Farm Topics

There is a feeling growing in the west that homesteads are being given away by the Government at too cheap a price, and that a reform in this matter is much needed. Regulations at present in effect with respect to homesteads are formed on the supposition that people must have strong inducements to take up this land. Some now argue that this is no longer the case. A homestead, they say, has in the last five years become a very desirable

piece of property, due largely to the fact of settlement. In other words, settlement has given a value to land, and the complaint is made that this value should be used for public purposes. To get this value and to avoid the allotment to those who can show the most brute force, as is now the case. It would be necessary to adopt a system whereby a man who wants a homestead will agree to return to the Government what the homestead is worth to him. This need not be required of him in cash at the time of filing, but a

purchase price might be spread over a term of years, as is now done with purchased homesteads or railway company lands. There seems little doubt but that a change in this direction would lead to a better class of settlers. With land as far removed from settlement as the Peace River district, however, it would probably not hold good.

The agricultural projects of the Canadian Pacific Railway Company in the west have always attracted the interest of the prairie farmers, who watch the progress

of these enterprises as the small boy follows his town's ball team. Mr. J. S. Dennis, who had charge of this work, has just returned to Calgary from the east, where he perfected a number of schemes for further development.

These relate particularly to western agriculture. First the C. P. R. had decided to establish twenty-five demonstration farms west of the lakes, five in Manitoba and ten each in Saskatchewan and Alberta. The circumstances which prompted this decision are the fact that farmers have not been disposed to accept generally the suggestions that have been made that they go more extensively into mixed farming, the contention that grain growing pays better, the statement that mixed farming must be followed by certain peculiar classes of people, etc.

The C. P. R. proposes to select managers for these farms from eastern Canada, the States, England, Scotland and other countries. The company proposes that these men shall give a statement of their operations to the C. P. R. Company's superintendent of agriculture and the operation of these farms shall demonstrate that it pays to diversify farming.

Another scheme that is to be launched at once is to provide purchasers of C. P. R. lands with money at a low rate of interest before the purchasers have got their titles. The idea is to set aside sev-

eral hundred farms, put a value on them as they stand raw prairie, then advance money for improvements up to \$2,000 at 6 per cent. These improvements are to consist of buildings, fencing a well, breaking and preparing for crops. It is so arranged that the buyer of one of these farms may himself do some of the work and the wages so earned will go towards paying the interest on the money borrowed, the principal being payable in annual payments extending over ten years. This year it is expected two hundred and fifty families will be located under this system.

Lubricating Old Axles

Many lubricate axles only to prevent wear; they overlook the fact that by reducing friction they lessen the draught. A well oiled axle lightens the load. Oil to axles is best governed by the rule, "little and often." If too much is used it exudes at the ends, gathers dust, and gathers dust, and thus the lessening of the friction is not so great, while oil is wasted. In many cases where the lubricant is wasted, it is because it is stiff not fit to be used, for a good lubricator costs enough to keep the average man from allowing it to waste. Oil that "gums" much is unfit to be used. Castor oil is a splendid lubricator for axles, but used alone may gum too much. This is corrected by the addition of refined coal oil (that used for lamps) or lard; the coal oil is better. Some wagons are yet made unprovided with metal shields or "thimbles," being banded with steel; for these some tallow may be used, as it is one of the best lubricants when iron and wood are brought together. Pine tar is a good addition to the lubricant for wagon axles and is part of most of the "axle greases" sold. Plumbago is another good addition; its fine particles fill the small irregularities in the opposing surfaces, thus making them smoother. A mixture of lard and plumbago is good for the journals of reapers, mowers, etc.; we have found castor oil and refined coal oil also good for this use, particularly for use on the "sickle driver." For carriages nothing is better than castor oil or refined coal oil. Lard oil alone has not "body" enough for the journals of reapers, mowers, etc.; add a little castor oil, or tallow or plumbago. While the axles or reap-

ers, grain drill, etc., will not need lubricating so often during the year as the axles of the wagon, oiling them must not be neglected, as the rough ground the wheels pass over makes the wear on oil-lubricated axles quite rapid. Tor. Globe.

A Singular Rescue

(Christian Herald)

The three-year-old child of Albert Stepp, living two miles from Canton, Texas, fell feet foremost in a thirteen-inch bored well sixty feet deep. By the use of a mirror the child could be seen, and the little fellow was constantly crying and calling to his grandpa to come and get him. The grandparents and parents were wild with excitement and overcome with grief at their inability to afford immediate succor.

Fifty or fifty men and women were gathered, all anxious to get a loop over the child to draw it out, but with no avail. A negro boy twelve years old was let down, and, getting the child by the sleeve, both were drawn up half way. The sleeve gave way and the child fell back to the bottom. All were horror-stricken for fear the fall would certainly kill the child. Then they tied a rope to the leg of the negro boy and let him down head first. He put the loop of a rope about the child's body and then the two were drawn out separately. The miraculous part of the incident is that the child was only bruised a little and not seriously injured.

Tax Notice

Public notice is hereby given that I have received from the Assessors, the Assessment list for the Town of St. George for 1912, and the same is now filed at my dwelling house. All persons thereby assessed in the Town shall be entitled to a deduction or discount of five per centum on the amount assessed against them respectively, upon payment of their respective rates to me, within 10 days from the fifth day of July inst., and a like discount of two and one-half per centum upon payment within twenty days, and more than ten days after that date. After 20 days no discount will be allowed. And all rates and taxes must be paid within thirty days after the said fifth day of July or execution will be issued.

Dated at St. George, July 5th, 1912.
James O'Brien
Town Treasurer.

LEONARDVILLE

Mrs. Jarvis Johnson of Dearborn's Har- is visiting her sister Mrs. I. Welch.

Miss Prindle Wilson who has been teaching school in Glassville returned home Saturday.

Mrs. Wm. Conley spent Saturday with friends in St. Andrews.

Rev. Harry Publishing passed through here Sunday on his way to his appointment at Cacolate Cove.

Mrs. Allison Hanspecker who has been visiting her mother Mrs. John Welch returned to her home on St. John River Thursday.

Mrs. Annie Herring of New York spent Thursday with friends here.

Mr. and Mrs. Marvin Martin and family of Labeac are visiting Mr. Martin's parents.

Geo. Doughty who has been to St. John for medical treatment has returned home.

The Methodist spent their annual picnic on a trip to Casco Bay.

LORD'S COVE

Rev. Mr. Burr arrived by Str. Viking and will spend a few days with friends here.

The Eureka L. O. L. held a business meeting Tuesday evening to make arrangements for 12th July celebration which day if the weather man is good to them they expect to make an enjoyable day for all visiting lodges.

Mrs. Wallace Lambert was calling on friends recently.

Mrs. Bessie Eaton of Northern Harbor called on Mrs. Lizzie Leonard Wednesday.

Mrs. Georganna Stuart of Stuart Town called on friends in Lambert Town Saturday afternoon.

Mr. and Mrs. Jas. Lambert and family went to Red Beach on Saturday last.

Mrs. Carl Gardner is very much improved in health.

Isaac Wentworth is reported very ill with typhoid fever and although he is receiving medical treatment from Dr. A. at Eastport is not improving at time of writing.

Mrs. B. B. Leeman is very ill, Dr. Brooks of Eastport is in attendance.

Wesley Lambert is quite ill at time of writing. Dr. Gove is in attendance.

Dr. Brooks of Eastport was called here on Sunday last to administer medical aid to Miss Emily English who has a very sore foot.

Harry Church of Jonesport spent Sunday here.

Nellie Pendleton returned home from Calais where she has been visiting her sister.

Mrs. Clas. Stuart visited her sister Mrs. Calista Lord recently.

Mrs. Robert Adams who has been quite ill with sore throat is improving.

Says Election is Inevitable
(Montreal Herald)

Hon. Geo. P. Graham, M. P. for South Renfrew, ex-Minister of Railways and Canals, last evening told a Herald reporter why he believes a general election is inevitable within two years.

"It may be soon after next session of Parliament, by the look of things just

now," he ventured.

Mr. Borden before his election declared everything he spoke that the navy question would be decided by the people. Now he has gone to England with some of his ministers and will return with some kind of naval policy outlined. I have an idea what it will be, but prefer not to say just now. What is going to happen? He has promised to take his policy on the navy to the people, and must keep his promise.

"So it looks then as if the naval question will precipitate an election soon after next session.

"However, don't suppose that Mr. Borden will allow the navy question to be the one plank in the platform. He intends to overshadow it by a redistribution policy. Redistribution will be talked loudly to try and minimize the importance of the navy question.

"There seems to be something looming up that will make Mr. Borden declare himself one way or the other on some issue. When that time comes within two years, mind you, very probably sooner, the Liberals will be returned again. Liberalism is not dead, as some people think. It is getting to be more alive than ever."

BEAVER HARBOR

Miss Rena Marr of Newburyport, Mass is the guest of her aunt Mrs. Margaret Eldridge.

W. H. Farnham of St. Stephen spent Sunday in the village.

Mrs. Maurice Eldridge returned on Thursday from a pleasant visit with her parents at Graniteville.

Miss Dora Justason who has spent the past year in Philadelphia has returned home and is spending her vacation with her sister Mrs. Allen Paul.

Mr. and Mrs. Cameron Wright and baby Ora visited friends at Dipper Harbor and Macs Bay last week.

Rev. Mr. Davidson of Deer Island delivered a Temperance lecture for the Sons of Temperance in Paul's hall on Friday evening. The meeting was quite well attended and the discourse much appreciated.

Mrs. Edmund Wallace, Jr. returned to her home in Blacks Harbor on Sunday after several weeks stay with her sister Mrs. Harry Barry.

Mrs. A. C. Kennedy and grandson Master Hickey of St. George were visitors at the home of Wm. Parker on Tuesday.

Mrs. Fowler and daughter Lena of Welsford are visiting Mr. and Mrs. Bernard Eldridge.

Mrs. Welton of Boston is summering with Mrs. Benj. Bates.

Mr. and Mrs. Wm. Sparks drove to St. George Saturday.

Mr. and Mrs. Pearl Morse, White Head, Grand Manan, spent the week end with her sister Mrs. Tidd.

Capt. E. Doucett in the Eclair, Emerald is here buying fish.

Mr. and Mrs. Herbert Wright and family enjoyed a motor sail to Eastport on Saturday.

Geo. S. Best made a business trip to St. George one day recently.

Mr. Hackett, Naturalist of Department of Agriculture, Ottawa, is spending a few weeks at King George hotel.

Mr. and Mrs. Neil Cross visited St. George on Saturday.

J. N. Hawkins and Mr. and Mrs. Ira Hawkins returned on Saturday from a trip to St. Stephen.

Rev. Mr. Kersey who is collecting for the Methodist African Home Mission Fund preached in the Baptist Church on Sunday evening.

Misses Sadie and Beatrice Brown left by train on Tuesday for a visit at St. Stephen.

Mrs. J. F. Eldridge and Mrs. Homer Cross visited St. George on Monday.

Miss Dora Justason and Mrs. Allen Paul drove to St. George on Monday.

Mr. and Mrs. Colin McKay of Pennfield Ridge visited friends here Sunday.

Mr. Flagg of Grand Manan spent a few days of last week with his daughter Mrs. Tidd.

George Bates Jr. has moved his family from St. George here.

Mr. Farnham of St. Stephen has rented the home of Mrs. Laura Holmes and will spend the warm weather here.

Miss Nellie Whalen of Eastport is the guest of Mr. and Mrs. Cecil Cross.

Rev. Mr. Davidson of Deer Island spent a short time at the home of Mrs. Robt. Barry and Melvin Eldridge.

Rev. J. Spencer of St. George called on his parishioners here last week.

What Toads are Worth.
(From the Technical World.)

Science offers a new solution for the bug problem. It is to employ in its professional capacity, so to speak, the toad, the ordinary hop toad of the field and garden as an insect destroyer.

In this business the humble toad is unequalled by any other living animal. He is the greatest bug exterminator in the world. It is entirely practicable to utilize his services on an extended scale employing him systematically as an ally to keep in check the insects which levy an annual tax of more than \$8,000,000 upon our agricultural resources.

There is no reason why the farmers of the country should not hatch and rear their own supply of toads for local service. With a pond or even a small pool insured against drying up during late spring the creatures will breed off their own accord in any desired numbers up to the limit of the food supply available in the shape of insects.

But one thing absolutely essential is that they shall be protected against their natural enemies, and by no means the least destructive of their enemies are small boys, who, through mere thoughtlessness, kill toads whenever they get a chance.

It is estimated that an average toad is worth to the farmer \$5 a year for the cutworms alone which it destroys. But this is only one item. The amount a toad will eat is astonishing. A large specimen has been known to devour a hundred rose beetles at a single meal. One toad needed 77 millipeds, the common household centipede, to satisfy his appetite, another fifty five army worms, and yet another 65 cypress moth caterpillars. Still another toad was seen to eat 35 large, full-grown celery worms in three hours, while another accepted 86 flies to him in less than 10 minutes.

FRIDAY, JULY 12, 1912

The Dominion of Canada.

On the first of July, 1867, the Dominion of Canada began its career as such, and after half a century it is interesting to take a backward glance at the course of its evolution. It has become customary to speak of this country as a "nation," whether the term be technically admissible, there can be no doubt that the Dominion is rapidly becoming a "power." For many years the population of Canada increased slowly, but it is now expanding by leaps and bounds. Territorially the four Provinces of 1867 have grown to nine, stretching continuously from the Atlantic to the Pacific and extending from the 49th to the 60th parallel with an immense area still farther north. These Provinces have been bound together by one completed line of transcontinental railway, and in less than two years there will be two others in active operation.

The industrial and commercial development of the Dominion has exceeded all expectations and has falsified all pessimistic forecasts. Its aggregate import and export trade has already been enormous and is rapidly increasing. Its sociological evolution has been satisfactory and bids fair to continue so. In all that goes to make a great civilization nation it excels all but a few of those that have had centuries in which to reach their present degree of expansion.

It would be unworthy of a people with such a history and such opportunities to make this anniversary a day of mere self-congratulation; it should be one for serious consideration of the many and difficult problems pressing insistently for solution. The purely material future of the Dominion seems to be as thoroughly assured as that of any country can be; it would be too far to assume that the progress of the country in all other respects is equally certain. That depends very much on the national character developed with the passing years. The law of retribution is as inevitable in its operation in the moral as in the physical world, in the case of the nation as in that of the individual. As Canadians have a country and a history to be proud of they should in the spirit of rational patriotism co-operate to make them still more worthy of appreciation in the forum of nations.—Tor. Globe.

The Supply of Electricity

London, June 22.—At the Royal Institution, London, a lecture was given recently by A. A. Campbell, Swinton on "Electricity Supply; Past, Present and Future." Mr. Swinton reviewed the progress made from 1882, when parliament passed the first of the electric light acts up to the present day. This act of 1882 was partly based upon recommendations made by a committee which sat in 1871 and it is an amusing fact that the town clerk of Liverpool explained to this committee that the corporation of Liverpool were in a very advantageous position for supplying electricity to their boroughs as they had a twenty horse power engine which worked a fountain during the day, and might well be used to supply electricity at night. At the end of last year Mr. Swinton added, the electric supply plant of the corporation of

Liverpool amounted to about 50,000 horsepower.

Up to the year 1883 the most important improvements that were made were in the cables, switches and other apparatus that distribute the electricity. But in 1885 the advent of the steam turbine with its high speed marked a great advance. Steam turbines are now in general use and where electrical generation on a large scale is needed the steam is used almost exclusively.

Turning to the consideration of the future of electric supply, Mr. Swinton said that the steam turbine seemed likely to maintain its position where large electrical powers are needed. In smaller stations where units up to 500 or 1,000 kilowatts are wanted, the internal combustion engine offers advantages. The maximum that can at present be obtained per cylinder from the internal combustion engine is about 1,500 kilowatts, while the larger the size of a steam turbine the higher is its efficiency. Probably coal will be used in England until it is exhausted, as it is much cheaper than oil but it will be turned into gas, and the sulphate of ammonia and the tar will be saved. But whether in the future the gas will be used to heat boilers to supply steam to turbines, or whether it will be used in internal combustion engines will depend on the improvements that will probably be made both in the gas firing of boilers and in internal combustion engines.

Concluding, the lecturer turned to the subject that has lately received so much attention, the question of what sources of energy will be available when coal and oil are exhausted. Water power can only furnish a very small proportion of the heat required. At present neither the tides nor the internal heat of the earth seem likely to be available, and the immense amount of energy stored up in the atom is at present out of our reach. As regards the radiant energy that reaches our earth from the sun, on a clear day, Sir J. Thompson has calculated that this energy amounts to about 7,000 horse power per acre, and here Mr. Swinton said is a problem of the greatest importance for the physicist to solve.

No definite figures on net earnings will be available for some days, but it is possible to arrive at a close estimate with the official figures for 11 months and approximate figures for June.

The net earnings last year were \$36,599,830 and for 11 months of the current year they were \$39,451,640. For May the net was \$3,680,000 and assuming that June will show \$3,600, a conservative estimate, the total would be \$43,051,000, a gain of \$6,352,000.

Last year, in addition to the regular net, the annual statement added the sum of \$1,118,349 as net earnings of steam ship in excess of amount included in monthly reports.

In 1911 net increased by \$3,978,225 over 1910, and this year the increase will be about \$5,235,000 over 1911, taking in to account the steamship figures added, or \$6,352,000 not counting the steamship figures.

McCue-Traverse

A pretty wedding in St. Paul's Church on Friday morning was that of Miss Mary A. Traverse of 25 Preston street and Chas. H. McCue. The ceremony was performed at a nuptial high mass at 8 o'clock. The Rev. Wm. E. Ryan officiated.

The bridesmaid was Miss Genevieve R. Traverse, a cousin of the bride, and the best man was James J. Morgan of Cherry Valley.

The bridal party entered the church to the strains of the wedding march from "Lohengrin," played by Miss Marion E. Downey. Mrs. Daniel Downey was soloist at the mass. Mendelssohn's wedding march was played as a recessional.

The bride wore a gown of white marquisette with coatees of baby Irish and Valenciennes lace, and a white millan hat done with willow plumes and moss roses. She carried a shower bouquet of bride roses and valley lilies.

Where the Salmon Leap

The Humber River is one of the largest in Newfoundland. Fifty miles above tidal waters, between high cliffs, are the falls of the Humber, a sheer drop of eight to twelve feet. The salmon coming up from the sea on their annual pilgrimage to spawn in the quiet upper reaches of the river must get over this seemingly impassible object somehow or other.

In the great pool below the falls they congratulate, says a writer in "Country Life in America." Young salmon-grilse—of three or four pounds, adults of ten or twelve pounds, big fellows of twenty, thirty, and even more pounds pause here, to rest before making the supreme effort for the great leap.

Above the fall's the river advances with a rush and pours in broken masses into the pool below. Dashing spray and living foam are everywhere. And from all this smother of mist and whirling waters the river surges onward to the smother runs below. The pool just below the drop of the fall is alive with moving, striving, jumping salmon.

Some dash through the curtain of falling waters into the water worn recesses underneath the lip of the shelf. All along the face are jumping salmon—all jumping at the fall; there are several in the air at once. Many fish only thrust head and shoulders or half the body out of the water as it inspecting the fall and measuring the height of the jump, and this the natives declare they do.

Big and little essay the jump. The time and place for the supreme effort is at hand; on and over is what must be. And so they dare the leap. The three-pound grilse cleave the air like balls of polished silver; the mature fish of twelve pounds, the big ones of twenty and the leviathans of thirty pounds or more, all are trying. Out of all the turmoil and welter they spring.

Even the little ones no more than six inches long pop up three or four feet into the air. By actual count the fish are jumping at the rate of thirty to fifty a minute for hours, the period of greatest activity being the middle of the day. The salmon seem to sense the least dis-

A Model Labor Organization

(Century Magazine)

"Other labor unions, and other organizations as well, might study the Brotherhood of Locomotive Engineers to their own advantage. For the brotherhood has done more for its members than any other labor union ever accomplished."

"On January 1, 1910, the brotherhood had a membership of 64,392 embracing 99 per cent. of all locomotive engineers in the United States, Canada, and Mexico. It had contracts governing rates of wages, hours, and conditions of service, with one hundred and eighty-two railway companies, including every system of importance on the continent. Rates and conditions specified in those contracts govern the movements of every train that turns a wheel in North America, for non members get the benefit of all that is gained by the brotherhood. No labor union ever before achieved so much because no other labor union ever had the courage to expel members who violated a contract, or to revoke the charter of an entire sub division for the same offence. Yet that is what the Brotherhood of Locomotives does."

World's Record Was Broken

Only Few People Knew Of It.

Only a few persons on the riverside stands at the Olympic games realized that a world's record had gone when Kalsenmoku won his heat in the 100 metres swimming race in one minute 2.5 seconds, and no demonstration followed the performance. He climbed out of the water and walked to the dressing room almost unnoticed, while the fellow countrymen of other swimmers were bundling them away in bath robes.

No such cosmopolitan population ever swarmed over a small city as is gathered here. Every imaginable language is heard and everybody is good natured and animated with the gala spirit.

The sports thus far have not been marred by any brawls. The only adverse criticism by visitors is on account of the Swedish committee men who fill the arena and cannot resist the temptation of coaching and encouraging their favorites.

KING COLE TEA

Bride for Prince Arthur of Connaught

New York, July 9.—A cable despatch to the New York Times from Paris this morning says: The St. Petersburg correspondent of the Echo de Paris reports that Prince Arthur of Connaught, only son of the Duke of Connaught will shortly marry Princess Irene Alexandrovna, daughter of the Grand Duke Alexander Michailovitch, who is a cousin of the Czar. It is stated that the marriage was decided upon last August. No official announcement was made owing to the youth of the Princess, who, however, is now just about to reach her seventeenth birthday, when the betrothal will be announced. The marriage, it is added, will be celebrated in St. Petersburg and it is expected that King George will attend the ceremony.

Big Gain in C. P. R. Net for the Year

Gross earnings of C. P. Railway for the fiscal year which ended June 30, will be shown in the annual report as a few dollars within \$122,856,000, compared with \$104,167,000 in 1911, a gain of \$18,689,000.

It is possible to arrive at this total by the publication of the approximate figures for June, completed yesterday by the announcement of the last ten days of the month, giving a total of \$10,848,000 for the month, a gain of \$1,808,000.

depths, like an arrow from a bow shoots a salmon, high and with graceful curve, clear over and above the edge. A clean jump of ten feet, and a twelve-pound fish has fallen on the shelf.

Watch the struggle as the floods sweep down upon him. Fins and the powerful tail are instantly at work; all speed ahead is the signal. Will he hold? Will he make it? The fish is making frantic efforts; the tail vibrating at its maximum; then a slight upward motion is seen, and faster and faster, with spurts of water from dorsal fin and tip of tail making its course, he disappears in the rapids.

Some fish are not successful in stemming the tide and are swept down into the pool. Some fall heavily on the rocky edge and are sorely wounded, some even killed. Some make the jump with the ease and grace of a trained athlete taking a hurdle, and drop lightly, with a margin of several feet of safety, into the less forceful waters above. Even the big thirty pounder, jumps clear over and well up on the shelf and glides easily into the triangular pocket above. So the jumping is continued until all are over, and the continuance of the race is assured for Salmo salar.

THE GRANITE TOWN GREETINGS

The Ancient Order of United Workmen of whom there are probably 30,000 in Canada, over 35,000 being in Ontario, have at last decided to put the rates for their insurance on what is considered a safe basis. The Order has been tinkering with its rates since 1913, and in 1935 made some efforts towards safety by deciding that all new members coming in after that date should pay according to what have become known as the "Hunters rates," because they were those which the late Dr. Hunter, head of Ontario's Insurance Department, considered safe. At its meeting last Friday the special session of the Grand Lodge of the Order decided that all members should pay according to the Hunter rate as at their actual age in 1935.—Rk.

A series of lawsuits relative to the marriage laws has been occupying the attention of the court during the past few days, and the proceedings have been closely watched by the public. The stated case on the Lancaster Bill covered a wide field, and the decision arrived at by Canada's Supreme Court was that the mere degree of any other Church law has no standing in the Dominion, and cannot be enforced in a case of marriage by a duly authorized clergyman when the parties marrying are not debarred by the civil law. The decision also declared that under the B. N. A. Act the Province has the exclusive power over the ceremonies connected with marriages. The case came in which the daughter of the late Father Chiniquay sued the French-Canadian Catholic paper Le Croix for asserting that Chiniquay was not lawfully married, and therefore that the daughter was illegitimate. The woman won her suit, getting \$3,000 damages. Next comes a case in which a man in Quebec, after being married for several years, in suing for separation on the plea that as he and his wife are fourth cousins they could not be lawfully married without a dispensation from the Roman Catholic Bishop. Each of these cases is to be appealed to higher courts.—Rk.

New York Society women at Long Beach are giving dinner parties now when they go in bathing, the table being set in the water. There is some criticism of the latest fad.

THE PRICE OF SILENCE

—BY—
Mark Darran

The expression of the inspectors face changed.

"I think, perhaps, I might promise," he said hastily. "I am sure that you have to much sense, Mr. Smith, to make absurd suggestions."

John Smith bowed, and there was a little smile on his lips.

"You have heard of a certain Prince Rani Singra?" he inquired. "He is reported to also have lost jewels."

"Yes," Inspector Blakeland answered eagerly. "I have sometimes thought there was something fishy about the man—and yet he has been entertained by good people."

"He took the jewels," John Smith said quietly.

Inspector Blakeland was on his feet in an instant, and buttoning up his coat.

"You are sure of this?" he cried. "It would not do to make a mistake. How can you prove it?"

"That is one of the things I do not wish to explain," John Smith replied. "It is natural that you might wish to search the rooms again—it is equally natural that you would notice a loose board. And I can assure you that beneath it you will find the missing jewels—the imitation ones."

"Imitation ones?" the detective gasped in amazement.

"Precisely," John Smith explained. "In the excitement of the discovery was not noticed which set had been taken. Fortunately it was the wrong one."

Inspector Blakeland whistled, then looked questioning into John Smith's face.

"How did you come to take the case up?" he inquired.

"I have not taken it up, my friend," John Smith answered. "I was after the prince on a different charge—blackmail—and I shall by only too pleased to see him out of the way for a time."

Actually, John Smith was afraid that Prince Rani Singra would give away the part that Lady Minter had played but yet he might fear to do it, knowing that it would make his sentence heavier.

"Well, the jewels are the things for me to see to," Inspector Blakeland said. "Shall I take any men with me?"

"It might be wise," John Smith assured him, "as he always has two native attendants with him."

A few minutes later John Smith's powerful car was whizzing westwards, with Detective Blakeland and his two assistants aboard, and soon arriving at Sir Charles Minter's house they were at once admitted. Sir Charles himself meeting them in the hall. He took John Smith aside for a moment.

"My wife has told me all," he said huskily. "Do you think we can bust it up?"

"I am going to," John Smith answered, but even he did not guess what a strange way the prince's lips were to be closed.

"In the prince's upstairs, Sir Charles?"

"Yes," Sir Charles answered, and led the way upstairs.

On the way they passed Lady Minter, and John Smith noticed that although she was very pale, there was no longer any fear in her eyes.

"Everything is arranged?" John Smith whispered.

"Yes," she answered, in the same tone.

The door of Prince Rani Singra's room proved to be locked, but at a request from Sir Charles it was opened by Avasha. The prince sat by the window, a nervous expression in his dark eyes, while Vashti crouched in his usual attitude over the blazing fire.

"Inspector Blakeland is sorry to disturb you, prince," Sir Charles said quietly, "but he wishes to examine the room."

The prince scarcely seemed to hear the words. His eyes were upon John Smith, and the look of fear in them had increased. By an effort he roused himself.

"What is there to learn here?" he asked harshly.

"No knowing, sir," the detective answered bluntly.

Remembering his promise to John Smith, Inspector Blakeland went peering around the room until he had examined every spot save that covered by the cushions on which Prince Rani Singra sat.

"May I trouble you, sir?" he said quietly.

A sudden pallor turned the Indian's face to a particularly ugly color, and he shifted uneasily.

"It is absurd," he said in a low voice.

"Duty," Inspector Blakeland snapped. "Got to be done!"

Slowly Prince Rani Singra rose from the cushions, and his eyes were turned towards the doorway. If he had any intention of trying a dash for liberty, however, he must have seen the hopelessness of his chance, for one of the detectives stood there with a carelessness that was distinctly assumed.

With quick hands Inspector Blakeland jerked the cushions away, and an ejaculation broke from him as he saw that several of the parquet blocks were loose.

Vashti, squatting by the fire, buried his right hand in his robe.

Taking a knife from his pocket, the detective quickly wrenched the blocks up, and thrust his hand through the hole formed. The next moment he had brought into the light several jewel-cases. He snapped one open, showing a great necklace of diamonds within, but the light that came from them was not particularly dazzling.

With a wild cry, Prince Rani Singra leapt for the door, but the detectives standing there met the charge and buried him back.

Then Vashti jumped from his crouching attitude, was at the officer,

ready the police have nearly worried the life out of her. Besides, I can give you all the information you desire."

"A woman's memory is better for such things," John Smith averred. "I shall really be very much obliged if I may see your wife."

"Well, I will try," Sir Charles conceded, and bustled from the room, adding over his shoulder: "Of course, you know that the prince has lost some property, too?"

Ten minutes later Lady Minter entered with her husband. There were dark marks under her eyes, and the hand she held out to John Smith trembled badly.

"Thank you for coming," she said, in a voice that was little above a whisper.

John Smith pulled a chair forward for her, then turned to her husband.

"I would rather be alone, Sir Charles," he said firmly. "The memory acts better when there is nothing to distract the mind."

Sir Charles hesitated, glancing at his wife, but she sat listlessly, and made no sign.

"Very well," he agreed, and went out.

John Smith stood by the window, so that he could see every changing expression on Lady Minter's face.

"Lady Minter," he said quietly. "I want you not to be offended at anything I am going to say."

A slight flush crossed the woman's face as she looked up, but only to drop her head again the next moment.

"Why should I be?" she said nervously.

"Were the jewels really stolen?" John Smith asked.

Something between a gasp and a cry of fear broke from Lady Minter, and there was terror in her eyes as she looked at John Smith.

"Yes," she whispered.

John Smith shrugged his shoulders, and then she was a stern look in his eyes.

"And yet I heard a rumor, not so very long ago," he said, "that the last time you were seen to be wearing the diamonds that they seemed to have lost their lustre. I suggested that you were wearing an imitation set for safety, and, as a matter of fact, I casually asked your husband if that precaution had been taken."

"You asked my husband?" the woman almost sobbed.

"Naturally he laughed at the idea," John Smith continued calmly. "There was another rumor," he added.

"And that?" Lady Minter's lips merely formed the words.

"That you had lost at bridge more than you could afford to pay," John Smith held up his hand as the woman was about to speak. "I asked you not to be offended."

But the look on Lady Minter's face was one of fear rather than anger.

"The prince has been robbed, too," she said, with her eyes averted.

"The prince?" For once John Smith allowed himself a laugh. "Suppose I have heard rumors about him, too?"

"Well," there was a touch of defiance in the woman's voice.

"Suppose I have heard rumors that have confirmed, and that I know him to be nothing better than a blackmailer? Is it not natural, then, that I should wonder why he is in this house?"

By a mighty effort Lady Minter was keeping herself in hand. She wanted to scream out—anything to relieve her feelings.

"You mean that you don't believe that there has really been a robbery?" she asked, in a dead voice.

John Smith nodded in silence.

With a sudden sob Lady Minter dropped her face into her hands. But she soon looked up again. Somehow the fear seemed to have gone out of her eyes.

"There has been none," she said slowly. "The real jewels were pawned by me months ago, after I had had an imitation set made, to pay my debts."

John Smith's face betrayed no triumph. He drew nearer to the woman, and laid a hand upon her shoulder.

"And this Prince Rani Singra learnt of this, and has blackmailed you since?" he said. "Well, you are only one of many."

"I know," Lady Minter groaned; "but what could I do?"

John Smith was silent, for he was thinking rapidly, and the woman never took her eyes from his face; to relieve "I wish to stand your friend, Lady Minter," he said at last, "and I can do it—possibly save you from all the consequences of your rash act—if you will help me."

"Help you?" The woman laughed hysterically. "You don't know what it has meant to me! More than once I have been on the point of confessing everything to my husband!"

"Very good." Where are the imitation stones?" John Smith asked.

"The prince has them."

John Smith was silent again, and when he spoke his plans were completed.

"As soon as the jewelers who have the real stones see the announcements in the papers they will naturally communicate with the police," he said. "How much will get them out?"

"Something over two thousand pounds," Lady Minter answered quickly.

"Good!" John Smith said. "My car is waiting, and I will fetch them at once. While I am away, get Prince Rani Singra out of the house if possible."

A look of hope had come into Lady Minter's eyes, but it quickly died out again.

"Why should you do it?"

"Because it will give Darling & Co. a chance to do that which they have undertaken," John Smith answered simply. "If you take my advice, however, you will tell everything to your husband."

"Oh, no!" the woman gasped.

"Think," John Smith answered, as he left the room.

CHAPTER VI

The Missing Jewels—The Arrest and the Trial

Detective-Inspector Blakeland looked with some annoyance at the car that one of his subordinates brought in to him.

"John Smith," he read, and his expression changed. "Show him in."

John Smith entered the office, his usual calm expression on his face.

"What can I do for you, Mr. Smith?"

GUARANTEE OF SILENCE

Unexpectedly a Glasgow minister who encouraged congregational singing gained a new parishioner. Keen though his delight in hearing his people sing, there was one member of his choir whose endeavors he never encouraged. But the man sang without encouragement much to the discomfort of seasholders near him, who claimed that his loud, unmusical voice threw them out of time and tune.

Repeated complaints convinced the minister that somebody would have to assume the responsibility of silencing the ambitious singer. He decided that the man's wife was best fitted for the job. Owing to a difference in religious views, husband and wife attended different churches; but the minister knew her, so he called and explained his predicament. She was genuinely surprised.

"Do you mean to say he sings?" she said.

"Tries to," amended the pastor.

She thought a minute. "I shall have to come there to church," she said. "I shall be glad to see you," said the minister. "But what effect will that have on your husband's singing?"

The look she gave him was more significant than words, and they meant a good deal.

"John will never open his mouth when I am around," she said.

And John never has.

Fine Picture of Famous Crew

Mr. Fred H. C. Miles, artist, has just completed and placed on exhibition in Edgecombe & Chaisson's window, King street, a large oil painting of the celebrated "Paris Crew" of St. John. The picture measures 6 ft. x 32 in. and is a splendid example of the artist's work. Each head is a portrait, necessarily taken from photos, with the exception of Elijah Ross after mid, the sole surviving member of the crew, which is painted part from life and part from a photo. The boat "St. John," is from sketches made from the original, now owned by P. M. O'Neill, Esq. The view is taken from Appleby's wharf on the Kennebecasis, and shows a view of Long Island and the Nerepis hills in the distance. The crew are represented as out for a practice spin just before the celebrated race on the day of August 23rd, 1871. In this race Renforth collapsed from over exertion. The famous "Paris Crew," so named from their victories on the Seine, Paris. "The regatta on the Seine took place July 8th, 1867 and the great Carleton crew in the "James A. Harding," beat all the English French and German crews. It was a memorable event, as rowed against the crack six oared crews. Their first race was the six oared race with nine starters.

The New Brunswick crew won easily, covering 3.1.5 miles in 20 minutes and 5 seconds. After two other races were pulled off our boys in the "James A. Harding" won again with their "Chinese puzzle," as the "Harding" was called, against eight of the best four oared crews in Europe and came home with flying colors. Among other notable victories on October 21, 1868, the "Paris Crew" defeated the celebrated "Ward Brothers," who were the champions of the United States. The distance was six miles, three miles and return and our boys won by fifty lengths in 37 min. 28.3.4 sec. In the summer of 1873 they defeated a crew from Portland, Me. The picture will be exhibited for the next few days and is well worth seeing both for its execution and for the fact that it recalls the glories of the past.—St. J. Globe.

\$100 Reward, \$100

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials.

The Red Man's Last Stand

(Richard Barry, in Harper's Weekly)

At last the white man has started proceedings which may take his lands from the only remaining tribe of Indians which still inhabit its aboriginal haunts, the Navajos. One of the first acts of the New Mexico Legislature, passed within a few weeks of the admission of the State to the Union, was a memorial presented to the President and to Congress in the latter part of April, asking that the vast acreage now held by the Navajos be opened to white settlement.

This is the last chapter in that history of conquest by which the Caucasian has all but obliterated the Indian from the continent which was once his. It is a history which no conscientious American is happy to read, for it contains, in final analysis, much that is not creditable to our humanitarian spirit.

It will require the approval of the President and of Congress to consummate this final seizure of the red man's last primitive habitat, and, as that approval has not yet been granted, and is only being sought, a short inquiry into the condition of the Navajos and their home is interesting now.

The Navajos are the only tribe of the Indians living today, without a subsidy from the government. They are the only Indians who do not receive rations from the public stores. They are the only Indians who still maintain their primitive tribal conditions, both of economic life and of government. They are the only Indians who have developed commercially their own handicrafts, blanket and basket weaving, without aid from the white man. Moreover, they are law-abiding and have given us no trouble for over forty years. They are living down there in the Southwest, free, happy, prosperous, self supporting, and physically and morally clean. Tuberculosis, which has attacked every other tribe of Indians, once it has come in close contact with the white man, has passed them by. Sexual diseases, which have ravaged every other tribe once it has been corralled and just placed under the restrictions of governmental supervision, are unknown among them. They are an aristocratic people, proud in their aloofness both from the whites and from other Indians. They do not intermarry with other tribes, and of the forty six clans, forty four punish marital infidelity with death.

Our neighbors may not be proud of the hubbub at Chicago, but, nevertheless, they like it. Galt Rpr.

Electrical Terms Commonly Used.

(By the Professor in the Scouts.)

A kind-hearted reader thinks that the Professor has been writing of different things for so long that he must be hard up for subjects by now. So he writes to suggest that a little talk about some of those queer names which we hear used in connection with electricity would be interesting not at all a bad suggestion.

The commonest of all, perhaps, is Volt, an abbreviation of Volta, the name of a famous man who did much for electrical science in its early days. It signifies the force of an electric current, just as a number of pounds per square inch denotes the force of a current of water or air.

The ordinary single dry battery such as we use for electric bells, gives us current at a force of about 1.1-2 volts. One and a half is then called the 'voltage' of the current.

Then we come to ampere, the name of another early electrician, which denotes a quantity of current flowing in any given time.

To show how much water was flowing through a pipe we should say so many 'gallons per hour.' In like manner, with electricity to indicate how much current flows along a wire we say so many amperes.

If we want to know how much work any current is capable of doing we multiply the number of volts which represents its force by the number of amperes which denotes the volume and call the result so many 'Watts,' a name used by way of compliment to our fellow countryman James Watt, who did so much for the steam engine.

So if your house is lit by electricity and the current is supplied to you from the mains at a voltage of say, 200 and you use five amperes, then the current entering your house is doing work in lighting your house at the rate of 1,000 watts.

And for convenience take a thousand watts are called a kilo-watt. And a kilo-watt for one hour is a Board of Trade unit the basis on which your father pays his electric light bill.

The charge is always made at so much per Board of Trade unit; in other words, so many kilo-watts for one hour, or the equivalent.

In telegraphy they use very tiny currents, and so you will find telegraph engineers talking about 'Milliamperes,' meaning thousandths of an ampere.

A battery is, strictly speaking a num-

ber of 'cells,' as a battery of guns, but sometimes we use the word to mean one cell when it is used by itself. An electric bell worked by one cell is said to have a battery, although properly the word should mean two or more.

A dry battery is simply an electric cell or battery with a damp paste instead of the liquid which wet batteries contain. It is more convenient in many cases because the liquid may without care, get split, whereas the paste will not.

You hear of Leclanche batteries, Grove batteries, Bi-chromate batteries, and others; but they are all varieties of the same thing, namely, batteries for generating a current of electricity.

Then there are secondary batteries so called because they do not give out current unless current be first led into them. The others, called primary batteries to distinguish them give out the current because of their own generating power; but the secondary batteries only take in and store up current which they give out when needed.

A conductor is something through which current flows, or will flow, if needed. An insulator, on the other hand, is something the conducting power of which is so poor that for practical purposes no current will flow through it. We therefore use insulators to keep current from going where we do not want it to go.

The resistance which an insulator offers to the passage of a current, and also the resistance which conductors offer, too (for no conductor is so good that it offers no resistance at all) is measured in Ohms. This has nothing to do with 'His Majesty's Service,' as has been suggested, but is simply the name of another early worker in electrical science. It is so related to the volt and the ampere that a force of one volt is able to send a current of one ampere along a conductor whose resistance is one Ohm. A millionth part of an ohm is called a Microhm, while a million ohms is a Megohm.

An electrical term which we do not often hear of is the 'Coulomb.' It is a measure of quantity of current.

Just as an ampere when talking of electricity is the same as a 'gallon per hour' when we are thinking of a current of water, so the coulomb is similar to 'gallon.'

A current of one ampere means that a coulomb of electricity is passing any given point every second. So you see, if a current of one ampere flows through a conductor for an hour 3,600 coulombs will pass in that time, for there are 3,600 seconds in an hour.

Electric lamps, and all other lights for that matter, are measured by their candle-power.

The legal candle-power is the light given off by a candle, weighing a sixth of a pound, burning 120 grains of sperm-cet per hour. A sixteen candle-power lamp, for instance is therefore one which gives out light equal to sixteen such candles.

Similarly there is the 'joule,' which indicates the amount of work which a current whose capacity for work is one watt will do in one second.

Electric motors are usually stated to be so many horse power.

This term was invented by James Watt for measuring the power of his steam-engines. He fixed up a pulley at the top of a coal pit and passed over it one end of a rope with a 150-pound weight attached. Then he fastened the other end to a horse and saw how fast the animal was able to put up the weight. He found that it walked at the rate of 220 ft. per minute and so he reckoned that a horse could work at the rate of 33,000 foot-pounds per minute, the figure being arrived at by multiplying 150 by 220.

So the power to do 33,000 foot-pounds of work in a minute is a 'horse-power,' and on that basis the power for work of electric motors is measured.

Sometimes voltage is spoken of as tension or pressure so that we hear or read references to high-tension or high-pressure currents meaning currents whose force is measured by a large number of volts, generally thousands.

The size of a dynamo is generally stated to be so many kilo-watts meaning that it is capable of generating a current whose power for work is that amount.

High-frequency is a term which we sometimes come across in connection with the medical uses of electricity. Such currents are employed in the treatment of certain diseases.

What is meant is a vast number of little puffs of current flowing not in a steady stream, but first one way and then the other, changing direction at the rate of thousands of times, or even millions of times per second. Such currents are also used in wireless telegraphy.

Fires on Private Lands.

The broad interest of a general government in the forest fire question upon privately owned lands is well illustrated in the United States by the provision of the Week's Law for co-operation of the Federal Government with States for the patrol of forest lands upon the headwaters of navigable streams. The Week's Act became law March 1, 1911, and in addition to providing for the acquisition of lands by the Government, carried an appropriation of \$200,000, available until expended for co-operation with the States in fire-protection work. During the summer of 1911 co-operative agreements were entered into with a number of States, principally in the East, the western watersheds being already for the most part protected by the establishment of National Forests. One of the first States to enter into co-operation with the Federal Government under the new law was New Hampshire. An efficient system of fire patrols, supplemented by the use of lookout stations and telephones, was established in the northern district of New Hampshire, comprising an area of about one million acres, at a cost of less than one and one-half cents per acre.

Lobster Fisheries of Canada.

There are probably 50,000,000 lobsters taken from the coastal waters of Canada every year. During the fishing season, which extends from April 27th to June 30th, roughly 11,000 men are engaged in actual fishing, and 8,000 people are employed in the 682 canneries. In short Canada possesses a more extensive and valuable lobster fishery than any other country in the world. Lobster canneries were first established in Canada in 1869, and in that year 6,000 one lb. cans were put up. By 1881 the maximum pack in the history of the industry was reached, when over 17,000,000 pounds were canned. Since that year there has been a decline. In 1898 the production was about 10,000,000 pounds and since 1909 there has been a further falling off.

In addition to the canned lobsters a very important trade is carried on in live lobsters. There is an active demand for live lobsters wherever they can be shipped in cold storage. Anywhere from 100,000 to 120,000 hundredweights of live lobsters are annually shipped to Canadian fishermen.

The Department of Marine and Fisheries has tried a number of experiments in the hope of regulating the lobster fishery, with a view to its better conservation. Hatcheries have been encouraged and efforts made to have the fishermen bring the egg-bearing female lobsters to these hatcheries. This has been fairly successful. There are now thirteen lobster hatcheries on the Atlantic coast, and millions of lobster eggs are artificially hatched annually and the young are planted. This has been found very beneficial, because it saves the destruction of the female lobsters by the fishermen, as well as preserving large numbers of live

While You Are Thinking Of Building, Think of Plumbing

Your plumbing equipment is important as upon its efficiency may depend the health of your household. Insure the dependability of your plumbing system by seeking the aid of experienced plumbers and the careful selection of fixtures of reliable manufacture.

We solicit your investigation of our claim to give you the above combination of necessary qualifications to insure good equipment. Our service in workmanship and system design is moderate and efficient. The goods we use are the "Standard" and may be depended upon for perfect sanitary service throughout many years, possibly a lifetime.

Our free estimate on new work places you under no obligation to give us your order-why not let us estimate? Show room on Main St.

ster eggs which would be lost if they are deposited in the open sea. There is, however, still a great loss of fry after it is planted. No economical means have yet been devised for preserving the fry until they have reached the groundling stage, before planting. If this could be accomplished, a very great advance would have been made in the conservation of the Canadian lobster industry.

Cutting a Rich Melon.

London, July 1.-Through the reorganization of British-American Tobacco the fourteen directors were enriched by an aggregate gift of \$7,500,000. This was done by the method familiarly known as "cutting a melon." In other words, the directors were permitted to subscribe for almost exactly 450,000 shares of the enlarged capital of the British-American Tobacco Co. at the rate of \$7.50 a share, the par being \$5. At that time the market value of this stock was \$25. Therefore these directors found themselves enriched by the difference between the \$7.50 which they paid, and the \$25 which was then the market value of the stock. Since then they have made profits. The melon, so to speak, has grown, for the market value of the stock of this company is now not less than \$28 a share.

This is a corporation which the Supreme of the United States decided was a monopoly, or in contravention to the Sherman law, controlled by the old American Tobacco Co. After the dissolution of the American Tobacco Co. its stockholders received the British-American Co., as exchange for their shares of the American Tobacco Co., or trust. For the most part the men who now controlled the British-American Co. as an

independent corporation were in control of the old American Tobacco Co.

For the purpose of increasing the working capital of the British company with which greatly to enlarge its field of operation it was decided to increase the capital stock. And it was through this increase and the fact that as a British corporation the par of the stock was only \$5, whereas the market value was \$25, that these directors have been enriched on paper, at least, by nearly nine million dollars, basing that figure upon the present market value of the stock.

THE MISSING FIGURES

```

215 | x 7 x 9 x 11 x
    | x x x
    | x 5 x 9
    | x 5 x 5
    | x 4 x
    | x x x
    | 0 0 0
    
```

Here is a simple problem in long division, with over half the figures missing. Now the puzzle is to fill them in again in place of the "x's."

How to conserve Canada's fisheries, was the theme discussed by the Committee on Fisheries of the Commission of Conservation on June 4th. Canada has exceedingly valuable fresh water and coastal fisheries, but there are indications of a steady depletion of some important species. This perhaps especially true of the oyster, the shad and the whitefish. Much valuable information was brought together and presented to the meeting by Dr. Joseph Stafford of McGill University, who spoke on the "Conservation of the Oyster" by Messrs W. A. Found and J.

J. Cowie of the Department of Marine and Fisheries, who spoke on passes of the Atlantic coastal fisheries. Dr. Howard Murray contributed a paper on "The Needs of the Fisheries of Nova Scotia;" Mr. M. J. P. ton on "Whitefish in the Great Lakes," while Premier Macleod of Prince Edward Island spoke on the oyster industry in that Province.

Copies of the resolutions passed by the Committee, as well as a list of the members of the Committee are given elsewhere in this issue.

A stenographic report of the meeting was made and will be published in book form early in the autumn.

Dollar Doublers

Our Classified Want Ads. are real dollar doublers. In shoe leather and nervous energy they will save you many times their small cost by bringing to your door what you require, whether it be efficient help, a desirable borrower for surplus cash, a position or a domestic. A most convincing and irrefragable proof would be to try a Want Ad.

THE GRANITE TOWN GREETINGS

Personals.

Mrs. H. E. Goss and Mrs. Chase left on Tuesday for a few days in St. Stephen.

Mrs. Youngclaus of St. John is the guest of Mrs. McIntyre this week, also Miss Elizabeth Strayhorn of Boston who expects to remain for the summer.

Rev. E. A. MacPhee left for Nova Scotia on Thursday of last week. Rev. T. M. Munroe of Penfield took his services in his absence.

Miss Laura Spoffard arrived here from Bridgeport, Conn. on Tuesday accompanied by friends and are visiting with her father John Spoffard.

Mrs. Robt. J. Dodds left on Wednesday evening for Letete to take the Viking the next morning for Eastport where she took the Am. boat for Boston visiting relatives in that city for 10 days or a fortnight, thence going to Jaramie, Wyoming for 2 or 3 months visit with her two sisters at that place, on her return she will be accompanied by her little son who has been away for the past few years.

W. McL. Barker left on Monday for Fredericton to take a 5 week Physical exercise course. Mrs. Barker left the same day for her former home in Kingsport, N. S. for a 3 weeks visit with her relatives. On her return here she will have as her guest Mr. Barker's sister.

Mrs. T. R. Kent and her father A. C. Kennedy were at Eastport a day or two during the week.

Mrs. Coatts was at Musquash for a couple of days this week returning with her little grandchild.

T. R. Kent left on Monday for St. John.

Mrs. G. W. Gilley of New Westminster, B. C. and Miss Gertrude McCormick of St. Stephen are guests of M. and Mrs. George McCormick.

Mrs. Will Stewart of Letang was visiting in Calais, Me. last week with her sister Mrs. J. M. Beckett and other relatives.

Miss Myrtle Dick of the Gen. Hospital, Lawrence, Mass. is visiting at her home here.

Miss McGloan returned to her home in St. John this week.

Bishop Richardson and family are spending the vacation season in St. Andrews. They are at Mr. W. Carson's... Beacon.

Ira Getten left Thursday for a short trip to U. S. points via St. John where he will take the Am. boat.

Bernst Shaw and father of New River were guests of Mr. and Mrs. Wesley Phillips Sunday.

A MIS-HIT
Did you make a mis-hit the time you employed the last "help."
Don't worry. There are lots of good fish in the sea, and a sure bait to catch them is a Want Ad.

There were about 900 quarts of dirty milk dumped into the sewers in Toronto by the Health Department during May. When producers are sufficiently impressed by this summary procedure Toronto will get pure milk.

The Kansas City street car system is disorganized through the attempts of conductors to carry out the order forbidding smoking on the cars. The smokers absolutely refuse to give up their tobacco while riding in the company's vehicles.

There is a report that negotiations are on foot looking to the development of the cement deposits at Letang. Such an industry would be a very welcome one to the eastern section of the county.—Beacon.

\$40,950 Paid for Piece of Tapestry

London, July 3.—One hundred and nineteen items of the John Edward Taylor collection sold at Christie's here today brought \$258,073.

Jacques Seligmann, of New York, carried off the prize of the day. It cost him \$40,950. It is a Flemish tapestry of the fifteenth century and represents the "Resurrection in Egypt." The foreground of the composition shows the Virgin and Child and St. Joseph beneath a tree in the branches of which are cherubs. An extensive landscape is the background, while the middle distance shows buildings, a bridge and figures harvesting. Mr. Taylor got it from the Spitzer collection in 1893.

Adding to the sorrow expressed here at the loss to Great Britain of this enviable collection is the fact that the late Mr. Taylor had intended to leave his collection to the nation. But he was an advanced pro-Ber, and when war was declared upon the little South African republic he withdrew his offer, considering the war a great injustice.

Seligmann and Duveen throughout the sale have been its most prominent figures. Whispers here have it that Seligmann, who is bringing J. P. Morgan's collections to the Metropolitan Museum of Art, is again in this instance acting as his agent.

The Duveens paid \$22,050 for a vestment clasp of gold and enamel, which is said to have belonged to Pope Alexan-

der VI., and attributed to Caradoso. It is of Milanese workmanship, about 1500. They also paid \$24,650 for a diptych of translucent enamel on silver, "The Adoration of the Magi" and "The Nativity" North Italian of the end of the fifteenth century. This piece was once in the Tolin collection.

The Hydro Electric Company

The New Brunswick Hydro Electric Company which was granted a charter at the last session of the legislature, to develop the water powers on the Lepreau and Magaguadavic rivers, is busy making financial arrangements for carrying out their plans, and it is expected that an early start will be made in developing their resources. The company has already spent considerable money in acquiring properties along the rivers in question, and, making surveys, and according to the conditions of its charter has to do a good deal of work before another year rolls round.—Standard.

Claims to be Heir to Earldom of Airlie

Fredericton Gleaner. He was born in Greasy, Sanbury county, forty four yrs. ago, and he is the eldest of three brothers, and therefore claims to be the immediate heir to the estate and title of the Earl of Airlie. The claims of the Ogilvie brothers are now being urged and it is expected that within a short time some thing definite will be known. George Martin Ogilvie was born forty four years ago, and moved to Washington about fourteen years ago, and has been a resident there ever since. In 1901 he was married to Miss Susie Ross, of Littlefield, Oxford Co., Me. They have 4 children.—Ex.

She Saw Her Finish

A widow belonging to a country village lately led to the altar a fourth bride. After the honeymoon the happy couple settled down in his home, and, as the surrounding country was new to the lady, she was anxious to visit all the places of interest in the locality. Among the spots visited was the village church yard, and there the husband and wife paused before a very elaborate tombstone the property of the bridegroom. The bride, being a little shortsighted, asked him to read the inscription. In solemn tones he read:

"Sacred to the memory of Ann, beloved wife of John - -; also Jane, beloved wife of John - -; also Mary, beloved wife of John - -."

He stopped abruptly.

"What are the words beneath?" innocently asked the lady, and her horror can be imagined when he read:

"Be ye also ready."

WOMAN'S TRIALS.

The burdens a woman has to carry through life are many but they can be lightened if she will turn to Dr. Pierce's Favorite Prescription. A soothing and strengthening nerve—subduing nervous excitability, prostration, hysteria, hot-flashes and the many symptoms which may be caused by distressing ill-peculiar to women. For those "dragging-down" pains or distress and for the derangements and irregularities the "Favorite Prescription" has had many thousands of testimonials from people living in every part of America. Another important thing to every woman is that this medicine is made from efficient medicinal roots, without the use of alcohol, narcotics, or any injurious agents. Full list of ingredients given on bottle-wrapper and sworn to by Dr. R. V. Pierce—who is President of the Invalids' Hotel and Surgical Institute, at Buffalo, N. Y. Every woman is invited to write to this Institute and receive confidential and sound medical advice, entirely without cost from one who makes the diseases of women his specialty.

"I can cheerfully recommend your remedies, especially your Favorite Prescription, for all female disorders," writes Mrs. M. M. MORRELL, of Bluff City, Tenn., Route 2. "During the past seven years I suffered from pains in the back and ovaries. Tried many remedies but found only transient relief until I was persuaded by a friend to try Dr. Pierce's Favorite Prescription. After giving this remedy a fair trial, I found that it would do just what it is recommended to do. I used in all seven bottles. I cannot speak too highly of Dr. Pierce's remedies for all female derangements."

Dr. Pierce's Pleasant Pellets regulate liver ill.

Mrs. MORRELL.

THE GRANITE TOWN GREETINGS

Paying Cash Pays!

Running an Account is very convenient at times, we readily admit; but you must have observed that when you run an account, you are very apt to buy many a thing you would go without if you were paying cash—things no doubt you could easily dispense with, without injury to yourself or family. And when those extra things come to be paid for—maybe you must then deprive yourself of other things that you actually need or at least go without them for a time, now "Paying Cash" enables you if you want to, to save money. Its very easy to "Charge the Goods" Its not so easy to "Discharge the Debt." So for economy's sake "Pay Cash" And since we have adopted this Cash System we find it moving very satisfactory both to our customers and ourselves, your money will buy you "Better Goods and More of Them" than if we were making bad bills by reckless credit giving.

ANDREW MCGEE - - Back Bay

BACK BAY

Mrs. Albin French and Mrs. Thomas French were the guests of Mrs. Sydney French.

Miss Lilla Hoyt returned home Wednesday.

Messrs. Nevin Matthews, James Hoyt, Robert Holmes and Arthur Mathews of Letete were recent visitors here.

Mrs. Charles Leland and son Willie spent a few hours at Letete Sunday.

Mr. and Mrs. Stephen Dick of Letete were visitors here Sunday.

Blunderly—Really, madam, you look remarkably well. You appear as young as your daughter.
Lady—Yes, I am the daughter.

AS USUAL.
She—The world certainly patted you on the back.
He—Yes, and then I had to cough up.

Advertise in Greetings

RAILROAD CONSTRUCTION WORK OF ONE WOMAN

Mrs. L. S. Hooker of Omaha is the only woman railroad contractor in the United States. She is now engaged on an electric interurban line between Kansas City and St. Joseph, Mo.

Six years ago Mrs. Hooker was a retiring little woman, making an effort to support her three children through the various occupations to which the untalented widow turns. Her efforts netted her only a bare living and failing health. Her doctor told her that she would not live unless in the open air.

So, impelled by the little ones dependent on her, Mrs. Hooker looked for open air work. She obtained employment as cook in a railroad camp. Her reserve and dignity won her the respect of the men and the approval of her employers.

Advanced to supervisory cook over three camps she ordered the supplies and made out the menus on a scientific basis, keeping ever in mind the efficiency of the men.

Mrs. Hooker soon realized she was capable of managing a construction gang. With money saved she bought three teams. By renting these out she became owner of 11 teams. These were the beginning of the present "Hooker outfit." She buys nothing but mules, best for construction work, she says.

The contractor who engages Mrs. Hooker's outfit never meets delays. She ships her mules, machinery and men on special trains and a savings on hand to see that everything goes right.

MRS. L. S. HOOKER

RAISE SCHOOL AGE

A Chicago Education Would Place It At 16

Vocational training of the young in the public school will solve a big economic question, according to Mrs. William B. Owen, Chicago, whose husband is superintendent of the Chicago normal school.

"Thousands of children," she says, "leave school at 14, when they have only gone as far as the fourth or fifth grade."

"A great number of these do not

MRS. W. B. OWEN

know anything about work. They are not prepared to meet life's problems nor to solve the question of living.

"From this class many girls go to questionable houses. From this class many boys join the ranks of the criminals."

"The school age limit should be raised at least to 16. The solution of the difficulty is the vocational school as a part of the public school."

"The child leaving school at 14, unprepared for anything, is naturally picked up by the big employer who gives pitiful wages. The result is worn out children and a serious economic condition."

A MATCH TRICK

Take five matches and arrange them like this:

Thus you have five squares of equal size. Now remove three matches so as to leave but three squares.

LOCAL AND GENERAL

The ladies of the Baptist Sewing Circle will hold an Ice Cream Sale and Fancy Sale in the Vestry of the Church on Wednesday July 17th.

Word has been received here of the death of John Goss, a native of St. George, but a lifelong resident of the west. He was a brother of the late Thomas Goss of this place.

H. R. Lawrence received his new auto on Tuesday this makes the second in town.

Heavy forest fires are raging in Lomenburg and Halifax counties N. S., and large tracts of valuable land have been burned and several heads of cattle were burned. It is still raging and sweeping everything before it, threatening several of the smaller towns.

One of the worst wrecks in the history of the I. C. R. occurred on Wednesday afternoon at Grand Lake N. S. The Maritime Express from Montreal to Halifax left the rails the engine plunging into the lake, the Engineer, Fireman and a tramp were killed, all the passengers and others escaped some getting slight injuries the loss will be about \$50,000.

A large crew are at work opening up the old St. John road from the Spinney corner to New River, which will be put in good shape for auto's making a saving of about 6 miles between here and Lepreau enroute to St. John, also making a good satisfactory road which it is impossible to make of the present shore road on account of several bad places which cannot be made good.

The work is in charge of O. Budd of St. Stephen.

Thunder storms have been very prevalent all over the province during the past week, with lightning striking in many places especially up the St. John river, where much damage has been done at many places. On Tuesday afternoon St. George had a very heavy storm, the lightning striking the J. D. Williamson dwelling on river road damaging the kitchen baking the stove and pipe. Mr. Williamson had just returned from his work as the house was struck, neither he nor wife felt any effects of the stroke.

In Victoria County the storm was exceptionally severe, one man being killed and several having slight shocks and a great deal of damage done.

THE JULY COMMITTEE.

Has Small Number of Accounts to Deal With.

The July Committee of the County Council convened in the court house on Tuesday forenoon at 11 o'clock.

The members in attendance were Warden McNeill, Councilors Smith, McKay, McMillan and Maxwell.

Auditor Cockburn reported upon the county accounts, after which the bills were taken up separately and voted upon, payment being recommended of the following:

R. A. Stuart, half year's salary; T. A. Kendrick, half year's salary; F. H. Grimmer, salaries, &c.; M. N. Cockburn, half year's salary; M. E. McFarlane, painting court house; St. Andrews Post Office, postage; R. E. Armstrong, printing; J. R. A. McMillan, record book, etc.; J. D. Lawson, coroner's fees; Maxwell Robinson, constable's fees; J. R. Soderquest, hire of room; H. M. Webber and 6 others, jury fees; R. E. Armstrong, official reporting; C. H. Greenlaw; bell ringing.

Constable Kendrick was recommended to be paid \$1 for attendance upon the committee.

Day's pay and mileage were recommended to be paid as follows:

| | Day's Pay. | Mileage |
|----------------|------------|---------|
| Warden McNeill | 20 | \$3.00 |
| Coun. Smith | 22 | 3.00 |
| McKay | 32 | 5.00 |

0.47

| | | | |
|----------|----|------|------|
| McMillan | 13 | 3.00 | 5.60 |
| Maxwell | 25 | 3.00 | 2.00 |

The Committee then adjourned.—Beacon.

DIPPER HARBOR WEST.

Schr. 'Lennis' Capt. Guphill of Grand Manan were in for Harbor Monday evening.

Mr. and Mrs. Wesley Long of St. Martins came here Friday to spend the summer.

Tug boat 'Alice R' Capt. Ruddick of St. John came here Monday and landed a large crowd of men to work on the breakwater which was started last summer.

Schr. 'Harry Miller,' Capt. Miller of St. John was in for harbor Tuesday night and sailed Wednesday for Boston.

The Salmon fishermen are getting some large catches of salmon.

The home of Mr. and Mrs. Edward Thompson was brightened by the arrival of a baby boy.

Mr. and Mrs. Peter Devine drove to St. John Saturday and returned Sunday.

Mrs. Frank Campbell spent Tuesday with relatives in Maces Bay.

Mrs. Chas. Harkins and daughter Miss Annie spent Wednesday with friends in St. John.

Daniel Wilson, George Simpson and others from Deer Is. came here last week to build a weir.

Roy Theriault returned to his home in Lords Cove Friday after spending the summer months here.

New Canning Town.

Girls Will be Imported From Norway and Elsewhere.

Good progress is being made with the canning plant at Chamcook, also the boarding house.

The stand-pipe which is to provide water for the new sardine town, has been erected alongside the track. It will supply the purest of fresh water by gravity for the various buildings.

The help problem is to be solved by the importation of girls from Norway and elsewhere. It is expected that 120 girls will leave Norway about the first of August. These girls are of a superior type and are accustomed to the handling of fish. In addition to local help, it is likely that men and women will be brought here from Nova Scotia fishing villages.

The company has already booked large orders for sardines, clams and other products of sea, and shows that it purposes canning.—Beacon.

Keep the Streets Clean.

The streets are one of the many forms of public property that the young and old should learn to respect. A word now and then at the home and at school upon this and kindred subjects would gradually establish a wholesome sense of responsibility among the young. Perhaps after such precepts had been patiently, though not tediously repeated, we would cease to see the streets and walks cluttered with old paper and scraps of waste. The children will respond if this subject of keeping the town neat and clean is wisely urged and the response will not be merely spasmodic if adults do not forget their duty. The public in these matters seem to be reprehensively indifferent, and should set the example for spotless cleanliness and neatness in all that tends to make the town attractive.—Ex.

The dust nuisance has become so unbearable as to justify some step looking to its abatement. As much of this dust is the result of auto-driving, might it not be a good idea to seek relief from the same quarter, by compelling auto owners to contribute to a dust-laying fund.

—Beacon.

Everybody recognizes the need of a respectable public building at St. George. Both governments have made appropriations for it, yet neither political party seems able to agree upon a site. Better call in a disinterested outsider and let him make the choice.—Beacon.

It is altogether likely that the Duke of Connaught, Canada's royal governor general, will pay St. Andrews an unofficial visit next month. He will be welcome, no matter how he may elect to come.

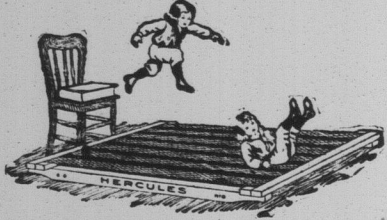

—Beacon.

Marvels of Smartness

(New York Tribune)

To any one who remembers the faded bathing suit, with flimsy collar, trimmed with rows of white braid, which was - once almost universally believed to be quite good enough for a dip in the sea, the bathing suit of today must seem a marvel of smartness. It is no small amount of thought that the well dressed woman now to the becomingness of her bathing suit for she considers it as important as any other part of her summer wardrobe.

Though there is much variety in the models for the new season, they are all well adapted to the average figure. Among the safest and most practical suits are the ones with long silk tights which extend well under the stockings, and a short plain skirt, topped by a peasant blouse. The one piece suit with bloomers to match, is always popular. A valuable addition is made to many of the suits in the form of a giraffe stiffened with whalebone, which, of course, will not rust.

New color schemes are suggested in the different materials shown for bathing suits, but blue, black and red still remain the most generally satisfactory. Dark blue wash silk and the durable black sat in make charming suits for both young and old, with a collar and large tie of blue polka dot silk trimming. If one wears with a suit of this kind, the dark rubber cap which is so unbecoming next the face, it can be covered with an artistically adjusted white silk handkerchief or a square of the dotted silk.

Fashion's latest pronouncement is that

black and white checked silk is to be used by smart women who are fond of swimming; also, that red, blue and green plaid sarah suits will have plain black or dark blue mohair bloomers.

Plant Trees for use on Christmas.

An Ohio farmer is solved the problem of what to do with a wornout farm, says a writer in Outing. He owns an old homestead of sixty acres which he is desirous of keeping in the family. He does not live on the place, however, for the reason that farming on it has of late yrs. been a decidedly losing affair; He has, therefore decided to plant the entire track in trees. Already 35,000 Norway spruce have been set out, three and one half feet apart each way, on an area of about eleven acres.

These trees will be cut as they become large enough, for Christmas trees. Chestnut seedlings will be planted in the spaces left by the removal of the spruce, and it is expected that these will come in to bearing by the time the last spruce is cut. In addition to the spruce, hardy catalpa, black locust, elm, box elder and sycamore have been planted. It is the intention to put the entire sixty acres in forest within five or six years. The owner is wise in planting several kinds of trees instead of confining himself to one species. His forest will be producing six or seven kinds of lumber, chestnuts and Christmas trees, all at the same time.

A "Natural born" miser has died in Vienna at the age of 84. When seven years old he refused to put sugar in his tea, and demanded a half penny a week from his parents as a bonus. Later his penurious habits grew stronger. He lived in an attic, ate principally dry bread and read the newspapers in the offices, so as to save the expense of buying them. By his will he leaves \$50,000 to a children's hospital.

The Milwaukee Physicians' Association is preparing a bill for submission to the legislature that has as its aim the prevention of kissing, which is declared to be a blot on civilization and a menace to decency.
