Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming are checked below.

- ☒ Coloured covers / Couverture de couleur
- ☒ Covers damaged / Couverture endommagée
- ☐ Covers restored and/or laminated / Couverture restaurée et/ou pelliculée
- ☐ Cover title missing / Le titre de couverture manque
- ☒ Coloured maps / Cartes géographiques en couleur
- ☐ Coloured ink (i.e. other than blue or black) / Encre de couleur (i.e. autre que bleue ou noire)
- ☐ Coloured plates and/or illustrations / Planches et/ou illustrations en couleur
- ☐ Bound with other material / Relié avec d'autres documents
- ☐ Only edition available / Seule édition disponible
- ☒ Tight binding may cause shadows or distortion along interior margin / La reliure serrée peut causer de l'ombre ou de la distorsion le long de la marge intérieure.
- ☐ Blank leaves added during restorations may appear within the text. Whenever possible, these have been omitted from filming / Il se peut que certaines pages blanches ajoutées lors d'une restauration apparaissent dans le texte, mais, lorsque cela était possible, ces pages n'ont pas été filmées.
- ☒ Additional comments / Commentaires supplémentaires: Page 683 is incorrectly numbered page 83.

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- ☐ Coloured pages / Pages de couleur
- ☒ Pages damaged / Pages endommagées
- ☐ Pages restored and/or laminated / Pages restaurées et/ou pelliculées
- ☒ Pages discoloured, stained or foxed / Pages décolorées, tachetées ou piquées
- ☐ Pages detached / Pages détachées
- ☐ Showthrough / Transparence
- ☐ Quality of print varies / Qualité inégale de l'impression
- ☐ Includes supplementary material / Comprend du matériel supplémentaire
- ☐ Pages wholly or partially obscured by errata slips, tissues, etc., have been refilmed to ensure the best possible image / Les pages totalement ou partiellement obscurcies par un feuillet d'errata, une pelure, etc., ont été filmées à nouveau de façon à obtenir la meilleure image possible.
- ☐ Opposing pages with varying colouration or discolourations are filmed twice to ensure the best possible image / Les pages s'opposant ayant des colorations variables ou des décolorations sont filmées deux fois afin d'obtenir la meilleure image possible.

This item is filmed at the reduction ratio checked below /
Ce document est filmé au taux de réduction indiqué ci-dessous.

10x	12x	14x	16x	18x	20x	22x	24x	26x	28x	30x	32x
☐	☐	☐	☐	☐	☐	☐	☐	☒	☐	☐	☐

The copy filmed here has been reproduced thanks to the generosity of:

St. Michael's College, Toronto
John M. Kelly Library

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol $\longrightarrow$ (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

St. Michael's College, Toronto
John M. Kelly Library

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole $\longrightarrow$ signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

PREFACE TO THE SIXTH VOLUME.

THE six years that have passed since the original five volumes of this compilation were published, in 1894-5, have been filled with events so remarkable and changes so revolutionary in political and social conditions that the work has seemed to need an extension to cover them. The wish for such an extension, expressed by many people, led to the preparation of a new volume, in which all the lines of the historical record are taken from the points at which they were dropped in the early volumes, and are carried to the end of the Nineteenth Century, and beyond it, into the opening months of the present year.

In plan and arrangement this additional volume is uniform with the preceding ones; but the material used in it is different from that dealt with before, and a quite different character is given consequently to the book. The former compilation represented closet-studies of History—perspective views of a past more or less remote from those who depicted it. This one, on the contrary, exhibits History in the making,—the day by day evolution of events and changes as they passed under the hands and before the eyes and were recorded by the pens of the actual makers and witnesses of them. If there is crudeness in the story thus constructed, there is life in it, to quite make good the lack of literary finish; and the volume is expected to prove as interesting and as useful as its predecessors. It sets forth, with the fulness which their present-day interest demands, all the circumstances that led to the Spanish-American war; the unforeseen sequences of that war, in the Philippine Islands, in Cuba, in Porto Rico, and in American politics; the whole controversy of Great Britain with the South African Boers and the resulting war; the shameful dealings of western nations with China, during late years, which provoked the outbreak of barbaric hostility to foreigners, and the dreadful experiences of the siege and relief of Peking; the strange Dreyfus agitations in France; the threatening race-conflicts in Austria; the change of sovereign in England; the Peace Conference at The Hague and its results; the federation of the Australian colonies; the development of industrial combinations or trusts in the United States; the archæological discoveries of late years in the East, and the more notable triumphs of achievement in the scientific world. On these and other occurrences of the period surveyed, the

PREFACE TO THE SIXTH VOLUME.

record of fact is quoted from sources the most responsible and authentic now available, and always with the endeavor to present both sides of controverted matters with strict impartiality.

For purposes of reference and study, a large number of important documents—laws, treaties, new constitutions of government, and other state papers—are given in full, and, in most instances, from officially printed texts.

BUFFALO, N. Y., May, 1901.

ACKNOWLEDGMENTS.

I AM indebted to the following named authors, editors, and publishers, for permission kindly given me to quote from books and periodicals, all of which are duly referred to in connection with the passages severally borrowed from them :

The manager of *The American Catholic Quarterly Review*; the editor of *The American Journal of Archaeology*; the editor of *The American Monthly Review of Reviews*; General Thomas F. Anderson, Messrs. D. Appleton & Company; Messrs. Wm. Blackwood's Sons (*Blackwood's Magazine*); Mr. Andrew Carnegie; Messrs. Chapman & Hall (*The Fortnightly Review*); Mr. Samuel L. Clemens (Mark Twain); Hon. W. Bourke Cockran; the editor of *The Contemporary Review*; Prof. John Franklin Crowell; the G. W. Dillingham Company; Messrs. Dodd, Mead & Company; Messrs. Doubleday, Page & Company; The Ecumenical Conference on Foreign Missions; Mr. J. Foreman; The Forum Publishing Company; Harper & Brothers (*Harper's Magazine*); Mr. Howard C. Hillegas; Prof. H. V. Hilprecht; Hon. Frederick W. Hollis; Messrs. Houghton, Mifflin & Company (*The Atlantic Monthly*); Mr. George Hes; the editor of *The Independent*; Prof. John H. Latane; Messrs. Longmans, Green & Company (*The Edinburgh Review*); Mr. Charles F. Lummis; Messrs. McClure, Phillips & Company (*The Popular Science Monthly*); Messrs. MacMillan & Company (London); The New Amsterdam Book Company; the editor of *The Nineteenth Century Review*; the editor of *The North American Review*; the editors of *The Outlook*; the managing editor of *The Political Science Quarterly*; Mr. Edward Porritt; Messrs. G. P. Putnam's Sons; Messrs. Charles Scribner's Sons; George M. Sternberg, Surgeon-General, U. S. A.; The Frederick A. Stokes Company; the managing editor of *The Sunday School Times*; Prof. F. W. Taussig; Prof. Elihu Thomson; the manager of *The Times*, London; The University Press, Cambridge; Mr. Herbert Welsh; the editors of *The Yale Review*.

My acknowledgments are likewise due to the Hon. D. S. Alexander, Representative in Congress, and to many officials at Washington, for courteous assistance in procuring publications of the national government for my use.

A. D. 1895.—Anglo-Russian Agreement.—Determination of the northern frontier.—The joint Anglo-Russian Commission for fixing the northern frontier of Afghanistan, from Zuhlikar on the Heri Rind to the Pamirs, finished its work in July, 1895. This was consequent upon an Agreement between the governments of Great Britain and Russia which had been reduced to

writing on the previous 11th of March. In part, that Agreement was as follows: "Her Britannic Majesty's Government and the Government of His Majesty the Emperor of Russia engage to abstain from exercising any political influence or control, the former to the north, the latter to the south, of the above line of demarcation. Her Britannic Majesty's Government engage that the territory lying within the British sphere of influence between the Hindu Kush and the line running from the east end of Lake Victoria to the Chinese frontier shall form part of the territory of the Ameer of Afghanistan, that it shall not be annexed to Great Britain, and that no military posts or forts shall be established in it. The execution of this Agreement is contingent upon the evacuation by the Ameer of Afghanistan of all the territories now occupied by His Highness on the right bank of the Panjah, and on the evacuation by the Ameer of Bokhara of the portion of Darwaz which lies to the south of the GAMS, in regard to which Her Britannic Majesty's Government and the Government of His Majesty the Emperor of Russia have agreed to use their influence respectively with the two Ameer."—*Great Britain, Papers by Command: Treaty Series, No. 8, 1895.*

A. D. 1896.—Conquest of Kafiristan.—By the agreement of 1893, between the Ameer of Afghanistan and the government of India (see, in this vol., **INDIA: A. D. 1895—MARCH—SEPTEMBER**), the mountain district of Kafiristan was conceded to the former, and he presently set to work to subjugate its warlike people, who had never acknowledged his yoke. By the end of 1896 the conquest of these Asiatic Kafirs was believed to be complete.

A. D. 1894-1898 (British Central Africa Protectorate: Nyassaland).—Administrative separation from British South Africa Company's territory.—Conflicts with natives.—Resources and prospects. See (in this vol.) **BRITISH CENTRAL AFRICA PROTECTORATE.**

A. D. 1895 (Bechuanaland).—Partial conveyance to British South Africa Company.

—Several Bechuanaland chiefs visited England to urge that their country should not be absorbed by Cape Colony or the British South Africa Company. An agreement was made with them which reserved certain territories to each, but yielded the remainder to the administration of the British South Africa Company.

A. D. 1895 (British East Africa).—Transfer of territory to the British Government.—The territories previously administered by the Imperial British East Africa Company (excepting the Uganda Protectorate, which had been transferred in 1891) were finally transferred to the British Government on the 1st of July. At the same time, the dominion of the Sultan of Zanzibar on the mainland came under the administrative control of the British consul-general at Zanzibar.

A. D. 1895 (Cape Colony).—Annexation of British Bechuanaland.—Proceedings for the annexation of British Bechuanaland to Cape Colony were adopted by the Cape Parliament in August.

A. D. 1895 (French West Africa).—Appointment of a Governor-General.—In June, M. t. handle was appointed Governor-General of French West Africa, his jurisdiction extending over Senegal, the Sudan possessions of France, French Guinea, Dahomey, and other French possessions in the Gulf of Benin.

A. D. 1895 (Orange Free State).—Proposed federal union of the Free State with the Transvaal.—A resolution making overtures for a federal union with the Transvaal was passed by the Volksraad of the Orange Free State in June.

A. D. 1895 (Sierra Leone).—Establishment of a British Protectorate over the Hinterland of Sierra Leone.—Anglo-French boundary agreement. See (in this vol.) SIERRA LEONE PROTECTORATE.

A. D. 1895 (Transvaal).—Action in Swaziland.—By a proclamation in February, the Transvaal Government assumed the administration of Swaziland and installed King Bona as paramount chief.

A. D. 1895 (The Transvaal).—Closing of the Vaal River Drifts. See (in this vol.) SOUTH AFRICA (THE TRANSVAAL): A. D. 1895 (SEPTEMBER—DECEMBER).

A. D. 1895 (The Transvaal).—Discontent of the Uitlanders.—The Franchise question. See (in this vol.) SOUTH AFRICA (THE TRANSVAAL): A. D. 1895 (NOVEMBER).

A. D. 1895 (The Transvaal).—Opening of the Lagos Bay Railway. See (in this vol.) SOUTH AFRICA (THE TRANSVAAL): A. D. 1895 (JULY).

A. D. 1895 (Zululand).—Extension of Boundary.—A strip of territory west of Amatongaland, along the Pondoland River to the Maputa was formally added to Zululand in May, the South African Republic protesting.

A. D. 1895-1896 (Portuguese East Africa).—War with Gungunhana.—The Portuguese were involved in war with Gungunhana, king of Gazaland, which lasted from September, 1895, until the following spring, when Gungunhana was captured and carried a prisoner, with his wives and son, to Lisbon.

A. D. 1895-1896 (The Transvaal).—Revolutionary conspiracy of Uitlanders at Johannesburg.—The Jameson raid. See (in this

vol.) SOUTH AFRICA (THE TRANSVAAL): A. D. 1895-1896.

A. D. 1895-1897 (British East Africa Protectorate).—Creation of the Protectorate.—Territories included.—Subjugation of Arab chiefs.—Report of commissioner. See (in this vol.) BRITISH EAST AFRICA PROTECTORATE: A. D. 1895-1897.

A. D. 1896 (Ashanti).—British conquest and occupation. See (in this vol.) ASHANTI.

A. D. 1896 (British South Africa Company).—Resignation of Mr. Rhodes.—Parliamentary movement to investigate. See (in this vol.) SOUTH AFRICA (BRITISH SOUTH AFRICA COMPANY): A. D. 1896 (JANUARY AND FEBRUARY).

A. D. 1896 (Cape Colony).—Investigation of the Jameson raid. See (in this vol.) SOUTH AFRICA (CAPE COLONY): A. D. 1896 (JULY).

A. D. 1896 (Rhodesia).—Matabele revolt. See (in this vol.) SOUTH AFRICA (RHODESIA): A. D. 1896 (MARCH—SEPTEMBER).

A. D. 1896 (Zanzibar).—Suppression of an usurper by the British.—On the sudden death (supposed to be from poison) of the Sultan of Zanzibar, August 25, his cousin, Said Khalid, seized the palace and proclaimed himself sultan. Zanzibar being an acknowledged protectorate of Great Britain, the usurper was summoned by the British consul to surrender. He refused, and the palace was bombarded by war vessels in the harbor, with such effect that the palace was speedily destroyed and about 500 of its inmates killed. Khalid fled to the German consul, who protected him and had him conveyed to German territory. A new sultan, Said Hamud bin-Mahomed was at once proclaimed.

A. D. 1896-1899 (The Transvaal).—Controversies with the British Government. See (in this vol.) SOUTH AFRICA (THE TRANSVAAL): A. D. 1896 (JANUARY—APRIL), to 1899 (SEPTEMBER—OCTOBER).

A. D. 1897 (Congo Free State).—Mutiny of troops.—The Congo troops of an expedition led by Baron Dhanis mutinied and murdered a number of Belgian officers. Subsequently they were attacked in the neighborhood of Lake Albert Edward Nyanza and mostly destroyed.

A. D. 1897 (Dahomey and Tongoland).—Definition of boundary.—By a convention concluded in July between Germany and France, the boundary between German possessions in Tongoland and those of France in Dahomey and the Sudan was defined.

A. D. 1897 (Nigeria).—Massacre at Benin.—British expedition.—Capture of the town. See (in this vol.) NIGERIA: A. D. 1897.

A. D. 1897 (Nigeria).—Subjugation of Fulah slave-raiders.—In January and February, the forces of the Royal Niger Company successfully invaded the strong Fulah states of Nupé and Hoirin, from which slave raiding in the territory under British protection was carried on. Bida, the Nupé capital, was entered on the 27th of January, after a battle in which 800 Hausa troops, led by European officers, and using heavy artillery, drove from the field an army of cavalry and foot estimated at 30,000 in number. The Emir of Nupé was deposed, another set up in his place, and a treaty signed which established British rule. The Emir of Hoirin submitted after his town had been bombarded, and bowed himself to British authority in his government. At the same time, a treaty settled the Lagos fron-

A. D. 1898 (Tunis).—Results of the French Protectorate. See (in this vol.) TUNIS. A. D. 1898-1899.

A. D. 1899.—Railway development.—“Railroad development in Africa has been rapid in the past few years and seems but the beginning of a great system which must contribute to the rapid development, civilization, and enlightenment of the Dark Continent. Already railroads run northwardly from Cape Colony about 1,400 miles, and southwardly from Cairo about 1,400 miles, thus making 2,800 miles of the ‘Cape to Cairo’ railroad complete, while the intermediate distance is about 3,000 miles. Mr. Rhodes, whose recent visit to England and Germany in the interest of the proposed through line from the Cape to Cairo is a matter of record, and whose visit to Germany was made necessary by the fact that in order to pass from the southern chain of British territory to the northern chain he must cross German or Belgian territory, is reported as confident that the through line

will be completed by the year 1910. Certainly it may reasonably be assumed that a continuous railway line will be in operation from the southern to the northern end of Africa in the early years of the twentieth century. Toward this line, present and prospective, which is to stretch through the eastern part of the continent, lateral lines from either coast are beginning to make their way. A line has already been constructed from Natal on the southeast coast, another from Lourenço Marques in Portuguese territory and the gold and diamond fields, an other from Beira, also in Portuguese territory, but considerably farther north, and destined to extend to Salisbury in Rhodesia, where it will form a junction with the ‘Cape to Cairo’ road, still another is projected from Zanzibar to Lake Victoria Nyanza, to connect it with the Tabora, with the transcontinental line. Other line is in for actual construction westward from Pangani just north of Zanzibar, both of these being in German East Africa; another line is being constructed northwardly from Mombasa, in British territory, toward Lake Victoria Nyanza, and is completed more than half the distance, while at the entrance to the Red Sea a road is projected westwardly into Abyssinia, and is expected to pass farther toward the west and connect with the main line. At Suakin, fronting on the Red Sea, a road is projected to Berber, the present terminus of the line running southwardly from Cairo. On the west of Africa lines have begun to penetrate inward, a short line in the French Sudan running from the head of navigation on the Senegal eastwardly toward the head of navigation on the Niger, with the ultimate purpose of connecting navigation on these two streams. In the Congo Free State a railway connects the Upper Congo with the Lower Congo around Livingstone Falls, in Portuguese Angola a road extends eastwardly from Lomda, the capital, a considerable distance, and others are projected from Benguela and Mossamedes with the ultimate purpose of connecting with the ‘Cape to Cairo’ road and joining with the lines from Portuguese East Africa, which also touch that road, thus making a transcontinental line from east to west, with Portuguese territory at either terminus. Farther south on the western coast the Germans have projected a road from Wallisch Bay to Windhoek, the capital of German Southwest Africa, and this will probably be extended eastwardly until it connects with the great transcontinental line from ‘Cape to Cairo,’ which is to form the great nerve center of the system, to be contributed to and supported by these branches connecting it with either coast. Another magnificent railway project, which was some years ago suggested by M. Leroy Beaulieu, has been recently revived, being no less than an east and west transcontinental line through the Sudan region, connecting the Senegal and Niger countries on the west with the Nile Valley and Red Sea on the east and penetrating a densely populated and extremely productive region of which less is now known, perhaps, than of any other part of Africa. At the north numerous lines skirt the Mediterranean coast, especially in the French territory of Algeria, and in Tunis, where the length of railway is, in round numbers, 2,250 miles, while the Egyptian railroads are including those now under construction, about 1,500

mile to length. Those of Cape Colony and Natal are nearly 1,000 miles, and those of Portuguese East Africa and the South African Republic are another thousand. Taking into consideration all of the roads now constructed or under actual construction, their total length reaches nearly three thousand, while there seems every reason to believe that the great through system connecting the rapidly developing mining regions of South Africa with the north of the continent and with Europe will soon be pushed to completion. A large proportion of the railways thus far constructed are owned by the several colonies or States which they traverse, about 2,000 miles of the Cape Colony system belonging to the Government, while nearly all that of Egypt is owned and operated by the State.—U. S. Bureau of Statistics, *Monthly Summary*, August, 1899. See, also, (in this vol.), RAILWAY, CAPE TO CAIRO.

A. D. 1899 (June).—International Convention respecting the liquor traffic.—Representatives of the governments of Great Britain, Germany, Belgium, Spain, the Congo State, France, Italy, the Netherlands, Portugal, Russia, Sweden and Norway, and Turkey, assembled at Brussels, Belgium, 1899, with the authorization, and the conclusion of an international convention respecting the liquor traffic in Africa. Subsequently the governments of Austria-Hungary, the United States of America, Liberia and Persia, gave their adhesion to the Convention and ratified their assent deposited at Brussels in June, 1899. The Convention is, in its measure, supplemental to what is known as the General Act of Brussels, relative to the African slave trade, which was framed at a conference of the representatives of European, American and Asiatic States at Brussels. The treaty known as the General Act of Brussels was signed July 2, 1890, but did not come into force until April 2, 1894. The text of it may be found in U. S. House Doc. No. 276, 56th Congress, 3d Sess. The Convention of 1899 provides:

"Article I.—From the coming into force of the present Convention, the import duty on spirituous liquors, as that duty is regulated by the General Act of Brussels, shall be raised throughout the zone where there does not exist the system of total prohibition provided by Article XC1 of the said General Act, to the rate of 70 fr. the hectolitre at 50 degrees centigrade, for a period of six years. It may, exceptionally, be at the rate of 60 fr. only the hectolitre at 50 degrees centigrade in the Colony of Togo and in that of Dahomey. The import duty shall be augmented proportionally for each degree above 50 degrees centigrade; it may be diminished proportionally for each degree below 50 degrees centigrade. At the end of the above mentioned period of six years, the import duty shall be submitted to revision, taking as a basis the results produced by the preceding rate. The Powers retain the right of maintaining and increasing the duty beyond the minimum fixed by the present Article in the regions where they now possess that right. Article II.—In accordance with Article XCIII of the General Act of Brussels, distilled drinks made in the regions mentioned in Article XCII of the said General Act, and intended for consumption, shall pay an excise duty. This excise duty, the collection of which the Powers undertake to insure as far

as possible, shall not be lower than the minimum import duty fixed by Article I of the present Convention. Article III.—It is understood that the Powers who signed the General Act of Brussels, or who have acceded to it, and who are not represented at the present Conference, preserve the right of acceding to the present Convention."—*Great Britain, Parliamentary Publications* (Papers by Command): *Treaty Series*, No. 13, 1900.

A. D. 1899-1900.—Summary of the partition of the Continent.—"Seven European nations, as before remarked, now control territories in Africa, two of them having areas equal in each case to about the entire land area of the United States, while a few small territories remain as independent States. Beginning at the northeast, Egypt and Tripoli are nominally at least tributaries of Turkey, though the Egyptian Government, which was given large latitude by that of Turkey, has of late years formed such relations with Great Britain that, in financial matters at least, her guidance is recognized; next west, Algeria, French; then Morocco on the extreme northwest, an independent Government and an absolute despotism; next on the south, Spain's territory of Rio de Oro; then the Senegal territories, belonging to the French, and connecting through the desert of Sahara with her Algeria; then a group of small divisions controlled by England, along the Gulf of Guinea; then Liberia, the black Republic; Togoland, controlled by the Germans; Dahomey, a French protectorate; the Niger territory, one third the size of the United States, controlled by England; Kamerun, controlled by Germany; French Kongo; then the Kongo Free State, under the auspices of the King of Belgium, and occupying the very heart of equatorial Africa; then Portuguese Angola, next, German Southwest Africa; and finally in the march down the Atlantic side, Cape Colony, British. Following up the eastern side comes the British colony of Natal; then just inland from this the two Boer Republics, the Orange Free State and the South African Re-

both of which are entirely in the interior. A third French frontier, next Portuguese Africa, and west of this the great territory known as Rhodesia, then German Africa, which extends almost to the equator, north of these British East Africa fronting on the Indian Ocean, and meeting northwardly with the Egyptian Sudan, which was recently recovered from the Mahdi by the joint operation of British and Egyptian troops, and the British flag placed side by side with that of Egypt, next north upon the coast, Italian territory, and a small tract opposite the entrance to the Red Sea, owned by England, and a few hundred miles west of the entrance to the Red Sea, the independent Kingdom of Abyssinia. This division of African territory nearly all of it made within the memory of the present generation, forms the present political map of Africa. With England and France controlling an area equal in extent to that of the United States, Germany a territory somewhat the size of the United States, Portugal with an area somewhat less, the Congo Free State in the great equatorial basin, but

having a frontage upon the Atlantic, with an area nearly one-third that of the United States, Italy and Spain each with an important island area, a territory in Egypt with an area as large as much British as Turkish Empire, Turkey and the five independent States of Morocco, Algeria, Abyssinia and the two Boer Republics, nothing remains unclaimed, even in the desert wastes, while in the high altitudes and sub-tropical climate of southern Africa civilization and progress are making rapid advancement. U. S. Bureau of Statistics, *Monthly Summary, August 1899*.

The following table, given in an article in "The Forum," December 1899, by Mr. O. P. Austin, Chief of the U. S. Bureau of Statistics, shows the area, total population, foreign population, and imports and exports of the territory in Africa held by each European Government and by the independent States of that continent at the time of its compilation, so far as could be ascertained, but the statistics are not population, especially the latter, are in many cases necessarily estimates.

	AREA	TOTAL POPULATION	FOREIGN POPULATION	FOREIGN MILES	IMPORTS	EXPORTS
British Africa	1,075,000	28,100,000	10,000,000	100	\$1,100,000	\$1,100,000
France	2,000,000	10,000,000	1,000,000	100	1,000,000	1,000,000
Germany	1,000,000	10,000,000	1,000,000	100	1,000,000	1,000,000
Italy	100,000	1,000,000	1,000,000	100	1,000,000	1,000,000
Spain	100,000	1,000,000	1,000,000	100	1,000,000	1,000,000
Portugal	100,000	1,000,000	1,000,000	100	1,000,000	1,000,000
Independent States						
Abyssinia	100,000	1,000,000	1,000,000	100	1,000,000	1,000,000
Algeria	100,000	1,000,000	1,000,000	100	1,000,000	1,000,000
S. African Republic	100,000	1,000,000	1,000,000	100	1,000,000	1,000,000
Congo Free State	100,000	1,000,000	1,000,000	100	1,000,000	1,000,000
Totals	11,185,000	110,000,000	10,000,000	1,000	\$1,100,000	\$1,100,000

According to a statistical table in the twenty-fourth volume of Meyer's *Konversations-Lexikon* (third annual supplement), based upon the latest data furnished by the boundary treaties between the Powers, it would appear that all but about one-sixth of the African continent is now (A. D. 1900) included in some "protectorate" or "sphere of influence." The French sphere is the largest, comprising about 3,500,000 square miles, about the extent of Europe out of a total area of 11,000,000. England comes next with 2,400,000 (including the Boer territories). Then follow in order Germany, Belgium (Congo Free State), and Portugal, each with somewhat less than a million square miles. The Egyptian sphere (about 400,000 square miles) may properly be regarded as part of the British. The extent of the French sphere will appear less imposing on consulting the map of Africa here given, which shows that it takes in the greater part of the sands of the Sahara. The British sphere (including Egypt and her dependencies) is estimated to contain in round numbers about 50,000,000 souls. The French, 35,000,000; the Belgian, 17,000,000; the German, 9,000,000; the Portuguese, 8,000,000.

ALASKA: A. D. 1898-1899.—Discovery of the Cape Nome gold mining region.—The Cape Nome mining region lies on the western coast of Alaska, just beyond the military reservation of St. Michael and about 120 miles south of the Arctic Circle. It can be reached by an ocean voyage of ten or twelve days from Seattle. It has long been known that gold exists in the general vicinity of Cape Nome, and during the last five or six years a few adventurous miners have done more or less prospecting and claim staking throughout the district lying between Norton and Kotzebue sounds. During the winter of 1897-98 a large number of miners entered the Kotzebue country, while others spent the season in the vicinity of Golofnin Bay. On the 15th of October, 1898, a party of seven men reached Snake River in a schooner. Between that date and the 18th a miners' meeting was held, the boundaries of a district 25 miles square were established, local mining regulations were formulated, and Dr. Kittelson was elected recorder for a term of two years. After organizing the district natives were hired to do the necessary packing, and a camp was established on Anvil Creek. The prospecting outfits were quickly brought into service. In one afternoon \$76 was panned out on Snow Creek. Encouraged by this showing, lumber was carried up from the schooner and two rockers were constructed. In four or five days over \$1,800 was cleaned up with these two rockers. The weather turned odd and the water was frozen up. As it was impossible to do any more work with the rockers the party broke camp on the 1st of November and returned to

the schooner, which they found frozen solid in 2 feet of ice. They then made their way in a small boat to an Indian village, near Cape Nome, where they obtained dogs and sleds, and a little farther on they were met by reindeer from the Swedish Mission, with which they returned to Golofnin Bay.

The lucky miners had agreed among themselves that their discovery should be held secret, but the news was too good to keep, and soon leaked out. A general stampede commenced at once and continued all winter. Every available dog and reindeer was pressed into the service, and they were soon racing with each other for the valuable claims which had been left unstaked in the vicinity of Anvil Creek. As soon as that creek had been all taken up the stampede extended to the neighboring streams and gulches, and Glacier and Dexter creeks, as well as many others which have not proved equally valuable, were quickly staked and recorded. By the 25th of December a large party armed with numerous powers of attorney had entered the district, and as the local regulations allowed every man to stake on each creek one claim of the full legal dimensions (660 by 1,320 feet), it was not long until the whole district had been thoroughly covered, and nearly every stream had been staked with claims, which in some cases were 'jumped' and the right of possession disputed.

The news of a rich strike at Nome worked its way up the Yukon River during the winter, and as soon as the ice broke in June a large crowd came down from Rampart City, followed by a larger crowd from Dawson. The 'Yukoners,' as these people were called, were already disgusted with the hardships, disappointments, and Canadian misgovernment which they had met with on the upper river. Those to whom enough faith had been given to go over to Cape Nome were disgusted and angered to find that pretty much the whole district was already staked, and that the claims taken were two or three times as large as those commonly allowed on the upper river. Another grievance was the great abuse of the power of attorney, by means of which an immense number of claims had been taken up, so that in many cases (according to common reports) single individuals held or controlled from 50 to 100 claims apiece.

A miners' meeting was called by the newcomers to remedy their grievances. Resolutions were prepared, in which it was represented that the district had been illegally organized by men who were not citizens of the United States and who had not conformed with the law in properly defining the boundaries of the district with reference to natural objects, in enacting suitable and sufficient mining regulations, and in complying with any of the details of organization required by law. It was intended by the promoters of this meeting to reorganize the district in such a way as would enable them to share the benefits of the discovery of a new gold field with the men who had entered it the previous winter, and as they expressed it, 'gobbled up the whole country.' It is, of course, impossible to say what would have been the result if their attempt had not been interfered with. On the 28th of June Lieutenant Spaulding and a detachment of 10 men from the Third Artillery had been ordered to the vicinity of Snake River, and on the 7th of July their numbers were increased by the

addition of 15 more. As soon as it was proposed to throw open for restaking a large amount of land already staked and recorded an appeal was made to the United States troops to prevent this action by prohibiting the intended meeting, which was called to assemble July 10. It was represented to them that if the newcomers should attempt, under the quasi legal guise of a miners' meeting, to take forcible possession of lands already claimed by others, the inevitable consequence would be a reign of disorder and violence, with the possibility of considerable bloodshed. On the strength of this representation and appeal the army officers decided to prevent the adoption of the proposed resolutions. The miners were allowed to call their meeting to order, but as soon as the resolutions were read Lieutenant Spaulding requested that they be withdrawn. He allowed two minutes for compliance with his request, the alternative being that he would clear the hall. The resolutions were not withdrawn, the troops were ordered to fix bayonets, and the hall was cleared quietly, without a conflict. Such meetings as were subsequently attempted were quickly broken up by virtue of the same authority. The right in which this action is regarded by the people at Nome depends, of course, upon the way in which their personal interests were affected.

The great discontent which actually did exist at this time found sudden and unexpected relief in the discovery of the beach diggings. It had long been known that there was more or less gold on the seashore, and before the middle of July it was discovered that good wages could be taken out of the sand with a rocker. Even those who were on the ground could hardly believe the story at first, but its truth was quickly and easily demonstrated. Before the month was over a great army of the unemployed was engaged in throwing up irregular intrenchments along the edge of the sea, and those who had just been driven nearly to the point of desperation by the exhaustion of all their resources were soon contentedly rocking out from 80 to 850 each per day and even more than that. This discovery came like a god-send to many destitute men, and was a most fortunate development in the history of the camp.

Meantime the men who were in possession of claims on Avvil and Snow creeks were beginning to sluice their ground and getting good returns for their work, while others were actively making preparations to take out the gold which they knew they had discovered. More sluice boxes were constructed and put into operation as rapidly as possible. A town site was laid off at the mouth of Snake River, and on the 14th of July a post office was established. The town which has sprung so suddenly into existence is called "Nome" by the Post Office Department, but at a miners' meeting held February 28, it was decided to call it "Avvil City," and this is generally done by the residents of the district, as well as in all official records. At a meeting held in September, however, the name was again changed to "Nome."—*United States, 50th Cong., 1st sess., Senate Doc. No. 337, pp. 1-4.*

A year ago [that is, in the winter of 1898-9] a few Eskimo huts and one or two sod houses of white men were the only human habitations along 60 miles of the present Nome coast. Last June [1898] a dozen or so tents contained the

whole population. By October a town of 5,000 inhabitants fronting the ocean was crowded for a mile or more along the beach. Hundreds of galvanized iron and wooden buildings were irregularly scattered along two or three fronting beaches, running parallel with the coast line. There is every description of building, from the dens of the poor prospectors, built of driftwood, canvas, and sod, to the large companies' warehouses, stores, and the army barracks—a city, as it were, springing up in the night, built under the most adverse circumstances on the barren seacoast, a coast without harbor, all the supplies being landed through the surf. . . . The country contributes nothing toward the support of the population except a few fish and a limited supply of drift wood.

The city is of the most cosmopolitan type and contains representatives of almost every nationality on the globe. Germans, Canadians, Frenchmen, Englishmen, Russians, Swedes, Norwegians, Poles, Chinese, negroes, Italians, Spaniards, Greeks, Jews, and Americans. The dominant type is the American, through whose veins, with that inherent talent of the Anglo-Saxon race for self government, this isolated community at once organized a city government. Before the close of the summer Nome had a mayor, councilmen, a police force, a deputy United States marshal, a United States post office, a fire department with town well, a board of health, a hospital corps, and charitable organizations. A majority of the people consists of the shifting population of the Yukon country, which, upon hearing the news of the discovery of gold, poured itself into Nome. . . . Along with the shifting population of the Yukon from Dawson and other camps came also many would-be explorers and venturers, and especially gamblers, but good order prevails throughout. Drunkenness, disorderly conduct, and theft are promptly tried before the police, justice and punished by fine and imprisonment. Copies of the official rules and regulations are kept posted before the city hall and in other conspicuous places, as a warning to all. "Ignorance of the law is no excuse." Some of the well known "toughs" and most undesirable characters are reported to have been rounded up by the authorities late in the fall and exported to the States. . . . There are several printing presses and three newspapers—the Nome News, Nome Herald, and Nome Gold Digger. . . . There are at least 2,500 people now [February, 1900] wintering at Nome, and by estimate, at least several thousand are on their way there by winter routes.

Since, according to the conservative estimate of those who are best situated to judge, it is believed that the Nome region will have a population of at least 30,000 or 40,000 people this year (1900), some public improvements there seem not only commendable but urgently necessary. Among these the most important are: Some municipal form of government, water supply, land office service, and harbor facilities. As the General Government had never made provision for any form of municipal government in Alaska, the people of Nome, in response to the urgency of the hour, called a mass meeting, and organized the present government of Nome, with a complete corps of city officers, as follows: . . . though they were conscious at the time that it was without a authority from the United States

Government."—F. C. Schrader and A. H. Brooks, *Preliminary Report on the Cape Nome Gold Region, Alaska U. S. Geological Survey*, pp. 43-47.

A. D. 1900.—Civil Government.—Better provision for the civil government of Alaska was made by the Act which passed by the President on the 6th of June, 1900. It constitutes Alaska a civil and judicial district, with a governor who has the duties and powers that pertain to the governor of a Territory, and a district court of general jurisdiction, civil and criminal, and in equity and admiralty, the court being in three divisions, each with a district judge. The act provides a civil code for the district.

A. D. 1900.—Exploration of Seward peninsula. See in this vol. **POLAR EXPLORATION**, 1900.

ALASKA BOUNDARY QUESTION.

The boundary between Alaska, when it was Russian territory, and the British possessions on the western side of the American continent, was settled by an Anglo-Russian treaty in 1825. The treaty which ceded the Russian territory to the United States, in 1867, incorporated the definition of boundary given in Articles III. and IV. of the above-mentioned convention, which translated from French to English read as follows:

"III. The line of demarcation between the possessions of the High Contracting Parties upon the Coasts of the Continent and the Islands of America to the North West, shall be drawn in the following manner: Commencing from the southernmost point of the Island called Prince of Wales Island, which point lies in the parallel of 51 degrees 40 minutes North Latitude, and between the 131st and 133d Degree of West Longitude (Meridian of Greenwich), the said line shall ascend to the North along the Channel called Portland Channel, as far as the Point of the Continent where it strikes the 56th Degree of North Latitude; from this last mentioned Point the line of demarcation shall follow the summit of the mountains situated parallel to the coast, as far as the point of intersection of the 141st Degree of West Longitude of the same meridian; and, finally, from the said point of intersection, the said Meridian Line of the 141st Degree, in its prolongation as far as the Frozen Ocean, shall form the limit between the Russian and British Possessions on the Continent of America to the North West.

"IV. With reference to the line of demarcation laid down in the preceding Article, it is understood: 1st. That the Island called Prince of Wales Island shall belong wholly to Russia. 2d. That wherever the summit of the mountains which extend in a direction parallel to the Coast, from the 56th Degree of North Latitude to the point of intersection of the 141st Degree of West Longitude, shall prove to be at the distance of more than ten marine leagues from the Ocean, the limit between the British Possessions and the line of Coast which is to belong to Russia, as above mentioned, shall be formed by a line parallel to the windings of the Coast, and which shall never exceed the distance of ten marine leagues therefrom."

When attempts to reduce this description in the treaty to an actually determined boundary line were begun, disagreements arose between

Canada and the United States, which became exceedingly troublesome after the Klondike gold discoveries had given a new importance to that region and to its communications with the outside world. The Alaska boundary question proved, in fact, to be considerably the most difficult of settlement among all the many subjects of disagreement between the United States and Canada while a Joint High Commission was created in 1898 (see—in this vol.—**CANADA**: A. D. 1898-1900) to adjust. It was the one question on which no ground of compromise could then be found, and which compelled the Commission to adjourn in February, 1899, with its labors incomplete. The disputable points in the definition of the boundary by the Anglo-Russian treaty of 1825 are explained as follows by Prof. J. B. Moore, ex Assistant Secretary of State, in an article contributed to the "North American Review" of October, 1899: "An examination of the boundary defined in Articles III. and IV. of the convention of 1825 shows," says Prof. Moore, "that it is scientifically divisible into two distinct sections, first, the line from the southernmost point of Prince of Wales Island, through Portland Channel and along the summit of the mountains parallel to the coast, to the point of intersection of the 141st meridian of longitude; and, second, the line from this point to the Arctic Ocean. With the latter section, which is merely a meridian line, and as to which the United States and Canadian surveys exhibit no considerable difference, we are not now concerned. The section as to which material differences have arisen is the first. The principal differences in this quarter are two in number, first, as to what channel is meant by Portland Channel (sometimes called Portland Canal); and, second, as to what is the extent of the line or strip of coast (*la lisière de côte*) which was assigned to Russia."

The following is an English statement of the situation of the controversy at the time the Joint High Commission adjourned: "The adjournment of the Commission with nothing accomplished is fresh in all our memories. Nor is it easy to determine on whose shoulders lies the blame of this unfortunate break down. America has been blamed for her stubbornness in refusing to submit to an arbitration which should take into consideration the possession of the towns and settlements under the authority of the United States and at present under their jurisdiction; while they have also been charged with having made no concessions at all to Canada in the direction of allowing her free access to her Yukon possessions. I am enabled to say, however, in this latter respect the Americans have not been so stiff-necked as has been made to appear. Although it was not placed formally before the Commission, it was allowed charily to be understood by the other side, that in regard to Skagway, America was prepared to make a very liberal concession. They were ready, that is, to allow of the joint administration of Skagway, the two flags flying side by side, and to allow of the denationalisation, or internationalisation as it might otherwise be termed, of the White Pass and the Yukon Railroad, now completed to Lake Bennett, and the only railroad which gives access to the Yukon. They were even prepared to admit of the passage of troops and munitions of war over this road, thus doing away with the

ALASKA BOUNDARY QUESTION.

Canadian contention that, should a disturbance occur in the Yukon, they are at present barred from taking efficient measures to quell it. This proposition, however, does not commend itself to the Canadians, whose main object, I think I am justified in saying, is to have a railroad route of their own from beginning to end, in their own territory, as far north as Dawson City. At one time, owing to insufficient information and ignorance of the natural obstacles in the way, they thought they could accomplish this by what was known as the Stikine route. They even went so far as to make a contract with Messrs. McKenzie and Mann to construct this road, the contractors receiving, as part of their payment, concessions and grants of territory in the Yukon, which would practically have given them the absolute and sole control of that district. The value of this to the contractors can hardly be overestimated. However, not only did the natural obstacles I have referred to lead to the abandonment of the scheme, but the Senate at Ottawa threw out the Bill which had passed through the Lower House, affording a striking proof that there are times when an Upper House has its distinct value in legislation. It has been suggested (though I am the last to confirm it) that it was the influence of the firm of railroad contractors, to whose lot it would probably fall to construct any new line of subsidised railway, which caused the Canadian Commission to reject the tentative American proposal regarding Skagway, and to put forward the counter claim to the possession of Pyramid Harbour (which lies lower down upon the west coast of the Lynn Canal, together with a two mile wide strip of territory reaching inland, containing the Chilkoot Pass, and through it easy passage through the coast ranges, and so by a long line of railroad to Fort Stikine, which lies on the Yukon River, to the south and east of Dawson City). It is said also, though of this I have no direct evidence, that the Canadians included the right to fortify Pyramid Harbour. It is not surprising that the Americans rejected this proposal, for they entered into the discussion convinced of the impossibility of accepting any arrangement which would involve the surrender of American settlements, and though it is not so large or important as Skagway or Dyak, Pyramid Harbour is nevertheless as much an American settlement as the two latter. I am bound to point out that just as the Dominion of Canada, as a whole, has a keener interest in this dispute than has the Home Government, so the Government of British Columbia is more closely affected by any possible settlement than is the rest of the Dominion. And British Columbia is as adverse to the Pyramid Harbour scheme as the United States themselves. This is due to the fact that when finished the Pyramid Harbour and Fort Stikine railroad would afford no access to the British Columbia gold fields on Athabaska, which would still be reached only by way of Skagway and the White Pass, or by Dyea and the Chilkoot Pass. But quite apart from this view of the matter, we may take it for granted that the United States will never voluntarily surrender any of their tide water settlements, while the Canadian Government, on the other hand, are no more disposed to accept any settlement based on the internationalisation of Skagway, their argument, possibly being that, save as a temporary *modus vivendi*, this would be giving away their

ALASKA BOUNDARY QUESTION.

whole case to their opponents. — H. Townes, *The Alaska Boundary Question* (*Pittsburgh Courier*, Sept. 1899).

Pending further negotiations on the subject, a *"modus vivendi"* between the United States and Great Britain, fixing a provisional boundary line between the Territory of Alaska and the Dominion of Canada about the head of Lynn Canal, was concluded October 20, 1899, in the following terms: "It is hereby agreed between the Governments of the United States and of Great Britain that the boundary line between Canada and the territory of Alaska in the region about the head of Lynn Canal shall be provisionally fixed as follows without prejudice to the claims of either party in the permanent adjustment of the international boundary. In the region of the Dalton Trail, a line beginning at the peak West of Porcupine Creek, marked on the map No. 49 of the United States Commission, December 31, 1895, and on Sheet No. 18 of the British Commission, December 31, 1896, with the number 6500, thence running to the Khikini-Khichilo River in the direction of the Peak north of that river, marked 5020 on the aforesaid United States map and 5025 on the aforesaid British map, thence following the high or right bank of the said Khikini river to the junction thereof with the Chilkat River, a mile and a half, more or less, north of Khikwan, — provided that persons proceeding to or from Porcupine Creek shall be freely permitted to follow the trail between the said creek and the said junction of the rivers, into and across the territory on the Canadian side of the temporary line whenever the trade passes to such side, and subject to such reasonable regulations for the protection of the Revenues as the Canadian Government may prescribe, to carry with them over such part or parts of the trail between the said points as may lie on the Canadian side of the temporary line, such goods and articles as they desire, without being required to pay any customs duties on such goods and articles, and from said junction to the summit of the peak East of the Chilkat river, marked on the above said map No. 49 of the United States Commission with the number 5110 and on the map No. 15 of the aforesaid British Commission with the number 5130. — On the Dyea and Skagway Passes the summits of the Chilkoot and White Passes. — It is understood, as heretofore set forth in communications of the Department of State of the United States, that the citizens or subjects of either Power, and by this arrangement within the temporary jurisdiction of the other, shall suffer no diminution of the rights and privileges which they now enjoy. The Government of the United States will at once appoint an officer or officers in conjunction with an officer or officers to be named by the Government of Her Britannic Majesty, to mark the temporary line agreed upon by the creation of posts, stakes, or other appropriate temporary marks."

In his Annual Message to Congress, December 3, 1900, the President of the United States stated the situation as follows: "The work of marking certain provisional boundary points, for convenience of administration, around the head of Lynn Canal, in accordance with the temporary arrangement of October, 1899, was completed by a joint survey in July last. The *modus vivendi* has so far worked without friction, and the Dominion Government has provided rules and regulations

for securing to our citizens the benefit of the reciprocal stipulation that the citizens or subjects of either Power joined by that arrangement within the temporary jurisdiction of the other shall suffer no diminution of the rights and privileges they have hitherto enjoyed. But however necessary such an expedient may have been to tide over the grave emergencies of the situation, it is at best but an unsatisfactory makeshift, which should not be suffered to delay the speedy and complete establishment of the frontier line to which we are entitled under the Russo-American treaty for the cession of Alaska. In this relation I urge again to the need of definitely marking the Alaskan boundary where it follows the 141st meridian. A convention to that end has been before the Senate for some two years, but as no action has been taken I contemplate negotiating a new convention for a joint determination of the meridian by telegraphic observations. These, it is believed, will give more accurate and unquestionable results than the sidereal methods heretofore independently followed, which, as is known, proved discrepant at several points on the line, although not varying at any place more than seven hundred feet."

AMERICAN REPUBLICS, The Bureau of the. "The idea of the creation of an international bureau, or agency, representing the Republics of the Western Hemisphere, was suggested to the delegates accredited to the International American Conference held in Washington in 1889-90, by the conference held at Brussels in May, 1888, which planned for an international union for the publication of customs tariffs, etc."

"On March 29, 1890, the International American Conference, by a unanimous vote of the delegates of the eighteen countries there represented, namely: The Argentine Republic, Bolivia, Brazil, Chile, Colombia, Costa Rica, Ecuador, Guatemala, Haiti, Honduras, Mexico, Nicaragua, Paraguay, Peru, Salvador, United States, Uruguay, and Venezuela, provided for the establishment of an association to be known as 'The International Union of American Republics for the Prompt Collection and Distribution of Commercial Information' which should be repre-

sented at the capital of the United States by a Bureau, under the title of 'The Bureau of the American Republics.' This organ, so to speak, of the independent governments of the New World was placed under the supervision of the Secretary of State of the United States, and was to continue in existence for a period of ten years, and, if found profitable to the nations participating in its advantages, it was to be maintained for successive periods of ten years indefinitely. At the first session of the Fifty-first Congress of the United States, that body, in an Act making appropriations for the support of the Diplomatic and Consular Service, etc., approved July 14, 1890, gave the President authority to carry into effect the recommendations of the Conference so far as he should deem them expedient, and appropriated \$30,000 for the organization and establishment of the Bureau, which amount it had been stipulated by the delegates in the Conference assembled should not be exceeded, and should be annually advanced by the United States and shared by the several Republics in proportion to their population. . . . The Conference had defined the purpose of the Bureau to be the preparation and publication of bulletins concerning the commerce and resources of the American Republics, and to furnish information of interest to manufacturers, merchants, and shippers, which should be at all times available to persons desirous of obtaining particulars regarding their customs, tariffs and regulations, as well as commerce and navigation."—*Bulletin of the Bureau of American Republics*, June, 1898.

A plan of government for the International Union, by an executive committee composed of representatives of the American nations constituting the Union, was adopted in 1890, but modified at a conference held in Washington, March 18, 1899. As then adopted, the plan of government is as follows: "The Bureau of the American Republics will be governed under the supervision of the Secretary of State of the United States, with the cooperation and advice of four representatives of the other Republics composing the International Union, the five persons indicated to constitute an Executive Committee, of which the Secretary of State is to be ex officio Chairman, or, in his absence, the Acting Secretary of State. The other four members of the Executive Committee shall be called to serve in turn, in the alphabetical order of the official names of their nations in one of the four languages of the Union, previously selected by lot at a meeting of the representatives of the Union. At the end of each year the first of these four members shall retire, giving place to another representative of the Union, in the same alphabetical order already explained, and so on until the next period of succession."

"The interest taken by the various States forming the International Union of American Republics in the work of its organic bureau is evidenced by the fact that for the first time since its creation in 1890 all the republics of South and Central America are now [1899] represented in it. The unanimous recommendation of the International American Conference, providing for the International Union of American Republics, stated that it should continue in force during a term of ten years from the date of its organization, and no country becoming a member of the union should cease to be a member until the end

AMERICAN REPUBLICS

of said period of ten years, and unless twelve months before the expiration of said period a majority of the members of the union had given to the Secretary of State of the United States official notice of their wish to terminate the union at the end of its first period, that the union should continue to be maintained for another period of ten years, and thereafter, under the same conditions, for successive periods of ten years each. The period for notification expired on July 14, 1899, without any of the members having given the necessary notice of withdrawal. Its maintenance is therefore assured for the next ten years. *Message of the President of the U. S. Dec. 5, 1899.*

ARCHÆOLOGICAL RESEARCH.

The Oriental Field.—Recent achievements and future prospects. Three successive years have just added to the realm of Egyptian archaeology, not only the period of the first two dynasties hitherto discomfitedly unrecognized from contemporary remains, but also a long prehistoric period. Assyriology likewise has lately been pushed back into antiquity with almost equal rapidity. Though the subjects will probably all

ways have their limitations, yet the insight of scholars and explorers is opening up new vistas on all sides. Our prospect for the future is bright. Egypt itself seems inexhaustible. Few of the cities of Babylon and Assyria have yet been excavated, and each of them, of its library and record office of clay tablets, as well as its monuments in stone and bronze. In Nubia the monuments are countless, and the ruins of the

and in Armenia monuments are only less plentiful. In Arabia inscriptions are now being read which may perhaps date from 1000 B. C. The so-called Hittite hieroglyphs still baffle the decipherer, but as more of the documents become known these will in all likelihood prove a fruitful source for the history of North Syria, of Cappadocia, and of Asia Minor throughout. Occasionally, too, though it is but rarely, an inscription in the Phœnician type of alphabet yields up important historical facts. When all is done, there is but scant hope that we shall be able to construct a consecutive history of persons and events in the ancient world. All that we can be content of securing, at any rate in Egypt, is the broad outline of development and change, chronologically graduated and varied by occasional pictures of extraordinary minuteness and brilliancy." F. L. Griffith, *Authority and Archaeology Sacred and Profane*, pt. 2, pp. 218-219 (V. F. Chas. Serbelli's Sons).

In Bible Lands: General results as affecting our knowledge of the ancient Hebrews.—

"The general result of the archaeological and anthropological researches of the past half-century has been to take the Hebrews out of the isolated position which, as a nation, they seemed previously to hold, and to demonstrate their affinities with, and oft in their dependence upon, the civilizations by which they were surrounded. Tribes more or less closely akin to themselves in both language and race were their neighbours alike on the north, on the east, and on the south; in addition to this, on each side there towered above them an ancient and imposing civilization,—that of Babylonia, from the earliest times active, enterprising, and full of life, and that of Egypt, hardly, if at all, less remarkable than that of Babylonia, though more self-contained and less expansive. The civilization which, in spite of the long residence of the Israelites in Egypt, left its mark, however, most distinctly upon the culture and literature of the Hebrews was that of Babylonia. It was in the East that the Hebrew traditions placed both the cradle of humanity and the more immediate home of their own ancestors; and it was Babylonia which, as we now know, exerted during many centuries an influence, once unsuspected, over Palestine itself.

"It is true, the facts thus disclosed, do not in any degree detract from that religious pre-eminence which has always been deemed the inalienable characteristic of the Hebrew race: the spiritual intuitions and experiences of its great teachers retain still their uniqueness; but the secular institutions of the nation, and even the material elements upon which the religious system of the Israelites was itself constructed, are seen now to have been in many cases common to them with their neighbours. Thus their beliefs about the origin and early history of the world, their social usages, their code of civil and criminal law, their religious institutions, can no longer be viewed, as was once possible, as differing in kind from those of other nations, and determined in every feature by a direct revelation from Heaven; all it is now known, have substantial analogies among other peoples, the distinctive character which they exhibit among the Hebrews consisting in the spirit with which they are infused and the higher principles of which they are made the exponent . . .

"What is called the 'witness of the monuments' is often strangely misunderstood. The monuments witness to nothing whif any reasonable critic has ever doubted. No one, for instance, has ever doubted that there were kings of Israel or Judah named Abab and Joram and Pekah and Abaz and Hezekiah, or that Tiglath-Pileser and Sennacherib led expeditions into Palestine, the mention of these (and such like) persons and events in the Assyrian annals has brought to light many additional facts about them which it is an extreme satisfaction to know, but it has only 'confirmed' what no critic had questioned. On the other hand, the Assyrian annals have shown that the chronology of the Books of Kings is, in certain places, incorrect; they have thus confirmed the conclusion which critics had reached independently upon internal evidence, that the parts of these books to which the chronology belongs are of much later origin than the more strictly historical parts, and consequently do not possess equal value.

"The inscriptions, especially those of Babylon, Assyria, and Egypt, have revealed to us an immense amount of information respecting the antiquities and history of these nations and also, in some cases, respecting the peoples with whom, whether by commerce or war, they came into contact; but (with the exception of the statement on the stele of Merneptah that 'Israel is desolated') the first event connected with Israel or its ancestors which they mention or attest is Shishak's invasion of Judah in the reign of Rehoboam, the first Israelites whom they specify by name are Omri and his son Abab. There is also indirect illustration of statements in the Old Testament relating to the period earlier than this; but the monuments supply no 'confirmation' of any single fact recorded in it, prior to Shishak's invasion."—S. R. Driver, *Authority and Archaeology Sacred and Profane*, pt. 1, pp. 150-151 (V. F. Chas. Serbelli's Sons).

Babylonia: Earlier explorations in.—For some account of the earlier archaeological explorations in Babylonia and their results, see (i) vol. I. BABYLONIA, PRIMITIVE; and (ii) vol. SEMITES.

Babylonia: American exploration of the ruins of ancient Nippur.*—"In the summer of 1888, the University of Pennsylvania fully equipped and sent out the first American expedition to the northern half of the plains of Babylonia to effect a thorough exploration of the ruins of Nippur—the modern Niffer, or, more correctly, Nuffar—on the border of the unwholesome swamps of the Euphrates, and to undertake extensive excavations. A few intelligent citizens of Philadelphia had met in the house of Ex-Provost Dr. William Pepper, and formed 'The Babylonian Exploration Fund' a short time before this with the purpose of effecting a systematic exploration of ancient Babylonia. What science owes to this unselfish undertaking can be adequately estimated only by posterity. . . . Two professors, Peters and Hilprecht, were entrusted with the management of the expedition. Dr. Peters as director, and Dr. Hilprecht as Assyriologist."—H. V. Hilprecht, ed., *Recent Research in Bible Lands*, p. 47.

* Quotations in this account from Professor Hilprecht's copyrighted reports in the "Sunday School Times" are used with permission from the publishers of that journal.

Professor Hilprecht, who conducts for the Sennar School Times, a most interesting and important department in which the proceedings and principal results of archaeological exploration in Table Lands have been currently chronicled during several years past, gave, in that journal of December 1, 1900, the following description of the scene and the historical importance of the ruins in which the excavations have mentioned have been carried on. "Nuffar is the modern Arabic name of an old Babylonian ruin situated about half way between the Tigris and Euphrates, at the northern boundary of the great Akkadian swamps, which are formed by the regular annual inundations of the Euphrates. In a straight line it is nearly eighty miles to the southeast from Baghdad. A large canal, now dry, and often for miles entirely filled with rubbish and sand, divides the ruins into two almost equal parts. On an average about fifty or sixty feet high, these ruins are torn up by frequent gullies and furrows into a number of spurs and ridges from the distance not unlike a rugged mountain range on the bank of the upper Tigris. In the Babylonian literature, the city buried here was called Nippur. According to Jewish tradition, strongly supported by arguments drawn from cuneiform texts and archaeological objects found at the ruins themselves, Nippur was identical with the Biblical Calneh, mentioned in Genesis 10-10, as one of the four great cities of the kingdom of Nimrod. It was therefore natural that the public in general should take a warm interest in our excavations at Nuffar. This interest grew considerably in religious circles when a few years ago I announced my discovery of the name of the river Chobar in two cuneiform texts from the archives of Nippur. It became then evident that this 'river Chobar,' which hitherto could not be located, was one of the four or five large canals once bringing life and fertility to the fields of Nippur; that, furthermore, a large number of the Jewish captives carried away by Nebuchadnezzar after the destruction of Jerusalem were settled in the plains around this city, and that even Ezekiel himself, while admonishing and comforting his people, and holding out to them Jehovah's mercy and never-failing promise of a brighter future, stood in the very shadow of Babylon's ancient national sanctuary, the crumbling walls of the great temple of Bel at Nippur. The beginning and end of Old Testament history thus point to Nippur as the background and theater for the first and final acts in the great drama of divine selection and human rejection in which Israel played the leading rôle."

In the same article, Professor Hilprecht indicated in a few words what was done at Nuffar by the first three of the four expeditions sent out from Philadelphia since 1888. "It was comparatively easy," he said, "to get a clear idea of the extent of the city and the life in its streets during the last six centuries preceding our era. Each of the four expeditions to Nuffar contributed its peculiar share to a better knowledge of this latest period of Babylonian history, particularly, however, the third and the present campaigns. But it was of greater importance to follow up the traces of a very early civilization, which, unfortunately, we had not during our first brief campaign in 1889. By means of a few deep trenches, the second expedition, in the following

year, had brought to light new evidence that a considerable number of ancient monuments existed in the lower strata of the temple mound. The third expedition showed that the monuments, while numerous, were mostly very fragmentary, thereby offering considerable difficulties to the decipherer and historian. But it also showed that a number of platforms entered through the temple mound, and made of baked bricks, frequently bearing inscriptions, enabled us to fix the size of the different strata of this mound with great accuracy. The two lowest of these platforms found were the work of kings and priest-kings of 1000 B.C. But, to our great astonishment, they did not represent the earliest trace of human life at Nippur. There were not less than about thirty feet of rubbish below them, revealing an even earlier civilization, the beginning and development of which lie considerably before the times of Sargon the Great (3800 B.C.) and Narām-Sîn, who had been generally regarded as half-mythical persons of the first chapter of Babylonian history."

Of the results of the work of these three expeditions of the University of Pennsylvania and of the studies for which they furnished materials to Professor Hilprecht, Professor Sayce wrote with much enthusiasm in the "Contemporary Review" of January, 1897, as follows: "In my Hilbert Lectures on the 'Religion of the Ancient Babylonians' I had been led by a study of the religious texts of Babylonian to the conclusion that Nippur had been a centre from which Babylonian culture was disseminated in what we then regarded as prehistoric times. Thanks to the American excavations, what were prehistoric times when my Hilbert Lectures were written have now become historic, and my conclusion has proved to be correct. . . . For the first time in Babylonian history, systematically carried their shafts through the various strata of historical remains which occupy the site, carefully noting the objects found in each, and when ever possible clearing each stage away when once it had been thoroughly examined. The work began in 1888, about two hundred Arabs being employed as laborers. . . . The excavations at Nippur were carried deeply and widely enough not only to reveal the history of the city itself but also to open up a new vista in the forgotten history of civilised man. The history of civilisation has been taken back into ages which a short while since were still undreamed of. Professor Hilprecht, the historian of the expedition, upon whom has fallen the work of copying, publishing and translating the multitudinous texts discovered in the course of it, declares that we can no longer hesitate to date the founding of the temple of Bel and the settlements in Nippur somewhere between 6000 and 7000 B.C., possibly even earlier. At any rate the oldest monuments which have been discovered there belong to the fifth or sixth millennium before the Christian era. Hitherto we have been accustomed to regard Egypt as the land which has preserved for us the earliest written monuments of mankind, but Babylonian now bids fair to overtake Egypt. The earliest fixed date in Babylonian history is that of Sargon of Akkad and his son Narām-Sîn. It has been fixed for us by Nabonidus, the royal antiquarian of Babylon. In one of his inscriptions he describes the excavations he made in order to discover the memorial of

Inders of Naram Sin, who had lived 3200 years before his own time. In my Hibbert Lectures I gave reasons for accepting this date as approximately correct. The recent discoveries at Niffer, Tellah, and other places have shown that my conclusion was justified.

Assyriologists have long had in their possession a cuneiform text which contains the annals of the reign of Sargon, and of the first three years of the reign of his son. It is a late copy of the original text, and was made for the library of Nineveh. Our critical friends have been particularly noisy over the credibility of the Assyriologists in accepting these annals as authentic.

So far from being unhistorical, Sargon and Naram Sin prove to have come at the end of a long preceding historical period, and the annals themselves have been verified by contemporaneous documents. The empire of Sargon, which extended from the Persian Gulf to the Mediterranean, was not even the first that had arisen in Western Asia. And the art that flourished under his rule, like the art which flourished in Egypt in the age of the Old Empire, was higher and more perfect than any that succeeded it in Babylonia. . . . Henceforward, Sargon and Naram Sin, instead of belonging to 'the grey dawn of time,' must be regarded as representatives of 'the golden age of Babylonian history.' That they should have undertaken military expeditions to the distant West, and annexed Palestine and the Sinaitic Peninsula to the empire they created need no longer be a matter of astonishment. Such empires had already been undertaken by Babylonian kings long before, the way was well known which led from one extremity of Western Asia to the other.

It is Mr. Haym's [Director of the explorations from 1891] who tells us that we are henceforth to look upon Sargon of Akkad as a representative of 'the golden age of Babylonian history' and his assertion is endorsed by Professor Hilprecht. In fact, the conclusion is forced upon both the excavator and the palaeographer. Professor Hilprecht, who, thanks to the abundant materials at his disposal, has been able to found the science of Babylonian palaeography, tracing the development of the cuneiform characters from one stage of development to another, and determining the age of each successive form of writing, has made it clear to all students of Assyriology that many of the inscriptions found at Niffer and Tellah belong to a much older period than those of the age of Sargon. The palaeographic evidence has been supplemented by the results of excavation. . . . As far back as we can penetrate, we still find inscribed monuments and other evidences of civilisation. It is true that the characters are rude and hardly yet lifted above their pictorial forms. They have, however, ceased to be pictures, and have already become that cursive script which we call cuneiform. For the beginnings of Babylonian writing we have still to search among the relics of centuries that lie far behind the foundation of the temple of Nippur.

The first king whom the excavations there have brought to light is a certain En-sag-sak-nu-ur who calls himself 'lord of Kengi' and conqueror of Kis 'the wicked.' Kengi—'the land of reeds and reeds,' as Professor Hilprecht interprets the word—was the oldest name of Babylonia, given to it in days when it was still

wholly occupied by its Sumerian population, and when as yet no Semitic stranger had ventured within it. The city of Kis now El-Hy-mari lay outside its borders to the north, and between Kis and Kengi there seems to have been constant war.

Nippur was the religious centre of Kengi, and Mul-il, the god of Nippur, was the supreme object of Sumerian worship. . . . A king of Kis made himself master of Nippur and its sanctuary, and the old kingdom of Kengi passed away. The final blow was dealt by the son of the Sumerian high priest of the 'Land of the Bow.' Lugal-zaggesi was the chieftain who descended from the north upon Babylonia and made it part of his empire.

Lugal-zaggesi lived centuries before Sargon of Akkad in days when, only a year ago, we still believed to lie far beyond the horizon of history and culture. We little dreamed that in that hour antiquity the great cities and sanctuaries of Babylonia were already old, and that the culture and script of Babylonia had already extended far beyond the boundaries of their motherland. The inscriptions of Lugal-zaggesi are in the Sumerian language, and his name, like that of his father, is Sumerian also. . . . The empire of Lugal-zaggesi seems to have passed away with his death, and at no long period subsequently a new dynasty arose at Ur. . . . According to Professor Hilprecht, this would have been about 4000 B.C. How long the first dynasty of Ur lasted we cannot tell. It had to keep up a perpetual warfare with the Semitic tribes of northern Arabia, Kisharra, 'the land of the herds,' as it was termed by the Sumerians. Meanwhile a new state was growing up on the eastern side of the Euphrates in a small provincial city called Lagas, whose ruins are now known as Tellah. Its proximity to Eridu, the seaport and trading depot of early Babylonia, had doubtless much to do with its rise to power. At all events the kings of Tellah, whose monuments have been brought to light by M. de Sarzec, became continually stronger, and the dynasty of Lagas took the place of the dynasty of Ur. One of these kings, E-Aun-ur, at length defeated the Semitic oppressors of northern Chaldaea in a decisive battle and overthrew the 'people of the Land of the Bow.' . . .

The kings of Lagas represent the closing days of Sumerian supremacy. With Sargon and his empire the Semitic age begins. The culture of Chaldaea is still Sumerian, the educated classes are for the most part of Sumerian origin, and the literature of the country is Sumerian also. But the king and his court are Semites, and the older culture which they borrow and adopt becomes Semitised in the process. . . . For many generations Sumerians and Semites lived side by side, each borrowing from the other, and mutually adapting and modifying their own forms of expression. . . . Sumerian continued to be the language of religion and law—the two most conservative branches of human study—down to the age of Abraham. . . . The new facts that have been discovered from the grave of the past furnish a striking confirmation of Professor Hommel's theory, which connects the culture of primitive Egypt with that of primitive Chaldaea, and derives the language of the Egyptians, at all events in part, from a mixed Babylonian language in which Semitic and Sumerian elements alike claimed a share. We now know

that such a mixed language could once exist, and we can now that this language and the written characters by which it was expressed were common to the shores of the Mediterranean and the coast of Egypt in the earliest record of Egyptian history. A. H. Sayce, *Journal of the Asiatic Society of London, 1897*.

The third of the Pennsylvania expeditions closed its work at Nippur in February, 1896. There was then an interval of three years before a fourth expedition resumed work at the ruins in February, 1899. In the "Sunday School Times" of April 29 and May 27, 1899, Professor Hilprecht, who did not go personally to Nippur until later in the year, gave the following account of the friendly reception of the exploring party by the Arabs of the district, from whom there had been formerly much experience of trouble. "The Akkadians, in whose territory the large mounds are situated, had carefully guarded the expedition's stronghold—a mud castle—half way between the ruins and the marshes, which had been sealed and entrusted to them, as before we quitted the field some years ago. They now gave to the expedition a hearty welcome, accompanied by shouting, shouting, dancing, and singing, and were evidently greatly delighted to have the Americans once more in the neighborhood. In the presence of Haji Torki, their commander in chief, who was surrounded by his retainers, sheikhs and other dignitaries, of the Akkadians, the former arrangements with the two sheikhs, Hamid Bajir and Abdul Hamid were renewed, and new pledges given for the security and welfare of the little party of explorers, the constant guards and water being especially emphasized. In accordance with the Oriental custom, the expedition showed its appreciation of the warm reception by preparing for their hosts a magnificent feast, at which plenty of meat and fatted fow were eaten by some fifty Arabs, and the old bond of friendship was renewed in a glow with friend and salt."

Despite all the advantages resulting from the Akkadians' changed attitudes from the presence of the Americans were carefully calculated by the Arabs the three years (February, 1896-1899) that we had withdrawn our expedition from their territory. They have apparently found out that the comparatively large amount of money brought into their country through the wages paid to many Arabs employed as workmen and through the purchase of milk, eggs, chicken, mutton, and all the other material supplied by the surrounding tribes for our camp, with its about two hundred and fifty persons, has done much to improve their general condition. The conviction has been growing with them that we have no more to demand of anything to which they attach great value themselves, nor to establish a new military station for the Turkish government in order to gather taxes and unpaid debts. The Akkadians, engaged by the Expedition, has been actively treated, and help and assistance have only been given cheerfully and gratis to the many sick people who apply daily for medical aid, and many or less during the whole year from pulmonary diseases, typhoid and malarial fevers, easily contracted in the midst of the extended marshes which they inhabit."

In the "Sunday School Times" of August 5, in the same year, Professor Hilprecht reported:

The mounds of Nippur seem to conceal an al-

most inexhaustible treasure of inscribed cuneiform tablets, by means of which we are enabled to restore the chronological history of the land and the high degree of civilization which reached a very early date by the ancient world, and between the lower Euphrates and Tigris. More than 33,000 of these precious documents were found during the previous campaigns. Not less than 4,756 tablets have been rescued from February 6 to June 10 of this year, averaging therefore nearly 4,200 manuscripts in clay—as we may style them—per month. About the fourth part of these tablets is in perfect condition, while a very large proportion of the remaining ones are good sized fragments of tablets that are broken but their general contents, and many important details can be ascertained by the patient decipherer.

In November, 1899, Professor Hilprecht started for the field to superintend the excavations in person and on the way he wrote to the "S. S. Times" published December 15. "The deeper trenches of the Babylonian Expedition at the University of Pennsylvania descend into the lower strata of Nippur, the probable site of the biblical Calneh, the more important and interesting become the results obtained. The work of clearing the northeastern wall of the highest, towering temple of Bel was continued with success during the summer months. Particularly numerous were the inscribed vase fragments brought to light, and almost exclusively belonging to the pre-Sargonic period, 3800 B. C. and before. As I showed in the second part of Volume I of our official University publication, this fragmentary condition of the vases is due to the wilful destruction of the temple property by the numerous Elamite hordes who, towards the end of the third pre-Christian millennium, invaded the Babylonian cities, extending their conquest and devastation even as far as the shores of the Mediterranean Sea (comp. Gen. 11). From the earliest historical period down to about 2500 B. C., when this national calamity befell Babylon, the large temple storehouse, with its precious statues, votive, slides and vases, immortal stones, bronze figures, and other gifts from powerful monarchs and governors had practically remained intact. What, therefore, is left of the demolished and scattered contents of this ancient chamber as a rule is found above the platform of En-Ninur (about 2500 B. C.), in a layer several feet thick and about twenty five feet wide surrounding the front and the two side walls of the temple. The systematic clearing and examination of this layer, and of the huge mass of ruins lying above it, occupied the attention of the expedition considerably in the past years and was continued with new energy during the past six months."

At the end of January, 1900, Professor Hilprecht arrived in Babylon and wrote some weeks later to the "Sunday School Times" of May 19. "As early as eleven years ago, the present writer pointed out that the extensive group of hills to the southwest of the temple of Bel must be regarded as the probable site of the temple library of ancient Nippur. About twenty five hundred tablets were rescued from the trenches in this hill during our first campaign. Later excavations increased the number of tablets taken from these mounds to about fifteen thousand. But it was only within the last six weeks that my old theory could be established beyond any

reasonable doubt. During this brief period a series of rooms was exposed which furnished not less than five or six cuneiform and cuneiform documents. From one part of the temple library during the latter half of the third millennium B. C. In fact, now the tablets were lying on ledges of mud-brick, and were on shelves for the temple library. The tablets were from different parts of the temple, and the present campaign has even now more than twenty-one thousand, and is rapidly increased by new finds every day. The content of these cuneiform library are as varied as possible. Texts of Sumerian words and cuneiform signs, arranged according to different principles, and of fundamental value for our knowledge of the early non-Semitic language of the country. In the present campaign, the American expedition stands readily first among the three expeditions at present engaged in the exploration of Ancient Babylon and the restoration of its past history.

Three weeks later he added: "The Temple Library, as indicated in the writer's last report, has been definitely located at the precise spot which in 1889 the present writer pointed out as its most probable site. Nearly eighteen thousand cuneiform documents have been rescued this year from the shelves of a series of rooms in its southeastern and northwestern wings. The total number of tablets (mostly of a didactic character) obtained from the library up to date is from twenty-five thousand to twenty-six thousand tablets (whole and broken). In view, however, of more important other duties to be executed by this expedition before we can leave Nippur this year, and in consideration of the enormous amount of time and labor required for a methodical exploration of the whole mound in which it is concealed, I have recently ordered all the gangs of Arab workmen to be withdrawn from this section of ancient Nippur and to be set at work at the eastern fortification line of the city, close to the temple complex proper. According to a fair estimate based upon actual finds, the unique history of the temple, and topographical indications, there must be hidden at least from a hundred thousand to a hundred and fifty thousand tablets more in this ancient library, which was destroyed by the invading Elamites about the time of Abraham's emigration from Ur of the Chaldees. Only about the twentieth part of this library (all of Dr. Haynes's previous work included) has so far been examined and excavated."

In the same letter the Professor described the uncovering of one ledge of a large pre-Sargonic palace, "the chief discovery," in his opinion, "of this whole campaign." "A thorough examination of this large palace," he wrote, "will form one of the chief tasks of a future expedition, after its character, age, and extent have been successfully determined by the present one. Important art treasures of the Tello type, and library documents may reasonably be expected to be unearthed from the floor level of its many chambers. It has become evident, from the large number of pre-Sargonic buildings, walls, and other antiquities discovered on both sides of the Shatt en Nil, that the pre-Sargonic Nippur was of by far greater extent than had been an-

ticipated. This discovery, however, is only in strict accord with what we know from the cuneiform documents as to the importance of historical role which the temple of Bel, the father of the gods, as the central national sanctuary of ancient Babylonia, played in the earliest period, long before Babylon, the capital of the later empire, achieved any prominence."

The work at Nippur was suspended for the season about the middle of May, 1900, and Professor Hilprecht, after his return to Philadelphia, wrote of the general fruits of the campaign, in the "Sunday School Times" of December 1. "As the task of the fourth and most recent expedition, just completed, I had mapped out long before its organization the following work, it was to determine the probable extent of the earliest pre-Sargonic settlement at ancient Nippur, to discover the precise form and character of the famous temple of Bel at this earliest period, to define the exact boundaries of the city proper, if possible, to find one or more of the great city gates (fragments of which are in the inscriptions); to locate the great temple library and educational quarters of Nippur, to study the different modes of burial in use in ancient Babylonia, and to study all types and forms of pottery, with a view to finding laws for the classification and determination of the ages of vases, always excavated in large numbers at Nippur. The work set before us has been accomplished. The task was great, almost too great for the limited time at our disposal."

But the number of Arab workmen, busy with pickaxe, scraper, and basket in the trenches for ten to fourteen hours every day, gradually increased to the full force of four hundred. In the course of time, when the nearly twenty-five thousand cuneiform texts which form one of the most conspicuous prizes of the present expedition have been fully deciphered and interpreted, when the still hidden larger mass of tablets from that great educational institution, the temple library of Calneh Nippur, discovered at the very spot which I had marked for its site twelve years ago, has been brought to light,—a great civilization will loom up from past millenia before our astonished eyes. For four thousand years the documents which contain this precious information have disappeared from sight, forgotten in the destroyed rooms of ancient Nippur. Abraham was about leaving his ancestral home at Ur when the great building in which so much learning had been stored up by previous generations collapsed under the ruthless acts of the Elamite hordes. But the light which begins to flash forth from the new trenches in this lonely mound in the desert of Iraq will soon illumine the world again. And it will be no small satisfaction to know that it was rekindled by the hands of American explorers."

Babylonia: German exploration of the ruins of Babylon.—An expedition to explore the ruins of Babylon was sent out by the German Orient Society, in 1890, under the direction of Dr. Kohlewey, an eminent architect and archaeologist, who had been connected with previous works of excavation done in Babylonia and northern Syria. In announcing the project, in the "Sunday School Times" of January 28, 1890, Professor Hilprecht remarked: "These extended ruins will require at least fifty years of labor if they are to be excavated as thoroughly

and systematically as the work is done by the American expedition at Nippur, which has employed in its trenches never less than sixty, but frequently from two hundred to four hundred American workmen at the same time during the last ten years. Certain parts of the ruins of Babylon have been previously explored and excavated by Layard, Rawlinson, and the French expedition under Fossé and Oppert, to which we owe the first accurate details of the topography of this ancient city. Within some what more than a year later from Nippur, after having visited the German party at Babylon, Professor Hilprecht said of its work: "The chief work of the expedition during the past year was the exploration of the great ruin heap called El Kesi, under which are hidden the remains of the palace of Nebuchadnezzar, where Alexander the Great died after his famous campaign against India. Among the few important antiquities so far obtained from this imposing mound of Ancient Babylon is a new Hittite inscription and a new Babylonian stela with an interesting cuneiform record. Very recently, Dr. Schliemann, whose excellent topographical surveys form a conspicuous part of the results of the last year, has found the temple of the goddess Nin-Mah, so often mentioned in the building inscriptions of the neo-Babylonian rulers, and a little terra-cotta statue of the goddess. The systematic examination of the enormous mass of ruins covering Ancient Babylon will require several decennies of continued hard labor. To facilitate this great task, a bill has been submitted to the German Reichstag requesting a yearly government appropriation of over fifteen thousand dollars, while at the same time application has been made by the German Orient Committee to the Ottoman Government for another Roman to carry on excavations at Warka, the biblical Erech, whose temple archive was badly pillaged by the invading Elamites about 2250 B. C."

Some account of results from the uncovering of the palace of Nebuchadnezzar are quoted from "Die Illustrirte Zeitung" in the "Scientific American Supplement" of December 16, 1899, as follows: "According to early Babylonian records, Nebuchadnezzar completed the fortifications of the city, begun by his father Nabopolassar, consisting of a double inclosure of strong walls, the inner called Inzur Bel or Bel is gracious, the outer Nemitti Bel or foundation of Bel. The circumference of the latter according to Herodotus was 480 stades (55 miles), its height 340 feet, and its thickness 85 feet. At the inner and outer peripheries one-story houses were built, between which was room enough for a chariot drawn by four horses harnessed abreast. When Koldewey cut through the eastern front of Al Kesi, he came upon a wall which was undoubtedly that described by Herodotus. The outer eastern shell was composed of burnt brick and asphalt, 24 feet in thickness, then came a filling of sand and broken stone 704 feet in thickness, which was followed by an inner western shell of 43 feet thickness. The total thickness was, therefore, 137.5 feet. By dint of hard work this wall was cut through and the entrance to Nebuchadnezzar's palace laid bare. Koldewey and his men were enabled to verify the description given by Diodorus of the polychromatic reliefs which graced the walls of the royal towers and palaces. It still remains to

be seen how trustworthy are the statements of other ancient historians. The city's walls, previous investigations have found, were lined with many temples, chief among them the city of the forty towering towers, the temple of the city, and the national god Marduk. Marduk and his spouse Zarpanit. Standing toward the east were the Hanging Gardens, one of the world's seven wonders, located in the northern mound of the ruins of Babel. The temple described by Herodotus is that of Nabonidus, supposed to be from Babylon, which Herodotus included under Babylon and which the cuneiform inscriptions term "Babylon the Second." This temple, which in the mind of Babylonia is the most important ruin of Babylon, is called the eternal house, in the inscriptions it was restored by Nebuchadnezzar with great splendor. In form it is a pyramidal building seven stories high, which reason it is sometimes referred to as the "Temple of the Seven Spheres of Heaven and Earth." The Tower of Babel described in Genesis is perhaps the same structure. It remains for the German expedition to continue its excavations in Nebuchadnezzar's palace."

Babylonia. Discovery of an inscription of Nabonidos, the last of the Babylonian kings. "A discovery of the greatest importance has just been made by Father Schell, who has for some time been exploring in Babelonia. In the Marduk mound, one of the principal heaps of ruins in the ruins of Babylon, he has discovered a long inscription of Nabonidos, the last of the Babylonian Kings, B. C. 555-539, which contains a mass of historical and other data which will be of greatest value to students of this important period of Babylonian history. The monument in question is a small 'stela' of diorite, the upper part of which is broken, inscribed with eleven columns of writing, and which appears to have been erected early in the King's reign. It resembles in some measure the celebrated India House inscription of Nebuchadnezzar, but is much more full of historical matter. Its value may be estimated when it is stated that it contains a record of the war of revenge conducted by the Babylonians and their Median allies against Assyria for the destruction of the city by Sennacherib in B. C. 698; an account of the election and coronation of Nabonidos in B. C. 555, and the wonderful dream in which Nebuchadnezzar appeared to him, as well as an account of the restoration of the temple of the Moon god at Harran, accompanied by a chronological record which enables us to fix the date of the so-called Scythian invasion. There is also a double allusion to the murder of Sennacherib by his son in Telai, B. C. 681." *Am. Journal of Archaeology, January-March, 1899.*

Persia. French exploration of the ruin of Susa, the capital of ancient Elam. In 1897 an arrangement was completed between the French Government and the Shah of Persia by which the former obtained the exclusive right of archaeological explorations in the latter's empire, coupled with certain privileges for the exportation of different kinds of antiquities that might be unearthed. Soon afterwards, M. de Morgan, late director of excavations in Egypt, who had made archaeological researches in the regions east of the Taurus before was placed at the head of a French expedition to Susa, the ancient capital of Elam, the upper strata of

which had been successfully explored by M. Dieulafoy. In the Babylonian cuneiform inscriptions Elam appears as the most terrible foe of the Babylonian empire from the earliest time, and the name of its capital, Susa, or Shush, was discovered by the present editor several years ago. A small vase object in a clay originally manufactured and inscribed in southern Babylonia, in the last half of the third pre-Christian millennium, several hundred years after wars carried away as part of their spoil by the invading Elamites, and in the middle of the fourth century B. C. recaptured, re-inscribed, and presented to the temple of Nippur by King Kuru-Adad, after his conquest of Susa. It was therefore evident that, if the same method of excavating was applied to the ruins of Susa as had been applied so successfully by the University of Pennsylvania's expedition in Nippur, remarkable results would soon be obtained, and amply repay all labor and money expended. M. de Morgan, accompanied by some engineers and architects, set hopefully to work, cutting his trenches more than fifty feet below the ruins of the Achaemenian dynasty. The first campaign, 1890-91, was so successful, in the discovery of buildings and inscribed antiquities, that in October of last year the French government dispatched the Assyriologist Professor Schell, in order to decipher the new cuneiform documents, and to report on their historical bearings.

"Among the more important finds so far made, but not yet published, may be mentioned over a thousand cuneiform tablets of the earlier period, a beautifully preserved obelisk more than five feet high, and covered with twelve hundred lines of Old Babylonian cuneiform writing. It was inscribed and set up by King Manishtush, who left inscribed vases in Nippur and other Babylonian cities. A stele of somewhat smaller size, representing a battle in the mountains, testifies to the high development of art at that remote period. On the one end it bears a mutilated inscription of Narâm-Sîn, son of Sargon the Great (2300 B. C.); on the other, the name of Shûti-Shilkhak, a well-known Elamite king, and grandfather of the biblical Aholah (Gen. 10). These two monuments were either left in Susa by the two Babylonian kings whose names they bear, after successful operations against Elam, or they were carried off as booty at the time of the great Elamite invasion, which proved so disastrous to the treasure-houses and archives of Babylonian cities and temples [see above: BABYLONIA]. The latter is more probable to the present writer, who in 1896 Old Babylonian Inscriptions, Part II, p. 33, pointed out, in connection with his discussion of the reasons of the lamentable condition of Babylonian temple archives, that on the whole we shall look in vain for well-preserved large monuments in most Babylonian ruins, because about 2280 B. C. that which in the eyes of the national enemies of Babylonia appeared most valuable was carried to Susa and other places, what did not find favor with them was smashed and scattered on Babylonian temple courts."—Prof. H. V. Hilprecht, *Oriental Research (Sunday School Times, Jan. 28, 1899)*.

Egypt. Earlier explorations.—For some account of earlier archaeological explorations in Egypt, see in vol. I, *EGYPT*.

Egypt. Results of recent exploration.—

The opening up of prehistoric Egypt. — The tomb of Mena. — The funeral temple of Merenptah. — Single mention of the people of Israel.—"During all this century in which Egyptian history has been studied at first hand, it has been accepted as a sort of axiom that the beginnings of things were quite unknown. In the epitome of the history which was drawn up under the Greeks to make Egypt intelligible to the rest of the world, there were three dynasties of kings stated before the time of the great pyramid builders, and yet of those it has been commonly said that no trace remained. Hence it has been usual to pass them by with just a mention as being half fabulous, and then to begin real history with Seneferu or Khufu (Cheops), the kings who stand at the beginning of the fourth dynasty, at about 4000 B. C. The first discovery to break up this habit of thought was when the prehistoric colossal statues of Men, the god of the city of Koptos, were found in my excavations in his temple. These had carvings in relief upon them wholly different from anything known as yet in Egypt, and the circumstances pointed to their being earlier than any carvings yet found in that country. In the same temple we found also statues of sacred animals and pottery which we now know to belong to the very beginning of Egyptian history, many centuries before the pyramids, and probably about 5000 B. C. or earlier.

"The next step was the finding of a new cemetery and a town of the prehistoric people, which we can now date to at least 5000 B. C., within two or three centuries either way. This place lay on the opposite side of the Nile to Koptos—that is to say, about 20 miles north of Thebes. At first we were completely staggered by a class of objects entirely different from any yet known in Egypt. We tried to fit them into every gap in Egyptian history, but found that it was impossible to put them before 3000 B. C. Later discoveries prove that they are really as old as 5000 B. C. They show a very different civilization from that of the Egyptians whom we already know—far less artistic, but in some respects even more skillful in mechanical taste and touch than the historical Egyptians. They built brick houses to live in, and buried their dead in small chambers sunk in the gravels of the water courses, lined with mats, and roofed over with beams. They show several points of contact with the early Mediterranean civilization, and apparently have been mainly north African tribes of the European type. Their pottery, in its patterns and coloring, shows designs which have survived almost unchanged unto the present day among the Kabyles of the Algerian Mountains. And one very peculiar type of pottery is found spread from Spain to Egypt, and indicates a widespread commercial intercourse at that remote day. The frequent figures upon the vases of great galley ships rowed with oars show that shipping was well developed then, and make the evidences of trading between different countries easy to be accepted.

"All of the above belongs to the age probably before 4500 B. C., which is the age given for the first historical king of Egypt by the Greek history of Manetho. A keystone of our knowledge of the civilization is the identification of the tomb of Mena, the first name in Egyptian history, the venerated founder of all the long series of hundreds of historic kings. This tomb, about

15 miles north of Thebes, was found by some Arabs, and shown to M. De Morgan, the director of the Department of Antiquities. It was a mass of about thirty chambers built of mud brick and earth. Each chamber contained a different class of objects: one of stone vases, one of silver dishes, one of copper tools, one of water jars, etc. And among the things are carvings of lions and vases in rock crystal and obsidian, large hard stone vases, some papyrus for grinding paint, pottery vases, and above all, an ivory tablet with relief carvings which show the names of the king. Besides this, M. Amelin has found sixteen tombs of this same general character at Abydos, which we can hardly now doubt belong to the early kings of the first three dynasties, and some four or five have been actually identified with the names of these kings in the Greek history. So now instead of treating the first three dynasties as half fabulous and saying that Egyptian art and civilization begin full blown at 4000 B. C., we have the clear and tangible remains of much of these early kings back to 4500 B. C., and a stretch of some centuries of the prehistoric period with a varied and distinctive civilization, well known and quite different from anything later. Lying before 4500 B. C. To put the earlier part of this to 5500 B. C. is certainly no stretch of probability.

We now pass entirely from these early times, with their fascinating insight into the beginnings of things, long before any other human history that we possess, until we reach down to what seems quite modern times in the record of Egypt, where it comes into contact with the Old Testament history. On clearing out the funeral temple of King Merneptah I found in that the upper half of a fine colossal statue of his, with all the colors still fresh upon it. As this son of Ramesses the Great is generally believed to be the Pharaoh of the exodus, such a fine portrait of him is full of interest. Better even than that I found an immense tablet of black granite over 10 feet high and 5 feet wide. It had been erected before two centuries, before and brilliantly carved by an earlier king, whose temple was destroyed for materials by Merneptah. He took this splendid block and turned its face upward against the wall of his temple and carved the back of it with other scenes and long inscriptions. Most of it is occupied with the history of his vanquishing the Libyans or North African tribes, who were then invading Egypt. But at the end he recounts his conquests in Syria, among which occurs the priceless passage: "The people of Israel are spoiled, they have no seed." This is the only trace yet found in Egypt of the existence of the Israelites, the only mention of the name, and it is several centuries earlier than the references to the Israelite and Jewish kings in the cuneiform inscriptions of Assyria.

What relation this has to our biblical knowledge of the Israelites is a wide question, that has several possible answers. Without entering on all the openings, I may here state what seems to me to be the most probable connection of all the events, though I am quite aware that fresh discoveries might easily alter our views. It seems that either all the Israelites did not go into Egypt or else a part returned and lived in the south of Palestine before the exodus that we know, because we here find Merneptah defeating Israelites at about 1200 B. C. Of his conquest

and of those of Ramesses III in Palestine there are no traces in the biblical accounts, the absence of which indicates that the entry into Canaan took place after 1160 B. C., the first year of Ramesses III. Then the period of the Judges is given in a triple record, that of the north, that of the east of the Jordan, and of Ephraim, and the west, and these three accounts are quite distinct and never overlap, though the history passes in succession from one to another. Thus the whole age of Judges is but little over a century. And to this agree the priestly genealogies stretching between the tabernacle and temple periods.

Leaving now all the monumental age, we come lastly to the evidences of the Christian period, preserved in the papyrus or miscellaneas waste papers left behind in the town of the Roman times. Last winter my friends, Mr. Grenfell and Mr. Hunt, cleared out the remains of the town Behnesa, about 110 miles south of Cairo. There, amid thousands of stray papers, documents, rolls, accounts, and all the waste sweepings out of the city offices they found two leaves which are priceless in Christian literature—the leaf of Logia or sayings of Jesus, and the leaf of Matthew's Gospel. The leaf of the Logia is already so widely known that it is needless for me to describe it. The leaf of Matthew's Gospel is of great interest in the literary history of the Gospels. Hitherto we have had no manuscripts older than the second great ecclesiastical settlement under Theodosius. Now we have a piece two ages earlier, before the first settlement of things under Constantine at the council of Nicea. Here, in the middle of the third century, we find that the beginning of the Gospel, the most artificial, and probably the latest, part, the introductory genealogy and account of the Nativity, was exactly in its present form. This gives us the greatest confidence that the Gospel as we have it dates from the time of the great persecutions. Such are some of the astonishing and far-reaching results that Egypt has given us within three years past.

W. M. Flinders Petrie, *Recent Research in Egypt* (Sunday School Times, Feb. 19, 1898).

In a later article, contributed to the "Popular Science Monthly," Professor Petrie has described more fully the results of recent exploration in Egypt, especially with reference to the discovery and study of prehistoric remains. The following are passages from the article: "The great stride that has been made in the last six years is the opening up of prehistoric Egypt, leading us back some 2000 years before the time of the pyramid builders. Till recently nothing was known before the age of the finest art and the greatest buildings, and it was a familiar puzzle how such a grand civilization could have left no traces of its rise. This was only a case of blindness on the part of explorers. Upper Egypt teems with prehistoric remains, but as most of what appears is dug up by plunderers for the market, until there is a demand for a class of objects, very little is seen of them. Now that the prehistoric has become fashionable, it is everywhere to be seen. The earlier diggers were dazzled by the polished colossi, the massive buildings, the brilliant sculptures of the well-known historic times, and they had no eyes for small graves, containing only a few jars or, at best, a flint knife.

"The present position of the prehistory of Egypt is that we can now distinguish two separate cultures before the beginning of the Egyptian dynasties, and we can clearly trace a sequence of monuments and, at throughout long ages before the pyramid builders, or from say 6000 B.C., covering a continuous history of 5000 years for man in Egypt. Continuous I say advisedly, for some of the prehistoric ways are those kept up to the present time. In the earliest stages of this prehistoric culture metal was already used and pottery made. Why no ruder stages are found is perhaps explained by the fact that the alluvial deposits of the Nile do not seem to be much older than 5000 years. The rate of deposit is well known, very closely one metre in a thousand years, and borings show only eight metres thick of Nile mud in the valley. Before that the country had enough rain to keep up the volume of the river, and it did not drop its load. It must have run as a rapid stream through a barren land of sand and stones, which could not support any population except paleolithic hunters. With the further drying of the climate, the river lost so much velocity that its mud was deposited and the fertile mud flats made cultivation and a higher civilization possible. At this point a people already using copper came into the country.

"The second prehistoric civilization seems to have belonged to a people kindred to that of the first age, as much of the pottery continued unchanged, and only gradually faded away. But a new style arose of a hard, buff pottery, painted with patterns and subjects in red outline. Ships are represented with cabins on them, and rowed by a long bank of oars. The use of copper became more general, and gold and silver appear also. Though this civilization was in many respects higher than that which preceded it yet it was lower artistically, the figures being ruder and always flat, instead of in the round.

"The separation of these two different ages has been entirely reached by the classification of many hundreds of tombs, the original order of which could be traced by the relation of their contents. The material for this study has come entirely from excavations of my own party at Nagada (1895), Abydos, and Hu (1899); but great numbers of tombs of these same ages have been opened without record by M. de Morgan (1896-97) and by French and Arab speculators in antiquities. The connection between these prehistoric ages and the early historic times of the dynastic kings of Egypt is yet obscure. The cemeteries which would have cleared this have unhappily been looted in the last few years without any record, and it is only the chance of some new discoveries that can be looked to for filling up the history.

"We can at least say that the pottery of the early kings is clearly derived from the later prehistoric types, and that much of the civilization was in common. But it is clear that the second prehistoric civilization was degenerating and losing its artistic taste for fine work before the new wave of the dynastic or historic Egyptians came to open it. These early historic people are mainly known by the remains of the tombs of the early kings found by M. Amelineau at Abydos (1896-99) and probably the first stage of the same race is seen in the rude colossi of the

god Min, which I found at Koptos (1894). In these great discoveries of the last few years we can trace at least three successive peoples, and see the gradual rise of the arts, from the man who was buried in his goat skins with one plain cup by him, up to the king who built great monuments and was surrounded by most sumptuous handiwork. We see the rise of the art of exquisite flint flaking, and the decline of that as copper came more commonly into use. We see at first the use of signs, later on disused by a second race, and then superseded by the elaborate hieroglyph system of the dynastic race.

"Turning now to the purely classical Egyptian work, the principal discoveries of the last few years have given us new leading examples in every line. The great copper statue of King Pepy, with his son, dates from before 3000 B.C. It is over life size, and entirely wrought in hammered copper, showing a complete mastery in metal work of the highest artistic power. Many of the royal temples of the 19th dynasty at Thebes were explored by the English in 1896. The Ramessum was completely examined, throughout all the maze of stone chambers around it. But the most important result was the magnificent tablet of black granite, about 10 feet high and 5 wide, covered on one side with an inscription of Amenhotep III, and on the other side with an inscription of Merneptah. The latter account, of about 1200 B.C., mentions the war with the 'People of Israel'; this is the only naming of Israel on Egyptian records, and is several centuries earlier than any Assyrian record of the Hebrews.

"One of the most important results of historical Egyptian times is the light thrown on prehistoric Greek races. The pottery known as 'Mykenian' since the discoveries of Schliemann in the Peloponnese was first dated in Egypt at Gurob in 1889; next were found hundreds of vase fragments at Tell el Amarna in 1892; and since then several Egyptian kings' names have been found on objects in Greece, along with such pottery. The whole of this evidence shows that the grand age of prehistoric Greece, which can well compare with the art of classical Greece, began about 1500 B.C., was at its highest point about 1400 B.C., and became decadent about 1200 B.C., before its overthrow by the Dorian invasion. Besides this dating, Greece is indebted to Egypt for the preservation of the oldest texts of its classics."—W. M. Flinders Petrie, *Recent Years of Egyptian Exploration* (Appleton's Popular Science Monthly, Apr., 1900).

Still later, in an address at the annual meeting of the Egypt Exploration Fund, November 7, 1900, Professor Petrie summed up with succinctness the gains to our knowledge of early man from the later researches in Egypt. "How many controversies," he said, "had waged over Mincho! And now from the Royal tombs of Abydos we had seen and handled this summer the drinking bowls and furniture of the Kings of the first dynasty, even the property of Menes himself, the first King of United Egypt. The early Kings, whom we had scarcely believed in, even Menes who had been proclaimed a mythical version of the Cretan Minos and the Indian Manu, came now before us as real and as familiarly as the Kings of the 30th dynasty or of Saxon England, and never before had so remote a period been brought so completely before us

as it had been in the work this year at Abydos. And how did Manetho and the State history of Seti bear the test? Five Kings we could already identify out of the eight recorded for the first dynasty. These five are proved to have been recorded in their correct order, although the time of the first dynasty was so remote from even that of Seti that all the names had become slightly altered by transmission. It was to be remembered that the first dynasty was older to Seti than the Exodus was to us. Now that we were no longer afraid of our own rashness in assigning anything to a date before the fourth dynasty, and could deal with the earliest periods back to the first entry of agricultural man into Egypt, we could see more of the perspective of history. We saw pre-dynastic man scattering his massive flint weapons until the age of Nile mud beginning about 7000 B. C. made agriculture possible, and a Caucasian race existed the paleolithic folks, whose portraits were left us in the figures found in the earliest graves. We saw this oldest race of man to have been of the Hottentot type, but even more hairy than the Hottentot, with the traces of his original North African habitation not yet wiped off by tropical suns. Then we saw a rapidly rising civilization already knowing metals linked with the modern Kabylo both by bodily formation and by existing products. Next after some dozen generations we could trace strong Eastern or Semite influence, which carried on this civilization to a higher point in many respects, and then decay set in and the first cycle that we could trace was completed. The next cycle began with the entry of the dynamic race from the Red Sea, possessing the elements of hieroglyphic writing and far more artistic sense and power than the earlier people. In some three or four centuries they had gradually conquered and invaded all the races scattered through Egypt—long haired, short haired, bearded and unbearded, clothed and unclothed; and the first King of all Egypt, who founded his new capital at the mouth of the valley, was Menes. The era of consolidation which preceded him was stated by Manetho as the dynasty of ten Kings of Abydos, who reigned for 300 years; it was a time of rapidly increasing civilization, during which most of the main features of Egyptian language, life, and art were stamped for 5000 years to come. From the Royal tombs of Abydos we could see now how this art rose to its finest age in the middle of the first dynasty, and was decaying and becoming cheaper and more common by the end of that time. Probably we should see that this cycle was fading when some new impetus gave birth to the colossal ages of the pyramid builders. That grand period we now see to have been the third cycle of civilization and art, which was renewed again and again until we might see in the brilliance of the Fatimite dynasty the seventh of the great eras of Egypt. Such was the wider aspect of human history which the work solely of English exploration in Egypt now put before us. It might be safely said that there had never been a greater extension of knowledge of man's past in any decade than the discoveries of the last five years had unfolded. Details yet awaited us, but the main lines were all marked out, and their work of the future was to complete the picture of which we now had the full extent before us. What, now, would occupy the com-

ing winter was the exploration of the remaining Royal tombs.

Egypt: Discovery of a fragment of the Logia, or Sayings of Jesus. During the winter of 1896-7, Messrs. Bernard P. Grenfell and Arthur S. Hunt conducted excavations for the Egypt Exploration Fund on the site of Oxyrhynchus, which was a flourishing city in the time of Roman rule in Egypt. Large quantities of papyri were found in the rubbish heaps of the town, and among them one fragment of special and remarkable interest, as thus described by the discoverers, in a brief report, entitled "Sayings of Our Lord," published by the Egypt Exploration Fund in 1897. The document in question is a leaf from a papyrus book containing a collection of Logia or Sayings of our Lord of which some, though presenting several novel features, are familiar, others are wholly new. It was found at the very beginning of our work upon the town, in a mound which produced a great number of papyri belonging to the three centuries of our era, those in the immediate vicinity of our fragment belonging to the second and third centuries. This fact, together with the evidence of the handwriting, which has a characteristically Roman aspect, fixes with certainty 300 A. D. as the lowest limit for the date at which the papyrus was written. The general probabilities of the case, the presence of unusual contractions found in biblical MSS., and the fact that the papyrus was in book, not roll, form, put the first century out of the question, and made the first half of the second unlikely. The date therefore probably falls within the period 150-300 A. D. More than that cannot be said with any approach to certainty. . . . The fragment measures 5½x3½ inches, but its height was originally somewhat greater, as it is unfortunately broken at the bottom.

The following is a translation of the fragmentary sayings inscribed on the leaf:

" . . . and then shalt thou see clearly to cast out the mote that is in thy brother's eye."

"Jesus saith, Except ye fast to the world, ye shall in no wise find the kingdom of God; and except ye keep the sabbath, ye shall not see the Father."

"Jesus saith, I stood in the midst of the world, and in the flesh was I seen of them, and I found all men drunken, and none found I athirst among them, and my soul grieved over the sons of men, because they are blind in their heart. . . ."

"Jesus saith, Wherever there are . . . and there is one . . . alone, I am with him. Raise the stone and there thou shalt find me, cleave the wood and there am I."

"Jesus saith, A prophet is not acceptable in his own country, neither doth a physician work cures upon them that know him."

"Jesus saith, A city built upon the top of a high hill, and stablished, can neither fall nor be hid."

Egypt: New discoveries in the tombs of the Valley of the Kings.—In the Valley of the Kings, which extends along the west bank of the Nile, in the Libyan Mountains, opposite Luxor, M. Loret, director of the Egyptian explorations, discovered in 1898 the tombs of Thutmosis III. and Amenophis II., and in the following year made the more important discovery of the tomb of Thutmosis I., "the real founder of the eigh-

teenth dynasty, who made Egypt one of the great empires of the ancient world. Professor Steindorff of the University of Leipzig, writing of this discovery to Professor Hilprecht of the University of Pennsylvania, remarked that its special importance lies in the fact that Thutmosis I, the earliest king of the eighteenth dynasty, was also the first ruler to depart from the ancient custom of the Pharaohs, that of building in the desert lowland pyramidal tombs. For himself he had a tomb hewn out of rock in the mountains. His predecessor, Amenophis I, according to custom, built his tomb in the plain, near the present site of Deir el-Bahari, as we know from written records. Thutmosis I, on the contrary, chose for his last dwelling place the lonely and majestic valley in the Libyan Mountains. For centuries the Pharaohs followed his example, and during the eighteenth, nineteenth, and twentieth dynasties were built those magnificent sepulchers which in Roman times were still among the greatest curiosities of ancient Thebes.

Chief among the articles that Mr. Loret found in the tomb is a remarkably well preserved papyrus containing texts from the Book of the Dead, with colored pictures finely executed; also a chest in which were kept a draught-board, with a full set of draughtmen, and some earlands; likewise fruit, food, poultry, and beef. The last-mentioned articles, being intended for the sustenance of the dead, each one was wrapped in linen and enclosed in a wooden case, exactly corresponding to its form. Thirteen large earthen beer jars, most of which, with their seals, stood there unmarred, and a large number of other vessels, had contained the beverages necessary for the refreshment of the dead. Weapons, among others two artistically wrought leathern quivers containing arrows, and two beautiful armchairs, completed this strange stock of equipments. The most remarkable piece of all is a large and beautifully preserved couch, the like of which has never been found in any other tomb. It consists of a quadrangular wooden frame, over spread with a thick rush mat, and over this were stretched three layers of linen with a life size figure of the god of death, Osiris, drawn upon the outer layer. The figure itself was smeared with some material intended to make the under layer waterproof. Over this, mingled with some adhesive substance, soil had been spread, in which barley was planted. The grains had sprouted, and had grown to the height of from two and a half to three inches. The whole, therefore, represented a couch whereon the dead Osiris lay figured in green sward. Verily, a striking poetical idea, the resurrection of the dead symbolized by the picture of the barley springing up. The whole tomb, with its numerous equipments, furnishes a very important contribution to the history of the methods of burial among the ancient Egyptians.—*Sunday School Times*, July 8, 1899.

Egypt: Fall of eleven columns of the great temple at Karnak.—From Professor Georg Steindorff, of the University of Leipzig, comes the following: "In the covered colonnade of the great temple at Karnak extensive restorations have lately been undertaken, rendered necessary by a most deplorable accident, which, about a year ago, befall this grandest of all Egyptian edifices. It occurred on the morning

of October 3, 1899, in the colonnade which was built by Ramses I., Sethtos I., and Ramses II., and which is doubtless familiar to all in engravings and photographs. In the northeastern part of this structure as many as eleven immense columns fell, and were totally wrecked, while several others are leaning over so that they might fall at any time. By this event the magnificent structure has been utterly ruined, and it now presents a dreary aspect. The cause of this catastrophe has not been definitely ascertained. The first thought was of an earthquake, but nothing of the sort was experienced elsewhere in Egypt on the morning of the day above mentioned. It is more likely that during the thirty-two hundred years of the building's existence, the material used in its construction had greatly deteriorated, and that this fact increased the possibility of a collapse. Then, also, in the main hall during recent years, the work of excavation and restoration was carried on with little regard for the dilapidated condition of the temple, which was weakened rather than strengthened by this work. But especially for the last four years, during the inundation of the Nile, the hall, by artificial means, has been flooded in order to extract and remove the salt which had formed. By this periodical flooding and drying of the ground the foundations have been very badly damaged. This, according to Dr. Borchardt, is the prime cause of the ruin. First the ground gave way under a column, which then toppled, and, in falling, brought down the others with it.

"We must recognize the zeal with which the Egyptian Government, especially the department of Egyptian Antiquities, with its Director General, Professor Maspero, came to the rescue of the ill-fated edifice. To prevent further catastrophe, they first proceeded to remove the architraves from five of the endangered columns, and to reduce the height of the columns to about twenty feet. This was accomplished by filling with sand that portion of the hall in which the columns stood, and then rolling the separate parts down the inclined plane formed by the sand. The north portion of the pylon terminating the colonnade toward the east—that is, toward the Nile—had badly suffered by the disaster. There were cracks in it so large as to cause the fear that it might some day collapse. After prompt and thorough work this danger also was obviated. Later on the ruins of the eleven fallen columns are to be removed, and the foundations of the hall examined. Then everything possible will be done to make the ground solid, and the attempt will be made to erect again the ruined columns. But whether the beautiful colonnade will ever resume its former appearance, whether it will ever again make upon the visitor such an overpowering impression as formerly, may well be a matter of serious doubt. Ancient Thebes has lost one of its most beautiful monuments."—*Sunday School Times*, Dec. 1, 1900.

Egypt: Discovery of the Serapeion at Alexandria.—The excavations by Dr. Botti, the Director of the Alexandria Museum, in the neighborhood of Pompey's Pillar, have resulted in the discovery of the Serapeion, where the last of the great libraries of Alexandria was preserved. An elaborate account of his researches, with an admirable plan, has been given by the discoverer in a memoir on "L'Acropole d'Alexandrie et le Serapeum," presented to the Archæo-

logical Society of Alexandria. Dr. Battl was first led to make his explorations by a passage in the orator Aphthonios, who visited Alexandria about A. D. 315. *The Journal of Archaeology, January-March, 1896.*

Crete: Recent explorations. Supposed discovery of the Palace of Minos and the Cretan Labyrinth.—Fresh light on prehistoric Greece and the origin of the alphabet.

Results of extraordinary importance have been already obtained from explorations in Crete, carried on during 1899 and 1900 by the British School at Athens, under the direction of Mr. D. G. Hogarth and by Mr. Arthur J. Evans, of the Ashmolean Museum, working with the aid of a small Cretan Exploration Fund, raised in England. The excavations of both parties were carried on at Knossos, but the latter was the most fortunate, having opened the site of a prehistoric palace which is yielding remarkable revelations of the legendary age in Crete. In a communication to the "London Times" of October 31, 1900, Mr. Evans gave the following account of the results so far as then obtained:

"The discoveries made at Knossos throw into the shade all the other exploratory campaigns of last season in the Eastern Mediterranean, by whatever nationality conducted. It is not too much to say that the materials already gathered have revolutionized our knowledge of prehistoric Greece, and that to find even an approach to the results obtained we must go back to Schliemann's great discovery of the Royal tombs at Mycenae. The prehistoric site, of which some two acres have now been uncovered at Knossos, proves to contain a palace beside which those of Tiryns and Mycenae sink into insignificance. By an unhoped-for piece of good fortune the site, though in the immediate neighbourhood of the greatest civil centres of the island in ancient, mediæval, and modern times, had remained practically untouched for over 3,000 years. At but a very slight depth below the surface of the ground the spade has uncovered great courts and corridors, propylæa, a long succession of magazines containing gigantic store jars that might have hidden the Forty Thieves, and a multiplicity of chambers, pre-eminent among which is the actual throne room and council chamber of Homeric kings. The throne itself, on which (if so much faith be permitted to us) Minos may have declared the law, is carved out of alabaster, once brilliant with coloured designs and relieved with curious tracery and crocketed arched which is wholly unique in ancient art and exhibits a strange anticipation of 13th-century Gothic. In the throne-room, the western entrance gallery, and elsewhere, partly still adhering to the walls, partly in detached pieces on the floors, was a series of fresco paintings, exceeding any known examples of the art in Mycenaean Greece. A beautiful life size painting of a youth, with a European and almost classically Greek profile, gives us the first real knowledge of the race who produced this mysterious early civilization. Other frescoes introduce us to a lively and hitherto unknown miniature style, representing, among other subjects, groups of women engaged in animated conversation in the courts and on the balconies of the Palace. The monuments of the sculptor's art are equally striking. It may be sufficient to mention here a marble fountain in the shape of a

lioness's head with enamelled eyes, fragments of a frieze with beautifully cut rosettes, superior in its kind to anything known from Mycenae, an alabaster vase, and a shield copied from a Triton shell; a porphyry bump with graceful foliation supported on an Egyptianising lotus column. The head and parts of the body of a magnificent painted relief of a bull in gesso-lime are unsurpassed for vitality and strength.

"It is impossible here to refer more than incidentally to the new evidence of intercourse between Crete and Egypt at a very remote period supplied by the Palace finds of Knossos. It may be mentioned, however, as showing the extreme antiquity of the earlier elements of the building that in the great Eastern Court was found an Egyptian seated figure of diorite, broken above, which can be approximately dated about 2000 B. C. Below this again extends a vast Stone Age settlement which forms a deposit in some places 24 ft. in thickness.

"Neither is it possible here to dwell on the new indications supplied by some of the discoveries in the 'House of Minos' as to the cult and religious beliefs of its occupants. It must be sufficient to observe that one of the miniature frescoes found represents the façade of a Mycenaean shrine and that the Palace itself seems to have been a sanctuary of the Cretan God of the Double Axe, as well as a dwelling place of prehistoric kings. There can be little remaining doubt that this huge building with its maze of corridors and tortuous passages, its medley of small chambers, its long succession of magazines with their blind endings, was in fact the Labyrinth of later tradition which supplied a local habitation for the Minotaur of grisly fame. The great figures of bulls in fresco and relief that adorned the walls, the barren scenes of some of the frescoes, the corner stones and pillars marked with the labrys or double axe—the emblem of the Cretan Zeus, explaining the derivation of the name 'Labyrinth' itself—are so many details which all conspire to bear out this identification. In the Palace shrine of Knossos there stands at last revealed to us the spacious structure which the skill of Daedalus is said to have imitated from the great Egyptian building on the shore of Lake Moeris, and with it some part at least of his fabled masterpieces still clinging to the walls.

"But, brilliant as are the illustrations thus recovered of the high early civilization of the City of Minos and of the substantial truth of early tradition, they are almost thrown into the shade by a discovery which carries back the existence of written documents in the Hellenic lands some seven centuries beyond the first known monuments of the historic Greek writing. In the chambers and magazines of the Palace there came to light a series of deposits of clay tablets, in form somewhat analogous to the Babylonian, but inscribed with characters in two distinct types of indigenous prehistoric script—one hieroglyphic or quasi-pictorial, the other linear. The existence of a hieroglyphic script in the island had been already the theme of some earlier researches by the explorer of the Palace, based on the more limited material supplied by groups of signs on a class of Cretan seal stones, and the ample corroboration of the conclusions arrived at was, therefore, the more satisfactory. These Cretan hieroglyphs will be

found to have a special importance in their bearing on the origin of the Phoenician alphabet.

But the great bulk of the tablets belonged to the linear class, exhibiting an elegant and much more highly developed form of script, with letters of an upright and singularly Lapidean aspect. The inscriptions, over 1,000 of which were collected, were originally contained in cylinders of clay, wood and gypsum, which had been in turn secured by clay seals impressed with finely engraved signs and counter marked and counter signed by controlling officials in the same script while the clay was still wet. The clay documents themselves are, beyond doubt, the Palace archives. Many relate to accounts concerning the Royal Arsenal, stores, and treasures. Others, perhaps, like the contemporary cuneiform tablets, refer to contracts or correspondence. The problems attaching to the decipherment of these clay records are of enthralling interest, and we have here locked up for us materials which may some day enlarge the bounds of history.

In an earlier communication to "The Times" (September 15), Mr. Evans had explained more distinctly the importance of the clay tablets found at Knossos, as throwing light on the origin of the alphabet: "In my excavation of the prehistoric Palace at Knossos," he wrote, "I came upon a series of deposits of clay tablets representing the Royal archives, the inscriptions on which belong to two distinct systems of writing — one hieroglyphic and quasi-pictorial; the other for the most part linear and much more highly developed. Of these the hieroglyphic class especially presents a series of forms answering to what, according to the names of the Phoenician letters, we must suppose to have been the original pictorial designs from which these, too, were derived. A series of conjectural reconstructions of the originals of the Phoenician letters on this line were in fact drawn out by my father, Sir John Evans, for a lecture on the origin of the alphabet given at the Royal Institution in 1872, and it may be said that two-thirds of these resemble almost line for line actual forms of Cretan hieroglyphs. The oxhead (Aleph), the house (Beth), the window (He), the peg (Vau), the fence (Cheth), the hand (Yod) seen sideways, and the open palm (Kaph), the fish (Nun), the post or trunk (Samek), the eye (Ain), the mouth (Pe), the teeth (Shin), the cross sign (Tav), not to speak of several other probable examples, are all literally reproduced.

"The analogy thus supplied is indeed overwhelming. It is impossible to believe that, while on one side of the East Mediterranean basin these alphabetic prototypes were naturally evolving themselves, the people of the opposite shore were arriving at the same result by a complicated process of selection and transformation of a series of hieratic Egyptian signs derived from quite different objects. The analogy with the Cretan hieroglyphic forms certainly weighs strongly in favour of the simple and natural explanation of the origin of the Phoenician letters which was held from the time of Gesenius onwards, and was only disturbed by the extremely ingenious, though over-elaborate, theory of De Rouge."

At the annual meeting of the subscribers to the British School at Athens, held in London, October 30, 1900, Mr. Hogarth, the Director, spoke with great enthusiasm of the significance

of the Cretan discoveries already made, and of the promise of enlarged knowledge which they gave. He said: "The discovery made 25 years ago [by Schliemann] that no barbarians, but possessors of a very high and individual culture, preceded the Hellenic period in Greece — a culture which could not but have affected the Hellenic — had been developed in various ways since. It had been established that this culture had had a very long existence and development; it covered completely a large geographical area; it developed various local characteristics in art production which seemed to be gathered again into one by the typical art of Mycenae. But the most important historical points remained obscure. Where was the original home of this new civilization; what family did the race or races belong to; of what speech were they and what religious; what was the history of their societies and art during their dominance, and what became of them after? Neither mainland Greece nor the Aegean islands answered these. But there were two unknown quantities, Crete and Asia Minor, with Rhodes. One of these we have now attacked. Crete by its great size and natural wealth, its position, and its mythologic fame was bound to inform us of much. It is too early to say that the questions will all be answered by Crete, but already we have much light. The discovery of written documents and of shrines has told us more than any other evidence of the origin and family. The Knossos frescoes show us the racial type; the Dictæon Cave, and Knossos houses illuminate the religion. New arts have been discovered, and the relation to Egypt and Asia are already far better understood. It remains now to find the early tombs, and clear the lower stratum of the Palace ruins at Knossos, to know more of the earliest Cretan race, to explore the east or 'Eteocretan' end of the island, to obtain light on the language and relations to Egypt and Asia, and to investigate the 'Geometric' period, which is the transition to the Hellenic."

Commenting in another place on the discoveries in Crete, Mr. Hogarth has pointed out their effect in modifying the ideas heretofore entertained of the importance of Phoenician influence in the rise of European civilization. "For many years now," he writes, "we have had before our eyes two standing protests against the traditional claim of Phoenicia to originate European civilization, and those protests come from two regions which Phoenician influence, travelling west, ought first to have affected, namely, Cyprus and Asia Minor. In both these regions exist remains of early systems of writing which are clearly not of Phoenician descent. Both the Cypriote syllabic script and the 'Hittite' symbols must have been firmly rooted in their homes before ever the convenient alphabet of Sidon and Tyre was known there. And now, since Mr. Evans has demonstrated the existence of two non-Phoenician systems of writing in Crete also, the use of one of which has been proved to extend to the Cyclades and the mainland of Greece, it has become evident that we have to deal in south-eastern Europe, as well as in Cyprus and Asia Minor, with a non-Phoenician influence of civilization which, since it could originate that greatest of achievements, a local script, was quite powerful enough to account by itself also for the local art.

"Those who continue to advocate the Phoenician claim do not seem sufficiently to realize that

ARCHAEOLOGICAL RESEARCH

nowadays they have to take account not only of the Homeric age, nor only of even half a millennium before Homer, but of an almost geologic antiquity. Far into the third millennium B. C. at the very least, and more probably much earlier still, there was a civilization in the Aegean and on the Greek mainland which, while it contracted many debts to the East and to Egypt, was able to assimilate all that it borrowed, and to reissue it in an individual form, expressed in products which are not of the same character with those of any Eastern civilization that we know.

H. G. Hogarth, *Both city and Archaeology Sacred and Profane*, pt. 2, pp. 245-248 (N. Y.: Charles Scribner's Sons).

During the past season, Evans, discoverer of the now famous early Cretan systems of writing, Hubbard and other Italians, as well as the French, have been proving what was already foreshadowed, that in Crete we find in its purest form and in all its historic and racial phases that Mediterranean civilization,—Pelagic and Aegean,—that culminated in Tiryns and Mycenae. We now see that Homer sings of the closing years of a culture that dates back of the Trojan War, at least for fifteen hundred years. Crete is found to be covered with ruined Pelagic cities, surrounded by gigantic poly and walls, crowned by acropolis, adorned with royal palaces, defended by forts, connected by artificial highways, and with necropoli of vaulted tombs like those discovered by Schliemann at Mycenae. Already the royal palaces and libraries are being unearthed at Cnossos and Gouli's with sculptures and decoration of the most novel description and early date. A literature in an unknown tongue and in undeciphered scripts is being found to puzzle scholars as much perhaps as the Hittite and Etruscan languages. Some day these "Pelagic" documents will disclose the secrets of a neglected civilization and fill up the gap between early Eastern and Hellenic cultures."—A. L. Frothingham, Jr., *Archaeological Progress (International Monthly, Dec., 1906)*.

India: Discovery of the birthplace, tomb and relics of Gautama Buddha. See in this vol. (Bregna).

Troy: Later researches on the site.—"Dr Doerpfeld finished in 1894 the exploration which he had begun in 1893 on the site of the excavations of Schliemann at Hisarlik (Troy). It appears to be established that Schliemann, carried away by his zeal, had overlooked the very end which he wished to attain, and that the burnt city, which he thought to be the real Troy, is a more ancient foundation going back beyond the year 2000 B. C. M. Doerpfeld discerned, in one of the layers of ruins discovered but disregarded by Schliemann, a city which must be the Ilion of Priam contemporaneous with the Mykenai of Agamemnon; he removed the surrounding walls, the towers, and some of the houses that filled it. It is to be understood that this little acropolis, analogous to that of Tiryns, is not the whole of the city but simply its citadel, which Homer called "Pergamos." It was surrounded, lower down, by a city reserved for the habitation of the common people, some traces of which also have been found."—*Am. Journal of Archaeology*, 1906.

Italy: Excavations at Antemnae disclose what early Rome was probably like.—"We can show what the earliest Rome was, the Rome

ARCHAEOLOGICAL RESEARCH

of Romulus on the Palatine, and how it grew to be the City of the Seven Hills. The City itself, crowded with the wrecks of twenty-five centuries, preserves to-day few memories of its earliest age, but excavations made on two sites, one close to Rome, some a little further north in Etruria, explain the process very clearly. The traveler who approaches Rome by the Via Salaria sees, just where Tiber and Anio join, a modern fort on an isolated rock. Here was Antemnae, destroyed according to legend by Roman jealousy very soon after Rome itself was founded. The legend seems to be true, at least in substance. On this hilltop excavations have shown a little village within a wall of stone. It had its temple and senate house, its water-cistern, and square huts, thatched or timbered, for dwelling houses. The riches found there show that the site was abandoned, never to be again inhabited, about the time at which the legend fixes the fall of Antemnae. Here we have Rome's earliest rival. From the rival we may guess what the earliest Rome was like on the Palatine rock, and what all the little Italian towns were in their infancy."—*F. Haverfield, Authority and Archaeology Sacred and Profane*, pt. 2, pp. 302-303 (N. Y.: Charles Scribner's Sons).

Italy: The Etruscans.—"During the decade which is now ending, archaeology has thrown some light on this strange people. Researches in North Italy prove that it never entered the Peninsula from the north. Researches in Etruria itself prove that the earliest Etruscan civilization resembled that which prevailed in the Eastern Mediterranean in the last days of the Aegean period. After all, the old legends were right. The ancients told how the Etruscans came from the east; archaeological evidence is now accumulating to confirm the legends. Precisely when they came or why is still obscure, nor can we identify them yet with any special tribe in prehistoric Greece, Pelagian or other. Probably they were driven from their old homes, like the Phoenicians who built Carthage and the Phoenicians who built Marseilles."—*F. Haverfield, Authority and Archaeology Sacred and Profane*, pt. 2, p. 305 (N. Y.: Charles Scribner's Sons).

Italy: Sunken Roman vessels in Lake Nemi.—"A discovery during 1895 which made a great sensation throughout Italy, was that of the famous Roman vessels which had been sunk for so many centuries at the bottom of Lake Nemi, the existence of which has been known or suspected ever since the fifteenth century, not withstanding many sceptics."—*Am. Journal of Archaeology*, July-September, 1896.

Syria: Ruined cities of the Roman Province.—"An important exploration of ruined cities in the old Roman provinces of Syria and Arabia was conducted by an American archaeological expedition organized in 1890. Mr. Howard Crosby Butler, of Princeton, was in charge of the studies made in architecture, sculpture and archaeological matters generally. Professor William K. Prentice devoted attention to the inscriptions, of which a great number were found, while Semitic inscriptions were the subjects of the study of Dr. Edna Littmann, of the University of Halle. The ruins of thirty-three cities, nearly all of them evident places of large population in their day, were visited in regions now too bare of productive soil to support even the small nomadic population of the present day.

"The desert conditions have preserved the cities intact as they stood at the time when they appear to have been abandoned, in the beginning

ARGENTINE REPUBLIC: A. D. 1895.—Census. "According to the census, the number of persons in the Argentine Republic on May 10, 1895, was 1,042,990. The estimated number of Argentines outside the boundaries of the Republic on that day is placed at 50,000, thus making the total population 1,092,990." Of this population 662,547 is in the city of Buenos Ayres. "The increase in the population between September 15, 1869 (the last census), and May 10, 1895 (the date on which the present census was taken), has been 2,218,776, equivalent to an increase of 520 per cent, or an annual increase of 1.6 per cent. The urban population of the Republic has increased 1,015,944. It is estimated that there are 315,333 foreigners in the city of Buenos Ayres, and that the total number of foreigners in the Republic is about 1,000,000. Among the Argentine portion of the population, the females exceed the males in number, while it is estimated that two thirds of the foreign population are males." *United States Consular Reports, Nov., 1896, p. 438.*

A. D. 1895.—Resignation of President Peña. "President Scaz Peña having refused to issue, at the request of Congress, a decree of amnesty, extended to all persons implicated in the last revolution, his Cabinet resigned (January 16), and he found it impossible to form another. Thereupon the President himself resigned his office, on the 23d of January, and his resignation was accepted by the Congress. Señor Friboya was elected President on the following day, and promptly issued the desired decree.

A. D. 1898.—Settlement of boundary dispute with Chile.—Election of President.—"A long unsettled dispute as to the extended boundary between the Argentine Republic and Chile, stretching along the Andean crests from the southern border of the Atacama Desert to Magellan Straits, nearly a third of the length of the South American continent, assumed an acute stage in the early part of the year, and afforded to this Government occasion to express the hope that the resort to arbitration, already contemplated by existing conventions between the parties, might prevail despite the grave difficulties arising from its application. I am happy to say that arrangements to this end have been perfected, the questions of fact upon which the respective commissioners were unable to agree being in course of reference to Her Britannic Majesty for determination. A residual difference touching the northern boundary line across the Atacama Desert, for which existing treaties provided no adequate adjustment, bids fair to be settled in like manner by a joint commission, upon which the United States Minister at Buenos Aires has been invited to serve as umpire in the last resort."—*Message of the President of the U. S. of Am., Dec., 1898.*—The arbitration of the United States Minister, Hon. William L. Buchanan, proved successful in the matter last referred to, and the Atacama boundary was quickly determined.

In June, 1898, General Julio Roca was elected

of the seventh century." Some account of the expedition and its work is given in the "New York Tribune" of February 3, 1901.

President and assumed the office in October. In July a treaty of arbitration was concluded with the government of Italy, which provides that there shall be no appeal from the decision of the arbitrators.

ASHANTI: British occupation of the country.—Rising of the tribes.—Siege and relief of Kumassi.—"In 1895, King Prempeh, of Ashanti, provoked a second expedition of British troops against his capital, Kumassi, or Coomassie (for some account of the former expedition see in vol. 2, ENGLAND: A. D. 1873-1880), by persistence in slave catching raids and in human sacrifices, and by other violations of his treaty engagements. Late in the year a strong force was organized in Gold Coast Colony, mostly made up of native troops. It marched without resistance to Kumassi, which it entered on the 17th of January, 1896. Prempeh made complete submission, placing his crown at the feet of the Governor of the Gold Coast; but he was taken prisoner to Sierra Leone. A fort was built and garrisoned in the center of the town, and the country was then definitely placed under British protection, politically attached to the Gold Coast Colony. It submitted quietly to the practical conquest until the spring of 1900, when a fierce and general rising of the tribes occurred. It was said at the time that the outbreak was caused by efforts of the British to secure possession of a "golden stool" which King Prempeh had used for his throne, and which had been effectually concealed when Kumassi was taken in 1896; but this has been denied by Sir Frederic Hodgson, the Governor of the Gold Coast. "The 'golden stool,'" he declared, "was only an incident in the affair and had nothing to do with the cause of the rising, which had been brewing for a long time. In his opinion the Ashantis had been preparing

ASHANTI

ever since the British occupation in 1806 to resent their dependence. The Governor was imprisoned in Kumassi when the Ashantis first attacked it on the 25th of March, and to his great annoyance of the desperate position in which the few British officials with their small native garrison and the refugees whom they tried to protect were placed. "Our force," said Sir Frederic Hodgson, "consisted of only some 200 Europeans, while there is reason to believe that we had not less than 15,000 Ashantis surrounding us. In addition to our own force we had to protect some 3,500 refugees, chiefly Mohammedan traders, Fantis and loyal Kumassians, none of whom we were able to take into the fort, where every available bit of space was required for military purposes. It was heartrending to see the efforts of these poor people to scale the walls or break through the crevices of the fort, and we had to withdraw the Europeans from the entrenchments and draw a circle round the refugees. It is impossible to describe the horror of the situation with these 3,500 wretched people huddled together without shelter under the walls of the fort. That same night a tornado broke over Kumassi, and the scene next morning with over 200 children was too terrible for words. Afterwards they were able to arrange shelters for themselves. Near the end of April two small reinforcements from other posts reached Kumassi, but while this strengthened the numbers for defence, it weakened the food supply. Taking stock of their food, the loss I decided that they could hold out until June 31 and that if the main body then marched out, to cut, if possible, their way through the enemy, leaving a hundred men behind, the latter might keep the fort until July 15. This, accordingly, was done. On the 31st of June Governor Hodgson, with all but 100 men, stole away from Kumassi, by a road which the Ashantis had not guarded, and succeeded in reaching the coast, undergoing great hardships and dangers in the march. Meantime, an expedition from Cape Coast Castle was being energetically prepared by Colonel Sir J. Willcocks, who overcame immense difficulties, and fought his way into Kumassi on July 15, the very day on which the food supply of the little garrison was expected to give out. The following account of his entry into Kumassi is from Colonel Willcocks' official report:—"Forming up in the main road, we marched towards Kumassi, a mile distant, the troops cheering wildly for the Queen and then followed silence. No sound came from the direction of the fort, which you cannot see till quite close. For a moment the hideous desolation and silence, the headless bodies lying everywhere, the sickening smell, &c., almost made one shudder to think what no one dared to utter—'Has Kumassi fallen? Are we too late?' Then a single sound caught the ear—'The general salute!'—the tops of the towers appeared, and again every man in the column, white and black, broke into his long-sustained. The brave defenders had at last seen us; they knew for hours past from the firing growing ever nearer that we were coming, yet they dared not open their only gate; they perforce must wait, for even as we appeared the enemy were making their last efforts to destroy the outlying buildings, and were actually setting them on fire until after dark, when a party of 100 men went out and treated them to volleys and cleared

ATHENS

them out. If I have gone too fully into details of the mid scene, the reason was, that every white man felt for him some sympathy, and each and none would have missed it for a king's ransom.

ATHENS: A. D. 1896. **The revival of Olympic games.**—As the result of a movement instituted in France by the Baron de Coubertin, an interesting attempt to give athletic sports the spirit and semblance of the ancient Olympic games was made at Athens in the spring of 1896. A number of wealthy Greeks in different parts of the world joined generously in the undertaking, one gentleman especially, M. Averoff, of Alexandria, bearing the cost of a restoration in marble of the stadium at Athens, for the occasion. The games were held in April, from the 6th to the 15th, and were witnessed by a great number of people. Besides Greek competitors, there were 42 from Germany, 24 from England, 21 from America, 15 from France. The great event of the occasion was the long foot race from Marathon to Athens, which was won by a young Greek.

The U. S. Consul at Athens, writing of the reconstruction of the ancient stadium for the games, described the work as follows:

"The stadium may be described as an immense open air amphitheater constructed in a natural ravine, artificially filled in at the end. It is in the shape of an elongated horseshoe. The spectators, seated upon the sloping sides of the ravine,

ATHENS.

look down into the arena below, which is a little over 600 feet in length and about 190 feet wide at the wide part.

The stadium, as rebuilt for the games, will consist of: (1) the arena, bounded by a marble curbings surmounted by an iron railing adorned with Athenian owls; (2) a walk between this curbings and the first row of seats; (3) a low retaining wall of marble on which rests the first row of seats; the entire row being of marble; (4) the seats; (5) the underground tunnel. In addition to these features there will be an imposing entrance, a surrounding wall at the top of the hill and two supporting walls at the entrance. As far as possible, in the reconstruction of the stadium the old portions will be used, where these are in a sufficient state of preservation, and an effort will be made to reproduce as nearly as practicable the ancient structure. The seats at present will not all be made of porphyry marble, as there is neither time nor money for such an undertaking. At the closed end of the arena, seventeen rows will be made of porphyry marble, as well as the first row all the way around. The remaining rows up to the first aisle are being constructed of travertine stone. These will accommodate 25,000 seated spectators. From this aisle to the top

AUSTRALIA.

will be placed wooden benches for 30,000 seated spectators. Added to these standing room for 5,000, we have the holding capacity of the stadium 60,000 without crowding. *United States Consular Reports, March, 1896, pp. 354-51.*

ATLANTA: A. D. 1895. The Cotton States and International Exposition. An important exposition named as above, was held with great success at Atlanta, Georgia from the 18th of September until the end of the year 1895. The exhibits from Mexico and many of the Central and South American States were extensive and interesting, but the main interest and value of the exposition were in its showing of the industrial resources of the Southern States of the American Union and of the recent progress made in developing them.

AUSTRAL ISLANDS: Annexation to France.—The Austral or Tahiti Islands were formally annexed to France by the Governor of Tahiti, on the 21st of August, 1900.

AUSTRALIA.

Recent extensions of Democracy in the Australian Colonies and New Zealand.—**Social experiments.**—The five colonies of the Australian continent, Tasmania, and New Zealand constitute seven practically independent commonwealths under the British crown. Australians and New Zealanders have therefore been able to develop their countries along their own lines, and have surpassed all other Anglo-Saxon nations in the number and variety of functions which the state is called upon to perform. The railways almost without exception, and all the telegraph and telephone lines, are in the hands of the community. In the few cases in which there is private ownership of railways a particular line was demanded at a certain time, and the government were not then in a position to borrow the funds required for its construction. Western Australia has recently purchased the entire property of one of the two private undertakings in the colony. A mass of sanitary and industrial legislation also has been placed upon the statute book.

"Again, South Australia, Victoria, Western Australia, and New Zealand lend money to settlers at low rates of interest; South Australia sells its wines in London; Queensland facilitates the erection of sugar mills; Victoria and South Australia have given a bonus upon the exportation of dairy produce; South Australia, New Zealand, and Victoria receive the produce, grade and freeze it free of charge, or at a rate which barely covers the expenses; Victoria contributes toward the erection of butter factories; Victoria and New Zealand have subsidized the mining industry, and Western Australia has adopted a comprehensive scheme for the supply of water to the Coolgardie gold fields. In all the colonies the national system of primary education is compulsory and undenominational. In South Australia, Victoria, Queensland, and New Zealand it is also free. In the other colonies fees are charged, which may be remitted wholly or partly if parents are unable to pay them. Assistance is given in most cases for the promotion of secondary, technical, and university education. New Zealand and South Australia have appointed public trustees. New Zealand has long possessed a department of life insurance. Finally, New Zealand has adopted a system of old-age pensions. A pension of seven shillings a week is to be given to every person above the age of sixty-five years, provided he or she has lived in the colony for twenty-five years, and is able to pass a certain test in regard to sobriety and general good conduct. In South Australia direct taxation takes two forms. There is an income tax at the rate of four and a half pence in the pound up to £800, and of six pence in the pound above £800 of taxable amount resulting from personal exertions, and at the rate of nine pence and one shilling in the pound respectively on incomes from property. Incomes between £125 and £125 enjoy exemption on £125 of the amount. Again, there is a tax on the unimproved value of land of one half penny in the pound up to, and one penny above, the capital value of £5000.

"Similar taxation is to be found in New Zealand, and includes both a progressive income tax and a tax on land values which is more highly graduated than that of South Australia. All improvements are excluded from the assessment of the taxable amount. If the owner of the property is dissatisfied with the assessment of the government, he can call upon them to buy it of him at their own valuation. In only one case has such an extreme step been taken; and it is pleasant to find that it has resulted in an annual profit of nearly five per cent upon the outlay, and that the land which formerly gave employment to a few shepherds is now occupied

by a large number of thriving settlers. I may add that when the government claim that an enterprise is better developed as it should be by its owners, they are justified by its ability to pay those engaged in it, and to pay them otherwise a price paid by an impartial tribunal, with a view to its satisfactory and useful findings suitable to the requirements of the community. This system of taxation it will be said with some truth is based upon the teachings of Henry George. He travelled in Australia and New Zealand, and was interested with attention, but while he looked to the intricate absorption of the whole unimproved increment, his honors in the antipodes dissipated themselves from his conclusions, though they appreciated the value of his premises. So, consequently, while accepting his principles, they did not hesitate to exempt small properties from the tax, and to increase its rate progressively in relation to the amount of the unimproved value.

One of the most hopeful signs of the day is that, with the help of the representatives of labor in Parliament, Australian governments have done much within recent years to mitigate the excess of population in the large towns, and to replace the unemployed upon the land. Of course mistakes have been made. In some cases settlers have failed through lack of agricultural knowledge; in others, on account of the barrenness of the soil. In South Australia, the village settlements, which were avowedly started as an alternative to relief works, have been only a modified success. In New Zealand, village settlements have produced very satisfactory results.

In Victoria a labor colony has been established with the entire support of the trades unionists, to which the unemployed may be sent, and at which they receive at a very low rate of wages, a course of instruction in agricultural pursuits which enables them subsequently to obtain private employment with farmers or others. In New Zealand I found a very strong feeling among trades unionists that it would be to the interest of the workmen themselves if a penal colony were established on the lines of those which exist in Germany, to which loafers might be sent, and at which they would be compelled to work, with the alternative of starvation.—H. De R. Walker, *Australasian Extension of Democracy* (Atlantic Monthly, May, 1899).—See also in this vol., NEW ZEALAND: A.D. 1890-1900.

Western Australia: The Outlander problem in Australia.—Here we have a problem in many respects similar to that which has distracted South Africa. In several particulars the resemblance is startlingly close. Many of the elements of disorder in the two continents are the same. In Western Australia, as in the Transvaal, there is a large population of mining residents, who complain that they are treated like helots,—to use Sir Alfred Miller's term—by the privileged agricultural burghers. They urge that they are denied fair representation, so that the burghers monopolise political power; that the administration is in the hands of a knot of politicians and place hunters at Perth—I had almost written Pretoria,—that they have made the colony wealthy by their enterprise and capital, only to see a large part of the fruits of their industry drawn from them by excessive taxation, which is expended mainly outside their

own district, that they are burdened by oppressive rates and denied access to the port which is the natural outlet to the gold fields and sea. The Krugerite burghers, like the Johannesburgers, have sent a petition to the Queen signed by a far larger number of persons than those who forwarded the famous memorial which set the bad ball rolling in South Africa and led to the Bloemfontein Conference. The case is fairly and temperately set forth in this petition, and in the Manifesto of the Eastern Goldfields Reform League of Western Australia, both of which documents are in the East Blue book bearing on Australian Federation. The same official compilation contains a statement by Mr. Chamberlain from Dr. Fritz Thurston, in which the parallel between West Australia and the Transvaal is asserted with the most unpromising directness. We have here, says the writer, a Boer and Outlander question almost parallel to that in the Transvaal. As an Outlander I appeal to you, Dr. Thurston adds.

The old West Australians openly speak as if the colony was theirs, and we were interlopers who have no course open to us but to leave the colony if we are dissatisfied. This has a very familiar sound, and so has the following: "The great bulk of the taxation is levied through duties on food and drink. As the Boer party includes all the agricultural producers, and the Outlanders include the great bulk of the consumers, this acts injuriously on us in two ways. It puts a frightful load on the Outlander taxpayer, and enables the Boer producer to command a very high price for his food stuffs owing to the limitation of the market by excessive protection, many articles of common use reach famine prices at times. In the three years I have been here, for instance, potatoes have been £22 10s a ton, apples, 2s 6d a pound, oranges, 5s a dozen, new laid eggs, 1s a dozen at the time of writing, 4s 6d. Fresh butter is practically unobtainable for ten months in the year, and common country wine (such as I used to buy for 3s and 4s a bottle in the Canary Is.) is sold here 2s a bottle. I ask you, Sir, whether any other place in Her Majesty's Empire not physically inaccessible can show prices one half as high during the past three years?"

"Nor does the ominous kind of hint that preceded the Emuon Raid fail to be uttered. Only three terminations, according to Dr. Thurston, are possible if Sir John Forrest does not modify his Krugerite policy towards the mining settlers."

(1) Separation of the goldfields.—This would be only fair to the goldfields, but thousands of Outlanders have settled in the other parts of the colony, and this step would not redress their wrongs. The practical result of this step would be prosperity for the goldfields, but almost ruin for the rest of the colony. (2) Revolution.—I fear this is much more probable than is generally thought. Unless a material change takes place quickly there will be bloodshed in this colony. (3) General repression, practically equivalent to bankruptcy.—Separation, however, include the Goldfields district and come down to the sea, and would immediately join the Australian Federation, is the remedy officially proposed by the representatives of the Outlanders.

"The Colonial Secretary has deferred his final

The decision of the Government of Western Australia to send a Parliament none other than the one with the joining of a measure for the submission of the Commonwealth Bill to the election of the colony has removed the chief of the grievances put forward in the petition and has opened up a fairly prospect of obtaining the object which the petitioners had in view. An answer will be returned to the petition after a careful consideration of its terms and of the comments of the Government of the colony thereon. But Mr. Chamberlain trusts that before an answer can be returned the people of the colony will have decided to join the Commonwealth for the government of which in that event, it will be decided with the grievances allged in the petition in so far as they are not exclusively within the province of the Parliament and Government of Western Australia. In other words, at the President's dispose of the matter. But the delegates point out that this might not remove their grievances. The Federal Parliament would have no power to compel the dominant party in the Perth Assembly either to redistribute seats fairly or divide the colony, so as to create a 'Home Rule for the Rand'. True, we should have washed our hands of the affair, and could tell the malignant offenders that it was none of our business. But if Perth still remained obstinate, and Cockburn in consequence began to carry out some of those ugly projects hinted at by Dr. Thurston, it might become our business in an embarrassing fashion. At any rate, it does not seem quite fair to the new Commonwealth to start it in life with this grave question still unsettled, upon its hands.—S. Low, *Chronicle of Empire (Nineteenth Century, June, 1901).*

of his eldest followers was debated, and the so-called Free Trade party came back much stronger than before. Thus it was affirmed that the mandate of the people, declaring for free trade and direct taxation, had been reaffirmed at the re-assembling of Parliament on August 13. The same measure, as passed by the Assembly and reported by the Council, was again presented and passed by the Assembly by a majority of 50 to 20, and again went to the upper house. And it was met with great hostility, but the Government party in that chamber, having been augmented by ten new appointments, the triumph of the house was assured, and the bill was passed with some two hundred and fifty amendments. As the Assembly could only accept some eighty of these without yielding territorial points, a conference was suggested, which, after several days of discussion, arrived at a modified measure embracing the principle of free trade, as interpreted in this colony and direct taxation, and the new law goes into effect as above stated, on January 1, 1896.

"It may be well here to remark that there are a few articles, notably raw sugar, glucose, molasses, and treacle, upon which the duty will be removed gradually, so as not to wantonly disturb vested interests; but with these exceptions, the change is a very sweeping one." (*United States Consular Reports, Dom.*, 1890, p. 290)

New South Wales: A. D. 1806. Change in the government of Norfolk Island. - Its re-annexation to New South Wales. A change in the government of Norfolk Island was proclaimed in November, 1806, by the Governor of New South Wales, who came to the island, acting under directions from the British Colonial Office, and announced that "Her Majesty's Government has decided to appoint a resident magistrate. The object sought is to secure the impartial administration of justice, while leaving the local and municipal affairs of the island to be conducted by a council representing the inhabitants. In consideration of the fact that the Norfolk Island settlement originally formed part of the administrative colony of New South Wales, and that the legal business of the island and the registration of all land titles and transfers have uniformly been conducted by the Government departments at Sydney, Her Majesty's Government has decided to transfer the administration of the island to the Government of New South Wales. The Government of New South Wales has accepted the charge and as soon as the necessary arrangements have been completed, Norfolk Island will be administered by the governor of New South Wales in council." It will thus be seen that the Pitcairn community, which, for more than one hundred years, has governed itself by its own laws, is now abolished and that a new era has begun. The governors legal right to annul the constitution given by the Queen when the community emigrated from Pitcairn was questioned. A deputation was appointed to wait on the governor, but he refused to discuss the subject further. - *United States Consular Reports, May, 1897, p. 37.*

Union

was accomplished. — **Passage of the "Commonwealth of Australia Constitution Act" by the Imperial Parliament.** — "The first indication of a plan for united action among the colonies is to be found in a proposal of Earl Grey in 1870. The main object of the proposal was to bring about uniformity in colonial tariffs; but, though partially adopted, it came to nothing. From 1870 to 1890 the project of federation was discussed from time to time in several of the colonial legislatures, and committees on the subject were appointed. But there seems to have been little general interest in the question, and up to 1890 all efforts in the direction of federation met with complete failure. Shortly after, however, a new form of united action, less ambitious but more likely of success, was suggested and adopted. From 1893 to 1895 conferences of colonial ministers were held at various times to discuss certain specified topics, with a view to introducing identical proposals in the separate colonial legislatures. Six of these conferences were held at Melbourne and three at Sydney, and one also was held at Hobart in 1895, though the period of the real activity of the conference scheme practically closed in 1893. The scheme proved a failure, because it was found impossible to carry out the measures concerted in the conferences. But material events were doing more than could any public agitation to draw attention to the advantages of closer union. The colonies were growing in population and wealth, railroads were building and commerce was extending. The inconveniences of border customs duties suggested attempts at something like commercial reciprocity between two or more colonies. New political problems also helped to arouse public interest. Heretofore there had been little fear of foreign aggression and, hence, no feeling of the need of united action for common defense; nor had there been any thought of the extension of Australian power and interests beyond the immediate boundaries of the different colonies. But the period from 1880 to 1890 witnessed a change in this respect. It was during this period that much feeling was aroused against the influx of French criminals, escaped from the penal settlements in New Caledonia. The difficulties in regard to New Guinea belong also to this decade. Suspicion of the designs of Germany upon that part of the island of New Guinea nearest the Dutch boundary led to the annexation of its eastern portion by the Queensland government. This action was disapproved by the British government under Gladstone, and the fears of the colonists were ridiculed; but almost immediately after the northern half of New Guinea was forcibly taken possession of by Germany. The indignation of Australians was extreme, and the opinion was freely expressed that the colonies would have to unite to protect their own interests. Finally, this was the time of the French designs on the New Hebrides Islands and of German movements with reference to Samoa. These conditions, economic and political, affected all the colonies more or less intimately and resulted in the first real, though loose, form of federal union. At the instigation of the Honorable James Service, premier of Victoria, a convention met at Sydney, November, 1893, composed of delegates from all the colonial governments. This convention adopted a bill providing for the

establishment of a Federal Council, with power to deal with certain specified subjects and with such other matters as might be referred to it by two or more colonies.

New South Wales and New Zealand refused to agree to the bill, but it was adopted by the other colonies, and the Imperial Parliament, in 1885, passed an act permitting such a Council to be called into existence at the request of any three colonies, to be joined by other colonies as they saw fit. Meetings of the Council took place in 1886, 1888, 1889 and 1891, but very little was accomplished. That the Federal Council was a very weak affair is obvious.

Meanwhile, interest in a more adequate form of federation was growing. In 1890 Sir Henry Parkes, composed a plan for federal union of a real and vigorous sort. At his suggestion, a conference met at Melbourne, February 6, 1890, to decide on the best method of getting the question into definite shape for consideration.

Provision was made for the calling of a convention to draw up a constitution.

In accordance with the decision of the conference, delegates from the several colonies convened at Sydney, March 2, 1891, and with the work of this convention began the third and final stage in the federation movement. The Sydney convention formulated a bill, embodying a draft of a federal constitution, and then resolved that provision should be made by the several parliaments to submit it to the people in such manner as each colony should see fit. But there was no sufficient external pressure to bring about an immediate discussion and an early settlement.

The result was that nothing was done. . . . Meanwhile, federation leagues had been organized in different colonies, and in 1893 delegates from a number of these leagues met at Bendigo, Victoria.

After adopting the bill of 1891 as a basis of discussion, the Bendigo conference resolved to urge the colonial governments to pass uniform enabling acts for a new convention—its members to be elected by popular vote—to frame a constitution which should be submitted to the people for approval. This proposal met with general favor and resulted in the calling of a meeting of the premiers of all the colonies at Hobart in January, 1895. There an enabling bill was drafted which five premiers agreed to lay before their respective parliaments. . . . It took two years to get this machinery into working order. At length, however, the requisite authority was granted by five colonies: New South Wales, Victoria, South Australia, Western Australia and Tasmania. Queensland and New Zealand declining to participate. On March 22, 1897, the second constitutional convention assembled at Adelaide. This convention drew up a new federal constitution, based upon the draft of 1891. Between May 5 and September 2 the constitution was discussed in each of the parliaments. When the convention reassembled at Sydney on March 2, as many as 75 amendments were reported as suggested by the different colonies. Many were of an insignificant character and many were practically identical. The constitution and proposed amendments were discussed in two sessions of the convention which finally adjourned March 16, 1898, its work then being ready to submit to the people. In June a popular vote resulted in the acceptance of the constitution by Victoria, Tasmania, and South

Australia; but the failure of the parent colony, New South Wales, to adopt it blocked all hope of federal union for the moment. Recently, however, at a conference of colonial premiers certain amendments demanded by New South Wales were agreed to in part, and upon a second vote the constitution, as amended, was accepted by that colony. — W. G. Beach, *The Australian Federal Constitution* (*Pub. Science Quarterly*, Dec., 1899).

In August, 1899, the draft of a Constitution thus agreed upon was transmitted to England, with addresses from the provincial legislatures, praying that it be passed into law by the Imperial Parliament. Early in the following year delegates from the several colonies were sent to England to discuss with the Colonial Office certain questions that had arisen, and to assist in procuring the passage by Parliament of the necessary Act. Looked at from the Imperial standpoint, a number of objections to the draft Constitution were found, but all of them were finally waived excepting one. That one related to a provision touching appeals from the High Court of the Australian Commonwealth to the Queen in Council. As framed and adopted in Australia, the provision in question was as follows: "71. No appeal shall be permitted to the Queen in Council in any matter involving the interpretation of this Constitution or of the Constitution of a State, unless the public interests of some part of Her Majesty's Dominions, other than the Commonwealth or a State, are involved. Except as provided in this section, this Constitution shall not impair any right which the Queen may be pleased to exercise, by virtue of Her Royal Prerogative, to grant special leave of appeal from the High Court to Her Majesty in Council. But The Parliament may make laws limiting the matters in which such leave may be asked." This was objected to on several grounds, but mainly for the reasons thus stated by Mr. Chamberlain: "Proposals are under consideration for securing a permanent and effective representation of the great Colonies on the Judicial Committee, and for amalgamating the Judicial Committee with the House of Lords, so as to constitute a Court of Appeal from the whole British Empire. It would be very unfortunate if Australia should choose this moment to take from the Imperial Tribunal the cognizance of the class of cases of greatest importance, and often of greatest difficulty. Article 74 proposes to withdraw from the Queen in Council matters involving the interpretation of the Constitution. It is precisely on questions of this kind that the Queen in Council has been able to render most valuable service to the administration of law in the Colonies, and questions of this kind, which may sometimes involve a good deal of local feeling, are the last that should be withdrawn from a Tribunal of appeal with regard to which there could not be even a suspicion of prepossession. Questions as to the constitution of the Commonwealth or of a State may be such as to raise a great deal of public excitement as to the definition of the boundaries between the powers of the Commonwealth Parliament and the powers of the State Parliaments. It can hardly be satisfactory to the people of Australia that in such cases, however important and far reaching in their consequences, the decision of the High Court should be absolutely final. Before long the necessity for alter-

ing the Constitution in this respect would be felt, and it is better that the Constitution should be enacted in such a form as to render unnecessary the somewhat elaborate proceedings which would be required to amend it." — *Great Britain, Parliamentary Publications (Paper by Command, April and May, 1900, Australia—Vol. 124 and 158)*. — In reply, the Australian delegates maintained that they had no authority to amend in any particular the instrument which the people of the several colonies had ratified by their votes; but the Imperial authorities were inflexible, and the article 74 was modified in the Act which passed Parliament, on the 7th of July, 1900, "to constitute the Commonwealth of Australia," as may be seen by reference to the text, published elsewhere—see on this vol.) CONSTITUTION OF AUSTRALIA.

A. D. 1900.—The question of the Federal Capital.—By the Constitution of the Commonwealth, it is required that the seat of government "shall be determined by the Parliament, and shall be within territory which shall have been granted to or acquired by the Commonwealth, and shall be vested in and belong to the Commonwealth, and shall be in the State of New South Wales and be distant not less than one hundred miles from Sydney;" and "such territory shall contain an area of not less than one hundred square miles." "New South Wales," says a correspondent, writing from Sydney, "is naturally anxious to get the question decided as quickly as possible; but Victoria will equally be inclined to procrastinate, and the new Parliament—which cannot be more comfortable than it will be at Melbourne—will not be in a hurry to shift. The necessity for a new and artificial capital arises entirely out of our provincial jealousies, and it would have been a great saving of initial expense and a great diminution of inconvenience if we could have used one of the old capitals for a quarter of a century." To remove preliminary difficulties and avoid delay, the government of New South Wales appointed a commissioner to visit and report on the most likely places. The report of this commissioner, made early in October, "reduces the possible positions to three—one near Bombala in the south east corner of the colony at the foot of the Australian Alps, one near Yass on the line of the railway between Sydney and Melbourne, and one near Orange on our western line. On the whole he gives the preference to the first named."

New South Wales: A. D. 1900.—Old-Age Pension Act.—A letter from Sydney, Nov. 29, 1900, announced: "The question of the establishment of an old age pension system, similar to that now in successful operation in New Zealand (see in this vol.) NEW ZEALAND: A. D. 1899], has been agitating New South Wales for several months, and to day the bill for that purpose became a law. There has been a desire on the part of some members of the Legislature to hold over the bill until the convening of the Federal Parliament, in the hope that the measure would become universal throughout the continent, but the majority, including the Premier, wished the bill to be pushed through without loss of time. There is no opposition worth mentioning. . . . At a mass meeting in favor of the bill representatives of every political party, of every Church and of every profession and trade in the community were present. The sentiment of the colony has

never been more unanimous. . . . The estimated cost of the scheme is something like £250,000 or £300,000 a year, but this does not take into consideration the amount which will be saved by doing away with the charitable institutions now draining the pockets alike of the state and of the individual. Private contributions alone amount to £500,000 a year, all this will be saved, together with a part of the Government's annual expenditure—about £400,000—for public institutions. Not all pauper institutions can be abolished, for many of the aged and friendless poor are ailing or slightly feeble minded, and will continue to need medical attention."

A. D. 1900 (March).—New Zealand looking toward federation with the Australian Commonwealth. See in this vol. NEW ZEALAND V. D. 1900 (March).

West Australia: A. D. 1900 (August).—Vote to join the Commonwealth.—The question of union with the other colonies in the Commonwealth, from which the West Australians had previously held aloof, was submitted to them in August (women voting for the first time), and decided affirmatively by 44,794 against 19,691. Adding the West Australian totals to the aggregate vote at the decisive referendum in each of the other federating colonies, the following is the reported result:

For federation	422,647
Against federation	161,024
Majority	261,623

A. D. 1900 (September–December).—The Queen's Proclamation of the Australian Commonwealth.—Contemplated visit of the Duke and Duchess of York to open the first session of the Federal Parliament.—Appointment of Lord Hopetoun to be Governor-General.—The first Federal Cabinet.—On the 17th of September the following proclamation of the Australian Commonwealth was issued by the Queen: "Whereas by an Act of Parliament passed in the sixteenth and sixteenth years of Our reign, intitled 'An Act to constitute the Commonwealth of Australia,' it is enacted that it shall be lawful for the Queen with the advice of the Privy Council, to declare by Proclamation that, on and after a day therein appointed, not being later than one year after the passing of this Act, the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, and also, if Her Majesty is satisfied that the people of Western Australia have agreed thereto, of Western Australia, shall be united in a Federal Commonwealth, under the name of the Commonwealth of Australia. And whereas We are satisfied that the people of Western Australia have agreed thereto accordingly. We therefore, by and with the advice of Our Privy Council, have thought fit to issue this Our Royal Proclamation, and We do hereby declare that on and after the first day of January, one thousand nine hundred and one, the people of New South Wales, Victoria, South Australia, Queensland, Tasmania, and Western Australia shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia. Given at Our Court at Balmoral, this seventeenth day of September, in the year of our Lord one thousand nine hundred, and in the sixteenth year of Our reign. God save the Queen."

At the same time, the following announcement, which caused extreme delight in Australia, was published officially from the Colonial Office: "Her Majesty the Queen has been graciously pleased to assent, on the recommendation of the Marquis of Salisbury, to the visit of their Royal Highnesses the Duke and Duchess of York to the colonies of Australasia in the spring of next year. His Royal Highness the Duke of York will be commissioned by her Majesty to open the first Session of the Parliament of the Australian Commonwealth in her name. Although the Queen naturally shrinks from parting with her grandson for so long a period, her Majesty fully recognizes the greatness of the occasion which will bring her colonies of Australia into federal union, and desires to give this special proof of her interest in all that concerns the welfare of her Australian subjects. Her Majesty at the same time wishes to signify her sense of the loyalty and devotion which have prompted the spontaneous aid so liberally offered by all the colonies in the South African war, and of the splendid gallantry of her colonial troops. Her Majesty's assent to this visit is, of course, given on the assumption that at the time fixed for the Duke of York's departure the circumstances are as generally favourable as at present and that no national interests call for his Royal Highness's presence in this country."

To manifest still further the interest taken by the British government in the event, it was made known in October that "when the Duke of York opens the new Commonwealth Parliament, the guard of honour, it is directed, shall be so made up as to be representative of every arm of the British Army, including the volunteers. To the Victoria and St. George's Regiments has fallen the honour of being selected to represent the entire Volunteer force of the country. A detachment of the regiment, between 50 and 60 strong, will accordingly leave for Australia in about a month and will be absent three or four months."

The honor of the appointment to be the first Governor-General of the new Commonwealth fell to a Scottish nobleman, John Adrian Louis Hope, seventh Earl of Hopetoun, who had been Governor of Victoria from 1889 to 1895, and had held high offices at home, including that of Lord Chamberlain in the household of the Queen. Lord Hopetoun landed at Sydney on the 15th of December and received a great welcome. On the 30th, his Cabinet was formed, and announced, as follows: Mr. Barton, Prime Minister and Minister for External Affairs; Mr. Deakin, Attorney-General; Sir William Lyne, Minister for Home Affairs; Sir George Turner, Treasurer; Mr. Kingston, Minister of Trade and Commerce; Mr. Dickson, Minister of Defence; Sir John Forrest, Postmaster-General.

A. D. 1901 (January).—Inauguration of the Federal Government.—The government of the Commonwealth was inaugurated with splendid ceremonies on the first day of the New Year and the New Century, when the Governor-General and the members of the Federal Cabinet were sworn and assumed office. Two messages from the British Secretary of State for the Colonies were read, as follows:

"The Queen commands me to express through you to the people of Australia her Majesty's heartfelt interest in the inauguration of the

Commonwealth, and her earnest wish that, under divine Providence, it may ensure the increased prosperity and well-being of her loyal and beloved subjects in Australia.

Her Majesty's Government send cordial greetings to the Commonwealth of Australia. They welcome her to her place among the nations united under her Majesty's sovereignty, and confidently anticipate for the new Federation a future of ever increasing prosperity and influence. They recognize in the long desired consummation of the hopes of patriotic Australians a further step in the direction of the permanent unity of the British Empire, and they are satisfied that the wider powers and responsibilities henceforth secured to Australia will give fresh opportunity for the display of that generous loyalty and devotion to the Throne and Empire which has always characterized the action in the past of its several States.

A. D. 1901 (May).—Opening of the first Parliament of the Commonwealth by the heir to the British crown. The programme of the Federal Government.—The Duke of Cornwall and York, heir to the British crown (but not yet created Prince of Wales), sailed, with his wife, from England in March, to be present at the opening of the first Parliament of the federated Commonwealth of Australia, which is arranged to take place early in May. He makes the voyage in royal state, on a steamer specially fitted and converted for the occasion into a royal yacht, with an escort of two cruisers.

Preliminary to the election and meeting of Parliament, the new federal government has much organizing work to do, and much preparation of measures for Parliament to discuss. The Premier, Mr. Barton, in a speech made on the 15th of January, announced that the Customs were taken over from the several States on January 1, and the defences and post offices

would be transferred as soon as possible. "Probably the railways would be acquired by the Commonwealth at an early date. Whether the debts of the several States would be taken over before the railways was a matter which had to be decided, and was now engaging the attention of the Treasurer. The Ministry would not consider the appointment of a Chief Justice of the High Court until Parliament had established that tribunal." In the same speech, the main features of the programme and policy of the federal government were indicated. "The Commonwealth," said the Premier, "would have the exclusive power of imposing Customs and excise duties, and it would, therefore, be necessary to preserve the States' power of direct taxation. There must be no direct taxation by the Commonwealth except under very great pressure. Free trade under the Constitution was practically impossible; there must be a very large Customs revenue. . . . The policy of the Government would be protective, not prohibitive, because it must be revenue producing. No one colony could lay claim to the adoption of its tariff, whether high or low. The first tariff of Australia ought to be considerate of existing industries. The policy of the Government could be summed up in a dozen words. It would give Australia a tariff that would be Australian. Regarding a preferential duty on British goods, he would be glad to reciprocate where possible, but the question would have to receive very serious consideration before final action could be taken. Among the legislation to be introduced at an early date, Mr. Barton continued, were a Conciliation and Arbitration Bill in labour disputes, and a Bill for a transcontinental railway, which would be of great value from the defence point of view. He was in favour of womanhood suffrage. Legislation to exclude Asiaties would be taken in hand as a matter of course."

AUSTRIA-HUNGARY.

Financial relations of the two countries forming the dual Empire.—The financial relations of Austria and Hungary fall under three main heads. Firstly, the Quota, or proportionate contribution to joint expenditure. The Quota is an integral portion of the compact of 1867 [see—in vol. I.—AUSTRIA, A. D. 1866-1867], but is revised every ten years. Failing an agreement on the proportion to be paid by each half of the monarchy, the Quota is fixed from year to year by the Emperor till an agreement is arrived at. Secondly, the so-called commercial 'Ausgleich' treaty, which provides for a customs union, postal and telegraphic union, commercial equality of citizens of one state in the other, identical excise duties, &c. Thirdly, the Bank Union, by which Austria and Hungary have a common Austro-Hungarian bank, and common paper money. The Ausgleich and Bank Union are not essential parts of the 1867 compact; they are really only treaties renewable every ten years, and if no agreement is come to, they simply lapse, and each state makes its own arrangements, which seems very likely to be the fate of the Ausgleich unless the present crisis can be got over. The proceeds of the joint customs are applied directly to common expenses,

and only the difference is made up by Quota. But if the Ausgleich falls through, the whole of the joint expenditure will have to be settled by quota payments. The joint expenditure goes almost wholly to the upkeep of the army, navy, and consular and diplomatic services. It amounts on an average to about 150 million florins or 12½ million £, falling as low as 124½ million florins in 1885 and rising to nearly 167 million in 1888. Of this total the customs revenues have, in the last few years, accounted for nearly a third, usually about 31 per cent. The Quota was fixed in 1867 at 70 per cent. for Austria and 30 per cent. for Hungary, based on a very rough calculation from the yield of common taxation in the years 1860-1865, the last few years preceding the restoration of Hungarian independence. On the incorporation of the so-called Military Frontier in Hungary, the Hungarian proportion was increased to 31·4. Hitherto the Hungarians have resisted any attempt to increase their quota. This 'non possumus' attitude has provoked great resentment in Austria, especially when it is compared with the self-complacent tone with which the Magyars dwell on the enormous progress made by Hungary since 1867. That progress is indubitable. Hungary has not only developed

as an agricultural state, but is in a very fair way of becoming an industrial and manufacturing state as well.

On all these grounds the Austrians declare that they can no longer go on paying the old quota of 68.6 per cent. The Hungarians admit the great progress made by Hungary, but with some qualifications. In spite of the growth of Budapest, Fiume, and a few other towns, Hungary is still on the whole, very backward when compared with Austria. The total volume of her manufactures is very small, in spite of the rapid increase of recent years. Hungary is still, to all intents and purposes, an agricultural country, and as such, has suffered largely from the fall in prices. — L. S. Amery, *Austro-Hungarian Financial Relations* (*Economic Journal*, Sept., 1898).

A. D. 1894-1895.—The Hungarian Ecclesiastical Laws. Conflict with the Church.—Resignation of Count Kalnoky.—In the last month of 1894 no dissent was given to three bills, known as the Ecclesiastical Laws, which marked an extraordinary departure from the old subservience of the State to the Church. The first was a civil marriage law, which made civil marriage compulsory, leaving religious ceremonies optional with the parties, and which modified the law of divorce; the second annulled a former law by which the sons of mixed marriages were required to follow the father's religion, and the daughters to follow that of the mother; the third established an uniform State registration of births, deaths and marriages, in place of a former registration of different creeds, and legalized marriages between Christians and Jews without change of faith. These very radical measures, after passing the lower house of the Hungarian legislature, were carried with great difficulty through the aristocratic and clerical upper house, and only by a strong pressure of influence from the emperor-king himself. They were exceedingly obnoxious to the Church, and the Papal Nuncio became active in a hostility which the Hungarian premier, Baron Bimffy, deemed offensive to the State. He called upon the Imperial Minister of Foreign Affairs, Count Kalnoky, to address a complaint on the subject to the Vatican. This led to disagreements between the two ministers which the Emperor strove without success to reconcile, and Count Kalnoky, in the end, was forced to retire from office. The Pope was requested to recall the offending Nuncio, and declined to do so.

A. D. 1895-1896.—Race-jealousies and conflicts.—The position of Bohemia in the part of the dual Empire called Austria.—Anti-Semitic agitation in Vienna.—Austrian Ministry of Count Badeni.—Enlarged parliamentary franchise.—In the constitutional reconstruction of the Empire after the war of 1866, almost everything was conceded to the Magyars of Hungary, who acquired independence in matters of internal administration, and ascendancy over the other races subject to the Hungarian crown. "On the other hand, absolute equality was established between the different countries that are not connected with Hungary. No greater privileges were granted to an ancient historical kingdom such as Bohemia than were given, for instance, to the small Alpine district situated between the Tyrol and the Baden See (Lake of Constance) known as Vorarl-

berg. The representatives of these countries were to meet at Vienna, and a ministry for 'Cisleithania' was appointed. That these measures were injudicious is now the opinion of almost all Austrians. Beust, the Saxon statesman who was called in to conduct the political reconstruction of 1867 (see, in vol. I, AUSTRIA, A. D. 1866-1867 and 1866-1887), created a new agglomeration of small and large countries, entirely different as regards race, history, and culture. It is characteristic of the artificiality of Count Beust's new creation that up to the present day no real and generally accepted name for it has been found. The usual designation of Cisleithania is an obvious absurdity. A glance at the map will suffice to show how senseless such a name is when applied, for instance, to Dalmatia, one of the countries ruled from Vienna. The word 'Austria' also can correctly be applied only either to all the countries ruled by the house of Habsburg-Lorraine or to the arch-duchies of Upper and Lower Austria, which are the cradle of the dynasty. The official designation of the non-Hungarian parts of the empire is 'the kingdoms and lands represented in the parliament' of Vienna. 'Die im Reichsrath vertretenen Königreiche und Länder.'

Though the Germans willingly took part in the deliberations of the Parliament of 'Cisleithania,' the Slavs of Bohemia and Poland were at first violently opposed to the new institution. They might perhaps have willingly consented to take part in a Vienna parliament that would have consisted of representatives of the whole empire. But when the ancient historical rights of Hungary were fully recognized, countries such as Bohemia and Poland naturally felt offended. Count Beust dealt differently with these two divisions of the empire. The partly true, partly imaginary grievances of the Poles were more recent and better known thirty years ago than they are now. Beust was impressed by them and considered it advisable to make large concessions to the Poles of Galicia with regard to autonomy, local government, and the use of the national language. The Poles, who did not fail to contrast their fate with that of their countrymen who were under Russian or Prussian rule, gratefully accepted these concessions, and attended the meetings of the representative assembly at Vienna. Other motives also contributed to this decision of the Galician Poles. Galicia is a very poor country, and the Germans who then ruled at Vienna, naturally welcoming the representatives of a large Slav country in their Parliament, proved most generous in their votes in favour of the Galician railways. Matters stood differently in Bohemia, and the attitude of Count Beust and the new 'Cisleithanian' ministers was also here quite different. They seem to have thought that they could break the resistance of the Bohemians by military force, and with the aid of the German minority of the population. A long struggle ensued. . . . Bohemia is the 'rockpit' of Austrian political warfare, and almost every political crisis has been closely connected with events that occurred in Bohemia. The Bohemian representatives in 1867 refused to take part in the deliberations of the Vienna Parliament, the existence of which they considered contrary to the ancient constitution of their country. In 1879 they finally decided to take part in the

deliberations of the Vienna assembly. . . . The Bohemians, indeed, entered the Vienna Parliament under protest, and declared that their appearance there was by no means to be considered as a resignation of the special rights that Bohemia had formerly possessed. The Bohemian deputies, however, continued nevertheless to take part in the deliberations of the Cisleithanian Parliament and loyally supported those of the many Austrian ministers who were not entirely deaf to their demands. Some of these demands, such as that of the foundation of a national university at Prague, were indeed granted by the Vienna ministers. Though a German university continued to exist at Prague, this concession was vehemently opposed by the Germans, as indeed every concession to appease the Bohemian people was. — Francis Count Lutzw, *Austria at the End of the Century* (Nineteenth Century Rev., Dec., 1899).

During recent years, government in the dual empire has been made increasingly difficult, especially on the Austrian side, by the jealousy, which grows constantly more bitter, between the German and Slavic elements of the mixed population, and by the rising heat of the Anti Semitic agitation. The latter was brought to a serious crisis in Vienna during 1895 by the election of Dr. Lueger, a violent leader of Anti Semitism, to the office of First Vice Burgomaster, which caused the resignation of the Burgomaster, and led to such disorders in the municipal council that the government was forced to intervene. The council was dissolved and an imperial commissioner appointed to conduct the city administration provisionally; but similar disorders, still more serious, occurred in October, when elections were held and the Anti Semites won a majority in the council. Dr. Lueger was then elected Burgomaster. The government, supported by a majority in the Austrian Reichsrath, refused to confirm the election. A second time Dr. Lueger was elected; whereupon the municipal council was again dissolved and the municipal administration transferred to an imperial commissioner. This measure was followed by scenes of scandalous turbulence in the Reichsrath and riotous demonstrations in the streets, which latter were vigorously suppressed by the police. Some considerable part of the temper in these demonstrations was directed against the Austrian premier, Count Badeni, and still more against the Polish race, to which he belonged. Count Badeni, who had been Governor of Galicia, had just been called to the head of affairs, and gave promise of an administration that would be strong, but several other members of his cabinet were Poles, and that fact was a cause of offense. He gave an early assurance that the demand for an enlargement of the parliamentary franchise should be satisfactorily met, and that other liberal measures should be promptly taken in hand. These promises, with the show of firmness in the conduct of the government, produced a wide feeling in its favor. The promise of an enlargement of the parliamentary franchise in Austria was redeemed the following February (1896), by the introduction and speedy passage of a parliamentary reform bill, which embodied an important revision of the Austrian constitution. Seventy-two new members were added to the 353 which formerly constituted the lower or Abgeordneten House of the Austrian Reichsrath. The original body of 353 remained

as it had been, made up in four sections, elected by four classes in the community, namely: owners of large estates, electing 85 members; doctors of the universities and town taxpayers who pay two florins of direct taxation yearly, these together electing 115; country taxpayers who pay five florins of direct taxation yearly, electing 131. The number of voters in these four privileged classes were said to number 1,732,000 when the Reform Bill passed. The new voters added by the bill were estimated to number about 3,600,000. But the latter would elect only the 72 new members added to the House, while the former continued to be exclusively represented by the 353 members of its former constitution. In other words, though the suffrage was now extended to all male adults, it was not with equality of value to all. For about one third of the political community, the franchise was given five times the weight and force that it possessed for the remaining two thirds. Nevertheless, the bill seems to have been accepted and passed with no great opposition. In Vienna, the Anti Semitic agitation was kept up with violence, Dr. Lueger being elected four times to the chief burgomastership of the city, in defiance of the imperial refusal to sanction his election. Finally the conflict was ended by a compromise. Lueger resigned and was permitted to take the office of Vice Burgomaster, while one of his followers was chosen to the Chief Burgomaster's seat.

A. D. 1896.—Celebration of the Millennium of the Kingdom of Hungary.—The millennial anniversary of the Kingdom of Hungary was celebrated by the holding of a great national exposition and festival at Buda Pesth, from the 2d of May until the end of October, 1896. Preparations were begun as early as 1893, and were carried forward with great national enthusiasm and liberality, the government contributing nearly two millions of dollars to the expense of the undertaking. The spirit of the movement was expressed at the beginning by the Minister of Commerce, Bela Lukács, by whose department it was specially promoted. "The government," he said, "will take care that the national work be exhibited in a worthy frame, so as to further the interests of the exhibitors. May every one of you, its subjects, therefore show what he is able to attain by his diligence, his taste, and his inventive faculty. Let us all, in fact, compete—we who are working, some with our brains, others with our hands, and others with our machines—like one man for the fatherland. Thus the living generation will be able to see what its forefathers have made in the midst of hard circumstances, and to realize what tasks are awaiting us and the new generations in the path which has been smoothed by the sweat, labor, and pain of our ancestors. This will be a rare family festival, the equal of which has not been granted to many nations. Let the people gather, then, round our august ruler, who has guided our country with fatherly care and wisdom in the benevolent ways of peace to the heights which mark the progress of to-day, and who—a faithful keeper of the glorious past of a thousand years—has led the Hungarian people to the threshold of a still more splendid thousand years to come!"

Writing shortly before the opening, the United States Consul at Buda Pesth, Mr. Hammond, gave the following description of the plans and

preparations then nearly complete. "The series of allied festivities will be diversified by those of social and popular character. These will be the interparliamentary conference for international courts of arbitration, the congress of journalists with the view to constitute an international journalistic union, international congresses of art and history, of actors, tourists, athletes, etc., numerous national congresses embracing every intellectual and material interest of the country in which the leading personages of all groups and branches of national production, the highest authorities in the field of commerce, industry, communication, etc., as well as those who are in the forefront of the literary, spiritual and philanthropic movements of the country will take part.

"There is activity in all classes of Hungarian society with a view to carrying out the ingenious project of the artist, Paul Vágó—the great historical painter. Several municipal bodies have already promised their cooperation, while scores of men and women, bearers of historic names, have declared their readiness to take part at their own expense. All the costumes of all the races and social classes who have inhabited this country during ten centuries will pass before our eyes in this beautiful cortège. The genius of the artist will call into life in their descendants the warriors who conquered Pannonia under Attila, and, during the reign of Louis the Great, annexed to this realm all the neighboring countries; all the dignitaries, both civil and ecclesiastical, who, under Stephen the Saint, King Kálmán, and Matthias Corvinus, spread Christianity, enlightenment, liberty, and wealth to the extreme confines of this part of Europe; all the crusaders of Joannes Hunyadi, who drove back the Crescent for a century and thus defended western civilization against eastern fanaticism; all the kings, princes, noblemen, and poets of modern times who have led the nation in her struggle for modern ideas. These historical figures will be followed by their retainers or surrounded by the popular types of the respective epochs. To judge by the sketches of the artist, this pageant promises to surpass anything that has hitherto been offered on similar occasions.

"All these festivals will move, as it were, within the fixed frame of the Millennial National Exhibition, which will cover an area of 500,000 square meters (5,382,100 square feet) and consist of 160 buildings and pavilions, erected at a total cost (including private expenses) of 10,000,000 florins (\$4,020,000). This exhibition is divided into two sections, viz.: (1) The historical section, containing art treasures, relics, and antiquities of the past, which will illustrate the political, religious, military, and private life of each principal period in the history of the nation. . . . (2) The section of modern times will embrace everything offered by similar exhibitions. Nevertheless, the visitor's mind will here, too, be impressed with the solemnity of the millennium and the enthusiasm inspiring the nation at this momentous period of its history. The programme embraces the national life in all its manifestations. Not only will the present condition of Hungary be laid open to general view, but the world will also be impressed with the great progress Hungary has made since the reestablishment of her constitution in 1867."—*U. S. Consular Reports, April, 1896.*

By every possible arrangement of facilitation and cheapening a visit to the Exposition was placed within the means of all the inhabitants of the kingdom, and especial provision was made for bringing schools and teachers to receive the object lessons which it taught.

Among the ceremonies which attended the closing of the great national festival was the formal opening at Orsova of a ship channel through the rocky obstructions that have been known since the days when they troubled the Romans as the "Iron Gates of the Danube."

A. D. 1897. Industrial combinations. See on this vol. I. PARTS. 18. EUROPEAN SOCIETIES.

A. D. 1897. The forces of feudalism and clericalism in Austria. Austrian parties in the Reichsrath. Their aims, character and relative strength. Count Baden's language decrees for Bohemia. In no European country have the forces of feudalism and clericalism such an enormous influence as they have in Austria. The Austrian nobility is supreme at Court and in the upper branches of the Administration. In Hungary the small nobility and landed gentry exercise a preponderating influence, but they are a wide class and filled with the national spirit. The Austrian nobility forms a narrow, intensely exclusive and bigoted caste, whose only political interest is the maintenance of its own class supremacy. The large Protestant element in Hungary has in no small degree contributed to the success of the Magyars, both in its effect on the national character and by the secondary position to which the mixture of creeds has relegated the Church. In Austria the Church of Rome is all powerful. The House of Habsburg has always been bigotedly Catholic; Francis Joseph himself was a pupil of the Jesuits. The triumph of the reaction after 1848 was the establishment in 1855 of that "written Canon" the Concordat, which made the Church absolute in all matters relating to education and marriage. And even though the Concordat was got rid of in 1870, the energies of the clerical party have been but little weakened. The real explanation of the whole course of Austrian politics lies in the interaction of the two outflows—of reaction, clerical or aristocratic, against liberalism, and of Slav against German.

"In March 1897 came the general elections, to which a special interest was lent by the first appearance of the fifth class of voters. The most striking feature of the elections was the complete and final break up of the German Liberal party. . . . The history of the German Liberal party has been one of a continuous decline both in numbers and importance. It counted 290 members in 1873, 170 in 1879, 111 in 1885-1891, and only 77 out of a total of 125 in 1897. . . . Their political theories are those of moderate constitutional liberalism as understood on the Continent in the middle of the century, i. e. belief in the efficacy of parliamentary government, in commercial and industrial freedom, hostility to military bureaucracy and clericalism. The most radical group among them, the Progressists, an offshoot of the last election, is about as radical as the ordinary English Conservative of to-day. The views of the Verfassungstreue Grossgrundbesitzer are those of the English Tory of fifty years ago.

"Of the fractions into which the Liberal party is now divided the most important is the

Deutsch-Fortschrittliche, or Progressive, which split off from the main body in November 1896. Its chief object was to direct a stronger opposition on national and liberal lines to Count Badeni. Its 35 members are almost exclusively recruited from Bohemia and Moravia. They differ from the German Volkspartei mainly in their refusal to accept anti-Semitism, which would be both against their liberal professions and their economic convictions as representatives of the commercial and manufacturing classes. The constitutional landowners (Verfassungstreue Grossgrundbesitzer) do not represent the most conservative element of the old Liberal party.

The 12 members of the Free German Union (Freie Deutsche Vereinigung) may perhaps consider themselves the most authentic remnant of the great Liberal party. It is their chief claim to distinction. The German National or People's party (Deutsche Volkspartei, 43 seats) first made its appearance at the elections of 1885. It rejected the old idea of the Liberals that the Germans were meant, as defenders of the State, to look to State interests alone without regard to the fate of their own nationality, and took up a more strictly national as well as a more democratic attitude. It has also of late years included anti-Semitism in its programme. Its main strength lies in the Alpine provinces, where it heads the German national and Liberal opposition to the Slovenes on the one side, and the German clericals on the other. It is at present the largest of the German parties.

Least but not last of the German parties comes the little group of five led by Schönerer and Wolf. Noisy, turbulent, and reckless, this little body of extremists headed the obstruction in the Reichsrath, the disorganised larger German parties simply following in its wake. The object these men aim at is the incorporation of German Austria in the German Empire, the non-German parts being left to take care of themselves. Both the German National party and Schönerer's followers are anti-Semitic, but anti-Semitism only plays a secondary part in their programme. The party that more specially claims the title of anti-Semite is the Christian Social (Christlich Soziale, 27 seats). The growth of this party in the last few years has been extraordinarily rapid. In Dr Lueger and Prince Alois Liechtenstein it has found leaders who thoroughly understand the arts of exciting or humouring the Viennese populace. The characteristic feature of Austrian anti-Semitism, besides the reaction against the predominance of the ubiquitous Jew in commerce, journalism, and the liberal professions, is that it represents the opposition of the small tradesman or handicraftsman to the increasing pressure of competition from the large Jewish shops and the sweating system so frequently connected with them. The economic theories of the party are of the crudest and most medieval kind; compulsory apprenticeship, restricted trade guilds, penalties on stock exchange speculation, &c., form the chief items of its programme.

The German Clericals and the Clerical Conservatives (Katholische Volkspartei and Centrum) number some 37 votes together; but their importance has always been increased by the skillful and unscrupulous parliamentary tactics of the party. The strength of the Clerical party lies in the ignorant and devotedly pious peas-

antry of Upper Austria and the Alpine provinces. The defence of agrarian interests is included in its programme, but its only real object is the maintenance of the moral and material power of the Church. Its policy looks solely to the interests of the Vatican.

The best organised of the national parties is the Polish Club (59 seats). It represents the national and social interests of the Polish nobility and landed gentry. Standing outside of Austrian interests, they exercise a controlling voice in Austrian affairs. The three so-called well-drilled Polish votes have helped the Government again and again to ride roughshod over constitutional opposition. The partition of Poland has thus avenged itself on one at least of its spoilers. The Germans have long resented this outside interference which permanently keeps them in a minority. . . . The Czechs are a party of 60, and together with the 10 representatives of the Czech landed aristocracy form the largest group in the Reichsrath. The Young Czech party began in the seventies as a reaction against the Old Czech policy of passive resistance. In contradistinction to the Old Czechs, they also professed radical and anti-clerical views in politics generally. . . . In 1897 the Old Czechs finally withdrew from the contest or were merged in the victorious party.

Of the other nationalist parties the most important is the Slav National Christian Union (34 seats), comprising the Slovenes, Croats, and some of the more moderate Ruthenians from Galicia. Their programme is mainly national, though tinged with clericalism; equality of the Slav languages with German and Italian in mixed districts; and ultimately a union of the southern Slavs in an autonomous national province. The Italians are divided into 5 Clerical Italians from the Tirol and 14 Liberals from Trieste, Istria, &c. The Tirolese Italians desire a division of the Tirol into a German and an Italian part.

The most interesting, and in some ways the most respectable, of all Austrian parties is the Socialist or Social Democratic party (45 seats). It is the only one that fights for a living political theory—German liberalism being to all intents and purposes defunct—and not for mere national aggression. The Social Democrats hold the whole national agitation to be an hysterical dispute got up by professors, advocates, and other ne'er-do-wells of the unemployed upper classes. . . . Their support is derived from the working classes in the industrial districts, and not least from the poorer Jews, who supply socialism with many of its keenest apostles.

Altogether a most hopeless jumble of incoherent atoms is this Austrian Reichsrath. The chariots driving four-ways on the roof of the Houses of Parliament are a true symbol of the nature of Austrian politics. To add to the confusion, all the parties are headless. Able men and men of culture, there are a good many in the House; but political leaders there are none. The general tone of the House is undignified, and has been so for some time.

On April 5, 1897, Count Badeni published the notorious language decrees for Bohemia. This ordinance placed the Czech language on an absolute equality with the German in all governmental departments and in the law courts all over Bohemia. . . . After 1901 all officials to every part of Bohemia were to be obliged to

know both languages. The refusal of the Germans to admit the language spoken by 62 per cent of the population of Bohemia to be equal with their own is not quite so preposterous as would at first sight appear. Without subscribing to Professor Mannstein's somewhat incidentally phrased inferior races, one must admit that the Czech and German languages do not stand on anything like the same footing. German is a language spoken by some 60,000,000 of people; the language of a great literature and a great commerce. Czech is difficult, unpronounceable, and spoken by some 4,000,000 in all. It must be remembered, too, that the two nations do not really live together in Bohemia, but that the Germans live in a broad belt all round the country, while the Czechs inhabit the central plain. There is no more reason for a German Bohemian to acquire Czech than there is for a citizen of Edinburgh to make himself master of Gaelic. On the other hand, every educated Czech naturally learns German, even in a purely Czech speaking district. It must also be remembered that the decrees, as such, were of doubtful constitutionality; the language question was really a matter for the Legislature to settle. The decrees at once produced a violent agitation among the Germans, which rapidly spread from Bohemia over the whole Empire.—*The Imperial Gazetteer of Austria-Hungary* (Edinburgh Review, July 1898).

A. D. 1897 (October–December).—Scenes in the Austrian Reichsrath described by Mark Twain. He re in Vienna in these closing days of 1897 one's blood gets no chance to sequester. The atmosphere is brimful of political electricity. All conversation is political; every man is a battery, with brushes overworn, and gives out blue sparks when you set him going on the common topic. Things have happened here recently which would set any country but Austria on fire from end to end, and upset the government to a certainty; but no one feels confident that such results will follow here. Here, apparently, one must wait and see what will happen; then he will know, and not before; guessing is idle; guessing cannot help the matter. This is what the wise tell you; they all say it; they say it every day, and it is the sole detail upon which they all agree. There is some approach to agreement upon another point; that there will be no revolution. Nearly every day some one explains to me that a revolution would not succeed here. It could n't, you know. Broadly speaking, all the nations in the empire hate the government—but they all hate each other too, and with devoted and enthusiastic hatredness, no two of them can combine; the nation that rises must rise alone; then the others would joyfully join the government against her, and she would have just a fly's chance against a combination of spiders. This government is entirely independent. It can go its own road, and do as it pleases; it has nothing to fear. In countries like England and America, where there is one tongue and the public interests are common, the government must take account of public opinion; but in Austria-Hungary there are nineteen public opinions—one for each state. No—two or three for each state, since there are two or three nationalities in each. A government cannot satisfy all these public opinions; it can only go through the mo-

tions of trying. This government does that. It goes through the motions, and they do not succeed; but that does not worry the government much.

The recent troubles have grown out of Count Badeni's necessities. He could not carry on his government without a majority vote in the House; at his back, and in order to secure it he had to make a trade of some sort. He made it with the Czechs, the Bohemians. The terms were not easy for him; he must pass a bill making the Czech tongue the official language in Bohemia in place of the German. This created a storm. All the Germans in Austria were incensed. In numbers they form but a fourth part of the empire's population, but they urge that the country's public business should be conducted in one common tongue, and that tongue a world language, which German is. However, Badeni secured his majority. The German element was apparently become helpless. The Czech deputies were exultant. Then the music began. Badeni's voyage, instead of being smooth, was disappointingly rough from the start. The government must get the 'Ausgleich' through. It must not fail. Badeni's majority was ready to carry it through, but the minority was determined to obstruct it, and delay it until the obnoxious Czech language measure should be shelved.

The 'Ausgleich' is an Adjustment, Arrangement, Settlement, which holds Austria and Hungary together [see above, also in vol. I, Austria, A. D. 1866–1867]. It dates from 1867, and has to be renewed every ten years. It establishes the share which Hungary must pay toward the expenses of the imperial government. Hungary is a kingdom (the Emperor of Austria is its King), and has its own parliament and governmental machinery. But it has no foreign office, and it has no army—at least its army is a part of the imperial army, is paid out of the imperial treasury, and is under the control of the imperial war office. The ten year rearrangement was due a year ago, but failed to connect. At last completely. A year's compromise was arranged. A new arrangement must be effected before the last day of this year. Otherwise the two countries become separate entities. The Emperor would still be King of Hungary—that is, King of an independent foreign country. There would be Hungarian custom houses on the Austrian frontier, and there would be a Hungarian army and a Hungarian foreign office. Both countries would be weakened by this, both would suffer damage. The Opposition in the House, although in the minority, had a good weapon to fight with in the pending 'Ausgleich'. If it could delay the 'Ausgleich' a few weeks, the government would doubtless have to withdraw the hated language bill or lose Hungary.

The Opposition began its fight. Its arms were the Rules of the House. It was soon manifest that by applying these Rules ingeniously, it could make the majority helpless, and keep it so as long as it pleased. It could shift off business every now and then with a motion to adjourn. It could require the yeas and nays on the motion, and use up thirty minutes on that detail. It could call for the reading and verification of the minutes of the preceding meeting, and use up half a day in that way. It could require that several of its members be entered upon the list

of permitted speakers previously to the opening of a sitting, and a further regulation limit further delays could thus be accomplished. These were all lawful weapons, and the men of the opposition technically called the Left were within their rights in using them. They used them to such dire purpose that all parliamentary business was paralyzed. The Right (the government side) could accomplish nothing. Then it had a saving idea. This idea was a curious one. It was to leave the President and the Vice Presidents of the parliament to trample the Rules under foot upon occasion.

And now took place that memorable sitting of the House which broke two records. It lasted the best part of two days and a night, surpassing by half an hour the longest sitting known to the world's previous parliamentary history, and breaking the long speech record with Dr. Lecher's twelve-hour effort, the longest flow of unbroken talk that ever came out of one mouth since the world began. At 8.45, on the evening of the 28th of October, when the House had been sitting a few minutes short of ten hours, Dr. Lecher was granted the floor.

Then burst out such another wild and frantic and deafening clamor as has not been heard on this planet since the last time the Communists surprised a white settlement at midnight. Yells from the Left, counter yells from the Right, explosions of yells from all sides at once, and all the air sawed and pined and clawed and choven by a writhing confusion of gesturing arms and hands. Out of the midst of this thunder and turmoil and tempest rose Dr. Lecher, serene and collected, and the phenomenal length of him embled his head to show out above it. He began his twelve-hour speech. At any rate his lips could be seen to move, and that was evidence. On high sat the President imploring order, with his long hands put together as in prayer, and his lips visibly but not hearably speaking. At intervals he grasped his bell and swung it up and down with vigor, adding its keen clamor to the storm weltering there below. Dr. Lecher went on with his pantomime speech, contented, untroubled.

One of the interrupters who made himself heard was a young fellow of slight build and neat dress, who stood a little apart from the solid crowd and leaned negligently, with folded arms and feet crossed, against a desk. Trim and handsome, strong face and thin features, black hair roughed up; parsimonious mustache; resonant great voice, of good tone and pitch. It is Wolf, capable and hospitable with sword and pistol. Out of him came early this thundering peal, audible above the storm.

"I demand the floor. I wish to offer a motion."

In the sudden hush which followed, the President answered, "Dr. Lecher has the floor."

"Wolf. I move the close of the sitting."

"P. Representative Lecher has the floor." [Stormy outburst from the Left—that is, the Opposition.]

"Wolf. I demand the floor for the introduction of a formal motion. [Pause.] Mr. President, are you going to grant it, or not? [Crash of approval from the Left.] I will keep on demanding the floor till I get it."

"P. I call Representative Wolf to order. Dr. Lecher has the floor."

"Which was true, and he was speaking, too,

calmly, earnestly and argumentatively, and the old-fashioned stenographers had left their places, and were at his elbows taking down his words, the leaning and craning into their ears, a most curious and interesting scene.

At this point a new and most effective noise-maker was pressed into service. Each desk has an extension consisting of a removable board eighteen inches long, six wide, and a half inch thick. A member pulled one of these out and began to belabor the top of his desk with it. Instantly other members followed suit, and perhaps you can imagine the result. Of all conceivable racket it is the most ear-splitting, intolerable, and altogether fiendish. Wolf went on with his noise, and with his demands that he be granted the floor, resting his board at intervals to discharge exclaims and epithets at the Chair.

By and by he struck the idea of beating out a tune with his board. Later he decided to stop asking for the floor, and to confer it upon himself. And so he and Dr. Lecher now spoke at the same time and mingled their speeches with the other noises, and nobody heard either of them. Wolf rested himself now and then from speech-making by reading, in his clariion voice, from a pamphlet.

"I will explain that Dr. Lecher was not making a twelve-hour speech for pastime, but for an important purpose. It was the government's intention to push the 'Ausgleich' through its preliminary stages in this one sitting (for which it was the Order of the Day), and then by vote refer it to a select committee. It was the Majority's scheme—as charged by the Opposition—to drown debate upon the bill by pure noise—drown it out and stop it. The debate being thus ended, the vote upon the reference would follow—with victory for the government. But into the government's calculations had not entered the possibility of a single hurled speech which should occupy the entire time limit of the sitting, and also get itself delivered in spite of all the noise.

In the English House an obstructionist has held the floor with Bible readings and other out-of-side matters, but Dr. Lecher could not have that restful and recuperative privilege—he must confine himself strictly to the subject before the House. More than once, when the President could not hear him because of the general tumult, he sent persons to listen and report us to whether the orator was speaking to the subject or not.

The subject was a peculiarly difficult one, and it would have troubled any other deputy to stick to it three hours without exhausting his ammunition, because it required a vast and intimate knowledge—detailed and particularized knowledge—of the commercial, railroading, financial, and international banking relations existing between two great sovereignties, Hungary and the Empire. But Dr. Lecher is President of the Board of Trade of his city of Brunn, and was master of the situation. He went steadily on with his speech, and always it was strong, virile, felicitous, and to the point. He was earning applause, and this enabled his party to turn that fact to account. Now and then they applauded him a couple of minutes on a stretch, and during that time he could stop speaking and rest his voice without having the floor taken from him.

The Minority staid loyally by their champion. Some distinguished deputies of the Majority staid

by him too compelled thereto by admiration of his moral performance. When a man has been speaking eight hours as it occasionally has been possible to interesting still fresh and vigorous. When Dr. Beecher had been speaking eight hours he was still comparatively untroubled by friends who would have tired him and by foes of all parties who would have derided him, exhausted him and would have spoken words and all stripped the triumph of its worth, and left only a mockery left. It appears, however, as was a triumph without precedent in history.

In consequence, most of the teachers' twelve-hour speech and the other distinctions it imposed by the Ministry of Education in thirty-three-hour lessons of the Housewife encompassed nothing. The curriculum was reduced for a week, to let the members see, if perhaps, a small slice of previous time. For a few months remained in which to carry the all important, 'Ausgleich' to a consummation.

During the whole of November things went from bad to worse. The all important Ausgleich remained hard, unyielding, and could not be spurred off. Bismarck's government could not withdraw the 14 ounces Calumnie and keep its majority, and the Opposition could not be pliant on easier terms. One night, while the customary pamphlet storm was raging and thundering along at its best, a light broke out

On Thanks-giving day the sitting was a lustrous baking one. On that day the hurried, belated and obnoxious government went insane. In order to free itself from the thrall of the Opposition it committed this curiously juvenile crime: it moved an important change of the Rules of the House, forbade debate upon the motion, put it to a stand-up vote instead of ayes and noes, and then gravely claimed that it had been adopted. The House was already

been adopted. The House was already standing up, had been standing for an hour, and before a third of it had found out what the President had been saying, he had proclaimed the adoption of the motion. And only a few heard that. In fact, when that House is legislating you can't tell it from an artillery practice. You will realize what a happy idea it was to side-track the bayful ayes and noes, and substitute a stand-up vote by this fact—that a little later, when a delegation of deputies waited upon the President and asked him if he was actually willing to sign that bill, that measure had been passed, he answered 'Yes, and unanimously'.

The 'Lex Falkenhayn' thus strangely born, gave the President power to suspend for three days any deputy who should continue to be disorderly after being called to order twice, and it also placed at his disposal such force as might be necessary to make the suspension effective. So the House had a sergeant-at-arms at last, and a more formidable one as to power, than any other legislature in Christendom had ever possessed. The Lex Falkenhayn also gave the House itself authority to suspend members for thirty days (in these terms the 'Ausgleich' could be put through in an hour—apparently). The Opposition would have to sit meek and quiet, and stop obstructing, or be turned into the street, deputy after deputy, leaving the Majority an unvexed field for its work.

"Certainly the thing looked well . . . [But not so] when the President attempted to open the session, a band of the Socialist members made

a sudden charge upon him drove him and the Vice-President from the House, took possession of the tribune, and brought even the attendance of legislative proceedings to an end. Then a body of sixty policemen was brought in to occupy the House. [Some of the records of this wild freak followed instantly.] The liberal government came down with perash. There was a popular outbreak on two or three days, there were three or four days of furious rioting, and Prague followed by the establishing the order of martial law. The Jews and Germans were killed and plundered, and their houses destroyed, and their homes towns there was a riot on some days, the Germans being the mob, and the Czechs—and in all cases the Jews took no part in matters which side he was on. We are working in December now, the new Minister-President has not been able to pick up a party among the warring factions of the parliament, therefore there is no use in discussing it together, and for the present public opinion believes that parliamentary government and the Constitution are finally threatened with extinction and that the permanency of the monarchy itself is not absolutely certain thing.

Yes, the Fox Falkenhovm was a great invention, and did what was claimed for it—it got the government out of the fixing pain. —S. I. Clements (Mark Twain), *St. Louis Times and Democrat* (Harper's Magazine), March 1888.

A. D. 1897-December. Imperial action. On the last day of the year the Emperor closed the sittings of the Austrian Reichsrath by proclamation and issued a rescript confirming the "Anglo-Gh" provisionally for six months.

A. D. 1898. Prolongation of factional disorders. Paralysis of constitutional government. Though scenes in the Austrian Chambers were not quite so violent perhaps as they had become near the close of 1897, the state of faction-disorder continued much the same through out the year, and legislation was completely stopped. The work of government could be carried on only by imperial decrees. The ministry of Baron von Gautsch, which had succeeded that of Count Badeni attempted a compromise on the language question in Bohemia by dividing the country into three districts, according to the distribution of the several races, in one of which German was to be the official tongue, in another Czech, while both languages were to be used in the third. But the Germans of the empire would accept no such compromise. In March, Baron von Gautsch retired, and Count Thun-Hohenstein, formerly Ministry made up to represent the principal factions in the Reichsrath, but the scheme brought no peace. Nor did appeals by Count Thun in the name of Austria, "to the patriotism and the reason of all parties, to suspend their warfare long enough for a little of the necessary work of the state to be done, have any effect." The turbulence in the legislature infected the whole community, and especially, it would seem, the students in the schools, whose disorder caused many lectures to be stopped. In Hungary, too, there was an increase of violence in political agitation. A party, led by the son of Louis Kossuth, struggled to improve what seemed to be an opportunity for breaking the political union of Hungary with Austria, and realizing the old ambition for an independent Hungarian state. The ministry of

Baron Baulffy had this party against him, as well as that of the clericals, who resented the civil marriage laws, and legislation came to a deadlock nearly as complete in the Hungarian as in the Austrian Parliament. There, as well as in Austria, the extension of the Ausgleich, provisionally for another year, had to be imposed by imperial decree.

A. D. 1898 (September).—Assassination of the Empress—Jubilee of the Emperor's reign. On the 10th of September Elizabeth, Empress of Austria and Queen of Hungary, was assassinated at Geneva by an Italian anarchist, named Luigi Luccheni, who stabbed her with a small stiletto, exceedingly thin and narrow in the blade. The murderer rushed upon her and struck her, as she was walking with a single attendant, on the quay, towards a lake steamer on which she intended to travel to Montreux. She fell, but arose, with some assistance, and walked forward to the steamer, evidently unaware that she had suffered worse than a blow. On the steamer, however, she lost consciousness, and then, for the first time, the wound was discovered. It had been made by so fine a weapon that it showed little external sign, and it is probable that the Empress felt little pain. She lived nearly half an hour after the blow was struck. The assassin attempted to escape, but was caught. As Swiss law forbids capital punishment, he could be only condemned to solitary confinement for life. This terrible tragedy came soon after the festivities in Austria which had celebrated the jubilee year of the Emperor Francis Joseph's reign. The Emperor's marriage had been one of love; he had suffered many afflictions in his later life; the state of his realm was such as could hardly be contemplated without despair; men wondered if he could bear this crowding sorrow and live. But he had the undoubted affection of his subjects, much as they troubled him with their miserably factional quarrels, and that consciousness seems to have been his one support.

A. D. 1899 (May–July).—Representation in the Peace Conference at The Hague. See in this vol. PEACE CONFERENCE.

A. D. 1899-1900.—Continued obstruction by the German parties in Austria.—Extensive secession of German Catholics from their Church, and its significance.—Withdrawal of the Bohemian language decrees.—Obstruction taken up by the Czechs.—During most of the year the German parties in the Austrian Reichsrath continued to make legislation impossible by disorderly obstruction, with the avowed purpose of compelling the government to withdraw the language decrees in Bohemia. A still more significant demonstration of German feeling and policy appeared, in a wide spread and organized movement to detach German Roman Catholics from their church, partly, it would seem, as a proceeding of hostility to the Clerical party, and partly as a means of recommending the Germans of the Austrian states to the sympathy of the German Empire, and smoothing the approach to

an ultimate union of some of those states with the Germanic federation. The agitation against the Catholic Church is called "Los von Rom," and is said to have had remarkable results. "Those acquainted with the situation in Austria," says a writer in the "Quarterly Review," "do not wonder that in various parts of the Empire there is a marked tendency among the German Catholics to join Christian communities separated from Rome. Many thousand Roman Catholics have recently renounced their allegiance to the Holy See. Further secessions are announced as about to take place. The movement is especially strong in great centres like Eger, Asch, and Santz, but has made itself felt also in Carinthia, and even in coast districts. This is a grave political fact, for it is a marked indication of serious discontent, and a sure sign that some arrangement under which certain districts of Austria might be joined to Germany would not be unwelcome to a section of the people."—*Quarterly Rev.*, January, 1899.—In September the Austrian Ministry of Count Thun resigned, and was succeeded by one formed under Count Clary-Alldingen. The new premier withdrew the language decrees, which quieted the German obstructionists, but provoked the Czechs to take up the same rôle. Count Clary-Alldingen resigned in December, and a provisional Ministry was formed under Dr. Wetek, which lasted only until the 19th of January, 1900, when a new Cabinet was formed by Dr. von Körber. In Hungary Baron Baulffy was driven from power in February, 1899, by a state of things in the Hungarian Parliament much like that in the Austrian. M. Koloman Szell, who succeeded him, effected a compromise with the opposition which enabled him to carry a measure extending the Ausgleich to 1907. This brought one serious difficulty of the situation to an end.

A. D. 1900.—Military and naval expenditure. See in this vol. WAR BUDGETS.

A. D. 1900 (February).—Attempted pacification of German and Czech parties by a Conciliation Board.—On Monday last (February 5) the German and Czech Conciliation Board met for the first time in Vienna, under the presidency of the Austrian Premier, Dr. von Körber, and conferred for two hours. . . . Dr. von Körber is at the head of what may be called a 'business' Ministry, composed largely of those who had filled subordinate offices in previous Ministries. It was hoped, perhaps, that, since the leading politicians with a political 'past' could apparently do nothing to bring about a settlement, men with no past, but with a capacity for business, and in no way committed on the racial question, might do better in effecting a working arrangement. The appointment of this Conciliation Board seemed a promising way of attempting such a settlement. Dr. von Körber opened Monday's proceedings with a strong appeal to both sides, saying: 'Gentlemen, the Empire looks to you to restore its happiness and tranquillity.' It cannot be said that the Empire is likely to find its wishes fulfilled, for when the Board came down to hard business, the old troubles instantly revealed themselves. The Premier recommended a committee for Bohemia of

twenty-two members, and one for Moravia of fifteen members, the two sitting in joint session in certain cases. Dr. Engel then set forth the historical claims of the Czechs, which immediately called forth a demand from Dr. Funke, of the German party, that German should be declared the official language throughout Austria. Each speaker seems to have been supported by his own party, and so no progress was made, and matters remain in *statu quo ante*. The singularly deficient constitution of this Board makes against success, for it seems that the German Nationalists and Anti-Semites have only one delegate apiece, the Social Democrats were not invited at all, while the extreme Germans and extreme Czechs, apparently regarding the Board as a mere device to nominate delegates to its sittings. . . . There is unhappily little reason for believing that the Board of Conciliation will effect what the Emperor himself has failed to accomplish. — *Nystätter (London)*, Feb. 10, 1900.

A. D. 1900 (September–December).—Warnings by the Emperor.—Clerical interference in politics.—The attitude of Hungary. Economic decline of Austria.—Pessimistic views in Vienna.—The pending elections.—The Vienna correspondence of the "London Times" seems to be the best source of information concerning the critical conditions that are prevailing in the composite Empire, as the Nineteenth Century closes, and the events by which these conditions are from time to time revealed. The writer, whose reports we shall quote is evidently well placed for observation, and well prepared for understanding what he sees.

In a dispatch of September 11, he notes the significance of a reprimand which the Emperor had caused to be administered to the Archbishop of Sarajevo for interference in political affairs: "The chief of the Emperor's Cabinet called the Archbishop's attention to newspaper reports of a speech made by him at the close of the Catholic Congress recently held at Agram, in which he was represented to have expressed the hope that Bosnia would be incorporated with Croatia at the earliest possible date. As that question was a purely political one and foreign to the sacred vocation of the Archbishop, and as its solution fell exclusively within the jurisdiction of certain lay factors, and more especially within the Sovereign prerogatives of his Majesty, the chief of the Cabinet was instructed, in case the reports were correct, to communicate to his Grace the serious warning and firm expectation of the Emperor that his Grace would abstain in future, both in word and deed, from interference in political questions. As was to be expected, this sharp reprimand to an ecclesiastic of such high position and repute has made a great sensation. It meets with warm approval from the entire Hungarian Press. . . . There is, on the other hand, bitter mortification in Clerical circles. It is evidently felt that the warning to abstain from politics may be of more than mere local and individual significance."

In another dispatch on the same day the correspondent reported a still more significant imperial utterance, this time from the Emperor's own lips: "Yesterday the Emperor, who is at-

tending the manoeuvres in Galicia, received the Polish Parliamentary Deputation and, addressing their president, informed him that the dissolution of the Reichsrath and the coming elections were the last constitutional means which would be employed by his Government. That implies that, if the new Parliament will not work, the Constitution will be suspended. . . . The dissolution of the Reichsrath takes place in opposition to the wish of the moderate element of all parties, who did their utmost to dissuade the Prime Minister from taking such a drastic measure. The opinion of those who did not approve of dissolution is that in the absence of a new suffrage the next Parliament will prove more amiable than the last."

Yesterday's Imperial warning requires no comment. It means no more than it says—namely, an eventual suspension of the Constitution. It does not point to any alternative régime in case the Parliamentary system should break down. Indeed there is nothing to show that any such alternative has been under the consideration of the Emperor and his Ministers. No less an authority than Dr. Lueger, the Anti-Semite leader-master of Vienna, has just expressed his opinion on the subject to a local journalist in the following words:—"I am firmly convinced that nobody, not a single man in Austria including all statesmen and Parliamentary politicians, has the faintest idea of how the situation will develop."

A few days later (Sept. 25) the "Times" correspondence summarized an important speech by the Hungarian statesman, Count Apponyi, to his constituents, in which the same forecast of a political catastrophe in Austria was intimated. Count Apponyi,—"after dwelling upon the importance of maintaining the Ausgleich, remarked that affairs in Austria might take a turn which would render its revision indispensable owing either to a complete suspension of the constitutional system in Austria, the maintenance of which was one of the conditions of the arrangement of 1867, or such modifications thereof as would make the existing form of union between the two countries technically untenable or politically questionable. In either case the revision could only confirm the independence of Hungary. But even then Count Apponyi believed that by following the traditions of Francis Deák it would be possible to harmonize the necessary revision with the fundamental principles of the Dual Monarchy. It would, however, be a great mistake to raise that question unless forced to do so by circumstances. Count Apponyi went on to say that the importance of Hungary, not only in the Monarchy but throughout the civilized world, was enormously increased by the fact that it secured the maintenance of Austria-Hungary, threatened by the destructive influence of the Austrian chaos, and thus constituted one of the principal guarantees of European tranquillity. The peace-abiding nations recognized that this service to the dynasty, the Monarchy, and the European State system was only possible while the constitutional independence and national unity of Hungary was maintained. It was clear to every unprejudiced mind that Hungarian national independence and unity was the backbone of the Dual Monarchy and one of the most important guarantees of European peace. But the imposing position attained by Hungary through the European sanction of

her national ideal would be imperilled if they were of their own initiative to raise the question of the union of the two countries and thus convert the Austrian crisis into one affecting the whole Monarchy."

An article in the "Noue Frée Presse," of Vienna, on the hostility of the Vatican to Austria and Hungary was partially communicated in a despatch of October 11. The Vienna journal ascribes this hostility in part to resentment engendered by the alliance of Catholic Austria with Italy, and in part to the Hungarian ecclesiastical laws (see above; A. D. 1891-1895). It remarked: "Never has clericalism been so influential in the legislation and administration of this Empire. The most powerful party is the one that takes its 'mot d'ordre' from the Papal Nuncio." It guides the feudal nobility, it is the thorn in the flesh of the German population, it has provoked a 20 years' reaction in Austria, and, unnumbered and protected, it scatters in Hungary that seed which has thriven so well in this half of the Monarchy that nothing is done in Austria without first considering what will be said about it in Rome." A day or two later some evidence of a growing resentment in Austria at the interference of the clergy in politics was adduced. "Thus the Czech organ, inspired by the well-known leader of the party, Dr. Srnbsky, states that a deputation of tradespeople called on the editor and expressed great indignation at the unprecedented manner in which the priests were joining in electoral agitation. They added that they could no longer remain members of a Church whose clergy took advantage of religious sentiment for political purposes." The Peasants' Electoral Association for Upper Austria has just issued a manifesto in which the following occurs:—"We have, for more than 20 years invariably elected the candidates proposed by the Clerical party. What has been done during that long period for us peasants and small tradespeople? What have the Clerical party and the Clerical members of Parliament done for us? How have they rewarded our long fidelity? By treason. . . . We have been imposed upon long enough. It is due to our self-respect and honour to emancipate ourselves thoroughly from the manacles put forward by the Clerical wirepullers. We must show that we can get on without Clerical leading-strings."

On the 26th of October the writer summarized a report that day published by the Vienna Stock Exchange Committee, as furnishing "fresh evidence of the disastrous effects of the prolonged internal political crisis." "The report begins by stating that the Vienna Stock Exchange, formerly the leading and most important one in Europe, and which in consequence of the geographical situation of the town, was called upon to be the centre of financial operations with the Near East, has for years past been steadily declining. Every year the number of those frequenting the Bourse diminishes, and there has been an annual decrease in the amount of capital that has changed hands. Of late years, and particularly within the last few months, this has assumed such dimensions that it has become an imperative duty for the competent authorities to investigate the causes of the evil and to seek a remedy. It is recognized that the deplorable domestic situation has largely contributed to the

decline of the Bourse. The deadlock in the legislative Assembly has occasioned stagnation in industry and commerce, whereas outside the Monarchy there has been an unprecedented development of trade. Further prejudice has been caused by what is called in the report the anti-capitalist tendencies, which represent all gains and profits to be ill gotten. The profession of merchant has been held up by unprincipled demagogues as disreputable. The authorities are reproached with having encouraged those tendencies by undue tolerance."

Early in November, the Vienna letters began accounts of the electioneering campaign then opening, though elections for the new House were not to take place until the following January: "Every day," wrote the correspondent, "brings its contingent of electoral manifestoes, and all parties have already had their say. Unfortunately, nothing could be less edifying. It may be said of them all that they have profited little by experience, and it is vain to search for any indication of a conciliatory disposition among Czechs or Germans, Liberals or Clericals. One and all are as uncompromising as ever, and neither the leaders nor the rank and file are prepared to reckon with the real exigencies of the situation, even to save their own Parliamentary existence. The feudal nobility, who stand aloof from Parliamentary strife, have alone lost nothing of their position and influence. They disdainfully refuse to take either the requirements of the State or the legitimate wishes of the Crown into account. They are preparing in alliance with Ultramontanism to hold their own against the coming storm. Their action in the pending electoral campaign is of an occult nature, their proceedings are seldom reported by the newspapers, and when they meet it is by groups and privately."

"The political speeches which have hitherto been delivered in various parts of the country are bewildering. The Germans are split up into several fractions, and even on the other side there have been separate manifestoes from the Young Czechs and also from the Old Czechs, who have long ceased to play a part in the Reichsrath. It is confusion worse confounded, in fact complete chaos. The prospect of a rallying of the heterogeneous and mutually antagonistic groups on the basis of resistance to Hungarian exigencies, though possible, is not yet at hand, whatever the future may reserve. . . . The words of warning that came from the Crown as to this being the last attempt that would be made to rule by constitutional methods has clearly failed to produce that impression among Parliamentary politicians which might justly have been anticipated. Not even the most experienced and best informed among the former members of the Reichsrath are disposed to make any prophecy as to what will follow the dissolution of the next Chamber."

In the following month, a significant speech in the Reichsrath at Buda Pesth, by the very able Hungarian Prime Minister, M. Szell, was reported. "He foreshadowed the possibility of a situation in which Austria would not be able to fulfil the conditions prescribed in the Ausgleich Act of 1867 with regard to the manner of dealing with the affairs common to both halves of the Monarchy. He himself had, however, made up his mind on the subject, and was convinced that

even in those circumstances the Hungarians would by means of provisional measures regulate the common affairs and interests of the two States, "while specially asserting the rights of Hungary and its independence." Another version of this somewhat oracular statement runs as follows:—"Hungary, without infringing the Ausgleich law, will find ways and means of regulating those affairs which, in virtue of the Pragmatic sanction, are common to both States, while at the same time protecting her own interests and giving greater emphasis to her independence." M. Szell added:—"When the right time comes I shall explain my views, and eventually submit proposals to the House. Meanwhile, let us husband our strength and keep our powder dry." The self-confident and almost defiant tone of this forecast, coming from a responsible statesman accustomed to display such prudence and moderation of language as M. Szell has made a profound impression in Austria. It assumes the breakdown of the Austrian Parliamentary system to be a certainty, and anticipates the adoption by Hungary of one-sided measures which, according to M. Szell, will afford more effective protection to its interests and confirm its independence. This seems to be interpreted in Vienna as an indication that the Hungarian Premier has a cut and dry scheme ready for the revision of the Ausgleich in a direction which bodes ill for Austria. The gravity of the Ministerial statement is recognized by journals of such divergent views as the semi-official "Freidenkblatt," the pan-Germanic and Anti-Semitic "Deutsche Zeitung," and the "Neues Wiener Tagblatt," which is the organ of the moderate German element. The "Neues Wiener Tagblatt" frankly acknowledges that, in addition to all her other cares, Austria has now to consider the crucial question of the form which her relations with Hungary will assume at no distant date. Commercial severance and declarations of independence are, it says, being discussed by the initiated sections of the community in both countries, as if it were a matter of merely economic concern, instead of the greatest and most perilous political problem that the Monarchy has been called upon to solve since the establishment of the Dual system, which, in spite of its complexity, has worked well for such a long period. The "Neues Wiener Tagblatt" nevertheless admits that things have now reached a stage at which economic severance is no longer impossible. "In a subsequent speech on New Year's Day, M. Szell declared that it "would be a fatal mistake to sever the ties which had so long connected the two countries, as the objects for which they were called into existence still remained and their fundamental basis was not shaken."

The Vienna journals, on that New Year's Day of 1901, reviewed the past and surveyed the prospects of the future in gloomy and pessimistic tones. Heading its article "Progress Backward," the "Wiener Allgemeine Zeitung" said:

It is true that Austria has at her disposal a larger and more efficiently trained army than ever. The natural resources of the country have been better developed than in the past. The progress of the century has not been without influence upon ourselves. But, whereas other nations are more vigorous, greater, and mightier, we have become weaker, smaller, and less important. The history of the world during the

second half of the past century has been made at our expense. . . . In the new partition of the world no room has been reserved for Austria. The most important events which will perhaps give the world a new physiognomy are taking place without Austria's being able to exercise the slightest influence thereon. We are living upon our old reputation, but in the long run that capital will prove insufficient."

A. D. 1901.—Parliamentary elections.

Weakening of the Clerical and Anti-Semitic parties.—Gains for the ultra-radical German parties.—Disorderly opening of the Reichsrath.—Speech of the Emperor from the throne.

—From the parliamentary elections held in January the Clerical and Anti-Semitic parties came back to the Reichsrath shorn of about one third of their strength, while the various radical factions, especially those among the Germans, appear to have made considerable gains. Even in the Tyrol, one of the strongest of the Clerical leaders, Baron Di Puth, was defeated, and in Vienna the Anti-Semitic majority was cut to less than one fourth of what it had been three years before. "The Pan-Germanic group," writes "The Times" correspondent from Vienna, "which only numbered five in the last Parliament, now numbers 21. It will be remembered that it openly advocates incorporation with the German Empire, and as a preparatory measure the wholesale conversion of the German population of Austria to Protestantism. It has hitherto been to a certain extent boycotted by the other German parties, being excluded from their so-called union for mutual defence and joint action." "But the programme which had thus been boycotted by the bulk of the German members has been the most successful of all in the recent general election. The position of its leading representative, Herr Schönerer, has been so strengthened that he has been able to impose upon the whole group the title of Pan-Germanic Union, and to enforce the acceptance of the principle of 'emancipation from Rome.' The latter demand caused a certain hesitation on the part of some of his new followers, who, however, ultimately decided to adopt it, although not to the full extent of renouncing the Roman Catholic faith, as Herr Schönerer and his principal lieutenant, Herr Wolf, themselves had done. At a conference of the party its programme was declared to be the promotion of such a federal connexion of the German provinces of Austria with the German Empire as would furnish permanent guarantee for the maintenance of the German nationality in this country. The party would oppose every Government that resisted the realization of that object, and it could not participate in any manifestations of loyalty while such a Government policy was maintained. At the same time, the party regarded it as their obvious duty to emancipate themselves from Rome in a political but not religious sense—that is to say, to free themselves from the influence of the Roman Curia in affairs of State."

This boycotted party and programme now threatens to win the voluntary adherence of the advanced section of the other German groups which had hitherto declined to commit themselves to such an extreme policy. The most moderate of all the German parties,

that of the constitutional landed proprietors, has felt called upon to enter an energetic and indignant protest against the foregoing Pan-German programme. While they are convinced supporters of the Austro-German alliance, they unconditionally reject aspirations which they hold to be totally inconsistent with the tried and reliable basis of that agreement, and which would constitute an undignified sacrifice of the independence of the Monarchy. They further decline to make their manifestations of loyalty to the Sovereign dependent upon any condition; and they strongly condemn the emancipation from Rome movement as a culpable confusion of the spheres of religion and politics, and an infringement of the liberty of conscience which is calculated to sow dissension among the German nationality in Austria.

"It now remains to be seen to which side the bulk of the German representatives will rally: to that of the Moderates who have reaffirmed their devotion to the Dynasty and the existing Constitution, or to that of the Pan-Germanic revolutionaries, who have decided to make their manifestations of loyalty dependent upon the adoption by the Crown of their programme.

"The outlook has thus undergone, if anything, a change for the worse since the last Reichsrath was dissolved. The only reassuring feature of the situation is that the fall of the Ministry is not a primary end with any of the parties in the Reichsrath. Dr. von Körber, who is a politician of great tact and experience, has avoided friction on all sides."

The opening session of the newly elected Reichsrath was held on the 31st of January, and the disorderly temper in it was manifested upon a reference by the President to the death of Queen Victoria, which called out cries of hostility to England from both Germans and Czechs. "In the course of the proceedings some of the members of the Extreme Czech fraction warned the Prime Minister in threatening terms against introducing a single word hostile to the Czech nation in the coming Speech from the Throne. They also announced their intention of squaring accounts with him so soon as the Speech from the Throne should be delivered. The whole sitting did not last an hour, but . . . what happened suffices to show that not only the Pan-Germanic Union, but also the Extreme section of the German People's party and a couple of Radical Czechs, are ready at a moment's notice to transform the Reichsrath into a bear garden."

On the 4th of February the two Houses of the Reichsrath were assembled at the Palace and addressed by the Emperor, in a speech from the throne of which the following is a partial report: "His Majesty referred to various features of legislation, including the Budget, the revision of the Customs tariff, the promotion of trade, industry, and navigation, the protection of the working classes and the regulation of the hours of labour, the Government railway projects and the Bosnian lines, and Bills for the regulation of emigration, the construction of dwellings for the lower classes, the repression of drunkenness, the development of the University system and other educational reforms, and a revision of the Press laws. In fact a whole inventory of the important legislative arrears consequent upon the breakdown of Parliament.

"The following passage occurs in the further course of the speech: 'The Constitution which I bestowed upon my dominions in the exercise of my free will ought to be an adequate guarantee for the development of my people. The finances of the State have been put in order in exemplary fashion and its credit has been raised to a high level. The freedom of the subject reposes upon a firm foundation, and thanks to the scholastic organization and the extraordinary increase of educational establishments general culture has reached a gratifying standard, which has more especially contributed to the efficiency and intelligence of my army. The Provincial Diets have been able to do much within the limits of their jurisdiction. The beneficial influence of the constitutional system has penetrated as far as the communal administrations. I am thus justified in saying that the fundamental laws of the State are a precious possession of my loyal people. Notwithstanding the autonomy enjoyed by certain kingdoms and provinces, they constitute for foreigners the symbol of the strength and unity of the State. I was, therefore, all the more grieved that the last sessions of the Legislature should have had no result, even if I am prepared to acknowledge that such business as affected the position of the Monarchy was satisfactorily transacted by all parties.'

"The Emperor then expressed his regret that other matters of equal importance affecting the interests of Austria had not been disposed of. His Majesty made an appeal to the representatives of the Reichsrath to devote their efforts to the necessary and urgent work awaiting them, and assured them that they might count upon the Government. All attempts at the moral and material development of the Empire were, he said, stultified by the nationality strife. Experience had shown that the efforts of the Government to bring about a settlement of the principal questions involved therein had led to no result and that it was preferable to deal with the matter in the Legislature. The Government regarded a generally satisfactory solution of the pending language question as being both an act of justice and a necessity of State. Trusting in the good will manifested by all parties, the Ministry would do its utmost to promote a settlement which would relieve the country of its greatest evil. At the same time, the Cabinet was under the obligation of maintaining intact the unity of language in certain departments of the Administration, in which it constituted an old and well-tested institution. Success must never again be sought through paralyzing the popular representation. The hindrance of Parliamentary work could only postpone or render quite impossible the realization of such aspirations as most deeply affected the public mind. The Sovereign then referred to the damage done to the interests of the Empire by the obstacles placed in the way of the regular working of the Constitution, and pointed to the indispensable necessity of the vigorous co-operation of Parliament in the approaching settlement of the commercial relations between the two halves of the Monarchy. The speech concluded with a warmly worded appeal to the representatives to establish a peace which would correspond to the requirements of the time and to defend as their fathers had defended 'this venerable State which accords equal protection to all its peoples.'"

AUSTRIA-HUNGARY, 1901.

A. D. 1901 (March).—Continued turbulence of the factions in the Austrian Reichsrath. — **Outspoken aim of the Pan-Germans.**—At this writing date in March, the disgraceful and destructive conflict of reckless factions is still raging in the Austrian Reichsrath, and the parties have come to blows several times. The hope of the German extremists for a dissolution of the Empire seems to be more and more openly avowed. On one occasion, a Czech member, Dr. Sieleny, having accused the Pan-Germans of wistfully glancing across the frontier, Herr Stein, a mem-

BALKAN AND DANUBIAN STATES

ber of the Pan-Germanic group, replied, "We do not glance, we gaze." Being reproached with looking towards Germany with an ulterior motive, the same gentleman answered, "You Czechs want to go to Russia, and we Germans want to go to Germany." Again, on being told that he would like to become a Prussian, he exclaimed, "I declare openly that we want to go to the German Empire." Finally, in reply to another remark, Herr Stein observed that everybody in the country who was an Austrian patriot was stupid."

BALKAN AND DANUBIAN STATES, The.—The States of the Balkan Peninsula, ever since the practical disruption of European Turkey after the war of 1877-78, have been in a condition of chronic restlessness. Those who desire the repose of Europe have hoped against hope that the new communities which were founded or extended on the ruins of the Ottoman dominion in Europe would be able and willing to keep the peace among themselves and to combine in resisting the intrusion of foreign influences. These expectations have been too frequently disappointed. The lawlessness of Bulgaria and the

unsettled state of Servia, more especially, continue to constitute a periodical cause of anxiety to the diplomacy of Europe. The recent murder at Bukharest of Professor Mihailenco, a Macedonian by birth and a Rumanian by extraction, appears to be a shocking example of the teaching of a school of political conspirators who have their centre of operations at Sofia. These persons had already combined to black-mail and terrorise the leading Rumanian residents in the capital of Bulgaria, where the most abominable outrages are stated to have been committed with impunity. Apparently, they have now carried the war, with surprising audacity, into the Rumanian capital itself. Two persons marked out for vengeance by the terrorists of Sofia had previously been murdered in Bukharest, according to our Vienna Correspondent, but these were Bulgarians by birth. It is a further step in this mischievous propaganda that a Rumanian subject, the occupant of an official position at the seat of the Rumanian government, should be done to death by emissaries from the secret society at Sofia. His crime was that, born of Rumanian parents in Macedonia, he had the boldness to controvert in the Press the claims of the Bulgarians to obtain the upper hand in a Turkish province, where Greeks, Turks, Bulgarians, Albanians, and Serbs are inextricably mixed up. Professor Mihailenco had probably very good reasons for coming to the conclusion that, whatever may be the evils of Ottoman rule, they are less than those which would follow a free fight in the Balkans, ending, it may be, in the ascendancy of Bulgarian ruffianism.

It is for this offence that M. Mihailenco suffered the penalty of death by the decree of a secret tribunal, and at the hands of assassins sent out to do their deadly work by political intrigues who sit in safety at Sofia. The most serious aspect of the matter, however, is the careless and almost contemptuous attitude of the Bulgarian Government. The reign of terror at Sofia and the too successful attempts to extend it to Rumania have provoked remonstrances not only from the government at Bukharest, but from some of the Great Powers, including Austria-Hungary, Germany, and Italy. . . . There is only too much reason to fear, even now, that both the Bulgarian Government and the ruler of the Principality are afraid to break with the terrorists of Sofia. Political assassination is unfor-

tunately among the traditions of the Bulgarian State, but it has never been practised with such frequency and impunity as under the rule of Prince Ferdinand. His own conduct as a ruler coupled with the lamentable decline of the spirit of Bulgarian independence, which seemed to be vigorous and unflinching before the kidnapping of Prince Alexander, has steadily lowered his position. The Bulgarian agitation—to a large extent a sham one—for the 'redemption,' as it is called, of Macedonia is a safety-valve that relieves Prince Ferdinand and those who surround him from much unpleasant criticism.

The situation in the Balkans is in many respects disquieting. The Bulgarian agitation for the absorption of Macedonia is not discouraged in high quarters. The hostility of the Sofia conspirators to the Kontzo Wallachs, the Rumanians of Macedonia, is due to the fact that the latter, being a small minority of the population, are ready to take their chance of equal treatment under Turkish rule, subject to the supervision of Europe, rather than to be swallowed up in an enlarged Bulgaria, dominated by the passions that now prevail in the Principality and that have been cultivated for obvious reasons. Russia, it is believed, has no wish to see Bulgarian aspirations realized, and would much rather keep the Principality in a state of expectant dependence. Servia and Greece would be as much embarrassed as Rumania by the success of the Bulgarian propaganda, and Austria-Hungary would regard it as a grave menace. Of course the Turkish government could not be expected to acquiesce in what would, in fact, be its knell of doom. . . . In Greece the insubordination in certain sections of the army is a symptom not very alarming in itself, but unpleasantly significant of latent discontent. In Turkey, of course, the recrudescence of the fanaticism which periodically breaks out in the massacres of the Armenians cannot be overlooked. A more unfortunate time could not be chosen for endeavouring to reopen the Eastern question by pressing forward the Bulgarian claim to Macedonia. Nor could a more unfortunate method be adopted of presenting that claim than that of the terrorists who appear to be sheltered or screened at Sofia. — *London Times*, August 23, 1900.—See, also (in this vol.), *TRUCKY*; A. D. 1890-1901.

Bulgaria.—On the 15th of July, 1895, M. Stambouloff, lately the powerful chief minister in the Bulgarian government, but now overthrown and out of favor, was attacked by four assassins in the streets of Sofia, and received wounds from which he died three days afterwards.

The increasing influence of Russia in Bulgaria was manifested unmistakably on the 11th of February, 1896, when Prince Boris, the infant son and heir of the reigning Prince Ferdinand, was solemnly baptised into the Orthodox Greek Church, the Tsar of Russia, represented by proxy at the ceremony, acting as sponsor. This is understood to have been done in opposition to the most earnest remonstrances of the mother of the child, who is an ardent Roman Catholic, the father being nominally the same.

Montenegro: Recent changes.—The accession of territory obtained under the Berlin Treaty has already begun to alter the character of the country. The area of the Principality

has been almost doubled, and fertile valleys, tracts of rich woodland and a strip of sea coast have been added to the realm of Prince Nicholas. Montenegro is now something more than the rocky eyrie of a warlike clan, and the problem of its commercial development constantly occupies the mind of its ruler. The state of transition is reflected in the aspect of the capital. A tiny hamlet in 1878, Tzetinje now bears witness to the growth of civilisation and to the beneficent influence of a paternal despotism. . . . Nikola I., 'Prince and Gospodar of free Tzragora and the Berda,' is the most picturesque and remarkable figure in the South Slavonic world. Descended from a long line of heroes, the heir of the Vladikas, he has, like them, distinguished himself in many a hard fought conflict with the hereditary foe. In the field of poetry he has also won his triumphs, like his father Mirko, 'the Sword of Montenegro,' he has written lyric odes and ballads, like his ancestor, the Vladika Petar II., he has composed historical dramas, and his poems and plays hold a recognised place in contemporary Slavonic literature. The inheritor of a splendid tradition, a warrior and a bard, gifted by nature with a fine physique and a commanding presence, he forms the impersonation and embodiment of all that appeals most to the imagination of a romantic and impressionable race, to its martial instinct, its poetic temperament, and its strange—and to us incomprehensible—yearning after long vanished glories. . . . Any attempt to describe Prince Nikola's work as an administrator and a reformer would lead me too far. The codification of the law, which was begun by his ancestors, Danilo I. and Petar I., has been almost completed under his supervision. . . . The suppression of the vendetta is one of the greatest of the Prince's achievements. . . . Crime is now rare in the Principality, except in the frontier districts, where acts of homicide are regarded as justifiable, and indeed laudable, if perpetrated in payment of old scores, or if the victim is an Albanian from over the border. Primary education has been made universal, schools have arisen in every village, and lecturers have been appointed to explain to the peasants the advantages of learning. Communications are being opened up, and the Principality, which a few years since possessed nothing but mule tracks, can now boast of 138 miles of excellent carriage road, better engineered and maintained than any I have seen in the Peninsula. The construction of roads is viewed with some apprehension by the more conservative Montenegrins, who fear that their mountain stronghold may lose its impenetrable character. But the Prince is determined to keep abreast of the march of civilisation. Nine post-offices and thirteen telegraph stations have been established. The latter, which are much used by the people, will play an important part in the next mobilization of the Montenegrin army. Hitherto the forces of the Principality have been called together by stentorian couriers who shouted from the tops of the mountains. A great reform, however, still remains to be attempted—the conversion of a clan of warriors into an industrial nation. The change has been rendered inevitable by the enlargement of the bounds of the Principality, and its necessity is fully recognised by the Prince. Once the future of the country is assured, his

order will be 'À bas les armes'. He is aware that such an edict would be intensely unpopular, but he will not flinch when the time for issuing it arrives. Every Montenegrin has been taught from his cradle to regard warfare as his sole vocation in life, and to despise industrial pursuits. The tradition of five hundred years has remained unbroken, but the Prince will not hesitate to destroy it. So enormous is his influence over the people, that he feels confident in his ability to carry out this sweeping reform."—J. D. Bourchier, *Montenegro and her Prince* (Fortnightly Rev., Dec., 1898).

Montenegro: New title of the Prince.—On the 19th of December, 1900, at Tzethye, or Cetigne, "the President of the Council of State, in the presence of the other Ministers and dignitaries and of the members of the Diplomatic Corps, presented an address to the Prince of Montenegro praying him, in token of the gratitude of the Montenegrin people for the benefits which he had conferred on them during his 40 years' reign, to take the title of Royal Highness. The Prince acceded to the request, and, replying to the President, thanked all the European rulers who on this occasion had given him a fresh proof of their friendship by their recognition of his new title. After the ceremony a Te Deum was celebrated in the Cathedral, and the Prince subsequently reviewed the troops, receiving a great welcome from the people."—*Telegram, Reuter's Agency*.

Servia.—In January, 1894, the young king, Alexander, called his father, the ex king, Milan educated in 1889—see, in vol. I. BALKAN AND DANUBIAN STATES. A. D. 1879-1889), to Belgrade to give him help against his Radical ministers, who had been taking the latter thought, too much into their own hands. The first result was a change of ministry, soon followed by a decision from the synod of Servian bishops annulling the divorce of ex King Milan and Queen Natalie; by a public announcement of their reconciliation, and by an ukase from King Alexander, cancelling all laws and resolutions which touched his parents and restoring to them their rights and privileges as members of the royal house. This, again, was followed, on the 21st of May, by a royal proclamation which abolished the constitution of December, 1888, and restored the old constitution of 1869. This was a tremendous step backward, to a state of things in which almost no protection against arbitrary kingship could be found.

For some years the ex king exercised considerable influence over his son, and was again an uncertain and much distrusted factor in the troubled politics of southeastern Europe. In 1898 the son appointed him commander-in-chief of the Servian army, and he is said to have ably and energetically improved its efficiency during the brief period of his command. A breach between father and son was brought about before long, however, by the determination of the latter to marry a lady, Madame Draga Maschin, considerably older than himself, who had been lady-in-waiting to his mother; while the father was arranging a political marriage for him with a German princess. The young king married his chosen bride in August, 1900 and guarded his frontier with troops to bar the return of his father, then sojourning at a German watering place, to the kingdom. It was a final exile for

the ex king. He visited Paris for a time; then went to Vienna and there, on the 11th of February, 1901, he died, at the age of 47.

BELGIUM: A. D. 1894-1895.—The first election under the new constitution.—Victory of the Catholics and surprising Socialist gains.—Elsewhere in this work (see—in vol. I.—CONSTITUTION OF BELGIUM) will be found

the full text of the Belgian constitution as it was revised in 1893; while in volume 3 (see NETHERLANDS (BELGIUM) A. D. 1892-1893), the peculiar features of the new constitution, especially in its provision of a system of cumulative or plural voting, are described. The singularity of the experiment thus introduced caused the elections that were held in Belgium in 1894 and 1895 to be watched with an interest widely felt. Elections for the Chamber of Representatives and the Senate occurred on the same day, Oct. 14, 1894. Previously the Belgian suffrage had been limited to about 130,000 electors. Under the new constitution the electors numbered no less than 1,370,000, and the working of the plural system gave them 2,111,000 votes. The result was a more crushing victory for the Catholics than they had ever won before. Of 152 Representatives they elected no less than 104. The Liberal party was almost annihilated, securing but 20 seats in the Chamber; while the Socialists rose to political importance, winning 28 seats. This representation is said to be not at all proportioned to the votes cast by the several parties, and it lent force to the demand for a system of proportional representation, as the needed accompaniment of plural voting, which had been urged when the constitution was revised. In the Senate the Conservatives obtained 52 seats and the Liberals 24. In the next year an electoral law relating to communal councils was passed. In this law, the principle of proportional representation was introduced, along with that of cumulative or plural voting. Compulsory voting, enforced by penalties more or less severe, was also a feature of the law. In November, the first election under it was held, and again the Socialists made surprising gains, at the expense of the Radical party, the Catholics and Liberals generally holding their ground.

A. D. 1899-1900.—Threatened revolution.—An explosion of discontent with the working of the electoral provisions of the new constitution (see above) occurred in June, and created for a time an exceedingly dangerous situation. It was precipitated by an attempt on the part of the government to pass a bill providing for proportional representation in certain districts, which was expected to increase the advantage already possessed by the Clerical or Catholic party. Excitement in the Chamber of Deputies reached such a height on the 28th of June that fighting among the members occurred, and soldiers were called in. That night and the next day there was serious rioting in Brussels; bar-

ricades were built, sharp battles between citizens and soldiers were fought, and a general strike of working men was proposed. On the 30th the government arranged a compromise with the Socialist and Liberal leaders which referred the question of proportional representation to a committee in which all parties were represented. This quieted the disorder. In due time the committee reported against the measure which the government had proposed; whereupon a change of ministry was made, the new ministry being expected to bring forward a more satisfactory plan of proportional representation. It produced a bill for that purpose, the provisions of which failed to give satisfaction, but which was passed, nevertheless, near the end of the year.

Commenting, in July, on the disturbances then just quieted in Belgium, the "Spectator," of London, remarked: "The recent explosion of political feeling in Belgium was a much more serious event than was quite understood in this country. It might have involved all Europe, as, indeed, it may even yet. There was revolution in the air, and a revolution in Belgium would gravely affect the military position both of France and Germany, would rouse keen suspicions and apprehensions in this country, and would perturb all the dynasties with fears of coming change. The new electoral bill drove the Liberals and Socialists of the little kingdom into one another's arms—both believing that it would give the Clericals a permanent hold on power—and when ever these two parties are united they control the majority of the Belgian people. That majority is a most dangerous one. It controls all the cities, and it includes hundreds of thousands of men who resent their economic condition with justifiable bitterness, and who are penetrated with a tradition of victories achieved by insurrection. At the same time they have no pacific vent for their discontents, for the suffrage gives double votes to the well-to-do, and secures to both Liberals and laborers on all economic or religious questions a certainty of defeat. With the inhabitants of the cities all rioting and killing the officials, the government would have been compelled to resort to force, and it is by no means clear that force was decidedly on their side. The Belgian army is not a caste widely separated in feeling from the people; it has no instinctive devotion to the Clerical party, and it has no great soldier whom it admires or to whom it is attached. The king is distrusted and disliked both personally and politically; and the dynasty, which has no historic connection with Belgium, has never taken root in the soil as the Bernadottes, for example, have done in Sweden. If the revolutionists had been beaten, they would have appealed to France, where Belgium is regarded as a reversionary estate; while if they had been victorious, they might—in our judgment, they certainly would—have proclaimed a republic."

The danger has, we suppose, for the moment been smoothed away; but it has not been removed, probably can not be removed, while the conditions which produce it continue to exist. The Belgians, who are commonly supposed to be so prosperous and pacific, are divided by differences of race, creed, and social condition more violent than exists in Ireland, where at all events, all alike, with insignificant exceptions, speak one tongue. The French-speaking Belgians despise the Flemish speaking Belgians, and the Flemish

speaking Belgians detest the French-speaking Belgians, with a rancor only concealed by the long habit of living and acting together, a habit which, remember, has not prevented the same contempt and aversions from continuing to exist in Ireland. The Clericals and the Secularists hate each other as only religious parties can hate, far more than Catholics and Protestants in any of the countries where the two creeds stand side by side. The Secularist seems to the Clerical a blasphemer, against whom almost all devices are justifiable, while the Clerical is held by the Secularist to be a kind of evil fool, from whom nothing is to be expected except cunningly concealed malignity. The possessors of property expect that the 'ugly rush' which used to be talked of in England will occur to-morrow, while the wage-receivers declare that they are worked to death for the benefit of others, who will not leave them so much as a living wage. All display when excited to a noteworthy fierceness of temper, a readiness to shed blood, and a disposition to push every quarrel into a sort of war,—tendencies visible throughout the history of the country."

At the parliamentary election in June, 1900, under the new law providing for proportional representation, the Socialists gained seventeen seats from the Clerical party.

BERING SEA QUESTIONS.—"Several vexatious questions were left undetermined by the decision of the Bering Sea Arbitration Tribunal [see, in vol. 5, UNITED STATES OF AM.: A. D. 1886-1893]. The application of the principles laid down by that august body has not been followed by the results they were intended to accomplish, either because the principles themselves lacked in breadth and definiteness or because their execution has been more or less imperfect. Much correspondence has been exchanged between the two Governments [of Great Britain and the United States] on the subject of preventing the exterminating slaughter of seals. The insufficiency of the British patrol of Bering Sea under the regulations agreed on by the two Governments has been pointed out, and yet only two British ships have been on notice duty during this season in those waters. The need of a more effective enforcement of existing regulations as well as the adoption of such additional regulations as experience has shown to be absolutely necessary to carry out the intent of the award have been earnestly urged upon the British Government, but thus far without effective results. In the meantime the depel-

tion of the seal herds by means of pelagic hunting [that is, in the open sea] has so alarmingly progressed that unless their slaughter is at once effectively checked their extinction within a few years seems to be a matter of absolute certainty. The understanding by which the United States was to pay and Great Britain to receive a lump sum of \$425,000 in full settlement of all British claims for damages arising from our seizure of British sealing vessels unauthorized under the award of the Paris Tribunal of Arbitration was not confirmed by the last Congress, which declined to make the necessary appropriation. I am still of the opinion that this arrangement was a judicious and advantageous one for the Government, and I earnestly recommend that it be again considered and sanctioned. If, however, this does not meet with the favor of Congress, it certainly will hardly dissent from the proposition that the Government is bound by every consideration of honor and good faith to provide for the speedy adjustment of these claims by arbitration as the only other alternative. A treaty of arbitration has therefore been agreed upon, and will be immediately laid before the Senate, so that in one of the modes suggested a final settlement may be reached." *Message of the President of the United States to Congress, December, 1895.*

The treaty thus referred to by the President was signed at Washington, February 8, 1896, and ratifications were exchanged at London on the 3d of June following. Its preamble set forth that, whereas the two governments had submitted certain questions to a tribunal of arbitration, and "whereas the High Contracting Parties having found themselves unable to agree upon a reference which should include the question of the liability of each for the injuries alleged to have been sustained by the other, or by its citizens, in connection with the claims presented and urged by it, did, by Article VIII of the said Treaty, agree that either party might submit to the Arbitrators any questions of fact involved in said claims, and ask for a finding thereon, the question of the liability of either Government on the facts found to be the subject of further negotiation: And whereas the Agent of Great Britain did, in accordance with the provisions of said Article VIII, submit to the Tribunal of Arbitration certain findings of fact which were agreed to as proved by the Agent of the United States, and the Arbitrators did unanimously find the facts so set forth to be true, as appears by the Award of the Tribunal rendered on the 15th day of August, 1893. And whereas, in view of the said findings of fact and of the decision of the Tribunal of Arbitration concerning the jurisdictional rights of the United States in Behring Sea, and the right of protection of property of the United States in the fur seals frequenting the islands of the United States in Behring Sea, the Government of the United States is desirous that, in so far as its liability is not already fixed and determined by the findings of fact and the decision of said Tribunal of Arbitration, the question of such liability should be definitely and fully settled and determined, and compensation made, for any injuries for which, in the contemplation of the Treaty aforesaid, and the Award and findings of the Tribunal of Arbitration, compensation may be due to Great Britain from the United States: And whereas it is claimed by

BERING SEA QUESTIONS.

Great Britain, though not admitted by the United States, that prior to the said Award certain other claims against the United States accrued in favour of Great Britain on account of seizures of or interference with the following named British sealing vessels, to wit: the 'Wanderer,' the 'Winifred,' the 'Henrietta,' and the 'Oscar and Mattie,' and it is for the mutual interest and convenience of both the High Contracting Parties that the liability of the United States, if any, and the amount of compensation to be paid, if any, in respect to such claims, and each of them should also be determined under the provisions of this Convention — all claims by Great Britain under Article V of the *modus vivendi* of the 18th April, 1892, for the abstention from fishing of British sealers during the pendency of said arbitration having been definitely waived before the Tribunal of Arbitration — therefore the two nations have concluded the Convention referred to, which provides that "all claims on account of injuries sustained by persons in whose behalf Great Britain is entitled to claim compensation from the United States, and arising by virtue of the Treaty aforesaid, the Award and the findings of the said Tribunal of Arbitration, as also the additional claims specified in the 5th paragraph of the preamble hereto, shall be referred to two Commissioners, one of whom shall be appointed by Her Britannic Majesty, and the other by the President of the United States, and each of whom shall be learned in the law." — *Great Britain, Parliamentary Publications (Papers by Command: Treaty Series, No. 10, 1896)*

Judges William L. Putnam, of the United States, and George E. King, of Canada, were subsequently appointed to be the two commissioners provided for in the treaty. Meantime each government had appointed a number of men of science to investigate the condition of the herds of fur seals on Pribilof Islands, President David S. Jordan, of Leland Stanford Junior University being director of the American investigation and Professor D'Arcy W. Thompson having charge of the British. The two bodies of investigators reached quite different conclusions. Professor Jordan, in a preliminary statement, announced: "There is still a vast body of fur seals on the islands, more than the commissioners were at first led to expect, but the number is steadily declining. The only cause of this decline is the killing of females through pelagic sealing. The females are never molested on the islands, but three-fourths of those killed in Bering sea are nursing females. The death of the mother causes the death of the young on shore, so that for every four fur seals killed at sea three pups starve to death on shore. As each of those females is also pregnant, a like number of unborn pups is likewise destroyed." His formal report, made in January, 1897, was to the same effect, and led to the following conclusion: "The ultimate end in view should be an international arrangement whereby all skins of female fur seals should be seized and destroyed by the customs authorities of civilized nations, whether taken on land or sea, from the Pribilof herd, the Asiatic herds, or in the lawless raiding of the Antarctic rookeries. In the destruction of the fur seal rookeries of the Antarctic, as well as those of the Japanese islands and of Bering sea, American enterprise has taken a leading part. It would be well for America to lead the way in

BERING SEA QUESTIONS.

stopping pelagic sealing by restraining her own citizens without waiting for the other nations. We can ask for protection with better grace when we have accorded, unasked, protection to others. The report of Professor Thompson, made three months later, agreed but partially with that of the American experts. He admitted the extensive starving of the young seals, caused by the killing of the mothers, but contended that the herd was diminishing slightly, if at all, and he did not favor drastic measures for the suppression of pelagic sealing.

The government of the United States adopted measures in accordance with the views of Professor Jordan, looking to an international regulation of the killing of seals. Hon. John W. Foster was appointed a special ambassador to negotiate arrangements to that effect. Through the efforts of Mr. Foster, an international conference on the subject was agreed to on the part of Russia and Japan, but Great Britain declined to take part. While these arrangements were pending, the American Secretary of State, Mr. Sherman, addressed a letter to the American Ambassador at London, Mr. Hay, criticising the conduct of the British government and its agents in terms that are not usual among diplomats, and which excited much feeling when the letter was published in July. This called out a reply from the British Colonial Secretary, Mr. Chamberlain, in which he wrote: "When Her Majesty's government sent their agents to inquire into the actual facts in 1896, it was found that, in spite of the large catch of 1895, the herd actually numbered more than twice as many cows as it had been officially asserted to contain in 1895. The result of these investigations, as pointed out in Lord Salisbury's dispatch of May 7, has further been to show that pelagic sealing is much less injurious than the practice pursued by the United States' lessees of killing on land every male whose skin was worth taking. If the seal herd to-day is, as Professor Jordan estimates, but one fifth of what it was in 1872-74, that result must be, in great measure, due to the fact that, while the islands were under the control of Russia, that power was satisfied with an average catch of 33,000 seals, subsequently under the United States' control more than three times that number have been taken every year, until the catch was, perforce, reduced because that number of males could no longer be found."

"Last year, while the United States government were pressing Her Majesty's government to place further restrictions on pelagic sealing, they found it possible to kill 30,000 seals on the islands, of which Professor Jordan says (in one place in his report) 22,000 were, to the best of his information, three-year olds, though (in another place) he estimated the total number of three-year old males on the islands as 15,000 to 20,000. If such extensive slaughter is continued, it will, in the light of the past history of the herd, very quickly bring about that commercial extermination which has been declared in the United States to be imminent every year for the last twelve years. Enough has perhaps been said to justify the refusal of Her Majesty's government to enter on a precipitate revision of the regulations."

The two countries were thus being carried into serious opposition, on a matter that looks contemptible when compared with the great common interests which ought to bind them in firm friend

aid together. But, while the government of Great Britain declined to enter into conference with those of Russia, Japan and the United States on general questions relating to the seals, it assented at length to a new conference with the United States and Canada, relative to the carrying out of the regulations prescribed by the Paris tribunal of 1893. Both conferences were held at Washington in October and November of 1897. The first resulted in a treaty, November 11, between Russia, Japan, and the United States, providing for a suspension of pelagic sealing during such time as might be determined by experts. The other conference led, after some interval, to the creation of a Joint High Commission for the settlement of all questions in dispute between the United States and Canada, the sealing question included. See in this vol. **U.S.A. A. D. 1898-1899.**

So far as concerned its own citizens, the American government adopted vigorous measures for the suppression of pelagic sealing. An Act of Congress, approved by the President on the 29th December, 1897, forbade the killing of seals by any citizen of the United States, in any part of the Pacific Ocean north of 35 degrees north latitude. The same act prohibited the importation into the United States of sealskins taken elsewhere than in the Pribilof Islands, and very strict regulations for its enforcement were issued by the Treasury Department. No sealskins, either in the raw or the manufactured state, might be admitted to the country, even among the personal effects of a traveller, unless accompanied by an invoice, signed by an United States Consul, certifying that they were not from seals killed at sea. Skins not thus certified were seized and destroyed.

In his annual report for 1898, the U. S. Secretary of the Treasury stated that no pelagic sealing whatever had been carried on by citizens of the United States during the season past; but that 30 British vessels had been engaged in the work, against 32 in the previous year, and that their total catch had been 10,581, against 6,100 taken by the same fleet in 1897. The number of seals found on the Islands was reported to be greatly reduced.

BOSTON: A. D. 1895-1899.—The municipal experiments of Mayor Quincy.—First elected Mayor of Boston in 1895 and re-elected in 1897, the two terms of the administration of Mayor

Josiah Quincy were made remarkable by the number, the originality and the boldness of the experiments which he introduced in extension of the functions of municipal government. They consisted on the one hand in the substitution, in certain branches of public work, of direct labor for the contract system, and on the other in the provision of new facilities for promoting popular health, recreation, and instruction. He established a municipal printing office, a municipal department of electrical construction, and another municipal department which conducted every kind of repairing work that the city requires, all of these to supersede the old system of contracts and jobs. He instituted a great number and variety of public baths,—floating baths, beach baths, river baths and swimming pools. He opened playgrounds and gymnasiums, both outdoor and indoor. He carried the city into the work of the fresh air missions for poor children. He reorganized the administration of public charities. He placed the artistic undertakings of the city under the supervision of a competent board. He instituted cheap concerts of a high order, as well as popular lectures. Boston at length took alarm at the extent of the ventures of Mayor Quincy, complained of the cost, and refused him reelection for a third term. But the Boston correspondent of a New York Journal opposed in politics to Mayor Quincy, writing on the 15th of December, 1900, testifies that "most of the experiments are working well, and a study of them cannot fail to be beneficial to those who have the government of other cities in their hands. . . . The madness of Mayor Quincy had evidently a method. It seems to have made permanent a good many excellent institutions. Some good citizens say that things were done too quickly, that they cost too much money, that the Mayor was always robbing Peter to pay Paul, as it were. But, after all, it seems cause for thankfulness that they were done at all."

A. D. 1899.—Completion of the Subway.—In this year the city of Boston completed a very important public improvement, undertaken in 1895, and carried out under the direction of a commission appointed that year. This was the construction of a Subway under Boylston and Tremont streets, and under various streets in the northern district, for the transit of electric cars through the crowded central parts of the city. The section of Subway from Park Square to Park Street was finished in the fall of 1897; the remainder in 1899. The entire length of underground road is one and two-thirds miles. The cost of work done was \$4,680,000; cost of real estate taken, \$1,100,000. The legislative Act authorizing the work provided further for the construction of a tunnel to East Boston, and for the purchase of rights of way for an elevated road to Franklin Park, with new bridges to Charlestown and West Boston.

BRAZIL: A. D. 1897.—Conflict with the "Fanatics."—A religious enthusiast, called Conselheiro (Counselor), who had made his appearance in the State of Bahia and gathered a great number of followers, began in 1897 to become dangerous to the government, which he denounced as atheistic; his following grew disorderly, and political malcontents were taking advantage of the disturbance which he caused. Attempts on the part of the government to stop the disorder were fiercely resisted, and its conflict with "the Fanatics," as Conselheiro and his followers were known, soon became a very serious war, demanding many thousands of troops, and spreading over wide regions of the country. Amazonian bands of women fought with "the Fanatics," and were among the most dreaded forces on their side. The headquarters and stronghold of the movement were finally taken in July, after an obstinate defense, and in October Conselheiro was killed; after which the rebellion came to an end.

A. D. 1898.—Election of Dr. Campos Salles to the Presidency.—The nomination and election of Dr. M. F. de Campos Salles, who was inaugurated President of the United States of Brazil on the 15th of November, 1898, marks the decided distinction of parties in Brazil. Previously, there had been various divergencies among the Republicans, but no distinct party differences. But at that time there arose a party advocating the selection of a candidate who would favor the national against the foreign (naturalized) element, one who would have influence with the few remaining advocates of the monarchical government; who would give preference to a military over a civil government; finally, one who would introduce into the government the system called "Jacobinism," a designation which the new party did not refuse to accept. Dr. Campos Salles was the candidate of the moderate Republicans or Conservatives, who were organized under the name of the Republican party, with a platform demanding respect for the constitution and declaring for the institution of such reforms as only reason and time should dictate. The sympathies of the conservative element and of foreigners who had interests in the country were with the candidate of this party and gave him their support. The election of Dr. Campos Salles inspired renewed confidence in the stability of Brazil, a confidence which was at once manifested by the higher quotation of the national bond, by an advance in the rate of exchange, and by greater activity in business throughout the country. Brazil, in spite of all hindrances, has prospered since 1889.—*Bulletin of the Bureau of Am. Republics, Dec., 1898.*

A. D. 1900.—Arbitration of the French Guiana boundary dispute.—Award of the Swiss Government.—A dispute with France concerning the boundary of the French possessions in Guiana, which Brazil inherited from Portugal, and which dates back to the 17th century, was submitted at last to the Swiss Federal Council, as a tribunal of arbitration, and settled by the award of the Council on December 1, 1900. The decision fixes the River Oyapok and the watershed of the Tumme Humme Mountains as the boundary. It is practically in favor of

Brazil, for France had claimed a year before a territory of not less than 400,000 square kilometres, ten times the area of Switzerland itself. Even after a large abatement had been made, the claim was still for 200,000 square kilometres, or 100,000 square miles, much more than the area of Great Britain. The actual territory allotted to France by the Federal Government of Switzerland is about 1,000 square miles. The arbitrators had no excuse for saying that the case was not brought before them in all its length and breadth. The documents presented by France formed four large volumes, supplemented by an atlas of 35 maps, while Brazil, not to be outdone, put in 13 volumes of documents and three atlases, with about 200 maps.

BRITISH CENTRAL AFRICA PROTECTORATE: Administrative separation from British South Africa Company's territory. Conflicts with natives.—Resources and prospects of the country.—Until 1894 the territory north of the Zambesi over which the British South Africa Company claimed a "sphere of influence," and the region covered by the British Protectorate that was declared in 1893-94 over Nyasaland and the Shire Highlands, were administered together by Sir Harry Johnston. But in that year the South Africa Company undertook the administration of its own portion of British Central Africa, and Commissioner Johnston became the Administrator of the remaining "British Central Africa Protectorate." In his report for 1895-6 (April to April) the Commissioner estimated the native population of the Protectorate at 844,420, British subjects, 259, other Europeans, 40, Indians, 263, half-castes, 21. Of hostilities with the natives, Commissioner Johnston gave the following report:

"In the autumn of 1895 a campaign lasting four months was commenced and carried to successful conclusion against all the Independent Arab Chiefs who dwelt on the south-eastern border of the Protectorate, and who continued to raid our territories for slaves. This campaign culminated in the complete defeat and death or expulsion of those Arabs who had created an independent power in the North Nyasa district. Action was also taken against the Angoni Chief, Mwasi Kazungu, in the interior of the Marindya district, who had made common cause with the Arabs, and was attempting to form against us a league of the Angoni Zulus. The only people likely now to give trouble in any way are the Angoni Zulus, who are to the west of the Protectorate what the Yao and Arabs have been to the north. For the past 40 years the western portions of the Protectorate have been the happy hunting ground of the descendants of the Zulu bands who quitted Matabeleland at various periods during the last 70 years, and who penetrated into Central Africa as far as the eastern part of Fuzanyika and the south shores of the Victoria Nyanza. They established themselves strongly as a ruling caste on the high plateau to the west and to the north-east of Lake Nyasa. From these plateaux they raided perseveringly for slaves, chiefly in the regions of the Great Lungwa valley, but also to some extent the coast lands of Lake Nyasa.

"Not a few of the Angoni Chiefs are friendly and well-disposed towards the British, and seem likely to settle down quietly as they appreciate

the facilities of commerce and civilization; but we have to deal with the more warlike West, and the young men of the tribe are still in the habit of raiding the coast for slaves. In the autumn of 1895 a campaign was carried out against Angoni Chief Mwasi Kazungu, who had made common cause with the Arabs, and was attempting to form against us a league of the Angoni Zulus. The only people likely now to give trouble in any way are the Angoni Zulus, who are to the west of the Protectorate what the Yao and Arabs have been to the north. For the past 40 years the western portions of the Protectorate have been the happy hunting ground of the descendants of the Zulu bands who quitted Matabeleland at various periods during the last 70 years, and who penetrated into Central Africa as far as the eastern part of Fuzanyika and the south shores of the Victoria Nyanza. They established themselves strongly as a ruling caste on the high plateau to the west and to the north-east of Lake Nyasa. From these plateaux they raided perseveringly for slaves, chiefly in the regions of the Great Lungwa valley, but also to some extent the coast lands of Lake Nyasa.

"Nyasaland, or British Central Africa as it is officially called, is now (1896) in a fair way of becoming one of the richest coffee and tobacco growing districts of the world. It enjoys the immense advantage of direct water communication with the coast and, with the exception of a stretch of one hundred miles, the River Shire, which runs out of Lake Nyasa, is navigable along its whole course. Before long the Upper and Lower Shire will be connected by a railway line, and goods will then be landed at the northern extremity of Lake Nyasa—a distance of 700 miles from the mouth of the Zambesi—at a trifling cost. At present the journey can already be accomplished in a week. Ten steamers navigate Lake Nyasa, and double that number run on the Zambesi and the Shire Rivers. This mighty task—accomplished, we must not forget it, without the cost of a single penny to the British taxpayer—did not benefit Great Britain alone. The Portuguese, who, for the best three centuries were slumbering in their East African possessions, were aroused by the extraordinary activity which was displayed at their door. At first they raised objections, but they soon understood what advantages they would derive from the situation, and gave their hearty cooperation to Great Britain. It brought more wealth than they had ever dreamt of to their Zambezi provinces, now a busy centre of trade, in telegraphic communication with the Cape in the South and Lake Nyasa in the North. The Portuguese port of Beira, a sandbank some years ago, has become the most important harbour between Zanzibar and Delagoa Bay, and owes its present position to the railway line which runs to Mashonaland."—L. Deane, *The Fashoda Question* (Fortnightly Rev., Nov., 1898).

BRITISH EAST AFRICA PROTECTORATE, The: A. D. 1895.—Territory transferred to the British Government. See (in this vol.) AFRICA: A. D. 1895 (BRITISH EAST AFRICA).

A. D. 1895-1897.—Its creation and extent.—Existence of slavery.—War in the Province of Seyyidieh.—Report of the commissioner.—"The British East Africa Protectorate is bounded on the east by the Indian Ocean, on the west by the Uganda Protectorate, and on the south-west by the Anglo-German frontier, which,

starting from the mouth of the River Umba, runs in a generally north-west direction till it strikes the eastern shore of Lake Victoria Nyanza at the point at which it is intersected by the 1st parallel of south latitude. To the north and north-east it is bounded by the Italian sphere of influence from which it is divided by the River Juba up to parallel 6° of north latitude, and thence by a line running along that parallel until it reaches the Blue Nile. The frontier between the East Africa and Uganda Protectorates is only partially defined, starting from the German frontier, it follows the Gmiso Masai River as far as Sosian, thence strikes north-east to the Kedong River, which it follows to its source, and thence runs in a northerly direction along the Likipia escarpment or eastern lip of the great 'meridional rift'. It is, however, still undecided whether or not it should be deflected, for greater convenience in dealing with the Uganda Masai, so as to leave to Uganda the region between the southern portion of the Likipia escarpment and the so-called Aberdare range. In view of the uncertainty existing as to the inland boundaries, it is impossible to give the exact area of the territory, though it may be estimated roughly at 280,000 square miles. It will be sufficient here to state that its coast line, including in the term the islands of Lamu, Mandi, and Patta, which are separated from the mainland by narrow channels, is 405 miles long, whilst its greatest breadth, measured from the centre of the district of Gusha on the Juba to the Likipia escarpment, is 400 miles.

The Protectorate in its present form was constituted on the 1st July, 1895. Previous to that date a Protectorate had been declared on the 4th November, 1890, over those portions of the territory which formed part of the Zanzibar Sultanate, and on the 19th November of the same year over Witu and the whole of the coast between the Tana and Juba Rivers. The administration of this second Protectorate was confided in 1893, with the exception of those portions of the coast between the Tana and Juba which belonged to the Zanzibar Sultanate and were rented by the Imperial British East Africa Company from him, to the Sultan of Zanzibar, but without being fused in or united to the Sultanate. In September, 1891, a Protectorate was established under an independent Commissioner over Uganda, and was subsequently defined as extending over the whole of the intervening territory from which the Imperial British East Africa Company had withdrawn its effective control, that is, as far as the western limits of its district of Kikuyu, which still constitutes the frontier between the East Africa and Uganda Protectorates. The remainder of the British sphere between the Zanzibar and Uganda boundaries and the Tana River and German frontier was placed under Her Majesty's protection on the 1st July, 1895 and the whole of the above-described territories to the east of the Uganda Protectorate were at the same time fused into one administrative whole under the title of the 'East Africa Protectorate'.

British East Africa includes three distinct sovereignties, i.e. 1. The mainland territories of the Sultan of Zanzibar. 2. The Sultanate of Witu. 3. The remainder of the Protectorate consisting of the old 'chartered territory' of the Imperial British East Africa Company and of

the region between the Tana and the Juba not included either in Zanzibar or Witu. This division, which I propose for the sake of convenience to style British East Africa proper, is not, of course, technically under Her Majesty's sovereignty, and is divided among a number of tribes and races under our Protectorate, but it differs from Zanzibar and Witu in that the status of the Chiefs exercising authority there is not recognized by international law or at least by any international engagement.

The mainland dominions of the Sultan of Zanzibar included in the Protectorate (for he possesses certain coast ports to the north of it now leased to Italy) consist—(1.) Of a strip of coast 10 miles deep from high water mark, extending from the mouth of the River Umba on the south to Kipini on the Ozi on the north; and (2.) Of a series of islands off the coast between the Ozi and the Juba and of the mainland town of Kisumu with a radius of 10 miles around it.

The State of Witu extends along the coast from Kipini to Kwyhoo, its northern boundary being a straight line drawn in 1887 by Commissioners representing the German and Zanzibar Governments due west from Kwyhoo to a point a few miles east of the Ozi River. It was founded, or rather gradually grew up, in the years from 1860 to 1885, round a colony of outlaws. When the German Government first interested itself, about a decade ago, in East African affairs, it recognized the little colony of outlaws and refugees from the coast towns which had grown up in Witu as an independent State. Accordingly, on transferring this Protectorate by the Treaty of 1890 to Great Britain, it stipulated by Article II of that Agreement, that the sovereignty of the Sultan of Witu over the territory formally defined as his in 1887 should be recognized by the new Protecting Power.

Beyond the Zanzibar and Witu limits, the territories comprised in the Protectorate are ruled directly under Her Majesty by the British officers in charge of them. All the various tribes, Mahomedan and heathen, retain, however, their respective native Rulers and Institutions. For a period of ten months from the transfer from the Imperial British East Africa Company to Her Majesty's Government, the country now forming the Province of Seyidieh, was the theatre of disturbances, which for a time retarded the development of the territory and diverted the attention of the Administration from useful schemes of improvement that might otherwise have been immediately set on foot. These disturbances began under the Administration of the Imperial British East Africa Company, their immediate cause being a dispute over the succession to the Chieftainship of Takamgn between Rashid bin Salim, the son, and Mubarak bin-Rashid, the nephew of the former Chief. The Company supported Rashid, who though younger in years than Mubarak, was friendly to the English. Though the rebellion of the Mazrui Chiefs retarded to some extent the development of the province, and entailed in its suppression considerable expense, its occurrence, under the special circumstances which attended it, has not been an unmitigated evil. We have broken once for all the power of several influential Arab potentates, who were never thoroughly subjugated either by the Sultans or the Company, and whose ambitions and semi-

Independent position would sooner or later have involved us in trouble with them had we attempted to make the authority of our Administration effective, and to interfere with the slavery, and even Slave Trade, which flourished under their protection."—Sir A. Hardinge, *Report (Great Britain, Parliamentary Publications: Papers by Command, Africa, No. 7, 1897), pp. 1-3, and 65*.

A. D. 1900-1901.—Rising of Ogaden Somalis.—In the latter part of November, 1900, news reached Zanzibar of a rising of the Somali tribe called Ogaden in the Jubaland province of the British East Africa Protectorate, and that the British Sub-Commissioner, Mr. Jenner, had probably been killed. The Somalis are a very warlike race, supposed to be Gallas by descent, with an admixture of Arab blood. In the following February it was announced that Ali Madhi, the head quarters of the Ogaden Somalis, had been occupied without opposition by the British punitive expedition sent to exact reparation for the murder of Mr. Jenner, and that the Ogaden Sultan was a prisoner.

BRUGES: A. D. 1900.—The new canal from the city to the sea.—"On the 25th day of February, the inauguration of the new canal was celebrated at Bruges. . . . The canal runs from Zeebrugge, a port on the North Sea 14.20 miles north of Ostend, to the city of Bruges, a total distance of 7.46 miles. The work is now so far completed that vessels of a draft of 25 feet can enter and pass to the port of Bruges. The locks are fully completed, as well as three-fifths of the wharf wall at Bruges. When finished, the wharf wall will have a total length of 1,575 feet. The canal has a width of 72 feet 8 inches at the bottom and 229 feet 4 inches at the water level and will have, when completed, a depth of 26 feet 3 inches; this will also be the depth of the interior port and of the great basin of Bruges. Bruges is an old, inland deep water port, having connection with the sea by canal from Ostend, but this only for vessels of a very light draft."—*United States Consular Reports, July, 1900, p. 346*.

BUDDHA, Gautama: Discovery of his birthplace and his tomb, with personal relics.—"Mr. Vincent Smith, of the Bengal Civil Service, a learned antiquary, has published in the *Allahabad Pioneer* a statement as to the nature and significance of recent discoveries of Buddhist antiquities in India. The first of these is the home of Gautama Buddha, who lived about 500 B. C., and who is known to have been the son of the Raja of Kapilavastu, a small state in the Nepal Terai, bordering on the modern Hindustan. The site of Kapilavastu has long been eagerly sought for, and it is only within the past three years that the accidental discovery of an inscribed pillar erected by the Emperor Asoka, in the third century B. C., fixed with certainty the site of the city. The ruins, which were lately visited by Mr. Smith, are, so far as is yet known, all of brick; they are for the most part buried in jungle, and are so extensive that many years would be required for their exploration. The city was destroyed during the lifetime of Gautama, and when the first of the famous Chinese pilgrims visited the place, in 410 A. D., it was a mass of desolate ruins, and there is no indication that it has since been occupied. This fact gives

exceptional interest to the excavations now in progress, for they are bringing to light buildings more ancient than any previously known in India. More interesting even than Kapilavastu is the discovery of the Lambini Garden, the traditional birthplace of Gautama. The sacred spot has been found marked by another of Asoka's pillars, on which the inscription is perfect. This is also in Nepalese territory, five miles from the British frontier. The pillar stands on the western edge of a mound of ruins about a hundred yards in diameter, and on the south side of the mound is the tank in which the child's mother bathed after his birth. Another discovery which was made in a stupa, or brick tumulus, close to the British frontier, is that of relics of Buddha himself. These consist only of fragments of bone, which were deposited in a wooden vessel that stood on the bottom of a massive coffer more than four feet long and two feet deep cut out of a solid block of fine sandstone. This coffer was buried under eighteen feet of masonry composed of huge bricks, each sixteen inches long. The wooden vessel was decayed, and with it was an exquisitely finished bowl of rock crystal, the largest yet discovered in India, and also five small vases of soapstone. All these vessels were partially filled in honor of the relics, with a marvellous collection of gold stars, pearls, topazes, beryls, and other jewels, and of various objects delicately wrought in crystal, agate, and other substances. An inscription on the lid of one of the soapstone vases declares the relics to be those of Buddha himself, and the characters in which the inscription is written are substantially the same as those of the Asoka inscriptions, and indicate that the tumulus was constructed between 300 and 250 B. C. — *London Times*, May, 1898. The relics discovered as described above were presented by the Indian government to the King of Siam, he being the only existing Buddhist monarch, with the proviso that he offer a portion of them to Buddhists of Ceylon and Burmah.

BUFFALO: A. D. 1896.—First reception of electric power from Niagara Falls. See SCIENCE. RECENT. ELECTRICAL.

A. D. 1901.—The Pan-American Exposition. —As this volume goes to press, the preparations are about completed for holding a great Exposition at Buffalo which promises to be second in importance only to the Columbian Exposition at Chicago in 1893, so far as concerns undertakings of like character in America. The Columbian Exposition was a "World's Fair," this at Buffalo is "Pan-American," an exhibition, that is, of the arts, the industries, and all the achievements in civilization of the people of the Western hemisphere, from Bering Strait to Cape Horn. Very nearly every country in North, South and Central America has taken a warmly interested part in the preparations for the Exposition, and many have erected special buildings for their exhibits. The States of the Union have likewise been active, and few of them will be unrepresented in the numerous buildings on the grounds. Cuba, Porto Rico, and the West Indies generally, as well as Hawaii and the Philippine Islands, in

their new character as dependencies of the United States, are brought importantly into the scheme.

The enterprise received official endorsement from the Federal Government when Congress in July, 1898, by resolution declared that "A Pan-American Exposition will undoubtedly be of vast benefit to the commercial interests of the countries of North, South and Central America, and it merits the approval of Congress, and of the people of the United States." In March, 1899, Congress appropriated \$500,000, and declared that "it is desirable to encourage the holding of a Pan-American Exposition on the Niagara Frontier in the City of Buffalo, in the year 1901, fittingly to illustrate the marvelous development of the Western Hemisphere during the Nineteenth Century, by a display of the arts, industries, manufactures and the products of the soil, mine and sea," and also declared that "the proposed Pan-American Exposition being confined to the Western Hemisphere, and being held in the near vicinity of the great Niagara Cataract, within a day's journey of which reside forty million people, would unquestionably be of vast benefit to the commercial interests, not only of this country, but of the entire hemisphere, and should therefore have the sanction of the Congress of the United States."

The grounds of the Exposition are in the northern part of the city of Buffalo, taking in a portion of its most beautiful public park. They extend about one mile in length, from north to south, and about half a mile in width, containing 350 acres. A general plan of landscape and building architecture, with which every detail of form and color should be made to harmonize, was worked out at the beginning by a board of the leading architects of the United States, and has been adhered to with beautifully harmonious effects.

In one of the circular announcements of the Exposition it is said: "In planning the Exposition the management early decided upon giving to electricity special homage. The progress of the electrical science has been so marked in recent years as to excite the wonderment of the scientific world. Buffalo is, perhaps, more than any other city on the globe, interested in this science, owing to the nearness of Niagara Falls, where the greatest electric power plants known to this class of engineering have been installed. In fact the electrical displays here contemplated would be impossible except where a large volume of power is available, such as Buffalo receives from the great Falls of Niagara. . . . The Pan-American Exposition will far surpass former enterprises of this kind in six important features. First, the electrical effects; second, the hydraulic and fountain effects; third, the horticultural, floral and garden effects; fourth, the original sculptural ornamentation; fifth, the color decorations; sixth, the court settings. Particular attention has been given by the designers in the arrangement of its court settings, to provide unusually large vistas, both for the purpose of providing a memorable picture and for the utility reason of accommodating large crowds of people."

The Pan-American Exposition is under the management of a strong company of professional and business men in Buffalo with Mr. John T. Millburn for its President. The Director General is H. C. William F. Buchanan, former United States Minister to the Argentine Republic.

CANADA.

A. D. 1890-1896.—**The Manitoba School Question.**—When Manitoba in 1870 passed from the position of a Crown territory, managed by the Hudson's Bay Company, into that of a province of Canada, its area, which is considerably greater than that of England and Wales, was peopled by about 12,000 persons, whites and half-breeds. In religion this population was about equally divided into Catholics and Protestants. Previous to the Union there was no state system of education. A number of elementary schools existed, but they owed their foundation entirely to voluntary effort, and were supported exclusively by private contributions, either in the form of fees paid by some of the parents or of funds supplied by the Churches. In every case these schools were conducted and managed on strictly denominational lines. When the Act of Union was passed it was sought to secure the continuance of this state of things, and to safeguard the rights of whichever Church should in the hereafter be in the minority by the following sub-sections in the 22nd section, which gave to the legislature of the province the power to make laws in relation to education: "(1) Nothing in any such law shall prejudicially affect any right or privilege with respect to denominational schools which any class of persons have by law or practice in the province at the Union." (2) An appeal shall lie to the Governor-General in Council from any act or decision of the legislature of the province, or of any provincial authority, affecting any right or privilege of the Protestant or Roman Catholic minority of the Queen's subjects in relation to education." Those two clauses of the Manitoba Act, 1870, govern the whole situation.

The attention of the new provincial legislature was at once directed to the condition of the denominational schools. The Government decided to

supersede the old voluntary system by one of State-aided schools, which, however, were still to be scrupulously denominational in character. The legislature simply took the educational system as it found it and improved it by assistance from public funds. Thus it was arranged that the annual public grant for common school education was to be appropriated equally between the Protestant and the Catholic schools.

The only important amendment to this Act was passed in 1875 and provided that the legislative grant, instead of being divided between the Protestant and Catholic schools as heretofore, should in future be distributed in proportion to the number of children of school age in the Catholic and Protestant districts. Already immigration had begun to upset the balance of numbers and power, and as the years went on it became evident that the Catholics were destined to be in a permanent minority in Manitoba. This trend of immigration, which in 1875 made legislation necessary, has continued ever since, and to-day the Catholics of the province number only 20,000 out of a total population of 200,000. No further change was made in the educational system of Manitoba until the memorable year of 1890. In that year the provincial legislature boldly broke all morings with the past and abolishing the separate denominational schools introduced a system of free compulsory and non-sectarian schools, for the support of which the whole community was to be taxed.

To test the legality of the change, what is known as Barrett's case was begun in Winnipeg. It was carried to the Supreme Court of Canada and the Canadian judges by a unanimous decision declared that the Act of 1890 was ultra vires and void. The city of Winnipeg appealed to the Privy Council and that tribunal in July, 1892, reversed the decision of the Canadian Court and affirmed that the Act

was the only standing. The second subsection of the Manitoba Act read: "No appeal shall lie to the Governor General in Council from any Act or decision of the Legislature of the province, or of any court of law or equity, affecting any right or privilege of the Protestant or Roman Catholic minority of the province subjects in relation to education." But the legislation of 1890 was not explicit and expressly declared to be so on the ground that it had not prejudicially affected the position which the minority held at the time of the Union, now could there be an appeal from it? The Governor General, however, considered the question as to his jurisdiction in such cases of justice. What is known as Brophy's case was begun and in due course was carried to the Supreme Court of Canada. The decision of that tribunal, though not unanimous, was in accord with public expectation. The majority of the judges felt that the previous judgment of the Privy Council had settled the matter beforehand. The Act of 1890 had been declared a travesty on the ground that it had not interfered with the rights which the minority possessed before the Union, and therefore there could be no appeal from it.

Still the undaunted Archbishop of St. Boniface went on, and for a last time appealed to that Judicial Committee of the Privy Council which two years and a half before had spoiled and disappointed the Catholic hopes. In January 1894 the final decision in Brophy's case was read by the Lord Chancellor. For a second time the Lords of the Council upset the ruling of the Supreme Court of Canada, and treated their reasoning as irrelevant. It will be remembered that both the appellant prelates and the Canadian judges had assumed that the clause in the Manitoba Act, which conferred the right of appeal to the Governor General, was limited to one contingency, and could be invoked only if the minority were robbed at any time of the poor and elementary rights which they had enjoyed before the Act of Union. But was the clause necessarily so limited? Could it not be used to justify an appeal from legislation which affected rights acquired after the Union? In the words of the judgment: "The question arose: Did the subsection extend to the rights and privileges acquired by legislation subsequent to the Union? It extended in terms to 'any' right or privilege of the minority affected by any Act passed by the Legislature, and would therefore seem to embrace all the rights and privileges existing at the time when such Act was passed. Their Lordships saw no justification for putting a limitation on language thus unlimited. There was nothing in the surrounding circumstances or in the apparent intention of the legislature to warrant any such limitation." In other words, the dispute was referred to a new tribunal, and one which was free to consider and give effect to the true equities of the case. The Governor General and his responsible advisers, after considering all the facts, found in favour of the Catholic minority, and at once issued a Remedial Order to the Government of Manitoba, which went far beyond anything suggested in the judgment in Brophy's case. The province was called upon to repeal the legislation of 1890, so far as it interfered with the right of the Catholic minority to build and maintain their own schools,

to share proportionately in any public grant for the purposes of education, and with the right of such Catholics as contributed to Catholic schools to be held exempt from all payments towards the support of any other schools. In a word, the Governor General and Sir Mackenzie Bowell's Administration, exercising as it were appellate jurisdiction, decided that the minority were entitled to all they claimed. The Government of Manitoba, however, had hardened their hearts against the minority in the province, and refused to obey the remedial Order.

The refusal of the provincial Government to accept the responsibility of carrying into effect the terms of the remedial Order for the first time brought the Parliament of Canada into the field, and empowered them to pass coercive legislation. A remedial Bill was accordingly, after an inexplicable delay, brought into the Federal Parliament to enforce the remedial Order.

The Cabinet recognised that the Federal Parliament had no power to spend the money of the province, and so all they could do was to exempt the minority from the obligation to contribute to the support of schools other than their own. The Bill bristled with legal and constitutional difficulties. It concerned the coercion of a province; it contained no less than 116 clauses; it was introduced on the 2nd of March 1896, when all Canada knew that the life of the Federal Parliament must necessarily expire on the 24th of April. Some fifteen clauses had been considered when the Government admitted, what all men saw, the impossibility of the task, and abandoned the Bill.

While the fate of the remedial Bill was still undecided, Sir Donald Smith and two others were commissioned by the Federal Government to go to Winnipeg and see if by direct negotiations some sort of tolerable terms could be arranged. Sir Donald Smith proposed that the principle of the separate school should be admitted wherever there were a reasonable number of Catholic children—thus, wherever in towns and villages there are twenty-five Catholic children of school age, and in cities where there are fifty such children, they should have a school house or school room for their own use, with a Catholic teacher.

In the event the negotiations failed, the baffled Commissioners returned to Ottawa, and on the 24th of April 1896 Parliament was dissolved. The Government went to the country upon the policy of the abandoned Bill. On the other hand, many of the followers of Mr. Laurier in the province of Quebec pledged themselves to see justice done to the Catholics of Manitoba, and let it be understood that they objected to the remedial Bill only because it was not likely to prove effective in the face of the combined hostility of the legislature and the municipalities of the province.

Catholic Quebec gave Mr. Laurier his majority at Ottawa.

When the Liberal party for the first time for eighteen years found itself in power at Ottawa, Mr. Laurier at once opened negotiations with Manitoba. The result was a settlement which, although it might work well in particular districts, could not be accepted as satisfactory by the Catholic authorities. It arranged that where in towns and cities the average attendance of Catholic children was forty or upwards, and in villages and rural districts the average attendance of such children was twenty-five or up

wards one Catholic teacher should be employed. There were various other provisions, but that was the central concession. Leo the Thirteenth, recognising the difficulties which beset Mr. Laurier's path, intimated perhaps also that it is not always easy immediately to resume friendly conference with those who have just done their best to defeat you, has sent to Canada an Apostolic Commissioner. J. G. Stoad C.S. *Mr. Laurier and Manitoba* (Nineteenth Century, April, 1897).

A. D. 1895. Northern territories formed into provisional districts. The unorganized and unmanicured portion of the Dominion this year was set apart into provisional districts. The territory east of Hudson's Bay, having the province of Quebec on the south and the Atlantic on the east, was to be hereafter known as Ungava. The territory embraced in the islands of the Arctic Sea was to be known as Franklin, the Mackenzie River region as Mackenzie, and the Pacific coast territory lying north of British Columbia and west of Mackenzie as Yukon. The extent of Ungava and Franklin was undefined. Mackenzie would cover 538,600 square miles, and Yukon 225,000 square miles. In addition to 143,500 square miles added to Athabasca and 450,000 to Keewatin. The total area of the Dominion was estimated at 3,456,383 square miles. *The Annual Register*, 1895, p. 391.

A. D. 1895. Negotiations with Newfoundland.—Negotiations for the entrance of Newfoundland into the federation of the Dominion of Canada proved ineffectual and were abandoned in May. The island province refused the terms proposed.

A. D. 1896 (June—July).—Liberal triumph in Parliamentary elections.—Formation of Ministry by Sir Wilfred Laurier.—General elections held in Canada on the 23d of June, 1896 gave the Liberal Party 113 seats out of 213 in the Dominion House of Commons, the Conservatives securing 88, and the Patrons of Industry and other Independents 12. Much to the general surprise, the scale was turned in favor of the Liberals by the vote of the province of Quebec, notwithstanding the Manitoba school question, on which clerical influence in the Roman church was ranged against that party. The effect of the election was to call the Liberal leader, Sir Wilfred Laurier, of Quebec, to the head of the government, the Conservative Ministry, under Sir Charles Tupper, retiring on the 8th of July.

A. D. 1896-1897.—Policy of the Liberal Government.—Revision of the tariff, with discriminating duties in favor of Great Britain, and provisions for reciprocity.—The position of the Canadian Liberals, when they came into power after the General Election of 1896, was unlike that of the English Liberals after the General Election of 1902. Both Liberal parties had listed reforms to which they were committed. The English measures were in the Newcastle Programme. Those of the Canadian Liberals were embodied in the Ottawa Programme, which was formulated at a convention held at the Dominion Capital in 1893. A large part of the Ottawa Programme was set out in the speech which the Governor General read in the Senate when the session of 1897 commenced. There was then promised a measure for the revision of the tariff; a bill provid-

ing for the extension of the Intercolonial railway from Lewis to Montreal; a bill repealing the Dominion Franchise Act and abolishing the costly system of registration which goes with it; and a measure providing for the plebiscite on the Prohibition question. Neither of these last two measures was carried through Parliament. Both had to be postponed to another session, and the session of 1897 was devoted so far as legislation went, chiefly to the tariff and to bills, none of which were promised in the Speech from the Throne, in retaliation for the United States Contract Labor Laws and the new United States tariff.

The new tariff was a departure from the tariffs of the Conservative regime in only one important direction. Protective duties heretofore had been levied on imports from England, in the same way as on imports from the United States or any other country. The 'National Policy' had allowed of no preferences for England, and during the long period of Conservative rule, when the Conservatives were supported by the Canadian manufacturers in much the same way as the Republican party in the United States is supported by the manufacturing interests, the Canadian manufacturers had been as insistent for adequate protection against English-made goods as against manufactured articles from the United States or Germany. The Conservative party had continuously claimed a monopoly of loyalty to England, but in its tariffs had never dared to make any concession in favour of English goods. In the new tariff, preferences for England were established, and with these openings in favour of imports from Great Britain, there came a specific warning from the Minister of Finance that Canada manufacturers must not regard themselves as possessing a vested interest in the continuance of the protective system.

When the Minister of Finance laid the tariff before the House of Commons, he declared that the 'National Policy,' as it had been tried for eighteen years, was a failure, and he claimed that lowering the tariff wall against England was a step in the direction of a tariff 'based not upon the protective system but upon the requirements of the public service.' During the first fifteen months of the new tariff, the concession to England consists of a reduction by one eighth of the duties chargeable under the general list. At the end of that time, that is on the last of July, 1898, the reduction will be one fourth. The reductions do not apply to wines, malt liquors, spirits and tobacco, the taxes on which are essentially for revenue. While England was admitted at once to the advantages of the reduced tariff, this tariff is not to be applicable to England alone. In July, it was extended to the products of New South Wales, the free trade colony of the British Australasian group, and any country can come within its provisions whose government can satisfy the Comptroller of Customs at Ottawa, that it is offering favourable treatment to Canadian exports, and is affording them as easy an entrance through its customs houses as the Canadians give by means of the reciprocal tariff. It is also possible, under a later amendment to the Tariff Act, for the Governor in Council to extend the benefits of the reciprocal tariff to any country entitled thereto by virtue of a treaty with Great Britain. Numerous

alterations were made in the general list of import duties. Some of these involved higher rates, others lowered the duties. But if the changes in the fiscal system had been confined to these variations, the new tariff would not have been noteworthy, and it would have fulfilled the pledges made by the Liberals when they were in Opposition. It owes its chief importance to the establishment of an inner tariff in the interests of countries which deal favourably with Canada." E. Porritt, *The New Administration in Canada* (Yale Review, August, 1897).

A. D. 1897 June July.—Conference of colonial prems with the British Colonial Secretary. (This vol.) ENGLAND. A. D. 1897 (this vol.)

A. D. 1897 Jan.—Self-government for the Northwest Territories. By an Act passed by the British Parliament, giving the Territories the full powers of a provincial government, but having some limitations, was passed.

A. D. 1897 Jan.—Encyclical Letter of the Pope. The "Manitoba School Question" made his delegate, Monseigneur de La Rivière, address to the Roman Church in Canada. The Pope's encyclical, addressed to the bishops of the world, was made public at Rome on the 28th of January.

A. D. 1897 Jan.—The Pope's encyclical, addressed to the bishops of the world, was made public at Rome on the 28th of January. The letter has been translated into English as dealing with the question of the Church towards all secular school systems. With a few unessential passages it is given in the following. "It was with extreme solicitude," wrote the Pope, "that we turned our mind to the unhappy events which in these later years have marked the history of Catholic education in Manitoba."

And since many expected that we should make a pronouncement on the question and asked that we should trace a line of conduct and a way to be followed, we did not wish to decide anything on this subject before our Apostolic delegate had been on the spot, charged to proceed to a serious examination of the situation and to give an account to us of the state of affairs. He has faithfully and diligently fulfilled the command which we had given him. The question agitated is one of great and exceptional importance. We speak of the decision taken seven years ago by the parliament of Manitoba on the subject of education. The act of Confederation had secured to Catholic children the right of education in public schools in keeping with their conscientious convictions. The parliament of Manitoba abolished this right by contrary law. By this latter law a grave injury was inflicted, for it was not lawful for our children to seek the benefits of education in schools in which the Catholic religion is ignored or actively combated in schools where its doctrine is despised and its fundamental principles repudiated. If the Church has anywhere permitted this, it was only with great reluctance and in self-defense, and after having taken many precautions, which, however, have too often been found unequal to prevent the danger. In like manner one must at once be avoided, as most pernicious, those schools in which every form of belief is indifferently admitted and placed on an equal footing, as if in what regards God and Divine

things, it was of no importance whether one believed rightly or wrongly, whether one followed truth or falsehood. You well know, venerable brothers, that all schools of this kind have been condemned by the Church, because there can be nothing more pernicious nor more fitted to injure the integrity of faith and to turn away the tender minds of youth from the truth.

For the Catholic there is but one true religion, the Catholic religion, hence in all that concerns doctrine, or morality, or religion, he cannot accept or recognize anything which is not drawn from the very sources of Catholic teaching. Justice and reason demand, then, that our children have in their schools not only scientific instruction but also moral teachings in harmony, as we have already said, with the principles of their religion, teachings without which all education will be not only fruitless but absolutely pernicious. Hence the necessity of having Catholic teachers, reading books, and text books approved of by the bishops, and liberty to organize the schools, that the teaching therein shall be in full accord with Catholic faith as well as with all the duties that flow therefrom. For the rest, to decide in what institutions their children shall be instructed, who shall be their teachers of morality, is a right inherent to parental authority. When, then, Catholics demand, and it is their duty to demand, and to strive to obtain, that the teaching of the masters shall be in conformity with the religion of their children, they are only making use of their right, and there can be nothing more unjust than to force on them the alternative of allowing their children to grow up in ignorance, or to expose them to manifest danger in what concerns the supreme interests of their souls. It is not right to call in doubt or to abandon in any way these principles of judging and acting which are founded on truth and justice, and which are the safe guards both of public and private interests. Therefore, when the new law in Manitoba struck a blow at Catholic education, it was your duty, venerable brothers, to freely protest against the injury and disaster inflicted, and the way in which you all fulfilled that duty is a proof of your common vigilance, and of a spirit truly worthy of bishops, and, although each one of you will find on this point a sufficient approbation in the testimony of his own conscience, learn, nevertheless, that you have also our conscience and our approbation for the things which you sought and still seek to protect and defend are most sacred. The difficulties created by the law of which we speak by their very nature showed that an alleviation was to be sought for in a united effort. For so worthy was the Catholic cause that all good and upright citizens, without distinction of party, should have banded themselves together in a close union to uphold it. Unfortunately for the success of this cause, the contrary took place. What is more deplorable still, is that Catholic Canadians themselves failed to unite as they should in defending those interests which are of such importance to all, the importance and gravity of which should have stifled the voice of party politics, which are of much less importance. We are not unaware that some thing has been done to amend that law. The men who are at the head of the federal government and of the Province of Manitoba have already taken certain measures with a view to

decreasing the difficulties of which the Catholics of Manitoba complain, and against which they rightly continue to protest. We have no reason to doubt that these measures were taken from love of justice and from a laudable motive. We cannot, however, disseminate the truth, the law which they have passed to repair the injury is defective, insufficient, insufficient. The Catholics ask, and no one can deny that they justly ask, for much more. Moreover, in the remedial measures that have been proposed there is this defect, that in changes of local circumstances they may easily become useless. In a word, the rights of Catholics and the education of their children have not been sufficiently provided for in Manitoba. Everything in this question demands, and is conformable to justice, that they should be thoroughly provided for, that is by placing in security and surrounding with due safeguards those unchangeable and sacred principles of which we have spoken above. This should be the aim, this the end to be zealously and prudently sought for. Nothing can be more injurious to the attainment of this end than discord, unity of spirit and harmony of action are most necessary. Nevertheless since, as frequently happens in things of this nature, there is not only one fixed and determined but various ways of arriving at the end which is proposed and which should be desired, it follows that there may be various opinions equally good and advantageous. Wherefore let each act in the mould of the rules of moderation and gentleness and mutual charity. Let no one feel in the respect that is due to another, but let us resolve in fraternal unanimity, and not without your advice, to do that which the circumstances require and which appears to be best. As regards especially the Catholics of Manitoba we have every confidence that with God's help they will succeed in obtaining full satisfaction. This hope is founded, in the first place, on the righteousness of the cause, next in the sense of justice and prudence of the men at the head of the government, and finally in the good will of all upright men in Canada. In the meantime, until they are able to obtain their full rights, let them not refuse partial satisfaction. If therefore anything is granted by law to sustain or the good will of men, which will render the evil more tolerable, and the dangers more remote, it is expedient and useful to make use of such concessions, and to derive therefrom as much benefit and advantage as possible. When, however, no remedy can be found for the evil, we must exhort and beseech that it be prevented against by the liberality and munificence of their contributions, for no one can do anything more salutary for himself or more conducive to the prosperity of his country, than to contribute according to his means to the maintenance of these schools. There is another point which appeals to your common solicitude, namely that by your authority, and with the assistance of those who direct educational institutions, an accurate and suitable curriculum of studies be established, and that it be especially provided that no one should be permitted to teach who does not comply in law with all the necessary conditions and acquired, for it is only by the fact that the schools should be able to compare bearing culture, and scholarship with the best in the country. As concerns intellectual

culture and the progress of civilization, one can only recognize as praiseworthy and noble the desire of the provinces of Canada to develop public instruction and to raise its standard more and more, in order that it may daily become higher and more perfect. Now there is no kind of knowledge, no perfection of learning, which cannot be fully harmonized with Catholic doctrine."

A. D. 1898 (September) Popular vote on the question of Prohibition. Pursuant to a law passed by the Dominion Parliament the previous June a vote of the people in all the Provinces of the Dominion was taken, on the 26th of September, 1898, upon the following question: "Are you in favor of the passing of an act prohibiting the importation, manufacture or sale of spirits, wine, ale, beer, cider, and all other alcoholic liquors for use as beverages?" The submitting of this question to a direct vote of the people was a proceeding not quite analogous to the Swiss Referendum, since it decided the fate of no pending law, nor did it imitate the popular initiative of Swiss legislation, since the result carried no mandate to the government. It was more in the nature of a French Plebiscite, and many called it by that name, but not because in France ever drew so formal an expression of popular opinion on a question so fully discussed. The result of the voting was a near parity for prohibition in every Province except Quebec, Ontario pronouncing for it by more than 20,000, Nova Scotia by more than 20,000, New Brunswick by more than 17,000, Manitoba by more than 9,000, Prince Edward Island by more than 8,000, and the Northwest Territories by more than 3,000, while British Columbia gave a small majority of less than 600 on the same side. Quebec, on the other hand, shouted a loud "No" to the question, by 93,000 majority. The net majority in favor of Prohibition was 107,000. The total of votes polled on the question was 740,000. This was less than 44 per cent of the total registration of voters, hence the vote for Prohibition represented only about 23 per cent of the electorate, which the government considered to offer too small a support for the measure asked for.

A. D. 1898-1899. The Joint High Commission for settlement of all unsettled questions between Canada and the United States. As the outcome of negotiations opened at Washington in the previous autumn by the Canadian Premier, relative to the seal killing controversy, an agreement between Great Britain, Canada and the United States was concluded on the 30th of May, 1898, for the creation of a Joint High Commission to negotiate a treaty, if possible, by which all existing subjects of controversy between the United States and Canada should be settled with finality. Appointments to the Commission by the three governments were made soon afterwards, Great Britain being represented by the Lord High Chancellor, Baron Herschell, Canada by Sir Wilfrid Laurier, Premier, Sir Richard Cartwright, Minister of Finance, Commerce, and Sir Louis Herry, Devis, Minister of Marine and Fisheries, the United States by Hon. John W. Foster, ex-Secretary of State, Senator Charles W. Fairbanks, Senator George Gray, Representative Nelson Dingley, and the Hon. John A. Kesson, Representative Commissioner. Senator Gray having been subsequently appointed on the Commission to negotiate peace

with Spain. Its place on the Anglo-American Commission was taken by Senator Faulkner. The Joint Commission sat first in Quebec and later in Washington. Among the questions referred to it were those relating to the establishment of the boundary between Alaska and British Columbia, the issues over Bering Sea and the catch of fur seals, the unmarked boundary between Canada and the United States near Passaic, Passaic Bay in Maine and at points between Wisconsin and Minnesota and Canada, the north-east fisheries question, involving the rights of fishing in the North Atlantic off Newfoundland and other points, the regulation of the fishing rights on the Great Lakes, alien labor immigration across the Canadian-American border, commercial reciprocity between the two countries, the regulation of the bonding system by which goods are carried in bond across the frontier and also the regulation of traffic by international railways and canals of the two countries, reciprocal mining privileges in the Klondike, British North America and other points, wrecking and salvage on the ocean and Great Lakes coasting waters, the modification of the treaty arrangement under which only one war vessel can be maintained on the Great Lakes, with a view to allowing warships to be built on the lakes and then floated out to the ocean. The sessions of the Joint Commission were continued at intervals until February, 1899, when it adjourned to meet at Quebec in the following August, unless further adjournment should be agreed upon by the several chairmen. Such further adjournment was made, and the labors of the Joint Commission were indefinitely suspended, for reasons which the President of the United States explained in his Message to Congress, December, 1899, as follows: "Much progress had been made by the Commission toward the adjustment of many of these questions, when it became apparent that an irreconcilable difference of views was entertained respecting the delimitation of the Alaskan boundary. In the failure of an agreement as to the meaning of articles 3 and 4 of the treaty of 1825 between Russia and Great Britain, which defined the boundary between Alaska and Canada, the American Commissioners proposed that the subject of the boundary be laid aside and that the remaining questions of difference be proceeded with, some of which were so far advanced as to assure the probability of a settlement. This being declined by the British Commissioners, an adjournment was taken until the boundary should be adjusted by the two Governments. The subject has been receiving the careful attention which its importance demands, with the result that a *modus vivendi* for provisional demarcations in the region about the head of Lynn Canal has been agreed upon [see in this vol. ALASKA BOUNDARY QUESTION] and it is hoped that the negotiations now in progress between the two Governments will end in an agreement for the establishment and delimitation of a permanent boundary."

A. D. 1899, October.—*Modus Vivendi, fixing provisional boundary line of Alaska.* See in this vol. ALASKA BOUNDARY QUESTION.

A. D. 1899-1900.—*Troops to reinforce the British army in South Africa.* A proposal from the Canadian government to assist that of the Empire in its South African War was gratefully accepted in the early stages of the war, and

a regiment of infantry called the Royal Canadian, numbering a little more than 1,000 men, sailed from Quebec, October 30. In the following January a second contingent of more than 1,000 men was sent to the field. This latter comprised squadrons of mounted rifles and rough riders and three batteries of field artillery. In the same month the Canadian government accepted an offer from Lord Strathcona to raise, equip and transport at his own expense a body of 500 mounted men from the Northwest.

A. D. 1900 (November).—*General election.* The general election of members of the Dominion House of Commons was held November 7, resulting as follows:

PROVINCE	Liberal	Conservative	Independent	Total
New Brunswick	15	5		20
Prince Edward Island	9	2		11
Quebec	3	2		5
Ontario	57	8		65
Manitoba	23	54	5	82
Northwest Territories	2	3		5
British Columbia	2	2	1	5
Totals	124	79	10	213

As in the election of 1896, the Liberal Ministry of Sir Wilfrid Laurier found its strong support in the province of Quebec. Its party suffered unexpected losses in Ontario. The slight meaning of the election was summed up by Professor Goldwin Smith as follows: "The net result of the elections seems to be a Government resting on French Quebec and an Opposition resting on British Ontario. The minor provinces have been carried, as usual, by local interests rather than on general questions. Apart from the distinction of race between the two great provinces and the antagonism, before dormant but somewhat awakened by the war, there was no question of importance at issue between the parties. Both concurred in sending contingents to South Africa. The Liberals, though they went in at first on the platform of free traders at least, of a tariff for revenue only—have practically embraced protection under the name of stability of the tariff, and are believed to have received from the protected manufacturers contributions to their large election fund. The other special principles, such as the reduction of expenditure and discontinuance of the bonus to railways, proclaimed by Liberals before the last election, have been dropped. So has reform of the Senate. It is not likely that the Liberal victory will be followed by any change either in legislation or government, or by any special reform. Mr. Bourassa and Moncton of the French Canadian members who protested against the contingent, have been re-elected. Great as may be the extent and warmth of British feeling, the statement that Canadians were unanimously in favour of participation in the war must not be taken without qualification. For myself I felt that so little principle was at stake that I voted for two Conservatives on their personal merits."

CANAL, Interoceanic, The Project of the: A. D. 1581-1892. The early inception of the project. Movements towards its realization. The thought of uniting the two great oceans by means of a canal across the American isthmus sprang up, as is known, from the moment the conviction was reached that the passage which, from the days of Columbus, was thought to exist towards the Southern Sea, was not a reality. Nevertheless the first survey of the land was not carried out until the year 1581 when, in obedience to superior instructions, Capt. Antonio Perelra, Governor of Costa Rica, organized an expedition and explored the route by way of the San Juan river, the lake, and the rivers emptying into Gulf Nicoya, Costa Rica. Thirty-nine years later Don Juan Mercado submitted to King Philip III. his famous report of January 23, 1620, suggesting the route by the river and lake and thence through Costa Rican territory along the quebrada or Barranca Honda to Salinas Bay, thence to Puerto del Papagayo. Either because the magnitude of the undertaking was at that time superior to the necessities of trade, or, as was said by one, Spain considered the canal antagonistic to her interests, the era of independence arrived without the execution of the project ever having been entered upon. After independence the Congress of Central America in which Costa Rica and Nicaragua were represented as States of the Federation which succeeded the Colonial Government, enacted on Jan. 16, 1825 a decree providing for the construction of the canal, and in that same year Don Antonio Jose Cufias, Diplomatic Representative of Central America in Washington addressed the Secretary of State, Mr. Henry Clay, informing him of this resolution and stating that "A company formed of American citizens of respectability was ready to undertake the work as soon as a treaty with the United States ensuring the cooperation of the latter was signed, that he was ready to enter into negotiations for the treaty and that nothing would be more pleasant for Central America than to see the generous people of the United States joining her in the opening of the canal, sharing the glory of the enterprise, and enjoying the great advantages to be derived from it." The Government of Central America could not carry the undertaking into effect notwithstanding that among the means employed to reach the desired result, the figures the arrangement concluded with the King of Holland in October 1840. But, though the hopes centered in the undertaking were frustrated, to the honor of Central America the declarations of that Congress, which constituted like the concession for the canal itself, one of the first public documents ever issued by a nation of the earth have become a matter of record. The Central American Federation dissolved, this important matter attached to Nic-

aragua and Costa Rica directly, and the boundary line between the two republics having been determined by the treaty of April 15, 1858, as were also the points relative to the canal, the two governments jointly granted a concession on May 1 of that same year to Mr. Felix Belly, a distinguished French writer, to whom the Emperor Napoleon gave his support to carry forward the undertaking. This failing of accomplishment, the two governments, in perfect accord, concluded the contract known as the Ayon-Chevallier signed by Nicaragua on October 16, 1858 and by Costa Rica on June 18, 1860, which it is unnecessary to say also failed to produce any results whatever. Some years after the expiration of this last contract, Nicaragua promulgated a discussion as to the validity of the treaty and the meaning of some of its stipulations, which Costa Rica upheld in its original form, and the question was submitted to the decision of the President of the United States. Mr. Cleveland, who in his award of March 22, 1888, accepted by both parties, declared the treaty valid and binding upon each Republic and interpreted the points which in the opinion of Nicaragua were doubtful. According to the provisions of both of these documents, the treaty and award, even in the remotest event that the natural rights of Costa Rica should not be injured, Nicaragua is bound not to make any grants for canal purposes across her territory without first asking the opinion of the Republic of Costa Rica. Three years prior and while this question was still pending, Nicaragua concluded the treaty known as the Zavala-Fredinghayson, signed in Washington on December 1, 1884 whereby the title to the canal was conveyed to the United States and Costa Rica adhered to this treaty under date of February 23, 1885, but the negotiations remained without effect, because, ratification having been denied in the Senate although a reconsideration of the subject had been agreed to President Cleveland on inaugurating his first administration withdrew the document from the Senate. Things then returned to the status they formerly maintained, and Nicaragua in April 1887 and Costa Rica in July, 1888, respectively granted the concessions pursuant to which the construction of the American waterway has been pending of late years. The Congress of the United States has been giving special attention to this important matter since the year 1892, and commissions have been created charged with the survey and location of the route as well as the study of the influence of the canal in its different aspects. Recently the investigation is not limited to the route by Nicaragua and Costa Rica alone but extends to Panama. *Speech of Senor Calvo, Costa Rican Minister, at the International Commercial Congress, Philadelphia, Oct. 24, 1899.*

A. D. 1889-1899. The Maritime Canal Company. Investigation of Nicaragua routes. The failure of the Fredinghayson-Zavala treaty [see above] was a severe disappointment to the friends of the canal project, but it did not discourage them. A company of private citizens, capitalists and promoters, was organized, which at length took the name of the Maritime Canal Company. Fair and full concessions were secured from the government of Nicaragua, while similar articles were also signed with the Republic of Costa Rica on

CANAL, INTEROCEANIC

account of imagined ownership of a portion of the territory through which the canal was to pass, it has been shown subsequently in the settlement of the boundary dispute between these two governments that Costa Rica's rights in the matter were solely riparian. In due time Congress was called upon to grant a charter to the Maritime Company, which asked nothing more than this. The chartering act was passed by Congress in 1889, with an important amendment proposed by Judge Holman of Indiana, providing that "nothing in this act contained shall be so construed as to commit the United States to any pecuniary liability, whether for any account of said company nor shall the United States be held in any wise liable or responsible in any form or by any implication for any debt or liability in any form which said company may incur, nor as guaranteeing any engagement or contract of said company." But two years afterwards, the company having failed to collect the necessary capital for its undertaking, an attempt was made to set aside the above provision and to persuade Congress to guarantee \$1,000,000 of bonds, taking \$70,000,000 of stock and making the government a partner in the enterprise. The proposal was rejected. Congress did not guarantee the company's bonds. The company, without such guarantee, was unable to raise the necessary capital either in the United States or abroad, and the financial crisis of 1893 so overwhelmed it that all active operations on the isthmus were suspended, and they have never been resumed. The same issue in the guaranteeing of bonds has come up from time to time in succeeding Congresses, but not until the second session of the Fifty-fourth [1897] did it appear to have much chance of being decided in favor of the company. The opposition in the Senate, where it was first considered, was strong and the arguments advanced against the bill were clear, sound and forceful. The advocates of the measure were pressing for a vote, but almost at the supreme moment a note was received from the State Department, accompanied by a communication from Minister Rodriguez, the representative of the Greater Republic of Central America, setting forth several unassailable objections of his government to the methods of procedure. This final thrust determined the fate of the bill, and a vote on it was not taken.

The material points of Minister Rodriguez's criticism, which caused the Senate bill in 1897 to be withdrawn, were that some of the vital provisions of the concessions under which the Maritime Canal Company had the right to construct the canal were violated.—"C. M. Studden, *Latest Facts of the Nicaragua Canal Project* (N. Am. Rev., Dec., 1898).—Congress now (June 4, 1897) passed an Act which created a commission to examine all practicable routes for a canal through Nicaragua and report its judgment not to the best, without cost, of the cost of the work on such route. The commissioners appointed were Admiral Walker, Professor Haupt, and Colonel Hains. Their report, submitted to the President in May, 1899, unanimously recommended the route described as follows: "This line, leaving Brito follows the left bank of the Rio Grande to near Buena Retiro, and crosses the western divide to the valley of the Lajas, which it follows to Lake Nicaragua. Crossing the

CANAL, INTEROCEANIC

lake to the head of the San Juan river it follows the upper river to near Buena Vista, thence the excavation to the left bank of the river to the San Juanillo and across the low country to Greytown, passing to the northward of Lake San José." But while the commissioners agreed in finding this route preferable to any others in the Nicaragua region, they disagreed seriously in their estimates of cost. Colonel Hains putting it at nearly \$135,000,000, while Admiral Walker and Professor Haupt placed the cost at little more than \$118,000,000. Before the report of the Nicaragua Canal Commission was made, however, Congress (March 3, 1899) had directed the appointment of another commission to examine and report upon all possible routes for an interoceanic canal, in the Panama region and elsewhere, as well as through Nicaragua and to determine the cost of constructing such a canal and placing it under the control, management and ownership of the United States." This later commission, known as the Isthmian Canal Commission, was made up as follows: Rear Admiral John G. Walker, U. S. N., Samuel Bassett of Florida, Alfred Noble, C. E. of Illinois, George S. Morrison, E. E. of New York, Colonel Peter C. Hains, U. S. A., Prof. William H. Bassett of Connecticut, Lieutenant Colonel Oswald H. Ernst, U. S. A., Prof. Lewis M. Haupt, C. E. of Pennsylvania, Prof. Emory R. Johnston, U. S. A., Pennsylvania.

In his Message to Congress the next December President McKinley stated: "The contract of the Maritime Canal Company of Nicaragua was declared forfeited by the Nicaraguan Government on the 10th of October, on the ground of nonfulfillment within the ten years' term stipulated in the contract. The Maritime Canal Company has lodged a protest against this action, alleging rights in the premises which appear worthy of consideration. This Government expects that Nicaragua will afford the protestants a full and fair hearing upon the merits of the case." But another company had been put into the place of the Maritime Canal Company, by action of President Zelaya of Nicaragua, who, in 1898, granted to Edward Eyré and E. F. Cragin, who represented an American Syndicate, the right to construct the canal when the contract with the Maritime should have lapsed. This transaction, however, lacked confirmation by Costa Rica and the United States.

A. D. 1893-1900.—The Panama Canal Commission twice extended.—Formation of new company. See in this vol. COLUMBIA A. D. 1893-1900.

A. D. 1899 (December).—Transfer of the Panama Canal to an American company.—The transfer of the Panama Canal from the later French company to an American company, chartered in New Jersey, was accomplished in December, 1899. The new company received all the property, rights and powers of its French predecessor, the consideration to be paid to the latter being mainly in the form of shares in the American company.

A. D. 1900 (November).—Preliminary report of the Isthmian Canal Commission in favor of the Nicaragua route.—The preliminary report of the Isthmian Canal Commission, appointed under the Act of March 3, 1899, was presented to the President on the 30th November,

CANAL, INTEROCEANIC.

1900 and communicated to Congress at the opening of the session. The Commission reported in favor of the Nicaragua route, essentially on the lines laid down by the previous Nicaragua Canal Commission, as defined above. It found that the choice of routes lies between this and the route of the partly constructed Panama Canal, and its discussion of the question presented the following views: "(a) Between New York and San Francisco, the Nicaragua Canal route would be 377 nautical miles shorter than the Panama route. Between New Orleans and San Francisco 579 miles would be saved, and, in general, the distances between the Atlantic and Pacific ports of the United States are less by way of Nicaragua. Between our east coast and Yokohama and Shanghai the Nicaragua route is somewhat shorter, but for the trade of our eastern ports with the west coast of South America the Panama route is not so long as the Nicaragua. (b) A part of the saving in distance effected by using a Nicaragua canal instead of one at Panama would be offset by the longer time of transit at Nicaragua. An average steamer would require twelve hours to make the passage through the Panama Canal, and thirty three through one across Nicaragua. For a 10-knot steamer this difference of twenty-one hours would be equivalent to 210 knots difference in distance, and for a 13-knot steamer, the difference in time of transit would be equivalent to 273 knots. (c) The Nicaragua route would be the more favorable one for sailing vessels because of the uncertain winds in the bay of Panama. It would not be impossible for sailing vessels to use the Panama Co. but for average voyages between the two seaboards of the United States, a sailing vessel would require about nine days additional time to make the passage by way of the Panama Canal. However, neither route would be much used by sailing vessels, because of their inability to compete with steamers. They would certainly not be able to compete with steamers, both using the Panama Canal. (d) For the promotion of the domestic trade of the United States, the Nicaragua route would possess advantages over the Panama route, because the distance between our two seaboards is less. For our trade with Japan, China, the Philippines, and Australia, the advantages of the two routes are nearly equal, the distance by way of the Nicaragua route being slightly less. For our trade with South America the Panama route is shorter and more direct. (e) The industrial changes which the Nicaragua Canal would produce in the countries through which it will pass would be great. Nicaragua and Costa Rica comprise a region capable of producing a large amount of tropical products for which there is a demand in Europe and the United States. A canal across their territory would give a great impetus to their economic development.

A careful examination has been made of all the rights, privileges, and franchises held and owned by corporations, associations, and individuals at the different canal routes. This necessarily included a study of the treaties relating to the establishment of an interoceanic communication made by the Republics, whose territory is to be occupied, and by the United States, with one another, and also with foreign governments. The treaties heretofore made exclude all idea of a relinquishment of sovereignty over any of the

CANAL, INTEROCEANIC.

proposed routes. In most of them the right of transit and the innocent use of the communication, whether by railway or canal, is granted to the other contracting party, its citizens and subjects, to be enjoyed upon equal terms with other governments and people; and the leading commercial nations of the world have committed themselves to the policy of neutrality at the different routes, and some of them have obligated themselves to use their influence to induce other nations to agree to the same policy. No existing treaties between the United States and the Republics of Nicaragua and Costa Rica, or of Colombia, give our Government the right to excavate and operate a maritime canal through any of these countries. The concessions granted by the different Republics through whose territory the lines of the projected canals extend, in terms, exclude the right of the companies holding them to transfer them to any foreign government, and further treaty rights must be acquired to enable the United States to undertake the excavation of a navigable waterway between the two oceans in a governmental capacity. The only prior obligations to corporations, associations, or individuals in the way of a direct agreement between the United States and Nicaragua authorizing our Government to construct a canal across the territory of the latter, to be under its control, management, and ownership, have been eliminated by the forfeiture and termination of the contracts with the Maritime Canal Company of Nicaragua and the Interoceanic Canal Company. In view of this declaration the Commission has not made any effort to ascertain the cost at which the concessions of these companies can be purchased, for if these forfeitures are final the rights formerly granted to these companies are not in the way of diplomatic negotiations with the Government interested to acquire the consent and authority necessary for the construction of a canal by this route. The situation in Costa Rica is practically the same.

The situation at Panama is different. The Republic of Colombia first granted a concession to the Panama Railroad Company, giving it exclusive privileges on the Isthmus, which will continue according to modifications afterwards made for ninety-nine years from August 16, 1867. A later concession to the Panama Canal Company required it to enter into some amicable arrangement with the railroad company under which the former might occupy the territory along or near its line. The canal company acquired by purchase a majority of the railroad stock and the necessary arrangements were made. This stock is now under the control of the New Panama Canal Company, which gives it a directing influence in both organizations. The canal concession is to continue according to its latest extension for ninety-nine years from the day on which the canal shall be wholly or partially opened to public service, and the date fixed for this in the contract is October 31, 1910. Should it fail and the concession be forfeited the company will still have exclusive control of the territory through which its line extends till 1906 under the railroad concession. The canal company is absolutely prohibited to cede or mortgage its rights under any consideration whatever to any nation or foreign government under penalty of forfeiture. The contract with the railroad company contains a like prohibition and declares further that the

pain of forfeiture will be incurred by the mere act of attempting to cede or transfer its privilege to a foreign government and such an act is declared absolutely null and of no value or effect. These concessions, if acquired by the United States, would not give to the Government the control and ownership evidently contemplated by the law, that is, an absolute ownership in perpetuity. The right under the contract with the railroad company is designated as 'the use and possession' of the property for ninety nine years, and it is provided that 'at the expiration of the term of the privilege' and by the sole fact of the expiration, the Government of Colombia shall be subordinated in all the rights of the company and 'all immediately enter into the enjoyment of the line of communication, its fixtures, dependencies and all its products. The right of the canal company is substantially of the same character. . . . An examination of the charter rights of the New Panama Canal Company under the general incorporation laws of France and the special legislation in its behalf resulted in finding an enactment, included in a law passed June 8, 1888, requiring that all the plant necessary for the construction of the canal shall be manufactured in France and that the material must be of French origin. This being the situation, it was manifest that, even if the privileges of the companies could be purchased by and transferred to the United States, they were encumbered with charges and conditions that would not permit this Government to exercise all the rights of complete ownership over a canal constructed by it at the Panama route. A new arrangement is necessary if the United States is to undertake such a work. The relinquishment by the canal company, with the consent of Colombia, of the privileges it has under existing concessions, for a consideration to be agreed upon with the United States, would leave the way open for treaty negotiations between the two governments to ascertain whether Colombia will consent to the occupation of its territory by the United States for the construction of a canal to be under Government control, management, and ownership, and, if so, whether they can agree upon terms mutually satisfactory. The situation is peculiar, as there are three parties in interest. The United States can enter into no agreement with Colombia that does not have the approval of the company, and the concessions do not permit the company to transfer or attempt to transfer its rights to a foreign government.

The Commission has, however, attempted to ascertain the views of the New Panama Canal Company with reference to a disposition and transfer of its rights. Interviews were had with its president and other officers during the visit to Paris and on several occasions from time to time since then, and on the 10th day of April last a formal letter was addressed to Mr. Maurice Heu, the president and director general, asking whether he was in a position to name terms upon which the company would dispose of its property and interests to the United States. At different times since then the subject has been discussed by the representatives of the company with the Commission and its committee on rights, privileges, and franchises, but no formal reply to the letter was received until this report was being closed. These conferences and correspondence have resulted in no offer to dispose of the prop-

erty and privileges of the company to the United States upon any terms, even with the consent of the Colombian Government, nor has the company expressed any desire or wish to enter into any negotiations with the United States with reference to such a disposition of its property and rights. It was proposed by President Hutin that the United States might obtain control of the canal scheme as a majority stockholder of a new organization to which the present company could contribute its concession, plant, unfinished work, and other property, at a valuation to be determined by arbitration, and he expressed the opinion that such an arrangement could be made without violating the concessions. But this must include some plan for the protection of the minority stockholders in the financial management, for they would favor a policy that would realize liberal dividends in proportion to the commercial value of the canal, while the policy of this Government might be to reduce tolls and charges to the cost of maintenance or even below it, if the interests of the people would be thereby advanced. The plan, however, which the company prefers is that outlined in its letter of February 28, 1899, addressed to the President of the United States, which has been published in Senate Document No. 188, Fifty Sixth Congress, first session, pages 41 and 42. This was to reincorporate under the laws of New York or some other State, and accord to the United States such representation in its board of directors and such opportunity to acquire an interest in its securities as its concessions permitted. And an assurance was added to the effect that if the United States should desire to perpetuate or enlarge its existing rights and privileges acquired under the treaty of 1886, the company would conform to such supplemental treaty as might be entered into between the United States and Colombia. The Commission having no other authority than to make investigations and obtain information submits this result of its efforts to ascertain upon what terms the rights and privileges at the Panama route can be obtained. It is proper to add that the examination of the title of the present company to the canal property under the laws of France and Colombia has satisfied this Commission that the New Panama Canal Company has the entire control and management of the canal property.

The estimated cost of building the Nicaragua Canal is about \$52,000,000 more than that of completing the Panama Canal, leaving out the cost of acquiring the latter property. This measures the difference in the magnitude of the obstacles to be overcome in the actual construction of the two canals, and covers all physical considerations such as the greater or less height of dams, the greater or less depth of cuts, the presence or absence of natural harbors, the presence or absence of a railroad, the exemption from or liability to disease, and the amount of work remaining to be done. The New Panama Canal Company has shown no disposition to sell its property to the United States. Should that company be able and willing to sell, there is reason to believe that the price would not be such as would make the total cost to the United States less than that of the Nicaragua Canal. In view of all the facts, and particularly in view of all the difficulties of obtaining the necessary rights, privileges, and franchises on the Panama

CANAL, INTEROCEANIC.

cept, and assuming that Nicaragua and Costa Rica recognize the value of the canal to themselves, and are prepared to grant concessions on terms which are reasonable and acceptable to the United States, the Commission is of the opinion that "the most practicable and feasible route for an isthmian canal to be under the control, management, and ownership of the United States" is that known as the Nicaragua route. — *United States 56th Cong., 2d Sess., Senate Doc. No. 5.*

A. D. 1900, December. — The Hay-Pauncefote Treaty between the United States and Great Britain, to facilitate the construction of the Canal, as amended by the U. S. Senate. — In his annual Message to Congress, December 3, 1900, President McKinley had the following to say: "The subject of the Interoceanic Canal:

"The all important matter of an interoceanic canal has assumed a new phase. Adhering to his refusal to reopen the question of the forfeiture of the contract of the Maritime Canal Company, which was terminated for alleged non-execution in October, 1899, the Government of Nicaragua has since supplemented that action by declaring the so-called Eyre Craig option void for non-payment of the stipulated advance. Protests in relation to these acts have been filed in the State Department, and are under consideration. Deeming itself relieved from existing engagements, the Nicaraguan Government shows a disposition to deal freely with the canal question either in the way of negotiations with the United States or by taking measures to promote the waterway. Overtures for a convention to effect the building of a canal under the auspices of the United States are under consideration. In the mean time, the views of the Congress upon the general subject, in the light of the report of the Commission appointed to examine the comparative merits of the various trans-isthmian ship canal projects, may be awaited. I commend to the early attention of the Senate the convention with Great Britain to facilitate the construction of such a canal and to remove any objection which might arise out of the convention commonly called the Clayton-Bulwer Treaty." (On the terms of the Clayton-Bulwer Treaty see, in vol. 4, SUPPLEMENT A. D. 1850.)

The Convention thus referred to was negotiated by the Secretary of State of the United States, Mr. John Hay, with the British Ambassador to the United States, Lord Pauncefote. It was signed at Washington on the 5th of February, 1900 and communicated by the President to the Senate on the same day. The action of the Senate on the Convention was not taken until after the opening of the session of Congress in December. It was then ratified (December 20), but with three amendments which seriously changed its character. The following is the text of the Convention as ratified, with the Senate amendments indicated:

"ARTICLE I. It is agreed that the canal may be constructed under the auspices of the Government of the United States, either directly at its own cost, or by gift or loan of money to individuals or corporations or through subscription to the purchase of stock or shares, and that, subject to the provisions of the present Convention, the said Government shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal.

CANAL, INTEROCEANIC.

"ARTICLE II. The High Contracting Parties, desiring to preserve and maintain the general principle of neutralization established in Article VIII of the Clayton-Bulwer Convention, * which convention is hereby superseded, adopt, as the basis of such neutralization, the following rules, substantially as embodied in the convention between Great Britain and certain other Powers, signed at Constantinople, October 29, 1888, for the Free Navigation of the Suez Maritime Canal, that is to say: 1. The canal shall be free and open, in time of war as in time of peace, to the vessels of commerce and of war of all nations, on terms of entire equality, so that there shall be no discrimination against any nation or its citizens or subjects in respect of the conditions or charges of traffic, or otherwise. 2. The canal shall never be blockaded, nor shall any right of war be exercised nor any act of hostility be committed within it. 3. Vessels of war of a belligerent shall not revictual nor take any stores in the canal except so far as may be strictly necessary, and the transit of such vessels through the canal shall be effected with the least possible delay, in accordance with the regulations in force, and with only such interruption as may result from the necessities of the service. Prizes shall be in all respects subject to the same rules as vessels of war of the belligerents. 4. No belligerent shall embark or disembark troops, munitions of war or warlike materials in the canal except in case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible despatch. 5. The provisions of this article shall apply to waters adjacent to the canal, within three marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than twenty-four hours at any one time except in case of distress, and in such case shall depart as soon as possible, but a vessel of war of one belligerent shall not depart within twenty-four hours from the departure of a vessel of war of the other belligerent. * It is agreed, however, that none of the immediately foregoing conditions and stipulations in sections numbered one, two, three, four and five of this article shall apply to measures which the United States may find it necessary to take for securing by its own forces the defense of the United States and the maintenance of public order. 6. The plant, establishments, buildings and all works necessary to the construction, maintenance and operation of the canal shall be deemed to be part thereof, for the purposes of this Convention, and in time of war as in time of peace shall enjoy complete immunity from attack or injury by belligerents and from acts calculated to impair their usefulness as part of the canal. 7. No fortifications shall be erected commanding the canal or the waters adjacent. The United States, however, shall be at liberty to maintain such military police along the canal as may be necessary to protect it against lawlessness and disorder.

"ARTICLE III. The High Contracting Parties will, immediately upon the exchange of the ratifications of this Convention, bring it to the notice of the other Powers [and invite them to adhere to it]. †

"ARTICLE IV. The present Convention shall be ratified by the President of the United States, by and with the advice and consent of the Senate thereof, and by Her Britannic Majesty, and the

* Added by the Senate.

† Stricken out by the Senate.

ratifications shall be exchanged at Washington or at London within six months from the date hereof, or earlier if possible."—*United States, 56th Cong., 1st Sess., Senate Doc. No. 100*

Anticipating the ratification of the above Treaty with Great Britain, the President of the United States, in December, 1900, concluded agreements with the governments of Costa Rica and Nicaragua, both of which were in the following terms: "It is agreed between the two Governments that when the President of the United States is authorized by law to acquire control of such portion of the territory now belonging to [Costa Rica and Nicaragua] as may be desirable and necessary on which to construct and protect a canal of depth and capacity sufficient for the passage of vessels of the greatest tonnage and draft now in use from a point near San Juan del Norte, on the Caribbean Sea, via Lake Nicaragua, to Brito, on the Pacific Ocean, they mutually engage to enter into negotiations with each other to settle the plan and the agreements, in detail, found necessary to accomplish the construction and to provide for the ownership and control of the proposed canal. As preliminary to such future negotiations it is forthwith agreed that the course of said canal and the terminals thereof shall be the same that were stated in a treaty signed by the plenipotentiaries of the United States and Great Britain on February 5, 1900, and now pending in the Senate of the United States for confirmation, and that the provisions of the same shall be adhered to by the United States and [Costa Rica and Nicaragua]." No action on these agreements was taken in the Senate.

A. D. 1901 (March).—Rejection by the British Government of the Hay-Pauncefote Treaty as amended by the U. S. Senate.—Early in March, soon after the adjournment of Congress, a communication from Lord Lansdowne, the British Secretary of State for Foreign Affairs, declining with courtesy and in friendly terms to accept the Senate amendments to the Hay-Pauncefote Treaty, was received by Lord Pauncefote, the British Ambassador at Washington. The objections urged most strongly are against those amendments which touch the neutrality of the proposed canal and its unimpeded use in time of war as well as in time of peace. "The first of them," said Lord Lansdowne, "which reserves to the United States the right of taking any measures which they may find necessary to secure by their own forces the defence of the United States, appears to His Majesty's government to involve a distinct departure from the principle which has until now found acceptance with both governments; the principle, namely, that in time of war, as well as in time of peace, the passage of the canal is to remain free and unimpeded, and is to be so maintained by the power or powers responsible for its control. Were this amendment added to the convention the United States would, it is presumed, be within their rights. If, at any moment when it seemed to them that their safety required it, in view of warlike preparations not yet commenced, but contemplated or supposed to be contemplated by another power, they resorted to warlike acts in or near the canal—acts clearly inconsistent with the neutral character which it has always been sought to give it, and which would deny the free use of it to the com-

merce and navies of the world. . . . If the new clause were to be added, the obligation to respect the neutrality of the canal in all circumstances would, so far as Great Britain is concerned, remain in force, the obligation of the United States, on the other hand, would be essentially modified. The result would be a one-sided arrangement, under which Great Britain would be debarred from any warlike action in or around the canal, while the United States would be liable to resort to such action to whatever extent they might deem necessary to secure their own safety."

To the contention that there is a specific prohibition in the Hay-Pauncefote treaty against the erection of fortifications, and that this would sufficiently insure the free use of the canal, Lord Lansdowne replies that this contention is one which His Majesty's government are quite unable to admit. He notes the vagueness of language in the amendment, and says: "Even if it were more precisely worded it would be impossible to determine what might be the effect if one clause permitting defensive measures and another forbidding fortifications were allowed to stand side by side in the convention. To His Majesty's government it seems, as I have already said, that the amendment might be construed as leaving it open to the United States at any moment, not only if war existed, but even if it were anticipated, to take any measures, however stringent or far-reaching, which in their own judgment might be represented as suitable for the purpose of protecting their national interests. Such an enactment would strike at the very root of that 'general principle' of neutralization upon which the Clayton-Bulwer treaty was based, and which was reaffirmed in the convention as drafted."

As to the third Senate amendment, which struck out the provision inviting the adherence of other powers, Lord Lansdowne says: "The amendment not only removes all prospect of the wider guarantee of the neutrality of the canal, but places this country in a position of marked disadvantage compared with other powers which would not be subject to the self-denying ordinance which Great Britain is desired to accept. It would follow, were His Majesty's government to agree to such an arrangement, that while the United States would have a treaty right to interfere with the canal in time of war, or apprehended war, and while other powers could with a clear conscience disregard any of the restrictions imposed by the convention, Great Britain alone, in spite of her enormous possessions on the American Continent, in spite of the extent of her Australasian colonies and her interests in the East, would be absolutely precluded from resorting to any such action or from taking measures to secure her interests in and near the canal."

The British Minister closes his communication to Lord Pauncefote as follows: "I request that your excellency will explain to the Secretary of State the reasons, as set forth in this dispatch, why His Majesty's government feel unable to accept the convention in the shape presented to them by the American Ambassador, and why they prefer, as matters stand at present, to retain unmodified the provisions of the Clayton-Bulwer Treaty. His Majesty's government have throughout these negotiations given evidence of their earnest desire to meet the views of the United

CANAL, INTEROCEANIC.

States. They would on this occasion have been ready to consider in a friendly spirit any amendments of the convention not inconsistent with the principles accepted by both governments which the government of the United States might have desired to propose, and they would sincerely regret a failure to come to an amicable understanding in regard to this important subject."

CATASTROPHES, Natural: A. D. 1894.—Late in December, the orange groves of Florida were mostly destroyed or seriously injured by the severest frost known in more than half a century.

1896.—On Jan. 8, a severe earthquake shock was felt at Meshed, Kelat and other Persian towns, causing over 1,000 deaths.

1896.—In March, the Tigris overflowed its banks, causing incalculable loss of life and property in Mesopotamia.

1896.—A succession of earthquake shocks in March, 1896, did great damage at Santiago, Valparaiso, and other parts of Chile.

1896.—On May 15, a cyclone destroyed part of the town of Sherman, in Texas, killing more than 120 persons, mostly negroes. The same day a waterspout burst over the town of Howe in the same state, killing 8 people.

1896.—On May 27, a fierce cyclone swept the city of St. Louis, Mo., completely devastating a large part of the city, and causing great loss of life and property.

1896.—A destructive wave swept the Japanese coast in June. See (in this vol.) JAPAN: A. D. 1896.

1896.—On July 26, a tidal wave, 5 miles in width, inundated the coast of Kiangsu, in China, destroying many villages and more than 4,000 inhabitants.

1896-1897.—A severe famine prevailed in India from the spring of 1896 until the autumn of 1897. See (in this vol.) INDIA: A. D. 1896-1897.

1897.—A severe earthquake occurred at the island of Kishm in the Persian Gulf, in January, causing great loss of life.

1897.—In March and April of this year the floods along the Mississippi river and its tributaries reached the highest level ever recorded. In extent of area and loss of property these floods were the most remarkable in the history of the continent. The total area under water on April 10 was about 15,800 square miles, containing about 39,500 farms, whose value was close upon \$45,000,000. The loss of life was small. Congress gave relief to the extent of \$200,000 besides appropriating \$2,584,300 for the improvement of the Mississippi.

1897.—Extensive floods occurred in Galatz, Moldavia, in June, rendering 20,000 people homeless.

1897.—The islands of Leyte and Samar, in the Visayas group, were swept by an immense

CATASTROPHES.

CENTRAL AMERICA, 1821-1898.

wave, caused by a cyclone, in October, then sands of natives being killed, and much property destroyed.

1897. On October 6, the Philippine Islands were swept by a typhoon, which destroyed several towns. The loss of life was estimated at 6,000 of whom 100 were Europeans. This was followed on October 12 by a cyclone which destroyed several villages and caused further loss of life.

1897. By an eruption of the Mayon volcano in the island of Luzon, Philippine Islands, four hundred persons were buried in the lava, and the large town of Libog completely destroyed.

1898. A series of earthquake shocks in Asia Minor during the month of January occasioned considerable loss of life and property.

1898. In January, Amboyna, in the Molucca Islands, was almost destroyed by an earthquake, in which about 50 persons were killed, 200 injured.

1898. On January 11, a tornado wrecked many buildings in Fort Smith, Ark. The loss of life was reported as 50, with hundreds injured.

1898.—A disastrous blizzard occurred in New England, January 31 and February 1. Fifty lives were reported as lost, and the damage in Boston alone amounted to \$2,000,000. Many vessels were driven ashore or foundered, with further loss of life.

1898.—Floods on the Ohio river in March and April caused much loss of life and property. Shawneetown, Ill., on the Ohio river, was almost entirely destroyed by the flood, more than 60 lives being lost.

1898.—On the night of September 13, the island of Barbados was swept by a tornado which destroyed 10,000 houses and damaged 5,000 more. Three-fourths of the inhabitants were left homeless, and about 100 were killed. The islands of St. Vincent and St. Lucia also suffered great losses of life and property.

1898.—A typhoon swept the central provinces of Japan in September, causing heavy floods, and destroying 100 lives.

1899.—Severe floods on the Brazos river, in Texas, occasioned the death of about 100 people, and property losses to the extent of \$15,000,000.

1899.—A destructive tornado in Northern Missouri, in April, did much damage in the towns of Kirksville and Newtown. Over fifty persons were killed.

1899.—An almost unprecedented failure of crops in eastern Russia caused famine, disease and awful destruction of life.

1899.—A terrible hurricane visited the West Indies August 7 and 8. Of the several islands affected, Porto Rico suffered most, three-fourths of the population being left homeless. The total loss of life in the West Indies was estimated at 5,000. See (in this vol.) *Porto Rico*: A. D. 1899 (AUGUST).

1899.—About 1,500 people lost their lives in an earthquake around Aidin, Asia Minor, September 2.

1899.—The island of Ceram, in the Moluccas, was visited by an earthquake and tidal wave, November 2. Many towns were destroyed, and 5,000 people killed.

1899-1900.—Reurrence of famine in India. See (in this vol.) *India*: A. D. 1899-1900.

1900.—The city of Galveston, Texas, was overwhelmed and mostly destroyed, on the 9th of September, by an unprecedented hurricane, which drove the waters of the Gulf upon the low lying town. See (in this vol.) *Galveston*.

CENTRAL AMERICA, A. D. 1821-1898.

—Unsuccessful attempts to unite the republics.—In 1821, after numerous revolutions, Central America succeeded in throwing off the yoke of Spain. A Congress assembled at Guatemala in March, 1822, and founded the Republic of Central America, composed of Guatemala, Salvador, Honduras, Nicaragua, and Costa Rica. The new Republic had but a short existence, after numerous civil wars the Union was dissolved, October 26, 1838, and the five States of the Republic became so many independent countries. Several attempts toward a reorganization of the Constitution of the Republic of Central America remained fruitless and had cost the lives of certain of their authors, when, through the influence of Dr. P. Bonilla, President of the Republic of Honduras, a treaty was concluded between Nicaragua and Salvador, according to which the three Republics constituted a federation under the name of the Greater Republic of Central America. The three Republics became States, and the sovereignty of the federation was exercised by a Diet composed of three members, one for each State, and which convened every year in the capital of the Federal States.

On the invitation of this Diet, the three States appointed a delegation which met as a Constituent Assembly at Managua, Nicaragua, and established a constitution, according to the terms of which the three States took the name of the United States of Central America, November 1, 1848. This Constitution, grand and patriotic, which, in the minds of those who had elaborated it, meant a complete consolidation of the three Federal States and a speedy realization of a reorganization of the Grand Republic of Central America, dreamed of by Morazan, had a sad ending. The day after the meeting of the Constituent Assembly a revolutionary movement hostile to the new federation broke out in Salvador and gave a new administration to this State. Its first act was to retire from the Union, and this secession brought about the dissolution of the United States of Central America; for, following the example of Salvador, Honduras and

Nicaragua took back their absolute sovereignty."

H. J. Hathay, quoted in *Bulletin of American Republics*, March, 1899.

The secession of Salvador was brought about by a revolutionary movement, which overthrew the constitutional government of President Guzmán and placed General Tomás Regalado at the head of a provisional government, which issued the following manifesto on the 25th of November 1898: "Considering That the compact of Amapala, celebrated in June, 1895 and all that proceeds therefrom, has not obtained the legitimate sanction of the Salvadorean people, and, moreover, has been a violation of the political constitution of Salvador. That in the assembled Constituent Assembly of Managua, reunited in June of the present year, the deputies of Salvador were not directly elected by the Salvadorean people, and for that reason had no legal authority to concur to a constituent law that could bind the Republic. That the union with the Republics of Honduras and Nicaragua under the contracted terms will seriously injure the interests of Salvador. Decrees: ART. 1. The Republic of Salvador is not obliged by the contract of Amapala to acknowledge any authority in the constitution of Managua of the 27th August of the current year, and it is released from the contract of union with the Republics of Honduras and Nicaragua. ART. 2. The Republic of Salvador assumes in full its self government and independence, and will enter the union with the sister Republics of Central America when same is convenient to its positive interests and is the express and free will of the Salvadorean people."—*United States, 55th Cong., 3d Sess., Senate Doc. No. 50*.

Nicaragua: A. D. 1894-1895.—Insurrection in the Mosquito Indian Strip.—The Bluefields Incident. In his Annual Message to Congress, December, 1894, President Cleveland referred as follows to disturbances which had occurred during the year at Bluefields, the principal town of the Mosquitodistrict of Nicaragua, and commonly known as "the Bluefields Incident": "By the treaty of 1860 between Great Britain and Nicaragua, the former Government expressly recognized the sovereignty of the latter over the strip, and a limited form of self government was guaranteed to the Mosquito Indians, to be exercised according to their customs, for themselves and other dwellers within its limits. The so-called native government, which grew to be largely made up of aliens, for many years disputed the sovereignty of Nicaragua over the strip and claimed the right to maintain therein a practically independent municipal government. Early in the past year efforts of Nicaragua to maintain sovereignty over the Mosquito territory led to serious disturbances, culminating in the suppression of the native government and the attempted substitution of an impracticable composite administration in which Nicaragua and alien residents were to participate. Failure was followed by an insurrection, which for a time subverted Nicaraguan rule, expelling her officers and restoring the old organization. This in turn gave place to the existing local government established and upheld by Nicaragua. Although the alien interests arrayed against Nic-

aragua in these transactions have been largely American and the commerce of that region for some time has been and still is chiefly controlled by our citizens, we can not for that reason challenge the rightful sovereignty of Nicaragua over this important part of her domain."—*United States, Message and Documents, Precedent, 1894-5*. In his Message of 1895 the President summarized the later history of the incident as follows: "In last year's message I narrated at some length the jurisdictional questions then freshly arisen in the Mosquito Indian Strip of Nicaragua. Since that time, by the voluntary act of the Mosquito Nation, the territory reserved to them has been incorporated with Nicaragua, the Indians formally subjecting themselves to be governed by the general laws and regulations of the Republic instead of by their own customs and regulations, and thus availing themselves of a privilege secured to them by the treaty between Nicaragua and Great Britain of January 28, 1860. After this extension of uniform Nicaraguan administration to the Mosquito Strip, the case of the British Vice-consul, Hatch, and of several of his countrymen who had been summarily expelled from Nicaragua and treated with considerable indignity, provoked a claim by Great Britain upon Nicaragua for pecuniary indemnity, which, upon Nicaragua's refusal to admit liability, was enforced by Great Britain. While the sovereignty and jurisdiction of Nicaragua was in no way questioned by Great Britain, the former's arbitrary conduct in regard to British subjects furnished the ground for this proceeding. A British naval force occupied without resistance the Pacific coast of Corinto, but was soon after withdrawn upon the promise that the sum demanded would be paid. Throughout this incident the kindly offices of the United States were invoked and were employed in favor of as peaceful a settlement and as much consideration and indulgence toward Nicaragua as were consistent with the nature of the case."—*United States, Message and Documents, Precedent, 1895-6*.

Guatemala: A. D. 1895.—Mexican boundary dispute. See in this vol. MEXICO, A. D. 1895.

Nicaragua: A. D. 1896-1898.—Revolutionary conflicts.—Vice President Barón of Nicaragua joined a revolutionary movement which was set on foot in February, 1896, by the Clericals, for the overthrow of President Zelaya, and was declared Provisional President. The rebellion had much support from exiles and friends in Honduras, but the government of that State sustained and assisted Zelaya. The insurgents were defeated in a number of battles, and gave up the contest in May. During the civil war American and British marines were landed on occasions at Corinto to protect property there. In 1897, and again in 1898, there were renewed insurrections, quickly suppressed.

Costa Rica: A. D. 1896-1900. Boundary dispute with Colombia settled by arbitration. See in this vol. COLOMBIA, A. D. 1893-1900.

Nicaragua—Costa Rica: A. D. 1897.—A dispute between Nicaragua and Costa Rica, as to the eastern extremity of their boundary line, was decided by General Alexander, a referee accepted by the two republics. The boundary had not been well defined in a treaty negotiated

for its settlement in 1858. According to the terms of the treaty, the line was to start from the Atlantic at the mouth of the San Juan river, but changes of current and accumulation of river drift, etc., gave ground for dispute as to where the river actually made its exit. President Cleveland in 1888, acting as arbitrator at the request of the two countries, decided that the treaty of 1858 was valid, but was not clear as to which outlet of the delta was the boundary. Finally, in 1896, an agreement was reached for a final survey and marking of the boundary line, and President Cleveland, on request, appointed General Alexander as arbitrator in any case of disagreement between the surveying commissions. The decision gives to Nicaragua the territory upon which Greytown is situated, and practical control of the mouth of the canal.

Guatemala: A. D. 1897-1898.—Dictatorship of President Barrios. His assassination.—In June, 1897, President José M. Reyna Barrios, whose six years' term in the presidency would expire the next March, losing defeat in the approaching election, forcibly dissolved the National Assembly and proclaimed a dictatorship. A few months later a revolt was organized by General Prospero Morales, but Barrios crushed it with merciless energy, and a veritable reign of terror ensued. In February, 1898, the career of the Dictator was cut short by an assassin, who shot him to avenge the death of a wealthy citizen, Don Juan Aparicio, whom Barrios had executed for expressing sympathy with the objects of the rebellion of the previous year. Control of the government was then taken by Dr. Cabrera, who had been at the head of the party which supported Barrios. A rising under Morales was again attempted, but failed. Morales, in a dying condition at the time, was betrayed and captured. Cabrera, with no more opposition, was elected President for six years.

A. D. 1899.—Significance of the municipal election.—The municipal election of April 4, 1899, in Chicago, resulted in the reelection of Mayor Carter H. Harrison, Democrat, by 149,000 votes, against 107,000 cast for Zina R. Carter, Republican, and 46,000 for Ex Governor Altgeld, radical Democrat, running independently. In the opinion of a correspondent of the "Review of Reviews," "The campaign disclosed three interesting results—namely: (1) the growth of independence and of attention to local issues; (2) the dominance of the street railroad issue; and (3) the growth of sentiment in favor of municipal ownership. Nearly two thirds of all the votes cast were against the Republican candidate, and our correspondent regards this as largely due to the belief that he, more than any of the others, represented the interests of the street-railroad corporations." This writer holds that "in all probability any practical proposition for municipal ownership and operation of the street railroads would to-day be approved by a popular vote in Chicago."

A. D. 1900.—Opening of the Drainage Canal.—An extraordinary public work was brought into use early in the year, by the opening of what is known as the Chicago Drainage Canal. This was constructed for the purpose of

turning the natural flow of water in Chicago River backward, away from Lake Michigan, its natural embouchure, into the small Des Plaines River, which runs to the Illinois and the Rhineas to the Mississippi. The object being to carry the sewage of Chicago away from the Lake, where it contaminates the water supply of the city. Part of the city sewage was already being sent in that direction by a pumping system which carried it over the divide. The purpose of the canal is to take the whole. The work was begun in September, 1892, and practically finished, so far as concerns the canal, in little more than seven years at a cost of about \$41,500,000. Changes in the city sewage system, to fully utilize the object of the canal, were still to be completed. When the full use is realized, there is said to be provision in the canal for a maximum discharge of 600,000 cubic feet of water per minute. Some have anticipated that such an outflow would seriously lower the level of the lakes, but there were no signs of that effect in the season of 1900. Nor did it seem to appear that the sewage then passing by river flow was doing harm to towns on the Illinois and Mississippi, as they had apprehended. But the discharge was as yet, far short of what it is intended to be. It is possible that ultimately the Chicago Drainage Canal may become part of a navigable water way from the lakes to the Mississippi, realizing an old project of water transportation in that direction to compete with the rails. The canal has been constructed upon a scale to suffice for that use; but the river improvement called for is one of formidable cost.

About the time of the opening of the canal, the State of Missouri, by its Attorney General, moved in the Supreme Court of the United States to have to file a bill of complaint against the State of Illinois and the Sanitary District of Chicago, the purpose of which was to enjoin the defendants from discharging the sewage and noxious filth of the Sanitary District of Chicago into the Mississippi River by artificial methods. The complaint alleged that unless the relief sought is granted the water of the Mississippi, which is used for drinking and other domestic purposes by many thousands of inhabitants of the State, will be polluted, and that the public health will be endangered. The Court granted leave to file the bill. The defendants then interposed a demurrer, claiming that the controversy, not being in reality between two States, but between two cities, was one over which the Supreme Court has no jurisdiction. On the 28th of January, 1901, the Court rendered its decision, overruling the demurrer to its jurisdiction. The effect of the opinion is that the Drainage Canal attorneys now must answer the complaint that the sewage and noxious filth of the sanitary district are contaminating the waters of the Mississippi River at St. Louis. No evidence of the facts will be taken in court. On the request of the parties to the suit, a commission will be appointed to take testimony and make a report.

CHILE: A. D. 1894-1900. The questions with Bolivia and Peru concerning Atacama, Tacna and Arica. In the treaties which closed the war of 1879-84 between Chile, Bolivia and Peru, see, in vol. 1, CHILE. A. D. 1883-1884, that between Chile and Bolivia contained the following curious provision of "indefinite truce," as it has been called. "Until the opportunity presents itself of celebrating a definite treaty of peace between the Republics of Chile and Bolivia, both countries duly represented by _____ have agreed to adjust a treaty of truce in accordance with the following bases. First, the Republics of Chile and Bolivia agree to celebrate an indefinite truce, and, in consequence, declare at an end the state of war, which will not be renewed unless one of the contracting parties should inform the other, with at least a year's notification, of its intention to recommence hostilities. In this case the notification will be made directly, or through the diplomatic representative of a friendly nation. Second, the Republic of Chile, while this truce is in force, shall continue to rule, in accordance with the political and administrative system established by Chilean law, the territories situated between parallel 23° and the mouth of the Loa in the Pacific, such territories having for their eastern boundary a straight line." Under this agreement Chile has held ever since the territory in question (which is the province of Atacama) and has claimed that her possession of it should be made conclusive and permanent by such a "definite treaty" as the "treaty of truce" in 1884 contemplated. In her view it was taken in lieu of a war indemnity. Bolivia has disputed this view, maintaining that a permanent cession of the province, which was her only seaboard, and without which she has no port, was not intended. The Bolivian government has continually urged claims to the restoration of a seaport for Bolivian trade, which Chile has refused.

At the same time when Atacama was taken from Bolivia, the provinces of Tacna and Arica were taken by Chile from Peru, with a stipulation in the peace treaty of Ancón (1884) that she should hold them for ten years, pending the payment by Peru of a war indemnity, and that the inhabitants should then decide by vote to which country they would belong. But, down to the close of the year 1900, the Chilean government had not allowed the vote to be taken.

In September, 1900, the dispute, as between Chile and Bolivia, was brought to what seemed to be an ultimate stage by an incisive note from the Chilean to the Bolivian government, proposing to grant to the latter "in exchange for a final cancelling of all claims to the littoral, three compensations, viz: First, to pay all obligations contracted by the Bolivian Government with the mining enterprises at Huachaca, Corocoro and Oruro, and the balance of the Bolivian loan contracted in Chile in 1867; second, an amount of money, to be fixed by mutual agreement, for the construction of a railroad connecting any port on the Chilean coast with the interior of Bolivia, or else to extend the present Oruro Railway; and, third, to grant free transit for all products and merchandise passing into and out of Bolivia

through the port referred to. Bolivia has not seemed to be disposed to accept this proposal, and the situation is likely to become more strained than before.

A. D. 1896. Presidential election.—An expected but entirely presidential election held in June, 1896, without government interference resulted in the choice of Señor Errázuriz, to succeed Admiral Jorge Montt, who had been at the head of the government since the overthrow and death of Balmaceda in 1891.

A. D. 1900. Adoption of compulsory military service.—The "Diario Oficial" of Chile of September 5, 1900, published a decree of the Chilean Government establishing compulsory military service in Chile. By the decree all Chileans will be liable to military service from their 20th to their 45th year. Every man on completing his 20th year will be liable to be

chosen by lot to serve one year with the colors, after which, if so chosen, he will pass into the first reserve, where he will remain for five years. Those not chosen by lot to serve one year with the colors will pass directly into the first reserve. The second reserve will consist of men of from 30 to 45 years of age. Among those who will be exempt from compulsory military service are the members of the Government, members of Congress, State and municipal councilors, judges, the clergy, including all those who wear the tonsure, or belong to any religious order, the directors and teachers of public schools and colleges, and the police. The last however will be liable to military duty if called upon by the President. Various civil servants and every only son, or every one of two only sons of a family which he esists to maintain, may be excused service under certain conditions.

A. D. 1900.—Vote against compulsory arbitration at Spanish-American Congress. See in this vol. SPAIN, A. D. 1900 (NOVEMBER).

CHINA.

A. D. 1894-1895. The war with Japan.—The peace treaty of Shimonoseki. Recognition of Korean independence. Cession of part of Fêng-tien, of Formosa, and of the Pescadores Islands to Japan. Relinquishment of Fêng-tien by Japan.—In the original edition of this work, the causes of the war of 1894-5 between China and Japan will be found stated in the Supplement (vol. 5, under "Korea." In the now, revised edition, the same appears in vol. 3, under "Korea." At the close of the year 1894 the Japanese were pressing their campaign, with little heed to the cold of winter, for which they seemed to be well prepared. They had won, almost with ease, every serious engagement of the war. They had half destroyed the Chinese navy, on the 18th of September, in a great battle at the mouth of the Yalu River, and, on the 21st-23d of November, they had captured Port Arthur, the strongest fortress in China, with costly dockyards and great stores of the munitions of war. In the first month of the new year the successes of the Japanese were renewed. Kaiping was taken on the 10th, a vigorous Chinese attack was repulsed, near Nanchuang, on the 16th, a landing of 25,000 troops on the Shantung Peninsula was effected on the 26th, and a combined attack by army and navy on the strong forts which protected the important harbor of Wei hai wei, and the Chinese fleet sheltered in it, was begun on the 30th of the month. The attack was ended on the 13th of February, when the Chinese admiral Ting Jih-chang gave up the remnant of his fleet and then killed himself. The Chinese general, Tai, had committed suicide in despair on the third night of the fighting. There was further fighting around Nanchuang and Yingkow during February and part of March, while overtures for peace were being made by the Chinese government. At length the famous viceroy, Li Hung-chang, was sent to Japan with full powers to conclude a treaty. Negotiations were interrupted at the outset by a bold attack on the Chinese ambassador by a Japanese militia, who shot and seriously wounded him in the chest. But the Mikado of-

dered an armistice, and the Treaty of Shimonoseki was concluded and signed on the 17th of April. The essential provisions of the treaty are as follows:

"Article I. China recognizes definitely the full and complete independence and autonomy of Korea, and, in consequence, the payment of tribute and the performance of ceremonies for unilities by Korea to China in derogation of such independence and autonomy shall wholly cease for the future.

"Article II. China cedes to Japan in perpetuity and full sovereignty the following territories, together with all fortifications, arsenals and public property thereon:—(a.) The southern portion of the Province of Fêng-tien, within the following boundaries:—The line of demarcation begins at the mouth of the River Yalu, and ascends that stream to the mouth of the River An Phing; from thence the line runs to Fêng Hoang; from thence to Hai-nong; from thence to Ying Kow, forming a line which describes the southern portion of the territory. The places above named are included in the ceded territory. When the line reaches the River Liao at Ying Kow it follows the course of that stream to its mouth, where it terminates. The mid channel of the River Liao shall be taken as the line of demarcation. This cession also includes all islands appertaining or belonging to the Province of Fêng-tien situated in the eastern portion of the Bay of Liao Tung, and in the northern part of the Yellow Sea. (b.) The Island of Formosa, together with all islands appertaining or belonging to the said Island of Formosa. (c.) The Pescadores Group, that is to say, all islands lying between the 119th and 120th degrees of longitude east of Greenwich and the 23rd and 24th degrees of north latitude. . . .

"Article IV. China agrees to pay to Japan as a war indemnity the sum of 200,000,000 Kuiping taels. The said sum to be paid in eight instalments. The first instalment of 50,000,000 taels to be paid within six months, and the second instalment of 50,000,000 taels to be paid within twelve months after the exchange of the ratifica-

tions of this Act. The remaining sum to be paid in six equal annual instalments as follows: the first of such equal annual instalments to be paid within two years, the second within three years, the third within four years, the fourth within five years, the fifth within six years, and the sixth within seven years after the exchange of the ratifications of this Act. Interest at the rate of 5 per cent. per annum shall begin to run on all unpaid portions of the said indemnity from the date the first instalment falls due. China shall, however, have the right to pay by anticipation at any time any or all of said instalments. In case the whole amount of the said indemnity is paid within three years after the exchange of the ratifications of the present Act, all interest shall be waived, and the interest for two years and a half, or for any less period if then already paid, shall be included as a part of the principal amount of the indemnity.

"Article V. The inhabitants of the territories ceded to Japan who wish to take up their residence outside the ceded districts shall be at liberty to sell their real property and retire. For this purpose a period of two years from the date of the exchange of the ratifications of the present Act shall be granted. At the expiration of that period those of the inhabitants who shall not have left such territories shall, at the option of Japan, be deemed to be Japanese subjects. Each of the two Governments shall immediately upon the exchange of the ratifications of the present Act, send one or more Commissioners to Formosa to effect a final transfer of that province, and within the space of two months after the exchange of the ratifications of this Act such transfer shall be completed.

"Article VI. All Treaties between Japan and China having come to an end in consequence of war, China engages, immediately upon the exchange of the ratifications of this Act, to appoint Plenipotentiaries to conclude with the Japanese Plenipotentiaries a Treaty of Commerce and Navigation, and a Convention to regulate frontier intercourse and trade. The Treaties, Conventions, and Regulations now subsisting between China and European Powers shall serve as a basis for the said Treaty and Convention between Japan and China. From the date of the exchange of the ratifications of this Act until the said Treaty and Convention are brought into actual operation the Japanese Government, its officials, commerce, navigation, frontier intercourse and trade, industries, ships and subjects, shall in every respect be accorded by China most favoured nation treatment. China makes, in addition, the following concessions to take effect six months after the date of the present Act:—(1) The following cities, towns, and ports, in addition to those already opened, shall be opened to the trade, residence, industries, and manufactures of Japanese subjects under the same conditions, and with the same privileges and facilities as exist at the present open cities, towns, and ports of China:—(1) Shashih in the Province of Hupeh. (2) Chung King, in the Province of Szechuan. (3) Suchow, in the Province of Kiang Su. (4) Hangchow, in the Province of Chekiang. The Japanese Government shall have the right to station Consuls at any or all of the above named places. (2) Steam navigation for vessels under the Japanese flag for the conveyance of passengers and cargo shall be extended to the following places:—(1.) On the

Upper Yangtze River, from Ichang to Chung King. (2.) On the Woosung River and the Canal, from Shanghai to Suchow and Hangchow. The Rules and Regulations which now govern the navigation of the inland waters of China by foreign vessels, shall, so far as applicable, be enforced in respect of the above named routes until new Rules and Regulations are conjointly agreed to. (3) Japanese subjects purchasing goods or produce in the interior of China or transporting imported merchandise into the interior of China, shall have the right temporarily to rent or hire warehouses for the storage of the articles so purchased or transported, without the payment of any taxes or exactions whatever. (4) Japanese subjects shall be free to engage in all kinds of manufacturing industries in all the open cities, towns, and ports of China, and shall be at liberty to import into China all kinds of machinery, paying only the stipulated import duties thereon. All articles manufactured by Japanese subjects in China, shall in respect of inland transit and internal taxes, duties, charges, and exactions of all kinds and also in respect of warehousing and storage facilities in the interior of China, stand upon the same footing and enjoy the same privileges and exemptions as merchandise imported by Japanese subjects into China. In the event additional Rules and Regulations are necessary in connection with these concessions, they shall be embodied in the Treaty of Commerce and Navigation provided for by this Article.

"Article VII. Subject to the provisions of the next succeeding Article, the evacuation of China by the armies of Japan, shall be completely effected within three months after the exchange of the ratifications of the present Act.

"Article VIII. As a guarantee of the faithful performance of the stipulations of this Act, China consents to the temporary occupation by the military forces of Japan, of Wei hai wei, in the Province of Shantung. Upon the payment of the first two instalments of the war indemnity herein stipulated for and the exchange of the ratifications of the Treaty of Commerce and Navigation, the said place shall be evacuated by the Japanese forces, provided the Chinese Government consents to pledge, under suitable and sufficient arrangements, the Customs Revenue of China as security for the payment of the principal and interest of the remaining instalments of said indemnity. In the event no such arrangements are concluded, such evacuation shall only take place upon the payment of the final instalment of said indemnity. It is, however, expressly understood that no such evacuation shall take place until after the exchange of the ratifications of the Treaty of Commerce and Navigation.

"Article IX. Immediately upon the exchange of the ratifications of this Act, all prisoners of war then held shall be restored, and China undertakes not to ill treat or punish prisoners of war so restored to her by Japan. China also engages to at once release all Japanese subjects accused of being military spies or charged with any other military offences. China further engages not to punish in any manner nor to allow to be punished, those Chinese subjects who have in any manner been compromised in their relations with the Japanese army during the war.

"Article X. All offensive military operations

shall cease upon the exchange of the ratifications of this Act."

When the terms of the treaty were made known, Russia, Germany and France entered such protests against the cession of a portion of the Feng-tien peninsula, on the main land, and brought such pressure to bear on Japan, that the latter was compelled to yield, and relinquished the districts in question by the following Imperial proclamation, dated May 10, 1895:

"We recently, at the request of the Emperor of China, appointed Plenipotentiaries for the purpose of conferring with the Ambassadors sent by China, and of concluding with them a Treaty of Peace between the two Empires. Since then the Governments of the two Empires of Russia and Germany and of the French Republic, considering that the permanent possession of the ceded districts of the Feng-tien Peninsula by the Empire of Japan would be detrimental to the lasting peace of the Orient, have united in a simultaneous recommendation to our Government to refrain from holding those districts permanently.

"Earnestly desirous as we always are for the maintenance of peace, nevertheless we were forced to commence hostilities against China for no other reason than our sincere desire to secure for the Orient an enduring peace. The Governments of the three Powers are, in offering their friendly recommendation, similarly actuated by the same desire, and we, out of our regard for peace, do not hesitate to accept their advice. Moreover, it is not our wish to cause suffering to our people, or to impede the progress of the national destiny by embroiling the Empire in new complications, and thereby imperilling the situation and retarding the restoration of peace.

"China has already shown, by the conclusion of the Treaty of Peace, the sincerity of her repentance for her breach of faith with us, and has made manifest to the world our reasons and the object we had in view in waging war with that Empire. Under these circumstances we do not consider that the honour and dignity of the Empire will be compromised by resorting to magnanimous measures, and by taking into consideration the general situation of affairs. We have therefore accepted the advice of the friendly Powers, and have commanded our Government to reply to the Governments of the three Powers to that effect.

"We have specially commanded our Government to negotiate with the Chinese Government respecting all arrangements for the return of the peninsular districts. The exchange of the ratifications of the Treaty of Peace has now been concluded, the friendly relations between the two Empires have been restored, and cordial relations with all other Powers have been strengthened. We therefore command all our subjects to respect our will, to take into careful consideration the general situation, to be circumspect in all things, to avoid erroneous tendencies, and not to impair or thwart the high aspirations of our Empire."—*Great Britain, Parliamentary Publications: Papers by Command, Japan, No. 1, 1895.*

A. D. 1894-1895 (March—July).—Cession of Kiang-Hung to France protested against by Great Britain.—In March 1894, the government of China entered into a treaty with that of Great Britain, for the settlement of boundaries

of Burmah, in which it agreed to make no cession of the district of Kiang-Hung, or any part of it, to any other Power. Notwithstanding this agreement, the eastern part of Kiang-Hung was ceded to France in July, 1895, for which proceeding the British Government promptly called China to account.

A. D. 1895.—Treaty with Russia, giving railway privileges and other rights in Manchuria.—On the 28th of October, 1896, the "North China Daily News," the leading English newspaper in China, published what purports to be, and is believed to be, the text of a secret treaty, concluded in the previous year between Russia and China, under which the former is extending her Trans-Siberian railway system through Manchuria, and is practically in possession of that province. The preamble of the treaty declares that the Emperor of China has specially appointed the princes and great officers of the Crown composing the Imperial Chinese Ministry of War to confer with the Russian Minister concerning the connecting of the railway system of the Three Eastern Provinces with the Trans-Siberian Railway, "with the object of facilitating the transport of goods between the two empires and strengthening the frontier defences and sea coasts. And, furthermore, to agree upon certain special privileges to be conceded by China to Russia as a response to the loyal aid given by Russia in the retrocession of Liaoting and its dependencies." The articles of the convention relating to the route of the railway are as follows:

"I. Owing to the fact that the Russian Great Siberian Railway is on the point of completion, China consents to allow Russia to prolong her railway into Chinese territories (a) from the Russian port of Vladivostok into the Chinese city of Hunchun, in the province of Kirin, from thence north-westwards to the provincial capital of Kirin, and (b) from a railway station of some city in Siberia to the Chinese town of Alyun, in Heilungchiang province, from thence south-westwards to the provincial capital of Tsitsihar, and from thence to the town of Petumé, in Kiria province, and from thence south-eastwards to the provincial capital of Kirin.

"II. All railways built by Russia into the Chinese provinces of Heilungchiang and Kirin shall be built at the sole expense of Russia, and the regulations and building thereof shall be solely on the Russian system, with which China has nothing to do, and the entire control shall be in the hands of Russia for the space of thirty years. At the end of the said period China shall be allowed to prepare the necessary funds wherewith, after proper estimation of the value of the said railways, she shall redeem them, the rolling stock, machine shops, and buildings connected therewith. But as to how China will at that date redeem these railways shall be left for future consideration.

"III. China is now in the possession of a railway which she intends to extend from Shunhai-kuan into the provincial capital of Fengtien—namely, Mukden (Shenking), and from Mukden to the provincial capital of Kirin. If China should hereafter find it inconvenient to build this road, she shall allow Russia to provide the funds to build the railway from the city of Kirin on behalf of China, the redemption of which road shall be permissible to China at the end of ten

years. With reference to the route to be taken by this railway, Russia shall follow the surveys already made by China in connection therewith, from Kirin to Mukden, Newchwang, &c.

"IV. The railway to be built by China, beginning from Shandakum, in Fêngtien, to Newchwang, to Kaiping, to Chundun, to Lushunk'ou (Port Arthur), and to Takuwan and their dependencies, shall follow the Russian railway regulations, in order to facilitate the commercial intercourse between the respective empires."

Article V authorizes Russia to place special battalions of horse and foot soldiers at the various important stations for the better protection of railway property. Article VII "permits" Russians and Chinese to exploit and open any mines in the Amur and Kirin provinces, and in the Long White Mountain range in the north of Korea. Article VIII "permits" Chinese to engage Russian military officers to reform the whole army organization of the three Eastern provinces in accordance with the Western system. The next three Articles are as follows:

"IX. Russia has never possessed a seaport in Asia which is free from ice and open all the year round. If, therefore, there should suddenly arise military operations in this continent, it will naturally be difficult for the Russian Eastern sers and Pacific fleets to move about freely and at pleasure. As China is well aware of this, she is willing to lease temporarily to Russia the port of Kiao-chow (Chiaochow), in the province of Shantung, the period of such lease being limited to fifteen years. At the end of this period China shall buy all the barracks, godowns, machine shops and docks built there by Russia (during her occupation of the said port). But should there be no danger of military operations, Russia shall not enter immediately into possession of the said port or hold the important points dominating the port in order to obviate the chance of exciting the jealousy and suspicions of other Powers. With reference to the amount of rent and the way it is to be paid, this shall form the subject of consideration in a protocol at some future date."

"X. As the Liaoting ports of Lushunk'ou (Port Arthur) and Takuwan and their dependencies are important strategical points, it shall be incumbent upon China to properly fortify them with all haste and to repair all their fortifications &c. in order to provide against future dangers. Russia shall therefore lend all necessary assistance in helping to protect these two ports, and shall not permit any foreign Power to encroach upon them. China, on her part, also binds herself never to cede them to another country; but if in future the exigencies of the case require it, and Russia should find herself suddenly involved in a war, China consents to allow Russia temporarily to concentrate her land and naval forces within the said ports in order the better to enable Russia to attack the enemy or to guard her own position."

"XI. If, however, there be no dangers of military operations in which Russia is engaged, China shall have entire control over the administration of the said ports of Lushunk'ou and Takuwan, nor shall Russia interfere in any way therein. But as regards the building of the railways in the three Eastern Provinces and the exploitation and opening of the mines therein, they shall be permitted to be proceeded with imme-

diately after the ratification of this convention and at the pleasure of the people concerned therein. With reference to the civil and military officers of Russia and Russian merchants and traders traveling in any part of the territories herein mentioned, wherever they shall go, they shall be given all the privileges of protection and facilities within the power of the local authorities, nor shall these officials be allowed to put obstructions in the way or delay the journeys of the Russian officers and subjects herein mentioned."—Henry Norman, *Russia and England, Contemporary Review*, Feb., 1897.

A. D. 1895 (August).—Massacre of missionaries at Hua Sang. In the fall of 1894 the English and American missionaries at Ku Cheng, in the Chinese province of Fu Kien, of which Foochow is the capital, began to be threatened by a sect or party called the "Vegetarians" (Shih Chai), who were violently hostile to foreigners, and said to be revolutionary in their aims. The hostile demonstrations were repeated in the following April, and the missionary party started upon a retreat to Foochow, but were stopped on the way by news that the Mandarin at Ku Cheng had pacified the Vegetarians and that they might safely return. They did so and were apparently secure for some months. In July they retired from the city to a mountain sanatorium, named Hua Sang, 12 miles from Ku Cheng, and there, on the 1st day of August, without warning, they were surrounded by a Vegetarian band of some eighty savage men, armed with swords and spears, who performed a rapid work of murder, killing eleven persons, including six women and two children, and then disappeared. "These men did not belong either to Hua Sang or Ku Cheng, but came from some villages at a considerable distance."

The city authorities at Ku Cheng had no hand in the outrage. It was evidently the work of a band of marauders, and the district magistrate seems to have done all that could be done under the circumstances."—D. M. Berry, *The Sister Martyrs of Ku Cheng*.—The British and American governments joined in sending a consular commission to investigate the crime, and with diffidence compelled the Chinese government to execute twenty of the ringleaders of the attack. At Fatsien, near Canton, there had been mob attacks on the missionary station, with destruction of buildings, but no murders, during the same month in which the massacre at Hua Sang occurred.

A. D. 1896.—Tour of Li Hung-chang in Europe and America.—Li Hung-chang, the Chinese statesman, left Shanghai with a numerous suite, March 28, on board a French mail steamer for Europe, to represent the Emperor of China at the coronation of the Czar of Russia, and afterwards to visit other countries. He declared that his object was to see Europe for himself, in order to report to the Emperor as to feasible reforms for China. A great reception was offered to him at Hong Kong, but he refused to bind by the advice of the European physician of the embassy, who feared lest any member of the suite, by catching the plague, would render the party liable to quarantine elsewhere. Proceeding to Singapore, via Saigon, he visited the Governor of the Straits Settlements. At Colombo he was received on landing by a guard of honour. After the Russian coronation he visited Germany, Holland, Belgium and France, and ar-

rived in London early in August. Wherever he went he was honored, and he lost no opportunity of asking questions and informing himself concerning the manufactures and armaments of the several countries he visited. He returned to China via New York and the Canadian Pacific Railway, sailing from Vancouver (September 14) for Yokohama and Tientsin, where he arrived October 3. Thence he proceeded to Peking (October 20), where he was received by the Emperor, and appointed a member of the Tsungli Yamen. At the same time for presuming to enter the precincts of the ruined Summer Palace while visiting the Empress Dowager, after his return home, his enemies took occasion of the slight trespass to insult him, and proposed that he should be stripped of all his titles and honours, with the exception of the earldom, which is confirmed to the Li family for twenty nine generations. The case was referred to the Board of Civil Appointments, and the Controller General, Chang chih wan, decided that "according to precedent" the ex Viceroy should be cashiered, but on account of his life-long and distinguished services to the imperial dynasty he should be recommended to the clemency of the Throne, which took the form of a loss of one year's salary. He took over his seals of office in the Tsungli Yamen on November 1, but none of his colleagues were present to welcome him."—*Annual Register*, 1896, pp. 349-50.

A. D. 1897.—The condition of Manchuria and Mongolia. See (in this vol.) MANCHURIA AND MONGOLIA.

A. D. 1897.—Foreigners resident in China.—**Ports open to them.**—"In the *Bulletin de la Société de Géographie Commerciale*, Paris, Vol. XIX, a report is published from which the following extracts are taken: There are over ten thousand Europeans and Americans resident in China. The English head the list with 4,000; the Americans number 1,325; Germans, 882; French, 875; Portuguese, 805; Spaniards, 461; Norwegians, 355; Russians, 146; Italians, 108, etc. There are 669 Japanese. Twenty-two ports are open to foreign residence, that is to say, that Europeans are allowed to acquire conditional title to certain lands, on which they live, govern themselves, and have special privileges in judicial matters. The ports are Mengtz, Lung Chow, Pakhoi, King Chow, Lappa, Canton, Kowloon, Swatow, Amoy, Fuchau, Winchow, Ningpo, Shanghai, Chinkiang, Wuhu, Kinkiang, Hankow, Ichang, Chungking, Chifoo, Tientsin, and Ninchwang. It is to be noted that Peking does not appear on this list, although the embassies and legations are established there. The Chinese who find themselves under foreign jurisdiction appear more than contented with the situation, because, although taxes are high, they are fixed. Two hundred thousand natives live in the European settlements of Shanghai. Besides the foreign residents of China, a large number live in ports that have been ceded to other nations. For instance, Hongkong comprises in its civil population 4,195 Europeans and Americans. With the troops and sailors, this number is raised to 8,545. Hongkong is the actual capital of foreign industry in the far East. More than 3,000 vessels, with a tonnage of nearly 1,000,000 touch there annually. The same spirit which caused the development of Singapore, Colombo, and Hongkong is to be found in the foreign settle-

ments of the open ports of China."—*U. S. Consular Reports*, Oct., 1897, p. 315.

A. D. 1897 (May-June).—Cessions and concessions to England and France.—In May, the Chinese government sanctioned an extension of the British settlement at Tientsin from 65 acres to about 300. In the next month, it satisfied the complaints of Great Britain concerning the cession of Kiang Hung to France (see above). A. D. 1894-1895, March-July, by ceding to that Power the Shan district of Kokang, about 400 square miles in extent, and leasing to Great Britain in perpetuity a considerable tract at the south of the Namwan River. The same treaty opened new routes to trade across the frontier between Burmah and China, and admitted British consuls and merchants to two new ports. At about the same time France secured mining privileges on the Tonquin frontier and rights for the extension of a railway into Chinese territory.

A. D. 1897 (November).—Germany opens the attack of European Powers on the integrity of the Chinese Empire.—Seizure of the port of Kiao-Chau.—Concessions obtained as reparation for the murder of German missionaries.—"Among the recent events that have attracted especial attention to China is the lease to foreign nations of important strategic or commercial ports on the coast of the Empire. While the Portuguese have controlled the island of Macao, near Canton, since 1537, and the English became owners of the island of Hongkong, in the same vicinity, by the treaty of 1842, no other nation had possessions on or near the coast of China until within a comparatively recent date. One result of the war between China and Japan was that Japan obtained the island of Formosa, lying 300 miles off the coast of central China. By this treaty Japan was also to have certain territory on the peninsula of Linotung, which commands from the north the entrance to the Gulf of Pechili, the gateway to the capital of China; but on the urgent protest of Russia, France, and Germany this was abandoned, and the mainland of China up to that time thus remained intact. On November 4, 1897, however, the German Government seized the port of Kiao chau, on the northeastern coast of China, asserting as the cause of its action the desire to obtain satisfaction for the murder of [two] German missionaries by Chinese on November 1 of that year. This port was held by a German war ship until the announcement of a treaty with China by which the port of Kiao chau and adjacent territory were leased to Germany for a term of ninety-nine years, the German Government being given the right to land troops, construct fortifications, and establish coal and naval stations, while German subjects were to have the right to construct railways, open mines, and transact business in the rich mineral and agricultural province of Shantung, in which Kiao chau is located, Chinese vessels, however, to have the same privileges in the port of Kiao chau that the German Government might decide to give to other nations."—*U. S. Bureau of Statistics, Monthly Summary of Commerce and Statistics*, March, 1899.

The terms of the German acquisition of Kiao chau, as officially communicated to the Reichstag by Herr von Bülow, Foreign Secretary of the German Empire, on the 8th of February, 1898, were as follows: "The Imperial

Chinese Government, in fulfilment of the legitimate wish of the German Government to possess, in common with other Powers, a point in the matters [waters?] of Eastern Asia, where German vessels may be fitted out and repaired, where the necessary materials can be deposited, and other arrangements made in connection with that object, leads to the German Government in the form of a lease, to run as at present fixed, for a period of ninety-nine years, the territory situated on both sides of the entrance to the Bay of Kiaochau, in South Shantung, more accurately described below, in such a manner that the German Government will be at liberty to erect all necessary buildings, &c., within the territory, and take all the measures required for their defence. According to the English chart of Kiaochau Bay of 1863, the district leased to the German Government consists of the following:—1. The promontory north of the entrance to the bay, bounded on the northeast by a straight line drawn from the extreme north-eastern point of Potato Island to the sea coast in the direction of Zoshan. 2. The promontory south of the entrance to the bay, bounded on the south-west by a straight line drawn from the southernmost point of the inlet situated to the south-west of Tschiposun, in the direction of the Folsom Islands (Wheeler chart), to the sea coast. 3. The Island of Tschiposun and Potato Island, as well as all the islands lying at the entrance to the bay, inclusive of Folsom and Seolien. Further, the Chinese Government undertake not to frame any Regulations within a zone of 50 Kilom. round the bay without the consent of the German Government, and, in particular, to offer no resistance to any measures necessary for regulating the course of the rivers. The Chinese Government also grant to German troops the right of passage across the zone above described. With the object of avoiding every possibility of collision, the Chinese Government will exercise no rights of sovereignty within the leased territory during the period of the lease, but they cede these rights as well as those over the entire water surface of the Bay of Kiaochau to the German Government. The German Government will erect sea marks on the islands and shallows at the entrance to the bay. 4. In the event of the territory leased not proving to be adapted to the requirements of the German Government, the Government of China will cede to Germany a more suitable district, and will take back the Bay of Kiaochau, paying compensation for any improvements or constructions the Germans may have made there. 5. A more accurate delimitation of the boundaries of the district leased will take place in accordance with the local conditions, and will be carried out by Commissioners from both Governments."

The Foreign Secretary added the following particulars respecting the area, &c., of the territory and the character of the lease:—"The territory leased, the boundaries of which are not yet accurately determined, will cover an area of 30 to 50 square Kilom. Consequently, it is materially larger than the British possession at old opposite Hong Kong. For military reasons, the northern boundary had been pushed a little further forward than is shown on the map presented to the Budget Commission. The number of inhabitants is calculated at a few thousand. As regards the size of the bay, accurate details

are as yet wanting. It runs about 20 geographical miles into the mainland. At its narrowest point, the entrance to the bay is about 1000 metres broad. Two-thirds of the bay afford harbour accommodation. The rent payable to China, the exact amount of which has not yet been determined, is an unimportant point, as it possesses a nominal character, merely to present the continuation in theory of the proprietorship of China over the territory ceded. The following stipulations have been secured respecting railway and mining concessions. The Chinese Government have consented to hand over to a German-Chinese Railway Company, to be formed hereafter, the construction of a railway from Kiaochau, which will run first in a northerly and then in a westerly direction, to be subsequently connected with the projected great railway system of China. The railway will serve the coalfields of Weihsien and Poshan, situated to the north of Kiaochau, which will be exploited by German capital. The Chinese Government have further pledged themselves to accord to the Railway Company to be thus formed, conditions at least as favourable as those granted to any other European Chinese Railway Company in China."

The Foreign Secretary concluded his speech with an exposition of the motives which had induced the German Government to occupy Kiaochau in preference to other places. Its proximity to the scene of the massacre had been the first consideration. Secondly, it was favourably situated from a political point of view, being removed from the French and British spheres in Southern China and from the Russian base of operations in the north. Lastly, the spacious, ice-free harbour, the climate, which is probably the best to be met with in China, and the existence of coalfields in the vicinity of the coast, offered sufficient grounds for the choice of Kiaochau. Herr von Bülow might have quoted in this connection a candid remark which had been made not long before by the "*Kolonial Zeitung*:" "The principal point is that the Power which possesses Kiaochau will control the coal supply in northern Chinese waters."—*Great Britain, Papers by Command: China, No. 1, 1898.*

A. D. 1898 (February).—British diplomacy in China.—The tone in which foreign demands were made on the Tsung-li Yamên.—**Agreement not to alienate the Yang-tsze region.**—Early in 1898 the Chinese government was in need of money for the final payment of indemnity to Japan, and opened negotiations with the British government for the guarantee of a loan. Her Majesty's Ministers were quite ready to give the needed financial aid, for a consideration, requiring, in return, that Tientsin should be opened to trade as a treaty port. But Russia was then scheming to secure possession of Tientsin, and interfered with the British negotiation so vigorously that the Chinese were frightened into breaking it off, even after they had practically accepted the offered loan. Not daring, however, to take from Russia the financial guarantee which they rejected at British hands, they thought to balance themselves between these jealous rivals by borrowing without help from either. Both the Powers were thus offended. England especially showing stern resentment on account of the slight with which she had been treated. The following report by

Sir Claude MacDonald, the British Minister at Peking, of his interviews with the Tsung li Yamen on the subject, is very interesting, as showing the tone in which the European Powers were making demands on the government of China at that time. The despatch of Sir Claude MacDonald is dated at Peking, February 20, 1898.

"Since the 14th of February," he wrote, "I have had four interviews with the Yamen for the purpose of extracting some concessions in return for the rejection of the offer of a guaranteed loan from Great Britain after it had in principle been accepted. At the first of these, on the 5th February, the Yamen refused to recognize that we had any claim to compensation, declaring that the refusal of a Russian as well as a British guarantee left no ground for complaint. I told them that this argument might have had some plausibility if the two offers had been equally advantageous, or if the Chinese Government had not committed themselves to serious negotiations with us. The British Government had at China's own request reluctantly agreed to do her a very exceptional favour, and the Yamen could not suppose that we should accept with equanimity a brusque intimation that the Chinese Government had changed its mind.

The Yamen abounded in protestations of their readiness at some future date to give proofs of their gratitude to Great Britain in the shape of encouragement to commerce, but they insisted that the loan negotiations must first be dismissed, and all demands for compensation in connection with them dropped. I refused to telegraph such a suggestion to your Lordship, and as after long debate they still refused to bind themselves by any promises, I reminded them that at an earlier interview they had asked me whether the action threatened by Great Britain in the event of their accepting a Russian guarantee would equally be taken if they borrowed from neither Power. I could not at the time answer the question, but I could now tell them that Her Majesty's Government had a right to feel deeply affronted by what had occurred, and I would not be answerable for the consequences if they declined to make to Great Britain even such concessions as they had frequently admitted to be China's own interests.

"The Yamen begged me to smooth matters for them, to which I answered that their present attitude made it impossible for me to do so. Let them permit me to report that China was ready to open inland navigation to steamers; to establish Treaty ports at Nanking and Hsing Tan; and to give reasonable security to trade by a pledge against alienation of the Yangtze region to another Power, and the rejection of our loan might be forgiven. All these were matters within the Yamen's power.

"The Ministers did not deny the feasibility of what I had asked except as regarded the opening of Nanking, but objected to these measures being tacked on to the loan, for if that were done, Russia would at once demand counter concessions for the rejection of her loan, and China would be placed in a very difficult position. On this they laid much stress. I said I did not insist on the concessions being formally announced as made to England in connection with the loan, and should be prepared to move Her Majesty's Government to treat them as steps taken spon-

taneously by China, but that I absolutely refused to treat the loan account as settled until I had some definite assurance that these measures would be carried out within a fixed time. The Yamen again attempted to persuade me to leave the carrying out of the measures indicated entirely to the Chinese Government, and it was only after the usual prolonged argument that they consented to open internal waters to steam navigation within four months, to let me know at an early date when they would open a port in Hsuan, and to give me a written guarantee against the alienation of the Yangtze region to a foreign Power."

After reporting conversation on other matters, the Minister recounted his action on the subject of the Yangtze region, and on that of the opening of inland waterways to steam navigation, at an interview with the Tsung li Yamen on the 9th. "I then produced," he said, "a draft of the note I intended addressing to them with regard to non-alienation of the Yangtze region. This was accepted with little demur, with the insertion of the words 'now entirely in Chinese possession,' which, as recording an undeniable fact, I agreed to put in. Copies of the notes subsequently exchanged are inclosed. I have not thought it necessary to narrate the arguments by which I supported the demand for this pledge at both these interviews. My chief ground was that we could not afford to find one morning that by reason of the murder of a foreign subject, or the refusal of some demand by a foreign Power, some place on the Yangtze had been seized and was now retained on a ninety-nine years' lease. I then handed to the Ministers the despatch . . . recording their assurance with regard to steam navigation of inland waterways. They read it with attention, and accepted it as satisfactory."

Of the notes thus passed between the British Minister and the Tsung li Yamen, that of the former, dated February 9, was as follows: "Your Highnesses and your Excellencies have more than once intimated to me that the Chinese Government were aware of the great importance that has always been attached by Great Britain to the retention in Chinese possession of the Yangtze region, now entirely hers, as providing security for the free course and development of trade. I shall be glad to be in a position to communicate to Her Majesty's Government a definite assurance that China will never alienate any territory in the provinces adjoining the Yangtze to any other Power, whether under lease, mortgage, or any other designation. Such an assurance is in full harmony with the observations made to me by your Highnesses and your Excellencies."

On the 14th, the Yamen returned the following reply: "The Yamen have the honour to acknowledge the receipt of the British Minister's despatch of the 9th February, stating that the Yamen had more than once intimated to him that the Chinese Government were aware of the great importance that has always been attached by Great Britain to the retention in Chinese possession of the Yangtze region, now entirely hers, as providing security for the free course and development of trade. The British Minister would be glad to be in a position to communicate to Her Majesty's Government a definite assurance that China would never alienate any ter-

riety in the provinces adjoining the Yangtze to any other Power, whether under lease, mortgage, or any other designation. The Yamen have to observe that the Yangtze region is of the greatest importance, is concerning the whole position or interests of China, and it is out of the question that territory in it should be mortgaged, leased, or ceded to another Power. Since Her Britannic Majesty's Government has expressed its interest in this matter, it is the duty of the Yamen to address this note to the British Minister for communication to his Government.

The despatch regarding the Chinese concession of steam navigation on inland waters was in the following terms:—It was with great pleasure that I learnt from your Highnesses and your Excellencies at a recent interview that the Chinese Government had determined that where ever the use of native boats is now by Treaty permitted to foreigners, they shall equally be permitted to employ steamers or steam launches, whether Chinese or foreign owned, or their own boats, and, further, that this arrangement would come into effect before the end of the 4th Chinese moon. I shall have great pleasure in communicating the Chinese Government's decision to my Government, for it is an indication that China is prepared to take every step open to her to increase the volume of trade, and so add to her resources and the wealth of the people. *Great Britain, Papers by Command: China, No. 1, 1899, pp. 13-18.*

A. D. 1898 (February-December).—The "Battle of Concessions," for railway building and mining.—By summer time in 1898 the scramble among the Powers for footholds of territory on the Chinese coast seemed to be giving way to what Lord Salisbury described as "the battle of concessions," for the building of railways and the opening of mines. This newer battle gave his lordship much anxiety. On the 13th of July he cabled to Sir Claude MacDonald: "It does not seem that the battle of Concessions is going well for us, and that the mass of Chinese railways, if they are ever built, will be in foreign hands is a possibility that we must face. One evil of this is, that no orders for materials will come to this country. That we cannot help. The other evil is, that by differential rates and privileges the Managers of the railways may strangle our trade. This we ought to be able to prevent, by pressing that proper provisions for equal treatment be inserted in every Concession."

The British Minister at Peking, in reply, dissented warmly from Lord Salisbury's opinion.

The battle of Concessions is not, in my opinion," he cabled on the 23d of July, "going against us. Up to the present, any concessions granted to other nationalities are far out balanced in material value by the Shansi and Honan mining and railway concession, with its possible extensions. I have consistently informed the Chinese Government that, as to differential rates and privileges, we want none ourselves, and cannot admit that other nationalities have a claim to them." In due time, as will appear, Sir Claude was able to furnish very good evidence in support of his contention that the "battle of concessions" was going against Great Britain, by forwarding a list of all the concessions granted to clamoring capitalists and promoters of the several nationalities. Meantime, he gave close attention to the varying fortunes of the battle.

A concession for the Peking Hankow Railway was the one which interested the English most. Its line would traverse the rich and populous provinces of Chih, Honan, and Hoei Pe, and be connected by another line, for which the Russo-Chinese Bank held concessions, with the valuable coal-mining basin of Pung-tung. Early in August, the British found reason to believe that the pending agreement with a Belgian syndicate for the building of this road was one that would give control of it to the Russo-Chinese Bank, which meant Russian, or Russian and French control. He promptly remonstrated to the Yamen, and was assured that the agreement had not yet been submitted to the throne, and would not be ratified if the effect were such as he had described. He cabled this assurance to Lord Salisbury on the 6th of August. On the 13th he had a very different report to make. "I learnt on the 9th," he says, "that the Yamen had, under the influence of Li Hung-chang, abandoned this position [that they would not ratify the Belgian agreement if its effect was to give control of the Peking Hankow line of railway to the Russo-Chinese Bank], and intended to ratify the agreement immediately. In view of the urgency of the matter, I addressed a note on the same day to the Yamen, in which I asked for an interview on the 10th or 11th instant, and informed them that the Chinese text of the Contract had reached me, warning them at the same time that if they did not give me another interview before they ratified the Agreement Her Majesty's Government would look upon their action as unfriendly, and would probably insist on the same rights being given to Great Britain in all the provinces adjoining the Yangtze."

"On the evening of the 10th the Yamen answered that they would appoint a day for an interview when they had received the Contract, which, they said, had not yet reached Peking for ratification. On the 11th I replied that I understood from this communication that they undertook not to ratify until they had seen me. To this they returned an evasive answer to the effect that they were all engaged by ceremonies at the Palace connected with the Emperor's birthday, which would last some days. I should add that I had already, on the 10th, sent them a note in which I criticized the Contract in detail, stating finally that I should leave further objections to bring forward at my interview with them. I now hear on good authority that the Contract was ratified yesterday, the 12th. That the ratification has thus been rushed through is undoubtedly due to the influence of Li Hung-chang, combined with strong pressure on the part of the Representatives of Russia, France, and Belgium, and if heavy payment is not exacted from the Chinese Government for their bad faith, Li will persuade his colleagues that it is safer to slight England than any other Power, and any pressure which we may want to bring to bear in other matters will be without weight. I therefore think that Her Majesty's Government should insist either—

"1. On a written assurance from the Yamen that if British Syndicates apply for any railway concessions in the Yangtze provinces, they shall be given on the same terms as those which France, under cover of the Belgian Syndicate, has received in the Peking-Hankow Contract, and that no mining or railway concessions will be granted in those provinces unless they have

been previously declined by British Syndicates, or

"2. On a written assurance that all railways for which British Syndicates are now in Treaty, that is to say—(a) The Shan hai Kuan Newchwang line; (b) The line from Tien tsu to Chinkiang (the latter as I understand, in conjunction with Germans and Americans); (c) The line from Shanghai to Nanking with its continuations and branches; and (d) The lines in Honan and Shansi should be granted without any further delay on terms identical with those contained in the Contract for the Peking Hankow line. The latter consist, so far as I can learn, in complete control over the construction, choice of material, working and personnel of the line, together with an hospital guarantee for the repayment of the loan. The second demand seems to me to be preferable on the whole, it will be impossible to obtain either demand without bringing great pressure to bear, and I consider that the demand should be made not as a compensatory concession, but as a punishment for bad faith."

On the 17th the reply of the British Foreign Office was sent by Mr. Balfour, as follows: "With reference to your telegram of the 13th instant, inform Yamén that they must assent to your proposed No. 2 without delay, omitting from it the Shanhai Kuan Newchwang Railway, which we must deal with as a separate question. You are authorized to inform them, if you have any reason to apprehend that they will delay compliance, that, unless they agree at once, we shall regard their breach of faith concerning the Peking Hankow Railway as an act of deliberate hostility against this country, and shall act accordingly. After consultation with the Admiralty, you may give them the number of days or hours you think proper within which to send their reply. The delay should not be of too long duration. It should be noted, on face of your demand, that Chinkiang Concession is for Americans and Germans, if they desire a share, as well as ourselves. Also make it clear that your ultimatum has nothing to do with the line to Newchwang."

The tone of these demands made them effectual. On the 4th of September, Sir Claude MacDonald was able to announce to his superiors, in London: "At an interview which I had with them yesterday, the Yamén entered into the following undertaking:—Within the next few days they will address a despatch to me, apologising for their action, and consenting to the construction of the following lines by British Syndicates: 1. A line from Shanghai to Nanking with a continuation via Chinkiang to Sui Yang. They said, however, that the latter route was that followed by the line from Tien tsu to Chinkiang, for which they said that a Preliminary Agreement had been signed between Yung Wing and the Anglo American Syndicate; and the continuation in question must be dependent on the cancellation of that Agreement. 2. A line connecting Hangchow and Soochow with Shanghai, to be continued if required to Ningpo. 3. A line from Canton to Kowloon. 4. The Peking Syndicate to be entitled to construct a railway to convey minerals from their mines to the Yang-tze. The Yamén have also agreed to send me a Confidential note embodying a declaration that the terms accorded for the construction of these lines will not be inferior to those granted for the construction of any railways in China

proper. The Manchurian lines are excluded from the scope of this Agreement. I venture to think that this is a satisfactory settlement. I did not give them an ultimatum, continuing myself to a warning of the grave consequences which would now attend any failure on their part to keep their word. The fact that the line is concentrating is, of course, known to them."

Before receiving this announcement, Mr. Balfour had cabled, on the 21th of August: "Negotiations with Yamén may be facilitated if you informed them at once that, unless the very moderate terms already demanded are immediately complied with, we shall, in addition, require the Concession of another line, on same conditions as those granted in case of Peking Hankow line, a railway, and that additional demands will be preferred as the result of further delay. I think it would conduce to the rapid and satisfactory termination of the negotiations you are authorized to make a communication to them in this sense." Whether this suggestion was acted upon or not does not appear.

This transaction, connected with the project of a railway from Peking to Hankow appears to illustrate, not unfairly, on the whole, the mode in which speculative concessions were being wrung from the Chinese government in its busiest year of oriental speculation, 1898. The outcome of the grand "bottle" was commiserated by Sir Claude MacDonald to Lord Charles Bessford on the 2nd of November, in a full list of the concessions then granted to British subjects, compared with the grants to other nationalities. "We do not seem," wrote Sir Claude, with pardonable complacency, "to have come out second best. . . . Not a single bona fide or approximately practical scheme which has been brought to this Legation has failed to be put through." The summarized result in railway concessions was 9 British (2,800 miles); 3 Russian (1,530 miles); 2 German (520 miles); 3 French (420 miles); 1 Belgian (650 miles); 1 American (300 miles). In detail, the railway and mining concessions were described in the list as follows:

"Railway and other Concessions obtained by British Companies: I.—Province of Shansi. The Peking Syndicate have acquired the sole right to open and work coal and iron mines throughout the districts of Yu Hsien and Ping Ting-chou, and the Prefectures of Lianan Fu, Tshu-chou Fu, and Ping Yang Fu, and also petroleum, wherever found. Under their contract, the Syndicate have also the right to construct branch railways to connect with main lines or with water navigation, to facilitate transport of Shansi coal. This has been interpreted officially to include the right of connecting the mines with Siang-yung in Hupeh, the nearest head of navigation giving access to the Yang-tze. This means a railway of 250 miles. As to the value of this Concession, it is not amiss to quote the testimony of Baron von Richthofen, the greatest authority on the geology of China. He says that "in proportion to its area, Shansi has probably the largest and most easily workable coalfield of any region on the globe, and the manufacture of iron is capable of almost unlimited extension." II.—Province of Honan. The Peking Syndicate have also acquired rights similar to those obtained in Shansi in that part of Honan north of the Yellow River. III.—Province of

Chihli. The Hong Kong and Shanghai Bank are managing and controlling the North China railways from Peking to Tientsin, and thence to Soochow and Newchwang. The total length of these lines is about 500 miles, of which 300 miles are completely open to traffic. IV.—This bank has also acquired a half interest in the coal mines at Nan Piao, in the Chiao yang district. According to experts these mines possess the best and richest coal seams in North China, and they have the immense advantage of being close to a line of railway and the sea. V.—Provinces of Chihli and Kiangsu. The Tsungli Yamen have undertaken officially that the construction of the Tientsin-Chinkingiang line shall be entrusted to an Anglo-German Syndicate. The British portion of this Syndicate is represented in China by Messrs. Jardine, Matheson, and Co., and the Hong Kong and Shanghai Bank. This will be a trunk line of 600 miles, passing through more populous country than the Lu Han Railway (the Belgian line) with which it is certain to be able to compete successfully. VI.—Province of Kiangsu. A British Syndicate, represented by Messrs. Jardine, Matheson, and Co., and the Hong Kong and Shanghai Bank, has obtained the Concession to finance and construct the Shanghai-Nanking Railway. There is no more paying district than this for a railway in China. The length of line will be 170 or 180 miles. VII.—Provinces of Kiangsu, Anhui, and Hsienan. The same Syndicate has the right to extend the Shanghai-Nanking Railway from Peking, opposite Nanking, to Hsin Yang, in Honan, a distance of 270 miles. VIII.—Provinces of Kiangsu and Chikiang. The same Syndicate has the right to construct a line from Soochow to Hangchow, with a possible extension to Ningpo. This line will run through very populous districts for over 200 miles. The last three Concessions all lie within the Yangtze region. IX.—Province of Chikiang. The Peking Syndicate have also obtained mining Concessions similar to the Shanxi and Honan in this province. X.—Province of Kwangtung. The Jardine Syndicate has the right to construct a railway from Kowloon to Canton. The length of line will be nearly 100 miles. XI.—Provinces of Hupei, Kiangsi, and Kwangtung. An American Syndicate signed a preliminary Agreement for the construction of a railway from Hankow to Canton in May last. Negotiations are now in progress for the amalgamation of this Concession with No. 10, Kowloon to Canton, and the working of the whole line from Hankow to Kowloon by an Anglo-American Company. This will be a trunk line of, approximately, 600 miles long. XII.—Provinces of Yunnan, Kweichow, and Szechuan. The right to extend the Burmah system into China as far as the Yangtze is admitted, and surveys are now in progress. This involves a possible railway of 700 miles. (See Remarks on French Concessions.)

Concessions other than British. Russian. The Manchurian Railway Concession dates from 1896. As is well known, it was obtained as recompense for help given in securing the retrocession of Linotung. From Stretensk on the Shilka, where it leaves the main Siberian line, this railway will cross the Argun and Hingan Mountains, and reach Kirin via Petuna. The whole length from Stretensk to Vladivostok is estimated at 1,400 miles, of which about 1,000

will pass through Chinese territory. The Concession is purely strategic. The country traversed, though potentially rich in great part is, and will be for long, sparsely populated, and the line cannot, in the near future at any rate, hope to pay its working expenses. 2. The Port Arthur Agreement of March 1898 arranges for the conclusion by Russia of a branch from the above line to Port Arthur or Tadenwan. The length of the railway will be about 100 miles. Commercially, this branch is more promising than the first Concession. 3. The Russo-Chinese Bank has signed a contract for the construction of a branch line from Tai-yuan Fu to connect with the Lu Han trunk line's near Ching tung. Length, approximately 130 miles. They have, up to date, been unable to raise money for this line. I think it very possible that it will eventually be built by an Anglo-Russian Syndicate. I am trying to arrange this.

French.—The French possess the right to construct three lines, but beyond acquiring this right they have done nothing. 1. From Tonquin up the Red River Valley to Yunnan Fu, say 200 miles. The impression in French railway circles is that a railway through Yunnan will not pay expenses, and if any serious attempt is made to carry out the extension of the Tonquin system, it will be merely as a stopping store to Szechuan. Yet again, any pretensions that a railway from Yunnan to the Yangtze may have to rank as a commercial project have been pronounced against by every traveller in Central China. 2. Langson-Lungchow-Nanning Railway, length, about 100 miles. (There appears to be an alternative open to the French of going to Pöé instead of Nanning.) The right to build this line has been conceded, but the idea is growing amongst the French of Tonquin that, instead of diverting traffic from the West River, a line from Langson to Lungchow and Nanning would prove an additional feeder of the West River route. 3. From Pakhoi inland, presumably to Nanning, length, say 120 miles. The Tonquin press have pointed out that this line will benefit English commerce more than French. It will never, in my opinion, be built—by the French.

German.—1. Kiao chan-Yichow-Tsinan line; length, 420 miles. Nothing has been done towards the construction of this line, which does not promise commercially. 2. Tientsin-Chinkingiang line to be built by an Anglo-German Company (see No. 5 of the British Concessions).

Belgian.—The Lu Han or Peking-Hankow Railway. A Franco-Belgian Syndicate have secured the Concession for this, a trunk line of some 650 or 700 miles, passing north and south through Chihli, Honan, and Hupei. This railway is an old project born of Chang Chih-Tung's objection to building lines near the coast, lest they should facilitate the access of an enemy. Its prospects as a commercial enterprise are not considered so good as those of the rival Tientsin-Chinkingiang line.

American.—The only railway in which America is at present interested is the trunk line projected from Hankow to Canton (see British Concessions, No. 11).

On the 18th of December the British Minister announced to Lord Salisbury: "An Imperial Decree, stating that no more railway proposals will be for the present entertained by the Chinese

Government has been officially communicated to me by the Yamen. To which the response from London was: "You should inform the Chinese Government that Her Majesty's Government cannot in the event of their revoking their present resolve not to entertain any more proposals for railways, priority of consideration by the Chinese Government of all British applications already made." This notice was given, as directed, and the Yamen replied to it (December 31) with some dignity: "We have the honour to observe that the development of railways in China is the natural right and advantage of the Chinese Government. If, hereafter, in addition to the lines already sanctioned, which will be proceeded with in order, China proposes to construct other railways, she will negotiate with the nation which she finds suitable. When the time arrives China must use her own discretion as to her course of action. The applications of British merchants can, of course, be kept on record as material for negotiation at that day, but it is not expedient to treat them as having a prior claim over all others to a settled agreement."—*Great Britain, Papers by Command: China, No. 1, 1899, pp. 164-65, 190-92, 215-16, 327, 344-47; and No. 1, 1900, p. 22.*

A. D. 1898 (March).—An intelligent Chinese view of the situation of the country.—How well the situation and the dangers of their country were understood at this period by some, at least, of the Chinese officials, and how intelligently they considered them, may be gathered from some passages in a memorial addressed by Viceroy Chang Chih-tung and another high official, Sheng Hsuan-hua, Director General of Railways, to the Emperor, on the subject of the construction of the Hankow Kwangtung Railway. A translation of the document was transmitted to London at the end of March. The memorialists say: "The original idea was that the construction of the Hankow Kwangtung Southern trunk line should be postponed for a time, but now, owing to the exigencies of the present situation, this work must not be delayed. The powerful foreign nations stand around watching for their opportunity, and, making use of trivial pretexts in the conduct of international affairs, swiftly dispatch their war ships from one end of the Empire to the other. It is impossible to say when our communication by sea may be blocked, and the establishment of internal communication by railways has become a necessity. Kwangtung is a rich province, and the defence of the southern territory and waterways must not be neglected, so that the making of the Hankow-Kwangtung line should be proceeded with at the same time as the northern road. The original intention was to construct a road from Kwangtung to Hupoh via Chiangsi, but this circuitous route is longer than the direct route through Hunan Province, and for many reasons it will be a source of greater prosperity and strength to the Empire if the latter route is adopted. There is, moreover, no doubt that the officials and merchants of the three provinces are in favour of this scheme. The most direct route will be to proceed via Cien-chou, Yung-chou, Feng-chou, and Chang-sha to Wuchang, and so to Hankow. . . . Now Hankow is the central point to which all the waterways of the eighteen provinces from north, south, east, and west converge. If England is allowed to build the Hankow and Kwangtung

road, passing through this important point afterwards when the Russian line advances southward, and the English line is continued to the north, although we shall be in possession of the Hankow-Lu-Kou-chiao line, we shall be still at our ports entailed, for, being between the two lines, we shall not be able to defend our own. It is also greatly to be feared that our own line would pass into either English or Russian hands. In this case not only is our throat stopped by the foreigners being in possession of our ports, but our vital parts are injuriously affected. Should we wish to raise and drill soldiers, make arms, or obtain funds for the necessities of the Empire, it will be impossible, and China not only will not make progress, but we fear she will hardly be able to maintain her independence.

Your memorialists are distressed when they consider the extreme danger of the situation, for they think that the best method of meeting it is to protect ourselves at once with the construction of the Hankow Kwangtung Railway. Should it be made by degrees, starting from Kwangtung through Hunan to Hankow, it will be seized forcibly before completion, and we have sufficient funds cannot be raised for hurrying forward its construction. Your memorialists, Sheng, had the intention of employing American capital for the construction of the Lu-Kou-chiao-Hankow line, but afterwards when the American, Washburn, came to China, his conditions were found to be too hard, and consequently negotiations were broken off. Your servant was thus constrained to approach Belgium. By doing thus our privileges would not be lost, nor would ill consequences follow. But Belgium is a small country, and her strength is inconsiderable, and often she has pointed out that an unfinished railroad is hardly a sufficient guarantee for the loan. Consequently she is very undecided, but we have hopes that by the adoption of some compromise terms may be arrived at, though the question is extremely difficult. Thus another scheme must be adopted for raising the capital for the southern line. There are grave objections to allowing either England, France, or Germany to undertake the work, and your memorialists suggest that Wu Ting-fang, the Minister at Washington, should be communicated with. He is a Cantonese, and will not fail to do his best to find a scheme."—*Great Britain, Papers by Command: China, No. 1, 1899, pp. 87-89.*

A. D. 1898 (March-July).—Russian acquisition of Port Arthur and Talienwan. Ineffectual British opposition.—Consequent British demand for Wei-hai Wei.—Its lease by China.—While the British Minister at Peking was securing these assurances from the Tsungli Yamen, concerning the non-alienation of the Yangtze region and the opening of inland waters to steam navigation, the Russian Minister was equally busy, extorting a cession or lease of Port Arthur and Talienwan, with privileges of railway construction through neighboring territory which gave immense value to those acquisitions. The probability of his success was soon known to the British authorities, who made no serious objection to the leasing of Talienwan, but were strongly opposed to a Russian occupation of Port Arthur. On the 23d of March, 1898, Lord Salisbury wrote to the British Ambassador at St. Petersburg: "Her Majesty's Government on their part would not regard with

any dissatisfaction the loss by Russia of an ice-free commercial harbour connected by rail with the Trans-Siberian Railway, which is now under construction. Questions of an entirely different kind are opened if Russia obtains control of a military port in the neighbourhood of Peking. Port Arthur is useless for commercial purposes, its whole importance being derived solely from its military strength and strategic position, and its occupation would inevitably be considered in the East as a standing menace to Peking and the commencement of the partition of China.

On the 28th of March he wrote again: "Port Arthur is not a commercial harbour. It is doubtful whether it could be converted into one. It is certain that, even if such a project were possible, it could never be worth while for the owners or lessees of Tientsin to embark upon it. But though not a commercial harbour, Port Arthur supplies an invaluable, limited and of limited extent, but possessing great natural and artificial strength. And this, taken in connection with its strategic position, gives it an importance in the Gulf of Pechili and therefore at Peking, upon which in their representations to Japan at the close of the war with China, the Russian Government had the greatest emphasis. It is from this last point of view that the occupation of Port Arthur chiefly concerns Her Majesty's Government. It is not because a position which can easily be made a naval arsenal of great strength has been acquired by Russia that they regret its occupation by that Power. It is because the possession, even if temporary, of this particular position is likely to have political consequences at Peking of great international importance, and because the acquisition of a Chinese harbour notoriously useless for commercial purposes by a foreign Power will be universally interpreted in the Far East as indicating that the partition of China has begun.

As regards the second of these reasons nothing further need be said, inasmuch as Her Majesty's Government understand from Count Munyevich's communication to you that this result is as little desired by the Russian Government as it is by that of Her Majesty. As regards the first, it may perhaps be proper to observe that a great military Power which is continuous for over 1,000 miles with the land frontier of China, including the portion lying nearest to its capital, is never likely to be without its due share of influence on the councils of that country. Her Majesty's Government regard it as most unfortunate that it has been thought necessary in addition to obtain control of a port which, if the rest of the Gulf of Pechili remains in hands so helpless as those of the Sovereign Power, will command the maritime approaches to its capital, and give to Russia the same strategic advantage by sea which she already possesses in so ample a measure by land. Her Majesty's Government have thought it their duty thus to put on record their grave objections to the occupation of Port Arthur by Russia."

Before this despatch was written, Lord Salisbury already knew that his remonstrances had failed and that Russia was to possess Port Arthur, and he had cabled March 25, the following instructions to Sir Claude MacDonald, the British Minister to Peking: "Balance of power in Gulf of Pechili is materially altered by surrender of Port Arthur by Yankin to Russia.

It is therefore necessary to obtain, in the manner you think most efficacious and speedy, the refusal of Wei-hai Wei on the departure of the Japanese. The terms should be similar to those granted to Russia for Port Arthur. In such there is only a way from Hong Kong to Gulf of Pechili. The day following, Lord Salisbury advised the British Ambassador at Berlin by telegram: "Her Majesty's Government have demanded a temporary lease of Wei-hai Wei, and it is possible that the German Government will address you with regard to our occupying territory which forms part of the Province of Shantung. Should this be the case, you are authorized to explain that Wei-hai Wei is not at present, and cannot, we believe, be made a commercial port by which access can be obtained to any part of the province. We do not wish to interfere with the interests of Germany in that region. The action in our opinion very regrettable, of Russia with respect to Port Arthur, has compelled us to take the course we are now pursuing."

On the 29th of March the completion of the transaction by which China transferred Port Arthur and Tientsin to Russia was officially announced at St. Petersburg by the following publication in the "Official Messenger": "At Peking on the 15th (27th) March a special Agreement was signed by the Plenipotentiaries of Russia and China, by virtue of which Ports Arthur and Tientsin, with the corresponding territory and waters, have been ceded to the Imperial Government for twenty-five years - which period, by mutual agreement, may be still further prolonged - and the construction allowed of branches of railways in order to connect these ports with the main Great Siberian line. This Agreement is a direct and natural outcome of the friendly relations between great neighbouring Empires, all of whose endeavours should be directed towards the preservation of tranquillity along the vast extent of their neighbouring possessions for the common benefit of the people of both of them. The peaceful occupation, by the diplomatic Agreement of the 15th March, of the ports and territory of a friendly nation shows, in the best possible way, that the Government of China truly appreciates the meaning of the Agreement established between us.

"Securing the inviolability of the sovereign rights of China, and satisfying the daily requirements of Russia in her capacity of a great and neighbouring naval Power, this Agreement can in no way insure [hijure?] the interests of any other foreign Power; on the contrary, it gives to all nations of the world the possibility in the near future of entering into communication with this hitherto closed-up country on the coast of the Yellow Sea. The opening to the commercial fleets of all foreign nations of the port of Tientsin creates in the Pacific Ocean a new and extended centre for the commercial and trading undertakings of those nations, especially by means of the Great Siberian line, henceforth to be taken into account, and which thanks to the friendly Treaty between Russia and China, will unite the extreme ends of the Old World. Thus, the Agreement signed at Peking has for Russia a deep historical significance, and must be joyfully welcomed by all to whom happy peace and successes, based on the mutual understandings of nations, are dear."

On the 3d of April, Sir Claude MacDonnell was able to announce by cable to Lord Salisbury: "Yamén agreed yesterday to the following arrangement: China will lease Wei-hai Wei to Great Britain on the same terms as Port Arthur has been leased to Russia, but Great Britain agrees not to take possession of the place until it has been given up by Japan. The lease will continue until Russia ceases to occupy Liaoning Peninsula. Details are left for subsequent adjustment." Negotiations relative to the terms of the lease of Wei-hai Wei were protracted until the first of July, when the Convention determining them was signed at Peking. Its provisions were as follows: "The territory leased shall comprise the Island of Lu-chang and all islands in the Bay of Wei-hai Wei, and a belt of land 10 English miles wide along the entire coast line of the Bay of Wei-hai Wei. Within the above mentioned territory leased Great Britain shall have sole jurisdiction. Great Britain shall have, in addition, the right to erect fortifications, station troops, or take any other measures necessary for defensive purposes, at any points on or near the coast of the region east of the meridian 121° 40' east of Greenwich, and to acquire on equal terms compensation with that territory such sites as may be necessary for water supply, communications, and hospitals. Within that zone Chinese administration will not be interfered with, but no troops other than Chinese or British shall be allowed therein. It is also agreed that within the walled city of Wei-hai Wei, Chinese officials shall continue to exercise jurisdiction except so far as may be inconsistent with naval and military requirements for the defence of the territory leased. It is further agreed that Chinese vessels of war, whether neutral or otherwise, shall retain the right to use the waters herein leased to Great Britain. It is further understood that there will be no expropriation or expulsion of the inhabitants of the territory herein specified, and that if land is required for fortifications, public officers, or any official or public purpose, it shall be bought at a fair price."—*Great Britain, Papers by Command: China, No. 1, 1898, and No. 1, 1899.*

A. D. 1898 (April—July).—Charges of corruption against Li Hung-chang and the Tsung-li Yamen.—"One of the censors of highest rank memorialised the Emperor early in April, accusing the whole Tsung-li Yamen of being in Russian pay, and alleging that the sum of 10,000,000 taels was paid to them. He also stated that Li Hung-chang had secured from Russia 1,500,000 taels, and he prayed for a full inquiry and for the decapitation of Li Hung-chang if the accusation were proved, or if he were found guiltless, he himself should be decapitated. Li Hung-chang was dismissed on September 6, but afterwards in November was appointed an imperial commissioner to report on the inundations of the Yellow River, an unwelcome post. . . . A Black Flag rebellion in the southern province of Kwang-shi, in which the secret society called The Triads was said to be concerned, was giving the Peking Government great anxiety in July. The rebels, numbering about 40,000, were for a time victorious and seemed determined to overthrow the dynasty."—*Annual Register, 1898, pp. 333-4.*

A. D. 1898 (April—August).—France in the field with demands.—New demands from

Great Britain.—France had now come forward to seize a place in the attacking line, preparatory to what seemed to be the impending partition of China. On the 12th of April, Sir Claude MacDonnell cabled to Lord Salisbury the following despatch: "I had an interview with the Yamen yesterday, at which they informed me that they had acceded to the following demands on the part of France:—1. Kwangchow Wan [for the Lanchow peninsula, on the southern coast near Hongkong] to be leased as a coaling station to France. 2. The right to construct a railway from Yunnan fu to the Tonquin frontier. 3. The promise not to alienate any territory in the three provinces of Kwangtung, Kwangsi, and Yunnan, which border on the French frontier. 4. The Chinese Government agree that if ever they constitute a Postal Department independent of the maritime customs and if a European is to be appointed as Director thereof, France shall have an equal right with that of other Powers to nominate a candidate for the post of Director. The Chinese Government are willing—1. To lease us as much additional territory on Kowloon peninsula (opposite Hong Kong) exclusive of Kowloon itself as is required for military and naval purposes. 2. The Yamen state that China is quite willing to allow the extension into Yunnan of the Hurehah Railway."

On the 13th Mr. Balfour, in the absence of Lord Salisbury, cabled from London in reply: "Inform Yamén that, although they have not followed our advice, we are anxious to maintain, as far as possible, integrity of China, and will therefore not make new territorial demands upon them. It is, however, absolutely necessary, if we are to pursue this policy, that they, on their side, should first immediately conclude negotiations—in giving us all the land required for military defences of Hong Kong, in fulfilling their promise to make Nanning a Treaty port; (c) to give some railway concession; obtain agreement as to the non-alienation of Kwangtung and Yunnan. In connection with condition (b), it is in the interests of the integrity of China, and is justified by the proximity of Yunnan to Burma, and by our commercial preponderance in Kwangtung."

On the same day (13th April) the British Minister at Paris telegraphed to the Foreign Office, London: "It is stated in tonight's papers that, at the Cabinet Council held this morning, Mr. Hanotaux was able to announce to his colleagues that the French demands on China had been satisfactorily met. They are stated in the semi-official 'Temps' to be:—1. Concession of a lease of a bay on the south coast of China. 2. Concession of a railway connecting Tonquin with Yunnan fu by the Red River. 3. Engagement on the part of China never to alienate the territories of the provinces contiguous to Tonquin. 4. Engagement never to cede to any other Power the Island of Hainan. 5. Arrangement in regard to the constitution of the postal service."

Thus, for the time being, France was satisfied, and England would be, before she gave rest to the Tsung-li Yamen. Her present demands, as above specified by Mr. Balfour, were pressed without ceasing by the pertinacious Sir Claude. On the 9th of June he obtained from the Yamen a lease for the British Government of about 200 square miles of territory on the mainland oppo-

so-called crown colony of Hong Kong, and some of the Chinese city of Kowloon the same day, to remain under Chinese jurisdiction. The term of the lease was 99 years. With regard to the opening of Nanning as a Treaty Port, he received an assurance from the Yamen in August that it should be done as soon as the Kwang-chow rebellion was crushed. On the other points he felt a great success. — *Great Britain: Progress of the World, China, No. 1, 1899, pp. 11, 12, 19, 28, 47.*

A. D. 1898 May. How the murder of a missionary was made the ground of French demands for a Railway Concession. On the 15th of May, 1898, the British Minister at Peking called to Lord Salisbury. "Murder of missionary at Kiangsi." French demands for compensation. The Yamen said they were not certain that the murdered missionary was not a Chinaman, and that the demands made by the French for compensation comprised a Concession for a railway to some point on the sea coast not specified, a chapel to be built, and a pecuniary indemnity of 100,000 fr. to be paid. Up to the present they had refused all these demands. Later the following particulars of the murder were received from the British consul at Canton: "The occurrence happened about a fortnight ago at Yung-chow in the Ping to Prefecture. While walking through the streets the missionary noticed a placard directed against the Christian religion. Having discovered the author of the placard the missionary, with two converts, proceeded to his house and attempted to arrest him. Out of this a disturbance arose in which the passers-by took part, and in the end the missionary and the two converts lost their lives."

On the 21st of May Sir Claude MacDonald reported to Lord Salisbury from Peking: "I am very reliably informed that the demands made at an interview with the Yamen yesterday by M. Polon, the French Minister, in connection with this case were, — 1. A Concession to construct a railway from Pakhoi to Nanning; 2. Construction of a chapel at Pakhoi; 3. A pecuniary indemnity of 100,000 fr.; and 4. The responsible officials to be punished. In response to these demands, the Yamen suggested that the Railway Concession should be granted in a document by itself, apart from the granting of the other demands, and that the chapel should be built at Yung-chow, the scene of the murder, instead of at Pakhoi, and the French Minister undertook to refer these modifications to his Government for their favourable consideration."

On the 25th, Sir Claude reported further that he had heard on very good authority that all the French demands had been granted, and added: "The Yamen have since denied to me that they have committed themselves to granting them, but I have little doubt that they have practically done so. The reason for making the Railway Concession a separate matter is that the Chinese are anxious to avoid establishing precedents for compensation for attacks on missionaries taking the shape of commercial Concessions, and they hope, rather foolishly, to do so by nominally closing the missionary case before the other matter is taken up. They did this in the case of the German Agreement for the lease of Kiao-chau Bay, which begins by declaring that the Shantung missionary case has already been closed. The French demands are not at all excessive. I

have already expressed my belief that the proposed railway will not injure us commercially, provided of course that no differential rates are allowed, to which I shall insist on specific assurances from the Yamen." — *Great Britain: Progress of the World, China, No. 1, 1899, pp. 11, 12, 19.*

Mind is the essence of it, and to that which the form is subordinate, made its price for seizing Korea hereafter. — *ibid. A. D. 1897. No. 1, 19.* (German writer has remarked.)

Never before, perhaps, has so much material value been attached to ministers of the Gospel in foreign lands, and the manner in which after their death they are used to spread civilization is somewhat foreign to our older ideas of the functions of the bearers of spiritual blessings.

A. D. 1898 June. September. Momentary influence of a reform party in the palace.

Futile attempt of the young emperor to uphold it. — The decaying state of the Empire had now become so desperately plain, and the predatory swarm of governments and speculators which gathered to despoil it had grown so greedy and so bold that a party which could see that the only hope for its salvation must be sought in some modernizing reforms of education and administration, was able to win a momentary footing of influence in the palace at Peking. Its leading spirit appears to have been one Kang Yen Wei, an extremely radical reformer who came from Canton. In an article which he wrote a few months later and which was published in the "Contemporary Review," Kang Yen Wei gave this account of himself and of the mode in which he was brought into relations with the young Emperor:

"I was always fond of studying Western learning. After the French took Fochow in 1885 there was evident danger of China's end drawing nigh. Consequently, in 1889, I memorised about the matter in great grief. I feared Russia's advance southward, and pointed out the secret intentions of Japan and the latent danger in Korea. I thought that China had come to such a pass that if she should devote these years for the purpose of speedy reform she might become strong, but if there was delay nothing could save her. At that time the high Ministers of State were all Conservatives, and would not present any memorial to the throne. After the loss of Formosa, Weng Tung Ho [the Emperor's tutor] was sorry that he had listened to their advice, and was very cordial to me. Then I exhorted him to reform, and I wrote a long memorial, signed by 1,300 provincial graduates, to urge reform again and again, and a Reform Club was formed in Peking and the newspaper, 'Chinese Progress,' was started in Shanghai. At this time (1895) Weng Tung Ho strongly urged reform on the Emperor, but was checked by the Empress Dowager, and almost put aside then, and the Reform Club was shut up. I then returned to Canton, and founded the Ethical Society in Canton province and the Sacred Society in Kwang Si province. My disciples, Liang Chi Chao and Tan Tze Tung, formed the Southern Learning Society in Hunan province; Lin Shiao started the Fookien Learning Society in the Fukien province; Yang Tui the Szechuen Learning Society, in the province of Szechuen; Yang Shin Shou and Sung Peh

Luh opened the Pess Learning Society in the provinces of Shansi and Shensi; I and my brother K'ang Kwang Yu, with King Yuen Shun, opened a Chinese girls' school and formed the Anti foot-binding Society in Shanghai; and many newspapers were started. Thus news papers and new schools flourished in all the provinces, and all the empire knew of the reform.

"When Kiaochow was taken by the Germans I went to Peking again and set up another memorial strongly urging reform, with the same motive as Peter the Great, and on the same political lines as have been adopted by the present Emperor of Japan. I also presented my books on the history of reform in Japan and the history of Peter the Great's reforms, and suggested that all the coast of the empire be open to international trade. W'eng Tung Ho approved of it, and strongly supported the measure at Court. But the crowd of Conservatives opposed, and he could not carry it. Then it was proposed to make an alliance with England, as was advised in the reform paper of Macao. The Government was undecided and feared that a great nation like England would not be willing. But when England asked that Port Arthur and Ta Lien Wan should be open ports I hastened to W'eng Tung Ho and said, 'China is saved and will not perish. You must grant the request. Since God gives us this opportunity, it should on no account be let slip.' But the Empress Dowager and Li Hung Chang had made up their minds to give them to Russia. Again England promised to lend China ten millions at 3 per cent. Russia was forcing China to borrow from her at 4 per cent. The Foreign Office was in great fear between these two great nations, and undecided. They then discussed about borrowing from both, and finally decided not to borrow from either. I said, 'You should decline Russia's offer and borrow from England. Russia, though she might threaten us, will never dare to declare war on this account.' The Empress Dowager favoured Russia and was afraid. In the end they did not borrow from either.

"When Russia was seeking Port Arthur and Ta Lien Wan, I presented two memorials that they should be refused to Russia and both made open ports. The Emperor blamed Prince Kung and Li Hung Chang, and asked, 'What is the use of a secret treaty with Russia? Not only does Russia not protect us, but she herself takes away territory from us.' Both the Prince and Li replied: 'It is by giving Port Arthur and Ta Lien Wan to Russia that the secret treaty is preserved.' At this the Emperor was very angry. When the Empress Dowager decided to give them to Russia, and W'eng Tung Ho found that all my prophecies came true, he strongly recommended me to the Emperor. Kao Hsueh Tsung, the Supervising Censor, Chen Bao Chen, the Governor of Hunan, Su Chih Ching, of the Hanlin College, and Li T'wan Fün, President of the Board of Rites, also had recommended me from time to time. When the Emperor asked the members of the Cabinet, W'eng Tung Ho recommended me, saying, 'His abilities are a hundred times superior to my own,' and prayed the Emperor to listen to me in all matters of reform. I also presented to the Emperor a record of England, France, and Germany, a comparative diagram of all nations, and the Rev. Timothy Richards' 'History of the Nineteenth Cen-

tury' and his 'Essays for the Times,' and translations of Western books. The Emperor had understood something of the cause of the rise and fall of nations, and made up his mind to introduce great reforms. Desiring men to help him, he invited me, and acted on my former suggestions."

But the situation at Peking, as Kang Yen Wei describes it,—the weakness of the young Emperor and the strength of the Empress Dowager—made the undertaking of reform hopeless from the beginning. The Empress Dowager had professed to resign the government, but, says Kang Yen Wei, "she really still held the reins in her hands." She read the memorials about appointments. All the Ministers of the first and second rank were her nominees. The Emperor had no voice. In all matters he had to inform her first before acting. The Emperor was only an Emperor in name.

"The Emperor was of a studious disposition. Since the loss of Formosa he has been greatly distressed about the decline of the Empire. After this his faithful tutor, W'eng Tung Ho, who was a learned man, sought foreign books for study, and presented them, with atlases, to the Emperor. These the Emperor daily studied, discovered the cause of foreign prosperity, discovered the reason of China's weakness and conservatism, and made up his mind to reform. But this was not in accordance with the view of the Empress Dowager. At the beginning of the war with Japan the Emperor and his Ministers wanted war. The Empress Dowager and Li Hung Chang wanted peace. The Empress Dowager was ready to give up Manchuria and Formosa. The Emperor could not think of it for a moment without crying with distress. He wanted to make an alliance with England and to reform, while the Empress Dowager was equally bent on alliance with Russia without reform. Thus their views diverged more and more, so that when the Emperor wanted to reform in 1896 the Empress hated him; two of his favourite Imperial ladies were beaten; the Vice Presidents, Chang Lin, Wang Ming Lun, and Tsz Tai a brother of one of these Imperial ladies, were driven away; and these Imperial ladies' tutor, W'eng Tung Shih, was stripped of his honours never to be employed any more. This was because all these advised the Emperor to keep the power in his own hands.

"The eunuch Kow Lung Tsai memorialised the Empress Dowager to resign the government into the hands of the Emperor. For this he was put to death. The Emperor himself narrowly escaped being put aside then. . . . Chang Lin was a straightforward man in whom Prince Kung put great confidence. In a memorial to the Emperor he said: 'The relation of the Empress Dowager to the late Emperor Tung Chih was that of his own mother, but her relation to you is that of the widowed concubine of a former Emperor.' When the Empress Dowager came to know this she was in a great rage. Prince Kung was also in great fear. When the Emperor issued an edict, by command of the Empress Dowager, to degrade Chang Lin, Prince Kung was weeping on his knees. When asked the reason of it, the Emperor waved his hand and said, 'Don't ask him.' The Emperor and the Prince wept together, and the Prince wept so bitterly that he had no strength to rise up.

The Emperor commanded the eunuchs to help him, and led him away. Wen Ting Shih begged the Emperor to exercise his rights. The Emperor waved his hand, saying, "Don't speak!" For the Emperor knew long ago that when he took the reins of government into his own hands the Empress hated him."

Nevertheless, in 1898, the well-meaning but weak young Emperor was moved to a spasmodic assertion of his authority in bold strokes of reform. "Rather than lose his empire like those of the Ch'in and the Ming dynasties, and become a byword of disgrace for all future generations, he would risk the dangers of reform. If he succeeded, then he would get power into his own hands and save his country. If he failed, he would greatly open the minds of the people and prepare them for the future, and thus, perhaps, preserve a remnant of China. At this time the Emperor considered the chief thing was to preserve the country from being lost to foreign nations and looked upon his position on the throne as of little consequence in comparison—considering the welfare of the people as of supreme importance, while his own person was of little importance. He had none to consult with, but decided to risk all danger and try." Kang Yu Wei, *The Reform of China and the Revolution*, 1898, *Contemporary Rec.*, August, 1899.

Real with a knowledge of what came of them, the bold decrees which the helpless young Emperor issued in June, 1898, seem pathetic in the extreme. The following is a translation of the first of his reform edicts, which bears the date, "K'ung Hse, 24th year, 11th moon, 23d day," corresponding to June 11, 1898.

"For a long time past the condition of Imperial affairs has been a subject of discussion among the officials of the Empire, both metropolitan and provincial, with a view to bring about changes necessary for improvement. Decrees have been frequently issued by the Emperor, for a special system of examinations, for doing away with the surplus soldiery, for the alteration of the military examinations, and for the institution of colleges. In spite of the fact that these things have so often been carefully thought out, and so many plans have been formed, there is no general consensus of opinion, and discussion is still idle as to which plans are best. There are some among the older officials who affirm that the old ways are best and need no alteration, and that the new plans are not required. Such labblings are vain and useless.

The Emperor puts the question before you thus: In the present condition of Imperial affairs, with an untamed army, with limited funds, with ignorant 'literate,' and with artisans untaught because they have no teachers, is there any difficulty in deciding, when China is compared with foreign nations, who is the strong and who is the weak? It is easy to distinguish between the rich and the poor. How can a man armed with a wooden stick smite his foe encased in coat of mail? The Emperor sees that the affairs of the Empire are in an unsettled condition, and that his various Decrees have availed nothing. Diversity of opinion, each unlike another, is preachers from water, is responsible for the spread of the existing evil. It is the same as that which existed in the Sung and Ming dynasties (A. D. 1000 and 1500). Our present system is not of the slightest use. We

cannot in these modern days adhere to the ways of the five Kings (c. 2500 B. C.) even they did not continue exactly after the manner of their respective predecessors. It is like wearing thick clothes in summer, and thin ones in winter.

Now, therefore, the Emperor orders all officials, metropolitan and provincial, from prince down to 'literate,' to give their whole minds to a real endeavor to improvement. With perseverance, like that of the sages of old, do your utmost to discover which foreign country has the best system in any branch of learning and learn that one. Your great fault is the falseness of your present knowledge. Make a special effort and determine to learn the best of everything. Do not merely learn the outside covers of the books of knowledge, and do not make a loud noise of your own attainments. The Emperor swears to change what is now useless into something useful, so that proficiency may be attained and handed on to posterity. The Metropolitan College will be the chief one, and must be instituted at once. The Emperor orders the Grand Councilors to consult with the Tsung li Yamén on the subject, and to come to a decision as soon as possible, and then to memorialize the Throne. Any of the compilers and graduates of the Hanlin College, the secretaries of the Boards, the officers of the Palace Guards, expectant Intendants, Prefects, district Magistrates, and subordinate officials, sons and brothers of officials, the hereditary officials of the Eight Banners and the sons of the military officials of the Empire, can enter the College who wish to do so. By this means knowledge will be handed down from one generation to another. It will be strictly forbidden to members of the College to be careless or dilatory in their studies, or to introduce as students any of their friends without regard for the latter's capabilities, for such things would frustrate the benefit of this excellent plan of His Imperial Majesty."

A day later he issued the following: "The Tsung li Yamén have reported to the Throne that in obedience to instructions they have considered the requests contained in the memorial of the Vice President Jung Hui for the appointment of special Ministers of Commerce, and the sending of members of the Imperial family to visit foreign nations. Commercial matters are of the highest importance, and the suggestion is one which deserves to be acted upon. As the result of a former consultation of the Tsung li Yamén on the subject, commercial bureaus have been established at the capitals of the provinces, and the officials of each province have ordered the leading gentry and merchants to elect from their numbers managers of the bureaus, who will then draw up commercial regulations. It is to be hoped that strict conformity to these Regulations will lead to a daily improvement in trade, and the Emperor orders the Viceroy and Governors of the provinces to direct the gentry and merchants to strictly obey the official instructions, and to consult together for the most speedy and satisfactory arrangement of commercial matters, it is to be hoped that in this way the officials will be kept in touch with the merchants. We must not adhere blindly to our old customs. Let the officials of each province memorialize the Throne, and inform the Emperor how commercial affairs are managed in their respective provinces. With regard to the suggestion that members of the

Imperial Family should go abroad, this is a new departure, but is quite in accordance with modern custom. The Emperor, therefore, orders the Court of the Imperial clan to select from the Princes of the first three ranks any who are well versed in modern affairs and ideas, and who are on the side of modern improvement, and to inform the Emperor of their selection. The selected Princes will then await the Emperor's orders with regard to their journey."

On the 15th the following imperial mandate was published: "Weng Tung-ho, Assistant Grand Secretary and President of the Board of Revenue, has of late made many errors in the conduct of business, and has forfeited all confidence; on several occasions he has been impeached to the Throne. At his private audiences of the Emperor he has replied to His Majesty's questions with no regard for anything except his own personal feeling and opinion, and he has made no attempt to conceal his pleasure or displeasure either in his speech or in his countenance. It has gradually become clear that his ambition and rebellious feeling have led him to arrogate to himself an attempt to dictate to the Emperor. It is impossible to permit him to remain in the responsible position of a Grand Councillor. In former days a strict inquiry would have been held, and his crime punished with the utmost rigour of the law. Taking into consideration, however, his long service as tutor to the Emperor, His Majesty cannot bring himself to mete out to him such a severe penalty. Let Weng Tung-ho vacate his posts, and retire into private life, as a warning that he is preserved (from a worse fate)."

In transmitting this mandate to the British Foreign Office, Sir Claude MacDonald explained that Weng Tung-ho was a "reactionary," whose influence was invariably against innovation and progress, but personally "prepossessing, courteous, and scholarly—an excellent type of the Conservative Chinese statesman." But that the dismissal of Weng Tung-ho did not signify the triumph of the reform party was shown the same day by a decree commanding special honors to the Empress Dowager, who seemed to be losing no time in reasserting herself. "In future," said the edict, "whenever officials receive favours or gifts from the Empress Dowager, or receive promotion to the highest civil or military rank or to the Vice Presidency of a Board, they must after thanking the Emperor present themselves before the Empress Dowager and thank her, and in similar cases all provincial Tartar Generals, Lieutenant Generals, Viceroys, Governors, and Commanders in chief must write their thanks to the Empress Dowager (as well as to the Emperor)."

Other radically reforming decrees that were issued by the Emperor during June and early in July were described by the British Minister in a despatch dated July 9, as follows: "To effect a change in the agricultural methods of an ancient Eastern nation would seem a very hopeless task, but from a Decree published on the 4th instant it appears that a censor has made proposals for the establishment of a school of agriculture, on which the Tsung li Yamen were asked to report. The Decree founded on their Report states that agriculture is the basis of the State's wealth, and that measures for its revival are urgently needed. The provincial authorities

are, therefore, directed to examine all methods of cultivation, whether Chinese or foreign, with a view to their adoption by the people."

The Decree proceeds to promise rewards for successful treatment of agricultural problems, and to direct the translation and circulation in provincial Colleges of foreign works on the subject.

"Two Decrees, published on the 27th of June and 5th July, have reference to reforms in the Chinese army, but they throw no light on the nature of them, and merely refer certain suggestions to various Departments for examination. The last Decree I shall mention, which appeared on the 5th instant, contains a very frank admission of the need of reforms. It states that in foreign countries commerce and industry thrive and progress, while in China, though there is no lack of ability, it is fettered in the bonds of an ancient custom, and cannot free itself. As one means of assisting in its liberation it is ordained that any persons producing 'new books' (presumably books that show originality of thought, or being the first to use new methods, or to produce new instruments or appliances suitable for use, are to receive rewards from the State in the shape either of official employment, if they are fitted for it, or of some other distinction. In the case of inventions a certificate will be given, and the profits secured to the inventor for a fixed term of years—in fact patent rights will be granted. Rewards will also be given to those who, with their own resources, establish colleges, open up mines, or set up arsenals for the manufacture of rifles and cannon. In conclusion, the Tsung li Yamen are directed to draw up Regulations for effecting the above objects."

The zeal of the reforming movement was kept alive and its authors held their ground throughout the summer, and nearly to the end of September. On the 17th of that month, Sir Claude MacDonald wrote to Lord Salisbury: "Imperial Decrees intended to launch China on the path of reform continue to appear, though there are few signs of any of them taking practical effect. The Emperor is evidently learning that it is one thing to issue a reform Edict and another to get it obeyed. Not long ago a Decree was issued, the object of which was to make the Throne more accessible to the subordinate portion of the official world. At the beginning of this month a case was brought to His Majesty's notice, in which the Board of Ceremonies disobeyed this Decree by refusing to transmit a Memorial sent in by a Secretary. He was much enraged, and forthwith cashiered the six head officials of the Board, that is to say, the two Presidents and four Vice Presidents."

"On the 12th instant he followed this up by a fresh Decree dwelling on the circumstances and reiterating his previous instructions. Memorials were to be presented as they came in, it being of the highest importance, in the present critical state of public affairs, that all such communications should be examined as soon as possible. Obstruction and delay were to be punished with the utmost rigour, and special commands were given that the previous Edicts on reform, all of which were enumerated, were to be hung up in a public place in each Yamen throughout the Empire, so that no one should be ignorant of their contents. Not satisfied with all this, he issued, also on the 12th instant, a long and remarkable Decree calling attention to the advan-

ages of Western methods, and inveighing against degenerate officials and conservative Ministers, who not only could not assist him in adopting their methods, but spread in their midst a feverish desire to disturb the minds of the people. He wanted his subjects to know that they could depend on their Prince, and appealed to them to make China powerful by working for reform with "united minds." The previous orders were simplified, and the privilege of memorializing the Throne, which formerly was accorded to officers of a high rank, is now extended to practically every soul in the Empire.

Next day, the 15th September, another Decree repeated the terms of the above in clearer detail, and laid down precisely the procedure each class was to observe in making itself heard. The severest penalties were threatened should there be any interference with the free exercise of this privilege by the high officers of Government, who were commanded to report by telegram the steps they were taking to fulfil the Imperial wishes. The series of Decrees above quoted are naturally creating a great commotion in the Chinese official world, and it will be interesting to note their effect. — *Great Britain, Papers by Command, China, No. 1, 1898, pp. 129-139.*

The effect was soon known. It was one which brought the reformers to grief and their reform to an end.

A. D. 1898 September. Overthrow of the Reformers. Subjugation of the Emperor by the Empress-Dowager. His countermanning decrees. The Imperial reformer announced the downfall of his own authority on the 21st of September, in the following significant decree:

"The affairs of the nation are at present in a difficult position, and everything awaits reform. Let the Emperor am working day and night with all my powers and every day arrange a multitude of affairs. But despite my careful toil, I constantly fear to be overwhelmed by the press of work. I reverently recall that Her Majesty the Empress Dowager has on two occasions since the reign of Tang Chih 1861 assumed the reins of Government with great success in critical periods. In all she did Her Majesty showed perfection. Moved by a deep regard for the welfare of the nation, I have repeatedly implored Her Majesty to be graciously pleased to advise me in government and have received her assent. This is an assurance of prosperity to the whole nation, officials and people. Her Majesty will commence to transact business from today in the Side Hall. On the 23rd September, 1, the Emperor will lead my princes and high officials to make obeisance in the Chün ching Hall. Let the proper officials reverently and carefully prepare the training programme of the ceremony."

On the 25th he announced: "Since the 15th when I, the Emperor, have been frequently ill, my health, and in spite of long continued rest, it is still no great improvement. Should there be any persons, either in the capital or the provinces, who are highly skilled in treatment of disease, let the officials at once recommend them to the throne and await our orders. Should such men be in the provinces, let them be sent to the capital without the least delay."

On the 26th the unfortunate Emperor was made to send forth another decree, countering

ing the greater part of the orders he had been giving on the pretext that they had been misunderstood and badly carried out. The obstructive officers, which he had previously warned, and restored the permission to petition to princes and people to present memorials was withdrawn.

The original purpose of the decree was that we should see with our eyes and hear with the ears of everybody, but the Court has now opened wide the path of access to the throne, and if there are useful proposals for reform made in the statements of any of the different classes of officials they are bound to be observed, discussed and set into operation. At present various documents all able in character pour in. All are full of frivolous statements, some even without the extravagant and all are much wanting in order. Hereafter all officers whose duty it is to speak shall say what they have to say in fitting language. In no case will any proposed rules, persons or officers who are not competent to memorialize the throne are not permitted to submit sealed documents. The Chinese official newspaper, is of no benefit to good government and will vainly disturb men's minds, it is to be abolished at once. The Imperial edicts will be ground for the cultivation of talent. Apart from those which are already being gradually established in Peking and the provincial capitals, let the local officials in all prefectures and districts where it is proposed to establish minor colleges consider the local conditions and the convenience of the people. Let the temples which were to have been turned into colleges in the provinces remain as before, there is no need to make colleges of them and disturb the feelings of the people. Over and above the matters above mentioned, there are others, which have been duly considered and put into operation, and others which are under consideration, such as trade, agriculture, reorganization of the army, and the development of resources, all of which are of undoubted consequence to the State and the people, and must imperatively be introduced gradually. Those measures which are of no benefit to the present system of government, and are detrimental to the Constitution need not be discussed. Let the six Princes and the Tsung li Yamen make an investigation of these matters, consider them with special care, and submit a report to the throne so that they may be dealt with."

The events which attended and followed these decrees were reported by Sir Charles MacDonell on September 28, as follows: "The Decree [of the 21st] naturally created much excitement in Peking, and rumors of impending disaster to the most prominent of the advocates of reform were prevalent. Subsequent proceedings justified the alarm and assumed the character of a coup d'état. The same day the house of Chang Yin huan was surrounded by the police in search of one Kang Yu wei. This Kang Yu wei is a Chinese scholar of high repute who was, until lately, editor of a Chinese newspaper in Shanghai known as 'Progress.' He was a strong advocate of reform, and was this year recommended to the Emperor, and on his arrival in Peking was given a position of Secretary in the Board of Works. He is said to have acquired great influence over the Emperor, and to have been his adviser in his recent reform measures. Kang Yu wei could not be found, and it has subsequently transpired that he has escaped and

left Shanghai on the 27th in the English mail for Hong Kong. So keen was the hunt for him that on the 22nd all traffic was stopped on the Tientsin Railway line to prevent his passage. On the 24th instant orders were issued for the arrest of several officials who had been in a liaison with him, including Chang Yin-huan and Hsu Chih-chang. The latter had recommended Kang to the throne, and had been recently appointed President of the Board of Rites. Chang Yin-huan went to the Board of Punishments and has remained a prisoner since. The precise charge against Kang and his friends has not transpired, but it is supposed to be one of conspiring against the liberty and even the life of the Empress Dowager.

It was reported on the 25th that Chang was to be executed the same evening or early next morning, and I thought it advisable to make an appeal on his behalf for at least due consideration of any charge brought against him. The report reached me late in the afternoon, and it was therefore necessary to take prompt measures. It was supposed that Li Hung-chang had been consulted by the Empress Dowager in the matter. I accordingly addressed a letter to his Excellency pointing out the horror with which such sudden executions were regarded by all Western nations, and the bad effect the secret and hasty condemnation of an official of Chang's rank, who was so well known in Europe, would produce, and begged his Excellency to use what influence he possessed to prevent such hurried action. I concluded my letter by saying that I appended to him, Li, because he was the only Statesman now in Peking who was conversant with European methods, and would, therefore, thoroughly realize the disastrous impression which such a summary execution would produce throughout the Western world. It is well known that Li Hung-chang and Chang Yin-huan are deadly enemies, and it was generally reported that Chang's imprisonment was due to Li. The Grand Secretary replied saying that he highly respected my generous and humane motives, and he assured me that no summary action would be taken.

On the 30th Sir Claude reported: "Six of the reformers referred to in my despatch of the 28th September were executed on the 28th instant. They included a brother of Kang Yu-wei, the chief reformer, and, though subordinates, all were graduates and men of standing. Chang Yin-huan has been banished to Chinese Turkistan, where he is to be kept under rigorous surveillance. No precise crime is charged against him. The Edict announcing his punishment accuses him vaguely of being treacherous, fickle, and desecrating. Last night a long Decree appeared dealing with the so-called conspiracy. Kang Yu-wei is declared to have taken advantage of the Emperor's leaning towards beneficial reforms to plot a revolution, which was to be opened by surrounding the Palace at Wan Shou-shan, and seizing the Empress Dowager and the Emperor. The haste in executing Kang's chief accomplices, for it appears that the legal formalities had not been observed, is admitted to have been caused by Manchuials, whose dominant motive was fear of a revolution if punishment was delayed." *Great Britain, Papers by Command: China, No. 1, 1898, p. 291-4.*

A. D. 1898 (October).—The Empress-Dow-

ager.—Her past career.—Her character.—

The Empress Dowager, so called, who now recovered her ascendancy over the weak young Emperor, which the reformers had momentarily overcome, and who became again the real Sovereign of the Empire, as she had been for the past thirty years, was never Empress, not even as imperial consort, having been but the secondary wife of Hsien-feng, the Emperor who died from his capital on the approach of the Anglo-French forces in 1860 [see, in vol. 1, CHINA: A. D. 1856-1860]. But she took the title as the mother of that ill-starred monarch's heir, in which capacity she was allowed to share with the widow proper the regency during the minority of the Emperor Tung-chih (or Che, for there is no agreement as to the transliteration of Chinese sounds). The female dominion was not what was intended—was in fact an unforeseen result of the last will and testament of the Emperor Hsien-feng, who died at his hunting lodge at Jehu, whither he himself had been hunted by the victorious invaders.

The fundamental law of the Ta tsing dynasty is the Salic law. No woman and no eunuch can ever reign or rule. Conforming to the laws of his house, the Emperor in his will nominated a Council of Regency during the minority of his infant son, afterwards known as the Emperor Tung-chih. The Council was composed of two imperial princes and the Minister Sun cho. To his two wives, the true but childless one and the secondary one who was mother of the Prince Imperial, he bequeathed the guardianship of the infant. The Emperor placed his real confidence in the first, the legal wife, but he was fond of the other, the mother of his heir. A serious dilemma thus confronted him, which he thought to evade by placing in the hands of the Empress a private and personal testament, giving her absolute authority over her colleague, only to be exercised, however, in certain emergencies. As a matter of fact, the power was never called into exercise.

The Empress mother was twenty-seven years old, clever, ambitious, and apparently fearless. She conceived a scheme by which the position might be reversed, and confided it to her brother-in-law, Prince Kung. The ambition which the Empress mother confided to Prince Kung was nothing less than to suppress the Council of Regency, and set up in its place the authority of the two Empresses. Inasmuch, however, as they were ignorant of affairs, and women to boot, the Prince himself was to be the real executive and de facto ruler of the empire. Prince Kung yielded to the seduction, and thus became accessory to the violation of the dynastic law. The Regents were returning from the obsequies of the deceased Emperor when Prince Kung launched trumped-up charges against them of neglect of certain funeral rites, had them arrested on the road, and executed. By this summary violence the two Empresses were securely established as Regents, with Prince Kung as Chancellor of the empire. For a few years things went smoothly. From the relative position of the buildings in which they had their respective apartments, the ladies were known as the Eastern and Western Empresses, the former being the title commonly applied to the one whom we have termed the true Empress.

The 'Eastern Empress' was full of gentle sympathy and wider heart. She was, however, unconsciously yoked with her sternier husband, and the pair could never have really come together to any practical end. The life of the weaker humanity was only a quiver of sympathy.

The life and death of the Emperor, Prince Chih, the son of Hsien-feng, and the poor Empress regnant, seems more than a episode in the career of an imperial and virtuous mother. He died when two years of his full accession, removed from the eyes of men, as some would have believed, by quite other agencies, as others, no less likely to err.

With the disappearance of the Empress from the legal platform of the Empire, her disappearance. But her appeal had stood by what it had upon. She had, which to certain years, schooling in statecraft, and she resolved that, 'per fas et nefas,' remain where she would govern.

The story of her son's coup d'état of January, 1875, has been often related. How the Empress, so cruel to her own sister's child, he snatched out of its warm bed on a bitter night and conveyed into the Palace where he was proclaimed Emperor at daybreak. By this stroke the Regent, once grandfather of her own family, made account of a younger brother in law, the father of the child, to replace the elder who had become a shadow, and to sum up all, secured for her, so she may have of power. For she who could not move, the emperor could also make a revolution.

The Empress Regent of China (Book 1, Ch. 1, 1898).

A. D. 1898, October November, Outbreaks of popular hostility to foreigners. Guards for the Legations sent to Peking. Chinese troops removed.

The palace revolution, which overthrew the reforming party was followed by outbreaks of popular hostility to foreigners. Two messages were telegraphed to the Legations from Peking October 1st. One informed them that a Chinese mob at a point between Peking and the railway station yesterday afternoon had assembled several foreigners who had to pass that way from the train. Among those assembled was Mr. Mortimore of this Legation, and in English lady, who were severely attacked with mud and stones, a number of the British Legation had one of his ribs broken. There is a decided spirit of disturbance among the Chinese, though the fact that many foreigners were about yesterday in consequence of the mid autumn festival may go some way towards accounting for these outrages.

I have requested Admiral Seymour by telegraph to dispatch a vessel to Yaku, in case a guard should be required for the protection of this Legation, and I am making strong representations to the Tsungli Yamen.

This second despatch the British Minister answered, "I did not anticipate any danger, but should be anxious to see what will be produced as a result of the Japanese war, by the presence of a British force. The foreign Representatives decided to send for a small guard to protect the Legations. I have asked Admiral Seymour to send me twenty five marines in a machine gun. The German, Russian, American, and French Representatives had previously arranged for their guards."

On the 5th, Sir Claude MacDonald reported

"A meeting of foreign Representatives yesterday decided to notify the Chinese Government of the proposed departure from Tientsin to Peking tomorrow of bodies of British, German, and Russian marines, and to ask that all facilities, including a special train, should be extended to them by the Chinese authorities. The French, American, Japanese, and Italian marines to come straight on to Peking on their arrival at Tientsin. The meeting was held in consequence of the refusal of the Viceroy of Chihli to permit any foreign soldiers to leave Tientsin for Peking without special permission from the Tsungli Yamen. It is very likely that the Chinese Government will make a protest similar to that of 1895, but it would be very ill advised at the present crisis to give way to their protests, and it is absolutely necessary that the decision of the foreign Representatives should be put into effect."

The Chinese government did protest, but without effect. The legation guards were insisted upon, and, as speedily as possible, they were provided from the warships of the several powers, and quartered in Peking. Then the Chinese authorities brought troops to the capital, and the sense of danger at the legations grew. On the 25th of October Minister MacDonald cabled to London. "A serious menace to the safety of Europeans is the presence of some 10,000 soldiers, who have come from the Province of Kansu, and are to be quartered in the hunting park, two miles south of Peking. A party of these soldiers made a severe assault on four Europeans including Mr. C. W. Campbell, of this Legation, who were last Sunday visiting the railway line at Lukou Chiao. The foreign Ministers will meet this morning to protest against these outrages. I shall see the Yamen today, and propose to demand that the force of soldiers shall be removed to another province, and that the offenders shall be rigorously dealt with."

On the 29th he telegraphed again. "The Foreign Representatives met yesterday, and drafted a note to the Yamen demanding that the Kansu troops should be withdrawn at once. The troops in question have not been paid for some months, and are in a semi-mutinous state. They have declared their intention to drive all Europeans out of the north of China and have cut the telegraph wires and destroyed portions of the railway line between Lukou Chiao and Pao-ting Fu. Some disturbances have been caused by them on the railway to Tientsin, but the line has not been touched, and traffic has not been interrupted. In the city here all is quiet. The presence of these troops in the immediate vicinity of Peking undoubtedly constitutes a serious danger to all Europeans. The Yamen gave me a promise that the force should be removed, but have not yet carried it into effect."

On the 6th of November he reported that the Yamen had replied to the note of the Diplomatic Body acknowledging that the troops lacked discipline and were a source of danger, and again promising their removal, but that nothing had been done. He added, "It was decided unanimously to address a note to the Yamen stating that if the troops in question were not withdrawn by the 15th instant, our respective Governments would adopt such measures as they considered necessary for the protection during

the winter months of foreigners in Peking and Tientsin.

After several more exchanges of notes between the Diplomatic Body and the Yamen, peremptory on one side, apologetic on the other, the troops were removed to Chihchow, about 80 miles east of Peking, beginning their march November 15. A few days previously Sir Claude MacDonald had been able to report: "That two of the ringleaders in the attack on Mr. Campbell and other Europeans at Lu Kow chow [announced in despatch of Oct. 25] were brought into Peking and lodged in Mr. Campbell's presence at the Yamen and the Governor of the city on the 29th October. The men were sentenced to 1,000 blows each, but Mr. Campbell, after eighty blows had been inflicted, begged that the flogging might cease. It turned out that two other soldiers were struck by bullets from a small revolver, which was used by one of the railway engineers in self defence, and, chiefly for this reason, I did not press for more floggings."

"I attached more importance to the punishment of the officer in command, who, it appears, had been warned beforehand by the railway authorities to keep his men away from the railway bridge, but had refused to do so. I consider him the person really responsible for what happened, and at an interview on the 31st October I told the Yamen that I should not be satisfied, and the incident would not be closed, until I saw his degradation published in the official Gazette. On the 4th November an Imperial Decree was issued ordering this officer, a Colonel named Chu Wan-jung, to be handed over to the Board of War for punishment. The Masters inform me that this is likely to mean his degradation. I have, however, again warned their Excellencies that nothing short of this punishment will be satisfactory to Her Majesty's Government."—*Great Britain, Papers by Command: China, No. 1, 1899, pp. 258-59, and 332.*

A. D. 1898 (December).—Reorganization of Chinese armies. Reception by the Empress Dowager to the ladies of the Legations.—On the 29th of December Sir Claude MacDonald reported: "The reorganization of the land forces in the north appears to be occupying the serious attention of the Central Government. In the early half of this month Edicts were issued by the Empress Dowager approving proposals made by Jung Lu, who was appointed Generalissimo of northern armies immediately after the Kwang Yü wei conspiracy. The following are the principal features of these proposals. The armies under the command of Sung Ch'ing and others, that is to say all the brigaded troops in North China are to be organized in four corps—front, rear, right, and left—to occupy different strategic points. In addition, Jung Lu will raise a centre corps of 10,000 men, to be stationed presumably in or about Peking. . . . The importance of bringing the other four corps into an efficient state is dwelt upon, and the Edicts are sternly demanding the production of sufficient funds for the purpose. The Viceroy of Chihli is also instructed to closely scrutinize the condition of the Pelyang drilled troops—formerly Li Hung-chang's army—and bring them into order. They are to be under the orders of Jung Lu, instead of the Viceroy."

"The Viceroy's responsible for the Armies of North and Mid China are also commanded to see

to the immediate construction of quick firing guns and Mauser rifles and other war material, and to the preparation of maps of the coast for military purposes. Jung Lu has done nothing yet towards raising the centre corps, but is calling in the assistance of a German officer named Yin Chang, who holds a post in the Tien tsin Military Academy. He is reported to be able, and probably one of the best Chinese available for the work, but I question whether he will be given sufficient powers of control. He is now engaged in drawing up a scheme."

Bearing the same date as the above, was a despatch from Sir Claude MacDonald describing a reception given by the Empress Dowager, on the 31st, to the wives of the foreign representatives at Peking, "to accept their congratulations on the occasion of Her Imperial Majesty's birthday." "The ceremony," said the British Minister, "passed off extremely well. The Empress Dowager made a most favourable impression by her courtesy and affability. Those who went to the Palace under the idea that they would meet a cold and haughty person of strong imperious manners, were agreeably surprised to find Her Imperial Majesty a kind and courteous hostess, who displayed both the tact and softness of a womanly disposition." "Thus ended," wrote Sir Claude, in closing his despatch, "the incident which may be considered to mark another step in the nearer relations of China and foreign nations."—*Great Britain, Papers by Command: China, No. 1, 1899, pp. 12-15.*

A. D. 1898-1899.—Rioting in Shanghai consequent on French desecration of a cemetery.—French demand for extension of settlement ground in Shanghai.—English and American protests.—The outcome.—On the 18th of July, 1898, the following was reported by the British Consul General at Shanghai: "Serious rioting took place in the French Settlement on the 16th and the morning of 17th instant, in the course of which some fifteen natives lost their lives. The disturbance was due to an attempt of the French authorities to take possession of certain temple land known as the Ningpo Joss-house Cemetery. The ground is full of graves, and it is also used for depositing coffins until a favourable opportunity presents itself for removing them to the native districts of the deceased. The cemetery is within the limits of the French Settlement; originally it was far removed from the inhabited portion of the Settlement, but by degrees new streets have been laid out, and houses have been built, until the cemetery is surrounded by dwellings."

"Twenty-four years ago the French Municipality attempted to make a road through the cemetery, but such serious rioting broke out that the French Consul thought it prudent to abandon his claim to the ground, and gave the Ningpo Guild to understand that they would be left in undisturbed possession. As years have gone on, the nuisance of having a cemetery in the midst of a crowded Settlement has made itself more and more felt, and some months ago the French Municipal Council decided to expropriate the owners and to pay them compensation. The Ningpo Guild and the Chinese authorities were duly apprised of the intention, and they were urged to make their own arrangements for removing the coffins to some other site. They would not admit that the French had any right

to dispossess them, and they refused to vacate the cemetery. The French Consuls then gave the Chinese officials notice that the Municipal Council would take possession on a certain day, and as the day drew near the Taotai became very uneasy, and appealed to the Foreign Consuls to interfere in the matter, giving hints that serious rioting and loss of life would result if the French Consul persisted in his intentions.

On the morning of the 6th, the day appointed for taking possession of the cemetery, a detachment from the French cruiser *Calypso* and a strong body of police marched to the cemetery, and afforded protection to the workmen who were told off to make a breach in the cemetery wall by way of taking possession. An angry mob watched these operations, and, as time went on, the streets filled with crowds of men who moved about making hostile demonstrations, but the French showed great self-restraint, and no serious collision took place on that day. All night long the crowds filled the streets, and many lamps were smashed and lamp posts uprooted.

Early on Sunday morning a determined attack was made by the mob on one of the French police stations, and when the small body of men within saw that their lives were in danger, they opened fire. About the same time the police and the *Calypso's* men attacked bands of rioters in other quarters, with the result that on Sunday morning, as far as can be ascertained, fifteen men were shot dead or bayoneted, and about forty were seriously wounded. After that the rioters seemed to have become intimidated for a time, and the streets were left to the police. Meanwhile many of the shops in both Settlements were closed, and orders were sent to all Ningpo men—and they form 50 per cent. of the population—to go out on strike.

Some of the principal Ningpo merchants came forward in the afternoon, and through the good offices of a peace-maker came to an understanding with the French Consul, under which it was agreed that the French should postpone taking possession of the cemetery for one month, during which time the Ningpo Guild trust to come to some amicable arrangement. The French Consul has given them to understand that he will not recede from his position; the cemetery must be given up, but he is willing that this should be done in any way that will be most pleasing to the Ningpo residents.

On the 23d of August it was announced by telegram from Shanghai that "the dispute arising out of the Ningpo loss-house is about to be settled by French withdrawing their claims to remove the buildings in consideration for an extension of their concession as far as Si-ca Wei, an addition of 20 square miles." This raised contests from Great Britain and the United States, many of whose citizens owned property within the area thus proposed to be placed under French jurisdiction, and the distracted Tsung-tsun was threatened and pulled about by the contending parties for months. The final outcome was an extension of the general British Settlement at Shanghai (principally British and American) and a limited extension of French jurisdiction, controlled by the French.

The substance of the question was not reached until the end of 1899. *Great Britain, Powers and China*, No 1, 1899, and No 1, 1900.

A.D. 1898-1899 June-January.—Anti-mis-

sionary insurrection at Shun-ching, in Central Szechuan.—The following is from a communication addressed by the British Minister to the Tsung-tsun Viceroy, August 2, 1898: "At Shun-ching. For the local officials, with a few of the gentry, have for years shown themselves determinedly hostile to foreigners, and have refused to allow houses to be let to missionaries. British missionaries have in consequence been forced to quarter themselves in an inn for the last six years, but even that was apparently objected to, in 1894 there was a riot, and in 1895 another, in which two missionaries were treated with brutal violence. In May of this year a house was finally rented; the District Magistrate was notified, but neither he nor the Pao-ching Taotai issued proclamations or gave protection, though requested by the missionaries to do so. The Shun-ching Prefect, instead of giving protection, connived at the local opposition, and with the usual results. On the 15th June three missionaries were attacked and stoned, and one severely wounded while passing through the city, and though protection was asked of the Prefect, he gave none, and later he and the other officials repeatedly refused to issue a Proclamation or to take any measures whatever to avert disturbances. On the 20th the Prefect feigned sickness, and could not be appealed to, and on the 27th the house leased by the missionaries was destroyed, with all the property it contained. The Roman Catholic establishment was also gutted.

"As usual the disturbance did not end at Shun-ching. Later on a Roman Catholic Chapel at Ying-ching Hsien was attacked and looted, two native Christians killed, 10,000 taels of silver stolen, and a French priest [Father Fleury] seized and held to ransom by a band of rioters. I am also informed that other acts of brigandage have occurred, and that the Protestant missions at Pao-ching and Shih-hung are in grave danger. The Provincial Government appears to absolutely ignore the recent Imperial Decrees for the prevention of missionary troubles. All the conditions point to this, or to an utter incapacity on the part of those officers to exercise satisfactory control. Her Majesty's Consul, indeed, informs me that there is one band of brigands, led by an outlaw known as Yin Mau Tzu, which is able to terrorise two important districts in the centre of Szechuan and even to overawe the Chêngtu authorities. In connection with the Shun-ching affair Her Majesty's Consul has made the following demands:—1. Immediate restoration of their house to the missionaries, the officers to pay the whole cost of repairs. 2. Punishment of the ring-leaders. 3. The local headmen to give security for future good conduct. 4. Compensation for all property destroyed. 5. Punishment of officials in fault. I shall look to the Viceroy and see that these demands are fully satisfied and with the least possible delay."

But urgency from both England and France failed to stimulate action on the part of the Chinese government energetic enough to stop this anti-missionary movement in Central Szechuan. What seems to have been a riot at first became a formidable revolt. The action of the Provincial Government was paralysed by the fact that Father Fleury was still in Yin's hands, and would be killed if a move was made against the rebels. On the other side the Viceroy was in

formed by M. Haas, the French Consul, that if anything happened to the Father, the consequences to China would be disagreeable. The Taoist was in consequence making efforts to secure the release of the prisoner by paying black mail. In September it was reported that "Yü's power was increasing. His emissaries were scattered about in places beyond his immediate sphere of influence, and were attempting to stir up Secret Societies, and he had issued a manifest. A riot took place at Ho Chou, 60 miles north of Chungking, on the 14th September, the American mission hospital being partially looted and a Roman Catholic establishment destroyed by fire. The Provincial Government was acting weakly and unprofitably."

Towards the end of September, "Yü marched with about 2,000 untrained men and took up a position on the Ch'ing tu road, thence he moved east to Tung Liang, pillaging and burning the houses of Christians, and levying contributions on the rich. The Viceroy, at the request of the Consuls, was said to have sent 4,000 troops from Ch'ing tu, Lu Chou, and Ho ching to converge on Chungking. Twelve of the rebels, who had been seized at a place only 30 miles south of the port, were publicly executed with torture in Chungking on the 30th September." In October the report was that "fresh troops were arriving, and were taking up positions along the Ch'ing tu road, and the paces north of Chungking. Further executions had taken place. The Procurator of the French Mission estimated that up to date the total damage done by Yu Man tzu was twenty persons killed, the houses of 6,000 Christians burned and their property stolen, and twelve Missions destroyed."—*Great Britain, Papers by Command, China, No. 1, 1899, p. 249, and No. 1, 1900, p. 152.*

On the 12th of October, the United States Minister, Mr. Conger, sent to the State Department at Washington the following translation of a decree issued by the Empress Dowager on the 6th:

"From the opening of ports to foreign trade to the present time, foreigners and Chinese have been as one family, with undivided interests, and since missionaries from foreign countries are living in the interior, we have decreed, not three or four times, but many times, that the local officials must protect them, that the gentry and people of all the provinces must sympathize with our desire for mutual benevolence; that they must treat them truthfully and honestly, with out dislike or suspicion, with the hope of lasting peaceful relations."

"Recently there have been disturbances in the provinces, which it has been impossible to avoid. There have been several cases of riot in Szechuan, which have not been settled. The stupid and ignorant people who circulate rumors and stir up strife, proceeding from light to grave differences, are most truly to be detested. On the other hand, the officials, who have not been able at convenient seasons to properly instruct the people and prevent disturbances, can not be excused from censure."

"We now especially decree again that all high provincial officials, wherever there are churches, shall distinctly instruct the local officials to most respectfully obey our several decrees, to recognize and protect the foreign missionaries as they go about free, and to treat them with all courtesy. If lawsuits arise between Chinese and na-

tive Christians, they must be conducted with justice and speedily concluded. Moreover, they must command and instruct the gentry and people to fulfill their duties, that there may be no quarrels or disagreements. Wherever there are foreigners traveling from place to place, they must surely be protected and the extreme limit of our hospitality extended. After the issuance of this decree, if there is any lack of preparation, and disturbances should arise, the officials of the locality will be severely dealt with, whether they be viceroys or governors or others they shall be punished, and it will not avail to say we have not informed you.—*U. S. Consular Reports, Feb., 1899, p. 299.*

On the 1st of November the British Consular at Chungking announced "an alarming extension of the rebellion. Flourishing communities of Christians in four districts were destroyed, and heavy contributions were laid on non-Christians. The continued inactivity of the Government troops was chiefly attributable to orders from the Yamen to the effect that the first and foremost consideration was the rescue of Père Flenry. Negotiations were being carried on by the Chungking Taoist and the Chinese Generals for the Father's release, a ransom of 100,000 taels was offered, presents were sent to Yü and his mother, and he and his lieutenants were given battalions of the third rank." The next month, however, brought on the scene a new Viceroy who really wished to suppress the insurrection, though he complained that his hands were tied by the Yamen's instructions, which urged him to come to terms with Yü. At last this singularly energetic Viceroy got permission to fight the rebels. On arriving in front of the terrible Yü he found that the troops who had been stationed there previously were quite untrustworthy, and that the Generals and local officials were all more or less in league with the rebels. However, as soon as it was learnt that the Treasurer meant business, a number of the rebels dispersed. The main band, under Yü Man tzu, about 6,000 in number, was then surrounded in Ta Tsu Hsien, after a preliminary encounter in which the rebels lost some 100 men. By the 19th January, a Mayen was brought to bear on Yü's camp, and the rebels fled like rabbits. Yü begged Père Flenry to save his life, and next day released the Father, who found his way to the Treasurer, after some narrow escapes. Yü then surrendered."

It was said at the time that the French government was demanding an indemnity in this case to the amount of £150,000. Later it was understood that the French Minister at Peking had taken advantage of the pending missionary case to revive an old request for a Mining Commission.—*Great Britain, Papers by Command, China, No. 1, 1899.*

A. D. 1899.—Anti-missionary outbreaks, increasing piracy, and other signs of growing disorder in the country.—During 1899 there was a notable relaxation of the hard and ceaseless pressure upon China which governments, capitalists and speculators had been keeping up of late, in demands more or less peremptory for harbor leases, settlement grounds, railway franchises, mining privileges, and naval, railway and commercial advantages of every possible sort. But the irritation of the country and the bullying and "mercenary" of the treatment had received from the European nations revealed

staff of increasing outbreaks of popular hostility against foreigners, and these called out threats and promises for indemnity and punishment, which were chiefly as a rule in the treatment of those that rendered me tributary to western diplomacy in accordance with the people of the East. It was a time when the Chinese provoked by the child-sneak attacks and treacherous deceptions, with which their officials tried to lead the demands made on them, but gave useless offense, and were less plucky to be counted among the causes of what afterwards occurred.

Throughout most of the year the British Legation at Peking and the Consulate at Chungking were busied in obtaining satisfaction for the murder of Mr. Fleming, a missionary in the Catholic Mission station at Pang-Hai near Kwei-Yang. He had been killed and the mission looted in November, 1898. The Chinese authorities claimed that he had been killed by a band of rebels. The British Consul investigated and became convinced that the missionary had been the victim of a deliberate plot, directed by the headman of the village of Chung-An-tsiang, where the murder occurred, and connived at by the military official Lin. The Chinese government, adding to this conviction, caused two of the murderers to be executed, degraded and exiled all of the local officials who were involved in the crime except the headman, and paid an indemnity of \$10,000. But the headman escaped, and it was claimed by the governor of the province that he could not be found. The British authorities found evidence that he was being shielded by the governor, and demanded the dismissal of the governor, which was persistently refused. Finally, in October, 1899, the guilty headman was hunted down.

On the 18th of February, the British Minister complained energetically to the Tsung Li Yamén of the rapid increase of piracy on the Canton River. "Since November, 1898," he wrote, "that last three months no less than forty-seven cases of piracy on the Canton waters have been reported in the papers. In several of these cases a life was taken, and it may almost be said that a reign of terror exists on the waterways of the Kwangtung. Cargo boats are afraid to travel at night, or to move about except in company, and troops are becoming to a certain extent paralysed. The Viceroy is always sailing and it is difficult to have an interview with him. Her Majesty's Consul has repeatedly addressed him on the subject of these pirates in the strongest terms, but he can only obtain the stereotyped reply that strict instructions have been sent to the officials concerned. Admiral Ho, the Commander in Chief, who should properly be the officer to inaugurate a vigorous campaign against the pirates, appears absolutely supine and incapable of dealing with the evil. The complaints of the Hong Kong Government and Her Majesty's Consuls are a source of affairs in Canton waters which is quite intolerable. There is no security for life and property, and as British subjects are closely concerned it is my duty to inform your Highness. Your Excellencies must unless measures are immediately taken to prevent such outrages, be obliged to have to report, for the consideration of Her Majesty's Government, the advisability of taking steps to protect British lives and property, by the patrolling of the waterways or by placing guards on the steamers, the expense of which

would be the subject of a claim on the Chinese Government.

On the 28th of February, Herr von Bülow, the German Imperial Secretary of State for Foreign Affairs, announced in the Reichstag at Berlin, the receipt of a telegram from Peking, reporting that several Germans had been attacked and insulted in that town on the 24th, and had been compelled to take refuge in the side streets and narrow alleys. The Imperial Government, he said, had been already aware for some weeks past that a considerable feeling of irritation had manifested itself against foreigners in China, especially in the southern portion of the Province of Shantung. The Chinese Government were therefore warned of the necessity of maintaining order and securing public safety, and, upon the receipt of the telegram above referred to, the German Minister at Peking was instructed to impress upon the Chinese Government that, if such incidents were permitted to recur, or the perpetrators allowed to escape unpunished, the consequences for China would be very serious. "We have," Herr von Bülow declared, "neither the occasion nor the desire to interfere in the internal affairs of China. But it is our duty to watch lest the life and property of our fellow subjects, whether missionaries or traders, should be made to suffer through the internal complications in China."

In March, however, the state of things at and near Peking was so far improved that the Legation guards were being withdrawn. Sir Claude MacDonald obtained leave of absence and left Peking on the 3d for a visit to England, and the business of the Legation was conducted for a time by Mr. Bax Froude, the Chargé d'Affaires.

In June there was an anti-missionary riot at Kienning in the neighborhood of Foochow, excited by the murder of a boy, popular rumor ascribing the murder to foreigners. "In all directions," wrote one of the threatened missionaries, who gave an account of the occurrence, "murders were said to be taking place, though no bodies were ever found, that seemed of no consequence to the people, and the story was current, and was apparently generally believed, that these murders were done by men in our employ, and that we used the eyes and legs to make medicine. There were endless stories of people being kidnapped, chloroformed in the road by a bottle being held out to their nose, and the day I arrived it was said that eyes had been found at Tai-lui, a suburb of Kienning, and as I passed a crowd was actually on the spot seeking for the said eyes. The missionaries succeeded in escaping from the mob; but one native convert was killed, and the mission hospital and other premises were looted.

The ideas and the state of feeling out of which this attack on the missionaries and their converts grew are revealed in the following translation of a placard that was posted in Kienning in June. "We of this region have hitherto led a worthy life. All the four castes (scholars, agriculturists, artisans, traders) have kept the laws and done their duty. Of late foreigners have suddenly come among us in disorderly march and preaching heretical doctrines. They have had from us indulgent treatment, but they have repaid us by endangering our lives. This year in town and country, people have been to win in two men and women in numbers have fallen upon evil days.

Everywhere the perpetrators have been seized, and every one of them has confessed that it was by the missionary chapels they were emboldened to go forth and slay men and women, to cut out their brains and marrow to make into medicine. The officials deliberately refrained from interfering. They glibbed the evidence and screened the malefactors. The whole country side is filled with wrath, the officials then posted Proclamations, and arrested spreaders of false reports. The lowering down of men is hateful, but they issued no Proclamations forbidding that. Now fortunately the people is of one mind in its wrath. They have destroyed two chapels. The Onning ruffian has issued another Proclamation holding this to be the work of local rowdies. He little knows that our indignation is righteous, and that it is a unanimous expression of feeling. If the officials authorize the police to effect unjust arrests, the people will unite in a body, in every street business will be stopped, and the Wuli missionary chapel will be destroyed, while the others themselves will be turned out of the city, and the converts will be slain and overthrown. When cutting grass destroy the roots at the same time. Do not let dead ashes spring again into flame."

A settlement of the Kienning case was arranged locally between the British Consul at Foochow, Mr. Playfair, and the Viceroy of the province. The views of the Consul were expressed in a communication to Mr. Bax transcribed as follows: "Since the missionaries established themselves there it is the sixth attempt made to drive them out of the region. The common people (from what I can gather) have no animosity against the foreign preacher of the Gospel, and show none, on the contrary, whether moved to accept Christianity or not, they appear to recognize that missionaries are in any case there for benevolent and beneficial objects. Schools and hospitals are independent of proselytizing, and, even if the missionaries were never to make another convert, they would be doing good and useful work in spreading Western knowledge and healing the sick. In addition to this, the presence of missionaries in out of the way places in China has an unquestionable advantage. To use the phrase of Sir Thomas Wade, they 'multiply the points of contact' and familiarize the Chinese with the sight of the European. To the missionary, either as a preacher of the Gospel or as a dispenser of benefits, the populace at Kienning does not seem to have shown any aversion; yet six times this populace has risen and tried to drive the missionaries from the place. The logical inference is that the Kienning peasant, though tolerant by nature, is subject to some outside influence. He is moved, not by what he sees, but by what he is told exists beyond his range of vision, and these things are pointed out to him by such as he believes to be his intellectual superiors, and as have, therefore, the faculty of perceiving what is hid from himself. The history of almost every anti-missionary movement in China points to the same process. Why the chronic diseases of this land should be so inveterately hostile to the foreigner is a difficult question to answer. It has been suggested that the Chinese of this type have an ineradicable conviction that every European is at heart a 'land grabber', and missionaries are the advance agents of their Governments, that the Bible is

the certain forerunner of the gun boat, and that where the missionary comes as a superior he means to stay as a proprietor, consequently that the only hope of integrity for China is that her loyal sons should on every occasion resist the baneful germ. Extravagant and in the instance of Kienning far fetched as these notions may seem, I am convinced that the literati and gentry have been at the root not only of the present outbreak, but of the others which have preceded it. While, therefore, I have insisted throughout that Kienning must be made a place of safe residence for the British missionaries, I have considered that the only way to attain that result will be to shackle the hands of the gentry by making any further breach of the peace a sure precursor of punishment."

To this end, Mr. Playfair's exactions included not only the trial and punishment of those guilty of the riot and the murder, but the signing of a bond by twenty-four leading nobles of Kienning, binding them, with penalties, to protect the missionaries. His demand was complied with, and, on the 29th of September, he reported that the required bond had been given. He added: "Before accepting it, however, I required the authorities to inform me officially that the terms which to me seemed somewhat vague, were understood by the authorities to extend the responsibility of the gentry to any outbreak of the populace." I received this intimation and I consider that it supplements the original wording effectually."

In November the German government made public the substance of an official telegram received from Peking, reporting a serious state of disturbance in the German missionary districts of Shantung. "It appears from this communication that the followers of the sects of the 'Red Fist' and the 'Great Knife' are in a state of revolt against the Administration and the people in that province, and are engaged in plunder and rapine in many places. The native Christians suffer no less than the rest of the population by this revolt. Money was usually extorted from them, and their dwellings were pillaged or destroyed. The Italian Mission, situated in the adjoining district, were faring no better, and their chapel had just been burned down. Owing, however, to the unremitting representations of the German Minister, the Chinese Government have caused several of the agitators to be arrested by the local authorities, and they are taking further steps in this direction, with the result that order is gradually being restored. At several places the native Christians, with their non-Christian fellow countrymen, repulsed the rebels by force of arms. The Provincial Governor has promised the authorities of the Mission adequate indemnity for the losses suffered by them and by the other Christians, and several payments have already been made."

On the 11th of December, the following despatch was sent to London from the British Legation at Peking: "During the delimitation of French leased territory at Kwang chau wan on the 10th November, Chinese villagers seized two French officers and decapitated them. The execution of a dignitary—the Prefect concerned in the matter—has been demanded by the French Minister as well as the dismissal of the Canton Viceroy who is also implicated. The Chinese Commissioner engaged in the delimitation and the gun-

location which he travelled are held by the French authorities.

A. D. 1899 (March). The Tsung-li Yamén. Its character and position. — **The power of the Empress Dowager.** The Tsung-li Yamén is a small body of Counsellors who form a species of Cabinet, with a special designation to advise the Emperor on foreign affairs. They have no constitutional position whatever; they have no powers except those derived from the Emperor, and they are very much afraid for themselves. He may by mere fiat deprive them of their rank, which is high; he may squeeze them of their wealth, which is often great; he may banish them from the delights of Peking to very unpleasant places; or he may order them to be quietly decapitated or cut slowly into little pieces. At such times their preoccupation is neither their country nor their immediate business, nor even their own advancement, but to avoid offending the irritable earthly deity who holds their lives and fortunes in his hands. Such a time it is just now. The Empress Dowager is Emperor in all but name; she has others and a will, and she is suspicious to the last degree. There is no possibility of opposing her, for she has drawn together eighty thousand troops round Peking, while she pays their Generals well; even anybody she pleases, there is no possibility of appeal from her, for she represents a theocracy; and there is no possibility of overpowering her mind, for she is that dreadful phenomenon four or five times revealed in history, an Asiatic woman possessed of absolute power, and determined to sweep away all who oppose or whom she suspects of opposition from her path. Under her regime the members of the Tsung-li Yamén are powerless nonentities, trembling with fear lest, if they make a blunder, they may awaken the anger of their all-powerful and implacable Sovereign, whose motives they themselves often fail to fathom. *The Spectator (London), March 18, 1899.*

A. D. 1899 (March-April). — Agreement between England and Russia concerning their railway interests in China. — On the 28th of April, 1899, the governments of Great Britain and Russia exchanged notes, embodying such agreement practically arrived at in the previous month concerning their respective railway interests in China, in the following terms: "Russia and Great Britain, animated by the sincere desire to avoid in China all cause of conflict on questions where their interests meet, and taking into consideration the economic and geographical gravitation of certain parts of that Empire, have agreed as follows: — 1. Russia engages not to seek for her own account, or on behalf of Russian subjects or of others, any railway concessions in the basin of the Yangtze, and not to obstruct, directly or indirectly, applications for railway concessions in that region supported by the British Government. 2. Great Britain, on her part, engages not to seek for her own account, or on behalf of British subjects or of others, any railway concessions to the south of the Great Wall of China, and not to obstruct, directly or indirectly, applications for railway concessions in that region supported by the Russian Government. The two contracting parties, having nowise in view to infringe in any way the sovereign rights of China or of ex-

isting treaties, will not fail to communicate to the Chinese Government the present arrangement, which, by averting all cause of complication between them, is of a nature to consolidate peace in the far East, and to serve the primordial interests of China herself.

Second Note. — In order to complete the notes exchanged this day respecting the partition of spheres for concessions for the construction and working of railways in China, it has been agreed to record in the present additional note the arrangement arrived at with regard to the line Shanghai-Kuan Newchwang, for the construction of which a loan has been already contracted by the Chinese Government with the Shanghai-Hongkong Bank, acting on behalf of the British and Chinese corporation. The general arrangement established by the above mentioned notes is not to infringe in any way the rights acquired under the said loan contract, and the Chinese Government may appoint both an English engineer and a European accountant to supervise the construction of the line in question, and the expenditure of the money appropriated to it. But it remains understood that this fact can not be taken as constituting a right of property or foreign control, and that the line in question is to remain a Chinese line under the control of the Chinese Government, and can not be mortgaged or alienated to a non-Chinese Company. As regards the branch line from Siaohedchun to Summiting, in addition to the aforesaid restrictions, it has been agreed that it is to be constructed by China herself, which may permit Europeans, not necessarily British engineers, to periodically inspect it, and to verify and certify that the work is being properly executed. The present special agreement is naturally not to interfere in any way with the right of the Russian Government to support, if it thinks fit, applications of Russian subjects or establishments, for concessions for railways, which, starting from the main Manchurian line in a southwesterly direction, would traverse the region in which the Chinese line terminating at Summiting and Newchwang is to be constructed." — *Great Britain, Papers by Command, Treaty Series, No. 11, 1899.*

A. D. 1899 (April). — Increasing ascendancy of Manchus in the government. — On the 17th of April, Mr. Balfour reported to Lord Salisbury: "There has been no change of importance to note in the political situation. The tendency to replace Chinese by Manchus in the important political posts of the Empire is increasing. There are sixty-two Viceroys, Governors, Treasurers, and Judges of the eighteen provinces and the New Dominion. Twenty-four of these posts are now held by Manchus, whereas before the coup d'état only thirteen of them were so occupied. So large a percentage of Manchus in the highest positions tends to indicate a retrograde administration, as the Manchus are, as a race, very inferior to the Chinese in intelligence and capacity, and their appointment to important positions is viewed with disfavour by the Chinese themselves. The Dowager Empress has sent special instructions both to Moukden and Kirin to raise the present standard of the Manchu schools in those towns to that existing in the ordinary schools in Peking." — *Great Britain, Papers by Command, China, No. 1, 1899, p. 129.*

A. D. 1899 (May-July). — Representation

in the Peace Conference at The Hague. See on this vol. I *PEACE CONFERENCE*.

A. D. 1899 (August).—Talienwan declared a free port.—The Emperor of Russia in a quaintly worded Imperial Order issued on Sunday last [August 14] and addressed to the Minister of Finance, has declared that after the completion of the railway Talienwan shall be a free port during the whole duration of the lease from China. In the course of the Order the Emperor says: "Thanks to the wise decision of the Chinese Government, we shall through the railway lines in course of construction be united with China, a result which gives to all nations the immeasurable gain of easy communication and lightens the operations of the world's trade." The Emperor also speaks of "a rapprochement between the peoples of the West and East" (brought about apparently by obtaining an outlet for the great Siberian railway) as "our historic task." *Spectator (London), Aug. 19, 1899.*

A. D. 1899 (December).—Li Hung-chang appointed Acting Viceroy at Canton. On the 20th of December it was announced that the Viceroy at Canton had been ordered to Peking and that Li Hung-chang had been appointed Acting Viceroy of Kwangtung and Kwangsi—the provinces of which Canton is the Viceroyal seat.

A. D. 1899-1900 (September—February).—Pledges of an "open-door" commercial policy in China obtained by the government of the United States from the governments of Great Britain, Russia, France, Germany, Italy and Japan.—On the 6th of September, 1899, the American Secretary of State, Mr. John Hay, despatched to the United States Ambassador at Berlin the following instructions, copies of which were forwarded at the same time to the Ambassadors at London and St. Petersburg, to be communicated to the British and Russian governments:

"At the time when the Government of the United States was informed by that of Germany that it had leased from His Majesty the Emperor of China the port of Kiao-chiao and the adjacent territory in the province of Shantung, assurances were given to the ambassador of the United States at Berlin by the Imperial German minister for foreign affairs that the rights and privileges insured by treaties with China to citizens of the United States would not thereby suffer or be in anywise impaired within the area over which Germany had thus obtained control. More recently, however, the British Government recognized by a formal agreement with Germany the exclusive right of the latter country to enjoy in said leased area and the contiguous 'sphere of influence or interest' certain privileges, more especially those relating to railroads and mining enterprises; but, as the exact nature and extent of the rights thus recognized have not been clearly defined, it is possible that serious conflicts of interest may at any time arise, not only between British and German subjects within said area, but that the interests of our citizens may also be jeopardized thereby. Earnestly desirous to remove any cause of irritation and to insure at the same time to the commerce of all nations in China the undiminished benefits which should accrue from a formal recognition by the various powers claiming 'spheres of interest' that they shall enjoy perfect equality

of treatment for their commerce and navigation within such 'spheres,' the Government of the United States would be pleased to see His Imperial Majesty's Government give formal assurances and lend its cooperation in securing such assurances from the other interested powers, each within its respective sphere of whatever influence.

"First.—Will in no way interfere with any treaty port or any vested interest within an enclosed 'sphere of interest' or leased territory it may have in China.

"Second.—That the Chinese treaty tariff of the time being shall apply to all goods landed or shipped to all such ports as are within said 'sphere of interest' unless they be 'free ports,' no matter to what nationality they belong, and that duties so leviable shall be collected by the Chinese Government.

"Third.—That it will levy no higher harbor duties on vessels of another nationality transiting any port in such 'sphere' than shall be levied on vessels of its own nationality, and no higher railroad charges over lines built, controlled or operated within its 'sphere' on merchandise belonging to citizens or subjects of other nationalities transported through such 'sphere' than shall be levied on similar merchandise belonging to its own nationals transported over equal distances.

"The liberal policy pursued by His Imperial German Majesty in declaring Kiao-chiao a free port and in aiding the Chinese Government in the establishment thereof of a custom house, is so clearly in line with the proposition which this Government is anxious to see recognized that it entertains the strongest hope that Germany will give its acceptance and hearty support. The recent ukase of His Majesty the Emperor of Russia declaring the port of Ta-lien-wan open during the whole of the lease under which it is held from China, to the merchant ships of all nations, coupled with the categorical assurances made to this Government by His Imperial Majesty's representative at this capital at the time, and since repeated to me by the present Russian ambassador, seem to insure the support of the Emperor to the proposed measure. Our minister at the Court of St. Petersburg has, in consequence, been instructed to submit it to the Russian Government and to request their early consideration of it. A copy of my instruction on the subject to Mr. Tower is herewith inclosed for your confidential information. The commercial interests of Great Britain and Japan will be so clearly served by the desired declaration of intentions and the views of the Governments of these countries as to the desirability of the adoption of measures insuring the benefits of equality of treatment of all foreign trade throughout China are so similar to those entertained by the United States, that their acceptance of the propositions herein outlined and their cooperation in advocating their adoption by the other powers can be confidently expected. I inclose herewith copy of the instruction which I have sent to Mr. Chenot on the subject. In view of the present favorable conditions, you are instructed to submit the above considerations to His Imperial German Majesty's minister for foreign affairs, and to request his early consideration of the subject. Copy of this instruction is sent to our ambassadors at London and at St. Petersburg for their information." Subsequently the same pro-

posal was addressed to the governments of France, Italy and Japan.

On the 10th of November Lord Salisbury addressed Ambassador Corti the reply of his government as follows: "I have the honor to state that I have cordially assented to communication with my colleagues of the proposal contained in your excellency's note of September 22 that a declaration should be made by foreign powers relating to 'spheres of interest' in China as to their intentions in regard to the treatment of foreign trade and investment therein. I have much pleasure in informing your excellency that Her Majesty's Government will be prepared to make a declaration in the sense desired by your Government in regard to the leased territory of Weihai Wei and all territory in China which may hereafter be acquired by Great Britain by lease or otherwise, and all spheres of interest now held or that may hereafter be held by her in China, in a declaration of a similar declaration is made by other powers concerned."

Ambassador Porter at Paris received a prompt reply December 16 from the French Minister for Foreign Affairs, M. Delcasse, in the following note: "The declarations which I made in the Chamber on the 14th of November last, and which I have had occasion to recall to you, since then, show clearly the sentiments of the Government of the Republic. It desires throughout the whole of China and with the quite natural reservation that all the powers interested give an assurance of their willingness to act likewise, is ready to apply in the territories which are leased to it equal treatment to the citizens and subjects of all nations, especially in the matter of customs duties and navigation dues, as well as transportation tariffs on railways."

Vice-Admiral Minister for Foreign Affairs, replied to the government of Japan, December 20, in the following note to Minister Hay: "I have the happy duty of assuring your excellency that the Imperial Government will have no hesitation to give their assent to so just and fair a proposal of the United States, provided that all the other powers concerned shall accept the same."

The reply of the Russian government was addressed to Ambassador Tower by Count Mouraviev on the 30th of December, in the following terms: "In so far as the territory leased by China to Russia is concerned, the Imperial Government has already demonstrated its firm intention to follow the policy of 'the open door' by creating Dalny (Talien-wan) a free port, and that at some future time that port, although remaining free itself, should be separated by a customs limit from other portions of the territory in question, the customs duties would be levied, in the zone subject to the tariff, upon all foreign merchandise without distinction as to nationality. As to the ports now opened or hereafter to be opened to foreign commerce by the Chinese Government, and which lie beyond the territory leased to Russia, the settlement of the question of customs duties belongs to China herself, and the Imperial Government has no intention whatever of claiming any privileges for its own subjects to the exclusion of other foreigners. It is to be understood, however, that this assurance of the Imperial Government is given upon condition that a similar declaration shall be made by other Powers having interests in China."

With the conviction that this reply is sufficient to satisfy the inquiry made in the aforementioned note, the Imperial Government is happy to have complied with the wishes of the American Government, especially as it touches the highest value of anything that may strengthen and consolidate the traditional relations of friendship existing between the two countries.

On the 17th of January the reply of the Italian government was addressed to Minister Prignani at Rome by the Marquis Visconti Venosta, as follows: "Supplementary to what you had already done in the honor of communicating to me in your note of December 9, 1899, your excellency informed me yesterday of the telegraphic note received from your Government that all the powers consulted by the United States of Washington concerning the suitability of adopting a line of policy which would insure to the trade of the whole world equality of treatment in China have given a favorable reply. Referring to your communications and to the statements in my note of December 24, 1899, I take pleasure in saying that the Government of the King adheres willingly to the proposals set forth in said note of December 9."

Finally, on the 19th of February, Count von Ballow wrote to Ambassador White, at Berlin:

"As recognized by the Government of the United States of America according to your excellency's note."

The Imperial Government has from the beginning not only asserted but also practically carried out to the fullest extent in its Chinese possessions absolute equality of treatment of all nations with regard to trade, navigation and commerce. The Imperial Government entertains no thought of departing in the future from this principle, which at once excludes any prejudicial or disadvantageous commercial treatment of the citizens of the United States of America so long as it is not forced to do so on account of considerations of reciprocity, by a divergence from it by other governments. If, therefore, the other powers interested in the industrial development of the Chinese Empire are willing to recognize the same principles, this can only be desired by the Imperial Government, which in this case upon being requested will gladly be ready to participate with the United States of America and the other powers in an agreement made upon these lines by which the same rights are reciprocally secured."

Having, now, the assent of all the Powers which hold leased territory or claim "spheres of interest" in China, Secretary Hay sent instructions to the Ambassadors and Ministers representing the government of the United States at the capital of each, in the following form:

"The Government, having accepted the declaration suggested by the United States concerning foreign trade in China, the terms of which I transmitted to you in my instruction No. — of —, and like action having been taken by all the various powers having leased territory or so-called 'spheres of interest' in the Chinese Empire, as shown by the notes which I herewith transmit to you, you will please inform the government to which you are accredited that the condition originally attached to its acceptance—that all other powers concerned should likewise accept the proposals of the United States—having been complied with, this

Government will therefore consider the assent given to it by — as final and definitive." — *United States, 56th Cong., 1st Sess., House Doc., No. 517.*

A. D. 1900 (January).—Imperial Decree relative to the succession to the Throne.—The following is a translation of an Imperial Decree, "by the Emperor's own pen," which appeared in the *Peking Gazette*, January 24, 1900:

"When at a tender age we entered into the succession to the throne, Her Majesty the Empress Dowager graciously undertook the rule of the country as Regent, taught and guided us with diligence, and managed all things, great and small, with unremitting care, until we ourselves assumed the government. Thereafter the times again became critical. We bent all our thoughts and energies to the task of ruling rightly, striving to requite Her Majesty's loving kindness, that so we might fulfil the weighty duties intrusted to us by the late Emperor Mu Tsung Yi (T'ung Chih). But since last year we have suffered from ill health, affairs of State have increased in magnitude and perplexity, and we have lived in constant dread of going wrong. Reflecting on the supreme importance of the worship of our ancestors and of the spirits of the land, we therefore implored the Empress Dowager to advise us in the government. This was more than a year ago, but we have never been restored to health, and we have not the strength to perform in person the great sacrifices at the altar of Heaven and in the temples of the spirits of the land. And now the times are full of difficulties. We see Her Gracious Majesty's anxious toil by day and by night, never laid aside for rest or leisure, and with troubled mind we examine ourselves, taking no comfort in sleep or food, but ever dwelling in thought on the labours of our ancestors in founding the dynasty, and ever fearful lest our strength be not equal to our task.

"Moreover, we call to mind how, when we first succeeded to the throne, we reverently received the Empress Dowager's Decree that as soon as a Prince should be born to us he should become the heir by adoption to the late Emperor Mu Tsung Yi (T'ung Chih). This is known to all the officials and people throughout the Empire. But we suffer from an incurable disease, and it is impossible for us to beget a son, so that the Emperor Mu Tsung Yi has no posterity, and the consequences to the lines of succession are of the utmost gravity. Sorrowfully thinking on this, and feeling that there is no place to hide ourselves for shame, how can we look forward to recovery from all our ailments? We have therefore humbly implored Her Sacred Majesty carefully to select from among the near branches of our family a good and worthy member, who should found a line of posterity for the Emperor Mu Tsung Yi (T'ung Chih), and to whom the Throne should revert hereafter. After repeated entreaties, Her Majesty has now deigned to grant her consent that P'u Chün, son of Tsai Yi, Prince Tuan, should be adopted as the son of the late Emperor Mu Tsung Yi (T'ung Chih). We have received Her Majesty's Decree with unspeakable joy, and in reverent obedience to her gracious instruction we appoint P'u Chün, son of Tsai Yi, as Prince Imperial, to carry on the dynastic succession. Let this Decree be made known to all men." — *Great Britain, Parliamentary Pub-*

lications (Papers by Command: China, No. 3, 1900, pp. 15-16).

A. D. 1900 (January-March).—First accounts of the secret society of "the Boxers" and their bloody work. The murder of Mr. Brooks, the missionary. Prolonged effort of foreign Ministers to procure an Imperial Edict for the suppression of the hostile secret societies.—A naval demonstration recommended.—Testimony of Sir Robert Hart as to the causes and the patriotic inspiration of the Boxer movement.—The Year 1900 opened with news of the murder of Mr. Brooks of the Church of England Mission in northern Shantung, who was wounded and captured December 30 and beheaded the day following by a band of marauders belonging to a secret organization which soon became notorious under the name of the society of "the Boxers".

The British Minister at Peking reported it to London on the 4th of January, and on the 5th he gave the following account of the state of affairs in northern Shantung, where the outrage occurred: "For several months past the northern part of the Province of Shantung has been disturbed by bands of rebels connected with various Secret Societies, who have been defying the authorities and pillaging the people. An organization known as the 'Boxers' has attained special notoriety, and their ravages recently spread over a large portion of Southern Chihli, where the native Christians appear to have suffered even more than the rest of the inhabitants from the lawlessness of these marauders. The danger to which, in both provinces, foreign missionary establishments have been thus exposed, has been the subject of repeated representations to the Chinese Government by others of the foreign Representatives—especially the German and United States' Ministers—and myself. Early last month the Governor of Shantung, Yü Hsün, was ordered to vacate his post and come to Peking for audience, and the General Yuan Shih K'ai was appointed Acting Governor in his place. In Southern Chihli the task of dealing with the disturbances was entrusted to the Viceroy at Tien tsin. Her Majesty's Consulate at Tien tsin has had repeatedly to complain to the latter of the inadequacy of the protection afforded to British life and property in the districts affected by the rebellion; and in consequence of these representations and of my own communications to the Tsung li Yamén, guards of soldiers have been stationed for the special protection of the missionary premises which were endangered. On the 29th ultimo I took occasion to warn the Yamén by letter that if the disorder were not vigorously quelled, international complications were likely to ensue."

After narrating an interview with the Tsung li Yamén on the subject of the murder of Mr. Brooks, and repeating the assurances he had received of vigorous measures to punish the murderers, Minister MacDonald concluded his despatch by saying: "In a note which I addressed to the Yamén this morning I took occasion to remind the Ministers that there were other British missionaries living in the district where Mr. Brooks was killed, and to impress upon their Excellencies the necessity of securing efficient protection to these. I do not, however, entertain serious apprehensions as to their safety, because guards of soldiers have been for

some time past stationed to protect the various missionary residences. The unfortunate man who was murdered was seized when he was traveling by which means, without resort, through the agency of the rebels.

A few days later, Bishop Scott, of the Church of England Mission at Peking, received from Mr. Brown, another missionary in Shantung province, the following telegram: "Outlook very dark, daily marauding, constant danger. For suppressing published troops present, but useless, officials complete inaction. Tai An Prefecture blocks secret orders from Throne to enforce. On this Sir Claude again called upon the Yamen, and spoke to them," he says, "in terms of the gravest warning. While I could not believe it possible I said that the rumours of secret orders from the Throne were true, the mere fact of the currency of such rumours showed the impression which the conduct of the Government conveyed to the public. So much was I impressed by this, that I had come today, especially to protest against the behaviour of the Shantung officials. The whole of the press could hardly could be traced to the attitude of the Governor of Shantung, Yü Hsien, who secretly encouraged the seditious Society known as the 'Boxers'. I had again and again pointed out to the Ministers that until China dealt with the high authorities in such cases these outrages would not cease. I asked the Ministers to telegraph to the new Governor Yüan that I had called the Yamen that day to complain of the conduct of the Prefect of Tai An. The Ministers attempted to excuse the inertia of the local officials on the plea that their difficulties were very great. The primary cause of the trouble was the bad feeling existing between the converts and the ordinary natives. This had developed until bands of marauders had formed, who harassed Christians and other natives alike. The local officials had hitherto not had sufficient force to cope with so widespread a rising, but now that Yüan and his troops had been sent to the province, they hoped for the speedy restoration of order. I impressed upon the Ministers in the most emphatic manner my view of the gravity of the situation. The Imperial Edict expressing sorrow for what had occurred and enjoining strong measures was satisfactory so far as it went, but Her Majesty's Government required something more than mere words, and would now await action on the part of the Chinese Government in conformity with their promises."

The day of this interview (January 11), an Imperial Decree was issued by the Chinese Government, opening in ambiguous terms and declaring nothing. "Of late," it said, "in all the provinces brigandage has become daily more prevalent, and missionary cases have recurred with frequency. Most critics point to seditious Societies as the cause, and ask for rigorous suppression and punishment of these. But reflection shows that Societies are of different kinds. Which without vengeance form themselves into bands and sworn confederacies, and relying on their numbers create disturbances, the law can show no directly no leniency to them. On the other hand, when peaceful and law-abiding people practise their skill in mechanical arts for the self-preservation of themselves and their families or when they combine in village communities for the mutual protection of the rural

population, this is in accordance with the public-spirited principle enjoined by Mencius of 'keeping men as well and giving mutual help. Some local uprisings, when a case arises, do not regard this distinction, but I strive to take and allie rumours, regard all alike as seditious Societies, and involve all in one indiscriminate slaughter. The result is that no distinction being made between the good and the evil, men's hands are thrown into confusion. This is, indeed, 'adding fuel to stop a fire,' 'driving fish to the deep part of the pond to catch them.' It means, not that the people are disorderly, but that the administration is bad."

The foreign ministers at Peking soon learned that this ambiguous decree had given no encouragement to the "Boxers," and the British, American, German, French and Italian representatives by agreement addressed an "admonition" to the Yamen, dated January 27, in which referring to the state of affairs in north Shantung and in the centre and south of Chahli, each one said: "This state of affairs, which is a disgrace to any civilized country, has been brought about by the riotous and lawless behaviour of certain ruffians who have banded themselves together into two Societies, termed respectively the 'Fist of Righteous Harmony' and the 'Big Sword Society,' and by the apathy, and in some instances actual connivance and encouragement of these Societies by the local officials. The members of these Societies go about pillaging the homes of Christian converts, breaking down their chapels, robbing and ill-treating inoffensive women and children, and it is a fact, to which I would draw the special attention of your Highness and your Excellencies, that on the banners which are carried by these riotous and lawless people are inscribed the words, 'Exterminate the Foreigners!'"

"On the 14th January an Imperial Decree was issued drawing a distinction between good and bad Societies. The wording of this Decree has unfortunately given rise to a widespread impression that such Associations as the 'Fist of Righteous Harmony' and the 'Big Sword Society' are regarded with favour by the Chinese Government, and their members have openly expressed their gratification and have been encouraged by the Decree to continue to carry on their outrages against the Christian converts. I cannot for a moment suppose that such was the intention of this Decree. These Societies are, as I have shown, of a most pernicious and rebellious character."

"I earnestly beg to draw the serious attention of the Throne to the circumstances above described: the disorders have not reached such a stage that they cannot be stamped out by prompt and energetic action; but if such action be not immediately taken the rioters will be encouraged to think that they have the support of the Government and proceed to graver crimes, thereby seriously endangering international relations. As a preliminary measure, and one to which I attach the greatest importance, I have to beg that an Imperial Decree be published and promulgated, ordering by name the complete suppression and abolition of the 'Fist of Righteous Harmony' and the 'Big Sword Societies,' and I request that it may be distinctly stated in the Decree that to belong to either of these Societies, or to harbour any of its members, is a criminal offence against the laws of China."

In communicating the above note to Lord Salisbury, Sir Claude MacDonald explained: "The name of the Society given in the note as 'The Fist of Righteous Harmony' is the same as the 'Boxers.' The latter name was given in the first instance, either by missionaries or news-papers, but does not convey the meaning of the Chinese words. The idea underlying the name is that the members of the Society will unite to uphold the cause of righteousness, if necessary by force."

On the 21st of February a reply to the identical note had been given, and the five foreign Ministers then wrote again. This brought an answer so evasive that they asked for an interview with the Yamen, and it was appointed for March 2d. On the evening of the 1st they received copies of a proclamation which the Governor General of Chihli had been commanded to issue. The proclamation embodied an Imperial Decree, transmitted to the Governor General on the 21st of February, which said: "Last year the Governor of Shantung telegraphed that the Society known as 'the Fist of Righteous Harmony' in many of his districts under the plea of enmity to foreign religions, were raising disturbances in all directions, and had extended their operations into the southern part of Chihli. We have repeatedly ordered the Governor General of Chihli and the Governor of Shantung to send soldiers to keep the peace. But it is to be feared that if stern measures of suppression of such proceedings as secretly establishing societies with names and collecting in numbers to raise disturbances be not taken, the ignorant populace will be deluded and excited, and as time goes on things will grow worse, and when some serious case occurs we shall be compelled to employ troops to extirpate the evil. The sufferers would be truly many, and the throne cannot bear to slay without warning. Let the Governor General of Chihli and the Governor of Shantung issue the most stringent Proclamations admonishing the people and strictly prohibiting (the societies) so that our people may all know that to secretly establish societies is contrary to prohibition and a breach of the law."

To this the Governor General of Chihli added, in his own name: "The Governor General find it settled by decided cases that those people of no occupation, busybodies who style themselves Professors, and practise boxing, and play with clubs, and teach people their arts; those also who learn from these men, and those who march about and parade the villages and marts flourishing tridents, and playing with sticks, hoodwinking the populace to make a profit for themselves, are strictly forbidden to carry on such practices. Should any disobey, on arrest the principals will receive 100 blows with the heavy bamboo, and be banished to a distance of 1,000 miles. The pupils will receive the same beating, and be banished to another province for three years, and on expiration of that period and return to their native place be subjected to strict surveillance. Should any inn, temple or house harbour these people without report to the officials, or should the police and others not search them out and arrest them, the delinquents will be sentenced to eighty blows with the heavy bamboo for improper conduct in the higher degree."

"From this it appears that teaching or prac-

tising boxing and club play, and deluding the people for private gain are fundamentally contrary to law. But of late some of the ignorant populace have been deluded by ruffians from other parts of the Empire who talk of charms, incantations, and spiritual incarnations, who protect from guns and cannon. They have dared to secretly establish the Society of the Fist of Righteous Harmony and have practised drill with fists and clubs. The movement has spread in all directions, and under the plea of hatred of foreign religions these people have harried the country. When soldiers and runners came to make arrests, turbulent ruffians had the audacity to defy them, relying on their numbers, thereby exhibiting a still greater contempt for the law."

"In addition to instructing all the local officials to adopt strict measures of prohibition and to punish without fail all offenders I hereby issue this most stringent admonition, and notify all people in my jurisdiction, gentry, and every class of the population that you should clearly understand that the establishment and formation of secret societies for the practice of boxing and club exercises are contrary to prohibition and a breach of the law. The assembly of mobs to create disturbances and all violent outrages are acts which the law will still less brook. . . . The converts and the ordinary people are all the subjects of the throne, and are regarded by the Government with impartial benevolence. No distinction is made between them. Should they have lawsuits they must law to the judgments of the officials. The ordinary people must not give way to rage, and by violent acts create feuds and trouble. The converts on the other hand must not stir up strife and oppress the people or incite the missionaries to screen them and help them to obtain the upper hand."

According to appointment, the interview with the Yamen took place on the 3d of March: "Mr. Conger, United States Minister, Baron von Ketteler, German Minister, Marquis Salvago, Italian Minister, Baron d'Anthoard, French Chargé d'Affaires, and myself," writes Sir Claude MacDonald, "were received at the Yamen by Prince Ching and nearly all the Ministers. On behalf of myself and my colleagues I recapitulated the circumstances, as detailed above, which had led to the demand which we now made. My colleagues all expressed to the Prince and Ministers their entire concurrence with the language I used. Mr. Conger reminded the Yamen of the incredulity with which they had listened to his representations regarding these disturbances over three months ago, and the promises they had been making ever since, from which nothing had resulted. Baron von Ketteler laid special stress on the fact that in the Decree just communicated no mention was made of the 'Ta Tao Hui,' or 'Big Knife Society,' the denunciation of which, equally with that of the 'I-Ho-Ch'uan,' or 'Fist of Righteous Harmony,' had been demanded. The Prince and Ministers protested emphatically that the Throne was earnest in its determination to put a stop to the outrages committed by these Societies. They maintained that the method adopted for promulgating the Imperial Decree, that of sending it to the Governors of the provinces concerned, to be embodied in a Proclamation and acted upon, was much slower and more effective than that of publishing a Decree in the 'Peking Gazette.' As

suggested by us. With regard to the omission of the name 'Ta Hsiu Hui' from the Decree, they pointed out that this Society was now the same as the 'Ta Hsiu Chuan'.

At the close of the interview the five Ministers presented identic notes to the Yamen, in which they said: "I request that an Imperial Decree be issued and published in the 'Peking Gazette' ordering by name the complete suppression and extinction of the 'List of Righteous Harmony' and 'Big Sword Societies,' and I request that it be distinctly stated in the Decree that to be a member of these societies or to harbour any members is a criminal offence against the Government. Nothing less than this will, I am convinced, put an end to the outrages against Christians which have lately been so prevalent in Shantung and Shantung. Should the Chinese Government refuse this reasonable request, I shall be compelled to repeat to my Government at the Hague to take what may be called only an advisory position against a most pernicious and anti-foreign organization. The consequences of further bloodshed in the districts concerned can and should be extremely serious to the Chinese Government."

The reply of the Yamen to this "identic note" was a lengthy argument to show that publication in the 'Peking Gazette' of the Imperial Decree against "Boxers" would be contrary to the established rule of public business in China when it is impossible to alter it, and that, furthermore, it would be useless, because the common people of the provinces would not see it. Not satisfied with this reply, the Ministers, on the 10th of March, addressed another identic note to the Yamen, in the following words: "Acknowledging receipt of your 'Highness' and your Excellencies' note of the 7th March, I regret to say that it is in no way either an adequate or satisfactory reply to my notes or my verbal requests concerning the suppression of the two Societies known as the 'Big Sword' and 'List of Righteous Harmony.' I therefore am obliged to repeat the requests, and because of the rapid spread of these Societies, proof of which is accumulating every day, and which the Imperial Decree of the 11th January greatly encouraged, I insist that an absolute prohibitive Decree for all China, mentioning these two Societies by name, be forthwith issued and published in the 'Peking Gazette,' as was done with the Decree of the 11th January. Should I not receive a favourable answer without delay, I shall report the matter to my Government, and urge strongly the advisability of the adoption of other measures for the protection of the lives and property of British subjects in China."

On the same day, each of the Ministers called the following recommendation to his government: "If the Chinese Government should refuse to publish the Decree we have requested, and should the state of affairs not materially improve, I would respectfully recommend that a few ships of war of each nationality concerned should be sent in a naval demonstration to North China waters. Identic recommendations are being telegraphed home by my four colleagues above-mentioned."

On the 10th, Sir Claude wrote: "No reply has yet been received from the Tsung Li Yamen to the note of the 10th March, and it was with serious misgivings as to the attitude of the Chinese

Government on this question that I read yesterday the official announcement of the appointment of Yu Hsien, lately Governor of Shantung, to the post of Governor of Shantung. The growth and impurity of the anti-Christian Societies in Shantung has been universally ascribed to the sympathy and encouragement accorded to them by this high officer, and his conduct has for some time past formed the subject of strong representations on the part of several of the foreign Representatives." *Great Britain Papers by Consular of China, No. 3, 1900, pp. 2, 26.*

"The foundation of the 'Boxers' can be traced to one man, Yu Hsien, who when Prefect of Tsao-chai in the south-west corner of Shantung, organized a band of men as a militia or bandits. For the time he revived the ancient appellation of 'The Chinese, the Patriotic Harmony Fists.' Armed with long swords, they were known popularly as the 'Red-tongue' or 'Big Knife Society.' After the occupation of Kiao-chau Bay, the Society grew in force, the professed objects of its members being to oppose the exactions of native Catholics and to resist further German aggression. They became anti-Christian and anti-foreign. They became a religious sect, and underwent a fantastic kind of spiritual training of word incantations and grotesque gymnastics, which they professed to believe rendered them impervious to the sword and to the bullet of the white man. Three deities they specially worshipped as their own, namely, Kwant, the God of War, and patron deity of the present dynasty, Kwang Cheng (an incarnation of Lao-tze), and the Joyful Buddha of the Falstadhan Belly. They made Taoist and Buddhist temples their headquarters. Everywhere they declared that they would drive the foreigner and his devilish religion from China. To encourage this society its founder Yu Hsien was in March, 1899, appointed by the Throne Governor of Shantung. In four years he had risen from the comparatively humble post of Prefect to that of the highest official in the province."—*Peking Correspondence, London Times, Oct. 13, 1900.*

Sir Robert Hart, an English gentleman who had been in the service of the Chinese government at Peking for many years, administering its maritime customs, is the author of an account of the causes and the character of the Boxer movement, written since its violent outbreak, from which the following passages are taken: "For ages China had disesteemed the military spirit and was laughed at by us accordingly, and thus, ever since intercourse under treaties has gone on, we have been lecturing the Government from our superior standpoint, telling it that it must grow strong, must create army and navy—must adopt foreign drill and foreign weapons—must prepare to hold its own against all comers—must remember 'Collins' is its friend, not 'Short'—our words did not fall on closed ears—effort was given to selected bits of advice—and various firms did a very remarkable and very remunerative trade in arms. But while the Chinese Government made a note of all the advice its generous friends placed at its disposal, and adopted some suggestions because they either suited it or it seemed polite and harmless to do so, it did not forget its own thirty centuries of historic teaching, and it looked at affairs abroad through its own eyes and the eyes of its representatives at foreign Courts, studied

their reports and the pointed differences of books, magazines, and newspapers, and the teaching of this or that, and the tendency to crystallise in the belief that a homogeneous army on European lines would be better, wiser, and more efficient than any Chinese force as suggested by the way in which China tinged itself on the Government side in the Franco-Chinese affair—covering the whole Empire, offering an outlet for restless spirits and fostering a united and patriotic feeling, would be more reliable and effective, and which seemed to receive immediate confirmation from without in the stand a handful of leaders were making in the Transvaal, hence the Boxer Association, patriotic in origin, justified in its fundamental idea, and in point of fact the outcome of other foreign advice or the study of foreign methods.

In the meanwhile the seeds of other growths were being sown in the soil of the Chinese mind, private and official, and were producing fruit everywhere, its kind variations commercial stipulations sanctioned by treaties had not taken into full account Chinese conditions, difficulties, methods, and requirements, and their enforcement did not make foreign commerce more agreeable to the eye of either provincial or metropolitan officials. A missionary propaganda was at work all over the country, and its traits, Chinese Christians did not win the esteem or goodwill of their fellows; for, first of all, they offended public feeling by deserting Chinese for foreign cults, next they irritated their fellow villagers by refusing, as Christians, to take part in or share the expenses of village festivals, and lastly, as Christians again, they shocked the official mind and popular opinion also by getting their religious teachers, more especially the Roman Catholics, to interfere on their behalf in litigation, &c., a state of affairs which became specially talked about in Shantung, the native province of the Confucius of over 2,000 years ago and now the sphere of influence of one of the Churches' most energetic bishops, the arrangement by which missionaries were to ride in green chairs and be recognised as the equals of Governors and Viceroy's had its special significance and undermined missionary aspiration telling people and officials in every province what they had to expect from it, on the top of this came the Kiao Chow affair and the degradation and casting of a really able, popular, and clean-minded official, the Governor Li Ping Heng, succeeded by the cessions of territory at Port Arthur, Wei Hai Wei, Kwang Chow Wan, &c., &c., and these things, followed by the successful stand made against the Italian demand for a port on the Coast of Chekiang, helped to force the Chinese Government to see that concession had gone far enough and that opposition to foreign encroachment might now and henceforth be the key note of its policy.

Li Ping Heng had taken up his private residence in the southeastern corner of Peking, close to the Shantung frontier and the Boxer movement, already started in a tentative way in the latter province, now received an immense impetus from the occurrences alluded to and was carefully nurtured and fostered by that cherished official, more respected than ever by his countrymen. Other high officials were known to be in sympathy with the new departure and to give it their strongest approval and support, such as

Hsu Tung, Kang I and men of the same stamp and standing, and their advice to the throne to try concessions with foreigners and yield more to their demands. However mistaken they have been their reading of foreigners, and how ever wrong their manner of action, these men, eminent in their own country for their learning and services—were animated by patriotism, were enraged at foreign dictation, and had the courage of their convictions. We must do them the justice of allowing they were actuated by high motives and love of country—but they does not always or necessarily mean political ability or highest wisdom.

"The Chinese, an intelligent, cultivated, sober, industrious, and on their own lines civilised, homogeneous in language, thought, and feeling, which numbers some four hundred millions lives in its own ring fence, and covers a country which made up of fertile land and teeming waters, with infinite variety of mountain and plain, hill and dale, and every kind of climate and condition, on its surface produces all that a people requires and in its bosom hides untold virgin wealth that has never yet been disturbed—this race, after thousands of years of haughty seclusion and exclusiveness, has been pushed by the force of circumstances and by the superior strength of assailants into treaty relations with the rest of the world, but regards that as a humiliation, sees no benefit accruing from it, and is looking forward to the day when it in turn will be strong enough to revert to its old life again and do away with foreign intercourse, interference and intrusion: it has slept long as we count sleep, but it is awake at last and its every member is tingling with Chinese feeling. 'China for the Chinese and out with the foreigners!'"

"The Boxer movement is doubtless the product of official inspiration, but it has taken hold of the popular imagination and will spread like wildfire all over the length and breadth of the country: it is, in short, a purely patriotic volunteer movement, and its object is to strengthen China—and for a Chinese programme. Its first experience has not been altogether a success as regards the attainment through strength of proposed ends—the rooting up of foreign cults and the ejection of foreigners, but it is not a failure in respect of the fever it put out—will you volunteer work?—or as an experiment that would test ways and means and guide future choice. It has proved how to a man the people will respond to the call, and it has further demonstrated that the swords and spears to which the prudent official mind confined the initiated will not suffice, but must be supplemented or replaced by Mauser rifles and Krupp guns, the Boxer patriot of the future will possess the best weapons money can buy, and then the 'Yellow Peril' will be beyond ignoring."—Robert Hart, *The Peking Legation* (Fortnightly Review, Nov., 1900).

A. D. 1900 (March–April).—Proposed joint naval demonstration of the Powers in Chinese waters.—On receipt of the telegram from Peking March 19 recommending a joint naval demonstration in North Chinese waters, the British Ambassador at Paris was directed to consult the Government of France on the subject, and did so. On the 13th he reported M. Delcassé, the French Minister for Foreign Affairs, as saying that "he could not, of course, without reflection

without consultation of his colleagues, say what he thought the French Government would be doing in part in a relay demonstration, but I did not seem to him that it would be necessary to say anything upon a suggestion which Representatives of Five Powers, who ought to be equally considered, could make." On the 16th I wrote to Lord Salisbury. M. Delcandé informed me the day before yesterday that he had telegraphed to Peking for more precise information. I told him that I was glad to hear that a precipitate action was going to be taken in regard to the Boxers, and that I believed that he would inform the United States Government would be satisfied and assent to themselves with any such action in demonstration. I added that, although I had instructions to say so, I expected that the French Ministry's Government would also adopt the usual policy of proceeding with deliberation, and would be in no hurry to take any action, although urgent necessity would render it necessary.

On the 21st of March, Sir Claude MacDonald telegraphed to Lord Salisbury. I learn that the Government of the United States have ordered a ship to go to Taku for the purpose of protecting American interests; that the Italian Minister has been given the disposal of two ships, and the German Minister has the use of a steamship at Kiao-chow for the same purpose. With a view to protect British missionary as well as other interests, which are far in excess of those of other Powers, I would respectfully request that two of Her Majesty's ships be sent to Taku.

On the 10th of April, the T'ung li Yamén communicated to the British Ambassador the following communication, as to the punishment of the murderers of Mr. Brooks, and of the officials responsible for neglect to protect him: "Of several arrests that had been made of persons suspected of having been the perpetrators of the crime or having been concerned in its commission, two have been brought to justice and at a trial at which a British Consul was present, found guilty and sentenced to be decapitated—a sentence which has already been carried into effect. Besides the Magistrate of Fichien, and some of the local authorities of the district, accounted to have been guilty of culpable negligence in the protection of Mr. Brooks, have been punished, and other punishments awarded them of different degrees of severity."

For some weeks after this the Boxer movement appears to have been under constraint, further outrages were not reported and no expressions of anxiety appear in the despatches from Peking. The proposal of a joint naval expedition on the waters of Northern China has not passed. *Great Britain, Papers by Com. Chamberlain, A. 2, 1900, pp. 6-17.*

A D 1900 May-June. Renewed activity of the "Boxers" and increasing gravity of the situation at Peking. Return of Legation guards. Call upon the fleets at Taku for reinforcement and rescue. About the middle of May the activity of the "Boxers" was renewed, and the state of disorder far more threatening than it was speedily made known. The rapid succession of startling events during the next few weeks may be traced in the following series of telegrams from the British Minister at Peking to Lord Salisbury.

May 17. The French Minister telegraphed to the Legation that the Boxers have murdered three foreigners and killed ten Roman Catholic Chinese converts at a place 60 miles from Peking, near Pao-tai-tai. The French Bishop informs me that in that district and at Pao-tai-tai and Peking generally, much disorder prevails."

May 18. There was a report yesterday, which has been confirmed today, that the Boxers have destroyed the London Mission chapel at Kung-tsun, and killed the Chinese preacher King Sun is about 40 miles south west of Peking."

May 19. At the Yamén yesterday I reminded the Ministers how I had previously warned them during the last six months how dangerous it was not to take adequate measures in suppression of the Boxer Societies. I said that the result of the apathy of the Chinese Government was that now a Mission chapel, a few miles distant from the capital had been destroyed. The Ministers admitted that the danger of the Boxer movement had not previously appeared to them so urgent, but that now they fully saw how serious it was. On the previous day an Imperial Decree had been issued, whereby specified metropolitan and provincial authorities were directed to adopt stringent measures to suppress the Boxers. This they believed would not fail to have the desired effect.

May 21. All eleven foreign Representatives attended a meeting of the Diplomatic Body held yesterday afternoon at the instance of the French Minister. The doyen was empowered to write, in the name of all the foreign Representatives, a note to the Yamén to the effect that the Diplomatic Body, basing their demands on the Decrees already issued by the Palace denunciating the Boxers, requested that all persons who should print, publish, or disseminate pamphlets which incited foreigners, all individuals aiding and abetting, all owners of houses or temples now used as meeting places for Boxers, should be arrested. They also demanded that those guilty of arson, murder, outrages, &c., together with those affording support or direction to Boxers while committing such outrages, should be executed. Finally, the publication of a Decree in Peking and the Northern Provinces setting forth the above. The foreign Representatives decided at their meeting to take further measures if the disturbances still continued, or if a favorable answer was not received to their note within five days. The meeting did not decide what measures should be taken, but the Representatives were generally averse to bringing guards to Peking, and what found most favour was as follows: "With the exception of Holland, which has no ships in Chinese waters, it was proposed that all the Maritime Powers represented should make a united demonstration either at Shun-hai-kan, or at the new port Chang-wing-tao, while, in case of necessity, gunboats were to be held ready on board ships. My colleagues will, I think, send these proposals as they stand to their governments. As the Chinese Government the proposals seem to be sufficiently alarmed, I do not think that the above measure will be necessary, but should the occasion arise, I trust that Her Majesty's Government will see fit to support it." I had a private interview with my Russian colleague, who came to see me

before the matter reached its last stages. M. de Cassas said that the reason why two countries with serious interests in the case—England and Russia—had then refused to land troops, was discouraged, as they were not sure of the known eventualities. However, since the 18th inst., he admits that matters are serious, and that at once to the point.

May 24.—Her Majesty's Consul at Tien tsin reported by telegram yesterday that a Colonel in charge of a party of the Army cavalry was credited on the 22nd inst. with an ambuscade near Koushien, which is about 20 miles south west of Peking. The party were destroyed.

May 25.—Tsungh Yuen have replied to the request by the Government of the Corps Diplomatique reported in my telegram of the 21st May. They state that the main lines of the measures already in force agree with those required by the foreign Representatives, and add that a further force, which will direct official action, is being asked for. The above does not even promise official action, and, in my personal opinion, is unsatisfactory.

May 27.—At the meeting of the Corps Diplomatique, which took place yesterday evening, we were informed by the French Minister that all his information led him to believe that a serious outbreak, which would endanger the lives of all European residents in Peking, was on the point of breaking out. The Italian Minister confirmed the information received by M. Pichon. The Russian Minister agreed with his Italian and French colleagues in considering the latest reply of the Yamen to be unsatisfactory, adding that, in his opinion, the Chinese Government was now about to adopt effective measures. That the danger was imminent he doubted, but said that it was not possible to disregard the evidence adduced by the French Minister. We all agreed with this last remark. M. Pichon then urged that if the Chinese Government did not at once take action, guards should at once be brought up by the foreign Representatives. Some discussion then ensued, after which it was determined that a precise statement should be demanded from the Yamen as to the measures they had taken, also that the terms of the Edict mentioned by them should be communicated to the foreign Representatives. Failing a reply from the Yamen of a satisfactory nature by this afternoon, it was resolved that guards should be sent for. Baron von Ketteler, the German Minister, declared that he considered the Chinese Government was crumbling to pieces, and that he did not believe that any action based on the assumption of their stability could be efficacious. The French Minister is then certain, genuinely convinced that the danger is real, and owing to his want of information he is well qualified to judge.

I had an interview with Prince Chien, and the Yamen Ministers this afternoon. Energetic measures are now being taken against the Boxers by the Government, when the progress of the Boxer movement has, at last, thoroughly changed. The Corps Diplomatique, who met in the course of the day, have decided to wait another twenty to thirty hours for further developments.

May 29.—Some stations on the line, among others Yangtse, 6 miles from Peking, together with machine sheds and European houses, were

burnt yesterday by the Boxers. The line has also been torn up in places. Trains between Tientsin and Peking have stopped running, and traffic has not been resumed yet. The situation here is serious, and so far the Imperial troops have done nothing. It was unanimously decided, at a meeting of foreign Representatives yesterday, to send for guards for the Legations, in view of the apathy of the Chinese Government and the gravity of the situation. Before the meeting assembled, the French Minister had already sent for his.

May 30.—Permission for the guards to come to Peking has been refused by the Yamen. I think, however, that they may not persist in their refusal. The situation in the meantime is one of extreme gravity. The people are very excited and the soldiers mutinous. Without doubt it is now a question of European life and property being in danger here. The French and Russians are landing 100 men each. French, Russian, and United States Ministers, and myself, were deputed to day at a meeting of the foreign Representatives to declare to the Tsingh Yamen that the foreign Representatives must immediately bring up guards for the protection of the lives of Europeans in Peking in view of the serious situation and untrustworthiness of the Chinese troops. That the number would be small if facilities were granted, but it must be augmented should they be refused, and serious consequences might result for the Chinese Government in the latter event. In reply, the Yamen stated that no definite reply could be given until to-morrow afternoon, as the Prince was at the Summer Palace. As the Summer Palace is within a hour's ride we refused to admit the impossibility of prompt communication and decision, and repeated the warning already given of the serious consequences which would result if the Viceroy at Tientsin did not receive instructions this evening in order that the guards might be enabled to arrive here to-morrow. The danger will be greatest on Friday, which is a Chinese festival.

May 31.—Provided that the number does not exceed that of thirty for each Legation, as on the last occasion, the Yamen have given their consent to the guards coming to Peking. It was decided this morning, at a meeting of the foreign Representatives, to at once bring up the guards that are ready. These probably include the British, American, Italian, and Japanese.

June 1.—British, American, Italian, Russian, French and Japanese guards arrived yesterday. Facilities were given, and there were no disturbances. Our detachment consists of three officers and seventy-five men, and a machine gun.

June 2.—The city is comparatively quiet, but murders of Christian converts and the destruction of missionary property in outlying districts occur every day, and the situation still remains serious. The situation at the Palace is gleaned from a reliable authority, very strained. The Empress Dowager does not dare to put down the Boxers, although wishing to do so, on account of the support given them by Prince Tuan, father of the hereditary Prince, and other conservative Manchus, and also because of their numbers. Thirty Europeans, most of whom were Belgians, fled from Peking via the river to Tientsin. About 20 miles from Tientsin they were attacked by Boxers. A party of Eu-

... having gone to their rescue from Tien tsin, and in the confusion in which a large number of Boxers were killed. Nine of the prisoners were taken, including one lady. The Russian Consul then came into Tien tsin. The Russian Minister, who came to see me to-day, said that it was most imperative that the foreign governments should be prepared for all even contingencies, although he had no news confirming the reports. He said he had been authorized by his Government to support any Chinese movement of Peking which was able and willing to renounce its policy in case the Government could not do so.

June 4.—I am informed by a Chinese courier who arrived today from Yang Ching, 40 miles south of Peking, that on the 1st June the Russian Legation and Mission at that place was attacked by the Boxers. He states that one missionary, Mr. Robinson, was murdered, and that his secretary, and that another, Mr. Norman, was carried off by the Boxers. I am insisting on the Chinese authorities taking immediate measures to effect his rescue. Present situation of Peking is such that we may at any time be forced here with the railway and telegraph severed. In the event of this occurring, I beg your Lordship will cause urgent instructions to be sent to Admiral Seymour to consult with the officers commanding the other foreign squadrons at Taku to take concerted measures for our relief. The above was agreed to at a meeting presided by the foreign Representatives, and a similar telegram was sent to their respective Governments by the Ministers of Austria, Italy, Germany, France, Japan, Russia, and the United States, all of whom have ships at Taku and guards here. The telegram was proposed by the French Minister and carried unanimously. It is difficult to say whether the situation is as grave as the latter supposes, but the apathy of the Chinese Government makes it very serious.

June 5.—I went this afternoon to the Yamén to inquire of the Ministers personally what steps the Chinese Government proposed to take to effect the punishment of Mr. Robinson's murderers and the release of Mr. Norman. I was informed by the Ministers that the Viceroy was the responsible person, i. e. that they had telegraphed to him to send troops to the spot, and that that was all they were able to do in the matter. They did not express regret or show the least anxiety to effect the relief of the imprisoned man, and they displayed the greatest indifference during the interview. I informed them that the Chinese Government would be held responsible by Her Majesty's Government for the criminal apathy which had brought about this disgraceful state of affairs. I then demanded an interview with Prince Ching, which is fixed for to-morrow, as I found it useless to discuss the matter with the Yamén. This afternoon I had an interview with the Prince and Ministers of the Yamén. They express much regret at the murder of Messrs. Robinson and Norman, and their tone was fully satisfactory in this respect. No attempt was made by the Prince to defend the Chinese Government, nor to deny what I had said. He could say nothing to reassure me as to the safety of the city, and admitted that the Government was bound to deal harshly with the movement, which owing to its anti-foreign character, was popular. He stated that they were bringing

6,000 soldiers from near Tien tsin for the protection of the railway, but it was evident that he doubted whether they would be allowed to fire on the Boxers except in the defence of Government property, or if authorized whether they would obey. He gave me to understand without saying so directly, that he has entirely failed to induce the Court to accept his own views as to the danger of inaction. It was clear in fact, that the Yamén wished me to understand that the situation was most serious and that, owing to the influence of ignorant advisers with the Empress Dowager, they were powerless to remedy it.

June 6.—Since the interview with the Yamén reported in my preceding telegram I have seen several of my colleagues. I find they all agree that, owing to the now evident sympathy of the Empress Dowager and the more conservative of her advisers with the anti-foreign movement, the situation is rapidly growing more serious. Should there be no change in the attitude of the Empress, a rising in the city, ending in anarchy, which may produce rebellion in the provinces, will be the result, leading to an armed occupation of Peking by one or more of the Powers. Our ordinary means of pressure on the Chinese Government fail, as the Yamén is, by general consent and their own admission, powerless to persuade the Court to take serious measures of repression. Direct representations to the Emperor and Dowager Empress from the Corps Diplomatique at a special audience seems to be the only remaining chance of impressing the Court.

June 7.—There is a long Decree in the "Gazette" which ascribes the recent trouble to the favour shown to converts in law suits and the admission to their ranks of bad characters. It states that the Boxers, who are the objects of the Throne's sympathy equally with the converts, have made use of the anti-Christian feeling aroused by these causes and that bad characters among them have destroyed chapels and railways which are the property of the State. Unless the ringleaders among such bad characters are now surrendered by the Boxers they will be dealt with as disloyal subjects and will be exterminated. Authorization will be given to the Generals to effect arrests, exercising discrimination between leaders and their followers. It is probable that the above Decree represents a compromise between the conflicting opinions which exist at Court. The general tone is most unsatisfactory, though the effect may be good if severe measures are actually taken. The general lenient tone, the absence of reference to the murder of missionaries, and the justification of the proceedings of the Boxers by the misconduct of Christian converts are all dangerous factors in the case.

June 8.—A very bad effect has been produced by the Decree reported in my immediately preceding telegram. There is no prohibition of the Boxers drilling, which they now openly do in the houses of the Manchou nobility and in the temples. This Legation is full of British refugees, mostly women and children, and the London and Church of England Missions have been abandoned. I trust that the instructions requested in my telegrams of the 4th and 5th instant have been sent to the Admiral. I have received the following telegram, dated noon to-day, from Her Majesty's Consul at Tien tsin:—"By now the

Boxers must be near Yungtsin. Last night the boats which were sent to the river were seen to be on fire. The Boxers are being with-
drawn to the north of the river. They have already
passed the Peiho River. There are now at
Yungtsin 2,000 men and 100 boats ready to take
2,000 men and 100 boats to the other side of
the river. Should this information be correct, it is an attempt to
push Peking back, intended by the only
force which is in Yungtsin to place any
resistance. The Boxers are not in my tele-
grams. The Boxers were not mentioned by
General N. J.

London, June 10. Vice Admiral Sir E.
Seymour, Commander in Chief, telegraph
received from Minister at Peking. Situation
extremely grave. Unless arrangements are made
for immediate advance to Peking, it will be too
late.

In consequence of above, I am landing at once
with my expedition and have asked foreign
powers for cooperation. *Great Britain Papers by
Commander, China, V. 3, 1900, pp. 26-27.*

**A. D. 1900 June 10-26. Bombardment
and capture of Taku forts by the allied
fleets. Failure of first relief expedition
started for Peking.** The following is from an
official report by Lieut. Admiral Bruce of the
British Navy, dated at Taku June 17, 1900: "On
my arrival here on the 11th inst. I found a large
fleet consisting of Russian, German, French,
Austrian, Italian, Japanese, and British ships. In
consequence of an urgent telegram from Her
Majesty's Minister at Peking, Vice Admiral Sir
Edward H. Seymour, K. C. B., Commander in
Chief, had started at 11 o'clock the previous morn-
ing. I had a conference with him a force of 1,375
of all ranks being followed by men from the
squad ships as they arrived, until he commanded
not less than 2,000 men. At a distance of some
20 or 30 miles from Tientsin, but it is very diffi-
cult to locate the place, as no authentic record
has come in. He found the railway destroyed and
sleepers buried. And every impediment made
by supposed Boxers to his advance. Then his
difficulties began, and it is supposed that the
Boxers, probably assisted by Chinese troops,
closed in on his rear, destroyed railway lines,
bridges, etc., and nothing since the 13th inst. has
passed from Commander in Chief and his relief
force and Tientsin, nor vice versa up to this
date.

During the night of the 14th inst. news was
received that all railway carriages and other roll-
ing stock had been ordered to be sent up the line
for the purpose of bringing down Chinese army
to Peking. On receipt of this serious informa-
tion a council of Admirals was summoned by
Vice Admiral Hildebrandt, Commander in Chief
of the Russian Squadron, and the German, French,
United States Admirals, myself, and the Senior
Officers of Italy, Austria, and Japan attended,
and it was decided to send immediate orders to
the captains of the allied vessels in the Peiho
River, three Russian, two German, one United
States, and Japanese, one British (Algerine),
to prevent any railway plant being taken away
from Peking, or the Chinese army reaching that
place, which would cut off our communication
with Tientsin, and in the event of either being
attempted they were to use force to prevent it,
and to destroy the Taku forts. By the evening,

and during the night of 15th inst. information
arrived that the mouth of the Peiho River
being protected by electric mines. On receipt
of this another council composed of the same
officers was held in the forenoon of 16th inst.
and the Russian, and in consequence of the
gravity of the situation, and information having
also arrived that the forts were being provisioned
and reinforced, immediate notice was sent to
Vice Admiral Hildebrandt and the command-
ers of the forts that in consequence of the danger to
our forces up the river at Tientsin, and on the
march to Peking by the action of the Chinese
authorities, we proposed to temporarily occupy the
Taku Forts, with or without their good will, at
2 a.m. on the 17th inst. Early on Sunday 17th
June, the Taku Forts opened fire on the allied
ships in the Peiho River, which continued almost
without intermission until 6.30 a.m., when at-
tacking had practically ceased and the Taku Forts
were stormed and in the hands of the Allied
Fleets, allowing of free communication with
Tientsin by water, and rail when the latter is
repaired.

The American Admiral took no part in this
attack on the forts at Taku, on the ground that
we were not at war with China and that a hostile
demonstration might consolidate the anti foreign
elements and strengthen the Boxers to oppose
the relieving column.

From the point to which the allied expedition
led by Admiral Seymour fought its way, and at
which it was stopped by the increasing numbers
that opposed it, it fell back to a position near
Hsiku, on the right bank of the Peiho. There the
allies drove the Chinese forces from an imperial
armory and took possession of the buildings,
which gave them a strong defensive position with
a large store of rice for food, and enabled them to
hold their ground until help came to them from
Tientsin, on the 25th. They were encumbered
with no less than 230 wounded men, which made
it impossible for them, in the circumstances, to
fight their way back without aid; though the
distance was so short that the return march was
accomplished, on the 26th, between 3 o'clock
and 9 of the same morning. In his report made
the following day Admiral Seymour says: "The
number of enemy engaged against us in the march
from Yungtsin to the Armory near Hsiku can
not be even estimated; the country alongside the
river banks is quite flat, and consisted of a suc-
cession of villages of mud huts, those on the out-
skirts having enclosures made of dried reeds,
outside, high reeds were generally growing in
patches near the village, and although trees are
very scarce away from the River, alongside it
they are very numerous; those with the graves,
embankments for irrigation and against flood,
afforded cover to the enemy from which they
seldom exposed themselves, withdrawing on our
near approach. Had their fire not been generally
high it would have been much more destructive
than it was. The number of the enemy certainly
increased gradually until the Armory near Hsiku
was reached, when General Nichols troops and the
Boxers both joined in the attack. In the early
part of the expedition the Boxers were mostly
armed with swords and spears, and not with
many firearms; at the engagement at Langhau
on 18th, and afterwards, they were armed with
rifles of late pattern, this together with their
captured and uniform worn shows that they had

offer the active or covert support of the Chinese Government or some of its high officials.

A.D. 1900 June 11-29. Chinese Imperial Edicts.

On June 11 Mr. Sugiyama, the Chinese Minister at the Japanese Legation, was brutally murdered in Peking by the soldiers of General Fong Yuen-sheng. Two days later the following Imperial edict was published in the Peking Gazette:—On June 11 the Japanese Chamberlain was murdered by brigands outside the Yung Men. On hearing this intelligence we were very deeply grieved. Officials of neighbouring provinces stationed in Peking ought to be protected in every possible way, and now especially extra precautions ought to be displayed to prevent such occurrences when foreigners are so numerous as at present. We have repeatedly commanded the local authorities to ensure the most efficient protection in the districts, yet in spite of our frequent orders, we have this case of the murder of the Japanese Chamberlain occurring in the very capital of the Empire. The civil and military officials have apparently been remiss in not clearing their districts of bad characters, or immediately arresting such persons, and we hereby order every Yamen concerned to set a limit of time for the arrest of the criminals that they may suffer the extreme penalty. Should the time expire without any arrest being effected the severest punishment will assuredly be inflicted upon the responsible persons. It is needless to add that the criminals were never arrested and the responsible persons were never punished. In the same Gazette another decree condemns the 'Boxer' brigands, who have recently been causing trouble in the neighbourhood of the capital, who have been committing arson and murder and revenge, and themselves upon the native converts. Soldiers and 'Boxers,' it says, have leagued together to commit acts of murder and arson, and have vied with one another in disgraceful acts of looting and robbery. The 'Boxers' are to be disbanded, disarmed, and are to be arrested, ringleaders are to be seized but the followers may be allowed to disband.

Similar decrees on the 14th and 15th show alarm at the result of the 'Boxer' agitation and lawlessness within the city. Nothing as strong against the 'Boxers' had previously been published. Fires were approaching too closely to the Imperial Palace. No steps had been taken by the Court to prevent the massacre and burning of Christians and their property in the country, but on the 16th the great Chien Men gate facing the Palace had been burned and the smoke had swept over the Imperial Courts. Yet even in these decrees leniency is shown to the 'Boxers' for they are not to be fired upon, but are of guilty, to be arrested and executed. On June 17th the edict expresses the belief of the Throne that—All foreign Ministers ought to be fully protected. If the Ministers and their families wish to go for a time to Tien-tsin, they must be protected on the way. But the railroad is at present in working order. If they go by the railroad it will be difficult, and there is fear that perfect protection cannot be offered. They would do better, therefore, to abide here in peace as before and wait till the railroad is repaired, when, as circumstances render expedient.

Two days later an ultimatum was sent to the Ministers ordering them to leave Peking within 48 hours. On the 20th Baron von Ketteler was

murdered and on June 21 China published, having entered upon war, a post the whole world, her Apologia. Ever since the foundation of the Dynasty foreigners coming to China have been kindly treated. In the reigns Tiao-Kwang, and Hsien-Feng, they were allowed to trade, and they also asked leave to propagate their religion, a request that the Throne reluctantly granted.

At first they were amenable to Chinese control, but for the past 40 years they have taken advantage of China's forbearance to encroach on China's territory and trample on Chinese people and to demand China's wealth. Every concession made by China increased their reliance on violence. They oppressed peaceful citizens and insulted the gods and holy men, exciting the most burning indignation among the people. Hence the burning of chapels and slaughter of converts by the patriotic braves. The Throne was anxious to avoid war, and issued edicts commanding the protection of legations and pity to the converts. The decrees declaring 'Boxers' and converts to be equally the children of the State, were issued in the hope of removing the old feud between people and converts. Extreme kindness was shown to the strangers from afar. But these people knew no gratitude and increased their pressure. A despatch was yesterday sent by Pao-hayward, calling us to deliver up the Taku Forts into their keeping otherwise they would be taken by force. These threats showed their aggressive intention. In all matters relating to international intercourse, we have never been wanting in courtesies to them, but they, while styling themselves civilized States have acted without regard for right, relying solely on their military force. We have now reigned nearly 30 years, and have treated the people as our children, the people honouring us as their deity, and in the midst of our reign we have been the recipients of the gracious favour of the Empress Dowager. Furthermore, our ancestors have come to our aid, and the gods have answered our call, and never has there been so universal a manifestation of loyalty and patriotism. With tears have we announced war in the ancestral shrines. Better to enter on the struggle and do our utmost than seek some measures of self preservation involving eternal disgrace. All our officials, high and low are of one mind, and there have assembled without official summons several hundred thousand patriotic soldiers of Ping 'Boxers'. Even children carrying spears in the service of the State. Those others relying on empty schemes, our trust is in Heaven's justice. They depend on violence, we on humanity. Not to speak of the righteousness of our cause, our provinces number more than 20, our people over 400,000,000, and it will not be difficult to vindicate the dignity of our country. The decree concludes by promising heavy rewards to those who distinguish themselves in battle or subscribe funds, and threatening punishment to those who show cowardice or act treacherously.

In the same 'Gazette' Yü Lu reports acts of war on the part of the foreigners. When after some days' fighting he was victorious, 'Personal of his memorial has given us great comfort,' says the Throne. Warm praise is given to the 'Boxers,' who have done great service without any assistance either of men or money from the State. Marked favour will be shown them hereon, and they must continue to show their devotion. On the 24th presents of rice are sent to the

Boxers. Leaders of the Boxers are appointed by the Throne: Prince Y. Prince Ching and the Assistant Grand Secretary K'ang Yi to be in direct command, and Yeh Nien and Duke Lan, the brother of Prince Tuan the father of the Crown Prince, to act in co-operation with them, while another high post is given to Wen Jui. *London Times*, Oct. 16, 1900. *Review of Foreign Affairs*.

Very different indeed to the Imperial decree of June 21, quoted above, was one issued a week later (June 29) and sent to the diplomatic representatives of the Chinese government in Europe and America. As published by Minister Wu Tingfang at Washington on the 11th of July, it was in the following words: "The circumstances which led to the commencement of fighting between Chinese and foreigners were of such a complex, confusing, and unfortunate character as to be entirely unexpected. Our diplomatic representatives abroad, owing to their distance from the scene of action, have had no means of knowing the true state of things, and accordingly cannot lay the views of the government before the ministers for foreign affairs of the respective Powers to which they are accredited. Now we take this opportunity of going fully into the matter for the information of our representatives abroad."

"In the first place, there arose in the provinces of Chih Li and Shantung a kind of rebellious subjects who had been in the habit of practicing boxing and fencing in their respective villages, and at the same time clothing their doings with spiritualistic and strange rites. The local authorities failed to take due notice of them at the time. Accordingly the infection spread with astonishing rapidity. Within the space of a month it seemed to make its appearance everywhere, and finally even reached the capital itself. Everyone looked upon the movement as supernatural and strange, and many joined it. Then there were lawless and treacherous persons who sounded the cry of 'Down with Christianity.' About the middle of the fifth moon these persons began to create disturbances without warning. Churches were burned and converts were killed. The whole city was in a ferment. A situation was created which could not be brought under control. At first the foreign Powers requested that foreign troops be allowed to enter the capital for the protection of the legations. The Imperial government, having in view the comparative urgency of the occasion, granted the request as an extraordinary mark of courtesy beyond the requirements of international intercourse. Over five hundred foreign troops were sent to Peking. This shows clearly how much care China exercised in the maintenance of friendly relations with other countries."

"The legations at the capital never had much to do with the people. But from the time foreign troops entered the city the guards did not devote themselves exclusively to the protection of their respective legations. They sometimes fired their guns on top of the city walls and sometimes patrolled the streets everywhere. There were repeated reports of persons being hit by stray bullets. Moreover they strolled about the city without restraint, and even attempted to enter the Tung Hua gate (the eastern gate of the palace grounds). They only desisted when admonition was positively forbidden. On this account, both the soldiers and the people were provoked to resentment, and voiced their indignation with one

accord. Lawless persons then took advantage of the situation to do mischief, and became bolder than ever in burning and killing Christians and converts. The Powers then upon attempted to force the foreign troops in Peking, but the reinforcements encountered resistance, and during the hands of the insurgents on the way and have not yet been able to proceed. The insurgents of the two provinces of Chih Li and Shantung led by this time effected a complete union and could not be separated. The Imperial government was by no means reluctant to issue orders for the capture and suppression of this insurgent element. But as the trouble was so near at hand, there was a great fear that due protection might not be assured to the legations if the anarchists should be driven to extremities, thus bringing on a national calamity. There also was a fear that uprisings might occur in the provinces of Chih Li and Shantung at the same time, with the result that both foreign missionaries and Chinese converts in the two provinces might fall victims to popular fury. It was therefore absolutely necessary to consider the matter from every point of view."

"As a measure of precaution it was finally decided to request the foreign ministers to retire temporarily to Tien Tsin for safety. It was while the discussion of this proposition was in progress that the German minister, Baron Von Kettner, was assassinated by a riotous mob one morning while on his way to the Tsung Li Yamen. On the previous day the German minister had written a letter appointing a time for calling at the Tsung Li Yamen. But the Yamen, fearing he might be molested on the way, did not consent to the appointment as suggested by the minister. Since this occurrence the anarchists assumed a more bold and threatening attitude, and consequently it was not deemed wise to carry out the project of sending the diplomatic corps to Tien Tsin under an escort. However, orders were issued to the troops detailed for the protection of the legations to keep stricter watch and take greater precaution against any emergency."

"To our surprise, on the 20th of the fifth moon (June 16th), foreign (naval?) officers at Taku called upon Lo Jung Kwang, the general commanding, and demanded his surrender of the forts, notifying him that failing to receive compliance they would at two o'clock the next day take steps to seize the forts by force. Lo Jung Kwang, being bound by the duties of his office to hold the forts, how could he yield to the demand? On the day named they actually first fired upon the forts, which responded, and kept up fighting all day and then surrendered. Thus the conflict of forces began, but certainly the initiative did not come from our side. Even supposing that China were not conscious of her true condition, how could she take such a step as to engage in war with all the Powers simultaneously? and how could she, relying upon the support of anarchistic populace, go into war with the Powers?"

"Our position in this matter ought to be clearly understood by all the Powers. The above is a statement of the wrongs we have suffered, and how China was driven to the unfortunate position from which she could not escape. Our several ministers will make known accurately and in detail the contents of this decree and the policy of China to the ministers of foreign affairs in their respective countries, and assure them that

...with rates are still strictly enjoined to abstain from the legations as hitherto to assist them in their power. As for the anarchists, they will be severely dealt with as circumstances permit. The several ministers will continue to discharge the duties of their office with the same without hesitation or doubt. This message is hence to be transmitted for their consideration. Respect this.

A. D. 1900 June, July. Failure of attempt to entrust Japan with the rescuing of the Legations at Peking. A British Blue Book, issued on the 18th of February, 1901, contains correspondence that took place between the Powers before and immediately in July, looking to an arrangement for the immediate sending of a force to China to rescue the legations at Peking and Legations in Peking. As summarized in the "London Times," this correspondence showed that "the necessity of asking the help of the only Power that was near enough to intervene promptly was strongly pressed by Lord Salisbury on the other Powers in the beginning of July." M. Delcassé fell in entirely with the scheme and insisted on the need of putting aside all jealousies or afterthoughts which might hinder unity of action on the spot. The Russian Government, however, seems to have misunderstood Lord Salisbury's meaning and to have conceived him to wish Japan to settle the Chinese crisis by herself and with a view to her own interests, a misunderstanding which it required a whole series of despatches to clear up completely. The Japanese Government itself showed the most commendable readiness to act, and on July 11 Mr. Whithead telegraphed from Tokio in reply to an appeal from Lord Salisbury to the Japanese Government that "in consequence of the friendly assurances given by Lord Salisbury the Japanese Government had decided to send one or two more divisions to China." To this Lord Salisbury replied on July 13 that her Majesty's Government were willing to assist the Japanese Government up to £1,000,000 if they at once mobilized and despatched an additional 20,000 men to Peking. But the latter, in the absence of any definite scheme of operations on the part of the Powers, showed an unwillingness to accede to this proposal, which thus fell through.

A. D. 1900 (June—August).—The siege of the Foreign Legations at Peking.—The story of two dreadful months as told by one of the besieged. The most detailed and altogether best account of the dreadful experience which the foreigners besieged in the quarter of the Legations at Peking underwent from the first week in June until the 14th day of August, when a rescuing army forced its way into the city, is that furnished to the "London Times" by its Peking correspondent, who was one of the besieged. His narrative, forwarded immediately upon the opening of communication with the outer world, was published in "The Times" of October 13 and 15. With some abridgement it is given here under permission from the Manager of "The Times." Missionaries in Peking began collecting together into the larger mission compounds for common protection. Many ladies went for safety into the British Legation. Railway communication was now severed and the telegraph communication threatened. Our isolation was being completed. In the country disaffection spread

to the districts to the east of Peking, and the position of the American missionaries at Tung-chau became one of great danger. It was decided to abandon their great missionary establishments and with the native Christians that could follow them to come into Peking. They asked for an escort, but Mr. Vonger felt himself compelled to decline on the ground that he did not venture to send the small body of men that he could spare from the Legation through so dangerous a district. Protection must be looked for from the Chinese Government. What soldiers could not be sent to do one fearless American missionary succeeded in doing. Late in the evening of June 7 the Rev. W. S. Amott, of the Board Mission, left Peking in a cart, and with 20 other carts journeyed 44 miles to Tung-chau through a country palpating with excitement. It was an act of courage and devotion that seemed to one who knew the country a deed of heroism. His arrival was most opportune. He brought safely back with him to Peking the whole missionary body then in Tung-chau, five men, including the author of "Chinese Characteristics," 11 ladies and seven children, together with their Christian servants.

More troops were sent for to reinforce the Legation guards in Peking, but they were sent for too late. Already many miles of the railway had been torn up, and it was hopeless to expect an early restoration of communication. The Empress Dowager and the Emperor, who had been for some time past at the Summer Palace, returned to Peking, entering the city at the same hour by different gates. Large escorts of cavalry and infantry accompanied them. Manchu bannermen in large numbers were posted on the walls. It was noticeable that the body guard of the Empress was provided by the renegade Manchurian rabble of Tung-fu-shang, who had long been a menace to foreigners in the province. The return of the Court was expected to have a tranquillizing effect upon the populace. But this was not the case. Students were attacked when riding in the country, our race course, grand stand, and stables were burnt by "Boxers" armed with knives. Europeans could not venture along the streets outside the foreign quarter without being insulted. People were saying everywhere, "The foreigners are to be ended." Streets were being patrolled by cavalry, but there was every fear that the patrols were in league with the "Boxers," who were marching through the streets bearing banners inscribed "Fu-Ching-Mieh-Yang" ("Protect Pure (the Dynasty) exterminate the foreigner").

The London Mission and the Society for the Propagation of the Gospel handed over their buildings to the Chinese authorities, holding them responsible for their safe-keeping, and all missionaries and their families went to the British Legation. The American Board Mission likewise delivered over their valuable property to the Government and fell back upon the great Methodist Episcopal Mission near the Data-Mên Gate, beyond the foreign quarter. Tung-chau missionaries and their families and several hundred Christian converts were already gathered there. Steps were at once taken to fortify the compound. Under the direction of Mr. F. D. Gamewell deep trenches were cut, earthwork thrown up, and barbed wire entanglements laid down. Watch was kept and sentries posted,

provisions had increased, all preparations made to withstand a siege. Two to three hundred troops from the American Legation were sent as a guard, and some page-boys were obtained from the British Legation. Converts were armed with pikes and knives, and a determined effort was to be made to resist an attack. The mission was, however, devoid of the means of any force having the high city wall and Hsiao Men Gate. Without the power of reply the small garrison could have been shot down from the wall, which is still seen to this day, stones thrown from the nearest point of the compound. Shell fire, such as was subsequently used against the Legations, would have smashed the buildings into fragments. All the Maritime Customs staff and their families, except the Light City family, were housed the foreign quarter, the professors and teachers of the Tung wen kuan. Dr. Dodgeon, Mr. Petrick, the secretary of Li Hong Chang, and others were forced to abandon their homes and come in for protection. Preparations for defence went on at all the Legations, for it was now inevitable that we should have to fight. A council de guerre was held, attended by all the military officers, and a plan of defence determined. The palace and grounds of Prince Su, opposite the British Legation, were to be held for the Christian refugees, and an area was to be defended, some half a mile long by half a mile broad, bounded by the Austrian and Italian Legations to the east, the street running over the north bridge of the canal to the north, the British, Russian, and American Legations to the west, while the southern boundary was to be the street running at the foot of the great city wall from the American Legation on the west, past the German Legation on the east to the lane running from the wall north past the French Legation, the buildings of the Inspectorate General of Customs, and the Austrian Legation. All women and children and non-combatants were to come into the British Legation. Each position was to be held as long as possible, and the final stand was to be made at the British Legation. No question of surrender could ever be entertained, for surrender meant massacre.

On the 10th it was announced that reinforcements were on the way and that they were coming with the approval of the Viceroy, and of the Chinese Government, an approval more readily accorded since it was known to the Viceroy that the troops could not come by train. More than one of the Ministers was so confident that they were coming that carts were sent to await their arrival at Machun pu, the terminal railway station at Peking. Then Government gave its first public official recognition of the 'Boxers' by announcing that the notorious chief of the 'Boxers,' Prince Tuan had been appointed President of the Tsung li Yamen. Prince Chi, 2 was superseded but was not removed from the Yamen. One harmless old Chinese, Kiao Shieh, being was sent into retirement while four rabidly anti-foreign Manchus, entirely ignorant of all foreign affairs, were appointed members. The last hope of any wisdom springing from the Yamen disappeared with the supersession of Prince Chang by the anti-foreign barbarian who, more than any other man in China, was responsible for the outbreak. The following morning most of the Europeans rode to Machun pu to await the arrival of the foreign troops. They waited, but

no troops came, and then took back past the burning faces of hordes of Chinese, seeing that security was not increased by this move.

Soldiers sent to guard the summer residence of the British Legation in the Western Hill, their posts during the night. The buildings had been officially placed under the protection of the Imperial Government. In the prearrangement, some of the soldiers the buildings were guarded by 'Boxers' and entirely turned to the gods, the soldiers witnessed it they did not as the burning. But worse evils were to happen that day. In the afternoon news passed from Peking that Mr. Sugiyama, the Charge of the Japanese Legation had been murdered by soldiers. He had been sent by his Minister a second time to Machun pu to wait the arrival of the troops. Passing unharmed and alone in his cart beyond the Yung ting Men, the entrance on the way to the station, he was seized by soldiers of Tung fu shang, dragged from his cart, and done to death in the presence of a crowd of Chinese who witnessed his struggles with unimpaired interest and uncontrolled satisfaction.

On the 12th a deputation, consisting of Chi Hsin, a member of the Grand Council, and newly appointed to the Yamen, Hsu Chang ching, the ex-Minister, the Boxer leader Chai Shin chiao, and another Mandarin, called upon the British Minister. Chi Hsin made a long address, his theme being the enduring nature of the friendship between China and England and the duty which China has always recognized as a sacred obligation to protect the members of the Legations who were her guests and the strangers within her walls. Chi Hsin assured the Minister that the movement was at an end, that all was now tranquil, and that there was no more reason to fear. Yet the very next day Baron von Ketteler himself, captured by a Boxer, from amid the crowd in Legation street. He carried the consecrated headpiece, and was armed with a sword. Round his waist he had a belt containing a diamond of yellow paper smeared with mystic red symbols by which he was rendered 'impervious to foreign bullets'. And in the afternoon the 'Boxers' came down in force from the north of the city and the burning of foreign buildings began. The cry arose that the 'Boxers' were coming. Every man ran to his post, a cordon was established round the foreign quarter and no one was allowed to pass. Guards were on watch at all the Legations, but their numbers, spread over so many posts, were very inadequate, and they were still further reduced by the guards detached for duty at the Pei tang Cathedral, where, three miles distant within the Imperial City, were gathered in the one great compound Mgr. Favon, the Bishop, his coadjutor, Mgr. Jarlin, the missionaries and his brothers, the sisters of charity, and a vast concourse of Christian refugees, estimated at 2,000, who had fled from the massacre in the country. A guard of five Austrians was sent to the Belgian Legation. The Austrians with their machine gun commanded the Customs street leading to the north, the Italians with a one pounder commanded the Legation street to the east. The British with their Nordenflicht swept the Canal street to the north and the North bridge, the Russians were on the South bridge, while the Americans with their Colt machine gun had command of Legation street to the west.

117

of the great gate of the China Men. It

was the work of 'Boxers' done while the soldiers were looking on. In order to burn the foreign drug store and do the foreigners a few pounds' worth of damage, they did not hesitate to jeopardize by fire property worth millions of pounds and that is what happened. Adjoining buildings took fire, the flames spread to the book-sellers' street, and the most interesting street in China, filled with priceless scrolls, manuscripts, and printed books, was gutted from end to end. Fire broke up house after house, and soon the conflagration was the most disastrous ever known in China, reaching to ashes the richest part of Peking, the pearl and jewel shops, the silk and fur, the satin and embroidery stores, the great cane shops, the gold and silver shops, the melting houses, and nearly all that was of the highest value in the metropolis. Irreparable was the damage done.

During the night the Americans, fearing an attack from the street at the back of their Legation, kept the street clear till daybreak. During one of the volleys fired at the T'ung li Yam'en Ministers called upon the American Minister. They were blandly assuring him that all was now quiet, that there was no need for further alarm, that great was the tenderness of the Throne for men from afar, when a rattle of musketry was heard which rendered them speechless with fear. They hurriedly went away. Assurance of the Throne's tenderness did not deceive us. Our barricades were everywhere strengthened and defences systematically planned, for rumour was quick to reach us that the relief forces had been driven back to Tientsin, and this did not add to the security of our position. Inside the Imperial City wall, within one hundred yards of the British picket on the north bridge, large Chinese camp was formed. Peking was in a state of panic, all the streets near the foreign quarters were empty, and people were fleeing from the city. There was a run on the banks, and the *Sau ta h'ing*, the four great banks, the leading banks of Peking, closed their doors, and paper money was not in circulation. The Palace of Prince Su was occupied by the refugees, and its defence, the most important of all and a vital one to the British Legation, was entrusted to Colonel Shiba and Japanese marines and volunteers.

The crisis was approaching. On the morning of June 19 Mr. Cordes, the Chinese Secretary of the German Legation, was at the Yam'en when the secretaries told him that the allied fleets had taken the Taku forts on June 17. This was remembered when at 4.30 in the afternoon an ultimatum was sent to the foreign Ministers. It was a bolt from the blue. They were to leave Peking within 24 hours. 'A despatch,' they wrote, 'has arrived from the Viceroy Yu Lu, forwarding a note which he has received from the viceroy of the Consular body in Tientsin, the French Comte de Chavigny, to say that, unless foreign troops are at once permitted to land at Tientsin, the allied fleets will bombard the Taku forts. As this is equivalent to a declaration of war, the T'ung li Yam'en herewith notify the foreign Ministers that they must leave Peking within 24 hours, otherwise protection cannot be guaranteed to them. They will be given safe conduct and transport.' It was quite in accordance with Chinese custom that a despatch saying that the secret of the Taku forts had been threatened

should be sent after the seizure had been effected. What is distasteful to them to say they avoid saying. A meeting of the diplomatic body was at once held. It was decided to accept the ultimatum. They had been given their passports by the Chinese Government, what other course was open to them? . . . Word was passed round that preparation had to be made to leave Peking the following day. Mr. Conger, the American Minister, asked for 100 carts, and his Legation spent most of the night making preparations. No packing was done at the British Legation, for it was there considered inconceivable that China should insist upon sending the Ministers their passports. Only two days before, in the 'Peking Gazette' of June 17, it had been officially announced that the road to Tientsin was unsafe. . . . When the decision of the Diplomatic Body became known in Peking the most profound indignation was everywhere expressed at so unworthy a decision and the most profound astonishment that such a course of action should have received the support of M. Thibon, the French Minister 'Protecteur des Missions Catholiques en Chine,' and of so humane a man as Mr. Conger, the American Minister, for to leave Peking meant the immediate abandonment to massacre of the thousands of native Christians who had trusted the foreigner and believed in his good faith.

Early on the morning of the 20th a meeting of the Diplomatic Body was held at the French Legation. No reply had been received from the T'ung li Yam'en to the request for an audience, and the proposition that all the Ministers should go to the Yam'en found no second. Had it been carried out, there would have occurred one of the most appalling massacres on record. Two hours later left for the Yam'en. In the first was the German Minister, Baron von Ketteler, who had this advantage over the other Ministers, that he spoke Chinese fluently. In the second was the Chinese Secretary of the German Legation, Mr. Cordes. News travels quickly in Peking. Not many minutes later my boy burst into my office—'Any man speaker have make kill German Minister.' It was true. The German Minister had been assassinated by an Imperial officer. The Secretary had been grievously wounded, but, running for his life, shot at by a hundred rifles, had escaped as if by a miracle. A patrol of 15 men under Count Soden, the commander, went out to recover the body. Fired on by Chinese soldiers from every side, they were forced to retire. . . . There was no more question about leaving for Tientsin. Later in the day the Yam'en, evidently indifferent to the gravity of the position created by the Government, sent an impudent despatch to the German Legation to the effect that two Germans had been proceeding in chairs along the Hata Men street, and at the mouth of the street leading to the T'ung li Yam'en one of them had fired upon the crowd. The Chinese had retaliated and he had been killed. They wished to know his name. No reply was sent, for it was felt to be a mockery. Only too well the Yam'en knew whom they had murdered. Weeks passed before the body was recovered, and it was not until July 18 that any official reference was made to the murder. In the course of the morning a despatch was sent to the Diplomatic Body in reply to the answer they had sent to the ultimatum of yesterday. The country, it

said between Peking and Tien tsin was overrun with brigands, and it would not be safe for the Ministers to go there. They should therefore remain in Peking. It is difficult to write with calmness of the treachery with which the Chinese were now acting. Four p. m. was the hour given on the ultimatum for the Ministers to vacate their Legations, but the ultimatum had been rescinded, and the Ministers invited to remain in Peking. Thus it was hoped that they would be lulled into a false security. Chinese soldiers were secretly stationed under cover at every strategic point commanding the outposts. At 4 p. m. precisely to the minute, by preconcerted signal, they opened fire upon the Austrian and French outposts. A French marine fell shot dead through the forehead. An Austrian was wounded. The siege had begun.

At this time (June 20, at the opening of the siege) the total strength of the combined Legation guards consisted of 18 officers and 389 men, distributed as follows:—

American.—Three officers, Captain Myers in command, Captain Hall, Surgeon Lippett, and 53 marines from the Newark.

Austrian.—Five officers, Captain Thomann, the commander of the Zenta, Flag Lieutenant von Winterhalder, Lieutenant Kollar, two midshipmen, and 30 marines from the Zenta.

British.—Three officers, Captain B. M. Street in command, Captain Halliday, Captain Wray, and 79 men R. M. A. 1—30 from H. M. S. *Orlando* and 49 from *Wei hai wei*.

French.—Two officers, Captain Darcy and Midshipman Herbert, and 45 marines from the *D'Audousteraux* and *Descartes*.

German.—Lieutenant Graf Soden and 51 marines of the 3rd Battalion *Kino chun*.

Italian.—Lieutenant Paolini and 28 blue-jackets from the *Elba*.

Japanese.—Lieutenant Hara and 24 marines from the *Atago*.

Russian.—Two officers, Lieutenant Baron von Rablen and Lieutenant von Dahn, and 79 men, 72 marines from the *Sissel Veliki* and *Navarin* and seven Legation Cossacks.

Total 18 officers and 389 men.

In addition the French sent Lieutenant Henry and 30 men to guard the Pei-tung Cathedral, and the Italians detached one officer, Lieutenant Cavalieri, and 11 men for the same humane mission. To this insignificant force of 18 officers and 389 men of eight nationalities the entire foreign quarter had to trust for its defence. Fortunately several visitors or residents had received military training, and they at once went on the active list and rendered invaluable service.

A volunteer force numbering altogether 74 men, of whom 31 were Japanese, was organized and armed with all available rifles. They added greatly to the strength of the garrison, taking watch and watch like the Regulars, fighting behind the barricades, and never shrinking from any duty imposed upon them. There was also a regular force of 50 gentlemen of many occupations who did garrison guard duty in the British Legation and were most useful. They were known from the gentleman who enrolled himself as 'Thornhill's Roughs,' and they bore themselves as the legitimate successors on foot of Roosevelt's Roughriders. Armed with a variety of weapons, from an elephant rifle to the 'old-fashioned' with a picture of the Grand Prix,

to all of which carving knives had been lashed as bayonets, they were known as the 'Carving Knife Brigade'. Such were the effective forces. They were provided with four guns, an Italian one-pounder with 120 rounds, an American Colt with 25,000 rounds, an Austrian machine gun, and a British five-barrel Nordenfolt, pattern 1887. Rifle ammunition was very scanty. The Japanese had only 100 rounds apiece, the Russians 145, and the Italians 120, while the best provided of the other guards had only 300 rounds per man, none too many for a siege the duration of which could not be foreseen.

Punctually, then, at 4 o'clock Chinese soldiers began firing upon us whom they had requested to remain in peace at Peking. And immediately after the Austrian Legation was abandoned. No sufficient reason has been given for its abandonment, which was done so precipitately that not an article was saved. It was left to the mercy of the Chinese, and the guard retired to the corner of Customs Lane, leading west to the Prince's Palace. This involved the sacrifice of Sir Robert Hart's and all the Customs buildings, and hastened the advance of the Chinese westward. As previously arranged the American mission buildings had been abandoned in the morning, for they were quite untenable. All the missionaries, their wives, and families crossed over to the British Legation. Converts to the number of several hundreds joined the other refugees. The captain and 20 American marines returned to the American Legation. By an error of judgment on the part of the captain the mission was finally left in a panic. Almost nothing was saved, and nearly all the stores accumulated for a siege were lost. The British Legation was now thronged. Rarely has a more cosmopolitan gathering been gathered together within the limits of one compound. All the women and children were there, all the missionaries, American, British, French, and Russian, all the Customs staff, the French, Belgian, Russian, American, Spanish, Japanese, and Italian Ministers, and their families, the entire undivided foreign community of Peking, with the exception of M. Chanut, who remained in his hotel throughout though it was in the hottest corner of the besieged area. French volunteers bravely stood by their own Legation, and the Austrian *Chargé d'Affaires* and *Mme. von Rosstern* remained there as long as there was a room habitable. Mr. Spicers, the first Secretary of the American Legation, with Mr. Cheshire the Chinese Secretary, and Mr. Pethick, the well-known private secretary of Li Hung Chang, stayed by the United States Legation, and the staff of the German Legation also kept staunchly to their posts. At the British Legation fortification began in real earnest, the refugees working like coolies. Sand bags were made by the thousand, and posts mounted round the Legation. A way was knocked through the houses to the Russian Legation, so that the Americans, if they had to fall back, could pass through to the British Legation. During the day every Legation was exposed to a continuous fire from surrounding house tops, and in the case of the British Legation from the cover in the Imperial Carriage Park. Chinese put flames to the abandoned buildings, and the Belgian Legation, the Austrian Legation, the Methodist Mission, and some private houses were burned.

"June 22 opened disastrously. The evening before, Captain Thomann, the Austrian commander, announced that as the senior officer he had taken command in Peking. This morning, hearing from an irresponsible American that the American Legation was abandoned, he, without taking steps to verify the information, ordered the abandonment of all the Legations east of Canal street, the detachments to fall back upon the British Legation. There had been no casualties to speak of, none of the Legations had been attacked, and every commander who received the order to retreat regarded the action as madness. Peremptory orders were sent to the Japanese to abandon the Prince's Palace or Fu as I shall henceforth call it, and they retired to their Legation. In the British Legation nothing was known of the order when, to the amazement of all, the Italians, Austrians, and French came raming down Legation street, followed a little later by the Japanese, and subsequently by the Germans, who recalled their post on the wall and marched without a shot being fired at them down under the wall to Canal street. Americans and Russians, learning that all east of Canal street had been abandoned, saw themselves cut off, though their communications had not even been menaced, and retreated precipitately into the British Legation. It was a veritable stampede—a panic that might have been fraught with the gravest disaster. Prompt action was taken. Captain Thomann was relieved of his command, and Sir Claude MacDonald, at the urgent instance of the French and Russian Ministers, subsequently confirmed by all their colleagues, assumed the chief command. The French and Austrians reoccupied the French Legation, but the barricade in Customs street was lost. One German only was killed and the position was saved, but the blunder might have been disastrous.

"It was obvious from the first that the great danger at the British Legation was not so much from rifle fire as from incendiarism, for on three sides the compound was surrounded by Chinese buildings of a highly inflammable nature. Before time could be given to clear an open space round the Legation, the buildings to the rear of Mr Cockburn's house were set on fire, and as the wind was blowing strongly towards us it seemed as if nothing could prevent the fire from bursting into the Legation. Water had to be used sparingly, for the wells were lower than they had been for years, yet the flames had to be fought. Bullets were whistling through the trees. Private Scudling, the first Englishman to fall, was killed while on watch on the stables near by. Men and women lined up, and water passed along in buckets to a small fire engine that was played upon the fire. Walls were broken through, trees hastily cut down, and desperate work saved the building. It was the first experience of intense excitement. Then the men set to with a will and till late at night were demolishing the temple and buildings outside the wall of the Legation. Work was continued in the morning, but when it was proposed to pull down an important building in the Hanlin Academy that abuts upon the Legation to the North, the proposition was vetoed. Such desecration, it was said, would wound the susceptibilities of the Chinese Government. It was 'the most sacred building in China.' To lay hands upon it, even

to safeguard the lives of beleaguered women and children, could not be thought of, for fear of wounding the susceptibilities of the Chinese Government. So little do the oldest of us understand the Chinese.

"A strong wind was blowing from the Hanlin into the Legation, the distance separating the nearest building from the Minister's residence being only a few feet. Fire the one and the Minister's residence would have been in danger. Suddenly there was the alarm of fire. Smoke was rising from the Hanlin. The most venerated pile in Peking, the great Imperial Academy, centre of all Chinese learning, with its precious collection of books and manuscripts, was in flames. Every one who was off duty rushed to the back of the Legation. The Hanlin had been occupied during the night by Imperial soldiers, who did not hesitate, in their rage to destroy the foreigners, to set fire to the buildings. It was first necessary to clear the temple. A breach was made in the wall, Captain Poole headed a force of Marines and volunteers who rushed in, divided, searched the courts, and returned to the main pavilion with its superb pillars and memorial tablets. Chinese were rushing from other burning pavilions to the main entrance. They were taken by surprise and many were killed, but they had done their evil deed. To save the Legation it was necessary to continue the destruction and dismantle the library buildings. With great difficulty, with inadequate tools, the buildings were pulled down. Trees endangering our position were felled. An attempt was made to rescue specimens of the more valuable manuscripts, but few were saved for the danger was pressing. Sir Claude MacDonald, as soon as the fire was discovered, despatched a messenger to the Tsung li Yamén, telling them of the fire and urging them to send some responsible officials to carry away what volumes could be rescued, but no attention was given to his courteous communication. The Dutch Legation was burned on the 22nd, and next day Chinese soldiers set fire to the Russo-Chinese Bank, and a greater part of the buildings were destroyed involving in danger the American Legation. Chinese volunteers were called for. They responded readily, worked with much courage exposed to fire from the wall, and the Legation was saved. All the buildings back from the bank to the Chien Mén (the main gate between the Chinese and Tartar cities facing the entrance to the Forbidden City) seemed to be on fire. Then all the Customs buildings were fired, so that flames were on every side, and the smoke was tremendous, while the fusillade was incessant. An Italian and a German died of their wounds. The first American was killed, shot from the wall, then a Russian fell. They were dropping off one by one, and already we were well accustomed to the sight of the stretcher and the funeral. Wounded were being brought in from every Legation to the hospital in the British Legation.

"Then a new terror was added to the fears of the besieged, for the Imperial troops mounted a 3 in. Krupp gun on the Chien Mén, the gate opposite to the Forbidden City, and began throwing segment shells from a distance of 1,000 yards into the crowded Legation. The first shell struck the American Legation, others burst over the British compound, while others crashed into the

upper rooms of the German Legation. It was known that the Chinese had ten similar guns in Peking, while we had nothing with which to oppose them, and no one ever knew where they might be mounted. Immediately after the first bombardment shelters for the women were taken down. Rifle fire also played on the American Legation from the wall quite close to them at a distance of a few hundred feet only, whence, safely screened by the parapet of the wall, men could attack the barricade which was held by the Americans on the street running east and west near the wall. The barricade became untenable, and to occupy the wall was a paramount necessity which could no longer be delayed.

Down in the besieged area the enemy pressed upon every side. Again they attempted to fire on the British Legation from the Mongol market on the east, but a sortie was made by British Marines and Volunteers, and the Chinese were driven from house to house out of the market. The work was dangerous, and Captain Halfday was dangerously wounded, while Captain Strouts had an extraordinary escape, the bullet grazing the skin above the corioid artery. The sortie was entirely successful; some rifles were captured and ammunition, which was more precious than silver. The buildings were then held by us, the fire being kept under control, which allowed a long distance round the west of the Legation. Fortification proceeded without interruption and all the defences of the besieged area quickly gathered strength. For the first time in our art was a feature in the fortification. Sandbags were of every colour under the sun and of every texture. Silks and satins, curtains and carpets and upholsteries were ruthlessly cut up into sandbags. In the Prince's Fu the sandbags were made of the richest silks and satins, the Imperial Courts and accumulated treasures of one of the eight princely families of China. In the Prince's Fu the Chinese made a determined attempt to force their way into the Palace in their frenzy to slaughter the native Christians. In the angle of the wall in the northeastern court of the Palace they made a breach in the wall and rushed wildly in. But the Japanese were waiting for them and from loopholes they had made opposite to them drove them over like rabbits, driving them helter-skelter back again. Some 20 were killed, and but for the inconstancy of the Italians who were assisting the Japanese the execution would have been greater. The Chinese were driven back, but the same evening they threw fireballs of petroleum over the wall and set fire to the building. Flames spread to the splendid main pavilion of the Palace. The Japanese in their turn were driven back, and the Christians escaped from the burning building overflowed from the Palace all that quarter lying between the Palace grounds and Legation street.

On June 25 a truly Oriental method of work and defence was attempted by the Chinese. They took lock in the afternoon the shooting of rifles and field guns had been continuous, when suddenly high voices sounded north, east, south, and west, and, as it by magic, the firing ceased. It was under perfect control—Imperial control controlled by responsible central authority. This was abruptly following the fusillade was striking. Then an official of low rank was seen to climb to the parapet of the north bridge near the British Legation a board inscribed with 18

Chinese characters. Imperial command to protect Ministers and stop firing. A despatch will be handed at the Imperial and Bridge. A placard whereon was written 'The patch will be received' was sent by one of the Chinese clerks employed in the Legation, but when he approached the bridge a hundred rifles from the Imperial Palace gate were levelled at him. The despatch was never received. The attitude deceived no one. Treachery was feared, vigilance was redoubled. Sandbags were thrown on positions which during fire were untenable. So that when at midnight the general attack was made upon us we were prepared, and every man was at his post. The surprise had failed. As firing had ceased so it began. Horns were sounded, and then from every quarter a hail of bullets poured over us, sweeping through the trees and striking with sharp impact the roofs of the pavilions. No harm was done though the noise was terrific. Great steadiness was shown by the men. They lay quietly behind the sandbags and not a shot was fired in reply. It was suggested as an explanation of this wild firing that the shots were to kill the guardian spirits which were known to hover over us. Similar fusillades took place at the American Legation and at the French Legation, and with the same result. During the armistice the Chinese had availed themselves of the quiet to throw up earthworks in the Carriage Park alongside the British Legation, in the Mongol market between the British and Russian Legations, and at both ends of Legation street facing the Americans on the west and facing the French Legation corner on the east.

Our isolation was now complete, and the enemy's cordon was constantly drawing closer. Every wall beyond the lines was loopholed. Not only was the besieged area cut off from all communication with the world outside Peking, but it was cut off from all communication with the Peking. No messenger could be induced for love or money to carry a message there. Bishop Favier and his guards must have been already hard pressed, for they were exposed to the danger not only of rifle and cannon, but of fire and starvation. The small garrison detached from the guards was known to be inadequately supplied with ammunition. It was known, however, that the danger of the situation had long been foreseen by Monseigneur Favier, who, speaking with unequalled authority, had weeks before the siege vainly urged his Minister to bring troops to Peking. When the crisis came inevitable, and Christian refugees poured into the city the Bishop endeavoured to buy arms and ammunition, so that there was a hope, though a faint one, that the Chinese themselves had assisted in the defence. So with stores. Large quantities of grain were stored in the Peking, but whether sufficient for a siege for a garrison of 3,000 souls was not known. Their condition was a constant source of anxiety to the Europeans within the Legations, who were powerless to help them. Watch was kept uneasingly for any sign of the disaster that seemed inevitable—the massacre and the conflagration.

Towards evening of the 25th a Krupp gun was mounted in the Mongol market, not 300 yards from the British Legation, and fire was opened upon a storeroom building occupied by marines in the south court of the Legation.

Fired at short range, the shells crashed through the roof and walls. For an hour the bombardment continued, but no one was injured, though a crack racing pony in the stables below was killed, and next day eaten. It was determined to capture this gun, so in the early morning a force consisting of 26 British, ten Germans, ten Russians, five French and five Italians, and about 20 volunteers made a sortie from the Legation to try and capture the gun and burn the houses covering it, but the attempt was a fiasco. The men got tangled up in the lanes so that the reserve line with the kerosene marched ahead of the firing line, there was a Babel of voices, no one knew where to go, the captain lost his head and set fire to the houses in the rear and the men retreated pell-mell. . . . The Chinese, however, were alarmed and removed the gun. Meanwhile both French and German Legations had suffered heavily.

On the 26th the French Legation was hard pressed. One of their officers, the midshipman Herbert, was shot. Reinforcements were hastily sent from the Fu, and the attack was repulsed; but some of the outer buildings of the Legation were burned, and the French had to retire further into the Legation. In this siege it was striking what a powerful part petroleum was made to play. Already the French Legation had suffered more severely than any other Legation; of their 15 men 16 had been killed or wounded. Krupp guns had been mounted not 50 yards to the eastward, and the eastern walls of the pavilions were being gradually and systematically battered in ruins. All day now and until the cessation of hostilities shells were pounding into the French Legation, into Chanot's hotel, and from the Chien Men on the wall, promiscuously, everywhere. Much property was destroyed, but, though the shells burst everywhere and escapes were marvellous, few people were hit. Bullets whistled in the Legation compounds. Surgeon Lippett was talking to Mr. Conger in the American Legation when he was hit by a bullet that smashed the thigh bone. Had the bullet not struck the surgeon it would have hit the Minister. Mr. Petrick was sitting at a window of the American Legation fanning himself when a bullet pierced the fan. A civilian was wounded in the British Legation and a marine, Phillips, was killed while walking in the compound. A fragment of shell fell on a patient inside the hospital.

The cordon was drawing closer. In the Fu nearly one third of the buildings had been abandoned and the Japanese retired to a second line of defence. Shells were fired by the hundred. On the 29th 70 shells were thrown into the British Legation. The difficulty of holding the American and German barricades on the city wall was increasing. The positions were very much exposed. A Krupp gun was brought close to the American barricade. The Russo-Chinese Bank and all the buildings near were occupied by Chinese troops, the walls being loopholed and lines barricaded. And all were so close that you could not look through a loophole without being shot at. Yet the American barricade, with its mixed guard of Americans, Russians and British had to be held at all hazards, otherwise the Krupp gun could be brought down the wall and play havoc upon the Legations, the furthest of which—the British—

was at its nearest point not 400 yards distant. Still more exposed than the American barricade was the outpost on the wall held by the Germans. At first they had been reinforced by the French and Austrians, but the needs of the French Legation were equally pressing and the guards were withdrawn and a small pocket of British sent to aid the Germans. . . . In the morning of July 1 the Chinese climbed up the ramp and surprised the guard. The order was hastily given to retire, and the picket, shaken by its losses of yesterday, left the wall. The German non-commissioned officer who gave the order was severely blamed for thus abandoning a position that he had been ordered to hold. Withdrawal left the Americans exposed in the rear. They saw the Germans retire, and in a panic fell back to the Legation, rushing pell-mell down the ramp. Nothing had occurred at the barricade itself to justify the retreat, although two men had fallen within a few hours before. Yet the wall was the key of the position and had to be maintained. A conference was held at the British Legation, and as a result orders were given to return to the post. Captain Myers at once took back a strong detachment of 14 Americans, ten British, and ten Russians, and reoccupied the barricade as if nothing had happened. The Chinese, ignorant that the post had been evacuated, lost their opportunity. Then the guard in the French Legation was driven a stage further back and M. Wagner, a volunteer, was killed by the bursting of a shell.

It was a day of misfortunes. In the afternoon the most disastrous sortie of the siege was attempted. A Krupp gun, firing at short range into the Fu (i.e., the Prince's Palace), was a serious menace to our communications. Captain Paolini, the Italian officer, conceived the idea that he could capture the gun if volunteers could be given him and if the Japanese could assist. . . . By this ineffective sortie our small garrison was reduced by three men killed, one officer and four men and one volunteer wounded. Fortunately it was no worse. The gun that was not captured was brought up again next day into play and continued battering down the Fu walls. The enemy were working their way ever nearer to the refugee Christians. Their rage to reach the Christians was appalling. They cursed them from over the wall, hurled stones at them, and threw shells to explode overhead. Only after the armistice, when we received the 'Peking Gazette,' did we find that word to burn out and slaughter the converts had come from the highest in the land. The Japanese were driven still further back. Already they had lost heavily, for upon them had fallen the brunt of a defence the gallantry of which surpassed all praise. When the siege was raised it was found that of the entire force of marines only five men had escaped without wounds; one was wounded five times. Colonel Shiba early raised a force of 'Christian volunteers,' drilled them, instructed them, and armed them with rifles captured from the enemy. They made an effective addition to the Japanese strength.

At daybreak on July 3, the Chinese barricade on the top of the wall near the American outpost was successfully stormed by a party of British, Americans, and Russians, under the leadership of Captain Myers, Captain Vromblevsky, and Mr. Nigel Oliphant. . . . The position was intolerable.

ble. It was imperative to rush the barricade and drive out the Chinese, nothing else could be done. An attack was planned for 3 in the morning, and before that hour a strong force of British was sent over from the Legation. The combined force assembled for the attack consisted of 26 British marines under Sergeant Murphy and Corporal Gregory, with Mr. Noel Ouphant as volunteer, 15 Russians under Captain Vroublevsky, and 15 Americans, all being under the command of Captain Myers. When asked if they came whangly one American begged to be relieved and was sent below. This left the total force at 56, of whom 14 were Americans. So close were the Chinese that it was only a couple of pumps from our barricade to their fort. There was a rush to be first over, the fort was stormed and dashing round the covering wall the foreign devils charged behind the barricade. Taken by surprise the Chinese were in the air, fled incontinently, and were shot down as they ran along the open surface of the wall. Captain Vroublevsky and his detachment moved with especial gallantry, for their duty it was to attack the Chinese barricade in the front, while the British and Americans took position in the rear. Two banners marked General M. were captured. Fifteen Chinese soldiers of Tang tsu sang were killed outright and many more must have been wounded. Some rifles and ammunition were captured. Then the allied forces, exposed to a heavy fire, retired within what had been the Chinese barricade and employed it against the enemy who had built it. Captain Myers was wounded in the knee by tripping over a fallen spear, two Americans, Turner and Thomas, one having accidentally jumped on the wrong side of the barricade—were killed, and Corporal Gregory was wounded in the foot. News of the successful sortie gave much pleasure to the community. Chinese coolies were sent on the wall, and a strongly entrenched redoubt was built there, the camp was made safe by traverses. Unfortunately, the wound of Captain Myers proved more serious than was at first suspected, and he was not again able to return to duty. The services of a brave and capable officer were lost to the garrison, his post on the wall was taken most ably by Captain Percy Smith and other officers in turn.

Most of the shelling was now directed against the French and German Legations and Chaoet's Hotel. The hotel was struck 91 times and was several times set on fire, but the flame was extinguished. Work continued there, however hot the shelling for food had to be prepared there for half the community in Peking, Russians, French, Germans and Austrians. The energy of Chaoet was marvellous. He fed the troops and a crowd of Christian refugees, killed his own mules and horses, ground his own wheat, and baked 2000 loaves a day. Shelled out of the kitchen he baked in the parlour. His courage inspired the Chinese, and they followed him under fire with an amazing confidence.

Then suddenly a new attempt was made to reduce the British Legation. Guns firing round shot, eight pounders, and four pounders, were mounted on the Imperial City wall overlooking from the north, the Haidin and the British Legation. With glasses, the distance was only 350 yards—some could clearly see the officers and waving fish their Imperial Peacock feathers and

Mandarin hats.

Three batteries in all, carrying five guns, were mounted on the Imperial City wall where the bombardment could be witnessed by the Empress Dowager and her counsellors, and day after day round shot were thrown from them into the British Legation, into a compound crowded with women and children. On July 5 Mr. David Ouphant, of the British Legation, was killed. He was telling a tree by the well in the Haidin when he was shot by a sniper concealed in a roof in the Imperial Carriage Park, and died within an hour. Only 24 years of age, he was a student of exceptional promise and ability.

Day by day the Chinese were pressing us more closely. In the Fu they were gradually wedging their way in from the north-east seeks to cut the communications between the British and the Legations to the east. They burned their way from house to house. Keeping under cover, they set alight the gables within reach by torches of cloth soaked in kerosene held at the end of long poles. If the roof were beyond reach they threw over fireballs of kerosene, or, if still further shot into them with arrows freighted with burning cloth. In this way and with the use of the heavy gun they battered a way through the houses and courtyards of the Prince's Palace. A daring attempt made by the Japanese to capture the gun resulted in failure. Coolies failed them when they were within four yards of success, and they were forced to retire. Their gallant leader Captain Ando was shot in the throat while waving on his men, one marine was seriously wounded and one Christian volunteer killed.

By the 8th the position in the Fu was alarming, for the Japanese force had been reduced to 13 marines and 14 volunteers, yet with decreasing numbers they were constantly called upon to defend a longer line. Reinforcements were sent them of half a dozen Customs and student volunteers and of six British marines. Nothing can give a better indication of the smallness of our garrison than the fact that throughout the siege reinforcements meant five men or ten men. Strong reinforcements meant 15 men. Our reinforcements were counted by ones, not by companies. With this force a line of intrenchments stretching from the outer court of the Fu on the east across the grounds, to near the extreme north-west corner was held till the end.

The position was one of constant solicitude, for the loss of the Fu would have imperilled the British Legation. A Krupp gun, mounted 50 yards away, had the range and raked the post with shell and shrapnel. To strengthen the breastwork exposure to rifle fire was incurred from 20 yards' distance, while to reach the post required crossing a zone of fire which was perhaps the hottest in the whole of the defences. Many men were wounded there, and one Italian had his head blown off. Shell fire finally made it impossible to live there. The advanced posts were abandoned, and the sentries fell back to the main picket. No sooner was the advanced post abandoned than it was occupied by the Chinese, and the defences we had made were turned against us.

Meanwhile, the French and German Legations were being roughly handled, and men were falling daily. At the German Legation shells burst through the Minister's drawing room. Most of the other buildings conspicuous by their

height were unimpaired, but every member of the Legation remained at his post. So, too, in the French Legation, where the Austrians were, Dr. and Madame von Rosthorn remained by the side of their men. The French volunteers and Dr. Matignon stood staunchly by their Legation, although it was fast tumbling into ruins, their coolness and resolution being in curious contrast to the despair of their Minister, who, crying, "Tout est perdu," melodramatically burned the French archives in a ditch at the British Legation. Chinese and French were so close that the voices of the Chinese officers could be heard encouraging their men. Chinese were within the Legation itself. Their guns literally bombarded the Minister's residence "à bout portant," and the noise of the exploding shells was terrific. Yet the men never flinched. . . . July 11 was a day of many casualties. One German was mortally wounded, one Englishman, one Italian, and one Japanese were seriously wounded. Mr. Nigel Cliphant, a volunteer, received a bullet wound in the leg while Mr. Narahara, the well-known secretary of the Japanese Legation, wounded by the bursting of a shell, suffered a compound fracture of the leg which from the first gave cause for anxiety. He gradually sank and died on July 24.

On the 11th 18 prisoners were captured by the French in a temple near the Legation. They were soldiers, and a Chinese Christian gave information as to their whereabouts. Every one of them was put to death without mercy in the French Legation, bayoneted by a French corporal to save cartridges. Questioned before death they gave much information that was obviously false. One man, however, declared that a mine was being driven under the French Legation. His story had quick corroboration. As the afternoon of the 15th was closing a faint attack was made on the Japanese intrenchments in the Fu. Then the sound of many bugles was heard from the camps round the French Legation to be followed in a few minutes by a terrific explosion, and in a moment or two by another; and bricks and debris were hurled into the air. It was a dull roar in the midst of the devilish cries of hordes of Chinese, shrieking like spirits in hell, the rattle of musketry, and the boom of heavy guns. The mine of which the prisoner had warned us had exploded and burst an entrance into the French Legation. When the first mine exploded the French Captain Darcy, the Austrian Chargé d'Affaires, two French marines, and Mr. Destelan of the Customs were standing over the death trap. Mr. Destelan was burned up to the neck, but was rescued unhurt. The two marines were engulfed, and their bodies were never recovered. Captain Darcy and Dr. von Rosthorn escaped miraculously. The latter was hurried by the first explosion and released unhurt a moment or two later by the second. Driven out of the main buildings, the small garrison consisted only of 17 Austrians with three officers, 27 French with two officers, and nine volunteers; fell back a few paces to a line of defence, part of which had only been completed in the afternoon, and securely held the position.

Simultaneously with this attack upon the French Legation the Chinese made a determined assault upon the German Legation, the effective strength of whose garrison numbered only one

officer and 31 men. They broke into the Club alongside the Legation and were on the tennis ground when Count Soden and a handful of German soldiers gallantly charged them at the point of the bayonet and drove them out headlong.

Uniforms on the dead Chinese showed that the attack had been carried out by the troops of Yang Lu, reinforced by the savages of Tung Luh shang. Some of the dead were armed with the latest pattern Mauser and the newest German army revolver. Some ammunition, of which the guards were in much need, was recovered and distributed among the Japanese and Italians. Firing continued round the other Legations; every battery opened fire; the air hissed with bullets. There was momentary darkness, then flames broke out from the large foreign houses between the German Legation and Canal street. It seemed at one time as if the whole of the quarter would be burned, but the fire did not spread. Heavy rain came on, and the rest of the night passed in quiet.

On July 14, a messenger, sent out on the 10th, with a letter for the troops, returned to the British Legation. He had been arrested by the Chinese, cruelly beaten, and taken, he said, to the yamen of Yang Lu, and there given the following letter, purporting to be written by Prince Ching and others, addressed to the British Minister. It was the first communication of any kind whatsoever that had reached us from outside for nearly one month. "For the last ten days the soldiers and militia have been fighting, and there has been no communication between us, to our great anxiety. Some time ago we hung up a board, expressing our intentions, but no answer has been received, and contrary to expectation the foreign soldiers made renewed attacks, causing alarm and suspicion among soldiers and people. Yesterday the troops captured a convert named Chin Sui-hai and learnt from him that all the foreign Ministers were well, which caused us very great satisfaction. But it is the unexpected which happens. The reinforcements of foreign troops were long ago stopped and turned back by the 'Boxers,' and if, in accordance with previous agreement, we were to guard your Excellencies out of the city, there are so many 'Boxers' on the road to Tien tsin and Ta ku that we should be apprehensive of misadventure. We now request your Excellencies to first take your families and the various members of your staffs and leave your Legations in detachments. We should select trustworthy officers to give close and strict protection, and you should temporarily reside in the Tsung-li-Yamen, pending future arrangements for your return home, in order to preserve friendly relations intact from beginning to end. But at the time of leaving the Legations there must on no account whatever be taken any single armed soldier, in order to prevent doubt and fear on the part of the troops and people, leading to untoward incidents. If your Excellencies are willing to show this confidence, we beg you to communicate with all the foreign Ministers in Peking, to-morrow at noon being the limit of time, and to let the original messenger deliver the reply in order that we may settle the day for leaving the Legations. This is the single way of preserving relations which we have been able to devise in the face of innumerable difficulties. If no reply is received by the time fixed, even our affection will not enable us to

help you. Compliments. (Signed) Prince Ching and others. July 14, 1900.

Following as it did immediately after the attack on the French Legation, which reduced it to ruins, the letter did not lack for impudence.

Boxers had driven back our troops. "Militia," not Boxers, had been attacking us in Peking. The letter was read with derision. It was interpreted as a guileless attempt to seduce the Ministers away from their Legations and massacre them at ease. News we heard subsequently had just reached the Chinese of the taking of Tientsin city.

On the 15th a reply was sent declining on the part of the foreign representatives the invitation to proceed to the Tsung li Yamén, and pointing out that no attacks had been made by our troops, who were only defending the lives and property of foreigners against the attacks of Chinese Government troops. The reply concluded with a statement that if the Chinese Government wished to negotiate they should send a responsible official with a white flag.

The morning of the 16th opened with a disaster. Captain Stroott, the senior British officer, was shot while returning from the outposts in the P. R. He was struck in the upper part of the left thigh by an expanding bullet, and died an hour after being brought into the hospital, to the grief of the entire community.

While shells were bursting in the trees, and amid the crack of rifle bullets the brave young fellow to whose gallant defence we all owed so much was laid to rest.

While the service was proceeding a messenger bearing a flag of truce was approaching the gate. The letter was from "Prince Ching and others." It explained that the reason for suggesting the removal of the Legations to the Tsung li Yamén was that the Chinese Government could afford more efficient protection to the members of the Legations if concentrated than it scattered as at present. As the foreign Ministers did not agree, however, the Chinese would in duty bound do their utmost to protect the Legations where they were. (While the letter sentence was being read the translator had to raise his voice in order that it should be heard above the crack of the Imperial rifle bullets.) They would bring reinforcements and continue their endeavours to prevent the "Boxers" from firing and they trusted that the foreign Ministers on their part would restrain their troops also from firing.

By the same messenger a cipher message was brought to Mr. Conger, the American Minister. It said: "Communications by bearer." It was in the State Department cipher and had no date or indication by whom it had been sent. Mr. Conger replied in the same cipher:—"For one month we have been besieged in British Legation under continued shot and shell from Chinese troops. Quick relief only can prevent general massacre." When forwarding his reply he asked that it should be sent to the address from which the other had come, which address had not been communicated to him. Next day the Yamén sent him an answer saying that his message had been forwarded and explaining that the telegram sent to him had been contained in a telegram from Wu Ting Fang, the Chinese Minister at Washington dated July 11. This telegram read: "The United States cheerfully aid China, but it is thinking of Mr. Minister Conger. The Hon. Secretary of State inquires after him by

telegram, which I beg to be transmitted to him and get his reply." From this we could well imagine what specious assurances had been given to Mr. Hay by Wu Ting Fang's bland assurances that there had been a most regrettable outbreak on the part of lawless bands in the north of China which the Government was vainly struggling to cope with. From July 17 there was a cessation of hostilities, not that men were not wounded afterwards and Christian coaches fired upon whenever they showed themselves, but the organized attacks ceased and the Krupp guns were muzzled. Fearing treachery, however, we relaxed none of our vigilance. Tranches were cut where mines might have been driven. All walls and shelters were so strengthened as to be practically shell proof. Our preparations were purely defensive. On their part the Chinese also continued work at their barricades. From their barricade on the top of the wall near the German Legation they advanced westward so that they could fire directly down into the German Legation and pick off men going up the steps of the Ministers' house. They built a wall with loop holes across Legation street not 20 yards from the Russian barricade. In nearly every position the enemy were so close that you could shoot into the muzzles of their rifles thrust through the loop holes. The cordon was still drawn tightly round us, and we were pinned in to prevent our acting in cooperation with the troops who were coming to our relief. No provisions were permitted to reach us, but a few eggs for the women and children were surreptitiously sold us by Chinese soldiers. All were on reduced rations, the allowance for the 2,750 native Christians whom we had to provide for being barely sufficient to save them from starvation. Their sufferings were very great, the mortality among the children and the aged pitiful. No one could have foreseen that within the restricted limits of the besieged area, with the food supply therein obtainable, 473 civilians (of these 414—namely, 191 men, 147 women, 76 children—were inside the British Legation), a garrison of 400 men, 2,750 refugees, and some 400 native servants could have sustained a siege of two entire months. Providentially in the very centre of Legation street there was a mill with a large quantity of grain which turned out 100 lb. of flour a day divided between the hotel and the Legation. One day the Tsung li Yamén insultingly sent us a present of 1,000 lb. of flour and some tea and vegetables, but no one would venture to eat the flour, fearing that it might be poisoned. Communications now passed almost daily with the Tsung li Yamén or with the officials whose despatches were signed "Prince Ching and others." On July 17, Sir Claude MacDonald replied to the suggestion that the Ministers would restrain their troops from firing upon the Chinese. He said that from the first the foreign troops had acted entirely in self defence, and would continue to do so. But the Chinese must understand that previous events had led to a want of confidence and that if barricades were erected or troops moved in the vicinity of the Legations the foreign guards would be obliged to fire. In the afternoon the Chinese replied reviewing the situation and ascribing the hostilities to the attacks previously made by the Legation guards. They noted with satisfaction that a cessation of firing was agreed to on both sides,

but suggested that as foreign soldiers had been firing from the city wall east of the Chien Mên they should be removed from that position. Next day, Sir Claude MacDonell replied with a review of the situation from the foreign point of view.

He hoped that mutual confidence would gradually be restored, but meanwhile he again pointed out that cessation of hostile preparations as well as firing was necessary on the part of the Chinese troops to secure that the foreign troops should cease firing. As for the suggestion that the foreign troops should leave the city wall, it was impossible to accede to it, because a great part of the attacks on the Legations had been made from the wall. He concluded by suggesting that sellers of fruit and ice should be allowed to come in. They were never permitted to come in. It was clear, however, that events were happening elsewhere to cause alarm in the Imperial Court. On the afternoon of the first day of what might be called the armistice M. Pellet, a French gentleman from Tongking, entered the Chinese lines and to the great anxiety of all was absent five hours. He was taken by soldiers to a yamen of one of the big generals—he knew not which—was poked with questions which, speaking some Chinese, he could answer, and was sent back unmolested with an escort of 15 soldiers 'to protect him against the Boxers.' This unusual clemency was interpreted favourably. It was clear that the Chinese had sustained a severe defeat and that relief was coming. Next day direct communication was for the first time held with an official of the Tsungli Yamen. A secretary named Wen Jui came to the Legation to see Sir Claude MacDonell and was received by the Minister outside the gate, not being permitted to enter. He said that the regrettable occurrences were due to 'local banditti,' that the Government had great concern to protect the foreigners, that Baron von Ketteler's body had been recovered from the hands of the 'local banditti' who had murdered him and been enclosed in a valuable coffin. He urged that the maintenance of foreign troops on the city wall was unnecessary and that they should be withdrawn. It was pointed out to him that as we had been very continuously shelled from the city wall both from the Hsü ta Mên and the Chien Mên, it would be inadvisable to retire. Asked to send copies of the 'Peking Gazette,' he hesitated a moment and then stammered that he really had not himself seen the 'Peking Gazette' for a long time, but he would inquire and see if they could be bought. He never came back and never sent a 'Gazette.' His name was Wen Jui. When we did obtain copies of the 'Gazette' it was interesting to find two items that must have been especially unpleasant for him to have us know. On June 24, by Imperial decree, leaders were appointed to the 'Boxers,' or 'patriotic militia.' Among the chiefs was Wen Jui.

The visit of Wen Jui was on the 18th. Up to the time of his visit, though more than four weeks had passed since the assassination, no allusion of any kind whatever had been made in any 'Peking Gazette' to the murder of Baron von Ketteler. Then the Empress Dowager, yielding to her fears, published an allusion to the murder. Will the German Emperor rest satisfied with the tardy official reference to the brutal assassination of his Minister by an Imperial officer? Last month

the Chinese or of the Japanese Legation was killed. This was indeed, most unexpected. Before this matter had been settled the German Minister was killed. Suddenly meeting this affair caused us deep grief. We ought vigorously to seek the murderer and punish him. No more. The date July 18, the murder June 20.

Yet even in this decree there was a complete volte face. Missionaries who were by the decree of July 2 'to be at once driven away to their own countries' were by the decree of July 18 'to be protected in every province,' 'to be protected without the least carelessness.' The lenience and bullfidence of the decrees issued when our troops had been driven back had disappeared; the tone now was one of justification and conciliation. Only one interpretation was possible—that the Chinese had been defeated. Confirmation came the same day. A messenger sent out by the Japanese successfully passed the enemy's lines and brought us the news that we had so long awaited.

By the same messenger a letter was received by the French Minister. The same messenger also brought to the Belgian Minister a despatch from his Consul at Tientsin. Days followed quietly now, though 'sniping' did not cease. Several casualties occurred among the garrison: a Russian was killed and an Austrian wounded; an Italian wounded and also a Japanese. In the Fu it was still dangerous for the Christian refugees to move about, and several were hit and two killed. But the Yamen became more and more conciliatory, until we could gauge the advance of the relief by the degree of apology in their despatches. But all supplies were rigorously cut off, and the sufferings of the Christians were acute.

On the 22nd Sir Robert Hart received a despatch from the Tsungli Yamen. They naively remarked that it was now one month since they had heard from him, and his silence gave them concern for his welfare. Moreover, a report had just reached them that his house had been burned, but they expressed the hope that he and all his staff were well. Another despatch requested his advice upon a Customs question that had arisen in Shanghai. Sir Robert Hart wrote a despatch reply. For more than a month, he said, he had been a refugee in the British Legation with all his staff, having had to flee from his house without warning; that all Customs records and papers, and every paper and letter of value that he had accumulated during a lifetime, had been destroyed; that not only his house, but some 19 other buildings in the occupation of his staff had been burned with all their contents; that the acting postal secretary had been killed by a shell, and two other members of his staff—Mr. Richardson and Mr. Macoun—had been wounded by bullets.

Meanwhile, the armistice continued. If armistice it can be called where true armistice there was none. Desultory firing continued, and sniping was still the chief pastime at the Chinese outposts. Friendly relations were, however, opened with some Chinese soldiers in the Fu. A Japanese Volunteer established a bureau of intelligence to which the enemy's soldiers had access. One soldier was especially communicative, and earned high reward for the valuable information that he conveyed to us. For a week from July 26 to August 2 daily bulletins based upon this information of the advance of the relief

column were posted on the bell tower of the British Legation. An unbroken series of victories was attending our relief forces. Letters were given to the soldier to take to the general of the rebel column, and a reward offered if an answer should be brought next day, but no answer was ever brought. Our informant had brought the armies along too quickly. He was compelled to send them back. Accordingly on the 11st he made the Chinese recapture Chung chui wan, killing 60 of the foreigners, advancing upon Meien he killed 10 foreigners more, and drove them back to An ping. Next day he drove the foreigners disastrously back to Tien tsin with a loss of 1,000. The day was equally disastrous to us. Our informant had killed the goose that lay the golden egg. For a messenger arrived on that day with letters from Tien tsin, dated July 30, informing us that a large force was on the point of leaving for our relief. . . . Meanwhile, while our informant was marching our men back towards and forwards to Tien tsin, Prince Ching and others were vainly urging the Ministers to leave Peking, but whether they left Peking or not they were to hand over the Christian refugees now under the protection of the Legations to the mercies of the Government, which had issued a decree commanding that they be exterminated unless they recanted their errors. In other communications Prince Ching and others urged that the foreign Ministers should telegraph to their Government 'en chair' lying in terms of the condition of affairs in Peking.

Two days after the cessation of hostilities Prince Ching and others sent a despatch to Sir Claude MacDonald to the effect that it was impossible to protect the Ministers in Peking because 'Boxers' were gathering from all points of the compass, and that nothing would satisfy them but the destruction of the Legations, and that the Ministers would be given safe conduct to Tien tsin. Sir Claude, in reply, asked why it was that protection could be given to the Ministers on the way to Tien tsin and yet could not be given to them while in the Legations in Peking. Prince Ching and others replied:—

July 25, 1900. . . . As to the inquiry what difference there is between giving protection in the city or on the road, and why it is possible to give it in the latter, there is only an apparent discrepancy. For the being in the city is permanent, the being on the road is temporary. If all the foreign Ministers are willing to temporarily retire we should propose the route to Tung chun and thence by boat down stream to Tien tsin, which could be reached in only two days. No matter what difficulties there might be a numerous body of troops would be sent, half by water to form a close escort, half by road to keep all safe for a long way on both banks. Since the time would be short we can guarantee that there would be no mishap. It is otherwise with a permanent residence in Peking, where it is impossible to foretell when a disaster may occur.

In the envelope which brought this letter were two other communications of the same guileless nature. 'On July 24,' said the first, 'we received a telegram from Mr. Warren, British Consul General in Shanghai, to the effect that while China was protecting the Legations no telegram had been received from the British Minister and asking the Yamen to transmit Sir C. M. MacDonald's telegram to Shanghai. As in

duty bound we communicate the above, and beg you to send a telegram 'en chair' to the Yamen for transmission.' Tender consideration was shown for us in the second letter. For the past month and more military affairs have been very pressing. Your Excellency and other Ministers ought to telegraph home that your families are well in order to soothe anxiety, but at the present moment peace is not yet restored and your Legation telegrams must be wholly 'en chair,' stating that all is well, without touching on military affairs. Under those conditions the Yamen can transmit them. The writers beg that your Excellency will communicate this to the other foreign Ministers.

Evasive replies were given to these communications. Our position at this time compelled us to temporize. We knew from the alteration in tone of the Chinese despatches that they had suffered defeat and were growing alarmed, but we did not know how much longer international jealousies or difficulties of obtaining transport were to delay the departure of the troops for Tien tsin. Though now nominally under the protection of an armistice shipping still continued, especially in the Fu, into any exposed portion of the besieged area. The Chinese worked on continuously at their fortifications. Finding that the Ministers declined to telegraph to their Governments 'en chair' that all was well with the Legations, the Tsungli Yamen wrote to Sir Robert Hart asking him to send home a telegram in the sense they suggested. Sir Robert replied diplomatically, 'If I were to wire the truth about the Legations I should not be believed.'

A malevolent attempt was next made by the Chinese to obtain possession of the refugees who were in our safe keeping. On July 27 they wrote to Sir Claude MacDonald saying that 'they hear that there are lodged at the Legations a considerable number of converts, and that, as the space is limited and weather hot, they suggest that they must be causing the Legations considerable inconvenience. And now that people's minds are quieted, these converts can all be sent out and go about their ordinary avocations. They need not have doubts or fears. If you concur, an estimate should be made of the numbers and a date fixed for letting them out. Then all will be in harmony.' The reply of the diplomatic body was to the effect that while they were considering the two last letters—one offering safe conduct to Tien tsin and the other declaring that the converts might leave the Legations in perfect security—heavy firing was heard in the direction of the Pei tang, which was evidently being attacked in force, that yesterday and last night a barricade was built across the North Bridge, from behind which shots are being continuously fired into the British Legation. The French and Russian Legations are also being fired upon. As all this seems inconsistent with the above letters, an explanation is asked for before further consideration is given to the offer. Promptly the Yamen sent its explanation. The Pei tang refugees, it seemed, who were starving, had made a sortie to obtain food. And they had fired upon the people. 'A decree,' it went on to say, 'has now been requested to the effect that if the converts do not consent to plunder they are to be protected and not to be continually attacked, for

they also are the children of the State. This practice of continually firing upon the converts will thus be gradually stopped. Such a callous reply was read with indignation, and there was not the slightest intention on the part of any Minister to leave Peking. Yet on the 4th of August a decree was issued appointing Yung Lu to conduct the foreign Ministers safely to Tientsin, in order once more to show the tenderness of the Throne for the men from afar.

On August 10, Friday, a messenger succeeded in passing the enemy's lines and brought us letters from General Gaselee and General Paasikann. A strong relief force was marching to Peking and would arrive here if nothing untoward happened on the 13th or 14th. Our danger then was that the enemy would make a final effort to rush the legations before the arrival of reinforcements. And the expected happened.

Yesterday [August 13] passed under a continuous fusillade which increased during the night. Then at 3 on this morning we were all awakened by the booming of guns in the east and by the welcome sound of volley firing. Word flew round that "the foreign troops are at the city wall and are shelling the East Gate." At daylight most of us went on to the wall and witnessed the shelling of the Great East Gate. We knew that the allies would advance in separate columns, and were on the qui vive of excitement, knowing that at any moment now the troops might arrive. Lunched the hard luncheon of horse flesh, came on and we had just finished when the cry rang through the Legation: "The British are coming!" and there was a rush to the entrance and up Canal street towards the Water Gate. The stalwart form of the general and his staff were entering by the Water Gate, followed by the 1st Regiment of Sikhs and the 7th Rajputs. They passed down Canal street, and amid a scene of indescribable emotion marched to the British Legation. The siege has been raised.

Peking, Aug. 15. On reading over my narrative of the siege I find that in the hurry and confusion of concluding my report I have omitted one or two things that I had wished to say. In the first place, I find that I have not in any adequate way expressed the obligation of all those confined in the British Legation to the splendid services done by the Rev. F. D. Gamewell, of the American Episcopal Mission [who was educated as a civil engineer at Troy and Cornell], to whom was due the designing and construction of all our defences, and who carried out in the most admirable manner the ideas and suggestions of our Minister, Sir Claude MacDonald. To the Rev. Frank Norris, of the Society for the Propagation of the Gospel, our thanks are also specially due. He superintended, often under heavy fire, the construction of defences in the Prince's Fu and in other exposed places, working always with a courage and energy worthy of admiration. He was struck in the neck once by a segment of a shell, but escaped unscathed from serious injury. He speaks Chinese well, and Chinese worked under him with a fearlessness that few men can inspire. In the second place, I noticed that I have not sufficiently recorded the valuable services rendered by Mr. H. G. Squiers, the First Secretary of the American Legation, who on the death of Captain

Strouts became Chief of the Staff to Sir Claude MacDonald. He had been for 15 years in the United States cavalry, and his knowledge and skill and the resolution with which he inspired his small body of men will not readily be forgotten.

To-day the Pel tang Cathedral was relieved. Bishops, priests, and sisters had survived the siege and, thanks to the wonderful forest of Bishop Favier, the Christians had been spared from starvation. Japanese coming down from the north of the city relieved the cathedral. French, British, and Russians from the south arrived as the siege was raised. Mines had been employed with deadly effect. The guards had lost five French killed and five Italians. Some 200 of the Christians had perished. — *London Times*, Oct. 13 and 15, 1900.

A. D. 1900 (June-December).—Upright conduct of the Chinese Viceroy in the Yangtze provinces.—In his annual message of December 3, 1900, to Congress, referring to the occurrences in China, the President of the United States remarked with much justice: "It is a relief to recall and a pleasure to record the loyal conduct of the viceroys and local authorities of the southern and eastern provinces. Their efforts were continuously directed to the pacific control of the vast populations under their rule and to the scrupulous observance of foreign treaty rights. At critical moments they did not hesitate to memorialize the Throne, urging the protection of the legations, the restoration of communication, and the assertion of the Imperial authority against the subversive elements. They maintained excellent relations with the official representatives of foreign powers. To their kindly disposition is largely due the success of the consuls in removing many of the missionaries from the interior to places of safety." The viceroys especially referred to in this are Chang Chih tung and Liu Kun yi, often referred to as "the Yangtze viceroys."

A. D. 1900 (July).—Speech of German Emperor to troops departing to China, commanding no quarter. See in this vol. GERMANY, A. D. 1900 (OCTOBER 9).

A. D. 1900 (July).—American troops sent to co-operate with those of other Powers.—Capture of Tientsin by the allied forces.—Death of Colonel Liscum.—Reported massacre of foreign Ministers and others in Peking.—The long month of dread suspense.—Overtures from Earl Li Hung-chang for negotiation.—On the 26th of June Maj. Gen. Adna R. Chaffee, U. S. V., was appointed to the command of the American forces in China. He embarked from San Francisco on the 1st of July, reached Nagasaki on the 24th, and Taku, China, on the 28th. . . . On reaching Nagasaki he received the following instructions, dated July 19: "Secretary War directs that you proceed at once with transport Grant, Sixth Cavalry, and Marines to Taku, China, and take command of American land forces, which will be an independent command known as the China Relief expedition. You will find there the Ninth and Fourteenth Infantry, one battery of the Fifth Artillery, and one battalion of Marines. . . . Summer sailed from San Francisco July 17 with Second battalion of Fifteenth Infantry and recruits to capacity of vessel. Reinforcements will follow to make your force in the immediate future up to

5,000, and very soon to 10,000. . . . Reports now indicate that American Minister with all the legation have been destroyed in Peking. Chinese representative here, however, insists to the contrary, and there is, therefore, a hope which you will not lose sight of until certainty is absolute. It is the desire of this Government to maintain its relations of friendship with the part of Chinese people and Chinese officials not concerned in outrages on Americans. Among these we consider Li Hung Chang, just appointed viceroy of Chihli. You will to the extent of your power aid the Government of China, or any part thereof, in repressing such outrages and in rescuing Americans, and in protecting American citizens and interests, and wherever Chinese Government fails to render such protection you will do all in your power to supply it. Confer freely with commanders of other national forces, act concurrently with them, and seek entire harmony of action along the lines of similar purpose and interest. There should be full and free conference as to operations before they are entered upon. You are at liberty to agree with them from time to time as to a common official direction of the various forces in their combined operations, preserving, however, the integrity of your own American division, ready to be used as a separate and complete organization. Much must be left to your wise discretion and that of the admiral. At all times report fully and freely to this Department your wants and views. The President has today appointed you major-general of volunteers. . . .

In the meantime the Ninth Infantry, from Maucha, reached Taku on the 6th of July. Two battalions of that regiment, under Colonel Lisun, pressed forward to Tientsin, reaching that point on the 11th, and on the 13th took part with the British, French, and Japanese forces in an attack upon the southwest part of the walled city of Tientsin which had been rendered necessary by the persistent shelling of the foreign quarters, outside of the walls, on the part of the Chinese troops occupying the city. Colonel Lisun's command formed part of a brigade under General Howard, of the British army, and was assigned to the duty of protecting the flank of the allied forces. In the performance of that duty it maintained a position under heavy fire for fifteen hours, with a loss of 18 killed and 77 wounded. Among the killed was the gallant Colonel Lisun, who thus ended an honorable service of nearly forty years, commencing in the ranks of the First Vermont Infantry at the outbreak of the civil war, and distinguished by unvarying courage, fidelity, and high character. The regiment was withdrawn from its position on the night of the 13th, and on the morning of the 14th the native city was captured, and the southeast quarter was assigned to the American forces for police and protection. . . .

"At the time of the capture of Tientsin the most positive and circumstantial accounts of the massacre of all the ministers and members of the legations in Peking, coming apparently from Chinese sources, had been published, and were almost universally believed. The general view taken by the civilized world of the duty to be performed in China was not that the living representatives of the Western powers in Peking were to be rescued, but that their murder was to be avenged and their murderers punished. In

the performance of that duty time and rapidity of movement were not especially important. The resolution of the commanders of the allied forces, communicated by Admiral Kempff on the 8th of July, to the effect that 80,000 men would be required—20,000 to hold the position from Taku to Tientsin and 60,000 to march to Peking, while not more than 40,000 troops were expected to have arrived by the middle of August, practically abandoned all expectation of rescuing the ministers and members of the legations alive, for it proposed that after the middle of August any forward movement should be still deferred until 40,000 more troops had arrived. On the 11th of July, however, the American Secretary of State secured, through the Chinese minister at Washington, the forwarding of a dispatch in the State Department cipher to the American minister at Peking, and on the 20th of July, pursuant to the same arrangement, an answer in cipher was received from Minister Conger, as follows: "For one month we have been besieged in British legation under continued shot and shell from Chinese troops. Quick relief only can prevent general massacre." This dispatch from Mr. Conger was the first communication received by any Western power from any representative in Peking for about a month, and although it was at first received in Europe with some incredulity, it presented a situation which plainly called for the urgency of a relief expedition rather than for perfection of preparation. It was made the basis of urgent pressure for an immediate movement upon Peking, without waiting for the accumulation of the large force previously proposed"—*United States, Secretary of War, Annual Report, Nov. 30, 1900, pp. 14-16, 19-20.*

As mentioned above, in the instructions of the American government to General Chaffee, the veteran Chinese statesman and diplomat, Earl Li Hung-chang, well known in Europe and America, had now been recalled by the Peking government to the viceroyalty of Chihli, from which he was removed six years before, and had been given the authority of a plenipotentiary to negotiate with the allied Powers. He addressed a proposal to the latter, to the effect that the Ministers in Peking would be delivered, under safe escort, at Tientsin, if the allies would refrain from advancing their forces to Peking. The reply from all the governments concerned was substantially the same as that made by the United States, in the following terms: "The government will not enter into any arrangement regarding disposition or treatment of legations without first having free communication with Minister Conger. Responsibility for their protection rests upon Chinese government. Power to deliver at Tientsin presupposes power to protect and to open communication. This is insisted on." Earl Li then asked whether, "if free communication were established, it could be arranged that the Powers should not advance pending negotiations," and was told in reply: "Free communication with our representatives in Peking is demanded as a matter of absolute right, and not as a favor. Since the Chinese government admits that it possesses the power to give communication, it puts itself in an unfriendly attitude by denying it. No negotiations seem advisable until the Chinese government shall have put the diplomatic representatives of the Powers in full and free communication with their respective

governments, and removed all danger to their lives and liberty."

A. D. 1900 (July-August).—Boxer attack on the Russians in Manchuria, and Russian retaliation. See in this vol. *MANCHURIA*, A. D. 1900.

A. D. 1900 (August). Appointment of Count Waldersee to command the allied forces.—Field Marshal Count von Waldersee, appointed to command the German forces sent to China, being of higher military rank than any other of the commanding officers in that country, was proposed for the general command of the allied armies, and accepted as such. Before his arrival in China, however, many of the American, Russian, and some other troops, had been withdrawn.

A. D. 1900 (August 4-16).—The advance of the allied forces on Peking and the capture of the city. The following is from the report of General Chaffee, commanding the American forces in the allied movement from Tientsin, to rescue the beleaguered Legations at Peking: "On my arrival at Tientsin I called on the various generals commanding troops, and on August 1 a conference of generals was held at the headquarters of Lieutenant General Lievitch, of the Russian army. Present at the conference were the commanding general of the Russian army and his chief of staff; Lieutenant General Yamaguchi and his chief of staff; Major General Enokushima, of the Japanese army; Lieutenant General Gaschen, of the British army, and his chief of staff; General Barrow, General Frey, of the French army; the Germans were also represented by an officer of the German navy; myself and Maj. Jesse M. Lee, Sixth Infantry, and Lieut. Louis M. Little, of the marines, who speaks French. The purpose of this conference was to decide whether the armies were ready to make a movement for the relief of Peking. It was discussed in the conference that the Japanese, whose forces occupied the right bank of the river in and about Tientsin, where also were located the British and American forces, had by various patrols determined that the Chinese were in considerable force in the vicinity of Pei tsang, about 7 miles distance up the river from Tientsin, and that they were strengthening their position by earthworks extending from the right bank of the river westward something like 3 miles, and from the left bank east to the railroad embankment was also being strengthened. The forces were variously estimated, from reports of Chinese, at from 10,000 to 12,000 men in the vicinity of Pei tsang, with large bodies to the rearward as far as Yangtsun, where it was reported their main line of defenses would be encountered."

"The first question submitted for decision was 'whether a movement should be made at once' which was decided in the affirmative, two Powers only dissenting, and these not seriously, as their doubt seemed to be that the force we could put in movement was not sufficiently strong to meet the opposition that might be expected. The decision was that the attack should be made on Sunday, August 5, and as the Japanese, British, and American forces occupied the right bank of the river, the Russians the left, the attack should be made without change of situation of the troops, the British to send four heavy guns to aid the Russian column. The strategy on the right bank of the river was left to the determination of the British, American, and Japanese

generals. The force reported to the conference as available for the movement was Japanese, about 8,000; Russian, 4,000; British, about 3,000; American, 2,100; French, 800. With special effort on the part of Captains Byron and Wood, Kelly's battery was gotten to Tientsin August 3 and assembled. We were also able to make one pack train available on the 11th just in time to march with the column. The marines and Sixth Cavalry were gotten off the 'Grant' and to Tientsin August 3. The presence of the Sixth Cavalry at Tientsin, disappointed, enabled me to take all available men of the Ninth and Fourteenth, also all the marines except one company 100 strong, left to assist the civil government of the city. By arrangement prior to arrival the officers selected to establish a civil government for Tientsin were to be allowed a military force, of which the United States should furnish 100. I was compelled, of course, to leave the Sixth Cavalry, because the horses had not arrived. The troops moved out from the city of Tientsin during the afternoon and night of August 4 and bivouacked in the vicinity of Si ku arsenal, the same that was taken by Admiral Seymour in his retrograde movement."

The Chinese were driven from the Arsenal by the Japanese, before whom they also fell back from Pei tsang, and the first serious battle was fought at Yang tsun, on the 6th. Having rested at Yang tsun and cared for its sick and wounded, on the 7th, the army moved forward on the 8th, encountered slight resistance at Shang shia wan on the 11th, found Tong chow abandoned, on the 12th, and reached Peking on the 14th, having suffered more from heat, fatigue, and the want of potable water on the march, than from "Boxers" or Imperial troops.

Returning now to the report of General Chaffee, we take from it his account of the final movement to the walls of Peking, of the forcing of the gates and of the clearing of Chinese troops from the city: "The Japanese when taking possession of Tong Chow in the morning [of the 12th] advanced troops toward Peking for a distance of 64 miles. It was finally agreed that the next day, the 13th, should be devoted to reconnaissance; the Japanese should reconnoiter on the two roads to the right or north of the paved road which is just north of the canal; the Russians on the paved road, if at all; the Americans to reconnoiter on the road just south of the canal; the British a parallel road $1\frac{1}{2}$ miles to the left of the road occupied by the Americans. On the 14th the armies should be concentrated on the advance line held by the Japanese, and that that evening a conference should be held to determine what the method of attack on Peking should be. On the morning of the 13th I reconnoitered the road to be occupied by the Americans with Troop M, Sixth Cavalry, Kelly's battery, and the Fourteenth Infantry up to the point specified in our agreement, or about 7 miles from Tong Chow. Finding no opposition, I directed the remainder of my force to march out and close in on the advance guard. This force arrived at midnight. The British reconnoitered their road with some cavalry. The Japanese reconnoitered their front and also the front which properly belonged to the Russians."

"For reasons unknown to me the Russians left their camp at Tong Chow about the time that my troops were marching to close on my

system guard. They followed the road which had been assigned to them, and about nine o'clock heavy firing was heard in the vicinity of Peking. It was the next day ascertained that they had moved forward during the previous evening and had attacked the "Tung-pien men" gate, an eastern gate of the city near where the Chinese were on the Tartar wall. Very heavy artillery and considerable small arm firing was continued throughout the night. At the time of the occurrence I supposed the firing to be the last effort of the Chinese troops to destroy the legations.

The 14th being the day decided upon for the concentration on the line 7 miles from Tong Chow, I made no preparations for carrying on operations beyond a small reconnaissance by a force of cavalry to my front, which duty I assigned to Captain Caldwell. My cavalry had been absent not more than an hour, when Mr. Leary, the interpreter who had accompanied me, rode back and informed me that Captain Caldwell was surrounded by Chinese cavalry. I immediately ordered a battalion of the Fourteenth Infantry to fall in, and we went forward about a mile and a half and found Captain Caldwell occupying some houses, firing from the roofs of a village in his front. I insisted on the British troops giving me the road, which they reluctantly did. Having joined Caldwell, I continued the reconnaissance to my front, wishing to get as near the wall of the city as I could, but not expecting to move my whole force, which was contrary to the agreement at Tong Chow on the evening of August 12. Without serious opposition we arrived at the northeast corner of the Chinese city, having brushed away some Chinese troops or "Boxers" that fired from villages to our left and front. About 10 o'clock I saw the advantage of holding the ground that I had obtained, and directed all my force to move forward, as I had then become aware of Russian troops being in action on my right, and could also hear the Japanese artillery farther to the right. My left flank at this time was uncovered, except by a small force of British cavalry. The British troops did not advance from Tong Chow until the 14th, owing to the agreement previously referred to. On that day they marched for the line of concentration and found my force advancing on Peking. At noon a British battery was at work on a line to my left and I rear.

At 11 a. m. two companies of the Fourteenth Infantry, under the immediate command of Colonel Daggett, had scaled the wall of the Chinese city at the northeast corner, and the flag of that regiment was the first foreign colors unfurled upon the walls surrounding Peking. The two companies on the wall, with the assistance of the troops scaling the wall, drove away the Chinese detachments from the corner to the east gate of the Chinese city, where the British entered without opposition later in the day. About noon it was reported to me that the Russians had battered open the "Tung-pien men" gate during the night and had effected an entrance there. I arrived at the gate soon afterwards and found in the gate some of the Fourteenth Infantry, followed by Reilly's battery. The Russian artillery and troops were in great confusion in the passage, their artillery firing in both directions, and I could see no effort being made to extricate themselves and give passage into the city. One company of the

Fourteenth Infantry deployed itself in the buildings to the right of the gate and poured effective fire onto the Tartar wall. Captain Reilly got two guns through a very narrow passage to his left, tearing down a wall to do so and found a position a few yards to the left of the road where he could enfilade the Tartar wall, section by section, with shrapnel. The Fourteenth Infantry crossed the moat and, taking position paralleling the moat, deployed along a street facing the Tartar wall, and with the aid of the artillery swept it of Chinese troops. In this way, gradually working to the westward, the Tartar wall was cleared of opposition to the "Hait men" gate, and beyond.

Orders were sent to the Ninth to follow up the movement of the Fourteenth Infantry and Reilly's battery as soon as the wall was cleared of Chinese, also to follow the movement to the "Chien men" gate of the Tartar city. The marines were to follow the general movement, but later were ordered to protect the train. At about 3 o'clock p. m. our advance had arrived opposite the legations, the fire of the Chinese having practically ended, and we drew over to the Tartar wall and entered the legation grounds with the Fourteenth Infantry by the "water gate or moat." Reilly's battery passing through the "Chien men" gate, which was opened by the American and Russian marines of the besieged force. The Fourteenth Infantry was selected on this occasion in recognition of gallantry at Yang-tsun and during this day. The British troops entered at the "Shahmo" gate of the Chinese city, and following a road through the center of the city to opposite the legations, arrived there through the "water gate or moat." In advance of the United States troops. Having communicated with Minister Conger, I withdrew the troops from the legation and camped just outside near the Tartar wall for the night. My casualties during the day were 8 enlisted men wounded in the Fourteenth Infantry, 1 enlisted man wounded of Battery F, Fifth Artillery, and 1 officer and 2 enlisted men wounded of the marines.

I was informed by Mr. Conger that a portion of the Imperial city directly in front of the "Chien men" gate had been used by Chinese to fire on the legations, and I determined to force the Chinese troops from this position. On the morning of the 15th I placed four guns of Reilly's battery on the Tartar wall at "Chien men" gate and swept the walls to the westward to the next gate, there being some slight opposition in that direction, supported by poor artillery. About 8 o'clock a. m. the Chinese opened fire on us at "Chien men" gate, from the second gate of the Imperial city north of Chien men gate, whereupon I directed an attack on the first gate to be made, and in a short while Lieut. Charles P. Sumnerall, of Reilly's battery, had opened the door of this gate. Our troops entered, and were met with a severe fire from the next gate, about 600 yards distant. Fire was directed upon the second gate with the battery and such of the infantry as could be elevated on the Tartar wall and side walls of the Imperial city and act effectively. In the course of half an hour the Chinese fire was silenced, and Colonel Daggett led forward his regiment to the base of the second gate. Lieutenant Sumnerall was directed to open this gate with artillery, which he did. The course just indicated was pursued for four gates, the Chinese troops being driven from each gate in succession, the

fourth gate being near what is known as the 'palace grounds,' which is surrounded by the 'imperial guards.'

"At a conference that afternoon it was decided not to occupy the imperial city, and I withdrew my troops into the camp occupied the night before, maintaining my position on the Tartar wall at Chien men gate. The idea of not occupying the imperial city was not concurred in by the ministers in a conference held by them the next day. In their opinion the imperial city should be occupied. It was later decided by the generals to occupy the imperial grounds, and in consequence of this decision I reoccupied the grounds we had won on the 15th, placing the Ninth Infantry within as guard at the gate where our attack ceased.

"During the 15th and the attack upon the gates referred to our losses were 2 enlisted men killed and 1 wounded, Ninth Infantry; 3 enlisted men killed and 14 wounded, Fourteenth Infantry; 1 enlisted man, Battery F, Fifth Artillery, wounded. At 8.50 o'clock a m. of this date Capt. Henry J. Reilly, Fifth Artillery, was struck in the mouth and almost instantly killed when standing at my left elbow observing the effect of a shot from one of his guns by his side.

"At a conference of the generals on the afternoon of the 16th the Chinese and Tartar cities were divided to the various forces for police and protection of the inhabitants. The United States troops were assigned to the west half of the Chinese city and to that section of the Tartar city lying between the Chien men gate and Shun chin gate of the south wall of the Tartar city and north to the east and west street through the Tartar city, being bounded upon the east by the wall of the imperial city."—*United States Secretary of War, Annual Report, Nov. 30, 1900, pp. 61-71.*

A. D. 1900, August 5-16.—The horrors of the allied invasion.—Barbarity of some divisions of the army in the march from Tien-tsin to Peking.—Murder, rape, pillage and destruction.—Of the conduct of some divisions of the allied army which advanced from Tien-tsin, and which represented to "the heathen Chinese" the civilized and Christian nations of Europe and the Western world, a writer in "Scribner's Magazine," who evidently shared the experience and witnessed the scenes of the march, gives the following account: "The dreary stretches through which the Pei ho flows, never attractive to the Western eye, presented, as the allied armies slowly traversed them, a scene of indescribable desolation.

"In a region which usually contained a population of many millions, scarcely a human being, besides those attached to the allied armies, was to be seen. Towns and villages were completely deserted. In China an ordinary town will have from one to three hundred thousand inhabitants, while villages not of sufficient importance to be designated on the maps, have populations varying from ten to thirty thousand. These villages line the banks of the Pei ho and the main road to Peking by hundreds. The troops were never entirely clear of them. . . . So hurried had been the flight of the inhabitants that hundreds of houses were left open, such household possessions that could not be carried away being tossed about in great disorder. Of all that dense population, only a few scattered hundreds of aged, decrepit men and women, and some unfortunate

cripples and abandoned children, remained. A great majority of these were ruthlessly slain. The Russians and Japanese shot or bayoneted them without compunction. Their prayers for mercy availed not. If these miserable unfortunates chanced to fall into the hands of American or British troops they had a chance for their lives, but even our armies are not free from these wanton sacrifices. Every town, every village, every peasant's hut in the path of the troops was first looted and then burned. A stretch of country fully ten miles in width was thus swept. Mounted 'flanks in the air' scoured far and wide, keen on the scent of plunder, dark columns of smoke on the horizon attesting their labors. In this merry task of chastising the heathen Chinese, the Cossacks easily excelled. . . . Like an avenging Juggernaut the Army of Civilization moved, Terror strode before it; Death and Desolation sat and brooded in its path. Through such scenes as these, day after day, the army gided. A spirit of utter callousness took root, and enveloped officers and men alike. Pathetic scenes passed without comment or even notice. Pathos involved in a riot of more violent emotions, had lost its power to move."—T. F. Millard, *A Comparison of the Armies in China* (Scribner's Magazine, Jan., 1901).

Another eye witness, writing in the "Contemporary Review," tells the same sickening and shameful story, with more vividness of description and detail: "As a rule," he remarks, "the heathen Chinese suffers silently, and dispassionately. He has, it is true, a deep rooted hatred of war, and sometimes a paralyzing fear of being shot down in battle. But he takes beheading, hanging, or death by torture with as much resignation as did Seneca, and a great deal less fuss. And he bears the loss of those near and dear to him with the same serenity, heroism, or heartlessness. But he does not often move to pity, and very seldom yearns for sympathy. The dire sights which anyone might have witnessed during the months of August and September in Northern China afforded admirable illustrations of this aspect of the national character. The doings of some of the apostles of culture were so heinous that even the plea of their having been perpetrated upon wild savages would not free them from the nature of crimes. I myself remember how profoundly I was impressed when sailing on one calm summer's day up to the bar of Taku towards the mouth of the river Pei ho. Dead bodies of Chinamen were floating seawards, some with eyes agape and aghast, others with brainless skulls and eyeless sockets, and nearly all of them wearing their blue houses, baggy trousers, and black glossy pig-tails. Many of them looked as if they were merely swimming on their backs. . . .

"The next picture that engraved itself upon my memory had for its frame the town of Tongkew. . . . On the right bank [of the Pei ho] naked children were amusing themselves in the infected water which covered them to the armpits, dancing, shouting, splashing each other, turning somersaults, and intoxicating themselves with the pure joy of living. A few yards behind them lay their fathers, mothers, sisters, brothers, dead, unburied, mouldering away. On the left bank, which was also but a few yards off was the site of Tongkew: a vast expanse of smoking rubbish heaps. Not a roof was left standing.

hardly a wall was without a wide breach; formless mounds of baked mud, charred woodwork, and half-burned clothes were burning or smouldering still. Here and there a few roofless dwellings were left, as if to give an idea of what the town had been before the torch of civilisation set it alight. Every one of these houses, one could see, had been robbed, wrecked, and wantonly ruined. All the inhabitants who were in the place when the troops swept through had been swiftly sent to their last account, but not yet to their final resting place. Beside the demolished huts, under the lengthening shadows of the crumbling walls, on the thresholds of houseless doorways, were spread out scores, hundreds of matted pieces of canvas, fragments of tarpaulin, and wisps of straw, which bulged suspiciously upwards. At first one wondered what they could have been put there for. But the clue was soon revealed. In places where the soldiers had scamped their work, or prey birds had been busy, a pair of fleshless feet or a plaited pigtail protruding from the scanty covering satisfied any curiosity which the passer-by could have felt after having breathed the nauseating air. Near the motionless plumage of the tall grass happy children were playing. Hard by an uncovered corpse a group of Chinamen were carrying out the orders they had received from the invaders. None of the living seemed to heed the dead.

"Feeling that I never knew a man until I have been permitted to see somewhat of his hidden springs of action and gauge the depth or shallowness of his emotion, I set myself to get a glance at what lay behind the mask of propriety which a Chinaman habitually wears in Tongkew as in every other town and village in the Empire. As soon as the ice seemed broken I asked one smiling individual: 'Why do you stay here with the slayers of your relatives and friends?' 'To escape their fate, if we can,' was the reply. 'We may be killed at any time, but while we live we must eat, and for food we have to work.' 'Were many of your people killed?' I inquired. 'Look there,' he answered, pointing to the corpses in the vast overgrown churchyard, 'and in the river there are many more. The Russians killed every Chinaman they met. Of them we are in great fear. They never look whether we have crosses or medals; they shoot everyone.' 'You are a Christian, then?' I queried. 'Yes, a Christian,' he eagerly answered. 'And I.' 'And I,' chimed in two others. Ten minutes' further conversation, however, brought out the fact that they were Christians not for conscience' sake but for safety, and they were sorely afraid that they were beating on a broken reed. The upshot of what they had to tell me was that the Europeans, mainly the Russians, looked upon them all as legitimate quarry, and hounded them down accordingly. They and theirs, they declared, had been shot in skirmishes, killed in sport, and bayoneted in play.

But the ever-recurring refrain of their narrative was the massacre in cold blood of the three hundred coolies of Taku. . . . The story has been often told since then, not merely in the rich but throughout the length and breadth of China. The leading facts, as narrated on the spot, are these. Some three hundred hard-working coolies eked out a very cheerless existence by loading and unloading the steamers of all nations which touched at Taku. For the conven-

ience of both sides they all cooped themselves up in one boat, which served them as a permanent dwelling. When times were slack they were huddled together there like herrings in a barrel, and when work was brisk they toiled and moiled like galley slaves. Thus they managed to get along, doing harm to no man and good to many. The attack of the foreign troops upon Taku was the beginning of their end. Hearing one day the sharp reports of rifle shots, this peaceable and useful community was panic-stricken. In order to save their dreary lives they determined to go ashore. Strong in their weakness, and trusting in their character of working men who, scorning war, they steered their boat landwards. In an evil hour they were espied by the Russian troops, who at that time had orders, it is said, to slay every human being who wore a pigtail. Each of the three hundred defenceless coolies at once became a target for Muscovite bullets. It must have been a sickening sight when it was all done.

"The river Pei ho, could it bear witness in words to the dramas of blood enacted on its banks by Europeans, would have many a tale to tell as gruesome as that of the slaughter of the three hundred coolies. . . . I lived for twelve or thirteen days on that foul river, and never was I more profoundly impressed than by what I saw in its waters and on its banks. The first day after I had left Tientsin I was towed by untiring coolies through a land thickly studded over with what had once been human dwellings, but were now high heaps of smouldering rubbish. . . . A wave of death and desolation had swept over the land, washing away the vestiges of Chinese culture. Men, women, boys, girls, and babes in arms had been shot, stabbed, and hewn to bits in this labyrinth of streets, and now, on both banks of the river, reigned the peace described by Tacitus. . . .

"Fire and sword had put their marks upon this entire country. The untrampled corn was rotting in the fields, the pastures were herdless, roofless the ruins of houses, the hamlets devoid of inhabitants. In all the villages we passed the desolation was the same. . . . The streets and houses of war-blasted cities were also the scenes of harrowing tragedies, calculated to sear and scar the memory even of the average man who is not given to 'sickly sentimentality.' In war they would have passed unnoticed; in times of peace (hostilities were definitely over) they ought to have been stopped by drastic measures, if mild means had proved ineffectual. I speak as an eye-witness when I say, for example, that over and over again the gutters of the city of Tungtschau ran red with blood, and I sometimes found it impossible to go my way without getting my boots bespattered with human gore. There were few shops, private houses and courtyards without dead bodies and pools of dark blood. . . . The thirst of blood had made men mad. The pettiest and most despicable whipper-snapper who happened to have seen the light of day in Europe or Japan had uncontrolled power over the life and limbs, the body and soul, of the most highly-cultivated Chinaman in the city. From his decision there was no appeal. A Chinaman never knew what might befall him an hour hence, if the European lost his temper. He might lie down to rest after having worked like a beast of burden for twelve or fourteen hours

only to be suddenly awakened out of his sleep, marched a few paces from his hard couch, and shot dead. He was never told, and probably seldom guessed, the reason why. I saw an old man and woman who were thus hurriedly hustled out of existence. Their day's work done they were walking home, when a fire broke out on a little barge on the river. They were the only living beings found out of bed at the time, and in the pockets of the woman a candle and some matches were stowed away. Nobody, not even the boat watchman, had seen them on or near the boat. They were panicked upon, taken to the river's edge, shot and buried. It was the work of fifteen minutes or less.

The circumstantial tales told of the dishonouring of wives, girls, children, in Tientsin, Tientshan, Peking, are such as should in normal beings kindle some sparks of indignation without the aid of 'sickly sentimentality.' I knew well a man whose wife had been dealt with in this manner, and then killed along with her child. He was one of the 'good and loyal people' who were on excellent terms with the Christians, but, if ever he gets a chance of wreaking vengeance upon the foreigners, he will not lightly let it slip. I knew of others whose wives and daughters hanged themselves on trees or drowned themselves in garden wells in order to escape a much worse lot. Chinese women honestly believed that no more terrible fate could overtake them than to fall alive into the hands of Europeans and Christians. And it is to be feared that they were right. Buddhism and Confucianism have their martyrs to chastity, whose heroic feats no martyrology will ever record. Some of these obscure, but right-minded, girls and women hurled themselves into the river, and, finding only three feet of water there, kept their heads under the surface until death had set his seal on the sacrifice of their life. This suicidal frenzy was catching. So far as I have been able to make out, and I have been at some pains to investigate the subject, no officers or soldiers of English or German speaking nationalities have been guilty of these abominations against defenceless women.—E. J. Dillon, *The Chinese Wolf and the European Lamb* (Contemporary Record, Jan., 1901).

A. D. 1900 (August 15-28).—Occupation of Peking by the allied forces.—International jealousies.—License to some of the soldiery.—Shameful stories of looting and outrage.—Formal march through the "Forbidden City."—Early on the morning of the 15th [of August]—the day after the siege of the Legations was raised—General Chaffee [the American commander] advanced his men from the Chien Mén, which he had held overnight, and drove the Chinese from gateway to gateway back along the wide-paved approach to the far famed 'Forbidden City.' From the wall at the Chien Mén the American field battery shelled each of the great gateways before the infantry advanced, and Captain Kelly, who commanded the battery, was killed while directing the operations—a bullet striking him full in the face and passing out through the back of his head. In him was lost a popular and efficient officer. The movements of the Americans were watched with no little anxiety by certain of the allies, who evidently feared that General Chaffee was about to enter and seize the Forbidden City itself. The French, who had only

that morning arrived, were apparently very keen to establish a claim by joining in the attack, for they took their mountain guns to the top of the wall opposite the Legations, and began blazing away in the direction of the approaches to the Palace. It so happened that by this time the Americans had penetrated nearly to the gateway of the Palace itself, and this French fire, so suddenly opened, was directed upon them. Instead of, as the French General thought, upon the enemy, General Chaffee rode down himself from the Chien Mén to where the guns were placed on the wall, and from below conducted a spirited conversation with the French General and M. Pichon. 'Stop firing those guns,' the General shouted up from 60 ft below, 'you are killing my men.' Not understanding, the French General replied to the effect that he was firing for the honour of France, and M. Pichon joined in with similar protestations. General Chaffee's protests increased in vigour, and the force, perhaps, rather than the lucidity of them eventually induced the French General to desist from firing upon the Americans for the honour and glory of 'la patrie.' The Russians also displayed a marked desire to participate in the operations in front of the Palace, coming up after the fighting was practically finished and attempting to occupy a part of the position won by the Americans. Again General Chaffee had to speak forcibly to persuade the Russians to retire. General Chaffee cleared and occupied the whole length of the approaches—a series of noble paved courtyards—from the Chien Mén to the south gate of the Palace, before which he set a strong guard. His doings were quite evidently being watched with suspicion, and in the afternoon a conference was held, at which it was solemnly agreed by the representatives of the allies that in the meantime, pending the arrangement of some concerted plan, the Forbidden City should not be entered. In other parts of the city the work of clearing out the enemy was meanwhile progressing, the Japanese and Russians operating on the east and to the north, and the British to the south in the Chinese city.

It was thought that an expedition would have been undertaken by the French to relieve the besieged in the Pei tang. Help could have been obtained for the asking, and it is difficult to understand why no effort was made to reach the unfortunate people, who, be it noted, were still being attacked, and whose position, for all that was known, might have been desperate to the last degree. The story of the long and weary weeks of fighting round the stately cathedral pile—alas, now, how battered and rent!—must be written by no outsider from hearsay, but first hand by a survivor. As heard from the lips of Père Favier, it is, indeed, a thrilling narrative in many respects, surpassing in wonder even the sister story of the defence of the Legations. The relief was effected the following morning by a combined force of French and Russians, with whom also were the British Marines under Major Luke, R. M. L. I., the whole under the command of the French general. When this force arrived it was found that the Japanese had already practically raised the siege, having started earlier and worked along on the north west of the Imperial City, driving the Chinese before them. However the Japanese had not actually penetrated into the Pei tang defences, and the French had the satisfaction, after all, of being first in to receive a

joyful welcome from their long-suffering fellow-countrymen. The raising of the siege was signalized by the slaughter of a large number of Chinese who had been rounded up into a cul-de-sac and who were killed to a man, the Chinese Christian converts joining in with the French soldiers of the relieving force, who lent them bayonets and abandoning themselves to the spirit of revenge. Witnesses describe the scene as a sickening sight, but in judging such acts it is necessary to remember the provocation, and these people had been sorely tried.

The French general had given orders to Major Luke to remain with his men to guard a bridge in the rear while the relief of the Peking was being effected. Afterwards the main body of the relieving force was pushed on through the Imperial City, leaving the British contingent behind. After waiting some time Major Luke came to the conclusion that he must have been forgotten, and, leaving a guard on the bridge, followed on in the track of the French troops, to find that they had penetrated into the Imperial City along the wall of the Palace as far as the Meishan (Coal Hill), from the pagodas on which the tri-colour was flying. The Russians had taken up a position near the North Gate of the Palace, and he was only just in time to secure the temple building at the foot of the Meishan, and the camping ground alongside of it. There was great enthusiasm between the Russians and French, who cheered each other as their forces appeared, in marked contrast to the coolness with which the arrival of Major Luke and his men was received. . . . The Russians are camped round the old place and will permit no one to go over it; in fact, in this part of the city French or Russian sentries make it difficult to see most of the many objects of art or interest.

Now that the common bond of interest in the success of the relief expedition was removed, the points of difference at once began to appear, and the underlying jealousy and suspicion with which it seems each nation regards almost every other manifested itself in various ways, particularly in the unseemly race for loot and the game of general grab that now started up, the methods of which were indicated above with regard to the seizure of the Meishan. The Japanese seized the Board of Revenue and must have found a huge amount of money there, to judge by the length of the line of pack mules that it took to carry it away. Through a mistake, it is said, on the part of the Americans, the French got possession of the Palace of Prince Li, said to contain treasure to the extent of many millions of dollars. The Russians also got some treasure, seizing on Chang An.

Inside the Forbidden City, the Chinese say, there is fabulous wealth in treasure stowed away or buried and it is principally lest this should prove true that so much jealousy exists about the privilege of entering. Of course, the question is also of great importance politically, and after several diplomatic conferences it was eventually decided that, on a date still to be arranged, the Ministers and Generals of all the Powers should enter at the same time and proceed together through the Palace, ascertaining the nature and value of its contents and then sealing the whole place up and withdrawing to await instructions from the home Governments. . . .

As regards the larger game of grab, the Russians

succeeded in winning the last large prize, the Wan Shen Shan, or new Summer Palace, seven miles out near the western hills, racing for it against a body of Japanese and coming in a quarter of an hour ahead, having had a long start. So the story goes, but it is not easy to check such stories, both Japanese and Russians being very reticent about their relations with each other. One thing only is certain, that the Russians are in jealous possession of the Wan Shen Shan. Two British officers who rode out there a couple of days ago in uniform were refused admission to the grounds.

Alongside of this official looting, private looting on the part of the foreign soldiers was freely permitted during the first few days; in fact, the city was abandoned for the most part to the soldiery, and horrible stories of the kind common in war, but nevertheless and everhat- ingly revolting, were current—stories of the ravishing of women in circumstances of great savagery, particularly by the rough Russian soldiers and their following of French. The number of Chinese women who committed suicide rather than submit to dishonour was considerable. A British officer of standing told me he had seen seven hanging from the same beam in the house of apparently a well-to-do Chinaman. These stories, and I heard of many more, reflect credit upon Chinese womanhood and something very different upon the armies of Europe, which are supposed to be the forerunners and upholders of civilization in this particular campaign. However, this period of licence was not of long duration. The soldiers having had their fling, the city was divided, by arrangement, into districts, each under the control of one of the Powers, proclamations were issued reassuring the remaining peaceable citizens and encouraging others to return, and gradually the work of restoring law and order and confidence is progressing. . . .

Where is the Chinese Government? Fled to Jehol? No one seems to know for certain. It is only certain that on the morning of the 14th the Empress-Dowager and her following, and the Imperial Court, fled by the west gate of the city and disappeared. This flight took place while the Japanese were actually engaged in shelling the Tse kwa Men and the city wall. If they had succeeded in their first attempt on the gate in the morning, the flight of the Court might have been prevented. The Empress and her advisers had a narrow escape. . . .

August 28. After deliberations occupying a full fortnight the question of what was to be done with the Forbidden City has been settled, at any rate, for the time being. The main problem presented was not new. Lord Elgin had to face it forty years ago. Considerations of immediate political expediency guided his action then, as they have dictated the course adopted now. He spared the Imperial Palace, and burnt instead the Yuen Ming Yuen, or Summer Palace, seven miles from Peking. As a result the fact that British troops ever entered Peking does not appear in Chinese history. Indeed the idea is ridiculed by Mandarinism. Remembering this, many people here thought it would be desirable in the present instance to burn the Imperial Palace, after carefully removing the art treasures, and thus, if possible, impress upon the whole Chinese nation some idea of the enormity of the crime which their Government has committed.

against civilization at large. On the other hand, it was held that if this were done the Imperial Court, through loss of 'face,' could never return to Peking and this contingency appealed strongly to the representatives of both Russia and Japan, who conceived that the interests of their respective countries demanded the retention of Peking as the capital. What the representatives of the other Powers thought has not transpired, nor does it matter much at present, the overwhelming position of Russia and Japan combined making all opposition to their proposals futile. Germany may insist upon burning the Palace when her forces have all arrived, and those who think it ought to be done hope that she will; but in the meantime the conference of commanding officers, in consultation with the Ministers, decided not to do more than march a small force of foreign troops through the 'sacred precincts' from the South Gate to the North, after which these were to be again closed, leaving the Palace intact. There was to be no looting. Everything was to be done to provide against the idea arising that the place had been desecrated. The ceremony was merely to be a display of military power.

Arrangements were made for certain Chinese officials to be present during the ceremony and also for a number of attendants to open up the various halls through which the troops would require to pass, and to close the doors behind the 'barbarians' when they finally withdrew. Yesterday there were reports of further friction and possible further postponement of the ceremony, but by evening these had died away and the programme had assumed at last a definite shape. According to it the various troops were to parade this morning between 7 and 8 outside the Tien an Mén, the Inner Gate of the Imperial City. There at the time appointed they were drawn up, and the interest of a great historic event began. The Imperial Palace, or Forbidden City, is an enclosure about two thirds of a mile long from north to south and about half a mile broad from east to west. It is surrounded by a high wall. Outside this wall on the west, north, and east lies a broad moat. From the south it is approached by a series of immense paved courtyards divided one from the other by high and massive gateways, above which rise imposing pavilions with yellow tiled overhanging roofs, flanked by great towers built in the same style and similarly roofed with Imperial yellow. This Forbidden City or Imperial Palace enclosure is situated within the Imperial City, a larger enclosure, also surrounded by a high tile topped wall. It was outside the Inner Gateway to this Imperial City that the troops were drawn up. The Russians took up their position on the centre, close to the stone bridge in front of the Tien an Mén; the Japanese were opposite the gateway on the left; the British to the right of the Russians in a wide paved avenue running east and west outside the inner wall of the Imperial City. The remainder of the allies were drawn up to the rear of the Russians and Japanese in the wide avenue running north and south from the Outer Gateway (Ta ching Mén). As a pageant it was not a success. Soldiers on service do not make a fine show. Inside the Tien an Mén the central stone road continues for about half a mile down a broad flagged avenue running between handsome temple buildings on either hand, until the

Wu Mén, or south gate, of the Forbidden City is reached. It is an imposing entrance. The gateway itself is high and massive, and the towers on top are particularly fine. Thus far, on the morning of the 15th, the American troops fought, driving the Chinese before them into the city. The self-denial displayed by General Chaffee on that occasion has not, perhaps, received proper recognition. There was at that time no agreement to hold him back, and he might have pressed on and taken the palace and hoisted the Stars and Stripes over it. It would have been a fine prize, and the temptation must have been great, but General Chaffee, acting, possibly, under the advice of Mr. Conger, the United States Minister, refrained—a noteworthy act. This gateway has been held by an American guard ever since, and American troops have been quartered in the approach to it.

After it was over the generals and staff officers and the Ministers and other privileged persons returned by the way we had come through the Forbidden City. Tea was provided by the Chinese officials in the summer-house of the palace garden, the quaint beauties of which there was now time to appreciate. Beautiful stone carvings and magnificent bronzes claimed attention. The march through had occupied about an hour, and another was spent sauntering back through the various halls and courtyards. As the halls were cleared the Chinese attendants hastily closed the doors behind us with evident relief at our departure. A few jade ornaments were pocketed by quick fingered persons desirous of possessing souvenirs, but on the whole the understanding that there was to be no looting was carried out. Arrived at the courtyard where their horses had been left, the generals and staff officers mounted and rode out of the palace, and the rest of us followed on foot. The gates were once more closed and guards were stationed outside to prevent any one from entering. The Forbidden City resumed its normal state, inviolate, undesecrated. The honour of the civilized world, we were told, had been thus vindicated. But had it?—*London Times, Peking Correspondence.*

A. D. 1900 (August—September).—The flight of the Imperial Court.—The following account of the flight of the Court from Peking to Tai-yuen-fu was given to a newspaper correspondent, in October, by Prince Su, who accompanied the fugitive Emperor and Dowager-Empress, and afterwards returned to Peking: "The day the Court left Peking they travelled in carts to Kuan-shi, 20 miles to the north, escorted by 3,000 soldiers of various commands. This composite army pillaged, murdered, and outraged along the whole route. At Kuan-shi the Imperial cortège was supplied with mule litters. The flight then continued at the rate of 20 miles daily to Hsuan-hua-fu, where a halt was made for three days. This place is 120 miles from Peking. Up to this time the flight had been of a most panic-stricken nature. So little authority was exerted that the soldiers even stole the mules which had been prepared for the Emperor and the Dowager-Empress. Some improvement was effected by the execution of several for murder and pillaging, and gradually the various constituents of the force were brought under control. Many of the Dowager-Empress's advisers were in favour of

remaining at Hsuan hua-fu, on account of the comparatively easy means of communication with the capital. The majority, however, were in such fear of pursuit by the foreign troops that the proposition was overruled. The flight was then resumed towards Tai-yuen fu. Before leaving Hsuan hua fu, 10,000 additional troops under Tung fuh-sung joined the escort. The newcomers, however, only added to the discord already prevailing. The Dowager Empress did little else but weep and upbraid those whose advice had brought them into such a position. The Emperor reviled every one irrespective of his opinions. The journey to Tai-yuen fu took 26 days, the longest route being taken for fear of pursuit. On arriving there the formation of some kind of Government was attempted, but owing to the many elements of discord this was found to be next to impossible. Though many edicts were issued they could not be enforced. Neither party cared for an open rupture, and affairs rapidly assumed a state of chaos. Prince Su further said that the Emperor did not desire to leave Peking, preferring to trust himself to the allies, but his objections were not listened to and he was compelled to accompany the flight.

The final resting place of the fugitive Imperial Court for some months was Si ngan fu, or Sheng-an fu, or Sagan fu, or Sian fu (as it is variously written), a large city, the capital of the western province of Shensi.

A. D. 1900 (August-December).—Discussions among "the Powers" as to the terms to be made with the Chinese Government.—Opening of negotiations with Prince Ching and Li Hung-chang.—Immediately upon the capture of Peking, Li Hung-chang addressed appeals to the Powers for a cessation of hostilities, for the withdrawal of troops from Peking, and for the appointment of envoys to negotiate a permanent peace. Discussion among the governments followed, the first definite outcome of which appeared in the announcement of an intention on the part of Russia to withdraw her troops from Peking as soon as order had been reestablished there, and of a disposition on the part of the United States to act with Russia in that procedure. This substantial agreement between the two governments was made public by the printing of the following dispatch, dated August 29, from Mr. Adee, the American Acting Secretary of State, to the representatives of the United States in London, Paris, Vienna, Berlin, Rome, and Tokio.

"The Russian Chargé d'Affaires yesterday afternoon made me an oral statement regarding Russia's purposes in China to the following effect:—That, as she has already repeatedly declared, Russia has no designs of territorial acquisition in China; that, equally with the other Powers now operating there, Russia sought the safety of her Legation in Peking and to help the Chinese Government to repress the troubles that arose; that incidentally to the necessary defensive measures on the Russian border, Russia has occupied Niu-chwang for military purposes, and as soon as order is reestablished she will withdraw her troops from the town if the action of the other Powers be no obstacle; that the purpose for which the various Governments have co-operated for the relief of the Legations in Peking has been accomplished; that taking the

position that as the Chinese Government has left Peking there is no need for the Russian representative to remain, Russia has directed her Minister to retire with his official personnel from China; that the Russian troops will likewise be withdrawn, and that when the Government of China shall regain the reins of government and can afford an authority with which the other Powers can deal, and will express a desire to enter into negotiations, the Russian Government will also name its representative." Holding these views and purposes, Russia has expressed the hope that the United States will share the same opinion.

"To this declaration our reply has been made by the following memorandum:—The Government of the United States has received with much satisfaction the reiterated statement that Russia has no designs of territorial acquisition in China and that, equally with the other Powers now operating in China, Russia has sought the safety of her Legation and to help the Chinese Government to repress the existing troubles. The same purposes have moved, and will continue to control, the Government of the United States, and the frank declarations of Russia in this regard are in accord with those made to the United States by the other Powers. All the Powers, therefore, having disclaimed any purpose to acquire any part of China, and now that the adherence thereto has been renewed since relief reached Peking, it ought not to be difficult by concurrent action through negotiations to reach an amicable settlement with China whereby the treaty rights of all the Powers shall be secured for the future, the open door assured, the interests and property of foreign citizens conserved, and full reparation made for the wrongs and injuries suffered by them.

"So far as we are advised, the greater part of China is at peace and earnestly desires to protect the life and property of all foreigners, and in several of the provinces active and successful efforts to suppress the 'Boxers' have been taken by the Viceroys, to whom we have extended encouragement through our Consuls and naval officers. This present good relation should be promoted for the peace of China. While we agree that the immediate object for which the military forces of the Powers have been co-operating—the relief of the Ministers in Peking—has been accomplished, there still remain other purposes which all the Powers have in common, which have been referred to in the communication of the Russian Chargé d'Affaires, and which were specifically enumerated in our Note to the Powers.

"These are:—To afford all possible protection everywhere in China to foreign life and property; to guard and protect all legitimate foreign interests; to aid in preventing the spread of disorders in the other provinces of the Empire and the recurrence of such disorders; to seek a solution which may bring about permanent safety and peace in China; to preserve the Chinese territorial and administrative entity; to protect all rights guaranteed by treaty and international law to friendly Powers, and to safeguard for the world the principle of equal and impartial trade with all parts of the Chinese Empire. In our opinion, these purposes could best be attained by the joint occupation of Peking under a definite understanding between

the Powers until the Chinese Government shall have been reestablished and shall be in a position to enter into new treaties containing adequate provisions for reparation and guarantees for future protection.

"With the establishment and recognition of such authority the United States would wish to withdraw its military forces from Peking and remit to the processes of peaceful negotiation our just demands. We consider, however, that the continued occupation of Peking would be ineffective to produce the desired result unless all the Powers unite therein with entire harmony of purpose. Any Power which determines to withdraw its troops from Peking will necessarily proceed thenceforth to protect its interests in China by its own method, and we think this would make a general withdrawal expedient. As to the time and manner of withdrawal, we think that, in view of the imperfect knowledge of the military situation resulting from the interruptions of telegraphic communication, the several military commanders in Peking should be instructed to confer and to agree together upon the withdrawal as a concerted movement, as they agreed upon in advance.

"The result of these considerations is that, unless there is such a general expression by the Powers in favour of the continued occupation as to modify the views expressed by the Russian Government and lead to a general agreement for continued occupation, we shall give instructions to the commander of the American forces in China to withdraw our troops from Peking after due conference with the other commanders as to the time and manner of withdrawal.

"The Government of the United States is much gratified by the assurance given by Russia that the occupation of Xin-chwang is for military purposes incidental to the military steps for the security of the Russian border provinces menaced by the Chinese, and that as soon as order is established Russia will withdraw her troops from those places if the action of the other Powers is not an obstacle thereto. No obstacle in this regard can arise through any action of the United States, whose policy is fixed and has been repeatedly proclaimed."

Even before the communication received from Russia, the government of the United States had taken steps to withdraw the greater part of its troops. "On the 25th of August," says the American Secretary of War, in his annual report, November 30, 1900, "General Chaffee was directed to hold his forces in readiness for instructions to withdraw, and on the 25th of September he was instructed to send to Manila all the American troops in China with the exception of a legion guard, to consist of a regiment of infantry, a squadron of cavalry, and one light battery."

The expressions from Russia and the United States in favor of an early withdrawal of foreign troops from Peking and the opening of pacific negotiations with the Chinese government, were unsatisfactory to several of the concerned Powers, and were sharply criticised in the British and German press. The German government, especially, was disposed to insist upon stern and strenuous measures in dealing with that of China, and it addressed the following circular note, on the 18th of September, to all the Powers: "The Government of the Emperor holds as preliminary

to entering upon diplomatic relations with the Chinese Government that those persons must be delivered up who have been proved to be the original and real instigators of the outrages against international law which have occurred at Peking. The number of those who were merely instruments in carrying out the outrages is too great. Wholesale exceptions would be contrary to the civilized conscience, and the circumstances of such a group of leaders cannot be completely ascertained. But a few whose guilt is notorious should be delivered up and punished. The representatives of the powers at Peking are in a position to give or bring forward convincing evidence. Less importance attaches to the number punished than to their character as chief instigators or leaders. The Government believes it can count on the unanimity of all the Cabinets in regard to this point, inasmuch as indifference to the idea of just atonement would be equivalent to indifference to a repetition of the crime. The Government proposes, therefore, that the Cabinets concerned should instruct their representatives at Peking to indicate those leading Chinese personages from whose guilt in instigating or perpetrating outrages all doubt is excluded."

The British government was understood to be not unwilling to support this demand from Germany, but little encouragement seems to have been officially given to it from other quarters, and the government of the United States was most emphatic in declining to approve it. The reply of the latter to the German circular note was promptly given, September 21, as follows:

"The government of the United States has, from the outset, proclaimed its purpose to hold to the uttermost accountability the responsible authors of any wrongs done in China to citizens of the United States and their interests, as was stated in the Government's circular communication to the Powers of July 3 last. These wrongs have been committed not alone in Peking, but in many parts of the Empire, and their punishment is believed to be an essential element of any effective settlement which shall prevent a recurrence of such outrages and bring about permanent safety and peace in China. It is thought, however, that no punitive measures can be so effective by way of reparation for wrongs suffered and as deterrent examples for the future as the degradation and punishment of the responsible authors by the supreme Imperial authority itself, and it seems only just to China that she should be afforded in the first instance an opportunity to do this and thus rehabilitate herself before the world.

"Believing thus, and without abating in anywise its deliberate purpose to exact the fullest accountability from the responsible authors of the wrongs we have suffered in China, the Government of the United States is not disposed as a preliminary condition to entering into diplomatic negotiations with the Chinese Government, to join in a demand that said Government surrender to the Powers such persons as, according to the determination of the Powers themselves, may be held to be the first and real perpetrators of those wrongs. On the other hand, this Government is disposed to hold that the punishment of the high responsible authors of these wrongs, not only in Peking, but throughout China, is essentially a condition to be embraced and provided for in the negotiations for a final settlement. It is the purpose of this Government, at the earliest

practicable moment, to name its plenipotentiaries for negotiating a settlement with China, and in the mean time to authorize its Minister in Peking to enter forthwith into conference with the duly authorized representatives of the Chinese Government, with a view of bringing about a preliminary agreement whereby the full exercise of the Imperial power for the preservation of order and the protection of foreign life and property throughout China, pending final negotiations with the Powers, shall be assured."

On the same day on which the above note was written the American government announced its recognition of Prince Ching and Li Hung chang, as plenipotentiaries appointed to represent the Emperor of China, in preliminary negotiations for the restoration of the Imperial authority at Peking and for a settlement with the foreign Powers.

Differences between the Powers acting together in China, as to the preliminary conditions of negotiation with the Chinese government, and as to the nature and range of the demands to be made upon it, were finally adjusted on the lines of a proposal advanced by the French Foreign Office, in a note dated October 4, addressed to the several governments, as follows:—"The intention of the Powers in sending their forces to China was above all, to deliver the Legations. Thanks to their union and the valour of their troops this object has been attained. The question now is to obtain from the Chinese Government, which has given Prince Ching and Li Hung chang full powers to negotiate and to treat in its name, suitable reparation for the past and serious guarantees for the future. Penetrated with the spirit which has evoked the previous declarations of the different Governments, the Government of the Republic has summarized its own sentiments in the following points, which it submits as a basis for the forthcoming negotiations after the customary verification of powers:—(1) The punishment of the chief culprits, who will be designated by the representatives of the Powers in Peking. (2) The maintenance of the embargo on the importation of arms. (3) Equitable indemnity for the States and for private persons. (4) The establishment in Peking of a permanent guard for the Legations. (5) The dismantling of the Ta ku forts. (6) The military occupation of two or three points on the Tientsin Peking route, thus assuring complete liberty of access for the Legations should they wish to go to the coast and to ferries from the sea board which might have to go up to the capital. It appears impossible to the Government of the Republic that these so legitimate conditions, if collectively presented by the representatives of the Powers and supported by the presence of the international troops, will not shortly be accepted by the Chinese Government."

On the 15th of October, the French Embassy at Washington announced to the American government that "all the interested powers have adhered to the essential principles of the French note, and added:—"The essential thing now is to show the Chinese Government, which has declared itself ready to negotiate, that the powers are animated by the same spirit; that they are decided to respect the integrity of China and the independence of its Government, but that they are none the less resolved to obtain the satisfaction to which they have a right. In this regard

it would seem that if the proposition which has been accepted as the basis of negotiations were communicated to the Chinese plenipotentiaries by the Ministers of the powers at Peking, or in their name by their Dean, this step would be of a nature to have a happy influence upon the determinations of the Emperor of China and of his Government." The Government of the United States approved of this suggestion from France, and announced that it had "instructed its Minister in Peking to concur in presenting to the Chinese plenipotentiaries the points upon which we are agreed." Other governments, however, seem to have given different instructions, and some weeks were spent by the foreign Ministers at Peking in formulating the joint note in which their requirements were to be presented to Prince Ching and Earl Li.

The latter, meantime, had submitted, on their own part, to the allied plenipotentiaries, a draft of what they conceived to be the just preliminaries of a definitive treaty. They prefaced it with a brief review of what had occurred, and some remarks, confessing that "the throne now realizes that all these calamities have been caused by the fact that Princes and high Ministers of State screened the Boxer desperados, and is accordingly determined to punish severely the Princes and Ministers concerned in accordance with precedent by handing them over to the respective Yaméns for the determination of a penalty." The "draft clauses" then submitted were as follows:—

"The siege of the Legations was a flagrant violation of the usages of international law and an utterly unpermissible act. China admits the gravity of her error and undertakes that there shall be no repetition of the occurrence. China admits her liability to pay an indemnity, and leaves it to the Powers to appoint officers who shall investigate the details and make out a general statement of claims to be dealt with accordingly."

"With regard to the subsequent trade relations between China and the foreign Powers, it will be for the latter to make their own arrangements as to whether former treaties shall be adhered to in their entirety, modified in details, or exchanged for new ones. China will take steps to put the respective proposals into operation accordingly."

"Before drawing up a definitive treaty it will be necessary for China and the Powers to be agreed as to general principles. Upon this agreement being arrived at, the Ministers of the Powers will remove the seals which have been affixed to the various departments of the Tsung-li Yamén and proceed to the Yamén for the despatch of business in matters relating to international questions exactly as before."

"So soon as a settlement of matters of detail shall have been agreed upon between China and the various nations concerned in accordance with the requirements of each particular nation, and so soon as the question of the payment of an indemnity shall have been satisfactorily settled, the Powers will respectively withdraw their troops. The despatch of troops to China by the Powers was undertaken with the sole object of protecting the Ministers, and so soon as peace negotiations between China and the Powers shall have been opened there shall be a cessation of hostilities."

"The statement that treaties will be made with each of the Powers in no way prejudices the fact that with regard to the trade conventions mentioned the conditions vary in accordance with the respective powers concerned. With regard to the headings of a definitive treaty, questions of nomenclature and precedence affecting each of the Powers which may arise in framing the treaty can be adjusted at personal conferences."

Great Britain and Germany were now acting in close accord, having, apparently, been drawn together by a common distrust of the intentions of Russia. On the 16th of October, Lord Salisbury and Count Hatzfeldt signed the following agreement which was made known at once to the other governments concerned, and its principles assented to by all:

"Her Britannic Majesty's Government and the Imperial German Government, being desirous to maintain their interests in China and their rights under existing treaties, have agreed to observe the following principles in regard to their mutual policy in China:—

"1. It is a matter of joint and permanent international interest that the ports on the rivers and littoral of China should remain free and open to trade and to every other legitimate form of economic activity for the nationals of all countries without distinction; and the two Governments agree on their part to uphold the same for all Chinese territory as far as they can exercise influence.

"2. The Imperial German Government and her Britannic Majesty's Government will not, on their part, make use of the present complication to obtain for themselves any territorial advantages in Chinese dominions, and will direct their policy towards maintaining undiminished the territorial condition of the Chinese Empire.

"3. In case of another Power making use of the complications in China in order to obtain under any form whatever such territorial advantages, the two Contracting Parties reserve to themselves to come to a preliminary understanding as to the eventual steps to be taken for the protection of their own interests in China.

"4. The two Governments will communicate this Agreement to the other Powers interested, and especially to Austria-Hungary, France, Italy, Japan, Russia, and the United States of America, and will invite them to accept the principles recorded in it."

The assent of Russia was no less positive than that of the other Powers. It was conveyed in the following words: "The first point of this Agreement, stipulating that the ports situated on the rivers and littoral of China, wherever the two Governments exercise their influence, should remain free and open to commerce, can be favorably entertained by Russia, as this stipulation does not infringe in any way the 'status quo' established in China by existing treaties. The second point corresponds all the more with the intentions of Russia, seeing that, from the commencement of the present complications, she was the first to lay down the maintenance of the integrity of the Chinese Empire as a fundamental principle of her policy in China. As regards the third point relating to the eventuality of an infringement of this fundamental principle, the Imperial Government while referring to their Circular of the 12th/25th August can only renew the declaration that such an infringement would

oblige Russia to modify her attitude according to circumstances."

On the 15th of November, while the foreign plenipotentiaries at Peking were trying to agree in formulating the demands they should make, the Chinese Imperial government issued a decree for the punishment of officials held responsible for the Boxer outrages. As given the Press by the Japanese Legation at Washington, in translation from the text received there, it was as follows:

"Orders have been already issued for the punishment of the officials responsible for opening hostilities upon friendly Powers and bringing the country into the present critical condition by neglecting to suppress and even by encouraging the Boxers. But as Peking and its neighborhood have not yet been entirely cleared of the Boxers, the innocent people are still suffering terribly through the devastation of their fields and the destruction of their houses, a state of affairs which cannot fail to fill one with the bitterest feelings against these officials. And if they are not severely punished, how can the anger of the people be appeased and the indignation of the foreign Powers allayed?

"Accordingly, Prince Tuan is hereby deprived of his title and rank, and shall, together with Prince Chwang, who has already been deprived of his title, be delivered to the Clan Court to be kept in prison until the restoration of peace, when they shall be banished to Sheng King, to be imprisoned for life. Princes Yi and Tsai Yung, who have both been already deprived of their titles, are also to be delivered to the Clan Court for imprisonment, while Prince Tsai Lien, also already deprived of title and rank, is to be kept confined in his own house. Duke Tsai Lai shall forfeit his dual salary, but may be transferred with the degradation of one rank. Chief Censor Ying Nien shall be degraded two ranks and transferred. As to Kang Yi, Minister of the Board of Civil Appointment, upon his return from the commission on which he had been sent for the purpose of making inquiries into the Boxer affair he memorialized the Throne in an audience strongly in their favor. He should have been severely punished but for his death from illness, and all penalties are accordingly remitted. Chao Shun Yao, Minister of the Board of Punishment, who had been sent on a mission similar to that of Kang Yi, returned almost immediately. Though such conduct was a flagrant neglect of his duties, still he did not make a distorted report to the Throne, and therefore he shall be deprived of his rank, but allowed to retain his present office. Finally, Yu Hsien, ex Governor of Shan Se, allowed, while in office, the Boxers freely to massacre the Christian missionaries and converts. For this he deserves the severest punishment, and therefore he is to be banished to the furthestmost border of the country, and there to be kept at hard labor for life.

"We have a full knowledge of the present trouble from the very beginning, and therefore, though no impeachment has been brought by Chinese officials at home or abroad against Princes Yi, Tsai Lien and Tsai Yung, we order them to be punished in the same manner as those who have been impeached. All who see this edict will thus perceive our justice and impartiality in both the appointment and the punishment of officials."

It was not until the 20th of December that the

joint note of the plenipotentiaries of the Powers, after having been submitted in November to the several governments represented, and amended to remove critical objections, was finally signed and delivered to the Chinese plenipotentiaries. The following is a précis of the requirements set forth in it:

"1. An Imperial Prince is to convey to Berlin the Emperor's regret for the assassination of Baron von Kettler, and a monument is to be erected on the site of the murder, with an inscription, in Latin, German, and Chinese, expressing the regret of the Emperor for the murder.

"2. The most severe punishment fitting their crimes is to be inflicted on the personages designated in the Imperial decree of September 21, whose names, not mentioned—are Princes Tuan and Chuang and two other princes, Duke Lun, Chao Shu-chiao, Yang Yi, Ying Hien, also others whom the foreign Ministers shall hereafter designate. Official examinations are to be suspended for five years in those cities where forgers have been assassinated or cruelly treated.

"3. Honourable reparation is to be made to Japan for the murder of M. Sugiyama.

"4. Expiatory monuments are to be erected in all foreign cemeteries where tombs have been desecrated.

"5. The importation of arms or 'materiel' and their manufacture are to be prohibited.

"6. An equitable indemnity is to be paid to States, societies, and individuals, also to Chinese who have suffered injury because of their employment by foreigners. China will adopt financial measures acceptable to the Powers to guarantee the payment of the indemnity and the service of the loans.

"7. Permanent Legation guards are to be maintained, and the diplomatic quarter is to be fortified.

"8. The Taku forts and those between Peking and the sea are to be razed.

"9. There is to be a military occupation of points necessary to ensure the safety of the communications between Peking and the sea.

"10. Proclamations are to be posted during two years throughout the Empire threatening death to any person joining an anti foreign society and enumerating the punishment inflicted by China upon the guilty ringleaders of the recent outrages. An Imperial edict is to be promulgated ordering Viceroy, Governors, and Provincial officials to be held responsible for anti foreign outbreaks or violations of treaties within their jurisdiction, failure to suppress the same being visited by the immediate cashiering of the officials responsible, who shall never hold office again.

"11. China undertakes to negotiate a revision of the commercial treaties in order to facilitate commercial relations.

"12. The Tsung li Yamén is to be reformed, and the Court ceremonial for the reception of foreign Ministers modified in the sense indicated by the Powers.

"Until the foregoing conditions are complied with (so conformer A) the Powers can hold out no expectation of a limit of time for the removal of the foreign troops now occupying Peking and the provinces."

A. D. 1900 (November).—Russo-Chinese agreement relating to Manchuria. See in this vol. MANCHURIA.

A. D. 1900 (December). Russo-Chinese agreement concerning the Manchurian province of Fêng-tien. See in this vol. MANCHURIA. A. D. 1900.

A. D. 1900-1901 (November-February). Seizure of grounds at Peking for a large Legation Quarter.—Extensive plans of fortification. In February, 1901, the following from a despatch written in the previous November by Mr. Conger, the American Minister at Peking, was given to the Press by the State Department at Washington: "I have the honor to report that in view of the probability of keeping large legation grounds in the future, and because of the general desire on the part of all the European representatives to have extensive legations, all of the Ministers are taking possession of considerable areas adjoining their legations, property belonging either to the Chinese Government or to private citizens, and having been abandoned by the owners during the siege, with the intention to claim them as conquest, or possibly credit something for them on their account for indemnity. I have as yet not taken formal possession of any ground for this purpose, nor shall I without instructions, but I shall not for the present permit any of the owners or other persons to re-occupy any of the property between this legation and the canal to the east of it. While this area will be very small in comparison with the other legations, yet it will be sufficient to make both the legation personnel and the guard very comfortable, and will better comport with our traditional simplicity vis-à-vis the usual magnificence of other representatives.

"It is proposed to designate the boundaries of a legation quarter, which shall include all the legations, and then demand the right to put that in a state of defence when necessary, and to prohibit the residence of Chinese there, except by permission of the Ministers. If, therefore, these ideas as to guards, defence, etc., are to be carried out, a larger legation will be an absolute necessity. In fact, it is impossible now to accommodate the legation and staff in our present quarters without most inconvenient crowding.

"There are no public properties inside the legation quarter which we could take as a legation. All the proposed property to be added, as above mentioned, to our legation, is private ground, except a very small temple in the southeast corner, and I presume, under our policy, if taken, will be paid for either to the Chinese owners or credited upon account against the Chinese Government for indemnity, although I suspect most of the other Governments will take theirs as a species of conquest. The plot of ground adjoining and lying to the east of the legation to which I have made reference is about the size of the premises now occupied by us."

Before its adjournment on the 14th of March, 1901, the Congress of the United States made an appropriation for the purchase of grounds for its Legation at Peking, and instructions were sent to make the purchase.

By telegram from Peking on the 14th of February it was announced that a formidable plan of fortification for this Legation Quarter had been drawn up by the Military Council of the Powers at Peking, and that work upon it was to begin at once. The correspondent of the "London Times" described the plan and wrote a daily of it, as follows: "From supreme contempt for

the weakness of China armed we have swayed to exaggerated fear of the strength of China disarmed. The international military experts have devised a scheme for putting the Legation quarter in a state of defence which is equivalent to the construction of an international fortress alongside the Imperial Palace. The plan requires the breaching of the city wall at the Water gate, the levelling of the Hsüa Men and Chien Men towers, the demolition of the ramparts giving access to them, the sweeping clear of a space 150 to 300 yards wide round the entire Legation area, and the construction of walls, glacis, moats, barbed wire defences, with siege guns, Maxim, and batteries capable of holding 2,000 troops, with military stores and equipment sufficient to withstand a siege of three months. All public buildings, boards, and civil offices between the Legations and the Imperial walls are to be levelled, while 11,000 foreign troops are to hold the communications between Peking and the sea, so that no Chinese can travel to Peking from the sea without the knowledge of the foreign military authorities.

The erection of the defences is to begin at once, before the return of the Court to Peking. They are no doubt devised to encourage the Court to return to Peking, it being apparently the belief of the foreign Ministers that an Imperial Court governing an independent empire are eager to place themselves under the tutelage of foreign soldiers and within the reach of foreign Maxims.

Within the large new Legation area all the private property of Chinese owners who years before sought the advantages of vicinity to the Legations has been seized by the foreign Legations. France and Germany, with a view to subsequent commercial transactions, have annexed many acres of valuable private property for which no compensation is contemplated, while the Italian Legation, which boasts a staff of two persons, carrying out the scheme of appropriation to a logical absurdity, has, in addition to other property, grabbed the Imperial Maritime Customs gardens and buildings occupied for so many years by Sir Robert Hart and his staff.

A. D. 1901 (January-February).—Famine in Shensi.—A Press telegram from Peking, late in January, announced a fearful famine prevailing in the province of Shensi, where thousands of natives were dying. The Chinese government was distributing rice, and there was reported to be discrimination against native Christians in the distribution. Mr. Conger, Sir E. Satow, and M. Pichon protested to Prince Ching and Li Hung-chang against such discrimination. A Court edict was therefore issued on the 26th instant ordering all relief officials and Chinese soldiers to treat Christians in exactly the same way as all other Chinese throughout the Empire, under penalty of decapitation. Another despatch, early in February, stated: "Trustworthy reports received here from Shugan fu [the temporary residence of the fugitive Chinese court] all agree that the famine in the provinces of Shensi and Shansi is one of the worst in the history of China. It is estimated that two-thirds of the people are without sufficient food or the means of obtaining it. They are also suffering from the bitter cold. As there is little fuel in either province the woodwork of the houses is being used to supply the want. Oxen, horses, and dogs have

been practically all sacrificed to allay hunger. Three years of crop failures in both provinces and more or less of famine in previous seasons had brought the people to poverty when winter began. This year their condition has rapidly grown worse. Prince Ching stated to Mr. Conger, the United States Minister, that the people were reduced to eating human flesh and to selling their women and children. Infanticide is alarmingly common."

A. D. 1901 (January-February).—Submission to the demands of the Powers by the Imperial Government.—Punishments inflicted and promised.—A new Reform Edict.—With no great delay, the Chinese plenipotentiaries at Peking were authorized by the Emperor and Empress to agree to the demands of the Powers which they did by formally signing the Joint Note. Prince Ching gave his signature on the 12th of January, 1901, and Li Hung-chang, who was seriously ill, signed on the following day. Discussion of the punishments to be inflicted on guilty officials was then opened, and went on for some time. On the 5th of February, the foreign Ministers submitted the names of twelve leading officials, against whom formal indictments were framed, and who were considered to be deserving of death. Three of them, however, Kang Yi, Hsu Tung, and Li Ping Heng, were found to be already deceased. The remaining nine were the following: Prince Chuang, commander-in-chief of the Boxers; Prince Tuan, who was held to be the principal instigator of the attack on foreigners; Duke Lan, the Vice President of Police, who admitted the Boxers to the city; Yu Hsien, who was the governor of Shan Si Province, promoter of the Boxer movement there, and director of the massacre in that province; General Tung Fu Sheng, who led the attacks on the Legations; Ying Nien, Chao Hsu Kiao, Hsu Cheng Yu, and Chih Sin, who were variously prominent in the murderous work. In the cases of Prince Tuan and Duke Lan, who were related to the Imperial family, and in the case of General Tung Fu Sheng, whose military command gave him power to be troublesome, the Chinese court pleaded such difficulties in the way of executing a decree of death that the Ministers at Peking were persuaded to be satisfied with sentences of exile, or degradation in rank, or both. On the 21st of February the Ministers received notice that an imperial edict had been issued, condemning General Tung Fu Sheng to be degraded and deprived of his rank; Prince Tuan and Duke Lan to be disgraced and exiled; Prince Chuang, Ying Nien and Chao Hsu Kiao to commit suicide; Hsu Cheng Yu, Yu Hsien and Chih Sin to be beheaded. Hsu Cheng Yu and Chih Sin were then prisoners in the hands of the foreign military authorities at Peking, and the sentence was executed upon them there, on the 26th of February, in the presence of Japanese, French, German and American troops. A despatch from Peking reporting the execution stated that, while it was being carried out, "the ministers held a meeting and determined on the part of the majority to draw a curtain over further demands for blood. United States Special Commissioner Rockhill sided strongly with those favoring humane methods, who are Sir Ernest Satow and M. Komura, De Cologan and De Giers, respectively British, Japanese, Spanish and Russian ministers. Others believe that China has not been sufficiently pun-

ished, and that men should be executed in every city, town and village where foreigners were injured.

While the subject of punishments was pending, and with a view, it was said, of quickening the action of the Chinese government, Count von Waldersee, the German Field Marshal commanding the allied forces in China, ordered preparations to be made for an extensive military expedition into the interior. The government of the European states gave prompt directions that its forces at Peking should not take part in this movement and the remonstrances of other Powers more pacifically inclined than the Germans caused the project to be given up.

Meantime, three Imperial edicts of importance, if faithfully carried out, had been issued. One, on the 5th of February, commanded new undertakings of reform, accounting for the abandonment of the reform movement of 1898 by declaring that it was reactionary and would have resulted in anarchy, and that it was entered upon when the Emperor was in bad health, for all which reasons he had requested the Empress Dowager to resume the reins of government. Now it was declared, since peace negotiations were in progress, the government should be formed on a basis for future prosperity. Established good methods of foreign countries should be introduced to supply China's deficiencies. China's greatest difficulty," said the edict, "is her bad customs, which have resulted in the smothering of business and the promoting of private gain. Up to the present time those who have followed the Western methods have had only superficial knowledge, knowing only a little of foreign languages and foreign inventions, without knowing the real basis of the strength of foreign nations. Such methods are insufficient for real reform."

In order to obtain a true basis, the Emperor commanded a consultation between the ministers of the privy council, the six boards, nine officers, the Chinese ministers to foreign countries and all the viceroys and governors. Those were instructed to recommend reforms in the seven branches of government, namely, the central government, ceremonies, taxation, schools, civil-service examinations, military affairs and public economies. They were also to recommend what part of the old system can be used and what part needs changing. Two months were given them in which to prepare their report.

On the following day, two edicts, in fulfillment of demands made in the Joint Note of the Powers, were promulgated. The first provided, in accordance with article 1 of the Joint Note, for the suspension of official examinations for five years in places where foreigners are killed. The second edict forbade anti foreign societies, rectified the punishment of guilty parties and declared that the officials will be held responsible for the maintenance of order. If trouble occurs the officials would be removed without delay and never again allowed to hold office.

A. D. 1901: March.—The murdered Christian missionaries and native converts.—Varying statements and estimates of their number.—To the time of this writing (March, 1901) no complete enumeration of the foreign Christian missionaries and members of missionary families who were killed during the Boxer outbreak of the past year has been made. Varying

estimates have appeared, from time to time, and it is possible that one of the latest among these, communicated from Shanghai on the 1st of March, may approach accuracy. It was published in the "North China Daily News," and said to be founded on the missionary records, according to which said the "News" a total of 134 adults and 52 children were killed or died of injuries in the Boxer rising of 1899 and 1900.

On the 13th of March, the "Lokal Anzeiger" of Berlin, published a statistical report from its Peking correspondent of "foreign Christians killed during the troubles, exclusive of the Peking siege," which enumerated 118 Englishmen, 70 Americans, Swedes and Norwegians, 26 Frenchmen, 11 Belgians, 10 Italians and Swiss, and 1 German. The total of these figures is largely in excess of those given by the "North China Daily News," but they cover not missionaries alone, but all foreign Christians. It is impossible, however, not to doubt the accuracy of both these accounts. Of native Christians, the German writer estimated that 30,000 had perished.

In September, 1900, the United States Consul General at Shanghai, Mr. Gossnow, "after making inquiries from every possible source," placed the number of British and American missionaries who had probably been killed at 33, taking no account of a larger number in Chih li and Shan si whose fate was entirely unknown. Of those whose deaths he believed to be absolutely proved at that time, 34 were British, including 9 men, 15 women and 10 children, and 22 were American, 8 of these being men, 8 women and 6 children.

In December, 1900, a private letter from the "Association for the Propagation of the Faith, St. Mary's Seminary," Baltimore, Md., stated that up to the end of September 48 Catholic missionaries were known to have been murdered. A pastoral letter issued in December by Cardinal Vaughan, in London, without stating the numbers killed, declared that all work of the Catholic church, throughout the most of China, where 942 European and 445 native priests had been engaged, was practically swept away.

A private letter, written early in January, 1901, by the Rev. Dr. Judson Smith, one of the corresponding secretaries of the American Board of Commissioners for Foreign Missions, contains the following statement: "The American Board has lost in the recent disturbances in China 13 missionaries, 6 men and 7 women, and 5 children belonging to the families who perished. The number of native converts connected with the mission churches of the American Board who have suffered death during these troubles cannot be stated with accuracy. It undoubtedly exceeds 1,000. It may reach a much larger figure, but some facts that have come to light of late imply that more of those who were supposed to be lost have been in hiding than was known. If we should reckon along with native converts members of their families who have suffered death, the number would probably be doubled."

There seems to be absolutely no basis of real information for any estimate that has been made of the extent of massacre among the native Christian converts. Thousands perished, without doubt, but how many thousands is yet to be learned. As intimated by Dr. Smith, larger numbers than have been supposed may have escaped, and it will probably be long before the

true facts are gathered from all parts of the country.

In any view, the massacre of missionaries and their families was hideous enough, but details of horror were shamefully added. It seems, in some of the stories which came from the East. At Pao Ting Fu, where women were said to have suffered indescribable brutality before being slain, investigation by an American military officer convinced him that "there is no evidence of any peculiar atrocities committed upon the persons of those who were slain", and the American Board of Commissioners for Foreign Missions has publicly announced: "While forced to believe that our missionaries in Shan Si and at Pao Ting Fu were put to death by the Chinese, we have never credited the published reports concerning atrocities connected with their slaughter."

A. D. 1901 (March).—Withdrawal of American troops, excepting a Legation guard.—The following order was sent by cable from the War Department at Washington to General Chaffee, commanding the United States forces in China, on the 15th of March: "In reply to your telegram Secretary of War directs you complete arrangements for Manila with your command and staff officers by end April, leaving as legation guard infantry company composed of 150 men having at least one year to serve or those intending re-enlist, with full complement of officers, medical officer, sufficient hospital corps men and, if you think best, field officer especially qualified to command guard. Retain and instruct officer quartermaster's department proceed to erect necessary buildings for guard according to plan and estimate you approve."

A. D. 1901 (March—April).—Discussion of the question of indemnity.—Uneasiness concerning rumored secret negotiations of Russia with the Chinese government relative to Manchuria. As we write this (early in April), the reckoning of indemnities to be demanded by the several Powers of the Concert in China is still under discussion between the Ministers at Peking, and is found to be very difficult of settlement. There is understood to be wide differences of disposition among the governments represented in the discussion, some being accused of a greed that would endeavor to wring from the Chinese government far more than the country can possibly pay, while others are laboring to reduce the total of exactions within a more reasonable limit. At the latest accounts from Peking, a special committee of the Ministers was said to

be engaged in a searching investigation of the resources of China, in order to ascertain what sum the Empire has ability to pay, and in what manner the payment can best be secured and best made. It seems to be hoped that when these facts are made clear there may be possibilities of an agreement as to the division of the total sum between the nations whose legations were attacked, whose citizens were slain, and whose sent troops to crush the Boxer rising.

Meantime grave anxieties are being caused by rumors of a secret treaty concerning Manchuria which Russia is said to be attempting to extort from the Chinese government [see, in this vol., MANCHURIA], the whispered terms of which would give her, in that vast region, a degree of control never likely to become less. The most positive remonstrance yet known to have been made, against any concession of that nature, was addressed, on the 1st of March, by the government of the United States, to its representatives at St. Petersburg, Berlin, London, Paris, Vienna, Rome, and Tokio, as follows: "The following memorandum, which was handed to Chinese Minister on February 19, is transmitted to you for your information and communication to the government to which you are accredited:—

"The preservation of the territorial integrity of China having been recognized by all the powers now engaged in joint negotiation concerning the injuries recently inflicted upon their ministers and nationals by certain officials and subjects of the Chinese Empire, it is evidently advantageous to China to continue the present international understanding upon this subject. It would be, therefore, unwise and dangerous in the extreme for China to make any arrangement or to consider any proposition of a private nature involving the surrender of territory or financial obligations by convention with any particular power; and the government of the United States, aiming solely at the preservation of China from the danger indicated and the conservation of the largest and most beneficial relations between the empire and other countries, in accordance with the principles set forth in its circular note of July 3, 1900, and in a purely friendly spirit toward the Chinese Empire and all the powers now interested in the negotiations, desires to express its sense of the impropriety, inexpediency and even extreme danger to the interests of China of considering any private territorial or financial arrangements, at least without the full knowledge and approval of all the powers now engaged in negotiation. HAY."

CHRISTIAN ENDEAVOR, The Young People's Society of.—The nineteenth annual international convention of Young People's Societies of Christian Endeavor was held in the Alexandra Palace, London, England, from the 13th to the 20th of July, 1900, delegates being present from most countries of the world. Reports presented to the convention showed a total membership of about 3,500,000, in 59,712 societies, 43,462 of which were in the United States, 4,000 in Canada, some 7,000 in Great Britain, 4,000 in Australia, and smaller numbers in Germany, India, China, Japan, Mexico, and elsewhere.

The first society, which supplied the germ of organization for all succeeding ones, was formed in the Williston Congregational Church of Portland, Maine, on the 2d of February, 1881, by

CHRISTIAN ENDEAVOR

1896.—Francis E. Clark, the pastor of the First Church as indicated by the name, was to organize the religious efforts of the young people of the church for the year's work. The idea was caught by the other churches, Congregational, Methodist, Baptist, and others, and the organization soon became a national and not international. In 1896 it reported that Russia then remained inactive in the world without a Christian Society, and the total was 54,191. At the next year's report Russia was announced as having the list of countries represented. A number of societies had advanced to 1896. In 1896 the numbers had risen to the 100,000 mark. CHUNGKING.—Chungking, which lies about 2,000 miles inland, is, despite its interior position, one of the most important of the more than 500 ports of China. Located at practically the head of navigation on the Yangtze, it is the hub city of the largest most populous, and perhaps the most productive province of China, whose relative position, industries, population, and diversified products make it quite similar to the great productive valley of the lower Mississippi. The province of Szechuan is the largest province of China, having an area of 160,000 square miles, and a population of 47,000,000, or but little less than that of the entire United States. Its area and density of population may be more readily recognized in the fact that its size is about the same as that of the States of Ohio, Indiana, Illinois, and Kentucky combined, but that its population is six times as great as that of those States. Its productions include wheat, tobacco, buckwheat, hemp, rice, millet, barley, sugar cane, cotton, and silk. *United States, Bureau of Statistics, Monthly Summary, March, 1899, p. 2196.*

CIVIL-SERVICE REFORM IN THE UNITED STATES. A. D. 1893-1896.—Extensions of the Civil-Service rules by President Cleveland. Through the extension of the Federal Classification during President Cleveland's administration the number of positions covered by the civil service rules increased from 12,028 to 12,928. By a series of orders ranging from March 20, 1894, to July 27, 1895, 10,000 places were added to the list, bringing the total approximately to 23,000. Meanwhile the Civil Service Commission was organized and the President a general

CIVIL-SERVICE REFORM IN

revision that would correct the defects in the original rules and extend the full degree contemplated by them. After much correspondence with department officers, and the part of the Commission's [1896] were promulgated. The classification of about 20,000 in transferring to the control of the system of Navy Yard, established by Secretary Tracy, for number in the classified service to positions in the Executive branch, these orders included those classes excluded by the statute, persons nominated by the Senate and the court, "merely as laborers or workmen," together with the fourth class postmasters, clerks in post offices other than free delivery offices, and in Customs districts having less than five employees, persons receiving less than \$300 annual compensation, and about 1,000 miscellaneous positions of minor character, not classified for reasons having to do with the good of the service, 20,000 in all. Within the classified service, the list of positions exempted from competitive examination was confined to the private secretaries and clerks of the President and Cabinet officers, cashiers in the Customs Service, the Internal Revenue Service, and the principal post offices, attorneys who prepare cases for trial, principal Customs inspectors, and all assistant postmasters, 781 in all. The new rules provided for a general system of promotion based on competitive examinations and efficiency records, and gave the Commission somewhat larger powers in the matter of removals by providing that no officer or employee in the classified service, of whatever station, should be removed for political or religious reasons, and that in all cases like penalties should be imposed for like offenses. They created an admirable system, a system founded on the most sensible rules of business administration, and likely to work badly only where the Commission might encounter the opposition of hostile appointing officers. President Cleveland's revised rules were promulgated before the Convention of either political party had been held and before the results of the election could be fore-shadowed. The extensions were practically approved, however, by the Republican platform which was adopted with full knowledge of the nature of the changes, and which declared that the law should be thoroughly and honestly enforced and extended wherever practicable.

Mr. McKinley, in his letter of acceptance and in his inaugural address, repeated the pledge of the Republican party to uphold the law, and during the two months of his administration now past he has consistently done so. He has been helped by many thousands of place seekers by Senators and Representatives, and by members of his own Cabinet, all among them making the work of his predecessor a task wholly or in part, and so break his word of honor to the nation, in order that they may profit. At least five bills have been introduced in Congress, providing for the repeal of the law. Finally, the Senate has authorized an investigation, by the Committee on Civil Service and Retrenchment, with the view of ascertaining whether the law should be continued, amended or repealed, and sessions of this Committee are now in progress. Mr.

Makovsky by orientating the system against the so-called attacks will do as great a thing as Makovsky did in the 1960s and 70s. *Report of the Commission on the Assassination of President John F. Kennedy* (New York: Harper, 1975), p. 184.

The Central Medical Congress, December, 1896, reported that the following on the subject of "Treatment of the Colpectome Class" had been reported as of the four thousand pounds. Many of the following have been in general treatment of the disease since March 4, 1896.

As the results of the interviews suggest, it may be said that the current rules are not fully contemplated by the community. There may be a need for abundant rules to exist in the form of these partnerships, but a more important need is improved service and the participation of the individuals. If, however, the rules prevent such action at present, I cannot imagine that there is will, without increasing political and/or financial support, to permit the partnerships as a considered action of the state. It is to be noted that there is a "this process" in the text of the law that indicates that the process is to be continued to the extent that it is not completed. The civil service rules are amended during the last year to provide for a sensible and realistic method of promotion, thus increasing ability to better positions. Improvements in efficiency and fullness of the *Administrative Rules, Regulations and Decisions* (1996), p. 333.

A. D. 1894 Constitutional provision in New York. See also CONSTITUTION OF New York.

A. D. 1897-1898. Onslaught of the spoils-
men at Washington. Failure of the Con-
gressional attack. During the four months
of the administration of President Mc-
Kinley, the removal of placemen was al-
most a perpetuity. Ninety-nine out of a hun-
dred of them were convicted that the office or
position held in it was classed and subject to
compulsory rotation. The tenure of their
employment in it was virtually at the discre-
tion of the department officers, named in the
law. Some of the appointments to the places
were evidently made in favor of men who did
not have the necessary qualifications. It
is true that the removal of the tenement
with the nomination of persons who had been
separated from the service without personal
fault with some few of the veterans who had
been in the service of the army, and that one re-
mover was made to make room for the other. But
the appointments in such cases went but a very
little way toward making the removal. The re-
sult was that almost the whole prestige of the
volunteering forces and of their members of
Congress was directed to the white toward one
end, the revocation of the total nomination of
the civil service force. President McKinley was
forced to bury his personal pledges as well as
to take the party and to take the classed
service as they were held of the 87,000 officers
and privates continued. But the Presi-

the United States. The attitude of the speakers was turned at once from the President to Congress. It was declared by them that the best resolutions would be passed through creation, and that it might even be possible to restrain the majority from voting in the House. In the House the new law of the United States General Convention of Ohio and the Senate by the Governor of New

Hampshire . . . The first debates of the session dealt with civil service reform. The House devoted two weeks to the subject in conference with the consideration of the annual appropriation for the Civil Service Commission. The

about to defeat the appropriation ended in a usual failure. It was explained, however, that all of this had been mere preparation for the proposed legislation. A committee was appointed by the Republican opponents, under the name General Grosvenor, to prepare a bill. The bill appeared on January 6, when it was introduced by Mr. Evans of Kentucky, and referred to a Committee on Reform in the Civil Service. It limited the application of the civil service law to clerical employees at Washington, letter carriers and mail clerks, and employees in principal Post Offices and Customs Houses, proposing to take from the present classified service about 55,000 positions. A series of hearings was arranged by the Civil Service Committee, at which representatives of this and other Associations, and of the Civil Service Commission, were present. A subcommittee of seven, comprising a majority of the full committee, shortly afterward voted unanimously to report the bill adversely. About the same time, the Senate Civil Service Committee, which had been investigating the operation of the law since early summer, presented its report. Of the eight members, three recommended a limited number of exceptions, amounting in all to probably 14,000; three recommended a greatly reduced list of exceptions; and two proposed none whatever. All agreed that the President alone had authority to act, and that no legislation was needed.

The collapse of the movement in Congress has turned the attention of the spoilsmen again toward the President. He is asked once more to make sweeping exceptions." *Report of the Central Committee of the New York Civil Service Reform Association*, 1898.

A. D. 1897-1899. Temporary check in New York. Governor Black's law. Restoration of the merit system under Governor Roosevelt. In June [1897] after the Court of Appeals had declared that the constitution

amendment was self-executing and that appointments made without competitive examination where competitive examinations were prescribed must be held to be illegal steps were taken to secure a reduction of the competitive to non-competitive positions in the State Service. A letter was addressed to Governor Murray by the officers of the Association on June 8, 1902, stating that the service be reclassified on a basis competitive as far as practicable. The Governor replied that he had already given the subject some thought, and that he would be glad to give or suggestions careful consideration. On the first of August he instructed the Civil Service Commission to prepare such a reclassification of the public employees as had been proposed. On the 11th of November this text in prepared by the Civil Service Board, was adopted by the full Commission and on the 30th of December the new rules were formally promulgated by the Governor and placed in immediate operation. The Governor, earlier in the year, had reversed his action in the case of inspectors and other employees of the new Excise Department by transferring them from the non-competitive to the competitive class. This marked the beginning of a sys-

ment against the competitive system. The numerous defects, mistakes, and other irregularities Governor Morton swept away. By December completed the dismissal of those people and strengthened their position. A final desperate effort to break the new law. The new Governor, of whom it had been known prior to his unexpected election in September, proved to be in full sympathy with their point. In his message to the Governor Mr. Black in a paragraph devoted to the service referred to the system built up by the Legislature in contemptuous language, and that in his judgment, "Civil Service Law is better with less starch." He said that a "reform" that would render the system more practical and that would appointing officers to select from the number of eligible list and not continue the "rotations" from among those graded by the Legislature, he would not "prompt executive approval." Each time the Legislature referred this part of the message to a select committee, with instructions to report a bill embodying the Governor's suggestion.

Within a few days of the close of the session the measure currently designated as Governor Black's bill was introduced. It provided that in all examinations for State, county or municipal service not more than 50 per cent might be given to those who had been in the service of the State or county. The rest of the rating represented by the Governor's bill was to be given to the appointing authority some person or persons designated by the Governor. A rotating eligible list was to be made up of 100 names, and the new scheme was to be in operation at once. A hearing was held by the Senate Committee on the following day by the Assembly Committee a few days later. The bill with some amendments was passed in the Senate, under suspension of the rules, and as a party measure.

It passed in the Assembly also as a caucus measure. *Report of the Executive Committee of the New York Civil Service Reform Association, 1897.*

By the year 1898 after time had been allowed to pass its capabilities in practice, the system toward commencing a suit to test its constitutionality in the courts.

On the morning of a test suit a bill was presented to the Association and introduced in the Assembly. On March 10th, last one of the bills which was the repeal of the mischievous law.

The bill was passed by the Assembly on March 20th. On the 21st the bill was passed by the Senate.

On the same date it was signed by Governor Roosevelt and became a law. This act has the effect of extending the cities from the operation of the law, 1897 restoring the former competitive system in each of them. *The Sun,* March 21, 1898.

As a result of the confusing legislation of 1897, at least four systems of widely different character had come into existence by the year 1898. New York City had its competitive system, the State had its competitive system, the city of New York had its competitive system, and the city of New York had its competitive system.

The State departments were controlled by the Black Law. The city of New York followed the plan of the original competitive system. In his first annual message Governor Roosevelt directed the attention of the Legislature to this anomalous condition and strongly urged the passage of an act repealing the Black Law and establishing a uniform system for the State and cities alike subject to State control. Such an act was prepared with the cooperation of a special committee of the Association. After some discussion it was determined to reconstitute the measure adopting a form amounting to a codification of all previously existing statutes and less strict in certain of its general provisions. The bill was passed by the Senate by a majority of two. In the Assembly it was passed with slight amendments.

On the 19th of April the act was signed by the Governor and went into immediate effect. The passage of this law would necessitate the complete reorganizing of the civil service system in New York on radically different lines.

A. D. 1899. Modification of Civil Service Rules by President McKinley. Severe criticism of the order by the National Civil Service Reform League. On the 29th of May, 1899, President McKinley was persuaded to issue an order greatly modifying the civil service rules, releasing many officers from the operation and permitting numerous transfers in the service on a non-competitive examination. This presidential order was criticised with severity in a statement promptly issued by the Executive Committee of the National Civil Service Reform League, which says: "The National Civil Service Reform League after mature consideration, regards the order of President McKinley of May 29 changing the Civil Service rules as a backward step of the most pronounced character. The order follows a long succession of violations of both the spirit and the literal terms of the law and rules in various branches of the service, and must be considered in its relations to these. Its immediate effects, which have been understood may be set forth as follows: 1. It withdraws from the classified service not merely 3,000 or 4,000 officers and positions, but, as nearly as can be now estimated, 10,000. It removes 3,000 from the class of positions filled hitherto either through competitive examination or through orderly practice of promotion, and it transfers 6,400 other positions in the War Department, 175 hitherto through a competitive registration system under the control of the Civil Service Commission to a system to be devised and placed in effect by the present Secretary of War. 2. It declares regular at least one thousand additional appointments need temporarily without examination in many cases in direct disregard of the law, in branches that are not affected by the exceptions, but that remain nominally competitive. 3. It permits the permanent appointment of persons without examination for emergency purposes during the course of war with Spain, thus furnishing a standing list of many thousands from which positions in the War Department may be filled without tests of fitness for a long time to come. 4. It alters the rules to the effect that in future no person appointed with or without competitive examination or without any examination may be placed by transfer in any classified position without regard to the character or similarity of the employment previously engaged, and after non-competitive examination only. 5. It permits the reclassification within

Second, Postmaster appoints the clerks of the House except the clerks of the committees, the messengers, and those appointed by the House itself. The appointments are made in the recommendation of the members and very largely through the influence of the members of the dominant party. The House member upon whose recommendation an appointment is made desires the removal and the substitution of any person in the removal and substitution of any person in regard to the capacity of either person. Because a member upon whose recommendation an appointment has been made causes the removal of the House an employee recommended by him ordinarily loses his place. The members of the House, though responsible for the character of the service rendered by the clerks, have in reality little or no voice in the removal and as might reasonably be expected the results obtained from the system of removals described are in some cases extremely satisfactory. This method of appointments of employees has existed for many years, but the House has been under the control of one party almost entirely. We have to suppose as to state at the outset that some of the evils of administration which we are now endeavoring to remove are attributable to the system of appointments of members of the House in the officers, the appointment of their subordinates to the subordinate places, and the transfers are deeply rooted of long standing, and key to continue under the administration of any political party as long as the system remains unaltered.

Third, members of the House are authorized in the administration of the offices of the House. Postmaster is the chief clerk. With reference to the duties of the Clerk and the Doorkeeper. We have found in both departments some abuses which may be grouped under two heads, namely: Transfers of employees from the duties of the positions to which they are appointed to other duties, unjustifiable payments of compensation to employees while absent from their posts of duty, and divisions of duties.

First, Transfers of employees from the duties to which they were appointed to other duties. Some part of this evil is doubtless attributable to the fact that the annual appropriation acts have not properly provided for the necessities of the House service. An illustration of this is furnished by the case of Guy Underwood, who is carried on the rolls as a clerk at \$720 per annum while in fact he performs the duty of assistant in the library of the House and his compensation is actually increased to \$1,800 per annum by the appropriation of \$1,080 in the general deficit.

Again, a sufficient number of messengers has not been provided for the actual needs of the service, while more folders have been provided than are required. As a result of these conditions, employees have been transferred from the duties to which they were appointed, from messenger and the doorkeepers have been increased by approximately twenty per cent. But evils of another sort have arisen from transfers. Some examples of these are: (1) They result in part at least, in the loss of the public services so as to satisfy the members that their appointees obtain a

just share of the whole appropriation. (2) An attempt to "compensate" the employees for the loss of the respect of members and the neglect of the services which they render.

Second, Payments of compensation to employees while absent. The duty of the employees of the House ceases with the adjournment of a session or very soon thereafter. Such is the case with the reading clerks, messengers, writing clerks, and many others who might be cited. Their absence from Washington after adjournment of Congress closes and their duties are therefore as legitimate as the absence of the members themselves. But many employees who should be at their posts have been from time to time absent without justification both during sessions and between sessions. In the absence of any record it is impossible for the committee to ascertain with anything like accuracy the amount of absence from duty, but in any case it is very serious indeed.

Some of these employees of the library service have been absent for long periods before the sessions of Congress, although the library is not a department which demands constant attention for years to come in order to keep up a proper maintenance of the collection. The payment of the library has increased and the salary paid to the library service, including compensation of employees, amounts to \$9,000 per annum. Ninety per cent of the employees of the library with the exception of a \$400 deficiency employee, voted for Underwood when this freshman year of Congress was in session part of the session at the University of Chicago has covered any library experience, although they all appear to be capable and intelligent men. The House library is said to consist of 200,000 volumes, many of which are of poor quality and are scattered from the dome to the basement of the Capitol. In some instances, indeed, the books being piled in matted rooms like so much wood or coal. The present librarian testified as follows: "Q. It would be difficult to describe a worse condition than existed. A. I would for the condition of books. It would be all right for a library, but for books it is terrible." It is just to say that under the present administration of the library, some attempt has been made to improve conditions. The effect of fifty years neglect is not to be remedied in a day. We can not think that any able person, by and by a reasonable vacation on the part of those employed in the library is justifiable in view of the foregoing facts.

The folders taking the orders of members rather than those of the Doorkeeper are also of a great deal during the year. In some cases persons are employed by members to do their work. The Doorkeeper has said as follows: "I think Mr. Lyon told me when members requested they had three months of leave during this last Congress." "Q. Drawing the leave in the meantime?" "A. Yes, sir, they had three months." "Q. That is not in the interest of your service, is it?" "A. No, sir." "Q. Have you been able to prevent it?" "A. No, sir." "Q. Why?" "A. They would go to the superintendent of the folding room and say to him: 'My name is not to go home.'" "Q. You name the members and go?" "A. Yes, sir. I do not like to name the members but that is the situation. They would say: 'I have got to have my name home' and he must go home, it is absolutely necessary," and in has been permitted to go."

COLOMBIA: A D 1893-1900. Resumption of work on the Panama Canal. Revolutionary movements. Prolonged Civil War. Boundary dispute with Costa Rica. Panama Canal concession twice extended. In 1904 the country was placed under the tutelage of the United States and the Panama Canal Company of the U.S. was organized.

By what is said to have been a forced resignation, the time in the latter part of the year 1900, President Sucremante, a very old man, retired from the active duties of the office, which were taken in hand by the Vice President, Don Manoguerra.

During the year 1900, the government, to avoid a further extension of the concession to the Panama Canal Company, prolonging the period within which the canal must be completed 52 years from April, 1904.

CONGO FREE STATE

and 1891, which took the name of "The Concert of Europe," was limited to those who had more "civilized" (i.e., European) aspirations. It was sad to say, springing from the world's first "World" meeting in China, see in this vol. CHINA: A D. D. 1900, Japan was then associated with the United States and Japan were then associated in a union with the European nations, and the "Concert of Europe" was succeeded by a larger "Concert of the Powers."

CONGO FREE STATE

Secretary of the State at every possible opportunity, but at length, in February, 1890, she was persuaded to write in favour of Bismarck the right of the empire to which the Com. Association had renounced in April, 1884, over its possessions in the Pacific, when the Anglo-Portuguese Convention had agreed that enterprise with exclusive rights for fifteen years after the meeting at Berlin. It was not necessary to convene another conference of the Powers, had on this occasion of Bismarck, under the presidency of Bismarck, had not been shown in the success of the enterprise, which had been very marked. The fact was, that the object set before the Com. Association was to show the means for the abolition of slavery.

...lasted more than seven months, and expired July 1, 1890, that the General Assembly, the successors of the Powers

But the P group used the information to make its decisions. To which it added that it was itself a party made to be used. And at the same time it set its own priorities to go to the Senate and needed for the execution of that plan.

Each from the Brass Coast State threw itself in the arms of the other with which the campaign triumph of the State was celebrated. The Arabes seemed devoted to the Arabes, and the slave-trade of which they were the principal principle, and noted the sole promoters. The Arabes, however, did not conclude the new conquests, and beat the negroes of the State. The Batcher continued the Public Force of not very army of the Government in January 1897 while on the right to occupy the Lado District of the Upper Nile, and the episode, which in its characters of blood by the assassination of many Belgian officers seemed to shake the recently constructed empire to its base. That if the United was severe, the manner in which the authorities have triumphed over their adversaries and surrounded them, themselves, furnishes clear evidence of the stability of their power. The Batcher mutiny has been overthrown in several signal encounters, a mere handful of fugitives still survive, and each local brings news of their further disposal. Even at the moment of its occurrence the blow from the Batcher mutiny was repaired by the success of the column under Commandant Chamin in overthrowing the Der Aishes at Beldat and in establishing the State's authority on the part of the Nile assigned to it by the Anglo-Congolese Convention of 1894. The triumphs of the Congo State have, however, been those of peace and not of war. With the exception of the operations named and the conflict with the despotism of the Sarr, the State's record is one of unbroken tranquillity. There was little in magnitude but great in their consequences, were necessary for the suppression of the slave-trade as well as for the legitimate assertion of the authority of the Congo Government. But their main consequence was the effective carrying out of the clauses in the Paris Treaty making full participation in the capitalist system of capitalism a capital offence. That was the primary task, the initial step, in the development of civilisation in Central Africa, and the credit for this the Congo State

CONGO FREE STATE

cannot be deprived. When this was done the
remained the still more difficult task of
the black races from the evils which exist
long in its train among an ignorant people
incapable of self-control. The import of
measures had to be checked in order to prevent
maintained race indulging in internecine strife
turning their weapons upon the more handi-
Europeans engaged in the task of regenerat-
the negroes. The necessary measures inspired
by the double motives of self-preservation and
the welfare of the blacks have been taken, and
the State controls in the most complete and
effective manner the importation of all weapons
and munitions of war. Nor has the success of
the administration been less clear or decisive in
its control of the liquor traffic." *Dunster*. Cf.
Boulger, *Twelve Years' Work on the Congo*, *the*
Nightly Review, Oct., 1898.

To a considerable extent this favorable view of the work of the Belgians in the Congo State is sustained by the report which a first shipment, Mr. Pickersall, made to his Government in 1895. He wrote admiringly of the energy with which the Belgians had overcome enormous difficulties in their undertaking, and then asked:

This splendid invasion justified its title, and the aborigines? Equatorial Africa is not a man's country. He can never possess it in sole possession of it by surviving his first, and without the black men it will in serve no useful purpose.

Has the welfare of the Algonquians and their precarious existence, as this indigenous community cared for in the Congo State? The answer to these questions, his report says, lies with unquenching strict fairness. The facts produced in the country as he came to observed them. He found that much good had been done to the natives by restrictions of the liquor trade, by an extensive suppression of intertribal wars, and by a diminution of cannibalism. Then comes a rehearsal of facts which have a different look.

The yoke of the notorious Arab-slave traders has been broken, and traffic in human beings amongst the natives themselves has been diminished to a considerable degree. Slavery here begins with a spirit and runs out thin at the end. But there is no better way of recording the facts concisely. To hear, amidst the story's wild surroundings, how Danians and Hinde and their intrepid comrades throw themselves time after time, upon the strongholds of the heathen oppressors, until the Zeme Arabe was won in the name of freedom, is to thrill with admiration at a gallant crusade. . . . But it is disappointing to see the outcome of this lofty enterprise, so far from a mere modification of the evil that was righteously attacked. Like the Portuguese in Angola, the Belgians on the Congo have adopted the system of requiring the slave to pay for his freedom by serving a new master during a fixed term of years for wages merely nominal. In this principle is fused the "servical" system of the first named possessor, and the "liber" system of the latter; the only difference being in the two-folding that the Portuguese Government permits limited re-enslavement for the benefit of private individuals, but does not purchase its own account, while the Government of the independent State refuses for itself an advantage which it taboos to very body else.

The State supports this system because it is more easily obtainable than by any other means, namely, the free people, and it is more easily obtained by paying wages. The system, however, is supposed to have a change of status and is implied to be a change of status. After seven years' service the low name is entitled to live in the country. In Angola the land is five years' service. The natives are being drilled into the military work. The first Europeans

The first Europeans involved in the Matruh had to rely on local porters from the coast, and it was not until the British had gained the confidence of the people and discovered individuals amongst them whom they could trust as gangsters that the use of local carriers became feasible.

It was pointed out, of course, and it is to the credit of the S. that the remuneration could be increased after compulsion was lifted. But how, if it could fail to be asked, did it ever get compulsion on its rise? In the same

It has since arisen in connection with the United Fruit Company. The State wished to get from the United Fruit Company a concession to build a canal. The Government at that time prohibited companies from recruiting where porters were being obtained, and under the direct authority of the United Fruit Company, the State Government

Wages included an ingenious system of "topping off" the remuneration; this was done by the men liable to serve absent from the trenches and afterwards when returned to the trenches, the women and children, by proprietors for war work, by the members of the army

It was the proper and early response to the harsh and efforts were made to bring about a general amnesty and national pardon. There is no doubt a resolution that Colonel Wades was punished the destruction of a General's reputation and the murder of the officer

Moreover, through the influence of the general conflagration, was produced the original outbreak confined to the city, and transport work of all kinds had to be continued until men were taken off the burden of the service, leaving the cooperation of the wheels diminished. That was in 1894. Thereafter, the strain appeared to be working away on a smoothness. Whenever

It can be held respecting the influence of St. Paul at the present stage of its schoolmaster there can be no doubt that the condition of the influence of these sections of the population can be relieved from the transport of a completely exclusive experience one way or the other of the Government's assistance.

It needs no great knowledge of human nature to see that such pupils will not use the good for nothingness, but will find it unless they expect to

the most obvious clothes of an European style, but in the apartments for slaves and ex-slaves, a domestic patch, an unpaired red sock to educate the child. Since 1892 the Congress has attempted to be pious of regions, and with another about 6,000,000 per cent of the entire country. It is, therefore, to have included the

duty entirely. A school for boys has been established at Roum, and another at Naxos. At Ayvaz, while large numbers of children of both sexes have been placed with the Roumanian consuls, situated in the same and other districts. Except in one direction, however, the movement has not been very successful. The young Athenians thus blessed with a chance of becoming freed with intelligence are all waifs and strays who have been picked up by exploding parties and military expeditions. Their homes are at the points of the compass, and their speech is heterogeneous.

[illegible]

From this account of things, we would soon find that Mr. Kitchener, the new general, had taken from his article in the *Week* of K. the point that the Congress had chosen to give only what is best in the results. The new officer had the writers of the following sentences in the *Standard* and *London* may have looked at it with but the hackles bristling. K. had said, "He who through his misdeeds gains the Congress K. is not a really able man, deceived by confidence in his own great wealth, and by the thought of continental idea that anybody can make money in the tropics if he is only hard enough, undertook an enterprise wholly beyond his resources, and by making a name instead of good government himself, spoiled the whole effect of his first successes. The Congo Free State, covering a million square miles, that is as large as Italy, and containing a population supposed to exceed forty-two millions, was committed by him to his change in his act of sovereignty, and at first there appeared to be no resistance. Steamships and telegraphs and stations are there, a mail-boats, and there were everywhere the African dignitaries, and young officers and soldiers, for employment. The work people of the country, taking to employment, were to have a becoming patent to the work. The King had the disposal of a few white troops, and they were only Belgians, who suffer from the heat and warfare, and his agents had to employ the mercenary army, 'on the cheap.' The result of this, therefore, the honest blacks have been to force of their numbers, and to them by the native house-

CONSTITUTION OF AUSTRALIA

Three days after the close of the Year 1900 Convention of 1890, which regulated the relations of ten years the relations between Belgium and the Congo State expired by lapse of time. The likely to be renewed. The chief provisions of the Convention were (1) that Belgium should advance to the Congo State a loan of 2,000,000 francs (2,000,000 francs free of interest, of which one-half was payable at sight and the balance in yearly instalments of 2,000,000 francs, 2 per centum acquired within six months of the first payment the option of anting the Congo State with all the rights and appurtenances of sovereignty attaching thereto, or (2) if Belgium did not avail herself of this right the loan was to be redeemable after a further period of ten years and became subject to interest at the rate of 2 per centum per annum. The will of King Leopold executed in 1890 runs as follows: "We have given and transmit to Belgium after our death the full Sovereign rights to the Congo Free State, as they have been recognized by the various international conventions and treaties drawn up since the one hand between the King of Belgium and the Congo State in 1890 and the other hand between the Congo State and the Congo Free State, and all the rights and appurtenances accruing from such conventions and treaties. At the same time the Legislature of Belgium should have stated its intentions as to the exercise of these dispositions. The sovereignty should be exercised collectively by the Council of Ministers of the Free State and by the King of Belgium."

The following is the Act to constitute the Commonwealth of Australia, as passed by the Imperial Parliament July 9, 1900, 63 & 64 Vict. ch. 12, see in this vol. AUSTRALIA, A. D. 1900. The text is from the official publication, 1900, Act.

What is the people of New South Wales, Australia, to do? A Scotch Quaker, Lind, told us that Lind had been in the blessing of Alms by George Fox, and to smile in one's presence. Fox had been a youth under the crown of the King, and a great Great Britain and Ireland people, and a great nation, lately established. A great nation is expedient to provide for the people of the Commonwealth, whether they are in the land or in possession of the Queen. But the people are not by the Queen's most high power, and with the advice and consent of the Lords Spiritual and Temporal, and of the Commons in Parliament assembled, and by the authority of the same, as follows:

2. The expression used in this Act referring to the

2. In the case of the 1990s, the Act referring to the

Queen shall extend to Her Majesty's heirs and successors in the sovereignty of the United Kingdom.

3. It shall be lawful for the Queen, with the advice of the Privy Council, to declare by Letters Patent that, on and after the day therein appointed for the coming into operation of this Act, the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, and also, if Her Majesty shall so direct, the people of Western Australia, shall be united in one Federal Commonwealth, to be known as the Commonwealth of Australia; that the Queen may, at any time after the passing of this Act, appoint a Governor-General for the Commonwealth.

1. The Commonwealth shall be estab-
lished by the Constitution of the Commonwealth
take effect on and after the day on which
the Parliament of the several States
shall have passed the passing of this Act
any such laws, to be the interpretation
supplemented as they might have been

CONSTITUTION OF AUSTRALIA.

Article 10 of the 1793 Act reflected the passing of this new Act and the laws made by the Parliament of Great Britain under the Convention in London on the courts, judges, and officers of the State and of every part of the new empire, notwithstanding anything to the contrary in the laws of any State, and the laws of the new empire shall be in force on all British ships and vessels if it was excepted, whose cargo was contraband and whose port of destination was the Commonwealth.

[illegible]

Under the control of Australasia Air, which reported the success of the pilot used by the Federal Government, a very important contribution to the development of the Australian Air Force may be reported. The Government of the Commonwealth of Australia is to be congratulated for having been the first to apply the principle of the "State of the Art" in the development of the Australian Air Force.

the fact that $A \in \mathcal{C}_1$ and $A \in \mathcal{C}_2$ implies $A \in \mathcal{C}_1 \cap \mathcal{C}_2$. Since the Center of Gravity is the center of all the circles, it is the center of all the processes.

CONSTITUTION OF AUSTRALIA

17. The Senate shall, before proceeding to the despatch of any other business, choose a senator to be the President of the Senate, and, if the office of President becomes vacant, the Senate may again choose a senator to be the President. The President shall cease to hold his office if he ceases to be a senator. He may be removed from office by a vote of the Senate or he may resign his office or his seat by writing addressed to the Governor General.

14. Before or during any absence of _____, _____ shall not be permitted to _____ the Senate nor choose a senator. _____ shall not _____ his duties in his absence.

19. A Senator may, by writing, address the President or to the Governor General, the Chief Justice, or if the President is unable to do so, the Governor General, resign his place in the Senate and become a Senator.

24. The place of senatorial election moved out for two or three months of delay since the Parliament is without the parliament of the Senate. It is not the Senate.

21. When, at a regular session of the Senate, the President or if there is no President, the President-elect, absent from that session, the Governor or if there is no Governor, the Governor-elect, of the State in the presence of the Senate, shall take the following oath:

(2) Even though the Parliament has no power to amend the provisions of at least one item of the subject-matter of the Statute, but the mere fact of amendment of the Statute by the Legislature does not make it law.

[illegible]

21. The House of Representatives has proposed a budget for the fiscal year 1991 that would increase the federal deficit by \$100 billion.

[illegible]

For the first step of procedure 1, n is divided by 2, and if n is such division is even, or greater than one half of the number of the n to be chosen, the least number of the n to be chosen is $n/2$, although not less than 1, and the members at least shall be chosen by lot.

And every State all persons of any race are entitled from voting at elections for the numerous House of the Parliament of the State, then in reckoning the number of the people of the State or of the Commonwealth persons that race resident in that State shall not be counted.

26 Notwithstanding anything in section

9

the number of members to be elected in the Territory shall be fixed by the Governor-General in New South Wales, twenty-three in Victoria, twenty in the South Australian, twenty in the Western Australian, twenty in the Northern Territory, twenty in Queensland, and twenty in the Western Australian Territory.

5. In each Territory, the Parliament shall consist of not more than ten members of the House of

Representatives. Every shall be elected by the people of the Territory, and shall hold office for not more than three years.

6. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

7. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

8. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

9. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

10. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

11. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

12. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

13. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

and as often as the office of Speaker becomes vacant, the House shall elect a member to be the Speaker. The Speaker shall hold office for one year, or until he is re-elected. He may be removed from office by a vote of the House of Representatives.

14. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

15. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

16. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

17. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

18. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

19. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

20. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

21. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

22. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

23. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

24. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

25. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

26. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

27. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

28. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

29. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

30. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

31. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

32. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

33. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

34. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

35. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

36. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

37. The members of the House of Representatives shall be elected by the people of the Territory, and shall hold office for not more than three years.

CONSTITUTION OF AUSTRALIA.

except of pay, half pay, or a pension by any person as an officer or member of the Queen's navy or army, or to the receipt of pay as an officer or member of the naval or military forces of the Commonwealth by any person whose services are not wholly employed by the Commonwealth.

15. If a senator or member of the House of Representatives—*(i)* Becomes subject to any of the disabilities mentioned in the last preceding section; or *(ii)* Takes the benefit, whether by a payment, composition or otherwise, of any law relating to bankrupt or insolvent debtors; or *(iii)* Directly or indirectly takes or agrees to take any fee or honorarium for services rendered to the Commonwealth, or for services rendered to the Parliament to any person or State, his place shall thereupon become vacant.

16. Until the Parliament otherwise provides, any person elected by this Constitution to be a judge of sitting as a senator or as a member of the House of Representatives shall, for every day on which he so sits, be liable to pay the sum of one hundred pounds to any person who sues for it in any court of competent jurisdiction.

17. Until the Parliament otherwise provides, any question respecting the qualification of a senator or of a member of the House of Representatives, or respecting a vacancy in either House of the Parliament, and any question of a disputed election to either House, shall be determined by the House in which the question arises.

18. Until the Parliament otherwise provides, each senator and each member of the House of Representatives shall receive an allowance of four hundred pounds a year, to be reckoned from the day on which he takes his seat.

19. The powers, privileges, and immunities of the Senate and of the House of Representatives, and of the members and the committees of each House, shall be such as are declared by the Parliament, and until declared shall be those of the Queen's House of Parliament of the United Kingdom, and of its members and committees, at the establishment of the Commonwealth.

20. Each House of the Parliament may make rules and orders with respect to—*(i)* The mode in which its powers, privileges, and immunities may be exercised and upheld; *(ii)* The order and conduct of its business and proceedings either separately or jointly with the other House.

PART V.—POWERS OF THE PARLIAMENT.

51. The Parliament shall, subject to this Constitution, have power to make laws for the peace, order, and good government of the Commonwealth with respect to—*(i)* Trade and commerce with other countries, and among the States; *(ii)* Taxation; *(iii)* But so as not to discriminate between States or parts of States; *(iv)* Borrowing money on the public credit of the Commonwealth; *(v)* Postal, telegraphic, telephonic, and other like services; *(vi)* The naval and military defence of the Commonwealth and of the several States, and the control of the forces to execute and maintain the laws of the Commonwealth; *(vii)* Lighthouses, harbours, piers, and navigational aids; *(viii)* Astronomical and meteorological observations; *(ix)* Fisheries in Australian waters beyond territorial limits; *(x)* Census and statis-

CONSTITUTION OF AUSTRALIA.

tics; *(xi)* Currency, coinage, and legal tender; *(xii)* Banking, other than State banking; *(xiii)* State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money; *(xiv)* Insurance, other than State insurance; also State insurance extending beyond the limits of the State concerned; *(xv)* Weights and measures; *(xvi)* Bills of exchange and promissory notes; *(xvii)* Bankruptcy and insolvency; *(xviii)* Copyrights, patents of inventions and designs, and trademarks; *(xix)* Naturalization and aliens; *(xx)* Foreign corporations, and trading or financial corporations formed within the limits of the Commonwealth; *(xxi)* Marriage; *(xxii)* Divorce and matrimonial causes, and in relation thereto parental rights, and the custody and guardianship of infants; *(xxiii)* Invalid and old age pensions; *(xxiv)* The service and execution throughout the Commonwealth of the civil and criminal process and the judgments of the courts of the States; *(xxv)* The recognition throughout the Commonwealth of the laws, the public Acts and records, and the judicial proceedings of the States; *(xxvi)* The people of any race other than the aboriginal race in any State, for whom it is deemed necessary to make special laws; *(xxvii)* Immigration and emigration; *(xxviii)* The influx of criminals; *(xxix)* External affairs; *(xxx)* The relations of the Commonwealth with the islands of the Pacific; *(xxxi)* The acquisition of property on just terms from any State or person for any purpose in respect of which the Parliament has power to make laws; *(xxxii)* The control of railways with respect to transport for the naval and military purposes of the Commonwealth; *(xxxiii)* The acquisition, with the consent of a State, of any railways of the State on terms arranged between the Commonwealth and the State; *(xxxiv)* Railway construction and extension in any State with the consent of that State; *(xxxv)* Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State; *(xxxvi)* Matters in respect of which this Constitution makes provision until the Parliament otherwise provides; *(xxxvii)* Matters referred to the Parliament of the Commonwealth by the Parliament or Parliaments of any State or States, but so that the law shall extend only to States by whose Parliaments the matter is referred, or which afterwards adopt the law; *(xxxviii)* The exercise within the Commonwealth at the request or with the concurrence of the Parliaments of all the States directly concerned, of any power which can at the establishment of this Constitution be exercised only by the Parliament of the United Kingdom, or by the Federal Council of Australasia; *(xxxix)* Matters incidental to the execution of any power vested by this Constitution in the Parliament or in either House thereof, or in the Government of the Commonwealth, or in the Federal Judiciary, or in any department or officer of the Commonwealth.

52. The Parliament shall, subject to this Constitution, have exclusive power to make laws for the peace, order, and good government of the Commonwealth with respect to—*(i)* The seat of government of the Commonwealth, and all places acquired by the Commonwealth for public purposes; *(ii)* Matters relating to any department of the public service the control of which is by

the Constitution transferred to the Executive Government of the Commonwealth. (iii.) Other laws, not provided by this Constitution to be within the power of the Parliament.

Laws appropriating revenue or moneys for the purpose of taxation, shall not originate in the Senate. But a proposed law shall not be rejected or amended by the Senate, if it is only of its containing the disposition or appropriation of revenue or moneys, or for the discharge of any primary penalties, or for the discharge of any appropriation of fees for services under the proposed law. The Senate may not amend proposed laws appropriating revenue or moneys for the ordinary annual services of the Government. The Senate may amend a proposed law so as to increase the charge or burden on the people, but any such amendment at any stage return to the House of Representatives. If any proposed law which the Senate amends, requesting by message, an amendment of any item or items of the bill. And the House of Representatives, if it thinks fit, may make any of such amendments, with or without modification, as may be provided in this section. The Senate shall have equal power with the House of Representatives in respect of all proposed laws.

1. A proposed law which appropriates revenue or moneys for the ordinary annual services of the Government shall deal only with such subject-matter.

2. A proposed law imposing taxation shall deal only with one subject-matter of taxation, and any proposed law dealing with any other matter shall deal only with one subject-matter of taxation. 3. A proposed law imposing duties of customs shall deal only with one subject-matter of customs only, and laws imposing duties of excise shall deal with duties of excise.

4. A proposed law, or proposed law for the purpose of revenue or moneys shall not be passed for the purpose of the appropriation of revenue or moneys, unless it has been recommended by the Governor-General to the House of Representatives.

5. If the House of Representatives passes any proposed law, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, and if after three months the House of Representatives, in the same or the next session, passes the proposed law, with or without amendments which have been made, suggested, or agreed to by the Senate, and the Senate is not to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may, after consulting the Senate and the House of Representatives, assent to the law. But such assent shall not be given until six months before the date of the dissolution of the House of Representatives.

6. If after such dissolution the House of Representatives again passes the proposed law, with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the

Governor-General may convene a joint sitting of the members of the Senate and of the House of Representatives. The members present at the joint sitting may deliberate and shall vote together upon the proposed law as first proposed by the House of Representatives and upon amendments, if any, which have been made to it by the other House and not agreed to by the other. If any such amendments which are affirmed by an absolute majority of the total number of the members of the Senate and House of Representatives shall be taken to have been carried, and if the proposed law, with the amendments, if any, so carried is affirmed by an absolute majority of the total number of the members of the Senate and House of Representatives, it shall be taken to have been duly passed by both Houses of the Parliament, and shall be presented to the Governor-General for the Queen's assent.

58. When a proposed law passed by both Houses of the Parliament is presented to the Governor-General for the Queen's assent, he shall declare, according to his discretion, but subject to this Constitution, that he assents in the Queen's name, or that he withholds assent, or that he reserves the law for the Queen's pleasure. The Governor-General may return to the house in which it originated any proposed law so presented to him, and may transmit it, with any amendments which he may recommend, and the Houses may deal with the recommendation.

59. The Queen may disallow any law within one year from the Governor-General's assent, and such disallowance on being made known by the Governor-General by speech or message to each of the Houses of the Parliament, or by Proclamation, shall annul the law from the day when the disallowance is so made known.

60. A proposed law reserved for the Queen's pleasure, shall not have any force unless, and until within two years from the day on which it was presented to the Governor-General for the Queen's assent the Governor-General makes known, by speech or message to each of the Houses of the Parliament, or by Proclamation, that it has received the Queen's assent.

CHAPTER II. THE EXECUTIVE GOVERNMENT.

61. The executive power of the Commonwealth is vested in the Queen and is exercisable by the Governor-General as the Queen's representative, and extends to the execution and maintenance of this Constitution and of the laws of the Commonwealth.

62. There shall be a Federal Executive Council to advise the Governor-General in the Government of the Commonwealth, and the members of the Council shall be chosen and summoned by the Governor-General and sworn as Executive Councillors, and shall hold office during his pleasure.

63. The provisions of this Constitution referring to the Governor-General in Council shall be construed as referring to the Governor-General acting with the advice of the Federal Executive Council.

64. The Governor-General may appoint officers to administer such departments of State of the Commonwealth as the Governor-General in Council may establish. Such officers shall hold office during the pleasure of the Governor-General. They shall be members of the Federal Executive Council, and shall be the Queen's

Ministers of State for the Commonwealth. After the first general election, no Minister of State shall hold office for a longer period than three months, unless he is or becomes a senator or a member of the House of Representatives.

65. Except the Parliament otherwise provides, the Ministers of State shall not exceed seven in number and shall hold office so long as the Parliament approves, or in the absence of provision, the Governor-General directs.

66. There shall be payable to the Queen, out of the Consolidated Revenue Fund of the Commonwealth, the salaries of the Ministers of State. The annual sum which, until the Parliament otherwise provides, shall not exceed twelve thousand pounds, to be paid.

67. Until the Parliament otherwise provides, the appointment and removal of all other officers of the Executive Government of the Commonwealth shall be vested in the Governor-General in Council, unless the appointment is delegated by the Governor-General in Council or by a law of the Commonwealth to some other authority.

68. The command in chief of the naval and military forces of the Commonwealth is vested in the Governor-General as the Queen's representative.

69. Until a date or dates to be proclaimed by the Governor-General after the establishment of the Commonwealth, the following departments of the public service of each State shall become transferred to the Commonwealth: Posts, telegraphs, and telephones; Naval and military departments; Land forces; Hospitals, prisons, and houses of correction. But the departments of education in each State shall become transferred to the Commonwealth on its establishment.

70. The respect of matters which, under this Constitution, pass to the Executive Government of the Commonwealth, all powers and functions which, apart from the appointment of the Commonwealth, are vested in the Governor of a Colony, or in the Governor of a Colony with the advice of his Executive Council, or in any authority or authorities, shall vest in the Governor-General in Council or in the Governor-General in Council or in the authority exercising similar powers in the Commonwealth, as the case requires.

CHAPTER III.—THE JUDICATURE.

71. The judicial power of the Commonwealth shall be vested in a Federal Supreme Court, to be called the High Court of Australia, and in such other federal courts as the Parliament creates, and in such other courts as it invests with federal jurisdiction. The High Court shall consist of not less than five, and so many other judges as it may determine, as the Parliament prescribes.

72. The judges of the High Court and of the other courts created by the Parliament, or of such courts as shall not be removed except by the Governor-General in Council, on an address from both Houses of the Parliament in the same manner as such removal or the ground for such removal or incapacity shall not be taken into consideration as the Parliament may, by law, determine, shall not be diminished during their continuance in office.

73. The High Court shall have jurisdiction, with such exceptions and subject to such regu-

lations as the Parliament prescribes, to hear and determine appeals from all judgments of all courts, and sentences—(i) Of any Justice of the Peace exercising the original jurisdiction of the High Court; (ii) Of any other federal court or court exercising federal jurisdiction; (iii) Of the Supreme Court of any State, or of any other court of any State from which an appeal lies to the Queen in Council; (iv) Of the Federal Supreme Court, but as to questions of law only, subject to the judgment of the High Court in all such cases shall be final and conclusive. But no exception or regulation prescribed by the Parliament shall prevent the High Court from hearing and determining any appeal from the Supreme Court of a State in which a permanent establishment of the Commonwealth an appeal lies from such Supreme Court to the Queen in Council. Until the Parliament otherwise provides, the conditions of and restrictions on appeals to the Queen in Council from the Supreme Courts of the several States shall be applied to appeals from them to the High Court.

74. No appeal shall be permitted to the Queen in Council from a decision of the High Court upon any question, howsoever arising, as to the limits inter se of the Constitutional powers of the Commonwealth and those of any State or States, or as to the limits inter se of the Constitutional powers of any two or more States, unless the High Court shall certify that the question is one which ought to be determined by Her Majesty in Council. The High Court may so certify if satisfied that for any special reason the certificate should be granted, and then upon an appeal shall lie to Her Majesty in Council on the question without further leave. Except as provided in this section, this Constitution shall not impair any right which the Queen may be pleased to exercise by virtue of Her Royal prerogative to grant special leave of appeal from the High Court to Her Majesty in Council. The Parliament may make laws prescribing the matters in which such leave may be asked, but proposed laws containing any such limitation shall be reserved by the Governor-General for Her Majesty's pleasure.

75. In all matters—(i) Affecting under-treaty; (ii) Affecting consuls or other representatives of other countries; (iii) In which the Commonwealth, or a person suing or being sued on behalf of the Commonwealth, is a party; (iv) Between States, or between residents of different States, or between a State and a resident of another State; (v) In which a person, Mariner, or a prohibition or an interference sought against an officer of the Commonwealth, the High Court shall have original jurisdiction.

76. The Parliament may make laws conferring original jurisdiction on the High Court in matters—(i) Arising under this Constitution, including its interpretation; (ii) Arising under any laws made by the Parliament; (iii) Of Admiralty and maritime jurisdiction; (iv) Of any other subject-matter claimed in behalf of different States.

77. With respect to any of the matters mentioned in the last two sections the Parliament may make laws—(i) Defining the jurisdiction of any federal court other than the High Court; (ii) Defining the extent to which the jurisdiction of any federal court shall be exercisable.

power belongs to or is invested in the courts of the States, in investing any court of a State with judicial jurisdiction.

83. The Parliament may make laws conferring powers conferred against the Commonwealth or in respect of matters within the limits of the Commonwealth.

84. The federal jurisdiction of any court may be exercised by such number of judges as the Parliament prescribes.

85. The trial on indictment of any offence against any law of the Commonwealth shall be by jury, and every such trial shall be held in the State where the offence was committed, and if no State was so committed within any State territory shall be held at such place or places as the Parliament prescribes.

CHAPTER IV. FINANCE AND TRADE

86. All revenues or moneys raised or received by the Executive Government of the Commonwealth shall form one Consolidated Revenue Fund, to be appropriated for the purposes of the Commonwealth in the manner and subject to the charges and liabilities imposed by this Constitution.

87. The costs, charges, and expenses incident to the collection, management, and receipt of the Consolidated Revenue Fund shall form the first charge thereon, and the revenue of the Commonwealth shall in the first instance be applied to the payment of the expenditure of the Commonwealth.

88. A moneys shall be drawn from the Treasury of the Commonwealth except under appropriation made by law. But until the expiration of one month after the first meeting of the Parliament the Governor-General in Council may draw from the Treasury and expend such moneys as may be necessary for the maintenance of any department transferred to the Commonwealth, and for the holding of the first elections to the Parliament.

89. When any department of the public service of a State becomes transferred to the Commonwealth, all officers of the department shall become subject to the control of the Executive Government of the Commonwealth. Any such

officer who is not retained in the service of the Commonwealth shall, unless he is appointed to some other office of equal emolument in the public service of the State, be entitled to receive from the State any pension, gratuity, or other compensation payable under the law of the State on the termination of his office. Any such officer who is retained in the service of the Commonwealth shall preserve all his existing and accruing rights, and shall be entitled to retire from office at the time, and on the pension or retiring allowance, which would be permitted by the law of the State if his service with the Commonwealth were a continuation of his service with the State. Such pension or retiring allowance shall be paid to him by the Commonwealth; and the State shall pay to the Commonwealth a proportion to be calculated on the proportion which his term of service with the State bears to the whole term of service, and for the purpose of the calculation his salary shall be taken to be that of which he was entitled to at the time of the transfer. Any officer who is, at the establishment of the Commonwealth, in the public service of a State, and who is, by consent of the

Governor of the State with the advice of the Executive Council thereof, transferred to the public service of the Commonwealth, shall have the same rights as if he had been an officer of a department transferred to the Commonwealth and were retained in the service of the Commonwealth.

90. When any department of the public service of a State is transferred to the Commonwealth—(i) All property of the State of any kind, used exclusively in connexion with the department, shall become vested in the Commonwealth, but, in the case of the departments controlling customs and excise and bounties, for such time only as the Governor-General in Council may declare to be necessary; (ii) The Commonwealth may acquire any property of the State, of any kind used, but not exclusively used in connexion with the department, the value thereof shall, if no agreement can be made, be ascertained in, as nearly as may be, the manner in which the value of land, or of an interest in land, taken by the State for public purposes is ascertained under the law of the State in force at the establishment of the Commonwealth; (iii) The Commonwealth shall compensate the State for the value of any property passing to the Commonwealth under this section, if no agreement can be made as to the mode of compensation, it shall be determined under laws to be made by the Parliament; (iv) The Commonwealth shall, at the date of the transfer, assume the current obligations of the State in respect of the department transferred.

91. On the establishment of the Commonwealth, the collection and control of duties of customs and of excise, and the control of the payment of bounties, shall pass to the Executive Government of the Commonwealth.

92. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, of the net revenue of the Commonwealth from duties of customs and of excise not more than one fourth shall be applied annually by the Commonwealth towards its expenditure. The balance shall, in accordance with this Constitution, be paid to the several States, or applied towards the payment of interest on debts of the several States taken over by the Commonwealth.

93. Uniform duties of customs shall be imposed within two years after the establishment of the Commonwealth.

94. Until the imposition of uniform duties of customs—(i) The Commonwealth shall credit to each State the revenues collected therein by the Commonwealth; (ii) The Commonwealth shall debit to each State—(a) The expenditure therein of the Commonwealth incurred solely for the maintenance or continuance, as at the time of transfer, of any department transferred from the State to the Commonwealth; (b) The proportion of the State, according to the number of its people, in the other expenditure of the Commonwealth; (iii) The Commonwealth shall pay to each State month by month the balance of any in favour of the State.

95. On the imposition of uniform duties of customs the power of the Parliament to impose duties of customs and of excise, and to grant bounties on the production or export of goods, shall become exclusive. On the imposition of uniform duties of customs all laws of the several

CONSTITUTION OF AUSTRALIA.

States imposing duties of customs or of excise, or offering bounties on the production or export of goods, shall cease to have effect; but any grant or agreement for any such bounty lawfully made by or under the authority of the Government of any State shall be taken to be good if made before the thirtieth day of June, one thousand eight hundred and ninety-eight, and not otherwise.

91. Nothing in this Constitution prohibits a State from granting any aid to or bounty on mining for gold, silver, or other metals, nor from granting, with the consent of both Houses of the Parliament of the Commonwealth expressed by resolution, any aid to or bounty on the production or export of goods.

92. On the imposition of uniform duties of customs, trade, commerce, and intercourse among the States, whether by means of internal carriage or ocean navigation, shall be absolutely free. But notwithstanding anything in this Constitution, goods imported before the imposition of uniform duties of customs into any State, or into any Colony which, whilst the goods remain therein, becomes a State, shall, on thence passing into another State within two years after the imposition of such duties, be liable to any duty chargeable on the importation of such goods into the Commonwealth, less any duty paid in respect of the goods on their importation.

93. During the first five years after the imposition of uniform duties of customs and thereafter until the Parliament otherwise provides—

(i.) The duties of customs chargeable on goods imported into a State and afterwards passing into another State for consumption, and the duties of excise paid on goods produced or manufactured in a State and afterwards passing into another State for consumption, shall be taken to have been collected not in the former, but in the latter State; (ii.) Subject to the last subsection, the Commonwealth shall credit revenue, debit expenditure, and pay balances to the several States as prescribed for the period preceding the imposition of uniform duties of customs.

94. After five years from the imposition of uniform duties of customs, the Parliament may provide, on such basis as it deems fair, for the monthly payment to the several States of all surplus revenue of the Commonwealth.

95. Notwithstanding anything in this Constitution, the Parliament of the State of Western Australia, if that State be an Original State, may, during the first five years after the imposition of uniform duties of customs, impose duties of customs on goods passing into that State and not originally imported from beyond the limits of the Commonwealth, and such duties shall be collected by the Commonwealth. But any duty so imposed on any goods shall not exceed during the first of such years the duty chargeable on the goods under the law of Western Australia in force at the imposition of uniform duties, and shall not exceed during the second, third, fourth, and fifth of such years respectively, four fifths, three fifths, two fifths, and one fifth of such last-mentioned duty; and all duties imposed under this section shall cease at the expiration of the fifth year after the imposition of uniform duties. If at any time during the five years the duty on any goods under this section is higher than the duty imposed by the Commonwealth on the im-

CONSTITUTION OF AUSTRALIA.

portation of the like goods, then such higher duty shall be collected on the goods when imported into Western Australia from beyond the limits of the Commonwealth.

96. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, the Parliament may grant financial assistance to any State on such terms and conditions as the Parliament thinks fit.

97. Until the Parliament otherwise provides, the laws in force in any Colony which has become or becomes a State with respect to the receipt of revenue and the expenditure of money on account of the Government of the Colony, and the review and audit of such receipt and expenditure, shall apply to the receipt of revenue and the expenditure of money on account of the Commonwealth in the State in the same manner as if the Commonwealth, or the Government or an officer of the Commonwealth, were mentioned whenever the Colony, or the Government or an officer of the Colony, is mentioned.

98. The power of the Parliament to make laws with respect to trade and commerce extends to navigation and shipping, and to railways the property of any State.

99. The Commonwealth shall not, by any law or regulation of trade, commerce, or revenue, give preference to one State or any part thereof over another State or any part thereof.

100. The Commonwealth shall not, by any law or regulation of trade or commerce, abridge the right of a State or of the residents therein to the reasonable use of the waters of rivers for conservation or irrigation.

101. There shall be an Inter State Commission, with such powers of adjudication and administration as the Parliament deems necessary for the execution and maintenance, within the Commonwealth, of the provisions of this Constitution relating to trade and commerce, and of all laws made thereunder.

102. The Parliament may by any law with respect to trade or commerce forbid, as to railways, any preference or discrimination by any State, or by any authority constituted under a State, if such preference or discrimination is undue and unreasonable, or unjust to any State, due regard being had to the financial responsibilities incurred by any State in connexion with the construction and maintenance of its railways. But no preference or discrimination shall, within the meaning of this section, be taken to be undue and unreasonable, or unjust to any State, unless so adjudged by the Inter State Commission.

103. The members of the Inter State Commission—(i.) Shall be appointed by the Governor-General in Council; (ii.) Shall hold office for seven years, but may be removed within that time by the Governor-General in Council on an address from both Houses of the Parliament in the same session praying for such removal on the ground of proved misbehaviour or incapacity; (iii.) Shall receive such remuneration as the Parliament may fix; but such remuneration shall not be diminished during their continuance in office.

104. Nothing in this Constitution shall render unlawful any rate for the carriage of goods upon a railway, the property of a State, if the rate is deemed by the Inter State Commission to be nec-

support the development of the territory of the State, and if the rate applies equally to goods passing into the State and to goods passing into the State from other States.

140. The Parliament may take over from the States any or all debts as existing at the establishment of the Commonwealth or in proportion to the population of the respective numbers of the States as shown by the latest statistics of population, and may convert, renew or discharge such debts or any part thereof, and the States shall indemnify the Commonwealth in respect of the debts taken over, and the latter shall not be responsible in respect of the debts shall be taken over.

141. The portion of the surplus of the Commonwealth payable to the several States, or if such surplus is insufficient, if there is no surplus, then the deficiency, if any, shall be paid by the several States.

CHAPTER V. THE STATES.

142. The Constitution of each State of the Commonwealth shall, subject to this Constitution, be as at the establishment of the Commonwealth or as at the admission or establishment of the State, as the case may be, until altered in accordance with the Constitution of the State.

143. Every power of the Parliament of a Colony which has become or becomes a State, shall, unless it is by this Constitution exclusively vested in the Parliament of the Commonwealth or withdrawn from the Parliament of the State, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be.

144. Every law in force in a Colony which has become or becomes a State, and relating to any matter within the powers of the Parliament of the Commonwealth, shall, subject to this Constitution, continue in force in the State; and until provision is made in that behalf by the Parliament of the Commonwealth, the Parliament of the State shall have such powers of alteration and repeal in respect of any such law as the Parliament of the Colony had until the Colony became a State.

145. When a law of a State is inconsistent with a law of the Commonwealth, the latter shall prevail, and the former shall, to the extent of the inconsistency, be invalid.

146. The provisions of this Constitution relating to the Governor of a State extend and apply to the Governor for the time being of the State, or other chief executive officer or administrator of the government of the State.

147. The Parliament of a State may surrender any part of the State to the Commonwealth; and upon such surrender, and the acceptance thereof by the Commonwealth, such part of the State shall become subject to the exclusive jurisdiction of the Commonwealth.

148. After uniform duties of customs have been imposed a State may levy on imports or exports, or on goods passing into or out of the State, such charges as may be necessary for executing the inspection laws of the State, but the net produce of all charges so levied shall be for the use of the Commonwealth, and any such inspection laws may be annulled by the Parliament of the Commonwealth.

149. All fermented, distilled, or other intoxicating liquors passing into any State or remaining therein for use, consumption, sale or storage, shall be subject to the laws of the State, as if such liquors had been produced in the State.

150. A State shall not, without the consent of the Parliament of the Commonwealth, raise or maintain any naval or military force, or impose any tax on property of any kind belonging to the Commonwealth, nor shall the Commonwealth impose any tax on property of any kind belonging to a State.

151. A State shall not coin money, nor make anything but gold and silver coin a legal tender in payment of debts.

152. The Commonwealth shall not make any law for establishing any religion, or for imposing any religious observance, or for prohibiting the free exercise of any religion, and no religious test shall be required as a qualification for any office or public trust under the Commonwealth.

153. A subject of the Queen, resident in any State, shall not be subject in any other State to any disability or discrimination which would not be equally applicable to him if he were a subject of the Queen resident in such other State.

154. Full faith and credit shall be given throughout the Commonwealth to the laws, the public Acts and records, and the judicial proceedings of every State.

155. The Commonwealth shall protect every State against invasion and, on the application of the Executive Government of the State, against domestic violence.

156. Every State shall make provision for the detention in its prisons of persons accused or convicted of offences against the laws of the Commonwealth, and for the punishment of persons convicted of such offences, and the Parliament of the Commonwealth may make laws to give effect to this provision.

CHAPTER VI. NEW STATES.

157. The Parliament may admit to the Commonwealth or establish new States, and may upon such admission or establishment make or impose such terms and conditions, including the extent of representation in either House of the Parliament, as it thinks fit.

158. The Parliament may make laws for the government of any territory surrendered by any State to and accepted by the Commonwealth, or of any territory placed by the Queen under the authority of and accepted by the Commonwealth, or otherwise acquired by the Commonwealth, and may allow the representation of such territory in either House of the Parliament to the extent and on the terms which it thinks fit.

159. The Parliament of the Commonwealth may, with the consent of the Parliament of a State, and the approval of the majority of the electors of the State voting upon the question, increase, diminish, or otherwise alter the limits of the State, upon such terms and conditions as may be agreed on, and may, with the like consent, make provision respecting the effect and operation of any increase or diminution or alteration of territory in relation to any State affected.

160. A new State may be formed by separation of territory from a State, but only with the consent of the Parliament thereof, and a new State may be formed by the union of two or more States or parts of States, but only with the consent of the Parliaments of the States affected.

CONSTITUTION OF AUSTRALIA.

CHAPTER VII. MISCELLANEOUS.

125. The seat of Government of the Commonwealth shall be determined by the Parliament and shall be within Territory which shall have been granted to or acquired by the Commonwealth and shall be vested in and belong to the Commonwealth and shall be in the State of New South Wales and be not less than one hundred miles from Sydney. Such territory shall contain an area of not less than one hundred square miles and such portion thereof as shall consist of Crown lands shall be granted to the Commonwealth without any payment therefor. The Parliament shall sit at Melbourne until it meets at the seat of Government.

126. The Queen may authorize the Governor-General to appoint any person or any persons jointly or severally to be his deputy or deputies within any part of the Commonwealth and in that capacity to exercise during the pleasure of the Governor-General such powers and functions of the Governor-General as he thinks fit to assign to such deputy or deputies subject to any limitations expressed or directions given by the Queen, but the appointment of such deputy or deputies shall not affect the exercise by the Governor-General himself of any power or function.

127. In reckoning the numbers of the people of the Commonwealth or of a State or other part of the Commonwealth, aboriginal natives shall not be counted.

CHAPTER VIII. ALTERATION OF THE CONSTITUTION.

128. This Constitution shall not be altered except in the following manner: The proposed law for the alteration thereof must be passed by an absolute majority of each House of the Parliament and not less than two nor more than six months after its passage through both Houses the proposed law shall be submitted in each State to

CONSTITUTION OF MEXICO.

the electors qualified to vote for the electors of members of the House of Representatives, and if either House passes any such proposed law by an absolute majority and the other House rejects or fails to pass it or passes it with amendments to which the first mentioned House does not agree, and if after an interval of three months the first mentioned House in the same or in a next session again passes the proposed law by an absolute majority with or without any amendments which have been made or agreed to by the other House, and such other House rejects or fails to pass it or passes it with any amendment to which the first mentioned House will not agree, the Governor-General may submit the proposed law as last proposed by the first mentioned House and either with or without any amendments subsequently agreed to by both Houses to the electors in each State qualified to vote for the electors of the House of Representatives. When a proposed law is submitted to the electors in that State shall be taken in such manner as the Parliament prescribes. But until the qualification of electors of members of the House of Representatives becomes uniform throughout the Commonwealth, only one half the electors voting for and against the proposed law shall be counted in any State in which adult suffrage prevails. And if in a majority of the States a majority of the electors voting approve the proposed law, and if a majority of all the electors voting also approve the proposed law, it shall be presented to the Governor-General for the Queen's assent. No alteration diminishing the proportionate representation of any State in either House of the Parliament or the minimum number of representatives of a State in the House of Representatives, or increasing, diminishing, or otherwise affecting the rights of the State, or in any manner affecting the provisions of the Constitution, in relation thereto, shall become law unless the majority of the electors voting in that State approve the proposed law.

In 1896, the Constitution received two amendments promulgated by decrees published in the "Diario Oficial" on the 24th of April and the 1st of May in that year. Translations of these decrees were transmitted to the State Department at Washington by the United States Minister to Mexico and published in U. S. Consular Reports, July, 1896, from which source they are copied below. That of April 24 was as follows:

The Congress of the United Mexican States, in the exercise of the power which article 127 of the federal constitution concedes to it and with the previous approbation of the majority of the legislatures of the States, declares articles 70, 80, 82, and 83 of the constitution to be amended and in addition to article 72 of the same, in the following tenor:

ART. 72. Congress has power

XXXI. To appoint, both houses of Congress being assembled for such purpose, a President of the Republic, either with the character of substitute or with that of ad interim, to act in the absolute or temporary default of the constitutional President. Likewise, to replace in the respective cases and in equal form the substitute as well as the ad interim, if these in their turn should default.

XXXII. To qualify and to decide upon the petition for leave of absence that the President of the Republic may make. It is the exclusive

CONSTITUTION OF MEXICO

the same time summoning the Senate for an extraordinary session of Congress before which the commission shall render its decision. The proposition with which the decision may end it favorably shall comprise in a decree of a sole article the granting of the permission and the approval of the proposition which shall be decided upon only by one ballot.

IX. From the day appointed by the constitution, the President elect shall not enter into the discharge of his office. Congress shall at once appoint an ad interim President. If the cause of the impediment be transitory, the ad interim shall cease in the Presidential functions when said cause ceases and the President elect enters into the discharge of his functions. But, should the cause be of that kind that produces absolute impossibility, so that the President elect cannot enter into the exercise of power during the four years, Congress, after appointing the ad interim President shall, without delay, annul the extraordinary elections. The ad interim President shall cease in his functions as soon as the new President elect protests, and this shall complete the constitutional period. Should the impediment arise from the fact that the election be not made or published on the 1st of December, a President ad interim shall also be appointed who will discharge the Presidential duties until these requisites are complied with and the President elect takes due protest.

X. The defaults of the substitute President and those of the ad interim shall also be punished in the manner prescribed, except in regard to the second, in the case when the constitutional President, who, having temporarily separated himself, may again assume the exercise of his duties.

Art. 80. Should the default of the President be absolute, the substitute appointed by Congress shall terminate the constitutional period.

Art. 82. The President, upon taking possession of his office, shall swear before Congress under the following formula: "I protest to perform loyally and patriotically the functions of President of the United Mexican States; to keep and cause to be kept, without any reserve, the constitution of 1857, with all its additions and reforms, the laws of reform, and all those laws emanating therefrom, watching everything for the good and prosperity of the union." The Secretary of Department, who may take provisional charge of the Executive power, in its case, is exempted from this requisite.

The decree of May 1, 1896, was as follows:

The Congress of the Union has decreed the following: The General Congress of the United Mexican States, in conformity with the provisions of article 127 of the federal constitution and with the previous approbation of the State legislatures, declares articles 111 and 121 of said constitution amended and an addition made to same in the following terms:

First. Section III of article 111 of the federal constitution is amended and an addition made to be said article in the following terms: The States shall not—

III. Coin money, issue paper money, stamps, or stamped paper.

IV. Obstruct the transit of persons or goods across its territory.

V. Prohibit or molest, either directly or indirectly, the entrance or exit, to or from its territory, of national or foreign merchandise.

CONSTITUTION OF MEXICO.

VI. Obstruct the circulation or consumption of national or foreign goods by means of imposts or taxes that may be exacted in local customs houses, by requiring the inspection or registration of packages, or by requiring the documentation to accompany the merchandise.

VII. Exercise or attempt to exercise force laws or fiscal decrees which may cause differences of taxes or royalties by reason of the source of national or foreign merchandise, whether these differences be established in regard to the production in that territory, or on account of like production from different sources.

Second.—Article 124 of the federal constitution is amended in the following terms:

Art. 124. It is the exclusive faculty of the federal government to obstruct merchandise imported or exported, or which passes in transit through the national territory, likewise to regulate at all times, and even to prohibit, for reasons of policy and security, the circulation within the Republic of all merchandise from whatever source, but the said federation cannot establish or decree in the district or federal territories the taxes and laws expressed in Sections VI and V, of Article 111.

Transitory article.—These amendments and additions shall take effect on the 1st of July, 1896.

CONSTITUTION OF MINNESOTA:
Amendment. See (in this vol.) MINNESOTA. A. D. 1896.

CONSTITUTION OF MISSISSIPPI:
Amendment. See (in this vol.) MISSISSIPPI. A. D. 1890-1892.

CONSTITUTION OF NEW JERSEY:
Proposed Amendments. See (in this vol.) NEW JERSEY. A. D. 1897.

CONSTITUTION OF NEW YORK.—The constitution of the State of New York, as revised by the Convention of 1894 (see, in vol. 4, New York, A. D. 1894), was submitted to the people at the election in November that year and adopted. The important features of the revision were set forth in an address by the Convention to the people as follows: "We seek to separate, in the larger cities, municipal elections from State and national elections to the end that the business affairs of our great municipal corporations may be managed upon their own merits, uncontrolled by national and State politics.

We have provided further safeguards against abuses in legislative procedure by requiring that all bills shall be printed in their final form at least three days before their passage, prohibiting riders on appropriation bills, providing for notice to municipal authorities before special acts relating to the larger cities can take effect, prohibiting the issue of passes by railroad, telegraph and telephone companies to public officers, enlarging the express constitutional powers of the President of the Senate. . . . We have extended the prohibition against lotteries so as to include all pool-betting, book-making and other forms of gambling. . . . We have sought to throw greater safeguards around the elective franchise by providing a period of ninety instead of ten days of disqualification before that right can be exercised, so

CONSTITUTION OF NORTH CAROLINA.

that naturalization may be taken out of the hands of campaign committees and reserved to the period immediately before election. . . . We have modified the language relating to the ballot so that if any mechanical device for recording and counting votes is so perfected as to be superior to the present system, the Legislature may make trial of it. . . . We have established in the Constitution the well tried and satisfactory system of registration of votes, forbidding, however, any requirement of personal attendance on the first day of registration in the thinly settled regions outside of the cities and large villages, where voters would have long distances to travel to the place of registration, and we have provided for securing an honest and fair election requiring that on all election boards election officers shall equally represent the two principal political parties of the State. . . . We have provided for a new apportionment of Senate and Assembly districts. . . . Attack has been made upon two rules laid down in the proposed measure for the guidance of the Legislature in future apportionments. One of these is the rule that no county shall have more than three Senators, and that shall have a fifth ratio for each Senator, and that smaller counties may receive a Senator or an additional Senator on a major fraction of ratio. . . . The other rule attacked is that no county shall have more than one third of the Senators, and that New York and Kentucky together shall not have more than one third of all the Senators. . . . We have declared in the Constitution the principle of civil service reform, that appointments and promotions are to be based upon merit and a certain so far as practicable by competitive examination. . . . We have sought by this to secure not merely the advantage derived from declaring the principle, but the practical benefit of its extension to the State prisons, canals and other public works of the State, which, under the existing Constitution, the emergency of last resort has decided that civil service rules cannot be applied. . . . We have prohibited the contract system of convict labor. . . . We have authorized the Legislature to provide for the improvement of the canals, without, however, borrowing money for that purpose unless the people expressly authorize it. . . . We have required the Legislature to provide for free public schools, in which all the children of the State may be educated, and we have prohibited absolutely the use of public money in aid of sectarian schools.

We have so amended the present Constitution as to provide for a naval as well as a land force of militia. . . . In order to allow every voter to exercise a choice in voting on some of the important proposed amendments, we have provided that the Revised Constitution shall be submitted to the people in three parts, viz.: 1. That relating to an apportionment of Senators and members of the Assembly. 2. That pertaining to the improvements of the canals. 3. All the remainder of the proposed amendments as a whole. . . . *Journal of the Constitutional Convention, State of New York, 1894, pp. 839-46.*

CONSTITUTION OF NORTH CAROLINA. **Amendment qualifying the suffrage.** See (in this vol.) NORTH CAROLINA. A. D. 1896.

CONSTITUTION (GRONDWET) OF THE SOUTH AFRICAN REPUBLIC.

1. Following are the Articles of main importance in the Grondwet or Constitution of the South African Republic.

Art. 1.—This State shall bear the name of the South African Republic.

Art. 2.—The form of government of this State shall be that of a republic.

Art. 3.—It desires to be recognized and respected by the civilized world as an independent sovereign people.

Art. 4.—The people seek for no extension of territory, and desire it only in accordance with the principles when the interest of the Republic is so highly extension desirable.

Art. 5.—The people desire to retain and maintain their territory in South Africa unimpaird. The boundaries thereof are fixed by proclamation.

Art. 6.—Its territory is open for every foreigner who obeys the laws of this Republic. All who are within the territory of this Republic have equal claims to protection of person and property.

Art. 7.—The land or farms situate in this country which have not yet been given out, are declared to be the property of the State.

Art. 8.—The people claim the utmost social justice, and expect the result from the maintenance of their religious belief, from the observance of their obligations, from submission to law, order and right, and the maintenance of the same. The people permit the spread of the Gospel among the heathen under fixed preconditions, and without coercion or misleading.

Art. 9.—The people will not allow any equalization of the coloured inhabitants with the white.

Art. 10.—The people will not suffer any slave or slavery in this Republic.

Art. 11.—The people reserve to themselves the protection and defence of the independence and inviolability of the State, subject to the laws.

Art. 12.—The people entrust the legislation to a Volksraad, the highest authority in the land—consisting of representatives or deputies of the people chosen by the enfranchised burghers; but with the reservation that a period of three months shall be left to the people to enable them if they so wish to communicate to the Volksraad their verdict on a proposed law; except those laws which can suffer no delay.

Art. 13.—The people charge the President with the task of proposing and executing the laws, he also brings before the Volksraad the appointments of all civil servants for ratification.

Art. 14.—The people entrust the maintenance of order to the military force, the police, and other persons appointed by the law for that purpose.

Art. 15.—The people place the judicial power in the hands of a Supreme Court, Circuit Court, District Courts, and such other persons as shall be entrusted with judicial powers, and leave all these free to discharge their function according to their judgment and consciences, according to the laws of the land.

Art. 16.—The people shall receive from the Volksraad an estimate of the general income and expenses of the State, and learn therefrom how much revenue and taxes shall amount to.

Art. 17.—Potchefstroom situated on the Modder River shall be the capital of the Republic and Pretoria the seat of Government.

Art. 18.—All services rendered on behalf of the public are remunerated by the public.

Art. 19.—Freedom of the press is granted provided the printer and publisher remain responsible for all the documents which contain defamation, insult, or attacks against any one's character.

Art. 20.—The people shall only appoint as representatives in the Volksraad those who are members of a Protestant Church.

Art. 21.—The people desire the growth, prosperity, and welfare of the State and with this view provision for suitable school teachers.

Art. 22.—Providing also that in time of peace precautionary measures are taken to enable the State to wage or withstand a war.

Art. 23.—In case of a hostile attack from outside, everyone, without distinction, shall be held bound to lend his assistance in the promulgation of martial law.

Art. 24.—The Volksraad shall be the highest authority of the country, and the legislative power.

Art. 25.—No civil servants are to be representatives of the people.

Art. 26.—The Volksraad shall consist of at least twelve members, who must possess the following qualifications:—They must have attained the age of thirty years, and be born in the Republic, or have for fifteen consecutive years been burghers entitled to vote, be members of a Protestant Church, resble, and possess immovable property in the Republic. No persons of notoriously bad character, or who have had a dishonouring sentence pronounced against them, and no uncertified or unrehabilitated insolvents shall be eligible. They may not be related to each other in the relationship of father and son, or stepson. No coloured persons or bastards shall be admitted into our Assemblies. In like manner no military officer or official of the State, who draws a fixed annual or monthly salary, shall be eligible as member of the Volksraad.

Art. 27.—The members of the Volksraad are elected by a majority of votes from among the electors of each district. No one shall be considered as elected who has not obtained at least sixty votes. Every one who is born in the country and has attained the age of twenty-one years, or has become naturalized, shall be a burgher qualified to vote. The members of the Volksraad are elected for the period of four years.

[The above provisions of the Constitution, relating to the Volksraad and the representation of the people, were modified by the following among other provisions of an Act of the Volksraad passed in 1891.]

Art. 1.—The legislative power shall rest with a representation of the people, which shall consist of a First Volksraad and a Second Volksraad.

Art. 2.—The First Volksraad shall be the highest authority in the State, just as the Volksraad was before this Law came into operation. The First Volksraad shall be the body named the Volksraad until this law came into operation. From the period of this law coming into opera-

that the same (if that body shall be derived from the Volksraad to the First Volksraad). The period within which that body's members shall have been elected to the same shall be the same as the period within which the members of the First Volksraad shall be elected. The members of the First Volksraad shall have no right of re-election.

The law of the First Volksraad and the members of the First Volksraad shall be subject to the same law as the law of the First Volksraad and the members of the First Volksraad.

Art. 4. The number of the members of the First Volksraad shall be the same as of the First Volksraad. This number shall be fixed later by the First Volksraad for both Volksraads.

Art. 5. The members of the First Volksraad shall be chosen by those enfranchised burghers who have attained the burgher right, either before the law came into operation, or thereafter by birth, and have reached the age of sixteen years. The franchise for the First Volksraad can be sides also be obtained by those who have during ten years been eligible for the Second Volksraad by resolution of the First Volksraad and according to the law to be fixed later by law.

Art. 6. The members of the Second Volksraad are chosen by all enfranchised burghers who have reached the age of sixteen years.

Art. 7. The Second Volksraad shall have the power to pass further regulations on the following subjects as is necessary, either by law or resolution: (1) The department of mines; (2) The making and support of wagon and post roads; (3) The postal department; (4) The department of telegraphs and telephones; (5) The protection of inventions, samples, and trade marks; (6) The protection of the right of the author; (7) The exploitation and support of the woods and salt prisms; (8) The prevention and coping with contagious diseases; (9) The conditions, the rights, and obligations of companies; (10) Taxation; (11) Civil procedure; (12) Criminal procedure; (13) Such other subjects as the First Volksraad shall decide later by law or resolution of the First Volksraad shall specially refer to the Second Volksraad.

Art. 8. All laws or resolutions accepted by the Second Volksraad are as soon as possible, that is to say at the outside within forty-eight hours, communicated both to the First Volksraad and to the President.

Art. 9. The President has the right, when he has received notice from the Second Volksraad of the adoption of a law or a resolution, to bring that law or resolution before the First Volksraad for consideration within fourteen days after the receipt of such notice. The President is in any case bound after the receipt of such a notice, to communicate it to the First Volksraad within the said period.

Art. 10. If the President has not brought the law or resolution as communicated before the First Volksraad for consideration, and the First Volksraad has not on its own part thought it necessary to take said law or resolution into consideration, the President shall, unless with the advice and consent of the Executive Council he thinks it unduly in the interests of the State, be bound to have that law or resolution published in the first succeeding Volksraad, unless within the said fourteen days the First Volksraad may be determined, in which case the publication in

the "Staats Courant" shall take place, either at the lapse of eight days from the communication, or at the first succeeding session of the First Volksraad.

Art. 11. The law or resolution adopted by the Second Volksraad shall have no force unless published by the President in the "Staats Courant."

Art. 12. The President shall bring forward for discussion the proposals for laws which have come before the Volksraad, whether they have been made known to the public three months before the commencement of the session, or whether the same have come in during the session of the Volksraad.

Art. 13. When the notices of laws and government notices to the public have not been given in time, the President shall explain with regard to the blame of that delay lies. A Landrost found guilty hereof shall have a fine of Rls. 500 inflicted and a Field Cor or or lesser official of Rls. 25.

Art. 14. The executive power resides in the State President, who is responsible to the Volksraad. He is chosen by a majority of the burghers entitled to vote, and for the term of five years. He is eligible for re-election. He must have attained the age of thirty years, and need not be a burgher of the State at the time of his nomination, and must be a member of a Protestant Church, and have no dishonouring sentence pronounced against him. (By a subsequent law the President must be chosen from among the burghers.)

Art. 15. The President is the first or highest official of the State. All civil servants are subordinate to him; such, however, as are charged with exercise of the judicial power are kept altogether free and independent in their exercise.

Art. 16. As long as the President holds his position as such he shall fill no other, nor shall he discharge any prebendary office, nor carry on any business. The President cannot go outside the boundaries of the State without consent of the Volksraad. However, the Executive Council shall have the power to grant him leave to go outside the boundaries of the State upon private affairs in cases of necessity.

Art. 17. The President shall be discharged from his post by the Volksraad after conviction of misconduct, embezzlement of public property, treachery, or other serious crimes, and be treated further according to the laws.

Art. 18. If in consequence of transgression of the Constitution or other public misdemeanors the Volksraad resolve that the President shall be brought to trial, he shall be tried before a special court composed of the members of the High Court, the President and another member of the Volksraad, while the State Attorney acts as Public Prosecutor. The accused shall be allowed to secure assistance of a lawyer at his choice.

Art. 19. The President is charged with the proposing of laws to the Volksraad, whether his own proposals or others which have come to him from the people; he must make these proposals known to the public by means of the "Staats Courant" three months before presenting them to the Volksraad, together with all such other documents as are judged useful and necessary by him.

Art. 20. All proposals for a law sent in to

CONSTITUTION OF S. A. REPUBLIC

1. Bills shall, before they are published, be submitted to the President and Executive Council, whether publication is necessary or not.

Art. 61. The President submits the proposals to the Volksraad and charges the Executive Council to prepare them, they being first examined with their explanation and details.

Art. 62. As soon as the President has received from the Volksraad that the proposal has been adopted, he shall have that law promulgated in two months, and after the promulgation he shall take measures for the execution of the law.

Art. 63. Proclamation of martial law, as in Art. 62, shall only be made by the President in the presence of the members of the Executive Council.

Art. 64. The President, with advice of the Executive Council, declares war and peace, with the sanction of the Volksraad. The Executive Council shall first, if possible, summoned the Volksraad before the declaration of war.

Art. 65. The President shall submit, yearly, to the Volksraad, estimates of the revenues and income, and therein indicate the deficit or apply the surplus to cover the deficit or apply the surplus to other purposes.

Art. 66. The President shall submit, yearly, to the Volksraad, estimates of the revenues and income, and therein indicate the deficit or apply the surplus to cover the deficit or apply the surplus to other purposes.

Art. 67. He shall also give a report during the last year of the condition of the Republic and everything that concerns its general interests.

Art. 68. The President and one member of the Executive Council shall, if possible, visit the provinces of the Republic where the President's officers are once in the year, he shall inquire into the state of those offices, inquire into the conduct of the officials, and on these circuits give them an opportunity of presenting their grievances and of obtaining anything they are interested in.

Art. 69. The President exercises his power with the Executive Council. An Executive Council shall be joined to the President, consisting of the Commandant General, two enfranchised burghers, a Secretary, and a Notkeeper, all of whom shall have an equal vote, and in the title of members of the Executive Council.

Art. 70. The Superintendent of Native Affairs and the Notkeeper shall be ex officio members of the Executive Council. The President and the Executive Council shall have the right to sit, but not to vote, in the Volksraad.

Art. 71. The President is allowed, when important matters arise, to invite the head official to be seated in the Executive Council whose department is directly concerned with the subject under consideration. The said head official shall have a vote in the Executive Council, be

CONSTITUTION OF SWITZERLAND

equally responsible for the resolution taken, and shall sit along with the others.

Art. 81. According to the intention of Article 82 the following shall be considered "Head Officials": The State Attorney, Treasurer, Auditor, Superintendent of Education, Diplomatic Minister, Registrar of Deeds, Surveyor General, Postmaster General, Head of the Mining Department, Chief Director of the Telegraph Service, and Chief of Public Works.

Art. 82. The President shall be Chairman of the Executive Council and in case of an equal division of votes have a casting vote. For the ratification of sentences of death or declarations of war the unanimous vote of the Executive Council shall be requisite for a decision.

Art. 83. All resolutions of the Executive Council and official letters of the President must, besides being signed by him, also be signed by the Secretary of State. The latter is at the same time responsible that the contents of the resolution or the letter is not in conflict with the existing laws.

Art. 84. The two enfranchised burghers or members of the Executive Council contemplated by Article 82 are chosen by the Volksraad for the period of three years; the Commandant General for ten years; they must be members of a Protestant Church, have had no sentence in a criminal court to their discredit, and have reached the age of thirty years.

Art. 85. The Secretary of State is chosen also by the Volksraad, but is appointed for the period of four years. On resignation or expiration of his term he is re-eligible. He must be a member of a Protestant Church, have had no sentence in a criminal court to his discredit, possess fixed property in the Republic, and have reached the age of thirty years.

Art. 86. The military force consists of all the men of this Republic capable of bearing arms, and if necessary of all those of the natives within its boundaries whose chiefs are subject to it.

Art. 87. Besides the armed force of burghers to be called upon times of disturbance or war, there exists a general police and corps of artillery, for which each year a fixed sum is drawn upon the estimates.

Art. 88. The men of the white people capable of bearing arms are all men between the ages of sixteen and sixty years; and of the natives, only those which are capable of being made serviceable in the war.

Art. 89. For the subdivision of the military force the territory of this Republic is divided into field companies and districts.

Art. 90. The men are under the orders of the following officers, ascending in rank: Assistant Field Cornets, Field Cornets, Commandants, and a Commandant General. *Selected Official Documents of the South African Republic and Great Britain (supplement to the Annals of the Ann. CUBA.

A. D. 1868-1885.—Ten years of insurrection.—The United States and Spain.—The Affair of the Virginias.—End of Slavery.

The abolition of slavery in the southern states left the Spanish Antilles in the enjoyment of a monopoly of slave labor, which, in the production of sugar, especially, gave them advantages which overcame all competition. This led to the formation of a strong Spanish party, for whom the cause of slavery and that of Spanish domination were identical. These were known as Peninsulars or Spanish immigrants. They were the official class, the wealthy planters and slave-owners, and the real rulers of Cuba. Their central organization was the Casino Español of Havana, which was copied in all the towns of the island, and through these clubs they controlled the volunteers, who at times numbered 60,000 or 70,000. These volunteers never took the field, but held possession of all the arms and fortifications, and thus were able to defy even the captain-general. They were obedient to his orders only so long as he was acting in close accord with the wishes of their party. On

the other hand, there was a party composed of Creoles, or native Cubans, whose cry was, "Cuba for the Cubans!" and who hoped to effect the complete separation of the island from Spain either through their own efforts or through the assistance of the United States.

The Spanish revolution of September 1868 was the signal for an uprising of the native or Creole party in the eastern part of the island under the leadership of Cespedes. This movement was not at first ostensibly for independence, but for the revolution in Spain, the cries being "Hurrah for Prim!" "Hurrah for the Revolution!" Its real character was, however, apparent from the first, and its supporters continued for a period of ten years, without regard to the numerous vicissitudes through which the Spanish Government passed—the provisional government, the regency, the elective monarchy, the republic, and the restored Bourbon dynasty—to wage a dogged, though desultory warfare against the constituted authorities of the island. This struggle was almost continuous with President Grant's Administration of eight years.

President Grant made early offers of mediation between Spain and the insurgents, but no agreement or terms could be reached. An increasing sympathy with the Cubans raised demands in the United States for their recognition as belligerents with belligerent rights, and the President was forced to have been ready to yield to the demand, but was deterred by the influence of his Secretary of State Mr. Fish, who contended that the insurgents had established no government that could claim such rights. The Cuban sympathizers in Congress were accordingly checked by an opposing message June 13, 1870, and no further action occurred.

In February, 1873, when King Amadeus restored his crown and a republic was proclaimed in Spain, the United States made haste to grant the new government recognition and support which led to friendly relations between the two countries for a time and promised happy results. The Spanish republicans were being urged to give the Cubans self government and end slavery in the whole Spanish domain, and they were lending, at least, a considerate ear to the cry. But negotiation on that topic was soon disturbed. On October 31, 1873, the steamer *Virginia*, sailing under American colors and carrying a United States registry, was captured on the high seas by the "Tornado," a Spanish war vessel, and on the afternoon of November 1, taken into the port of Santiago de Cuba. The men and supplies aboard were bound for the insurgents, but no fighting did not occur in Cuban waters. General Barrio, the commandant of the city, summoned a court martial, and, in spite of the protest of the American consul, condemned to death at the first sitting, four of the passengers, General W. A. C. Ryan, an Irish patriot, and three Cubans. They were shot on the morning of November 4. On the 7th twelve other passengers were executed, and on the 8th Captain Fox and his entire crew, numbering 36, made the total number of executions 53. This barbarous procedure caused hot excitement in the United States, and demands for reparation were made so sharply that the two countries came near to war. In the end it was shown that the *Virginia* was sailing under the American flag without right, being owned by Cubans and controlled by them. The vessel was surrendered, however, but foundered off Cape Fear, while being conveyed to the United States. Her surviving passengers were released, and an indemnity was paid for all who were put to death. The brave officer who took their lives was never brought to justice, though his punishment was pronounced and again. On the settlement of the *Virginia* question, the government of the United States resumed its efforts to bring concessions to the Cubans from Spain and sought to have its efforts supported by Great Britain and other European powers. Cold replies came from all the cabinets that were approached. At the same time the Spanish government met the demand from America with promises so lavish that, April, 1876, going so far in appearance towards what had been asked, that no ground for further action seemed left. The act of Secretary Fish, in proposing intervention to foreign powers, was sharply rebuffed as a breach of the Monroe doctrine, but he made no defense.

The Cuban struggle continued for two years

longer. In October, 1877, several leaders surrendered to the Spanish authorities and under took the task of bringing over the few remaining ones. Some of these paid for their efforts with their lives, being taken and condemned by court martial, by order of the commander of the Cuban forces. Finally, in February, 1878, the terms of pacification (under an agreement called the Treaty of El Zanjón) were made known. They embraced representation in the Spanish Cortes, oblivion of the past as regarded political offences committed since the year 1868, and the freedom of slaves in the insurgent ranks. In practice, however, the Cuban deputies were never truly representative, but were men of Spanish birth, designated usually by the captain-general. By gradual emancipation, slavery ceased to exist in the island in 1885. The powers of the captain-general, the most objectionable feature of Spanish rule, continued uncurtailed. — J. H. Latane, *The Diplomatic Relations of the U. S. and Spanish America*, ch. 3.

A. D. 1895. — Insurrection renewed. Early in 1895 a new uprising of the oppressed Cubans was begun, and on the 7th of December, in that year, T. Estrada Palma, writing as their authorized representative, presented to the State Department at Washington a statement setting forth the causes of the revolt and describing its state of organization at that time. The causes, he wrote, "are substantially the same as those of the former revolution lasting from 1868 to 1878, and terminating only on the representation of the Spanish Government that Cuba would be granted such reforms as would remove the grounds of complaint on the part of the Cuban people. Unfortunately the hopes thus held out have never been realized. The representation which was to be given the Cubans has proved to be absolutely without character; taxes have been levied anew on everything conceivable; the offices in the island have increased, but the officers are all Spaniards; the native Cubans have been left with no public duties whatsoever to perform except the payment of taxes to the Government and blackmail to the officials, without privilege even to move from place to place in the island except on the permission of the governmental authority. Spain has framed laws so that the natives have substantially been deprived of the right of suffrage. The taxes levied have been almost entirely devoted to support the army and navy in Cuba, to pay interest on the debt that Spain has saddled on the island, and to pay the salaries of the vast number of Spanish officeholders, devoting only \$746,000 for internal improvements out of the \$26,000,000 collected by tax. No public schools are within reach of the masses for their education. All the principal industries of the island are hampered by excessive imposts. Her commerce with every country but Spain has been crippled in every possible manner, as can readily be seen by the frequent protests of shipowners and merchants. The Cubans have no security of person or property. The judiciary are instruments of the military authorities. Trial by military tribunals can be ordered at any time at the will of the Captain General. There is, beside, no freedom of speech, press, or religion. In point of fact the causes of the Revolution of 1775 in this country were not nearly as grave as those that have driven the Cuban people to the various insurrections which culminated in the present revolution."

Years before the outbreak of the present hostilities the people within and without the island began to organize, with a view of preparing for the inevitable revolution, being satisfied, after repeated and patient endeavors, that peaceful petition was fruitless. In order that the movement should be strong from the beginning and organized both as to civil and military administration, the Cuban Revolutionary party was founded, with José Martí at its head. The principal objects were by united efforts to obtain the absolute independence of Cuba, to promote the sympathy of other countries, to collect funds with these in view, and to invest them in incursions.

The military organization of this movement was completed by the election of Máximo Gómez as commander in chief. This election was made by the principal officers who fought in the last revolution. The time for the uprising was fixed at the solicitation of the people in Cuba, who protested that there was no hope of autonomy, and that their deposits of arms and ammunition were in danger of being discovered and their leaders arrested. A large amount of war material was then bought by Martí and vessels chartered to transport it to Cuba, where arrangements were made for its reception in the provinces of Santiago, Puerto Principe, and Santa Clara, but at Fernandina, Fla., it was seized by the United States authorities. Efforts were successfully made for the restitution of this material, nevertheless valuable time and opportunity was thus lost. The people in Cuba clamored for the revolution to proceed immediately, and in consequence the uprising was not further postponed. The date fixed for the uprising was the 24th of February. The people responded in Santiago, Santa Clara, and Matanzas. The provinces of Puerto Principe and Pinar del Rio did not respond, owing to lack of arms. In Puerto Principe, no arms, such as had previous to the 24th been entrusted, and all arms and ammunition confiscated by the Government. The leaders in the provinces of Matanzas and Santa Clara were imprisoned, and so the movement there was checked for the time being. In the province of Santiago the revolution rapidly increased in strength, under the leadership of Bartolomé Masseo, one of the most influential and respected citizens of Manzanillo, Guillermo Moncada, Jesus Rabí, Pedro Pérez, José Mire and others. It was characterized by the Spanish Government as a negro and bandit movement, but many of the most distinguished and wealthy white citizens of the district flocked to the insurgent camp.

On the 1st of April, Generals Antonio and José Maceo, Florentino, and Augustin Gibrero, and veteran leaders in the former revolt, landed at Baracoa in the province of Santiago, and the insurgents rose to join them. Antonio Maceo then, on the 14th of April, a detachment received by Generals Máximo Gómez, José Martí, Francisco Borrero, and Angel Guerra. Captain General Calleja was, on the 16th of April, succeeded by Gen. Arsenio Martínez Campos, the new commander in chief of the Spanish forces, who has the reputation of being Spain's ablest chief general. The military organization of the Cubans is ample and complete. Maj. Gen. Máximo Gómez is the commander in chief, as we have said of all the forces, a veteran of the last revolution as indeed are all the generals

almost without exception. Maj. Gen. Antonio Maceo is second in command of the army, liberation, and was, until killed upon the march to the western province, in command of Santiago. The army is at present divided into five corps—two in Santiago, one in Puerto Principe, and two in Santa Clara and Matanzas.

As above indicated, José Martí was the head of the preliminary civil organization, and he immediately upon landing with Gómez in Cuba, issued a call for the selection of representatives of the Cuban people to form a civil government. His death in an engagement at Boca de los Rios, May 19, postponed for a time the selection of these men, but in the beginning of September the call previously issued was complied with. Representatives from each of the provinces of Santiago, Puerto Principe, Santa Clara, and the western part of the island, comprising the provinces of Matanzas and Havana, making twenty in all, were elected to the constituent assembly, which was to establish a civil government, a republic in form. . . . A constitution of the Republic of Cuba was adopted on the 16th of September. . . . On the 18th of September, officers of the Government were elected by the constituent assembly in accordance with the terms of the constitution.

The Spaniards charge, in order to belittle the insurrection, that it is a movement of negroes. It should be remembered that not more than one-third of the entire population are of the colored race. As a matter of fact, less than one-third of the army are of the colored race. Take, for instance, the generals of corps, divisions, and . . . there are but three of the colored race.

Antonio and José Maceo and Amargosa, and these are mulattoes, whose deeds and victories have placed them far above the generals of those who pretend to despise them. None of the members of the constituent assembly or of the government are of the colored race. The Cubans and the colored race are as friendly in this war as they were in times of peace.

The subject . . . which has caused probably the most discussion is the order of General Gómez to prevent the grinding of sugar cane and in case of the disobedience of said order the destruction of the crop. . . . The reasons underlying this measure are the same which caused this country to destroy the cotton crop and the hulled cotton in the South during the war of the secession. The sugar crop is a source of large income to the Spanish Government, directly by tax and export duty, as well as indirectly. The action of the insurgents is perfectly justified, because it is simply a blockade, so to speak, on land—a prevention of the gathering, and hence the export, of the commodity with naturally, a punishment for the violation thereof.

In view of the history of this revolution as herein stated, in view of the causes which led to it, its rapid growth, its successes in arms, the establishment, operation, and resources of the Government of the Cuban Republic, the organization, number, and discipline of its army, the contrast in the treatment of prisoners to that of the enemy, the territory in its control and subject to the carrying out of its decrees, of the futility of the attempts of the Spanish Government to crush the revolution, in spite of the immense increase of its army in Cuba and of its blockade and the

many millions spent for that purpose, the cruellest and most inhuman part of the Spanish have especially characterized this so genuine and fiercely patriotic war, and the damage to the interests of the people of this country under the present administration is the duty accredited representative of the people of the Cuban people in arms to have fought singly and alone against the Spanish Government for nearly a year in the heart of the island, and in public institutions, in the name of humanity, in the name of liberty, justice, and through the intervention of the United States of America to read the rights of belligerency to a people fighting for their absolute independence. *United States, 54th Cong., 1st Sess., Senate Doc. A. 166.*

A. D. 1896-1897. Captain-General Campos succeeded by General Weyler. Weyler's Concentration Order and other edicts. — Death of Antonio Maceo. — Weyler succeeded by Blanco. — In January, 1896, Governor and Captain-General Campos, whose policy had been as humane and conciliatory as his Spanish successors would permit it to be, was recalled, and Don Valeriano Weyler y Nicolau, Marquis of Puerto Real, and lately Captain-General of Catalonia, was sent to take his place. General Weyler arrived at Havana on the 10th of February, and before he could possibly have acquired any personal knowledge of the conditions which he had to deal with, he issued three orders, the first of which was a policy of merciless warfare, the second was broadly set forth. The first of these edicts or proclamations commanded as follows:

Article 1. All inhabitants of the district of Santiago and the provinces of Puerto Príncipe and Santiago de Cuba will have to concentrate in places which are the headquarters of a division, a brigade, a column, or a troop, and will have to be provided with documentary proof of residence within eight days of the publication of this proclamation in the municipalities.

Article 2. To travel in the country in the ranks covered by the columns in operation, it is absolutely indispensable to have a pass from the nearest military commandants or chiefs of detachments. Any one lacking this will be detained and sent to headquarters of divisions or brigades, and thence to Havana, at my disposal, by the first possible means. Even if a pass is exhibited which is suspected to be not authentic, or granted by authority to person with known sympathy toward the rebellion or who so wily that the rigorous measures will result to those responsible.

Article 3. Adherents of commercial establishments in the country districts will vacate them, and the chiefs of columns will take such measures as the success of their operations dictates in such places which, while useless for the country's wealth, serve the enemy as hiding places in the woods and in the interior.

Article 4. All persons liable to issued hereby become liable and void.

The order of "concentration" contained in the first of these edicts was slowly executed, and it is not to be wondered at that the horrors of suffering and death which words could hardly describe. General Weyler's edicts delegated his own military and judicial attributes "for the enforcement of the military code of justice," to certain

subordinate commanders and gave sharp instructions for their exercise. The third species of a large number of edicts as being "subject to military law," including in the category every use of tongue or pen that could be construed as "favorable to the rebellion" or as "injurious to the prestige of the Spanish army" or "the volunteers" or "freemen" or any other force that cooperates with the army. It is said to have been nearly a year before the Weyler policy of "concentration" was generally carried out. And even before that occurred the misery of the country had become very great. Both parties in the war were recklessly laying waste the land. The insurgent leaders had published orders for a total destruction of sugar factories and plantations, because the product supplied revenues to Spain, and now the Spanish governor struck all traffic and industry down in the rural districts, by driving the inhabitants from their homes and fields, to concentrate and pen them up in certain prescribed places, with practically no provision for employment, or shelter or food. At the close of the year 1896 the state of suffering in the island was not yet at its worst, but already it was riveting the attention of the neighboring people of the United States, exciting a hot feeling against Spain and a growing desire for measures on the part of the American government to bring it to an end. Repeated attempts had already been made by frothy politicians in Congress to force the country into an attitude toward Spain that would challenge war, but the Executive, supported by a congressional majority, and by the better opinion of the American public, adhered with firmness to a policy which aimed at the exhausting of pacific influences in favor of the Cuban cause. In his annual message to Congress at the opening of the session in December, 1896, President Cleveland set forth the situation in the following words:

"It is difficult to perceive that any progress has thus far been made towards the pacification of the island. . . . If Spain still holds Havana and the seaports and all the considerable towns, the insurgents still remain at will over at least two-thirds of the inland country. To the determination of Spain to put down the insurrection seems but to strengthen with the lapse of time, and is evinced by her unhesitating devotion of largely increased military and naval forces to the task, there is much reason to believe that the insurgents have gained in point of numbers and character, and are none the less flexible in their resolve not to succumb without practically securing the great objects for which they took up arms. If Spain has not yet re-established her authority, neither have the insurgents yet made good their title to be regarded as an independent state. Indeed, as the contest has gone on, the pretense that civil government exists on the island, except so far as Spain is able to maintain it, has been practically abandoned. Spain does keep on foot such a government, more or less imperfectly, in the large towns and their immediate suburbs. But that exception being made, the entire country is either given over to anarchy or is subject to the military occupation of one or the other party. . . . In pursuance of general orders, Spanish garrisons are now being withdrawn from plantations and the rural population required to concentrate itself in the towns. The sure result would seem to be

that the industrial value of the island is fast diminishing, and that unless there is a speedy and radical change in existing conditions, it will soon disappear altogether.

"The spectacle of the utter ruin of an adjoining country, by nature one of the most fertile and charming on the globe, would engage the serious attention of the Government and people of the United States in any circumstances. In point of fact, they have a concern with it which is by no means of a wholly sentimental or philanthropic character. It lies so near to us as to be hardly separated from our territory. Our actual pecuniary interest in it is second only to that of the people and Government of Spain. It is reasonably estimated that at least from \$30,000,000 to \$40,000,000 of American capital are invested in plantations and in railroad, mining, and other business enterprises on the island. The volume of trade between the United States and Cuba, which in 1889 amounted to about \$60,000,000, rose in 1893 to about \$100,000,000 and in 1894, the year before the present insurrection broke out, amounted to nearly \$90,000,000. Besides this large pecuniary stake in the fortunes of Cuba, the United States finds itself inextricably involved in the present contest in other ways both vexatious and costly. These inevitable entanglements of the United States with the rebellion in Cuba, the large American property interests affected, and considerations of philanthropy and humanity in general, have led to a vehement demand in various quarters for some sort of positive intervention on the part of the United States.

"It would seem that if Spain should offer to Cuba genuine autonomy—a measure of home rule which, while preserving the sovereignty of Spain, would satisfy all rational requirements of her Spanish subjects—there should be no just reason why the pacification of the island might not be effected on that basis. Such a result would appear to be in the true interest of all concerned. It has been objected on the one side that Spain should not promise autonomy until her insurgent subjects lay down their arms; on the other side, that promised autonomy, however liberal is insisted, but, because without assurance of the peace being fulfilled. . . . Realizing that suspicions and precautions on the part of the weaker of two combatants are always natural and not always unjustifiable—being sincerely desirous in the interest of both as well as on its own account that the Cuban problem should be solved with the least possible delay—it was intimated by this Government to the Government of Spain some months ago that, if a satisfactory measure of home rule were tendered the Cuban insurgents, and would be accepted by them upon a guaranty of its execution, the United States would endeavor to find a way not objectionable to Spain of furnishing such guaranty. While no definite response to this intimation has yet been received from the Spanish Government, it is believed to be not altogether unwelcome, while, as already suggested, no reason is perceived why it should not be approved by the insurgents.

"It should be added that it can not be reasonably assumed that the hitherto expectant attitude of the United States will be indefinitely maintained. While we are anxious to accord all due respect to the sovereignty of Spain, we can not

view the pending conflict in all its features, and properly appraise our inevitably close relations to it, and its possible results, without considering that by the course of events we may be drawn into such an unusual and unprecedented condition, as will fix a limit to our patient waiting for Spain to end the contest, either alone and in her own way, or with our friendly cooperation."

President Cleveland's Message to Congress, Dec. 7, 1896.

Just at this time (Dec. 7, 1896) the Cuban insurgents suffered a serious calamity. In the death of Antonio Maceo, the heroic mulatto, who seems to have been the most soldierly and inspiring of their leaders. He had broken through the "trocha," or fortified line across the island, by which the Spaniards were endeavoring to hold its western part, and had been troubling them in the province of Pinar del Rio for some months. At length he was killed in an unimportant skirmish, and much of the vigor of the insurrection appears to have gone out of it when he fell. The obstinacy of spirit remained, nevertheless, and all the merciless energy of Weyler only spread death and misery, without opening any prospect of an end to the state of war. Spain was being utterly exhausted by the immense cost of the struggle; Cuba was being ruined and depopulated, yet neither would yield. The oppressors would not set their victims free—the oppressed would not submit. But, politically, the situation continued for another year as it had been when described by President Cleveland at the close of 1896. The only visible authority was that which the Spaniards maintained here and there. The revolutionists established no government that could reasonably be given the name, and their "Republic of Cuba," which foolish people in the United States were clamoring to have recognized, existed on paper alone. To concede "belligerent rights" to the scattered bands of insurgents would only bring them under crippling rules of international law, and do no good to their cause. President McKinley, who succeeded President Cleveland in March, 1897, made no change in the policy which the latter had pursued. He continued the insistent pressure by which it was sought to persuade the Spanish government to give a satisfying measure of free government to its great dependency. After some months there appeared to be fair promise of success. The Liberal party had come into power at Madrid, with Sagasta at its head. In October, Weyler was recalled, General Blanco took his place, and a new constitution for Cuba was announced, giving the colony what seemed to be a fairly autonomous government, under a parliament of its own. In his message to Congress the following December, President McKinley was able to meet the continued clamor for more violent measures of interference by saying: "It is honestly due to Spain, and to our friendly relations with Spain, that she should be given a reasonable chance to realize her expectations, and to prove the asserted efficacy of the new order of things to which she stands irrevocably committed. She has recalled the commander whose brutal orders inflamed the American mind and shocked the civilized world. She has modified the horrible order of concentration, and has undertaken to care for the helpless and permit those who desire to resume the cultivation of their fields to do so, and assures them the

position of the Spanish Government in their past occupations. But the awful tragedy of September, among the "recomendados" had exacted a ransom to such a pitch that the conduct of Spain in any new line of policy could no longer be fairly judged. There had been at times in the part of the Spanish authorities to give some relief to the starved and perishing population and help to that end had been accepted from the United States. The American Red Cross Society, with Miss Clara Barton at its head, entered the island in December, with vast stores of food and hospital supplies, and a strong force of generous workers, but the need was far beyond their means. The tale of death and misery in the stricken country seemed to grow more gloomy every day.

A. D. 1897 (November). Constitution establishing self-government in the islands of Cuba and Porto Rico, promulgated by Royal Decree. The following is a translation of the text of the Constitution establishing self-government in the islands of Cuba and Porto Rico which was promulgated by royal decree at Madrid on October 12, November, 1897.

After the proposition of my Prime Minister, in view of the concurrence of the Council of Ministers, in the name of my august son, King Alfonso XIII, and as Queen Regent of the Kingdom, I hereby decree as follows:

TITLE I* GOVERNMENT AND CIVIL ADMINISTRATION IN THE ISLANDS OF CUBA AND PORTO RICO.

Article 1. The system of government and administration in the islands of Cuba and Porto Rico shall hereafter be carried on in conformity with the following provisions:

Art. 2. Each island shall be governed by an executive government consisting of two chambers, and by the Governor General, representing the mother country, who shall exercise supreme authority.

TITLE II THE INSULAR CHAMBERS.

Art. 3. The legislative power as to colonial matters in the shape and manner prescribed by law shall be vested in the insular chambers constituted by the Governor General.

Art. 4. Insular representation shall consist of two chambers of equal powers, which shall be known respectively as representatives and council of administration.

***EXPLANATORY NOTE.** To facilitate the understanding of this decree and to avoid confusion as to the legal value of the terms employed therein the following definitions shall be observed:

Executive Power. The King with his Council of Ministers.

Legislative Chambers. The Cortes with the King.

Executive Government. The Congress and the Senate.

Insular Government. The Council of Ministers of the island.

Insular Parliament. The two Chambers with the Governor General.

Insular Chambers. The Council of Administration and the Chamber of Representatives.

Executive Assemblies. The Council of Administration and the Chamber of Representatives.

Executive Council in Council. The Governor-General with his Ministers of his Cabinet.

Ministers of the Government-General. Those which he receives when named for his office.

Legislative Power. The measure of a legislative character.

Colonial Legislation. Legislation of laws of the Kingdom.

Insular or General Laws. Legislation or laws of the Kingdom.

TITLE III COUNCIL OF ADMINISTRATION.

Art. 5. The council shall be composed of thirty-five members, of whom eighteen shall be elected in the manner directed by the electoral law, and seventeen shall be appointed by the Governor General acting for the Crown from among such persons as have the qualifications specified in the following articles.

Art. 6. To be entitled to sit in the council of administration it is necessary to be a Spanish subject, to have attained the age of thirty-five years, to have been born in the island or to have had four years' constant residence therein, not to be subject to any pending criminal prosecution, to be in the full enjoyment of his political rights, to have his property free from attachment, to have led for two or more years previous an annual income of four thousand dollars, to have no interest in any contract with either the insular or the home government. The shareholders of a stock company shall not be considered as government contractors, even if the company has a contract with the government.

Art. 7. Persons are also qualified to serve as councilors who, besides the above stated requirements, have any of the following qualifications:

1. To be or to have been a senator of the Kingdom, or to possess the requirements for being a senator, in conformity with Article III of the constitution. 2. To have held for a period of two years any of the following offices: President, or prosecuting attorney of the pretorial court of Havana, rector of the University of Havana, counselor of administration in the council for nearly thus designated, president of the Havana Chamber of Commerce, president of the Economic Society of Friends of the Country, president of the Sugar Planters' Association, president of the Tobacco Manufacturers Union, president of the Merchants, Tradersmen, and Agriculturists League, dean of the bar of Havana, mayor of Havana, president of the provincial assembly of Havana during two terms or of any provincial assembly during three terms, dean of either of the chapters of the two cathedrals. 3. Likewise may be elected or appointed as councilor any property owner from among the fifty taxpayers paying the highest taxes either on real estate or on industries, commerce, arts, and the professions.

Art. 8. The councilors appointed by the Crown shall be appointed by special decrees, stating the qualification entitling the appointee to serve as councilor. Councilors thus appointed shall hold office for life. One-half the number of elective councilors shall be elected every five years, and the whole number shall be elected whenever the council of administration shall be dissolved by the Governor General.

Art. 9. The qualifications required in order to be appointed or elected councilor of administration may be changed by a national law, at the request or upon the proposition of the insular chambers.

Art. 10. No councilor shall, during the session of the council, accept any civil office, promotion (unless it be strictly by seniority), title, or decoration, but any councilor may be appointed by either the local or the home government to any commission within his own profession or category, whenever the public service shall require it. The signatures of the insular gov-

criminally shall be excepted from the foregoing rule.

TITLE IV. THE CHAMBER OF REPRESENTATIVES.

ART. 11. The chamber of representatives shall be composed of members named by the electoral boards in the manner prescribed by law and in the proportion of one for every twenty-five thousand inhabitants.

ART. 12. To be elected as representative the candidate must have the following requirements: To be a Spanish citizen; to be a layman; to have attained his majority; to be in full enjoyment of civil rights; to have been born in the island or to have had four years' constant residence therein, and not to be subject to any pending criminal prosecution.

ART. 13. Representatives shall be elected every five years, and any representative may be re-elected any number of times. The insular chamber shall determine what classes of officers are incompatible with the office of representative, as well as the cases governing re-election.

ART. 14. Any representative upon whom either the local or home government shall confer a pension, or any employment, promotion (unless it be by strict seniority), pardon, commission, title, or decoration, shall cease to be such without necessity of any declaration to that effect, unless he shall within fifteen days of his appointment notify the chamber of his having declined the favor. The provisions of the preceding paragraph shall not include the representatives who shall be appointed members of the cabinet.

TITLE V. PROCEEDINGS OF THE INSULAR CHAMBERS AND THEIR RELATIONS TO EACH OTHER.

ART. 15. The chambers will meet every year. The King, the Governor General acting in his name, shall convene, suspend, and adjourn the sessions and dissolve the chamber of representatives and the council of administration, either separately or simultaneously, under the obligation to call them together again or renew them within three months.

ART. 16. Each of the two legislative bodies shall determine the rules of their proceedings and shall fix the judges of the qualifications of their respective members and the legality of their election. Until the chamber and the council shall pass their own rules, they shall be governed by the rules of the national house of representatives and of the senate, respectively.

ART. 17. Each chamber shall choose its president, vice-president and secretaries.

ART. 18. Neither chamber shall sit unless the other be sitting also, except when the council exercises judicial functions.

ART. 19. The two insular chambers shall not deliberate together nor in the presence of the Governor General. The sessions shall be public, but either chamber may hold secret sessions when the business of a private nature shall require it.

ART. 20. To the Governor General, through his secretaries, as well as to either of the two chambers belongs the power to initiate and propose colonial statutes.

ART. 21. All colonial statutes in regard to taxes and the public credit shall originate in the chamber of representatives.

ART. 22. Resolutions may be passed by either chamber by a plurality of votes, but in order to

pass a measure of a legislative character, a majority of all the members constituting the chamber must be present. Nevertheless, one-third of the members shall constitute a quorum for deliberation.

ART. 23. No resolution or law shall be considered passed by the insular parliament unless it has had the concurrence of the chamber of representatives and the council of administration.

ART. 24. Every colonial statute, as soon as it has been approved in the form prescribed in the preceding article, shall be presented to the Governor General by the officers of both chambers for his sanction and proclamation of the same.

ART. 25. Members of the council and the chamber of representatives shall have immunity for any speech or vote in either chamber.

ART. 26. No councilor of administration shall be indicted or arrested without a previous resolution of the council, unless he shall be found "in flagrant" or the council shall not be in session; but in every case notice shall be given to the body as soon as possible, that it may determine what should be done. Not shall the representatives be indicted or arrested during the sessions without the permission of the chamber in which they are found "in flagrant" but in this last case or in case of indictment or arrest when the chamber is not sitting, notice shall be given as soon as possible to the chamber of representatives for its information and action. All proceedings against councilors and representatives shall be brought before the portorial court at Havana in the same manner that shall be prescribed by colonial statutes.

ART. 27. The guarantees established in the foregoing section shall not apply to a councilor or representative who shall himself admit that he is the author of any article, book, pamphlet or printed matter wherein military sedition is incited or invoked, or the Governor General is insulted and maligned, or national sovereignty is assailed.

ART. 28. The relations between the two chambers shall be governed, until otherwise provided by the act of July 19, 1837, regulating the relations between the two legislative houses of the Cortes.

ART. 29. Besides the power of enacting laws for the colony the insular chambers shall have power: 1. To receive the oath of the Governor General to preserve the constitution and the laws which guarantee the autonomy of the colony. 2. To enforce the responsibility of the secretaries of the executive, who shall be tried by the council whenever impeached by the chamber of representatives. 3. To address the home government through the Governor General proposing the abrogation or modification of existing laws of the Kingdom; to invite the home government to present bills as to particular matters, or to ask a decision of an executive character on matters which interest the colony.

ART. 30. The Governor General shall communicate to the home government before presenting to the insular parliament any bill originating in the executive government of the island, whenever, in his judgment, said bill may affect national interests. Should any such bill originate in the insular parliament, the government of the island shall ask for a postponement of the debate until the home government shall have given its opinion. In either case the correspondence passing between the two governments shall be had

of the laws and published in the official gazette.

Art. 32. All differences of jurisdiction between the several municipal provinces and in the provinces, or between any of them and the home government, which by their nature may not be referred to the home government, shall be submitted to the courts of justice in accordance with the laws here prescribed.

BOOK VI. POWERS VESTED IN THE ISLAND PARLIAMENT.

Art. 33. The insular chambers shall have the right to propose upon a matter not specially and expressly reserved to the Cortes of the Kingdom. The home government is herein provided, however, to be provided hereafter, in accordance with the prescription set forth in additional Article 34. In this manner, and without implying any restriction, the insular parliament presupposes any restriction of their power to legislate on other matters. They shall have power to legislate on all matters of subjects, concerning the departments of commerce, of the treasury, public works, education, and agriculture.

They shall likewise have exclusive cognizance of all matters of a purely local nature which may affect the colonial territory, and to which they shall have power to legislate on matters of administration, on provincial, municipal, or departmental, on public health, by the creation of public credit banks, and the monetary system. This power, however, shall be subject to the powers vested in the colonial executive according to the laws in connection with the matters above mentioned.

Art. 34. It shall be incumbent upon the colonial government to make regulations under such laws as may be passed by the Cortes and laws enacted by the Cortes. Especially among such laws the insular parliament shall legislate, and may do so at the first sitting, for the purpose of regulating the elections, the taking of the electoral lists, qualifying electors, and exercising the right of suffrage, but in no event shall these laws affect the rights of the citizens, as established by the electoral laws.

Art. 35. Notwithstanding that the laws govern the judiciary and the administration of justice of a national character, and therefore apply to the colony, the insular parliament may, within the provisions of said laws, make laws or propose to the home government such laws as shall render easier the admission, continuation, or promotion in the local courts of lawyers, natives of the island, or practicing thereon.

The Governor General in council shall have, as far as the island of Cuba is concerned, the same power that has been vested heretofore in the minister for the colonies for the appointment of judges, magistrates and subordinate and auxiliary officers of the judicial order and as to the other matters connected with the administration of justice.

Art. 36. The insular parliament shall have the power to frame the local budget of expenditures and revenues, including the revenue derived from the island as her quota of the national budget. To this end the Governor General shall present to the chambers every year, on the first month of January the budget for the current year divided in two parts, as fol-

lows. The first part shall state the revenues needed to defray the expenses of sovereignty, and the second part shall state the revenues and expenditures estimated for the maintenance of the colonial administration. Neither chamber shall take up the budget of the colonial government without having thrice voted the part for the maintenance of sovereignty.

Art. 36. The Cortes of the Kingdom shall determine what expenditures are to be considered by reason of their inalienable obligatory expenses inherent to sovereignty, and shall fix the amount every three years and the revenue needed to defray the same, the Cortes reserving the right to alter this rule.

Art. 37. All treaties of commerce affecting the island of Cuba, be they suggested by the insular or by the home government, shall be made by the latter with the cooperation of special delegates duly authorized by the colonial government, whose concurrence shall be acknowledged upon submitting the treaties to the Cortes. Said treaties, when approved by the Cortes, shall be proclaimed as laws of the Kingdom and as such shall obtain in the colony.

Art. 38. Notice shall be given to the insular government of any commercial treaties made without its participation, as soon as said treaties shall become laws, to the end that, within a period of three months, it may declare its acceptance or nonacceptance of their stipulations. In case of acceptance the Governor General shall cause the treaty to be published in the gazette as a colonial statute.

Art. 39. The insular parliament shall also have power to frame the tariff and fix the duties to be paid on merchandise as well for its importation into the territory of the island as for the exportation thereof.

Art. 40. As a transition from the old régime to the new constitution and until the home and insular governments may otherwise conjointly determine hereafter, the commercial relations between the island and the metropolis shall be governed by the following rules: 1. No differential duty, whether fiscal or otherwise, either on imports or exports, shall be imposed to the detriment of either insular or peninsular production. 2. The two governments shall make a schedule of articles of direct national origin to which shall be allowed by common consent preferential duty over similar foreign products. In another schedule made in like manner shall be determined such articles of direct insular production as shall be entitled to privileged treatment on their importation into the peninsula and the amount of preferential duties thereon. In either case shall the preferential duty exceed 35 per cent. Should the home and the colonial government agree upon the schedules and the preferential duties they shall be considered final and shall be enforced at once. In case of disagreement the point in dispute shall be submitted to a committee of representatives of the Cortes, consisting of an equal number of Cubans and Peninsulars. The committee shall appoint its chairman and in case of disagreement the chairman shall preside. The chairman shall have the casting vote. 3. The valuation tables concerning the articles in the schedules above mentioned shall be fixed by mutual agreement, and shall be revised after discussion every two years. The modification which may thereupon become necessary in the tariff

duties shall be carried out at once by the respective governments.

TITLE VII.—THE GOVERNOR GENERAL

ART. 41. The supreme authority of the colony shall be vested in a Governor General, appointed by the King on the nomination of the council of ministers. In his capacity he shall have as vice-royal part in the power inherent in the patronage of the Indies. He shall have command of all military and fiscal forces in the island. He shall act as head of the departments of state, war, navy, and the colonies, and other authorities in the island shall be subordinate to him, and he shall be responsible for the preservation of order and the safety of the colony. The Governor General shall, before taking possession of his office, take an oath in the presence of the King to discharge his duties faithfully and loyally.

ART. 42. The Governor General, representing the nation, will discharge, by himself and with the aid of his secretaries, all the functions indicated in the preceding articles and such others as may devolve upon him as direct delegate of the King in matters of a national character. It shall be incumbent upon the Governor General as representing the home government: 1. To appoint without restriction the secretaries of his cabinet. 2. To proclaim, execute, and cause to be executed in the island all laws, decrees, treaties, international covenants, and all other acts emanating from the legislative branch of the government, as well as all decrees, royal commands, and other measures emanating from the executive which shall be communicated to him by the departments of which he acts as delegate. When exercising his judgment and in that of his secretaries he considers the resolutions of the home government as liable to injure the general interests of the nation or the special interests of the island, he shall have power to suspend the publication and execution thereof, and shall so notify the respective department, stating the reasons for his action. 3. To grant pardons in the name of the King, within the limitations specially prescribed to him in his instructions from the government, and to stay the execution of a death sentence whenever the gravity of the circumstances shall so demand or the urgency of the case shall allow of no time to solicit and obtain His Majesty's pardon, but in either case he shall hear the counsel of his secretaries. 4. To suspend the guarantees set forth in articles 3, 7, 6 and 9, and in the first, second, and third paragraphs of article 13 of the constitution; to enforce legislation in regard to public order, and to take all measures which he may deem necessary to preserve the peace within and the safety without for the territory entrusted to him after hearing the counsel of his cabinet. 5. To take care that in the colony justice be promptly and fully administered, and that it shall always be administered in the name of the King. 6. To hold direct communication on foreign affairs with the ministers, diplomatic agents, and consuls of Spain throughout America. A full copy of such correspondence shall be simultaneously forwarded to the home Department of State.

ART. 43. It behooves the Governor General, as the superior authority in the colony and head of its administration: 1. To take care that the rights, powers, and privileges now vested or that may hereafter be vested in the colonial admin-

istration be respected and protected. 2. To sanction and proclaim the acts of the insular parliament, which shall be submitted to him by the president and secretaries of the respective chambers. Whenever in the judgment of the Governor General, an act of the insular parliament goes beyond its powers or impairs the rights of the citizens as set forth in Article 1 of the constitution, or curtails the guarantees prescribed by law for the exercise of said rights or impairs the interest of the colony or of the nation, he shall forward the act to the council of ministers of the Kingdom, which, within a period that shall not exceed two months shall either assent to it or return it to the Governor General with the objections to its sanction and proclamation. The insular parliament may, in view of the objections, reconsider or modify the act, if it deems fit, without a special proposition. If two months shall elapse without the central government giving any opinion as to a measure agreed upon by the chambers which has been transmitted to it by the Governor General, the latter shall sanction and proclaim the same. 3. To appoint, suspend, and discharge the employees of the colonial administration, upon the suggestion of the secretaries of the departments and in accordance with the laws. 4. To appoint and remove, without restriction, the secretaries of his cabinet.

ART. 44. No executive order of the Governor General, acting as representative and chief of the colony, shall take effect unless countersigned by a secretary of the cabinet, who by this act alone shall make himself responsible for the same.

ART. 45. There shall be five secretaries of department to wit: Grace and justice and interior, finance, public education, public works and posts and telegraphs, agriculture, industry and commerce. The Governor General shall appoint the president of the cabinet from among the secretaries, and shall also have power to appoint a president without a secretaryship. The power to increase or diminish the number of secretaries composing the colonial cabinet, and to determine the scope of each department, is vested in the insular parliament.

ART. 46. The secretaries of the cabinet may be members of either the chamber of representatives or the council of administration and take part in the debates of either chamber, but a secretary shall only vote in the chamber of which he is a member.

ART. 47. The secretaries of the cabinet shall be responsible to the insular parliament.

ART. 48. The Governor General shall not modify or abrogate his own orders after they are assented to by the home government, or when they shall declare some rights, or when a sentence by a judicial court or administrative tribunal shall have been based upon said orders or when they shall deal with his own competency.

ART. 49. The Governor General shall be relieved of his office when leaving the island except by special command from the home government. In case of absence from the seat of government which prevents his discharging the duties of his office or of disability to perform such duties, he can appoint one or more persons to take his place, provided the home government has previously done so or the method of substitution shall not be stated in his instructions.

Art. 59. The supreme court shall have the authority to try the Governor General when he is held responsible as defined by law. The members of ministers shall be held responsible in the same manner as the Governor General. The Governor General shall have the right to pardon the prisoners of the different provinces, to act upon his own responsibility without consulting his secretaries of state. Art. 60. When forwarding to the government a bill passed by the provincial assembly when in his opinion it is against the rights set forth in Article 61, the Governor General shall refer the bill to the monarch or the monarch's representative for the exercise thereof, with a faithful copy. Art. 61. When it shall be necessary to issue any order or public order, especially if it is of such a nature as to require the possibility to consult the monarch, the Governor General shall have the bill passed by the provincial assembly, but shall have been approved by the monarch, and shall be applicable to all of the Spanish colonies under his government. The Governor General shall employ in the above cases the law determined by a special law.

CHAPTER VIII.—MUNICIPAL AND PROVINCIAL GOVERNMENT

Art. 62. Municipality organization shall be composed of every group of population of more than 500 inhabitants. Groups of less than 500 inhabitants may organize the service of the municipality by special agreements. Every organized municipality shall have power to issue laws regarding public education, public works by land, river and sea, public health, public finances, as well as to freely employ and remove its own employees.

Art. 63. At the head of each province there shall be a provincial assembly, which shall be elected in accordance with the provisions of the colonial statutes. It shall be composed of a number of members proportional to the population.

Art. 64. The provincial assembly shall be composed of representatives regarding the creation and maintenance of public schools and colleges, charities, hospitals, and provincial roads and ways. It shall have the power to order or send, also as regards their own affairs, the appointment and removal of municipal and provincial employees.

Art. 65. The municipalities, as well as the provincial assemblies, shall have power to freely raise the necessary revenue to cover their expenses, without any other limitation than to make the same adapted compatible with the general system of taxation which shall obtain in the colony. The resources for provincial appropriations shall be independent of municipal resources.

Art. 66. The mayors and presidents of boards of aldermen shall be chosen by their respective electors from among their members.

Art. 67. The mayors shall discharge without restriction the active duties of the municipal administration, exceptors of the resolutions of the boards of aldermen or their representatives.

Art. 68. The aldermen and the provincial assemblies shall be civilly responsible for the resolutions passed by their acts. Their responsibility shall be exercised before the ordinary courts.

Art. 69. The provincial assemblies shall freely elect their respective presidents.

Art. 70. The elections of aldermen and assem-

blies shall be conducted in such manner as to allow for a legitimate representation of the minorities.

Art. 71. The provincial and municipal laws now obtaining in the island shall continue in vigor, whenever not in conflict with the provisions of this decree, until the insular parliament shall legislate upon the matter.

Art. 72. No colonial statute shall curtail the powers vested by the preceding articles in the municipalities and the provincial assemblies.

TITLE IX.—AS TO THE GUARANTEES FOR THE FULFILLMENT OF THE COLONIAL CONSTITUTION

Art. 73. Whenever a citizen shall consider that his rights have been violated or his interests injured by the action of a municipality or a provincial assembly he shall have the right to apply to the courts of justice for redress. The department of justice shall, if so required by the agents of the executive government of the colony, prosecute before the courts the boards of aldermen or provincial assemblies charged with breaking the laws or abusing their power.

Art. 74. In the cases referred to in the preceding article, the following courts shall have jurisdiction. The territorial audencia shall try all claims against municipalities, and the pretorian court of Havana shall try all claims against provincial assemblies. Said courts, when the charges against any of the above mentioned corporations shall be for abuse of power, shall render their decisions by a full bench. From the decision of the Territorial audencia an appeal shall be allowed to the pretorian court of Havana, and from the decisions of the latter an appeal shall be allowed to the supreme court of the Kingdom.

Art. 75. The redress of grievances which Article 62 grants to any citizen can also be had collectively by means of public action, by appointing an attorney or representative claimant.

Art. 76. Without in any way impairing the powers vested in the Governor General by Title V of the present decree, he may, whenever he deems fit, appear before the pretorian court of Havana in his capacity as chief of the executive government of the colony, to the end that said court shall finally decide any conflict of jurisdiction between the executive power and the legislative chambers of the colony.

Art. 77. Should any question of jurisdiction be raised between the insular parliament and the Governor General in his capacity as representative of the home government, which shall not have been submitted to the council of ministers of the Kingdom by petition of the insular parliament, either party shall have power to bring the matter before the supreme court of the Kingdom, which shall render its decision by a full bench and in the first instance.

Art. 78. The decisions rendered in all cases provided for in the preceding articles shall be published in the collection of colonial statutes and shall form part of the insular legislation.

Art. 79. Every municipal measure for the purpose of contracting a loan or a municipal debt shall be without effect, unless it be assented to by a majority of the townspeople, whenever one third of the number of aldermen shall so demand. The amount of the loan or debt which, according to the number of inhabitants of a

to which shall make the record an approved one, and shall be approved by special statute.

Article 1. All laws, decrees, and orders in the name of parliament shall be composed of the laws, decrees, and orders in the name of the Governor General.

Article 2. The laws, decrees, and orders in the name of the Governor General shall be composed of the laws, decrees, and orders in the name of the Governor General.

ADDITIONAL ARTICLES

Article 1. The laws, decrees, and orders in the name of the Governor General shall be composed of the laws, decrees, and orders in the name of the Governor General.

Article 2. When the present constitution shall be approved by the Cortes of the Kingdom of Spain, the laws, decrees, and orders in the name of the Governor General shall be composed of the laws, decrees, and orders in the name of the Governor General.

Article 3. The provisions of the present decree shall be applied to the laws, decrees, and orders in the name of the Governor General.

Article 4. The laws, decrees, and orders in the name of the Governor General shall be composed of the laws, decrees, and orders in the name of the Governor General.

Article 5. The laws, decrees, and orders in the name of the Governor General shall be composed of the laws, decrees, and orders in the name of the Governor General.

TRANSITORY PROVISIONS

Article 1. With a view to carry out the transition from the present regime to the system hereby established, with the greatest possible dispatch and the least interruption of the public business, the Governor General shall, whenever he deems it timely and after consulting the home government, appoint the secretaries of the executive offices as per Article 15 of this decree and with them and he shall conduct the local government of the island until the municipal chambers shall have been constituted. The secretaries thus appointed shall vacate their offices as soon as the Governor General shall take his oath of office before the municipal chambers, and the Governor General shall immediately appoint as their successors the members of parliament who in his judgment most fully represent the majorities in the chamber of representatives and the council of administration.

Article 2. The manner of meeting the expenditures occasioned by the debt now weighing upon the Spanish and Cuban treasuries and the debt that may be contracted until the termination of the war shall be determined by a law fixing the share that shall be borne by each treasury and the special ways and means for the payment of the interest on the sinking fund and for redeeming the principal in due time. Until the Cortes of the Kingdom shall decide this point no loans shall be made in the conditions under which the debts were contracted, nor in the payment of the interest and the sinking fund for a sinking fund. The government to which they enjoy, and the manner of payment. When the loans are made or appointed the states, each of

the two treasuries shall take upon itself the payment of the share allotted. In no case shall the obligations contracted towards the lender of the Spanish nation cease to be lawfully respected. Issued in the Palace of November 23, 1897. MARIA CRISTINA.

The President of the Cortes of Spain, FRANCISCO MATEO SALAS.

A. D. 1897-1898 (November, February). The experiment of autonomy or home rule.

It cannot be said that the Constitution of 1897 was given a fair trial. In the circumstances it may doubt whether a fair trial was possible. It came too late for advance planning or unprejudiced judging of its practical value. The autonomist party, which might have been able to make Cuba a constitutional monarchy like Canada, had been discredited by its broken promise. Weavers spoke of a revolution in the United States which was too important to wait for new experiments in Spanish rule. Cuba to be worked out, or to estimate the chances of their success. The first results of results from the scheme of autonomy were promising as it could hardly have failed to be, and that was readily taken as conclusive proof of its value. The judgment of General Goyena, the Consul General of the United States in Havana, had great influence in America, and says nothing to expect from the Constitution. The article contributed subsequently to the "Evening Review" (June 1898) he wrote.

If [the Constitution] was an elaborate system of Home Rule, with a string to every bow, so that I soon became satisfied that it was a concession against the Spanish throne, on the one hand, the condition of the Cubans would specially be the same as it was at the commencement of the war. I gave the reasons there for it, and now on file in the State Department which have proved that the Spaniards could easily manage one of the legislative chambers, and that if any point action on the part of both was the will of the Governor General, whose appointment was made from the throne in Madrid.

This system of autonomy, however, was gravely preceded with. An Autonomist Cabinet was seriously formed, composed in part of Cubans who, though at one time in favor of a government of the island free from Spanish control, had given satisfactory intimations that if they were appointed to cabinet offices, their opinions could be modified to suit existing circumstances. Blasco's Autonomist Government was doomed to failure from its inception. The Spanish soldiers and officers seemed to be cause they did not desire Cuban rule, which meant autonomy, if genuine, would insure. The Spanish merchants and citizens were opposed to it, because they too were hostile to the Cubans having control of the island, and if the question could be narrowed down to Cuban control, annexationists, believing that they could get a better government and one that would protect in a greater measure life and property under the United States flag than under the Cuban banner. On the other hand, the Cubans in arms were not to be touched, because they were fighting for the Cuban and the Cuban citizens and sympathizers of the non-arm bearing population, were also times opposed to it also, while those in the army it seemed to consist of the Autonomist Cabinet.

ning, but all with the same protection. All the country people in the four western provinces, about 100,000 in number, remaining outside the fortified towns when Weyler's order was made were driven into these towns, and these are the reconcentrados. They were the peasantry, many of them farmers, some landowners, others renting lands and rearing more or less stock, others working on estates and cultivating small patches, and even a small patch in that fruitful clime was support a family. It is but fair to say that the normal condition of these people was very different from what prevails in this country. Their standard of comfort and prosperity was not high measured by ours. But according to their standards and requirements their conditions of life were satisfactory. They lived mostly in cabins made of palm- or in wooden houses. Some of them had houses of stone, the blackened walls of which are all that remain to show the country was ever inhabited.

The first clause of Weyler's order [renewing that of Feb. 16, 1896] reads as follows: "I Order and Command. First. All the inhabitants of the country or outside of the line of fortifications of the town shall, within the period of eight days, concentrate themselves in the towns occupied by the troops. Any individual who, after the expiration of this period, is found in the uninhabited parts will be considered a rebel and tried as such." Many, doubtless, did not learn of this order. Others failed to grasp its terrible meaning. Its execution was left largely to the guerrillas to drive in all that had not obeyed, and I was informed that in many cases the torch was applied to their homes with no notice, and the inmates fled with such clothing as they might have on, their stock and other belongings being appropriated by the guerrillas. When they reached the towns, they were allowed to build huts of palm leaves in the suburbs and vacant places within the trochas, and left to live, if they could.

Torn from their homes, with foul earth, foul air, foul water, and foul food or none, what wonder that one half have died and that one quarter of the living are so diseased that they cannot be saved? Deaths in the streets have not been uncommon. I was told by one of our consuls that they have been found dead about the markets in the morning, where they had crawled, hoping to get some stray bits of food from the early hucksters, and that there had been cases where they had dropped dead inside the market surrounded by food. These people were independent and self-supporting before Weyler's order.

I went to Cuba with a strong conviction that the picture had been overdrawn; that a few cases of starvation and suffering had inspired and stimulated the press correspondents, and that they had given free play to a strong, natural, and highly cultivated imagination.

I could not believe that, out of a population of 1,600,000, 200,000 had died within these Spanish forts, practically prison walls, within a few months past from actual starvation and disease caused by insufficient and improper food. My inquiries were entirely outside of sensational sources. They were made of our medical officers, of our consuls, of city aldermen, mayors, of relief committees, of leading merchants and brokers, physicians, and lawyers. Several of my informants were Spanish-born, but every

time the answer was that the case had not been overstated. What I saw I cannot tell so that others can see it. It must be seen with one's own eyes to be realized.

The dividing lines between parties are the most straight and clear cut that have ever come to my knowledge. The division in our war was by no means so clearly defined. It is Cuban against Spaniard. It is practically the entire Cuban population on one side and the Spanish army and Spanish citizens on the other. I do not count the autonomists in this division, as they are so far too inconsiderable in numbers to be worth counting. General Blanco filled the civil offices with men who had been autonomists, and were still classed as such. But the major events had satisfied most of them that the chance for autonomy came too late. There is no doubt that General Blanco is acting in entire good faith, that he desires to give the Cubans a fair measure of autonomy, as Campos did at the close of the ten year war. He has of course a few personal followers, but the army and the Spanish citizens do not want genuine autonomy, for that means government by the Cuban people. And it is not strange that the Cubans soon comes too late. — (*Congressional Record*, March 17, 1898.)

A. D. 1898-1899 (December—October).—Organization of military government under United States authority.—Report of the military governor, on conditions prevailing, measures adopted, and results obtained. On the 13th of December, 1898, the following General Order was issued by the Secretary of War:

By direction of the President, a division is known as the Division of Cuba, consisting of the geographical departments and provinces of the island of Cuba, with headquarters in the city of Habana, is hereby created, under command of Maj. Gen. John R. Brooke, U. S. A., who, in addition to command of the troops in the division, will exercise the authority of military governor of the island. Maj. Gen. Hugh Lee, U. S. V., commanding the Seventh Army Corps, is assigned to the immediate com-

mand. All the troops in the province of Havana, Maj. Gen. William Ludlow, U. S. A., is in command, and will report direct to the division commander. He is charged with all that relates to the organization and disbursement of revenues of the port, city, and its police, sanitation and general government, under such regulations as may be prescribed by the President."

General Brooke arrived at Havana on the 28th of December and assumed the command of the province and the military government of the island. In his subsequent report (October 1, 1899) General Brooke then existing, proceedings taken since occurring and results attained, he wrote: "It was found that considerable confusion existed in the withdrawal of the Spanish troops and replacing them with the United States troops existed, but no untoward event occurred, however as every precaution was taken to maintain order. The gradual withdrawal of the Spanish troops and the advance of the United States troops continued, until the morning of the 1st of January, 1899 found but few Spanish troops in the city, and these went in loaded transports which movement was completed about 12:30 p. m. Outside of the principal boxes the retreating Spanish army was closely followed by the Cuban army, which took charge of the towns and country, maintaining order, and generally performing police duty. This work of affairs continued, substantially, until the final disbandment of that army. The disbandment of the Cuban army was commenced on November 1898, but only such as could procure work or were anxious to resume their former avocations, seem to have taken advantage of the generous furloughs which was given to many. A large part of the army was held to 20th November protests until the distribution of the \$1,000,000 allotted for distribution to the Cuban army, to enable the soldiers to return to their homes, and the giving up of their arms effected a final disbandment. During the time the army was held together as an organized body the police duties performed seemed to be well done and order was preserved. The specter of an army of according to the rolls, 48,000 men being peacefully dispersed among the people has for its prototype the disappearance of the great volunteer army of the United States in 1867. In neither case has there been any great disturbance, as was feared in both cases, and particularly so as regards the Cuban army. The small attempts at brigandage were quickly suppressed, the lawbreakers placed in prison and the courts are now hearing their cases."

On January 1, 1899, a division of the Seventh Army Corps under the command of General Fitzhugh Lee, General Kerfer's division, was brought to the city, and with the regiments on duty in Havana under the command of Gen. William Ludlow, were so placed as to insure good order during the ceremonies of the relinquishment of sovereignty by Spain, which occurred in the Governor General's palace at 12 o'clock, when were assembled the Captain General and his staff, the United States commissary and his officers, the American military governor with his staff, Maj. Gen. Fitzhugh Lee, Maj. Gen. William Ludlow, Maj. Gen. J. Warlock Kerfer, and their staffs, and nine Cuban gen-

erals as his guests. This ceremony was simple in its character, though very impressive, consisting of a formal speech by the Spanish Governor General, which was replied to by General Wades, the chairman of the United States commission, who in concluding his remarks, returned to the military governor and transferred the island of Cuba to him, who thereupon entered upon the full exercise of his duty as the military governor of Cuba. Of course, the taking over into his hands of all the duties of his office took time. The desire of a large body of the Cuban army to take part on the 1st of January in the ceremonies of the relinquishment of sovereignty by Spain was reported verbally by General Ludlow, and he was informed that the danger to life and property was too great, and that the celebration must be postponed to a time when the excitement had cooled off and the passions of the people could be under control. The celebration afterwards took place on the arrival in the city of Gen. Maximo Gomez, Commander in Chief of the Cuban forces, on February 24. General Ludlow was directed to meet General Gomez at the city limits and show him every courtesy possible. The Quinta de los Molinos, the summer residence of the Governor General, was placed at his disposal, and for several months he, with his staff and escort, occupied the houses and grounds as the guests of this Government. The civil bureaus of the Governor General's office were taken over by officers of the military governor's staff, and held by them until the proper civil officials could be selected and appointed.

"In reaching this stage on the highway of progress toward the establishment of government through civil channels, many obstacles have been overcome, the most serious being the very natural distrust of the people, which was born and nurtured under the system of the preceding government, and was particularly the effort of the wars which these people waged in their effort to improve their condition. It is believed that this distrust has given way to confidence in the minds of a majority of the people, and that they are generally beginning to see that the government, as administered by the United States, is for them and for their benefit. It is proper at this time to speak of the condition of the people and the country as it existed at the time of the relinquishment of sovereignty by Spain. A large number of the people were found to be actually starving. Efforts were immediately made to supply food, which the War Department sent, all told, 5,493,500 Cuban rations, in addition to the 1,000,000 rations distributed by Mr. Gould, and these were sent into the country and distributed under the direction of the commanding generals of departments, through such agencies as they established, while in the cities the distribution was generally conducted by an officer of the Army. The result of this action was the immediate lowering of the death rate, the restoration to health of the sick. A general change for the better was soon apparent. Medicines were also supplied for the sick with most beneficial results. Employment was given to those who could work, and they were paid weekly, so that they might have money to buy food. In fact, need that was spared to relieve the terrible condition in which so many thousand people were found."

"Turning to the present conditions, we have in view such a change that the progress seems incredible. A great part of the improvement dates from the month of May, when the monster out of the Cienfuegos removed a great source of distrust. The extent to which have been carried the cultivation of the fields, the reconstruction of houses, the reestablishment of order and public service, especially in the matter of hygiene in the towns, is something wonderful. The question of finance, as relates to the restoration of crippled and destroyed agricultural industries, is one which has occupied a great deal of attention on the part of this government. It is expected that assistance in the way of repairing the roads and bridges, as well as to municipalities to ease their present impoverished conditions, is necessary, and the most pressing wants in this direction have been met by granting money from the treasury of the island. There is every reason to hope that the municipal revenues will meet all requirements, as soon as agriculture is again on its feet, and there will, doubtless, be some changes in the present tax law made. In this connection, it is well to know that planters and small farmers in the tobacco-growing districts are rapidly recovering from their forlorn condition. The quick-growing crop and the remunerative prices have enabled them to restore, in a measure, the lost cattle, mules and implements necessary to the farmers. There is also a desire to use labor-saving devices, which are now being slowly introduced.

"The quiet severance of church and state has been effected by the fact of the Government of the United States being in control. Certain changes have already been made in the laws, and others will follow in due course, thus without violating the legal rights of the Roman Catholic Church, which was the only religious denomination tolerated in the island, except a small body of Baptists. The important subject of schools is now approaching a solution. The present system will be improved upon but it will require time to develop fully a good school system throughout the island. There are no school houses and under present conditions there can be none built for some time to come. It is hoped that a manual training school will be opened as soon as certain repairs and changes can be made in the Spanish barracks at Santiago de las Vegas, a short distance south of Havana, in which about 600 of both sexes can receive instruction at one time. This form of instruction is more important under the conditions found to exist, than the ordinary instruction given in the other schools. As conditions improve, an opportunity can be given to increase the number of these schools, and by their means introduce modern methods more rapidly than by other systems." Gen. John R. Brooke, *Civil Report*, Oct. 1, 1899 (*McSweeney's Documentary Abridgment*, 1899-1900, 1:2, 1266-76).

General Fitzhugh Lee reported, Sept. 19, 1899, on the state of things in the province of Havana, as follows: "I assumed command of the department of the province of Havana January 1, 1899, and of the province of Pinar del Rio April 19, 1899. The deplorable condition of the island after it was evacuated by the Spanish is well known. Business of all sorts was suspended. Agricultural operations had ceased, large sugar estates, with their enormous and expensive ma-

chinery, were destroyed, houses burned, stock driven off for consumption by the Spanish troops, or killed. There was scarcely an ox left to plow, a plow, had there been a plow left. Not a pig had been left in the pen, nor a hen to lay an egg for the poor, destitute people who still held on to life, most of them sick, weary, and weak. Miles and miles of country uninhabited either by the human race or domestic animals was visible to the eye on every side. The great trouble is land of Cuba in some places resembled a rubbish pile, in others, the dreary desert. The 'contrado' order of the former Captain General Weyler, it will be remembered, drove from their houses and lands all the old men, women, and children who had remained at their homes because they were not physically able to join the hordes of war. The wheels of the former government had ceased to revolve. Chaos, confusion, doubt, and uncertainty filled with apprehension the minds of the Cubans, who, for the first time, had been relieved of the cruel care of those who for centuries controlled their country and their destiny. . . . The railroads on the island were in bad order, having been used to the extent of their endurance conveying Spanish troops and Spanish supplies over them, while the great calzadas or turnpikes were filled with holes, for the war prevented repairs to either railroads or roads. Municipalities were all greatly in debt. None of the civil officers had been paid, and school teachers had large amounts of back salary due. Judicial officers were discharging their duties as far as they could—for there was really no law in the island except the mandate of the Captain General—without pay, and many months of back pay was due to the professors in the colleges of the largest cities. The whole framework of the government had to be rebuilt and its machinery carefully and gradually reconstructed. Important government problems had to be promptly solved, which involved social, economic, commercial, agricultural, public instruction, support of eleemosynary institutions of all kinds, means of communications, reorganization of municipalities, with the necessary town and city police, including a mounted force to patrol the adjoining rural districts within the limits, and subject to the authorities of the mayors and council of their respective municipalities; the appointment of new alcaldes and other officers to replace those left in authority by the Spanish Government, and who would be more in accord with the inhabitants whose local affairs they directed. Many trying and tedious questions arose, and many difficulties envisioned on either side of the situation.

"Of the Cuban rural population, less than 20 per cent of them were able to read and write, resembling children awaking the first time to the realities of life. They were in the main obedient, docile, quiet, and inoffensive, and anxious to adapt themselves as soon as possible to the new conditions which confronted them. The Cuban soldiers, black and white, who had been in the fields and woods for four years defying the Spanish banner, still kept their guns, and were massing around the cities and towns, producing more or less unrest in the public mind with the fear that many of them, unaccustomed to work so long, would be transformed into brigands, and not become peaceful, law-abiding citizens. In eight months wonderful progress

made. The arms of the Cuban soldiers were stacked, and they have quietly resumed their old vocations. Brigandage, which had for a time, had been stamped out everywhere. His army increased, and his army was constructed, and more and more farms were gradually being taken up, and the army was organized with new officers representing the wishes of the majority of the island. Municipal police have been appointed in each town and under the charge of, in each town, efficient officers. — Gen. Fitzhugh, *Report*, Sept. 19, 1899.

Gen. Leonard Wood, commanding in the province of Santiago, reported at the same time. — On the assumption of control by the American Government July 17, 1899, of that province the province of Santiago included in its territory, industries were practically at a standstill. In the rural districts all work was at an end. The estates, almost everywhere, have been destroyed, and no work is being done. In the towns the effect of reconcentration was shown by large crowds of women and children and old men who were perishing by starvation. They were thin, pale, and were unable to drag themselves about. The merchants and a few planters were the only prosperous people in the province. A feeling of bitter hostility existed between the Cubans and Spaniards, and also a very ugly feeling between the Cubans who had acted in harmony with the revolutionists in the latter days of the Spanish occupation and those who had been in sympathy with the enemy. At first there was a good deal of confusion in the reconcentration policy in regard to the Cubans who would do the Spaniards, now that they were in a position to avenge themselves for some of the many injuries received in the past. This, however, soon passed over, and a more friendly and sensible idea prevailed. The Spaniards had no material for establishing a home. All officers of the civil government had fled and left their posts, with the exception of one judge of the first instance and several municipal judges and certain police officers. The prisons were full of prisoners, both Spanish and Cuban, many of them being Spanish military and political prisoners. The administration of justice was at a standstill. The towns presented an appearance of greatest neglect, and there was everywhere entire disregard of every sanitary law. The amount of clothing in the possession of the people was very limited, and in the interior villages women were obliged to keep out of sight when strangers were present as they had only skirts and waists and leggings and other coarse material. Many of the children were absolutely without clothing. Evidences of great suffering were everywhere to be seen. A very large proportion of the population was sick in the country districts, and in the seaboard towns there was a shortage of food and water.

Two and a half months after the reconcentration policy was devoted almost entirely to the supply of food and to supplying hospitals and prisons with such limited quantities of material as we were able to obtain. The American officers in all parts of the island were engaged in cleaning up towns and in making all possible sanitary and adminis-

trative reforms. Schools were established, some 60 in the city of Santiago and over 200 in the province as a whole. Affairs have continued to improve slowly but surely, and at the present time we find the towns, generally speaking, clean, the death rate lower than the people have known before, some public improvements under way in all the large towns, the amount of work done being limited only by the amount of money received.

Industries of all kinds are springing up. New sugar plantations are being projected, hospitals and charitable institutions are being regularly supplied and all are fairly well equipped with necessary articles. The death rate among the native population is very much lower than in former years. The people in the towns are quiet and orderly, with the exception of a few editorial writers, who manage to keep up a certain small amount of excitement just enough to give the papers in question a fair sale. The people are all anxious to work. The present currency is American currency. A condition of good order exists in the rural districts. The small planters are all out on their farms and a condition of security and good order prevails. The issue of rations has been practically stopped and we have few or almost no applications for food. — Gen. Leonard Wood, *Report*, Sept. 20, 1899.

A. D. 1899 (October). — Census of the Island. — Statistics of population, nativity, illiteracy, etc. — The total population of Cuba on October 16, 1899, determined by the census taken (under the direction of the War Department of the United States) as of that date was 1,572,797. This was distributed as follows among the six provinces: Habana, 421,804; Matanzas, 302,444; Pinar del Rio, 173,064; Puerto Principe, 88,234; Santa Clara, 356,536; Santiago, 327,715. The latest census taken under Spanish authority was in 1887. The total population as returned by that census was 1,631,687, and the population by provinces was as follows: Habana, 451,928; Matanzas, 259,578; Pinar del Rio, 225,891; Puerto Principe, 67,789; Santa Clara, 354,122; Santiago, 272,379. Whether that census was correct may be a matter of discussion, but if incorrect, the number of inhabitants was certainly not overstated. Comparing the total population at these two censuses, it is seen that the loss in the 12 years amounted to 58,890, or 3.6 per cent of the population in 1887. This loss is attributable to the recent civil war and the reconcentration policy accompanying it, but the figures express only a part of the loss from this cause. Judging from the earlier history of the island and the excess of births over deaths, as shown by the registration records, however imperfect they may be, the population probably increased from 1887 up to the beginning of the war and at the latter epoch reached a total of little less than 1,800,000. It is probable, therefore, that the direct and indirect losses by the war and the reconcentration policy, including a decrease of births and of immigration and an increase of deaths and of emigration reached a total of approximately 200,000.

The area of Cuba is approximately 41,000 square miles, and the average number of inhabitants per square mile 38.7, about the same as the State of Iowa. Habana, with the densest population, is as thickly populated as the State of Connecticut, and Puerto Principe, the most

sparsely populated, is in this respect comparable with the State of Texas.

The total number of males of voting age in Cuba was 413,963, or 26 per cent of the total population. This is a little less than the proportion in 1890 in the United States, where it was 27 per cent. Classifying the potential voters of Cuba by birthplace and race, it is seen that 44.9 per cent were whites, born in Cuba, that 20.5 per cent were colored, and as nearly all the colored were born in the island it is seen that fully seven-tenths of the potential voters of Cuba were native born, 24 per cent were born in Spain, and 1.6 per cent in other countries. Classifying the whole number of potential voters by citizenship it is seen that 70 per cent were Cuban citizens, 2 per cent were Spanish citizens, 18 per cent were holding their citizenship in suspense, and 10 per cent were citizens of other countries, or their citizenship was unknown.

The Cuban citizens, numbering 290,905, were composed almost entirely of persons born in Cuba, there being among them but 220 white persons and probably not more colored, of alien birth. The white Cuban citizens, who were natives of the island, numbered 184,471 and of these 94,304, or 51 per cent, were unable to read. The colored Cuban citizens numbered 106,214, of which not less than 78,276, or 74 per cent, were unable to read. The people of Cuba who claimed Spanish citizenship numbered 9,500, and of these nearly all were born in Spain, there being but 150 born elsewhere. Those whose citizenship was in suspense numbered 76,669. These also were nearly all of Spanish birth, the number born elsewhere being but 1,129. The number of persons of other or unknown citizenship was 40,449. Of these fully one-half were colored, most of them being Chinese, and much the larger proportion of the remaining half were of Spanish birth.

Summing up the situation, it appears that the total number of males of voting age who could read was 200,631, a little less than half the total number of males of voting age. Of these 22,620 were of Spanish or other foreign citizenship or unknown citizenship. The number whose citizenship was in suspense was 39,724, and the number of Cuban citizens able to read was 118,278, or 59 per cent of all Cuban citizens of voting age.—*Census of Cuba, Bulletin Nos. I and III.*

A. D. 1899 (December). Appointment of General Leonard Wood to the military command and Governorship. On the 6th of December General Leonard Wood was commissioned major general of volunteers, and was assigned to command of the Division of Cuba, relieving General Brooke as division commander and military governor of Cuba. On the 30th, Governor Wood announced the appointment of the following Cuban ministers to form his cabinet: Secretary of State and Government, Diego Tamayo; Secretary of Justice, Luis Estevez; Secretary of Education, Juan Bautista Hernandez; Secretary of Finance, Enrique Varona; Secretary of Public Works, José Remón Villdon; Secretary of Agriculture, Industry, and Commerce, Rins Rivera.

A. D. 1900. Organization of a school system. Teachers at Harvard Summer School. Especial attention has been given by the military government to the development of primary education. The enrollment of the

public schools of Cuba immediately before the last war shows 36,306 scholars, but an examination of the reports containing these figures indicates that probably less than half the number rolled represented actual attendance. There were practically no separate school buildings. The scholars were collected in the residences of the teachers. There were few books, and practically no maps, blackboards, desks or other school apparatus. Even these poor pedagogical public schools were, to a great extent, broken up by the war, and in December, 1899, the entire public school enrollment of the island numbered 21,416. The following table shows the advance in school facilities during the half year ending June, 1900.

		Schools. Pupils. (Boys. Girls.)	
January, 1900	1,000	1,000	1,000
February, 1900	1,000	1,000	1,000
March, 1900	1,000	1,000	1,000
April, 1900	1,000	1,000	1,000
May, 1900	1,000	1,000	1,000
June, 1900	1,000	1,000	1,000

This great development was accomplished under the Cuban secretary of public instruction, and the Cuban commissioner of public schools, with the able and experienced assistance of Mr. Alexis E. Frye as superintendent. It is governed by a school law modeled largely upon the law of Ohio. The schools are subject to constant and effective inspection and the attendance is practically identical with the enrollment.

The schools are separated from the residences of the teachers, and each schoolroom has a separate teacher. The courses and methods of instruction are those most approved in this country. The text books are translations into Spanish of American text books. For the supply of material \$150,000 were, in the first instance, appropriated from the insular treasury, and afterwards, upon a single order, 100,000 full sets of desks, text books, scholars' supplies, etc., were purchased upon public advertisement in this country at an expense of about three quarters of a million dollars. All over the island the old Spanish barracks, and barracks occupied by the American troops, which have been withdrawn, are being turned into schoolrooms after thorough renovation. The pressure for education is earnest and universal. The appropriations of this year from the insular treasury for that purpose will amount to about four and a half million dollars; but great as the development has been it will be impossible, with the resources of the island for a long time yet to come, to fully meet the demand for the learning so long withheld. The provincial institutions and high schools and the University of Habana have been reorganized.

During the past summer, through the generosity of Harvard University and its friends who raised a fund of \$70,000 for that purpose, 1,281 Cuban teachers were enabled to attend a summer school of instruction at Cambridge designed to fit them for their duties. They were drawn from every municipality and almost every town in the island. They were collected from the different parts of the island by United States transports, which carried them to New York and thence to Habana and to the

They were lodged and boarded in and provided for by the University of Cambridge, and visited the various museums and the educational institutions in London and returning establishments in England and the city of Boston. Through the efforts of Mr. Frye money was raised to enable them to visit New York and Washington. They were introduced to their homes without a single word of loss, full of new ideas and of zeal for the great work in which they had found so much sympathy and encouragement." *United States Secretary of War Annual Report, Nov. 30, 1900, p. 22, 23.*

A. D. 1900 (June-November). Municipal elections and election of a Constitutional Convention. Meeting of the Convention.—Statement of the Military Governor.

"The census having been completed and the period for the Spanish residents to make their declaration of citizenship having expired on the 11th of April, 1900, steps were immediately taken for the election of municipal governments by the people. In view of the fact that 65 per cent of the people could not read and write, it was deemed advisable that absolutely universal suffrage should be established, and, after very close conference with leading Cubans, including the heads of the great departments of State, a general agreement was reached upon a system of suffrage, which provided that every male citizen of Cuban or Spanish blood, elected to take Cuban citizenship of full age, might vote if he could read and write, or owned real estate or personal property to the value of \$250, or had served in and been honorably discharged from the Cuban army. Thus according a voice in the government of the country to every one who had the intelligence to acquire the rudiments of language, the right to accumulate property, or the patriotism to fight for his country. On the 15th of April an election law, which aims to approximate the best examples of our American election statutes to the existing conditions of Cuba, was promulgated for the guidance of the proposed Convention. On the 16th of June an election was held throughout the island in which the people of Cuba, through the municipalities, which include the entire island, elected all their municipal officers. The boards of registration and election were composed of Cubans selected by the Cubans themselves. No United States soldier or officer was present at or in the neighborhood of any polling place. There was no disturbance. After the newly elected municipal officers had been installed, the Commission the performance of their duty and order was made enlarging the powers of the municipal governments and putting into their hands as much of the government of the people as was practicable.

As soon as the new municipal governments were fully established the following call for a second general convention was issued: 'Habana, July 26, 1900. The military governor of Cuba, in obedience to the publication of the following instructions: Whereas the Congress of the United States by its resolution of April 20, 1898, declared that the people of the island of Cuba are, and of right ought to be, free and independent. That the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island except for the maintenance thereof and asserts its determination, when that is accomplished, to leave the govern-

ment and control of the island to its people; And whereas the people of Cuba have established municipal governments, deriving their authority from the suffrages of the people given under just and equal laws and are now ready, in like manner, to proceed to the establishment of a general government which shall assume and exercise sovereignty, jurisdiction, and control over the island. Therefore:

"It is ordered, That a general election be held in the island of Cuba on the third Saturday of September in the year nineteen hundred to elect delegates to a convention to meet in the city of Habana at twelve o'clock noon on the first Monday of November in the year nineteen hundred to frame and adopt a constitution for the people of Cuba and as a part thereof to provide for and agree with the Government of the United States upon the relations to exist between that Government and the Government of Cuba and to provide for the election by the people of officers under such constitution and the transfer of government to the officers so elected.

"The election will be held in the several voting precincts of the island under and pursuant to the provisions of the electoral law of April 18, 1900, and the amendments thereto. The people of the several provinces will elect delegates in number proportionate to their populations as determined by the census, viz: The people of the province of Pinar del Rio will elect three (3) delegates. The people of the province of Habana will elect eight (8) delegates. The people of the province of Matanzas will elect four (4) delegates. The people of the province of Santa Clara will elect seven (7) delegates. The people of the province of Puerto Principe will elect two (2) delegates. The people of the province of Santiago de Cuba will elect seven (7) delegates."

"Under this call a second election was held on the 15th of September under the same law with some slight amendments, and under the same conditions as the municipal elections. The election was wholly under the charge of Cubans and without any participation or interference whatever by officers or troops of the United States. The thirty-one members of the constitutional convention were elected and they convened at Habana at the appointed time. The sessions of the convention were opened in the city of Habana on the 5th of November by the military governor, with the following statement: To the delegates of the Constitutional Convention of Cuba, Gentlemen: As military governor of the island representing the President of the United States I call this convention to order. It will be your duty, first, to frame and adopt a constitution for Cuba, and, when that has been done, to formulate what, in your opinion, ought to be the relations between Cuba and the United States. The constitution must be adequate to secure a stable, orderly, and free government.

"When you have formulated the relations which, in your opinion, ought to exist between Cuba and the United States, the Government of the United States will doubtless take such action on its part as shall lead to a final and authoritative agreement between the people of the two countries for the promotion of their common interests.

"All friends of Cuba will follow your deliberations with the deepest interest, earnestly desiring that you shall reach just conclusions, and that,

by the dignity, individual self-restraint and wise conservatism in which she characterizes your proceedings, the capacity of the Cuban people for representative government may be signally illustrated. The fundamental distinction between true representative government and dictatorship is that in the former every representative of the people, in whatever office, confines himself strictly within the limits of his defined powers. Without such restraint there can be no free constitution or government. Under the order pursuant to which you have been elected and convened you have no duty and no authority to take part in the present government of the island. Your powers are strictly limited by the terms of that order. —*United States, Secretary of War, Annual Report, Vol. 30, 1900, pp. 24-32.*

A. D. 1900, December. Measures for the destruction of the mosquito, as a carrier of yellow fever. See in this vol. SCIENCE, RECENT, MEDICAL AND SURGICAL.

A. D. 1900-1901. Frauds by American officials in the Havana post office. Question of the extradition of C. F. W. Neely. Decision of the Supreme Court of the United States as to the independent status of Cuba in its relations to the United States. In the spring of 1900 a discovery was made of extensive frauds committed by American officials who had been placed, by U. S. military authority in the post office at Havana. One of the persons accused, named C. F. W. Neely, having returned to the United States, his extradition, for trial in Cuba, was demanded, and a question there arose as to the status of the island of Cuba in its relations to the United States. The case (Neely vs. Henkel) was taken on appeal to the Supreme Court of the United States, and Neely was subjected to extradition by the decision of that tribunal, rendered in January, 1901. The status of Cuba as an independent foreign territory, was thus defined in the opinion of the Court.

The legislative and executive branches of the Government, by the joint resolution of April 20, 1898, expressly disclaimed any purpose to exercise sovereignty, jurisdiction, or control over Cuba, except for the pacification thereof, and asserted the determination of the United States, that object being accomplished, to leave the government and control of Cuba to its own people. All that has been done in relation to Cuba has had that end in view, and so far as the court is informed by the public history of the relations of this country with that island, nothing has been done inconsistent with the declared object of the war with Spain. Cuba is none the less foreign territory, within the meaning of the act of Congress, because it is under a military governor appointed by, and representing the President in the work of assisting the inhabitants of that island to establish a government of their own, under which, as a free and independent people, they may control their own affairs without interference by other nations. The occupancy of the island by troops of the United States was the necessary result of the war. That result could not have been avoided by the United States consistently with the principles of international law or with its obligations to the people of Cuba. It is true that as between Spain and the United States, indeed as between the United States and all foreign nations, Cuba, upon the cessation of hostilities with Spain and after the treaty of

Paris, was to be treated as if it were an unincorporated territory. But—as between the United States and Cuba, that island is territory. It is ours for the inhabitants of Cuba to govern, and rightfully belongs and to whose exclusive control it will be surrendered when a stable government shall have been established by their voluntary action."

A. D. 1901 (January).—Draft of Constitution reported to the Convention by its Central Committee. Public sessions of the Constitutional Convention were not opened until the middle of January, 1901, when the draft of a Constitution was reported by its Central Committee, and the text given to the Press. By subsequent action of the Convention various amendments were made, and the instrument, in this writing (early in April), still awaits final adoption. The amendments have been reported imperfectly and the text of the Constitution, even in its present state, cannot be authoritatively given. It is probable, however, that the structure of government provided for in the draft reported to the Convention stands now and will remain substantially unchanged. An outline of its features is the most that we will venture to give in this place.

The preamble is in these words: "We, the delegates of the Cuban people, having met in assembly for the purpose of agreeing upon the adoption of a fundamental law, which, at the same time that it provides for the constitution into a sovereign and independent nation of the people of Cuba, establishes a solid and permanent form of government, capable of complying with its international obligations, insuring domestic tranquillity, establishing justice, promoting the general welfare, and securing the blessings of liberty to the inhabitants, we declare upon and adopt the following constitution, in pursuance of the said purpose, invoking the protection of the Almighty, and prompted by the dictates of our conscience."

The form of government is declared to be republican. The guarantees of the Constitution, defined with precision and at length, include "equal rights under the law," protection from arbitrary arrest and imprisonment, freedom of thought, speech, writing and publication, freedom of worship, freedom of association and meeting, freedom of teaching, freedom of travel, inviolability of private dwellings and private papers, "except by order of a competent authority and with the formalities prescribed by the laws."

Legislative powers are to be exercised by two elective bodies, to be named House of Representatives and Senate, and conjointly known as Congress. The Senate to be composed of six senators elected from each of the six departments of the republic; the boundaries and names of the departments to be those of the present provinces "as long as not modified by the laws." The terms of the senators to be six years, one third of their number to be elected every two years. The House of Representatives to be composed of "one representative for every 25,000 inhabitants or fraction of more than 12,000, elected for a period of four years, by direct vote and in the manner prescribed by law"; one half to be elected every two years. Representatives and Senators not to be held responsible for opinions expressed in the exercise of their duties and not

and that they could without the consent of the Government, they being, except in case of emergency, employed in the act of committing an offence. It is necessary to note, in regular sessions, except on the first Monday in November, that the Government must, at least ninety days before the beginning of the holiday and Sunday, be substantially the same as the Government of the United Kingdom.

1 "I have no power to be exercised by the
2 President, who shall be elected
3 by the people, and be absolutely incapable thereof,
4 for each day in accordance with the
5 provisions of the law. The term of the Presi-
6 dent shall be four years, and none to be elected for
7 more than two terms. A Vice President to
8 be elected in the same manner as the President,
9 except with the latter and for a like term."

the Court has power to be exercised by the Supreme Court of Justice and such other courts as may be established by law." The Supreme Court has ruled that the United States "to deprive the States of their autonomy of legislative acts that have been so described is to be unconstitutional," and that the appellate jurisdiction correspondingly is a part of the Supreme Court of the United States.

of the elected of the six departments or provinces, as provided that there shall be a governor, elected by a direct vote for a period of three years, and a Departmental Assembly, to consist of not less than eight or more than twenty, elected by direct vote for a like period of three years. The Departmental Assemblies to have complete and independent action in all things not prohibited by the constitution, to the general laws or to international treaties, nor to that which pertains to the inherent rights of the municipalities, which may concern the department, such as the establishment and maintenance of institutions of public education, public charities, highways, departmental roads, means of communication by water or sea, the preparation of their budgets, and the appointment and removal of their employees.

The "municipal territories" are to be governed by "Ayuntamiento" composed of Councilmen elected by a direct vote in the manner prescribed by law and by a Mayor, elected in like manner. The Ayuntamientos to be self-governing, free to participate on all matters that solely and exclusively concern their municipal territory, such as assignment and removal of employees, preparation of their budgets, freely establishing the means of income to meet them without any other restriction than that of making them compatible with the general system of taxation of the republic.

The provision for amendment of the Constitution is as follows: "The constitution cannot be amended in whole or part except by two thirds of each legislative bodies. Six months after the date on the reform, a Constitutional Assembly shall be elected, which shall confine itself to the approval or disapproval of the reform by the legislative bodies. These will continue in their functions independently of the National Assembly. The members in this Assembly shall be equal to the number of the members in the two legislative bodies together."

A. D. 1901 February—March.—Conditions on which the government of the island will

be yielded to its people prescribed by the Congress of the United States. In the case of the

Constitution and Convention issued by the Provisional Governor on the 25th of July, 1900, set above, it was set forth that the duty of the Convention would be "to frame and adopt a constitution for the people of Cuba and as a part thereof, to provide for and agree with the government of the United States upon the relations to exist between that government and the government of Cuba." This intimated an intention on the part of the government of the United States to attach conditions to its recognition of the independent government for which the Convention was expected to provide. The intimation was conveyed still more plainly to the Constitutional Convention by Military Governor Wood, at the opening of its sessions, when he said: "When you have formulated the relations which in your opinion ought to exist between Cuba and the United States, the government of the United States will doubtless take such action on its part as shall lead to final and authoritative agreement between the two countries for the promotion of their common interests." The Convention, however, gave no sign of a disposition to act as desired by the government of the United States, and seemed likely to finish its work, either without touching the subject of relations between the Cuban and American Republics, or else offering proposals that would not meet the wishes of the latter. These wishes were made known to the Convention in that terms at length, by the military governor, and its prompt action was urged, in order that the judgment of the Congress of the United States might be pronounced on what it did. But the day on which the session of Congress would expire drew near, and still nothing came from the Cubans, who seem to have understood that they were exempted from such dictation by the resolution which Congress adopted on the 18th of April, 1898, when it took up the Cuban case (see in this vol. UNITED STATES OF AM. A. D. 1898, APRIL), declaring that "the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island [of Cuba], except for the pacification thereof and asserts its determination when that is accomplished to leave the government and control of the island to its people."

I unwilling to be left to deal, alone, with the question thus arising between the Cubans and their liberators, President Mr. Kinley caused it to be understood that he should call an extra session of Congress, if no Congressional expression on the subject of Cuban relations was found practicable before the 1st of March. This stimulated action in the existing Congress, and the Army Appropriation Bill, then pending in the Senate, was made the vehicle of legislation on the subject, by the hasty insertion therein of the following amendment, offered by Senator Platt, of Connecticut:

In fulfillment of the declaration contained in the joint resolution approved April 20, 1898, and entitled "For the recognition of the independence of the people of Cuba, and mandating that the Government of Spain relinquish its authority and government in the island of Cuba, and to withdraw its land and naval forces from Cuba and Cuban waters," and directing the President of the United States to seize the land and naval forces of

the United States to carry these resolutions into effect, the President is hereby authorized to cause the Government and control of the island of Cuba to be placed, so soon as a government shall have been established on said island, under and subject to laws and orders as a part thereof or hereafter may appear not later than shall define the nature and extent of the United States with Cuba, said country as follows:

I

That the Government of Cuba shall never enter into any treaty or other compact with any foreign power or powers which will impair or tend to impair the independence of Cuba, nor in any manner authorize or permit any foreign power or powers to claim by colonization or for military or naval purposes or otherwise, jurisdiction or control over any portion of said island.

II

That said government shall not assume or contract any public debt to pay the interest upon which, and to make reasonable sinking fund provision for the ultimate discharge of which, the ordinary revenues of the island, after defraying the current expenses of government, shall be inadequate.

III

"That the government of Cuba consents that the United States may exercise the right to intervene for the preservation of Cuban independence, the maintenance of a government adequate for the protection of life, property, and individual liberty, and for discharging the obligations with respect to Cuba imposed by the treaty of Paris on the United States, now to be assumed and undertaken by the government of Cuba.

IV

"That all acts of the United States in Cuba during its military occupancy then of are ratified and validated, and all lawful rights acquired thereafter shall be maintained and protected.

V

"That the government of Cuba will execute,

and as far as necessary extend the plans already devised or other plans to be mutually agreed upon, for the sanitation of the cities of the island, to the end that a recurrence of epidemic and infectious diseases may be prevented, thereby assuring protection to the people and commerce of Cuba, as well as to the commerce of the Southern ports of the United States and the people residing therein.

VI

"That the Isle of Pines shall be united to the proposed constitutional boundaries of Cuba, the title thereto being left to future settlement by treaty.

VII

"That to enable the United States to protect the independence of Cuba, and to protect the people thereof, as well as for its own defense, the government of Cuba will sell or lease to the United States lands necessary for coaling or naval stations at certain specified points, to be agreed upon with the President of the United States.

VIII

"That by way of further assurance the government of Cuba will embody the foregoing provisions in a permanent treaty with the United States."

The Platt Amendment, as it is known, was adopted by the Senate on the 25th of February (yeas 43, nays 20, not voting 25), and concurred in by the House on the 1st of March (yeas 401, nays 136, not voting 56). The opponents of the amendment were weakened by their dread of an extra session of Congress, and by the knowledge that the party of the administration would be still stronger in the new Congress than in that which expired on the 4th of March. Otherwise no vote on the measure could have been reached before that date.

At the time of this writing, the effect in Cuba of the declarations of the Congress of the United States remains in doubt. The Constitutional Convention has taken no action upon them.

DELAGOA BAY ARBITRATION. On July 1877 Portugal concluded a treaty with the Portuguese Government under which the company agreed to build and itself to continue the railway, which the Portuguese Government had sold from Lourenço Marques to the Delagoa Bay, up to a centre of consumption which should in the future be the line and the development of commerce. The Portuguese Government undertook to look about for a concession for this line, and after some time had come to terms with one Colonel M. Mendo, a citizen of the United States, who undertook to build the railway Government subvention, — a concession of importance to the Portuguese Government, — upon certain conditions, of which the most important was that the company should have the right to fix the tariffs of the railway. A contract was signed in Lisbon on December 1881. The government bound itself to the company for a rival railway from the Delagoa Bay to the interior, and gave the company valuable mining rights and the right to build a steam tramway. These rumors were contradicted by the Portuguese government, but are said to have been confirmed. Five months after the signing of the contract with Colonel Mendo the Portuguese authorities, it seems, had already agreed it in the manner described. Hence the contractor appears to have had considerable embarrassment thrown in his way by the action of the Portuguese and Boer governments. His Portuguese company was dissolved, but he organized another in England, which struggled on with the enterprise until 1888 when a decree from Lisbon rescinded the concession declared the railway forfeited, and the railway possession of it to be taken over by the Portuguese government, being British and American citizens, appealed then to their respective governments, and both intervened in the matter. The result was a reference of the matter to the arbitration of Switzerland. So much was done in June 1891, but it was not until March 1892 that the judgment of the arbitrators was received. They awarded to the Delagoa Bay Railway Company the railway, 13,980,000 francs. For this it added a sum of fr. 2,000,000 as indemnity for the land grant, which brings

the total award to fr. 15,980,000 or about £612,500, with interest at 5 per cent. from June 25th, 1889 to the date of payment. The amount of this award came as a considerable shock to the claimants as well it might. It was insufficient to pay even the bonds in full including interest at 5 per cent., and left nothing whatever for the shareholders, while even the expenses are to be borne by each party equally. M. M. Hwath, *The Delagoa Bay Arbitration (Port and Bay Rev., Sept., 1900)*.

DELAWARE: A. D. 1897. A new Constitution. A new constitution for the State of Delaware, which went into effect June 10, 1897, provides that after January 1, 1900, no citizen shall vote who cannot write his name and read the constitution in the English language. It also provides a registration fee of one dollar as a qualification to vote.

DOMINICAN REPUBLIC: A. D. 1899. Assassination of President Heureaux. Revolution.—Election of President Jimenez.

General D. Fies Heureaux, President of the Republic, was shot through the heart by an assassin and not only killed, on the 26th of July. He was in his fourth consecutive term as president, and had occupied that position for fifteen years, although still a young man. San Domingo had been free from revolution, more prosperous, better inclined toward outside capital and enterprise, and more disposed toward the ways of modern civilization, under Heureaux, than at any previous time, for many decades. Although nominally a republic, San Domingo was ruled by this non-willed and resolute negro with a stern despotism hardly matched by any other contemporary government on earth. He was superior to all law. He constantly made use of the practice of executing officials, generals, and well-known public men with his own hand whenever dissatisfied with them. Still more frequently, when the objects of his disapproval were not within easy traveling distance, he gave orders to some officer or subordinate, dependent upon his favor, to undertake an assassination. Failure to comply promptly and successfully with such a mandate meant death to the men who failed. These statements convey no exaggerated impression of the way in which Heureaux has ruled San Domingo, nipped insurrection in the bud, and kept himself in power.

He always excused his ruthlessness on the ground of public necessity. Of course, it was inevitable that a man should sooner or later be assassinated himself. *The Review of the Times*, Sept. 1, 1899.

According to the provisions of the constitution, the Vice-President, General Figueroa, succeeded to the presidency, but an insurrection against his government was so rapidly successful that he resigned his office on the 31st of August, and a provisional government was created pending arrangements for an election. The recognized leader of the revolutionary movement was Juan Isidro Jimenez, who had been exiled some years before, to quit San Domingo, at account of his opposition to Heureaux, but he had left property behind. Since that time, he had been a successful and well-known merchant in New York. Latterly, Jimenez had

established himself in Cuba, where he had attempted to assist as well as direct the revolution in the neighboring island, but the Cuban authorities objected to such assistance, and he was placed under arrest. When released, however, he was permitted to proceed to San Domingo, without men or arms, and there he was charged with assuming the office on the 14th of November.

DUM-DUM BULLET, The. The dum-dum bullet, about which there was much discussion at The Hague Peace Conference, is constructed to spread slightly at the point. All modern bullets have an outer jacket of hard material, like the grooving of the gun barrel. Originally the jacket was thickest at the point and so strong that, while penetration was enormous, stopping power was wanting; in other words, one bullet might easily go through half a dozen men, yet, unless it happened to hit a vital spot or a bone, they need not be disabled and might therefore continue to fight. This was amply illustrated in the Chitral campaign, during which our soldiers began to lose confidence in their weapon, while the enemy, quick to recognize the different effect of volleys, were inclined to attack British infantry armed with the Lee-Metford rather than native infantry armed with the Martini Henry. The Indian military authorities at once set about designing a bullet which, while maintaining range, should have the required stopping power. The result was the dum-dum bullet—so named after the place near Calcutta where it is made—of which much has been heard. The difference in appearance between it and the original pattern is comparatively slight. The shape is exactly the same, but the jacket is differently arranged, instead of having its greatest strength at the point, it is weakest there; indeed, at the apex a small part of the core is uncovered, but does not project. *—Quarterly Review, July, 1899.*

DUTCH EAST INDIES: A. D. 1894.—Revolt in Lombok.—A rising in the island of Lombok, one of the Lesser Sunda group, which began in August, proved a troublesome affair.

The cause of the rebellion was the conscription made to the Sasaks, to be henceforth armed by their own chiefs, instead of by the Dutch chiefs, who had hitherto been all-powerful. During the continuance of the hostilities, the Sasaks remained constantly faithful to the

DUTCH EAST INDIES.

and fought against the Balintina who, after a series of murders, had nevertheless followed the energy and audacity of the natives, and as early as 1894 Dutch troops had been in serious conflict with them. The news of this disaster had great excitement and public was anxious in its demand for speedy and effective reprisals. Several severe and

EDUCATION.

bloody encounters took place, but finally the Dutch troops, under the orders of General Veltor, succeeded in making the Rajah of Lombok prisoner, his immense wealth falling at the same time into the hands of the victors."—*Tanaka Register*, 1894, p. 308.

ECUADOR. A. D. 1894-1899.—Successful Revolution. Government measures against the Church. In the fall of 1894 the government of Cárdenas ostensibly to that of Ecuador was a vessel, which the latter at once transferred to the Republic. The Republic was regarded with suspicion, the government being accused of a conspiracy to overthrow the Republic. Much feeling on the subject was expressed in the country, and this gave to the Republic an opportunity to stir up revolt. They improved it with success. After an obstinate civil war of more than six months the government of President Cordero was overthrown, and General Aloy Alfaro, the revolutionary leader, was inaugurated Executive Chief of the Republic on the 14th of November, 1895. The Liberal Conservatives, stimulated by the success, were again in arms, and in the summer of 1896 they were overcome, and the government of Alfaro began to deal severely with the religious orders and the Church. Much church property was confiscated, and the houses of religious houses are said to have fled in great numbers to other countries. In October 1896 a National Convention was held to revise the constitution. Among other things it imposed limitations on the power of the Church, and extended religious freedom to other sects. In 1897 the Indians were granted citizenship. A renewed attempt at revolution that year, organized and armed in secret, was suppressed with the help of the United States government. The same fate attended another outbreak of rebellion in June, 1899, but it was overcome only after a hard fight.

Philippine Islands: A. D. 1898. Schools and colleges under the Spanish régime.—"The only educational advantages attainable by

the common people of the archipelago are those afforded by the primary schools. The Spanish regulations provided that there should be one teacher and one female primary school teacher for each 1,000 inhabitants, instruction being given separately to the two sexes. This wretchedly inadequate provision was, as a matter of fact, never carried out. From a table showing the relation between number of primary school teachers and population in the several provinces, etc., it appears that the number of teachers of each sex required by law for a population of 6,000 is only 4,44, making a total of 2,684 teachers, whereas there are in reality but 390 male teachers and 1,904 female teachers, giving a total of 3,294. From another table showing the question of sex, we see that where there should be one teacher for each 1,000 inhabitants there is in reality but one teacher to 1,000 even if we include only that portion of the population sufficiently civilized to be taken account of in the above enumeration. Taking the entire population at 8,000,000, we find that there is but one teacher to each 4,170 males. Examination of the table further shows that in many instances the lack of teachers is greater in those provinces which are most thickly populated and whose people are most thickly civilized.

Where most of the small towns have one teacher of each sex, in the larger towns and cities much greater provision is made for the increased teaching force necessary, so that places of 30,000 or 40,000 inhabitants are often no better off as regards number of teachers than are other places in the same province of but 1,500 or 2,000 souls. The handicap thus involved for children desirous of primary education will be better understood if one stops to consider the nature of the Philippine people, which is really a township, often containing within its limits a considerable number of distinct and important villages or towns, from the most important of which the township takes its name. The others, under distinct names, are known as *barrios*, or wards. It is often quite impossible for small children to attend school at the particular town which gives its name to the township on account of their distance from it.

The character and amount of the instruction which has heretofore been furnished is also worthy of careful consideration. The regulations for primary schools were as follows: "Instruction in schools for natives shall for the present be reduced to elementary primary instruction and shall consist of: 1. Christian doctrine and principles of morality and sacred history suitable for children. 2. Reading. 3. Writing. 4. Practical instruction in Spanish, including grammar and orthography. 5. Principles of arithmetic, comprising the four rules for figures, common fractions, decimal fractions, and instruction in the metric system with its equivalents in ordinary weights and measures. 6. Instruction in general geography and Spanish history. 7. Instruction in practical agriculture as applied to the products of the country. 8. Rules of deportment. 9. Vocal music."

It will be noted that education in Christian doctrine is placed before reading and writing, and if the natives are to be believed, in many of the more remote districts instruction began and ended with this subject and was imparted in the most haphazard of that. It is further noted

persistently charged that the instruction in Spanish was in very many cases purely nominal, because the local friars, who were formerly the official school inspectors, not only practically but took active measures to enforce this statement.

Ability to read and write a little in the local native language was comparatively common. Instruction in geography was extremely superficial. As a rule no maps or charts were available, and such information as was imparted orally was left to the memory of the pupil, unaided by any graphic method of presentation. The only history ever made use of that of Spain and the under-conception of citizenship. The history of other nations was a closed volume to the average Filipino. The course as above outlined was the curriculum for boys. Girls were not given instruction in geography, history, or agriculture, but in place of these subjects were supposed to receive instruction in employments suitable to their sex.

It should be understood that the regulations which have been here made apply to the provincial schools. The primary instruction given at the Ateneo Municipal at Manila under the direction of the Jesuits, fulfilled the requirements of the law, and in some particulars exceeded them.

The only official institution for secondary education in the Philippines was the College of San Juan de Letran, which was in charge of the Dominican Friars and was under the control of the university authorities. Secondary education was also given in the Ateneo Municipal at Manila, by the Jesuit Fathers, and this institution was better and more modern in its methods than any other in the archipelago. But although the Jesuits provided the instruction, the Dominicans held the examinations. . . . There are two normal schools in Manila, one for the education of male and the other for the education of female teachers. . . . The only institutions for higher education in the Philippines have been the Royal and Pontifical University of Santo Tomas and the Royal College of San José, which has for the past twenty-five years been under the direction of the university authorities. — *Report of the Philippine Commission, Jan. 1, 1900, p. 173.*

A. D. 1885-1896.—Abandonment of the Egyptian Sudan to the Dervishes.—Death of the Mahdi and reign of the Khalifa.—Beginning of a new Anglo-Egyptian movement for the recovery of the Sudan.—The expedition to Dongola.—After the failure to rescue General Gordon from the Mahdists at Khartoum (see, in this vol. (EGYPT. A. D. 1884-1885), the British Government, embarrassed in other quarters, felt compelled to evacuate the Sudan.—Before it did so, the Mahdi had finished his career, having died of dysentery in June 1885, and one of his three sons, styled Khalifas, had acquired authority over the Dervish army and reigned in Dongola.—This was the Khalifa Abdullah, a member of the Baggara tribe.—Khartoum had been destroyed, and Omdurman, on the opposite bank of the river, became his capital.—The reign of the Khalifa was soon made so cruelly despotical, and so much in the interest of his own race, that incessant rebellions in many parts of his Empire restrained him from any vigorous achievement of the conquest of Egypt, which was the great object of Dervish desire.—But his energetic lieutenant in the Eastern Sudan, Osman Digma, was a serious menace to the Egyptian forces holding Suakin, where Major Watson at first and afterwards Colonel Kitchener were holding command, under General Gordon, who was then the Egyptian Sirdar, or military chief.—Osman Digma, however, was defeated by British attempts.—At the same time the Khalifa was desperately at war with the Negus, Emperor of Abyssinia, who fell in a great battle at Gera on March 1889, and whose death at the close of the battle threw his army into confusion and secured its defeat.—Menelik, king of the Empire of Shoa, acquired the Abyssinian throne, and war with the Dervishes was stopped.—The Negus began an advance down the Nile, and secured a great defeat from the British and Egyptian troops at Fosh, on the 15th of Aug. 28, 1890.—From that time, for several years, there was no real menace to Egypt, and little was heard of the Khalifa.—His borders were limited to the north by the British in Egypt, on the south by the British in Egypt, on the west by the Belgians in the Congo Free State, and by the French in the Western Sudan, whilst the Italians held Kassala to the east, so that the Khalifa preferred to conserve his resources until the inevitable day should arrive when he would have to fight for his throne.

A crisis in the situation came in 1896.—The Egyptian army, organised and commanded by British officers, had become a strong fighting

force, on which its leaders could depend.—Its Sirdar was now Major-General Sir Herbert Kitchener, who succeeded General Grenfell in 1892.—Suddenly there came news early in March, 1896, of the serious reverse which the Italians had suffered at Adowa in their war with the Abyssinians (see, in this vol. (ITALY. A. D. 1895-1896)).—The consternation felt in England and Egypt at this disaster deepened when it became known that Kassala, which was held by the Italian forces, was hemmed in and threatened by 10,000 Dervishes, and that Osman Digma was marching there with reinforcements.—If Kassala fell into the hands of the Dervishes, the latter would be left base to overrun the Nile valley on the frontier of Egypt, and threaten that country itself.—As if in anticipation of these reinforcements, the Dervishes suddenly assumed an offensive attitude, and it was rumoured that a large body of Dervishes were contemplating an immediate advance on Egypt.—A totally new situation was now created, and immediate action was rendered imperative.—Everything was ripe for an expedition up the Nile.—Whilst creating a diversion in favour of the Italians besieged at Kassala, it afforded an opportunity of creating a stronger barrier than the Wady Halfa boundary between Egypt and the Dervishes, and it would moreover be an important step towards the long wished for recovery of the Sudan.—The announcement of the contemplated expedition was made in the House of Commons on the 17th of March, 1896, by Mr. Curzon, Under Secretary for Foreign Affairs.—It came as a great surprise to the whole country, which, having heard so little of the Dervishes of late years, was not prepared for a recrudescence of the Sudan question. [But a vote of censure on the Egyptian policy of the government, moved by Mr. John Morley in the House of Commons, was rejected by 288 to 145.]

An unexpected difficulty arose in connection with the financing of the expedition.—This is explained very plainly and concisely in the "Annual Register" 1896, which we quote at length.—"In order to defray the cost of the undertaking, it being obviously desirable to impose as little strain as possible on the slowly recovering finances of Egypt, it was determined by the Egyptian Government to apply for an advance of £500,000 from the General Reserve Fund of the Caisse de la Dette, and the authorities of the Caisse obligingly handed over the money.—However, the French and Russian members of the Caisse de la Dette protested against the loan which the Caisse had made.—In December (1896) the International Court of Appeal required the Egyptian Government to refund to the Caisse the £500,000 which they had secured.—The very next day Lord Cromer offered an English loan to make good the advance.—The Egyptian Government accepted his offer, and repaid immediately

the £500,000 to the Chisse, and the result of this somewhat absurd transaction is that England has thus strengthened her hold on another small point on the Government of Egypt. H. S. L. Alfred and W. D. Sword, *The Egyptian Sudan, its Loss and Recovery*, ch. 4. London: Macmillan & Co.

On the 21st of March, the Sirdar left Cairo for Assuan and Wady Halfa, and various Egyptian battalions were hurried up the river. Meantime, the forces already on the frontier had moved forward and taken the advanced post of the Dervishes at Akashah. From that point the Sirdar was ready to begin his advance early in June, and did so with two columns, a River Column and a Desert Column, the latter including a camel corps and a squadron of infantry mounted on camels, besides cavalry, horse-artillery and Maxim guns. Ferket, on the east bank of the Nile, 16 miles from Akashah, was taken after hard fighting on the 7th of June, many of the Dervishes refusing quarter and resisting to the death. They lost, it was estimated, 1,000 killed and wounded and 200 were taken prisoners. The Egyptian loss was slight. The Dervishes fell back some fifty miles, and the Sirdar halted at Souda during three months, while the railroad was pushed forward, steamers dragged up the cataracts and stores concentrated, the army suffering greatly, meantime, from an alarming epidemic of cholera and from exhausting labors in a season of terrific heat. In the middle of September the advance was resumed, and, on the 23d, Dongola was reached. Seeing themselves outnumbered, the enemy there retreated, and the town, or its ruins, was taken with only a few shots from the steamers on the river. "As a consequence of the fall of Dongola every Dervish fled for his life from the province. The mounted men made off across the desert direct to Omdurman, and the foot soldiers took the Nile route to Berber always being careful to keep out of range of the gunboats, which were prevented by the Fourth Cataract from pursuing them beyond Merawi." — C. Royle, *The Egyptian Campaign, new and revised ed.*, to December, 1890, ch. 50-51.

The Emir who commanded at Dongola was a comparatively young man, Mohammed Wad el Bishara, who seems to have been possessed by a very genuinely religious spirit, as shown in the following letter, which he had written to the Dervish commander at Ferket, just before the battle there, and which was found by the British officers when they entered that place: "You are thank God, of good understanding, and are thoroughly acquainted with those rules of religion which enjoin love and union. Thanks be to God that I hear but good reports of you. But you are now close to the enemy of God, and have with you, with the help of God, a sufficient number of men. Therefore request you to unite together, to have the heart of a single man founded on love and unity. Consult with one another and thus you will insure good results, which will strengthen the religion and vex the heathen, the enemies of God. Do not move with out consulting one another, and such others, also, in the army who are full of sense and wisdom. Employ their plans and tricks of war, in the general fight more especially. Your army, thank God, is large; if you unite and act as one hand, your action will be regular; you will, with the help of God, defeat the enemies of God and set

at ease the mind of the khalifa, peace be to him! Follow this advice, and do not allow any intrigues to come between you. Rely on God in all your dealings, be bold in all your deeds, with the enemy; let them find no flaw in your disposition for the fight. But be ever most vigilant for these enemies of God are cunning, may God destroy them! Our brethren, Mohamed Koki, with two others, bring you this letter on their return they will inform me whether you work in union or not. Let them truly be ordered in religion, in good spirits, doing your utmost to insure the victory of religion. Remember, my brethren, that what moves me to urge on you to love each other and to unite is my love for you and my desire for your good. This is a trial of war; so for us love and unity are of utmost necessity. You were of the supporters of the Mahdi, peace be on him! You were as one spirit occupying one body. When the enemy know that you are quite united they will be much provoked. Strive, therefore, to provoke these enemies of religion. May God bless you and render you successful."

A. D. 1895.—New anti-slavery law.—A convention to establish a more effective anti-slavery law in Egypt was signed on the 21st of November, 1895, "by the Minister of Foreign Affairs, representing the Khedival Government, and the British diplomatic agent and consul-general. . . . This new convention will supplant that of August 4, 1877, which . . . was found to be defective, inasmuch as it provided no penalty for the purchaser of a slave, but for the seller only. An Egyptian notable, Ali Pasha Cherif, at that time president of the Legislative Council, was tried for buying slaves for his household, but escaped punishment through a technicality of the law hitherto escaping notice. . . . Under the existing regulations, every slave in the Egyptian dominions has the right to complete freedom, and may demand his certificate of manumission whenever he chooses. Thus all domestic slaves, of whom there are thousands in Cairo, Alexandria, and the large towns may call upon their masters to set them free. Many choose to remain in nominal bondage, preferring the certainty of food and shelter to the hardships and uncertainty of looking after themselves." — *United States Consular Reports*, March, 1896, p. 370.

A. D. 1897.—Italian evacuation of Kassala, in the eastern Sudan. See (in this vol.) ITALY, A. D. 1897.

A. D. 1897 (June).—Census.—A census of Egypt, taken on the 1st of June, 1897, showed a population of 9,700,000, the area being Egypt up to Wady Halfa. In 1882 an imperfect census gave six and three-quarter millions. Twelve per cent. of the males can write, the rest are totally illiterate. There are, it is said, about 40,000 persons not really Egyptians, but who come from other parts of the Ottoman Empire. The Bedonin number 570,000, but of these only 80,000 are really nomads, the rest being semi-sedentary. Of foreign residents there are 112,500 of whom the Greeks, the most numerous, number 38,000. Then come the Italians, with 24,500. The British (including 6,500 Maltese and 5,000 of the Army of Occupation) are 19,500, and the French (including 4,000 Algerians and Tunisians) 14,000. The Germans only number 1,300. The classification according to religion shows nearly

quod non Muslims, 750,000 Christians, and 25,000 Jews. The Christians include the Coptic population being about 608,000. Only a very small proportion profess the Roman Catholic and Protestant faiths. Amongst the town population, the population of 750,000, Alexandria 320,000.

A. D. 1897-1898. — The final campaigns of the Anglo-Egyptian conquest of the Eastern Sudan. Desperate battles of the Atbara and of Omdurman. — "The winter of 1896-1897 was passed undisturbed by the enemy. The exhausted and open front of the Egyptian army imperatively called for fresh guarantees against a Dervish invasion. The important strategic position of Abu Hamed was then held by the enemy, to dislodge whom was the objective of the 1897 campaign. The railway was boldly launched into the Sudan Desert; the rail head crept rapidly and surely towards the Dervish post, still within striking distance of Abu Hamed, when the river column, by a forced march, through difficult country, delivered an attack on 7th August. Abu Hamed was taken by the Egyptian army under Major General Sir Archibald Hunter, with trifling loss, and the effect of this victory caused the precipitate evacuation of Berber. The Dervishes withdrew, the Egyptians—not to lose so favourable an opportunity—advanced. Berber, the key to the Sudan, was promptly re-occupied. The railway was hurried forward, reinforcements were demanded, but in the close of the year, at a short distance from Berber, and the Anglo-Egyptian army, gathered force for the last heat. British troops were called up. In this final struggle (1898) nothing could be risked. An Egyptian reverse would have rebalanced the task of the accomplishment of which, having deliberately accepted it, we had pledged our honour. Mahdism, the Dervish emir, and that ubiquitous rascal Osman Digma, with their united forces, were pushing on Berber. They, however, held up at the confluence of the Atbara, and comfortably entrenched themselves in a 'zariba.' Here the Sudan came out to have a look at them. The Dervish force numbered about 19,000 men. The Anglo-Egyptian army was composed of 13,000 men. The odds were good enough for the Sirdar, and he went for them. Under the demoralization created by some sharp artillery practice the Anglo-Egyptians stormed the 'zariba,' killed three-fourths of the defenders, and drove the remainder away. This victory [April 8, 1898], which cost over 500 men in killed and wounded, broke the Dervish power for offence and seriously damaged the Khalifa's prestige. With reinforcements bringing his army up to 22,000 men, including some picked British regiments, the Sudan then advanced slowly up the river. It was a pilgrimage to the Mahdi's tomb, in sight of which Cross and Crescent combined to overthrow the false prophet. This sanguinary and decisive engagement [before Omdurman] took place on 2nd September, 1898. The Khalifa was put to flight; his forces were scattered and ridden down. On the same evening, the Sirdar entered Omdurman, and released the European captives. Subsequently, the British and Egyptian troops were hoisted together at Khartum; and divine service was celebrated at the spot where Omdurman fell." — A. S. White, *The Expansion of Egypt*, 1898, 4 (N. Y.: New Amsterdam Book Co.).

"The honour of the fight [at Omdurman] must still go with the men who died. Our men were perfect, but the dervishes were superb, beyond perfection. It was their largest, best, and bravest army that ever fought against us for Mahdism, and it died worthily of the huge empire that Mahdism won and kept so long. The rifle men, mangled by every kind of death and torment that man can devise, clung round the black flag and the green, emptying their poor, rotten, home-made cartridges dauntlessly. Their spearmen charged death at every minute hopelessly. Their horsemen led each attack, riding into the bodies till nothing was left but three horses trotting up to our line, heads down, saying, 'For goodness' sake, let us in out of this.' Not one rush or two, or ten, but rush on rush, company on company, never stopping, though all their view that was not unshaken enemy was the bodies of the men who had rushed before them. A dusky line got up and stormed forward, it bent, broke up, fell apart, and disappeared. Before the smoke had cleared, another line was bending and storming forward in the same track.

"It was over. The avenging squadrons of the Egyptian cavalry swept over the field. The Khalifa and the Sheikh el Dm had galloped back to Omdurman. Ali Wad Helu was borne away on an augur with a bullet through his thigh-bone. Yakub lay dead under his brother's banner. From the green army there now came only death-mannoured desperadoes, strolling one by one towards the rifles, pausing to shake a spear, turning aside to recognise a corpse, then, caught by a sudden jet of fury, bounding forward, chucking, sinking limply to the ground. Now under the black flag in a ring of bodies stood only three men, facing the three thousand of the Third Brigade. They folded their arms about the staff and gazed steadily forward. Two fell. The last dervish stood up and filled his chest; he shouted the name of his God and hurled his spear. Then he stood quite still, waiting. It took him full; he quivered, gave at the knees, and toppled with his head on his arms and his face towards the legions of his conquerors. Over 11,000 killed, 16,000 wounded, 4,000 prisoners—that was the astounding bill of dervish casualties officially presented after the battle of Omdurman. Some people had estimated the whole dervish army at 1,000 less than this total, few had put it above 50,000. The Anglo-Egyptian army on the day of battle numbered, perhaps, 22,000 men. If the Allies had done the same proportional execution at Waterloo, not one Frenchman would have escaped. . . . The dervish army was killed out as hardly an army has been killed out in the history of war. It will shock you, but it was simply unavoidable. Not a man was killed except resisting—very few except attacking. Many wounded were killed, it is true, but that again was absolutely unavoidable. . . . It was impossible not to kill the dervishes; they refused to go back alive."

The same brilliant writer gives the following description of Omdurman, as the British found it on entering the town after the victory. . . . It began just like any other town or village of the mean Sudan. Half the huts seemed left unfinished, the other half to have been deserted and fallen to pieces. There were no streets, no doors or windows except holes, usually no roofs. As for a garden, a tree, a standing for a beast—any

evidence of thrift or intelligence, any attempt at comfort or amenity or common cleanliness, not a single trace of any of it. Omdurman was just planless confusion of blind walls and gaping holes, shiftless stupidity, contented filth and beastliness. But that, we said, was only the outskirts; when we came farther in we shall surely find this mass of population manifesting some small symbols of a great dominion. And presently we came indeed into a broader way than the rest—something with the rude semblance of a street. Only it was paved with dead donkeys, and here and there it disappeared in a chandler of deep holes where green water festered. . . . Omdurman was a rabbit warren—a threadless labyrinth of tiny huts or shelters, too flimsy for the name of sheds. Oppression, stagnation, degradation, were stamped deep on every yard of miserable Omdurman.

But the people! We could hardly see the place for the people. We could hardly hear our own voices for their shrieks of welcome. We could hardly move for their importunate greetings. They tumbled over each other like ants from every mud heap, from behind every dung hill, from under every mat. . . . They had been trying to kill us three hours before. But they saluted, none the less, and volleyed, 'Peace be with you' in our track. All the miscellaneous tribes of Arabs whom Abdullah's fears or suspicions had congregated in his capital, all the blackish caputins had gathered together into franker slavery—indiscriminate, half-naked, grinning the grin of the sycephant, they held out their hands and asked for bakshesh. Yet more wonderful were the women. The multitude of women whom concupiscence had harried from every recess of Africa and mewed up in Bazarah harems came out to salute their new masters. There were at least three of them to every man. Black women from Equatoria and almost white women from Egypt, plum-skinned Arabs and a strange yellow type with square, boy faces and tightly ringleted black hair. . . . the whole city was a huge harem, a museum of African races, a monstrosity of African lust."—G. W. Stevens, *With Kitchener to Khartum*, ch. 32-34 (copyright, Dodd, Mead & Co., quoted with permission).

"Anyone who has not served in the Sudan cannot conceive the state of devastation and misery to which that unfortunate country has been brought under Dervish rule. Miles and miles of formerly richly cultivated country lies waste; villages are deserted; the population has disappeared. Thousands of women are without homes or families. Years must elapse before the Sudan can recover from the results of its abandonment to Dervish tyranny; but it is to be hoped and may be confidently expected, that in course of time, under just and upright government, the Sudan may be restored to prosperity; and the great battle of September will be remembered as laying established peace, without which prosperity would have been impossible; and from which thousands of misguided and wretched people will reap the benefits of civilization."—E. S. Wortley, *With the Sirdar* (Scribner's Magazine, Jan., 1899).

A. D. 1898. — The country and its people after 15 years of British occupation.—"The British occupation has now lasted for over fifteen years. During the first five, comparatively little

was accomplished, owing to the uncertain and provisional character of our tenure. The work done has been done in the main in the last ten years, and was only commenced in earnest when the British authorities began to realise that, whether we liked it or not, we had got to stay, and the Egyptians themselves came to the conclusion that we intended to stay. . . . Under our occupation Egypt has been rendered solvent and prosperous, taxes have been largely reduced, her population has increased by nearly 50 per cent., the value and the productiveness of her soil has been greatly improved; a regular and permanent system of irrigation has been introduced into Lower Egypt, and is now in the course of introduction into Upper Egypt; trade and industry have made giant strides; the use of the Kurbash [bastinado] has been forbidden; the Corvée has been suppressed; regularity in the collection of taxes has been made the rule, and not the exception; wholesale corruption has been abolished; the Fellahs can now keep the money they earn, and are better off than they were before; the landowners are all richer owing to the fresh supply of water, with the consequent rapid increase in the saleable price of land; justice is administered with an approach to impartiality; barbarous punishments have been mitigated, if not abolished; and the extraordinary conversion of Cairo into a fair semblance of a civilised European capital has been repeated on a smaller scale in all the chief centres of Egypt. To put the matter briefly, if our occupation were to cease to-morrow, we should leave Egypt and the Egyptians far better off than they were when our occupation commenced.

"If, however, I am asked whether we have succeeded in the alleged aim of our policy that of rendering Egypt fit for self government, I should be obliged honestly to answer that in my opinion we have made little or no progress towards the achievement of this aim. The one certain result of our interference in the internal administration of Egypt has been to impair, if not to destroy, the authority of the Khedive, of the Mudirs, who, as the nominees of the Effendi, rule over the provinces; and of the Shieks, who, in virtue of the favour of the Mudirs, govern the villages. We have undoubtedly trained a school of native officials who have learnt that it is to their interest to administer the country more or less in accordance with British ideas. Here and there we may have converted an individual official to a genuine belief in these ideas. But I am convinced that if our troops were withdrawn, and our place in Egypt was not taken by any other civilised European Power, the old state of things would revive at once, and Egypt would be governed once more by the old system of Bakshesh and Kurbash"—E. Dicey, *Egypt, 1881 to 1897* (Fortnightly Rev., May, 1898).

Reviewing the report, for 1898, of Lord Cromer, the British Agent and Consul General, who is practically the director of the government of Egypt, "The Spectator" (London) has noted the principle of Lord Cromer's administration to be that of "using English heads but Egyptian hands. In practice this means the policy of never putting an Englishman into any post which could be just as well filled by a native. In other words, the Englishman is only used in the administration where he is indispensable. Where he is not, the native, as is only just and

right, is employed. The outcome of this is that Lord Cromer's work in Egypt has been carried out by a body of officials who certainly do not exceed one hundred in number, and might possibly, if the figures were vigorously examined, be somewhat lower. Lord Cromer adds, however, that these hundred have been selected with the greatest care. In fact, the principle has been, never employ an Englishman unless it is necessary in the interests of good government to do so, but then employ a first class man. The result is that the inspiring force in every Department of the Egyptian State is a first class English brain, and yet the natives are not depressed by being deprived of their share of the administration. The Egyptians, that is, do not feel the legitimate grievance that is felt by the Tunisians and Algerians when they see even little posts of a couple of hundred a year filled by Frenchmen.—*Spectator*, April 15, 1899.

A. D. 1898 (September—November).—**The French expedition of M. Marchand at Fashoda.**—On the 10th of September, eight days after destroying the power of the Khalifa at Omdurman, the Sirdar, Lord Kitchener, left that fallen capital with five gunboats and a considerable force of Highlanders, Sudanese and Egyptians, to take possession of the Upper Nile. At Fashoda, in the Shilluk country, a little north of the junction of the Sobat with the White Nile, he found a party of eight French officers and about a hundred Senegalese troops, commanded by M. Marchand entrenched at the old government buildings in that place and claiming occupation of the country. It had been known for some time that M. Marchand was leading an expedition from the French Congo towards the Nile, and the British government had been seeking an explanation of his objects from the government of France, uttering warnings, at the same time, that England would recognize no rights in any part of the Nile Valley except the rights of Egypt, which the evacuation of the Egyptian Sudan, consequent on the conquests of the Mahdi and the Dervishes, had not extinguished. Even long before the movements of M. Marchand were known, it had been suspected that France entertained the design of extending her great possessions in West Africa eastward, to connect with the Nile, and, as early as the spring of 1895, Sir Edward Grey, speaking for the British Foreign Office, in reply to a question then asked in the House of Commons, concerning rumors that a French expedition from West Africa was approaching the Nile, said with unmistakable meaning: "After all I have explained about the claims we consider we have under past Agreements, and the claims which we consider Egypt may have in the Nile Valley, and adding to that the fact that those claims and the view of the Government with regard to them are fully and clearly known to the French Government? I cannot think it is possible that these rumors deserve credence, because the advance of a French expedition under secret instructions right from the other side of Africa into a territory over which our claims have been known for so long would be not merely an inconsistent and unexpected fact, but it must be perfectly well known to the French Government that it would be an extremely bad and would be so viewed by England." In December, 1897, the British Ambassador at Paris had called the attention of the French government to Sir Edward Grey's declaration,

adding that "Her Majesty's present Government entirely adhere to the language that was on this occasion employed by their predecessors."

As between the two governments, then, such was the critical situation of affairs when the Sirdar, who had been already instructed how to act if he found intruders in the Nile Valley, came upon M. Marchand and his little party at Fashoda. The circumstances and the results of the meeting were reported by him, promptly as follows: "On reaching the old Government buildings, over which the French flag was flying, M. Marchand, accompanied by Captain Germain, came on board. After complimenting them on their long and arduous journey, I proceeded at once to inform M. Marchand that I was authorized to state that the presence of the French at Fashoda and in the Valley of the Nile was regarded as a direct violation of the rights of Egypt and Great Britain, and that, in accordance with my instructions, I must protest in the strongest terms against their occupation of Fashoda, and their hoisting of the French flag in the dominions of His Highness the Khedive. In reply, M. Marchand stated that as a soldier he had to obey orders, the instructions of his Government to occupy the Bahr el Ghazal and the Mudirich of Fashoda were precise, and, having carried them out, he must await the orders of his Government as to his subsequent action and movements. I then pointed out that I had the instructions of the Government to re-establish Egyptian authority in the Fashoda Mudirich, and I asked M. Marchand whether he was prepared—on behalf of the French Government—to resist the execution of these orders; he must be fully aware, I said, that the Egyptian and British forces were very much more powerful than those at his disposal, but, at the same time, I was very averse to creating a situation which might lead to hostilities. I therefore begged M. Marchand to most carefully consider his final decision on this matter. I further informed him that I should be pleased to place one of the gun-boats at his disposal to convey him and his expedition north. In answer to this, M. Marchand did not hesitate to admit the preponderating forces at my disposal, and his inability to offer effective armed resistance; if, however, he said, I felt obliged to take any such action, he could only submit to the inevitable, which would mean that he and his companions would die at their posts. He begged, therefore, that I would consider his position, and would allow the question of his remaining at Fashoda to be referred to his Government, as, without their orders, he could not retire from his position or hand down his flag; at the same time, he said he felt sure that, under the circumstances, the orders for his retirement would not be delayed by his Government, and that then he hoped to avail himself of the offer I had made him. I then said to him: 'Do I understand that you are authorized by the French Government to resist Egypt in putting up its flag and reasserting its authority in its former possessions—such as the Mudirich of Fashoda?' M. Marchand hesitated, and then said that he could not resist the Egyptian flag being hoisted. I replied that my instructions were to hoist the flag, and that I intended to do so. . . . The Egyptian flag was hoisted . . . at 1 p. m. with due ceremony in the presence of the British and Egyptian troops, and a salute of twenty-one guns was fired. I should add that, in the course of the conversation, I informed M.

Marchand that, in addition to my verbal protest, I intended to make a formal protest in writing, and thus I duly handed him before leaving Fashoda. During these somewhat delicate proceedings, nothing could have exceeded the politeness and courtesy of the French officers. Having officially appointed Major Jackson Commandant of the Fashoda district, and leaving with him a battalion of infantry, four guns, and a gun boat, I proceeded south with the remainder of the troops and four gun boats.

I had no opportunity for a further interview with M. Marchand, who, I venture to think, holds at Fashoda a most anomalous position—encamped with 120 men on a narrow strip of land, surrounded by marshes, cut off from access to the interior, possessing only three small boats without oars or sails and an inefficient steam launch which has lately been dispatched on a long journey south, short of ammunition and supplies, his followers exhausted by years of continuous hardship, yet still persisting in the prosecution of his impracticable undertaking in the face of the effective occupation and administration of the country I have been able to establish. It is impossible not to entertain the highest admiration for the courage, devotion, and indomitable spirit displayed by M. Marchand's expedition, but our general impression was one of astonishment that an attempt should have been made to carry out a project of such magnitude and danger by the dispatch of so small and ill-equipped a force which—as their Commander remarked to me, was neither in a position to resist a second Derwish attack nor to retire—indeed, had our destruction of the Khedive's power at Omdurman been delayed a fortnight, in all probability he and his companions would have been massacred. The claims of M. Marchand to have occupied the Bahr el Ghazal and Fashoda Provinces with the force at his disposal would be ludicrous did not the sufferings and privations his expedition endured during their two years' arduous journey render the futility of their efforts pathetic. — *Great Britain, Parliamentary Publications (Papers by Command: Egypt, Nos. 2 and 3, 1898).*

The "Fashoda incident," as it was described, caused great excitement in both England and France, and threatened for some weeks to involve the two countries in war. Both army feeling and popular feeling in France very nearly forced the government to persist in what was plainly an ill-considered and inopportune movement, and to hold untenable ground. But better sense prevailed, and, on the 24 of November, when the Sirdar, Lord Kitchener, who had visited England, was being fettered and given the freedom of London, at Guildhall, Lord Salisbury was able to make a dramatic announcement of the closing of the dispute. "I received," he said, speaking at the banquet, "from the French ambassador this afternoon the information that the French Government had come to the conclusion that the occupation of Fashoda was of no sort of value to the French Republic, and they thought that, under those circumstances, to persist in an occupation which only cost them money and did them harm, merely because some people—some bad advisers—thought it might be disagreeable to an unwelcome neighbor, would not show the wisdom with which, I think, the French Republic has been uniformly guided, and they have done what I believe many other governments would have

done in the same position—they have resolved that the occupation must cease."

A. D. 1898-1899.—The Gordon Memorial College at Khartoum.—On an appeal from Lord Kitchener, funds were raised in Great Britain for the founding of a Gordon Memorial College at Khartoum, to be, in the first instance, a school for elementary instruction to the sons of the heads of districts and villages.

A. D. 1898-1901.—The Barrage and Reservoir works on the Nile.—In February, 1898, the Khedive in Council approved a contract concluded with the British firm of John Aird & Co., for the construction of a dam or "barrage" across the Nile at Assouan, drowning the cataracts and turning the river above into a storage reservoir; with another dam at Assiout for the irrigation of Middle Egypt and the Fayum. In the report of Lord Cromer for 1898, Sir William Garstin, at the head of the Egyptian Public Works Department, gave the following description of the plan of the works, then fairly under way. "The dam which is to form the reservoir will be built at the first cataract, a few miles south of Assouan. It is designed to hold up water to a level of 106 metres above mean sea level, or rather more than 20 metres above the low water level of the Nile at site. Its total length will be 2,156 yards with a width at crest of 26.4 feet. The width of base at the deepest portion will be 82.5 feet, and the height of the work at the deepest spot will be 92.4 feet. The dam will be pierced by 180 openings, or under sluices (140 of which are 23.4 feet by 6.6 feet and 40 are 18.2 feet by 6.6 feet) provided with gates. These sluices will pass the flood and surplus water through the dam, and by them the reservoir will be emptied when water is required for irrigation in Middle and Lower Egypt. Three locks will be built and a navigation channel made on the west of the river to enable boats to pass up and down.

"The dam at Assiout will be what is called an open Barrage, and will be similar in construction to the existing Barrages on the Rosetta and Damietta branches. The new work will consist of 111 bays or openings, each 16.5 feet wide and each bay will be provided with regulating gates. The total length of the work will be 903 yards. A lock 53 feet in width will be constructed on the west bank, large enough to pass the largest tourist boat plying on the river. By regulating on this Barrage water will be supplied in spring and summer to the Ibrahimieh Canal, which irrigates Middle Egypt. At present this canal has to be dredged to a depth of some 2 metres below the lowest summer level in the river, and even with these the crops suffer in years of low summer supply. A regulation bridge with a lock will be built at the head of the Ibrahimieh Canal in order to allow of the supply being reduced, if necessary, in flood." — *Great Britain, Papers by Command: Egypt, No. 3, 1899.*

By a singular happening, the Nile flood of 1899 was the lowest recorded in the century and gave an opportunity for the barrage and irrigation works, barely begun as they were, to give a convincing foretaste of their value. According to the report of that year, "the distress was enormously less than on all previous occasions of a failure of the flood. The area of 'sharaki' or land unirrigated and therefore untaxed, which had been 900,000 feddans in 1877 was only one

of this in 1890. "Ever in this area, which is a 'pecky' Upper Egypt, 'distress' says Sir William Girdlestone, 'was hardly felt at all by the people.' The immense amount of contract work in progress in the country enabled them to earn a good daily wage and toiled over the interval between the two crops." In Lower Egypt, however, there was saved by the Barrage, which, for the first time in its history, was regulated throughout the flood. Had it not been for the work done by this structure, there is little doubt that large areas of crop would have been lost. As it is, the cotton crop is very nearly the highest on record, and the maize crop was up to the average. Of the progress of the work at Assuan it is said, "After nearly a year had been spent in accumulation of material and various preparations, the foundation stone of the dam was laid by H. R. H. the Duke of Connaught on February 12; and from that date the work was carried on with less interruption than must have been necessitated by a normal flood. Beginning on the east bank, masonry was carried on throughout a length of 620 metres, and of these 360 metres were brought up to within two metres of their full height. . . . Not less satisfactory progress was made with the weir at Assuan, although the original design had to be considerably altered."

On the 7th of February, 1901, a Press despatch from Cairo reported, "Sir John Aird and Sir Benjamin Baker start for England on Sunday next, having completed their visit of inspection to the great engineering works at Assuan, where the immense dam to hold up the waters of the Nile is being constructed. The total extent of the dam is one mile and a quarter, of which one-third, or an eighth of the foundation is finished. Temporary dams enabling the remaining sections to be put in are now carried across the channel. Pumps for getting in the permanent dam foundations will be started next week. The whole of the granite masonry required for the dam is cut and ready to be laid in its place. The parapet alone remains to be prepared. The portion of the dam remaining to be built is that across the well-known deep western channel. The work is of considerable difficulty, but the experience gained last season in dealing with other channels has rendered the engineers and contractors confident that equal success will be obtained this year in the western channel. The dam is piled with 180 openings, about 23ft. high and 7ft. wide, which openings are controlled by steel sluices. The work for the latter is now well advanced. The discharge through these sluices at high Nile may reach 15,000 tons of water per second. The navigation channel and chain of locks are equally advanced with the dam itself, and the lock gates will also be in course of construction in about three months. Unless anything unforeseen occurs the reservoir will be in operation for the Nile flood of 1903. This will be well within the contract time, although owing to the increased depth of the foundations the work done by the contractors has been largely increased."

At Assut the great regulating dam across the Nile approaches completion, the foundations being practically in position, leaving a portion of the superstructure to be completed. The sluice openings here number 119, all 16ft. wide. This dam is somewhat similar in principle to the

well-known barrage near Cairo, but the details of construction are entirely different, as the foundations are guarded against undermining by a complete line of cast iron and steel piling above and below the work. The barrage itself is constructed of high class masonry instead of brickwork as at the old barrage. Although the Assut barrage is overshadowed by the greater magnitude of the Assuan dam, it will doubtless rank second as the monumental work of Egypt."

A. D. 1899 (January). The Anglo-Egyptian Condominium established in the Sudan.

—The following agreement between the British government and that of the Khedive of Egypt, relative to the future administration of the Sudan, establishing a condominium or joint dominion therein, was signed at Cairo on the 19th of January, 1899, and made public the same day.

Whereas certain provinces in the Sudan which were in rebellion against the authority of His Highness the Khedive have now been reconquered by the joint military and financial efforts of Her Britannic Majesty's Government and the Government of His Highness the Khedive; and whereas it has become necessary to decide upon a system for the administration of and for the making of laws for the said reconquered provinces, under which due allowance may be made for the backward and unsettled condition of large portions thereof, and for the varying requirements of different localities; and whereas it is desired to give effect to the claims which have accrued to Her Britannic Majesty's Government by right of conquest, to share in the present settlement and future working and development of the said system of administration and legislation; and whereas it is conceived that for many purposes Wadi Halfa and Suakin may be most effectively administered in conjunction with the reconquered provinces to which they are respectively adjacent; now, it is hereby agreed and declared by and between the Undersigned, duly authorized for that purpose, as follows:

ART. I. The word "Sudan" in this Agreement means all the territories south of the 22nd parallel of latitude, which: 1. Have never been evacuated by Egyptian troops since the year 1882; or 2. Which, having before the late rebellion in the Sudan been administered by the Government of His Highness the Khedive, were temporarily lost to Egypt, and have been reconquered by Her Majesty's Government and the Egyptian Government acting in concert; or 3. Which may hereafter be reconquered by the two Governments acting in concert.

ART. II. The British and Egyptian flags shall be used together, both on land and water, throughout the Sudan, except in the town of Suakin, in which locality the Egyptian flag alone shall be used.

ART. III. The supreme military and civil command in the Sudan shall be vested in one officer, termed the "Governor General of the Sudan." He shall be appointed by Khedivial Decree on the recommendation of Her Britannic Majesty's Government, and shall be removed only by Khedivial Decree, with the consent of Her Britannic Majesty's Government.

ART. IV. Laws, as also Orders and Regulations with the full force of law, for the good government of the Sudan, and for regulating the holding, disposal, and devolution of property of

every kind therein situated, may from time to time be made, altered or abrogated by Proclamation of the Governor General. Such Laws, Orders, and Regulations may apply to the whole or any named part of the Sudan and may, either explicitly or by necessary implication, alter or abrogate any existing Law or Regulation. All such Proclamations shall be forthwith notified to Her Britannic Majesty's Agent and Consul-General in Cairo, and to the President of the Council of Ministers of His Highness the Khedive.

Art. V. No Egyptian Law, Decree, Ministerial Arrêt, or other enactment hereafter to be made or promulgated shall apply to the Sudan or any part thereof, save in so far as the same shall be applied by Proclamation of the Governor General in manner hereinafter provided.

Art. VI. In the definition by Proclamation of the conditions under which Europeans, of whatever nationality, shall be at liberty to trade with or reside in the Sudan, or to hold property within its limits, no special privileges shall be accorded to the subjects of any one or more Powers.

Art. VII. Import duties on entering the Sudan shall not be payable on goods coming from Egyptian territory. Such duties may, however, be levied on goods coming from elsewhere than Egyptian territory, but in the case of goods entering the Sudan at Suakin, or any other port on the Red Sea littoral, they shall not exceed the corresponding duties for the time being leviable on goods entering Egypt from abroad. Duties may be levied on goods leaving the Sudan at such rates as may from time to time be prescribed by Proclamation.

Art. VIII. The jurisdiction of the Mixed Tribunals shall not extend, nor be recognized for any purpose whatsoever, in any part of the Sudan, except in the town of Suakin.

Art. IX. Until, and save so far as it shall be otherwise determined, by Proclamation, the Sudan, with the exception of the town of Suakin, shall be and remain under martial law.

Art. X. No Consuls, Vice Consuls, or Consular Agents shall be accredited in respect of nor allowed to reside in the Sudan, without the previous consent of Her Britannic Majesty's Government.

Art. XI. The importation of slaves into the Sudan, as also their exportation, is absolutely prohibited. Provision shall be made by Proclamation for the enforcement of this Regulation.

Art. XII. It is agreed between the two Governments that special attention shall be paid to the enforcement of the Brussels Act of the 2nd July 1890, in respect to the import, sale, and manufacture of firearms and their munitions, and distilled or spirituous liquors. Done in Cairo, the 19th January 1890. (Signed) Bontros Ghali Cromer. — A. S. White. *The Expansion of Egypt*, App. I. (N. Y.): New Amsterdam Book Co.

By a subsequent agreement signed July 10, the exceptions in the above relative to Suakin were abrogated.

A. D. 1890-1900.—Final defeat and death of the Khalifa.—Capture of Osman Digna.—Condition of the Sudan.—The Khalifa, who escaped from the scene of his overthrow at Omdurman, in 1898, kept a following of his own tribe, the Baggaras, sufficient to give trouble for

more than another year. At length, late in November, 1899, he was overtaken by Sir Francis Wingate, who succeeded General Kitchener as Governor General of the Sudan, and was killed in a battle fought near Gedli. Azam Osman Digna, his able lieutenant, escaped, but in January of the following year the latter was captured and taken to Suva.

In a report to Lord Salisbury, made on the 20th of February, 1900, Lord Cromer, British Agent and Consul General in Egypt, gave the following account of the general state of affairs in the Sudan: "The territorial situation may be briefly described as follows.—The frontier between the Sudan and the Italian Colony of Eritrea has now been delimited from Ras Kasar, on the Red Sea, to Sublerat, a few miles east of Kassala. Negotiations are proceeding which will, without doubt, result before long in the delimitation of the small remaining portion of the Italian frontier from Sublerat up to the point where it strikes Abyssinian territory. The most friendly relations exist between the British and Abyssinian Governments. The general basis of a frontier arrangement in respect to the country lying west of the Blue Nile has already been settled with the Emperor Menelik. When the survey party, now being employed, has finished its work, it may confidently be expected that the detailed delimitation will be carried out without much difficulty.

An endeavour is being made to cut through the sudd which obstructs the White Nile, and thus open up communication with Uganda. To a certain extent this communication may be said to be already established, for a mixed party, consisting of British, French, and Belgian officers, with their followers, arriving from the South, recently succeeded in getting through and joining the Egyptian party, under Major Peake, which was engaged in cutting the sudd.

From the moment of the Khalifa's crushing defeat at Omdurman, the desert and Kordofan tribes, with the exception of a certain number of Baggaras who still adhered to the cause of their Chief, threw in their lot with the Government. Most of these tribes, however, rendered but little active assistance to the Government in the subsequent operations against the Khalifa. Omdurman and the Ghezirah [the tract of country lying south of Khartoum, between the White and Blue Niles] were found to be full of Arabs belonging to the Kordofan and far western tribes, who had been brought from their homes by the Khalifa. They were without any regular means of subsistence, but, in the existing state of insecurity, it was for the time being impossible for them to return to their own districts. . . . The inhabitants of the districts which were raided by the Dervishes were obliged to take refuge in the Ghezirah, with the result that the situation remained practically unchanged until the Khalifa's overthrow and death. Since then, the main objects of the Government have been to send back to their homes the inhabitants of the gum-producing region, and to get rid of the useless months from the Ghezirah. In respect to the first point, some success has attended their efforts, but many thousands of Arabs belonging to tribes whose homes are in Kordofan and Darfour, still remain in the Ghezirah. . . . The attitude of the Nubas and of other tribes in Central and Southern Kordofan has, since the battle of Omdurman,

and perfectly satisfactory. Some long time must certainly elapse before prosperity returns to the tribes in the Soudan. The population has

A. D. 1894-1895.—Retirement of Mr. Gladstone from public life.—Earl of Rosebery Prime Minister.—His speech on the "predominant member" and Home Rule.—Weakening and overthrow of the Liberal Government.—Dissolution of Parliament.—Conservative and Unionist triumph.—Third Ministry of Lord Salisbury.—Mr. Gladstone, who had passed his 84th year, whose health was failing, and who might justly consider that his public work was done, resigned his post as Prime Minister on the 24 of March, 1894, and the Earl of Rosebery, on his recommendation, was called by the Queen to take his place. Slight changes, otherwise, were made in the cabinet, but the spirit in the Liberal government was no longer the same. The new Premier soon signified that his disposition in the matter of Home Rule for Ireland was not quite what Mr. Gladstone's had been, by using the following language in a speech (March 14) in the House of Lords:—"Before Irish Home Rule is conceded by the Imperial Parliament, England, as the predominant member of the partnership of the three kingdoms, will have to be convinced of its justice. That may seem to be a considerable admission to make, because your lordships will know that the majority of English members of Parliament, elected from England proper, are hostile to Home Rule. But I believe that the conviction of England in regard to Home Rule depends on one point alone, and that is the conduct of Ireland herself. I believe that if we can go on showing this comparative absence of agrarian crime; if we can point to the continued harmony of Ireland with the great Liberal party of this country; if we can go on giving proofs and pledges that Ireland is entitled to be granted that boon which she has never ceased to demand since the Act of Union was passed, I believe that the conversion of England will not be of a slow or difficult charac-

ter. My lords, the question of Home Rule is one that I regard not from the point of view of Ireland only. It has for me a triple aspect. It has, in the first place, the aspect that I believe that Ireland will never be contented until this measure of Home Rule be granted to her, and that, though you may come in on other issues and succeed as who sit here, your policy of palliatives is bound to fail. In the second place, I believe that not merely have we in our Irish policy to satisfy those who live in the island of Ireland itself, encompassed, as Mr. Disraeli once said, by that melancholy ocean, we have not merely to satisfy the Irish themselves within Ireland, but, for the good of our Empire and for the continuity and solidarity of our relations with our brethren across the Atlantic, it is necessary that we should produce an Irish policy which shall satisfy the Irish people. And, lastly, I view it from the highest Imperial grounds, because I believe that the maintenance of this Empire depends, not on centralization, but on decentralization, and that if you once commence to tread this path, you will have to give satisfaction under the same conditions certainly to Scotland, and possibly to Wales, not in the same degree or possibly in the same way, but so as to relieve this growing Imperial Parliament from the burden of legislation under which it labours. I will not detain you further on this subject to-night. I did not mean to dilate so much on the question of Home Rule."

His remarks seemed to show an intention to postpone the pressing of the measure. Distrust arose among the Irish and uncertainty was created in the mind of the Liberal party. It became evident very quickly that the Liberals, with the loss of their old leader, had lost heart and faith in the policy to which he had committed them, and that a serious weakening of the political energies of the party had been produced. No measures which raised troublesome issues were undertaken in Parliament during the year of Mr. Gladstone's retirement, but at the session which opened in the following Feb-

mary, 1895, the government brought forward a number of highly important bills.

The first to be introduced was a bill to reform the establishment of the Church of England in Wales and Monmouth. The bill made provision for the creation of a representative Church body giving power to the bishops, clergy and lay to hold synods and to legislate on ecclesiastical matters. It entrusted ecclesiastical revenues to a commission, provided for the transfer of churches and parsonages to the representative body of the Church and of land, grounds and glebes to parishes, district, and town councils, other property of the Church to be vested in the commission before mentioned, which had also leave the charge of cathedrals, to keep them in repair. The bill had its first reading on the 25th of February, and its second on the 1st of April but went no further. It shared the fate of the other measures of the Government, including a bill to establish local control of the liquor traffic, and others for the remedying of defects in the Irish Land Law, and for the abolition of plural voting, all of which were extinguished by the sudden and unexpected overthrow of the Government on the 21st of June. It was debated on a motion to reduce the salary of the Secretary for War, which was made for no purpose but to start a question as to the adequacy of the provision of certain ammunition stored for use. When the vote was found to be against the Government there was great surprise in both parties. But the Ministry had been steadily losing support and was quite willing to resign, which it did the next day.

Lord Salisbury was sent for by the Queen and accepted the task of forming a new Government with the understanding that Parliament should be dissolved as soon as practicable, and the will of the country ascertained. In the new Government, Lord Salisbury filled the office of Secretary of State for Foreign Affairs, with that of Prime Minister, Mr. A. J. Balfour became First Lord of the Treasury, Sir Michael Hicks-Beach Chancellor of the Exchequer, Mr. Joseph Chamberlain Secretary of State for the Colonies; Mr. G. J. Goschen First Lord of the Admiralty. Before the dissolution of Parliament, which occurred on the 6th of July, a bill for the amendment of the Factories Act, on which both parties agreed, was passed. The elections that followed beginning July 12 resulted in the return of a majority of 152 in favor of the new Ministry, which represented the coalition of Conservatives and Liberal Unionists. The majority of the popular vote on the same side in the three kingdoms was a little more than 30,000, in a total poll of 4,592,512; but in England the new Government received a majority of some 300,000. In Ireland the vote went heavily against them, and in Wales and Scotland to a lighter extent. Of the Irish members elected, 12 were of the Parnell faction and 69 Anti-Parnell. The new Parliament came together August 12, and after a brief session, at which little was done, was prorogued September 5.

A. D. 1896.—Report on Old-Age Pensions.—The question of the practicability and expediency of a national system of pensions for old age, which had been agitated in England for some years, and which a royal commission, appointed in 1893, had already examined with great thoroughness and no definite result was referred in 1896 to a committee of financial experts, with Lord Rothschild at their head. This committee reported that it could recommend no scheme as satisfactory, though it put forward that of Sir Spencer Walpole as open to less objection than others. The scheme in question was as follows: 1. Any person at 65 having an assured income of not less than 2s. 6d. and not more than 5s. may apply for a pension. 2. If the pensioning authority is satisfied as to the income a pension may be granted. 3. The applicant must not be physically or mentally infirm. 4. To an income of 2s. 6d. 2s. 6d. is to be added. To an income of 3s. 6d. 2s. 6d. is to be added. To an income of 4s. 6d. 1s. 6d. is to be added. 5. 'Assured income' includes real estate, household property, securities, or annuities (Government, friendly society, or insurance office), but not out-relief. 6. The guardians are to be the pensioning authority. 7. Not more than half of the pension is to be paid out of Imperial taxation, the remainder out of local rates. 8. The pension is not to involve disfranchisement.

The committee, however, pointed out some very strong objections to this scheme, which they roughly estimated as likely to apply to 443,363 persons, and to cost £2,300,000 a year. On the whole, while they regarded the Walpole

... as the best suggested the Rothschild... that like the rest, its inherent... outweighed its merits. In effect... of the establishment of old age... impracticable.

A. D. 1896 (June). The Agricultural Land Bill. Among the measures brought forward in Parliament this year and carried by the Conservative Government was one which aroused bitter opposition and was sharply denounced, as being legislation in the interest of the landholding class, at the expense of the community at large. A ground of protest for it was found by its supporters, however, in the extreme agricultural depression of the time. This Agricultural Land Bill, as it was styled, provided that, in the case of every rate to which it applied, agricultural land should be assessed in future on half its rateable value, while houses and buildings would still be assessed on the whole of their rateable value. The bill passed the Commons near the end of June, and went speedily through the House of Lords.

A. D. 1896-1897. "The Voluntary Schools Act" and "The Elementary Education Act." - The Conservative Ministry of Lord Salisbury

came to power. In England, in 1896, under pledges to the Church that it would revise the educational system in the interest of the Voluntary Schools (mostly Church schools) as against the secular or non-sectarian Board Schools. See in vol. I, EDUCATION. MODERN ENGLAND. A. D. 1890-1899, which were steadily gaining ground from the former, and proving superior efficiency. A bill which did for England and Wales was introduced at the end of March, 1896. In support of the bill it was stated that, in the previous year, the voluntary schools educated 2,445,812 children, as against 1,879,218 educated in the board schools, though the voluntary schools were, as a rule, "under-staffed," had less qualified teachers, and labored generally under financial difficulties, but that a large proportion of the members of the Church of England, as well as Roman Catholics, made it a point of conscience that their children should be educated by teachers of their own denomination, and could not be forced to send them to board schools without a gross exercise of religious intolerance. That, finally, it would cost £25,445,635 to replace the voluntary schools, and £2,250,000 yearly to maintain board schools in their place, if they were not kept up. Therefore, it was contended that they should receive a more liberal allowance of state aid by parliamentary grant, to keep them alive and improve their efficiency. Connected with provisions to that effect were others which would completely reorganize the system of school administration and control. They proposed to take the administration to a great extent from the Committee of Council on Education, where it had been centralized, and to place it in the County Councils, to be exercised by statutory educational committees appointed by each Council. By what was called a "conscience clause," the bill required separate religious instruction to be given to children in schools (board or voluntary) where ever a "reasonable number of parents" required it. The measure was strenuously opposed on the ground that its aim was the extinction of the board schools; that it would give them only £17,000 out of £300,000, and give it, said Lord Rosebery, "without any vestige of control, so that in 8,000 places where only Church of England schools existed the Nonconformists would have only the vague protection of the conscience clause." So much debate was provoked by the bill, and so much time was being consumed by it, that the Government was forced to drop the measure in June, in order to save the other business of the session from being spoiled, — promising, however, to bring it forward again the next January. The promise was redeemed, on the convening of Parliament in January, 1897, in so far that a new Education Bill was brought forward by the government; but the measure was very different from that of the previous session. It was addressed solely to the end of strengthening the voluntary or Church schools against the board schools, firstly by increasing the aid to them from public funds, and secondly by uniting them in organized associations, under stronger governing bodies. The main provisions of the bill were as follows:

"(1.) For aiding voluntary schools there shall be annually paid out of moneys provided by Parliament an aid grant, not exceeding in the aggregate five shillings per scholar for the whole number of scholars in those schools.

"(2) The aid grant shall be distributed by the Education Department to such voluntary schools and associations, and amounts as the Department think best for the purpose of helping necessitous school and increasing their efficiency, due regard being had to the maintenance of voluntary subscriptions.

"(3) If associations of schools are constituted in such manner in such areas and with such governing bodies representative of the managers as are approved by the Education Department, there shall be allotted to each association while so approved a share of the aid grant to be computed according to the number of scholars in the schools of the association at the rate of £100 per scholar, or if the Department shall direct rates for town and country schools respectively which they are hereby empowered to do then at those rates, and on corresponding share of any sum which may be available out of the aid grant after distribution has been made to unassociated schools.

"(4) The share so allotted to each such association shall be distributed as aforesaid by the Education Department after consulting the governing body of the association, and in accordance with any scheme prepared by that body which the Department for the time being approve.

"(5) The Education Department may exclude a school from any share of the aid grant which it might otherwise receive, if, in the opinion of the Department, it unreasonably refuses or fails to join such an association, but the refusal or failure shall not be deemed unreasonable if the majority of the schools in the association belong to a religious denomination to which the school in question does not itself belong.

"(6) The Education Department may require, as a condition of a school receiving a share of the aid grant, that the accounts of the receipts and expenditure of the school shall be annually audited in accordance with the regulations of the Department.

"(7) The decision of the Education Department upon any question relating to the distribution or allotment of the aid grant, including the question whether an association is or is not in conformity with this Act, and whether a school is a town or a country school, shall be final."

The passage of the bill was resisted strenuously by the liberals in the House of Commons. "Whether they regarded the bill from an educational, a constitutional, a parliamentary, or a social aspect," said Mr. John Morley "in his concluding speech in the debate," he and his friends regarded it as a mischievous and reactionary measure." But the opposition was of no avail. The bill passed its third reading in the House of Commons, on the 25th of March, with a majority of 200 in its favor, the Irish Nationalists giving it their support. In the House of Lords it was ruled to be a money bill, which their lordships could not amend, and they passed it with little debate. In April, the government brought forward a second school bill, which increased the parliamentary grant to Board schools by £110,000. The sum was so trivial that it excited the scorn of the friends of the Board schools, and did nothing towards conciliating them. It became a law on the 3d of June.

A. D. 1897 (May-July).—The Workmen's Compensation Act.—A subject which had grown urgent in England, for parliamentary attention, was that of a better provision of law for securing proper compensation to workmen for accidental injuries suffered in the course of their employment. The measure was not one that a Conservative government would be likely, under ordinary circumstances, to take up, since the class of large employers of labor, from which opposition to it came, were mostly in the Conservative ranks. But the Liberal Unionists, now in parliamentary coalition with the Conservatives, were called upon to favor such a piece of legislation by their creed, and rumor said that they bargained for it with their political partners. In exchange for the support they gave unwillingly to the Voluntary Schools Bill. At all events, a bill which was first called the Employers' Liability Bill, but finally named the Workmen's Compensation Bill, was brought in to the House of Commons, by the government, in May, and was carried, after much debate, through both Houses in July. The essential provisions of the Act as passed are the following:

"1.—(1) If in any employment to which this Act applies personal injury by accident arising out of and in the course of the employment is caused to a workman, his employer shall subject as herein-after mentioned, be liable to pay compensation in accordance with the First Schedule to this Act. (2) Provided that—(a) The employer shall not be liable under this Act in respect of any injury which does not disable the workman for a period of at least two weeks from earning full wages at the work at which

was employed. (1.) When the injury was caused by the personal negligence or wilful act of the employer or of some person for whose act the employer is responsible, nothing in this Act shall affect any civil liability of the employer, but in that case the workman may at his option either claim compensation under this Act or take the same proceedings as if he had preferred before the commencement of this Act that the employer should not be liable to him for compensation for injury to a workman by negligence, arising out of and in the course of his employment, both independently of and also under this Act, and shall not be liable to any proceedings not pendently of this Act, except in cases of such personal negligence or wilful act as are mentioned in (2.) If it is proved that the injury to a workman is attributable to the serious and wilful misconduct of that workman, any compensation awarded in respect of that injury shall be reduced accordingly. (3.) If any question arises in connection with this Act as to the liability of a person for compensation under this Act including any question as to whether the employment is one to which this Act applies, or as to the question of reduction of compensation under this Act, any question if not settled by agreement, shall, subject to the provisions of the First Schedule to this Act, be settled by arbitration in accordance with the Second Schedule to this Act.

2. (1.) Proceedings for the recovery under this Act of compensation for an injury shall not be commenced unless notice of the accident has been given as soon as practicable after the happening thereof and before the workman has voluntarily left the employment in which he was injured, and unless the claim for compensation with respect to such accident has been made within six months from the occurrence of the accident causing the injury, or, in case of death, within six months from the time of death.

3. (1.) If the Registrar of Friendly Societies, after taking steps to ascertain the views of the employer and workman, certifies that any scheme of compensation, benefit, or insurance for the workmen of an employer in any employment, whether or not such scheme includes other employers and their workmen is on the whole not less favourable to the general body of workmen and their dependants than the provisions of this Act, the employer may, until the certificate is rescinded or varied with any of those workmen to whom the provisions of the scheme shall be subject in the provisions of this Act, and thereupon the employer shall be liable only in accordance with the scheme, but save as aforesaid, this Act shall apply notwithstanding any contract to the contrary made after the commencement of this Act.

7. (1.) This Act shall apply only to employment by the undertakers as herein after defined, or of or in or about a railway, factory, mine, quarry or engineering work, and to employment by the undertakers as herein after defined on, in or about any building which exceeds thirty feet in height, and is either being constructed or repaired by means of a scaffolding, or being demolished, or on which machinery driven by steam, water, or other mechanical power, is being used for the purpose of the construction, repair or demolition thereof. (2.) In this Act

“Undertakers” in the case of a railway

means the railway company. In the case of a factory, quarry, or landwork means the occupier thereof within the meaning of the Factory and Workshop Acts 1878 to 1894, in the case of a mine means the owner thereof within the meaning of the Coal Mines Regulation Act 1887, or the Metalliferous Mines Regulation Act 1872, as the case may be, and in the case of an engineering work means the person undertaking the construction, alteration, or repair, and in the case of a building means the persons undertaking the construction, repair, or demolition.

Workman includes every person who is engaged in an employment to which this Act applies whether by way of manual labour or otherwise, and whether his agreement is one of service or apprenticeship or otherwise, and is expressed or implied, is oral or in writing.

The First Schedule referred to in the first section of the Act prescribes rules for determining compensation, these principally important being as follows:—“The amount of compensation under this Act shall be—(1.) where death results from the injury, (a) if the workman leaves any dependants wholly dependent upon his earnings at the time of his death a sum equal to his earnings in the employment of the same employer during the three years next preceding the injury, or the sum of one hundred and fifty pounds, whichever of those sums is the larger, but not exceeding in any case three hundred pounds, provided that the amount of any weekly payments made under this Act shall be deducted from such sum, and if the period of the workman's employment by the said employer has been less than the said three years, then the amount of his earnings during the said three years shall be deemed to be 156 times his average weekly earnings during the period of his actual employment under the said employer, (ii) if the workman does not leave any such dependants, but leaves any dependants in part dependent upon his earnings at the time of his death such sum, not exceeding in any case the amount payable under the foregoing provisions, as may be agreed upon or, in default of agreement, may be determined, on arbitration under this Act, to be reasonable and proportionate to the injury to the said dependants, and (iii) if he leaves no dependants, the reasonable expenses of his medical attendance and burial, not exceeding ten pounds; (2.) where total or partial incapacity for work results from the injury, a weekly payment during the incapacity after the second week not exceeding fifty per cent. of his average weekly earnings during the previous twelve months, if he has been so long employed, but if not, then for any less period during which he has been in the employment of the same employer, such weekly payment not to exceed one pound.”

A. D. 1897 (June).—The “Diamond Jubilee” of Queen Victoria. —The sixtieth anniversary of the coronation of Queen Victoria was celebrated in London on the 26th of June, by religious services of great solemnity and impressiveness, and two days later by pageants of extraordinary pomp and magnificence, in which representatives

of every person who acknowledge the queen's supremacy here a part. Numerous functions and ceremonies present to many of which the queen herself was present and her presence.

At the end of the month of July she addressed the nation by radio to the millions of her subjects throughout the world. "I have frequently expressed my personal feelings to my people, and there has on this memorable occasion been a further opportunity of expressions of my deep sense of the undiminished loyalty which I expect to find in each without personally giving opportunity to these sentiments. It is difficult for me on this occasion to say how truly touched and comforted I am by the spontaneous and universal outburst of loyal attachment and real affection which I have experienced on the completion of the twentieth year of my reign. During my progress through London on the 22nd of June this great enthusiasm was shown in the most striking manner, and can never be effaced from my heart. It is indeed deeply gratifying, after so many years of labour and anxiety for the good of my beloved country, to find that my exertions have been appreciated throughout my vast empire. In word and deed I have ever had the true sympathy of all my people which has been warmly reciprocated by myself. It has given me unbounded pleasure to see so many of my subjects from all parts of the world assembled here, and to find them joining in the acclamations of loyal devotion to myself, and I would wish to thank them all from the depth of my grateful heart. I shall ever pray God to bless them and to enable me still to discharge my duties for their welfare as long as life lasts. Victoria R."

A D 1897 (June-July). Conference of colonial premiers with the Secretary of State for the Colonies. Discussion of important questions. Denunciation of commercial treaties with Germany and Belgium.—On Thursday, the 24th of June, the Prime Ministers of Canada, New South Wales, Victoria, New Zealand, Queensland, Cape Colony, South Australia, Newfoundland, Tasmania, Western Australia, and Natal assembled at the Colonial Office, Downing Street, for the discussion of certain Imperial questions with the Secretary of State for the Colonies. It was decided that the proceedings should be informal and that the general results only should be published. With the view of giving a definite direction to the discussion, the Secretary of State, in opening the proceedings set forth the subjects which he considered might usefully be discussed, so as to secure an interchange of views upon them, and where they were ripe for a statement of opinion, a definite resolution in regard to them. [He did so in a speech of some length, after which the several questions brought forward in his remarks were discussed in succession at a series of meetings in the Colonial Office.] The commercial relations of the United Kingdom and the self-governing Colonies were first considered, and the following resolutions were unanimously adopted:—1. That the Premiers of the self-governing Colonies unanimously and earnestly recommend the denunciation at the earliest convenient time, of any treaties which now hamper the commercial relations between Great Britain and her Colonies. 2. That in the hope of improving the trade relations between the mother country and the Colo-

nies, the Premiers present undertake to consult with their colleagues with the view of ascertaining whether such a result can be properly achieved by a preference given by the Colonies to the products of the United Kingdom. The Mother Government have already [July 31, 1897] effected to the first of these resolutions [July 31, 1897] notifying to the Governments concerned their wish to terminate the commercial treaties with Germany and Belgium, which tend to create an unequal commercial relation of the United Kingdom to the Colonies. From and after the 1st of July, 1898, therefore, there will be no further extension of Her Majesty's treaty obligations to protect any action which any of the Colonies may see fit to take in pursuance of the second resolution. It is, however, right to point out that it does not follow that the Colonies are free to go further and to grant preferences to any Foreign Country, the provisions of the most favoured nation clauses in many treaties between Her Majesty and other powers in which the Colonies are included, would necessitate the concession of similar terms to those countries.

On the question of the political relations between the mother country and the self-governing Colonies, the resolutions adopted were as follows:—1. The Prime Ministers here assembled are of opinion that the present political relations between the United Kingdom and the self-governing Colonies are generally satisfactory and that the existing condition of things. Mr. Seddon and Sir E. N. C. Braddon dissented. 2. They are also of opinion that it is desirable, wherever and wherever practicable, to group together under a federal union those colonies which are geographically united. Carried unanimously. 3. Meanwhile the Premiers are of opinion that it would be desirable to hold periodical conferences of representatives of the Colonies and Great Britain for the discussion of matters of common interest. Carried unanimously. Mr. Seddon and Sir E. N. C. Braddon dissented from the first resolution because they were of opinion that the time had already come when a better should be made to render more formal the political ties between the United Kingdom and the Colonies. The majority of the Premiers were not yet prepared to adopt this position, but there was a strong feeling amongst some of them that with the rapid growth of population in the Colonies, the present relations could not continue indefinitely, and that some means would have to be devised for giving the Colonies a voice in the control and direction of those questions of Imperial interest in which they are concerned equally with the mother country. It was recognised at the same time that such a share in the direction of Imperial policy would involve a proportionate contribution in aid of Imperial expenditure, for which at present, at any rate, the Colonies generally are not prepared.

On the question of Imperial defence, the various points raised in the speech of the Secretary of State were fully discussed, but on this and on some questions of minor importance, no conclusions were definitely formulated.—*Great Britain, Parliamentary Publications (Paper by Command, C.—8396, 1897).*

The following reference to the "denunciation" of the treaties appeared in the *Colonial Statist* of August 7, 1897: "Last week the

with forces which in the aggregate are a force of over five hundred men. There are thirty-five thousand in the British Empire in the character of the Native Indian Militia, according to the Annual Subsidies report, and by Sir Henry Havelock Viceroy of India, in the same service, two hundred thousand, to protect the Kingdom of Oudhman, who send four hundred fifty to Ceylon, four hundred putting down an outbreak in Malacca, three hundred crushing a riot in F. India, and some hundreds more restoring order in F. S. Borneo and Bessaland. All these troops the highest of foreign nationalities, Englishmen, Sikhs, Gorkhas, Rajpoots, Malays, Egyptians, Sindians, Hessians and Wurtembergers, under British officers, are paid from funds under British control, and are engaged in the self-same work that of subsidizing the Pax Britannica, so that universal civilisation may have a fair chance to grow. *The Spectator* (London), Feb. 7, 1898.

A. D. 1898 (May).—Death of Mr. Gladstone.—After a long and painful illness, the great statesman and leader of the Liberal party in England, William Ewart Gladstone, died on the 19th of May. His death drew tributes in Parliament from his political opponents which called him quite to the height of great distinction that those who followed him would claim. It was said by Lord Salisbury that "the most distinguished political name of the century had been withdrawn from the roll of Englishmen." Mr. Balfour described him as "the greatest number of the greatest deliberative assembly that the world had yet seen," and expressed the belief that "they would never again have in that assembly any man who could reproduce what Mr. Gladstone was to his contemporaries."

Lord Rosebery paid an eloquent tribute to the dead statesman: "This country he said, this nation, loves brave men. Mr. Gladstone was the bravest of the brave. There was no cause so hopeless that he was afraid to undertake it; there was no amount of opposition that would awe him when once he had undertaken it. My lords, Mr. Gladstone always expressed a hope that there might be an interval left to him between the end of his political and of his natural life. That period was given to him, for it is more than four years since he quitted the sphere of politics. Those four years have been with him a special preparation for his death, but have they not also been a preparation for his death with the nation at large? Had he died in the plenitude of his power as Prime Minister, would

A D 1898 February). - British troops fighting in eight regions of the world. - We are a people of practical traders—shopkeepers, our motto is the old testament affirm—and are consequently at war in only eight points of the globe.

It have been possible for a vigorous and convinced Opposition to allow to pass to him, without a word of dissent, the honours which are now universally conceded? Hushed for the moment are the voices of criticism, hushed for the moment is the very sound of party faction. I venture to think that this is a notable fact in our history. It was not so with the elder Pitt. It was not so with the younger Pitt. It was not so with the elder Pitt, in spite of his tragic end, of his unrivalled services, and of his enfeebled old age. It was not so with the younger Pitt, in spite of his long control of the country and his absolute and absorbed devotion to the State. I think that we should remember this as creditable not merely to the man, but to the nation. With the consent of Mrs. Gladstone and family, a public funeral was voted by Parliament, and the remains of the great leader were laid, with simple but impressive ceremonies, in Westminster Abbey, on the 28th of May.

A. D. 1898 (December).—Imperial Penny Postage.—On Christmas Day, 1898, the Imperial penny postage came into operation, — i. e., it became possible to send for a penny a letter not above half an ounce in weight to all places in the British Empire, except the Australasian Colonies and the Cape. "Thousands of small orders and business transactions and millions of questions and answers will fly round the world at a penny which were too heavily weighted at twopence halfpenny. The political effect of the fact that it will not now be necessary to think whether an address is outside the United Kingdom, but only whether it is inside the British Empire, will be by no means insignificant. If people will only let the Empire alone we shall ultimately weave out of many varied strands—some thick, some thin—a rope to join the Motherland and the Daughter States which none will be able to break. Not an unimportant thread in the answer will be,—letters for a penny wherever the Union Jack is flown."—*The Spectator* (London), Dec. 31, 1898.

A. D. 1899-1900.—Renewed investigation of the Old-Age Pension question.—On the initiative of the government, a fresh investigation of the question of old-age pensions was opened in 1899 by a select committee of the House of Commons, under the chairmanship of Mr. Chaplin. The report of the Committee, made in the following year, suggested the following plan: A person, aged 65, whether man or woman, who satisfied the pension authority that he or she: (1) Is a British subject; (2) Is 65 years of age; (3) Has not within the last 20 years been convicted of an offence and sentenced to penal servitude or imprisonment without the option of a fine; (4) Has not received poor relief other than medical relief, unless under circumstances of a wholly exceptional character, during twenty years prior to the application for a pension; (5) Is resident within the district of the pension authority; (6) Has not an income from any source of more than 10s. a week; and (7) Has endeavoured to the best of his ability, by his industry or by the exercise of reasonable providence, to make provision for himself and those immediately dependent on him—“should receive a certificate to that effect and be entitled to a pension. The amount of pension to be from 5s. to 7s. a week.

As a means of ascertaining approximately the number of persons in the United Kingdom who would be pensionable under this scheme, a test census was taken in certain districts made as representative as possible by the inclusion of various kinds of population. In each of the selected areas in Great Britain a house-to-house visitation was made with a view of ascertaining how many of the aged would satisfy the conditions of the scheme. In Ireland a similar census had to be abandoned (as impracticable because “the officials, although they proceeded courteously, were received with abuse”), but the Poor Law inspectors traced some rough estimates after consultation with local authorities. Altogether the inquiry in Great Britain extended to a population of rather over half a million persons. From facts thus obtained the following estimate of the cost of the proposed pensioning project was deduced:

Estimated number of persons over 65 years of age in England	2,016,000
Deduct:	
1. For those whose incomes exceed 10s. a week	711,000
2. For paupers	515,000
3. For convicts, criminals, and lunatics	32,000
4. For inability to comply with thrift test	72,700
Total deductions	1,390,700
Estimated number of pensionable persons	655,000
Estimated cost, the average pension being taken at 6s. a week	£9,976,000
Add administrative expenses (3 per cent.)	299,000
Total estimated cost	£10,275,000
In round figures	£10,300,000

The Committee estimated, still further, that the cost would rise to £15,650,000 by 1921. No legislative action was taken on the report.

A. D. 1900 (September—October).—Dissolution of Parliament.—Election of a new Parliament.—Victory for the Conservatives and Liberal Unionists.—By royal proclamation, September 17, the existing Parliament was dissolved and order given for the issue of writs calling a new Parliament, the elections for which were held in October, concluding on the 21st of that month. The state of parties in the House of Commons resulting from the election was as follows: Conservatives, 334; Liberal Unionists, 68; total supporters of the Unionist Ministry, 402; Liberals and Labor members, 186; Nationalists (Irish), 82; total opposition, 268. Unionist majority, 134, against 128 in the preceding Parliament. The issues in the election were those growing out of the South African War. Although most of the Liberals upheld the war, and the annexation of the South African republics, they sharply criticised the prior dealings of the Colonial Secretary, Mr. Chamberlain, with the Transvaal Boers and the general conduct of the war. A number of the leading Liberals were uncompromising in condemnation of the war, of the policy which caused it, and of the proposed extinction of Boer independence. The sentiment of the country was shown by the election to be strongly against all questioning of the righteousness of the war or of the use to be made of victory in it.

A. D. 1900 (November–December).—The Fourth Ministry of Lord Salisbury.—**Brief session of Parliament.**—For the fourth time, Lord Salisbury was called to the lead in government, and formed his Ministry anew, making considerable changes. He relieved himself of the conduct of Foreign Affairs (which was transferred to the Marquis of Lansdowne), and took, with the office of Prime Minister, that of Lord Privy Seal. Mr. Brodrick, who had been an Under Secretary, succeeded Lord Lansdowne as Secretary of State for War. Mr. Balfour continued to be First Lord of the Treasury, and Leader of the House; Mr. Chamberlain remained in the Colonial Office. Mr. Goschen retired.

Parliament met on the 6th of December, for the purpose set forth in a remarkably brief "Queen's Speech," as follows: "My Lords, and Gentlemen, It has become necessary to make further provision for the expenses incurred by the operations of my armies in South Africa and China. I have summoned you to hold a Special Session in order that you may give your sanction to the enactments required for this purpose. I will not enter upon other public matters requiring your attention until the ordinary meeting of Parliament in the spring." The estimates of the War Office called for £16,000,000, and it was voted after a few days of debate, in which the causes and conduct of the war were criticised and defended by the two parties, and, on the 15th, Parliament was prorogued to the 14th of February, 1901, by the Queen's command.

A. D. 1900 (December).—Parliamentary statements of the number of men employed in the South African War, and the number dead and disabled.—In the House of Commons, December 11, Mr. Brodrick, Secretary of State for War, moved a vote of £16,000,000, required for the current year, to meet additional expenditure in South Africa and China. In the course of his remarks, explanatory of the need for this supplementary supply, he made the following statement: "When the war broke out we had in South Africa in round figures 10,000 men, all Regular troops. We have in the 14 months which have since elapsed sent from this country and landed in South Africa 175,000 Regular soldiers, a number which exceeds by far any number which any Minister from this bench or any gentleman sitting behind these benches or in front of them ever suggested that this country ought to be in a position to ship to any part of the world, and a number far in excess of that which during any period that I have sat in the house any member of the House, except an official, would have been willing to believe that the War Office could find to dispose of. But they are not the only troops. We have called on them, I will not say to the extreme limit of our power, but, at all events, with an unsparring hand. But you have in addition, as this return will show, some 40,000 Volunteers of various descriptions from the United Kingdom—40,000 including the Im-

perial Yeomanry, whose service is spoken of by every officer under whom they have served with such satisfaction; 30 Militia regiments, who are also Volunteers, since their term of service was only for the United Kingdom and who have gone abroad at great personal sacrifice to themselves and the Volunteer companies who have joined the Regular battalions. You have also got in our colonial troops, to a large extent, no doubt, men raised in the colonies affected, and as everybody knows to a still larger extent consisting of men who have gone for a year from Australia, Canada, and other places."

Sir William Harcourt replied to Mr. Brodrick, not in opposition to the motion, but in criticism of the conduct of the war. Referring to a return submitted by the War Office, he analysed its showing of facts, thus: "Now just let us look at this table. By some accident it only gives the rank and file and non-commissioned officers. It is a very terrible return, and I think it is worthy of the attention of the men who ought to be in war, of whom, I am afraid, there are unhappily not a few. I have made a short analysis of the paper. It shows that the garrison at the Cape before the war was 9,600. Reinforcements of 6,300 men were sent out in October last year and from India 5,000, which with the former garrison made up 21,000 in all when the war broke out. Up to August, that is, after the last estimate for 1900, according to this table 267,000 men had been in arms in South Africa—that is without the officers. Therefore I will call it 270,000 men in round numbers. I think the right hon. gentleman made a mistake when he said that the colonial troops were more numerous from beyond the seas than they were in the Cape. This return shows that the men raised in South Africa were 30,000, and, apart from them, the colonials from beyond the seas were 11,000. According to the last return there were 210,000 men in South Africa. You will observe there is a balance of some 60,000 or 70,000 men. What has become of those men? You would find from this return, one would suppose, that a good many of these have returned safe and sound to England. No, Sir; the men who have returned to England according to this paper, not invalids, are 7,500 and to the colonies 3,000 more. That makes 10,000 men, or with the officers about 11,000 men. But since July you have sent out 13,000 men to South Africa, more, in fact, than you have been bringing home, and yet you have only 210,000 men there. Now, Sir, how is this accounted for? First of all you have the heading, 'killed or died of wounds,' 11,000 men. You have 'wounded,' 13,000, you have 'in hospital in South Africa,' 12,000, and you have 'returned to England, sick, wounded, or died on passage,' 36,000 men. That is the balance. Seventy thousand men have been killed, wounded, or disabled, or have died in this war. And now what is the prospect that is held before us with this force, once 270,000 men, and now 210,000 in South Africa? Lord Roberts has declared that the war is over, yet you hold out to us no prospect of diminishing the force you have in South Africa of 210,000 men."

A. D. 1901 (January).—Death of Queen Victoria.—The following notice, which appeared in the "Court Circular," on the 18th of January, dated from the winter residence of the Queen at Osborne House, in the Isle of Wight, seems to

have been the first intimation to the country of its sovereign's failing health. "The Queen has not lately been in her usual health and is unable for the present to take her customary drives. The Queen during the past year has had a great strain upon her powers, which has rather told upon her Majesty's nervous system. It has, therefore, been thought advisable by her Majesty's physicians that the Queen should be kept perfectly quiet in the house and should abstain for the present from transacting business." It was subsequently found, as stated in an "authoritative account" by the "British Medical Journal," and the "Lancet," that "the Queen's health for the past 12 months had been failing, with symptoms mainly of a dyspeptic kind, accompanied by impaired general nutrition, periods of insomnia, and later by occasional slight and transitory attacks of aphasia, the latter suggesting that the cerebral vessels had become damaged, although her Majesty's general arterial system showed markedly few signs of age. . . . The dyspepsia which tended to lower her Majesty's original robust constitution was especially marked during her last visit to Balmoral. It was there that the Queen first manifested distinct symptoms of brain fatigue and lost notably in weight. These symptoms continued at Windsor, where in November and December, 1900, slight aphasic symptoms were first observed, attacks of an epileptic kind, and unattended by any motor paralysis. . . . A few days before the final illness transient but recurring symptoms of apathy and somnolence, with aphasic indications and increasing feebleness, gave great uneasiness to her physician." Before the publication of these cautious announcements quoted above, the symptoms had become too grave to leave any doubt as to the near approach of death. It came on Tuesday, the 23d of January, at half past six o'clock in the evening, the dying Queen being then surrounded by a large number of her many children, grandchildren and great grandchildren, whom she recognized, it is said, within a few moments of the end. The eldest of the Queen's children, the Empress Frederick, was kept from her mother's side at this last hour by serious illness of her own, but the Emperor William, of Germany (son of the Empress Frederick and eldest grandson of Queen Victoria) had hastened to the scene and showed a filial affection which touched English hearts.

On Friday, the first day of February, the remains of the Queen were borne from the island where she died to Portsmouth, between long lines of battleships and cruisers—British, German, French, Italian, Japanese, Belgian and Portuguese. The scene of the funeral voyage was impressively described by a correspondent of the New York "Sun" as follows: "Nature was ever kinder. The smiling waters of the Solent were as calm as on a summer's morning. It was Queen's weather" to the very last. The cavalcade which wended slowly through the narrow, tree-green even in midwinter, down through the streets of the little town of Cowes to the Trinity pier was a funeral procession such as the world had never seen before. Kings and princes, a queen and princesses, walked humbly between two ranks of mourning islanders, escorting the coffin of the dead sovereign. Then followed a cortege far more notable and more impressive, indeed, than the great tribute the great capital of

the empire will pay to-morrow. It was the transit of the funeral yacht across the waters between lines of steel which are England's bulwarks against the world. Battleship after battleship thundered its grief, band after band wailed its dirge, and crew after crew bowed low their heads as the piny yacht swept past, bearing no passengers save an admiral on the bridge and four red-coated guards at the corners of the simple, glowing white bier resting amidships. It was a picture neither a painter's brush nor an orator's eloquence could reproduce. The boat slowly glided on in the mellow light of the afternoon sun, herself almost golden in hue, sharply contrasting with the black warships. The ears also were assailed in strange contrast, the sad strains of Beethoven's funeral march floating over the water being punctuated by the roar of minute guns from each ship. Somehow it was not incongruous and one felt that it was all a great and majestic tribute to a reign which was an era and to a sovereign to whom the world pays its highest honors.

On the following day the remains were conveyed by railway from Portsmouth to London, carried in solemn procession through the streets of the capital, and thence by railway to Windsor, where the last rites were performed on Monday, the 4th. The Queen was then laid to rest, by the side of her husband, in the mausoleum which she had built at Frogmore.

Of the sincerity with which Queen Victoria had been loved by her own people and respected and admired by the world at large, and of the genuineness of sorrow that was manifested everywhere at her death, there can be no doubt. To the impressiveness of the ending of an unexampled period of history there was added a true sense of loss, from the disappearance of a greatly important personage, whose high example had been pure and whose large influence had been good.

Among all the tributes to the Queen that were called out by her death none seem so significant and so fully drawn from knowledge of what she was in her regal character, as the words that were spoken by Lord Salisbury in the House of Lords, at the meeting of Parliament on the Friday following her death. "My lords," he said, "the late Queen had so many titles to our admiration that it would occupy an enormous time to glance at them even perfunctorily; but that on which I think your lordships should most reflect, and which will chiefly attach to her character in history, is that, being a constitutional monarch with restricted powers, she reigned by sheer force of character, by the loveliness of her disposition, over the hearts of her subjects, and exercised an influence in moulding their character and destiny which she could not have done more if she had had the most despotic power. She has been a great instance of government by example, by esteem, by love, and it will never be forgotten how much she has done for the elevation of her people, not by the exercise of any prerogative, not by the giving of any commands, but by the simple recognition and contemplation of the brilliant qualities which she has exhibited in her exalted position. My lords, it may be, perhaps, proper that those who, like noble lords opposite and myself, have had the opportunity of seeing the close workings of her character in the discharge of her duties as Sovereign, should take

this opportunity of testifying to the great admiration she inspired and the great force which her distinguishing characteristics exercised over all who came near her. The position of a Constitutional Sovereign is not an easy one. Duties have to be reconciled which sometimes seem far apart. Much has to be accepted which it may not be always pleasant to accept, but she showed a wonderful power, on the one hand, of observing with the most absolute strictness, the limits of her action which the Constitution draws, and, on the other hand, of maintaining a steady and persistent influence on the action of her Ministers in the course of legislation and government which no one could mistake. She was able to accept some things of which, perhaps, she did not entirely approve, but which she thought it her duty in her position to accept.

"She always maintained and practised a rigorous supervision over public affairs, giving to her Ministers her frank advice and warning them of danger if she saw there was danger ahead; and she certainly impressed many of us with a profound sense of the penetration, almost intuition, with which she saw the perils with which we might be threatened in any course it was thought expedient to adopt. She left upon my mind, she left upon our minds, the conviction that it was always a dangerous matter to press on her any course of the expediency of which she was not thoroughly convinced; and I may say with confidence that no Minister in her long reign ever disregarded her advice, or pressed her to disregard it, without afterwards feeling that he had incurred a dangerous responsibility. She had an extraordinary knowledge of what her people would think. I have said for years that I always thought that when I knew what the Queen thought I knew certainly what view her subjects would take, and especially the middle classes of her subjects. Such was the extraordinary penetration of her mind. Yet she never adhered to her own conceptions obstinately. On the contrary, she was full of concession and consideration; and she spared no effort—I might almost say she shrank from no sacrifice—to make the task of conducting this difficult Government more easy to her advisers than it would otherwise have been. My lords, I feel sure that the testimony I have borne will be abundantly sustained by all those who have been called to serve her.

"We owe her gratitude in every direction—for her influence in elevating the people, for her power with foreign Courts and Sovereigns to remove difficulties and misapprehension which sometimes might have been dangerous; but, above all things, I think, we owe her gratitude for this, that by a happy dispensation her reign has coincided with that great change which has come over the political structure of this country and the political instincts of its people. She has bridged over that great interval which separates old England from new England. Other nations may have had to pass through similar trials, but have seldom passed through them so peaceably, so easily, and with so much prosperity and success as we have. I think that future historians will look to the Queen's reign as the boundary which separates the two states of England—England which has changed so much—and recognize that we have undergone the change with constant increase of public prosperity, without any friction or endanger the peace or stability of our

civil life, and at the same time with a constant expansion of an Empire which every year grows more and more powerful. We owe all these blessings to the tact, the wisdom, the passionate patriotism, and the incomparable judgment of the Sovereign whom we deplore."

In the House of Commons, on the same day Mr. Balfour, the leader of the House, spoke with the feeling, partly as follows: "The reign of Queen Victoria is no mere chronological landmark. It is no mere convenient division of time useful for the historian or the chronicler. No, Sir, we feel as we do feel for our great loss because we intimately associate the personality of Queen Victoria with the great succession of events which have filled her reign and with the development of the Empire over which she ruled. And, associating her personality with those events, surely we do well. In my judgment the importance of the Crown in our Constitution is not a diminishing, but an increasing factor. It is increasing, and must increase with the growth and development of those free, self-governing communities, those new commonwealths beyond the sea, who are bound to us by the person of the Sovereign, who is the living symbol of the unity of the Empire. But, Sir, it is not given, it cannot, in ordinary course, be given to a Constitutional Monarch to signalize his reign by any great isolated action. The effect of a Constitutional Sovereign, great as it is, is produced by the slow, constant, and cumulative results of a great ideal and a great example, and of that great ideal and that great example Queen Victoria surely was the first of all Constitutional Monarchs whom the world has yet seen. Where shall we find that ideal so lofty in itself, so constantly and consistently maintained through two generations, through more than two generations, of her subjects, through many generations of her public men and members of this House?

"Sir, it would be almost impertinent for me were I to attempt to express to the House in words the effect which the character of our late Sovereign produced upon all who were in any degree, however remote, brought in contact with her. The simple dignity, befitting a Monarch of this realm, in that she could never fail because it arose from her inherent sense of the fitness of things. It was no trapping put on for office, and therefore it was that this dignity, this Queenly dignity, only served to throw into stronger relief and into a brighter light those admirable virtues of the wife, the mother and the woman with which she was so richly endowed. Those kindly graces, those admirable qualities, have endeared her to every class in the community, and are known to all. Perhaps less known was the life of continuous labour which her position as Queen threw upon her. Short as was the interval between the last trembling signature affixed to a public document and final rest, it was yet long enough to clog and hamper the wheels of administration; and I remember when I saw a vast mass of untouched documents which awaited the hand of the Sovereign of this country to deal with it was brought vividly before my mind how admirable was the unobtrusive patience with which for 63 years, through sorrow, through suffering, in moments of weakness, in moments of despondency, it may be, she carried on without intermission her share in the

DESCENDANTS OF QUEEN VICTORIA

And of the Prince Consort, Albert, second son of the Duke of Saxe-Coburg-Gotha, whom she married on the 10th of February, 1840, and who died December 14, 1861.

* These are marriages of first cousins, or cousins german

government of this great Empire. For her there was no holiday, to her there was no intermission of toil. Domestic sorrow, domestic sickness, made no difference in her labours, and they were continued from the hour at which he became our Sovereign to within a very few days of her death. It is easy to chronicle the growth of Empire, the progress of trade, the triumphs of war, all the events that make history interesting or exciting; but who is there that will dare to weigh in the balance the effect which such an example continued over 63 years has produced on the highest life of the people? It is a great life, and had a fortunate, and, let me say, in my judgment, a happy ending."

The espectral and peculiar importance which Queen Victoria had acquired in the political world, and the weight in its councils which England owed to her personality, were impressively suggested by Lord Rosebery, in a speech which he made at a special court of the Governors of the Corporation of the Royal Scottish Hospital, when he said: "We hear much in these days of the life of the Queen and of what we owe her. But I sometimes wonder if we all realize how much we do owe her, for you would have had to know much about the Queen to realize adequately the debt which the nation was under to her. Probably every subject in Great Britain realizes that he has lost his greatest and his best friend. But they do not understand of what enormous weight in the councils of the world we are deprived by the death of our late Sovereign. She gave to the councils of Great Britain an advantage which no talents, no brilliancy, no genius, could supply. Think of what her reign was! She had reigned for 63 years. For 63 years she had known all that was to be known about the political condition of her country. For 63 years she had been in communication with every important Minister and with every important public man. She had received reports, daily reports almost, from her successive Ministers, or their deputies in the House of Commons. She had, therefore, a fund of knowledge which no constitutional historian has ever had at his command. That by the stroke of death is lost to us to-day. All that was of incalculable advantage to our Monarchy. But have you realized what the personal weight of the late Queen was in the councils of the world? She was by far the senior of all the European Sovereigns. She was, it is no disparagement to other Kings to say, the chief of all the European Sovereigns. The German Emperor was her grandson by birth. The Emperor of Russia was her grandson by marriage. She had reigned 11 years when the Emperor of Austria came to his throne. She had seen two dynasties pass from the throne of France. She had seen, as Queen, three Monarchs of Spain, and four Sovereigns of the House of Savoy in Italy. In all those kingdoms which have been carved out of the Turkish Empire she had seen the foundation of their reigning dynasties. Can we not realize, then, what a force the personal influence of such a Sovereign was in the troubled councils of Europe? And when as we know that influence was always given for peace, for freedom, and for good government, we feel that not merely ourselves but all the world has lost one of its best friends."

A statement in the "London Times" of January 24 shows the descendants of Queen Victoria to

be in number as follows:—The Queen has had

9 children of whom 6 survive
40 grandchildren of whom 31 survive
37 great grandchildren of whom 37 survive

86

74

"Of the great grandchildren 22 are boys and 15 are girls, 6 are grandchildren of the Prince of Wales; 18 are grandchildren of the Empress Frederick; 11 are grandchildren of the late Princess Alice; 6 are grandchildren of the late Duke of Saxe-Coburg and Gotha. This would appear to make a total of 41, but three of them are grandchildren of both the Empress Frederick and Princess Alice, while one is grandchild of both the Princess Alice and the Duke of Saxe-Coburg and Gotha."

"It will be seen that in the course of nature the future rulers of Great Britain, Germany, Russia, Greece, and Rumania will be descendants of her Majesty."

A. D. 1901 (January—February).—Ceremonies of the accession of King Edward VII.—His speech in Council and his messages to the people of the British Empire.—On Wednesday, the 23d of January—the day following the death of the Queen—her eldest son, Albert Edward, long known as Prince of Wales, went from Osborne to London to take up the sceptre of sovereignty which his mother had laid down. The proceedings in Council which took place thereupon were officially reported in the "London Gazette" as follows:—

"At the Court at Saint James's, the 23d day of January, 1901. Present,

"The King's Most Excellent Majesty in Council. His Majesty being this day present in Council was pleased to make the following Declaration:—

"Your Royal Highnesses, My Lords and Gentlemen, This is the most painful occasion on which I shall ever be called upon to address you. My first and melancholy duty is to announce to you the death of My beloved Mother the Queen, and I know how deeply you, the whole Nation, and I think I may say the whole world, sympathize with Me in the irreparable loss we have all sustained. I need hardly say that My constant endeavour will be always to walk in Her footsteps. In undertaking the heavy load which now devolves upon Me, I am fully determined to be a Constitutional Sovereign in the strictest sense of the word, and as long as there is breath in My body to work for the good and amelioration of My people."

"I have resolved to be known by the name of Edward, which has been borne by six of My ancestors. In doing so I do not undervalue the name of Albert, which I inherit from My ever to be lamented, great and wise Father, who by universal consent is I think deservedly known by the name of Albert the Good, and I desire that his name should stand alone."

"In conclusion, I trust to Parliament and the Nation to support Me in the arduous duties which now devolve upon Me by inheritance, and to which I am determined to devote My whole strength during the remainder of My life."

"Whereupon the Lords of the Council made it their humble request to His Majesty that His Majesty's Most Gracious Declaration to their

London might be made public, which His Majesty was pleased to Order accordingly."

The King then caused all the Lords and Bishops of the late Queen's Privy Council, who were then present, to be sworn of His Majesty's Privy Council. Orders had been previously given for proclaiming: "His present Majesty," and for having borne: "Whereas it has pleased Almighty God to call to His Mercy Our late Sovereign Lady Queen Victoria, of Blessed and Glorious Memory, by whose Decree the Imperial Crown of the United Kingdom of Great Britain and Ireland is solely and rightfully come to the High and Mighty Prince Albert Edward. We therefore the Lords Spiritual and Temporal of Great Britain being here-assisted with these of His late Majesty's Privy Council, with Numbers of other Principled Gentlemen of Quality, with the Lord Mayor, Aldermen, and Citizens of London do now hereby, with one Voice and consent of Tongue and Heart, publish and proclaim That the High and Mighty Prince, Albert Edward is now, by the Death of our late Sovereign of Happy Memory, become our only lawful and rightful Ruler Lord Edward the Seventh, by the Grace of God, King of the United Kingdom of Great Britain and Ireland, Defender of the Faith Emperor of India: To whom we do acknowledge all Faith and constant Obedience, with all hearty and humble Affection; beseeching God, by whom Kings and Queens do reign, to bless the Royal Prince Edward the Seventh, with long and happy Years to reign over Us."

The proclamation was made in London, with antique and picturesque ceremony on the succeeding day, January 24, and the following official report of it from "Earl Marshal's Office," published in the "London Gazette":

"This day His Most Gracious Majesty King Edward VII. was, in pursuance of an Order in Council of the 23rd instant, proclaimed with the usual ceremonies. At 9 o'clock in the forenoon, the Officers of Arms habited in their tabards, the Sergeants at Arms, with their maces and collars; and Deputy Serjeant Trumpeter in his collar; the Trumpeters, Drum Major, and Knight Marshalmen being assembled at St James's Palace, the Proclamation was read in the Grand Court by William H. Weldon, Esq., Norroy King of Arms, Deputy to Sir Albert W. Woods, Garter Principal King of Arms. In the presence of the Earl Marshal of England, the Lord Steward, the Lord Chamberlain, the Master of the Horse, and many other Members of Her late Majesty's Household, with Lords and others of the Privy Council and several personages of distinction. Deputy Garter read the Proclamation. Then the Officers of Arms having entered Royal Carriages a procession was formed in the following order—

The High Bailiff of Westminster,
in his carriage,
Horse Guards,
Trumpeters.

A Royal Carriage containing
The four Sergeants at Arms,
bearing their maces.

A Royal Carriage containing
Pursuivants.

Rouge Dragon:
Everard Green.

Rheumantle
G. Andrews Lee.

Rouge Croix:
G. W. Marsault.

Heralds

Windsor

W. A. Lindsay, Esq.

York

Somerset

A. S. Scott Gatty, Esq., H. Farnham Burke, Esq.
in a Royal Carriage

A Detachment of Horse Guards

The Procession, flanked by the Horse Guards, moved from St James's Palace to Temple Bar, and Rouge Dragon Pursuivant of Arms alighting from the carriage, advanced between two trumpeters, preceded by two of the Horse Guards, to the barrier, and after the trumpeters had sounded thrice, demanded in the usual form admission into the City to proclaim His Royal Majesty King Edward VII. and being admitted, and the barrier again closed Rouge Dragon was conducted by the City Marshal and his Officers to the Lord Mayor, who was in attendance in his State Carriage, when Rouge Dragon delivered to his Lordship the Order in Council, which the Lord Mayor, having read, returned, and directed the barrier to be opened, and Rouge Dragon being reconducted to his place in the Procession it then moved into the City, the High Bailiff of Westminster filing off at Temple Bar.

"At the corner of Chancery Lane York Herald read the Proclamation, then the Lord Mayor, Aldermen Recorder, Sheriffs, Chamberlain, Common Serjeant, Town Clerk, and City Officers fell into the procession immediately after the Officers of Arms, and the procession moved on to the Royal Exchange, where it was lastly read by Somerset Herald, when the guns in St James's Park and at the Tower of London were fired. A multitude of spectators filled the streets through which the procession passed, the windows of which were crowded, and the acclamations were loud and general."

As described more fully by the "London Times," the interesting proceeding, according to ancient custom, at Temple Bar—the site of the old city gate—was as follows: "Temple Bar has passed away, but not so the privileges associated with it, although they have ceased to have more than an historical, ceremonial, and picturesque interest. In accordance, therefore, with ancient custom, the Lord Mayor yesterday proceeded in State to the site of Temple Bar to grant entrance to the King's Officer of Arms, who was about to proclaim his Majesty King within the City. The gates of Temple Bar were formerly closed for a short time before this ceremony, to be opened, upon demand of the Officer of Arms, by the direction of the Lord Mayor. As there are now no gates a barrier was made for the occasion by the laddering of a red silken rope across the street on either side of the Griffin which commemorates the spot upon which Temple Bar formerly stood. A strong force of burly constables was entrusted with this duty, and the barrier thus created answered every practical purpose, although there must have been lingering in the minds of some of the venerable City Fathers some little regret that stern necessity had occasioned the removal of the historic landmark which stood there when Queen Victoria was proclaimed and remained for many a long year afterwards, one of the most interesting features of the ancient City."

"The Pursuivant (Rouge Dragon), the heralds, the officials of Westminster, and the cavalcade

halted a short distance to the west of the barrier, and the Pursuivant then advanced between two trumpeters, and the trumpets sounded thrice. Upon this the City Marshal, on horseback, in scarlet tunic and cocked hat with plumes, advanced to the barrier to meet the Pursuivant, and in a loud voice, which could be heard by those at a considerable distance, asked, "Who comes there?" The Pursuivant replied, "The Officer of Arms who demands entrance into the City to proclaim his Royal Majesty, Edward the Seventh." Thereupon the barrier was opened so as to admit the Pursuivant without escort, and immediately closed again. The Pursuivant was then conducted by the City Marshal to the Lord Mayor, who being made acquainted with the object of the Pursuivant's visit, directed the opening of the barrier and the Pursuivant returned to his cavalcade. There was a fanfare of trumpets, and York Herald Mr. S. Scott-Gatty, between two trumpeters, approached the Lord Mayor, and presented to his lordship the Order in Council requiring him to proclaim his Majesty. The Lord Mayor replied:—"I am aware of the contents of this paper, having been apprised yesterday of the ceremony appointed to take place, and I have attended to perform my duty in accordance with ancient usages and customs of the City of London."

"The Lord Mayor then read aloud the Order in Council requiring the herald to proclaim his Majesty within the jurisdiction of the City, and returned it to the herald. . . . The trumpets sounded and the officials of Westminster having filed off, the cavalcade advanced into the City as far as the corner of Chancery Lane. There was another fanfare of trumpets, and the herald then made the proclamation, reading it with admirable clearness. When it was over the spectators, who had listened with bared heads, cried 'God Save the King.' The trumpets were again sounded, and a military band stationed to the west of Temple Bar played the National Anthem. This was followed by cheering, which lasted while the Lord Mayor and his retinue resumed their places in the carriages which had brought them, and the procession made its way to the Royal Exchange, the route being down Fleet street, up Ludgate hill, through St. Paul's Churchyard, and along Cheapside."

"Thus ended a ceremony which impressed all who saw it by its solemnity, its dignity, and its significance. It brought home vividly to the mind of every spectator the continuity which exists amid all the changes of our national life, and the very strangeness of the quaint heraldic garb worn by the heralds and pursuivants, which at another time might have provoked a smile, was felt to be an object lesson for all, telling of unbroken tradition reaching far back into the glorious history of our country. On turning away from the site of Temple Bar after the Proclamation had been made and the procession had disappeared, one felt that the seriousness of the occasion had impressed itself on every mind and that from every heart there rose a common prayer, 'God save the King!'"

With somewhat less ceremony, on the same day, the same proclamation was read in many parts of the United Kingdom.

On Friday the 25th both Houses of Parliament met the members having, one by one, taken the oath of allegiance to the new sovereign

on the two preceding days) to receive a message from the King and to adopt an address in reply. The royal message was as follows:—"The King is fully assured that the House of Commons will share in the deep sorrow which has befallen his Majesty and the nation by the lamented death of his Majesty's mother, the late Queen. Her devotion to the welfare of her country and her people and her wise and beneficent rule during the sixty-four years of her glorious reign will ever be held in affectionate remembrance by her loyal and devoted subjects throughout the dominions of the British Empire."

The Marquis of Salisbury, in the House of Lords, and Mr. Balfour, in the House of Commons, moved the following Address, in speeches from which some passages have been quoted above:—"That an humble Address be presented to his Majesty to assure his Majesty that this House deeply sympathizes in the great sorrow which his Majesty has sustained by the death of our beloved Sovereign, the late Queen, whose unflinching devotion to the duties of her highest estate and to the welfare of her people will ever cause her reign to be remembered with reverence and affection; to submit to his Majesty our respectful congratulations on his accession to the Throne; to assure his Majesty of our loyal attachment to his person; and, further, to assure him of our earnest conviction that his reign will be distinguished under the blessing of Providence by an anxious desire to maintain the laws of the kingdom and to promote the happiness, the welfare, and the liberty of his subjects." Speeches in support of the motion were made by the leaders of the Opposition party, the Earl of Kimberley, in the House of Lords, and Sir H. Campbell-Bannerman, in the House of Commons, and by the Archbishop of Canterbury, also, in the former chamber. The Address was then adopted, and Parliament was adjourned until February 14.

On the 4th of February, the new King addressed the following messages to his subjects in the British Empire at large, to the Colonies, and to the princes and people of India:

"To My People. Now that the last Scene has closed in the noble and ever glorious life of My beloved Mother, The Queen, I am anxious to endeavour to convey to the whole Empire the extent of the deep gratitude I feel for the heart-stirring and affectionate tributes which are everywhere borne to Her Memory. I wish also to express My warm recognition of those universal expressions of what I know to be genuine and loyal sympathy with Me and with the Royal Family in our overwhelming sorrow. Such expressions have reached Me from all parts of My vast Empire, while at home the sorrowful, reverent and sincere enthusiasm manifested in the magnificent display by sea and land has deeply touched Me. The consciousness of this generous spirit of devotion and loyalty among the millions of My Subjects and of the feeling that we are all sharing a common sorrow, has inspired Me with courage and hope during the past trying and momentous days. Encouraged by the confidence of that love and trust which the nation ever reposed in its late and fondly mourned Sovereign, I shall earnestly strive to walk in Her Footsteps, devoting Myself to the utmost of My powers to maintaining and promoting the highest interests of My People, and to the diligent and zealous fulfilment of the great and

shared responsibilities which, through the Will of God, I am now called to undertake. EDWARD R. I.

To My People Beyond the Seas. The countless messages of loyal sympathy which I have received from every part of My Dominions over the Seas testify to the universal grief in which the whole Empire now mourns the loss of My beloved Mother. In the welfare and prosperity of Her subjects throughout Greater Britain the Queen ever evinced a heartfelt interest. She saw with thankfulness the steady progress which, with the wide extension of Self Government, they had made during Her Reign. She warmly appreciated their unflinching loyalty to Her Throne and Person, and was proud to think of those who had nobly fought and died for the Empire's cause in South Africa. I have already declared that it will be My constant endeavour not only the great example which has been bequeathed to Me. In these endeavours I shall have confident trust in the devotion and sympathy of the People and of their several Representative Assemblies throughout My vast Colonial Dominions. With such loyal support I will, with God's blessing, solemnly work for the promotion of the common welfare and security of the great Empire over which I have now been called to reign. EDWARD R. I.

To the Princes and People of India. Through the lamented death of My beloved and dearly mourned Mother, I have inherited the Throne, which has descended to Me through a long and unbroken lineage. I now desire to send My greeting to the Ruling Chiefs of the Native States, and to the Inhabitants of My Indian Dominions, to assure them of My sincere good will and affection, and of My heartfelt wishes for their welfare. My illustrious and lamented Predecessor was the first Sovereign of this Country who took upon Himself the direct Administration of the Affairs of India, and assumed the title of Empress in token of Her closer association with the Government of that vast Country. In all matters connected with India, the Queen Empress displayed an unvarying deep personal interest, and I am well aware of the feeling of loyalty and affection evinced by the millions of its people towards Her Throne and Person. This feeling was conspicuously shown during the last year of Her long and glorious reign by the noble and patriotic assistance offered by the Ruling Princes in the South African War, and by the gallant services rendered by the Native Army beyond the limits of their own Country. It was by Her wish and with Her sanction that I visited India and made Myself personally acquainted with the Ruling Chiefs, the people, and the cities of that ancient and famous Empire. I shall never forget the deep impressions which I then received, and I shall endeavour to follow the good example of the first Queen Empress to work for the general well being of my Indian subjects of all ranks and to merit, as She did, their unflinching loyalty and affection. EDWARD R. ET I.

English feeling toward the new sovereign of the British Empire, and the English estimate of his character and promise, are probably expressed quite truly for the general mass of intelligent people, by the following remarks of "The Times": "In the whole range of English social and political life there is no position more difficult to fill satisfactorily and without reproach

than that of Her Apparent to the Throne, and it may be justly said that the way in which that position has been filled for more than the ordinary life time of a generation has contributed to the remarkable increase of devotion to the Throne and the dynasty which is one of the most striking characteristics of Queen Victoria's reign. In the relations of private life, from his childhood upwards, the Prince has been universally and observedly popular. Cheerful and amiable, kind and generous, ever ready to sympathize with the joys and sorrows of those around him, a true friend, and a loyal antagonist, possessing considerable mental culture and wide intellectual sympathies without any tinge of pedantry, he has represented worthily the type of the genuine English gentleman. Though a lover of sport, like most of his countrymen, he deferred from some of them in never regarding it as the chief interest and occupation in life. If he had been born in a humbler station he might have become a successful business man or an eminent administrator, for he possesses many of the qualities which command success in such spheres of action. He is a quick and methodical worker, arranges his time so as never to be hurried, is scrupulously conscientious in fulfilling engagements, great and small, with a punctuality which has become proverbial, never forgets to do anything he has undertaken, and never allows unanswered letters to accumulate. Few men have a larger private correspondence, and his letters have the clearness, the directness, the exquisite tactfulness, and the absolute freedom from affectation which characterize his conversation.

In public life he has displayed the same qualities and done a great deal of very useful work. The numerous and often irksome ceremonial duties of his position have been invariably fulfilled most conscientiously and with fitting dignity. Of the remainder of his time a considerable part has been devoted to what might be called semi-official activity. In works of benevolence and public utility and in efforts to promote the interests of science and art he was ever ready and anxious to lend a helping hand. He never forgot, however, that in his public appearances he had not the liberty of speech and action enjoyed by the ordinary Englishman. Whilst taking the keenest interest in public affairs of every kind, he carefully abstained from overstepping in the slightest degree the limits imposed on him by constitutional tradition and usage. No party clique or Court camarilla ever sheltered itself behind him, and no political intrigue was ever associated with his name. Throughout her dominions Queen Victoria had no more loyal, devoted subject than her own eldest son. If this strictly correct attitude had been confined to his relations with the Head of the State we might have supposed that it proceeded from a feeling of deep filial affection and reverence, but, as it was displayed equally in his relations with Parliament and politicians, we must assume that it proceeded also from a high and discriminating sense of duty. Of the Prime Ministers, leaders of her Majesty's Opposition, and politicians of minor degree with whom he came in contact, he may have found some more sympathetic than others, but such personal preferences were carefully concealed in his manner, which was invariably courteous and considerate, and were not allowed to influence his conduct."

In another article the same journal again remarked that "There is no position more difficult to fill than that of Her Majesty on the Throne, and indeed it is less beset by more than all the temptations of action or inaction. While the weight of responsibility, as open duty, is much less alluring than it must be with a feeling akin to hope, which has a more in that position offers up the tempting power. Lead is not into temptation. Other men say, and much temptation if they have a duty to do, to keep out of its way, but the duty to do is too slow, dragged and impeded by temptation in its most seductive forms. It is not only the obviously feel that he has a duty to do, but he must also steel himself against much that comes in the specious garb of goodness and a duty with the imperious command of necessity. The King has passed through that tempestuous world, prolonged through youth and manhood to middle age. We shall not pretend that there is nothing in his long career which those who respect and admire him could not wish otherwise. Which of us can say that with even approximate temptations to meet he could face the fierce light that beats upon an heir apparent no less than upon the Throne?"

The King was in his sixteenth year when he succeeded to the throne, having been born on the 14th of November, 1841. By inheritance under a patent of Edward III. he became at once Duke of Cornwall and a month later he was created, by patent, Prince of Wales and Earl of Chester—titles which do not pass by descent. He was married to the Princess Alexandra of Denmark, on the 19th of March, 1863. The children born of the marriage have been six in all—three sons and three daughters. Of the former only one survives—Prince George, Duke of York, the second son, who will no doubt be created Prince of Wales. The eldest son, Prince Albert Victor, Duke of Clarence and Avonlile, died in his 27th year on the eve of his marriage. The third son, Alexander, born in 1871, died an infant. The Duke of York is married to Princess Victoria Mary, daughter of the late Duke of Fife and of his wife, Princess Mary of Cambridge. There are four children of the marriage, three sons and a daughter, the eldest son, in direct succession to the Throne, bearing the name of Prince Edward Albert. Of the daughters of the new Sovereign the eldest, Princess Louise, is the wife of the Duke of Fife and has two daughters. Of her two sisters, the Princess Victoria is unmarried. The Princess Maud became in 1896 the wife of Prince Charles of Denmark.

A. D. 1901 (February).—The opening of Parliament by King Edward VII.—The royal declaration against transubstantiation and the invocation of saints.—Protest of Roman Catholic peers.—Parliament, reassembling on the 14th of February, was formally opened by the King in person, with a degree of pomp and ceremony which had been made strange by half a century of disuse. King and Queen were escorted in procession, with all possible state, from Buckingham Palace to Westminster. Received there, at the royal entrance, by the great officers of state, they were conducted, by a still more imposing procession of dignitaries, to the "robing room." "His Majesty being robed and the Imperial Crown borne by the Duke of Devonshire, Lord President of the Council, the Procession advanced into the House of Peers in the

same order, except that the Cup of Mantling, a [metaphorical symbol of dignity] was borne immediately before His Majesty, on the right hand of the Sword of State, by the Marquess of Winchester. The King being seated on his Throne, the Lord bearing the Cup of Mantling stood on the Steps of the Throne, on the right, and the Peer bearing the Sword of State, on the left of His Majesty. The Lord Chancellor, the Lord President and the Earl Marshal stood on the right and the Lord Privy Seal on the left of His Majesty, the Lord Great Chamberlain stood on the Steps of the Throne on the left hand of His Majesty, to receive the Royal Command. The Lord Steward and the other officers of His Majesty's Household arranged themselves on each side of the Steps of the Throne, in the rear of the Great Officers of State."

By hereditary right, the ceremonial arrangements of the occasion were controlled by the Duke of Norfolk, as Earl Marshal, and the Marquess of Cholmondeley, as Lord Great Chamberlain, and they are said to have followed ancient precedent with a strictness which became very offensive to modern democratic feeling. The small chamber of the House of Lords was so filled with peeresses as well as peers that next to no room remained for the House of Commons when its members were summoned to go to meet the King. What should have been a dignified procession behind the Speaker became, in consequence, a mob-like crush and scramble, and only some fifty out of five hundred Commons are said to have succeeded in squeezing themselves within range of his Majesty's eye.

The King, then, as required by laws of the seventeenth century (the Bill of Rights and the Test Act—see, in vol. 2, ENGLAND, A. D. 1689, October, and 1672-1673) signed and made oath to the following Declaration against the doctrine of transubstantiation, the invocation of the Virgin and the invocation of saints: "I do solemnly and sincerely in the presence of God profess, testify and declare that I do believe that in the sacrament of the Lord's Supper there is not any transubstantiation of the elements of bread and wine into the body and blood of Christ at or after the consecration thereof by any person whatsoever; and that the invocation or adoration of the Virgin Mary or any other saint and the sacrifice of the masses as they are now used in the Church of Rome are superstitious and idolatrous, and I do solemnly in the presence of God profess, testify and declare that I do make this declaration and every part thereof in the plain and ordinary sense of the words read into me; they are commonly understood by English Protestants without any evasion, equivocation or mental reservation whatsoever and without any dispensation already granted me for this purpose by the Pope or any other authority or person whatsoever or without any hope of any such dispensation from any person or authority whatsoever or without thinking that I am or can be acquitted before God or man or absolved of this declaration or any part thereof although the Pope or any other person or persons or power whatsoever should dispense with or annul the same, or declare that it was null and void from the beginning."

Having thus submitted to the old test of a Protestant qualification for the Throne, the King read his Speech to Parliament, briefly stating the

general posture of public affairs and setting forth the business which the two Houses were asked to be vigilant to consider. The war in South Africa was dealt with by the royal speaker in a few words, as follows: "The war in South Africa has not yet entirely terminated, but the capitals of the enemy and his principal lines of communication are in my possession, and measures have been taken which will I trust enable my troops to deal effectually with the forces by which they are still opposed. I greatly regret the loss of life and the expenditure of treasure due to the fruitless guerrilla war maintained by Boer partisans in the former territories of the two Republics. Their early submission is much to be desired in their own interests; as, until it takes place, it will be impossible for me to establish in those colonies a government which will secure equal rights to all the white inhabitants, and protection and justice to the native population." In a later paragraph of the speech he said: "The proceeding not hostile in South Africa has led me to make a further call upon the patriotism and devotion of Canada and Australasia. I rejoice that my request has met with a prompt and loyal response, and that large additional contingents from those Colonies will embark for the seat of war at an early date." The speech concluded with the following announcement of subjects and measures to be brought before Parliament:

"On the 10th of the House of Commons, The Estimates for the year will be laid before you. Every care has been taken to limit the amount, but the naval and military requirements of the country, and especially the outlay consequent on the South African war, have involved an inevitable increase."

"The demise of the Crown renders it necessary that a renewed provision shall be made for the Civil List. I place unreservedly at your disposal those hereditary revenues which were so placed by my predecessor, and I have commanded that the papers necessary for a full consideration of the subject shall be laid before you."

"My Lords and Gentlemen, Proposals will be submitted to your judgment for increasing the efficiency of my military forces."

"Certain changes in the constitution of the Court of Final Appeal are rendered necessary in consequence of the increased resort to it, which has resulted from the expansion of the Empire during the last two generations."

"Legislation will be proposed to you for the amendment of the Law relating to Education."

"Legislation has been prepared, and, if the time at your disposal shall prove to be adequate, will be laid before you, for the purpose of regulating the voluntary sale by landlords to occupying tenants in Ireland, for amending and consolidating the Factory and Workshops Acts, for the better administration of the Law respecting Lunatics, for amending the Public Health Acts in regard to Water Supply, for the prevention of drunkenness in Licensed Houses or Public Places, and for amending the Law of Literary Copyright."

"I pray that Almighty God may continue to guide you in the conduct of your deliberations, and may bless them with success."

Dated from the House of Lords, on the day of the opening, the following protest, signed by Roman Catholic peers (of whom there are thirty),

against the continued requirement from the British sovereign of the Declaration quoted above, was laid before the Lord Chancellor.

"My Lord:—On the opening of his first Parliament to-day His Majesty was called upon to make and subscribe the so-called Declaration against Transubstantiation, which was framed during the reign of Charles II., at a moment when religious animosities were unusually bitter."

"Some days ago we addressed ourselves to your lordship as the chief authority on English law, to ascertain whether it was possible to bring about any modification of those parts of the Declaration which are specially provocative to the religious feelings of Catholics. We received from your lordship the authoritative assurance that no modification whatever was possible, except by an Act of Parliament, and that no action of ours would therefore be of the slightest use to effect the pacific purpose we had in view. The Sovereign himself has, it appears, no option, and is obliged by statute to use the very words prescribed, although we feel assured that his Gracious Majesty would willingly have been relieved, as all his subjects have for many years been relieved by Act of Parliament, from the necessity of branding with continuous epithets the religious tenets of any of his subjects."

"While we submit to the law, we cannot be wholly silent on this occasion. We desire to impress upon your lordship that the expressions used in this Declaration made it difficult and painful for Catholic peers to attend to-day in the House of Lords in order to discharge their official or public duties, and that those expressions cannot but cause the deepest pain to millions of subjects of His Majesty in all parts of the Empire, who are as loyal and devoted to his Crown and person as any others in his dominions."

"We are, my lord, your lordship's most obedient and faithful servants."—*London Times*, Feb. 15, 1901.

In the House of Lords, on the 22d of February, the Marquis of Salisbury made the following reply to Lord Bryce, who asked if the Prime Minister could hold out hope of an early measure to abolish the oath so offensive to Catholic subjects of the King:—"Though I am very anxious to give an answer which would be satisfactory to the noble lord and his co-religionists, I do not wish to leave on his mind an impression that there are any doubts in the matter. We all of us deplore the language in which that declaration is couched, and very much wish it could be otherwise expressed, but when it comes to altering an enactment which has now lasted as far as I know, without serious question, 200 years, and which was originally included in the Bill of Rights, it is a matter which cannot be done without very considerable thought. We must remember that an enactment of that kind represents the passions, feelings, and sensibilities of the people by whom it was originally caused; and that these have not died out. They are not strong within these walls, but there are undoubtedly parts of the country where the controversies which the declaration represents still flourish, and where the emotions which it indicates have not died out. Before an enactment is proposed, with all the discussion which must precede such an enactment, we shall have to consider how far it is desirable to light again passions which sleep

at this moment for an occasion which is not now urgent, and which we all earnestly hope may not be urgent in our lives. I do not wish to debar the noble lord from any action which he may think it right to take, but I wish to point out to him the extreme difficulties and anxieties which would accompany any such attempt. With respect to the retardation of legislation, I need hardly observe that it is rather a question for the House of Commons than for us, because here I do not imagine there would be any doubt whatever about the result of such attempted legislation. But I could not be certain that a very strong feeling might not be excited elsewhere, and I notice that, possibly with a view to that consideration, the leader of the other House, in answer to a question, said that at all events for the present year he did not see the possibility of having the requisite opportunity of bringing the question before the House. I am afraid, therefore, however deeply I sympathize with the feelings of the noble lord and wish there had been no cause for their being expressed, to that my answer would have to be of a discouraging character.

Notwithstanding this discouraging reply to the question, Lord Salisbury, on the 21st of March, moved the following resolution in the House of Lords: "To resolve that it is desirable that a Joint Committee of both Houses be appointed to consider the declaration required of the Sovereign, on his accession, by the Bill of Rights, and to report whether its language can be modified advantageously, without diminishing its efficacy as a security for the maintenance of the Protestant succession." On introducing the resolution he said: "The only thing that it is necessary I should mention is that something has been said with respect to referring the Coronation Oath to the same committee, and making in it alterations which undoubtedly will have to be made. But the two subjects are not at all similar, and it would have been impossible to put the Coronation Oath into this reference. If, later, it should be thought wise to use the same committee for the purpose of considering the matter of the Coro-

nation Oath, I probably shall see no difficulty in that."

A. D. 1901 (February).—Attitude of the Liberal party towards the South African War.—At the annual meeting of the general committee of the National Liberal Federation held at Rugby, February 27, 1901, more than 100 affiliated Liberal Associations in England and Wales being represented by about 500 delegates, including many eminent men, the following resolution was adopted: "That this committee records its profound conviction that the prolongation of the deplorable war in South Africa declared for electing purposes to be over last September is due to the policy of demanding unconditional surrender and to a want of knowledge, foresight, and judgment on the part of the Government, who have neither demonstrated effectively to the Boers the military supremacy of Great Britain, nor succeeded in the war as to induce them to lay down their arms; this committee bitterly laments the sacrifice of thousands of brave men on both sides, the terrible loss of life from disease, owing in no small degree to the scandalous inadequacy of sanitary and hospital arrangements provided for our forces, and the enormous waste of resources in actual expenditure upon the war, in the devastation of territory, and in the economic embarrassments which must inevitably follow. The committee calls upon the Government to announce forthwith, and to carry out, on the cessation of hostilities, a policy for the settlement of South African affairs which will secure equal rights to the white races, just and humane treatment of natives, and such a measure of self-government as can honourably be accepted by a brave and high-spirited people."

EPWORTH LEAGUE, The.—The Epworth League, an organization of young people in the Methodist Episcopal Church, on lines and with objects kindred to those of the "Young People's Society of Christian Endeavor" (see, in this vol. CHRISTIAN ENDEAVOR), was instituted by a convention of representatives from various societies of young people in that church, held at Cleveland, Ohio, May 14-15, 1889. It was officially adopted by the General Conference of the M. E. Church in 1892. The Year book of the League for 1901 says:—"A dozen years ago the Epworth League had no regularly organized Chapter. Today it has almost twenty-one thousand. Twelve years ago it had a total membership of twenty-seven. To-day it has a million and a half. Twelve years ago the Junior League had scarcely been dreamed of. To-day it is the most promising division of the great Epworth army, having a membership of tens of thousands. Twelve years ago a suggestion to establish a newspaper organ was looked upon as a most

doubtful experiment, and predictions of failure were freely made. To-day the organization has an official journal whose circulation exceeds that of any Church weekly in the world."

FINLAND: A. D. 1898-1901.—A blow at the constitutional rights of the country.—Attempt to Russinize the Finnish army.—Possible defeat of the measure.—In July, 1898, at a month before the publication of the Czar's Peace Manifesto, the Diet of Finland was summoned to meet in extraordinary session during February, 1899, in order to debate upon the new Army Bill submitted by the Russian Government. Hitherto, the army of Finland has been strictly national in character, and has served solely for the defence of the province. The Finnish army has been limited to 5,600 men, 1,920 of whom are annually selected to bear arms during a period of three years. This has now been changed; the main features of the new Army Bill

being as follows: 1. Finnish troops may be requisitioned for service beyond the confines of the Grand Duchy. 2. Russians may serve in the Finnish, and Finlanders in the Russian Army. 3. A lightening of the duties of military service upon the ground of superior education will be granted to those only who can speak, read and write Russian. 4. The period of active service under the flag is increased from three years to five. 5. The annual contingent of soldiers in active service is increased from 1,920 men to 7,200. We at once perceive the fundamental nature of these changes, which threaten to impose a far heavier burden upon Finland, and to Russify her army. Naturally, the new law met with the most determined opposition. But while the bill was still in committee there appeared on February 15, 1899, an Imperial ukase, whereby the entire situation was radically changed and the independence of Finland seriously threatened. This ukase decrees that while the internal administration and legislation of Finland are to remain unimpaired, matters affecting the common interests of Finland and Russia are to be no longer submitted solely to the jurisdiction of the Grand Duchy. Furthermore, the Emperor reserves to himself the final decision as to which matters are to be included in the above category.

The document is couched in terms expressing good will for Finland. In effect, however, it signifies the complete demolition of the constitutional rights of that country. For in all matters involving the interests of both countries, or affecting in any way those of Russia, Finland will hereafter be confined to a mere expression of opinion; she will no longer be able to exercise the privilege of formulating an independent solution. The definition of "common interests" as furnished by the ukase is so vague as to make the exercise of any form of self government on the part of the Finlanders a matter of uncertainty, if not of serious difficulty. Not only the interpretation of "common interests," but also the designation of the law governing them, is primarily in the hands of the Russian authorities. Finland, an independent, constitutional state [see in vol. 4, SCANDINAVIAN STATES A. D. 1897-1899], has been, or, at all events, is to be, converted into a province of Russia.

The conviction is general that the Czar, who had formerly manifested such good will toward the country, and who had abrogated the enactments curbing its constitutional rights, could not possibly have so completely changed his views within so short a time. Consequently it was decided to address a monster petition to the half of the people directly to the ruler himself. This plan met with the enthusiastic approval of the entire nation and the document was signed by no fewer than 523,931 men and women

of Finland. A deputation of five hundred was elected to present this petition, which so eloquently voiced the conviction of the whole nation. These five hundred representatives went to St. Petersburg, and requested an audience with the Czar. But their efforts were unavailing. They were not received; and it appeared as if the united voice of a peaceful and loyal people could not penetrate to the ear of the ruler.

"In the meantime the attention of all Europe was directed to the matter, and everywhere the liveliest sympathy was manifested for that little Nation in the Northeast. . . . There now arose—entirely from private initiative, and without the exercise of any influence on the part of Finland—a general movement among European nations to select prominent scholars and artists; i. e., men entirely removed from the political arena, to act as representatives of the popular sentiment, and to speak a good word with the Czar in behalf of Finland. . . . Addresses of sympathy for Finland were formulated in England, France, Germany, Austria, Hungary, Italy, Switzerland, Belgium, Holland, Denmark, Sweden, and Norway, and these addresses were signed by over one thousand and fifty scholars and artists. . . . All the addresses together were to be presented to the Czar by a small deputation, and for this purpose the Commission mentioned at the beginning of this article proceeded to St. Petersburg. The gentlemen took great pains to secure an audience; they went from one minister to another, and avoided every appearance of unfriendliness. Nevertheless, their request was politely declined; and the acceptance of the document bearing the signatures of over one thousand notabilities firmly refused."—R. Eucken, *The Finnish Question* (Forum, Nor., 1899).

A correspondent of the "London Times," writing from Helsingfors, December 28, 1900, reported: "The situation in Finland at the end of the year is by no means improved, notwithstanding a few gratifying events, such as the permission granted by General Bobrikoff for a new daily paper to be published in Helsingfors. . . . Two papers, one published in a provincial town, and a weekly journal in Helsingfors, have been suppressed for ever, and the preventive censorship is applied with the utmost rigour. The Governor-General has displayed great energy in enforcing the restrictions on the right to hold meetings, and he has in circulars to the provincial governors issued instructions for the introduction of Russian as the language of the Provincial Government offices even earlier, and more fully, than is provided for in the language ordinance promulgated last autumn. Denunciations of private persons to General Bobrikoff by secret agents, as well as public authorities, are events of well-nigh daily occurrence, and one consequence of these secret reports is that five University professors are threatened with summary dismissal unless they bind themselves to mix themselves up no longer in any sort of political agitation."

"The question of the new military law will in all probability come before the Russian Imperial Council in January, all authorities concerned having had an opportunity of expressing their views on the report made on the question by the Finnish Diet in 1899, including the Minister of War, General Kuropatkin. In conformity with the manifesto of February 15, 1899, this report

will be regarded merely as an 'opinion' given by that body, in no way binding when the matter comes up for further consideration. This scheme, it will be remembered, not only imposes on Finland a military burden beyond the powers of the country, but has the political aim of denationalizing the Finnish army, and is thus intended to serve as a potent lever in the Russification of the Grand Duchy. The main features of the Bill were rejected by the Finnish Diet, but, although several members of the Imperial Council are opposed to the new scheme, it is believed that it will gain the majority in the Council in all its more salient points."

Three months later (Feb. 26, 1901), an important change in the situation was reported from St. Petersburg by the same correspondent. "The project of Russifying the Finnish army had suffered defeat," he learned, in the Council of State, by a large majority. "But," he added, "this does not by any means imply that the military reform scheme in Finland, which has been the chief cause of all the harm done to the Finnish Constitution during the last three years, has been finally upset. A similar procedure in any other European civilized country would mean as much, but it is not so in Russia. It simply means that the Russification of Finland is still being prosecuted by a small powerful minority, who will probably gain their point in spite of the vast majority of his Majesty's councillors. The Council of State, the highest institution in the sphere of supreme administration, is merely a consultative body, whose opinion can be, and often has been, set aside by the Sovereign without the least difficulty. A mere stroke of the pen is necessary."

"In the present case the Finnish military project was discussed by the four united departments of the Council. It is stated that M. Pobedonostzeff and the Minister of War said nothing, being, perhaps, either too much impressed by the speech of M. Witte against the project, or feeling sure of their ground without the need of entering into useless discussion. M. Witte, whose influence is gradually embracing every branch of government, is also looming big in this question. He is reported to have made a speech on the occasion which carried over 40 members of the Council with him in opposition to the project. He attacked it principally on financial grounds, and declared that nobody could advise his Majesty to adopt it. The rejection of the proposal by the four departments is preliminary to its discussion by a plenary assembly of the Council, and only after that has taken place will the opinion of the majority be laid before the Emperor."

A. D. 1895.—Ministerial changes.—The alliance with Russia.—On the resignation of the presidency of the Republic by M. Casimir-Perier, see, in vol. 2, FRANCE: A. D. 1894-1895, and the election of M. Félix Faure to succeed him (January 15-17), a ministry was formed which represented the moderate republican group, with M. Ribot at its head, as President of the Council and Minister of Finance, and with M. Hanotaux as Minister of Foreign Affairs. The most important work of the new government was the arrangement of an alliance with Russia, which was conspicuously signified to the world by the union of the French and Russian fleets when they entered the German harbor of Kiel, on the 17th of June, to take part in the celebration of the opening of the Kaiser Wilhelm Ship Canal, between the Baltic and North Seas (see, in this vol., GERMANY: A. D. 1895, JUNE). This gave the greatest possible satisfaction to the nation, and powerfully strengthened the ministers for a time; but they were discredited a little later in the year by disclosures of waste, extravagance and peculation in the military department. Early in the autumn session of the Chamber of Deputies a vote was carried against them, and they resigned. A more radical cabinet was then formed, under M. Leon Bourgeois, President of the Council and Minister of the Interior; with M. Berthelot holding the portfolio of foreign affairs, M. Cavalagnac that of war, and M. Lockroy that of the marine.

A. D. 1896 (March).—Census of the Republic.—Returns of a national census taken in March showed a population in France of 38,228,969, being an increase in five years of only 133,919. The population of Paris was 2,511,955.

A. D. 1896 (April—May).—Change of Ministry.—Socialist gains.—After a long conflict with a hostile Senate, the Radical Ministry of M. Bourgeois gave way and was succeeded, April 30, by a Cabinet of Moderate Republicans, in which M. Méline presided, holding the portfolio of Agriculture, and with M. Hanotaux returned to the direction of Foreign Affairs. At municipal elections in the following month the Socialists made important gains. "The elections of May, 1896, revealed the immense progress that socialism had made in all lands since the year 1891. Towns as important as Lille, Roubaix, Clichy-Montigny, Narbonne, re-elected socialist mayors to administer their affairs; and even where there was only a socialist minority, a socialist mayor was elected, as in the case of Dr. Fausseres at Marseilles, and Constant at Bordeaux. But in the small towns and the villages our victories have been especially remarkable. The Parti Ouvrier alone can reckon more than eleven hundred municipal councillors elected upon its collectivist programme; and at the Lille Congress, which was held a few days before the International Congress in London, thirty-eight socialist municipal councils and twenty-one so-

cialist minorities of municipal councils were represented by their mayors or by delegates chosen by the party."—P. Lafargue, *Socialism in France* (Fortnightly Rev., Sept., 1897).

A. D. 1897-1899.—The Dreyfus Affair.—Although Captain Alfred Dreyfus, of the French army, was arrested, tried by court martial, convicted of treasonable practices, in the betrayal of military secrets to a foreign power, and thereupon degraded and imprisoned, in 1894, it was not until 1897 that his case became historically important, by reason of the unparalleled agitations to which it gave rise, threatening the very life of the French Republic, and exciting the whole civilized world. Accordingly we date the whole extraordinary story of Captain Dreyfus and his unscrupulous enemies in the French Army Staff from that year, in order to place it in proper chronological relations with other events. As told here, the story is largely borrowed from a singularly clear review of its complicated incidents by Sir Godfrey Lushington, formerly Permanent Under Secretary in the British Home Office, which appeared in the "London Times," while the question of a revision of the Dreyfus trial was pending in the Court of Cassation. We are indebted to the publisher of "The Times" for permission to make use of it:

"In October, 1894, Captain Alfred Dreyfus, an artillery officer on the staff, was arrested for treason. He belonged to a respected and highly loyal Jewish family in Alsace, his military character was unblemished, and he was in easy circumstances. At this time General Mercier was Minister of War, General de Boisdeffre Chief of the Staff (practically Commander-in-Chief of the French army), General Gonse, Assistant Chief, Colonel Sandherr, well known as an Anti-Semite, was head of the Intelligence Department, under him were Commandants Picquart, Henry, and Lanth, also the Archivist Gribelin. Commandant Du Paty de Clam was an officer attached to the general staff. Commandant Esterhazy was serving with his regiment. On October 15, on the order of the Minister of War, Captain Dreyfus was arrested by Commandant Du Paty de Clam, and taken in the charge of Commandant Henry to the Cherche-Midi Prison, of which Commandant Forzinetti was governor. For a fortnight extraordinary precautions were taken to keep his arrest an absolute secret from the public and even from his own family. His wife alone knew of it, but dared not speak. . . . So harsh was his treatment that Commandant Forzinetti felt it his duty to take the strong step of making a formal representation to the Minister of War and also to the Governor of Paris, at the same time declaring his own conviction that Captain Dreyfus was an

innocent man. On October 31 Commandant Du Paty de Clam made his report, which has not seen the light, and on November 3 Commandant d'Ormescheville was appointed 'rapporteur' to conduct a further inquiry, and in due course to draw up a formal report, which practically constitutes the case for the prosecution. Not till then was Captain Dreyfus informed of the particulars of the charge about to be laid against him. From this report of Commandant d'Ormescheville we learn that the basis of the accusation against Captain Dreyfus was a document known by the name of the 'bordereau' [memorandum]. Neither Commandant d'Ormescheville's report nor the 'bordereau' has been officially published by the Government, but both ultimately found their way into the newspapers. The 'bordereau' was a communication not dated, nor addressed, nor signed. It began:—*'Sous nouvelles m'indiquant que vous désirez me voir, je vous adresse cependant, Monsieur, quelques renseignements intéressants.'* [Without news indicating that you wish to see me, I send you, nevertheless, monsieur, some important information.] (Then followed the titles of various military documents, 1, 2, &c.) The report stated that the 'bordereau' had fallen into the hands of the Minister of War, but how the Minister declined to say, beyond making a general statement that the circumstances showed that it had been sent to an agent of a foreign Power. It is now generally accepted that it had been brought to the War Office by a spy—an Alsatian porter who was in the service of Colonel von Schwarzkoppen, then the military attaché to the German Embassy in Paris. The report contained nothing to show that Captain Dreyfus had been following treasonable practices or to connect him in any manner with the 'bordereau'. The sole question for the Court martial was whether the 'bordereau' was in his handwriting. On this the experts were divided, three being of opinion that it was, two that it was not, in his handwriting.

The Court martial was duly held, and Captain Dreyfus had the aid of counsel, Maître Demange; but the first act of the Court was, at the instance of the Government representative, to declare the 'huis clos,' so that none but those concerned were present. After the evidence had been taken the Court, according to custom, adjourned to consider their verdict in private. Ultimately they found Captain Dreyfus guilty, and he was sentenced to be publicly expelled from the army and imprisoned for life. Not till after his conviction was he allowed to communicate with his wife and family. The sentence has been carried out with the utmost rigour. Captain Dreyfus was transported to the Isle du Diable [off the coast of French Guiana], where he lives in solitary confinement. . . . The Court martial having been held within closed doors, the public at large knew nothing. . . . beyond the fact that Captain Dreyfus had been convicted of betraying military secrets to a foreign Power, and they had no suspicion that there had been any irregularity at the Court martial or that the verdict was a mistaken one. . . . For two years the Dreyfus question may be said to have slumbered. In the course of this time Colonel Sandherr, who died in January, 1897, had been compelled to retire from ill health, and Commandant Picquart became head of the Intelligence Department. . . . In May, 1898, there were brought

to the Intelligence Department of the War Office some more sweepings from Colonel von Schwarzkoppen's waste-paper basket by the same Alsatian porter who had brought the 'bordereau'. These were put by Commandant Henry into a packet, and given by him (according to the usual custom) to Commandant Picquart. Commandant Picquart swears that amongst these were about 60 small pieces of paper. These (also according to custom) he gave to Commandant Lauth to piece together. When pieced together they were found to constitute the document which is known by the name of 'Petit bleu, à carte télégramme' for transmission through the Post-office, but which had never been posted. It was addressed to Commandant Esterhazy, and ran as follows:—

'J'attends avant tout une explication plus détaillée que celle que vous m'avez donnée, l'autre jour, sur la question en suspens. En conséquence, je vous prie de me la donner par écrit, pour pouvoir juger si je puis continuer mes relations avec la maison R. . . ou non. [I await, before anything farther, a more detailed explanation than you gave me the other day on the question now in suspense. In consequence, I request you to give this to me in writing, that I may judge whether I can continue my relations with the house of R. or not.] M. le Commandant Esterhazy, 27, Rue de la Blenfaillance, Paris.'

At this time Commandant Esterhazy was a stranger to Commandant Picquart, and the first step which Commandant Picquart took was to make inquiry as to who and what he was. His character proved most disreputable, and he was in money difficulties. The next was to obtain a specimen of his handwriting in order to compare it with other writings which had been brought by spies to the office and were kept there. In this way it came about that it was compared with the facsimile of the 'bordereau', when, lo and behold, the writings of the two appeared identical. It was Commandant Esterhazy, then, who had written the 'bordereau', and if Commandant Esterhazy, then not Captain Dreyfus. . . . Commandant Picquart acquainted his chiefs with what had been done—namely, General de Boisdeffre in July, and his own immediate superior, General Gonse, in September. . . .

On September 15 of the same year, 1898, took place the first explosion. This solely concerned the Dreyfus trial. On that day the 'Éclair,' an anti-Semite newspaper, published an article headed 'Le Traître,' in which they stated that at the Court martial the 'pièce d'accusation' on which Captain Dreyfus was tried was the 'bordereau'; but that after the Court had retired to the 'chamber of deliberation,' there was communicated to them from the War Office, in the absence of the prisoner and his counsel, a document purporting to be addressed by the German military attaché to his colleague at the Italian Embassy in Paris, and ending with a postscript, 'Cet animal de Dreyfus devient trop exigeant'; further, that this document was the only one in which appeared the name Dreyfus. This at once had removed all doubts from the minds of the Court martial, who thereupon had unanimously brought the prisoner in guilty, and the 'Éclair' called upon the Government to produce this document and thus satisfy the public conscience. This document has, for sufficient reasons hereinafter appearing, come to be known

as 'le document libérateur,' and by this name we will distinguish it. As to the article in the 'Eclair,' it must have proceeded either from a member of the Court-martial or from some one in the War Office, but whether its contents were true is a matter which to this day has not been fully cleared up. This much, however, is known. We have the authority of Maitre Demange (Captain Dreyfus's advocate) that no such document was brought before the Court-martial during the proceedings at which he was present. On the other hand, it has now been admitted that at the date of Captain Dreyfus's trial there was, and that there had been for some months previously, in the archives of the War Office a similar document not in the Dreyfus 'dossier' proper, but in a secret dossier, only that the words therein are not 'l'et animal de Dreyfus,' but 'Ce (sic) canaille de D—' (initial only) 'devient trop exigeant.'

The Government have never yet either admitted or denied it. General Mercier went down to the Court-martial and made to them a secret communication.

As might have been expected, the article in the 'Eclair' occasioned a considerable stir; both parties welcomed it, the one as showing Captain Dreyfus to have been really a traitor and therefore justly deserving his sentence; the other as a proof that whether guilty or not he had been condemned illegally on a document used behind his back. The public excitement was increased when on the 10th of November the 'Matin'—a War Office journal—published what purported to be a fac-simile of the bordereau, and a host of experts and others set to work to compare it with the accused's handwriting. The reproduction was most ably made, not from the original bordereau which was in the sealed up Dreyfus dossier, but from a photograph of it. And the photograph must have been obtained surreptitiously from some one in the War Office or from some one who had attended the secret Court-martial.

The natural sequel to these revelations was an interpellation in the Chamber—the 'Interpellation Castelin' of November 18, 1896. On that day, M. Castelin, an anti-Semite deputy, by asking some question as to the safe custody of Dreyfus gave the Government an opportunity. General Billot, then Minister of War, replied in general terms—'L'instruction de l'affaire, les débats, le jugement, ont eu lieu conformément aux règles de la procédure militaire. Le Conseil de Guerre régulièrement composé, a régulièrement délibéré,' &c. [The Instructions, the debates, the verdict have all taken place conformably to the rules of military procedure. The Court-martial, regularly composed, has deliberated regularly,' &c.] On November 14, 1896 on the eve of the Interpellation Castelin, Commandant Picquart was sent on a secret mission which has not been disclosed. He left his duties as head of the Intelligence Department nominally in the hands of General Gonse, his superior but practically to be discharged by Commandant Henry—who was Commandant Picquart's subordinate. He requested his family to address their private letters for him to the War Office whence they would be forwarded. His secret missions, or missions, took him first to Nancy then to Besançon (permission being refused to him to return to Paris even for a night to recover his wardrobe), later on to Algeria and Tunisia with instructions to proceed to the front.

... In March, 1897, Commandant Picquart was appointed Lieutenant Colonel of the 4th Tirailleurs, the appointment being represented to him as a favour. He was the youngest Colonel in the service. In his stead Commandant Henry became Chief of the Intelligence Department.

From the first Colonel Picquart had, of course, felt some uneasiness at being sent on these missions away from his ordinary duties, and various little circumstances occurred to increase it, and in May, 1897, having occasion to write unofficially to Commandant Henry, now Chief of the Intelligence Department, he expressed himself strongly as to the mystery and finstles with which his departure had been surrounded; and he received a reply dated June 3, in which Commandant Henry said that the mystery he could well enough explain by what had come to his knowledge after some inquiry, and he alluded in general to three circumstances—

(1) Opening letters in the post; (2) attempt to suborn two officers in the service to speak to a certain writing as being that of a certain person; and (3) the opening of a secret dossier. The first Colonel Picquart knew to refer to his having intercepted Commandant Esterhazy's letters, the other two allusions he did not at the time (June, 1897) fully understand; but the letter, couched in such terms and coming from one who had until lately been his subordinate, and was now the head of the Department, convinced him that he was the object of serious and secret machinations in the War Office. He immediately applied for leave and came to Paris. There he determined, with a view to his self defence, to obtain legal advice from an advocate, M. Leblois, saw him, and showed him Colonel Henry's letter, and, whilst abstaining (according to his own account and that of M. Leblois) from touching on the third matter, the secret dossier, spoke freely on the other two—on the 'affaires' Dreyfus and Esterhazy generally, also, in order to explain how far he had acted with the sanction or cognizance of his superiors, he placed in his hands the correspondence—not official but confidential—about Commandant Esterhazy which he had had with General Gonse in 1896. He left it to M. Leblois to take what course he might think necessary, and returned to Soussse. In the course of the autumn he was summoned to Tunis and asked by the military authority there whether he had been robbed of a secret document by a woman. The question seemed a strange one and was answered by him with a simple negative. Later on he received at Soussse two telegrams from Paris, dated November 10. One—'Arretez Bondieu. Tout est découvert. Affaire très grave. Speranza.' This was addressed to Tunis and forwarded to Soussse. The other—'On a des preuves que le bleu est fabriqué par Georges Blanche.' This was addressed to Soussse. And two days after he received a letter, likewise of November 10, from Esterhazy, an abusive one charging him with conspiring against him, &c. He felt certain that the telegrams were sent in order to compromise him. Colonel Picquart suspected Commandant Esterhazy to be the author of the telegrams, the more so that in Commandant Esterhazy's letter and in one of the telegrams his own name Picquart was spelt without a c. He at once telegraphed to Tunis for leave to come and see the General there. He did see him and through him forwarded to the

Minister of War the three documents, with a covering letter in which he demanded an inquiry. He then obtained leave to go to Paris, but the condition was imposed on him that he should see no one before presenting himself to General de Pellieux. When he saw the General he learnt for the first time and to his surprise that ever since he left Paris in November, 1896, his letters had been intercepted and examined at the War Office and he was called upon to explain various letters and documents.

Before June, 1897, Commandant Esterhazy's name had not been breathed to the public. It is now to come out, and from two independent sources. Some little time after seeing Colonel Picquart, in June, 1897, M. Leblois had determined, in his interest, to consult M. Scheurer-Kestner, who was well known to have taken an interest in the 'affaire Dreyfus,' because of the suspicion that Captain Dreyfus had been condemned on a document which he had never seen and because of the discrepancies between Captain Dreyfus's handwriting and that of the bordereau. He was Vice-President of the Senate and a personal friend of General Billot, the Minister of War. M. Leblois communicated to him what he knew about Commandant Esterhazy and showed him General Gousses's letters to Colonel Picquart. In October M. Scheurer-Kestner communicated on the subject both with General Billot and with the President of the Council, M. Méline. He was now to learn the name of Commandant Esterhazy from another quarter. One afternoon in the end of October a M. de Castro, a stock broker, was seated in a café in Paris, and a boy from the street came up with copies of the facsimile of the bordereau, which had then been on sale for more than a year. M. de Castro bought a copy, and at once recognized, as he thought, the handwriting of the bordereau to be that of Commandant Esterhazy, who was a client of his. He took the copy home, compared it with letters of Commandant Esterhazy, and all doubts vanished. His friends told M. Matthieu Dreyfus, who begged him to take the letters to M. Scheurer-Kestner, and he did so on November 12, 1897, and M. Scheurer-Kestner advised that M. Matthieu Dreyfus should go to General Billot and denounce Commandant Esterhazy as the author of the bordereau. And now to turn to Commandant Esterhazy. His own statement is this:—In the month of October, 1897, when in the country, he received a letter from 'Speranza' giving minute details of a plot against himself, the instigator of which was, Speranza said, a colonel named Picquart (without the *e*). He at once went to Paris, saw the Minister of War, and gave him Speranza's letter. Shortly afterwards he received a telegram asking him to be behind the pillboxes of the bridge Alexander III. at 11.30 p.m. He would there meet a person who would give him important information. He kept his appointment, met a veiled woman, who, first binding him over under oath to respect her incognito, gave him long details of the plot of the 'band' against himself. Afterwards he had three similar interviews, but not at the same place. At the second of these four interviews the unknown woman gave him a letter, saying:—Prenez la pièce contenue dans cette enveloppe, elle prouve votre innocence, et si le torchon brûle, n'hésitez pas à vous en servir. ['Take the piece contained in this envelope, it proves your innocence, and if there is

trouble do not hesitate to use it.'] This document, henceforward called 'le document libérateur,' was no other than the letter referred to in the 'Éclair' (see *canaille de D.*), which, of course, ought to have been safe in the archives of the Intelligence Department. On November 14 Commandant Esterhazy returned this document to the Minister of War under a covering letter in which he called upon his chief to defend his honour thus menaced. The Minister of War sent Commandant Esterhazy a receipt. The next day the Minister received a letter from M. Matthieu Dreyfus denouncing Commandant Esterhazy as the author of the bordereau. The letter of Speranza to Commandant Esterhazy has not yet been divulged to the public; and the War Office, after diligent inquiries, have not been able to find the veiled woman. Very different was the interpretation put on this narrative by M. Trépoix, ex-Minister of Justice, and others interested in revision. Their suggestion was that Commandant Esterhazy was in the first instance appraised beforehand by his friends in the War Office of the coming danger and was for flying across the frontier, but that subsequently these same friends, finding that the chiefs of the army were fearful of being compromised by his flight from justice and would make common cause with him, wished to recall him, and with this view, took from the archives the 'document libérateur,' and sent it to him as an assurance that he might safely return and stand his trial, and also with a view to his claiming the credit of having restored to the office a document which it was now intended to charge Colonel Picquart with abstracting. On November 16, 1897, on a question being asked in the Chamber, General Billot, Minister of War, replied that he had made inquiries, and the result 'n'ébranlait nullement mon esprit l'autorité de la chose jugée,' but that as a formal denunciation of an officer of the army had been made by the 'famille Dreyfus,' there would be a military investigation. A fortnight or so afterwards he repeated that the Government considered the 'affaire Dreyfus comme régulièrement et justement jugée.' Here, as elsewhere, the reader will remember that the question at issue was who was the author of the bordereau, and that if Captain Dreyfus was, Commandant Esterhazy could not be. Consequently, a public declaration by the Minister of War that Captain Dreyfus had been justly condemned was as much as to say that Commandant Esterhazy must be acquitted. . . . Commandant Esterhazy was acquitted.

On the morrow of Commandant Esterhazy's acquittal M. Zola launched his letter of January 13, 1898, which was addressed to the President of the Republic, and wound up with a series of formal accusations attributing the gravest iniquities to all concerned in either of the Courts martial, each officer being in turn pointedly mentioned by name. M. Zola's avowed object was to get himself prosecuted for defamation and so obtain an opportunity for bringing out 'la lumière' on the whole situation. The Minister of War so far accepted the challenge as to institute a prosecution at the Assizes, but resolving to maintain the 'chose jugée' as to the 'affaire Dreyfus,' he carefully chose his own ground so as to avoid that subject, selecting

from the whole letter only 15 lines as constituting the defamation. In particular as to one sentence which ran — 'J'accuse enfin le Premier Conseil de Guerre d'avoir violé le droit en condamnant un accusé sur une pièce restée secrète' — I accuse the Second Council of War of having converted this illegality par ordre, en commettant à son tour le crime juridique d'accuser sciemment un coupable.' [I accuse, then, the first Court martial of having violated the law in a conviction of the accused on the strength of a document kept secret; and I accuse the second Court martial of having covered this illegality, acting under orders and committing in its turn the legal crime of knowingly declaring a guilty person.]

The prosecution omitted the first half of the sentence, the part within brackets. By French law it is for the defendants to justify the defamatory words assigned, and to prove their good faith. But this was a difficult task even for M. Labori, the counsel for M. Zola. There were several notable obstacles to be passed before light could reach the Court. — 1. The 'chose jugée' is applicable to the 'affaire Dreyfus.' 2. The 'choses', the whole proceedings at the Dreyfus trial, and all the more important part of the proceedings at the Esterhazy trial, having been conducted within closed doors. 3. The 'secret d'Etat' excluding all reference to foreign Governments. 4. The 'secret professionnel' pleaded not only by officers civil and military, but even by the experts employed by the Court for the transcription of handwriting. 5. To these may be added the unwillingness of a witness for any reason whatever. Thus Colonel Du Paty de Clam was allowed to refuse to answer questions as to his conduct in family affairs; and, as for Commandant Esterhazy, he turned his back on the defendants and refused to answer any question whatever suggested by them, although it was put to him by the mouth of the Judge. . . . Of the above mentioned obligations to silence, three were such as it was within the competence of the Government to dispense from. No dispensation was given, and hence it was that the Minister of War was seen as prosecutor pressing his legal right to call upon the defendants, under pain of conviction to prove the truth of the alleged libel, and at the same time, by the exercise or non-exercise of his official authority, preventing the witnesses for the defence from stating the facts which were within their knowledge and most material to the truth. But the 'chose jugée' was a legal entity by which was meant not merely that the sentence could not be legally disputed, but that it was to be accepted as 'la vérité légale' — no word of evidence was to be admitted which in any way referred to any part of the proceedings — the whole affair was to be eliminated. The bar thus raised was very effective in shutting out of Court large classes of witnesses who could speak only to the 'affaire Dreyfus'.

Whatever was the rule as to the 'chose jugée', it should have been enforced equally on both parties. This was not always the case. One single example of the contrary shall be given, which as will be shown hereafter, events have proved to be of the utmost significance. General de Pellieux had completed his long career, but having received from 'a juror' a private letter to the effect that the jury would not convict M. Zola unless they had some further

proof of the guilt of Captain Dreyfus, on a subsequent day he asked leave to make a supplementary deposition and then said —

"Au moment de l'interpellation Casteln [i.e., in 1896] il s'est produit un fait que je tiens à signaler. On a eu au Ministère de la Guerre et remarquez que je ne parle pas de l'affaire Dreyfus la preuve absolue de la culpabilité de Dreyfus, et cette preuve je l'ai vue. Au moment de cette interpellation, il est arrivé au Ministère de la Guerre un papier dont l'origine ne peut être contestée, et qui dit: je vous dirai ce qu'il y a dedans." Il va se produire une interpellation sur l'affaire Dreyfus. Ne dites jamais les relations que nous avons eues avec ce juif." [At the time of the Casteln interpellation (1896) there was a fact which I want to point out. The Ministry of War held — remark that I am not speaking of the Dreyfus case — absolute proof of the guilt of Dreyfus; and this proof I have seen. At the moment of that interpellation there arrived at the Ministry of War a paper the origin of which is incontestable, and which says, — I will tell you what it says, — There is going to be an interpellation about the Dreyfus affair. You must never disclose the relations which we had with that Jew."'] And General de Pellieux called upon General de Boladefre and General Gonse to confirm what he said, and they did so. But when M. Labori asked to see the document and proposed to cross examine the generals upon it, the Judge did not allow him. 'Nous n'avons pas à parler de l'affaire Dreyfus.' It may be conceived what effect such a revelation, made by the chiefs of the French army in full uniform, had upon the jury. They pronounced M. Zola guilty and found no extenuating circumstances, and he was sentenced by the Judge to the maximum penalty, viz., imprisonment for a year and a fine of 3,000 francs.

On April 2 the Zola case is brought up before the Court of Cassation [the French Court of Appeals] and the Court quashes the verdict of the Assizes, on the technical ground that the prosecution had been instituted by the wrong person. The Minister of War was incompetent to prosecute; the only persons competent were those who could allege they had been defamed — in this instance the persons constituting the Esterhazy Court martial. . . . The officers who had sat at the Esterhazy Court martial were then called together again in order to decide whether M. Zola should be represented. To put a stop to any unwillingness on their part, M. Zola published in the 'Siècle' of April 7 a declaration of Count Casella, which the Count said he would have deposed to on oath at the former trial if the Judge had allowed him to be a witness. This declaration gave a detailed history of various interviews in Paris with Count Paulzardi, the military attaché at the Italian Embassy, and at Berlin with Colonel von Schwarzkoppen, who had been the military attaché at the German Embassy. According to Count Casella, both these officers had declared positively to him that they had had nothing to do with Captain Dreyfus, but Colonel von Schwarzkoppen much with Commandant Esterhazy. It will be said that this declaration of Count Casella had not been sifted by cross examination, but it is understood that at the end of 1896, immediately after the 'Éclair' made the revelation of 'le document libérateur,' both the German and Italian Govern-

ments made a diplomatic representation to the French Government, denying that they had had anything to do with Captain Dreyfus. At all events, in January, 1898, official denials had been publicly made by the German Minister of Foreign Affairs to the Budget Commission of the Reichstag and by the Italian Under-Secretary for Foreign Affairs to the Parliament at Rome. The officers of the Court martial resolve to reprecure, and the case is fixed for the May Assizes at Versailles. When the case comes on, M. Zola denounces its being tried outside Paris; the demurrer is overruled by the Court of Cassation, and ultimately, on July 18, the case comes on again at the Versailles Assizes. The charge, however, is now cut down from what it had been on the first trial in Paris. Of the whole letter of M. Zola now only three lines are selected as defamatory—viz.—‘Un conseil de guerre vient par ordre d’oser acquitter un Esterhazy, soufflet suprême à toute vérité, à toute justice.’ [‘The Court martial has by order dared to acquit an Esterhazy, supreme blow to all truth, to all justice.’] This selection was manifestly designed to shut out any possibility of reference to the ‘affaire Dreyfus,’ and M. Labori, finding that any attempt to import it would be vain, allowed the case to go by default, and M. Zola was condemned and, as before, sentenced to a year’s imprisonment and a fine of 3,000*fr.* He has appealed to the Cour de Cassation, and the appeal may be heard in the course of the autumn. To secure his own liberty in the meantime, M. Zola has avoided personal service of the order of the Assizes by removing beyond the frontier.

“We will now go back to Colonel Picquart. During the year 1897 he had become aware that in the Intelligence Department suspicions were expressed that the ‘petit bleu’ was not a genuine document and insinuations made that Colonel Picquart had forged it. . . . The ground on which this imputation was rested came out clearly in the evidence which was given subsequently in the Zola trial, to which reference may now be made. The sweepings of Colonel von Schwarzkoppen’s basket had been brought by a spy to the Intelligence Department, and were given first into the hands of Commandant Henry, who put them into a packet or ‘cornet’ and passed them on to Colonel Picquart to examine. Colonel Picquart swore that on examination he had found amongst the papers a large number of fragments, fifty or sixty. These he gave to Commandant Lauth to piece together and photograph. When pieced together they were found to constitute the ‘petit bleu’ addressed to Commandant Esterhazy, who at that time was a perfect stranger to Colonel Picquart. At the Zola trial Colonel Henry had sworn that the pieces were not in the ‘cornet’ when he gave it to Colonel Picquart, and the insinuation was that Colonel Picquart had forged the document, torn it in pieces, and put the pieces into the ‘cornet.’ . . . Commandant Esterhazy was acquitted by the Court martial, and on the very next day Colonel Picquart was himself summoned to submit to a military inquiry. The Court martial sat with closed doors, so that neither the charges nor the proceedings nor the findings would be known to the public, but the findings have found their way into the newspapers. [Picquart cleared himself on the main charges.] . . . But as to the charge (which had never been disputed) that in 1897

Colonel Picquart had communicated General Goisse’s letters to M. Lebdois, this the Court found to be proved; and for this military offence Colonel Picquart was removed from the army upon a pension of a little more than 2,000*fr.* or 450*l.* per annum. Other chastisements have followed. . . .

“We now come to the famous declaration of July 7 (1898), made by M. Cavaignac, Minister of War. On an interpellation by M. Taschelin, the Minister of War replied that hitherto the Government had respected the ‘choses jugées’ but now considerations superior to reasons of law made it necessary for them to bring before the Chamber and the country all the truth in their possession, the facts which had come to confirm the conviction of Captain Dreyfus. He made this declaration because of the absolute certainty he had of his guilt. He based his declaration first on documents in the Intelligence Department, and then on Captain Dreyfus’s own confessions. The latter will here be dealt with first. The Minister relied on two witnesses. One was Captain d’Attel, who on the day of Captain Dreyfus’s resignation had told Captain Anthoine that Captain Dreyfus had just said in his presence, ‘As to what I have handed over it was worth nothing. If I had been left alone I should have had more in exchange.’ Captain Anthoine had, according to the Minister, humbly repeated these words to Major de Mitry. But Captain d’Attel is dead, and M. Cavaignac did not state to the Chamber at what date or on whose authority this information came to the War Office. The other witness was a Captain Lebrun-Renaud, still alive, who had acted as captain of the escort on the day of degradation, January 5, 1895. . . . The Minister omits to specify the date at which Captain Lebrun-Renaud first communicated to the War Office. It is believed to be in November, 1897; and against these allegations may be set the testimony of Commandant Forzinetti, the governor of the prison in which Captain Dreyfus was confined, to the effect that there is no record of confession in the official report made at the time by Captain Lebrun-Renaud, as Captain of the escort, and that within the last year the Captain had denied to him (Commandant Forzinetti) that there had been any confession. Further we know that throughout his imprisonment before trial, at the trial, at the scene of his degradation, and in his letter written immediately afterwards to his wife, and to the Minister of War, Captain Dreyfus protested his innocence and that he had never committed even the slightest imprudence.

“Then as to the documents confirmatory of the conviction of Captain Dreyfus. M. Cavaignac did not say whether by this term ‘guilt’ he meant that Captain Dreyfus had been guilty of writing the bordereau, or had been guilty otherwise as a traitor. Indeed it was remarked that he never so much as mentioned the bordereau. Was, then, the bordereau dropped, as a document no longer recognized to be in the handwriting of Captain Dreyfus? But he informed the Chamber that the Intelligence Department had during the last six years accumulated 1,000 documents and letters relating to espionage, of the authorship of which there was no reasonable doubt. He would call the attention of the Chamber to only three, all of which, he said, had passed between the persons who had been mentioned

(Colonel von Schwarzkoppen and M. Paulzard). Here again it was noticed that the document liberateur, ce camille de D. was not mentioned. Had this, too, been dropped as no longer to be relied upon, because 'D.' did not mean Dreyfus or was it now omitted because it had been produced at the Court martial by General Mercler and therefore could not be said to be confirmatory of his conviction? Of the three documents which M. Cavaignac specified, the first, dated in March 1894, made reference to a person indicated as D., the second, dated April 16,

1894, contained the expression 'cette camille de D.', the same as that used in the document liberateur. The third was no other than 'la preuve absolue' which General de Pellieux had purported to find in evidence in the Zola trial as having been in the hands of the Government at the time of the Cassin Interpellation in November, 1896. M. Cavaignac read out its contents, of which the following is an exact transcript:—'J'ai lu qu'un député va interpellier sur Dreyfus. Si je disais que jamais j'avais des relations avec ce Duf. C'est entendu. Si on vous demande, dites comme ça, car il faut pas que on sache jamais personne ce qui est arrivé avec lui.' I read that a deputy is going to question concerning Dreyfus. I shall say that I never had relations with that Jew. If they ask you, say the same, for it is necessary that we know no one who approaches him. M. Cavaignac went on to say that the moral authenticity of this document depended not merely on its origin, but also on its similarity with a document written in 1894 on the same paper and with the same blue pencil, and that its moral authenticity was established by its being part of a correspondence exchanged between the same persons in 1896. 'The first writes to the other who replies in terms which left no obscurity on the cause of their common unreason.' The Chamber was transported with the speech of the Minister of War, and, treating it as a 'coup de grâce' to the 'affaire Dreyfus,' decreed by a majority of 572 to two that a print of it should be placed in the 36,000 communes of France. On the next day Colonel Picquart wrote a letter to the Minister of War undertaking to prove that the first two documents had nothing to do with Captain Dreyfus, and that the third, 'la preuve absolue,' was a forgery. Within six weeks his words as to 'la preuve absolue' came true. On August 31 the public are startled with the announcement that Colonel Henry has confessed to having forged it himself, and has committed suicide in the fortress Mont Valérien, being found with his throat cut and a razor in his left hand. The discovery of the forgery was stated to have arisen from a clerk in the Intelligence Department having detected by the help of a specially strong lamp that the blue paper of 'la preuve absolue' was not identical with the blue paper of a similar document of 1894 which M. Cavaignac had relied upon as a proof of its moral authenticity.

As a sequel to this confession, General de Bousdoffe, chief of the staff, has resigned, feeling he could not remain after having placed before the Minister of War as genuine a document proved to be a forgery. Commandant Esterhazy has been removed from the active list of the army, having been brought by M. Cavaignac before a Court martial sitting with closed doors—his offence not disclosed, but conceived to be his anti-patriotic correspondence

with a Mme. de Boulancy. A like fate has befallen Colonel Du Paty de Clam from a similar Court martial instituted by M. Cavaignac's successor, his offence likewise not disclosed, but presumed to be improper communication of official secrets to Commandant Esterhazy.

However, notwithstanding the confession of Colonel Henry, M. Cavaignac insisted that Captain Dreyfus was guilty, and refused consent to revision. The Cabinet not acceding to this view, M. Cavaignac resigns the Ministry of War and is succeeded by General Zurlinden, then military Governor of Paris. General Zurlinden asks that he be allowed time to study the dossier, and after a week's study and communication with the War Office staff he also declares his opposition to revision, retires from the Ministry of War and resumes his post of Governor of Paris. With him also retires one other member of the Cabinet. Then the Minister of Justice takes the first formal step in referring the matter to a legal Commission, the technical question at issue appearing to be whether the confession by Colonel Henry—a witness in the case—of a forgery committed by him subsequently to the conviction with a view to its confirmation might be considered either as a new fact in the case or as equivalent to a conviction for forgery, so as to justify an application to the Cour de Cassation for revision. The Commission were divided in opinion, and the matter would have fallen to the ground if the Cabinet had not decided to take the matter into their own hands and apply to the Court direct. This has now been done, the Court is making preliminary inquiries, and will then decide whether revision in some form may be allowed or a new trial ordered.

With regard to Colonel Picquart, his public challenge of the documents put forward in the speech of the Minister of War was followed three days afterwards by an order of the Cabinet directing the Minister of War to set the Minister of Justice in motion with a view that he should be criminally prosecuted in a non-military Court for communication of secret documents—the same offence as that for which he had been punished by the Court martial early in the year by removal from the active list of the army—and M. Leblois was to be prosecuted with him as an accomplice. On the 13th of July Colonel Picquart is put into prison to await his trial, M. Leblois being left at large. The prison was a civil prison, where he was allowed to communicate with his legal advisor.

On September 21 Colonel Picquart is taken from his prison to the Court for his trial. The Government Prosecutor rises and asks for an indefinite postponement on the ground that the military authorities are about to bring him before a military Court for forgery.

The military prosecution for forgery was ordered, and on the strength of it the Correctional Court acceded to the application for indefinite postponement of the other case of which it was seized, the military authorities claimed to take the prisoner out of the hands of the Civil authorities, and the Correctional Court acquiesced. Then it was that Colonel Picquart broke out—'This, perhaps, is the last time my voice will be heard in public. It will be easy for me to justify myself as to the petit bien. I shall perhaps spend to-night in the Cherche-Midi (military) Prison, but I am anxious to say if I find in my cell the nose of Lemerder and, or the razor of Henry, it will be

an assassination. I have no intention of committing suicide." The same or the next day Colonel Picquart was removed to the Cherche-Midi Prison, there to await his court-martial, which is not expected yet for some weeks. He is not permitted to communicate with his legal adviser or any one else.—G. Lushington, *The Dreyfus Case* (London Times, Oct. 13, 1898).

Late in October (1898) the Court of Cassation decided that it found ground for proceeding to a supplementary investigation in the case of Captain Dreyfus but not for the suspension meantime of the punishment he was undergoing. On the 15th of November it decided that the prisoner should be informed by telegraph of the pending revision proceedings, in order that he might prepare his defense. The Court was now endeavoring to secure possession of the secret documents (known as the "Dreyfus dossier") on which the conviction of the accused was said to have been really founded. For some time the war office seemed determined to withhold them; but at length, late in December, the dossier was turned over, under pledges of strict secrecy as to the documents contained. Showing still further a disposition to check the doings of the military authorities, the Court of Cassation, in December, ordered a suspension of proceedings in the military court against Colonel Picquart, and demanded all documents in his case for examination by itself.

Attacks were now made on the Court which had thus ventured to interfere with the secret doings of the army chiefs. Suddenly, on the 8th of January (1899), the president of the civil section of the Court, M. Quesnay de Beaupaire, resigned his office and denounced his recent colleagues as being in a conspiracy to acquit Dreyfus and dishonor the army. This, of course, was calculated to stimulate anti-Dreyfus excitement and furnish ground for challenging the final decision of the Court, if it should be favorable to a new trial for the imprisoned Captain. It also delayed proceedings in the case, leading to the enactment of a law requiring all cases of revision to be tried by the united sections of the Court of Cassation. This act took the Dreyfus case from the 16 judges of the criminal section and committed it to the whole 48 judges of the Court.

Major Esterhazy had taken refuge in England. On the 2d of June he went to the office of the London "Chronicle" and made the following confession for publication: "The chiefs of the army have disgracefully abandoned me. My cup is full, and I shall speak out. Yes, it was I who wrote the bordereau. I wrote it upon orders received from Saubert. They (the chiefs of the general staff) will lie, as they know how to lie, but I have them fast. I have proofs that they knew the whole thing and share the responsibility with me, and I will produce the proofs." Immediately it was said that he had been bribed by the friends of Dreyfus to take the crime upon himself.

On the day following this confession, the decision of the Court of Cassation was announced. Meantime, the newspaper "Figaro" had, by some means, been able to obtain and publish the testimony which the Court had taken with closed doors, and had thus revealed the flimsiness and the contradictoriness of the grounds on which the officers of the Army Staff based their accusa-

tions assertions that they had positive knowledge of the guilt of Dreyfus. This had great influence in preparing the public mind for the decision of the Court when announced. On ground relating to the bordereau, to the document which contained the expression "je m'enfiance" and to the alleged confession of Dreyfus, besides all other questions of evidence, the judgment as delivered declared that "the court quashes and annuls the judgment of condemnation pronounced on December 22, 1894, against Alfred Dreyfus by the first court-martial of the Military Government of Paris, and remits the accused to the court-martial of Rennes, named by special deliberation in council chamber, to be tried on the following question:—Is Dreyfus guilty of having in 1894 instigated machinations or hold dealings with a foreign power or one of its agents in order to incite it to commit hostilities or undertake war against France by furnishing it with the notes and documents enumerated in the bordereau? and orders the prescribed judgment to be printed and transcribed on the registers of the first court-martial of the Military Government of Paris in the margin of the decision annulled." Captain Dreyfus was taken immediately from his prison on Devil's Island and brought by a French cruiser to France, landing at Quiberon on the 1st of July and being taken to Rennes, where arrangements for the new military trial were being made.

The new court-martial trial began at Rennes on the 7th of August. When it had proceeded for a week, and had reached what appeared to be a critical point—the opening of a cross-examination of General Mercier by the counsel for Dreyfus—M. Labori, the leading counsel for the defense, was shot as he walked the street, by a would-be assassin who escaped. Fortunately the wound he received only disordered him for some days, and deprived the accused of his presence and his powerful service in the court at a highly important time. The trial, which lasted beyond a month, was a keen disappointment in every respect. It probed none of the sinister secrets that are surely hidden somewhere in the black depths of the extraordinary case. In the judgment of all unimpassioned watchers of its proceedings, it disclosed no proof of guilt in Dreyfus. On the other hand, it gave no opportunity for his innocence to be distinctly shown. Apparently, there was no way in which the negative of his non-guiltiness could be proved except by testimony from the foreign agents with whom he was accused of having treasonable dealings; but that testimony was barred out by the court, though the German and Italian governments gave permission to the counsel for Dreyfus to have it taken by commission outside of France, at least, the public verdict may be said to have been unanimous, that the whole case against Captain Dreyfus, as set forth by the heads of the French army, in plain combination against him, was foul with forgeries, lies, contradictions and puerilities, and that nothing to justify his condemnation had been shown. But the military court, on the 9th of September, by a vote of five judges against two, brought in a verdict of Guilty, with "extenuating circumstances" (as though any circumstances could extenuate the guilt of an actual crime like that of which Dreyfus was accused), and sentenced him to imprisonment in a fortress for ten years, from

will term the years of his past imprisonment would be taken out. Mr. G. W. Steevens, the English newspaper correspondent, who attended the trial and has written the best account of it, makes the following comment on the verdict, which sums up all that needs to be said: "In a way the most remarkable feature about the verdict of Rennes was the proportion of the vote. When it had been over a few hours, and the judges had relaxed to thought again, it struck somebody that on the very first day the verdict motion had been carried by five to two. The next and next and all of them had been carried by five to two. Now Dreyfus was carried by five to two. The idea—the strange idea—dropped like a stone into the mind, and spread in widening circles till it filled it with conviction. Every one of the judges had made up his mind before a single word of evidence had been heard. The twenty-seven days, the hundreds and something witnesses, the hundreds of documents, the seas of sweat and tears—they were all utterly wasted. . . . The verdict was warmly received with a howl of indignation, and to endeavour to extenuate the stupid prejudice that at least, if not cowardly dishonesty, of the five who voted against the evidence is unlikely to be popular with civilized readers. Yet it may be said of them in extenuation—if it is any extenuation—that they only did as almost any other wise Frenchmen would have done in the place. Frenchmen are hypnotized by the case of Dreyfus, as some people are hypnotized by religion, in its presence they lose all mental power and moral sense." The army chiefs had had their way; the stain of their condemnation had been kept upon Dreyfus, but the government of France was magnanimous enough to punish no more. His sentence was remitted by the President, and he was set free, a broken man.

A. D. 1898 (May–November).—General Elections.—Fall of the Ministry of M. Méline.—Brief Ministry of M. Brisson, struggling with the Dreyfus question.—Coalition Cabinet of M. Dupuy. General elections for a new Chamber of Deputies were held throughout France on Sunday, May 8, with a second balloting on Sunday, May 22, in constituencies where the first had resulted in no choice. Of the 584 seats, 225 were won by the Progressive Republicans, 225 by the Ministry of M. Méline, and 134 by no party with any certainty on the supposition of a majority in the Chamber. It was followed by a downfall in the following month by a motion made by M. Bourgeois, in the following month. The Chamber determines to support a Ministry relying exclusively on a Republican majority. This was carried by

a majority of about fifty votes, and on the next day the Ministry resigned. It was succeeded by a Radical cabinet, under M. Henri Brisson, after several unsuccessful attempts to form a conservative government. By announcing that it would not attempt to carry out a Radical programme in some important particulars, the Brisson Ministry secured enough support to maintain its ground for a time, but there were fatal differences in its ranks on the burning Dreyfus question, as well as on other points. M. Cavaignac, Minister of War, was bitterly opposed to a revision of the Dreyfus case, while the Premier and M. Bourgeois (now Minister of Public Instruction) were understood to favor it. M. Cavaignac soon placed himself in an extremely embarrassing position by sending to the Chamber certain documents which he put forward as absolute proofs of the guilt of Dreyfus, but of which one was shown presently to have been forged, while another had no relation to the case. He accordingly resigned (September 1), and General Zurlinden took his place. But Zurlinden too resigned a few days later, when a determination to revise the trial of Dreyfus was reached. The government was then exposed to a new outburst of fury in the anti-Dreyfus factions, and all the enemies of the Republic became active in new intrigues. The Orléanists bestirred themselves with fresh hopes, and the old Bonapartists conspirators revived their so-called Patriotic League with M. Déroulède at its head. At the same time dangerous labor disturbances occurred in Paris threatening a complete paralysis of railway communications as well as of the industries of the capital. The Ministry faced its many difficulties with much resolution, but it failed of support in the Chamber, when that body met in October, and it resigned. A coalition cabinet was then formed, with M. Charles Dupuy in the presidency of the council, and M. de Freycinet as Minister of War.

A. D. 1899 (February–June). Death of President Faure.—Election of President Loubet.—Revolutionary attempts of "Nationalist" agitators.—The Ministry of M. Waldeck-Rousseau.—Felix Faure, President of the French Republic, died suddenly on the 16th of February,—a victim, it is believed, of the excitements and anxieties of the Dreyfus affair. The situation thus produced was so sobering in its effect that the Republican factions were generally drawn together for the moment, and acted promptly in filling the vacant execu-

tive. The Senate and the Chamber of Deputies were convened in joint session, as a National Assembly, at Versailles, on the 18th, and Emile Loubet, then President of the Senate, was chosen to the presidency of the Republic on its first ballot, by 481 votes, against 239 for M. Méline, and 15 for M. Cavaignac. At the funeral of the late President Fauré, which occurred on the 23d, the presidential Déroulède and his fellow nationalist chief-makers, with their so-called "League of Patriots," "League de Patrie Française," and party of "Nationalists," attempted to excite the troops to revolt, but without success. Déroulède and others were arrested for this treasonable attempt. During some months the enemies of the Republic were active and violent in hostility to President Loubet, and the cabinet which he inherited from his predecessor was believed to lack loyalty to him. On the 4th of June, while attending the steeple chase races at Auteuil, he was grossly insulted, and even struck with a cane, by a party of young royalists; the leader of whom, Count Christiani, who struck the shameful blow, was sentenced afterwards to imprisonment for four years. The Ministry of the day was considered to be responsible for these disorders, and, on the 12th of June, a resolution was passed in the Chamber to the effect that it would support only a government that was determined to defend republican institutions with energy and preserve public order. Thereupon the Ministry of M. Dupuy resigned, and a new cabinet was formed with much difficulty by M. Waldeck-Roussau. It included a radical Socialist, M. Millerand, who became Minister of Commerce, and a resolute and honest soldier, the Marquis de Gallifet, as Minister of War. The latter promptly cleared the way for more independent action in the government, by removing several troublesome generals from important commands. The new Ministry assumed the name of the "Government of Republican Defense," and offered a front to the enemies of the Republic which plainly checked their attacks. M. Déroulède and some of his fellow conspirators were brought to trial before the Court of Assizes, and acquitted.

A. D. 1899-1900 (August—January).—Arrest and trial of revolutionary conspirators.—In August, 1899, the government, having obtained good evidence that treasonable plans for the overthrow of the Republic had been under organization for several months, in the various royalist, anti-Semitic, and so-called "Patriotic" leagues, caused the arrest of a number of the leaders implicated, the irrepressible Paul Déroulède being conspicuous among them. The president of the Anti-Semitic League, M. Guérin, with a number of his associates, barricaded themselves at the headquarters of the league and defied arrest,

evidently expecting a mob rising in Paris if they were attacked. Serious rioting did occur on the 20th of August, but the government promptly allowed Guérin and his party to hold their trial, until the ending of the excitement of the Dreyfus trial, then, on the showing of a serious determination to take it by force, they gave themselves up. The trial of the conspirators was begun in September, before the Senate, sitting as a high court of justice, and continued at intervals until the following January. Déroulède received two sentences of imprisonment, one for three months and the other for two years, on account of outrageous attacks on the Senate and on the President of the Republic. These were additional to a final sentence to ten years of banishment for his treasonable plotting, which he shared with one fellow conspirator. Guérin was condemned to ten years imprisonment in a fortified place. The remainder of the accused were discharged with the exception of one who had escaped arrest, and who was convicted in his absence. The trial, wrote the Paris correspondent of the "London Times," "showed how strange a thing was this motley conspiracy between men who had but one common bond of sympathy, namely, the desire to upset the Republic,—men from whom the Bonapartist, another variety of anti-republican conspirators, had held aloof. The latter fancied themselves sufficiently represented in the conspiracy by the plebeian party [of Déroulède] whose accession to office would have been tantamount to the success of Imperialism. The condemnation of these conspirators of varied aspirations proved that the Nationalist party was a mere conglomeration of ambitions which would end in every form of violence if ever the conspirators were called upon to share the booty. The harm that they have already done, even before they have made themselves masters of France, shows that the danger which they conspire to their country is infinitely greater than the danger with which it was menaced by Bonapartism, for then at least at the moment of victory all the ambitions would have been concentrated round a single will, however mediocre that will, and General Boulanger would at all events have been a rallying flag for the conspirators visible all over France. The Nationalism condemned by the Court in its various personifications has not even a head around which at the moment of action the accomplices could be grouped. Its confusion worse confounded. If it succeeded in its aims it could only avoid at home the consequences of its incoherent policy by some desperate enterprise abroad. The judgment of the High Court, by restoring tranquillity in the streets, preserved France from the dangers towards which she was hastening, and which were increased, consciously or unconsciously, by auxiliaries at the head of the executive office. But owing to the verdict of the High Court France had time to pull herself together to breathe more easily, and to take the necessary resolutions to secure tranquillity. The approach of the Exhibition imposed upon every one a kind of truce, and M. Déroulède himself, with an imprudence of which he is still feeling the consequences, declared that he would return to France when once the Exhibition was over.

In a speech which he made subsequently at San Sebastian, his place of exile, Déroulède

related that the "coup d'état" prepared by his party of revolutionists for the 24th of February, 1899, on the occasion of the funeral of President Fauré (see above), was frustrated because he refused at the last moment, to permit it to be called on the interest of the Duke of Orleans.

"The following day," he said, "between midday and 1 o'clock in the afternoon, a mysterious hand had control of the preparations made, the position of the troops, their disposition, their order and their officers commanding them, and the same evening, M. René Huret and myself were arrested." The pronunciation of his speech seemed to be that the head of the government which changed the position of the troops and upset the revolutionary party would not have done so if the royalists had been taken into it.

Some after the conclusion of the conspiracy trials, the superior and eleven monks of the order of the Assumptionist Fathers, who had apparently been mixed up in the plot, were brought to account as an illegal association, and their society was dissolved.

A. D. 1900 (January).—Elections to the Senate.—Elections to the French Senate, on the 25th of January, returned 61 Republicans, 6 Liberals, 18 Radicals, 7 Socialists, 4 Monarchists and 3 Nationalists. "The Radicals are as they were. The Socialists have just gained an entrance to the Senate, and to this they were enabled by the large and solid Socialist vote of the Left Centre. The great mass of solid and sensible Republicans have not only held their ground, but have increased and solidified their position. The reactionaries, whether avowed Monarchists or supporters of the Dérainé movement, have made one or two merely formal gains, but have really fallen back, from the point of view of their pretensions, and the long list of candidates they put forward. On the whole, we may fairly say that the solid, sober Republican vote of France has proved that it is in the ascendant. Once more, in a deeper sense than he meant the verdict of M. Thiers has, for the moment at any rate, been verified,—that France is really at bottom Left Centre. That is to say, the nation is for progress, but for progress devoid of vague revolutionary pretensions, of mere a priori dogmas as to what Republican progress involves. In the main the nation seems to have supported the Government in repelling the aggressive attacks of unbridled Clericalism, and in rejecting the pretensions of the Army to dictate French politics. On the other hand, the mass of the French electors do not desire a crusade against the Roman Catholic Church, and they do not care for an indiscriminate attack on the French Army."—*The Spectator* (London), Feb. 3, 1900.

A. D. 1900 (April–November). The Paris Exposition. The Paris Exposition of 1900, which exceeded all previous "world's fairs" in

extent and in the multitude of its visitors, was formally opened on the 14th of April, but with unfinished preparations and closed on the 12th of November. The reported attendance during the whole period of the Exposition was 78,430,361, being very nearly double the attendance at the Exposition of 1889. The total receipts of money were 114,456,215 francs, and total expenditures 119,500,000 francs, leaving a deficit of 5,043,785 francs. But France and Paris are thought to have profited greatly, notwithstanding. Forty countries besides France took part in the preparations and were officially represented. The number of exhibitors was 75,531, the pavilions distributed were 42,700 in number. The buildings erected for the Exposition numbered more than 200, including 36 official pavilions erected by foreign governments. The ground occupied extended on each side of the Seine for a distance of nearly two miles, comprising, besides the quays on each side of the river, the Champ de Mars, the Esplanade des Invalides, the Trocadéro Gardens and part of the Champs Elysées.

A. D. 1900 (September).—The centenary of the Proclamation of the French Republic.—A gigantic banquet.—On the 25th of September, the centenary of the proclamation of the French Republic was celebrated in Paris by a gigantic banquet given by President Loubet, accompanied by his Ministers, to the assembled Mayors of France, gathered from near and far. Some 23,000 guests sat down to the déjeuner, for which a temporary structure had been prepared in the Tuileries Gardens. It was a triumphal demonstration of the culinary resources of Paris, but it had more important objects. It was a political demonstration, organized by the President of the Republic, in concert with the Cabinet of M. Waldeck-Rousseau, as a check to certain schemes of the Paris Nationalists, against the government. It brought the municipal representatives of the provinces to the capital to show the array of their feeling for the Republic against that of the noisy demagogues of the capital. It was a striking success.

A. D. 1900 (October).—Proposal of terms for negotiation with the Chinese government. See (in this vol.) CHINA. A. D. 1900 (AUGUST–DECEMBER).

A. D. 1900 (December).—The Amnesty Bill.—With the object of making it impossible for the enemies of the Republic to find such opportunity for a revival of the dangerous Dreyfus controversy as any new trial of its issues would give them, the French government in December accomplished the passage of an amnesty bill, which purges everybody connected with the affair so far as legal proceedings are concerned. The measure was strenuously opposed by the friends of Dreyfus, Picquart and Zola, none of whom are willing to be left unvindicated by law, nor willing to be barred from future proceedings against some of the army staff. It was also fought by the mischievous factions which wish to keep the Dreyfus quarrel alive for purposes of dissension and excitement. The policy of the measure, from the governmental standpoint, was thus

described at the time it was pending. The Cabinet felt that this affair had done great injury to France, that it was a dangerous weapon in the hands of all the conspirators against the Republic, that not a centimetre would agree to acquit Dreyfus, even though convinced of his innocence, and that in view of the futility of any attempt to secure an acquittal, it was necessary to avoid danger to the Republic by reopening the affair. France had already suffered irreparable mischief from it. The affair has falsified the judgment and opinion of the army, so that it has no longer a clear notion of its duty at home. In external affairs it is still always ready to march to the defence of the country, but as to its duties at home it is in a state of deplorable confusion. Considering that the Dreyfus affair has scarred the adventures of the Government that it cannot be sure of the army in internal matters, the Cabinet, it is evident, could not allow that affair to remain open and produce mischief. On the other hand, there was a prosecution pending against M. Zola, who, it was clearly proved to all, was right in his famous letter "J'accuse." There was a prosecution against Colonel Picquart, who had sacrificed a brilliant future in the defence of truth against falsehood. There was likewise a prosecution against M. Joseph Reinach, who had accused Henry of having been a traitor or the accomplice of a traitor. I do not know how far M. Reinach had proofs of his allegations, but these three prosecutions were so closely connected with the Dreyfus case that, if they had been allowed to go on, that affair, which was so dangerous to tranquillity, security, and order, would be reopened. Now the Government will not at any cost allow the affair to be reopened. The whole Amnesty Bill hinges on this question. The Government agrees to amnesty everybody except the persons condemned by the High Court, and who continue to defy it. It insists on these three prosecutions being struck off the rolls of the Tribunal. This is the whole question. Nothing else in the eyes of the Government is essential, but it will not allow the further serious mischief which would result from the reopening of the affair. The Bill will not stop the civil proceedings against MM. Zola, Picquart, and Reinach, but such proceedings do not cause the same excitement as criminal prosecutions. If the latter are stopped, the dangers occasioned by the confusion in the spirit of the army will disappear, and it may then be hoped that the excitement will calm down.

M. Zola protested vigorously against the Amnesty Bill, and, on its passage, wrote an open letter to the President in which he said: "I shall not cease repeating that the affair cannot cease as long as France does not know and repair the injustice. I said that the fourth act was played at Rennes and that there would have to be a fifth act. Anxiety remains in my heart. The people of France always forget that the Kaiser is in possession of the truth, which he may throw in our face when the hour strikes. Perhaps he has already chosen his time. This would be the horrible fifth act which I have always dreaded. The French Government should not for one hour accept such a terrible contingency."

pute with Brazil. See on this vol. Brazil A. D. 1900.

A. D. 1901.—The Bill on Associations. A measure to place the Religious Orders under strict regulations of law, and to limit their possession of property. In a speech, made at Toulouse on the 28th of October, 1901, the French Prime Minister, M. Waldeck Rousseau, announced the intention of the Government of bringing forward, at the next session of that body, a measure of critical importance, and of remarkable boldness, being no less than the project of a law (called in general terms a "Bill on Associations") for the stringent regulation and restriction of the religious orders in France, especially for the restriction of their acquisition and ownership of property. Foretelling the measure in that speech, he said: "The question is the rendering free, and subject only to the common law, all the associations which are in themselves lawful as regards the safety of the State. Another object of the Bill is to cope with the peril which arises from the continuous development in a Democratic society of an organicism which, according to a famous definition, the merit of which is due to our old Parliament, 'tends to introduce into the State under the specious veil of a religious institution a political corporation the object of which is to arrive first at complete independence and then at the usurpation of all authority.' I am filled with no sectarian spirit, but merely with the spirit which dominated as well the policy of the Revolution as the entire historical policy of France. The fundamental statute determining the relations between the churches and the State should be exactly applied so long as it has not been altered, and we have always interpreted its spirit with the broadest tolerance. But as things are now going, what will remain of this part of reciprocal guarantees? It had been exclusively confined to the secular clergy owing them absolute obedience to their superiors and to the State and to questions of worship, the preparation for ecclesiastical functions and preaching in the churches. And, now, lo and behold, we find religious orders teaching in the seminaries, the pulpit usurped by the missions, and the Church more and more menaced by the chapel. The dispersed but not suppressed religious communities cover the territory with a close network, which has been evidenced in a recent trial, and have been so bold as to defy the Church dignitaries not accepting their vassalage. In pointing to the peril of increasing mortmain thus attacking the principle of the free circulation of property, it is sufficient to say that we are influenced by no vain alarms that the value of the real property occupied or owned by the communities was in 1880 as much as 700,000,000*fr.*, and that it now exceeds a milliard. Starting from this figure, what may be the value of mortmain personality? Yet the real peril does not arise from the extension of mortmain. In this country, whose moral unity has for centuries constituted its strength and greatness, two youths are growing up ignorant of each other until the day when they meet, so unlike as to risk not comprehending one another. Such a fact is explained only by the existence of a power which is no longer even occult and by the constitution in the State of a rival power. All efforts will be fruitless as long as a rational, effective legislation has not superseded a legisla-

cannot be blighted, arbitrary, and inoperative law, which so much impurifies a Law on Liberty. It is so, because it involves the so-called right of a portion of the education question. But is the indispensable guarantee of the most necessary prerogative of modern States?

The announcement of the intentions of the Government gave rise, as it must have been, to a most warm discussion of the problem. I myself showed something of the emotion of the antagonists with whom its supporters must make their fight. At length, late in December, a few days before the opening of the session of the Chambers—the attitude of the Government was fully declared by the Pope, and a lengthy interview with M. Henri Rochefort, one of the members of the staff of the Ministry, was permitted to publish in that Paris journal.

After M. Waddeck-Rousseau's Toulouse speech and presence of the Assurances of the Pope, I can no longer keep silent. It is my Apostolic duty to speak out. French Catholics will know that their father has said to them, that he suffers with them in their trials, and that he encourages their just desires for right and liberty. They are well aware that the Pope has unswervingly held to their behalf and for the Church, adapting the means to the utility of the ends. The Pope is the edge of the manoeuvre at the bar. At no moment he seems to be backing before the temptation of another he is bound to call full agreement. But his one aim ever is to make the Pope. Now the Pope cannot consent to allow the French Government to twist the Concordat to its own interest and transform an instrument of peace into one of war and oppression. The Concordat [see, in vol. 2, FRANCE: A D. 1801-1801] established and regulated in France the exercise of Catholic worship and defined between the Church and the French State, mutual rights and duties. The religious communities form an integral part of the Apostolic Church as much as the secular clergy. They exercise a special and a different mission, but one not less sacred than that of the pastors recognized by the State. To try to destroy them is to deal a blow at the Church, to mutilate it, and to restrict its benefits. Such was not the intent of the Concordat. It would be a misconstruction of this treaty to declare illegal and to interdict whatever it was not able to settle or foresee. The Concordat is silent as to religious communities. This means that the regular clergy has no share in the special rights and relative privileges granted by the Concordat to the members of the secular ecclesiastical hierarchy. It does not mean that religious orders are to be excluded from the common law and put outside the pale of the State.

There was no need of mentioning the religious communities in the Concordat because these pious bodies were permitted to live under the shelter of the equal rights accorded to men and citizens by the fundamental laws of your constitution. But if an exception is made to these solemn declarations in the case of certain citizens it is an infraction of the intentions of the negotiators of 1801. Look at the countries with which the Holy See has signed no Concordat, and even at Protestant countries like England, the United States, and many another.

Are religious communities the liberties recognized citizens? Do they not suffer? And that minorities would take refuge in the Terror, from France? But since bound by the Concordat.

Why does France then of the great nations in the world settling the Chinese question? your Ministry for Foreign Affairs representative in Peking the authority weight to their opinion in the assembly of potentates? What interest have you in the north of China? Are you at the head there in trade and industry? Have you many traders there to protect? No. But you are there the noblest champions of Christian civilization the protectors of the Catholic missions. Your foreign rivals are envious of this privileged situation. They are seeking to displace your rights laid down in treaties that assign to you the rôle of defenders of native missions and Christian settlements.

Hitherto your Governments had had a better notion of the importance of their rights. It is in the name of treaties guaranteeing them that they protested to me when the Chinese Emperor asked me to arrange diplomatic relations directly with the Holy See. Upon the insistence of M. de Freycinet, the then Minister, I refused, so fearful was I that France might believe, even wrongfully, that I wished in any way to diminish her prestige, her influence, and her power. In the Levant, at Constantinople, in Syria, in the Lebanon, what will remain of the eminent position held by your Ambassador and Consuls if France intends to renounce representing there the rights of Christianity?

M. Waddeck-Rousseau, in his Toulouse speech, spoke of the moral unity of France. Who has laboured more than I for it? Have I not energetically counselled Catholics to cease all conflict against the institutions which your country has freely chosen and to which it remains attached? Have I not urged Catholics to serve the Republic instead of combating it? I have encountered warm resistance among them, but I believe that their present weakness arises from their very lack of union and their imperfect deference to my advice. The Republican Government at least knows in what degree my authority has been effective towards bringing about that public peace and moral unity which is proclaimed at the very moment when it is seriously menaced. It has more than once thanked me. If the Pontifical authority has not been able entirely to accomplish the union so much desired, I at least have spared no effort for it. As there now is a desire to reconstitute the union of Catholics against the Republic? How could I prevent this? In the name of the Republic liberal, equitable, open to all, to which I have invited Catholics to rally, there was substituted a narrow, sectarian Republic, governed by an inflamed faction governed by laws of exception and spoliation, repugnant to all honest and upright consciences, and to the traditional generosity of France? Is it thought that such a Republic can obtain the respect of a single Catholic and the benediction of the Supreme Pontiff? I still hope that France will spare herself such crises, and that her Govern-

ment will not renounce the services which I have been able to render and can still render it. On several occasions, for instance, and quite recently, I have been asked by the head of a powerful State to allow disregard of the rights of France in the East and Far East. Although compensations were offered to the Church and the Holy See, I resolved that the right of France should remain intact, because it is an unquestionable right, which France has not allowed to become obsolete. But if in your country the religious orders, without which no Catholic expansion is possible, are ruined and suppressed, what shall I answer whenever such requests are renewed to me? Will the Pope be alone in defending privileges the possessors of which prize them so little?"

Of the seriousness of the conflict thus opening between the French Republicans and the Roman Catholic Church there could be no doubt.

The threatened bill was brought forward by the government and debate upon it opened on the 15th of January, 1901. The most stringent clauses of the measure were translated and communicated to the "London Times" by its Paris correspondent as follows:

"II. Any association founded on a cause, or for an illicit end, contrary to the laws, to public order, to good manners, to the national unity, and to the form of the Government of the Republic, is null and void.

"III. Any member of an association which has not been formed for a determined time may withdraw at any time after payment of all dues belonging to the current year, in spite of any clauses to the contrary.

"IV. The founders of any association are bound to publish the covenants of the association. This declaration must be made at the prefecture of the Department or at the sub-prefecture of the district which is the seat of the association. This declaration must reveal the title and object of the association, the place of meeting and the names, professions, and domiciles of the members or of those who are in any way connected with its administration. The founders, directors, or administrators of an association maintained or re-constituted illegally after the verdict of dissolution will be punished with a fine of from 500f. to 5,000f. and imprisonment ranging from six days

to a year. And the same penalty will apply to all persons who shall have favoured the assembling of the members of the dissolved association by the offer of a meeting place.

"X. Associations recognized as of public utility may exercise all the rights of civil life not forbidden in their statutes, but they cannot possess or acquire other real estate than that necessary for the object which they have in view. A personal property belonging to an association should be invested in bonds bearing the name of the owner. Such associations can receive gifts and bequests on the conditions defined by Chapter 910 of the Civil Code. Real estate included in an act of donation or in testamentary dispositions which is not necessary for the working of the association, is alienated within the period and after the forms prescribed by the decree authorizing acceptance of the gift, the amount thereby represented becoming a part of the association's funds. Such associations cannot accept a donation of real estate or personal property under the reserve of usufruct for the benefit of the donor.

"XI. Associations between Frenchmen and foreigners cannot be formed without previous authorization by a decree of the Council of State. A special law authorizing their formation and determining the conditions of their working is necessary in the case, first of associations between Frenchmen, the seat or management of which is fixed or emanates from beyond the frontiers or is in the hands of foreigners; secondly, in the case of associations whose members live in common.

"XIV. Associations existing at the moment of the promulgation of the present law and not having previously been authorized or recognized must, within six months, be able to show that they have done all in their power to conform to these regulations."

Discussion of the Bill in the Chamber of Deputies was carried on at intervals during ten weeks, the government defeating nearly every amendment proposed by its opponents, and carrying the measure to its final passage on the 29th of March, by a vote of 303 to 220. Of the passage of the bill by the Senate there seems to be no doubt.

After disposing of the Bill on Associations on the 27th of March, the Chamber adjourned to May 14.

GALVESTON: A. D. 1900.—The city overwhelmed by wind and waves.—The southern part of the United States was visited by a tropical hurricane on September 6-9, the fury of which reached its climax at and near Galveston, Texas 1 P. M. on Sunday, the 9th. Galveston is built upon the east end of a beautiful but low-lying island some thirty miles long and six or seven miles wide at the point of greatest extent, though only a mile or two wide where the city is built. The pressure of the wind upon the waters of the Gulf was so powerful and so continuous that it lifted the waves on the north coast many feet above the ordinary high tide level, and for a short time the entire city was submerged. The combined attack of hurricane and tidal wave produced indescribable horrors, the destruction of property sinking into insignificance when compared with the appalling loss of life. The new census taken in June recorded Galveston with a population of 37,789. The density of a few hours seems to have reduced that number by 20 per cent. The loss of 15,000 villages and isolated points along the coast line would probably bring the sum total of destruction caused by this fatal storm up to 10,000. The condition of the survivors for two or three days beggars description. The water had quickly receded, and all means of communication had been destroyed, including steamships, railroads, telegraph and telephone lines, and public highways. Practically all food supplies had been destroyed, and the drinking water supply had been cut off by the breaking of the aqueduct pipes. The tropical climate required the most summary measures for the disposition of the bodies of the dead. Military administration was made necessary, and many dishonest looters and plunderers

were summarily shot, either in the act of robbing the dead or upon evidence of guilt.

Relief agencies everywhere set to work promptly to forward food, clothing, and money to the impoverished survivors. Great corporations like the Southern Pacific Railroad made haste to restore their Galveston facilities, and ingenious engineers brought forward suggestions for protection of the city against future inundations. These suggestions embraced such improvements as additional break waters, jetties, dikes, and the filling in of a portion of the bay, between Galveston and the mainland. The United States Government in recent years has spent \$8,000,000 or \$10,000,000 in engineering works to deepen the approach to Galveston harbor. The channel, which was formerly only 20 or 21 feet deep across the bar, is now 27 feet deep, and the action of wind and tide between the jetties cuts the passage a little deeper every year. The foreign trade of Galveston, particularly in cotton, had been growing by leaps and bounds.—*Am. Review of Reviews*, Oct., 1900, p. 308.

GERMANY.

A. D. 1891-1899.—Recent commercial treaties. Preparations for forthcoming treaties.—The new customs tariff of July 15, 1879 [see, in vol. 4 **TARIFF LEGISLATION (GERMANY)** A D 1873-1892] exhibited the following characteristics. An increase of the existing duties and the introduction of new protective duties in the interests of industrial and agricultural products. The grain and wool duties abolished in 1861 were reintroduced, and a new petroleum duty was adopted. Those on coffee, wine, rice, tobacco, cattle, and textiles were raised. Those on iron were restored, and others were placed on many new articles formerly admitted free. In 1885 the tariff was again revised, especially in the direction of trebling the grain and doubling the wool duties. Those on cattle, grapes, etc. were raised at the same time. The year 1887 saw another general rise of duties. But, on the other hand, some reductions in the tariff for most favored nations came about. In 1884 and in 1889 in consequence of the tariff treaties made with Switzerland and Spain. Other reductions were made by the four tariff

treaties of 1891 with Belgium, Italy, Austria, Hungary, and Switzerland, and again in 1892 and 1893 when like treaties were respectively made with Serbia and Rumania. Increases in some duties took place in 1894 and 1895, such as those on cotton seeds, perfumes, ether, and honey.

In consequence of the higher prices rendered possible at home from the protective duty, the German manufacturer can afford to sell abroad the surplus of his output at a lower price than he could otherwise do. His average profit on his whole output is made up of two parts. Firstly, of a rather high profit on the sales in Germany, and, secondly, of a rather low profit on the sales abroad. The net average profit is, however, only an ordinary one, but the larger total quantity sold (which he could not dispose of without the foreign market), combined with the extra low price of sale abroad enables him to produce the commodity in the larger quantities at a lower cost of production than he otherwise could if he had only the German market for manufacture for. He thereby obtains abroad, when selling against an Englishman, an indirect advantage from his

home protection which stands him in good stead and is equivalent to a small indirect benefit (which the Englishman has not on his foreign sales, which is however paid for by the German consumer through the higher sale price at home).

The customs tariff now in force provides one general or "uniform" rate of duty for all countries, from which deviations only exist for such nations as have tariff treaties or treaties containing the most favored nation clause. Such deviations are "treaty" or "conventional" duties. At the present moment treaties of one kind or another exist with most European powers (excepting Great Britain, Spain and Portugal) and with the majority of extra-European countries. So that, with few exceptions, the German Empire may now be said to trade with the world on the basis of the lower "conventional" or "treaty" tariff. Most of the tariff treaties existing in Europe expired early in 1892, whereupon many countries proposed higher customs tariffs in order to be prepared to grant certain concessions reciprocally when negotiating for the new treaties. Germany, therefore, under the auspices of General Caprivi, set to work to make a series of special tariff treaties with Belgium, Italy, Austria-Hungary, and Switzerland, which were all dated December 6, 1891. Later negotiations of the same class were those with Serbia in 1892, with Roumania in 1893, and with Russia in 1894.

Perhaps almost the greatest benefit conferred upon the country by these seven tariff treaties was the fact that they all being made for a long period of years and not terminable in any event before December 31, 1903. This secured for the mercantile classes the measurable benefit of a fixed tariff for most of the important commodities of commerce over a long period of time—a very valuable factor in trade, which has in this case greatly assisted the development of commerce. The reductions in Germany granted by these treaties were not great except on imported grains, and those in the various foreign countries were not very considerable either. The negotiations for the negotiation of the new commercial treaties which are to replace those which expired on January 1, 1904, were begun in Germany as early as 1897. Immense trouble has been and is being taken by the Government to obtain thoroughly reliable data on which to work, as they were by no means content merely to elaborate a new tariff on the wide experience already gained from the working of the seven commercial treaties of 1891 to 1893. *Diplomatic and Consular Reports of the Reichstag, 1897, 1898, 1899, cited in Monthly Summary of Commerce and Finance, 1900, p. 8, July, 1899.*

A. D. 1894-1895. The Emperor and the Social Democrats. His violent and autocratic speeches. Failure of the Anti-Revolutionary Bill. Socialist message to France.

At the opening of the winter session of the Reichstag in December, 1894, the Emperor, speaking in person, declared it to be "necessary to oppose more effectively than hitherto the pernicious conduct of those who attempt to disturb the executive power in the fulfilment of its duty," and announced that a bill to that end, enlarging the penal provisions of law, would be introduced without delay. This was well understood to be aimed at the Social Democrats, against whom the Emperor had been making savage violent speeches of late. At Potsdam

In addressing some recruits of the First Guards, he had gone so far as to say: "You have no children, sworn allegiance to me. That means that you have given yourselves to me body and soul. You have only one enemy, and that is my enemy. With the present Socialist agitation I may order you,—which God forbid!—to shoot down your brothers, and even your parents; and then you must obey me without a murmur." In view of these three threatenings of the Emperor, and the intended legislative attack upon the freedom of political expression and action of members of the Social Democratic party, instead of quitting the House, as others did before the customary cheers for his Imperial Majesty were called for, remained silently sitting. The same day, for that behaviour they were not only rebuked by the president of the Reichstag, but a demand for proceedings against them was made by the public prosecutor, at the request of the Imperial Chancellor. The Reichstag valued its own rights too highly to thus gratify the Emperor, and the demand was refused, by a vote of three to one. His Imperial Majesty failed likewise to carry the bill—the Anti-Revolutionary Bill as it was called—on which he had set his heart. For some critical tongues and pens. The measure was opposed so stoutly, in the Reichstag and through out the Empire, that defeat appeared certain, and in May (1895) it was dropped. The Emperor did not take his defeat quietly. Celebrating the anniversary of the battle of Sedan by a grand dinner at the palace, he found the opportunity for a speech in which the Socialists were denigrated in the following terms: "A rabble appears to bear the name of Germans has dared to carry the German people, has dared to drag to the dust the person of the universally honored Emperor, which is to us sacred. May the whole people find in themselves the strength to repel these monstrous attacks, if not, I can only exhort to resist the treasonable band, to wage a war which will free us from such elements." The Social Democrats replied by despatching the following telegram to the Socialists in Paris: "On the anniversary of the battle of Sedan we send as a protest against war and chauvinism, our greeting and a clasp of the hand to our French comrades. Hurrah for international solidarity." Prosecutions followed. The editor of "Vorwärts" got a month's imprisonment for saving the police provoked brawls to make a protest for interference; Liebknecht four for a casual allusion to the Emperor's declarations against Socialism, and for predicting the collapse of the Empire; and Dr. Forster, three, for less impetuous.

A. D. 1894-1899. The Emperor's claim to "Kingship by Divine Right." A great sensation was produced in Germany by a speech addressed on September 6, 1894, by the German Emperor to the chief dignitaries and nobles of East Prussia in the Royal Palace at Königsberg. The following are the principal passages of this speech: "Agriculture has been in a seriously depressed state during the last four years and it appears to me as though, under this misfortune, doubts have arisen with regard to the fulfilment of my promises. Nay, it has even been brought home to me, to my grief and regret, that my best intentions have been misunderstood and have been disputed by members of the nobility with whom I am in close personal relation. Even the word 'opposition' has reached my ears. God-fearing,

The successor of him who became
taken in Prussia in his own right will
be his great-grandfather his great ancestor. The
Emperor of Prussia once said, "Ex me mea
origo, et ex me mea gloria." His great son set up his an-
cestor as a model for him. "I, in my turn,"
said the great-grandfather, hold my kingship
in the name of God and of my ancestors. We witnessed an
emperor, the day before yesterday,
Prussia be the statue of the Emperor Wil-
helm, the imperial sword uplifted in his right
hand, symbol of law and order. It exhorts
us to enter lines to the serious combating
of the world against the very basis of our
civilization and fabric. To you gentlemen I
address myself to the fight for religion mor-
ally and against the parties of revolution
which would rend the gnarled oak
of our country with its leaves, protests
and banners, through its topmost
branches the glory of Prussia close
to us. May it and with it the whole
of the German nation, become a bril-
liant and noble section of the people who
have entered into this struggle to
live with God, and dishonor to him
and to his law.

[illegible]

the use of the emperor which indicates the great corruption of his office. The emperor of day and night. The fact that his grandfather had been the Ming Emperor would have been an honor. His family would have become more prestigious from all parts of the land, speech delivered at Cebu.

A. D. 1895 (June). Opening of the Kaiser Wilhelm Ship Canal. The opening of the new

ship canal named the Kaiser Wilhelm Canal the occasion of a great celebration on the 21st of June in which the navies of Great Britain, Russia, France, Austria and Italy took part, starting in procession with the German squadron through the canal. It was also made the occasion for an exhibition of the newly formed alliance between Russia and France, the Russian and French fleets entering the harbor of Kiel to gather here in this day of peace. A. D. 1895. The canal had been eight years in building, the first spadeful of earth in the excavation having been turned by Emperor William I. at that time, near Kiel, on the 31 of June 1887. The canal is thus described: It is 98.6 kilometers or 27 miles in length. It begins at H. Pommern in the Bay of Kiel and terminates near Brunsbüttel at the mouth of the River Elbe, thus forming clear through the province of Schleswig-Holstein from northeast to southwest. Both openings are provided with huge locks. Near Rendsburg there is a third lock connecting the canal with the old Luder Canal. The medium water level of the canal will be about equal to the medium water level of Kiel harbor. At the lowest tide the profile of the canal lies in a depth of 6.17 meters (20 feet 6 inches) below the surface of the water, a navigable width of 36 meters (118.4 feet) so as to allow the largest Baltic steamers to pass each other. For the navy, 22 meters (72.18 feet) of canal bottom are provided at least 38 meters (124.29 feet) of water surface, and 84 meters (277 feet 9 inches) depth of water. The greatest depth for merchant vessels was calculated at 6.5 meters (21 feet 3 inches). The estimated cost was \$37,128,000. Two thirds of the cost is defrayed by Germany, the remaining one third by Russia. The time saved by its canal ship sailing from Kiel to Hamburg via the canal instead of through the Skagerrak strait between Denmark and Sweden is estimated at 24 days. The time of passage through the canal including stoppages and delays will be about thirteen hours. In time of peace the canal is to be open to men of war as well as merchant vessels of every nation, but in time of war it is to be restricted to vessels of the German navy. Many vessels have been wrecked and many lives lost on the Danish and Swedish coasts in waters which need not be navigated after the canal is opened to traffic. Its strategic importance to Germany will also be noted as it will cut off that country's two naval ports, Kiel on the Baltic and Wilhelmshafen on the North Sea, which are accessible to each other. *U. S. Consular Report*, No. 175, p. 940.

A. D. 1895 (June, December). Census of the Empire, and census of Prussia. The results of the last census of the German Empire (the census being taken every five years in December) have produced some surprise in that notwithstanding the alleged depression of agriculture and manufactures, the total shows an increase greater than any census since the formation of the Empire. The population in

the three lateral sections and the center. The agrarian protectionists would regard the commercial treaties, which prevent them from raising the protective tariff on cultural imports, as a serious economic loss. For instance, if the price of rice were to fall, but the extreme protectionists would not advocate the abolition of the tariff and the adoption of a so-called "natural" silver standard. The protectionists oppose the cutting of the tariff on foreign produce, would thus be in a stronger position. In short, the protectionists oppose the natural evolution of the market.

the drunkard, the aristocratic drinker, the rich and marrow of the race has never been well off, but because they have suffered from the whole world, which is made of the sadness, in the production of land. They have sunk into nothing while the standard of life has risen throughout all the world. The drunkard has long since been drinking both ends and not by endeavoring to raise himself above his kind, but by endeavoring at the same time to struggle with the other and upholding a tradition.

It is not really to satisfy these desires that the actuary is compelled to make the actuarial move-ment, but to satisfy the strong natural desire of the individuals in the army to be able to go out, and at court, and to be able to avoid the pack of lambs and the pack of lambs.

A D 1846 May Sugar bounty and sugar tax legislation. The sugar tax amendment of 1846 has been viewed in the German literature as the first and most drastic of the protectionist measures. It was finally enacted in 1846 by the Prussian Diet, and took effect on May 1, 1846. Its influence will be seen in the production of Germany, which has been depressing effect upon the markets and the interests of producers in other growing countries. The effect has been to the present situation of the industry from the time when the sugar industry began the systematic production of beet sugar down to the present time. The sugar for home consumption was produced in the quantity of beets worked in the factories; it being assumed that the beets required to produce a ton of sugar would be uniform and in the same amount of land was 20 units of sugar. The amount of sugar which at the time was enacted, was approx-

"But, under the stimulus of the export bounty provided by the same law, the German beet growers and sugar makers worked hard and intelligently to improve and increase their production. By careful selection and cultivation, the beets were so improved that from 12 to 14 tons of roots would yield a ton of sugar. Irrigation was also made in the machinery and processes employed in the sugar factories, so that as a result the German Government, which had nearly 12 cents per cwt. bounty on all sugar exported, had charged a tax of the same amount on all sugar for home consumption that could be made from 20 cwt. of beets. And that the export bounties were completely absorbed in the revenue derived from the same tax. This efficiency of the system had become apparent as early as 1899, and at that time it was decided to revise the law, but the sugar-producing interest was powerful enough to resist this change. Sugar

growing still continued to be the most profitable form of culture for German farmers, the amount cultivated and number of sugar factories continued to increase. Land complaints were heard against a system that favored the class of farmers at the expense of the entire population. In 1894, the Imperial Diet reduced the sugar export bounty by half, that is to 205 cents per 100 kilograms, and demanded that such a levy should entirely cease on the 31st of July, 1897, provided that in the meantime Austria, France, and other bounty-paying countries should likewise reduce their bounties on exported sugar. Several attempts have been made to reach such an international agreement, but without success; and, as a result, and in view of this failure, to secure a general reduction or abolition of bounties, the German *Agrochemists* have rallied and secured the adoption of the present law, which reduces the export bounty to 1887.50 cents per 220.6 pounds and raises the tax on sugar for home consumption from 18 marks 84.28 to 21 marks 84.90 per 100 kilograms, or about 2.2 cents per pound. This increased tax will, of course, be added to the retail price of sugar already very high, and tend to still further retard the increase of sugar consumption in Germany, which is now only 28.8 pounds per capita, against 74.08 pounds per capita in England and 77 pounds in the United States.

From the statistics that were brought out in the recent debate, it appears that the whole system of beef culture and sugar manufacturing in Germany has reached a higher, indeed a scientific perfection than has been attained in any other European country. Every step from the preparation and fertilization of the land to the smallest detail in the factory process has been refined as nearly as possible to exact scientific methods.

Statisticians were called to prove that the German farm products are not substandard all European competition and do not need the protection of an increased export bounty, but nothing could withstand the demand of the Agrarians and their victory is one of the most significant events in recent German legislation. *J. A. D. 1897 July. Defeat in Prussia of a bill to restrict the right of political associa-

tion and meeting. In July, the government in Prussia suffered a significant defeat in the Prussian Diet on an attempt to give the police new powers for interference with political meetings and associations. The bill was especially aimed at the Social Democrats, meeting in its first clause that "agents of the police authorities have power to dissolve meetings in which anarchists or Social Democratic movements are manifest, having for their object the overthrow of the existing order of state or society, and finding an expression in a manner which endangers public security and imperils the security of the state." It passed the upper house overwhelmingly, but was defeated in the lower by 200 votes to 207.

Later on it was granted to us as men to look on each other's eyes and stand faithfully on each other's side. To your Majesty the imperial crown has come with thorns. I have striven in my restricted sphere and with my scanty strength as man, soldier, and citizen to help your Majesty. We have reached a great epoch in our history, a portentous epoch for the nation, an important epoch for your Majesty and the Navy. Your Majesty has made a great sacrifice, and has shown great favour to myself in entrusting this command to me. I thank your Majesty from the bottom of a loyal, brotherly and loving heart. I well understand your Majesty's feelings. I know what a heavy sacrifice you make in giving me so fine a command. It is for this reason, your Majesty, that I am so much obliged and that I so sincerely thank you. I am deeply indebted for the confidence which your Majesty reposes in my weak person and I assure your Majesty of this. I am not animated by hopes of winning glory or laurels. I am animated by one desire—to proclaim and put abroad to all who will hear, as well as to those who will not, the gospel of your Majesty, anointed person. This I will have inscribed on my banner and will bear it wherever I go. These sentiments with which I set out are shared by my comrades. I raise my glass to you, those who with me enjoy the happy privilege of being permitted to go forth to meet this day, to impress the person of the Emperor on their minds, and to let the cry resound from the world: Our most Serene Majesty, the beloved Emperor, King and Master for ever. Hurrah, hurrah, hurrah!"

A. D. 1897-1900. Practical operation of the state system of workingmen's insurance. Enlargement of its provisions. By a series of laws enacted in 1883, 1884, and 1889, a system of compulsory state insurance of workingmen was established in Germany, covering in the first instance sickness, then accident, and finally becoming a pensioning insurance for old age and permanent invalidity. These laws establish a compulsion to be insured, but also freedom of choice as to the associations to which the insurance shall be maintained, all such associations being under a surveillance of the state.

In a report from U. S. Consul J. C. McFarlane, Chemnitz, made July, 1898, the practical working of the system to that time is thus described:

Time is proving the practical value of the German workingmen's insurance system. The social and economic influence of so great a system must be very great.

The object of the system is to relieve the sufferings of workmen and their families in cases of sickness (sick insurance), in case of accidents incurred at work (accident insurance), in cases of old age, and old age insurance. In case of sickness, the insured person is given free medical treatment, money, that is money during periods of sickness with which to obtain medical treatment, etc., of a desired free hospital and support for the time he is in hospital, in case of death is supplied the funeral fund is furnished by employers and workmen, the former paying one third and the latter two thirds. In cases of accident insurance, the insured person receives support during convalescence.

A. D. 1898 April The new naval policy.

One of the most important foreign investments taking place in Germany is the development of her maritime interests. The maritime and overseas interests had developed to such an extent that recently the Government has taken the most important step in this direction by passing the Law of 18th July 1924, which provides that the Government should have the right to acquire shares in shipping companies. During the year 1924 continuous efforts had been made to bring this project prominently before the public and to report on the absolute necessity of a large increase of the navy in order to adequately protect Germany's growing maritime interests. The preliminary statement of the bill presented to the Reichstag in November gave great prominence to the following considerations of general interest in connection with the new programme: Germany, during the last twenty years, the increase of her ports and exports, the rapid increase of her capital abroad, the largest number of overseas flour-shipping fleets, and the rapidly increasing population had steadily held Germany's sea interest. But that at the same time the

As pointed out by right-wing opponents of the law, the law with the interests of foreign investors, which must be provided against an increase of the tax, for any injury to those national interests would entail serious consequences in the whole country.

The bill was eventually passed on April 10, 1898, provided that the construction expenditure should not exceed \$20,145,000, of which \$15,845,000 was to be devoted to the construction of ships and their armaments. The vision of the fleet was then to be brought up to date by strengthening 17 battle ships of the *U.S.S.* *South Dakota* class, six 9-inch and 24 small cruisers, besides a variety of torpedo and other smaller craft. It is thought and hoped that, in consequence of the favorable state of the revenues of the United States, a sum of \$5,576,771 a year can easily be voluntarily assigned to the general naval budget of the next six years, by which time the alterations to the fleet are to be completed. The *U.S. Bureau of Statistics Monthly Summary of Statistics* for February, June, 1899. See also below, A. 1. 1900, 1901.

the other means by which the State and municipal systems. One million families have paid out £800,000 inclusive; 320,000,000,000,000. From 1900 on, the annual expenditure was upwards of 300,000,000,000 or 100 marks £23,800,000,000 in the year. Whether it comes so much for paternalism is not clear, but its effects here are too bad. Poverty in spite of it is practically unknown (*Ibid.*, p. 51).

of the accident insurance law in 1911, compulsory insurance to be introduced in the shops of blacksmiths and butchers, and in windowless, the absence of assistance provided by many cases making it impossible to demand equal treatment. I also noted the lack of liability for catchlessness in the fishing year.

[illegible]

It may perhaps be asked why we place the Centre party in the same category with the Liberals and Social Democrats, since the latter two parties are avowedly internationalist and anti-Rubials are largely in opposition to the rubial system. We reply that the Centre party is essentially a democratic party, and a party of the so-called 'middle classes'. It is not, like the Liberals and the Social Democrats, a party which identifies itself with democracy as such, but rather a party of the 'middle classes'. It is not a party of bodies but of character; the Liberal Bishop Ketteler of Mainz, the chief of the German Catholics, Christian Socialists, writes in the *Presse* on democracy in 1900: 'But as the present Pope has said, "the destruction of wide Catholic social organisations had no stronger supporters than the liberals." The German Centre party, which is an exception to the democratic American Catholic principle, with whom the Centre

party has much in common. The case is clear that democracy in its varied forms controls and directs the Reichstag, a small map of the *Pro-Socialist* line, July 1, 1935.

A D 1900 January. Introduction of the Civil Code. On the first day of the nineteenth century revolution was effected in the laws of Germany by putting into operation the new German Civil Code. "Since the close of the fifteenth century Germany has been the seat of documentary right. The Roman law, which was recognized as common law, which had not procedure distinctly native in its origin, was confined to certain districts and more or less, and was, therefore, entirely devoid of local significance in the wider sense. The ownership of the land was represented by the *Corpus Domini Civilis*, a Latin work entirely inapplicable to the layman. This very remarkable circum-

Law for the German Empire is at
 R. 8 Jan. *The Civil Code of Ger-*
many, 1899.

the obstructing of the American meat trade was passed by the Reichstag on the 23d of May 1919.

prohibits the importation of canned or sausage meat entirely, and imposes conditions on the introduction of other meats which are thought to be, in some cases, prohibitory. The measure was originally claimed to be purely one of sanitary precaution. It had been introduced in the Reichstag only in 1899, but the sharp conflict of interests about it kept it for more than a year in committee. When the bill finally emerged for discussion in the Reichstag, it was found that the Agrarian majority had distorted it from a sanitary to a protective measure. Both in the new form they gave the bill and in their discussion of it in the Reichstag, the Agrarians showed that it was chiefly their exclusion of foreign meats, rather than a system of sanitary inspection, that they wanted. As finally passed in May the bill had lost some of the harsh prohibitory features given it by the Agrarians, the latter contenting themselves with the exclusion of canned meats and sausages. To the foreign student of German politics, the Meat Inspection Law is chiefly interesting as illustrating the tendency of the general government to seize upon functions which have hitherto been in the hands of the individual states and municipalities, as well as of bringing the private affairs of the people under the control of governmental authority. It is another long step of the German government away from the principle of *laissez faire*. The task undertaken by the government here is itself a stupendous one. There is certainly no other great government in the world that would endeavor to organize the administrative machinery for inspecting every pound of meat that comes upon the markets of the country. — W. C. Dreher, *Letter from Germany* (*Atlantic Monthly*, March 1901).

A. D. 1900 (June).—Opening of the Elbe and Trave Canal.—The new Elbe and Trave Canal, which has been building five years and has been completed at a cost of 24,500,000 marks (\$5,841,000), of which Prussia contributed 7,500,000 marks (\$1,785,000) and the old Hansa town of Lübeck, which is now reviving, 17,000,000 marks (\$4,056,000)—was formally opened by the German Emperor on the 16th [of June]. The length of the new canal—which is the second to join the North Sea and the Baltic, following the Kaiser Wilhelm Ship Canal, or Kiel Canal, which was finished five years ago at a cost of 156,000,000 marks (\$37,128,000)—is about 11 miles. The available breadth of the new canal is 72 feet; breadth of the lock gates, 46 feet; length of the locks, 87 yards; depth of the locks, 8 feet 2 inches. The canal is crossed by twenty-nine bridges, erected at a cost of \$1,000,000. The span of the bridges is in all cases not less than 30 yards and their height above water level about 15 feet. There are, even locks, five being between Lübeck and the Möllner See, the highest part of the canal—and two between Möllner See and Lauenburg on the Elbe. — *United States Commerce Reports*, Sept., 1900, p. 8.

A newspaper item by the British *Chargé d'Affaires* in Berlin on the Elbe Trave Canal says that the opening of the Kaiser Wilhelm Canal had already affected the trade of Lübeck. This was foreseen and in 1894 a plan was sanctioned for the widening of the existing canal, which only allowed the passage of vessels of about 1,000 tons. The direction of the old canal was turned only to some extent, as it had immense

curves, while the new bed was fairly straight from Lübeck to Lauenburg, on the Elbe near Hamburg. The memorandum states that the undertaking is of great importance to the States along the Elbe, as well as to Sweden, Norway, Denmark, and Russia. It will to some extent divert traffic from Hamburg, and possibly raise somewhat the revenue of the Kaiser Wilhelm Canal.

A. D. 1900 (June–December).—Cooperation with the Powers in China. See in this vol. CHINA.

A. D. 1900 (September).—Government loan placed in America.—Great excitement and indignation was caused in September by the action of the imperial government in placing a loan of 80,000,000 marks (about \$20,000,000) in the American money market. On the meeting of the Reichstag, the finance minister, Dr. von Mühl, replying to attacks upon this measure, explained that in September the state of the German market was such that if they had raised the 80,000,000 marks at home the bank discount rate would have risen above the present rate of 5 per cent. before the end of the year. In the previous winter the bank rate had been at 6 per cent. for a period of 90 days, and during three weeks it had stood at 7 per cent. The government had been strongly urged to do everything in its power to prevent the recurrence of such high rates of discount. The London rate was rapidly approaching the German, and there was reason to fear that there would be a serious flow of gold from Germany. It was therefore urgently desirable to attract gold from abroad, and there was no country where money was so easy at the time as in the United States. This was due to the extraordinarily favorable balance of American trade and the remarkable increase in exports out of all proportion to the development of her ports. Another reason was the American currency law, which enabled the national banks to issue as much as 100 per cent. of their capital in loans, whereas they formerly issued only 90 per cent. There was no doubt that the 80,000,000 marks could have been obtained in Germany, but the public must have been aware that other loans of much greater extent were impending. There was going to be a loan of about 150,000,000 marks for the expedition to China, and it was certain that before the end of the year 1901 considerable demands would be made upon the public.

A. D. 1900 (October).—Anglo-German agreement concerning policy in China. See in this vol. CHINA. A. D. 1900 (AUGUST–DECEMBER).

A. D. 1900 (October 9).—Lèse-majesté in criticism of the Emperor's speech to soldiers departing for China, enjoining no quarter and commending the Huns as a military example.

Increasing prosecutions for lèse-majesté.—On the 9th of October, a newspaper carried an item wrote from Berlin: "The Berlin news, apart of yesterday and to-day chronicle no fewer than five trials for 'lèse-majesté'. The most important case was that of Herr Maximilian Harden, the editor of the weekly magazine (*Zukunft*). Herr Harden, who enjoyed the confidence of the late Prince Bismarck, wields a very satirical pen and

was reported. The Junius of modern Germany. In 1848 Herr Harden was convicted of treason and was sentenced to six months' imprisonment in a fortress. In the present instance he is charged with having committed lese-majesté in an article, "The Fight with the Emperor," published in the *Zukunft* of August 1, 1899, in connection with the speech delivered by the Emperor at Birmensteden on July 27. The Emperor's transgression of which, as was asserted, had been forbidden by Count von Helldorf, is noted as a fact that the Emperor had recommended the troops who were ordered to give no quarter and to make prisoners but, in doing the example of Attila, he had sought to excite a terror in East Asia that should last for a thousand years. The Emperor replied: "May the blessing of God and the prayers of my faithful subjects and the blessed angels of Christianity shall make its way." Herr Harden in his comments on this speech had truthfully examined the deeds of Attila and had contrasted him with the Emperor. A popular story in order to demonstrate that he was not a proper model to set up for the imitation of German soldiers. The article in the *Zukunft* had also maintained that it was the mission of the German Empire to spread Christianity in China, and finally had described the Emperor's action as a mistake. No publicity was given to the proceedings of the court. Herr Harden was found guilty not of having been waiting in the respect due to the Emperor, but of having actually attacked His Majesty in a way that constituted lese-majesté. He was sentenced him to six months' imprisonment in a fortress and at the same time ordered that the incriminated number of the *Zukunft* should be destroyed.

Dr. A. Sasse-Zettinger's remarks:—"We read in the newspapers today that a street porter in Munich has been sentenced to six months' imprisonment for insulting the Empress; that in Hanover a workman has been sentenced to five months' imprisonment for lese-majesté; that in Baden a workman has been sentenced to a year's imprisonment for lese-majesté; and that in Prussia a man who is deaf and dumb has been sentenced to four months' imprisonment for lese-majesté. The prosecutions for lese-majesté are multiplying at an alarming rate. We must emphatically repeat that such proceedings are repugnant to us in the last degree and that they repudiate the principles of Monarchy. The number of political prosecutions are instituted the more accustomed, the more difficult circumstances, does the Press become the police of writing so that the reader is kept between the lines. And this attitude is not to the advantage either of public morals nor of the Empire." We regret in particular that yesterday that of Herr Harden was charged with lese-majesté. It has justly been said that there is more indispensable in political prosecutions against thieves and murderers. There is no prospect of any improvement in this respect. The Reichstag will pay serious attention to the question of the present administration of justice is not only in the interest of free speech and of the Press, but also for the honor of the Crown and the wellbeing of the State.

A. D. 1900 (October 18). Change in the Imperial Chancellorship.—On the 18th of October it was announced in the "Imperial Gazette" that "His Majesty the Emperor and King has been graciously pleased to accede to the request of the Imperial Chancellor, the President of the Ministry and Minister for Foreign Affairs Prince Hohenlohe-Schillingsfürst, Prince of Ratibor and Corvey to be relieved of his offices and has at the same time conferred upon him the high Order of the Black Eagle with brilliants. His Majesty has further been graciously pleased to appoint Count von Bülow, Minister of State and Secretary of State to the Foreign Office to be Imperial Chancellor and Minister for Foreign Affairs." Count von Bülow is the third of the successors of Prince Bismarck in the high office of the Imperial Chancellor. The latter was followed by Count von Caprivi, who gave way to Prince Hohenlohe in 1894. Prince Hohenlohe had nearly reached the age of 82 when he is said to have asked leave to retire from public life.

A. D. 1900 (November). Withdrawal of legal tender silver coins.—"Germany has lately taken a step to clear off the haze from her financial horizon by calling in the outstanding thalers which are full legal tender, and turning them into subsidiary coins of limited legal tender—a process which will extend over ten years. At the end of that time, if no misfortune intervenes, she will be on the gold standard as surely and safely as England is. Her banks can now tender silver to their customers when they ask for gold, as the Bank of France can and does occasionally. When this last measure is carried into effect the only full legal tender money in Germany will be gold, or Government notes redeemable in gold."—*A. Y. Nation*, Nov. 29, 1900.

A. D. 1900 (November–December).—The Reichstag and the Kaiser. His speeches and his system of personal government.—In the Reichstag, which reassembled on the 14th of November, the speeches of the Kaiser were discussed by men of all parties, with a freedom that was new and refreshing in German political debates. Apart from the Kaiser's speeches in connection with the Chinese troubles the debates brought out some frank complaints from the more "loyal" sections of German politics, that the Kaiser is surrounded by advisers who systematically misinform him as to the actual state of public opinion. It has long been felt, and particularly during the past few years, that the present system of two cabinets, one of which is nominally responsible to the Reichstag and public opinion, while the other is merely a personal cabinet, responsible to neither, and yet exercising an enormous influence in shaping the monarch's policies, has been growing more and more intolerable. This system of personal government is becoming the subject of chronic discontent in Germany, and even the more loyal section of the press is growing restive under it. Bismarck's wise maxim, "A monarch should appear in public only when attired in the clothing of a responsible ministry," is finding more and more supporters among intelligent Germans."—*W. C. Draper, A Letter from Germany, Boston Monthly, March, 1901*.

A. D. 1900 (December).—Census of the Empire. Growth of Berlin and other cities. Urban population compared with that in the United States.—A despatch from Berlin.

February 26, announced the results of the census of December, 1900, made public that day. The population of the German Empire is shown to have increased from 32,279,361 in 1895 to 36,345,914. Of this population 27,731,067 are males and 8,614,847 females. Over 83 per cent of the whole population is contained in the four kingdoms, of these Prussia comes first with an round figure of 31,500,000 inhabitants, and Bavaria second, with 6,200,000. The figures for Saxony and Württemberg are 4,200,000 and 2,300,000 respectively. More than 16 per cent of the population is resident in the 34 towns of over 100,000 inhabitants. Of these 34 towns the largest is Berlin, while the smallest is Cassel, of which the inhabitants number 101,001.

The Prussian Statistical Office had already published the results of the census, so far as they concern Berlin and its suburbs. It appears that the population of the German capital now amounts to 1,881,151 souls, as against 1,677,304 in 1895 and 826,311 in 1871. The population of the suburbs has increased from 57,735 in 1871 and 135,236 in 1895, to 639,340 in 1900. The total population of the capital, including the suburbs is given as 2,520,491 souls as against 2,112,540 in 1895, an increase of over 19 per cent. Some figures relating to other cities had previously appeared, going to show "an acceleration of the movement of population from the country toward the great cities. The growth of the urban population in five years has been astonishing. The population of Berlin, for example, increased more than twice as much in the last five years as in the preceding five. The fourteen German cities now having a population of above 200,000 have increased more than 17 per cent since 1895. . . . No other European capital is growing so fast in wealth and numbers as Berlin, and the city is rapidly assuming a dominant position in all spheres of German life."

W. C. Dozier, *A Letter from Germany* (Atlanta: M. City, March, 1901).

The percentage of growth in Berlin "has been far outstripped by many other cities, especially by Silesburg, and so far as our own census shows, no American city of over 50,000 inhabitants can match its increase. In five years it has grown from 162,000 to 261,000—60 per cent increase. That would mean 120 per cent in a decade."

But though Germany has only one city of more than one million, and one more of more than half a million, and the United States has three of each class, Germany has, in proportion to its population rather more cities of from 50,000 to 100,000 inhabitants, and decidedly more of from 100,000 to 500,000, than the United States. In the United States 8,000,000 people live in cities of over 500,000 inhabitants, against some 3,000,000 in Germany; yet in the United States a larger percentage of the population lives in places which have under 50,000 inhabitants."—*The World's Work*, March, 1901.

A. D. 1901 (January).—Celebration of the Prussian Bicentenary. See (in this vol.) PRUSSIA, A. D. 1901.

A. D. 1901 (January).—Promised increase of protective duties. In the Reichstag—the Parliament of the Empire—on the 26th of January the Agrarians brought in a resolution de-

manding that the Prussian Government should "in the most resolute manner" use its influence to secure a "considerable increase" in the protective duties on agricultural produce, and a "pro-
pounding revision of German commercial policy, and should take steps to get the new tariff bill laid before the Reichstag as promptly as possible. In response, the Imperial Chancellor, Count von Bülow, made the following declaration of the policy of the government, to which all parties had been anxiously waiting. After recognizing the difficult situation in which agriculture is placed, and inspired by the desire effectively to improve that situation, the Prussian Government is resolved to exert its influence in order to obtain adequate protective duties on agricultural produce by means of the customs duties, which must be raised to an extent calculated to attain that object."

A. D. 1901 (January).—The Prussian Canal scheme enlarged.—The canal scheme which suffered defeat in the Prussian diet in 1899 (see above), and the rejection of which by 183,431 agricultural subjects roused the wrath of the emperor king, was again brought forward at the opening of the session of the Diet, or Landtag, in January, 1901, with a great enlargement of its scope and cost, and with an emphatic expression of the expectation of his Majesty that the bill providing for it should be passed. The bill covered no less than seven different projects, of which the total cost to the State was estimated at about 389,910,700 marks, or nearly \$100,000,000. These include the Rhine-Elbe Canal, which is calculated to cost 260,784,700 marks, a ship canal between Berlin and Stettin, to cost 41,500,000 marks; a waterway connecting the Oder and the Vistula, of which the cost, together with that of a channel rendering the Warthe navigable for ships from Posen to the junction of the Netze, is estimated at 23,631,000 marks, and a canal connecting the province of Silesia with the canal joining the Oder to the Spree. The Emperor proposed that the State should participate in the work of improving the flow of water in the Lower Oder and the Upper Havel to the extent of 40,989,000 marks and 9,670,000 marks respectively, and should contribute the sum of 9,396,000 marks towards the canalization of the Spree.

A. D. 1901 (February).—Annual meeting of the Husbanders.—The annual meeting of the Husbanders, one of the organizations of German agrarian interests, held at Berlin on the 11th of February, is reported to have been attended by some 8,000 delegates. The official report of the organization showed a membership of 232,000, or an increase of 26,000 over that of the previous year. Large gains were made during the year in the southern section of the Empire. It also appeared that no fewer than 262,000 members represented small farmers. A resolution was adopted demanding that the Government grant such protection to agriculture as would enable it to farm prices independent of the Bourse, fixing the duties high enough to make it possible for the soil to reap as large profits for their producers as from 1870 to 1900. "Above all," said the resolution, "Germany must not grant the same facilities to countries discriminating in their tariffs, as in the case of the United States."

HALL OF FAME, for Great Americans, The. In the designing of new buildings for the New York University College of Arts and Science, at University Heights, certain exigencies of art led to the construction of a stately colonnade, surrounding a high terrace which overlooks Harlem River, and the happy idea was conceived by Chancellor MacCracken of evolving therefrom a "Hall of Fame for Great Americans." The idea has been carried out, by providing for the inscription of carefully chosen names on panels of stone, with a further provision of space for statues, busts, portraits, tablets, autographs and other memorials of those whose names are found worthy of the place. For the selection of names thus honored, a body of one hundred electors, representing all parts of the country, was appointed by the Senate of the University. These electors were apportioned to four classes of citizens, in as nearly equal numbers as possible, namely: (A) University or college presidents and educators; (B) Professors of history and scientists; (C) Publicists, editors, and authors; (D) Judges of the Supreme Court, State or National. It was required of the electors that they should consider the claims of eminent citizens in many classes, not less than fifteen, and that a majority of these classes should be represented among the first fifty names to be chosen. They were, furthermore, restricted in their choice to native-born Americans, a rule which had some reasons in its favor, though it excluded from the Hall such shining names in American history as those of John Winthrop, Roger Williams, and Alexander Hamilton.

As the result of the votes given by 97 electors, in the year 1900, 29 names were found to have received the approval of 51 or more of the electors, and these were ordered to be inscribed in the Hall of Fame. The 29 names are as follows, in the order of preference shown them by the 97 electors, as indicated by the number of votes given to each:

GEORGE WASHINGTON	97
ABRAHAM LINCOLN	96
DANIEL WEBSTER	96
BENJAMIN FRANKLIN	94
ELIAS S. GRANT	92
JOHN MARSHALL	91
THOMAS JEFFERSON	90
RALPH WALDO EMERSON	87
HENRY WADSWORTH LONGFELLOW	85
ROBERT FULTON	85
WASHINGTON IRVING	84
JONATHAN EDWARDS	81
SAMUEL F. B. MORSE	80
DAVID GLASSGOW FARRAGUT	79
HENRY CLAY	71
NATHANIEL HAWTHORNE	70
GEORGE PIERCE	72

ROBERT E. LEE	70
PETER COOPER	69
ELI WHITNEY	67
JOHN JAMES AUDUBON	67
HORACE MANN	67
HENRY WARD BEECHER	66
JAMES KENT	65
JOSEPH STORY	64
JOHN ADAMS	64
WILLIAM ELLERY CHANNING	63
GILBERT STUART	58
ASA GRAY	51

Resolutions by the Senate of the University have determined the action to be taken in the selection of further names, as follows: The Senate will take action in the year 1901, under the rules of the Hall of Fame, toward the selection of the names to be inscribed in the Hall of Fame for the year 1901, being 21 in number. Each year, beginning with the year 1901, the Hall of Fame will have received the approval of ten or more names, yet has failed to receive a majority, will be considered a nomination for the year 1902. The year 1902 shall be added any name nominated by five of the Board of Electors. Any nomination may be nominated by the New York University Senate in such way as it may find expedient. Any nomination by any citizen of the United States that shall be addressed to the New York University Senate shall be received and considered by that body. Furthermore, during the five years throughout the twentieth century, additional names will be inscribed, provided the electors under the rules can agree by a majority upon so many.

The Senate further took note of the many requests that foreign-born Americans should be considered, by adopting a memorial to the University Corporation, to the effect that it will welcome a similar memorial to foreign-born Americans, for which a new edifice may be joined to the north porch of the present hall, containing one-fifth of the space of the latter, providing thirty panels for names — Chancellor H. M. MacCracken, *The Hall of Fame (Am. Rev. of Reviews, Nov., 1900, p. 563).*

HAWAII.—Names and areas of the islands. — "For practical purposes, there are eight islands in the Hawaiian group. The others are small rocks, of no value at present. These eight islands, beginning from the northwest, are: Niihau, Kauai, Oahu, Molokai, Lanai, Kaula, Maui, and Hawaii. The areas of these islands (in square miles) are: Niihau, 97; Kauai, 281; Oahu, 600; Molokai, 270; Maui, 760; Lanai, 20; Kaula, 63; Hawaii, 4,210. Total, 6,268. As compared with States of the Union, the area of the group approximates most nearly to

area of the State of New Jersey—7 185 square miles, or more than three times that of Delaware—contains square miles. —*Reel Four of the Reel of the Department of the Interior, 1898*

Annexation to the United States. On the 21st of July, 1897, the President of the United States transmitted to Congress a new treaty for the annexation of the Republic of Hawaii to the United States, signed that day by representatives of the two countries, upon the 15th of the same. With the treaty he submitted to his Secretary of State, Mr. Seward, a letter in which the latter said: "The negotiations which culminated in the treaty now submitted have been a mere resumption of the negotiations of 1897, which were interrupted in vol. 1, p. 100, and have been conducted upon the same basis. The interrupted revolutionary process was brought about the de-thronement of the Hawaiian monarch, and set up instead of the throne a provisional government, which was to be a temporary government of public affairs, until the public peace, such government as might be formed in union with the United States should have been negotiated. This self-constituted its purpose to exist for only a de facto existence, and its termination in which it took place was accomplished. As time passed, the relations with the United States became more intimate, the organization of the government, with its administrative needs, became more permanent, and the character of its first provisional government, framed by the representatives of the people of the Islands, administration of the Islands, council not chosen by suffrage, was succeeded by an elective government, and the ability of the Hawaiian people to hold—as the Republic of Hawaii, a dependent place in the family of the United States, preserving order at home and discharging international obligations abroad—has been proved. Recognized by the powers of the world, sending and receiving envoys, enjoying support for the law and maintaining peace on its established borders, Hawaii sends to the United States not a commission representing a revolution, but the accredited plenipotentiary of a constitutionally and firmly established government. However sufficient may have been the sympathy of the commissioners with whom the United States Government treated in 1893, and who satisfied the President may then have been, their power to offer the domain of the Hawaiian Islands to the United States, the fact remains that what they then tendered was a territory, not a pre-established Government, a government whose administration had been cast down by a revolution, but a complete revolution and a complete state of political transition. Now, the Republic of Hawaii approaches the United States as an equal, and points for its annexation the provision of article 22 of the constitution, promulgated July 21, 1894, whereby—

"This, with the approval of the cabinet, is hereby authorized and empowered to negotiate a treaty of political or commercial union between the Republic of Hawaii and the United States. And when subject to the ratification of Congress." The essential articles of the treaty are as follows:

Art. I. The Republic of Hawaii hereby cedes

absolutely and without reserve to the United States of America all rights of sovereignty of whatsoever kind in and over the Hawaiian Islands and their dependencies, and it is agreed that all the territory of and appertaining to the Republic of Hawaii is hereby annexed to the United States of America under the name of the Territory of Hawaii.

Art. II. The Republic of Hawaii also cedes and hereby transfers to the United States the absolute fee-simple ownership of all public government or private public buildings or offices, ports, harbors, military equipments and all other public property of every kind and description belonging to the Government of the Hawaiian Islands, together with every right and appurtenance thereto appertaining. The existing laws of the United States relative to public lands shall not apply to such lands in the Hawaiian Islands, but the Congress of the United States shall enact special laws for their management and disposition. Provided, that all revenue from the proceeds of the same, except as regards such part thereof as may be used or occupied for the civil, military or naval purposes of the United States, or may be assigned for the use of the local government, shall be used solely for the benefit of the inhabitants of the Hawaiian Islands for educational and other public purposes.

Art. III. Until Congress shall provide for the government of such Islands all the civil, political and military powers exercised by the officers of the existing government in said Islands, shall be vested in such person or persons and shall be exercised in such manner as the President of the United States shall direct, and the President shall have power to remove said officers and fill the vacancies so occasioned. The existing treaties of the Hawaiian Islands with foreign nations shall forthwith cease and determine, being replaced by such treaties as may exist or as may be hereafter concluded between the United States and such foreign nations. The nonapplicability of the Hawaiian Islands, not created by the fulfilment of the treaties so extinguished, and not inconsistent with this treaty nor contrary to the Constitution of the United States, nor to any existing treaty of the United States, shall remain in force until the Congress of the United States shall otherwise determine. Until legislation shall be enacted extending the United States customs laws and regulations to the Hawaiian Islands, the existing customs relations of the Hawaiian Islands with the United States and other countries shall remain unchanged.

Art. IV. The public debt of the Republic of Hawaii, lawfully existing at the date of the exchange of the ratifications of this treaty, including the amounts due to depositors in the Hawaiian Postal Savings Bank, is hereby assumed by the Government of the United States. And the liability of the United States to this debt shall in no case exceed \$1,000,000. So long, however, as the existing Government and the present commercial relations of the Hawaiian Islands are maintained as heretofore provided, said Government shall continue to pay the interest on said debt.

Art. V. There shall be no further immigration of Chinese to the Hawaiian Islands except upon such conditions as are now or may hereafter be allowed by the laws of the United States, and to Chinese by reason of anything herein contained

shall be allowed to enter the United States from the Hawaiian Islands.

Art. VI. The President shall appoint five commissioners, at least two of whom shall be residents of the Hawaiian Islands, who shall as soon as reasonably practicable recommend to Congress such legislation concerning the Territory of Hawaii as they shall deem necessary or proper. — *United States, 55th Cong., 1st Sess., Senate Executive Document E.*

A determined opposition to the renewed proposal of Hawaiian annexation was manifested at once in Congress and by many expressions of public opinion at large. It condemned the measure on grounds of principle and policy alike. It denied the right of the existing government at Honolulu to present the Hawaiian people in such disposal of their country. It denied the constitutional right of the government of the United States to annex territory in the circumstances and the manner proposed. It denied too, the expected advantages, whether naval or commercial, that the annexation of the islands would give to the United States. A protest against the annexation came also from the deposed Hawaiian queen, Liliuokalani, and another from a party in the island which attempted to rally round the presumptive heiress to the overturned Hawaiian throne, the Princess Kaiulani. The government of Japan also entered a protest, apprehending some disturbance of rights which it had acquired for its emigrating subjects by treaty with the Republic of Hawaii, but this protest was ultimately withdrawn. The array of opposition sufficed, however, to hold the question of annexation in abeyance for more than a year. No action was taken on the treaty during the special session of the Senate. When Congress assembled in December, 1897, President McKinley repeated his expressions in its favor, and the treaty was reported to the Senate, from the committee on foreign relations, early in the following year; but the two-thirds majority needed for its ratification could not be obtained.

Attempts to accomplish the annexation by that method were given up in March, 1898, and the advocates of the acquisition determined to gain their end by the passage of a joint resolution of Congress, which required no more than a majority of each House. Over the question in this form the battle was fiercely fought, until the 15th of June in the House of Representatives and the 6th of July in the Senate, on which dates the following joint resolution to provide for annexing the Hawaiian Islands to the United States was passed. It was signed by the President the following day.

"Whereas the Government of the Republic of Hawaii having, in due form, signified its consent in the manner provided by its constitution, to cede absolutely and without reserve to the United States of America all rights of sovereignty of whatsoever kind in and over the Hawaiian Islands and their dependencies, and also to cede and transfer to the United States absolute fee and ownership of all public, Government, or Crown lands, public buildings or edifices, ports, harbors, military equipment, and all other public property of every kind and description belonging to the Government of the Hawaiian Islands, together with every right and appurtenance thereunto appertaining. Therefore,

"Resolved by the Senate and House of Repre-

sentatives of the United States of America in Congress assembled, That said cession is accepted, ratified, and confirmed, and that the said Hawaiian Islands and their dependencies be, and they are hereby, annexed as a part of the Territory of the United States and are subject to the sovereign dominion thereof, and that all and singular the property and rights heretofore mentioned are vested in the United States of America. The existing laws of the United States relative to public lands shall not apply to such lands in the Hawaiian Islands, but the Congress of the United States shall enact special laws for their management and disposition. Provided, That all revenue from or proceeds of the same, except as regards such part thereof as may be used or occupied for the civil, military, or naval purposes of the United States, or may be assigned for the use of the local government, shall be used solely for the benefit of the inhabitants of the Hawaiian Islands for educational and other public purposes.

"Until Congress shall provide for the government of such islands all the civil, police, and military powers exercised by the officers of the existing government in said islands shall be vested in such person or persons and shall be exercised in such manner as the President of the United States shall direct, and the President shall have power to remove said officers and to take the oaths so occasioned. The existing treaties of the Hawaiian Islands with foreign nations shall forthwith cease and determine, being replaced by such treaties as may exist or as may be hereafter concluded, between the United States and such foreign nations. The municipal legislation of the Hawaiian Islands, not in conflict with the fulfillment of the treaties so extinguished, and not inconsistent with this joint resolution, or contrary to the Constitution of the United States nor to any existing treaty of the United States, shall remain in force until the Congress of the United States shall otherwise determine. Until legislation shall be enacted extending the United States customs laws and regulations to the Hawaiian Islands the existing customs relations of the Hawaiian Islands with the United States and other countries shall remain unchanged. The public debt of the Republic of Hawaii lawfully existing at the date of the passage of this joint resolution, including the amounts due to depositors in the Hawaiian Postal Savings Bank, is hereby assumed by the Government of the United States, but the liability of the United States in this regard shall in no case exceed four million dollars. So long, however, as the existing Government and the present commercial relations of the Hawaiian Islands are continued as heretofore provided, said Government shall continue to pay the interest on said debt.

"There shall be no further immigration of Chinese into the Hawaiian Islands, except upon such conditions as are now or may hereafter be allowed by the laws of the United States, and no Chinese, by reason of anything herein contained, shall be allowed to enter the United States from the Hawaiian Islands.

"The President shall appoint five commissioners, at least two of whom shall be residents of the Hawaiian Islands, who shall, as soon as reasonably practicable, recommend to Congress such legislation concerning the Hawaiian Islands as they shall deem necessary or proper.

HAWAII.

Sec. 3. That the commissioners heretofore appointed be and they shall be appointed by the President, to act with the advice and consent of the Senate.

Sec. 4. That the sum of one hundred thousand dollars or so much thereof as may be necessary is hereby appropriated out of any money in the Treasury not otherwise appropriated and is immediately available, to be expended at the discretion of the President of the United States of America for the purpose of carrying this and resolution into effect.

There was a strict division of parties on the passage of the resolution, but only three Republican votes were cast against it. Speaker Reed, who had strenuously opposed the measure, was absent. Two Republican senators voted against the resolution and three who opposed it were present. A large majority of the Democrats in both Houses were in opposition.

The policy advocated by the opponents of annexation was set forth in the following resolution, which they brought to a vote in the House, and which was defeated by 205 to 94.

1. That the United States will view as an act of hostility any attempt upon the part of any government of Europe or Asia to take or hold possession of the Hawaiian Islands or to acquire them by any pretext or under any conditions, sovereign authority therein. 2. That the United States hereby announces to the people of these Islands and to the world the guarantee of the independence of the people of the Hawaiian Islands and their firm determination to maintain the same.

Immediately upon the passage of the resolution of annexation, preparations were begun at Honolulu for the transfer of sovereignty to the United States, which was performed ceremoniously August 12. Meantime, the President had appointed, as commissioners to recommend legislation for the government of the Islands, Messrs. Shelby M. Cullum, John T. Morgan, Robert R. Holt, Sanford B. Dole, and Walter F. Fear. In the following November the Commission presented its report, with a draft of several bills embodying the recommended legislation. When the subject came into Congress, wide differences of opinion appeared on questions concerning the relations of the new possession to the United States and the form of government to be provided for it. As the consequence, more than a year passed before Congress reached action on the subject, and Hawaii was kept in suspense for that period provisionally governed under the terms of the resolution of annexation. The Act which, at last, determined the status and the government of Hawaii, under the flag of the United States, became law by the President's signature on the 30th of April, 1900, and Sanford B. Dole, formerly President of the Republic of Hawaii, was appointed its governor.

The fundamental provisions of the "Act to provide a government for the Territory of Hawaii" are the following:

Sec. 2. That the islands acquired by the United States of America under an Act of Congress entitled "Joint resolution to provide for annexing the Hawaiian Islands to the United States," approved July seventh, eighteen hundred and ninety-eight, shall be known as the Territory of Hawaii.

Sec. 3. That a Territorial government is hereby

HAWAII.

by established over the said Territory, with its capital at Honolulu, on the island of Oahu.

Sec. 4. That all persons who were citizens of the Republic of Hawaii on August twelfth, eighteen hundred and ninety-eight, are hereby declared to be citizens of the United States and citizens of the Territory of Hawaii. And all citizens of the United States resident in the Hawaiian Islands who were resident there on or since August twelfth, eighteen hundred and ninety-eight, and all the citizens of the United States who shall hereafter reside in the Territory of Hawaii for one year shall be citizens of the Territory of Hawaii.

Sec. 5. That the Constitution and except as herein otherwise provided, all the laws of the United States which are not locally inapplicable, shall have the same force and effect within the said Territory as elsewhere in the United States. Provided, that sections eighteen hundred and fifty and eighteen hundred and ninety of the Revised Statutes of the United States shall not apply to the Territory of Hawaii.

Sec. 6. That the laws of Hawaii not inconsistent with the Constitution or laws of the United States or the provisions of this Act shall continue in force, subject to repeal or amendment by the legislature of Hawaii or the Congress of the United States.

Sec. 12. That the legislature of the Territory of Hawaii shall consist of two houses, styled, respectively, the senate and house of representatives, which shall organize and sit separately, except as otherwise herein provided. The two houses shall be styled "The legislature of the Territory of Hawaii."

Sec. 17. That no person holding office in or under or by authority of the Government of the United States or of the Territory of Hawaii shall be eligible to election to the legislature, or to hold the position of a member of the same while holding said office.

Sec. 55. That the legislative power of the Territory shall extend to all rightful subjects of legislation not inconsistent with the Constitution and laws of the United States locally applicable.

Sec. 60. That the executive power of the government of the Territory of Hawaii shall be vested in a governor, who shall be appointed by the President, by and with the advice and consent of the Senate of the United States, and shall hold office for four years and until his successor shall be appointed and qualified, unless sooner removed by the President. He shall be not less than thirty-five years of age; shall be a citizen of the Territory of Hawaii; shall be commander in chief of the militia thereof; may grant pardons or reprieves for offences against the laws of the said Territory and reprieves for offences against the laws of the United States until the decision of the President is made known thereon.

Sec. 68. That all the powers and duties which, by the laws of Hawaii, are conferred upon or required of the President or any minister of the Republic of Hawaii (acting alone or in connection with any other officer or person or body) or the cabinet or executive council, and not inconsistent with the Constitution or laws of the United States, are conferred upon and required of the governor of the Territory of Hawaii, unless otherwise provided.

Sec. 80. That the President shall nominate and by and with the advice and consent of the Senate, appoint the chief justice and justices of the supreme court, the judges of the circuit courts, who shall hold their respective offices for the term of four years, unless sooner removed by the President.

Sec. 81. That the judicial power of the Territory shall be vested in one supreme court, circuit courts, and in such inferior courts as the legislature may from time to time establish.

Sec. 82. That a Delegate to the House of Representatives of the United States, to serve during each Congress, shall be elected by the voters qualified to vote for members of the house of representatives of the legislature, such Delegate shall possess the qualifications necessary for membership of the senate of the legislature of Hawaii. Every such Delegate shall have a seat in the House of Representatives with the right of debate, but not of voting.

Sec. 83. That there shall be established in said Territory a district court to consist of one judge, who shall reside therein and be called the district judge. The President of the United States, by and with the advice and consent of the Senate of the United States, shall appoint a district judge, a district attorney, and a marshal of the United States for the said district, and said judge, attorney, and marshal shall hold office for six years unless sooner removed by the President. Said court shall have, in addition to the ordinary jurisdiction of district courts of the United States, jurisdiction of all cases cognizable in a circuit court of the United States, and shall proceed therein in the same manner as a circuit court.

Sec. 84. That the Territory of Hawaii shall comprise a customs district of the United States, with ports of entry and delivery at Honolulu, Hilo, Mahukona, and Kahului.

A. D. 1900.—Census of the Islands. Progress of educational work. — The last Hawaiian census, taken in the year 1890, gives a total population of 109,020, of which 31,019 were native Hawaiians. The number of Americans reported was 8,485. The results of the Federal census taken this year [1900] show the islands to have a total population of 154,001, an increase over that reported in 1890 of 44,981, or 41.2 per cent. The total land surface of the Hawaiian Islands is approximately 6,149 square miles; the average number of persons to the square mile is, the last three censuses being as follows: For 1890, 13.9; 1896, 10.9; 1900, 23.8.

Education in Hawaii is making favorable progress. In Honolulu two large schoolhouses have recently been erected at a cost of \$247,8 and \$20,349, respectively. The department of education is under the management of a superintendent of public instruction, assisted by six commissioners of public instruction, two of whom are ladies. The tenure of office of the commissioners is six years, the term of two of them expiring each year. They serve without pay. The system is the same as that existing under the Republic of Hawaii. In the biennial period ending December 31 there were 141 public and 18 private schools in the Hawaiian Islands; 341 teachers in the public schools, of whom 113 were men and 231 were women, and 200 teachers in the private schools, of whom 79 were men and 121 were women. In the same period there were

11,636 pupils in the public schools, of whom 6,305 were boys and 5,331 were girls; 1,434 pupils in the private schools, of whom 666 were boys and 1,768 were girls. This gives a total of 12,400 pupils, of whom 8,661 were boys and 3,839 were girls.

In the 1899-1900 school year 5,045 were Hawaiian, 2,721 port Hawaiian, 666 American, 213 British, 347 German, 188 Portuguese, 84 Scandinavian, 1,141 Japanese, 104 Chinese, 30 South Sea Islanders, and 1,141 other foreigners. Each nationality had its own teacher. The expenditures for the two years ending December 31, 1899, were \$67,100.88; in the year 1898 nearly all the common schools, in which the Hawaiian language was the medium of instruction, have been converted to schools in which English alone is so employed; 88 per cent of the children, eight at present, taught by teachers who use English. *United States Secretary of the Interior, Annual Report, Vol. 30, 1900.*

HAYTI: A. D. 1896. Election of President Sam. — Hayti elected a new President, General Thereseas Simon Sam, to succeed General Hippolyte, who died suddenly on the 20th of March.

A. D. 1897.—Quarrel with Germany. The government of Hayti came into conflict with that of Germany, in September, 1897, over what was claimed to be the illegal arrest of a Haytian, General Thereseas Simon Sam, to succeed General Hippolyte, who died suddenly on the 20th of March. A German, named Enders, who had secured German citizenship, demanded his release, with an indemnity at the rate of \$1,000 per day for his imprisonment. The demand not being acceded to promptly, the German consul at Port-au-Prince handed down his flag. The United States Minister persuaded the Haytian President, General Simon Sam, to set Enders free. The demand for indemnity, still pending, brought two German war ships to Port-au-Prince on the 6th of December, with their guns ready to open fire on the town if payment were not made within eight hours. For Hayti there was nothing possible but submission, and \$20,000 was paid, with apologies and expressions of regret.

HOBOKEN, Great fire at.—On the 30th of Dec. 1890 between 200 and 300 people lost their lives in a fire which destroyed the pier system of the New York and Lloyd steamship line, at Hoboken, N. J. The fire wrecked three of the largest ships of the company, and is said to have been the most destructive blaze that ever visited the pier system of shipping of the port of New York. A substantial part of the loss of life at nearly 300, and the damage to property at about \$10,000,000, and the company's estimate of the loss of life and property wiped out was considered excessive. The fire started in some cotton on the pier, and four large piers at 4 o'clock in the afternoon. In a few minutes the pier on which the fire broke out was enveloped in flames, and in six minutes the whole pier system was burning. The flames spread so quickly that many men on

INDIA: A. D. 1894.—The Waziri War.—A fierce attempt to interrupt the demarcation of the Afghan boundary was made by the Waziris. The escort of 5,000 troops, consisting mainly of Sikhs and Goorkhas, was desperately attacked in camp at Wano, November 3. The attack was repulsed, but with heavy loss on the British side. It became afterwards necessary to send three strong columns into the country, under Sir William Lockhart, in order to carry out the work.

A. D. 1895 (March—September).—The defense and relief of Chitral.—The British frontier advanced.—At the extreme northwestern limit of British Indian dominion and semi-dominion, under the shadow of the lofty Hindu-Kush mountains, lie a group of quasi-independent tribal states over which the Amir of Afghanistan claimed at least a "sphere of influence" until 1893. In that year the Amir and the Government of India agreed upon a line which defined the eastern and southern frontier of Afghanistan, "from Wakhan to the Persian border," and agreed further as follows: "The Government of India will at no time exercise interference in the territories lying beyond this line on the side of Afghanistan, and his Highness the Amir will at no time exercise interference in the territories lying beyond this line on the side of India. The British Government thus agrees to his Highness the Amir retaining Asmar and the valley above it, as far as Chanak. His Highness agrees, on the other hand, that he will at no time exercise interference in Swat, Bajaur, or Chitral, including Aruwal or Bashgal valley." Under this agreement, the Indian Government prepared itself to be watchful of Chitral affairs. The little state was notoriously a nest of turbulence and intrigue. Its rulers, who bore the Persian title of Mehtar, signifying "Greater," can never have expected to live out their days. Changes of government were brought about commonly by assassination. The reigning prince, Nizam-ul-Mulk, owed his seat to the murder of his father, Aman-ul-Mulk, though not by himself. In turn, he fell, on New Year's day, 1895, slain at the instigation of his half-brother, Amir-ul-Mulk, who mounted the vacant chair of state. The usurper was then promptly assailed by two rivals, one of them his brother-in-law, Umra Khan, a mountain chieftain of Bajaur, the other an uncle, Sher Afzal, who had been a refugee at Kabul. On the news of these occurrences at Chitral, the Government of India sent thither, from Gilgit, its political agent, Surgeon Major Robertson, with a small escort, to learn the state of affairs.

The result of Dr. Robertson's attempt to settle matters was an alliance of Umra Khan and Sher Afzal in a desperate attempt to destroy him and his small force of native troops, which had five English officers at its head. The latter took possession (March 1) of the fort at Chitral, a structure about 80 yards square, walled partly with wood, and so placed in a valley that it was commanded from neighboring hills. In this weak fortification the little garrison held off a savage swarm of the surrounding tribes during 46 days of a siege that is as thrilling in the story of it as any found in recent history. The first reinforcements sent to Dr. Robertson,

from near Gilgit, were disastrously beaten back with the loss of the captain in command and two of his men. As speedily as possible, when the situation was known in India, an army of about 14,000 men was made ready at Peshawar, under the command of Major General Sir Robert Law, and relieving columns were pushed with great difficulty through the Mahakand Pass, then almost deep with snow. A smaller force of 400 men, under Colonel Kelly, fought its way from Gilgit, struggling through the snows of a pass 12,000 feet above the level of the sea. Colonel Kelly was the first to reach Chitral, which he did on the 20th of April. The besieged garrison had at his approach. The beleaguered garrison was found to have lost 40 killed and 70 wounded out of its fighting force of about 370 men. Sher Afzal was caught by the Khan of Dir, who led 2,000 of his followers to the help of the British. Umra Khan escaped to Kabul, where he was imprisoned by the Amir. Shuja-ul-Mulk, a younger brother of Amir-ul-Mulk, was declared Mehtar. The question whether British authority should be maintained in Chitral or withdrawn was now sharply debated in England; but Lord Salisbury and his party, coming into power at that moment, decided that the advanced frontier of Indian Empire must be held. The young Mehtar was installed in the name of the Mulekara of Kashmir as his suzerain, and the terms under which his government should be carried on were announced at his installation (Sept. 2, 1895) by the British Agent, as follows:

"The general internal administration of the country will be left in the hands of the Mehtar and of his advisers. The Government of India do not intend to undertake themselves the management of the internal affairs of Chitral, their concern being with the foreign relations of the State, and with its general welfare. It, however, has to be remembered that Shuja-ul-Mulk is only a boy, and that, at an age when other boys are engaged in education and amusement, he has been called upon to hold the reins of State. Bearing this fact in mind, the Government of India recognise the necessity of his receiving some help during the time of his minority, and it has consequently been decided to leave at Chitral an experienced Political Officer upon whom the Mehtar may always call for advice and assistance, while it is proposed to appoint three persons, Raja Bahadur Khan, the Governor of Mastuj, Wazir Inayat Khan, and Aksakal Fateh Ali Shah, to give him help, instruction and advice in the management of his State and in the laws and customs of the people. Ordinarily the entire country will be governed in accordance with their experience and judgment, but nevertheless the Assistant British Agent, if he thinks it necessary to do so, may, at any time, ask the Mehtar to delay action recommended by his three advisers, until the opinion of the British Agent at Gilgit has been obtained, whose decision shall be final and authoritative.

"The desirability of abolishing traffic in slaves is a matter to which the Government of India attach much importance, and that they have lately interested themselves with some success in procuring the release of Natives of Kashmir and her dependencies, including Chitralis who are held in bondage in Chinese Turkistan. It is in accordance therefore with the general policy of the Government of India that in Chitral also

and buying and selling of slaves, whether for domestic use in the country or with the intention of sending them abroad, should be altogether prohibited. "Any such selling of slaves is therefore from this time forward absolutely illegal."—*Great Britain, Parliamentary Publications: Papers, Command 1896 (C)—80371*. Also in *C. P. Fraser, History of Chitral (Century Mag., v. 55, p. 58)*.

A. D. 1895 (April).—Report of the Opium Commission. The long deferred publication of the report of this commission was made in April, and the report was signed by eight out of the members of the commission. "The commission declared that it had not been shown to the contrary, or to be demanded by the people, that the growth of the poppy and the manufacture of opium in British India should be prohibited. Such a prohibition, if extended to the protected States, would be an unprecedented act of interference on the part of the paramount power and would be sure to be resisted by the chiefs and their people. The existing treaties with China in regard to the importation of Indian opium into that country had been admitted by the Chinese Government to contain all they desired. The evidence led the commissioners to the conclusion that the common use of opium in India is moderate, and its prohibition is strongly opposed by the great mass of native opinion."—*Journal Register*, 1895, pp. 337-8.

A. D. 1896-1897.—Famine in northwestern and central provinces.—A failure of rains, especially in northwestern and central India, produced the inevitable consequence of famine, last year, with awful severity from the spring of 1896 to the autumn of 1897. In December of the former year there were 561,800 persons employed on public works which the Indian government organized. In the following March the number had risen to more than three millions, and in June it exceeded four millions. Rain fell in July and August, and the distress began soon afterwards to grow less. In addition to the heavy expenditures of the government, the charitable contributions for the relief of sufferers from this famine were officially reported to have amounted to 1,750,000 pounds sterling (\$8,750,000).

A. D. 1897-1898.—Frontier wars.—From the summer of 1897 until beyond the close of the year the British were once more seriously engaged with the warlike tribes of the Afghan frontier. The risings of the latter were begun in the Peshawar Valley, on the 10th of June, when a serious and dangerous attack was made by Waziri tribesmen on the escort of Mr. Gee, the political agent at the village of Maizur. A number of British and men were killed and wounded, and the whole party would have been destroyed if not for reinforcements had not reached them. Over 1,000 troops were subsequently employed in the suppression and punishment of this revolt. The next outbreak, in the Swat Valley, was

more extensive. It was ascribed to the preaching of a fanatical Mohammedan priest, known as "the mad mullah," who labored to excite a religious war, and was opened, July 26, by a night attack on the British positions at Mahakand and Chakdarra. The latter outpost, guarding the bridge over the Swat river on the road to Chitral, was held by a small garrison of less than 300 men, who were beleaguered for a considerable time before relief came. According to an official return of wars and military operations on or beyond the borders of British India in which the Government of India has been engaged, made to Parliament on the 30th of January, 1900, there were 11,826 troops employed in the operations immediately consequent on this rising, with the result that "the insurgents were defeated and the fanatical gatherings were dispersed, large fines were taken in money and arms." But other neighboring tribes either gave help to the Swats or were moved to follow their example, and required to be subdued, their countries traversed by punitive expeditions and "fines of money and arms" collected. Before the year closed, these tasks employed 6,800 men in the Mohmand country, 3,200 in the Utman Khel country, 7,300 in the Buner country, 11,231 in the Kurram Valley; and then came the most serious business of all. The Afridis, who had been subsidized by the government of India for some years, as guardians of the important Khyber Pass, were suddenly in arms against their paymasters, in August, destroying the Khyber posts. This serious hostility called nearly 14,000 British Indian troops into the field, under General Sir William Lockhart, whose successful campaign was not finished until the following spring. The most serious engagement of the war with the Afridis was fought at the village of Dargai, October 18. The final results of the campaign are thus summarized in the return mentioned above: "British troops traversed the country of the tribes, inflicting severe loss on the tribesmen, who were ultimately reduced to submission; they paid large fines in money and arms, and friendly relations have since been restored."—*Great Britain, House of Commons Reports and Papers*, 1900, 13.

A. D. 1898 (September).—Appointment of Lord Curzon to the Viceroyalty.—In September, 1898, the Right Hon. George N. Curzon, lately Under Secretary of State for Foreign Affairs, was appointed Viceroy and Governor General of India, to succeed the Earl of Elgin. In the following month, Mr. Curzon was raised to the peerage, as Baron Curzon of Kedleston.

A. D. 1899-1900.—Famine again. There was a recurrence of drought and famine in 1899 far more extensive than that of 1896-7, producing more death and suffering, and calling out more strenuous exertions for its relief. The regions afflicted were largely the same as two years before, embracing much of northwestern and central India. The relief measures which it demanded were carried far into the summer of 1900. In October of the latter year Lord Curzon, the Viceroy, addressing the Legislative Council at Simla, and reviewing the experience through which the government and the country had passed, made some important statements of fact.

"In a greater or less degree," he said, "nearly one-fourth of the entire population of the Indian continent came within the range of the relief operations. The loss occasioned may be roughly put in this way. The annual agricultural production of India and Burma averages in value between 300 and 400 crores of rupees (the crore being ten millions, and the rupee equivalent to about one-third of a dollar). On a very cautious estimate the production of 1899-1900 must have been at least one quarter, if not one third, below the average, or at normal prices 75 crores, or £50,000,000 sterling. If to this be added the value of some millions of cattle, some conception may be formed of the destruction of property which great drought occasions. There have been many great droughts in India, but no other of which such figures could be predicated as these."

If a special characteristic can be attributed to our campaign of famine relief in the past year, it has been its unprecedented liberality. There is no parallel in the history of India or any country of the world to the total of over 6,000,000 persons who, in British India and the native States for weeks on end, have been dependent upon the charity of the Government. The famine cost ten crores in direct expenditure, while 238 lakhs were given to landholders and cultivators on loans and advances, besides loans to native States. . . . There has never been a famine when the general mortality has been less, when the distress has been more amply or swiftly relieved, or when the Government and its officers have given themselves with more whole-hearted devotion to the saving of life and the service of the people. It is impossible to tell the actual mortality, but there has apparently been an excess of mortality over the normal of 750,000. Cholera and smallpox have accounted for 230,000, which is probably below the mark, so that the excess in British India has equalled 500,000 during the year. To say that the greater part of these died of starvation or even of destitution would be an unjustifiable exaggeration, since many other contributory causes have been at work."

Referring to the charitable help received from various parts of the world, Lord Curzon said:

In 1896-97 the total collections amounted to 170 lakhs [the lakh being 100,000 rupees] of which 10 lakhs remained over at the beginning of the recent famine. In the present year the Central Relief Committee has received a sum of close upon 140 lakhs, not far short of £1,000,000 sterling. To analyze the subscriptions: India has contributed about the same amount to the fund as in 1896-97—namely, 32 lakhs. If the contributions from the European community are deducted, India may be considered to have contributed less than one-fifth of the total collections of 140 lakhs. More might have been expected from the native community as a whole, notwithstanding individual examples of remarkable generosity. The little colony of the Straits Settlements, which has no connexion with India beyond that of sentiment, has given more than the whole of Burma. A careful observation of the figures and proceedings in each province compels me to say that native India has not yet reached as high a standard of practical philanthropy and charity as might reasonably be expected. . . . The collections from abroad amounted to 108 lakhs, as

against 137 in 1896-97. The United Kingdom's contribution of 88½ lakhs compared itself favorably with its contribution of 123 lakhs in 1896-97. In the circumstances of the year it is a noble gift. Glasgow has been especially generous with a donation of 8½ lakhs and Liverpool with 4½ in addition to nearly 16 lakhs from the rest of Lancashire. Australasia has given nearly 8 lakhs, in place of 2 lakhs. The Straits Settlements, Ceylon, and Hong Kong have also been extremely generous. Even the Chinese native officials have collected handsome sums. The liberal donation of Germany at the instigation of the Emperor has already been publicly acknowledged. The United States, both through direct contributions to the fund and by means of privately distributed gifts of money and grain, have once more shown their vivid sympathy with England's mission and India's need."

A. D. 1901.—Census of the Empire.—Decrease of population in several of the Native States.

—The Indian census, begun on the 1st of March, 1901, was completed in the empire in fourteen days, the result being announced on the 15th. It showed a total population in British territory of 231,085,000, against 231,266,000 in 1891; in Native States 61,181,000 against 68,050,000 in 1891; total for all India 294,266,000 against 287,317,000 in 1891. The Native States, it will be seen, have declined in population to the extent of nearly 3,000,000, showing greater severity in those states of the effects of famine and disease. In several provinces, however, of the British territory, a decrease of population appears: Bengal declining from 2,867,000 in 1891 to 1,191,000 in 1901; Bombay (British Presidency) from 15,957,000 to 15,330,000; Central Provinces from 10,781,000 to 9,845,000; Assam from 41,000 to 41,000; Coorg from 174,000 to 170,000. Of the Native States the greatest loss of population was suffered in Rajputana which sank from 12,016,000 to 9,841,000; in Central India, where the numbers fell from 10,318,000 to 8,501,000; and in the Bombay States, which were reduced in population from 8,603,000 to 6,891,000. The provinces in British India which show the greatest percentage of gain are Upper and Lower Burma, Assam and Sindh. The present population of the greater British provinces is as follows: Bengal, 74,713,000; Madras 38,208,000; Northwest provinces, 34,812,000; Punjab, 22,449,000.

A. D. 1901 (February).—Continued famine.

—On the 24th of January, 1901, the Viceroy of India reported to the British Government, by telegram, that the winter rainfall had been unusually good in Upper India, Rajputana, Central Provinces, and Central India, and agricultural prospects were very favorable; but that in Gujarat, Deccan, and the Karnatik districts of Bombay, through the early cessation of the monsoon in September and the absence of rain, the crop prospects were bad and serious distress was expected between then and August. Relief measures would be required. The affected district included Baroda and part of Hyderabad. On the 14th of February the Viceroy reported further that the number on the relief works and gratuitous relief showed little increase, but greater pressure was expected in the affected areas after the reaping of the scanty harvests there. In Upper and Central India some damage by storm and damp had been done to crops which were set

to be very good. The number of persons then in receipt of relief was: Bombay, 176,000; Bombay Native States, 17,000; Baroda, 15,000; Hyderabad, 2,000; Madras, 3,000; Central India States, 1,000. Total, 211,000.

A. D. 1901 (February).—Creation of a new administrative province on the northwestern frontier. A despatch from Calcutta February 13 announced the determination of the government to create "a new frontier agency to be formed out of the four trans-Indus agencies of the Punjab under an Agent to the Commissioner of similar status to the Agent to the Commissioner with revenue and judicial commissions; all the officers being under the Supreme Government and enrolled in the Political Department." The districts which form the new province will be Peshawar, Kohat, Bannu, and Pora (Swat) Khan, with the tribal country between them and also the existing political agencies of Dir, Swat, Chitral, the Khair, the Karam, Focht, and Wana. The scheme takes as much as possible away from the Punjab, while making a compact charge, easily controllable by one officer.

INDIANAPOLIS CONVENTION, and Monetary Commission, The. See (in this vol.) *UNITED STATES OF AM.* **A. D. 1896-1898.**

INDIANS, The American: A. D. 1893-1899. Negotiations and agreements with the Five Civilized Tribes.—Work of the Dawes Commission. In his annual Message to the Congress of the United States, December 7, 1896, President Cleveland made the following reference to the work of a commission created in 1891 for negotiating with what are known as the Five Civilized Tribes of Indians: "The condition of affairs among the Five Civilized Tribes, who occupy large tracts of land in the Indian Territory and who have governments of their own, has assumed such an aspect as to render it almost indispensable that there should be an entire change in the relations of these Indians to the General Government. This seems to be necessary in furtherance of their own interests, as well as for the protection of non-Indian residents in the territory. A commission organized and empowered under several recent laws is now negotiating with these Indians for the relinquishment of their courts and the division of their common lands in severalty, and are adding in the settlement of the troublesome question of tribal membership. The reception of their first proposal of negotiation was not encouraging, but their patience and such conduct on their part as demonstrated that their intentions were friendly and in the interest of the tribes the prospect of success has become more promising. The chief should be to save these Indians from the consequences of their own mistakes and improvidence and to secure to the real Indian his rights against intruders and professed friends who prey on his retrogression. A change is also made in the protocol life and property through the operation of courts conducted according to strict rules and strong enough to enforce their maintenance. As a sincere friend of the Indian, I am exceedingly anxious that these reforms should

be accomplished with the consent and aid of the tribes and that no necessity may be presented for radical or drastic legislation." (*United States Message and Documents* (Budget), 1896-7.)

The Act of March 3, 1893, by which the commission was created, set forth its character, its duties and its powers, as follows: "The President shall nominate and by and with the advice and consent of the Senate, shall appoint three commissioners to enter into negotiations with the Cherokee Nation, the Choctaw Nation, the Chickasaw Nation, the Muscogee (or Creek) Nation, the Seminole Nation, for the purpose of extinguishment of the national or tribal title to any lands within that territory now held by any and all of such nations or tribes, either by cession of the same or some part thereof to the United States, or by the allotment and division of the same in severalty among the Indians of such nations or tribes, respectively, as may be entitled to the same, or by such other method as may be agreed upon between the several nations and tribes aforesaid, or each of them, with the United States, with a view to such an adjustment, upon the basis of justice and equity, as may, with the consent of such nations or tribes of Indians, so far as may be necessary, be requisite and suitable to enable the ultimate creation of a State or States of the Union which shall embrace the lands within said Indian Territory.

"Such commissioners shall, under such regulations and directions as shall be prescribed by the President, through the Secretary of the Interior, enter upon negotiation with the several nations of Indians as aforesaid in the Indian Territory, and shall endeavor to procure, first, such allotment of lands in severalty to the Indians belonging to each such nation, tribe, or band, respectively, as may be agreed upon as just and proper to provide for each such Indian a sufficient quantity of land for his or her needs, in such equal distribution and apportionment as may be found just and suited to the circumstances, for which purpose, after the terms of such an agreement shall have been arrived at, the said commissioners shall cause the land of any such nation, or tribe, or band to be surveyed and the proper allotment to be designated; and, secondly, to procure the cession, for such price and upon such terms as shall be agreed upon, of any lands not found necessary to be so allotted or divided, to the United States; and to make proper agreements for the investment or holding by the United States of such moneys as may be paid or agreed to be paid to such nation, or tribes, or bands, or to any of the Indians thereof, for the extinguishment of their [title?] therein. But said commissioners shall, however, have power to negotiate any and all such agreements as, in view of all the circumstances affecting the subject, shall be found requisite and suitable to such an arrangement of the rights and interests and affairs of such nations, tribes, bands, or Indians, or any of them, to enable the ultimate creation of a Territory of the United States with a view to the admission of the same as a State in the Union."

A subsequent Act, of March 2, 1895, authorized the appointment of two additional members of the commission; and an Act of June 10, 1896, provided that "said commission is further authorized and directed to proceed at once to hear and determine the application of all persons who may

apply to them for citizenship in any of said nations, and after said hearing they shall determine the right of said applicant to be so admitted and enrolled.

That the said commission shall cause a complete roll of citizenship of each of said nations to be made up from their records, and add thereto the names of citizens whose right may be conferred under this act, and said rolls shall be, and are hereby, made rolls of citizenship of said nations or tribes, subject, however, to the determination of the United States courts, as provided herein.

A further Act of Congress, known as the Curtis Act, June 28, 1898, ratified, with some amendments, an agreement made by the commission with the Choctaw and Chickasaws, in April, 1897, and with the Creeks in September of that year, to become effective if ratified by a majority of the voters of those tribes at an election held prior to December 1, 1898. In the annual report, for 1899, made by the commission of which the Hon. Henry L. Dawes, of Massachusetts, is chairman, and which is often referred to as "the Dawes Commission," the following account of results is given: "A special election was called by the executives of the Choctaw and Chickasaw nations to be held August 24, and the votes cast were counted in the presence of the Commission to the Five Civilized Tribes at Atoka, August 30, resulting in the ratification of the agreement by a majority of seven hundred ninety-eight votes. Proclamation thereof was duly made, and the 'Atoka agreement,' so called, is therefore now in full force and effect in the Choctaw and Chickasaw nations. Chief Isparhecher of the Creeks was slow to call an election, and it was not until November 1, 1898, that the agreement with that tribe was submitted in its amended form for ratification. While no active interest was manifested, the full bloods and many of the freedmen were opposed to the agreement and it failed of ratification by about one hundred and fifty votes."

"The Cherokees now began to realize the sensations of 'a man without a country,' and again created a commission at a general session of the national council in November, 1898, clothed with authority to negotiate an agreement with the United States. The earlier efforts of this commission to conclude an agreement with that tribe were futile, owing to the disinclination of the Cherokee commissioners to concede such propositions as the Government had to offer. The commission now created was limited in its power to negotiate to a period of thirty days. The United States Commission had advertised appointments in Mississippi extending from December 19, 1898, to January 7, 1899, for the purpose of identifying the Mississippi Choctaws, a duty imposed upon the commission by the act of June 28, 1898, but on receiving a communication from the chairman of the Cherokee Commission requesting a conference it was deemed desirable to postpone the appointments in Mississippi and meet the Cherokee Commission, which it did on December 19, 1898, continuing negotiations until January 11, 1899, producing the agreement which is appended hereto. In the meantime the Creeks had, by act of council, created another commission with authority to negotiate an agreement with the United States, and a conference was accorded it immediately upon conclusion of the negotiations with the Cherokees, continuing to

February 1, 1899, when an agreement was concluded. The agreement with the Cherokees was ratified by the tribe at a special election held January 31, 1899, by a majority of two thousand one hundred six votes, and that with the Creeks on February 18, 1899, by a majority of one thousand eighty five."

"While these agreements do not in all respects embody those features which the commission desired, they were the best obtainable under the result of most serious, patient, and careful consideration, covering many days of arduous labor. The commissions were many times on the verge of suspending negotiations, there having arisen propositions upon the part of one of the commissions which the other was unwilling to accept. Particularly were the tribal commissions determined to fix a maximum and minimum value for the appraisement of lands, while this commission was equally vigorous in its views that the lands should be appraised at their actual value, excluding improvements, without limitations in order that an equal division might be made. The propositions finally agreed upon were the result of a compromise, without which no agreement could have been reached. The desirability, if not the absolute necessity, of securing a uniform land tenure among the Five Tribes leads the commission to recommend these agreements, with such modifications and amendments as may be deemed wise and proper be ratified by Congress."

"The Choctaw and Chickasaw governments in a limited way, are continued, by agreement to March 4, 1906, and certain of their laws are therefore effective within the territory of those tribes. A similar condition exists as to the Seminole, with which an agreement was concluded in the case of the year 1897. To supply needed places various tribal statutes which had been extended over Indian Territory. The Federal laws have been made to apply to still other subjects, and officials under the Interior Department are charged with the enforcement of rules and regulations governing still further matters, and so on. So complicated and complex a state of affairs does this system of jurisprudence present that the people are dazed and often unable to determine what is law and who is authorized to enforce it. Indeed, none other than an able lawyer can reasonably hope to understand the situation, and even he must be content to look upon certain phases of it as not being susceptible of solution."

"Conditions are not yet ripe for the immediate installation of a Territorial or State government."

"It is a consummation devoutly to be wished, but wholly impracticable at this time for various reasons, not the least of which is found in the fact that there are four non-citizens in Indian Territory to every citizen. The non-citizen does not own a foot of soil, save as provisions have recently been made for the segregation of lots of town sites, and with a voice in legislation the non-citizen would soon legislate the Indian into a state of innocuous desuetude. On the other hand, it would be manifestly unjust and at variance with the spirit of our institutions to deny the right of franchise to so great a number of people, in all respects otherwise entitled to enjoy that prerogative. Another very serious obstacle

the want of a territorial form of government, the lack of uniform land tenures, the scattered places in the hope and belief that some method may be found whereby the lands of all the Five Tribes may be subjected to a uniform tenure. It is one of the legislative features of the present government is not possible at present, when legislation by Congress for the Territory is impracticable. At the highest degree, the more urgent needs of the people must be met by this branch of the present. The judicial branch is now occupied by the United States courts.

In conclusion, most earnestly, the importance of adequate appropriation for pushing to early completion the work contemplated by the various laws and acts, which a transformation is to be made in Indian Territory. The all important duty now devolving upon the government of the United States incident to the condition of conditions among the Five Tribes, the allotment of lands in severalty, and the pressing and essential preliminary steps to be taken are the completion of citizen status, the appraisement of lands, and the subdivision of sections into forty-acre tracts, all of which have been already discussed in detail previously. The commission believes that the progress of the work is progressing as rapidly as the progress of the work will permit, and unless some serious obstacle arises to prevent, the work of the nations will be completed and referred to the Secretary during the fiscal year ending June 30, 1900, and very material progress made in the fifth.—*Sixth Annual Report of the Commission to the Five Civilized Tribes, 1899, pp. 667, and 9-29.*

A. D. 1898. Outbreak in northern Minnesota.—A alarming outbreak of hostility on the part of some of the Indians of the Leech Lake Reservation in northern Minnesota occurred in October 1898, provoked, as was afterwards ascertained, by gross wrongs and abuses on the part of some of the officials with whom they had to deal. They had been shamefully defrauded in respect of their timber lands, which the government assumed to undertake for their benefit; their immediate cause of trouble appeared to be the scandalous practice on the part of deputy marshals, who made arrests among them for petty reasons, conveyed prisoners and witnesses to a federal court at St. Paul, in order to obtain fees and mileage, and left them to make their way home again as they could. The outbreak began on the arrest of a chief of the Pillager band of Chippewas, on Bear Island. He was taken to St. Paul as a witness in a case of illegal whiskey selling, but his followers, on his return, the marshal, thereupon, called on his aid, and a company of U. S. infantry was sent to the Reservation. They were surrounded by the Indians and suffered a loss of killed and wounded. The Pillager band was surrounded by Indians from neighboring tribes, and the region was dangerously excited. The whites, while the whites were in great numbers, a general Indian war. But reinforcements of troops were promptly sent to the scene, and peace was soon restored,—measures being taken to remedy the wrongs of which the Indians complained.

A. D. 1899-1900.—The recent Indian policy of the government, and its results. Indian schools and education. Present Indian population.—This, then, is the present Indian policy of the nation—to fit the Indian for civilization and to absorb him into it. It is a national work. It is less than twenty-five years since the government turned from the policy of keeping him on reservations, as quiet as possible, out of the way of civilization, waiting with no excess of patience, for the race to fade out of existence and to cease from troubling. It was in 1877 that the nation made the first appropriation from its own treasury to fit for its own citizenship this portion of the human race living under its own flag and constitution, but without legal status or constitutional humanities. The first appropriation was a mere pittance of \$20,000. It was given only after a hard struggle. But the first step met with encouragement, and the next year the sum was increased to \$30,000, and then to \$60,000, and in two years more it became \$125,000. The policy has at last so grown in public confidence that, while there is still much discussion of the best methods of expenditure, not a word is heard among the lawgivers for its abandonment. It has in the meantime so broadened in its scope that the appropriations for this work have increased from year to year, till this year (1899) it has risen to \$2,638,390. There are now 118 well-equipped boarding schools and 295 day schools, engaged in the education of 24,004 children, with an average attendance of 19,671. How near this comes to including the whole number of children of school age, in a total population of a quarter of a million of Indians, every inquirer can form a pretty close estimate for himself. No one will deny that, at this rate of progress, the facilities for the education of Indian children will soon reach, if they have not already reached, those enjoyed by their white neighbors in the remote regions of the West. The results thus far are of a most encouraging character.

But the work does not stop with the rising generation of the race; it embraces also the adult Indian. Soon after the beginning of appropriations for Indian schools, Congress, in what is called the Severalty Act, provided for every Indian capable of appreciating its value, and who chose to take it, a homestead of one hundred and sixty acres to heads of families and a smaller number to other members, inalienable and untaxable for twenty-five years, to be selected by him on the reservation of his tribe. If he prefer to abandon his tribe and go elsewhere, he may take his allotment anywhere, on the public domain, free of charge. No English baron has a safer title to his manor than has such Indian to his homestead. He cannot part with it for twenty-five years without the consent of Congress, nor can the United States, without his consent, be released from a covenant to defend his possession for the same period. This allotment carries with it also all the rights, privileges, and immunities of an American citizen, opens to these Indians, as to all other citizens, the doors of all the courts, and extends to them the protection of all the laws, national and state, which affect any other citizen. Any Indian if he prefers not to be a farmer, incumbered with one of these homesteads, may become a citizen of the United States, and reside and practice

any calling in any part of the United States, as securely under this law as any one else, by taking up his residence separate and apart from his tribe and adopting the habits of civilized life. Thus every door of opportunity is thrown wide open to every adult Indian, as well as to those of the next generation.

"This recognition of the home and family as a force in Indian civilization became a part of the present policy of dealing with the race only twelve years ago. These are some of its results: 55,667 individual Indians, including a few under former treaty stipulations, have taken their allotments, making an aggregate of 3,708,628 acres. Of these, 30,000 now hold complete patents to their homes, and the rest are awaiting the perfection and delivery of their title deeds. . . . Not alone in these statistics are manifest the evidences of permanent advance of the race toward the goal of orderly, self-supporting citizenship. Bloody Indian wars have ceased. The slaughter of warring clans and the scalping of women and children fleeing from burning wigwams are no longer recorded. Geronimo himself has become a teacher of peace. The recent unfortunate difficulty with the Chippewas in Minnesota, caused more by lack of white than of red civilization, is no exception. We are at peace with the Indian all along the border, and the line between the Indian and the white settlements is fast fading out."—H. L. Dawes, *How we failed with the Indian?* (*Atlantic Monthly*, August, 1899).

"Indian education is accomplished through the means of nonreservation boarding schools, reservation boarding schools, and reservation and independent day schools, all under complete Government control. State and Territorial public schools, contract day and boarding schools, and mission day and boarding schools. The Indian school system aims to provide a training which will prepare the Indian boy or girl for the every day life of the average American citizen. It does not contemplate, as some have supposed on a superficial examination, an elaborate preparation for a collegiate course through an extended high school curriculum. The course of instruction in these schools is limited to that usually taught in the common schools of the country. Shoe and harness making, tailoring, blacksmithing, masonry work, plastering, brick making and laying, etc., are taught in the larger nonreservation schools; not, it is true, with the elaborate mass of special training as at the great polytechnic institutions of the country, but on a scale suited to the ability and future environment of the Indian. There are special cases, however, where Indian boys are, and have been, trained so thoroughly that their work compares favorably with that of the white mechanic. Phoenix, Haskell, Albuquerque, and other institutions, have well organized schools of domestic science, where the girls are practically taught the art of preparing a wholesome meal, such as appears on the tables of persons of moderate means.

"Nonreservation schools . . . are as a rule the largest institutions devoted to Indian education. As indicated by their designation they are situated off the reservations and usually near cities or populous districts, where the object lessons of white civilization are constantly presented to the pupils. They are recruited principally from the day and boarding schools on the reservations. The majority are supported by special

appropriations made by Congress, and are subjected to the teaching of trades, etc., in a more extended degree than are schools on the reservation. The largest of these schools is situated at Phoenix, Pa., where there are accommodated 8,000 pupils; the next largest is at Phoenix, Ariz., with a capacity for 700; the third, at Fort Hays, Kans., and known as Haskell Institute, accommodating 600 pupils. These three are typical types of their class, and are not restricted in territory as to collection of pupils. . . . Two other schools, near Salem, Oreg., and Chillicothe, near Arkansas City, Okla., are typical of the medium sized schools, and each has a capacity of 400 pupils. The remainder of the schools are of less capacity and have not been developed so highly. There are altogether 25 of these schools.

"There are 81 boarding schools located on the different reservations, an increase of 11 over last year. At these institutions the same general line of policy is pursued as at the nonreservation schools. Frequently located far from the centers of civilization, conditions are different, and their conduct must be varied to suit their own special environment. Many were formerly mission schools and army posts, misused to Indian school purposes, but by constant modification are being brought into general harmony with the system. . . . Government day schools are small schools with capacity for 30 or 40 pupils each. As a rule they are located at remote points on the reservations, and are conducted by a teacher and a housekeeper. A small garden, some stock, and tools are furnished, and the rudiments of industrial education are given the boys, and the girls are taught the use of the needle in mending and sewing, and of the washboard in cleanliness. . . . There were 147 day schools in operation during the year, an increase of 5 over last year."

The number of government schools reported for the year 1900 was 253, total enrollment, 22,124, average attendance, 17,860; contract schools, 32, with an enrollment of 2,806, average attendance, 2,451; public and mission schools, 22, with an enrollment of 1,521, and an average attendance of 1,257; the aggregate being 307 schools, with an enrollment of 26,451, and an average attendance of 21,568. "Statistics of the schools for the New York Indians are not included in the above, for the reason that as they are cared for by the State of New York this office has no jurisdiction over them. . . . The Indian population of the United States under the control of the Indian Office (excluding the Five Civilized Tribes) was 187,312 in 1899, which would give a scholastic population of between 45,000 and 47,000. Deduct 30 per cent for the sick and otherwise disabled, and those in white schools or away from the direct control of the office and it would leave about 31,000 children for whom educational facilities should be provided. There are now 26,000 of them in school, leaving about 8,000 unprovided for."—*Annual Report of the Commissioner of Indian Affairs, 1900*, pp. 15-23.

"Taking the concurrent facts of history and experience into consideration, it can, with a great degree of confidence, be stated that the Indian population of the United States has been very little diminished from the days of Columbus, Coronado, Raleigh, Capt. John Smith, and

INDIANS, AMERICAN

early explorers? The number of Indians in the United States in the year 1900 is given in the report of the Indian Office, was 250,000. This excludes the Indians of Alaska, who are the New York Indians (5,344) and the Indians of Alaska (1,000). These Indians are separated from the others in that they have separate schools and medical systems. *Annual Report of the Commissioner of Indian Affairs, 1900*, pp. 47-49.

INDUSTRIAL DISTURBANCES. Wide-spread: A. D. 1895-1896. Strike of glassworkers in France. A great strike of glassworkers, beginning in the summer of 1895, led the following January in a lock-out, leaving thousands without means of subsistence.

A. D. 1897. The great dispute in the British engineering trades. The strike originated on the part of some of the men in London to introduce the eight hour day. As a consequence of this movement, the Engineers' Federation voted, on July 1st, that the strike should be carried out. Notices will be given by the members of the Federation, and it is intended that a reduction of hands of 25 per cent. will take place. The members of such unions in their employment. This challenge of the employers was quickly taken up by the Unionists. The Annual Meeting of the Society at once gave instructions that notices in which notices of lockout were issued to 25 per cent. of their members the remaining 75 per cent. should hand in notices to cease work at the same time. The result was the prolongation of the dispute, which took in part the form of a lockout, in part that of a strike, but which from the beginning was carried on with extreme displays of bitterness and obstinacy on both sides. The membership of the different societies concerned in the dispute was estimated, in the *Labor Gazette* in July, at over 100,000. A. D. 1898. There were not of course actually on strike. It seems as if the employers had been ready to enter into this contest with the view of crushing the union, or at least of making a lesson, but the result is a very serious industrial conflict which is probably to go far beyond those immediately concerned. *The Review* (November, 1897).

The number of workpeople directly affected by the strike was about 25,000 at the outset. As the dispute widened the number of workmen involved gradually increased until the lock-out involved 702 firms and 10,000 workmen directly and 12,500 indirectly. Through the frequent cessation of the

INDUSTRIAL DISTURBANCES, 1897

general dispute was the demand for an eight hours day in London, the real questions at issue between the parties had become of a much more far-reaching kind, and now involved the questions of workshop control and the limits of trade union interference. During October and November negotiations under the Conciliation Act took place between the Board of Trade and the representatives of the parties with a view to arranging a conference between them. As a result of the correspondence, both sides assented to the following basis for a conference suggested by the Board of Trade: 1. The Federated Employers, while disavowing any intention of interfering with the legitimate action of trade unions, will admit no interference with the management of their business. The Trade Unions on their part, while maintaining their right of combination, disavow any intention of interfering with the management of the business of the employers. 2. The notices demanding a 48 hours' work served on the Federated Employers in London without previous request for a conference are withdrawn. 3. A conference between representatives of the Federated Employers and the Trade Unions concerned in the dispute shall be held forthwith. Pending the conference the employers agreed to suspend all pending lock-out notices, and the Unions not to further in any way with men in employment.

The sittings were held on November 24th and two following days, and again on November 30th and three following days, after which an adjournment took place until December 14th in order to allow the men to vote as to the acceptance or otherwise of the proposals made by the employers. When the conference resumed its sittings on December 14th the result of the ballot of the men was declared to be: For the terms, 752, against 68,966. Discussion of the proposals was, however, resumed and continued over four days by a sub-committee of three representatives on each side, who consulted with their colleagues when necessary. The terms were somewhat amended. On submitting these amended conditions to the vote of the men 1,041 voted in favour of their acceptance and 74,963 against. The truce which had been arranged over the period of negotiations was brought to an end by this vote, and fresh notices of lockout were given in various centres, which considerably increased the numbers affected.

On January 13th, however, an important change was made in the position of the men. The London Joint Committee, the body which took the first actual step in the dispute by ordering strike notices to be given in certain London shops, passed the following resolution: That we intimate to the Employers' Federation that the demand for an eight hours' day or forty-eight hours' week be withdrawn. That before such intimation is given the above resolution be sent to the Executive Councils of the Societies represented on the Joint Committee for their approval or otherwise. This resolution received the approval of the trade unions concerned, and the withdrawal of the demand for a 48 hours' week was intimated to the Employers' Federation, which, however, still insisted on the acceptance by the unions of the conditions of management mutually adjusted at the recent Westminster Conference as a condition of returning to work. The men asked that the employ-

ers' notes and explanations should be read as part of the proposed agreement and eventually, after renewed negotiations between the parties, a provisional agreement was arrived at and submitted to the votes of the men who ratified it by 28,588 to 13,727. The final agreement was signed in London on January 28th and work was resumed in the following week.

Naturally, after so long a stoppage the resumption of work by the men was a gradual process, but the number unemployed owing to the dispute, including those indirectly affected, sank from 44,000 at the close of the lock out to 7,500 at the end of February, 2,000 at the end of April, 1,000 at the end of May, and 1,000 at the end of June. Some idea of the indirect effects of the stoppage on trades related to those engaged in the struggle may be formed from the fact that the percentage of unemployed members in trade unions of the ship building group rose from 4.4 per cent. in July, to 14.4 per cent. in December. *Great Britain, Board of Trade (Labour Department), Report on the Strikes and Lock out of 1897.*

A. D. 1897. Great coal miners' strike in the United States.—A general strike of the coal miners in the various districts of the United States began in July, 1897. The territory covered five states and involved about 157,000 men. The strikers asked for an advance in wages on the ground that it was their right to share in the increase of business prosperity and advanced prices. A grievance for which redress was asked was that of being obliged to buy at the company stores, paying in company's orders, to be deducted from their wages. The principal grievance was the 51 cent rate, paid by Mr. W. P. De Armitt of the New York and Cleveland Gas Coal Company. The men employed by Mr. De Armitt had signed a contract to accept a rate 10 cents below that of other operators, in return for which he had abolished company stores, gave steady employment, and paid promptly in cash. His men were satisfied with the arrangement, although the prevailing price for mining coal was 64 cents a ton. Most of them, however, were finally forced by the organization to join the strikers. The strike lasted until September 12, when matters were arranged in a convention at Columbus, Ohio, when a uniform rate of 65 cents was adopted.

A tragic feature of the strike occurred at Latimer, Penn., where a mob of marching miners, resisting the sheriff and handling him roughly, were fired upon by armed deputies. Eighteen were killed and about forty wounded.

A. D. 1898.—New England cotton mill strike.—In January a general strike, affecting 125,000 operatives, resulted from a reduction in wages in 150 cotton mills of New England. By April most of the strikers returned to work at the manufacturers' terms.

A. D. 1898.—Coal miners' strike in Illinois.—This strike, beginning in May, originated in the refusal of the mine operators to grant the rate of 40 cents a ton, agreed upon after the strike of 1897. The operators refused to compromise and the miners were upheld by the United Mine Workers. Riots arose in the towns of Pana and Virden upon the attempt of the mine owners to import negro workers from the south. Governor Taylor, in sending troops to restore order, enjoined upon them to protect citizens, but on no

account to assist mine owners to operate their mines with imported labor. The governor's attitude provoked much criticism. A serious outbreak occurred on October 12 at Virden when 11 persons were killed and 25 wounded. The strike at Virden was settled in November, the mine owners agreeing to the demands of the miners. The trouble at Pana lasted until April, when a settlement was arrived at.

A. D. 1900.—Anthracite coal miners' strike in Pennsylvania.—A great strike of the anthracite mine workers of Pennsylvania, which began September 17, practically ended October 17, when the Philadelphia and Reading Coal and Iron Company and the Lehigh Valley Coal Company agreed to abolish the sliding scale in the respective regions and to grant an advance in wages of 10 per cent. net, the advance to remain in operation until April 1, 1901, and thereafter till further notice. Mr. John Mitchell, president of the Mine Workers' National Union, in a speech soon after the end of the strike, said that of the 142,000 men employed at first only 8,000 men were in the union or organized. Nevertheless, the day the strike began, 112,000 men laid down their tools; and when the strike ended after 39 days of non-employment, all but 2,000 of them had joined the ranks of the union.

INTERNATIONAL COMMERCIAL CONGRESS.—An important step in promotion of the development of international commerce was taken at Philadelphia, in October, 1893, by the assembling of an International Commercial Congress, under the auspices of the Philadelphia Commercial Museum and the Franklin Institute, with the co-operation, not only of the city and the State, but also of the Congress of the United States. Some forty governments, and a great number of chambers of commerce and other business organizations were represented, and much good was expected from the meeting. It adopted resolutions urging co-operative and assimilated action by all nations, in the registration of trade marks, in the preparation of trade statistics and agricultural reports, and in the establishing of the patents post. It commended the Philadelphia Commercial Museum as an example to be imitated, urged the construction of an inter-oceanic canal, recommended free trade in artistic works, and pleaded for the peaceful settlement of international disputes by arbitration.

At the time of the session of the Congress, a

IRELAND.

A. D. 1890-1900. Hopeful work in the organization and systematization of Irish agriculture.

It is nothing to be made of unless it is a well-producing country situated at the very door of the greatest market for food stuffs that the world has ever seen? Government has just received in this matter but, as usual, not been very efficient in shunting them into water. Mr. Horace Plunkett and his friends were at work ten years ago, pointing out that Ireland had natural resources equal or superior to those of countries which were driving her few products out of the English market and preached the organization, the co-operation, and the scientific methods of agriculture which in those other countries were incited and subsidised by state agencies. Then the Congested Districts Board, under the auspices of Mr. Arthur Balfour, began its beneficent work. Then came in 1895 the Dews Committee on Mr. Plunkett's suggestion, and finally, in 1896, the recommendations of that committee's valuable Report were practically embodied in the creation of a Board of Agricultural and Technical Instruction. This body has scarcely yet begun its work, but its main business will be to do throughout the whole of Ireland what has been done in the least hopeful districts by the Congested Districts Board, and over a larger area, but with very inadequate means, by the Irish Agricultural Organisation Society, of which Mr. Plunkett has been the moving spirit. Things are therefore only at their beginning. . . . The main purpose of the Irish Agricultural Organisation Society has been not to create new industries but to organize and systematise the one already existing—the characteristic Irish industry of agriculture. It has done the work which in France, Denmark, Canada, and a dozen other countries that can be named is being done by a State department, and the efforts of its promoters have brought into being such a department for Ireland also. The Society spent in nine years £15,000 of sub-sidies. This neither can last nor ought to last. It is the business of the Department, if it does not supersede the Society, to subsidise it."

Stephen Gwynn, *A Month in Ireland (Black and White)*, Oct., 1900, p. 573.—The most effective work done thus far, by the official and private agencies above mentioned appears to have been in the organization of co-operative societies and dairies.

A. D. 1894.—Cooling of the Liberal party towards Irish Home Rule. See (in this vol.) IRELAND. A. D. 1894-1895.

A. D. 1896.—A new Land Act.—The amended Land Act of 1881, supplemented by Acts in the same direction, placed the land of

Ireland as everyone knows under a system of perpetual leases at State settled rents renewable every fifteen years, and in 1896 the time was at hand for revising the rents fixed from 1881 onwards, and for renewing the leases made during this interval of time. An Act accordingly, was passed through Parliament in order fully to accomplish this end, and incidentally, to deal with many other things connected with the Irish Land System, and with the legislation inaugurated in 1881. It enlarged the sphere of State settled rent, bringing within it certain classes of tenants which hitherto had been excluded from it, it placed the law for exempting tenants' improvements in rent on a considerable extent on a new basis, and it introduced for the first time what is called the principle of "compulsory purchase" into the system of Land Purchase, so named in Ireland always a favourite policy of Lord Salisbury's Governments."

Judge H. Connor Morris, *The Report of the Fry Commission on Irish Land Law*, Nov. 1898. The new bill (59 & 60 Vict. ch. 47) was carried successfully through Parliament by the Government with skillful management on the part of Mr. Gerald Balfour, the Secretary for Ireland, after many amendments and much debate. It was a compromise measure, reluctantly accepted and satisfying no interest or party. The general feeling with which it was passed is described as follows:—"The practical result of the discussion was to show that the bill did not go so far as Mr. T. W. Russell, a member of the Government and the representative of the Ulster farmers, wished, that the section of the Nationalists headed by Mr. Dillon were anxious to throw cold water upon it, but afraid to oppose it openly; and that Mr. Healy and his friends as well as the Parnellites were ready to do their best to ensure its passing. But while the representatives of the tenants were ready to accept the bill as an installment of their claims, they at the same time pronounced it to be inadequate."

The Parnellites were now willing to give the Healyites and the Parnellites the character of intimidating them with having lost the bill whilst the landlords hoped for an improvement of the purchase clauses and a reform of procedure in the law courts. The debate on the third reading, although not forced to a division was spirited, the landlords opposing it because it was too much of a tenants' bill, and Mr. Trevelyan opposing it because it was too much of a landlords' bill. Mr. Dillon and his followers voted for it, but in their speeches did all they could to run it down, while the Parnellites and Healyites did all in their power to support it. —*Annual Register*, 1896, pp. 109-61.

1896-1897. Report of a Royal Commission on the Financial Relations between Great Britain and Ireland.

At various times since the passing of the Act of Legislative Union between Great Britain and Ireland, complaints have been made that the financial arrangements between the two countries were not satisfactory, or in accordance with the principles of that Act, and that the resources of Ireland have had to bear an undue pressure of taxation. Inquiries into the truth of these allegations have frequently been called for, but it was not until 1894 that provision was made for a thorough investigation of the subject. In that year a Royal Commission was appointed, with Mr. Childers, ex-Chancellor of the Exchequer, at its head, "to inquire into the financial relations between Great Britain and Ireland, and their relative taxable capacity, and to report—(1) Upon what principles of comparison and by the application of what specific standards, the relative capacity of Great Britain and Ireland to bear taxation may be most equitably determined;—(2) What, so far as can be ascertained, is the true proportion, under the principles of specific standards so determined, between the taxable capacity of Great Britain and Ireland;—(3) The history of the financial relations between Great Britain and Ireland at and after the Legislative Union, the charge for Irish purposes on the Imperial Exchequer during that period, and the amount of Irish taxation remaining available for contribution to Imperial expenditure, also the Imperial expenditure to which it is considered equitable that Ireland should contribute."

The Commission made its "Final Report" in 1896, submitting the conclusions on which its members were unanimously agreed and presenting, further, no less than seven differing reports on other points upon which agreement could not be reached. The summary of conclusions in the unanimous joint report was as follows:—"In carrying out the inquiry we have ascertained that there are certain questions upon which we are practically unanimous, and we think it expedient to set them out in this joint report. Our conclusions on these questions are as follows:—I. That Great Britain and Ireland must, for the purpose of this inquiry, be considered as separate entities. II. That the Act of Union imposed upon Ireland a burden which, as events showed, she was unable to bear. III. That the increase of taxation laid upon Ireland between 1853 and 1880 was not justified by the then existing circumstances. IV. That identity of rates of taxation does not necessarily involve equality of burden. V. That whilst the actual tax revenue of Ireland is about one-eleventh of that of Great Britain the relative taxable capacity of Ireland is very much smaller and is not estimated by any of us as exceeding one-twentieth."—*Great Britain, Parliamentary Publications (Papers by Command): C. 8262, pp. 1-21.*

The report was keenly criticised in England, and the fact that it emanated from a Commission in which the majority were partisans of Irish Home Rule was used by the Conservatives to disparage its conclusions. A new investigation of the subject was called for. The subject came before Parliament in the session of 1897,—first in the Lords, and later in the Commons. On the 10th of March, Mr. Blake, a member from Ireland, moved a resolution in the House of Com-

mons, to the effect that the report of the Commission had established the existence of the undue burden of taxation on Ireland, and that it the duty of the Government to propose remedial legislation at an early day. The motion, which this opened, was continued during three nights, at the end of which the motion was carried by a vote of 317 to 157.

A. D. 1898 (July).—The Local Government Act.—A bill which had great success when it went, in satisfying the representatives of Ireland in the Parliament of the United Kingdom, was brought forward there, by the Conservative Government, in February 1898, and carried through both Houses in July. It was accepted by the Irish as "the substitute for Home Rule," and was recognized "step in that direction." It had been foreshadowed in the Queen's Speech at the opening of Parliament, and described as a measure "for the organisation of a system of local government in Ireland substantially similar to that which, within the last few years, has been established in Great Britain." This important Act established County Councils, Urban District Councils, Rural District Councils, and Boards of Guardians, all elected by ballot every three years, on a franchise broader than the Parliamentary franchise, since it gave the local suffrage to women. The same Act extended to Ireland the provisions of the Act for the relief of agricultural land, and contained some other welcome provisions of financial relief.—*Id. A. 62 Act ch. 37.*

To understand the extent of the change which is now determined on, it is necessary first to describe the system of Irish Local Government which is about to pass away forever. Broadly speaking, that system consisted of three parts, viz.: the Grand Jury, the Poor Law Boards, and various forms of Municipal Government, towns and cities. The Grand Jury was about the most anomalous and indefensible institution which can be conceived. It consisted usually of a couple of dozen persons chosen from a larger number selected by the High Sheriff for the county or the city, as the case might be; the High Sheriff himself being the nominee of the Lord Lieutenant, who acted on the recommendation of the Superior Court Judges, who, in their turn, always recommended some leading landlord and magistrate. The Grand Jury in every Irish county, down even to the present year, has always consisted almost entirely of members of the landlord class, and mainly of Protestants also. To bodies thus constituted was entrusted the control of all public roads and other public works of the county, the contracts therefor, the management of the prisons, the care of the public buildings, the power to contribute to infirmaries, lunatic asylums and fever hospitals, the appointment of all the paid officials of the county, and the right to levy a tax called the county cess, which, of late years, has produced considerably more than a million pounds sterling annually. Associated with the Grand Juries were smaller bodies, the members of which met at "Presentment Sessions" once or twice a year to initiate county works. Those bodies also were non-elective, and represented mainly the landlords and magistrates of the respective counties. In the old days these Grand Juries became—not unnaturally—not merely nests of jobbery and corruption but an agency of social and political oppression.

years past, indeed, the Grand Juries were open to all these charges. They were, then, the corrupt jobbers they really were in 1840. Their administration of justice entrusted to them has been almost entirely abandoned. But in their constitution, on the whole, continued to be what it was.

The Boards of Poor Law Guardians have in the past become more or less popular institutions. Besides their original function of relieving the destitute, they have been invested with the management of many other matters in recent years that have now really misnamed them. They are now the sanitary authorities in all rural and urban districts; they have to do with the registration of births, deaths, and marriages, and, going through the whole list of their present duties, they have had the administration of the Landlord's Acts, under which a good deal has been done, since the year 1881, to improve the homes of agricultural laborers.

It is easy to notice the system of Government in the towns and cities. In this case there has been some degree of reality in the phrase, "local self-government," at least, for the last twenty years. Down to 1840 there was no real representative system of government in any Irish town or city.

Since the year men, the corporations have been more or less representative, and since 1854 the smaller towns in Ireland have been allowed the right to possess municipal institutions of a less important, but still representative, character. In respect, however, both the corporations of the cities and of the town boards of the smaller civic communities, the scheme for municipal purposes has been in reality restricted. In Dublin, the population exceeds 100,000, the municipal corporation amounts to only about 8,000 or 9,000, and the same story is true of all the other municipalities except a few which, like Belfast, have by special act of Parliament obtained extensions of their franchise peculiar to themselves.

Here, then, was a state of things which, as I have said, required mending and, as I have said, innumerable efforts to mend it had been made up to last year with no result. Last summer, however, the reform now virtually accomplished was introduced to the House of Commons one after another by Mr. Arthur Balfour, without anyone having asked for it and without any warning whatever. The chief features of the measure may be briefly described. In the first place, the grand juries are abolished by absolutely sweeping away the Grand Juries for fiscal purposes. These bodies are still retained for their original purpose, that, namely, of dealing with indictments.

With the end of the Boards of Guardians as they are at present constituted. Bodies will still continue to exist under that name, but they will be otherwise constituted as they are now. In the place of the Grand Juries and the Boards of Guardians there has been set up a rather complex system of County Councils and District Councils, these latter being subdivided into two classes, Urban District Councils and Rural District Councils, and at this point one provision applies to all these bodies and also to every Corporation and Town Board in the country, may be conveniently mentioned. It is that which

enacts that the electorate in each case shall be the Parliamentary electorate, in addition to persons to such women as would, if they were men, be qualified for the Parliamentary franchise. There is manifestly a great reform in itself. The change is a vast one in view of the narrow foundation on which even the most popular Irish local institutions have hitherto rested. It means the transfer of power from a class to the people. It means the ousting of what used to be the English garrison in Ireland from what it had come to regard as its indefensible heritage. It marks the entry of the Irish Nation after ages of weary waiting into at least a considerable portion of its birthright. To the County Councils, which will thus repose on a thoroughly popular basis, and one of which will be established in every county, will be entrusted all the fiscal business of the Grand Juries, with one exception. The excepted business is that of assessing compensation for malicious injuries. (A. J. Clancy, *The Latest Reform in Ireland* (Ninth American Review, Sept., 1898).)

A. D. 1900 (April). Visit of Queen Victoria. For the first time in nearly forty years Queen Victoria paid a visit to Ireland in April and held court in Dublin for three weeks, being cordially received and treated throughout with respect by well-mannered crowds. Apparently the visit gave satisfaction to most of the Irish people.

A. D. 1900-1901. Parliamentary elections. Triumph of the United Irish League. Its absorption of the Nationalist party. Its programme. The elections to a new Parliament (see, in this vol., ENGLAND, A. D. 1900 SEPTEMBER-October), held in October, resulted in a sweeping victory for the United Irish League, a new organization formed by Mr. William O'Brien, which, according to the *London Times*, "has practically absorbed the whole of the Irish Nationalist party" and "is the successor in title of the old Land League." "Mr. William O'Brien," says the *Times*, "returned his own followers to Parliament from practically every Nationalist constituency in Ireland. For the moment at least all the other successors of Mr. Parnell are vanquished or in captivity, and Mr. O'Brien finds himself at the head of a party which for the first time in ten years has the right to call itself 'united'."

On the opening of the Parliament, in the following February, the new League was soon brought to its attention by Mr. O'Brien, who moved, on the 2d, to amend the Address to the King, which was then under discussion, by adding to it the following: "Humbly to represent to your Majesty that this House has observed that a combination of the agricultural classes in Ireland has been formed under the name of the United Irish League, with the object of accomplishing reforms which alone, in the opinion of nine-tenths of the constitutional representatives of Ireland, can arrest the continued depopulation of that country and the decay of its only great national industry. These reforms being, first, the creation of an occupying proprietary in substitution for the present untitled and vexatious system of dual ownership of land, and secondly, the utilization of extensive tracts at present lying practically waste in the congested districts for the purpose of supplying holdings of sufficient extent to a hard-working

and deserving population who for want of land are compelled to live in a condition of chronic privation and even famine on the borders of those fertile depopulated areas; that the movement which has been carried on for the past three years for the promotion of these objects has been marked by the disappearance of those crimes of violence and secret conspiracies which were used to the discredit of all former agrarian combinations in Ireland and the league basing itself on the principle that its struggle is in the nature of a great economic industrial dispute between the tillers of the soil on the one side and the rent owners supported by a vast capital and territorial influence on the other has relied for success upon those combinations for mutual protection and appeals to public opinion which the trade union laws have expressly authorized in the course of disputes between capital and labour of a non-agricultural character; that, nevertheless, this House has observed that the forces of the Crown have been constitutionally employed, and public justice has been polluted in the interest of one of the parties to the dispute, that the right of public meeting has been capriciously suppressed, that prosecutions for conspiracy and Whiteboyism have been instituted in reference to open and advised appeals to public opinion and measures of mutual protection which are indisputably within the right of trade unions in ordinary industrial struggles, that the power of contempt of Court has been unconstitutionally and oppressively abused for the purpose of inflicting prolonged sentences of imprisonment without trial, that the right of trial by jury has been outraged by the systematic exclusion from the jury box of all jurors sharing the politics or creed of the accused, and the empaneling of juries composed exclusively of sympathizers with the territorial class, that the liberty of the Press in Ireland has been assailed, and influential organs of opinion prosecuted in the endeavour to silence public comment on this iniquitous system; that grievous and vindictive fines have been exacted from districts noxious to the landlord interest by means of charges for extra police quartered upon peaceful populations, and that the people of Ireland have been subjected to divers others the like cruel oppressions and provocations, and humbly to represent to your Majesty that, it being of the highest constitutional import to encourage the Irish people to seek the redress of their grievances by the fullest freedom of speech and of combination which is warranted by the example of the trade unions of

Great Britain, this House is of opinion that the attacks at present directed by the Government against the rights of free speech and combination in Ireland should cease, and that the combination protecting the trade unions in the exercise of their rights of combination in the case of non-union labour should be everywhere and agricultural combinations of a similar character in that country."

In his speech supporting the amendment Mr. O'Brien charged that, "there being no crime in Ireland, the Executive there had made some of perfectly legitimate actions, creating the people as if the object was to goad them into conspiracy and violence. The record of the league was virtually a crimeless one, it had carried out its work now for three years without any of those blood-curdling incidents which the Government Ministers used to smack their lips with in the House."

The league, which had been created by time and had proved its power at the general election, had started and carried on in Ireland an irresistible agitation for the suppression of the abolition of landlordism, and had carried out King's first Speech promise, such as it was, of another land bill, although two years ago the House was assured that there was no longer an Irish land question."

An extensive combination, he said, was going on in Ireland against the taking of evicted farms, and "what form of trade unionism can be more legitimate?" But charges of intimidation and conspiracy, he claimed, were trumped up, and juries were packed, for the suppression of this movement, though it went no farther than trades unions in England could go with impunity. "The Irish people exercised the right of combination in the United Irish League, and they would continue to exercise it whether the Government liked it or not, in order to demand the land on conditions that would give its cultivators a living wage. In the ranks of the organization were 500,000 farmers and laborers, representing with their families three-fourths of the population of Ireland. Their object was to parcel out the vast grazing lands lying derelict among the cottagers who were starving on their verge. A department of the Government was actually engaged in carrying out the programme of the league, but at such a small pace that it would take centuries to make any impression upon the mass of misery which existed in the country."

After several hours of debate the amendment to the Address was rejected by 203 votes against 100.

A. D. 1895-1896. Accusations against the Crispi Ministry. Fresh offense to the Vatican. Disastrous war with Abyssinia. Fall of Crispi. In elections to the Italian Chamber of Deputies, which took place in May, 1896, the government under Signor Crispi was accused of various offenses, striking the names of representatives from the voting lists to the number of several hundred, of thousands were expelled, or otherwise to paralyze the opposition. The result of the elections was that the government candidates achieved no majority. An attempt to obtain an adjournment of all the deputies who were re-elected to the State, directly or indirectly, was rejected by Signor Crispi, and remained a matter of rumor and guess. In September the government gave fresh offense to the Vatican by imposing celebration of the 25th anniversary of the entry of the Italian troops into Rome as a display of the flag of tricolorism.

The policy of France and Russia to Italy was made public by the renewal on the return of Lord Salisbury to office in 1895 of an agreement between France, Austria and Italy for common action in the Eastern question, originally made in 1887. In virtue of this agreement Italy sent troops to the Aegean to support Great Britain in the opening of the Armenian question (see, for example, *FRANCE*, A. D. 1895, and after), and the consequence was that France and Russia put pressure on Abyssinia to renew hostilities against Italy. This new campaign Crispi was prepared to meet as he had detailed a corps of 10,000 men for expedition to Asia Minor in conjunction with the naval preparations, and the statement that the forces under arms did not enable the ministers of war to detach another corps to Erythraea. To complete the difficulties of the position, goodwill arose between the Emperor of Germany and the government of Crispi, the latter having notified the German government that he should at the proper time denounce the Treaty of the Triple Alliance with the object of providing better security for Italian interests in Africa. The Emperor in reply advised the King of Italy that Crispi was becoming importunate and must be got rid of. This defection probably determined the fall of Crispi. It gave such strength to the opposition at home that the intrigues of the court and military circles succeeded in paralyzing all his military plans and especially in preventing him from superseding Baratieri, now recognized as incompetent for the enlarged operations which were in view. The King refused to consent to the suppression until it became imperative through the increase of the force to a point at which a superior officer was necessary to take the negotiations, when Baldissera was appointed to the superior command. But before Baldissera could enter on his command, Baratieri, against the distinct orders of the government, crossed with a force of 11,000 men the Impregnable Saltic near Adowah which Menekel held in 1896. He was met by the most crushing defeat that Italy has had to undergo in modern times. 10,000 of the total force, no less than 8,000 perished.

The history of this affair still remains more

or less a secret, the court-martial which followed being rather calculated to bury than expose the facts of the case. But the intended effect was to induce the ministry to resign without waiting for the assembling of parliament. The magnitude of the disaster made it evident that responsibility could not be laid on its shoulders to pay the responsibility for it would be visited on the ministry, though it was only responsible in so far as it had submitted to the Royal decision deferring the recall of Baratieri. The King unwilling to accept the programme of Rudini gave the formation of the new ministry to General Ricotti a Senator, Rudini taking the portfolio of home affairs (March, 1896). The scheme of army reorganization proposed by Ricotti, which aimed at improving the efficiency of the force by devoting money rather to the instruction of the rank and file than to the maintenance of superfluous officers, was opposed.

The law was debated in the chamber, and Ricotti gave place to Rudini as President of the Council. The rejection of Ricotti's plan was a triumph for the Franco-Russian party, which had reassumed the direction of foreign affairs. Africa, under this policy being excluded from the Italian sphere of action, peace was made with Menekel (October 20, 1896) on terms which practically implied withdrawal from Erythraea to the port of Massowah. This measure satisfied the exigencies of the old Right, while the Radicals were conciliated by the exclusion and proscription of Crispi and by the understanding with France, as well as by the reversal of the repressive policy towards the extreme members of their party. Thus the year 1897 saw Italy reduced to inertia abroad and apathy within. (W. J. Stillman, *The Union of Italy*, 1897, Cambridge University Press.)

The peace made with King Menekel in 1896 ended the Italian claim to a protectorate over Abyssinia, which seems never to have had any basis of right. It started from a treaty negotiated in 1889, known as the Treaty of Uchali, which purported to be no more than an ordinary settlement of friendly relations, commercial and political. But the convention contained a clause which is said to have read in the Amharic, the court and official language of Abyssinia, "the King of Abyssinia may make use of the government of the King of Italy in all matters whereon he may have to treat with other governments." In the Italian version of the treaty, the innocent permissive phrase, "may make use," became it is said an obligatory "agrees to make use of," and was so communicated to foreign governments, furnishing grounds for a claim of "protection" which the Abyssinians rejected indignantly. Hence the wars which proved disastrous to Italy.

A. D. 1897.—Dissolution of the Chamber. Election of Deputies.—Reconstruction of the Ministry.—Early in the year a royal decree dissolved the Chamber of Deputies, and elections held in March gave the Rudini Ministry a large majority. The Catholic party refrained almost entirely from voting. But divisions arose in the course of the year which brought about a reconstruction of the Cabinet in December. Signor Rudini still being at the head. An important event of the year was the resolution of the Italian

government to evacuate Kassala, on the Abyssinian frontier, directly eastward from Khartum. The Italians had taken it from the Mahdists in 1894. It now became part of the Anglo-Egyptian territory.

A. D. 1898 (March—June).—Report on charges against Signor Crispi.—His resignation from Parliament and re-election.—Change of Ministry.—In March, a special commission, appointed the previous December, to investigate certain serious charges against the ex-Premier, Signor Crispi, reported his culpability, but that nothing in his conduct could be brought for trial before the High Court. The charges were connected with a scandalous wrecking of several banks, at Rome, Naples, and elsewhere, which had occurred during Signor Crispi's administration, and which was found to be due to political extortions practiced on those institutions by members and agents of the government. Personally, it did not appear that the ex-Premier had profited by what was done; but his wife seemed to have been a large recipient of gain, and moneys wrung from the banks had been used for party political purposes and for the government secret service fund. On the report made by the commission Signor Crispi resigned his seat in Parliament, and was promptly re-elected from Palermo by an overwhelming majority. In May, the Ministry of the Marquis di Rudini, much weakened by the troubled state of the country, was reconstructed, but only to hold its ground for another month. On the 15th of June, upon a threatened vote of want of confidence, it resigned, and, on the 28th, a new Liberal Ministry took office, with General Pelloux at its head.

A. D. 1898 (April—May).—Bread riots in the south and revolutionary outbreaks in the north.—May 1898 will be remembered for a long time in Italy, and one may wish that the eventful month may mark the turning point in political life of the new kingdom. The revolt was general, the explosion broke out almost suddenly, but long was the period of preparation. 'Malcontento' is quite a household word in Italy—and the Italians had more than one reason to be dissatisfied with their national government. The rise in the price of bread, as a consequence of the Hispano-American war, was the immediate, but by no means the only, cause of the uprising which darkened the skies of sunny Italy for several days. The enormous taxation imposed upon a people yet young in its national life, in order to carry out a policy far reaching for the financial means of the country, the failure of the attempt to establish a strong colony in the Red Sea, the economic war with France; the scanty help Italy received from her allies in time of need; the political corruption, unchecked when not encouraged by those who stood at the helm of the State; the impotence of the Chambers of Deputies to deal with the evil doers as the claims of justice and the voice of the people required, all these evils have prepared a propitious ground for the agitators, both of the radical and reactionary parties.

The Bread Riots began towards the end of April, and in a few days they assumed a very alarming aspect, especially in the small towns

of the Neapolitan provinces, inhabited by people ordinarily pacific and law-abiding. The destruction of property was rampant and widespread, women careless of their lives and of their men to the assault. In many cases the rioting came to an end; in others the immediate action of the 'octroi' did not produce the desired effect. . . . There was no organization of the Neapolitan provinces; the riots were independent of one another, but they were animated by the same cause—misery; they aimed at the same object—a loud protest by means of devastation; they all ended in the same way, after two or three days the soldiers restored order, the dead were buried, and the ringleaders taken to prison to be dealt with by the criminal court. In the north, at Milan, the uprising was of quite a different character. In the setting Italy it was truly a question of bread not bread alone. In Central Italy it was a question of work, in Lombardy a truly revolutionary movement. The Neapolitan mob shouted for bread and bread alone, some asking for 'quarter bread' some others for 'free bread'. In Tuscany the cry was, 'Pane o Lavoro'—bread or work. In Lombardy quite another trumpet was sounded: 'Down with the Government!—Down with the Dynasty!'

The Milanese, of all the people of Italy, had plenty of work and bread, and it is admitted that all that bread had nothing to do with the revolt of Milan. I have studied this movement from its inception, and my conclusion is that the revolt broke out long before it was expected thus, making the discomfiture more certain. The great majority of the population of Milan was, and is, conservative and loyal to the King, though not pleased with the doings of the Government. Only a minority, but a very noisy and active minority, is against monarchial institutions. For some time past the revolutionary party of Milan have made no mystery of their political aspirations towards the establishment of a Milanese republic, to be called 'Repubblica Ambrogiana'. . . . Milan is also the headquarters of Socialism and Anarchism. Socialists and Republicans once upon a time were implacable foes. Many a battle they fought one against the other, but since 1886 the two have come to love each other more, or to hate each other less, whichever it may be; and towards the end of 1895 they entered into partnership against their common enemy—Crispi. Then the Anarchists came in. Decent Republicans and true Socialists were rather averse to ally themselves with anarchy; the very name was loathsome to them. However, this natural mistrust soon disappeared and the Anarchists were welcome into the alliance. Still another element was to enter the clerical party. . . . The clerics had their special cry of their own. They satiated themselves by rubbing their hands and saying, 'Down it goes at last! Little they knew that not the dynasty, not united Italy was down, but society itself. A tried leader, who was in the midst of the revolt, assures me that its importance has been very much exaggerated in the first reports sent abroad, and that the official documents, since published, exaggerate that about 90 barricades were erected and about 20 houses ransacked to provide the necessary material to build them. The number of the killed amounted to 72, and that of the seriously wounded

of May play evening [May 9] order was given to fire. On Wednesday morning shots and laurels were accepted, but it will take years to undo the mischief done on May 7. See in this vol. 1898. All are sadder now; one may say that they will be wiser also. The agitators, and the masses, the governing classes, the government all have had their lesson."—G. D. A. vol. 1, *The Revolt in Italy* (Contemporary History), July, 1898.

A. D. 1899–1900. Parliamentary disorder, leading to arbitrary government.—Assassination of King Humbert.—Much feeling was excited in Italy by the agreement between Great Britain and France, which practically awarded to the Sahara Hinterland of Tripoli a position long hoped for and expected by the Powers as well as that of Tunis, Algiers, and Morocco. France, see in this vol. NIGERIA. The Government was accused of want of vigor in opposing this, and was held responsible, at the same time, for the humiliating failure of its attempt to secure a share of spoils in China, by base of Sumatin Bay. The resignation of the Ministry was consequent early in May; but the King retained General Pelloni at the head of the Government, and new associates in his cabinet were found. The Chamber of Deputies became again a source of obstruction, very much in the American manner, was carried to such an extent that the attempt was prolonged. The King then, in June, conferred extraordinary powers on the Ministry, suspending, at the same time, the right of meeting and association, to suppress the obstruction, and taking, in fact, a serious step toward government outside of constitutional law. Liberals of all shades, and especially many constitutional Conservatives, were enraged and outraged by this threatening measure, and when Parliament was reconvened, the proceedings of obstruction were renewed with more persistence than before. The government then attempted an arbitrary adoption of laws to prevent obstruction, whereupon (April 1900) the entire Opposition left the House in a body. The situation at length became such that the King adjourned the Parliament sine die, May 10th of May, and a new Chamber of Deputies was elected on the 3d of the month of June. The Opposition was considerably strengthened in the election, and the Ministry of General Pelloni finding itself more helpless in Parliament than ever, resigned on the 18th of June. A new Cabinet under Signor Saracco was formed.

On the 29th of July, 1900, King Humbert was assassinated by an Italian anarchist, named Vercelotti, who went to Italy for the purpose. Patterson, N. J., in the United States, who he had lately been living. The King was at Monza, and had been distributing prizes to the winners. At the close of the ceremony, he and his carriage, the assassin fired three shots, inflicting wounds from which the King died within an hour. The murderer was shot on the spot, tried and convicted, of the crime. He received the severest penalty that the law could inflict, which was imprisonment for life. The son who succeeds King Humbert, Victor Emmanuel III., was in his

thirty-first year when thus tragically raised to the throne. He is weak in body, but is reputed to have an excellent mind. He was wedded in 1896 to Princess Helene of Montenegro.

A. D. 1899–1900 (SEPTEMBER–FEBRUARY).

A. D. 1900 (January). Exposure of the Mafia.—Circumstances came to light in the course of the year 1899 which compelled the government to enter upon an investigation of the doings of the Sicilian secret society known as the Mafia. This resulted in the arrest of a number of persons, including a Sicilian member of the Chamber of Deputies, named Palizzolo, charged with complicity in the murder, seven years before, of the Marquis Notarbartolo, manager of the Bank of Sicily at Palermo. The accused were brought to Milan for trial, which took place in January, 1900, and the disclosures then made showed that Sicily had long been terrorized and tyrannized, in all departments of affairs, by a few men who controlled this murderous secret organization, Palizzolo being, apparently, the head of the fiendish crew. One of the ministers in the Italian government, General Mirri, Secretary of War, was found to have had, at least, some scandalous understandings with the Mafia, and he was forced to resign.

A. D. 1900 (June–December).—Co-operation with the Powers in China. See in this vol. CHINA.

A. D. 1900 (July–September).—An Italian view of the state of the country.—"Appearances, it is well known, are often deceptive, and the present condition of Italy is a case in point. Discontent is not a new thing for the Italian mind to be agitated by, but there is an enormous difference between being discontented with the Government of the day and being dissatisfied with the national institutions. Italians have a quick perception and are extremely impulsive; they often act suddenly and on the impression of the moment, but they are also apt to fall into a state of lethargy, during which the will of the nation is very weak, both as a stimulus to good government and as repressive of that which is bad. There are, however, times in which this will asserts itself. Italy is just passing through one of these hard intervals."

"The assassination of King Humbert seems to have awakened the whole nation from a long sleep. Those who thought there was no affection left for monarchical institutions in Italy must have experienced a very depressing disappointment. For forty-eight hours there was no king at all in Italy. King Humbert was dead and his successor was somewhere on the high seas, but nobody knew exactly where, yet not a single disorderly movement was noticed anywhere. Clericals, Socialists, Republicans, the three declared enemies of the monarchy, entirely disappeared from the scene during the crisis. If any one of these parties, which during the last

period of national lethargy had grown more and more tedious, had only attempted to assert itself, the Italian public "en masse" would have revolted against it, and performed one of those acts of summary justice of which the history of Italy furnishes abundant examples. I think this absence of disorder of any kind is the most convincing proof that can be adduced in favour of the present state of things in Italy. Surely if the people had been nursing in their hearts a general revolt, that was the moment for action.

Of course a few anarchists here and there have repined over the crime of their comrade, however I venture to assert that it is not quite correct to call Italy the hotbed of anarchy. It is true that many of the most fierce anarchists are Italian by birth; but anarchism did not originate in Italy; it was imported there. France and Russia had, under another name, anarchists long before the name of any Italian was ever connected with anarchism. . . . Political education is still in Italy of very poor quality—truthfully speaking there is none. Even the anarchists go elsewhere to perfect their education. The assassins of Carnot, of the Empress Elizabeth, and of Cuvias, had their political education perfected in Paris or in London. Italy does not export political murderers, as was very unkindly said on the occasion of the assassination of the Empress of Austria. Italy at the worst exports only the rough material for the making of anarchist murderers. Even the assassin of King Humbert belongs to this category. He left Italy with no homicidal mania in him. He was not then a wild beast with a human face, to make use of an expression uttered by Signor Saracco, the Premier of Italy. The anarchist clubs of Paris, London, and New York were his university colleges. —G. D. Vecchia, *The Situation in Italy, Nineteenth Century Rev.*, Sept., 1900.

A. D. 1901.—Fall of the Saracco Ministry.—Formation of a Liberal Cabinet under Signor Zanardelli.—Census of the kingdom.—The Saracco Ministry, which took direction of the government in June, 1900, was defeated on the 6th of February, 1901, and compelled to

resign. An extraordinarily heavy vote (185 to 102) was cast against it in condemnation of its conduct in matters relating to a "Humber of Labor" at Genoa. First, it had ordered a judicial solution of that body, as being subversive of influence, and then, when a "strike" occurred in Genoa, as the consequence, it resorted to force, action and reconstituted the Chamber. But, first proceeding it had disgusted the Moderates, by the second the Radicals, and by a indecision the Moderates. They combined to overthrow it. With some difficulty a new cabinet was formed containing Liberals of various shades, with Signor Zanardelli, a veteran politician of the Garibaldi generation, at its head. A writer who has frequently discussed the capabilities with a good deal of knowledge in the columns of the "New York Tribune," observes of his nature "Ex Attacché," believes that Zanardelli is committed "to anti clerical legislation, the most drastic and far reaching character," and "may be depended upon to proceed against the Vatican with a vigor unprecedented in the annals of united Italy. And there will be, he thinks, "no attempt on the part of Victor Emmanuel to hold him in leash." Existing laws will be enforced to the utmost against the Pope, while new measures may be looked for to restrict further the activity of the Church as a factor in political life, to extend the control of the government over all ecclesiastical enterprises and undertakings and to emphasize the fact that all Italians, no matter whether they form part of the Papal Court or not, are Italian citizens as well as subjects of the Italian crown, and required to obey the laws and to fulfil their obligations as such."

A Press despatch from Rome, in February announced that "the result of the first Italian census in 20 years has proved a surprise. It shows that the population is 35,000,000 which it was not expected that it would exceed 31,000,000. The ratio of increase is greater than in any other European country. This is ascribed to improved sanitation. The birthrate continues high. It is estimated that 5,000,000 Italians have gone to the United States and South America."

A. D. 1899. Financial crisis and conflict between the Governor and the Legislative Assembly.—A crisis in the financial circumstances of the Colony, consequent on expenditures exceeding revenue for several years, was reached in 1899 and led to a serious conflict of views between the Governor and the Legislative Assembly. The latter is constituted of members partly elected and partly appointed by the Governor. The elected members of the Assembly had been in the majority hitherto, but the Governor possessed authority to add to the nominated

membership, and he exercised that authority as a means of obtaining action on a tariff bill which he held to be a necessary measure. He acted under instructions from the British Colonial Secretary. Before this occurred, an agent of the Colonial Office, Sir David Barbour, had been sent to Jamaica to report on the financial situation. His report, submitted in June, besides recommending financial remedies, suggested some references to the political constitution of the colony—among them these:

"The peculiar constitution of the Government had . . . an influence in bringing about or aggravating the present financial difficulties. When it was apparent that either more revenue must be raised or expenditure must be reduced, the Government was in favour of increasing taxation, while the elected members of the Legislative Council pressed for reductions of expenditure."

present nature of the constitution, the Government was practically unable to carry proposals for increased taxation in opposition to the votes of the nominated members, while the elected members could not in any satisfactory manner enforce a reduction of expenditure. The present state of affairs shows that both a decrease of taxation and a reduction of expenditure were necessary, but though there has been much friction in recent years and great loss of time in the Legislative Council, neither increase of taxation nor reduction of expenditure was effected in any degree adequate to avert the difficulties which were approaching.

The Home Government, being the last resort, responsible for the financial condition of Jamaica, while, under ordinary circumstances, the Colonial Office exercises a powerful and real direct and immediate control over the finances.

It may be taken for granted that under any circumstances Her Majesty's Government would be unwilling to see Jamaica sink into a condition of insolvency without making every effort for its relief, and as the ultimate responsibility must, therefore, rest on Her Majesty's Government it would seem better to extend the power of control, while it is still possible to apply a remedy, rather than to wait until the mischief can only be redressed at the expense of the British taxpayer. On the other hand, as ultimate responsibility can be enforced on the Elected Members, it seems necessary to give the Governor some practicable means of enforcing less pay, and I would suggest that this might be done by keeping the number of nominated Members at its full strength so that in case of need the Governor would only have to make the necessary declaration, and would not have to go through the preliminary operation of adding to the number of nominated Members.

On the 23d of August, the report of Sir David Barbour was reviewed at length by the Colonial Secretary, Mr. Chamberlain, in a despatch to Governor Henning, and the above recommendations were substantially approved and made instructions to the Governor. "Two plain facts in connection with this matter," said the Colonial Secretary, "must force themselves upon the attention of all who study the question, still more of all who are called upon to find a solution of it. The first is that 'the Home Government,' in Sir David Barbour's words, 'are in the last resort responsible for the financial condition of Jamaica.' The second is that as a 'working compromise,' the existing system has failed. It

is a compromise, but it has not worked. I am not now so much concerned with principle as with practice. As a machine for doing the work which has to be done the present system has failed. It is in fact impossible, except where tact and goodwill and friendly feeling exist in an unusual degree, for the government of a country to be carried on when those who are responsible for it are in a permanent minority in the Legislature. I decline to allow the Jamaica Government to remain in that position any longer, not merely because it is unfair to them, but also because recognizing the ultimate responsibility of Her Majesty's Government for the solvency of the Colony, I must ensure that the measures which they may consider necessary are carried out. I must instruct you, therefore, before the Legislative Council is again summoned, to fill up the full number of nominated members and to retain them, using at your discretion the power given you by the Constitution to declare measures to be of paramount importance. You will give the Council and the public to understand that this step is taken by my express instructions. It is my hope that the Elected Members will recognise that my decision is based on public grounds and has become inevitable, that they will loyally accept it, and co-operate with me and with you for the good of the Colony."—*Great Britain, Parliamentary Publications (Papers by Command Jamaica, 1899 [C.—9412] and 1900 [Cd.—135])*

JAPAN.

A. D. 1890-1898.—**Rise of Parliamentary parties. Working of Constitutional Government.** "When the Emperor's nominal authority was converted into a reality by the overthrow of the Shogun in 1868, the work was largely due to the efforts of Satsuma, Choshu, Iizen, and Tosa. Their aim was to destroy the Shogunate and to create an Imperial Government, and though many other motives actuated them, these were the two main ideas of the revolution which grew in importance and left political results. Nevertheless, however, was the Imperial Government established than it was found that the Satsuma clan was strongly divided. There were

within it a party in favour of reform, and another party, led by Shimazu Saburo and Saigo Takamori, who clung to old traditions. The sword had not yet given place to the ballot box, and the result of a bloody contest was the annihilation of the reactionaries. There remained, therefore, the Satsuma men loyal to the Emperor and to the absolute government of 1868, and with them the Choshu, Iizen, Tosa, and other clans. Some of these clans had not always been friendly in the past. They found it difficult to work together now. Marquis Ito has observed that Japanese politicians are more prone to destroy than to construct, and an opportunity to indulge

this proclivity soon presented itself. Although the four clans were equally pledged to secure representative government eventually, jealousy of one another drove two of them to take up this cry as a pretext for dissolving the alliance. The Tosa clan, now represented by Count Itagaki, seceded accordingly in 1873 and the Hiizen clan, represented by Count Okuma, followed its example eight years afterwards. The former organised a party called the *Fuyuto*, or Liberals, and the latter the *Kaishinto*, or Progressives. The two remaining clans of Satsuma and Choshu were called for shortness the *Sat Chos*. Such was the origin of parliamentary parties in Japan. There was no political issue at stake, the moving cause was simply clan jealousy, and hence it was that Hiizen and Tosa did not join hands, though both strenuously opposed the *Sat Chos* Government and each posed as the friend of the people. Consequently, when the first Diet met in November, 1890, the *Sat Chos* Ministry, with Marquis Yamagata as Premier, found itself face to face with a bitter and, it must be added, unmerciful opposition.—H. N. G. Rusby, *Parliamentary Government in Japan* (New York: Century, July, 1896).

The history of the Japanese Parliament [see CONSTITUTION OF JAPAN, in vol. I], briefly told, is as follows: The first Diet was opened in November, 1890, and the twelfth session in May, 1898. In this brief space of time there have been four dissolutions and five Parliaments. From the very first the collision between the Government and the Diet has been short and violent. In the case of the first dissolution, in December, 1891, the question turned on the Budget estimate, the Diet insisting on the bold curtailment of items of expenditure. In the second dissolution, in December, 1893, the question turned on the memorial to be presented to the Throne, the Opposition insisting in very strong terms on the necessity of strictly enforcing the terms of treaties with Western Powers, the Diet regarding the Cabinet as too weak handed in foreign politics. The third dissolution, in June, 1894, was also on the same question. The Cabinet, in these two latter cases, was under the presidency of Marquis Ito (then Count), and was vigorously pushing forward negotiations for treaty revision, through the brilliant diplomacy of Count Mutsu, the Foreign Minister. This strict enforcement agitation was looked upon by the Government as a piece of anti foreign agitation, a Jingo movement—and as endangering the success of the treaty revision negotiations. In fact, the revised treaty with Great Britain was on the latter date well nigh completed, it being signed in July following by Lord Kimberley and Viscount Aoki. It was at this stage that the scepticism of foreign observers as to the final success of representative institutions in Japan seemed to reach its height. . . . Marquis Ito and some of the most tried statesmen of the time were out of office, forming a sort of reserve force, to be called out in any grave emergency. . . . great was the disappointment when it was seen that after Marquis Ito, with some of the most trusted statesmen as his colleagues, had been in office but little over a year dissolution followed dissolution, and it seemed that even the Father of the Constitution was unable to manage its successful working. There is no question that the constitutional situation was at that time exceedingly critical.

But when the war broke out the situation completely changed. In the August of 1894 the whole nation spoke and acted as if it were one man and had but one mind. In the sessions of the Diet held during the war the Government was most ably supported by the Opposition. Everybody hoped that after the war was over the same good-feeling would continue in the Diet. On the other hand, it was well known that the Opposition members in the Diet had clearly intimated that their support of the Government was merely temporary, and that after the emergency was over they might be expected to continue their opposition policy. Some months before the opening of the next session, mutterings of deep discontent especially with reference to the retrocession of the Liaodong peninsula, began to be widely heard, and it was much feared that the former scene of temporary opposition and blind obstruction would be repeated. However, as the session approached (December, 1896), rumours were heard of a certain understanding between the Government and the Liberal party, at that time the largest and the best organized in the country. And in the coming session the Government secured a majority, through the support of the Liberals, for most of its important Bills.

Now this 'entente' between Marquis Ito and the Liberals was a great step in advance in the constitutional history of the country, and a very bold departure in a new direction on the part of the Marquis. He was known to be an admirer of the German system, and a chief upholder of the policy of Chosen Naikaku, or the Provisional Cabinet policy, which meant a Ministry responsible to the Emperor alone. Marquis Ito saw evidently at this stage the impossibility of carrying on the Government without a secure parliamentary support, and Count Itagaki, the Liberal leader, saw in the Marquis a bold ally, whose character as a great constructive statesman, and whose history as the author of the Constitution, both forbade his ever passing disloyal to the Constitution. The 'entente' was cemented in May following by the entrance of Count Itagaki into the Cabinet as the Home Minister. On the other hand, this 'entente' led to the formation of the Progressist party by the union of the six Opposition parties, as well as to the union of Count Okuma, the Progressist leader, and Count Matsugata, leader of the Kagoshima statesmen. Their united opposition was now quite effective in influencing the administration. At this stage certain radical men, particularly Count Inouye, suggested a compromise, offering a scheme of a 'half Government'. . . . But Count Itagaki was firm in opposing such a compromise, saying it was tantamount to the ignoring of party distinctions, and as such was a retrogression instead of being a forward step in the constitutional history of the country. He finally tendered his resignation. When Marquis Ito saw that the Count was firm in his determination, he, too, resigned, saying that he felt so deeply obliged to the Liberal party for their late parliamentary support that he would not let the Count go out of office alone. This told the Ito Ministry after five years' brilliant service.

The new Cabinet, formed in September, 1896, had Count Matsukata for Premier and Treasury Minister; Count Okuma for Foreign Minister; and Admiral Kato, then the hero of the Russo-

battle for Home Minister. There were at this time two things that the nation desired. It wished to be saved from the impending business depression. It wished to see Japanese Charities developed at the Foreign Office, and the shame of the cession of the Liao Tung peninsula wiped off. It hoped, lastly, to see a Parliamentary government inaugurated and all the evils of autocracy removed. The states-

man now installed in office aspired to satisfy all these wishes, and they were expected to work wonders. But, unfortunately, the Cabinet lacked ability.

Early in the fall [of 1897] Count Okuma resigned office, saying that he felt like a foreign physician in consultation over a case with Chinese doctors. Count Okuma led away the majority of the Progressist party, and the government was left with but an insignificant number of supporters. As soon as the Diet met, the spirit of opposition manifested was so strong that the Ministers asked the Emperor to issue an order for dissolution. It was expected that the government would at once appeal to the country with some strong programme. But to the astonishment of everybody the Ministry resigned the very next day. In the midst of the general confusion which followed, Marquis Ito's name was in the mouth of everybody. He was unanimously hailed as the only man to bring order out of the political situation. In January, following 1898, the new Cabinet was announced with Ito for Premier, Count Inouye for the Foreign Office, Marquis Satouji, one of the best educated, most progressive, and, perhaps, also most fearless of the younger statesmen, for Education. Marquis Tokiwa Yokoi, *See Japan and her Constitutional Outlook* (Gladstony Press, N. Y., 1898).

A. D. 1895. The war with China.—Treaty of Shimonoseki. Korean independence secured. Part of Feng-tien, Formosa and the Pescadores ceded by China. Relinquishment of Feng-tien by Japan. *See* (in this vol.) CHINA: A. D. 1894-1895.

A. D. 1896. Affairs in Formosa.—Retirement of Marquis Ito. Progressists in power. Destructive sea-wave.—Serious risings of the Chinese in Formosa against the newly established Japanese rule in that island were said to have been caused by incident and atrocious conduct on the part of the Japanese soldiery. Possibly a decree which prohibited the importation of opium into Formosa, and which placed the medicinal sale of the drug under close restrictions, had something to do with the discontent. In Japan the able statesman, Marquis Ito, was much unpopular by his yielding of the Liao Tung peninsula on the Feng-tien province of China. *See*, in this vol., CHINA: A. D. 1894-1895, under pressure from Russia, Germany and France. He retired from the government, and Count Watsukata became Premier in September, with a cabinet of the Progressist (Kashinto) party, which advocated resistance to Russia, and opposition generally to the encouragement of foreign enterprises in Japan. A frightful calamity was suffered in June, when a prodigious wave, possibly raised by some submarine volcano, overcame a long stretch of north-eastern coast, destroying some 30,000 people, and sweeping out of existence a number of considerable towns. *Annual Register*, 1896.

A. D. 1897.—New tariff.—A new tariff, regu-

lating the customs duties levied in all cases wherein Japan is not bound by treaty stipulations, was adopted in March, 1897. The duties imposed range from 5 to 10 per cent, of value, the higher being laid upon liquors and tobacco. The "Japan Gazette" is quoted as saying, in explanation: "The statutory tariff fixes the duties to be collected on every article imported into Japan from countries that have not concluded tariff conventions with her, or that are not entitled to the most favored nation treatment in regard to the tariff. Spain, Portugal, Greece, and many other countries have no tariff conventions with Japan and no favored nation clause in regard to tariff in their new treaties with this country. The United States, Belgium, Holland, Russia, and others have the favored nation clause and will get the benefit of the lesser duties on items named in the different mentioned tariffs. There will therefore be two columns of figures in the printed general tariff list, showing in the first column the duties on the articles named in the conventional tariffs, and in the second column the duties on the same articles imported from countries that have no tariff convention with Japan, and that are not entitled to favored nation treatment. For instance, most textile articles are subject to a duty of 10 per cent in the conventional tariff column and to a duty of 15 per cent in the statutory column."

A. D. 1898-1899.—The struggle between clan government and party government.—When, in January 1898, Marquis Ito made an attempt to win the country back to non-party government and efficiency by forming an independent Ministry in defiance of the Liberal demands, he was acting no doubt from no more than instinct, but, as he conceived, in the highest interests of the realm. His experiment was not destined to succeed. In the general election of March 1898, 109 Progressives and 94 Liberals were returned as Representatives in a House of 300. A common hunger for office and a common sense of humiliation at their treatment by the greater statesmen of the clans united the two parties under one banner as they had not been united since 1873. At last they took up in earnest the crusade against clan government, which, logically, they should have commenced together exactly a quarter of a century before. They called their coalition the "Kenseito" or Constitutional Party. Japan is a country of rapid progress, but she is lucky that for twenty-five years the formation of the Kenseito was deferred while she was content to be guided through difficult times by clansmen more skilled in statcraft than the usurious nobodies who were kicking at the heels of Counts Okuma and Itagaki.

Meanwhile Marquis Ito had to decide how he would act. He had tried to govern with the

help of a party and had partially succeeded. He had tried to govern without one, and had discovered that it was impossible. The two parties could no longer be played off one against the other. They were united, and with fifty new recruits formed the Kensei to 253 strong. There remained only nineteen clan government sympathisers, calling themselves National Unionists, and twenty-eight independents. In these difficult circumstances Marquis Ito's decision was a bold one and in its consequences far-reaching. He advised that Count Okuma, the Progressive leader of the Kensei, should be summoned to form a Cabinet in conjunction with his Liberal colleague, Count Itagaki. His advice was followed by the Emperor, but with the significant condition that the Ministries of War and the Navy were to be retained by clansmen. The Emperor was not disposed to allow constitutional experiments in these departments. On the 28th of June 1898, Marquis Ito resigned, and on the 30th the Okuma-Itagaki Cabinet was formed.

"It now seemed to many that the death blow had been given to clan government, and that at last the era of government by party had commenced. . . . The elements of which the Kensei to was composed were the two great ones of the Progressives, led by Count Okuma, and the Liberals, led by Count Itagaki. These two parties acted together in a condition of veiled hostility. There was coalition without any approach to amalgamation. A common hunger for office, a common dislike for clan government, obscured for a little while a mutual jealousy and distrust. Meanwhile the Kensei to as a whole, and both wings of it, were divided into endless clubs, cliques, and associations. Our own Temperance, Colonial, Church, and China parties are affable and self-effacing in comparison. Thus, to name only a few of the political divisions of the Kensei to, there were the territorial associations of the Kwantai-kai (led by Mr. Hoshi), the Hokuriku-kai (led by Mr. Sugita), the Kynshu Kurabu (led by Mr. Matsuda), the Tohoku-dantai, the Chugoku-kai, and the Shigoku-kai; there were the Satsuma-section, the Tosa section, the Kukushinto, the Young Constitutionalists, the Senior Politicians (such as Baron Kusumoto, Mr. Hirakawa, the chief organiser of the coalition, and others), the Central Constitutionalist Club, and so forth. Each clique had its private organisation and animosities; each aspired to dictate to the Cabinet and secure portfolios for its members in the House. They combined and recombined among themselves. . . . Clearly, however, the two leaders wished to work together, each must find it impossible in such circumstances to preserve discipline among his own followers. Indeed, the leaders scarcely tried to lead. . . . It was impossible to carry on the Government under such conditions. The Okuma-Itagaki Cabinet fell, and Field Marshal the Marquis Yamagata, Premier of the first Japanese Ministry, was summoned by the Emperor. Once more a clan Ministry, independent of party, was formed; once more it seemed as though party government was to be indefinitely postponed.

Marquis Yamagata formed his Ministry in November 1898, on strictly clan lines. . . . Being an old soldier, he wisely determined to profit by experience and seek an ally. No one knew

better than himself the need of passing the Land Tax Bill, on which the efficiency of the army, its defence and the future of Japan depended. It was natural, therefore, for him to approach the Liberals, who had shown themselves favourable to an increase of the Land Tax. On the 27th of November the support of the Liberals was assured, an event which prompted the 'Iiji' to express its joy that Marquis Yamagata had become a party man, leaving the cause of the non-partisan Ministry. The Government party consisted now of the National Unionists (in favour of clan government) and loyal followers of Marquis Yamagata, the Liberals, and a few so-called Independents (who, of course, speedily formed themselves into a clique giving the Government a majority of about fifteen or twenty votes in the House).

"The first session of Marquis Yamagata's second Ministry will always be remembered in Japan because the Land Tax Bill was successfully passed through both Houses. . . . But the most important episode of the session, from a parliamentary point of view, was a remarkable act of self-denial on the part of the Liberals. In March of this year [1899] they agreed not to demand office from Marquis Yamagata for any of their number, though they were to be free to accept such offices as he might offer them. If this unprecedented pledge he loyally adhered to, it marks a very great stride towards a party government in the future. . . . The hope of the Liberals now lies, not in the immediate enjoyment of the sweets of office, but in winning over Marquis Ito to their party. If he were to show the way, it is probable that many more of the leading clan statesmen would take sides, in which case, to adopt Mr. Balfour's phrase, political society would be divided vertically as in England, not horizontally as in France, and either party on obtaining a majority in the House would be able to find material in its own ranks for an efficient Cabinet. At present neither is in that happy position."—H. N. G. Bushby, *Parliamentary Government in Japan* (Nineteenth Century, July, 1899).

A. D. 1899 (May-July).—Representation in the Peace Conference at The Hague. See (in this vol.) PEACE CONFERENCE.

A. D. 1899 (July).—Release from the treaties with Western Powers which gave them extraterritorial rights.—Consular jurisdictions abolished.—Japan has been promoted. The great sign that Europe regards a Power as only semi-civilised is the demand that all who visit it, or trade in it, should be exempted from the jurisdiction of the local Courts, the Consuls acting when necessary as Judges. This rule is maintained even when the Powers thus stigmatised send Ambassadors, and is, no doubt, very keenly resented. It seems specially offensive to the Japanese, who have a high opinion of their own merits, and they have for seventeen years demanded the treatment accorded to fully civilised States. As the alliance of Japan is now earnestly sought by all Europe this has been conceded, and on Monday, July 17th, the consular jurisdiction ceased (Owing to some blunder the powers of the French and Austrian Consuls last a fortnight longer, but the difference is only formal.) The Japanese are highly delighted, and the European traders are not displeased, as

with consular jurisdictions all restrictions disappear with the interior disappear." *The Statesman's Journal*, July 22, 1899. The early treaties with Japan with Western Powers, which treated Japan what are called rights of extrajurisdiction, that is to administer their own laws to their own consular or other courts, upon foreign subjects within a foreign country, were revised in 1894. Japan then became free to exercise the foreign courts on her soil, at the end of five years, upon giving a year's notice, which she has stated above. Her government has thus gained a recognized parity in sovereignty with the governments of the Western world. At the same time, the whole country has been thrown open to foreign trade—restricted formerly to certain ports.

In order to protect the Japanese people from this important change in their relations with the foreign world, the following imperial rescript was issued at the end of June, 1899:

"The revision of the treaties our long cherished aim is to lay on the eve of becoming an accomplished fact, a result which, while it adds materially to the responsibilities of our Empire, will greatly strengthen the basis of our friendship with foreign countries. It is our earnest wish that our subjects, whose devoted loyalty in the discharge of their duties is conspicuous, should enter ardently into our sentiments in this matter, and co-operate with the great policy of opening the country, should all unite with one heart to assist cordially with the peoples from afar, thus maintaining the character of the nation and enhancing the prestige of the Empire. In view of the responsibilities that devolve upon us in giving effect to the new treaties, it is our will that the ministers of state, acting on our behalf, should instruct our officials of all classes to observe the strictest supervision in the management of affairs to the end that subjects and strangers alike may enjoy equal privileges and advantages, and that every source of dissatisfaction be avoided, relations of peace and amity with all nations may be strengthened and consolidated perpetually."

In obedience to this command, the Minister-President, Marquis Yamagata, published the following instruction on the 1st of July: "The work of revising the treaties has caused deep sorrow to His August Majesty, since the centralization of the Government, and has long been regarded with earnest desire to the people. More than twenty years have elapsed since the question was posed by the dispatch of a special embassy to the West in 1871. Throughout the whole of that period numerous negotiations were conducted with foreign countries and numerous plans discussed, until finally, in 1884, Great Britain took the lead in concluding a revised treaty, and the other powers all followed in succession, so that now the operation of the new treaties is about to take place on the 17th of July and the 1st of August.

In the revision of the treaties in the sense of the recognition of equality the intercourse of this country with foreign states was the basis of the great liberal policy adopted at the time of the restoration, and that such a course conduces to enhance the prestige of the Empire and to promote the prosperity of the people is a proposition requiring no demonstration. But if there should

be anything defective in the methods adopted for giving effect to the treaties, our country will the object of revision be sacrificed, and the country's relations with the great powers will be impaired, and its prestige necessarily lowered. It is, of course, beyond question that the rights and privileges accruing to us as a result of treaty revision should be duly asserted. But there devolves upon the Government of this Empire the responsibility, and upon the people of this Realm the duty, of protecting the rights and privileges of foreigners, and of sparing no effort that they may one and all be enabled to reside in the country comfortably and contentedly. It behooves all officials to clearly apprehend the august intentions, and to pay profound attention to these points.

With still finer care for the honor and good name of Japan, the following instruction to schools was published on the same day by Count Katsuyama, the Minister of State for Education:

"The schools, under the direct control of the Government serve as models to all the public and private educational institutions throughout the country. It is therefore my earnest desire that the behavior of the students of such schools should be regulated with notably strict regard to the canons of propriety, so that they may show themselves worthy of the station they occupy. The date of the operation of the revised treaties is now imminent, and His Imperial Majesty has issued a gracious rescript. It may be expected that the coming and going of foreigners in the interior of the country will henceforth grow more frequent, and if at such a time students be left without proper control, and suffered to neglect the dictates of propriety by cherishing sentiments of petty arrogance, and behaving in a violent, outrageous or vulgar manner, not only will the educational system be brought into discredit, but also the prestige of the country will be impaired and its reputation may even be destroyed. For that reason I have addressed an instruction to the local governors urging them to guard against any defects in educational methods, and I am now constrained to appeal to the Government schools, which serve for models. I trust that those upon whom the functions of direction and teaching devolve, paying respectful attention to the august intention, will discharge their duties carefully towards the students, and by securing the latter's strict adherence to rules, will contrive that they shall serve as a worthy example to the schools throughout the country."—*U. S. Consular Reports*, Oct., 1899, p. 285.

A. D. 1899 (August).—Prohibition of religious instruction in the government schools.—Some important regulations for the national schools were promulgated in August by the Minister of Education, having the effect, probably intended, of discouraging attendance at the Christian mission schools, and stimulating a preference for the schools of the national system. They forbade religious exercises or instruction in any schools that adopt the curriculum of the national schools. While, at the same time, they allow admission from foreigners to the Christian schools of the national system without examination. Students in the middle schools of the national system are exempted from conscription, while others are not. That the aim in this policy is to strengthen the national ideal, rather than

to interfere with religious freedom, seems probable.

A. D. 1900 (August—October). The new party of Marquis Ito. The letters of the Tokio correspondent of the London "Times" describe interestingly the genesis of a new party of which Marquis Ito has taken the lead, and which took control of the government in October, 1900. Various parties, the career of which the writer reviews, had been formed in opposition to the veteran statesmen who continued to hold the reins of government after constitutional forms were introduced in 1889. But very few of the party politicians who constructed these parties, says the writer, had held high office. They were without the prestige of experience. To put such men on the administrative stage while the gallery was occupied by the greybeards—the "Meiji statesmen" as they are called—who had managed the country's affairs since the Restoration would have seemed a strange spectacle in the eyes of the nation. The Meiji statesmen, however, persistently declined to be drawn into the ranks of the political parties. They gave the latter plenty of rope, they even allowed them to administer the State, which essay ended in a fiasco, and they took them into alliances which served chiefly to demonstrate the eagerness of these politicians for office and emoluments. But there was no amalgamation. The line of demarcation remained indelible.

The political parties, discovering the impossibility of becoming a real power in the State without the cooperation of the Meiji statesmen, asked Marquis Ito to assume their leadership. Marquis Ito may be said to possess everything that his country can give him. He has the unbounded confidence of his Sovereign and his countrymen, he is loaded with titles and honours, and a word from him can make or mar a Ministry. It seems strange that such a man should step down from his pedestal to become a party leader, to occupy a position which can bring no honour and must at once create enemies. Yet Marquis Ito has consented. He issued his manifesto. It is in two respects a very remarkable document. First, it tells the politicians that their great fault has been self-seeking; that they have set party higher than country; office and emolument above public duty and political responsibility. Secondly, it informs them in emphatic terms that Parliamentary Cabinets are unconstitutional in Japan, that Ministers and officials must be appointed by the Sovereign without any reference to their party connexions. The politicians who place themselves under Marquis Ito's leadership must eschew the former failing and abandon the latter heresy. It would be impossible to imagine a more complete reversal of

the tables. The men who ten years ago asked the nation to condemn the Meiji statesmen on a charge of political self-seeking are now publicly censured by the chief of these statesmen for committing the very same sin in the new positions, and the men who for ten years have been Parliamentary Cabinets the text of their agitation now enrol themselves in a party who openly declares such Cabinets to be unconstitutional.

The new party calls itself the "Association of Friends of the Constitution" (Kokko Seijikai). "In its ranks are found the whole of the Liberals, and many members of the Liberal Club hitherto maintained an independent position, so that it can count on 152 supporters among the 300 members of the Lower House. In opposition, the Progressists, comprising 100 votes, and the remainder of the House are composed mainly of men upon whose support the Cabinet can always reckon. In fact, for the first time since the Diet opened, the direction of State affairs come into the hands of Ministers who may rest assured of Parliamentary cooperation."

Marquis Yamagata, who had conducted the administration for nearly two years, resigned in October, and Marquis Ito brought his new party into power. His Cabinet "does not include any of the older statesmen—the clan statesmen—except the marquis himself. Among the new portfolios that have changed hands, those of War and of the Navy are still held as before. Three have been given to untried party politicians, leaders of the Liberals, and four to men who may be regarded as Marquis Ito's disciples."

The Yamagata Cabinet consisted entirely of clan statesmen and their followers. The new Cabinet has a clan statesman for leader, public nominees for members. It may be called essentially a one man Ministry, so far does the Premier tower above the heads of his colleagues.

A. D. 1900-1901.—Strategic importance of Korea.—Interest in the designs of Russia. See in this vol. KOREA: A. D. 1900.

A. D. 1901. Movement to erect a monument to commemorate the visit of Commodore Perry.—A movement in Japan to erect a monument at Kurikuma, the landing place of the American expedition, commanded by Commodore Matthew C. Perry, which visited Japan in 1853 and brought about the opening of the country to intercourse with the western world (see in vol. 3, JAPAN: A. D. 1852-1853). It was announced to the State Department at Washington by the U. S. Consul General at Yokohama in March, 1901. The undertaking is disapproved by the "American Association of Japan," of whom the Japanese Minister of Justice is President, and its purpose is to commemorate an event which the Association, in a published circular, declares to be "the most memorable in the annals of Japan." The language of the circular in part is as follows: "This visit of Commodore Perry was in a word the turning of the key which opened the doors of the Japanese Empire to friendly intercourse with the United States, and subsequently to the rest of the nations of Europe on similar terms, and may in truth be regarded as the most memorable event in our annals—an event which paved the way toward accelerated the introduction of a new order of things, an event that enabled the country to

in the unprecedented era of Nationalism, in which we are now living. Japan has shown her will she ever forget that she has a loving and most beloved daughter, who with high virtues and great wisdom, has been a blessing to her. In no small degree has she prospered in the United States, and it is to be hoped that the latter rendered her a most interesting service already referred to.

A. D. 1897-1901. The Zionist movement. In those closing days of August (1897) I was in Basel, concerning the significant Congress of Jews, which friends and foes alike seem to have well agreed. It was the Congress of "Zionists." Until then that word was almost unknown to the public at large. Zionism, I have made its bow to the Gentile world at Basel, and disclosed for the first time what its aims and its needs were. It was in my view, "The Jewish State," which appeared a year or half ago that I first formulated what the Congress at Basel virtually adopted as its aim. In the terms of that definition, "Zionism" has for its object the creation of a home, secured by public rights, for those Jews who either could or will not be assimilated in the countries of their adoption.

Nothing was more instructive at the Basel Congress than the vigour—I might almost say violence—with which the representatives of the great Jewish strata of population resisted an attempt to limit the guarantees for a State based on public rights. The executive appointed to draw up a programme had proposed "a legally secured home." The delegates, however, were not satisfied, and clamoured for an amendment to be inserted on the basis of international rights. It was only by adopting the international expression "public rights" that an agreement was arrived at. The significance of this is, why is that what the Jews desire is not more tracts of land, but a country owned by Jewish people and to comprise that Jewish territory is plain as possible without warring or on legitimate and sovereign states. We can acquire land any day in any part of the world. But that is not enough for Zionists. In our case we have to do with private rights. That will be a great as well as the land speculators—Zionism has achieved success. What the Zionists are doing during their attention to the public rights idea. In that they hope to be able to do for the Jewish World.

express myself paradoxically, I should say that a country belonging to the Jews on the basis of public rights, even though down to the very last parcel it was the legally secured property of non-Jews, would mean the final solution of the Jewish question. We have held a gathering at Basel before the whole world, and there we saw the national consciousness and the popular will break forth at times like a convulsive upheaval. To Basel came Jews of all nations, of all tongues, of all parties, and of all forms of religious confession. There were more than 200 representatives of the Jewish people, most of them delegates for hundreds and thousands. Mer from Rumania alone brought over 20,000 signatures of those who had sent them there. There surely was never such a motley assembly of opinions in such a narrow space before. On the other hand, there would certainly have been more conflict of opinion in any other deliberative assembly than there was in this.

It would appear to be to the interest of Turkey to come to an arrangement with the Jews. But what are the interests which other Governments would have in assisting the realisation of a legally guaranteed Jewish home? The interest would vary with each country, but it is present in some form or other everywhere. It would mean the drawing off of an unhappy and detested element of population which is reduced more and more to a condition of despair, and which, scattered over the face of the earth and in a state of unrest, must perpetually identify itself with the most extreme parties everywhere. Governments and all friends of the existing order of things cannot bring themselves to believe that, by helping us in the solution we propose, they could give refuge to an element which has been driven to revolution, and rendered dangerous through its dispersion. That a highly conservative people like the Jews have always been driven into the ranks of revolutionists is the most lamentable feature in the tragedy of our race. Zionism would mean an end to all that. We should see results, not for the general condition of mankind, the full benefits of which we cannot even guess. There are, of course, a great number of existing political difficulties to be overcome, but these, given the necessary good will, might be surmounted."—Theodor Herzl, *The Zionist Congress and Contemporary Review*, 1897.

The programme of the Philo-Zionists as defined in their printed constitution is as follows:—(a) To foster the national idea in Israel. (b) To promote the colonization of Palestine and

neighbouring territories by Jews, by establishing new colonies and assisting those already established. (a) To diffuse the knowledge of Hebrew as a living language. (b) To further the moral, intellectual and material status of Israel. The English Association known as the Chovevei Zion, is presided over by Colonel Albert Edward Goldsmid, Assistant Adjutant General of Her Majesty's Forces. It has 35 established 'Tents' spread through the length and breadth of the United Kingdom.

Similar associations have been established in America, Germany, France, Russia, Austria, Denmark, Switzerland, and other countries, and there is a central committee meeting at Paris, where the organisation of new colonies and development of existing ones in the Holy Land is systematically carried out. Even before these associations had been called into existence Baron Edmond de Rothschild of Paris, encouraged by the success of the agricultural schools at Jaffa, founded by the late Charles Netter, had devoted his vast influence and his own purse to the work, and there is a separate administration in Palestine charged with the control and management of what are known as 'the Baron's colonies'.

"Today we have in Palestine between twenty and thirty distinct colonies or communities spreading along the coast from Askalon in the south to Carmel in the north, and along the Jordan from the Waters of Meron to the Sea of Galilee in the east. The population of these colonies varies from 100 to 700 souls, and they may safely be estimated to number 10,000 souls in all, independently of the large number of Jewish day labourers from neighbouring towns and villages, to whom they give occasional employment. There are 50,000 more Jews—mostly refugees in the various Holy Cities, and the immediate problem is to get these—or the better part of them—also on the land. The current language of the colonists is the Hebrew of the Bible, although many of them have acquired the native Arabic, and also French, which is taught in their schools. They have their places of worship, their houses of study, their modest institutes, their public baths, and in fact the counterpart in small of all the features of the model European village; and they have, thanks to the Baron and the Philo-Zionists' Associations, the most modern appliances and complete installations for the prosecution of their agricultural work."—Herbert Bentwich, *Philo-Zionists and Anti-Semites* (Nineteenth Century, Oct., 1897).

"At the beginning of March, 1898, an important Conference was held in London, attended by delegates from nearly 50 societies, representing 10,000 English Zionists, and resolutions were passed adopting the International programme, and making provisions for a federation of all the English Zionist bodies. Similar conferences were held in New York, in Berlin, in Galatz (Roumania), and other great centres; and local federations were everywhere formed to give greater strength and solidity to the general organization. At the second International Congress, which was held at Basle in August, 1898, and was attended by an imposing body of more than 500 delegates, the Executive Committee were able to report that the 'Basle programme' had received the support of 943 Zionist organizations out of which over 700 had sprung up since the first Congress. It had been estimated that these represented at least a quarter

of a million of active members. The Congress had become the authorised representative and exponent of the people's wishes, and the Zionists had become in power to be reckoned with in the settlement of the Jewish question. Programmes among the attendants at this world-gathering were the Rabbinical crown officials from orthodox Russia and Poland as well as the most reformed congregations from America, all taking an active interest in the settlement of the programme of work for the ensuing year which was the main business of the meeting. H. Bentwich, *The Progress of Zionism* (Fortnightly Review, Dec., 1898).

At the International Zionist Congress, which assembled in London on the 13th of August, 1898, the report of the executive committee on the progress which the movement has made showed as follows:—"In Russia there are at least 100,000 members of Zionist societies; in England the movement is supported by 38 societies as against 16 last year, and all these societies have increased membership. Thanks to the work of the English Zionist Federation Zionism has made great headway in England. In the United States there are 135 societies, as against 102 last year. Notwithstanding the war in South Africa the contributions towards the expenses of the movement have been well maintained. Having regard to the returns received by the executive committee the reporter felt no hesitation in saying that by the vast majority of the Jewish nation were in favour of Zionism."—*London Times*, Jan. 15, 1900.

Late in December, 1899, it was announced at Vienna that the Sultan had issued or renewed a decree, according to which the Jews are forbidden to remain in Palestine for longer than two months. This measure, which applies to both traders and pilgrims, further prohibits the acquisition by Jews of landed property. It was suggested that the wholesale exodus of Jews from Russia and their recent emigration from Roumania gave rise to the apprehension that they might overcrowd Palestine. This apprehension is said to have been strengthened by the increasing activity of the Zionists, who are suspected in certain circles in Constantinople of pursuing distinct political ends. According to another suggestion, Russia had grown jealous of the Jewish colonization of Palestine, fearing it to be in the interest of German policy, and had used influence to check it.

"Viewed merely on its prosaic side, Zionism is by no means a visionary scheme. The aggregation of Jews in Palestine is only a matter of time, and it is better that they should be aggregated there under their own laws and religion, and the mild suzerainty of the Sultan, than under the semi-barbarous restrictions of Russia or Roumania, and exposed to recurrent popular outbreaks. True, Palestine is a ruined country and the Jews are a broken people, but neither is beyond recuperation. Palestine needs a people. Israel needs a country. If, in regenerating the Holy Land, Israel could regenerate itself, how should the world be other than the gainer? In the solution of the problem of Asia, which has just succeeded the problem of Africa, Israel might play no insignificant part. Already the colony of Rishon le-Zion has obtained a gold medal for its wines from the Paris Exposition, which is not prejudicial in the Jew's favour. We

may be seen the spiritual wine of Judaea would not be so far fetched, like wine, that produces vintage after vintage and has drunk these many centuries without the essential activities of the colon. As the vineyard would have paved the way for the Jewish and commercial future of Israel in its own country, so would the rabbinical sing song of the vineyard prove to have been but the unconscious preparation of the ages for the Jewish vineyard.

So, the Palestine belongs to the Sultan, and the Sultan wishes to grant the coveted land and that of the Jewish people. Is not this fatal? No, it is as little as that the Zionists could not have the millions, it suddenly called upon them to collect a quarter of a million pounds. But there are millions of Jews in the world, and the Zionists. It is not likely that the Sultan would so humiliate himself by giving the millions left by Baron Hirsch to the Zionists. And the Sultan's interest in the Jews is equally unimportant, because a Jew's life is independent of transient modes of government. The only aspect that really matters is whether Israel's face be, or be not, set towards Zion. For decades and even for centuries. Much less turns on the Sultan's mind. For Herzl's. Will he lose patience? for Herzl's. He is not born in every century.

The Jewish Colonization Association and the New Jewish Colonization Association, Jan. 12, 1901.

A. D. 1899. In Palestine. - In view of the importance of the Zionist movement by the second Zionist Congress, held at Basel in September, 1899, and the Palestine journey of Emperor William II, the present status of Jews in Palestine has a matter of general interest. Out of a total population in Palestine of some 200,000, some 10,000 are Jews, as against 14,000 twenty years ago. In Jerusalem, there are 22,000 Jews, half of whom have immigrated from Europe and America and are called Ashkenazim, the other half from the oriental Israelites, the Sephardim. Nine hundred and sixty families, numbering about 5,000 souls, inhabit the twenty-two Jewish colonies in Palestine which have been founded and subsidized by Europeans, led by Baron Edmond de Rothschild, representing the Alliance Israélite Universelle; the rest by the Jewish Colonization Association and by the Odessa Company.

The idea of gathering in Palestine homeless Jews scattered all over the globe was championed by the rabbis by Moses Montefiore, but with indifferent success. In the eighties, however, the movement of Jews to Palestine assumed significant proportions. Of the twenty-two present colonies, the "Jewish Memorial" is the largest, supporting more than 1,000 souls. It boasts a graded school, five teachers, a synagogue, etc., and 4,000 acres of land under cultivation, on which are raised fruit, chiefly grapes, honey, and mulberry leaves, the rearing of silkworms being a new industry. The "First to Zion" is another important colony, owning 2,000 acres of land. Some forty two-story stone dwelling houses greet the eye of the approaching stranger, a large school house with a Hebrew library, a synagogue, and a hospital. One million five hundred thousand vines and 25,000 olive, almond, orange, and mulberry trees belong to this

colony, which also possesses a famous wine culture.

The "Hope of Israel," a mile beyond Yafa, on the plain of Sharon, is perhaps best known for its agricultural school, in which one hundred or more pupils are taught gardening. Recently a high school for Jewish youth was established in Yafa. The "Head Corner Stone" and the "Jews beyond the Jordan," with snow-capped Hermon in the background, is another quite prosperous Jewish colony in Palestine. Here, near the source of the Jordan, water is plentiful, and the situation high up above the level of Lake Genesareth insures fair climatic conditions. In the

Doon of Hope, dairy farming is profitably followed and experiments made in tea planting. This colony is said to have 1,000,000 vines.

It hardly requires a prophet to say that the Zionists will succeed in awakening in the Jewish people a national spirit and founding a Jewish monarchy or republic, with its parliament in Jerusalem and its representation in foreign capitals; the present agitation makes for the development of a country which is but a shadow of its former self, and which will necessarily respond to modern influences. The Sultan seems quite disposed to grant railway, harbor, and other franchises, and it is possible that the new Jewish Colonial Bank, the organization of which was decided upon in Basel, will be permitted under certain guarantees to play an important part in the industrial advancement and growth of Palestine. The movement is far from being out new, especially in the Jews residing in Palestine. They are no longer content with studying the Talmud and living in charity, but are working to the fact, as the Hebrew word says, "to fill the ground and to worship God."

It should not be inferred from statements here made that peace and prosperity have suddenly become the lot of the Jews in Palestine. Only a few days ago Rev. William King Eddy, of Sion, returned from beyond the Jordan, and he informs me that a Jewish colony situated not far from El Mzarib on the caravan route from Damascus to Mekka was recently attacked by predatory Bedouin tribes. The settlers were all driven away, their gardens and crops destroyed. Even a road built by the Jews to connect their frontier colony with older ones in Galilee, west of the river, was at least partially obliterated. Taxes are more oppressive than ever, officials are corrupt, and prohibitive measures regarding immigration are still in force, although inadequate. I think, however, I am justified in saying that the prospects are brighter than ever for the Jews in Palestine and for Palestine itself. European influence has obtained a foothold in the country, and the tide of modern life is no longer so long delayed. Only four or five weeks ago an English company announced its determination to build a broad gauge railway from the sea at Haifa through the very heart of Samaria and Galilee to Damascus and on to Bagdad, and active operations have already commenced. G. B. Ryland, U. S. Consul at Beirut, *U. S. Consular Reports, April, 1899*, p. 620.

A. D. 1901. Turkish order regulating visits to Palestine. A Press telegram from Washington, February 16, 1901, states that Consul Merrill, at Jerusalem, has reported to the State Department that the Turkish Minister of the Interior at Constantinople has issued an order relative to Jews who visit Palestine, which went

in effect on January 29. The order applies to all persons hereafter to be sent from other countries as pilgrims or visitors. The conditions of the passport are strict. On arriving at Joppa the consular officials deliver his passport to the Turkish authorities and receive therefor a Turkish

KENTUCKY: A. D. 1895-1900. Political conflicts. Assassination of Governor Gorbelt.

In 1895 a Republican Governor, William B. Bradley, was elected in Kentucky by a margin of nearly 10,000 votes. In 1896 the contest of political parties became fierce and bitter, on the occasion of the election of an United States Senator to succeed the Democratic incumbent, J. C. S. Blackburn, whose term would expire March 3d, 1897. On joint ballot in the Legislature the Republicans and Democrats had 65 votes each, and the Populists had 2. The latter was holding a balance of power. But the two Populist members were divided, and the Democrats could not get together, owing to the division of their party on the money question. The sound money Democrats refused support to Senator Blackburn, who obtained the caucus nomination of his party for re-election, and their votes were scattered. The Republicans were elected, but a candidate, and secured one of the Populist votes but needed one more to give them a majority. They attempted to win the needed vote by electing a Democrat in the Lower House whose seat was contested, but the Democrats promptly neutralized their move by inserting two Republicans in the Upper House. The passions were so violent and threatening that in March, 1897, the Governor of the State deemed it necessary to call out several companies of militia to preserve peace at Frankfort. In the end, the Democrats adjourned without electing an United States Senator, but a special session was called for the election accomplished on the 25th of April. William B. Bradley, Republican, winning the seat.

In the following year (1898) the Democrats secured strong majorities in both branches of the Legislature, and, under the leadership of Senator William B. Bradley, passed an election bill which was bitterly denounced as a contrivance for fraud.

KENTUCKY

state were heard, appointed by the governor for four years, which were to be commissioners in each county to conduct and registration of voters. Notwithstanding this, the returning officers the Democrats held in the silver question in the election of 1890, and further the lawlessness which Goebel, as a candidate for governor, had committed, the third term of the chief justice, S. Taylor, the Republican majority of more than 2,000 votes in 1890 had been fear of riot in the counties, and the Governor had succeeded in preserving order. The government that military interference would make the election illegal and that reports from Louisville should be made to the sides there were accurate and a dangerous state of political and legal. But two of the members of the State Board of Commissioners decided that Taylor as a candidate had been lawfully elected. He was inaugurated Governor on the 1st of December. Goebel and his partisans, however, accepted the decision determined to overthrow Taylor by authority of the Legislature, which they controlled a considerable majority.

The Legislature met and organized on the 1st of January, 1900. The Governor prepared to do his duty as usual, but the office by summoning troops from the State Guard from the strong Republican mountain region and 1,000 men arrived in Frankfort on the 1st of January. There had been fighting between the two parties, and the situation now became very strained. Some kind of a bloody battle seemed inevitable, but no one could anticipate the horrible tragedy which ensued. As Senator Goebel was walking to the state capitol on the 10th of January, he was shot from the windows by a child assassin, receiving a wound from which he died February 3d. The Legislature closed its investigation of the murder and voted to recognize the dying Will of Goebel as Governor, with C. W. Beck as his lieutenant and the successor to the office in the event of his death. Governor Taylor, in an address to the people of the State, denouncing the murder and enjoining the preservation of order. At the same time he proclaimed the government of the Legislature, closed the State House against it and summoned its members to assemble on the 6th of February, not at Frankfort, but at the distant small mountain town of Paducah. Goebel, on his death bed, took the oath of office and issued orders dismissing the State's Adjutant General, appointing Beck as his place and commanding the force of the State to return to their homes.

The President of the United States was applied to by Governor Taylor for recognition and support. He decided that he had no authority to do so. The supporters of Goebel applied to the United States Circuit Court of Kentucky, which issued a writ enjoining Governor Taylor from the use of armed force to prevent the State from meeting. A clerk who succeeded in saving the writ by locking it in the safe in the Governor's office was seized and held

KENTUCKY

prisoner by the military, and a writ of habeas corpus requiring his delivery was refused for several days. A conspiracy was being laid down and a state of public order was produced. To save the State from actual anarchy and civil war, a conference of leaders of both parties was held at Louisville, February 10, and an agreement reached to withdraw troops from the capitol, to say the four states to meet there, and thereby to settle with promises to respect the choice of election day. Governor Taylor refused acceptance of the agreement. He dismissed the troops, however, on the 12th, and called the Legislature to meet at the capitol. The Democratic members of that body were holding meetings at Louisville, the Republican members at Paducah. The latter obeyed the call to Frankfort, while the former continued at Louisville, both fragments claiming to be the Legislature of the State. A petition to the United States Circuit Court for injunctions against the Democratic elements for contempt of the national laws was denied by Judge Ladd on the 14th.

On the 21st Republican and Democratic leaders came to an agreement that the constitutional question should be settled in the courts, first in those of the State, and then carried by appeal to the Supreme Court of the United States. This agreement prevailed, and the case, as between Governor Taylor and Governor Beckham, declared to be Governor by a majority of the members of the Legislature after Governor Goebel's death was peacefully adjudicated in favor of the latter. The Circuit Court of the State recognized the Legislature's decision of the question, but the Court of Appeals, with only one of three Republican judges dissenting, did the same April 6. On April 20 the case was argued on appeal before the Supreme Court of the United States, and on the 21st of May that tribunal decided that it had no jurisdiction. This ended attempts to dispute the authority of Governor Beckham.

Stronous efforts were being made to implicate his competitor, Mr. Taylor, as accessory to the murder of Goebel. Several persons had been arrested and put on trial for that crime, including Caleb Powers, the Secretary of State in Governor Taylor's fallen government, from the window of whose office it was claimed that the cowardly shot had been fired. The trials were scandalized by confessions of perjury and charges and counter charges of subornation on the part of witnesses. In August Powers was found guilty and sentenced to imprisonment for life. Subsequently Henry T. Yontsey received the same sentence, while James Howard was condemned to death. Appeals were taken in each case. Mr. Taylor, under indictment as an accomplice, had left the State, and a requisition for his rendition was refused by the Governor of Indiana, where he resided. He indignantly denied all knowledge of the alleged conspiracy to kill his competitor, but claimed that a fair trial could not be secured to him if he was placed in the power of his political enemies.

In October a new election law was passed by the Legislature and signed by the Governor. It provides that of the three State Election Commissioners one is to be taken from each of the dominant parties upon the recommendation of the State Central Committee, and the Clerk of

the Court of Appeals, an elective officer, is to act as umpire. The Commissioners are to be appointed by the Governor. They are to appoint the county boards, one from each party, with the Sheriff as umpire. All the boards are to have only ministerial powers, and the law gives the right of appeal in all cases of contests to the courts except in the case of Governor and Lieutenant Governor, which must be tried by the Legislature, as the constitution prescribes. The local law made the boards supreme. The new law also provides for an equitable division of election officers.

KLONDIKE GOLD FIELDS, The.—Many years ago gold was known to exist on the Yukon. The Hudson Bay Company's men tested the bars of the main river, and found 'the color,' but not in sufficient quantity to warrant working. The reason is, that, in the disintegration of the rocks by the smaller streams and the action of frost and melting snow, the metallic burden of the waters is dropped in the causeway of the smaller tributaries; only the finest float gold and the lighter sand and gravel being carried

as far as the Yukon itself. In 1880, five years of fruitless search on the main stream, chiefly by prospectors under the protection of the then-governor, Admiral Beardsley, U. S. N., who, at the head of Lynn Canal, crossed the mountains, proceeded to explore the head waters of the river, much being found at first in Canadian territory. The prospectors descended the river to a point near the lower end of the Upper Klamath. In this region lies the boundary, formed by one hundred and forty first degree west longitude from Greenwich. Here the Yukon receives from the southwest a tributary called Forty Mile Creek. A few miles of the lower part of this creek, including its mouth, are on the Canadian side of the line; the head waters, on which the gold is chiefly found—are, for the most part, on the American side. In this vicinity the most substantial deposits were discovered, many of which are still worked.

The site of the new diggings—which have produced an excitement recalling the 'Frisco River rush' of 1857—is on a stream tributary to the Yukon from the northeast, wholly in Canadian territory, and entering the main river about thirty miles eastward from the boundary. Here a mining camp, called Dawson City, after the head of the Dominion Geological Survey, has been established. The stream above referred to has been named the Klondyke, 'sooty' or 'reindeer'; on some of the older maps it is designated Reindeer River. It is said, however, that the name should really be Thonahk—a Tutch term meaning 'plenty of fish.' The existence of gold on this stream and its branches appears to have been first made known by Indians. One of the first prospectors to locate upon it with success was J. A. Carmichael, who staked out his claim in August, 1896, and with two helpers, in a few weeks, washed out over \$14,000.—*W. H. Dall, Alaska and the New Gold Field (Formo, Sept., 1897).*

KOREA: A. D. 1895-1898.—Nominal independence of Korea.—Japanese influence supplanted by Russian.—On the 7th of January, 1895, the independence of Korea (see (in this vol.) CHINA: A. D. 1894-1895) was formally proclaimed at Seoul. For a time, Japanese influence prevailed, and the party favorable to it controlled affairs. But Russian jealousy gave encouragement to the opposing faction, headed by the queen, and the latter succeeded at length in thwarting most of the aims of the Japanese. The result was a revolutionary conspiracy in October carried out by a murderous band which broke into the palace and killed three women, one of whom was supposed to be the queen. The assassins were dressed in Japanese costume, and were said to belong to the 'soshi,' or hired cutthroats of that country; but the Japanese government indignantly repudiated the crime, recalled and arrested its Minister, who was suspected of complicity, and forbade its subjects to enter Korea without special permission. Russian influence, nevertheless,

became dominant soon after, the king yielded to complicity and obtained ridance of opposing powers with Russian support. In the end, Russia and Japan came to an agreement, nominally establishing joint protectorate over Korea; but practically the Japanese seemed to be fairly satisfied with it.

In the later part of 1897, the Russian Minister at Seoul brought about the dismissal of an English official Mr. Brown, who had been the main adviser of the Korean government and its commissioner of Customs, putting a Russian in his place, and secured a written agreement that neither Russians or Koreans should fill that important post in future. The vigorous remonstrances of the British government, however, caused this action to be reversed.

Russia and Japan came to a new understanding in 1898 more favorable to the interests of the Korean King. This was embodied in a protocol signed at Tokyo on the 25th of April, 1898, the terms of which follow: "I. That the Governments of Japan and Russia, recognizing the sovereignty and complete independence of Korea, shall in no way directly interfere with the domestic government of that country. II. That in order to avoid past misunderstandings in the future, whenever either Japan or Russia is applied to by Korea for advice or assistance, neither contracting party shall take any steps toward the appointment of military instructors or financial advisers without previous consultation with the other. III. That Russia, recognizing the great progress made in commercial and industrial enterprises by Japan in Korea and the great number of Japanese subjects residing in the settlements, will do nothing to hinder the development of the commercial and industrial relations between Japan and Korea."—*U. S. Consular Reports, Aug., 1898, p. 591.*

A reform party had begun to manifest influence at this time, even aspiring to representative institutions in the government. Various progressive measures were undertaken. In 1898, the gold monetary standard was adopted; American engineers were engaged to plan roads, bridges, etc., and new ports were opened.

A. D. 1900. Strategic importance of Korea to Russia and Japan.—Japanese jealousy of Russian encroachments in Manchuria and its grounds. Considerable as are the material interests which Japan is building up in Korea, it is still from the strategical point of view that she is most deeply concerned with the future of the Korean peninsula, which, in the hands of a great military Power like Russia, would be a permanent threat to her safety. And the Japanese appear to be firmly convinced that, when once Russia is firmly seated in Northern China, she must inevitably seek to absorb Korea. In any other hands but her own the Korean peninsula would always be a wedge inconveniently driven in between her older acquisitions on the Pacific seaboard and her more recent acquisitions in the Gulf of Chifu, nor could she regard her strategical position in the Far East as thoroughly secured so long as she did not command one shore of the straits through which lies the natural waterway between her two naval bases at Vladivostok and at Port Arthur. . . . Port Arthur is situated practically on an inland sea to which the approaches can be dominated not only by positions already in the hands of other European Powers, such as Wei-lai-wei and Kiao-tsun, but by the Korean peninsula and islands as well as by the Japanese archipelago, from Tsushima down to Fukuoka. With Port Arthur as her main base Russia's position as a naval Power in the Far East would be subject to natural limitations not altogether unlike those which hamper her in the Black Sea and the Baltic.

Considered in this light the question of Russian aggrandisement in Northern China is so closely interwoven with that of the future of Korea that it must necessarily wear a much more serious aspect for Japan than for any other Power—so serious, indeed, that not a few Japanese deem the time to be close at hand when Japan should retort upon Russia in precisely the same terms which the latter used in 1897 and demand the evacuation of territories where her presence must be a permanent threat to the independence of the Chinese Empire and the peace of the Far East.—*London Times, Tokyo Correspondence, Dec. 27, 1900.*

LIBRARIES, The gifts of Mr. Andrew Carnegie to.—Of neither the manifold items nor the stupendous total of the gifts made by Mr. Andrew Carnegie for the founding or for the assistance of public libraries in America and Great Britain is there any authentic account; but a tentative record of them, compiled mainly from the news columns of the "Library Journal," and published, on the 17th of March, 1894, in the "Buffalo Illustrated Express," is probably not far from correct. It begins in 1881, with the founding of a public library at Glenferme, Scotland, the birthplace of Mr. Carnegie, who then gave for it \$40,000. Two years later, he is said to have given \$50,000 to a library at Inverness. In 1885 the New York Free Circulating Libraries were helped by him to the extent of \$5,000. In the following year his benefactions were raised to their largest scale by his gift of \$250,000 to the Free Public Library of Edinburgh; besides which he gave \$25,000 to the Workmen's Library of the Keystone Bridge Works, and smaller donations elsewhere. In 1889 he founded the Carnegie Library at Braddock, Pa., at a cost of \$300,000. In 1890 he con-

LIBRARIES.

gave, and \$275,000 to the founding of the Carnegie Free Public Library at Allegheny, Pa., which the Carnegie brothers asked to support; he replaced the Carnegie Library, which the great flood at Johnstown had destroyed, expending \$67,000 in that kindly work; he gave \$10,000 to a library at Fairfield, Iowa, and \$20,000 to another at Augusta, Me. Five thousand dollars to a library in Airdrie, \$50,000 to a new one at Avon, and \$2,500 to a third at Edinburgh, Scotland, are the gifts recorded in 1891 and 1892.

In 1893 Mr. Carnegie seemed to be crowning his munificence by the creation, at Pittsburg, of the great institution, combining library, art gallery, and museum, on which, between that year and 1899 he is said to have expended no less than \$8,500,000. In the same year he founded a small library at Wick, in Scotland. In 1897 the donations appear to have been small. In 1898 Dunfermline, in Scotland, received for a public library \$50,000 from his open purse, and \$250,000 went from it to the creation of the Carnegie Library at Homestead, Pa., the seat of the Carnegie works.

If the stream of Mr. Carnegie's bounty to public libraries had been a rivulet, it now, in 1899, began to pour like the fertilizing flood of the Nile, and that first twelvemonth of the amazing race was celebrated by American librarians, at the annual meeting of their Association, as "the Carnegie year." In reality, it but opened a series of "Carnegie years," which have filled the present time, and may still go on. As compiled by the "Express," supplemented by a later record in the "Library Journal" for April, 1901, the list of the library gifts and offers of Mr. Carnegie, from the beginning of 1899 until March, 1900, includes \$7,200,000, tendered to the city of New York for branches to its Public Library (see below); \$1,000,000 tendered to St. Louis; \$500,000 to the city of Washington; \$260,000 to Syracuse; \$125,000 each to Atlanta and Louisville; \$100,000, or \$150,000 (there seems to be uncertainty as to the sum) to Seattle; \$100,000 each to Richmond, Connecticut, Grand Rapids, Ottawa, Ont., and the State College in Pennsylvania; \$75,000 each to Lincoln, Neb., Springfield, Ill., Danport, La., Tacoma, Wash., and the Bellevue Medical College, N. Y.; \$50,000 each to San Diego, Oakland, Duluth, Sedalia, East Liverpool, O., Stenleville, Nebraska, Connellsville, McKeesport, Beaver, Beaver Falls, Tyrone, Pa., Clarion, Oil City, Fort Worth, Dallas, Cayuga, Dubuque, Ottumwa, Emporia College, East Orange, York, Coal Center and Wilkesburg, Pa., Chattanooga, Houston, San Antonio, Vancouver, B. C., Aurora, Ill., Lewiston, Me., Niagara Falls, Yonkers, Canton, O., Montgomery, Ala., Marion, Ind., Galesburg, Ill., Schenectady, N. Y., and Hawick, Scotland; besides a great number of lesser sums, ranging from a few hundred dollars to \$10,000. The total of the library gifts and proffers of Mr. Carnegie, from the beginning to March, 1900, is thought to exceed \$23,000,000.

To many other educational institutions Mr. Carnegie has been munificently generous, giving, for example, \$500,000 for the Manual Training School of Cooper Institute, New York; \$250,000 to Birmingham University; \$50,000 to the engineering Laboratory of Stevens Institute, Hoboken; \$50,000 to the Edinburgh Technical School, and making other gifts of like kind.

LIBRARY, NEW YORK PUBLIC.

LIBRARY, New York Public, Astor, Lenox and Tilden Foundations. Andrew Carnegie's offered gift.—The New York Public Library, Astor, Lenox and Tilden Foundations, was formed by the consolidation, etc.

23d of May, 1895, of the three corporations.—The Trustees of the Astor Library, originally incorporated January 18, 1849; The Trustees of the Lenox Library, originally incorporated January 20, 1870; and The Tilden Trust, originally incorporated March 26, 1887.

In the agreement for consolidation it was provided that the name of the new corporation should be "The New York Public Library, Astor, Lenox and Tilden Foundations"; that the number of its trustees should be twenty-one, to be selected from the thirty-three members of the separate boards; and that the said new corporation should establish and maintain a free public library and reading room in the city of New York, with such branches as may be deemed advisable, and shall continue and promote the several objects and purposes set forth in the respective acts of incorporation of "The Trustees of the Astor Library," "The Trustees of the Lenox Library," and the "Tilden Trust." . . . In December, Dr. John Shaw Billings, U. S. A. (retired), was chosen Director, but he did not enter fully upon his duties until June 1896.

At the time of the consolidation the Astor Library owned its site and buildings, had an endowment fund of about \$941,000, producing an annual income of about \$47,000, and contained 267,117 volumes. The Lenox Library owned its site and building, had an endowment fund of \$505,500, producing an annual income of \$20,500, and contained about 80,000 volumes. The Tilden Trust possessed Mr. Tilden's private library, containing about 20,000 volumes, and an endowment fund estimated at \$2,000,000, making the total number of volumes in the New York Public Library 373,117, and the total endowment fund about \$3,446,500. . . . The joint libraries now contain about 500,000 volumes and 175,000 pamphlets.

Immediately upon the completion of the consolidation of the three libraries, the city of New York was asked to provide a suitable building for the great institution contemplated, and the ground covered by the old reservoir, on Fifth Avenue, between Fourth and Forty-second Streets, was suggested as an advantageous site. The result of this appeal, which met with cordial public support, was that an act was passed by the legislature and approved May 19, 1897, giving the necessary authority to the city to issue bonds for the construction of a library building, the result of which was that on November 10, 1897, the plans prepared by Messrs. Carrère & Hastings, of New York City, were selected and approved, and were laid before the Board of Estimate and Apportionment of the City of New York on December 1, 1897. These plans were approved by the Board of Estimate and on December 8 a contract was entered into between the City of New York and the New York Public Library, by which the library building to be erected upon Bryant Park was leased to the New York Public Library. . . . The sketch plans provide for a building about 350 feet in length and about 250 feet in width from east to west, giving shelving for about 1,500,000 volumes and seating capacity for about 800 readers in the main reading room. . . .

LIBRARY, NEW YORK PUBLIC.

"Plans and specifications for the removal of the Forty-second Street reservoir and laying the foundations for the new building having been approved the contract for this work was awarded to Mr. Eugene Lenthien, and the work of removing was begun on June 6th, 1890. — *Handbook to the New York Public Library*, 1900.

In October, 1900, it was stated in the newspapers of the city that Mayor Van Wyck, Controller Coker, and the other members of the Board of Estimate had come to an understanding regarding the consolidation of all the libraries of the Greater New York under the New York Public Library. It was announced officially that all the smaller libraries would be allowed about the same amount of money for maintenance this year as was allowed last year. A practical plan of consolidation will be perfected, and when the matter comes up before the Board of Estimate next year it was agreed that the libraries would be put under one head. . . . It is proposed to spend \$5,000,000 on the New York Public Library now in course of erection in Bryant Park on the site of the old reservoir. It will be four years before the building can be completed. Controller Coker's idea is to gradually merge the smaller libraries so that when the new building is completed New York will have the largest and best equipped library for sending out books of any city in the world.

On the 13th of March, 1901, Mr. Andrew Carnegie addressed the following letter to Dr. Billings, the Director of the New York Public Library, making a proposal of unparalleled munificence: "Dear Dr. Billings: Our conferences upon the needs of greater New York for branch libraries to reach the masses of the people in every district have convinced me of the wisdom of your plans. Sixty-five branches strike me at first as a very large order, but as other cities have found one necessary for every sixty thousand or seventy thousand of population, the number is not excessive. You estimate the average cost of these libraries at, say, \$80,000 each, being \$5,200,000 for all. If New York will furnish sites for these branches for the special benefit of the masses of the people, as it has done for the central library, and also agree in satisfactory form to provide for their maintenance as built, I should esteem it a rare privilege to be permitted to furnish the money as needed for the buildings, say, \$5,200,000. Sixty-five libraries at one stroke probably breaks the record, but this is the day of big operations, and New York is soon to be the biggest of cities. Very truly yours, ANDREW CARNEGIE."

In communicating this extraordinary proposal to the New York Public Library Board, Dr. Billings made the following statement of the plan contemplated in the suggestions he had made:

In the conferences referred to by Mr. Carnegie the suggestions which I have made have related mainly to a free public library system for the boroughs of Manhattan and The Bronx. I have stated that such a system should include the great central reference library in Forty-second st. and Fifth ave., about forty branch libraries for circulation, small distributing centres in those public school buildings which are adapted to such purpose, and a large travelling library system operated from the central building. Each of the branch libraries should contain reading rooms for from 50 to 100 adults and for from 75 to 125 children and in these reading rooms should be about

LIBRARY OF CONGRESS

500 volumes of encyclopedias, dictionaries, atlases and large and important reference books. There should be ample telephone and other arrangements between the branches and the central library.

To establish this system would require at least five years. The average cost of the public libraries I estimated at from \$75,000 to \$125,000, including site and equipment. The cost of maintaining the system when completed I estimated at \$500,000 a year. The circulation of books alone in these boroughs should amount to more than 5,000,000 of volumes a year, and there should be at least 500,000 volumes in the circulation department, with additions of new books and to replace worn out books of at least 40,000 a year.

With regard to the other boroughs of Greater New York I have made no special plans or estimates, but have said that about twenty-two libraries would be required for them.

LIBRARY OF CONGRESS, at Washington.—The new building.—"By the act of April 15, 1886, the present site, one quarter of a mile south of east from the Capitol, was selected as acquisition by the United States provided for, and the construction of a building authorized. During this long period of discussion many schemes for attaining the desired end, including a variety of plans for enlarging and occupying the Capitol and many different sites in the city of Washington, were considered. Several times did the legislation reach an advanced stage and fail through the pressure of more absorbing interests. Finally the law referred to adopted sketch plans that had been prepared by Messrs. Smithmeyer and Pelz, a firm of Washington architects, but it fixed no limit of cost, nor did it specify the materials of construction or character of execution of the design other than to stipulate that the building should be fireproof. A commission, composed of the Secretary of the Interior, the Librarian of Congress, and the Architect of the Capitol, was designated to conduct the construction of the building. The site, comprising two city squares—nearly nine acres, within the city building lines and with the included streets—was purchased of the private owners, the ground cleared of some seventy buildings occupying it, and by the summer of 1888 about one-half of the foundation beams for the building were laid. During the year, however, Congress became dissatisfied with the progress that had been made and the uncertainties involved in the operation of the inadequate original law, and accordingly, on October 2 modified it and lodged the entire control of the work, including the preparation of new plans at a limited cost, in the hands of Brig. Gen. Thomas Lincoln Casey, Chief of Engineers of the United States Army. He immediately placed the writer in local charge. On March 2, 1889, Congress enacted that the building should be erected at a total cost of \$8,500,000, including previous

expended, according to a plan that had been prepared and is limited by General Casey, purchased in the previous act of October 2, 1888. The plan was based on that adopted by the architect and provided a building of similar form, dimensions, and architecture. The project provided the principal materials of construction and a detailed estimate of the cost. For these purposes operations were begun in the spring of 1889 where the operations had left off in 1888, and the construction thence proceeded without interruption until the building was finally completed, in the spring of 1897. It was 170 feet in length by 340 feet in width, having three stories and a sub-basement, and fronts west toward the Capitol. . . . The foundation of the building are of hydraulic cement concrete, 10 feet deep in ground which is a mixture of clay and sand of very uniform character. The exterior walls are of hard red brick; the exterior face of the superstructure of a fine grained granite from Concord, N. H.; the stone of the rotunda and the trimmings of the east wall is a light blue granite from near Woodstock, Md.; the facing of the court walls emanates from Leeds, England; and the backing and interior walls as well as all of the vault floor of the basement and first stories are of hard red brick. Most of the floors that are flat ceiled are of terra cotta, and this material also forms the covering and filling of the roofs and main dome, of which the supporting members are of round steel in beams, girders, and trusses. All of the floors are leveled up with concrete and surfaced with tiles, terrazzo, or mosaic in the public spaces while in the office and working rooms they are covered with a carpet of southern pine boards. The most important of the strictly useful features of the building are the book stacks, of which the design is largely original. The problem was new, not only through the capacity to be provided but the numerous other conditions to be met, such as light, ventilation, adaptability to several uses, communication, resistance from fire, cleanliness, durability, and simplicity. It was also necessary that rapid mechanical transmission of books between the shelving and the reading room should be provided coupled with a quick and reliable means of communication, both written and oral. . . . The book carrier is a pair of parallel, endless chains running in a vertical shaft in the middle of the stack, thence in a horizontal duct in the ceiling, up into the central desk of the reading room where it turns upward and ascends vertically to the delivery outlet at the desk. A series of equidistant book trays, eighteen in number, are suspended between the chains. The reading room continuously and automatically takes on and delivers books of the size of a quarto or less at its reading room terminal and returns them to the stack stories. The speed of the carrier is about 100 feet per minute. The pneumatic message tube is also convenient as a peak facility. . . . The great rotunda or public reading room of the building, the main staircase hall or foyer, the private reading rooms for the members of Congress, the Librarian's office, the corridors communicating with these, and the exhibition hall, as well as many portions of the exterior walls, especially the west main pavilion, have received a good degree of artistic treatment and embellishment, but all within strict architect-

tural requirements. Some forty sculptors and mural painters, about equally divided in numbers, furnished the principal works of art under the architect's supervision and direction. Many appropriate quotations and names are inscribed on the walls in the architectural tablets, friezes and panels, adding to the general impressiveness and interest of the building. In all ways and from all points of view the library building is eminently instructive as an example of good design, good appointment for its great purpose, good building and good administration in the execution, and therefore the more appropriate to house the nation's library. The unusual success of the undertaking under Government auspices is almost wholly due to the selection of a known competent, sturdy, and faithful individual such as General Casey was, and giving him the sole charge directly under Congress, with an executive superior liable to interfere and cause delays. The work went on quietly, but with energy, and was completed within the originally estimated time and well within the legal limit of cost. The total cost of the building was \$6,344,585.34—that of the site, \$85,000. —Bernard R. Green, *The Building for the Library of Congress* (*Annual Report Smithsonian Institution, 1897*, p. 625).

LIKIN, The Chinese taxes called.—Old Chinese tariff rates, where they exist, average about 5 per cent ad valorem. Many articles are admitted free of duty, and on some the rates are higher than 5 per cent, but in general terms this is about the average rate. To this, however, there is a material addition where the goods are intended for interior points. The Chinese Government, while it collects a part of its revenue from customs, relies largely upon the provinces to supply revenue, and arbitrarily names each year the sum which each province must supply, leaving to the officers of that province the methods by which this is obtained. The consequence is that each province is permitted to collect a tax on goods entering it from the adjacent provinces, and this custom has been extended to the subdivision of the provinces, so that goods in transit are frequently compelled to pay taxes every few miles. As a consequence, the interior taxes, known as 'likin,' became not only the terror of importers, but sometimes almost prohibitory. So serious was this system in its effects upon attempts to introduce foreign goods that, upon the insistence of foreign ministers, the Chinese Government announced that an addition of 50 per cent to the rates paid at the custom houses would insure passage of the goods to any point in the interior without the exaction

of likin taxes. This was gladly accepted by foreigners desiring to do business in the interior of China. The additional 50 per cent on duties was paid and transit passes issued for the goods in question, purporting to authorize their free transit to any point in the Empire. Actual experience, however, shows that these transit passes do not always accomplish what was expected. . . . Every 8 or 10 miles along the principal waterways or caravan routes a likin station is found, where a tax is levied upon some article or articles carried through by boat, pack animal, or wheelbarrow. At some points every article is taxed. This is the usual rule at the gates of cities. In some cases the tax is as little as 2 per cent ad valorem; in others, such as silk, satin, and native opium, much more, amounting at times to 6, 8, or even 10 per cent. Between Shanghai and Soochow, a distance of 84 miles, there are 8 likin stations. At the first and last stations all goods are dutiable; at the rest all goods must be examined, and there is scarcely a single article that does not in that distance pay at least three taxes. It is easily seen that under such a system foreign goods cannot be carried very far from the coast before their prices become prohibitive for ordinary people.—*United States Bureau of Statistics, Monthly Summary, March, 1899, pp. 2188, 2231.*

LONDON: A. D. 1894.—The Tower Bridge.—The Tower Bridge was formally opened on the 30th of June, eight years after the beginning of the work. Its cost was £1,200,000.

A. D. 1897.—Great fire.—On November 19, 1897, occurred one of the largest fires in London since 1666. Beginning in Aldersgate it spread over six acres of a densely populated quarter, destroying over 100 warehouses and buildings. The loss was estimated at £2,000,000.

A. D. 1899.—The London Government Act.—The London Government Act is the most important measure passed by Lord Salisbury's Government during the year 1899; indeed, in some respects it is the most valuable reform since the Parliament which expired in 1900. There was urgent need for such a measure. The machinery of London Government was hopelessly out of gear. It was both cumbersome and inefficient. It was controlled by a network of small local authorities whose duties were ill-defined and clashed with each other. There was no uniformity or harmony in the system. The old Roman wall, built somewhere between A. D. 350 and A. D. 370 . . . played a most important part in the history of London; and, indeed, it had a large share in creating the problems with which Mr. Balfour had to deal in 1899. Each citizen's unknown builder dream that his wall, so admirable in itself, would cause no trouble fifteen centuries after his death. But such is the fact. He was a wise man, this nameless benefactor of the infant municipality; he took care that the wall should be thoroughly well built; and he allowed, as he thought, ample room for later growth. The exact position of this wall is well known to antiquaries. Many portions of it still remain. It included in its ambit about a square mile of territory, with wells and trees, gardens and pastures bordering on the great Roman roads. For a thousand years or more this area was sufficient for all purposes. . . . So far as we now can guess, it was not till the 16th century that any Londoner felt cramped within the wall and craved more elbow room. Gradually the City expanded, and at first it incorporated its extramural parishes, such as Bishopsgate and Farringdon Within. The borough of Southwark was supposed for some purposes to be annexed to the City; it was till last year by a fiction regarded as a ward of the City—the ward of Bridge Within. To this extent, then, the City spread outside its wall. But here its natural expansion stopped. The City proper remained a compact town, well organized and well governed, but the suburbs were treated as mere country villages, the only local authority was the parish vestry, and its only officers the churchwardens and the overseers.

This state of things obviously could not last. It soon became impossible for the parish vestry to assemble in the vestry, no room, and no time.

LONDON.

Use one parish and then another for an Act creating what vestry, and in my present parish I am joined with diverse and other powers. Where the parish is a select vestry in this regard, under which several manor parishes are included. And so when the London Vestry Act was passed there were 78 vestry parishes within the limits of the City of London.

The vestries and boards were the sanitary authorities in their respective areas, they superintended the cleansing and the lighting of the streets, and the cleaning of the streets, and the removal of some minor works of drainage.

In 1855 the Metropolitan Board of Works was created to carry out drainage, to carry out improvements in the streets and bridges and to manage and manage the Fire Brigade. But its powers were limited on a vicious system, by the vestries and boards, and not directly by the ratepayers.

Its place was taken in 1888 by the London County Council. But before the vestries, local boards, district boards, and Metropolitan Board, it was deemed necessary to create many minor authorities for various pressing needs, such as the Metropolitan Asylums Board, the Thames Conservators, the Ten Conservators, the Metropolitan Board of Works, the Metropolitan Board of Health, the Metropolitan Board of Guardians and the Metropolitan School Board. As the population of London grew its existing institutions, the deficiencies and shortcomings were remedied by patch work.

From this position of affairs we have been relieved by two important measures. The Local Government Act, 1888, and the London Government Act, 1899. The Local Government Act of 1888 abolished the Metropolitan Board of Works, it created the administrative county of London, it called into existence the London County Council. The London Government Act 1899 has done still more for London. It has abolished some 127 local authorities, whose place was taken by the 28 borough councils which must be elected on November 1. The London County Council, the City Corporation, the Metropolitan Asylums Board, the boards of guardians, and the London School Board remain untouched. But 73 vestries, 12 district boards, the Woodwich Local Board of Health, the 12 district boards, 12 burial boards, 10 boards of library commissioners, and 10 boards of baths and washhouses commissioners, for all purposes of local government, cease to exist.—*London Times*, Oct. 16, 1900.

LOUISIANA: A. D. 1898. New State Constitution. An educational qualification of the suffrage which applies to all negroes and few whites. The framing of a new constitution for the State was completed in May. Its distinctive feature is in educational qualification of the suffrage which does not apply to men who were qualified in any State to vote at the beginning of the year 1867, nor to the sons and grandsons of such men, nor to foreigners naturalized before the 1st of January, 1898. The amendment is as follows:

"Sec. 3. He (the voter) shall be able to read and write, and shall demonstrate his ability to do so when he applies for registration, by making, under oath administered by the registration officer or his deputy, written application therefor, in the English language, or his mother tongue, which application shall contain the essential facts necessary to show that he is entitled to register and vote, and shall be entirely written, dated, and signed by him in the presence of the registration officer or his deputy, without assistance or suggestion from any person or memorandum whatever, except the form of application herein after set forth. Provided however, that if the applicant be unable to write his application in the English language, he shall have the right, if he so demands, to write the same in his mother tongue from the dictation of an interpreter, and if the applicant is unable to write his application by reason of physical disability, the same shall be written at his dictation by the registration officer or his deputy, upon his oath of such disability. The application for registration, above provided for, shall be a copy of the following form, with the proper names, dates, and numbers substituted for the blanks appearing therein, to wit:

"I am a citizen of the State of Louisiana. My name is — I was born in the State (or country) of —, parish (or county) of —, on the — day of —, in the year —. I am now — years — months and — days of age. I have resided in this State since —, and am not disfranchised by any provision of the constitution of this State.

"Sec. 4. If he be not able to read and write, as provided by section 3 of this article, then he shall be entitled to register and vote if he shall, at the time he offers to register, be the bona fide owner of property assessed to him in this State at a valuation of not less than \$300 on the assessment roll of the current year, if the roll of the current year shall then have been completed and filed, and on which, if such property be personal only, all taxes due shall have been paid.

"Sec. 5. No male person who was on January 1, 1867, or at any date prior thereto, entitled to vote under the constitution or statute of any State of the United States, wherein he then resided, and no son or grandson of any such person not less than 21 years of age at the date of the adoption of this constitution, and no male person of foreign birth, who was naturalized prior to the first day of January, 1898, shall be denied the right to register and vote in this State by reason of his failure to possess the educational or property qualifications prescribed by this constitution.

LOUISIANA.

Provided, He shall have resided in this State for five years next preceding the date at which he shall apply for registration and shall have registered in accordance with the terms of this article prior to September 1, 1898, and no person shall be entitled to register under this section after said date.

LYNCH LAW, in the United States. Statistics, compiled by the Chicago Tribune, of the cases of mob murder, called lynchings, which were reported in the United States as having occurred in the United States during the year 1899, showed a total of 117, being 20 less than a similar record for 1898, as shown. Of the reported cases 3 were in Massachusetts, 1 in Pennsylvania, and 103 in Southern States. Georgia led in the latter list, being charged with 20 executions under lynch law. Mississippi followed with 11, Louisiana with 13, Arkansas with 11, and other States of the South with 58 numbers. Of the victims (mostly colored) 44 were accused of murder, 11 of complicity in murder, 11 with rape or attempted rape, 1 with rape and murder.

The "Political Science Quarterly," a Record of Political Events between November 11, 1897, and May 10, 1898, cites 31 instances of lynching, exclusive of a mob murder committed at Lake City, South Carolina, where a negro postmaster and one of his children were killed, his wife and three other children wounded and their house burned down. Of these incidents 26 were reported from the South, the victims in every case being black, 8 were from northern States, the victims being white.

For 1897, the "Buffalo Express" compiled statistics of reported lynchings from its news columns, which showed 38 between January 1 and June 8, and 77 during the remainder of the year, making a total of 115.

MADAGASCAR.—The island of Madagascar, which stretches through more than thirteen degrees of latitude, in close neighborhood to the eastern African coast, opposite Mozambique, though often called "the great African island," is more Malayan than African in its population. The dominant tribe is the Hova. For more than a century the French have been covetous of the island, and since 1883, when they opened war with its Hova rulers, they have pursued a steady policy toward the end of making it their own. The result of the war of 1886 was a treaty under which the French claimed a certain protectorate or control of Malagasy foreign relations, a claim concerning which there remained much dispute. In 1890 the British government recognized the French protectorate, but the native government continued steadily to refuse acknowledgment that the treaty had given any such rights.

Subjugation of the island by the French.—Anti-foreign and anti-Christian risings. **Revival of idolatry. Final possession of the island by France proclaimed. Submissive Declaration of the Queen.** In 1894 the French took successive measures looking to well as to the domination of the island, and early in 1896 a large expedition under General Duchesne was sent to the coast. The Malagasy were frightened and hid themselves, and they were beaten and killed in war. They made feeble resistance, and the French, but the latter had a superior military campaign, notwithstanding, the nature of the country and the numerous obstacles which they were obliged to overcome as they advanced. They are said to have killed 200 men killed in action, but 6,000 by disease. They reached Antananarivo, the Malagasy capital, at the end of September. "In the morning of the arrival of General Duchesne a meeting was held by the Malagasy authorities, by which the whole power of the country was ceded to the French. The queen remained in her place, but the Hova Prime Minister was also allowed to be commonly at the head of affairs. Poorly arranged, the Prime Minister had been a usurper of power for too long a period to accept a subordinate position, and General Duchesne was forced to remove him. Accordingly, he was placed in a house of his own at a short distance from the capital, where he was kept under strict guard for two or three months, but as he was supposed to be plotting he was deported to Africa, in which country he died after a very short time."

It seemed at first as if the change of masters in the island was to be accomplished without any serious disturbance. In the early part of November, 1896, however, this satisfactory state of affairs was rudely interrupted. A paltry quarrel between two clans about a piece of ground, which had been gradually developed into a serious feud. The two parties came to an understanding by agreeing to make an attack upon the Europeans. As soon as General Duchesne was informed of what had been happening to the south-west of the capital, he sent a column with orders to punish the insurgents and to pacify the district. The resistance on the part of the natives was vigorous, and for a time well sustained. Discipline and order, however, were more than a match for all their efforts, and after a loss of about 150 men they desisted. One distressing feature in the insurrection was the revival of idolatry, which was thought to be extinct in Imerina, but which evidently has been neglected and not killed. Almost the first move on the part of the rebels had been to reinstate a priest called Ravaloman, and the performance of certain acts of worship in the presence of the idol was considered the mark of a good nation. Naturally under these circumstances the teachers and the more prominent Christians in the various churches and chapels were objects of dislike and hatred, and in the districts where these men with their wives and children had to fly for their lives. It is useless to draw eyes to facts, a considerable number of those who were held in esteem by the masses were obliged to spend the rest of their lives in a state of guilt of actually worshipping the idols, or to live in league with those who did

so. After the suppression of this first outbreak matters remained quiet in Imerina for some months.

The next serious event in the island was a outbreak of a different character. With the exception of the Hova, few if any of the tribes were thought to be opposed to French rule. The Hova were as much hated as they were feared, and from whatever quarter it might come, release from their rule would be welcome. The arrival of the French was the long wished-for moment, but news spreads slowly in Madagascar, and though the Hova power came to an end at the beginning of October, it was not realized on the coast until the new year [1896]. When, however, it was known that the French were masters of the country, the explosion came. The two large tribes of the Betsimisaraka and the Bemelo on the east rose against the Hova, and ruthlessly killed them wherever they could catch them. The buildings used as churches and schools were also burnt, for as the greater part of the teachers came from Imerina, religion and education were associated with the Hova. In one or two instances Europeans were murdered, but only when they were mixed up with the Hova. F. A. Gregory, *The French in Madagascar in the Twentieth Century*, Jan., 1897.

Formal possession of the island was now proclaimed, and, on the 18th of January, 1896, the submissive queen signed the following "Declaration": "Her Majesty the Queen of Madagascar, having been made acquainted with the Proclamation taking possession of the Island of Madagascar by the French Government, declares her acceptance of the following conditions:

"Art. I. The Government of the French Republic shall be represented at the Court of Her Majesty the Queen of Madagascar by a Resident General."

"Art. II. The Government of the French Republic shall represent Madagascar in all relations with foreign Powers. The Resident General shall be intrusted with the conduct of relations with the Agents of foreign Powers, and all questions affecting foreigners in Madagascar shall be dealt with through him. The French Diplomatic and Consular Agents abroad shall be charged with the protection of Malagasy subjects and interests."

"Art. III. The Government of the French Republic reserve to themselves the right of maintaining in Madagascar the armed forces necessary for the exercise of their authority."

"Art. IV. The Resident General shall control the internal administration of the island. Her Majesty the Queen of Madagascar undertakes to introduce such reforms as the French Government shall deem expedient for the economic development of the island and for the advancement of civilization."

"Art. V. The Government of Her Majesty the Queen of Madagascar undertake to contract no loan without the authorization of the Government of the French Republic. (Signed) RANAVALOMANJAKA, *Queen of Madagascar*."

On the 11th of February the following "Notification" was officially communicated to all the Powers: "In consequence of difficulties which have arisen in Madagascar the Government of the Republic, in the exercise of their Protectorate, have been obliged to intervene by force of arms in order to make their rights respected, and

to obtain guarantees for the future. They have been allowed to occupy the island with small troops, and to take final possession thereof. *Annals of the British Parliamentary Public Affairs (L'opinion publique en Angleterre)*, No. 8, 1897.

About his time, M. Laroche, the first Resident General, arrived at the capital and began to organize the government of the country. A new Prime Minister was appointed, in whose name laws were to be issued. But it had been settled that the administration should be indirect, that is to say conducted through the medium of the natives. A considerable number of regulations were promulgated affecting the development of the industries of the country, the granting of concessions, and the education of the natives. Most of these were much too elaborate to be useful, and up to the present time nearly all of them have remained a dead letter. Some may be useful when the insurrection has been quelled, when the country is such as to invite capitalists, and when schools have been re-established. In March there were again signs of trouble, though at first these were faint and perhaps too far off to attract the serious attention of the authorities.

A petty disturbance in the beginning, fomented for private purposes and fostered by an appeal to patriotic feeling, has developed into a formidable insurrection. I say formidable, but I do not mean to give the idea that the insurrection is formidable from a military point of view.

But from industrial, educational, and religious points of view, the rebellion has been a complete success, and however soon it may be suppressed, the progress of the country in some parts has been thrown back for years, a large tract reduced to desolation, and the inhabitants to little better than savages. This destruction has been effected in five months, for beginning in May, it has spread over the whole of Avondranono, Vozizongo, part of Imarovatana, and Vakinankaratoa, four out of the six divisions of Imerina. . . . To mark the anti-European character of the rising, the churches were burnt without distinction, and in some places leper hospitals were destroyed, and their unhappy inmates rendered homeless. The English and Norwegian missions have suffered the most severely. It is impossible to estimate correctly the number of churches and chapels that have been burnt, but at the lowest computation it must amount to 600. . . .

As in the West, idol worship was practised, the idol in this case being Ramahavaly, the war god or goddess; the pillaging of houses and property became almost universal, and soon it came to pass that no one was safe unless he either joined the insurgents or paid them to leave him unmolested.

The greatest move in the organisation of the country is the abolition of slavery throughout the island. This was proclaimed in the official gazette issued on the 27th of September (1896) by decree of the Resident General. It was wholly unexpected at the time, though there had been rumours two or three months previously to the effect that the step was contemplated, but would be effected gradually. Naturally, it fell upon the Hova like a clap of thunder, and, as the law was published on a Sunday, some worthy folk found themselves, on their return from service, with a slave free on their hands. . . . It would have been better to have proceeded more slowly

to the desired end; to have made all children free after a fixed day free, and to have made the redemption of the rest, either by those who could, or others, cheap and easy. However, it has been decided otherwise, and certainly the state of the country is such as to justify any measure, when everything is in a state of anarchy, the exact amount of pressure is of small importance. In addition to this it must be remembered that, in consequence of the outbreak, Madagascar has been declared a French colony, and that the struggles with it the abolition of the status of slaves. While, then, the greater number of Europeans who know Madagascar would have preferred that slavery should have been abolished by degrees, few would be prepared to say that it was altogether a mistake. — F. A. Gosselin, *The French in Madagascar (Nineteenth Century)*, Dec. 1897.

An Act for the annexation of Madagascar was passed by the French Chamber and Senate in the early summer of 1890, with a declaration for the immediate abolition of slavery. In the following year Queen Ranavalomanjaka was banished from the French Island of Réunion, and in 1890 she was removed to a more distant and more cruel exile in Algiers.

MANCHURIA.

A. D. 1900-1901. Chinese Boxer attack on the Russians and savage Russian retaliation. Russo-Chinese negotiations concerning the province.

Chinese negotiations concerning the province. The Boxer at Peking and Peking. In the early summer of 1900, the Chinese government, under the influence of the Boxers, made an attack on the Manchurian line of the Trans-Siberian Railway. The Russian government appears to have been very much surprised. Professor G. Fredericks, who was travelling in Manchuria at the time, gives a very interesting account of what he saw.

At the station at Blagovestensk, in a letter to the New York Times, the Chinese fort on the Manchurian side of the Amur, he writes, "on the 14th of July, he was surprised to find upon passing steamboats and on the shore were captured upon Blagovestensk, the Russian villages were burned opposite the Chinese. The Russian inquiry into the Chinese, but the terror caused by the Chinese, and it drove the Cossacks into a panic. The peaceful Chinese, to the number of 5,000 or 4,000, in the city were expelled, and being forced upon rafts on the river, and were most of them drowned in attempting to cross the river. Three days after we sighted hundreds of them in the water. Through the country to reach the city, the first day, we saw as many as thirty villages and hamlets of the Chinese in flames. One of them was a city of 5,000 or 10,000 inhabitants. We estimated that we saw the dwellings of 100,000 Chinese in flames that awful day. Many parties of Cossacks were scouring the country, and shooting them down as they fled. What became of the women and children, we do not know, but there was apparently no way for them to escape to a place of safety. On our way up the river for 500 miles above the city, every Chinese hamlet was a charred mass of ruins. The large village of Motcha was still smoking, and we were told that 4,000 Chinese had been killed. We do not mention these facts to show prejudice against the Russian authorities, but against the Cossacks. This work of devastation has not been ordered by those high in authority. It is rather the result of mob violence such as instigates the promoters of lynch law in the Southern States, or, more nearly, such as has from time immemorial animated the pioneers in America against the Indians. The wholesale destruction, both of property and of life, was thought to be a military necessity. The wives and children of the Cossacks were in terror."

Russian troops were poured into Manchuria in vast numbers, and however much or little there may have been of the Boxer movement, it was crushed with merciless rigor. A letter from the Manchurian treaty port of Niu-chwang, on the Yellow Gulf, written August 13, to the "London Times," describes the Russian occupation of that town and region, in the previous week. After some 1,500 or 2,000 Chinese soldiers and civilians in flight from the town, had been intercepted and killed, "the Russian general," says the writer, "was about to order a general assault on the town when the foreign residents interceded,

as there were no longer any soldiers or Boxers left. He decided to suspend the attack, as it was impossible to destroy the town. There were no soldiers or Boxers left. Some of the men went down into the city, and by holding the principal merchants, who were saved, until 40 a.m. to deliver up all the guns in the town.

Thus of course they could not and did not so some foreign residents offered to enter the city with the Russian soldiers, and protect them from occupation. This offer was accepted, and the town was spared the horrors of life, though there was a certain amount of looting, and a few people were bayoneted in the evening houses. Outside the walls many women and children were killed, and from all sides were heard reports of violation of women. There is no possible doubt about the truth of these reports. The Russians are carrying out a policy of destruction of property and extermination of the people. Kadchen, the district city, 24 miles south of this port, and nearly all the villages have been burnt and the inhabitants killed. The soldiers, both infantry and Cossacks, have been allowed to do what they like for some days.

The same correspondent goes on to say: "The Russians hoisted their flag at 7 a.m. on August 4. Neither in the attack and bombardment of the town nor in hoisting their flag did they consult any of the foreign Consuls or the commanders of the two Japanese gunboats in port. Admiral Alexeff arrived on the 5th and issued a circular announcing the occupation of the treaty port by Russian military forces."

What the other Powers will say to the seizure of a treaty port and hoisting of only one flag remains to be seen. The "one flag" seems to have been still waving over Niu-chwang as late as the 14th of February, 1901, since a member in the British House of Commons, on that day, arraigning his government for want of vigor in China, said that "though British people traded with Niu-chwang to the extent of three millions sterling a year, the port was now under the civil and military administration of Russia alone. He should like to know what undertaking his Majesty's Government had obtained that Russia would speedily evacuate Niu-chwang, and that the administration of the port would revert to the hands of the Chinese Government."

A few days later the Under Secretary of State for Foreign Affairs, Viscount Cranborne, said in reply to this statement: "We made proper inquiry from our representative, and he assured us that any agreement which exists between Russia and China in respect to Manchuria is in the nature of a 'modus vivendi,' consisting merely in the simultaneous presence of the Russian and Chinese forces in Manchuria, and in order to prevent disturbances on their frontier. He assured us that the occupation of the railway is of a purely temporary character, and that although a guarantee is expected by the Russian Government that upon their withdrawal the disturbances shall not break out again, yet that guarantee will not take the form of an acquisition of territory or of a virtual or actual protectorate in Manchuria. In respect to Niu-chwang we have received assurances at least equal to those which have been given us in respect to the province of South Manchuria. We understand the Russians are prepared to restore Niu-chwang at the end of

their occupation precisely to his former condition.

For the time being, however, the Russians seem to have established in practice a very real protectorate over the province of Fêng tien, in Southern Manchuria, by an agreement between the Russian governor of the territory leased from China in the Liaotung peninsula and the Chinese Tartar general of Fêng tien signed on the 11th of November, 1900. The general terms of this agreement were reported late in December, and excited much uneasiness as to Russian designs. The full text was communicated to the "London Times" in the February following by its Peking correspondent, with the information that the Tartar general who signed it, in transmitting a copy to Li Hung chang, "states that grief pierces his very soul, but what alternative has he?" The agreement required the Tartar general to disband his troops and disarm them, on account of the rebellions which had occurred among them; to deliver up all munitions of war and dismantle all forts and defences, and to give full information of all important measures taken by him to a Russian resident who should be stationed at Mukden, with "general powers of control."

Late in February, 1901, it was ascertained that the Russian Minister at Peking, M. de Giers, was negotiating a more definite and binding convention relative to Manchuria with the Chinese Imperial government, as represented by Li Hung chang, and, on the 7th of March, the Peking correspondent of the "London Times" telegraphed to that journal what claimed to be a translation of the full text of the treaty, as follows:

"I. The Emperor of Russia, being desirous to manifest his friendly feelings, agrees to restore Manchuria completely to China without keeping in mind the fact of the recent warfare in that province. The Chinese administration shall be restored in all respects to the status quo ante."

"II. China, granted to the railway company, as stipulated in Article VI. of the Eastern China Railway Concession, the right of guarding the line with troops, but the country being still in disorder and the number of troops being insufficient, it has been found necessary to station a body of troops in the province, which will be withdrawn as soon as peace and order are restored and the provisions of the last four articles of the present convention are carried out."

"III. In case of emergency, the Russian troops stationed in the province shall render all possible assistance to China to suppress any disturbances."

"IV. The recent attacks against Russia having been conducted principally by regular troops, China agrees not to organize any army before the completion of the railway and the opening thereof for traffic. When China subsequently organizes her military forces, the number of troops shall be fixed in consultation with Russia. The importation of arms and ammunition into Manchuria is prohibited."

"V. In order to safeguard the province, China shall immediately dismiss such Governors General and high local officials as have committed improper acts in connexion with foreign relations against which Russia would protest. China recognizes her duty and capacity in Manchuria for police purposes, but the number shall be fixed in consultation with Russia. Artillery

should be excluded, and any soldiers or military subjects of any other Power employed in Manchuria shall be subject to the exercise of functions."

VI. China, as previously agreed, shall employ the subjects of any other Power for her naval and military forces in the leased provinces."

VII. In order to maintain peace in the leased provinces, the local authorities residing in the neutral zone province of Fêng tien, and the subjects of the convention relative to the leased territory of Liaotung, shall be established in positions suitable to the circumstances, and shall relinquish the administrative functions of the province, which is reserved to China by Article VI. of the special convention."

VIII. China shall not grant, without the consent of Russia, to any other Power, except subjects advantages relative to navigation, commerce, or other matters in the Russo-Chinese provinces, namely Manchuria, Mongolia, Kashgar, Yarkand, Khodan, and Turkestan. China shall she consent her own railways, and other provinces without the consent of Russia. Rights of land outside Niu chwang shall not be granted to the subjects of any other Power."

IX. China, being under obligations to pay the war expenses of Russia and the claims of various other Powers, the amount of Russia's indemnity, and the terms of payment and security for it, shall be adjusted conjointly with the other Powers."

X. Indemnities shall be paid and compensation granted for the destruction of railway property and to the employees of the company. Losses accruing from delay in the work shall be adjusted between China and the railway company."

XI. When the indemnities for the various damages shall have been agreed upon between China and the company the whole or part of the amount of such indemnities should be met by advantages other than pecuniary compensation—that is, either by revision of the existing agreement relating to the railway or by the grant of new advantages."

XII. China shall, as previously agreed, grant to Russia a concession for the construction of a railway from the main or branch line of the Manchuria Railway towards Peking and to the Great Wall."

Notwithstanding the very positive agreement contained in the first article of this treaty that the Emperor of Russia will "restore Manchuria completely to China," the publication of its terms excited new and greater distrust of the designs and the action of the Muscovite Power. It was seen that Chinese authority, for the time being, would be pushed out of Manchuria so completely, and that of Russia would be established so firmly, that any future restoration of the former was improbable, to say the least. Moreover, the entire exclusion of all people except Russians from any share in the development of Manchurian resources was exceedingly offensive to the money-making desire, with which the whole western world is looking toward the great decayed empire of the East. That such an exclusion should extend beyond Manchuria, even to Mongolia, Kashgar, Yarkand, Khodan and Turkestan as set forth in the above report of the preceding treaty, was an idea at which capitalists in Europe and America stood aghast. Very soon there was denial that the exclusiveness asked

MAY 1961]

[illegible]

On October 10, 1891, during the Russo-Japanese War, the Russian government decided that it had no alternative but to accept the demand that it should withdraw its troops from the peninsula of Pichon. The Japanese spokesmen followed the Russian withdrawal from Count Lamsdorf's proposal. The Russian Minister of the Foreign Affairs of the Russian Government, with the local civil authorities, was working strenuously to between them to prevent the spontaneous presence of the Japanese troops in the Southern Manchuria. The Japanese were trying to prevent the Russian authorities in the vicinity of the railway from "protecting the railway from the Japanese troops." "Philip Arthur" And he was not had the intention of the Japanese to acquire the territory of the railway from the acquisition of territory. The Japanese had virtually complete over-

MANCHURIA AND MONGOLIA.—The geographical conception of Manchuria and Mongolia in Chinese notes made in 1897 by the Japanese Military Attache to the British Legation at Peking: "The area of Manchuria is about 1,200,000 square miles, or less than 502,310 square miles of Great Britain and Ireland. It is divided into two provinces of which the most southerly, the province of Shantung, with its capital at Mukden, has for several hundred years formed an integral part of the Chinese Empire, and is consequently more opened up and more densely populated than the two northern provinces, which were regarded until the beginning of this century as a wasteland outside the pale of civilization, and a place for the transportation of criminals. The great old paths have long disappeared, and it is difficult to mark the boundary between Manchuria and Mongolia, and the gateways on the north and east are still used as posts for the collection of tribute taxes. These places may be recognized by the denomination 'men' (a gate), such as Feng-shan (Feng-shan men). The province of Kirin also bears the same name, while the large northern province of 'Mai-lin' (Mandchurian) has its seat of government at Fêng-tien. It is generally said that the Governor of Fêng-tien (Mukden) occupies the position as regards the two northern provinces as a viceroy in China holds towards the provinces comprised in his Viceroyalty."

MANCHURIA AND MONGOLIA

city, but this does not appear to be an exception. The capital is the Imperial City, and in the territory of the three Manchurian provinces, the governors of the three provinces reside. Outside the official territory, by the special title of Military Governor of the Province & Capital, the latter General of the Province, but the Governor of Feng-tien holds the most high office, and he governs Manchuria in Imperial City, with a few provinces. In Imperial City, with a few provinces, the duties of the governors of the Manchurian provinces are also to investigate. Besides that, the duties of the capital for regulation, command, and punishment, and all appointments, such as the election and promotion of officers, in the government of the country, should the Imperial City, the capital of Manchuria.

The great grain and bean producing area in the three provinces is contained by a strip of country, extending from the Treaty Port of Newchwang to the mouth of the Yellow River. To the west of this belt of arable are the Mongolian steppes, all in grass, but fading away into sand as they move in the great desert of Gobi, to the east is a high and mountainous region in which the only large cultivated area is that watered by the River Hwai ho, an affluent of the Upper Yangtze, and also where the cultivated areas are small, as at those at Muzhen, Tsitsihar, the Valley of the Yen, and at Sinsing, Sungari, and Chien and Onong. Exclusive of patches of cultivation in the districts and valleys, the 26,000 square miles may be estimated to amount to 14,000 square miles, or about one twenty-fourth of the total area of the country. To what extent under improved communications, drainage, and more favorable conditions generally, the cultivated area is capable of expansion, it is difficult to say.

The population of Manchuria has been variously estimated from a few millions by the Chinese to as much as 25,000,000 by Europeans. A Russian engineer, who has travelled all over the country, estimates it is between 10,000,000 and 15,000,000. Before I received the figures I had arrived at a somewhat similar result by taking the cultivated area at 700 per square mile which gives a population of 11,250,000, and assuming 2,000,000 scattered throughout the more remote districts, or a population in all of about 14,000,000. What proportion of these are Manchus is also a vexed question to which no definite answer can be given. Certainly the Manchus are in the minority, for though there are several towns almost wholly Chinese, I know of no town in which it is not acknowledged that the Chinese form more than half the population. The Manchus are nearly all concentrated in towns; there are Manchu villages, but they are small, possibly their numbers amount to between 2,000,000 and 3,000,000, or about 20 per cent of the population. The chief appointments in Manchuria are, without exception, held by Manchus, the descendants of the conquerors of China. In four centuries of ease and sloth they have lost the wild courage, the spirit of adventure that inspired them to overrun China, and the hardihood and skill at arms that brought success to their venture. But if they have lost the warlike instincts of their savage ancestors, they have retained all their pride, their ignorance, their cruelty, and their superstition. All these qualities a Manchian possesses far in excess of the liberal share that nature has bestowed on the Chinese. It is true

that skill at arms still nominally opens the door to military preferment, but such arms and such skill. Shooting arrows from a moderately strong bow when entering on a pony is a test which displays neither skill, strength, nor endurance. Even according to Chinese ideas they are ignorant. As regards their privileges, the Manchus pay no land tax; but in so far as I have been able to ascertain, the opinion generally held, that they are all pensioned by Government, is erroneous. But though the mass of the Manchus receive no pension, nearly all are in pay as hangers-on at Yaméns, body guard to officials, soldiers, care-takers at the Palace or Imperial tombs, and similar posts. The emoluments are small, just sufficient to enable the man to support his family without working, or making his way in the world as an ordinary Chinese must do. Formerly the Manchus did not intermarry with Chinese women, but at the present time this custom is frequently broken through, though of course no Chinese would be permitted to marry a Manchurian woman. The Manchus, especially the dependents, hangers-on, and soldiers, are great opium smokers, and a very worthless class; probably intermarriage with the Chinese will prevent the extinction of the race, which, were the present dynasty to fall, would be speedily absorbed, for, without being propped up with State assistance, it could not on its merits hold the position it does at present. As regards the Chinese, few of the rich merchants make Manchuria their home. They come to the country for a definite number of years, and the same applies to their agents, managers, and staff generally, who leave their families in China. The settlers on the contrary, have made the country their home. They are a fine, healthy, and vigorous race. Driven from China by poverty or famine, they regard Manchuria as a land flowing with milk and honey. . . . Whether it be the rigour of the climate which softens their manners, or the absence of the Chinese Mandarin, or living under the sway of an alien race which humbles their pride, or a combination of all these elements, it is difficult to say, but the people are far less hostile to the foreigner than those in China proper. . . .

"Mongolia extends for 1,500 miles along the northern frontier of China, and as its eastern border is coterminous with Manchuria, a few words regarding the Mongols may not be out of place in these notes. The race is said to come with the Manchus from a common Tartar stock, but, except in colour and features, there is little resemblance between the two races. The Mongol is essentially a nomad, hating towns and houses. He prefers to wander about the steppes, pitching his 'yourt,' or felt tent, wherever water and pasture are for the time most plentiful. As the nature of the country they inhabit prohibits agriculture, the art is unknown among his people, who are entirely engaged in tending their flocks and herds, ponies, and camels. They are mere children in the hands of the Chinese, who can outwit them as easily as a member of the 'confidence-trick' fraternity outwits a rustic from the shires. . . . A small portion of their territory is rented by the Chinese on the west of the Provinces of Kirin and Fêng-tien, of which it has now become an integral part. Kuan cheng-tzu was originally in Mongolia, and so are all the towns and villages to the west of the palisade,

of which the principal are Mai-mai-ka, Fêng-hua, Ch'ang-tu, and Cheng (chia-tu). Mongolia is the great breeding land for horses and camels. At first sight when travelling through the country one is astonished at the enormous size of the troops of ponies, but when one considers that this territory supplies Siberia, China, and Manchuria with animals, it is easy to see that the supply is not greater than the demand. The Mongols are governed by their herding Princes, Chinese authority being maintained by Imperial Residents at Ching-hai, in Western Mongolia (Kokonor), and at T'ien in the north."—(*Great Britain, Parliamentary Papers, 1890* (Papers by Command, China, A. MASSACHUSETTS: A. D. 1897.—Recovery of the original manuscript of Governor Bradford's History of Plymouth Colony, sometimes called "The Log of the Mayflower."—It has long been well known that Governor Bradford wrote and left behind him a history of the settlement of Plymouth. It was quoted by early chroniclers. There are extracts from it in the records at Plymouth. Thomas Bruce used it when he compiled his annals. H. Board depended on it when he wrote his "History of New England." Cotton Mather had read it or a copy of a portion of it, when he wrote his "Magnalia." Governor Hutchinson had it when he published the second volume of his History in 1767. From that time it disappeared from the knowledge of everybody on this side of the water. All our historians speak of it as lost and can only guess what had been its fate.

In 1844 Samuel Wilberforce, Bishop of Oxford, afterward Bishop of Winchester, one of the brightest of men, published one of the duller and stupidest of books. It is entitled "The History of the Protestant Episcopal Church in America." It contained extracts from manuscripts which he said he had discovered in the Diary of the Bishop of London at Fulham. The book attracted no attention here until, about twelve years later, in 1855, John Wingate Thornton happened to pick up a copy of it while he was lounging in Burnham's book store. He read the bishop's quotations, and carried the book to his office, where he left it for his friend, Mr. Barry, who was then writing his "History of Massachusetts," with passages marked, and with a note which is not preserved, but which, according to his memory, suggested that the passages must have come from Bradford's long lost history. That is the claim for Mr. Thornton. On the other hand, it is claimed by Mr. Barry that there was nothing of that kind expressed in Mr. Thornton's note, but in reading the book when he got it an hour or so later the thought struck him for the first time that the clue had been found to the precious book which had been lost so long. He at once reported to Charles Deane, then and ever since, devoted to his death, as President Eliot felicitously styled him, the master of historical investigations in this country. Mr. Deane saw the importance of the discovery. He communicated at once with Joseph Hunter, an eminent English scholar. Hunter was high authority on all matters connected with the settlement of New

MASSACHUSETTS.

England. He visited the palace at Fulham, and established beyond question the identity of the manuscript with Governor Bradford's history, an original letter of Governor Bradford having been sent over for comparison of handwriting.

"How the manuscript got to Fulham nobody knows. Whether it was carried over by Governor Hutchinson in 1774, whether it was taken as spoil from the tower of the Old South Church in 1775; whether, with other manuscripts, it was sent to Fulham at the time of the attempts of the Episcopal churches in America, just before the Revolution, to establish an episcopate here,—nobody knows." George F. Hour, *address, May 26, 1897, on the Return of the Manuscript to Massachusetts.*

After the discovery of the manuscript, several attempts to bring about its return to America were made, by Justin Winsor, in 1890, and again in 1877, by Mr. Motley, in 1869, and by others. At length, Senator Hour, after delivering an address at Plymouth, in 1895, on the anniversary of the landing of the Pilgrims, went abroad, with his interest in the matter warmly stirred up, and took steps, in concurrence with Ambassador Bayard, which led to the enlistment of potent influences on both sides of the sea in favor of the restoration of the precious piece of writing to its proper home. There were many difficulties in procuring the necessary legal authority for the surrender of the manuscript by the Bishop of London,—difficulties not created wilfully, but by questions and processes of law; but they were all overcome, with kindly help from everybody concerned, and, on the 12th of April, 1897, the coveted manuscript book was formally delivered to the United States Ambassador, Mr. Bayard, for conveyance to the Governor of the Commonwealth of Massachusetts. It was delivered by Mr. Bayard in person, on the 26th of May following, in the presence of the Senate and the House of Representatives of Massachusetts, sitting together in the chamber of the latter, with many guests invited for the occasion. The ceremonies of the occasion included the address by Senator Hour from which the above account is taken.

The manuscript volume is now deposited in the State Library of Massachusetts at Boston. A new edition, carefully reproducing the text of the history from it, with a full report of the proceedings incident to its return to Massachusetts, was printed in 1900, under the direction of the Secretary of the Commonwealth, by order of the General Court. The following remarks on the manuscript are from the Introduction to that edition: "By very many it has been called, incorrectly, the log of the 'Mayflower.' Indeed that is the title by which it is described in the decree of the Consistorial Court of London. The fact is, however, that Governor Bradford undertook its preparation long after the arrival of the Pilgrims, and it cannot be properly considered as in any sense a log or daily journal of the voyage of the 'Mayflower.' It is in point of fact, a history of the Plymouth Colony, chiefly in the form of annals, extending from the inception of the colony down to the year 1617. The matter has been in print since 1856, put forth through the public spirit of the Massachusetts Historical Society, which secured a transcript of the document from London, and printed it in the Society's Collections of the above named year."

MEXICAN FREE ZONE, The.—"The Department of State has received through Consul General Barlow a report of the Free Zone, compiled by the Secretary of the Treasury of Mexico, giving a history of the original creation of the zone and defining its limits, and the privileges and restrictions applicable thereto. The Free Zone is a narrow strip of territory extending along the northern border from the Gulf of

Mexico to the Pacific Ocean, with a latitudinal area of about 124 miles to the interior, and embracing a portion of the States of Tamaulipas, Coahuila, Chihuahua, Sonora, and the territory of Lower California. It was established many years ago [1861] by the Central Government as a compromise or concession to the States bordering the Rio Grande, as a protection against smuggling from the United States. The principal cities of the zone are Matamoros, Camargo, Mier, Guerrero, Laredo, Portillo Diaz, Pecos, Negrasi, Juarez, and Nogales. The total population does not exceed 100,000 people. According to the official reports, there exist within the limits of the free zone no industries worth mentioning, which is explained by the fact that all industrial products manufactured in the zone when sent into the interior of the country are required to pay the regular duties charged on imports into the country; and, on account of the protective tariff of the United States, it is impracticable to export such products to that country. Thus the manufacturing industries would have to depend upon the home consumption, which is not sufficient to maintain them. All merchandise imported into the zone destined for consumption therein is admitted on a basis of 10 per cent of the regular tariff duties, but such merchandise when reshipped into the interior of Mexico is required to pay an additional duty of 90 per cent, making, in connection with the 10 per cent already paid, the regular tariff duty of Mexico. In his report the secretary of the treasury, Senor Limantour, makes this statement: "Many distinguished financiers and eminent statesmen are opposed to the Free Zone, but all recognize the fact that, on account of existing circumstances in the northern frontier, its sparse population, without resources in agriculture, industry, or mining, the privilege could not be abolished without compensation, and the problem lies in choosing some other advantage without prejudice to the rest of the country."—*Bulletin of the Am. Republics*, Aug., 1898.

"The franchise granted the Free Zone consisted, in the beginning, in not levying any duty upon imported articles; afterwards, however, some small duties, purely local, were established, and the ordinance of 1887 established as a fixed basis 3 per cent on the value of the duties according to tariff—a basis which was raised to 10 per cent by the ordinance of 1901. By subsequent decrees the duties were raised 14 per cent for the municipality and 7 per cent for stamps for internal revenue, the result of all this being that the merchandise introduced into the Free Zone from abroad now paid 184 per cent upon the importation duties according to tariff. As the records of the frontier custom houses of the north make no distinction in the duties, those for the Free Zone as well as those for the interior appearing in the same classification it is impossible to know exactly what the treasury loses by the 90 per cent rebate on the duties of the merchandise destined for consumption in the Free Zone; but, admitting as an exaggerated estimate that the total consumption of the Free Zone represents in duties \$400,000 (\$777,000 a year, with the 10 per cent charge on this amount, the average annual loss would be \$365,000 [\$162,060].

"The institution of the Free Zone obliges the Mexican Government, in order to prevent the

introduction clandestinely into the interior of merchandise proceeding therefrom, to maintain a body of fiscal guards at an annual expense of \$561,725.00 (\$249,762). The guards of the custom houses must not be reckoned in this account; for these, with or without the Free Zone, are necessary to prevent the smuggling which would be carried on from the United States, and which is even now done. In case of abolishing the Free Zone, it would not be possible to completely suppress the fiscal guards, lessened in number and with a distinct organization, they would have to be maintained, especially since in case of their abolition the entire duties would be charged that is to say, 90 per cent more than is now levied, and this would be inducement enough to provoke attempts at smuggling. This body of guards, fiscal as well as administrative, supplies the place of an interior custom-house (although it does not levy duties), as it reviews in certain instances the merchandise shipped through the frontier custom houses and in a military capacity guards the roads leading to and from the frontier to prevent smuggling. It has a system of fixed

sections situated at convenient locations between the Gulf of Mexico and the Pacific, and of flying detachments continually patrolling the strip of territory named. Experience has demonstrated the usefulness of the body, for instances of smuggling by wagons, carts, or animals can be said to no longer exist."

Of smuggling, "there are two divisions to be made, as follows: Smuggling to the interior of the Republic and smuggling to the United States of America. The first was at one time of importance, since it was practiced on a large scale. Bands of smugglers, resorting at times to violence, conducted merchandise to the interior, but since the Republic entered the period of peace the Government has been able to take measures to end this illegal traffic. The custom houses, which formerly scarcely produced enough to pay the employees, now render from \$4,000,000 to \$5,000,000 annually from import duties."

"Smuggling from Mexico to the United States of America has never been practiced to any great extent." — *U. S. Consular Reports, August, 1898, p. 619.*

MEXICO.

A. D. 1892-1895.—Boundary surveys.—The international commission which had been engaged since 1892 in resurveying the incorrectly marked boundary between Mexico and the United States from San Diego, California, to El Paso, Texas, finished its work in 1895. Another commission began in the same year to resurvey the remainder of the boundary, along the Rio Grande from El Paso to the Gulf.

A. D. 1895.—Boundary dispute with Guatemala.—There was a quite serious threatening of war between Mexico and Guatemala in 1895, consequent upon a disputed boundary line. The mediation of the United States brought about a settlement, which gave the disputed district to Guatemala, and provided for an arbitration of indemnities, the United States Minister to Mexico being selected as arbitrator.

A. D. 1895.—Census of population.—Its distribution.—"The population of Mexico appears to be, from our . . . census . . . in 1895, 12,570,195, which would give 16.34 for each square mile, but from my personal knowledge of the country, I am quite sure that it is not less than 15,000,000. It is very difficult to take a correct census in Mexico, because there is not the proper machinery in operation for that purpose and especially because a great many districts are inhabited by Indians, who are impressed with the fear that if they inscribe themselves in the census they will be taxed or drafted into the military service, and they try to avoid registration."

"A great many of our people live in such remote districts that they are practically cut off from communication with other portions of the country, and in fact are almost isolated; and this constitutes still another difficulty in the way of taking a correct census. . . . The upper lands being the healthiest, most of the population in Mexico is settled in the central plateau; a relatively small portion lives in the temperate zone, while the torrid zone is very thinly populated. I imagine, at a rough calculation, that about 75

per cent. of the population make their abode in the cold zone, from 15 to 18 per cent. in the temperate zone, and from 7 to 10 per cent. in the torrid zone."

"From the synopsis of our censuses, . . . it appears that the population in Mexico has duplicated during the last century, and although that increase does not keep pace with the increase in the United States, because this has been really wonderful, it compares favorably with the increase in other countries."—M. Romero, *Mexico and the United States*, v. 1, pp. 89-90 (*N. Y.: G. P. Putnam's Sons*).

A. D. 1896. Amendments to the Constitution.—See (in this vol.) CONSTITUTION OF MEXICO.

A. D. 1896.—Re-election of President Diaz.—By a popular election held on the 28th of June, 1896, followed by a vote of "electors" cast July 13, Porfirio Diaz was chosen President of the Republic of Mexico for a fifth term of four years, to begin December 1, 1896.

A. D. 1896 (July).—Abolition of inter-state taxes.—The following announcement was reported in May, 1896, by the U. S. Consul General at the City of Mexico: "All the States and Territories having approved the amendment to the constitution prohibiting any interstate tax on commerce (alcabalas), Congress has passed the bill, the President has signed it, the *Diario Oficial* has published it, and it will soon be promulgated by 'bando,' as the Vice Presidency was the other day. The law takes effect July 1." This tax has been in existence for many years in Mexico, and has been a source of much embarrassment to internal and external trade. Its repeal meets with general approval, although some of the States will be compelled to seek other modes of taxation to replace the money heretofore obtained by this interstate tax." — *U. S. Consular Reports, June, 1896, p. 354.*

A. D. 1896-1899.—Revolts of the Yaquis.—The Yaquis, one of the native tribes of north-western Mexico, taking their name from the

river, in Sonora, on which they dwell, have been in frequent revolt. In 1896, and again in 1899, some of the tribe were fiercely in arms, excited, it was said, by a religious enthusiast, Teresa Urrea, who claimed a divine mission and obtained boundless influence over her tribe, as a saint. She was expelled from the country by the Mexican government, but stayed on the border, in United States territory, and continued to stir up hostilities. Though repeatedly beaten by the government troops, with heavy loss, their late rising was obstinately persisted in for many months; but early in 1900 their chief, Tetablate, was slain, and a few sharp engagements after that time seems to have brought the revolt, practically, to an end. A writer in the California magazine, entitled "The Land of Sunshine" (July, 1899), says of the Yaquis that they are "the backbone of the population of Sonora. They are the best workmen in the republic, commanding from 10 to 20 per cent. higher wages in many localities than Mexican or other Indian labor. There is not a lazy bone in the Yaqui body. They are a peaceable, law abiding people when justly treated. From time immemorial they have been hunters, miners, and tillers of the soil. They have the nomad instinct in less degree than almost any other Indian tribe."

Another writer makes this statement: "There are about three hundred wild and rebellious Yaqui Indians hidden in the fastnesses of the Bacatete Mountains, and some thirty thousand peaceful Yaquis working all over Sonora—among the best workers, the most successful farmers, and the quietest citizens in the whole state. . . . There are few things in the history of the native races of North America of such absorbing interest as the career of the Yaqui Indians. The Spanish conquistadores found them living in this country three hundred and fifty years ago. They were a strong and stalwart race. Put a Yaqui by the side of an Iroquois and you can hardly tell them apart. Put a Yaqui and an Iroquois by the side of any other Indians in North America, and their physical superiority is seen at once. Compare them physically with all the other races of the earth and you will find that they have few, if any, superiors. The Yaquis were not, however, like their prototypes, the Iroquois, dependent upon the chase for their food. From the beginning they were not woodsmen, but farmers. Cabeza de Vaca, after his long, romantic and perilous journey across the continent, found great fields of Indian corn waving on the Yaqui River as far back as 1636. When the early Spanish missions were established in the Californias they obtained their supplies from the agricultural Indians in the Yaqui Valley, and many are the Spanish armies that have been saved from starvation in times past by the Yaqui corn fields"—W. S. Logan, *Yaqui, the Land of Sunshine and Health*, pp. 15, 17.

A. D. 1898.—Completion of the great drainage tunnel and canal of the City of Mexico.—"Mexico is finishing a great work, the drainage of the valley where the capital city is located, which has required for its completion nearly three hundred years and many millions of dollars, and has cost the lives of hundreds of thousands of men. . . . The Valley of Mexico is an immense basin, of approximately circular shape, with one extreme diameter of about 60 miles, completely bounded by high mountains,

and having only two or three quite high passes out of it. No water drains out of the basin. The surface of this valley has an average altitude above the sea of 7,413 feet and an area of about 2,000 square miles. Mountain ranges rise on every side, making a great corral of rock containing dozens of villages and hamlets, with the ancient capital in the centre. . . . Evaporation is so excessive that certain periods of the year that malaria is so frequent on drouth, was far more dreaded by the inhabitants than the periodical floods, and thousands perished annually, so that proper drainage was an absolute necessity for the preservation of health. Nearly fifty years before the discovery of America, which took place in 1492, Nezahualcoyotl saw the necessity for a drainage canal and commenced the work in 1450. The Spaniards, throughout their rule, labored at projects to the same end, and sacrificed the lives of vast numbers of the natives in the work, without much result.

Frequent floodings of the old Aztec city and of the Spanish capital, situated almost at the lowest point of the valley, were sure to come in times of unusually heavy rains. In early days when the Aztecs lived in the middle of Lake Mexico, when their temples and wigwams were built on piles and the streets were often dry canals, the periodical overflows from the upper lakes were a matter of small concern, though even then the Nahuatl engineers were called upon to protect the city by dykes. But when by evaporation, by filling in at the site of the city, by lessened waters, due to the fissures caused by earthquakes, Lake Mexico had disappeared and the city had come to be built on the spongy soil above all, when the short sighted choice of Cortez had been confirmed and the capital of New Spain had come to stand on the ruins of the Aztec town, increasing rapidly in population and wealth,—it became a serious matter that on an average of once in twenty five years the streets should be from two to six feet under water for an indefinite time. . . .

In 1866 the works now [1895] nearing completion were commenced. A project proposed by Señor Don Francisco de Garay, a well known engineer of the city of Mexico, was pronounced the most feasible. But the revolutionary struggle succeeded, and for many years the work was relegated to the background. . . . The present gigantic work cannot have been considered to have been seriously undertaken, with a view of completion at any cost, until the year 1885 when the City Council of Mexico submitted a project to the Government to which they offered to contribute largely in the event of its being adopted. A special commission, with ample authority to deal with the funds set aside for the work, was appointed by President Porfirio Díaz. . . .

The drainage works, when carried out will receive the surplus waters and sewage of the City of Mexico and carry them outside of the valley, and will also control the entire waters of the valley, affording an outlet, whenever found necessary, to those which might otherwise overflow fields and towns, rendering the soil stagnant and marshy. The work consists of three parts—1st, the tunnel; 2d, a canal starting from the gates of San Lázaro, and having a length of 47 1/2 kilometres, or 43 miles; . . . and 3d, the sewage of the City of Mexico. . . . As this paper goes to press, the drainage works of the Valley

of Mexico are practically finished, as the waters of the valley have been for several years passing through the canal and the tunnel to their outlet in the river which takes them to the Gulf of Mexico, and the company with whom the canal was contracted is now giving the finishing touches to the sides and bottom of the canal and will deliver it to the Government Board of the Drainage Directors in January, 1898.

The canal and six mile tunnel through the mountain range have a total length approaching 40 miles. The present works will take rank with the great achievements of modern times, just as the immense cut of Nochtougo, their immediate predecessor, was the leader among ancient earthworks in all the world. The completed system will have cost \$20,000,000.—M. Romero, *Mexico and the United States*, pp. 266-280 (N. Y.: G. P. Putnam & Sons).

A. D. 1898-1900.—The results of twenty years of the presidency of Porfirio Diaz.—The wonderful advance of the Republic.—In his interesting book on Mexico, entitled "The Awakening of a Nation," written in 1898, Mr. Charles F. Lummis expresses the opinion that, under the Presidency of Porfirio Diaz, that country "has graduated to be the most compact and united nation in the New World"; that

she has acquired not only a government which governs, but one which knows how to govern—and contemporaneously a people which has learned how to be ruled"; and he characterizes his government as "logical paternalism—a scheme frightfully dangerous under a bad father, immeasurably beneficial under a good one." Two years later, in a contribution to an elaborate

"Review of the Nineteenth Century," by many writers, which was published by the "New York Evening Post," January 12, 1901, Mr. Lummis wrote: "Before Diaz, the rich and ancient capital had spent two and a half centuries and ten millions in vain attempts to relieve its recurrent floods. Sewerage was unknown. To day the valley is drained and sewered by a system nowhere surpassed. Electric lighting, transit, and power transmission are in vogue. Law and order are of a proportion we may well envy. Public education and individual scholarship have no need to blush in any fair comparison with any land. Business is prosperous, almost without individual exceptions. Factories of all sorts—some of the costliest and finest factories in the world have sprung up by the thousand. The comminuted bones of a national spirit have knit as they never were before. Nowadays, it is not Mexico but we, who are 'fooled' when we count her from the category of the nations that count. She does count; she will count far more. She has mastered anarchy, she has triumphed over poverty. She is busily engaged in practicing one of the first gospels and mottoes of the American colonies—'Mind Your Own Business'—and is making a magnificent success at it. It is a curious problem in the philosophies of history, what shall be the outcome of a nation which instead of being born rugged and growing old and easy, was born old and in the last quarter of a century has come into the heritage of sturdy youth. For it is a young nation, with muscles growing, that we must think of new Old Mexico.

If a John W. Foster, writing to the "New York Tribune," on the 9th of January, 1901,

from the City of Mexico, where he formerly resided for some years as United States Minister, has borne similar testimony to the astonishing progress of the country. "Since the advent of General Porfirio Diaz to power in 1876," writes Mr. Foster, "there has been no foreign war and no serious disturbance of an internal character, the only exception being the outbreak of certain semi-independent Indian tribes. In the previous fifty years of the existence of the republic there had been as many presidents, the majority of whom owed their existence to revolutionary movements. The wretched story of Mexican history of that period is too familiar to be repeated here.

In his inaugural address to Congress last month, on being again installed as President, he [President Diaz] referred to the achievements of Mexico in the last twenty-five years, and modestly said that in it there were no brilliant deeds to chronicle. From that notable address I make this extract: 'If it were true that a peaceful and laborious people have no history, the administration period I am about to review would almost be devoid of history. But, on the contrary, those nations that deserve to be called happy in the only intelligible sense of the word, far from being without a history, have a very glorious and interesting one, if, besides being peaceful and laborious, they are also progressive. That history is the history of their progress, their achievements, their growing prosperity, of the improvements of every kind which they have introduced—a history which, in this modern age and the present constitution of civilized societies, is as interesting as that of their past and just as deserving of attention.'

A report for 1900 by the British Consul at Vera Cruz is to the same effect. The result of the recent elections he describes as an assurance of prosperity and a guarantee of the foreign capital invested in the country. Few countries, the Consul observes, can boast of such rapid and beneficial reforms as Mexico; these have, in a short time, prepared the way for the development of her extensive resources, which are themselves a sufficient assurance of the future. The finances have of recent years been brought to a high state of excellence, and commerce throughout the Republic has flourished. Foreign capital has flowed in steadily, railway construction has progressed, and other modes of communication have improved, the telegraph and postal service have been reformed. The improvement of inter-oceanic communication across the Tehuantepec Isthmus, with the harbors now being constructed on both coasts, will revolutionize the foreign trade of Mexico. It will take more than three years to complete the reconstruction of the railway and to put the ports in a condition to enable freight to be taken from the ships' side at one port and placed alongside the ship at the other within 24 hours. The Consul thinks the route is destined to become one of the principal thoroughfares of the world, competing with all other routes between Europe and the Far East.

Of what has been done for public education in Mexico under the Diaz government the following account is given in one of the publications (1900) of the Bureau of the American Republics: "Education in Mexico has been for many years the subject of serious consideration on the part of the Government, on account of the difficulty experienced in combating the conservative ideas pre-

valling in the Republic. The main obstacles have, however, been overcome, and the country to-day enjoys the benefit of a liberal system of education, which is administered under three branches—cratutious, lay, and obligatory. . . . The law making education compulsory was promulgated March 23, 1888, but its enforcement was not decreed at that time, and the first Congress of Public Education was convened for the purpose of adopting such measures as should tend to establish an efficient and uniform system of education. This congress met on December 1, 1889, and closed its sessions on March 31, 1890. . . . A second congress was convened on December 1, 1890, which solved certain problems on compulsory elemental education, fixed the methods to be followed in the schools of superior primary education, and settled matters pertaining to normal schools, preparatory education, and special schools. As the result of this congress, the law of March 21, 1891, was enacted, regulating compulsory education in the Federal District and the Territories of Tepic and Lower California, which law became effective on January 17, 1892. . . .

On May 19, 1896, the law of public education was promulgated, its salient points being as follows: Official primary elemental education in the Federal Districts and Federal Territories was placed under the exclusive control of the Executive; primary superior education was organized as an intermediate educational system between elementary and preparatory instruction. A general board of primary education was created, charged to develop and maintain the same under a scientific and administrative plan. Preparatory education was decreed to be uniform for all professions, its extent being limited to the study of such matters as are necessary to the development of the physical and intellectual faculties and the morals of youth, it being further directed that professional education be reorganized, limiting it to technical matters which pertain to the profession or professions to which each particular school is devoted.

By virtue of this law public education ceased to be in charge of the Board of Aldermen (*ayuntamientos*) of the above mentioned sections. At the time of its promulgation the municipality of Mexico contained 113 schools, supported by the Board of Aldermen, 14,246 students being entered on the rolls, with an average attendance of 9,798. Each State defrays the expenses of public education, either with funds specially appropriated for that purpose or with the municipal funds.

According to statistical data, in 1876, there were throughout the country 8,165 primary schools, with 368,754 students of both sexes. In 1895 Government schools reached the number of 4,056, of which 2,189 were for males, 1,119 for females, and 748 for both sexes; municipal schools numbered 3,394—for males, 1,754; females, 632, both sexes, 708. These comprised 7,380 primary, 32 secondary, and 35 professional schools, the number of students enrolled being 310,496 males and 181,484 females (a total of 491,980), and the mean attendance 338,066. The total cost to the Government and the municipalities for the maintenance of these institutions was \$3,973,738. In the same year private schools to the number of 1,816 were being conducted, 659 for males, 460 for females, and the remainder under a coeducational system. In addition, 276 were supported by the clergy and 116 by associations, the total number of students enrolled being 68,870, of which 40,135 were males and 38,744 females. The total number of private schools was accordingly 2,238, of which 2,193 were devoted to primary education, 34 to secondary instruction and 11 to professions.

The statistics for 1897, which are the latest available, give the following figures:

SCHOOLS.	1896.	1897.
Federal and State Governments.	5,802	6,141
Municipal.	3,318	3,424
Private institutions.	1,630	1,976
Supported by the clergy.	261	286
Supported by associations.	186	112

Using the figures given in 1896 for Vera Cruz and the Federal District as about half of 1897, it may be safely assumed that on December 31, 1897, the public schools in Mexico (Federal, State, and municipal) stood as follows:

Number of schools.	9,067
Students enrolled.	666,787
Average monthly attendance.	458,625
Private institutions.	2,291
Number of students.	92,487
Average attendance.	75,827

The total expenditures for the support of Federal, State, and municipal schools amounted in 1897 to \$6,291,000. In addition to the normal and primary schools, the Government also supports the following institutions: School of jurisprudence, school of medicine, school of agriculture and veterinary instruction, school of engineers, school of fine arts, school of arts and trades for men, and a similar institution for women, school of commerce and administration, National conservatory of music, preparatory school, schools for the blind, for deaf-mutes, reform schools, etc., also 9 museums, and 17 libraries containing from 400 to 159,000 volumes. Beside the Government institutions above mentioned, there are throughout the country 26 museums, 83 libraries, 32 scientific and literary associations, and 457 periodical publications (*Bureau of Am. Republics, Mexico; a topographical Sketch*, p. 313).

A. D. 1899 (May—July).—Representation in the Peace Conference at The Hague. See in this vol. PEACE CONFERENCE.

A. D. 1900 (January).—Re-election of President Diaz.—President Porfirio Diaz was re-elected on January 1, for a sixth term of four years.

A. D. 1900 (October).—Census of the Republic.—Gains shown in five years.—An announcement was made from Washington on the 24th of February, 1901, that "complete official returns of the census taken on October 28, 1899, received by the Bureau of American Republics, shows that the population of Mexico is 13,579,545, against a population of 12,632,127 (given by M. Romero as 12,579,195—see above) in 1895. The gain in five years was 938,118, or 7.43 per cent, due in part to the greater accuracy of the latest enumeration. The Federal District, in which is located the City of Mexico, is the most densely populated portion of the republic, and contains

530,723 people. The City of Mexico increased about 20,000 in five years and now has nearly 350,000 inhabitants. The population of seven States—Jalisco, Guanajuato, Puebla, Vera Cruz, Oaxaca, Michoacan and Mexico, is 6,995,880, or a little more than one-half of the entire population of the country. The population of the States of Sonora, Tamaulipas, Tlaxcala, Morelos, Tabasco, Azuay Calientes, Campeche, Colima, and the territories of Tepic and Lower California, the total area of which is more than one-fourth the entire country, is slightly in excess of 1,380,000, or a density of only about 27 inhabitants to the square kilometre. The central and southern portions of the republic are the most thickly popu-

lated, the Western and Northern States being the most sparsely settled, and the Gulf region or eastern coast, contains a larger number of inhabitants than the Pacific Coast region. The greatest percentage of increase is noted in the northern States. These States, in addition to being good agricultural districts, are enormously rich in mineral wealth, and the large increase in population in this part of the country is chiefly due to the rapid development of the mines of the republic, the erection of smelters and manufacturing plants, and to the general stimulus given to trade and commerce by the construction of railroads and the heavy investments of foreign capital in the republic.

MISSIONS, Christian: The Ecumenical Conference of 1900 in New York.—Statistics of the Protestant foreign missionary work of the world.—The third Ecumenical Conference on Protestant foreign missions (the second having been held in London in 1888) was assembled at New York on the 21st of April, 1900, under circumstances related as follows in vol. I of the official report: "The immediate origin of the Ecumenical Conference of 1900 was the discussion of a question put in the 'question box' at the Annual Conference of Foreign Missions Boards of the United States and Canada, which met in New York in January, 1896, as to whether it would be advisable to invite the secretaries or representatives of societies from the other side of the Atlantic to meet with the Annual Conference of the American societies as it was then held, consisting chiefly of the officers of the Boards. The Rev. F. F. Ellinwood, D. D., speaking to the question, said: 'I have had a hope that in the year 1898, ten years from the great London Conference, we might invite our brethren from all lands to a great Ecumenical Conference on Missions.'

"Following this suggestion, a committee of five, consisting of the Rev. Drs. Judson Smith, F. F. Ellinwood, A. B. Leonard, S. W. Duncan, and William S. Langford was appointed 'to consider the advisability of calling an Ecumenical Missionary Conference, to meet in this country within the next four years, to make preliminary preparation therefor, if deemed advisable, and to report at the Conference of the following year.' This committee corresponded with missionary societies throughout the world, and at the next Annual Conference recommended that such a Conference be held in New York City in April of the year 1900; that this recommendation be communicated to the societies, and a final date agreed upon. In January, 1899, after further correspondence, the place and date were finally decided." Measures were taken to raise a guarantee fund of \$30,000 for expenses, and other preparations were made. Then, under date of

June 1, 1899, a general invitation was sent to every missionary whose name and address could be secured, to attend the Conference and participate in the discussions."

The Conference was opened in Carnegie Hall, New York, on the 21st of April, 1899, and continued its sessions there and in neighboring churches, until the 1st of May. "The personnel of the Conference was broadly representative. It consisted (1) of delegates appointed by organizations conducting foreign missions outside of Europe and America, (2) the missionaries of such organizations, and (3) members elected by the Executive Committee. The British and Continental and other foreign societies were invited to send as many delegates as possible. The American and Canadian societies were limited in the number of their delegates; the total from both countries, being fixed at 1,666, was apportioned among the societies on the basis of their expenditures in foreign missions. All foreign missionaries in active service retired were received as full members. Some of the honorary members and vice presidents who were unable to attend desired to have their names connected with so historic a gathering. Members of committees and speakers, who were not already delegates, were by a general act of the Executive Committee, constituted 'special members.' In addition to the members of the Conference a large number of persons came from far and near to attend the meetings. Over fifty thousand tickets to the Carnegie Hall and alternate meetings were distributed among this class of visitors. Many thousands more attended the sectional and overflow meetings where no tickets were required. The Hon. Benjamin Harrison, for four years President of the United States of America, occupied the chair, and made an opening speech."

The magnitude of the organizations of missionary work, all the interests, needs and fruits of which were discussed in the Conference, is most succinctly represented in the subjoined tables, prepared by Dr. James S. Dennis, which are given in the appendix to the official report (pp. 424-6, vol. 2). The classification appearing in the tables is explained as follows:

"The Bible Societies, the Tract and Literature Societies, the United Society of Christian Endeavor, the Epworth Leagues, and similar organizations, philanthropic specialties like that of the Puandla Ramaiul in India, with a considerable number of organizations, foreign missionary in title and purpose, but simply rendering financial or other aid to existing societies—demand recognition, and yet should they be counted as strictly and technically foreign missionary societies? It was chosen for the present purpose, to differentiate and classify, naming three classes of societies as follows: Class I. Societies directly engaged in conducting foreign missions. Class II. Societies indirectly co-operating or aiding in foreign missions. Class III. Societies or institutions independently engaged in specialized effort in various departments of foreign missions."

MISSISSIPPI: A. D. 1890-1892.—New State Constitution.—Qualification of the suffrage.—A new State Constitution, framed and put in force in 1890 by a constitutional convention, without submission to the people, established a qualification of the suffrage which heavily diminished the negro vote by its effect. It im-

posed a poll tax of two dollars per head to which any county might add a further tax not exceeding one dollar per head, which poll tax for the year every voter must have paid before his ballot would be received at any election. A further clause of the Constitution on the subject was as follows: "On and after the first day of January, A. D. 1892, the following qualifications are added to the foregoing: Every qualified elector shall be able to read any section of the Constitution of this State, or he shall be able to understand the same when read to him or to give a reasonable interpretation thereof. A new registration shall be made before the next ensuing election after these qualifications are established. Electors in municipal elections shall possess all the qualifications herein prescribed and such additional qualifications as may be prescribed by law." In 1892 the Supreme Court of the State affirmed the validity of the Constitution, which had been challenged on two grounds, namely: that it had not been submitted to the vote of the people, and that it was in conflict with the Fourteenth Amendment of the Constitution of the United States.

So far, the disfranchisement of the mass of blacks seems to have had an unlooked for evil effect. "The Negro eliminated, only one political party remains, and political stagnation has followed. In Mississippi, the requirement that a poll tax be paid long before the election deprives many white men also of their votes. But it does not bar them out of nominating conventions. Many communities are ruled by a mere handful of whites who cannot even cast a ballot. For instance, there are 320,000 males of voting age in Mississippi, but the whole vote cast in the State in November was only 59,000. This is 11,000 votes less than were cast four years ago under the same restrictions of suffrage. In other words, the whole State of Mississippi cast practically no more ballots to elect seven members of Congress than were cast in a single congressional district in New York. (The fourteenth New York district cast 58,000 votes.) In the town of Epion, where a mayor, a marshal, a treasurer, and four aldermen were elected, only eight votes were cast, and of the eight voters seven are said to have been candidates for office.

"The same men," says a trustworthy despatch from New Orleans, "were voters, candidates for office, and judges of election to pass as judges on their own votes as voters for themselves, and in spite of all their efforts they could get only one outsider to come to the polls and cast his ballot." This is an extreme case; but in every State that has disfranchised the Negro making a discrimination between him and the ignorant white man, in the white man's favor, political activity has constantly disappeared, the vote has shrunk, public spirit in politics has died. In Louisiana the total vote in November fell from 99,000 in 1896 to 61,000; of Mississippi from 69,000 to 59,000; of South Carolina from 68,000 to 50,000—the shrinkage in four years in these three States being nearly 68,000 votes in spite of the increase of population."—*The World's Work*, Feb., 1901.

A. D. 1897.—Renewal of the privileges of the Bank of France.—The privileges of the Bank of France, as the fiscal agent of the French Government, expired with the close of the year 1897, and renewal of them was opposed by the Radicals and Socialists, who demanded the creation of a State Bank. The government succeeded, however (June, 1897), in carrying the measure necessary for continuing the existing system, on terms some what more favorable to the state than before.

A. D. 1897 (March).—Adoption of the gold standard in Japan.—By a law of the Japanese Parliament, passed in March, 1897, to come into force October 1, a gold monetary standard was adopted, at the ratio of 32 $\frac{1}{2}$ to 1, the silver dollar to be legal tender until six months after notice given of its withdrawal.

A. D. 1897 (April—October).—Negotiation by American Commissioners in Europe for an international bi-metallic agreement.—In fulfillment of the pledge given by the Republican party, at its national convention, in 1896, that it would use efforts to bring about an international agreement for free coinage of gold and silver at some common ratio, the following Act was passed by the two Houses of Congress in January and February, 1897: "That whenever after March 4, 1897, the president of the United States shall determine that the United States should be represented at any international conference called by the United States or any other country with a view to securing by international agreement a fixity of relative value between gold and silver as money by means of a common ratio between these metals, with free mintage at such ratio, he is hereby authorized to appoint five or more commissioners to such international conference; and for compensation of said commissioners, and for all reasonable expenses connected therewith, to be approved by the secretary of state, including the proportion to be paid by the United States of the joint expenses of any such conference the sum of \$100,000, or so much thereof as may be necessary, is hereby appropriated. That the

president of the United States is hereby authorized, in the name of the government of the United States, to call in his discretion such an international conference to assemble at such place as may be agreed upon. And he is further authorized, if in his judgment the purpose specified in the first section hereof can thus be better attained, to appoint one or more special commissioners or envoys to such of the nations of Europe as may designate, to seek by diplomatic negotiation an international agreement for the purpose specified in the first section hereof. And in case of such appointment so much of the appropriation herein made as shall be necessary shall be available for the proper expenses and compensation of such commissioners or envoys." Pursuant to this Act President McKinley, on the 12th of April, appointed Senator Edward D. Wolcott of Rhode Island, ex-Vice President Adlai E. Stevenson of Illinois, and General Charles J. Folger, of Massachusetts, to be commissioners for the purpose which the bill describes. The commissioners first met at Paris, and there obtained assurances from the French government of cordial cooperation and support. They then proceeded to London for negotiation with the British authorities, on whose attitude towards the movement for international action in the matter its success was well known to depend. Some members of the British government, conspicuously Mr. Balfour, were outspoken advocates of bi-metallism, and much was hoped from the discussion to be opened with them. The American commissioners were cordially received, and they were invited to a formal meeting, on the 12th of July, with Lord Salisbury, the Prime Minister, Mr. Balfour, First Lord of the Treasury, Sir Michael Hicks Beach, Chancellor of the Exchequer, and Lord George Hamilton, Secretary of State for India. The American Ambassador, Mr. Hay, accompanied them to the conference, which was held at the Foreign Office. A memorandum of the conversation at this meeting, and at a second one held on the 15th, together with a correspondence which followed, were published later in a parliamentary "blue book," from which the following account is drawn. Mr. Wolcott explained the wish of the American envoys to obtain the views of several governments, preliminary to the inviting of an international bi-metallic conference. He added that they expected to have in England, the full cooperation of the Ambassador of the French Republic, who happened, for the moment, to be absent from the country, but who had requested them to proceed with the meeting in his absence. Mr. Wolcott then presented some reasons which, in the opinion of the Special Envoys, rendered it desirable that some international agreement for the restoration of bi-metallism should be reached, and explained why, in their opinion, the success of this effort depended upon the attitude which England would take regarding the question. He then stated that the Special Envoys requested that England should agree to open English mints as its contribution to an attempt to restore bi-metallism by international agreement, and dwelt upon the importance of the fact that France and the United States were together engaged in an attempt to bring about such an agreement, and were co-operating together to that end. Lord Salisbury desired to know if the French Government would co-operate upon the basis of opening their mints

unlimited coinage of silver. Mr. W. asked at what time and was informed that the French Government proposed to open its mints at 154 to 1, and that the United States Government would yield this point and accept a proper ratio. A considerable discussion took place as to the question of the ratio and the method of settling it, which should be settled then took place. It was then suggested that further proceedings should be deferred until the French Ambassador should be also present. The Chancellor of the Exchequer in further conversation said that the question of opening the English mints was to be made, he thought an answer in the negative would undoubtedly be given. The First Lord of the Treasury asked whether assuming this point for opening English mints to be refused it was feared that the subject be discussed upon the basis of something different and less than the opening of English mints. Upon a mutual understanding that in the absence of the French Ambassador anything said should be considered as such informally, a discussion then took place as to the concessions that England might make towards an international solution of the question, if it should refuse to open English mints. Mr. W. then for the Special Envoys, presented the following as a list of contributions which, among others, England might make to war is tantamount to an international agreement could be effected:—1. Opening of the Indian mints. 2. Repeal of the order making the sovereign legal tender in India. 3. Placing one fifth of the bullion in the Issue Department of the Bank of England in silver. 4. (a) Raising the legal tender limit of silver to, say, £10. (b) Issuing the 20s. notes based on silver, which shall be legal tender. (c) Retirement, gradual or otherwise, of the 10s. gold pieces, and substitution of paper based on silver. 5. Agreement to coin an amount of silver (present silver coinage average for five years about £1,000,000, less normal withdrawal of worn and defaced coin for recoinage £350,000). 6. Opening of English mints to coinage of rupees, and for coinage of British dollar, which shall be full tender in Straits Settlements and other silver standard Colonies, and tender in the United Kingdom to the limit of silver legal tender. 7. Colonial action, and coinage of silver in Egypt. 8. Something having the general scope of the Huxtable plan. Some general conversation followed in regard to the preceding suggestions, and the interview terminated to be resumed on the 15th July, 1897, when it was understood that the French Ambassador would also be present.

At the second meeting, July 15, Baron de Courcel, Ambassador of the French Republic, and M. L. Godefroy, French Minister Plenipotentiary, were present, and the former spoke at length, stating the position of the French Government on the question of the free coinage of silver. He said: "Our population, notably the agricultural population, finds that it has not at its disposal sufficient resources in currency, in metallic money. On the other hand, if the Government in its actual state of affairs reopens the mints to the free coinage of silver, we would be flooded by the abundance of this metal coming from all other countries of the world, and we could not resist the even greater evil of the inevitable depreciation of one of our precious metals,

that is to say, of the effective destruction of the legal ratio upon which our monetary system is based. In other words, we think that the production of silver, more active in certain quarters of the globe in the last quarter of a century, is not of itself considerable enough to change in an enduring manner the normal ratio between gold and silver after these two metals will have been scattered over the entire surface of the world among all nations who are called upon to absorb them. There is, then, in our eyes, a need which is perhaps transitory, but which is actually common to all the commercial nations, of taking measures adequate for assuring, by a common understanding, the re-establishment of the normal ratio of 154 between silver and gold. If measures of this kind should be adopted by all the commercial nations, we would be able to reopen our mints to the free coinage of silver without fear of being submerged by an excessive influx of this metal. The reopening of the mints of all the commercial countries to the free coinage of silver in the ratio of 154 with gold would be the most natural and the most efficacious means of arriving at the result sought for. This is the desideratum which I am instructed to bring forward here, and which I am particularly to urge upon the English Government as a primordial condition of the success of the common understanding. If the Government of the Queen, even in consenting to reopen the mints in India, should refuse to adopt the same measure for England, at least would they not be able to take certain measures which would be, up to a certain point, equivalent, in order to maintain the full value of silver, and to prevent India from being the victim of a depreciation of this metal in consequence of an unlimited coinage?"

My way of suggestion, I would indicate, as one of the measures which the English Government might usefully adopt, the annual purchase of a certain quantity of silver metal, which might afterwards be disposed of as seemed best—either it might be preserved in ingots, or it might be used for regular consumption, or it might be sent to India. This quantity might be fixed approximately, at least, for a number of years, at a sum of £10,000,000 in nominal value. This is, perhaps, only a palliative, it is, in any event, only one of the expedients which would be deemed necessary. But I am to press strongly that the English Government determine to take measures of this kind, or other equivalent measures, if, as I believe, it recognizes with us the necessity of improving the monetary situation in a great part of its Empire—I may say, in a great part of the entire world." Lord Salisbury then asked whether the French Government would decline to open its mints unless England would also open her mints. The French Ambassador replied that he preferred to discuss the subject upon the basis that France would go to open mints if England would consent to open her mints, but that he would not exclude from his view the question of contributions by England towards maintaining the value of silver, short of open mints. The Chancellor of the Exchequer, in response to this, said definitely that the English Government would not agree to open English mints to the unlimited coinage of silver, and that, whatever views he and his colleagues might separately hold on the question of bimetallism, he thought he could say they

were united upon this point. . . . The suggestions made by the Special Envoys at the interview on the 12th July were again read, and the Special Envoys accepted also as important and desirable the proposal that the English Government should purchase annually, say, £10,000,000 of silver, with proper safeguards and provisions as to the place and manner of its use. The French Ambassador expressed his approval generally of the suggestions of the Special Envoys, as being serviceable in the consideration of the question. It was then understood that the proposals submitted by the French Ambassador and by the Special Envoys of the United States should be considered, and due notice given when a reply could be made."

The proposal for the reopening of the Indian mints to silver was submitted at once by the home authorities of the India Office, at London, to the government of India, and the reply of the latter was not received until the following October. When the reply came, it extinguished hopes of the arrangement which the American and French governments desired. In a long despatch, the Indian government explained with clearness the monetary situation in that country, and discussed the effect which a return to the unrestricted mintage of silver would have upon it, under the circumstances and prospects of the time. "The currency system of India," said the despatch, "is in a transition state; the Government of India in 1893 decided to establish a gold standard, and the first step towards that object was the closing of the mints to silver by Act VIII of 1893. The silver rupee is still the sole legal tender coin, though the Government has by Executive orders undertaken to receive gold and sovereigns under certain restrictions. . . . the rate of exchange adopted being 16d. the rupee or 15 rupees=£1. The measures to be taken when the transition period has passed have not been laid down, but it is probable that the Indian mints will be opened to gold, and gold coins will be made legal tender to an unlimited amount; silver rupees would also continue to be legal tender to an unlimited amount, and the ratio between the rupee and the gold coins as legal tender would at the same time be finally settled. The system towards which India is moving is thus a gold standard of the same kind as that which now exists in France and the United States, but with a different ratio for legal tender; but for the present the mints are closed both to gold and silver. The transition period has lasted for more than four years, but there is ground for hope that it is now drawing to a close. The changes which are involved in the arrangements proposed to Her Majesty's Government are the following. France and the United States are to open their mints to the free coinage of silver, continuing the free coinage of gold and the unlimited legal tender of coins of both metals, the ratio remaining unchanged in France and being altered to the French ratio of 154 to 1 in the United States. India is to open her mints to silver, to keep them closed to gold, and to undertake not to make gold legal tender. France and the United States would thus be bimetallic; India would be monometallic (silver); while most of the other important countries of the world would be monometallic (gold). The object which the proposers have in view is the establishment of a stable relation between the

values of gold and of silver. This would include the establishment of a stable exchange between the rupee and sterling currency, which was the object of the Government of India in the proposals made in our financial despatch of the 21st June, 1892, which proposals ultimately resulted in the adoption, in view to the attainment of that object, of the policy of a gold standard and in the closing of the mints to the free coinage of silver. If, then, it were certain that the suggested measures would result in the establishment of a stable ratio, the Government of India might well consider whether their adoption would not be preferable to the policy to which they committed themselves in 1893 in the hope of attaining the same result by isolated action on the part of India alone. The principal questions therefore for us to consider are whether the measures are more likely to succeed than the policy of 1893, and what consequences to India may be apprehended if the measures should fail of success after being brought into operation.

The first result of the suggested measures, if they even temporarily succeeded in their object, would be an intense disturbance of Indian trade and industry by the sudden rise in the rate of exchange, which, if the ratio adopted were 154 to 1, would be a rise from about 16d. to about 23d. the rupee. Such a rise is enough to kill our export trade, for the time at least. If the public were not convinced that the arrangement would have the effect intended, or believed that it would not be permanent, the paralysis of trade and industry would be prolonged and accompanied by acute individual suffering, none of the advantages expected would be attained, and the country would pass through a critical period which would retard its progress for years. How long the crisis would last before normal or stable conditions were restored it is not possible to conjecture. It would be long even if the mercantile and banking community saw that silver was being steadily maintained at the prescribed ratio, while any indication of unsteadiness would greatly prolong the period by giving foundation for doubt. If the doubt should happen to be justified by the results, the position would be disastrous alike to the State, to individuals, and to trade generally. . . . We cannot help seeing that if the policy of 1893 is now abandoned, and if the triple union now proposed as a substitute should fail in its operation or should terminate, and in its failure subject Indian trade to the violent shocks we have described, the Government of India could not, as a responsible Government, call upon the commercial public to face another prolonged period of doubt, suspense, agitation, and difficulties. For it must be clearly and fully recognized that if India joins in the proposed measures, we shall be left dependent, as the sole means of attaining stability in exchange, on the success of those measures and that if they should fail, India must be content to remain permanently under the silver standard with all its admitted disadvantages. . . . We have given very careful consideration to the question whether France and the United States are likely, with the help of India, to be able to maintain the relative value of gold and silver permanently at the ratio they intend to adopt, and have come to the conclusion that while we admit a possibility of the arrangements proposed resulting in the permanent maintenance of the

value of gold and silver at the ratio of 15½ to 1, the probability is that they will fail to secure the result, and that it is quite impossible to hold that there is anything approaching a practical certainty of their doing so. (One reason for this conclusion is, that the arrangement would rest on too narrow a basis. A union consisting of two countries with a third lending assistance, is a very different thing from the general international union of all or most of the important countries of the world, which was advocated by the Government of India in the despatches of March and June 1892 and of February and September 1896. To afford a hope that a monetary union will succeed in establishing stability in the relative value of gold and silver, it is essential that the nations adhering to it should be of such number and importance that the metallic currency of the whole body shall be of sufficient extent to allow of the exercise of adequate influence on the value of the two metals. We doubt whether any two, or even three, nations in the world, unless, indeed, one of them was Great Britain, could comply with this condition, and we have no hesitation in saying that France and the United States and India certainly could not.) We have no hesitation in recommending your Lordship to refuse to give the undertaking desired by the Governments of France and the United States. We are quite clearly of opinion that the interests of India demand that far more shall not be opened as part of an arrangement to which two or three countries only are parties, and which does not include Great Britain. Immediately on receiving this reply Lord Salisbury informed Ambassador Hay that "Her Majesty's Government feel it their duty to state that the first proposal of the United States Representatives is one which they are unable to accept," and expressing a wish to know "how far the views of the American and French Governments are modified by the decision now arrived at, and whether they desire to proceed further with the negotiations at the present moment."—*Great Britain, Parliamentary Publications (Papers by Command: Commerce)*, A. D. 1897.

In the view of the American envoys, it seemed useless to proceed, with no hope of cooperation from Great Britain, and they returned to America with a discouraging report.

NAVIES OF THE SEA POWERS: A. D. 1900.—The following tables are compiled from a return issued by the British Admiralty in the spring of 1900, showing the state of the fleets of Great Britain, France, Russia, Germany, Italy, the United States, and Japan, including vessels then built and in progress of construction.

Of battle-ships, there were built and building in the several navies:

Great Britain	70, with a displacement of 821,605
France	35, " " 389,599
Russia	24, " " 282,912
Germany	25, " " 191,259
Italy	19, " " 191,004
United States	16, " " 183,144
Japan	7, " " 92,420

Of armored and protected cruisers, there were built and building:

Great Britain	147, with a displacement of 827,430
France	60, " " 287,496
Russia	21, " " 144,613
Germany	22, " " 167,844
Italy	25, " " 93,653
United States	26, " " 140,274
Japan	23, " " 114,479

Of unprotected cruisers, armored coast defence vessels, and special vessels there were built and building:

Great Britain	51, with a displacement of 104,250
France	23, " " 93,385
Russia	20, " " 66,880
Germany	35, " " 59,617
Italy	31, " " 17,921
United States	30, " " 77,150
Japan	13, " " 24,065

Of torpedo vessels and torpedo-boat destroyers the number built and building was:

Great Britain	238, with a displacement of 70,311
France	205, " " 34,002
Russia	221, " " 37,735
Germany	130, " " 20,084
Italy	180, " " 24,863
United States	59, " " 12,121
Japan	71, " " 9,537

A consolidation of the above figures shows a total of ships in the principal navies as follows: Great Britain, 486; France, 429; Russia, 306; Germany, 212; Italy, 227; United States, 122; Japan, 114.

A writer in the "Fortnightly Review," discussing the above returns, points out the imperfectness of the representation which such gross figures give of the actual naval strength of the several Powers, and he has undertaken to correct them, by a calculation of what he calls the "fighting weight" of the ships, based on the age of each and its displacement in tons. He says: "The scale of depreciation for age that I have used is as follows: Ships, built and now building, that were launched, or which will be launched, during 1895-1899 (and later), are reckoned at their full value of fighting weight; i. e., at 100 per cent. Ships launched during 1890-1894 are reckoned as now worth only 80 per cent. of their fighting weight. The other depreciations being: Ships launched 1885-1889 are valued at 60 per cent. of their nominal fighting weight,

1880-1884, at 40 per cent.; before 1880 at 20 per cent."

By this mode of reckoning, the table of battle-ships is converted to the following exhibit of estimated "naval strength":

Great Britain	70, adjusted fighting weight 694,141
France	35, " " 290,635
Russia	24, " " 227,886
Germany	25, " " 152,629
Italy	19, " " 151,899
United States	16, " " 145,506
Japan	7, " " 68,082

This method of depreciating the tonnage on the basis of the age of a ship causes the respective proportions of Great Britain, France, and Italy, in battle-ships, to become smaller, while the respective proportions of Russia, Germany, United States and Japan become larger. The United States lose but 4 per cent. of the nominal value of their battle-ships; Japan, 5 per cent.; Russia, 16; Germany, 20; Great Britain, 26; France, 35; Italy, 42.

Applying the same arithmetic to the returns of armored and protected cruisers, the writer shows that Japan suffers a loss of 10 per cent. of their nominal fighting weight, France 14, United States 14, Italy 18, Great Britain 21, Russia 23, Germany 24.

Reducing in like manner all the remaining returns, he arrives at the following summary of "the seven navies arranged in the order of their strength"—taking the navy of Japan as the unit: Great Britain, Degree of strength, 6.38; France, 2.57; Russia, 1.88; United States, 1.63; Germany, 1.34; Italy, 1.03; Japan 1.00. Stated in "tons of fighting weight," his comparison stands: Great Britain, 1,347,000; France, 543,000; Russia, 397,000; United States, 349,000; Germany, 282,000; Italy, 218,000; Japan, 211,000.

Turning next to the consideration of armaments, the writer has compiled the following table, which shows "for each class of gun separately, and for all classes of guns combined, the number of these guns that are possessed by the seven naval powers":

POWER.	Breech-Load- ing Guns.	Quick Firing Guns.	Muzzle-Load- ing Guns.	Torpedo Tubes.	All classes of Guns.
Great Britain	912	7,454	340	1,334	10,040
France	471	3,653	-	978	5,102
Russia	383	2,583	-	625	3,167
Germany	258	1,986	-	611	2,854
Italy	140	1,791	4	713	2,548
United States	301	1,791	-	230	2,322
Japan	110	1,168	-	314	1,592

All the Powers combined. 2,587 20,441 344 4,815 28,197

In this comparison the United States drops from the fourth rank to the sixth.

A. D. 1896.—**Electorate Reform Act.**—A notable extension of the franchise was accomplished by an Act passed this year by the States General to have effect in the elections of 1897. It made voters of all Dutch citizens not under 25 years of age who present "certain outward and positive signs of capacity and well being. The chief signs are the fact of payment of one or more direct State taxes (for the land tax an amount of 1 florin is sufficient). Besides these, the Reform Act admits as electors all those who can prove that they are householders, and have paid rent of houses or lodgings during a fixed term, or that they are owners or tenants of boats of not less than 24 tons capacity, or that they have been during a fixed term in employment with an annual wage or salary of at least 222 fls. 40., or possess a certificate of State interest of at least 100 florins, or a State savings bank deposit of at least 500 florins, or the legal qualifications for any profession or employment."—*Statesman's Year-Book*, 1899, p. 807.

A. D. 1897.—**First election under the new Franchise Law.**—The first election in Holland under the new franchise law, held June 15-25, 1897, returned to the Chamber 47 Liberals, 22 Catholics, 22 Protestant anti-Revolutionists, 4 Radicals, and one deputy who is styled an Illustrious Christian.

A. D. 1898.—**Enthronement of Queen Wilhelmina.**—Queen Wilhelmina, who succeeded to the crown on the death of her father, William III. in 1890, reached the age of 18 on the 31st of August, 1898, and received the reins of government from her mother, Queen Emma, who had acted as Regent until that time. The young Queen was enthroned September 6 in the New Church at Amsterdam, where she delivered, with a simplicity and fervor which impressed those present, her address to the States-General and took her oath of allegiance to the Constitution. "I am happy and thankful," the Queen said, "to rule over the people of the Netherlands, who, although small in numbers, are great in virtue and strong by nature and character. I esteem it a great privilege that it is my life's task and duty to dedicate all my powers to the prosperity and interests of my dear fatherland; and I repeat the words of my beloved father.—Yes, One can never do enough for the Nether-

NEWFOUNDLAND.

lands." After the Queen and the Queen Mother, the most striking figures at the ceremony were the Princes from the Dutch Indies.

A. D. 1897-1900.—**The Reid contract.**—**The question in politics.**—In the fall of 1897 a line of narrow gauge railway, with branches over six hundred miles in total length, was completed and opened to traffic. The main line of rail extends from the capital, St. Johns, to Port-aux-Basques, at the southwestern extremity of the island, and is expected to produce an important development of resources from the forests and mines, as well as from agricultural lands. The railway was constructed by a contractor, Mr. Reid, who agreed to operate it for seven years at his own expense, receiving therefor a land grant of 5000 acres per mile. In 1898 a new contract was made with Mr. Reid, which placed most of the resources of the island under his control. For an additional land grant of 2500 acres per mile of road he undertook to operate the road for fifty years. By a present cash payment of 4,000,000 to the colony treasury, he purchased the reversion of its right to the possession of the road at the end of that period. At the same time he secured the right to purchase from the government its telegraph lines and the dry dock at St. Johns, for half a million of dollars, and was given a monopoly for 30 years of the coast mail steam service, with an annual subsidy of \$150,000, he undertaking to maintain in it eight steamers, well equipped. This remarkable contract was bitterly denounced by a large party in the island, and the Imperial government was strongly petitioned to nullify the whole transaction, but the British Colonial Secretary, Mr. Chamberlain, while he characterized the contract as representing "the most unparalleled abrogation of its functions by a respon-

sible government," decided that he could not properly interfere. The "Reid Deal," as it was known, then became a burning issue in Newfoundland politics, and the Ministry responsible for it, led by Sir James Winter, was ousted from the government in February, 1900. Mr. Reid was then arranging to transfer his Newfoundland contract and franchises to a company, which required the sanction of the colonial government. The new Liberal Ministry, of which Mr. Robert Bond was Premier, refused consent to the transfer unless Mr. Reid would amend his bargain with the colony in several very important particulars. He offered some concessions, but not to the extent demanded; and so the question between him and the Bond Ministry went into the canvass of 1900, for the election of a new Assembly, and the Conservatives, heavily backed by Mr. Reid, were defeated overwhelmingly, winning but 4 seats out of 36 in the Lower House of the Legislature. On this result of the elections the "London Times" of Nov. 26, 1900, comments as follows: "The course which the victorious Bond Ministry will now take must be awaited with interest. . . . A policy of compromise would certainly appear to be the wisest and the safest for all parties. Mr. Reid, it seems to be acknowledged, has carried out his part of the bargain of 1898 fully and even generously, and the colony, it is stated, has profited largely in consequence. In the absence of actual fraud or corruption it would be difficult in these circumstances to justify the rescission or even the material modification of the agreement, on the faith of which he has spent his money, without his assent. A repeal of the Act of 1898 against his will would savour of repudiation. It would assuredly damage the credit of the colony very seriously."

A. D. 1899-1901.—The French Shore Question.—The Modus Vivendi.—"At the period of the negotiation of the Treaty of Utrecht, in 1713, by which the rights of the French fishermen were regulated [see, in vol. 4, *NEWFOUNDLAND: A. D. 1713*], thousands of French fishing vessels availed themselves of the inshore fisheries about the island; and that they might be not altogether without facilities for the drying and curing of their fish, they were granted under the Treaty the right to use a strip of the coast seven hundred miles long and half a mile wide. Accompanying the Treaty, but, be it noted, not a part of it, was a declaration of King George, that British subjects on the island were not to interfere with these French coast rights by erecting permanent structures upon it, calculated to obstruct the operations of the French fishermen. This Royal declaration was harmless and unimportant when the population of the island was very small, and the French fishermen resorted to the inshore fisheries of Newfoundland. But to-day, a different condition exists. The French fishermen no longer use the inshore fisheries of the island, but prosecute, instead, their fishing operations on the Grand Banks, several hundred miles distant, drying their product either at the French islands of St. Pierre and Miquelon, which are more adjacent to the Banks, or transporting the fish direct to France.

The need for which the French shore right was granted has practically ceased to exist; and inasmuch as the prohibition to the people of the island from erecting permanent structures on the

island was merely a mandate emanating from the King, and not an integral part of the Treaty itself, and because the reason for the observance of the mandate has thus ceased to exist, it is imperative that, in the interests of the prosperity of the island, this Royal concession should be revoked. . . . But what, it may be asked, on a perusal of the whole case, has caused the Newfoundland question to suddenly become paramount? Why is its urgency greater in 1899 than it was in 1897? "Is there not some concentrated force, some propelling power, at work behind the scenes?" There is—and that power is a millionaire. The name of this millionaire is Robert Gillespie Reid, who, having voluntarily assumed, by means of the measure known as the Reid contract, the responsibility of developing the island's resources for himself, at the outset, confronted by a situation which precludes all present enterprise. This gentleman has acquired, in fee simple, some three or four million acres of land in Newfoundland, and where the islanders were content to wait patiently for justice, he, as a business man eager to exploit his mines and timber, can hardly be expected to pin his faith to assurances so frail, and of fulfilment so remote."—B. Wilson, *Newfoundland's Opportunity* (Fortnightly Rev., Feb., 1899).

A royal commission which lately investigated the situation of affairs on the Treaty Coast of Newfoundland found that the coast is 500 miles in extent, with a permanent population of 13,300, all but 76 of whom are native born, while the total of French frequenting the territory during the fishing season does not exceed 600 men. The French, last year, according to the official reports furnished to the Admiralty, occupied only eight cod and nine lobster stations, with a personnel as above, while their catch of cod was but 18,000 qtls., worth about 36,000 dollars, and their pack of lobsters about 7,000 cases, of about equal value. And is it not monstrous that, in order to satisfy vexatious French claims, and perpetuate obsolete treaty claims, the people of the Treaty Coast should be coerced and victimised, and the development of the whole colony retarded, as has been the case? The Commissioners found that, despite the liberal bounties given by France for fishing on the Treaty Coast, the allowance of 50 francs per head by the St. Pierre municipality for the same purpose, and the special appropriation the past two seasons in the French colonial grant for extending operations on the Newfoundland coast, 4,000 francs, the number of men frequenting there and the number of stations operated are steadily declining every year, and in ten years' time it is doubtful if there would be a Frenchman on the coast. Still, so powerful is the French fetish that the shore is tabooed as far as industrial development is concerned, and the hinterland likewise. No grant of land can be given there except with the stipulation that it is subject to French rights. No permanent building can be erected within half a mile of high-water mark, because the French claim the strand for drying their fish. No wharves can be built by which to load minerals, because they will interfere with the French fishery. (Only last year they stopped the erection of one which was twenty-two miles from their nearest station, and Mr. Reid the railway contractor, when he wanted to build a wharf at Bay St. George to land construction materials,

bundle of affidavits. He repented and emphasised his former accusations, and again he was summoned before the grand jury. This time the result was different. "The police are either incompetent or corrupt," the jury declared, and citizens generally agreed.

In 1891 the State Senate appointed a committee, this time under Senator Lenox, to inquire into New York municipal affairs. Soon after the committee was appointed Mr. Croker found it convenient to hastily resign the leadership of Tammany and go to Europe. The worst accusations of the bitterest enemies of Crokerism were almost all more than substantiated by the evidence given before the committee. It was found that the police were utterly corrupt, that they extorted blackmail from gambling house keepers, women of ill name, saloon keepers, and others, and in return gave them their protection. Even the yes, in some instances, were found to be regularly paying their police dues in return for immunity from arrest. One police justice had to admit that he received a hundred dollars from a keeper of a disorderly house. Everywhere that the Lenox Committee probed, or that other competent critics examined, the same thing was found. For several years New York had been living under a system of universal blackmail. Saloonkeepers had to pay Tammany to be allowed to violate the Sunday closing law, merchants to be granted the simplest conveniences for getting their goods into their premises. But in the case of Mr. Croker no dishonesty could be proved. It was known that he had in a few years risen from a poor man to a millionaire, but in no instance could it be shown that he had acquired this wealth by corruption. His friends said he had made his money by horse racing and real estate speculation but unfortunately Mr. Croker did not go before the witness stand to finally clear up the matter. While the committee was sitting he remained in Europe.

The usual storm of indignation followed the Lenox exposure, and most reputable citizens united once more to overthrow Tammany. Colonel Strong, a well known banker, was chosen reform candidate for mayor, and secured a majority of fifty thousand. In 1895 he began his administration, and initiated a vigorous reform movement. The police force was entirely reorganised; municipal offices were given for merit rather than political reward; the streets, for the first time in the memory of the oldest inhabitant, were really kept clean; and the whole local government was taken out of politics. Mayor Strong's time of office has not been without its faults, but among those faults dishonesty has not been one. Rather the mistake has been to enforce all laws too rigidly, and make too few allowances for the weaknesses of human nature in a cosmopolitan resort. Police President Roosevelt's strict enforcement of the Sunday closing and social purity laws was only his duty, but yet it cost the reformers many votes. Although the report of the Lenox Committee did Tammany much temporary harm, it recovered quickly. After the mayoral defeat of 1894 it pulled its forces together again, and rallied around it all the ambitious men who were disappointed in Mayor Strong's bestowal of this patronage. In the autumn of 1896 it was able to score a minor victory at the polls, and it carefully nursed its strength for the election of November 1897. Mr. Croker

notwithstanding his repeated declarations that he was "out of politics," came back to New York, and at once took over command of Tammany. —F. A. McKenzie, *Tammany: A Study in Democracy*, New York, 1897.

A. D. 1895.—Consolidation of the Astor, Lenox and Tilden foundations to form the New York Public Library. See the Library, New York Public.

A. D. 1896-1897.—Consolidation of New York, Brooklyn, and neighboring towns, in the Greater New York. The process of uniting the cities of New York, Brooklyn, the cities, towns and villages comprising the same, into one great municipality, had been mooted before 1890, first took definite shape that year, by the passage on May 8, 1890, of the Legislature of Laws 1890, Chap. 11, entitled, "An Act to create a commission to inquire into the expediency of consolidating the various municipalities in the State of New York, occupying several islands in the harbor of New York."

Pursuant to the provisions of this act, a commission consisting of the following members was appointed, viz: Andrew H. Green, Mayor of New York; John L. Hamilton, J. S. Waver, of New York; J. S. T. Stranahan, Edward L. Tilton, William D. Veeder of Brooklyn; John Brinkerhoff of Queens county; George C. B. Field of Richmond county; Charles P. McCall of Westchester county; and George W. Adams, State Engineer and Surveyor. On July 1, 1893 the commission presented to the Legislature a bill providing for the submission of the question of consolidation to a vote of the electors of the various municipalities proposed to be merged into one city. The following year the Legislature provided for the referendum, and by the commission. The following year was cast upon the question of consolidation at the ensuing election on November 6, 1894. New York, for consolidation, 96,938; against, 70,796; Kings for, 61,711; against, 64,497; Queens for, 7,712; against, 4,711; Richmond for, 1,574; against, 1,505; Mount Vernon for, 87; against, 1,603; Eastchester for, 374; against, 266; Westchester for, 629; against, 621; Pellam for, 261; against, 153. At the opening of the Legislature in 1895, the Commission of Municipal Consolidation presented a report, in which a proposed bill declaring the entire district mentioned (with the exception of the city of Mount Vernon consolidated with the city of New York). The bill, however, failed of passage, on account of the addition of an amendment to the end of the last hours of the session of 1895 too late for further action. The Legislature as a result no doubt of this vote, and the fact that it did annex to New York city the towns of Westchester, Eastchester, Pellam and other parts of Westchester county.

Early in January 1896 the Legislature appointed a joint sub-committee of the committees of both Houses to inquire into the merits of the proposed consolidation measure. On March 1, 1896, the committee made a report, which submitted a bill favoring consolidation. The report was passed by the Legislature, and the bill submitted to the Mayors of the city of New York and Brooklyn, and to the Mayor of Mount Vernon Council of Long Island City pursuant to the provisions of the Constitution. The measure

when the head of the Republican organization in New York persisted in setting a party candidate in the field to convince the opposing voters of the city there seemed to be small doubt of the faction with which it was done. The master politicians of the party were evidently more willing that the vast powers of the majority, in the organization of the government of Greater New York, should be wielded by their prototypes of Tammany than that they should be given to independent hands. The party was obedient to them, and General Benjamin F. Tracy was put forward by a Republican convention held September 28, in opposition to Mr. Low. The night previous, another candidate had appeared in the person of Mr. Henry George, author of the economic doctrine of the "single tax," supported ardently by a large following, especially in the Democratic party. A section of that party, organized under the name of the United Democracy, had nominated Mr. George, and his nomination was endorsed a week later by a great assembly which claimed to represent the Jeffersonian Democracy of New York. On the 30th of September the nomination of the Tammany Democracy was given to Judge Robert A. Van Wyck. Between these four principal candidates, the result of the election was only put in doubt by some question as to the strength of the Democratic vote which Mr. George would draw away from Judge Van Wyck. It was a question extinguished sadly, three days before the election by the sudden death of Mr. George. He had not been in good health, and the strain of the exciting canvass broke him down. His followers made a hasty nomination of his son, Henry George, Jr., in his place; but the personal prestige which might have carried a large vote with them was lost. Of the triumph of Tammany there was no longer any doubt, and no surprise was felt (though abundant grief and anger found expression) when the returns of the voting on November 2d were announced. Judge Van Wyck was elected by the ballots of 233,997 citizens, against 151,510 cast for Mr. Low, 102,873 for General Tracy, 21,693 for the younger Mr. George. Tammany would have been beaten if the Republican vote had gone to Mr. Low. Besides the four principal candidates here named, there were four other nominees who received small numbers of votes. Lucien Smith, put forward by the Social Democrats, received 14,467; William T. Wardwell, named by the Prohibitionists, received 1,359; Patrick J. Gleason and Alfred B. Cruikshank, running with little more than some personal support, received a few hundreds of votes each.

A. D. 1899 (April-December).—The Mazet Investigation.—An investigation of charges against the city government, by a committee of the Legislature, Mr. Robert Mazet, chairman, was opened in April, 1899, the examination of witnesses being conducted by Mr. Frank Moss. The investigation followed lines much the same as those pursued by the Lexow committee, in 1891, and revealed much the same foul state of things, especially in the department of police. But there was evidently less earnestness in the committee, the probing of iniquities was far less thorough, and the whole proceeding was stopped with suspicious sublimeness as soon as it drew near to prominent members of the party by which it was controlled. It called fresh atten-

tion to the rottenness in municipal government, it led to the creation of a new commission, the revision of the Greater New York charter, otherwise it was most unsatisfactory.

A. D. 1899-1900.—The Ramapo Water Contract.—In August, 1899, Eli S. P. Tamm, controller of the City, exposed a gigantic swindle involved in a contract with the Ramapo Water Company, which Tammany officials insisted, it was said by some liberal Republicans, were attempting to crowd out of the Board of Public Improvements. The contract would have bound the city for twenty years to the Ramapo Company \$70 per acre, or \$100 for 200,000,000 gallons of water daily. The Message to the State Legislature, January 1, 1900, Governor Odell thus referred to the matter: "Under chapter 985 of the laws, as amended, the Ramapo Water Company was given the power of condemnation for the purpose of securing to it the water and lands necessary for its purposes. During the year 1899, an attempt was made to enter it into a contract with this company by the municipal board empowered to make such contracts. This proposition, when presented to the citizens of New York, was severely criticised by them and the question of continued municipal ownership of the water supply was thus brought to the attention. The Legislature of 1900 enacted a law which made the consummation of such a contract impossible without the unanimous assent of those empowered to make such contract. The ownership of water rights sufficient to provide the city of New York with an ample supply of pure and wholesome water should be entirely under the control and direction of the municipality." Action on the subject was taken by the Legislature, which, in March, repealed the Act of 1895, thus stripping the Ramapo Company of its extraordinary powers.

A. D. 1900 (January-September).—The Rapid Transit Tunnel Contract.—Projected Tunnel to Brooklyn.—"The great project of an underground rapid transit is now an assured thing. A few months ago the prospect seemed very dark. It is true that the rapid transit commissioners, a very able and upright body of men, with the invaluable aid of a distinguished engineer, Mr. Parsons, had a good while ago decided on the route and the plans; but the way seemed blocked by a series of semi-political and semi-legal difficulties. . . . Suddenly these difficulties began to disappear. The municipal board adopted what the city should provide the money which a contractor would expend in building the road, the contractor following the plans furnished by the city, submitting to municipal inspection, and agreeing upon a certain pay the interest on the bonds sold by the city to obtain the money, and also to pay enough to a sinking fund to provide for the ultimate redemption of the bonds. Bills were called for on November 15, to be opened on January 15. It turned out that two well known contractors were the only bidders, and the award was given to Mr. John B. McDonald. His bid was \$8,000,000. The theory of this contract is that the tunnel is to be the property of the city, leased for ten years to the contractor, who is to pay a rent that will be large enough so that the taxpayer will not have a penny out of his pocket. The trunk line will start at the post office City Hall.

the south and proceed northward to the point of beginning of Broadway to Kingsbridge, in the point of beginning of the road which takes a north-easterly direction to Bronx Park, which is about six or seven miles north as Kingsbridge, but six or seven miles to the east. The road will have four miles of main line, two of which will be for local trains and two for express.

See also Review, Feb., 1900.

Work on the great undertaking was begun in 1897 and had made great progress within the next few months.

By September, 1900, preliminary steps were taken for the construction of a connecting line for the East River, to Brooklyn, and for the various districts of the latter city.

At least three years will be necessary for the preliminary work and actual construction of the line.

Ten estimates have been made, and these are ranging from \$8,000,000 to \$10,000,000.

The line is contemplated to start in corner of Broadway and Manhattan proposed tunnel at a point between the intersection of Broadway and

and Broadway, and Bowling Green, and under Broadway and Bowling Green to South Street, thence under South Street to the East River and under the river, and to the Brooklyn shore at a point in Jorale Street between the East River and Furman Street, and from Jorale Street to Fulton Street, and from Fulton Street to Flat

and under this thoroughfare to the East River. On the New York side the road will be built whose design is to be built between Bowling Green and

and under this thoroughfare to the East River. On the New York side the road will be built whose design is to be built between Bowling Green and

the bill embodying the revised charter under went considerable amendment, some of which would seem to be detrimental. It was passed by the Senate on the 24th of April, and by the Assembly on the 4th, and went to the Mayor of New York for the submission to his parliament, which the State Constitution of New York requires.

Some of the more important changes in the charter made by the revision as passed are the shortening of the mayor's term of office from four years (which the revision committee had advised retaining to two years, with eligibility for reelection, which the commission had advised against), an increase of the number of powers of the presidents of boroughs, abolition of the municipal council and creation of a Board of Aldermen of 25 members, reorganization of various departments of the municipal administration.

A. D. 1896-1897. Passage of the Rames Liquor Law.—An Act for the regulation of the liquor traffic which was and is the subject of much controversy, was passed in March 1896 by the Legislature of the State of New York.

From its author, Senator John Rames, it has borne the name of the Rames Law. It has increased the tax on the selling of liquor, raising it to \$200 on common "saloons" in the city of New York, to \$650 in Brooklyn, to \$500 in other cities having more than 50,000 and not more than 700,000 inhabitants, and to rates in lesser cities and towns which ranged from \$50 to \$150. It forbade the licensing of any liquor shop within 200 feet of a schoolhouse or church, and also forbade the opening of any new shop of that character in any residence district without consent of two-thirds of the property owners. It prohibited the sale of liquor on Sundays, except in hotels and clubs, but this provision furnished a means of evasion which was speedily brought into use. "Rames hotels" and "Rames Clubs," as they were called, sprang into existence everywhere, sufficiently answering the requirements of the law to escape its penalties. These and other defects were considerably remedied by amendments of the Act in April 1897. It survived a powerful attack in the Legislature at that time, the whole strength of the leading forces in the State being brought against the law.

The country districts were generally opposed in supporting it, partly on principle, and partly because of the extent to which it lightened the burden of taxation. By apportioning two-thirds of the enormous revenue raised under the Act to the towns, counties and cities to which it is collected, and one-third to the State treasury, the Rames Law fulfilled itself strongly in accordance with the moral sentiment of the people. Under the Rames Law all local excise boards are abolished, and the whole licensing and regulating of the liquor traffic is placed under the supervision of a State commission.

A. D. 1898. Primary Election Law.—An Act which aims to make the political party caucus for nominating candidates and for choosing delegates to nominating conventions a primary election, conducted under strict regulations of law and guarded by registration, was passed by the New York State Legislature and signed by the Governor March 23, 1898.

A. D. 1899. New Civil Service Enactment. See on this vol. CIVIL SERVICE REFORM, A. D. 1897-1899.

A. D. 1899 May. Taxation of public franchises. A measure of great importance in introducing a new and eminently just principle in taxation was carried through the Legislature of New York in May by the energetic influence of Governor Roosevelt. Recommended by the Governor in a special message on the 27th of March and passed in an unsatisfactory form, a bill to provide for the taxing of public franchises which did not promise successful working was being left on his hands when the Legislature adjourned. He promptly called a special session and renewed to it his most recommendations. "I recommend," he said, "the enactment of a law which shall tax all these franchises as realty, which shall provide for the assessment of the tax by the Board of State Tax Commissioners and which shall further provide that from the tax thus levied for the benefit of each locality, there shall be deducted the tax as now paid by the corporation in question. Furthermore as the time for assessing the largest and wealthiest corporations, those of New York and Buffalo, has passed for this year, and as it will be preferable not to have the small country corporations taxed before the larger corporations of the city are taxed, I suggest that the operations of the law be deferred until October 1 of this year."

Within a few days the desired bill was passed by both Houses of the Legislature, signed by the Governor and became a law. The public franchises to which it relates are defined in its first section, as follows:

"The terms 'land,' 'real estate,' and 'real property' as used in this chapter, include the land itself above and under water, all buildings and other articles and structures, substructures, and superstructures, erected upon, under or

above, or affixed to the same, all wharves and piers, including the value of the masts, rigging, wharfage, cranes, or docks, all bridges, all telegraph lines, wires, and other appurtenances, all supports and other electrical conductors and other appurtenances upon, above and underground, and all underground or elevated railroads, including the value of all franchises, rights, or permits to construct, maintain, or operate the same, and to above, on, or through streets, highways, or public places, all railroad structures, fixtures, and superstructures, tracks, and the thereon, branches, switches, and crossings, permitted or authorized to be made, laid, or put on, upon, above, or under any public or private road, street or grounds, all mains, pipes, tanks laid or placed in, upon, above, or under any public or private street or place for conveying steam, heat, water, oil, electricity, or any property, substance or product equal to transportation or conveyance thereon or connected thereby, including the value of all franchises, rights, authority, or permits to construct, maintain, or operate in, upon, above, or through any streets, highways, or public places, any mains, pipes, tanks, or other works, with their appurtenances, for conveying water, steam, heat, light, power, gas, or other substance, or electricity, for telegraphic, telephonic, or other purposes, all trees and underwood growing upon land and all minerals, quarries, and fossils in and upon the same, except mines belonging to the State. A franchise, right, authority, or permit included in this subdivision, shall, for the purpose of taxation, be known as a special franchise. A special franchise shall be deemed to include the value of the tangible property of a partnership, association, or corporation, situated in, upon, under, or above any street, highway, public place, or public waters in and upon which the special franchise. The tangible property included shall be taxed as a part of the special franchise."

A. D. 1891-1900. — Democratic experiments. — Labor laws and the land system. — Compulsory industrial arbitration and its working.

"I have been a studious observer of every phase of social life and legislative change that has taken place in this colony during the past seven years," wrote F. S. Connelley, at Auckland, in July, 1896. "I am yet at the very beginning of the experimental era, and it is no misnomer to call much of the legislation of the past few years experimental in the strict sense (see also on this vol. AUSTRALIA. RECENT EXTENSIONS OF DEMOCRACY). But while it is so, there is a most satisfying feature which compensates for the violence done to the feelings of those whose motto has been 'let us permit matters to remain as they are; they suit us well enough.' That the legislative innovations of the immediate past have shocked the sensibilities of a large number

of prominent and well-to-do colonists is unquestionably true, but, at the same time, it is not any inconvenience they may have experienced on this account, there is the fact that the prosperity in nearly every branch of the colony's industrial life throughout the country, and the products are fetching satisfactory prices, and the mining industries are running full time, paying good wages and fair interest on the capital invested, labor is remunerated for its interest on money has fallen from four and a half per cent (this of itself is sufficient to prove that money is abundant). Moreover, English capital are flowing in for development of the gold fields of the colony, the credit of the country at no period of its history stood so high on the Exchange as it does to-day. I may also mention that the genuine encouragement given by the Govern-

laborer. The tendency to use the powers of the government chiefly for the promotion of the comfort of the working classes—whether in the matter of land settlement, education, or employment, seems to undergo no diminution. The only thing which has ceased or slackened is the borrowing of money for improvements. The results of this borrowing have been so disastrous that the present generation, at least, will hardly try that experiment again.—E. L. Goskin, *The Australian Democrat and Atlantic Monthly*, March, 1898.

Labor Laws.—Compulsory industrial arbitration.
