A branch railway of 3½ miles has been surveyed, and steps are being taken for its construction to connect the property by a down grade with the Intercolonial Railway, at a point 21 miles from the head of the Bay Fundy and contemplated Bay Verte Canal, and 13 miles from a shipping place at the mouth of Maccan River, half a mile from the Intercolonial, where vessels drawing 13 feet of water may load. Until the opening of the Intercolonial, between Truro and Amherst, next autumn, the coal will be hauled 4 miles to Black River Station.

From the nearness of the outcrop to the surface, and the seams lying on high and descending ground, securing easy drainage, it is considered that these seams may be most economically worked.

The freight of a ton from the head of Bay Fundy to Boston or New York is about

most economically worked.

The freight of a ton from the head of Bay Fundy to Boston or New York is about 75 cents less than from Pictou or Sydney—of itself a good profit, while the difference to

The Spring Hill coal is well adapted for house, steam and smelting purposes. Situ The Spring Hill coal is well adapted for house, steam and smelting purposes. Situated within 37 miles by rail of the lodes of brown hematite and micacoous iron ore of the richest quality, known as the Acadia iron ore, of Londonderry, it is difficult to assigo limits to the quantity of ore likely to be taken to Spring Hill, for smelting by a sigo limits to the quantity of ore likely to be taken to Spring Hill, for smelting by a coal unusually free from sulphur. The large proportion of carbon renders it eminently adapted for manufacturing coke, which, with the coal itself, must be extensively used in the iron and steel works at Londonderry, as well as the Machine shops being erected for the Government railways at Moneton.

The portion of the Intercolonial between Truro and Amherst is now being ballasted with engines driven by Spring Hill coal. It is understood that the line between Truro and Newcastle, if not the whole line to St. John, a distance of 280, miles will shortly be worked in the same way, and the local demand between these points, already large, is steadily increasing.

is steadily increasing.

Vessels bringing flour from the St. Lawrence to St. John, Yarmouth, and other lower ports. through the Bay Verte Canal, when completed, may have return cargoes of coal to Quebec, Montreal or Toronto.

From all these sources of traffic, in addition to the Western part of Nova Scotia, the New England ports and New York, it is assumed that an unlimited market will be

afforded.

Additional means of shipment will be afforded by the contemplated railway to Parrsboro—a port open at least ten to eleven months in the year—for which the Nova Scotia Legislature have provided large subventions.

The estimated cost per ton for raising, handling, and putting on board ship, say at mouth of Maccan river, is about as follows:

Cutting and raising, including weighing, screening, &c...... 65 cents, Railway transportation, loading and royalty....... 45

Average price of coal, St. John, wholesale. 3.35 If Pictou and Sydney coal can be shipped to Boston and New York at paying prices. it cannot fail to be highly remunerative to send a better article from Spring Hill, with an advantage of 75 cents in freight. The local traffic would yield a high rate of

Taking the low average of only 80 cents per ton, inclusive of repairs of machinery, &c., and assuming only 100 000 tons as the annual production at first, we have a gain of 20 per cent. on the capital, which might be much augmented by the rent of other seams, as suggested. From the exceptionally high character of this coal, and the facilities for raising it cheaply, this quantity, it is confidently believed, might cre long be doubled or trebled, and a large rate of profit secured even with considerable increase of central

stroyed, or the glands atrophied and decayed; but such as remain can be saved by this application, and stimulated into activity, so that a new recent of heir is produced. Instead growth of hair is produced. Instead of fouling the hair with a pasty sediment, it will keep it clean and vigorous. Its occasional use will prevent the hair from turning grey or falling off, and consequently prevent baldness. The restoration of vitality it gives to the scalp arrests and prevents the forma-tion of dandruff, which is often so uncleanly and offensive. Free from those deleterious substances which make some preparations dangerous and injurious to the hair, the Vigor can only benefit but not harm it. If wanted merely for a HAIR DRESSING. nothing else can be found so desirable. Containing neither oil nor dye, it does not soil white cambric, and yet lasts long on the hair, giving it a rich, glossy lustre, and a grateful perfume.

Nursery Rhymes, No. 11

Yt is an antiente mariniere, And he stoppeth one of three; 'By thy long grey beard and glittering eye, Now wherefore stopps't thou me? Still, in thy hand I'd understand Why should that bottle be? "The bridegroom's doors are opened wide,
And I am next of kin;
The guests are met, the feast is set,
May'st hear the merry din.
So, quick, I pray, thou'lt say thy say
And let me enter in."

He holds him with his glittering eye,— Ye wedding guest stood still,— And listens like a three year's child,— Ye mariniere had hie will; "My friend," s-ith_he, "this remedee Will Rheumatism kill." Ye wedding guest sat on a stone, He cannot choose but hear, And thus spake on that antiente man, Ye bright eyed mariniere: "Neuralgia, too. and Tic Doloreaux, It causes to disappear.

"'Tis a capital cure and always sure,
All others must go to the wall."
(Now ye wedding guest had a pain in his chest
The result of a dangerous fall).
So without any fuss, he pulled out his puss,
"Your stock—I will take it all." Ye mariniere whose eye is bright,
Whose beard with age is hoar,
Is gone: and now ye wedding guest
Turns from ye bridegroom's door,
And in jigs and reels he kicks up his heels,
For his aches he feels no more.
