The use of the Balloon in Warfare

It was in the wars of the French Revolution, during the hard-fought battles about Fleurus or Flery in Belgium, that the French for the first time made use of the balloon in warfare. By its means they reconnoitered, recognized the comparative weakness of the enemy, and were thus enabled to take the measures resulting ultimately in their remaining in possession of the field of battle, thus achieving a victory. This occurred on the 26th day of June, 1794. The battle had lasted ten days, having been begun on June 16. The French had made many unsuccessful efforts to cross the river Sambre and gain a footing on its left shore. Finally the "Commissioners of the Convention," representing the government, and accompanying the French armies as was then the custom, "for reasons of state," made Gen. Jourdan commander-in-chief over the United French forces, amounting to some 105,000 men--thus enabling him to bring order out of chaos. He at once reorganized the forces under his command, and brought about the unity of action that culminated in the victory mentioned.

Crossing the Sambre on the 12th of June, the French general so disposed his troops about Charleroi that the allies under the Hereditary Prince of Orange, in order to relieve this fortress, began an attack upon his forces on the 16th of

June, and receiving reinforcements under Prince Frederick Josias of Coburg, they were on the point of achieving a signal victory at the end of ten days of hard fighting. But, probably too confident, "the allies neglected to properly reconnoiter, and thus were in ignorance of the possible resistance the enemy could offer, as the old chronicle has it, " whilst the French upon this occasion, for the first time, made use of the balloon for reconnoitering, and convinced themselves of the weakness of the allied forces opposing them," and were thus enabled to convert a threatened defeat into a victory.

Many of the men who later became Napoleon's greatest generals were present at this engagement, and took part in it; we read among the names of the commanders the names of Jourdan, Kleber, Pichegru, Montaigne, Lefebvre, Moreau, and others.

It is a matter of some surprise that in view of the success attending the use of the balloon on this occasion, its general use in warfare was not by them introduced and recommended to Napoleon, their chieftain. He surely would have been interested, could he but have known that over these self-same fields that so nearly proved fatal to the destinies of France then, there would be fought, but twenty-one short years later to the very day, the battle of nations that closed his glorious career, for it was in the middle of another month of June, from the 16th to the 18th day of the month, that there took place here, in the year 1815, the battle of Waterloo.--Stfc. Amen.

Big Guns and the Wireless Telegraph

It has been demonstrated that the wireless telegraph apparatus as used by our battleship fleet has been seriously impaired by the extreme heavy firing of the large guns during the recent battle practice of the Atlantic fleet off the Virginia coast.

Reports to the effect that some of the apparatus was of such a delicate nature that it had been put out of gear on one of the ships after five minutes of big gun work, and had not responded to the efforts of the wiremen to readjust it for several hours afterward are apt to cause many new experiments to be made to determine a relief from the conditions which now exist.

The Navy Department is working on a plan providing some method of meeting the handicap of the exposure of the antennae to the shots of the enemy, and eliminate as much as possible the exposure of the present high mast. It is planned to build a small portable wireless set, which, while good for short distances, would cut down the distance efficiency, for the high mast is most vital to the sending of long messages. It is also planned to carry a small mast for quick use in emergencies.

Under the rules of battle practice which have been conducted by the commander-in-chief of the Atlantic fleet, considerable trouble was experienced in view of the heavy seas that interfered with the work of the sixteen battleships, and the fact that the flagships and the vessels of the firing squadron had to be in communication by wireless all the time.

It has been planned that regular reports will be made to the department on the observations of the workings of the apparatus. It is also thought that the finding of these defects at this time under the heavy strain of the big firing as has occurred is fortunate rather than otherwise, for it places the government in possession of knowledge of the obstacles which the experts all along the line may now work to overcome, thereby, making the wireless one of the vital features of naval efficiency as reliable as possible.--Stfc. Amen.

Long Life of a Tramp Steamer

Baltimore, Md., Oct. 2.--The trial of a tramp steamer in her migrations about the world keeps up the romance of the sea, as did the white winged messengers of commerce in the days of the sailing craft, now a decaying figure in ocean transportation.

After having just ended continuous steaming to many parts of the world the British steamer Alenides' Capt. Thomas Graham, is in port, and when she dropped her mud hook off Sea Girt last Sunday she had logged 31,495 miles since leaving Barry, Wales, December 10, 1909. She was launched at Greenock, Scotland, a short time before, almost ready for sea, and for her maiden cargo coal was loaded at Barry for Port Said, a distance of 3,125 miles.

Thence she went to Suez, and then calls were made at Aden, Bombay and Calcutta. Up and down the dirty Hooley river, in India, was a part of the programme, and from Calcutta she steamed for Waterloo, South Australia, by way of Sabang. From Wallaroo, Port Pirie was visited and then Bunbury, Australia. With a voyage of 5,050 miles to steam, the Gleneden started for Port Sudan, Egypt, stopping at Colombo, in Ceylon. Ordered back to the East from Port Sudan the Gleneden brought up at Bombay, where Capt. Graham found a cargo of manganese ore waiting to be shipped to Baltimore July 1. Found the ship loaded with 7,000 tons of cargo and steaming for this port, stopping on the way at Suez, Port Said and Algeria. Between Bombay and Baltimore she steamed 8,418 miles.

The Gleneden is one of the most complete types of the ocean tramp. She is lighted throughout by electricity, and the master's, officers' and crew's apartments are models for comfort, light and ventilation. She is 400 feet long, 53 feet beam and 20 feet 7 inches deep. She has nine steam winches and eleven derricks booms to handle cargo.

Japan Decides to Teach the Women

University is Started There and is Based on the Western Ideas.

Some years ago two little Japanese scholars made a quiet tour through America to find out, as they admitted, what was most significant about the woman's educational system of the West says Robert Haven Schauflier in Success Magazine.

They returned and started a university, the aim of which, in the words of its founder, is "to impart higher education to the daughters of Japan, with the object of enabling them satisfactorily to discharge their duties as women, wives and mothers, fully equipped with ideas and knowledge, in touch with the progress of the nation and the world."

That university to-day is the largest woman's college in the world, if one includes the model schools. "In all the courses"--a quote from an article by Dr. Theodore Smith, of Clark University--"psychology, child duty, ethics, hygiene, education and nursing of children, and history of the fine arts are required. There is a dormitory system and the students share in the household work. Students in advanced classes hold in turn the position of head women (Shafu) and then learn the management of a home under the supervision of a matron appointed by the university.

Then the Japanese learned of us. Now we have to learn of them. And we have to remember that that nation which first consistently works out the eugenic ideal, as this university is working it out, is destined to rule the world." As Dr. Saleeby well says, "The history of nations is determined not on the battle-field but in the nursery, and the battalions which gave lasting victory are battalions of babies. The politics of the future will be domestic."

Forest Giants not as Old as Thought

The California big trees only antedate the Christian era about five or six hundred years, according to the statement of Professor Willis L. Jepson of the botany department of the University. Professor Jepson declares that the admiring contemplation of the forest giants by poets and writers has unduly lengthened the age of the big trees. He continues:

"When one considers that the oldest trees were seedlings five hundred years before the Christian era, it would seem that such a lengthened period of life were sufficient to afford food for the reflective mind. But those popular writings, and likewise the poets, whose figures are based solely upon an admiring contemplation of the bulk and staleness of these forest giants, are not satisfied with attributing to them ages less than five thousand to six thousand years."

The university botanist declared that the sequoias were the only survivors of a large family of trees, fossils alone of which remain. Untold centuries ago, he declared, their species were growing on the mountain sides of Alaska and Asia, and only the California species of the family is alive to-day.

The despised Digger Indian of the northern part of California is given credit by Professor Jepson for the development of some of the finest groves of the state. He declared that these people, few of whom are now alive of many thousands, had a forestry system of their own, which accounts for the remarkable growth of some kinds of trees in California.

According to the little French clock on the mantel, midnight was only twenty minutes away.

"What, queried the young man who was holding down a rocker in the parlor scene, "is the longest day you ever experienced?"

The fair maid on the sofa tried to suppress a yawn, but failed.

"Why--er this one, I think," she replied.

Resources of Province in Natural History Museum.

A complete collection of the natural resources and products of the Province of New Brunswick, the mineral, fishery, forestry, horticultural and agricultural resources, with the various by-products of these productions, with the history of each and every one of these resources, with photographs of typical scenes, showing persons engaged in the various industries, made possible by such resources, and of other commercial activities which centre in these industries, with complete statistics as to exportation and home consumption, and other interesting facts in connection with the natural resources and products of the province--this, in brief, is the display, for which Mr. Wm. McIntosh, curator of the Natural History Society, is now collecting, and which promises to be an intensely interesting and possibly the preeminent feature of the Natural History Society in the future.

Some of the resources, such as the various woods, and minerals, are now the property of the museum, though the collections are not quite complete. But what gives promise of being an important factor in the above mentioned display--important from the fact that McIntosh a horticulturist with many years' experience, predicts that in twenty years New Brunswick will be one of the greatest fruit-growing countries in the world--is the collection of horticultural resources, which has lately been made, and will be on exhibition for the first time about the latter part of next week. This collection, besides the fruit products, will consist of a series of photographs showing the various phases of apple culture, suitable situations for orchards, trees in bearing, and coming into bearing and others in blossom; also the packing and exporting of these fruit products, and in addition photographs of the recent apple show. All this, which by the way, is the gift of the provincial Government, is very interesting as the real products, and the early history and present growth of these. This display includes apples--five specimens--of the Wealthy, Baxter, McIntosh, Red, Dudley Winter, Alexander, Golden Russet, Fameuse, Bethel, St. Lawrence, Ontario, Bishop Pippin, Ben Davis, Pewaukee, and Duchess of Oldenburg varieties. These are principally export fruits.

Then there are plums of fourteen varieties; goose berries of five varieties; English gooseberries, currants of seven varieties; raspberries of four varieties; strawberries of fifteen varieties; cherries and blackberries, also native or wild fruits, such as blueberries, strawberries, raspberries, blackberries, cranberries and high bush cranberries. It might be noted that the English gooseberry is remarkable for its prolixity about St. John, owing to a similarity of climate conditions, particularly the cold, with those of England, the home of this fruit. It is therefore a very profitable product to grow in this vicinity.

The labels on the receptacles containing these products, will give the history of the fruit from the first knowledge, which in some instances can be traced to ancient Greek and Roman history.

The display of natural resources when completed, will occupy considerable space, and will show at a glance the great products and resources of New Brunswick.--St. J. Globe.

Certificate of Character

(Brooklyn Life.)

The superintendent of streets in a western city recently summoned one of his subordinates, saying:

"Mike, there is a dead dog reported in the alley between Illinois and Blank streets. I want you to look after its disposition."

It was about an hour later that this came over the 'phone:

"I have inquired about the dog, and find that he had a very savage disposition."

Springless Electric Clock

The students of the St. Louis watch-making school have completed a new type of clock that is driven by electricity. Different from the usual form, the pendulum of this clock swings from a point above. It is made from an ordinary clock, but the pendulum is impelled by an electro magnetically operated armature of the oscillating type.

The armature in its approach toward the emerging coil closes the circuit by which the coil is energized. Under the attractive influence of the coil the armature is impelled against the pendulum, driving it forward, after which the circuit is broken, leaving the armature free to be returned to its original position under the momentum of the pendulum in its returning swing. The swinging pendulum also operates the escapement lever by which the clock mechanism is advanced, so no weights or springs are necessary.

London the Greatest of World's Cities

London, Oct. 29.--Some striking figures of London's life are brought out in the 1909-10 volume of London statistics, and below are given some of the most interesting.

The estimated population of Greater London is now 7,537,196 (an increase of 107,456 over 1906, and that of the administrative county 4,272,710).

There are 611,796 houses in the county (of which 15,974 are recorded as empty). In Greater London the total is 991,383.

Only 4 per cent. of the deaths were set down as from old age.

Over 3,000 tons of foodstuffs were either seized or surrendered as being unsound.

There are fifty-one theatres in London, with a total accommodation for 69,900 persons. The estimated total value of the houses when full is 12,297.

The music halls total forty-eight with accommodations for 70,000.

Licenses have now been granted for 194 cinematograph theatres.

London has nearly 9,000 public houses, 437 houses have been extinguished under the 1904 Act.

It takes a force of over 18,000 men to "police" the County of London; 109,787 persons were apprehended in twelve months.

There are now over a million books in London's free libraries. The total issues during the year under review were 7,628,659, of which 5,634,234 were works of fiction.

London gas bill (apart from charges for stoves and meters) was 5,486,594. The expenditure on electricity supply totalled 1,946,639.

Among the most interesting tables are those relating to marriage. Of 33,409 London marriages recorded in 1908, 24,000 were those of persons between the ages of 20 and 25. There were many marriages of spinsters under age, as young as 15 years.

Whaling in the South Atlantic

Seven whaling companies now occupy sites in the island of South Georgia, where the whole carcass of the whales is converted into oil and fertilizer, says the British colonial report from Stanley, the capital of the Falklands. Six companies fish in the waters of the south Shetlands, pursuing the whale through Pelgica strait to the icy shores of Graham Land. The 1909 season in the dependent clee was a good one, but was not so remunerative around the Falklands. A station at New island, fitted with the latest machinery and lighted by electricity, was completed during the year. There were exported from the Falklands last year 4,006 tons of whale oil, worth \$221,425, against 2,929 tons, worth \$275,930, in 1908 and 2,400 tons, worth \$910,000, in 1907, which shows a wide variation in market values.

There were exported from the Falklands last year 4,006 tons of whale oil, worth \$221,425, against 2,929 tons, worth \$275,930, in 1908 and 2,400 tons, worth \$910,000, in 1907, which shows a wide variation in market values.

When Canada Leads

Not in the least among the distinctions held by Canada is the lead given to all other countries in Christendom in the movement toward the reunion of the church. Australia is first to follow Canada in a serious and hopeful effort for the organic union of the Presbyterian, Methodist, and Congregational denominations. Conditions there are not unlike conditions here. The same ecclesiastical divisions were imported from Britain and persisted in both countries, working the same waste and weakness. There as here the best men in all the churches came to feel the burden and the shame of their outgrown sectarianism. They learned that truth is above all creeds, and the service to men is more obligatory than the maintenance of names and shibboleths. Experience proved to them that neither at home nor abroad can the church do its great work of evangelization if its camp divisions are marked by neglect here, overlapping there, and cross-purposes everywhere. They faced the situation with open eyes and honest hearts. As in Canada, so in Australia, the result is a union movement.

The Canadian situation is full of interest. A half dozen years ago the union movement was initiated. It was not a matter of official leaders or ecclesiastics. It arose out of the necessities of the case and the temper of the people. At its inauguration its most conspicuous advocate was the late Principal Cayne. He and others have been taken from the forefront, but the movement goes on. At each seemingly critical time the logic of events—the increasing purposes of God disprove the fears of its friends and overcome the conservatism of its opponents. To-day the union in Canada of these three historic churches, Presbyterian, Methodist, Congregational, seems plainly inevitable. And this too, not because of any commanding personality or well planned campaign, but because it is the common sense and Christian thing to do. Almost everybody has preferences and prejudices, but these gradually vanish in the presence of recognized Christian duty and in the face of a gigantic world service.

At the present time the approved documents are before the various courts and representative bodies of the churches. The question for their consideration and decision is as to the suitability of the proposed articles as a basis of union. To that question the intelligence and conscience of the churches are directed by their supreme courts. And in all this Canada leads the way, with its sympathetic, hopefully, he all the countries under the flag, by the United States, and by Christian communities in all lands. It is a distinction worth while. Toronto Globe.

To Change Atmosphere

If the odors from cooking are unpleasant in any room of the house, try the following which has been found to act like a charm.

Put in a bowl-shaped vessel about ten cents worth of salts, such as is used in smelling salts, and cover either with alcohol or ammonia. Keep this covered when not in use, as the liquid evaporates.

Such a bowl put into a smoking room or "den" will make the atmosphere breathable by absorbing or destroying the odor of smoke and tobacco. One may cook onions or cabbage without the unpleasantness, and the smoker need not fear to sit in the "best room" and smoke.

The Jew and his Burden

"A Wanderer O'er the Face of the Earth."—Thus it was proclaimed ages ago, and today the man with the flip-tongue and a vision that extends to the end of his straight nose will tell you, the Jew is still a wanderer. But what a wanderer! You that boast of eyes that see and flatter yourselves with powers that may analyze ever so little reflect for a moment whether this flagless, nationless one wanders and the harvest of his wandering. Turn your class' room globe around and up and down and put your finger where he is not, and it will show you a barren soil or a watery waste. Wonderfully has he wandered.

And what are the fruits of this careless, restless journeying? What has he accomplished, despite the most colossal barrier ever erected against human endeavor—centuries-old prejudice? Read history for an answer. The world's history—for he is a creature of the world—he was not meant for our count—our continent. The command was "a man never be." And that he might obey that command he chose, with the wisdom of the sages, to wander in peace.

"Peace shall be thy armor, wisdom shall be thy weapon." Thus accoutered he went forth and all down the broad highway of the ages the historian sees the footprints of the Jew. Not the ball or the heel but the whole foot print because he ever carries on his back the burden of that wander bed. And it bore him down.

Hence, the clear impression of the ever moving feet. Looking at these marks upon the highway, which time cannot efface, what do we see? Temples reared in homage to Gods of Destruction? Shafts that pierce the sky to proclaim princely pillage. Tablets that cry with deathless tongues the wrongs of Empires and defamers of women? Psalms that din the ear with unholo, themes strung on tawdry tunes?

No! Thunderously no! The Jew in his great wisdom upbuilds, for he knows that only fools destroy—nor does he pillage, for that is not the part of peace—nor does he wreck Empires—for his memory is long and he knows it is unprofitable—and his women are sacred in his eyes—and lastly, his psalms were learned on the lonely highway he trod, the theme were of the Messiah and the melodies were caught from the throats of the birds that flew about him. Nor is this all, for while he ate his humble unleavened bread he learned many things and learned them well. That hand that gripped the burden on his back left him spread upon canvas visions that his now sad now glad eyes behold, and the modern eye that looks along the straight road calls his work masterpieces. His nimble fingers with almost divine guidance struck his lyre neatly a sheltering palm tree at eventide, and for ages our souls have rocked from ecstatic heights to abyssal depths with the magic of his wonderful harmonies. He has sat in the high cabinets of the world, counselling peace and has won victories for them that shile at the burden on his back, yet raised no soft hand to shift or ease it and in the realm of finance he stands out a veritable Mount Everest.

Well may he rest by the road side as he wanders and try to the cold winds that blow his burnowed brow. "I am a wanderer, Oh, God, but I have sinned not."

Finally if one may read the signs that point the temper of the times, one may learn as the years roll by that the Jew's burden is becoming less heavy, his stride easier and his carriage more erect, for there exists today as of yore the law that compensates—that strikes nature's balance—that adjusts and corrects one's vision be it over the straight nose or the crooked one.

Palycaim is doomed in Utah. The Mormon church has recently excommunicated a bishop who had married polygamously, and a patriarch, who had officiated at a polygamous wedding. Such discipline counts more against the practice than any number of paper edicts, or decrees, or resolutions—Youth's Companion.

THE GRANITE TOWN GREETINGS

Not Sisters

Now and again you see two women pass down the street who look like sisters. You are astonished to learn that they are mother and daughter, and you realize that a woman of forty or forty-five ought to be at her best and fairest. Why isn't she? The general health of woman is so intimately associated with the local health of the essentially feminine organ that there can be no red cheeks and round form where there is female weakness.

Women who have suffered from this trouble have found prompt relief and cure in the use of Dr. Pierce's Favorite Prescription. It gives vigor and vitality to the organs of womanhood. It clears the complexion, brightens the eyes and restores the cheeks.

No alcohol, or habit-forming drugs is contained in "Favorite Prescription." Any sick woman may consult Dr. Pierce by letter, free. Every letter is handled as sacredly confidential, and answered in a plain envelope. Address: World's Dispensary Medical Association, Dr. R. V. Pierce, Pres., Buffalo, N. Y.

Wins Poor Girls Love

Miss Finley, Support of Widowed Mother. Repeatedly Refused to Become Rich Pittsburg's Bride.

Pittsburg, Nov. 9.—A romantic Pittsburg courtship of two years' length was ended in the Bellevue Stratford Hotel in Philadelphia last Tuesday afternoon when Miss Florence Finley became the wife of Charles Arrott, a Pittsburg millionaire.

Miss Finley was the only support of her widowed mother, and she worked until last Monday as a water of advertising in one of the large downtown stores of Pittsburg.

News of the elopement—for such the friends of both say it was—did not leak until to-day when it became known that Mr. and Mrs. Arrott were now in Pittsburg making preparations to go to Florida, and intending to go from there to Italy for the winter.

Charles Arrott is one of the sons of the late James W. Arrott, millionaire, one of the best known of Pittsburg's rich men. A few years ago he discovered his wife and was awarded the custody of a small daughter, who since with the second Mrs. Arrott.

Two years ago when Christmas shopping with his little daughter, Arrott entered a downtown store and there met the young woman who is now his bride. She was writing the advertisement for a late line of goods in the Pittsburg office at the time she met him.

He became devoted to her and proposed marriage. Again and again Mrs. Finley refused, explaining that she had her mother to support and that she would not allow a husband to take this work of love off her hands.

Miss Finley was decidedly fond of sewing, but it was not occasionally. As she would ride with him she was afraid, she said, that "people would think there was something wrong." Finally, a short time ago, Arrott bought a five-thousand dollar auto and set it to Mrs. Finley with the understanding that she must not be foolish and refuse it and that he was determined that she accept it—even if she would not use it.

"How will it look for me to go to work each morning to a third dollar a week when I have a five thousand dollar car?" she asked.

And poor rich Arrott could only twirl his hat and say he hoped she would not continue to talk to him about working; that she did not have to work, etc. Arrott's persistence and his motor car won out. Miss Finley took time to think it over and finally said she would do it for Mrs. Arrott at some future date, but the matter must be kept very quiet and the auto must be sent to a garage until she was ready to be married.

Webster's NEW INTERNATIONAL Dictionary, G. & C. Merriam Co., Springfield, Mass. surpasses the old International as much as that book exceeded its predecessor. On the old foundation a new superstructure has been built. The reconstruction has been carried on through many years by a large force of trained workers, under the supervision of Dr. W. T. Harris, former United States Commissioner of Education, and reinforced by many eminent specialists. The definitions have been rearranged and amplified. The number of terms defined has been more than doubled. The etymology, synonyms, pronunciation, have received unerring scholarly labor. The language of English literature for over seven centuries, the terminology of the arts and sciences, and the every-day speech of street, shop, and household, are presented with fullness and clearness. Its size of vocabulary, its richness of general information, and its convenience of consultation, the book sets a new mark in lexicography.

400,000 words and phrases.
6000 illustrations.
2700 pages.

RINK ASSOCIATION ENTERTAINMENT.

The St. George Rink Association will hold a Box Social in the Drageogian Hall on Friday Nov. 25th. There will be the usual dances. Whist tables will be provided for those who do not dance. A good time is expected and an opportunity given to show the Association provide such able pastime during the winter months.
The Association are endeavoring to build an up-to-date open air rink. A weekly band night is assured and every effort will be made to provide for the comfort and pleasure of the skaters. The construction of the rink is now well under way and all that is needed is the hearty co-operation of the public.
All are invited to attend this entertainment and bring their friends. The ladies are invited to bring boxes which will be auctioned at the Hall.
The first fancy dress carnival of the season will be held about the first week in January. Get your costumes ready now and avoid the rush. Prizes will be given to home productions only.

The best deer story of the season in the district of Cornwall, Ont., comes from the south side of the St. Lawrence River. The other day James Rudley and Henry Packard shot a fine big buck in the south meadows district, and when the former attempted to cut the animals brow it kicked out with all four legs, and Dudley got a blow in the eye, which may blind him for life. Packard butted in with his knife as the deer struggled to its feet, but received a kick which broke his knee cap and tore his trousers. The deer then escaped.

LOCALS

John Dow a former resident of this town was killed at Cobalt last week.

The young son of David Holt of Digdequash died suddenly of Spinal Meningitis last week after an illness of only two or three days.

The Baptist congregation held a very successful supper on Tuesday evening, a large number being present all enjoying themselves.

To our Subscribers in U. S.:--Subscription to U. S. is \$1.25 strictly in advance, all subscriptions will be cancelled on expiring.

Frank Leavitt of Back Bay was united in marriage to Miss Emma Brewer, a former Salvation Army Capt. of St. John on Wednesday. The happy couple arrived here on Thursday's train en route to Back Bay where they will reside. Our Back Bay friends will no doubt give them a hearty welcome and all wish them every happiness and prosperity on life's journey.

Bruce McDougall of Moncton the notorious editor of the Free Speech for the issuing of which he spent some time in prison, and on coming out started another scandal manager paper "The Vindicator" was killed at Sydney by falling down the stairs of the Windsor Hotel of that city Tuesday he had gone there to defend a couple of newsboys who had been arrested for selling his paper, and the evening before had been quite badly beaten by some of the people he had insulted in his scandal sheet.

Mrs. Charles Paul Burned to Death

A sad tragedy occurred at Beaver Harbor on Monday evening, resulting in the death of Mrs. Charles Paul, a well known resident of that place. Mrs. Paul was burned to death, but as she was alone in her house at the time, what happened can only be conjectured. A neighbor, Mrs. Martin Eldridge, called at the Paul home about 5.30 o'clock Monday afternoon and was surprised to find the kitchen full of smoke and two covers off the stove, in which a bright fire was burning. She noticed that one of the covers had fallen into the flames. Mrs. Paul was nowhere in sight, but she summoned other neighbors and the afflicted woman was tenderly carried into her home and everything possible done for her, while a hurry call was sent to Dr. Taylor at St. George.

It was about 6 o'clock or a little later when Dr. Taylor reached Beaver and he quickly saw that Mrs. Paul's injuries would prove fatal. She passed away about 8 o'clock.
The deceased lady was one of the best known residents of Beaver Harbor. Her husband is employed by the Beaver Harbor Fishing Company and is now somewhere in the Bay. An only son, Allen, is on the cruiser Curlew, which happened to be at Black's Harbor, and he was notified, reaching home a short time before his mother died.

Mrs. Paul was about 50 years of age and was a Miss Eldridge. Brothers are Fred, George, Allen and William, all of Beaver Harbor, and Mrs. Howard Traynor, of Pennfield, is a sister.
Dr. Taylor did not consider an inquest necessary as the general opinion was that Mrs. Paul's clothing had caught while she was endeavoring to lift out of the stove the cover that had fallen into the blaze, and that rushing to the open had caused the fire to burn up fiercely. The sad affair has cast a gloom over the village and there is general sympathy with the family.

St. J. Globe.

A good position can be had by ambitious young men and ladies in the field of "Wireless" or Railway telegraphy. Since the 8 hour law became effective, and since the wireless companies are establishing stations throughout the country there is a great shortage of telegraphers. Positions pay beginners from \$70 to \$90 per month, with good chance of advancement. The National Telegraph Institute operates six official institutes in America, under supervision of R. K. and wireless officials and places all graduates into positions. It will pay you to write them for full details at Cincinnati, Ohio, or Philadelphia.

Atlantic, Quebec and Western Railway.

At the recent general meeting in London the President, Lord Ranfurly, stated that he hoped at their next meeting to be able to report the successful opening of the railway, thus placing in direct rail communication with the river or Gaspe Harbor, destined, as they believed, to become in the near future one of the great ports of the Dominion of Canada. The engineers-in-chief, Sir Douglas Fox and Partners, have certified that 78 per cent. of the work on the coast line had been completed, leaving 22 per cent. to complete at the end of September, since which time considerable progress had been made. Possession had been obtained of the whole of the land, and the work of construction was being carried out in the most substantial and efficient manner. The line was now in operation up to mile 37, and would be open for traffic as far as mile 61 next month, and through to Gaspe before this time next year. At Gaspe Harbor the Government were constructing a large wharf at which there would be sufficient depth of water to accommodate ocean steamers. The company had already received \$365,568 on account of cash subsidies, and was now in a position to claim considerable further amount. It had also received official notification that it was entitled to 188,107 acres of land, and next month, when a further 24 miles of line were open, they would have earned under the terms of the subsidy agreement a further large sum. Exchange.

Ottawa, November 11. The Census Office issues today a bulletin on the crops of Canada as prepared from reports made up to the end of October.

The closing months of the year give good reports for nearly all of the field crops of the Dominion. Potatoes alone indicate partial failure, and in all the provinces there are complaints of rot in the fields and in the heaps for winter storage. The area is 503,262 acres and the estimated yield 74,048,000 bushels, being an average of about 147 bushels per acre, which is nearly uniform for all the provinces. The quality is 84.42 per cent. Turnips and other field roots show a quality of 88.5, a yield per acre of 402 bushels and a total yield of 93,207,000 bushels for a crop of 236,622 acres. Hay and clover are computed for 8,515,400 acres and a yield per acre of 1.82 tons. The quality is 90.45 per cent and the total yield 15,497,000 tons. Fodder corn has an estimated yield per acre of 9.38 tons, which upon an area of 271,960 acres gives a product of 2,511,000 tons. Sugar beets are grown most extensively in Ontario and Alberta, where they supply roots for three sugar factories. The area in crop this year is 16,000 acres, which is a substantial increase upon last year. The yield per acre is 9.69 tons, the total yield 155,001 tons and the quality 93.15 per cent. The roots supplied to the Berlin factory are testing 17 per cent of sugar and at the Wallaceburg factory 16 per cent, but a product of 5000 acres in Ontario is being shipped to factories in Michigan. The product of 8,200 acres in that province is marketed at Wallaceburg and Berlin where the average price is about \$5.86 per ton or better than \$7.80 per acre. Computed at the average local prices the market value of potatoes this year is \$33,446,000 of turnips and other roots \$21,444,000, of hay and clover \$149,716,000, of fodder corn \$11,957,000, and of sugar beets \$887,000. The report on fall wheat sown this year shows an area of 790,300 acres, whereof 682,500 acres are in Ontario and 107,800 acres in Alberta. The condition of the crop is reported at 98.4 per cent as compared with 93.60 last year.

The per cent of fall ploughing completed this year compared with the area planned for is less than last year, but the report is made for a period one month earlier. The per cent of summer following compared in the same way is somewhat lower, but increases are shown for Saskatchewan and Alberta.

MC2465 POOR DOCUMENT

THE GRANITE TOWN GREETINGS

IMPORTANT CHANGE IN FIRE INSURANCE POLICIES.

That fine old Company, The Acadia Fire Insurance Company of Halifax, N. S., who have been represented in New Brunswick for the past five or six years by Wm. Thomson & Co., as General Agents, at St. John, N. B., are about severing their connection with the above firm, and are establishing direct through out the Province of New Brunswick, on the non-Tariff basis, and not being connected with the Board of Underwriters, are prepared to accept business throughout the Province at non-tariff rates.

This strong, independent company has been in operation for over 48 years, having been established in the year 1862, and bears the highest reputation throughout the whole of Canada for prompt and honorable dealing to all its claimants, and during its entire history has never been contested or disputed on honest claim. That the business of this Company has been very profitable is evidenced by its exceptional low loss and general expense ratio throughout its entire career, which all stands for the permanency and stability of the Company. That the "Acadia" is today in the front rank, and one of the strongest of Canadian fire companies, is shown by its annual statement for the year ending 1919, which shows that the assets of this sound Company exceeds three-quarters of a million dollars, and after making full provision for all liabilities, including the reserve for unearned premiums of \$100,567.53 they have a reserve account of \$214,863.85, which is equal to over 71 per cent their capital paid-up of \$300,000 and their surplus to policy-holders is \$614,863.85; it will thus be seen that the property owners who avail themselves of the "Acadia's" policies secure the highest grade of protection at the lowest possible cost.

Mr. Edwin K. McKay, Inspector of "The Acadia's" Fire has been in town the past few days, and has appointed Mr. E. J. O'Neill representative of the said Company for the Town of St. George and who is now in a position to issue policies on desirable risks at a minimum cost commensurate with absolute security.

The position of a representative of a strong and reliable fire insurance Company in his community is unique, inasmuch as he has large amounts on call immediately available, in the event of a conflagration, as was evidenced by the recent Campbellton conflagration when something like \$2,500.00 in round figures was paid by the insurance Companies to the property owners of that town. His duty is not simply to canvas a risk; in fact his duty or obligation only commences when he issues a policy as he is obliged to guard the assured and as well to guard the Company's interests by using policies only to reliable parties. Mr. O'Neill we have no doubt will fill the position with credit to all concerned.

TRY THE MONEY-BACK CURE FOR INDIGESTION

Nine times in ten stomach derangements are responsible for sallow complexion, dull eyes and thin body.

It is the stomach that supplies nourishing blood to the muscles, the nerves and skin. If the stomach is healthy, plenty of nutritious matter will be absorbed by the blood. If it is not healthy the food will ferment, and undigested, will pass along through the bowels, furnishing so little nutritious matter that the blood becomes impoverished, and the glow of health vanishes.

If you suffer from nervousness, sick headache, belching of gas, sour taste in the mouth, heaviness after eating, or any other miserable stomach disturbance, you need Hyomei, and the sooner you get it the sooner you will be healthier and happier.

It will relieve any distressed stomach condition almost immediately. It will cure if not according to directions. J. S. Satton Clark sells it for 50 cents a large box, and he thinks enough of it to insure indigestion to guarantee it.

HYOMEI
(PRONOUNCED HIGH-O-ME)
CURES CATARRH, ASTHMA, Bronchitis, Croup, Coughs and Colds, or money back. Sold and guaranteed by

"The Little Man With the Whiskers."

woman to whom your duty belongs, let me finish. Lou Manning doesn't want to work. She wouldn't take it if she could get it!"

"It is false!"

"Prove it!"

"If I prove it will you break with Mrs. Lou?"

"If you prove to me that Mrs. Manning is a false woman I promise you I shall trouble with her any more."

The gentleman took a letter from his pocket.

"I only got this yesterday, Jack, or I should have said all this to you long ago, but I knew that unless I could prove all I said to you it would be just so much time wasted, so I waited. She has been crazy to go on the stage and has been begging you to do what you could for her, and you have been taking her day after day from manager to manager, and haven't you? She cried one day while I was there with you because she had no money and no one would engage her. I was quite touched and sorry for her at the time, but listen to this:

"Great Heavens! Many thanks for your offer of a part in your road company of The Hills. I would like to be under your management, but I don't care to leave the city just now, and it would be a good one for me to live on a salary of twenty dollars, which you offer. If you have any thing in the city to offer I will glad to consider it."

"Years truly, LOU MANNING."

The gentleman closed the letter and looked at his master.

"If that's the right kind of a letter from a woman who is accepting her

I LAUGHED TILL I BOLLED OVER.

board from an ex-flame, you can call me a rat."

This struck me as so funny that I laughed till I rolled over on the grass—but my master didn't even smile.

"Will you give me that note?" he asked.

"To show Mrs. Manning."

"Jack! Will you really break with her?"

My master gave a funny little hard laugh.

"This time to-morrow Mrs. Manning will have struck me off the list of her acquaintances."

"Thank God!" said the gentleman, "and now, Jack, that your eyes are opened to your own folly, let me warn you of another danger that is threatening you. You are breaking your wife's heart—but that isn't the worst of it. While you have been foolish, others have been but too wise—your little wife needn't go begging."

"Great heaven! man, what do you mean?"

"That you had better look out for yourself. When a pretty woman is unhappy there is never any lack of nice fellows ready to cheer her up."

With that they waded away and I heard no more.

The next morning, to my great surprise, my master and mistress came out to me together. He had his hat on and shining boots, so as that the some Patrick had tethered me on the wrong side of the brook, he would not cross to talk to me, but just looked and called to me. I saw, however, that they looked happy and I could hear all they said.

"After to-day I won't go to town again all summer," said my master, "and now that we have not a word to fear your face must wear nothing but smiles for the future."

Then he went off down the road, and I laughed to myself to see. I was in the secret and knew just why he would not go to town any more. I called to my mistress and asked her to come and untie me, and promised to let her into the secret if she would, but she was so busy looking down the road after my master and kissing her hand to him as he turned the corner that she did not hear me. Perhaps as it turned out it was better she did not hear me.

I ate a lot of grass that morning—more than I had dared to since I began to watch for a critic. I heard my mistress singing in the garden, she was evidently feeling happy, and I too was happy in knowing that we had nothing more to fear from a critic—for the strain of watching for him was beginning to tell on me. I had been so busy scanning every one who went up or down the road, and listening to hear if my mistress cried as they went by, that I had not had time to eat and I was getting thin and poor, and beginning to be afraid Crisfield would come and make me of me—a disgusting practice that I did not want to countenance.

I gambled with joy as I thought that this would be the last few hours of my watch-to-morrow my master would not go away any more. A critic was settled, and my mistress was no longer going to cry again. I wonder what had settled a critic, and supposed he was dead and made into veal or beef or whatever they make out of a critic. I

was a little sorry that we were rid of it—because I should greatly have liked to have had one chance at it myself—but so long as it was gone I supposed that I ought to be contented.

My and by my mistress came gayly out of the garden with her work and a book and all the dogs at her heels, and sat down under the willow.

She had been there some little time when the little man with the whiskers came. The moment I saw him I hated him afresh, and longed to be near my mistress to protect her. I tugged at my staid, and it made me so mad that I couldn't move it, and that I was on the wrong side of the brook, that I cried aloud, and missed the beginning of the conversation.

"Yes, I am alone," was the first words I heard, "but my husband says his business will be finished to-day and he won't go to town again this summer."

The little man with the whiskers gave another of those horrid laughs of his.

"I don't suppose he will. I think he is going to bring his business down here."

"What do you mean?"

"On Saturday he was at the Rossin House on the hill arranging about board for a lady."

My mistress gave a short cry, and then looked him square in the face.

"It is not true," she said, proudly.

"I think you'll say it is when I tell you the name of the lady he has half engaged the room for is Mrs. Lou Manning."

(Concluded Next Week.)

Intensive Farming.

Every Canadian province the question of improved methods of farming is attracting more and more attention. There is profit in good farming, and yet the tendency to desert the farm has not been overcome. Conditions must be improved, better roads must be provided, and the better methods of agriculture more widely taught. Referring to the general subject of conservation the Victorian Colonist makes this particular and proper statement relative to the farm:

"One of the greatest needs of Canada today is the full utilization of all the areas that have been prepared for cultivation, and a more intensive system of farming. At a time when the labor problem is serious, it seems as if it would be good policy for farmers to reduce the acreage under cultivation and cultivate what is left more thoroughly. If this were done, it is very probable that better results would be obtained for the expenditure of less labor, and the reduced size of each village area would mean more possible increase in the number of farms. The problem of the most advantageous use of cultivation land is one that calls for very serious consideration. Especially is this true of those parts of Canada which are not prairie-like in character. This is an aspect of the Conservative question that cannot be pressed upon the consideration of the community too frequently or too forcibly."

The Price of "Peace."

Nearly one-half of the German budget for 1911, amounting in all to \$750,000,000, is made up of appropriations for the army and navy. The estimated expenditure for the army is \$200,000,000 and for the navy \$110,000,000.

Germany is thus paying one-seventh of the insane rivalry in national armament which Lord George has computed at the enormous annual total \$5,250,000,000. It is spending every three years the equivalent of the five milliards of francs received from France as a war indemnity after the defeat of 1871, mainly to maintain its military establishment on a peace footing.

This "peace" at a price no less exorbitant than war. The withdrawal of \$310,000,000 from productive industry in a single year to build Dreadnoughts and support an idle soldiery amounts in effect to a peace indemnity fully as burdensome in its ultimate results as a war tax. That it is paid not in burning fields and loaded houses but in a cost of living that means pecuniary in countless households, does not alter its essential nature.

Two young men entered the jewelry store of E. L. Paulman at Washington and Rutland streets, Boston, Tuesday evening, and while the proprietors attention was distracted, seized a tray of rings and ran out of the store. There were about fifty rings on the tray, valued at \$200. Paulman discovered the theft almost immediately and gave chase but the two thieves had too much of a start and succeeded in making their escape.

THE GRANITE TOWN GREETINGS

The warmest friends of Red Rose Tea are those who have tried some other brand and said to be "as good as Red Rose" and for which they paid the same price. Very easy to say a thing is "as good" but not so easy to "make good."

Prices: 30c., 35c., 40c., 50c. and 60c.

Moderation in Exercise.

The Montreal Witness calls attention to the well known fact that great athletes are, as a rule, comparatively short-lived. It is deplored that this is so. This is the age of record-breaking and record-breakers in athletics. He is the greatest athlete who can strain every fibre of his body to a greater extent than all the fibre strainers of all lands in all years of the past.

It is no wonder that the human organism cannot long this kind of thing. It is no wonder that the great athlete dies young of an overworked heart.

Extremes in the modern "athletic habit" are in the same category as the alcohol habit and the morphine habit.

You can't have too much of a good thing, is an exploded theory in its relation to physical exercise. Moderate and common sense exercise is invigorating and health building extreme, record breaking exercise is health destroying and fatal.

I. C. R. Conductors Ask Level Rates.

There is a movement among the conductors and trainmen of the Intercolonial for a levelling up of rates on the Canadian Western section of the system to standard schedule. Conductor Craik-shank of Fredericton is here hoping to arrange a conference with the Board of Management of the I. C. R. to discuss the matter.

The question was brought under the notice of Mr. Braly, one of the members of the board and superintendent, who felt that the matter was not one upon which he could act on his own responsibility without reference to the board. The men are asking for an increase of from fifteen to twenty per cent on their present rates, which they claim should be made retroactive from the beginning of July last, the time their first demand was presented.

Asaya-Neurall
THE NEW REMEDY FOR
Nervous Exhaustion
Nervous exhaustion, the ailment of the age, results from the destruction of nerve cells by overstrain faster than they are rebuilt. The only remedy is Food, Rest and increased nerve repair. "ASAYA-NEURALL" is and makes possible this cure. It feeds the nerves, induces sleep, quickens the appetite and digestion, restores buoyancy of spirits, \$1.50 per bottle. Obtain from the following:
Andrew McLean, Back Bay,
W. E. R. Jackson, Portland,
Mills, Curtis & Co., St. George.

Forced to Eat Skins and Snow-Shoe Thongs.

Ottawa, Nov. 8. Forced by lack of healthy food to subsist at different periods on skins and snowshoe thongs, Dr. E. Steffansson, who is representing the American Museum of Natural History and the Canadian Geological Survey in some Arctic explorations, was reduced to extremities last winter on Cape Lyons one of the most northern points in Canada.

This morning R. W. Brock, director of geological survey, received a letter written on April 26 last, by Dr. Steffansson. The message had to be carried several hundred miles by an Eskimo on snowshoes, from Cape Lyons to an east-

ern point in Alaska.

Mr. Steffansson, who is a native of Winnipeg, had with him Lieut. Anderson of the American army, and five Eskimos. For three weeks steadily they lived on a diet of deerskin, the Eskimo during that time gating up all the zoological specimens collected by the scientists of the party. Throughout, however, they were able to retain their records and instruments. Dr. Anderson and two of the aborigines of the north had pneumonia, and the dogs died from rigorous conditions.

At the time Dr. Steffansson wrote, the party was about to start for Coronation Gulf, about two hundred miles east of Cape Lyons. There was, he reported, no further fear of a shortage in food supply as game was plentiful. One difficulty still confronting the explorers was the great lack of dogs, which made travel across northernmost Canada exceedingly difficult. Mr. Steffansson sent down some of his geographical results. After three and a half years spent in ice-bound regions, with auroras and midnight sun, he expects to return in the fall of next year. The coming winter will be spent in the vicinity of Coronation Gulf.

CARROL E. FISHER
Pembroke, Me.

Soporific Carrots.

Eat carrots for insomnia. A large, properly cooked carrot for supper will induce sound and refreshing sleep.

That was the opinion given yesterday by a well known London doctor.

"Carrots differ from other vegetables in that they contain a large amount of various sugars," he said. "Properly cooked they are sweet and pleasant to the taste; they are also cumulative, that is, they promote digestion.

In its sleep-producing qualities the carrot is closely allied to the onion, and as a supper dish for insomnia patients it is to be strongly recommended.

"It has also been ascertained that the carrot is excellent as a nerve tonic and mental stimulant. There can be no doubt as to its peculiar properties for inducing sleep, but they should not be eaten raw. They are very indigestible uncooked.

A woman who is an enthusiastic vegetarian gave one of the best recipes for cooking this vegetable.

"Carrots are best cooked conservatively," she said. "By this, I mean they should be cut in strips and allowed to simmer with butter in a double boiler. No water should be added.

"By this method all the valuable juices and properties of the carrot are retained instead of being thrown away with the hot water, as is done when they are boiled.

"For supper this dish is most appetizing, a poached egg is a tasty addition. It is a meal which I know from experience produces slumber.

"The many good qualities of carrots are overlooked by the public. They not only induce sleep, but are excellent for the complexion as a consequence of their tonic effect on the blood." From the London Mirror.

Do You Need a New Winter Overcoat?

GRAND TOWN GREETINGS

For Coughs and Colds

Troubled with a cough? A hard cold, bronchitis, or some chronic lung trouble? There is a medicine made for just these cases—Ayer's Cherry Pectoral. Your doctor knows all about it. Ask him what he thinks of it. No medicine can ever take the place of your doctor. Keep in close touch with him, consult him frequently, trust him fully. No alcohol in this cough medicine. J.C. Ayer Co., Lowell, Mass.

Ayer's Pills. Sugar-coated. All vegetable. Act directly on the liver. Gently laxative. Dose, only one pill. Sold for nearly sixty years. Ask your doctor about them.

MASCARENE

Miss Annie Stewart and Edith Cameron returned to their homes after having been employed in Lubec for some time.

Mr. Cameron visited friends in Lubec on Sunday.

Miss Cameron is visiting friends in Lubec on Sunday.

Mrs. N. Cameron and Mrs. F. A. Cameron returned to St. John for the week.

Mr. George Lambert, Dick and Robert English are spending a few days in Lubec.

Mrs. Josina McKenzie and David Bell are calling on friends in Lubec on Sunday.

Mrs. Leland went to Eastport on Sunday.

Mr. Dolen is very ill at the home of Mrs. W. W. Cook.

Miss Grace Stuart and Clara Boyd were guests of Mrs. Wm. Matthews during Saturday and Sunday.

Mr. and Mrs. Henlerson and Roscoe Burgess were with friends in Letang on Sunday.

Mrs. Robert and Nolan Wilcox of Bowyer River spent Sunday with their parents.

George McVicar attended the pie supper at Letete Saturday evening. He met some of his Mascarene friends but did not know them.

Bert Cameron has gone to Boston to spend a few weeks with friends.

Kinsman Stewart has returned home after being employed for some time on the railroad.

John Stewart and Miss Alice Gearson of St. George took tea with Mrs. Wm. Hebeey at Letang on Sunday.

Miss Delia McVicar and her mother were guests of Mrs. John Holmes on Sunday.

Frank Leland who is working at Woodland spent Sunday at his home here.

Miss Grace Stewart is spending a few days with her sister at Letete.

Anglo-Saxon Navies.

The growth of the United States as a naval power as perhaps the most remarkable feature of the statistics embodied in a recent British parliamentary return which shows the expenditures on the world's navies during the past three years. While the spirit of militarism has but a slight hold on the Republic as compared with some of the European nations, the return in question demonstrates that the American naval estimates have exceeded even those of Germany, and are second only to those of Great Britain. For the three years ending March 31 next, it is thought that the Empire's ships will have cost about £110,000,000. As compared with this there is an estimate of £83,000,000 for the United States, £58,000,000 for Germany, 41,000,000 pounds for France, £29,000,000 for Russia, £23,000,000 for Japan, and 20,000,000 for Italy. It will thus be seen that there is an expected Anglo-Saxon expenditure for the three years of 493,000,000 as compared with the 171,000,000 pounds which the other five powers anticipate spending, and while Germany may get more for her money than the United States, the figures are not without their significance.

THE VARIETY OF PINE.

The teacher had been reading to the class about the great forests of America. "And now, boys," she exclaimed afterwards, "which one of you can tell me the pine that has the longest needles? Up went a hand in the front row. "Well, Tommie, the porcupine, ma'am."

ELMCROFT.

Miss Alice Benez has returned to her home after a few months' vacation in the States.

Joseph Leaman has returned to his home after spending a few days with his parents in the States.

William Irvin called on friends here on Monday.

Joseph McLean is visiting his sister-in-law Mrs. Robert McLean.

A mining project is now under way in Alaska that has all the romance of a story from the "Arabian Nights." For years there have been geologists who held that somewhere in the far North there is a matrix which is the source of all Alaskan gold. A number of the richest creeks have their headquarters on a round mountain and a few content that in the heart of this dome lies the world's greatest treasure house, a mass of virgin gold that will make the fabled wealth of the Incas look like the traditional quarter sitting beside a nickel. It is contended that the erosion which has gone on through the ages has dropped the edges of the treasure down the gold-bearing streams, but none know whether it has all been washed away or not. A tunnel is now being sunk into the mountain, and the projectors hope, of course, to find a huge mass of gold, or at least long veins of the precious metal radiating through the rock.

Aseptic Drinking Cups on C. P. R. Sleeping Cars.

Aseptic drinking cups are the latest improvement introduced by the Canadian Pacific Railway on all their standard sleeping cars, in order to do as far as possible follow out the recommendations of health experts with regard to indiscriminate drinking out of the same glasses. The cups are a model of ingenuity, and are made by a special process. They are simply a sheet of paraffin cardboard, superimposed on a similar base, the whole being neatly folded in a waxed paper envelope. When a passenger goes to the wash room and wants a drink of water instead of using the glass which has been used by numerous other passengers and, perhaps, used for tooth cleaning purposes, he will simply demand a glass from the waiter. He will then be handed a neat envelope containing the aseptic drinking cup, open it up, unfold the cup, have his drink and then throw the thing away, thus avoiding the possibility of receiving or distributing contagion.

Father Morrissey's No. 7 Cured His Rheumatism in 3 Weeks.

Father Morrissey's prescription, called "No. 7," cures Rheumatism completely as well as quickly, as Mr. James Major, of Hartland, N.B., gladly testifies.

"I want to tell you," he writes, "of the wonderful cure Father Morrissey's medicine made of me. I was troubled with Rheumatism so badly that I could not get into my wagon alone. After using his medicine for three weeks I was completely cured, and felt like a boy. I am now a man of 79 years of age, and in good health yet—no Father Morrissey's medicine I owe all thanks."

"I can truly advise anyone suffering from Rheumatism to use this medicine at once."

Father Morrissey's No. 7 Tablets act directly on the kidneys, invigorating them so that they can thoroughly cleanse the blood of the Uric Acid which causes the Rheumatism, and thus permanently cure.

The "Chemics" of Bread

LET us look a bit into the chemistry of bread. For we want our bread not only to seem good but we want it to actually be good. And as bread is a question of flour and flour a question of wheat we see that wheat is where we have to begin.

Gluten, starch, water and phosphates, are the principal component qualities of wheat. And in proportion as these qualities are more or less present is the wheat more or less valuable so far as nutrition is concerned.

The nutritive and bread-making qualities of wheat are the things that make it more valuable than rye or oats or barley or corn as human food. The quality of nutrition, too, is what makes one brand of flour more valuable than another.

If it were not for nutrition and bread-making qualities any flour would be as good as any other. We wouldn't have to care whether it was made from good wheat or poor wheat, from Spring wheat or Winter, from all wheat or part other cereals.

A chemist will tell you that ROYAL HOUSEHOLD FLOUR is richer in high quality gluten than flour made from low grades of wheat. And for that reason it is better for food, hence more valuable than ordinary flour.

And actual tests in your kitchen will tell you that it produces more and larger loaves to the barrel than ordinary soft wheat or blended flour, the reason being that flour made from hard Red Fife wheat is more expansive and more absorbent.

It is plain, common-sense that flour made from the finest hard wheat in the world and scientifically milled must produce the finest bread in the world. And it does. Try it. Prove it.

Sealed Tenders addressed to the undersigned, and endorsed "Tender for Warehouses, St. John Harbour, N. B.," will be received at this office until 4.00 p.m. on Monday, October 24, 1910, for the construction of Warehouse No. 7 and the Extension of Warehouse No. 6.

Plans, specification and form of contract can be seen and forms of tender obtained at this department and at the offices of J. K. Scammell, Esq., District Engineer, St. John, N. B., and Geoffrey Stead, Esq., District Engineer, Chatham, N. B.

Persons tendering are notified that tenders will be considered unless made on the printed forms supplied, and signed with their actual signatures, stating their occupations and place of residence. In the case of firms, the actual signature the nature of the occupation, and place of residence of each member of the firm must be given.

Each tender must be accompanied by an accepted cheque on a chartered bank, payable to the order of the Honorable the Minister of Public Works for the sum of three thousand (\$3,000.00) dollars, which will be forfeited if the person tendering decline to enter into a contract when called to do so, or fail to complete the work contracted for. If the tender be not accepted the check will be returned.

The Department does not bind itself to accept the lowest of any tender.

By order,
R. C. DESROCHERS,
Secretary.

Synopsis of Canadian North-West Land Regulations.

Any person who is the sole head of a family or any male over 18 years old, may homestead a quarter section of available Dominion land in Manitoba, Saskatchewan or Alberta. The applicant must appear in person at the Dominion Lands Agency or Sub-Agency for the district. Entry by proxy may be made at any agency, on certain conditions, by father, mother, son, daughter, brother or sister of intending homesteader.

Duties—Six months residence and cultivation of the land in each of three years. A homesteader may live within nine miles of his homestead on a farm of at least 80 acres solely owned and occupied by him or by his father, mother, son, daughter, brother or sister.

In certain districts a homesteader in good standing may pre-empt a quarter-section along side his homestead. Price \$5.00 per acre. Duties—must reside upon the homestead or pre-emption six months in each of six years from date of homestead entry (including the time required to earn homestead patent) and cultivate fifty acres extra.

A homesteader who has exhausted his homestead right and cannot obtain a pre-emption may enter for a purchased homestead in certain districts. Price \$5.00 per acre. Duties—must reside six months in each of three years, cultivate 60 acres, erect a house worth \$500.00.

W. W. CORY,
Deputy of the Minister of the Interior.

Invaluable to Every Farmer.

Its Wonderful Power in Curing Sick Cattle and Colicky Horses Makes "Nerviline" Worth its Weight in Gold.

The Rockman or farmer, that doesn't know of the thousands and one uses of Nerviline in the stable, has a great deal to learn. I wouldn't think of locking my stable door at night without knowing I had a supply of "Nerviline" on hand? It always gets a dozen bottles at a time from my druggist.

It cures colic, indigestion and bad stomach in a horse. There is no "Nerviline" on earth in the same class as "Nerviline." Last summer I had a \$250 horse that got the colic, and I would have lost him if I hadn't been able to give him Nerviline. I poured a full quart of Nerviline in a pint of water down his throat and saved his life. I know of neighbors who have saved many heads of valuable stock, stricken with colic, just by using Nerviline. It is equally good as a rub-on liniment, and I know from my experience that for man or beast, internally or externally, "Nerviline" is worth a dollar a drop.

James E. McCullough,
Stock Breeder, etc.
You will not regret using Nerviline, but see you get it and not something else, in two sizes 50c. and 25c. at all dealers, or The Cattarhazone Company, Kingston, Ont.

Trains as Plant Distributers

It has been noticed that many plants not natives of the locality are to be found growing in the neighborhood of great railroad yards. Sometimes the seeds of these plants have been brought thousands of miles from their natural habitat. Often they flourish in their new environments and gradually spread over the surrounding country. Thus the trains carry unsuspected emigrants which travel to and from every point of the compass. In the Mississippi valley are to be found plants which within a few years past have thus been brought together from the Atlantic seaboard, some from the gulf region and some from the other side of the Rocky mountains.—Harper's Weekly.

A food standard for milk has been announced by the Inland Revenue Department. Milk is defined as "The fresh, clean and unaltered product, obtained by the complete and uninterrupted milking, under proper sanitary conditions, of one or more healthy cows, properly fed and kept, excluding that obtained within two weeks before, and one week after calving, and contains not less than 3.7 per cent of milk fat, and 8.50 per cent of milk solids, other than fat."

Advertise in Greetings.

The Prince of Peace.

Why Jesus Christ was ever called the Prince of Peace, when these words: "Think not that I came to send peace by a sword," are credited to Him, is something not clear to my understanding. There is nothing ambiguous about the words, like some of His parables, and we are perfectly justified in accepting them as presented.

Religious wars were waged by Christians, by followers of the Prince of Peace, for centuries; and in the days of the Crusades, the Eleventh, Twelfth and Thirteenth Centuries, millions of human beings perished on the plains of Asia in a vain attempt to recover the Holy Land from the Mohammedans. For thirty years after the Reformation, in Luther's time, there was one prolonged conflict or war between Christians.

What are Christians doing today? They are predicting a war in the distant future between the two Christian nations, England and Germany. It is declared to be inevitable, and no one expects anything the Prince of Peace ever said can prevent it. What is to cause it? No one seems to know exactly, but both nations are preparing for it and their statesmen claim to see it coming.

In all Christian nations there is a gradual increase in armies and navies, and each one seems afraid of the other, tho they all worship the same God and except the Jew Jesus as their Savior; and should they commit wholesale murders with the modern weapons of war, they all expect to be angels by and by and to forget they killed each other in battle, when they gather round the White Throne and begin the endless song and dance. Now, why should Christian nations fear each other or even go to war unless they are damned hypocrites?

Nothing will stop wars between Christians except the great expense of wars, for the almighty dollar, or that thing known as money, is certainly more potent for or against war than the Prince of Peace, His Father and the Holy Ghost combined. Let us see what five Christian nations are expending yearly for armies and navies to protect themselves from each other or to be in condition to fight if they have to: England, two hundred thirty-seven million, five hundred thousand dollars; France, two hundred twenty-six million, eight hundred thirty thousand dollars; United States, two hundred twenty-six million, eight hundred thirty thousand, six hundred fifty dollars; Germany, three hundred twelve million, five hundred thousand dollars. In view of these facts, I rise to suggest that Wm. Jennings Bryan cut out his lecture on the Prince of Peace, and that all reference to that individual be omitted in every Christian pulpit until He does something to deserve the appellation.—Channing Severance in the Philistine.

LOST

A Ladies' Extension gold bracelet on Monday Nov. 7th, between Letang and St. George. Finder will be rewarded by leaving same at the Greetings Office.

Sealed Tenders addressed to the undersigned, and endorsed "Tender for Extension to Breakwater at Lorneville, N. B.," will be received at this office until 4.00 p. m., on Wednesday, November 23, 1910, for the construction of an Extension to the Breakwater at Lorneville, Regent's Point, St. John County, N. B. Plans, specifications and form of contract can be seen and forms of tender obtained at this Department and at the offices of E. T. P. Shewen, Esq., District Engineer St. John, N. B., Geoffrey Stead, Esq., District Engineer, Clarendon N. B., and on application to the Postmaster at Lorneville, N. B.

Persons tendering are notified that tenders will not be considered unless made on the printed forms supplied, and signed with their actual signatures, stating their occupations and places of residence. In the case of firms, the actual signature, the nature of the occupation, and place of residence of each member of the firm must be given.

Each tender must be accompanied by an accepted cheque on a chartered bank, payable to the order of the Honorable the Minister of Public Works, for the sum of two thousand eight hundred (\$2,800.00) dollars, which will be forfeited if the person tendering decline to enter into a contract when called upon to do so, or fail to complete the work contracted for. If the tender be not accepted the cheque will be returned.

The Department does not bind itself to accept the lowest or any tender.

Deafness Cannot be Cured

--by local applications, as they can reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by Catarrh, which is nothing but an inflamed condition of the mucous surfaces. We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars free.
