EXPLANATION OF CALENDAR PAGES.

The Publisher of this Almanac, with a view to increase its circulation and usefulness, has adapted its calculations for the whole country. The Moon's changes are given for five different places, viz: Quebec, Montreal, Kingston, Toronto, and London. The rising and setting of the Sun are given for Montreal and Toronto. The rising and setting of the Moon are given with sufficient exactness for all practical purposes. The weather prognostications are again calculated according to the table of the celebrated Dr. Herschel; and for extraordinary accuracy, Miller's Almanac retains its wonderful popularity.

JANUARY.—As a general thing it may be said that Canadian farmers work too hard. Our seasons are so short, help so scarce, and so much to do, that it is almost impossible to find time for mental improvement, and the cultivation of social feelings. Work without recreation produces dullness. We all need relaxation, and we all take it one way or another. Would it not be well to find it by visiting a little more among our brother farmers? Not visits of mere formality, but of cordiality and exchange of thought.

FEBRUARY.—As the spring approaches you had best consider whether there are not portions of the farm that require underdraining, and get to work in this most important work. At the proper season, say August, your muck swamps—if you have such—may be reclaimed, and brought under cultivation. The muck, for manure, should be thrown out and formed into large well-shaped heaps, and they will become dry in the course of a few months. Cover the heaps to keep out rain, for obvious reasons. Dry muck will absorb about nine-tenths its own weight in liquid manure, thereby greatly increasing its value.

MARCH.—The "Canada Farmer," speaking of "Clean Seed," says, "The maxim, 'Whatsoever a man soweth, that shall he also reap,' is practically disbelieved by multitudes, both as it respects agriculture and morals. Few farmers properly appreciate the necessity of care to have their seed grain unmixed with seeds of various grasses, chaff, and pernicious plants in general. Chaff may be completely eradicated from a farm, and the crops of weeds annually raised, made 'small by degrees and beautifully less,' until they disappear altogether, by a little attention to cleaning the seed before sowing it."

APRIL.—To destroy Canada thistles is a most important work, especially in some localities. They can be destroyed. A man of experience says,—“I plough them about six times during the summer—five times might do if a dry summer. I plough them the first time about the beginning of May, and so on near the first of every month till October. I always harrow them the next day after ploughing, which drags many to the surface. These must die. My rule is never to let them up. Keep the air from the main root one summer, and they will die. I assure you I have proved it.” Root out the thistles, and be assured it will pay better than to let them grow.

MAY.—Caterpillars have been always a great source of annoyance and cause of loss. That coal oil will cause instant death to these pests has been proved beyond all doubt. A correspondent of the "Leader" says he experimented with the oil, and was perfectly satisfied. He applied the oil with a brush made of feathers, placing a small quantity on the nests. He says, "instant death ensued." The proprietor of the Leader made the experiment at Glengrove Farm, Yonge Street, and says, "In a couple of hours one quart of oil had cleared the orchard completely of caterpillars." Certainly a cheap remedy. Try it.

June--On early Tuesday East "Yukon's Annual Register" says "The great point is to have a good water crop. The best point of the month should be reached, and all water probably lands on hard. It is usually cut too late or when the seed sprouts. The time is when most of the best have become brown. It is dangerous to allow to heat or mold. It may be reached at some periods or it may be cut with a hand-saw, but it is best to have the best all one way."

JUNE.—On saving Timothy Seed, "Tucker's Annual Register" says, "The great point is to have a good clean crop. The best portion of the meadow should be selected, and all foul-weeds previously removed by hand. It is usually cut too late, or when the seed shells. The best time is when most of the heads have become brown. It is unimportant how it is cut, provided it is taken in before the seed wastes, and is not allowed to heat or mold. It may be cradled at some height, or it may be cut with a hand-scythe, taking care to throw the heads all one way. It will be usually dry enough to bind in a day or two."

JULY.—The "Country Gentleman" says, "It will be found far better to keep coarse manure in a heap and under cover till autumn, than to use it as a top dressing for grass land in the spring. Coarse, unfermented barnyard manure, if spread upon grass land in the spring, will be found of little value. The true reason of this is, manure needs to ferment, more or less, before it will be prepared to maintain the growth of plants. The fine scraping of yards, and even common earth, spread thinly on meadows in the spring, will often be the means of doubling the crop of hay." Unfermented manure will not do this.

AUGUST.—Now that land in the older settled townships has been so often picked over, that none but what is called inferior is to be had, the swales and swamps attract attention. People look at the deep black soil and wet ground and long to attack it, but are afraid. The general run of farmers little know what may be done with such property; but those who have once ditched swales, prefer the deep, rich fatness of such places to inferior dry ground. There is scarcely any land which has not some run to it—it slopes one way or the other—and therefore can be thoroughly drained.

SEPTEMBER.—In order to keep up the highest quality, or to improve the seed of wheat, select the very best portions of the field, and exclude the seeds of every weed, and especially of that notorious intruder, chess. Many careful farmers, by continued attention for years, have succeeded in entirely eradicating chess from their farms. To improve the quality, the largest and finest heads may be selected by hand. The process repeated, year after year, will give very encouraging results. A half-day spent in thus selecting the best heads will furnish a considerable amount. The best winnowing machines may be used to advantage.

OCTOBER.—Farmers who have ample barn room, with their grain safe from rats, and who are not compelled to hurry it early to market, will do best to leave their thrashing till winter. A small machine, driven by a two-horse, endless chain power, will enable them to go through the work at that time with little help from attendance. The straw will be fresh, and therefore preferred by animals. It should be well stacked and protected from the weather, and it will then very materially aid in wintering the stock. You may place the straw where it will be accessible at all times, and thus save good hay.

NOVEMBER.—It is the practice of many farmers to top-dress their grass lands with composted manure, as soon as they conveniently can after getting off the hay crop. It is a good practice. The manure protects the roots a little from the rays of the sun, and the first shower washes some of its nutritious properties into the soil and about the roots of the grass, so that they are stimulated to throw out new sets of leaves, which afford a still further protection both to plants and the manure. The surface of land in summer is hard enough to allow teams to pass over it without injury, either from the horses' hoofs or from cutting ruts.

DECEMBER.—Boys, help your mother! We have seen from two to six great hearty boys sitting by the stove, toasting their feet and cracking nuts or jokes, while their mother or sister has gone to the woodpile for wood, to the well for water, or to the meat-house to cut a frozen steak for dinner. There is much work about the house too hard for women. Heavy lifting, hard, extra steps should be done by those more able. Boys, don't let your mother do it all. Sometimes girls are not sufficiently thoughtful of their mothers; and alas, mothers are often indulgent foolishly, and allow the girls to grow up without doing a fair share of the household work.
