# GRAND DIET OF WORMS!

DISSOLVED BY

## WATSON'S SCHOLEDION,

Which is offered to the public as a perfectly safe, pleasant, and efficacious EXPELLER OF WORMS from the human system.

As this preparation contains no mineral ingredient, the administration of it to young children is not followed by the dangerous, and—in many cases—fatal consequences resulting from the use of many of the Vermifuges at present before the public.

A compliance with the directions accompanying this, will prove that it deserves the character claimed for it above; while the promptness and painless character of its action render it the cheapest and safest remedy for worms hitherto discovered.

### DIRECTIONS.

A child, from 6 months to 1 year may take  $\frac{1}{8}$  stick.  
 " " 1 year " 2 " "  $\frac{1}{4}$  "  
 " " 2 " " 4 " "  $\frac{1}{2}$  "  
 " " 4 " " 6 " "  $\frac{3}{4}$  "  
 " " 6 " and upwards " $\frac{1}{2}$  to  $\frac{3}{4}$  "

To be given at night, on going to bed, and on getting up in the morning, fasting for three hours after. Two to four doses, according to symptoms, will ENTIRELY eradicate every species of worms.

Charlottetown, 21st Sept., 1869.

W. R. Watson, Esq., has informed me of the composition of his "Worm Candy," and I can unhesitatingly recommend it as a safe and efficacious vermifuge.

JAMES N. FRASER, M. D., L. R. C. S. Ed.

Having prescribed "Watson's Scholedion" in a large number of cases, in which Worms were indicated, we have much pleasure in stating that we consider it a very safe and efficient form of Anthelmintic.

Messrs. JENKINS & BRINE, Physicians and Surgeons.  
 Charlottetown, Sept. 22, 1869.

Summerside, August 10th, 1869.

DEAR SIR,—I shall feel obliged by your making known, for the benefit of others, my opinion of your "Scholedion." The use of it; the case of my infant child has satisfied me that it not only merits the character claimed for it in your advertisement, but also that the advertisement does not do adequate justice to a most valuable remedy.

Yours truly

Wm. M. Howe.

## EXPLANATIONS

AND

## Principal Articles of the Calendar.

ON THE LEFT HAND PAGE will be found the day of the Month, day of the Week, Time of Sun's Rising and Setting reduced to Mean Charlottetown Time, the Equation of Time, (usually called "Sun Fast or Slow of Clock") which is given for the instant of *Apparent Noon at Greenwich*, and in the next column at the right, the hourly change or variation of same.

The Sun's Declination is given at *Apparent and Mean Noon at Greenwich*, and is the same as the quantities given in the Nautical Almanac Pages I and II, while between the two columns the Hourly variation is also given.

On the right hand page are given the Sun's semi-diameter for each day, the Moon's Rising and Setting, (*Approximately*), the Time of High Water Morning and Afternoon at Charlottetown and London Bridge, and the Moon's Transit as given in the Nautical Almanac; see Tides and Tidal Constants Page 117.

The *Equation of Time*, *Sun's Declination*, &c., are given for the use of Seamen, and are intended to be used exactly as though taken from the Nautical Almanac; Seamen will find them sufficient for obtaining the Latitude, Longitude, Amplitude, Azimuth, Tides, &c., and may depend upon their accuracy.

## ECLIPSES.

There will be four Eclipses during the year 1878, viz: Two of the Sun and Two of the Moon.

1st. February 2nd: An Annular Eclipse of the Sun, invisible in North America.

2nd. February 17th: An Eclipse of the Moon, visible as a Partial Eclipse.

Greenwich Mean Time of Opposition 16th day. 23h. 39m. 21.6 sec. Middle of Eclipse 17th day. 6h. 58m. 20sec. a.m. Last contact with Shade  $\vee$  below the horizon.

3rd. July 29th: A Total Eclipse of the Sun, visible more or less to all parts of North America; visible to all parts of P. E. Island as a Partial Eclipse only: rather more than half the Sun's disc will be obscured.

## TIDES AND TIDAL CONSTANTS.

The Time of High Water, morning and afternoon is given in the Calendar for Charlottetown and London Bridge: the time at Charlottetown, it must be understood is merely APPROXIMATELY TRUE, there being many causes which affect the time of High Water, such as *storms*, &c.

The following Table gives a Constant, to be applied to Charlottetown time to find the High Tide at the places mentioned; but it is suggested that the better way to find the Time of High Water at places quite distant from Charlotte-

town, is to proceed as directed hereafter for Foreign Ports, and the Time at London Bridge is given for this purpose. The process is as follows:—

Get the Longitude of the required Port from the Epitome, (Norie, Bowditch or Raper) and take from the Calendar the Time of Moon's Transit on the given and *following* days if in *West*, or the given and *preceding* days, if in *East* Longitude: with the difference of Transit on these days, and the Longitude of the Port, enter (Table XVI Norie, XXVIII Bowditch, 27 Raper) and with the minutes at the top and Longitude in side column will be found a correction which is to be applied to the Tide Hour on full and change days as directed; *i. e.* added in *West*, subtracted in *East* Longitude. Then take from (Table LVII Norie, LV Bowditch, 13 Raper,) the Time of High Water, on full and change days, and apply the correction as directed; if the time thus found *exceeds* the London Tide Hour on full and change days (1h. 58m.) subtract the latter from the former and the Constant, *additive*, is found; but if London Bridge Tide Hour exceeds it, it is to be *subtracted* from London Hour, and the Constant so found is *subtractive*; then to the time of High Water at London Bridge given in the Calendar for the day, apply the Constant thus found, and the time of High Water at the required Port is obtained.

FORECASTING THE WEATHER.—Vennor forecasts the weather for 1878 as follows:—" Winter; short, warm, wet and open, with one or two severe terms of short duration—altogether gloomy and not healthy. Spring; very wet up to the middle of June. Summer, intensely hot and oppressive. The winter will be favorable to the increase of throat diseases and fevers—also cattle diseases. I agree with Professor Mansill in anticipating the approach of Asiatic cholera towards northern latitudes.

2. The phases happening from 4 to 10 p. m. may be followed by fair weather; but this chiefly depends upon the direction of the wind.
