Mr. FOSTER. It is such a Siamese twins business that we never know where we are. The House should insist on the Minister of Marine and Fisheries being seated alongside the Minister of Public Works whenever these estimates are going through, so that what one does not know the other could tell, and not have them throwing the responsibility from the one to the other. Has the ligature been entirely cut between the two, or do there still exist certain tendons which keep the two corporate bodies joined together ? What authority does one of them have which the other has not ? I see in the estimates of Public Works some items opposite which there are dashes followed by the designation 'Marine.' Is my hon. friend going to take up these items or refer them to the Minister of Marine and Fisheries ? In fact, these two departments are so dovetailed, the one with the other, that each of the twins should be here at the same time whenever the estimates of either department are going through. This is just a good illustration of the business methods of this government. They appoint a transportation committee, declaring that they themselves know nothing about the difficulties and technicalities and science of transportation, and that they must be instructed. Then, before that commission gets to work, they rush into an expenditure upon the Transcontinental Railway in which hundreds of millions of dollars are involved, and which, in one way or the other, affects transportation more than probably any other act of the government could do. Then they just treat the different ports of the country as political or other necessity dictates. There does not seem to be any element of fairness in their methods of treating the different ports. Take the great trade harbours of the country. If one presses for expenditure, they give it something. If the other presses for similar

expenditure, but does not press sufficiently strong, they do not give it anything. Take, for instance, the harbour of St. John. That is one of the great export harbours of this continent, ready to handle the export trade equally to the harbour of Quebec, if you will only improve it. Yet they have allowed the people of St. John, through their municipal taxation and the loans they have had to make, to do almost everything that has to be done in that harbour and do not give them a dollar of contribution towards that work. But go to the harbour of Quebec and see what is being done there. After spending five million dollars in that harbour—and the Lord only knows what has become of it—after that expenditure, which one would think ought to make it a harbour capable of taking in all the sea-going vessels that could get to it, the minister cannot find sufficient place in it in which ships can lay up, and he has to come back to his colleagues and say: I want to spend a half a million dollars more in order to get some adequate facilities. The time will come—and I hope it will come soon—when we shall have an accounting for all these things. This government came into office in 1896, yet it has not had time to take up these most important questions and settle them on some basis of what is consistent, right and just, as regards the different ports of the country. They have no confidence evidently in the Harbour Commission at Quebec, or they would let that commission have the spending of the money in its own waters. If the government had full confidence in it, they would have given it this money to spend, as that commission ought to know best what is necessary. There is no principle, no consistency, no method in their expenditure, and that is a good illustration of the lack of business methods which characterizes the present administration. I am sure that my hon. friend would not justify in his own business the course of procedure which is followed with regard to our different ports. Instead of devising some general, reasonable plan which would be uniformly and consistently carried out, we have these hap-hazard methods followed, and followed apparently to suit some political or other caprice or exigencies.

Mr. HYMAN. My hon. friend knows that there always has been and always will be great difficulty in establishing a line of cleavage between, not only the Public Works Department and the Department of Marine and Fisheries, but also between the Public Works Department and the Department of Railways and Canals, in regard to certain works. Take, for instance, our canals. They must be under some department, and they are under the Department of Railways and Canals. But every one knows it is very often difficult to define exactly where the jurisdiction of the Department of Railways ceases in that respect and that of the Public Works Department begins. Take, for instance, the improvements in harbours and canals. The hon. gentleman shakes his head, but there has always been that difficulty. There has been no change made in the jurisdiction of the Department of Railways and Canals and the Department of Public Works as regards these matters. There must be a certain amount of dovetailing all through, so long as the harbours are under the control of the Department of Marine and Fisheries and the public works under the control of the Public Works Department. The latter has control of the building of wharfs; and if a wharf happens to be very close to the mouth of a canal or to where there is a harbour commission, there is always a question as to which department should control it. One word with regard to the harbour of St. John. There has been a large expenditure made in that harbour by this government.

Mr. STOCKTON. Not for the western export part.

Mr. HYMAN. I cannot draw the distinction quite as fine as my hon. friend does, who is possibly more acquainted with the details as to where the western and eastern export trade take place, but we all know that large expenditures have been made in the port. The hon. gentleman appeals to me as a business man. Speaking frankly as such, I would be glad if at the proper time we had a discussion in this House on the whole question of jurisdiction and the methods in which our harbours are managed. No doubt, in such a discussion, a great deal of information might be elicited. The government may have been somewhat dilatory in taking the question up. It is a large question which might be properly discussed, but I submit that that discussion would much more properly take place on some item in connection with the Marine Department, which has control of those harbours.

Mr. BERGERON. In view of the discussion which my hon. friend promises us later on, it would be well to get from him now such information as we can. The information I have asked for with regard to the number of harbour commissioners and the number of employees we ought to have. My hon. friend can get all that from the officers of his department. They know all about it.

Mr. HYMAN. This department has nothing in the world to do with the Harbour Commissioners of Montreal. I can obtain the information for my hon. friend, not from the officers of my department but from the officers of the Department of Marine and Fisheries.

Mr. FOSTER. Since when had it not?

Mr. HYMAN. It never had.

Mr. BERGERON. Who is responsible in parliament to the people for all the moneys that have been spent in the harbour of Montreal or the harbour of Quebec ? Five millions of public money have been spent in Quebec and $3,000,000 in Montreal.

Mr. FOSTER. Five millions.

Mr. BERGERON. There are $3,000,000 owing to the government. Who is responsible in the House ? This is a democratic country.

Mr. W. F. MACLEAN. No.

Mr. BERGERON. Yes. Every cent that is spent must be accounted for in parliament. It may not be entirely under the control of the department of the hon. gentleman, but he is a business man. He is doing a great deal of work at a great sacrifice and I hope he will help us in this direction. We want to know who is responsible for all these moneys which have been spent during past years and which are being spent to-day. We are here as the representatives of the people. We are responsible to the people for what we are doing. We have been called upon to vote an amount which will form a portion of about half a million dollars to be spent in Quebec harbour. We are entitled to know who is responsible for the moneys that have been spent in the past. My hon. friend says that when finished these works will be transferred to the Department of Marine and Fisheries according to the law passed last session. Then the Department of Marine and Fisheries will probably give them back to the Harbour Commissioners of Quebec unless there is a change in the Bill now before the House. In the meantime we are entitled to all the information necessary to help us in the discussion of this question. When my hon. friend says that the Department of Public Works have nothing to do with that surely it places matters in a worse position than ever. If my hon. friend will say here : I do not know anything about it and my officers know nothing at all about it, there would be some excuse in that and we would postpone the matter until later on, but when we are told that the Department of Public Works is not responsible I am sure that if the hon. Minister of Marine and Fisheries were here he would say that he was not responsible for it. Well then, who is responsible ?

Mr. HYMAN. The position is exactly the same as it was previous to 1896.

Mr. BERGERON. That is no excuse.

Mr. HYMAN. It may not be an excuse, but I think that my hon. friend, being an old parliamentarian, will understand the position. It is a very simple one. As far as the actual expenditure on the harbour is concerned, the Department of Public Works have always had charge of that expenditure. The Harbour Commissioners are there, they expend the public money, the Department of Public Works advances the money and the Department of Public Works have up to this time exercised a supervision over the plans. That has always been the method pursued. As far as the management of the harbour is concerned it is within the purview and under the control of the Department of Marine and Fisheries. The line of cleavage is exactly the same as that which has always existed.

Mr. STOCKTON. Mr. Chairman, I cannot allow the statement of the hon. Minister of Public Works to pass that a large amount of money has been expended by the government of Canada in fitting the port of St. John for export trade. The expenditure on the part of the government was really for the purpose of perfecting the terminal facilities of the government railway and nothing beyond that.

Mr. HYMAN. I think I said very plainly that I did not undertake to say that it was for the export trade. I said on the harbour of St. John. I do not know whether it was for that purpose or not.

Mr. STOCKTON. I assure my hon. friend that I do not wish to misrepresent or misinterpret his language.

Mr. HYMAN. I know you do not.

Mr. STOCKTON. But I say that the expenditure that has been made has been made for the purpose of building the terminal facilities of that railway. It is true that in doing that two extra berths have been provided for ocean steamships on the east side of the harbour. I would like to ask the hon. Minister of Public Works if, in consequence of advancing money or making expenditures on the harbour of Quebec, there is any exemption or reduction of port dues on export trade from the west ?

Mr. HYMAN. I am sorry again that I am not exactly in the same position as I was before. As far as the Department of Public Works is concerned this is a matter of which we have no knowledge at all. I am sure there would be no difficulty in getting the information for the hon. gentleman. But, the committee must understand that we have got into a discussion which is aside from the item under consideration. It is rather stretching the rules of discussion althogether, I have no desire to take any exception to the fact. It would seem though, that we might confine the discussion a little more closely to the item under discussion. As far as the Department of Public Works is concerned, whenever there is an item up in regard to the harbour of St. John, I shall be very glad to give the hon. gentleman the fullest opportunity for the discussion of that question.

Mr. STOCKTON. I quite appreciate the courtesy of my hon. friend the Minister of Public Works and I accept his statement fully and in the terms in which he has presented it, but he cannot blame me if I would like to see an appropriation side by side in there for the important harbour of St. John. I think I am correct in saying that although the government of Canada has spent large sums of money for the benefit of the port of Quebec, yet there is no reduction of port dues, while in the harbour of St. John none of the export trade from the west is charged a single cent for port dues.

Mr. FOSTER. A difficulty arises in this; if you are bringing in a vote for improvements in Quebec harbour it is almost impossible to confine the discussion just simply to the expenditure of the $157,000. A member wants to know why this is being expended and what will be the result for trade just as my hon. friend asked and it would conduce to the smoothness and dispatch of business if we could see the hon. Minister of Marine and Fisheries more frequently in his place when these estimates are going through. I dare say there is some important business that keeps him out to-night but when these estimates are going on in which he is intimately interested it would be a great advantage to the committee to have the hon. Minister of Marine and Fisheries—the other part of this Siamese arrangement—in the House at the same time so that we could refer him for information. However, it is a saving clause that we have an opportunity of going back in order to get information upon this question and the minister cannot do anything more than he can do and, I suppose, defend his own department. But, there is one question that I do not quite understand. Is it true that after the advance of the $5,000,000, these sums have been expended on the initiative of the Harbour Commission ?

Mr. HYMAN. They were expended on the initiative of and by the Harbour Commission under the control of the department.

Mr. FOSTER. Under their jurisdiction?

Mr. HYMAN. Yes.

Mr. FOSTER. But this is not expended in that way ?

Mr. HYMAN. No.

Mr. FOSTER. Why was that ? Did you distrust the commission ?

Mr. HYMAN. Of course I cannot speak of my own knowledge as this expenditure was started long before I was in the department. I understand from the deputy—and I speak from the knowledge I get from the deputy—that possibly when this contract was made not through the Harbour Commissioners of Montreal or Quebec, but directly by the department, the minister had in his mind some such idea as has been suggested in regard to the nationalization of these harbours. It may have been an initial step which did not go any further, but I am given to understand by the deputy that the minister probably had that idea at the time, however hazy it might be, hoping that it might take some more definite form in the future.

Mr. SAM. HUGHES. Has the government a Bill before the House to nationalize the harbours of Montreal and Quebec ?

Mr. HYMAN. No, I understand not.

Mr. SAM. HUGHES. I understood there was a Bill to that effect.

Mr. HYMAN. No, there is no such Bill.

Mr. SAM. HUGHES. I am aware that there is no Bill but is it not the intention of the government to bring in a Bill ? Has not notice been given of such a Bill ?

Mr. HYMAN. I cannot say what the intention of the government is in regard to the matter, but there is no Bill before the House.

Mr. SAM. HUGHES. If there were, it might be well to hold this over until we see the nature of the Bill. Why should the government spend money directly on Quebec harbour and also have money expended through the Harbour Commission ?

Mr. HYMAN. I have not the plans here.

Mr. SAM. HUGHES. If the minister will permit me to remind him, last year when the harbour of Seven Islands was under discussion the minister promised that he would bring down plans of all works in his department for the future.

Mr. HYMAN. If the hon. member will pardon me I made no such promise. The hon. gentleman must know that the estimmates of the Public Works Department have become very voluminous and that it would be a practical impossibility to bring down plans for all works. I shall be glad to bring down plans of any one work and furnish the fullest possible information in reference to all items, but it is hardly possible to bring down the plans for all works. This is not the intention of this work ; if we were commencing the work then possibly, in a large work like this, I might have thought of bringing down the plans.

Mr. SAM. HUGHES. What is the nature of the work ?

Mr. HYMAN. In the hon. gentleman's absence from the House I gave a full explanation.

Mr. MONK. Is it expected that we will have an announcement of some policy from the government during the present session in regard to the principal harbours, Quebec, Montreal, St. John and Halifax ? I say this in order to better define our position, because

when we ask some question about any particular harbour, our experience has been that the next day the local press accuses us of being against all improvement in that particular harbour. I have no doubt that to-morrow we will see in the Quebec papers that with extraordinary narrow-mindedness the opposition were anxious to prevent any improvements being carried out in Quebec. That is not at all the object. For my own part I think that the four principal harbours interest me all in an equal degree, but I do not notice that there has been the slightest change, the slightest announcement of policy since 1886. Take the harbour of Montreal. In 1896 the Department of Public Works had almost completed its plans of improvement. These plans with some very small modifications have been completed and have taken an extraordinary long time in being carried out, largely on account of difficulties that have arisen between the government and the Harbour Board, between the Harbour Commissioners and the Department of Public Works during the incumbency of my hon. friend's predecessor, and the Department of Marine and Fisheries since. I mention this because for my own part—and I think it is the feeling expressed on this side of the House—we are all anxious to see the harbours improved. I believe the government ought to nationalize our principal ports. We are all the time advancing money and in some instances we do not get back the interest while in other instances the harbours pay the interest on the advances or guarantees. I think it would be fairer to these ports, fairer to Montreal at any rate, if we were not always kept in a state of uncertainty, and if we knew that the government did not intend assuming the harbours. We ought, I think, after eight years to have a declared policy. I ask this not to embarrass my hon. friend in his estimates, but because I think this third parliament ought to bring us a declaration of what I said that not more than two or three days ago the Minister of Marine and Fisheries (Mr. Prefontaine) announced in the House that he was going to bring in a Bill entirely modifying the relations between the government and the Harbour Board of Montreal. My hon. friend from Beauharnois (Mr. Bergeron) has just asked the hon. Minister of Public Works (Mr. Hyman) and has been informed that he has never heard of such a thing. We have been in that state of uncertainty since 1896, and the passing of these estimates would hasten if we were permitted to know what the government's policy is. My hon. friend reminds me that a Bill stands for second reading in the name of the Minister of Marine and Fisheries to amend the Quebec Harbour Commissioner's Act.

Mr. HYMAN. This is not the question my hon. friend asked me. The question he asked me was whether the government proposed bringing down a policy affecting all the harbours.

Mr. MONK.

Mr. MONK. All or any of them.

Mr. HYMAN. The words 'all or any of them' were not mentioned. I am sure that Hansard will bear me out.

Mr. MONK. Well, all of them.

Mr. HYMAN. There is no such Bill before the House affecting all the harbours. I think, with all due respect, that it will be only fair that this discussion which has broadened so much, ought to take place upon the Bill when the whole matter can be discussed. So far as I am concerned all the information from the Public Works Department that can be furnished I shall be glad to give my hon. friend. I have no objection in the world to the question he asked me about the Harbour Commissioners in Quebec, but I have not the information. We have nothing to do in the Public Works Department with the Harbour Commissioners of Quebec and in the memoranda which are furnished me by the officers of my department I have no reference to the personnel of the commission.

Mr. MONK. My real intention was not to embarrass or delay but to define what we on this side were anxious to know. Take these estimates; we are voting $207,000 for the harbour of Quebec and for Port Arthur and Fort William $195,000, $600,000 in round figures for the River St. Lawrence channel improvements, and for Montreal harbour, the lower division where we have been spending very considerable sums every year that is on the wharfs below St. Mary's current, $90,000, and at Port Colborne harbour, improvements including the eastern breakwater $180,000. We have been spending money within measurable distance of these figures every year since 1896, and I say that we have no declared policy from the government as to what it intends doing for these ports, whether leaving them under the control of the Harbour Commission or assuming the responsibility for these ports and making them national harbours.

Mr. HYMAN. Of course, the hon. gentleman understands that the harbours of Port Colborne, Port Arthur and Fort William are entirely under the control of the Public Works Department. The control by the Department of Marine and Fisheries is confined to those harbours which are operated by commissions.

Port Arthur and Fort William—harbour and river improvements, $195,000.

Mr. HYMAN. This vote is for the purpose of continuing the work of dredging which has been in progress for a number of years. The harbour is being deepened to 22 feet.

Mr. R. L. BORDEN. I suppose there is some systematic plan of working. There is the harbour of Port Arthur, and there is the river, which forms practically a harbour, extending to Fort William and beyond.

Then there is another passage from the harbour of Fort William, which at present is not capable of being used much for purposes of navigation, but it was anticipated when I was there two years ago that if that was opened out the season would be lengthened a little. Will the minister give us an idea of what is being done there, and what expenditure will have to be made before the harbour is available for all the purposes to which it may be applied in the immediate future ?

Mr. HYMAN. The work progressing there at present is, as I have said, the deepening of the harbour within the breakwater to 22 feet. The total estimate for the whole work of dredging is $815,000.

Mr. SAM. HUGHES. How much a yard ?

Mr. HYMAN. The estimate is based on the nature of the soil.

Mr. FOSTER. How much of that has been spent up to the present ?

Mr. HYMAN. About $336,000.

Mr. FOSTER. What is the nature of the stuff taken out ?

Mr. HYMAN. All kinds—clay, sand, rock, hard-pan. It depends entirely on the depth at different parts of the harbour.

Mr. FOSTER. Does the material which has been taken out silt back or fill up in any way ?

Mr. HYMAN. I am informed by the engineer of the department that we are very fortunate in that respect—that there has been no silting except at the mouth of the Kaministiquia river.

Mr. SAM. HUGHES. Has it struck the minister that the breakwater of Port Arthur harbour is altogether too near shore for a great harbour ? It should be at least one-third of a mile further out. Then the minister would not need to go to so much expense in dredging, and a part of the money now expended in that way could be utilized for docks. He can go on dredging for a hundred years, and he will not make a good harbour so long as the breakwater is kept where it is.

Mr. HYMAN. The time may come, perhaps is fast approaching, when such an extension of the harbour will become necessary. The distance from the breakwater to the shore is not perhaps as great as it ought to be, but, at the same time, the dredging operations which are being carried on are very largely increasing the advantages of the harbour within the breakwater. I have no doubt that the time is not far distant when the largely increased tonnage at Port Arthur and Fort William will render necessary a largely increased expenditure there. I hope to be able, at no very distant date, if I am in the Public Works Department, to work out a more comprehensive scheme with regard to those harbours, and I intend to visit them personally along with the chief engineer of the department. Whatever plan may be determined on, this expenditure is necessary.

Mr. SAM. HUGHES. Not at all.

Mr. HYMAN. I am assured by the officers of the department that a large part of this work is being done immediately inside of the present breakwater, and that we are gradually increasing the area of deep water In time to come the larger scheme suggested by my hon. friend may be carried out.

Mr. SAM. HUGHES. I do not know whether the hon. minister understands the point I made. The present breakwater was built when no one ever expected that vessels drawing more than 16 feet of water would enter Port Arthur harbour, but to-day it is frequented by vessels drawing 20 feet of water. That breakwater is very close in shore. If this million of dollars is to be expended in the erection of a new breakwater, at each side of the present one but much further out, undoubtedly some dredging will have to be done, but the minister cannot spend $2,000,000 honestly in dredging that harbour. What he should do is let those who are going to construct docks build them out and then a large part of the dredging could be used to fill up the cribwork and concrete work of these docks. What we want is some comprehensive scheme of building up Port Arthur and Fort William harbours. Is the hon. gentleman going to take into consideration the dredging of one of the mouths of the delta to which the leader of the opposition has referred? There are three mouths. In the middle one, dredging could be made effective for the purposes of the harbour, and if he is going to dredge the middle mouth of the delta is he going to take into consideration the fact that the value of the property in proximity to it will be greatly enhanced.

Mr. HYMAN. Does my hon. friend mean the Mission river? There is nothing in this appropriation for the Mission river. I quite appreciate what the hon. gentleman says but it is easy in the House, when discussing harbour improvements, to speak of an expenditure of a million dollars. I would not like, however, to undertake the responsibility of any such expenditure until I had the report of the government engineers and visited the harbour personally with them. In the opinion of our engineers, the dredging we are doing will be necessary in any case. Whether in the future we would be justified in making a large expenditure of a million or more can only be decided when we have laid out a general scheme and have ascertained whether the necessities of the harbour demand that that scheme should be carried out.

Mr. SAM. HUGHES. The matter has been before the House two or three times, but there have been so many changes in the hon. gentleman's department that the acting minister himself evidently does not know what has transpired.

Mr. HYMAN. It has been up every year since I have been in the House.

Mr. SAM. HUGHES. What I say is this, that my hon. friend cannot expend a million of dollars in dredging behind the present little breakwater in that harbour to any proper advantage.

Mr. HYMAN. I did not say it was my intention to spend any such sum there. This work covers the work in the Kaministiquia river as well. My hon. friend the leader of the opposition asked me for the estimated expenditure in dredging the two harbours and I gave him the sum of $816,000 as the figure estimated by our engineers after carefully ascertaining the different classes of soil found on the bottom.

Mr. SAM. HUGHES. If the hon. minister has been misrepresented, he himself is to blame because he certainly stated this sum was to be expended for the purpose of dredging. I drew attention to the fact that there is no breakwater at Fort William and he does not intend the expenditure to be limited to Port Arthur. I do not see where there can be any more dredging done in Kaministiquia river.

Mr. R. L. BORDEN. Is the work done directly by the department by their own dredges or under contract?

Mr. HYMAN. Under contract. We pay for some by the yard and some by the hour but the result is practically the same. When we pay by the hour it is for the minimum amount of work they are obliged to do.

Mr. R. L. BORDEN. Who are the contractors?

Mr. HYMAN. Dredge No. 6, Mr. A. F. Bowman; dredge No. 1, the Great Lakes Dredging Company; dredge 'Kingsford,' C. S. Boone.

Mr. SAM. HUGHES. Is this the Mr. Bowman who is a member of the local House and to whom the government gave a guarantee of a million dollars?

Mr. HYMAN. No, he is a brother of that gentleman.

Mr. BERGERON. What is the principle upon which the department acts in this dredging business? Some dredges are paid by the hour and some by the yard and when paid by the yard the prices are not the same. This man Bowman must be a great friend of the government. Does the dredge 'Kingsford' belong to Mr. Boone?

Mr. HYMAN. Yes.

Mr. HYMAN.

Mr. BERGERON. Evidently the plan of the late Minister of Public Works, Mr. Tarte, of having dredges owned by the government operating all over the Dominion, and which, he claimed, would cost less than hiring dredges, is not being carried out. Mr. Boone got $10 an hour for dredging 869 hours in July and September. Yet some years ago we were told by hon. gentlemen opposite that $8 an hour was too much. Then the Great Lake Dredging Company are paid on a different principle. They were paid 8,323 yards at 90 cents; 481 yards at 45 cents; 7,959 yards at 23 cents and 13,122 yards at 15 cents. And all this dredging was done at the same place. I notice that any number of engineers and inspectors were employed on this work, no doubt, to inspect one another. Who is the man who decides whether a dredge will be paid by the hour or the yard and what prices shall be paid by the yard. Here is another dredge, Dredge No. 5, which I suppose belongs to the Great Lakes Dredging Company. This one was paid 7,224 yards at 90 cents; 8,777 yards at 40 cents; 47,022 yards at 23 cents; 22,623 yards at 15 cents and 444 yards at $1.25, and all done at the same place. Mr. Bowman, who is mentioned here must be a great friend of the government.

An hon. MEMBER. He was in the Local House.

Mr. BERGERON. There is likely to be a row in the future. Because the two governments will not work on the same dredges. He has dredge No. 6 which is employed from August 13 to October 13, 139,596 yards at 15 cents. Another one not far from the same spot, $1.25. Then I find Bowman again at 20 cents a yard. Then there is Mr. Boone with the dredge Kingsford. It is employed for 168 hours at $12—the rate seems to be increasing. Then there is a charge of 496 hours and 50 minutes—that is getting it down fine—at $10.

Mr. HYMAN. That shows that we watch them closely.

Mr. BERGERON. There seems to be a great deal of watching judging from the number of inspectors and engineers, but I am afraid there is a combination amongst the crowd. For the purposes of this work, I suppose, Fort William and Port Arthur are considered together, because they almost join. I understand that the hon. gentleman (Mr. Hyman) is the minister in charge of those works. I would like to know who is the man representing the government who is above all these sub-engineers and inspectors and on whom the government relies. Then I would like to know on what principle the men are paid. I do not know their political leanings, but I find some labourers are paid $2.50 a day, some $2 a day and some $1.50 a day. There seems

to be no principle in the working of the department of these matters.

Mr. HYMAN. The hon. gentleman is asking a question and answering it too.

Mr. BERGERON. That is very clever, but I do not see it. Perhaps the minister can tell me whether there is any rule or principle that he follows in these matters. There is another question I should like to ask. I see here a charge for a quantity of timber bought from the Pigeon River Lumber Company. In such a case are tenders called for, or does the engineer or inspector in charge go to the Pigeon River Company and say : We want to get so much timber—

Mr. HYMAN. That does not come under this vote. That is for repairs to the breakwater.

Mr. BERGERON. It must be all the same thing. There is only one Port Arthur.

Mr. HYMAN. But there may be different kinds of work at the same place.

Mr. BERGERON. Will the hon. minister call my attention to the item under which this expenditure arises when we reach it ?

Mr. HYMAN. I will try to remember.

Mr. BERGERON. And will he answer my other questions now ?

Mr. HYMAN. With pleasure.. So far as the different prices for labour is concerned, the same differences have always existed. For certain surveys we must have a better class of men, men who are a little more than labourers. These are paid $2.50 a day. As to the dredging, my hon. friend seems concerned because there were so many different kinds of material at Port Arthur. I may tell him that the plans show, in places, as many as four different kinds of material at the same spot—mud and sand on top, then clay, then hard-pan and then rock. There are different prices for these different kinds of work. The department have an engineer there, a Mr. Temple. He has been in charge there for some four years. Of course, we hold him responsible. He does not fix the prices for the dredging, but he makes reports that come to the chief engineer and the deputy. As to the different prices for dredges, $10 and $12 an hour, the price is based upon the quantity of work the several dredges can do. It is all done to a standard. As to the general policy, speaking for myself, I think it would be well if the department had a larger fleet of dredges. But the hon. gentleman must know that these dredges are very costly. A first-class dredge to-day will cost at least a quarter of a million dollars. The department have been for years asking for votes and supplying themselves with dredges of the latest pattern and able to do work at the lowest cost. But the department could not very well ask a vote to supply dredges for all the harbours, because in some harbours a certain kind of dredge will do the best work, while others require a different dredge. I do not think the department can ever hope to be equipped with enough dredges of its own to cover all the harbours. But it is the policy of the department to increase its dredging fleet.

Mr. R. L. BORDEN. How many dredges are employed at Port Arthur and Fort William ?

Mr. HYMAN. Four.

Mr. R. L. BORDEN. Were they constructed especially for this work ?

Mr. HYMAN. No.

Mr. R. L. BORDEN. Where were they constructed ?

Mr. HYMAN. Those dredges do not belong to the department. Still I am sorry I have not the information the hon. gentleman desires. We deal simply with the contractor, and, so long as the dredge comes up to the requirements of the department we are satisfied.

Mr. R. L. BORDEN. I was asking with a view to understanding the practicability of the department acquiring dredges. I thought that as that was the policy of the minister he would have considered that point, and would be able to tell us whether these dredges were made in this country or elsewhere.

Mr. HYMAN. I have not that information.

Mr. SAM. HUGHES. What are the names of the other two dredges ?

Mr. HYMAN. No. 5, the 'Arthur,' and No. 6 the 'Kingsford.' No. 5 is the Great Lakes Dredging Company's.

Mr. FOSTER. Who is the contract made with ?

Mr. HYMAN. My deputy tells me that it is with Mr. A. F. Bowman.

Mr. BERGERON. The same man ?

Mr. HYMAN. The same man.

Mr. SAM. HUGHES. We have here for dredging the Kaministiquia river, $20,939, that is to F. A. Bowman. Then we have the Great Lakes Dredging Company, $2,119. Dredging in Kaminisquia river near elevator D, $4,036 ; Great Lakes Dredging Company, $1,333. Who owns the dredge 'Kingsford' ?

Mr. HYMAN. C. S. Boone.

Mr. SAM. HUGHES. Dredging in Port Arthur harbour at new Canadian Northern Railway elevator, $14,484 ; Great Lakes Dredging Company, $18,917, making a total amount of $73,679 for dredging Port Arthur last year. This year the minister comes

down with another estimate of $195,000 for dredging. I have no hesitation in telling the minister that he is carrying out a wrong policy, and the public is not getting service for the money expended.

Mr. HYMAN. The hon. gentleman has a right to his opinion, and possibly I have a right to mine. My opinion is that the country is getting service for the money. The expenditure comes directly under the Department of the Chief Engineer, who is watching it very closely. Since I have been in charge of the department no contract has been made or arrangement of any kind except after a report of the chief engineer.

Mr. SAM. HUGHES. From what depth to what depth is the hon. gentleman dredging, both in Port Arthur and Kaministiquia ?

Mr. HYMAN. The average present depth varies. The intention is to give twenty-two feet of water, gradually extending it along the docks to twenty-two feet.

Mr. R. L. BORDEN. Could the minister give the committee an idea of the size, capacity and value of each of these dredges ?

Mr. HYMAN. I have not the value of the dredges, because we are dealing with contractors who do the dredging. We take into consideration the amount of work a dredge can perform in a given time. When a dredge is paid $10 an hour it is supposed to be for ordinary work. If it is in mud or sand, it is 15 cents a yard, that is considered to be a fair price.

Mr. SAM. HUGHES. A modern dredge can do the mud dredging for an infinitely less price than that.

Mr. HYMAN. Perhaps so. The department is now looking at a new dredge that can do the work for less price ; but there is not a dredge of that kind available in Canada.

Mr. STOCKTON. Does that include scowage ?

Mr. HYMAN. Yes. While a dredge is being paid $10 an hour it is working in different kinds of material all the while, which varies in price from 16⅔ cents per yard up to 40 cents, depending altogether upon the character of the work the dredge is engaged in.

Mr. R. L. BORDEN. The reason I asked the question as to the value is this. It was stated to us in committee several years ago by a predecessor of the minister, that the department was, as stated by my hon. friend from Beauharnois (Mr. Bergeron), considering a proposition to construct dredges to do this work, for the reason that it could thus be more economically performed. Several years have since elapsed, and I would have thought, if that is the opinion of the department still, that the deaprtment would have made itself acquainted with the particulars to which I have referred respecting these dredges, because I assume they are proper dredges for undertaking this work. If they are proper dredges for this work, then it would seem that an inquiry might have been made long ago as to the value of these dredges, and the cost of acquiring dredges of a similar character, in order that the saving spoken of by the hon. gentleman's predecessor might be effected. The minister will agree that in that aspect of the question it would have been proper for the government to obtain some information along that line. He has spoken to us of a dredge costing $250,000. I want to find out whether any one of these dredges cost anything like that sum.

Mr. HYMAN. I do not think any of them did, of that character.

Mr. R. L. BORDEN. I think the minister will find that for the same purpose he could have bought the whole of these dredges for one-half or one-fourth of that sum. The inquiry seems to be pertinent for that reason, because if you can dredge out the harbours of Fort William and Port Arthur for 5 cents a cubic yard, there is no reason why you should be paying 15, 20 and 25 cents per cubic yard. I hope, therefore, that the minister, during the present session or at some early date, will give us some information along these lines ; because while it may be profitable to some of these gentlemen to be dredging these harbours at these rates, there is no reason in the interests of the people why that system should be pursued if it be true, as stated by the hon. gentleman's predecessor, that the work can well be done for one-third or one-fourth of the price now paid.

Mr. HYMAN. The department can do no work at Port Arthur or at Kaministiquia until such time, as we get up-to-date dredges. If we were to attempt to do so with the present dredges, I think the hon. gentleman would say that we were not doing our full duty. If we were to acquire these dredges, I do not believe that we could do the work a single bit cheaper than we are doing it under the system we are pursuing at the present time. If we pursued that policy we would require immediately to spend a large amount of money on capital account for the purpose of doing the work in Port Arthur. What is to be done with the dredges afterwards ? I understand it to be a rule in dredging contracts that a certain amount has to be charged up to the price for dredging to provide for the plant. If the department simply say : we will do no work, or we will ask parliament for $400,000 or $500,000 to get these dredges to do the work in two or three years, and at the end of that time possibly the dredges may not be placed where they can be used, the result will be that a large price must be charged up against the work. But we are gradually adopting a new policy. At the

present time we are building a new dredge on the most approved plans and we hope to be able to accomplish some results with that dredge.

Mr. BERGERON. Where is that being built ?

Mr. HYMAN. That is being built under contract at the Polson Works in Toronto.

Mr. BERGERON. Is it a big dredge ?

Mr. HYMAN. It is a 24-inch hydraulic dredge.

Mr. BERGERON. Like the 'J. Israel Tarte' ?

Mr. HYMAN. Practically on the same principle, except that it has the latest up-to-date improvements in every possible way. The department are gradually trying to get themselves into that position, but I hardly think this House will be prepared to say in the meantime that we should stop all work at Port Arthur.

Mr. R. L. BORDEN. I know that my hon. friend is not disposed to be unfair ordinarily, but he has given a construction to my remarks which is not in the slightest degree borne out by anything I said. How long have we been dredging in this river ? For several years, have we not ?

Sir WILLIAM MULOCK. For at least thirty years.

Mr. R. L. BORDEN. Well, we had the announcement made by a responsible minister of the Crown that this work could be done in a very much cheaper way by acquiring dredges and doing the work directly by the department. I do not know whether that can be borne out or not. I was not suggesting that the hon. minister should wait, but I was suggesting that if the policy of the department had at any time been what was thus stated, some inquiry should be made, so that the hon. Minister of Public Works could give some necessary information. The hon. minister says it will not be cheaper, but when I ask him the very questions which are pertinent to the consideration of the subject he is not able to give me any information. He does not know what the cost is of a dredge capable of doing that work. Is not that the first thing to consider in order to come to a conclusion as to whether or not we can do the work more cheaply ourselves ? Would you not have to consider the cost of the dredge and the cost of operation afterwards ? Would you not have to consider that the dredge during a portion of the time might not be employed after this work has been done ? All these things are proper subjects for consideration, but the hon. minister did not seem to be able to give very much information to the committee. One consideration is, of course, the cost of dredges which will be capable of performing this work, and whether or not such dredges can be obtained within a reasonable time. It might turn out, if we had the information, that the hon. minister is exactly right in his conjecture, but the committee should be furnished with the necessary information to enable it to come to a conclusion on the subject, and to offer any suggestions which may seem pertinent before voting the money.

Mr. HYMAN. I am sure the hon. gentleman will acquit me of in any possible way desiring to put any unfair construction upon his words. As far as the cost of a dredge is concerned, the committee will quite understand that for in the neighbourhood of $250,000 a first-class suction dredge could be built. That dredge would not do all the work there ; we would require a dredge for hard-pan and rock work, so that we would have to build, in addition to that class of dredge, a dredge which would do hard-pan and rock work.

Mr. R. L. BORDEN. These dredges are of more than one class ?

Mr. HYMAN. These four dredges are all of one class ; they are all of the class which is known as the 'dipper' dredge. I do not think it would be the policy of the department to acquire these dredges. If the government were to acquire and man these dredges themselves, I question very much if the work could be done cheaper than by paying so much for each dredge per hour, or so much per yard for the work under contract. I just wish to say that this dredge question is in Canada a very important and serious one. There are practically no dredges available. I do not know of a single dredge of any capacity which is available in Canada for the works of the department that we are not using. It is a very difficult matter to get dredges, and for that reason I feel convinced that the department must gradually extend this system of buying and manning its own dredges, but I do not believe that the House would agree with the opinion that it would be a proper thing that we should do so in one year.

Mr. BERGERON. I sympathize very much with my hon. friend the acting Minister of Public Works. I believe he did not quite catch what the chief of the opposition said. He was not here some years ago, when one of his predecessors asked parliament for a very large amount of money to equip government works at Sorel. These works were designed for the building of the dredges which will be necessary in Canada. This question was very much discussed here. It was a very large amount of money that was required. Some hon. gentlemen expressed an opinion very much in line with that of my hon. friend, but the majority of the House and the government, who were responsible for it, sustained the opinion of the then Minister of Public Works. The money was spent. I believe

that over half a million dollars was spent at Sorel for the building of a shop there. Am I right in regard to the figure ?

Mr. HYMAN. It was a large amount, as the hon. gentleman says.

Mr. BERGERON. A good deal of work, in accordance with the intentions of the then minister, was commenced there, but it was not continued. I think this is an evidence of the unfortunate results that follow from the government having no stated policy. If that had been the policy of the government on that subject, whether the Minister of Public Works disappeared or not, that policy should have been continued. It has not been continued. The works at Sorel are not to-day operated to as great an extent as was intended when they were built. I know it may be answered that they are used for repairs for the fleet that is employed in the St. Lawrence channel. That work is not being properly done, if I can judge by what was done last summer, when the boiler on the largest dredge—the 'J. Israel Tarte'—burst, with the result that the dredge could do nothing at all.

Mr. FOSTER. It was Préfontaine that burst.

Mr. BERGERON. The steamer 'Préfontaine' was near the dredge 'Tarte.'

Mr. FOSTER. He burst his boiler.

Mr. BERGERON. The then minister was to build other dredges. This was six years ago. How many of these dredges have been built ? It was said that when they finished the work in the St. Lawrence channel they were to be used later upon the Georgian bay canal, a scheme which is now before parliament. It was said here by that hon. gentleman, as a minister of the Crown, and it was accepted by parliament, that it was a good policy, because dredges built and owned by the government could do the work for one-half the price the government has to pay to-day for rented dredges. My hon. friend has said what is perfectly clear, that it is hard to get dredges, and naturally the prices are going up, but had the government been building dredges of their own, then these contractors, knowing that the government were building their own dredges, would have to keep the prices as low as possible. What is being done about that famous dredge—which must have been a good one, since the government are building another of the same kind in Toronto—it is a special kind of dredge, and the first one is not at work at all ?

Mr. HYMAN. The 'J. Israel Tarte' was at work last season.

Mr. BERGERON. It did hardly any work.

Mr. HYMAN. It worked in the fall last season. As regards the work at Sorel the very policy which the hon. gentleman says was laid down by a member of the government was carried out, so far as the dredges are concerned. Every dredge on the ship canal, except the 'Laval' whose hull only was built here was built in those works, and I have always understood that these dredges were doing remarkably good work. At Sorel they are also building a dredge for the Public Works Department, the dredge 'W. S. Fielding.' The Department of Public Works in addition to that are as I said trying to equip themselves with modern dredges, but I do not think it will be good policy on the part of the government to make all these expenditures in one year. We are gradually trying to equip ourselves with hydraulic and elevator dredges and there is no question that the work can be done at a lower cost with the kind of dredge that is best suited for it.

Mr. FOSTER. How do you arrive at the rate of $10 an hour ?

Mr. HYMAN. That is based on a capacity of 800 yards a day.

Mr. FOSTER. For what kind of work ?

Mr. HYMAN. It is all based on sand and mud work which is 15 cents. Then there is a regular schedule price which is supposed to be an equivalent for hard-pan and for rock.

Mr. FOSTER. Why fix 15 cents a yard there.

Mr. HYMAN. Because that is considered a fair price for the work.

Mr. FOSTER. And the contract is let on that ?

Mr. SAM. HUGHES. There is no contract whatever.

Mr. FOSTER. Is there any contract ?

Mr. HYMAN. Of course there is a contract between the department and the proprietors of the dredge.

Mr. SAM. HUGHES. Will the hon. gentleman explain what a contract is ? Let him not deceive the House—I do not think he intends to deceive——

Mr. HYMAN. Mr. Chairman I rise to a point of order. I have no desire to deceive the House.

The CHAIRMAN (Mr. Oliver). I think the hon. gentleman (Mr. Sam. Hughes) will have to consider that he is out of order.

Mr. SAM. HUGHES. I am not out of order. I said he did not intend to deceive the House.

The CHAIRMAN (Mr. Oliver). I understood him to say that the hon. minister deceived the House.

Mr. SAM. HUGHES. I understood him to say the contract with Bowman to be for

dredging, $14,484.39 and at the mouth of the Kaministiquia river $20,939.40. Was there a contract there? No there was not.

Mr. HYMAN. I wish to say there was a contract.

Mr. SAM. HUGHES. What was the contract, what were the terms ?

Mr. HYMAN. If the hon. gentleman wants the floor I will give him the opportunity.

Mr. SAM. HUGHES. I want him to tell the terms of the contract.

Mr. HYMAN. I wish to be allowed to make my statement without being interrupted. The terms of the contract are exactly as I said before. The contracts are between the proprietors of the dredges and the department to do the work at $10 per hour. That $10 per hour is based upon the capability of the dredge to do a certain amount of work, figuring at 15 cents for ordinary sand and mud work. There is a price which the dredge would get for rock work, a proportionate to the price of 15 cents for sand or mud. Then there is a price for hard-pan. That is the nature of the contract which is entered into between the owners of the dredge and the Department of Public Works.

Mr. SAM. HUGHES. The contract was for $10 an hour.

Mr. HYMAN. That is the contract.

Mr. SAM. HUGHES. That is a mere agreement. What I would call a contract is that the engineer should have estimates for the work to be done for this coming year for which we are voting $195,000. We want to know from the minister if he can tell us how much of that is sand, how much hard-pan and how much rock. On what does he base his estimate of $195,000 ? Can he say to Conmee & Bowman and the outfit generally : Here gentlemen are certain obstructions in this harbour which you have to remove ; for what will you enter into a contract with us to remove all the sand and mud and hard-pan. What will you take to remove all of that ? I would call that a contract, but I call it no contract to go on at $10 an hour, as the minister bases his estimate, in asking for this $195,000.

Mr. HYMAN. The estimate of $195,000 is based upon the engineer's estimate of the amount of work that we will be able to do in these harbours this year. It is based upon an estimate that there will be so many cubic yards each of sand, clay, rock, mud, or hard-pan. The contract they entered into—or if you like to call it an agreement—the contract or agreement is based upon that basis that a dredge earns about $10 an hour, and it must do the equivalent of 300 yards a day. It figures out at 15 cents per yard for 12 hours a day at $120. Engineers know perfectly well what that equivalent is in hard-pan, rock and sand.

Mr. SAM. HUGHES. Can the minister furnish the figures of that estimate, because if he does not give them now I intend moving for them. I mean the estimate of material to be removed with this $195,000 this year. How much of it is of each quality ?

Mr. HYMAN. I have not the details of every yard of sand, rock, or hard-pan, but there is so much dredging to be done there—

Mr. SAM. HUGHES. It is a large sum—

Mr. HYMAN. If I might be allowed to make the explanation, Mr. Chairman, there is a certain area to be removed ; we figure that we can remove this year a certain amount of material from this harbour and we estimate that so much of it is sand, so much hard-pan and so much rock. Taking these different items and putting them together the engineers of the department figure that we can do work to the extent of $195,000 in Port Arthur harbour and Kaministiquia river.

Mr. SAM. HUGHES. On what data do you figure ?

Mr. HYMAN. I figure on the plans which are furnished to the department and on the surveys of these waters which the department has.

Mr. SAM. HUGHES. The minister can produce these figures, of course. Another point : where is the material put that is dredged out ?

Mr. HYMAN. It is dumped into deep water in the lake.

Mr. SAM. HUGHES. Whereabouts ?

Mr. HYMAN. At the closest possible point.

Mr. SAM. HUGHES. So that it will be convenient to wash back again.

Mr. R. L. BORDEN. Why is it not better for the department to pay so much per cubic yard for the material actually removed than to pay $10 an hour for the dredge.

Mr. HYMAN. In some cases we have done that. I do not know that there is really any great difference in the result. The payment is practically figured on the capacity of the dredge.

Mr. R. L. BORDEN. Simply a different way of arriving at what you regard as the same result. When you pay at the rate of $10 an hour, how do you know that the quantity you estimate for is actually removed ?

Mr. HYMAN. We have an engineer who visits the harbour, and an inspector on every dredge. A report comes to the department every day, so that we can check it.

Mr. R. L. BORDEN. The minister spoke some time ago as if it were not advisable to employ dredges owned by the department because he expects this dredging to cease some time ; but the Postmaster General says that dredging has been going on there for thirty years. Is it not probable, from the nature of the river, that you will always have dredging there ?

Sir WILLIAM MULOCK. Always.

Mr. HYMAN. Then, the hon. member for Victoria (Mr. Sam. Hughes) has brought up the question of the necessity that might arise for a considerable enlargement of the harbour.

Mr. R. L. BORDEN. Is that not an additional reason why the minister should consider what has been suggested to-night ?

Mr. HYMAN. I have received some information, and am very glad to have had the discussion.

Mr. R. L. BORDEN. Where is the new dredge now being constructed by the Polson Company of Toronto to be employed ?

Mr. HYMAN. In the maritime provinces.

Mr. R. L. BORDEN. There is no dredge now being constructed which it is intended to employ at this point ?

Mr. HYMAN. No.

Mr. R. L. BORDEN. Would the dredge now being constructed by the Polson Company be suitable for work at the mouth of the Kaministiquia ?

Mr. HYMAN. I am informed by the officers of the department that it would work specially well there.

Mr. SAM. HUGHES. I may say that I have always objected to the work that is being done at Port Arthur and Fort William, especially at Port Arthur. As the breakwater was placed too close to the shore in the first place, some dredging must be done inside of it to enable vessels to turn. But the whole policy of the department on those harbours, I contend, is wrong. I intend asking what the total sums are that have already been expended upon them. A hydraulic dredge could very properly be worked at Port Arthur. The mud—it is principally mud—I took soundings in the harbour before the engineers of the department did—could be dumped on the shore where there would be no danger of it flowing back into the harbour. When I see the large sums of money expended by the department on dredging in this harbour, I have no hesitation in saying that at the first opportunity I will go into the accounts before the Public Accounts Committee to show that this work has not been properly done.

Mr. BLAIN. What is the condition of the breakwater at Port Arthur ?

Mr. HYMAN.

Mr. HYMAN. It is being repaired at present. The expenditure last year for repairs was about $15,000.

Mr. BLAIN. The statement was made some years ago that the condition of the breakwater at Port Arthur was very serious, and that unless extensive repairs were made immediately it was in danger of being swept away altogether. When does the minister expect to have the present breakwater thoroughly repaired and completed ?

Mr. HYMAN. We are not asking for any vote for the breakwater this year. The engineer informs me that all the necessary repairs will be completed out of the vote for the present year.

Mr. BLAIN. On the question of the material dredged out of the harbour drifting back again, what is the experience of the department ? Is there a considerable portion required to be re-dredged ?

Mr. HYMAN. There is an appreciable amount at the mouth of the Kaministiquia river, where we shall require practically continuous dredging.

Mr. BLAIN. About how much ?

Mr. HYMAN. It is almost impossible to tell—some years less and some more. The same thing occurs in many other harbours.

Mr. BLAIN. The harbour now under discussion is a very important harbour, not only to Ontario but to all Canada, and it seems to me that one of those up-to-date dredges which the department has been constructing should be put into that harbour. Will the hon. gentleman state what is the prospect on that point ?

Mr. HYMAN. I have no decided policy at the moment in regard to that harbour, and the department has not all the details that may be necessary to decide upon a policy. There are certain contemplated changes which may postpone any large work there. Possibly new railway connections may be made there. We cannot decide upon a policy until we see exactly what the necessities of the case are.

Mr. BLAIN. I suppose the minister would have no objection to lay on the table the contract between his department and A. F. Bowman, at the next meeting of the committee or at some other convenient time ?

Mr. HYMAN. There is no objection. I have explained the way in which that matter is arranged between the department and the contractor. We arrived at a decision after consulting with our engineer at Port Arthur, who has charge of these works, and our chief engineer ; and the contractor has to go on and do the work at a price considered fair and reasonable by both.

Mr. BLAIN. I suppose the hon. gentleman will have no objection to laying the contract on the table.

Mr. HYMAN. I have explained how the prices were arrived at and that there is actually no formal contract.

Mr. BLAIN. I am not particular as to whether it is a letter or not, but I would like the hon. minister to lay on the table what he regards as the contract existing between A. F. Bowman and the department.

Mr. HYMAN. Certainly, any information in the department is at the disposal of the House at any time.

Mr. FOSTER. Has the minister anything which would show the cost of operation of the dredge 'Kingsford' for twelve hours? How many men are employed on it?

Mr. HYMAN. Three. There is great difficulty in arriving at the exact figures. In all these contracts the element of chance is a considerable one. Allowance must be made for breakages and depreciation of the dredge. Every dredge has to be laid up every winter and overhauled, and sometimes the depreciations and renewals are very large. The contractor has to take all that into consideration, and that is one of the greatest difficulties the department has to deal with.

Mr. FOSTER. That is quite true, but at the same time it would help us in coming to a conclusion. The way the minister has arrived at his $10 per hour is to place an arbitrary rate on mud or sand dredging. His engineers at Port Arthur say they think it is worth 15 cents per cubic yard to remove mud or sand, and it takes more for another kind of deposits, and so on. He gets at $10 per hour by fixing an arbitrary amount as the reasonable sum to be placed for sand or mud excavation, but possibly 15 cents may be too much or too little, and the only way of determining is to get at the cost of dredging and the average of depreciation and repairs. I suppose that any one skilful in these matters can come quickly to a conclusion as to whether a dredge has earned a disproportionate amount compared with the cost of running it and the loss by depreciation and repairs and by having to lay it up during the winter. The department which has been using dredges for years ought to have pretty accurate information on these points.

Mr. HYMAN. The department has sources of information which it has carefully considered in fixing the price at 15 cents. We have dredges of our own, and our engineers know what it costs per day to run a dredge of a certain capacity, and also what it has cost the government for repairs. But in making a comparison between the dredging done by contractors and that done by the department itself, it must be remembered that in the public accounts giving the items of dredging there is nothing added to the cost of the dredging for the cost and depreciation of the plant. The contractor must take these into consideration.

Mr. FOSTER. What would the cost of running the 'Kingsford' be per day of 12 hours?

Mr. HYMAN. We have not got the information concerning that particular dredge and such information might be very misleading.

Mr. FOSTER. It would not be misleading. The hon. minister is very quick to see that another element comes into the calculation and is quick to put it forward in the interest of fair-play to the contractor. Other business men would be just as quick to give a fair and reasonable price, but they would have something on which to base a calculation and make up their minds as to whether 15 cents per hour was too large as a unit of expense. The House has not that knowledge and therefore has nothing on which to form a conclusion. The House will not be so unreasonable as to refuse to take into account the element of depreciation or of laying up for six months in the year; but at the same time if those dredges are not very expensive as regards their first cost, in two or three years they would earn enough money to enable the department, if it had that money, to build all the dredges necessary and credit them with 15 cents an hour. Were any tenders called for for the dredging at Port Arthur?

Mr. HYMAN. No, but negotiations were had with these gentlemen because they had the dredges.

Mr. FOSTER. Would it not be possible to call for tenders and get a relative idea of the cost? You might say that there were no others in that vicinity, but if you take in the whole extent of the lakes, you might very well get competition.

Mr. HYMAN. I have explained the position the department took. There were practically no other dredges available and we considered that we had made as favourable an arrangement with the contractors as we could possibly have done, even had we called for tenders.

Mr. FOSTER. But the hon. minister leaves himself open at every stage of the argument to be reminded that this is a negotiation between gentlemen who are not unfriendly, politically or otherwise, and consequently there might be an unfair advantage given to one side. If the minister exhausted his resources in securing public competition he would be more strongly fortified in making an arrangement by private negotiation. I think that is always a protection to a minister. Of course, if he cannot get competition, he must fall back upon the parties and negotiate with them. There is always the chance, that once in a while a competitor will come in and offer to do the work at cheaper rates.

Mr. SAM. HUGHES. In the Auditor General's Report for 1904, page V—294, and following pages, he will find the charges for the working expenses of dredges. He will find that the dredge 'Lake Nipissing' was run for a year for $6,400; the dredge 'Nithsdale' for $10,587; dredge No. 1, for $4,220; dredge No. 6, $530— I suppose she was not run for the whole year. The dredge 'Ontario' ran from May to December, and the pay of officers and other expenses amount to $8,361; the dredge 'Progress' cost $5,962; the 'Queen,' $12,237; the 'Richelieu,' $6,602; the dredge 'P. V. Savard,' $3,846. I presume that these are the running expenses of these dredges and I presume also that some of these dredges are as large as the dredges at Port Arthur, possibly larger. Then, at page V—58 of this report we find that Mr. Bowman was paid for dredging in entrance channel to the Kaministiquia river, $20,939.40. We are informed by the minister himself that Mr. Bowman is the contractor for the Great Lakes Dredging Company, and that company received on the same work, $2,119.20. Then, for dredging in the Kaministiquia river near elevator D, Mr. Bowman received $4,036.80 and the Great Lakes Dredging Company, services of dredge No. 5, $1,333.05. Then for dredging in Port Arthur harbour, Mr. Boone received for services of dredge 'Kingsford,' $6,984.33. For dredging in Port Arthur near new Canadian Northern Railway elevator, Mr. Bowman was paid, $14,484.39, and the Great Lakes Dredging Company, $18,917.28. All this is exclusive of the cost of inspectors and various other expenses, nor is there anything for soundings and borings. The total cost of this dredging work is $73,679.54. In addition we have the charge for dredging the Kaministiquia river, $35,923. With inspectors and other services, the total for the four dredges is $109,602.81. Compare this with four of the most expensive of the government dredges, and you find that these contractors have a large margin of profit. If the minister did the work with government dredges, he would have this large sum of money to devote to procuring new dredges or to carrying on dredging elsewhere. The minister has come down from his high position about a contract for $10 an hour. He knows what the contract was—virtually a negotiation with the gentlemen and telling them, 'Go ahead and we will pay you $10 an hour.' The hon. minister has—at least, he certainly ought to have—a report showing how much of each class of material it is expected to remove with the vote he is asking for. If he will then advertise for tenders for the specific work I believe he can save 50 per cent of this money.

Mr. HYMAN. I have no objection to the comparison the hon. gentleman (Mr. Sam. Hughes) has made, but I have not had time to consider it. Of course, the hon. gentleman knows that the length of time the dredge is running affects the question of expense, and so does the question of where the work is to be done and the time of work.

Mr. BLAIN. I would like to call the attention of the minister to the statement of one of his predecessors on this question of dredging. He will find it at page 3284 of 'Hansard' of 1902 :—

> I hope that by next year we shall be sufficiently equipped to do our own work. The two or three new dredges which we are building now I hope will enable us to do the work ourselves, and at a cheaper rate than we have done it in the past.

This was on a discussion of an item of $619,000 for constructing new dredges, &c. With that statement before the committee I am sure the hon. minister will not think we are unduly inquisitive if we ask him how it comes in 1905 he tells us that they have not enough dredges and cannot say when they will have.

Mr. HYMAN. Did the minister in making that statement refer to all the dredging done in the Dominion of Canada?

Mr. BLAIN. Yes, I read his exact words. I am not responsible for them. The item is dredging, $619,000.

Mr. HYMAN. If I mistake not, that is for dredging in some part of the Dominion.

Mr. BLAIN. No, general dredging I take it. I will read a little further :

> Dredging, $619,000.
>
> Mr. WILSON. We should have some explanation of this very large item. The word 'plant' is mentioned in the estimates several times. It would seem as if we needed to build a great many dredges to require all this plant.
>
> MINISTER OF PUBLIC WORKS. The word 'plant' means a new dredge; not plant to build a dredge.

That is his explanation of it. I am sure the minister, when he reads this statement, covering two or three pages, will see that his predecessor wished to leave the impression upon the committee that in the course of a short time, even the next year, they would have sufficient dredges to do all their own work. He goes on further and points out that the present system of hiring dredges is out of date altogether, and that it would be in the interest of the country to build these hydraulic dredges, giving an explanation why he was asking for this enormous sum of money. Now we are anxious to know what has become of this money, and how it is that the minister now says that a sufficient number of these up-to-date dredges cannot be constructed without hiring dredges from Mr. Bowman.

Mr. HYMAN. I can only say that the department have gradually equipped themselves to a large extent since that statement was made. The vote of which the

minister was speaking then was the general vote taken for dredges. Since that date the department have largely added to their own plant, and largely in the interest of the public. But the demand for dredging has been growing all the time, and it has been found almost impossible to keep up with the demand. At that time the dredging of the St. Lawrence channel was under the Department of Public Works, which I think largely accounts for the minister's statement. The department has built several large dredges which are confined to that work.

Mr. SAM. HUGHES. Has the minister a statement of the horse-power of this new hydraulic dredge, this $250,000 dredge ?

Mr. HYMAN. 13,000 odd horse-power.

Mr. SAM. HUGHES. Can he give us the horse-power of these four dredges at Port Arthur now ?

Mr. HYMAN. The Marine Department has a record of them. I suppose they are registered.

Mr. SAM. HUGHES. I give the minister notice that I shall expect the information at a later date.

Mr. BARKER. As I have to confess that I am even more ignorant than the department on the subject, I would like to ask one or two questions of the minister. I do not desire to hold him responsible for the matters I am about to refer to. I desire to inquire into certain matters of expenditure by the Public Works Department in connection with this dredging business. I find that in certain cases certain dredges are paid $8, $10 and $12 an hour for their work ; I find that dredges are moved from place to place, and are paid something like half rates for moving. I find also that dredges employed by the government, so far as I can see, not by contract but by direct employment of the department, apparently by some method of hiring, are employed by the hour. Now I have found in the accounts dredges paid $12 an hour, which seems to be a very large sum. It may be right, I do not dispute it, but I would like to know something about it. I find also that dredges employed at $12 an hour are working in the month of November and up to the middle of December, twelve hours a day. That says a great deal for the diligence of the department, and the energy of the owners of the dredges, that they can work in the middle of December twelve hours a day. I think it a remarkable thing that in this country a dredge could be employed until in the middle of December for twelve hours a day. My own notion of things would make me believe that it was absolutely impossible, and I would like to know from the minister how it is that in the matter of dredging, hours and duration of employment exceed so enormously the ordinary custom of the country. I do not know of any other trade or employment in which people work in the middle of December twelve hours a day, especially in matters such as dredging, where light is, one would think, absolutely essential. Perhaps the minister can tell us how, in the middle of December, twelve hours of honest work can be devoted to the service of the country, no matter what the rate of wages may be. and if he can do that, it will perhaps save a good deal of time in this committee and others, where the members desire to inquire into these things.

Mr. HYMAN. Unfortunately, the hon. member for Hamilton (Mr. Barker) was not in the House when I gave a great deal of information to the committee which he has just asked for. There are one or two things however, which I would like to explain, one of which is the hours the dredges work. It does not follow that they must work in daylight. In some of the dredges which we hire and even in some of our own dredges, there are two shifts of men that work the dredge day and night, so that a dredge will sometimes work 24 hours a day. In the case of some of these dredges which we hire by the hour, I explained already that the way we pay them depends altogether upon the quality of the material removed by the dredges, and upon their capacity. We have dredges which we pay $8 an hour, to others having a greater capacity we pay $10, and to others having a still greater capacity, $12 an hour. I explained fully that the payment is based upon the capacity of the dredges, and the number of hours that the dredge works. That is the method followed by the department. So far as regards a dredge working in December, I am assured by the officers of the department that they have a daily return from every one of these dredges which are under contract to the department. This daily return is furnished by our own officers, and payments are made upon that check, which the hon. member will agree is as good as can be devised upon the work of the dredges.

Mr. BARKER. The explanation of the minister leaves me just where I was before. My trouble is this: It does not appear to me that a dredge can very well work in the dark; certainly it cannot work in the dark in an economical way for the department. Now I find that in December with the sun setting before five o'clock, and the moon rising about one o'clock in the morning the department is paying for work twelve hours in the day. If they can pay for twelve hours I cannot see why they cannot pay for 24 hours. There is no reason why they should not pay for 24 hours just as well as for twelve and get the work done earlier. The peculiarity to me seems to be that the inspector who sends his report to the minister, as the minister says

under this most perfect system of checking, is paid extra for every hour that he is employed to inspect. I find that a dredge is employed in the month of December and is paid for 12 hours of dredging work and this gentleman certifies that it is employed every day no matter what the weather is, whether it is stormy or the finest and fairest weather. Apparently the dredge works the same number of hours and turns out exactly the same number of yards of earth whether the weather is fair or foul. It does seem to me a little singular that the inspector charges per hour just the same number of hours for his inspection as the dredge is employed. The inspector is allowed $3 per day for looking on. I do not know exactly how he measures day by day the exact number of yards turned out by the dredge, but he does so and certifies exactly to the number of yards turned out by the dredge and that, having certified that the dredge has been working a certain number of hours, charges here just so many hours extra for his services. It strikes me that an inspector who is allowed thirty cents an hour for every extra hour he certifies in his account that the dredge is on duty is tempted by that thirty cents an hour to not look too closely into the accounts.

Mr. HYMAN. As regards the overtime work of the inspector, of course when the dredge is working overtime the inspector is necessarily paid overtime. There is no objection to that. The hon. gentleman will agree with me that it is necessary to have an inspector. As far as the measurement is concerned it is scow measurement. The officers of the department know exactly the number of cubic yards contained in the scow that is being used and when the scow is filled up the dredge man gets credit for having removed that amount of earth.

Mr. BARKER. I think nobody in this House knows more thoroughly than the hon. minister himself that in the months of November and December, about the hour of five o'clock, under the game laws, darkness comes on very quickly. Sundown is a fixed minute. We can find that in the Canadian almanac. The hon. gentleman knows that thirty minutes after sundown there is such an amount of darkness that certain shooting and other amusements that are defined by the game laws are stopped. The hon. gentleman knows as well as I do that between thirty and forty minutes after sundown work of that kind cannot be done and to say that a dredge can go on for hours after sundown and do dredging work is to my mind all nonsense. I do not care how many inspectors of the government certify that the work is being done and I say that when the inspector is paid thirty cents an hour for every hour beyond darkness that the work has been done it is offering him thirty cents per hour as a reward for over-certifying the work that is really done.

Mr. HYMAN. I cannot accept the statement of the hon. gentleman that because an officer of the department is paid for over time and because he certifies to the work done during that time he is dishonest. I have asked my deputy to look through the accounts, but he does not see any case of the character which my hon. friend has mentioned. If my hon. friend will give me the particulars in regard to the dredge to which he refers I will be glad to have the matter investigated.

Mr. BARKER. I can tell the hon. minister that in regard to work done on the Grand river, the accounts show charges for 12 hours per day in October, November and December for dredging. In my opinion, knowing the province of Ontario as I do and knowing the months of November and December, as I do, it is absurd to say that a dredge works 12 hours a day.

Mr. HYMAN. We have dredges capable of working 24 hours a day. These dredges are equipped for that purpose. There are a great many of these dredges.

Mr. SPROULE. Are they equipped with electric light?

Mr. HYMAN. Yes, a great many of them are or with other suitable light. We have departmental dredges which we can work 24 hours a day. It all depends on the number of shifts we put on.

Mr. SPROULE. I think where they charge for so much a day provided they take out a certain number of cubic yards per day they do very irregular work sometimes. It is said that when they get a nice soft place to dredge they will dredge away as much as possible until they get below the depth and when they get a hard place they will skip over it, and proceed to another place where they can scoop out the material so as to make up the number of yards that by their contract they are required to take out in a day. The result is that the bottom is often very unevenly dredged. I know from parties who took the trouble to make measurements that this is the case. As to dredges working at night, I do not see how they can work at night very well. I do not think it is the general custom in our part of the country. I have never known it to be the case. They may do so where the lights are sufficient for the purpose.

Mr. HYMAN. I am informed by the chief engineer that our officers are instructed to see that nothing of the kind to which my hon. friend (Mr. Sproule) referred is done; that is to say that dredges shall not do the easy work and skip the hard work.

Mr. SAM. HUGHES. In reference to this work at Port Arthur there is no con-

tract, as I understand it. It says $10 per hour for every hour they work no matter what they take out. That is what the Auditor General's Report shows at all events.

Mr. HYMAN. They are paid $10 per hour which is based upon their doing 800 yards an hour.

Mr. SAM. HUGHES. They have not done it every day then ?

Mr. SPROULE. There is another thing to which I drew attention once before. I am not complaining of any thing recently brought to my notice, but it has been brought to my notice that the inspector who is put there to see the amount of work done is often found around the hotel puffing away at 20 cents cigars, while the work is going on, and he makes his return just as if he had been on the dredge. Then too, the calculation of the number of yards taken out is made by counting the number of scows. I have often seen scows taken out not by any means full, and I assume that these are counted as full scows every time, as holding so many cubic yards. That is sure to be an overcharge, and in all human probability the dredge which is supposed to be taking out 800 or 1,000 yards a day is taking out less than that. I think there should be a very reliable man on each dredge to see that the scows are properly filled. This man cannot do his duty and be around the hotel.

Mr. HYMAN. I quite agree that very reliable men should be engaged for this work. We are always very careful in the department in selecting the men, and I quite understand that it would be dishonest for a man to certify to what he does not know of his own knowledge. The department do the best they can to guard against it but with the large number of inspectors that we have it may sometimes happen that one of them is remiss in his duties.

Mr. R. L. BORDEN. Of course it would be improper to attribute any dishonesty to any official, but speaking impersonally and with regard to the system, perhaps it is not wise to make the remuneration of the inspectors increase proportionately to the increase in the number of hours which they allow to the dredges.

Mr. HYMAN. I understand what you mean and I see the difficulty.

Mr. R. L. BORDEN. That is the point to which the hon. member for Hamilton (Mr. Barker) drew attention. While we are bound to consider that the inspectors act honestly it is not desirable that the remuneration should increase proportionately to the different amounts of work done by the dredges.

Mr. HYMAN. I see the difficulty that strikes my hon. friend (Mr. Borden), that where one man is working 10 hours a day and another is working 12 hours a day it seems unfair that the payment should be the same. I would be glad if any member would suggest some means of overcoming the difficulty.

Mr. BARKER. When an inspector whose duty is simply to overlook the work of a dredge and the number of hours the dredge is employed gets $3 a day that is quite sufficient for a man doing such work, and if he has to stay longer hours he should take that as part of his duty and not be allowed more than $3. $3 a day is a very good wage for a man who has simply to look after that kind of work. When a man gets $3 a day and get 30 cents for each additional hour of work credited to the dredge, he is tempted to certify more—I do not say that he necessarily acts dishonestly in certifying—but it is a temptation.

Mr. HYMAN. The hon. gentleman says that $3 a day is quite sufficient. I do not think it is fair that with one dredge working 10 hours a day and another working 12 hours the inspector on each dredge should receive the same amount, $3.

Mr. BARKER. There are many occasions when owing to storms or other causes a dredge cannot work more than perhaps 6 hours a day, but returns from these inspectors come in week after week, giving 12 hours a day for every day.

Mr. SAM. HUGHES. I notice that in the Auditor General's Report 358, one of these inspectors, as I presume he must be, Mr. Lefebvre, gets :

Services October to November and January to June, 232 days at $3, 11 days at $4 ; board, November to June, $271.

Why is this man paid his board, $271 during the winter months or during the winter and part of the spring.

Car fare, $70 ; travel, $123.80, voucher outstanding, $100.

Then also in connection with the Kaministiquia work, for overlapping time, the same person receives $131.75.

Mr. HYMAN. This as a matter of fact is an assistant engineer and while he was employed inspecting he was simply paid inspector's wages, and of course being an engineer of the department he was paid his expenses.

Mr. SAM. HUGHES. Why is it charged in this way.

Mr. HYMAN. This is the way he was paid for this particular work.

Mr. SAM. HUGHES. Where does he belong, in Ottawa ?

Mr. HYMAN. The fact of his belonging in Ottawa would not matter.

Mr. SAM. HUGHES. The minister says he was sent out on inspection work. What inspection ?

Mr. HYMAN. Inspecting dredges.

Mr. SAM. HUGHES. The minister might have told us that.

Mr. HYMAN. I received that information this very minute, from the deputy. I cannot be expected to know the name of every officer in the department.

Mr. SAM. HUGHES. Just to show what a nice profit there is in operating one of these dredges, I see here the account of Mr. A. F. Bowman for dredge No. 6, August 13 to October 13, two months, and May 16 to May 31, two weeks, $20,939. That is in that two and a half months that dredge netted over $20,000. There is no use shutting our eyes to the fact that the country has not been getting value for the money it has paid for dredging. The same outfit has been doing dredging in the Georgian bay and along the shores of Lake Huron, and has been defrauding the country—I use the term advisedly—for a great many years by not giving good value for the money paid. And members who sat on the Liberal side of the House have received their $1,000 a year for dredges which they never saw, though they may have taken stock in them. We know that this is one of the many ways they have of getting certain profits without putting in much capital or labour. I want the minister to take this matter up seriously and to look at it on the basis of a contract. He has his engineers who know or ought to know the quantity of sand, of hard-pan, of clay, to be removed at any given place. Then he should advertise for tenders for so much dredging to be done, and if he gets honest tenders, he will save this country hundreds of thousands of dollars.

Mr. SPROULE. I think there is something wrong about a good deal of the dredging that is being done, and I imagine, from what comes out from time to time, that that accounts for the ease and lavishness with which certain contractors can furnish money for contesting elections. This Bowman firm has been notorious, and also another gentleman who is in this House today. There is a prevailing idea that these people get a great deal of money out of the country for which they give nothing in return, and therefore they are able and willing to help the government party whenever they become needy. If money is taken out of the country improperly in that way, it should be stopped. I am not saying positively that it is, but I have a very strong suspicion that it is, because I hear about it so frequently and so circumstantially; and when one looks over the Auditor General's Report and sees the large amount of money earned by these dredges in a short time compared with the amount of money invested in the plant, one cannot help coming to the conclusion that they get a great deal more than a reasonable return for their labour.

Mr. SAM. HUGHES. Has the minister arrived at any conclusion yet as to the proper plan for carrying out on a large scale the works at Port Arthur and Fort William?

Mr. HYMAN. The hon. member and myself have discussed the matter several times since this item has been under discussion. There have been no plans made for the larger work which the hon. member brought to my attention. Upon the necessity of that work, whether immediately or in the near future, I am not prepared to speak. I have not had an opportunity, since I have been in charge of the department, of going to Port Arthur. I hope this year to be able to visit the place with the chief engineer of the department and to form some idea of what the necessities are.

Mr. BLAIN. Are the United States authorities doing any dredging at the present time at Port Arthur?

Mr. HYMAN. I have never heard of any.

Mr. SPROULE. There is one unfortunate thing that we are often confronted with when we attempt to elicit information in regard to the expenditure of public money for public works, that is, the numerous changes made in the heads of these departments. One man is away for months, and if I ask for information from the one in charge of the estimates for the time being, he tells me that he has only been in the department for a short time and does not know much about it; and perhaps before the end of the session another change is made. During the last few years especially it has been impossible to get any connected information in regard to these works. I do not know how that condition of things can be corrected, but it ought to be, if possible. Whoever comes here and asks the House to vote money ought to be prepared to give such information to the House as to enable it to intelligently vote the money.

Mr. HYMAN. I do not think the hon. member can fairly charge me with having withheld information. This matter has been under discussion for three hours, and I have given every scrap of information that has been asked for. No one in this House regrets more than I do the unfortunate circumstances under which the Minister of Public Works has been compelled to remain so long from this House. For that I do not think blame can be thrown on anybody. What the hon. gentleman refers to is an entirely new scheme which the hon. member for Victoria has laid before the House.

Mr. SPROULE. The hon. minister told us that he did not know and the reason he gave was that he had but recently taken

charge of the department. But he was here last year, when the estimates were voted, and I think he told us that after the session he would take occasion to acquaint himself with these harbours so as to be able to give the House the information it desired. We all know that a very heavy expenditure is going on at Port Arthur. Surely that is not going on without the government having some definite plan for carrying out the work. The minister in charge of the estimates for the time being ought to be able to give the House the information to which it is entitled. A good minister always comes prepared to give that information.

Mr. HYMAN. I have given the House the fullest information that it is possible to give with regard to this item. The hon. gentleman was not in the House when that information was given, and I think it is unfair for him to come in now and make a charge of that kind. I have been during the last two and a half hours, explaining the details of the work. The hon. member for Victoria spoke to me about some more extensive plan, and I stated that I hoped to be able to visit Port Arthur with the chief engineer and be able to form some idea of any additional requirements of that harbour.

Mr. SPROULE. But a plan must have been made out years ago.

Mr. HYMAN. The member for Victoria suggested a new plan.

Mr. SPROULE. I understand him to ask whether the government had considered any extensive plan and the minister replied that as he had been only a short time in the department he had not had opportunity to make himself acquainted with the requirements of the harbour. But there must be some plan which the government have been following for years and surely they have not been making expenditure in a hap-hazard fashion.

Mr. SAM. HUGHES. The plans for the harbour of Port Arthur were drawn at a time when it was not contemplated that any great Transcontinental road would be built which would reach that harbour. The expenditure of any money for dredging, except what is absolutely necessary, will be waste of money in view of the fact that in a short time we must have an entirely different plan for Port Arthur and Fort William. I would ask the minister to consult his engineers and find out what is a reasonable price for removing the sand and mud and other deposits and then call for tenders. If necessary he could let American dredges come in, but I believe that with this sum of $195,000 he could buy dredges and get more work done for less money than he is now spending. If necessary he could let yankee dredges come in, but I believe he could with the money he is now voting purchase dredges to do the work.

Montreal Harbour (lower division)—improvement below St. Mary's current, $90,000.

Mr. SAM. HUGHES. I think we ought to hold over the Quebec item until the hon. member for Jacques Cartier is here.

Sir WILLIAM MULOCK. Of course I cannot speak for the hon. member for Jacques Cartier, but on looking over the estimates with me, he said that he was not interested in discussing any of the items until we reached public buildings in the province of Quebec on page 45.

Mr. HYMAN. This is simply to complete the payment under the contract that has been made ?

Mr. AMES. Is that the contract with Malone & Poupore ?

Mr. HYMAN. Yes.

Mr. AMES. Was not that contract to have been completed eighteen months ago ?

Mr. HYMAN. Yes.

Mr. AMES. What is the cause of the delay ?

Mr. HYMAN. Five feet have been added to the height of the work.

Mr. AMES. Why were the five feet added ?

Mr. HYMAN. On the report of the engineer of the department so as to bring the work up to the high water level of the harbour.

Mr. AMES. Were new tenders called for?

Mr. HYMAN. No. The work being under the control of the contractors, there was nothing for the department to do except to see that the prices paid would be fair and reasonable. No other contactors could have possession of the work, and the additional work was given out on schedule rates. It is practically all one contract.

Mr. AMES. Was the original work completed within the time stipulated ?

Mr. HYMAN. There was some delay with regard to that. The water kept very much higher than was anticipated, and the difficulty of working with the higher water was such that the contractor could not finish his work in the specified time.

Mr. AMES. Does the hon. minister believe that with this additional amount the work can be finished during the coming season and that this is the last vote which will be required for it ?

Mr. HYMAN. Another vote will be required, but not a large amount. The chief engineer states that he hopes the contract will be finished this fall.

Mr. AMES. What was the amount of the original contract and what would be the total expenditure when completed ?

Mr. HYMAN. The original contract was $631.000. The total extra expenditure with contingencies will be about $250,000.

Mr. R. L. BORDEN. What is the nature of the improvement ?

Mr. HYMAN. The building of a pier at the foot of the harbour—length 1,000 feet on the western side, or up stream, and 800 feet on the eastern side or down stream.

Port Colborne—harbour improvements including eastern breakwater, $150,000.

Mr. LANCASTER. What is the total expenditure ?

Mr. HYMAN. This contract is for $179,000 and the only one there at present.

Mr. LANCASTER. How long before the work will be finished ?

Mr. HYMAN. It was let on June 8, 1904 and should be completed November 30, 1905.

Mr. SAM. HUGHES. How does the minister explain an expenditure of $140,000 last year and $150,000 this year ?

Mr. HYMAN. There is a typographical error. Part of this is a revote.

Mr. SAM. HUGHES. Was this in connection with the new harbour, or the ordinary works there ?

Mr. HYMAN. The harbour, the breakwater and other works going on there.

Mr. R. L. BORDEN. Is it for the purpose of making the harbour more secure against storms ?

Mr. HYMAN. To make the harbour perfectly secure.

Mr. SAM. HUGHES. Is not this in connection with the two million dollar scheme ?

Mr. HYMAN. No ; that is in the other department. This is the breakwater making the harbour.

Mr. SPROULE. What amount of money has been spent on the work, and in what state of advancement is it ?

Mr. HYMAN. The completion of this will end that part of the work, and it is to be finished, according to the contract, on the 30th of November next.

Mr. FOWLER. Who is the contractor ?

Mr. HYMAN. M. J. Hogan, of Port Colborne.

Mr. SPROULE. What is the nature of the work ?

Mr. HYMAN. A breakwater 2,400 feet long. which this will complete.

Mr. SPROULE. Will the harbour then be finished and the desired depth of water available ?

Mr. HYMAN. This is simply completing the breakwater. There is work to be carried on under the Department of Railways and Canals in connection with the elevator and the piers.

Mr. SPROULE. According to my recollection, there was dredging to be done—I think some rock had to be taken away. Is that work going on at the same time ? There is little use in carrying on this work if it is not finished to be available for commerce. In view of the rapid changes which sometimes take place in the trade routes, there is danger that this work may be finished too late to be useful.

Mr. HYMAN. There will be some additional work to be done, but, until the work under the Department of Railways and Canals is completed, we cannot say exactly where the dredging work ought to be carried on.

Mr. SPROULE. If the other work is never done, what will be the advantage of this expenditure ?

Mr. HYMAN. The other work is being done. The whole is practically one scheme.

Sir WILLIAM MULOCK. This breakwater will be a shelter for vessels, and will be the completion of a portion of the work.

Mr. HYMAN. In addition, there is work going on in connection with the foundations of the elevators and in other directions. My hon. friend from Lincoln (Mr. Lancaster) lives near the work, and is probably aware of what is being done.

Mr. LANCASTER. I know there is work going on there, but I do not know to what extent.

Mr. SAM. HUGHES. Is the dredging under the same department as the building of the breakwater ?

Mr. HYMAN. Not up to date. Both the Minister of Public Works and the Minister of Railways and Canals have control of certain of the works in that harbour. Of course, it is not always easy to define where the jurisdiction of one ends and that of the other begins.

Mr. SAM. HUGHES. Can the hon. gentleman tell whether the breakwater is filled in with stone or with concrete ?

Mr. HYMAN. A timber foundation and a concrete superstructure.

Mr. SAM. HUGHES. Would it not be a saving to use the stone taken from the bottom to fill in the breakwater, instead of hauling it for miles to get rid of it and hauling other stone for miles to fill in with? I understand that the docks at Port Arthur

are being filled with material taken from the lake.

Mr. HYMAN. I understand that there is plenty of stone to be found in the vicinity.

Mr. SPROULE. What depth of water will there be when the whole work is finished ?

Mr. HYMAN. It is contemplated to have 22 feet.

Mr. R. L. BORDEN. I suppose that, even though this item is carried, if any hon. member desires to ask questions about it, he will be at liberty to do so ?

Mr. HYMAN. Certainly.

Some resolutions reported.

ADJOURNMENT—BUSINESS OF THE HOUSE.

Sir WILLIAM MULOCK moved the adjournment of the House.

Mr. R. L. BORDEN. Will the minister tell us what business we may expect tomorrow ?

Sir WILLIAM MULOCK. If there are any Bills ready, we will proceed with them. When those orders are exhausted, I suppose we shall go on with supply, taking up, until six o'clock, the estimates of the Minister of Public Works, and after that the estimates of the Department of Trade and Commerce.

Motion agreed to, and House adjourned at 11.30 p.m.

HOUSE OF COMMONS.

FRIDAY, February 10, 1905.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 49) respecting the Century Life Insurance Company.—Mr. Macpherson.

Bill (No. 50) to incorporate the Calgary and Battleford Railway Company.—Mr. Turiff.

Bill (No. 53) to amend the Act respecting the Department of Railways and Canals.—Mr. Emmerson.

TORONTO AND HAMILTON RAILWAY COMPANY.

Mr. CALVERT moved for leave to introduce Bill (No. 48) respecting the Toronto and Hamilton Railway Company.

Mr. HENDERSON. What is the object of the Bill ?

Mr. CALVERT. It is to give power to the company to issue preference stock and pay dividends on the same over common stock.

Motion agreed to, and Bill read the first time.

CONTRACTS FOR GOVERNMENT WORK.

Hon. CHAS. FITZPATRICK (Minister of Justice) moved for leave to introduce Bill (No. 51) respecting contracts for government works. He said : This and two other Bills on the order paper in the names of Messrs. Emmerson and Hyman are practically to the same effect. The intention is to provide that hereafter contracts in which the amount involved exceeds $5,000 will be let, not only after tenders have been called for, but also after they have had the sanction of the Governor General in Council. Hitherto the practice has been for the minister at the head of the department interested to dispose of such contracts. My hon. friend (Mr. Foster) will remember that in 1880 an Order in Council was passed authorizing the letting without tender of small contracts in which the amounts involved did not exceed $5,000. After I became Minister of Justice, I came to the conclusion that there was no warrant for such a proceeding, and in 1903 introduced a Bill to give legal effect to the practice. The intention now is to provide that when a contract involves expenditure of more than $5,000 it cannot be awarded by the minister alone, but must receive the sanction of the Governor General in Council.

Motion agreed to, and Bill read the first time.

FRANCHISE ACT, 1898, AMENDMENT.

Hon CHARLES FITZPATRICK (Minister of Justice) moved for leave to introduce Bill (No. 52) to amend the Franchise Act, 1898. He said : This Bill is to facilitate proceedings in contested election cases. The effect of it will be to enable any list of electors bearing the imprint of the King's Printer to be produced in court as prima facie evidence of the original list. At the present time, in order to prove in a contested election case that the petitioner is a qualified voter, it is necessary to do one of two things, either to summon the Clerk of the Crown in Chancery to appear before the court with the original list, or to get from him a certified copy of the list. Either method is cumbrous and expensive, and to overcome the difficulty this amendment is proposed.

Motion agreed to, and Bill read the first time.

PUBLIC WORKS ACT AMENDMENT.

Hon. CHARLES HYMAN (Acting Minister of Public Works) moved for leave to introduce Bill (No. 54) to amend the Public Works Act. He said : The purpose of this Bill is explained by the statement of the Minister of Justice (Mr. Fitzpatrick) concerning the Act respecting contract for government works.

Hon. GEO. E. FOSTER. How will that affect the practice, which was in vogue in 1890 at least, of giving work out without tender or doing it by day labour if it did not exceed $5,000 ? Is that excepted now under this Bill ?

Mr. FITZPATRICK. These Bills do not affect that question. That was affected by the Bill of 1903. As I said a moment ago, my hon. friend will remember that in 1880 an Order in Council was passed authorizing the Minister of Public Works to let contracts for works that did not exceed $5,000 without tender or by private tender. I came to the conclusion that there was not statutory authority for that practice, and it was doubtful whether the Order in Council was effective. And, in order to make it effective I introduce the legislation of 1893.

Mr. FOSTER. So that works below $5,000 could be carried out in this way ?

Mr. FITZPATRICK. Yes.

Mr. FOSTER. There is an ingenious way of getting around that provision, by cutting the work up in sections of $5,000 of less and spending, it may be $30,000 or $40,000 in the end. That is very much like an evasion of the spirit of the Act, and ought to be provided against in some way. I know that it is a little difficult because the minister may say : What I propose to do amounts to $5,000 or less, but when that is done, his intentions may broaden and he may want another $5,000 worth done.

Mr. FITZPATRICK. I think it is the intention of the House—and after all this legislation is intended to give effect to the intention of the House—that a contract that involves $5,000 or more shall not be let except by public tender. Still, of couse, we know there are works of immediate pressing necessity that must be done without tender. When the Bill is in committee, I shall be glad to consider any amendment that will make in the direction of requiring public tenders for contracts of over $5,000.

Mr. HAGGART. As I understand it, it is not so much the intention to interfere with the present law as to take the jurisdiction from the department and give it to the Governor in Council.

Mr. SPROULE. But the department, apparently may carry on a work involving more than that $5,000 where there is no contract at all. Are they not building the post office in this city by day labour ? That is a work that will cost much more than $5,000.

Mr. FITZPATRICK. That is a matter of repair.

Mr. SPROULE. But involves a very large outlay. And it will hardly be said that there was any urgency there.

Motion agreed to, and Bill read the first time.

CENSUS AND STATISTICS.

Hon. SYDNEY FISHER moved that the House go into committee on Tuesday next to consider the following proposed resolution :

That it is expedient to provide that the Governor in Council may from time to time pay out of the moneys to be provided by parliament for such purposes, such sums as are required for the taking of the census, and for the collection, tabulation and publication of agricultural, commercial, criminal, educational, manufacturing, vital and other statistics ; the remuneration of the necessary officers and clerks and the payment of all expenses incurred in carrying into effect an Act for such purpose.

Motion agreed to.

BUSINESS OF THE HOUSE.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister) moved :

That from Wednesday next, the 15th instant, inclusive, to the end of the session, government orders have precedence on Wednesdays and Thursdays, immediately after questions to be put by members.

He said : I think the state of the order paper justifies the government now in taking these two days.

Hon. GEO. E. FOSTER. The state of the order paper might be tortured into support of an idea of that kind. But where is the government's legislation ? I think my right hon. friend (Sir Wilfrid Laurier) intimated some time ago, in answer to a question of mine, that the Autonomy Bill would be down about the second week of February. The second week of February is here and we have not seen any trace of the Autonomy Bill, while the minister who is most interested in it does not seem to be present with his colleagues. So, I imagine, that intimation will have to be revised. If the government work is not ready, it is not worth while taking more days for it. But, if the government will be good and get its work ready, I do not think there will be any objection from this side of the House to considering it on Wednesdays and Thursdays even up to midnight.

Sir WILFRID LAURIER. The government always wants to be good. That is its constant disposition——

Some hon. MEMBERS. Oh, oh.

Sir WILFRIED LAURIER——but very poorly appreciated, I am sorry to say. I did state to my hon. friend (Mr. Foster) that I intended to introduce the Autonomy Bill during the second week in February; but, owing to the absence of certain gentlemen who have much to do with the discussion of the legislation, our work has been delayed. My intention is to introduce the Bill on Tuesday the 21st inst. I cannot commit myself absolutely, but I think I shall be able to introduce it on that day.

Mr. HAGGART. Will the Minister of the Interior (Mr. Sifton) be here?

Sir WILFRID LAURIER. The Prime Minister will be here.

Mr. MONK. I think the passing of this legislation might be deferred. The Auditor General's Report is not complete, and I do not think that the reports of all the departments are down. Possibly this may explain why there are not more notices of motion from private members. Before taking away these days from private members, I think it is the duty of the government to lay before the House all the legislation and all the departmental and other reports upon which members rely for their information concerning public affairs.

Sir WILFRID LAURIER. My hon. friend (Mr. Monk) will remember that every private member's day during this session has been in part taken up with government business. We have gone over the order paper day after day and exhausted all the business standing in the names of private members, and then have taken up government business. Under these circumstances I think it is fair that the government should have the time for its business. It is not our fault if the report of the Auditor General has not yet been brought down. I am sure that according to the law as it stands at present, the report of the Auditor General should have been here on the 31st of January; and I have reason to believe that on the 31st of Jaunary all the manuscript for the report was not yet in the hands of the printers. But I do not admit that we are at all at fault. If the hon. gentleman will look at the order paper he will see that there are only eleven notices of motion, most of them not contentious, and I think that they will all, or the greater part of them, be disposed of on Monday.

Mr. SPROULE. I think the report that was to be made to this House by Judge Britton regarding the Treadgold concessions was never presented to the House.

Sir WILFRID LAURIER. The hon. gentleman's memory is at fault.

Mr. SPROULE. And the report on the importation of alien labour for the Transcontinental Railway—was that presented to the House?

Sir WILFRID LAURIER. I do not remember. The report of Mr. Justice Britton was brought down during the last days of the last session.

Motion agreed to.

OTTAWA AND GEORGIAN BAY CANAL SURVEY.

Hon. PETER WHITE. I would like to ask the Minister of Public Works if he will lay on the table of the House a copy of the instructions issued to the engineer in charge of the Ottawa and Georgian Bay Canal survey, before that item is taken up in the estimates?

Hon. CHAS. HYMAN (Acting Minister of Public Works). Do I understand the hon. gentleman (Hon. Mr. White) wants a copy of the orders issued by the chief engineer?

Mr. WHITE. Perhaps I can explain more fully what I want by referring to an article that appeared in one of the newspapers the other day, in which it was stated that the instructions to the engineers required them to make an estimate for a depth of water of 22 feet. Whether that be so or not, I would like to know.

Mr. HYMAN. If the hon. gentleman wants the instructions which have been sent to the engineers by the chief engineer in charge of the work, I would be glad to bring them down.

Mr. WHITE. Will they be laid on the table?

Mr. HYMAN. Yes.

SUPPLY—THE POLITICAL CRISIS AT QUEBEC.

Mr. J. E. E. LEONARD. (Translation.) Mr. Speaker, before the orders of the day are called, and as the hon. minister of Justice (Mr. Fitzpatrick) has promised us yesterday in answer to the question I asked about the crisis in Quebec, I would like to know if the hon. minister of the Inland Revenue (Mr. Brodeur) has any information to give us about his mission to Quebec.

(The assistant clerk of the House called item No. 9, House again in Committee of Supply).

Mr. F. D. MONK. Are we not entitled to the explanations which were promised yesterday by the Minister of Justice (Hon. Mr. Fitzpatrick) on behalf of the government, explanations that were to be given by the Minister of Inland Revenue (Hon. Mr. Brodeur) to-day? I see the Minister of Inland Revenue back in his place. I have followed him with some difficulty around the House, no doubt he has been reporting the result of his mission to the individual members of the House. Would it not be fairer to take the House into his

confidence and give us the explanations to which we are entitled?

Hon. CHAS. FITZPATRICK (Minister of Justice). The hon. gentleman has not stated accurately what occurred yesterday. I endeavoured to express myself in very imperfect French to the hon. member for Laval (Mr. Léonard). What I said was that if he would be good enough, when the minister was in the House, to put his question to him, and that was intended not for me but for him, he would no doubt get an answer.

Hon. G. E. FOSTER. I would suggest to the First Minister (Sir Wilfrid Laurier), if the Minister of Inland Revenue is not here, that the Minister of Agriculture (Mr. Fisher) might give us some news, as I have no doubt the Minister of Inland Revenue confined the whole thing a few moments ago to the Minister of Agriculture.

Mr. MONK. I think we have a right to insist. I understand the French of my hon. friend the Minister of Justice perfectly well, he speaks it admirably, as he knows himself. I may be mistaken, I did not take his words down in writing, but I understood him to answer the hon. member for Laval that the Minister of Inland Revenue was absent at Quebec, and that he would give an answer to-day, which answer would not be a vague one like the stories which have been flying around, but would be certain information. Now if I am not in order, I will move the usual motion. But I think our demand is a just one. We have seen ministers from Quebec who have resigned and ministers who have not resigned but were holding on still.

Sir WILFRID LAURIER. Order.

Mr. MONK. I am in order, Mr. Speaker, I intend to move the adjournment of the House.

Sir WILFRID LAURIER. Well, there is no necessity for that. If the hon. gentleman will let us move the House into Supply then he will have an opportunity.

Mr. MONK. I am putting my question now, which I have a right to do, or later on, as I see fit.

Sir WILFRID LAURIER. My hon. friend is not in order.

Mr. MONK. I ask your ruling on that point, Mr. Speaker. I am not obliged to wait to another stage in the proceedings.

Sir WILFRID LAURIER. My hon. friend has a right to move the adjournment of the House, but he knows that is usually done only on matters of necessity and urgency. I do not know the matter as to which he wants to have a little chaff, whether it is either urgent or important. But he will have an opportunity to be as funny and as pleasant as he desires when the House is moved into Committee of Supply.

Mr. MONK. I do not think there is any such restriction. If there is in England, we have not introduced it here.

Mr. WHITE. I understood, Mr. Speaker, that you had put the motion that the House go into Committee of Supply.

Mr. SPEAKER. I have not yet.

Mr. WHITE. If that be so, then the hon. gentleman is perfectly in order.

Mr. SPEAKER. The motion has not been moved yet.

Mr. WHITE. I heard the clerk at the table call order No. 9.

Sir WILFRID LAURIER. But it was not put to the chair.

Mr. SPEAKER. Sir Wilfrid Laurier moves that I do now leave the Chair.

Mr. MONK. I wish to call the attention of the House to what is, in my estimation at least, an interference by the government with proceedings actually going on in Quebec. A political crisis has arisen in the provincial cabinet, and we are entitled here, as members of the House, to know exactly what part the government of Canada is taking in that crisis. I mentioned a moment ago that within the last ten days we have had here from Quebec interviewing the right hon. gentleman and other members of the government, ministers of the cabinet in the province of Quebec who have not resigned, and we have had others up here on alternate days who have resigned. We have had a large number of members of this House and of members of the cabinet moving down to Quebec, and down to Montreal, in connection with this crisis. Liberal organs announced freely before the opening of the session that my right hon. friend himself had gone down to Quebec, and made no secret of the object of his mission; he had gone down there in order to set matters right, and arrange the internal difficulties that have arisen in the cabinet itself at Quebec. The government organ in the city of Montreal, the Montreal 'Herald,' states this in regard to the point which I have just raised. It contains a telegram from Quebec dated February 9.

Conciliation was in the air all day. Hon. L. P. Brodeur and Senator Dandurand were on hand as peace makers and they did their best.

Further on :

A HEAVY DAY'S WORK.

It was obvious an hour after breakfast time that there was 'something doing.' Mr. Brodeur had come in by the morning train. Mr. Dandurand was stopping with relatives. Presently it was whispered that these gentlemen, acting at Sir Wilfrid Laurier's request, were doing their best to make peace. In the course of the day

the ex-ministers had several interviews with Hon. Mr. McCorkill and Hon. Mr. Archambault. It is conceded by all who have been in any way privy to what went on that, in a day of disappointments, the one clear gain to the party is a pronounced enhancement of Mr. McCorkill's reputation as a public man.

I could quote from several of the Liberal organs' articles, telegrams and items which point clearly to the interference of this government and by members of the government with the difficulties which have arisen at Quebec and which are very far from a solution as my right hon. friend knows better than any one else. On two occasions the attention of the government has been called to this point. Yesterday my hon. friend from Laval (Mr. Léonard) knowing, as everybody knew, it being a matter of public notoriety that the hon. Minister of Inland Revenue had gone down to Quebec with the mission with which he was charged as has been intimated here by the Montreal 'Herald,' asked that we should have some report. Ministers are responsible to the House of Commons in general and they are responsible for every one of their acts. As I understood the hon. Minister of Justice (Mr. Fitzpatrick) he stated that the hon. Minister of Inland Revenue was absent at Quebec and instead of listening to vague rumours of all sorts, my hon. friend would receive to-day some answer, some information from that minister. The hon. Minister of Inland Revenue has been in the House since three o'clock. He has, as has been noticed by everybody made a report evidently of his mission to Quebec to a number of hon. members of this House, and I think it is only fair to us to-day in view of the promise made yesterday that he should tell us what the mission was with which he was charged and with what results he has performed the mission.

Right Hon. Sir WILFRID LAURIER (Prime Minister). Well, Mr. Speaker, I am sorry that I cannot gratify the very fastidious curiosity of my hon. friend from Jacques Cartier (Mr. Monk). I wish I could. The ideas of my hon. friend and my ideas in regard to responsible government do not agree. There is a crisis in Quebec. It is not the first time that there have been crises in governments; it has happened before and perhaps may happen again so long as men are men and divide into opposite parties. My hon. friend said that he wanted to know what part the government intend to take or are taking in regard to the crisis at Quebec. I am very glad that I can satisfy him on that point. The government are taking no part whatever in the crisis at Quebec and the government have no part to take in that crisis. I do not deny that personally I am very much concerned in what is taking place at Quebec. I take an interest in what is going on, some of my colleagues do the same and I understand also that on the other side of the House a very deep interest is taken in that crisis. My hon. friend is not perhaps the least of those who take an interest in it. Perhaps he is not as immediately concerned as I am, because the crisis is not amongst his own political friends, but in the charity of his bosom he takes an interest in it as if it were amongst his own friends. I have to say that if my colleague, Mr. Brodeur, went to Quebec, he went simply as Mr. Brodeur and in no other capacity. My hon. friend says that ministers are responsible for their actions. There is no doubt that ministers are responsible for their actions when they act as members of the government in matters which concern the government, but if a minister of the Crown goes to Quebec or Montreal, I do not think he gives an account where he sleeps or what he has done or how he has disposed of his time. I think that as much liberty ought to be given a minister as any other man. If because a man is a member of the government does it follow that he must be dogged and followed and that he shall give an account of what he has done during his trip ?

Mr. FOSTER. The defence of my hon. friend (Sir Wilfrid Laurier) has certainly not been a very long one and I think the House will agree with me that it has not been a very strong one.

Sir WILFRID LAURIER. No, because there is nothing to defend.

Mr. FOSTER. I do not think that any one will stand up and say that it has been a very skilful one or a very frank one. It is impossible that the whole public sentiment of the country can be under a grave mistake in believing that there is an attempt being made by the government here in Ottawa, or certain of its individual members, to interfere in the party crisis which has taken place in the province of Quebec. My hon. friend (Mr. Monk) has quoted original extracts from one of my right hon. friends own well-informed papers. Neither the editor of that paper nor the staff of reporters who work for that paper are without sense or intelligence, and it is impossible that these things would be going on and be reported as they are by my right hon. friend's own papers in plain and unmistakable terms if there was not something in them. Does my right hon. friend think that what he has stated here to-day will disarm public sentiment and operate the impression that he and the members of his government are taking no interest at all in this crisis at Quebec ? I do not think so, and I do not believe there is a man in this House who reasonably looks upon the thing who will come to that conclusion either. The hon. Minister of Inland Revenue (Mr. Brodeur) left his place and went down with that alter ego of the right hon. gentleman in matters political. Senator Dandurand,

and they have been travelling to and fro in Montreal and Quebec city, they have had conferences with the dissidents on both sides and is the country to be asked by the right hon. gentleman to believe that when they were having these excursions the hon. Minister of Inland Revenue was looking after his pipes and his valves and his butts and his vats ? The people know just as well as my right hon. friend knows that when the hon. minister and the senator went down there they went for the purpose of patching up the difficulty that has arisen in the ranks of the party in Quebec. I think this House has also an interest in it, because, invariably in these cases, sooner or later, the public pays the bill. These rapprochments are brought about, as my right hon. friend has been very skilful and untiring in bringing them about by the interposition of public moneys and public offices, and so after this rapprochment is effectually carried out, it will not be many weeks, certainly not many months, before this House and the whole country will know just how much they will have to pay in order to foot the bill for the reconciliation. I was thinking while my right hon. friend was speaking so mildly and innocently as if he had never taken part in provincial party politics of the old times, old days, old men and old manners now for ever gone.

And if the shade of the honest and honourable Alexander Mackenzie sitting close to where I am, could form voice for itself and speak in this House to-day, what would it say. It would certainly read my hon. friends on the other side a formidable lecture on the vice and the infinite folly of putting their fortunes to the test in every conflict that takes place in the different provinces of this Dominion. If the shade of Edward Blake, the substantial body of whom lives and moves on the other side of the Atlantic, could here utter its thoughts what would it say ? It would point out the same lesson of the unconstitutionality, the inadvisability and utter folly of a party making common cause with the party politics of a province, in that the retribution always comes and will have to be paid. The right hon. gentleman had colleagues here who spoke on this subject. Take for instance the Hon. Mr. Mills. My colleagues on this side of the House know with what untiring vehemence he denounced this interference of the federal party in the concerns of the different provinces. Yes, there is a gentleman who at this time sits on the other side of the House, the hon. Postmaster General who was untiring and I suppose just as sincere in his vehement denunciations of that course at that time, a course which since he and his colleagues have come into power they seem to follow with wonderful avidity and until lately with seeming success; but the success of such a policy in the long run now seems a little doubtful. The right hon. gentleman (Sir Wilfrid Laurier) two elections ago stood in a hall in this city and, leaning his left hand on the right shoulder of Mr. Ross, said: this Reform party is the right hand of our party in this Dominion of Canada. The right hand of his party, thanks to the right hon. gentleman's influence, was at that time successful in keeping in power although absolutely unsuccessful in getting the majority of the electors of Ontario registered in its favour. That right hand from 1902 to 1904 has been holding office through means which were not legitimate and which did not approve themselves to the electors of Ontario. But not retarded by the statements and the principles which were reiterated by his colleagues and old time friend, and by none more stoutly than himself, not retarded by the evident unwillingness of the people of Ontario to take his right arm, only a few months ago, the right hon. gentleman stood again on the platform, made common cause with a discredited party in Ontario, linked his fortunes with theirs and went to the test. The test took place and ended on Jan 25, and my right hon. friend has got his lesson; his right arm has been shattered into bits, and the right hon. gentleman's fortunes have taken on a little more sombre cast since the overthrow of his right hand in Ontario. Now he makes common cause with the party in Quebec. Does he not recall the old pledge between himself and Hon. Mr. Mercier that one was to deliver a majority to the other and the other was to have his price, whatever he demanded after the majority had been delivered ? Does he not remember that in defiance of every constitutional principle, in defiance of every one of the canons of good government my right hon. friend if he did not advise certainly connived at the action of his favourite and dependent in Quebec, the present leader of the government, and advised him—or if did not advise him, was cognizant of his action, and did not reprove it—when Mr. Parent took the unconstitutional and unmanly advantage of destroying entirely any opposition in his local parliament if he could possibly carry it that far by bringing on an election before the proper time and within a period which made it impossible in the large province of Quebec, to organize an opposition in their widely scattered counties ? To-day the same thing is going on. Mr. Parent is one of the government's directors in the Grand Trunk Pacific, is one of the high officials in the Bridge Company to which a vast subsidy has been given. Mr. Parent has this, has that, has the other. My hon. friend is determined to keep Mr. Parent—and it is strange how things happen. My right hon. friend wanted an organizer. After looking all over Quebec, he could not find an organizer to suit his particular wishes; he aimed high, his flight went as far up as the bench, the judicial ermine of the province of Quebec, and he called down one of its

honourable judges whom I think he himself had placed there, and by a very skilful dicker between senatorships and judgeships he got this hon. gentleman where he wanted him, removed him from the bench, made him a senator, assured him of a life pension and then sent him out to organize his forces in Quebec. Strange fatality and strange Nemesis! The very man whom he haled from the bench, then elevated to the Senate, then sent, armed cap-a-pie to be his organizer and militant representative in Quebec—this same man quarrelled with Hon. Mr. Parent and to-day there is a feud, a feud in law, a feud in politics and a feud all through, a war à l'outrance between the premier of Quebec and the right hon. gentleman's organizer. I am anxious to find out where the hon. gentleman is. Has he confidence in his organizer? Is he his organizer? Is he in favour of the present government faction that seems to be on top? His fight seems to be going both ways. The right hon. gentleman sends down his Minister of Inland Revenue and at once the frigid air in Montreal takes on an aspect of warm conciliation, and yet there is his organizer, his former judge, his present senator raising an acrid smell of brimstone and a suspicion of post mortem fires in his denunciations of Hon. Mr. Parent and all his works. It is a strange lesson for the electors of this country to read, and I think they will profit by its reading.

Sir WILFRID LAURIER. I have just one word to say; I have not the right to speak and therefore I shall be very brief. I would simply say to my hon friend (Mr. Foster) that he has put a different complexion on the remarks of the hon. member for Jacques Cartier (Mr. Monk). The hon. member for Jacques Cartier (Mr. Monk) did not make the statement absolutely, but rather insinuated that I had sent the hon. Minister of Inland Revenue (Mr. Brodeur) with a mission to Quebec, a mission which meant a money consideration in some way or other. I have to say to my hon. friend (Mr. Foster) that he is absolutely mistaken. I repudiate that absolutely. I gave no instructions whatever to the hon. the Minister of Inland Revenue and especially nothing in the way of a money consideration or promise of any kind. I have to say that the hon. Minister of Inland Revenue (Mr. Brodeur) is a human being like every one else; he belongs to the Liberal party and he takes an interest in the future of the Liberal party. There have been some feuds in former times in the Conservative party also.

Mr. TALBOT. The nest of traitors

Sir WILFRID LAURIER. And just as there were men in that party who took an interest in bringing about a conciliation which was effective, I hope that we may have the same success some time or other.

Mr. T. S. SPROULE. There is an additional reason why the House is interested in this case. Not only has a minister of the Crown gone from here to do conciliatory work but he is accompanied by the Speaker of the Senate; both branches of the legislature have been pressed into service to do political work down there. Heretofore it has always been claimed that the upper House had no politics; there were no political shadows there, the Senate was quite independent. That was the Reform doctrine but now even the first man in the Senate, the hon. the Speaker of the Senate, is pressed into service along with a minister of the Crown to go down there and patch up some kind of an arrangement between the present leader of the provincial government and the other ministers who are rebelling against him.

That being the case, it seems to me that we are specially interested to know whether we are drifting. If members of both Houses of parliament are going to be forced to take part as politicians in these provincial feuds and troubles, the affairs of the provinces and the affairs of the Dominion are not going to be kept as distinct as we were led to believe, from the professions of hon. gentlemen opposite hitherto, would be the case.

Mr. J. E. E. LEONARD (Laval). (Translation). Mr. Speaker, I heard with pleasure the Right Hon. Prime Minister state that he had given no instructions to the Hon. Minister of Inland Revenue. I am bound to accept his word; but,—always in connection with that crisis at Quebec—may I inquire of the right hon. gentleman whether he has read an article of the 'Soleil', dated February 8, in respect to the policy followed by that paper. It runs as follows:

THE SOLEIL'S POLITICAL MANAGEMENT—WHAT IT IS.

The stand taken by the 'Soleil,' during the present crisis, is variously appreciated. Those whose life-long weakness has been to talk too much could not very well miss this opportunity of falling into their capital sin.

To set things right, we may state once for all that the 'Soleil' is the organ of the Liberal party, and as such, under the absolute guidance and control of Sir Wilfrid. Consequently, the partisans of Sir Wilfrid, those who are sincerely so, as well as those who call themselves such, will please take note of the fact.

If the above editorial states the truth, I am unable to understand how the Right Hon. Prime Minister can inform the House that he does not interfere with Quebec politics.

Then I read on the same page of the 'Soleil' another article under the following heading:

THE REAL ISSUE.

Now that the first moment of excitement is over, light is dawning again, and the true

question at issue, as laid down by us yesterday, is very clearly in evidence.

It was necessary that a number of honest minded people living in far off counties, and who had been made to believe in the existence of a political scandal, should have their minds disabused as soon as possible. It cannot be said too many times, and it is an actual truth, that the whole matter is a question of personal differences and personal dislikes.

The 'Evenement' is, therefore, completely at variance with the facts when it points to recent events as a vindication of the criticism made and the charges brought forth for the last five years by the party to which it belongs. Such an accusation, the Liberal party cannot afford to assent to, unless they wish to shamefully repudiate themselves.

It is the Parent government and no other which has been entrusted with the task of managing public affairs. Should there be any doubt as to the truth of this contention, it would be necessary in order to disprove it, to make a new appeal to the people. It is the rank and file who undergo the hazards of war, but it is the general who gets the credit for any success. The victories won by the Liberal party in 1900 and 1904 are in justice attributable to the Hon. S. N. Parent. As Scipio Africanus, he might proudly say to his accusers : 'Twice have I led you to victory, now let us proceed to the Capitol to thank the gods.' And it shall be in order to follow him.

If ever time was ill chosen to remove a leader is it not just now, hardly three months after the most overwhelming victory which ever a party has had to its credit ?

The Liberal party has come out of it so powerful as to become headstrong, believing that it can with impunity indulge all its fancies, even to the point of revelling in internal strifes for the mere pleasure of a change. But those are untoward fancies, the result of thoughtlessness. Once the first nervous crisis has been got over, wisdom will assert its rights, and it will be conceded that the least that could be expected by a political leader, after fifteen years of services of an exceptionally fruitful nature to the country, is to be allowed to depart with full honours. To attempt to remove him by sheer force would be acting contrary to common sense. It would be putting him fully in the right, and the people completely in the wrong.

Such is the question, rid of all unpleasantness, and as the representatives of the people in this province should look at it to-day.

Has that article been written at the request or at the suggestion of the Right Hon. Prime Minister ?

Mr. MONK. Is it true the hon. Minister of Inland Revenue has just returned to Quebec ?

Sir WILFRID LAURIER. That is the first news I have had of it.

COMMUNICATION WITH PRINCE EDWARD ISLAND.

Mr. ALEX. MARTIN (Queen's). Mr. Speaker, I wish to bring to the attention of the premier a question to which he promised me a reply in a few days ; I also wish to bring it to the attention of the hon. Postmaster General. The question which is one of very serious interest to my province, refers to the communication at present maintained between Prince Edward Island and the mainland. As I explained yesterday, it is now carried on by iceboats, and when the iceboats reach the main land at Cape Tormentine, there is no special train to carry the mails to Sackville, a distance of 35 miles. This is a great hardship. Hon. members have only to go to the reading room to see that the last papers received from Prince Edward Island are nearly a week old. Any one can imagine what the business men of the province suffer in this matter. I am instructed by a telegram from my province, which I will read to the House :

Before the orders of the day, interrogate the premier every day about island communication.

Some hon. MEMBERS. Name, name.

Mr. A. MARTIN. That is a very hard duty imposed upon me, to stand up every day and interrogate the government about the communication with Prince Edward Island. I think the only thing they can do is to remedy this grievance, and thus relieve me of a very unpleasant duty and at the same time do justice to the province.

Hon. Sir WILLIAM MULOCK (Postmaster General). Mr. Speaker, I am extremely sorry that the state of the climate or the weather has interrupted communication between the mainland and Prince Edward Island. This is not the first time that there has been such interruption. I wish I could hope that it will be the last.

Mr. FOSTER. Change the government.

Sir WILLIAM MULOCK. It was worse under the late regime. I can remember in the days that are beyond recall, when a good representative of Prince Edward Island, Mr. Perry, like my hon. friend, announced to parliament how Providence, in view of the government of the day, was smiting Prince Edward Island, as it seems to be doing in a lesser degree to-day, the government of that day did not put on special trains, or even special ships. They allowed the people to get across in small ferry boats and to carry the mails as best they could, very frequently at the peril of their lives. We have endeavoured to improve the service as much as possible, and this year we have two steamers endeavouring to keep open communication. If the floating ice has made it impossible for these steamers to navigate, I suppose the only solution would be to get more powerful steamers, perhaps ice breakers such as are used in Russia. That would be a very considerable expense. I do not say the government would not be justified in undertaking it, but there can be no satisfactory and uninterrupted communication between the Island and the mainland until some means

are devised for overcoming the difficulty of floating ice that becomes congested in the channel. My hon. friend the Minister of Justice has made a suggestion to me that would perhaps commend itself to my hon. friend. The difficulty arises from vis major —something beyond the control of the government.

Mr. FOSTER. Vis inertiae.

Sir WILLIAM MULOCK. No, the vis inertiae was in the olden days.

Mr. FOSTER. There are some things that you forget.

Sir WILLIAM MULOCK. There are some things the hon. member for North Toronto forgets, and it would be well to remind him of some of his history. He is a public man with a past. However, I am dealing with the present now. My hon. friend from Queen's (Mr. Martin) is seeking for information in obedience to the mandate of his correspondent, to worry the House each day, in the hope that, like the unjust judge, we may at last yield to his importunity. However, Mr. Speaker, I am afraid that we could not establish the precedent of employing special trains to meet every interruption of the mail service. That has never been done, and I doubt if any government would be willing deliberately to undertake it. Therefore, to resume the train of my thoughts when they were interrupted by the hon. friend for North Toronto——

Mr. FOSTER. Very mean thoughts, too.

Sir WILLIAM MULOCK. What does the hon. gentleman mean ?

Mr. FOSTER. I will tell him when he gets through.

Sir WILLIAM MULOCK. I certainly am utterly at a loss as to the meaning of the hon. gentleman, but if he wants time to invent some substance for what he says, I have no objection. I was going to suggest that this House is not the tribunal which can overcome the operations of nature. We certainly cannot overcome the congestion of ice, and I cannot hold out any hope of the government subsidizing special trains to carry the mails. We endeavour to utilize all the regular trains which the companies choose to establish, and even if they were to put on special trains for other purposes, I am sure we would be glad to use them ; but as to the department subsidizing special trains to carry the mails, I would hesitate before inaugurating any such policy.

Mr. FOSTER. The hon. gentleman has, as usual, been giving free rein to his imagination, and the length to which that imagination can carry him is immeasurable. He conjured up a condition of things which never had any existence, and which he must know was purely imaginary. He painted that imaginary condition in vivid colours, and then endeavoured to show by contrast how much better he and his government had done. But there never was a time under the late administration when we depended on ferry boats to carry on navigation between Prince Edward Island and the mainland.

Sir WILLIAM MULOCK. Yes, there was.

Mr. FOSTER. There never was a time in the late administration when that was done ; but, of course, if the hon. gentleman wants to go back to pioneer times, he will find that at one period the only communication between the island and the mainland was by canoe.

Sir WILLIAM MULOCK. I am referring to a time when the hon. gentleman was in this House.

Mr. FOSTER. The hon. gentleman is utterly at sea. He is in the habit of drawing on his imagination——

Sir WILLIAM MULOCK. It is a fact.

Mr. FOSTER. He is in the habit of painting an imaginary condition and then using that as a foil to show how much better things are done now. The people of Prince Edward Island have a perfect right to ventilate their grievance. When their facilities of travel are interrupted, they have a perfect right to ask their representative to plead their case before the government. But when they do so they receive but scant sympathy or mercy from this administration. In fact, some hon. gentlemen on that side were good enough to suggest that the constituents of my hon. friend should get up and use their shovels to clear away the railway tracks. I believe it was the Minister of Marine and Fisheries.

Some hon. MEMBERS. It was the Minister of Railways (Mr. Emmerson).

Mr. FOSTER. That shows you how the Liberal party regards the grievances of the people. It is the old story. All they look at is what will benefit the party. The hon. gentleman was good enough to say that I was a man with a past. Has he a past ? Who does not remember ; who that was here in the days before 1896, does not remember how my hon. friend, in the long weary years when he was in opposition, was a prominent figure, and not a very creditable one in many ways, in this House ? Who does not remember how he looked up at the galleries and swore eternal opposition on any kind of a salary like $50,000 for the Governor General ? Can any one fail to recollect how he tried to make capital with the farmers by posing as a patron and introducing a Bill providing that no member of this parliament should have a pass and travel upon railways by the favour and option of the railway companies ? Who

does not remember how he advocated economies which he has since repudiated ? Why did he do this ? Either because he was honest and had convictions, or because he was seeking to deceive the public with the object of gaining their votes and getting into power. Well, he got into power, and what happened ? Do we not all remember how eloquent he was in opposition against members sitting in this House with promises of offices and emoluments in their pockets ? So far did his convictions carry him that he introduced a Bill to make it impossible for any one who had been a member of this House to obtain an office of emolument of any kind until he had been a certain number of years out of parliament. Yet that gentleman, who tells us that he has no past, and who twits another hon. member with his past, sat in this House through two terms of parliament after 1896—the year the present government took office—and when he had come to the end of the two terms, he had before his eyes a list of fifty members of parliament and senators who had, in the course of these two years, been given offices of emolument by this government and had sat and voted in this House with promises of these in their trousers' pockets. Who does not remember the gentleman from Quebec who sat yonder with a promise from the First Minister of either a lieutenant governorship or a judgeship of a higher court in the province of Quebec in his pocket, voting for measures which, in his heart, he did not believe in, and which, with his lips, he said he did not believe in, but for which he voted because of the promise he held in his pocket ? That was wrong in itself, but, worse yet, the fulfilment of that promise was kept back by the right hon. gentleman and his colleagues for one and a half or two years, in order that they might still keep that supporter in his seat. The hon. gentleman thinks there are some things we would like to forget, and twits us with wishing to forget them. He may forget for himself a display of lack of conviction, want of sincerity and disregard of principles, which is without precedent in the public records of this country.

Sir WILLIAM MULOCK. As the hon. member for North Toronto has spoken twice on this motion, perhaps the House will be similarly indulgent in my regard. Of course, my hon. friend must be allowed some latitude, and it reminds one of olden times to see him take his stand and, with that digit finger of his, threaten any one against whom he directs his spleen and disappointment. He, of course, may claim some indulgence. If I had it in my composition—and I thank God I have not—to nurse during four years feelings of animosity and take the first opportunity to give vent to them, I might follow the example of my hon. friend, and, on each occasion when I rise to address the House, endeavour to misrepresent and torture the record of those to whom I am opposed and excite heart-burnings and vengeful feelings among them. My hon. friend has sought to vent his disappointment on my head by going back into the past. But if I should look up his past, I hardly think it would prove very edifying. I can well remember the platform upon which he secured an entry into political life, and how well he wriggled away from that platform, when he said that if it did happen that at one time he had committed himself to the doctrine of prohibition, that was only in a moment of weakness. After he had started on his public career and won his spurs and his position in this House as an advocate of that doctrine, after he had delivered in this House philippic after philippic to show his zeal for the cause, no sooner did he get into office than he apologized for his mistake and pleaded infancy as his excuse. Well, I am willing to forget his boyhood days and throw the mantle of charity over them, but there are some events of more recent date, in which the hon. gentleman was a prominent figure, and with regard to which he cannot plead the same excuse. He could hardly plead weakness and infancy and inexperience, or even temporary insanity, for what occurred in 1896.

And what occurred ? I remember well occupying at that time the seat now occupied by my hon. friend from Dorchester (Mr. Morin). The hon. gentleman (Mr. Foster) was sitting where the Prime Minister (Sir Wilfrid Laurier) sits to-day. There was an histrionic incident in the month of January, 1896, when the ex-premier, Sir Mackenzie Bowell, coming forward to the floor of this House as the Speaker left the chair, stated that for six months he had been sitting with the hon. gentleman (Mr. Foster) and others whom he described as a nest of traitors with the hon. gentleman as their leader. He selected the hon. gentleman as the most distinguished member of that body and said that for six months that gentleman, if he might so describe him, had been endeavouring to cut his throat. What are their relations to-day, between the former prime minister (Sir Mackenzie Bowell) and the hon. gentleman (Mr. Foster)? Has the hon. gentleman received absolution from Sir Mackenzie ? Has he made amends to him ? Has he ever yet given to the public an explanation and defence of that transaction ? Why, I read in the press during the last campaign that, in North Toronto—I think it was North Toronto—the hon. gentleman (Mr. Foster) was asked to explain and justify his conduct as a public man in having betrayed his leader, and having caused a strike among his friends to prevent that leader from re-forming the government. He was asked to explain and to justify, if he could, his treachery on that occasion. And what did he say ? He said that his mouth was sealed ; that he had given his explanation to His Excellency and he was satis-

fied. There was courage for you. The hon. gentleman showed the high quality of his courage by taking shelter for an indefensible transaction behind His Excellency the Governor of Canada.

Mr. FOSTER. And what would my hon. friend (Sir William Mulock) have done?

Sir WILLIAM MULIOCK. I certainly trust I would not have been guilty—as I think no hon. gentleman would ever be guilty—of the offence of my hon. friend. He is teaching us what our political morals ought to be. But what did he himself do? Sir Mackenzie Bowell was a member of parliament long before the hon. gentleman (Mr. Foster) entered this House. He was taken into the government of Sir John Macdonald in 1878. He was Sir John Macdonald's trusted colleague for many years. In 1883 or 1885, the hon. gentleman (Mr. Foster) became a colleague of Sir Mackenzie Bowell under Sir John Macdonald. He sat with Sir Mackenzie Bowell in Council from the time he joined the cabinet until the lamented death of Sir John Thompson. He had ten years association with him in the Council chamber as well in the party organization. And, when it became necessary to appoint a premier in the month of January, or thereabouts, 1895, the hon. gentleman (Mr. Foster) I presume, joined with others in recommending Sir Mackenzie Bowell. He took office under him and served under him—if service it can be called—for a year. He waited until parliament met on the 2nd of January, 1896. After the speech from the Throne had been delivered and the House had assembled to receive that speech, instead of moving in a manly way that the speech should be taken into consideration the next day the hon. gentleman moved for some reason mysterious at the time but afterwards made clear—that the House should stand adjourned until the following Tuesday. Saturday came and then the conspiracy was laid bare before the public, and, for two weeks the hon. gentleman (Mr. Foster) took up his position in room 16, he and a few more, to prevent Sir Mackenzie Bowell re-forming his cabinet. He endeavoured by the arts of the striker to destroy constitutional government and betray his chief. The hon. gentleman now asks me what I would have done. I ask him if he can find any parallel for his conduct in any parliamentary body? You will search in vain the history of constitutional government in Great Britain and its colonies to find a precedent for such a transaction.

Mr. SPROULE. What about Quebec today?

Sir WILLIAM MULOCK. I am dealing with my hon. friend from North Toronto (Mr. Foster). He has asked me to refer to his history, and I am doing so. He refers to me, and he is quite at liberty to refer to me. He mentions certain propositions of mine in days gone by. He knows perfectly well that it is one thing for a member to have individual views, but that it is quite another thing for him to impress those views upon his colleagues. It is true, since he alludes to it—though I never publicly made an observation upon the subject—that I did not approve, so far as I myself was concerned, of a member of parliament travelling upon a railway pass. I never said so before—never expressed an opinion upon the subject. I do not propose to lay down a rule of conduct for the guidance of my fellow-men. They are the keepers of their consciences, as I am the keeper of mine. I have entertained that view and have lived up to it strictly throughout the whole of my public career. If the hon. gentleman (Mr. Foster) means to insinuate to the contrary, he is not correct in his insinuation. At present the law provides that members of parliament are entitled to travel free. I am under no obligation to any railway company if I travel free now in Canada, for it is my legal right to do so. Moreover if I had used a railway pass every day since I became Postmaster General I should have been within my legal rights, for it is provided in the contract between the railways and the department that the Postmaster General is entitled so to travel. However, I have not happened to make use of that provision. I did not exercise my right in that particular until parliament had placed upon the statute-book a law vesting that right in members of parliament. The hon. gentleman says I supported a measure to prevent members of parliament being appointed to office. It is true that in the year, 1895, I introduced a Bill of that kind. When I introduced it the only person in parliament, who made the slightest inquiry of me as to its meaning was my hon. friend from North Toronto (Mr. Foster). He asked me to explain the Bill. I explained it. He with a very contemptible nod of his head, said, 'that's all.' And that is all he had to say in the way of expressing an opinion on the subject. No member of parliament expressed approval of the Bill, and I am not aware that the sentiments I gave expression to were shared by any member of parliament then or are shared by any member of parliament now. So, what was the use of my pressing an opinion that had no support in parliament, or, apparently out of parliament. There is such a thing as having views, but there is also such a thing as having to submit to the views of others; and, in this age and in the way we do business in this country and elsewhere, organization is essential to accomplish anything in life. If my hon. friend desires to discuss other features of my public life. I am quite prepared to meet him. But, before concluding I would ask him again if he would give the country an explanation—and justification, if he can—of his action in 1896 in betraying his leader, Sir Mackenzie Bowell. He knew that gentleman for 20 years, he was his

colleague for ten years, he enlisted under and served under him, he took the oath of allegiance to him, that he would be loyal——

Mr. HAGGART. Where ?

Sir WILLIAM MULOCK. Does not a gentleman who takes office bind himself in honour to——

Mr. HAGGART. The hon. gentleman (Sir William Mulock) said he took the oath of allegiance to him.

Mr. FOSTER. That is his imagination.

Sir WILLIAM MULOCK. Does he think he is living up to his oath of office as a member of the cabinet if the gentleman betrays the premier? However, the matter is before the hon. gentleman. Since he has asked me to discuss his history, I give him this opportunity now to justify to the country, if he can, his action on that occasion. We are all desirous of having his explanation. We want him to tell us why, having with his friends sat for ten years in Council with Sir Mackenzie Bowell, having joined in the formation of his government, having served with him for all that time, he should, between the meeting of the House on Thursday and the following Tuesday, the date of the reassembling of the House to take into consideration His Excellency's address—we want to know why it was that he then sprang that surprise on Sir Mackenzie Bowell, and committed that act which is without a parallel in Canadian history, and I trust ever will remain without a parallel ?

Hon. JOHN HAGGART. It was not my intention to take part in the present debate; I would have been satisfied with the part played by my hon. friend from North Toronto (Mr. Foster) and my hon. friend the Postmaster General. It was the Postmaster General who commenced the attack. There was no necessity at all for that speech of his, referring to the past history of my hon. friend. He got exactly what he deserved.

Sir WILLIAM MULOCK. I beg your pardon, the hon. gentleman forgets. If we are going to extend this peculiar debate—the hon. member for North Toronto interrupted me by a very offensive observation, which was without foundation in fact.

Mr. FOSTER. What was the offensive observation, I ask my hon. friend?

Sir WILLIAM MULOCK. 'Hansard' will tell it.

Mr. FOSTER. The hon. gentleman does not know it.

Mr. HAGGART. I listened carefully to the Postmaster General's reference to my hon. friend, and I think it was totally uncalled for, and he got the dressing which he richly deserved. The hon. gentleman, for the purpose of finishing off my hon. friend from North Toronto, refers to an episode which took place in 1896 and to my hon. friend's part in that affair. He says it was a crime of which history furnishes no parallel, that nothing like it ever occurred in the history of any country before.

Sir WILLIAM MULOCK. Do you know of any?

Mr. HAGGART. If the hon. gentleman knew all the facts in relation to it he would be one of the first to justify my hon. friend from North Toronto. A correct statement has never been made of that affair, but very likely it will be made shortly. You know, Mr. Speaker, the position of the Conservative party in 1896; you know the difficulties that the hon. gentleman who was at the head of the government had in carrying on the affairs of government. There was a question which arose in reference to school affairs in the Northwest. First of all, we had a gentleman who left the government, left his leader at that time, as the hon. gentleman says, Mr. Clarke Wallace, a member for one of the Yorks. Afterwards Mr. Angers left the government, then two other French gentlemen, Mr. Ouimet and Sir Adolphe Caron, followed suit. They all had a right to do it ; they resigned from the government for different reasons. Afterwards there was an attempt to reconstruct the government. Sir Charles Tupper was in this country. I do not know the reasons why he came out here. My own idea is that he came out at the request of Sir Mackenzie Bowell and of some of his colleagues in the government. But there was no secret about it. It was well known then that Sir Mackenzie Bowell—I have no objections to that hon. gentleman, I have the kindliest feelings for him—it was well known that the party at that time, a party which had a majority in the country in every province, was dying for lack of good management, for want of a federal leader at Ottawa. It was with the consent of Sir Mackenzie Bowell, as well as the rest of his colleagues, that Sir Charles Tupper was asked to form a government. These are the facts. All were loyal to Sir Mackenzie Bowell until it was known by his colleagues that he was a party to Sir Charles Tupper taking the leadership of the Conservative party. From day to day, from time to time, like a sick girl hanging on to life, he did not hand in his resignation as his colleagues in the cabinet expected of him. There was then no other remedy than the remedy that the Conservative leaders, or the colleagues of Sir Mackenzie Bowell, took at that time. They did it, not for themselves. My hon. friend had nothing to gain, he was getting no promotion, nor was I. We may have been wrong, we may have made a mistake at the time, but we did it thinking it was in the best interests of the Liberal-Conservative party and for the purpose of benefiting that party. From that moment to the present day I have never felt sorry for what I did at that time. My

hon. friend performed the same act that I did myself, and I am confident that he did it because he thought it was in the interest of his country, or at least in the interest of the Liberal-Conservative party. There was nothing else left for us to do, and we did it. We may have done wrong, we may have done what the Postmaster General says was not the act of gentlemen. But who has constituted him an authority to say what the conduct of a gentleman should be in reference to that affair? Who has constituted him a censor of the acts of those hon. gentlemen at that time? What I say is this, and I say it for myself and my colleagues, that we acted on that occasion, as we believed, in the interests of the country, and in the interest of the party. For those reasons I now rise for the purpose of defending my hon. friend. When the whole history of that transaction is written, there will not be a single man from one end of this country to the other who can point a finger at any of these gentlemen and charge them with having done wrong.

Mr. FOSTER. I do not know that I have a right to ask it, but I would like to say about twenty-five words in answer to my hon. friend in a very cool and collected way—not by way of recrimination. It is not an interesting thing, and probably it is not a very pleasant thing, to hurl these recriminations against one another as representatives of a party. My hon. friend opposite has followed me from that time to this with his peculiar version of the affair of 1896, not only in parliament, but to a certain extent in every contest in which I have engaged, like a sleuth hound on my track.

Sir WILFRID LAURIER. Order.

Mr. FOSTER. I do not think that is out of order.

Sir WILFRID LAURIER. Like a sleuth hound.

Mr. FOSTER. Yes.

Sir WILFRID LAURIER. Is that the modern way?

Mr. FOSTER. My hon. friend knows what a hound is for. He is to track his prey by whatever instincts and capabilities Providence has endowed him with. In my contest in North Ontario, my hon. friend did me the honour to track me. He followed me from concession to concession, and his chief stock in trade was this particular version of his as to my not acting as a man and a gentleman in 1896. Now, it is just as well that I should state once and for all in parliament, very briefly, just what I did and just what I conceive I was right in doing. That is all I want to do. From that time in 1896 up to this present moment, although I have been hounded—as I have stated—I do not find fault with any one for doing that if he thinks it is a good piece of party politics—although it has been thrown in my teeth everywhere I have never yet stood up in public when attacked, I have never once allowed myself to give the version plain and clear of my action at that time. Why? Because I did not think it was in the interest of the public life of this country for me to do it. I felt that I would rather take the implications and the charges and whatever penalty came with them than violate what I conceived to be a good maxim in public life, that in these matters we are bound by our oath and our position as privy councillors to give our reasons to His Excellency and to let them bide there. Now, the first charge that my hon. friend brought against me was that I came into this House on the prohibition platform and that I repudiated my principles later. This is incorrect in every particular. I came into this House and I take now the opportunity of stating that I came into this House as a teetotaler in practice, as a prohibitionist in principle, well known because these had been my principles, right or wrong from my youth up. My canvass in the county in which I won my first election was absolutely outside the question of prohibition, and there is no man in this country that can say to the contrary. My published circular to my people, my call to them and my whole canvass were on the question of the policy of the government in regard to trade matters particularly and that alone, and I came to this parliament as an independent Conservative in favour of the National Policy. The hon. gentleman says that a man may have individual opinions, but that when he becomes a member of a government he may not be able to make his opinions effective and he excused himself in two particulars for his not having carried out as a member of the government what he held to be right as a private individual. Will not the same reasoning apply to me?

Sir WILLIAM MULOCK. But the hon. gentleman abjured his principles.

Mr. FOSTER. The hon. gentleman abjured his principles? It does not lie in the mouth of my hon. friend to make that statement now nor did it ever. If the hon. gentleman can say that I have violated my total abstinence principles let him stand up and bring the proof. If he can say that I have violated my prohibitionist principles let him stand up and say so. I am not such a ninny or so absurd, or so wanting in common sense as to think, however strongly a man may hold individual prohibition opinions that he is able to put them upon the country unless the majority of the electors will stand behind his back. I never thought so, never said so, and never tried to. My hon. friend justifies himself by saying that he could not carry out in the government individual opinions because he could not impress them upon the majority of the government. It is within the judgment of the

House whether there has ever been a time in the history of this parliament when I or any other prohibitionist could impress our views on the majority of the House with sufficient strength as to bring about the enactment of a prohibitory law.

My hon. friend says that I was no gentleman in that I swore an oath of allegiance to my premier and broke it. I was not aware of swearing any oath of allegianc to my premier, nor do I think my hon. friend is aware of having sworn any oath of allegiance to his premier. Am I not to be allowed to leave the government if I differ from it on points of policy or principle ? Is a man to be branded as no gentleman because, differing from what is the policy and principle of his government, he leaves it ? Did not Mr. Angers, Mr. Ouimet, Sir Adolphe Caron and Mr. Clarke Wallace leave the government ? Were they no gentlemen ? There have been gentlemen who have left the government of the right hon. Prime Minister (Sir Wilfrid Laurier). And why ? Because they differed upon points of policy and upon principle from his government. Did they violate their oaths of allegiance to the premier or were they no gentlemen because they left ? The statement of my hon. friend will not hold good in that respect. At whatever time a member of the government feels that he is out of accord with his premier and the government of which he is a member on points of policy or administration, he has a perfect right to send in his resignation and he retains all his attributes of a gentleman and an honourable man in doing so. I did not leave the government for financial preference or personal emolument. When I left the government I left my position and I left my salary. I gave my demission in to the Governor General. I justified, as we all did, my resignation by the explanations which I made to the Governor General. I presume the Governor General who heard our explanations and received them did not apparently come to the conclusion that we were no gentlemen or that we had violated our oaths of allegiance as was stated by my hon. friend for that very same Governor General made us again members of the following government without stain and without reproach. Now, what does my hon. friend wish me to do ? What would he have done, I venture to ask him, if he were in the same position as I, not that I think he is apt to be in such a position ? He hangs on pretty thoroughly and pretty closely, but suppose my hon. friend came to the conclusion that he could not agree with his premier on some line of public policy, would he have violated his standard of gentlemanly conduct if he had frankly told the premier so and left ? Before I or any of my colleagues left the government, our premier knew our position and had it within his own hands. Would my hon. friend be not acting the part of a gentleman because, if he disagreed with his premier to-day or to-morrow, he left the government, or, if he said : As an honest man I cannot agree with you on this question of policy or principle, and I hand in my resignation ? He will not say so. Therefore, the charge he urged against me in this respect has no force at all.

By what right did he call this a conspiracy ? Does the hon. gentleman, himself, know the circumstances of the case ? A reasonable man or a careful man will not make a statement of that kind except upon thorough knowledge. What thorough knowledge has my hon. friend of the circumstances of the case ? Has he any ? Was he within the secrets of the Council ? Has he been made the bosom friend and confident of any member of the government of that time ? I venture to say that he has not. On what authority does he stand up here and say that this was a conspiracy, not knowing the facts of the case, not knowing a single one of the facts of the case ? So when you come to reason fairly and carefully on the premises of my hon. friend they do not hold water. So far as I am concerned that is the statement of my position. I make it here in the House and I apologize to the House for having had to take up their time to make it, but it has been often urged outside of the House and up to this time I have never taken occasion to vindicate myself by making a statement. When it was brought up and elevated to the dignity of what I might call a front bench question, I thought it was only fair for me to ask my right hon. friend and the House to indulge me in making this plain statement of the affair.

Sir WILLIAM MULOCK. The hon. gentleman has asked me a question and I presume I shall be allowed to reply to it. I am pleased to recognize the more moderate manner in which he has endeavoured to express himself and I shall try to follow that worthy example.

Mr. FOSTER. That is right.

Sir WILLIAM MULOCK. See the effect of good example and of bad example. My hon. friend asks me on what authority I stated that there was a conspiracy. I made the statement upon the authority of Sir Mackenzie Bowell.

Some hon. MEMBERS. None better.

Sir WILLIAM MULOCK. Sir Mackenzie Bowell made a public statement—he did not make it to me—which appeared in the press of the day charging these gentlemen with being a nest of traitors. I do not know what authority that is but it is sufficient for me because he was the premier. I would call attention to the violence of my hon. friend's remarks. No one questions the right of any member of a government to resign. It is his duty to resign if

he is not in harmony with the policy of the government, but my hon. friend has not explained this point. The question is not whether a man may or may not properly resign ; the question in this case is to explain the coincidence of seven members of a government resigning after the House was called together, after the speech from the Throne had been presented and before it had been taken into consideration; and during the time the government was in that chaotic state these seven gentlemen using their best endeavours to prevent the leader reforming his government. These are things that have not been explained.

Mr. GEO. TAYLOR. The Prime Minister (Sir Wilfrid Laurier) made a motion to-day asking for two days now occupied by the private members of this House, so that we might get through with the business rapidly. The opposition cheerfully granted the motion.

Sir WILFRID LAURIER. Cheerfully ? My hon. friend (Mr. Taylor) did not hear my hon. friend from Jacques Cartier (Mr. Monk).

Mr. TAYLOR. It was done cheerfully ; your motion carried. One day of the government has been taken up by an hon. member, friend of the government in making an attack upon the opposition which was quite unjustified.

Sir WILLIAM MULOCK. I did not make an attack.

Mr. TAYLOR. And in his last statement he makes a charge against Sir Mackenzie Bowell that I do not think he can justify. He said that Sir Mackenzie Bowell stated that his former colleagues were a nest of traitors.

Sir WILLIAM MULOCK. Not all of them.

Mr. TAYLOR. I never saw that statement published and I think the only justification he had for saying that was some words that escaped Sir Mackenzie Bowell here in this House, after the Speaker had left the Chair, when he was in a passion. I wish to corroborate a statement of the hon. member for South Lanark (Mr. Haggart). I was then as now whip of the Conservative party. I was the go-between between Sir Mackenzie Bowell and the ministers who had left his cabinet. I had consultations with both of them. There was a deadlock ; the cabinet had resigned as they had a right to do. My hon. friend (Sir William Mulock) has no right to charge these gentlemen with trying to prevent Sir Mackenzie Bowell from forming a cabinet. I was in the confidence of both parties and it was at the request of Sir Mackenzie Bowell that I saw Sir Charles Tupper and got them together, and they arranged between themselves and made a bargain that Sir Charles Tupper——

Some hon. MEMBERS. What was the bargain ?

Mr. TAYLOR. There are two or three young members from the eastern part of the Dominion who have seen fit to-day several times to insult gentlemen on this side of the House when speaking. I will ask you, Mr. Speaker, to draw their attention to the fact that they are quite unparliamentary in their conduct.

Mr. LENNOX. And they are not at all discouraged by the Minister of Railways and Canals (Mr. Emmerson).

Some hon. MEMBERS. Order.

Mr. TAYLOR. I want you to inform them—or I shall through you—that it is not the intention of the opposition to put up with it very long. If they want the business of this House to be proceeded with, they must conduct themselves as the opposition always do and treat them respectfully. It was at the request of Sir Mackenzie Bowell that I had an interview with Sir Charles Tupper and brought these two gentlemen together. They made the arrangement that Sir Charles Tupper would conduct the session and then he would become the Prime Minister. That was the agreement that was made and these gentlemen had nothing to do with the arrangements, further until after the arrangement was fully concluded between Sir Mackenzie Bowell and Sir Charles Tupper.

Motion agreed to, and House went into Committee of Supply.

Public buildings—Antigonish, $15,000.

Mr. HYMAN. This is a vote for the purpose of erecting a building in Antigonish to take the place of the building there which is very old. It has been there for a number of years and it has been reported by the architect of the department to be in a very bad state of repair, so bad, in fact, that it would not be in the public interest to attempt to repair it. Therefore I am asking a vote of $15,000 towards the erection of a new building.

Mr. FOSTER. Before this goes through there are certain items of information we would like to have. In the first place what has been spent on that so far ?

Mr. HYMAN. No expenditure has yet been made.

Mr. FOSTER. What is this public building to include ?

Mr. HYMAN. This will house the post-office and customs, and will also include a residence.

Mr. FOSTER. What building is there at present ?

Mr. HYMAN. The old building I spoke of, a frame building 50 feet by 32 feet, two and a half stories high.

Mr. FOSTER. Owned by the government?

Mr. HYMAN. Owned by the government.

Mr. FOSTER. Is that to be pulled down?

Mr. HYMAN. Yes. I think the intention in this case is to use the site on which the old building stands.

Mr. FOSTER. Are the plans made for this building?

Mr. HYMAN. The plans are in course of preparation and are nearly completed.

Mr. FOSTER. What is the estimate of the minister, formed on those plans, as to the cost?

Mr. HYMAN. The estimate for the building is about $25,000 complete.

Mr. FOSTER. Will the minister read the different items ? It is well to have these on 'Hansard,' so that in another year we can have them to refer to.

Mr. HYMAN. The estimates are : for the building itself, $16,000; heating, $2,000; electric wiring and fixtures, $600; fittings and furniture, including letter-boxes, $3,000; fencing and sidewalks, about $500; clerk of works, $1,000; and the usual sum for contingencies, making $25,000.

Mr. FOSTER. What is the population and the postal, customs and internal revenues of Antigonish?

Mr. HYMAN. The population is about 1,900, the postal revenue for 1903-4, $3,702, and the customs revenue, $7,780.

Mr. FOSTER. What do you pay the postmaster there?

Mr. HYMAN. With regard to that question the same duplicity arises from the Public Works Department acting practically as the agent for the other departments. That is information which I have not got.

Mr. FOSTER. We must have that kind of information. We have always had it previously. The ministers have been going along in a very slipshod way in the matter of supplying information for the committee. I want to serve a notice, a very kindly notice, on the ministers that they must not come here and attempt to put their estimates through on information which is altogether insufficient for the committee to accept. We are to be treated as a serious House who have the revenues of the country in their keeping to a certain extent, and it is not just because a minister puts a sum of money before us and says he is going to put up a building of stone or wood, that it must go through. We always had this kind of information in my time, and if the minister hasn't it, he had better shut his book, and let some other minister who has the information that we require take the floor, and we will go on.

Mr. PATERSON. I think the hon. gentleman is asking rather too much. He has a perfect right to ask what the revenue of the post office is; but when he proceeded with the further question as to the salary of the postmaster, it seems to me that he went outside of what has been customary. It would lead to a discussion of how the Post Office Department is conducting its business, and whether it is paying postmasters more than it should, which are questions which can only properly come up when the Post Office estimates are before the committee.

Mr. FOSTER. The hon. gentleman knows a great deal of what other people's ideas and motives are. He will allow me to state my own motive in asking this question. I had no such object as he has intimated. Here is a town of 1,900 people in which it is proposed to spend $25,000 in erecting a post office. We have a great many towns of 1,900 people which have no public building at all, and what I am trying to get at is what the revenues of this town are at present, and what the cost of the administration of this building will be after it is constructed. You are going to have a different kind of post office arrangement, I presume, after you get this building, and it will be more costly. What I am trying to get at is whether it is a wise proceeding to put up a $25,000 building which will afterwards have all these excesses of expenditure which the present building does not have. Another point I want to get at is whether there is any principle in this matter at all—whether every town which has 1,900 inhabitants and is fairly situated in comparison with Antigonish, is to have a public building. I remember that the opposition of former days, among them my hon. friend himself, went very actively into this question of the principle that underlay the policy of erecting public buildings, and protested most vehemently against erecting them in towns of a certain population when other towns of larger population were without them, saying that they were granted by favour and not on a broad public principle. They went so far as to propose a resolution, which was moved by Mr. David Mills, then a member of this House, in which they laid down certain principles that should guide. The names of these public buildings are legion, and we ought to arrive at some kind of policy or principle underlying these expenditures.

Mr. PATERSON. I do not want to intervene in the discussion; but the hon. member made a remark giving notice to all the ministers, and I thought I would draw at-

tention to the matter. I was not imputing any motives to him—quite the contrary. But when he asked a question as to the cost of the management of the post office, I pointed out that that was a subject on which the Minister of Public Works could not be expected to be informed; that would properly come up under the post office estimates. The hon. gentleman says he supposes the cost of collecting the revenue will be increased. I do not think that will be the case. I do not suppose it will be altered at all by the fact of the post office being in a building instead of in a rented building. It was to that one point that I directed my attention, not to the other questions of the hon. gentleman, which he had a perfect right to ask. The remuneration given to the postmaster for the services he renders does seem to me an unreasonable question to ask of the Minister of Public Works.

Mr. R. L. BORDEN. The hon. gentleman's point is that this is not relevant to the estimates. I would regard it as rather difficult to take that position, and I am sure that my hon. friend the Minister of Public Works has over and over again answered questions which have been very much less relevant than that proposed by my hon. friend from North Toronto. We have got somewhat into the habit, during the past few years when the estimates are being discussed in committee, of accepting the stereotyped answer from the minister in charge that he is not in a position to give the information required as that comes under another department. That is one way of getting the estimates through, but perhaps it is not the best after all, and it should be the duty of ministers of the Crown to be present while the estimates are going through ; whether they happen to be in charge of the particular department whose estimates are being discussed or not, so that the House may get all the information required.

Sir WILLIAM MULOCK. What is wanted ?

Mr. R. L. BORDEN. The salary of the postmaster. It is not at all an adequate answer for the Minister of Public Works to tell us that he is not able to furnish the information asked for. The minister of the department who can furnish the information ought to be here to give it.

Mr. FOSTER. The drift of my question is this. What is the position of the post office there now as regards salary and what changes, if any, will be made when the new building is finished and the post office moved into it ? Will the postmaster be put on a different footing and the expenditure increased ?

Sir WILIAM MULOCK. The information will be found in my report in the Appendix, letter ' C.' The items for Antigonish are as follows :

Gross postal revenue..	$ 3,702 01
Number of money orders issued..	1,349
Total amount of money orders..	18,151 50
Total commission received from public	102 26
Number of money orders paid..	2,754
Amount of money orders paid..	66,347 08
Amount of postal notes paid..	1,659 84
Compensation paid the postmaster on money order business..	113 46
Compensation paid to postmaster on saving banks business..	19 23
Compensation paid to postmaster on postal notes business..	13 09
Salary..	1,129 88
Forward allowance..	300 00

Mr. FOSTER. When the new building is completed, will the postmaster's pay be exactly the same ?

Sir WILLIAM MULOCK. Yes, that will not affect his salary.

Mr. FOSTER. What population must a town have to entitle it to a public building ?

Sir WILLIAM MULOCK. There has been no rule laid down by any government. I have no desire to provoke any discussion or to blame any government, but I can remember quite well when we in opposition took very serious exception to the erection of a public building at Lapraire.

Mr. SAM. HUGHES. And at Farnham You held up the House two days on that item.

Sir WILIIAM MULOCK. The Laprairie post office, I think, had a revenue of $500.

Mr. FOSTER. Something like Antigonish.

Sir WILLIAM MULOCK. No, Antigonish has a revenue of nearly $4,000, and I think at Laprairie you put up a building that cost some $20,000. I think it is well to put up public buildings in places where they were required for public convenience. Of course it is one thing to have an idea, as my hon. friend says, and another thing to live up to it, but I think after all this item has a good deal more to commend it than some which my hon. friends opposite sanctioned in the past.

Mr. SAM. HUGHES. Is the hon. gentleman now expressing contrition for his past ?

Sir WILIAM MULOCK. I am afraid that remark is out of order. We have agreed, after our little discussion just now, to bury the hatchet for the present.

Mr. FOSTER. What will be the staff that will be housed there ?

Mr. HYMAN. There will be an office in that building for the government engineers and for the Customs.

Mr. FOSTER. What customs officers are there there now ?

Mr. PATERSON. Only one.

Mr. FOSTER. One customs officer, one postmaster and no engineer at present.

Mr. HYMAN. There is a government engineer there now and also his assistant.

Mr. McISAAC. There are the chief engineer, his assistant, a clerk and a stenographer.

Mr. FOSTER. They are not for Antigonish itself, but for a certain district ?

Mr. McISAAC. For the eastern district, of which Antigonish is the centre.

Mr. INGRAM. Have you an engineer in the post office now ?

Mr. HYMAN. I mean the engineer representing the Department of Public Works in that locality.

Mr. FOSTER. You have an engineer and an assistant engineer ?

Mr. HYMAN. Yes.

Mr. FOSTER. These have no connection with the building ?

Mr. HYMAN. No, but they will be housed there.

Mr. FOSTER. Is there any Inland Revenue office there ?

Mr. HYMAN. No.

Mr. FOSTER. When the hon. minister makes this expenditure of $25,000, which will carry $1,000 for interest besides the cost of a keeper with a pretty large salary to take care of that building and the cost of fuel and lighting and repairs and all that, he is making a pretty large inroad in our revenue. That $25,000 building will have in it, one postmaster, one or two clerks, one customs officer, and an engineer and his assistant. That seems a pretty large sum to invest in a building to house that number of the country's servants.

Sir WILLIAM MUOCK. But it is not merely put up to house the officials. Antigonish has a population of 1,900, and the public will have free access to the post office and the other offices, so that they will utilize the building to a considerable extent.

Mr. SAM. HUGHES. Can the hon. gentleman give us an estimate of the amount of public money expended in this country on wharfs and breakwaters and for various other purposes in addition to this public building within the last eight or nine years?

Mr. HYMAN. I am afriad if I had tried to prepare that class of information with regard to these votes, it would have taken some time. The question is not such as one would expect to be asked in putting through a vote of this kind, and therefore I am not prepared with the information.

Mr. FOSTER. So far as I am concerned I have all the information I want with respect to this vote. But, as we are considering votes for other public buildings, opportunities may arise for the minister to state what principle or policy he intends to follow hereafter in these matters.

Mr. HENDERSON. Has the minister fixed $25,000 as the entire cost of this building and its fittings, or is this only an estimate which may be exceeded by ten or twenty thousand dollars ? I believe that in the erection of these public buildings, the minister, in the first place, should determine how much money he is ready to expend on a public building in the particular town for which it is intended. It seems to me that he proposes here to spend a pretty large sum for a town of only 1,800 population. However, we will let that go. What I desire to know is whether this amount is the outside limit. Has the minister instructed his architect, or whoever is to have supervision of this work or the making of the plans, that $25,000 must complete the building, with lighting and heating appliances and all its internal fittings ? If the minister has not done so, I think he ought to inform the House that this vote is simply a preliminary step. In bygone years, I have discussed this question. The Minister of Public Works (Mr. Sutherland) for whom the present incumbent is acting temporarily, told us last year, or the year before, that he approved of that policy and that public buildings should be erected within the cost given. In other words, the minister told us that he would instruct those in charge of these works that in each case they must cut the coat according to the cloth furnished them—that no more cloth would be furnished to complete the garment. If the acting minister has not given that instruction to the officers, I hope he will be candid enough to tell us that we may know whether this $25,000 is to be the total amount expended on this work, or whether we may expect to be called upon to vote a very much larger sum. I shall feel it my duty to oppose with all my power the estimate for every public building unless that principle is applied. Unless that principle is applied, we cannot tell in what expenditure we are involving the country. Some years ago I advocated this principle very strongly. I also advocated the principle that in small towns the size of Antigonish, public buildings should be erected for a smaller sum than is here proposed. I think that a building sufficient to meet the wants of a town of this size might be provided for a very much smaller sum. When we think of the enormous number of incorporated towns and villages in this country that have not had a dollar of public money expended within their borders—and at the rate at which we are going will not for fifty years to come have a public building of any kind—the condition is alarming. Unfortunately, in the county I have the honour to represent,

we have not a town as large as Antigonish —possibly 1,600 or 1,700 is the largest town we have, and we have five of about the same size. To all appearances it will be many a long day before that county will have the opportunity of having money expended on public buildings within its borders, though, I am sure that it is just as important a county as Antigonish. I would be glad if the minister would take all these matters into consideration, and would not be guided simply by some special reason for giving one town a public building and, because that reason did not apply, refusing it to another town. Now, in the case of Clinton, I have it on the authority of the late member for West Huron that when he spoke to the architect of the Public Works Department with reference to the estimate for a post office in that town—a post office which the former Minister of Public Works, Hon. Mr. Tarte said, was to be erected as a model post office at a cheap rate, to include a postmaster's residence and so do away with the necessity for any caretaker besides the postmaster—the officer of the department said that the policy of the department was not to make plans and specifications for a building costing less than $10,000. I would like to know who runs this government and this country. It does not seem to be even the ministers. The country seems to be run and the expenditure fixed by the departmental officers. I do not think it lies in the mouth of any officer of the government to say that he will not make plans and specifications for a building costing less than a certain sum, even though parliament may consider that sum all that is necessary. If that is the rule of the department, I am sorry that the minister has not better control of the affairs committed to his charge. If I were Minister of Public Works—which I never expect to be—I would quickly tell that officer that I had no further use for his services, and that I would put in a man who could make plans and specifications for a building costing whatever sum I thought necessary to spend upon it. Of course, we must hold the minister responsible for the conduct of his officers. As I have said, if the departmental officers will not conform to the requirements of the ministers, it will be a very difficult matter indeed for this House to control the public expenditure. I do not know who the officer was who made the statement to which I have referred, but I think the time has gone by, if it ever existed, when officers of the department should dictate to this House or to the minister what the cost of public buildings should be. The minister should lay down as a principle that the estimate for a public building must be adhered to. And we must hold the minister absolutely responsible for carrying out the construction of public buildings within the estimate, or we can exercise no control over public expenditure.

Mr. HYMAN. I am sure there must have been some misunderstanding as between the late member for West Huron and the hon. member for Halton (Mr. Henderson), if the impression was conveyed that officers of the department would not draw plans for any building for which the minister had given orders. It may be, in the case which was under discussion, that the chief official of the department who has control of the erection of buildings, thought that it would have been impossible to construct a building for the services which it was proposed to make it for, at a less sum than $10,000. In the case to which the hon. gentleman refers, the town of Clinton, the actual construction of the building cost $9,650. So far as the estimate of the building is concerned, I want to say this, which is general in its character, that when this House has given its fiat by a majority that a public building shall be constructed in a certain place, it behooves us to put up a building of such a character that it will be a credit to the place in which it is erected. It is well understood that public buildings cannot be built of the same character as many others. Possibly, the officers of the department may err occasionally in making a building too heavy, possibly they are putting too much money into it. But, speaking with the responsibility of acting Minister of Public Works, I may say that I think that is a good fault, in the long run it saves an expenditure upon the buildings in the way of future repairs. I think, taking everything into consideration, it is in the best interest of the country that when we erect a public building it should be of a character which will do credit to the government. So far as the estimates are concerned, I have taken great care in having them properly prepared. I was assured by the officers of the department that a building such as is requisite here can be erected for the sum of $16,000. I have already given to the House, and it is on the 'Hansard,' the estimates of the officer for that building. Now, it is to be remembered that the cost of a building of that character, for a custom-house and post office, with the cost of furnishing the building separately, may be much larger than the cost of any other building in the locality where it is erected. I acknowledge that when this House is voting money they are entitled to all that information, and, so far as I am concerned, I hope to be able to keep the expenditure within the estimate. There may be circumstances in a large public building which may require the expenditure to exceed the estimate, but I can assure the House that special care will be taken to keep the expenditure within the estimates which are voted by the House.

Mr. FOSTER. When was this Antigonish building decided upon ?

Mr. HYMAN. The question of erecting that building has been pressed upon the attention of the department for some time. For two or three years there was a question as to whether it would be better to repair it or to build a new building. The last reports we have say that the sills are so rotten that portions of them can be pulled away by hand. The building has been getting into a bad shape. The government own both the site and the building.

Mr. DANIEL. Of what material is the new building?

Mr. HYMAN. It is to be a brick structure on a stone foundation.

Mr. GANONG. Now that the government own the site, I think this proposition is still more unjustifiable. A more ridiculous expenditure, it seems to me, could scarcely be conceived of. We are not here merely to build a monument to the respected gentleman who has the honour to represent Antigonish. Here is Antigonish, not even an incorporated town.

An hon. MEMBER. Oh, yes it is.

Mr. GANONG. Then the census lies. It gives the population at 1,838 souls, and we are taking $25,000, in addition to owning the land, to build a custom-house, which, I understand, is also to be used as a post office. We had better put $10,000 into the building, and get accommodation outside for the engineer and his assistants. As the hon. member for Halton (Mr. Henderson) has said, we have hundreds of towns needing accommodation more than this one. I have two or three in my own county, and I do not ask for one-half the amount the government is expending in the county of Antigonish. There is the town of St. Andrews, a very important watering place on the Atlantic sea-board, with a population very nearly equal to that of Antigonish, with a very large revenue indeed; and it has a post office and custom-house in a small wooden building that certainly is no credit to the government. Then there is the town of Milltown, with a population of 2,044. If the Postmaster General would come down there he would be ashamed of the public building in that town. I think this amount should be divided in two, and half of it be given to some other place, if it is desired to do justice. I have in my hand a little circular, I am not sure it was not got up with the complicity of the acting Minister of Public Works. It says 'Vote for a new building for St. George; vote for Mr. Gilmour.' St. George is in my county. I do not see anything in the estimates for that St. George building; but I trust the minister will see his way to carry out the suggestion made in that circular when the supplementary estimates are brought down.

Mr. McISAAC. In many towns with a smaller population than that of Antigonish, in various parts of Canada, public buildings have been provided; at the same time, I am free to admit that many towns with a larger population than Antigonish have not yet been provided with public buildings. But it is a fact that has been recognized by both political parties that Antigonish, according to its population, is a much more important town than many others in Nova Scotia or elsewhere with a greater population. It is the shire town of the county of Antigonish, and has a university, the only university in eastern Nova Scotia. The importance of Antigonish has been recognized, not only by this government, but recognized by hon. gentlemen opposite when they were in power. Away back, some twenty-five years or more, when the policy of erecting public buildings was being inaugurated, Antigonish was recognized as a place where the government should erect a public building. The only difference, therefore, between the two parties in regard to Antigonish is that the Conservative party went about putting up a public building in the wrong way, and the Liberal party has gone about it in the right way. In 1882 the late Conservative government purchased in the town of Antigonish, for the purpose of a public building, an old wooden building used as the St. Francois Xavier College. The authorities of the college undertook to build a brick building in a different part of the town and sold the old building to the then government. I am not finding fault with that at all, except with the way in which it was done. They sold to the government of the day the old building with the lot, for a very moderate sum indeed—But I say the late government went about it the wrong way. They should have done what the present government is doing—built upon that lot a new building of brick suitable for the requirements of the town at that time. But what did they do? They bought the building and the lot, and undertook to repair the old building, and year after year appropriations were placed in the estimates by the late government for purposes of repair, tearing down the walls and building them up again, tearing out the rotten sills, and the roof, and remodelling it, so that it has cost nearly as much, at least half as much, as it would have cost to put up a new building. What is the result?

Notwithstanding all the expenditures that were made year after year and the interest charges accumulating, the result has been that, through age, its condition and wear and tear it became absolutely unsuited to the needs of the post office or of the officers who are occupying the building. I brought the matter to the attention of the government for several years and they refused to do anything. At last they were compelled to send an officer from the Department of Public Works to examine the building, a thorough examination was made of it and it was condemned; so that it be-

came absolutely necessary to erect a new building in Antigonish. As to the cost, as to the dimensions and as to the kind of building that should be put up in Antigonish I desire to say a few words. This is a very important point. Nobody who knows the conditions which prevail there can deny that. It is important that we should have a large building because the resident engineers for the eastern section of the province of Nova Scotia have been located in Antigonish for the last thirty years. The province is divided into two districts as far as public works are concerned. The engineers of the western part are located in Halifax while those of the eastern part have their residences and offices at Antigonish. Therefore this is not used as an ordinary public building for the accommodation of the postmaster and his staff, and the collector of customs and his staff, but a building must be provided to suit the growing requirements of the resident engineers and their assistants not only for the county of Antigonish but for the eastern part of the province of Nova Scotia. The sum which it is estimated this building will cost is not at all a large one. It will be a very respectable building indeed and will afford ample accommodation to these various public officers to which I have referred. The cost of maintenance will not be any more than it was before. We have had to keep a janitor for the last twenty-two years in charge of the old building which, on account of its age, is a very much more difficult building to take care of and keep in proper condition than an up to date modern building will be. I think the estimate for the new building is not a large one. The building will be a very modest one for the requirements of the town.

Mr. GANONG. I think it would be very difficult for any one to get a justification out of that speech. I would like to know if the hon. gentleman had anything to do with the distribution of this circular :

Vote for a new public building in Antigonish.

Mr. McISAAC. No, I never deemed it necessary to refer, even in my elections, to any appropriations made for public buildings or any other work. It was so difficult for the Conservative party to get a man to run against me in the county that they had to import a man from another county for appearance sake.

Mr. W. F. MACLEAN. Well then, you do not need a building.

Mr. McISAAC. No. I do not need a building or a public work of any kind to get votes. But, the town of Antigonish needs it and it is only right that they should get a fair share of the good things that are going.

Mr. SCHAFFNER. Being a new member I am not very familiar with these estimates, but in looking over the appropriations for Manitoba, a country in which the conditions are changing very much more rapidly than they are in the east, I find that outside of the amounts put down for the constituency of the hon. the Minister of the Interior (Mr. Sifton) who represents the riding north of mine and outside of the city of Winnipeg, his right arm, there is only $15,000 in the estimates for public buildings for that great province which is developing so rapidly. I am surprised that any business government——

An hon. MEMBER. You need not be surprised.

Mr. SCHAFFNER. Perhaps it is because I am a new member—but I am surprised that $25,000 should be placed in the main estimates for a public building in Antigonish, a town of 1,800 inhabitants. I think the population has been 1,800 for some time, it will likely be 1,800 for the next twenty-five years, and it is not likely that they will want any additional buildings. I believe this is not a fair estimate for a building in a town of that size in the eastern country. In estimating the probable requirements of a town in the next twenty years with the view of erecting a public building there is no possible comparison to be made between the east and the west. The development of the west is going ahead so rapidly that such comparison is impossible. While a town in the west may to-day have only 1,800 inhabitants the prospects are that in ten years the population will be ten times as great. And we should therefore prepare for the future, but there can be no justification offered for erecting a building in the expectation of an equally rapid development in old Nova Scotia.

Mr. HYMAN. I presume the hon. gentleman (Mr. Schaffner) who has just taken his seat knows that these estimates are not the estimates in which new expenditures are initiated. These are the main estimates. These are revotes and consequently it is impossible to say what may appear in the estimates for the province which the hon. gentleman represents.

Mr. SCHAFFNER. Well then they do not mean anything.

Mr. GUNN. May I ask the hon. Minister of Public Works if it is the intention of the department to provide for the erection of a post office in the town of Seaforth. The post office revenue exceeds the post office revenue of the town of Wingham in the constituency of my hon. friend from East Huron (Mr. Chisholm) yet a new post office was erected in Wingham at a very large cost—$15,000 or $20.000. I am not finding any fault with the expenditure of that money because I believe it was necessary, but I would like to know if the hon. minister has in contemplation the erection of

a post office in our town. I have just arisen to endeavour to obtain this information because many of my constituents are interested in knowing whether the hon. minister intends to erect such a building. I may say for the information of the hon. minister that the post office at present in use in our town is a very old building indeed. It has been in existence for more than a third of a century and a new one has become a public necessity. Complaints are frequent in our town that the present building does not afford the necessary facilities for handling the business there. I am sure that if the hon. minister understood the necessities of the town of Seaforth he would at once conclude to erect a building in that town worthy of the position which it holds in the county. As far as the policy of erecting public buildings is concerned, I see by the estimates that a post office is to be erected in the village of Antigonish in the province of Nova Scotia at a cost of $25,000. It is not my intention to ask the hon. minister to erect a building, costing anything like that sum of money, nor do I believe the people of my constituency desire it. We will be very well satisfied with an expenditure of, say, $10,000. We have a population in the neighbourhood of 2,600, and I am perfectly confident that if the hon. minister would see to it that an amount of $10,000 was included in the estimates our people would be very well pleased and the probabilities are that when the next general election comes around they would not return a Conservative representative, but would send a follower of the government.

Mr. HYMAN. I shall be very glad indeed to take into consideration any representations which the hon. gentleman (Mr. Gunn) may make as to the necessity of a public building in the town of Seaforth. Speaking from memory I do not think that the county of Huron has done so badly in the way of public buildings.

Mr. SAM. HUGHES. It is a large county.

Mr. HYMAN. Quite true, but there are other large counties. There is a public building at Goderich, another at Clinton and another at Wingham.

Mr. SAM. HUGHES. But, the hon. minister——

Mr. HYMAN. May I be permitted to say a word once in a while without being interrupted?

Mr. SAM. HUGHES. I will not interrupt the hon. minister if he is so fastidious.

Mr. HYMAN. I am not fastidious at all. On almost every occasion on which I rise to speak I am interrupted. Surely the hon. gentleman can allow the county of Antigonish a public building. There are three in Huron and if the hon. gentleman has any representations to make in regard to a public building at Seaforth I shall be glad to listen to those representations.

Mr. SAM. HUGHES. I was going to remark to the minister, who is very fastidious—he is not always so fastidious—and if he was not so fastidious we might make better progress——

Mr. HYMAN. Mr. Chairman——

Mr. SAM. HUGHES. I was going to suggest to him that in enumerating the public works carried out in Huron he omitted to mention some harbour improvements in Goderich. That is a very convenient omission. I would take the opportunity of pointing out that Seaforth has an income from the post office of $1,000 more than Antigonish and the minister might properly see his way to spending $1,000.

Mr. INGRAM. I would like to put on record the customs revenue of Antigonish. The receipts were $1,024.03. You can add that to the post office receipts and you have the grand total.

Mr. HYMAN. Did I understand the hon. gentleman to say that the customs receipts are only $1,000 ?

Mr. INGRAM. That is the amount given at page 745 of the Auditor General's Report. If this report is not correct he can settle that with the minister.

Mr. COCKSHUTT. The minister was in Brantford during the recent election campaign and viewed our post office at that time. It cost about $25,000 according to competent experts. We have a population of about 19,000 and we have received no additions to the post office since its erection. It houses the Post Office Department, the Customs Department and the Inland Revenue Department, which together produce a revenue of about $350,000 per annum. We have had no expenditure there on public buildings for a great many years. The avenues for Dominion government expenditures in Brantford are very limited and we think that on the two services which we have, the militia and the post office, we are not receiving at all what is due us. In bringing this matter before the attention of the Postmaster General the other day I was referred to the Minister of Public Works, and as the estimates of that minister are now under discussion I would like to ask him if during his recent visit to Brantford he thought that post office commensurate with the size and importance of Brantford, and if he thinks that coat of paint applied to the outside and some little alteration on the inside of the post office are sufficient for a city the size of Brantford, producing a revenue I have mentioned ? I would also ask him if it is his intention to afford increased accommodation there ? I think we are entitled to a better building there and I would ask the hon. gentleman

if after his recent visit he does not agree with me ?

Mr. HYMAN. While we are wandering rather far afield I shall briefly discuss with my hon. friend the question which he has raised. I did visit Brantford, I did see the public building of Brantford. I would not like to say that it is such a building as I would like to see the Department of Public Works erect in Brantford. There have been some expenditures made on that building. I interviewed, I think, the proper parties there, that is the custom house officer and the postmaster, and they assured me that if these expenditures were made upon the building it would vastly improve the service they were able to render. The hon. gentleman forgot to tell the House that the Department of Public Works are making a large expenditure in Brantford. He says they are practically making no expenditure there. I was pleased to see the drill hall there, I think it is a credit to the city of Brantford. There is an expenditure on that building and in these very estimates we are asking a vote for a continuation of this work. I think if the hon. member (Mr. Cockshutt) wants to be fair he should thank the Department of Public Works in reference to that public building. I did not suppose it would be fair to proceed with the two public buildings at the present time, but I do not hesitate to say that I think the time is coming when it would probably be to the public interest to have a better public building at Brantford. In the meantime certain expenditures are being made on the building and I was told by the officers there that, temporarily at any rate, they will meet the requirements of the people.

Mr. PATERSON. I find that the customs duties collected at Antigonish last year were $7,702.17.

Mr. HYMAN. That is the figure I gave the House.

Mr. COCKSHUTT. The question I raised was not in connection with the drill hall or armouries, but with the post office. I stated that there had been an expenditure to provide for increased accommodation in that building. I did not refer to the other. I think the hon. minister (Mr. Hyman) misunderstood me. I am willing to admit that there is quite an expenditure going on in connection with the armouries but I was referring particularly to the post office building, housing as it does that department as well as the Department of Inland Revenue and the Department of Customs.

Mr. INGRAM. What is the amount of the customs collections at Antigonish for 1903-4 ?

Mr. PATERSON. I just read it, $7,000 and something.

Mr. INGRAM. For what year ?

Mr. PATERSON. For the fiscal year ending June 30, 1904.

Mr. INGRAM. Will the hon. gentleman turn up the Auditor General's Report ?

Mr. PATERSON. It would not make any difference, these are the figures.

Mr. INGRAM. It makes some difference to members of the House. These are the figures given in the Auditor General's Report.

Mr. PATERSON. You will find the figures in the trade and navigation returns for the different ports.

Mr. GUNN. While the Minister of Customs is looking into that matter I would like to return thanks to the Minister of Public Works for the promise that he has made me that he will give this matter some consideration. As I said a moment ago. I am perfectly satisfied that if the minister was familiar with the conditions in our town he would give us a post office. So far as I know—and I have lived in Seaforth nineteen years—there has not been a cent of public money spent in Seaforth in that time nor for many years before that. I would like to ask the minister what course I should take in order to bring this matter up for intelligent discussion and I desire to again thank him for the kindly way in which he has treated my remarks and the hope he has inspired in my breast.

Mr. R. L. BORDEN. I think the trouble in reference to the Auditor General's Report is that the figures in the line above should be opposite Antigonish. It is exactly the amount my hon. friend said. I think there is a line left out and that the figures that are opposite Annapolis should be opposite Antigonish.

Mr. HENDERSON. Before leaving this subject I desire to say a few words with reference to another post office, and I take the opportunity of doing so while the Postmaster General is in his seat—although of course I do not mean to insinuate that he is not always there. I refer to the post office at Sarnia. On a former occasion, I advised the Postmaster General to erect a post office in Sarnia, putting up a respectable building on a prominent site. As far as the site is concerned he did select the site that in my judgment was preferable, an excellent site fronting the river. A building has been erected there but I do not suppose the Postmaster General is responsible for the size of the building. I am not aware either how much it cost definitely but I was informed last summer when visiting Sarnia that it cost $70,000 to $80,000. What I complain of is that I cannot for the life of me see where $70,000 or $80,000 is put in that building.

For an expenditure of $70,000 or $80,000 we ought certainly to have a building of large capacity. The town of Sarnia is a growing town, a town which will probably double its population within the next ten years, and its requirements will far exceed

those of the present time. During the last summer when I was in Sarnia I went into the post office, and I was astonished to find that the portion of the building alloted to the public was, to my mind, entirely too cramped and narrow and quite unsuited to the needs of a town of a population of 8,000 or 9,000. I was anxious to see where the officers did the sorting, and after being allowed to look in, I was astonished to find that it was equally cramped. The whole building was entirely too shallow. As a matter of curiosity I asked what kind of an office the postmaster had, and I succeeded in having a look into a little box of about eight feet square. I said: ' When I see the Postmaster General I am going to tell him that he ought to be ashamed of himself to put a public postmaster into such a cramped space.' The bulding is not at all in keeping with the town of Sarnia or the site on which it is erected, a site fronting on the River St. Clair, where probably more shipping passes during the year than crosses the Atlantic ocean. On such a site a handsome building of large dimensions would be an ornament and a splendid advertisement to Canada, but I am sorry to say that even with the expenditure of $70,000 or $80,000 that has not been accomplished. I do not say that the government did not spend enough money, but I say that there is some thing wrong in the construction of these public buildings when the people of the Dominion do not get the worth of their money. The result in this case is not what I would expect from an expenditure of so large a sum of money.

Sir WILLIAM MULOCK. I do not know how the building is laid out. I suppose my officers were consulted. I was in Halifax some time ago and went into the postmaster's office there. I do not know who erected that building, we or our predecessors, but the postmaster's room was no bigger than an ordinary box stall; I do not think it was more than six feet square. However, I suppose the real point of my hon. friend's remarks is that we have not a large enough building at Sarnia. His complaint is practically that we are too economical. So that it is hard to please him.

Mr. HENDERSON. No, I beg the hon. gentleman's pardon. I did not complain that the government were too economical in the expenditure of the money, but too economical in getting results for the expenditure.

Mr. HYMAN. The building was constructed in the usual way, by public contract. I have never before heard the first breath of complaint against the building. I have always understood that the people of Sarnia are pleased with it and consider it a credit to the town. As a matter of fact, the building itself cost $65,000, and was built by public contract let to the lowest tender. It is a solid stone and brick building. I cannot agree with the hon. gentleman that it would be better to construct these buildings more lightly in order to provide more room for the same money.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill (No. 11) respecting the Columbia and Western Railway Company.—Mr. Galliher.

Bill (No. 13) respecting the Atlantic, Quebec and Western Railway Company.—Mr. Gauvreau.

Bill (No. 18) respecting the Ottawa, Northern and Western Railway Company.—Mr. Belcourt.

Bill (No. 15) to incorporate the St. Mary's and Western Ontario Railway Company.—Mr. McIntyre.

SECOND READINGS.

Bill (No. 39) respecting the Niagara, St. Catharines and Toronto Railway Company.—Mr. Calvert.

Bill (No. 40) respecting the Niagara-Welland Power Company.—Mr. Guthrie.

Bill (No. 41) respecting the Regina and Hudson's Bay Railway Company.—Mr. Scott.

Bill (No. 42) respecting the Vancouver, Westminster and Yukon Railway Company.—Mr. Macpherson.

Bill (No. 43) respecting the Lake Champlain and St. Lawrence Ship Canal Company.—Mr. Gervais.

SUPPLY.

House in Committee of Supply.

Mail subsidies and steamship subventions—ocean and mail service between Great Britain and Canada, $260,000.

Mr. DANIEL. Will the hon. minister (Hon. Mr. Paterson) explain, before we go into the details, what change there has been in this subsidy as compared with last year.

Hon. WILLIAM PATERSON (Minister of Customs). I understand there has been no change in this item.

Mr. W. F. MACLEAN. No chance, then, of an improved mail service between Canada and Great Britain ?

Mr. PATERSON. When the turbines are running, faster time will be made.

Mr. MACLEAN. One turbine will not effect that.

Mr. PATERSON. There will be two.

Mr. R. L. BORDEN. When does the hon. gentleman expect the new steamships to be in operation ?

Mr. PATERSON. One on the 23rd of March and the other in April.

Mr. W. F. MACLEAN. What are the terms as to speed ?

Mr. PATERSON. Seventeen knots.

Mr. W. F. MACLEAN. How many days for the trip ?

Mr. PATERSON. Six in summer and six and a half in winter.

Mr. DANIEL. Has the new style of steamer been tested yet ?

Mr. PATERSON. I believe so.

Mr. DANIEL. Was the result satisfactory ?

Mr. PATERSON. Quite so, I understand.

Mr. HENDERSON. Will any of the vessels subsidized under this item be fitted up with cold storage accommodation for the carriage of perishable products ?

Mr. PATERSON. All are so fitted up.

Mr. HENDERSON. Will they be made serviceable, or will they be no improvement on what we had last year or the year before ?

Mr. PATERSON. I have here a memorandum from the Allans saying that they have been improved.

Mr. HENDERSON. I ask because we remember that last year an hon. gentleman who, I regret, is not in the House at the present time, and who was very conversant with the shipping interests of this country, especially the shipping of perishable products, made a very serious complaint on the floor of this House, against the character of the equipment for the purpose of carrying perishable goods from Canada to the old land. I am glad to hear the minister say that an improvement has been made and that better facilities will now be afforded the fruit-growers and agriculturists of this country for the carriage of these perishable products.

Mr. PATERSON. I think it was with reference to the very statement made by the hon. gentleman that has been alluded to, and who was a member of the House at that time. The Allans were communicated with, and perhaps I had better read the answer that he received to his communication calling their attention to what had been said. It was addressed to Mr. O'Hara, of the Department of Trade and Commerce :

Montreal, October 4, 1904.

F. C. T. O'Hara, Esq.,
Department of Trade and Commerce,
Ottawa, Ont.

Dear Sir,—We duly received your various communications in this matter. We have also read carefully the printed sheets containing the debates in the House of Commons on this subject, and more particularly the statements made by Mr. Smith, M.P.

When we entered into contracts with the government to furnish refrigerator stowage, the temperature most suitable for butter was thought to be about 30 degrees of Fahr. and this temperature was provided. Within a short time, however, after the system was in operation butter exporters commenced an agitation for 10 degrees lower temperature. After considerable demur we met this demand by altering all former arrangements, giving additional power and a larger service of freezing pipes.

These alterations involved an outlay of $23,-910.72 as by the specifications and vouchers now before the department, one moiety of which is reasonably due us by the government.

There is now provided on the vessels of our Montreal service refrigerator facilities for the better conveyance of perishable cargo as follows :—(1) compartments for frozen goods at a temperature varying from 20 to 30 degrees; (2) compartments for cheese, bacon, fruits, &c., with a temperature of from 35 to 40 degrees, higher or lower as may be wanted by the shippers of the goods, and (3) compartments with forced currents of external air (inlets and outlets) operated by steam-driven fans.

Details of these various facilities are explained more fully in our recent circulars to shippers, copies of which we inclose for your information. Still more detailed information is given in the typewritten memorandum sent herewith prepared by our Glasgow friends and bearing the date of March 22, 1904.

As stated above, the arrangement to give a temperature below 30 degrees was on the demand of butter shippers. Few of these merchants, however, furnished their goods to the ship at any such degree of cold. We inclose official statements given to us by the Montreal government officers having the matter in charge, from which you will note that out of 31 separate shipments made in July of the current year, only six were delivered to the ship at or below 32 degrees, that six were delivered at and above 52 degrees and that the average temperature of the whole 31 shipments was above 41 degrees. We have more than once suggested that a rule should be promulgated by the department requiring that all shipments should be delivered to the ocean ship at or below the temperature which is to be maintained in the compartment wherein they are stowed throughout the voyage.

The machinery of these compartments is arranged to maintain the required temperature, but is not calculated to reduce the temperature of butter delivered at or above 52 degrees down to the minimum. Such reductions should be made in city refrigerators prior to delivery being given to the ship.

As regards deliveries of refrigerator goods to consignees at British ports, we have (broadly speaking) to complain that consignees are extremely dilatory in receiving their goods; not infrequently they are left on the wharfs for a full day after they have been discharged, and occasionally even two days. We receive occasional statements from our British friends giving details of these delays which we communicate to the shippers.

Respecting the returns made to the department of the temperatures registered by the thermographs, it should be borne in mind that we not infrequently make an agreement with

the shipper fixing the temperature which is to be maintained throughout the voyage in the compartment containing his goods. It may thus occur that while the thermograph registers 40 degrees in a compartment containing butter, our agreement with the shipper may nevertheless have been carried out. We have explained this matter to your Montreal agents who called our attention to the circumstances that butter was being carried at a higher temperature than our contract with the government required.

We return the papers sent us by you whereon we have penciled the information asked for.

Any further information you may require in the premises will be cheerfully furnished.

Yours truly,

(Signed) H. & A. ALLAN.

Then follows particulars of the shipment, which I need not read. The hon. member for Halton (Mr. Henderson) will observe that it was owing to the comments that were made last session by the late member for South Wentworth (Mr. Smith) that this letter is written, and these are the explanations they give. It would appear from this that improvements have been made at additional cost to themselves. But they point out that the steamers cannot be held alone responsible, that the shippers themselves are partly to blame, as they deliver goods at a higher temperature than they should.

Mr. W. F. MACLEAN. Did the government pay half of that increased cost?

Mr. PATERSON. No, it was not entertained; they had to pay it themselves.

Mr. HENDERSON. I am rather pleased at the statement made by the minister, so far as it goes. It seems to meet the case very well. However, in my recollection, one of the serious complaints made by the late member for South Wentworth, and which we are very glad has been taken notice of by the shippers, was that these agreements or conditions were not carried out during the entire voyage across the ocean; that whilst butter was put on board ship at a certain temperature, which was maintained for a day or so, this temperature was not kept up during the entire voyage, and the result was disastrous to the shipper. Now, to my mind, the Department of Trade and Commerce should give special attention to that point, and see that all the requirements which entitle them to this subsidy and all the promises made are carried out through the entire voyage, so that butter, for example, will not be put on board ship at a temperature of say 30 degrees and be brought down during the first day or two to a temperature of 20, but that that temperature should be maintained during the entire voyage, instead of allowing it to run up probably to 30 or 40 again, to the injury of the goods. I am glad attention has been drawn to the fact that when goods are landed on the other side consignees have been neglectful in looking after those goods. I scarcely see that the department could be held responsible for that, providing due notice is given of the arrival of those goods. It is certainly, to my mind, the duty of the consignee at once to take the goods away, and not allow an article such as butter to remain upon the dock at Liverpool for possibly ten or eleven days. I think, in some circumstances, goods were allowed to remain that length of time, of course to the great injury of the article, and to the detriment of the entire Canadian industry. I hope the department will take steps to see that these conditions are complied with throughout the entire voyage, and that we will not have a renewal of the complaints that were made last year—that that feature of the contract was overlooked. I would ask the Minister of Agriculture if he is still of opinion that 20 degrees of cold is sufficient for the transhipment of butter? I understood last year he had arrived at the conclusion that it was necessary to bring it down to 10 degrees. It seems that the provision here made is for 20.

Mr. FISHER. From the investigations I have made, I am of the opinion that 20 degrees is a cold enough temperature in which to carry butter from Canada to England in a steamship. The butter is put upon the market as soon as it gets to England, and there is no particular reason in having it below 20 degrees.

Mr. HENDERSON. There seems to be one other matter that requires the careful attention of the department, and that is that ample provision should be made for forwarding these perishable products to the place of shipment. I do not know what arrangement has been made with the railway companies, but it would certainly seem very essential that some method of refrigeration be provided, so that the goods will arrive at the port of shipment at the degree of temperature at which the shipowners, Messrs. Allan, have referred. If butter or other delicate articles are presented to them for shipment at a temperature which will be almost destructive, we can hardly expect that they can provide means by which their quality or utility will be restored. I am not aware whether the hon. minister has any system of providing refrigerator cars for the purpose of forwarding goods, such as have been referred to, to the point of shipment.

Mr. FISHER. In reply to the hon. gentleman, I would say that we have, but perhaps it would be better when my estimates come up to go into the details of that question.

Mr. SPROULE. There is another thing disclosed by this correspondence, which, it seems to me, is worth while referring to. That is the complaint that there were no thermographs in the various chambers. There is nothing said about them in the

correspondence, listening casually, as I did, to it being read. The question was asked if all necessary provision had been made in that direction and strenuous complaint was made by my hon. friend from Wentworth (Mr. Smith), that there were only a certain number of thermographs provided for each vessel, that they were placed in some of the chambers but not in others, and that there were no means of registering the temperature from day to day in these chambers. Then, the correspondence discloses this further fact that the Messrs. Allan claim that they have fulfilled their agreement in regard to the temperature at which they were to keep the chambers for butter. They were to keep the chambers at thirty degrees but they point out that the government, after making the contract, found out that ten degrees lower would be a better temperature for butter, and the hon. minister told us last year that down as low as eleven degrees would be a better temperature. If that be the fact then the government are to blame because their expert must have known before the contract was entered into which was the most suitable temperature. It turns out that thirty degrees is not the best temperature by any means, and while there is a difference between the hon. minister and those who complain regarding these arrangements the two facts which are brought out by that letter are that the Allans have fulfilled their contract and that the fault was with the hon. Minister of Agriculture in entering into the contract without providing for a proper temperature but in providing for a temperature about ten degrees above what it ought to have been.

Mr. PATERSON. I am told by the deputy that the hon. member for Wentworth, last year, in giving his figures had taken the records of vessels not subsidized by this government at all—not all of them but a good many of them. He quotes as instances of vessels not properly equipped, some of those which were not subsidized by the government at all and therefore the government would be in no way responsible and have no control over them. If a shipper saw fit to ship on a tramp steamer or a regular Trans-Atlantic liner, many of which were not subsidized by us at all we would not be responsible under those circumstances. If that were so the statement of the hon. member for Wentworth would have to be dissected in order to find out whether we were paying public money by way of subsidy to steamers that were not carrying out the contract. If they were getting no public money we would have nothing to do with them.

Mr. SPROULE. If my memory is not at fault the question was asked: What steamers are we paying subsidies to and which are operating under government contract? We were certainly dealing with these though there might have been some others included that were not under government contract. The hon. minister was defending what was being done and giving explanations. What we wanted to know was what steamers under government contract were violating their contract and why, if they were violating it, the government did not hold them to it. In the next place we wanted to know why the government allowed their expert to stipulate for a certain temperature as being the proper temperature although the government afterwards came to the conclusion that it was not the proper temperature. There is here disclosed a want of knowledge in connection with this contract that otherwise never would have been admitted by the hon. Minister of Agriculture, because, if there is one thing more than another that has impressed itself upon this House it is that everything is stamped with perfection that emanates from his department.

Mr. FISHER. I may explain that there were two sets of contracts, one made by the Department of Trade and Commerce for vessels which are subsidized by the department and which vessels by these contracts now are required to provide adequate cold storage. There was another set of contracts entered into by my department some years ago with vessels that were subsidized and some not subsidized by the government under the ordinary class of subsidy. But I entered into contracts as the Minister of Agriculture to induce them to equip themselves with cold storage. These contracts lasted for three years. At the end of these contracts these vessels were free of any control by the government. The subsidy contracts made by the Department of Trade and Commerce have been continuous and the vessels operating under these contracts are still controlled to a certain extent by the government. My hon. friend (Mr. Sproule) has spoken about temperatures. I do not know that at the present time it is worth while going into that question but I would point out that a temperature of thirty degrees which was provided for when we first made the contracts for cold storage was the temperature which at that time the dealers in butter wanted, expected and asked for the carriage of their butter. As time went on it developed that butter could be more securely carried at a lower temperature and from time to time we urged upon the steamship companies to make their temperature lower, which they did, as far as they could, with the equipment they then had. Our contracts ceased. We had no control over them. They, however, in view of the demand made, lowered their temperature for butter. They have in most of these steamers two or three different compartments. In a great many vessels they have one compartment for the carriage of butter or other articles which can be

frozen. The temperature of that compartment is brought down to about twenty and sometimes a little below. They have another compartment for products that, while they want to be carried cold, cannot bear to be frozen—cheese and fruit, for instance and many meats which the people do not wish to have frozen but want to have chilled. The temperature of these compartments has been maintained at from 32 to 36 degrees. Then, they have another set of compartments which are described in the Messrs. Allan's letters. Those are compartments through which chilled air is forced. The temperature in these compartments is not required to be as low as that of the compartment to which I last alluded. I forget for the moment what the exact temperature is but I think it is expected to be below 45, speaking, subject to correction, from memory. In any discussion of the temperature in a compartment it is absolutely necessary to know what the contents of that compartment are before you judge the temperature. I do not wish particularly to enter into a discussion but a statement has been made in regard to what was said by the hon. member for Wentworth last session. He made some statements here in regard to what the temperatures were in certain compartments and pointed out that they were higher than they ought to have been.

Unfortunately I was not present in the House when that statement of his was made, but afterwards I had that statement analysed and I found that in a great many instances, not absolutely all but I think I am safe in saying in a large majority, of instances which he quoted where the temperature was too high, he was quoting temperatures of chambers in which not butter was being carried but fruit and cheese, which would have been destroyed if the temperature of the chamber had been kept as low as he demanded it should have been kept, and he did that with the fact recorded on the very records which he was quoting that these chambers contained fruit or cheese and not butter. I went carefully over the statements that he made and I regret to say that I found that difficulty in connection with the quotations that he made. I am quite willing to go into that matter at greater length later on and prove conclusively what I am saying if necessary. I point this out now as a quotation has been made from what was said last session.

Mr. SPROULE. In reply to the hon. minister I would say that I saw some of the answers which the minister made and I thought they were rather evasive and not very conclusive. I am not prepared to say that in quoting the temperatures the hon. member for Wentworth (Mr. Smith) in every case specified the contents of the chambers. I was looking over it afterwards and comparing it with the reports and the impression on my mind was that they were pretty accurate. There are two species of contracts here with regard to steamships and the minister tries to shield himself behind the one contract, that made by the Minister of Trade and Commerce, in which a provision is made for cold storage, and he says: 'I cannot be held responsible for these contracts because they are made by the right hon. the Minister of Trade and Commerce.'

Mr. FISHER. I beg pardon, I am not shielding myself at all.

Mr. SPROULE. That was the inference, 'and therefore those made by the Minister of Trade and Commerce are not up to what they should be.'

Mr. FISHER. I did not intend to convey that impression at all although I may have done so.

Mr. SPROULE. That is the inference that could fairly be drawn.

Mr. FISHER. That is not what I intended.

Mr. SPROULE. When the subsidies were voted to the Minister of Trade and Commerce for steamships he was questioned as to whether or not there would be provision for cold storage for the carrying of the perishable products of this country. His answer was: Yes. And on what basis? After consultation with the Minister of Agriculture and according to requirements as given by him. That is my recollection of the answer. Therefore it must fairly be assumed that the Minister of Agriculture would give him correct information as to the requirements of cold storage and the nature of the cold storage that the country required and that the contract would be made on the basis of these requirements, so that these vessels, whether subsidized by the Department of Trade and Commerce or by the Agricultural Department, would be required to provide cold storage adequate and suitable for the requirements of the country. Another thing about that which struck my attention as well was the large number of cases where perishable products went into the vessel at a higher temperature than that which the minister declared to be a suitable temperature.

Mr. FISHER. That is true.

Mr. SPROULE. He had his inspector at Montreal to see that it was properly done. The inspector was appointed for that purpose and is paid for that purpose and it was his duty to report to the Minister at once if these vessels were not carrying out their contract, and then it was the duty of the department to call them to account. Nevertheless we find this in the report of the department, and no effort was made to remedy

this evil so far as I can find. No information was given to the House that any effort was made to secure the carrying out of the contract. In that respect I think the Minister of Agriculture was at fault. I blame him more than the Minister of Trade and Commerce because it does not appear in my judgment to be exactly the duty of the Minister of Trade and Commerce to look after the cold storage chambers in which the perishable products of Canada are shipped.

Mr. HENDERSON. Perhaps we are digressing somewhat from the subject, but I scarcely think that the Minister of Agriculture has been quite fair to the hon. gentleman who represented South Wentworth, who I regret is not in his place in the House as he has been asked to stand aside. My recollection is that Mr. Smith was very careful to obtain all his information from the Minister of Agriculture and if there was anything wrong in the statements made by Mr. Smith I think it must have come from the Minister of Agriculture himself. Mr. Smith was careful to lay his plans for his speech. He put frequent questions on the order paper and obtained the desired information, the data from which he made his remarks. Now I feel quite sure, although it is a matter of recollection only, that the then member for South Wentworth spoke from information which he had obtained from the Minister of Agriculture. Certainly all these thermograph records were obtained in that way—in fact I do not know any other way in which he could have obtained them—and these were the chief foundation for his criticism. I remember quite well that the Minister of Agriculture was not present on one occasion when Mr. Smith delivered a very forcible speech on that subject and we all regretted his absence very much because we would have been glad if the minister had been present to hear what was said and to reply to Mr. Smith. I understood the minister to say that there are two sets of vessels. The Minister of Customs leads us to understand that the Department of Trade and Commerce only have control over such vessels as are subsidized by the government, but I understand that other vessels not subsidized were aided in the fitting up of these cold storage chambers by the Agricultural Department, and therefore they were in receipt of government money and should be responsible to this House for a proper fulfilment of any contract entered into with the department here. I regret that the minister should have cast a reflection on Mr. Smith in his absence because I think on further reflection he will realize that if Mr. Smith was led astray at all it was owing to the fact he had used information obtained from the Minister of Agriculture himself.

Mr. FISHER. I think my hon. friend is doing me a great injustice. I would not have brought up Mr. Smith's remarks if the hon. gentleman had not quoted these statements of Mr. Smith's on this occasion. I did not wish to say anything about Mr. Smith in his absence although he said a good many things against my department in my absence last session.

Mr. HENDERSON. It was not his fault.

Mr. FISHER. It may not have been but I was often present when he did not say these things. He said he based his statements on records in my department. He did, but he did not give the whole statement which these records show ; on the contrary he gave statements which these records did not show, and therefore did not tell the whole truth about the matter. I am prepared to bring these records before the House and to put the matter before the House as I did before the country last fall.

Mr. R. L. BORDEN. When did Mr. Smith make the statements ?

Mr. FISHER. When I was in Winnipeg last summer.

Mr. R. L. BORDEN. I want the time.

Mr. FISHER. I cannot give the date.

Mr. R. L. BORDEN. When was the hon. minister at Winnipeg ?

Mr. FISHER. I have not looked it up to see.

Mr. R. L. BORDEN. How long was it before the end of the session that Mr. Smith made the statement ?

Mr. FISHER. Quite shortly before the end of the session.

Mr. R. L. BORDEN. What does the hon. gentleman mean by shortly ?

Mr. FISHER. A couple of weeks.

Mr. INGRAM. I would like to point out to the hon. Minister of Agriculture that he was present when Mr. Smith made the statements in the House, and he did not contradict the figures given by Mr. Smith on that occasion. Mr. Smith complained that the contract did not contain certain things which it should contain in the interest of those shipping in cold storage, also that the tests provided by the department were made at the beginning of the voyage, but were not carried out to the end. I am surprised to hear the minister say that he had no opportunity to reply.

Mr. PATERSON. That is a question that pertains to the Department of the Minister of Agriculture.

Mr. SAM. HUGHES. The Minister of Agriculture made a statement reflecting upon an hon. member on this side of the House, and I do not think it is the intention of

this party to let it go by until the matter is settled. The hon. member for Wentworth has never been challenged for having made an untrue statement in this House or out of it. I am sorry that we cannot say that of all the persons concerned.

Mr. PATERSON. I have a great many items to be passed, and as the vote for this subsidy appears to be all right, why not let me get on? That subject will come up again.

Mr. R. L. BORDEN. It appears to me that the Minister of Agriculture has said either too much or too little.

Mr. PATERSON. It will come up again. It is extraneous to this vote.

Mr. R. L. BORDEN. Better settle it now.

Mr. PATERSON. I will not be able to get on with my estimates.

Mr. R. L. BORDEN. That is the fault of the hon. gentleman's colleague introducing matters that did not apply.

Mr. PATERSON. I think the hon. leader of the opposition will agree with me that in order to get on with some work——

Mr. R. L. BORDEN. The hon. gentleman will have to control his colleague. He had better send him out of the House while he is passing his estimates.

Mr. PATERSON. I think he was led into making the remarks he did. It will come up again.

Mr. SAM. HUGHES. Let him get up and apologize.

Mr. PATERSON. So far as the Allan line of steamers is concerned, I think hon, gentlemen are satisfied with that. I have some details I could give.

Mr. FOSTER. The trouble seems to be that the discussion has gone on to a certain extent, in which the Minister of Agriculture has reflected pretty severely on an absent member. That is now in 'Hansard' and is going into the papers, and it seems to be unfair for the other side of the case not to have the whole matter discussed at the present time, so that all will go on 'Hansard' and to the public together, as it ought to. I think my hon. friend will have to take the disadvantages as well as the advantages of colleagues. Sometimes they are a great help, but sometimes they are a sad hindrance.

Mr. PATERSON. In all seriousness my hon. friend will see that if what he proposes now is adopted, it will take the committee away altogether from the subject under consideration to discuss an item which must come under investigation on another day.

Mr. FOSTER. But my hon. friend will see that there is butter as well as salt sea in connection with this estimate, because the subsidy carries two things. The vessels have to sail the vast deep, and they have to carry butter and other things in a certain condition, and both are parts of the same contract.

Mr. PATERSON. Quite so, but I think it is not contended that the vessels for which I am asking this vote are not up to the requirements. If that be the case, that disposes of this vote and we had better get on, and the Minister of Agriculture and the other gentlemen can discuss the other matter at the proper time.

Mr. SPROULE. I understand that we were to have cold storage for carrying perishable products. Are the vessels to provide cold storage or not?

Mr. PATERSON. Certainly.

Mr. SPROULE. Then it is absolutely necessary for us to know what kind of cold storage they are going to provide, and whether the government have made a proper contract. The Minister of Agriculture contends that they have done that. We contend that he has contradicted the statements made by Mr. Smith on the basis of the minister's own reports and on the thermographic readings of minimum and maximum temperature given in this House. We believe that Mr. Smith's statements were based on reliable and authentic information. These statements are contradicted by the minister now. Consequently we ought to have it settled whether Mr. Smith or the Minister of Agriculture is right.

Mr. PATERSON. I think the whole matter arose from a remark I made. When attention was called to Mr. Smith's statements, the deputy had just informed me that there were facts taken by Mr. Smith from vessels that were not subsidized by the government, and therefore the government could not be held responsible for them. That remark led to this discussion. But now we are discussing the Allan Line steamers, and perhaps I may as well read the provision for cold storage in the 'Bavarian.'

The compartment No. 5 lower between decks has been divided by a bulkhead on the centre line of the ship, and the starboard chamber thus formed has been subdivided by a bulkhead athwartships. The space forward of the hatch to the water-tight bulkhead, of a capacity of 5,418 cubic feet, should be capable of being maintained at a minimum temperature of about twenty degrees, while the remainder of the space on the starboard side of a capacity 3,211 cubic feet, together with the whole of the compartment on the port side, of a capacity of 8,958 cubic feet, should be able to be maintained at a minimum temperature of about thirty-two degrees as above. In addition to the above, there is also the compartment in the centre of No. 5 main between decks, of a capacity of 4,780 cubic feet, capable of being maintained at a minimum temperature of about thirty-two degrees as before. The arrangement

of piping is such that each of the chambers can be maintained independently of the others, or cut off altogether if required. Total capacity, 22,367 cubic feet.

I have also the particulars with reference to the 'Corinthian,' the 'Hungarian,' the 'Ionian,' the 'Numidian,' the 'Ontarian,' the 'Pomeranian,' the 'Pretorian,' the 'Sardinian,' the 'Sicilian' and the 'Tunisian.' So that the hon. gentleman will see that it is all right so far as this vote is concerned.

Mr. SPROULE. Oh, no, it is all wrong; that is the trouble. We have no information, or comparatively none. The hon. minister reads what should be on one vessel; but does not tell us how much space or what temperature is provided for on the various boats. According to the minister's own statement some products require to be carried at a temperature of 11 degrees, yet the lowest provided is 20. We have not got the contract or any information as to what it contains, which was made with these steamship companies. All that the minister gives us is the spaces contained in one steamship.

Mr. PATERSON. I only gave that as a sample. I said nothing about 11 degrees.

Mr. SPROULE. But I did; and that is just where I say the hon. minister shows they have not made proper provision. The Minister of Agriculture has told us that butter could be kept better in a temperature of 11 degrees than in a temperature of 20 or 30, but the Minister of Trade and Commerce told us that in some of these compartments the temperature is kept down to 30 degrees and in others to about 20. Does the contract bind the company to keep the compartments at any temperature; and if so, what is the temperature, and how much space are they to provide with one temperature and how much with another? What provision is made for the thermographs? How many of them are there, and are they self-registered? Will there be one in each chamber? Where it is possible a register should be kept of the temperature of every day in the voyage, and where the proper temperature is known which perishable fruits and other commodities require, surely it is the duty of the government to provide in their contract for that temperature during every day of the voyage, and for a thermographic registration every day in each compartment. If that were done, and these charts taken out, we could tell whether the temperature is proper or not, and whether the government has made proper provision to carry the farmers' produce as it should be in order to have it on the market in proper condition.

Mr. R. L. BORDEN. I find that the hon. member for Wentworth (Mr. E. D. Smith) made observations on the 29th July other than those to which the hon. Minister of Agriculture referred.

Mr. FISHER. I could not say positively without looking up 'Hansard.' Mr. Smith spoke more than once on this question, but the particular occasion referred to by the hon. member for Halton (Mr. Henderson) was that on which he took the thermographic records and quoted them. Afterwards I was able to take the same thermographic records and compare them with those quoted by Mr. Smith, and I found that he made this mistake, that he did not take into account the fact that in many of the vessels there was more than one thermographic record.

Mr. SAM. HUGHES. My hon. friend should quote Mr. Smith's statement.

Mr. FISHER. I cannot do so just at the moment, but I am speaking in general terms.

Mr. R. L. BORDEN. It would be better for the hon. gentleman to defer any observation until he has the records with him. I find that the Minister of Trade and Commerce (Sir Richard Cartwright) rose and answered Mr. Smith on that occasion, and I do not find that any application was made to delay the reply of the government until the advent of my hon. friend the Minister of Agriculture, although he seems to think it was a most unfortunate circumstance that the defence of the government should have been entrusted to Sir Richard Cartwright rather than to himself. However that may be, I do find that the hon. gentleman was in his place answering questions on the 1st August, and had from that time until the end of the session to make, in the presence of Mr. Smith, the observations he has seen fit to make in his absence. It would have been far better if the hon. minister had not waited until Mr. Smith is not here to make what were undoubtedly intended as very serious reflections upon him.

Mr. FISHER. I would not have alluded to the matter in any way whatever if Mr. Smith's observations had not been quoted to-night.

Mr. R. L. BORDEN. The hon. gentleman could have referred to them in a different spirit and tone and without making reflections on Mr. Smith, and could thus have justified the decision of the government equally as well. There was a little too much spite in his remarks.

Mr. HENDERSON. Mr. Smith obtained the thermographic records from the Minister of Agriculture by asking questions across the floor. From these reports I read his statement. If there is anything wrong in the statement Mr. Smith made which is the subject of criticism, it is because the minister furnished him with incorrect information. I hold that Mr. Smith was perfectly justified in using the information he obtained from the report of the Minister of

Agriculture and the questions answered across the floor. I cannot conceive for a moment that Mr. Smith presumed to give information to this House which he had not obtained from that authentic source. I say this in justification of an old friend who is not with us at this time. I regard the speech made by Mr. Smith then as one of the most important speeches delivered during the whole parliament. It showed a breadth of knowledge in the matter of transportation of perishable products which I believe was not possessed by any member in this House. I listened to the speech very carefully and have read and re-read many parts of it, and the one thing I felt I could rely upon was the correctness of the statement made by Mr. Smith, knowing the source from which he obtained his information.

Mr. FISHER. I shall defer making any more remarks until my own estimates come up.

Mr. INGRAM. Where the hon. Minister of Agriculture did the hon. member for Wentworth an injustice was in making the charge that Mr. Smith had reference to the ventilation of defective apples and not defective butter and cheese. That statement cannot be borne out by the record, because on page 794 of last year's 'Hansard' you will see that Mr. Smith asked the Minister of Agriculture whether the government inspector had examined the compartments in certain vessels, and what system of mechanical ventilation was in each. Again, on July 11th, 1904, he asked about mechanical ventilation on steamers, and the hon. gentleman answered the question. Again, on April 18th, he put this question :

1. In answer to question of April 6th, the Minister of Agriculture said :—
The steamship 'Lake Champlain' had the ordinary system of Cowl ventilation.
2. Has the government examined these Cowl ventilators and found them in proper order and of sufficient size on this boat on each outward voyage when perishable cargo was on board ?

To these questions the hon. minister replied :

One of the inspectors for the Department of Agriculture has reported on each outward voyage of this steamship, both from the port of Montreal, both during the past season of navigation, and from the port of St. Johns, N.B., during the winter season, and in each report the ventilation is described as follows.

Then he went on to give the very statement quoted by Mr. Smith in this House. Yet, he now says that Mr. Smith's statements are incorrect. Mr. Smith, however, quoted the very information he got from the minister himself, and the minister is not justified in complaining about the conduct of Mr. Smith, because every one knows that there was no hon. gentleman in this House more conversant with the question than the hon. member for Wentworth, and I do not even exclude the hon. minister himself.

Mr. HENDERSON.

Mr. DANIEL. Are these steamers supplied with wireless telegraphy ?

Mr. PATERSON. The turbines are, and so are some of the others.

Mr. SPROULE. We require more information than has been given. We want to know something about the contract, so that we may satisfy ourselves——

Mr. PATERSON. It is precisely the same contract.

Mr. SPROULE. But we were told that the contract was right in every respect. May we not be allowed to exercise our own judgment as to whether it was right or not? Why should we not be allowed to know what it actually provided for? Though we were assured that it was perfect it turned out to be very loosely drawn.

Mr. R. L. BORDEN. There was an observation in the report of Messrs. Allan respecting the condition in which goods were placed on board these ships. An hon. gentleman on this side has referred to the fact that a staff of inspectors is kept by the department of Agriculture at Montreal. I observe that that very circumstance is adverted to by the Minister of Trade and Commerce (Sir Richard Cartwright) in his speech of last year in reply to the member for Wentworth, Mr. Smith. The Minister of Trade and Commerce said:—

As regards what the Department of Agriculture has done, the department has furnished me with this memorandum. They state that the department maintains a staff of inspectors at Montreal to observe and report concerning the condition of Canadian food products when loaded in the steamers, including the shipments carried in cold storage.

Well, it seems a rather extraordinary condition of things, if the government have a staff of inspectors in Montreal, that they should be unaware that these goods were put in the cold storage apartments at too high a temperature. How does it happen that the attention of the government was not called to this fact by the government inspectors ?

Mr. FISHER. A good deal of the information has been in the hands of the government. The fact, that goods, especially butter, arrive in Montreal at a higher temperature than they ought to have when put in the cold storage chambers in the ships is true, unfortunately. We have had our inspectors carefully watching that trade, and they have made reports. I have drawn the attention of the people who handle this butter to the difficulty, and have explained to them the wrong they were doing to themselves and their neighbours. At the same time, we have not power to force people to keep their butter at a low temperature, nor have we power to prevent this butter from being put in the cold storage chambers. It may be that we ought to take that power

and it may be that parliament would give it to us. But, at present we have not that power. I have a pretty complete report of the season just past and also of that of a year ago. I have pointed out to the handlers and shippers of the butter how foolish their course was, and have begged them and encouraged them to do better, but I have not power to compel them to do better.

Mr. R. L. BORDEN. Did the hon. gentleman (Mr. Fisher) take any steps in consequence of the reports of the inspectors ?

Mr. FISHER. I even went so far as to threaten, in the dairy conventions last winter, that if conditions did not improve during the season just past, I might have to ask parliament for this power of compulsion. I am glad to say that the reports of last season show an improvement—not so great as I would like, but still an improvement. I confess that I have hesitated to go to the extreme of asking parliament for the power to refuse admission to the cold storage chambers of goods under certain conditions. It would be going rather far. The steamship companies themselves would hesitate before agreeing that such power should be taken, because in certain seasons there is not enough freight to fill the cold storage chambers, and the companies are glad to get the goods, and they take them. We had this difficulty to contend with as well as with the carelessness of shippers in allowing their butter especially to get warmer than it ought to be. A considerable quantity of the butter brought to Montreal to be put in the cold storage chambers runs as high as fifty degrees, and I have no hesitation in saying that butter cannot reach a temperature of fifty degrees without being harmed. It does reach that temperature, and at that temperature is put into the cold storage chambers, so that it must not merely be kept cool but actually cooled. That is one of the causes of variation in the recorded temperatures of the cold storage chambers. If you put a couple of hundred boxes of butter in a cold storage chamber at a temperature of say forty degrees when the temperature of the chamber ought to be, and is, twenty degrees, you raise the temperature of the chamber at once, and it will be a day, or perhaps two days, before the temperature can be brought down again to the proper level. As I have shown, the question is surrounded with difficulties, as hon. gentlemen will understand, and I confess that I have not been able to solve these difficulties completely.

Mr. AMES. Is the butter that comes in at a high temperature generally delivered as package freight in Montreal, or does it come on through shipment by rail?

Mr. FISHER. Most of it, I think, comes by short-haul. That which comes from a long distance comes in refrigerator cars and is generally fairly cool; but that which comes from a distance of one hundred miles or less from Montreal often does not come in refrigerator cars, although the cars are there, if the shippers would take advantage of them. But the great difficulty is in the carriage of butter from the creamery to the station and keeping it at the station for several hours, sometimes for half a day, before it is put in refrigerator cars. The refrigerator car cannot cool butter. If the butter is put in reasonably cool, the car will keep it so, but, with the refrigerator capacity they have they cannot reduce the temperature of the butter to any great extent. The railway and steamship companies say, with a good deal of justice, that it is not their business to cool the goods but only to keep them as cool as when they were put in. So, there is a good deal of difficulty in managing this trade. We have been trying to educate the people to their true interest and to get them to work the business to the best advantage, without using any absolute coercion.

Mr. AMES. Has the hon. minister conferred with the Minister of Marine and Fisheries with a view to establishing cold storage compartments in the new sheds which are being erected in Montreal, more especially for the short-haul freight that he speaks of in the way of perishable goods?

Mr. FISHER. I have not. I may say that in Montreal the cold storage accommodation provided by private concerns is fairly complete. There is no difficulty for people who ship goods on through bills of lading to have them arrive in Montreal a day or two before they need to be put on the ships that they may be put in cold storage and properly cooled.

Mr. AMES. But I was speaking of the short-haul freight.

Mr. FISHER. That appears to be the difficult question. But the goods can be very easily kept in the cold storage houses in Montreal and at a trifling expense.

Mr. AMES. I refer to the goods that are carried by short railway haul and shipped directly to the steamer, and that do not go into cold storage in Montreal. Is provision being made for that business in connection with the new sheds?

Mr. FISHER. Not that I am aware of. I have not had any representations made to me, either by the handlers of this produce or the shippers, asking for that. Of course that kind of thing would interfere with the business of cold storage warehouses in Montreal, there would be opposition to it, though I do not say it ought to succeed, if the arrangements are advisable. This question has been discussed by the trade to a certain extent, not particularly in connection with the new sheds in Montreal, but with the whole handling of goods. I may

say that in England most of the cold storage stores are on the docks and very convenient for handling. What I have seen of them in England has led me to think they give satisfaction.

Mr. AMES. The tendency of the additional accommodation which is to be provided in the port of Montreal when the new improvements are completed, will be to create a larger amount of railway freight and a smaller quantity of local package freight. It will probably be necessary for the minister to make provision for cold storage accommodation on the wharfs themselves for the short haul railway freight that may be brought there.

Mr. SPROULE. There are some things that we ought to know before this passes. First, what is the temperature required and provided in the various chambers, and the capacity of these chambers for different kinds of fruit ? What is the proper temperature for carrying apples, pears, grapes, tomatoes, butter, cheese, meat and eggs ?

The officers of the department must know what is the proper temperature for carrying these various commodities. Then does the contract provide that there shall be suitable accommodation in these chambers, and sufficient capacity to carry the goods offered in those lines in chambers of the right temperature? Then, what will be the additional cost of freight on account of the cold storage they provide? I think we ought to have that information so as to enable us to understand whether the government has or has not made proper provision for cold storage in giving these subsidies to the steamship company.

Mr. PATERSON. The contract requires that they should provide cold storage to the satisfaction of the minister, with adequate space and at the different temperatures required. These are to be to the satisfaction of the minister. The vessels are running and I suppose the minister is perfectly satisfied with the facilities provided. The Allans, judging from their letter, prove that the facilities are adequate, and that whatever complaints have arisen they were not responsible for. That is where goods have been handed to them at a temperature higher than they should have been. I have before me a circular of one of the steamships, giving the space, one temperature of 50 degrees and another temperature of 20 degrees and a certain number of cubic feet. Shippers know what goods will go into the 30 degree compartment and what into the 20 degree compartment. There is no doubt that these points are fully guarded by the Minister of Agriculture. I do not know that the hon. gentleman himself can say that he has heard complaints with reference to freights. Of course, we could not govern the rates they charge for freights, I suppose they vary.

Mr. FISHER.

Mr. SPROULE. A few years ago the freight was to be so many shillings or so many cents above the ordinary rate on vessels without cold storage.

Mr. PATERSON. A movable rate, but so much above.

Mr. SPROULE. There is one satisfaction in that information, and it is that we will know where to place the blame if we find out afterwards there is blame. From the information we have, there is blame, because the minister has just given us some information that our contract provides there shall be adequate cold storage according to the judgment of the Minister of Agriculture. If, therefore, the cold storage proves not to be adequate or suitable, then the Minister of Agriculture must be to blame, because he has an inspector there to see that the goods are put on the vessel in proper condition and that the cold storage is provided as required.

Mr. PATERSON. I think the Minister of Agriculture will attend to the hon. gentlemen when his items come up.

Mr. HAGGART. What is the average speed of these vessels we have been paying for?

Mr. PATERSON. The 'Bavarian,' between Moville and Rimouski, a 17-knot steamer, 6 days during summer and 6½ days in winter. The 'Tunisian' and the 'Bavarian' should not exceed 7 days in summer and 7½ days in winter.

Mr. HAGGART. I am not asking what they intend to do but what they have done.

Mr. PATERSON. They are not in service yet.

Mr. HAGGART. Those we had the contract with last year, what was their speed?

Mr. PATERSON. The contract is for 7½ days in summer and 8 days in winter. They have complied with the contract.

Mr. R. L. BORDEN. You mean the contract is for a certain number of days, not for a certain number of knots?

Mr. PATERSON. Yes.

Mr. HAGGART. The Minister of Trade and Commerce gave us last year the speed of each vessel. I want to know the speed on the actual voyage.

Mr. PATERSON. I have not that with me.

Mr. HAGGART. Can't you give it within a knot or two? Is it 12 knots or is it 17 knots? If I remember rightly, it was somewhere between 12 and 14, instead of 17.

Mr. PATERSON. These turbine steamers are about 17. The 'Tunisian' and 'Bavarian,' speaking from memory, average about 14 knots on the voyage.

Mr. HAGGART. What is the speed of the others ?

Mr. PATERSON. The others would be slower, probably 10 or 12.

Mr. FOSTER. Will the minister be kind enough to have his clerk make out a list of the actual sailings of last year of each one of these vessels? What I want to get at is the actual speed they accomplish. We are paying $260,000 under this vote for what is called a fast line service, at least it is the fastest we have. Now, what is the real speed that has been accomplished? The minister last year, my colleague informs me, gave a table of these speeds. We may be getting an actual voyage service of 10 or 12 knots, or it may be 13, but it may not be as many knots as those knots I have spoken of indicate. But what we would like to know is how many knots we are getting, not how many days it took a boat to carry the minister over.

Mr. SPROULE. Will any of them reach a higher rate of speed than the 'Minnie M.'?

Mr. DEPUTY SPEAKER. Shall this item be carried ?

Mr. FOSTER. It is understood that we will get that information ?

Mr. PATERSON. The hon. gentleman will accept the statement that will be handed in to-morrow ?

Mr. FOSTER. Certainly.

Mr. SPROULE. To what extent do shippers avail themselves of cold storage for the transportation of their goods ? It is said by some—I do not know whether correctly or incorrectly—that the rates for cold storage were so high that many of the shippers decided to take the risk of sending their goods not in cold storage but in the ordinary way at the lower freight rate.

Mr. PATERSON. I am told by the hon. Minister of Agriculture that practically all of these shipments have gone by cold storage.

Mr. SPROULE. We have no information yet as to what the additional freight rates are to be over and above the movable rates. Have you provided for that in the contract ?

Mr. PATERSON. The rates are not controlled at all.

Mr. SPROULE. They were originally.

Mr. FISHER. They were in the contract which I made when I subsidized vessels to induce them to put in cold storage. Those contracts were closed long ago and we have no further contracts.

Mr. SPROULE. Do you not think the government were derelict in their duty when they were giving steamships large subsidies if they did not provide for freight rates ?

Mr. PATERSON. Competition will regulate that.

Mr. SPROULE. We leave too many things to competition and we do not have competition afterwards. There is a great deal of complaint regarding it. The rates for shipment in cold storage were so high that a great many people thought it better to run the risk of their stuff spoiling.

Mr. PATERSON. Competition regulates that.

Mr. SPROULE. This is not competition. There seems to be an absence of business ability and astuteness on the part of the minister who makes this contract. It is failure on his part to make a suitable contract so as to secure the people who produce this stuff and the commercial men who ship it. In the interest of these producers and shippers it seems to me that something ought to be done ; otherwise they are at the mercy of every vessel on which they put their goods.

Mr. PATERSON. I will call the minister's attention to the suggestion.

Mr. FOSTER. What is the machinery for knowing that each one of these boats keeps the temperature at the required point during the whole voyage ? Have you an inspector on each vessel ?

Mr. FISHER. There are self registering thermographs—generally two in each compartment.

Mr. FOSTER. And they are fixed at the commencement of the voyage and inspected at the end ?

Mr. FISHER. Yes, they are locked by my officer in Montreal, taken out by my officer in Liverpool and sent back.

Mr. FOSTER. Is there no possibility of tampering with them ?

Mr. FISHER. No.

Mr. SPROULE. Well, 'my officer' must have been sadly derelict in his duty last year because the information we got was that there were only a few on each vessel and that there were not two in each chamber.

Mr. FISHER. Speaking from memory we have about 130 of these thermographs. Under ordinary circumstances they would serve our needs, but last year there was a large number of vessels fitted up with what is called cool storage. We did not know of that until the season was on and we could not get these thermographs in less than four months. They have to be made especially and we did not have enough of them in each of the chambers last year, both cold storage and cool storage, but they were put in just as rapidly as they could be got back. I think I may hazard a guess that eighty per cent of the chambers

of vessels which went out of Montreal were provided with thermographs.

Mr. SPROULE. It is rather an unsatisfactory way of providing for these things in a contract. Now, we are making a new contract. Has the hon. minister provided that there shall be enough thermographs this year ?

Mr. FISHER. I have ordered more.

Mr. SPROULE. But the hon. minister knows the number of compartments these vessels contain.

Mr. FISHER. I do not know at the present time how many vessels are going to run from Montreal with cold storage chambers.

Mr. SPROULE. But the hon. minister knows how many will get the government subsidies.

Mr. FISHER. Yes.

Mr. SPROULE. Then I assume he knows the number of chambers he will require thermographs for ?

Mr. FISHER. I guarantee my hon. friend that there will be a thermograph in every cold storage chamber in every vessel subsidized by the government.

Mr. HENDERSON. Will the hon. minister see that thermographs are placed on the deck of the vessel so as to take the temperature of the sea air ?

Mr. FISHER. We have not done that.

Mr. HENDERSON. Is that not essential?

Mr. FISHER. My officers who have dealt with this matter have not thought so. I know that Mr. Smith brought that question forward and it was discussed, but my officers have not thought that is would be of any great value because the variations of the temperature on deck are so great that the instrument would hardly indicate them.

Mr. HENDERSON. I am afraid the hon. minister's officers are hardly up to date as practical men.

Mr. SPROULE. In the contracts made with these vessels will there be any provision regarding freight rates ?

Mr. PATERSON. No.

Mr. SPROULE. It should be given out beforehand what the rates are to be so that shippers would know what they would have to pay for these cold storage chambers.

Mr. PATERSON. The contract is made and it is not in it. It is left to the regulation of trade competition.

Mr. SPROULE. The department has not shown good business ability.

Mr. PATERSON. We cannot regulate the price of commodities.

Mr. SPROULE. Is it of such little account that it is not worth while for the government to pay any attention to it ? When we were told some years ago that it was an essential elemeut of the contract that they should pay so much more if they availed themselves of this cold storage, shippers knew whether it would be advisable for them to avail themselves of cold storage or not. Many shippers tell us that they did not avail themselves of cold storage because the rates were so high. The contract which was made by the old government or by the present government—I forget which—was allowed to run out and was not renewed by this government. The South African war was on and freight rates went up. They said that they could not get the same freight rates and they did not provide for the equipment of these steamers until it was too late. Another year has elapsed since then. Have the government made no effort to get the freight rates fixed so that shippers may know where they stand? If not they have been derelict in their duty and they are censurable for their failure. Surely they ought to have made provision this year for freight rates. There is now no South African war on and they ought to know that freight rates, let them be what they may, could easily have been provided for so that those availing themselves of cold storage would not pay more than so many shillings or so many dollars or cents beyond the ordinary freight rate.

Mr. PATERSON. I will call the attention of the minister to the suggestion of the hon. gentleman.

Mr. R. L. BORDEN. Both last year and on previous occasions there has been some discussion upon items of this character as to alleged discrimination—it is called discrimination, at least—as against Canadian shippers. The question arose in this way : It was alleged, with what truth I do not know, that upon some of these steamship lines—I do not say upon the lines of the Messrs. Allan—rates were given to shippers in the United States which were lower than those given from Canadian points of a corresponding inland distance. That is to say, from Chicago, for example, you can get by some of the subsidized lines a lower rate for United States shippers than you can get for Canadian shippers from a point equally far west. Therefore, we complained with respect to some lines—I do not think there was any complaint with regard to the line of the Messrs. Allan—but with respect to some lines, which eventually resulted in a certain provision being inserted in some of these contracts with other steamship owners which forbade any such discrimination, if that is the term to use. The question was discussed during the past session, and, I think, during the session previous to that, and my recollection is that difficulties were fairly acknowledged on

both sides of the House. It was, of course, pointed out, I think by the Minister of Trade and Commerce on one occasion at least, that at Chicago these lines had to compete with lines running to New York, which had quite as good railway communication with Chicago as Montreal or St. John would have, and it was said that some of these owners could not avoid making offers of low rates where that was necessary for the purpose of competition. The Minister of Trade and Commerce last year, I think, promised us some further information on the subject, and I have no doubt that it has been under the consideration of my hon. friend the Minister of Customs before he undertook these estimates. I would be very glad indeed to know whether or not he has any information on the subject which he would like to impart to the committee, especially as to whether or not there have been any complaints made by shippers with regard to this particular line. I think we were told last year that there had been no complaint so far as this line was concerned.

Mr. PATERSON. I remember myself, not in connection with this, but I remember that two or three years ago a person wrote me from St. John charging that a subsidized line—I do not exactly remember the name, and therefore I will not mention it—were carrying goods cheaper from Boston than from St. John, although the boats were subsidized by this government from St. John. I understood from his complaint that they would bring the goods to St. John and then forward them to Boston, and yet, with this extra charge added, the rate was lower from Boston. I thought this was a matter that demanded attention, and I mentioned it to the Minister of Trade and Commerce. I think he immediately took steps to ascertain whether the charge was well founded or not. I presume there is not much in that, but I am told by the deputy that the question has arisen, as the leader of the opposition (Mr. R. L. Borden) has said, with reference to some large Chicago meat houses that were able to make a contract with every ship that went out giving them a very large consignment, and that under these circumstances—the Minister of Agriculture says that they were special cold storage chambers, not the cold storage chambers prepared by us, and that for these large shipments and steady sources of freight the Chicago houses were given better terms than were given to the shippers who were not able to offer the ship-owners as much freight at a time or as regular supplies. Otherwise, it is thought that the steamers would have gone with not half a load. I suppose that if they can get a full ship load they can afford to carry cheaper for the Canadian shipper in proportion than if they had only half a load.

Mr. R. L. BORDEN. There are, of course, considerations of that character which we very frankly admitted should have weight with the government, but, at the same time, where we are paying out subsidies to a line such as this, or any other of these lines, it does seem a little incongruous that shippers in Canada should have to pay higher freights to such a subsidized line than the rates paid by shippers in the United States by the same line.

Mr. PATERSON. I am not sure whether there are complaints as to any of the subsidized lines; they say there are none in reference to the Allan Line.

Mr. R. L. BORDEN. I understand there has been no complaint with regard to them. I know that last year the Minister of Trade and Commerce admitted it, and justified the action of certain steamship companies, and there was very considerable weight in what he said. He took the position that they could not get the freight unless they gave these lower rates, because these lower rates were given via New York, and that it was no injustice to the Canadian shipper, but indeed tended to maintain the line that the ship-owner should take the freight at these low rates. That was from the standpoint of the steamship-owner. From our standpoint it presented itself in this way. We were paying large subsidies to these ship-owners to maintain a line, and it seemed, as I said, incongruous that our own shippers should be paying more freight and higher freight rates than those paid by United States shippers.

Mr. PATERSON. Something like through and local freight by rail.

Mr. SPROULE. Has the government made any effort in the last year to develop the chilled meat or frozen meat trade?

Mr. FISHER. We have not taken any steps about it.

Mr. SAM. HUGHES. The Minister of Trade and Commerce made a promise to me for two or three successive years that he would furnish the House with a statement of the local rates and also the general rates by rail to Canadian ports and also the rates from Canadian inland points to foreign markets, and the American western rates to these same foreign markets. I have never heard of this information being laid on the table. I do not suppose it belongs to this department, but inasmuch as this question of subsidies to steamships is up, I think it would be well for the Minister of Customs, as a business man, to look into the matter, and have a guarantee that while the freights rates from western points over our lines and by our subsidized steamships to Britain might possibly be regulated so that while the long haul to western points might be reduced, yet in no case should the short haul, viz., to and from Canadian points, be greater than the long haul. I

presume the minister knows, as every one knows, that the rates from Liverpool to Chicago or any western point are much lower than to our Canadian points.

Mr. PATERSON. Proportionately lower.

Mr. SAM. HUGHES. No ; actually lower. They can ship more cheaply say from Belgium right into the western country west of the lakes than to points in Canada. I think it woud be a very proper thing for the minister to impress on his colleague—the Minister of Trade and Commerce is the one particularly interested —the necessity of having it enacted that no local rate should exceed in price the through rates.

Mr. PATERSON. Do you mean to make that a clause in the contract ?

Mr. SAM. HUGHES. In granting a subsidy, to provide that the local rate to a point in Canada should not exceed the through rate. I do not want it necessarily lower, but it should be as low.

Mr. W. F. MACLEAN. I hope that the statement made by the hon. gentleman just now will induce him to assist me in compelling American roads to give the same rates to Canadian as to American shippers.

Mr. SAM. HUGHES. We do not control the American roads.

Mr. DANIEL. Last session the Minister of Trade and Commerce took an increased grant towards providing aids to navigation, especially, I think, in connection with the St. Lawrence. He mentioned a system which could be installed in vessels which would give them notice when they were approaching shallow water, rocks, &c. It was some sort of telephonic arrangement under water. I would be glad to know if anything of that kind is being done in connection with these subsidized steamers. I think it is a matter of great importance, especially to steamers coming up the St. Lawrence in the summer months to Quebec or Montreal.

Mr. PATERSON. I do not feel at liberty to say that he has made a contract as to that, but I am warranted in saying that it has been seriously under consideration, and negotiations have been going on in reference to it.

Mr. HAGGART. I understood the minister to say that all the conditions of the contract made with the Allan Company have been performed. There have been no forfeitures ?

Mr. PATERSON. I think there have been no forfeitures.

Mr. HAGGART. I would like to know whether they have performed the provisions of the contract, or, if not, whether there has been an enforcement of the penalty.

Mr. PATERSON. No deductions have been made and therefore no penalties have been incurred.

Mr. HAGGART. That is not a consequence of the statement of the minister. A penalty may be incurred but not collected, and there may have been a forfeiture. I want to know whether there has been or not.

Mr. PATERSON. I am assured that the practice of the department has been, what I would expect it to be, that if there were any deductions to be made, they would be made at the time the cheque was given ; but that there have been no deductions, and therefore the full amount must have been earned.

Mr. HAGGART. Can the minister not state whether the voyages have been performed according to the contract or not ?

Mr. PATERSON. Yes, and paid for.

Mr. HAGGART. Then, there is a new state of affairs this year as compared with last year, according to the statement then made by the minister.

Mr. PATERSON. I do not know what was stated last year. I am stating what I am informed by the deputy.

Mr. GANONG. The minister will find on page 62 that $70,000 is provided for a submarine signal apparatus.

Mr. PATERSON. I think that is what the hon. member for St. John has been referring to.

Mr. BERGERON. On this item I would like to ask the hon. gentleman for some information. Where do we stand now in regard to the fast line ? When I left here we were in the bottle-necked business ; where are we now ? Has there been any improvement in the communication between England and Canada ?

Mr. PATERSON. There has been a good deal of improvement. There are two turbine steamers going on in the spring which will make seventeen knots. They will make the crossing in six days in summer and six and a half days in winter.

Mr. BERGERON. With what companies have we contracts for carrying the mails between Canada and England ?

Mr. PATERSON. The Allan Line.

Mr. BERGERON. What is the contract price ?

Mr. PATERSON. £2,000 for each full round trip between Liverpool and Quebec or between Liverpool and St. John by the seventeen-knot steamers ; £1,000 for each similar round trip by the 'Bavarian' and 'Tunisian'; £500 for each round trip by the 'Parisian,' 'Ionian,' 'Sicilian' and 'Pretorian,'

when employed between Liverpool and Quebec; and £750 for each round trip by the 'Parisian,' 'Ionian,' 'Sicilian' and 'Pretorian' between Liverpool and St. John. One per cent is deducted for every hour by which the voyage time is exceeded.

Mr. BERGERON. Was that contract given after tenders had been asked from different companies?

Mr. PATERSON. That is a contract made on November 7, 1903.

Mr. BERGERON. Were tenders asked from different companies plying between Canada and England?

Mr. PATERSON. I could not say.

Mr. BERGERON. What proportion of the Canadian mails are carried by Canadian vessels and what proportion through the United States?

Sir WILLIAM MULOCK. I gave the figures at the close of last session in reply to a question put to me by the hon. member for Centre Toronto.

Mr. BERGERON. This is a case in which it seems to me that we are spending a great deal of money for which we do not get benefit. Seven or eight years ago a contract was made by another administration for a fast line which would have carried not only our own mails, but probably a great part of the mails of the western states. The present government did not carry out that contract. Since then they have been insinuating that they were preparing a contract for a fast line, but it has never been carried to a successful issue. We are paying $260,000 a year or probably more for having our mails carried by a slow line; for in present conditions a line of fourteen or fifteen knots is a slow line. I know business men in Montreal to-day who send their mails through the United States instead of using the Canadian lines. There is no reason for that. With the progressive government we have, and the growing times, when the supplies we are voting amount to about $65,000,000 compared with $35,000,000 or $40,000,000 eight or nine years ago, there is no reason why we should not have a Canadian line between Canada and England which would carry not only our own mails but the mails of the western states as well. It is the fault of the government if we have not a fast line to-day, and if we are obliged to delay the hon. gentleman's estimates by making these criticisms. I see the hon. minister looking at last year's Hansard, but I want something more fresh. I want information regarding what has happened since.

Sir WILLIAM MULOCK. It is impossible for me to give the weight of the mails carried since I spoke in this House in July last, but I shall be very happy to get the information and give it to the hon. gentleman.

Mr. BERGERON. What I want to know is the proportion of mail matter carried by Canadian and American vessels?

Sir WILLIAM MULOCK. I shall get the information and have it brought down on Tuesday or Wednesday next.

Mr. SAM. HUGHES. What is the arrangement about the steamers in winter time? Last year there was some change in the programme about calling at St. John and Halifax.

Mr. PATERSON. They call at Halifax in the winter en route for St. John.

Mr. SAM. HUGHES. What is the rule followed with regard to the sailing of all these subsidized steamers in winter time?

Mr. PATERSON. I will have that information when we are discussing the other item.

Mr. FOWLER. Last year the contract with the Allan Line was varied so that some of the sailings to St. John were cut out. Have those been restored?

Mr. PATERSON. I am not aware that any were cut out. Here is the contract.

Mr. DANIEL. Perhaps I may give both the minister and the hon. gentleman a little information on that point. The contract was not varied, but as a matter of fact the Allan steamers did not call at St. John on several of their trips. It was stated by their agent that they did not obtain freight with sufficient ease at St. John and it was thought they could do better by loading at Halifax. I remember speaking of this last session. My hon. friend will remember the hon. member for Annapolis, Mr. Wade, told us that the result of that experiment was that the steamers got barely enough freight in Halifax to give them steadiness in the sea-way, so that the experiment was not a success. This year they are loading at St. John. They always call at Halifax and leave their mails and generally passengers—not always all the passengers, generally the first class, but sometimes the immigrants are brought on and landed at St. John. That is the way the contract is being carried out this year. They are calling at Halifax both ways, leaving the mails and passengers and finishing their voyage at St. John, where they get their freight.

Mr. FOWLER. That is very true, but, I understand they have the authority of the department for doing this.

Mr. PATERSON. The contract under which they are working now commenced in April last, and I am told they have been calling at both places since then.

Mr. SAM. HUGHES. Was there not another line of steamships that had a subsidy for carrying the mails?

Mr. PATERSON. I see that the next item is a subsidy for a line to St. John's, Newfoundland and Liverpool. I would ask that item 189 be taken up.

Mail subsidies and steamship subventions—steamboat service between Canada and Mexico, $50,000.

Mr. PATERSON. The memorandum I have on this subject says that negotiations are under way for the establishment of this service, and definite announcement may be made before the House prorogues. The Postmaster General has been carrying on negotiations and no doubt can give any information any hon. members may desire.

Sir WILLIAM MULOCK. The Mexican government has agreed with the Canadian government for a subsidized line of steamers on the Pacific and Atlantic. Last spring they agreed to go as high as $50,000, we doing the same. It was hoped that that amount would get us a line on the two oceans; but when tenders were invited it was found that the whole amount would practically be absorbed by one line.

Mr. FOSTER. A monthly service?

Sir WILLIAM MULOCK. Yes. Last December I had negotiations with the Mexican government and they agreed, subject to our doing the same, that they would give another $50,000. This would mean a total of subsidies from two governments of $200,000, which would give us two lines, provided we could get them at that amount. But I think the Minister of Trade and Commerce is hardly likely to secure an Atlantic line for the sum here voted. The Mexican government will not give more than $50,000 extra, or $100,000 in all. It is probable that when the supplementary estimates are brought down the House may be asked to increase the subsidy. The amounts here voted will give us only the one line. I think that the tenders show it would cost about $100,000 for the Pacific line—I cannot give the figures exactly.

Mr. FOSTER. Which would be the more expensive?

Sir WILLIAM MULOCK. The Atlantic line.

Mr. BERGERON. What are the lines now?

Sir WILLIAM MULOCK. Between Canada and Mexico there are none.

Mr. BERGERON. But between the United States and Mexico?

Sir WILLIAM MULOCK. There is such a line but I do not recall the name.

Mr. SAM. HUGHES. Would this be given to a British or an American or to a Mexican line?

Sir WILLIAM MULOCK. We were to advertise and the vessels were to carry the British flag. The Mexican government have no ships carrying there flag.

Mr. SAM. HUGHES. Oh, yes.

Sir WILLIAM MULOCK. The president of Mexico so informed me, and I suppose he ought to know.

Mr. BERGERON. How are the mails carried between Canada and Mexico?

Sir WILLIAM MULOCK. They go through the United States.

Mr. BERGERON. What is the extent of the mails between Canada and Mexico?

Sir WILLIAM MULOCK. There are no statistics to show that. This is not a matter of mails.

Mr. GANONG. What would be the ports of departure and call in Mexico and in Canada?

Sir WILLIAM MULOCK. In summer the vessels would leave Montreal and in winter some maritime province port or ports. They would call at a place called Progresso, the outport of Yucatan, which is part of the republic of Mexico. At Yucatan they raise great quantities of sisal fibre, which is used to mix with manila in the manufacture of binder twine. There would be a large import of this material, which at present we buy mainly in the New York market. The ship would then do some coasting and call at Coatzacoalcos, which is intended to be the gulf port of the Tehuantepec Railway, a railway crossing the peninsula from the Gulf of Mexico to the Pacific ocean. At present the only port that is available is Vera Cruz, but it is a good distance away and the Mexican government is at present making a harbour at Coatzacoalcos. There will be a railway 196 miles across the peninsula to Salina Cruz, a harbour on the Pacific ocean now being improved by the Mexican government at very great expense. It is not in a backward state, and the contracts have been made for the expenditure of about $25,000,000 Mexican, which is about $12,000,000 gold. The next port would be Vera Cruz and then Tampico. That is connected with the interior of Mexico by a railway, just as Vera Cruz is. There are two railways going from Vera Cruz to the interior. So, if the Atlantic vessel were to call at each place it would be comparatively close to the interior of Mexico.

Mr. BERGERON. How long would it take a vessel to go from Montreal to the first port the hon. gentleman mentioned?

Sir WILLIAM MULOCK. At what rate of speed?

Mr. BERGERON. If it were like the 'Gauss' that came here from Germany, I suppose it would take seven months. But I mean an ordinary vessel of 14 knots.

Sir WILLIAM MULOCK. I do not think you would put a cargo on a ship of 14 knots, it would be too expensive. I think it would be about 3,500 knots from Montreal to Vera Cruz.

Mr. MACLEAN. Have you got a wharf there ?

Sir WILLIAM MULOCK. No, you would have to use lighters.

Mr. BERGERON. How long does it take a vessel to go to these ports from New York ? The Minister of Customs says it is not so much a question of carrying mails as of bringing trade from Mexico to Canada. We do not want to pay $50,000 or $60,000 a year for a line of steamers which would not attain that object. If it takes a much longer time to carry the mails between Canada and Mexico by the proposed subsidized line, than to carry them by steamers plying between American ports and Mexican ports we would be throwing away our money, because our mails would go by the American line. Of course, if the hon. gentleman is not in a position to answer now, he can take means to obtain some statistics and bring them down.

Sir WILLIAM MULOCK. I think the hon. gentleman has had his answer from the Minister of Customs. It is not a question of carrying mails at all. Under no circumstances would Canadian mails such as letters go by this line so long as they can go by rail. When you can go from Ottawa to the city of Mexico by rail in five days, letters will be carried by the shortest route. This proposition is for the development of trade for bulky articles of commerce that cannot afford to pay a large haul, but which may be transported a long distance by a cheaper route. I think there is a large market in the republic of Mexico that Canada can supply, and there is a reciprocal trade.

Mr. R. L. BORDEN. Would the hon. gentleman state what we might export there, and what we might import ?

Sir WILLIAM MULOCK. As to imports, I mentioned a moment ago the article of sisal fibre. I think we consume in this country about 12,000,000 pounds of binder twine, into which sisal enters, I do not know in what proportion.

Mr. BERGERON. Worth how much ?

Sir WILLIAM MULOCK. The raw material might be worth a cent and a half, perhaps, I do not know the price per pound. But it is a necessary article in Canada where we have a number of factories manufacturing binder twine. It is a growing industry, and we shall use more and more every year. We have to have that raw material. Canada does not produce it and Mexico does. Then coffee is grown in southern Mexico, tobacco, sugar and cotton. It is an excellent country for growing raw cotton. As you are aware, grazing is carried on to a large extent in Mexico, and they export large quantities of hides of all kinds. In the mountains and central parts of Mexico where the country is rough, instead of sheep they have great flocks of goats, and the skins of goats are largely used in trade. I believe that is the raw material used in making fine leather. Then there are fruits. I do not know that we could do a banana trade, bananas being perishable. I think that trade is controlled by a company largely, and I do not think we would be able to do much in the banana trade. But we would be able to do something in many other fruits, oranges, lemons, nuts, cocoanuts, pineapples and so on. So far as our exports to Mexico are concerned, we could sell to them I think great quantities of Canadian products in the rough. We could sell them such things as coal on the Atlantic and on the Pacific. Mexico does not produce good coal to any extent. There are some coal deposits in the northeast part of Mexico, but they import great quantities of coal. Some of it comes in by rail into the northern parts, and portions of their coal are supplied from England and the United States by water. I think there is some continental coal also consumed in Mexico. We ought also to be able to sell them pine. They have no white pine in Mexico. We could sell them products of pine, such as household furniture and woodenware of various kinds. I was in conversation with a gentleman in the city of Mexico, who is a representative there of a Canadian house for boxes, which are shipped there in great quantities in what I think they call the knockdown state. Then there is a good market for railway ties. These are very valuable and very expensive. I was told by Mr. Brown, president of the National Railways that there would be no difficulty in marketing a million ties a year in Mexico, not to supply new roads but merely to make up the waste on existing roads. As to foods, I am pleased to say that I found there a favourite cheese, the Imperial cheese. I believe we all know where that comes from.

Mr. HENDERSON. Anything else imperial ?

Sir WILLIAM MULOCK. Well, I am willing to admit—though I am not supposed to be an agent here for Canadian houses, but when the question is asked I am willing to admit that the first thing I saw when I entered the Buena Vista station—I am not making any confession, merely telling what I saw—but on leaving the Mexican Central station the first sign I saw on reaching the street was on an establishment just opposite the station, and it was one of Walkers' advertisements—Canadian Club. I found on inquiry there was a house there which sold large quantities of that brand.

Mr. R. L. BORDEN. Did the hon gentleman find it the real article ?

Sir WILLIAM MULOCK. That is a leading question.

Mr. BERGERON. We do not ask the hon. gentleman to incriminate himself.

Sir WILLIAM MULOCK. I would not know it even if I were to try it. My hon. friend will have to get an expert to answer that question. Then I am glad to say that we could sell them another article of food. My hon. friend from North Perth (Mr. Maclaren) would perhaps have some information on what I am about to say now. There is a very large wholesale and retail grocery establishment in the city of Mexico, and the enterprising owner of that House informed me that he sold large quantities of American hams and bacons throughout Mexico in the city and elsewhere. He said that he only regretted that he could not get it in Canada and that he would be able to obtain the supplies from his own country—he is a native of our country—if we had a direct line of steamers. He is taking a great interest in this enterprise in the hope that this direct line of steamships may be the means of developing a trade of the kind I speak of. Butter is imported into Mexico in considerable quantities but it comes from France chiefly and it comes in tins. There is no reason why we should not capture the butter trade of Mexico if we put the goods up in the proper way and have proper transportation facilities. I was in conversation with a representative of some Toronto manufacturers and I found that a Toronto firm had captured the trade of the city of Mexico in what is known as neckwear. I do not know the details of that business, but I suppose it includes cravats, ties and so on. I also found that in the chief shops of the city of Mexico, Canadian leather goods were on sale in large quantities and that they came from establishments engaged in the manufacture of these goods in the city of Toronto —such goods as trunks, pocket books, purses and small articles made of fine leather.

Mr. HENDERSON. Gloves or anything of that kind ?

Sir WILLIAM MULOCK. I did not happen to hear of those but there is no reason in the world why we should not get the glove trade to a large extent if our people are enterprising enough and we have the transportation facilities. But you cannot send anything like heavy freight by rail from here to Mexico. From where I am speaking now I suppose it would be nearly 3,000 miles by rail to the city of Mexico. That is a long distance to carry goods by land.

Mr. BERGERON. What is the trade today between Mexico and Canada ?

Sir WILLIAM MULOCK. Practically nil.

Mr. PATERSON. About $200,000.

Sir WILLIAM MULOCK. I think if you turn up the Trade and Navigation returns of the republic of Mexico you will find that they are importing more and more every year. Speaking from memory—I may be wrong about this and I do not want to be held to these figures, but I can give the statistics as I think I have some copies of their trade returns——

Mr. SAM. HUGHES. Have they a high protective tariff ?

Sir WILLIAM MULOCK. Yes, I think they import about $100,000,000. They are a growing and a coming people, and now is the time if we are going to get that trade before other countries get their lines of communication established. It is a very difficult thing to dislodge trade after it is once established. It is better to try and get it in its infancy.

Mr. SAM. HUGHES. The hon. minister was good enough to tell us that the president told him that they had no shipping.

Sir WILLIAM MULOCK. No mercantile shipping.

Mr. SAM. HUGHES. Perhaps the president knows, but in going over Whittaker's Almanac and every other return given I find that they spend upwards of $2,000,000 in equipping their navy every year and that they have a mercantile marine of 23,817 tons.

Sir WILLIAM MULOCK. Small coasting boats.

Mr. SAM. HUGHES. Even so.

Sir WILLIAM MULOCK. They have no shipping in the sense of the subject we are discussing. The president informed me so and so did the Secretary of Finances, Mr. Limantour. They may have some small coasting vessels, but not ocean-going vessels such as are required for this traffic and they very readily assented to our controlling the flag.

Mr. SAM. HUGHES. That is what I wanted to make clear in the matter.

Sir WILLIAM MULOCK. Yes.

Mr. INGRAM. Last year there was some talk of tenders being invited for this service. Will the hon. minister say what was done in connection with that ?

Sir WILLIAM MULOCK. The Department of Trade and Commerce invited tenders. They only got one tender for the Pacific coast service and that was from Messrs. Weir & Co., of Glasgow. There were conditions coupled with it. The company sent a representative to Canada to try to obtain some modifications of the terms, and he left here intending to go to the city of Mexico to consult with the

Mexican government. He has not returned to Canada yet and the Department of Trade and Commerce has not had any advice as to whether he has met with any success. As to the Atlantic coast service I think there was a tender from Messrs. Pickford & Black. The Elder Dempster Company did not put in a tender in answer to the advertisement but they are in negotiation with the department to see if they can make arrangements for that service.

Mr. INGRAM. Last year when this matter was before the House a gentleman in Boston wrote me in reference to this service. He wanted to know what the department intended to do in the matter. I consulted with the right hon. Minister of Trade and Commerce (Sir Richard Cartwright) but the information he gave me was so indefinite that it was of no use to the party in Boston. Therefore the matter dropped, as far as that firm was concerned. I understood from the indefinite way in which the hon. minister made his statement that the service they intended to establish was a Pacific coast service and not an Atlantic service. That being the case these Boston parties had no further interest in it.

Mr. PATERSON. The first effort was for a Pacific coast service, but it is hoped, I believe, if the House sanctions it, that services may ultimately be established between Canada and the Mexican republic on both oceans.

Mr. HENDERSON. But the present intention is only to establish a service on the Pacific coast ?

Mr. PATERSON. No, the Atlantic is more alive now than the Pacific. It started with the Pacific but obstacles presented themselves there. The representative of Andrew Weir & Co. who was here in connection with the contract on the Pacific coast, went to Mexico but he has not come back yet and it is at a standstill meanwhile.

Mr. INGRAM. What steps did the department take to draw the attention of the public and of those interested in shipping to the contracts ?

Mr. PATERSON. Advertisements were inserted in the papers of the maritime provinces and then copies of these were sent to the High Commissioner with instructions to distribute them among the shipping ports of England.

Mr. SAM. HUGHES. Can the hon. minister tell us how much coal is shipped from the Pacific coast or from the eastern coast to Mexico ?

Mr. PATERSON. I have not looked up my trade and navigation returns. What about the thirty-nine items between the one we carried and this?

Mr. DANIEL. I have some remarks on one or two of them.

Steam service between Halifax, St. John's, Newfoundland, and Liverpool, from July 1, 1905, to June 30, 1906, $20,000.

Mr. FOSTER. Who has that contract?

Mr. PATERSON. There is no change. The date of the present contract is October 10, 1904, and it expires June 30, 1905. The contractors are Messrs. Furness, Withy & Co.

Mr. FOSTER. Is that a satisfactory service.

Mr. PATERSON. We have no complaints. The round trip is made in seventeen days.

Mr. FOSTER. I mean as far as the carrying trade is concerned.

Mr. PATERSON. We have no complaints and we therefore judge that it is satisfactory.

Steam service between St. John, N.B., and Glasgow, during winter of 1905-6, $15,000.

Mr. PATERSON. There is no change in that ; the contractors are the Donaldson Line and the Robert Reford Line. They are paid $750 per round trip or $15,000 per annum and the carrying of mails is stipulated for.

Steam service between St. John, N.B., Dublin and Belfast during the winter of 1905-6, $7,500.

Mr. PATERSON. There is no change here. The date is October 20, 1904, and the contract expires with the opening of navigation, 1905. The contractors are the Ulster Steamship Company, the Head Line. The contractors have the privilege of calling at St. John's, Newfoundland, on the western trip. The subsidy is $750 each round trip. They carry mails but cold storage is not stipulated for.

Mr. SAM. HUGHES. In connection with this have the government taken any steps to have it made possible for these steamers to carry cattle? At the present time they cannot carry cattle even for slaughter on landing, because the British government will not allow cattle to be landed at any but certain few points even for slaughter. It would tend to increase trade to the old country, without detriment to British trade, if it were possible to allow these steamers to carry cattle.

Mr. PATERSON. We will look into that but if the policy of the British government is to prevent the landing——

Mr. SAM. HUGHES. But the whole world centres around this government now and the government has only to wave its hand to have the matter attended to.

Mr. PATERSON. I think the hand should be waved.

A line or lines of steamers to run between St. John, Halifax and London, $40,000.

Mr. DANIEL. I would be glad if the minister would explain the present condition of this line and state the intention of the government with regard to asking for tenders. I may say that the Board of Trade of the city of St. John sent a memorial to the Governor General in Council with regard to this steamship service, with which I presume the minister is familiar. It was to the following effect :

That according to the records of the trade between St. John, Halifax and London which has been carried on for a number of years past by the Furness line of steamers subsidized by your government, the results have been extremely disappointing, more particularly in connection with the imports and exports of western Canadian goods (statements of which are inclosed herewith), in consequence of whch, and of the unsuitable and unsatisfactory steamers employed in the trade——

Particulars concerning which I will also give directly.

——there have been numerous strong complaints on the part of both importers and exporters by the line ;

And whereas the Board of Trade has been informed by other responsible steamship companies, that they would be willing to tender for the service commencing on 1st of July next, if allowed the opportunity of doing so ;

The St. John Board of Trade therefore respectfully requests that your government will, as soon as convenient, issue a call for tenders for the following services to commence on 1st July next, viz. :—

A line or lines of steamers to run during the summer months between St. John, Halifax and London, and during the winter months between St. John and London direct and Halifax and London direct, and that the steamship companies be allowed until the 1st April next for submitting their tenders to the government.

(Signed) H. B. Schofield,
President.

With regard to the statement of the steamers referred to, I may say that when this line was first subsidized, between 1894 and 1900, the service was principally maintained by the following three steamers: The 'St. John City,' and the 'Halifax City,' which were both new steamers, and the 'London City,' which was built in 1891, and therefore was only three years old at that time. They were good steamers but they were sold by the Furness Line, after which the service was carried on by the following inferior steamers: the 'Ulunda,' 'Madiana,' 'Dahome' and 'Dalton Hall.' In November, 1900, the new steamer 'Evangeline' came on, and in February, 1901, the new steamer 'Loyalist,' after which the service was maintained by the 'Evangeline,' 'Loyalist' and 'Dahome.' In January, 1902, the 'Evangeline' and 'Loyalist' were sold by the Furness Company, and the service has been carried on ever since with inferior steamers.

That is the statement of the Board of Trade, composed of merchants and shipping men well acquainted with this trade ; and I would like to ask if the communication which that board sent to the government has received any consideration, and whether it is the intention of the government to see that in future the company puts on such vessels as are competent to do in a satisfactory manner the work which it has contracted to do. The service has certainly not been satisfactory for the business men of St. John. I therefore take this opportunity of bringing this matter to the notice of the minister and to tell him that there are other shipping firms which are quite able and willing to tender for this service, and which would, in the opinion of the Board of Trade of the city of St. John, carry it out in a more satisfactory manner than it appears to be done by the Furness Company under their present contract.

Mr. PATERSON. May I ask what is the date of that statement ? And did I understand the hon. gentleman to say that a copy of it had been sent to the department ?

Mr. DANIEL. This copy does not give the date. The communication I got from the Board of Trade is dated January 20, 1905, and the letter of the president is dated January 19.

Mr. PATERSON. The deputy of the department has unfortunately been ill for some time, and has not been able to give any assistance in preparing the information. The acting deputy is not aware that that memorandum has come to the department, but he has no doubt that it has from what the hon. gentleman has said. He has made a note of it, and the hon. gentleman may rely upon it being brought to the attention of the minister. There are two contracts running for those ports, one by the Canadian Pacific Railway Line and one by the Furness Line.

Mr. DANIEL. It is the Furness Line I am speaking of.

Mr. FOSTER. This item had better stand, because there are other matters to be discussed in connection with it.

Item allowed to stand.

Steam communication between St. John and Digby, from July 1, 1905, to June 30, 1906, $12,500.

Mr. DANIEL. I would like to ask the minister if the government have received any communication with regard to this line from the Maritime Board of Trade ?

Mr. PATERSON. Not that the acting deputy remembers.

Mr. DANIEL. Then I would like to read the following resolution which was passed at the annual meeting of the Maritime Board of Trade held at Moncton, N.B., on August 17, 1904.

Whereas, the increased requirements of commerce in the southwestern section of Nova Scotia, coupled with those of the Annapolis valley, demand greater transportation facilities and in particular a daily passenger and freight service between St. John and Digby, N.S., which it is understood the Dominion Atlantic Railway Company will operate for a pro rata increase in the subsidy now paid.

Resolved, That the Maritime Board of Trade urge the federal government to provide daily steamboat communication between St. John and Digby by granting such pro rata increase in such subsidy;

Further resolved, That as the four previous requests of this board for an improved bay service have been overlooked by the government, the present be submitted with the respectful request that it be dealt with immediately.

I may say that this Maritime Board of Trade is composed of business men of Nova Scotia, Prince Edward Island and New Brunswick. The hon. minister will notice that increased accommodation is asked for on behalf of several counties in the province of Nova Scotia. This service, I understand, is intended especially for the accommodation of those counties in Nova Scotia which border on the Bay of Fundy or which do business largely through the Bay of Fundy ports; and if there were a better service between St. John and Digby, I think there is no doubt that the business would grow very greatly, and it would be a real boon to the people of those counties. I would be glad to know whether the matter has received any consideration from the government; if so, what consideration it has received; whether the government intend to act on the request of this memorial; and, if so, how soon?

Mr. PATERSON. The matter has been brought to the attention of the department, and is receiving their consideration. Under the present contract full round trips are made daily during June, July, August and September, four trips each week during October, November, December, March, April and May; and three trips each week during January and February. If I apprehend it rightly, what the hon. gentleman read asks for a round trip daily all the year round.

Mr. DANIEL. Yes.

Mr. PATERSON. The contract has not been varied in that respect. It is dated June 1, 1904, and expires July 1, 1905, and is renewable for another year at the option of the minister. The minister, having that power, would I suppose, be able to take into consideration the wishes of the maritime board. He is not asking for a vote for that purpose just now; but when he sees the remarks of the hon. gentleman and the expression of his belief that it would be beneficial, he may perhaps bring down a supplementary vote, though I cannot of course say anything about that.

Steam service between Victoria and San Francisco, $5,000.

Mr. PATERSON. This is an old item since confederation.

Mr. FOSTER. Why is it kept on?

Mr. PATERSON. I believe the contract has expired and may not be taken up again. The original amount was $17,000, and was the result of an agreement entered into with the province of British Columbia when that province entered confederation.

Mr. FOSTER. We dropped that.

Mr. PATERSON. I am afraid not very effectively. According to the Post Office Department, the value of the service is very trifling, and if another contract should be given it will no doubt be less than the amount of this item. The minister apparently asked to have this amount of $5,000 put at his disposal, but will be at liberty not to make a contract if he sees fit.

Mr. FOSTER. It seems to be no good, commercially or otherwise.

Mr. PATERSON. From the information given me it would seem so.

Mr. R. L. BORDEN. Then the minister should not ask for the vote.

Mr. PATERSON. My deputy thinks there might be a question as to whether we can drop it. If the hon. member for Toronto (Mr. Foster) is right in saying that it was dropped, of course that would disprove that contention. Better let the item pass, and the minister will only make a contract if he finds it necessary.

Steam communication between Halifax and Newfoundland via Cape Breton ports, $2,000.

Mr. FOSTSR. What ports does this take in?

Mr. PATERSON. It is between Halifax and the west coast of Newfoundland, calling both coming and returning at St. Pierre, Grand Narrows, Baddeck, North and South Sydney and some other ports. I believe the contract has expired.

Mr. INGRAM. How many trips does the steamer make?

Mr. PATERSON. A regular fortnightly service.

Steam communication during the season of 1905, i.e., from the opening to the closing of navigation, between the mainland and the Magdalen Islands, $15,000.

Mr. FOSTER. What vessels are doing that?

Mr. PATERSON. The steamers 'Amelia' and 'Lunenburg.' Regular steam weekly service, making each week two full round trips. The contract expires on July 7th, 1908. It is with the Magdalen Island Steamship Company, Limited.

Mr. DANIEL. I would like to bring to the notice of the hon. minister another resolution with regard to steamship service with the Magdalen Islands, passed at the same meeting of the Maritime Board of Trade, held at Moncton, the 17th August, 1904. I do not know whether this resolution was formally sent to the government or not, but I presume it must have been :

Resolved, That the federal government be respectfully requested to grant a subsidy of $200 per trip for a steamer to make a weekly service between ports on the north side of Prince Edward Island, Miramichi, Magdalen Island and North Sydney, the distance on the whole route being about 625 miles.

I am not in a position to advocate the matter very strongly, because I am not so familiar with the ports on the north side of Prince Edward Island as are the members from that province. Perhaps the hon. member for Queen's will be able to give us a little information on this matter, but I take this opportunity of bringing this resolution before the minister, in order that he may give it his consideration.

Mr. PATERSON. The steamers now ply to Stewart and Georgetown, Prince Edward Island. What other ports are proposed ?

Mr. A. MARTIN. Stanley and Rustico. I am very glad my hon. friend has brought this matter up. I think that when we look over these estimates we find that the province of Prince Edward Island receives very scant justice. The resolution moved by the Maritime Board of Trade only asks a very small measure of justice for this province, and I hope it will be acceded to and the requisite sum put in the supplementary estimates.

Mr. PATERSON. That would extend the trip and would make a difference in the subsidy asked.

Mr. A. MARTIN. Yes.

Mr. GANONG. I think the request they make is for $200 a trip for a weekly service.

Mr. PATERSON. I do not know whether that is before the department or not.

Mr. E. M. MACDONALD. I would point out that the proposition in this resolution of the Maritime Board of Trade is not for the extension of the present route between Pictou and the Magdalen Islands, a service performed by the Magdalen Islands Steamship Company; it is a separate proposition for a new service. I have a copy of the resolutions and they involve a steamer starting from Miramichi, calling at points in the northern part of Prince Edward Island and going to the Magdalen Islands, then coming to North Sydney and returning. The distance of the whole route would be about 625 miles. That would be apart from the service now under discussion, a service that has been in existence, I believe, ever since confederation, involving a connection between the Magdalen Islands and Pictou as being the most available point on the mainland, the calling at Souris and Georgetown being mere incidents of the trip to the Magdalen Islands.

Mr. A. MARTIN. I am glad the Minister of Trade and Commerce appears to take a friendly view of this, and I hope there will be an item in the supplementary estimates for the establishment of a separate service.

Mr. PATERSON. I understand now. It is an entirely new service. Apparently the minister has not decided upon it, as there is no item in the main estimates. Whether he will ask for an item in the supplementary estimates I cannot say. The acting deputy has taken a note on it and will call his attention to it.

Mr. FOSTER. It is growing late, and I think we might rise now.

Mr. PATERSON. I think we should show more progress to-day. Hon. gentlemen opposite were responsible for wasting a good part of the afternoon.

Mr. FOSTER. No, it was the Minister of Agriculture (Mr. Fisher) who did that.

Mr. PATERSON. We might take these items as far as the bottom of the page. There are no changes and there need be but little discussion.

Mr. FOSTER. If there is not much discussion we can get through them very quickly another time.

Mr. PATERSON. The hon. gentleman will have to bear the responsibility for accomplishing so little.

Mr. FOSTER. At half past eleven I am willing to take the responsibility.

Some resolutions reported.

On motion of Mr. Paterson, House adjourned at 11.15 p.m.

HOUSE OF COMMONS.

MONDAY, February 13, 1905.

The SPEAKER took the Chair at Three o'clock.

FIRST READING.

Bill (No. 55) to incorporate the Canada-Middlesex Railway Company.—Mr. Calvert.

REPORT PRESENTED.

Report of the Department of Railways and Canals for the year ending 30th June, 1904.—Hon. H. R. Emmerson.

PRIVATE BILLS.

SECOND READINGS.

Bill (No. 45) respecting the Grand Trunk Railway Company.—Mr. E. M. Macdonald.

Bill (No. 46) respecting the Canada Atlantic Railway Company.—Mr. E. M. Macdonald.

Bill (No. 48) respecting the Toronto and Hamilton Railway Company.—Mr. Calvert.

Bill (No. 49) respecting the Century Life Insurance Company.—Mr. Macpherson.

Bill (No. 50) to incorporate the Calgary and Battleford Railway Company.—Mr. Turriff.

QUESTIONS.

95th BATT.—REDUCTION AND DISBANDMENT.

Mr. S. J. JACKSON asked :

1. After the rebellion in 1885 what was the reason for reducing the strength of the 95th Battalion, Manitoba Grenadiers, from 432 to 266?
2. Why was the said battalion disbanded ?

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence) :

1. Because, on the 5th of August, 1887, the corps was changed from a city to a rural corps and reduced by two companies.
2. Because it was inefficient.

RELIEF TO MANITOBA FARMERS.

Mr. S. J. JACKSON asked :

1. What is the amount still due on the loan made by the Dominion government for the relief of the Manitoba farmers during the grasshopper scourge in the years 1874 and 1875 ?
2. Is it the intention of the government to remit such amount ? If not, why not ?

Right Hon. Sir WILFRID LAURIER (Prime Minister). The amount still due upon the loan made by the Dominion government for relief during the grasshopper scourge of 1874-75, is about $34,000 exclusive of interest. The government do not see any reason for departing from the policy of the previous government, and think that this money should be repaid.

AGRICULTURAL IMPORTS FROM AND EXPORTS TO UNITED STATES.

Mr. CLEMENTS asked :

What were the imports of the following, imported into Canada for home consumption from United States, and the exports of same from Canada to the United States, and the duty on the same both ways, in the years 1903 and 1904 : (1) Amount of pork, bacon, hams, shoulders, &c.? (2) Apples ? (3) Wheat ? (4) Corn ? (5) Beans, raw, canned and otherwise ? (6) Cattle (7) Horses ? (8) Wool ? (9) Hides ?

Hon. WILLIAM PATERSON (Minister of Customs). My deputy informs me that this would require an answer at such length as to make it inconvenient to give it to the House in this manner. If the hon. gentleman will let the question drop, we will hasten a return in every way.

Mr. CLEMENTS. I ask for a return.

LOBSTER LICENSES.

Mr. GANONG—by Mr. Lancaster—asked :

Is it the intention of the government to issue any more licenses to can lobsters in district No. 1, New Brunswick, for 1905, than those named in a reply to a question on February 6th, viz.: J. Ingersoll, E. A Holmes., Connors Bros., Burnham & Morrell ?

Right Hon. Sir WILFRID LAURIER (Prime Minister). As at present advised, it is not the intention of the government to issue any more licenses.

GRAIN SURVEY BOARDS.

Mr. AMES—by Mr. Lancaster—asked :

1. Who are the members of the grain survey boards of Toronto and of Montreal, appointed by the Governor in Council, under the authority of clause 32, 4 Edward VII., chapter 14?
2. Of those appointed for Toronto, who were so named on recommendation of the Board of Trade of Toronto '?
3. Of those appointed for Montreal, who were named on the recommendation of the Board of Trade of Montreal ?
4. Were any of the appointments for Montreal named by the government without the recommendation of the Montreal Board of Trade ?

Hon. Sir WILLIAM MULOCK (Minister of Customs) :

1. For Montreal : Thos. A. Crane, C. B. Esdaile, Alex. McFee, J. S. Norris, A. G. Thomson, E. S. Jaques. For Toronto : Thomas Flynn, W. D. Matthews, Hedley Shaw, C. W. Band, J. L. Spink, John Carrick, H. N. Baird, J. D. Flavelle, J. C. McKeggie, W. E. Milner.
2. Thomas Flynn, W. D. Matthews, Hedley Shaw, C. W. Band, J. L. Spink, John Carrick, H. N. Baird, J. D. Flavelle, J. C. McKeggie, W. E. Milner.
3. C. B. Esdaile, A. G. Thomson, E. S. Jaques.
4. Yes.

PURCHASE OF COAL FOR INTERCOLONIAL RAILWAY.

Mr. DANIEL asked :

1. How much coal was purchased by the Intercolonial Railway from the Beersville Coal and Railway Company during the year ending December 31st, 1904, and at what price per ton?
2. What was the quality or value of this coal for steam purposes, as shown by its use on the Intercolonial Railway ?

Hon. H. R. EMMERSON (Minister of Railways and Canals) :

1. 1,246¾ tons. $3.25 per ton.
2. Fuel inspector has not had the opportunity of testing the quality or value of this

coal, but in speaking to engineers and firemen, they say it is fairly good steam coal.

BLANK BALLOTS FOR DOMINION ELECTIONS.

Mr. SPROULE asked :

1. What is the custom of the Department of Public Printing and Stationery in issuing the blank ballots used in the Dominion elections ? How many ballots are contained on each sheet of paper ?

2. Is the paper on which the ballots are printed issued direct from the Printing Bureau to the several returning officers throughout Canada, or does it go through the Clerk of the Crown in Chancery ?

3. Are the sheets of ballot paper carefully counted before being sent out, and is a record kept of the number of sheets sent to each returning officer ? If so, under whose supervision was this done ?

4. After the issue of the sheets of ballot paper to the several returning officers for the last Dominion elections, was any complaint made to the Department of Public Printing and Stationery, or to the Clerk of the Crown in Chancery, by any returning officer, or by his subordinates, or by any printing establishment, that the requisite number of sheets of paper for such constituency or constituencies had not been furnished, or that the actual number of sheets was less than that which the returning officer was credited with having received ?

5. If so, in what constituency or constituencies did this occur, and what action was taken on such complaint ?

Right Hon. Sir WILFRID LAURIER (Prime Minister):

1. The main principles are : (a) To deal with no one but returning officers. (d) To have no broken packages. The ballots are issued in sheets of 4 and 2 according to the sample which I lay on the table.

2. The ballots are issued direct from the Printing Bureau to the returning officers throughout Canada without the intervention of the Clerk of the Crown in Chancery.

3. The sheets are carefully counted before being packed. They are sent out in closed packages of three sizes only, viz : Packages of 2,000 in fours and of 1,000 and of 500 in twos. The packages are not opened after being counted. The smaller packages are used for uneven or broken thousands. The counting is done in the bindery, after cutting, by skilled hands and under the supervision of the foreman of the bindery. The packages are then finally closed and pasted up.

4. After the issue of the ballots, applications were received by the King's Printer from returning officers where the supply was insufficient. In all such cases the additional ballots required by the returning officer were sent to him, but always in whole packages. No ballots whatever were sent to any printing office but they were sent cut in sealed bags by registered post to the returning officers. No communications from others than returning officers were entertained.

Mr. EMMERSON.

5. Two complaints were made that the count of the ballot paper was wrong. One was from South Lanark the other was from Ottawa. In the case of South Lanark no additional supply was asked for. It was a question of count. In the case of Ottawa an additional quantity of 1,000 ballots was delivered to the returning officer.

DIPPER HARBOUR BREAKWATER, N.B.

Mr. DANIEL asked :

1. Who is doing the work of construction of Dipper Harbour breakwater in St. John's County, N.B. ?

2. Was the work let by tender ? If so, who were the tenderers, and what was the amount of each tender ?

Hon. CHARLES S. HYMAN (Acting Minister of Public Works):

1. Messrs. Lyons and White.

2. Yes. The two following tenders were received, viz:

Lyons and White..	$45,485
Flood and Bates..	45,800

LIFEBOAT CREWS, N.S.

Mr. SINCLAIR asked :

1. How many life boat crews, under the management of the Department of Marine and Fisheries, are stationed on the coast of Nova Scotia ?

2. What are the names of the places where so stationed ?

3. What is the name and address of each cockswain in charge in each case, and what is the number of each crew ?

4. What amount was expanded during the last fiscal year to maintain each of the said ?

Right Hon. Sir WILFRID LAURIER (Prime Minister):

1. Thirteen.

2. Blanche, Devil's Island, Clarke's Harbour, Duncan's Cove, Herring Cove, Mud Island, Pictou Island, Port Mouton, Seal Island, White Head, Yarmouth, St. Paul's Island, Scatarie.

3. Blanche ; W. A. B. Smith, crew 7, address Blanche. Clarke's Harbour ; Thomas W. Nickerson, crew 7, address Clarke's Harbour. Seal Island ; H. Hitchens, crew 7, address, Seal Island. White Head ; H. P. Munroe, crew 7, address, White Head, Duncan's Cove ; J. W. Holl, crew 7, address, Duncan's Cove. Herring Cove ; J. Gorman, crew 7, Herring Cove. Mud Island ; supplied and kept up by Mud Island Lobster Company. Scatarie ; J. T. Martell, crew 7, address, Scatarie. Baker's Cove ; A. Kane, crew 7, address, Yarmouth. Devil's Island; Geo. D. Young, crew 7, address, Devil's Island. Port Mouton ; Walter Cook, crew 7, address, Port Mouton. St. Paul's Island ; kept up by light-house staff. Pictou Island ; Alex. Currie, crew 7, address, Pictou Island.

4. Blanche, $305.96 ; Devil's Island, $237.22 ; Clarke's Harbour, $248.84 ; Duncan's Cove, $276.60 ; Herring Cove, $485.56 ;

Pictou Island, $317.69; Port Mouton, $272.97; Seal Island, $1,316.47; White Head, $316.44; Yarmouth or Baker's Cove, $276; Scatarie, $532.90.

EXPORT OF GRASS SEEDS.

Mr. COCKSHUTT—by Mr. Lancaster—asked:

1. What was the quantity and value of our exports of red clover, alsike and timothy seed, respectively, for the years 1902, 1903 and 1904?
2. From what ports was said seed exported?
3. To what country or countries was said seed exported?

Right Hon. Sir WILFRID LAURIER (Prime Minister):

The statistical reports make no distinction as to the classes of kinds of clover or grass seeds exported, they being classed simply as clover seed or grass seed as the case may be.

1. The quality and value of Canadian clover and grass seed exported during the fiscal years 1902, 1903 and 1904 respectively were as follows:

Fiscal Years.	Clover Seed.		Grass Seed.	
	Bush.	$	Bush.	$
1902.....	192,825	1,201,678	107,765	88,193
1903.....	113,496	839,459	65,324	75,464
1904.....	230,484	1,337,139	101,853	77,825

2. The ports from which these seeds were exported were: Montreal, St. Armand, Coaticook, Abercorn, Winnipeg, Niagara Falls, St. John, N.B., Halifax, North Sydney, Prescott, Sault Ste. Marie, Bridgeburg, Kingston, Picton, Windsor, Sarnia, Stanstead, Hemmingford, Victoria, Charlottetown, Quebec and Wallaceburg.

3. The countries to which exported were: Great Britain, Belgium, United States, Denmark, Germany, Australia, Holland, New Zealand, France, Newfoundland, Norway and Sweden, St. Pierre.

LEASE OF PROPERTY IN MONTREAL FOR IMMIGRATION SERVICE.

Mr. AMES—by Mr. Lancaster—asked:

1. Has the government recently purchased, or is it about to purchase, a property on St. Antoine street, in St. Joseph's ward of the city of Montreal, for occupation in connection with the Dominion immigration service, or for any other purpose?
2. If so, what is the street number, the cadastral division and subdivision, and the area of said property?
3. What was the purchase price paid or agreed upon?
4. From whom was the property purchased?
5. Who negotiated the sale, and what commission was paid, and to whom, on the transaction?

Hon. CHAS. HYMAN (Acting Minister of Public Works). No. The premises, No. 306 St. Antoine street, Montreal, have been leased from the Rodier Estate for fifteen months, from January 21, 1905, at a rental of $1,000 per year. The immigrant hospital for the treatment of trachoma will be located therein.

STEAMER 'DE LEVIS.'

Mr. LEWIS asked:

1. Who is the owner of the steamship 'De Levis,' employed by the government in connection with the hydrographical survey of the River St. Lawrence?
2. What was the total amount paid by the government for the use of the said steamer during 1904?
3. How many days was she in use by the government?
4. What officials of the Department of Marine and Fisheries were employed in this work; how long was each in service and what remuneration did each receive?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister) for the Minister of Marine and Fisheries:

1. The government of the Dominion of Canada.
2. The government being the owner, nothing was paid for use.
3. About 210 days or the whole season of navigation.
4. Mr. P. E. Parent, $2,000 per annum, employed since 1898; Mr. Chas. E. McGreevy, $1,500 per annum, employed since 1898; Mr. Arthur Amos, $1,800 per annum, employed since 1898; Mr. A. R. Decary, $1,500 per annum, employed since 1900; Mr. John Houliston, $1,200 per annum, employed since 1901.

DOMINION LIGHTHOUSE DEPOT, KINGSTON.

Mr. MONK asked:

1. What is the total area and the cadastral designation of the property acquired by the government for the establishment of a Dominion lighthouse depot at Kingston?
2. What were the prices paid?
3. Who were the vendors, and what were the commissions on the sale, and to whom paid?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister) for the Minister of Marine and Fisheries:

1. The government has no lighthouse depot at Kingston.
2. Answered by No. 1.
3. Answered by No. 1.

PURCHASE OF CARBIDE.

Mr. AMES—by Mr. Lancaster—asked:

1. What quantity of carbide for acetylene gas lighting has been purchased or manufactured

by the Department of Marine and Fisheries since July 1st, 1903 ?

2. From whom have the purchases been made?

3. What have been the prices paid ?

4. Were tenders called for by public advertisement ? If not, why not ?

5. Do any contracts exist for future supply ?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister) for the Minister of Marine and Fisheries :

1. 187 1-5 tons purchased; none manufactured.

2. From the Ottawa Carbide Company.

3. $65 per ton.

4. No; tenders were not called as carbide was purchased at wholesale rates in small quantities as required.

5. No.

LIGHTHOUSE DEPOT, KINGSTON.

Mr. LALOR—by Mr. Lancaster—asked :

1. Were the buildings and constructions of the government, in connection with the Dominion lighthouse depot at Kingston, erected by contract ?

2. If so, were public tenders called ; in what newspapers, and on what dates were they advertised ?

3. What tenders were received ; what were the offers, and who received the contract ?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister) for the Minister of Marine and Fisheries :

1. I have again to repeat that the government has no lighthouse depot at Kingston.

2. Answered by No. 1.

3. Answered by No. 1.

SITE FOR MAIL DISTRIBUTING STATION, MONTREAL.

Mr. AMES—by Mr. Lancaster—asked :

1. Has the government recently purchased, as a site for a mail distributing station, property in the city of Montreal, opposite the Bonaventure station of the Grand Trunk Railway ?

2. If so, what were the cadastral numbers and subdivisions of said property ?

3. What was the total area purchased ?

4. Who were the previous owners ?

5. What price was paid ?

6. Who was the agent through whom the transaction was carried on, and what was the amount of his commission ?

Hon. CHAS. HYMAN (Acting Minister of Public Works):

1. Yes.

2. Cadastral lot 731 and northeast half of 732, St. Joseph's ward.

3. Area 13,395 feet.

4. Owner of lot 731, Mrs. McCrory, of lot 732, Mrs. Myler.

5. For lot 731, $25,000 and for half lot 732, $12,000.

6. U. H. Dandurand, of Montreal, commission 5 per cent. His work, however, was not confined to the simple purchase of the property, as in the case of the Myler property he had to look up the title, attend the judicial sale. as on account of the substitution, which called for court intervention, obtained information re: tenants, value of surrounding property, age and value of buildings on site, &c.

MOTIONS AGREED TO WITHOUT DISCUSSION.

Copies of all correspondence, petitions, resolutions, reports, memoranda, in possession of the government, or any member thereof, relating to the survey and construction of branch railway lines in the province of Prince Edward Island. Also the number of surveys made in the province since 1900, the routes survey, and the cost of each.—Mr. A. Martin.

Copies of all correspondence, and despatches between the government of Canada and the Imperial government, in regard to the establishment of a branch of the Royal mint of Canada.—Mr Monk.

Return showing the respective dates of appointments of the commissioners and working staff of the Grand Trunk Pacific Railway Commission and the total amount expended thereon to December 31, 1904, under the heads : (a) salaries of commissioners ; (b) salaries of staff ; (c) expenses ; (d) rental of quarters.—Mr. Foster.

Statement showing the amount of money expended by the Dominion government since the first day of July, 1873, for constructing, equipping, and subsidizing railways and canals, separately, in Canada ; adding thereto the value of land given as subsidies, on the basis of one dollar value per acre ; and adding further thereto the total estimated liability incurred by Canada on account of the building of the Grand Trunk Pacific Railway. Also a statement showing separately the part of such expenditure made or to be made as above, on railways and canals separately in each province of Canada, and the Northwest Territories, deducting any sums that may have been charged any of the provinces or the Northwest Territories in their debt account with the Dominion of Canada.—Mr. A. Martin.

Copies of all correspondence in reference to the building of a new boat to be employed to maintain winter communication between Prince Edward Island and the mainland of Canada. The engineer's and inspector's report of the present condition of the ss. 'Stanley' now on that route ; the repairs made ; the damage sustained by contact with heavy ice ; and any other information in regard to her age, class, &c., in any of the Government departments.—Mr. A. Martin.

Copies of all correspondence had with the government, or any member thereof, or any official under the government, relative to the appointment of returning officers for the county of Dorchester, Quebec, for the general election of 1904, and relative to the resignation of any one so appointed.—Mr. Morin.

Return showing what contracts for public works, or for supplies, have been awarded since July 1st, 1903, to other than the lowest tenderer, in the Department of Marine and Fisheries, by the authority of the Governor in Council, in the manner set forth in clause 6 of the Act 55-56 Victoria, chapter 17. Also for the names and offers of all unsuccessful tenderers in every such case, and for the reasons why any such lowest tenderer was passed over.—Mr. Lewis.

Return giving unabridged copies of all applications for the improvement of the lighthouse service, the establishment of additional aids to navigation and cognate matters received by the Lighthouse Board since the said board was constituted ; setting forth what action has been taken by the board upon each application, and also indicating what recommendations of said board have received the approval of the Honourable the Minister of Marine and Fisheries.—Mr. Lewis.

Return showing the names of all persons added to the pay-roll of the Meterological service, permanently or temporarily, since June, 30, 1904, and the amount received by each to date.—Mr. Monk.

Copies of all correspondence between the Minister of Marine and Fisheries and the Submarine Signal Company, of Boston, U.S.A., including all contracts or agreements which may have been entered into between the aforesaid parties.—Mr. Monk.

Return showing all contracts which have since July 1st, 1903, been made or renewed by the Department of Marine and Fisheries, with any person or company, for the placing, maintenance or care of harbour buoys ; giving in each case the name of the approved contractor, the annual amount of his contract, and time of its expiry ; and further indicating in what instances public tenders were not called for, and in what instances the lowest tenders were not accepted.—Mr. Ames—by Mr. Monk.

GRAND TRUNK PACIFIC RAILWAY PLANS.

Mr. A. C. BOYCE (Algoma West) moved :

For a return containing a copy of the plan or plans deposited by the Grand Trunk Pacific Railway Company with the Department of Railways and Canals, showing the proposed terminal point or points on the Pacific coast. Also for a copy of the plan or plans deposited by the said company for terminal points at Port Arthur, Fort William and Winnipeg.

Hon. H. R. EMMERSON (Minister of Railways and Canals). There are no plans deposited and approved in the Department of Railways and Canals. Therefore this motion could not very well pass.

Hon. JOHN HAGGART. The hon. gentleman (Mr. Boyce) did not say 'approved.'

Mr. EMMERSON. They cannot be dealt with unless they are approved. It would not be proper to bring them before the public ; that might very well serve the interests of those who wished to indulge in speculation, but I do not think it would serve the public interest.

Mr. BOYCE. Have any plans whatever been deposited whether approved or not ?

Mr. EMMERSON. They have not been approved.

Mr. BOYCE. I asked if any have been deposited ?

Sir WILFRID LAURIER. Yes.

Mr. EMMERSON. Yes, some plans have been placed there, but they have not been approved.

Mr. HAGGART. Did I understand that this question was to stand or is it refused ?

Sir WILFRID LAURIER. The attitude of the government is that as these plans have been deposited, but not approved, they cannot be brought down. I supposed this would commend itself to the sentiment of my hon. friend (Mr. Boyce) and therefore I understood that the hon. member would not proceed with his motion.

Mr. R. L. BORDEN. We would like to consider that a little ; there may be something in what is said, but I am not absolutely sure that this is right.

Motion allowed to stand.

LABOUR UNION LABELS.

House in Committee on Bill (No. 10) respecting Labour Union Labels.—Mr. Ralph Smith.

Mr. R. L. BORDEN. When this Bill was in committee before, I understood from the Minister of Justice that he had some observations to make on the subject, and also that he would prepare and put in proper form certain suggestions which had emanated from some members of the committee and which my hon. friend who is moving the Bill (Mr. Smith) seemed prepared to accept rather than have any further discussion. I observe that the Minister of Justice is not here this afternoon.

Sir WILFRID LAURIER. The observation of my hon. friend (Mr. R. L. Borden) is quite correct ; the minister (Mr. Fitzpatrick) was to look into the point which was suggested to the House by my hon. friend from St. John and Iberville (Mr. Demers). Unfortunately the Minister of Justice has to be absent from the House to-day and therefore I would move that the committee rise, report progress and ask leave to sit again.

Progress reported.

CERTIFICATES TO MASTERS AND MATES.

On the order :

Second reading of Bill (No. 44) to amend the Act respecting certificates to masters and mates.—Mr. Lancaster.

Sir WILFRID LAURIER. I would ask to have this order stand.

Mr. LANCASTER. I suppose that in the absence of the Minister of Marine and Fisheries——

Sir WILFRID LAURIER. And the Minister of Justice also.

Mr. LANCASTER. Yes, it would not be advisable to go on with this Bill. As two private members' days have been taken and as we are anxious to have a discussion on this Bill, although of course in the absence of the ministers, we could not very well have it to-day, I would ask the Prime

Minister to assist me to have it discussed at some future date if the taking away of the private members' days should interfere with it ?

Sir WILFRID LAURIER. Most certainly.

SUPPLY—FREE TRANSPORTATION OF HAY ON I.C.R.

Hon. WILLIAM PATERSON (Minister of Customs) moved that the House go into Committee of Supply.

Hon. GEO. E. FOSTER. Before we go into Supply, I would ask the Minister of Railways and Canals (Mr. Emmerson) if he will kindly facilitate the return to an order of the House in reference to the hay transported on the Intercolonial Railway. We would like to have it as soon as we possibly can.

Hon. H. R. EMMERSON. I may say that the papers very largely were at Moncton and the certificates have to be gathered up at the different points all along the line. This requires considerable work, but we are expediting it.

Motion agreed to, and House went into Committee of Supply.

Mr. FOSTER. Before we go on I would like to suggest to the minister that it would be well to take up first those departments on which we have the Auditor General's Report. The other night we went on with some of the subsidies as to which that was not the case, but I think it was with the understanding that we should confine ourselves to those until we had worked out the departments on which the Auditor General had reported. The Department of Public Works is in this category. With regard to some at least of the steamship subsidies, we would like to have the Auditor General's Report before we pass from them. Of course, if the minister has a mind to go on with them, and let such items stand as we want a little more information on, the House having the privilege of taking any of them up again when the Auditor General's Report is down, I think that would be satisfactory.

Mr. PATERSON. If the hon. member will agree to take up the steamship subsidies to-day, I think it will please the Minister of Public Works who is very busy in his department to-day, and who asked me as a special favour to go on with these. To-morrow he will be ready to go on with his estimates. We will take what we can, with the full understanding that we may go back, as the hon. gentleman suggests.

Steam communication during the season of 1905, i.e., from the opening to the closing of navigation, between Prince Edward Island and the mainland, $12,500.

Mr. LANCASTER.

Mr. PATERSON. There is no change. The date of the contract is the 15th of March, 1900; it expires the 31st of December, 1905. The contractors are the Charlottetown Steam Navigation Co.. The steamships are the 'Northumberland,' of 1,255 tons gross, and the 'Princess,' of 541 tons gross. The terminal ports are Charlottetown, P.E.I., and Pictou, N.S.; Summerside, P.E.I., and Point du Chene, N.B. The speed of the 'Princess' is 12½ knots and that of the 'Northumberland' 15 knots. They provide a daily service between the points mentioned and a full round trip and they carry the mails.

Mr. A. MARTIN. Has the department any proposals with regard to putting on a new boat and increasing the subsidy?

Mr. PATERSON. Communications have passed between the company and the department and they are under consideration, but no change is involved in the vote now asked for. If another boat were put on or a new contract made, it would be necessary, I think, to have a supplementary vote.

Mr. A. MARTIN. Is the contract renewed?

Mr. PATERSON. I suppose the contract could be renewed during the summer.

Mr. A. MARTIN. I may state that the Board of Trade of Charlottetown passed a resolution complaining of the high rates which shippers and passengers have to pay on these boats. They also complain that while the company has a very good boat on the Summerside route, the 'Princess', which at present runs between Charlottetown and Pictou, is one which has outlasted her usefulness to a great extent, and that the large increase of trade between those two points require a much larger boat. I understand that the company are willing to put on a much larger boat, but they cannot do it with the subsidy now given. I notice that the subsidy immediately preceding this one, for communication between the mainland and the Magdalen Islands, amounts to $15,000. I am not complaining of that, but the minister and the House know that the service between Prince Edward Island and the mainland is one which the Dominion government is pledged by the terms of confederation to maintain, and the sums voted for it are ridiculously small. This steam navigation company has done a great service to the province, but the accommodation at Charlottetown at present is not equal to what the public demands. I may say that the freight on 100 lbs. of goods of the first class from St. John, N.B., to Sydney, a distance of 400 miles, is only 30c, whereas the rate from St. John to Charlottetown, a distance of only 190 miles, is 59c. This large rate is to a great extent owing to the heavy freights charged by this company, but the company says there is no remedy unless the subsidy is increased. I hope, therefore,

that when the supplementary estimates come down there will be a further vote to increase this subsidy. The trade between the province and the mainland is rapidly increasing, and it requires much better accommodation than is at present provided, especially between Charlottetown and Pictou.

Mr. EDWARD M. MACDONALD. With reference to the request of my hon. friend from Queen's, I would like to point out that there is one condition in regard to this proposed vote which seems to be applicable to every proposition that relates to communication between Prince Edward Island and the mainland. That is the proposition that these boats and services should be conducted entirely in the interests of Prince Edward Island, and for the sole benefit of the people of that province. I may say that those who are interested in the company which owns the boats for which this vote has been given belong entirely to Prince Edward Island. My hon. friend is quite right in stating that the service is inefficient, and that the boat now running between Charlottetown and Pictou is not at all satisfactory or fitted to cope with the large trade which has grown up and the passenger traffic between the two points. But this company has earned large dividends and has a large amount at rest, which it proposes to utilize for the purpose of obtaining a new boat; and those who live on the mainland and have occasion sometimes to visit this garden of the gulf would like to see these gentlemen who own the boats which are earning these large dividends run them with some consideration for the requirements of the people who have not the advantage of living in that favoured locality, and the government should see that they do so before granting any further favours. Should any one who happens to live on the mainland desire to visit the island, he cannot do so in less than three days, both going and returning, no matter from what part of Nova Scotia he may start. Therefore, before this company is given the slightest increase of subsidy, the government should see that it runs its boats from Charlottetown to Pictou in such a way that people living in Nova Scotia will be able to go to Charlottetown and return within twenty-four hours at least. There is no particular reason why that should not be done, and no reason why the population in Nova Scotia and the maritime provinces generally should not receive some attention from the management of this service. I need hardly remind my hon. friend that this particular company, not so very long ago, was very active in opposing before this parliament a proposition to give another company a charter to engage in this same service; and I am therefore not asking anything unreasonable when I ask that the government shall insist, before giving this company any additional subsidy or renewal of contract on its placing upon the route between Charlottetown and Pictou a larger and more commodious steamer than the one it has at present. And further, that this company should be compelled to so arrange the sailings of its boats that it would be possible for any one to leave Pictou in the morning and go to Charlottetown and return at night, instead of following the present system of having both boats leave the island in the morning, thus rendering it impossible for any one to get to and fro in any period less than three days.

Mr. A. MARTIN. I agree with my hon. friend that when the government subsidizes these boats their hours of sailing should be subject to the approval of the government. The allegation that the company is very wealthy, is one that is considerably disputed, and I am not aware that it is a matter of record that it has a large rest. If any company in Nova Scotia is ready to take hold of the service, there is nothing to prevent their getting to work; but hitherto the boat on the Summerside route has given every satisfaction, although I must say that the boat on the route between Charlottetown and Pictou is not at all adequate for the traffic, and should be replaced by a better one. Whether or not the service can be performed with the present subsidy is very doubtful, especially if the freights are kept as low as they are on other routes. We contend that the rates from any point in Canada to any point in Charlottetown should not exceed any charged on the Intercolonial Railway in other parts of Canada. Prince Edward Island has suffered extremely in that respect. The freights on those boats are extremely high. Whether that be due to the fact that the subsidy is not large enough, is one on which I am not prepared to express an opinion, but the subsidy is certainly not large. I see that we give a much larger subsidy to the service to Magdalen Island. I hope, however, that the hon. minister will see that some improvement is effected, and that is the only reason why I call his attention to the matter.

Mr. PATERSON. I take it that no fault was found with the steamer which runs between Summerside and Point Du Chêne, which makes fifteen knots an hour, but that it is the boat which runs between Pictou and Charlottetown, that only makes twelve knots an hour, that is complained of.

Steam communication from July 1st, 1905, to June 30th, 1906, between Grand Manan and the mainland, $5,000.

Mr. PATERSON. There is no change in that.

Mr. FOSTER. What boats are doing the business?

Mr. PATERSON. The Grand Manan Steamship Company are the contractors.

There is only one boat, and it carries the mails.

Steam communication during the year 1905, i.e., for not less than 52 full round weekly trips between St. John and Halifax, via Yarmouth and other way ports, $10,000.

Mr. PATERSON. There is no change in that contract. It does not expire until 1908.

Mr. R. L. BORDEN. What steamer performs that service ?

Mr. PATERSON. William Thompson & Co., are the contractors. It carries the mails.

Mr. FOSTER. Speaking generally with regard to all these boats, what attention does the Department of Trade and Commerce give to these different carriers so as to be informed whether they are really of service, whether their trade is increasing, and what value they are giving for the money. Some of these are valuable because communication should be kept up between the points. But most of these subsidies are paid because they are in aid of trade and commerce. A number of years ago, we made a very careful revision of the subsidies paid, and considerable changes were made. A number were cut off as not being useful, some were reduced, some were increased, and one or two new ones put on in the places of those cut off. That is, we thought it well to take stock and see whether we were paying money where there was no adequate return to the public. The list is largely increasing, I find. We are paying here $968-000—practically a million dollars in subsidies for services across the Atlantic, to West India and on local routes. I suppose the Trade and Commerce Department in some way gets at the facts with reference to these services, the volume of trade and the increase or decrease in that volume, in order that it may know whether it is right to continue or discontinue the service, or whether it would be better to increase the subsidy—because it is evidently poor policy to pay a certain amount for an inferior service if, by doubling the payment, you can secure an adequate service and increase trade between the ports touched at. Is there any system of gathering information which could serve the department and the House in judging as to the usefulnesss of these subsidies, which of them are paying, what future there is for each and, where a service is not really effective, what means would be taken to improve it ?

Mr. PATERSON. I understand from the deputy of the department that reports are received, but I do not know that they cover the information referred to. I suppose the contract provides for the carrying out of certain considerations, and this is done. But I gather that the only other information is in the form of complaints from parties who object that the contracts are not carried out. I understand the hon. gentleman (Mr. Foster) to ask if there is any systematic report from which the House could judge whether the subsidy has been effective in promoting trade. I understand that there are no such reports.

Mr. W. F. MACLEAN. Would it not be a good idea for the government, through some minister, to make a statement reviewing this whole vote, so that the House and the country might be able to judge whether it is conferring any benefit. If this cannot be done this year it should be understood that the government will be prepared next year to justify these votes or to suggest some improvement. An expenditure so great as this should certainly be reviewed on the basis of information by the House, that the public may know whether they are getting any thing for their money.

Mr. PATERSON. I may supplement what I said by what the deputy minister now tells me. It does not contradict what I said before but adds to it. Before payment is made the customs officers and postal authorities have to sign certificates that the work imposed by the contract has been properly performed. That, of course, does not necessarily affect the question of increase in internal commerce through the subsidy. It does show that there is some supervision and that subsidies are not paid without assurance that the service has been performed. But I do not think there is any information before the department bearing upon the question of the effect of these subsidies in increasing trade.

Mr. SPROULE. That, however, is the important part of it. Subsidies were given first in hopes of developing trade by that means. I know that, in some cases, the Minister of Trade and Commerce stated to the House that the subsidy was given in anticipation of developing a good trade. If it is found that trade cannot be developed by this means, it would be wise to stop the subsidy. There should be some data presented to the House to enable it to judge of the usefulness of these subsidies, and so to justify our action in voting them.

Mr. FOSTER. The minister will see that the supervision he speaks of is merely mechanical supervision. Certificates are demanded showing that certain trips were made. But whether the vessel sailed light or full laden is not shown. I make the suggestion I do because I think if it were carried out it would help in the intelligent consideration of this question. And the question must be considered sooner or later, because the country will not go on voting a million dollars for steamship services without demanding to know whether value is received or not. Demands are coming in for new services, and, as all demands cannot be met, we must judge for which our money should be spent. There are custom house

officers who could give information, and the officers of the vessels themselves could return the volume of trade from year to year and also the kind of trade, which would be valuable information for the House to have as showing the development of the inter-port commerce of the country. The minister said that complaints have been made as to some of these services. I suppose these complaints have been investigated. If not, they ought to be. Then, by simple process of reporting in answer to questions framed and sent out by the department to the proper officers of the government and of the vessels themselves, much information could be gathered. If that has not been done, I hope that before next year it will be done, for we must look at these things from a business point of view and not give subsidies simply because certain persons ask for them, but because they are in the public interest.

Mr. DANIEL. The steamer that performs this service was equipped specially for this route and this purpose, and I presume that she was built of such a size and character as would enable her adequately to perform the service expected of her.

Mr. PATERSON. Speaking individually, it seems to me that the remarks of the member for North Toronto (Mr. Foster) are very practical, and I do not see that it is at all an impossible thing to get what he requires. Also speaking personally, and with such knowledge as I have, I should think it would be very important that we should have that information. Is it wise to keep this thing on at all ? On the other hand, if the traffic is greatly increased, do they require as much subsidy as they are getting ? I think the observation is a practical one, and well worthy of consideration, and I have no doubt it will be brought to the minister's attention through the 'Hansard.' Further than that, I cannot say, but it seems to me it is a practical suggestion, and that some way ought to be found of carrying it out.

Mr. W. F. MACLEAN. Is not that the very work this Department of Trade and Commerce was created for ? Some years ago a new department called the Department of Trade and Commerce was created at a large expense, and a minister was put in charge of it, and this matter especially was one of those to come under his control. The hon. gentleman in assuming a responsibility of that kind should be prepared to justify all these expenditures, and to give a general report and review of the situation. I hope that next year, if not this year, parliament will be given some information from the Minister of Trade and Commerce in regard to this very item. It is a large item, and concerns the development of our trade, and we ought to have some report from him showing whether the money we are spending is developing our trade or not.

Steam communication during the season of 1905, that, from the opening to the closing of navigation, between St. John and Minas Basin ports, $3,000.

Mr. R. L. BORDEN. What boat is that ?

Mr. PATERSON. The 'Brunswick.' There is no change from last year.

Steam communication from July 1st, 1905, to June 30th, 1906, between Pictou, Murray Harbour, Georgetown and Montague Bridge, $1,200.

Mr. FOSTER. What boat is doing that work ?

Mr. PATERSON. The 'Electra.'

Mr. FOSTER. What is the tonnage ?

Mr. PATERSON. I have not the tonnage.

Mr. ALEXANDER MARTIN. I know this vessel, it is not of large tonnage, but she is performing an excellent service. She makes weekly trips, and has been of great advantage to the people on the route.

Mr. PATERSON. She calls at Bridge Point, Murray Harbour north, Murray Harbour south, and Murray river.

Mr. FOSTER. The minister might take a note of it and tell us on another occasion.

Steam communication from July 1st, 1905, to June 30th, 1906, between Quebec and Gaspe Basin, touching at intermediate ports, $8,500.

Mr. PATERSON. That touches at a great many ports. The vessel is the 'Gaspesia', of 490 tons gross, and 287 tons net, 160 feet long by 27 feet broad.

Mr. INGRAM. Have any changes been made in the figures of this item from last year ?

Mr. PATERSON. There was an increase, I am told.

Mr. INGRAM. What was the figure brought down in the estimates last year ?

Mr. PATERSON. $7,500 in the main estimates, and then $1,000 extra in the supplementaries.

Hon. R. LEMIEUX (Solicitor General). The increase of $1,000 in this service was given to pay her for stopping at a greater number of ports. Formerly the boat only stopped at intermediate ports in the county of Gaspé, and last year there was a request that came from several localities in the county of Rimouski to be benefited by her service, and the boat now stops at five or six additional ports, for which $1,000 additional is given. I may say that this boat gives a very good service to that coast. As the hon. gentleman knows, there is no communication from Summit or Métis, on the Intercolonial with the other side of the peninsula, as far as Paspebiac. It is a mountainous region, and there are several little coves on the coast, and settlements of

fishermen, who now can send their fish to Quebec, Montreal and other places by this boat.

Mr. FOSTER. What general work does a boat like that do ?

Mr. LEMIEUX. It carries something like 200 passengers, I think 150 second class and 50 first class.

Mr. FOSTER. How many trips does she give ?

Mr. PATERSON. Two round trips a month.

Mr. FOSTER. What is the distance ?

Mr. LEMIEUX. I think it is something like 800 miles.

Mr. FOSTER. How many knots ?

Mr. LEMIEUX. About 11 knots.

Steam communication between a port or ports in Prince Edward Island and a port or ports in Great Britain, $7,000.

Mr. ANGUS A. McLEAN. I think this service could be greatly improved. There was great dissatisfaction in the province with reference to the time of sailings of these vessels, and the rates of freight charged. The shippers claim that the contract should provide explicitly for same freight rates charged in Montreal, St. John and Halifax. These vessels in many cases charged higher rates than could be obtained at either Montreal, St. John or Halifax.

Mr. PATERSON. I believe only $2,500 were paid last year, because they had not carried out the full requirements of the contract.

Mr. A. A. McLEAN. Shippers in Prince Edward Island are anxious to obtain boats under the contract to run to Liverpool as that market suits most of them better than Manchester. Is it the intention of the government to arrange for such a service ?

Mr. PATERSON. The subject is under consideration, I am told, now, a decision not having yet been arrived at. The parties who had the contract before were the Manchester Liners, Limited. The steamship was the 'Manchester Trader', 3,318 tons gross. This vessel ran apparently between Manchester and Charlottetown. A subsidy of $7,000 was granted but only $2,500 of this was earned.

Mr. A. A. McLEAN. How many trips were made ?

Mr. PATERSON. One trip only.

Mr. FOSTER. Was the contract for a summer service?

Mr. PATERSON. The contract provided for two complete round trips, the first prior to October, 1904, and the second prior to December 15, 1904. But, they only made one trip.

Mr. FOSTER. The hon. minister ought to give some reason why they did not make both trips.

Mr. A. A. McLEAN. I understand that during 1903, only $1,500 was paid for one trip. Why should they be paid $2,500 for the same service last year ?

Mr. PATERSON. It is explained to me that $2,500 was paid last season. The $1,500 to which the hon. gentleman refers was a sum that was held back because of a dispute with some of the shippers. But, the dispute being finally adjusted the claim was paid. The steamship company settled with the shippers and their claim was paid. I suppose the hon. gentleman is more anxious to know what we are going to do in the future.

Mr. FOSTER. No, I do not understand that explanation quite.

Mr. PATERSON. I understand that there were $1,500 claimed by the steamship company.

Mr. FOSTER. On what?

Mr. PATERSON. On subsidy and that there was a dispute between them and the shippers. The $1,500 was held back until they made a satisfactory arrangement with the shippers.

Mr. FOSTER. What kind of an arrangement was that?

Mr. PATERSON. I do not know.

Mr. R. L. BORDEN. Perhaps the hon. gentleman may make it plain by informing the committee as to what is the basis of payment. Is it so much per trip or is it in proportion of the freight carried?

Mr. PATERSON. The basis seems to be, from the information before me, that this was a subsidy of $7,000 to complete two round voyages. It is provided that the freight rates are not to be greater between the ports mentioned than those between Montreal and Manchester and it is probable under that clause of the contract that a question would arise as to that between the steamship company and the shippers. I am supposing that. It looks a reasonable supposition, does it not? Owing to the fact of the shippers not being satisfied in reference to this a portion of the subsidy amounting to $1,500 was kept back until they arranged with the shippers and the matter having been satisfactorily arranged the $1,500 was paid.

Mr. FOSTER. What was the complaint?

Mr. PATERSON. It appears that a large quantity of live stock that was to be sent over in this boat had been taken to certain ports at which the steamer did not call. Therefore a great deal of loss was inflicted upon those parties who expected to ship by the steamer and for that

reason the steamship company had to settle with these people. Complaints had reached the Department of Trade and Commerce and they retained $1,500 of the amount claimed by the company until a satisfactory settlement was made. A settlement having been made they paid the amount.

Mr. A. MARTIN. Have these shippers been paid the losses which they sustained?

Mr. PATERSON. Yes. The deputy thought that the members from Prince Edward Island would know the facts of the case.

Mr. A. A. McLEAN. I would like the hon. minister to bring down the names of those to whom the money was paid. I am informed that the shippers have not been paid and that a suit is now pending in the courts against Furness-Withy & Co., to recover an amount for the loss incurred. I think this item should be allowed to stand until that information is brought down.

Mr. PATERSON. Certainly.

Mr. INGRAM. Do I understand the hon. minister to say that $7,000 was voted last year and that only $2,500 was expended?

Mr. PATERSON. Yes, I am told so. Did the hon. gentleman (Mr. A. A. McLean) say that it was the Furness-Withy Line?

Mr. A. A. McLEAN. The Manchester Line?

Mr. PATERSON. I thought the hon. gentleman said Furness-Withy & Co.

Mr. A. A. McLEAN. It is controlled by Furness-Withy & Co.

Mr. PATERSON. This item had better stand.

Mr. INGRAM. There was $3,500 asked for first and the reason given for the increase to $7,000 was that you wanted to increase this service. It is a strange thing that you want more money when you only spent $2,500 of the $7,000 asked for last year.

Mr. PATERSON. This contract has expired and they are expecting to be able to effect a contract which will be better carried out than this one.

Mr. INGRAM. They got the same amount exactly last year, $7,000. Why were they not able to carry out the same service then that they wish to carry out now?

Mr. PATERSON. I cannot tell the hon. gentleman. It has been unsatisfactory apparently. The contract may not be made with the same company. The right hon. Minister of Trade and Commerce, with this vote at his disposal, will be enabled to make a new contract. This, on the face of it looks to have been a very unsatisfactory one.

Mr. R. L. BORDEN. I would like to bring to the attention of the hon. minister what was said in regard to the freight rates. I gather from his memorandum of the contract that the freight rates were not to be greater than those between Montreal and Manchester.

Mr. PATERSON. Yes.

Mr. R. L. BORDEN. It is stated by one of the hon. members for Queen's that the rates charged were much higher. Perhaps then the hon. minister will give us some information about that when the item comes up again. It is important to know about that because it seems to be a violation of the contract?

Mr. PATERSON. Yes, that was one of the points of the contract.

Mr. FOSTER. Was the port at which she did not stop one of the ports at which she should have stopped under the contract?

Mr. PATERSON. Yes.

Mr. FOSTER. Then, I hope the hon. minister will give us some information as to why, if she did not stop at the ports called for under the contract, the money was paid?

Mr. A. MARTIN. Last year, $7,000 was placed in the estimates in the expectation that there would be a larger number of trips between the province of Prince Edward Island and Great Britain than formerly. Any person can understand that one trip between Prince Edward Island and Great Britain is not what the province should have. Not only was there only one trip made, but the rates charged for that trip were excessively high. In the production of cattle, sheep, bacon, ham, eggs, butter and cheese, there is no similar area in the Dominion of Canada that can equal the province of Prince Edward Island and without adequate shipping facilities the farmers are very much handicapped. We know very well now that Great Britain is our market but what position is Prince Edward Island in? The first thing that our exporters have to do is to ship their goods to Halifax and then tranship them to the vessel from Halifax to the old country. Thus they are handicapped in every way, and I think that in place of having one trip per annum Prince Edward Island should have at least seven trips. Every time that the boat did come to the port at Charlottetown she could not accommodate all the freight that was offered, and the cold storage accommodation was not at all sufficient, and yet they think they are doing a great deal for Prince Edward Island by giving one trip per annum. They are only showing the people of Prince Edward what they are losing by not being in communication with Great Britain and not having the subsidies that the other provinces have. If the Minister of Trade and Commerce would see that these four or five

trips are provided for this service he would be doing an immense service for the province. If you compare the daily market quotations for Montreal and Prince Edward Island you will find that the quotations for pork, beef and ham, are two cents a pound lower in Prince Edward Island, mainly because the farmer of Prince Edward Island has first to ship his produce to Halifax or Montreal and then to ship it back to the old country from there all owing to the fact that they have not the direct accommodation. When you look at this page and see the amount of subsidies it is appalling. I do not believe that it is any too much, but I think the province of Prince Edward Island should figure a little larger and that at least four or five trips should be given to Prince Edward Island. I think you could get a steamer that would perform that service for $1,500 in subsidies for each trip. I would like to know all the particulars of this $2,500 as there seems to be something a little shady about it, but we will get to the bottom of it a little later on. My object is to call attention to the position the province occupies.

Mr. PATERSON. As the item stands I will say very little about it. The hon. gentleman's statement is important if it is only for the purpose of pressing these matters on the minister, and I shall repeat my understanding of his statement to be quite sure that I am correct and to know just what I can say to the minister in charge. The hon. gentleman thinks there is trade enough to warrant four or five round trips in the year ?

Mr. A. MARTIN. Yes.

Mr. PATERSON. He thinks that there will be so much trade offering that $1,500 per round trip would be sufficient payment, that is, that for the subsidy here he thinks the minister would be warranted in the strength of his statement in saying to the steamship people that they would be sufficiently remunerated for making four or five trips for that amount of money, that he would be moderately safe in assuring them that they could have a full cargo for the trip ?

Mr. A. MARTIN. Yes.

Mr. PATERSON. I would ask one more question ; what would be the hon. gentleman's suggestion as to the date of these trips, should there be two in the fall and two in the spring ; or should they all be subsequent to the harvest ?

Mr. A. MARTIN. In reply to that, I remember a few years ago bringing this up in the House. I think the Minister of Agriculture was in the House and that he promised a trip in the spring, but after the farmers of Prince Edward Island had fattened their cattle and got them ready for shipment the boat did not arrive and large loss was the result. There might be one or two trips in the spring and two or three trips in the fall and I think there would be ample freight for this number of trips. As to the question as to whether the $1,500 would be sufficient I have only taken what my colleague says. Freights of course may vary, but I would say that as a general thing $1,500 would be a fair subsidy, but whether the subsidy be $1,500 or $2,000 I think it would be money well spent.

Mr. PATERSON. This is an important service evidently if it can be developed, because it is an export trade, in which, if a good arrangement is made and the foreign market is stimulated, it will be an advantage to all Canada.

Mr. SPROULE. I cannot understand how there comes to be a dispute between the vessel owner and the shipper. Are you dividing this money between them, or are you giving some consideration to the shipper ?

Mr. PATERSON. I do not know ; there is a statement to come down giving the whole thing.

Mr. A. A. McLEAN. I think I can explain shortly. The steamer usually leaves Halifax or St. John and she has to go around to Charlottetown ; that is the reason for the subsidy. She has to go out of her way to get to Charlottetown. The vessel would be partly loaded leaving either of these ports and the dispute with reference to the trade is with the shippers.

Mr. SPROULE. The point I am interested in is whether the shipper gets any consideration for supplying the freight. Do you make a reduction in his freight or something of that kind ? They are claiming damages on account of the boat failing to keep her contract and calling for cargo.

Mr. PATERSON. At the proper port and time.

Direct fortnightly steam service between Montreal, Quebec and Manchester, England, during the summer season, and between St. John, Halifax and Manchester, during the winter season, $35,000.

Mr. PATERSON. We have six steamers engaged in this service, the 'Manchester City,' the 'Manchester Commerce,' the 'Manchester Trader,' the 'Manchester Corporation,' the 'Manchester Importer' and the 'Manchester Shipper.' This service is between Manchester and Montreal, calling at Quebec both ways, and in winter between Manchester and St. John, calling at Halifax. It is a regular fortnightly service ; the steamers carry mails and cold storage is stipulated for in the contract.

Mr. R. L. BORDEN. They are paid by the round trip ?

Mr. PATERSON. Yes.

Mr. R. L. BORDEN. How much per trip ?

Mr PATERSON. We do not pay by the trip, we pay the $35,000.

Mr. R. L. BORDEN. $35,000 to one particular line ?

Mr. PATERSON. Yes, but with several vessels.

Mr. R. L. BORDEN. How many trips ?

Mr. PATERSON. It is a regular fortnightly service and if they fail for a trip the amount is deducted.

Mr. INGRAM. The hon. minister mentions a boat, the 'Manchester Trader.' Is that the same vessel which is mentioned in connection with item 166 which we have just been discussing ?

Mr. PATERSON. I would not wonder, after the explanation of the hon. member for Prince Edward Island (Mr. A. A. McLean), that the boat does not go from St. John alone, but leaves Halifax and calls there. The Manchester Line apparently does the Charlottetown service.

Mr. INGRAM. So that votes 166 and 167 are related to each other to the extent that by one vote you pay $35,000 and the other $7,000, but the same boat provides the service stipulated for in each vote.

Mr. PATERSON. The information which I have is a little different from what the hon. member for Queen's (Mr. McLean) states. The understanding of the deputy is that the business with Charlottetown is done by a vessel subsidized for that purpose, and not by one of the regular liners between Montreal and Manchester. I understood the hon. gentleman to say that the boat that was performing this work came from Halifax or some port partly loaded, and completed her cargo at Charlottetown.

Mr. A. A. McLEAN. That is the fact. It was the case with all the boats that called there last fall.

Mr. A. JOHNSTON. Does this contract cover a period of years or is it an annual contract ?

Mr. PATERSON. It was made on October 6, 1904, became operative on July 3, and expires on July 1, 1905.

Mr. FOSTER. What are the conditions of the contract as to trips ?

Mr. PATERSON. It is for a regular fortnightly service, carrying mails and providing cold storage. In summer the terminal points are Manchester and Montreal, calling at Quebec both ways, and in winter Manchester and St. John, calling at Halifax.

Mr. FOSTER. Is there any penalty for mal-performance ?

Mr. PATERSON. Oh, yes. That is stipulated in all contracts. The penalty is a deduction pro rata.

Mr. FOSTER. Have they performed their contract absolutely ?

Mr. PATERSON. Absolutely, I am told.

Steam communication during the season of 1905-6 between Baddeck, Grand Narrows, Iona, Big Pond and East Bay, $5,000.

Mr. PATERSON. There is no change in this contract. It expires April 15, 1906. It is one of our local services and the mail vessels carry the mails.

Steam communication during the season of 1905, that is, from the opening to the closing of navigation, betwen Port Mulgrave, St. Peters, Irish Cove, Marble Mountain, and other ports on the Bras d'Or Lakes, $6,000.

Mr. PATERSON. There is no change in this. The contract runs till the close of navigation this year. It includes the carrying of the mails. Two full round trips are made each week between Port Mulgrave, St. Peters, Irish Cove and Grand Narrows, and four full round trips each week between Grand Narrows and Marble Mountain, two of which extend to East Bay.

Mr. FOSTER. What boats are doing that?

Mr. PATERSON. The steamer 'Bega.'

Steam communication during the season of 1905, that is, from the opening to the closing of navigation, between Gaspe Basin and Dalhousie or Campbellton, $12,500.

Mr. FOSTER. Explain this. What improvements are expected, if any ?

Mr. LEMIEUX. This service was performed by the steamer 'Admiral' until last year. She ran between Dalhousie in the county of Restigouche and stopped at all ports in the county of Bonaventure and the county of Gaspé until she reached Gaspé Basin. Last year it was found that the 'Admiral' could not any longer serve the purposes for which she had been subsidized during the years previous, as she was too old. Therefore a new boat, the 'Restigouche,' was put on by the contractor. She was a good boat, but too slow. Then the department decided, at the request of my hon. friend the Deputy Speaker, the hon. member for Restigouche and myself, to call for new tenders. A company was formed at Campbellton, the Interprovincial Navigation Company of Canada, composed of merchants of New Brunswick, especially of Campbellton and Dalhousie, and others of the counties of Bonaventure and Gaspé. They subscribed a capital of something like $97,000; and, after having obtained the contract from the Department of Trade and Commerce, they ordered a new boat from Scotland, a model of which was exhibited a short time ago in room 16. The new boat has been christened the 'Lady Eileen,' after the daughter of our late Governor General. She is one of the best boats on Canadian waters, and will, I am sure, give satisfaction to all

parties concerned. There is a change made in the terminals. Hitherto the terminal in New Brunswick has been Dalhousie; but it has been decided, at the request of the people, to have the terminal in future at Campbellton, which is on the main line of the Intercolonial Railway, and where new wharf accommodation, with freight sheds, will be provided for the public. I am sure that the Baie des Chaleurs will gain considerably by this new boat. It will attract not only business men, but tourists. The 'Admiral' was so old that tourists would no longer travel in her, but with this new boat that travel will no doubt revive and prove very remunerative to the coast of Gaspé and Bonaventure.

Mr. FOSTER. Will the voyage begin at Campbellton and be interrupted at Dalhousie a whole night?

Mr. LEMIEUX. The boat will start from Campbellton for Dalhousie and then cross to Carleton and will stop at every harbour as far as Gaspé Basin. The boat is the 'Lady Eileen' and her length is 180 feet, and I am sure she will be the best of her kind in Canada.

Mr. FOSTER. What I want to know is whether or not she will lay over night at Dalhousie and start from there in the morning?

Mr. LEMIEUX. She will stop at Dalhousie and then go on. She will reach Gaspé at nine p.m.

Mr. FOSTER. What is her speed?

Mr. PATERSON. 12 knots.

Mr. INGRAM. What has been done with the 'Restigouche' and the 'Admiral'?

Mr. LEMIEUX. The 'Admiral' is at the bottom of the sea and the 'Restigouche' was there only to replace the 'Admiral.'

Steam communication during the season of 1905, that is, from the opening to the closing of navigation, between Pictou and Cheticamp, $2,000.

Mr. PATERSON. The contract expires at the close of navigation.

Mr. FOSTER. Is this amount to resuscitate?

Mr. PATERSON. I suppose it is to make a new contract.

Steam communication from April 1, 1905, to March 31, 1906, between Port Mulgrave and Canso, and between Port Mulgrave and Guysborough, and from the opening to the closing of navigation in 1905, between Port Mulgrave, Margaree and Cheticamp, $8,000.

Mr. PATERSON. This contract was made in 1902 and expires this year.

Mr. INGRAM. Are there any complaints now about the train connections with these vessels?

Mr. PATERSON. No.

Mr. SINCLAIR. I think the time has come when the contractors should furnish a better boat. The service is performed by two steamers—one from Guysborough to the coast of Inverness, one trip each week, and the other making a direct service between the Intercolonial Railway and the town of Canso, about twenty-seven miles. The service to Guysborough and the coast of Inverness is very satisfactorily performed by a boat called the Malcolm Cann. The other boat plying on the Canso route is an old boat, to which we have been paying a subsidy for about ten years, and while she is doing the work fairly well, the people there think the time has come when we should have a better boat. As the contract will shortly expire, I wish to suggest to the hon. minister that he should communicate with the contractors and ascertain whether they will not furnish a larger and more commodious boat for the Canso route. The trade has grown considerably during the last few years, especially the fresh fish trade. This boat starts in the early morning, meets the express train at Mulgrave, and her cargo of fresh fish is sent by fast express to Montreal. This trade has grown considerably, and sometimes the boat is too small for the business, especially at certain seasons of the year. The passenger accommodation is also poor and the contractors should be asked to improve the service.

Mr. FOSTER. What is the population of Canso?

Mr. SINCLAIR. 2,300.

Mr. FOSTER. What was paid for this boat 'John L. Camp?'

Mr. PATERSON. The subsidy to the two was $8,000 and they get it between them. The request of the hon. gentleman with regard to the framing of another contract will be brought to the attention of the minister.

Mr. FOSTER. That adds force to what I said a little while ago. We should have some supervision over all those services. If that fresh fish trade is important, as no doubt it is, and the vessel too small, it seems to me that more ought to be required for that amount of subsidy. You are paying those two small vessels $8,000, as much nearly as you are paying on the Prince Edward Island route for a double service. It seems to be a very large subsidy for two very small vessels and one of them a very old one.

Steam service during the year 1905, between St. Stephen, N.B., St. Croix River Points, Deer Island, Campobello and the inner islands, Passamaquoddy Bay, L'Etête or Black Bay, $3,000.

Mr. PATERSON. There is no change in that, the contract has run out and has to be renewed.

Steam service during the year 1905, between Quebec and Blanc Sablon, calling at ports along

the northern shore of the River St. Lawrence between such terminals, $8,000.

Mr. FOSTER. That seems to be a new service ?

Mr. PATERSON. No, it is not a new service ; it was entered into three years ago. The contract terminates at the close of navigation 1904.

Mr. FOSTER. Where is Blanc Sablon ?

Mr. FITZPATRICK. Almost at the Strait of Belle Isle.

Mr. FOSTER. How many trips does the vessel make, and what is her size ?

Mr. PATERSON. She makes a semi-monthly trip from Quebec to Natashquan, one trip each season to be extended to Blanc Sablon. The steamer is the 'King Edward,' and the contractors are Messrs. Holliday Brothers. The steamer carries the mail.

Mr. FOSTER. What is her tonnage ?

Mr. PATERSON. I have not that information.

Steam service during the season of 1905 between Sydney, C.B., and Bay St. Lawrence, calling at way ports, $1,500.

Mr. FOSTER. Where is this ?

Mr. PATERSON. This seems to be a new contract, entered into on the 25th of January, but a renewal of an old service on the same terms. From the opening of navigation to the 15th of June, and from the 15th of October to the close of navigation each year, that is, until the ice will not permit of the running of a steamer over the routes, one full round trip between Sydney and St. Ann's bay, calling both going and returning at North Sydney, Breton Cove, Englishtown and North river, and one full round trip each week between Sydney and Bay St. Lawrence, calling both going and returning at North Sydney, Ingonish, Neil's harbour, Aspy bay and Cape North ; and from the 15th day of June until the 15th day of October two full round trips each week between Sydney and Neil's harbour, calling both going and returning at North Sydney and Ingonish, one trip each week to be extended to Bay St. Lawrence, with calls at Aspy and Cape North. The vessel is the 'Weymouth,' and she carries the mails. The contract runs until the close of navigation 1908.

Weekly service between Halifax and Canso, from July 1, 1905, to June 30, 1906, $4,000.

Mr. PATERSON. There is no change in that. The contract runs until the 30th of June, 1908.

Mr. FOSTER. What vessel is performing this service ?

Mr. PATERSON. The 'Lunenburg' and the 'Strathcona.'

Mr. FOSTER. What is the distance around from the Intercolonial terminus to Canso ?

Mr. A. JOHNSTON. Thirty-seven miles.

Mr. FOSTER. I should think these places would get the mails more quickly from the Intercolonial.

Mr. A. JOHNSTON. The vessel calls for mails along the route.

Mr. PATERSON. The ports are Port Dufferin, Sonora, Isaac's harbour, Goldboro' and Whitehead.

Winter steam navigation during the winter of 1905-6 between Quebec and the St. Lawrence harbours down to Murray Bay and River Ouelle, $12,000.

Mr. FOSTER. What is this service ?

Mr. PATERSON. The minister is asking to have this vote placed at his disposal to make a contract, but no contract has yet been made. A proper vessel has not been found to take up the service.

Mr. FOSTER. Better let the item stand.

Mr. PATERSON. I am not at the moment in a position to explain the item, so we will let it stand.

Summer service between Murray Bay and River Ouelle, $6,000.

Mr. PATERSON. No contract has been awarded for this yet.

Mr. FOSTER. Better let it stand.

Mr. DEPUTY SPEAKER. The item will stand.

Steam service between Victoria, Vancouver, way ports and Skagway, $12,500.
Steam service between Victoria and west coast of Vancouver Island, $5,000.

Mr. PATERSON. The same contractors carry on these two services, and there does not appear to have been any change. The contractors are the Canadian Pacific Navigation Company. The vessels are 'Princess May', 'Tees,' 'Amur' and 'Queen City.' There are three routes. Route A is from Victoria and Vancouver to Skagway four complete round trips during June, July, August, September and October ; three complete round trips during March, April and May, and two complete round trips during May, November and December, and January and February. Route B, from Victoria, Vancouver, Naas harbour and Skidegate, calling at way ports, two round trips each month. Route C, Victoria and Ahousset, Quatsino and Cape Scott and way ports, four round trips from April to September, inclusive, as follows:—Two from Victoria to Ahousset, one to Ahousset and Quatsino and Cape Scott. During the remaining months three round trips from Victoria to Ahousset, one to be continued to Cape Scott, calling at way ports. The

vote is for $5,000. There is an increase of $2,500, which is to improve the service.

Mr. FOSTER. What improvement does the minister get for this added $2,500 ?

Mr. PATERSON. He expects to get better boats.

Mr. FOSTER. In what way ? What have we now, and what does the minister intend to demand ?

Mr. PATERSON. The service expires in June of this year, and this vote is taken to enable us to stipulate for a better service.

Mr. FOSTER. My hon. friend will see that that is a very shadowy explanation. The minister must have a mind of his own He seems to know what the defect is, and what will remedy that defect. When he comes down to parliament asking for blank powers, he ought to tell us in what way he proposes to make the service better before he gets an extra vote. I suppose there is trouble in the quality of the boat, in speed, or in size.

Mr. PATERSON. Frequency of the trips, I fancy.

Mr. FOSTER. Will the minister tell us what he proposes to get, or let the item stand.

Mr. PATERSON. The matter is under consideration. It is not an unusual thing to place a sum at the disposal of the minister where a contract has been made. It would be a subject for criticism next year as to whether it was a wise contract.

Mr. FOSTER. How many extra trips does he expect to get ?

Mr. PATERSON. I am told it is what we have at present.

Mr. FOSTER. Does the minister know any more than he is telling us ?

Mr. PATERSON. No. This is a very reliable company. It will be a question as to whether they will consent to do any more than they are doing for $2,500. The minister would like to get more frequent trips, and he is asking for $2,500 more than the present contract calls for, so that if it is necessary to secure what he wants, if he can get it for $2,500, he wants the sanction of parliament.

Mr. FOSTER. Before the minister can get the vote he must tell the House what his idea is as to improvements, then we will have something to hold the minister to.

Mr. PATERSON. In what particulars does the hon. gentleman mean ?

Mr. FOSTER. In whatever particulars the improvement is to be made, whether in size, or speed, or frequency.

Mr. PATERSON. Then we will have to let the item stand.

Mr. PATERSON.

Steam communication between Prince Edward Island, Cape Breton and Newfoundland, $8,000.

Mr. PATERSON. This contract has expired. The service was performed by the steamer 'Elliott,' which was wrecked. It was a fortnightly service between the points named in the vote. We have not found another boat yet, and we would like the money to find one.

Mr. MARTIN. I may say this was a very useful service to the ports at which the boat stopped. How many trips did she make ?

Mr. PATERSON. It was a fortnightly service between the points named. Fifteen hundred dollars was paid before the contract expired.

Mr. A. MARTIN. Have they advertised for another service ?

Mr. PATERSON. No.

Mr. FOSTER. Had'nt they better get busy ?

Mr. PATERSON. Yes, if they want to carry on the work.

Mr. FOSTER. Who administers the Department of Trade and Commerce now, or is it an ornament ?

Mr. PATERSON. No, it is very efficiently managed. I regret the minister is not in the House now.

Mr. FOSTER. If we were to judge from the infantile remarks of the minister who is explaining these votes, it is not well managed.

Mr. PATERSON. That is a fair reflection on the minister who is explaining the votes but it would not apply to the minister at the head of the department. If my explanations are not very lucid, the committee has the satisfaction of knowing that the expenditure of the money is in the hands of a gentleman in whom the committee has full confidence that the public interest will be guarded in every way.

Mr. A. MARTIN. Will the minister call for tenders for another boat to perform this service ?

Mr. PATERSON. I am afraid there will have to be another stand of this vote.

Mr. A. JOHNSTON. I am sure the hon. member for Queen's (Mr. Martin) is not unaware of the fact that for years a steam service has been in operation between Prince Edward Island and the ports of Cape Breton and Newfoundland, during the season of navigation, and I do not see what necessity there is for this subsidy. They are performing the service now, and have been for a number of years, without any subsidy.

Mr. FOSTER. But the vessel has gone to the bottom of the sea.

Mr. A. JOHNSTON. I am speaking of another, an independent service.

Mr. FOSTER. Is there another service being performed ?

Mr. A. JOHNSTON. Yes, on the same route, between Charlottetown and the various ports of Cape Breton and Newfoundland. There is a regular line of steamers from Charlottetown, North Sydney and Sydney to St. Johns, Newfoundland. Surely my hon. friend representing the city of Charlottetown is not aware of the fact that for years this service has been in operation.

Mr. A. MARTIN. I am well aware of the object of the service. There must have been some reason for making provision for another service. I think the service the hon. gentleman alludes to is one for his province, but there are other provinces in Canada besides his own. I think he will find that this service to Newfoundland is a very important one, and one for which another boat should be provided. If the service is such as the hon. gentleman describes, there was no necessity for this vote last year. He was in his place, I suppose, and knows what information was given to the committee at that time. I think the service is highly beneficial to the trade between Newfoundland and this country, and anything we can do to increase the trade between Canada and Newfoundland is a move in the right direction. That trade is rapidly passing from Canada to the neighbouring republic, and anything we can do to keep it for Canada should be done.

Mr. A. JOHNSTON. I am not offering any opposition to the subsidy which is proposed to be voted. I do say, however, that it is unfair that a rival company should be subsidized to do business in opposition to a company which has been doing a fair business for a number of years. I represented to the Department of Trade and Commerce at the time that if this subsidy were to be granted it should be given to the company that had been performing the service for a number of years. I represented that it was unfair that a rival company should be subsidized. I still think so. I will support the proposition that this subsidy be voted, but I say it should go to the pioneer company, to the company that has been doing good work in years past, to the company that proposes to continue that work and to the company that has given very excellent service from the best information that I can obtain.

Mr. A. MARTIN. I am not very particularly concerned as to which company performs the service. I would be perfectly satisfied to give it to the company the hon. gentleman (Mr. A. Johnston) may be interested in.

Mr. A. JOHNSTON. I am not interested in any company.

Mr. A. MARTIN. You may be interested.

Mr. A. JOHNSTON. I am not.

Mr. A. MARTIN. The hon. gentleman says that he opposes the payment of this subsidy to any other company, but does not oppose the vote.

Mr. A. JOHNSTON. No.

Mr. A. MARTIN. The only object I have in view in calling attention to it is that somebody should be called upon to perform the service. To the company spoken of I have no objection. All I desire is that that service shall be performed in an efficient manner.

Mr. PATERSON. Tenders will be called for, no doubt, and this company will tender.

Mr. FOSTER. This is rather an interesting feature that is brought up. Here is one hon. gentleman who says that for a number of years a capable and full service has been carried out by a line of vessels that is doing the work and doing it well. Suddenly, for some reason or other, against this old and well established line a subsidized line is placed on the route to perform exactly the same service as has been explained by the hon. member for Cape Breton. Is that part of the policy of the Department of Trade and Commerce, or the government ? The hon. member for Cape Breton, says that he is not averse to the subsidy being given if it goes to the old company, but there is just where the crux of the position is. If a company has been for years doing the service and doing it well, making enough out of it to give a good service and to pay its way, why in the world does the government stick its nose in with a new subsidized line ? Are the routes exactly the same ? Do the vessels start from the same ports, touch at the same ports, go to the same ports and return to the same ports, and is the Department of Trade and Commerce doing everywhere what it is doing with these boats ? If that is so it is rather a remarkable thing. I think the hon. minister had better let this stand and I think he had better let it stand a long time.

Mr. PATERSON. If you want it dropped, why, say so.

Mr. FOSTER. No, I have great faith in my hon. friend from Queen's (Mr. A. Martin) and he has great faith just at this particular time in the Department of Trade and Commerce, but with all that I think the chamber should have an explantion.

Mr. A. MARTIN. I think I can give the information about this. The boats from Montreal call at Charlottetown and Sydney and their final destination is St. John's, Newfoundland. But, they return without calling at these ports and the government, to develop trade and to get the steamers on their return from Newfoundland and Sydney

to call at Charlottetown, have offered this subsidy. That is the reason.

Mr. FOSTER. I think the hon. minister will have to look into that.

Some hon. MEMBERS. Drop it.

Mr. A. MARTIN. I think the explanation given by my hon. friend (Mr. A. A. McLean) will be sufficient to give hon. gentlemen opposite pause before they drop it. The reason for the subsidy is that at present these boats do not return by way of Charlottetown.

Mr. PATERSON. Well, the contract has expired, and no new contract has been made. Of course, if there is a line doing the service and answering the purpose——

Mr. A MARTIN. No, they are only answering it half way. There is no return trade.

Mr. PATERSON. As to the larger question raised by the hon. member for North Toronto (Mr. Foster) as to the wisdom of subsidizing a line of steamers anywhere coming into competition with independent lines, it is a question just how far you ought to go in that direction. It would not be confined to these local routes but it would go beyond. The whole question is raised as to the wisdom of giving any subsidies at all.

Mr. FOSTER. You get into that when you get into the ocean steamship subsidies.

Mr. PATERSON. Yes, but apparently there seems to be a misunderstanding in this. The hon. gentleman from Prince Edward Island says that the service alluded to by my hon. friend from Cape Breton (Mr. A. Johnston) is not the same service.

Mr. FOSTER. In that case it certainly becomes the duty of the hon. minister to bring down the correct information. He had better let this stand.

Mr. PATERSON. The only question is whether we shall drop this item.

Mr. FOSTER. Why should you drop it on insufficient information ? The hon. minister does not know whether these are or are not identical routes. If they are identical routes there is something to be looked into but my hon. friend (Mr. A. Martin) says the routes are not identical.

Mr. A. MARTIN. No.

Mr. PATERSON. And my hon. friend (Mr. A. Johnston) says they are.

Mr. FOSTER. We do not believe the hon. member for Cape Breton or the hon. member for Queen's, P.E.I. We must have the hon. minister bring down the information.

Mr. INGRAM. Last year the right hon. Minister of Trade and Commerce pledged himself to one of his own supporters that he would have these vessels running over the same route both going and returning, and on the strength of that pledge this vote was passed. Do I understand that the Department of Trade and Commerce is not going to carry out the promise made by the right hon. minister in this House last year ?

Mr. PATERSON. In reference to this ?

Mr. INGRAM. Yes.

Mr. PATERSON. I do not know what arrangement was made. I did not hear the first part of the hon. gentleman's remarks, but the contract has expired. What was the promise last year ? Does the hon. gentleman have it before him ?

Mr. INGRAM. Yes, and perhaps it would be best to put it on 'Hansard :'

Mr. J. J. HUGHES. What will be the starting point in the province of Prince Edward Island for this service and what will be the port or ports of call in that province ? Also, what will be the port or ports of call in Cape Breton and the port of destination in Newfoundland ?

Sir RICHARD CARTWRIGHT. Leaving Charlottetown, thence to Bridgetown, Annandale and Souris, P.E.I. ; thence to Glace Bay and Sydney, and thence to St. John's Newfoundland ; returning over the same route.

Mr. J. J. HUGHES. In any agreement that may be made with a company for this service, that will be one of the conditions, of course ?

Sir RICHARD CARTWRIGHT. That is our intention, of course ?

Meaning that that would be the route they would go, that that would be the route they would return, and that any agreement that was entered into would be along that line.

Mr. A. JOHNSTON. I have to say that I understood that these two lines of steamers went to Charlottetown, touched at Sydney and then proceeded to St. John's, Newfoundland. From the route indicated by my hon. friend from Elgin (Mr. Ingram) it would seem that the purpose is not only to start from Charlottetown but that the vessels shall touch at various other ports. The steamers doing the work just now, call at Charlottetown, proceeding direct to North Sydney and Sydney and from Sydney going direct to St. John's, Newfoundland. Of course, if it is the purpose to call at other ports I admit at once that it is a different service.

Mr. FOSTER. Then the routes are quite different ?

Mr. A. JOHNSTON. Well, the routes are not different.

Mr. INGRAM. The right. hon. Minister of Trade and Commerce said, 'leaving Charlottetown' and then he goes on to describe the route.

Steam service between Paspebiac and Gaspé Basin during the months of December, 1905, and January, 1906, $3,000.

Mr. PATERSON. I cannot give much information about this.

Mr. LEMIEUX. As long as we had the 'Admiral' on the coast this vote would be useless, but now with the new steamer the service will be performed as late as January 15 or 20. Last year, or two years ago the service could have been properly performed if we had had a proper steamer.

Mr. FOWLER. Is this an addition to the subsidy given to the same steamer by the other vote ?

Mr. LEMIEUX. This is in another shape. The subsidy is $12,500 for the ordinary service, between the opening and the close of navigation as ordinarily known, but when the boat performs the service during November, December and the early part of January, she takes greater risks, and we have this year the promise by this Interprovincial Company that it will be able to perform the service with this new boat.

Mr. BERGERON. For how many months is the service generally performed ?

Mr. LEMIEUX. From April to December ?

Mr. BERGERON. About nine months, and this will give about a month and a half or two months more.

Mr. W. F. MACLEAN. I would like to ask the hon. member for Gaspé (Mr. Lemieux) if there is any probability of Paspebiac being an open winter port.

Mr. LEMIEUX. As the Deputy Speaker, owing to his position as chairman of the committee cannot speak, I would not like to say anything on this subject, because I stand for Gaspé Basin and he stands for Paspebiac.

Mr. FOSTER. Perhaps, as the Deputy Speaker would not like to refer to it, the Solicitor General would read the contents of that wonderful postcard. Perhaps we will find it in that.

Mr. INGRAM. What about this experiment ? How did it succeed ?

Mr. LEMIEUX. There was no experiment last year. The vote was placed there with the expectation that the old company would give us a proper steamer, but the company did not give that steamer, and therefore this vote will be available for the new steamer, the 'Lady Eileen.'

Mr. FOWLER. The subsidy was not paid last year ?

Mr. LEMIEUX. It was not earned.

Mr. BERGERON. The boat will now receive $15,500 instead of $12,500, because in future she will be running two months more.

Mr. LEMIEUX. Yes.

Mr. INGRAM. It seems to me that the Minister of Trade and Commerce should know more about this, and last year he did say it was an experiment.

Mr. LEMIEUX. Last year we had the promise from the company which owned the 'Admiral' that they would get a new boat during the season of navigation. They failed to get that boat and therefore they could not perform the service in December and January. Now we have a new boat and the service will be performed.

Mr. INGRAM. The Minister of Trade and Commerce said that they wanted to make the experiment.

Mr. LEMIEUX. It was not a new steamer last year, it was an old boat which was afterwards burned.

Mr. INGRAM. This is the discussion that took place on it last year :

Sir RICHARD CARTWRIGHT. This is in the nature of an experiment to see if we can prolong that service during the winter months. We are now in negotiation and hope to obtain the service.

Mr. R. L. BORDEN. We had an item in the estimates for this year ; did the hon. minister utilize that ?

Sir RICHARD CARTWRIGHT. No, we did not succeed in getting a boat to carry on the service during December and January. They were afraid to face the ice in the Gulf at that time.

Mr. LEMIEUX. The company which owned the 'Admiral' would not risk that steamer in the ice. There is no question that a screw steamer specially fitted for the service, could make the trips in December and January. Some winters the navigation is open during the whole season, but every winter with a good screw steamer such as the new steamer is the company will be able to navigate the waters of the Baie de Chaleurs and the Gaspé Basin during December and January.

Mr. FOSTER. To what point does the railway go down ?

Mr. LEMIEUX. There are two railways ; the Baie de Chaleurs Railway runs as far as Paspebiac.

Mr. FOSTER. Is it an all winter service ?

Mr. LEMIEUX. Oh, yes. The new railway will start from Paspebiac to Gaspé Basin.

Mr. FOSTER. That will not be operated this year ?

Mr. LEMIEUX. Ten miles will be operated by June next, and 20 miles by next year.

Mr. FOSTER. The new vessel will run from Campbellton to Gaspé Basin during the summer and autumn, and it is now proposed that she will run between Gaspé Basin and Paspebiac for the winter. For running between these places during the

two winter months she gets $3,000 and that makes the whole subsidy to this vessel $15,-500. She is employed in this service practically all the year and the subsidy seems permissible because she makes winter connection between the railway and Gaspé Basin, but when this new railway is built and operated, then of course this service would be no longer necessary.

Mr. LEMIEUX. Probably.

Mr. MONK. When do the trips between Campbellton and Gaspé begin in the summer ?

Mr. LEMIEUX. Early in April.

Mr. MONK. Are they weekly trips.

Mr. LEMIEUX. It is a semi-weekly service.

Mr. MONK. And they last until what time ?

Mr. LEMIEUX. With the new steamer we will have navigation open until January 15 or 20, so that it will last from April to January.

Mr. MONK. Perhaps my hon. friend can tell me if the steamer 'Admiral' is going to run regularly ?

Mr. LEMIEUX. She was burnt.

Mr. MONK. Is it intended to replace the steamer for the service between River Ouelle and Murray Bay ?

Mr. LEMIEUX. Two years ago the 'Admiral' performed that service, but last year, failing to find a new steamer for the Baie de Chaleurs we had to take her again. During the summer she was burned and is now at the bottom of the sea. The work was then performed by the 'Restigouche' and now we have a contract with the company owning the 'Lady Eileen.'

Mr. MONK. Is there to be a service between St. Denis and Murray Bay.

Mr. LEMIEUX. I understand that the Department of Marine had a boat built for that purpose which was running this winter, the 'Champlain.'

Mr. FOSTER. When was this contract made with the new company ?

Mr. PATERSON. On October 6, 1904.

Mr. FOSTER. The contract was made with the company before the boat was built.

Mr. LEMIEUX. The boat was being built. The plans were exhibited in the department.

Mr. FOSTER. And the contract was made on the plans, I suppose, and her capacity as shown by them, and she is bound in the contract to come up to those conditions?

Mr. LEMIEUX. Oh, yes. There is no question but that by the beginning of April we shall have on the Baie des Chaleurs the best steamer on the River St Lawrence.

Mr. FOSTER. It is a comfortable thing for a company which is canvassing for stock to go to the government first through one of its most trusted members and enter into a contract hard and fast, and then go out and sell stock on a sure thing.

Mr. LEMIEUX. And after having invited tenders. I believe a majority of the stockholders belong to the party of my hon. friend.

Mr. FOSTER. I would like to ask the minister if that is to be the policy of the government; because, if it is understood to be such, more of us will come in.

Steam service between St. Catherines bay and Tadousac during winter of 1905-6, $2,000.

Mr. BERGERON. Where is St. Catherines bay?

Mr. PATERSON. It is near the mouth of the Saguenay river.

Mr. BERGERON. I suppose this is a crossing. Is it a steamboat?

Mr. PATERSON. Yes.

Mr. BERGERON. Does she carry the mails during the winter months?

Mr. PATERSON. The contract expired on April 30, and none has since been awarded.

Mr. BERGERON. Is it an old service?

Mr. PATERSON. It is a service that was put on last year.

Mr. BERGERON. Who is the owner of the boat?

Mr. PATERSON. There is no boat.

Mr. BERGERON. Who is making the service now?

Mr. PATERSON. No one is. We are asking for $2,000 to enable the minister to make it.

Mr. FOSTER. What will be the length of the course?

Mr. PATERSON. Three miles, I am told. There is no service this winter. The contractors wanted an increased amount, and the minister would not give it.

Mr. FOWLER. It strikes me that this is an ordinary ferry. In every other province services of this kind are subsidized by the provincial governments.

Mr. BERGERON. Our provincial government is on strike now.

Mr. FOWLER. When Mr. Parent recovers his health, you may get a subsidy from him.

Mr. FOSTER. This is an astounding thing. I would suggest to the Minister of Inland Revenue that here may be a way out. If one of the contending parties will undertake to carry out this half-mile ferry service without charging it up to the Dominion, we might all throw our influence in favour of that party. The minister is getting matters down pretty fine when he undertakes to subsidize a ferry of half a mile or three-quarters of a mile in extent.

Mr. PATERSON. Three miles, I am told.

Mr. FOSTER. Oh, no. Is the government undertaking to subsidize ferry boats?

Mr. GIRARD. I may say that this service was organized last year for the purpose of enabling the people of the whole district of Tadousac to have regular communication with the rest of the Dominion during the winter. Owing to the fact that the Saguenay river at its mouth, which is about two and a half or three miles across, from St. Catherines bay to Tadousac, is sometimes covered with ice, and that the north and east winds at that point are usually very strong, it is impossible for any but a strong boat to make the passage. Last year the government, in response to a petition from the people, organized a service, which gave complete satisfaction to the department and the public. Since then Price Bros., the proprietors of the boat, have organized a new company, and there has been some negotiation between the company and the government. The distance from St. Catherines bay to the wharf at Tadousac is nearly three miles.

Mr. BERGERON. How are the mails carried now?

Mr. FITZPATRICK. My hon. friend understands the situation. He knows that there is no bridge across the Saguenay until you reach Ha-Ha bay, a distance of sixty or seventy miles from the mouth; so that the people along the north shore of the St. Lawrence below Tadousac, if they want to come up to the settled parts of the north shore, when they reach Tadousac, have to travel inland sixty or seventy miles, and then come back and take the shore line up to Murray bay or the other inhabited portions of the country. This is intended to enable them to cross the mouth of the Saguenay river from Tadousac to St. Catherines bay, which is the great milling point of the Price Bros. This service has been performed by a little boat belonging to the Price Bros. They want to put another boat on, and they have formed a company for the purpose, and it is to enable that company to perform this ferry service that this subsidy is asked.

Mr. FOWLER. That does not justify it.

Mr. FITZPATRICK. I think it does. There is no bridge across the Saguenay river and no way of crossing in the winter. There is no means of facilitating communication between those people at the mouth of the Saguenay and the upper part where they have no railway communication.

Mr. FOWLER. This is purely a local affair, and should only be subsidized by the local government. Take the St. John river, which is quite as important as the Saguenay. It has a large population on both banks and yet there is no bridge from below Fredericton to St. John. There are ferries, but if these are subsidized at all they are subsidized by the provincial government.

Mr. FITZPATRICK. Not two minutes ago we voted a subsidy under identical conditions. We voted $3,000 to subsidize a line to carry passengers from the terminus of the railway at Paspediac down to Gaspé basin.

Mr. GIRARD. That is the only way to give a regular service to the eastern part of the coast. The mail service has to cross the Saguenay during the winter and continue by land, and two years ago the mails were stuck on the west shore of the Saguenay for three weeks because the only means of crossing over was by canoe, and the wind was too strong. But with a small steamer you could have a regular service no matter what way the wind was.

At six o'clock, committee took recess.

After Recess.

Committee resumed at eight o'clock.

Mr. MONK. With reference to this vote from Tadousac into St. Catherines bay. and Tadousac, some facts have come to my knowledge since you left the Chair at six o'clock, Mr. Chairman, which put a rather different complexion on the resolution. This service is performed in summer by the Richelieu and Ontario Navigation Company. They receive a considerable grant for the service which is more important in summer than in winter. For some years, the winter carrying of the mails to the district below the Saguenay has become of importance because several new industries have started there. Last year there was a great delay in the conveyance of the mails—as much as eighteen days would elapse before the mail could get across from the western shore of the Saguenay and to Tadousac thence fifty miles by vehicle, &c., by dog-train to Matashquan, and further to Belle Isle by any conveyance that offered. The Price Company have built a steamer at a cost of some $20,000 which, during the winter, conveys the mail regularly across the Saguenay to Tadousac and brings the mail back from the east. There are two trips across the opening of the river every day—it is not straight across the river, but

there is a distance of about three miles for a service between St. Catherines bay We pay not for the steam service but for the mails in the winter time, because delay would be detrimental to the industries and to the growing population on the eastern side of the river. There is no road from Tadousac to where a crossing can be effected, and in winter, there is no crossing possible, I am informed, for twelve leagues up the river—you must go that distance before you find a place where the river is frozen across. Under the circumstances, the sum of $2,000 paid to the Price Company seems reasonable enough. Of course, it is local enterprise and falls under the jurisdiction of the provincial parliament. But, as I understand it, this is a subsidy for mail service which interests the whole Dominion.

Mr. FOWLER. The statement made in explanation of the item did not show that this was especially for a mail service. The committee is establishing the principle that these subsidies shall be given for ferries that are certainly within the jurisdiction of the provincial legislature. If this government has so much money that it can afford this sort of thing, I can suggest a place where it can spend some of its surplus cash. Along the shore of the Bay of Fundy in a portion of the constituency I represent, there are towns that have no steam communication at all, and a subsidy might be given to a line of steamers to ply between St. John, which is our commercial metropolis in New Brunswick, and the ports along the Bay of Fundy, for instance, St. Martin's quite a flourishing town. Alma, in the county of Albert, Waterside and the town of Albert, and other towns lying along the coast. The steamer could run all the year round. These places are certainly deserving of consideration.

Mr. MONK. I think there is a difference. This subsidy is to enable the mails to be brought across the Saguenay river, which would be impossible otherwise except by going some forty or fifty miles up the river to a point of crossing—and on the eastern side there are no roads at all. In the cases referred to by my hon. friend (Mr. Fowler) I suppose the mails are brought overland. The mails are brought from Quebec in winter overland to the mouth of the Saguenay, the difficulty is such as I have mentioned.

Mr. SPROULE. I thought it was said that there was a large business done by this ferry across the river, and that the country there was comparatively thickly settled. If that be so, one would expect to find that this boat had considerable earning capacity, enough to ensure a profit without this subsidy. So far, this looks to me like some other cases we have had brought to our notice. A company running a steamboat asks for a subsidy with the idea that not much inquiry will be made and that it will be a good thing to have. If there is a paying business, there is no need of this subsidy. But, if the subsidy is necessary to continue the service, and if there is no other way of carrying the mails, it would be much more likely to be justified.

Mr. PATERSON. The representations that impressed the department were not primarily with regard to the mails. They regarded it as a commercial enterprise. Many of the steamers subsidized promote trade between ports of the Dominion which otherwise would not be readily accessible. The owners in this case were able to convince the minister that it was worth the amount of the vote to encourage the trade of the country, the mails being carried as a part of the contract. But the company now want $3,000 and refuse to take the contract for less. The department would not give the $3,000, and so there is no contract. The minister asking only $2,000, and is not prepared, I understand to give more.

Mr. SPROULE. Was there not a boat running there before the subsidy was given ?

Mr. PATERSON. No.

Mr. MONK. There is a great deal in what my hon. friend from East Grey (Mr. Sproule) says. But, as a matter of fact, the boat performed this service last year for the first time. It was not generally known throughout the district that the boat would run regularly. There has been a considerable development of that region, and when the existence of this service is better known probably people will avail themselves more of it, and it will not be necessary to pay even $2,000 for the conveyance of the mails. The boat can carry six teams and a large number of passengers. It does a useful work generally in the gulf, I believe that last year it crossed from St. Catherines bay to Rimouski in the beginning of March. The Deputy Minister of Marine was on board on that occasion. But the traffic will probably develop, it is merely beginning.

Mr. FOSTER. I want to argue this matter from a business standpoint as business men around this board. Now, is it a business subsidy or a mail subsidy ? The representation to the minister is that it is a business subsidy for the purpose of promoting trade. If you take it on that ground, all the precedents of this parliament are against giving what you may call a mere ferry subsidy. It is to all intents and circumstances a ferry, which stretches across a river in one of the provinces—a very useful and necessary convenience to have, but it is a thing which, in all the other provinces of the Dominion, has been kept up and subsidized, if at all, by the province. We have them all over New Brunswick. In my time, I re-

member numerous applications were made to have these ferries subsidized. There was one particular ferry in my own county, running from St. John city three miles up to Bayswater, perhaps a little more. I well remember the deputations and pleas that were made to me to get a subsidy for that. The answer of the government always was, It is simply an internal ferry service ; it is entirely within a province, and the province itself must pay the subsidy ; and, as a matter of fact, the province always paid the subsidy, and pays it up to this day.

Mr. PATERSON. Does it carry the mails, too ?

Mr. FOSTER. Yes ; and they are paid by the Postmaster General, who pays for the conveyance of the mails of the country, and he pays for the mail bag that is carried on that boat a very small amount, a couple of hundreds dollars probably for the whole season. That is a legitimate payment for the carriage of mails. Then take the river St. John from its mouth up ; here and there you come across a ferry. The St. John river is a wide river, in some parts a mile and three-quarters, sometimes a mile and sometimes three-quarters of a mile, and there are ferries all along the river. Two ferries used always to run opposite Fredericton, the capital of the province, one running up the Nashwassis and the other across to the Nashwak, a distance, in the one case, of about two miles and, in the other, probably of three-quarters of a mile. Never have they asked for a subsidy for these ferries, and if anything was given to them it was given to them by the municipality or by the legislature. You find ferries along the St. John river all the way up. They are all treated in that way. There is a ferry in Nova Scotia, from Dartmouth to Halifax, kept up by the municipalities, and not by the Dominion government. So when you come to the matter of subsidizing ferries for commercial purposes, really it ought not be discussable in this chamber. Where are you going to stop if, under the shadow of a commercial subsidy, you are going to subsidize different ferries ? Now, another point was brought up, and it is one that ought to be looked at fairly. The mails are to be carried to the people on the other side of the river and they are to get their mails delivered on this side of the river. If there is need of a traverse there, and it is difficult in the winter to cross, that is the Postmaster General's business ; he has to see that the public are served with the mails, and if it is necessary to pay $1,000 to get that service, he must pay it. If it is necessary to pay more he must do it, because he is bound to keep up the postal service, and he is bound to dispense so much of the public money as is necessary in order to keep up that service. When this item first came up I took it as a commercial subsidy, and it did not seem to me that it was admissible here at all. As a postal service it is quite admissible, but then it ought to go through the Postmaster General, and he ought to give what is generously sufficient in order to have the mails carried across.

Mr. FITZPATRICK. There is a great deal to be said in support of the views put forward by the hon. member for North Toronto (Mr. Foster). But the conditions existing at this particular place are entirely different from those that exist in any other part of Canada. Take the whole north shore of the St. Lawrence, from Murray bay down to Labrador, and as soon as navigation is closed the people of that country are absolutely shut out from communication with the outside world, except by means of the road that passes along the shore of the St. Lawrence. Now, from St. Catherine's bay, on the west side of the mouth of the Saguenay, to Quebec, there are facilities for communication, no difficulty about that ; that is to say, you have a road by which you can get out, even though it takes three, or four, or five days, or a week, or a fortnight, in bad weather, to cover the distance. But from Tadousac down the full length of the north shore of the St. Lawrence, they are absolutely without any means of access to the outside world ; there is no boat, no railway, no means of communication whatever, except by this road which runs along the shore of the St. Lawrence river ; and when they reach Tadousac then they are obliged to go, I am sure, it must be sixty or seventy miles inland to get up to a point where they can cross the Saguenay river and get to the other side ; and after they have reached the west side of the Saguenay, they have to go down to S. Catherine's bay along the shore. As a commercial proposition, it does seem to me that it stands in line of all the subsidies that have been given in order to facilitate communication. We are constantly aiding railways, we are constantly aiding steamboat services. Why? In order to give facilities to enable people to communicate with the outside world. Now, the intention here is to enable these people to cross the river at that point and save 140 miles of carriage—that is practically what it amounts to. Now, there is no use in endeavouring to cover this thing up in any way ; it cannot be pretended it is merely a mail subsidy, because, after all, the government can have a mail service if it goes 140 miles as well as if it merely crosses the river. It seems to me it can be defended on the principle that it gives facilities to these people who are to the east of the mouth of the Saguenay river to go up to Quebec and have communication with the outside world. So far as the service itself is concerned, it is performed by a firm down there, as I remember it, who are interested to some extent in the commercial development of that part of the country,

the firm of Price Brothers. My hon. friend, I think, will agree that they are one of the most respectable firms in the province of Quebec.

Mr. FOSTER. That does not enter into the question.

Mr. FITZPATRICK. But it shows this: these people contributed to that service for their own advantage, and I am informed by those who know that after having endeavoured to carry on that service, they find they cannot do it for the subsidy hitherto paid them. Notwithstanding all the business they get, notwithstanding the subsidy they have received, it is not a paying concern, and they cannot go further with it. Now, from the commercial standpoint, this service must drop if we do not help it. I think the fairest way is to state the facts to the House, and let the House decide what is to be done.

Mr. FOSTER. Granting everything my hon. friend has said, which is no doubt the true ground, and that it would be a hardship to go sixty miles on one side to find a place to cross over and then sixty miles down on the other, what does it all amount to? The whole point is the purpose for which the subsidy is paid. For instance, suppose there is a road which makes a long detour of sixty or eighty miles, suppose it is possible to get rid of a portion of this distance, making it probably one-third, one-eighth or one-tenth of the distance, but at the same time at greater cost, they don't come to the Dominion government and ask for that. It seems to me the whole point involved is the making of a traverse way in the province; it is the same as a road, and it is the provincial government that has to see whether the road is the shortest and best to accommodate the people. Now, if that traverse is necessary, it is the duty of the provincial government to provide a roadway, a highway for its people, which is more convenient than the roundabout highway. As it crosses the water, it becomes a ferry, and it is the provincial government, and not the Dominion government, which should supply it. The amount of money, involving only $2,000 or $3,000, is a mere bagatelle. It is not the amount, but it is some principle that I am now arguing for, and whilst I accept the premises of the argument of my hon. friend, at the same time I would say that the government which has the administration of affairs in the province of Quebec is bound to look after that, and to give to the people better and shorter means of traverse than they have at the present time. Then I go farther in reference to the mail carrying business, and if I were the Postmaster General I would give a fair, and even a generous amount for the mail carrying part of it. A commercial subsidy you cannot call it; it is a travel or mail convenience. It is not for the amount of merchandise that is to come and go that it is needed, but it is to put passengers across backwards and forwards and to take the mails backwards and forwards. That is the point of difference.

Mr. MONK. I do not like to subscribe unconditionally to the proposition that if this is to encourage and facilitate trade and commerce it is outside the purview of this parliament. On the contrary the encouragement of trade and commerce, I think, comes distinctly within our jurisdiction. I am not aware that in the province of Quebec or in any other province any description of subsidies which would be an encouragement to trade and commerce would not belong exclusively to our jurisdiction. I think the conditions there render trade and commerce more difficult without the assistance of this steamship and the parties interested properly apply to us for assistance. I see in the subsidies that we grant every year very considerable amounts for a steam service between St. Stephen, N.B., St. Croix river points, Deer Island, Campobello, the inner islands, Passamaquoddy bay and L'Etete or Black bay and also one between Port Mulgrave and Canso and Halifax and Canso. Are these amounts voted purely for mail service?

Mr. PATERSON. No.

Mr. MONK. Or are they also for the encouragement of trade?

Mr. PATERSON. Yes, trade.

Mr. MONK. I only wish to point that out. I could understand my hon. friend's argument if it were merely a question of establishing ferries. Not only are ferries under the jurisdiction of the provincial authority, but when a bridge is to be built upon a river entirely within the province the authorities interested cannot look to us for assistance. But if you place it on this ground that there are 140 miles of road to be traversed in winter that trade is developing there and when you grant a subsidy to this steamship not only on account of mail service but on account of trade and commerce of that distant locality I think it comes within our jurisdiction and that it does not belong to the provincial authorities.

Mr. SPROULE. In connection with this question it has been a matter of interest to me for a great many years why we do this in the maritime provinces and do not do it in any other portion of the Dominion. If the principle is a proper one we have a right to apply it all over, I could bring to the attention of the hon. minister very many backward places on the Georgian bay where a small subsidy would secure communication by steamer regularly in the summer, whereas, at the present time, steamers only come in casually whenever there are special cargoes for them. In many places on the Georgian bay where they have practically

no roads and where they have to travel a long way from one settled village to another to get their mail it would be a great convenience if they could get a small subsidy—whether you call it a commercial subsidy or for the carriage of the mails it does not matter. I know that years and years ago such a subsidy was applied for but refused. So far as my knowledge goes there never was an instance in which it was given. I remember thirty-four or thirty-five, or thirty-six years ago that strong efforts were made to get some assistance from the Dominion of Canada to carry the mails or assist in establishing a route where the trade that was offered would not pay for a regular boat supply, but they were not successful. I have often wondered why it was that these subsidies were granted for services on the Atlantic coast and refused for service in the heart of Ontario. I never could see why it was justified in one case and not in another. If it is justifiable in one case it should be justifiable in both, but while one is denied it the other gets it.

For services of wrecking plant on the St. Lawrence for the year ending June 3, 1906, $10,000.

Mr. FOSTER. What in the world is this ?

Mr. PATERSON. This is a contract made on the 21st June with Mr. Geo. T. Davie the owner in Quebec of a wrecking steamer called the 'Lord Strathcona' for which the subsidy of $10,000 is granted. That wrecking vessel or apparatus is to be there and at all times ready to render service to vessels that are in distress or wrecked in any way.

Mr. FOSTER. Where is it ?

Mr. PATERSON. It is stationed at Quebec.

Mr. FOSTER. Tell us about it. What is it and what has it done ?

Mr. PATERSON. It is a wrecking appliance.

Mr. FOSTER. How long have you had it there ?

Mr. PATERSON. Several years.

Mr. FOSTER. Tell us what it has done all these several years ?

Mr. PATERSON. It has attended any vessels that have been wrecked near the coast.

Mr. FOSTER. The hon. minister knows that is not an answer to say that it has attended any vessels. What vessels ? He should give us the results.

Mr. PATERSON. I cannot give you them, I have not got them. The report of the Department of Marine and Fisheries will show that. But, it has done it in every case. It is kept there for the express purpose of being ready in case of any accident taking place, and I suppose in every case it has repaired to the scene and done the work required. In order to have it constantly where it can be readily available for vessels in distress it has been deemed of a sufficient commercial and general importance to the country to pay a subsidy of $10,000. I understand that the large steamship companies have all petitioned for it and this subsidy is granted in response to that petiion. I cannot say more. It has done what was intended to be done. I think it is perfectly satisfactory. Gentlemen perhaps more conversant with the subject than I will be able to tell the hon. gentleman what it has done.

Mr. FOSTER. What is it that is there ? You talk about 'it' ?

Mr. PATERSON. It is a steamer, a wrecking plant with all the appliances necessary to render assistance to a vessel when she goes on a rock and is in danger of breaking up. It is thoroughly equipped with all the complimentary machinery and is ready to proceed to render aid. They will get paid from the companies to whom they render assistance. No doubt they will charge them, but this $10,000 will only be justified as a public grant.

Mr. FOSTER. It is a sort of a retainer ?

Mr. FITZPATRICK. That is what it really is.

Mr. PATERSON. This amount does not pay the vessel for its services, but as the hon. gentleman says it may be termed a retainer so that the vessel may be at the spot where it is readily available.

Mr. BLAIN. I would like to ask the hon. minister if there are any wrecking appliances in that district that are not subsidized coming into competition with this one that is subsidized ?

Mr. PATERSON. Not that I know of. Perhaps the Minister of Justice knows ?

Mr. BLAIN. I think that is rather an important question.

Mr. PATERSON. I believe that this is the only one there.

Mr. FITZPATRICK. We have in Quebec a very large graving dock that is the property of the government. Mr. Geo. Davie has been for years past the proprietor of a large wrecking plant. At one time he was the owner of a wrecking steamer called the 'Lord Stanley.' He was in the habit of using this wrecking plant to salve vessels at any point in the St. Lawrence and at times he has gone down as far as the United States with his plant. I might say that it is the only plant in Quebec and that it is considered the best wrecking plant in Canada. In consequence of his using his plant for the purpose of going out of the St. Lawrence at times wrecks have occurred which have resulted disastrously because the means to salve the vessels were not readily

accessible. Some four or five years ago the owners of vessels at Montreal applied to the government to see if arrangements could not be made with Mr. Davie to keep his wrecking plant always available for wrecks in the St. Lawrence. Every one who is familiar with the conditions in the lower St. Lawrence understands the advantage to a wrecked vessel of a wrecking plant being able to go to its assistance at the earliest possible moment. As a result of the negotiations then entered into between the government and the shipping people of Montreal, Mr. Davie sold the 'Lord Stanley' and bought the present 'Lord Strathcona,' which has cost him something in the neighbourhood of $125,000 or $130,000; the understanding being that he would get a boat of that calibre which is greater than he required at the time, to facilitate the work of wrecking in the St. Lawrence. He was to get this retainer, as the hon. member for North Toronto (Mr. Foster) has correctly described it, on the understanding that his wrecking plant must always remain at Quebec, so as to be available for any call that may arise in any part of the St. Lawrence, and the wrecking plant cannot leave the St. Lawrence without the consent of the Minister of Trade and Commerce. It is to be always accessible for wrecks in the St. Lawrence.

Mr. SPROULE. I am not rising to object to this, but I would call attention to the unfairness of the treatment of one locality as compared with another. For many years there have been wrecking plants on the Georgian bay and at times there has been serious competition from American wrecking plants coming in there. Efforts have been made from time to time to get the government to put some restriction on these American plants coming in, because the company who have their money invested in the Canadian plants were not earning enough to make them pay and yet what work there was was divided up with the Americans. They received no assistance from the government either by way of subsidy or by coasting trade regulations. They were obliged to stand on their own bottom and continue as long as they could. Why apply one principle to Quebec and another to Georgian bay? If the principle is correct in the one instance it must be equally correct in the other, and in my judgment the argument for assistance is much stronger on behalf of the Georgian bay wrecking plants owing to the very much more scattered nature of the shipping there. I call attention to this because I notice that in many lines there seems to be a distinction drawn beween one part of the country and the other.

Mr. INGRAM. This wrecking plant has been in existence for years. It was not necessary for this government or any other to grant a subsidy to this company to maintain a wrecking plant. It was when Captain Leslie removed from Kingston and took his plant down the St. Lawrence, that it was found necessary to give a subsidy to the Davie Company, and there is where the unfairness of this comes in. Here is a fair wrecking competition as between Leslie and Davie and in order to help Davie out he is given this subsidy of $10,000 a year.

Mr. FITZPATRICK. What happened to Leslie when he went to Newfoundland?

Mr. INGRAM. Wrecking is turned over to Davie and there is where the disadvantage to Leslie comes in. What are the government doing in addition to this? By their treatment of Davie they are preventing that competition which vessels would have in the St. Lawrence by granting this $10,000 a year. It is unfair to Leslie who is in competition with Davie for the matter to be put in that position.

Mr. FITZPATRICK. In what respect did he enter into competition with Leslie? We all know that there have been wrecks in the St. Lawrence from time immemorial. I venture to say that during the past 20 years Captain Leslie had never gone down beyond Montreal except once, when he went to Newfoundland, and I think he has regretted that trip ever since.

Mr. INGRAM. A vessel man made the statement in this House that Captain Leslie did wrecking in the St. Lawrence, and very successfully, and I prefer taking the word of a vessel man even to that of the Minister of Justice (Mr. Fitzpatrick).

Mr. FITZPATRICK. If my hon. friend will take the responsibility of making that statement of course I accept it, but I make the statement with some knowledge of Quebec—and I have been connected with the mercantile life of Quebec for many years—I make the statement that Captain Leslie has never gone below Montreal to the assistance of a wreck except in one instance when he went to Newfoundland, and we all know what occurred then.

Mr. INGRAM. I am very glad that the minister made that statement. Possibly in a few days we shall see whether the statement of a vessel owner in this House or that of the Minister of Justice is correct.

Mr. R. L. BORDEN. The question seems to me to be whether or not it is a fair commercial venture. Was there any difficulty about wrecking in the St. Lawrence before this subsidy was granted? There are wrecking plants in the maritime provinces, possibly none of them quite so extensive as this, although some of them are very efficient as I happen to know by reason of having been professionally engaged in connection with claims where their services were being valued. They have always existed without any subsidy so far as I know, but

I am prepared to concede that conditions may be different in the St. Lawrence. I would like to have information on that point.

Mr. FITZPATRICK. I think the venture was successful, in fact Mr. Davie is a very rich man, and I think he made all his money out of the wrecking plant except some that he made out of repairs which he made in his dry dock. The question as I understood it was whether or not we could keep that valuable wrecking plant for exclusive use in the St. Lawrence, as I understood it. Of course these negotiations were not carried on through me.

The question was not whether this was a good venture. I am quite satisfied that as far as Mr. Davie himself is concerned, he was prepared to go on doing his business as he did, free to go wherever he liked. But the special purpose of this retainer was to keep his apparatus exclusively for the St. Lawrence. I think the original subsidy or retainer was $5,000. I do not think Mr. Davie has ever approached the department on the subject. It has all been done through the underwriters and shipowners of Montreal. He decided that $5,000 was not sufficient, and it was increased, if I remember rightly, to $10,000. So far as Mr. Davie is concerned, it is simply a business agreement. He has to consider whether it would suit him better to keep his plant for the St. Lawrence for a retainer of $10,000, or to be free to go where he likes either on the St. Lawrence or on the Atlantic. For instance, one of the things that occurred was this, Mr. Davie has the most powerful tug on this side of the Atlantic, the 'Lord Strathcona,' which he was in the habit of using to tow ships from the St. Lawrence around to New York. That has not happened very often, but it has happened; and my hon. friend the leader of the opposition will understand how profitable such work as that is. But Mr. Davie is now barred from doing work of that kind by this retainer. This boats must remain exclusively for use in the St. Lawrence. The only question is whether it is a good business proposition.

Mr. FOSTER. The minister has a contract with Mr. Davie?

Mr. PATERSON. Yes.

Mr. FOSTER. Does he know what the terms of the contract are?

Mr. PATERSON. I have sent for it.

Mr. FOSTER. Has the Department of Trade and Commerce any reports as to the actual work which has been done in the way of wrecking by Mr. Davie? If it has not, does it not think it should have? If you give a retainer to a lawyer, you want to know whether he does any business for you. If you give a retainer to Mr. Davie, it is given in order that he may devote himself to wrecking in a certain area. What track has the Department of Trade and Commerce kept of his operations? It should have a report of every wrecking operation in which he has been engaged, and should be able to make certain that he has fulfilled his contract and has not gone beyond the bounds within which his contract limits him. But the matter has another aspect to me. It is sometimes wise to ask what other countries do in this respect. Does the minister know whether in the United States or in Great Britain the government has ever considered it necessary to give a retainer to one particular wrecking firm in this way in order to get its services, and to bind it to a certain portion of the commercial wrecking area? I doubt very much whether such a policy has been adopted by any other country. If it has not, there must have been some good reason, either that it was not necessary or that some ill-effects come from it. I can see easily what ill-effect will come from this arrangement. It will absolutely paralyze all private wrecking energy and enterprise in the St. Lawrence. The moment it is known that one firm has a retainer for doing wrecking in the St. Lawrence, no private firm will establish a wrecking plant, and every firm that is in the business will go out of it, knowing that the competition is unfair, and in a little while you will come down to a monopoly. What happens then? Just what is happening now. $5,000 was at first considered a sufficient retainer. A year or two afterwards double the amount was considered necessary. Go on for another year or two, and you have a call for $15,000 or $20,000. It works that way, because you put yourself absolutely in the power of one company. The very policy which the government has adopted with regard to dredging is a negative answer to this system. You say you cannot trust your dredging to corporate or individual enterprise, and you have to build your own dredges in order to be independent. You meet with still another difficulty. If the government has to give a retainer for wrecking in a great mart or channel like the St. Lawrence river, with many vessels and with a proportionate number of wrecks, what reason is there why the government should not come to the aid of equally or more dangerous coasts in British Columbia or in the maritime provinces where trade and commerce is imperilled every day in the year? I venture to say that there is not a man in half a million in the Dominion who imagines that the government has gone the length of giving a retainer to one firm for a wrecking apparatus. If they did they would realize the injustice of it. I am not saying a word against the necessity of having a good wrecking apparatus; but the question is whether the government should step in and paralyze the initiative of the individual and the corporation by retaining here and there some large firm to carry on the work of wrecking within a certain area. It strikes me that this matter is more

important than it has probably seemed to some of us before we began to look into it and think about it.

Mr. PATERSON. Of course, it has had the approval of the committee for several sessions. I think the argument of the hon. gentleman would be a very strong one if there were other companies that could be relied upon at all times to render help if help were needed. But I am informed that there is no wrecking company making any complaint with reference to this arrangement. It would be manifestly unfair to subsidize one firm when without a subsidy we could have competition from different firms; but in the position of affairs which is represented to me, in which we have the absolute benefit of having a very strong wrecking plant always available, and we get that by a subsidy without which we could not get a wrecking plant at all, the question for the committee to consider is whether in the public interest the subsidy should be continued. On the great lakes, to which reference has been made, there is competition. We have more that one wrecking plant and the Americans have their wrecking plants, and there is a certain degree of reciprocity. As to the other question of the hon. member for Toronto (Mr. Foster) as to whether any other government is giving a subsidy under those conditions, I am not aware of it. The question will have to be judged on the points I have mentioned. Could you get what you have now without a subsidy and also what is desirable in the interests of shipping ? If you cannot, is it worth, in the general interests, the amount we pay in order to secure what we have ?

Mr. INGRAM. The hon. minister assumes, as justification for asking for this vote, that there is no competition in wrecking in the St. Lawrence river. He has allowed two or three items to stand, and I hope a few days will be allowed to elapse before they are taken up so that we may obtain information which will prove that there are other wrecking plants and other men willing to go into that line of business in the St. Lawrence. There are other wrecking plants whose owners consider this favouritism to Mr. Davie as unfair to them. Only a year ago very strong complaints were made by these men. The vessel men were asked to sign a petition asking that the Davie plant be subsidized for the purpose of assisting wrecks in the St. Lawrence and they signed it, but they did so very unwillingly and because they were in this unfortunate position that if a wreck took place, the Davies had a monopoly of the business. It is not fair to say there were no complaints, because here are complaints and serious ones. Capt. Leslie has good grounds for complaint and has complained, and the department is aware of the fact.

Mr. MONK. I hope my hon. friend the Minister of Customs will allow this item to stand. The amount is a large one, but it is not to that so much we are objecting as to the principle involved. We have no precise information from the hon. gentleman. What we do know is that this retaining of a wrecking plant is not practised anywhere else and I hardly think that my hon. friend's analogy between retaining a wrecking plant and giving a retainer to a lawyer has any bearing on the subject. We know that Mr. Davie has made a great deal of money in this business, but because he cannot tow boats around from Quebec to New York—and that seems a very extraordinary enterprise for him to embark upon—we are asked to give him a retainer. We have no information as to what has been the effect of this retaining of Mr. Davie. What did he do last year in return for his retainer ? We are given no account of what he did when asked to vote this amount. This item ought to come under the Department of Marine and Fisheries, and we ought to know exactly what Mr. Davie did last year and what prospects there are of his doing sufficient this year to justify this subsidy.

Mr. PATERSON. What my hon. friend asks is not unreasonable. No doubt the Minister of Mairne and Fisheries will have full record of the wrecks that have taken place. I am told that the condition of the contract requiring this plant to be always available has been always complied with. We have certificates to that effect signed by the officers of the Customs Department, but in view of the statement made by the hon. member for Elgin (Mr. Ingram), who spoke with apparent knowledge, I do not think we would be warranted in pressing this item until he has the opportunity of giving the facts to the committee, so that we may know fully in what position we are. We will, therefore, allow the item to stand.

Mr. R. L. BORDEN. With regard to what the hon. minister has said as to reciprocity in the use of wrecking plants, I am not very familiar with the laws of the United States but I am under the impression that our wrecking vessels are not allowed to conduct salvage operations on the American coast.

Mr. FITZPATRICK. I do not know what the laws of the United States are on that point, but I know that the 'Stanley ' went around and towed vessels down to New York.

Mr. R. L. BORDEN. The hon. gentleman is absolutely correct about that. There is no objection to her towing, but I would hardly think that this wrecking plant would be allowed to conduct salvage operations on the coast of the United States. So far as the maritime provinces are concerned, I do not think that it has done much on our coast. I know that it has on the coast of Newfoundland, and I know it has come into competition there with wrecking plants from the province of Nova Scotia. Another considera-

tion we should not lose sight of is that the granting of this subsidy undoubtedly tends to discourage individual enterprise, because those engaged in similar work in the maritime provinces could hardly be expected to compete on equal terms with a wrecking plant which gets an annual subsidy.

Mr. FOSTER. Would the hon. minister also give us the amount of salvage which Mr. Davie has received each year from the wrecking he has done ?

Mr. SPROULE. I know for a fact that the Americans do not allow our Canadian wrecking plants to operate in their waters, because the wrecking plant that was for years in the Georgian bay applied to the Americans for reciprocal rights and were refused, although American wrecking plants can come to Canadian waters to attend to wrecks. Then this company contended that it would be unprofitable for them to keep up their plant unless something was done to assist them or to relieve them of the difficulties which they had to contend with owing to the American wrecking plants there. But nothing was done. It is the grant of assistance in one locality and its refusal in another that I think is wrong.

Mr. BLAIN. If a certain amount of money is necessary to keep a wrecking plant on the St. Lawrence, that money should not be given in the shape of a subsidy to one concern. I am inclined to think it would be better for the government to promote competition between wrecking plants and, at the close of the year, to give the money to the company that has done the best service for the public, instead of establishing a monopoly as the government is now doing. Perhaps the minister would be prepared to express an opinion on that subject when the item is again up for consideration.

Mr. PATERSON. I will mention the matter to the minister.

Mr. MONK. I think it would be well to ask the minister also, why there is no retainer for Mr. Leslie. There was discussion of this subject on the 25th of July last, from which it appears that we only began paying the retainer to the present company after Mr. Leslie went down there. Speaking as a lawyer, I think if we retain Mr. Davie, we ought to retain Mr. Leslie also. He has done quite a lot of work there and stands in the same position as Mr. Davie does.

Mr. FITZPATRICK. Has he done a lot of work there ?

Mr. MONK. It appears so from the discussion of last year. Mr. Reid, who is well informed, and who is a shipowner, stated—and he was not contradicted by the Minister of Trade and Commerce—that Mr. Leslie had done a lot of work there.

Mr. FITZPATRICK. Below Montreal ?

Mr. MONK. I believe so.

Mr. DEPUTY SPEAKER. Item 187 stands.

Steam service between Petit de Grat and the Intercolonial Railway terminus at Mulgrave, $3,000.

Mr. PATERSON. This is a contract made with Messrs. Hugh Cann & Son, of Yarmouth. The steamer is the 'Percy Cann.' The contract expires this summer. The terminal ports are Petit de Grat and Mulgrave, and the services daily, calling at Arichat and West Arichat when required. The boat carries the mail.

Mr. FOSTER. What is the length of the trip ?

Mr. PATERSON. About 27 miles, I am informed by a member who knows the locality.

Mr. FOSTER. What is the character of the vessel ?

Mr. PATERSON. A vessel of ninety tons. This is a direct service and brings large quantities of freight, largely fish, for shipment on the Intercolonial Railway.

Steam service between St. John, N.B., Westport and other way ports, $1,500.

Mr. PATERSON. The hon. member for North Toronto (Mr. Foster) knows the geography of this part of the country.

Mr. FOSTER. I know where St. John is, as the hon. gentleman (Mr. Paterson) knows where Brantford is.

Mr. PATERSON. This is a contract made on the 21st of October last and expires on the 30th of June next. The contractors are the Insular Steamship Company, Limited. The steamship is the 'Westboro III,' and the terminal ports are St. John, N.B. and Westport and Yarmouth, calling at intermediate ports ; to make sixteen trips from November 1 to March 1 and twelve trips from April 1 to June 30. It is not stipulated, that the vessel shall carry the mails, and I do not know whether she does or not.

Steam communication between St. John, Digby and Annapolis and Granville, viz., along the west side of Annapolis Basin, $1,500.

Mr. PATERSON. There is no change. The contractors are the Valley Steamship Company, Limited. The contract expires on the 1st of July next. The steamship is the 'Granville.' The terminal ports are St. John, N.B., Annapolis Royal and Granville Ferry, N.S. During the winter months the trips from St. John are allowed to terminate at Digby. Time and weather permitting calls are to be made at certain intermediate ports. Carrying the mails is not stipulated. There is accommodation for forty passengers and 1,000 barrels of cargo.

Steam service between Annapolis and Hull, England, $5,000.

Mr. PATERSON. I move that that be amended so as to make it read between Annapolis, Hull and London, Eng.

Amendment agreed to.

Mr. FOSTER. Is that a fruit service ?

Mr. PATERSON. Yes.

Mr. R. L. BORDEN. How many round trips do we procure ?

Mr. PATERSON. Five trips between October 10, 1904, and January 31. I suppose the trips are all made in the fall. There are four steamers of a capacity of 8,000 or 8,500 barrels. The service is extended so that they touch at London as well as Hull. It is the Acadia Steamship Company, Limited. With reference to the cold storage, the ships guarantee that they are built expressly for carrying fruits, with proper and sufficient ventilation, with sufficient convenience for fruit or other perishable produce shipped on a sea voyage in a satisfactory condition.

Mr. FOSTER. It would be interesting to know how much has been carried.

Mr. PATERSON. No doubt there has been a large trade.

Mr. FOSTER. The minister will bring that down.

Steam service during the year 1905-6 between Quebec and Natashquan, calling at ports and places along the northern shore of River St. Lawrence between such terminals, $3,000.

Mr. PATERSON. This service is performed by the steamship 'St. Lawrence,' with a tonnage of 532, and 300 net, and a speed of 10 knots per hour. It is a tri-monthly service, carrying the mails.

Mr. FOSTER. What is the distance from Quebec to Natashquan ?

Mr. FITZPATRICK. Five hundred and thirty miles. Natashquan is a little below the eastern limit of Anticosti Island, on the north coast of the St. Lawrence. This boat calls at stated ports. Last year she performed three trips until somewhere at the end of October she got on the rocks, where she is now. She was the old 'Douro' that used to run down there when she was owned by the Frasers. She was sold about two years ago, and was repaired and recast, and called the 'St. Lawrence.' Last October she was wrecked.

Mr. MONK. I heard complaints about that service last year.

Mr. FITZPATRICK. Yes ; they came near having a dreadful catastrophe at the time the vessel was wrecked. It was found she was not properly equipped.

Mr. AMES. Are this boat and the 'King Edward' both subsidized ?

Mr. FITZPATRICK. Yes. If there is any part of this country that ought to receive some attention it is the north shore of the St. Lawrence. Many industries are being established on that shore all the way from Tadousac down to Blanc Sablon. I think there are at least, to my knowledge, a dozen industries down there now, pulp and timber. There is the Eastern Company, the Dobell, Beckett & Company, and other firms established on that shore, and they have absolutely no means of access except through these steamers. My hon. friend will remember the fishing industries they have down there on the Moisie river and below. If I could have my way I would subsidize two boats, and would endeavour to have a weekly service. You cannot meet the case with only one boat. I would have a weekly service, with two boats, and endeavour to make them comply with the terms of their contract.

Mr. AMES. Is there any clause in their contract which compels these boats to keep up their regular service ? A year or so ago, you will remember, the 'King Edward' several times voluntarily abandoned its regular service in order to engage in profitable wrecking operations. I was on the north coast at the time, and I know it was a great inconvenience to the people of that section to have this steamer, on several occasions, abandon her trips entirely and leave the passengers, who had been planning to take her, for several weeks in out-of-the-way places.

Mr. FITZPATRICK. Years ago numbers of people on the lower St. Lawrence used to come up to Quebec to purchase their winter supplies towards the end of the season. On one occasion, because the owners of the 'King Edward' thought the weather was not favourable they said they would not go down, and it was necessary for the government to interfere and get one of the government steamers to take these people back. That happened two years ago last autumn. I think that shore ought to be attended to properly, and my view would be that we should have a proper service, and to have that two boats at least would be required.

Mr. AMES. My first question was whether the government, in return for the subsidies, were requiring the Holliday Brothers, who were the owners of the 'King Edward,' to make three trips regularly according to the schedule.

Mr. FITZPATRICK. I think it requires they shall make a certain number of trips, but it does not fix the dates of sailing. That is where the inconvenience comes in. As long as they make two trips monthly, it is immaterial what date they select for starting.

Mr. OSLER. I agree that that service should be fully carried out. I understood the minister to say that that boat was badly equipped. Surely, if this government subsidizes boats, they ought to see that they

are properly inspected before the subsidy is paid.

Mr. FITZPATRICK. I do not want to speak in criticism, but it seems to me time to take some steps in this country to prevent such terrible disasters as that which took place on the 'Slocum' in New York. Certainly, from information of some of my friends who were on board the 'St. Lawrence' when she was wrecked, the vessel was not equipped as she ought to have been. I make the statement, not in criticism of my colleagues, as, of course, nothing of the sort is intended, but simply because I think that perhaps the officials ought to be notified of the necessity of looking after these vessels and seeing to it that they have all the requirements that the law makes necessary.

Mr. OSLER. Would it not be an easy matter to make it a rule that no subsidy shall be granted to any vessel until it is thoroughly inspected?

Mr. FITZPATRICK. That is implied.

Mr. OSLER. It is implied but evidently in this case it has not been carried out.

Mr. FOSTER. I do not think it has been definitely stated yet whether that vessel got her full subsidy. It seems to have been fully stated here to-night that she did not do her work, that she actually abandoned her voyage and went in for salvage. Has the money been paid yet?

Mr. PATERSON. Not yet.

Mr. FOSTER. That is still being held back?

Mr. PATERSON. So I am told. You are discussing the St. Lawrence ?

Mr. FITZPATRICK. That was two years ago.

Mr. FOSTER. Well I want to know whether she got her subsidy or not. It is the 'King Edward' that I am referring to.

Mr. PATERSON. I am told that the claim was that they did their work between trips. The subsidy was earned and it was paid. I understood the hon. minister was talking about the St. Lawrence when I made my previous statement.

Mr. FOSTER. Is it not a fact that the Department of Marine and Fisheries makes a careful inspection of all passenger vessels that ply in our waters?

Mr. FITZPATRICK. The law requires them to do so.

Mr. FOSTER. They require to have their certificates and they cannot sail under steam unless the boilers, equipment and hull are inspected. It was a rather startling statement that was made by the hon. Minister of Justice that one of these vessels was found to be totally unequipped, or almost so, and it would be sad if we were to be wakened up some day by a Slocum disaster. That seems to be an imputation on the officers of the department.

Mr. FITZPATRICK. I made the complaint directly to my hon. friend the Minister of Marine and Fisheries (Mr. Préfontaine) and in answer to my complaint he produced a certificate which purported to emanate from his office at Quebec. He said: There is the certificate of inspection. On the other hand a gentleman on board the boat in whom I have the greatest possible confidence made a statement to the contrary effect.

Mr. AMES. I would like to ask the hon. minister whether the department has taken into consideration the enlarging of the subsidy in return for extending the trip beyond Natashquan. There are three Reid boats on three sides of Newfoundland. One goes up the west coast, crosses over to the Canadian Labrador, and passes a certain distance down from the straits of Belle Isle, but there is a gap between the ultimate western port of the Newfoundland service and the ultimate eastern port of this line. This gap is between Natashquan and Blanc Sablon. There is a stretch of country which has no service at all. I would ask the hon. minister if he has considered the advisability of extending the service of the 'King Edward.' I was informed by the parties who own the 'King Edward,' when I was taking a trip down there some time ago, that it was only a question of money with them. They informed me that they could continue their trip, make two trips a month and that they were perfectly willing to do so. There is a considerable population between Natashquan and Blanc Sablon.

Mr. FOSTER. We have a subsidy for that.

Mr. FITZPATRICK. It is the 'King Edward' that goes down there.

Mr. FOSTER. There is another one—No. 175.

Mr. FITZPATRICK. That is the 'King Edward.' In answer to my hon. friend (Mr. Ames) my idea was, having been interested to some extent in this matter through the hon. member for Chicoutimi and Saguenay (Mr. Girard), who wrote to me several times upon the subject that we ought to have two boats, one a larger boat than the 'King Edward,' and that both of them should have regular sailing days from Quebec or Montreal, as the case might be. One would go right down to the straits. One boat could make two trips a month and the other would make an intervening trip, and we might have three or four trips a month. The business down there would certainly support a service such as that. A great many tourists go down there, a great many men go down in the fishing season in addi-

tion to the regular population of the coast and besides that there are large lumbering interests. My idea is that we should increase the subsidy for an improved service but that we ought to put it into the hands of the same men. These Holliday Bros., have large interests on the coast. They are the owners of the Moisie fishing business. We should give a subsidy to the same men if we get proper boats giving them a fair subsidy so that they might properly do the work.

Steam communication between St. John and ports in Minas Basin and Cumberland Basin, $3,000.

Mr. FOSTER. What vessel is doing that service?

Mr. PATERSON. The 'Brunswick.'

Mr. OSLER. This looks to me to be the same subsidy as that voted in item 163.

Mr. FOSTER. It does except that Cumberland Basin is added.

Mr. PATERSON. It is very nearly the same. I think we will let that stand. I see the name of the contractor is the same. It will be worth looking into so as to see whether it is a duplication or not

Mr. DEPUTY SPEAKER. Item 194 stands.

Mr. FOSTER. I think the hon. minister probably will find that it is wrongly expressed in the wording. The last vote is probably for a vessel which plies around the different ports of the Basin of Minas and Cumberland basin and makes connection with a steamer sailing to St. John but does not come to St. John itself.

Mr. PATERSON. I have that information here. The terminal ports of item 163 are St. John and Minas basin ports, Spencer's Island, Canning, Wolfville, Parrsboro', Kingsport, Maitland and Ross river, while the ports of item 194 are St. John, Spencer Island, Canning, Wolfville, Parrsboro', Kingsport and Maitland. It is very nearly the same service.

Direct monthly steam communication between Canada and South Africa, $146,000.

Mr. PATERSON. This is a service the contract for which was entered into with Messrs. Furness-Withy & Co. and Messrs. Elder-Dempster & Co. They joined forces for this service and the contract was made with them to last five years from October 1, 1902 to October 1, 1907. The steamers of course, were not specified by name but they were to be of 5,000 tons net register and their speed was to be not less than 10 knots. The terminal points are Montreal and Quebec in summer and St. John and Halifax in winter. It is stipulated that they shall call at three ports in South Africa, Cape Town, Port Elizabeth and Durban. They are to make monthly trips and the subsidy is £30,000. The carrying of the mails is stipulated for and cold storage is provided. With reference to freight, Canadians are to have a preference on ten days' notice. The vessels are allowed to fill up with foreign, American trade, if there is not enough Canadian freight offering.

Perhaps it would give the committee a little idea of the extent to which the service is benefiting the Dominion if I were to read a letter which we have received from Mr. D. W. Campbell, agent of the Elder-Dempster Line which puts the matter as clearly as could be. The letter is as follows :

SOUTH AFRICAN CARGOES.

Elder-Dempster & Co.
Montreal, Feb. 4, 1905.

F. C. T. O'Hara, Esq.,
Acting Deputy Minister,
Department of Trade and Commerce,
Ottawa, Ont.

Dear Mr. O'Hara,—I am to-day in receipt of yours of the 3rd instant re cargoes carried by the South African steamers, for six months ending, we will say, with the February steamer, which is to sail on or about the 18th instant. We are including this steamer as we have her now practically fully booked.

The six months commencing with September, 1903, and ending with February, 1904. The steamers of the joint service, during this period carried practically full cargoes. A large proportion of the cargoes were composed of Canadian wheat and flour. We also had large shipments of Canadian lumber, more particularly red pine, and a fair quantity of manufactured Canadian goods, such as furniture, carriages, agricultural implements, ploughs, &c. We also had considerable shipments of Quaker oats, manufactured at Peterborough, Ont., also considerable metallic roofing. In the refrigerators of our steamers we had very heavy shipments of mild cured bacon, shipped by the Laing Packing and Provision Company, Montreal, about 300 tons for each departure. We also had during October and November several thousand barrels of apples.

From September, 1904, to February, 1905. The steamer that sailed in September carried about three-quarters of a cargo, about sixty per cent being Canadian and forty per cent American. Owing to the contract by the Laing Packing Company with the Imperial Cold Storage Company, of Cape Town, having expired, the refrigerators carried a much smaller quantity of Canadian products than went in the same month in 1903. The steamer that sailed in October was a full ship, she had in her refrigerator equal to about 3,000 barrels of Canadian apples. Her cargo was composed principally of Canadian flour, considerably planed pine lumber, and manufactured lumber, such as doors, sashes, &c. The steamer that sailed in November, which was the steamship 'Melville' was about three-quarters full. Her cargo was composed of about fifty per cent of manufactured goods of Canadian origin and fifty per cent of American. The next steamer was the 'Etolia' which sailed in December. This steamer carried practically a full cargo. Since her departure a decided improvement has taken place in the South African business, the financial position appears to have considerably changed, and in consequence the 'Wyandotte,' which sailed the end of January, had a very large cargo, and

sailed a full ship. She only took sufficient coal for the voyage to South Africa. Besides a large quantity of miscellaneous cargo, she had about 55,000 sacks of Canadian flour, but we are sorry to say she had very little refrigerator goods. The next departure will be the steamship 'Melville' in February. This steamer is fully booked. Her cargo will be largely composed of flour, practically eighty per cent Canadian. At the present time we have secured about 55,000 sacks of flour, and about 200,000 feet of planed white pine, and about 20 cars of Quaker oats made at Peterborough, Ont.

Owing to better trade conditions in South Africa a decided improvement has taken place in the demand, and our South African agent advises us that the corner has now been turned and that a continuance is expected. We are also advised that the preference is materially helping the importation of Canadian goods.

I am,

Yours very truly,

D. W. CAMPBELL,

I concur in his conculding remark; I think that there will be a great advantage. We have now a preference in South Africa, our freight rates will be as low as those from the United States and with the preference, if we maintain the quality of our goods, the trade should greatly increase. Repeat orders are evidently being received now according to this statement as to flour and other items. In my own business my anxiety is not to make first sales, but to secure repeat orders. If you receive the repeat orders you know you have your customer, and as there are repeat orders coming in here I am led to believe that our people are sending goods there that will command the market if they once get a foothold and the preference I consider will be of so much advantage to us that it will turn the trade in our favour as against our American friends. I fully look for that and it will be very gratifying.

Mr. FOSTER. Will the minister tell us what information he has in regard to return cargoes? That is an important point to know as well.

Mr. PATERSON. The trade is largely in our favour. We sent them $2,380,000, and they only sent us $69,000.

Mr. FOSTER. We did not send that by our vessels. What we are trying to find out is whether there can be a mutual trade. The statement the minister read with reference to the outgo, I consider satisfactory, but we cannot keep the trade up for ever or very long unless we get return cargoes. It would be interesting to the committee to know just what came back in each of these vessels.

Mr. PATERSON. The hon. gentleman means that we cannot keep up the transportation long unless there are return cargoes. The companies have taken that risk for the number of years that I mentioned.

Mr. FOSTER. But unless they can get a trade that will work both ways, they cannot carry it on unless we pay for it.

Mr. BERGERON. How many vessels are engaged in that traffic?

Mr. PATERSON. There is one a month. I have not a list of them.

Mr. BERGERON. A monthly trip between Canada and South Africa would require a fleet of more than twelve vessels.

Mr. PATERSON. No it takes about 30 days to go there.

Mr. SINCLAIR. I think a ship can go to South Africa easily in thirty days. At the time of the war some ships carried hay in about that time. Do these ships call at ports of the United States as well as Canada?

Mr. PATERSON. No. American goods are shipped from Canadian ports.

Mr. W. F. MACLEAN. We have been discussing these subsidies all afternoon, and for the first time we have a succinct statement with regard to the trade pertaining to a single subsidy. Why is there not a similar report furnished by the Department of Trade and Commerce with reference to each vote? The agent of a steamship company can in half an hour dictate an intelligent letter showing the whole condition of the trade, and giving us the satisfactory information that it is growing. Why should not the same kind of information be given to the House and the country in regard to every one of these subsidies. I do not believe in spending large sums of money in maintaining great departments which do nothing for the country, and I hope that before another session we shall have an intelligent report like this one in regard to every one of these votes.

Mr. FOSTER. Will the minister get some information from the agent in regard to the return cargoes?

Mr. PATERSON. I dare say Mr. Campbell can furnish that.

Mr. BERGERON. What ports in Canada do the boats call at?

Mr. PATERSON. Montreal and Quebec in summer and Halifax and St. John in winter.

Mr. OSLER. At what ports in the United States do they call?

Mr. PATERSON. They do not call at United States ports. United States goods are shipped from Canadian ports, but Canadian goods get the preference by receiving ten days' notice ahead.

Mr. HENDERSON. Are the rates charged on American goods the same as those charged on Canadian?

Mr. PATERSON. Yes.

Mr. HENDERSON. I scarcely think that is fair, when we have to pay the subsidy, and the United States pay nothing. That

is giving the Americans a preference over the Canadians. I think they should pay something additional in order to make up for our subsidy. It is quite proper that Canadians should get the preference; but if Americans want to ship goods in our subsidized vessels, surely they should pay some premium for the privilege. We assume that we get lower rates because of the subsidy we pay.

Mr. PATERSON. When this contract was being made, if we had insisted that the vessels should be restricted to take Canadian goods alone, the probability is that no contract of this nature would have been made. The Canadian trade had to be almost created, but Canadian goods get the preference.

Mr. HENDERSON. When this subsidy was first granted, I understood that our vessels did call at American ports and take on American products of a similar character to our own, and carried them to South Africa in the vesesls that we subsidized, and placed them on the same market on which we put our goods. I scarcely think it is fair to our Canadian producers that we should subsidize vessels to carry American products to the very markets we want to get. I would rather give a larger subsidy and leave the American goods at home, and let our own goods get all the market. I do not think for a moment that we should carry American goods to be sold in competition with our own, and certainly not to enhance the price that we get for our goods, but rather to depreciate the price. It seems to me the Minister of Trade and Commerce should give this matter a little more consideration to make it fair to Canadians.

Mr. PATERSON. Should not the hon. gentleman give it a little more consideration? Suppose a steamer were sailing with half a cargo of Canadian goods, and were consequently forced to charge a certain rate. If it could get another half cargo, which would enable it to reduce the rate correspondingly, would that not be an advantage to the Canadian shipper? The hon. gentleman must remember that the American is not the only competitor the Canadian shipper has in the market. He has to meet English and German competitors as well. What we should have is a preference for Canadian goods and that is secured to us. The contract is a very good one for Canadian producers and I anticipate that we are going to do a large trade with South Africa.

Mr. HENDERSON. I was under the impression, when the subsidy was first granted, that our vessels called at American ports, but I may possibly have been mistaken. I think the principle all wrong of subsidizing vessels to carry American goods to a market we want to supply. It would be better for our producers to pay a little more freight and not have this competition. It may be that the United States goods which are shipped alongside of ours in the same vessel will be goods that will come into competition with ours, and a small fraction of difference in freight would not compare with the loss that may be sustained through this competition. For instance, apples may be sent from the United States as well as from Canada, we may also have American cheese sent in these same vessels which carry Canadian cheese, and these may depreciate the Canadian goods. It may be that in this way we will be depressing the market to the injury of my hon. friend from North Perth (Mr. Maclaren), who, I understand, ships cheese to a large extent from Canada to South Africa and even to Mexico. We heard the Postmaster General describing the large amount of cheese he saw in that latter country. I trust that the subsidy to be paid vessels running to Mexico will not be paid to vessels which call at American ports and which will carry American cheese and thus lower the price in that market of the cheese which the hon. member for North Perth is sending there. I would like him to get the very best prices possible, and a slight reduction in freight, consequent upon the vessel carrying American cheese, would not compensate him for the loss that would result from this competition.

Mr. PATERSON. My hon. friend must remember that American goods shipped in American bottoms might be of the same class as the Canadian goods shipped in these subsidized vessels, and we would not really have the market exclusively to ourselves in any case. The Americans are not limited to shipping by this line, but I think that we will be found in this position, that the cheese shipped by the hon. member for North Perth will be found superior to anything the Americans can send, and I have no doubt that we will be in a similar position as regards other lines.

Mr. HENDERSON. I quite agree with the hon. minister that our Canadian cheese is superior to the American. That is the reputation it has in the old country, and no doubt it will have the same reputation in the South African market, but there is this danger that the inferior cheese will be quoted against our better cheese, and the South Africans may not at first be able to discriminate between the two. But if the cheese and other products of the United States can be sent in American vessels, why do they send them to Canada to be shipped by our vessels? We are subsidizing vessels to carry American products. The Americans do not seem to have a line of steamers from New York to South Africa which will carry freight as cheaply as ours, and I am still of the opinion we should not

encourage that American trade in our bottoms. Even suppose there should be ten per cent of the space not filled up, this company which is getting the subsidy ought to be still prepared to give us a fair rate.

Mr. PATERSON. Canadian freight has the preference over American freight, but the question is whether it would not be in the interest of Canada to allow these vessels to complete their cargo with American goods rather than to go with only a part cargo. There is this other point, that the preference which has been granted to us in South Africa will be very advantageous, not only in the way of preference, but also in the way of determining what are Canadian goods. I look to great benefit from the preferential arrangements we have made with South Africa. I think it was generous on their part to enter into such an arrangement, for it looks as if, in the course of trade, we may hope to do a larger trade with them than they can hope to do with us.

Mr. HENDERSON. I fail to see where the existence of a preference alters the other case at all.

Mr. A. MARTIN. What restrictions are there on those vessels with regard to freight rates? Will Canadian goods have a preference or can the company give a preference to American goods by charging them a lower rate? At any rate, American goods should not be carried at lower rates than Canadian goods. If there is to be discrimination it should be in favour of Canadian goods. If the contract does not prevent the granting of lower rates to Americans it ought to do so.

Mr. PATERSON. The rates are not specified in the contract. The deputy minister says there is no discrimination against Canadian goods.

Mr. A. MARTIN. Is there anything to prevent a preference being given to American goods?

Mr. PATERSON. I do not know that there is.

Mr. A. MARTIN. I submit that there should be. Suppose a vessel is at Montreal with a two-thirds cargo. To get the other third, the owners might offer to carry American can goods at cheaper rates. This would place Canadian shippers at a disadvantage, and there should be something to prevent it.

Mr. PATERSON. I have not the contract before me, but the deputy tells me that it expressly provides that there shall not be discrimination against Canadian trade.

Mr. A. MARTIN. I think it is important that we should have the contract before us.

Mr. FOWLER. This is a very important point that the hon. member for Queen's (Mr. A. Martin) has raised. When we give this large subsidy there certainly should be no discrimination against Canadian trade. I do not say that there is anything improper in vessels subsidized by Canada carrying American freight. We want to carry the trade of the world, if we can, but we must not pay a subsidy and allow those who enjoy it to discriminate against our own people.

Mr. W. F. MACLEAN. Hon. gentlemen who have spoken on this subject have only raised the fringe of a very important question, which applies not only to steamships, but to the railways that we have so heavily subsidized. Of the thousand millions invested in Canadian railways, over one-quarter came from the people of Canada. And to-day the Department of Railways, this government, and the Railway Commission, allow these great roads to carry traffic of the United States that competes with our products in the old country through Canada at about one-half what the Canadian farmer has to pay. The wheat of the western states, the corn of Illinois, go through Canada to the sea-board for one-half what is charged for carrying Canadian grain. I have no doubt steamship companies fill this up with American cargo at lower rates than they give Canadian goods—that is a practice of all transportation companies whether by sea or land. There is only one cure and that is that Canadian and steamship services should be used altogether for the interest of the Canadian public.

Mr. WILLIAM WRIGHT. Does the American government subsidize steamships to carry goods from the United States to South Africa?

Mr. PATERSON. They have steamships running to South Africa, but whether they subsidize them or not I cannot say.

Mr. FOWLER. Is it the intention of the minister to bring down the contract?

Mr. PATERSON. It is not the custom to lay these original documents on the table, and perhaps it would not be necessary to copy it all. Perhaps the hon. gentleman could indictate what portion he would like to see——

Mr. FOWLER. Just that section.

Mr. W. F. MACLEAN. Is provision made for increase in the number of ships, if the trade grows as it seems to be growing?

Mr. PATERSON. Not in this country. But that would naturally go on if it pays.

Mr. FOSTER. Will the minister write to the Elder-Dempster Company for information with reference to the return cargoes?

Mr. PATERSON. Yes.

Mr. FOSTER. Has the minister any report previous to the last six months?

Mr. PATERSON. The information with reference to the cargoes is in the department but it would need to be tabulated with reference to each steamship.

Mr. FOSTER. Another year we must have all that for each steamer.

Mr. TAYLOR. To see what these boats have down for their money.

Mr. MONK. It would be simpler if we had a law obliging the companies receiving subsidies to make a sworn return. In the United States, wherever there is a grant, a sworn return must be made.

Mr. PATERSON. Theirs are mail subsidies.

Mr. MONK. Yes, they have mail subsidies, but no subsidies for the encouragement of trade.

Mr. U. WILSON. When will the minister lay the contract on the table?

Mr. PATERSON. I understand the hon. gentleman wants only a copy of one part, that dealing with freight and discrimination.

Mr. FOSTER. The minister had better bring down the contract and lay it on the table. None of us will run away with it.

Mr. PATERSON. It is not usual to bring down the original of these documents.

Mr. FOSTER. There are probably three or four copies in the department.

Mr. PATERSON. Not of this I believe.

Mr. W. F. MACLEAN. There is another obvious point, and that is that we should have a proper consular trade service in connection with these subventions. Not only should we have reports from steamship companies, but we should have reports from the men who represent the Dominion of Canada in promoting and extending trade. If we are to become an exporting country we should not have such haphazard business as we have had this afternoon, but a report of the steamship companies, a report of the Minister of Trade and Commerce, and a report of our consular agent.

Mr. PATERSON. We have that.

Mr. W. F. MACLEAN. But these reports should be brought forward and presented to the country in easily and intelligible form. If Canada's trade is to be extended we must organize our system as they have done in the United States. We must have fresh intelligence and bulletins, so that our people may know where opportunities for trade present themselves. I do trust that what has been said by the hon. member for North Toronto (Mr. Foster) and others will be respected and that next year when these votes come up, there will be an intelligent presentation of this effort made by the Department of Trade and Commerce to extend Canadian trade.

Mr. PATERSON. I would point out to the hon. gentleman (Mr. W. F. Maclean) that, so far as the Department of Trade and Commerce is concerned, they already issue a large and voluminous report giving the information that the hon. gentleman asks for. If the hon. gentleman will study that, he will find what he wants to know.

Mr. W. F. MACLEAN. No; the hon. gentleman is paid for presenting these things intelligently to the committee.

Mr. PATERSON. They cannot be presented more intelligently than by giving the written report of these commercial agents. They cannot be presented in any better shape.

Mr. W. F. MACLEAN. We have only one.

Mr. PATERSON. If the hon. gentleman will take up the Trade and Commerce reports, and the bulletins that are issued respecting the commercial agencies, he will find the information he is asking for.

Mr. MONK. But we would not get it all. Take the item of $146,000 for steamship service to South Africa; it would not give us the return cargoes or any of the details which we ought to have.

Mr. W. F. MACLEAN. The minister should come to parliament and present a statement, giving the total grant, in what direction trade is improving, or otherwise, what our agents abroad have to report, and so on. He could present it in a brief form that would go to the public and be of public use. I shall look for better things next year.

Mr. PATERSON. Do I understand from the hon. gentleman that he considers this valuable report not worth studying, and that he cannot find what he is seeking?

Mr. W. F. MACLEAN. The Minister of Finance, in his budget speech of an hour, gives the country an intelligent view of its financial affairs, and that is something that ought to be done by the Minister of Trade and Commerce in bringing down his estimates.

Mr. PATERSON. I could not undertake to give a list of all the different cargoes that came from South Africa here and that went there from Canada—of course, I can give you the round numbers, but I cannot be expected to give more. We ought to be able to give you the amount of the return cargoes in bulk, and perhaps in a general way what they consist of. But to go into all the details on the estimates could not be expected, especially when you have reports prepared already giving them. Might I ask the hon. gentleman to read the Trade and Commerce report, and if there is anything that he does not find in it and that he wants to know, I will try and supply the lack.

Mr. BARKER. Will the hon. gentleman refer us to the page of that valuable work where we will find about the return cargoes?

Mr. PATERSON. In the return of the commercial agencies. The conditions of trade between the two countries are such that we may hope to benefit more by this reciprocal arrangement and by these steamship subsidies than our fellow-colonists will. They are not in a position to send us as much as we are able to send them, but they are going to be a profitable market for us. We are doing what we can to encourage trade.

Administration of the Chinese Immigration Act, including remuneration to Trade and Commerce and Customs officers, $4,000.

Mr. PATERSON. It is the same vote as last year. The effect of the Chinese capitation tax is that there was collected during the calendar year of 1904 $3,200. This includes an amount of $1,700, being a $100 tax collected on seventeen Chinamen who had entered previous to January 1st, 1904. But the tax was not collected at all after that date. The remaining $1,500 is made up of a tax of $500 paid by the Canadian Pacific Railway on each of three Chinamen who had deserted. That is, as I understand, seventeen Chinamen had entered under the previous rate. No Chinese have paid the $500 tax under the new Act.

Mr. W. F. MACLEAN. Have none come in ?

Mr. PATERSON. There were these three deserters. But outside of them, no Chinamen landed except fifty-six exempted ones. Under the law merchants, professional men, students and men of science are exempted.

Mr. FOSTER. How is that $4,000 you are asking for to be spent ?

Mr. PATERSON. In paying the salaries of the collectors of customs, inspectors and interpreters.

Mr. FOSTER. How much was spent last year ?

Mr. PATERSON. Salaries, $3,953.31 ; contingencies, $239.95.

Mr. U. WILSON. How many officials are there ?

Mr. PATERSON. The number of officers is not here. The deputy says there are six.

Mr. FOWLER. Are these special officers ?

Mr. PATERSON. No, they are officers of customs. Though the Chinese portion of the administration is directed by the Department of Trade and Commerce, they make use of the Canadian customs. We do not pay the inspectors.

Mr. AMES. May I ask the hon. minister if these officers are preventive officers for the purpose of seeing that the law of exclusion is rigidly enforced ?

Mr. PATERSON. Yes, though they are customs officers they act under the Department of Trade and Commerce in reference to the Chinese.

Mr. AMES. I understand that the flow of Chinese into this country has absolutely ceased.

Mr. PATERSON. It looks like it.

Mr. AMES. Not a single one came in last year since the tax of $500 was imposed ?

Mr. PATERSON. No.

Mr. AMES. Then is it necessary to pay $400 for these officers when Chinese immigration has absolutely ceased ?

Mr. PATERSON. The influx might be renewed.

Mr. W. F. MACLEAN. Do the hon. minister and the government ask us to accept the idea that the Chinese are being excluded ? I can only speak from what I observe in Toronto and I think I can say without fear of contradiction that the Chinese portion of that city has increased by 1,000 or 2,000 within the last year or so, and that we have probably 5,000 of them there. I do not know what the Chinese population is in Montreal but they are coming into eastern Canada at a surprising rate. They are enterprising people to a large extent. They are going into business more and more in Toronto with the result that in some streets every third or fourth shop is a chinese store. They all say that they come from British Columbia and that they have been in the country for some time, but I think these officers who have charge of this department are not keeping their eyes open. They cannot come from the United States because they have to pay more to get into that country, but the number of Chinamen who are coming into the eastern portion of Canada is something surprising, and it will be interesting if anybody cares to investigate to try and find out where they are coming from.

Mr. PATERSON. They are coming from British Columbia. Having come in once they are at liberty to come east.

Mr. W. F. MACLEAN. I know that.

Mr. PATERSON. I understand my hon. friend to say that they are going into business. They must know the English language to do that and therefore they must have been in the country for some time.

Mr. W. F. MACLEAN. Some of them know very little of it.

Mr. FOSTER. How many came in last year ?

Mr. PATERSON. None.

Mr. FOSTER. 4,719.

Mr. PATERSON. Chinese ?

Mr. FOSTER. Yes.

Mr. PATERSON. Came in ?

Mr. FOSTER. Certainly. I advise the hon. minister to read the Trade and Commerce Report.

Mr. PATERSON. I am afraid it does not give that.

Mr. FOSTER. Look at page 750. The total collections were $474,420. The revenue that the provinces got is a very large revenue. It amounts to $231,000.

Mr. PATERSON. The explanation of that must be that knowing that the tax was to be increased there was an extra rush into the country at that time.

Mr. FOSTER. My hon. friend is a most versatile man.

Mr. PATERSON. That is the fact because none have come in since.

Mr. FOSTER. The hon. minister gave all these reasons why none came in and now he gives another reason why 4,719 came in.

Mr. PATERSON. It was owing to the fact that they knew that there was to be a raise from $100 to $500 and the Chinamen were sharp enough to get in before the tax of $500 came into effect, while those who did not get in are evidently staying away from us.

Mr. FOSTER. I ask the hon. gentleman to take a little of the advice he gave to my hon. friend from South York (Mr. Maclean) and just take a square hour and read over his own report.

Mr. PATERSON. That is not my report. I have hardly as much spare time as my hon. friend, but he has given me convincing proof of what I have said that all the information he seeks for he can get if he only looks for it. He has set me right in reference to that matter and I have no doubt that if he pursues his investigations further he would be able to answer my hon. friend from South York.

Mr. INGRAM. I think the British Columbia newspapers will support the statement made by my hon. friend from South York. They charge that Chinese are entering Canada in the eastern portion of Canada. We have also the statement made by the hon. member for Nanaimo (Mr. Smith) who quoted the 'Nanaimo Free Press' to the effect that Chinamen were entering Canada and that some of them were even accompanied by a special officer of the department. The impression seems to be that the Chinamen are coming into Canada in the eastern portion of Canada.

Mr. MACPHERSON. I can hardly let the statement the hon. member for North Toronto (Mr. Foster) has made that 4,719 Chinamen came into the country last year pass without saying a word or two in regard to it. If the Trade and Commerce report shows that for the whole of the year 1904 a certain number of Chinamen came in that statement must apply to the year ending the first of January, 1904.

Mr. FOSTER. I can only take the report and I must take it as being authentic. The report tells me that up to the 30th June, 1904, for the year 1904 there were 128 exempted, 4,719 paid fees and there were these collections, refunds and the like of that. There is no doubt about that information. How many have come in since 30th of June, 1904, up to last of the calendar year I do not know.

Mr. MACPHERSON. I would point out to my hon. friend from North Toronto that since the imposition of the tax there have been no Chinamen coming into this country with the exception of the few who are specially exempted.

Mr. FOWLER. When did the tax become operative ?

Mr. MACPHERSON. On the first of January.

Mr. FOWLER. 1905 ?

Mr. MACPHERSON. 1904. The tax has been in vogue for the past year. Chinamen have not been coming in. I would tell my hon. friend from South York (Mr. Maclean) that if Chinamen are coming into eastern Canada we are very pleased to know it, as they must be coming from British Columbia. We had the scourge long enough with us. They are not now coming into British Columbia. We suffered very severely from the great horde of Chinamen coming into the country and the tax has been a splendid thing as far as British Columbia is concerned. You are now getting them and you will find very shortly that you will have the people rising up and demanding that they shall be shut out.

Mr. MACLEAN. But the dumping clause cannot apply to Ontario.

Mr. MACPHERSON. Well I suppose that you have lots of Chinamen in Ontario who do not wear long queues.

Mr. U. WILSON. I do not see how it is that these books do not agree. The Department of the Interior has charge of immigration. It gives a list of the immigrants that come in, but I do not find any Chinamen in the list while in the report of the Department of Trade and Commerce my hon. friend from North Toronto has found the record of a very large number of Chinamen.

In addition to that I asked the minister some time ago for the number of preventive officers he had employed, and he did not

give us that information. I think before the item is passed he should give the number of preventive officers and try to make some explanation. The reports with reference to immigration ought all to agree. I do not see why the Department of the Interior should get one report and the Department of Trade and Commerce another. I have asked the minister to give the number of officers who are employed to prevent Chinamen coming into this country and he does not see fit to answer.

Mr. PATTERSON. I am sorry the hon. gentleman understood that I would not answer. I was trying to get the information that would enable me to answer him satisfactorily. I am told that there are six special officers who are under the Department of Trade and Commerce, but all the customs officers have the circulars and know the regulations with reference to Chinese and it is part of their duty to see that no Chinaman shall enter without paying the capitation tax. But they are officers of customs. The deputy tells me that there are six interpreters and officers especially charged with this duty who are under the pay of the Department of Trade and Commerce.

Mr. U. WILSON. Will the minister tell us the pay that each of these officers receives ?

Mr. PATERSON. I have not it here, but if we had the Auditor General's Report we would find it.

Mr. INGRAM. Supposing that a Chinaman comes from China, lands at Vancouver, and is passing through Canada to Newfoundland accompanied by a special officer. Would he give bonds ?

Mr. PATERSON. Oh, yes, he would be under bonds.

Mr. INGRAM. Supposing that he passed through Newfoundland and in the course of a year or so entered Canada could he not get over the tax in that way.

Mr. PATERSON. No.

Some resolutions reported.

On motion of Mr. Paterson, House adjourned at 10.40 p.m.

HOUSE OF COMMONS.

TUESDAY, February 14, 1905.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 56) respecting the Canadian Pacific Railway.—Mr. Bole.

Bill (No. 57) to incorporate La Compagnie Electrique de Trois Rivières, St. Maurice, Maskinongé et Champlain.—Mr. Bureau—by Mr. Talbot.

Bill (No. 58) respecting the Canadian Northern Railway.—Mr. Lamont—by Mr. Parmalee.

EXCHEQUER COURT—RAILWAY DEBTS.

Mr. VICTOR GEOFFRION moved for leave to introduce Bill (No. 59) respecting the jurisdiction of the Exchequer Court as to railway debts. He said : This Bill is for the purpose of correcting an apparent oversight in the Act which it proposes to amend. In the province of Quebec all sales made by judicial authority, under the Winding Up Act, in insolvency proceedings, have the effect of clearing the movable property sold of all incumbrances, privileges, hypotheques and mortgages, so as to give to the purchaser a clear title to the property. It is obvious that a sale under this Act ordered by the Exchequer Court should have the same effect as when ordered by the judge of a superior court, it should have the same effect as in a sale made by a sheriff. Of course, we should give the same authority to the Exchequer Court, because otherwise the law would be unworkable. A difficulty of this kind arose in the case of the South Shore Railway, which was offered for sale under this Act by the Exchequer Court, but nobody would buy it because the Exchequer Court could not give a clear title. It is clear that a hypothecary creditor would not suffer any more prejudice in a sale made by order of the Exchequer Court than in an ordinary sale by a sheriff, because we can rely upon the judge to see that the sale is properly advertised ; and, of course, the creditor could protect himself in bidding at the sale to see that the property was sold at its full value. If it is sold at its full value, no one can suffer any prejudice. This, briefly, is the purpose of the Bill.

Mr. MONK. I would ask my hon. friend if the Bill provides for notices to be given, as in the case of a judicial sale ?

Mr. GEOFFRION. Yes ; it is left to the judge of the Exchequer Court to give a proper notice of the sale. I have no objection to introducing a clause providing that a certain delay should be given, but it was thought that a judge of the Exchequer Court would see that the proper notice was given by advertisement of the sale.

Mr. MACDONELL. I would ask the hon. gentleman if provision is made in his Bill for pending litigation ? There is now pending before the Privy Council litigation regarding this very matter, from the province of Ontario, in the case of the Central Ontario Railway Company. Is there provision made for pending litigation ?

Mr. GEOFFRION. No such provision is made in this Bill. It is simply an amending Bill, and will have the effect, in the province of Quebec, when a sale is ordered by the Exchequer Court, of giving a clear title to the purchaser of the property, the same as in the case of a sale made by a sheriff. Otherwise, under the Act as it stands, a sale ordered by the Exchequer Court could not be attended with a clear title to the property. It is almost certain that under the sale ordered by the Exchequer Court a clear title could not be given. That is the opinion of the court, as I understand it; and, as the Act is unworkable, we want to remedy it as far as the province of Quebec is concerned, so that the sale ordered by the court may have the same effect as if it were a sheriff's sale.

Mr. MACDONELL. Did I understand that the operation of this Bill is confined to the province of Quebec?

Mr. GEOFFRION. The Act to be amended applies to the whole Dominion, but we want to have, in the province of Quebec, as far as this sale is concerned, a clear title. I have no objection to extending it to other provinces if it is the will of the House.

Mr. BERGERON. May I ask the hon. Minister of Justice if he knows anything about the provisions of this measure which has been brought down by the hon. member for Verchères (Mr. Geoffrion)—and whether it is an encroachment upon provincial rights. This is a single case which might be remedied by reverting to a sheriff's sale in the province of Quebec. The railway for which my hon. friend seems to be asking for the passage of this measure can be sold under the authority of the sheriff without this measure at all.

Mr. FITZPATRICK. All I know of this Bill is what I have learned from what has fallen from the lips of the hon. gentleman who has introduced it.

YUKON—DELAY IN OPENING BALLOT BOXES.

Mr. R. L. BORDEN (Carleton). Mr. Speaker, before the Orders of the Day are called I would like to ask the government whether they have any information as to the cause of the somewhat extraordinary conduct of the returning officer in the Yukon. If I understand it he delayed the date at which he should open the ballot boxes and sum up the result of the elections until the 7th February with the result that the member for that constituency will not be gazetted until, I suppose, near the end of March. I do not know what period of time at this season of the year is required for the transmission of the mails. I have been led to look into the condition of the law a little, and while it seems to me perfectly evident that a clear and satisfactory explanation is required from the returning officer of his conduct in this regard, it also seems desirable that the condition of the law should be looked into. I think that the returning officer under the law has the right to fix the date. I have examined the provisions of the Yukon Representation Act and of the Dominion Elections Act, and they seem to be identical in that regard. Unless I have overlooked some provision of the law the result seems to be that any returning officer can postpone as long as he sees fit the date at which he shall open the ballot boxes and sum up the results. The result in regard to the Yukon seems to indicate that this condition of the law should be amended in some way. Some period should be fixed within which the returning officer shall open the ballot boxes and sum up the results, and some provision should be made giving him the power to adjourn whenever an adjournment might be necessary by reason of his not having received all the ballot boxes. I may have overlooked some provision of the statute which can be brought to my attention by the right hon. Prime Minister (Sir Wilfrid Laurier) or the hon. Minister of Justice (Mr. Fitzpatrick), but from a very hasty perusal of the statutes I have arrived at the conclusion which I have just mentioned. However, I rose for the purpose of asking whether any explanation has been obtained from the returning officer because I think the hon. Minister of Justice, somewhat earlier in the session, stated that an inquiry had been made of him by telegram asking him to give the reason. The results are somewhat serious. The gentleman who was elected in that constituency on the 16th December last will not be able to take his seat in this House until the middle or the end of March. As a result of this the Yukon is disfranchised during a period of about two months when matters will come before the House in which the interests of the Yukon are very much concerned. I would therefore be glad to know from the right hon. Prime Minister whether or not any answer whatever has been made by the returning officer in regard to this subject.

Sir WILFRID LAURIER. If there has been any correspondence on this subject it has been carried on no doubt by the Secretary of State. I cannot give any information at this moment to my hon. friend (Mr. R. L. Borden), but if he will renew his question to-morrow probably I will be in a position to give him the information.

Mr. R. L. BORDEN. I would like to know whether the hon. Minister of Justice agrees with my view of the law in regard to the powers of returning officers, and if so whether or not he thinks it desirable that there should be some amendment to the law.

Hon. CHARLES FITZPATRICK (Minister of Justice). Mr. Speaker, when this question first came under the consideration of the De-

partment of Justice we looked into the law and the conclusion we came to was absolutely the same as that to which my hon. friend the leader of the opposition (Mr. Borden) has come. This is the first time that a difficulty of this sort has occurred since the law has been in force, and it has now been in force for over twenty-five years, but this one case will probably show the necessity of an amendment in the direction my hon. friend has indicated. I have spoken to my hon. colleague the Secretary of State on the subject and we are endeavouring to determine what the policy of the government should be in regard to it. When this question was brought to my notice by the hon. member from Toronto earlier in the session I communicated with the Secretary of State. He has been in communication with the returning officer and perhaps it would be proper to bring down the telegrams exchanged. I would suggest to my right hon. friend the Prime Minister to ask the Secretary of State for these telegrams.

PAYMENT FOR BALLOT BOXES.

Mr. J. B. MORIN (Dorchester). Mr. Speaker, before the Orders of the Day are called I would like to draw the attention of the government to the complaint of a gentleman about some ballot boxes that he has in the county of Dorchester. He writes as follows :

(Translation.)

Sainte-Claire, February 9, 1905.

J. B. Morin, M.P.,
Ottawa.

Dear Sir,—Will you kindly interest yourself for me in the proper quarters to obtain an allowance for me for 21 ballot boxes which have been placed in the post office since 1891 by the late Dr. C. A. Lesage, who was the returning officer for Dorchester ? These boxes were new when I received them, and I have taken good care of them. I have never used them, and I would be glad to have them taken away and to be compensated. Will you please look into that matter for me, and tell me what I ought to do ?

Yours devotedly,
J. E. CAYOUETTE,
Postmaster.

Now you have a right to say what you please about boxes.

Sir WILFRID LAURIER. I understand that some one in the county of Dorchester has had a claim against the government since 1891. I have never heard that we had a creditor in the county of Dorchester, but I have no doubt the government can pay anything that is owing to him so that if my hon. friend (Mr. Morin) will send me the letter I will see what can be done with it.

CENSUS AND STATISTICS.

House went into committee to consider the following proposed resolution :

Resolved, That it is expedient to provide that the Governor in Council may from time to time pay out of the moneys to be provided by parliament for such purposes, such sums as are required for the taking of the census, and for the collection, tabulation and publication of agricultural, commercial, criminal, educational, manufacturing, vital and other statistics ; the remuneration of the necessary officers and clerks and the payment of all expenses incurred in carrying into effect an Act for such purpose.—Mr. Fisher.

Mr. TAYLOR. Before this resolution passes, might I ask the Minister of Agriculture how the money, some $18,200, which we voted last year for agricultural statistics was expended ? The Auditor General's Report dealing with this expenditure is not yet down and we do not know what was done with that money.

Hon. SYDNEY FISHER (Minister of Agriculture). I could not give my hon. friend (Mr. Taylor) a detailed account of it of course. The sum which he refers to was in the estimates for the current fiscal year. A portion of it has been expended that was voted for general statistics. I speak from memory—I would have to look up the vote of last year to be accurate—but I think the sum mentioned was a part of a vote for general statistics, and the vote for the year-book would be included to make up the sum the hon. gentleman mentions. That which was voted for the year-book was spent in paying for the printing and binding of the year-book. The vote for general statistics was expended in the payment of the clerks who are engaged in statistical work in the Department of Agriculture. I do not remember any other expenditure that has been made under that vote during the current fiscal year ; I do not think there is any other expenditure. I do not remember at the moment the figures the hon. gentleman used but I rather take it that it covers the votes I have mentioned. I am just reminded of another vote for what is called criminal statistics, which appears in the estimates for my department, and which is also, I think, included in that sum of $18,200. I have here a list of the employees and the salaries they have been paid, and I am not aware that there has been any other expenditure.

Mr. TAYLOR. There was a special vote for the Statistical Year-book at $6,000 ; that had nothing to do with the amount I referred to, which is for general statistics, $18,200. That is apart from the year-book. Was that money spent in gathering statistics ? If so, of what nature were these statistics and was this expenditure outside of the census or was the money used as part of the expenditure in connection with the census ?

Mr. FISHER. I do not know the figures to which my hon. friend alludes, but the figures I have are $3,200 for general statis-

tics and a supplementary vote of $10,000 for general statistics.

Mr. TAYLOR. If my hon. friend (Mr. Fisher) will refer to the estimates now before us, on page 32 he will find the figures I refer to.

Mr. FISHER. Perhaps the second vote I referred to may have been $15,000 instead of $10,000 as I suggested ; that would make the $18,200.

Mr. TAYLOR. And you are asking the same amount this year. I want to know how that money is expended.

Mr. FISHER. I shall be glad to give the information up to the present time. That vote has been expended on statistical work, part of it, the usual statistical work always carried on in the department every year and part of it special statistical work, that is work drawn from the compilation of the census, and it has been found that a portion of that latter work has been of sufficient value to be included probably in the final reports or volumes of the census. The consequence is that I might almost say that a portion of it has been devoted to such work as is contemplated in this Bill, that I have now before the House, between the decennial census. It is largely the kind of work, although not all of the kind of work that the Bill contemplates and which I would like to see taken up and continued by the officers of the department between the decennial census years and the work which was necessary after our decennial census year on the compilations of the census of that year. I can give my hon. friend (Mr. Taylor) the expenditure which has been made with regard to the individuals employed &c., if he desires it.

Mr. MONK. As this is a somewhat important measure, I would like the minister to give us an outline of what the expenditure contemplates in connection with this new office in the immediate future and what work would be performed by the officers of this new department for the first few years ?

Mr. FISHER. I would say to my hon. friend when discussing this Bill a few days ago in committee, before the financial resolution was before the House, the question was asked of me as to the probable expenditure involved in the proposed legislation. I then said that I thought it would be about $20,000 more per annum, practically immediately, than we are now spending on statistical work in the department. I have since been going carefully over what I would like to do under this Bill, and I think that the amount which I then indicated is quite sufficient to accomplish all that I contemplate or expect to do for several years to come with the possible exception of some expenditure in connection with printing which I did not take fully into account when I made that estimate. I do not know yet that the printing would require more money than the amount I stated, but I want to be entirely frank with the House and do not wish in any way to say anything which I am not quite sure is within the mark. I therefore thought that I ought now to say that if we are to undertake to publish monthly bulletins or to publish every year a very large amount of statistical information that we gather, in extended form, it might be that the printing bill would be larger than I at first thought.

An extra thousand or two of dollars might therefore be required from year to year for printing. I wanted to give this explanation of the financial side of the case so that there would not be any suspicion that I was minimizing or misrepresenting it.

My hon. friend from Jacques Cartier has asked me to give an outline of what is proposed. We have had under the law a general census every ten years, and a census of Manitoba taken in the mid-year between the regular decennial censuses. In 1885 or 1886 we had a census of the Northwest Territories taken on the same basis as the census of Manitoba; but since that time there has been no special census taken of the Northwest Territories. Under this Act I propose to continue to take every ten years a census of the whole Dominion of Canada, and to take in the mid-year between the regular census years, a census of Manitoba, and, if this parliament at the present session should create two new provinces in the Northwest Territories, or any provinces, to take a census of them in the same way that the census of Manitoba is taken. The Manitoba census is taken by virtue of a provision in the Subsidy Act. Nobody can say to-day what may be decided in regard to a new province or new provinces in the Northwest Territories. But whatever is decided in regard to subsidies for those new provinces, I think it is well that this Act should provide for the censuses to be taken in the province of Manitoba and in the new provinces to be formed in the Territories. The figures which I have given do not include any expenditure which may be necessary in connection with those censuses. Those figures indicate what I expect the annual expenditure to be, in addition to which special provision will have to be made for the taking of the decennial census and for the taking of the census of Manitoba and the other northwest provinces. As I have said, I believe the value of this work will be very great; and, as the work will grow, it may be that a few years from now the minister will have to come down and ask for a larger vote on this account; but, so far as our expectations or intentions go at the present time, the money I have spoken of will, I think, cover the necessary expenditure for several years to come.

Mr. SPROULE. I inferred from what the hon. minister said at first that there would be a considerable saving in the cost of taking the decennial census. Where will that come in?

Mr. FISHER. That will come in whenever the vote is taken for the decennial census. I hope and believe that the organization of this work regularly and permanently will facilitate and cheapen the taking of the decennial census. The saving will be in the appropriation made by parliament for the decennial census.

Mr. SPROULE. I wanted to know by what means you were to make a saving, and how much the saving would be.

Mr. FISHER. It would be difficult to say how much the saving would be. The officers appointed permanently would be able to devote a good deal of time and attention, for a year or two before the taking of the decennial census, to preparation for that work, so that it would not have to be all done within a few months, as has hitherto been the case. It would not reduce the expense of the work of the enumerators or the local commissioners throughout the country, but I think it would reduce the expenditure at the head office. It is proposed by this Act to consolidate the three present laws relating to the statistics—the General Statistics Act, the Criminal Statistics Act and the Census Act. The work will be an expansion and enlargement of work which was contemplated when the General Statistics Act was passed. That is proved by the fact that in this consolidated Act I ask for very little increase of powers. Practically I have to-day the necessary powers for nearly all the work for which I am asking powers to-day. That work is the collection of statistics.

The kind of work to be done I outlined the other day. I would like to do for the Dominion a good deal of what is being done in Ontario through the Bureau of Industries. I would like to give statistics every year of the crops, the live stock, the areas of land under different crops and so on, and establish a system by which bulletins would be issued giving correct information with regard to agriculture, and also probably every year a larger bulletin or pamphlet giving a compilation of the results. In some years we might take up one group of subjects, the next year another and so on, and thus, the course of the whole ten years between the two censuses, publish probably four or five times certain classes of information. At present we have no such information for the Dominion which we have for Ontario and one or two other provinces, and what is obtained in Ontario is not available to the people in other parts of the country. I think that that work ought to be done for the Dominion and published as often as can reasonably be expected. I would not undertake at the outset to issue the whole of the information every year, but I do think it would be advisable immediately to issue some of it every year. Some classes of information we might issue two, three, or four times, between the two decennial censuses, That is as regards agricultural information, but it is equally important to get industrial information. Let me add that in the agricultural information would be included everything that grows upon the soil. Forest areas and the production of wood would be included, but the manufacture of those products into other articles would come under industrial information. As far as the latter information is concerned, we have to-day practically none of an official or authentic character except that contained in each decennial census. It is important, in the development of our industries and national progress, that we should have that kind of information more frequently and thus follow the example set by other countries. I would consider it advisable, at least once and more probably twice or three times between the census years, to take a pretty complete industrial census. I would not have it taken by enumerators or by sending agents to individual factories, but would get the information by correspondence and by sending out schedules to be filled up. This work could be done by the central office at Ottawa without any need for the great staff which we have to employ throughout the country at each decennial census. Nearly all the agricultural information we can get in the same way. To a large extent it is got in this way in the province of Ontario for the bureau of statistics. I might say that in the year 1902 the United States passed an Act for the establishment of a permanent census office, and the arguments they gave in favour of the scheme are very largely those which apply to this one. The condition of affairs there used to be pretty much what it is to-day here. They had no general census statistics. Some of the states had partial statistics, but there was nothing in the shape of national statistics taken between the censuses. They have, however, established a permanent census office for the purposes I have outlined, and they do the work in the same manner and on the same lines I have indicated. They are this year taking an industrial census of all their manufacturing establishments, without any army of enumerators or agents throughout the country. They are doing it by correspondence, by sending out schedules to be filled up from the central office at Washington, and they are satisfied with the results so far as the work has gone. I would like to see such information got here between the two censuses—probably twice or three times. We shall not take all the industries in any one year, but might so arrange that a very small staff working every year would be able to get in the ten years an immense mass of new information which would be of

the greatest value to every one engaged in industrial enterprises.

Mr. TAYLOR. I think the hon. minister should allow this resolution to stand until we get the information I am asking for now. A few days ago I asked this question :

Has the work in connection with the taking of the census for 1901 been completed ?

To that the minister replied :

The work in connection with the taking of the census for 1901 has been completed.

I then asked if the services of the staff engaged on this work had been dispensed with, and got this reply :

Yes, in so far as the taking of the census and the compilation are concerned ; but there are a certain number of the staff still in the service of the government working on tabular statements drawn from the compilation of the census. These are paid out of the general statistics vote.

Then I put a third question : How many are still retained in the service of the government ? And was told that only six persons were so engaged. I asked again :

What has been the total expenditure in connection with the taking of the census of 1901 up to 1st January, 1905 ?

To this the minister replied $1,192.296.19. What I want to know is what is the total cost in connection with the census from start to finish. Last year we raised the vote from $12,000 to $20,000 for the archives. Then we voted for the collection and compilation of criminal statistics, $2,000 ; for the statistical year book, $6,000 ; and for general statistics, $18,200. That vote is asked for again. I want to know what was done with that $18,200. Did a large portion go to pay this census staff that are still retained in completing the census ? If so, how are we to know, ten years hence, what the census of 1901 actually cost us ? I gather from the answers of the minister the other day and to-day that persons are still employed working up the figures from the census, which figures will be published in the last volume. If that is work in connection with the census, surely it should be paid out of the census vote. The census of 1881 cost less than half a million, and the census of 1891 just about half a million. And, so far, we have paid for the census of 1901 almost a million and a quarter, and still, judging by the minister's answers, money is being paid on account of the census to-day. It is only by questioning the minister in the course of such debates as this that we can gain information. I put a question on the notice paper the other day asking for information which, it seems to me, the minister might easily have given. He has three or four staffs gathering statistics, yet he could not answer these simple questions :

1. How many inspectors or other persons have been appointed or employed to attend to the enforcement of the Fruit Marks Act of 1901 ?
2. What amount has been paid for the services of said inspectors or other persons up to the 1st of January, 1905 ?
3. What amount has been paid for travelling and other expenses for said inspectors or other persons up to 1st of January, 1905 ?

These were simple questions and called for only such information as we require for the intelligent consideration of measures that the minister brings before us. He might have asked one of his clerks to turn over the book and, in five minutes, get the information to enable him to answer these questions. But, instead of answering he told me that the information is so voluminous that I must move for a return. I think this is unfair. And now he wants us to pass this resolution. But before it is passed we want certain information. The Auditor General's Report is not down showing what was done with the vote of $18,200, nor does the minister undertake to give that information to the committee. Before we can vote the people's money we ought to know what has been done with other votes.

Mr. FISHER. I am willing to give the information the hon. gentleman (Mr. Taylor) asks for. He speaks of the Auditor General's Report not being down ; but he knows that the expenditure since 1st July last, to which he refers would not be included in that report.

Mr. TAYLOR. I want to find out what was done with the general statistics vote.

Mr. FISHER. I am quite willing to give that information. I have already said that the general statistics vote was applied to the payment of a staff engaged in that work. Of that staff there are a number who have been there for years, who are practically permanent. The names of some of these are Messrs. Munroe, Watts and Pelletier and Miss Ross. These have been paid out of this vote the same as in former years. I think that Mr. Pelletier was appointed three or four years ago, but the others were all members of the staff when I came into office. There is almost infinite work to be done in preparing tables giving in form to be used by the public, information from the census schedules. Much work of that kind has been done by this staff within the last few months, and this may appear in the last volume of the census. It is not really census work. The census volumes could have been published on the 1st of July last. But the volumes were not all printed. All but two were not as complete as they are now, but they were as complete as census volumes need to be. This preparation of tables of which I have spoken is statistical work pure and simple. It is a kind of work which, I hope, if this Act is passed, to have carried on all the time from one census to another. It is for

work of that kind that I retained a portion of the staff who had been employed on the census, knowing them to be experienced in that kind of work and being aware of what they could do. I had no intention of hiding what was done, and thought I had given the hon. gentleman (Mr. Taylor) the information he asked for in as complete form as he could expect. I have nothing to hide in the matter. If this Act is passed, I will have officers working for the next five years in the compilation, or rather tabulation—for I prefer to reserve the word compilation for the census work for publication in the census volume—in the tabulation of information drawn from the census. That is, to a large extent—but not altogether—the work which these clerks have been doing for the last six months who are paid out of the vote for general statistics. I say frankly that, in doing that work they did finish a small part of the compilation of the census volumes which was not quite complete on the 1st of July last. But it is statistical work within the proper meaning of that term.

Mr. BLAIN. As I understand the minister, he says that some part of the statistics contained in the Year-book are taken from the last census and some other part collected in some other way. Do I understand the minister to make that statement?

Mr. FISHER. I do not remember making that statement, but the Year-book, as a rule, is compiled from the departmental reports of the year. There are certain tables in it taken from the census. For instance, I think the population tables are taken from the census and then computed on a certain basis of the actual increase for every year. I think there is a statement of the population of the country every year in the Statistical Year-book which is computed from the last census on a fixed proportion of the natural increase, and in that way it is taken from the census. I think there are some other tables computed in the same way from the census. But the Year-book for this year would not have any statistics taken from the census of four years ago. It would have to be computed to bring it up to what the officer in charge of the Year-book would calculate to be the statistics for this year. But the great bulk of the statistics in the Year-book are taken from the departmental reports for the year, and one reason why the Year-book has been late in coming out is that the officers working on it can only begin their work when the other reports are finished and supplied to them.

Mr. BLAIN. Are we then to understand that the information contained in the Statistical Year-book is all taken from the last census returns and the departmental books that are published? Or, in other words, does the Statistical Year-book contain any further information than that which is procured from these two sources?

Mr. FISHER. The officer in charge of the Year-book gathers no outside information each year for the Year-book; it is only from the publications of the government that he compiles or tabulates it. He does not collect statistics in the way that this Act contemplates they shall be collected in the future, and which I hope to do with the power proposed to be given.

Mr. BLAIN. I understood the minister to say that some proportion of the $18,000 expended last year was for the purpose of collecting special statistics.

Mr. FISHER. No, what I said was that of this $18,000 $15,000 is a new vote. The $3,200 which has been voted for general statistics for many years back has always been expended in the payment of certain salaried officers who are doing work on the Year-book. The work I have spoken of was other work, but none of this money was spent in the way of gathering information from outside sources, it was only spent on work connected with the compilation of the census and the preparation of tables from information in the census.

Mr. BLAIN. Then the Statistical Year-book gives no new information whatever, it is simply a compilation of the returns of the different departments?

Mr. FISHER. I think that is the case.

Mr. BLAIN. Then the minister proposes to expend a certain amount of money for the collection of information between the censuses that are now being taken? Would the minister state how he proposes to collect that information in the province of Ontario, both in respect to agriculture, commerce and manufactures?

Mr. FISHER. If the hon. gentleman will look at the Bill he will see that I take power to get such information as I can from any provincial or local sources; when I consider it accurate and complete I would not undertake to do the work over again.

Mr. BLAIN. The minister stated the other day that in the province of Ontario there was very full information taken every year by the assessors? Does he propose to take any further information in the province of Ontario in respect to these statistics?

Mr. FISHER. I cannot say just now what the assessors do collect. I think myself we would not make any commencement of getting more information than is now published by the Bureau of Statistics in Ontario on agricultural subjects. Perhaps afterwards we might arrange to get more.

Mr. BLAIN. What about other subjects?

Mr. FISHER. Yes, industrial subjects, because in the province of Ontario, so far as I know, there is no information of an industrial character such as I have outlined and that I think we ought to collect. But

we would not need to collect whatever is already collected by some local or provincial organization. If there was a local or a provincial organization which already collected such information, I would make use of it, and supplement it where necessary.

Mr. BLAIN. We are to understand then that in Ontario, at least, the agricultural statistics that will be procured under the new expenditure will be no different from what they are at the present moment, but the minister proposes to expend money for the purpose of procuring commercial and manufacturing statistics which will be valuable to the people. I suppose, before bringing down his Bill, he has outlined some plan that he proposes to adopt before asking for this increased expenditure. He knows that at the present time there is a large number of manufacturing concerns in Ontario and he knows that information respecting them and respecting commercial affairs, would be valuable to the people. Surely the hon. gentleman must have some fixed policy in his mind of the way he proposes to collect that information ?

Mr. FISHER. I thought I had already answered that question. My plan would be to take industrial statistics, as well as agricultural and manufacturing statistics. For that purpose I would have the officer here prepare a schedule of questions, and I would send these questions out to the industrial establishments whose record we have in the department. I would have the office here secure information by the best means in their power as to new industrial establishments wherever any sprung up. I would ask the managers or members of these establishments to fill up the schedules which were sent to them, and return them to the office here. That information would be very considerable in its character, it would enable the office here to compile those answers and tabulate them in a proper form to be published. I think that ought to be done as far as manufacturing industries of all kinds are concerned, once, twice or three times between every decennial census. That ought to be done, not only for the province of Ontario, but for the whole Dominion. I may say that the work of this office would be done for the whole Dominion, the same kind of information would be obtained for the whole Dominion, the information will be compiled for the whole Dominion in all its subdivisions and would be issued as information concerning the Dominion of Canada. I do not know whether that covers the ground referred to in my hon. friend's question.

Mr. SPROULE. Suppose they refuse or neglect to give answers to the question ?

Mr. FISHER. We have power to require them to give the information under this Act. We have power under the Census Act to require the information when taking the census. If anybody refuses to give us information he can be summoned before the court and ordered to give it, and if he then refuses he is subject to a penalty. I forget the exact penalty but it is a serious one. There is a fine and imprisonment in the final resort for a refusal to give information. In this Act I ask for power to get that information in the same way in any investigation undertaken by the office. This same power I now have in connection with information in census work.

Mr. BLAIN. I would like to ask the hon. minister if this work will be done without the appointment of a number of officials in different parts of the provinces ?

Mr. FISHER. The outline I have given does not contemplate the appointment of officials. At the same time, I do take power under certain circumstances and for certain special investigations, if by Order in Council these investigations are decided upon, to appoint a special official for such special investigations. That is now given me under the General Statistics Act. I can to-day appoint an official under the General Statistics Act to go and make an investigation of any special industry in Canada and get statistics and information in regard to it, but I could not force people to give information. By this Act, if passed, I will have that power, but otherwise I have the power now except with that limitation of which I have spoken.

Mr. BLAIN. The hon. minister has already stated that the department have a correct list of the industrial establishments in Canada. If a new establishment is put in operation or an old one ceases, what facilities has the hon. gentleman for keeping the list in the office up to date ?

Mr. FISHER. One of the first duties, I think, of a department of this kind would be to make what I might almost call a catalogue or index of the industries of the country. I think that can be done in the first place by taking the names of the industries already entered in the last census. We have all the details of them. Of course, a few of them may have disappeared and a number of others may have been created. We have easy facilities for getting them. The Boards of Trade in the different cities and towns and the commercial directories which are available to anybody would assist us in that respect. We would have all these available to our hand and we would, as one of the very first works of an office of this kind, prepare a list of industrial establishments. I think that should be one of the first works in connection with any industrial investigation. As a matter of fact, in the census of the industries of the United States which is going on to-day under the permanent census office that is just the way that they are proceeding. That is the way I have proceeded in connection with the agricultural industry in this country. I

have to-day in my own department elaborate and very carefully prepared lists of those engaged in what I may call the agricultural industries which have been prepared in the way that I indicated, and by a careful consultation with those who know about these things all over the country. To illustrate the matter I may say that we consulted the dairy association in regard to the butter and cheese factories. We have inspectors all over the country who know all about these. We have an almost absolutely complete list of all the butter and cheese factories in Canada, and we also have a very correct list of the bacon establishments, the fruit evaporating works and various industries of that kind that are connected more or less with agricultural work. The same kind of thing could be easily done ; it will take a little time and money, but there is no insurmountable difficulty and I am satisfied that under the operation of this Act as complete records of the other industries of the country can be obtained.

Mr. BARR. Mr. Speaker, we are undertaking a work which will in all probability cost a very large sum of money and it may be proper at this stage to consider what we are going to get in return. We do know that in Ontario and Manitoba, at least, they have already facilities for gathering all the statistics and information that are likely to be received through this new office. The hon. Minister of Agriculture (Mr. Fisher) has told us that he proposes to have this census taken every two or three years. It will be important for us to know how many months or years will be permitted to elapse between the collection of this information and the time at which it is given to the public. We do know that a most important part of the census which was taken three years ago, a part that we desire to have as dealing with a question of the greatest importance to the members of this House, is not yet out, and we have no guarantee that it will be out within the next year or two. It seems to me that unless some better proof can be shown of the necessity for the information proposed to be gathered it is not desirable that such a large sum of money should be expended. We should have some guarantee from the hon. minister as to the time at which the census will be taken and we should also have some guarantee as to whether we are going to have this information within a few months after it is collected instead of being furnished with some old, out of date material, because, if this information is to be of any value to this House and to the country we must have it within a few months of the time at which it is gathered. If it is the intention of the hon. minister to collect that information and to give it to us within a reasonable time there may be some excuse for the inauguration of this new department, but when we find that the publication of the results of the last decennial census has not been characterized by such expedition as is necessary if the information is to be of value to the country we are not encouraged to hope for better results in this case. If the hon. minister can assure us that the information will be collected and issued within a reasonable time and in a form in which it will be readily available, especially to manufacturers, then I say there may be some excuse for it, but I do hope that we may get this information more promptly than we have been able to obtain that which has been collected in the past.

Mr. FISHER. I would say to my hon. friend (Mr. Barr) who has just taken his seat that certain parts of the information, such as I have been talking about now, can be got and after it is got it can be compiled in about a month and issued. When we have the whole census to deal with that is another matter. I am only speaking about certain interim or partial information obtained from time to time. That information can be issued very rapidly by bulletin. A complete consus of industries for the whole country might take longer, but to obtain what I might call this industrial intercensus information for interim reports, I believe would take a very short time : I believe that we could get the information and compile it within a couple of months of the date on which the heads of the firms furnished their information. Supposing that next week I was to send out schedules to firms all over the country and to ask them to return them to us on the 1st of April, filled up with information to that date, I venture to say that all the compilations in regard to that information would be ready and issued to the public before the first of June.

Mr. GANONG. Will the schedules under this Act be the same as those in the regular census?

Mr. FISHER. Oh, no, the schedules will be specially prepared for this purpose.

Mr. GANONG. I think if there are special schedules we should know what they will be because I do not think the manufacturers should be subjected to the whim of any minister, no matter how honest he may be, as to the information they are forced to give.

Mr. FISHER. In regard to that the census requires manufacturers to give us this information, but the individual manufacturer's information is never divulged to the public; it is only compiled and the compilation is given to the public, but the individual manufacturer's information is given to our officials under the seal of secrecy and that information is not accessible to anybody. We cannot get general information for the whole country unless the details of that information are supplied to some officer who will compile them. That is an essential principle of the Census Act and

it must be an essential principle of any arrangement for collecting statistics. I may say to my hon. friend that in the last census there were only a few individual and scattered instances where any manufacturers objected to giving the information. When such a case arose, instead of taking the manufacturer by the throat and forcing him by law I sent a special officer to meet the manufacturer and to explain the situation to him, and in almost every case the manufacturer recognized the true situation and saw that the information in regard to their own particular business was not going to be divulged to the public but would simply be a portion of a statement in regard to the general business of the country. I think that in two or three cases I actually had to threaten them with proceedings to get the information, but in the whole Dominion of Canada there were only one or two such cases.

Mr. GANONG. I am not objecting to a general census schedule, but I think it is putting a good deal of power into the hands of the minister. If the minister went far enough he would find a good many kickers in this country.

Mr. MONK. I think in a matter of this kind the schedules must necessarily vary. in the United States the information is not divulged except with consent of the parties interested.

Mr. FISHER. It is not divulged at all.

Mr. MONK. They must necessarily vary ; it is not like the case of a general census. I listened to the information given by my hon. friend (Mr. Fisher) and of course he has convinced me that it was necessary that a permanent census office should be established. In the United States it is true that the permanent census office was only created in 1902 and it is still in the probationary stage. That appears by the annual report published by the new census commissioner of the United States, the chief of the permanent census bureau, and it is a question that has been discussed in the United States ever since 1879. I believe also that if we had a permanent bureau organized with as little expenditure as that intimated by the minister, and if the work was properly carried on, it would tend to diminish the expenditure of the decennial census because there are two parts in the measure of my hon. friend, one in regard to the decennial census and the other in regard to the creation of this permanent office. I have nothing to say as far as the decennial census passages are concerned ; they are very much the same as those already in the law. The Bill of my hon. friend, however, abolishes the Act respecting statistics and the Act respecting criminal statistics. We are entering upon an entirely new order of things and crea ing a machinery which I submit to my hon. friend must necessarily tend to increase in expense from year to year if it is to be really effective. Although my hon. friend (Mr. Fisher) has given a general explanation I do not find that he has gone into enough detail as regards the method of carrying out the work of the permanent office and the details of expenditure. I think that if we are going to limit it to some $20,000 per annum for four or five years it would be a certain consequence that there would only be work performed here at the permanent office; no field work could be done but my hon. friend has not given us that assurance. Indeed from some of his later remarks I would rather gather that outside work would have to be done on a rather extensive scale and I really cannot think it is possible to confine the expense of that new machinery within the figure mentioned by my hon. friend. We are furthermore to create a permanent office, and I question if it would not be worthy the consideration of the hon. gentleman and the government whether it would not be better to place the permanent census office as soon as we create one under the control of the Department of Trade and Commerce. Of course if the census had been confined to a decennial event it is not so important and we can ignore the question of why it was placed in the Department of Agriculture. I do not say this because I have any want of confidence in my hon. friend (Mr. Fisher) but because I think the work of the Department of Agriculture must necessarily tend to increase greatly, and that this work of the collection of statistics in regard to industry, agriculture, and the trade of the country would be much better placed in the Department of Trade and Commerce just as I think that the Department of Labour would be better if entrusted to the Department of Trade and Commerce because these subjects are corollary ones and are better treated in the same department. That is the way the United States have constituted that work, and I see from the reports that the placing of these three branches of work under the same department has been productive of very good results. My hon. friend has spoken of a sum of $20,000. I would like to call my hon. friend's attention to the figures of the cost of the permanent census office in the United States since this department was established two years ago. Of course, I am prepared to admit there is a great difference in the work to be done, but having due regard to the work to be done I find that our census work and work connected with statistics in Canada calls for a much larger expenditure proportionately than the same work in the United States.

The census of the Philippine Islands, taken quite recently, and the tabulating and compiling of that census, with a population considerably greater than we have in Canada, namely, 8,000,000 souls, has cost the United States $214,117.58. The twelfth cen-

sus of the United States itself cost only about $11,000,000 ; and when one considers the population of that country, what that census has produced, the large number of volumes and what a marvel of research and information it is, one cannot help coming to the conclusion that the one and a quarter million dollars which we spent for our census is proportionately a very much larger sum. The cost of the census bureau of the United States, similar to the one which my hon. friend seeks to create here by the present measure, was, in 1903, $1,350,271.08, and in 1904, $1,102,693.64 ; and it will appear to members of the committee who will take the trouble to peruse the first report of the Director of the Census Bureau to the Secretary of Commerce and Labour concerning its operations for the year 1903-4, that a much more clearly defined scheme, carefully prepared and studied, was submitted to Congress, before Congress, by a law passed in March, 1902, decided at last to establish that bureau. There is another point to which I desire to call the attention of my hon. friend and the committee. We have not a very large amount of money at our disposal for the mere taking of statistics. I mean that we have much more immediate and practical uses for our available money, although I do not for an instant deny the usefulness of a permanent census bureau, if the expenses of it can be kept within proper limits ; and I do not think that can be unless a more detailed and carefully thought-out scheme is first submitted to the House by the department interested. We are exposed, I think, to the danger of a double taking of the census, unless, before seeking the authority of parliament for the establishment of this bureau, my hon. friend finds out what can be done with the provinces in regard to the statistics which they take at present. I see by section 16 of my hon. friend's Bill that he takes authority to arrange with the authorities of the provinces or territories for the supply of their statistics. That is what has been done in the United States with a large number of the states. Arrangements have been made by which the federal office gets the benefit of the statistics gathered in the different states, and even, as in the case of Michigan, contributes equitably to the cost of obtaining those statistics. I have heard it mentioned here that industrial statistics are gathered in the province of Ontario. I do not believe that we have in the province of Quebec machinery for getting industrial statistics. My hon. friend from Beauharnois (Mr. Bergeron) reminds me that we have agricultural statistics, and a very complete system established under our municipal law, by which we obtain a very valuable amount of information which is absolutely necessary for a census office such as the one in contemplation, and which is obtained without any expense to the province. Of course, the information gathered from time to time would be absolutely useless unless it were furnished to the public, as it is under every proper system of this kind. My hon. friend will find that for educational, municipal and agricultural statistics he can obtain in the province of Quebec almost all the information which he requires for his office, and which I am afraid will be duplicated if we rush hastily into this proposed scheme of a permanent bureau without beforehand making arrangements with the provincial authorities. I may say, with regard to municipal statistics, that under our provincial code the secretary-treasurer of every municipality governed by the code is bound to furnish to the Lieutenant Governor the name of the corporation, the estimated value of the taxable real estate, the estimated value of the real estate not subject to taxation, the estimated value of the property declared liable to taxation by article 710, the number of persons paying taxes, the number of arpents of valued land, the rate of assessment in the dollar imposed for all purposes, the value of the property of the corporation, the debentures of the corporation, the amount of taxes collected within the year, all other sums collected, the amount of arrears of taxes, the capital amount due to the municipal loan fund, the amount of interest due upon such loans, all other debts, the amount raised by loan within the year, the amount received from the government under the Seigneurial Act, the interest paid on debentures, the expenditure for salaries and other expenditure for municipal government, all other expenditure, the number of persons resident in the municipality, any other statement which the Lieutenant Governor in Council may require. That is what the secretary-treasurer of each municipality is bound to furnish to the Lieutenant Governor in Council. In other words, he must give every possible municipal statistic of interest, and whatever other information may be required from him by the municipal authority. Town councils, under our General Town Clauses Act, are obliged to furnish by their secretary-treasurer similar information. The secretary-treasurers of county councils are also obliged to furnish special information. We have, of course, a complete set of educational statistics. It is only the province that can at present obtain that information. I am sure that a system could be easily devised under which, at very small expense, we could obtain agricultural statistics. With regard to industrial information, it would perhaps be better to wait until we see what is the result of the first industrial census which is being taken by the permanent census bureau in the United States, where there is under contemplation at present a general law called the License Law, which will apply to all corporations under the jurisdiction of Congress, requiring them to furnish automatically, so to speak, to the government all statistics

and information of a general nature, saving always to the officers of the general census bureau the right to obtain special information for special and specific purposes.

Does my hon. friend intend doing any outside or field work? As far as I can see, he has not tried to make any arrangement with any of the provincial authorities in order to prevent the duplicating of the same work and thus causing confusion and useless expense. I should think that the provincial authorities, who are best qualified to collect the information referred to by my hon. friend, would do that work for very much less than it would cost to have it done from Ottawa. My hon. friend does not seem to have attempted to follow the system adopted in the United States. There a very considerable proportion of the states act in concert with the federal census bureau for the purpose of securing and compiling statistics on many subjects. I believe that the scheme outlined by the minister will lead to the appointment of officials to do outside work and entail considerable expenditure. It seems to me that before deciding to establish this bureau, we should find out what arrangements can be made with the provinces so that we might work harmoniously with the provincial authorities. For these reasons I think that my hon. friend should wait until he has gone further into the subject and made sure of what co-operation he can obtain from the provinces.

Mr. FISHER. I am pleased to note that my hon. friend endorses at any rate my idea of having a census office established for the Dominion. If I am not mistaken, the leader of the opposition last year gave utterance to somewhat similar views as to the desirability of having a permanent census office established at Ottawa. Anybody who has interested himself in statistical work will appreciate the advantage of such an office. I quite agree with my hon. friend regarding the advisability of our utilizing where possible, provincial and municipal labours. We certainly would not for a moment think of collecting ourselves statistics which can be procured from provincial or municipal bodies. In the province of Ontario certain statistics are compiled by the Bureau of Statistics and published, but there is not much of that work done anywhere else. In the General Statistics Act, I am given the power, which is repeated in this Act, of making arrangements with local authorities to supply me with the information they gather. But if certain statistical information can be obtained from the provincial or municipal authorities, that would still have to be compiled for Dominion purposes and also separated into groups, and that work could only be done at the central office in Ottawa.

Mr. MONK. How will the hon. gentleman collect industrial information in the province of Quebec where there is no agency for the collection of those statistics?

Mr. FISHER. The same difficulty exists in Ontario. Even in Ontario there are no industrial statistics collected to-day.

Mr. INGRAM. Yes, there are.

Mr. FISHER. To a very limited extent.

Mr. INGRAM. In the matter of labour employed in manufacturing institutions, I have here certain letters which the department of the province of Ontario sends out to the manufacturing establishments asking for certain information. Look at page 104 of the Bureau of Statistics Report for 1903.

Mr. FISHER. Is there any tabulation of the returns there?

Mr. INGRAM. Yes.

Mr. FISHER. I have not examined that particular volume, but I have always understood that there was very little of what I have called industrial information collected by the Ontario Bureau of statistics. There may be a little about the number of hands employed, and, in Ontario and Quebec—and the other provinces, I suppose—information is collected by the factory inspectors as to the hygienic condition of factories. But I do not think there are statistics as to the manufacturing productions of the province, the capital employed and so on.

Mr. INGRAM. Here are a few words from the letter:

> The bureau in seeking your co-operation in this matter gives you the fullest assurance that any information you may give will be received in the strictest confidence, and will only be used in tabulated form, and in such manner as will not disclose the identity of the person supplying such information.

Mr. FISHER. Will the hon. gentleman furnish me with the list of questions asked?

Mr. INGRAM. Yes; there are twenty-one questions in the list.

Mr. FISHER. Even supposing that this work is done for the province of Ontario, it is not done, as the hon. member for Jacques-Cartier (Mr. Monk) says for the province of Quebec. I propose to ask that information from the manufacturers all over the Dominion. I have already told the committee that I had no intention of sending out enumerators between censuses to collect industrial information. I would do the work by correspondence, by sending schedules to be filled up by the heads of the industrial establishments. I want it throughly understood that, if such machinery as my hon. friend seems to think necessary—a corps of enumerators all over the country to collect this information—were adopted, the amount I have estimated would

not be nearly enough to meet the expenditure. The estimate I have made is based upon the plan outlined. First, we will take all the information that is now collected by local, provincial or any other machinery, and, secondly we will collect industrial information by sending out schedules asking for reports to the office. I have no intention of going into the more expensive method referred to by my hon. friend from Jacques-Cartier. This is a scheme which has been adopted, as my hon. friend says in the United States. Their expenditure is very much larger than ours. For instance their census cost about $11,000,000 against about $1,000,000 for ours. My hon. friend says that they have a very much greater number of people to enumerate. But the area over which the enumeration takes place in the United States is not larger than in Canada. The expenditure in proportion to the number of people might reasonably be expected to be greater in Canada. Also, speaking from memory and subject to correction, I think there is a considerable amount of information in connection with mineral production given in our census which does not appear in the census of the United States, but which it is the intention of the permanent bureau of census of the United States to collect.

Mr. MONK. I do not see how my hon. friend (Mr. Fisher) can even avail himself of the statistics gathered by the provinces without either outside work or making an arrangement with the provinces and contributing at least a small sum in order to secure the benefit of the statistics collected by the provinces. As he has said, the statistics of the provinces are not compiled as he would want them compiled, and there must be expenditure in getting them in the shape in which he wants them. He must make an arrangement with the provinces, an arrangement which, I think, we ought to control to a certain extent; or else he must employ outside help. And once he enters upon that he will find the expense considerable. Moreover I fear, as an hon. member on this side has suggested, that once we enter upon this work, the provinces will abandon the statistical work in which they are engaged, in order to save expense and on the plea that we are doing the work. That is one reason why I would urge that an arrangement be made with the provinces beforehand. I do not wish to prolong the discussion. If this were merely a question of the expenditure of $20,000, it would not be of so much importance. But I again call the attention of the committee to the fact that three departments which naturally are closely connected are now separated. We have the Department of Labour, under the Postmaster General—for what reason, I cannot imagine, except expediency at the time of its establishment—possibly political expediency. We have the Department of the Census under the Department of Agriculture, though there is no natural relation between the two. We have the Department of Trade and Commerce. I really think that more effective work would be done and some money saved if these three departments were under one head.

Mr. INGRAM. We have now six millions of people in the Dominion of Canada. And, since 1896 this government have increased the public expenditure enormously. In 1896, under the former government, we had a statistical department. When the year for taking the census came round, the work was done under that department for about $500,000 on each of two occasions. The last census, under the present government, cost more than double that amount. Now, after the census has been nearly completed the Minister of Agriculture proposes that we establish a census bureau. The people of the United States, up to 1902, got along very nicely with only a statistical department. They did not think it necessary, until they had a population of about eightly millions to have a census bureau. But we, with a population of only six millions think we must have a census bureau. We have had a statistical department for years. We have had a Department of Labour which has agents all over the country furnishing it with statistics.

Now how does the hon. gentleman propose to obtain his statistics? He says the reason he is asking for so little money is the excellency of the method he proposes to adopt, namely: to issue a circular letter to the various individuals in order to get the information. In the province of Ontario where they have agricultural, industrial and mining statistics, they have found that the circular letter method for collecting statistics does not work well, it is largely a failure, and it will be still greater in the hon. gentleman's case. Indeed the failure will be still greater, because he is proposing to perform an entirely new work in a new field, while the Ontario system has been going on for years. Now what do we find in this circular letter? We find that they ask for:

Name of firm; post office address; character of business; capital employed, including plant; number of days in operation during the year; gross value of product manufactured during the year; has the production increased or decreased during year; if either, what per cent; value of materials used in production during year, including fuel, gas, &c.; total taxes paid during year; total insurance paid during year; amount invested, if any, in permanent repairs or plant enlargement during year; total number of employees during year (wage-earners only) male and female; total wages paid during year to wage-earners only, male and female; highest weekly wages paid, male and female; lowest weekly wages paid, male and female; total

number of salaried clerks and officials, male and female; total salaries paid to clerks, officials, &c., during year; have wages been increased or decreased during the year; if either, what per cent; what class of employees has increase or decrease affected; if both, what per cent in either case?

Now, I doubt very much whether the hon. gentleman, under his method, can draw up a better set of questions than those twenty-one questions I have read. Of the method of collecting statistics, the Ontario officials say:

> Notwithstanding that every assurance of confidence was vouchsafed by the department, but 307 answers were received to 3,000 circulars issued, demonstrating the prediction previously expressed that the mail method of seeking such information is altogether ineffective.

Now here is a province that for years has been collecting statistics, having educated people to the necessity and importance of replying to these circular letters, yet we have the admission in that old province of the total failure of that method. I pointed out the other evening that for the amount of money the hon. gentleman was asking his method would never work. Instead of asking for $35,000 he is now asking for, the expenditure will be largely increased by the establishment of this branch of the census bureau. The creation of this department of the census bureau will mean a head, a deputy head, possibly, and many assistants, it will mean the incurring of a large amount of expense. Now instead of doing that, why not adopt the machinery you have at hand? You have a statistical department, give it more clerks, and obtain by its means the information that you are proposing to obtain by this new method. It would mean less expenditure, and to my mind, it would accomplish all the hon. gentleman is endeavouring to accomplish by this legislation. The people of the country are complaining of too much government, of over legislation. They say that we have too many members in this House, too many ministers in this government, too much government machinery, and they are complaining of the burdens imposed upon them. We are to have this session the creation of one, or perhaps two, more provincial governments in the Northwest Territories, no doubt a very proper thing; but they will certainly increase the expenditure of government in this country to that extent. Instead of going on with this Bill, let the hon. gentleman adopt the suggestion of my hon. friend from Jacques Cartier (Mr. Monk) and see what the United States are going to accomplish by their new census bureau. The time for taking the new census will soon be on us, and I hope we will then be in a position to take a better census than has been taken this last time. This last time there were many statistics collected that were really unnecessary, because the several departments already had the figures recently collected which would have served the purpose, instead of issuing so many schedules to collect the same information. For instance, we have an Indian Department, a Department of the Interior, who know perfectly well the number of Indians we have on the reserves, and know all about them. What more could we gain by employing census enumerators to go round and take these Indians all over again? That is only one instance of the prodigal manner in which the public money has been expended, and that is one reason why the cost of taking the last census has already reached $1,250,000.

Mr. FISHER. The questions asked in the province of Ontario for collecting industrial statistics are more numerous than I would propose to ask. But there is this essential difference in the operation of the method, that whereas the provincial government has no authority to compel people to answer questions, and as a matter of fact they do not answer them, I have power at the present time, under the General Statistics Act, to require answers to such questions. I desire to obtain the same power under the Bill I now propose. I have that power at present, but only in so far as the census year is concerned; I want the same power to obtain answers to these questions. I think the reason why the information with regard to industries in Ontario is not complete is that the local authorities have not got power, and cannot collect the information. Practically the Bill now before the House is a consolidation of the General Statistics Act with the Census Act.

Mr. BLAIN. May I be permitted to draw the hon. gentleman's attention to the fact that in the province of Ontario no new manufacturing establishment can commence operations until it has first been inspected by the factory inspector, and a certificate given that everything is all right. Yet the hon. gentleman says that the reason he wants this large amount of money is to get industrial information in the province of Ontario, as well as elsewhere. I do not think the hon. gentleman has given sufficient information to the committee, and I do not think he has sufficiently posted himself on this question before he has ventured to introduce this measure and ask for this large amount of money to be expended. Speaking for the province of Ontario, I object very strongly to this expenditure of money. If the Ontario government is to expend a large amount of money for taking care of this work of enumerating the industrial institutions and collecting agricultural statistics, paying for it out of the treasury of that province, why should not other provinces do the same thing? Are we going to govern in Ontario and regovern in the Dominion, or govern in Manitoba and regovern in the Dominion? As my hon. friend from East Elgin (Mr. Ingram) has pointed out, the people are opposed to this

expenditure. We are paying enormous amounts of money for provincial information and it is now proposed to duplicate this expenditure in the Dominion. I am sure that the hon. minister, when he looks into these matters more fully, will either abandon the proposition or come forward and give more detailed information as to what is done in the different provinces.

Resolution reported, read the first and second time, and agreed to.

Mr. FISHER moved that the House go into committee on Bill (No. 5) respecting the census and statistics.

Mr. BERGERON. No.

Mr. FISHER. Well, if my hon. friend objects to going into committee on the Bill I will not press it, but I would be glad to go on with the matter.

Mr. FOSTER. It is a case of exhaustion, that is all.

Mr. FISHER. If my hon. friends object we will have to go into Committee of Supply. Do my hon. friends prefer going into Committee of Supply ?

Sir WILLIAM MULOCK. We might as well make some progress on this matter.

Mr. FOSTER. We are ready for anything.

Mr. R. L. BORDEN. I think that as some hon. gentlemen on this side of the House would like to consider a little the suggestions which have been made by the hon. Minister of Agriculture it would be better to allow the matter to stand until to-morrow.

Mr. FISHER. I do not wish to press it.

Motion withdrawn.

SUPPLY—ICE JAM ON THAMES RIVER.

Hon. WILLIAM PATERSON (Minister of Customs) moved that the House go into Committee of Supply.

Mr. H. S. CLEMENTS (West Kent). Mr. Speaker, I desire to call the attention of the government to a very important question appertaining to the district in which I reside. There are a large number of people living between the city of Chatham and Lake St. Clair on the banks of the River Thames, covering a distance of seven or eight miles on each side of the river, who have a very great grievance because of the ice jamming in the River Thames and causing a large amount of damage to property in that district. I may say that the jam there last year caused damage to the farmers in that vicinity to the extent of from $175,000 to $200,000. The cause of this jam is the breaking up of the ice between London and Chatham previous to its breaking up between Chatham and Lake St. Clair and the reason of that is that the banks are higher from Chatham to London than from Chatham to Lake St. Clair, the result being that the water rises more rapidly above than at the lower end. The ice breaks up above several days previous to its breaking up below. The ice remains firm and solid at the lower end and the ice from above comes down and jams there causing the ice and water from the London district to overflow the banks of the river and flood the property of adjacent residents. I may say for the information of the government that the jam that was caused there last year resulted in the flooding of the magnificent farms on both sides of the river to the depth of eight or nine feet. I may also state that the Grand Trunk tracks were swept away causing damage to that company to the extent of from $40,000 to $50,000 besides impeding traffic for several days. I am not speaking in the interest of the Grand Trunk Railway because I think they are able to take care of themselves, but I am speaking particularly in the interests of the farmers of that district who lost, practically, in many cases, everything that they had. Some farmers, who have good farms, were last year obliged to go out and work by the month or the day to get a living. The hon. acting Minister of Public Works (Mr. Hyman) who lives in the district knows the situation possibly as well as I do. Although not living in the exact vicinity in which these jams occur the hon. acting minister knows possibly the results of these jams and of the floods caused by them. I trust that the government will see fit to give us a remedy at once. I think there is a remedy. What we desire, and what I have agitated and what a number of prominent men in my district have agitated, is that we should have the services of an ice crusher that would come from Lake St. Clair and crush the ice between Lake St. Clair and Chatham two or three days previously to its breaking up in the London district. There are men living in the district who will be able to notify the hon. acting minister when the crusher should go up the river and break the ice. There are ice crushers at Detroit and at Port Huron, so that they are available in that district, and I trust that the government will see fit to provide a remedy at once. The reason that I call the attention of the government to it now is that the river may break up within the next six or seven weeks and we may have the same results this spring as last spring. I trust that in the interests of the residents of that district the government will see fit to go into the matter at once and give these people the relief which I think they are properly entitled to.

Hon. CHARLES HYMAN (Acting Minister of Public Works). Mr. Speaker, I may say in answer to the hon. gentleman (Mr. Clements) that this is not the first time that the attention of the government has been called to the matter. The former member for Kent also brought the matter to the attention of the government. I am aware of the difficulties to which the hon. member

has referred. The constituency which I have the honour to represent in the House is also on the River Thames, but of course, very far up from the hon. gentleman's constituency where the conditions are not exactly the same. The difficulty seems to be that it would be almost impossible to get a boat from Detroit through the Detroit river and Lake St. Clair in time to do the work that would be necessary on the River Thames. If the hon. gentleman thinks it would be any advantage I should be very glad, as acting Minister of Public Works, to communicate with some of the boat owners at Detroit and see if it is possible for one of these boats to go from Detroit and accomplish the work that the hon. gentleman brings to the attention of the government. We have a resident engineer in the neighbourhood and I shall be very glad to call his attention to the matter, have him visit the locality and get a report thereafter to see if it is possible for the department to carry out the wishes of the hon. gentleman.

Mr. CLEMENTS. I may say, as far as being able to get the crusher from Detroit or Port Huron is concerned, that I think the hon. minister would have no difficulty whatever because the ice is not, as a rule, over a foot or one foot and a half thick. The minister will understand that these crushers are able to crush ice three feet thick, so that it is not necessary to have a boat lie at the mouth of the river for this special purpose. But it would be a great advantage if we were able to get a boat when we required it. We quite understand that it is just at a certain period that the boat is required; it must be at the time when the ice is breaking up, which may be three weeks from now or may be in six weeks.

Mr. HYMAN. I shall have the engineer report and see what can be done in the matter.

Mr. BERGERON. Before you leave the chair I wish to inquire of the Minister of Public Works about an order of the House given January 23, for

A statement showing the amount of money spent by the government, or any department thereof, in the parish of Chateau-Richer, county of Montmorency, for building wharfs, piers, docks, breakwaters, &c., or for removing boulders or rocks from the beach in front of the said parish, or for any other public works, from the 1st of September, 1904, to the 15th November of the same year.

We would like to have that as soon as possible.

Motion agreed to, House went into Committee of Supply.

Public Works—Antigonish public building, $15,000.

Mr. GANONG. We had some discussion in regard to this matter the other day. I do not think that any member objects to Antigonish having a proper building. As far as I am concerned it is wholly as a matter of principle that I am objecting to this vote. I think, as the member representing that constituency said that this town should have a fair share of public money but I do not think it should have more than a fair share, that it should have the share of two or three towns of similar size. Perhaps the hon. gentleman representing the constituency will advise us as to when this town was incorporated?

Mr. McISAAC. About twelve or fifteen years ago; I do not remember the exact date.

Mr. GANONG. Now this is a growing time in Canada. In 1881 the population of the County of Antigonish was 18,060. In 1891 it had dropped to 16,114, a loss of 1,946. In 1901, during the regime of hon. gentlemen opposite, it dropped again to 13,617; it had lost 2,497 of its population. That is, the total population of the county at the present time is 13,617 according to the census. This population is divided in this manner: Rural population, 12,091 and urban population 1,526, which includes the town I presume incorporated fifteen years since. Well, let us look at the records of the town itself. In 1891, the population was 2,758; in 1901 its population was 1,838, a loss of population in ten years of 920, and still they propose to erect a public building there in a town containing 1,838 people that has lost 920 of its population in the last ten years, a town having really no manufacturing business to amount to anything or any present prospect of any such business, a town that is simply an outport, not a port of entry, where not a large amount of shipping is done. I think it is inexcusable to spend $25,000 of public money on such a building as they propose to erect in this town, which has no possibility of growth as far as one can judge. They had to bring forward some kind of excuse and the only excuse they could advance is that they must house the engineer and his assistant. But these officials have evidently been housed before in some form. I do not think that when a building worth $10,000 or $12,000 is sufficient for the population of this town and is all the government is justified in erecting that we should add another $15,000 to the cost in order to house the engineer and his assistant. Not only does it entail an additional expenditure in the first place, but a janitor must be kept and the heating and lighting of such a building must be almost double that of a building suitable for the requirements of that town.

Mr. McISAAC. The hon. gentleman (Mr. Ganong) is entirely mistaken in the figures he has given.

Mr. GANONG. I should like to pass the census report over to the hon. gentleman; the figures are in it.

Mr. McISAAC. The hon. gentleman asked me how many years it is since the town was incorporated. I do not remember the exact year, I said twelve or fifteen years ago but I am satisfied that it was incorporated since the census of 1891 and that the figures for Antigonish in that census include the population of Antigonish polling district outside of the town limits as the town is now constituted. The only census of the town taken since it was incorporated was that of 1901 which gives a population of 1,838. But it must be remembered that this too is misleading. The town of Antigonish covers a small area, probably a mile long and half a mile wide, but the district outside the incorporated town must be included in the population which will receive benefits from this building. If the committee will look up the census figures they will find that the incorporated town itself is put down at 1,838, but the population of North Grant is 403. That is a poling subdivision of the polling district of Antigonish. There is also Antigonish South, which is put down at 590, making in all a population of 2,831, which is really the population of the town and the adjoining districts which will utilize this public building.

Mr. COCHRANE. Is there no post office in these outlying districts ?

Mr. McISAAC. No, there will be no other post office within a radius of three or four miles. This is the only town and the people outside use this building. When you consider that there are about 2,800 people benefited, it will be seen that the situation is very different from that indicated in the statement made by the hon. member for Charlotte (Mr. Ganong). As I stated, the other day the importance of the town of Antigonish has been recognized long ago. It was recognized by the late government as far back as 1882, when they purchased a building which had been used as a college building. It was a wooden building thirty years old when they purchased it, and instead of putting up a new building at that time the government undertook to repair that old building which was very poor economy indeed, because they had, year after year, to make appropriations to keep it in repair. The money was being wasted and the building was not being much improved by the money that was expended on it. It was getting worse year after year until two years ago, when a vote of $1,500 was put in the estimates for repairs. The Board of Trade of the town protested against the expenditure of any more money on the building, a wooden building fifty years old and in such a condition that the expenditure of any more money upon it would be a waste, and they pressed for an examination of it. The Public Works Department sent a man down to examine the building, and he reported that it was entirely unfit for further use, and that it would be a waste of money to attempt any further repairs upon it. Therefore a vote was put in the estimates last year for a new building, and the vote of this year is for the completion of that building.

Mr. GANONG. I anticipated just about what our friend has given us, and, to show you that the town is going back, I want to quote these figures. The population of the town proper shrunk from 2,758 in 1891 to 1,838 in 1901, a reduction of 920. The country district, where something is produced for market, I suppose, increased in the same time from 482 to 590. But taking the town and the village together, their population dropped from 3,340 in 1891 to 2,428 in 1901, a drop of 912, and that drop was almost wholly within the town, showing that there has been an absolute loss of nearly a thousand people in a population of less than 3,000 in the last ten years ; and yet we are asked to build a $25,000 building as a monument to the hon. gentleman who represents that district.

Mr. McISAAC. The hon. gentleman does not properly represent the facts. He should add the population of North Grant, 403, as well as that of Antigonish South, 590, which brings the population up to 2,831. So that, so far as the town of Antigonish is concerned, there is no reduction in the population at all. The hon. gentleman is not familiar with the locality, and does not give the figures of the surrounding district.

Mr. BLAIN. I see that $1,500 was voted two years ago for putting new letter boxes into this post office. I judge, from what the hon. gentleman representing the county says, that that money was not expended.

Mr. McISAAC. No, that is what I refer to.

Mr. BLAIN. The hon. gentleman also stated that a report was presented to the government on the condition of the building. Perhaps the hon. minister would give us some statement as to that before the item goes through.

Mr. HYMAN. The chief architect in his report states :

> The Antigonish public building is a wooden frame building, fifty feet by thirty-two feet, two and a half stories high, and in a bad state of repair. The main beams and sills are rotten and in such a state that portions of the timber can be pulled away by the hand, and the boards are so decayed that where repaired they will not hold the nails. The building has settled four inches in the centre, and the plaster is cracked beyond repair. It is reported to be fifty years since the building was erected.

Mr. BLAIN. On whose recommendation was the contract for letter boxes let to a Montreal firm ?

Mr. McISAAC. That vote of $1,500 was not expended at all, for the reason I gave.

Mr. GANONG. On whose recommendation is it that the department undertakes to spend $25,000 for the erection of a public building at this place, in view of the actual facts of the case, showing a reduction in the population and revenue ?

Mr. HYMAN. I may say, in the first place, that the hon. gentleman representing the constituency made, as I think he had a right to make, very strong representations to the department. I may say also that under date of April 8, 1904, the secretary of the Council of Board of Trade of Antigonish transmitted the following resolution to me :

The Board of Trade of Antigonish are aware that the government of Canada appropriated at the last session of parliament the sum of $1,500 for improvements and repairs to the public building in the town of Antigonish, in which are the post office, custom house and engineer's office. The said building is a wooden one, fifty-seven years old, and in a very dilapidated condition ; the council of said board of trade are of the opinion that any considerable expenditure made in repairing it would virtually be a waste of money ; and, for reasons stated, the said council beg strongly to recommend that before making any expenditure on repairs to said building a competent person be sent by your department to examine the building and report on its condition ; whereupon we believe it will be manifest to you and your department that the best interests of the county and the country will be promoted by constructing a new public building for the town of Antigonish, such being absolutely needed.

The report of the engineer of the department, which followed that, I have already read.

Mr. GANONG. Then it is simply on the recommendation of the hon. gentleman who represents that constituency that the department undertake to spend $25,000 ?

Mr. HYMAN. The hon. gentleman asks me a question, and then he says it is on the recommendation of the member alone. I have just read the recommendation of the Board of Trade, asking for the expenditure.

Mr. GANONG. There is no such amount mentioned in the resolution of the Board of Trade. They do not suggest for a moment that a $5,000 building would not answer all the purposes. I was perfectly justified in making the statement I did.

Mr. HYMAN. The Board of Trade certainly made no suggestion as to the amount. The amount expended and the character of the building are of course left very largely to the department.

Mr. WILLIAM WRIGHT. I would like to suggest that, as there are a great many important growing towns in the Dominion of Canada of larger population than this one which do not participate in these expenditures for public buildings would it not be well for the government to require any municipality wishing a public building to contribute say half the cost ? If this sort of thing goes on, any little town which has a political pull will be able to get a building, while many large and growing towns all over the country will not participate in these expenditures.

Mr. FOSTER. There is no doubt that the old building was pretty old. Fifty-seven years is a considerable age for a wooden building. Something had to be done. The whole question at issue is not that something should not be done at Antigonish, but as to the wisdom of putting $25,000 of the people's money into a building to accommodate such public business as there is there in the way of customs and post office. If it be necessary to provide room for some engineers who have a district under their supervision, they could be accommodated without the country putting up an expensive public building. Suitable rooms could be hired in any town at a very moderate figure. If we were on the other side of the House and the time was about 12 or 15 years, ago, we would have such questions as these put to us. The Minister of Public Works would be asked whether or not there had been any report from the Postmaster General as to the absolute necessity for a building to accommodate the post office in Antigonish and what kind of building was required. He would then be asked, whether the Minister of Customs had urged the necessity for better accommodation for his collector. And if such reports were not supplied, there would be a pretty good sized row kicked up and a charge made that this building was simply being put up in order that the member for the county might be able to show that a certain amount of money had been spent in his constituency. But if you have to put up a building, does not the minister think that in a place of that kind a serviceable and commodious building, which would give all the accommodation required, could be put up for, at the outside, $10,000 or $12,000. Why should the department put up a $25,000 building, when a $10,000 one would give all the accommodation required ? What does this $25,000 expenditure involve ? It involves the annual payment of $1,000 for interest and $500 at least for the cost of caretaking and repairs. You cannot get a caretaker to take hold of that building and pay for the heating and the little repairs every year for less than that figure. That makes $1,500 which you take from your revenue ; and as the whole postal revenue of that office is only about $3,000, one half of it will disappear entirely. Nobody objects to Antigonish getting a serviceable building for its public business, but $25,000 is altogether too much to pay, considering its revenue, population and prospects.

Mr. HYMAN. In this particular instance the officers of the Post Office Department

were asked with regard to their requirements and so also were the officers of the Customs Department. It does not seem to me that it would be good policy to put up a building in this town which would not give all the accommodation required. The difficulty is this, that although the estimate of building is only $16,000, it will cost almost as much for fitting up and electric light, and I do not think it is in the public interest that we should skimp and put up a poor looking building which would not do credit to the country. As regards the cost of running it, there is a caretaker there at present, and when the hon. gentleman says the cost will take one half the revenue, he leaves out of consideration the customs duties which are collected there to the extent of $7,700.

Mr. FOWLER. I have not the slightest objection to Antigonish getting a public building, but since the county of Albert has no public building and contains the town of Hillsborough, which has a considerably larger population than Antigonish, and the population of which is increasing, instead of decreasing, as is the case in the latter, I would suggest that the hon. minister would reduce the cost of this building to $15,000 and spend the other $10,000 on the erection of a building of like character in the town of Hillsborough. That is a fair proposition and in this way he would meet the views of the hon. member for Algoma, who wants to have the money to be voted for these public works more evenly distributed over the whole country. We have a large customs and post office business in Hillsborough. It is the centre of a splendid farming population and does a very large trade, and I trust the hon. minister will take note of my remarks and see whether he cannot agree to the suggestions I am making.

Mr. HYMAN. I am sorry I cannot accede to my hon. friend's suggestion. We do not think that a fit and proper building could be put up in Antigonish for less than $25,000. But of course if the hon. gentleman has any presentation to make in favour of a public building in the town of Hillsborough, I shall be happy to give it every consideration.

Mr. R. L. BORDEN. How many towns are there in Canada with a population of from 1,500 to 2,500 which are not yet provided with a public building ?

Mr. HYMAN. I have no statement of the kind with me, but I could have one prepared.

Mr. R. L. BORDEN. I would not delay this item for that. Perhaps we can find it in some return already brought down. If the hon. gentleman (Mr. Hyman) could indicate any official source of this information I would not give him the trouble of having the statement made up by the department. Otherwise, I would like to have it.

Mr. HYMAN. Of course, it would be easy to make up a statement in the department giving the places that have public buildings, and a list from the census returns of others of similar population.

Mr. R. L. BORDEN. I do not speak of this matter because this building is to be in Antigonish. I shall be glad to see a public building there. There are public buildings in towns of a similar size in different parts of the country. But, when we propose to spend $25,000 or $30,000 in a town having a population of between 1,500 and 2,500, I think it would be a desirable thing for this committee to know exactly what that is going to amount to in the long run. If Antigonish is to have a building costing $25,000, we may anticipate, I suppose, that practically every other town of approximately the same size, will demand a similar building, and, according to what I have heard during the last two or three sessions of parliament, we have every reason to expect that their requests will, some time in the early future be acceded to. What is that going to cost us ? To be able to judge of that I want a list of towns from 1,500 to 2,500 population which are not supplied with public buildings sufficient for the ordinary public service of those localities. With this information we shall have an idea of what this policy means to the country. I am assuming, of course, that the department has some policy with regard to it, and that in selecting Antigonish or any other town as a place in which a building is to be constructed costing $25,000, it is proceeding upon some definite policy with regard to the erection of these buildings throughout the country and is not doing it at hap-hazard and simply because one locality or another happens to have political influence with the government.

Mr. BLAIN. A vote was given in 1903 to equip the old building in Antigonish. That seems to have satisfied them for that year; but, in 1904, they seem to have realized the need of a new building costing a large amount of money. I think the minister ought to give us a statement of the cost, showing the cost of the land and how it was purchased, the cost of the building and of its equipment. He should also tell us whether the contract is to be let by tender. And when the building will be completed and ready for occupancy and will a caretaker be appointed ? I ask all these questions at once in order that the hon. gentleman (Mr. Hyman) may not be called to his feet too often.

Mr. HYMAN. I desire to give the hon. gentleman (Mr. Blain) every information. I think this is the third or fourth time I have answered these questions in detail. There will be no cost for the land, as it is the intention of the department to build on the old site. It is estimated that the building itself will cost $16,000; heating, $2,000;

wiring, $600; fittings and the furnishings, $3,000; fencing and sidewalks, $500, and a clerk of works and contingencies to make up a total of $25,000. No contract has been entered into by the department yet, nor have tenders been called for. Plans and specifications will be prepared and tenders will be called for in the legal way by public advertisement.

Mr. BLAIN. When will the building be completed ?

Mr. HYMAN. That is a matter to which the department has not given attention as yet. When a contract is to be let, no doubt the time allowed for construction will be fixed.

Mr. FOWLER. Is it the custom of the department to build sidewalks in front of all these buildings ?

Mr. HYMAN. Where improvements of this nature are made it is the custom of the department to pay its share of the cost, and, where the department destroys a sidewalk in the course of constructing a building, it has been the custom of the department to replace the sidewalk so destroyed.

At six o'clock, committee took recess.

After Recess.

Committee resumed at eight o'clock.

Canso public building, $15,000.

Mr. FOSTER. Has the site been obtained?

Mr. HYMAN. No. The cost of the site will depend altogether on the part of the town in which it is purchased. There have been no negotiations yet for purchasing a site. The populaion is 2,367. The postal revenue is $1,487, and the customs revenue, $1,787.

Mr. FOSTER. What is it proposed to spend there ?

Mr. HYMAN. It is proposed to spend about $9,500 for the building. Then the heating may cost $1,100, the fittings about $1,500, boxes about $1,700; altogether probably not less than $14,500.

Mr. FOSTER. What arrangements are now made for the post office and custom house ?

Mr. HYMAN. They are in a rented building. We pay $60 a year for the post office and $50 for the custom house. It is proposed to put up a brick building on a stone foundation.

Mr. FOSTER. Well, the minister sees that whilst, with reference to Antigonish, there was a postal revenue amounting to $3,700 and a customs revenue of $7,700, Canso is a town with only $1,487 postal revenue and $1,787 customs revenue, and the minister now proposes to spend, we will say, about $20,000, on a public building in that town. The rentals for the two buildings now amount to $110 a year. The other will be running up to $1,200 or $1,300 a year. It does seem as if the minister was running the thing pretty well into the ground. You are undertaking to put these expensive public buildings in every part. What do they do in the United States ? That is quite a forward country, with 80,000,000 people, fairly prosperous. What is the principle adopted there with reference to small post offices ?

Mr. HYMAN. I must acknowledge that I have not looked closely into the methods pursued in the United States with regard to these matters, and I do not know as we are accustomed to go there for precedents, at least hon. gentlemen opposite tell us we should not. In Canada, when we put up public buildings, we think it is a good principle to make them a credit to the locality and a credit to the country. No doubt by scrimping on these buildings we might cut down the expense a little, but I question if, in the long run, that would be in the interests of the country. In making up these estimates I have endeavoured to make the class of buildings fit the localities in which they are erected. In making up these estimates—I desire to be perfectly frank with the committee—I put the sum high enough to cover all probable expenditure, and I expect that we shall be able to keep within the estimate.

Mr. FOSTER. What is the trouble with the present arrangements for post office and customs house in Canso ? What is the trouble with the business being carried on under rental as it has been, I suppose, for a number of years ? Did the minister ever think of the system which is in vogue in the United States and other countries, the rental system, not entailing large capital expenditures, where you get a fairly reasonable service for the people ? The minister says it is not always well to look for examples on the other side of the line. Just at this time, when we are building $25,000 post offices in little towns, giving from $1,000 to $3,000 of a revenue, the minister does not want us to go to the United States for an example. I notice the Postmaster General seemed to echo the sentiment of the Minister of Public Works. If the echo were only long enough and persistent enough to reach back eight or ten years, we would hear the hon. gentleman's voice——

Sir WILLIAM MULOCK. You can hear it whenever you wish.

Mr. FOSTER—in this chamber very strongly, very vehemently, denouncing the expenditure of large sums of money in small towns for public buildings. I think if the Minister of Public Works would look into the matter as it is carried on in the United States he would find that they have an excellent postal system in small towns and villages, where they use rented buildings. They

give a certain amount as a salary to the postmaster, he finds his place, and finds accommodation, and the people never think of asking the government to erect public buildings in little towns and villages. The Minister of Public Works says he don't want to scrimp. No one asks him to scrimp, but there is such a thing as looking to the source from which the money comes. That source is the hard working men all over this country, many of whom have all they can do to make both ends meet. They have to pay their taxes, and their taxes form a fund into which the hon. gentleman and his colleagues dip. This kind of expenditure is the least valuable that we can make. If you build a railway with public money there is a growing value that returns to the people. They get their goods carried and themselves carried, business is developed, and if you help trade and commerce by subventions, it all tends to growth and development. But a public building in a little town, though it may be nice as a monument, does not bring a revenue, it does not cause any development. It is a nice thing to look upon sometimes, if it is well built, but it does not fructify anything, it does not add anything to the development of the country. You can easily spend a million dollars in that kind of fixed expenditure, but you would much better take the million dollars and put it into what you might call development expenditure. Are we to look upon this as a party measure or as one in the country's interests? If we look upon it in the country's interest, neither of these votes would be in the estimates to-night. But the party is bound to stand by the minister, and to say that the expenditure is good. But the time is coming, our expenditures are increasing so much, that we ought to call a halt upon this method of expenditure. I do not think it is economical; I do not think it is in the interest of the country. What is the rule that the hon. gentleman takes ? If he gives to his friend who represents Guysborough an expensive public building for a small and somewhat thriving fishing town how can he avoid in any fair way of administration giving it to every other town unless he gives simply on the line of distributing it as a part of the party spoils ? My hon. friend may hark back to previous years. Let previous years take care of themselves as far as I am concerned. He can get up and in answer to me he can call up the shades of the past if he pleases, but it is for the present and for the future that we are here and now in the future I am opposed to that kind of expenditure.

Mr. HYMAN. If my hon. friend the Postmaster General (Sir William Mulock) and the House would say that for the future there shall be no expenditure on public buildings, but that in all cases buildings for public purposes shall be rented I have not the least doubt of the possibility of a certain amount of money being saved to the country. The hon. gentleman (Mr. Foster) takes exception to the erection of these buildings and he says that the time has come to stop expenditures of this kind. The hon. gentleman was in power here for a number of years. He had the honour of being a minister of the Crown and of holding one of the most important positions as Minister of Finance, and I have just as much right to ask him why the time did not come then when expenditures of this class should be stopped. There is no doubt that this class of expenditure was not inaugurated by this government; it was inaugurated by the previous government, it was carried out by the previous government and if we have erred in this respect it is because we are following in the footsteps of our predecessors in office.

Mr. COCHRANE. You said it was wrong.

Mr. HYMAN. If we said it was wrong you say it is wrong now so that we are on an equal footing.

Mr. COCHRANE. You promised that if you got in you would remedy it.

Mr. HYMAN. If we are to look at this matter simply and solely from the sordid dollars and cents point of view I do not think that expenditures of this character can be completely justified. I am not prepared to say that the time has come when we should simply call a halt and stop entirely the erection of these public buildings. There are a great many counties in which there are no public expenditures of any kind. There are shire towns in which it is only fair and right that we should have a public building without looking at it entirely from the sordid standpoint of dollars and cents. Without any desire to bring up any particular cases in which the old government may have erred in regard to these expenditures, I can only say that in this we are following the precedent which was set up by our predecessors. The hon. gentleman says that these expenditures are entirely political. Let us assume for the moment that the expenditures of the old government were entirely political—and I presume the argument would apply in that case as well as in this —what would be the effect? The effect would be that that party having been in power for a number of years they would have public buildings erected in constituencies represented by the party. Is it fair to say that if another party comes into power it shall not erect buildings in the counties which have been overlooked by the previous government? I remember very well that in 1891 a discussion, possibly like the present discussion, took place in which the hon. gentleman who is now the Minister of Public Works very strongly pleaded on behalf of the town of Woodstock. He pointed out that expenditures were being made in very much smaller places, but that no expenditure had ever been made in Wood-

stock although it was a town of 10,000 inhabitants. I think that neglect was afterwards corrected and that an expenditure was made by the hon. gentleman's government. If you look upon these matters purely and simply from the dollars and cents standpoint I do not think that there can be any doubt that the public business can be carried on in a rented building as well as in an office which is built for the purpose. But, that is not entirely the policy of the government. The policy of the government is, when they have public money, when they feel that they can afford to make an expenditure on a public building to erect a public building, to endeavour to keep the amount of the expenditure as low as possible, but to erect a building in accordance with what the Department of Public Works should erect.

Mr. W. F. MACLEAN. I am not going to indulge in anything like the pot calling the kettle black, and I am not going to say the province of Nova Scotia is not entitled to her share of the expenditure, but I would like to see that expenditure devoted to some valuable purpose on the lines set out by my hon. friend from North Toronto (Mr. Foster). Take this Canso vote; $800, is four per cent on the money, $800 additional is the cost of caretaking and maintenance, and $500 is the sinking fund, making $2,100 a year put on the country where $110 now meets everything. I quite agree with what my hon. friend said that this money should be spent efficiently no matter what we have done in the past. Look at the good that would be accomplished by the establishment of a technical school in a little town like Canso. If we gave $2,000 to every county in Nova Scotia to improve the fisheries, to extend railways, or to be expended in some other progressive way the people would get a return for the money. But all they get from this expenditure are brick walls to look at. In the erection of a public building there is no advancement in the commercial or educational life of the people. There is a blank brick wall which is practically of no use except that it is an ornament. We are not here to build ornaments, we are here to advance the interests of the people and we are here as the trustees of the people to administer their estate. The money is theirs, it is not ours. The hon. Postmaster General is one whom everybody respects as an administrator of trust funds and I have heard him speak at times very learnedly on that subject. We are here as the administrators of trust funds which are to be administered in the interest of the people who own the money which is not to be squandered. If it has been the practice in the past to justify expenditures of this kind it is high time that practice ceased no matter which party is to blame. Let us administer this money in a way in which it will be profitable and in which it will convey some benefit to the public. I would far sooner see this money put into railways, public schools, the promotion of the fisheries or the encouragement of agriculture and things of that kind than see it expended in this way. It would end in the development and progress of the country and the people would learn to appreciate the act of any government that would spend money in that way. I am not taking objection to Nova Scotia getting her share of the money but I do take objection to the doctrine being set up that when good things are going this or that town is to have her share of the good things because some other town had it in the past and that because one party is in power, now is the time to reward the constituencies friendly to the government. I do not subscribe to those doctrines at all. I repudiate them and I am sorry to hear them enunciated in this House. If the hon. Acting Minister of Public Works would pay a visit to the United States or some other countries and see if there is not some rule that governs in cases of this kind I think the result would prove advantageous to himself and to the country. I have a pretty fair idea of what obtains in the United States. There is a rule—it is not a very strong rule—but there is a general rule that a certain amount will be spent in towns of a certain population and with a certain revenue and in that way those who have these matters in charge can keep a check on the expenditures. But now, we have sent the idea abroad that an expenditure will be made in any town that is friendly to the government——

Mr. HYMAN. No.

Mr. W. F. MACLEAN. That is pretty near what we have heard here to-night; that is that any town of 1,500 inhabitants that is friendly to the government can have $25,000 spent on a public building. That is not good policy. There might be a reason for a public building of this kind if we had public ownership of telephones and telegraphs and if the express business were conducted in connection with the post office. But, we have not got that at the present time and that being the case I say that this expenditure cannot be justified. I oppose it, not because Nova Scotia is not entitled to an expenditure of public money, but because it is not being expended efficiently and it is not our duty as trustees to squander the public money as it has been squandered in these votes.

Mr. SPROULE. I entertain the same opinion to-day in regard to expenditures on buildings of this character as that which I have entertained for many years, and I hold that no government has any business to expend money on that principle. We have post offices all over the country and have a somewhat extensive experience as to the cost. Take towns and villages with the

same population and the same amount of business, and you will find that in every instance where we rent the building it costs the country very much less, in most cases not one-fourth of the money that it costs to erect our own buildings. Then we put up buildings in some small places while in large towns never a dollar has been spent for public buildings, and to-day we have only rented buildings in them. Take, if you like, the county of Grey, which I represent. It is one of the largest counties in Ontario, with a population of about 75,000. If you take Meaford in that county with a revenue of $3,807, which shows that it is a live, prosperous town, you will find that not a dollar has been spent for a post office, but people there have not clamoured for the expenditure because there is a good post-office building built by a private individual and all we pay for that is $160 a year as an allowance for rent, fuel and light. $160 a year covers all the expense of a building for a place which is as large or larger than Antigonish or the place where we now propose to put up a post office. What justification can there be for incurring an annual outlay of over $1,200 a year to give the same accommodation to the public which they can receive for $160. It is a very bad business principle. Then take Owen Sound, one of the best towns in Ontario, a town of 10,000 population, but up to the present there has not been a dollar spent for a post office. They have a building rented there at a very much less cost than the interest in the investment and the cost of caring for a government building. Not many years ago when the Minister of Customs (Mr. Paterson) was running up there the Postmaster General visited that town and picked out a very nice site——

Sir WILLIAM MULOCK. I never did anything of the kind.

Mr. SPROULE—and gave the people to understand——

Sir WILLIAM MULOCK. I never did anything of the kind.

Mr. SPROULE—all I can say is this that I will give my authority for the statement, Mr. Hopkins, with whom I have been very well acquainted for many years. Mr. Hopkins with the Postmaster General walked into the Patterson house in Owen Sound. The Postmaster General walked upstairs. I asked Mr. Hopkins what he was doing, and he said picking out a site for a post-office and he picked out a very good one.

Sir WILLIAM MULOCK. It is quite untrue.

Mr. SPROULE. And he gave the people to understand——

Sir WILLIAM MULOCK. I never did.

Mr. SPROULE—that if they supported the government in this election what a fine thing it would be for them——

Sir WILLIAM MULOCK. I never did. If the hon. gentleman says that I gave the people to understand that, I give the most emphatic possible contradiction to his statement. I can quite recall being pestered by people wanting to sell lots for post office purposes and to all of them I declined to say anything except this : Owen Sound needs other things more than a post office; it requires the developing of its harbour. That is what I have told the people in many instances.

Mr. FOSTER. What does Canso require ?

Sir WILLIAM MULOCK. I am speaking of Owen Sound.

Mr. COCHRANE. What did you go upstairs for ?

Sir WILLIAM MULOCK. What I have said in Owen Sound is : Owen Sound has magnificent harbour facilities and I think that Owen Sound requires the improvement of its harbour to enable it to make money. That would be better for Owen Sound than to spend money on public buildings that otherwise might very properly be erected. I took this argument and I leave it to my hon. friend if that is not correct. No matter what must be the claims, no matter how justifiable it would be to expend for post office building and harbour works, after all there is a limit to what the country will pay to any particular place, and I have pointed out to the people, not of Owen Sound alone, but of other places, when they have discussed with me from time to time proposed expenditures to public buildings, I have asked them : is there not some other way, is there not something more urgent that would be a more useful expenditure than would the erection of public buildings? My recommendation to them is to see that the application is first made in regard to public works that are of greater urgency and likely to be more advantageous. I have given that advice constantly to people from places like Owen Sound. I did so in Meaford ; my hon. friend refers to Meaford. It is not many weeks since some gentlemen from Meaford proposed to me, thinking I had something to do with the recommendations for the building of post offices, that I should, in the interest of Meaford, recommend the appropriation of some money for a public building. I said : I think that whatever money the country can afford to give for Meaford would be more wisely expended to-day in developing your harbour. We have commenced to develop Meaford harbour and my hon. friend will justify, I am sure, all we have done there.

Mr. SPROULE. Yes.

Sir WILLIAM MULOCK. And will justify more. It has a bright future if we enable it to trade outside. That is the kind of argument I have advanced at Meaford and at other places. There are some places

not so situated geographically where wharfs, &c., can be of service, inland towns or places that are not in need of harbour facilities; these places may press for expenditure on public buildings, but we have had to contend with the effect of a bad example. The public have been falsely educated. For example, I have before me a paper and I will show you—but I did not intend to cut in on the hon. member for East Grey (Mr. Sproule) and I must apologize. I will later on show where we have been left by the bad example I spoke of.

Mr. COCHRANE. What did you go upstairs for ?

Mr. SPROULE. I only hope the Postmaster General will be fortified with sufficient strength to withstand this bad example and adopt better principles. I would like to call the attention of the Minister of Public Works (Mr. Hyman) to what a splendid rebuke this is to his policy in regard to post offices, and the principle is a good one, if they only lived up to it. I will say with regard to the Postmaster General that he must have been very unfortunate in the choice of his language in explaining the situation in Owen Sound, for my information was that he went down and showed what a splendid place they had for a dry dock, how much they required for harbours, how badly they needed a post office, and what a fine thing it would be to have all their workmen employed. I had been speaking there and I said that no matter what candidate was returned the government would have to do justice, and then along came Mr. Hardy and said : Oh yes, you will get justice, but there is a difference between cold justice and hot justice. Hot justice was an active commerce, employment for the labourers, expenditure of money in the town, fine buildings going up, improvements to the harbour, and expansion of commerce. This was the warm justice they were going to get in contradistinction to the cold justice which would be meted out if they sent an opponent of the government. The Postmaster General being there two different parties were vying with each other in the effort to sell a site and one of them, who had always been a Conservative, told me in the hotel that but for the fact that he had reasonable hopes of being able to sell a site to the Postmaster General he would support our candidate, but he said : You know I am hard up and anxious to sell my lot, therefore I cannot afford to oppose them. He was unfortunate in his language, because that is the impression he left.

Sir WILLIAM MULOCK. The hon. gentleman has no information except hearsay. Mr. Hopkins he says, told him. I never knew a member of this House more given to founding statements on hearsay than the hon. member. He begins a statement by saying 'I have heard,' 'rumour says,' 'a man told me,' &c. He is a regular Sarey Gamp with a ridiculous Mrs. Harris. He is eternally producing some imaginary witness to bolster up some absurd argument. I never suggested to any one that we would buy or build a post office in Owen Sound ; I never gave a promise during or before or after an election or said that I was favourable or that the government was favourable to the building of a post office. I ask the hon. gentleman to desist from charging me with doing a thing when I did not do it.

Mr. SPROULE. I think it is quite gratuitous to intimate that I am in the habit of basing statements on hearsay. I say that the evidence that I submit is as good, as reliable and as honest as the evidence that he submits. I have given the name of a respectable gentleman in Owen Sound who has been there for 30 years or more.

Sir WILLIAM MULOCK. It is about the only time you ever gave the name.

Mr. SPROULE. He walked in in my presence along with the Postmaster General. I happened to be in the hotel because I was staying there. Is that not good evidence ?

Sir WILLIAM MULOCK. No.

Mr. SPROULE. I submit it is. Let the Postmaster General go into Owen Sound and say that the evidence of Hopkins is not reliable. I can tell him one thing, that he would not get a very courteous reply. If the Owen Sound 'Advertiser,' which supports the hon. gentleman, does not bear out in the main what I say with regard to the impressions left on the people's mind, I will admit that I was entirely wrong in my impression. But I believe I was justified in every particular. With regard to Meaford, I said nothing. About the wisdom of spending money on harbours instead of post offices, I agree with the hon. Postmaster General. The expenditure on Meaford harbour was an admirable expenditure and served a good purpose. If the hon. gentleman proposed to-morrow to spend money for a post office in Meaford, I do not know that I would justify it. Meaford has now a good post office which costs the country only $160 a year, whereas, it would be impossible to have a good building put up there at a less cost than double or treble that amount. Take the village of Markdale, where I live. It has as large a revenue or larger than this place, but there is no post office there, and there has never been any application for one. Take Chesley, Durham, Shelbourne, Dundalk, any one of them as large as this place ; but no person pretends to say that the government would be justified in incurring an expenditure of $15,000 or $20,000 to put up a public building in each of these

places, because the public are now provided with accommodation for less cost than they would be if the buildings were put up. What I complain of is the want of business principles in the spending of the public money, the wastefulness of paying $1,000 or $1,200 a year for a service that could be got quite as well for $150 or $200. When the Postmaster General and his friends were on this side of the House, I took the same ground. I said, as a supporter of the government at that time, that whenever the government could not get a suitable building for a moderate figure, they might be justified in erecting a building, but otherwise they would not.

Sir WILFRID LAURIER. But you always supported their votes.

Mr. SPROULE. Not always.

Sir WILLIAM MULOCK. Yes, always.

Mr. SPROULE. I ought to know what I did quite as well as the Postmaster General.

Sir WILLIAM MULOCK. Did the hon. gentleman ever vote against a grant of the late government for a post office building ?

Mr. SPROULE. I am not in the witness box now.

Sir WILLIAM MULOCK. His principles are his own and his vote belongs to his party.

Mr. SPROULE. I said, and I repeat, that when I was on that side of the House supporting the government, I gave voice to the same sentiments that I do to-day. I say now, as I said then, that that is a sound principle, and the government that departs from that principle is not a good business government, and is not using wisely and economically the trust funds of the people.

Mr. SINCLAIR. The main argument used by some of the hon. gentlemen who have addressed the committee is that we should rent buildings for custom houses or post offices. I wish to point out that in Canso we are absolutely without decent facilities at the present time. The occasion of applying for this building was a fire, in which the existing custom house was burned. The business is now carried on in a dwelling house, a very inconvenient place. There is no building in the town at all suitable that could be secured by the government. The post office is in a small wooden building, something like 8 by 10 feet. It is so small that the people have to stand outside in the snow on stormy nights while the mail is being sorted, and there is no place to shelter them while the mail is being delivered. This small building was erected by the postmaster because there was no other suitable building. I may also point out that while the revenue from the custom house is small, a large business is carried on in connection with it. Canso is the principal fishing station on the eastern coast of Nova Scotia. It is now the headquarters of the banking fleet, and a large number of vessels call there year after year. I find on looking at the trade and navigation returns that the number of vessels engaged in the coasting trade which called at Canso last year was 802, with a tonnage of 41,349 tons, and having crews numbering 4,988 ; the number of steamers was 607, with a tonnage of 63,317 tons, and crews numbering 6,249 ; the number of vessels outward bound for sea was 466, with a tonnage of 41,066 and crews numbering 6,909 ; making altogether 1,875 vessels calling at that port during the last year, with a tonnage of 145,732 tons, and crews numbering 18,227 men ; showing the committee that there is a large business done in the custom house there, although the revenue is small.

Mr. FOSTER. How does the hon. gentleman account for that ?

Mr. SINCLAIR. It is the duty of the customs officer to enter these ships and report them.

Mr. FOSTER. These are fishing vessels.

Mr. SINCLAIR. Fishing vessels, from which there is no revenue at all. Canso is not an importing point. A large quantity of goods are used there, but they are imported chiefly from Halifax. Consequently, the amount of duties paid there is small, but the officer has a great deal of work, which he is required to do under the Merchants Shipping Act. Canso is a growing town. Some complaint was made in connection with the last item that we were voting money for a town that was decreasing in population. By the census, I find that the popluation of Canso in 1871 was 1,090, in 1881 1,411, in 1891, 1,824, and in 1901, 2,367, an increase of 35 per cent during the last ten years. The number of money orders issued there last year was 2,583, and the amount of money transmitted $29,750.98. Besides being the headquarters of the fishing industry in Nova Scotia, Canso is a cable station. Eight or ten cables are landed there. It has two large stations, one under the management of the Western Union, the other under the management of the Commercial Cable Company. The committee will therefore see that it is absolutely necessary to provide this accommodation at Canso, owing to the fact that there is no building that could be rented at the preseit time.

Glace Bay public bullding, $15,000.

Mr. FOSTER. What is the population of Glace Bay ?

Mr. HYMAN. Over 11,000. The town is growing very fast.

Mr. FOSTER. What are the revenues ?

Mr. HYMAN. The postal revenue is $5,443.88 and the customs revenue $46,650.72.

Mr. FOSTER. What is it proposed to spend there ?

Mr. HYMAN. $39,900. The building is to cost about $30,000, heating $2,300, fittings $3,700, and contingencies. The site has not yet been purchased, but negotiations have been started with regard to some sites.

Mr. FOSTER. Started before the election ?

Mr. HYMAN. No, I think within the last month.

Mr. FOSTER. Have not the officers been there ?

Mr. HYMAN. I understand that an officer was sent there during the last week. There is no report from him yet.

Mr. BARKER. What has the $3,000 already spent been spent for ?

Mr. HYMAN. There has been no expenditure of any kind. We have to June 30 to spend the money voted last year.

Mr. BARKER. What do you contemplate spending $3,000 for—buying the land?

Mr. HYMAN. It must be remembered that these estimates are made very early in the year, and it is always a question just what amount we are able to spend within the fiscal year to carry out the orders of the House. The officer of the department has only been there within the last ten days, and he could not tell within a dollar how much we shall spend of the vote of last year.

Mr. BARKER. The minister tells us that he does not know how the $3,000 is to be spent before the 1st July ?

Mr. HYMAN. I do not.

Mr. BARKER. Surely, the hon. gentleman must have had some idea before he asked for a revote of $7,000 on $10,000 ?

Mr. HYMAN. As I tried to explain, these estimates are made up early in the year. They were started last December, and so the officers of the department had to look ahead six months. They put down the sum of $3,000 as being the amount of the probable expenditure up to the 30th June next.

Mr. FOSTER. Has the minister received any report from the officer sent down to look after the site ?

Mr. HYMAN. No.

Mr. FOSTER. How much is it supposed that the site will cost ?

Mr. HYMAN. It depends upon the location. I have no report before me. I have some knowledge of the town, and I am afraid the site will be somewhat expensive.

Mr. FOSTER. I do not see quite how the hon. gentleman can make his estimate unless he has some idea of what he will require for the site.

Mr. HYMAN. The hon. gentleman (Mr. Foster) will see that we are asking only $15,000. I have given the amount it is expected to spend for the building. Without question we shall have to ask for a further vote, as the whole amount will not be expended in the fiscal year for which this is being asked. When I ask for a further vote, I shall have more particulars as to the site.

Mr. FOSTER. Is this a general public building ?

Mr. HYMAN. Yes.

Mr. FOSTER. For customs and post office ?

Mr. HYMAN. Yes.

Mr. FOSTER. This is an expenditure which, I think, the minister himself will feel, he has no difficulty in defending. Here is a town of 10,000 or 11,000 people, a growing town; and the hon. gentleman asks for $39,000 for a public building. I should think that there could be no very great objection to that. But how to justify $25,000 in the case of one of the towns we have been considering as against $39,000 in this case I cannot see. I want to impress upon the minister, if I can, the general policy, already largely carried out in this country, of renting buildings for the public service in the smaller towns and so keeping the expenditure within reasonable bounds.

Mr. HYMAN. I have already explained that, as between the buildings proper in these two places there is a difference of 100 per cent. But, when you come to the heating, lighting and fittings, there is not the same percentage in difference in cost. I have gone somewhat carefully into the character of the buildings we are providing for the different places, and I find that there is not so much difference in these accessories between a building costing $16,000 and a building costing $30,000.

Public buildings—Nova Scotia—Halifax Dominion building—improvements, repairs, &c., $2,000.

Mr. FOSTER. What is to be done there ?

Mr. HYMAN. General repairs. The department is at present erecting a new building at Halifax, but it is necessary to make some expenditure on the old one. It is intended to use the new building for customs house purposes, and to use this building for a post office alone. I think the hon. member for Carleton (Mr. R. L. Borden) is aware of the circumstances. The post office part of the old building has outlived its usefulness, and it is proposed to renew the whole building and use it for post office purposes only.

Halifax immigrant building—additional story over the one story portion, &c., $11,000.

Mr. FOSTER. What is to be done with that ?

Mr. HYMAN. That is explained by the vote itself—it is an addition story over part of the building. There is a contract for the work amounting to $15,000. The estimate for heating is $2,000 ; lighting, $1,500 ; furniture, $1,500 and fittings, $2,000—total $22,000. The amount we have at our disposal now is $11,000 and this is to complete the building.

Halifax immigrant building—detention building, $24,000.

Mr. R. L. BORDEN. Where is that being constructed ?

Mr. HYMAN. We are now looking for a site.

Mr. R. L. BORDEN. It was voted last year, but, apparently, no part of the money was spent.

Mr. HYMAN. The whole question in regard to this has been a question of site.

Halifax new public building, $112,000.

Mr. HYMAN. This is to carry on the work on the new public building in Halifax which has been under construction since 1902.

Mr. BARKER. What is the object of this building, and what is the ultimate cost to be ? So far the figures seem to be $187,000.

Mr. HYMAN. The object of this building is for customs purposes, and to furnish offices for the engineers of the Public Works Department. The contract for the building was $250,000 It is proposed to spend on fittings and furniture. $12,000 ; engine and boilers, $3,000 ; heating boilers, $8,000 ; electric wiring, &c., $4,000 ; elevator, $7,000 ; incidentals, &c., $6,000.

Mr. R. L. BORDEN. How many stories will this building have ?

Mr. HYMAN. Four stories besides the basement.

Mr. R. L. BORDEN. What is to be the size of the building ?

Mr. HYMAN. The lot is 106 feet by 86 feet, and the building covers the whole lot.

Mr. R. L. BORDEN. Within what time was it to be completed, under the contract?

Mr. HYMAN. It should have been completed last fall. I understand that the main reason given by the contractor—I have had some communications with the contractor, trying to hurry him up—was the difficulty in procuring stone from the quarry; that, and the difficulty of getting enough stonecutters at Halifax, are the reasons given by the contractor for the non completion of the building at the time specified.

Mr. R. L. BORDEN. I understood there was some difficulty raised about procuring skilled workmen, and the workingmen of Halifax were not very much astonished to find that that excuse had been given. Some action was taken on the subject. Perhaps the hon. gentleman would have no objection to bringing down the correspondence with the contractor. I would not consider the building more than half finished. I think there are two stories and part of the third story up.

Mr. HYMAN. I have seen a photograph of the building, I think the third story is up and part of the fourth.

Mr. R. L. BORDEN. Has the hon. gentleman any idea when the building will be completed? It has been going on for a year and a half now, and at the same rate it will take a year and a half longer.

Mr. HYMAN. I think it would take at least a year from the present time to complete it. There is another half story and the roof to be put on. I understand the work will go forward much faster in future.

Mr. BARKER. I understand this building was to have been completed according to contract five months ago. Will the minister tell us whether anything has occurred since the contract was entered into to postpone the completion of the building? It ought to have been finished in September last. What peculiar circumstances are there that make it improbable that the building will not be completed for more than a year to come?

Mr. HYMAN. There has been nothing between the contractor and the Public Works Department since the contract was made, which can be urged as an excuse for the non-completion of the building. I gave the reasons which the contractor has offered, namely, the difficulty with regard to procuring stone. I may say that the contractor, before the building was commenced or a short time after, made application to the department for the substitution of one stone for another, and the department did not accede to his request. The contractor has always said that the main difficulty was to procure the stone fast enough.

Mr. BARKER. Has that question of the kind of stone been definitely settled, and is the government to stand by the original contract?

Mr. HYMAN. Absolutely.

Mr. R. L. BORDEN. I would like to have a copy of the contract and of the correspondence with the contractor, if the hon. gentleman has no objection.

Mr. HYMAN. Not the slightest. Some of the statements I have made with regard to the stone may not appear in the correspondence. I was in Halifax myself last year, and strongly urged upon the contractor the necessity of pushing forward

the building, and he made the statement to me personally about the stone.

Mr. R. L. BORDEN. I would like an opportunity of discussing this after the documents are brought down, at the same time I do not want to hold up the item.

Mr. HYMAN. Certainly, I shall be glad at any time to discuss this item when the other estimates are going through.

Mr. R. L. BORDEN. I think this is a case in which the department should urge expedition upon the contractor and enforce it by every possible means. The Postmaster General himself spoke the other day in strong terms of the miserable, wretched accommodation in the city of Halifax for the postmaster and his staff. He did not use language any too strong. There was a good deal of delay in letting the contract. It dragged on for about two years after the item first appeared, and now we have a building only three-quarters finished, that should have been completed five or six months ago. The circumstances of the case rendered it absolutely necessary that that building should be completed within the time fixed, and it does not seem to me that what has been stated by the minister affords any good excuse. The contractor knew the kind of stone that was required for the building, and he should have made provision for it. He simply offered as an excuse, so far as I can gather, that he had some difficulty in getting the stone. Is there no penalty in the contract to compel the contractor to be a little more expeditious? It is for that purpose I would like to see a copy of the contract. The minister may be able to tell me now whether there were the usual provisions in the contract for some penalty, or some recourse against the contractor in case he does not complete the building within the time specified.

Mr. HYMAN. The contract is the usual contract made by the department with contractors. There is a deposit of ten per cent, or thereabouts of the amount which is in the hands of the government, and it is in the power of the government to enforce the contract by making any such deduction from the deposit that the government might feel proper to make. But it is rather a harsh measure to take with a contractor. The government have not always carried that out. I do not know myself of any place where that forfeiture has been carried out by the government against a private individual. The contractor has given as his reason that he is unable to get the stone.

Mr. R. L. BORDEN. The forfeiture is sometimes enforced. I know a case in which the imperial government employed a builder at Halifax to perform a certain work. They asked him if he could do it by a certain date, and he said he could do it before that date. He said: Name your own date, and they did so. He was about two months over the time specified, and they charged him £6 or £10 a day for every day that he exceeded. The government were put to expense and inconvenience by the delay. I am not suggesting that the government should act in such a way with this contractor. There may have been difficulties which would make it inadequate for the government to do so, although they may have the legal right to exact from him the penalty. I would like to see him treated with absolute fairness; at the same time I think the powers which the government have in that regard might be so placed before the contractor as to compel him to get along with his work more rapidly. Is any work being done at present?

Mr. HYMAN. I understand from the officers of the department that the material is being collected, and that certain stone cutting is going on. I do not think there is any actual laying of stone being done at the present time.

Mr. R. L. BORDEN. I am bound to say that I did not see any great evidence of haste on the part of the contractor when I observed the work. However, I would like to see the correspondence before being able to judge definitely, but I would be surprised if any satisfactory reason has been made out by the contractor for the great delay.

Mr. HYMAN. The documents will be produced.

Inverness public building, $15,000.

Mr. GANONG. Is this an incorporated town?

Mr. McLENNAN. It was incorporated last year.

Mr. GANONG. It is not so stated in the census.

Mr. McLENNAN. A municipal census taken last year shows a population of some 3,000. The town is growing very rapidly, it has in fact much exceeded the population of the shire town of the county of Inverness, or any other of the growing towns in that county. So rapidly indeed has been its growth that in the year 1901 when the last census was taken, the population did not exceed 100, whereas, owing to the development of the coal mines by the Inverness Coal and Railway Company, the population of that locality has increased to 3,000 last year, when a census was taken for the purpose of incorporation. The Postmaster General's return for 1900 or 1901 will show that the revenue from the post office for either of those years would be something like $80 or $85, whereas the postal revenue is now $1,255. The amount of money orders issued was $11,000 and odd during the past year. This abundantly shows the rapid growth of the town even

without reference to census. As an illustration of the rapid development that is going on in mining in that county, I may state that there are two other towns in it which are rapidly developing on similar lines but not to the same extent as in this instance. There were coal sales from this mine during the past year amounting to 200,000 tons, securing to the government of Nova Scotia $20,000 of revenue and no doubt a proportionate amount to this government The customs revenue at that port will not show much of the amount collected because the goods consumed there by the miners, who are almost absolutely a consuming population, are entered at Halifax and at Montreal. At the same time the customs receipts there would exceed those taken at Canso, and other points where similar buildings are sought. I may say also that although the county of Inverness in population and resources in every particular is one of the most important counties in Nova Scotia, strange to say, it is the only county in that province to-day without a public building within its confines—not one. Its population, according to the last census, is 25,000 in round numbers and from the description I gave of the progress of these mining towns it would not at all be exaggerating to estimate the population of the county to-day at 30,000 ; yet, as I have indicated there is not a public building within its confines.

Mr. FOSTER. What is the customs revenue there ?

Mr. McLENNAN. $1,950. It is an outport of Port Hood.

Mr. GANONG. What is the total cost of this building, land and everything complete?

Mr. HYMAN. There has been no site obtained for this building as yet nor have there been any negotiations in regard to the matter of a site. I am in hopes of putting up a building of the class 'C,' the estimated cost of which is $9,500 ; heating, $1,128 ; fittings, $1,485 ; boxes, $288, making, with contingencies, $14,500.

Mr. GANONG. It is quite evident that this building is not to be built on the basis of revenue, for I question if you can find another town with the population claimed by he hon. gentleman (Mr. McLennan) with a postal revenue as small as that which he gave.

Mr. FOSTER. That $15,000 does not include the site ?

Mr. HYMAN. No.

Mr. McLENNAN. In regard to the postal revenue I might further explain that the postal accommodation in that town is so very poor that the company and the bank agent there do their postal business in a great measure with the postal car, sending their mail by train direct without any reference to the post office at all, because, there is only a wretched building. There was great difficulty in securing a building at all for the post office for the simple reason that rents are so high in the town that no person would rent the government a building for so low a rent as would be paid for postal accommodation.

Mr. FOWLER. I would like to ask the hon. gentleman if these gentlemen buy their stamps from the postal car too ?

Mr. HYMAN. I am not able to give the hon. gentleman that information.

Mr. McLENNAN. There is nothing to prevent these gentlemen from buying postage stamps where they please.

Mr. FOSTER. They do not come up to Ottawa to get them do they ?

Mr. McLENNAN. No, but they go to other offices.

Mr. FOWLER. How far would they go to some other office to get them ?

Mr. McLENNAN. I know that the bank particularly buys its stamps at other post offices.

Mr. FOWLER. Would the hon. gentleman say that this is because of the poor accommodation at this post office ? Surely they have room enough in the post office to keep the stamps. Surely there is enough room for a person patronizing the office to stand in out of the wet while he is buying postage stamps.

Mr. McLENNAN. The accommodation is so very poor indeed that these parties scarcely care to do business with the office.

Mr. FOWLER. I would suggest that in fine weather they might be able to buy stamps there.

Mr. A. MARTIN. I would like to know whether the population which the hon. gentleman refers to of 2,800 is the population of the whole country, and if there are any other post offices in the county besides this ?

Mr. HYMAN. I cannot give the hon. gentleman any information in regard to other post offices, but there is no post office building owned by the government in the county.

Mr. A. MARTIN. What is the population of the village where this post office is located ?

Mr. HYMAN. The population is given at 3,000.

Mr. SAM. HUGHES. Would it not be worth while for the hon. minister to consider whether a $14,000 post office would meet the wants of this growing town ? If the town keeps on growing as the hon. member for Inverness (Mr. McLennan) says,

in two or three years it will perhaps need a $30,000 building.

Mr. McLENNAN. There is no doubt of it. I will come up here again for more.

Shelburne public building, $15,000.

Mr. HYMAN. This vote is asked for the purpose of providing a public building at Shelburne. There has been no site purchased up to this moment. The postal revenue is $1,552 and the customs revenue, which I note has doubled in the last year, is $1,227.

Mr. FOSTER. What is the population of Shelburne ?

Mr. HYMAN. In the last census it is given as 1,445.

Mr. FOSTER. What is it supposed this building is going to cost ?

Mr. BARR. It is very hard to understand the principle which hon. gentlemen opposite pursue. We find that in Shelburne, N.S., where the population is 1,445, the government will probably spend $15,000 while in Shelburne, Ont., which is about the same size there is no building at all.

Mr. BERGERON. And the postmaster dismissed.

Mr. BARR. And the postmaster dismissed. It must be because of the large support that hon. gentlemen have from Nova Scotia and which they do not seem to have in Ontario. I ask on what principle of justice are we spending these large sums of money in one province and in one part of one province when we have a village equally as large, a country surrounding very much superior and a larger post office revenue, and yet we hear no word of any expenditure in connection with a building in that place. There should be some principle of justice and fairness laid down in connection with the expenditure of public money in the different provinces. In Ontario to-day it is very true that there is a large majority against hon. gentlemen opposite, and yet we find from the returns that the money spent in Ontario according to population is much smaller in amount than in other provinces that give a large support to hon. gentlemen opposite. It does seem to me that the principle upon which they act is that to the victors belong the spoils. It does seem to me that this is a pernicious principle. It is one which I admit hon. gentlemen contended against very strongly, one on which they grew eloquent on every occasion when questions of this kind came up. It seems to me that they have forgotten, in these short years that they have been in power, all the principles they professed and the course which they pointed out should be followed, and would be followed as they promised, if they attained the reins of power. Now we find that they have outheroded Herod, that they have gone far beyond any previous government along these lines. We must draw some line or this system will become a game of grab and the county that gets the greatest pull upon the government will receive the greatest amount of money.

Sir WILLIAM MULOCK. I think my hon. friend will find that he is in error in thinking that Ontario has been slighted, in fact or for any such reason as he has assigned. It is a mere accident that money may be distributed among the provinces so that one receives more than another, but it certainly is not based on political grounds. If the hon. gentleman will turn to page 47 he will find that the items to be voted for Ontario for this year amount to $1,094,200—

Mr. SAM. HUGHES. For post offices ?

Sir WILLIAM MULOCK. Under the head of public buildings—whilst the appropriation for Nova Scotia is $240,500. Of course Nova Scotia in population and area is much less than Ontario, but the vote to be given to Nova Scotia is not 25 per cent of the amount being voted to Ontario.

Mr. BARKER. The population is very much smaller.

Mr. GANONG. What is the total cost of this building ? You say the ground has not been acquired ?

Mr. HYMAN. The land has not been acquired. Both the customs house and post office will be placed in this building. It is estimated that the cost of the building will be in the neighbourhood of $8,500. Then it is estimated that there will be $500 for heating, $1,500 for fittings, $500 for any requisites in regard to sidewalks, fencing, &c., and then of course there is an estimate for contingencies, $1,500 making a total of $13,000 for the building.

Mr. GANONG. I notice that the population of this town is 1,445 and it has made wonderful growth. In the last ten years it has grown 145 people. In the last census the population was 1,300. It seems as if the same principle that applies to outside counties applies also to the counties represented by the ministers.

Mr. FOSTER. Where is the business done now and for the last twenty years.

Mr. HYMAN. In a rented building.

Mr. FOSTER. What is the rent ?

Mr. HYMAN. $60, for the post office and $40 for the customs.

Mr. FOSTER. $100, and you say the customs revenue is $1,227. You are building a customs house to collect that much money.

Sydney public buildings—addition to, $2,500.

Mr. HYMAN. This is a small amount of money to make provision for completing an

addition to the public building at Sydney. The original building was built some years ago

Mr. BARKER. We might take the two items for public buildings at Sydney and North Sydney Mines together.

Mr. HYMAN. They are not placed together.

Mr. BARKER. They are not very far apart. We have had about $200,000 granted last year and this, about Sydney. Nobody I think, objects to every assistance being given to Sydney, but we ought to have particulars about this expenditure.

Mr. HYMAN. Sydney of course is on one side of the harbour and Sydney Mines is entirely on the other side of the harbour. I do not know the exact number of miles but it is quite distant.

Mr. D. D. McKENZIE. They are about 22 miles apart and this amount is simply to complete the Sydney building.

Sydney Mines public building, $14,000.

Mr. FOSTER. Is this a new building ?

Mr. HYMAN. It is a new building, the contract is given, the amount of the contract being $16,750.

Mr. FOSTER. For fittings and all ?

Mr. HYMAN. That is for the contract; the estimate for heating the building is $2,000. Fittings are placed at $3,000, and incidentals, $2,500, amounting in all to about $24,000. The department are not sure whether the building will be wired or not; if it is wired we will have to add $1,000 to that.

Mr. BLAIN. How much did the site cost?

Mr. HYMAN. The site was bought some time since and cost $4,500.

Mr. FOSTER. What is the population ?

Mr. HYMAN. 3,191.

Mr. INGRAM. What is the size of the site ?

Mr. HYMAN. It is a corner lot on the corner of Main Street and Fraser Ave. There is 96 feet frontage; the lot is 45 feet wide, and 136 feet deep at one point; it is a triangular site.

Mr. SAM. HUGHES. Has the minister taken the precaution that was suggested here of having all these public buildings a certain distance from any other building ? I called attention to the fact that in the United States, government buildings are by law not to be within a certain number of feet—I think a hundred—of any other building, public or private.

Mr. HYMAN. I do not think that could be carried out in the case of small post offices. Here the site cost $4,500 and it is doubtful if the expenditure required to keep it entirely isolated would be justified. The policy of the department is wherever possible to have a corner site. In this case the custom of the department is to have a lane on either side so as to make the building as far as possible a detached building.

Mr. SAM HUGHES. I do not know the value of land there and whether $4,500 was a high expenditure or not, but I will say there have been instances, both under the present and past administrations, when land was paid for at too high a price, and if it cost three times that amount, I am satisfied that the government would be justified in having fine public buildings kept up, and would be even justified in taking them off the main street of a town and putting them in the nearest square with a park where they would be safe from fire from adjoining buildings, and would be more attractive. I hope the minister will give this serious consideration. The public will stand $2,000 more for this building if we must have these buildings in order to have proper surroundings for the public building.

Mr. HYMAN. Of course while the department has the right to choose a site, in most instances they have to consult the convenience of the city or town in which the buildings are being erected. I can quite conceive myself that if we were to look at it solely from a public works standpoint, what he hon. gentleman suggestsi might be carried out, but it has always been the desire and the usage of the department to endeavour to meet the wishes of the city or town in which public buildings may be erected.

Mr. SAM. HUGHES. I suppose that was the case in reference to the Sherbrooke drill hall ?

Mr. FOSTER. What is the revenue there?

Mr. HYMAN. The post office revenue is $2,450, and the customs last year was only $85.

Mr. D. D McKENZIE. There is no customs house at Sydney Mines; it is an outport of North Sydney. The post office is a rented building.

Mr. FOSTER. How much is the rent ?

Mr. D. D. McKENZIE. I see by the estimates that the postmaster is allowed $65 for rent and fuel, but of course it is notorious that the accommodation is not satisfactory and that there has been an urgent cry for increased accommodation for some time. The hon. minister gave the population of the town of Sydney Mines as 3,000, but I may say that it is one of the boom towns of he province of Nova Scotia and that its population to-day is easily over 5,000. The amount of money orders handled there last year was $64,000, which shows that there was considerable business done.

It is the home of the Nova Scotia Steel and Coal Co. The coal shipments from that port have trebled within the last few years. Taking it all in all, it is a very important town, and not to be measured by the amount of customs revenue collected, because there is no customs house there at all.

Souris public building, $10,000.

Mr. FOSTER. Has anything been spent on that ?

Mr. HYMAN. No.

Mr. FOSTER. What is the population ?

Mr. HYMAN. In round numbers 2,000. The postal revenue is $1,537 and the customs revenue $3,358. The estimated cost of the building is $9,500, heating, $1,128; fittings, $1,763, and contingencies, amounting in all to $14,500. If we have to wire the building that will cost $500 extra. No site has yet been selected.

Mr. FOSTER. What is the business being done in now ?

Mr. HYMAN. I have not got that information.

Mr. FOSTER. Does the minister have any report from his officers as to existing accommodation before he commences putting up a new building ?

Mr. HYMAN. Only in cases where buildings are rented by the Public Works Department. In this case the rental would be paid by the Customs Department and the Post Office Department, and, therefore, we would have no report as to that.

Mr. SAM. HUGHES. With regard to sites, would it not be advisable for the government to secure options on sites before it is generally known that a public building is going to be erected? It is customary for the owners of possible sites to raise the prices as soon as it is known that a public building is to be put up. Why might not an officer of the department secure a proper site beforehand? He need not even communicate with the leading Liberal of the place. He might get an option on a site large enough to provide a nice public ground around the building. The minister would immortalize himself if he would start that rule.

Mr. HYMAN. It has been the custom of the department ever since I had anything to do with it to endeavour to secure these options as quietly as possible, so that the government shall not be called upon to pay more than may be necessary. I am endeavouring to get a number of options in different places in that way at present. We usually endeavour to obtain options on several sites, and then send an officer of the department to examine them and report before deciding.

Mr. SAM. HUGHES. Has the minister ever compared the municipal assessment of any of these sites with the price the government is paying ?

Mr. HYMAN. Our officer has been asked to obtain that as evidence of value.

Campbellton public building, $16,000.

Mr. FOSTER. What is the population ?

Mr. HYMAN. 3,500. The postal revenue is $4,836 and the customs revenue $13,686. This building is under contract. The amount of the contract is $16,600. The heating is estimated to cost $2,000, fittings and furniture about $2,000, extension of sidewalks, if necessary, $500, and adding $3,000, the cost of the building will be about $25,000. In addition, it is a question whether we shall have to put in electrical wiring.

Mr. FOSTER. What did the site cost ?

Mr. HYMAN. $4,000.

Mr. FOWLER. From whom was the site bought ?

Mr. HYMAN. Mr. Archibald Mackenzie.

Mr. FOWLER. What is the size ?

Mr. HYMAN. 100 feet square.

Mr. GANONG. This seems to be the only item for public buildings in New Brunswick, and I feel it just that I should again call the attention of the minister to the fact that there are three towns in my county all of them more deserving of public buuildings than the town of Shelburne. We have Milltown, with a very large cotton mill, employing over 800 hands and with a population of over 2,000. It has no government building of any kind. We have St. Andrews, which is as important as Shelburne, being a large watering place with the largest hotel in the maritime provinces—the shire town as well —without any public building. We also have the town of St. George, in which Mr. Gillmor promised a post office, I suppose on the authority of the government, although they disclaim it now. They have five large granite concerns in that place and a very large pulp mill, and still they have no public building. The post office in that town is a disgrace to the Canadian government. The surprise to me is that the postmaster will even stay in it. I would like the minister to take these matters into consideration. As I suggested to him this afternoon, if he would divide up the amount squandered in Antigonish, he might greatly improve the accommodation in these places. However, if money is plentiful in the treasury, we will be willing to accept a vote in the supplementary estimates.

Mr. HYMAN. It is only fair that the hon. gentleman (Mr. Ganong) should inform the committee that he has a large public building in one of the towns of his constituency.

Mr. GANONG. And it is only fair to state that for its size there is not a town in Canada that gives so large a revenue either from customs or post office.

St. John drill hall, $10,000.

Mr. DANIEL. Will the hon. gentleman (Mr. Hyman) please give us the dimensions of this building ?

Mr. HYMAN. I shall be obliged to ask this vote be allowed to stand. I would prefer that it should be discussed when my colleague the Minister of Militia is present. I have not all the particulars I would like to have.

Mr. DANIEL. I would remind the minister that this sum was voted last year, and that in February, 1904, plans of a drill shed were displayed in my constituency. Surely if the plans were ready then, the minister might be able to give us dimensions and other particulars of the building now and tell us where it is to be erected. This drill shed is very much needed in the city of St. John. The old drill shed there, I believe, was the first, or among the first, of the drill sheds built in Canada. It is a wooden building, extremely leaky and it costs the government a great deal for repairs. Besides, it is absolutely inadequate for the force there. We have a regiment of artillery and a regiment of infantry. And, as the minister knows, St. John is one of the strategic points in Canada. It is the terminus of the Canadian Pacific Railway and one of the termini of the Intercolonial Railway and is at the mouth of an important river. No doubt, at no very distant day there must be a permanent battery of artillery there. The force now existing in St. John is a very good force. The artillery has more than once, I believe, taken the highest efficiency prize in the whole artillery of Canada, and their infantry corps is a very creditable force in every respect. The men are enthusiastic, and they should be encouraged. But they feel very much discouraged indeed because of the want of proper armouries and a proper drill shed. The artillery, to which I myself have belonged for a number of years, were forced to build two armouries, one in the north end and one in the west end of the city. I do not think any militia force in Canada should be imposed upon in this way. And I certainly think we should have some explanation from the minister why, this vote having been given for the last two years, we hear nothing about the drill shed, and why a commencement has not been made in providing a building so much needed.

Mr. HYMAN. I have asked that the item be allowed to stand, and I hope the hon. gentleman (Mr. Daniel) will not object. My reason for asking to have it stand is that I may be able to give him all the particulars he wishes. This is a matter that concerns the Militia Department, and I prefer that my colleague the Minister of Militia should be present when it is discussed.

Mr. DEPUTY SPEAKER. The item stands.

St. John immigration detention building, $22,000.

Mr. FOSTER. What is to be done there ?

Mr. HYMAN. This is for a detention hospital at the port of St. John. The difficulty up to the present moment has been the acquiring of a site. I have a memo. from Dr. Bryce, who, at the present moment, is trying to arrange for a proper site. It is intended to keep the expenditure within the estimates.

Mr. DANIEL. This, I take it, is for a new building ?

Mr. HYMAN. Yes.

Mr. FOSTER. Is it now under contract ?

Mr. HYMAN. No.

Mr. FOSTER. There is a St. John Immigration building that has been under contract.

Mr. HYMAN. This is a detention building, a little different from the ordinary immigration building.

Mr. DANIEL. This is a sort of immigration hospital ?

Mr. HYMAN. Yes, something of that kind. When shiploads of immigrants come in, as I understand, the usual immigration sheds are used. But in all large bodies of immigrants, there are some who must be detained for examination or for reasons of health.

Mr. FOSTER. Where is it proposed to put the building—in the city or on Partridge Island ?

Mr. HYMAN. Dr. Bryce, who is the head of the department, informed me within the last two or three days that he intends to choose the site, but I do not know where it is to be.

Mr. DANIEL. It would be in the city.

Mr. OSLER. This building is to be used in case of immigrants held for examination ?

Mr. HYMAN. Yes.

Mr. OSLER. If the government have not a building of that kind already, this ought to be erected without question, for, we are getting into this country a class of immigrants absolutely inferior to the class allowed to enter the United States. No matter what is said, as a matter of fact, they are coming in, and from here they are filtering into the United States. No time should be lost in providing the proper housing to care for and examining these men. If they are not all right, send them back. We are getting a lot of people who have no right to come here, especially men from southern Italy, who have contagious diseases. If the government has not proper quarantine buildings in St. John, Halifax and Quebec to look

after these people, the money should not require to be re-voted, but should be spent at once.

Mr. HYMAN. In Quebec they have a building for this purpose, erected, I think, last year. In the present estimates. I think, will be found a vote for a similar building in Halifax. This one is for St. John, and, as I have explained Dr. Bryce is there at the present time to choose the site. I have instructed the chief architect to call Dr. Bryce's attention to the matter immediately on his return, and we shall endeavour to proceed with the building at once.

Mr. DANIEL. Dr. Bryce was there last summer in plenty of time to have the building started. It is evidently intended not to make it an expensive building. If they have not the site, they know about where it is to go. There has been no delay, as far as I can gather, on the part of Dr. Bryce, but the delay appears to be on the part of the government. As the hon. member for West Toronto (Mr. Osler) has stated, this is a building that is very much needed for the purpose of detaining the people who are physically unfit to be allowed to go loose in the country--people suffering from trachoma, favus and other contagious diseases. Such a building is now urgently needed. All this winter immigrants have been coming in through St. John ; and certainly we have heard no good reason why, when the money was voted last year, the work has not been carried out.

Mr. HYMAN. I know that Dr. Bryce has had some difficulty in acquiring a proper site. The very moment the site is decided upon, plans and specifications will be prepared. The Department of Public Works cannot prepare them until we know the character of the site.

Mr. DANIEL. Does this $22,000 cover the site and building?

Mr. HYMAN. No. The estimate for a building of this character is $18,000, the estimate made by the chief architect, which, with contingencies, will amount to $22,000.

Mr. DANIEL. How large will the building be?

Mr. HYMAN. We cannot tell until we first see what the site is. Dr. Bryce, who is at the head of that branch of the department, will give us two or three sites from which we will choose.

Mr. OSLER. I thoroughly approve of this vote. But I think no time should be lost in erecting the building, because there is nothing more important in the interest of Canada than to have the immigrants well looked after at these stations. For the sake of $2,000 I do not think delay should be allowed in the erection of a proper detention building.

Mr. HYMAN. I understand that in the winter time all the immigrants come to St. John, and I think the building will be ready for the coming winter.

St. John Quarantine Station, Partridge Island—hospital and two detention buildings, and acetylene gas plant and building ; also repairs to old buildings, water service, &c., $22,000.

Mr. DANIEL. Does this include any damages for the building that was blown down there last fall during the course of erection?

Mr. HYMAN. An arangement has been made with the contractor concerning the building which was blown down. We make no allowance for that.

Mr. DANIEL. Who is the architect for that building?

Mr. HYMAN. The plans and specifications are prepared in Ottawa. We have an agent of the department there, Mr. Waterbury, who looks after the local work.

Mr. DANIEL. I think the building must have been faulty, because it blew down during a gale, in the course of erection, and it was freely stated that the building was too narrow for the height, the stringers—if that is the technical term—were not strong enough, and if the architect had been more careful in drawing the building on safer lines it would not have blown down. It stands on an island exposed to every wind that blows, and in the winter time the storms from the Atlantic are pretty heavy.

Mr. HYMAN. It need not necessarily have been the fault of the architect if the building was blown down. I think in this case it was the fault of the builder, the building was not properly protected. The contractor should have known that these storms were likely to occur. I understand he did not even board up the windows, but allowed the wind to rush into the building, and in that way the accident occurred. The partitions were not even put up. The contractor stands the loss.

Mr. FOSTER. I see that this is to be lighted with acetylene gas. How much does the plant cost?

Mr. HYMAN. The plant complete for generating the gas, costs, $4,625. That was bought from the Acetylene Gas Construction Company of St. Catharines.

Mr. FOSTER. Is that the only company in Canada?

Mr. HYMAN. I do not know of any other.

Mr. FOSTER. Were tenders asked for an acetylene gas plant?

Mr. HYMAN. I do not think so.

Mr. FOWLER. For the information of the minister, I can inform him that in the constituency I have the honour to represent there is a plant for the manufacture of acetylene gas, within twenty-five miles of

the city of St. John. So there can be no difficulty in getting a plant.

Mr. HYMAN. This plant was arranged for before I came into the department. I understand that we do not require to ask for tenders where the price does not exceed $5,000. But it is necessary for the chief architect to certify that the price is fair and reasonable, and that was done in this case.

Mr. OSLER. Was there a contract made with the company to supply acetylene gas?

Mr. HYMAN. No, we have no contract.

Mr. OSLER. Is that supplied by one company alone?

Mr. HYMAN. I cannot give the information.

Mr. BARR. Were tenders asked for?

Mr. HYMAN. That was the only tender.

Mr. FOWLER. What was the cost of this gas plant, and what the number of lights?

Mr. HYMAN. $4,625, including the laying of the pipes; 500 lights, and 2,500 feet of piping.

Mr. OSLER. In that contract is there any obligation to get the gas from that company?

Mr. HYMAN. No obligation of any kind.

Mr. FOWLER. This was let without tender?

Mr. HYMAN. No, it was not let without tender, but there was only the one tender.

Mr. OSLER. As a matter of fact, is there only one firm supplying that in Canada?

Mr. HYMAN. The hon. gentleman from King's, N.B. (Mr. Fowler) has just told me there was another firm. I did not know that. But in a case of this kind where the use of acetylene has to be very carefully guarded, I think the department was justified in accepting the tender from a firm that is well acquainted with this business.

Mr. FOWLER. There is a company manufacturing acetylene gas plant in New Brunswick who are thoroughly capable, and thoroughly equipped, and have met with great success. One of the gentlemen engaged in the manufacture of this plant is the inventor of an improvement on the ordinary gas plant, which has been very successful indeed.

Mr. OSLER. That sum, I understand, includes the manufacture of the gas?

Mr. HYMAN. Yes, includes the lights and the pipes.

Mr. OSLER. When this discussion came up a year or two ago, I think it was understood that there was only one firm in Canada supplying acetylene carbide. Is that the case still?

Mr. HYMAN. I do not know of any other company. I understand there is a company here supplying acetylene and a company in St. Catharines. I do not know whether they are the same.

Mr. SPROULE. I have been told it is a fact that the one company owns the three different establishments, the one here, the one in St. Catharines and the one at Shawenegan; and that Mr. Wilson, who was the original patentee, is in all these companies, and all the profits go to the same persons.

Mr. HYMAN. I suppose the hon. gentleman knows that is the case.

Mr. SPROULE. I am told by parties who ought to be well informed, one living in St. Catharines and another living in Woodstock and who knows Mr. Wilson very well that there is no competition in it and that the purchases which the government have made for lighting on the lakes and for their buoys have all been made from the same company without any competition and at their own prices.

Mr. HYMAN. I have no knowledge as to what has been done by the Department of Marine and Fisheries in regard to this matter, but in regard to what the hon. gentleman says about the purchases of acetylene carbide, I do not think that he has the right to draw any conclusions at all. There has none been bought, there has no contract been made by the department for any acetylene and when the question comes up the acetylene will certainly be bought by the department at as low a figure as it is possible to buy it at.

Mr. SPROULE. I think I have a perfect right, if I believe it to be a fact——

Mr. HYMAN. But it is not a fact.

Mr. SPROULE—that the only companies in Canada are under the control of the same combine and that the government have bought from them up to the present, and must buy from them in the future, unless they or other parties get the right to make acetylene gas, to assume that what has been done in the past is what will be done in this case. The hon. minister says that this contract was let before he took charge of the department. Who let the contract? He ought to know that.

Mr. HYMAN. The Department of Public Works.

Mr. SPROULE. Through the Minister of Public Works?

Mr. HYMAN. I presume through the Minister of Public Works.

Mr. SPROULE. And the Minister of Public Works is certainly one of the owners of these three concerns. That is the in-

formation I have and that is where it seems to be very objectionable.

Mr. HYMAN. As a matter of fact I have not the least information in regard to the matter. It seems to be somewhat unfair that the hon. gentleman should undertake to pass a criticism of that kind. I do not know whether the hon. Minister of Public Works owns one dollar's worth of stock in a company of that nature. I have no knowledge of the matter at all. It seems to me under all the circumstances that the words of the hon. gentleman might have been just as well left unsaid.

Mr. SPROULE. I am asking the hon. gentleman whether he knows it or not. He seems to be in a state of blissful ignorance which is very useful at times.

Mr. GANONG. As far as the price of carbide is concerned I think I can speak with some authority on that subject as I have used it for some years. There is but one price. It is sold under the Wilson patent so-called. It does not make any difference where you buy it there is just the one price, but as far as the machinery is concerned there are at least eight or ten reputable firms making carbide gas machines. I have been running a plant for the last three or four years of 125 lights, and I think the whole plant, outside of piping, cost me about $300. I do not know where the hon. gentleman is going to put the money.

Mr. HYMAN. As the hon. gentleman has made some insinuations in regard to the matter I do not suppose he has the facts before him. As a matter of fact this includes not only what may be properly termed the plant with a capacity of 500 lights, but it includes the building, and the gasometer.

Mr. GANONG. The gasometer is a part of the machine.

Mr. HYMAN. And in addition to that some 2,500 feet of piping.

Mr. GANONG. The piping is not very expensive.

Mr. FOWLER. What is the size of the piping ?

Mr. HYMAN. What is the size of the building ?

Mr. FOWLER. Yes.

Mr. HYMAN. 17 x 22.

Mr. FOWLER. What is the diameter of the piping ?

Mr. HYMAN. The supply pipe ?

Mr. FOWLER. Yes.

Mr. HYMAN. I have not the size of the pipe.

Mr. FOWLER. The hon. minister is putting forward as a reason for the tremendous cost of this plant that there are 2,500 feet of piping. Then it is important for us to know what the size of this piping is because it varies in price as it varies in size. I have some knowledge of the cost of this acetylene gas plant and I believe that the cost of this is double what it should have been.

Mr. HYMAN. Of course this includes also the excavation.

Mr. FOWLER. That would cost about $20.

Mr. HYMAN. This includes excavation, a building 17 x 22, brick, hollow walls, stone foundation, with separate room——

Mr. FOWLER. You are going to bring in the whole cost of the building now ?

Mr. HYMAN. Surely the hon. gentleman is not insinuating that I am giving information misleading to the committee. There are brick hollow walls on a stone foundation, gas piping 2,500 feet, meter 9 x 12 with a capacity of 1,000 cubic feet, the gasometer to be sunk in the ground, rock or concrete. The plant will be of sufficient capacity to furnish 50 lights, the gas piping to be laid from the gasometer to the various buildings.

Mr. FOWLER. A building 17 x 22 one story high, and with a hollow wall—that is two bricks—would not cost more than $500 at the outside.

Mr. OSLER. I am not objecting at all to the cost, because I think the men who own the patent are entitled to a very large profit, but when the government enter into a contract I think they should be very free in their information as to whether there is only one company owning the patent. I think the company are entitled to make a lot of money out of this, having worked for many years with it, but I also think that the government should give us the fullest information when they are dealing with this acetylene gas as to whether this is a close corporation and whether they must purchase at the price at which these men supply it. They should ascertain whether they are charged the same price that the acetylene company charge the railways. I do not think any one would object if the price paid by the government is the same as that paid by the ordinary large consumers. As there are apparently several contractors prepared to put in the plant, fair competition can evidently be had in this respect. I think that is all the House would want and I think that in this case where there is apparently a close patent there should be the fullest information given, because in connection with this lighting we are going to spend a large amount of money.

Mr. HYMAN. The department have never purchased a pound of acetylene. The Department of Marine and Fisheries has its estimates before the House and I have no doubt that the hon. Minister of Marine and Fisheries will give all the information that hon. gentlemen opposite require.

Mr. OSLER. In connection with the contract for the plant if there are several firms building this plant then care should be taken to have tenders asked for from the different firms so that the owners of the patent should not have a cinch, on the machinery as well as on the gas.

Woodstock armoury and gun shed, $35,000.

Mr. FOSTER. What about this ?

Mr. HYMAN. This is a vote to complete the Woodstock armoury. There was a contract entered into with Mr. Fisher, of Woodstock, on the 25th October. The amount of the contract is $31,981.

Mr. FOWLER. What Mr. Fisher is that?

Mr. HYMAN. Mr. Wm. Fisher. I have no knowledge of him.

Mr. FOWLER. Is it not Williamson ?

Mr. HYMAN. I have just 'Wm.' in my notes. I presume it stands for William. I have no knowledge in regard to that matter. This is to complete the work.

Mr. FOWLER. What is the whole contract ?

Mr. HYMAN. The amount of Mr. Fisher's contract is $31,981.

Mr. FOWLER. What was paid for the lot ?

Mr. HYMAN. I understand that there was a lot purchased for $6,000. That included a rink which was on the property. The roof and a considerable portion of the rink were used in the construction of the new building. Of course the plans and specifications showed that. Tenders were called for in the usual way by public advertisement and the lowest tender was accepted.

Mr. FOWLER. Was an officer sent down there from the department to purchase the site ?

Mr. HYMAN. Yes.

Mr. FOWLER. Who was the officer ?

Mr. HYMAN. Two officers were sent down at different times—Mr. Shearer and Mr. Ogilvie.

Mr. FOWLER. Who purchased the site ?

Mr. HYMAN. Neither of them purchased the site. They reported to the department and the site was afterwards bought by the minister.

Mr. FOWLER. Did you not have an option on the site ?

Mr. HYMAN. I have not the particulars here in regard to the matter. I take the information from the officers of the department.

Mr. FOWLER. From whom was it bought ?

Mr. HYMAN. This is the Paxton, Baird and Rink property and a small lot purchased from Small & Fisher.

Mr. FOWLER. How much for the Small lot ?

Mr. HYMAN. $6,000 for the Rink property and $1,200 for the lot.

Mr. FOWLER. That will make the whole building cost about $40,000.

Mr. HYMAN. I gave the amount of the contract, it is for $31,908. That is for the building. For the heating and wiring the estimate of the department is $3,500, and then there will be fitting up of the armouries $3,500, for renewing the sidewalks, &c., the estimate will bring the total up to about $50,000 including the site.

Mr. FOWLER. Is the building going on?

Mr. HYMAN. Yes, this is to complete.

Mr. FOWLER. Have you a clerk of works in charge ?

Mr. HYMAN. Yes.

Mr. FOWLER. How long has he been in charge and what salary is he receiving.

Mr. HYMAN. $3 a day, the usual price.

Mr. FOWLER. How long has he been in charge.

Mr. HYMAN. Since February 1.

Mr. FOWLER. Of this present month ?

Mr. HYMAN. Yes.

Mr. FOWLER. What was his former occupation ?

Mr. HYMAN. I have no knowledge of his former occupation.

Mr. FOWLER. It is of importance that the department should know his former occupation.

Mr. HYMAN. It may be.

Mr. FOWLER. Not only may be but is. There was an instance in the town of Sussex where I reside, the principal town in King's, part of my constituency. The clerk of works in charge of an important work was a tailor by occupation and was in active work as a tailor. He had no previous knowledge of building and was not a mechanic except with his needle, and yet he was put in charge of the construction of that building as clerk of works. He was paid $3, or I think it was $3.50 a day. This man must be a mechanic because he is only getting $3 a day whereas the other, on account of his superior qualifications as

a tailor, got $3.50. The contract price for the building was $4,300, but this clerk of works, who was a tailor, drew $1,900 as clerk of works.

Mr. HYMAN. I am not disputing the hon. gentleman, I have no knowledge of it.

Mr. FOWLER. He will find if he refers to the accounts that they will bear out the statement.

Mr. HYMAN. He must have been a good tailor.

Mr. FOWLER. He knew how to make a bill, which they say is a requisite of a good tailor.

Mr. FOSTER. He evidently found his goose.

Mr. FOWLER. Evidently there was lots of cabbage. It seems that the department forgot he was employed and he kept on drawing his pay all the time. The building occupied four months in construction but he was kept on for a year and a half. I hope the same mistake will not be made in this case, and that is why I asked the minister what this person was. I would like the minister to find out from his officers.

Mr. HYMAN. I suppose the hon. member from the constituency can give the information.

Mr. CARVELL. I think I can give some information to the hon. member for King's (Mr. Fowler). I can tell him that the clerk is Mr. Drysdale, who has been a contractor for probably 25 or 30 years, and who, some 15 or 20 years ago, had charge of the building of the record building in Woodstock. He has been engaged in work of this kind all his lifetime. My hon. friend (Mr. Fowler) I would imagine objects to the construction of this building.

Mr. FOWLER. Not at all.

Mr. CARVELL. I am glad to hear him say so. Perhaps no item here to-night is more necessary than this armoury and drill hall in Woodstock, in the county of Carleton, N.B. which I represent. We have there the 67th Regiment, an eight company regiment, the Woodstock Field battery and the Brighton Engineers, the oldest in Canada. For want of accommodation the Woodstock battery is still armed with the old 9-pounder guns and will be until we can get proper accommodation for the new equipment. The Brighton engineers have never yet received their equipment, although two years ago the establishment was increased to almost double its former strength and given 28 horses or whatever the ordinary equipment of an engineer company is, and yet on account of lack of accommodation they are not able to receive the equipment. The 67th Regiment is still armed with the old Snider rifle for want of the accommodation and four of five years ago it was felt by the department that they should build an armoury in Woodstock. The result was that in 1902 the vote was placed in the estimates for an armoury at Woodstock and then it was only intended to have an armoury. A site was purchased for $1,250 and before that site was purchased the Department of Militia and Defence took pains to find out the value of the land from independent sources, and it has never been questioned in this House or I think, in the country, that the price paid was reasonable and just. It was afterwards decided by the department that this building would not be large enough to meet the requirements of the militia under the new conditions. A battery of field artillery formerly consisted of 6 guns and 6 ammunition wagons; to-day it would be 6 guns and 24 ammunition wagons besides forage and store wagons. At that time the accommodation of the engineers would not occupy a space of more than 30 or 40 feet square, but now it would take four times that space, and therefore it was decided to be inadvisable to erect a building according to the plans, although tenders had been called for. The department then looked for another site and they found that they could buy the rink property for a reasonable price and that the owners were willing to take the other property in part payment. The result was that the Rink property was purchased, tenders were called for and the contract was let. I can assure the committee and the hon. member for King's that we will have ample accommodation for all the militia in the county. We will have, besides, accommodation for the Woodstock Field battery and the engineers, a drill hall which will be 60 x 100 feet. It will be a modern building, the front part of which will be 30 x 100 feet, will be solid brick, and when completed will be a credit to the department and to the town of Woodstock, and will fill a long felt want for the militia of the county of Carleton. I can assure the committee that the clerk of works is actively engaged, that the contractor is drawing materials to the ground every day and that there can be no objection to this clerk of works. I do not think any gentleman in this House would find fault with the construction of the building.

Mr. FOWLER. I was not raising any objection, I was simply asking if the department, having made a mistake in Sussex by appointing a tailor to superintend the erection of a building, were guarding against the occurrence of a similar mistake in this case. The hon. gentleman should be thankful to me for giving him an opportunity to fire off that battery of artillery with which he was loaded up.

Mr. SAM. HUGHES. The hon. gentleman who has just taken his seat (Mr. Carvell) has pointed out that this is for an eight

company regiment. He seems to fail to recognize that these companies keep their arms at company headquarters and will not keep them in the drill shed. He pointed out that the Brighton engineers have no accommodation for their materials. I presume that the engineers' material and the guns of the battery can be kept in the drill shed, but I want the minister to explain these things to the House. I understood there was going to be an agreement made between the Department of Militia and the Department of Public Works as to some set form for these regimental or county armouries. If they are all to cost $35,000 or $50,000 I shall be delighted that the one for Victoria shall cost that sum. However, I hope that the Departments of Pubic Works and Militia will keep in mind the principle that these buildings should not be made too large at one point and too small at another, but should be commodious at all points and of uniform quality, so that there could be no fault found in any part. Is there any ground in connection with this drill shed other than the site of the shed itself? How many acres adjoin it

Mr. HYMAN. I understand there is no ground that could be used for drilling purpose.

Mr. SAM. HUGHES. That is a serious mistake. There should be grounds outside in connection with all these as in the old plans. There should be a large area. The only time the regiment will form up there is when it happens to go to or come from the annual camp. Then it should certainly have a large area outside for a parade ground.

Mr. CARVELL. There are two pieces of land in the rear of the building which could be purchased a a reasonable price, and I will take the hint given by my hon. friend and ask the department to purchase them.

Mr. SAM. HUGHES I do not know the political stripe of the hon gentleman, but I do know that the Woodstock, N.B., battery gave a good account of itself on all occasions when under fire in South Africa, and the men were several times in action.

Mr. INGRAM. What would those two lots be worth ?

Mr. CARVELL. One is about 30 by 80 feet and the other about 80 or 90 feet square, and we have an offer to purchase them for $1,600.

Mr. INGRAM. What is the size of the lot on which this rink was placed?

Mr. HYMAN. 100 feet by 160 feet.

Mr. INGRAM. Then I think the rumour about the cost of this lot is well founded. If this lot cost $6,000, or rather $7,200, it is quite evident that the department has paid too much for it. That is borne out by the statement made by my hon. friend from Carleton N. B. (Mr. Carvell), who states that a larger space immediately in the rear can be got for about $1,600.

Mr. CARVELL. I think that the hon. member will agree that there is a great difference between a lot fronting on one of the principal streets of the town and two pieces of land in the rear of the building that could not be sold for anything else. The lot in question is within 300 feet of the post office and is next but one to the town building. The town has 4,000 inhabitants; its postal revenue is the fifth in the province, and it is one of the most important commercial and manufacturing towns of the province. The land on which the rink stands could not be bought in the open market for less than $2,500 or $3,000.

Some resolutions reported.

Sir WILLIAM MULOCK moved the adjournment of the House.

Mr. R. L. BORDEN. What government business will be taken up to-morrow?

Sir WILLIAM MULOCK. The Minister of Agriculture will proceed with his Bill respecting the census, after which we shall continue with the estimates of the Minister of Public Works.

Motion agreed to, and House adjourned at 10.50 p.m.

HOUSE OF COMMONS.

WEDNESDAY, February 15, 1905.

The SPEAKER took the Chair at Three o'clock.

QUESTIONS.

DISMISSAL OF POSTMASTER AT STANHOPE, PRINCE EDWARD ISLAND.

Mr. A. MARTIN asked :

1. Has Henry Lawson been dismissed as postmaster for Stanhope, Prince Edward Island ?
2. If so, why, and on whose recommendation?
3. Were there any complaints ? If so, of what nature, and what are the names of those who made them ?
4. Were any petitions received for his dismissal ? If so, by whom signed ?
5. Did the postmaster or post office inspector in the province ask for Mr. Lawson's dismissal?
6. How long has Mr. Lawson held the position ?
7. When were complaints, if any, first made ?
8. Did the Postmaster General furnish Mr. Lawson any reasons for his dismissal ?

Hon. Sir WILLIAM MULOCK (Postmaster General). It having been clearly established that this officer adopted an active political partisan course in connection with the recent Dominion elections, he was removed from office. He was appointed postmaster at Stanhope on the 30th June, 1884.

Mr. A. MARTIN. I do not think that the hon. Postmaster General has given an answer to the question. I asked the hon. gentleman if the Postmaster General had furnished Mr. Lawson with any reasons for his dismissal, and he has not answered that.

Sir WILLIAM MULOCK. Mr. Lawson was not furnished with reasons. I fancy he knew very well the reasons for his dismissal. He is not in any doubt; he is quite cognizant of what occurred; there is no doubt of what occurred, and his dismissal is in accordance with the rule laid down eight years ago, of which he had ample notice.

Mr. A. MARTIN. I think this question has not been answered at all.

Sir WILLIAM MULOCK. I think I have answered that part of it.

Mr. A. MARTIN. The question as to who made these complaints against Mr. Lawson has not been answered. Mr. Lawson ought, in all fairness, to know who made these complaints.

HARBOURS CONTROLLED BY COMMISSIONERS.

Mr. BERGERON asked:

1. What are the harbours in Canada under boards of commissioners?
2. What are the names of the commissioners in the different harbours?
3. How are they appointed; and how many are named by the Governor in Council?
4. What is the remuneration of the commissioners?

Hon. R. PREFONTAINE (Minister of Marine and Fisheries):

1. The harbours in Canada controlled by boards of commissioners are: Montreal, Quebec, Toronto, Belleville, Three Rivers, North Sydney and Pictou.

2. Montreal — Robert Mackay, Jonathan Hodgson, Robert Bickerdike, Alphonse Racine, Eustache H. Lemay, His Worship the Mayor, James Crathern, Robert Reford, L. E. Geoffrion, W. E. Doran, Alexander McFee.

Toronto—J. T. Mathews, W. P. Hubbard, Barlow Cumberland, Joseph Oliver, Francis Stephen Spence.

Quebec—Jean Baptiste Laliberté, Narcisse Rioux, Dosithée Arcand, Harold Kennedy, William M. Macpherson, Felix Carbray, E. T. Etienne Dussault, George Tanguay, William Molson Dobell.

Belleville—T. S. Carman, the Mayor of Belleville, David Price.

Three Rivers—Henry E. Hart, Alexander Houliston, Richard S. Cooke, K.C.; the Mayor of Three Rivers, Louis Brunelle.

North Sydney — William Hackett, jr.; Peter McDonald, M. W. Lawlor.

Pictou, N.S.—Henry G. Ives, J. Robert Brown, Edward Doherty, John C. Reid, William A. McIntosh.

3. For the harbour of Montreal six are appointed by the Governor in Council, the Mayor of Montreal is ex officio a member, and four as follows:—One by the Montreal Board of Trade, one by the Montreal Corn Exchange Association, one by the Chamber of Commerce and one by the shipping interests.

At the port of Quebec there are nine commissioners—five appointed by the Governor in Council, the other four are: One appointed by the Council of the Board of Trade, one by the Council of the Lévis Board of Trade and two by the shipping interests. In addition to these, the Chairman of the Corporation of Pilots for and below Quebec is ex officio a member, so far only as respects pilotage matters.

For Toronto the common council of the city of Toronto appoints two commissioners, the Toronto Board of Trade two, and the majority of such commissioners to recommend another person to be a commissioner to be appointed by the Governor in Council; but if the majority of the commissioners cannot agree upon another person, then the Governor in Council appoints the fifth commissioner.

For Belleville the corporation of the town of Belleville, by an Act assented to on the 18th of May, 1870, are authorized and empowered to pass by-laws for the imposition and collection of harbour dues to be employed, after the expense of collection, for the purpose of assisting and liquidating the debts incurred or which may after that date be incurred, for the improvement of the harbour within the limits of the said town.

For the harbour of Three Rivers the Governor in Council appoints three persons the mayor, by virtue of his office, being a commissioner, along with the President of the Three Rivers Board of Trade—in all five persons.

For the harbour of North Sydney three commissioners are appointed by the Governor in Council.

For the harbour of Pictou the Governor in Council appoints three commissioners.

4. The commissioners at the port of Montreal receive $5 for each sitting of the board. The chairman of the board receives $2,000 annually.

The harbour commissioners of the other harbour boards receive no remuneration, except at the port of Quebec, and the returns of the department will not enable it to speak definitely about that port. The information is being asked for. So far as the returns in the department show, they have received no remuneration.

IMPORTS OF HAY.

Mr. BOYCE asked:

1. What quantity of hay was entered for consumption from the United States at the port of Sault Ste. Marie during the calendar years 1900, 1901, 1902, 1903 and 1904?

2. What was the amount of duty collected upon such imports in each of such years ?

Hon. WILLIAM PATERSON (Minister of Customs). The total quantity of hay imported from the United States and entered for consumption at the port of Sault Ste. Marie, and the duty collected thereon during each of the calendar years mentioned was :—

Year.	Tons.	Value.	Duty.
1900	14	$ 144	$ 28
1901	61	647	122
1902	435	4,364	870
1903	188	1,886	376
1904	674	6,224	1,348

EMPLOYMENT OF R. A. E. LEACH.

Mr. W. J. ROCHE asked :

1. Is Mr. R. A. E. Leach in the employ of this government ?
2. If so, in what capacity, and at what salary ?
3. What is the date of his employment ?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister):

1. Yes.
2. Inspector of Dominion Land Agencies, $2,000 per annum.
3. January 1, 1905.

WORK IN INLAND HARBOURS.

Mr. SAM. HUGHES asked :

1. How much money has been spent by the Dominion government since 1896, upon each of the following : (a) Port Arthur harbour ; (b) Fort William harbour ; (c) Kaministiquia river ; classified into (1) dredging : (2) breakwaters ; (3) other purposes ?
2. What quantities of each of the following are to be excavated during 1905-6 in each of the three locations above named ?
3. What are the dates and terms of the contracts entered into with those engaged in dredging at the aforesaid points in 1903-4 and 1904-5?
4. Will the government lay the said contracts upon the table of this House ?
5. What are the horse-power, tonnage and dimensions of each of the dredges engaged in said work ?
6. What is the cost of dredges newly built, similar to those engaged at the above three points ?

Hon. CHAS. HYMAN (Acting Minister of Public Works). I must ask the hon. gentleman (Mr. Sam. Hughes) to move for a return for this information. It will be necessary to go over a considerable amount of correspondence and there is information asked for which is not in the possession of the department.

Mr. SAM. HUGHES. I have asked the question and I insist that I am entitled to an answer. It is a very proper question and the information should all be available in the minister's own department. I want to know why he insists on a motion for return.

Mr. HYMAN. I must ask the hon. genteman to make a motion for the answer to question 5. Take for instance the 5th section of the question.

What are the horse-power, tonnage and dimensions of each of the dredges engaged in said work ?

There is no information of that character in the department and the question would have to stand a considerable time before I would be able to get the information.

Mr. SAM. HUGHES. The Minister of Marine and Fisheries should be able to give that information.

Mr. HYMAN. It is the usual way where a question includes such a detailed answer as this, that the hon. gentleman should ask for a return.

YUKON ELECTION.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). In answer to a question that was asked yesterday by my hon. friend the leader of the opposition (Mr. R. L. Borden) with regard to the return of the results of the election in the Yukon Territory, I would say the only information that we have upon this subject is contained in the following telegrams which have been exchanged recently.

Dawson, Y. T., Feb. 8th, 1905.

R. W. Scott,
Secretary of State, Ottawa.

Alfred Thompson was declared elected yesterday by a majority of 618. My report with writ will be sent in a couple of days.

PIERRE LEDIEU,
Returning Officer.

Another telegram reads :

Dawson, Y. T., Feb. 13th 1905.

R. W. Scott,
Ottawa, Ont.

Was served to-day with writ of subpœna in a case of conspiracy ordering me to produce on the 1st of March the writ of election, the voters' lists, the poll books and all other election papers. Shall I obey the order of the court or not ? Dr. Thompson is leaving for Ottawa on the 15th.

PIERRE LEDIEU,
Returning Officer.

The answer to this was as follows :

Ottawa, 14th Feb., 1904.

Pierre Ledieu,
Returning Officer, Dawson, Y. T.

If there has not been any demand for a recount under section ninety, Dominion Election Act, then your duty is to return the candidate-elect and conform to all the requirements of section ninety-two of the Act.

R. W. SCOTT.

Mr. R. L. BORDEN. I understood that some demand had been made upon the returning officer for an explanation of this very great delay in fixing a date for opening the ballot boxes and officially counting the ballots. The correspondence which has just been read by the Prime Minister does

not make any allusion to any such telegram to him or to his reply.

Sir WILFRID LAURIER. I am sorry to say that this part of the observations of the hon. gentleman escaped my attention. I thought that what was in his mind was the delay in the return of Mr. Thompson, the member elect for the Yukon. If there is any other correspondence I shall bring it down.

Mr. R. L. BORDEN. I alluded to that as a result of the action of the deputy returning officer in delaying the returns so unreasonably and I pointed out at the same time to the Minister of Justice that it would be perfectly competent for any returning officer to fix a date one or two years from the date of the election and thus disfranchise a constituency for that time.

Sir WILFRID LAURIER. I think that the writ has to be returned within a certain time and the official count cannot be delayed beyond the date of the writ.

Mr. R. L. BORDEN. I was not able to find any date nor could the Minister of Justice. It simply says that he shall fix a date, whenever he sees fit. We have never had any trouble before and we may not have any trouble again, but this delay would indicate a possible necessity for an amendment of the law. The Minister of Justice on February 2, if I remember correctly from a perusal of 'Hansard' stated that a telegram had been sent to the returning officer asking him the reason for the delay—until February 6, which I think was the day for opening the ballot boxes and summing up the figures. As to that we have no information; if there is any information I would be glad if the Prime Minister would give it to us to-morrow.

THE ANSWERING OF QUESTIONS BY MINISTERS.

Mr. SAM. HUGHES. I desire to call the attention of the House to the fact that on a recent occasion the First Minister, who is nearly as important in the House as the acting Minister of Public Works, took occasion, in answer to a question asked him by one of his supporters, to give a deliberate answer taking about twenty minutes to read. He answered the question with great detail, but when a member of this side asks a question that requires a particular answer he is asked to make a motion for a return. There is not a question here to which, if the minister had his work properly prepared when he brought his estimates before the House he would not have the answer at his finger ends in five minutes. He says he cannot get the information as to the horse-power of these dredges. He has a colleague who poses as a very efficient Minister of Marine and in his department there should be a record of every matter of this kind. I must protest against the Minister of Public Works giving any such answer to questions that are placed on the order paper; it is not treating the House with proper respect.

Mr. HYMAN. I desire to call the attention of the House to the character of this question. The first section of it is as follows :

1. How much money has been spent by the Dominion government since 1896, upon each of the following : (a) Port Arthur harbour ; (b) Fort William harbour ; (c) Kaministiquia river ; classified into (1) dredging ; (2) breakwaters ; (3) other purposes ?

I am perfectly willing to leave it to the judgment of the House if that is not a question for which a return should be asked. It deals with expenditures since 1896 upon five different works and also for other purposes ; the quantities to be excavated during 1905-6 in each of the three locations named ; the dates and terms of the contracts entered into with those engaged in dredging at the aforesaid points in 1903-4 and 1904-5 ; the horse-power, tonnage and dimensions of each of the dredges ; and the cost of dredges newly built, similar to those engaged at the above three points. I think in the judgment of the House it would be impossible to answer a question of that character immediately. The notice given of questions is very short, and it is impossible for the department to obtain all that information at once. I have no desire to withhold information from the hon. gentleman or from any other member of the House. I am simply asking him to move for a return, and, if he does so, I will use every expedition to have it brought down.

Mr. SPROULE. If a minister cannot answer a question the first time it is asked, it is usual to request a delay until he can get the information, perhaps a portion of it from other departments. We frequently allow questions to stand for a considerable length of time until the information is obtainable.

ANGLO-AMERICAN CONVENTION RESPECTING PROPERTY.

Mr. R. L. BORDEN. Before the Orders of the Day are called, I would ask the government to be good enough to lay upon the table of the House any correspondence between this government and the Imperial government as well as between this government and the governments of the different provinces, with respect to a convention between the United Kingdom and the United States of America relative to the disposal of real and personal property which was signed at Washington on March 2, 1899, and of which ratifications were exchanged at Washington on July 28, 1900. My reason for adverting to it is that by the terms of the fourth article of the convention, the stipulations of the convention are not to be appli-

cable to any of the colonies or foreign possessions of Her Britannic Majesty unless notice to that effect shall be given on behalf of such colony or foreign possession by Her Majesty's representative at Washington to the United States Secretary of State within one year from the date of the exchange of ratifications of the present convention. So far as I can gather, no such notice has been given on behalf of Canada, and therefore I would like to know what is the nature of the correspondence between this government and the governments to which I have referred.

CENSUS AND STATISTICS.

House in committee on Bill (No. 5) respecting the Census and Statistics—Mr. Fisher.

On section 3,—permanent office of census and statistics and its officers ; appointment of census officers and commissioners,——

Mr. FISHER. The first part of this clause is new, and establishes the permanent office. The second part is the same as the provision in the Census Act, and gives to the minister the usual authority for taking the census.

Mr. BLAIN. Has the minister any persons in view to occupy these positions ?

Mr. FISHER. I would as much as possible take the men now in the employ of the department, to take charge of the work and to do the work.

Mr. BLAIN. Can the hon. gentleman give the committee any information as to what salaries these gentlemen will get ?

Mr. FISHER. There will be of course a number of employees, who will be paid in accordance with the responsibilities and duties. The office will involve the appointment of a chief and a secretary. I would suppose that the chief would have the same salary as the census commissioner, $4,500 per year, and the secretary probably $2,000 or $2,500 according to his qualifications and experience. I might be able to get a perfectly competent officer for $2,000, but might find that I could not get one satisfactory for less than $2,500. The salaries of the other clerks would be based very largely on the Civil Service Act and be determined according to their qualifications and the nature of their work.

Mr. SPROULE. You are giving the same salary as to the head of a department and the same status.

Mr. FISHER. The same salary, but not the same status as I have not the intention of making it a separate department.

Mr. SPROULE. If you give the same salary, that amounts to the same thing.

Mr. FISHER. No, the experimental farm is in the Department of Agriculture and the director, who gets $4,000 a year, is under the deputy head of that department. In fact he gets more than the deputy head, because besides the $4,000 he gets free house, furniture, light and heat.

Mr. SPROULE. If you lay out as much money on this new branch or department, or whatever you choose to call it, the result as regards the public exchequer is practically the same. We should have a more definite statement as to the number of hands that will be required and the salaries to be paid them. As it is we are only given the information about two new officers, and without having a pretty fair idea of what really this new department involves, I don't see how we can be in a position to pass upon the project.

Mr. FISHER. Until the work is organized it will be quite impossible to state definitely how many employees will be required. It is new work and the number of employees and their salaries will be limited by the amount voted. At present, in addition to those on the civil list, there are six or seven employees doing work in my department which is covered by the provisions of this Bill. That is they are employed on general statistics work. There are three others paid out of the vote for general statistics but who are merely working on the Year-book. The six or seven employed on general statistics would have to be increased if this Bill passes, and that increase would be determined when the work is elaborated. Probably as many as four or five more would be required to be employed permanently besides such temporary clerical assistance as may be deemed necessary.

Mr. SPROULE. My hon. friend has given us to understand that there will be at least twelve employed in that branch among whom the money voted will be divided. What will be likely to take place next year and the years following ? Those employed will require larger salaries and more money will have to be voted. We will find that additional third-class clerks will have to be engaged, and that clerks will be promoted from one class to another, entailing every year an increased vote, and in the end this branch will reach the dignity of a department, so far as the expenditure is concerned. It does seem to me that we have not got all the information we should have. We have no definite information as to what this branch will do beyond dealing in statistics.

Mr. INGRAM. It would be interesting to know what number of employees the department has now under the Act respecting the census, the Act respecting statistics, and the Act respecting criminal statistics and the salaries paid.

Mr. FISHER. I had a list yesterday of the employees, but regret that for the

moment, I cannot lay my hand on it. Speaking from memory there are at present four paid out of civil government; I think there were four more whom we paid out of the general statistics vote who were practically permanent in the department. Three have been in the department for many years. One is a sort of messenger and typewriter who was appointed several years ago. There are also six employees who have been engaged in working up certain tables from the compilations of the census. That makes altogether fourteen employees in this branch. Of course, none of these are paid out of the census vote, but all are paid out of the general statistics vote, except one or two who are paid out of civil government. There is one officer employed in preparing the criminal statistics. The statistics are secured by arrangement with the judicial officers all over the Dominion, who are paid for sending in the returns. These returns are edited and put into the form of a report, and there is no expense here for compilation except the salary of one clerk. I think he is a junior second-class clerk and is paid $1,100 a year. His salary is charged to civil government. All the others are paid out of the general statistics vote. There is no payment out of the census vote or under the Census Act this year.

Mr. INGRAM. Then, money voted by parliament for general statistics has been taken for the census?

Mr. FISHER. I explained yesterday to the hon. member for South Leeds (Mr. Taylor) that certain tables had been made up from the facts compiled in the census. I suppose this might be called census work, but it is a kind of work that I want to have go on under the Act we are now discussing all the time between the times of taking a census. There is a vast quantity of information in the census volume which it is important to the public to have published in tabulated form. That is the work that some of these clerks have been doing. Some of these tables will be finished before the publication of the last volume of the census—some of them are ready now. I think it would be advisable that they should appear in this last census volume. I confess frankly that I cannot define precisely the limit between what may fairly be called census compilation and tabulation of this kind. I would point out that, under the arrangements of the United States permanent census bureau, they have already published two or three very important volumes of information drawn from the census—not issued as part of the census, but as special volumes. And they have a list in the document we have here, of subjects some of which are now in course of tabulation and others of which will be taken up as opportunity offers.

Mr. INGRAM. Then, the figures the minister has given us as to the actual cost of the census are hardly correct because some of the money voted for general statistics has been taken to complete the census?

Mr. FISHER. The figure I gave the other day included all that could possibly be charged to the census, down to the date fixed—the 1st of January.

Mr. INGRAM. What was the amount?

Mr. FISHER. I do not recollect. It is recorded in 'Hansard.' I included in that aggregate every charge that could with any reason be charged to the census. I can assure my hon. friend (Mr. Ingram) that I do not wish in any way to minimize the expenditure in connection with the census.

Mr. INGRAM. Is it not the fact that when parliament voted the money for general statistics, it intended the money to be expended for that work?

Mr. FISHER. I cannot speak as to that. But I can say that I intend to go on drawing information from the census. Believing that there was information of a statistical nature to be drawn from the census compilation, I sought to have that information tabulated. As being in charge of the general statistics service, I have always had the power—and on different occasions have exercised that power—to instruct the proper officers to draw up such tabulations. I do not pretend, and never have pretended that we should refuse to regard the census compilation as one of the sources from which we should draw information for general statistical purposes. Those compilations contain an enormous amount of information of great value to the public, but the ordinary individual can not extract that information for himself. It is the duty of the statistical staff to do that work and to do it in a way which will meet, not perhaps, individual demand, but a general demand. In that sense and to that extent that work has been done during the last fiscal year.

Mr. INGRAM. I think the Minister of Agriculture does not use the best judgment in choosing how he should expend this money. He gives to parliament a very wide interpretation indeed. In fact, he has been known to devote money voted by this parliament to an entirely different purpose from that for which parliament voted it. The hon. gentleman has taken some of the money that was voted for the census and expended it in investigating the census that had been taken ten years previous, and parliament never voted the money for that purpose; and we complain that the hon. gentleman has diverted money voted by parliament to a purpose that it was never intended for. It may be so now, that the money voted for statistical purposes, and that should be expended in a certain way, has been diverted and put into the census expenditures of this year, and will never be shown in the total census expenditure.

On section 4,—census enumerators—collection of statistics—temporary clerks and employees.

Mr. BLAIN. Will the minister give us an explanation of the meaning of 'census subdistrict ?'

Mr. FISHER. Let me first explain that this section is a combination of the similar clauses in the two Acts that are here consolidated, the Census Act, section 9, and the Statistics Act, section 3. This is a consolidation of these two Acts, and I have brought the powers and authorities under these two Acts together in this section 4 and its subclauses. There is no additional power asked for in this Act. As to the meaning of a census subdistrict, a census district is the district for which there is a commissioner appointed, like the division of a riding or an electoral district, a subdistrict is the enumeration district.

Mr. BLAIN. What would that be in the province of Ontario ?

Mr. FISHER. Generally speaking, in the last census we used the polling subdivisions. We took them as the basis of the subdistricts—those are the exact words in the present Census Act—to provide for the division of census districts into subdistricts for enumeration purposes.

Mr. BLAIN. In other words, the minister will have power to appoint every year the same number of officers that he appoints every ten years under the old Act.

Mr. FISHER. I have that power to-day under the General Statistics Act ; but I would never think of exercising it. It is quite out of my plan, as I explained yesterday.

Mr. ARMSTRONG. I understand from with reference to gathering statistics. Would it not be advisable to take into consideration the fact that there were imported into our country over one hundred million dollars worth of manufactured goods in the year 1904 ; and would it not be interesting to our people to know about how many men are employed, and the amount of money that is being paid to workmen in foreign countries to manufacture the goods that come into this country ? For instance, $100,000,000 worth of goods that might have been manufactured in Canada were imported in 1904, and outside of that, the increase in importations from Great Britain and the United States from 1896 to 1902 was $34,778,000. I would like to ask the minister if it is possible for him to obtain that information.

Mr. FISHER. No doubt that line of investigation might be very interesting, but I think it would be my duty first to investigate the conditions and productions within our country before undertaking to investigate those in foreign countries.

Mr. BOYCE. Could the minister tell the committee how much it costs to collect the criminal statistics ?

Mr. FISHER. Last year it cost $2,000.

Mr. BOYCE. How was that expended ?

Mr. FISHER. It was expended on a fixed scale, established by the statute, of payment to judicial officers of courts all over the country. Five cents, I believe, is the amount paid for each case, and in the case of summary convictions, two cents. We pay so much for each return ordered, which may contain one case or fifty cases. I am told we paid one dollar for each return. In many cases we pay the officer of the court so much for a return, according to the number of returns he sends in.

Mr. BOYCE. Will the minister discontinue that method of obtaining statistics ?

Mr. FISHER. No, I propose to continue it on that line.

Mr. BOYCE. Would the minister use the same staff to that extent, that he has been using for that purpose ?

Mr. FISHER. There is no staff except the one man here in Ottawa, who compiles the returns which are obtained from officials all over the country. I propose to use that same agency still. I am reminded that by law, and this law re-enacts it, those officers are bound to make these returns at the rate of pay which is fixed by statute.

Mr. HENDERSON. Under section 4, it appears to me that the minister is taking to himself full power to appoint all the enumerators. My impression was that heretofore the enumerators were appointed by the commission. I would like to ask the hon. minister if this is a change, or is he not taking to himself greater powers than he had before, and if so, what is the reason for the change ?

Mr. FISHER. I can assure my hon. friend that the wording of this part of the clause which applies to the appointment of enumerators is just the same as it is in the present Census Act. I take no extra power and I have no intention of making any change. The census enumerators have been appointed from Ottawa just the same as the commissioners themselves. The commissioners do not appoint the enumerators. They are appointed through the department here by Order in Council.

Mr. HENDERSON. Then, as I understand, the meaning of the Act is that these enumerators are to be appointed practically by the minister ; that is to say that he is not satisfied with the patrongae which former ministers had.

Mr. FISHER. No, the hon. gentleman will excuse me ; I am making no change. I am taking no power that I did not have before.

Mr. HENDERSON. That is quite possible, but I think the hon. gentleman is taking powers that were not exercised by previous governments showing that he has the disposition with this great 'I' that we hear so much about, to make all the appointments instead of the member for the county or the commissioner for the county having some little say in the matter. My impression is that the commissioners in the various counties will understand much better who are fit and proper persons to appoint as census enumerators, and if the Act is changed in regard to the census of 1901, and made different from what it was in 1891, I think it would be very well to take a backward step. I think the old rule was the best, that is to appoint the commissioner and let the commissioner from amongst the people living in the riding whom he knows well and with whose qualifications he is familiar, name his enumerators without having to fall back on the minister who could not possibly know the men who are qualified to do this work. I am not at all favourable to concentrating all the patronage of the country under the head of a department. I think we had a sufficient illustration of that in the province of Ontario and I am glad to say that the people have condemned it and I think they will condemn it here too. I think it is a bad principle for the government to persistently seek to take power from the people. Seventy-five or a hundred years ago the fight was to obtain power from the Crown and vest it in the people. Here we have a government calling themselves a Liberal government——

Some hon. MEMBERS. Hear, hear.

Mr. HENDERSON——and yet they will not allow the people to have anything to say in the administration of their own affairs. That is for the purpose of keeping a string upon the people, of concentrating and centralizing every power that can be possessed under this great 'I' that we hear so much about. I think it is a mistake and I would advise the hon. minister to go back to the old rule and let the commissioners appoint the enumerators.

Mr. FISHER. I am ready to go back to the old rule; in fact, I have never departed from it. The minister who conducted the census in 1891 followed this very same rule. The hon. gentleman (Mr. Henderson) was in the House at that time and he did not object to it. The minister who conducted the census of 1881 under an administration which the hon. gentleman supported for many years carried out that rule and that practice and appointed every enumerator in the Dominion of Canada from the central office at Ottawa. I dare say the rule is wrong. I dare say that the principles which the hon. gentleman is enunciating are right, but if ever there was an occasion when the great 'I' was repeated and exemplified in this country it was before the present Liberal government came into power.

Mr. FISHER.

Mr. HENDERSON. I remember when the census of 1891 was taken. I remember the gentleman who was commissioner in the county which I have the honour to represent, and I am quite satisfied that he appointed his own enumerators. I am not aware that he had to send to Ottawa to have his appointments confirmed; at any rate he made the appointments himself. There is no doubt about that. Whatever the statute was the practice was different. The practice was that the commissioner appointed his own enumerators, selected his own men and appointed them to the work they were to do. If that practice is not consistent with the Bill, then the words applying to the subject should be eliminated from the Bill so as to leave the appointment of these men in the hands of the commissioners without having to appeal to Ottawa to have these appointments confirmed. It seems to me that it is only dealing fairly with the commissioners and I am quite sure that a better selection will be made if some greater powers are given to the commissioners in the counties, because they certainly know a great deal better who should be appointed than an officer at the head of the department here. It is quite absurd to say that an officer here should know who is fit in the country to be appointed an enumerator. It is very nice—apparently the hon. minister thinks—to have the honour of that patronage. I am not aware that even the representative of the country is permitted in any way to interfere with the commissioner in his appointments. In the county which I have the honour to represent at the present time and which I represented at the time the census of 1891 was taken, I abstained altogether from attempting to influence the commissioner in his selection of enumerators. I think it should be made non-political, that the commissioners should be given a free hand, that these appointments should not be political appointments, but that the best men available should be selected. We are simply providing means to make these appointments purely political appointments, independently of fitness, honesty, or ability to do the work. I would advise the hon. minister to eliminate the words from this clause that vest in him powers to control the appointment of enumerators and to leave these appointments entirely in the hands of the commissioners.

Mr. INGRAM. I would beg to point out to the hon. minister that the statement he has made is not exactly in accordance with the fact. Under the Conservative regime the number of enumerators was very much less than under the hon. gentleman's regime. In my own city, for instance, under the Conservative regime there were four enumerators, while under the hon. gentleman's regime there were fourteen. The difference as between four and fourteen is very great, and when you apply this to the whole of the Dominion of Canada you will see

how it is that the hon. gentleman has increased the expenditure for the taking of the census. In the first place the census commissioner must collect these enumerators together and instruct them in their duties and for their attendance these men get so much per day. Take fourteen enumerators at $3 per day while obtaining their instructions and it will amount to so much, whereas, in our time, the instructions were only given to four men. Four men at $3 per day would mean $12 and if the hon. gentleman will multiply 14 by 3 he will see the difference between the two systems. That applies throughout the whole Dominion. The hon. gentleman has not only increased the number of enumerators but he has increased their pay, and the result shows the difference between the two systems. The hon. gentleman has stated that section 4 of this Bill is somewhat similar to the old Act. Section 9 of the old Act is section 4 of the new.

Mr. FISHER. Yes.

Mr. INGRAM. But, the hon. gentleman has added these words to it 'and in remote or sparsely settled parts of the country the minister may appoint one or more assistants for each enumerator.' While in the census of 1901, as compared with the census of 1891, you multiplied the number of enumerators, you are, by the Act you are now introducing, going to multiply that to a still greater extent in 1911, and it can only mean the increasing of the cost of taking the census of this country.

On section 6,—forms, rules, regulations and instructions, and rates of allowance.

Mr. BLAIN. Does the minister propose to keep the commissioner down to the schedule referred to in this clause ? The minister will remember that when this matter was before us two years ago, many instances were recorded where enumerators had overcharged the department, and these amounts had been paid. The hon. member for East Simcoe brought up a case the other day where an excessive amount had been charged, contrary altogether to the Act. The minister or his officials had signed for it and the money had been paid. If we are going to endorse the old rules we should have a promise from the minister that he will keep his departmental officials down according to the Act and not permit them to collect too large amounts.

Mr. FISHER. I will try as much as possible to keep them to the rules.

Mr. BLAIN. I suppose he will be more careful in the future in respect to the kinds of officials he appoints.

Mr. FISHER. Experience teaches.

Mr. BLAIN. Experience teaches, the minister says. It does not always teach, but I hope it will with my hon. friend. I would draw his attention to the fact that in North Hastings the commissioner who was appointed by his government had a bill of $653.14, and that mnay of the items were in excess of the table laid down by the hon. gentleman. Some little trouble took place in the county and Mr. Kelly thought he would bring some political pressure on the hon. gentleman, and so he brought down the famous Mr. A. B. Lott, who is well known in Canada at the present time.

An hon. MEMBER. What is he famous for ?

Mr. BLAIN. Ballot boxes at the bottom of the lake ; it was that same gentleman. He brought Mr. Lott down to the House and had an interview with the minister himself. That was brought out in the House two years ago and the hon. minister did not attempt to deny it. As soon as Mr. Kelly brought down Mr. Lott, who was a politician and had been a government candidate, the account was paid without any further trouble. The minister shakes his head.

Mr. FISHER. A part of it is paid.

Mr. BLAIN. The full amount $653.14 was paid. My hon. friend remembers that very well of course.

Mr. FISHER. A good deal more was asked for.

Mr. BLAIN. A good deal more was asked for ; there it is again. My hon. friend tells the committee the story. He says that the kind of officers he appointed under the old Act were the kind who asked a great deal more than they got, and that it was a question of compromise with the hon. gentleman. Here is a letter dated March 24, 1902, addressed to the hon. Minister of Agriculture :

> The Ontario elections are coming off at the end of May or the beginning of June.

That is what the commissioner appointed under the hon. gentleman said over his own signature in writing to the minister himself.

> The Ontario elections are coming off the end of May or the beginning of June. Mr. B. O. Lott is the unanimous choice of the Liberal convention. I have made up my mind to do some hard work in this north riding of Hastings. Mr. Lott is the best canvasser and the hardest worker ever went into a political contest.
>
> I have the honour to remain,
> Your old servant,
> WM. KELLY.

I hope that the hon. gentleman, when he is appointing his enumerators will not appoint old friends who will ask him to pay much more than the amount set out in the clause he is asking the committee to adopt.

On section 8,—census of the Dominion to be taken in the first year of each decade.

Mr. FISHER. This corresponds to section 3 of the Census Act, changed as to the time of year at which the census had to be taken. The Census Act says it shall be taken in the month of April. I believe that it would be much better to take it in June than in April, I think that that change would conduce to great economy and that a great deal more work could be done and done more easily and better in June, when the days are longer and as a rule the roads are much better, so that people could get about much more easily than in April when in the greater part of Canada the roads are breaking up and it is as difficult to get about as in the beginning of the year.

Mr. BLAIN. Has the minister considered that in June a great many people are away from home? On their wedding trips, the hon. member for West Toronto suggests. For instance in Ontario, a large number of workmen go to the west and stay out there for a great part of the summer while a great many are absent on pleasure, &c.

Mr. FISHER. Yes.

Mr. BLAIN. And after all that he has arrived at the conclusion that June is a better month.

Mr. FISHER. True, but all of these would be taken by the de jure system, just as they are now. There is no time of the year when a considerable number are not away, and that is the reason for employing the de jure system. I think that is a good reason I think that really there are fewer people absent from home in the first half of June, than at any other time of the year. The other reasons are very strong in favour of taking the census at that time.

On subsection 2 of section 8,—census of Manitoba and parts of the Northwest Territories, to be taken in the sixth year of each decade.

Mr. FISHER. This is to provide for the taking of a five year census in the province of Manitoba which is required by the Subsidy Act of that province, and it also applies the same principle to the provisional territories. If an Act is passed during the present session of parliament constituting these provinces, that would have to be consolidated with this, and the change would be made applying it to the new provinces. The reason for taking a census in Manitoba every fifth year is that we are required to do so by the Subsidy Act, and I think the same reasoning would apply to the territories or to the new provinces when created. Therefore I have introduced this section, which carries out that requirement.

Mr. HENDERSON. I quite understand the hon. minister's intention to be that the general census shall be taken all over the Dominion every tenth year. Then subsection 2 makes provision that a census shall be taken in the province of Manitoba and the Territories in 1906 and every tenth year thereafter. The intention is quite apparent to my mind, but I am not sure that the language used conveys that intention clearly. Might it not be interpreted to mean that in the province of Manitoba and the Territories the census should be taken only in 1906 and every tenth year thereafter? Is that not an amendment to section 8?

Mr. FISHER. I would not undertake to give a legal opinion upon that.

Mr. HENDERSON. I think the hon. gentleman should be able to give us a legal opinion, and let us know as a certainty.

Mr. FISHER. These clauses were drawn by the Department of Justice, who knew exactly what they were intended to do, and I supposed that they carried out the intention. I may say that I do not consider that subsection 2 can override the main body of the clause, which says that a census of Canada, which means the whole of Canada, including Manitoba and the Northwest Territories, shall be taken in 1911 and every tenth year thereafter. The next clause says that a census shall be taken in a certain portion of the Dominion in 1906 and every tenth year thereafter; but that does not in any way limit the first part of the clause, or provide that no census shall be taken in the province of Manitoba and the provisional districts in 1911 and every tenth year thereafter. I think the meaning is quite clear.

Mr. HENDERSON. Well, we do not want to rest on a 'think.' If the hon. minister would say so absolutely, I would rest there. I am glad to know that the Minister of Justice drafted the clause, for I would not set up my judgment against his; but it seemed to me that there might be some doubt, and now is the proper time to settle it.

Mr. FISHER. We might pass the clause, and I will see that the attention of the Minister of Justice, with my hon. friend's view, is called to it again.

Mr. R. L. BORDEN. The census of Manitoba and the Territories is different from the general census. Is that the intention?

Mr. FISHER. Yes, the requirement is only for taking the number of the people. That is done for the purpose of fixing the subsidy. The other census is far more general in its scope. This Act empowers us to take more information in the fifth year, between the decennial censuses, if we desire.

Mr. R. L. BORDEN. It says something more than the population. It says a census of the population and agriculture.

Mr. FISHER. Yes, it is intended that we should take some agricultural statistics at the same time. I do not think those words are really needed, because in other clauses of the Act we have power to do that. But

the probability is that we shall make use of the machinery which we shall employ for taking the numbers of the people to get some other information though not so complete in its scope as we now get in the decennial census.

On section 9—division of country into census districts by proclamation—

Mr. FISHER. This is the same as section 7 of the Census Act, with some slight verbal changes. The scope of the section is precisely the same.

On section 10—details required for general census,—

Mr. FISHER. This is based on section 5 of the Census Act, the chief change being that we provide that the values shall be taken as well as the quantities. We add here : ' whatsoever other matters are specified in the forms and instructions to be issued as this Act provides. We have that power in the Census Act, but it is put in here so as to be a definite statutory department. There are some other changes in details.

Mr. BLAIN. I think that in the taking of our census there should be a column for fallow land. I pointed out to the minister some time ago that in none of the censuses of Canada taken hitherto has there been any column of that kind. The minister stated in the House two years ago that the reason for that was that there was now no fallow land of any importance in Canada. The minister could not have given attention to the matter, or he would have known that there is a great deal of fallow land in Canada. There is hardly a farm in Ontario which has not every year from ten to fifteen acres being cleaned and made better for crop in fallow, and I am informed that the same thing is true of Manitoba and the Northwest Territories to some extent, and I suppose of eastern Canada. I think we should have a column for the enumerators to take the quantity of fallow land. It is very important that people intending to come to Canada, should be able to realize, on taking up the census, that Canadian farmers are up to date. But if they find that there is no fallow land in Canada and then take the statement of the Minister of Agriculture, they will come to the conclusion that our farmers do not understand the most advanced methods of cultivation. Every one knows that one of the great essentials for successful farming is to set aside a certain portion for fallow purposes, and it is very important that in the schedule we are now adopting there should be a column showing what land is in fallow.

Mr. FISHER. I shall be very happy to adopt the suggestion of my hon. friend and I would propose an amendment that a column be inserted showing the land in fallow.

Section as amended agreed to.

On section 15,

Mr. R. L. BORDEN. I would ask that that section be allowed to stand as one of my hon. friends who is not here has something to say about it.

Section allowed to stand.

On section 16,—the minister may arrange with the authorities of a province or territory for supply of its statistics.

Mr. FISHER. This is practically the same as section four of the General Statistics Act. There are only one or two verbal changes.

Mr. INGRAM. I see that in the Ontario Act, the Ontario government take power for their Minister of Agriculture to make arrangements with the Dominion Minister of Agriculture regarding such statistics. Has the hon. minister endeavoured to make any arrangement?

Mr. FISHER. I have not undertaken to make any arrangement and will not be in a position to do so until this Bill becomes law. When adopted, I shall try to enter into arrangements with the various local authorities, as contemplated under this clause.

Mr. INGRAM. The province of Ontario has a very complete system of collecting statistics. Does the hon. gentleman intend compensating the local government for furnishing these statistics which they have gone to the expense of collecting?

Mr. FISHER. This section does not mean in any way that we should contribute to the collecting of those statistics or their compilation, but if we make an arrangement with local bodies under which they will supply us with the information they collect, we will have to come to terms with them regarding the expenditure. It is not proposed that we should go into a sort of partnership with them for the collecting of statistics.

Mr. INGRAM. I would ask the hon. minister to allow this section to stand.

Section allowed to stand.

On section 17,—minister may call upon public officers for copies of papers, &c.

Mr. FISHER. That is the same as section 5 of the General Statistics Act.

Mr. LENNOX. Will the hon. minister explain to what class of public officers he refers in this section ?

Mr. FISHER. The section refers to any and every public officer in the country, whether provincial or municipal. That, I believe, is the interpretation that has been put upon the clause, and I do not know that any question has ever arisen under it. The hon. gentleman will see that it says :—

——with or without compensation for so doing, as is regulated from time to time by the Governor in Council.

As I understand it, that contemplates an amicable arrangement with such officials as are referred to. I might cite, as an instance, the collection of criminal statistics. There is an arrangement with the officers of the courts to supply information for pay. A similar arrangement could be made by the office here, as the result of what I might call bargaining with the various provincial and municipal officers for returns of the information they possess.

Mr. LENNOX. I agree with the minister that this would include officers of the local governments and the municipalities. That being the case, it seems to me we are legislating far beyond our powers as a parliament. The wording of the section, it seems to me, does not bear out the minister's argument. He says an amicable arrangement is contemplated by the wording. Well, if it read 'upon making compensation,' or 'upon entering into a satisfactory arrangement,' or something of that kind, it would more clearly cover the idea of an amicable arrangement. But the words 'with or without compensation' may cover a different idea. A municipality may collect, at considerable expense, a large amount of valuable information. It is their own, and they have an absolute right to use it as they think fit. But if this clause were carried out according to its wording, we would assume the right to expropriate—because that is what it means—the results of their labour and expenditure with or without compensation. I do not think it advisable that this parliament should trench upon the rights of the provinces. It is not wise that, depending upon the chance of an amicable arrangement, we should pass such a clause as this until we have considered carefully, and until the Minister of Justice has considered carefully, the wording of the clause. To me it appears to go clearly beyond our powers and to assume to vest in the Minister of Agriculture authority which this Dominion parliament does not possess. I am in favour of clothing the Minister of Agriculture with all reasonable prerogatives, but I am not in favour of assuming to give him powers beyond the authority of the Dominion parliament.

Mr. FISHER. I would not undertake to give a legal opinion on a point of this kind. But I might say that this is a clause that has been on our statute-book since 1879, and, apparently, it has never been called in question or disputed in any way. I think it a power that must be used with discretion. And my hon. friend will notice that it can be exercised only under regulations by the Governor in Council—not by the minister—as is shown by the last part of the clause.

Mr. R. L. BORDEN. So far as the question of expediency is concerned, it is conferring rather wide powers upon the Minister of Agriculture to provide that he may command from provincial officers certain work without compensation. I am inclined to think that parliament has the right to give him that power, but, as a matter of expediency, I would not think it very wise legislation. We have a somewhat similar case in the Franchise Act. According to my recollection, it is provided in that Act that the government here shall have the right to demand from provincial officers copies of lists in their possession, but it can only be done on giving them reasonable compensation, which, if I remember the terms of the statute correctly, was to be regulated by Order in Council. So far as the Dominion officers are concerned, it is quite right that the minister should have power to demand this information of them without further compensation than they already receive. But I would doubt the wisdom of making it apply to provincial officers. It might be advisable that the minister should allow this section to stand for a moment, in order that we may consider that point.

Mr. FISHER. I have no objection to allowing the section to stand for a few minutes. But, as I have said, it has been the law for a long time, and no difficulty has arisen under it. Of course, the power granted must be exercised with great discretion. I think it only fair that when information is required from such officers, due compensation should be given for any trouble they take or labour they perform, and, certainly, for any expense they are put to in furnishing the information. That, I think, would always be the plan followed by the Governor in Council. I think this clause is more to require the officers to do the work, that we may not be at their mercy as to whether they shall do it or not, or as to the amount of compensation they shall demand. I think it is an authority that is required, and I think the Governor in Council should always be ready to afford reasonable compensation.

Mr. R. L. BORDEN. On consideration, I would be inclined to the view that the section might pass in its present form. Perhaps the proper view is that the responsibility is imposed upon the executive of working this section out, and therefore parliament would very well conclude that, so far as provincial officers are concerned, this work will not be imposed upon them without provision for compensation. If you attempt to amend the section, you will make it a little cumbrous. In consideration of what has just been suggested, I would not, so far as I am concerned, ask that the section be allowed to stand.

On section 18—statistical abstracts of public reports and documents may be authorized—

Mr. FISHER. This is the same as section 6 of the General Statistics Act.

On section 20, examination for and correction of errors, &c.

Mr. R. L. BORDEN. Of course the minister will give the committee notice whenever these sections depart from the law as it stands at present.

Mr. FISHER. Yes.

Mr. R. L. BORDEN. My hon. friend from South Toronto (Mr. Macdonell) desires to make some suggestions with regard to section 15, if the minister will allow us to return to it.

Mr. FISHER. Certainly.

Mr. MACDONELL. I desire to draw attention to the fact that the manner of obtaining the information regarding commercial and manufacturing industries is really of an inquisitorial nature. This information has been obtainable at decennial periods in the past; and I think it is questionable whether it is a wise provision to give the minister power, every year, to obtain this information regarding commercial and manufacturing interests. We all know that capital is a sensitive creature, and commercial men often decline to give information for various reasons, reasons which I need not point out to the committee. But manufacturers do generally decline to give information about their private affairs, especially when that information is asked for every year. Agricultural information and statistics are of a different nature. But where you have capital invested in large enterprises, joint stock companies and other corporations, I question whether it is a wise provision to have this information collected and tabulated. The concluding part of the section also provides that the minister, in cases where he thinks it advantageous, shall cause such information to be published in such a form as the Governor in Council may prescribe. That provides machinery for the collection and publication of this information. It is, as I have said, of an inquisitorial character, and I would like to ask the minister if similar machinery has been working advantageously in the United States. In any case, I know that in the city of Toronto where this information is partially obtained municipally, great difficulty is experienced in dragging it out from manufacturing enterprises and concerns. If this is an experiment, if it is only pioneer legislation, I doubt its expediency; if not, will the minister tell us what the experience has been in providing this information for the census in the United States?

Mr. FISHER. At present this very system is going on in the United States, although the work is not completed. The permanent census office in the United States has the same power we are authorized to exercise by this Act, and the same power we have had under the Census Act in census years. I have found myself, and I believe my predecessors have had the same experience, that when information is asked from manufacturing establishments it often happens that they do not understand what use is going to be made of it, and a great deal of hesitation if not indignation is sometimes expressed at what they call the inquisitorial nature of the questions. A number of instances of that kind occurred during the taking of the last census. Wishing to avoid all friction and desiring to proceed cautiously, and with due regard to the feelings of the people, whenever any instance of that kind was reported by one of my enumerators, I sent up a special officer whose business it was to interview the individuals and explain the object of our proceeding. Also we wrote from the central office here a full explanation of the modus operandi of the census, showing to these people that although the information appeared in the schedule as regards their own business, in the published tables it only appeared as information in regard to the whole industry, the whole capital invested, the whole number of employees, the whole amount of products and so on throughout the list; and nobody could find out on examination of the published compilations what were the facts with regard to any individual industrial establishment. It was also pointed out to them that the original schedules containing all the details of their operations were absolutely secret, and nobody except the officers of the census had any access to them. When that was done their objections were removed, and with the exception of a very few cases, that I could count on the fingers of one hand, all the industrial establishments in Canada freely gave all the information we asked. What my hon. friend says in regard to the collection of this information in Toronto, is quite true, and it is true generally for the collection of industrial information for the province of Ontario. But I think that is owing to the fact that they have no authority under the law to extract this information, it is purely voluntary.

Mr. MACDONELL. Not at all, the giving of such authority is entirely a matter for the provincial legislature, it is a matter that concerns property and civil rights within the province, and they have a right to legislate and have legislated upon it, and actually obtain information along those lines.

Mr. FISHER. Then I have been erroneously informed. That may be the general law, but I do not think it is a provision under which machinery is operated for getting this information. I am not familiar with the Ontario laws, but I am informed there is no such provision or authority in

the Act under which this information is collected. It may be in the general law of the land, and there may be some provision in the Ontario legislation which, in a general way, gives that power to the government or to the municipality. I quite agree with my hon. friend that at first sight people engaged in industries are averse to giving this information until they are thoroughly satisfied that it is absolutely secret and confidential. When they are so satisfied, their opposition ceases immediately; and I am sure those people would themselves be the first to take advantage of the information thus acquired when it is published in tables covering the whole country. In regard to the United States, I may say that they have just the same authority we have here, an authority which is given to the Permanent Census Bureau, as it is called there, and they are working under that to-day. I have here a publication regarding the census in the United States, which alludes to that very thing, and shows that it is working satisfactorily.

I think it would be a great pity if an impediment should be put in the way of collecting industrial statistics as well as agricultural statistics. I think that the manufacturing interests of Canada would suffer if there were no such statistics collected. But I would say to my hon. friend that we have no intention or expectation of collecting these yearly, to begin with, at all events, and probably for a good many years to come one, two, or, at the most three such compilations between the decennial censuses were all we had any thought of. I think probably in this decennial period we would only be able to undertake one, or at the most two—probably only one. I am satisfied that after it had been once taken the very industries whose representatives have been speaking to my hon. friend would be amongst the first to say that the results of such industrial compilation were satisfactory and useful to them and that the dangers which they had anticipated had not resulted.

Mr. MACDONELL. In view of what the hon. minister has said I would still point out that this legislation is pioneer legislation. The experience of the working out of a similar clause in the United States is not before the people of this country or before the people of the United States. I understand the hon. minister to say that the American legislation was passed in 1902. Therefore, the real working or workability of the Act has scarcely been decided as yet. I desire to point out further that the information regarding industrial concerns that it is proposed to collect, is after all the private information of the parties to whom it belongs. It is the information of the corporations and individuals who own these establishments and it is in no sense a matter of penal legislation on the part of this House. It should not be made the subject of penal legislation such as this legislation is in that feature of it which provides penalties for non-compliance with the Act. There should be some evidence of the successful working out of similar systems in other countries before we adopt it here. I know a number of business interests that are protesting against this proposed legislation. They are satisfied to comply with the local Assessment Acts of the various provinces—I speak more particularly of the province of Ontario—and to supply the information called for in the schedules attached to these Acts. In the first place they have had something to say in the preparation of these schedules, and in the second place they are aware of what these schedules are. The hon. minister does not bring down a list of the questions that he is going to ask these people; he does not indicate what the schedules contain or what would be the nature of the information that he will require. There may be something in this regard in the mind of the minister, but he has not indicated to the House what information he is going to insist upon obtaining from these manufacturers. I think the people who own these establishments, who have their money invested in them, should be consulted. They should have some knowledge as to what inquisitorial proceedings are going to be taken in regard to their business. The hon. minister says that he is going to act with fairness and discretion in putting this Bill into operation and that the information shall be given in confidence, but his eternal continuance will end one day in this passing sphere. It may be that the hon. minister may not be always with us. Who knows who is going to take his place? What monument does he leave behind him in the shape of these tabulated schedules? This House has had no information as to what the intentions of the minister are nor has the country had any information. I think the least the minister should do in asking for drastic legislation such as is contained in this paragraph is to bring down to the House a statement of the information that he is going to ask from these establishments. I think that is required. It may be that the hon. minister has in his mind an idea of what this information is, but I think we are entitled to something more than the unopened and sealed mind of the minister. Succeeding ministers may have a different policy. It seems to me that there should be a uniform statutory policy which all ministers shall be bound by. I urge that this paragraph in its present form should not be inserted in this Bill. I think there should be some more detailed information given. The Bill is a pirate roving in provincial waters. I call it a piratical Bill because it provides for getting information from the provincial and other authorities with or without compensation. I think that before the power is given which the

hon. minister seeks, he should state what information he is going to ask from these people concerning their own private business affairs.

Mr. FISHER. I would be very sorry that the hon. gentleman should have such a bad opinion of the Bill as to characterize it as a pirate Bill, and to say that it is pioneer legislation and so on and so on. I do not think there is anything in the nature of a black flag or skull and cross bones in the legislation. Certainly this clause is not pioneer legislation. This power and authority have been given to the Department of Agriculture under the Census Act ever since we have had a census taken in Canada. It has been given in every country in the world where a census is taken. It is one of the absolute essentials of the collection of statistics. If you want to secure information and if you have no power to require the information your statistics are simply worthless because your information is not complete. Any bad natured or sulky individual in the community, or any small group of individuals could at any time defeat the whole object of the investigation if it were allowed at the caprice of an individual or a group who entertained some peculiar ideas as to their particular rights to refuse to give the information. That is one of the essentials of census taking. My hon. friend says that this is pioneer legislation. We have had the same kind of thing exactly in our Census Act for thirty or forty years.

Mr. MACDONELL. Only once in ten years.

Mr. FISHER. Only once in ten years but the principle is exactly the same. What does it matter whether you get certain information confidentially and secretly so that it cannot be published to the world once in ten years or once in five years? That does not interfere with the principle or the practical necessity of the thing. The thing is just as necessary in the case where you do it every five years or every three years as it is when you do it every ten years. My hon. friend says that this is pioneer legislation. The Act in the United States giving this power was passed in 1902 and it is working to-day. It has been working in regard to other things since 1902, and in the United States before that this same principle was applied to the taking of the census every ten years. I have here the report of Mr. Cortelyou who was the secretary of the Department of Commerce and Labour in the United States until quite recently and who had the management of this census. In this report he refers to the taking of the industrial census which is going on in the United States, and he takes credit to his bureau and to himself for doing this work and for requiring this information. That is the authority that I am asking for in regard to this matter. I do not think my hon. friend is quite right in saying that this is pioneer legislation and that it has not been tried. It has been tried, not perhaps in the degree in this country in which it is proposed to put it in operation but it has in this degree been tried in the United States, and the gentleman who has had the operation of it reports favourably on it and says that it is working satisfactorily. If I were to adopt my hon. friend's proposition and leave out this clause it would practically mean the prevention of the taking of industrial statistics of any kind whatever in Canada except in the census years. I would not undertake the responsibility, in establishing a census office for the express purpose of taking statistics, to exclude from its operations such a large, important and valuable class of statistics as those connected with the industires of the country. I think that the people engaged in the industries of the country themselves, in vast majority, would condemn me if I would agree to that exclusion.

Mr. MACDONELL. What I desired to suggest when I said it was pioneer legislation, was that the result of the operations of the American Act was not yet manifest to us, and I would again point out to the minister that under the language of this particular section No. 15, the information that the minister has a right to ask for and to insist upon obtaining, is not confined to the information authorized to be obtained under the existing law, upon the taking of the census. There is no limit to which he may not go. Further, he may demand the information which he is authorized to obtain, from one class of manufacturers and not from another or from one individual in a class of manufacturers; it need not be uniform. The minister may shake his head and say he does not intend to do so; I have no doubt he does not intend to work the Act oppressively, but I say that it is susceptible of that operation. You may pick upon a class of manufacturers engaged in a certain class of enterprise and insist on their making returns of their private enterprises year in and year out, and they might possibly be so harassed as to be driven out of business. The minister may again shake his head and say: 'No, no,' but the language of the Act permits that to be done. It may not be done by the present minister, but it leaves the way open for succeeding ministers to harass individuals. I am simply remarking on the loose framing of the clause, the indefinite character of the Act, and its wide, far reaching scope under which any information can be obtained.

Mr. FISHER. Does my hon. friend mean to say that I could ask one manufacturing industry to give information and not ask another to give the same information?

Mr. MACDONELL. I certainly think so.

Mr. FISHER. If this is my hon. friend's legal opinion, I would certainly ask the

clause to stand and have the opinion of the Department of Justice upon that point, because I would not wish for a moment to take that authority. If this meaning can be read into these words, I am willing to amend the clause to prevent this being expressed. The objection which the hon. member states is one to which I would at once give weight. The hon. gentleman, I understand, is a lawyer of high standing and he states as a lawyer on the floor of the House that this interpretation can be taken from the clause. Not being a lawyer and not pretending to have a legal opinion or knowledge I would certainly refer the matter to a competent authority before going further.

Mr. MACDONELL. I thank the hon. minister exceedingly for his kindness in that respect and I do urge the minister, not captiously but sincerely, in the interest of the House and of the industries of this country, that the information for which he can ask should be tabulated and placed in the schedule of this Act to be read concurrently, side by side, with clause 15. I commend that suggestion to the most respectful consideration of this House, and I think that the members of this House and the business interests of the country are entitled to know what they are to be asked concerning their own business. I think that the business interests of the country are entitled to know when embarking upon any enterprise just what information is to be asked of them and published more or less in the public records.

Mr. MONK. I think that clause 15 is susceptible of the construction which the hon. member for South Toronto (Mr. Macdonell) has put on it, and that it is open to the minister, under the wording of that clause, to seek to collect information from a certain class of manufacturers. I think there is no doubt about that.

Mr. FISHER. I do not think there is any doubt about that.

Mr. MONK. And from individual manufacturers alone, not from the whole class.

Mr. FISHER. That is the point in question.

Mr. MONK. The legislation is not new as the minister says, but it is being applied in a very extensive way in the United States. The circumstances that exist here are different from those that obtain in the United States, and I have had complaints of the same nature as those mentioned by the hon. member for South Toronto (Mr. Macdonell). In the United States the inquiries made and the information collected have become exceedingly detailed because in the United States they have a law against trusts and combinations which we have not here. The inquiry at present being held into industrial affairs is, I think, being held by the Bureau of Corporations which is a branch of the permanent Census Bureau, a new institution, in order to be able to apply with some degree of efficiency the law against trusts and combinations. It is necessary for the Bureau of Corporations to have this inquisitorial power which they have in the United States, under almost the same wording as we find here in section 15. But here we have no law against trusts and combinations, and it seems to me that until we have such a law—and I believe we are approaching a time when we must have that law—it is fair for us to ask that we should know exactly what kind of information will be asked from us. A very interesting report has been made by Mr. Garfield, the chief of the Bureau of Corporations, who is proceeding with this inquiry regarding industrial progress and industrial conditions in the United States. He has called into operation that power which my hon. friend (Mr. Fisher) is seeking to take here by section 15, and he had to ask from certain classes of manufacturers, or certain manufacturers in certain parts of the United States, questions which have not hitherto been asked, and which were not found in the usual schedules, such as the cost of production of the articles manufactured, the wages paid, the prices at which they sell an article in different parts of the United States, and the prices at which they sell in foreign countries. Mr. Garfield says that the securing of that information is absolutely necessary for him in order to place the government in such a position that it will be enabled to enforce the anti-trust and anti-combination laws. I may say frankly that I believe that we will soon have a similar law in this country and that it will then be necessary for the minister to have that power. Of course, as Mr. Garfield observes, he has had very few refusals from manufacturers and commercial men to give this information, once he has been able to ensure to them the privacy, between the government and themselves, of this special information he requires. As I said a moment ago we have not the anti-trust laws here, and I quite understand that our manufacturers under those circumstances would not feel inclined to give information in regard to the cost of production in regard to wages and in regard to the selling price of the articles they produce. Perhaps until we have such a law it would be better to fix exactly the nature of the information they have to give.

Mr. LENNOX. The point brought out by the hon. member for South Toronto (Mr. Macdonell) is a most important one, as regards the necessity of having a schedule determined now. I did not fully appreciate the importance of that until I examined the Act from which the Bill is taken. Looking at part 4, which we are just approaching, and at section 26, and referring back to the statute from which the minister takes section 15, with which we are now deal-

ing, we are enabled to appreciate the effect of what is proposed. The member from Toronto says it occurs to him that we should have it prescribed what the schedules shall contain and the information that shall be demanded. Strangely enough, when we refer to the statute from which section 15 is taken, we find that there is a safeguard thrown about the transaction in the original statute which is not to be found in the section we are now dealing with. Section 15 has a foot note leading us to suppose that it is taken from Revised Statutes of Canada, chapter 59, sections 1 and 2. Therefore, we are to assume that there is no material change—in other words, that this is not what the minister speaks of as pioneer legislation. Let me say that upon looking at this section, I find that we are having pioneer legislation of a very dangerous character, if the provision of the original section was necessary. That the minister may appreciate the importance of this, let me call his attention, in the first place, to the fact, that section 15 provides for the collection not only of agricultural, commercial, educational and manufacturing statistics, but also of criminal statistics. Then, part 4 of the Bill provides specially for the collection of criminal statistics, but in this case a special safeguard is provided, for section 26 of that part enacts that:

> All schedules transmitted under this part shall be according to forms from time to time approved by the Governor in Council and published in the 'Canada Gazette.'

On looking at section 1 of chapter 59, I find that although we have not in this Bill a provision to safeguard the public by providing that the form of schedule shall be determined by the Governor in Council, there is such a provision in the original Act. Section 1 of that Act says:

> The Minister of Agriculture shall, from time to time, subject to the approval of the Governor in Council, make such regulations and prescribe such forms as appear necessary and expedient, for the purpose of collecting, abstracting, tabulating and publishing vital, agricultural, commercial, criminal and other statistics, and such rules, regulations and forms, when assented to by the Governor in Council and published in the 'Canada Gazette,' shall have the force of law.

In other words, exactly what my hon. friend from South Toronto regarded as a proper and necessary safeguard was provided in the original Act from which the minister takes his Bill, and from which we are led to suppose that section 15 is taken by reason of the reference at the bottom of the section. Now, I quite apprehend that the minister did not himself realize that such an important change had been made. It emphasizes the necessity of very great care, in making these foot references, to see that we have a substantial re-enactment. In this particular case, unintentionally I have no doubt, but fatally all the same, we have left out this most important safeguard—that this shall not be exacted from the public until the assent of the Governor in Council is obtained—emphasizing the entire propriety of the demand made by the hon. member for South Toronto.

Mr. FISHER. My hon. friend is correct as to one point, but not as to the other. The whole of clause 15 is subject to the approval of the Governor in Council, and I do not think any part of it can be acted upon by the minister without an Order in Council. That provision is in clauses 1 and 2 of the Statistics Act. My hon. friend is correct as to the publication in the 'Canada Gazette'; but if my hon. friend refers to section 6 of this Bill, which applies to the whole Act, he will find that all these things have to be published in the 'Canada Gazette.' Therefore the provisions contained in sections 1 and 2 of chapter 59 are contained in this Act, although the whole of them are not specifically mentioned in section 15. My hon. friend is not right, therefore, in saying that any part of the original safeguards is omitted. I would like to say a word in reply to my hon. friend from Jacques Cartier (Mr. Monk). I am quite willing and desirous of securing that in no circumstances shall any arrangement be made for the collection of statistics which would permit us to ask from one industrial establishment, or from two or three or any number, what we are not asking from all industrial establishments of that class. Any wording that is necessary to make that clear I shall be only too glad to add to clause 15. As to the inclusion of the schedule in the statute, I think that is quite impossible. I say that not with any desire to prevent what my hon. friend is aiming at; but in the practical working out of the matter, I think it would be quite impossible. The different arrangements which might be found from time to time desirable, as to the kind and amount of information asked for, are so varied, and might require so many different schedules, that if we were to undertake to cumber the Act with those schedules, I think it would be quite impossible to carry on the work. I have a precedent for that: the Census Act does not contain the schedules or lists of questions—what my hon. friend is asking for in this case. The schedules are prepared every ten years for a census under the Act, and are authorized by the Governor in Council. So under this clause all schedules and questions must be arranged with the approval of the Governor in Council, and can only be issued and acted upon by virtue of an Order in Council. My hon. friend says that this is inquisitorial, and that there are great objections to it. For many years we have been asking questions under the Census Act, and there has been no practical objection. As I pointed out, at first, when these

schedules have been presented, a certain number of firms, not many, have objected, thinking them inquisitorial; but when they found that the information contained in the schedules was absolutely confidential, and was not to be given to the public except as contained in a compilation of the whole information in regard to that particular industry, their objection ceased at once; and I am satisfied that any objections made to this power will cease in the same way as soon as the matter is understood. The only position my hon. friend has practically taken in this respect is that this information is not inquisitorial when taken every ten years, but that it is when taken every five years or thereabouts.

Mr. MACDONELL. I desire to point out to the minister the difference between the old Act and the present Bill. The minister has omitted to mention that the word 'manufacturing' is in this Bill and not in the old statute. The statute says 'commercial and other statistics' and I do not think that under it the minister could obtain this information from manufacturing establishments.

Mr. FISHER. The words 'commercial and other statistics,' it seems to me would cover manufacturing.

Mr. MACDONELL. Why then insert the word 'manufacturing?'

Mr. FISHER. To make it clearer.

Mr. MACDONELL. I am still of the opinion that, read with the preceding words, the word 'commercial' would not cover manufacturing. But why not have the schedule so clearly defined that the people will know what information they will be required to give? People who are investing capital in manufacturing enterprises should know what kind of an inquisition is to be made into their private affairs.

Mr. LENNOX. The hon. minister did not meet the point I made. Under the old statute it is left to the Governor in Council to determine what forms of schedules will be adopted as well as whether any shall be adopted at all. Two things are thus left to the Governor in Council, namely, to determine whether the minister shall collect the information, and, if so, what forms of schedules shall be used. But under this Bill the Governor in Council has nothing to do with the forms. The Governor in Council authorizes the minister to collect the information, but the minister alone decides what forms shall be used. I think the House will see the importance of having investigations into people's business first sanctioned by the Governor General in Council and the forms of schedules determined on by the same authority before the department can set to work. In the part of this Bill referring to criminal statistics, it is expressly provided that the schedules shall be approved by the Governor General in Council, and it is equally important that the same precaution should be taken in commercial matters. I quite agree with the minister that it may not be necessary to incorporate the schedules in the statute, but I think that they should be subject to the approval of the Governor General in Council.

Mr. FISHER. That is the intention, and in consequence of the doubt expressed by my hon. friend on that point and that expressed by the hon. member from Toronto on the other point, I would ask that this section should stand so that I may refer it to the Department of Justice and have it so worded as to clearly indicate the intention.

Mr. MACDONELL. This clause should be also amended so that information may not be published only partially. As the Bill is now drawn, a portion of the information may be made public and a portion not.

Mr. FISHER. What my hon. friend means, no doubt, is that no information should be published about one firm which is not made public about other firms in the same business.

Mr. MACDONELL. Yes, so as to prevent rival firms getting an advantage over each other.

Mr. R. L. BORDEN. I agree in the opinion that it is desirable to reconsider the wording of this section. I have listened attentively to the remarks of my hon. friend from Simcoe (Mr. Lennox), and I agree with him that the same safeguards which are provided in the present law should be found here, and that they are in this section to say the least very doubtful.

Mr. FISHER. My intention was that they should be here.

Section 6 allowed to stand.

On section 15—agricultural, commercial, criminal, educational, manufacturing and other statistics.

Mr. INGRAM. I ask that this stand in order that I might get some information respecting the arrangements for collecting statistics. I find that the Ontario law is largely on the lines of the section in the hon. gentleman's Bill. I asked if any arrangements had been entered into between Ontario and the Dominion government regarding statistics, and he said no, but that it was his intention to make some arrangement.

Section 15 agreed to.

On section 21—Schedules of Criminal statistics to be furnished by clerks of courts.

Mr. FISHER. This and the succeeding clause are a repetition of clauses one and two of chapter 60, Criminal Statistics Act. There is no intention to make any change.

On section 29—this part shall remain in force and effect until it is declared to be no longer in force by a proclamation of the Governor in Council, stating that provision has been made for the collection of criminal statistics in accordance with the requirements of part III of this Act; and from and after the issue of such proclamation, this part shall cease to have force and effect.

Mr. LENNOX. Is that consistent with what has gone before? I would like the minister to explain why this is necessary and how it works out.

Mr. FISHER. The Criminal Statistics Act says, 'This Act shall remain in force and affect until'—and so on. We have to say, 'this part shall remain in force and effect'—and so on. That is, under the Criminal Statistics Act we have power to collect the criminal statistics in another way, and this part of the Act takes the place of the Criminal Statistics Act.

Mr. LENNOX. But does the hon. gentleman (Mr. Fisher) think that part 4 is necessary at all? In part 3 general statistics are provided for, and they would naturally include criminal statistics.

Mr. FISHER. There are certain special provisions of the Criminal Statistics Act which must be incorporated here, it seems to me.

Mr. LENNOX. It may be all right.

Mr. R. L. BORDEN. Has the minister utilized the work of the commissioners who are revising the statutes? Have they done any work on this part of the Bill?

Mr. FISHER. The officer of the Justice Department who drafted the Bill is thoroughly familiar with the work of the committee on consolidation of the statutes, and he had before him, when he considered this Bill, the first draft of that commission.

On section 30,—every person employed in the execution of this Act to take an oath of office.

Mr. FISHER. This is practically the same as the old section, with the addition of the words 'and to the secrecy of the statistics and information collected for the office.' We thought that should be inserted in order that it might be clearly understood that the oath of office bound the one who took it to secrecy in regard to the information coming into his possession.

Mr. BLAIN. The hon. gentleman (Mr. Fisher) will remember a former discussion when a circular was produced that originated in the province of Ontario, in the office of the Reform Association, and which was brought to the attention of the House. I have a copy of that circular here, but it is useless to put it on 'Hansard' again. The hon. minister will remember that it was directed to the enumerators of the census, and ordered them to report in duplicate the names of young men approaching 21 years of age. They were to find out the politics of these young men and in what polling subdivision they lived and a copy of the report was to be sent to the Liberal candidate in the last provincial election or to the candidate nominated on the Liberal side for the next coming provincial election. Has the minister put into this new law any provision that would cause the instant dismissal of any enumerator who would fill up a report such as is required by this circular and have him dismissed immediately?

Mr. FISHER. I do not know that there is any provision of the law which would have that effect. I would certainly think that such an Act on the part of an officer of the department was entirely unwarranted and improper, and should not be allowed for an instant.

Mr. BLAIN. That is all very well. But the fact remains that this was done. And the hon. gentleman (Mr. Fisher) himself produced on the floor of this House telegrams that had been sent out to those who were supposed to have received these circulars. He received answers from enumerators some of whom said the circular had not been placed in their hands, while others admitted that they had received it. The hon. minister did not make any investigation, although the leader of the opposition brought the matter to his attention and demanded that an investigation should be made. A clause should be inserted in this law—whatever may be necessary in the opinion of the Department of Justice—to provide for the immediate dismissal of any enumerator who will act upon such a circular in the interest of any political party. I should have thought that the minister would have a clear recollection of this case, and that he would have provided against it in some way. But it seems that he has neglected that—I suppose it is only neglect.

Mr. BARKER. I would remind the minister that there was a Quebec case also in which an officer of his own department issued a very important circular for which he had no authority whatever, and sent it all over the province of Quebec, demanding information that the statute in no way authorized. That was issued, I think, by Mr. Coté, a deputy, or a gentleman holding some position in the Census Department; it was issued without the knowledge of the minister himself, as he told the House, and was issued as a document from the Census Commissioner's office, and was franked by another minister's office, and sent broadcast throughout the province. Now, the hon. gentleman is providing, in section 31, that the neglect of certain duties by the officers of the department should be an indictable offence. I think the hon. gentleman should go further, and provide that if any officer, or commissioner, or agent of the

department, whether by letter or otherwise, requires information not authorized by statute, he shall also be guilty of an indictable offence.

Mr. FISHER. I would not like off-hand to give an opinion on that proposition; I would like to consult the Minister of Justice in regard to it. It may be advisable that such a clause should be introduced.

Mr. R. L. BORDEN. Might it not be advisable to consider the necessity of some provision in the statutes to this effect, that any officer undertaking or assuming to obtain information other than that which he was instructed to obtain by the department, should be criminally liable, and any attempt on the part of any outside person to induce an officer of the department to procure information not authorized by the department under the law, should subject such person to penalty or imprisonment? It appears to me that might be a very proper provision, in view of the matter which has been referred to by my hon. friend.

Mr. FISHER. I think it would be proper to provide that the officers collecting information should not be allowed to collect any other than that provided for in the schedule. As to the other point, I should like to consult the Minister of Justice.

Mr. FITZPATRICK. I think the Criminal Code provides for that already; I know there is some provision.

Mr. R. L. BORDEN. I think it very probable. The Minister of Justice would do well to consider that.

Mr. BOYCE. Section 12 of the Act prohibits the enumerator from obtaining any other information than that which he is required to obtain under the Act, but there is nothing in the Act to enforce the provisions of section 12. That is merely a statutory direction more honoured in the breach than in the observance. Therefore, it is vitally important that if the words 'and no others' provided for in section 12 are required, that any infraction be penalized in the closing clauses of the Act.

Mr. FISHER. I will look into that.

Mr. LENNOX. I would ask the minister to answer the question in reference to section 30, which says:

> Every officer, census commissioner, enumerator, agent or other person employed . . . shall take an oath.

Would that apply to section 17, in reference to public officers?

Mr. FISHER. I should think it would apply, at any rate, to this extent, that if these public officers supply information to this office they should accompany that by some declaration that it was correct as originally collected. But I do not think that would apply to the extent of requiring them to take an oath that the information they supplied was initially correct, because they have to take the word of somebody else for that. But we could require that all the information they supply was such as was given them.

Mr. LENNOX. There are some other matters in this section that would indicate that to be the case, and I would like to consider it further.

Progress reported.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

CALGARY AND EDMONTON RAILWAY.

House in committee on Bill No. 22 respecting the Calgary & Edmonton Railway Company.—Mr. Oliver.

On section 2,

Mr. LENNOX. How much is this bridge to cost?

Mr. OLIVER. It is estimated by the railway company to cost $600,000 if built for railway purposes, or $1,000,000 if built for railway and traffic purposes.

Mr. LENNOX. Which is it to be built for?

Mr. OLIVER. Authority is being asked to build it either for a railway bridge alone or for a railway and traffic bridge as may be subsequently agreed upon between the different parties interested, that is to say between the railway company, the government and the municipalities particularly concerned in having the bridge made a traffic bridge.

Mr. LENNOX. I do not understand this very well and probably I am asking questions that may seem very absurd, but as no one else is asking anything I want to find out what it means. I understand that there is power to borrow $1,000,000 'in aid of the construction of the branch line from Strathcona to Edmonton.' Then paragraph 2 says:

> The said bonds shall be called bridge bonds and shall be the first preferential claim and charge upon the said branch line and upon the said bridge and its approaches.

Then this million dollars is not exclusively for the bridge?

Sir WILLIAM MULOCK. No.

Mr. LENNOX. I think I see the point all right now.

Bill reported, read the third time and passed.

SUPPLY.

House in Committee of Supply.

Public buildings, Quebec—Acton Vale public building, $8,000.

Mr. HYMAN. This, Mr. Chairman, is to complete the payments on the public building at Acton Vale in the county of Bagot. The contract for the building was let on the 28th of June of last year for $10,250. The population of the town and parish to be served by the office is 3,000.

Mr. MONK. I would like to say in a general way in connection with these public buildings and without my remarks being especially applicable to the public building at Acton Vale and without going over the ground that was gone over yesterday in connection with our system of procedure in regard to public buildings, that I have looked over the list of public buildings in the province of Quebec, and I find that there are 12, 13 or 14 public buildings as regards which I doubt if there has ever been any urgent demand upon the government for their construction, otherwise than by the desire exhibited by the sitting member to have a public building. I think that is about the genesis of the public building.—I have seen many of these buildings in Quebec and I suppose they are the same all over Canada—and it bears the date of its erection and the name of the minister prominently displayed; sometimes it bears the name of the sitting member, and the expectation of the sitting member is that if he gets a public building he will consolidate himself in the constituency. As a matter of fact a number of members have declared to me that public buildings have been the cause of untold bitterness to them.

Sir WILLIAM MULOCK. It works the other way.

Mr. MONK. Generally it works the other way. The locality chosen gives rise to a good deal of bickering and heart-burning and often there are several possible sites chosen and the ultimate choice of the location leads to a lot of heart-burning. The contractor who erects the building finds many enemies for the sitting member and the man who is placed in charge of it generally makes a great many enemies for the sitting member also. That is what I have noticed in regard to public buildings since I have been in this House. The hon. member for South Toronto (Mr. Macdonell), I think, pointed out what has been a ground of complaint since 1896, that there is no system in regard to public buildings, there is no rule and as a general thing we never have any information here in regard to these public buildings. I have heard time and time again the predecessors of my hon. friend tell us that such and such a sum which we were voting would finish certain public buildings, and the next year we were called upon for a new appropriation for the same buildings. I have asked for plans time and time again, before we started on a public building, and I have never been able to obtain them nor much other information which is absolutely necessary in order to proceed in a businesslike way to the execution of this policy of building public buildings, if it may be called a policy. Take the public buildings in Quebec for this year and we have no data; my hon. friend will admit that. My hon. friend (Mr. Hyman) is a stranger to the province of Quebec.

Mr. HYMAN. A foreigner.

Mr. MONK. Not a foreigner but a stranger, and I would not like to ask him a number of questions in regard to these public buildings which would prolong debate uselessly. As a matter of fact, many of the constituencies where many of these public buildings are to be erected are not even represented here to-night and probably the bitterness of which I spoke a moment ago is already in the souls of the members who have asked for these public buildings. We will vote to-night for the class of public buildings I have alluded to, some $500,000, about $200,000 for public buildings in localities that I am perfectly sure could be benefited infinitely more by another kind of expenditure. We will vote a couple of hundred thousand dollars to complete what? To complete a sum I have no hesitation in saying of about $600,000, nearly three quarters of a million dollars, in order to finish these public buildings, and when we have spent $750,000 or $600,000 or perhaps more than three quarters of a million dollars on these public buildings erected in localities of which I will say a word in a moment, we will have made a permanent charge upon the public revenue of nearly $60,000 a year. If my hon. friend (Mr. Hyman) will take these public buildings and have an estimate made of what they cost for repairs, gas, heating, and caretakers, I think I am making a moderate estimate in saying that he will find that it will cost us about $60,000

a year to maintain these public buildings. I am equally certain that I am within the limit of reason in saying that for the purpose for which these public buildings are being erected $60,000 a year of rental would give the public all the accommodation they required. I am prepared to go carefully over each of these localities—I am not speaking of the city of Quebec or Montreal or Three Rivers, but of the smaller places—and to say that with $60,000 a year we would secure sufficient accommodation for all the public services and be free in each case to change the office to lease more space and so forth. In these small localities the important part of the town is often changing. I could point out a number of public buildings in Quebec that were probably erected in the right places when they were erected, but which are not now in the most suitable part of the town. But they are there to stay and to remain a charge upon the public treasury. Yet if the government to-day wished to secure accommodation in the same towns it would probably erect buildings elsewhere. I desire very much to emphasize this fact, that I am not opposed to public buildings in any of these particular smaller localities; not at all. If the Minister of Public Works wished to put up a public building in every locality in my own county I would not refuse.

As a matter of fact, when I was younger in public life, I think it was in 1901, I called the attention of the then Minister of Public Works to the fact that he was putting up no public building in my own constituency, where one might be of use, and he promised to take the matter into his serious consideration. The ground I take is that we could spend the same amount of money in these constituencies with much better result than by continuing what I am told has been the slipshod policy of every government, of putting up a public building merely to satisfy a particular member, because a previous government had put up one in another constituency. Now, I have looked over this list of appropriations for public buildings in my own province, and I believe that in many of these instances, if the people at large were consulted as to whether they would prefer to have a public building in one of the villages—because most of them are villages—or to have some other improvement which would benefit the whole constituency, there would not be a moment's hesitation. Our policy regarding public buildings is one that rests very often upon the vanity or the individual ambition of the sitting member to do as much as some other man has done. For instance, take the first place mentioned, that is, Acton Vale, in the county of Bagot, a very strong agricultural constituency, where much dairying is successfully carried on. I have no hesitation in saying that we could do much more for that constituency in the field of agriculture than by putting up a public building at Acton Vale. What is the great complaint in Montreal and the other centres from which butter is shipped? It is that our present system of bonusing the steamship and railway companies to provide cold storage facilities for the conveyance of perishable goods is faulty—why? Because these companies would be obliged under any circumstances to provide accommodation for perishable products, particularly butter. Our produce men in Montreal say that the government, instead of spending so much in bonusing these companies, which must supply cool space for the purposes of their business, should give some aid to the farmers who after bringing their butter to the stations, are obliged to leave it there sometimes three or four hours in the sun and subject to great deterioration. It has been urged upon me very often in Montreal that the government had much better devote some money to the erection of cooling rooms or small ice houses at the principal depots where butter is received. That would benefit, not a particular locality or a particular contractor or a certain set of men, but the entire district. Then, improvements might be made in the mail service. If the hon. minister were to offer, as I do not think he will, either to put up a public building in my own constituency or to spend the same amount of money on improving the mail service, I have no doubt that my constituents would not hesitate for a moment to say, give us an improper mail service, or do what this government has been urged again and again to do—reduce the indebtedness to the government of the Montreal Turnpike Trust; and you will benefit all the farmers throughout the constituency. Then, everybody knows that, for the development which we require in most of these counties where public buildings are going to be erected, important railway communications are required; and I have no doubt that if the same amount of money were expended on improving the railway communications, a far greater benefit would be bestowed upon the people. I do not apply these remarks to large centres like Montreal and Ottawa. Consider the immense amount of money we are spending yearly in rents in Ottawa, I think over $30,000, with departments spread all over the city. It seems to me that it would be better for us to install properly the central offices of administration than to squander money all over the country in that way. I have given utterance as briefly as possible to the view which I have entertained for many years of the policy of the government in regard to public buildings. I quite agree with what has been said, that if we adhere to that policy, it would be a great convenience for us to have a clearer statement of the stage at which the work has arrived on each of these public buildings, of the site and of the plan, as we ought to have a cer-

tainty that the expenditure will not go beyond a certain fixed sum in any particular place. But there is no such rule. I make these observations because I know that candidates in the fever of an election contest take up any utterance that we have made here in connection with the erection of public buildings, and invoke it before the people in order to prejudice them against us. Therefore I do not see the use of singling out any particular building. The remarks I have made apply to all, and I thought it well to make them in the first instance in order to facilitate the business of the committee.

Mr. HYMAN. In answer to the hon. gentleman, I have to say, in the first place, that with regard to every building for which the government is taking a vote, there has been a very clear and concise statement made of the estimate by the chief architect, and all the details; and I will endeavour to see that the expenditure does not go beyond the amount voted, although there are often contingencies arising in building operations to make it impossible to keep the cost entirely within the estimate. For the first time, I think, we have learned the secret of some of the opposition given in the House to this expenditure. The hon. member for Jacques Cartier takes exception to the custom that prevails in the province of Quebec of putting certain names on the buildings. He says it is customary to put on a building the name of the member representing the constituency in this House, and also the name of the minister. Possibly I may soften his opposition to this particular building by assuring him that I shall be glad to forego the honour of having my name placed upon it, and that I should be very glad indeed to place upon it the name of the hon. member for Jacques Cartier if he thinks that will in any way add to the lustre and honour of his name after he departs from this sphere. With regard to the system of erecting public buildings, that did not originate with this government; it has been in existence for many years. As I said last evening, if you consider the system purely and simply from the dollars and cents standpoint, I have no doubt that it cannot be defended entirely as a business proposition. But it has been the custom, I think ever since confederation, to lay aside a certain amount of money for the construction of these buildings. With regard to the particular building at present under the consideration of the committee, I do not know what other expenditure could possibly be made in the county of Bagot. It is an inland county, in which there has never been any expenditure on wharfs or other public works. The hon. gentleman says that the money might be spent in improving the mail service. I feel quite sure that if the people of Bagot have any complaints to make in regard to the mail service, my hon. colleague the Postmaster General will see that these complaints are remedied. The hon. gentleman referred to the question of a public building in his own county. Well, I shall be very glad to give every consideration to anything the hon. gentleman may lay before the department on that subject; but after his gloomy picture about the granting of public buildings, and the bickerings and heart burnings which he says occur in most constituencies where public buildings are erected, I am sure he would not care to have one erected in his constituency.

As to public buildings in Montreal, Toronto and the other large cities of the Dominion, there can be no question of doubt in regard to the policy of the government. But I must say that I am not prepared, nor, I think, is the government prepared, to subscribe to the idea that, having provided buildings for these cities, we must stop at that. I believe that care ought to be exercised; but there are so many considerations that govern the decision as to erecting public buildings in smaller places that it is almost impossible to lay down a rule. The matter was discussed many a time when hon. gentlemen opposite were in power, and they never were able to lay down a rule that could be always adhered to, nor do I think that any such rule could be framed.

Mr. BOYCE. Would the minister please state the post office and the customs revenue.

Mr. HYMAN. The postal revenue for the year last reported was $949. There is no customs house there at present.

Mr. BOYCE. Is it intended to establish a customs house there?

Mr. HYMAN. I understand that it is.

Chicoutimi public building, $15,000.

Mr. HYMAN. The site chosen for this building is a very desirable one and cost about $2,400. It is intended to put up a building there that will cost, for the building proper $21,000, and for the whole structure, including heating, wiring, fittings, &c., $30,000.

Mr. BARKER. Is the present appropriation intended to complete the work?

Mr. HYMAN. No, I have just explained that, we are to spend $30,000 and so we must ask for another vote.

Mr. BARKER. I ask, because last year, $8,000 was voted for this building and $4,000 spent. This vote will make a total of $19,000. The minister started last year with $8,000, then asked for enough to increase that to $19,000, and now we have a prospect of $30,000 expenditure.

Mr. HYMAN. Not a prospect—a certainty.

Mr. BARKER. I ask this, as I wish to do on every occasion, because I think it is the duty of the minister to tell us, not what he wants for the season, but what he expects ultimately to spend on the work. I think if that rule were followed on every occasion, we should have a little more sense of responsibility on the part of ministers.

Mr. HYMAN. The first vote was for $8,000. We are now asking for $15,000. I have already put it on 'Hansard' that it is the intention of the government to spend for this building $30,000. Of necessity, therefore, the government must ask for another vote to make up the total, and that vote will be asked for in the main estimates or, in the supplementary estimates, of next year.

Mr. BARKER. What is the population of Chicoutimi, and why is a $30,000 building required there? I do not profess to know much about the business of Chicoutimi. I was there a great many years ago. I am not aware that it has made any wonderful progress. This vote of $30,000 compared with the appropriations in other parts of the Dominion seems a very large sum and should call for some explanation.

Mr. HYMAN. I had the pleasure of visiting Chicoutimi, one of the few places I have been able to visit since I undertook the work of the department. Chicoutimi is advancing very rapidly indeed. It has now, I am informed, a population of about 6,000 or 6,400. A number of important interests have been centering there, and I have no doubt that when it is made, the great practical terminus of the Lake St. John Railway, it will become a very much larger town than it is at present. The lot on which the building is to be placed makes it necessary to construct a building rather more than usually expensive. The lot has streets on every side, and it is in a very prominent place. Every passenger getting off the boat, and every person who comes to Chicoutimi must see the public building. There are practically four fronts, each of which must have a certain amount of ornamentation. This will make it necessary to spend $2,000 or $3,000 more than would otherwise be spent.

Mr. BOYCE. What is the postal and customs revenue?

Mr. HYMAN. The postal revenue is $3,085, and the customs about $8,000. I may say that it is intended that this building shall also afford accommodation for the government telegraph service and engineering department.

Public buildings, Quebec—Dominion buildings—renewals, improvements, repairs, &c., $12,000.

Mr. MONK. How is it intended to apply this amount? We vote every year for the public buildings of Quebec $12,000, and every year we spend that amount. A strange coincidence. What is it intended to do with the money this year?

Mr. HYMAN. The vote is always $12,000, but I do not know that the expenditure will be $12,000 exactly. I have no data to show exactly where this money is to be spent. It depends upon contingencies that may arise and the decision of the architect with regard to them.

Grosse Isle quarantine station—improvements and repairs to buildings, &c., $12,000.

Mr. HYMAN. This is called for by the Department of Agriculture, which department, as the committee is aware has charge of Grosse Isle.

Mr. MONK. An amount was voted last year, and we were told specifically what it was for. According to my recollection the installation of a fresh water system was one item of expenditure. What is to be done with the present vote?

Mr. HYMAN. It is partly a continuance of the work last year. Money has been or is to be spent on police quarters, drainage, plumbing, hospital fire escape, painting superintendent's residence, new quarters for sailors, plank walks and other items—it is a general vote.

Mr. BARKER. But this year we do not require to do that work.

Mr. HYMAN. Only a part of the work has been done. In this item there is completion of the quarters for sailors, an ice house, well, repairs to medical superintendent's residence and other items.

Mr. BARKER. Will this vote finish everything except the ordinary repairs that go on from year to year? 'Improvements and repairs' is a very general expression. The hon. minister can easily spend $100,000 on 'improvements.'

Mr. HYMAN. I am not in a position to promise the House that there will be no more improvements at Grosse Isle. I do not know whether the hon. member (Mr. Barker) has visited Grosse Isle, but I was there some time ago, and I must say that some of the buildings are not in a good state of repair, and must, in time, be renewed. So far as the Department of Public Works is concerned, it has no intention of asking more than this vote. But the hon. gentleman will understand that if the department in control of the quarantine station come to the Public Works Department and say that the accommodation is not sufficient and show good reason why a new building should be constructed, I am sure the hon. gentleman himself, considering the importance of that quarantine station, would not ask the department to pledge itself not to ask for another vote.

Mr. BARKER. The hon. minister misunderstood me. I am aware that repairs will be needed every year.

Mr. HYMAN. And renewals—there may be renewals.

Mr. BARKER. Government buildings are, or ought to be, of a very substantial character, and so they should not require to be renewed frequently. But I admit that repairs are constantly needed, because government buildings should be kept in the best condition of repair. I do not dispute that for a moment. But when we have the word 'improvements' stuck on every year, $12,900 last year, $12,000 this year, and so on, I think we ought to know when this is going to end.

Mr. HYMAN. The hon. gentleman's remarks might apply to public buildings of the character we have been discussing a little while ago, but they do not apply to this case. These buildings are wooden buildings, or a large number of them; some of them have been in existence for forty-seven years. Under these circumstances, no doubt, they will have to be frequently repaired and renewed. It is the intention of the department to repair and renew them. Except for these purposes the department does not expect to have to apply for further appropriations in the way of buildings.

Mr. BERGERON. You are prophesying.

Mr. HYMAN. Of course, if the Agriculture Department makes a demand for works we have to supply them.

Mr. BERGERON. My hon. friend will regret very much that he made such a promise. I think for the last twenty-five years these improvements have been on the estimates.

Mr. BLAIN. How much was expended last year on headquarters for sailors? I understood that in the vote last year a certain amount was to be expended on headquarters for sailors. How was the money expended?

Mr. HYMAN. It was expended by day labour. If the hon. gentleman knew the circumstances, he would know that we have to house all the men employed there and provide accommodation for their families, $8,000 was spent last year, and we require some $6,000 more to complete that building.

Mr. BLAIN. Last year we were told that $8,000 would complete; how is it the hon. gentleman comes forward now and asks for $6,000 more?

Mr. HYMAN. I understand that last year it was hoped that we would be able to put up this building on the same kind of foundation as was under the other building. But when the matter was further investigated it was found that this building, which was 150 feet long by 32 feet wide, would require to stand on a heavier foundation than the other buildings. That is the explanation of the increased cost.

Mr. BLAIN. How much money was spent last year on plumbing?

Mr. HYMAN. I read out in detail the whole of the expenditures for last year.

Mr. BLAIN. Last year the Hon. Mr. Sutherland, Minister of Public Works, said, speaking on this item:

> This is an addition to the vote of last year. Of that vote $1,058 was expended.
>
> Mr. LENNOX. This will complete the work?
>
> Mr. SUTHERLAND. Yes, according to the estimates submitted by the Department of Agriculture.

Last year the minister asked for $12,000 to be voted and stated to the committee that it would complete the work. That is only a few months ago. Now, the hon. gentleman comes forward and, in a case where $8,000 was asked for last year to complete the work, he asks for $6,000 more. It is not to be wondered at that the representatives from Quebec are anxious to know when this work will be finally completed. My hon. friend will remember that for this plumbing he has mentioned this evening, about the same amounts were voted last year, with which he promised to complete the plumbing. One would imagine there were extensive buildings going up there every year. Preparation of the plans and specifications on which the estimates are based, would seem to show some recklessness in the department somewhere.

Mr. HYMAN. I see the point the hon. gentleman is trying to make. Last year the Minister of Public Works made certain statements to the effect that the vote he asked for would complete the plumbing, and it did not complete it. He had an estimate given by the architect of the department, which it was supposed would complete. But it does not follow that the amount voted last year would complete for this year. As I stated, there were old buildings which naturally require renewal and repairs. This is a very necessary work, at any moment we are liable to have 1,000 or 2,000 people landed on that island.

Mr. BLAIN. It is quite true that I am not acquainted with that island, but when the minister comes forward and makes a statement that $8,000 is to be expended for headquarters for sailors, and promises that it will complete the work, and then comes forward the next year and asks for $6,000 more, and without explaining the reason—

Mr. HYMAN. I am sure the hon. gentleman does not wish to be unfair. He asked me for explanations and I gave them.

Mr. BLAIN. I do not wish to misrepresent the hon. gentleman, but I ask him to be more careful in the preparation of his estimates. The committee does not wish to hold him down to exactly $8,000, we would not complain if he exceeded it by a few hundred or a thousand, but when he asks for $6,000 more, almost as much again, it does look either as if his officers were reckless

in the preparation of the estimates or as if the minister was not very careful in making statements before the committee. The committee is quite willing to vote the necessary money, so far as we are concerned, but we are anxious that the hon. gentleman should be more careful in preparing his estimates.

Mr. BERGERON. Were these amounts spent by day work ?

Mr. HYMAN. Yes.

Mr. BERGERON. I see here a certain amount for electric lighting, Ahearn & Soper, Ottawa. Isn't that going far from Quebec for such things?

Mr. HYMAN. Some of these articles come from the United States.

Mr. BERGERON. They can be got in Quebec. I see also an item for wheelbarrows from Frost & Wood in the province of Ontario.

Mr. FITZPATRICK. They have an agency in Quebec.

Mr. BERGERON. What county is that in?

Mr. FITZPATRICK. Montmagny.

Mr. BERGERON. I see that they have been repairing some steamers there.

Mr. HYMAN. Yes ; we repair the 'Challenger' there every year.

Mr. BERGERON. That is one of the expenses in connection with that place ?

Mr. HYMAN. Yes.

Lachute public building, $10,000.

Mr. BLAIN. Will my hon. friend give us some explanation about this ?

Mr. HYMAN. This is a vote for the purpose of erecting a public building in Lachute, in the county of Argenteuil. The site has not been procured for the building yet, but it is intended to procure a site at an early date. There are some negotiations going on in regard to several sites. We are trying to get options on two or three sites.

Mr. BLAIN. How much are the site and building expected to cost ?

Mr. HYMAN. I cannot give the information in regard to the site. In a town of any size a difference of thirty or forty feet will make a difference of at least a thousand dollars in the cost of a site. We always try to meet the wishes of the inhabitants of towns and cities, and I do not know what we may have to do in this case. We will buy the best site available for the building.

Mr. BLAIN. Will this amount complete the work ?

Mr. HYMAN. No.

Mr. BLAIN. How much will it cost for the purchase of the site and the erection and equipment of the building ready for occupation ?

Mr. HYMAN. I have endeavoured to explain to the hon. gentleman that I cannot venture any prediction or estimate as to the cost of the site. I want to be perfectly frank with the committee, and I want to be left to exercise some judgment in regard to where the site ought to be. Therefore, it is impossible for me to give any estimate in reference to the site.

Mr. BLAIN. Have you no estimate in regard to the building ?

Mr. HYMAN. I expect to be able to put up a building there for about $13,000. I might explain that we have made careful estimates of several classes of buildings, which we designate in the department as A, B, C and D ; and when a public building is to be erected, I simply say that we will put up building A, B, C or D, as the case may be. It depends, of course, on the locality in which the building is to be erected as to the cost. The same building in one locality will cost $2,000 or $3,000 more than in another locality. I propose to put up what we call building B in Lachute.

Mr. KEMP. When is it intended to commence the work ?

Mr. HYMAN. Just as soon as we can get a site. It is intended to advertise for tenders immediately.

Levis public building, $30,000

Mr. MORIN. Is this building under contract ?

Mr. HYMAN. The building is under contract.

Mr. MORIN. Who has the contract ?

Mr. HYMAN. Mr. J. Couture, of Lévis.

Mr. MORIN. Have you bought the site ?

Mr. HYMAN. By some arrangement with the Railway Department we have acquired a site for this building.

Mr. MORIN. What will be the size of the building ?

Mr. HYMAN. 64 by 45 feet ; two and a half stories, with an annex 34 by 30 feet ; pressed brick on a stone foundation.

Mr. BERGERON. I suppose this will be the ordinary building to accommodate the post office, customs and inland revenue ?

Mr. HYMAN. It is to cover all the departmental wants of the town.

Mr. BLAIN. What will the total cost of this building be when it is finished ?

Mr. HYMAN. The contract for the building is $22,000 ; heating, $2,500 ; and electric wiring and fixtures, $1,500. The furniture and fittings will depend upon the number of letter boxes that may be decided on

after the building is completed. We have to ask the Post Office Department as to the number of boxes they will require, and for that we have figured $4,000 or $4,500. For sidewalks, if it is found that there is any necessity for replacing sidewalks, we estimate $500, and, with contingencies, it is figured that the building will cost $33,000 or $34,000.

Mr. MORIN. Was the building let by tender ?

Mr. HYMAN. Yes, the work was let by tender, and the contract was given to the lowest tenderer.

Mr. MORIN. When is it to be completed?

Mr. HYMAN. On the 30th October, 1906.

Mr. BLAIN. How much did the site cost?

Mr. HYMAN. I have just explained that the site cost nothing. It came from the Railway Department.

Mr. BLAIN. Government land ?

Mr. HYMAN. Intercolonial Railway land.

Longueuil public building, $11,000.

Mr. MONK. What class of building is this—A, B or C ? This distinction, which the hon. minister made a few moments ago, is the first one I have ever heard in connection with this policy of erecting public buildings.

Mr. HYMAN. This building has been under contract for some time, and this amount is to complete it.

Mr. MONK. This new classification of buildings has not been discussed or mentioned in this House before. I would like to ask the hon. minister whether he has plans, details and specifications of each of these four classes of buildings, because if he has made a classification of this kind, it would simplify our work a great deal if he would place on the table plans, details and specifications of each of these four classes of buildings. Then all we would want to know would be as to whether such and such a class of building had been adopted.

Mr. HYMAN. Notwithstanding the fact that the Department of Public Works may put up a building which we term A in a certain locality for a certain sum, we may not be able to put up the same building at another point for the same sum, but we adhere to the cost of the building as nearly as possible. In erecting the same building in two different localities we have found a difference of $3,000 in the cost of a $20,000 building. It depends on wages, the question of the availability of stone, the cost of brick and other local considerations. Within a distance of a hundred miles there may be a difference of between 10 and 15 per cent in the cost of the building. I understand the desire of the committee to be to as nearly as possible, arrive at what the department expects to spend on a particular work. I have endeavoured to reach a standard, and it is as close a standard as I have been able to get.

Mr. BERGERON. What is the cost of each of these classes of buildings—A, B, C and D ?

Mr. HYMAN. Building A would be a small building which we would put up where there is nothing but a very small post office.

Mr. BERGERON. B ?

Mr. HYMAN. B would be a building where the accommodation would be somewhat greater, and C where there would be a customs house in addition to post office. In addition to that, we have to consider the question whether we have a Public Works office in the town or not.

Magog public building, $10,000.

Mr. BERGERON. Is that completed ?

Mr. HYMAN. No, it is not begun yet.

Mr. BLAIN. Will the minister give us an explanation of this?

Mr. HYMAN. This is a vote of $10,000 towards the completion of a public building at Magog.

Mr. BERGERON. I understood it was not commenced?

Mr. HYMAN. Neither is it. The $10,000 is a vote for the completion of the building.

Mr. BERGERON. What does the site cost?

Mr. HYMAN. We have not bought a site yet but we are negotiating at the present time.

Mr. BERGERON. What class of building is this?

Mr. HYMAN. The postal revenue at Magog is $2,527, and the customs revenue is $3,609. The population is 3,516. The building we expect will cost $21,500 to complete. It is a building with a stone foundation with a brick superstructure.

Mr. BERGERON. Who has devised that kind of building? I have remarked it in many places. It is stone for the first story and brick above.

Mr. HYMAN. Not always.

Mr. BERGERON. I may say that it makes a very bad appearance. I do not know who has invented that building or why it was decided to make these buildings in that way.

Mr. HYMAN. I am sorry we have offended the artistic eye of my hon. friend, but I have always understood that the public buildings put up not only by this government but by the late government under the

present chief architect and his predecessors compared, as a whole, very favourably with the buildings of the larger corporations. I do not think the committee would desire to put up a building costing $20,000 with a brick foundation. I think the extra cost is warranted by the longer life of the building and the lower expense for repairs.

Mr. BERGERON. We will come later to some buildings which I want to discuss. I think that this class of building is an eyesore in some cases and I do not think it would cost more to make the buildings all nice brick or stone. I must say that the buildings which have been put up by this government are not at all to be compared with those erected by the late government. I do not know if they cost as much. Take for example the public building at Sorel, which is really a very nice building.

Mr. HYMAN. It is an all stone building.

Mr. BERGERON. That is what I am saying; I do not think it costs much more and it looks a great deal nicer than the new ones.

Mr. BLAIN. This I understand is in Stanstead county. The first knowledge we had of this was an item of $5,000 asked by the Minister of Public Works to put up a public building at Magog. The minister said that the building would cost $12,000 but now the acting minister comes forward and says it will cost $21,000.

Mr. HYMAN. No.

Mr. BLAIN. What does my hon. friend say?

Mr. HYMAN. The hon. gentleman says it will cost that amount. I said that the estimate of the department of the cost of the building is that amount but in addition to that there are the boxes, the fittings and the heating.

Mr. MONK. The peculiar feature of this is that generally there is a vote for a public building a year before an election in a constituency, and then nothing is done. Parliament votes $10,000, as in this instance, for the immediate construction of a building, but nothing is done, the election takes place there is a terrible scuffle about the site and the whole thing is put off from year to year.

Mr. HYMAN. Of necessity the votes we are asking now were asked last year. Every vote, practically, in the estimates is a vote that was initiated last year except for buildings that have been running more than one year.

Mr. BLAIN. I misunderstood the hon. gentleman then. I understood him to say that the total cost of the building and site would be about $21,000.

Mr. HYMAN. I have said that $21,000 is the estimate of the cost of the building. I have said that when the site is not purchased it is impossible to put any estimate on it as a few feet difference in the position of the site makes a difference in its cost. I estimated that the building would cost about $14,000 that is, for the contract itself; the heating would cost $2,500 and if there is any wiring to be done it will cost $500. and the fittings are estimated to cost $2,500. We will have to get from the Post Office Department the number of boxes that will be necessary. Renewals of sidewalks, &c., may cost $500 and contingencies $1,500, making a total of $21,500.

Mr. BLAIN. My hon. friend says $21,500. The first statement by the minister (Mr. J. Sutherland) was $12,000 and at another place he says $25,000.

Mr. HYMAN. I am cutting it down.

Mr. BLAIN. My hon. friend is getting economical but he has not bought the lot, I notice. I wish the minister would be a little more careful in the statements he makes to the committee.

Mr. HYMAN. What statement does my hon. friend object to?

Mr. BLAIN. I am not objecting to the statements the hon. gentleman himself makes, but I suppose he is responsible for the statements made by the minister (Mr. J. Sutherland). In the selection of a site I suppose that, as the hon. member for Jacques Cartier suggests, the members are perhaps consulted.

Mr. HYMAN. Why not?

Mr. BLAIN. Because the hon. gentleman does not consult the members on this side, and he is supposed to be non-political in the expenditure of public money.

Mr. HYMAN. I should be glad indeed to consult the members.

Mr. BLAIN. Perhaps he might explain whether it is the 'A,' 'B' or 'C' building that will be erected in constituencies represented by hon. members on this side of the House.

Mr. MONK. I would like to have a 'B' building.

Mr. INGRAM. I understood the minister (Mr. J. Sutherland) to say that it was supposed $500 or $1,000 would be paid for the site. What I find fault with is that we do not have the same statements in successive years. We have a variety of Minister of Public Works and each minister has a different statement.

Mr. HYMAN. And we are getting worse all the time.

Mr. INGRAM. One minister makes a statement on which his estimate is passed and the gentleman who succeeds him enlarges a little on that. That has been the general history of the Department of Public

Works. In the general elections the candidates assist the ministers in promising their constituents public buildings. They generally have a promise of a post office or public building on which they ask support; occasionally they have a private letter in their pockets which they show to their friends privately, but they have not the courage to produce the letter publicly so that their opponents could get a chance to see whether the Minister of Public Works takes a hand in promising these buildings. I think it is high time that this sort of thing should stop; let us fight these matters on fair grounds. If a public building is really necessary in any place I am sure the opposition will assist in passing estimates for all reasonable expenditure, but it is like striking below the belt when government supporters have these private letters in their pockets and endeavour to make votes in that way.

Public building Montmagny, $10,000.

Mr. MORIN. Will the minister state what he proposes to do about this building?

Mr. HYMAN. I propose to put up a new one.

Mr. MORIN. Then you will throw the old building down. Remember that it has fallen down itself. How much money do you propose to spend on it?

Mr. HYMAN. I hope to be able to put up a building there at a cost of about $10,000.

Mr. MORIN. I do not wish to be hard on the minister or to prevent that building being erected; but I wish to tell him that there has been a regular farce about that building for the last six years. In the first place, there was a building there, and our friend Choquette took a friend there, and he got the government to buy that building for $7,000. To hear him talking in the House, you would suppose that it was a first-class building; but the postmaster was in it for only about a year and a half when the whole thing went down on his back. The foundations were no good, and the building went down three or four years ago, and every year since there has been $5,000 or $6,000 asked for a new building. How soon will you put it up?

Mr. HYMAN. We are going to put up a new one.

Mr. MORIN. Will you have a good foundation?

Mr. HYMAN. I promise the hon. gentleman that we will try to have a good foundation. I understand that the other was a little shy of foundation.

Mr. MORIN. Ask the postmaster how shy he was when he got caught. It was very lucky for Mr. Choquette that he was not there.

Mr. HYMAN. I will see that the foundation shall have the particular care of the department.

Mr. MORIN. The ground there is very soft, and you should go deep enough and put up a good building; and after you have it built, do not ask us for any more money. Ask enough now.

Montreal barracks for permanent corps, $20,000.

Mr. BERGERON. Where is that going to be built?

Mr. HYMAN. This vote is put in to enable the department to start the work. There has been no decision as to the location of the barracks, nor am I able to state at the present moment the exact size of the building.

Mr. BERGERON. Has the minister any idea of how much it will cost?

Mr. HYMAN. I am not able to state the exact amount. It depends on the number of men, the quarters and the character of the building. If I am pressed closely in regard to this vote, I must ask to let it stand.

Mr. BERGERON. I thought the minister had some idea of the cost, because this has been spoken of in Montreal for about eighteen months. I may say that I do not see any politics in this at all. The building is very much wanted. I understand that there has been some correspondence between the city council or the authorities of Montreal and the Department of Militia and Defence. Perhaps the Minister of Marine and Fisheries can enlighten the House on this subject. I imagine that as soon as the site is chosen the work will be commenced; for I do not suppose the government have put the amount in the estimates simply to make people believe that they intend to do so.

Mr. HYMAN. May I suggest that possibly it will meet the views of the hon. gentleman to allow the vote to pass, with the understanding that at any time when the estimates of the Minister of Militia are up the information may be asked from him.

Mr. MONK. I think the Minister of Marine and Fisheries may be able to give us some information on this matter, which is one of considerable interest in Montreal. I understand that under the agreement the city of Montreal is to furnish the site. For my part, I have no objection to the item passing, but I think we should have some explanation as to how far the negotiations have proceeded. One site suggested was behind the mountain and another east of the city.

Mr. PREFONTAINE. I am aware that ten years ago the city of Montreal voted $25,000 towards the erection of this military

school building. The matter has been in abeyance since. The military authorities have represented that it is necessary to go on with the enterprise, and last year, before the elections, it was about concluded that the school would be placed at Point aux Trembles where the shooting grounds are. Later it was represented that the site was not near enough to the city of Montreal, and the negotiations were resumed. It was almost decided to choose a site in the east end near Lafontaine Park; but protests were made. No arrangement having been arrived at, the Department of Militia notified the city of Montreal that it would establish the school on Lafontaine Park, which belongs to the Dominion government; but I understand that the city of Montreal object very strongly to the school being established there, and is trying to secure a site elsewhere. The city has been trying to secure some land on Montreal park, partly on the Brunet estate and partly on property that belongs to the city. That site was objected to, however, and I understand that the city is at the present moment negotiating with regard to three or four other sites which the Department of Militia will have to consider. I am not aware that any particular site has been chosen apart from the notification given by the Department of Militia to the city of Montreal that if they could not secure another site, they would have to erect the school on Lafontaine Park.

Montreal examining warehouse, $20,000.

Mr. HYMAN. This is mainly for elevators. There are six, and this is to complete the work.

Montreal inland revenue building—additions, repairs, &c., $50,000.

Mr. BERGERON. Where are you going to put that building?

Mr. HYMAN. As hon. gentlemen from Montreal who are acquainted with the present building know, it is a very old one, and understand the city has offered, if the department will extend it, to transfer to the department a small piece of ground now used as a park. I am unable to give the committee even an approximate estimate of what the building will cost. It will depend on the extent to which we can use the old building, which I understand has been built fifty or seventy-five years. In this case, I shall have to ask the committee to trust the department to incur no greater expenditure than will be necessary.

Mr. MONK. Has the government acquired the site which the city has promised—the Place Royale?

Mr. HYMAN. No, simply because the department has not been able to make up its mind as to the extent of the work it can undertake. I understand that the city is prepared to transfer the site, and this amount is appropriated with that understanding. For the reasons I have explained, the department has not started the negotiations. They do not know what the requirements will be.

Mr. MONK. I am told that the inland revenue building is entirely too small.

Mr. HYMAN. That is the reason for the vote.

Mr. MONK. But the enlargement cannot be effected for the amount of the vote. I cannot understand how it is that the department has not closed the matter of the site, because it has been pending for much more than a year? I understand that some of the neighbouring proprietors signed a petition against the site being deeded over to the government. That opposition was made, I think, over a year ago.

Mr. HYMAN. The first of this vote was only last session, and it was only then the department were in the position to negotiate.

Mr. AMES. Do I understand the minister to say that he has any authority for the statement that the city will provide the site?

Mr. HYMAN. I do not know that I am in a position to say that I have any authority in black and white, or that I am in possession of exact information. But I know that the question of the extension of this building came up, and it was intimated to me—I do not remember by whom—that if we desired to extend the building, the city of Montreal would give a site for that purpose.

Mr. COCHRANE. I have listened to this style of argument for a long while. In our part of the country we would not consider building until we knew where we were going to build. Yet, here we have the minister asking money for building after building, though he cannot tell us anything about the sites. We are simply voting this money blind. And, from what I know of human nature, I think the minister will find that, the announcement having been made that he intends to put up a building, he will hardly be able to secure the site except at exorbitant figures. I understand him to state that the city of Montreal will give the site if he will agree to enlarge the building, but when he is asked for particulars, he cannot tell us anything upon which he bases that statement; he cannot tell us where he got the information, or whether he got it at all. It seems to me absurd for the minister to ask us, as representatives of the people, to vote public money when he does not know anything about where that money is to be put. The excuse is made that the building is seventy-five years old. What difference does that make?

Mr. LEMIEUX. It is too small.

Mr. COCHRANE. But it is no harder to enlarge a building one hundred years old

than it is to enlarge one five years old. The question is, not the age of the building, but whether it is in a good state of repair. I have no objection to vote money for proper public buildings in this great country of ours, but I think we ought to know from the minister what the cost is to be, and not have further repetitions of what we have seen here—the minister asking for a few thousand dollars and, before the building is completed, asking for three or four times what we were led to believe the total cost would be.

Mr. GALLERY. I am a member of the city council of Montreal, and I think application has been made by the department for the small piece of ground that has been referred to. Speaking as a member of the city council, and judging from what I have heard other members of that body say, I think they will not hesitate to give it in order to secure this fine improvement. I think my hon. friend from St. Antoine (Mr. Ames) will back me up in what I say.

Mr. AMES. I do not wish to suggest for a moment that this vote is not needed. The building at present occupied by the department is a very old one, and should be exchanged for a modern building within the least possible delay. But the part I object to is the intimation on the part of the minister that the putting up of this building is conditional upon the site being provided by the city. We have voted this evening a great many appropriations for post offices and other public buildings throughout the Dominion, and in every case the site was deliberately purchased by the department. I do not think it quite fair to the city of Montreal to discriminate by saying that unless the city of Montreal provides the site this money will not be spent. The city council, I am sure, are prepared to enter into legitimate negotiations. I listened carefully to learn whether the minister had any authority on which to base his statement that the site was to be provided by the city. In regard to that statement, I have a letter from the acting city clerk of Montreal saying that he has looked up the matter of the proposed extension of the inland revenue building, and he does not find any resolution passed to furnish the land gratuitously. There are a number of matters pending to be arranged by negotiation between the city of Montreal and the government. These questions will probably be settled some day by an interview between the representatives of the city council and the various departments at Ottawa that are interested. I think it only fair to leave the city of Montreal in these negotiations free to offer the piece of land for this building. I desire to enter my protest against making this vote conditional on the city gratuitously providing a site. As the hon. member for St. Anne's (Mr. Gallery) said, I am sure the city will be ready to negotiate in a friendly spirit, but I do not think you are justified in making the enlargement of the inland revenue building conditional upon the city handing over to the government a piece of valuable property.

Mr. GALLERY. As a member of the city council of Montreal, I remember that three or four years ago the city council made application to the government for a piece of ground, and the government were so kind as to give that ground. I do not see why the city of Montreal should now object to give the government this ground, which is of no earthly use to the city, especially when the government is going to use it to put up a good building. I think my hon. friend (Mr. Ames) will help me in the city council, especially as the government will spend probably $100,000 in putting up this building. The present building is an eyesore. I think the city will not object to giving this property as a site for a public building.

Mr. AMES. I would ask the minister if he would have any objection to striking out the words 'site for addition to be furnished by the city'? That is a discriminating proviso, and does not treat the city fairly. Strike this out, and the question of the site will be a matter of negotiation between the city and the government, and I am sure both will enter into it in a spirit of fairness. But the vote in its present form seems to say that if the city does not provide a site the building will not be constructed. That means that the consent of parliament is made conditional upon the decision of an outside and independent body.

Mr. LEMIEUX. Has my hon. friend (Mr. Ames) forgotten that the city of Montreal has received from this government already very valuable sites? There is the Champs de Mars, there is Logan's farm and Fletcher's field handed over to the city for nothing.

Mr. MONK. I understand that the properties referred to have not been deeded over, but leased to the city.

Mr. LEMIEUX. At a nominal rental of $1 a year.

Mr. MONK. But this is a question of handing over property absolutely. I go back to the point referred to by my hon. friend from Northumberland (Mr. Cochrane). We are asked to vote an amount for an improvement which cannot be carried out unless the site is provided in some way or other, and, when we ask if the site is provided, the only information we have shows that no site has been secured. The building which the government has on the Place Royale is an eyesore. And the little strip of land adjoining the present building cannot be of much use to the city of Montreal. It cannot be of much use to anybody, so far as I can see, except the government. If the government secures that site and puts

up a building costing $100,000—I think it must spend that much before that work is ended—it seems to me the city of Montreal will get good value for what it has given.

Mr. GALLERY. I understood the minister to say that if the city would not give the site, no building would be put up.

Mr. HYMAN. I do not want to make it so strong as that.

Mr. GALLERY. I understood the minister at the beginning to say that.

Mr. MONK. That is what is meant by that condition.

Mr. GALLERY. I think the city of Montreal cannot afford to lose such a fine building as that. If the hon. member for St. Antoine, Montreal (Mr. Ames) will help me here to-night, we ought to be good for this small piece of land.

Mr. BERGERON. We have to consider that this building must be in a certain place. It is at present near the custom house in the business centre, surrounded by wholesale stores and warehouses. If the city of Montreal gave a piece of land too far away, it could not be accepted, because the building has to be in the centre of the city. The present building is a small one, on a small square. There has been a tendency in Montreal the last few years, as the members of the city council know very well, to enlarge the squares.

Mr. PREFONTAINE. It cannot be done at that place.

Mr. BERGERON. Unless it is all taken up, and even if it were all taken up, it would still be objectionable. My impression is that the only way to solve the question would be, if the foundations of the present building are not solid enough to support two or three stories—because we are having some skyscrapers now in Montreal—if the foundations are not strong enough, it would be better to take down the old building and put up another very high one where the present one stands. That is the only way that we can have the Inland Revenue offices in the most proper place in the city, and if we went anywhere else they would not be convenient for the public. It is of no use talking about getting a piece of land from the city; the government had better make up their minds immediately to put up a building which will be a credit to themselves and to the city.

Mr. AMES. I would like an answer from the minister whether he would object to striking out that clause in the estimate.

Mr. PREFONTAINE. It is clear from the estimate itself that the government has made up its mind to have a new building; but if there is to be an addition to the building the city will have to furnish the site. I know the site very well. The building is an eyesore, everybody admits that, it must be demolished and rebuilt, and it can be rebuilt five, six or ten stories high, as need may require. But if it is thought proper to enlarge the building, and the city of Montreal is not willing to give us the extra ground, then we will have to build on the same ground. The city must understand that if they want more accommodation they must furnish the site. The place which it is in contemplation to use for an extension of the building, is perfectly useless at the present moment; it is only a place where a lot of idle people congregate, there are no trees on it. So if the city does not think proper in its own interest to give a little piece of that ground in order to have a larger building, then we shall have to renew the building as it exists. There are many precedents for cities furnishing sites for public buildings. There is an item in the estimates for a military school at Three Rivers, the site to be furnished by the city. It rests with the city council of Montreal to say whether they will take interest enough in the city to furnish the land for a larger building.

Mr. AMES. I find it necessary in discussing this question to speak not only as a member of parliament, but as an alderman of the city of Montreal. As an alderman, I have been cognizant that certain negotiations have been going on with the government from time to time to settle a number of matters in dispute. We are anxious to secure certain favours from the government, we are anxious to secure certain privileges on St. Helen's Island, also on Lafontaine Park, also on the ancient burial ground on Papineau Avenue; we are anxious to secure these from the government. Now it is a matter more or less of barter, in which we have some things the government wants, and we are prepared to make reasonable exchanges with the government. We have this piece of property which the government desires in order to extend one of its necessary public buildings, we are probably prepared to grant that; but we want it to be considered as one of the commodities which we have in our barter and sale with the government. Now I want to point out that you are bringing to bear undue pressure on the city council to make them part with one of their assets, which is a valuable one when we come to the matter of settling up these difficulties with you, because you are in the position of saying that unless the city council gives you this land for nothing, the Inland Revenue Department shall continue in its present congested condition, and the citizens of Montreal shall continue to cry out, and you will say, It is not our fault, the city owns the land, and unless the city gives the land we cannot put up the building. You are therefore bringing pressure to bear upon the city council to part with one of its assets, which they are holding in view of making eventually a fair settlement with you of the various questions at issue. Further

than that, I think you are discriminating against us, because you are voting a sum of money, the expenditure of which depends upon concurrent legislation on the part of another body over which you have no control. Unless the city council practically ratifies your decision, why, the building cannot go up. I think therefore it would be far better to strike that line from the estimates and allow that matter to be dealt with in an amicable spirit along with the other questions which are at issue between the government and the city. I am sure you will find on the part of the citizens of Montreal no desire to get the last pound of flesh, no disposition to mete out Shylock treatment to the government. But we do not wish to part with one of our assets absolutely, aside from a settlement of other outstanding questions.

Mr. FITZPATRICK. We are wasting a lot of valuable time in discussing this question. The item must pass in its present shape or not at all, because the committee has no authority to add anything to the item that is brought down, and it will add to the burdens of the country if you take that rider out, because it would add to the item the value of the site. If we pay for the site we add to the vote. You cannot do that constitutionally.

Mr. AMES. It is not a matter of payment for the site, it is a matter of exchange for the site.

Mr. HYMAN. The hon. gentleman forgets the most important part of the whole question. If we get the site we will extend the building; if we do not get the site rather than pay for the site, we might possibly prefer to make the building higher. That is the gist of the whole question, and must be taken into consideration by the department.

Montreal military buildings—new stores building, $10,000.

Mr. HYMAN. This is one of several military buildings that are being erected at the headquarters of the different military centres. There is one to be erected in Montreal, one in Winnipeg and one in London. They are for the purpose of storing military equipments of all kinds, and have nothing to do with armouries. At present, buildings are being rented for that purpose in certain places, and at large rents.

Mr. SPROULE. How many years has this item been in the estimates?

Mr. HYMAN. Only last year.

Mr. SPROULE. I object to that principle, as I did last year. To my mind it is a very bad principle for the government to follow. The government either require that money for expenditure or they do not; if they do not require it they should not have it. If it is not intended to expend it, but to keep it on the estimates dangling before the people, it is always available when elections come on, though it may never be used—I say that is an unsound principle. The government should not ask for anything they do not intend to spend.

Mr. BERGERON. Has anything been done to that building yet?

Mr. HYMAN. No. I think there are some negotiations going on with the permanent corps in Montreal. I have no objection to let the matter stand.

Mr. BERGERON. I do not know anything about it.

Mr. HYMAN. This item is for erecting a stone building in the city of Montreal for the purpose of receiving the militia stores. Ten thousand dollars was put in the estimates last year but we have been unable to obtain a site. We have not started negotiations for a site for the building. If the committee desire me I am satisfied to let it stand.

Mr. SPROULE. I am not objecting to the expenditure of the money. If the government desire to spend the money and are prepared to spend it, all right. I am not objecting to the item at all but I am objecting to the principle of voting money year after year for three or four years as we have been doing in this case and not a dollar of the money spent.

Sir WILLIAM MULOCK. We are so economical. Why should you be pressing us to spend money?

Mr. SPROULE. I am not pressing you to spend money but I am objecting to the improper course of asking for money that you do not intend to spend. The government ought first to make up their minds that they intend to spend so much money on a public building, ask parliament for it and, if it is granted, expend it. But, if there is no definite object in view to have an item in the estimates dangling before the public it is wrong.

Mr. HYMAN. There is no doubt that would be wrong, but this item was put in the estimates only last year and it is being revoted now.

Mr. SPROULE. I asked if it were put in before last year and the answer was 'yes.'

Mr. HYMAN. No, the answer was not 'yes.'

Mr. SPROULE. I understood the hon. Minister of Marine and Fisheries (Mr. Préfontaine) to say 'yes.'

Mr. PREFONTAINE. I said that it was put in last year.

Mr. HYMAN. It was passed last year.

Mr. SPROULE. I can understand that you might pass over a single year without

expending the money, but we have many items that are voted two or three years when no expenditures are made.

Mr. PREFONTAINE. This is in connection with the Montreal barracks, and no site has been chosen because this building is to be put near the barracks for the permanent force.

Mr. BERGERON. When the matter of the barracks is decided this will follow ?

Mr. PREFONTAINE. Yes.

Mr. HYMAN. Not necessarily. I would not like to say that.

Montreal post office—improvements, $25,000.

Mr. HYMAN. This is for the purpose of improving the front of the Montreal post office and giving more accommodation. This vote is asked for by the Post Office Department for the extension of the front of the building to make more accommodation downstairs.

Mr. MONK. There is very serious ground of complaint as to the size of the post office.

Mr. HYMAN. This is for the purpose of extending it.

Mr. MONK. How can you extend it unless you add another story ?

Mr. HYMAN. There is a certain area between the front walk and the door which it is intended to take into the building, so that it may be used for post office purposes.

Mr. MONK. What is the plan of the building ?

Mr. HYMAN. The plan is not yet completed although nearly so.

Mr. BERGERON. And that will cost $5,000 ?

Mr. HYMAN. It will cost $25,000.

Mr. BERGERON. I do not understand without having seen the plan how you can make an enlargement of the building there?

Mr. HYMAN. There is an open vestibule in front of the building. It is intended to move the main wall out in front and include the open space which now forms the vestibule in the building so as to increase the accommodation.

Mr. BERGERON. It will be down on the steps then.

Sir WILLIAM MULOCK. No, there is a lot of space in front. There will be just double the floor space.

Mr. AMES. Can the hon. minister give us the additional floor space that will be created ?

Mr. HYMAN. The lobby at present is 85 x 15. It will give about 85 x 15 feet extra space.

Mr. BERGERON. This will be the proper time to find out whether there is going to be a new post office in the city of Montreal. Instead of spending $25,000 to do something which I think will not improve the appearance of the present building and which will not give much additional accommodation would it not be better to adopt the view which has prevailed in Montreal for a long time that a new post office should be erected in the eastern part of Montreal ? My hon. friend the Postmaster General will perhaps remember that the other night we had a very long talk about that. His answers to me showed that he was not very well posted because I had the honour to receive a note from him afterwards explaining that some of the answers were not quite correct. I want to remind you, Mr. Chairman, that there is nothing in these estimates for a new post office. The item for the new postal station has nothing to do with the question I am putting to the government as to whether a new post office building will be erected in the eastern part of Montreal. I stated the other night that there has long been talk of such a building in St. James division of Montreal. It has been very truly said that the present post office is entirely inadequate to the demands of the service in Montreal and we were led to understand in some little political meetings we had in St. James division during the last two or three years that such a building would be erected. I believe there was some correspondence between the government and the representative of St. James division (Mr. Gervais) to that effect, although, of course, he can speak more authoritatively on that subject than I can. This is the proper time to find out whether the government intend to have such a building erected in the eastern part of Montreal, either in St. James, or in St. Mary's division, or anywhere in the eastern part of Montreal.

Sir WILLIAM MULOCK. Mr. Chairman, my hon. friend (Mr. Bergeron) takes exception to the accommodation furnished by the present building on St. James Street, Montreal. It is quite true that the building to-day is not adequate to the demands upon it owing to the growth and prosperity of the city and to the increased volume of mail matter, but the congestion at the central office will be relieved and entirely done away with when we carry out the policy we have in view of erecting a postal station near the Bonaventure station and enlarging the vestibule of the present building on St. James street. My hon. friend, if he has a plan of that building in his mind, will remember that when you seek to enter the building you first of all ascend a flight of stairs and then there is a space

between the street line and the entrance of the building of perhaps 12 or 15 feet.

Mr. BERGERON. Ten feet, I think.

Sir WILLIAM MULOCK. I cannot say how many, but it is quite a substantial space. It is proposed, I think, to include that space in the lobby ; that is the part of the post office which is available for the general public to enter there to transact postal business. When that improvement is made it will afford very great advantage and accommodation to the people. Then, when the Bonaventure postal station is established there will be a large amount of mail that comes in and leaves Montreal that will never pass through the main post office on St. James street at all. That will get the go-by. For example, newspapers and parcels will practically all be handled at the postal station opposite Bonaventure station. Moreover, a large quantity of the ordinary mail matter which comes in to be distributed throughout the city of Montreal, instead of being sent up to the main office to be there rehandled and sorted and given to the mail carriers, will be dealt with at the postal station, and from that point the letter-carriers will serve a considerable part of the district immediately around Bonaventure station. This will very greatly relieve the condition of affairs at the main post office.

Mr. BERGERON. Will that be a building ?

Sir WILLIAM MULOCK. It will, of course, be a building in which whatever post office work is transacted at any post office will be transacted.

Mr. BERGERON. What will be the size?

Sir WILLIAM MULOCK. I could not say. I do not know if the lot has been secured, there has been some trouble. The minister says that the lot has been secured on Cathedral Street opposite the Grand Trunk station.

Mr. GALLERY. I may state that the lot has been secured, because I know that the owner has been paid for it.

Mr. LENNOX. I would ask the Postmaster General to explain the situation here. When this new postal station is established—which will, I understand, relieve to a large extent the central post office—and the contemplated improvements are made at an expenditure of $25,000, does the Postmaster General think that that will relieve the congestion for a number of years? I do not regard the expenditure of $25,000 as being very large in this connection at all, but still it would be a pity to expend that $25,000 to make improvements which might prove insufficient within a few years.

Sir WILLIAM MULOCK. If it was only patchwork that was proposed such a proposition would be open to question, but today in the advanced and progressive post-office world—and we claim to be a part of that world—the old system of having a grand pile for post office work is being abandoned; instead of having all the work of distributing the mail matter concentrated at one point, the policy now is to have substations at different points and as a city grows to multiply your substations and to despatch the mail matter from the incoming trains to those substations for distribution to the district immediately around, and, of course, in like manner to collect out-going mail matter from different points and deliver it from the substations to the railways without its ever passing through the main post office. I have no doubt in the world that the day of large post offices, great architectural piles, is a thing of the past so far as Canada is concerned. This will be a good and wise expenditure, and if in time the progress of the city demands more postal accommodation, it would not be to the interest of the mail service to supply that accommodation by erecting a larger building in one spot, rather by erecting substations throughout the city.

Mr. LENNOX. I have had the advantage of hearing the Postmaster General before dealing with this question of decentralization. I quite approve of it and I thought that when the Postmaster General began he was going to answer the question I asked, but, unfortunately, like many hon. gentlemen he has mystified himself in a multitude of words and has not answered the question which I asked ; he has not done what I think he intended to do when he got up. I asked the Postmaster General to tell the committee whether, when that expenditure of $25,000 is made upon the central post office in Montreal, having regard to the fact that there is a policy of decentralization, and that another substation is to be established to relieve the congestion, we would have all that Montreal would require at that particular point for several years to come or whether this small addition to the Montreal central post office would be found adequate only for a short season of time. I was not talking about 'great monumental piles' or anything elaborate. I was speaking about what I understand the city of Montreal as a great commercial centre would require. I want to know from the Postmaster General, and I think we should know that distinctly, is this to be a wise expenditure in this sense that it will meet the requirements of Montreal at that point for some years to come ?

Sir WILLIAM MULOCK. I think it will.

Mr. BERGERON. I do not share the opinion of the Postmaster General on this point. I really believe it would be a great deal better not to vote $25,000 for that purpose. In view of what the Postmaster General said before about the policy of decentralizing post offices, I would think it would

be better to spend a little more in different parts of the city. We are going to build a station near the Bonaventure railway station, I understand from the Postmaster General, and I think that is a very good idea; I believe it will be money well spent. We have many railway stations in Montreal. Montreal is a terminal. We have not one railway that goes through Montreal, properly speaking. If we are to have one station at Bonaventure which will serve both Windsor station, the terminus of the C.P.R. and Bonaventure station, the terminus of the G.T.R. and the I.C.R., why not have one post office station at the Place Viger station in the eastern portion of the city of Montreal. When I speak of the eastern portion I am not speaking of that part of Montreal in a particular way. I join with my hon. friend in his idea of enlarging the facilities for the distributing of mail in Montreal, but we are here going to spend $25,000 that in my mind will not be well spent. I am afraid we are going to disfigure the present post office, which is a handsome building, and it will not attain the results the minister hopes to obtain.

Sir WILLIAM MULOCK. What do you mean?

Mr. BERGERON. Because it will not give you increased room commensurate with the amount of money you will spend on it, and if you would only spend a little more and put a substation near the Place Viger station you would have three distributing centres, the central office and the two railway stations at the two ends of Montreal. I believe that was the idea the hon. member for East Simcoe had in his mind when he put that famous question to the Postmaster General.

Sir WILLIAM MULOCK. If it were the case that this expenditure would not add to the accommodation furnished the public I would agree with what my hon. friend says, but the architect informs me at this moment that this expenditure will give a floor space available to the public of 2,000 feet, as against the present floor space of 1,200 feet. The present space available for the public is 80 feet by 15 feet, and my hon. friend can multiply and determine that amount himself.

Mr. BERGERON. It is no use multiplying: I do not believe the figures are correct.

Sir WILLIAM MULOCK. I give the figures of the architect, who must know what he is talking about. The present space is 1,200 square feet and this will give 2,000 square feet.

Montreal post office—installation of pneumatic tube system for post office purposes, $55,000.

Mr. GERVAIS. Before this item is passed, I would like to make a few remarks. I would like to acquaint the House with this fact, that the condition of affairs in Montreal, as far as postal facilities in the constituency of St. James are concerned, has become unbearable. I represent the constituency of St. James, and in this electoral division you will find 43,000 inhabitants. Adjoining that constituency you find the electoral district of St. Mary and that of St. Louis, and if you add together the inhabitants of these three wards, you will find that they contain over 117,000 inhabitants. Do you know how much is spent each year for postal facilities in Montreal east? A few hundred dollars, for the maintenance of two little stamp-selling establishments, whereas in St. Antoine division, where there are just 47,000 inhabitants, $5,000 is spent annually for postal facilities. I think this is unfair treatment to the east of Montreal, and it cannot be suffered to continue. I know quite well that the Postmaster General of Canada, under section 36 of chapter 35 of the Revised Statutes, has to decide whether or not it would be useful to establish a sub post office in Montreal east; I know quite well also that it is the duty of the Minister of Public Works to build such a post office; and this is the reason I am bringing this question forward tonight; because I want to know, in the first place, from the hon. Postmaster General whether he has made up his mind that this is the proper time to give adequate postal facilities to the east of Montreal, and whether it is the intention of the Minister of Public Works to build a sub-post office there. You must bear in mind that the east of Montreal has built up a trade larger than that of Montreal west. On this point I refer the hon. Postmaster General to the letter which has been sent to him by Mr. Jones, the cashier of the Quebec Bank; I refer him also to the resolution which was unanimously adopted by the Montreal city council, recommending the erection of a sub-post office in the east of Montreal. I may say, too, that one may find there about one thousand wholesale and retail merchants. In St. James division one may find about eight banking houses. You will find either in or close to that constituency one branch of the Bank of Montreal, two branches of the Bank of Hochelaga, one branch of the Montreal City and District Savings Bank, one branch of the Quebec Bank, one branch of the Molsons Bank, and two branches of the Provincial Bank of Canada. I may remind the hon. Postmaster General that most of the newspapers in Montreal have recommended the expenditure. I may say too that it will be highly beneficial to the inhabitants of the eastern part of the city. Do you know that the business men of the east of Montreal have to take the street car or drive or walk one mile and a half to buy five or six stamps? We want in Montreal east the postal facilities which every good post office to-day affords to the people. We want a good sub-post office in which

money orders will be issued at which our letters will be received, from which our letters will be distributed, in which a savings bank business will be done, in which a letter may be insured, in which we shall be able to secure a service of late mailable matter, and from which we could enjoy a special delivery service. We want for the electors of St. James division, as well as those of St. Mary's and part of the St. Lawrence division, these postal facilities. We do not wish to suffer any longer the conditions of affairs which I have described. We want the government to spend in the east of Montreal at least as much as it is spending in Montreal west. I am not complaining of the favours which have been shown to the good people of St. Antoine.

Mr. AMES. St. Anne's.

Mr. GERVAIS. No. You have two post offices on St. Catharines street, one near Metcalfe street, and one near Mountain street. For the building of these post offices over $10,000 was spent last year. This government is spending in that constituency over $5,000 yearly. I believe in the expenditure of money for the establishment of good postal facilities. I am satisfied with the expenditure which has been incurred by the government for the establishment of sub-post offices in the division of St. Antoine; but, on the other hand, I want equally adequate treatment for the constituency which I represent. This is the reason why I ask the government to build a sub-post office in St. James division, on St. Catherines street, and to connect it with the central post office by means of the pneumatic tube system which is referred to in the item under discussion.

M. CAMILLE PICHE (St. Mary's, Montreal). (Translation). Before the hon. Postmaster General makes the statements which my hon. friend from St. James (Mr. Gervais) may reasonably expect from him, I think it is incumbent on me to join hands with my hon. colleague and to raise my voice in support of the just claims of the east end. It cannot be gainsaid that this very important part of the metropolis is not provided with adequate postal facilities under present conditions, and I entirely agree with what has just been said in this connection. However, I would not give to my few remarks the aggressive tone which my hon. friend seemed intent on giving to his, as I have no complaint to make regarding what has been done for the west end. In fact, the improvements which have been enacted there are of recent date, and it would not be fair, to my mind, to suppose that the government do not intend effecting similar improvements in the east end. As regards the remarks made by my hon. friend from St. James (Mr. Gervais), I am not ready to follow him when he brings forward the name of my electoral division to strengthen his contentions regarding the necessity of putting up a building in St. James division and in St. James division only. I think the east end is entitled to such expenditure as the public service requires. I am inclined to believe that the government is very favourable to this view owing to representations which I have made personally and others which have been forwarded by numerous electors and especially through a petition bearing a great many signatures of electors in my division, business men, bank managers, &c. In order that the favourable disposition of the hon. Postmaser General may not be doubtful for any one, I am pleased to state—and in passing that may also restore the confidence of my hon. friend from St. James—that this very day I have received from the hon. minister a letter stating that he will be glad to discuss that important question with the parties interested or their representatives. I await with confidence the explanations which the hon. gentleman is to give on that subject, and I trust that he will not fail to listen attentively to any suggestions which will be made to him on behalf of the east end, which, I believe, is entitled to as much consideration as the west end of Montreal.

Sir WILLIAM MULOCK. Mr. Chairman——

Some hon. MEMBERS. (Translation). Speak French.

Sir WILLIAM MULOCK. My hon. friend from St. James division (Mr. Gervais) addressed the committee in English, and I will respond to him in the same language. After that we will see. My hon. friend from St. James division, with proper pride, has announced to this House the growth and development of that great centre of commerce which has done him the honour of choosing him as its representative in this House. I appreciate extremely the zeal which he has manifested on behalf of his constituents, and I can take no exception whatever to the force with which he represents their interests in this House. However, if I may be permitted to debate the subject, he rests his demand for an additional building upon the fact that there are two in the west, on St. Catherines street. Perhaps that is hardly a reason that will commend itself to our hon. friends opposite at least. They might ask me to justify in each case the expenditure of public money by showing that it was serving a public purpose ; and I am sure that my hon. friend would expect that I should not ask for a building in one place simply because we had erected one elsewhere, but that in each case I should be able to defend the expenditure by showing that it was wise and in the public interest. With reference to St. James division, I would say, without promising anything whatever, that as my hon. friend is aware, the subject is engaging the consideration of the government. More than that, my hon. friend is aware that, with the

object of trying to inform myself better than I could by remaining in Ottawa, I went to Montreal to study the question; and my investigations there have not yet been completed. I hope to be able to reach a conclusion before a very long time; and if that conclusion should enable me to say to my colleagues in the government that I thought the erection of a substation or postal building in St. James division would be in the interest of the people there, if it were necessary or wise in order to improve their mail service, I would have great pleasure in making the necessary recommendation under the statute to which my hon. friend has referred. But I would ask him to be kind enough to let me have an opportunity, with his assistance, of visiting the place and studying with him the merits of the question, that I may reach a fair conclusion.

Mr. GERVAIS. Let me declare at once, Mr. Chairman, that I shall be entirely at the disposal of the Postmaster General for his visit to my district. If the hon. gentleman is ready to go next week, I shall be glad. I should like to have a decision reached by his department before the supplementary estimates are brought down.

Mr. PICHE. How about St. Mary's?

Mr. BERGERON. (Translation). Speak French.

Sir WILLIAM MULOCK. (Translation). Well, I shall make the same request to the hon. member from St. Mary's, that is to wait until I have the opportunity of visiting St. Mary's division with him.

Mr. BERGERON. Whereabouts is this new post office that is to be opposite the Bonaventure station?

Mr. HYMAN. The installation of pneumatic tubes will require the construction of a building, which building is to be on Cathedral street, immediately opposite the front of the station. The new postal station is to be on St. Catherine street west.

Mr. BERGERON. And where will the pneumatic station be on Cathedral street?

Mr. GALLERY. Between St. James street and Chaboillez square.

Mr. BERGERON. My hon. friend from St. Anne's (Mr. Gallery) says that the land has been bought and paid for. From whom was it bought, and how much did it cost?

Mr. HYMAN. It was bought from Mrs. McGrory and Mrs. Myler, and the total cost was $37,000.

Mr. BERGERON. What are the dimensions of the property bought?

Mr. HYMAN. One lot is 130 feet 3 inches by 75 feet in depth, and has a superficial area of 9,769 square feet. The second lot is 98 feet by 33 feet.

Mr. BERGERON. That will run from the private property of the Grand Trunk Railway to Cathedral street?

Mr. GALLERY. Yes; it will go from Depot square to Cathedral street.

Mr. BERGERON. Who bought that property for the government?

Mr. HYMAN. Mr. U. H. Dandurand.

Mr. BERGERON. Was there any arbitration, or did he simply go and buy the property?

Mr. HYMAN. One parcel, that of Mrs. Myler, was bought from the court, and the other was bought by private sale.

Mr. BERGERON. How much did the part bought from the court cost?

Mr. HYMAN. It cost $12,000.

Mr. BERGERON. And the other cost how much?

Mr. HYMAN. It cost $25,000.

Mr. AMES. And on that Mr. Dandurand got 5 per cent?

Mr. HYMAN. Yes. The information on that subject was given the other day in answer to a question of the hon. gentleman (Mr. Ames).

Mr. AMES. Have tenders been called for the pneumatic tubes?

Sir WILLIAM MULOCK. Yes.

Mr. AMES. I will save the time of the minister by taking certain information for granted and will ask for some that I want. In the installation of the pneumatic tube system, has it been deemed advisable to call for three tenders—the first for digging and filling the trenches——

Mr. HYMAN. That has not been considered—no tenders have been called for.

Mr. AMES. Have tenders been called for for laying the pipes and supplying the machinery at either end?

Mr. HYMAN. Yes, that has been called for.

Mr. AMES. Have tenders been asked for the supply of the pipe?

Mr. HYMAN. Yes; tenders have been called for, and one has been accepted.

Mr. AMES. Will the hon. minister tell us where the plans were that contractors were expected to see in this matter.

Mr. HYMAN. In the post office building in Montreal. The usual methods were adopted—advertisement inserted in the

usual way calling for tenders and stating where the plans had been deposited.

Mr. AMES. Is the hon. gentleman sure that the plans and specifications were deposited in Montreal where they could be seen by Montreal contractors ?

Mr. HYMAN. I am advised that they were in the department here, and the advertisement so stated. In the case of voluminous plans, it is quite the custom for the department to have the plans here.

Mr. AMES. I understand that in the specification it was intimated that the contractor would have to see the machinery in operation somewhere in order to ascertain its nature. Where was it possible for a would-be contractor to see that machinery ?

Mr. HYMAN. The hon. gentleman asks me a good many technical questions. As I understand, the only place to see this machinery would be in England or in two or three of the large cities in the United States, where the system has been inaugurated.

Mr. AMES. I understand that the department did not supply working drawings, from which the contractor could see what was to be done ?

Mr. HYMAN. Oh, yes.

Mr. AMES. Plans of the machinery ?

Mr. HYMAN. The department furnished full plans and specifications on which a tender could be made. Of course, it was impossible to show the machinery in actual operation.

Mr. AMES. The point I am endeavouring to make is this. For work to be done in Montreal it was necessary for Montreal contractors to come to Ottawa or Toronto to see the plans, and then to go to Buffalo or some other American city to see the machinery in operation. Would it not have been possible to have suitable plans left in the city of Montreal where contractors desiring to bid might have studied them ?

Mr. HYMAN. If any Montreal contractor had desired to see the plans, he had only to drop a post card to the minister or deputy minister, and every facility would have been given him.

Mr. AMES. Was it not necessary for the would-be contractor to go to Buffalo ?

Sir WILLIAM MULOCK. He could go to Buffalo or some other city.

Mr. HYMAN. The work was advertised fully. There was no desire to keep any Montreal contractor out of the work.

Mr. AMES. As a matter of fact, the method pursued did keep the Montreal contractors from tendering.

Mr. HYMAN. If any Montreal contractor was prevented from tendering by the conditions, it can hardly be said that he was pushing business very hard. All he had to do was to drop a line to the department to say that it was inconvenient for him to come to Ottawa.

Mr. LENNOX. The minister at first said that the plans and specifications were deposited in Montreal as usual.

Mr. HYMAN. I was so informed by the officer of the department.

Mr. LENNOX. In regard to the machinery, I think it would be a proper thing for the minister to have in future a working model of that kind of thing, which is new in Canada, so that parties wanting to contract would not have to go to the United States.

Quebec immigration buildings—new landing sheds on Point à Carcy breakwater, and additions and alterations to present buildings, including covered passage to those on Louise embankment, $45,000.

Mr. HYMAN. This vote is for the purpose of furnishing a suitable landing place on the embankment. The reason there was no expenditure last year was because the department were in consultation with large shippers, and were most desirable of selecting the best place for the landing station.

Quebec hospital for treatment of immigrants suffering from trachoma and kindred diseases, $10,000.

Mr. MONK. I notice we are building hospitals for the treatment of trachoma, one down in the maritime provinces this year, and we are also proposing a building in Montreal for the treatment of the same disease. Of course I am aware that a matter like this can only be exhaustibly treated when the estimates of the Department of the Interior are under consideration. But I wish to protest strongly against this expenditure. It is altogether the result of the careless policy we have adopted in regard to immigration. The spread of trachoma throughout Canada is so great as to constitute a national danger. If my hon. friend will inquire in Montreal from the specialists for eye diseases at the Royal Victoria hospital, he will find that that disease is now implanted in Canada. I have here the annual report of the Commissioner General of Immigration for the United States, for last year, and it points out, with details, how diseased persons are now entering the United States, and describes the measures that have been taken to prevent them from entering from Canada. During the year 1903, they refused, in all American ports, 1,700 immigrants affected with contagious diseases, of whom 1,400 came from Canada, and were therefore sent back into Canada. The number of diseased persons suffering from trachoma examined in Mont-

real and who must have remained in Canada, was over 400. There were 171 refused by the immigration inspector in Winnipeg who wanted to cross into the United States, but who had to remain in Canada. The matter is one of very great importance to this country, a matter of urgency.

Mr. HYMAN. If the hon. gentleman would pardon me for interrupting him—would it not be better to bring this matter up on the estimates of the Interior Department?

Mr. MONK. That is what I intend to do, but the urgency of the case is my excuse for mentioning it at present, because we are going to be involved in an immense expenditure for the treatment of immigrants who have arrived here affected with contagious diseases, and particularly trachoma. Another point to which I wish to call attention is this: I believe that at the present moment Mr. Preston is travelling in that part of Europe where this disease originates and where we get it from. I put a question upon the order paper the other day, and was informed that Mr. Preston is not in London, but we learn from newspaper despatches that at the present time he is in Austria, and is seeking to obtain immigrants in that part of Austria and Hungary where the disease is a national plague. If my information is correct, I think the government cannot too soon warn Mr. Preston against that kind of immigration. The matter is treated at length in this report of the American commissioner, who took the trouble to send over to Austria and make a special investigation to find out what were the conditions prevailing there in regard to trachoma. There are 60,000 people in that part of Europe anxious to come here, who are under government surveillance on account of this terrible disease. At the present moment the government, at large expenditure, is seeking to promote immigration from that country. The result is that we have to provide protection for these people when they arrive here, and we have to protect ourselves against a disease that was unknown here before this kind of immigration began. It is a matter deserving of the immediate attention of the department.

Mr. SPROULE. For the last few years this matter has been discussed in this House, and the government nearly always took the ground that little or no trachoma was imported. Now we are asking for money to build hospitals to treat those afflicted with it.

Sherbrooke drill hall, $10,000.

Mr. WORTHINGTON. I would like to ask the minister what he thinks the building will cost, and when it will be ready for occupation?

Mr. HYMAN. I have not got the full information from the Militia Department of the requirements of this building. The dimensions are 224 feet by 115 feet. I have not got a memorandum from the Militia Department. The Militia Department, when it wants a building, sends to the Department of Public Works a memorandum of the floor space required, and the kind of structure. As I have not got the full requirements here, I am unable to answer the hon. gentleman's question.

Mr. WORTHINGTON. I would like to ask if there are any reasons other than political why the drill shed is to be placed on the site that has been selected. There was a very good site offered to the Militia Department but which was not considered. I would like to know in what way the present site was selected, whether somebody was sent down to Sherbrooke who obtained the cadastral plans and merely shut his eyes and put his finger on a certain spot, or was there some other reason for the selection? I can tell the minster, and can give him the proof, that at a certain council meeting in the city of Sherbrooke a motion was made and seconded condemning this site as unhealthy. A part of this property consists of an old canal and an old clay pit which was left from a brick yard, and which is being gradually filled in with refuse from the upper part of the town and with sawdust from the mills. Perhaps the hon. gentleman can give me some idea how this particular site came to be selectel for this purpose. On whose recommendation was it selected?

Mr. HYMAN. Of course, the site was purchased before I had anything to do with the Department of Public Works, and I have no memorandum here as to the information upon which the department acted. The initial information upon which the department generally act of course comes from the Department of Militia. In the selection of these sites the Militia Department are consulted and then an officer of the Department of Public Works is sent to look into the question of cost, and if his report is favourable the site is purchased and paid for.

Mr. WORTHINGTON. I suppose the hon. minister would not put up a handsome public building upon a site which was not a proper one even if it were recommended by the Department of Militia and Defence. I see that the first estimate for this drill shed was made at the same time as the appropriations were made for drill sheds at St. Hyacinthe and Three Rivers, but I see that in this short space of time these other two places have outstripped Sherbrooke and that there has been an expenditure in these places of $30,000 or $35,000.

Mr. HYMAN. That would not affect the question of the building. If we were making a contract we would ask for another sum in the supplementary estimates. Of

course this sum is available; we can go on and prepare the plans of the building and call for tenders.

Mr. WORTHINGTON. In making a few remarks about the site selected I do not condemn the part of the city in which the building is to be erected. We would be very glad to have the drill shed in any ward of the city. The question is not whether it is to be in one particular ward or in another. It is the site itself which is objectionable.

Mr. SPROULE. If the site is objectionable and no money has been spent surely this is a good time to remedy it.

Mr. HYMAN. There has been no money spent on the building but there has been money spent on the site. If the hon. gentleman (Mr. Worthington) will allow the vote to pass I will be very glad to discuss it with him.

Mr. WORTHINGTON. I should be very glad to have the hon. minister do so.

Mr. KEMP. Did the recommendation of the site come from the hon. Minister of Militia and Defence?

Mr. HYMAN. This matter has been discussed in the House before but this is not the initiation of the vote. If it were the initiation of the vote we would have prepared fuller particulars in regard to the matter.

Mr. KEMP. But the hon. gentleman was a member of the House at the time this was discussed and as he has his deputy here perhaps he will be able to answer that question.

Mr. TOBIN. I believe the hon. member for Sherbrooke (Mr. Worthington) is aware that a majority of the citizens of Sherbrooke are in favour of the present site for the proposed drill shed.

Mr. WORTHINGTON. In reply to the hon. gentleman (Mr. Tobin) I may say that if that is the view of the citizens of Sherbrooke I cannot understand why they sent two deputations to the hon. Minister of Militia and Defence objecting to the site. I may say in regard to the composition of these deputations that they were selected not entirely from military men but from men of both political complexions, and that they waited upon the hon. minister, and asked that this site be reconsidered and if possible changed. I am not objecting to the locality in which this drill shed is being built nor to the ward but to the particular site on which it is to be placed. It is an old disused brickyard and it is not a suitable site for a drill shed.

Mr. HYMAN. I notice in the memorandum which I have here that the council of Sherbrooke made a contribution to this site.

Mr. WORTHINGTON. The council made a contribution in this way that there was some exchange between the government and the council in regard to the old site.

Mr. HYMAN. They were accepting the new site. They were parties to the negotiations that took place between themselves and the department. The council that were in charge of the matter would be parties to the negotiation with the Department of Public Works in regard to the question and they accepted this site.

Mr. WORTHINGTON. They voted a certain amount for a drill shed site before the site was selected, not after.

Mr. HYMAN. But, there is no protest from them and being contributors they would naturally have an interest in the site.

Mr. TOBIN. My hon. friend from Sherbrooke (Mr. Worthington) knows very well that the majority of the council are in favour of the present site and he is only giving expression to a kick that comes from a small portion of the citizens of Sherbrooke. I live within six miles of Sherbrooke, I am well acquainted with the citizens and I am sure that seventy-five per cent of the citizens are in favour of the present site. I have been informed by parties in Sherbrooke that eight-tenths of the council are in favour of the present site.

Mr. WORTHINGTON. In reply to the hon. gentleman I may say that quite a number of the citizens of Sherbrooke are in favour of the site that has been selected, but as I understand it, this drill shed is being built for the accommodation of the militia. It is not being built for the accommodation of the majority of the politicians to capture votes. It is being put there for drill purposes. There was a site offered to the Militia Department which is adjacent to and fronting the parade ground, the only available place for drill purposes in the city, and that is only distant from the rifle ranges about 600 yards and is reached by a ferry which was put on by, and at the expense of the militia. Then, a man is sent down from Ottawa with instructions to go to somebody there and select a site for the drill shed. This he did without even going to any of the militia men in Sherbrooke and it was done entirely at the instigation of the hon. Minister of Agriculture who does not deny it.

Mr. HYMAN. Possibly the hon. gentleman has in his mind some site in Sherbrooke that would be more suitable than the one which has been selected, and if so I will be very glad to take the matter into consideration. I am not aware of any protest having been filed by the council against the proposed site.

Mr. WORTHINGTON. The hon. gentleman is certainly aware of a protest having been filed by the militia. We are not building it for the council.

Mr. HYMAN. It is the citizens' money which is going into this building. I am perfectly willing to agree that to a large extent the militia authorities should be consulted. The militia authorities are consulted in the person of the hon. the Minister of Militia and through the department here, and I am quite willing to admit that the local military authorities should be consulted also. But, I am hardly prepared to say that the residents of Sherbrooke should not have something to say about it. They are citizen soldiers. In so far as the city of London is concerned I would not be prepared to say that the regiment for whom the drill shed is being provided should have the whole say as to where the site of that building should be. I do not think the hon. gentleman himself would take such a strong position as that.

Mr. KEMP. I am very glad that the hon. acting minister admits that the citizen soldiers of Sherbrooke should have something to say about the location of the drill shed. These men give their services to the country without compensation of any kind. It seems to me that for an officer to go down to Sherbrooke and select a site there without consulting the militia is not right. He did not even call on them as my hon. friend (Mr. Worthington) says. If no money has been spent on that site——

Mr. HYMAN. The site has been bought and paid for.

Mr. KEMP. If no money has been spent on the building it would be a generous act for the hon. minister to take this matter into consideration and thus relieve the deplorable situation caused by the hon. Minister of Agriculture in interfering with a matter entirely out of his department.

Mr. HYMAN. I shall be very glad to give the matter full consideration before the expenditure is made.

St. John's public building, $20,000.

Mr. BERGERON. What kind of a building is this ? Is it A, B or C ?

Mr. HYMAN. It is neither, it is a larger building.

Mr. BERGERON. What is the population of this town ?

Mr. HYMAN. It is a large town, the population is 4,000, the postal revenue $7,200 and the customs revenue $96,000. The lot has been purchased for $2,500 from Mrs. J. R. Boisvert.

Valleyfield public building, $12,000.

Mr. BERGERON. When will that be finished and how much will it cost ?

Mr. HYMAN. It will cost $42,000.

Mr. BERGERON. This was the case I had in mind particularly when I reminded my hon. friend (Mr. Hyman) of the practice of building these public buildings half of stone and half of brick. My hon. friend might have put up a very good stone building there that would not have cost any more, and that would have looked a great deal better.

Sir WILLIAM MULOCK. You are too extravagant altogether, too wasteful of public money.

Mr. BERGERON. My hon. friend should not speak about extravagance.

Some hon. MEMBERS. Carried.

Mr. BERGERON. Oh, that will not do it. I want to say that my hon. friend has finished his estimates and is very happy.

Mr. HYMAN. Oh no, I am not.

Mr. BERGERON. We have not been criticising very much, except to do our duty. We have been reproached very often in the country with not having criticised large estimates. This government has spent three or four times as much as the late government spent, and it is the fault of my hon. friend's friends in the country that we are criticising the estimates as we now do. My hon. friend (Mr. Hyman) has been very kind and courteous in answering questions tonight and I wish to acknowledge his courtesy, because I know he has not been long in the department, and is not in the position to answer all the questions that may be put to him, as readily as if he were an old minister. All the criticism we can make will not change this amount, it is there and must go through. I am reminded of years gone by when we would sometimes spend whole nights discussing amounts of a great deal less than we voted to-night which was criticised by my hon. friend, and it shows that while the government may change, bad habits do not. We used to vote $35,000,000 to $40,000,000, and now we are asked to vote $60,000,000 or $75,000,000 and yet if we criticise any amount proposed for any county we are told immediately: You do not want that building to be put up there. If there is an election in that particular county then an opposition speaker is pointed to, as the man who had been trying to prevent the electors from having a public building. What is the inference to be drawn from that ? It looks as if hon. gentlemen opposite thought that by putting a building or a wharf or a breakwater here or there, they are in a position either to buy that county or to show it that by voting for their candidates it is likely to obtain favours. It is immoral, purely and simply immoral. It seems to me that we should put up public buildings where they

are absolutely necessary. I am not prepared to say that the old government did very well on that line; they might also have been carried away like the present government by the requests of their friends for public buildings, but when I look at all these estimates I think we were angels to hon. gentlemen opposite.

Mr. BUREAU. Where are the wings ?

Mr. BERGERON. We were good, and I would like the people in the country to hear me in order that they might see what an immense difference there is between those who sat here ten years ago in opposition and those who sit here in power now.

Some resolutions reported.

Sir WILLIAM MULOCK moved the adjournment of the House.

Mr. SPROULE. I would like to inquire what business will be taken up to-morrow ?

Sir WILLIAM MULOCK. The Minister of Agriculture will proceed with the Bill respecting the census and statistics and perhaps, he may take up the Bill respecting seeds. When the Bills are disposed of we will then proceed with the estimates of the Minister of Railways and Canals.

Motion agreed to, and House adjourned at 11.25 p.m.

HOUSE OF COMMONS.

THURSDAY, February 16, 1905.

The SPEAKER took the Chair at Three o'clock.

QUESTIONS.

QUEBEC DRILL HALL.

Mr. BERGERON asked :

1. What amount was appropriated by parliament in 1904 for the extension of the drill hall at Quebec ?
2. What part of said amount has been expended in the purchase of land ?
3. To whom has the said amount been paid ?
4. What is the date of the payment ?
5. Before whom was the deed of acquisition received ?
6. Was there a regular proceeding in expropriation for the said acquisition ?
7. Who were the expropriation commissioners ?

Hon. CHAS. HYMAN (Acting Minister of Public Works) :

1. $30,000.
2. $20,000.
3. To Hon. P. A. Choquette, through Mr. C. E. Taschereau, agent of the Department of Justice.
4. December 3rd, 1904.
5, 6 & 7. Expropriation was made through notice issued by the Department of Justice, by virtue of 'The Expropriation Act.'

EMPLOYEES-INTERCOLONIAL RAILWAY.

Mr. FOWLER—by Mr. Taylor—asked :

1. Are C. C. Weldon, C. B. McDougall, R. S. Legère, M. C. Lockhart, M. L. Tracey, and N. L. Rand, in the employ of the Intercolonial Railway ? If so, in what capacity, respectively?
2. Is the Minister of Railways aware that these persons took an active part as political workers in the late federal campaign on behalf of Honourable H. R. Emmerson and Oliver J. Leblanc, Liberal candidates in Westmoreland and Kent in said contest ?
3. If the attention of the Minister has been called to the matter, will he take steps to have an investigation under oath into the conduct of these persons, if they are now in the employ of the Department of Railways ?

Hon. H. R. EMMERSON (Minister of Railways and Canals) :

1. Yes, namely : C. C. Weldon, clerk in Audit Office ; C. B. McDougall, clerk in Audit Office ; R. S. Legere, clerk in office of engineer of maintenance ; M. C. Lockhart, fuel inspector ; M. L. Tracey, inspector of car cleaning ; N. L. Rand, master mechanic.
2. The minister is not aware that the gentlemen named took an active part as political workers in the late federal campaign : one of the gentlemen named, Mr. C. B. McDougall, was absent from his duties on leave, and was not on the pay-roll of the Intercolonial Railway during the period named ; and, so far as the minister knows, the other gentlemen named attended strictly to the duties of their respective positions during the last federal campaign.
3. The attention of the Minister of Railways and Canals has not been called to the matter.

CANADIAN HERRING INDUSTRY.

Mr. LEFURGEY asked :

1. Has the government erected or contributed to the erection of a bait freezer establishment at Canso, N.S., upon property which is not owned by or vested in the Crown ?
2. If so, upon whose property has such bait freezer been erected ?
3. What amount has the government contributed or agreed to contribute, or what does it propose to contribute toward the establishment of such a bait freezer ?
4. Under what conditions or safeguards, if any, has such money been contributed ?
5. What amount has the government expended, or undertaken to expend, at Canso, in connection with the establishment of improved methods of curing herring or other fish ?
6. What has been accomplished in this regard during the past year ?
7. How many barrels have been cured, and what was the cost of the work ?
8. Was any steamer engaged by the government in this connection ?
9. How long was such steamer employed in such work, and at what cost ?

10. In what work was such steamer engaged after ceasing to be employed in connection with the herring industry ?

11. What is the name of the said steamer ?

12. Was the said steamer chartered to Messrs. A. N. Whitman & Company for any, and what period, and for what remuneration ?

13. What is the value of the said steamer, and by whom is it owned ?

Hon. WILLIAM PATERSON (for the Minister of Marine and Fisheries) :

1. Yes.

2. Messrs. A. N. Whitman & Son.

3. One half the cost up to $25,000 and a bonus for the first three years of $4 per ton on bait frozen up to 500 tons.

4. The plant is to be operated under regulations sanctioned by the Minister of Marine and Fisheries, and a representative of the department at Ottawa shall be on the board of directors.

The paid-up capital of the company shall not be less than $60,000.

No mortgage shall be placed on the building or plant without the sanction of the Minister of Marine and Fisheries.

Bait shall be sold to bank fishermen and boat fishermen at the current market rate, and Canadian boats and vessels shall be given a rebate of 10 per cent on the current market rate.

The freezer is to be operated to the fullest extent for at least fifteen years after the expiration of the bonus.

Failing the fulfilment of any of these conditions, the building and plant is to revert to His Majesty.

5. $13,807.35.

6. Information was obtained by the herring drifting operations respecting the movements and resorts of the herring schools offshore, which information has hitherto been very imperfect.

The superior quality of Canadian herring for curing purposes, after the Scottish methods, has been established beyond question.

New and highly remunerative markets have been practically opened by the sample shipments of Scotch cured herring from Canso, which were pronounced by New York buyers to be equal to the best Scotch or Norwegian herring.

Such widespread interest has been created amongst the herring fishermen all along our Atlantic shores that, by the continuation of the experiment for a longer period, a general and immediate improvement of Canadian cured herring is inevitable.

7. Forty barrels. Answered by No. 5.

8. Yes.

9. From June 3rd to November 23rd, $6,375.68.

10. It was arranged with Messrs. A. N. Whitman & Son to keep the vessel in readiness for use when needed.

11. Herring drifter No. 33.

12. No.

Mr. LEFURGEY.

13. $16,546.67. The Department of Marine and Fisheries.

IMMIGRATION IN 1904.

Mr. BARR—by Mr. Lewis—asked :

1. What number of immigrants arrived in the Dominion of Canada during the year 1904?

2. What number of children under 12 years of age arrived during the said year?

3. Were they examined by medical experts before leaving Europe ?

4. What was the amount, if any, paid for such examinations ?

5. Were the said immigrants examined by medical experts on arriving at our ports ?

6. What was the name of each examiner, and what was the amount paid each ?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister) :

1. Total immigration for calendar year 1904, 134,223.

2. Total number of children under twelve years of age from Europe, 17,056.

3. Yes.

4. Nothing paid by Dominion government.

5. Yes.

6. Dr. A. C. Hawkins, $1,201.51 ; Dr. W. L. Ellis, $1,800.02 ; Dr. A. Potvin, $1,019.75 ; Dr. J. C. Howe, $1,400 ; Dr. A. D. Stewart, $1,233.32.

DREDGING IN PRINCE EDWARD ISLAND.

Mr. A. A. McLEAN asked :

1. How many dredges are employed in Prince Edward Island by the government of Canada? What are their names, and where are they now located ?

2. What harbours were dredged in that province during the season of 1904 ?

3. Is there a new dredge in course of construction for use in Prince Edward Island waters ? If so, where is it being built, and when will it be completed ?

4. Is the department in charge of these public works aware that the harbour of Crapaud is in a dangerous condition for navigation, by reason of the harbour channel being recently filled in with sand?

Hon. CHARLES HYMAN (Acting Minister of Public Works) :

1. The dredge ' Prince Edward.'

2. Dredging was done at Belfast, Morell and Vernon River Bridge.

3. Yes, building by the Bertram Engine Works of Toronto, to be completed in July, 1905.

4. No report to that effect has reached this department.

PRESCOTT LIGHTHOUSE DEPOT.

Mr. MONK asked :

1. What is the total area and the cadastral designation of the properties acquired by the government for the establishment of a Dominion lighthouse depot at Prescott.

2. What were the prices paid ?

3. Who were the vendors, and what were the commissions on the sale, and to whom paid ?

Hon. WILLIAM PATERSON (for the Minister of Marine and Fisheries) :

1. The department has acquired two properties at Prescott for the establishment of the Dominion Depot ; the first known as the Labatt property has an area of 3·35 acres ; that known as the Buckley lot, an area of ·16 of an acre. The Labatt property is described as part of lot 27 south side of King street in block 3 of the town of Prescott, 1⅝ acres, and water lot 1⅝ acres lying in front thereof, at one time forming part of the east half of township lot No. 4 in first concession of the township of Augusta in the county of Grenville. The Buckley lot is described as part of lot No. 27 on the south side of King street in block 3 of the town of Prescott.

2. For the Labatt property $26,500, and $1,000 for the Buckley lot.

3. For the Labatt property, John Labatt, London, and James Buckley of Prescott. Commission on sale of Labatt property 2½ per cent and $209. Expenses paid to George F. Thompson, Ottawa. No commission was paid re Buckley property.

GLENN ROSS POST OFFICE.

Mr. PORTER—by Mr. Taylor—asked :

1. How long had the post office at Glenn Ross, Ontario, been in existence before its abolition during last year ?

2. Why was this office abolished, instead of another postmaster being appointed on the resignation of the last incumbent of the office.

3. Is it the intention of the department to re-open or re-establish this office ? If so, when?

Hon. Sir WILLIAM MULOCK (Postmaster General) :

1. From the 1st December, 1882.

2. This office was closed owing to the fact that the postmaster resigned and almost immediately afterwards left the locality. The retiring postmaster expressed the opinion that nobody was willing to accept the office, and, as he pressed to be relieved at once, the inspector decided that he had no recourse but to close it.

3. The office was re-opened on the 1st November, 1904.

TORONTO METEOROLOGICAL BUILDING.

Mr. FOSTER asked :

Is it the intention of the government to bring down a vote for the erection of a new building for the meteorological service in Toronto ? If so, when ?

Hon. WILLIAM PATERSON (Minister of Customs). The matter is under consideration.

WHARFAGE REPAIRS AT STE. FAMILLE.

Mr. BERGERON asked :

1. Did the government, or the Department of Public Works, or any other department of the government, send to or place at the disposal of one François-Xavier Gosselin, or any other person of the parish of Ste. Famille, Island of Orleans, a sum of money, during the course of the months of September, October and November last, for repairs to the wharf of the said parish ?

2. If so, what sum ?

3. Was the said sum spent and did the person to whom it was confided render an account thereof ?

Hon. CHARLES HYMAN (Acting Minister of Public Works). No such sum of money was placed in the hands of the party named, or any other person, but authority was given on the 12th October, 1904, to F. X. Gosselin, foreman of works on Ste. Famille wharf, to expend $500 on urgent repairs to the flooring of the old part of the wharf. Pay-lists and accounts have not yet been received, and consequently no money has been paid.

WHARFAGE DUES.

Mr. BERGERON asked :

1. Has the government received a request for the abolition of the wharfage dues on the wharf belonging to the government at St. Laurent, St. Jean, St. Francois, and Ste. Famille, Island of Orleans ?

2. If so, by whom was that request made, and what is the date thereof ?

3. Is it the intention of the government to abolish the wharfage dues in question ?

Hon. WILLIAM PATERSON (Minister of Customs) :

1. No, so far as the wharfs at St. Laurent and St. Jean, are concerned. The other wharfs are not under the control of the Department of Marine and Fisheries.

2. None, so far as the wharfs at St. Laurent and St. Jean are concerned.

3. No, so far as the wharfs at St. Laurent and St. Jean are concerned.

GRAND TRUNK PACIFIC RAILWAY—PLANS.

Mr. BOYCE asked :

1. What plans, if any, showing the general location of the proposed line of the Grand Trunk Pacific Railway, the termini, at the Pacific coast, Port Arthur, Fort William, and Winnipeg, and showing the physical features of the country through which said railway is to be constructed, have been prepared and deposited under section 122 (1) of the Consolidated Railway Act of Canada, 1903 ?

2. Has any application or applications been made to the Minister of Railways, under subsection 2 of said section, for approval of said plan or plans ?

3. If so, what are the dates of such applications, respectively ?

4. Have such plans, or any of them, been approved ? If so, which ?

5. Have any plans been rejected ? If so, which, and for what reasons ?

6. What is the reason for suspending approval of any such plans not yet approved ?

Hon. H. R. EMMERSON (Minister of Railways and Canals) :

1. There are no plans of the general location deposited in the department, but plans of proposed termini at Fort William, Port Arthur and on the Pacific coast have been deposited in the department, but they have not been approved.
2. Yes.
3. Fort William, August 2nd, 1904. Port Arthur, August 16th and December 12th, 1904. Pacific coast, August 16th, 1904.
4. No.
5. No.
6. Because it would be premature to approve them.

EMPLOYMENT OF R. E. A. LEACH.

Mr. BOYCE asked :

1. Is R. E. A. Leach at present in the employ of the Canadian government at Winnipeg or elsewhere ?
2. If so, what position does he hold ; when was he appointed, and at what salary ?
3. What are his duties ?
4. Is he at present performing his duties in the employment of the government ?
5. Is the government aware that complaints have been made as to the unwarranted activity of Mr. Leach during the last parliamentary elections ?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister) :

1. Yes.
2. Inspector of Dominion Lands Agencies. Was appointed January 1, 1905, at $2,000 per annum.
3. He inspects the offices of the local agents of Dominion Lands, and supervises the Homestead Inspection service.
4. Yes.
5. No.

INQUIRIES FOR REPORTS AND RETURNS.

Mr. R. L. BORDEN. Might I ask the Prime Minister when it is expected that we shall have the remainder of the Auditor General's Report ? If I remember rightly, under the terms of the statute it is required to be laid on the table of the House by the 31st of January if the House is then in session, and, if the House is not then in session, within seven days after the opening of the session. I understand that the work has been completed as far as the Auditor General is concerned.

Sir WILFRID LAURIER. As my hon. friend knows, the time when the Auditor General's Report should have been on the table of the House has expired for some time. I understand that the report is completed, but I cannot to-day tell my hon. friend when it will be ready to be laid on the table. I have been told on Monday, but I cannot say for certain.

Mr. R. L. BORDEN. If it is not likely to come on Monday, perhaps the Prime Minister will give us the information to-morrow or on some early occasion as to the probable date.

Mr. SPROULE. The other day, when I asked in regard to the report of Mr. Justice Britton on the Yukon and the report of the Royal Commission to inquire into the employment of alien labour, I understood the First Minister to say that they were both down.

Sir WILFRID LAURIER. No. Judge Britton's report is down, but I did not say anything about the other.

Mr. SPROULE. What about the other one ? I see that it is mentioned in the report of the Department of Labour, but although it is a long time since the commission was appointed, we have no report of it yet. The gentleman was appointed a judge since then and there ought to have been a report made to parliament about what he did.

Sir WILLIAM MULOCK. I shall inquire and inform the hon. gentleman to-morrow.

THE RETURNING OFFICER, YUKON.

Mr. R. L. BORDEN. Has my right hon. friend any further information regarding the matter I mentioned yesterday and the day before, namely the reasons which induced the returning officer in the Yukon to postpone so long the counting of the ballots ?

Sir WILFRID LAURIER. I shall lay on the table the correspondence between the Secretary of State and the returning officer to-morrow.

MINISTER OF THE INTERIOR.

Mr. FOSTER. Who is administering the Department of the Interior at present and when may we expect the minister ? There are certain matters of more or less importance to be brought up and which are waiting his return.

Sir WILFRID LAURIER. I had a report some time ago from the minister himself that he expected to be here on the 15th. I understand, however, that he will not be able to return for some time as the progress in his health, I am sorry to say, is not so rapid as was expected. In the meantime I shall be happy to give my hon. friend any information in my power.

PRINCE EDWARD ISLAND MAIL SERVICE

Mr. A. A. LEFURGEY. Would the hon. the Postmaster General give us some information as to the condition of the mail service to and from Prince Edward Island at present ? There are only four boats available to cross each way, and the mails are piled up on either side to such an extent

that it is impossible to handle them. A great part of the mails have been transferred from the Straits to the steamer 'Minto' and will probably be lying on that boat until the end of March unless we get much milder weather than has prevailed this last month. The 'Minto' and the 'Stanley' have been tied up since the 24th of January and are likely to be tied up another month. I understand that the service at the Capes has not been such as should have been provided to meet an emergency of this kind. I have reliable information that in one case when there was a boat available in the boat house at the Capes, they had to telegraph to Ottawa for permission to get it out and and have it manned and it took three days before they could get an order from Ottawa. When the department are aware that the steamers are tied up, they should use every effort to have a sufficient force put on the other boats available to carry the mails across. The people on the Island have had no newspapers and very few letters since the 4th of the month. During the space of 16 days, there was only one mail. This is certainly a discreditable state of affairs and I call the attention of the hon. the Postmaster General to it.

Mr. LEWIS. As the government and its ministers should be as much interested in this matter as the people immediately concerned, I would suggest that the ice boat now in use between Montreal and Quebec should be put on this route between the mainland and Prince Edward Island.

Sir WILLIAM MULOCK (Postmaster General). My hon. friend from West Huron is quite right in saying that the government are as much interested as any one could be in keeping open communication between Prince Edward Island and the mainland. The other day, I explained what the difficulties were, and I do not believe that Divine Providence has been any more gentle with us in the matter of storms since then. In fact I see in the press that the storms have been repeated especially in the maritime provinces, and the trains are being delayed in all directions. My hon. colleague the Minister of Railways has just handed me the following telegram :

Moncton, N.B., Feb. 16th, 1905.

D. Pottinger, Ottawa.

Another heavy snow storm with high north east wind commenced early this a.m., and extends all east of Bathurst. Number 34, one hour and a half late. Number 9 arrived St. John two hours late. Number 10 about three hours late, has two engines and plough. Mr. Jarvis reports quite useless to move any trains until storm abates. Numbers 1 and 25 will be held at Halifax until weather improves. A train of important freight for Halifax stuck on main line at Sandy Cove, engine ran to Wellington to report ; cars will have to remain where they are until relief train can be sent. Superintendent Campbell reports cancelled all trains west of Strait.

(Sgd.) T. EVANS.

My hon. friend from Prince Edward Island has drawn attention to an instance which occurred, but he did not give the name of the boat or the information which would enable me to inquire into it. I would ask him to give me such information as will enable me to inquire into the matter and see whether any of our officers were guilty of delay. I think it will be found on inquiry that everything human beings can do, has been done, and is being done to keep open the mail service.

Mr. LEFURGEY. I do not think that these boats which cross at the Cape have any particular names. They are simply small boats on runners, manned by seven or eight men. They are pushed across the ice until open water is reached when they are propelled by oar.

Sir WILLIAM MULOCK. Will my hon. friend give me the dates ?

Mr. LEFURGEY. I have not got them just now, but this is not a new matter. It is the same old story of unreadiness on the part of the department to meet the emergencies of winter, and I am very sorry to have to bring it to the attention of the government every session. In fact the government seem to suffer from an apparent lethargy in this matter and are unable to grapple with the situation. I cannot recall any particular date, but I have reliable information that these delays have occurred and are still occurring. I call the attention of the government to the fact now, and on another occasion I hope to address the House more fully on the subject.

OBSTRUCTIONS AT CHATEAU RICHER.

Mr. MORIN. When may I expect an answer to the motion I made on the 23rd January last, regarding the removal of rocks and boulders in the parish of Chateau Richer below Quebec ?

Sir WILFRID LAURIER. I shall take a note of it.

Mr. MORIN. How am I to get an answer, Mr. Speaker ?

Sir WILFRID LAURIER. I understood my hon. friend (Mr. Morin) to ask concerning the removal of rocks from Chateau Richer. I will try to get an answer as soon as possible.

Mr. MORIN. And how soon will that be ?

SALES OF NORTHWEST LANDS.

Mr. FOSTER. May I ask my right hon. friend to request the officers of the Interior Department to hasten the return of lots sold in the Northwest ?

Sir WILFRID LAURIER. I shall be happy to do so.

INSPECTION AND SALE OF SEEDS.

House in committee on Bill (No. 7) respecting the Inspection and Sale of Seeds.—Mr. Fisher.

On section 3,—seeds to be free from seeds of certain weeds; seller's name and address on package; exception :

Mr. W. F. COCKSHUTT (Brantford). I had hoped that the minister would make some report of his consideration of this clause since our last debate upon the Bill. Before entering again upon the discussion of this clause, I desire to call the attention of the House to a statement that appeared in one of our leading newspapers with regard to what I said of this clause on that occasion. I refer to a statement that appeared in the Toronto 'Globe' of February 1, representing me as saying that I desired the farmers of my district to be brought under the operation of the Act. I wish to state that that is a gross misrepresentation of what I said. I asked for no special favours for the farmers of my district, nor did I ask that any restrictions should be placed upon the farmers of my district that were not equally placed upon the farmers of the whole Dominion. This was a very unfair and a gross misrepresentation of the remarks I made on that occasion. I was discussing the Bill with the desire of making it as perfect as possible, and was offering the minister the suggestions I had to make as one engaged in the business. I was not considering how it might affect my district when the next vote came on, but addressed myself to the question simply with a view to making practical and useful suggestions. I think it is not right that such misrepresentations should be made.

I do not take back anything I said on that occasion, in spite of the misrepresentations. Since the last debate on the Bill, a large deputation waited on the Minister of Agriculture; and I think he will agree with me that it carried weight. There were practical men there who have spent their lives in the study of this great question. There were men there with technical knowledge such as few of those on the floor of this House or either side possess. These men gave their best energies for two hours and a half to lay before the minister the points on which they thought this Bill would conflict with the best interests of trade and agriculture. The minister knows what took place on that occasion, so it is unnecessary to advise him. I wish to say here, what appeared very evident on that occasion, that the Bill, if it has a principle at all is the supply of seeds of purity to the farmers and growers of the country. But, having declared that principle, the Bill proceeds at once to throw down the fence it has raised. The Bill hedges the trade about with restrictions—they shall only sell seeds of purity—and then, in a later clause it throws the whole thing open so that every grower and every farmer may sell these seeds to his neighbours irrespective of any law. I took issue with that on the occasion of the last debate, and I stand by that still. If our object is to assert the principle of pure seed, it is absurd to make such a distinction in the selling of seeds that what will be a criminal act on the part of one man will be perfectly justifiable on the part of another. Not only is this a violation of the principle laid down in the Bill, but it is class legislation that, in my opinion, this country is not prepared for. I say there are many very good reasons why this clause should apply to the grower. I would like the minister to state here to-day why a dealer might not be a grower also; and if I, as a dealer, become a farmer and grower, shall I be free to sell from my barn seeds that I am prohibited from selling from my warehouse? That would appear to be the case under the Bill as it is framed. The minister permits the sale of seeds from a barn, storehouse or granary that would be prohibited if from a store. This is plainly class legislation. Further, I contend it is not in the interest of the farmers themselves. It is universally admitted by agriculturists, I think, that seeds should be planted in a different district from that in which they are grown. The interchange of seed by immediate neighbours is not a good thing. It is better by far to bring your seed from a distance than to buy it from your next-door neighbour. Now, I do not know whether the minister is aware or not, but I am aware, that some farmers are not only growers but dealers also. I could give him the names of farmers in my own district who not only grow seed of their own but also buy from their neighbours.

They have got a name for handling seeds well, they are good cleaners, they grow it well, and they have a name of buying a good class of seeds. These men not only grow their seeds themselves, but they buy seeds from their neighbours' fields. Though this Bill says the seed should be grown upon their land, what is there in the Bill to show that the seed that is sold from a barn is grown upon the farm in which that barn stands ? Who is to see to that ? Does he see the farm ? The farmer may have a show field in front of his premises growing fine seed, so that all the neighbours will say, see that beautiful clean field. Though he might sell the product of a hundred acres from his barn—there is nothing here to prohibit him from doing that, and there is nothing here to prevent him from selling seed that he has obtained from some other source than his own growing. He may do that. Therefore, I submit that that clause is not in the interest of the dealer, it is not in the interest of the farmer himself and it is not in the interest of the grower. If the minister will examine that point carefully, I think he will see his way to alter that clause.

Further, I desire to point out what I pointed out on a previous occasion, that it is impossible—I make that statement deliberately—to placard every bag, receptacle or package with all the names there designated. Further, there is nothing to limit the size of the bag, receptacle or package. A receptacle, under the clause, so far as I can read it, may contain a thousand bushels of seed, it may be a large bin in which there may be a thousand bushels of seed. If that seed is not right, the man may be fined $5, but if he proceeds to put that thousand bushels into a thousand separate bags, he immediately becomes responsible for a thousand times that fine. Why should the quantity affect the fine? He may put this into smaller packages still. When I raised the point the other day the minister said I had in mind ten cent packages. Not at all. Grass seeds are always put up in sacks. Let me refer to the white, Dutch clover. That is sold very generally by druggists, almost in every town and city, it is used in towns and cities almost entirely. It is impossible to placard that small bag containing five or ten pounds with all these names. Further, having placarded those bags with all these names, it becomes necessary not only to placard the bag with the names of the weeds contained therein, but also the seed that is sold. Now I wish to remind the minister that there is a very large amount of valuable seed that is grown in a mingled state. I cannot find in this clause or in any other clause that provision is made for handling that class of seed. It is not uncommon that in the same field there may be red clover, alsike clover and timothy seed, all grown in the one field, all nearly pure; and still under the Act I do not find that the minister makes provision for the handling of these seeds, which every one knows are perfectly legitimate articles of trade. In fact the farmer in buying them often brings one sack to contain the three lots, and takes them all home in the one bag, they having been mixed in his presence. Surely it does not appear that the minister has given that consideration to this clause that he should have done. I contend that it is desirable to put practical and workable legislation on our statute-books, and I say that if this clause goes through as it is it will do a great wrong. It throws down the principle that has been laid down regarding the purity of the seed. It permits one man to deal in an article that it condemns another man for handling, and it opens the door for the minister to allow the sale from one premise of an article that he would not allow to be sold from another. That is a system of legislation we are not ready for. It is going to do great harm, not only to the agriculturist, but also to the dealer and all concerned in the trade.

I asked a question the other day, which was answered, I regret to say, in my absence, the answer showing the various countries to which these seeds referred to are exported. I notice there is a list of thirteen countries to which these seeds are exported. That is in spite of the fact that we have no law at present governing seeds. We sell thousands of bushels of seeds to the very best countries, to men who are well acquainted with seeds. We will be prohibited to a large extent from doing that, because we will be compelled to label them with the names of certain weeds. I wish to point out to the Minister that under his Act he does not recognize the standards that rule in the trade at all. On the next clause, perhaps, I may more fully touch upon the point I refer to now, and that is with regard to the test which he submits the seed to. He submits it to a test with regard to purity and germination. Now purity and germination are only partial tests of the value of seeds, as any one knows who is engaged in the trade, but a comparatively small part of the test. You may have a perfectly pure seed but very weak. It may germinate, but it will be very weak. It may be a seed that is not matured, it may be perfectly pure of its kind, but it is only about half size. Now to have a No. 1 seed you must have a seed that is fully developed, and it must not only be fully developed in size, but well developed in colour. Any man who handles seeds will tell you that those are the requisites that go to make up a first-class sample of seed. After the minister has laid down his law as to what constitutes a first-class seed, he has not got a first-class seed at all—not nearly as good as is sold to-day under a less high grade than he proposes to establish here, for the reason that it may be perfect in purity and germination, but it is deficient in size and colour, two of the requisites of a first-class seed. I do not like to refer the minister to anything so small as small potatoes, but I can show him perhaps, just what I mean. You take five bushels of potatoes and cull from them one bushel of small size, only fit for hog feed. You give those to the hogs, and probably that is the best end of them. But these potatoes you culled out were, according to the minister's test, pure of their kind and would germinate. Now both of these points are fully established, they are pure and will germinate, and still they are very far short of what they should be according to the standard set up. Therefore, I contend that the minister is not laying down a proper law in endeavouring to force us to label a seed if it has got ten weed seeds to a thousand good seeds. It may be possible to have ten weed seeds to a thousand, and still be a far better article than we will have under this Bill. Any one that knows the state of the trade, knows that is a fact. Why should we be compelled to brand that package with all the imperfections in it? Who would be able to sell a horse if he were obliged to brand all the imperfections on that horse? Who would

be able to sell any article under those conditions ? Yet the hon. gentleman asks the seedsmen to brand upon their package every impurity and every imperfection, and then says, buy it if you dare. It is not a fair way of doing business, it is not a right way, it is not a way that will commend itself, I believe, to the intelligence of this country and this House.

Further, it is calculated to do an immense amount of damage to trade that has been established. I say that this trade has been well established under great difficulties. You heard the First Minister the other day, in answering my question, say that upwards of $1,300,000 worth of clover and grass seeds were exported from this country during the last year. Remember too that we have to supply almost the whole Dominion of Canada, because Ontario grows almost all the clover and grass seed which are sown throughout the Dominion ; and after we have done that, we ship $1,300,000 worth of seed to foreign countries. That seed did not go as a pure article, it went as the best seed that goes to the markets of the world, and the proof is that it brought the price. There is the proof of the quality of the seed, that it brought a profitable price in the world's markets. I have here a report of the British Committee of Agriculture dealing with this question.

I do not know whether the hon. minister has seen this or not but there are some items in it that are well worthy of his reflection. The same class of committee I have asked for was appointed to deal with this question and it is the only proper way to deal with it now. It should either be referred by this House to the committee on agriculture or to a special committee selected by the Right Hon. Prime Minister (Sir Wilfrid Laurier) or by some other gentleman in whom the House has confidence, and every one of these clauses should be dealt with and threshed out in the presence of men who have a full technical knowledge of the subject they are dealing with. I hold here the report that deals with the evidence collected. The committee says there that after travelling throughout the length and breadth of Great Britain and after receiving testimony from growers, farmers, dealers and men of every class interested in the trade it believes that it is not in the interest of the trade that government control should be set up. It is not palatable reading perhaps but it is a true statement made after a most thorough examination. Every one who knows anything about agriculture in Great Britain will say that they are away ahead of us in this country, and still, after weighing this whole subject, after taking evidence from men of all classes and from men who are engaged in all the different branches of the seed business this committee were compelled to say that in their opinion they did not believe that government control would conduce to the advantage of the trade or to the advantage of any agricultural interest. I trust the hon. minister will take into his consideration the proposition that I made privately to him the other day and that I make here again now, and that is that this Bill, before it becomes law, in the interest of the country at large, should go before a committee where every single clause can be threshed out and everything shown up that is in it, seeds, weeds and all. Let that be done and the hon. minister will perhaps have a workable Bill, a Bill that can be carried out. But, put it on the statute-book as it comes before the House and it will either become a dead letter or else it will drive out every man who is now in the trade. That is not my word, it is the word of the gentlemen who waited on the hon. minister the other day. I ask him if he will not consider the matter and if he will not allow a committee of the House to thresh out every clause of the Bill. Let him deal fairly with every interest and let every agriculturist in this House have a chance of hearing the technical side of the question presented. We cannot have the evidence brought before the House. These technical men cannot be heard here but they have their views. I have a lot of correspondence which has come to me since the Bill was up before, and I believe that other hon. gentlemen have also received correspondence. I hold in my hand a letter from Lieutenant Colonel Bruce, a former member of this House, and a gentleman who is highly respected on both sides of the House not only as a man of high standing but as a man who is in a position to speak with authority upon this subject. He protests against this measure and says that he believes it will never become law. I have also a letter from a gentleman engaged in the trade in my own city, Mr. Horold, who writes in opposition to the Bill in clear and strong terms. These are men who are engaged in the business, who have spent a large portion of their lives in it, who understand the question thoroughly and who say that the Bill is unworkable and that it can never become law without driving out of the trade many who are now in it. Will we allow such a measure to go on the statute-book ? Will the hon. Minister of Agriculture persist in the face of the deputation that waited upon him the other day asking for the amendment of this clause ? This is more than a party question. It is more than party capital. What we want is a fair and workable measure that will not trammel the interests of any class or individual but will operate equitably all around. I trust the hon. minister will adopt the suggestion I have made in this respect, that he will permit this Bill to be referred either to the committee on agriculture or to a special committee. The fact has been brought out in this discussion that in the opinion at least of hon. gentleman on this

side of the House the Bill will not be a workable measure, but that if it is adopted in its present shape it will inflict an injury upon the trade. I do trust that this House will see to it that before the Bill goes through the proposed amendments which are most important and which are most necessary in the interest of the dealer, in the interest of the country and in the interest of agriculture shall be introduced. If the hon. minister will accept these amendments he will have the co-operation I believe not only of his own friends but of every hon. gentleman on this side of the House. Our desire is to assist the hon. minister to the utmost of our ability in making this a workable measure. I have letters and telegrams received since the discussion the other day, from a great many friends, backing me up in every point I have taken in the amendment of this Bill. I trust that I have not trespassed too long upon the time of the House, but I desired to make this statement.

Hon. SYDNEY FISHER (Minister of Agriculture). Mr. Chairman, the hon. gentleman has dealt not only with the clause under consideration but with, apparently, all the clauses in the Bill. I will rather confine myself to the question he has treated as regards the clause under consideration leaving any other questions which he has raised, to be dealt with when they come up under the various clauses of the Bill. My hon. friend has spoken about the interest of the trade generally and about the importance of certain suggestions that were made to me by a deputation which he accompanied a few days ago to my office. I met that delegation with the greatest pleasure, I heard their suggestion and I pointed out to them that as a result of the discussion which took place in this House a few days ago I had already agreed to one or two points which they pressed very strongly. I pointed out to them that I was quite ready to meet them on other points, and if my hon. friend would wait until we reach the clause referred to I will show him that I propose to introduce certain amendments in deference to the desires of the trade where the trade seems to show a reasonable consideration for other interests and where their representations have carried conviction to my mind. My hon. friend has spoken at considerable length generally and I was rather surprised and I take issue with him in one or two of the illustrations that he gave and especially perhaps I should allude to his illustration in which he likened this trade in seeds to what I might call horse-jockeying. I do not think it is a very happy illustration because I think those who are engaged in the commerce of seeds are an honourable body of men who are not engaged in any dishonest practices and who would not like themselves to be classed for a moment with those who are dealing in unsound horses. But, there are one or two points in which this trade differs from most trades in the country, and even differs from that in horses because the individual who buys seeds has no possible way of testing what he is buying. Seeds as a general rule, especially grass seeds and clover seeds, are of a character that no ordinary man, even an ordinary farmer accustomed to the growth and handling of seeds, can carefully judge the value of. The essence of the whole Bill, the most important principle in this whole question, is that we are dealing with a subject, a trade or a product, which requires to have careful test to show its real value. Therefore we require to throw safeguards around the transaction so that the purchaser shall be fairly protected.

Mr. SPROULE. If it is surrounded with safeguards that cannot be applied in practice what is the use of it?

Mr. FISHER. I do not wish now to enter upon the discussion of another point, which of course is of general application, but which does not apply to what my hon. friend (Mr. Cockshutt) whom I am now answering, has alluded to. The question at issue in this particular section, as I understood the hon. member from Brantford (Mr. Cockshutt) is as to whether we should amend and modify the clause which exempts farmers selling, on their own premises, seed which they have grown to other people. My friend wants that provision modified; he says that it is a very dangerous blow at the trade, that it is going to bring about the sale of impure seeds. I take issue with my hon. friend on that point. I maintain that when the farmer who has raised these seeds sells them on his own premises to a person who has come to his premises to buy these seeds the purchaser has his eyes open and probably has a knowledge in regard to the quality and character of those seeds which no purchaser from a seed merchant or a dealer could possibly have. Therefore the two transactions are entirely different in their character.

Mr. R. L. BORDEN. Did the minister say that a purchaser from the grower has better opportunities of knowing what he is purchasing than the purchaser from a dealer? Is that the point?

Mr. FISHER. Yes, and I say that the purchaser who buys from a farmer seeds which have been raised on that farm, presumably and almost surely, has opportunities of knowing what he is buying which the farmer who buys from a dealer has not.

Mr. R. L. BORDEN. What means ?

Mr. FISHER. Where the seed is sold on the premises by the grower the chances are 100 to 1 that it will be purchased only by

a person who lives within a reasonable distance of that farm. It might be that a purchaser might come from a distance to buy but if he did so, he would probably come because he knew something about the grower of that seed and the conditions under which it was grown, as the grower would probably have a reputation for growing clean and pure seed. It is inconceivable that a farmer from a distance who knew nothing about the farm or the man should come to the premises of a farmer who grew certain seed and buy seed from him. I say that is practically inconceivable.

Mr. SPROULE. That happens repeatedly and repeatedly.

Mr. FISHER. I do not believe it does.

Mr. SPROULE. Now there is a flat contradiction.

Mr. FISHER. Yes.

Mr. SPROULE. I can tell the minister that I have seen men who have driven sixty miles, go into a locality where clover and other seeds were largely raised and inquire of farmers around where they could buy seed, and I have seen load after load taken out of the neighbourhood.

Mr. FISHER. And why? Because——

Mr. SPROULE. Because the seed was grown largely in that locality.

Mr. FISHER. And because he wanted to buy that seed from that farmer. That farmer had a reputation for raising seed.

Mr. SPROULE. Not at all. I have seen a man make inquiry generally, at a hotel, as to where he could buy seed. I have seen this over and over again and I have given instructions to a buyer to go to a certain locality where they raised large quantities. The buyer knew nothing about the farms.

Mr. FISHER. He then has the privilege under this section of demanding that the purchase should be made under the provisions of the Act, and it is only if the purchaser wishes it that the seller is exempted from the provisions of the Act, and I cannot myself believe that any people would go, as my hon. friend says, and deliberately put themselves at a disadvantage in regard to their purchases when they have within their own power the privilege of requiring that the seed shall be sold to them under the terms of the Act. I want the committee to understand fully the provisions of this section; it might be inferred from what has been said that this is a wholesale and special exemption. It is a very limited exemption, which only applies to the sale of seed on the premises of the person who has grown it to another person who is going to use it for seed and not to sell it, and then only if the purchaser does not require a certificate that the seed is sold under the provisions of the Act.

Mr. R. L. BORDEN. I understand the minister to say that any one purchasing from a producer has better opportunities of knowing what he is buying than if he purchased from a dealer. We will allow that to pass for the present. Does it not follow from the very reasons the minister urges that the man who has produced and is selling the seed would know better what he is selling than the man who is simply dealing in this seed and does not know anything about the manner in which it has been grown? How does it follow under the terms of the Bill that you impose a certain penalty upon one who is only dealing in the seeds and knows little about them and at the same time impose no penalty upon one who has raised the seeds and who is supposed to know all about them and the manner of their growth? That is the difficulty I see.

Mr. FISHER. Under this provision the transaction has to take place on the premises of the farmer who raises the seed.

Mr. R. L. BORDEN. And who knows all about the seed?

Mr. FISHER. And who knows all about the seed. He sells the seed to an individual who can if he chooses bring the transaction under the provisions of the law.

Mr. R. L. BORDEN. Certainly he can.

Mr. FISHER. If he does not do so, it is presumed that it is because he is satisfied of the quality of the seed he is getting. If he feels any doubt about the seed he is getting, he can require that the transaction shall be brought under the action of the law. If he knows enough about the farmer and the seed he need not do so. The reason, however, for this exemption is that the grower of the seed himself, the farmer, has practically no way of knowing what the seedsman, who is in the business and who does as a matter of fact clean seed and who has machinery for cleaning seed, can easily know, but which the farmer selling as he does on his own premises seed which he grew himself would find it very difficult indeed if at all possible to know. This Bill provides especially for the sale of cereals where in small transactions between neighbours seed may be sold and not be subject to the provisions of this section of the law.

I want to point out further that this exemption applies only to one section of the law. It does not allow the farmer to mark his seeds as first quality. It only exempts him from the necessity of putting upon them the name of certain weeds, for the reason that he cannot and ought not to be expected to know the seeds of weeds in the way that a dealer or seedsman would know them. The intention of the section is to

permit of transactions between neighbours such as are common in all sections of the country. The farmer at one season may be out of clover seed or grass seed, or he may want a little oats or wheat or barley to sow his fields with, and he is to be allowed to go to his neighbour to get them. He knows his neighbour's fields and method of farming, and may, therefore, be supposed to be able to judge fairly well of the quality of the seeds he is buying. If he chooses to risk buying them without bringing the transaction under the operation of the Act, he can do so, but if he wishes to protect himself he can demand that the transaction shall be brought under the operation of the Act, and then it shall be subject to all the penalties and restrictions which the Act provides. It seems to me that we should not interfere with transactions of that kind. Interference would not only be unnecessary, but it would be unfair and would create a hardship in the business of agriculture. The hon. member for Brantford (Mr. Cockshutt) has referred to this as a means of selling bad seeds. I do not think it is. I do not think it will produce the same kind of difficulty in the seed trade that the sale of bad seeds by seedsmen or dealers would do; because this sale of seeds would not spread the weeds which may be contained in them over a large area of country. My hon. friend from Grey said a few minutes ago that he had known men to go sixty miles for seeds. That is a pretty long distance, I should think about the limit of the distance that could come under the operation of this clause. But a seedsman may sell seeds in another province, to some one a thousand miles away. Nobody knows whether he is going to sell seeds to be used on the next farm or at a great distance. The origin of the seed is quite out of reach of the knowledge of the purchaser. As a matter of fact, I do not think the seedsmen themselves, when they fill an order, can generally tell where the seeds came from. I may say that when this subclause was first drawn it was not even limited to the sale of seeds by a farmer on his premises. If a farmer sold seed to another person, to be used for seeding, he was to be allowed to do so. I think I have hedged this exemption round with every possible limitation which could be introduced without creating a very great hardship and hinderance to the agricultural operations of farmers, and I do not see how it is possible for me to go any further in that respect. When representations were made to me the other day by the deputation of seedsmen, I told them that I would be glad to consider what they proposed, and all they proposed was that the effect of the certificate should be reversed, that is to say, that the sale should come under the operations of the Act, unless the seller required a certificate from the purchaser. One would imagine, from what the hon. member from Brantford has said, that the deputation had deliberately asked for the elimination of this clause altogether. They said that they would be glad to have it eliminated, but finally, when the matter simmered down, the amount of their request in the end was as I have said that we should reverse the certificate. I feel that I cannot go as far as that and that I must ask the committee to adopt the clause as it stands in the Bill.

Mr. WARD. Is it the intention of the minister to press the Bill through the committee to-day? My reason for asking is this: Recently, at the request of a prominent seed dealer in my own county, I sent him a copy of the Bill. His desire was to send me his objections to it, and his suggestions for its improvements. In the course of a casual conversation with him, he presented to me many of the objections which have been brought before the committee this afternoon by my hon. friend from Brantford. I would, therefore, ask the minister not to press the Bill through the committee to-day so that I may have an opportunity of bringing my constituent's views, if not before the committee, at least before the minister, before the Bill passes the committee stage.

Mr. FISHER. I do not wish to force things, but I would point out to my hon. friend that this Bill has been before the House now for nearly a month, that a good deal of the Bill was in committee before, and adopted some three weeks ago, that opportunity has been given for a full consideration of it, and that it is not at all likely that the gentleman to whom my hon. friend alludes is going to bring out anything new beyond what the delegation of seedsmen have already presented to me and what has been presented to me in various representations made on their behalf. I do not wish to be in any way discourteous to my hon. friend, and I am not going to insist, but I would like him to consider these points. I would like also to go on with the Bill this afternoon and propose some amendments which I have agreed to. It is quite possible that some of these may meet the views of my hon. friend's constituent. I do not know, of course, what those views are, or what he proposes to suggest, but I can assure the committee that this subject has been threshed out now for nearly two years, that the seedsmen, collectively and individually, have appeared before me and have written to members and have presented their views over and over again, and that to-day I have modified the Bill very considerably so as to try and meet their objections. I have met nearly all their objections and they have expressed themselves to me, a number of them privately, as being quite prepared to go on with their business under the provisions of the Act as here printed with the amendments which I am going to propose. Having laid these points

before my hon. friend, I would promise not to take the Bill out of committee if he will not delay it in committee too long, because I wish to treat him with every consideration.

Mr. WARD. I only ask to have it held over one day more in committee, and then, if I have no objections to offer, I shall not delay it further.

Mr. BARR. This Bill affects two classes, the farmers and the seed merchants; and while the seed merchants have waited on the minister in large numbers and presented their views to him, the contrary is the case with respect to the farmers, and consequently they are not in a position to receive that consideration which is given the seed merchants. I regret that the hon. minister did not see fit to accept the suggestion of the hon. member for Brantford (Mr. Cockshutt), and refer the matter to the Committee on Agriculture. That committee is particularly in a position to look after the interests of the farmer, and the farming interest is far more important than that of the seed merchants seeing that they outnumber the latter ten times. We are all aware that whilst we have received communications from almost every seed merchant in the Dominion, we have not heard to any considerable extent from the farmers, nor have the farmers in this House taken advantage of their position to look after the interests of their constituents as carefully as they should. Clause 2, as it stands, is a safeguard to the agricultural community, and I hope it will not be changed. I know that the seed buyers are putting forth every effort to have it changed and thus throw the responsibility from their own shoulders to those of the farmers. So far as the province of Ontario is concerned, the agriculturists there can do very well without the Bill, and it is not in the interests of that province. There may be stronger reasons in Manitoba and some other provinces why the Bill should be adopted, but what I wish to impress on the hon. minister is that no change should be made in this clause, and that the farmers be allowed to sell the one to the other without coming under the provision of this measure except indeed by their own consent. If you change this section, what will be the result? A farmer might not understand the provisions of this Bill and give the purchaser a certificate which would bring him under its provisions and render him liable to heavy damages. I hope that the hon. minister will be firm as regards this clause, and I think it would be greatly in the interests of our farming community if this Bill should be sent to the Agricultural Committee. It must be remembered that our farmers are not in a position to send deputations to wait on the minister or to understand the proposed law and instruct their representatives as they should. It has been contended that the farmers should be placed in the same position as other people. In that contention, I do not agree. When one farmer desires to buy seeds from another, he is in a better position to judge of the quality of that seed by looking over the field while the crop was growing than he would be by testing the seed. And even buyers from a distance could inquire from other farmers whether there were obnoxious weeds in those fields from which the seed they are purchasing was taken, and in this way be in a better position to know what they are buying than if they went into a seed store.

Mr. OSLER. The Bill, as I understand, is intended to protect the buyer. Is not that the case?

Mr. FISHER. Yes.

Mr. OSLER. I shall not attempt to discuss the details of the measure as others more competent are in a better position to do this. But it strikes me that clause two is a reversal of the position which the minister has taken. In this particular clause the whole object is to protect the seller. But the farmer who raises the seed ought to know more about it than the man who buys from him, and the latter is the one you are trying to protect. A farmer may be a very large dealer in seed, practically a wholesale dealer, yet you are throwing the onus on the buyer no matter how small a quantity he may buy. The very fact that the seller is entitled to obtain from the buyer an acknowledgment that he is selling the seed under the provisions of this Bill implies a knowledge on the part of the seller that he understands its provisions.

Mr. FISHER. The seller here is protected only under certain circumstances and conditions, which are so different from these to which the rest of the Bill applies, that I think a change should be made. If the purchaser thinks he is running any risk, he can bring the transaction under the law or it cannot be completed.

Mr. OSLER. The seller can do that. But the seller is the one likely to have the knowledge, rather than the farmer who buys.

Mr. FISHER. That might be so where the raising of the seed was as described by the hon. member for Brantford (Mr. Cockshutt). But this clause seeks to permit the ordinary small transactions that go on between farmers. If we put it in the form the hon. gentleman suggests, there is danger of great hardship. A farmer might even entice one against whom he had a grudge, or whom he wished to get into trouble, to violate the law inadvertently. As it is now, the buyer is protected if he wishes to protect himself; but if he thinks he has enough knowledge of the transaction, he takes the responsibility. I would not like to change the clause.

Mr. BLAIN. Would the minister give the committee any statement as to the proportion of total seed transactions that take place between farmer and farmer as against those that take place between the farmer and the seed merchant? I have a letter that makes the statement that nine-tenths of the seed sold in Canada is sold by one farmer to another directly or through the medium of the local seedsman. I think it would be valuable information and would help us in this discussion, if the minister would tell us whether this estimate is correct.

Mr. FISHER. I have no information on that point. The transactions that this clause provides for are so varied and so local that there is no possibility, so far as I know, of getting that information. One man, for instance, happens to have a crop of better looking oats than his neighbour. His neighbour asks him to sell a few bushels, thinking that the seed will be better. That kind of transaction is provided for in this section. But I have no information on which to base a statement as to the proportion of such transactions as compared with those that take place between the farmer and the seedsman.

Mr. COCKSHUTT. The minister states that the farmer who buys from another farmer buys with his eyes open. But a man even with his eyes open cannot know what is in the seed. Even with a pair of ordinary glasses one cannot discern exactly the character of the seed—a powerful magnifying glass is often necessary. The statement that a man buys with his eyes open, therefore, does not affect the case, because he cannot know what is in the goods. Now, as to the remark of my hon. friend from Dufferin (Mr. Barr), whom I respect very highly, I would like to say a word. And, by the way, I was glad to see that hon. gentlemen opposite took note of my hon. friend's remark. It must be plain to hon. gentlemen opposite that we allow great liberty of opinion on this side. I trust that hon. gentlemen opposite will show equal independence and will freely speak their minds. If they do, I know, as a matter of fact, that a number of them will support me, for they do not believe in the features of this Bill. I do not think the minister has stated all the points concerning the deputation that waited upon him.

Mr. FISHER. I did not refer to anything except points relating to the clause under consideration. Other matters I left for future discussion.

Mr. COCKSHUTT. But I think the minister has not stated even all that relates to the clause under consideration. I have it from one of the largest dealers in Canada, who was a member of the deputation, that the minister gave him to understand that he would reverse the order of procedure in the clause to which I refer. That gentleman went home with the belief that the clause would be reversed. I can give the minister the name of this gentleman if he wishes, but I do not care to mention it in public. So far as that is concerned, the seedsmen asked that it should be reversed if it cannot be withdrawn. It is in the interest of all concerned that it should not be there. I submit that, and I will not take it back for anything we have heard yet. I will deal with the point of my hon. friend from Dufferin. I think he has only grasped the outside of the question, when he endorses this part of the Bill. Nine-tenths of the seed grown in Ontario is grown for export. My hon. friend (Mr. Barr) says he wants the farmers to sell to one another. But they cannot sell more than one-tenth of what they grow. What is to become of the nine-tenths? Is the farmer going to export it? Is he in a position to export it, or even to send it to Manitoba and the Northwest? It must, of necessity, go through the hands of the dealers. The dealer knows the transportation situation, he knows how to insure and how to handle the business generally. He has his agents all over the country. The dealer must handle the crop, or Ontario must cease growing it. If this clause remains it will prevent the dealers buying as much as they have been buying, and many farmers will be left with their seed on their hands. The farmer cannot sell to his neighbour, because there is no land upon which the seed can be planted. If my hon. friend from Dufferin will consider that point, I am sure that he will see that it is in the interest of dealer and grower alike that this seed should be handled. Therefore, I contend that the procedure provided by this clause should be reversed. It would not be considered neighbourly of a farmer to ask another to give him a writing; but unless the farmer specially asks for a writing he does not get it. If the minister will reverse the order, and provide that the farmer is obliged to give a writing unless he specially negotiates that a writing shall not be given, the clause will be better than it is now. Under this clause it is all in the buyer's hands. The buyer, if he wants a certificate, is compelled to ask the seller to give him one. The farmer will not do that —he cannot do it. I wish to read a clause of the report of the British Committee of Agriculture that examined witnesses and discussed this whole subject. Dealing with this particular question, they say:

> A considerable amount of seed is also sold by farmers to each other. Farmers not having the appliances used by reguler seed merchants are unable to properly clean and winnow their seeds, but it is admitted that the price at which these seeds are sold not infrequently corresponds fairly accurately to their value.

That is, the seed is sold more cheaply because the farmer cannot clean it as the dealer does. That goes to show that the

seed is best passed through the hands of the dealer. In regard to the cleaning of the seed I stated—and perhaps some hon. gentlemen were not present and not aware of the facts which were brought out more fully by the deputation—that there are many weed seeds that no machinery will entirely remove. I gave only one or two the other day, but experts, in the presence of the minister, stated that there were twelve or thirteen weed seeds that no machinery so far invented would entirely remove. The minister gave us to understand that a complete cleaning outfit could be obtained for $800, and that some fifteen concerns in the Dominion had such outfits. But one of the dealers stated in the presence of the minister that two years ago, after he had provided a complete outfit, he had to spend $2,500 in improving that outfit. And another dealer stated that he had a cleaning plant that cost him $8,000. There is a vast difference between $800 and $8,000. Therefore, I contend there is the difficulty that no grower can afford to put in that expensive machinery to clean it in the same way the dealer can. Furthermore, the minister did not deal with another important point. I pointed out that there is no safeguard there that a grower will handle his own seed only, but he may also handle his neighbours' seed. It is a fact that farmers often handle seed that they do not grow themselves. I know one or two notable instances in my own county.

Mr. FISHER. My hon. friend will remark that if they do that, they will not come under the provision of this exemption at all.

Mr. COCKSHUTT. The minister did not explain that, and it does not appear to me that that thing is safeguarded. It says here 'seed that is grown on his own premises.' But who is to tell whether that farmer has sold only his own seed ? There is no one there who can tell, he may have bought it from his neighbour's field.

Mr. FISHER. He may know that to be a fact, and then he would not come under the operation of this exemption clause.

Mr. COCKSHUTT. Whether that is the case or not, it is down in black and white here that he may sell only seed that is grown on his own premises for seeding purposes. There is no safeguard in the Act to show that there is any other seed in that barn than the seed the man grew himself. Further, the minister failed to take up another point. I asked him this question, if I, as a dealer, also became a grower, can I sell from my barn seed that I cannot sell from my warehouse ? I might become a grower, many seedsmen are growers, and I want to know from the minister now whether a seedsman, who is generally a seed grower as well—because nearly every prominent seedsmen has a seed farm—if that seedsman grows seed on his farm can he sell from his barn what he is forbidden by the Act to sell from his warehouse ? It may appear that he could. He becomes a farmer, and he can sell from his barn in the one case seed that he knows is less pure than the seed he sells from his warehouse, simply because under the Act he is classified as a farmer and as a grower. That is a very important point which the minister does not deal with, and it may be necessary for some dealers to handle the product from their barn instead of from their warehouse.

Now, I wish to refer again to the matter of labelling. I say that under this clause the minister is compelling a man to label the receptacle with all the imperfections that his seed contains—I think that is not right —with every weed seed that is in it, or that is named in that clause. Now he cannot take any chances, therefore he will be obliged to placard it in this way : This seed is clover seed, or timothy seed, or alsike, and it may contain the twenty-five named weeds—he would only be safe in naming them all, because he is not sure what is in it himself. You may examine every package and find it good on top, and you may put your hand a few inches lower down and you may strike ten weed seeds that you did not strike on the first handling. Every article you may mention may vary, because we know that the shifting of a sieve will throw certain lighter seeds to the top, and they congregate. Now, you may take one handling and say that is perfectly pure, and the next handling might have ten weed seeds in it. That may occur, and does occur to my own knowledge of the seed trade.

Now the placarding is a great hardship. The minister says you must placard everything but No. 1 seed. No. 1 seed, according to the Act, can be produced only in very limited quantities ; therefore every dealer and grower that comes under the operation of this Act is obliged to label that with all the impurities that it contains. I say you cannot sell goods under those conditions. Is it a fair thing ? A seller usually places all the good qualities in front. The dry goods man sells a piece of dress-goods, the lady makes it up, and she puts a lot of work into it, and says it will wash. But it does not wash, the colours do run. But the dress is made up, and there is an incidental damage against the dry goods man, in the same way that there is expected to be here incidental damages against the seedsman. Damages can be recovered now, damages are recovered now at law without this Seeds Act. I say it is unfair to ask any one to label all the imperfections in his goods on the outside. How can these seeds be sold in that way ? Still the minister obliges every one who has seed that comes under No. 1 grade to label it with all the imperfections it contains. I

submit that is not a fair proposition. I did not say the minister was a horse jockey, but I said that if he were obliged to label all the imperfections on a horse he knew of, he probably might not be able to sell it for what it was worth. So I say that if you label all the imperfections that bag contains you are not likely to get anything like its value.

Mr. BARR. I took the trouble to send this Bill, as many of them as I could find, to the seed dealers and also to the farmers in my riding. I have received several letters from farmers, and they say that they think they can get along very well without the Bill, though they think the object of the Bill is good. But they wish that their privilege be carefully guarded to sell to their neighbours if they wish to do so. I would like to ask if there is a member in this House who has received from any farmer in Canada a single intimation that this clause is not to their interest. In my opinion we should carefully guard their interest. I do not take much stock in that extract that was read by my hon. friend; we can find those views almost any where. Nor do I take much stock in the statement that so large a number of seed dealers are farmers. If they are, then they have the provisions of this Bill to fall back upon, they have all the advantages that the farmers have. Therefore I do not think this is class legislation, and I submit again that we are only doing our duty in looking after the farmers' interests.

Mr. SPROULE. Like my hon. friend from Dufferin (Mr. Barr) I submitted this Bill to three seedsmen in my locality, men who sell 20,000 or 30,000 bushels a year; and after looking it over carefully they did not think it was possible to continue their business and keep within the provisions of the law. Most of them admitted that if the Bill could be worked out it would be valuable, that it was desirable to have seed as clean as possible. One gentleman said that so far as he was concerned he would have to go out of the business. Now if these three seedsmen go out of the business, men who are shipping carload after carload of seeds from that locality, all of which is bought from the farmers, it must come back to the farmers, and if the farmer cannot get a market for his seed, he is put to a great disadvantage. Farmers in my locality realize year after year anywhere from $100 to $800 or $900 for seed raised on their farms. If that seed is not purchased by the dealers in the villages and towns in their neighbourhood, they will find it much more difficult to get purchasers from outside.

Then, there is some of the seed bought in this way and I mention this in answer to the statement of the hon. Minister of Agriculture: Men drive forty, fifty and sixty miles to buy seed. I have seen three, four or five teams in one day from the immediate vicinity of Guelph coming up to buy seed. These men go out amongst the farmers and buy seed. They can buy two or three loads from some individual farmers. They make inquiries, it is true, about the farms and where they are likely to get the seed they want, but they know nothing or very little about the seed that is raised on the farm nor does the buyer in the village, so that they cannot know much more than if they were buying it from the seedsman. Therefore, the statement the hon. minister made that when one farmer buys from another he does it with his eyes open and therefore is not going it blindly, is not a statement which is supported by the facts. That is the dilemma that I have in regard to the Bill. But, I rose more particularly to support the suggestion of the hon. member for Brantford (Mr. Cockshutt) because I think it is a good one though it seems rather late to make it. That is that the Bill should be sent to the Agricultural Committee and that parties should be brought here so that they might give their evidence upon it, if you like, both farmers and seedsmen. While I think it is a good thing and I would like to see it carried out if it can be made workable, I have no evidence before me that it is a workable measure and you can naturally understand the dilemma one is confronted with who is anxious that after we have spent our time and labour on the Bill it shall be a workable measure. If we can make it a workable measure it seems to me that it would not be labour in vain.

Mr. OSLER. I would like to ask the hon. minister if in England or the United States the same conditions or something similar have prevailed?

Mr. FISHER. There is no legislation of this kind in England. The hon. member for Brantford (Mr. Cockshutt) referred to a report of a committee that was appointed to deal with this question in England. That report is five years old and the subject of seed analysis, laboratory work and seed legislation has advanced very much indeed since that time. That report was based largely on the idea in England that they should introduce a law upon the guaranteeing of seeds and the report wound up by saying that they could not see their way clear to recommending a law introducing the guarantee system. We are not attempting to introduce the guarantee system. The guarantee system obtains in several countries on the continent of Europe and works fairly well there, but the observation of it and its working there led us to believe that it would not be suited to the conditions of business in this country or to our people's genius and apparently the committee decided the same thing.

Mr. OSLER. Is there any precedent in the United States?

Mr. FISHER. There is a law in the state of Maine which is similar to this. I think in the United States also they have been discussing the question of the guarantee system but they have not adopted it yet and they have not proceeded yet in the direction of this Bill. Seed laboratory work and analysis have been carried on for a number of years in the United States and I think it has now reached a point where it can be made of practical use for the protection of farmers. A Bill of this kind would not be practicable unless there was a pretty well established system of laboratory analysis of seeds and until I was prepared to say that we had that here, and I do think that we have a pretty well equipped system, I would not insist upon the passage of a Bill of this kind. But, having reached the point which that science has reached to-day, I do not think there is any doubt of the possibility of satisfactorily working a Bill of this kind. My hon. friend from East Grey (Mr. Sproule) says that he is quite willing to admit the principle of the Bill, but that the only question with him is the difficulty of working it, apparently basing this doubt upon the testimony submitted by the seed dealers that they would have to go out of business if this Bill is passed. A deputation of seed dealers came here to see me the other day. They made that statement and they brought with them a lot of samples. One gentleman brought a lot of samples of cereals which, under this Bill, he said he could not sell. Then the gentleman went down to the laboratory and he submitted to the laboratory the samples which he said he could not sell if this Bill were passed. Some of the samples he himself said he would not risk his reputation in proposing to sell. He submitted these samples to the laboratory and there was not one of them that he could not sell under the Bill.

Mr. OSLER. Then, the Bill is no good.

Mr. FISHER. If you want it stronger I will be very glad. I am perfectly willing to make it stronger. I have made it less strong in deference to the wishes of the seedsmen because they have raised such a row and put forward their pleas so vigorously. If the House will sustain me I will make the Bill more stringent at once.

Mr. BARR. No, we will not do that.

Mr. FISHER. No. Well, I think I have struck the happy medium and that the Bill is about as good as it can be made at this day. I hope that after we have had some experience of this law, if it becomes law, we will be able to make it more stringent from time to time. I have said already, and I say again, that in the interest of the farmers and in the interest of clean agriculture in Canada, this Bill ought to be made more stringent. But this is a first step in that direction. In view of the fact that we have not had a Bill of this kind before, I am willing to adopt it as it stands, try it for a year or two and then make it more stringent as the condition of affairs in Canada improves under this legislation. Now, I want to continue what I was saying. These gentlemen are more afraid than they need be that they will be hurt by the passage of this Bill. These same gentlemen brought a lot of samples of grass and clover seeds. They were afraid that none of them could be sold under this law. They were avowedly not very good samples. They brought them to show that they were not good enough samples; yet, I think, one half of these samples could be sold under this law as No. 1 and all of them could be sold. There was one sample that was avowedly a sample of screenings. The statements and representations which have been made on behalf of the seedsmen are not based upon proof of the condition of affairs.

Mr. SPROULE. If they can sell everything but screenings under the Bill, what is the use of the Bill?

Mr. FISHER. Even if that were the case I would be glad to stop the sale of screenings in this country, and if to-day our farmers are being tempted to buy screenings and seedsmen are selling screenings, I say we ought to pass a law to stop it and I am prepared to appeal to the House and the country on that question. The Bill, although it does not go so far as I would like, goes as far as the conditions of the trade to-day will permit without an undue and harsh interference with the trade. In consideration of the large body of respectable and honest seedsmen who do a legitimate, honest business and who are prepared to try and live up, as they can succeed in living up to the provisions of this Act when it is passed, I am prepared to pass the Act in its present lenient form, and to then trust to the future to make it more stringent. But, Sir, I confess that I am not ready to emasculate the Act and to make it absolutely worthless and then pretend that we are going to do any good by it in the direction of creating a clean agriculture in this country. If I should adopt the suggestions of the hon. member for Brantford (Mr. Cockshutt) and the frightened statements of certain statesmen, I would be emasculating the Act and I am not prepared, as the responsible minister who has to introduce legislation of this kind and put it through the House, to go further in the modification of this Bill than the amendments that I have suggested and which I intend to make to it. So far as I am concerned, I think with my hon. friend from Dufferin (Mr. Barr) that it is essential in the interests of the farmers of the country that the section should pass as it is and I must ask the committee to make no amendment.

Mr. W. D. STAPLES (Macdonald). As a new member of the House I did not intend to speak upon this Bill. I have listened

with great interest to the discussion of the Bill and to the criticisms that have been levelled against it, and I have come to the conclusion that as a farmer, since it has been called to my attention that the farmers of the House are not taking the interest in this Bill that they should take, it is possibly my duty to speak upon it. I have noticed during the discussion that in this House as in smaller gatherings we have two classes of farmers, the theoretical and the practical. If the hon. the Minister of Agriculture (Mr. Fisher) is the practical farmer that the Liberal party have always claimed him to be, especially during the last election campaign, I am sure he will agree with me when I say that it is an easy matter to farm theoretically but that it is a different proposition to put those theories into practice. I am speaking only as a practical, or if you will allow the expression, an ordinary, common farmer. I have the honour of representing in this House one of the largest and most prosperous agricultural districts in the province of Manitoba; I think it is the largest and most prosperous constituency.

An hon. MEMBER. Oh, no.

Mr. STAPLES. My hon. friend says 'no,' but of course he represents another constituency in the province of Manitoba. Not only have I the honour of representing that great constituency, but I am sent here by the largest majority of any hon. member from that province, save and except, as I must, the Minister of the Interior (Hon. Clifford Sifton). As to how he rolled up his great majority, I am not going to say at the present moment, but I will go this far and say that if it had not been for the mean contemptible, shameless practices perpetrated upon the electors of the constituency of Macdonald, by simply taking a red pen and disfrancising them, I would be here to-day with a larger majority than the Minister of the Interior.

If this Bill becomes law, are we putting anything on the statute-book that we have not at the present time? I will state to the Minister of Agriculture that so far at least, as Manitoba is concerned, we are not. We have on the statute-book of Manitoba what is known as the Noxious Weed Act, which is more drastic—that is a nice term of the hon. minister—than the Bill presented here to-day and in order to prove that, I shall call attention to a couple of clauses in that Act. It appears to me that, so far as Manitoba is concerned, we are to-day wasting time. Sections 22 and 23 of the Noxious Weed Act of Manitoba are as follows:

Any such inspector may, during the day time, enter any store, shop, warehouse, mill, elevator or other premises occupied by any person who vends grain, grass or other seed for feed or seeding purposes, and may inspect such seeds or grain to ascertain if they contain any seeds of noxious weeds, and may take away a sample of such grain, grass or other seeds if he considers it necessary for the purpose of establishing the fact that seeds of noxious weeds are contained among such grain, grass or other seeds.

Section 23 reads thus:

Any person who vends for seed or feed purposes any grain, grass or other seed, among which there is any seed of noxious weeds, shall be liable to a fine of not less than ten dollars nor more than one hundred dollars, and the magistrate may order that any grain, grass or other seed sold contrary to the provisions of this section shall be destroyed.

Now, Sir, I claim that so far as Manitoba is concerned we have all the protection not only as seedsmen but as farmers, that this Act purports to give, and I do not see that we can make any better law than that which exists in Manitoba. I will admit of course that all through his arguments the province of Manitoba has been dealt with as though it were a back number and was not worthy of consideration. In so far as the work of the Department of Agriculture and the gathering of statistics is concerned, I would say that Manitoba is well up to the mark, and in so far as the Noxious Weed Act is concerned, I think that these two clauses which I have just read will fully establish the fact that that province is quite up to the mark to-day. Notwithstanding that Act the farmers of Manitoba have not by any means the protection that we deserve from the Department of Agriculture of the Dominion of Canada. We require some means whereby we will be able to furnish not only the seedsmen, but the farmers of this country with the means of acquiring good, sound, clean seed. As to the method which will best bring this about, I agree with the suggestion of the hon. member for Brantford (Mr. Cockshutt) who has proposed that this question should be referred to an agricultural committee. I think that is the proper place for this discussion, where we farmers can get together—and it will not take a very large room to hold the farmers in this House for there are only 24—notwithstanding the fact that three-fourths of the population of Canada are farmers and paying three-fourths of the taxes of this country. Not quite a fair representation, and I am sure that if the farmers and the seedsmen meet together we can make some progress. Let us get to work and see if we cannot, together with the Minister of Agriculture (Mr. Fisher) succeed in laying down a fundamental basis whereby we can put within easy reach not only of the farmers, but also of the seedsmen, good clean seed. This can be done, there is no doubt about it, if we would follow out the lines suggested by an hon. member of this government during the last election who thought that it would be to the interests of his party to go to the west and give us one or two addresses, I refer to the Minister of Trade and Commerce (Sir Richard Cartwright). While I do not agree

with all the remarks he made, still I always try to be fair, and he did make some suggestions which if applied to the seed question so that we can get good clean seed, would, I think be of great benefit. He said that he thought the time had come when there should be established throughout Canada, small model farms. If these model farms were established and brought under the supervision of the Minister of Agriculture, I do not see why we could not equip them in such a manner—and I do not know that it would be a very expensive operation; after all—that we would be able to accomplish the object which I hope the hon. Minister has in view in submitting this Bill. I do not know that there is any serious objection to the Bill, from the farmers' point of view, so far as it goes; but it does not go far enough, and it does not put the responsibility upon the proper persons. It is the Department of Agriculture that should be responsible for the supply of clean seed. I believe that if we got together, we could succeed, with the good judgment of the hon. minister, in mapping out and putting into operation the requisite facilities for placing within easy reach of the farmers and seedsmen of this country the good, clean seed which we as farmers are deserving of, and the seedsmen as well.

Mr. M. S. SCHELL (South Oxford). As a practical farmer, who lives on a farm and is interested in farming operations, I have taken a deep interest in the discussion of this question, when it was before the House a few days ago, when it was discussed by the deputation of seedsmen who waited upon the minister, and as it has been presented before us to-day by the various speakers who have addressed the House. In the discussion that has taken place there has been very little real criticism against the Bill. Some points have been touched upon slightly—for instance, the provision in regard to the fines that may possibly be imposed; but I believe the minister proposes to amend the clause respecting the fines. So far as the object of the Bill is concerned, I am confident that the more carefully we consider its provisions, the more convinced we shall be that they are not at all too stringent. The first thought was that it was probably too complicated for the legal points in regard to its enforcement to be readily determined; but I presume that it has been made as clear and as easy of interpretation as the lawyers who have had it in hand could make it. The provisions of the Bill, I am sure, are not at all too stringent. Our country is too much overrun with foul weeds, and anything that is done with the view of curtailing their dissemination is in the interest of agriculture in this Dominion. I listened the other day to the deputation of seedsmen who presented the arguments from their standpoint in the strongest possible way; and yet, when they considered the situation carefully and candidly, I think that they themselves realized that the Bill was a pretty fair measure, and not one that would operate seriously against their business. Their fear that the Bill would hurt their business seemed to be greater at the introduction of their case than it was at the conclusion of the interview; and I believe that if the Bill is passed as now proposed, the seedsmen will not have much reason to complain. The objection has been raised against allowing farmers to sell seed to their neighbours, that such seed would not be fit to be sown; but we know that neighbouring farmers are thoroughly conversant with the nature of the soil and the foul weeds liable to be grown on each other's farms. The farmers themselves are desirous of getting the best possible seed, and are usually as capable as any other class of the community of guarding their own interest; and, while it may seem to be giving a farmer somewhat of a privilege to sell seeds to his neighbour in this way, I do not think that as a rule he is going to abuse the privilege. It has been stated that ninety per cent of the seed grown in Canada is exported. If so, it is important that we should have some regulation of that seed as well as of the ten per cent which is sold at home. Of the members on the opposition side who have spoken on this Bill, I notice that those who have been longest in the House have said but little. I believe that they recognize the reasonableness of the Bill, and I believe that the House as a whole regard it not only as a Bill that should be passed, but as one that has been framed moderately and in such a way as will conduce to the protection of the farmers of this country, conserve the interests of the seed trade, and, while not perhaps as stringent as it should be, will in a large measure help the agricultural industry, especially this particular branch of it.

Mr. FISHER. The hon. member for Macdonald (Mr. Staples) has alluded to the local law of the province of Manitoba. I know that Act, and I hope that it is doing good work there. I hope that the government of Manitoba is enforcing it.

Mr. STAPLES. They cannot enforce it.

Mr. FISHER. If that is the case, I think we had better have a Dominion Act that we can enforce. I am sorry that the hon. gentleman says that his government cannot enforce their Act; I am sorry that he confesses their weakness in that respect. But I was going to ask him, in his strength as a member from Manitoba, to be merciful to us who do not belong to that province, and allow us to pass an Act which will apply to other parts of the Dominion, and to Manitoba as well; because the farmers of Manitoba are equally interested in this matter with the farmers of the other parts of the Dominion. This Act does not undertake

to do what cannot be done or what we cannot enforce in a reasonable, moderate and judicious way; and I am satisfied that if this Bill becomes law, it will be enforced. I appreciate what my hon. friend from South Oxford (Mr. Schell) has said. I believe he has expressed the judgment of the House in general, the desire of the farmers, and the feeling of the seedsmen. The deputation of seedsmen came here a good deal frightened, and determined, I think, to get all they could in the way of modifications; but after the explanations which were given at the meeting and afterwards in the seed laboratory, in regard to the way in which the Act would work out, the statement was made to me by one of the most important of those who spoke on the question, that although he would have liked this particular clause to have been modified in the way suggested, he believed that if the Act were passed they would be able to carry on their business and would go on with their business. I must ask the committee to adopt this third clause and then go on to the consideration of those amendments which, as the hon. member for South Oxford (Mr. Schell) has indicated, I am quite prepared to make, in the general interests, after considering the representations of the seedsmen.

Mr. CLEMENTS. Speaking from a farmer's standpoint and as one always anxious to promote the interests of the farmers, I think that the suggestion thrown out by the hon. member for Brantford (Mr. Cockshutt) should be adopted and this Bill referred to the Agricultural Committee. When it was first introduced, I sent copies to every district, and nearly every reply I have received from both sides indicates that the Bill is wholly unworkable. That is my opinion also. I should regret very much to have to vote against the Bill if I thought it was in the interests of the farmers and would be only too glad to support any measures in their interests, I care not who might bring it in. But as the measure, I believe, is neither in the interests of the farmers not the seedsmen, I think we are losing very much valuable time discussing it, and that it should be rather sent to the Agricultural Committee where it could be more satisfactorily dealt with.

Mr. STAPLES. We have a law at present in Manitoba on this same subject, but it has not proved adequate to prevent the spreading of noxious weeds, simply because we have not the proper facilities for growing and for cleaning the seeds, and until we get these facilities within easy reach of the farmers we are bound to suffer from this evil. You are going, if this measure passes, to inflict upon the people of Manitoba the cost of enforcing a law similar to the provincial one now in existence, and I do not believe that the staff of officers to be provided under this Bill will prove any more efficient than those we have at present in Manitoba.

Mr. A. A. McLEAN. I would like to be informed by the hon. minister whether the Act passed by the legislature of Manitoba was outside the jurisdiction of that province ? If so, has this parliament the right to pass the Bill now before us, which is dealing with a similar object ? It may be that this Bill is ultra vires and that all we have the power to do is to appoint inspectors as is done with regard to our fisheries.

Mr. FISHER. I cannot pretend to be an authority on legal questions, but I know that this Act affects a matter of commerce and consequently is within the powers of this parliament, and I have the opinion of the Department of Justice to that effect. It was introduced by a resolution because it deals with trade and commerce.

Mr. T. MARTIN. As I represent a constituency of farmers and have had something to do with the buying and selling of seed, I feel it my duty to give some expression to my views on this important measure. There is nothing to-day which gives our farmers more trouble and costs them more, without any return, than weeds, and if we can do something to eradicate this nuisance, we certainly ought to do it. As the hon. member for Brantford has told us, the deputation the other day which waited on the minister consisted of practical men, but they were practical men on one side and one side only. The opposition to this Bill has been all from that side. The object of the Bill is to afford relief to the farmers, not the seedsmen. I do not believe that we should do anything in this House to injure any man. But, if we refuse to give the farmers protection against the spread of weeds, and have no reason for it except that the dealers have not cleaners or something of that kind, we are of very little use here. The deputation that waited on the minister were very anxious to have this Bill laid over. I have no doubt that from the standpoint of their business that was all right. But this is an excellent Bill, in my opinion. If there is anything wrong with it, it is that it does not go far enough. We should not delay an hour in passing it. I wonder that such a measure as this was not placed on the statute-book many years ago. The hon. member for Brantford (Mr. Cockshutt), judging from his remarks, I should say, has not had much to do with farming. And hon. members, as, for instance, the hon. member for North Perth (Mr. MacLaren) in asking that this Bill be laid over, speak from the seedsman's point of view. I claim as a representative of the farmers that we ought to pass a law of this kind.

Mr. MACLAREN. I rise to a point of order. I did not make the statement that I spoke on behalf of the seedsmen, but I

said that I had a letter from a seedsman on this subject. I advocated sending the Bill to the Committee on Agriculture, that it might be discussed and that all those who are interested might be heard.

Mr. T. MARTIN. I sent copies of this Bill to fifteen or twenty farmers in the constituency I have the honour to represent, asking their opinion upon it. I have had a good number of answers, and, without exception those answers have been favourable to the Bill. These farmers are my friends on both sides of politics and fairly represent the general run of farmers of this country. The hon. member for Brantford does not give the farmers credit for any intelligence; but I can tell the hon. gentleman that the farmers are just as intelligent and just as alert in promoting their own business as are the representatives of any other business interest of the country. If the hon. gentleman believes that a farmer would buy seed from his neighbour without inquiring or without knowing what that seed was like, the only conclusion I can come to is that the hon. gentleman has not mixed enough with farmers to know how careful they are in guarding their own interests. If the Bill is to be changed at all, I would suggest to the Minister of Agriculture that it should be changed so as to provide that these packages or bags shall be labelled with red ink and with letters so large that he that runs may read. If the seedsmen are scattering through this country seed upon which they are afraid to put on the name of the weeds contained therein, the sooner that seed is burned the better for the Dominion of Canada. I am sure the hon. member for Brantford has never figured up what weeds cost this country. The spread of weeds means millions of dollars ; and we are throwing this money away because a few seedsmen believe they cannot clean their seed. I understand that the seed which has been tested, 65 per cent of it will grade No. 1. I would also call the attention of the committee to the fact that the Bill, as I read it, has not a word in it to prevent seedsmen going on in the business of exporting seed as they have been doing. The hon. gentleman tells of a horse that could not be sold because he was branded. Well, if his horse was so foul, I would put him in the same place as I would put the seed.

Mr. COCKSHUTT. I desire to say a word or two in regard to the debate so far as it has gone. The minister rather cast an imputation on the report of the British Committee on Agriculture from which I read, giving members to understand that it was obsolete. Well, it bears the date 1901, the date of the minister's census, all the volumes of which have not yet been published. It seems to me that the minister at least should regard it as comparatively new ; and I think that members of the House generally will be inclined to accept it. If the minister has the confidence in his Bill that he claims, he has nothing to fear in sending it to the Committee on Agriculture. I am anxious for a full and open discussion ; I want the thing to be considered from the standpoint of all concerned. Let all come forward and state their views. If the committee report favourably on the Bill, if any committee that professing to know the needs of the farmer and the dealer approve this measure, I am prepared to withdraw my opposition. Now, a word to the hon. member for North Wellington (Mr. T. Martin). I am sorry to see that the hon. gentleman has escaped from the chamber. He advocated painting these packages red. Well, I think the hon. gentleman left us no room to doubt his party proclivities ; I think he is entitled to the very first place as a party man. As a party man, I would paint him red. He has accepted the whole Bill without regard to criticism. He suggests that I know nothing about farming. I think I know at least as much about farming as the hon. gentleman does. I was brought up largely on a farm, and have spent at least twenty summers on a farm. I am pretty well known to the farmers, and would have no fear in going before the farmers and saying exactly what I have said in this House. I have discussed this matter with farmers, and I speak the opinions of many farmers in my district. If the Bill goes through it will hit the farmer harder than anybody else. If I did not believe that so strongly, you may be sure I would not stand up here so often to declare it. The Bill will take away the big business the farmer has in seed growing. I do not know whether my hon. friend (Mr. T. Martin) who professes to know so much about farming has looked into that matter or not, but seed-growing is a great source of revenue to the farmers of Ontario. The hon. member for South Oxford (Mr. M. S. Schell) showed a disposition to swallow his own opinions as a party man. He would regulate not only the selling of the ten per cent of seed that is sold in this country but of the ninety per cent that is sold in foreign countries. Why cannot he trust the foreign countries to look after themselves ? If we are sending seed abroad that won't pass the test in this clause, it will not be received. I mentioned in this House the other day that the seedsmen, when they came down on that deputation, stated that the seeds raised in the province of Ontario are the best in the world. Now what better can you have under the Bill than that ? Are you going to destroy that trade that has been built up with great difficulty ? It is going to take away from the farmers of Ontario alone a revenue of probably $2,000,000 per annum, because Ontario is the seed grower, none

of the other provinces, scarcely, grow seed at all. I am speaking now of grass and clover seeds. There are other gentlemen here prepared to deal with the cereal question better than I am.

I do not profess to be an expert in the grain trade, but I am able to say that this is going to raise the price of seed grain. One gentleman, before the committee the other day devoted his attention to that question, but it has not appeared in this discussion at all. He said that many farms in this country would remain unseeded if the Bill was carried in its present shape, because seed grain of a certain quality cannot be obtained at all times. Are you going to risk having land remain unseeded because the quality cannot be obtained that the hon. gentleman requires ? In the Northwest alone it will cause grave injury. Many of these men live in remote districts, hundreds of miles from the Northwest seedsmen, and are you going to make it impossible for them to get seed in their own neighbourhood ? Because you are going to knock that man out of business that has been supplying him with seed. How is that man in the Northwest, or New Ontario, hundreds of miles removed from seedsmen, going to get his seed ? It is impossible. The minister makes provision that these samples shall be sent to a laboratory. This Bill says that seeds shall be tested during a period of from one to four weeks before they can tell all the seeds that will germinate. I prefer to accept the expert testimony of the best agriculturists in Great Britain, headed by Lord Onslow as chairman, to the testimony of hon. gentlemen opposite. Hon. gentlemen opposite are prepared to swallow this Bill without knowing what it means. They say, don't discuss it. I say if this Bill is what the minister claims it to be, it will stand full discussion at the hands of this committee. Let the hon. gentleman name, if he can, any country in the world that has as drastic legislation as is proposed here. I asked him to do that, and he has not answered my question. I want him to name any country on the face of the earth that has the same drastic legislation. We all want to get rid of weeds, all kinds of weeds ; but are you going to lay the whole onus of the weed question on the seed dealer or the seed grower ? Look at your waysides, every road way in the whole country is marred with weeds. There is a law against it, but the neighbour who takes the trouble to cut weeds on his own side of the roadway and in the fence corners, is obliged to stand the flood of weed seeds that come to him by every wind that blows from the farm of his neighbour, who is less careful. There is a law already on the statute book against nuisances of that kind. Still, the hon. gentleman comes against the seedsmen and the grower. This is going to hit the grower. The farmer who grows seed is going to be the hardest hit of any. It is going to hit every one who plants seed, because you are hedging around his source of supply a measure that will enhance the price of seed to such an extent that he will not be able to pay for it. It will put up the price of clover seed $1 or $2 per bushel, because no man can afford to sell on the margin he is selling for at present and take the risk of the fines imposed by this Bill. Is it in the interest of agriculture that clover seed should be made a dear article ? There is no seed so necessary to the agriculturist as clover seed, it is the best manure that can be furnished to his fields, and it is the easiest provided, and if he cannot get that seed cheaply, he will be unable to keep his land in that state of fertility that it should be kept.

Now, I contend that if the minister has the confidence in his Bill that he says he has, he should submit it to a committee, who can hear the farmers and others interested. Let them examine expert evidence from all sides. I am willing to have the farmers represented, I represent a large number of farmers myself, and I trust I am doing that quite as well as the hon. gentleman from Wellington (Mr. T. Martin). I have spoken to several farmers in my county about it, and they said : 'We have the utmost confidence in your judgment on that question, go ahead and say what you like about the Bill.' I told them that I had put myself on record against that exemption clause, and not one of them objected. I have sent this Bill to some farmers and some dealers, and I have yet to hear from any one a single objection against what I said. A statement was printed in the 'Globe,' and it was a gross misrepresentation, that I had endeavoured to put it on the farmers of my neighbourhood, and still I have not had a single protest from the farmers I represent. If that is the case, I think I am justified in saying that I have endeavoured to speak on this Bill in the interest of all concerned. If, I say, the hon. gentleman has that confidence in his Bill that he claims to have, if it is as good as he says it is, and he thinks it will stand the test, let him submit it to a committee, and if that committee says the Bill is right my mouth will be sealed for evermore as far as opposing it is concerned. But in the meantime I am here to tell the minister that he has got a most imperfect Bill, a most drastic Bill, a Bill without a parallel in any civilized country in the world, so far as we know, and that if he makes it law, it will be a great injury to the farmers whom he professes to be catering to, and indirectly to the dealers, of whom I am one, and whom I am endeavouring to represent here as well as the growers. Now let the hon. gentleman submit his Bill to a committee of members of both parties, and if they approve of it just as it is, I am willing to let it go through just as it is.

But I tell the minister again that when that deputation went away the other day it was with the understanding that he was going to reverse that clause. I would like the minister to say whether or not he or his deputy did give that deputation to understand that he was going to do that. He said, as far as I understood him, that he would do it; and I was told by one of those who formed part of that deputation that he understood it was going to be done. I am not here to mention names, but I was told this by an hon. gentleman sitting on the other side of the House, and I believe he spoke the truth when he said he believed this particular clause was going to be reversed. But the minister now comes down and says that he will stand by it, he will die in the ditch with it rather than change it, it is going through just as it is. If he does that, he will wrong that deputation, he will wrong the gentlemen who went away with that impression, and who would be here again to-day to press upon the minister the injustice of this Bill if they supposed it was not going to be revised. I believe the Postmaster General himself knows something about this Bill, I believe he has been seen about it; why does he not speak? I know that some gentlemen waited on him, why does not the Postmaster General say what he knows about it? Where is our hon. friend from Centre York (Mr. Campbell)? He knows something about the objections to this Bill. Where are these gentlemen, and why don't they stand up now? Are they going to be so hide bound that they will swallow a Bill that is going to do an immense injustice to the trade, to the growers, to the agriculturists of this country? Are they simply going to bolt it down because it is a party measure, instead of threshing it out and making it a credit to the country and to parliament? I trust that the minister will take into consideration all these grave objections that have been made to his Bill, and revise it along the lines that they point out.

At six o'clock, committee took recess.

After Recess.

Committee resumed at eight o'clock.

Mr. R. L. BORDEN. Will this Bill apply to seed that is intended for export?

Mr. FISHER. The main part of section 3 would apply except as modified by an amendment which I propose to add to section 7. The Bill as it stands now, I think, applies to all sales of seed within the boundaries of Canada.

Mr. R. L. BORDEN. It applies to more than that, does it not?

Mr. FISHER. It would apply also to any seed held for sale in the Dominion of Canada, whether for export or not.

Mr. R. L. BORDEN. I would like to know what the hon. minister's amendment is before we leave this section.

Mr. FISHER. After section 7, which my hon. friend will see provides for certain exemptions from the provisions of the Act, I propose to add a clause 'd':

Seed marked as screenings and held or sold for export only.

By the first section of section 7, as my hon. friend will see, the provisions of the Act will not apply to this class of seed. The seedsmen say that they would like to sell abroad the refuse which they could not sell in Canada under this Bill. Any seed which is sold to the foreign markets as Canadian seed would have to live up to the provisions of this Bill, but if they can find a market abroad for this class of goods, and if it is sold as screenings, I am willing that it should be exported, and therefore I am adding this amendment; otherwise the Act would apply to seed either sold for export or held for export.

Mr. HENDERSON. I do not rise to offer any opposition to the Bill; I do not claim to be a sufficient judge of what would be required; but I would like to know whether I properly understood the minister when he was speaking with reference to the deputation which waited upon him. It appears that they had certain samples of seed which they showed to the minister, and which were placed under test. The minister, as I understood, said this afternoon that all of these seeds were such as could be sold under this Act, with the exception of one sample. I simply rise to ask if I correctly understood the minister.

Mr. FISHER. Yes, except that they were not shown to me, but were taken to the laboratory and examined by the officer of the department in the laboratory. I did not myself personally see them at all.

Mr. HENDERSON. Well, then, it seems to me that there is not that very great demand for this measure that I at first thought there was. That is all the opinion I have to express about it.

Mr. JOHN HERRON (Alberta). There is one feature of this Bill of which I am somewhat afraid. I believe the Bill is honestly intended to benefit the farmers of this country, but I believe that its effect will be just the opposite, owing to the creation of a monopoly. For instance, in an outlying district, say in Alberta, where I live, you will have a large settlement and a small town in which there are three or four merchants dealing in seed. You will, under present conditions, have good opposition among them, and every one consequently gets seeds at a reasonable price. Supposing that this Act comes into operation, and that there is only one merchant in the town able to put in a plant capable of cleaning

the seed and extracting the noxious weed seeds. Will that not throw the business into the hands of one man, who will have the advantage of a monopoly, while the farmers will have to pay more than they otherwise would, and will not its evil effect in this way be greater as against the interests of the farmers in general than the evils arising under the present system? There is another feature of the Bill to which I would call attention. A farmer will get a small price for his seed grain. Many farmers make considerable money by selling seed grain of a fairly good sample, but if this law takes effect they will be afraid to sell this as clean grain, and therefore they will be compelled under the law to sell it to the one merchant who has the machinery for cleaning it. In that way, the control of the whole seed trade of the district will pass into that man's hands, and this will be an injury to the farmers.

Mr. FISHER. I think the usual competition of trade would obtain there as elsewhere. I am not familiar with the conditions in the district of my hon. friend (Mr. Herron), but I think probably agencies would be established almost immediately for the sale of seeds by the larger seed merchants of Winnipeg and other places in the western country or in Ontario, who are already selling seed pretty largely all over the Dominion. I think that the demands of trade and competition would rectify such a condition.

Mr. BOYCE. How does the minister expect to enforce or carry into operation the provisions of this Act? Does he expect to appoint inspectors throughout the farming districts of Canada, or by what machinery does he propose to render effective the so-called drastic provisions of this Act?

Mr. FISHER. I suppose my hon. friend was not in the House when I explained that before?

Mr. BOYCE. I was not.

Mr. FISHER. In the first place, any one who is aggrieved can take out an action; the Bill provides a penalty, &c. In the second place, I have a certain staff who are engaged in the seed laboratory in the investigation of the seed conditions all over the country. This staff to-day is composed of the chief of the division and, I think, five men under him. During the winter season, and I think most of the time, these officials work in the laboratory, some of them would all the time. But during the summer I have had one of them in the Northwest, one in Ontario, one in Quebec and one in the maritime provinces, investigating the conditions of the seed trade. If any circumstances arose which indicated a violation of the law, and it appeared that there was no action taken by individuals, I would consider it the duty of these men to try and enforce it; but I have no desire or intention to appoint a corps or staff of inspectors over the country, and I do not think it is at all necessary. I am satisfied that the passage of this Act, and the knowledge of the fact in the minds of the people engaged in this trade, will bring about the results which the Act is intended to secure.

Mr. BOYCE. Do I understand the minister to say that beyond the staff he now has, he will not require to appoint any officers for the enforcement of the provisions of this Act, nor will he ask for any appropriation for that purpose?

Mr. FISHER. I do not expect to do so. I cannot of course tell what developments may take place, and cannot bind myself with regard to the future; but so far as the appointment of inspectors under the Act is concerned, I do not intend to ask for any appropriation for that purpose this session.

Mr. CARVELL. I have listened to the discussion this afternoon on this question, and, while not a practical farmer, I represent a farming constituency, and I have observed that the discussion has been nearly altogether from the standpoint of the seed merchant and to some extent from the standpoint of the province of Ontario. I have heard two or three speeches from gentlemen from the west, but not a word as yet from the maritime provinces. I would therefore like to discuss this measure for a few moments from the standpoint of a maritime member, and one of the representatives of the maritime farmers. I can assure you that there is no question of so much importance to the maritime farmers to-day as the seed question. We have attempted for some years to improve the quality of the seeds we have to use. We cannot tell why, but it is a fact that we do not raise our own grass seeds to any great extent in the maritime provinces. We are compelled to purchase them mostly from the province of Ontario, and it seems almost impossible for a farmer to get a good quality of grass seeds. He can prepare his land for a crop of wheat or any other grain, and the crop will be fairly free from weeds; but the next year after he uses Ontario grass seed, he will probably have more sorrel in his crop than timothy or clover. Our farmers have taken various courses in their efforts to overcome this difficulty. They have banded themselves together in societies and have imported the seed direct; our merchants have tried to get good seed for them; but no matter what we do, it seems impossible to get good results. Now, it seems to me that this Bill is exactly in the right direction. It has been described here this afternoon, I think by the hon. member for Brantford (Mr. Cockshutt), as a drastic measure; I think he almost went so far as to say it was vicious legislation, and he did say that it was

legislation unprecedented in the annals of any civilized country. Well, Sir, if this Bill will be the means of overcoming some of the difficulties under which the farmers of this country are suffering in connection with the purchase of their grass seed, then Canada will have the distinction of being the first civilized country which has tried to grapple with this question. I cannot see any difficulty in the way of working it out. It seems to me that it would be nonsense to appoint a staff of inspectors to enforce the Act. If it is going to be useful to the farmers, they will find the means of working it out. If it become law, we in the province of New Brunswick will do so, whether they will in the province of Ontario or not. We will simply get some farmer to take a sample of the grass seed which he has purchased from his local merchant, and have it tested, and if it does not come up to the requirements, we will lay an information against the local merchant and see where the trouble is. You may say that this will be a hardship on an innocent merchant. By no means, because by subsection 2 of section 8, if the merchant be able to show that the package has not been broken, and that he has purchased it in good faith, and gives the name of the merchant in Montreal or Toronto from whom he has bought the seed, the onus will fall back upon the latter.

Mr. BOYCE. But the farmer is mulcted in the costs of the transaction.

Mr. CARVELL. What would the costs amount to? Perhaps a couple of dollars in the police court.

Mr. GANONG. And the cost of hiring a ten-dollar lawyer.

Mr. BOYCE. Whatever they are, he has to pay them.

Mr. CARVELL. I appreciate the solicitude which my hon. friends have for the poor farmer, especially the solicitude of my hon. friend from Charlotte (Mr. Ganong) for the farmer who gets into the hands of the lawyers. When the farmer gets into trouble, he is the first man who goes to a lawyer for protection. If the merchant who sells the seed has violated the Act, then he is the man who should pay the penalty. Now, the trend of opinion seems to be that this Bill does not go far enough, because it does not make the farmer liable. That would be a hardship, because he cannot supply himself with the plant necessary to separate the seeds, which costs from $800 to $1,000. But he can go to a seed merchant, who is in a position to supply the plant and have the seeds properly examined; and if the seed merchant will not take the trouble to have the seeds properly examined, and palms them off on the country as pure seed, then he is the man who should pay the costs. It seems to me that no injustice will be done to anybody, but that great benefit will be done to the farmer who purchases seed, and in the end we shall have better seed and better agriculture. Therefore in my humble opinion this legislation is in the proper direction and should pass this House.

Mr. WALSH. Before this section passes, I would like to ask for a little information. I am not going to say that I am a farmer, like some hon. gentlemen who have spoken, and who remind me of a man who, at a meeting, said that he was a farmer. The man who spoke after him said that that was not necessary, as one only required to look at him to see that he was a farmer. He said it reminded him of a story of a man who boasted of having been brought up on the farm. 'In fact,' he said, 'I have been nurtured between two hills of corn;' and an old gentleman in the front seat spoke up and said, 'A pumpkin, begosh.' Before I discuss the Bill, I want to bring to the attention of the hon. minister a remark which he made, and which I am sure I only need to bring to his attention to have him withdraw. One speaker made a comparison between selling a horse and selling seed, and the minister said that the man who sold seed was an honourable man, thereby implying that the man who sold a horse was not. In my constituency we deal largely in horses, and I believe the farmers there are thoroughly honest. They make as much money out of selling horses as they do out of selling grass seed, because they do not deal in grass seed. The minister told us that the Bill does not require the farmer to give a certificate of the seed he sells, because he is not in a position to say whether the seed is pure or not; but, on the other hand, he tells us that the farmer who buys from his neighbour is protected because he knows the kind of seed his neighbour is growing. If the man who owns the farm does not know whether his seed is pure or not, how can his neighbour? The discussion has hinged principally on grass and clover seed. That does not apply to the farmers in my section, because they do not grow it. We are more interested in cereals. We have flat land surrounding the river, which grows grain and, back of that rising ground which is good for pasture; but they do not gow sufficient grain to feed the stock which the dairy industry requires. I give the minister credit for being a great help in the way of introducing silos and other improvements, but I am not quite sure about the effect of this Bill. If a man from the highlands comes down to the level to buy seed grain, I understand the minister to say that the farmer from whom he buys is not bound to give a certificate that that grain is pure unless he is asked to do so. But if he is asked to do so and is not in a position to give such a certificate, then he loses the sale of his seed. I am not making any factious oppo-

sition, but would be glad to join hands with the hon. minister in doing anything which would curtail the sale of impure seeds, but I would like to be in a position to know whether this measure is workable.

Mr. FISHER. This section relieves the farmer from responsibility if he sells seed on his own premises, which he raised himself, to another farmer who intends using it himself and does not intend selling it again. The buyer will have to use his own judgment, and if he has any doubt about the seed, he can ask that it be sold to him subject to the provisions of this Bill.

On section 8—penalties; liability of purchaser in good faith; report by magistrate.

Mr. FISHER. I beg to move, in amendment to this clause, that it read: 'Shall be liable, for the first offence, not exceeding $1, and each subsequent offence not exceeding $5, together with the cost of prosecution, for each receptacle, package, sack or bag, but the total amount of the fine in the case of a first offence shall not exceed $5 and, in the case of a second, $25.' I am making these modifications to meet the representations of the seedsmen, who complain that in certain circumstances a very heavy penalty might be imposed, altogether out of proportion to the offence, if the clause were not modified. The infliction of a penalty is not so much what is desired as a deterrent, as the exposure of bad seed and conduct contrary to law.

Mr. BOYCE. I would suggest to the hon. minister the insertion in the second line of section 8, after the word 'person' the word 'knowingly.' That would considerably minimize the harshness of this penal clause. It would also carry out the idea of the minister, who has expressed the desire that this measure might, while being made effective, bear as lightly as possible in the way of penalties. A reading of the penal sections will show that it is quite within the range of probability that some farmer, unacquainted with the working of the law, might have his ignorance taken advantage of by those anxious to avail themselves of a literal construction of the Act. Therefore, I think it would be only just that the penalties should be enforced only in clear cases of a wilful infraction of the law.

Mr. FISHER. I think the introduction of that word would make the prosecution for violation of the Act altogether too difficult. The second part of this clause provides machinery by which a person who has been selling impure seeds may throw the responsibility back on the person who supplied him, if he has been acting innocently or through inadvertence. But, if we were obliged to prove that the Act was wilful and with knowledge in all instances, we would leave the door open to carelessness; and I think that one of the most important effects of this Act will be to make those who are dealing in seeds careful of what they do. It is true that such a case as my hon. friend mentions might arise, but I think the magistrate has sufficient latitude in his judgment and the fines and penalties are so low that it would not work any practical hardship at all.

Mr. BOYCE. I would point out that this is peculiarly a case where a guilty knowledge should be made essential to a successful prosecution. We have many offences in our code in which the word 'knowingly' is the very essence of the offence. Surely in this case, having regard to the peculiar wording of sections 3, 4 and 6 this would be an important word to insert. Take the case to which the minister refers. Under subsection 2 of section 8, if the accused proves to the magistrate that the package was purchased directly from a seed merchant domiciled in Canada and not opened, and the state of the seed not altered while in his possession, and that he had no reason to believe—that is, was without a guilty knowledge—that the seed did not comply with the provisions of the Act, he throws the responsibility back upon the person from which he purchased it. But though we find his innocence may protect this man to a certain extent, it does not make him free from having the conviction recorded against him and being mulcted in the costs of prosecution. If the word 'knowingly' or the word 'wilfully' be inserted, it would render it difficult—justly difficult—to obtain a conviction.

Mr. SPROULE. In what position would a clerk in a seedsman's store be who sold impure seed while innocently acting as the agent of another?

Mr. FISHER. Section 9 provides for that.

Mr. R. L. BORDEN. Has the minister had under consideration the advisability of making provision for different fines in proportion to the quantity of seed involved. As has been pointed out, the word 'receptacle' is very comprehensive. The receptacle may contain bushels of seed. To impose a fine of $1 for having that quantity of foul seed on hand, and a similar fine for having in possession the smallest package that did not come up to the requirements of the statute seems hardly reasonable. It may be difficult to cover this point; I think perhaps it would be; but the legislation as it stands seems somewhat incongruous.

Mr. FISHER. The fine is not fixed; it is only provided that it shall not exceed one dollar. The case my hon. friend (Mr. R. L. Borden) has in mind I suppose, is where an inspector, entering a premises, finds seed not up to the requirements of the law held for sale. I think it is not usual for a seedsman to sell a bin full of seed. The seed is generally put up in bags or

receptacles of some kind. I should think 'receptacles' means a bin or barrel or whatever it may be in which the seed is held in the store. The prosecution for holding seed for sale contrary to the Act would not be very common, I take it. I think it would hardly be well to provide a multiplicity of penalties.

Mr. R. L. BORDEN. It is desirable to have it as simple as possible in the first instance. There is one other point. The man who has purchased and who sells in good faith may be put to the costs of a prosecution, although absolutely innocent. He escapes in part by throwing the responsibility back on the party from whom he purchased. But how are you going to work that out and get at the guilty party? The name of the person who sold him the seed is sent forward with the date of the sale. But I do not understand how the minister intends to deal with the question of punishing the original seller. Does he intend to have prosecutions originated by the department?

Mr. FISHER. I think that would be a proper case for the department to take up. And that is why subsection 3 requires that a report of every case be sent to the department. Still, that does not affect in any way the person who is attacked. Supposing he is a country dealer who has been attacked under the law by a farmer. The dealer proves that he is not guilty. He can himself proceed against the person who sold the seed, and the proof he submitted in his own defence would help in proving that the person who sold him the seed was guilty. His reputation would suffer unless he defended himself. My idea is that in cases of that kind the department would take up the case, and I provide machinery giving more time in such cases than is provided under the Summary Convictions Act.

Mr. R. L. BORDEN. It is not likely the dealer could be re-imbursed himself. The man who sold the seed might be liable civilly——

Mr. FISHER. That would be outside of this Act.

Mr. R. L. BORDEN. The original seller might live a thousand miles away and in another province, and it would hardly be worth while, for the small costs to which the dealer would be subjected to enter an action. What I intended to suggest was that the Act will fall altogether short of its object if you simply permit the innocent dealer to be subject to some punishment in the shape of the costs of prosecution, and let go free the man who is absolutely responsible in the first instance.

Mr. WM. WRIGHT. Will that apply to garden seeds ?

Mr. FISHER. No. The hon. gentleman will see that by this section it applies to seeds of cereals, grasses, clover or forage plant.

Mr. WM. WRIGHT. I have listened with a good deal of interest to this discussion, and I must confess that I am considerably at sea with regard to the probable outcome of the Act. I know there are a number of practical farmers in this House, gentlemen who probably have a practical knowledge of this subject, and I do not see any good reason why the minister should be unwilling to refer this Bill to the Committee on Agriculture of which they form a part. The very case which is now before the House is one which that committee is well fitted to deal with, and if they are not competent to deal with questions of this kind, they might as well be disbanded. Now we have a number of practical farmers on the floor of the House who have given their views on this subject, and we also have what are called gentleman farmers, farmers that have probably never done any farm work at all except a little milking in the very early part of their lives.

Some hon. MEMBERS. Order.

Mr. WM. WRIGHT. Now, Sir, there are many difficulties in the way of this legislation. Of course I am in favour of anything that will be of general assistance to the farmers, but on principle, I am opposed to class legislation. I have watched its effect with regard to many other things, and I do not know that I have ever seen any good come out of it. If it could be shown that some good would come out of this legislation, I would be glad to support it, and to do all in my power to make it workable. But I am a little doubtful about it. I have tried to think out what its probable results would be, and from what practical knowledge of farming I have, having been raised on a farm, and having also some knowledge of the grain and seed business, I see many difficulties in the way. There will be many cases where men will be mulcted in costs, if not in fines, without any intention or knowledge of doing anything wrong, even though they are the most careful men in the world. It seems to me it is placing the burden of proof on the seedsmen. You tell them to keep a record of sales they have made of seeds at any time to farmers. That is one of the difficulties I foresee. You know how difficult it is to keep track of seeds which you have in a store. Suppose you have bags of various kinds of seeds sitting in a row, and a person comes along and puts his hand into the bag and takes a handful and looks at it, and then he goes along and does the same in another bag. How easy it would be for him to transfer seeds from one bag into another. I have seen that done, and if this Bill passes men

can be fined for having this seed in possession. I believe that inside of five years, if this legislation passes, it will become obsolete, it will become a dead letter on the statute-book, deader than that old horse, thirty-two years old, that was in Queen's Park, Toronto.

Mr. BOYCE. I would again call upon the minister to consider with that leniency which he desires to show towards men prosecuted under the main clause of section 8 and the concluding words of subsection 2, some amendment; I would urge him to take into consideration an amendment striking out all the works after 'liable' in the second last line of that subsection, and inserting in lieu thereof the words 'to be convicted.' Then it would read that in the case of a local agent who innocently receives from a merchant domiciled in Canada, closed packages and retains them in his possession, and sells them in good faith, without opening them; and having no reason to believe that they did not comply with the provisions of the Act, he would not be liable to a penalty, but would be immune from prosecution. What lesser justice could be accorded to the local dealer? And why should the local dealer be held responsible under these conditions for any costs at all, or for any penalty in the shape of costs? I have in view places in my own constituency where distances are very great, where means of communication are very difficult, and where, if a prosecution was urged under this subsection against the local dealer, he would be involved in serious costs. The prosecution mentioned in subsection 2 to which he would be subjected for the reason mentioned in the closing words, would render him immune from any conviction. Then if he be held not responsible by reason of the disclosure of those facts referred to in the subsection, why should he be visited with a large amount of costs, both the costs of prosecution, the costs of the magistrate, and the costs of his own solicitor, involving also, in a country sparsely settled, travelling expenses and so forth, though he is not under the Act guilty of any offence? I fail to see why this clause is inserted if it is not meant to render the person charged under these conditions entirely immune from any penalty. I fail to see why, if he is to be mulcted in the costs of a prosecution and called to pay his own costs, he should not be guilty of some offence under the Act. It would follow as a matter of course that because he has to pay some portion of the costs there must be a record against him for infraction of the Act, at any rate to that extent, that he was guilty of some offence. But the Act declares he is not guilty of any offence, which things are an anomaly.

Mr. FISHER. The hon. gentleman has mistaken the case a little. The individual who is protected by this section is guilty.

Mr. BOYCE. Of what?

Mr. FISHER. Of selling seeds that did not conform to the provisions of the law. He has been prosecuted by a purchaser who is innocent and who has been defrauded, who has suffered a wrong. This section allows the party who has been guilty to show that he was not intentionally guilty, or that his guilt is due to the guilt of somebody else, and therefore he is only to be liable to the cost of prosecution. If he was not able to show that, he was not intentionally guilty, or that his guilt was due to the guilt of somebody else, he would be punished under the rest of section 8.

Mr. BOYCE. It would cost him a dollar more if convicted.

Mr. FISHER. Possibly, and possibly more than a dollar more, that depends upon the case. But if the hon. gentleman's amendment were adopted the innocent purchaser who has been defrauded, who has been cheated, would have to go and pay the costs of prosecution. I think the person who has been doing what is contemplated in this Act, though not intentionally perhaps, had better pay those costs than the innocent party who has been cheated by the operation.

Mr. R. L. BORDEN. There is some force in what the hon. minister has observed, but after all it comes down to the question as to whether or not in the practical selling of seeds in this country it is a reasonable thing that dealers should open every package and test it before they sell it. I would think that not to be reasonable although I do not know very much about the trade. I would consider that altogether an unreasonable requirement. If a local dealer has purchased from a firm of good repute, seed in packages and has sold the packages as he received them, should he be held to be guilty of an offence? Did not the hon. gentleman have legislation upon these lines two or three years ago in connection with apples or some other commodities and was not this very question considered then?

Mr. FISHER. There is no provision in the Fruit Marks Act which would give the protection to the local dealer which is here given.

Mr. R. L. BORDEN. I think the question was discussed.

Mr. FISHER. It may have been but there certainly is no such provision.

Mr. R. L. BORDEN. It seems to me an unreasonable thing to require the local dealer to do this.

Mr. FISHER. The view I take is this: If the local dealer were to be entirely immune in every respect and be relieved of all responsibilities he would not be tempted to take any great care as to the kind of seeds

he was dealing in. He now knows that he is subject to prosecution. He may relieve himself of the penalties by certain proof but at the same time he knows that he may suffer somewhat. One of the best safeguards we can have is that the individual shall do his best to get the right kind of goods from the wholesaler and deal in them. I do not think that this result of his doing what is contrary to the law is too great an infliction to induce him to do his very best to get the best seeds. If he does try his best to get seeds that come within the provisions of this law I think he can succeed. I cannot see how it would be fair or right that the purchaser should have to pay the cost of the prosecution. I do not know of any other alternative.

Mr. BOYCE. May I ask the hon. gentleman——

Some hon. MEMBERS. Carried.

Mr. DEPUTY SPEAKER. Order.

Mr. BOYCE. I think hon. gentlemen might treat a young member of the House with some little courtesy. I was going to ask the hon. minister for information. How can the local dealer, under the conditions stated by him, protect himself? For instance, if a local dealer, as is often the case, receives a large number of packages, smaller packages and larger packages together, from the wholesale seed merchant, would he be compelled in order to render himself immune from the prosecution and his lawyer's costs for his defence to open every one of the packages before he sold them and if he did not open every one of the five hundred or a thousand packages would he have to take the risk of at least paying the cost of his own prosecution.

Mr. DEPUTY SPEAKER. Subsection 2.

Mr. TAYLOR. We want an answer from the hon. minister.

Mr. BOYCE. I would ask the hon. minister for an answer. I was merely seeking for information.

Mr. FISHER. As a matter of fact the retail dealer ought to take every precaution possible to protect himself and to see that the seeds he buys are up to the provisions of the law. He can take his sample of the seeds the moment he receives them.

Mr. BOYCE. Then he must open the package?

Mr. FISHER. No, excuse me. The hon. gentleman is not familiar with the methods of the trade. He can take a sample without opening the package.

Mr. BOYCE. I am not a farmer.

Mr. FISHER. No, the hon. gentleman is not a farmer, but he is like a good many other hon. gentlemen who talk about farming.

Mr. BOYCE. I have not been talking farming.

Mr. FISHER. No, I admit the hon. gentleman has not been posing as a friend of the farmer, but he has been acting as the friend of the dealers and seedsmen. The samples can be taken by means of a little sampler which is commonly known and which, I believe, costs 25 cents, without breaking the seal of the package. Most retail dealers buy their seeds in large sacks and sell again not in the sealed package. The sealed package trade which is just beginning, which I hope will increase and which the country dealer ought to encourage in every way will still enable the country dealer to take a sample and know what he is buying before he sells the seeds. He will have to present the proof if he is attacked. I doubt very much if he would be attacked if he showed the purchaser a sample of what he had bought.

Mr. BOYCE. Would it be an excuse ?

Mr. FISHER. What?

Mr. BOYCE. He may not be attacked, but would it render him liable to attack?

Mr. FISHER. He might be attacked under the provisions of the law.

On subsection 3, of section 8,—report by magistrate.

Mr. R. L. BORDEN. You do not seem to have any way of enforcing that third clause which is very important.

Mr. FISHER. I think it can be enforced now.

Mr. R. L. BORDEN. Under the general law?

Mr. FISHER. Yes, and under clause 16.

Mr. R. L. BORDEN. The hon. minister did not refer to what was said by my hon. friend from Muskoka (Mr. William Wright) in regard to one matter. What is his objection to allowing the Bill to be considered by the Committee on Agriculture as it is a matter that affects the farmers very closely? Is there any serious oojection to it ?

Mr. FISHER. I do not think that at this stage of the Bill it is at all advisable that we should refer it to another committee. The subject has been threshed out in the House over and over again. This Bill has already been before this committee ; this is after all the Committee of the whole House and I do not see any possible object in referring it to a special committee or the committee on Agriculture. The question has been discussed and threshed out. It is being dealt with here where the opinions of everybody are on record and where they will be known and criticised and dealt with. I see no object except delay and I cannot

see any object in delay by referring it to any committee.

Mr. SPROULE. We have sent other Bills of a similar character to that committee—the Bill for marking packages of butter and cheese and I think the Fruit Marks Bill.

Mr. FISHER. Not the Fruit Marks Act.

Mr. SPROULE. Perhaps not, but we certainly do that because I remember bringing parties before the committee and taking their evidence and the committee making a report to this House. The only difficulty in dealing with the Bill in the Committee of the whole House is that no outsider can come before the committee and give evidence. These deputations may go before the minister but they cannot come before the members of this House and present their case nor can you ask such question from them as you would desire to bring out the information. We have the power to bring them before the committee to take evidence and to report to this House and it seems to me to be the proper place to bring it. The minister treats that with silent contempt.

Mr. FISHER. No I have answered my hon. friend.

Mr. SPROULE. I was in this House when the Agricultural Committee was first established and the chief argument in its favour was that you would have a committee amongst whom were the agriculturists of this House, before whom you could bring these matters and they could discuss them among themselves, bring experts before them and take such evidence as they might desire. Now we ignore the committee and say that we will not avail ourselves of the committee or allow the farmers or seedsmen to come before the committee, but force it through the House as a government measure.

Mr. FISHER. My hon. friend's suggestion might have some force if the matter was new, but it has been discussed and discussed and discussed, and every one has had opportunities of making representations. I was going to say that the Bill had been in the hands of those concerned for years; certainly the principle has been before them for years, and I cannot believe it is necessary to delay the passing of the Bill any longer, and can only regard the suggestion to refer it to the Committee on Agriculture as a blind to prevent the passage of the Bill.

Mr. SPROULE. That is not the design by any means, and I repeat that the minister is dishonouring the committee. He says that the case of those who are interested in the Bill is presented, but it is all presented at second hand, as they cannot come before the House or say a word.

Mr. WALSH. How would this section apply to seeds bought anywhere except in Canada?

Mr. FISHER. I do not know that it would.

Mr. WALSH. A man buying seed in good faith would be liable to penalties without any recourse.

Mr. FISHER. It would be well for him to buy his seed in Canada.

Mr. WALSH. What about free corn for seed purposes?

Mr. FISHER. Free corn is for feeding purposes.

Mr. WALSH. For seeding purposes too.

On section 10—examination of seeds; payments of samples; penalty for preventing examination.

Mr. FISHER. Objection is taken to this clause in that it is supposed that an officer might enter the premises of some party who is holding seed and not intending to sell it. I have therefore inserted the words——

In respect of which he has reason to believe that any of the provisions of this Act are being violated.

Mr. LENNOX. Where do they come in?

Mr. FISHER. After the fourth line of the section before 'are on the premises.' I submitted the matter to the Department of Justice who said that the insertion of these words would limit and restrict the officers to cases where they believed the provisions of the law were being violated.

Mr. LENNOX. So far as those words are concerned it seems to me they are the usual words and they would meet the point.

Mr. SPROULE. Is any one specially charged with the enforcement of this Act?

Mr. FISHER. A person could only be charged with the enforcement of the Act by Order in Council.

Mr. SPROULE. I understood the minister to say that no person was to be appointed?

Mr. FISHER. I said that I would authorize some or all of the present officers of the department now engaged in the seed branch to be the officers to act in such cases as are contemplated under this section.

Mr. SPROULE. But there would be no inspector?

Mr. FISHER. There would not be an inspector appointed.

Mr. SPROULE. Suppose that a case is reported from Manitoba, who would be responsible for the carrying on of the prosecution?

Mr. FISHER. I suppose the sample of seed would be sent down by some one in Manitoba who was complaining. He could take out the prosecution himself if he chose or the department might consider that the

circumstances of the case were such that it would be proper and right for the department to intervene. But that would be only in exceptional cases.

Mr. FOSTER. Then they would have to bring the case in Manitoba ?

Mr. FISHER. That would be covered by section 16.

Mr. SPROULE. How would you present to the court satisfactory and conclusive evidence of the analysis ?

Mr. FISHER. Section 15 would cover that.

On section 11—samples to be sent to official seed analyst.

Mr. LENNOX. I think the minister will amend this section ; it is the one to which the hon. member for North Toronto (Mr. Foster) called attention. The hon. member for North Toronto pointed out that it should be changed something on the line of the alteration just made in section 10, that is to say, if the person had good ground for belief or something of that kind. That must commend itself to the minister and I think he so expressed himself the other day.

Mr. FISHER. This is only in regard to the taking of the sample and he could not enter into the premises. Section 10 empowers him to enter into the premises and that is limited by the words I have inserted there.

Mr. LENNOX. I do not think this is consistent with what the minister has done in the other section.

Mr. FOSTER. If you insert the words 'or has good reason to suspect', that will make it responsible.

Mr. FISHER. I am quite willing to accept that.

Mr. LENNOX. You use the word 'believe' in the section above and the word 'suspect' in this section. It seems to me that both sections should have the same wording.

Mr. FISHER. I think it is all right.

Mr. LENNOX. Does the minister prefer to retain the word 'suspect' ?

Mr. FISHER. I think so.

Mr. SPROULE. In this section you say that the informant or complainant shall take a sample, not purchase. By what authority shall he take it ? Suppose the party refuses to give it to him ?

Mr. FISHER. I think clause 10 covers that.

Mr. SPROULE. Clause 10 refers to any person charged with the enforcement of this Act ; but clause 11 refers to any person who may desire to purchase seed and who may suspect that it is not up to the requirements of the Act. It provides that he shall take a sample and forward it for analysis ; but there is no provision to enforce that, if the party refuses to give him a sample.

Mr. FISHER. The Act is not violated until the purchase is made ; and if the informant or complainant makes complaint, he can take a sample from what he has purchased, because it is his own. But under section 10 the inspector has the authority to enter upon the premises of the seller and take a sample on payment.

Mr. SPROULE. If the only party charged with the responsibility of enforcement resided at Ottawa, and the seed suspected were in Manitoba, then it could only be taken for analysis through a complainant. He might not want to buy the seed, but he might be satisfied that it was impure.

Mr. FISHER. If he suspected it, he could easily purchase a small quantity and from that take a sample. I do not think it would be well to give an ordinary complainant the power to go into another man's premises and take a sample or force the other man to give him a sample of the seed he is handling. Section 10 gives that power to the inspector appointed to enforce the Act, but does not extend it to anybody else.

Mr. SPROULE. You say that he shall do a thing which he has no power to do. You do not say that he shall purchase it, but you say that he shall take it, and take it in the presence of two witnesses. Now, the hon. minister admits that he cannot do that. That was the contention we made before, that the party might not be willing to give up the seed.

Mr. BARKER. The objection to clause 11 is that any busybody or meddler may go to a seed merchant and insist on taking a sample.

Mr. FISHER. He has no power to do so.

Mr. BARKER : What are the words ? 'Any inspector, informant or complainant who finds or suspects seeds to be sold,' shall take a sample. Why not adopt the words in the previous section : 'any person charged with the enforcement of this Act' ?

Mr. FISHER. There is nothing there that gives any person the power to do that. Section 10 confers that power upon the inspector alone, but section 11 does not confer it upon anybody. That means simply that they shall take a sample when they have the control over the seed.

Some hon. MEMBERS. Oh, oh.

Mr. FISHER. My hon. friends may laugh, but I think that is all the power that

is given there. If they have not the control over the seed, they cannot take it; but if they have control over it, this section provides that they shall take it in a certain way.

Mr. SPROULE. They would not complain of their own seed.

Mr. FISHER. Excuse me. If I buy some seed from a dealer, that is my seed. If I find that it is fraudulent, I take a sample of it and complain of it.

Mr. SPROULE. Suppose you do not want to buy ?

Mr. FISHER. Then I may ask the seller to give me some. The inspector has power to go and take a sample, but other people have not.

Mr. BOYCE. But under this section they would have the power.

Mr. FISHER. I do not think so. I think they have only the power to take the sample where they have control of the seed or where the seller chooses to give them a sample.

Mr. BOYCE. The wording of the section is only capable, according to my reading of the English language, of one construction, and that is, that the inspector—who is the one who corresponds with the person charged with the enforcement of this Act under section 10—and the informant or complainant—or in other words, any person in the neighbourhood who may make himself busy enough to complain that some one has been guilty of an infraction of the Act, must take a sample from the seeds in question. He is compelled to take the sample because the word 'shall' is used and not the word 'may,' and that sample must be submitted for analysis in the manner provided by section 12.

Mr. ALCORN. It is evident that the section is not confined to the case put by the minister. The words 'or offered, exposed or had in possession' cannot mean exposed or had in possession by the intending purchaser. They must refer to the dealer. The words are 'or offered, exposed or had in possession for sale.' Therefore, the informant or complainant has to take a sample from that seed while it is in the possession of another person. It is evidently not in his own possession. Section 10 gives the inspector the right to take a sample, but section 11 extends that right to some other classes of persons. It says 'any inspector, informant or complainant.' Any one of these men has the right to take a sample if he finds or suspects that seeds are put for sale, or are offered for sale in contravention of the law, or exposed or had in possession for sale; but evidently they must be put up or offered for sale, or exposed or had in possession for sale, by some one else than the complainant. It cannot be their own seed, but the seed of somebody else of which they want a sample. It would be absurd to suppose otherwise.

Mr. FISHER. I do not propose to give an opinion as a lawyer, but this clause was submitted to the Justice Department and approved by them as carrying out the intention. Section ten gives the person charged with the enforcement of the Act the power to enter upon any premises and take samples. Section eleven deals with a case which has arisen. It supposes that action has been taken or is contemplated, and for the purpose of making out a case, it provides that the inspector or informant or complainant shall send a sample of the seed to the official seed analyst for examination. I do not see that it gives any authority to do that if the owner of the goods objects to the taking of the sample. As a rule, I think a case would arise in two ways. Either the goods were offered for sale to the complainant, informant or inspector, or the goods had been already sold and the informant or complainant believed he was cheated. In the latter case the complainant has the seeds in his possession and can send a sample to be analysed. In the other case, where an offer to sell has been made but has not been completed, the informant can say: I want to take a sample of these seeds so as to test them. But I do not think he would have any authority to do so if the seller objected. The crux of this section is that a sample shall be taken by the aggrieved party and forwarded to the government laboratory for analysis.

Mr. R. L. BORDEN. Might I suggest that the previous clause seems to give ample power to enter and take samples?

Mr. FISHER. To the inspector.

Mr. R. L. BORDEN. You do not want any one else to have that power ?

Mr. FISHER. No.

Mr. R. L. BORDEN. Why would it not be sufficient for this section to read down as far as line thirty-six: 'may forward a sample from the said seed to such person as the Governor in Council may appoint ?' That would make it much clearer and remove the difficulty.

Mr. FISHER. I would not like offhand to amend the clause, as it was submitted to the Justice Department and declared by them to be in accord with the intention expressed. Section ten makes it an offence to obstruct the inspector if he chooses to take samples, but it does not give power to anybody else. My hon. friend will understand that in the case of an action which did not originate with the inspector or person charged with the enforcement of the Act, a sample would still have to be forwarded to the laboratory for analysis.

Mr. R. L. BORDEN. You must get a sample of the same seed, but suppose the seeds are sold, how will you do about getting a sample? There may not be another bag in the possession of the dealer.

Mr. FISHER. You must get a sample of the seed actually sold.

Mr. SPROULE. Here is a case that has been submitted to me: Suppose a man purchased seed and sowed it, but, afterwards having reason to fear that it was not up to the standard, he wished to procure a sample of the seed, what authority would he have to take it? I was innocent enough to think that under this section he could demand it in the presence of two witnesses, and that the party selling the seed would be obliged to give it.

Mr. FISHER. I do not think he could demand a sample of the seed; he would have to purchase a sample in order to get it. That is as I understand the section, and that is what I intended.

Mr. SPROULE. But suppose the dealer refused to sell, he ought to have some way of getting the sample. It is not a question of the consideration paid, but a question of making sure that he can secure the sample.

Mr. R. L. BORDEN. I asked the minister if that was what was intended, and I understood him to say that it was not. What is now suggested is to give the person charged with the enforcement of the Act, or the complainant, as the case may be, power to go to the dealer and compel the dealer to deliver a sample of the same class of goods, that it may be forwarded to the department for analysis. The language that I suggest would not cover that, but I did not understand that that was the object that the minister had in view.

Mr. FISHER. I do not think that would be advisable.

Mr. R. L. BORDEN. I would agree with that.

Mr. FISHER. It would be troublesome and, I think, dangerous to allow a sample of seed other than that sold to be submitted as proof in regard to the sale of a certain seed. Suppose my hon. friend bought a bushel of grass seed in a country store and, after he had sowed it, had reason to think it might have been sold contrary to the provisions of this Act, if he got a sample of grass seed, even if it came out of the same bag, he would labour under a disadvantage, I think his lawyer would tell him, in proving that it was the same seed. The whole idea of the Act is that the sample that proves the case must be a sample of the seed actually bought or held in possession.

Mr. SPROULE. If you compel the seedsman to put a tag on his bag of seed, I think that the only proof necessary would be proof that the sample afterwards got came out of the same bag with the same tag on it as did the seed complained of.

Mr. ALCORN. I would suggest that after the word 'seeds,' in the thirty-sixth line, these words might be added, 'if such seed has been sold to him.'

Mr. COCKSHUTT. I regret that I have been absent from the chamber, and that several clauses have been railroaded through in my absence. I will have to begin my discussion where I am able to. This clause is most objectionable. I pointed out to the minister on a previous occasion that under it there is no limit to the number of samples that may be taken. The minister admits that he does not know the meaning of the clause; but one thing is as clear as the English language can make it, and that is that the inspector, not only may, but shall, take samples, the informant may take samples and the complainant may come in and demand samples. And these samples are sent to the analyst. Now, I want to read an opinion as to what the analyst may decide on the samples sent to them. I will read the testimony of this British Committee on Agriculture, which, I think, the minister will acknowledge is pretty good authority:

> In taking the opinion of two or more botanists on any particular sample, at least five per cent variation in the results may be expected.

And the minister allows only five seeds in a thousand.

> And in some cases the variation will be much more. This is especially so in the finer grasses such as the Poas, and in these an allowance of fifteen per cent for variation would not be unreasonable. In seeds of an inferior quality there is greater variation than in those of high germination. In making tests, it would seem desirable to lay down the conditions under which they should be made, and as far as possible to have the tests tried in more than one manner. Clovers kept under test for two or three weeks, and grasses for four or five weeks, though refusing to germinate in this period will sometimes do so if kept for a still longer one. There is a difference of opinion among botanists as to the proper treatment of seeds which are so hard that they do not germinate under the test. Some reject these altogether; others expecting that some at least will ultimately germinate, include a certain proportion as seeds having vitality.

And the minister proposes to take an interminable number of samples and submit them to seed analysts who will do imperfect work—who cannot do perfect work, any more than we can furnish perfect seeds. I know that grievance has already been suffered under the department of the Minister of Agriculture. I am in a position to state that seeds have been taken from dealers surreptitiously. Is the minister aware of that? This Bill leaves it open for the informant and the complainant to take the

dealer's seed whether the dealer wishes or whether he wishes not. That has been done already under the department. And it has not always been done by a man who desires to buy or to sow seed, but by a man who desires to stab in the back a political opponent.

Some hon. MEMBERS. Oh, oh.

Mr. COCKSHUTT. That is right, and I can give the minister the testimony. I have been a sufferer myself, and I know whereof I speak. Who was it that got the seeds from my firm without my knowledge or consent? If the minister does not know, he had better find out. Who was it furnished me the information that these seeds had been given not to a man who intended to purchase or to sow? My political opponent was the man who marked the analysis and sent it to me, and said: These seeds were obtained from you, and somebody has hoodwinked you. Is that the kind of legislation that the minister is going to put through this House? I ask him to reconsider this. This clause permits any man to walk into an establishment and demand these samples. It permits any man, whether a buyer or not, he may be a political opponent, but he can walk in and take those seeds in spite of you. He can buy them from one of your employees when your back is turned, and there is nothing to show that he cannot.

Any inspector, informant or complainant who finds or suspects seeds to be sold or offered.

Let the minister understand that word, 'or offered,' not bought, merely offered. It says 'to be sold or offered, exposed or had in his possession, and this man may march in—whether he wants to buy or not, whether he is an agriculturist or not, whether he understands anything about seeds or not—he can walk in and demand samples. I ask the minister in all fairness if he wants to do that. We know that to deal with political appointments is bad enough, but we do ask, if he is going to enforce this Act, that we be committed to the tender mercies of a government appointed inspector, and not be thrown upon every informer who desires to walk into that establishment. I ask the minister to confine that clause to a properly appointed inspector, who is supposed to know something about the seed trade. But if we are to be committed to the tender mercies of anybody, let us fall into the hands of our enemies rather than into the hands of an uncertain quantity like an informer, or informers by the score.

Mr. FISHER. It is a pity the hon. gentleman was absent for a while from the chamber. It is true that he accuses the committee of railroading through some sections while he was away. I do not know what the hon. gentleman's experience is in legislative bodies. But we have been now nearly two hours, and we have passed two sections, one of which was discussed for about an hour and three-quarters this afternoon while the hon. gentleman was present. If he had been here all the time, he would not have accused me of all these horrible things. The hon. gentleman, unwittingly I am sure, has been putting words into my mouth the exact opposite of what I said in my explanations a few minutes ago of this particular section. The hon. gentleman's interpretation of it may be right, he knows what the English language means, he knows all about it, and of course the rest of us will take due knowledge and record of what he tells us. At the same time, my intention, when the Act was drawn, was exactly the opposite of what the hon. gentleman has been attributing to me.

Mr. SPROULE. Several lawyers on this side of the House differ with the minister in the interpretation.

Mr. FISHER. As I said, I do not profess to give a legal opinion, I gave the opinion of the Department of Justice of Canada, which had declared that this section meant what I said. The hon. gentleman has given us the benefit of another speech this evening, as he did of several this afternoon. I remember he said this afternoon that his constituents had told him to say what he liked and as much as he liked about this Bill, and they would back him up. The hon. gentleman is taking full advantage of that permission, and he is saying a great deal about it, and I think that when he goes back to his constituents and asks them to back him up they will want some explanation of several things he has said, and perhaps the hon. gentleman will find it a little difficult to explain exactly what he has said on several occasions. I notice that he has changed his position, at all events the expressions of his views, several times in the different speeches he has made. The hon. gentleman says that this clause provides that anybody, and everybody, and innumerable people, can go in and take from a dealer as many samples as they like. I think it is about what the hon. gentleman said. Now, I pointed out that my interpretation was that, with the exception of the inspector, who had power under the clause to do that, neither an informer nor a complainant could enter into anybody's place and take any sample at all.

Mr. BARKER. Why did not the hon. gentleman say so?

Mr. FISHER. I did say so; I said clearly that I did not think this section gave authority to anybody to go and take seeds that did not belong to him. I do not know how anybody could have misunderstood what I said, because I said that more than once and very distinctly. I said that section 10 gave the inspector or person charged with the enforcement of the Act, that power, and he was paid for it; but I said clearly that

nobody else had that power, and my interpretation of clause 11 is that nobody has that power.

Mr. R. L. BORDEN. Would the hon. gentleman say what the object and intention of section 11 is? I have been trying to find it out in good faith, and I really do not understand it.

Mr. FISHER. I intended to indicate that when a case arises, and when a complainant desires to find a sample, or to have a sample of any seeds which are in question, or about which he intends to take action, he shall take a sample and forward it to the laboratory for the purpose of analysis.

Mr. R. L. BORDEN. How is he to get it?

Mr. FISHER. In any way he can.

Some hon. MEMBERS. Steal it.

Mr. FISHER. No, if he steals it he would be liable to the law of the land.

Mr. HENDERSON. You said any way he can.

Mr. FISHER. I take it for granted that he is a decent Canadian citizen, and would not think of stealing it.

Mr. BOYCE. Is the minister presuming that there has been a sale or transaction with these seeds, and that the inspector, or complainant, or informant, is getting them from the purchaser?

Mr. FISHER. I am not presuming that there has been a sale, because this Act covers other things besides a sale, if there has been a sale, and the complaint is about a sale, then the purchaser who owns the seeds can take as many samples of them as he likes.

Mr. BOYCE. It is not so worded, though I believe that construction may be put upon the section.

Mr. FISHER. It is a matter of drafting. This was drafted by the Department of Justice, and I think it is correct. Then the hon. gentleman asked whether there must be a sale. I was premising there had been a sale in some instances. But a person might want to get a sample when there had not been a sale; I would then only take a sample with the consent of the owner of the seed.

Mr. R. L. BORDEN. If it is merely a matter of consent, we do not require any statute. If this provision deals with seeds which have been purchased, you do not require any statute to enable an inspector or complainant to forward a sample to the Department of Agriculture. There is no law against forwarding anything to the Department of Agriculture. Any man in the country can forward anything he likes to the department, provided it is not dangerous and not calculated to blow the department up.

Mr. FISHER.

Suppose you have the other case where the seeds remain in the possession of the dealer; as I understand, it is not intended by this section to give to the inspector, informant or complainant any power to go forcibly and take a sample against the will of the dealer. The hon. minister has made that plain. It is a matter of consent. You do not want any statute if there is consent. With that consent he could go and procure a sample, which he will be at liberty to forward to the Department of Agriculture. The informant has perfect liberty without this section to forward it to the Department of Agriculture; and further than that if it is intended to enable him to get the sample by consent he can, without this statute, procure it under the law of the land and forward it to the Department of Agriculture. I can see that it is very desirable that the samples should be forwarded, but I do not see at the present time, as far as I can gather the intention of the hon. minister, that the section really accomplishes anything. I thought at first it was intended to enable the complainant or inspector to take the samples even against the will of the dealer, because that might be necessary in some cases but the hon. minister tells me distinctly that that is not the intention at all.

Mr. FISHER. Not under this clause but under clause 10.

Mr. R. L. BORDEN. You have it in clause 10; therefore you do not need it in this clause.

Mr. FISHER. I would say to my hon. friend that the Act that is intended under this clause could be accomplished in many instances without the clause. I do not think this clause confers any powers. The clause is directory as to the procedure which would be, I might almost say, necessary to the prosecution. I presuppose that the evidence in a prosecution would be the analysis of the seed laboratory and this clause directs that for that purpose and for that end a sample shall be taken. All that might be done without the clause. The clause simply directs that it shall be done and shall be done for that purpose. I said a minute or two ago while the hon. gentleman was speaking that section 10 gives the inspector, or person charged with the enforcement of the law, power to take a sample under certain conditions or restrictions. This section simply directs him to do so. It may be his duty to do so. He may get an order from the department to do so and there may be no necessity for putting any such direction in the statute.

Mr. R. L. BORDEN. I do not think that there would be.

Mr. FISHER. There may not be.

Mr. R. L. BORDEN. May I suggest to my hon. friend that I think it is undesirable to

put it there if it is simply intended to be directory. You use language that is ambiguous. You say 'shall take a sample.' In construing a section of that kind a court would regard it as having been put there for some purpose and they would hardly say that this section was put there simply for the purpose of directing an officer to do that which he ordinarily would do under the instructions of the department and not by virtue of the statute. Therefore, there is some danger in leaving the clause in its present form. If you make it perfectly plain on the face of it that it is intended as a mere departmental direction to the inspector, or complainant or informant in order that there may be an analysis, there is no great objection to the section, although there is no great good in it as far as I can see, but unless you make it absolutely plain I think the section might possibly be construed in another way from that which the hon. minister states to be his intention.

Mr. FISHER. I think it goes a little farther than that in this sense ; I think it would be unfortunate if prosecutions were taken out under this Act except where a sample had been taken and sent to the laboratory for analysis. The proof in regard to the purity of the seed would be so difficult that I consider that that would be a necessary precedent to the trying of the case.

Mr. R. L. BORDEN. You mean by the farmer who purchases or the inspector ?

Mr. FISHER. Anybody. Put aside the inspector for the moment. There is no question that the inspector has power to take a sample under section 10. If the inspector wants to make a report, for instance, to the department that certain seeds are being exposed for sale it would be his duty to take a sample and take it in the way that section 10 authorizes him to do it. He would, of course, have to pay for it. Now, in another case where an action is being taken out I think it would be unfortunate if the action should be taken out without a sample being taken. I would like to suppose that the taking of a sample is an almost absolutely necessary precedent to the taking of the action. I would not preclude a person taking action if he chose without taking a sample but I do not think an Act of this kind would be properly enforced if there were no machinery for testing the samples. I therefore have always thought and believed that it will be almost a necessity—I would not make it by statute a necessity—but it is I think almost a necessity in the practical working out of the Act that samples should be taken and sent to the laboratory for analysis, the analysis to be used as evidence in the prosecution for the trying of the case.

Mr. R. L. BORDEN. Are these analyses made evidence by the statute ?

Mr. FISHER. Yes, by another section of the statute and that is the reason why we put in this directory or mandatory clause. I want to reiterate that I do not consider myself that the clause confers any powers or gives any control or authority to take any sample per force from the seller or owner of the seeds against that individual's will. My hon. friend, I do not think, reads the section to say so. I agree with him in that, I do not think it does, and I have no desire that it should. The words are all included here because I think it is necessary. I suppose that in legal drafting it is better to use these words : 'Any inspector or, informant or complainant.' Then, following the subject matter to the end these words are used 'who finds or suspects seeds to be sold, or offered, exposed or had in possession for sale for the purpose of seeding.' I suppose the clause would be imperfect if all these words were not included to cover the whole meaning of the Act.

Mr. R. L. BORDEN. If the hon. minister would take the suggestion into consideration I would be inclined to think that the drafting had better be looked at. I thought the Bill was intended to mean what the hon. minister has suggested when I first read it and it may be so construed. I think the hon. minister's purpose would be better fulfilled by a clause drawn somewhat differently. If the hon. minister will submit to the Department of Justice what has been said in the committee in regard to it, possibly there would be no great difficulty in making it conform a little more closely to what I see now is his intention.

Mr. FISHER. I do not wish to press the matter at all. I want to accept a suggestion of such a friendly nature from the hon. leader of the opposition and I would be very glad to do so. I would be rather disappointed, however, not to get this Bill through to-night. The suggestion has been made to me that we might adopt the clause as it is and then if the Department of Justice wishes in any way to amend this clause they could do so on the third reading, referring it back to the committee if necessary.

Mr. TAYLOR. Last night before the House adjourned my hon. friend from East Grey (Mr. Sproule) asked the hon. the Postmaster General (Sir William Mulock) who was leading the House then as now, what business he would take up to-day. He promised the House that we would first dispose of the Census Bill, then the Seeds Bill, and then get into supply with the estimates of the Department of Railways. If we are to follow that programme I think it would be better for the Minister of Agriculture to accept this suggestion which has been made two or three times from this side of the House—and now that he has come to a deadlock it is all the more necessary—that the Bill be referred to the Committee of Agriculture where the farmers and law-

yers could whip the Bill into shape in the committee room and not be wasting the time of the House all day. It looks as if it would take two or three days to do it in the House. I have great respect for the Postmaster General and want to see the promise he made last night carried out, that these two Bills should be put through and that we should make some progress with the estimates. We would like to hear from the Postmaster General his opinion on the Bill and on the propriety of sending it to the committee and not discussing it in the House.

Sir WILLIAM MULOCK. So many opinions have been offered that I do not think I could add anything to the debate.

Mr. BOYCE. I was going to suggest to the minister that clause 11 might be passed for the present as suggested by him, but when he comes to consider the matter, in view of the somewhat ambiguous wording of section 11, all that the minister has suggested as being the meaning he engrafts on section 11 as at present framed might be added to section 10, so as to avoid the possibility of any misunderstanding. That is to add to section 10 something like this :

And such sample or samples shall be forwarded by such person charged with the enforcement of the Act to such person as the Governor General in Council appoints as official seed analyst.

And then add the operative part of section 11. That occurs to me to be in accord with the intention which the minister explained to the House ; namely, that where under section 10 the person charged with the enforcement of this Act suspects that there is a violation of the Act he may in his official capacity enter the premises and take samples and by the subsection such samples shall be forwarded to the analyst, pursuant to the provisions of the Act.

Mr. FISHER. In discussing it with the Department of Justice I shall bear that in mind.

Mr. COCKSHUTT. I would suggest that the interpretation which the hon. minister puts upon this clause should accompany the clause when it is sent to the Department of Justice because that interpretation does not agree with the plain language of the Act. If this is submitted to the department they can see if they can interpret it as he does, because I cannot interpret it in that way. The hon. minister has been kind enough to say that I have said things that my constituents will not stand by.

Mr. FISHER. I do not know.

Mr. COCKSHUTT. Possibly that is the case, but I was lending the best that was in me to make a good Bill for the minister, and I wish to say further that if the minister had lent himself to making as good a Bill as he could without regard to his constituents or to the electors throughout the country he would have a better Bill than he has to-night and would have thrown more light on the Bill than he has done. He has too much in view the effect upon the electors and too little in view the language of the clause. I submit that his first duty is to direct his attention to the language of the clause. That language is as straight as the English language can be. He may say that it conveys the meaning he attributes to it, and oil it over in that way ; he is giving you a sugar coated pill. Unfortunately we will not have the minister present when the case comes up in court, and his interpretation will not be the interpretation which the court will put on it. He is putting on his interpretation as a great agriculturist, but when it comes to the courts I venture to say, in the language of our learned leader, that the interpretation the court will put on the language is a very different thing from the interpretation the hon. gentleman has given to-night. The section says that the persons enumerated 'shall take a sample.' The minister says that that does not mean anything. Then in the name of all that is good leave it out ; by all means obliterate it, drop it and put it where it should be, in the waste basket. I submit that the hon. gentleman according to his own interpretation of the words should take the clause out.

Mr. R. L. BORDEN. Of course it is understood that we can go back again and discuss it in committee if we should think it advisable.

Mr. FISHER. Yes, if the Department of Justice thinks it should be amended.

On section 12.—samples to be taken in presence of seller or two witnesses ; certificate to accompany samples.

Mr. BOYCE. There is one portion of that clause that I would commend to the attention of the minister, subsection (b). It would be rather an invidious or pernicious practice to allow an informant or complainant to send an official statement of a case that would likely come before a justice of the peace for trial. It says that a statement 'shall' include, that is, it must include the name and address of the person who sold or offered the seeds and so forth ; but it may include a great deal more, and there are certain facts extraneous to the case that might be included in the statement and that might have an unfair bearing on the case when it came to trial. The minister may argue that any statement of fact submitted by an informer or complainant would not have any effect upon the quality or the adulteration of the seed, but there is this further to be spoken of, that the words 'informant or complainant' having regard to the explanation with reference to section 11, might well be left out

especially if respect be paid to the suggestion of the leader of the opposition with regard to the meaning of that section which would render it unnecessary for the words 'informant or complainant' to be introduced at all.

Mr. FISHER. I think it would be necessary for a sample to be sent, whether it is taken by an informant or complainant or an inspector, and the sample would have to be taken by the machinery herein provided. Then we want to have certain information accompanying the sample. If that information did not come with the sample, the seed laboratory would be unable to attach the data of that particular seed for the purpose of identification in any prosecution which might come before the court. The only object of this is to see that it is the sample of the seeds which might afterwards be the subject of prosecution, and it is necessary that the two should be carefully connected so as to use the analysis as evidence.

Mr. BOYCE. But the use of the words 'informant or complainant' would not enter into the prosecution at all if clause 11 were amended in the manner suggested, because the whole thing would be done by the inspector or person charged with the enforcement of the Act.

Section agreed to.

On section 15—certificate as evidence—

Mr. R. L. BORDEN. The minister will observe that under section 12 the informant or complainant is to take a sample in the presence of the person who sold or in the presence of two impartial witnesses, and he is to inclose that and send it to the department with a certain statement. It is not provided that he shall inclose it in the presence of any person. He does that by himself, as his own individual act, I suppose. Then under section 15 it is provided that the certificate of analysis shall be accepted as evidence against any person prosecuted in respect of the seeds from which the sample purports to have been taken. The result is that you might not have the sanction of the oath of any person, but merely the word of the informant or complainant as to the identity of the particular sample forwarded with that from which it purports to have been taken. Would it not be better to amend section 15, and say, 'seeds from which the sample was taken,' and thus make it necessary to prove at the trial that the sample actually came from the seeds which are the subject of prosecution ?

Mr. FISHER. Section 17 provides that the Governor in Council may make regulations to secure the enforcement of the Act, and I think that would come within these regulations.

Mr. R. L. BORDEN. I would not think so, because you have here an explicit provision of the statute, and you could not control that by any regulation made by Order in Council.

Mr. FISHER. I shall be glad to look into that point, and if there is any doubt about it, I will on the third reading go back into committee to provide for that.

On section 7—exemptions from Act—

Mr. FISHER. I wish to amend this section for the purpose of adding a clause which will permit seeds marked as 'screenings' to be held or sold for export only. Some of the seedsmen represented that they buy seeds that are foul, and after cleaning them they have a large quantity of screenings or refuse which they do not want to sell in Canada, for which they have not a market in Canada, but for which there is a market in some foreign countries, and they wish to provide that these may be exported.

Mr. R. L. BORDEN. It seems to me that if that were done this result might follow, that if a dealer held for export seeds that contained a very slight quantity of weed seed he would be liable, but at the same time he might hold for export seeds of a very much inferior character known as screenings without being liable to any penalty. Would not that be the result?

Mr. FISHER. It would be practically the result. The seedsmen inform me that their usual trade abroad is in first-class seeds. As a matter of fact, Canada has made a reputation for clover seeds abroad and the great bulk of the export trade is in these seeds. I do not think there is any market for inferior seeds that would not comply with all the provisions of this Act, except this trade in screenings or refuse.

Mr. R. L. BORDEN. I am not acquainted with the matter practically, but it struck me as a curious provision that a dealer might have in his possession for export seeds of a very poor quality without being liable, while he would be liable if he held for export seed of a very much superior quality. It seems to me that that is a curious condition in which to leave the legislation, although there may be conditions in the trade which make it desirable or necessary, and which I do not understand. As at present advised, it seems to me perilously near nonsense.

Mr. FISHER. This Bill would not interfere with the export trade, except in this matter of screenings and the seedsmen asked to be protected with regard to the latter. I would move that the section be reconsidered and these words added to clause 'C': 'Marked as screenings held or sold for export.'

Section, as amended, agreed to.

Mr. FISHER. I would like to substitute a new provision for section 18. Section 18 provides that any prosecution may be commenced within 12 months, but not later. Under the Summary Convictions Act, prosecutions must begin within six months. In its original draft, this Bill contained the same provision, but it was pointed out that under subsection 2 of section 8 it might be impossible to begin the prosecution within the 6 months. Therefore, I propose that section 18 shall read as follows:

Any prosecution against any person under subsection three of section eight may be commenced within twelve months from the time the matter of complaint or information arose and not later.

That would allow the ordinary prosecutions to come under the provisions of the Summary Convictions Act.

Mr. WM. WRIGHT. Will prosecutions first have to be pressed against the retailer and then, if he proves innocent, be pressed against the wholesaler through the Department of Agriculture?

Mr. FISHER. That is the intention, but anybody may proceed against the wholesaler at once if he chooses.

Mr. WM. WRIGHT. Where the wholesaler puts up seed in packages and those packages are retailed without being broken, why not prosecute the wholesaler in the first instance?

Mr. FISHER. The purchaser may do so if he chooses, but the wholesale dealer may not be in the same district as that in which the final purchaser lives, and the last purchaser should be allowed to sue the retailer if he chooses.

Mr. WM. WRIGHT. Suppose the name of the wholesale firm is on the package and the stamp has never been broken until it gets into the hands of the person who buys from the retailer. If a sample of that seed is sent to the official analyst, could not the department proceed against the wholesaler?

Mr. FISHER. I think it could.

Section, as amended, agreed to.

Bill reported.

Mr. SPEAKER. When shall the Bill be read the third time?

Mr. FISHER. This day week.

Mr. TAYLOR. Will the Bill be reprinted in the meantime?

Mr. FISHER. Yes.

SUPPLY.

House in Committee of Supply.

Railways and Canals—chargeable to capital—Cornwall Canal enlargement, $7,000.

Mr. FISHER.

Hon. H. R. EMMERSON (Minister of Railways and Canals). At the outset I wish to make a slight amendment with respect to the caption. I move to add the words 'and other St. Lawrence Canals.'

Motion agreed to.

Mr. EMMERSON. This covers the paylist of the staff for the Cornwall and other canals amounting to $6,000, and the balance of $1,000 is to liquidate the remainder due on the regulating weir of the Cornwall canal.

Mr. LENNOX. The amount voted last year was $64,500, and this year the minister asks only $7,000. Why such a great difference?

Mr. EMMERSON. The amount last year was expended and there is a balance due of about $1,000, we hope that it will only amount to $700. The $6,000 as I have explained is to pay the staff.

Mr. LENNOX. The alteration that is proposed can be legally made I suppose?

Mr. EMMERSON. If it does not change the destination. It could be confined strictly to the Cornwall canal, but, I thought it in the interest of accuracy to explain that while this staff was engaged for the Cornwall canal they performed also certain duties and services with the other St. Lawrence canal. Instead of having a separate staff of engineers for these other works we utilized the services of these officers on the Cornwall canal.

Amendment agreed to.

Railways and Canals—chargeable to capital—Canals—Galops Canal, enlargement $135,000.

Mr. EMMERSON. Last year we asked $292,300, of which there will be expended up to the close of the fiscal year all except $69,000, so that this item includes a revote of that amount. This is an enlargement to make the canal and locks conform to the fourteen-foot scale of navigation.

Mr. LENNOX. Does this complete the work?

Mr. EMMERSON. This is to pay certain claims and to complete the upper entrance and also to provide a new wharf at Cardinal.

Mr. BARKER. What is the nature of the claims?

Mr. EMMERSON. They arise in the adjustment of the contracts entered into on schedule prices. In every work of this discription, in winding up there are claims in connection with extra work perhaps not fully set forth in the specification. It is estimated that, in connection with this work there would be, on the Cardinal section $52,251 of an adjustment between the chief engineer and the contractor in winding up,

carrying out strictly the terms of the contract.

Mr. BARKER. Will the minister be good enough to say who are the claimants and the amounts ?

Mr. EMMERSON. On the Cardinal section, William Davis & Son, $52,251. Then, there is an amount we expect to spend under the contract of Murray & Cleveland of $21,968. That is to complete the work. Then there is an item of $50,000 to cover claims for extra work which the engineer has required to be done under this contract, and the fourth item is for a new wharf at Cardinal, $11,600. The contract for the wharf has not yet been let.

Mr. BARKER. What is the nature of the payment of $50,000 to Messrs. Murray & Cleveland?

Mr. EMMERSON. It is in connection with the enlargement of the canal.

Mr. BARKER. Is it for extras?

Mr. EMMERSON. It is extra work, but not extras in the sense of being extras under the contract. It was in addition to the work specified under the contract.

Mr. MACLAREN. Will the hon. minister please tell us who Mr. Robert Smith is, the man who employed the extra men on this Cornwall canal?

Mr. EMMERSON. That is under another vote. Mr. Robert Smith was a candidate in the recent election. He is supposed to be a friendly adviser.

Mr. LENNOX. Do I understand the minister aright, to say that $50,000 is for extra work that would not come under the contract?

Mr. EMMERSON. Perhaps not arising out of the contract, but extra of that specified by the contract.

Mr. LENNOX. But it is not provided for in the contract. The contract I presume is the ordinary contract we have laid on the table occasionally, and provides that no extras should be incurred except under certain conditions. It is important to know if this work was outside the contract and was not contemplated when the contract was let.

Mr. EMMERSON. These contracts are entered into at schedule prices, the engineer's estimate is made on the basis of a certain quantity of work. Now, in the course of carrying out the work it is frequently found that additional work is necessary; this additional work is ordered to be done, and it is done at schedule prices. This item of $50,000 in connection with the Murray & Cleveland contract is to cover such extra work in addition to what was contemplated originally. But the contract prices have been entered into, and the limits prescribed originally by the specifications have been enlarged.

Mr. LENNOX. It comes to this, that you can let a contract complying with the Act, after having advertised for tenders and got the tenders in, and it may be a work in which it is contemplated to spend $20,000. Then having got tenders upon that basis, and on which the contractor necessarily has to tender high up, he can enlarge the scope of his operations and may double that amount. You may then give him additional work at schedule prices to the extent of $50,000 or $100,000. It appears to me that in that way the provisions of the statute in regard to tenders are substantially violated, that although nominally the matter is let by tender after due advertisement, yet in that way the statute is in effect disregarded.

Mr. EMMERSON. My hon. friend has stated a hypothetical case; now, I will state the case as it is. Here was a contract entered into for a sum amounting altogether to about $2,000,000. This has gone on over a number of years, and in the final adjustment of the claim in consequence of extra work that was necessary in the judgment of the engineer, we require about $50,000 finally to adjust with the contractor. The percentage is not very large, and I do not think much objection can be taken to the amount.

Mr. LENNOX. Is it a fact that there is only this one item of $50,000 out of a contract of some $2,000,000?

Mr. EMMERSON. That is my information.

Mr. LENNOX. I think that is pretty satisfactory

Mr. BARKER. Does the minister assure us that this $50,000 is only to pay for work at the rate of contract prices? Is it intended to confine the payments absolutely to the rate per yard, or whatever it was, of the contract?

Mr. EMMERSON. I can give my hon. friend the assurance from what the chief engineer tells me that in every instance the prices are actual schedule prices, that is usually the case. But he cannot recollect with respect to this particular matter. But he states that there are times when that rule is departed from, and in accordance with a particular clause in the contract which provides that any extra work ordered by the chief engineer in writing need not necessarily be performed at the schedule prices. It is for the chief engineer to fix at the time he requires this extra work the price with the contractor.

Mr. BARKER. Then the hon. gentleman will see that this $50,000 is not merely for additional work, but consists of extras. That is the question I asked in the first instance. You are allowing for extras here;

we asked that question and were informed it was only additional work that was performed.

Mr. EMMERSON. It is very difficult to express it.

Mr. BARKER. Oh, no.

Mr. EMMERSON. I think my hon. friend will see that it is not extras in the sense that you are paying anything additional for work that was contracted for, but it is for the payment of extra work that was not contemplated at the time the contract was entered into.

Mr. BARKER. And at an extra price.

Mr. EMMERSON. Not necessarily at an extra price. The prices fixed in the schedule might govern, but the extra work might not be of the value fixed by the schedule and it is under the terms of the contract left to the option of the chief engineer to fix the price at which that work shall be done.

Mr. BARKER. It is an extra.

Mr. EMMERSON. Call it what you like.

Mr. LEFURGEY. If I understood the hon. minister aright a few moments ago in answer to a question from my hon. friend from Perth (Mr. MacLaren) he said that the person who recommended the extra men required during October and November on the Cornwall canal was Mr. Robert Smith, who was the government candidate for election to this House.

Mr. EMMERSON. I was asked who Mr. Robert Smith was, and I said he was a candidate at the last election. If my hon. friend wants to refer to 'Hansard' the statement that I made the other day is there reported.

Mr. LEFURGEY. I am just referring to 'Hansard' and I want to remark that it is a very extraordinary circumstance that a candidate for election to this House should, during the months that active canvassing is going on amongst the electorate, have the authority to go to the superintendent of any of the public works in Canada and put on twenty-five or thirty extra men. It is certainly prostituting the elections for this House to degrading ends. I would like to know from the hon. minister if that is the regular custom followed by the government in regard to public works, if candidates are given liberty to go to superintendents of public works without any apparent cause, without any crisis arising in regard to these works, and to recommend the employment of men apparently for the purpose of obtaining votes in the election.

Mr. EMMERSON. I think that for the past twenty-five years in Canada the custom has prevailed that where men are wanted on public works the government of the day usually apply to their friends. They have applied to some one who would advise them in a friendly way and I think that custom has not been departed from. Men are not put on who are not wanted. It has been the custom year after year, whether an election was in progress or not, to have certain work done at that particular season of the year. That was done last fall, it was done the preceding fall, it has been done ever since I have had any knowledge of the department and I think it has been done from time immemorial. This is necessary work in connection with the canal. It requires men. To whom shall you apply? Of course, you will have to get some one who will advise you wisely. Under these circumstances, when we wanted some men, Mr. Smith was asked to name those who would be fit and competent to take such positions, and the department, having confidence in his advice, accepted it. There is nothing unusual in that and nothing very startling.

Mr. LEFURGEY. I think it is an outrageous principle to put before the committee, that any man who happens to be running for a constituency should have the power to override the superintendent of a public work who is a paid employee of the government and to select men to do this work, that he shall have the power to say that this or that person who may be friendly to him shall be employed and to exercise this power just at the time the election comes on.

Mr. EMMERSON. I am sorry to lacerate the sensibilities of my hon. friend.

Mr. PRINGLE. I am very glad to hear the hon. minister make the acknowledgment here that these men were wanted just before the election in November.

Mr. EMMERSON. This was in October.

Mr. PRINGLE. And in November. If the hon. gentleman will look at my question he will see that I interrogated him in regard to both months.

Mr. EMMERSON. The hon. gentleman is now referring to November. I am correcting him and pointing out that it was in October that these men were employed.

Mr. PRINGLE. They were employed in October and November. During the most active stage of the election canvass I paid a visit to Dickenson's Landing at the head of the canal and I found that nearly every man was employed in a ditch which was being dug out nobody knew for what purpose except that these men were being given employment in the campaign. I thought one Saturday afternoon that I would go out into a certain section of the town of Cornwall and call upon some of the voters in that district. I found that they were all working on the canal, that

they all had government positions, and I also found that these positions terminated immediately after the elections. These men were wanted very badly for the purpose of assisting Mr. Smith in his campaign. The hon. minister has, in his answer to this question, stated that there were some twenty-five or forty extra men employed, but I venture to say that during September, October and November there were at least 100 men put on outside of the staff generally employed on the Cornwall canal, and I say that I believe they were put on for one purpose and one purpose only and that was the purpose of the election which was coming on in the month of November.

Mr. LENNOX. The hon. minister says that this work is done every year. Is that true?

Mr. EMMERSON. This occurs every year.

Mr. PRINGLE. I venture to say if you look back in the Auditor General's Report for past years you will find it has never occurred, that in any previous year there have been so many extra men employed on the Cornwall canal. These men were tumbling over one another. They were the laughing stock of the community. People said they were pulling weeds on the bank of the canal. I remember that at the time the registration was going on, I saw one good Conservative actively engaged in assisting at the registration. He came out from the court room and I said to him: 'What are you doing here?' He said: 'I am pulling weeds on the Cornwall canal, but I have to do some work for Mr. Smith.' I said: 'Are you getting paid for pulling weeds on the Cornwall canal while you are assisting in the registration here?' and he said 'My pay goes on just the same.' This went on during the months of October and November. I may say this is not a proper way of spending the money of the country. Nor is it proper just at that time to put it in the hands of the government candidate to say what men shall come on that work, and what men shall not come on it. It gives him a very great power in an election and a power which the government should not place in his hands. I myself am not at all sorry to see these men get work. It was a season of the year when many of them were out of employment and if the government had such a large surplus that they wanted to assist these poor men I am not sorry to see them get the money in the way they did, but I disapprove of the minister permitting the government candidate to say that twenty-five or thirty men shall go on at this place and twenty-five or thirty men at some other place on the Cornwall canal when we all know that this is done solely for the purpose of assisting in the campaign.

Mr. EMMERSON. I wish to say to my hon. friend (Mr. Pringle) that he is not stating the facts as I have stated them and that I have stated them in accordance with what transpired. Mr. Smith had no right nor did he attempt to exercise the right, to place any number of men on that canal or any portion of it, but when the department in the ordinary course of its business—for it is annually required to make certain repairs and did so last year and the preceding year, and I am informed by the chief engineer of canals that it is done every year—wants men to do that work the difficulty is to get the men. It is not always easy to secure men for such work and Mr. Smith was asked by the superintendent of canals with respect to getting a certain number of men.

Mr. PRINGLE. Would that be Mr. Stewart?

Mr. EMMERSON. Yes, Mr. Stewart, he is the superintendent to whom I referred, and when the men were required, Mr. Smith's advice was asked. To whom shall we refer? We have to get information from some one; the department has not the knowledge and the superintendent of canals is certainly not to run around the country looking up men.

Mr. PRINGLE. Prior to 1896 on our St. Lawrence canals we had a superintendent on each canal whose duty it was to see that the proper repairs were made. We have a permanent staff employed on each of these canals who go from end to end of the canal. They have their scows and the other articles necessary for use, and they have always done the repairs on these canals. Since 1896 in order to make a position for the organizer of the Liberal party in Glengarry, Mr. Stewart, an ex-school teacher, and I think an ex-insurance agent too, he was put in charge of all the canals. I am not saying anything personally about Mr. Stewart, I think he is a very respectable gentleman. But he knows less about a canal than I do. I think he knows little or nothing about our canals; he could not possibly know anything, he had no experience. His training was not such that he could have any knowledge of our canals. Then under Mr. Stewart, there is now the superintendent of the Cornwall canal. Why is this man overlooked? Why has he not something to say in regard to the men who are employed in connection with the work of that canal? The government evidently considered that he was a man fitted for the position when they put him in charge under Mr. Stewart, of the Cornwall canal, and yet that man is ignored and had nothing whatever to say in regard to any man employed on that canal. Instead of consulting Mr. Lally, the superintendent of the canal, the minister frankly admits that Mr.

Stewart goes to Mr. Smith the candidate and says: Mr. Smith, we want so many men put on the Cornwall canal. He entirely ignored and overlooked the man who is paid a very substantial salary for taking charge of the Cornwall canal. I do not think that is a proper way of conducting the affairs of this canal. I am told that he was never consulted in any way. Mr. Stewart goes to Mr. Smith, a lawyer and a politician, and says, we want certain repairs on the Cornwall canal; you furnish the men. Why should he not go to Mr. Lally and ask him what is required to be done in connection with the canal of which he has charge and let Mr. Lally take charge of it, and do the work with the permanent staff he has under him on that canal for this very purpose? I say again that you cannot turn to the books of previous years and show that it has been the custom to put on a staff of extra men in the fall of the year. This is the first time it ever occurred and it occurred just when we were in the heat of an election. I say now that, notwithstanding the answer, they may not be called extra men, but there was a staff of 50 to 100 men in connection with the work and they were there for one purpose, a political purpose.

Mr. EMMERSON. Communications with respect to these canals by the department are always had with the superintendents. There is no superintendent of the Cornwall canal. There is a Mr. Lally there, who is an overseer, but in so far as the transaction of the business of the canals is concerned, he has no more to do with the transaction of the business of the canal than the overseer of any of the other canals. The superintendent, Mr. Stuart, is in charge of all the canals and he receives his instructions from the department. In so far as the expenditure last year and the previous year particularly is concerned, the appropriations were not passed by parliament until a very late date and the work that might have been done earlier in the season could not be undertaken because no funds had been provided and therefore before the cold weather came on it was necessary to put on an extra crew of men. Some 40 were employed in connection with this canal and it was done at the earliest possible moment, as it was done the preceding year when there was no election. It may be a coincidence that there was an election going on but simply because there was an election is no reason why the work should not be attended to in the ordinary course of events.

Mr. PRINGLE. The minister says that Mr. Lally is overseer. What does he oversee, if he does not oversee the work that was done on the Cornwall canal? Why was Mr. Stewart going jumping about along the front like a pea on a gridiron, making himself active politically, in and out of my constituency, attending to the work on that canal, shoving to one side the man employed as overseer? The minister knows as well as I know that the overseer of the canal has not received fair treatment from Mr. Stewart, and that during the campaign Mr. Stewart came into Cornwall and devoted all his time to political work in an effort to defeat me. Mr. Lally, if he is an overseer, could have seen to the cleaning of the banks and removal of weeds in the fall; he was quite competent to do that, but Mr. Lally is overlooked entirely, a superior is brought in for this campaign. There was little use for him in Morrisburg, his headquarters at that time, because he recognized the impossibility of defeating Mr. Broder, so he devoted the most of his time and energies to the county of Stormont, and put on this extra staff of men to help him. That is the truth in regard to the work that went on there last fall.

Mr. R. L. BORDEN. What was the date when the men were employed and the date when they were dismissed?

Mr. EMMERSON. I gave the dates the other day. Some of them were dismissed in December and some in the latter end of November. Some of them were employed in September.

Mr. R. L. BORDEN. When they were not pulling weeds and attending to the registration of voters, what were they doing?

Mr. EMMERSON. I am not aware that any of them were doing that. I am bound to accept the statement of my hon. friend; but the very great friendliness which he evinces towards Mr. Stewart, of which we had evidence last year, and of which we have some evidence to-night, would not indicate to me that he is very warm in his favour. Mr. Stewart is certainly a very excellent business man, and attends to his duties very carefully, so far as they come under my observation. Mr. Lally is a sort of overseer or foreman, whose duty it is to see that the men who are engaged attend to their work, and I am sure that he would not have these men playing or have them up town or anywhere else and drawing their pay without attending to their work. I must assume that, because I must assume that he was attending to his duty.

Mr. PRINGLE. I want to say with regard to Mr. Lally that he is a very competent man, who knows more about canals than Mr. Stewart could learn in a year. Mr. Lally is a man well fitted for his position, and he does his work well; but he was so hampered and interfered with by Mr. Stewart coming on the canal and assuming to take charge and to put on a staff of men who were not required, that he prepared his resignation with the intention of sending it in to this government. I cannot speak

too highly of Mr. Lally as a capable man for the work entrusted to him.

Mr. EMMERSON. I am surprised that he did not send in any complaint to the department.

Mr. PRINGLE. I have not the slightest doubt that he did. I understand that he made many complaints.

Mr. EMMERSON. I am informed by the chief engineer that he never made any complaint, and I never heard of any.

Mr. PRINGLE. Have complaints not been sent in in regard to Mr. Stewart's interference with the Cornwall canal by Mr. Smith himself ?

Mr. EMMERSON. The chief engineer states that he does not know of any, and I certainly do not recollect any.

Mr. BLAIN. Are we to understand, then, from the minister that that is the policy of the department in the employment of labour? I remember the hon. gentleman stating that so far as the Intercolonial Railway was concerned, he knew no politics. Are we to understand, then, that he has one policy for the Intercolonial Railway and another for the canals ? Does he adopt that policy all along the line, of consulting the member or the defeated candidate in regard to the employment of all the men ?

Mr. EMMERSON. I can only say what my policy is in respect to that matter. If I require any advice in connection with any public work in any constituency, I am not going to be mealy-mouthed about it ; I want to say frankly that I am going to consult my friends. My hon. friend says that I stated, with respect to the railway, that I knew no politics. I do not know that my hon. friend can find on record a bald statement like that. I am not going to be hypocritical about it ; in the administration of the works under me, if it comes to be a choice between two, a Liberal and a Conservative, all other things being equal, I am going to favour the Liberal ; and I think I would not have the respect of my hon. friends opposite if I were to make any other statement. I treat those in the public service who are Conservatives justly, properly and courteously ; but in dealing with the public interest, I am not going to allow politics in any way to interfere with the works if I know it.

Mr. BLAIN. We are to understand, then, from the hon. minister that there is no danger of there ever being a conflict between the two political parties, because my hon. friend always gets his information from one source.

Mr. EMMERSON. I get it from both ; I get it from everybody.

Mr. BLAIN. I am taking the words of the hon. minister. He says he always consults his own friends—I suppose he means his political friends. We are to understand from the hon. minister that it is a political department.

Mr. EMMERSON. Oh, no.

Mr. BLAIN. I am taking the hon. gentleman's words.

Mr. EMMERSON. I will be judged by my words, not by the hon. gentleman's construction of them.

Mr. BLAIN. I will take the hon. gentleman's own words. He says he consults his own friends. He means his political friends. Do I misundertand him ?

Mr. EMMERSON. No, you do not misunderstand me.

Mr. BLAIN. The hon. gentleman says that when he wants any advice in a particular county, or wants men to put on works, he consults his own political friends. Therefore, we are to infer that no Conservative will be put on ; no other inference is possible. So when we have any estimates of my hon. friend, we know that no Conservative need apply.

Mr. EMMERSON. They do apply, though.

Galops Rapids—to complete channel, $26,500.

Mr. EMMERSON. This is a revote of a portion of the amount appropriated last year to complete this work.

Mr. R. L. BORDEN. Will this complete it ?

Mr. EMMERSON. I am informed by the chief engineer that it will.

Mr. PRINGLE. Who has the contract for that work ?

Mr. EMMERSON. The Gilbert Company.

Mr. PRINGLE. The work is to be done under the same contract that was entered into six or seven years ago ?

Mr. EMMERSON. The same contract.

North channel—forming channel and building dam between Galops and Adams Island, $70,000.

Mr. LENNOX. Is this item correct ? This asks for an appropriation of $70,000 and then says that $90,200 is a revote.

Mr. EMMERSON. That is a printer's error. It is a revote of $70,000.

Improvements at Port Colborne entrance, $250,000.

Mr. PRINGLE. Who has the contract ?

Mr. EMMERSON. Hogan & McDonald.

Mr. PRINGLE. Were they the lowest tenders ?

Mr. EMMERSON. Yes. There were 14 and they were the lowest at schedule prices.

Mr. R. L. BORDEN. Does this complete ?

Mr. EMMERSON. No, it will require $150,000 more to complete.

Electric light and power plant, $100,000.

Mr. EMMERSON. That will complete.

Mr. BLAIN. Is it by contract ?

Mr. EMMERSON. Yes, except a small item.

Mr. BLAIN. Who are the contractors ?

Mr. EMMERSON. There are several. Mr. Battle has the contract for the poles. The Northern Aluminum Company have the contract for wire. The Hamilton Bridge Works have the contract for steel poles. The Wire and Cable Company have the contract for copper conductors. Baker & Co. have the contract for arc lamps and regulators. In all cases the lowest tenders were accepted.

Mr. ARMSTRONG. How comes it that whereas in 1903 the cost of maintenance was $72,004, in 1904 it has increased to $116,858.

Mr. EMMERSON. Do you mean on the Welland canal ?

Mr. ARMSTRONG. Yes.

Mr. EMMERSON. That is in consequence of the repairs. There has been an increase in the wages of the men, but the greater part of the increase is caused by the additional repairs necessary.

To remove obstructions and make other improvements, Welland canal, $75,000.

Mr. PRINGLE. What is the price paid per cubic yard for the removal of earth and dredging work ?

Mr. EMMERSON. Thirty-eight and a half cents.

Mr. PRINGLE. When was this contract originally entered into ?

Mr. EMMERSON. I think three years ago.

Mr. PRINGLE. Is that a continuous contract to last for all time to come for any excavation required in the Welland canal ?

Mr. EMMERSON. That was only within certain limits. The work was to be proceeded with year after year.

Mr. PRINGLE. Have any new tenders been called for for this work to be done since ?

Mr. EMMERSON. It was all included in the original contract.

Mr. PRINGLE. Does my hon. friend say that 38½ cents is a reasonable figure for the work done ? I understand that 22 cents would be a fair price.

Mr. EMMERSON. I only know that every tenderer knew what was contemplated. Here was a certain area to be excavated. The specifications were very explicit and were understood by the other tenderers as well as by the successful ones.

Mr. PRINGLE. Was it not understood at the inception of the contract that only a small quantity was to be removed ?

Mr. EMMERSON. My chief engineer says not. The specifications clearly said a certain area.

Mr. PRINGLE. Will the hon. gentleman lay the contract on the table and let the item stand in the meantime ?

Mr. EMMERSON. I am quite willing.

Item allowed to stand.

To deepen portions of summit level between Port Colborne and Thorold, $80,000.

Mr. PRINGLE. Who has that contract ?

Mr. EMMERSON. Magann & Finn.

Mr. PRINGLE. The same firm that had the other contract ?

Mr. EMMERSON. No, the other was given to Weddell, Battle & Manley. Magann & Finn have this one.

Mr. R. L. BORDEN. Does this complete the work ?

Mr. EMMERSON. Yes.

Mr. PRINGLE. Is that a continuous contract as well ? They have been going on with this work the last five or six years, and every year there seems to be a larger appropriation for it.

Mr. EMMERSON. When the contract was first entered into the work was estimated to cost so much, and it was expected that it would not be completed only in a number of years. The deepening of this portion of the canal is necessary from the fact that Lake Erie is gradually lowering its level, and this level has been deepened two feet, giving 17 feet at the ordinary level of Lake Erie, and 15 feet at low water. At the time the contract was let there were three tenders. The total estimated cost at 38½ cents was $530,217. Besides this vote of $80,000, we will require $60,000 to complete the work.

Mr. PRINGLE. What has been paid to this firm up to the present time?

Mr. EMMERSON. Up to June 30, 1903, the amount paid was $139,250; from June 30, 1903, to June 30, 1904, the amount paid was $121,121, making a total up to June 30 last of $260,371; there has been expended between June 30 and December 31, 1904, $129,899, or a total to 31st of December last of $390,270. Then, as I have said, it is estimated that $140,000 will be required to complete the work, of which we are now

asking $80,000. I wish to correct a statement I made a few moments ago. I was asked as to deepening rock cut on the Welland canal and as to the contract price for the earth excavation. There was no earth excavation provided for in the contract; it was all rock cutting and the lowest tender was $2.90 per cubic yard. The earth work I had in mind at the moment was deepening portions of the summit level, the contract price for which is 38½c. per cubic yard. So, perhaps, my hon. friend (Mr. Pringle) will allow the item of $75,000 to go, that being the rock excavation.

Mr. PRINGLE. I am satisfied. The contract I would like to have brought down is the one in connection with the earth excavation. I find that the minister has expended on that work $359,000. I am informed, whether rightly or wrongly, that for the class of dredging being done there 38½c. is entirely too high a price. As to this being a continuing contract of the work. I assume, from what the minister says, that it is not, because he states that the work has been occasioned by the change in the depth of water in Lake Erie.

Mr. EMMERSON. That occurred three years ago.

Mr PRINGLE. Did it occur before the letting of this contract?

Mr. EMMERSON. It was to remedy that very defect that this contract was entered into. Let me be understood in respect to the matter. The contract of Weddell, Battle & Manley was at $2.90 per yard for rock excavation. The Magann & Finn contract for deepening portions of the summit level between Port Colborne and Thorold was at 38½c. per cubic yard for earth excavation.

Mr. PRINGLE. I quite understand that. The Auditor General's Report shows the prices that were paid last year.

Mr. EMMERSON. I cannot speak as to whether this is a low or high price, but I know it is the contract price under the tender.

Mr. PRINGLE. But the minister ought to know whether the contract covers all the excavation to be done in that canal for the next few years.

Mr. EMMERSON. The contract contemplated the carrying out of a certain work, the removal of 1,377,000 cubic yards of earth on this summit level between Port Colborne and Thorold. A certain portion of that work has not been completed. It was contemplated that it would take several years to do it. The total cost of the work was estimated at $530,270, of which after December 31 last $390,270 had been expended. The balance of the excavation, 377,000 cubic yards, is yet to be done, and it is for that we are asking this vote.

Mr. PRINGLE. I would ask that this item stand until we have the contract.

Mr. DEPUTY SPEAKER. The item of $75,000 is carried.

Mr. EMMERSON. And the one of $80,000 stands. All right.

Welland canal—to remove centre piers and rebuild bridges at Niagara and Queenston Streets, near Homer Road crossings, $150,000.

Mr. R. L. BORDEN. Does that complete the work?

Mr. EMMERSON. That is supposed to complete the work.

Mr. BLAIN How much was expended last year?

Mr. EMMERSON. The total estimated cost of this work is $190,000. Of this item, $30,000 is a revote, and the $70,000 last year makes $190,000, the total estimated cost.

To make survey of canal, $20,000.

Mr. EMMERSON. There is no complete plan of this canal, and apparently no accurate survey has ever been made of it. It is represented by the department that both are much needed.

Mr. BARKER. What is the length of the canal ?

Mr. EMMERSON. Twenty-seven and a half miles. An engineering survey of the whole canal is necessary to secure data from which a thorough and accurate plan can be prepared.

Mr. PRINGLE. Does the minister mean to tell us that the original plans upon which this canal was constructed are not in possession of the department ?

Mr. EMMERSON. There was, I believe, originally, a survey made, but there were no monuments placed. There have been continual encroachments upon the lands of the canal, and there are difficulties arising every year between the department and the owners along the canal ; therefore it is necessary to have a new survey. I see by a statement before me that there never was a complete plan of the canal in existence.

Mr. BARKER. Was there a plan of any portion of it ?

Mr. EMMERSON. There are detached plans of certain portions.

Mr. BARKER. Of what portion of the twenty-seven miles have you plans ?

Mr. EMMERSON. From Allanburg down to Port Dalhousie, about thirteen miles.

Mr. BARKER. Then for fourteen miles of survey you want $20,000 ?

Mr. EMMERSON. That has to be surveyed as well. There was the old canal which was changed, and now, in order to

put down monuments and to have a very accurate survey, marking out the line of the canal fixing the boundaries between the canal proper and the adjoining owners, it is estimated that we shall require $20,000. That is the estimate of the chief engineer.

Mr. PRINGLE. Does the minister mean to say that when the land was acquired for the purpose of constructing the Welland canal, the conveyances given to the Crown did not properly designate what the Crown was acquiring, and that that land was not marked out at the time, that the canal was not built on a regular system of plans, and that it is necessary now to expend something like $1,000 a mile to ascertain where the land belonged to the Crown lies? Is that the position?

Mr. EMMERSON. No doubt the deeds did not designate the boundaries; but it appears that monuments were not placed, certainly they were not sufficiently placed, or so insufficiently placed that there have been constant disputes arising between the owners of adjacent lands and the Department of Railways and Canals. Now in order to remedy these it is necessary to make a complete survey of the whole canal, and it is estimated by the engineer that in order to do that, and to prepare an accurate plan of the old canal, it will take $20,000.

Mr. PRINGLE. What form have these disputes taken? It is the first we have heard of any claims against the government in regard to encroachments upon the lands of private individuals along that canal.

Mr. EMMERSON. There are quite a number of cases. The engineers have attempted to fix the bounds of the canal as they understand it, and in some instances these boundaries go through the property of private owners who contend that they are not the proper boundaries. They contend that we encroach upon their property. When our men go on they send in bills or claims for trespassing on their lands. This has occurred, and has been going on for some time, and certainly it is a matter that should be settled.

Mr. COCHRANE. Is the canal fenced?

Mr. EMMERSON. It is in some places.

Mr. HENDERSON. Do I understand this $20,000 the minister is asking for, is to pay surveyors for a new survey of the canal, or is it intended to compensate the owners of property along the canal for damages? The minister says there are constant complaints about trespassing; is the money all to be expended on surveys, or is it to be used for the purpose of settling these difficulties and compensating owners of the land who claim they have been encroached upon? $20,000 seems to me a large sum for a survey of twenty-seven miles of canal.

Mr. EMMERSON. This sum does not include any item for the payment or settlement of claims. It is estimated by the engineer that it will take $20,000 to make a survey, prepare plans and place the stone monuments along the bounds of the canal.

Mr. BARKER. Will it be done by officers of the department?

Mr. EMMERSON. The chief engineer says that a land surveyor will be necessary along with the engineers of the department.

Mr. PRINGLE. I see last year that you had Mr. Davie attached to the Welland canal staff, and there is another engineer with him. What are these men doing? Are they merely laying out a route for these poles for electric lights?

Mr. EMMERSON. We have engineers at different points. The superintending engineer, Mr. Weller, is stationed at St. Catharines, he has one assistant. Mr. Davie I think is at the Port Colborne end of the canal, in connection with the construction works that are going on there. These gentlemen I have named are on the permanent staff.

Mr. COCHRANE. Then you will not want $20,000 to pay these?

Mr. EMMERSON. They are temporary in a sense.

Mr. BARKER. What is the practice when an officer on a given staff is detailed for particular work? Does he go off the pay-list on the regualr staff, and is his pay charged to the particular service?

Mr. EMMERSON. Invariably that is the case. He does not get paid from both.

Mr. BARKER. How is it that you take a vote in the estimates for these officers?

Mr. EMMERSON. That is the regular vote, it may not be expended. We cannot always anticipate that they will not be employed in connection with some other work.

Mr. R. L. BORDEN. Take a double vote.

Mr. EMMERSON. It is necessary in connection with this vote under the law of Ontario to employ a regularly qualified land surveyor—hon. gentlemen from Ontario will know whether that is correct or not—in fixing bounds which may be in dispute.

Mr. BARKER. But you surely have several provincial land surveyors on your staff?

Mr. EMMERSON. I am not aware of one.

Mr. BARKER. Every man of that class who has been taken from Ontario is probably a provincial land surveyor.

Mr. EMMERSON. I am not aware of it. If it is so it would cover the difficulty but the chief engineer tells me that he thinks that they are not.

Mr. LENNOX. There is another aspect of the case that I would like to call the hon. minister's attention to and it is this; assuming that there is a dispute between a land-owner and the government in what way does the hon. minister propose to adjust it? Ordinarily in a case of dispute between adjoining owners each party pays a portion of the costs. How does the government propose to do it? If these parties are claiming that they are entitled to land which has been and is in the possession of the government, and it seems to me that the government is now fairly in possession, it is for these parties who are claiming the land to establish their title to it, or at all events, to pay a portion of the expense. Why the government should take upon itself to make a survey of the whole line for that purpose and expend a matter of $20,000, I cannot understand. Does the hon. minister apprehend the point I am speaking of? It is that in any dispute between adjoining owners the person who is not in possession and who is claiming to obtain possession from the other is the person who enters the proceedings and it will be for the land-owner to have the limits marked out on the ground according to the provisions of the deed defining the boundaries.

Mr. EMMERSON. In a mere delimitation of bounds that may be correct, but there is other work to be done in connection with this—the preparation of the plans and the fixing of the monuments. I do not think that the parties holding the adjacent properties will be bound in any way to contribute to that. It would not be so necessary to them and I think it is more important for the government to have these bounds fixed because the present state of affairs opens the door to constant claims being pressed. The people are not so much interested in that as the government is.

Mr. LENNOX. I cannot see that the hon. minister has made it very clear yet as to the position we are in in reference to this matter. We have been in possession of the canal for years and years. We must have been using it. We are using the land. In the majority of instances I assume that the adjoining owners along the canal are using their lands. There will be fences in many instances, probably in almost all instances, and in regard to the plan that my hon. friend speaks of, the plan follows the survey; it does not precede it. You make the survey and then you prepare the plan, I presume. If the hon. minister will tell us how this $20,000 is made up, probably it will be satisfactory, but we have no information as yet on that point. There will be so much time involved, so much for the plan and so on. Will the hon. minister tell us that?

Mr. EMMERSON. I have no details of the estimate. The officers have not furnished me with them. I am acting on the estimate prepared for me by the chief engineer of canals and he concluded that this work would cost $20,000. We are asking a vote for that amount. I do not think it is an excessive amount. It cannot exceed that amount because that is the only amount provided, but if it does not cost that amount the whole of it would certainly not be expended.

Mr. LENNOX. I do not know whether I quite comprehend what the hon. minister means when he speaks of the estimate. What I understand by an estimate is that a person sits down and takes into consideration the various elements that enter into the various kinds of work and so on, and having set down the figures in detail he then finds out what the total will be. I do not understand that an estimate is a mere guess as the hon. minister says it is. It is simply that the deputy minister instructs him to put down $20,000 and down it goes. He says it may not be expended, but our experience is that when we vote money it is expended, and very often more than expended. We ought to have something more than a mere guess. We ought to have some figures to show how this amount is arrived at. If the hon. minister has such figures he ought to bring them down and if he has not he ought not to ask us to vote this amount until these figures are prepared.

Mr. HENDERSON. I would like to ask the hon. minister when this work will likely be completed. Will it be done during next summer or will it extend over several years? It may be that $20,000 is only the thin end of the wedge, only a very small part of the expense necessary. We seem to have a great many of these continuous jobs running on year after year extending over two, three, four, five, or six years. There must be a great many people in this country very happy with such contracts. They seem to make their living out of them. They never seem to come to any termination. This is a policy that we will have to inquire into. Probably this survey bureau to survey the Welland canal is another of these never ending contracts. I would not be surprised if those of us who are here three or four years hence will still be voting money for the survey of the Welland canal.

Mr. EMMERSON. I am not furnished with any detailed estimate. This is only the estimate of the chief engineer. This work has become urgent. The work should be done at once and as I am informed by the chief engineer it will be commenced as soon as the vote is available and will be completed certainly within the fiscal year commencing the first of July next. The reason why it is urgent that the work should be done is that in one instance, it is

claimed by the engineers, the bounds of the canal go right through the barn and house of one of the adjoining owners. It is claimed by the department that this man has encroached on the property of the canal by erecting his buildings there.

Mr. BARKER. You can ascertain that for $10.

Mr. EMMERSON. I doubt that very much. I think it will be necessary to make a complete survey of the whole line in order to ascertain with certainty where the monuments should be placed.

Mr. COCHRANE. How long have the House and barn been there, does the minister know?

Mr. EMMERSON. No, I do not know; long enough to create difficulty.

Mr. COCHRANE. It is all very well for the minister to pass it over so lightly as that, it is very nice to hand out $20,000 of the people's money and then smile.

Mr. EMMERSON. It is no use to cry over it.

Mr. COCHRANE. No, you will not cry. If it was the hon. minister's own money he would not be so happy.

Mr. EMMERSON. I am very generous.

Mr. COCHRANE. With other people's money, not with your own. I never heard of your being so generous.

Mr. EMMERSON. I never had the $20,000.

Mr. COCHRANE. I am not discussing your liberality; the question is what do you know about the subject.

Mr. LEIGHTON McCARTHY. Carried.

Mr. COCHRANE. No, it is not carried. The gentlemen opposite are very funny; I remember years ago when they were not so funny. It is absurd for intelligent men to be sitting here in parliament voting away the people's money and laughing and thinking they are so clever. I would think that the independent members would be serious. They are not tied up by any party ties and I would think that they would want to know where the money is going. I can understand hide-bound politicians but I would think the independents would show some independence. If the work is so important why does the minister not have some information? He cannot tell where the canal is. This house and barn have been there for years and they do not interfere with navigation and I would like to know why the difficulty has arisen at this time. I should think as the canal was built and deepened by the department that they would have complete plans and specifications in reference to it. I am surprised that the Minister of Customs does not instruct the Minister of Railways and Canals as to the necessity of having fuller information about his estimates. I understand that the Minister of Railways and Canals is a little new here, but the Minister of Customs knows how, when he was in opposition he used to howl about these expenditures.

Mr. LENNOX. No, not howl.

Mr. COCHRANE. No, I take that back, I made a mistake; but he used to make a great deal of noise and tell us that we were spending enormous sums of money and that the people were being bled white. Now he sits there and shakes his hands. I often wonder if he is not saying 'Lord be merciful to me a sinner.'

Lachine Canal, machinery for shops, $2,300.

Mr. EMMERSON. This is for some improvements in the workshops, the present ones are entirely inadequate.

Electrical installation, $5,000.

Mr. EMMERSON. This is intended to be spent in connection with the electrical apparatus for operating the lock gates and is to protect the lock gates, motors, &c., from the fenders of passing boats. The total expenditure is estimated at $15,000.

Mr. BLAIN. When will this be completed?

Mr. EMMERSON. Within this fiscal year.

Mr. BLAIN. And this will complete the work?

Mr. EMMERSON. Yes, this is the total cost of that particular electrical work.

Bridge over the canal at Atwater Avenue, $45,000.

Mr. EMMERSON. This is for the Atwater Avenue bridge over the Lachine canal in Montreal; $40,000 was voted last year, and this is to complete the work. $85,000 is the estimated cost of the bridge including the substructure and superstructure.

Mr. R. L. BORDEN. Possibly some of the hon. gentlemen from Montreal and vicinity might want to discuss some of these items that we have just passed. That can be done on one of the items that have been reserved. There will be no difficulty about that?

Mr. EMMERSON. There will be no difficulty.

Some resolutions reported.

Sir WILLIAM MULOCK moved the adjournment of the House.

Mr. R. L. BORDEN. What business will be taken up to-morrow?

Sir WILLIAM MULOCK. If the Minister of Marine and Fisheries is prepared to proceed with the legislation that stands in his

name, that will be taken up, and we will go into supply afterwards. If he is not ready to proceed, we will go into supply and continue with the estimates for Railways and Canals.

Mr. EMMERSON. I shall be prepared to go on with the Canals, but I had promised some hon. gentlemen that before the Railway estimates were taken up, I would give notice of that and make a statement.

Sir WILLIAM MULOCK. Then, as soon as we finish Canals we will return to Public Works.

Motion agreed to, House adjourned at 12.15 a.m., Friday.

HOUSE OF COMMONS.

FRIDAY, February 17, 1905.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 60) to incorporate the Algoma Copper Range Railway Company.—Mr. Dyment.

Bill (No. 61) to incorporate the Lebonk and Thunder Bay Railway Company.—Mr. Bole.

Bill (No. 62) respecting the Edmonton, Yukon and Pacific Railway Company.—Mr. Lamont—by Mr. S. J. Jackson.

Bill (No. 63) to incorporate the Brantford and Woodstock Railway Company.—Mr. M. S. Schell.

BUSINESS OF THE HOUSE.

Mr. W. F. MACLEAN. Before the Orders of the Day are called, I would like to direct the attention of the First Minister to a practice which seems to obtain a good deal this session, that of moving the House into Supply two or three hours after dinner, when neither the Prime Minister nor any of the other ministers are in their places. In the days of my parliamentary innocence it was the practice, I think, to move the House into Supply when the Prime Minister and most of his colleagues were here, and I would like to see that practice resumed. It may be fastidious on my part to vent this idea, but I would like to see it observed a little more, so that the undoubted right of every member of parliament to discuss some public question on going into Supply may be maintained, and that the ministers may be in their places to hear what is said.

Rt. Hon. Sir WILFRID LAURIER. I understand that the only time when the House was moved into Committee of Supply at a later hour than eight o'clock was yesterday.

Mr. MACLEAN. No ; two or three times.

Sir WILFRID LAURIER. I understand the contrary. At all events, the House can always be moved into Committee of Supply to oblige my hon. friend or any other hon. member who wants to make a motion. Of course, the House may be moved into Committee of Supply at any moment ; but we have usually taken up Bills before going into Committee of Supply. Of course, if I knew in advance that any hon. gentleman wished to bring up any question on the motion to go into Committee of Supply, I would be only too glad to give him the opportunity.

INQUIRIES FOR REPORTS AND RETURNS.

Mr. R. L. BORDEN. May I bring to the attention of the Prime Minister, as well as the Minister of Marine and Fisheries, the fact that a considerable number of returns have been moved for in connection with the Department of Marine and Fisheries, and that for the most part they have not yet been brought down ? It would be desirable to have those returns brought down before the estimates of the hon. gentleman are under consideration, otherwise some delay might be necessary in order to obtain the information which is asked for in the very returns to which I refer.

Mr. PREFONTAINE. The returns are being prepared as fast as possible, and they will be laid on the table of the House, I am quite sure, before the estimates of the department are taken up.

Mr. SPROULE. Yesterday I inquired when the report of the commissioner on the importation of alien labour would be brought down.

Sir WILLIAM MULOCK. I have made inquiry, and I find that the report is in the hands of the printer, and we are promised it in time to be presented to the House next week.

Mr. GANONG. Can the Minister of Marine and Fisheries give us any idea as to when we are likely to see the report of the commission on the Atlantic fisheries ?

Mr. PREFONTAINE. I am informed by the chairman of the commission that he will be here next week to complete his report.

QUEBEC HARBOUR COMMISSIONERS.

Hon. RAYMOND PREFONTAINE (Minister of Marine and Fisheries) moved second reading of Bill (No. 37) to amend the Quebec Harbour Commissioners Act, 1899. He said : The object is to extend about three miles further down the River St. Lawrence the pilotage limits of the Quebec

district. At present steamers have to stop at Father Point to get the mails and then they have to stop at Bic, 17 miles farther up in order to take on pilots. It is recommended by those interested in shipping that the pilotage limit be extended to Father Point and the pilots be taken on board there and thus avoid the necessity of a second stoppage.

Mr. MONK. Have all the shipping interests asked for that ?

Mr. PREFONTAINE. Every one.

Motion agreed to, Bill read the second time and House went into committee on the Bill.

On section 1,

Mr. HAGGART. What is the object of extending the jurisdiction of the Harbour Commissioners ?

Mr. PREFONTAINE. The limits are now 17 miles above Father Point and steamers are obliged to stop at Bic to take on pilots. They are also obliged to stop at Father Point, about 17 miles further down, to take the mails, but if the limits be extended to Father Point, the pilots can be taken on board there as well as the mail and thus only one stoppage will be necessary.

Mr. AMES. Is this the only Bill to be introduced by the government this session to amend the Quebec Harbour Commissioner's Act ?

Mr. PREFONTAINE. I am not aware of any other nor of any demands for any other change.

Mr. BERGERON. Is there anything in the law which compels the pilots to be taken on at Bic ?

Mr. PREFONTAINE. The pilots of the Port of Quebec are under the jurisdiction of the Quebec Harbour Commissioners and the pilots are taken on at the extreme eastern limit of the pilotage district. The shipping federations have represented time and again that this should be remedied, and the pilots taken on at Father Point as well as the mails. But unless we extend the limits of the pilotage district, we cannot oblige a pilot to go down to Father Point, because outside the pilotage district he is outside the authority of the Quebec Harbour Commissioners.

Mr. HAGGART. I thought that the hon. minister last session intended to bring in a Bill to take the control of pilotage into the hands of the Dominion government.

Mr. PREFONTAINE. The pilotage authority for the district of Montreal, extending from Montreal to Quebec was given to the Department of Marine and Fisheries last year with the consent of all public bodies interested. But as regards the Quebec district, no one would consent to this change. Even the Shipping Federation and others specially interested would not consent. I am informed however, though not officially, that they will make a request in the course of the next week that the pilotage authority for the district of Quebec be put into the hands of the Department of Marine and Fisheries. But I have not yet received any official demand.

Mr. BERGERON. Is the reason the hon. minister gives the only one for changing the law ?

Mr. PREFONTAINE. Yes.

Mr. BERGERON. What about steamers such as the 'Campana' which go to the maritime provinces ?

Mr. PREFONTAINE. They have no pilots.

Mr. BERGERON. They are not under the jurisdiction of the Quebec Harbour Commissioners ?

Mr. PREFONTAINE. No. I wish to propose an amendment to subsection B of this section by adding at the end of the words 'the river Saguenay excepted.' Through an error in preparing the Bill these words were not inserted, and they should be there because the pilotage on the Saguenay was last year put under the control of the Department of Marine and Fisheries.

Bill reported, read the third time and passed.

SUPPLY—CONTROL OF TELEPHONE LINES.

Hon. WILLIAM PATERSON (Minister of Customs) moved that the House go into Committee of Supply.

Mr. W. F. MACLEAN. I take this opportunity of calling the attention of the House to a petition with regard to telephones. This petition, which has been signed by a large number of municipal corporations all over the country prays :

That your honourable House may be pleased to pass an Act amending all charters granted to telephone companies so as to declare that the poles of such companies shall not be hereafter erected or conduits constructed on any road or street in a municipality without the consent of the council of such municipality, and upon such terms as such council may approve.

As things are now, it would appear, a telephone company incorporated under a Dominion charter can override these municipal rights and can enter upon the streets of any municipality without asking the consent of the corporation. This has been found a very substantial grievance and parliament is being petitioned to remove it.

Mr. R. L. BORDEN. Is there a general statute on the subject ?

Mr. W. F. MACLEAN. There may be some general statute in regard to it, but, so far as I can see, it does not cover the case completely. When a delegation of representatives of leading municipalities waited upon the government, the Minister of Justice asked them to draft a clause which they would like to see put in the general law, at least that is the representation that has been made to me. The municipalities all over this country feel that their rights are being encroached upon by the wide powers taken by the telephone company. And another petition is in circulation, but whether presented to the House or not I do not know. It is a petition on behalf of the Union of Canadian Municipalities. They pray the Dominion government and parliament to carry out the following legislation :

1. The purchase by the government of the long distance lines.
2. The amendment of all existing telephone charters, so as to provide that no companies shall erect poles or construct conduits on any road or street in a municipality without the consent of the council of such municipality, and upon such terms as such council may approve.

Here are two organizations, the municipalities on their own account and the Union of Canadian Municipalities praying parliament to give them jurisdiction over the erection of poles or laying of conduits by telephone companies within their limits ; and I trust the government may be able this session to introduce a general law dealing with that question and restoring to the municipalities the full control of their own streets in these matters. It may be necessary to allow these companies to go through a municipality with their long-distance service, but I contend it never was the intention of parliament to take jurisdiction over the streets of municipalities and hand it over to telephone companies. But there is a still more important question involved. It is referred to in 'The Canadian Engineer' as follows :

With regard to the government ownership and control of the long distance lines, while we endorse any movement for the public ownership of utilities, we believe it is far more essential at the present time, for the government to call upon the Bell Telephone Company to give and receive connection over the long distance lines of its existing system with the subscribers of all local telephone services, without regard to the ownership of such exchanges. In other words, every telephone user should have the right of long distance service whether he is a Bell subscriber or not. The inevitable result of this would be that the monopoly would no longer be able to keep out local competition, municipal and independent exchanges would be established in all parts of the Dominion, and in a few years the demand for increased long distance telephone facilities would be such that the government would be compelled to recognize the necessity of establishing a state-owned long distance system, either by duplicating or acquiring and extending the lines of the Bell Telephone Company.

Now, that is the most important question in connection with the telephone service. This calls for an interchange of what I might call telephone traffic. The law of Canada concerning railways provides that railway companies must interchange traffic. But at present the Bell Telephone Company or any other, can refuse to give connection to an independent company. The consequence is that the Bell Telephone Company has a monopoly throughout the country. This matter came up in the railway committee the other day. When I proposed to put in a private Bill incorporating a telephone company a clause compelling the company to allow interchange of traffic, the hon. acting Minister of Public Works (Mr. Hyman) who is chairman of that committee, said that this ought to be incorporated in a general measure. I agreed with him. But I went further and said that the government should assume the responsibility and introduce such a measure. In view of the petitions that have been presented, I take it to be the duty of the government, this session to make a general law compelling an interchange of traffic between the telephone companies. It is true that a telephone company to-day will accept a measure from another company if carried across the road and handed into their office; but they will not do what railway companies are compelled to do, make connections so that the traffic can go from one line to the other. Every telephone company has been created by parliament and given powers of incorporation because it is declared to be in the public interest. That is the very basis of the reasons given for incorporating them—that they are in the general interest of Canada. That being the case, the general interest of Canada can govern them as it governs the railway companies. And the government, out of respect for that interest, should ask parliament to pass a law to compel the telephone companies to interchange traffic. Let me put it as 'The Canadian Engineer' puts it :

We would point out that the charter of the Bell Company declares the works of that corporation to be 'for the general advantage of Canada.' That being so, the Bell Company has no more right to restrict the use of its long distance system to its own subscribers, than a railway company has to refuse to haul the cars of another system over its lines. We do not, of course, suggest that the company should not be compensated for the use of its lines by outside companies. A system similar to that in operation in Great Britain for the use of the government long distance lines could be arranged without difficulty. In Great Britain a subscriber to the Glasgow Municipal Telephone exchange wishing to speak to a subscriber of the National Telephone Company in London, Manchester, Liverpool or elsewhere, would pay,

in addition to the usual toll charge for the long distance line, a terminal fee to the National Telephone Company for the privilege of connecting with its local subscriber. In the case of a National subscriber speaking to a Municipal subscriber in Glasgow or any other town, a similar terminal fee would be paid to the municipality. This is a perfectly equitable arrangement, and it would be imposing no unfair conditions upon the Bell Company, if a similar arrangement was made compulsory in Canada.

My object in calling the attention of the government to this matter is to persuade them to give, this session, a general Bill to compel the Bell Company to give that interchange of traffic that is desired—to afford the same facilities now afforded in Great Britain—and to do so on the ground that it is in the public interest. It is not right that the parliament of Canada should create a great monopoly supposed to be in the public interest and then allow it to refuse to one class or to another the service it professes to give.

At the present time the long distance service of the Bell Telephone Company is restricted to its subscribers. If an independent telephone line is erected in a rural district, and there are many in this country, and they want to have conversation over the Bell system, they cannot do it, as they should do it, by a switch connection; but some individual must convey the message from the terminal of the independent company over to the office of the Bell Telephone Company, requiring a personal act. But just as railways interchange service, so ought the Bell Company to take a terminal wire from every independent line and to make connection on its switch board, being paid as much for that service as they would if an individual came in and offered a message. This company to-day has grown to be an enormous monopoly, it has been declared to be in the public interest, it has been incorporated as such, and yet it is in a position to discriminate as to what portion of the public shall be entitled to its services.

Another thing, that Bell Telephone Company has made a contract with the two great railways of this country, that is against public policy. I have before directed attention in this House to the fact that by this contract with the great railway companies they have denied the right of every independent company in this country to have access to any railway station. Now that thing cannot continue. There are private telephone lines being erected all over the country. The people of the Northwest are going in for independent telephone lines, and they wish to have. these independent lines enter railway stations. As I have pointed out before in this House, these people are the best customers of the railway company, but by reason of this contract they cannot get any access to the railway stations except through the Bell Company, and they cannot find out, for instance, whether their goods have arrived at the station. Therefore the time has come when we ought to have a general telephone law in this country, bringing all the telephone companies under it, giving to everybody an interchange of telephone traffic, and giving that direct access between the different telephone companies which only a connection on the switchboard can give, and we ought to compel the railways to abandon that exclusive contract with the Bell Company.

Now it will be a very hard thing for myself or any other member of the Railway Committee to draft a resolution that will meet the case. In this particular private Bill that is now going through, the promoters of it have agreed to accept some kind of amendment that would compel them to do this. But I find I have to employ counsel myself to draft that law. Notwithstanding that we have a law department in this parliament, a Minister of Justice, a Solicitor General, and law clerks of all kinds in this House, still it devolves upon me to retain a drafting solicitor of my own to get an amendment of that kind. Surely I ought to have the assistance of the law officers of the Crown in devising some protection for the public, as against the companies. But at present it seems that a private member who is trying to protect the public interest, or to make an improvement in the law, must work out all these things for himself. Much better would it be for the government, working on progressive lines, and following the example in England and other progressive countries to make a general law regulating these telephone companies, and compelling them to interchange traffic, not putting upon a private member, by means of a private Bill the duty of securing the public rights that ought to be protected by a public measure. Therefore I trust that the government will pay some heed to these petitions, hundreds of which have poured into the House this session from nearly every municipality of this country, calling for a general telephone law, giving back to the municipality the right to control their streets, except for long distance lines. The law also ought to compel an interchange of traffic by connection with switchboards, at the same time protecting the interests of companies that now have a monopoly. Let them be paid for such connection, and let the connection be made in a convenient manner instead of the round-about way that takes place at present. That being the case, I hope even to-day, that in a very short time we will have an intimation from the government that they propose to remedy some of these telephone grievances this session.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). I have to express to my hon. friend (Mr. W. F. Maclean) the regret that he gave me no notice that he intended to bring this important subject before the

House. Had he done so, I would have been prepared——

Mr. W. F. MACLEAN. I had it written.

Sir WILFRID LAURIER. I did not receive any notice, had I done so I would have been glad to place in his hands for his own information the report of an interview he referred to, and which took place some time ago with a deputation from the city of Toronto, if I remember right, with regard to some of the privileges which are now held by the Bell Telephone Company. So far as I remember, the grievance which was brought to our attention by the city deputation was in consequence of a decision given by the Judicial Committee of the Privy Council whereby it was held that the Bell Telephone Company could use the streets of Toronto, and put poles in the streets; they had not only the use of the streets which they had already been using, but of all the streets in the city. As I understand the charter given to the Bell Telephone Company in 1882, they had not only the right to use certain streets, they were already using, but the power to go all over the city and cover its streets with their poles. If I remember the request which was made to us by the mayor and solicitor of the city of Toronto, it was that parliament should pass a law to abridge the power thus given by parliament to the Bell Telephone Company. Well, for my part I pointed out to the mayor and to the solicitor that in my judgment that would be interfering with rights which had been given by parliament. They thought it would not be an interference, but that a clause could be framed whereby the Act would be so amended as that it would not infringe upon the vested rights they had in the city. Thereupon we asked the solicitor and the mayor to frame an amendment for our consideration so that we might have in concrete form the very thing they wanted us to do, whether we would agree to it or not. So far, however, we have not received this draft legislation. If such draft legislation were received by us, it would be our duty to consider it and see whether we could introduce it to this House. I would say to my hon. friend at once that if such an amendment could be framed, one which would not interfere with any vested rights of the Bell Telephone Company, I can see no objection why such a law should not be introduced. But if such a law cannot be introduced without infringing upon rights which have been granted to the company by this parliament, there would be a serious objection to such legislation. I pass no judgment at this moment upon the question which has been raised. I have been waiting, and am still waiting, for news from the city of Toronto upon this subject.

This brings me to another point which has been mentioned by my hon. friend. He has asked for a good deal of legislation, and one of the things he is asking for is a restoration to the municipalities of the powers which have been invaded by this parliament. I am not aware that parliament has ever, by any general law, invaded the powers of municipalities. But I am aware that in past legislation, private companies, the Bell Telephone Company for instance, have been allowed to invade municipalities, to invade Toronto and other cities, without any reference to municipal authority. Last year, or the year before, our attention was called to similar legislation which was asked for by some railway corporation; and, if I remember right, the Railway Committee here would not pass any law which would interfere with the powers of any municipality unless the consent of the municipality had first been obtained. I am pretty sure that at this moment the tendency and desire of the House would be at all times to see that the rights and privileges of the municipalities are not interfered with except with their consent. I do not know whether there will be any necessity of passing a law with this object in view. But, in regard to another matter which has been brought up by my hon. friend I confess that I, to a large extent, sympathize with him when he says that the time has come when we should have some general law regulating telephonic traffic and the interchange of traffic between telephone lines. For my part I think there is great force in the demand which has been made in this House and which has been presented to us in numerous petitions. This is a matter which ought to engage the attention of the House, but before it engages the attention of the House it ought to engage the attention of the government. I do not say what will be the course of the government this session or at any future session; all I can say is that the government is not at all oblivious to the sentiment which prevails in the country and I think some attention ought to be given to the question.

Mr. BOURASSA. Mr. Speaker, I am very glad that the hon. member for South York (Mr. Maclean) has brought the attention of the House to this matter. I think I can supply some information from my own county upon this subject which is only an illustration of the general condition of affairs as far as private telephone companies are concerned. There have been two private companies established in my county for the last four or five years, and their purpose is to give the people living in the back townships telephonic connection with the railways. One of them especially has its terminus at a station of the Canadian Pacific Railway, an important distributing centre of trade, but by virtue of an agreement entered into between the Canadian Pacific Railway and the Bell Telephone Company the Canadian Pacific Railway refuses to permit that private telephone company to place a tele-

phone box in the station. The result is that nine-tenths of the clients of the Canadian Pacific Railway at that station cannot have telephonic communication with the station through which they receive all their freight and goods. They are obliged to send their messages to the telephone office in the village and then pay a special rate for a messenger to go down the hill 400 or 500 yards to deliver them to the agent at the station. They cannot communicate directly with the agent; they can only send a messenger. And, mind you, there is no office of the Bell Telephone Company there, but simply by virtue of the monopoly they enjoy that private telephone company are not permitted to place a box in the office of the Canadian Pacific Railway notwithstanding the fact that the Bell Telephone Company have no office there. The Bell Telephone Company have no office there or at the village, but they exercise their right of monopoly even where they have no traffic at all. As far as the principle of vested rights is concerned in theory I quite agree with my right hon. friend the Prime Minister (Sir Wilfrid Laurier), but we must not forget this that when rights were granted for the Bell Telephone Company telephonic traffic was not then considered such as it is now a matter of general interest to the whole country. We had not then come to the point of seeing that the telephone system that does not belong to the companies who enjoy its profits but that it belongs to the people at large, and the time must come when vested rights which were at one time considered to be private property cannot longer be allowed to interfere with the rights of the public. The rights of the public must be considered and if the rights of a private company interfere with the rights of the people then parliament should rather side with the public interest than with private interest. But, it should be done with a great deal of care. We should not introduce that principle with the idea that in consideration of the public interest we should entirely disregard vested rights, but at the same time I think the government should look into the question. I hope they are going to look into it very soon and that they will not be entirely biased by the idea of protecting vested rights. They should consider vested rights, but if there is a conflict between public and private rights, public rights should have the preference over private rights.

Mr. T. S. SPROULE. Mr. Speaker, with a great deal of what the right hon. Prime Minister (Sir Wilfrid Laurier) said I would agree, but there is one thing with which I would not agree, that is that it is only the duty of the government to take up grievances when some one has brought in a Bill to remedy them. I have always regarded it as the duty of the government to recognize a grievance when it is brought to their notice in various ways and then to endeavour to find a remedy. This grievance has been brought to the attention of the government over and over again, for several years past and I respectfully submit that it should not be left to a private member to bring in a Bill to remedy it. The condition existing in his locality so graphically described by the hon. member for Labelle (Mr. Bourassa) is what may be found all over this country and it has been brought to the attention of the government over and over again. If I understand it correctly a railway company, when it receives its charter, agrees, by virtue of that charter, to give to the public alike equal facilities to do business with the company. Can it be said that a railway company is carrying out that agreement if it deprives the people who live in one section of the country of the right to do business over the telephone line with its station while it gives that right to another class of people ?

Mr. BOURASSA. The case I have cited is still worse than that. The Bell Telephone Company has no office there but it prevents the private company which is the only one that has a line there from having connection with the station.

Mr. SPROULE. Yes, but I was dealing with this question. It is absolutely the duty of the railway company to deal with all people who use that railway upon the same principle and to give them equal facilities. It cannot be successfully contended that a railway company is giving equal facilities to people who live alongside a private line when it denies them the right of connecting their line with the station while at the same time it gives people living upon the line of the Bell Telephone Company the right to do business with the station. I am anxious to get the ear of the right hon. Prime Minister, but if I am only talking to deaf ears I would rather avoid the trouble of talking at all. I do not say anything about the discourtesy that is displayed to a member of the House who is endeavouring to do his duty because I think every hon. minister ought to recognize that which is fairly due to another member. I say in regard to this question that in my judgment the duty of the government is, now that the grievance is brought to their attention, to provide a law to remedy and not call upon private members to perform that duty. This case has been brought to their attention over and over again. Then, another feature of this matter is that I hold that the law as it is to-day would compel the Canadian Pacific Railway or any other railway to admit any other telephone company to its office if the hon. Minister of Justice (Mr. Fitzpatrick) took the matter up and enforced the law. You cannot expect a private individual will undertake to fight against a railway company. This has become such an intolerable grievance to business people that the government ought to take it up and remedy it at the earliest

possible date. When we endeavour in every Bill that comes before the House and the Railway Committee to embody in it a clause providing a remedy for this grievance we are invariably met by some member of the government with the objection that this remedy should be provided by a general Act. Well, let the government introduce that Act and pass it. We will give them all the support we can and I am sure the people are desirous that it should be done. I think the government are not doing their duty by the people if they do not provide a remedy when the grievance is brought to their attention.

Mr. A. C. BOYCE. Mr. Speaker, this is a matter in which I am very much interested.

Mr. SPEAKER. There is no motion before the House. If there is to be a long discussion——

Mr. W. F. MACLEAN. I understood that a motion had been made to go into Supply and it was to that motion that I addressed myself.

Mr. BOYCE. This is a matter of very great moment to the country. Some time ago I placed certain questions with regard to it upon the order paper and requested an answer with regard to a particular instance, namely, the difficulty with the Bell Telephone Company which was brought to the attention of the government during the last session in reference to making connection with the Canadian Pacific Railway offices at Port Arthur and Fort William. I was told, I think, by the Minister of Railways (Hon. Mr. Emmerson), that it was impossible to answer these questions although they were put in succinct and concrete form. For what reason he was unable to answer these questions and give the information I am unable at present to say. I regret to note that the hon. member for Thunder Bay (Mr. Conmee) is not in his place at this time. If he were here he could doubtless speak of the very great confusion that was caused to the commercial interests of Port Arthur and Fort William by this difficulty. There is in these towns the Bell Telephone system and also a municipal system. The Bell Company, armed with this public franchise granted to them by parliament and enjoying the public rights, and opportunities so granted absolutely, refused to make any connection whatever with the municipal telephone system or with the offices of the Canadian Pacific Railway, so that it was impossible for subscribers of the municipal system of Port Arthur and Fort William to have any telephone access to, or any communication with the railway stations at Port Arthur and Fort William, which were under the control of the Bell Telephone Company. A very large percentage of the people of these two towns which are large growing and prosperous towns of considerable and growing commercial importance, use the service of the Citizen Telephone Company. They prefer to use the Citizen's Company and to exercise the privilege which they have of patronizing their local municipal telephone system, but of what use was it to them when the Bell Company, enjoying these privileges granted to them, as the right hon. the Prime Minister says, by parliament, could set at naught the will of the people and prevent them from having access to these offices and to the full use and enjoyment of their franchise. It is an important question and one that should occupy the attention of the government even at this late day. It is very much to be regretted indeed that the government has not, after all these grievances have been brought to its attention, seen fit to interfere, to remedy these grievances and bring before parliament some measure which would afford some relief under the circumstances.

YUKON ELECTION.

Mr. R. L. BORDEN. Before the motion is adopted I would like to refer to the correspondence which the Prime Minister has just placed on the table. As it is not very long I shall take the opportunity of reading it. The first telegram is as follows :

Ottawa, 5th Oct., 1904.

Joseph Ena Girouard,
Dawson, Y.T.

You have been appointed returning officer for the electoral district of the Yukon. Writ dated 29th September mailed to-day. Nomination Friday, 18th November, at Dawson. With this information by referring to form 'E' and clauses of Yukon Representation Act, 1902, you can select clerk and enumerator and decide on polling stations. Then prepare proclamation following directions in Act.

(Sgd.) R. W. SCOTT.

A note follows this :

On ascertaining that Girouard was a member of the Yukon Council and therefore disqualified, Ledieu was appointed.

The next telegram is dated October 8, 1904, to the gentleman just named Mr. Ledieu. It is as follows :

Ottawa, 8th October, 1904.

Pierre Ledieu,
Barrister, Dawson, Yukon Territory.

You have been appointed returning officer in place of Joseph Ena Girouard, not qualified. Get from him my telegram, October 5th, and act in accordance therewith.

R. W. SCOTT.

The next telegram reads :

Ottawa, 17th October, 1904.

Pierre Ledieu,
Returning Officer, Dawson, Yukon.

If proclamation has not been posted stay action. Represented that owing to difficulty of travelling time appointed for nomination is unsuitable. Number of polling places should not exceed forty. Consult Congdon, who is familiar

with centres of population. Advise me immediately of present position.

R. W. SCOTT.

Then there is a note following that to this effect:

Not then known that Congdon had resigned commissionership or that he was to be a candidate.

(Sgd.) R. W. S.

The next telegram is dated Dawson, Yukon, October 20, 1904:

Hon. R. W. Scott,
Secretary of State, Ottawa.

Is writ to be dated 5th October, and what is the return day?

(Sgd.) PIERRE LEDIEU,
Returning Officer.

The next telegram is dated Ottawa, October 21, 1904, and is as follows:

Ottawa, 21 October, 1904.

Pierre Ledieu,
Dawson, Yukon Territory.

No, writ dated 29th September—nomination 18th November. You were instructed to get my telegram to Mr. Girouard and act in accordance with it. I cancel the suggestion in my telegram to stay action and expect you to proceed vigorously. If not too late limit number of polls to forty. Writ returnable when your duties have been completed.

R. W. SCOTT.

The next telegram is dated Dawson, Yukon Territory, and is dated December 5, 1904. It is to the Hon. Charles Fitzpatrick (Minister of Justice), and reads:

The voters' lists compiled.

I suppose it is compiled, it reads 'complied:'

The voters' lists compiled under the Yukon Territory Representation Act, 1902, have been stolen, if posted, immediately after posted; lists for each polling division have not been posted in accordance with section 30, and access to lists in enumerators' hands under section 30 and 31 refused by enumerators to Dr. Alfred Thompson, candidate, his agents and supporting electors. Intense excitement prevails in consequence, pointing to danger of general uprising. The lists for whole enumeration district were posted in two places only in such district and were not segregated for polling subdivisions and posted in such polling divisions. Such lists as posted were so posted secretly at midnight, November 30th, and immediately removed and have never been open to be seen by Dr. Thompson or his supporters. We respectfully request that direct instructions be immediately given to all enumerators to allow Dr. Thompson, his agents and all electors access to voters' lists, final closing of the same under Act. Please advise Dr. Thompson by wire.

(Sgd.) ALFRED THOMPSON.

Candidate T. W. O'Brien, Thomas J. Kearney, N. F. Hagel, T. D. Patullo, C. W. Tobors, George Black, John Pringle, R. H. S. Cresswell, committee.

The next telegram is dated Ottawa, December 1, 1904:

Mr. R. L. BORDEN.

Ottawa, 7 December, 1904.

Pierre Ledieu,
Returning Officer, Dawson, Y.T.

All candidates are entitled to equal facilities in securing copies voters' lists. Representations are being made that this rule is not being observed. Any sharp or indefensible practice defeating this fair principle by officers employed under Elections Act will result in forfeiture of their remuneration and may void the election. You appointed clerks and enumerators and will be held responsible for any malfeasance. Publish this telegram immediately on receipt in local papers and send me copy of papers. Answer by wire if published.

R. W. SCOTT.

It appears by the subsequent correspondence that the returning officer did not obey the very proper instructions which the Secretary of State gave to him by publishing this telegram; in fact further on he intimates that he has declined or refused to obey these instructions so far as the publication is concerned. The telegram which follows next is:

Dawson, Y.T., Dec. 7, 1904.

Secretary State, Scott,
Ottawa.

Returning officer Pierre Ledieu refuses to make public through newspapers contents or purport of instructions known to have been received from you. People vitally interested. Please wire 'News' if the public is entitled to know.

Dawson 'Daily News,'
A. S. GEORGE, editor.

To this the following reply was sent:

Quebec, 9 Dec., 1904.

A. S. George, editor, &c.,
Dawson, Y. T.

Returning officer was substantially instructed to give all candidates equal opportunities to obtain copies of voters' lists. That as he had appointed enumerators it was in his power to see that the lists were given impartially to both candidates.

R. W. SCOTT.

The next telegram is from the Yukon to the Secretary of State.

Dawson, Y.T., Dec. 9, 1904.

Hon. R. W. Scott,
Halifax, N.S.

List as yet not furnished Dr. Thompson or his agent. Returning officer neglects to communicate with enumerators outside Dawson and some enumerators are being kept hidden. He refuses list of polling subdivisions until two days before election, too late for electors to ascertain whether names on are struck off. Other party has them. People depending on you but thoroughly aroused, have had to request police to protect enumerators and returning officer to-day. If corroboration desired communicate with Police Commissioner Wood. Instructions should be prompt and definite, and Dr. Thompson advised thereof, otherwise same will be evaded. Situation becoming more strained.

ALFRED THOMPSON, candidate,

John Pringle, T. W. O'Brien, Thos. J. Kearney, C. W. Clabor, N. W. Hagel, George Black, R. H. S. Cresswell, T D. Patullo.

The next telegram is from the returning officer:

Dawson, Y.T., Dec. 9th, 1904.

Hon. R. W. Scott,
Halifax, N.S.

I repudiate any intimation that I have facilitated one candidate more than the other in obtaining special copies of voters' lists. The law as framed does not provide for furnishing such special copies to each candidate by enumerators, whose only duty is to post the same in the different divisions. True it is that several of them were stolen after being posted. Each party accuses the other of the theft. I remain uncertain as to what was my duty, but will follow your instructions by advising the enumerators to furnish each candidate with special copies. The duties of returning officers under the Yukon Representation Act are not clear. I thank you for your opinion upon the matter. I beg, however, to submit that the publication of your telegram would be unjust towards me by putting me in an unfair light before the public. I hope you will not insist upon the execution of this order. I cannot understand how your telegram was known to have been sent before it reached me.

PIERRE LEDIEU,
Returning Officer.

The telegram of the Secretary of State reflected in no wise on the returning officer. It was a mere telegram of instructions, and it does credit to the Secretary of State in that regard. It is evident from the telegram which I have just read that it was not the intention of the returning officer to comply with those instructions, but to keep secret from the public until after the election the instructions which he had thus received. And I may say, before I go on to the further telegrams, that this returning officer points out what we pointed out to the government during the last session and the session before that if the law were not amended grave injustice would be done to candidates where there were partisan returning officers or enumerators, both in the Northwest Territories and in the Yukon. The very thing which we pointed out, which my friend Mr. Casgrain, who then represented Montmorency, predicted, in his address to the House on that occasion, has actually happened in the Yukon and has led to serious disturbances there. The other telegrams are as follows :

Dawson, Y.T., Dec. 14th, 1904.

Hon. R. W. Scott,
Secretary State, Ottawa.

If threatened wholesale removal of names from voters' lists carried out, will be bloodshed.

JOHN PRINGLE.

Ottawa, 15th Dec., 1904.

John Pringle,
Dawson, Y.T.

If election frauds such as you represent are being perpetrated, better apply afterwards to the courts to void election rather than resort to the bloodshed which you say is imminent.

R. W. SCOTT.

Ottawa, 31st Jan., 1905.

Pierre Ledieu,
Returning Officer, Dawson, Y.T.

Whom do you propose declaring as member elect ? Reports received give Thompson a large majority.

R. W. SCOTT.

Dawson, Y.T., Feb. 1, 1905.

R. W. Scott,
Ottawa, Ont.

I propose, as bound by law, to declare elected the candidate who on the 7th February, declaration day, will be found to have had the majority of votes. As it is I have only the unofficial reports of deputy returning officers, which apparently give a majority to Thompson of over 500.

PIERRE LEDIEU,
Returning Officer.

Dawson, Y.T., Feb. 8, 1905.

R. W. Scott,
Secretary State, Ottawa.

Alfred Thompson was declared elected yesterday by a **majority of 618. My report** with writ will be sent in a couple of days.

PIERRE LEDIEU,
Returning Officer.

Dawson, Y.T., Feb. 13, 1905.

R. W. Scott,
Ottawa, Ont.

Was served to-day with writ of subpoena in a case of conspiracy ordering me to produce on the 1st of March the writ of election, the voters' lists, the poll-books and all other election papers. Shall I obey the order of the court or not. Dr. Thompson is leaving for Ottawa on the 15th.

PIERRE LEDIEU,
Returning Officer.

Ottawa, 14th Feb., 1905.

Pierre Ledieu,
Returning Officer, Dawson, Y.T.

If there has not been any demand for a recount under section ninety, Dominion Elections Act, then your duty is to return this candidate and conform to all the requirements of section ninety-two of the Act.

R. W. SCOTT.

I thought it worth while to read this correspondence to the House, because it deals with a very important matter, namely, the conduct of the returning officer, who is an officer of this House ; and it concerns also the disfranchisement of the Yukon Territory for a period of perhaps two months when it should have been represented by its member sitting in this House. When this matter was mentioned earlier in the session, my hon. friend the Minister of Justice stated distinctly that an explanation was to be demanded from the returning officer as to the reason for delaying the date for opening the ballot boxes and summing up the result, to the 7th day of February, the necessity for which does not appear anywhere in this correspondence, nor, so far as I am aware, can it be demonstrated otherwise. The promise then made to the House by my hon. friend the Minister of Justice has apparently, for some reason, been overlooked or neglected.

I would suggest to my right hon. friend the Prime Minister that it is desirable that without delay that promise should be implemented and an explanation asked by telegram from the returning officer as to why he postponed to the 7th day of February the opening of the ballot boxes, when so far as we know a more proper date would have been one towards the end of December or certainly many weeks prior to the date he has fixed. I would respectfully ask the Prime Minister to have that matter dealt with at the earliest possible moment.

Sir WILFRID LAURIER. Mr. Speaker, I am sorry to say that I do not know much of the circumstances which have attended this election. In fact, I knew nothing of them until a day or two ago, when, after my hon. friend the leader of the opposition had brought the matter to the attention of the House, I made some inquiry as to the reason for the delay in returning the elected member. All the information that I can give at this moment to my hon. friend is this, that according to the law and the practice of the Yukon, the delay has not been extraordinary. If I am correctly informed, there must be according to the law of the Yukon a full month between nomination day and polling day, and a very long delay between polling day and declaration day. The reason is that at that season especially, on account of the long distances and the severity of the weather and the bad roads, it would not be possible to have any less delay. If I am correctly informed, the returning officer on this occasion acted exactly in accordance with the precedent of the previous election in the Yukon. There have been two elections in the Yukon so far, first, the election of Mr. Ross and then the election of Dr. Thompson. As I am informed, the delays in each were exactly the same, and those delays had been fixed by the returning officer before the two candidates were put in nomination. The impression seems to prevail that they were extended by the present returning officer after the election of Dr. Thompson, because Dr. Thompson was supposed not to be of his own political party; but if I am correctly informed, all such imputations are absolutely unfounded. The delays were exactly the same as before and were fixed at the time the returning officer issued his proclamation fixing the polling days and the day for declaration. As my hon. friend has read, the last telegram sent by the Secretary of State to the returning officer was that he should declare elected the candidate having the majority and that his duty was to send his return here, and as soon as we have his return we will be in a position to see how the matter stands.

Mr. R. L. BORDEN. There was no delay so far as the former member of the Yukon is concerned, but that may have been due to the fact that the House met at a later date in the year. But I would be slow to believe, without very cogent evidence, that a delay of fifty-three days is necessary for the return of the ballot boxes. That is the delay which has taken place in this instance from the 16th December until the 7th February.

MILITIA ORDERS.

Mr. G. H. PERLEY. I notice in the public prints, within the last day or two, copies of orders which the Militia Council proposes to put in force regarding those clerks in the Militia Department who are in the militia of Canada. I wish to call the attention of the hon. Minister of Militia to one of the clauses in these orders. It is a clause which, it seems to me, cannot fail to create a wrong impression, and an impression which, I feel sure, the hon. minister had no intention of producing. The clause says that—

> —similar considerations govern the grant of leave of absence for the purpose of attending annual training or performing other military duty. Leave of absence, other than the annual leave to which the applicant is entitled under the Civil Service Act, can only be given for this purpose upon the condition that no detriment is caused to the public service.

That is the clause to which I call attention. We all know well that no employer in this country can have any of his men belong to the militia without suffering some detriment to his business. This clause refers to times of peace, and the other parts of the order, which refer to times of war, provide that the members of the civil service in the Militia Department shall not go out in time of war. That is probably all right. But in times of peace, I feel quite certain that even if these orders are put in force as they read, the minister will never prevent any of the clerks in his department from going to annual drill, simply because that might cause the department some inconvenience. I am sure that the hon. minister wishes to make the militia as efficient as possible, and I simply wish to suggest that the clause to which I have referred, and which provides that the clerks in the Militia Department cannot attend annual drill in time of peace if it causes any detriment to the public service, is one which will produce an impression among other employers of labour that will do our militia a lot of harm. No employer of labour can allow his men to belong to the militia without some detriment to his business; and I am quite sure that the Minister of Militia is willing that his department should, in time of peace, be put to the ordinary inconvenience or detriment which other people are willing to suffer when their men belong to the force. I would suggest that before these orders are put in force the hon. minister should consider whether he should not alter the wording of this clause in order to remove from the minds of ordinary em-

ployers of labour the impression that the Department of Militia is not willing to be put to any detriment or inconvenience in order to allow its clerks to attend annual drill and the other ordinary duties of militiamen in times of peace.

Sir FREDERICK BORDEN. I am sorry I was not in the House when the motion was made, and still more that my hon. friend did not intimate to me that he intended to bring this matter up. That is the usual course pursued and the usual courtesy extended to a minister. I was near the chamber in my own room attending to some work, and would have been here if I had known the intention of my hon. friend. Besides it would have been much more convenient to give the minister the opportunity of being prepared to meet a matter of this kind. Speaking off-hand, I may say that the reason for the order is that it would be manifestly inconvenient, in time of stress, or difficulty, or war, if you like, for officers of the Militia Department, who, at such a time, are more required in their offices than at any other, to be compelled to go into the field. It would be absolutely impossible to carry on important militia work if men holding important positions in the department were permitted to take posts in the militia which would necessitate their leaving their duties in the department at the very moment when they were most needed there, and when they could do best service for their country in the department itself. That is the whole object of the order. It was discussed in the Militia Council, and very strongly recommended by the four military experts, and was not passed without being most carefully considered. With all deference to my hon. friend, I do think that these gentlemen, possibly, are better informed than he as to the best requirements in the public interest on the part of these officials in the Militia Department; and I am sure that no one can have a stronger desire than they to serve the public interest. Later on, perhaps, in the session I shall be very glad to return to a discussion of this matter, but I think that this is rather an inopportune moment to consider it.

Mr. SAM. HUGHES. It is my purpose to take this matter up on the minister's estimates. No doubt the theory is that these men are all members of a permanent corps, so to speak, and to take them from one branch of the service to another in time of stress might be detrimental to the public interest. The point I specially object to is that it names certain commissions that no officer in the department may hold, such as adjutant, and, I believe, commanding officer. If an official is allowed to enlist as a private in a militia corps, I do not see why he should not be allowed to rise to be Lieutenant-Colonel of his regiment. Either these officials should not be allowed to join a militia corps or they should be free to rise to the highest positions in the new service they are capable of taking. I give the minister intimation that I will take up this matter when the estimates are under consideration.

Sir FREDERICK BORDEN. I think it would be well to have this order placed upon 'Hansard,' and therefore with the permission of the House, I will read it:

The question of to what extent it is desirable that employees of the Department of Militia and Defence, both at headquarters and elsewhere, should serve in the militia has been under the consideration of the minister in Militia Council.

It is obvious that in the event of an outbreak of war, the position of the Department of Militia and Defence must be entirely different from that of other departments of the public service. Upon its efficient working depends the efficiency of the military forces in the field. It is, therefore, of paramount importance for the success of the campaign that it should not suffer detriment by being liable to have members of its civil staff withdrawn at such a moment in order to serve with troops in the field.

At the same time, the Minister in Council desires to encourage employees of the department to serve in time of peace and so familiarize themselves with military requirements.

He trusts, however, that they will understand that, although they are members of the militia force of Canada, their duty to the State is primarily that of civil servants in the department to which they belong, and that in time of emergency they render more valuable service to their country by continuing to serve in the Militia Department than by accompanying their units as soldiers.

This being the case, it follows that no employee of the Militia Department can be safely reckoned on to accompany his militia unit when it is called out for service, and further, that he ought not to hold any position in that unit of such a nature that his absence would seriously prejudice its military efficiency.

The Minister in Council has, therefore, decided that no civil employee of the Militia Department shall, in future, accept the position of either adjutant or commanding officer of any unit of the active militia, and that permission to join any corps can only be granted subject to this proviso.

Similar considerations govern the grant of leave of absence for the purpose of attending annual training or performing other military duty. Leave of absence, other than the annual leave to which the applicant is entitled under the Civil Service Act, can only be given for this purpose upon the condition that no detriment is caused to the public service.

All officers and other persons in the employment of the department will guide themselves accordingly.

Mr. SAM. HUGHES. Some time ago the minister, if I understood him aright, promised that he would supply each member of the House with a copy of the new regulations. May I jog his memory on that subject?

Sir FREDERICK BORDEN. I will see to that.

Motion agreed to and House went into Committee of Supply.

Railways and Canals—chargeable to capital—Welland canal—to deepen portions of summit level between Port Colborne and Thorold, $80,000.

Mr. EMMERSON. As I explained last evening, $140,000 is required to complete this work. We ask here for $80,000, which will cover the work that, in the ordinary course, will be done within the fiscal year which will leave a balance of $60,000 to be asked for later on.

Mr. HAGGART. Last year $150,000 was voted for this purpose, which, with the $140,000 yet to be spent would make a total of $290,000.

Mr. EMMERSON. The total estimated cost of this work is $530,000, of which $390,000 has been expended up to December 31 last.

Mr. HAGGART. Will this $140,000 complete the work ?

Mr. EMMERSON. Yes, so I am informed by the chief engineer. The work is the excavation of 1,377,000 cubic yards. The lowest tender was 38½ cents, making $530,000.

Mr. HAGGART. What depth of water will there be when the work is finished ?

Mr. EMMERSON. This will give 17 feet of water at the ordinary level of Lake Erie, and 15 feet at low water. The deepening of the canal is made necessary by reason of the lowering of the water in Lake Erie which has been going on for some years.

Mr. HAGGART. What is the object of having 17 feet when navigation in the canal is only 14 feet ?

Mr. EMMERSON. When this is completed there will be a depth of 17 feet. At certain points the boats dragged, I believe making the deepening of this level necessary.

Mr. HAGGART. Why have 17 feet when you have only 14 feet of navigation ?

Mr. GERMAN. I have some knowledge of the navigation of the Welland canal. The difficulty arises from the fact that the wind blowing from the east to the west lowers the water in the Welland canal. When the wind is blowing from the west the water in the canal will rise two feet or more ; and when it is blowing from the east up the lake the water in the canal will be lowered by two feet or more. The normal depth of the water is supposed to be 14 feet, that is the advertised depth of water in the Welland canal, the depth on the mitre sill. There being this fluctuation of two feet above or below, it is necessary that the canal from Port Colborne to Thorold, where the locks begin, should have a sufficient depth of water so that when the wind is blowing up you will still have 14 feet. Unless that is done the canal at certain times would be absolutely useless.

Mr. HAGGART. When it was first built it was well known what the effect of the wind was, blowing east or west on Lake Erie. The difference between the two extreme levels was, I think, about six feet. There would be no object in deepening the summit level if you have not dropped the mitre sills both on the lake and at the entrance. Have you done that ?

Mr. GERMAN. Yes, at Port Colborne.

Mr. HAGGART. How much ?

Mr. EMMERSON. Three feet.

Mr. HAGGART. Then you are deepening the summit level of the canal for the purpose of bringing it down to the depth on the mitre sill, and at the entrance to Port Colborne that would be 14 to 17 feet. Did not the weight of the material that was originally excavated at the summit level and piled on each side of the bank, force the bottom up a little ?

Mr. GERMAN. There is no doubt it did, and that is part of the work that it is necessary to do. This work has to a considerable degree been increased by the fact that the banks which were constructed under the supervision of the hon. gentlemen opposite in that particular way, have forced up the bottom of the canal.

Mr. EMMERSON. That would not be true with respect to that portion where there has been rock excavation.

Mr. HAGGART. None of it is rock excavation.

Mr. EMMERSON. It is a fact that a portion of this work is rock excavation. If the hon. gentleman had been here last night he would have learned that fact, and that there was a contract let for that work at $2.90 per cubic yard.

Mr. HAGGART. On the summit level of the Welland canal ?

Mr. GERMAN. Yes, at Port Colborne.

Mr. HAGGART. On the summit level it must be all clay.

Mr. GERMAN. From Port Colborne for about two miles and a half down the canal to what is known as Ramey's Bend, it is all rock excavation. The whole canal is built through rock, and that has to be deepened.

Mr. HAGGART. You have 17 feet on the mitre sill of the lock, what is the depth of the excavation for Port Colborne harbour, that part which is under the control of the Canals Department.

Mr. EMMERSON. The harbour is 22 feet, we reduced it at the entrance to the lock to 17 feet.

Mr. HAGGART. What is the standard you take for 22 feet depth ? Is it the original bench mark of the canal ?

Mr. EMMERSON. It is the original design.

Mr. HAGGART. Are you making allowance in your 22 feet excavation for Port Colborne, for the variation caused by the lowering of Lake Erie which the hon. gentleman mentions ?

Mr. EMMERSON. Just the same as it is done in the canal.

Mr. HAGGART. Just the same as it is being done on this level of the canal ?

Mr. EMMERSON. Yes.

Mr. HAGGART. You are taking the 22 feet navigation of Port Colborne, is that on the new depth or the new bench mark allowing for the lowering of the water in Lake Erie ?

Mr. GERMAN. The jurisdiction of the Department of Railways and Canals only extends to the outer extremity of the pier at Port Colborne. From the outer end of the pier, the beginning of the jurisdiction of the Department of Railways and Canals, the depth of the canal will be probably 15 feet on the whole summit level. Outside of that is under the jurisdiction of the Department of Public Works, who, I understand, are making a basin there with a depth of 22 feet under any condition of weather, so that the largest boats on the upper lakes can go into the elevator and unload no matter what the climatic conditions may be as respects the wind.

Mr. HAGGART. I understood entirely different. I understood that part of the work of deepening that was in process at Port Colborne, was under the jurisdiction of the Canals Department, that outside the locks they are deepening to the extent of 22 feet in order that vessels may come up to Port Colborne, and over this portion they have jurisdiction ; or do you only take jurisdiction to the end of the lock ?

Mr. GERMAN. To the end of the pier.

Mr. HAGGART. Does the Department of Public Works have jurisdiction to the guard lock of the canal ?

Mr. GERMAN. Not up to the guard lock.

Mr. EMMERSON. The harbour itself is under the jurisdiction of the Department of Public Works ; the channel which runs from the harbour into the entrance of the canal is under the control of the Department of Railway and Canals.

Mr. HAGGART. Are you deepening that channel 22 feet or only 17 ?

Mr. EMMERSON. I am informed by the chief engineer that they are deepening that channel to 22 feet.

Elevator at Port Colborne, including foundation, $310,000.

Mr. EMMERSON. The estimated cost of the elevator and foundations, including the machinery for operating and handling grain is $1,110,000. The capacity is 2,000,000 bushels. The foundations and superstructure were designed and planned by J. A. Jamieson, of Montreal, an acknowledged expert in this special line of engineering, and who is paid a commission of five per cent for the same, including superintendence during construction. The elevator will be fire proof, being constructed principally of steel and concrete. Mr. Jamieson has designed elevators for the Canadian Pacific Railway at Owen Sound and St. John, and for the Montreal Transportation Company at Kingston and other places. We have let the contract for the foundations, the contract price at schedule rates amounting to $95,200.

Mr. SAM. HUGHES. Has the hon. minister considered the possibility of having these elevators made of tile instead of iron? The iron ones are found to be affected more by the heat in summer and the cold in winter.

Mr. EMMERSON. This is not completely iron, but concrete and iron. It is different from the ordinary iron elevators. It is a new design of elevator in accordance with the most modern ideas and is to be one of the most up to date elevators that is to be found on this continent.

Mr. SAM. HUGHES. They are all that.

Mr. EMMERSON. They may be.

Mr. SAM. HUGHES. A concrete elevator erected at Duluth some years ago is more or less a failure and the iron elevators are failures.

Mr. EMMERSON. This is a combination of the two.

Mr. HAGGART. What is the policy of the government in reference to these elevators? What is the object of building them and what are you going to do with them after they are built?

Mr. EMMERSON. This is, of course, for the storage of grain. A harbour has been constructed at Port Colborne at great expense. Vast sums of public moneys have been expended there. There were quite a number of applications received by the department from time to time from transportation companies and other private corporations asking for the privilege of putting up separate elevators on the public works at that point at the entrance to the canal. It was deemed in the public interest better for Canada to furnish a large elevator which would be open to the general public in accordance with certain regulations and subject to conditions and tolls. It was deemed that it would be better that Canada should

expend the money to construct this elevator and give to all who are interested in the transportation question an opportunity of availing themselves of elevator facilities. Thus it was that it was determined to construct this elevator. It will be the largest elevator, as far as I have any knowledge, in Canada, and will certainly meet the present and even anticipated requirements of the traffic from the west to the east by the lakes.

Mr. HAGGART. Last session when the hon. gentleman was taking a vote he asked for about $40,000 for the purpose of constructing the foundations of this elevator.

Mr. EMMERSON. $400,000 was asked for last year.

Mr. HAGGART. But $40,000 for the foundations.

Mr. EMMERSON. We asked for $400,000 last year. At that time it was anticipated that we would have the foundations further advanced, but in consequence of the delay—

Mr. HAGGART. It appears in the estimates that you asked for $400,000 and I want to state what the hon. minister said last year in reference to it. He wanted $40,000 for the foundations for this elevator. He stated that in the course of the construction of the piers it would be necessary, whether the elevator was erected by private enterprise or by the government, to build the foundations. Last year the government had not decided whether it would be better for private individuals to build this elevator or whether the government should have control of it. It was a moot question with the government; they did not know whether they would expend a dollar or not in reference to this matter. What is the advantage of having this elevator built by the government and interfering with what ought to be strictly and purely a private enterprise ? What was the reason that induced the government to build this elevator?

Mr. EMMERSON. Well I would say to my hon. friend (Mr. Haggart) that as far as my judgment is concerned it was to prevent one or two transportation companies getting the control of that waterway. There can only of necessity be a limited number of elevators and they would be under the control of the exclusive few. There would be a large majority of those engaged in lake transportation who would be entirely shut out, and, of course, the expenditure of public moneys there is supposed to be in the general interest. It is for the good of the greatest number, and if it were our policy to permit private parties to have the use of the works there for their particular private business it would not promote the general lake traffic. The government believe that the application of this principle must commend itself to those who are interested in getting the traffic from the west to the east and while it cannot be said to be a money making enterprise in view of the expected traffic, it need not be a money losing operation.

Mr. HAGGART. Then, you are going into what is after all an individual or private enterprise on the ground that perhaps a couple of parties might erect elevators at Port Colborne and interfere with what might not be in the interest of the general public. That is the reason stated by the hon. minister for this arrangement. He says that in the interest of the general public the control of this elevator should be in the hands of the government because it might tend to monopoly in the hands of private individuals. I suppose the hon. minister has the report which he sent to Council or at least the report of his deputy urging the reasons why the government should build this particular elevator. Within a few miles of Port Colborne there is centered a great amount of traffic requiring the greatest elevator capacity in any part of the world. Yet, I am not aware that either the state of New York or the government of the United States has interfered with what should be purely private enterprise by having an elevator erected in Buffalo or in any part or portion of the United States. It is a new venture for governments to enter the domain of private enterprise for the purpose of erecting elevators in the interest of the public, in the hope that it will accrue to the public advantage afterwards. It is true that on the Intercolonial Railway as part and portion of that railway we have erected elevators, mostly in places where grain never reaches them, like Halifax, and to a certain extent St. John, and we have, for the convenience of the Intercolonial Railway or perhaps for some reason on the lines the hon. gentleman advances, erected one in Quebec, but if the government of the country are going to furnish elevators for every part of the Dominion of Canada where it might be to the public interest and advantage that elevators should be erected they are opening up a very wide field indeed. What is the cost of this elevator going to be?

Mr. EMMERSON. My hon. friend (Mr. Haggart) cannot have forgotten the proposition made to this parliament last year, that it would be in the public interest to build elevators along the railways as a public charge and under the control of the public. This proposition is a natural sequence of the action of this parliament in building the breakwater at the entrance to the Welland canal in the harbour of Port Colborne. A very large sum of money was expended in the public interest—wisely expended we must assume—in order to facilitate the lake traffic. In order to have any traffic whatever, it is necessary to have an elevator there. There are conflicting interests, competitive companies, all disputing for the

right to enjoy the major portion of that traffic, or all of it that they can get. There can only be a limited number of elevators, probably two at the most, placed upon these public works. If one or two of these companies secured these elevators, then where would be the facilities that other companies are seeking for? They would be simply shut out, and the large sums of the money of Canada which have been expended in the erection of that breakwater and the building up of that harbour would have been expended in order that one or two companies should have a monopoly of the traffic. That would be simply placing the expenditure of this large sum of money at their disposal, shutting out the larger number of transportation companies. It seems to me that these are very good reasons for the action proposed to be taken by the government with respect to this large elevator, which will be open to the public at large.

Mr. HAGGART. The minister has a curious system of ratiocination, which I am not able to follow. He says that the natural sequence of building a breakwater, if the public are going to utilize it, would be to furnish it with an elevator for the benefit of the public; in order to derive any benefit from the deepening of Port Colborne harbour and the entrance to the mouth of the Welland canal and to utilize it to the fullest extent in the interest of the public, we have to erect the largest elevator on the continent of America, and we do it probably for the reason that there is only room for two elevators there. It is news to most of us that you can only erect two elevators in that large harbour which is being constructed at Port Colborne, and that if the two were erected the public would be at the mercy of the elevator owners. It is in the interest of the public, it is the natural sequence, according to the hon. gentleman's style of argument, that when you erect a breakwater, and desire to use it to the fullest extent, you have to erect also an elevator for the benefit of the public at large. There should be an end of this kind of thing; something should be left to private enterprise in this country. The natural sequence, according to the minister's argument, of the building of the Grand Trunk Pacific by the government would be that we should erect elevators on the line of the different railways that are in operation throughout the country.

Mr. GERMAN. There is no doubt a question involved which is of very great public importance in the construction of the elevator at Port Colborne. There is a contingent on the opposite side of the House in this parliament who believe that the government should own all these utilities, not only the elevators, but all the railways, telegraph lines and telephone lines in the country. Possibly this government is starting, in a small way, in that direction by owning the elevator at Port Colborne and, perhaps, in other places. Whether it is wise for the government to own the elevator, or whether that should be left to private enterprise, is a matter for discussion; for myself, I am free to admit that I desired the government to allow a private company to construct this elevator. But the rights claimed by private companies were rather extreme. In the first place, Mr. Wolvin, of Duluth, who is the head of a large transportation company which operates between Duluth and the head of Lake Superior and Montreal and Quebec, desired to have the right to construct an elevator or elevators at Port Colborne. The government, some years ago, began, and have nearly completed, the construction of two large concrete piers at Port Colborne, which are being constructed exclusively for the purpose of erecting on them elevators and storage warehouses at considerable expense. It was thought to be in the public interest that this should be done, and I do not know that there has been any serious criticism of the government's action in the construction of these works. In order to make these works of any benefit to the country, elevators had to be built. Mr. Wolvin desired the right to construct an elevator on one of these piers, but he insisted that if he did anything he should have an exclusive right. Certain financial gentlemen in Toronto applied to parliament for a charter, and I had the honour of fathering their Bill. Hon. gentlemen can see from the Bill who the incorporators are, some of the wealthiest men in Toronto. Their idea was to get the right from this government, if possible, to construct an elevator or elevators at Port Colborne, and to put on a line of boats of canal size to carry grain on the lake route to Montreal. But these gentlemen, before they would go into the enterprise, before they would even think of constructing an elevator, insisted upon having a monopoly or an exclusive right to build elevators. They said that the matter was experimental, and that it was in the nature of a gamble, to expend large sums of money in the construction of ships and in the building of elevators at Port Colborne, terminals at Montreal and Quebec. They said that if they spent this large sum of money, they must have the exclusive right to the use of the elevators at Port Colborne. Mr. Wolvin insisted on the same thing. These two companies came into competition; they came to the government; Mr. Wolvin insisted on the exclusive right to construct the elevators, and the company of Canadian capitalists which was incorporated here also insisted on an exlusive right. The government decided—wisely or otherwise, is a question for argument—that rather than give any company the exclusive right to construct and control these elevators, the government would build an elevator itself. The government is going on to build the elevator, and I have no fear but that the

future will demonstrate conclusively that the construction of this elevator will aid very materially in the solution of the transportation question in Canada, and bring about the transportation of grain through Canadian channels instead of through American channels, where it goes at present.

Mr. OSLER. Does the minister know the amount of grain which has gone through the Welland canal during the present year as compared with previous years? Has there been any increase?

Mr. EMMERSON. I cannot state off-hand, but I can furnish that later. I know there has been an increase in the tonnage of the traffic through the canals generally. I want to invite the attention of the committee to this feature. In the first place, there is a very natural and very meritorious desire on the part of Canadians to have all the possible traffic brought down through Canadian waterways and by Canadian ports. If the policy of permitting private corporations to get advantages in connection with elevators were adopted, it might mean that parties at Duluth or at Buffalo would become interested and would get control of these elevators. They could very readily do that, and that might prove to be to the disadvantage of Canada with respect to our export trade. The policy which has been adopted is largely the outcome of a thorough inquiry into the matter on the part of the government and of suggestions made by the Transportation Commission, the appointment of which I think was concurred in by this parliament. In bringing the matter to the consideration of my colleagues, I had the privilege of inviting their attention to an extract from an interim report put in by that commission. That report recommended:

> That the work of putting in a suitable foundation and the erection of an elevator at Port Colborne harbour be proceeded with at once, the capacity to be not less than one million bushels, and placed so that additional storage bins can be added when found necessary; the elevator to be of the most modern and approved type, giving the quickest despatch to vessels loading and unloading; provision also being made for loading railway cars when connection is made; the government to retain the ownership, thus avoiding any complication or deflection of traffic from the St. Lawrence route; the rates for elevation to be as low as possible, the main object being to encourage the route rather than to make a profit for the elevator.

That expresses in a nutshell the policy of the government with respect to this elevator. It is to protect Canadian interests; it is to protect the St. Lawrence route. It is to prevent such great works getting under the control of American capitalists, which might prove disadvantageous to Canadian shipping interests.

Mr. HAGGART. We have an interim report, it seems now, from the commissioners who were appointed to investigate our transportation facilities? I understood from the answer that was given in the House the other day that there were no reports.

Mr. EMMERSON. It has been stated here more than once that this commission, under the chairmanship of the late Mr. Bertram, had reported with respect to the St. John harbour, and, if I mistake not, that report was laid before parliament. It was also stated, if I mistake not, at the last session, that the matter of the Port Colborne harbour facilities was being inquired into by this commission, and that they proposed making an interim report, and they did so.

Mr. HAGGART. Are these all the reports you have from the commission?

Mr. EMMERSON. Speaking from memory, there are only two. The commission went to St. John, Halifax and Sydney, if I mistake not. At any rate, they went to St. John and they have made a report with respect to that harbour and a report with respect to Port Colborne. I do not think they have made any other suggestions—certainly not a general report.

Mr. HAGGART. It would be most interesting to the committee to have a report from that transportation commission. I had every faith in the ability of the chairman of that commission, who has died, and a report from him would be of great use to this committee. When we are considering the expenditure of two or three million dollars for the building of elevators at Port Colborne and the deepening of the harbour and that portion of the canal which reaches the harbour, we ought to have the full report of the commission on the subject. We ought to be informed how the traffic is going to be diverted, what rates are going to be charged on these elevators, and how the whole affair is going to result commercially. We know nothing about any of these matters. The minister should furnish us with a tabulated statement showing mathematically the commercial advantages of what the government propose to do.

Sir WILLIAM MULOCK. The hon. gentleman asks for an accurate statement showing the commercial advantages. Let me invite his attention to the situation, and if he will take a comprehensive view of it he will see that it is our duty to erect this elevator regardless whether it will pay in the matter of fees, because its erection is essential to the utilization of the enormous capital we have already expended on the Welland canal. That canal has a carrying capacity of 14 feet. I believe that the locks are able to lock through vessels carrying about 70,000 bushels. But every one knows that on the upper lakes to-day are plying a

large number of grain carrying vessels of a capacity of 200,000 bushels and more, some going as high as 300,000.

Mr. MACLEAN. Drawing what water ?

Sir WILLIAM MULOCK. Twenty feet.

Mr. HAGGART. Nineteen feet.

Sir WILLIAM MULOCK. Those vessels are to-day doing the chief carrying trade on the lakes, carrying grain from Duluth and Fort William down chiefly to Buffalo. Why do they not bring it to Port Colborne? Those vessels carry sufficient cargo to fill at least four or five canal barges the full capacity of the lakes, and they will not come to Port Colborne if they have to be detained there. They must feel sure, when they start from Duluth or Fort William, that they will be able at once, on reaching Port Colborne, to unload either into barges or elevators. We have built a breakwater and dredged and deepened the harbour inside the breakwater. There are five hundred acres, or nearly a mile square of harbour safe for these vessels, but to-day they must give it the go-by and go to Buffalo because there are no facilities at Port Colborne to enable them to discharge their cargoes at once and immediately return. It is the very essence of the carrying trade that these vessels should utilize every moment of time during the short season of navigation instead of having to wait idly for hours or days before starting on their return trip. There are between 200 and 300 of these vessels on the upper lakes bringing the grain from the upper ports to Buffalo, and these vessels give the go-by to Port Colborne simply because we have not the facilities for unloading at the port which they require. The erection of an elevator there is therefore absolutely essential if we want to bring the traffic to that port and down the Welland canal. We have spent $60,000,000 from first to last on our canals, and they have not yet at all realized the expectations of our people or given any direct or indirect reasonable return on that expenditure. Why is this ? Simply because the key to the situation is Port Colborne, and that port has not yet been equipped in such a way as to make it possible for us to capture that traffic. If we are to enjoy the fruition of the expenditure on our canals, which has been justified by public opinion ever since confederation, we must completely equip that port. My hon. friend possibly takes exception to the government, but what is the situation ? If Port Colborne is the key to the situation, we must not imperil our chances by giving the control of the elevator at that port to any one person or company. There is not unlimited space there ; and if we were to give any set of gentlemen the building of the elevator, they would acquire a quasi monopoly and possibly deter others from investing money there in like manner. We know what wheels there are within wheels and how combines and organizations grow up. If we were to allow a set of men to build an elevator at Port Colborne, it might pay them better to shut up the elevator. They might make more money by playing into the hands of Buffalo ; and while you make agreements—my experience of agreements with great corporations——

Mr. W. F. MACLEAN. Be careful.

Sir WILLIAM MULOCK—is that in some way or other these corporations are able largely to evade the most carefully drawn bargains.

Mr. SAM. HUGHES. Would the hon. minister mind letting us into the secret of how they do this ?

Sir WILLIAM MULOCK. I am sure I could not add anything to the hon. gentleman's information on that question. In my opinion the only way for us to be safe is for the government to own this elevator. Then the grain men of Buffalo could not, as they might in case the elevator were owned by a private company, use their influence to have this elevator closed or its usefulness defeated. If a company should own the elevator, they might probably conform to the letter of the agreement and yet defeat its spirit. They might have a slow method of handling the grain. They might embarrass the boats coming and going. They might in many ways injure the trade without actually violating the agreement. On the other hand if the government should be the owner, they will have no interest except to bring the largest volume of trade through the elevator so as to make our canals useful and have the country reap the greatest advantage from the money expended. I do not think there can be any argument in favour of private ownership of an elevator at the mouth of Port Colborne as against the arguments in favour of government ownership. We should view with the greatest alarm the giving over the right to own the elevator to any corporation or set of men. The present scheme has my heartiest approval. I believe it will prove the turning point in the history of the Welland canal. That canal has not up to the present realized in any respect the expectations of the people and I shall be disappointed beyond expression if the building of this elevator will not bring to this canal as much grain as it can carry. Without this elevator how could a vessel drawing 19 feet of water come into Port Colborne and be discharged, if the weather be not favourable? If the vessel owners could be sure that when they got to Port Colborne there would be fine weather, they might come in, and a few do occasionally come in, but very few because they cannot depend upon it. True, the breakwater has to some extent got over that difficulty, but then the question of delay

comes in. I am told that when this elevator is constructed, it will give facilities for transhipment at Port Colborne that will enable vessels carrying 150,000 bushels of grain to unload and leave the harbour in six hours less than they could in Buffalo harbour. I do not know what the difficulties are in that harbour.

Mr. TAYLOR. The time taken in getting there and back.

Sir WILLIAM MULOCK. It is not only that, but there are difficulties there.

Mr. GERMAN. Congestion in the harbour.

Sir WILLIAM MULOCK. There are other difficulties I understand. My authority is an engineer, I think it was Mr. Weller. I visited Port Colborne harbour and talked with the men in the government service there, and they gave me to understand that a vessel of the kind I speak of would be able to save six hours on each trip. That is a very material saving, I suppose, in a short season of navigation. So, if we have the elevator there, we have the chance of having between two and three hundred vessels drawing 19 feet of water or thereabouts coming to our harbour with traffic, while, to-day, we have not a chance of any of them coming. Surely, the prospect is a favourable one. How else are you going to get the trade ? If you do not put up an elevator, you get along in the same miserable way as in the past. We have had enough disappointment in the working of the canal and it is time to display such enterprise as will actually bring the traffic our way. Everything is done except the finishing of the work. We have spent $60,000,000, and surely we are not going to stop at an expense of $2,000,000 if by that expenditure we have a fair chance of securing the trade.

Mr. SAM. HUGHES. I asked the minister (Sir William Mulock) if he would give us light on the matter of large companies controlling the elevators. I do not know that he has thrown light on anything, but, if he has, it is certainly not on the subject before the House. He speaks of two or three hundred vessels drawing 19 feet of water coming from Port Arthur and Fort William to Port Colborne. He says he does not know anything about the grain-shipping business. I can tell him that if he is going to get two or three hundred vessels from Port Arthur and Fort William, they must be American vessels, and they could not carry freight from Fort William to Port Colborne.

Sir WILLIAM MULOCK. Why not ?

Mr. SAM. HUGHES. Because they are American ships and are not allowed to engage in coasting traffic. That is, they are not allowed to go from one Canadian port direct to another. They could not be Canadian boats, because there are not nearly that number of Canadian boats drawing 19 feet of water.

Sir WILLIAM MULOCK. We will get the Duluth traffic.

Mr. SAM. HUGHES. The hon. minister spoke of Port Arthur and Fort William and did not mention Duluth.

Sir WILLIAM MULOCK. Yes, I did.

Mr. SAM. HUGHES. I did not hear him. In the shipping of this grain it is not a race to reach Port Colborne or Buffalo. The question is how to send the grain most quickly and most cheaply from Duluth, Port Arthur or Fort William to its final destination. Buffalo is nearly the end of the shipping route, where the grain is taken hold of by the various railways—very little of it goes by the Erie canal and little will go by the Welland canal. The minister says we have no place to receive the grain. Why, Midland is a great deal nearer Duluth, Port Arthur and Fort William than Port Colborne is.

Sir WILLIAM MULOCK. I did not make that statement.

Mr. SAM. HUGHES. I do not think the minister knew what statement he was making. He said we had no place to receive the grain——

Sir WILLIAM MULOCK. No, I made no such statement.

Mr. SAM. HUGHES. At any rate we have Midland which is a deeper harbour and much nearer Chicago and Duluth and Port Arthur than Port Colborne is. There are elevators there and a railway connection that will take the grain to the sea-board at cheaper rates than can be given from Port Colborne. In a short time we shall have the item for the Trent canal under consideration. I hope the government will push that work through to completion. We shall then have the grain carried to the sea-board by a sheltered route all the way. I trust that in a few years we shall have the Georgian bay canal via Lake Nipissing and the French river. This will be another sheltered route for grain to the sea-board and will make it unnecessary to go round the circuitous route by way of Port Colborne. I am not finding fault with the expenditure under consideration. I believe the scheme to be all moonshine, but I have never opposed it. If there is anything in the theory that this can be made a great shipping route I am willing to try it. But, I must say, I cannot see how any shipper of grain is going to ship to Port Colborne, then place the grain in small vessels to send it by canal, or send it in cars, to Lake Ontario, then load it into boats and take it to Montreal. The barge trade on Lake Ontario cannot be made a success. I believe it would be better to enlarge the Welland canal and let the vessels go through

to Montreal, rather than waste money in building up Port Colborne.

Mr. OSLER. One fact the effect of which was not fully realized, I believe in before the enormous expenditure at Port Colborne was decided upon is that the grain shipped by the Welland canal is destined to be exported by the St. Lawrence route. This route closes comparatively early and at the very time when grain is being shipped to Buffalo in the largest quantities. The last boat from Montreal carrying grain leaves about November 10th. That is, the shipper from Port Arthur, Fort William or Duluth cannot rely upon sending out his grain by Montreal unless he gets it through the Welland canal and into the port of Montreal not later than that date. The greatest rush of grain is between the beginning of November and the middle of December, and the closing of navigation from Port Arthur is certainly not earlier than December 6th. This year vessels left Port Arthur loaded with grain and landed their cargoes at Georgian bay ports—I think I am right in saying—up to December 10th.

Mr. GERMAN. The Welland canal closes on December 15th usually.

Mr. OSLER. I am not speaking of the Welland canal, but of the destination of the grain that goes by the Welland canal—that grain is destined for export by the St. Lawrence, and, as I say, it must reach Montreal not later than November 10th. I am a little familiar with vessel trade on the lakes and am aware that the boats are being made of greater and greater capacity every year. The boat that was considered a large boat four years ago is one that would not now be built by any one going into the grain trade. The whole object that the grain men have in view, so far as I can ascertain, is to build as large boats as possible and land their grain on the eastern shore of the Georgian bay. If the enormous expenditure at Port Colborne realizes in any degree the hopes built upon it, I shall be delighted. I am quite willing that whatever amount is necessary to the carrying out of any reasonable project should be spent. But I am afraid that the conditions of our canal navigation will render the usefulness of this expenditure doubtful to say the least of it. All the railways, the Grand Trunk Pacific, Mackenzie & Mann and the Canadian Pacific Railway are looking to get increased facilities on the eastern side of the Georgian bay, so that they may as rapidly as possible get rid of their wheat from Port Arthur and Fort William. The railways do not wish to have a bushel of grain lying in the elevators on the west side of Lake Superior when navigation closes, and they want boats that will empty the elevators and transfer the grain to the eastern side of the lakes that it may be carried away even in the winter. I believe that the ministers in going into this enormous expenditure at Port Colborne have not realized the fact that the grain goes to Buffalo not so much because of superior advantages of that harbour itself—though they have superior advantages we admit—but because the grain can be distributed from Buffalo six weeks later than it can be from Port Colborne. I think that is the secret of the Buffalo grain trade. Furthermore we find that about two-thirds of the grain shipped to Buffalo is distributed through the state of New York and the New England states and is not exported. Say that 300,000,000 bushels of grain are received at Buffalo, that is quoted as grain that should have gone down from the Welland canal and through our ports. But if you trace that grain out you will find that less than 100,000,000 bushels perhaps not more than one-fourth of the whole, is for export; the balance of it is used up in New York city and in the New England states. I think when we are discussing the question of the Welland canal as against Buffalo, we are apt to omit that important consideration. I do not think we sufficiently realize that the main reason why Port Colborne and the Welland canal do not take the traffic that we think they ought to take, is because the grain traffic comes too late to be carried by that route.

Sir WILLIAM MULOCK. It is to be borne in mind that the government is not to-day originating the scheme of the Welland canal. That was determined upon a third of a century ago, or more. We find ourselves to-day confronted with a situation. The Welland canal is completed to 14 feet, that was a policy adopted by the previous government, and we have simply adhered to it, and brought the depth of the St. Lawrence locks to that depth of 14 feet. Now, because it is possible that other routes are more suitable, are we to stop and allow the Welland canal to fall into decay? Are we to say it is a failure, instead of giving it the finishing touch so that it may have a chance? That is the situation. If we had not the Welland canal to-day, and if we had the existing railways, and route, and ideas, perhaps the country would pause before embarking in a Welland canal at all. But the canal has been built. Is it wise therefore for us to decide that it is a failure and not give it a chance? It may be that climate, it may be that geography is against us, but I am not quite prepared to admit that. As time goes on we may expect that transportation rates will become cheaper, and then grain can go through the Welland canal and the St. Lawrence canals and will be able to reach the eastern market before the close of navigation. Perhaps the Minister of Railways will be able to take it by his railway to a maritime port. We have not yet learned at what cheap rates grain can be hauled by railway. But even if we had to lose a few days, even if our outport should become congested, or the vessels should leave too

soon, is that any reason why we should not try to bring the grain down as far as we can? What reason is there to suppose that during the early period of navigation, with the several hundred vessels that are now bringing grain to Buffalo, you cannot bring cargoes by the Canadian route if they can unload within the proper time? My hon. friend from Toronto (Mr. Osler) says that if at that late date in the season they can with greater advantage bring their grain to Buffalo, they will do it. But that does not prevent them at an earlier date in the season unloading at Port Colborne. At all events, if you do not have a harbour at Port Colborne you cannot have the trade. Is there any person in this House who would say that we should not have a harbour at Port Colborne and give that port a chance? Even if nobody contested that view, then it is only a question of detail as to what we should do in order to give the Welland canal a chance. We must have a breakwater, everybody concedes that. You have to deepen the harbour for vessels drawing 30 feet of water, and you have to have some machinery for handling the grain. It is not a question of choice. There is the necessity, you are confronted with a situation from which you cannot escape. You have either to provide facilities at Port Colborne, or you might as well close up the Welland canal. That is my view of the situation.

Mr. OSLER. I do not object to the expenditure of money, in fact I approve of it to an almost unlimited extent if it will heighten the facilities for carrying our grain to market. But I do not approve of the Postmaster General's premises, that because we have spent an enormous amount of money on a route that may be superseded, we must continue to expend it.

Sir WILLIAM MULOCK. I did not make a general remark, I was addressing myself to a particular work.

Mr. OSLER. If it can be found that by spending $500,000 or $600,000 on some other harbour which will accomplish our object, it would be much better expended than it is there, notwithstanding that a large amount of money has been spent on the Welland canal. The tendency is to get as short a run as possible from the Lake Superior side to the Georgian bay or eastern side. That is the object all vessels have, that is the reason they are building bigger vessels; and an enormous increase in the business will take place when the Grand Trunk Pacific and the Mackenzie & Mann roads are in operation. I do not think the government sufficiently weigh this matter, or give sufficient attention to this question, if they are only spending more money on the Welland canal because, as the Postmaster General says, we have already spent so much. I do not think that is a good argument at all.

Sir WILLIAM MULOCK.

Mr. LEWIS. I am a firm believer in waterways, that is the proper way of carrying our grain to the sea. In considering this proposed vote of a sum of money to deepen the Welland canal, the real question is not whether it is right and proper to put an elevator there, but is this a proper amount to pay for that elevator. As I understand it, $95,000 is asked for to build the foundations for an elevator that can only carry 1,000,000 bushels of grain.

Mr. EMMERSON. 2,000,000.

Mr. LEWIS. Well, say 2,000,000. Now at Owen Sound it costs 13 cents a bushel to build an elevator, in the city of Buffalo, where the foundations are in mud, it costs 20 cents. The question is whether we should build an elevator there or not. There is no question that we should spend money on our waterways. The United States are considering the question of expending $100,000,000 on the Erie canal. We have a much shorter canal to carry grain. We should spend the money on our harbours. We should spend money on the Welland canal, so as to enable it to take care of the grain traffic. In 1902, 12,000,000 bushels of grain went through Buffalo because of the want of facilities to carry it through our own country. This government should promote the public interests by building up our waterways. We are spending too much money elsewhere. We should spend it on our great lakes and inland waterways. We have the best of facilities, if our waterways were improved, for handling the traffic through the Welland canal and by way of Montreal, and I want to say to the committee that last year and the year before, grain was carried from Duluth to Quebec at one and a half cents a bushel by the Wolvin steamers through the Welland canal. I would be glad if the government could see their way clear to deepening the Welland canal. I wish to ask the hon. minister whether this is a proper amount to be expended on the erection of an elevator and whether this work is to be let by tender. Private corporations, when doing similar work, adopt the principle of tender and contract. The Canadian Pacific Railway have built elevators at Owen Sound and at Fort William. I believe that they paid for a first-class elevator 13 cents a bushel at the outside. Canada should have a twenty-foot waterway from Fort William to Montreal.

Mr. HAGGART. If all the advantages from the expenditure at Port Colborne entailed by the erection of this elevator that my hon. friend the Postmaster General (Sir William Mulock) anticipates, were likely to be realized I am sure that the House and the country would have no objection to this vote. Let us see what the position is. In order to utilize the waterways we have at present he says that further facilities should be offered. We have constructed a harbour at Port Colborne a mile square with a

depth of 22 feet of water and there are only facilities for the erection of two elevators within that mile square. We all know about the harbour at Port Colborne, and we are aware that the difficulty of getting into the harbour was one of the objections to it. That is the reason perhaps why a good deal of the traffic was diverted to Buffalo. If you want to utilize the Welland canal without the deepening of Port Colborne harbour or the erection of an elevator why do you not send your barges to Buffalo and load them with the grain from the steamers there? Any steamer navigating the western lakes would rather go to Buffalo than to Port Colborne.

Sir WILLIAM MULOCK. Why?

Mr. HAGGART. The facilities for getting to Buffalo are much better than, notwithstanding your breakwater, Port Colborne will ever offer.

Sir WILLIAM MULOCK. Why are the facilities for getting to Buffalo better?

Mr. HAGGART. I will tell you why. When there is a wind blowing on Lake Erie, Port Colborne is a difficult and dangerous harbour to enter.

Mr. GERMAN. There was no harbour at that place.

Mr. HAGGART. The facilities you are providing do not remove the objections at all. They do to a certain extent but not altogether. However, if you want to utilize the Welland canal to the fullest extent why not load your barges at Buffalo where the steamers at present terminate their journey? What is the objection to it? You have a few miles more of a journey at a cost which is infinitesimal. Now, the main question to be considered is this: a party has grain at Chicago, Duluth or Fort William which he wants to send to the sea-board. He goes to the stock exchange and asks: What can I get that grain to Liverpool for? He does not care two cents whether it goes by way of New York, Baltimore, New Orleans, Montreal, or any other point. I quoted statistics here a couple of years ago to show that a fraction of a cent per bushel changes the destination of millions of bushels of grain from one port to another. Then, I ask the very pertinent question: Of what commercial advantage is the erection of an elevator at Port Colborne and the deepening of the harbour to the man sending grain from Duluth, Fort William or Chicago? I thought perhaps that question would be the first that the hon. Minister of Railways and Canals would ask of his department so as to be able to tell the committee the advantages which would accrue to the people of this country from the deepening of the harbour at Port Colborne and the erection of an elevator there: It seems to me he has not considered that question. I think this is the first and most pertinent question that can be asked in connection with the expenditure which we are asked to make of nearly $3,000,000. The expenditure involved in the deepening of Port Colborne harbour is not for the advantage of the Welland canal at all. The depth of water in the Welland canal for navigation purposes is 14 feet. They have a depth of 20 feet 6 inches at the Soo canal and the standard of navigation for that section of the country in American waters is 20 feet. What do you expend $3,000,000 or nearly $4,000,000 at Port Colborne for?—to allow these vessels coming from the upper lakes to get into Port Colborne and tranship. Why could not these facilities already be given fifteen miles further down. This is a large expenditure for that purpose, an enormous expenditure and I doubt very much whether the facilities which are being provided by it will ever be utilized. The government ought to utilize what we have already paid an enormous sum of money for; that is for the purpose of enlarging our canals. As my hon. friend from Toronto (Mr. Osler) said, you must remember one thing when you consider the question of diverting traffic. You must know how much traffic there is to be diverted. Look at the exports of grain from Baltimore, New York, New Orleans and other American ports and find out how much really goes from these ports. You would be astonished to find that the total exports of wheat or the product of wheat from the United States to foreign ports do not amount to 100,000,000 bushels. Then, what do you intend to do? They are building canals for what? For the foreign market? They are building canals for the purpose of utilizing their own grain in their own country. As my hon. friend from Toronto says, four-fifths, yes, nineteen-twentieths of the products that pass through the Sault Ste. Marie canal and Lake Superior are consumed in the United States. What is consumed in that country cannot be diverted by any means whatever. You have to consider what would be used in this country and what portion of the traffic goes to foreign countries, or countries across the ocean that you can divert by offering facilities through your own country. You can divert the whole of the traffic from Chicago, Milwaukee and other western points if you go on to the stock exchange and quote to parties in London, Antwerp, Paris or Hamburg grain or any of the products of grain at half a cent per hundred pounds less because they do not care one cent what country it goes through.

Sir WILLIAM MULOCK. They will get a better rate?

Mr. HAGGART. If they get a better rate through this country, you will divert the trade. You have to offer facilities through this country, and the government, when asking for a vote for such a large

sum as this, should be prepared with a commercial proposition to show the advantages of these expenditures and what would be their effect. That is what I asked the Minister of Railways.

Sir WILLIAM MULOCK. Does the hon. gentleman think that providing proper facilities at Port Colborne would or would not enable shippers to offer a better rate so far as that port is concerned ?

Mr. HAGGART. Yes, you incur an expenditure of $4,000,000 and it may be possible to divert a portion of traffic by the expenditure of a million dollars for elevators. The reasoning and logic of the Minister of Railways was that if you make an expenditure for any facilities of that kind—you erect a breakwater and as a necessary sequence have to go on with all the other utilities, and have to erect an elevator for instance in the harbour. I do not think that the expenditure at Port Colborne for the deepening of the harbour or the erection of an elevator will be at all compensated for by the benefit derived from it. I think you are going the wrong way in reference to your transportation expenditure.

Sir WILLIAM MULOCK. What would the hon. gentleman's plan be ?

Mr. HAGGART. If the hon. minister had listened to me I had a scheme which I explained to the fullest possible extent and I showed the advantages of it. I am not against the minister to a certain extent in his reasoning. We have these facilities at present, we might have used them and by a moderate expenditure we could probably have made them more useful, but I say that the expenditure which has been made now is an abnormal one.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

OTTAWA ELECTRIC COMPANY.

House went into Committee on Bill (No. 12) respecting the Ottawa Electric Company. —Mr. Galliher.

On section 1,

Mr. LOUIS LAVERGNE moved that the committee rise, report progress and ask leave to sit again.

Mr. W. F. MACLEAN. I was going to rise, before that motion was made, to point out that no one is here to-night representing the city of Ottawa. I am surprised that the members for Ottawa are not present. Perhaps they understood that the Bill was not to come up to-night. I wish to say that a number of us have been here night after night to discuss this Bill, and it has been put over from time to time. In justice to a large portion of the community who are interested in this Bill outside of the city of Ottawa, a day ought to be set for the discussion of the Bill. We ought not to be obliged to come here night after night expecting to state our views with regard to this Bill, only to find it put off. If this happens again, some of us will have to bring up the matter in the House, and have some new rule made in regard to these Bills ; because it is very unfair that a Bill of this kind, which some of us consider prejudicial to the public interest, is skipped night after night without any reason being given, and then when there is an available opportunity, or those who are opposed to the Bill are absent, an effort is made to railroad it through. The government must take the responsibility of the repeated postponements of this Bill. While I am quite willing that the committee should rise and report progress, I think some notice should be given by the promoters of the Bill of the day on which they intend to bring it up.

Mr. SPROULE. As this Bill was called to stand by the hon. Postmaster General on the last occasion when the order was called, it was thought by some that the government had decided on some course of action regarding it ; and therefore it was the more surprising to-night to find so few members present, and especially to find both of the members for Ottawa absent, who above all others are interested in the Bill. I think the committee should rise and report progress, because the Bill is too important to be proceeded with when there is such a slim House as there is to-night.

Sir WILLIAM MULOCK. It was simply as a matter of courtesy I asked that the Bill should stand, when I looked around and saw that the promoter was not here. It was in that spirit that I did so, nothing more or less. I would not desire an act of courtesy on my part to any member of the House to be misconstrued, as it appears to be by the hon. member for East Grey. I was speaking for nobody, but simply did an act of courtesy to an absent member.

Mr. W. F. MACLEAN. I think the minister who is leading the House to-night realizes that Bills of this kind, which concern the vital interests of the people, ought not to come up unless public notice is given. If they are the first on the order paper for a certain day, that is sufficient, if they are proceeded with on that day ; but when they are continually postponed until there is a favourable House and they can be railroaded through, there ought to be a rule that such Bill cannot be called unless some previous notice has been given.

Motion agreed to, and committee rose and reported progress.

FACER SOLID STEEL CAR COMPANY.

House went into Committee on Bill (No. 27) respecting certain patents of the Facer Solid Steel Car Company, of Perth, Limited.—Mr. Caldwell.

On section 1,

Mr. W. F. MACLEAN. Has the government, as representing the Department of Patents, passed upon this Bill, or is the government willing that it should go through ?

Mr. ALEX. JOHNSTON. I wish to suggest that as there are two or three other Bills of a somewhat similar character to this one, action on all these Bills should be deferred for the present. I know that certain parties desire to be heard in regard to other Bills of a similar nature before they are disposed of. I therefore desire to ask the promoter of this Bill not to press it until we have opportunity to look into it further.

Mr. W. F. MACLEAN. The Minister of Agriculture ought to be here when a Bill of this kind is being considered. I deprecate the continual absence of ministers. The ministers who are responsible for the matters dealt with in these private Bills ought to be present and prepared to enlighten the committee upon them. I think this Bill should stand over until the Minister of Agriculture is in his place.

Sir WILLIAM MULOCK. Since it has been suggested by my hon. friend that consideration of the Bill should be deferred, I think the committee might accede to that view. It is quite right that ministers should as much as possible be in their seats. It is also right that private members should be in their seats. I am afraid that on many occasions the seat of the hon. member for South York is vacant.

Mr. W. F. MACLEAN. Not when anything in which I am interested is up.

Sir WILLIAM MULOCK. Frequently. It was only the other day that he came over to this side of the House and begged us to put off something so that he might be present when it came up. We agreed to put it off, because we always deplore his absence.

Mr. W. F. MACLEAN. Allow me to explain what the hon. Postmaster General has referred to. I was in my place by arrangement with the Minister of Justice, but by reason of some action of a colleague of his, the matter that he had arranged to come up had to go over. The minister then said he was willing to make an arrangement with me and fix a day, so that everybody would know when the matter would come up ; and it was because he was not there that I went to one of his colleagues and stated my case. I am always here when Bills in which I am interested come up.

Sir WILLIAM MULOCK. But the hon. member should be here every time.

Mr. W. F. MACLEAN. Much more so should the Minister of Agriculture and the Prime Minister and all the members of his government. This is on a line with what I brought up this afternoon. There is far too much absence of ministers.

Sir WILLIAM MULOCK. And members.

Mr. W. F. MACLEAN. Can the hon. gentleman tell us where the Minister of the Interior is to-night ? Who has seen him since this session opened ?

Sir WILLIAM MULOCK. The hon. gentleman knows that he is absent through illness.

Mr. W. F. MACLEAN. That has not been imparted yet. I thought he went on a hunting expedition.

Sir WILLIAM MULOCK. The First Minister announced his illness yesterday ; but the hon. member for South York was not present.

Mr. W. F. MACLEAN. I was here yesterday. The statement was not so much that he was ill, but that the First Minister did not know when he would be in the House.

Sir WILLIAM MULOCK. He announced his illness, and the hon. gentleman knows of his illness.

Mr. ALEX. JOHNSTON. In view of what has been stated and in view of the importance of this measure, I move that the committee rise, report progress and ask leave to sit again.

Motion agreed to, and committee rose and reported progress.

CANADA SOUTHERN BRIDGE COMPANY.

House went into committee on Bill (No. 29) respecting the Canada Southern Bridge Company.—Mr. German.

Mr. SPROULE. Is the bridge commenced ?

Mr. EMMERSON. No ; it cannot be commenced until certain leave has been secured from the United States government. The matter was fully considered in the Railway Committee, and the Bill was unanimously concurred in.

Mr. SPROULE. We usually provide a time limit for commencing as well as for finishing a work. But in this case the limit is for finishing only.

Mr. EMMERSON. For the reason that it was dependent upon the consent of the United States government. It was thought advisable simply to provide that it should be finished within seven years.

Mr. SPROULE. It gives them five years to get authority from the United States to commence.

Mr. HAGGART. The Bill, as it has been furnished to me, gives this corporation a right to commence any time within seven years after the passing of an Act of Congress approving the construction, and they have five years from the passing of this Act in which to obtain that approval—making twelve years allowed for the commencement of the bridge.

Mr. W. F. MACLEAN. Have the government a policy in regard to bridging the Niagara river and the Detroit river? Is it their policy to facilitate the bridging of these rivers? Apparently it is, and apparently the Minister of Railways has considered the subject. We see these Bills in regard to bridging these international rivers go through without a declaration of policy on our side; but, apparently, the American government is very reserved about giving permission to bridge these rivers, so far as their side of it is concerned. While I am in favour of improving traffic facilities and of building bridges, because they are needed for the traffic, there ought to be some policy on the part of our government in regard to the matter, and that policy ought to be announced.

Mr. HYMAN. Surely the policy of the government is plain from the position of this Bill. We give our permission to have the bridge built. The company have not been able to get the consent of the United States government. That government, I understand, owing to pressure brought to bear upon them by the shipping interests, have refused permission thus far.

Mr. W. F. MACLEAN. We also have a large shipping interest.

Mr. HYMAN. There has been no protest from the shipping interest.

Mr. W. F. MACLEAN. The minister says, then, that the government have considered the matter, and they take the responsibility. That is what I wanted to know.

Bill reported, read the third time and passed.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill (No. 24) respecting the Kootenay, Cariboo and Pacific Railway Company—Mr. Galliher.

Bill (No. 31) respecting the Canada and Michigan Bridge and Tunnel Company.—Mr. German.

Bill (No. 30) respecting the Canada Southern Railway Company.—Mr. German.

Bill (No. 32) to incorporate the London and Saint Clair Railway Company.—Mr. Calvert.

Bill (No. 35) to incorporate the Georgian Bay and Sea-board Railway Company.—Mr. Grant.

SUPPLY.

House in Committee of Supply.

Welland canal—elevator at Port Colborne, including foundations, $310,000.

Hon. H. R. EMMERSON (Minister of Railways and Canals). A good deal has been said by way of making a comparison between the advantages afforded by Port Colborne and the advantages of some other ports, particularly those in the United States. Now while there may be ports which have advantages over our Canadian ports, and while there may be conditions and circumstances more favourable than those which exist in Canada, I do not think that it is in accord with the sentiment of Canadians to-day that we should remain inactive and take no action in the way of availing ourselves of every possible facility for securing at least a portion of the lake traffic. Now the action of the government in connection with the Port Colborne harbour and works has been largely guided by the report of the transportation commission. I had supposed that the report had been laid upon the table, or that its contents were within the knowledge of this committee. That not being the case, it would be fair that the committee should have a knowledge of it, and I shall avail myself of this opportunity to place before the committee the contents of that interim report.

Mr. SPROULE. Although that report has been called for twice, we were told it was not available, up to the present.

Mr. EMMERSON. I had the report in my hand and was waiting an opportunity.

Mr. SPROULE. It was called for days ago.

Mr. EMMERSON. I did not understand the hon. member to make reference to that commission.

Mr. SPROULE. It was the leader of the opposition.

Mr. EMMERSON. We cannot always hear what is said across the floor of the House, and I did not hear any reference made to this report, though no doubt, as the hon. gentleman says, it was called for. Had I heard it called for I could readily have told the hon. member that there were two interim reports, one of which has already been placed before the House of Commons, that relating to the harbour of St. John. The other report is dated at Toronto, May 6, 1904, and is addressed to His Excellency the Governor General:—

May it please your Excellency:—

We have the honour to report that in carrying out the work entrusted to us as your com-

missioners on transportation, we visited on the 3rd instant, the town of Port Colborne, Ont., at the inlet of the Welland canal on Lake Erie.

This port, situated at the eastern end of deep water navigation on the upper lakes and at the beginning of the St. Lawrence system of canals, occupies an important position on the water route from Fort William to Montreal. Passing along a level stretch of the canal from Thorold to Port Colborne, about thirteen miles in length, we were informed by the engineer in charge that between Port Dalhousie and Port Colborne the whole length of the canal had now the full depth of fourteen feet, and that only two more centre piers required to be taken out from the bridges over the canal, when there would be no obstruction to any width of vessel passing through.

Arriving at Port Colborne our attention was given to the condition of the harbour and its facilities for furthering transportation by the St. Lawrence channel.

In our examination we were favoured with the assistance and advice of Mr. J. L. Weller, superintending engineer of the Welland canal, Mr. A. J. Grant, the resident engineer at Port Colborne, and Mr. L. Coste, engineer of the Public Works Department.

Around the lake front at Port Colborne the water is shallow and the entrance to the canal has required a great deal of dredging through limestone rock.

The entrance to the canal from the new elevator piers to the guard lock is about 4,600 feet long, with a depth of 16 feet and 230 feet wide, except at the old east pier. Along the north end of this stretch, on both sides, is situated the town of Port Colborne, and on the east side, the small Grand Trunk elevator. At a distance of 4,600 feet from the guard lock, the new elevator piers have been built, the entrance is much wider and opening towards the lake, and all around the piers there is a depth of 22 feet, the rock dredging is still being continued to give ample facilities for steamers turning.

The elevator piers are built of concrete on a rock foundation, their length being 700 feet by 200 feet wide, with a connecting pier on the north side 200 feet by 100 feet connected by an old pier which needs to be repaired. To the southwest of these new piers a breakwater has been built 4,500 feet long and situated 1,650 feet out into the lake, which will, no doubt, guard the site from any southwest or south storm, but leaving it still exposed to the south-east.

To guard this the Department of Public Works have plans out for another breakwater to the southeast 2,400 feet long, and commencing 600 feet from the eastern end of the present breakwater, which when built will fully shelter the harbour. The question of how to utilize the existing canal system is important enough to merit the most careful consideration.

At the present time, with no facility for discharging cargoes at this port, the use of the route from Fort William to Montreal is confined to steamers drawing not more than fourteen feet and of a size to pass through the locks, giving a maximum capacity of 75,000 bushels of wheat, and to tow barges hauled by tugs or by steam barges of full canal size, 256 feet long by 42 feet wide, leaving entirely out of account the large steamers passing through the Sault Ste. Marie canal and carrying 200,000 bushels of wheat and upwards, able to carry grain on a 20 foot draught of water cheaper than any smaller steamer. The building of these larger steamers is a development since the Sault Ste. Marie canal was deepened ; they have cheapened freights, and if the St. Lawrence route is to have equal opportunities with the American, facilities must be provided for the discharge of cargoes from large steamers at Port Colborne, from whence it can be sent to Montreal in other vessels of canal size.

Your commissioners have, therefore, the honour to recommend :—

That the work of putting in a suitable foundation and the erection of an elevator at Port Colborne harbour be proceeded with at once, the capacity to be not less than one million bushels, and placed so that additional storage bins can be added when found necessary. The elevator to be of the most modern and approved type, giving the quickest despatch to vessels loading and unloading, provision also being made for loading railway cars when connection is made. The government to retain the ownership, thus avoiding any possible complication or deflection of traffic from the St. Lawrence route ; the rates for elevation to be as low as possible, the main object being to encourage the route rather than to make a profit for the elevator.

That the old pier stretching from the elevator lighthouse to the shore line, now in a dilapidated condition, should be rebuilt and carried to a depth of 22 feet to provide for future dredging contingencies and that the pier on the east side of the channel spoken of as the old east pier be taken out as an obstruction to navigation.

That action should be taken to have the two remaining centre piers under the railway bridges over the canal removed as soon as possible.

Although there are two piers provided on which to erect elevators, your commissioners will not think it advisable to build more than one at present, have it tested, and see what effect it has in increasing the traffic on the St. Lawrence system, which we feel assured will be so beneficial as to require additional elevator capacity at an early date.

All of which is respectfully submitted, for the commissioners,

(Sgd.) JOHN BERTRAM,
Chairman.

Now, that embodies in very few words and very pointedly the policy of the government in respect to the proposed elevator at Port Colborne, and it seems to me that no more meritorious work could be undertaken by the government in connection with this canal system. It is not a question as to the existence of the Welland canal. The policy in regard to the Welland canal was adopted years ago. We must deal with conditions and circumstances and while exception has been taken to the remarks which I made as to this being a natural sequence of the expenditure already made I think that if you deal with it from the standpoint of the circumstances and conditions that prevail there no exception can be taken to the conclusions I have arrived at. The expenditure in connection with the entrance to the canals seems to have been preliminary to some such action. There may be a question as to the policy adopted ; that is as to whether the government should build and control this elevator or whether it should be left to private enterprise. It seems to me

that having regard to the safeguarding of Canadian transportation interests the only proper policy to be pursued is the one adopted by the government in connection with this elevator and I submit that this sum should be voted by this committee at this time with the view of carrying out that policy.

Mr. HAGGART. We have some information from the reading of the report of the commissioners on transportation. If I understood the report as read by the hon. gentleman the distance between the entrance lock and Port Colborne proper, is 4,600 feet. Is that so ?

Mr. EMMERSON. Yes.

Mr. HAGGART. Then that is the part that the authorities of the Department of Railways and Canals are deepening to a depth of 22 feet. Perhaps the hon. minister will explain why he has departed altogether from the recommendation of this commission, that he has appointed himself in reference to the erection of the elevators. If I understood the hon. minister rightly, he said that he was erecting elevators of a capacity of 2,000,000 bushels. The commission recommended that the two elevators be not constructed, that although there are foundations made for two of them only one should be constructed of 1,000,000 bushels capacity. Why has the hon. minister departed from the recommendation of the commissioners in reference to that ?

Mr. EMMERSON. On the ground of economy.

Mr. HAGGART. On the ground of economy when you are expending double the amount ?

Mr. EMMERSON. Yes.

Mr. HAGGART. Has the hon. minister been listening? I say that the commission has recommended that only one elevator of a capacity of 1,000,000 bushels should be erected for the present, and if I understood the hon. minister rightly he is erecting two with a capacity of 2,000,000 bushels.

Mr. GERMAN. No, only one.

Mr. HAGGART. He said 2,000,000 bushels to the committee.

Mr. EMMERSON. We are erecting one elevator of a capacity of 2,000,000 bushels. That seemed to be an economical course to pursue. The commissioners recommended two elevators, or rather they recommended one elevator to be commenced with a capacity of not less than 1,000,000 bushels, but having foundations to enable additional bins to be provided so that it would have a capacity within the near future of 2,000,000 bushels, and it certainly seemed to be in the interest of economy to simply build the one set of foundations now and erect an elevator capable of meeting all the natural requirements of the traffic that may be expected within the next two or three years.

Mr. HAGGART. The Minister of Railways states what ? I understood him to state that he is erecting an elevator of a capacity of 2,000,000 bushels, having bins provided for use in case of emergency. The fact of the matter is that the commission have recommended only one elevator of a capacity of 1,000,000 bushels.

Mr. EMMERSON. But that everything be done for an elevator of 2,000,000 bushels.

Mr. HAGGART. No, they did not do anything of the kind ; they state that foundations be prepared for two elevators, and that in the meantime only one be erected of a capacity of only 1,000,000 bushels. He is now erecting an elevator of a capacity of 2,000,000 bushels.

Mr. BARKER. I would like to know from the minister distinctly whether he is asking for an appropriation for an elevator of 1,000,000 capacity or more ? Is this for an elevator of 1,000,000 or 2,000,000 capacity ? He has been talking, and so has the Postmaster General, of an elevator of 2,000,000 capacity. I would like to know which it is that is contemplated under this estimate.

Mr. EMMERSON. I will repeat to my hon. friend that this appropriation is towards the construction of a 2,000,000-bushel elevator.

Mr. BARKER. Has that been recommended ?

Mr. EMMERSON. Yes, it has been recommended ; and it is recommended here.

Mr. BARKER. Let us hear the words.

Mr. EMMERSON. They recommend here :

> That the work of putting in a suitable foundation and the erection of an elevator at Port Colborne Harbour to proceed with at once, the capacity to be not less than 1,000,000 bushels.

Mr. HAGGART. Hear, hear.

Mr. EMMERSON. Certainly ; but the report does not say how much larger the elevator should be. It goes on and advises this :

> ——and placed so that additional storage bins can be added when found necessary.

The capacity is evidently intended by the commissioners to be greater than 1,000,000 bushels ; it must not be less than 1,000,000 bushels. It does not confine it, as he says, indeed, it rather——

Mr. BARKER. Last year, in the discussion in this House, the present Minister of Railways and Canals told us that it was uncertain whether it was desirable to construct an elevator at all. It was then a

question with the minister whether an elevator should be constructed by the government or by private parties. To-day we are told that the minister has decided upon government construction of an elevator of 2,000,000 bushels capacity. For an hour before six o'clock, we got from the minister not one word of explanation as to why there should be an elevator at all. The first explanation we heard was from the hon. member for Welland (Mr. German), who told us that some gentlemen, I think one was a Mr. Wolvin, had made application to the government for permission to construct an elevator as a private enterprise and some other gentlemen in Toronto, great capitalists, friends of the hon. member for Welland (Mr. German), had proposed a rival private enterprise.

Mr. GERMAN. They were all good Conservatives.

Mr. BARKER. It does not matter in the expenditure of this money, I hope, whether they are Liberals or Conservatives.

Mr. GERMAN. Quite right.

Mr. BARKER. I hope the Liberals will be all the more pleased if Conservatives spend the money. The hon. gentleman said that certain gentlemen in Toronto were rivals of Mr. Wolvin for the building of this elevator. We never heard a word of that when the minister asked us to vote this money. We were not informed that within the last twelve months there had been a solitary application to the government by any individual or company to construct an elevator; not a word was uttered to us; we were simply asked to vote this money for one year's expenditure. We got the first intimation from the hon. member for Welland (Mr. German), but having broken the, ice we heard something further from the minister, and he told us that nobody on either side of the House had heard a word of, that the Transportation Commissioners had reported upon this very subject. I appeal to hon. gentlemen opposite, who, I think, owe a duty, every man of them, to their constituents and to the country, do they think it is right to sit behind the minister and blindly vote anything that is put in these estimates without inquiry? I ask these gentlemen if they think that a million or so is nothing to this country, and that the criticism of these estimates should be left entirely to gentlemen on this side of the House? Do they owe no duty to their constituents? Have they no right to ask the minister why he asks $500,000 or $1,000,000 for a particular work? Are they to sit mum, or say 'yea' to everything that is put in these estimates? I hope not; I think that the criticism would come from these gentlemen far more effectively than from us. If one of these gentlemen should give utterance to his honest convictions on these subjects its influence would be tenfold that of a criticism from this side of the House.

But I have been in this House for a few sessions, and I have yet to see one of these hon. members stand up and ask one question of the hon. gentlemen on the front benches as to why they propose any of these expenditures. Now, I appeal to hon. gentlemen opposite. There are, I know, very many of them who sincerely desire to do what is in the country's interest. I ask these hon. gentlemen, why cannot they stand up in this House and ask the hon. gentlemen on the front benches, civilly, respectfully and humbly, why these moneys are to be expended. These hon. gentlemen may think that we are asking these questions with the sole object of opposing them. Let me tell them that there are gentlemen on this side of the House just as anxious, possibly far more anxious to see public money spent on the Welland canal than half the gentlemen who sit on the government benches, so long as it is spent reasonably and in the interest of the country. Why cannot hon. gentlemen opposite criticise the government in the same spirit? When we know that a minister will listen respectfully and considerately to the representations of hon. gentlemen opposite, why cannot they use their influence reasonably and fairly, and criticise, not in a hostile spirit, but in a friendly spirit, every one of these items, and ask the government why they are spending a million when perhaps half a million would do?

Mr. GERMAN. I have listened with some degree of interest to the lecture which has been read to us on this question by the hon. member for Hamilton. I doubt very much, however, if there is a stronger political partisan in parliament to-day than the hon. gentleman who has just taken his seat, or one who would allow his party leaders to pass items through parliament with less criticism than he would. We are quite prepared, Sir, to criticise every act of this government. I have criticised some of the acts of this government when I thought that criticism was justified. As I said this afternoon, it was a moot question whether or not this elevator at Port Colborne should be built by a private company or by the government. For myself, I thought at the time that it would be better for a private company to build it. I am not sure that I have changed that opinion yet. The government decided that it was wiser, in the interest of the country, that it should be built by the government, in view of the fact that no company would build it—and this, in my opinion, is the only consideration that would justify the government in building the elevator—without insisting on having a monopoly of the rights in the harbour.

Mr. BARKER. Why so?

Mr. GERMAN. Simply because it was a speculative affair. I know what I am

speaking about when I say that neither the Wolvin syndicate nor the Toronto gentlemen who formed themselves into a company for the purposes of transportation would consider the building of an elevator at Port Colborne and the putting on of a line of boats without having an absolute monopoly of the rights in the harbour. I was not sure myself that it would not have been wise to have allowed the Canadian company—I would never have agreed to allow an American company—to have had the control of the situation. I do not know that the gentlemen who are interested in the company would object to my giving their names, as you can find them in the Act of incorporation : they are Frederick Nichols, William Mackenzie, I think Mr. W. R. Brock —all Canadians and men of means and enterprise who are willing to go into the work of developing the transportation facilities through our Canadian water routes ; but they would not undertake it without getting a monopoly of the rights at Port Colborne.

Mr. HAGGART. A monopoly of what rights ?

Mr. GERMAN. The rights for the construction of elevators on the two concrete piers which the government have constructed for that purpose—not an absolute monopoly of all the rights in the harbour. No other company could have built elevators except at an enormous expense. The government built, with the approbation of parliament, these two concrete piers for the purpose of constructing elevators thereon, and they also built the breakwater which forms the harbour at Port Colborne. Prior to that there was no harbour there. Each of the two companies who were interested in this matter told the government that they must have the exclusive right. The government refused to give the exclusive right to either company, and decided to build the elevator themselves.

Mr. HENDERSON. What did the piers cost ?

Mr. GERMAN. I have not got the figures. The work was put up at public tender, and it has been carried on as all government work is ; and I might say further that, much against my will, the contract was given to a good thorough Conservative.

Mr. HENDERSON. That is not the point. The point I wish to make is that the cost of constructing these concrete piers was not a difficulty in the way of a company establishing a transportation system and building piers for themselves. I understand that the piers cost only about $40,000.

Mr. GERMAN. I am not sure what the piers cost.

Mr. SAM. HUGHES. Are the piers on a solid foundation or on piles ?

Mr. GERMAN. They are on rock foundation. Now, the hon. member for West Toronto (Mr. Osler) raised the question this afternoon, whether or not the products of the Northwest can be carried to the seaboard cheaper by rail than by water. That is a question on which different people have different opinions.

Mr. HAGGART. Have you any doubt about it ?

Mr. GERMAN. I have no doubt that they can be taken to the seaboard cheaper by water than by rail ; but hon. gentlemen who are interested in railroad companies, as the hon. member for West Toronto is, and as I understand the hon. member for Hamilton (Mr. Barker) is——

Mr. BARKER. No, not a bit, and never was.

Mr. GERMAN. ——have an idea that the products of the Northwest can be taken to the sea-board more cheaply by rail than by water. That was the basis of the argument of the hon. member for West Toronto this afternoon. There is one thing which has operated against the Welland canal. The action of the Grand Trunk Railway Company for years past has made it practically impossible to bring the products of the west through our water routes, by reason of the fact that the boats coming to Port Colborne had to lighter there before they could go through the canal. The quantity of grain they had to lighter at Port Colborne was so large that the freight upon it from Port Colborne to Port Dalhousie was such as to stop the traffic.

That has been going on for years and is the reason why the grain cannot be taken through the Welland canal. Now the idea is to have an elevator at Port Colborne and tranship from the big upper lake boats, carrying 250,000 bushels of wheat, into it, and thence into canal sized boats carrying 75,000 bushels to Montreal and Quebec. That is the proposition. Our canals have been built at an enormous expense. What are we to do with them ? I heard the ex-Minister of Railways and Canals (Mr. Blair) say in this House that he believed it would be an excellent thing for this country to have canals even if nothing were taken through them, because they would be a regulator of freight rates.

Mr. HAGGART. Hear, hear.

Mr. GERMAN. But we cannot regulate the freight rates by means of our canals unless we have some system of transhipping our grain at Port Colborne. It has been said that the Georgian bay route, the Ottawa canal route, is a better route. That may be. That is a matter for discussion, but we have got the Welland canal route, we have built the Welland canal and the St. Lawrence canals. Are we to utilize them

or let them fall into decay and become useless ?

Sir WILLIAM MULOCK. That is the question.

Mr. GERMAN. That is the whole question. My hon. friend from Lanark (Mr. Haggart) asked why not, instead of building an elevator at Port Colborne, take your boats to Buffalo and take the grain at Buffalo. But I ask him in reply, does he want to build up Buffalo at the expense of our Canadian towns and water routes ? And when the grain gets to Buffalo, it will go from there by railway or by the Erie canal to the sea-board. It will not be possible to get it back again. The only way we can get through our Canadian waterways the grain products of the Northwest at present. is to have an elevator at Port Colborne into which these large upper lake boats can unload, and from which that grain can be transhipped into canal sized boats which will carry it to the sea-board. And in this way the grain can be carried cheaper to the sea-board than by taking it to Buffalo and transhipping it from there through American routes. That is demonstrated absolutely. The hon. member for West Toronto, (Mr. Osler) said this afternoon that the season was so short, our canal system being closed up in November or early in December, that we could not compete with the American routes. But what is the United States government doing ? Notwithstanding the opportunities for transportation which they have from Buffalo to New York and Boston and the different places to which they send these products, they have made an appropriation of $100,000,000 to enlarge the Erie canal.

Mr. HAGGART. The New York state government has.

Mr. GERMAN. Yes, the New York state government has made an appropriation of $100,000,000 to enlarge the Erie canal, and the Erie canal is closed up two or three weeks earlier than the Welland canal.

Mr. BARKER. That is the local government.

Mr. GERMAN. It is the government of the state of New York. I cannot quite understand why the hon. gentleman should lay so much stress on this. I do not see how it can make any possible difference. It is the government of the wealthiest state in the United States, and the people of that state who, I suppose, have an idea of the fitness of things, believe that the expenditure of this money will be beneficial to that state and the public generally. In any case that is what they are doing. And all that this government asks is that, after having spent all the money we have done in connection with our waterways, we should now simply put the keystone in the arch and do what must necessarily be done in order to give us a complete transportation system. All the government asks is that we should build an elevator at Port Colborne, which must be done unless we intend deepening the Welland canal to 22 feet. But no one, at present at any rate, would support any such proposition. No one would think of deepening the Welland canal, at present at any rate, to 22 feet. But if you build an elevator at Port Colborne, whether it be a one million or two million bushel elevator, you must build one that will supply what is required. A two million elevator can be built for about one-third cheaper than you could build two elevators of the capacity of a million bushels each, so that the government will be saving money by building one large elevator instead of two small ones. And I firmly believe that in the near future another elevator of two million bushels capacity will be needed at Port Colborne. I am inclined to think that under private enterprise that condition of affairs might be more quickly realized ; but I am satisfied with what the government is doing, because I believe most firmly that what it proposes to do will bring about the transportation of the products of our great Northwest through our Canadian channels at the cheapest possible rates. And if that can be accomplished, surely no one can criticise severely, if at all, this proposed expenditure.

Mr. HAGGART. I am gratified at the remarks of my hon. friend because in fact they support the theory which I have always thought should guide us in the erection of elevators. He says that there were applications from two companies for the erection of elevators at this particular station, but that neither of them would undertake the work unless they were given exclusive privileges. But when questioned as to the exclusive privileges which they asked, it appears that all they wanted was the right to erect these elevators on the two foundations which the government are putting in. Was there any other exclusive rights that they asked for ? None. All the exclusive rights which these private individuals wanted was the right to use the foundations which the government are putting in for the purpose of erecting elevators at a cost of some $20,000 or $30,000 a piece. The hon. gentleman has a leaning towards the argument which I made in the former part of the evening, and I have no doubt that he is convinced from the bottom of his soul that the policy of the government is a wrong one. Application was made by these companies, not only to erect elevators, but also to build steamboats for the purpose of utilizing the facilities which the government have provided by the deepening of the harbour. They were to have no exclusive privileges beyond the right of erecting eleva-

tors on the foundations built by the government. The whole of the harbour of Port Colborne was open to any other private individuals who desired to erect elevators if they would, but on their own foundations. I need not appeal to my hon. friend from Welland (Mr. German) because he is too intelligent not to know that an elevator owned by private individuals, who have their connections by boats and who could put on a line of steamers to the upper lakes, would be far more profitable than a government owned elevator. Private enterprise will succeed where a government will fail. Fancy a lot of government officials running an elevator, who do not care two cents whether a bushel of grain went into the elevator or not from one end of the year to the other. But in what a different position would be private enterprise. These people would embark their own money in the scheme, and in order to get a return from their investment, they must have transportation facilities and connections. They would build up large boats which would carry the grain most economically to Port Colborne. But, when we inquire into it, they have no exclusive privilege except, as my hon. friend from Welland (Mr. German) has stated, the privilege of erecting an elevator upon foundations which the government built because they could build them more cheaply in connection with the other works. What right has the government to enter upon business which should be left to private enterprise ? What right have they to provide facilities for transporting grain, if those facilities can be provided by private enterprise ? Any person who knows anything of government undertakings of this kind, knows that they cannot successfully compete with undertakings directed by private enterprise. I need not enter upon that question now, nor need I ask the Minister of Railways whether he thinks that government railways can be managed as economically as railways that are privately owned. This domain of private business is one upon which the government has no right to enter. What right have they to go into the elevator business ? None whatever. This fostering of industries of this kind seems peculiar to this government. The hon. gentleman objects because my hon. friend from South York (Mr. Maclean) advocates the government ownership of railways and of telegraph and telephone lines. There are some public utilities that are peculiarly within the province of government. One of these is the post office and, as a legitimate part of it, the telegraph and telephone services. The question of the public ownership of railways may become a question for the people of this country to decide. But, even if the government owned the elevator, could not they lease it to a private individual to carry on business in connection with grain transportation, and impose upon the lessee conditions necessary to protect the public interest ? In the world of private enterprise the interests of the public are protected by competition, and there is no business in which competition is keener than in the transportation of grain from the upper lake ports. The government have a commission to inquire into this business of transportation. That commission reports that certain facilities should be provided. But the Minister of Railways doubles the recommendation of the commissioners.

Mr. EMMERSON. Oh, no.

Mr. HAGGART. The commission recommends an elevator of——

Mr. EMMERSON. Not less than a million bushels.

Mr. HAGGART. And the hon. gentleman draws the inference that that is justification for elevator capacity of a hundred million bushels.

Sir WILLIAM MULOCK. Only two millions.

Mr. HAGGART. If a recommendation of a million is justification for providing two millions, why should it not be made justification for a hundred millions ? Mr. Chairman, this question of transportation is a nice question. It is too late to discuss it fully to-night. But, though the question is so great a one, and though this expenditure at Port Colborne is so large, we have nothing from the minister to show that that expenditure is justified. The expenditure of the elevator will be about $1,000,000, is it not ?

Mr. EMMERSON. I stated the amount—including the foundation, $1,100,000.

Mr. HAGGART. The deepening of the channel from the entrance locks to Port Colborne will cost $500,000 or $600,000 more

Mr. EMMERSON. That would have to be done any way.

Mr. HAGGART. The question of this elevator at Port Colborne can only be discussed in reference to the whole project. The expenditure for deepening Port Colborne and providing the second breakwater —the one additional to that already under construction—will be in the neighbourhood of $2,500,000. So you have here an expenditure of at least $4,000,000. The government must not find fault if we want the fullest information on the subject, or if we criticise that expenditure. We have been unable to get from the minister a single statement as to the commercial benefit to the Dominion to follow the development of the traffic of that port. We are simply asked to vote this money blindly. I ask him what trade he expects to develop. We cannot get any of the trade that goes to any port of the

United States, except that to New England. The only trade we can hope for is a part of that which now goes from United States ports to Europe. We ought to have some statement showing what that trade is and what part of it we may hope to secure. We have not even a statement of the rates the elevator is to charge. I understand from the recommendation of the commissioners that it will charge such a rate as will barely pay the government for the expenditures. If it comes within one-fifth of that it will do more than most of the public works of Canada are doing under the management of public officials.

Sir WILLIAM MULOCK. I am surprised at the persistent opposition of the ex-Minister of Railways (Mr. Haggart) to this most proper enterprise. For years he presided over the Department of Railways and Canals, and took part in framing the expenditure upon the Welland and St. Lawrence canals. For what purpose did he carry out the improvement of these canals ? Was it merely an ornamental work ? Was it merely for the purpose of spending public money ? Surely he made that expenditure in the hope that when the work was completed it would prove of benefit to the people of Canada. The work has been completed, except the mouth of the canal, from which must come the commerce which is to justify this canal construction, which is to go down to Montreal and feed ocean shipping and make Montreal the Canadian port. Up to the time we took office that mouth had been left neglected, and in such a condition that it was practically impossible for commerce to go to the Port Colborne canal and supply the traffic for which it was constructed. He says that because there is a breakwater and harbour, there is no monopoly, even if we built an elevator, that the harbour is free to all, and therefore there is no danger of a monopoly, even if we gave the privilege to a company to build an elevator on the government dock. Nobody pretends that the owners of the elevator would thereby have a monopoly of the harbour ; that is not contended ; but, from the nature of the scheme and the work, the control of the elevator by a private citizen——

Mr. HAGGART. It was stated by the hon. member for Welland (Mr. German) that they would have control of the harbour.

Sir WILLIAM MULOCK. Not the harbour, no one talked about the control of the harbour, you might as well talk of controlling the lake, but that is not the point, it is the control of the traffic that would be enjoyed by the company to control the elevator. Take the Grand Trunk Railway between Toronto and Montreal ; it goes through a country where you might build scores of routes, but capital has not come in and duplicated the expenses alongside of the Grand Trunk Railway, and practically the Grand Trunk, within the distance served by it, enjoys more or less of a monopoly. True we have tried by legislation, all governments have sought by legislation to control the railways in their dealings with the public ; but up to this moment the efforts of parliament in that direction have largely been a failure. Though you might say that other companies might build railways alongside of this, owners of capital will not invest under such circumstances, and so from the very nature of the transactions they are monopolistic. Now if the government owns the elevator the policy of the government will be so worked out as to encourage traffic to go that way, and to keep down the elevator rates to the lowest possible level, and in that way to help the farmers of the Northwest to get cheaper rates to market, instead of compelling them to send their traffic by rail. We want an additional outlet for the products of the farmers of the Northwest, and if, along with that, we get the earnings from United States commerce and get the grain raised in the United States, well and good. It will come down the St. Lawrence to supply freight to the shipping coming to Canadian ports. But my hon. friend would now practically close up the Welland canal. He left it with this unprotected opening, with its mouth at Port Colborne but without shelter from the sea ; he left it in such a position that it is impossible for ships to come to that harbour with freight, ships drawing 19 or 20 feet of water ; he left the entrance to that canal with 14 feet at most. How could ships have come to the Welland canal, modern ships, bringing freight and grain, with only 14 feet of water ? The canal must have failed to meet the expectations of the people. It was an unfinished scheme. Surely no engineers who devised the canal scheme ever contemplated that it was to be left without a breakwater and other protection whereby shipping could come to the entrance of the canal and make a safe transfer of their cargoes.

But my hon. friend complains now because we have dredged the harbour so as to allow ships to come in. What was the canal for ? Was it an ornament ? Was it to be as useful as the Tay canal ? What became of that enterprise ? Does my hon. friend wish the Welland canal to have the same fate as the Tay canal ? Let me read an item from a paper that has just come under my eye, in order to show the result of the policy of the hon. member for South Lanark (Mr. Haggart). That was a justifiable enterprise, a proper expenditure of public money, in the opinion of my hon. friend. He promoted the construction of this enterprise ; he who now, in opposition, is so careful about the expenditure of public money caused the construction of this canal. I think I am safe in saying that most of the ships that have passed over that canal since its construction were launches, skiffs

and canoes. If we adopted the policy of the hon. gentleman, the Welland canal would have the same fate as the Tay canal. I will read from the Daily 'Globe' of February 17. It is headed 'Dredge the Tay canal.' This is to be the prototype of the Welland canal, the fate of the Tay canal is a fit fate for the Welland canal. I recognize his policy in this item.

Smiths Falls, February 16.—A petition will be presented to the Dominion government by the residents of Perth, asking that the Tay canal be dredged. For some time the banks have been settling and sliding into the water until the channel is only about half as wide as it originally was. Navigation is now almost impossible since the canal has been allowed to fill in with mud and weeds caused by the spring freshets, but if it were dredged the matter would be remedied to a great extent.

It is not the freshets that have allowed the weeds to grow, it is because there has been no traffic to disturb the waters. A pasture has grown up in the Tay canal. My hon. friend desires such a future as that, such a return as that to the people of Canada for the expenditure of $60,000,000 on the St. Lawrence and Welland canal systems. Now the canal system that I refer to, the St. Lawrence and Welland canal systems, called the St. Lawrence canals, was the policy adopted prior to confederation. Both political parties have at all times united for the completion and improvement of that canal system, so that our products might be carried by water on the cheapest possible routes to the markets of the world. That policy has had the endorsement of all classes in Canada. Every government that has been in office since confederation has had more or less to do with prosecuting this work to completion, but whatever may have been the cause of it, a great amount of time was occupied in the completion of the canal system. I never could understand why the late government delayed the thing so long. I have my own opinion but it may not be the correct one; my own opinion is that the dilatoriness of the late government in completing the canal system and giving it those facilities which it was entitled to was largely attributed to railway influence. That may be wrong. It was either attributed to railway influence or it was attributed to the government itself not fully appreciating the importance to Canada of the early completion of the work. In that case the public interest was lost sight of and now that the canals have been deepened to 14 feet my hon. friend to-night tells us that it should be left to private enterprise to build elevators there and to build breakwaters.

An hon. MEMBER. He did not say breakwaters.

Sir WILLIAM MULOCK. He used the word 'breakwaters'; he may not have intended it and if so, I do not wish to make a point of it, but he used the word 'breakwaters' and he said that the construction of breakwaters and the erection of elevators should be left to private enterprise.

Mr. HAGGART. Not breakwaters.

Sir WILLIAM MULOCK. The hon. gentleman said so——

Mr. HAGGART. I was speaking about something else.

Sir WILLIAM MULOCK. But perhaps he did not intend to say so and of course I accept his explanation. I will admit without hesitation that under ordinary circumstances the erection of elevators should be left to private enterprise, but this is a unique state of affairs. There is but one Welland canal in all Canada and it is the duty of Canada to control the traffic and not leave it in the power of any set of men or corporations to prevent traffic going through the Welland canal. I do not believe, and I am sure the public will take that view of it, that it is possible to place one elevator there and to give over the whole of our piers to any set of men and at the same time be sure that these controllers of the elevator will serve the public at all times in such a way as will bring traffic through the Welland canal. As I have said before, if it were possible for any set of men to control that elevator it might be worth their while to so hamper the traffic that no grain would come this way. The government would be interested in having it come this way, and the public will get their elevator service at the lowest possible price. If the government borrows the money it will only cost the country what the government has to pay by way of interest, while if private capitalists invest their money in it they will insist on a higher dividend and accordingly they will impose higher rates. The government's interest in the traffic, its desire not being to make money, will encourage the traffic to come through at the lowest possible rate. As my hon. friend himself has said a very slight reduction in the cost of transportation will make traffic take one route or the other and therefore a fraction of a cent per bushel will divert traffic from one route to another. The very reduction that this elevator offers and the facilities for increased speed with which ships can transact their business, will necessarily have a marked effect in diverting traffic to this route, saving to us our own grain and also diverting to our water route grain grown in a foreign country. I am therefore entirely at a loss to understand why hon. gentlemen are endeavouring in every possible way to make points against this scheme, points not founded on good argument but, put forward for the moment perhaps, because they commend themselves to the hon. member for Lanark. For example, he complains because we are erecting a 2,000,000 bushel elevator instead of a 1,000,000 bushel elevator. There are

two very excellent reasons why that should be. A 1,000,000 bushel elevator will only hold four ship loads of 250,000 bushels each. In the fall of the year when there will be many ships of that capacity or greater coming down with loads, it would be felt that there is only accommodation at the most for four ship-loads and that is a limited capacity at the best, whereas a 2,000,000 bushel elevator gives us so much more capacity and therefore there is so much more confidence on the part of shippers that they will be able to get sufficient accommodation for the grain that is shipped by way of Port Colborne. It costs so much per bushel to erect a million bushel elevator; it costs less per bushel to erect a 2,000,000 bushel elevator. It will cost about fifty cents a bushel to erect a million bushel elevator, and it will cost about forty cents a bushel to erect a two million bushel elevator. You therefore save twenty per cent on the cost by having a 2,000,000 instead of 1,000,000 bushel elevator. A 2,000,000 bushel elevator at forty cents a bushel would cost $800,000. We spent nearly that much on the Tay canal alone. Would it not have been far better not to have spent that and we would have had another million bushel elevator out of that money, or if we wanted to be strictly economical, as the Tay canal cost half a million dollars and the interest would bring it up to about a million, we might have had the whole of this enterprise carried through with the money spent on the Tay canal which is now grown over with weeds.

Mr. SPROULE. The hon. gentleman's calculation must be out somewhere because the minister says it will cost $1,200,000 and therefore it must be over fifty cents a bushel.

Sir WILLIAM MULOCK. I am speaking of the construction of the elevator alone. There are other works outside of the elevator.

Mr. HENDERSON. I thought you were speaking of the Tay canal.

Sir WILLIAM MULOCK. I am speaking of it too.

Mr. HAGGART. After the remarks of the hon. gentleman (Sir William Mulock) perhaps it would be proper for me to make a few remarks in reply. I was criticising very mildly the erection of an elevator at Port Colborne at the entrance to the Welland canal. I was asking for a justification of it. The hon. gentleman says that I was opposed to the building of a 2,000,000 bushel elevator. I was simply arguing from the report of the commissioners in which they recommend a 1,000,000 bushel elevator.

Sir WILLIAM MULOCK. No, they recommend not less than 1,000,000 bushel capacity.

Mr. HAGGART. The hon. gentleman goes farther and says: Why is it that the hon. gentleman did not secure a greater depth of water in the Welland and other canals in order to bring the immense traffic of the Northwest to the port of Montreal? The policy of building the Welland canal was approved of first of all by the reform government, approved of by Mr. Mackenzie, the contracts were let and it was built. What is the necessity of a 14 foot canal having a 22 foot entrance? You say that it is in order to bring down the boats that navigate the upper lakes for the purposes of transhipping grain. They can go out to a point 22 feet deep exchange their cargoes and then come into the Welland canal. The hon. gentleman says that he does not understand the policy pursued by the late government, that he does not understand why we did not press to completion the Welland and St. Lawrence canals. What single contract have these hon. gentlemen entered into since they came into power for the purpose of completing these works that was not entered into when the last government was in power?

Sir WILLIAM MULOCK. It is not a question of what contract we have entered into that had not been commenced before, but a question of what we have done for the contractors. When the minister—I think it was the hon. gentleman (Mr. Haggart) himself—one of the ministry of his day, was being pressed upon this subject, I think it was in the Public Accounts Committee, we were informed that, at the instance of the ex-Minister of Finance, the member for North Toronto (Mr. Foster), it was the policy of that government to delay the completion of these works and to allow the contractors to prolong the work beyond the date limits of the contracts.

Mr. HAGGART. Every contract was entered into and there were only a very few small parts of the St. Lawrence canal which required completion. The only new one on any work of any importance to be done was the contract of Mr. Davis to overcome the Galops. The Welland had been finished for years. Is there a single expenditure that they have made except the deepening of the long reach? All of the contracts were let, the whole scheme was carried out by the late government, and if it is any benefit to the country the country must thank the late government for the expenditure upon the St. Lawrence and Welland canals. It is not true, as the gentleman states, that the work was delayed on part of the canals for about six months. It was not delayed, the contracts were entered into with certain parties for the construction of the canal and the option was given them I think that they might proceed quickly or slowly for the next three months at the instance, as the hon. gentleman (Sir William Mulock) says, of the then Finance Minister, because the finances of the country were not in the prosperous condition that they are at present. As

a climax to the whole affair, comes the Minister of Railways with the desire to put these works in the same condition as the Tay canal, 'his favourite work, the work that he undertook and completed.' was in ! Does the hon. gentleman know that the Tay canal was in active operation before either he or I was born ; that an Act of parliament was passed I think in 1831 and that the Tay canal was built and run in 1834 ?

Sir WILLIAM MULOCK. Then why did the hon. gentleman spend half a million dollars on it ?

Mr. HAGGART. By the Tay canal charter the company were given the right to build the canal and the Imperial government who had built the Rideau canal had the right to take it over at any time. The work was completed and it was taken over by the government of the country without giving to the parties who had invested large sums of money in it one single cent. The government of the country went on and made an expenditure for the purpose of making that canal of the same depth and tonnage as the Rideau canal. Did the hon. gentleman or any of his friends in this House object to it ? The expenditure was made in Lanark ; I represent that county and that was the principal objection to the expenditure. You do not hear a word about expenditures in other more favoured portions of the country on public works, in some counties of 16 or 18 expenditures being voted in one year—and for what purpose ? For the public utilities necessary for carrying on the government of the country in those particular counties. The hon. gentleman must remember that I was not a member of the government when the sum was voted for the expenditure upon the Tay canal. I was a supporter of the expenditure ; so were the hon. gentleman's friends in the House then. Not one of them criticised the expenditure until the hon. gentleman who represents South Lanark (Mr. Haggart) became a member of the government and then it was quite warrantable to make any possible attack upon a member of a Tory government. This canal has done good service to the Postmaster General and his friends in different parts of the country. They instance from one end of the country to the other the extravagance the enormous expenditure and the infamous job of building the Tay canal. None of them dare make the attack before my face. The first one who has made the attack is the hon. gentleman who has done so by reading a quotation from his organ the 'Globe,' as to the petition of the town of Perth to have certain obstructions removed from the Tay canal.

Sir WILLIAM MULOCK. The grass and the weeds.

Mr. HAGGART. If it was in the county of York or some constituencies I could name in the maritime provinces a dredge would be sent there at an expense of $1,500 or $5,000 or any sum of money that was required, especially if the work had been required about September or October or November last. There has been no expenditure upon it, the work has been a benefit to that section of the country as every man knows who resides in that section. As the hon. member for Welland (Mr. German) stated, we are not to judge the results by the traffic of the canal. It places the towns on the canal in the same position as if they were on the banks of the St. Lawrence, they are able to make arrangements with railway companies for a lower freight rate than they otherwise could secure. The amount saved annually to the people of the town in which I live is greater than the interest on the money expended by the government in the completion of that undertaking. Can the hon. gentleman justify other expenditures in that way ? Does he ever expect that the expenditure he proposes to make this afternoon in the building of this elevator will directly or indirectly bring to the people of this country a return for the expenditure ? Is it possible that the people will be so blind as to expect that what belongs purely to private enterprise can be effected as well by the government of the country ? That they can enter into competition in transport, the operation of steamers by the erection of elevators or anything of that kind and to do things as economically as a private individual would do ? If they cannot, they are not justified in the expenditure. This is not one of the public utilities of the country that justifies government interference ; it does not come within that category and they are infringing on what should be left entirely to private enterprise. I have no objection to this item passing with the criticism we have made.

Sir WILLIAM MULOCK. My hon. friend still says that the construction of elevators is a matter for private investment. Elevators are as a rule associated with railways or canals. The hon. gentleman himself as a minister caused the construction of two elevators by the government, one at St. John and the other at Halifax.

Mr. HAGGART. Are you sure that I did it ?

Sir WILLIAM MULOCK. The hon. gentleman's government did it.

Mr. HAGGART. I understood the hon. gentleman to mean that when I had charge of the Railway Department I authorized the construction of these elevators.

Sir WILLIAM MULOCK. I do not care whether it was as a minister or as a supporter of the government. The government of which the hon. gentleman was a supporter, and of which for some time he was a member, erected these two elevators in connection with the Intercolonial Railway.

Mr. HAGGART. I mentioned that in my speech.

Sir WILLIAM MULOCK. If the elevators should only be constructed as private enterprises, why did this government erect these two elevators ? I hope that the elevator which we erect at Port Colborne will prove of greater advantage than the one erected at Halifax.

Mr. HAGGART. Or the one you erected at Quebec.

Sir WILLIAM MULOCK. Although that elevator at Halifax has been erected for many years, I think I am right in saying that there has never been a bushel of grain pass through it yet. I am perhaps not right to the letter, but I think I am substantially right. My impression is that there never went through it an elevator of grain.

Mr. EMMERSON. Not as much as there should.

Mr. HAGGART. I understand that the elevator has been burned down, and that you are re-building it.

Sir WILLIAM MULOCK. Yes, we are. We expect, with the improvements on the Intercolonial Railway and the diversion of the grain via the St. Lawrence route, to be able to send grain to that elevator when the St. Lawrence navigation is closed. But my hon. friend, having spent money on the erection of two elevators, now discovers that it is all wrong for the government to spend money on public elevators. It is to be regretted that his policy and his practice do not seem to fit in together.

Mr. OSLER. I think we are entitled to have the fullest discussion on this item, and that when we discuss it we are not to be accused of objecting to expenditures in the interest of transportation. I may bring to the remembrance of the House the fact that two or three sessions ago the government brought in a measure which they heralded with all the eloquence that could be produced from the government side, for the appointment of a transportation commission which was to take charge of all the great questions of transportation in Canada. This commission has passed through various stages and has had various chairmen. I think I referred last session to the fact that the commission had reported upon the silt that came down the River Don at Toronto ; that was all it accomplished up to that time. The commission is still in existence, and it has made a report upon this particular work, a very meagre report. Now, the government are making a very large expenditure upon the experimental surveys of a canal, which, if successful, will destroy the utility of the Welland canal. I refer to a canal coming in at French river and down from the north ; and I venture to say that not one member of the government will contradict my statement that if that scheme is successful, the utility of the Welland canal is gone and this expenditure is absolutely useless. We also heard from the Prime Minister last session when one of his own ministers proposed the acquisition of the Canada Atlantic Railway, that he objected to the acquisition of that road because, when he had visited a harbour on the Georgian bay, it had at once occurred to him that if the government owned that railway, they would have to build elevators, charter and look after ships, and come into competion with private enterprise in grain carrying. That was the reason given by the Prime Minister for turning down the scheme of acquiring the Canada Atlantic Railway as an extension of the Intercolonial. Now, I am not objecting to this expenditure or to any expenditure that is going to facilitate the carriage of grain from the Northwest to the sea-board ; but I do say that we have not enough information before us to warrant the expenditure of millions of dollars on elevators at this port.

Sir WILLIAM MULOCK. We are not investing a million on an elevator.

Mr. OSLER. On elevators and other works, because the other works necessitate elevators, whether private or public, and all together they will cost this country $4,000,000, perhaps more.

Sir WILLIAM MULOCK. Might I ask the hon. gentleman what portions of the works at Port Colborne he objects to ? They consist of the elevator, the breakwater, deepening of the harbour and the construction of the piers. Does he object to all these works ?

Mr. OSLER. When I spoke on this question last year or the year before, when the Hon. Mr. Tarte was Minister of Public Works, I objected very strongly to the enormous expenditure at Port Colborne, because there was not data enough to indicate whether or not it was going to be profitable.

Sir WILLIAM MULOCK. Does he object to the breakwater ?

Mr. OSLER. I object to the expenditure of $4,000,000, which is now admitted to be necessary until the government have proper data to show to this House that it is going to be a warrantable expenditure. I say that the government put themselves out of court when they appointed a transportation commission and represented to this House that they would look to that commission to guide them in their expenditure for improving the facilities for transporting grain and other produce from the west to the east. That was their scheme, not the scheme of this side of the House, not the scheme of the late government. They pledged themselves to take the judgment of the commission which they themselves appointed, and from that

day to this they have ignored the existence of this commission. That being the case, we on this side have a perfect right to criticise most keenly and thoroughly every large expenditure in connection with transportation. So long as that transportation committee is in existence and is treated with absolute indifference by the government, so long as the government fail to ask that commission to report on any transportation scheme submitted to this House, it is our duty to criticise that scheme most minutely.

Mr. LENNOX. I have listened pretty attentively for several hours to the discussion of this subject in order to find whether the minister in charge can give any reasonable ground for this proposed large expenditure. But what probably induces me more than anything else to address the House at present is the attitude taken by the hon. the Postmaster General. It is rather refreshing to find that gentleman of late years advocating the extension and utilization of our water-ways. It shows that even at this late date he has come to realize to some extent that the Conservative party had advocated for years the best policy in this connection, but it would be more satisfactory to the people if the government, before submitting a proposition of this nature, would obtain upon it a report of the transportation committee which they themselves appointed for the express purpose of investigating such matters. We are told by the Postmaster General that this is a unique proposition, and no doubt it is; and it is both unique and peculiar in the way it has been brought before the House by the Minister of Railways and Canals. That hon. gentleman certainly has not been candid with the committee in the manner in which he introduced this matter and referred to the report. He led us to understand in the first instance that this was a recommendation for a two-million bushel elevator instead of, as it turns out to be, for a one-million bushel elevator only.

Mr. EMMERSON. Not less than one million.

Mr. LENNOX. It is unique in another respect, because it is a matter on which the government, through its first minister, had already distinctly pronounced itself. We all remember in what a dramatic way the right hon. gentleman, in introducing the transcontinental scheme, referred to that memorable day when he stood on the shores of Georgian bay in company with Mr. Booth, and there came to the conclusion that a scheme of government ownership was not practicable in the interests of the country, because a government could not enter, among other things, upon the construction of elevators. But a change has evidently since come over the spirit of their dream, and the Postmaster General in particular has completely taken to the water. Only a few months ago it was heralded throughout the Liberal press that the Postmaster General had virtually brought about the completion of the Trent Valley canal, and that, if he did not originate the scheme, at all events he had gone up and opened a lock, and in that way had, to a great extent, consummated that great work. Since then the Postmaster General has been engaged in other watery schemes. Just before the election he was approached by some of his old constituents in the townships of West Gwillimbury and Bradford and by some of his present constituents in North York and asked to supply them with a wharf, and if the wharf was to be constructed on the Holland river, it would naturally be on the village of Bradford side. A wharf was constructed and completed shortly before the elections, but not in time to be paid for before the elections took place. It was placed in my hon. friend's constituency, away from the village, it is true, but in his own constituency, because there had been a gerrymander by which Bradford had ceased to be in his constituency, and he placed it on his own side of the boundary, besides buying the land from one of his own supporters and giving to his supporter the building of the wharf. The wharf is there upon what was his supporter's land and has been paid for out of the public moneys. But the hon. minister has taken to the water in yet other ways. He has in fact allied himself to the water-ways most conspicuously in the last four or five months. Just about election time, when he was not too sanguine about the results in North York, he summoned together a number of the faithful in that constituency and laid before them a magnificent scheme of water-ways. He proposed, forsooth, to build what? To extend the Trent Valley canal—a scheme which those gentlemen had denounced in years gone by. And he proposed to extend it where? Into his own riding. He will have to negotiate with the Grand Trunk Railway to get it further than the Bradford bridge, but that no doubt can be done very easily, because this government are now hand and glove with that company. He proposed to extend it to the town of Newmarket and the village of Schomberg. The hon. gentleman told the House this afternoon that they were an up-to-date government which appreciated the signs of the times, and that they understood how things work. Certainly the Postmaster General showed his astuteness by inaugurating this scheme on the eve of the last general elections in his own riding. Let me read a word or two from the Bradford 'Witness,' which is a paper not altogether published in the interests of my hon. friend, but published in the riding he formerly represented. The article is dated February 9th, and is headed 'The Trent Valley Canal Extension':

Our readers will remember that a public meeting was held in Newmarket last September

to consider the advisability of steps being taken to deepen the east branch of the Holland river via Holland Landing, Newmarket and Aurora and the west branch to Schomberg, in order to make these waters available for commercial purposes in connection with the Trent Valley canal system which will shortly be continued to Lake Simcoe. Sir William Mulock, the Hon. E. J. Davis——

He is a gentleman who forgets, but who remembered very well to be present on this occasion.

——Mayor Kane, of Newmarket——

Another good supporter of my hon. friend.

——Mayor Daville, of Aurora, spoke in favour of the scheme,——

'Scheme' is the very word.

——and a large committee was appointed to promote this great undertaking.

Mr. SAM. HUGHES. Was the Postmaster General (Sir William Mulock) present at that meeting ?

Mr. LENNOX. He was the chief spokesman in favour of this scheme to promote the general interest and prosperity of Canada through his own riding and through his own supporters. The hon. gentleman (Sir William Mulock) seems to have been the chief person on that occasion, as we would naturally expect him to be.

Since that meeting government engineers have made careful survey of the territory——

It would need to be very careful if it favours the putting through of that canal.

——and, although no official report has yet been made, it is pretty well understood that the engineers will report favourably upon the matter.

It will be interesting to the people of Canada, it will be very interesting to the people who know the locality, it will be most interesting to the people of North York who after all are not perhaps to be hoodwinked exactly in this way—and interesting to the people of West Gwillimbury and Bradford whom my hon. friend used to represent—to see what that report will be. I would like the Postmaster General to tell the members of this committee, if he can, that this is anything else than what it is called here, a 'scheme,' a bribe to the electors of North York to support my hon. friend in that election—an effort to win their favour by putting into the field at the time of the election a number of surveyors, to impress the people with the idea that the work would go on. The men were there, and it was told over the riding that they were actually at work. It was heard in South Simcoe, my own riding, in the township of West Gwillimbury, that these men were coming right in ; that the work would be extended to Aurora, and Schomberg, and Holland landing, and Newmarket—every hamlet in the riding of my hon. friend was taken in. And when it was extended there, they said, they would do something for South Simcoe as well—they would make a cut from the elbow of the river to the Bradford railway station. My hon. friend from Hamilton (Mr. Barker) knows the locality and understands the case ; and he knows that if ever there was a farce played by a member of this House, it was played by the hon. member who has the distinction of being Postmaster General when he brought in this scheme upon the eve of an election and told the people of North York that this was a great enterprise and that he was prepared to advocate its adoption in this House.

Sir WILLIAM MULOCK. This is hardly the occasion to discuss a scheme that is not yet before parliament. The question before us is the Port Colborne scheme. But I may tell my hon. friend (Mr. Lennox) that he will have an excellent opportunity to know more about the scheme about which he has spoken than he appears to know at present. On Tuesday next, there is to be a very influential deputation from that part of the country to wait upon the government and lay the merits of this scheme and the needs of that district before them. And I here invite my hon. friend to accompany that deputation. Perhaps, when he has heard their arguments he will change his views and think that, after all, this is a very good enterprise and one that should be supported. From what I know of the country and the circumstances, the scheme has my entire approval. I believe that such a public work would be thoroughly justified and I hope that time will see it brought to completion.

Mr. BARKER. I hope the invitation of the Postmaster General will be accepted by the hon. member for South Simcoe (Mr. Lennox)——

Mr. LENNOX. Certainly.

Mr. BARKER. I hope also that the Postmaster General will not fail to be present to advocate the scheme. The hon. gentleman knows, perhaps, more than any other member in this House, perhaps more than any one in that district the possibilities of the particular canal that was being surveyed. The hon. gentleman is a large proprietor of real estate in the immediate neighbourhood and he ought to know exactly what the situation would be. I, therefore, commend to him the advice he has given to the member for South Simcoe, to be present and give his views on the occasion to which he has referred.

Sir WILLIAM MULOCK. I do not know what the hon. gentleman (Mr. Barker) intends to insinuate by saying that I am a large landed proprietor in that vicinity. If he means to suggest that I am seeking to promote some enterprise for personal gain—

Mr. BARKER. Not at all.

Sir WILLIAM MULOCK——I will say this to him, that he will not find any person in North York, even of his own political faith who will attribute to me such motives as he has done.

Mr. BARKER. I did not attribute motives.

Sir WILLIAM MULOCK. Then, what did the hon. gentleman mean by stating that I was a large landed proprietor in that vicinity ? I happen to own a small holding, a farm of a couple hundred acres. It is not near this proposed canal. My farm is in the township of King, and this canal will have no connection with my property ; it will be a long distance away. I think that when his remarks reach the people of North York his own friends will be the first to dissent from such insinuations as he has made. If I support the scheme, I support it in the interest of the general public.

Mr. BARKER. I suppose that the Postmaster General in giving advice to the hon. member for South Simcoe (Mr. Lennox) did not intend to insinuate anything against that hon. gentleman.

Sir WILLIAM MULOCK. No.

Mr. BARKER. I made simply the same remark to the Postmaster General——

Some hon. MEMBERS. No.

Mr. BARKER——that he made to the hon. member for South Simcoe. I told the Postmaster General, as a gentleman who is immediately interested in the district, that he ought to attend with the delegation and impress his personal views upon the government. I hope he will do so. From my knowledge of this district—and I do know a good deal about the district—I should be very glad to be present and hear the remarks of the hon. gentleman in advocating a branch of the Trent canal into it. I would like it to go upon record. I think it would be a very interesting thing for members of this House to have upon record, something that we might read to the hon. gentleman when he is lecturing gentlemen upon this side of the House upon ancient history in relation to public works.

Sir WILLIAM MULOCK. I extend to the hon. gentleman (Mr. Barker) as well the invitation to accompany the deputation.

Mr. SAM. HUGHES. Why not to all ?

Sir WILLIAM MULOCK. I extend it to all.

Mr. LENNOX. I wish to say a word or two in a friendly spirit to the Postmaster General. We are neighbours ; we live in adjoining ridings.

Mr. EMMERSON. Suppose we come back to the Welland canal ?

Mr. BARKER.

Mr. LENNOX. If I have the gracious indulgence of the Minister of Railways and Canals (Mr. Emmerson) who has cast so great a light upon this matter, I will refer to the gentleman who introduced the subject of the Tay canal. And I may incidentally, perhaps, refer to those who sit behind him and applauded him so loudly, and not one in ten of whom, I venture to say, could tell us anything about the Tay canal.

Mr. EMMERSON. You cannot see it, it is grown up with weeds.

Mr. COCHRANE. It is not as weedy as the hon. gentleman's (Mr. Emmerson's) mind.

Mr. LENNOX. I am not discussing particularly the question whether branches of the Trent Valley canal should or should not be extended to Schomberg and Aurora. I have the habit—I wish the Postmaster General had the same habit—of not talking of a matter until I know something about it. Now I will talk of a matter that the Postmaster General cannot deny. I am sorry he does not appreciate the situation better than he appears to ; he seems to be oblivious of the fact that it is a very grave offence, a very grave indiscretion in any member of parliament, and particularly a prominent member of a government, to go into a riding, particularly in his own riding, on the eve of a general election, when votes are to be won, and ought to be won by honest means, and there to hold out a bait to the people to vote for him. It is not a question of the policy of constructing the canal. When that matter has been laid before parliament, when this large scheme that has been foreshadowed by the speech from the Throne, it is quite time enough for any member of the government to go before the people and announce that he is in favour of the scheme. I venture to say, although a young man, a young member of parliament, that it is not becoming in a member of a cabinet, without consultation with his associates, without the scheme having been officially before the cabinet council for consideration, to pledge himself in his own riding to promote a scheme, whether it is or is not supposed to be in the interest of his constituents. How stands the Postmaster General in regard to this matter? He stands as a pledged man, bound and shackled in regard to this proposition. He is not a free man to sit as a cabinet minister when that delegation comes here, and to give a judicial consideration to the question. No, he is one of the promoters, as it is stated here, he is one of those who advocated the scheme, he is one of the active men who initiated it, and therefore he cannot represent the people of Canada in this matter. He is a shackled man before this delegation comes to Ottawa to consult with the government. But the Postmaster General is not in an unique position. He talked about unique positions a little

while ago, but he is not alone in failing to grasp the niceties which surround the actions of cabinet ministers. He is on a par with the unfortunate position in which the Minister of Trade and Commerce stood a few months ago when, in discussing the Jackson transaction, he failed to see what was the real issue before the House, and ventured to condone an offence without realizing the enormity of the offence. So it is with the Postmaster General to-night. I regret it exceedingly, I regret it because of its effect on public life in Canada, I regret it as a Canadian on behalf of the people of this country, that a cabinet minister, a gentleman not new to the position, one who has been long in office, does not see the gravity of the offence he committed when he became a party to the promotion of a scheme which had never been foreshadowed even by the speech from the Throne.

Mr. MACPHERSON. I desire to say a word or two in answer to the stand the hon. member for South Simcoe (Mr. Lennox) has taken here to-night. He has robed himself in righteousness and made broad his phylacteries like the Pharisees of old, thanking God he is not like other men. He reads a lecture to the members of this House on honesty, integrity and straightforwardness. We had the spectacle last year, on the last day of the last session of the last parliament, of this self same hon. gentleman getting up on the floor of this House and attempting to besmirch the name of a member of parliament; and to prove his statement he read a letter, and in reading that letter he purposely left out a sentence, he purposely suppressed a sentence in that letter which turned the whole force of the argument against himself, and left him with not a leg to stand on. That is the hon. gentleman who gets up now, I would like to call him my cacological friend, and attempts to read us a lesson. He should be the last man to do a thing like that. A gentleman who committed a wrong like that last session has no right to get up and read a lecture to this House on honesty. It ill becomes the hon. gentleman to make a statement like that unless he is prepared to stand by every one of his actions, let alone his words.

Mr. LENNOX. Somebody asks me to attend to this hon. gentleman. I do not think I will. There are a number of hon. gentlemen in this House who know exactly what the hon. gentleman is referring to, and it is not surprising to me that he feels sore. The hon. gentleman on that occasion had to admit—and I can furnish the 'Hansard' with the whole discussion—he had to admit that he had been guilty of making statements which did not sound well in the mouth of any hon. gentleman or any member of this House, statements that were made far away from this House, out in British Columbia, statements that I read from papers furnished to me. It is right and fitting that this hon. gentleman should come to the rescue of the Postmaster General. If not a case of birds of a feather flocking together, it is a case of returning a service where the Postmaster General came to his rescue on that occasion. I told the hon. member that as certain papers had been placed in my hands of which I knew nothing at all about——

An hon. MEMBER. Nothing at all?

Mr. LENNOX. Yes, of which I knew nothing at all—hon. gentlemen had better not shout until they are out of the bush—papers of which I knew nothing at all had been placed in my hands to bring before the House, and I took occasion to tell the hon. gentleman that I would endeavour to bring them up at a time that was convenient to him. I had waited for some time—I think he was at Montreal—for him to return. We were friendly. I could not get an opportunity when the hon. gentleman was present until the last day of the session. The Postmaster General, acting on behalf of my hon. friend, came over to me and seeing that I had a bundle of papers before me said, I hope you are not going to read all those papers because the time is short. He said the hon. member for Vancouver (Mr. Macpherson) wanted to leave soon on the train. I said, well, there are certain portions that I will read, and I went on to show the Postmaster General what I proposed to read. Well, he says, cut it short, just give a part of it, don't take up much time; and so I promised him I would shorten it as much as I could.

I was not particularly familiar with the papers. They had been marked before they had been placed in my hands. I read such portions as I thought would be necessary, but not all that would be necessary if I had had more time at my disposal. These papers were in the hands of the hon. minister, and every one of the letters which I read was in the possession of the government, and was known to be in the possession of the government, for weeks before the discussion came on. It was not essential or reasonable that I should read the whole of the letters. Subsequently, the hon. acting Minister of Public Works (Mr. Hyman), whom I see in the House, got up and, taking some of the papers I had handed over, said that I had left out a sentence in a letter that would have qualified what I had read. I was not professing to read the whole letter. He quoted it, and I said that I had not read such a letter, and neither I had, according to the bundle in my hand and probably according to the papers in his hand. But the hon. gentleman who has just spoken says that I wilfully and deliberately suppresed a portion of a letter, that I did not make it as full as I ought to have made it. The hon. gentleman (Mr. Macpherson), who has interjected something irrelevant in

the discussion, will receive attention at my hands on some occasion when the House is not so busy—in the dog days, in the good old summer time to come, perhaps; but I do not intend to pay much attention to him now. I am ready to refer to 'Hansard' and to deal with the whole question, and if he goes much farther, I will be liable to ask him certain questions that he will not like to answer. But I am not going to depart from the subject we have in hand now. It is quite right that he should come to the rescue of the hon. Postmaster General, and if there is any one who should apologize, it is the hon. Postmaster General, whom I endeavoured to accommodate.

Mr. MACPHERSON. I ask no man to apologize for me, and at any time the hon. gentleman wishes to follow up that line of attack upon me, he will find me doing business at the old stand. I want to say further when the hon. gentleman says here that I was obliged to retract something I said, he cannot find on the pages of the revised or unrevised 'Hansard' anything to show that I was obliged to retract one solitary word.

Mr. LENNOX. It is not remarkable that the hon. gentleman (Mr. Macpherson) should be inexact as to what occurred many months or a year ago, when he cannot remember what was said two minutes ago. I did not say that he was obliged to retract anything, but I said he was obliged to admit certain statements, which he made at Vancouver, and which were read by me, to be true. That is all. The hon. gentleman says I can commence the discussion of the matter at any time I see fit. I am not going to do anything of the kind. The time of this House is too valuable for me to waste it in dealing with the hon. gentleman who has just spoken.

Sir WILLIAM MULOCK. The hon. member for South Simcoe says that I am pledged, that I am shackled and bound to the scheme, and therefore I am not free to pass an opinion upon it. I just desire to say what my views are on that question. I am not shackled, I am not bound, and I am perfectly free to take any course that I think proper in the public interest. But, to give the committee my opinion and to repeat all that I have ever stated, I would say that I believe that such a work as is indicated would be of very great advantage to the locality in question. Whether or not the expenditure would make it unreasonable to embark upon it is another question. No person can form a proper opinion as to whether a work should or should not be proceeded with until a reasonable estimate of the cost is obtained, and until that cost is ascertained, however desirable in itself the public work might be, any final judgment upon it must remain in abeyance. My judgment is not in suspense as to the advantage it would be to the district to have the work proceeded with, but my judgment is in suspense as to whether the country must go into it until we know the cost. I have never otherwise expressed myself. The hon. gentleman read an extract from a paper published in Bradford. The statement was published in February last, and referred to a meeting which took place six months before, and upon that statement he makes an accusation against me. I do not think that is good evidence, and I do not think the hon. gentleman is quite doing himself justice in making such an unfounded charge against me as he has made.

Mr. LENNOX. The hon. gentleman is very funny. He tries to get away from the point. Does the hon. gentleman deny, as it is stated in the paper, that he was present at the meeting and spoke in favour of the scheme? I read it, not only in this paper, but I read it in other papers, amongst them the Newmarket 'Era,' I think. While I was travelling on the train I met a gentleman who had just come from the meeting. I know it was discussed broadcast throughout the last general election, and I am calling attention to it here because I think it does not become a cabinet minister, on the eve of an election, to make promises to the electors which may influence their votes.

Sir WILLIAM MULOCK. An abstract declaration of principle may be a very good thing. I attended the meeting in question, I addressed myself to the meeting as other citizens did, and I was saying what I am saying now, that the district would be advantaged by the construction of such a work, but the question of its cost and the question of its feasibility were matters entirely in the future, and the determination of the work must depend upon these considerations. That is my view to-day. I hope the result of the inquiry will show that the work is feasible, and that the prices come within a reasonable figure or as reasonable as will commend itself to support at the hands of this House.

Mr. LENNOX. Is it a fact that engineers or surveyors were put on?

Sir WILLIAM MULOCK. When we come to discuss that question, the way it happened to come up at that time will be made quite clear. It grew out of the decision of the Railway Commission seriously affecting a great enterprise in our district. The people were seriously intending to move away because of the railway freight rates. The matter came up in that way, and the people of our district were extremely uneasy lest this large enterprise should move away on account of the rates of freight charged by the Grand Trunk Railway Company on the commodities used and exported by that enterprise.

Mr. LENNOX. The hon. gentleman has not answered me, but probably he will tell me now?

Sir WILLIAM MULOCK. About the engineers ?

Mr. LENNOX. Yes.

Sir WILLIAM MULOCK. The engineers have been in the field ever since, and I think they are in the field yet.

Mr. LENNOX. I do not want to prolong this matter ; if the hon. gentleman will tell me now, that is an end of it—what large enterprise was it that was about to leave ?

Sir WILLIAM MULOCK. Messrs. Kane & Sons.

Mr. LENNOX. Of Newmarket ?

Sir WILLIAM MULOCK. Of Newmarket.

Mr. LENNOX. Yes, the gentleman who is named in this paper as the promoter of this scheme.

Sir WILLIAM MULOCK. He is one of the firm.

Mr. LENNOX. By what authority were these engineers sent into the field ?

Sir WILLIAM MULOCK. By the authority of the Minister of Railways.

Mr. SPROULE. I would like to ask the hon. Minister of Railways and Canals whether there has been any money spent on this work of building the elevators during the present year ? There was money voted for it, but was there any money spent, and when was the scheme undertaken by the government of building this elevator ?

Mr. EMMERSON. The matter was under consideration last May after the report of the Transportation Commission and during the summer. I asked parliament at the last session to make an appropriation of $400,000. Arrangements were then made with a view to having plans made for the foundations, and tenders were asked for. Arrangements were also made for the making of plans and specifications for the superstructure. The contract has been let for the substructure but the plans are not quite complete for the superstructure. I hope they will be ready within a week or two and then tenders will be called for.

Mr. SPROULE. As the $400,000 was in the main estimates last year, which were published before the date of the Transportation Commission's report, the government's decision must have been reached before the report was received ?

Mr. EMMERSON. The $400,000 was not in the main estimates but in the supplementaries which came down in August.

Mr. SPROULE. This seems to me to be exactly the same scheme as that which was outlined by the ex-Minister of Public Works (Mr. Tarte) and which he pressed on the attention of the House.

Mr. EMMERSON. I do not know what he did.

Mr. SPROULE. His contention was that it was a scheme that should be undertaken by the government, and he urged it on the ground that the storage of grain there ought to be made as cheap as possible, and that for that reason it should be kept in the hands of the government, for on that would largely depend the possibility or the probability of a large amount of grain passing by that route. This is exactly the same scheme and therefore must have been undertaken before the Transportation Commission reported on it. Speaking of this report it seems to me that for a great commission, a commission supposed to be composed of able men, this was about the most superficial report on the transportation question, so far as that locality is concerned, that I ever saw. It does not pretend to say that another bushel of grain will be taken down the St. Lawrence on account of it or that a bushel will be diverted from the Erie canal. The commission simply seems to recommend what the government had already discussed and agreed upon so that the government might be fortified in the policy to which they had practically committed themselves over a year before. If that is all the great Transportation Commission can do we had better avoid the expense of keeping that commission going in the future.

Mr. EMMERSON. The report of the Transportation Commission is certainly brief, but it states facts ; it does not indulge in any prophetic visions or fancy flights but states facts as to the conditions which prevail there and points out why it is necessary to have an elevator built in order to utilize and develop to their full capacity the works which have been constructed at great cost to the country in connection with the canal. I do not know anything about any views which Mr. Tarte entertained ; I only know that after this report came in I brought the matter, in a report to council, to the consideration of my colleagues and that it was discussed during the summer. The item was finally put in the estimates to the extent of $400,000 with a view to carrying out the policy which is outlined in the report referred to. It has no connection beyond that with any views which might have been entertained by other gentlemen. There may have been those who entertained these views; I have no doubt there are because they seem to be wise conclusions and I trust that the good judgment of the people of this country and of the business interests of the country will concur in their conclusion and will approve of the action of parliament in making an appropriation.

Mr. ARMSTRONG. The hon. member for Welland (Mr. German) gave us to understand that there were two corporations prepared to build this elevator, and not only to do that but to build boats suitable to pass

through the canal and handle the grain. We have heard a good deal of argument with reference to the possibility of the government building an elevator. As a business proposition we would readily understand that the men who are building the elevator would be willing and ready at least to build boats to carry the grain both from Port Arthur to Port Colborne and from Port Colborne to Montreal. I would like to have the minister explain at least part of the arrangement into which these companies were willing to enter.

Mr. EMMERSON. Propositions did come to the department that were sent there by the member for Welland (Mr. German). He has very correctly stated that in view of the policy outlined by the Transportation Commission they were not entertained or taken into consideration. I think that in a general way they wished the government to construct the foundations and to give them the privilege of building elevators on the pier after it had been constructed, the company then to have the exclusive control of these elevators in connection with their transportation lines. The propositions were not taken into serious consideration for the reason that they seemed to be opposed to the best interests of the country, that it would be creating a monopoly in connection with the traffic whatever it might amount to and would not inure to the advantage either of the business interests of the country or of the canal.

Mr. SPROULE. This elevator, I understand, is to contain not less than 2,000,000 bushels. Is it believed that there will be any great advantage in having a 2,000,000 bushel elevator there for the storage of grain at the close of the year. An elevator of the capacity of 2,000,000 bushels would be much better than an elevator of the capacity of 1,000,000. What object is there in putting in a large quantity of grain when navigation has closed.

Mr. EMMERSON. In the first instance, the class of vessels that will furnish the products of the west to that elevator will be a large class, and those products will necessarily be transhipped in smaller vessels suitable to the canal navigation. It will be necessary to have an elevator of large storage capacity, because the incoming freight will be greater than the outgoing at particular times during the season of navigation. More than that, as is outlined in the report of the commissioners, railway connection should be had with the elevator, and the grain that would not be taken through the canal, by reason of the closing of navigation, could be stored at the elevator and taken out from time to time by railway transportation. The commissioners recommend an elevator of not less capacity than one million bushels; but they contemplate another elevator, because they say, prepare your foundation and have everything in readiness for even more than that. The capacity of the elevator, in their judgment, must not be less than one million bushels, but they do not confine it to that capacity. One elevator of two million bushels capacity can be constructed for almost a third less—so I am advised by a very competent engineer—than two elevators of one million bushels capacity each. Therefore, having in mind the almost certainty of requiring two one million bushel elevators within the very near future, it seemed to be the interest of economy that one of the larger capacity should be built, especially as it could also be operated at much less expense. One power of larger capacity could be utilized in connection with the two million elevator much more cheaply than could two powers for isolated plants in separate elevators of one million capacity each. There would also be a smaller number of employees and officials. These are the reasons which led me, upon whom some responsibility rested in connection with the matter, to recommend to my colleagues the construction of one elevator of two million bushels capacity.

Mr. SPROULE. It does not seem to me that the reasons given are very strong. The principal one is that the grain might be stored there, and might be moved by railway after navigation closed. Is it likely that the grain would go such a long way round to be moved by railway when it could go to Midland or Parry Sound? Not very likely. There is a reason to my mind why there might be a large elevator, that is, to store the large quantity of Manitoba wheat that is used in the Ontario mills in the winter time. With regard to the necessity of having a large elevator so that it would not get filled up during navigation, I am satisfied that if you had a million bushel elevator, there would be plenty of craft to take all the grain that reached it during the season of navigation. I would not think it likely that there would be a great blockade of grain there after navigation opened. But after navigation closed, it might be advisable to have more storage capacity, not for the purpose of having the grain taken to Montreal by rail, but for the purpose of having it there for distribution to the mills in the province of Ontario in the winter time to be mixed with Ontario wheat. That is the strongest argument that could be advanced, in my judgment, for a large elevator. But the feature of the Transportation Commission that attracted my attention was this. The great object of the large expenditure at Port Colborne, as stated by the ex-Minister of Public Works, was the desirability of diverting to the St. Lawrence route the grain which goes from Chicago and Duluth via the Erie canal to New York. That, and that alone, must be the justification of this expenditure which when completed will be over $4,000,000. But this Transportation

Commission seems to have completely ignored that in their interim report, on which the hon. minister is acting in making this large expenditure, for they are silent on that point.

Mr. BARKER. There was one observation made by the minister a few minutes ago which seems to me to emphasize the objection raised by the hon. member from South Lanark to the government entering into this business which ought to be conducted by private enterprise. The hon. gentleman says that the wheat will arrive at this elevator, will go into it, and will be subsequently forwarded, perhaps by rail, perhaps at the conclusion of the winter season by vessels. Has the hon gentleman reflected for a moment that that involves the government entering into a warehouse business ? If you receive consignments of wheat of different classes and grades and from various persons you will have to issue warehouse receipts. These will be handled by banks, large advances will be made upon them, commercial transactions will occur, and all in reliance upon documents issued by an agent of the government. I think it is a most serious question. Have the government considered it as it ought to be considered ? You are going to have perhaps two milion bushels of wheat in your elevators at the end of the season. That wheat will be held on behalf of various companies, commission merchants, railways, ships and other interests.

A certificate from the government as to any quantity held in store will be commercial paper, negotiable in the banks, upon which enormous sums of money will be advanced. The government will be responsible for the documents issued by their agents ; and one of the most difficult matters to be conducted by any commercial body will be conducted by a few government appointees who were never brought up to the business and know little or nothing about it. I have had some experience myself of the difficulty of conducting an elevator business. There is no line of business in which the persons or company responsible run more risk than in this particular business which the government are proposing to enter into. I am inclined to think that a hasty conclusion has been arrived at and that the government have not fully considered what the construction and management of this elevator will lead them to. It may be that the government are under the impression that they will build an elevator and then perhaps turn it over to somebody else, but we have not had a word to that effect from the minister. So far as we know, the government propose to become warehousemen. They propose to enter into the commercial business of issuing warehouse receipts and conducting all the enormous transactions involved in the business including the liability to banks, endorsers and tranferees. And all these various ramifications are to be conducted by some gentlemen of the civil service who have had no training in anything of the kind. The whole of this discussion from first to last shows that there has not been given to this subject the careful consideration that it ought to have received. For an hour the minister did not tell us one word as to the grounds on which he was acting. It was not until the hon. member for Welland (Mr. German) told us about the proposition of a couple of private enterprises to build the elevators that we knew anything about that offer. And it was only after we got that information that the Postmaster General told us about the report from the transportation committee.

Mr. EMMERSON. I told you about that before the Postmaster General spoke at all. I read extracts from it.

Mr. BARKER. If the hon. gentleman did, it certainly escaped my observation.

Mr. EMMERSON. The Postmaster General made no reference to it whatever.

Mr. BARKER. I may perhaps be wrong in that respect, but I say it was not until after the hon. member for Welland told us about the proposition from two private companies that we knew that any such proposition had been made or that we heard a word about the report of the Transportation Commission. It was only then, for the first time, that we heard that the subject had been reported upon by that commission. We have never seen that report. It has never been laid on the table. We never heard until to-night that offers had been made by any parties to construct these elevators, and we are asked to grant millions of money without giving the matter as much consideration as a business man would give to an expenditure of $500.

Mr. BLAIN. May I ask the hon. minister if the erection of an elevator by the government will prevent any private company from constructing an elevator in that harbour ?

Mr. EMMERSON. The government may prevent any other elevator being built on their concrete piers. I question whether there would be room for another on these piers.

Mr. HAGGART. Would there not be room for 200 elevators in the harbour ?

Mr. EMMERSON. It is not merely the elevators but the slips in connection with the elevators which must be considered. There are quite a number of vessels prying over the lakes which will require to utilize the elevators and will require advantages in connection with the unloading.

Mr. HAGGART. The hon. gentleman says there is only room for two elevators. I asked him what is the distance from the entrance lock to the harbour and he said 4,650 feet.

Could you not put an elevator along the whole length of the canal from the entrance and the lock of the harbour ?

Mr. EMMERSON. I am speaking of the two concrete foundations. You can build elevators away down at the mouth and there is no reason why you could not.

Mr. R. L. BORDEN. My hon. friend means that you can only put two elevators on the foundations for two.

Mr. BLAIN. What I ask is that supposing private corporations wanted the privilege of erecting elevators would that be granted them or is it the policy of the government to monopolize the elevator business.

Mr. EMMERSON. That point has not been considered in the concrete form in which my hon. friend puts it, but I am satisfied that if any private corporation wanted to build a elevator, it would be open to them to do it, on such conditions as the government might see fit to impose.

Mr. OSLER. I was very sorry to find that on a question such as this a minister of the Crown or anybody else could drift away into ancient politics and go back to the expenditure on the Welland canal in generations gone by and ask who was responsible for it. What is the use, in this day and generation, of going away back to make political capital out of the expenditure on canals, which were built under conditions which the most of us to-day know nothing about. What struck me in connection with this discussion as to the relative advantage of government ownership and the building of these elevators by private enterprise, is this : If the government build the elevators and these large vessels unload into them, where are they going to get the barges into which to tranship that grain ? But if a company should build these elevators, they would do so for the purpose of making money and would no doubt build the barges required to take the grain down the canal. They would build an elevator for commercial reasons—to make money. Having built the elevator, would that company also be in a position to build vessels of proper capacity for the canal to carry the grain from the elevator down to the shipping port at Montreal, Quebec, or wherever they wished to go ? The hon. minister told us, with a great flourish of trumpets, about the number of vessels upon the upper lakes that would come down to Port Colborne. I admire his faith in the development of the country, for I am a Canadian also. But, even if there are so many vessels as he says on the upper lakes, surely three or four of these vessels would carry enough to fill his elevator, and then where would he be if barges were not provided to take the grain away ? Why, the whole traffic would be blocked. We may talk as much as we like, but we should not go beyond the bounds of common sense in dealing with this plain practical matter. It is too big and too serious a question to have our minds distracted by party politics when we are trying to deal with it. As a practical matter, I would ask how much of the grain that reaches Buffalo is ultimately exported from the United States. I have not the figures before me, and at my time of life I cannot carry these figures in my mind ; but I understand that a very small proportion of the grain that goes through the elevators at Buffalo is exported to foreign countries. If that is the fact, will the minister explain to me how he can possibly hope to divert any part of that traffic from Buffalo to Port Colborne ? To say that this could be done would be the most absurd proposition that could be made. All he can hope to secure will be a share of the grain that goes through Buffalo for export to foreign countries. The report that the minister has read is not complete for our purpose. It does not go into figures, and so does not give us the information upon which to base an intelligent judgment with regard to this vote. I hardly like to venture to give advice to the minister, but I must say, whether they like it or not, that I have found a lack of readiness on their part to give this committee information that it ought to have. The Minister of Railways has read the report of the commission, not when he introduced the resolution, but, apparently—I hope he will excuse me if I am wrong—when it was dragged out of him and he could not help himself.

Mr. SPROULE. The hon. member for Welland (Mr. German) spoke of two other offers made to build an elevator at this point. It would not have been amiss for the minister to bring down information concerning these. We have an extract from the report of the Transportation Commission, but we should have the other too. It may not prove valuable information, but I think it would be better if we had it before disposing of this item finally.

Mr. EMMERSON. I am quite ready to bring down any desired information, but I feel sure hon. gentlemen opposite will not seek to have the item stand over on that account. We have discussed this matter exhaustively. No item has been passed, and I think we ought to make some progress. I would like to go on with other items. I have already agreed with some hon. gentlemen opposite to allow some of the items to stand because some gentlemen on the other side who wish to discuss them could not be present this evening. Therefore, I would like to get this item through. The report of the Transportation Commission was referred to by me and I read an extract from it that I happened to have. I did not know at the time that a copy of the full report was in the House. But again after I sat down, and the discussion proceeded, the chief engi-

neer told me he had a copy of the report here, and I brought it to the notice of the committee. I did so at the first opportunity. Hon. gentlemen opposite and on this side also wished to speak and I bided my time. It certainly would be an advantage to this vote, as hon. gentlemen opposite will admit, to have that report before the committee, and had I known that a copy of it was here, I would have read the whole report. The extract that I did read, I read at the outset of my remarks in explanation of the vote.

Mr. BLAIN. I would draw the attention of the minister to the fact that this report was in the hands of the government last year before this question was discussed in the House. The report is dated Toronto, May 6th, 1904, and the discussion on the elevator question was on August 3rd, 1904. The minister had this report in his possession, and, no doubt, the government had gone over it very carefully, and, from that report had arrived at the decision to construct the elevator.

Mr. EMMERSON. My recollection is that at that time the decision had not been reached in the matter. The subject was under discussion in May, when I brought to the notice of my colleagues by the way of report, the contents of the report of the Transportation Commission. The matter was not finally settled even at the time the House was asked for the vote.

Mr. BLAIN. But let me read to the minister his own statement to the House on the 3rd of August, 1904, as reported in 'Hansard' of that year, page 8380 :

> It occurred to me that the elevators might be free even if the canals were not. But I would naturally expect that the public who use these elevators should pay for them. It is a question of policy as to whether a private corporation should have the right to build an elevator or whether it would be better for the government to do it.
>
> The policy adopted is that the government shall do it, there being so many different shippers whose interests might clash. Therefore, the government would charge the ordinary elevator dues. That would be my idea.

Mr. EMMERSON. Then it was settled at that time. Without referring to the record, I was under the impression that it had not been settled at that time. But it is only a question of date.

Mr. BLAIN. That is the all important question before the committee, and I do not wonder at my hon. friend from Northumberland calling the attention of the government to the fact that they are unwilling at times to give us information. Here is the fact that an important transportation commission had already reported last year, the report being in the hands of the government, and still the government have allowed this matter to come up involving the expenditure of nearly $3,000,000, as stated at that time, to build a 2,000,000 bushel elevator. They allowed the committee to go on and discuss that, and all the time they withheld from the committee the report of the Transportation Commission.

Mr. EMMERSON. There was no object in withholding it. I have already stated that I was under the impression that that report had been presented to parliament, as indeed the interim report with regard to the St. John harbour had been presented to parliament. Until the question arose here tonight I certainly had no idea, but that it was within the knowledge of the House.

Mr. BLAIN. My hon. friend does not pretend to say now that he was of the opinion that the committee had this report in their possession last year.

Mr. EMMERSON. Yes.

Mr. BLAIN. I am amazed at that statement, because this question was up then. Was it printed and distributed to the members ? No more important document could be printed.

Mr. EMMERSON. I thought it had been placed before the House with the report concerning the St. John harbour.

Mr. BLAIN. I accept the hon. gentleman's statement when he says he understood the committee had it in their possession. But the fact remains that the minister allowed this discussion to take place last year, involving an enormous expenditure, and he did not give the committee the report of the Transportation Commission, nor did he give it to the House at the beginning of this session. This item was up for discussion last evening, and still there was no mention of the report.

Mr. SPROULE. I wish to say a word with regard to the suggestion of the minister that we allow this item to pass, because we have been discussing it for some time, and he has no objection to bring down these offers later on. There is this inconvenience about it, that after we have voted the money it cannot be of the same interest to us. It is before we vote the money that we require the information to enable us to judge whether we are going right. I have no desire to obstruct the passage of the vote, at the same time I think we ought to see those offers before we dispose of the item. We desire the information so that we may act intelligently.

Mr. EMMERSON. They cannot affect the question materially. I acknowledge that the House should have these offers, but they do not bear materially on the question of this vote. It must be borne in mind that parliament is already committed to this work. There is no departure from the policy of the government constructing the elevator, This parliament committed itself a year ago

to a policy of that kind, and authorized the government to expend $400,000.

Mr. SPROULE. And that without the information which was in the government's possession.

Mr. EMMERSON. Parliament was evidently satisfied with the information it had at that time. There was no reason why hon. members should not have had it. I could have no interest in withholding it, as it is information that entirely supports the proposition made by the government. But parliament having committed itself to the principle of constructing an elevator at that point, and placed at the disposal of the government $400,000, it seems to me that my hon. friend, in asking the matter to stand over now, is not serving the purpose that he desires to serve. Hon. gentlemen who were here last session will bear witness that whenever I promised to bring down information, that promise was fulfilled as early as possible. I can promise my hon. friend that the information he requires will be furnished on Monday.

Mr. SPROULE. The minister says that the House committed itself to this expenditure last year, and that it did so without information. But last year we were confronted with two dilemmas. We made an effort to get information and we could not, and were obliged to let many items go through without information. First there was put up a plea that the minister was a new minister and therefore was not familiar with the business, and out of charity we had to let him pass over many things without the explanations we would have exacted from an older minister. Moreover, we never knew when there was any information in the possession of a minister. I am not applying that remark to the present minister, because he is better than some of them; but we never knew whether the information was in possession of a minister and he was so obstinate that he would not give it, or whether he had not the information, and in many cases we were obliged to go blindly. Does he not see that if we did what he desires us to do, that if we should let it go without this information, we would be practically repeating the same blunder that we have committed in other instances. Suppose, for instance, that these two offers were much more favourable than we might reasonably anticipate they were, we have not that knowledge because the information has not been given to the committee. We have voted about $400,000 and we are asked to vote $310,000, because we have committed ourselves to it already, but we are just adding to it. We are increasing the degree without increasing the intelligence with which we are doing it and it is on account of the absence of that information that I speak of it at the present time.

Mr. COCHRANE. I would like to draw the attention of the committee to the statement of the hon. minister just to show how absurd his proposition is. He says that he very generously gave us the information when we asked for it. We did not know anything about this report being in his possession. Here is a commission that we were paying, and the members of which are the servants of the people, but I think the trouble arose largely from the fact that the present ministers think they are czars, and that they are not the servants of the people. Here is a commission that the people are paying, obtaining information that an humble member of the House of Commons like myself cannot obtain. If the hon. minister will consult his deputy when I conclude the few remarks which I propose to make, I will be very much obliged to him. If he were as anxious to get information when he was out of the House as he is in the House, we would not have all this trouble in getting information from him. What reason has the hon. minister for having a report in his possession that is made to him in his capacity as minister when he has not thought it necessary to have it printed and given to the public, so that the public might understand what that commission has been doing in the interest of the people who are paying for it? He tells us very blandly, and with that generous smile he puts on——

Mr. EMMERSON. It is not put on. It is natural. Do not be unkind.

Mr. COCHRANE. It is not put on? I thought it was, because it is so bland that a wayfaring man, even a fool, might read that it is deceptive. If the hon. minister upon getting that report had printed it, we would have known what it contained. I fancy the trouble is that the hon. minister —I do not blame him and I do not criticise him more than I do other ministers—fails to get any information in reference to the estimates until he comes down to the House and asks the committee to vote them. Then he has to talk to his deputy and get the information that he should have in his hands when he comes before the House, instead of having to refer to his deputy or some one else to ascertain whether the criticism made of his estimates by some hon. member is well founded or not. A minister of the Crown is the servant of the people just as I am. We are paying him for his services as a minister. We paid that commission to give us certain information which they gave to the minister, and from the fact that he neglected his duty by failing to have that report printed and put in the hands of the committee, we have had three or four hours of discussion—useless discussion, perhaps. There is the whole trouble in a nut shell, and if ministers only realized that they were delaying their own estimates by

their—I was going to say ignorance, but I will not use that word—but from the fact that they do not post themselves in connection with their estimates, thus causing the country to expend a lot of money for useless talk, I am sure they would make an effort to prepare themselves more thoroughly. If they would get that information and give it to us, it would save the country a great deal of expense and save a great deal of talk in this House and hard feelings, as well as those humiliating conversations between the hon. minister and his deputy.

Mr. HAGGART. You have a preliminary report of the Transportation Commission ?

Mr. EMMERSON. There is the report in respect to the St. John harbour.

Mr. HAGGART. No, I am leaving out the St. John harbour and the special report you brought down this evening. Have you a preliminary report besides these ?

Mr. EMMERSON. Not that I am aware of.

Mr. HAGGART. Well, I am taking the answer of the right hon. Prime Minister :

Before the orders of the day are called, would the right hon. first minister tell us when we are to expect the preliminary report of the Transportation Committee.

Sir WILFRID LAURIER. It will be brought down very shortly.

Mr. EMMERSON. This is a preliminary report, and the report in regard to St. John harbour is a preliminary report.

Mr. HAGGART. We had that a year ago. You do not call that a preliminary report of the Transportation Commission ?

Mr. EMMERSON. I do.

Mr. HAGGART. Where there is a special reference to a particular portion of their work, and only giving their opinion on that —you call that a preliminary report ?

Mr. EMMERSON. I do.

Mr. HAGGART. That is sufficient. It may impose upon somebody.

Rideau canal extension, $50,000.

Mr. EMMERSON. This is a revote of $50,000.

Mr. HAGGART. Is there any of it expended ?

Mr. EMMERSON. Yes ; there was expended on surveys $566.66.

Mr. COCHRANE. Are you going to take the weeds out of the Tay canal ?

Mr. EMMERSON. No. There is a certain mill property belonging to certain parties—I forget the names, but I think they are Tott Brothers—for which a very large sum of money is claimed, and in order to build the locks at that place it will be necessary to have that property. The matter has not been gone on with. The surveys were not completed fully in time to go on last season, but in addition to that there is another difficulty arising in connection with this property.

Mr. HAGGART. This is for the purpose of establishing communication between the canal and a certain lake ?

Mr. EMMERSON. Mud lake, Devil's lake and Desert lake.

Mr. HAGGART. Yes ; for the purpose of developing what was represented by the right hon. Minister of Trade and Commerce (Sir Richard Cartwright) as a large mining section.

Mr. EMMERSON. Yes.

Mr. HAGGART. I hope the mines are there, that is all I can say.

Sault Ste. Marie canal—construction, $100,000.

Mr. SPROULE. What are you doing there ?

Mr. EMMERSON. This is $100,000 we are asking for in addition to the $170,000 asked for last year. About $150,000 will be required to complete this work. The canal is cut through St. Mary's Island. It is 1¾ miles in length. The canal proper has a depth of 22 feet of water in the prism, with 24 feet 4 inches of water on the mitre sill of the lock. The deepening of the lower entrance to a depth of 21 feet 5 inches has been completed. The above amount is to be expended in removing shoals and deepening what is called the Vidal shoal and dredging and deepening the Upper Entrance so as to give a uniform depth of 21 feet 5 inches ; also to make a safer passage of vessels. There is, under contract, an extension of South Entrance Pier at lower entrance of canal of 800 feet. The substructure is of timber crib work with a superstructure of concrete ; at present there is only 18 feet in parts of upper entrance. Hinckler Bros. had a contract for deepening a portion of upper entrance at upper end of Vidal shoal. Their contract is completed. Tenders were advertised for; but only one was received. Rate, 80 cents per yard. Tenders were called for in September, 1894, for deepening the upper entrance from eastern end of the entrance piers to the eastern end of what is known as the Vidal shoals. Five tenders were received. The work was awarded to the lowest tenderer—C. S. Boone, Toronto, at $1.74 per yard. No work has been done yet. Work is also under way in the extension of south entrance pier at lower entrance which will be finished next summer. Tenders were called for. Seven bids were received. The lowest tenderer, W. Birmingham, of Ottawa, was awarded the work at schedule rates. There was expended up to 30th November, 1904, $37,501.

Mr. BOYCE. When was the contract awarded to Mr. Birmingham ?

Mr. EMMERSON. It was sometime after the vote of parliament. It was between that time and Christmas. A contract was also entered into with Messrs. O'Boyle Bros. for extending the south entrance pier, at the upper entrance of the canal. This is an extension of 800 feet and consists of a timber substructure capped with a concrete wall. This will make a safer entrance and avoid the cross current. Three tenders were received. The work was awarded to the lowest and amounts to $59,280.

Mr. HAGGART. What sum more will be required to complete the improvements ?

Mr. EMMERSON. About $150,000 more in addition to the $50,000 I spoke of.

Mr. BOYCE. If the minister would allow this item to stand there is a great deal of information that we would like to obtain.

Mr. EMMERSON. I can give all the information now and I would like to make some progress in connection with it. I would like to get the item through.

Mr. BOYCE. The discussion might take some time and I think the work would be expedited by rising now.

Mr. EMMERSON. The Trent canal matter was to stand by arrangement. I want to make an amendment now. You will notice under the Trent canal an item.

Damage by flooding, $7,000.

That was stricken out in the original and it has been put in here by a clerical mistake. It has been transferred to the income account and I would like that stricken out. It is transferred to the supplementary estimates of 1904. I would move that that item of $7,000 be struck out.

Motion agreed to.

Mr. EMMERSON. I have agreed that the item of the Trent canal should stand.

Some resolutions reported.

Sir WILLIAM MULOCK moved the adjournment of the House.

Mr. R. L. BORDEN. If we should reach government business on Monday, what will be taken up ?

Sir WILLIAM MULOCK. If government business is reached, the Minister of Agriculture will proceed with his Census Bill and after that the House will be moved into Committee of Supply. The Minister of Railways and Canals will continue his estimates.

Motion agreed to, House adjourned at 12.05 a.m., Saturday.

Mr. EMMERSON.

HOUSE OF COMMONS.

MONDAY, February 20, 1905.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 64) respecting Central Counties Railway Company.—Mr. Stewart.

Bill (No. 65) respecting the James Bay Railway Company.—Mr. Talbot.

Bill (No. 66) to amend the Criminal Code of 1892, respecting appeals and summary convictions.—Mr. Porter by Mr. Sam Hughes.

CABINET CHANGES.

Mr. R. L. BORDEN. Before the Orders of the Day are called, I would like to ask the right hon. gentleman whether any cabinet changes have taken place since the session of 1904 ? I do not know that there are any which I have in mind, with the exception of the admission into the cabinet of the Hon. A. B. Aylesworth, a very prominent member of the Ontario bar. It was stated during the campaign in the newspapers that Mr. Aylesworth had become a member of the government, and I would like to know whether or not this statement was well founded, and whether or not Mr. Aylesworth is still a member of the administration.

Sir WILFRID LAURIER. Some time last fall, before the election, I approached, with the concurrence of my colleagues and the approval of His Excellency the Governor General, Mr. Aylesworth and asked him to become a member of the cabinet without portfolio. Mr. Aylesworth agreed to my proposition, and entered into the contest at once and ran for the county of Durham. But he was not sworn in as a member of the cabinet before he entered upon the campaign. He had not time to come to Ottawa before the election to be sworn in, so that he has never been a member of the cabinet and is not now. He was unsuccessful in the election, and after the election I had an interview with him and again asked him to come into the cabinet. He told me that, under the circumstances, so long as he had not stated whether or not he would run again, he was not prepared to be sworn in. I hope, however, that at an early date Mr. Aylesworth will take his position in the cabinet.

REPORTS OF RETURNING OFFICERS.

Mr. R. L. BORDEN. Will my right hon. friend bring down the special reports which I see must have been made by the returning officers for the electoral divisions of McKenzie and Dauphin. The hon. gentleman, will, no doubt, remember that under the terms of the Northwest Territories the Representation Act provision is made that, whenever, owing to unforeseen accident,

delays or otherwise, the proclamation cannot be postponed in time to leave the requisite number of days between the posting and the day of polling, the returning officer may fix another day for nomination, which day shall be the nearest possible day after allowing the number of days during which said proclamation is required to be posted before such nomination. There is a provision in the statute that in every such case, the returning officer must make a special report to the clerk of the Crown in Chancery as to the cause of the postponement. A similar provision is made in the Dominion Elections Act of 1900. I presume that special reports under these provisions must have been made with regard to the elections in the electoral divisions of Mackenzie and Dauphin. I think it would be right that, in both cases, the special report of the returning officer should be laid on the table of this House. I will send over to my right hon. friend (Sir Wilfred Laurier) the memorandum I have, which, I have no doubt, will assist him in obtaining the information which I have asked for.

PAYMENT FOR BALLOT BOXES.

Mr. J. B. MORIN. I would like to ask the Prime Minister if he has a reply for Mr. Cayouette, P.M., at Sainte Claire regarding the ballot boxes of which I spoke the other day. The gentleman wants an answer, and, if the Prime Minister can give me any information I shall be glad to have it. If not, I must reply to Mr. Cayouette advising him that there is no information.

Sir WILFRID LAURIER. I am sorry to say that the reply I have to give to my hon. friend (Mr. Morin) will not be very satisfactory to Mr. Cayouette. I understood from the letter he had written to my hon. friend, that Mr. Cayouette received, in 1891, certain ballot boxes which were handed to him by a Dr. Lesage, returning officer, and that they have been there ever since. I can only say that, so far as my information goes, we have no information as to the action of Dr. Lesage, whether Dr. Lesage deposited the ballot boxes with Mr. Cayouette does not appear from anything we can find in the records of the government.

Mr. MORIN. I can tell the Prime Minister that the boxes are there. Last fall, when the returning officer for the county of Dorchester was appointed he came to me and asked me if I knew where he could get ballot boxes made, and I told him that he could get them at Mr. Cayouette's; and he went and got four, Mr. Cayouette has yet twenty-one in his possession. He wants to dispose of them and he has no way to do so. I spoke to the Postmaster General (Sir William Mulock) about it in 1897, and he told me that he would see to it. But I suppose he has not done so.

Sir WILLIAM MULOCK. Speaking of the correction, I think that, under the law, Mr. Cayouette would be within his rights and obligations if he sent the boxes to the sheriff or registrar of the county.

Mr. MORIN. That is what the Postmaster General told me, and I told Mr. Cayouette of that, and he asks: Who will pay me for doing that? And the matter stands as it was.

STEAM COMMUNICATION WITH PRINCE EDWARD ISLAND.

Mr. A. MARTIN. Before the Orders of the Day are called, as the Minister of Marine and Fisheries (Mr. Préfontaine) is in his place, I would like to ask him if he has any tidings of the movement of the steamers 'Stanley' and 'Minto' plying between the provinces of Prince Edward Island and Nova Scotia. I understand that there has been no crossing there for three weeks.

Hon. RAYMOND PREFONTAINE (Minister of Marine and Fisheries). I understand from the report in the department that the two stemers are still unable to cope with the ice between the island and the mainland.

Mr. A. MARTIN. I would suggest to the minister that there is, as I understand a winter boat, or ice-crusher at present in Quebec, and not doing very much—the steamer 'Montcalm.' I would like to ask if there is any possibility of sending that steamer to their rescue.

Mr. PREFONTAINE. I would give the same answer as to the other question. It would be impossible to send an ice-breaker down under the present circumstances, especially from Montreal, because the St. Lawrence is blocked at the present moment.

PRIVATE BILLS.

OTTAWA ELECTRIC COMPANY.

On the order:

House in Committee on Bill (No. 12) respecting the Ottawa Electric Company.—Mr. Galliher.

Mr. MACPHERSON. I am asked by the promoter of the Bill to request that it be set over until Wednesday, March 1.

Mr. SPEAKER. Stand.

SECOND READINGS.

Bill (No. 60) to incorporate the Algoma Copper Range Railway Company.—Mr. Dyment.

Bill (No. 61) to incorporate the Lebonk and Thunder Bay Railway Company.—Mr. Bole.

Bill (No. 62) respecting the Edmonton, Yukon and Pacific Railway Company.—Mr. Lamont.

Bill (No. 63) to incorporate the Brantford and Woodstock Railway Company.—Mr. Schell (Oxford).

FACER SOLID STEEL CAR WHEEL CO.

House in Committee on Bill (No. 27) respecting certain patents of the Facer Solid Steel Car Wheel Company, of Perth, Limited.

On section 1,

Hon. SYDNEY FISHER (Minister of Agriculture). I may say that when this Bill came up in committee I, as the minister in charge of the administration of the Patent Act, took exception to the general provisions of the Bill as presented. It seemed to ask for a far too long an extension of time ; and in connection with one of the patents, at all events, there was no need of an extension of time at all. The Bill as originally printed asked to deal with five different patents, all of them more or less dependent on each other. One of them has still a term of nine years to go ; one of them through inadvertence made in the renewal, was dead ; the three others expire next fall. On several occasions this House has authorized an extension of the life of patents under circumstances very similar to those surrounding these patents, namely, that while the patent had existed for a length of time, nobody had been able to make use of it or really to take the matter up and utilize it for the benefit of the public. That is the case with these patents. A suggestion was made that we reinstate the patent which had expired through inadvertence, as has been commonly done in the House under similar circumstances, and that we should extend the time of the patents which will expire next year and make the life of these patents coextensive with the life of the patent which is still in existence and has a term of years to run.

Mr. FOSTER. That is the one having nine years to run ?

Mr. FISHER. Yes. That proposal was accepted with some hesitation by the promoters of the Bill, and the committee adopted it unanimously and reported the Bill amended so as to accomplish that object.

Mr. FOSTER. The four subsequent patents are all for improvements or amendments to the original one ?

Mr. FISHER. No, they are all connected together, they are all dealing with car wheels and are more or less dependent on each other. The full use of the patent which is still in existence cannot be enjoyed by the patentees unless they have also the other patents ; that is to say, this patent is more or less dependent on the others.

Mr. R. L. BORDEN. In dealing with these applications to extend patents which have been allowed to lapse, we have used a uniform section with regard to the rights of persons who have begun to manufacture in the meantime. Is that reservation of the rights of such persons which has been made in this Bill, of precisely the same character as the one upon which we have acted ?

Mr. FISHER. Yes, the clerk of the committee was instructed to draw it up in accordance with the usual section.

Bill reported, read the third time and passed.

MESSAGE FROM THE GOVERNOR GENERAL.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister) delivered a message from His Excellency the Governor General.

Mr. SPEAKER read the message as follows :

GREY.

Gentlemen of the House of Commons :—

I have received with much pleasure the address which you have adopted in reply to the speech with which I opened the session of parliament, and I thank you for it heartily.

Government House, Ottawa,
16th February, 1905.

QUESTIONS.

LIGHTHOUSE DEPOT AT PRESCOTT.

Mr. LALOR—by Mr. Lancaster—asked :

1. Were the buildings and constructions of the government in connection with the Dominion lighthouse depot at Prescott erected by contract ?

2. If so, were public tenders called ; in what newspapers and on what dates were they advertised ?

3. What tenders were received ; what were the offers and who received the contract ?

Hon. RAYMOND PREFONTAINE (Minister of Marine and Fisheries) :

1. There were two small new buildings erected and only repairs made to old buildings, and this was done by day labour by the men employed at the depot.

2. Answered by the first.

3. Answered by the first.

ADULTERATION OF MAPLE PRODUCTS.

Mr. BELAND asked :

1. Is the government in a position at the present time to control the production of maple sugar and maple syrup in Canada ?

2. Is the government aware that the manufacture of those products is carried on in the large cities on an extensive scale, and that at Montreal at this moment, under the designations of ' maple sugar from Beauce ' and ' maple syrup from Beauce ' articles that contain only a slight proportion of maple sap are offered for sale ?

3. Is it the intention of the government to check this practice which is calculated to ruin the reputation that the county of Beauce rightly enjoys for its maple products ?

Hon. L. P. BRODEUR (Minister of Inland Revenue) :

1. No.

2. The department is not aware that the articles 'maple sugar from Beauce' and 'maple syrup from Beauce' containing only a slight proportion of maple sap are offered for sale in Montreal, but the matter will be immediately inquired into.

3. The department is taking active steps to prevent the adulteration of maple sugar and maple syrup. Already prosecutions have been instituted in cases where the 'Adulteration Act' has been violated.

CHILD IMMIGRATION.

Mr. U. WILSON—by Mr. W. J. Roche—asked :

1. What assistance, if any, is given by the government to any person or persons bringing children to Canada from the old country ?

2. How many have been brought into this country during the fiscal year 1904, and of what age ? How many males and how many females?

3. From what sources in the old country do these immigrants come ?

4. To what institutions were they sent, and how many to each ?

Rt. Hon. Sir WILFRID LAURIER (for the Minister of the Interior.

1. There are two classes of children brought to Canada by Philanthropic Societies. (a.) Children from workhouses and industrial institutions, on whom no bonus or commission is paid. (b.) Children from private homes and educational institutions on whom it has been the practice since 1873-4, to pay a commission of $2 per head.

2. 2,212, of whom 525 were bonus children : 443 males and 82 females, their ages ranging from 5 to 18 years.

3. Private homes, educational, industrial institutions and workhouses.

4. To the following receiving homes in Canada : Bristol Emigration Society, St. John, N.B., 40 ; Canadian Catholic Emigration Society, Ottawa, Ont., 106 ; Dr. T. Bowman Stephenson, Hamilton, 60 ; Miss. Macpherson, Stratford, 142 ; Church of England, Waifs and Strays Society, Sherbrooke, 54 ; Church of England, Niagara-on-the-Lake, 29 ; J. W. C. Fagan's Home, Toronto, 49 ; Rev. Robert Wallace, Belleville, 94 ; Mrs. Birt, Knowlton, P.Q., 106 ; J. T. Middlemore, Halifax, N.S., 130 ; Dr. Barnardo's Homes, Toronto, Peterboro, Ontario, Winnipeg and Russell, Manitoba, 1,188 ; Catholic Emigrating Association, Montreal, P.Q., 206 ; Working Boys' Home, Lennoxville, P.Q., 8.

DELAY IN PRINTING SUPREME COURT REPORTS.

Mr. MONK—by Mr. Barker—asked :

1. Is the government aware that numerous complaints have been made by members of the bar in regard to the delay in printing the Supreme Court reports ?

2. What is the cause of said delay, and what steps have been taken by the government to remove this cause of complaint ?

3. Has the registrar of the Supreme Court power to have said reports printed where he deems expedient ? If not, why not ?

Rt. Hon. Sir WILRID LAURIER (Prime Minister) :

1. No complaints have been heard, excepting recently concerning a delay in issuing the current number of the Supreme Court Reports.

2. (a.) The cause is the pressure on the bindery in consequence of the early session. To prevent delaying the House it was necessary to give precedence to departmental reports. During the last two months the pressure has been very exceptional.

(b.) For years the accommodation at the bureau has been insufficient. Changes are now in progress to extend the space for the bindery. In the meantime the departmental reports for this year are nearly all issued. The delayed number of Supreme Court Reports will be issued early this week.

3. The Registrar of the Supreme Court in common with other officials has not the power under the law to place printing outside of the Printing Bureau.

BLANK BALLOTS FOR DOMINION ELECTIONS.

Mr. SPROULE asked :

1. Adverting to the answer given by the First Minister on Monday, February 13th, regarding the method of issuing blank ballot papers to returning officers, what was the date of the complaint received from the returning officer in South Lanark ?

2. What was the date of the complaint received from the returning officer in the city of Ottawa?

3. When were the additional thousand ballots sent to him ?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister) :

1. The letter making the complaint in relation to South Lanark was dated October 29, 1904.

2. The complaint of shortage made at Ottawa was by telephone one or two days before October 31.

3. The request for additional ballots was made on October 31, and the additional 1,000 was sent on that date.

4. On November 21, 1,499 unused printed ballots were returned to the King's Printer.

I. C. R.—EMPLOYMENT OF MR. F. B. CHAPMAN.

Mr. FOSTER asked :

1. Was F. B. Chapman, now fuel inspector on the Intercolonial Railway, an employee of the road at any time previous to his present employment ? If so, in what capacity, and for what length of time ?

2. Was he at any time discharged from the service ? If so, when, and for what cause ?

Hon. H. R. EMMERSON (Minister of Railways and Canals) :

1 and 2. There is no Fuel Inspector on the Intercolonial Railway named F. B. Chapman ; there is, however, a young man named F. B. Chapman, who was employed in the service as checker and clerk from June 1891 until February 1897, when he was dropped on account of reduction of staff, and who has lately been re-employed as a clerk in the Mechanical Accountant's Office.

JOACHIM GODBOUT, LIGHTHOUSE-KEEPER, ST. LAURENT.

Mr. MONK—by Mr. Barker—asked :

1. Is the government aware that one Joachim Godbout, a lighthouse-keeper, in the employ of the government at St. Laurent, Island of Orleans, took an active part in the last federal election, to the degree of insulting publicly in public meetings the opposition candidate and his friends ?

2. Is it the policy of the government to tolerate such conduct on the part of its employees ?

Hon. R. PREFONTAINE (Minister of Marine and Fisheries) :

1. No.

2. No. The policy of the government in this regard has been stated on more than one occasion.

EXPENDITURE BY J. HUOT, MAYOR OF L'ANGE GARDIEN.

Mr. MONK—by Mr. Barker—asked :

1. During the course of the months of September, October or November last, did the government, or any other department of the government, or any officer of any of its departments, write to J. C. Huot, Esq., mayor of l'Ange Gardien, informing him that a sum of $600, or any other sum, had been placed at his disposal for the carrying on of certain works along the beach in front of the said parish ?

2. If so, has the sum in question been sent to the said J. C. Huot, and if not, why not ?

Rt. Hon. Sir WILFRID LAURIER—(for the Minister of Public Works) :

1. On the 12th October 1904, Jos. Huot, at L'Ange Gardien, was authorized to expend the sum of $600 in removing boulders from the beach.

2. Pay-lists and accounts have not yet been received and consequently no money has been paid.

PARISH OF ST. FRANCOIS, ISLAND OF ORLEANS.

Mr. MONK—by Mr. Barker—asked :

1. During the course of September, October or November last, was a certain sum of money sent to or placed at the disposal of any person in the parish of St. François, Island of Orleans, by the government, or by any department of the government, for repairs to be done to the wharf of the said parish, or for any other works ?

2. If so, what sum, and to whom ?

3. Has the money been expended, and has the person in question rendered an account thereof?

Mr. FOSTER.

Rt. Hon. Sir WILFRID LAURIER (for the Minister of Public Works). No

RESIGNATION AND APPOINTMENT TO SENATE OF MR. JUSTICE CHOQUETTE

Mr. MONK—by Mr. Barker—asked :

1. What is the date of the resignation of Honourable P. A. Choquette as puisne judge of the Supreme Court for the province of Quebec ?

2. What is the date of the nomination of the said Honourable P. A. Choquette as a member of the Senate ?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). Mr. Justice Choquette in the month of September last sent a letter of resignation to the Prime Minister. The Prime Minister was under the impression that he had immediately sent it to the Department of Justice, but since this question was asked he found that he had not done so. The letter was somewhat mislaid. Mr. Justice Choquette was appointed a senator on the 30th September, 1904, which ipso facto vacated his judgeship.

PIER AT GRAND BEND.

Mr. ARMSTRONG asked :

1. Has there been any delay in building the pier at Grand Bend ?

2. If so, what is the cause of the delay, and when will the construction of the said pier be commenced ?

3. When will the pier and dredging be completed ?

4. What is the estimated cost of the said pier and dredging ?

5. How much has been expended on the said pier to date ?

6. Who is the inspector on behalf of the government for the construction of the said work?

7. What salary does he receive ?

8. When did his services begin ?

9. How much has been paid to him, and how much has he earned to date ?

Rt. Hon. Sir WILFRID LAURIER (for the Minister of Public Works) :

1. Yes.

2. Delay due to difficulties experienced in procuring materials ; work will be started next spring, as early as possible.

3. Contract calls for completion of pier on the 30th June, 1905.

4. Contract price for pier $21,388. Contract does not include any dredging.

5. $300.

6. Mr. John Rae.

7. $3 per working day.

8. On July 4, 1904.

9. $300.

GOVERNMENT OFFICERS IN NORTHWEST TERRITORIES.

Mr. HERRON asked :

1. What officers or employees of the government in Manitoba and the Northwest Territories resigned during the calendar year 1904 ; at what dates, and for what reasons ?

2. Who, if any, of these have since been again employed by the government ; at what date, and in what capacity ?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). I presume this question refers only to the Department of the Interior ; at all events I have the answer only for that department which is as follows :

1. J. Kelso Hunter, 17th February, 1904, deputy registrar, land registrar district of Assiniboia ; no reason given. A. E. Wild, 31st January, 1904, sub-agent of Dominion lands, Melfort, Saskatchewan ; no reason given. David M. Logie, 13th January, 1904, clerk Dominion lands office, Prince Albert ; no reason given. W. H. Reed, 27th January, 1904, sub-Crown timber agent, Strathclair ; removed to Winnipeg. H. S. Chaplin, 18th April 1904, clerk Dominion lands office, Calgary ; no reason given. Miss. Minnie M. McDonald, 6th May, 1904, clerk, Dominion lands office, Regina ; no reason given. R. R. King, 26th May, 1904, sub-agent of Dominion lands, Melfort, Saskatchewan ; no reason given. P. A. Miquelon, 7th June, 1904, sub-agent of Dominion lands, Wetaskiwin, Alta. ; no reason given. James Brewster, 12th April, 1904, land guide, Innisfail ; left the district. H. M. Douglas, 1st July, 1904, sub-agent of Dominion lands, Innisfail ; no reason given. M. M. Reed, 3rd July, 1904, clerk, land titles office, Regina ; no reason given. Thos. Turnbull, 31st August, 1904, inspector Dominion lands surveys, Winnipeg ; no reason given. J. B. Holden, 30th September, 1904, sub-agent of Dominion lands, Leduc, Alta. ; no reason given. Miss M. L. Armstrong, 7th November, 1904, clerk, Dominion lands office, Regina ; no reason given. P. M. Bredt, 30th September, 1904, immigration agent, Regina ; no reason given.

2. A. E. Wild, 1st June, 1904, sub-agent of Dominion lands, Melfort, Saskatchewan.

GRAIN WAREHOUSES IN MONTREAL.

Mr. PICHE—by Mr. Talbot—asked :

1. By whom were the plans of the warehouses for the storing of grain in the port of Montreal prepared ?

2. Who were the persons employed in the preparation of those plans, and what was the cost entailed in the preparation of said plans ?

3. Who prepared the plans of the grain chutes intended to convey the grain from the elevator which was erected by the government in the port of Montreal to the steamers ?

4. Was Mr. Metcalfe employed in the preparation of these plans, and what remuneration was he to receive for the same ?

5. Was Mr. Johnson, now general superintendent and engineer of the Dominion Bridge Company, employed in the preparation of these plans, and will he receive payment for his work ?

Hon RAYMOND PREFONTAINE (Minister of Marine and Fisheries) :

1. The commissioners have no warehouses for the storing of grain in the harbour of Montreal, excepting a grain elevator.

2. The plans for the elevator were prepared by the Steel Storage and Elevator Construction Company, of Buffalo, N.Y., the contractors for the building of the elevator, and the cost of the plans was included in the cost of the building.

3. The government has no elevator in Montreal, the commissioners' elevator has two grain chutes for loading vessels which form part of the contract work and were included in the plans therefor. Two other grain chutes were added, the plans for which were prepared by the commissioners' chief engineer.

4. Neither Mr. Metcalfe nor Mr Johnson was employed in the preparation of the plans for the grain chutes, and neither received remuneration therefor.

5. Answered by No. 4.

CANADIAN NAVAL MILITIA.

Mr. MONK—by Mr. Barker—asked :

1. What is the total expenditure incurred to date by the government in connection with the organization of a Canadian Naval Militia ?

2. What is the total number of officers and men at present engaged on the government steamship 'Canada' ?

3. Where is the steamship 'Canada' at present, and how is she going to be employed during the next four months ?

1. Nothing.

2. Seventy.

3. Nassau, West Indies. At present she is on an instructional cruise. About the middle of April she will join the Fisheries patrol fleet on the Nova Scotia coast.

RAILWAY SURVEYS IN JOLIETTE.

Mr. MONK—by Mr. Barker—asked :

1. Did the government, during the months of October and November, 1904, employ civil engineers to make a survey for a line of railway in the county of Joliette, Quebec ?

2. For what object was this work and survey undertaken by said engineers, and was this work and survey undertaken in connection with the proposed Transcontinental Railway ?

3. What was the total cost of this work and survey already accomplished by said engineers and their assistants ?

4. Have said engineers made their report concerning this work and survey ? If so, what was the date of said report ?

5. Who was the overseer charged with the direction of this work, and what salary did he receive ?

Hon. H. R. EMMERSON (Minister of Railways and Canals). The government did not during the months of October and November employ civil engineers to make a survey for a line of railway in the county of Joliette, but I have reason to assume that the transcontinental railway commissioners made a survey through that county, not under the direction of the government.

JURISDICTION OVER ESTUARY FISHERIES.

Mr. MONK—by Mr. Barker—asked :

1. What is the present state of the issue between the Dominion and provincial govern-

ments in regard to jurisdiction over the fishing rights in estuaries of rivers flowing into the sea ?

Hon. RAYMOND PREFONTAINE (Minister of Marine and Fisheries). The matter is still in issue between the provinces and the Dominion government.

FISHERIES PROTECTION STEAMERS.

Mr. LEWIS asked :

1. What are the names of the steamers employed by the government in connection with the fisheries protection service ?
2. What is the tonnage, horse-power, number of average crew, name of builder, and the age of each vessel ?
3. Where is each vessel stationed, and what, in general terms, are its duties ?
4. How many months during the year is each vessel in active service ?

Hon. RAYMOND PREFONTAINE (Minister of Marine and Fisheries) :

1. 'La Canadienne,' 'Petrel,' 'Constance,' 'Curlew,' 'Falcon,' 'Brant,' 'Kestrel,' 'Vigilant,' 'Canada,' 'Swan,' 'Georgia,' 'King Fisher,' 'Osprey.'

4. How many months during the year is each vessel in active service ?

Hon. RAYMOND PREFONTAINE (Minister of Marine and Fisheries) :

1. 'Minto,' 'Stanley,' 'Lady Laurier,' 'Lansdowne,' 'Aberdeen,' 'Druid,' 'Quadra,' 'Montcalm,' 'Champlain.'

2. 'Minto'—Tonnage, 1,090 gross, 372 net; nominal horse-power, 216 ; average number of crew, 7 officers, 37 men ; name of builder, Gourlay Bros., Dundee ; age of vessel, 5 years.

'Stanley'—Tonnage, 914 gross, 395 net ; nominal horse-power, 206 ; average number of crew, 6 officers, 34 men ; name of builder, The Fairfield Ship-building and Engineer Company, Govan ; age of vessel, 16 years.

'Lady Laurier'—Tonnage, 1,051 gross, 413 net ; nominal horse-power, 186 ; average number of crew, 8 officers, 31 men ; name of builder, Fleming and Ferguson, Paisley; age of vessel, 2 years.

'Lansdowne'—Tonnage, 680 gross, 463 net ; nominal horse-power, 80 ; average number of crew, 7 officers, 26 men ; name of builder, J. O'Brien, Maccan, N.S. ; age of vessel, 20 years.

'Aberdeen'—Tonnage, 674 gross, 266 net ; nominal horse-power, 200 ; average number of crew, 7 officers, 31 men ; name of builders, Fleming and Ferguson, Paisley, age of vessel, 10 years.

'Druid'—Tonnage, 503 gross, 149 net ; nominal horse-power, 59; average number of crew, 6 officers, 23 men ; name of builders, Fleming and Ferguson, Paisley ; age of vessel, 2 years.

'Montcalm'—Tonnage, 1,432 gross, 526 net ; indicated horse-power, 3,600 ; average number of crew, 6 officers, 36 men ; name of builders, Napier and Miller, Yoker ; age of vessel, 1 year.

'Champlain'—Tonnage, 522 gross, 225 net; indicated horse-power, 850; average number of crew, 5 officers, 28 men ; name of build-

Vessel.	Tonnage.		Horse-power.	Average No. of Crew.	Builder.	When Built.
	Gross.	Net.				
'La Canadienne'	372	227	60	20	I. Duncan & Co., Pt. Glasgow, G.B.	1880
'Petrel'	192	98	54	13	Polson's, Toronto	1892
'Constance'	185	126	54	15	"	1891
'Curlew'	158	96	54	11	"	1892
'Falcon'	52	33	2	3	Mr. Wallace, Lake Bennett, B.C	1898
'Brant'	142	58	33	8	J. White, O'Leary, P.E.I	1899
'Kestrel'	311	188	59	17	A. Wallace, B.C	1903
'Vigilant'	396	242	65	.....	Polson's, Toronto	1904
'Canada'	411	136	209	48	Vickers Sons & Maxim, England	1904
'Swan'	12	8	3	2	Built at Nanaimo, B.C	1894
'King Fisher'	107	107	.....	18	Jos. McGill, Shelburne, N.S.	1892
'Osprey'	125	125	.....	16	"	

3. The duty of these vessels is to protect the three mile limit, and they therefore follow United States fishing vessels around the coast, their stations being continually changing.

4. Approximately nine months ; but always depending on the movements of United States fishing vessels.

OCEAN AND RIVER SERVICE STEAMERS.

Mr. LEWIS asked :

1. What are the names of the steamers employed by the government in the ocean and river service ?
2. What is the tonnage, horse-power, number of average crew, name of builder, and the age of each vessel ?
3. Where is each vessel stationed, and what, in general terms, are its duties ?

ers, Fleming and Ferguson, Paisley ; age of vessel, 1 year.

3. 'Minto,' Georgetown—Pictou ; winter navigation with mainland.

'Stanley,' Georgetown—Pictou ; winter navigation with mainland.

'Lady Laurier,' Halifax ; lighthouse and buoy service, Nova Scotia agency.

'Lansdowne,' St. John ; lighthouse and buoy service, New Brunswick agency.

'Aberdeen,' Quebec ; lighthouse and buoy service, Quebec agency.

'Druid,' Quebec ; lighthouse and buoy service, Quebec agency.

'Quadra,' Victoria ; lighthouse and buoy service, British Columbia agency.

'Montcalm,' Quebec ; ice-breaker—lighthouse and buoy service, Quebec agency in summer.

'Champlain,' River Ouelle ; ferry service, River Ouelle and Murray Bay.

4. Practically the whole year, except when laid up for repairs.

REPAIRS TO GOVERNMENT SHIPS.

Mr. CROCKET asked :

What amount was expended upon each of the vessels under the control of the Department of Marine and Fisheries during the year ending June 30, 1904, for renewals and repairs ?

Hon. RAYMOND PREFONTAINE (Minister of Marine and Fisheries) :

REPAIRS, 1903-1904.

Dominion steamers :—

'Aberdeen'	$ 8,829 74
'Lansdowne'	6,030 93
'Quadra'	3,160 78
'Stanley'	11,053 59
'Minto'	6,130 88
'Druid'	7,079 32
'Lady Laurier'	36,107 62
'Constance'	6,134 55
'La Canadienne'	4,594 22
'Osprey'	292 87
'Curlew'	520 14
'Kingfisher'	445 99
'Kestrel'	2,115 34
'Georgia'	156 39
'Swan'	1,418 40

FISHERIES PROTECTION SERVICE.

Mr. LEFURGEY—by Mr. Lancaster—asked :

1. In respect of each of the steamers employed by the government in connection with the Fisheries Protection Service, what is approximately the ordinary weekly or monthly pay-roll ; the total amount paid last year for (a) wages ; for (b) supplies ; and (c) for other purposes ?

Hon. RAYMOND PREFONTAINE (Minister of Marine and Fisheries) :

Vessel.	Monthly Pay-roll (average).	Total Wages.	Deck and Engine Supplies and Repairs.	Provisions, Fuel, Clothing, &c.
	$ cts.	$ cts.	$ cts.	$ cts.
'La Canadienne'	616 10	8,383 22	2,037 44	7,598 42
'Osprey'	310 17	4,722 08	2,404 14	6,158 32
'Curlew'	472 20	5,666 50	1,815 27	3,734 86
'Petrel'	554 55	6,654 50	997 97	4,000 63
'King Fisher'	331 94	3,983 32	1,670 77	5,048 34
'Kestrel'	1,065 59	12,787 12	4,085 26	9,153 84
'Swan'	115 00	1,380 00	1,912 18	589 63
'Georgia'	173 50	2,080 00	422 35	1,236 90
'Constance'	575 26	6,902 96	7,093 05	9,749 78

OCEAN AND RIVER SERVICE.

Mr. LEFURGEY—by Mr. Lancaster—asked :

In respect of each of the steamers employed by the government in connection with the ocean and river service, what is, in round numbers, the ordinary weekly or monthly pay-roll ; the total amount paid last year for (a) wages ; (b) for supplies ; (c) for other purposes ?

Hon. RAYMOND PREFONTAINE (Minister of Marine and Fisheries). Fiscal year 1903-1904, average monthly pay-roll, $7,019.21. (a.) $84,426.02. (b.) $134,497.07. (c.) $78,392.86.

MIMINIGASH BREAKWATER.

Mr. LEFURGEY—by Mr. Lancaster—asked :

1. Is any work being done on Miminigash breakwater for repairs, &c., for 1904 ?
2. How is the work being done ?
3. If by tender, who were the tenderers, and what was the figure of each tender ?
4. To whom was the contract given ?

Rt. Hon. Sir WILFRID LAURIER (for the Minister of Public Works) :

1. Yes.
2. Work done by day labour.

PREVENTION OF TUBERCULOSIS.

Mr. GEO. H. PERLEY (Argenteuil) moved :

That in the opinion of this House the time has arrived when parliament should take some active steps to lessen the widespread suffering and the great mortality among the people of Canada, caused by the various forms of tuberculosis ?

He said : Mr. Speaker, as a layman in both medicine and law, I feel very diffident about bringing this question before the House ; but the national importance of it and the great interest I take in it must be my excuse for so doing. The disease to which the resolution refers needs no definition from me Consumption of the lungs, which is the most common and destructive form of tuberculosis, has been known ever since the dawn of medical science. It was discussed and studied by medical men even in the days of ancient Greece and Rome. I hold in my hand official returns from the secretaries of the boards of health of the provinces of Quebec and Ontario, according to which I find that in the year 1903, the last year of which we have official statistics, 60,540 people died in these two provinces. Of these, in the province of Quebec, 2,943 died from tuberculosis, while only 2,017 died from all other contagious diseases. In the same year, in the province of Ontario, 2,723 died from tuberculosis, and only 1,938 from all other contagious diseases.

Now, on the basis of these two provinces, the total deaths in the Dominion from tuberculosis in 1903 were about 8,000. That would be about 10 per cent of all deaths throughout the Dominion. And I find that practically all authorities agree that all the deaths caused by tuberculosis are not tabulated under that disease. In fact, some of the best writers claim that one-eighth of all deaths are caused by this disease, and others even say as many as one-fifth are caused by it. I have the official report for 1901 of the province of British Columbia, which states that in this form—that is in the form of consumption—tuberculosis causes about one-sixth of all the deaths occurring in the human race, and that omitting the deaths among children up to fifteen years and adults after sixty, it causes about a quarter of all deaths, so that its ravages are most deadly at a period when the life of the individual is most useful. Not only are a great number of deaths caused by this disease, but it is estimated that between 30,000 and 40,000 persons are affected by it in the Dominion of Canada ; which means that a great percentage of these people are unfit to follow their ordinary occupations, and the families of those that are poor must be, more or less, a charge upon the public purse.

For many centuries, consumption was supposed to be an hereditary and incurable disease, and in consequence its visitations were accepted by the people in a spirit of fatalism and hopelessness, and practically nothing was done to stop the terrible ravages it caused. During the last few years, however, this has all been changed, and we now know that this disease is not inherited. In fact, it has been shown that the children of consumptives, when removed from their parents at the time of birth and brought up in proper surroundings are very little more likely to take this disease than any other children are. We also know now that the cause, and the only cause, of this disease is a living germ known as the turbercle bacillus, which is taken into the human body chiefly by breathing air which is laden with the germs in a dry state. While this disease, therefore, is not directly contagious, it is communicable, and very readily so, when the patients suffering from it are careless or ignorant. But, though this disease can be easily communicated, its spread is very easily prevented, and patients can be kept from giving the disease to others by very simple means, chiefly by keeping the sputum of the patients wet and destroying it. In fact, it is now well known that the place where one is least likely to contract tuberculosis is in a well organized sanatorium, because if the rules are properly carried out there is absolutely no danger of contagion from the patients. I have known, and I have no doubt that every member of this House has known, cases of families where one member has had this disease, and, one after the other, the other members have contracted it from the patient entirely through ignorance of the proper rules to be observed in such cases. If our homes were guided by the same rules that prevail in sanatoria, there is no reason why this disease should not disappear from our midst. Now, to show that work through sanatoria and in other ways does effect a reduction in the mortality, I may say that, in the year 1891, in the city of London, England, 22 out of every 10,000 of the population died of tuberculosis. They have hospitals for this disease and fight it in other ways. In fact, His Majesty the King, who was given a million dollars to use for charitable purposes, decided that it was best to use it in erecting sanatoria for consumptives. The result of that work has been that, while the death rate in 1891 was 22 per 10,000 of the population, in 1896 it was reduced to 17·3 per 10,000. Not only that, but we find that in the different cities the percentage of deaths from tuberculosis is chiefly in proportion of the work done in attempting to prevent its spread. In 1894, the deaths from tuberculosis per 10,000 of the population were, in St. Petersburg, 44·3 ; Paris, 41·6 ; New York, 24·1 ; Berlin, 22·3 and London, 17·3.

This disease is not only preventable but the researches of medical men within the last few years have shown that it is curable—in fact that it readily yields to

treatment if taken in its early stages. Dr. Brehmer, of Germany, who has had a great deal to do with sanatoria, found, after investigating and reporting on 5,000 cases of tuberculosis, that 50 per cent of the incipient cases were cured, and, even of the moderately advanced cases, 21 per cent were cured. And these figures are borne out by reports of sanatoria in this country and Europe. I find that the reports run from 40 to 60 per cent of cures of cases taken in the early stages. Some people think that climate has a great deal to do with the cure of this disease. Fortunately it is now known that a cure can be effected in any climate, provided the patient is able to be out of doors. The treatment is very simple; it consists almost entirely of sun, fresh-air and good food. The wealthy are able to take care of themselves in this respect. When a member of such a family is taken with the dread disease, means are at hand to afford him proper treatment which will probably effect a cure, but the poorer people of this country are unable to provide for themselves. I am sure that every member of this House knows of cases among the poorer people, where members of a family have died one after another with practically nothing done to help them. I have mentioned these facts about the preventability and curability of tuberculosis simply to show that, if this parliament will take the matter in hand, a great deal of good, beyond all doubt, can be accomplished. As a matter of fact, very little is being done in our great country in this respect. The only sanatorium in this country owned by a province, I believe, is one in Kentville, N.S., with a capacity of eighteen patients. There are several private sanitoria, one in Nova Scotia with a capacity of eight patients, one in Quebec with a capacity of sixteen, and three in Ontario with a total capacity of 210 patients. And I believe that one has lately been started in the Northwest, although I do not know whether it has yet been opened.

It will thus be seen that in the sanatoria which are now open there is room for only 252 patients, while there are 40,000 afflicted with this disease in the Dominion of Canada. The municipalities throughout the Dominion, I am sorry to say, have not done a great deal in the direction of endeavouring to control this disease. Some cities have done something, but on the whole the disease has been allowed to flourish and spread in almost every part of the Dominion. There is no other place where a patient can go but to one of these sanatoria. As for the hospitals, nearly all of them strongly object to admitting consumptive patients. I may mention a very pitiable case that occurred a few years ago in Ottawa at the time of the great fire. The wife of a man who was burned badly was a consumptive, and he himself contracted the disease, as also did their two childern later, as they had no place to go to, but had to remain at home and infect each other. Private charity has not yet been able to cope with this difficulty to any extent.

For the last five years we have had in existence in this country a society called the Canadian Association for the Prevention of Consumption and other forms of tuberculosis, with its headquarters in the city of Ottawa. This association was formed for the purpose of educating the people by disseminating literature and information, and urging on the municipalities and governments the necessity of doing something to stop the ravages of this dread disease. The late Governor General, Lord Minto, was the first honorary president, and took a great deal of interest in furthering its objects. I am happy to say that the present Governor General, Lord Grey, has taken up his work and has become honorary president. I have been a member of the executive since its organization, and am well acquainted with its operations, and believe we have accomplished something. We have a secretary and lecturer, who travels through the country for the purpose of teaching the people the danger of the disease and the methods of preventing it, and we have sent out a great deal of information. Thanks to this government, a sum of $2,000 has been given the last few years annually for the purposes of this association, and I am glad to say on behalf of the association, that we are very grateful for that assistance. Now, the first thing we would like to get done is the establishment of sanatoria. Last spring, at our annual meeting, this question was brought up, and a deputation was appointed to interview the Dominion government and ask for assistance towards the establishment of sanatoria. We asked the federal government to assist the provincial governments in some way to build a sanatorium in each province as an object lesson, which others might follow. Every patient suffering from this disease is now a source of contagion to all about him, and every patient who is taken to a sanatorium becomes thus an agent for the dissemination of information throughout the country, and, through his experience, the people learn what they ought to do in order to cure themselves of the disease and prevent their friends and relatives from taking it. In this way a sanatorium would do a double good, because, in saving the patient himself, it would help to save others.

Now, Sir, it has been said that this subject ought to be dealt with entirely by the provinces. To that argument I may answer that the provinces are unable properly and efficiently to deal wih this evil, it is so widely disseminated throughout the length and breadth of this Dominion. It is to be remembered that there are 30,000 or 40,000 people suffering from it in the Dominion of Canada, although many of them are able to work and move about. In fact, an ordin-

ary observer would not know that many of them had the disease at all. These people move about and spread the disease. It would be impracticable for a provincial government to take up the matter, because it could not draw a line at its own boundaries, and people suffering from this disease in other provinces would drift into the province which was providing for such sufferers. One province could not make rules and regulations to prevent people crossing into it from other provinces It is necessary for the patient to live much out of doors; the weather is so much pleasanter in some sections than in others at this time of year, that the patients naturally move into that section where they can live outside most comfortably. It is manifestly impracticable for the provinces separately to deal with this question, and I believe that they cannot do so efficiently. Now, Sir, I consider that no greater obligation devolves upon this House than to provide some means of lessening this great evil. If we wait for the municipalities and private charities to come to the rescue of these unfortunate people, many of them will die in the meantime, and the disease will go on spreading. I do not say that the Dominion should take this matter up alone, but it should do so jointly with the provinces, and the municipalities must help as well The association asks this parliament to help build sanatoria, as I have already explained, but personally, I believe that the disease will never be properly dealt with until the Dominion government takes full charge of it, under the management of the Director of Public Health and an official staff here in Ottawa. Professor Knopf, who is a specialist in this disease, has said :

> To combat consumption as a disease of the masses successfully, requires the combined action of a wise government, well-trained physicians and an intelligent people.

If as many deaths—8,000 occurred from smallpox or scarlet fever, there would be such a tremendous outcry raised throughout the Dominion, that nothing would be left undone to stop its progress. Now, this disease causes more deaths than small-pox, diphtheria, scarlet fever, measles, typhoid and yellow fever combined; still tuberculosis is a preventable disease, and to a large extent it is a curable one. Now, Mr. Speaker, to come down to material arguments, I may mention that this disease, besides being so fatal to so many thousands, costs the people of this Dominion millions of dollars every year. We are now spending large sums of money on immigration.

In the estimates of this year, page 33, there is a vote of $767,200 for immigration; and whatever difference of opinion there may exist regarding the quality of the immigrants we are bringing to this country, I am sure we will all agree that they are not as good a class of people as our own Canadians living in the country, and if we can lessen the mortality among our own people, caused by this dread disease of tuberculosis, we will be doing our country a far greater benefit than by any expenditure on immigration. It is generally admitted that every productive life is worth a thousand dollars to the country. Well, if you accept that estimate and apply it to the eight thousand people who are dying here of tuberculosis per annum, it means a loss of eight million dollars a year to the Dominion. And when, in addition to this mortality, there are from 30,000 to 40,000 people suffering from tuberculosis who are in a great measure unable to work, that loss is considerably increased. Some authorities estimate the loss arising from this cause much higher than I do, but it seems to me that at least eight million dollars per year must be lost to the country through the inability of these people to work. That makes a total loss of $16,000,000 per annum, caused by the ravages of this fell disease. Would it not then be well for this parliament to give some substantial help to assist in lessening this disease. The saving of half these people would be an immense benefit to the Dominion from a humanitarian as well as from a financial point of view.

The argument has been made, I believe, that this parliament has no power to deal with this question, that the matter of public health is entirely within the jurisdiction of the provinces. True it is that at present the provinces have almost the entire charge of the public health, but I do not find anything in the British North America Act to give them the exclusive charge and prevent the federal authorities taking any action. The matter of public health is not mentioned in any of the exclusive clauses of the British North America Act at all. And in the year 1868, I find that in the first Act providing for the organization of the Department of Agriculture, 31 Vic. chap. 53, it is enacted that public health and quarantine shall be under the control of that department. I find also in chapter 63 of the same year that in clauses 7, 8, 9, 10, and 11 of the Quarantine and Health Act, it is provided that the government may make regulations regarding health. Further my view of the case is confirmed by a memorandum which was written on June 21, 1897, by Mr. John Low who was at that time the technical referee of the Department of Agriculture and who had been for years its deputy head. Mr. Low said :—

> The administration of the subject of public health is joint between the Dominion and the provinces, in virtue of the Act of Confederation.
>
> Until the year 1872, the Quarantine Act contained provisions charging the Department of Agriculture with the administration of public health, and which administration for many years before it had exercised as a bureau, there having been under it a public health

medical board, of which the late Dr. Taché, Deputy Minister of Agriculture, was the secretary.

In 1872, the Minister of Agriculture (the late Hon. J. H. Pope) advised the elimination of the public health clauses from the Quarantine Act, for the reason that he found heavy accounts for public health service were presented to him for payment by the provinces while he had no control in the direction of the service.

But in 1878, notwithstanding this decision, on the return of Sir John A. Macdonald to power, Mr. Pope, who became again Minister of Agriculture, took over, at the very urgent request and representation of Dr. Taché, the subject of leprosy and dealt with it as a part of the administration of his department, and ever since the treatment of leprosy throughout the Dominion and the hospital at Tracadie have been under the control of this government. I find besides a grant made to the Winnipeg and St. Boniface hospitals in our estimates of this year. It seems to me, therefore, that this question of the public health is joint between the Dominion and the provinces and that this parliament has every power to deal with it, particularly in virtue of section 91 of the British North America Act which provides that the federal parliament shall make laws in relation to all maters not assigned exclusively to the legislatures of the provinces.

Allow me, Sir, to briefly summarize the facts which I have brought before this House regarding this disease known throughout the world as the White Plague. It is a disease which carries off at least eight thousand of our people annually. It is a disease which costs this country at least $16,000,000 per annum and inflicts untold misery and woe throughout the land on the families of those whom it carries off. Today, medical science has discovered that to a large extent, if taken in its early stages, it may be cured; and it seems to me that we should not fail to take advantage of this knowledge and the means which medical science has placed at our disposal. There is nothing in the British North America Act to prevent our acting in the matter. Further there is not one of the provinces which is in the slightest degree adverse to our taking action, and in any case it would be criminal on our part to allow this great loss of life and wealth to continue simply because there should happen to be some few purely technical objections to our dealing with the subject. I appeal to this House to pass this motion. I appeal in the name of humanity, in the name of all the unfortunates who are suffering and dying from this disease, and I ask this parliament to take steps to save our people and keep this fair Dominion in the vanguard of civilization.

Mr. T. G. JOHNSTON. I think it my duty, Mr. Speaker, to second this very important motion, but as it is of too great importance to be discussed within the short space of time at the disposal of the House this afternoon, I shall confine my remarks exclusively to expressing the great sympathy I have in the ideas which my hon. friend (Mr. Perley) has expressed and the views he has brought forward. In the hope he has expressed that some action will eventually be taken by this House and government tending towards the repression of this scourge I most cordially join. The loss of life and the loss of money to the state caused by tuberculosis is almost incalculable. The disease may be almost called a social one. There is perhaps not a municipal centre in the Dominion entirely free from it in some form or other, and it certainly is high time that governing bodies should take cognizance of the fact and adopt means for its removal or at least its mitigation. We know that the disease can be prevented if taken in time. We know that if the proper means be taken at the outset, the patient may be cured. But in order that an effective system be put in operation, you require the combined action of an intelligent public, the professional men, and the statesmen. For years our professional men have been attempting to educate the public and have succeeded to some extent. Within the last few years, thanks to the medical profession, there has been great improvement in the knowledge of the public in this matter, and many attempts have been made to grapple with the evil by private individuals impelled by philanthropic motives. With the governments, however, we have not had the same success. They as a rule have given the subject very little attention. In fact the only class of individuals who still remain uneducated is our statesmen, but I am not without hope that in course of time they too will become educated and give to this subject the attention it deserves. I sincerely hope that those in charge of this movement will continue to press their representations upon governing bodies such as this until the governing bodies are thoroughly impressed with the sense of their duty and act accordingly.

Mr. J. W. DANIEL (St. John City). Mr. Speaker, I think the hon. member for Argenteuil (Mr. Perley) who has introduced the subject to us this afternoon is deserving of the thanks of this House and of the people of this country. This is a subject which I think must receive the sympathetic consideration of this government, because I cannot conceive of any government having the interests of the people at heart which by any possibility can throw to one side a matter so important to them as that which has been brought before us this afternoon. The mover of this motion has gone so thoroughly into the matter that it leaves really very little for any one else to bring forward. This subject of tuberculosis has, within the

last few years, been brought so frequently and thoroughly to the notice of the people that the movement is having its effect as is indicated by the attitude now taken by the public at large towards this disease. Having been connected with public health matters for a number of years, it has been a matter of great gratification to me to find within the last few years, people in whose home a death has taken place from consumption sending of their own accord to the board of health and asking them to either go and disinfect the house in which the case was or to give them such directions as would enable it to be thoroughly done. I think this is a matter of great moment as showing that the people are beginning to take an interest in the measures which are necessary to prevent the spread of this disease. The great question for us to consider at the present time is: Can the disease be radicated? For my part, I believe it can, if sufficiently radical means are taken to that end. It will not be the first time in the history of the world that widespread disease has been completely eradicated. Four or five hundred years may be a long time for an individual to look forward to or look backward on, but it is really a comparatively short time in the history of a nation. Some four or five hundred years ago it is calculated that there were no less than 19,000 leper houses in Europe. There were 95 in England alone besides those in Scotland and Ireland. What has become of leprosy in Europe to-day? Do you ever hear of a case? Do you ever see a case? We know very well that leprosy as a disease has entirely disappeared from Europe, including England, Ireland and Scotland. How has that been accomplished? I think there is no doubt in the world that it was accomplished by segregating those afflicted with the disease in houses which were plentifully supplied for that purpose. When we compare those ancient leper houses with the sanatoria to which my hon. friend has referred, we must remember that over the former there must always have been written, if not in actual letters, at least in the imagination, 'Abandon hope all ye who enter here,' while on the other hand if any inscription is written over the doors of these sanatoria it would be one which should give to those entering the greatest hope in the world that they would be cured, certainly relieved; at all events, that they would have some hope upon entering and know that they were not simply going there to die.

Now, Mr. Speaker, it appears to me that there are two points which the government might fairly take into consideration. They may say: What would you advise the government to do? My advice to the government in a case of this kind would be for them to take to their councils those who are expert in this disease, who have made a study of it, who have ascertained what they believe to be the best mode of dealing with it. They should take these people into their councils and act on their advice. My own view of this matter is that there are just two special points for them to consider. The first is a wide dissemination of knowledge all over the Dominion so that the people would have impressed upon them the great necessity there is of observing the rules of sanitation which have been especially prepared in regard to this disease, of putting them in practice and more especially of obtaining an early diagnosis of cases. If Koch's discovery has done one thing more than another that we should be grateful for, it is that it has given bacteriologists an opportunity of diagnosing the disease of tuberculosis even before any symptoms are apparent either of wasting or weakness or indeed any of the symptoms that would be understood or available or could be got at by a physical examination of the chest. If by an early diagnosis of the cases of those people who have sickness accompanied by a cough the presence of the disease can be detected, those people are in the most favourable position imaginable to get a cure. Then, there is the other subject of providing sanatoria. These are the two points, it appears to me, that should be taken into consideration by the government. In regard to the widespread knowledge that is being obtained by the people generally in regard to this matter and especially in connection with the subject of providing sanatoria, I should like to read to the House a short telegram that I read on Saturday night in one of the daily papers:

Tuberculosis Farms.

Cigar Workers' Union has under consideration big scheme for combatting the white plague.

Chicago, Feb. 17.—Tuberculosis farms to be established in different sections of the United States by labour organizations for the treatment of union workers with consumption have been advocated by President George W. Perkins of the Cigarmakers' International Union. The Cigarmakers' Union for a month has had under consideration the establishment of such an institution for the benefit of that organization. By a narrow margin the members voted against a plan submitted. A new plan, now in preparation, probably will be adopted. The new scheme is broadened to include other fraternal unions. Perkins' suggestion is for at least four of the largest unions in the country to join hands. According to the plan, farms would be located in North Carolina, the Adirondack Mountains, in the middle west and on the Pacific coast.

I simply read that extract, Mr. Speaker, to show to what an extent knowledge of and interest in the subject of tuberculosis is spreading over the world at large. There is no doubt, of course, that this is due in in the first place to Koch's great discovery and the practical advantage which the medical profession have taken of that discovery. It is also due, in large degree indeed, to the

great activity with which the press of this country have been popularizing all the knowledge that is to be gained on this subject, and also, Mr. Speaker, to the enthusiasm which is being created by the knowledge of the curability and preventability of this disease, among philanthropic people of both sexes, which has induced them to band together and to give their time, their means, their attention and their labour to do all they can to assist in eradicating this disease.

It might be asked: What benefit have these sanatoria exercised upon the health of the people. I think that the gentleman of whom I have already spoken once or twice, Professor Koch might be considered an authority on that matter. The great decrease that has taken place in the mortality from consumption in this country has been referred to this afternoon by the hon. member (Mr. Perley) who introduced this resolution and to emphasize that I might say that in the old country the mortality from tuberculosis has diminished at least one half since the establishment of these sanatoria there—and it is well known that some of them have been established there for a number of years. This is what Koch testifies with regard to it:

> The only country that boasts a considerable number of special hospitals for tuberculosis patients is England, and there can be no doubt that the diminution of tuberculosis in England, which is much greater than in any other country is very largely attributed to this circumstance.

It is hardly necessary, Sir, in view of the statements that have already been made and in view of the knowledge which we all have to endeavour by any lengthened remarks to induce the government to take up this subject to make them feel that there is no doubt whatever of the benefit which these sanatoria possess, but I certainly take great pleasure in adding my voice to that of the hon. gentlemen who have already spoken, and I hope that the government of this country will take this matter not only into their sympathetic consideration, but within the scope of their most sympathetic action.

Mr. J. B. BLACK (Hants). I shall not inflict upon the House a lecture on tuberculosis, its causes or its treatment; neither shall I take more than a few moments of your time. I would like to say that I consider that the government and parliament even as a matter of national defence should take active steps for the prevention of tuberculosis. If it is considered good statesmanship—and I have no doubt it is—that large sums of money should be spent in bringing immigrants into this country and increasing our population, it must be better statesmanship to save the lives of our own citizens, for I maintain that one good Canadian whose life has been saved is better than a score of Doukhobors.

Some hon. MEMBERS. Hear, hear.

Mr. BLACK. I say nothing against the Doukhobors; I say that one good Canadian, whose life has been saved, is better than a score of Doukhobors. I believe, Mr. Speaker, that as a matter of self defence we should take steps to prevent the spread of tuberculosis. We have a department of agriculture; we give special attention to the prevention of this disease among cattle and why should we not protect the lives of our people? We have every encouragement in making the attempt to defend ourselves against this disease because we have learned so much from the last few years that we can now prevent tuberculosis, we can save lives, and judging from the short past of what may be done in the future we have every encouragement to hope that if proper steps are taken we shall accomplish a very great deal for the benefit of the state, for the benefit of this Dominion, in adopting some organized plans for the prevention of the disease. We all know that it is preventable; we all know now that in its earlier stages, it is curable. We know that if knowledge were spread among the people many lives could be spared.

There are, I believe, somewhere about half a million people in this Dominion affected with tuberculosis. The percentage of deaths has been enormous, but with the knowledge we have gained in the last few years of its prevention and treatment the percentage of deaths is growing smaller every year, which is a great encouragement for us to go on to the prevention of this disease. We know now that nobody can have tuberculosis unless they catch it just as no one can have small-pox unless they catch it. The people do not know how to escape the contagion as they should and I think it is the duty of this country to have the people instructed. It seems to be the general idea that sanatoria are the only means for the proper cure of this disease and for its prevention, but how is the poor man going to get into the sanitorium? I am very glad to say that my own province has taken a wise step and that a wise and a generous government there has built a provincial sanatorium. It is a good one and well equipped and I would say all credit to the government of Nova Scotia for having established it. But, Mr. Speaker, there are thousands of people, thousands of the poor, the workingmen, suffering and dying from this disease who have neither the opportunity nor the means of getting into the sanatoria, and the saddest part of all in these deaths from tuberculosis is that it is not the old, whose lives have been worn out for their families and for the State, but it is the lives of the young whose continued existence would be a benefit to the State and to their families—these are the classes that are going most rapidly from this disease. I was saying that the idea seems to prevail

that sanatoria scattered through the Dominion would be the only possible method of preventing the spread of this disease. But, Mr. Speaker, I think it is the duty of the government of this country to have the people instructed. The causes and treatment of tuberculosis are so easily explained —for we depend little on drugs, medicines and prescriptions for its cure— that plain language and plain teaching such as the common people can understand is all that is necessary to instruct the people how to avoid the contagion of the disease. I believe the first public pamphlet for the instruction of the people was issued by my late reverred friend Dr. Farrell, of Halifax, who was the delegate of the government of Canada to the first tuberculosis conference at Berlin. That pamphlet of that able gentleman was written in such simple language that even the ignorant might understand it. That is the class of literature which I think should be published all over the Dominion. Further, I think instruction on the subject should be given in the public schools and lecturers should be sent throughout the country. The knowledge of the disease is so easy to teach and understand that the people, even the most ignorant, may be instructed so effectually that they will be able to take such steps as are necessary to prevent their children catching it. For, as I said before, the disease is not inherited, it is not transmitted, but it is caught. Of course, there are many of us with broad shoulders and deep chests who will never be injured by it, but the child born of tubercular parents, with sloping shoulders and narrow chest, while he may not have the disease, has the ground in which it is easily cultivated. Such are the people whom it is our duty to teach how to avoid contracting the disease. I think, Mr. Speaker, that the time has come when we should have a bureau of public health, when steps should be taken, not only for the planting all over this Dominion of sanatoria, but of other modes of teaching the people how to escape this disease. The prospect of accomplishing good in this respect is excellent. We have done so much in a very short time since we became acquainted with the cause and cure of this disease, that I think the time is now ripe for taking steps to teach the people throughout the Dominion how it can be avoided and how it can be cured.

Mr. T. S. SPROULE (East Grey). Mr. Speaker, I would have said nothing on this question but that my silence might have been misconstrued as a want of interest for suffering humanity or in the subject under discussion. In my judgment, the hon. member for Argenteuil (Mr. Perley) is entitled to the thanks not only of this House, but of the people of this country for the sympathetic way in which he has taken up this question, the philanthropic spirit which he has displayed and the able manner in which he has presented it to the House. We have too few people in the country to take an interest in this movement and give it that substantial aid which it must have if it is to be a success; and those individuals, one here and one there, who do take hold of it, as the hon. member has done, are entitled to the thanks of the people of this country. We have had this question before the House during my time, in the last quarter of a century, some four or five times. It has been discussed at great length, and the members of this House have shown a commendable desire to take it up in a practical way, but we have invariably been confronted with the contention that it is not within our jurisdiction to deal with the subject of public health—that the only matters relating to public health which the British North America Act places under the exclusive jurisdiction of the Parliament of Canada are defined in clause 11 to be : quarantine and the establishment and maintenance of marine hospitals, and, therefore, whatever we do in this respect must be be done along these lines. But it has always been a mystery to me why we should not take up this question jointly with the provinces and apply to the Imperial Parliament for an amendment to the British North America Act that would give the Dominion Parliament power to deal with it, if not exclusively, at least conjointly with the provinces. In that way some substantial good might be accomplished, a great deal more than is accomplished at the present time. We are also confronted with the next clause of the Act, which assigns to the provinces the establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the provinces, other than marine hospitals. So that the provinces have assigned to them the subject of public health. But it has always been curious to me that this parliament seems to have a greater interest in the health of brute creation than that of the human being. In the exercise of our power over quarantine, we made a law a few years ago to prevent the importation of tuberculosis. Under that law we would not allow a farmer to bring into Canada an animal which the tubercular test indicated to be affected by tuberculosis—the animal must be slaughtered. In the human being the bacteriological test enables us to detect it in the early stages. Why do we not apply it to immigrants coming in who show signs of disease—and refuse them admission into our country ? But we allow all classes of immigrants to come in without being subjected to any tubercular test, and we know, from the statistics gathered in Toronto, Montreal, Calgary, Vancouver and elsewhere, that many of these immigrants have been in the incipient stages of tuberculosis, and have had to go to the hospital shortly after their arrival. We do not examine them as we do the animals. I never could understand why that is so, and why we do not to that extent exercise the power we have in regard to quarantine. The result is that we

are importing the disease as well as allowing it to develop in the country; we are not doing all that we could in the interest of humanity. One reason why even more interest should be taken in this question to-day than was done a few years ago is that whereas it was formerly believed that tuberculosis was practically incurable, to-day the bacteriologist can tell from an examination of the sputa whether the tubercular bacillus is present or not in the early stages of the disease, which puts it within our power to cure a large percentage of the cases which could not a few years ago be cured.

No attempt was formerly made to affect a cure because the disease was not detected until too late, but at present it can be detected so readily that thousands of cases are cured in the incipient stages.

We are asked can we not do something. I think we can do a great deal. The hon. gentleman who preceded me said that we required greater education in the matter. Well, we can have that educational work done and there is nothing to prevent this government from undertaking to have it done. We can give the financial assistance required. We have the money and we have the power to spend it for that purpose. We can vote subsidies for the purpose of keeping up these sanatoria which are established and helping to establish others. One of the drawbacks which philanthropists have to contend with, in their efforts to do something for humanity, is the lack of the necessary financial assistance. We are not doing what we can. There can be no doubt that there is a large field in which we can act. There can be no doubt that there is an increasing need from year to year of means for the cure of these unfortunates who become afflicted with this disease. That need is increasing rapidly in many portions of the country despite the fact that if these unfortunates were only surrounded by favourable conditions the greater proportion of them would be cured. To prevent the spread of the disease is a work the importance of which is second to none. One individual will infect a whole family. I have seen six seven and eight members of a family one after another, dying in succession from the same disease. Why did they die? Not because of some inherent constitutional defects, but because the infection was transmitted from one to another, because they were living under the same conditions, in the same houses, and had not been removed to healthy surroundings. They died simply because they did not get proper care and attention. Cases have come under my own observation in which three or four members of the one family have died, and the rest who were taken away entirely and put under favourable conditions were not attacked at all. That being the case, this disease being so well known for its contagious character, it is our bounden duty to make every effort to prevent its spreading. I think, therefore, this parliament should take the matter up. There are certain lines in which we have the power to act. Why do we not have the turbercular tests applied to every immigrant that shows signs of weakness, so as to ascertain whether he is afflicted with tuberculosis or not; and if he is, he should not be allowed to land. Those who are in the country and are affected we should have put in an isolated hospital from which the contagion cannot spread. Why have we not quarantine regulations which would prevent people infected with this disease crossing into this country from the United States? Many of them are brought home here to die and no restraint is put upon their coming. We should go further. We should hold a conference between the federal parliament and the provincial legislature and apply to the Imperial parliament for an amendment to the British North America Act which will give us the right jointly or separately to deal with this most important subject. What is wanted is favourable conditions for those afflicted—plenty fresh air and good healthy diet. How is it that Indians, when they come under the conditions of civilization, perish in such a large number from the ravages of consumption, and yet in their nomadic condition are almost entirely free from it. It is because that when living in their wigwams they have plenty of fresh air. While their food is of the worst description, still the healthy conditions under which they lived kept them in perfect health. But let them come under the conditions of advanced civilization, let them live in warm sealed up houses, small rooms and general unsanitary conditions, and they very soon succumb to the ravages of consumption. This should be a lesson to us. It certainly appeals to medical men but it may not appeal with the same force to other members of the community. As a medical man I desire to emphasize the opinion that we are not doing all we can, that we are not working along the lines on which we have authority to work and are consequently not doing our duty to suffering humanity.

Mr. M. S. SCHELL. As a friend for many years of Professor Robertson, he requested me, when this question came up, to say a few words on it. While I am only a layman, and consequently not as well qualified to discuss it as are our medical friends and some others who are giving the question greater consideration and thought, yet its importance is such that I feel impelled to take some part in it. Those of us who have kept at all in touch with the current literature of the day on this subject, must be convinced that it is high time we should, as a united people, take some decided and decisive action in the way of attempting to check the spread of this disease. For many years there has been a considerable amount of educational work going on both in the provinces and the Dominion. A considerable amount of literature has been distri-

buted and with good effect, for in various parts of the province of Ontario we find our health boards, municipal councils and county councils, taking action in the matter, thus showing that this educational work is making an impression on their minds. Take the county council of the county of Oxford, a part of which county I have the honour to represent, I noticed a few days ago in one of the papers that the said council had granted $300 for the support of the sanatorium at Gravenhurst.

In consideration of this grant, the county of Oxford will have the privilege of sending a certain number of persons to the sanatorium for treatment. I noticed a few days ago that an association had been formed in the city of Brantford to deal with this matter. And I notice that the subject has been taken up in Peterborough, and that it is proposed to establish there a sanatorium. Other instances might be given to show that the educational work that has been going on for the last three or four years has made an impression upon the minds and consciences of the people of this province.

Our attention has been called to the scientific aspect of this question. This, perhaps, is not the place to enter into a discussion of the question from a technical or scientific standpoint. But when we can consider the widespread effect and fearful ravages of this disease among our people it becomes our duty as far as possible to stem its tide. This Dominion is not peculiar as a place where tuberculosis has a foothold. We find that in European countries it is even more virulent. Russia, Austria, Germany and other countries have a larger percentage of deaths from this disease than we have. The loss through this disease is less in England than with us, being about 1,500 per million of the population, while in some of the other countries I have named it goes as high as 3,000 per million of the population. In the United States we find that the deaths resulting from this disease are in the neighbourhood of 100,000 per annum. I find in a newspaper published on February 4th a summary of the report of the New York State Board of Health, showing the mortality from various causes in that state. From tuberculosis, in its various forms, the deaths last year were 14,000. I do not doubt that these statistics were carefully prepared, and that they are to be relied upon. The number of deaths from this disease in the Dominion of Canada has already been stated—some 8,000, it is estimated, is our annual death rate from this cause. The number of our people who are supposed to be afflicted with this disease has also been added here as 40,000. I suppose these data are correct. Looking into this subject we find that where the establishment of sanatoria has been carried on with earnestness the reduction of deaths from this disease has been from 35 to 50 per cent. Where patients have been taken into these sanatoria in the initial stages of the disease, the cures are as high as 75 per cent. And, even taking the patients promiscuously, of all ages and all classes, we find that from 30 to 40 per cent of cures have been effected. With these facts before us, I think it is incumbent upon us as a parliament, if it is within our province, to make our influence felt upon the subject. I do not know whether we can properly deal with this subject in a financial way. If we may, then we should show, in a practical way, our appreciation of the efforts that have been made to prevent the spread of this disease. If that is not within our province, perhaps we might assist by the dissemination of literature or otherwise, as the wisdom of this parliament may deem best. In any case, the question is one which may well engage the attention of the government and parliament of Canada. Whether the government deals with it or not, the discussion of this subject in this House from this high vantage ground overlooking, as it were, this whole Dominion from ocean to ocean, cannot fail to have a good effect upon the people at large. Through the medium of the press, which is so largely represented in this House, the discussion here will have wide educational results. I believe, further, that the consensus of opinion in this House is that something tangible ought to be done in this matter. This is not a political question. Both sides of the House can take equal part in the discussion without being considered partisan and without reflecting upon or criticising one side or the other. I trust the question will be approached by the government as a non-partisan question, and one to be dealt with simply in the interest of the people at large. If it is true that we can save the lives of at least 4,000 of our people annually—and we are led to believe that this is the case—what a triumph that will be. We know that economic authorities place the value of a human life to the state at from $1,000 to $1,500. It is easy to see the financial gain that will come to the Dominion if we can effect this saving of life. And so, even if we leave out of sight the higher considerations, the sympathetic and humanitarian considerations, and regard the subject from the lowest standpoint of mere economic gain, the country will be well repaid for taking action in this matter. But I appeal to this House from the standpoint of sympathy, from the humanitarian standpoint, to try, so far as lies within the province of this parliament, to alleviate present suffering and assist the authorities and the private individuals who are working to put down this disease. I thank you, Mr. Speaker, and the members of this House for the kind hearing you have given me.

Mr. W. J. ROCHE (Marquette). The subject matter of the motion of the hon. member for Argenteuil (Mr. Perley) is one of very great importance to the members of

this House and to the people of Canada as a whole. The question of our public health is one which should engage the interest and attention of every representative of the people. In the past, in this House, we have frequently indulged in what appeared to be somewhat useless discussions of questions of minor importance and, apparently, begrudged neither the time nor the space in 'Hansard' necessary to lay our views before the country. The government of the day has evinced a desire in the past to spare neither time, energy nor expense in the enactment of certain legislation of much less importance than the protection of the health of the population of Canada. As has been stated here to-day, tuberculosis was at one time regarded as essentially an hereditary and incurable disease. But modern investigation has proved that, though contagious, it is a preventable disease, and the work of stamping it out is receiving the active sympathy and support of the government and people of almost every civilized country in the world.

This being the case, and since we have learned the nature of the disease, and especially when we have knowledge in our possession as to the means of grappling with it properly, it is the duty of any country to adopt every means and to devise every plan possible in order to prevent its ravages among the inhabitants of our common country. We are spending, as has been mentioned by an hon. member to-day, in round numbers this last year or two, $700,000 or $800,000 yearly for the purpose of bringing immigrants to our shores. Many of them are from foreign countries where this disease abounds, and some of them were coming here who have actually died while on their journey. Many of them have succumbed during their first year of residence in our country. Owing to this large addition to our population annually it is apparent to any person—it is not necessary to be a professional man, for even a layman can understand that this danger will increase in the future with this largely increased addition to our population from year to year, particularly if we do not adopt proper measures to grapple with it and restrict it in its ravages. It has been mentioned here this afternoon that there are from 30,000 to 40,000 of our population annually who are infected with tuberculosis bacilli, who are practically invalided, and when so large a number as that are placed practically out of business and on the sick list, what will be the dire results if sufficient methods are not taken to protect our people from it, not only in this generation but in future generations?

The Department of Agriculture has been spending during the past year, as has been stated by the hon. member for East Grey (Mr. Sproule), from $25,000 to $30,000 per annum—for what purpose? For the purpose of restricting, and curtailing, and attempting to stamp out bovine tuberculosis, and I believe that about two or two and a half per cent of our cattle have been afflicted with that disease, and the result therefrom has been practically nil. When this has been the result of our government action in looking after our cattle, is it not of vastly more consequence that our people should be protected against the ravages of this dire plague? If nearly one-half of the annual increase to our population—practically this last year about one-third of our annual immigration to this country—is required to replace those who are placed upon the sick list, those who are invalided through the tuberculosis bacilli in our country, it is evident that we have been making a very large waste of public money, especially when we have the means at our disposal, when by wise and judicious expenditure of money amongst our own people, we can effect so vast a saving in human life and thereby prevent the introduction of this disease. We have our experimental farms—for what purpose? For the purpose of carrying on experimentations, to give our agriculturists the benefit of those experiments and teach them the most modern methods of farming. We have our farmers' institutes where our agriculturists commingle and interchange their views as to the best methods of farming. These institutes are addressed by lecturers sent out by the central government, who are experts in their particular line, and who teach our farmers and educate them as to the best means of looking after their stock, their lands, their crops, their grains, &c. Now when this is the case in regard to our stock and lands, is it not of much more consequence to look after our human beings? It is true that much has been done and much is being done by the medical men of our country in carrying on an educational campaign by means of their medical associations and public discussions, their medical journals for the dissemination of literature among the people, endeavouring by such means to secure the co-operation of the public, educating the public to co-operate with the profession for the adoption of the best methods to stamp out and eradicate this disease. Not only that, but we have our own provincial governments and boards of health who are also carrying on an educational campaign, and they cannot fail to prove very beneficial in the near future. The hon. member for Argenteuil (Mr. Perley) has referred to-day to the central association in the city of Ottawa that has been presided over by the ex-Governor General, Lord Minto, and that the hon. member is a member of the executive committee himself. This central association has been very useful in publishing its proceedings through the press of the country. And I may say here that the press of our country is a powerful lever in disseminating useful information; at the same time I think with all due deference to the press, that they have not been doing their full duty, and if they had given in the past as much of their

space to urging the public and teaching them the best methods of protecting themselves against the ravages of this disease as they have to advertisements of quack nostrums that have been deleterious to the public health, they would have been discharging more fully their duty. However, let justice be done where justice is due. It is necessary to say that they have evinced a desire lately, by the publication of the reports of the central association, to make amends in this regard. We have our provincial associations that are acting in concert with the central association. These associations are carrying on a very good work and cannot fail to be productive of great benefit. We have our sanatoria some of them under the direction of private individuals, some under provincial jurisdiction. These are doing a valuable work. But still very much remains to be done that cannot be done successfully, except by the central government, and in order to grapple sucessfully with this great plague we must have the assistance of the central government in our efforts to eradicate it.

It has been argued that the question of public health is one that belongs solely to provincial jurisdiction, but I think that argument should not have much weight when we are dealing with a question of such national magnitude. We have had this question of provincial rights raised on many questions in the past, but on a question of such great national importance affecting the public health in every portion of the Dominon, there is no reason why there should not be concerted action, why there should not be united action between the Dominion, provincial and municipal authorities. We have had introduced in this session a Census Bill, some of whose provisions have not been drafted with that due regard, with that excessive regard for provincial rights that has characterized the arguments of those who appear to be so jealous of them. We have this government appointing officers to look after infectious diseases of our stock in one of the provinces, notably in Manitoba where there is a division of authority by means of which this Dominion is doing a share in looking after the health of the animals in that province. In many other matters there has been united action and mutual understanding by means of which duties are assigned some to the provincial and some to the Dominion jurisdiction. Now the time may not have arrived when we should have in this country a distinct and separate department of public health, or a minister in the cabinet holding a portfolio of public health. I know that in some of the older settled countries where the population is more dense, and where the urban population is much larger, extending into the millions, notably in France and some other European countries, they have a separate portfolio of the government called the portfolio of public health. Possibly in this new country the population is yet too sparse for that, yet I think the time has already arrived when we should have a central bureau of public health, working in connection with one of the existing departments; possibly the Agriculture Department, owing to the nature of its duties, would be better fitted to take up this work. If such a branch was established in connection with one of the existing departments under the charge of officers thoroughly competent and selected because of their ability and expert knowledge, not because of political service, we would have the nucleus of a very valuable source of information to the public that would prove of great benefit in stamping out contagious diseases. Another necessary adjunct to this department would be a public laboratory where experiments could be carried on, the results of which would be printed and published and circulated, not only amongst the profession, but also amongst the laity.

We should then, in my opinion, have a public laboratory where we could have experiments carried on and have the results printed and published not only for the benefit of the medical profession but also for that of the laymen. Not only that, but, in connection with this laboratory, we should manufacture our own serums, our tuberculine serum, our prophylactic serum and our anti-toxines. I think it is humilating that a proud young country like Canada should be dependent on the United States and on European countries for these serums that we should make in our own country. There is the ability if it were only given a chance. There are young men in our country who are only awaiting an opportunity of developing that latent talent which opportunity they have not at the present time. We have all the elements that go to make up a strong Canadian nationality. Our climate is conducive to the protection of vigorous and stalwart men. Why should our young men not have an opportunity of discovering some of those drugs that have worked such great cures in recent years ? Why should we not give them an opportunity of making for themselves reputations not only national but world wide in their character and of reflecting credit upon themselves as well as upon the country that has given them birth ? We should also have a system of sanitary police working in connection with the provincial boards of health. We have a large number of people coming from other countries and bringing into this country their rather crude habits. A system of sanitary police, established under the jurisdiction of this parliament and working in harmony with the boards of health would be of incalculable benefit not only in connection with those at present here but also those who are coming to our shores. We should insist upon a rigid inspection of our immigrants before their embarkation for this country. I understand that within the last

year or two there has been a rather cursory examination of our immigrants before they leave, but in connection with this particular disease I do not think there has been so rigid an inspection as there should have been. Not only the government but the profession at large have been a little too apathetic on the question of this disease. We should not allow people to go to the trouble and expense of coming to Canada when they are likely to be deported again because they cannot comply with the immigration laws which I hope will be more rigid in the future. If we had a rigid inspection before they left their own country it would save them the expense of coming to this country. Immigrants' effects brought into this country should be put through a course of disinfection. All medical men know that a great deal of disease is introduced by this means, and if we had a rigid disinfection of settlers' effects we would put out of play one of the means through which that disease is often times introduced. In fact, there is a wide field of usefulness for this government in connection with the stamping out of this disease, and I trust it will rise equal to the occasion and adopt some means that will establish for Canada the reputation in this matter of keeping abreast of the progressive spirit of the age.

Mr. F. L. SCHAFFNER (Souris). Mr. Speaker, I shall not attempt to speak very long on this question, but I feel that it is my duty to express my opinion upon it. I regret very much to-day that all of the ministers of the Crown are not present. I also regret that every hon. member of the House is not here to listen to this very interesting discussion on one of the most important questions that is before the people of Canada to-day. Now, I take exception to one of the remarks made by my hon. friend from Hants (Mr. Black). Speaking of the importance not only of bringing people into the country but of saving the people who are already in the country he said that one good Canadian was worth twenty Doukhobors, and I think I must have misunderstood him when he said one hundred Englishmen. An hon. member beside me says that it must have been one hundred Indians. If that were so it would save me making a few more remarks, and it would save the feelings of some of my hon. friends behind me. I am only going to refer to two phases of this subject. Although this is a subject that may come more particularly within the province of the medical profession, I am glad that it has been introduced by my hon. friend from Argenteuil (Mr. Perley), a layman and I am glad that a layman on the other side of the House has seen fit to speak upon this question. The medical profession are entirely in accord in regard to the measures that should be taken in the treatment of consumption. I use the word consumption because that is the term which is more generally understood. I would like the galleries and the pressmen to note what has been said on this question to-day as evidencing the great interest we take in it, and also because of the need there is of having the facts widely disseminated throughout the country. One of the phases of this subject to which I wish to refer is the educational value of the movement which has been carried on. The tendency at one time when a sanatorium was about to be established in any part of this country or in any other country was for people resident in the neighbourhood to dread that it should be placed in their midst. Experience has shown that this dread has been entirely overcome and that the people are now glad to have such an institution right in their midst because it has been proven beyond a doubt that the educational value of the institution is such that people become early educated in reference to taking care of the sputa and other things in connection with this disease, and the result is that those within the radius of the institution are safer than those outside of it. We have had that experience in Manitoba. Being a member of the provincial board of health, we have, during the last two years, taken up the question of providing a sanatorium for the province. The people are taking an interest in it. One means we took of finding out as to whether the people were interested or not was to ask them to subscribe. I think that is one of the best ways of ascertaining whether a man is interested or not. If he is willing to go down in his pocket he is certainly interested. Before going to the provincial government to ask them to give us a grant we thought we would interview the people, and the way to reach the people is through their municipal councils. We sent out a circular to every municipality in Manitoba and eighty per cent of those municipalities, without any very strong influence being brought to bear upon them, have returned subscriptions of all the way from $25 to $100, and have said in addition to that, something that pleased us more than all, that this was only the beginning of what they were willing to give. They indicated in that way their belief that the idea of a sanatorium was right and they said that they were willing to give their money in support of it. I hope the hon. Minister of Militia (Sir Frederick Borden) who is a medical man is paying some attention to me at least, as down in the province of Nova Scotia they have established the only provincial sanatorium there is in the Dominion of Canada. I do not want to take up the time of the House any longer, but I hope that the government and the people will appreciate the very great importance of this question of establishing sanatoria in this Dominion.

Hon. SYDNEY FISHER (Minister of Agriculture). Mr. Speaker, I feel that the appeal of the hon. member for Argenteuil (Mr. Perley) is one that this House ought not

to refuse. He has put a case that appeals to the sympathies of everybody—sympathy for those in affliction, for those who are suffering, for those who cannot help themselves,—and it is an appeal which every hon. member of this House must naturally feel he would like to respond to. But, Canada, has adopted its constitution allotting certain work to the provinces and certain work to the Dominion parliament and government to perform. It happens that in connection with public health certain well defined work is allotted to the provinces and certain other well defined work is allotted to the Dominion powers. To the Dominion is given, by the British North America Act, the establishment and maintenance of quarantine and the establishment and maintenance of marine hospitals, while to the provincial authorities is given equally clearly and equally definitely the establishment, maintenance and management of hospitals, asylums, charities, eleemosynary institutions in and for the province, other than marine hospitals. At the time that these respective works were committed to the respective authorities there is no doubt that the general question was considered, and while it was thoroughly understood that certain parts of hygienic work should be done by the Dominion and certain others by the provinces, we can only believe that the question was examined in order to find which definite piece of work could be done more properly, more beneficially and more effectively by the authority into whose hands it was given. We can quite understand and appreciate that quarantine work comes more properly within the purview of the government of the whole country.

Mr. W. F. MACLEAN. Does the hon. gentleman mean that as purely frontier work ?

Mr. FISHER. Quarantine work as understood in the British North America Act, I think, applies to frontier quarantine. It will be necessary for the central Dominion authority to deal with work of that kind. As marine, and trade and commerce are also given into the power of the central government, it was quite natural that marine hospitals should also be given into the control of the Dominion government.

Mr. R. L. BORDEN. The hon. gentleman (Mr. Fisher) does not suggest that by reason of the words which he has quoted from the British North America Act this parliament might not have power to deal with the question of sanatoria throughout the Dominion ?

Mr. FISHER. No, what I meant to imply is that there is certain work which is definitely and clearly allotted to the provinces, and I was going on to point out that I think where this is the case, it is undesirable and would not be politic for the Dominion parliament to undertake that work. I would not go so far as to say that perhaps we might not have power to do that work ; that is a legal point in connection with the interpretation of the British North America Act on which I would not undertake to give an opinion, but at the same time I say—and I think that in this I am in the judgment of a majority of the people—that where, under the British North America Act, any particular piece of administration is definitely and clearly assigned to one or other of the powers, that is to the Dominion or to the provinces, it is well that it should be left to the power to which it is thus assigned. I say that in general terms. Most of the gentlemen who have spoken have discussed this question in general terms. I have understood, however, from the hon. member who introduced the question and from various discussions that have been held, that at the present moment there is a decided desire on the part of many whose sympathies are aroused on the question of tuberculosis and who have been strongly appealed to to aid in the prevention of this disease, a desire that the Dominion government should vote a sum for some one or more sanatoria. I venture to say that I think that would be inadvisable, and I do not think that this House ought to adopt any motion or resolution which would pledge it to that, that is to say, would pledge it to something which is practically for the establishment and maintenance and management of a hospital or an asylum or a charity for the purpose of tuberculosis any more than for any other disease. If this resolution were to be supposed to indicate an instruction to the government to do that I would feel it to be my duty to vote against it and to ask the House to reject it. But I grant fully that there is a very large work which can be done from a hygienic point of view outside of and altogether apart from sanatoria or hospital treatment. This government had the honour a few years ago of asking parliament to grant a small sum in aid of the Canadian Association for the prevention of tuberculosis. That grant has been renewed, I think, now twice, and in the estimates which are before the House for the coming year, we again ask for that grant. Several gentlemen have spoken about the spread of information and the gathering of information ; that grant has been devoted largely to that purpose. Without in any way wishing to take any credit, I think I may say that although the government has done so much for the purpose of spreading information and of drawing the attention of the people of Canada to the facts in regard to this dread disease, to the possibilities of preventing its spread, with a desire to rivet the attention of the people of the country everywhere on it and on what can be done to prevent its spread, till it may be that it will be wise, when we find a way to utilize the money, to increase that grant. That, I think, would

be quite within the purview of this parliament and it would be quite right for the government to do it, but I would point out that up to the present time no scheme has been put forward by those who are interested and who form this association which they could lay before the government or before parliament to indicate in what way such work as that might be improved, extended or rendered more effective. Speaking personally, I would be very glad indeed if such information could be given. It is quite possible that the association for preventing the spread of tuberculosis may be able to provide that information. The government would have to examine and investigate any scheme that was put forward and would have to take the responsibility of saying whether they would aid it financially. It would be impossible, I think, for me or any other member of the government to decide or to say what we ought to do or what we could do until some detail of a scheme of the kind were laid before parliament and before the government, but we think that it would be in the interest of the people at large that those who are to-day giving their attention to this work should turn their attention most particularly to devising something which might be done under the authority and through the intervention of this parliament, which would not in any way invade or overlap the authority and the work which ought to be done by the provincial authorities. I think that we should find some scheme which we could carry out without doing that, and I believe that the attention and the thought of those who are in earnest in this work—as many of the leading men of the country are—should be directed in the direction I have indicated, and that the question of the establishment and maintenance of sanatoria should be left to the provincial authorities in whom apparently it is very clearly indicated by the British North America Act they ought to be vested. Now, it happens that the province of Nova Scotia has taken a step. If that province has done it, there is no reason that I can see why the other provinces should not do the same, and I think it is better that it should be left to them.

I will allude briefly to one or two of the reasons which have been given by hon. gentlemen why we should take this matter up. The leper lazaretto has been mentioned. It is true that has been administered by and on behalf of the Dominion government and parliament. That is being done under a definite and distinct arrangement entered into between the Dominion government and the government of the province of New Brunswick, which at the time was managing that institution. I have not under my hand at the moment the exact date of that arrangement, but I think it was in the year 1872.

Mr. SPROULE. Why could you not make such a distinct and definite agreement with each province in regard to every other disease?

Mr. FISHER. I do not say that we could not, but as a matter of policy I think it better to leave the provinces the establishment of sanitoria. The question of animal tuberculosis has been brought forward. I would point out to my hon. friends that there are no clear or definite instructions as to the health of animals. That is left entirely open. It may be attended to either by the provinces or by the Dominion. As a matter of fact, our experience is that part of it is attended to by the provinces and part by the Dominion. But there is no such clear, defined line with regard to that as there is with regard to the establishment of sanataria for human beings. My hon. friend from East Grey (Mr. Sproule) spoke of testing for tuberculosis animals. It is true, we can very easily test animals, but we would find great difficulty in testing human beings. As a matter of fact, while the tubercular test is as applicable to human beings as it is to animals, I think I am correct in saying that no country has yet applied that test to human beings.

Mr. SPROULE. But you have the bacteriological test of the sputa.

Mr. FISHER. The tubercular test is the one the hon. gentleman was referring to, and is the only one applied to animals. I do not think it would be advisable to employ this test on human beings, either immigrants or others. While I understand from experts on this question that the test is used to a certain extent in hospitals, where the patients are willing, it has never been used except to that limited extent. I sympathize very much indeed with those who are interested in this question. I feel that it is one which we ought to do everything we possibly can to solve. I am glad to know that a great deal has been done already, through the efforts of private individuals, and that to-day, in consequence of the information that has been spread by various agencies throughout the country in regard to the ways in which the spread of tuberculosis may be prevented and the way in which those already afflicted may be treated, the disease is becoming less dangerous and will probably in the near future become very much less widespread. If we can devise any scheme by which the Dominion parliament can, in the proper exercise of the functions allotted to it, do something more than it has already done in this direction, I, personally shall be very glad, and when such a scheme is brought forward, I think it would be well for the House to take it up and deal with it on its merits. With these observations, I am very glad indeed to support the motion of the hon. member for Argenteuil (Mr. Perley) and to express my gratification that the question has been

brought before the House in the way which it has.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. R. L. BORDEN. I do not rise, Mr. Speaker, for the purpose of addressing myself at any length to the practical aspect of the question which has been brought to the attention of the House, and which has been placed so forcibly before the House and the country by gentlemen who have spoken on this subject. I think the House is indebted to the hon. member for Argenteuil (Mr. Perley) for bringing the matter to the attention of the country, and for the very able and forcible way in which he has presented the subject. The same is true of my hon. friend from Lambton (Mr. T. G. Johnston), who seconded the motion. The members of the medical profession have demonstrated the very great importance of the matter. I am thoroughly satisfied that if this House were composed for the main part of members of the medical profession, such pressure would be at once brought to bear upon the government as would result in prompt and effective action. There is no doubt whatever that the question is a very serious one to the people of Canada. The hon. gentleman who introduced the subject tells us, and tells us upon good authority, that this disease results in the death of about 8,000 of our people every year—more than twice as many as the number of men we sent to South Africa three or four years ago, and about four times or, perhaps, five times as many as the entire permanent military force we maintain, including the Northwest Mounted Police. If there is any means by which parliament can minimize, or altogether stop, this scourge, it seems highly desirable that we should use it. My hon. friend the Minister of Agriculture (Mr. Fisher) stated that the gentlemen interested in this question have placed no practical scheme before the House and the country. It seems to me that, if parliament has the power to deal with this question—and I think I shall be able to demonstrate, in a very few words, that it has—it is not for the government to sit idle on the treasury benches and wait for individual enterprise to place before them some scheme for dealing with this question ; but there is a duty and a responsibility placed upon the government themselves to take up this matter and deal with it promptly and in an effective way. The Minister of Agriculture seems to think that the government is in some way absolved from the duty of taking action in the matter, that they may sit silent and inactive for twenty or thirty years, perhaps, waiting for individuals to do that which the government ought to do. I do not take that view of the matter, unless it can be demonstrated that this government and this parliament have no right, and therefore no duty, to interfere. The Minister of Agriculture spoke of a section of the British North America Act—section 92. Well, that does not interfere at all with action by this parliament. In the first place, let me point out the resolution moved by my hon. friend from Argenteuil does not name the establishment of sanatoria. It is very simple and very general and, at the same time, very comprehensive :

> That in the opinion of this House the time has arrived when parliament should take some active steps to lessen the widespread suffering and the great mortality among the people of Canada, caused by the various forms of tuberculosis.

Should the resolution be adopted by this House, it would be simply a request or, if you like, a direction to the government to seek out the remedy which best would abate this scourge, and which would be within the jurisdiction of this parliament. The clause of the British North America Act which the Minister of Agriculture called attention to was subsection 7 of section 92. This subsection gives, as one of the subjects confided to the exclusive jurisdiction of the legislatures of the provinces :

> The establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals.

Now, even if the view which the Minister of Agriculture seems inclined to take were the correct view, we could act in this matter in any one of three ways. The Dominion authority could gather information and diffuse literature on this subject. It could create a criminal jurisprudence in connection with the subject, if it thought fit or necessary ; or, as has been well pointed out by more than one member of the House in this debate, it could give financial aid. The Minister of Agriculture does not seem to realize how much this parliament and this government have aided matters which are of purely provincial interest, if you look merely at the scope of the British North America Act. For example, the Minister of Agriculture says it is not desirable for parliament to interfere by granting financial aid in connection with work to be done by the provinces, that it would be better, as I understood him, to leave such matters entirely to the jurisdiction of the provincial legislatures. Does not the Minister of Agriculture remember that, during the past eight years, as well as before that time, we have interfered by assisting local enterprises in the shape of provincial railways, which are as much subject to the jurisdiction of the provinces as the establishment of sanatoria for the purpose of abating the ravages of this consumption. Almost every session since 1896 we have had aid granted by the parliament of Canada to local railways, provincial railways, which have not been declared works for the general advantage of Canada.

Mr. SAM. HUGHES. And inland navigation.

Mr. R. L. BORDEN. Yes, and inland navigation also, as my hon. friend from Victoria (Mr. Sam. Hughes) points out. I give these merely as illustrations; but, by looking over the estimates for the previous years, many illustrations could be found quite as forcible as those to which I have called attention. Therefore, there seems no good reason why, if the ravages of this disease are as extensive and as much to be dreaded as the hon. gentlemen have stated who have addressed the House, there is no good reason why parliament should not interfere. We have had royal commissions on various questions in the past on matters of very much less importance to the country as a whole than that which has engaged the attention of the House this afternoon. If the government have any doubt as to the extent of the evil that has been spoken of, or any doubt as to the best means of dealing with the evil, a short but thorough and comprehensive inquiry might be made by some such means as I have pointed out. In that way action on the part of the government might be expedited.

I rose more for the purpose of expressing my view, given without very much consideration, because I did not intend to speak, that, under the British North America Act, there is scope for this government and parliament to deal with the question. The parliament of Canada has a right under section 91 of the British North America Act, to make laws for the peace, order and good government of Canada. And, while the construction which, at one time, was placed upon these words has been supposed to be narrowed by a decision given not long ago in the Privy Council, I think that if we look at the whole scope of the authorities, including that which I have just mentioned, we can come to the conclusion that the parliament of Canada need not hold its hand in this matter for want of jurisdiction over this question. In a very well known work on the constitution of Canada, the work of Mr. Lefroy on legislative power in Canada, a work well known to all lawyers, and one that has been spoken of by the Minister of Justice in this House as one of the very best works that have ever been written on this subject, at page 384, the language of Lord Herschell is quoted:

> A sanitary regulation might be passed by a local legislature, but that would not prevent a general sanitary regulation of a similar nature necessary for the safety of the whole Dominion being enacted by parliament.

Further on, quoting again the language of the Judicial Committee of the Privy Council, and dealing with the very clause of the British North America Act to which I have referred, I find the following:

> Laws of this nature designed for the promotion of public order, safety or morals, and which subject those who contravene them to criminal procedure and punishment belong to the subject of public wrongs rather than to that of civil rights.

But there is even more direct authority in the very case to which I have just referred, the case of the Attorney General of Canada against the Attorney General of Ontario, in which the validiy of the Liquor License Act for the province of Ontario was questioned before the Judicial Committee of the Privy Council. During the argument in that case Lord Herschell used the following very significant language:

> Take sanitation for example, suppose that the Dominion parliament had, with a view to the health of the whole Dominion, passed certain regulations, and supposing in a particular province a particular disease was raging which rendered it necessary for the safety of all those within the province that much more stringent regulations as to the inhabitants of the houses should come into force. Should not that be considered a merely local matter? If it is so, it is intended to be dealt with, and you limit your regulations to the locality; and why is that inconsistent if the legislation is on the same lines as that which is in force in the Dominion at large?

You will perceive, Sir, that Lord Herschell concedes the right of the parliament of Canada to make general sanitary regulations applicable to the whole Dominion, and at the same time he holds that, consistently with that federal jurisdiction, it might be possible for a local legislature, acting within its jurisdiction, to deal with the question of sanitary regulation purely from a local and provincial standpoint and with regard to a particular emergency which may have arisen in any province. Further than that, the very case to which I have just referred—and it is a case wherein it was supposed that the jurisdiction of this parliament was limited under the words of clause 91 of the British North America Act—even in that case you will find direct authority for the proposition which I have endeavoured to present in a very few words. The headnote or synopsis of that case is as follows, as far as this particular question is concerned:—

> The general power of legislation conferred upon the Dominion parliament by section 91 of the British North America Act of 1867, in supplement of its therein enumerated powers, must be strictly confined to such matters as are of unquestionable national interest and importance, and must not trench on any of the subjects enumerated in section 92 as being within the scope of provincial legislation, unless they have attained such dimensions as to affect the body politic of the Dominion.

If the statements of fact made this afternoon, and supported by the best authority, are correct, then it is impossible to deny that this is a question of national interest and importance and one which has attained such dimensions as to affect the body politic of the whole Dominion. Therefore under these circumstances and in view of

these and other authorities which might be cited, I for one have no doubt that means might be found and a measure devised by which parliament could deal with this subject and deal with it effectively in the interests of the whole Dominion.

Mr. MILLER. I shall not, Mr. Speaker, take up the time of the House for more than a few minutes. Most of the remarks made this afternoon were on the line of the government doing something by way of encouraging the maintenance and establishment of sanatoria. While I have no desire to say a word in disparagement of such a course, while I think that much may be done by means of sanatoria in preventing contagion and adopting methods of cure that may be practised within the institution itself, I think a great deal more can be done by means of education. No matter what the government may do for the establishment of sanitoria, there will always be throughout this country many men and women who will not be able to take advantage of these institutions. There must be many men and women who will have to continue to be bread winners as long as they are able to work, and to whom it will be an impossibility to leave their homes and their work and become inmates of these institutions. I remember that in the town in which I live some citizens became possessed of a pamphlet on this dread disease of consumption, and so great was the interest it excited that the pamphlet was passed from one to another and I think a great deal of benefit resulted. Therefore it seems to me that the distribution if literature and the impressing upon the minds of the people the fact that consumption is not hereditary but exceedingly contagious, and that there are methods which may be used in the ordinary homes by the ordinary householders that will lead to its cure, especially if practised in the early stages, and that there are likewise methods which may be used by the ordinary householder to prevent the spread of the contagion, is of great importance and that the information thus given cannot fail to result in a great deal of good. With that end in view, I think the suggestion an exceedingly good one that a commission be appointed by this House to gather all possible information on the subject. The report of such a commission would prove a splendid literature for circulation and distribution among the people and would contain no doubt much information regarding the means which the government might take to combat this dreaded scourge.

Mr. PERLEY. If there is no one else to address the House on this subject, I would like to say a few words in winding up the debate. I have very little to add to what has been said by those hon. gentlemen who spoke this afternoon. I was very glad to hear my hon. friend the Minister of Agriculture express himself in favour of having something done in this matter, but of course one might naturally expect this of the hon. gentleman who has been a member of the executive committee ever since its formation and has always taken great interest in the work. I am sure that not one of us wishes to have anything done which would be in contravention of the British North America Act, and I was pleased to see my hon. friend the leader of the opposition put the case as he did, as it certainly confirms my view. I do not agree with the Minister of Agriculture, that there is a well defined division in the British North America Act with regard to this matter. There are many matters concerning the public health which are not referred to in that Act at all, and concerning which both the Dominion and the provinces have the right to legislate. In the Department of Agriculture itself, I have noticed that on one of the doors, not far from the minister's office, there is the inscription 'Director of Public Health' which must mean something. That must have been put there for some purpose, and the office, I may say, is occupied by a gentleman well qualified to fill it. In the Quarantine and Health Act, chapter 63 of the statutes of 1868, to which I referred this afternoon, you will find in clause seven a distinct reference to public health, and that great powers in that respect were assumed by this parliament. It reads as follows :—

> Whenever Canada or any part thereof appears to be threatened with any epidemic, endemic contagious or infectious disease the Governor may by proclamation make such regulations as he thinks proper and necessary to prevent the introduction of such disease from beyond the limits, or to prevent its spread within the limits of Canada, and otherwise protect the public health, and he may, from time to time, revoke or amend the same, or make others in their stead in like manner, and may impose penalties. forfeitures and punishments for the breach thereof, and such regulations shall be published at least twice in the 'Canada Gazette,' and the production of copies of the 'Gazette' containing such proclamation, shall be evidence of the making, date and contents of such regulations.

This Act was in force from 1868 to 1872, when it was repealed at the instance of the Minister of Agriculture because he objected to paying the expense of carrying it out. But if that Act was legal in 1868, surely a similar Act will be legal now. If it were in contravention of the British North America Act in 1868, surely it would have been objected to, more especially as the British North America Act was fresh in the minds of the members of parliament of that day, among whom were the fathers of confederation. I therefore contend that while technically sanatoria are placed by the British North America Act in the hands of the provinces, the question of public health is not so placed.

Now I may say that this resolution of mine is general in its terms. I do not ask especially for sanatoria, but the association thought this was the best way to start the fight against this disease. At the same time they have no set plan, they ask for no special thing. We simply come before this parliament with this resolution, and if it is passed I will take it as a request to the government to appoint a commission, or to adopt some means to find out in what way this parliament may help to stop the spread of this disease and the great number of deaths caused by it, without in any way contravening the British North America Act.

Sir WILLIAM MULOCK. There can be no objection whatever to the passage of the resolution. I think that the discussion itself will have a very beneficial effect in attracting public attention to a subject that so seriously affects every household in the Dominion of Canada. There has been much light thrown upon the dreadful white plague within the last few years. Since the discoveries or the researches of Prof. Koch and his school of German scholars, the public have come to learn the first elements in connection with the prevention of the disease. Until a recent date it was regarded as hereditary ; that theory appears to have given away to another one now, one that is better founded, and I think pretty well established in that by acting upon it there has been a great dimunition in the spread of this scourage. I had not the advantage, Mr. Speaker, of hearing the early part of the discussion, but I do not understand from the few explanations the Minister of Agriculture has given me of it, that he for a moment takes the ground that the Dominion government has not jurisdiction to some extent. It might be possible, by some species of technicality, to oust our jurisdiction in some ways, but still there are methods that every legislature and every community in Canada may take, each contributing within its sphere towards the abatement, and we will hope ultimately the extirpation of this great danger to human life. This subject, education, and the dissemination of information, is one clearly within the jurisdiction of every parliament. There can be nothing in any constitution that will prevent this parliament, or any parliament, or any legislative body, municipal or otherwise, from contributing towards enlightening the people how they may best prevent the extension and spread of the disease, and perhaps with more or less success confine the disease where it has acquired a foothold. I think I am safe in making the pledge on behalf of this government, that whatever we can do in aid of the very meritorious object of this resolution, will be done.

Motion agreed to.

HALIFAX FISHERY AWARD.

Mr. ANGUS A. McLEAN moved for :

Copies of all correspondence, telegrams, reports, writings, documents, memorials, Orders in Council, memorandum, or written or printed information of any kind not already down, which passed between the government of Canada, or of any minister or official thereof, in any wise relating to the claim of the province of Prince Edward Island to a share of the Halifax fishery award.

He said : In making this motion, I desire to make a short statement. I noticed that in the speech from the Throne delivered by the Lieutenant Governor of Prince Edward Island at the opening of the session in 1903, it was stated that negotiations were then in progress with a view to settling this vexed question of the distribution of the Halifax fishery award. It was stated by the leader of the government of the province of Prince Edward Island that a conference had taken place in Ottawa between the premiers of New Brunswick, Quebec and Prince Edward Island, at which the Minister of Justice of the Dominion of Canada was present, and that it was settled at that time that the question should be submitted to the decision of the Supreme Court of Canada. The question came before the legislature during the session of 1903, and the premier of the province stated that negotiations with reference to the submission of the matter to the Supreme Court of Canada had been for some reason abandoned, and that negotiations were going on with a view to having the matter submitted to the decision of the Privy Council in England. It seems that though this took place some eighteen months ago, nothing, so far as the people of the maritime provinces know, has taken place since. I think it would be very interesting to the people of the maritime provinces, and to the others interested in the distribution of this award, to know what the negotiations are and how they stand to-day, and when, if at all, the distribution of this large amount will take place.

Motion agreed to.

MUNICIPAL TELEPHONE SYSTEMS.

Mr. BOYCE moved for :

Copies of all correspondence and documents relating to an application to the Board of Railway Commissioners, and relating to an application lately before the said board, by the towns of Port Arthur and Fort William, to obtain access for their municipal telephone system into the offices of the stations of the Canadian Pacific Railway in the two towns. And for copies of all correspondence between the said towns of Port Arthur and Fort William, and the officers thereof, with the government, with reference to such application, or prior or subsequent thereto. Also copies of any report or recommendation, decision or order made by the Railway Commissioners with reference to

such application or applications, or incident thereto.

Mr. W. F. MACLEAN. Before that motion is carried I wish to refer for a moment to an incident that occurred within the last few days on this very question. The Prime Minister then made the statement that he thought well of introducing a General Act dealing with the telephone question in this country, and his attention at that time was called to this very substantial grievance in connection with the use of telephones in the towns of Port Arthur and Fort William. It has been pointed out in this House time after time that the decision, so far as the country is concerned, is a very interesting one, and that while the former Minister of Railways put a clause in the Railway Act compelling railroad companies to give access in their stations to all telephone companies, that Act was interpreted by the then chairman of the Railway Commission to mean that the compensation to be paid railways and to railway companies was of a general character and that they were entitled to large damages if such a thing took place.

Now, my belief is that the claim cannot be justified, that this contract, as it exists between the Bell Telephone Company and the railway companies, is against the public interest, is against the provisions of the Railway Act and if investigated by the government or in the courts, or if it were referred to the Supreme Court, it would be declared to be unconstitutional and against the public interest. Time after time this question has come up. The then Minister of Railways and Canals, when he passed his Railway Act and when he put that provision into the Act which secured telephonic entrance into all stations for all companies, said that the object desired at that time would be secured. It was not secured, but the then Minister of Railways and Canals went upon the Railway Commission as chairman of that commission and he interpreted that Act, as far as I can read his judgment, as against the public interest, as in the interest of the Bell Telephone Company, and although that decision was given months and months ago, nothing has been done to ascertain the rights of the public in this matter. Day after day we are passing legislation in this House in the interest of the three great railway companies who are parties to that contract which is against the public interest. I say it is the duty of the government not only to remedy the grievance, not only to make it clear in the Railway Act that this relief should be afforded, but that we should say to these railway companies : Until you grant the public the remedy of the grievance complained of in this matter we refuse to give you any legislation that you desire. Last year the Grand Trunk Railway Company was given the greatest franchise that was ever given in this country. The Canadian Pacific Railway, every session of this parliament, is given franchises and concessions of various kinds, and the only thing to be done on the part of the government, if they are interested in the public welfare, is to say to these railway corporations : Not one thing more will you get from this House or from this government until you remedy that grievance. But, the companies get more legislation and the grievance complained of is not remedied. This matter will come up later on in this session and it may come up during this very week, but again I point out that the cure of this grievance complained of is in the hands of the government, that they can cure it by legislation and they are bound to do it, they can cure it by negotiation with the companies or they can cure it by passing an Act declaring that such contracts are against the public interest. Then, for a moment let us recall what this contract involves. The Canadian Pacific Railway which had immense subsidies in money and immense grants of land from the people and great franchises, and the Grant Trunk Railway Company, which had the same from the people of this country and which only within the last two years got the greatest franchise that was ever given by this country, make a contract with the Bell Telephone Company that no independent telephone company shall have access to any railway station unless it be the Bell Telephone Company. My hon. friend from Labelle (Mr. Bourassa) pointed out the other day how far this thing was carried. In this county there is no Bell Telephone service given to the people, but so strong is the Bell Telephone Company under this contract that they say that the independent company shall not have a connection with the railway station. In Port Arthur and Fort William they have a splendid municipal telephone service. That telephone service is refused access to the Canadian Pacific Railway station and the Canadian Northern station, and yet the people of Port Arthur and Fort William are the main customers in those towns of both those railways. They are the people who do business with the railways, the people who travel over the railways the people who furnish and receive freight from these railways, and yet by reason of this iniquitous agreement, this agreement which is contrary to public policy and which should be declared to be contrary to public policy if the government were alive to their responsibilities is allowed to continue. For two years now this thing has continued. For two years attempts have been made to direct the attention of the hon. Minister of Railways and Canals (Mr. Emmerson) to this iniquitous agreement but so far he has had nothing to say on the question. So far he has not facilitated the consideration of the question by the Supreme Court as the law provides but he has allowed it to drag along and that is the position of the question to-day. Surely the government have enough courage, surely they have a sufficiently high conception of their duty

to the people to tell these railway companies that if they do not cancel that contract the government will find a way of passing a law to abolish it. But, so far they have done nothing in that direction. What is the strength of the Bell Telephone Company in this country that they are allowed to maintain a monopoly of that kind ? I do not know what is the cause of the influence that they seem to have, but every proposition that was made during the discussion of the Railway Act that seemed to tread on the corns of the Bell Telephone monopoly was objected to, no attention is paid to the demand for redress of the grievance which is now complained of, and the Bell Telephone monopoly is allowed to ride roughshod not only over the rights of the people but over the rights of municipalities and provinces. The responsibility must rest with the administration of the day to find a cure for the existing state of things. It is all very well to tell the people at Port Arthur, Fort William, Locust Hill and Labelle to go to the courts and maintain their rights but their is an easy way to correct this grievance and that way is for the government to exercise the power that undoubtedly rests in them of declaring the contract to be against public interest, to rescind the Act if necessary and compel the company to treat every one justly. As I pointed out in the House the other day in connection with this subject the Bell Telephone Company was incorporated in this country for the public interest, and any company incorporated for the public interest is bound to treat every section of the community fairly and equitably. They do not treat every one equitably. They only allow Bell Telephone customers to have access to the railway stations. In two ways this grievance can be remedied immediately. It can be remedied immediately by a change in the Railway Act and it can be remedied by a general law in so far as this parliament has control over corporations created by this parliament. Again I ask the government : Why is this remedy denied ? Why have they not courage to rectify this grievance? Is it that the men who are identified with the Bell Telephone Company are warm political friends of theirs ? The only explanation I can arrive at after all that has taken place is that in some way political friendship has more control here than has the public interest, and I ask hon. gentlemen on the other side of the House why it is that this grievance of two years standing is not rectified and why we have to make motions of this kind, why we have to go to the courts and make motions of another kind when the power to remedy this grievance is in the hands of the government.

Sir WILLIAM MULOCK. Mr. Speaker, I understand that the Railway Act has referred to the Railway Commision the determination of a question of this kind. I do not think any lawyer will say that the commissioners have not power to deal with this question. This is a motion respecting the Bell Telephone Company in two towns and a question arising under somewhat exclusive powers given by the Canadian Pacific Railway, I believe, to the Bell Telephone Company at these points. The matter came before the Board of Railway Commissioners after having heard evidence they gave judgment declaring that the exclusive privilege should come to an end, and that the only question remaining to be determined was that of compensation. I am not aware that the parties to the litigation, if we may so describe the nature of the strife, have since brought the subject before the commissioners.

Mr. BOYCE. When was that judgment given ?

Sir WILLIAM MULOCK. I believe it was given about last July. I do not remember exactly, but I remember reading the opinion of each commissioner. The result of their finding was that they would not yield to the contention of the Bell Telephone Company that it could exclude other lines from access to the Canadian Pacific Railway and they declined to allow the Canadian Pacific Railway to shelter itself behind the special contract made with the Bell Telephone Company and exclude other companies from access to their station. The question, therefore, simply became one of compensation, as to whether the applying company should pay compensation, not only for installing their wires, but also the damage for a breach of contract. That is the great question involved. I do not understand that any of the commissioners have expressed any opinion on that point. They have simply affirmed that it is a question of compensation, and if the parties desire to have an opinion and would prosecute the inquiry, then they would get a judgment from the commissioners as to their view of the law, as to whether or not in their judgment the company, the Canadian Pacific or the Bell Telephone Company, was entitled to any consequential damages by reason of the setting aside of this contract. I think that before we commence to amend laws we should try to find out what they mean by the proper tribunal and there is a proper tribunal to-day to determine the question. Of course we cannot prevent people, making such suggestions as have fallen from the lips of the hon. member for South York (Mr. W. F. Maclean) ; I can only say that I am quite satisfied that there is no foundation for his suspicions whatever. We have, we think, vested the subject in an independent and competent tribunal, composed of three gentlemen who I believe are in no way biased by considerations towards any of the parties interested but are influenced only by a high consideration of public duty and high regard for the law. If that question, therefore, were threshed out, and we had a decision either from that tribunal or from the Supreme Court,—for the parties

have a right to appeal to the Supreme Court, —then parliament would know whether or not the present legislation was adequate to meet the situation, and if it was not, parliament would then be in a position to consider what would be proper amendments to the law.

Mr. BOYCE. I can assure the hon. Postmaster General (Sir William Mulock) that I am not indulging in satire when I say that the House must be indebted to him for his explanation of this all-important question, and I must express my regret that the Minister of Railways and Canals (Hon. H. R. Emmerson) was not so well informed, so anxious or so willing to give information, as the minister who has given the explanation to-night. I would draw the attention of the minister and of the House, with regard to the explanation of the Postmaster General (Sir William Mulock), that on the 6th day of February of the present session, I formally asked certain questions which will be found at page 595 of 'Hansard' (Revised). The questions were as follows :

What is the present status of the application now before the Board of Railway Commissioners, of the town of Port Arthur and Fort William, to get access for their municipal telephone system into the Canadian Pacific Railway stations in the two towns ?

Did I get an answer, Sir, to that question ? Did the Minister of Railways who is supposed to have knowledge of these facts, to have the knowledge which the Postmaster General has given, vouchsafe any explanation in answer to this or any other question ? No, Sir. The minister said that he would ask that I make a motion for a return. For what purpose ? Was it to obtain delay ? The information given by the Postmaster General was clearly in the hands of the government and was important to the people directly concerned, to the towns of Port Arthur and Fort William, to the municipalities generally, to the country at large and to this House. It was information directly in the custody and control of the government and it has been disclosed here to-night.

Sir WILLIAM MULOCK. The judgments were published in the press and my information as to the opinions of the commissioners was derived from perusing the judgments in the press.

Mr. BOYCE. If the matter can be referred to now, if the Postmaster General can refer to a judgment, can give dicta of the judges, and a synopsis of the judgment pronounced last summer, surely, when a question is regularly put upon the order paper it should be answered by the Minister of Railways and Canals, who is supposed to have knowledge or who could have acquired it from the records. The next question was :

Did the Board of Railway Commissioners decide that the Canadian Pacific Railway must allow the municipal telephone system in Port Arthur and Fort William to be connected with the railway stations on the payment of compensation ? If so, has the order been carried out ?

There was a judgment of the Railway Commission, if we are to judge by the remarks of the Postmaster General. Surely the Minister of Railways should have looked up that judgment. Surely it was in his power to send for the record and give an answer, yes or no, to that very simple question. I need not comment on the fact that he did not answer the latter part of it. He might have been able to say it was not within his knowledge. There are many matters that are not within the ministerial knowledge of that hon. gentleman, but the fact might have been within his knowledge as to whether or not that order had been carried out. The third question was :

Has the extent of the compensation to be paid to the Canadian Pacific Railway been determined ? If so, by whom, and what is the amount ? If not, who will determine it ?

If I understand the remarks of the Postmaster General upon that point, that question might have been answered by a direct negative, if the information now given by the Postmaster General was correct that the question of compensation had not been decided. Then question four was :

Is the government aware that the municipalities throughout Canada are anxiously awaiting the final settlement of this question, other applications being dependent upon the result ?

The hon. gentleman might have found it difficult to answer that question, and possibly there may be something in the fact that he withheld answers to all the questions because of the difficulties in the way of answering the fourth question, but the hon. gentleman said that he would ask me to move for a return. A return of what ? Might I ask the Minister of Railways, a return of what ? Why put this House to the trouble, why encumber the records of this House with a motion for an address to the Crown for a return of all these documents when the simple answers to the questions might have been given if there was nothing to conceal ? I think it is due to the House that the Minister of Railways should explain how it is that these questions, which are so simple, should not be answered.

Mr. EMMERSON. Will my hon. friend give the date on which he asked the question ?

Mr. BOYCE. On the 6th of February on page 595 of Hansard. I think it is due to this House that the hon Minister of Railways should now explain how it was that on that date he could not or would not give a definite answer to these questions, while he has given the information with which he has

favoured this House to-night, showing that it was within his power to obtain the answers and they were within his personal knowledge. But there is in question something to which my hon. friend from South York referred the other day, and which may have occasioned the hon. minister some little difficulty, that is, the question of the rights of municipalities in this important matter—a question on which the hon. gentleman perhaps thought there was a little danger of committing the government either to one policy or the other, and as to which he was treading on somewhat dangerous ground. The municipalities, as the hon. gentleman perhaps knows, and as perhaps he knew when these questions were before him, are and have been awaiting a decision of these important questions. The municipalities are anxious to know whether they can be held up in this way by the corporations or any number of corporations enjoying public franchises granted to them by this parliament. It is of the utmost importance that the municipalities should be informed with regard to what their rights are, and if the facts be, as shown by the hon. member for South York, that in this case as in other cases the franchise granted to the Bell Telephone Company has enabled it to exclude municipal franchises and to trample on the rights of other corporations and individuals, the sooner that state of affairs is put an end to the better it will be for the liberties of the people.

Mr. EMMERSON. Mr. Speaker, I do not know that in answering the question put by my hon. friend on February 6 I did not cover all the points mentioned in that question. My hon. friend, if I am to judge by his tone and attitude in this House, would never confess that he lacked any information or that he was unable to answer any question that might be put to him. I invite the attention of the House to the question:

What is the present status of the application now before the Board of Railway Commissioners of the town of Port Arthur and Fort William, to get access for their municipal telephone system into the Canadian Pacific Railway stations in the two towns?

My hon. friend, I understand, is a lawyer, and I am sure that he will recognize that there is a question of law. He must bear in mind that it was the subject matter of litigation before the Railway Commission, that the commission had delivered a judgment in respect to it, and, therefore, the best information that could be given to this House and the country in regard to it would be a return of the judgment delivered by that tribunal. My hon. friend the Postmaster General has given his opinion with respect to this case, but my hon. friend did not for a moment contend that he was giving more than his own interpretation of the judgment delivered by that court. The next question was:

Did the Board of Railway Commissioners decide that the Canadian Pacific Railway must allow the municipal telephone system in Port Arthur and Fort William to be connected with the railway stations on the payment of compensation?

That is a question that can only be fully and amply answered by a recital of the judgment. I could have brought to this House the judgment, and I could have read it, but that would not have been a proper answer; that is not the ordinary way of answering these questions. My hon. friend might very well have read it himself. The whole question could be best answered by a return of the papers, which are in the possession of the Board of Railway Commissioners. They are not in the Department of Railways and have no connection with that department. A return will bring all these papers before this House, and my hon. friend and all others will then be in a position to form their own opinions on the subject; because it is a matter of legal interpretation just what the status was and what that tribunal decided. My opinion as to what it was might differ materially from that of my hon. friend or that of any other hon. member of this House. In fact, as I understand it, there is a difference of opinion among lawyers as to the status of the case; there is a difference of opinion even among the members of the Board of Railway Commissioners; so that it would not be for me to interpret the judgment. My hon. friend might assume to do all this, but certainly, with all modesty, I would refrain from attempting to give my judgment as to the conclusion at which that court has arrived.

Mr. R. L. BORDEN. If the question asked by my hon. friend were a question of law, it would not be a proper question at all, as the Minister of Railways ought to know. Questions of law are not put across the floor of this House. The question asked was not a question of law in the ordinary sense. It was a question as to the effect of a judgment.

Mr. EMMERSON. That is a question of law.

Mr. R. L. BORDEN. Is it? That is news. For example, when the Privy Council dismissed the appeal of the provinces of New Brunswick and Prince Edward Island, could we not ask across the floor of the House what that decision was? Would not the answer be that this parliament had the power to pass the legislation which it had passed? Would that be a question of law in the ordinary sense? I have heard the Minister of Justice in this House over and over again state the effect of a judgment.

Mr. EMMERSON. Will my hon. friend pardon me for a moment? The Privy Council decided a case with reference to the fisheries situation in this Dominion, and I believe it is a question of law to-day what that decision was. It is a disputed point and a

point that has to be referred, as I understand, to the courts to determine.

Mr. R. L. BORDEN. Does that suggestion illumine the situation very much? If this were a question of law, how are you going to improve it by moving for a return? If the judgment were of a complicated character, my hon. friend the Minister of Railways need simply have given what he considered to be its effect and lay the copy of it on the table. If the judgment were not complicated and its effect could be stated in a few words, my hon. friend could very easily have stated it, as the Postmaster General did to-night, pointing out in that regard to the Minister of Railways what he might very well have done. How are you going to deal with this question :

What is the present status of the application now before the Board of Railway Commissioners——

Mr. EMMERSON. The judgment will show it.

Mr. R. L. BORDEN. And my hon. friend ought to be able to state it in a few words.

Mr. EMMERSON. My interpretation might be different from that of my hon. friend.

Mr. R. L. BORDEN. The hon. gentleman might have stated his opinion as to the effect of the judgment, and laid a copy of it on the table. How are you going to deal with this question : 'Has the question of compensation to be paid to the Canadian Pacific Railway been determined?' Did the government understand it had not? We would like to have the information in possession of the government. Then take this question : 'If so, by whom, and what is the amount?' Surely you do not want a return for that? Take the last question :

Is the government aware that the municipalities throughout Canada are anxiously awaiting the final settlement of this question, other applications being dependent upon the result?

How are you going to deal with that by means of a return?

Mr. EMMERSON. The municipalities in the east are not.

Mr. R. L. BORDEN. Well, the hon. gentleman might give the information with regard to the east which he happens to possess. I would only suggest to him that on other occasions he has answered questions in a very courteous way, the answers to which, I think, took up more room in 'Hansard' than the answer to this would occupy. Look, for instance, at the reply in the 'Hansard' of the 8th February to the question of my hon. friend from North Toronto (Mr. Foster). Look at the host of other questions which have been answered by the hon. gentleman and other members of the government. If the same attention had been paid to this question, it would not have been necessary to waste time in moving for returns.

Mr. EMMERSON. My hon. friend says that I have courteously answered other questions. I assure him that I intended no discourtesy in asking that a return be moved for in this case.

Mr. R. L. BORDEN. Certainly ; I did not intend to suggest that. I was only endeavouring to impress upon my hon. friend that if he had given the matter a little attention there would have been no great difficulty in putting such an answer on 'Hansard,' and placing such documents on the table as would have made a motion absolutely unnecessary.

Motion agreed to.

TRENT VALLEY CANAL—CLAIM OF JAMES CLARK.

Mr. WARD—by Mr. Sam. Hughes—moved:

For copies of all correspondence, documents and other papers relating to the claim of Mr. James Clark, of the township of Otonabee, for compensation for land drowned by the waters of the Otonabee river, caused by the government works on the Trent Valley canal.

Hon. H. R. EMMERSON (Minister of Railways and Canals). There appears to be no record of any correspondence whatever in the department in relation to a claim of James Clark of the township of Otonabee, for compensation for land drowned by the waters of the Otonabee in consequence of the works of the government on the Trent Valley canal.

Mr. SAM. HUGHES. There may be some mistake in the name. Perhaps, Mr. Speaker, the motion might be allowed to stand until the hon. member for Durham (Mr. Ward) is here.

Mr. SPEAKER. Stand.

COST OF SURVEYS—NORTHWEST TERRITORIES.

Mr. W. J. ROCHE moved :

For a return showing the number of miles of land in the Northwest Territories surveyed in block outlines, and the cost per mile ; the number of miles of township outlines, and the cost per mile ; the number of acres subdivided, and the cost per acre ; for the years 1880, 1881, 1882, 1883, 1900, 1901, 1902, 1903 ; the average for the first four years, and the average for the latter four years.

Hon. SYDNEY FISHER (for the Minister of Agriculture). I would ask the mover of the motion to agree to amend it slightly by inserting after the word 'acre' in the fourth line as printed in the Orders of the Day, the following words : 'The proportion of open prairie to the whole of the land surveyed; the contract survey rate per mile of

section line in open prairie ; the rate of pay of surveyors employed by the day.'

Amendment agreed to.

Motion as amended, agreed to.

MOTIONS AGREED TO WITHOUT DISCUSSION.

For copies of all correspondence addressed to the government, or any minister, in reference to the cables of the Empire.—Mr. Logan.

For copies of all correspondence between the government, or any minister, and any party or parties, concerning the dismissal of the postmaster at St. Claude, Manitoba, Mr. J. P. Benrier, on or about the 1st day of November, 1904.—Mr. Staples.

For a return showing the amount and nature of each and every claim that has been made by the firm of P. Lyall & Sons, for extras in connection with their contract for the erection of steel sheds in the port of Montreal ; and further indicating in each instance whether the claim has been admitted and approved by the Harbour Commissioners or their chief engineer ; whether it has been recommended for payment by the government superintendent engineer ; and in case of dispute between the engineers, what decision the Minister of Marine and Fisheries has given in each case ; and the amount paid or agreed to be paid to the contractor in connection with each claim.—Mr. Ames.

For a return setting forth seriatim all orders given for works or for supplies by the Department of Marine and Fisheries since July 1st, 1903, without having previously invited tenders by public advertisement, as provided for in article 5 of the Act 55-56 Victoria, chapter 17.—Mr. Lalor.

For a return showing the date of sailing of each vessel from Canada to South Africa, under the contract made in 1902 with the government of Canada, for the establishment of steamship service with South Africa. Also showing the respective nature, quantities and values of the various exports carried from Canada to South Africa by each vessel on each sailing.—Mr. Alex. Johnston.

For a return showing the number of railway and steamboat disasters in Canada in 1904. The number in which investigation for cause was made, such cause, and the cause given. The means, if any employed by the proper authorities to prevent the recurrence of such accidents, wherever due to any preventable cause. The methods adopted in England where railway accidents are so rare, and any other information which may lead to the safe-guarding of the lives and property of Canadians, obliged to make use of those public facilities.—Mr. Alex. Martin.

For a copy of all correspondence relating to the Order in Council of 25th of August, 1904, providing for the preparation of voters' lists in the unorganized territories of Ontario together with a copy of such Order in Council, and all correspondence relating to the voters' lists prepared under or pursuant to such Order in Council, and especially all correspondence between any of the ministers or their deputies or officers in any of the departments, and the following persons, namely : His Honour Edward O'Connor, junior judge of Algoma, W. A. Quibell. police magistrate, Sault Ste. Marie, W. H. Carney, sheriff of Algoma, J. J. Kehoe, clerk of the peace of Algoma, Jacob Stevenson, Sault St. Marie, and all other persons, relating to the preparation or revision of such voters' lists. Also for copies of all instructions sent, issued or delivered to any of the said persons, or to any other persons, relative to the preparation or revision of such voters' lists, or any of them.—Mr. Boyce.

For a return showing the number and the names of all the public buildings erected by the Federal government in the different provinces since confederation, and the cost of the same.—Mr. A. Lavergne.

For a return showing the quantities of anthracite coal used in the several departments of the government of Canada, in the provinces of Quebec, New Brunswick, Nova Scotia and Prince Edward Island, in the years 1900, 1901, 1902, 1903 and 1904. Also of the total expenditure per year for said coal for each of said provinces during said years ; and separately, the names of the parties to whom paid, and the price per ton paid to each.—Mr. A. A. McLean.

For copies of all correspondence had with the government in regard to the delay in printing the reports of the Supreme Court.—Mr. Monk.

For a return showing the sums of money spent by the Dominion government since 1896 upon each of the following : (a) Port Arthur Harbour ; (b) Fort William Harbour ; (c) Kaministiquia River ; classified into (1) dredging ; (2) breakwaters ; (3) other purposes. The quantities of each of the following to be excavated during 1905-6 in each of the three locations above named : mud and sand, clay, hard-pan, rock. The dates and terms of the contracts entered into with those engaged in dredging at the aforesaid points in 1903-4 and 1904-05. The said contracts. The horse-power, tonnage and dimensions of each of the dredges engaged in the said work. The cost of dredges newly built, similar to those engaged at the above three points.—Mr. Sam. Hughes.

For a return showing in tabular form the amounts first voted for public buildings in towns in Canada of not more than 5,000 inhabitants ; the year in which the first amount was in each case voted ; the total amount expended to complete each building ; the year in which it was completed ; the revenue derived from post office, customs and inland revenue, separately, for the year in which the first vote was taken ; and the rentals paid for the buildings in use for the above services during same year, and the population of each town for that year ; said return to cover the period from January, 1888, to February, 1905, inclusive.—Mr. Foster.

For copies of all correspondence, papers, letters, recommendations, reports, petitions, &c., in possession of the government or any member or official thereof, relating to the dismissal of Henry Curtis Lawson, as postmaster at Stanhope, Prince Edward Island, and the appointment of his successor.—Mr. A. Martin.

For a return showing the number of witnesses who appeared before the Agriculture Committee, whose expenses were paid by the government, for each year from 1896 to 1904, inclusive; the amount paid to each such witness ; the name of each, where each came from, when their attendance was required and at whose instance each such witness was brought.—Mr. A. Wilson.

For copies of all reports made by Mr. Burley, or any other officer, in regard to reservations

of water rights for stock purposes in the North-west Territories during the last five years.—W. J. Roche.

For a return showing the amount of money expended in equipping and provisioning the government steamship 'Canada'; the names of those who received orders in or due connection therewith; and the amount paid to each. Also the number of officers and men employed on the said steamship; together with a statement of the pay of said officers and men; and the terms of engagement of said officers and men.—Mr. Monk.

For a return showing the total amount expended in wages to men employed at the Sorel shipyard, from the 30th June, 1904, to the 1st February, 1905 indicating separately the amount so expended for each month. Also the total amount expended in purchases for the same shipyard during the same period.—Mr. Monk.

For copies of all correspondence between the Department of Marine and Fisheries and Mr. A. E. Dyment, M.P.; and also between the Department of Marine and Fisheries and the late commissioner of fisheries of Ontario, the Honourable Mr. Latchford, during the past four years, regarding the granting of pound net licenses east of Little Current, Manitoulin Island, to Mr. T. H. Jackman, of Killarney, Ontario.—Mr. Crocket.

For a return showing (a) when and to whom circulars or other communications were issued or sent by or through the agencies of the Department of Marine and Fisheries at Quebec, Charlottetown, St. John and Halifax, respectively, inviting private tenders for supplies, (in cases where public tenders were not called for by newspaper advertisement), and copies of all such circulars and communications; (b) from whom replies to such circulars were received, and copies of such replies; (c) who in consequence of such reply, received contracts or orders for supplies or commodities required during the year ending June 30th, 1904, by vessels under control of the Department of Marine and Fisheries; (d) copies of all correspondence in reference to these private tenders, or to the supplies or commodities so required or furnished, exchanged between the minister or his deputy and the above named agencies.—Mr. Ames.

CERTIFICATES TO MASTERS AND MATES.

On the order:

Second reading of Bill (No. 44) to amend the Act respecting Certificates to Masters and Mates of Ships.—Mr. Lancaster.

Mr. LANCASTER. The Prime Minister (Sir Wilfrid Laurier) this afternoon asked me to allow this order to stand until next day on account of the absence of the Minister of Justice (Mr. Fitzpatrick).

Mr. SPEAKER. Stand.

EXCHEQUER COURT—RAILWAY DEBTS.

Bill (No. 59) to amend the Act respecting the jurisdiction of the Exchequer Court as to Railway Debts—Mr. Geoffrion—was read the second time, and House went into committee on the Bill.

Mr. FISHER.

Mr. R. L. BORDEN. I think we ought to have some explanation as to why this is necessary and whether it would be advisable to make it of general application. What is the particular object?

Mr. V. GEOFFRION. Does the hon. gentleman (Mr. R. L. Borden) wish to know why it is proposed to apply it only to the province of Quebec?

Mr. R. L. BORDEN. Yes.

Mr. GEOFFRION. It is because that provision was placed in the old Insolvent Act and Winding Up Act. I understand that the other provinces do not care about having this inserted, because they have a different system; but in the province of Quebec there is the difficulty that only judicial sales made by the sheriff clear immovable property from all incumbrances. For instance, in the old Insolvent Act such a provision was inserted. In chapter 16, section 76, 38 Vic., 1875, there is this provision:

All sales of real estate made by the assignee shall vest in the purchasers all the legal and equitable estates of the insolvent therein, and the conveyance may be in the form 'N'; but in the province of Quebec such sale shall, in all respects, have the same effect as to mortgages, hypothecs or privileges then existing thereon, as if the same had been made by a sheriff under a writ of execution issued in the ordinary course, but shall have no other greater or less effect than such sheriff's sale, and in the province of Quebec the title conveyed by such sale shall have no equal validity with a title created by a sheriff's sale.

Now we passed an Act in 1903 giving jurisdiction to the Exchequer Court, in case of the insolvency of a railway, to put it in the hands of a receiver, who may proceed to sell it. But when we came to apply that law in the province of Quebec to the Quebec Southern road, and the road was put up for sale, nobody would buy it, because a clear title could not be given. This was clearly an oversight in the law of 1903, and by this Bill I wish to give to a sale made by the Exchequer Court, the very same effect as a sale by a sheriff in the province of Quebec, and to apply the same principle as was applied in the old Insolvency Act and the Winding Up Act. I think the members of this House will see the necessity of amending the Act in the way I have pointed out; particularly is there a necessity for this amendment in the province of Quebec. But I have no objection to make it applicable to all the provinces, although another system seems to prevail in the other provinces. But I have no objection to amend it so that it will apply to all the provinces. In any case, I desire to provide that a sale made by the Exchequer Court shall convey the same guarantee and the same title as a sale made by a sheriff in the province of Quebec.

Mr. R. L. BORDEN. Of course it is highly desirable that any title obtained under a judicial sale such as this should be a good title, or at least that any one purchasing should know exactly what he is purchasing. I am not at all suggesting that some amendment to the law should not be made ; but if the Act is defective so far as the province of Quebec is concerned, I do not see how it can be absolutely effective so far as the other provinces are concerned. It is the practice in Nova Scotia, for the most part, to have judicial sales conducted by sheriffs under the direction of the court, and that practice, as I understand, prevails in the province of Quebec ; in the province of Ontario, I think it is different ; there judicial sales, at least sales under mortgage, and I suppose all judicial sales are conducted by the master in chancery.

Sir WILLIAM MULOCK. By any officer appointed for the purpose.

Mr. EMMERSON. In New Brunswick it is by a referee in equity.

Mr. R. L. BORDEN. Well, I think we should have the same general legislation making such sales legal in all the provinces, and we should have some provision, either in this Act or by means of power given to the judge of the Exchequer Court, to make rules, if that is not already in existence, so that we may have the same uniform practice throughout the whole country. I would think it undesirable for courts of this character, having jurisdiction in every province in Canada, to have one practice in one province and another practice in another province ; except of course in so far as such variation may be absolutely necessary in consequence of the different systems of jurisprudence which prevail in this country.

Mr. FITZPATRICK. My hon. friend (Mr. Geoffrion) has not pointed out, at least I did not hear him point out, that this law is applicable to a railway communicating between two provinces. Is it intended to be a law applicable exclusively to railways generally, or merely to railways of one province ? If it is applicable to railways connecting different provinces, it is impossible to accept the measure.

Mr. GEOFFRION. The law applies only to railways under the jurisdiction of the federal government. That is evident by the Act, Edward VII., chap. 21, which applies only to railways under the jurisdiction of the federal parliament.

Mr. FITZPATRICK. In that event I suggest that we might possibly have this condition of things, that a railway going through the province of Quebec and the province of Ontario, or any other province, would be dealt with differently as to that part of its road in the province of Quebec is concerned, from the way in which you would deal with it in another part of the country. I say that is impossible.

Mr. R. L. BORDEN. Of course, here you have its application to a railway wholly within the province of Quebec.

Mr. FITZPATRICK. Then it would be entirely different.

Mr. R. L. BORDEN. I take it for granted. although I did not hear the hon. gentleman perfectly, that he had reference to a railway of that character.

Mr. FITZPATRICK. My hon. friend (Mr. Geoffrion) suggested that the legislation would be applicable to railways connecting different provinces of the country. However, I think my hon. friend had better allow the Bill to stand until such time as I have an opportunity to confer with him.

Mr. GEOFFRION. I have no objection.

Mr. FITZPATRICK moved that the committee rise, report progress and ask leave to sit again.

Motion agreed to, and progress reported.

SUPPLY—DEFENCES OF CANADA.

Hon. Sir WILLIAM MULOCK (Postmaster General) moved that the House go into Committee of Supply.

Mr. SAM. HUGHES. Before you leave the chair, I desire to draw the attention of the House and especially of the Minister of Militia and Defence (Sir F. W. Borden) to a statement in the 'Evening Journal' of today. It gives in large headlines : 'Canada will take over the defences of the Dominion' and goes on to say that by agreement between the Canadian government, through the Minister of Militia, and the imperial authorities, Canada is to assume full control and pay the expense of garrisoning the cities and defences of Halifax and Esquimalt. I will read the article :

The Canadian government will take over from the Imperial authorities on July 1 next the Halifax and Esquimalt defences.

Canada will foot the entire bill for the garrisons on the Pacific and on the Atlantic coasts. All that the Dominion does at present is to pay part of the cost of the defences at Esquimalt.

It is understood that the British government suggested that Canada should pay £250,000, or a million and a quarter dollars of the cost of maintaining those defences and leave the control in the hands of the British government.

Canada would not consent to do this. She adhered to her outstanding offer to assume control and foot the whole bill.

It was not a question of cost with the Dominion, because the entire outlay will be over two million dollars. What Canada objected to was making any permanent expenditure which would not be under the control of the Dominion parliament.

The British authorities have agreed to Canada's offer, which means a saving to begin with

of over two million dollars to the British taxpayer.

While the control of the Halifax and Esquimalt garrisons will pass into the hands of Canada on July 1, the Dominion will only take over the different services gradually. There is certain work with which Canadians are not yet familiar, and British officers and men will continue in such positions until Canadians qualify. Canada could supply the necessary infantry in short order, but it would take some time to get an engineering staff, &c.

Canada regards with great favour the compliment which Britain has paid her in handing over these important defences to her care. The trust will be well looked after. Great credit is due Lord Grey for the interest he has taken in carrying these negotiations to a speedy and satisfactory conclusion.

It will be remembered that during the colonial conference Sir Frederick Borden made an offer to take over Halifax and Esquimalt defences. Canada is prepared to pay every dollar that is required for Canadian defences on Canadian soil.

I do not know whether this article is inspired or not, especially the last clause of it, where it speaks of Canadian defences on Canadian soil. As far as I am personally concerned, I hope the statement is not true. I would be very sorry that Great Britain should so far forget her duties to the empire as to surrender Halifax and Esquimalt; and, secondly, I hope that if Canada is to contribute to Imperial defence —and I trust at no far distant day she will —in place of garrisoning Halifax and Esquimalt, she may be found garrisoning Portsmouth, Gibraltar, Malta and other places, and we will contribute our fair share towards the defence of the empire. I notified the hon. minister that I would bring this up, and I would be pleased to receive his statement.

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence). Mr. Speaker, I may say at once to my hon. friend (Mr. Sam. Hughes), and to the House, that the article which he has read was not inspired by the government, nor by any member of it, so far as I know; in fact, it was an entirely unauthorized publication. However, it may be a convenient opportunity at this moment to state what has happened. I had intended to make a statement when the negotiations, which are now pending, were completed, and to lay the papers on the table of the House then; but, as the matter has been mentioned, I desire to say that it is true that Canada, a short time ago, renewed the offer which was made to the Imperial government as long ago as 1902, at the time of the colonial conference, to relieve the mother country from all expenditure in maintaining the garrisons of Halifax and Esquimalt, and that the offer has been gladly accepted by the Imperial authorities. Correspondence is now going on and negotiations pending by which the transfer can be carried out. The principles upon which this transfer is to be made are these: First, that the Dominion government shall control these garrisons, and secondly that the Dominion government shall bear all the expenditure connected with maintaining them. In 1902, as I have said, in the papers which were exchanged between the government and the Colonial Office, and which form part of the papers which have been laid on the table of the House, giving the details of what took place at the colonial conference, it was stated in general terms—and there can be no doubt as to the meaning—that while Canada was not able to accept the suggestions of the Imperial government—the War Office and the Admiralty particularly—as to the method by which Canada would aid in the defence of the empire, the government and people of Canada would be desirous of relieving the Britsh tax-payer, so far as that could possibly be done, and it seemed to the government, as I am sure it will appear to the people of this country, that obviously the first way in which that could be done would be by relieving the mother country from expenditure on Canadian territory. I will only make a single allusion to what my hon. friend said, and I am sorry that he differs from my views in this matter. I believe he will find that he is differing from the views of a large majority of the people of this country. My hon. friend, while he is not willing to take over the responsibility for the expenditure in connection with the garrisons at Halifax and Esquimalt, wishes to send troops to Malta and other places outside of the country. Let me say to my hon. friend that charity begins at home. Let us discharge our responsibilities within our own borders first. I hope, during the present session, at any rate, to be able to lay all the papers connected with this matter upon the table of the House.

Mr. R. L. BORDEN. Before the hon. gentleman (Sir Frederick Borden) sits down, I woud like to ask him one question. It will be more convenient, of course, to discuss the question fully when the papers are brought down. Will these two ports, Esquimalt and Halifax, be maintained in the same state of efficiency as they have in the past as far as the fortifications are concerned?

Sir FREDERICK BORDEN. Probably so.

Mr. R. L. BORDEN. It has been suggested, as far as Halifax is concerned, that the main reason for maintaining the fortifications which exist there at the present time is the fact that Halifax is a naval base for the North Atlantic squadron. If it is not to be a naval base in the future, will that modify the attitude of the government in regard to these fortifications, or is there any probability that, although it is not intended in the immediate future that it shall be retained as a naval base, the policy which apparently has been entered upon by

the Imperial government in that regard may in the future be modified? I have heard suggestions along both of these lines from gentlemen who ought to be pretty well informed on the subject, and possibly the hon. minister, without discussing the matter very fully, can give the House some statement as to what the future is to be in that regard in connection with these two points.

Sir FREDERICK BORDEN. I regret that I am not sufficiently well informed to answer that question, but I may say to my hon. friend that, so far as the negotiations have gone, there is no indication of any intention on the part of the British government to abandon Halifax as a naval base.

Mr. R. L. BORDEN. But have they not dismantled the dockyard?

Sir FREDERICK BORDEN. Well, they have removed some men from there but I do not think they have dismantled it in that sense. I think it is to be continued as a naval base.

Mr. R. L. BORDEN. I had a different impression. However, the hon. gentleman (Sir Frederick Borden) may be right.

MANITOBA ELECTION RETURNS.

Mr. R. L. BORDEN. Before you leave the chair, I would like to ask the Postmaster General (Sir William Mulock) who is leading the House in the absence of the hon. the Prime Minister, to give, not to-night but at some future date, information to the House with regard to a certain matter affecting recent elections in some constitueices of Canada. If the hon. gentleman will refer to section 21 of the Dominion Elections Act, 1900, he will observe that it is therein provided that:

> Immediately after the issue of the writ of election the Clerk of the Crown in Chancery shall transmit to the returning officer a sufficient number of copies of voters' lists, if there are any, one copy of this Act and of such instructions approved by the Governor in Council as are required to carry out the election according to the provisions of this Act——

That is the important part of it, a sufficient number of copies of the voters' lists.

By another provision of the same Act which is to be found in section 92 subsection 3 and which deals with the duties of the returning officer after the election it is provided that:

> The returning officer shall also transmit to the Clerk of the Crown in Chancery the writ, with his return, the stamp furnished him for stamping the ballot papers and all the ballot papers, including those unused, the original statements of the several deputy returning officers, hereinbefore referred to, together with the lists of voters and poll-books, used in the several polling divisions.

The Postmaster General will observe that, in short, there is a direction to the Clerk of the Crown in Chancery to forward to the returning officer a sufficient number of copies of the voters' lists and a further direction to him, after the election has been completed, to return to the Clerk of the Crown in Chancery the voters' lists that have just been used in the several polling divisions. It has been a matter of public notoriety and the circumstances has, as I understand, been disclosed in judicial proceedings in Manitoba, that the voters' lists which should have been returned to the Clerk of the Crown in Chancery by the several returning officers have not been so returned, or at least they are not forthcoming, although they have been required under subpœna and by the ordinary process of law in proceedings in Manitoba. I would like information from the government as to whether or not all the voters' lists so used in the several polling districts in the electoral divisions of Brandon, Lisgar, Marquette, Macdonald, Provencher, Portage la Prairie, Selkirk and Souris, have been returned to the Clerk of the Crown in Chancery. I would like also any information which may be in the possession of the government as to the reasons for any difficulty which has occurred in procuring for production in evidence these documents which should have been returned by the returning officers to whom I have alluded. I thought this matter of sufficient importance to justify me in bringing this subject to the attention of the government in this way because these officials, as is well understood, are officers of this House. They are bound to obey the provisions of the statute to which I have referred and if through any malfeasance, or indeed through any unintentional dereliction of duty, through carelessness merely, they have not returned these lists as they were bound to do under the law, it may be necessary that some notice of that circumstance by appropriate means should be taken by this House at a later day.

Sir WILLIAM MULOCK. I shall call the attention of the Prime Minister (Sir Wilfrid Laurier) to the remarks of my hon. friend, and I have no doubt that he will give the information that is desired.

Motion agreed to, and House went into Committee of Supply.

Sault Ste. Marie canal—construction, $100,000.

Hon. H. R. EMMERSON (Minister of Railways and Canals). On Friday evening I explained the reasons why this vote was asked and gave all of the facts connected with the several contracts entered into in regard to the completion of the work. I need not further explain, I suppose.

Mr. BOYCE. Where do the Hickler Brothers reside?

Mr. EMMERSON. I could not say.

Mr. BOYCE. Will the appropriation complete the work of deepening and widening?

Mr. EMMERSON. I stated that $150,000 more would be required.

Mr. BOYCE. And is all this work intended to be done at the lower end of the canal?

Mr. EMMERSON. No, some of it is at the upper end.

Mr. BOYCE. Is the upper end not completed?

Mr. EMMERSON. No, there is still some work in connection with the upper end. I am not personally very familiar with the work there but if I mistake not there is an extension at the upper end to protect vessels in approaching the canal on account of the cross current, and furthermore I think there is some difficulty in connection with the foundations of the piers at the upper entrance. Of course it is schedule work; the contractors are not bound to secure a foundation they are paid by the cubic yard. If they have to go away down, that will of course mean so much more return for them. There was some difficulty in connection with the foundation, and the department has found it necessary to use stone for filling, which is much cheaper than concrete, and a contract will be entered into for that. There is also some back filling to be done. For this loose stones will be used, in consequence of which the cost will be very much reduced.

Mr. BOYCE. Is there any more dredging to be done?

Mr. EMMERSON. That is all completed.

Mr. BOYCE. Is it possible to obtain the names of these contractors who figure so conspicuously in these contracts? I find that in 1900 there was a contract for 10,958 cubic yards at $3 per yard given to Bowman & Porter; another in 1901 to Bowman & Porter; and another again in 1902 to Bowman & Porter; in 1903 and in 1904, Hickler Bros. were the contractors. Would the hon. gentleman state further if there is any special clause in these government contracts in regard to the employment of alien labour?

Mr. EMMERSON. Yes.

Mr. BOYCE. May I ask the nature of that clause?

Mr. EMMERSON. That Canadian labour is to be employed. There is also the fair-wage clause with respect to the amount to be paid.

Mr. BOYCE. Does the hon. gentleman know what the fair-wage clause is?

Mr. EMMERSON. I cannot speak from memory. That is always provided. It is the rate prevailing in the district where the work is being carried on. The schedule of wages is furnished by the Department of Labour before a contract is entered into, and is incorporated in the contract.

Mr. BOYCE. Then, do I understand the hon. gentleman correctly, that there is first a clause making it obligatory on the contractor to employ only Canadian labour, and secondly an obligation upon him to pay such wages as are provided for in the schedule which may from time to time be handed by the Department of Labour to the hon. gentleman's department? Is there a schedule fixed to each contract?

Mr. EMMERSON. Yes, there is a schedule fixed to each contract.

Mr. BOYCE. I am not desirous in any way of placing myself on record as obstructing appropriations of any moneys necessary for the completion and proper equipment of the Sault Ste. Marie canal and its approaches. From time to time during the last five years at least these appropriations have been before the House. In 1900, $40,000 was appropriated, and in 1901 $100,000 was appropriated, to deepen and widen the entrance. In 1901 it was stated that the total cost of deepening and widening would be $450,000. This statement was repeated in 1902. Again, in connection with the supplementary estimates for the same year, the estimate for the completion was $420,000. In 1902 $50,000 was appropriated, besides $20,000 in the supplementary estimates. In 1903, $94,000 was appropriated, in 1904, $170,000, and we are now asked to appropriate $100,000. These make a grand total of $599,000, and the hon. minister says that will not complete the work. Will the hon. gentleman explain what circumstances or difficulties have arisen to have so far increased the cost?

Mr. EMMERSON. In the first place, there has been from time to time quite a variation with respect to the cost of the work. It has all been done by tender. The cost of dredging has varied from 80 cents to $3 per cubic yard.

Mr. BOYCE. What is $3 paid for?

Mr. EMMERSON. For rock dredging at the upper entrance.

Mr. BOYCE. Is $3 per yard paid for removing boulders?

Mr. EMMERSON. Yes, the contractors are obliged to take everything, whether solid rock, hard-pan, or whatever it may be. This same firm, Hickler Bros., had a contract for deepening the upper entrance or a portion of the upper entrance at the end of the Vidal Shoal, and their price was 80 cents. We let another contract last fall for deepening another portion of the upper entrance, from the eastern end of the entrance to the eastern end of what is known as Vidal Shoal. The lowest tender for that was $1.74 per cubic yard. This was let to C. S.

Boone, of Toronto. We have some work at the south entrance pier, which is under contract to Mr. Birmingham, of Ottawa. We have expended on that up to the 30th of November, 1904, $37,500.

Mr. BOYCE. Whenever these items are submitted to the House, the question is raised as to the utility of this canal, and that question seems to resolve itself under two headings. First, as to whether the fact that the canal is not being used as much as the American one, is due to the difficulty in getting supplies or to the lack of dock accommodation on the Canadian side. I wish to draw to the attention of the hon. minister the present condition of affairs. It is true that when last this appropriation was asked for, it was stated that the government dock was then in course of construction. That dock has since been completed, but I might point out that it is some distance below the canal and does not seem to have remedied the condition of affairs. It seems that the Canadian Pacific Railway boats prefer, in coming down from the west or the north, to turn round and go to the American side rather than proceed along the shoally channel to where the new dock is situated. There is no doubt that between the eastern outlet of that canal and the present newly constructed government dock there is a channel difficult of navigation. It has repeatedly been represented to me that the captains of these Canadian Pacific Railway vessels will not follow that channel if they can avoid doing so. They invariably make a sharp detour to the south and go over to the American side. In 1902, when the appropriation was first asked for (see page 4002 of 'Hansard') the then Minister of Railways and Canals used these words :

> We desire to place our canal upon an equally satisfactory footing with that of our neighbours.

The footing of the canal proper is no doubt equally satisfactory to that of the American canal because when vessels go into the Canadian canal, they go into a better lock than the American, a lock which will serve vessels very much quicker, which is in many respects a superior lock and under excellent management. But the difficulties are the difficulties of approach and the difficulties of docking. The difficulties of approach seem to have been grappled with to some extent by the large amount of dredging and deepening done, but I would point out that these difficulties have not been entirely removed although the expenditure has far exceeded the amount estimated. The difficulty of docking too is one that still calls for some consideration. The government dock is nearly a mile south of the entrance on the southern outlet of the canal, and there is in addition to the distance between the outlet and this government dock an unsatisfactory channel. I earnestly trust that the hon. minister will investigate these matters as they stand. Speaking purely for the local constituency and having natural interest in the condition of affairs as they exist there by contrast with the condition of affairs existing at the American Soo, I would much prefer that the government should undertake to place our canal on an equally satisfactory footing with that of our neighbours from every point of view ; and the hon. minister will meet with no dissent from me if he will provide an amount sufficient to complete that work and place it on a satisfactory footing. Whilst speaking on this matter, I consider that the conditions which have prevailed with regard to these contracts on the canal call for some comment at my hands, and I regret that the Postmaster General, who is also the Minister of Labour, is not in his place.

Mr. PRINGLE. Is this the contract referred to in answer to a question which I put on February 6. I asked :

1. In what month in 1903 was the contract for dredging Sault Ste. Marie canal given ?
2. If given in the fall, why was it given at a season when Canadian contractors were unable to take the work ?
3. Did United States contractors get the work?
4. What was the price ?
5. Was there such a rush to have the work done that Canadian contractors were excluded from doing the work ?

The answer to the question was as follows :

1. In November.
2. It was given in the autumn because parliamentary appropriations were not available until then, parliament having prorogued on October 24, 1903.
3. Yes.
4. Eighty cents per cubic yard.
5. It was necessary to let the work as early after the House prorogued to avail of the appropriation.

Mr. EMMERSON. That contract was completed. This contract was entered into last autumn.

Mr. PRINGLE. But, under this head, I dare say, I can refer to this for a moment. In answer to question 3, the minister states that the contractors who got the work were United States contractors. I suppose the reason they got the work was that tenders were called for late in the fall, when it was impossible for Canadian contractors to get their plant in place for the work. Consequently, the government are paying for the work double what they are paying on the Welland canal for a similar class of work. On the Welland canal they are paying 38½ cents, while on the Sault Ste. Marie canal they are paying 80 cents a yard, as I understand it, for a similar class of excavation.

Mr. EMMERSON. There is no comparison.

Mr. PRINGLE. This is earth, not rock, excavation.

Mr. EMMERSON. It includes boulders and hardpan. The work the Hickler Bros. are doing at 80 cents we are obliged to pay $1.74 for, and the offers made have been as high as $3.

Mr. PRINGLE. I am advised by a very competent contractor that at the time the tenders were called for it was absolutely impossible for any Canadian contractor to put in a tender, because it was at a season of the year when it would have been impossible for them to get their plant there, and consequently Americans got the contract at higher prices. Were there any Canadian contractors tendering for this work ?

Mr. EMMERSON. I was not then in the department, and am not prepared to answer that question off-hand. The appropriation having been passed late, the asking for tenders was late. The Canadian contractors tendered in 1904, and it seems to me they had equal opportunities to do so in 1903. My hon. friend (Mr. Pringle) is certainly misinformed as to the character of the work. It is absolutely different from the work on the Welland canal. I myself naturally asked the question why the tenders in connection with the Sault Ste. Marie canal were so much higher than those on the Welland canal, and so I was informed of the difference in the work. The successful tenderer last fall was Mr. Boone, whose figure was $1.74. Messrs. Magann & Finn, who are doing the work at 38½ cents on the Welland canal, tendered at $2, and Messrs. Battle & Manley, tendered at $2.25. It is practically the same class of work. It was just at the entrance at the upper or northern end of the canal.

Mr. PRINGLE. I am advised that the contract was let late in November, when very little if any work could be done, because the canal is usually frozen about the first week in December. The work would have to be held over until the spring, and there was no advantage in letting the contract so late in the fall, when only a few days' work could be done. If a reasonable time had been given our Canadian contractors would have had an opportpnity to bid for the work.

Mr. EMMERSON. Though the work was given out late in the fall, the Canadian contractors were in quite as good a position to tender as those on the other side of the line. The point was to get the work under contract and have it ready to proceed with in the spring. It has been a crying necessity. Complaints were made that there was only 18 feet of water there, and it was said the Canadian Pacific Railway boats could not come down because of the shallow entrance to the canal. Another objection was the cross-current which was said to make the shallow water much more dangerous. The money, no doubt, should have ben voted earlier in the session, but we all recognize the conditions which prevailed here in 1903. The moment the vote was available tenders were asked for. The prices were certainly very low. And if, as the hon. gentleman says, no work was done that fall, surely the other contractors might have been quite as wide awake to the point as were Hickler Bros., the successful tenderers. Of course, we hear these rumours, but I think that when the facts are inquired into no cause for complaint can be found. When it came down to last fall the tenders were sky-high. They did not offer to take the work at any such figure as 38½ cents a yard. And, by the way, somebody complained the other night that 38½ cents was too nigh.

Mr. PRINGLE. I may not correctly understand this matter, but, as I am advised, tenders were called for on this work, work to proceed in the fall of 1903.

Mr. EMMERSON. Nobody is expected to do the impossible.

Mr. PRINGLE. Tenders were not called for until such time as it would have been impossible for Canadian contractors to get their plant on the Sault Ste. Marie canal. As to the minister's excuse that there was no appropriation, we all know that in 1903 a special vote was passed early in the session, so that these public works could be carried on, and thus there was no reason why tenders should not have been called for early in that session instead of waiting until the fall. Now, so far as the cost of the work is concerned, I am not prepared to say.

Mr. EMMERSON. I think that was on the main estimates, there was a certain percentage.

Mr. PRINGLE. You could have done the same thing again. What was to prevent you from bringing down an interim estimate to carry on this work, instead of leaving it to the fall so as to throw this contract into the hands of these American contractors ?

Mr. BOYCE. Was the work kept going?

Mr. EMMERSON. That particular work was kept going, because I do not think it was under contract. As for the other work, I do not think any dredging was being done at that period.

Mr. BOYCE. As the Minister of Labour is now in his place I desire to draw his attention to the condition of affairs which has existed at that place, on both government contracts and other works of a large nature, with regard to the employment of aliens. The matter has been brought from time to time, with a great deal of pertinacity, to the attention of the Department of Labour, and absolutely no relief whatsoever has been afforded. Now, here you

have a dredge contract involving a large amount of money, with foreign contracts, a foreign dredge, manned by foreign engineers, supplied from a foreign port, and employing foreign workmen.

Mr. EMMERSON. Are you sure ?

Mr. BOYCE. I am speaking from very excellent information, that notwithstanding the clause that may have been imported into the contract, as it was imported into a contract by the Public Works Department, these conditions do and did exist at the time, and complaint was made with regard to it. There were importations of labour from the other side of the river for the purpose of dredging and deepening this canal—that can be established. There were importations of cheap foreign labour for the construction of the government dock, and that can be established. There was a time last year when the post office work there was under construction, that the stonemasons employed at the work were almost entirely, as I am informed, engaged from the United States across the river. So that on the three public works that were going on under a contract with this government at the town of Sault Ste. Marie, although that contract provided as the minister states, that the contractor should employ none but Canadian labour, that clause was honoured more in the breach than in the observance. Then what was the effect upon the town ? We find that during this time, according to this estimable publication from the bureau of labour, there is a report from Sault Ste. Marie on the labour conditions there—I am referring to the number for July, 1904, which, I may state, was the month following the date on which urgent petitions were sent to the Minister of Labour from the labouring men and other persons asking for relief. In the month of July, 1904, this article or minute appeared in the 'Labour Gazette :'

> Labour conditions in Sault Ste. Marie are at present duller than at any previous period in the last seven years. There is a large number of men employed, yet there are many more here than the amount of work calls for.

Yet what work there was there was being filled up by aliens imported under a government contract by government contractors upon a government work.

> The receiver, however, has as yet only three plants in operation, viz., the mechanical pulp mill, employing 140 men ; the veneer mill, employing 100 men, and the sawmill, employing 100 men. The contractor who is extending the government dock has 25 men employed, at a rate from $1.50 to $2 per day. The contractors on the post office building employ 45 men at wages ranging from $1.75 to $4.50, and on the extension of the pier, on the eastern approach to the ship canal, 45 men were employed at daily wages ranging from $1.50 to $4.50.

That is the report in the month of July, and in the month of August not a single word was said with regard to the urgent petitions that were presented to the Department of Labour in this issue of July. So it would appear that the organ of that department desired to say smooth things instead of true things. Then in the month for August, I extract from the report from Sault Ste. Marie, page 165 :

> Sixty men are employed on the extension of the piers of the government canal at from $1.50 to $2.50 per day. The men employed on the post office building are as follows :— 6 stonemasons at 45 cents per hour ; 7 carpenters at 25 cents per hour ; 9 stone-cutters at 50 cents per hour ; 7 quarrymen at from $2.52 to $2.75 per day, and 20 labourers at from 17½ to 20 cents per hour.

Then we are told that labour conditions in August had somewhat improved. The petitions that were sent down to the Department of Labour I would ask the minister, when it is convenient, to lay on the table of the House. They set forth the grievances that then existed, namely, that Canadian workingmen were being ousted and being pushed on one side by importations of alien labour under a government contract. The result was that men in Canada, some of them owning property and paying taxes at the Canadian Soo, went over and endeavoured to obtain work in American factories on the Michigan side, with the result that the American officials deported them and sent them back with their chests of tools by the same ferry by which they came. These matters were, as I understand, represented by these petitions to the department and a request was made that an inspector be appointed under the Dominion Alien Labour law to retaliate against that kind of treatment, so that these gentlemen who were employed on government work and eating up the bread of Canadian citizens might be dealt with at least on the same basis as our Canadians were dealt with by American officials. There was a meeting held at the Soo at which I was present, and the gentleman who was the government candidate at the last election, was also present. This question was put forcibly before us by a number of workingmen who were immediately affected by it, who represented the pros and the cons. The whole difficulty was discussed, and the government candidate at the last election stated—I think I am quoting his words fairly, I am sure I am desirous of doing so—stated that in his judgment the present law was unworkable, and he would see that pressure was brought to bear upon the government so that the conditions which were then presented to the meeting might be remedied.

Two instances were cited of the character I have mentioned of men living in Canada being deported by the American authorities with a number of cases where men were imported from the American Soo opposite, and were engaged upon the post office and other public works to which I have referred. These matters were represented to the De-

partment of Labour. A request was made for an inspector. No inspector for the enforcement of the labour law of Canada, as far as I know—if I am wrong the hon. minister will correct me—was appointed or is now on duty. The conditions there call for action, they call for the enforcement of some law even though it be enforcement by retaliation. Men there who own property and pay taxes—I am quoting from instances that came to my personal knowledge—are deprived of work. A man occupying the position of a stationary engineer, for instance, is pushed to one side and remains at home idle while a gentleman from the other side of the river who lives over there comes over and takes his work, brings his dinner pail over, eats his dinner, does his work and goes back to the southern side of the line at six o'clock and when wage day comes he carries his pay over there, while the man who fulfils the duties and bears the burdens of Canadian citizenship by the payment of taxation and in other ways is looking for work. This is an example of the way in which the Alien Labour Law is administered at the present time. I would respectfully ask the hon. minister whether he has dealt with the petitions which were presented and whether he intends in pursuance of the prayer of these petitions which were sent down last June to appoint an inspector and to carry into effect, as far as they can be made effective, the provisions of the Alien Labour Law so as to prevent this condition of things in the future. I would also ask the hon. Minister of Railways and Canals if in regard to the same appropriations he would see to it that the clause in the contract for the expenditure of this money on this dredging and deepening work providing for the employment of Canadian labour is not a matter of mere form more honoured in the breach than in the observance.

Mr. EMMERSON. I would say in reply to my hon. friend that if he is not more accurate in respect to the Department of Railways and Canals, I fear that he has not given us very correct information as respects the conditions at the Soo. I happen to know from an inquiry that was made by the Department of Railways and Canals that Hickler Bros. who had the contract and who were said to be American citizens and employed in their work aliens—

Mr. BOYCE. Yes, I understand so.

Mr. EMMERSON. Inquiry was made at the time and there was only one man on each dredge who was an American citizen. That was the engineer and captain, and further inquiry was made and it was found that it was impossible to get on the Canadian side any one who would undertake that work.

Mr. BOYCE. May I ask the hon. minister at what time he made these inquiries ?

Mr. EMMERSON. These inquiries were made in the spring of 1904. The contract was let in November, I think, 1903. I came into my department in January, 1904. My attention was called to the matter, and I asked the chief engineer to make inquiry and the result of that inquiry was as I have stated.

Mr. BOYCE. Mr. Chairman——

Mr. EMMERSON. I hope my hon. friend is not subject to any little fits of that kind ; jumping up and interrupting me. I am stating the facts as they are and if he will bear with me I will get them all placed before him. The results of the inquiry were that it was impossible to get any one to act in that capacity on these dredges and in view of these circumstances permission was given to the contractors to employ these men in the operation of the dredges. They did the work excellently well. All other employees in connection with the work were Canadian citizens, as they informed me.

Mr. BOYCE. At the risk of speaking too much, which, in the eyes of the hon. minister, appears to be a heinous offence, I want to say that if he will read my remarks as taken down by ' Hansard ' he will see that the meeting I referred to was held in June of this year at which certain instances were brought to the attention of the meeting. He is groping away back in January of last year when everything was frozen up and I do not think anything was working. The hon. gentleman has referred in almost uncalled for manner to some desire on my part, possibly impulsively exhibited, of making myself right with him in regard to the facts. I might discourse upon that enigmatical stare and inscrutable smile with which the hon. gentleman meets certain questions which are asked in regard to the expenditures of his department, but I refrain out of courtesy to the hon. gentleman. But, although I am a new member I trust I am not a fresh one, and I want to draw the hon. gentleman's attention to the fact that I have never violated my rights here, that I have kept strictly within the lines of courtesy and no one can complain of me on that score. I do not think when I am addressing myself to public questions that I should be subject to remarks and insinuations of that character from the hon. gentleman.

Sir WILLIAM MULOCK. The hon. gentleman (Mr. Boyce) stated that some petitions and communications had last year been addressed to the Department of Labour complaining of some infractions of the Alien Labour law at the Soo. If the hon. gentleman had informed me in advance, I should have examined the papers and put myself in a position to discuss what has occurred, or is supposed to have occurred, but as the hon. gentleman has not done so—

I am sure it was from inadvertence—I am not in a position to-night to enter into any controversy as to what might or might not have occurred. The hon. gentleman says there were infractions of the Alien Labour law and he asks whether an inspector has been sent up there, or will be, and why one is not sent. Let me remind him that the Alien Labour Act is not administered in that way at all. At one time it was for the government to administer the Alien Act, but, at the instance of I think, speaking from memory, the Congress of Labour,—although I would not say positively as to which organization it was,—but on the application of labour organizations, the law was changed and the administration taken from the Department of Justice. It was left to any private citizen to enforce the law. If the hon. gentleman had turned up the Act at that time and had found there were infractions of the law all he had to do was to have a complaint made to a judicial or semi-judicial officer at the Sault, or to have had proceedings instituted and that would have brought about the proper remedy. That has been done with great success in many parts of Canada.

Mr. BOYCE. But these proceedings would have to be undertaken at the expense of the prosecutor, some poor labouring man who has not a dollar.

Sir WILLIAM MULOCK. The law is as we were asked to make it by the labour organizations, the persons supposed to be particularly interested in it. The law provides that the government give one-half the penalty recovered to the complainant; in every instance that has been done, and it has not been complained to us that there are not people there prepared to undertake a prosecution. If my hon. friend in his zeal to help the workmen, had given them the benefit of his legal knowledge—for I presume he knows the law—he would have applied the remedy and we would not have had the grievance dragged out at such length in this House.

Mr. BOYCE. I am grateful for the explanation, but I wish to point out this difficulty. The average workman does not see the profit to himself or the advisability or the expediency of engaging personally in litigation, engaging lawyers to pursue a claim for penalties and giving security for costs, with the gracious promise that he may get one-half the reward. We know that the result of penal actions is exceedingly hazardous, much more so than civil actions, for the construction of the statutes is so strict that in a very small percentage of cases that are instituted to recover penalties is the plaintiff successful. Then what is the chance of his recovering against aliens or against a class of men who stand between the contractor and the employer of alien labour? There are many difficulties, and, knowing as I do that the minister is familiar with the provisions of the Act, it is with exceeding diffidence that I bring these matters to his notice and respectfully urge that they receive the attention they should receive.

Sir WILLIAM MULOCK. These are observations that would be properly addressed to the House in framing amendments to the law, but they have no application, no force, as against the existing law. It is not necessary to repeat that the enforcement of the penalties does not rest with the government and the government has no legal right to institute proceedings such as the hon. gentleman refers to. We cannot by force of arms proceed to grab men and throw them out of the country. There is a legal way of doing these things. My hon. friend holds out the great bug-bear of security for costs. On referring to the Act he will not find anything in it with reference to security for costs there is nothing in the Act on the subject.

Mr. J. D. REID. I would like to ask the hon. minister, as I was not here the other evening, whether he has done anything towards changing the method of swinging the bridge at the Cardinal locks, and also if it is his intention to ask for public tenders for the erection of the new wharf to be built at Cardinal?

Mr. EMMERSON. The intention is to fix the swing. If I remember rightly there was an item in that estimate for $11,000 or $12,000 for a wharf at Cardinal. Of course tenders will be asked for.

Mr. J. D. REID. I saw by the discussion that took place that there was $11,000 in the estimates for a wharf at Cardinal, but I would like to know if he will give the public an opportunity of competing for this contract? That is, will he advertise it in the local papers for that section?

Mr. EMMERSON. All these works are tendered for by public advertisement.

Mr. J. D. REID. Sometimes they are not.

Mr. EMMERSON. Not in the Department of Railways and Canals; the tenders for public works are always by newspaper advertisement.

Mr. J. D. REID. As I understand, this is not part of the original Davis contract for enlarging that canal.

Mr. EMMERSON. Oh, no, this is entirely separate; it is not part of their contract.

Mr. J. D. REID. You say you are going to arrange to have the bridge swung differently from the present system? It is now done by hand and with a great deal of inconvenience.

Mr. BOYCE. I would ask the minister now what were the conditions which led to

the tremendous increase in the expenditure for the deepening and widening of the canal from $420,000 as originally estimated and as it was declared would cover the cost, up to the present $599,000 with the statement from the minister that that will not complete the work ?

Mr. EMMERSON. Does my hon. friend mean simply the dredging ?

Mr. BOYCE. The deepening and widening of the entrance of the canal. He states that the amount was estimated $420,000 in 1902. Again, when the supplementary estimates came on, the Minister of Railways and Canals at that time said—I am quoting from 'Hansard,' at page 4002 :

> The estimated cost for both the upper and lower entrance is in the neighbourhood of $450,000. The lower entrance will cost in the neighbourhood of $140,000 to $150,000, and the upper entrance in the neighbourhood of $300,000. We have not commenced the upper entrance yet.

Again, on an item in the supplementary estimates for $20,000 towards deepening and widening the entrance, at page 4298, the hon. minister was asked : What will it require to complete the whole entrance to a 21-foot depth of navigation ?' The Minister of Railways answered : 'The estimated cost is $420,000.' The Hon. Mr. Haggart asked : 'Will the whole of it be finished this season,' and he was answered 'No.'

Mr. EMMERSON. The reason the estimate has been exceeded is that the channel has very much widened at both the upper and the lower entrance, further than was intended. That was found to be necessary. The cost of dredging also has been exceeded. My hon. friend knows that wages have very materially increased since 1902.

Mr. J. D. REID. What is the policy of the hon. minister in regard to these dredging contracts ? Is he going to give them to Americans in case they apply for them, or will he see that they are kept entirely for Canadians ?

Mr. EMMERSON. Our contracts contain clauses with respect to Canadian labour and wages. It becomes a serious matter sometimes, if an American tender is away down, perhaps half of what the lowest Canadian tender is. It would be problematical what should be done. My own inclination under these circumstances would be to give the lowest Canadian tender the benefit. But it is a question of dollars and cents.

Mr. J. D. REID. The hon. gentleman will remember that, when the Grand Trunk Pacific Bill was going through, he did not hesitate to see that a clause was put in the Bill that contracts must be let entirely to Canadians, although that measure involved a very large expenditure. Yet in regard to these contracts, when there is no question about Canadians having the plant, he seems to have changed his mind entirely, because he is now willing to give these contracts to Americans. He stated that he would give the contract to the lowest tenderer.

Mr. EMMERSON. I beg the hon. gentleman's pardon. I said my inclination would be to give it to a Canadian, even though the lowest tender was very much below his. I am speaking of my own judgment in this matter. Each case must be governed by the circumstances which surround it. That question is not involved in this vote, because all these are Canadian contractors.

Mr. SAM. HUGHES. Has the minister any data concerning the American channel through Hay lake, below the Sault Ste. Marie locks, lowering the water at the foot of the Canadian canal ?

Mr. EMMERSON. That matter was discussed last year, and nothing has occurred respecting it since. That question, I think, is now involved in the commission.

Trent canal—construction, $300,000.

Mr. EMMERSON. The work on the original contract is about completed, but the contractors have been required to do some extra work, some portion of it being the construction of a road across the fourth concession of the township of Eldon, and this road has two bridges on it.

Mr. SAM. HUGHES. That is in the township of Carden, I think.

Mr. EMMERSON. I am not as familiar with the district as the hon. gentleman. There was a special agreement entered into with respect to the extra work, the prices being 25 cents per yard for earth and $4.25 per yard for concrete. The contractors are Larkin & Sangster.

Mr. SAM. HUGHES. This $300,000 completes the work between Balsam lake and Heeley's falls ?

Mr. EMMERSON. Yes.

Mr. SAM. HUGHES. This has nothing to do with the locks at Kirkfield ?

Mr. EMMERSON. No.

Mr. SAM. HUGHES. Will the minister tell us his policy with regard to those locks?

Mr. EMMERSON. The sub-structure has been completed, or nearly so, with a view to the construction at that point of a lift-lock, which has been contracted for.

Mr. LENNOX. What kind of piers are they ?

Mr. EMMERSON. Steel piers.

Mr. SAM. HUGHES. I would ask the hon. minister to let that item stand until the hon. member for Simcoe (Mr. Bennett) and the hon. member for Durham (Mr. Ward) are here.

Item allowed to stand.

Lachine canal—rebuilding wharf below dock, $10,000.

Mr. EMMERSON. That is for concrete work running around the pier between the entrance and the head of the lock. The items is $10,000 to complete.

Lachine canal—rebuilding wall basin No. 2, $37,500.

Mr. EMMERSON. Length of wall 1,500 feet, height 17 feet, average thickness 4½ feet.

Soulanges canal—general repairs including gasoline boat, $15,000.

Mr. SAM. HUGHES. What is that boat for ?

Mr. EMMERSON. It is estimated to cost $2,000. It is for hauling scows along the line for repairs.

Some resolutions reported.

On motion of Sir William Mulock, House adjourned at 11.15 p.m.

HOUSE OF COMMONS.

TUESDAY, February 21, 1905.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 67) to amend the Criminal Code, 1902.—Mr. Guthrie.

Bill (No. 68) respecting the patents of the Paper Goods Company, Limited.—Mr. A. C. Macdonell.

PROVINCIAL GOVERNMENT IN THE NORTHWEST.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister) moved for leave to introduce Bill (No. 69) to establish and provide for the government of the province of Alberta. He said : Mr. Speaker, the Bill which I have now the honour to present is for the admission of another member into the Canadian family of provinces. As the House, no doubt, has noticed, this Bill is to be followed immediately by another for the same purpose, in relation to the province of Saskatchewan. These two Bills are intimately connected ; they form part of the same subject ; and, by your leave, Sir, the explanations which I shall have the honour to give to the House, will apply to both. They will apply likewise to the resolutions which will be introduced as the basis for the financial clauses of these Bills.

It has been observed on the floor of this House, as well as outside of this House, that as the nineteenth century had been the century of the United States, so the twentieth century would be the century of Canada. This opinion has not been deemed extravagant. On this continent and across the waters, it has been accepted as the statement of a truth, beyond controversy. The wonderful development of the United States during the space of scarcely more than one hundred years may well be an incitement to our efforts and our ambition. Yet to the emulation of such an example there may well be some exception taken ; for if it be true that settlement of the western portion of the American union has been marked by almost phenomenal rapidity, it is also true that every other consideration seems to have been sacrificed to this one consideration of rapid growth. Little attention was given, up to the last few years, to the materials which were introduced into the republic; little regard was paid among the new settlers to the observance of the law ; and it is not a slander upon our neighbours—for, indeed, the fact is admitted in their current literature—that frontier civilization was with them a by-word for lawlessness. We have proceeded upon different methods. We have been satisfied with slower progress. Our institutions in our own Northwest have been developed by gradual stages, so as to ensure at all times among these new communities law and order, and the restraints and safeguards of the highest civilization.

The time has arrived when we are all agreed, I believe, nay, I feel sure, upon both sides of the House, that another step, and the last, can now be taken to complete the passage of the Northwest Territories from what was once necessary tutelage, into the fulness of the rights which, under our constitution, appertain to provinces.

I may remind the House, though the fact is well known to every body, that when confederation was established in the year 1867, the Canada of that day was not at all what is the Canada of the present day. The Canada of that day did not extend beyond the western limits of the province of Ontario. On the other side of the continent, on the shores of the Pacific ocean, there was a British colony, British Columbia, absolutely isolated; and between British Columbia on one side and Ontario on the other side there was a vast extent of territory, the fairest portion perhaps of the continent, which was under British sovereignty, but in which British sovereignty had always been dormant. That vast extent of the continent, the fairest, as I said, and the most fertile, was administered, loosely administered by the Hudson Bay Company, under a charter which the company claimed, gave her almost sovereign sway, and which she used to keep this vast extent of country as a close preserve for her immense operations in the fur trade. I need not tell you, Sir, the fact is well known and present to the memory of all, that it was the intention of the fathers of confederation not to limit it to the comparatively narrow

bounds in which it was included in 1867, but to extend it eastward and westward between the two oceans. I need hardly tell you, Sir, the fact is known to all and well remembered by every one, that provision was made in the instrument of confederation itself, for the admission into confederation of British Columbia, Prince Edward Island, and even Newfoundland, and especially for these territories which at last have come in to-day as part of the Canadian family. In the very first year of confederation, the very first session of the first parliament, resolutions were introduced into this House and adopted unanimously for the acquisition of Rupert's Land and the Northwest Territories, and the extinguishment therein of the title of the Hudson Bay Company. This was accomplished in a very short time, and as soon as accomplished, the government of that day, the government of Sir John Macdonald, proceeded to carve the new province of Manitoba out of the wilderness, and without any preliminary stage endowed it at once with all the rights and privileges of a province.

If we go back to the history of those days, perhaps the opinion will not be unwarranted that it would have been a wiser course, if instead of bringing Manitoba at once into the confederation full fledged and fully equipped as a province, that maturity had been reached by gradual stages extended over a few years. If that course had been adopted, perhaps some mistakes would have been avoided from the effects of which we have not yet completely recovered.

Very different was the course and policy of Mr. Mackenzie when he came into office with regard to the Northwest Territory. Up to the year 1875 the Northwest Territories had been administered under no special form of government. But in 1875 Mr. Mackenzie, being then Prime Minister of Canada, introduced into this House and carried unanimously a measure, a very important measure, the object of which, as he said himself, was to give to the Northwest Territories an 'entirely independent government.' This measure has been the charter under which the Northwest Territories have come to their present state of manhood. It has never been repealed. Additions have been made to it from time to time, but it has remained and is to this day the rock upon which has been reared the structure, which we are about to crown with complete and absolute autonomy. By this measure it was provided that a Lieutenant Governor should be appointed for the Northwest Territories. The Lieutenant Governor was to be vested with executive power, and he was to administer that power with the assistance of a council to be composed of five members, the Lieutenant Governor and his advisers to be appointed by the Governor in Council. Apart from these administrative powers the Lieutenant Governor was also invested with large legislative authority. He could make laws for taxation, for local and municipal purposes, property and civil rights, the administration of justice, public health, police, roads, highways and bridges—generally all matters of a purely local and private nature. There was also an enactment in that measure to the effect that when any district, not exceeding 1,000 square miles, contained a population of not less than 1,000 people of adult age, exclusive of aliens and unenfranchised Indians, it could be erected into an electoral district which should thenceforward be entitled to elect a member to the council. There was also an important enactment with regard to education, introducing into that country the system of separate schools in force in the province of Ontario. But I shall say nothing at the present time of this important part of the law of 1875, as I propose to come again to it at a later stage of the observations which I desire to offer to the House. This Act remained in force without any important modifications up to the year 1886, when the Territories were given representation in this parliament. Two years later an important step in advance was also taken in their development, that is to say, in 1888. The executive council was abolished, so far, at all events, as its powers of legislation were concerned, and a legislative assembly was created, to be composed of twenty-five members, twenty-two of which were to be elected by the people and three to be known as legal experts, to be appointed by the Governor in Council; and a new executive council was to be appointed under the name of advisory council to advise the Lieutenant Governor upon all matters of finance. In 1891 another step forward was taken, and a very important one. The legislative assembly of the Territories was given additional powers; and if you take section 92 of the British North America Act and compare it with the powers which were then given to the legislature, you will find that that legislature was invested with powers almost as complete as those which are vested in the provinces under the British North America Act. In fact, with the exception of borrowing money most of the essential powers which are now given to the provinces were given to the legislative assembly of the Northwest Territories. In 1894 another departure, another change, was made—I call it a departure. The change which was then made was not, in my estimation, quite in accordance with the spirit of our constitution. It was that the legislative assembly could select four members of its own body to be called an executive committee to advise the Lieutenant Governor. This is not, as I say, in accordance with the principles of the British constitution. It is not in accordance with the principles of British constitution that parliament itself should elect the members who are to advise the Crown. The principle of the British constitution is that the Crown, or the representative of the Crown selects, him-

self, his own advisers ; and under our own well known practice in these modern days, the only restriction put upon the executive, the Crown, or the sovereign, is that he must select advisers who have the support of a majority of the elected body. This new departure introduced in the statute of 1894 did not last long, and at this I am not surprised. In 1897 another and a final change took place. In 1897 an Act was passed in this House whereby it was provided that there should be an executive council to be chosen by the Lieutenant Governor from the members of the House, and practically having the support of a majority of the elected members of the legislature. This was in fact the last and final concession and it was the application of the principle of ministerial responsibility. This has been the law ever since ; it is the law to-day. So that, Sir, it is manifest that at this moment the people of the Northwest Territories are in the enjoyment and have been for several years, not only of full ministerial responsibility, not only of full constitutional government, but also of a large measure of local autonomy. A great deal has been done, in fact, more has been done than we have to do to-day. We have to take the last step but it is easy and comparatively unimportant in view of and in comparison with what has already been accomplished. The metal has been in the crucible and all we have to do now, is to put the stamp of Canadian nationality upon it.

The House is aware that some two years ago or thereabouts there came to us a very general desire from the Northwest Territories for immediate admission into the confederation as provinces. I did not believe at the time for my part, that this request, respectable as it was, proceeded so much from an actual need as from a sentiment. It was to me the expression of a sentiment, a sentiment most honourable, a sentiment most worthy because it was an expression of the self-reliance of young and ambitious communities. The House is also aware of the answer which we gave to the Territories at that time. We represented to them that in our judgment, the time was inopportune for taking this question into parliament, that as we were on the eve of a general election, the time and occasion would be more propitious and more fitting after that event when the Territories would have the benefit on this floor of a larger representation. These views were generally accepted. The elections have taken place and immediately after the elections, or as soon as was practicable thereafter, we invited the executive of the Northwest Territories to send delegates here to confer with us upon the measure which was to be introduced so as to admit them into the confederation. We have had the benefit of the presence of Mr. Haultain, the Premier of the Northwest Territories and of Mr. Bulyea, one of his colleagues, and we have had the advantage of several conferences with them. We have had the advantage also of the presence and advice of several of the members from the Territories, and now, Sir, it is my privilege and my honour—I deem it indeed a privilege and an honour—to offer this Bill to the House.

When we came to consider the problem before us it became very soon apparent to me, at all events, that there were four subjects which dominated all the others ; that the others were of comparatively minor importance, but that there were four which I was sure the parliament of Canada and the Canadian people at large might be expected to take a deep interest in. The first was : How many provinces should be admitted into the confederation coming from the Northwest Territories—one, or two or more ? The next question was : in whom should be vested the ownership of the public lands? The third question was : What should be the financial terms to be granted to these new provinces ? And the fourth and not the least important by any means was the question of the school system which would be introduced—not introduced because it was introduced long ago, but should be continued in the Territories.

Now, Sir, I will proceed to examine one after the other, all these questions. The first, as I have just said is : How many provinces should be admitted into the confederation ? There is considerable variety, as everybody knows, in the area of the different provinces of the confederation. Prince Edward Island has an area of 2,184 miles, Nova Scotia 21,428 miles, New Brunswick 27,985 miles, Quebec 351,873, Ontario 260,862, Manitoba 73,732, and British Columbia 372,630, or a total area for the seven provinces of confederation of 1,110,694 miles. Now, the Territories which are to-day under the control and jurisdiction of the local legislature have exactly the same area as that of the seven provinces of the Dominion. The total area of the seven provinces, as I said a moment ago is 1,110,694 miles and the area of the different territories is as follows :

	Miles.
Assiniboia	88,879
Saskatchewan	107,618
Alberta	101,883
Athabaska	251,965
Mackenzie	562,182
Total	1,112,527

Or, an area a little greater than the total area of the seven provinces of the Dominion. Now, as I have said there is a great variety in the sizes of our provinces ; in fact, it is very much with the Canadian Confederation as with the American Union. There are in the Canadian Confederation provinces of unequal sizes as

there are in the American Union states of unequal sizes. It is not a fatal fault as has been proved by the history of the American Union, but I believe that when provinces are not the result of historic tradition, when they have not come to us formed and when we have the control of events, it is preferable that the provinces should be as near as possible about the same size. Therefore, it is impossible to suppose that this immense territory of 1,112,527 miles should be formed into one single province. There is another objection. The territories are naturally divided into two portions from the point of view of agriculture, climate, and productions generally, the northern portion and the southern portion, and I would place the boundary of these two sections a little south of the boundary which now divides the provisional district of Mackenzie from the provisional district of Athabaska. This northern portion of the continent has not yet been fully explored, but still we know enough of it, there has been enough exploration of it and it has been travelled over sufficiently, to make us sure that it is absolutely unfit for agriculture. The climate is too cold and the soil is too poor. There are, however, very excellent and very promising indications of mineral wealth in that district. There are indications to-day of petroleum, coal, gold, copper and other minerals, and perhaps some day we may have in what is to-day a barren section, another Yukon. But we know by the experience of the past that mineral wealth, when not coupled with agriculture, is but a precarious ground on which to found the hope of thick and permanent settlement. Therefore, we put aside this northern section ; but the southern section is of an absolutely different character.

Mr. R. L. BORDEN. What does the right hon. gentleman (Sir Wilfrid Laurier) refer to exactly ?

Sir WILFRID LAURIER. I would divide the two sections at about the line which now divides the provisional district of Mackenzie and the provisional district of Athabaska, about the 60th parallel of north latitude.

The southern section is of a different character. It is absolutely an agricultural country, and I need not say that it is one of the finest in the world to-day. It is traversed by large rivers flowing from the Rocky mountains to Hudson's bay, and the valley of the Saskatchewan is, as every one knows, equal in fertility to the valley of the Red river. Everybody knows also that the valley of the Red river and the valley of the Saskatchewan are to-day the most fertile wheat fields under the sun. We propose to give autonomy, not to the whole of the Territories, but to that section which extends from the American boundary up to the boundary line between the provisional district of Mackenzie and the provisional district of Athabaska, that is the 60th parallel of north latitude.

When we were first approached on this subject, it was proposed to us that we should make a province extending from the American boundary up to the 57th parallel, that is to say, somewhat to the south of the provisional boundary between the provisional districts of Mackenzie and Athabaska, but we thought it preferable to take in the whole district of Athabaska. The reason for this is, that although Athabaska is not considered to be a fertile country, and the eastern portion of it is barren, the western portion, the valley of the Peace river, is equal to the valley of the Saskatchewan and settlement there is already proceeding rapidly. There are to-day on the Peace river two grist mills, provided absolutely from wheat grown in the Peace river valley, and therefore we have decided to include within the new provinces the provisional district of Athabaska. The area of these two provinces together will be about 550,345 square miles. This is, in our estimation, altogether too large an area to be made into one single province according to the size of the other provinces, the largest of which is British Columbia, and the next largest Quebec, British Columbia with an area of 372,000 square miles and Quebec with an area of 351,000 square miles. By dividing it into two you have two provinces of 275,000 square miles in round numbers, each about the size of the province of Ontario. If any of the members of the House will care to look at the map, they will see that we have put the provisional boundary on the fourth meridian and according to our present information, this will give about the same area and also the same population to the two provinces. It is estimated that the population to-day in these two provinces is about 500,000 souls. We have no accurate data, but we can proceed pretty confidently upon this information. The census in 1901 gave to these Northwest Territories a population of a little over 160,000 souls. Since that time, during the seasons of 1901, 1902, 1903 and 1904, the population, by immigration alone, has increased by over 100,000 a year, so that to-day we feel we are on pretty safe ground when we say that there is in those two provinces a total population of 500,000 souls, and we calculate that this population is about equally divided between the two provinces, giving a population of 250,000 to each.

Since I am upon the question of boundaries I shall also come to another question, connected therewith, that is to say, the demand which has been made upon us by the province of Manitoba for an extension of its boundaries, westward, northward and eastward. Yesterday a morning paper in this city published an interview given by the Hon. Mr. Rogers, a member of the govern-

ment of Manitoba, upon this subject. I shall take the liberty of referring to that interview of Mr. Rogers, so that the House will better understand the point to which I am about to direct its attention. Mr. Rogers said in this interview :

It is not a matter of agreement. We are simply presenting the unanimous request of the people of our province for the extension of our boundaries at least as far west as Regina and north as far as the northern boundary of Athabaska, which would include Fort Churchill, the Nelson river and the territory tributary thereto. This is no new request on behalf of Manitoba. In 1901 a resolution was introduced in the legislature by Mr. T. A. Burrows, then a member of the legislature and now a member of the Dominion parliament. This resolution was supported by Mr. Greenway, who was then leader of the opposition, now a member of the House of Commons. This was accepted and supported by the government of the day and voted for by every member of the House. A similar resolution was introduced by Mr. Roblin, leader of the government, and unanimously carried in 1902. A further resolution was introduced at the recent session and voted for by every member of the legislature, in which action they reflected the unanimous desire of all Manitobans. Mr. Campbell and myself have been appointed to come here to plead for what is considered by Manitoba to be her just claims, before the government who are the tribunal in the case and whose decision must be final.

I may observe that Mr. Rogers might have gone back much further than 1901 for records of the presentation of the claims of Manitoba for an extension of territory. Indeed as far back as 1884 a similar request was presented to the government of Sir John Macdonald. At that time the Privy Council dealt with this question in these words :

The boundaries of Manitoba were originally fixed at the instance of the delegates from that province who came to Ottawa in 1870 to adjust with the government of Canada the terms upon which Manitoba was to enter the confederation of Her Majesty's North American provinces.

The limits then agreed to embrace an area of about 9,500,000 acres. In the year 1881 these limits were enlarged and territory added to the west and north, making the total area of the province 96,000,000 acres or 150,000 square miles.

The further enlargement now asked for by Manitoba would add about 180,000 square miles to the already large area of the province, and would be viewed with disfavour as well by the old provinces as by the new districts of Assiniboia, Saskatchewan, Alberta and Athabaska, which have been created in the Northwest Territories, and which will ultimately become provinces of the Dominion. It would largely add to the expense of the government, without increasing the resources of Manitoba, already pronounced by the government of the province to be insufficient to meet its normal and necessary expense.

The committee, under these circumstances, humbly submit to Your Excellency, that it is inexpedient to alter the boundaries of the province as prayed for.

This answer to the request of Manitoba was a categorical refusal. I may say that there is an error in this Order in Council. It states that the area of the province of Manitoba at that time was 150,000 square miles, whereas it was only 73,000. That, however, is not very material. But I want to point out that the request of Manitoba now is one which could not be granted except with great difficulty. It would have been far more easy for the government of that day, twenty years ago, to have extended the limits of Manitoba than it would be to-day. At that time the Territories were still in their infancy ; but to-day they have grown to manhood, and how can it be expected that we shall take from them a portion of their territory to give it to Manitoba ? If this could not be done in 1884, I submit that there is still less reason for doing it in 1905.

Mr. SPROULE. Might I ask the right hon. gentleman if in that calculation was not included the disputed territory between Manitoba and Lake Superior?

Sir WILFRID LAURIER. No, I think not. It was in dispute at that very moment. But even if it had been included, what would it have mattered ? We want to deal as fairly as we can with Manitoba and to give it all the consideration which is due to her. But is there a member of this House who would advise us that we should carve out of the Territories which for thirty years have been under the jurisdiction of their own legislature, which are to-day represented by ten members in this House, any portion of what belongs to them and hand it over to the province of Manitoba against the consent of the people of those territories ? If they agreed to it, well and good; I would have nothing to say. But the legislature of the Territories has more than once declared that they would not under any circumstances consent to any portion of their territory westward of the province of Manitoba being taken from them.

There is another consideration. For my part, I am prepared to give a full hearing to the province of Manitoba. When that province asks to have her limits extended westward, I am bound to say that we cannot entertain that prayer, for this simple reason, that the Territories, through their legislature, have passed upon it and have pronounced against it. But I understand that as to a certain portion of territory north of Lake Winnipegosis and Lake Manitoba, the Northwest legislature has declared that it has no pronounced views, and that that might be given to the province of Manitoba. But even this I am not prepared for my part to grant at this moment; because members representing that section to-day sit on the floor of this House, and they and their people have the right to be heard on that question; and if they do not agree to it, I do not think the parliament of Canada should make the grant against their wishes.

But, Sir, there is another demand of the

province of Manitoba which I think is entitled to fair consideration. Manitoba has asked to have her territory extended to the shores of Hudson's bay; and this is a prayer which seems to me to be entitled to a fair hearing. The province of Manitoba is not, however, the only one whose territory could be extended towards Hudson's bay. The province of Ontario would have the same right; the province of Quebec would also have that right; and the new province of Saskatchewan also. Therefore, in the project which we have to present to the House to-day, instead of including in the province of Saskatchewan that portion of territory lying north of Lake Winnipegosis and Lake Manitoba, we propose to leave that outside, to be included neither in Saskatchewan nor in Manitoba, but to be dealt with at a future day. And I may say at once, and I have the authority of my colleagues to make the announcement, that we propose to invite the province of Ontario, the province of Quebec, the province of Manitoba and the province of Saskatchewan to meet us here to decide whether or not it is advisable that the limits of any of these provinces should be extended to the shores of Hudson's Bay, and if so, in what manner it should be done. We have not considered the matter yet, but perhaps it may not be unadvisable even to consult the other provinces. I venture to think that the proposal which I now make to the House with reference to the province of Manitoba is a fair one, which will commend itself to the approval of all those who have given the matter fair and impartial consideration.

The new provinces shall, as a matter of course, be represented on the floor of this House, and, until another election takes place, they shall continue to be represented as they are to-day. There will be in each province a legislative assembly, of which it is proposed that the number of members shall be twenty-five.

A question which has given some difficulty to the members of the committee who had the preparation of this Bill, has been the selection of the capitals of the respective provinces. As to the capital of the province of Saskatchewan, the difficulty is easily solved, it will be, as it is at present, Regina. But as to the capital of Alberta, the selection was not so easy. There were three claimants for it—Calgary, Red Deer and Edmonton, each of which had a good claim. We have decided that we would not make any final selection, leaving the final selection to the province itself. In the meantime, if you look at the map, you will see that Edmonton seems to be the most central point, and therefore we propose to make Edmonton the capital for the present.

Beyond this, I have only to say that it is the intention to have this Bill come into force on July 1 next.

Sir WILFRID LAURIER.

The point being settled as to the number of provinces to be admitted into confederation, the next question is that regarding the public lands. In whom should the ownership of the lands be vested ? Should they belong to the provinces or to the Dominion? A strong plea was presented to us on behalf of the provinces. It was represented that as a matter of law and of equity, the public lands in these two provinces should belong to their governments. This plea was no doubt suggested by the fact that at the time of confederation, all the parties to the original contract, that is to say, the provinces of Nova Scotia, New Brunswick, Ontario and Quebec, each retained her own lands ; and when at a later day the province of British Columbia was admitted to the Dominion, she also retained her lands. But, Sir, the cases are not at all parallel. When the provinces which I have named came into confederation, they were already sovereignties. I use that term, because barring their dependence as colonies they were sovereignties in the sense of having the management of their own affairs. Each had a department of government called the Crown Lands Department, which was entrusted with the power of dealing with those lands, either for revenue or for settlement. But the case of these new provinces is not at all similar. They never had the ownership of the lands. Those lands were bought by the Dominion government, and they have remained ever since the property of the Dominion government, and have been administered by the Dominion government. Therefore I say the two cases are not in any way parallel; they are indeed absolutely different. When the provinces which I have named came into confederation they retained the ownership of their lands ; but when the two new provinces come into the Dominion, it cannot be said that they can retain the ownership of their lands, as they never had the ownership.

Therefore, the proposition that in equity and justice these lands belong to the provinces is not tenable. But for my part I would not care, in a question of this importance, to rest the case on a mere abstract proposition. We must view it from the grounds of policy ; and from the highest grounds of policy, I think it is advisable that the ownership of these lands should continue to be vested in the Dominion government. We have precedents for this. This is a case in which we can go to the United States for precedents. They are situated very much as we are regarding the ownership of lands and the establishment of new states. Whenever a new state has been created in the American Union, the Federal government has always retained the ownership and management of the public lands. And when we take the records of our own country, we know that when Manitoba was brought into the Dominion, that province was not given the ownership of her lands,

but it remained in the Dominion government. True it is that Manitoba made several efforts to acquire the ownership of the lands within her boundaries. She applied more than once to the successive governments of the Dominion, but her application was always met in the same way. It was always met by the statement that it was impossible to grant her request. The matter was finally closed in 1884 when the government of Sir John Macdonald, which had been approached on the subject, gave very forcibly and clearly the reasons why the prayer of that province could not be entertained. I may be allowed to quote to the House the language used by the government of Sir John Macdonald on the occasion. It will be found in an Order in Council of the 30th May, 1884 :—

> The success of the undertakings by the Dominion government in and for the Northwest, depends largely upon the settlement of the lands. Combined with a great expenditure in organizing and maintaining an immigration service abroad and at home, parliament pledged its faith to the world that a large portion of those lands should be set apart for free homesteads to all coming settlers, and another portion to be held in trust for the education of their children. No transfer could, therefore, be made, without exacting from the province the most ample securities that this pledged policy shall be maintained ; hence in so far as the free lands extend there would be no monetary advantage to the province, whilst a transfer would most assuredly seriously embarrass all the costly immigration operations which the Dominion government is making mainly in behalf of Manitoba and the Territories.
>
> The great attraction which the Canadian government now offers, the impressive fact to the mind of the men contemplating immigration is that a well known and recognized government holds unfettered in its own hand the lands which it offers free, and that that government has its agencies and organizations for directing, receiving, transporting and placing the immigrant upon the homestead which he may select. And if the immigration operations of the Dominion, which involve so large a cost, are to have continued success and to be of advantage to Manitoba and the Northwest Territories, your sub-committee deem it to be of the utmost importance that the Dominion government shall retain and control the lands which it has proclaimed free to all comers. Were there other considerations of sufficient force to induce them to recommend their transfer to Manitoba, and as a consequence and by precedent the surrender to the provinces to be created from the Northwest Territory, all the lands within their boundaries, then they would advise that the provinces holding the lands should conduct their own immigration operations at their own expense.

These reasons, strong and forcible as they were in 1884, are even stronger and more forcible in 1905, because the current of immigration is now flowing into these Territories in an unprecedented volume, and we are therefore compelled to say to the new provinces that we must continue the policy of retaining the ownership and control of the lands in our own hands. It is conceivable that if these lands were given to the new provinces, the policy of either one of them might differ from ours and clash with our efforts to increase immigration. It might possibly render these efforts nugatory. For instance, if either of the new provinces, under the strain of financial difficulty, were to abolish the free homesteads, which have proved so beneficial and so great an inducement to immigration, one can readily understand what a great blow that would be to our immigration policy. Or if the price of government lands for sale were to be increased over the present very moderate rate, that would also be another blow to that policy. But I frankly admit, and we must all recognize, that the provinces in the west, in being deprived of the public lands, are deprived of a valuable source of income. And in that way they complain that they are put on a footing of inequality as compared with the older provinces of the Dominion. Realizing that fact, it is the duty of parliament to make ample, even generous, provision which will compensate the provinces for the retention of the lands by the Federal government, and I believe that in makng this provision we shall have the full support of hon. members whether on one side or on the other.

Now I come to the financial terms which should be given to the new provinces. Our constitution, which is to be found in the British North America Act, contains a very remarkable provision. It contains the provision that out of the Federal treasury there shall be paid to the provinces a large amount of money in the shape of subsidies to assist them in carrying on their business. This, I say, is a very extraordinary provision. It is, I believe, unique. At all events, so far as my information goes, I do not know that any similar provision is to be found in the constitution of any other federal government. It is a sound principle of finance, and a still sounder principle of government, that those who have the duty of expending the revenue of a country should also be saddled with the responsibility of levying and providing it. That principle has been departed from in our case, and no doubt was departed from with some object. What can have been the reasons which induced the fathers of confederation in 1867 to depart from so obvious a principle of finance and government. The reasons are simply these. Confederation was the result of several compromises. It would have been impossible to establish it if there had not been a policy of give and take adopted among all the constituent bodies. And I am quite sure, I am speaking absolute historical truth when I say that neither Nova Scotia, New Brunswick, Ontario nor Quebec would ever have consented to part with their revenues, to give up their powers of taxation in customs and excise, if they had not been promised that out of the federal revenues they would be

allowed a certain sum every year to defray the expenses of their own local governments and administrations. This is the reason why this provision is to be found in the British North America Act. It is there. I do not think it is sound, but though in my judgment unsound, it is the duty of everybody in this House and in this country to take confederation as we find it, with its good points and its blemishes, and carry it to the end on the principle upon which it was established. Therefore upon this point I believe it is the duty of the Canadian parliament to continue that policy in this instance and make a liberal provision for these two new provinces which we are about to admit into the Canadian family.

But before I come to the revenue to be given these provinces, it will perhaps be preferable that I should give an idea of their present requirements. Last year there was expended out of appropriations by this parliament for the use of the local legislature and by the local legislature itself.

Civil government	$101,540
Legislation	21,375
Administration of Justice	29,000
Public Works	680,000
Education	345,125
Agriculture and Statistics	47,680
Hospitals, charities and public health	20,000
Miscellaneous	68,175

To these must be added sums which were spent by this government on services which in the future will have to be carried on by the governments of the provinces :

Public Works	$100,000
Justice	100,000
Miscellaneous	124,310

And this item of 'miscellaneous' was composed as follows :

Lieutenant-Governor's office	$ 3,880
Incidental Justice	32,000
Insane patients	70,000
Schools in unorganized districts	6,500

So that, last year there was provided for and expended by the Northwest Territories a total sum of $1,636,000.

Mr. FOSTER. Was that provided by this government ?

Sir WILFRID LAURIER. Yes.

Mr. FOSTER. Does the right hon. gentleman know what was raised by the government itself ?

Sir WILFRID LAURIER. Included in this was what was raised by the local government, which, was I believe in the neighbourhood of $150,000. So, this year, if the conditions were to remain as they are, without any increased demands, we should have to provide about $1,636,000, or an average of $818,000 for each province. Of course, there are some items of this expenditure which, under the new conditions, must be duplicated, because there will be two governments instead of one. Besides, as every one knows immigration is flowing rapidly into the Territories, and it is no wonder if the present requirements of the Territories are not sufficiently represented by these figures. More liberal provision must be made for their expenses.

So, I come to the terms which we have made with the provinces—the terms we propose to give them. As the House knows, we are guided in this by the terms of the British North America Act. Section 118 of that Act reads as follows :

The following sums shall be paid yearly by Canada to the several provinces for the support of their governments and legislatures :

Ontario	$80,000
Quebec	70,000
Nova Scotia	60,000
New Brunswick	50,000

Two hundred and sixty thousand,—and an annual grant in aid of each province shall be made, equal to eighty cents per head of the population as ascertained by the census of one thousand eight hundred and sixty-one, and in case of Nova Scotia and New Brunswick, by subsequent decennial census until the population of each of those two provinces amount to four hundred thousand souls, at which rate such grant shall thereafter remain. Such grants shall be in full settlement of all future demands on Canada, and shall be paid half-yearly in advance to each province ; but the government of Canada shall deduct from such grants, as against any province, all sums chargeable as interest on the public debt of that province in excess of the several amounts stipulated in this Act.

Now, we propose to make the following terms, keeping as close as possible to the British North America Act. I cite from the Bill :

The following amounts shall be allowed as an annual subsidy to the province of Alberta and shall be paid by the government of Canada by half-yearly instalments in advance : Support of government and legislature, $50,000,—

That is the sum paid to New Brunswick, when the population of that province was about the same as that of Alberta.

—on an estimated population of 250,000 at eighty cents per head $200,000, subject to be increased as hereinafter mentioned, that is to say : The census of the province shall be taken every fifth year, reckoning from the general census of 1901, and an approximate estimate of population shall be made at equal intervals between each quinquennial and decennial census, and, whenever the population, by any such census or estimate should exceed 250,000, the allowance shall be increased accordingly until the population has reached 800,000.

Now, the House has observed that in clause 118 of the British North America Act, which I have just read, the capitation allowance of the provinces of Nova Scotia and New Brunswick was fixed at a maximum

of 400,000 population. This rule was applied also to Manitoba and British Columbia. The reason why the maximum was fixed at 400,000 population is not very apparent, but I imagine that it was supposed at that time that the population of these provinces was not likely to reach a very much higher figure than 400,000. And this calculation has proven true. It took years for Nova Scotia to reach that maximum ; New Brunswick has not reached it yet, nor has Manitoba nor British Columbia. But it would be manifestly unfair to these new provinces to limit their maximum to 400,000. Already the population is about 250,000. Therefore, instead of fixing the maximum at 400,000 population, we have fixed it at 800,000.

A more important allowance is the allowance for debt. And this is what we propose:

Inasmuch as the province is not in debt, the said province should be entitled to be paid and to receive from the government of Canada by half-yearly instalments, interest at the rate of 5 per cent on the sum of $8,107,500.

The reason of this is familiar to everybody, but perhaps, it is not unimportant that I should review it here, and present it again to the House. In 1867, when confederation was established the debts of the provinces were assumed by the Dominion—the debts of Ontario, Quebec, Nova Scotia and New Brunswick. Now, the debt at that time of Old Canada, that is the provinces of Ontario and Quebec, amounted to $67,000,000 in round numbers. The debt of New Brunswick was about $7,000,000 and that of Nova Scotia about $8,000,000. It so happened that the debt of New Brunswick represented an average of about $25 per head of the population, and the debt of Nova Scotia of about $8,000,000 was nearly the same per head of her population. The debt of Old Canada was a little greater per head. Therefore, when allowance was made for the debts of the provinces, the debt of Ontario and Quebec was taken not at $67,000,000, but at $62,000,00. That is, Ontario and Quebec were each relieved of about $31,000,000, Nova Scotia of $8,000,000, and New Brunswick of $7,000,000. The provinces of Nova Scotia and New Brunswick entered confederation without debt, while Ontario and Quebec had between them a debt of about $5,000,000. Later on, new arrangements were made, new debts of the provinces were assumed by the Dominion, and the provinces were freed from such liabilities. By this means the capitation allowance for debt was increased from $25 to $32.43 per head. This is the last allowance that was made for debt, and, if I remember well this was made by statute passed in 1884 or 1885. Therefore, we make this allowance of $34.43 per head to these new provinces. They have a population of 250,000 souls each. This makes a total of $8,107,500.

Mr. FOSTER. On the basis of $32.43 ?

Sir WILFRID LAURIER. On the basis of $32.43, $8,107,500. Upon this we allow the large rate of interest which has been given to all the provinces of 5 per cent. We now come to the allowance for land.

Mr. R. L. BORDEN. Before the right hon. gentleman touches the land—he has spoken of the population of the Territories as amounting, at the present time, to 500,000 souls, and the allowance both for debt and subsidies based on that ; would he be good enough to give us any information in his possession as to that question ?

Sir WILFRID LAURIER. As I stated a moment ago, by the last census the population of the Northwest Territories was 165,555 souls. Since that time increases have been made, and the population now amounts, according to the last returns placed in my hands, to 417,956 souls. The population is increasing rapidly.

Mr. FOSTER. What was the basis of the estimate ?

Sir WILFRID LAURIER. The returns mostly of immigration, but I will give the exact basis as we have it correctly from the Interior Department. Total population as per census of 1901, 165,555 souls ; increase of population by homesteaders since the census of 1901, 221,251 souls.

Mr. FOSTER. Entries or actual settlers ?

Sir WILFRID LAURIER. I do not know that they are actual entries, but we calculate the population upon entries for homesteads. I will read the figures :

Population at present of Northwest Territories (estimated) 417,956.	
Total population as per census of 1901..	165,555
Increase of population of homesteaders since the census of 1901..	221,251
Increase of population other than homesteaders since census, 1901, say.. .. .. (Estimated from Waghorn's Guide.)	16,000
Estimated natural increase of the population at 1901 to date is..	9,900
Estimated natural increase of the increase of population in 1902 to date is	1,935
Estimated natural increase of the increase of population in 1903 to date is	2,370
Estimated natural increase of the increase of population in 1904 to date is	945
	417,956

Now, this Act is not to come into force until the 1st of July, and we estimate that by the 1st of July the population will have increased to 500,000 souls. This is the basis of our calculation. Now, I said a moment ago, and the House seemed to agree with me, that as we retain the lands in our own hands, it is natural and to be expected that government and parliament would be liberal in their allowance to the new provinces for compensation in that respect. Manitoba, which has an area of 73,000 square miles, received as compensation for her lands some fifteen or twenty years ago an annual grant of $100,000. Apart from that, Manitoba has

received the swamp lands. The swamp lands are perhaps the most valuable lands in the province of Manitoba. They require some preliminary work for drainage, but when drained there are no better lands in the whole province. When the late government gave to the province of Manitoba the swamp lands, they made her a valuable gift, and it has proved to her a most important asset. But the Northwest Territories have no swamp lands, we could not do for them what the government did for the province of Manitoba. We have, therefore, made the following arrangement, which we commend to the favourable consideration of the House :

As the public lands in the said provinces are to remain the property of Canada, there shall be paid by Canada to the said provinces annually by way of compensation therefor a sum based upon the estimated value of such lands, (namely, $37,500,000) ; the same being assumed to be of an area of 25,000,000 acres and to be of the value of $1.50 per acre, and upon the population of the said provinces as from time to time ascertained by the quinquennial census thereof, such sum to be arrived at as follows :—

The population of the said provinces being assumed to be at present 250,000, the sum payable until such population reaches 400,000 is to be one per cent on such estimated value, or $375,000.

Thereafter until such population reaches 800,000, the sum payable is to be one and one-half per cent on such estimated value, or $562,500.

Thereafter until such population reaches 1,200,000, the sum payable is to be two per cent on such estimated value, or $750,000.

And thereafter such payment is to be three per cent on such estimated value, or $1,112,500.

In additional compensation for such lands, there shall be paid by Canada to such province annually for five years from the time this Act comes into force to provide for the construction of necessary public buildings, $62,500.

Let me now recapitulate to see the minimum each province is to receive. At present, this year, the province is to receive for civil government $50,000 ; for capitation allowance, $200,000, which is going to increase until the population has reached 800,000 souls. It will receive for debt allowance $405,375, and this year it will receive also for land compensation $375,000 ; total, $1,030,375, to which sum must be added, for five years, $62,500, in order to allow the province to provide for her buildings and public works generally.

This is the minimum which will be paid to the province. The only thing new in these arrangements is in respect to the lands. The maximum which will be paid to the province at any time when the population shall have reached 1,200,000 souls is $1,125,000 ; that is to say, we pay to each of these provinces the maximum sum of $1,125,000 as compensation for the lands which we retain in our possession. I submit to the House that this is a very fair, a very moderate and very equitable adjustment indeed ; at all events, I so present it to the House, and I think it will be so regarded.

Mr. R. L. BORDEN. The maximum of the subsidy to the provinces will be reached, as I understand it, when the population reaches the number of 1,200,000. The total annual payments of all kinds reach their maximum when the population reaches the number of 1,200,000, that is, including both the per capita allowance and the allowance for land. Would the right hon. gentleman be good enough to tell us just what that maximum sum will be, including both the subsidy and the allowance in respect of land ?

Sir WILFRID LAURIER. The per capita allowance will be $640,000.

Mr. R. L. BORDEN. But the total of all kinds. Perhaps if the right hon. gentleman has not the figures it is not important.

Sir WILFRID LAURIER. The total of all kinds would be in the neighbourhood of a little more than $2,000,000.

Now, Sir, it is my duty to advert to a special feature of this Bill, a feature which I wish we could have averted, and which we introduced with great respect. The special clause which I now call the attention of the House to is as follows :—

The territory comprised in the said province shall be and continue to be subject to all such provisions as shall have been enacted respecting the Canadian Pacific Railway Company.

It is within the memory of the House, I have no doubt, that the contract which was made with the Canadian Pacific Railway contained a most extraordinary provision. It was the 16th section :

The Canadian Pacific Railway and all stations and station grounds, workshops, buildings, yards and other property, rolling stock and appurtenances required and used for the construction and working thereof and the capital stock of the company shall be for ever free from taxation by the Dominion, or by any province hereafter to be established or by any municipal corporation therein.

Thus it happens that in 1881 the then parliament deliberately gave to the Canadian Pacific Railway Company, which it was incorporating, an absolute exemption from federal, provincial and municipal taxation. It was an extraordinary contract, but the fact stares us in the face, and it is in accordance with British precedent and British policy that contracts have to be executed whether they are good or bad, whether they are advantageous or disadvantageous. In 1884 or 1885, when the limits of the province of Manitoba were extended westward, a similar provision was introduced into the Act of that time to exempt the company from taxation by that province in the territory thus added to her limits. We have to do the same thing to-day. It is a most lamentable condition of things, but all I have to say to the provinces, is that they have to abide

by the conditions which exist. In this respect, however, they are in no worse position than the Dominion government itself. We stand to-day, to use a common phrase in the same box. If the Minister of Finance were to introduce a budget wherein he thought it advantageous for the Dominion of Canada to impose taxation upon big corporations, upon the Grand Trunk Railway Company, upon the Bank of Montreal, upon all the other banks and corporations we could do so, but we could not lay a farthing of taxation on the Canadian Pacific Railway Company. That is the result of the condition of things which was enacted by this parliament twenty-four years ago. At that time the opposition led by Mr. Blake protested vigorously against that provision. Mr. Charlton moved the following amendment :—

That the contract respecting the Canadian Pacific Railway exempts perpetually the railway and all stations and station grounds, workshops, buildings, yards and other property, rolling stock and appurtenances, required for the construction and working thereof, and the capital stock of the company, from taxation by the Dominion or by any other province hereafter established, or by any municipal corporation therein. That the property of the corporation shall be in substance a gift from the public ; and its exemption from taxation is unjust, creates an unfair incidence of taxation, and gives an undue advantage to the company over other railway companies, calculated to prevent the construction of competing lines, and the contract is, in this respect, objectionable.

Unfortunately this amendment was defeated and that clause of the contract was carried into effect. We have to deal with it to-day as we find it and the provinces as well as the Dominion have to abide by it. All I can say at this moment is that if our efforts and their efforts could rid the new provinces of this incubus, we would be only too glad to give them all the help and assistance in our power, but it is not possible to do so, except by some method that I am not able at the present time to find out. It might be by the way of legislation, it might be through a mutual agreement, or by expropriation. There are some of these methods perhaps open to us, but I have only to say at this moment, that, regrettable as it is, the Dominion and the provinces the provinces and the Dominion must abide by it loyally until such time as it may be possible to find a remedy. That is all I have to say upon the financial clauses of the contract.

I now come to the question of education, and this question is perhaps under existing circumstances the most important of all that we have to deal with. There are evidences not a few coming to us from all directions, that the old passions which such a subject has always aroused are not, unfortunately, buried ; indeed, already, before the policy of the government has been known, before the subject is fairly before the people, the government has been warned as to its duty in this matter, and not only warned but threatened as well. The government has been warned, threatened from both sides of this question, from those who believe in separate schools and from those who oppose separate schools. These violent appeals are not a surprise to me, at all events, nor do I believe they are a surprise to anybody. We have known by the experience of the past, within the short life of this confederation, that public opinion is always inflammable whenever questions arise which ever so remotely touch upon the religious convictions of the people. It behooves us therefore all the more at this solemn moment to approach this subject with care, with calmness and deliberation and with the firm purpose of dealing with it not only in accordance with the inherent principles of abstract justice, but in accordance with the spirit—the Canadian spirit of tolerance and charity, this Canadian spirit of tolerance and charity of which confederation is the essence and of which in practice it ought to be the expression and embodiment. Before I proceed further, before I pass the threshold of this question, I put at once this inquiry to the House : What are separate schools ? What is the meaning of the term ? Whence does it come, what was its origin and what was its object ? Perhaps somebody will say : What is the use of discussing such a question ? The term separate schools ought to be familiar to every one. Sir, if any one were to make such an observation and to interpose such an objection, I would tell him that never was objection taken with less ground. Mankind is ever the same. New problems and new complications will always arise, but new problems and complications, when they do arise, always revolve within the same well beaten circle of man's passions, man's prejudices and man's selfishness. History therefore should be a safe guide, and it is generally by appealing to the past, by investigating the problems with which our fathers had to deal, that we may find the solutions of the complications that face us. If we look back to the history of our own country, if we find what is the origin of the separate schools, perhaps history may be the pillar of cloud by day and the pillar of fire by night to show us the way and give us the light.

Separate schools, Sir, go back to the old days of the legislature of Lower Canada. In these old days the system of schools in my province, in my native province, was rudimentary ; there was practically no system, but from year to year allowances were made by the legislature for the support and maintenance of schools. I need not say that the population within the limits of the province of Lower Canada at that time was, as it is to-day, divided in origin and in creed ; it was largely Roman Catholic with a small Protestant minority. I am glad to say, and perhaps it would be permitted if, in this matter, being myself a son of the province of Quebec I indulged in

N.B.

what may be not altogether unpardonable pride when I say, that I am not aware that the Protestant minority ever had any cause of complaint of the treatment they had received at the hands of the majority. One of the most eminent men of that day, one of the most eminent colleagues of Sir John Macdonald at the time of confederation, Sir John Rose, bore ample testimony to what I have now stated. This is what he said speaking in the confederation debate :

Now we, the English Protestant minority of Lower Canada, cannot forget that whatever right of separate education we have, was accorded to us in the most unrestricted way before the union of the provinces, when we were in a minority and entirely in the hands of the French population. We cannot forget that in no way was there any attempt to prevent us educating our children in the manner we saw fit and deemed best ; and I would be untrue to what is just if I forgot to state that the distribution of state funds for educational purposes was made in such a way as to cause no complaint on the part of the minority.

The system, as I said, was rudimentary ; it became more effective, more regulative, after the union of the two provinces, Upper and Lower Canada in 1841.

Mr. SPROULE. Would that not seem to be an argument in favour of leaving it to the provinces ?

Some hon. MEMBERS. Order.

Sir WILFRID LAURIER. I shall come to that presently and I hope I will be able to satisfy my hon. friend (Mr. Sproule) if he will have an open ear on this subject. In 1841 the parliament of United Canada passed a law for the establishment of schools all over the province. Section 11 of that statute provided that :

Whenever any number of the inhabitants of any township or parish professing a religious faith different from that of the majority of the inhabitants of such township or parish, shall dissent from the regulations, arrangements, or proceedings of the common school commissioners, with reference to any common school in such township or parish it shall be lawful for the inhabitants so dissenting, collectively to signify such dissent in writing to the clerk of the district council . . . . and it shall be lawful for such dissenting inhabitants . . . . to establish and maintain one or more common schools in the manner and subject to the visitation, conditions, rules and obligations in this Act provided, with reference to other common schools.

Section 12 enacted that :

No common schools shall be entitled to any apportionment of money out of the common school fund except on the terms and conditions following :

And so forth. No exception was made, whether they were separate or common schools. But it appears that some doubt arose in Upper Canada as to whether or not separate schools were entitled to state aid. In 1855 a school law was adopted and this section was passed.

Every such separate school shall be entitled to share in the fund annually granted by the legislature of the province for the support of common schools according to the average number of pupils attending such school during the twelve preceding months, or during the number of months that may have elapsed from the establishment of said such school as compared with the whole number of pupils attending the schools in the said city, town or village.

In 1863 a law was passed upon this same subject and that was the last passed on the subject by the old legislature of Canada before confederation, not to enact a new principle but simply to confirm the principle of separate schools. I remember very well—I was a young man in those days, a law student in Montreal—that the discussion of that law created a great deal of passion, but it was passed by an overwhelming majority in the parliament of Canada.

Before I proceed, let me make a few observations to show the origin and object of all this legislation concerning separate schools. You find in this legislation the terms constantly recurring of Protestant or Catholic. I need not say that the Christian religion is not only a religion founded on moral laws, prescribing moral duties, but it is also a religion of dogmas. Dogmas from the earliest times have occupied just as strong and commanding a position in the faith of all Christians as morals themselves. The reformation created a cleavage between Christians. The old section remained Roman Catholics ; the new called themselves Protestants. Between the Roman Catholics and Protestants there is a deep divergence in dogmas. Between the various Protestant denominations there are but small differences in dogmas ; the differences are more matters of discipline than of dogma. Therefore the old legislature of Canada, finding a population of Catholics and different denominations of Protestants all mixed together, finding only one cause of cleavage between them in Christian faith, that is dogmas, allowed religious teaching to be had in all the schools of our country, so that every man could give to his own child the religious tenets which he held sometimes dearer than life. That is the whole meaning of separate schools.

I have just stated that in 1863 a law was passed on this subject. At that time, in 1863, there were two men in Canada who each within his own circle and his own party, maintained a sovereign sway. One was Mr. Macdonald, now known to history as Sir John Macdonald, and the other was Mr. George Brown. Mr. Macdonald was a supporter of separate schools. He gave to the law of 1863 his vote and his influence. Mr. George Brown, on the contrary, was a most determined opponent of separate schools. He attacked the system relentless-

ly ; he attacked it in his paper, on the floor of the House of Commons and upon the hustings. He attacked it with all the vehemence of his strongly impassioned nature. The arguments we hear to-day against separate schools are not new ; they were heard 50 years ago. The arguments we hear to-day are but the attenuated echo of the strong denunciations of Mr. Brown, which were heard by our fathers two generations ago. But the views of Mr. Brown did not prevail, and notwithstanding his efforts, he was not in the House when the law of 1863 passed, which confirmed to the Roman Catholic minority of Upper Canada the privilege of separate schools. In view of the agitation then maintained by Mr. Brown in favour of representation by population, it is perhaps not inopportune to analyse that vote. The Bill of 1863 in favour of separate schools was carried by a vote of 80 against a minority of 22. Of this minority of 22, 21 belonged to the province of Upper Canada, and of the majority of 80, 33 belonged to that province, so that, leaving the vote of Lower Canada aside, taking only the vote of Upper Canada, we find that the law of 1863 was carried by a majority of the representatives of Upper Canada at that time. This is significant. Mr. Brown at that time was carrying on the strong agitation which he had maintained for years, and which he continued to maintain in favour, within the constitution of that day, of representation by population.

Sir, if we review the events of that period of our history, we must all admit that the constitution of 1841, which united Upper Canada and Lower Canada, was radically faulty. It was so constructed that it never gave satisfaction to either province. Lower Canada from the first looked upon it as an instrument of oppression, designed to deprive her of some of those institutions which she held dearer than life. Yet she it was who in after years held to that constitution, and defended it against reforms which she regarded as fraught with still greater dangers to herself. Upper Canada accepted that constitution, not with any enthusiasm, but because it relieved her for the time from serious financial embarrassments. But Upper Canada, before many years had elapsed commenced also to find herself oppressed by the clumsy clauses which it contained, and sought relief in the agitation of Mr. Brown in favour of representation by population. The radical fault of the constitution of 1841 was that it was neither federative nor legislative. It united two provinces, but kept them as separate entities, gave them the same number of members, provided against an increase of representation, and allowed only a single executive. This equality in representation coupled with a single executive was a defect which no expedients thereafter could altogether overcome. As soon as Mr. Papineau had returned from exile, he attacked that feature of the constitution, and demanded its repeal. He was opposed by Mr. Lafontaine, not on principle, but simply from expediency. Mr. Lafontaine represented to him that Upper Canada would grow in population faster than Lower Canada, because as Upper Canada was getting an immigration which Lower Canada did not, Upper Canada would soon be the stronger province and therefore all the arguments which Mr. Papineau advanced for the repeal of that portion of the constitution on behalf of Lower Canada, would react against her. The predictions of Mr. Lafontaine as to the movement of population were soon fulfilled. Upper Canada became the more populous province. Then Mr. Brown took up the agitation where Mr. Papineau had left it, and carried it on for years, with never abating vigour. He opened a current in the public opinion of Upper Canada, which yearly increased in volume until it became well nigh irresistible ; successive and short-lived administrations succeeded one another, and the day came in 1864 when there were two hostile majorities, one from Lower Canada and one from Upper Canada, facing each other and unyielding. There was a deadlock, and the government of the Queen was almost impossible if not actually impossible in the province of Canada. That was Mr. Brown's opportunity, and he seized it, it must be said, with alertness and courage ; and whoever has to speak of those events must admit that on that occasion Mr. Brown rose to the highest stature of statesmanship. He was not satisfied to take advantage of the occasion simply to obtain the realization of the principle which he had at heart, but he made it the basis for a union of all the British provinces on the continent of America. That is his glory, and that is his chief title to fame—every Canadian acknowledges it. But, Sir, the difficulties of the task were simply enormous, greater in my judgment, at all events, than the difficulties which arose in connection with the creation of the American union. History has recorded how jealously, how tenaciously, the thirteen colonies, after their joint efforts had wrought their independence, each clung to its own individual life. History has recorded how reluctantly each of the thirteen colonies at last consented to part with those powers, the concession of which was necessary to form a strong central government. The incentive which proved effective, and which forced a final consent, was the memory of dangers which they had recently shared together, and the necessity of guarding against a possible recurrence of such dangers. No such sentiment abode in the Canadian colonies. The various Canadian colonies were isolated from one another—isolated by distances and by racial distinctions. The two groups which were ethnically connected,

Ontario and maritime provinces, were separated by long distances. The two groups which were geographically united, Ontario and Quebec, were separated by the deeper cleavage of difference of origin. In all there was a strong sense of local pride, in all there was a strong assertion of self interest, and in all there were peculiar institutions as to the security of which all dreaded to be launched into the unknown. This was particularly true of education in Lower Canada and in Upper Canada. In Lower Canada the Protestant minority had long enjoyed their own system of separate schools. In Upper Canada the Roman Catholic minority had just secured a similar system. These two minorities feared that in the new constitution, under the separation of legislative powers which must ensue, the rights of each might be put in jeopardy by a hostile majority. The minority of Lower Canada felt perfectly secure under the then existing condition of things because those of their own creed and race were in the majority in United Canada. The Roman Catholic minority in Upper Canada feared also the constitution because it would be deprived of the powerful alliance of those of their own origin in another province. Under such circumstances, what was to be done? How could a scheme of confederation be devised so as to ensure the support of all parties and sections of the community? It is useless to speculate as to what might have been done. It is sufficient to say that means were found to insure to the minority in each province, the free exercise of its rights, and that means was to declare that in the provinces of Upper and Lower Canada, the rights of the minority, which were to be entrusted to the respective legislatures of these provinces, were to be above the control of the majority. Let me recall to the House the Quebec resolutions which were adopted and which were the basis and the charter under which the Canadian parliament now lives and the Canadian nation has been formed. Section 93 of the Quebec resolutions states as follows, and I pray you, Sir, mark the language :—

> The local legislatures shall have power to make laws respecting the following subjects :—
>
> 1. Direct taxation, and in New Brunswick the imposition of duties on the export of timber, logs, masts, spars, deals and sawn lumber ; and in Nova Scotia, of coals and other minerals.
>
> 2. Borrowing money on the credit of the province.
>
> 3. The establishment and tenure of local offices, and the appointment and payment of local officers.
>
> 4. Agriculture.
>
> 5. Immigration.
>
> 6. Education ; saving the rights and privileges which the Protestant or Catholic minority in both Canadas may possess as to their denominational schools at the time when the union goes into operation.

Again I say, mark the language. The

Sir WILFRID LAURIER.

legislatures of Nova Scotia, New Brunswick, Quebec and Ontario were given the power to make laws for the following purposes :

> Direct taxation.
> Borrowing money.
> The establishment and tenure of local office.
> Agriculture and colonization.

Upon all these subjects their powers are unlimited and they can do as they please, without any check, except their responsibility to the people of their respective provinces. Then on the subject of education the legislatures of Nova Scotia and New Brunswick can do as they please and are not responsible to any one except to the people. But when we come to the provinces of Ontario and Quebec, we find that the powers of these two provinces are limited as regards education. Neither the legislature of Ontario nor that of Quebec was given power to pass any law which might prejudicially affect the rights of the minority in either province. So long as this constitution endures the schools of the minority in Quebec and Ontario must likewise endure. Yet, remarkable as is this enactment, it is perhaps still more remarkable, if we remember that one of the men who assented to this limitation to the power of the province of Ontario was Mr. George Brown himself—Mr. George Brown who said again and again that he was opposed to separate schools, who had carried on a crusade of years against separate schools in his province. If you look only at the surface of things, without trying to find the inspiration, it is indeed remarkable that Mr. Brown, who, with Sir John Macdonald was the central figure, agreed that the powers of the legislature of his own province should be limited in that respect. We need not marvel if Mr. Brown was attacked and assailed for the action he then took. He was assailed perhaps by some of his own disciples whom he had taught to object to separate schools as strongly as he did himself. Mr. Brown defended his course in the confederation debate, or rather he explained his policy, because he was under no necessity to defend his course ; and I beg on this occasion to commend his language to those who to-day have forgotten confederation, when he came to discuss the 43rd resolution. He spoke as follows :—

> The people of Upper Canada will have another legislature for their local matters and will no longer have to betake themselves to Quebec for leave to open a road, to select a county town, or appoint a coroner. But I am told that to this general principle of placing all local matters under local control, an exception has been made in regard to the common schools. (Hear, hear.)
>
> The clause complained of is as follows :—
>
> 6. Education, saving the rights and privileges which the Protestant or Catholic minority in both Canadas may possess as to their denominational schools at the time when the union goes into operation.

Now, continued Mr. Brown :—

I need hardly remind the House that I have always opposed and continue to oppose the system of sectarian education, so far as the public chest is concerned. I have never had any hesitation on that point, I have never been able to see why all the people in the province, to whatever sect they may belong, should not send their children to the same schools to receive the ordinary branches of instruction. I regard the parent and the pastor as the best religious instructors—and so long as the religious faith of the children is not interfered with, and ample opportunity afforded to the clergy to give religious instruction to the children of their flocks, I cannot see any sound objection to mixed schools. But while in the conference and elsewhere I have always maintained this view, and always given my vote against sectarian public schools, I am bound to admit, as I have always admitted, that the sectarian system carried to the limited extent it has yet been in Upper Canada, and confined as it chiefly is to cities and towns, has not been a very great practical injury. The real cause of a line was that the admission of the sectarian principle was there, and that at any moment it might be extended to such a degree as to split up our school system altogether. There are about a hundred separate schools in Upper Canada, out of some 4,000, and all Roman Catholic. But if the Roman Catholics are entitled to separate schools and to go on extending their operations, so are the members of the Church of England, the Presbyterians, the Methodists, and all other sects. No candid Roman Catholic will deny this for a moment ; and there lays the great danger to our educational fabric, lest the separate system might gradually extend itself until the whole country was studded with nurseries of sectarianism, most hurtful to the best interests of the province and entailing an enormous expense to sustain the host of teachers that so prodigal a system of public instruction must inevitably entail. Now, it is known to every hon. member of this House that an Act was passed in 1863 as a final settlement of this sectarian controversy. I was not in Quebec at the time, but if I had been here, I would have voted against that Bill because it extended the facilities for establishing separate schools. It had, however, this good feature, that it was accepted by the Roman Catholic authorities and carried to parliament as a final compromise of the question in Upper Canada. When, therefore, it was proposed that a provision should be inserted in the confederation scheme to bind that contract of 1863 and declare it a final settlement, so that we should not be compelled, as we have been since 1849, to stand constantly to our arms, awaiting fresh attacks upon our common school system, the proposition seemed to me one that was not rashly to be rejected. (Hear, hear.) I admit that, from my point of view, this is a blot on the scheme before the House ; it is confessedly, one of the concessions from our side that had to be made to secure this great measure of reform. But assuredly, I, for one, have not the slightest hesitation in accepting it as a necessary condition of the scheme of union, and doubly acceptable must it be in the eyes of hon. gentlemen opposite, who were the authors of the Bill of 1863. (Cheers.) But it was urged that though this arrangement might perhaps be fair as regards Upper Canada, it was not so as regards Lower Canada, for there were matters of which the British population have long complained. and some amendments to the existing School Act were required to secure them equal justice. Well, when this point was raised, gentlemen of all parties in Lower Canada at once expressed themselves prepared to treat it in a frank and conciliatory manner, with a view to removing any injustice that might be shown to exist ; and on this understanding the educational clause was adopted by the conference.

Mr. T. C. WALLBRIDGE. That destroys the power of the local legislature to legislate upon the subject.

Hon. Mr. BROWN. I would like to know how much power the hon. gentleman has now to legislate upon it ? Let him introduce a Bill today to annul the contract of 1863 and repeal all the sectarian School Acts of Upper Canada, and how many votes would he get for it ? Would twenty members vote for it out of the 130 who compose this House ? If the hon. gentleman had been struggling for fifteen years, as I have been, to save the school system of Upper Canada from further extension of the sectarian element, he would have precious little diminution of power over it in this very moderate compromise. And what says the hon. gentleman to leaving the British population of Lower Canada in the unrestricted powers of the local legislature ? The common schools of Lower Canada are not as in Upper Canada—they are almost entirely non-sectarian, Roman Catholic schools. Does the hon. gentleman, then, desire to compel the Protestants of Lower Canada to avail themselves of Roman Catholic institutions or leave their children without instruction ?

Let us pause a moment to consider this language. Mr. Brown did not believe in separate schools. He had struggled all his life against that system. But a great object had to be achieved, a noble conception had to be realized, an inspiring idea had to be made a fact, and in order to reach that supreme goal, differences of opinion had to be reconciled, fears and apprehensions had to be removed, misgivings had to be alleviated, and above all the rights of conscience, the tender rights of conscience, had to be placed in as firm a position of security as they previously enjoyed, so that no one could object, and all, without regard to origin or creed, could give a cheerful and enthusiastic support to the new constitution.

Sir, Mr. Brown told his friends that he did not believe in separate schools ; but there were fellow-citizens of his in Ontario and in Quebec who believed in separate schools, and, in order to remove their objections and win their co-operation in the scheme which was the great work of his life, he agreed to make the sacrifice of his own convictions. In order to achieve the great object he had at heart, he agreed to fasten upon his own province a system in which he did not believe, but in which others did believe. Sir, for more than twenty years Mr. Brown has been in his grave ; but his memory is not dead. And if his teachings and his spirit be still alive, it is surely in the hearts of that staunch yeomanry of Ontario who gave him such constant support during the years of his political struggles. They followed him devot-

edly in his crusade against separate schools. They followed him even more devotedly, when he asked them to accept separate schools, to sacrifice their own opinions, and his own, upon the altar of the new country which it was his ambition to establish on this portion of the North American continent. If it were my privilege that my poor words might reach that staunch yeomanry of Ontario, I would remind them that the work of confederation is not yet finished; I would tell them that we are now engaged in advancing it; and I would ask them whether we are now to reverse our course, or whether we are not to continue to work it out to completion on the lines laid down by the great leader himself.

Now, Sir, such was the condition of things at the time of confederation. But I shall be told that this exception applies to Ontario and Quebec alone, and not to the other provinces. Sir, that is true. Amongst the four provinces then united, Ontario and Quebec alone had a system of separate schools. But I reminded the House a moment ago that it was not the intention of the fathers of confederation, it was not the intention of Sir John Macdonald or Mr. Brown to limit confederation to the narrow bounds it had in 1867. They had made provision in the very instrument of confederation, to extend it over the northern part of the continent; they had made provision to take in British Columbia, Newfoundland and Prince Edward Island; they had made provision to take in also the Northwest Territories, which were then uninhabited, but which now have a teeming population and are at our doors asking admission. Is it reasonable to suppose, if the Confederation Act recognizes that other provinces were to come into confederation similarly situated to Ontario and Quebec, that the same privileges should not be given to the minority as were given to the minority in Ontario and Quebec? What would have been the value of the invitation to enter confederation, if the provinces invited to enter, had been told that the security to the minority given to Ontario and Quebec was a privilege which they need not expect from us? Section 43 of the Quebec resolutions has become section 93 of the British North America Act, and is no longer confined to Quebec and Ontario. Here it is:

> In and for each province the legislature may exclusively make laws in relation to education, subject and according to the following provision:—
>
> 1. Nothing in any such law shall prejudicially affect any right or privilege with respect to denominational schools which any class of persons have by law in the province at the union.

So, Sir, now whenever a province comes here knocking at this door, asking to be admitted into confederation, if in that province there exists a system of separate schools, the British North America Act has provided that the same guarantee we give to the minority in Quebec and Ontario shall also be given to the minority in that province. Shortly after confederation had been established, that is, in the year 1870, the parliament of Canada had an opportunity of applying the doctrine contained in the British North America Act in the creation of the province of Manitoba. Until its admission into the Dominion, Manitoba had no regular government. It had been loosely administered by the Hudson Bay Company. There had been some schools in it, maintained by such authority as there was. There had been separate schools maintained by Roman Catholic missionaries. It was the intention of parliament to give the minority the system that they had before confederation; and, so marked was their intention, that instead of accepting without qualification the words of section 93 of the British North America Act, 'right or privilege with respect to denominational schools which any class of persons have by law in the province at the union,' they made it read 'by law or practice in the province at the union.' It turned out, as determined by judicial authority, that the province of Manitoba, when it entered confederation, had no system of schools either by law or practice. It followed, as a consequence, that the power of the province of Manitoba with regard to the subject of education was as complete as that of the province of Nova Scotia or the province of New Brunswick. This is a principle which was not understood at the time by hon. gentlemen opposite when they were on this side of the House. There was the fact, the positive fact—the power of the province of Manitoba with regard to education was as unshackled as that of New Brunswick and Nova Scotia. In 1875, as I stated a moment ago, Mr. Mackenzie introduced an Act for the government of the Northwest Territories, and in this Act the parliament of Canada, which, at that time, had among its members some of the ablest men who ever sat in a Canadian parliament—Sir John Macdonald, Mr. Mackenzie, Mr. Blake, Sir Charles Tupper and a score of others—unanimously, deliberately and with their eyes open, introduced into the Northwest Territories the system of separate schools. And not only that, but the parliament of Canada, four times successively—in 1880, in 1885, in 1886 and in 1898—deliberately and with their eyes open, ratified the system of separate schools in the Territories.

Mr. SPROULE. I would like to ask here one question, if the right hon. gentleman will allow me?

Sir WILFRID LAURIER. Yes.

Mr. SPROULE. The right hon. gentleman gave the House to understand that Hon. George Brown supported the principle of separate schools. May I ask if it is not true that Mr. Brown, in 1875, op-

posed the principle of authorizing separate schools in the Territories, voted against it and gave his reasons ?

Sir WILFRID LAURIER. I am delighted that my hon. friend (Mr. Sproule) has asked me that question. In 1875, when the Bill to which I have referred went through parliament, Mr. Brown who was a member of one branch of this parliament, opposed the introduction of the new clause in that Bill providing for separate schools. He opposed it with all his might. He told the House that he had not changed his mind upon the subject, but he told the House also that if the principle of separate schools was introduced, then, according to the terms of the constitution, it was introduced for all time to come. I am delighted that my hon. friend brought my attention to this, because really the whole subject is contained in the question of my hon. friend. We have to decide this problem upon the very terms of the legislation which was introduced in 1875. Let me give to my hon. friend all the information to which he is entitled, and which I fain would hope will fall upon favourable ground ; I will give him the whole history of that matter. Mr. Mackenzie himself introduced the Bill in 1875. The Bill as first introduced made no mention of separate schools ; but after he had sat down and when Sir John A. Macdonald had spoken on the subject, Mr. Blake rose and brought this very subject of separate schools to the attention of the House, and he did it with a height and breadth of thought which I hope will command the admiration of my hon. friend. This is what Mr. Blake said :

> The task which the ministry had set for itself was the most important it was possible to conceive. To found primary institutions under which we hope to see hundreds of thousands, and the more sanguine among us think millions of men and families settled and flourishing, was one of the noblest undertakings that could be entered upon by any legislative body, and it was no small indication of the power and true position of this Dominion that parliament should be engaged to-day in that important task. He agreed with the hon. member for Kingston that the task was one that required time, consideration and deliberation, and they must take care that no false steps were made in such work. He did not agree with that right hon. gentleman that the government ought to repeal his errors. The right hon. gentleman had tried the institutions for the Northwest Territories which he now asked the House to frame, and for the same reason as he had given to-day—that it would be better for the Dominion government to keep matters in their own hands and decide what was best for the future. He (Mr. Blake) believed that it was essential to our obtaining a large immigration to the Northwest that we should tell the people beforehand what those rights were to be in the country in which we invited them to settle. It was interesting to the people to know that at the very earliest moment there was a sufficient aggregate of population within a reasonable distance, that aggregation would have a voice in the self-government of the territories, and he believed the Dominion government was wise, (although the measure might be brought down very late this session and it might be found impossible to give it due consideration) in determining in advance of settlement what the character of the institutions of the country should be in which we invite people to settle.
>
> He regarded it as essential under the circumstances of the country, and in view of the deliberation during the last few days that a general principle should be laid down in the Bill with respect to public instruction. He did believe that we ought not to introduce into that territory the heart burnings and difficulties with which certain other portions of this Dominion and other countries had been afflicted. It seemed to him, having regard to the fact that, as far as we could expect at present, the general character of that population would be somewhat analogous to the population of Ontario, that there should be some provision in the constitution by which they should have conferred upon them the same rights and privileges in regard to religious instruction as those possessed by the people of the province of Ontario. The principles of local self-government and the settling of the question of public instruction, it seemed to him, ought to be the cardinal principles of the measure.

Now let me call renewed attention to these words of Mr. Blake : 'I regard it as essential under the circumstances of the country, and in view of the deliberation of the last few days.' What were the deliberations of those last few days in the House of Commons to which Mr. Blake alluded ? Why, Sir, it was a resolution on that very subject of separate schools, separate schools in the province of New Brunswick, where at that time, and by the constitution, the principle of separate schools was not adopted ; the minority was asking for separate schools, and came to this House for relief, but the House would not grant the relief because they would not invade the constitution. Mr. Blake said that instead of having such a state of things in the Northwest Territories it would be better to give to the people the religious instruction that all classes might want. Now what was Mr. Mackenzie's answer to this ?

> As to the subject of public instruction, it did not in the first place attract his attention, but when he came to the subject of local taxation he was reminded of it. Not having had time before to insert a clause on the subject, he proposed to do so when the Bill was in committee. The clause provided that the Lieutenant Governor by and with the consent of his council or assembly, as the case might be, should pass all necessary ordinances in respect of education, but it would be specially provided that the majority of the ratepayers might establish such schools and impose such necessary assessment as they might think fit ; and that the minority of the ratepayers, whether Protestant or Roman Catholic, might establish separate schools ; and such ratepayers would be liable only to such educational assessments as they might impose upon themselves. This he

hoped would meet the objection offered by the hon. member for South Bruce. There might be some amendments found necessary in the Bill, but he thought it would be found generally speaking to meet the requirements of the country. However, the government would be very glad to avail themselves as far as possible of such suggestions as might be made to them.

When the Bill was in committee Mr. Mackenzie proposed this clause, which was inserted in the Bill, not one member objecting to it, neither Sir John A. Macdonald, nor Sir Charles Tupper, nor any member on the government side of the House :

When and so soon as any system of taxation shall be adopted in any district or portion of the Northwest Territories, the Lieutenant Governor and council or assembly, as the case may be, shall pass all necessary ordinances in respect of education, and it shall therein be always provided that a majority of ratepayers in any district may establish such schools therein as they may think fit, and make the necessary assessment and rates therefor, and further that the minority of ratepayers therein whether Protestant or Roman Catholics, may establish separate schools therein, and that in such case the ratepayers establishing such Protestant or Roman Catholic separate schools shall be liable only to assessment of such rates as they impose upon themselves in respect therof.

Now this Bill went over to the other branch of the legislature, and there also I will give to my hon. friend who interrupted me a moment ago, the whole history of the debate upon this Bill. Mr. Aikens, who was then a prominent member of that body, moved to strike out the education clause altogether. He was answered by my hon. friend and colleague of to-day, the Secretary of State, who then as now was the leader of the Senate :

Any gentleman would have to admit that it was the greatest possible relief to the people of Ontario that this question was settled for them, and was not, as in some of the other provinces, a source of constant discord. He was one of those who maintained that parents had a right to educate their children as they pleased, and that they ought not to be taxed to maintain schools to which they could not conscientiously send their children. Our whole system of government was based upon that sound principle.

Now, Sir, I will give to my hon. friend the opinion of the Hon. Mr. Brown. But, before doing so, let me give him the opinion of a prominent member of his own party, Sir Alexander Campbell, who was then leader of the Conservative party in the Senate. Sir Alexander Campbell spoke as follows :—

It would be much to be regretted if the amendment passed. The object of the Bill was to establish and perpetuate in the Northwest Territories the same system as prevailed in Ontario and Quebec and which had worked so well in the interests of peace and harmony with the different populations of those provinces. He thought the fairer course, and the better one, for all races and creeds, was to adopt the suggestion of the government and enable people to establish separate schools in that territory and thus prevent the introduction of evils from which Ontario and Quebec had suffered, but had judiciously rid themselves.

I will now give to my hon. friend the language of Mr. Brown, this is it :

The safe way for us was to let each province suit itself in such matters. This country was filled by people of all classes and creeds, and there would be no end of confusion if each class had to have its own peculiar school system. It had been said this clause was put in for the protection of the Protestants against the Catholics, the latter being the most numerous. But he, speaking for the Protestants, was in a position to say that we did not want that protection.

Later on Mr. Brown spoke as follows :

Hon. Mr. Brown said he concurred with what had fallen from his hon. friends on the treasury benches, and from hon. gentlemen who had spoken on the amendment, with respect to the propriety of allowing separate schools. But the question was not whether those schools were right or wrong, good or bad, but as to whether it was wise for this country to deal with this question. He quite admitted the importance of the issue which had been raised—whether this matter should be referred to the province interested for settlement, or be brought to the Dominion legislature.

The moment——

——continued Mr. Brown——

——this Act passed and the Northwest became part of the union, they came under the Union Act, and under the provisions with regard to separate schools.

Sir, I commend this language to my hon. friend. I commend this language to every man in this House. There are to-day, as there were then, men in this House and out of it who do not believe in separate schools, but, as Mr. Brown said, the question is not whether that system is good or bad ; that is not the question to-day, that is not the question of which Senator Brown spoke, it is not the question with which we have to deal. But we have another duty to perform. Mr. Brown, on the floor of the other branch of the legislature, said that his opinions in regard to separate schools had not changed. He said practically this to the parliament of Canada : There is a new territory, there is virgin soil where there is no population. Do not introduce separate schools into it, do not introduce that burning question into it, but the moment you have introduced separate schools you have solved the question forever, it is part of the union and the minority will have its right to such schools.

Mr. SPROULE. The right hon. gentleman——

Sir WILFRID LAURIER. Now, we have introduced into this Bill—I beg my hon. friend's pardon.

Mr. SPROULE. I am only desirous of making one observation in regard to a part of Mr. Brown's speech which more directly refers to this subject and which the hon. gentleman has not quoted.

Sir WILFRID LAURIER. If that is the interruption of my hon. friend it was hardly worth while. I do not want to mislead the House. Can he find anything else than that Mr. Brown submitted the opinion that the moment separate schools were introduced they come under the Act of union, under clause 93 and that they were there to be maintained against the power of the legislature? Can he find anything else? Let him quote anything to the contrary.

Mr. SPROULE. Mr. Brown was arguing against the introduction of separate schools and he gives the following as his reasons:

He spoke in the interest of good feeling and harmony in the national councils. What else was the clause in the constitution empowering the provinces to settle the school question themselves inserted for, but to get quit of controversies like this in the Dominion, and to leave the schools to be managed according to the views of each locality? By this Bill they might raise the very serious issues in the Northwest which had proved so troublesome to Quebec and Ontario. No one would regret this more than he, and for this reason he would support the motion of the hon. member for Peel.

Which was that this clause should be dropped thus leaving it to the provinces.

Sir WILFRID LAURIER. It is ever the old story—none so blind as those who will not see, none so deaf as those who will not hear. I repeat again that Mr. Brown, on the floor of the Senate, did not want this clause providing for separate schools to be introduced in the Act. He stated that it would be a mistake to introduce separate schools, he said that he was opposed to separate schools, but he said that if at that time separate schools were introduced they came under the Act of Union and they were there for all time. I do not want to be offensive, but if my hon. friend (Mr. Sproule) is not blind he will understand the reasoning of Mr. Brown. That is the position that we have before us to-day. I am not here to advocate separate schools as an abstract proposition but we have introduced into this Bill the two propositions, that the minority shall have the power to establish their own schools and that they shall have the right to share in the public moneys. It is the law to-day. It is in accord with the constitution, with the British North America Act, and I commend it even to the biased judgment of my hon. friend. However, let me put a question to my hon. friend: If we were in the year 1867 and not in the year 1905, and, if we had to introduce into this Dominion the provinces of Alberta and Saskatchewan, would my hon. friend tell me that these provinces would not have the same rights and privileges in regard to separate schools as were granted to Ontario and Quebec? Would he tell me that when you say to Ontario and Quebec: You shall have your separate schools, Alberta and Saskatchewan should be denied that privilege? The thing is preposterous. Let us rise above such considerations. In everything that I have said I have refrained from saying a single word upon the abstract principle of separate schools. I approach the question upon another and a broader ground, I approach the question not from the view of separate schools, but I approach it upon the higher ground of Canadian duty and Canadian patriotism. Having obtained the consent of the minority to this form of government, having obtained their consent to the giving up of their valued privileges, and their position of strength are we to tell them, now that confederation is established, that the principle upon which they consented to this arrangement, is to be laid aside and that we are to ride roughshod over them? I do not think that is a proposition which will be maintained in this House, nor do I believe it is the intention of the House. I offer at this moment no opinion at all upon separate schools as an abstract propostion, but I have no hesitation in saying that if I were to speak my mind upon separate schools, I would say that I never could understand what objection there could be to a system of schools wherein, after secular matters have been attended to, the tenets of the religion of Christ, even with the divisions which exist among His followers, are allowed to be taught. We live in a country wherein the seven provinces that constitute our nation, either by the will or by the tolerance of the people, in every school, Christian morals and Christian dogmas are taught to the youth of the country. We live by the side of a nation, a great nation, a nation for which I have the greatest admiration, but whose example I would not take in everything, in whose schools for fear that Christian dogmas in which all do not believe might be taught, Christian morals are not taught. When I compare these two countries, when I compare Canada with the United States, when I compare the status of the two nations, when I think upon their future, when I observe the social condition of civil society in each of them and when I observe in this country of ours, a total absence of lynchings and an almost total absence of divorces and murders, for my part, I thank heaven that we are living in a country where the young children of the land are taught Christian morals and Christian dogmas. Either the American system is right or the Canadian system is wrong. For my part I say this and I say it without hesitation. Time will show that we are in the right and in this instance as in many others, I

have an abiding faith in the institutions of my own country.

Mr. R. L. BORDEN (Carleton, Ont.) Mr. Speaker, it is obviously impossible for the House to discuss in an effective manner at the present stage the Bill which has been introduced by the right hon. gentleman (Sir Wilfrid Laurier). I had hoped that I might have been put in possession of the Bill which has just been introduced, at a sufficiently early date to have enabled me to have made some remarks on it this afternoon, and I realize that one of the colleagues of the right hon. gentleman (Sir Wilfrid Laurier) the Minister of Justice (Hon. Mr. Fitzpatrick) had the intention to give me a copy of that Bill last evening. Owing doubtless, to circumstances over which he had no control, I did not receive it until a few minutes before the opening of the House this afternoon, and therefore I will not attempt any discussion of it to-day. Let me say, however, in the very few remarks that I propose to address to the House, that I congratulate the right hon. gentleman (Sir Wilfrid Laurier) upon the change of heart which he has experienced during the past twelve months. Do I understand my right hon. friend to deny that there has been such a change. Let me say that I hold under my hand the 'Hansard' of September 24, 1903, a little more than a year ago, when the right hon. gentleman (Sir Wilfrid Laurier) in debate on this House, pressed upon the attention of the House many reasons, in his opinion very conclusive, why the granting of a provincial status to the Northwest Territories should be delayed for many years, and I am bound to say that every one of those reasons which at that time presented themselves to the right hon. gentleman as insuperable difficulties in the way of immediately granting provincial autonomy, exist to-day just as strongly as they did then. The view which I am presenting to the House at this moment was suggested by my hon. friend from Marquette (Mr. Roche) in these words :

> But the Prime Minister adduced arguments that were strong no doubt from this point of view that the Northwest Territories should not be granted local self-government for many years to come.

What was the right hon. gentleman's response to that ? Did he deny that that was his opinion at that time? No, he responded to the remarks of the hon. member for Marquette (Mr. Roche) by ejaculating across the floor of the House 'hear, hear.' So therefore I have good reason to congratulate the right hon gentleman (Sir Wilfrid Laurier upon his change of heart, because when I myself on October 14, 1903, moved in this House a resolution declaring that in the opinion of this House, the time had come when the government should take this question into immediate consideration, not one member of the government, not the right hon. gentleman himself, nor one of his colleagues ventured to say one single word upon this all-important subject. They put up in their place two or three gentlemen from the Northwest Territories of Canada to argue as strenuously as they could that the granting of a provincial status should not be accorded to these provinces in the immediate future. The resolution which I moved at that time, after reciting the unanimous resolutions passed by the legislature of the Northwest Territories set forth :

> That under the provisions of the British North America Act and amending Acts, the people of the several provinces of Canada enjoy large powers of local self-government committed to and exercised by the executive and legislature of each province.
>
> That the time has arrived when the same powers of local self-government should be granted to the people of the Northwest Territories of Canada and to this end the said representations and prayers contained in the said humble addresses should be taken into immediate consideration and acted upon forthwith.

The only answer from the right hon. gentleman and his colleagues at that time was the answer of contemptuous silence and the putting up, as I have said, of two or three gentlemen from the Northwest Territories to argue that the time had not yet arrived. Well, the right hon. gentleman Sir Wilfrid Laurier) and his colleagues required a certain stimulus and that came in due course. But one of the arguments, and perhaps as strong an argument as any that was presented to the House on that occasion, was the absence of the Minister of the Interior. It was said that it would be an injustice to the Northwest Territories of Canada to introduce or to attempt to pass through this House a measure of so great importance as that which has been introduced this afternoon unless the government and the House had the benefit of the advice, the experience and the intimate knowledge of that gentleman with regard to conditions in the Northwest Territories of Canada. We all very much regret the indisposition of the Minister of the Interior (Hon. Mr. Sifton). It has unfortunately happened very often that he has been absent from sessions of this parliament, and we have endeavoured to facilitate the passage of his estimates through the House in his absence as much as possible. We all regret his indisposition I am sure, and we trust that in the early future and before any considerable progress is made with this Bill, we shall have in this House the presence of the hon. the Minister of the Interior and the benefit of his views with regard to the measure which has been presented by the right hon. gentleman (Sir Wilfrid Laurier).

But I said that it required a certain stimulus to the right hon. gentleman to enable

him to appreciate the importance of this question. Letters were addressed to him and to members of his government, over and over again, by the Prime Minister of the Northwest Territories of Canada. To these letters an answer was sometimes deigned and sometimes no answer was given for months. Letters were written by the Prime Minister of the Northwest Territories, to the right hon. gentleman who leads the government (Sir Wilfrid Laurier), on May 19, 1904, and on June 1, 1904. This matter which has been presented to the House this afternoon as a matter of transcendent importance, not only to the Northwest of Canada, but to the people of this country from one end of it to the other, was so little regarded by the right hon. gentleman and his colleagues at that time, that the whole summer passed away without any answer having been vouchsafed to the Prime Minister of the Northwest Territories. It was only in the stress of an election campaign that the right hon. gentleman awoke to the fact that he had not answered those communications. They were written on May 19 and June 1; and it was on September 30, after parliament had been dissolved, and when a campaign was actually in progress, that the right hon. gentleman was good enough to remember that he had not given any answer to the Prime Minister of the Northwest Territories. Then the matter seemed to him to possess a little more importance than he had previously considered. I will not deal with his answer now; there will be a better opportunity later on for dealing with the subjects with which it is concerned. But he did say this

> In reference to your letter of the 1st of June, I do not think I need discuss at length the representations which it contains further than to intimate my opinion that circumstances have justified the wisdom of the course adopted by my government in declining to deal finally two years ago with the many important questions involved in the admission of the Northwest Territories into confederation as a province or provinces.

Did not the right hon. gentleman realize, when he wrote that letter, that it was not two years ago, but about 11 months before, that he himself had stood up in this House and voted against the proposal even to consider the question of the admission of the Northwest Territories into the confederation on a provincial basis? He went on:

> Rapid development has taken place in the Northwest Territories during the intervening period.

Does he not remember that in the course of the debate to which I have referred, we pointed out that that development was not only going on, but might be expected to continue in the near future at even a greater rate? However, I will not deal with that subject further than to repeat that, in view of what I have brought to the attention of the right hon. gentleman, and apparently what he himself had forgotten, there is evident in his remarks to-day a marked change from the opinion he expressed in this House on the occasion to which I have referred, when he voted against the proposal that the request, the unanimous request, of the representatives and the government of the Northwest Territories should be taken into immediate consideration.

Now, I do not propose to discuss the provisions of this Bill in detail to-day. Let me say, however, that I regret very much that the government have not seen fit to give to the people of the new provinces that control over the lands of the Northwest Territories which is enjoyed by all the other provinces of Canada. That is a subject which will bear fuller discussion later on, and I do not propose to weary the House with any extended remarks respecting it this afternoon. The only thing which could be called an argument made by the right hon. gentleman against that proposition was this: he said it might interfere with the operation of the policy of the government with respect to immigration. So far as the rest of his argument is concerned, it would have justified the retention by the Imperial government up to the present time of every acre of Crown lands in Canada; and I was somewhat astonished to hear from the right hon. gentleman, the advocate, in the past at least, of responsible government, the defender of the liberties of the people on some occasions, according to his own view at least, I was astonished to hear from him the views he put forth this afternoon as to the rights of the people of the Northwest Territories in respect of those lands. He knows something of the history of this question. We remember that there were statesmen in Great Britain not many years ago who thought that the public lands not only of Canada but of all the dependencies of the empire should be retained under the control of the home government, and administered not so much for the benefit of the dependency in which they were situate as for the benefit of the whole empire at large. But it was soon found, when it was attempted to put that view in practice, that it was absolutely impracticable—that to the people living in and developing any dependency must be entrusted, and might be safely entrusted, the entire control of the public lands within the dependency. The right hon. gentleman spoke of immigration. Does he not know that there is a new Quebec and a new Ontario? Does he not know that a tide of immigration may be expected to flow, and indeed, I suppose it is now flowing into these portions of eastern Canada? Will he venture to say that there has been any obstacle placed against the immigration policy of the government by the governments which administer those provinces? Is that the ground the right hon. gentleman takes? Does he speak from experience, or does he

speak from mere surmise? I venture to think that he spoke only from surmise this afternoon, and that if he had looked at this question in the light of experience, in the light of what is happening to-day in Quebec and Ontario, he might very well have modified the provisions of this Bill, and might very well have entrusted to the people of the Northwest Territories exactly the same control over their lands as is enjoyed by the people of the other provinces. I venture to say further that if he was not willing to trust the people, as I would be willing to trust the people, in this regard—if he regarded them as possibly improvident, as was suggested by the Minister of the Interior last session or the session before—if he feared the result, he might at least have given them the control of the public lands within their respective provinces, subject to some such restriction as that which he has proposed in regard to education. If the principle is good in the one case, I do not see why it should not work out fairly well in the other case.

There are other features of the Bill which will undoubtedly invite discussion. The subject which the right hon. gentleman mentioned last, on which he spoke with great eloquence, and in a spirit of forbearance and moderation, will undoubtedly invite discussion. I do not propose to discuss it this afternoon. There is just one thing, however, that I would like to say about it, and that is that I understand that up to the present time there has been really no school question, to use the common expression, in the Northwest Territories of Canada; and I sincerely trust that on both sides of the House we will not seek to make this a political question in any sense.

Some hon. MEMBERS. Hear, hear.

Mr. R. L. BORDEN. But at the same time let us beware lest any action of ours may create in the Northwest of Canada for all time to come that question which happily has been entirely absent there in the past. I am speaking in all sincerity in regard to this to my right hon. friend. He has quoted the debates which took place in parliament on this subject. He has laid special stress upon the opinion of Mr. Brown. I will not go over his remarks except to say that of course when Mr. Brown regarded this matter as having been settled for all time to come, he did not speak in an absolutely legal sense. I do not understand my right hon. friend to contend that he did. Does he take the position that that is correct in the legal sense?

Sir WILFRID LAURIER. I take the position that the constitution certainly makes it imperative for us to respect separate schools wherever they exist.

Mr. R. L. BORDEN. I do not know that I yet quite seize exactly the meaning of my right hon. friend, but there will be opportunities later and better than the present to learn exactly his views on that point. Of course the constitutional view of the question—without touching for the moment the wisdom or propriety of what the right hon. gentleman suggests—the constitutional view of the question is perfectly plain. The parliament of Canada, so far as the Northwest Territories are concerned, can absolutely repeal or deal with in any way any provisions it makes.

Sir WILFRID LAURIER. The parliament of Canada can repeal the Act regarding the Canadian Pacific Railway with respect to taxation.

Mr. R. L. BORDEN. Of course it would be dealing there with vested rights, and my right hon. friend is very conservative in that respect. I am not discussing anything except the constitutional aspect, and vested rights are not touched in the matter I am presenting to the House at this moment. The right hon. gentleman knows that while the parliament of Canada can amend in any way it sees fit an Act with regard to the Territories, yet the position will be somewhat different after an Act such as the one now proposed has been passed. By the British North America Act of 1871 the parliament of Canada may from time to time establish new provinces. Section 2 of that Act provides:

> The parliament of Canada may from time to time establish new provinces in any territories forming for the time being part of the Dominion of Canada, but not included in any province thereof, and may, at the time of such establishment, make provision for the constitution and administration of any such province and for the passing of laws for the peace, order and good government of such province, and for its representation in the said parliament.

My right hon. friend has taken the ground, both in the letter to which I have referred, and in his speech in parliament, that the parliamentary representation of the new provinces under the Act I have mentioned, would be absolutely the results of the last census. I take issue with him on that point. I think he was mistaken absolutely when he placed that view before the premier of the Territories and advocated it in this House. The parliament of Canada may do what I have just referred to and what is set out in section 2 of the British North America Act of 1871. Then by section 3 of the same statue:

> The parliament of Canada may from time to time, with the consent of the legislature of any province of the said Dominion, increase, diminish or otherwise alter the limits of such province, upon such terms and conditions as may be agreed to by the said legislature.

Then by section 6 of the same Act it is provided:

> Except as provided by the third section of this Act, it shall not be competent for the par-

liament of Canada to alter the provisions of the last mentioned Act of the said parliament, in so far as it relates to the province of Manitoba, or of any other Act hereafter establishing new provinces in the said Dominion, subject always to the right of the legislature of the province of Manitoba to alter from time to time the provisions of any law respecting the qualification of electors and members of the legislative assembly, and to make laws respecting elections in the said province.

So that when we are framing this constitution for the new provinces of Canada, we are framing a constitution which in the future cannot be dealt with by this parliament except with the consent of the provincial legislature.

Just one word more. This Bill of course will have to be printed and we shall require some time to consider it and perhaps some further information will require to be brought down. I have made a note of what I think should be brought down for the information of the House before this Bill is further discussed. I would like to direct the attention of my right hon. friend to certain returns moved for on page 119 of the Votes and Proceedings, of which some have not been brought down. I am alluding of course only to those relating to the Northwest Territories. I would like also to have from the right hon. gentleman full information as to the centres of population in the new provinces and the course and tendency of immigration since the census of 1901. This is of importance in connection with the establishment of electoral divisions and also with regard to the boundaries of the two provinces. In the next place, I would like to know if possible the quantity of lands which have been patented in the two provinces for homestead purposes, the quantity granted to railway companies or which railway companies, under the terms of their charter, are entitled to select at present. Also what lands have been granted to railway companies, but which have not been earned or patented. And I would like a statement, if it is not already contained in the Bill or the speech of my right hon. friend, of what lands yet remain vested in the Crown. I would like also to know as to these lands, and especially in connection with the proposed boundaries of the two provinces, what proportion is more suitable for the growing of grain, and where it is situated, what proportion is more suitable for ranching or other description of farming and where it is situated, and what proportion is supposed to require irrigation and where situated. All this information will be of value to us in discussing the question of boundaries between the proposed provinces. It would be desirable also that on the second reading of the Bill some definite information should be given to us as to what is the practical condition of education in the Territories at present. I fully expected to have received that information this afternoon but was disappointed. Also information as to the systems of public schools which have been established there and under what ordinances, management and inspection they are carried on. What number of schools, public schools in the ordinary sense, are to be found there and what number of separate schools ? I think that all this information and other information of a kindred character should be placed before the House, and I am sure that upon this question, to which the right hon. gentleman has alluded with so much feeling, we shall all endeavour to meet him in the same spirit. I will not go over the past. I will not allude to the fact that possibly a somewhat different spirit was manifested some eight or nine years ago when a similar question arose. It has been asserted by some—with what truth I know not—that that question was deliberately brought into the political arena for the advantage it might give to hon. gentlemen on the other side. I will not do more than allude to that and express once more the hope that whatever may have been done in the past by hon. gentlemen opposite, which is not consistent with the lofty ideals my hon. friend has expressed this afternoon, we on this side at least shall not emulate that example, but shall deal with this question in a spirit of Christian charity and forbearance, realizing that on all such questions there are two sides and endeavouring each one of us too realize that we must consider the question presented to us not only from our own standpoint but also from the standpoint of those who differ from us in opinion. It is above all things desirable that these questions and considerations, touching sometimes upon differences of races and dealing with matters of dogma and creed, should not be introduced into the political arena more than is absolutely necessary. I know that the House will deal with this question in that spirit, and I trust and believe that we may find some solution of what has been presented to us this afternoon by the right hon. gentleman which will commend itself generally to the people of Canada from the Atlantic to the Pacific.

Mr. SPROULE. I do not rise to continue the debate but merely to ask a couple of questions. Before doing so, however, I must congratulate the right hon. gentleman as the accoucher who has assisted in bringing into the family of the Dominion this healthy pair of provincial twins. They have certainly given evidence of life and activity, and I should hope he will not shackle their limbs in such a way as to prevent their development. This is an important Bill, and I only rise to ask that a large number of copies be printed as there are many applications for it. I would suggest that the second reading

might be delayed for some period until there has been an opportunity to hear from those who are most interested, the people of the Northwest. I think that the second reading should not take place earlier than three weeks or a month later.

Motion agreed to, and Bill read the first time.

Sir WILFRID LAURIER moved for leave to introduce Bill (No. 70) to establish and provide for the government of the province of Saskatchewan.

Motion agreed to, and Bill read the first time.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

CENSUS AND STATISTICS.

House in committee on Bill (No. 5) respecting the census and statistics.—Mr. Fisher.

On section 30—every person employed in the execution of this Act to take an oath of office—

Hon. SYDNEY FISHER (Minister of Agriculture). When that section was previously before the committee, the suggestion was made that the getting of any information by an officer in addition to what was authorized in the schedules given him should be made an indictable offence. I promised to look into that and get the opinion of the law officers. I have done so, and am quite willing that this should be made an indictable offence, and I propose to introduce a new section, section 30 (a) next after this clause, to attain the object desired. I take it that the object of having the section stand has thus been met, and that the section may pass.

Mr. LENNOX. I desire to call the minister's attention to another point that was raised during the discussion of this section. I asked the minister to consider what officers would be included in the words of section 30—'every officer, census commissioner, enumerator, agent and other person employed in the execution of this Act,' and to say how his section would work in conjunction with section 17. I understood the minister then to say that probably the descriptive words in section 30 would include all the public officers described in section 17. I did not understand the minister to be positive on that point. It is a matter of some importance, and perhaps the minister will explain what conclusion he came to concerning it.

Mr. FISHER. I did not think it was necessary that officers employed by other authority, who furnish us information under this Act, should be called upon to take an oath under this Act. We would require them to say that the information furnished us was what they had collected. But I do not think we could do more than that. They are not acting as officers of the department in any way, except as they supply information to us. But I think when they supply information it should be under some form saying that this was the information they had collected.

Mr. LENNOX. I think the minister and the committee should carefully consider the effect of this legislation. As the minister says, some of the information that would be given by these officials would be given merely as information received from other sources, and they would not be able to pledge themselves to the accuracy of it as coming from original sources. But they will be bound, under this section, to swear to the faithful and exact discharge of the duties that are expected of them and to the secrecy of the statistics collected. And under section 31, it is provided that these officials, in case they make a false declaration, will be guilty of an indictable offence. I call the minister's attention again to the position we are taking in connection with sections 17 and 30 taken together. We have certain officials appointed by municipalities or by the provincial government and bound to carry out the instructions of the authority that appointed them. Almost inevitably, I fear, at some time, the duties prescribed by the federal government under this Act will conflict with the duties as defined by the local authorities. And it is a pretty drastic measure to provide that a neglect of duty required by this government on the part of an officer appointed by the local government will subject the officer not merely to a fine, but to being declared guilty of an indictable offence. I think we come dangerously near usurping the powers of the local governments; and, in that view, I think this is not a wise provision.

Mr. FISHER. Section 31 provides that every person employed in the execution of this Act 'who makes wilful default in any matter required of him by this Act, or wilfully makes any false declaration touching any such matter,' is guilty of an indictable offence. Of course, if he makes a return saying that it is information he has collected in his capacity as an officer of the local authority, and wilfully falsifies that return, I think he should be held guilty of an indictable offence. But if he transmits the information he collects, he would carry out the full spirit of the law.

Mr. LENNOX. I do not wish to put more difficulties in the way of the Bill than necessarily meet it. Of course, if one makes a false declaration, he is not much to be commiserated in any punishment. But there is another feature. Section 31 says ''who makes wilful default in any matter required of him by this Act.' There may be a bona

fide refusal to comply with this Act where it might be in conflict with the duties required of the officer by the power that appointed him. I think it is dangerous for us to say that we will assume authority to demand certain information of these officers and, even though the giving of it may be in direct conflict with the instructions of those who appointed them, and to declare that a refusal shall be an indictable offence. That is the matter that ought to be very fully considered.

Mr. FISHER. I will look into that and see if there is any difficulty. I would like to move the following as section 30 (a) :—

Every officer, census commissioner, enumerator, agent or other person employed in the execution of this Act who, in the pretended performance of his duty thereunder, obtains, or seeks to obtain, information which he is not by or under this Act duly authorized to obtain, is guilty of an indictable offence.

That is in exact concordance with existing provisions of clause 31.

Mr. R. L. BORDEN. Certainly it is a desirable provision to add. The particular occasion to which attention was directed in the House was one in which persons not employed in the execution of the Act had sought to obtain information.

Mr. FISHER. My deputy and the law officers looked into that point and they say that clause 61 of the Criminal Code covers that point. I may add that the clause I have just introduced makes this an offence, and then the Criminal Code makes it an offence to induce a person to commit the offence.

Amendment agreed to.

On section 33—penalty for refusal or neglect to fill up schedule, &c.

Mr. FISHER. In this case there is a difference in the fine. The fine is made $100 and not less than $10 in the present Act, this will make it uniform with some other provisions in other parts of the Act. In the old Act of 1858, the Census Act, the fine is $40 and not less than $1; but in the General Statistics Act and the Criminal Statistics Act it is $100 and $10. This makes the fine uniform.

On section 40,

Mr. FISHER. This is new, but it is simply carrying out the Act and is for the purpose of obtaining information by correspondence through the mail and not by personal application.

Mr. R. L. BORDEN. Both of the subsections of this section may be used a little oppressively. I do not suppose that any practical difficulty will result but they go rather far. Subsection 1 provides that :

The leaving, by an enumerator, at any house or part of a house, of any schedule purporting to be issued under this Act, and having thereon a notice requiring that it be filled up and signed within a stated time by the occupant of such house or part of a house, or in his absence by some other member of the family, shall, as against the occupant, be a sufficient requirement so to fill up and sign the schedule, though the occupant is not named in the notice, or personally served therewith.—R.S., c. 58, s. 23.

You might leave the notice in such a way that it will never come to his attention. You might leave it with some one who is absolutely unauthorized. The usual provision in legislation of this kind is that it shall be left with some adult person in the House for the person for whom it is intended and that is certain guarantee that it will in the end reach the person from whom it is intended. I am rather surprised to find that the legislation was passed originally in this form.

Mr. FISHER. That portion of the clause is exactly the same as section 23 of the Census Act, and subsection 2 is the same practically repeated to apply to correspondence. We propose to collect a great deal of information through the mails and we require power to act in the same way as if the schedules were left personally at the House. I do not think that in the practical working of it there will be any great difficulty. I can conceive that it might be used unfairly, but I take it that this power if given will be used properly and rightly by the government or the minister.

On section 41—remuneration of persons employed under this Act.

Mr. FISHER moved :

That section 41 be amended by inserting after the word 'shall' in the first line thereof the words 'subject to the approval of the Governor in Council.'

He said : I think this remuneration ought to be given by Order in Council and not by the minister.

Section as amended agreed to.

On section 15—agricultural, commercial, criminal, educational, manufacturing and other statistics.

Mr. FISHER. I would like to go back to clause 15 which was held over for further consideration. I wish to add a provision to that clause in the sense of the suggestion that was brought forward here the other night so as to ensure that no individual or particular investigation shall be held into the details of the business of any individual concern. This is what the Department of Justice have drawn up to cover the point.

Provided that the Governor in Council shall not, nor shall the minister in the execution of the powers conferred by this section, discriminate between individuals or companies to the prejudice of such individual or company.

I may say that the remarks of the hon. gentleman who brought this matter up were carefully examined and looked into and in the opinion of the Department of Justice

this is the most practical and most effective way to cover the idea as expressed.

Mr. MACDONELL. What I would like to suggest to the hon. minister is that the addition of the words to the amendment 'either in the collection or publication of such information' is desirable. I think it would be well to introduce these words to actually express what the intention is. That was the objection that was raised on the occasion to which the hon minister refers.

Mr. FISHER. I think that is covered by the whole clause. This proviso covers the whole clause and the whole clause deals with the collection and publication of statistics. Therefore, I think this proviso applies to the point that my hon. friend alludes to.

Mr. MACDONELL. But I think it might or might not be construed as applying to the whole clause. It would put it beyond the realm of doubt if these words were inserted and it would round off the phrase and give it significance.

Section as amended, agreed to.

Bill reported, and amendments read the first and second times.

SUPPLY.

House in Committee of Supply.

Trent canal, $300,000.

Mr. WARD. I would like to ask the Minister of Railways, if he were present, some questions about the surveys that are now being made with regard to the Trent Valley canal. In answer to some questions recently asked, the minister made reply that surveys were being made by way of Port Hope, Cobourg and Trenton. I was very anxious that the minister should be present in order to explain why a survey was being made by way of Cobourg and I would rather not go on with this item until the minister is here to make that explanation.

Sir WILLIAM MULOCK. The Minister of Railways thought that supply would not be reached until nine o'clock and he will not be here until that hour.

Mr. WARD. Perhaps the Postmaster General can give the information.

Sir WILLIAM MULOCK. I would not like to usurp my colleague's position, but if the hon. gentleman would like to have the item stand until the minister's arrival, perhaps it would be better.

Mr. SAM. HUGHES. From a little experience which we had the other day I understand that the Postmaster General is about running a canal up the valley to Newmarket and Aurora. I think he might fill in the time until the arrival of the Minister of Railways and Canals by giving us a description of that canal and all the data in connection with it.

Sir WILLIAM MULOCK. There is a very large deputation in the interest of that enterprise in the city and they will set forth its merits before the government to-morrow at 10.30 o'clock. If my hon. friend (Mr. Sam. Hughes) and others interested will come with them at that time they will obtain more detailed information. However, if the hon. gentlemen desire to have it stand, the Minister of Agriculture will proceed with his estimates.

Mr. COCHRANE. Have the surveyors made a report of that road into the riding of the Postmaster General?

Sir WILLIAM MULOCK. I am not able to answer any one of these questions.

Item allowed to stand.

Patent Record, $17,000.

Mr. FOSTER. Are these items covered by the portion of the Auditor General's Report which has been brought down ?

Mr. FISHER. I think the last volume of the Auditor General's Report was laid on the table of the House yesterday.

Mr. FISHER. This is the same item that we have had for several years back, though it has been increasing a little in amount. It is for the publication of the 'Patent Record,' which is published monthly, and which gives the patents issued, with a short outline of their character, and with a print which is supplied along with the application for the patent.

Mr. FOSTER. Where are these prints made ?

Mr. FISHER. In the Printing Bureau or through the Printing Bureau. I have nothing to do with that. We simply pay the bills which the Printing Bureau presents to us.

Mr. FOSTER. How is that work distributed ?

Mr. FISHER. It is sold to subscribers at the rate of twenty cents per number, it is sent regularly to members of the Senate and House of Commons, and it is distributed gratis to libraries and public institutions, and a large number are sent to Great Britain for distribution there to public libraries and other institutions.

Mr. FOSTER. What income do you derive from it ?

Mr. FISHER. I am informed that it amounts to some hundreds of dollars, but it is not a large amount. That goes to consolidated fund.

Mr. FOSTER. I suppose it is carried on in exactly the same way as it was formerly ?

Mr. FISHER. Exactly as it has been since I have been in office, except that it is expanding with the larger number of patents issued from year to year.

Mr. BARKER. Would not the issue of this yearly or half-yearly answer every purpose ? Every member receives copies of this publication monthly. I look over them occasionally and try to distribute them, but they receive very little attention. It appears to me that a great deal of the expense, perhaps one-half or two-thirds, might be saved by issuing it quarterly, half-yearly or yearly. I dare say it may be interesting to designers. The illustrations in it are undoubtedly of a most interesting character, but it is a good deal of money to pay, and unless the minister knows that the country is getting value for it, I think it might be well to consider whether some change could not be made in the method of distribution.

Mr. FISHER. I may say that there is a demand on the part of those interested in patents that it should be issued weekly instead of monthly. In the United States the similar publication is issued weekly. It is true, my hon. friend or myself or others who are not specially interested in patent matters, do not require these publications very often ; but those who are taking out patents or have any intention of doing so, as well as patent solicitors and the large body of people who are interested in patents or own patents, and manufacturers who wish to make use of patents in their industries, watch it very closely. The pressure on the department is altogether in the opposite direction from what my hon. friend suggests. I do not think the difference in expense, from issuing it half yearly or monthly, would be very great, because the monthly issues are not bound, but only stitched, and the printing would have to be done whether they were issued monthly or half-yearly.

Mr. FOSTER. How many are issued ?

Mr. FISHER. I am informed that about 4,000 are printed. We always keep a number in reserve, because very frequently we have applications for back numbers.

Collection and compilation of criminal statistics, $2,000.

Mr. FISHER. These are collected in accordance with the Act requiring the collection of criminal statistics. The money is paid to the court officials all over the country, who are required by the Act to send in this information periodically.

Mr. FOSTER. I suppose this will come under the new Act ?

Mr. FISHER. Yes, the provisions of the new Act are practically the same as those of the old Act, all being consolidated.

Mr. FOSTER. Has any improvement been made in the classification or scope of these statistics ? Owing to their fragmentary character, one can scarcely trust himself to make a generalization from them.

Mr. FISHER. I am informed that there has not been any change. There is a demand for them on the part of lawyers and others who are interested in criminal work, and also by students, philanthropists and sociologists. We frequently get requests for this information from people in Great Britain and the United States. I will have the matter looked in order to see whether any change can be worked out to make them better. That is one of the objects of the new Act.

Mr. FOSTER. Fragmentary statistics are almost more dangerous than none.

Statistical Year-book, $6,000.

Mr. MONK. The hon. minister will remember that Mr. Ross, of Victoria, who used to take a warm interest in this item, generally laid on the table, when we were discussing it, the year-books of Australia, New Zealand, Natal and the Cape, and my hon. friend will no doubt remember that our own does not compare at all favourably with those issued by those colonies. Is there any prospect of any improvement and of our getting our year-book a little earlier than we have been in the habit of getting it in the past few years ? In the year-books of Australia and the other British dependencies, there are maps showing the lines of railways in those colonies and also other information not to be found in our book. My hon. friend will admit that the year-book comes out in Canada at a very late date. Would it not be possible to have it published a little earlier, which ought to be more easily done now that my hon. friend has established a bureau of statistics. I think also we might have a few more copies of the French translation and have them a little earlier. The French edition comes out very late indeed. The translation is not difficult. It mostly consists of a compilation of figures, and there is a very considerable demand in our own province and outside for a French edition. I do not think that a few copies more would make much difference in the cost of printing. How many copies will this sum of $6,000 give us?

Mr. FISHER. I have here the details for 1903. There were then 5,000 copies of the English paper edition and 2,000 bound ; 600 copies of the French paper edition and 300 bound. In that year we took a smaller vote than we did last year and are asking for this year. We are taking an additional $1,000, but the figures for 1903 are the re-

sult of a vote of $5,000. We are asking this year for $6,000, and that extra money will be spent in obtaining so many more copies.

Mr. BARR. How much per book ?

Mr. FISHER. It is pretty hard to figure that out. About 40 cents, but some are in paper and some bound. The bound ones cost a good deal more than the paper ones. I can assure my hon. friend from Jacques Cartier that I will do my best to have the book out earlier, but it must be borne in mind that the gentleman in charge of the work cannot begin until the reports of the different departments are finished. I am told that probably the book will be ready about May 10, this year. The translation requires to be done by an experienced man, and we have an officer who has been doing that work many years, but I would be very willing to have the work done more rapidly if that could be accomplished by additional assistance. But there is this difficulty always in the translation. The translators want to work from the proof sheets of the Printing Bureau instead of from the copies. They say that they can finish their work just as quickly in the end if they wait for the proofs as if they worked from the typewritten copies. I could never understand why you cannot translate typewritten copy as well as proof, but they insist that they cannot and insist on waiting until the galley proofs of the English edition are before them. I tried to argue the question with them but they said they knew their business better than I.

Mr. MONK. I would like my hon. friend to bear in mind what I said with regard to the maps. In the year-books of the other colonies there are maps showing the mineral areas, the agricultural areas, the forest areas and the principal railways. I do not know whether that would materially increase the cost, but it would certainly increase the interest of the work.

Mr. FISHER. I have taken a note of what my hon. friend says. Let me say that in preparing for the exhibitions, we have had a book compiled very largely from the year-book for distribution at these exhibitions. We have had some maps prepared, and I admit that it would be a good thing that we should have maps in the different year-books showing the railroads, forest, mineral areas and so on. Those maps are however, very expensive and would add materially to the cost of the book, and I might have to ask for an additional vote.

Mr. BARR. Of course, these statistics are useless when they grow old and musty. Though we have the promise that they are to be put out more promptly in the future, I find, on looking over the list for the last three years, that the publication has been growing later. If we go on in this way they will soon be over a year old before they are made public. In 1900 the publication was on June 22 ; in 1901, on May 15 ; in 1902, May 28 ; and in 1903, June 29. So far as the municipal authorities are concerned they responded promptly, proving that they are probably the best agency for gathering statistics.

Mr. J. D. REID. Are the government selling maps such as were distributed amongst members of the House last year ? A man was in my town recently selling them.

Mr. FISHER. No maps are issued by my department. I suppose the map the hon. gentleman (Mr. J. D. Reid) refers to is one issued by the Department of the Interior a year and a half or two years ago. It was an excellent map and was issued in different sizes. But I do not think the department are selling them.

Mr. J. D. REID. They are very fine maps. I got fifty of them and distributed them through my riding. To my surprise a man was selling them around our town.

Mr. FISHER. I think he must have got them surreptitiously. I am sure the department could not countenance anything of that kind. I will call the attention of the Department of the Interior to what the hon. gentleman has said.

Mr. TAYLOR. I understood the Minister of Agriculture to say on a reply to the hon. member for Jacques Cartier (Mr. Monk) that the cost of the statistical year-book was about 40 cents a copy.

Mr. FISHER. I said I thought that was about the cost.

Mr. TAYLOR. By the Auditor General's Report, page D—32, you will find that the year-book of 1902 was printed to the extent of 6,500 copies in English and 1,400 in French, at a cost of $5,129.17 paid to the King's Printer, or 66⅔ cents per volume. It seems to me that this is a pretty high price for printing a volume of this character and that the Minister's estimate of 40 cents per volume would be nearer the mark.

Mr. FISHER. I have no control over the cost of printing. The work is done by the Printing Bureau, and they send in their bill and we pay them.

Railways and Canals—chargeable to capital—Trent canal—construction, $300,000.

Mr. WARD. I would like to ask the minister how many mouths this Trent Valley canal is to have. Up to the time of the elections on November 3, last, I was under the impression that only two mouths were proposed—at Port Hope and Trenton respectively. But information was brought to me at that time that a survey was being made by way of Cobourg. In answer to a question the Minister of Railways and Canals stated

that the survey was actually being made by way of Cobourg. During the late elections, instead of being confronted by my good friend Mr. Robert Beith, who formally represented West Durham, I had a cabinet minister opposed to me, who took a great interest in the Trent Valley canal. During the course of the election a good deal of correspondence took place between the hon. minister—or proposed hon. minister—who was opposing me and the Prime Minister. I desire to read a letter written at that time, as I understand by the right hon. gentleman (Sir Wilfrid Laurier) at the head of the government to my opponent, Mr. Aylesworth. I am sorry that the right hon. gentleman is not in his place to-night, but now, when the item is before the committee, is the time for the discussion of this matter. The letter is as follows :

Toronto, Oct. 13.

My Dear Aylesworth,—In answer to your communication requesting that there be made without any delays a full and detailed survey and report showing in detail the work and the estimated cost of the proposed outlets of the Trent Valley canal at both Port Hope and Trenton, by competent, reliable and impartial engineers —such report and survey to include hydraulic lift locks and also locks of any other design which might be considered or adopted, also electrical power for mechanical and lighting purposes, buoys, cost of operation and maintenance, together with a report on the construction of any railway and highway bridges that may be necessary, also the damages resulting from obstruction of water, flooding of lands or injuring lands, on other properties on each route, and also including construction and maintenance of all necessary harbour facilities and lighthouses with respect to each route, I beg to say that this subject has already engaged the attention of the government which some time ago decided that such survey and report of estimated cost should be made. I regret to learn from your letter that the work in question is possibly not proceeding on a satisfactory basis, and beg to assure you that the government will with all possible speed cause the survey and report which you ask to be made. It is further intended to have such survey and report made with reference not only to a work of the depth and capacity of the completed portion of the Trent Valley canal, but also of a work of greater depth and capacity, and therefore the instructions to the engineers will be given in accordance with such intention. From memory I cannot go more fully into the details of the survey, plans and route. It is the intention of the government to have the most complete inquiries made as to the relative merits of the two routes in all their bearings, and therefore the survey and report in question will be sufficiently comprehensive, not merely to cover details above mentioned, but any other details, which it would be either proper or necessary to know before making the selection of an outlet. If the details of the respective surveys and reports fall short of what is necessary or advisable the government will be glad to supplement them in any manner that you recommend in order to have both the government and the country in full possession of all information touching the relative merits of the various routes before a selection is made.

Yours very truly,

WILFRID LAURIER.

To A. B. Aylesworth, Port Hope.

With regard to that letter I may say, Mr. Chairman, that some gentlemen in the town of Port Hope who heard that letter read on the occasion when my hon. friend the Postmaster General, I think, was present, were not quite satisfied with the terms of the letter, and subsequently another one a little stronger in its terms was sent by the right hon. gentleman at the head of the government, I think to Mr. Aylesworth, in which he made it quite clear that the surveys to be made of these two routes should be made on a basis of an 8 feet 4 depth of canal. Now the matter of surprise to me is this, that although at that election there were apparently two routes suggested, those by way of Port Hope and Trenton, now there crops up an additional route by way of Cobourg. I do not know on what ground the hon. minister is having a survey made by way of Cobourg, except that my hon. friend, whom I do not see in his seat this evening, the hon. member for West Northumberland (Mr. McColl) managed to secure his election on that occasion, and naturally there might be some disposition on the part of the government to run a canal through a constituency which was successful in returning a supporter of the government. However that may be, I desire to call the attention of the minister to several facts in connection with the routes by Port Hope and Trenton—I cannot say one word about Cobourg, because I know nothing whatever about that route. But there is this to be said in addition to what I have already brought to the attention of the government on various occasions ; and I think that the right hon. premier of this government might have given me some credit for having brought this matter before the House on various occasions, and considered that I was perhaps a little more worthy of representing the county of Durham from residence reasons, if for no other, than the Hon. Mr. Aylesworth. However, in addition to what I have already brought to the attention of the government, I wish to mention this fact, that taking into consideration the buoying and the lighting of the canal for a distance of forty miles, the excess in length of the canal which would be necessary by way of Trenton, I am informed by gentlemen who have taken this matter into earnest consideration that the extra expense of running a canal by way of Trenton over and above what it would cost by way of Port Hope, would represent a capitalization of a million and a half dollars. I do not desire on this occasion to repeat the arguments that I have brought before the House before on three separate occasions ; but I do wish to impress upon the Minister of Railways and

Canals that no route should be adopted by the government until the most thorough inquiry and examination has taken place, not only by the engineers in charge of the work, but by the minister himself. I think the minister is capable of forming a judgment if he will only go over the ground, and if he does so he will find that the outlet by way of Port Hope is the proper outlet, not only by reason of the comparatively small expense that will be entailed in building the canal by that route, but for many other reasons which could be pointed out to him. I would like to ask the minister why this survey has been made by way of Cobourg, and why the other two routes by way of Trenton and Port Hope are ignored for the time being ?

Mr. EMMERSON. I may say to my hon. friend that the survey by way of Cobourg was not undertaken until about the 10th or 12th of December. The object of that survey is to get possession of all the facts relating to the lake entrance of the Trent valley waterway. I regret that it has not been my privilege to go over this waterway and to visit the different sections. I must, therefore, necessarily discuss the subject, if I undertook to discuss it at all, quite in the dark so far as any personal knowledge of the locality is concerned. I say I regret that I have not had an opportunity of visiting the locality, and I shall certainly avail myself of the earliest possible occasion to go over the entire route of these waterways. There are three possible outlets, one at Trenton, as I understand, where a survey has been made, and where one is now in progress ; another at Port Hope, and another at Cobourg, which was undertaken somewhere about the middle of December.

Mr. SAM. HUGHES. I hope the minister will not forget the one by Newmarket and Aurora.

Mr. EMMERSON. That is in another direction, I think. I find a difference of opinion exists as respects these different routes. My hon. friend from Durham (Mr. Ward) will recollect that I brought down and laid on the table of the House last session, I think it was, reports of the engineers with respect to the surveys which had been made in the previous year. He did not seem to be satisfied with those surveys, he thought it would be very much better to have a fuller survey made and more accurate information, from his standpoint. In deference to the views which he expressed at that time, and in deference to the views expressed by other members, the whole matter was gone into, and the question of surveys of these different routes was placed in charge of Mr. Walsh, a very eminent and competent engineer. I approach this subject with an entirely open mind, I have no preference for one route or the other and I trust that any arrangement that may be reached in the matter will be reached entirely upon the merits, because that after all is the important matter. There must be a correct route, or one of the routes must be better than the others. The point is to be able to find out exactly which is the most advantageous to the Trent valley waterway.

Mr. WARD. My hon. friend the Minister of Railways and Canals has referred to two previous surveys. Now, my whole objection to these surveys has been this, that they were not made of the two routes upon exactly the same basis. I pointed out last session and the session before, particularly last session, the discrepancies that existed in the survey of Mr. McLeod as to the route by Port Hope and by way of Trenton. It will not take a moment to instance two particular branches of the survey which differ entirely as far as the two routes are concerned. In the first place, there are the reaches of the river and the reaches generally of the canal. As my hon. friend will understand, there are nearly forty miles of reaches by the Trent route, between Rice lake and Trenton. If my hon. friend will examine the report of Mr. McLeod, the engineer who made these surveys, he will find that although estimates for 8 feet 4 inches in the canal were made, he states in another portion of his report that he only estimates for 6 feet in the reaches. He admits that in the canal proper every one of the excavations has to be made in limestone rock and that the excavations in the reaches are in limestone rock also. But there is not one dollar estimated for the excavation of the difference between 6 feet and 8 feet 4 inches in the reaches of the river or the canal. Therefore, there is a very large sum of money required for excavating these reaches of the river and the canal not included in the estimates of the cost as between Port Hope and Trenton. Another thing which I pointed out to the committee at the time was that there was not one dollar estimated for drowned land. It is well known that there are some 20,000 or 30,000 acres of drowned land already on the route of the canal, and it is intended to raise Chisholm's dam about two feet, which will drown about 10,000 acres more land. But there is not one dollar estimated for the drowning of this extra amount of land, and I say that unless we have an estimate of all these different things, as between the two routes, my hon. friend cannot possibly come to a just conclusion ; and until a satisfactory survey is made, it is utterly impossible, as far as the cost is concerned, to make a correct choice in the matter.

Mr. EMMERSON. The cost of drowned lands being a very important factor in the cost of the canal.

Mr. WARD. Certainly.

Mr. SAM. HUGHES. I shall not enter into the merits of the two routes further than to correct my hon. friend (Mr. Ward)

slightly in relation to the reaches. The plan is to dam the river and raise the water in that way—not to damn the canal, but to dam the river. A further point I want to lay before the committee is in relation to the dispute about where the entrance of this canal should be. My hon. friend ought to know why Port Hope cannot get the entrance of the canal. Durham is getting a town clock for the town of Bowmanville ; therefore, Durham cannot have the entrance to the canal. Lott got caught with the ballot boxes in West Hastings, and therefore West Hastings cannot get the entrance to the canal. West Northumberland returned a Liberal, and consequently West Northumberland is going to have the entrance to the canal.

Mr. EMMERSON. By the rule of three.

Mr. SAM. HUGHES. By the rule of three. I was very sorry to note in the letter of the right hon. Prime Minister, about which there is no misunderstanding, a reference to impartial engineers. There has been a good deal of objection raised to the fact that Chief Engineer Rogers of the canal has been more or less connected with the surveys of this route, and he has been charged with favouritism for one route or the other. No matter what that officer's opinions may be, I wish to assure the hon. minister, and to state to the committee, what every one who knows that gentleman will bear me out in saying, that a more impartial or competent engineer cannot be found in the Dominion of Canada. I take this opportunity of impressing upon the hon. minister the fact that in so far as the success attending that great lift-lock at Peterborough is concerned, it is due almost entirely to the able and indefatigable work of Chief Engineer Rogers, and I was very sorry, at the opening of that great work, to find that when the hon. Postmaster General (Sir William Mulock) and other ministers spoke, they were particular, for some cause or other, to deliberately omit giving that officer the credit due to him. I think this was an injustice to that gentleman, who has earned a reputation that he should not be depived of.

Mr. EMMERSON. I thought he was the central figure on that occasion.

Mr. SAM. HUGHES. If the hon. minister reads the report of the speeches made on that occasion, even that of the hon. minister's own speech, he will find that the name of Mr. Rogers was omitted from the references to those who had contributed to the success of the lock. All we want in our part of the country is that there shall be an outlet to the canal, whether at Port Hope, Cobourg or Trenton ; that the hon. minister will be good enough to determine where the outlet shall be, and press forward to that outlet with all available speed. I am delighted to hear the hon. minister say that he is going to do that. I presume he has the notes before him outlining the work under construction and now about completed and the work that is going on. I hope the hon. minister will be good enough to outline these proposed works to the committee. I shall not ask him to outline the branch to Newmarket and Aurora, as we would expect the hon. Postmaster General to give the details of that later on.

Mr. COCHRANE. Mr. Chairman, I want to correct the statement made by the two hon. gentlemen who have preceded me in reference to these stretches measuring from Rice lake. That water is navigable now to Heely's falls, and it must be ten or fifteen miles nearer the outlet than the rest of the lake. I am not going to tell the hon. minister what he should do in reference to it. He has engineers who, I suppose, will do their work honourably, and the outlet will no doubt be placed where nature designed it to be. I wish to draw the hon. minister's attention to the fact that there is another outlet which is suggested, and to which I had the honour of calling his attention on behalf of the council of the village of Brighton. There is no political significance in this, because it was a request that was made after the elections were over. The only objection that there might be to an outlet in that part of the riding is the fact that they returned the member who is now addressing the hon. minister. I know from his good nature generally manifested to me that he would not object to having the outlet at Presque Isle harbour, one of the best natural harbours on Lake Ontario, and which is at the mouth of the Murray canal. I think I can say, without fear of contradiction, that this is one of the best natural harbours on Lake Ontario. It is at the entrance to the Murray canal, which leads from Presque Isle harbour to the Bay of Quinte, and is on the direct route to Montreal and Quebec. I am not going to discuss the propriety of placing barges on Lake Ontario. I think, however, the idea will kill the outlet either at Cobourg or Port Hope, because these barges would not stand the severe storms to be encountered on Lake Ontario. My old home was on the shore of Lake Ontario, and I can tell hon. gentlemen who have not been on that stretch of lake in the fall of the year, when it would be used for carrying grain from the interior of Ontario to Montreal and Quebec, that my opinion is that a barge after it reached either harbour and got to Lake Ontario would not be above water very long. The engineers who are now surveying the route from Cobourg could survey the route from Brighton as well. I would be delighted, when the minister comes, if he would intimate to me when he will visit Brighton to see that outlet, to see that he is conveyed over that route in as comfortable a manner as can be.

Mr. EMMERSON. It is only within a week or so that the hon. gentleman (Mr.

Cochrane) furnished me with a copy of the resolution passed by the municipality to which he has made reference, and I have already submitted the question for the judgment of the engineer. The course to be pursued is under consideration. In reply to the hon. gentleman for Victoria (Mr. Sam. Hughes) I would say that of course this amount is very largely to complete certain works which have been undertaken. There is section 2, the Simcoe-Balsam Lake division, on which there is some work which requires to be completed. There is also section 3, a portion of the same division and then there is hydraulic lock No. 2, north of Kirkfield. I think the hon. member is familiar with all of these sections. The surveys that are to be made in that northerly direction relate to the reaching of Georgian bay, the connecting of Georgian bay with those water stretches at Lake Simcoe. There are two routes, one by Lake Couchiching and there is also the Severn river route. These surveys are being made with a view to determining the proper route to be followed in that section of the waterways. Some surveys have also been made on the Holland river section with a view to connecting certain sections of the country up there with this water-route, giving an outlet to a very rich and flourishing section of the country. All this involves a great deal of work. I think the engineers chosen go there with an open mind; the instructions given to the chief engineer simply involve directions to have complete and accurate surveys made of the different routes. He is to make his report upon the merits of the respective routes, to make his estimates full and complete in order that there may be placed before the department and before myself for consideration, ample information as to which route would cost the least which would be the most feasible and which would best serve the interests of the communities adjacent to and connected with the Trent Valley waters. More than this it is hardly necessary for me to say.

Mr. WARD. I desire to correct one statement made by the hon. member for East Northumberland (Mr. Cochrane). The great bugbear with the gentlemen who oppose the Port Hope route is the stretch of open lake for twenty-six miles from Port Hope to Presque Isle harbour. I produced last session a statement signed by twenty-six or twenty-seven mariners, men who have sailed the lakes, some of them for thirty or forty years past, and they expressed the opinion with one accord that they prefer the Port Hope route to the Trenton route for the reason that they can never be sure of getting into Trenton harbour at night, whereas they can always get into Port Hope harbour at night, and they say that the open lake from Port Hope to Presque Isle was no objection as my hon. friend would make out to the committee. So far as that twenty-six miles of open lake is concerned, the committee must bear in mind that the prevailing winds in the fall are off that shore. These mariners who have sailed all their lives surely should know as much as the hon. gentleman.

Mr. COCHRANE. I am not saying what I know.

Mr. WARD. If you look at the map of Lake Simcoe you will find that there are thirteen miles of open lake there under the present scheme of canal, and the shore upon which the barges have to come down is absolutely exposed to the prevailing northerly winds. That is on the stretch from Orillia to Beaverton. The mariners whom I have consulted state that a barge that will weather that thirteen miles——

Mr. COCHRANE. In an inland lake.

Mr. WARD. In an inland lake it is quite true, but there are gentlemen who live on that inland lake who say that there are days and days in the fall when the vessels that ply that lake are unable to leave the harbour at all. The mariners state that a barge that is strong enough to sail the thirteen miles on Lake Simcoe with a prevailing wind on the shore on which they are sailing is perfectly safe on the twenty-six miles on Lake Ontario with the prevailing winds off shore. The open stretch on Lake Ontario is a bugbear that these gentlemen who favour the Trenton route are very prone to urge. I am sure if the minister will examine these different points for himself he will be able to form his own judgment and we are quite satisfied that when he forms his judgment his decision will be in the interest of the country.

Mr. COCHRANE. I do not want to debate this question at all, because I fancy it will not matter what the hon. member for Durham (Mr. Ward) or myself says in connection with it. I think when this question is settled it will be settled on the merits of the routes. I would wish to say a word or two with respect to the harbours of Trenton and Port Hope. Why was a million of money spent by the Dominion government to build the Murray canal? It was to let vessels get off Lake Ontario into Presque Isle harbour and thence into the inland waters of the Bay of Quinte. You can see that these mariners who knew so much do not take their vessels into the port of Trenton at all; because it is on the Bay of Quinte, all inland water; and the Dominion of Canada has spent several millions of dollars to open a waterway from the natural harbour of Presque Isle, through which vessels can pass from Lake Ontario to the inland waters and have quiet navigation all the way down to Kingston and Montreal.

Mr. LENNOX. The minister referred to the routes in the northerly direction about

which there does not seem to be the same amount of contention as there is about the southerly outlet. I want to direct his attention to one or two phases of that matter which probably have not been kept as prominently before his mind as they ought to have been. A year ago, when I spoke of this subject, I understood the minister to promise that he would set surveyors at work almost immediately to survey the line along the route which I was advocating, that is from the extreme west end of Kempenfeldt bay, which is a portion of Lake Simoce, to the Georgian bay. I think I had a letter from the minister after the session closed renewing his promise, and intimating that the surveyors would be shorty at work with a view to ascertaining whether that was the best scheme or not. That may be called the direct route. The other route proposed is by way of the Severn river. To my mind there can be no question which is the better course to take; but I regret that up to the present time there have been no surveyors on the ground.

Mr. EMMERSON. I thought the route to which my hon. friend made reference was the one via Silver creek and North river. Another is the one via the Severn river; and I understand that my hon. friend suggests a third, starting near Barrie.

Mr. LENNOX. I thought that the one I referred to was the second; I did not know there was any scheme for a route via Silver creek. Those we discussed last session were the two I have mentioned. The route by way of Barrie and Kempenfeldt bay would serve not only for the purposes of the Trent Valley canal, but, if constructed on a large and generous scale, would open up an important extension of the general system of navigation across the continent, particularly in connection with the scheme which has been referred to recently, and which will probably come before the House for discussion, now that the elections are over, for the extension to Schomberg and Aurora, practically bringing the commerce of the west down as far as the village of Aurora, from which there would be only a short passage by land to one of the great commercial centres of the province of Ontario, the city of Toronto, there again joining the great lake and river system of navigation. I hope that if the minister has not the opportunity of sending surveyors to investigate that route since last session, he will do so at once. While on my feet, I want to ask the minister whether the Trent Valley canal will be completed to Lake Simcoe this year.

Mr. EMMERSON. We expect to have it completed this season. I was under the impression that the surveyors were taking into consideration the very route to which my hon. friend made reference last session. His letter was submitted to the engineers, and all the information on the subject in the department was laid before the chief engineer with the view of his studying out the very best route, and I think the route to which the hon. gentleman made reference was particularly considered by the engineer in charge of the work.

Mr. LENNOX. That is not exactly what I meant. I understood that surveyors would be put upon that territory to make actual surveys and tests. Am I to understand from the minister that if they are not actually at work, they will be shortly?

Mr. EMMERSON. Oh, yes. The surveys are not completed.

Mr. SAM. HUGHES. I understood that surveys of that route were made several years ago. The Severn route is a long and circuitous route, and the route determined upon as the most feasible is by Lake Couchiching to Waubaushene. What I would like to know is whether the minister is going to put a sum in the estimates to complete the work this year. Then, the people would like to know this spring whether the southern outlet is going to be by Trenton or by Port Hope. These works have been under contract now for nearly eight years. Not one solitary contract has been let by this government since it came into power. The tenders were all advertised for before they came in. The lift locks were planned, and they had the giving of the contracts for them; and they had the privilege of letting the section between Kirkfield and Lake Simcoe.

The minister who has taken charge will, no doubt push this through, especially when he knows that his leader, the first minister, takes such an intense interest in the Trent canal and especially too, when he finds the Postmaster General—who, years ago in opposition filled page after page of 'Hansard' in denunciation of this scheme—wanting to run branch lines of that canal through all the villages in his own riding. We want to see this work carried to completion. We want the two ends completed—the Georgian bay end and the Trenton end. All along the route of that canal, at Barrie, Orillia, Lindsay, Beaverton and Peterborough, there are immense mills which bring in grain from the Northwest by train. If we had the canal built, they could bring that grain in by barge at much lower rates and would be better able to compete in the markets of the world. I am satisfied the minister will carry out his promise and put a substantial vote of a million or two in the estimates this year. We have plenty of money now, but may not be so flush when the Grand Trunk Pacific is under way. As the surveys have been made at the Georgian bay end and at the Trenton end all the minister has to do is to call for tenders. While on my feet, I will

call attention to a few points I want to bring to his notice. The system of valves in the locks and of opening and closing gates is not the most modern all along that route. At Fenelon Falls, a steamer will be delayed some 20 or 25 minutes by the slow operation of the locks when she should be able to get through in 10 minutes. Above Fenelon Falls, there is a railway swing bridge across the canal. There is quite a strong current there and steamers, running the regular route, will reach this bridge about the time the morning train is crossing and have to lie in the offing where, on a windy day, they cannot keep their position in the channel. I would suggest that a wharf should be built at government expense just above the swing bridge at Fenelon Falls.

Mr. EMMERSON. A wharf, or an extension of the pier ?

Mr. SAM. HUGHES. One is just as good as the other. Another thing to which I would call attention is the fact that all along these waterways there are great quantities of sawlogs floating down the stream. In windy weather the booms block the entire river and are a great obstruction to travel. I would like the minister to devise some plan for overcoming this difficulty. At present he has but one dredge belonging to his department on those waters and it is entirely inadequate for the work it has to do. I am satisfied if the minister looks into it, he will recommend the construction of another dredge. The hon. gentleman promised to explain the condition of lands in Verulam and Emily townships subject to the overflow of the canal. I would also draw his attention to the condition of Pigeon river, there is a great tract of country which could be served by that stream, which barges could navigate drawing 3 to 5 feet of water ; but the river needs to be cleaned out, and I would suggest to the hon. minister to have his engineer make a report, by another year be ready to have the passages opened up. There is another matter to which I would draw his attention. The modern system of transport proves that the locks should be longer, that long barges are the most profitable to handle, and that the locks to be constructed for the future should be longer. If we could possibly overcome the lift-lock at Peterboro, we should build longer locks than the present ones. There is just one more point I would mention. North of Balsam lake there are almost innumerable lakes forming beautiful reservoirs. I should have great pleasure in taking the minister for a trip through this chain of lakes. The scenery there is as fine as any in the world and they form magnificent reservoirs. The shores in many cases are rocky, the land as a rule valueless for farming purposes, the timber has been cleaned out from the shores, and these lakes could be made into reservoirs for storing water to meet the needs of the canal. Balsam lake has to serve both the Georgian bay and the Trent end of the canal. I see that the government propose taking over these waterways and carrying out the plan I recommended in 1890, and will control them as a Dominion work for the storage of water. That would be serviceable not only to navigation but to manufacturers along the line of the canal.

A manufacturing town brings population to the country and trade to the railways and canals. Will the minister be good enough to say what they have done in the way of taking over these waterways. There are thousands of settlers north of Cobokonk. I notice that in the province of Quebec, back of Buckingham and also in the western part of Ontario, the government has opened up navigation in inland lakes far away from the main avenues of trade. But the waterways that I speak of are connected with the main line of the Trent canal and so properly come under the head of Dominion works. A few years ago the people in both parties who supported this great route were sneered at, but, now the common sense men of the country are coming to see that, after all, we need waterways. We support the Welland canal and the Georgian bay canal, and we want to have this Trent canal supported also. And, instead of listening to the echoes of the old speeches of the Postmaster General (Sir William Mulock) in his days of opposition, we want to hear the speeches he is making to-day. He is a little late in giving his support, and, by his opposition he has delayed the work a good deal.

Sir WILLIAM MULOCK. I never have said a word against it in my life.

Mr. SAM. HUGHES. My ears must have deceived me. I used to think that the hon. gentleman joined with the present senator from Mount Forest, Hon. Mr. McMullen, in delaying this House day after day by talking against this route of which they knew nothing. Of course I take the hon. gentleman's (Sir William Mulock's) word for it, and am glad that he is backing the canal now at any rate. The ridges to which I have referred run northwesterly and southwesterly. There is only one road running far north and that is the Haliburton road. It runs up the valley of the Burnt river. Between that and the Gull river waters there is this barrier of hills, over which farmers have to haul timber and other produce. It is impossible to haul hard-wood timber more than six or seven miles over these ridges to the market at a profit. But with an expenditure of about $100,000 the Gull river waters could be opened up for a distance of from fifty to seventy-five miles. There is not a mile of cutting ; all that is required is to place dams at the lakes and locks between the lakes. This would afford means of navigation and would bring into use a vast area of country where birch and maple and other hardwoods which the market is now demanding, abound. It will benefit the thousands of

farmers living along these waters as well as the people of central Ontario generally, I speak this in all seriousness, and I know the minister will look at it in the same way. Of course, I do not expect the minister to decide the matter at once ; but I hope he will investigate it and next year put an item in the estimates to carry out this work. I would also impress upon him the necessity of vigorous work upon the two ends of this Trent system of waterways. Now that the Postmaster General has grown out of his age of criticism and reached the time of constructive statesmanship and doing good work in his own department, I hope he will use his influence to have this work pushed forward to completion by establishing a connection with Georgian bay and also completing the Lake Ontario outlet whether by Trenton or by Port Hope.

Mr. FOSTER. I have been out of the House for some years, and probably have not followed the fortunes of this Trent canal as some gentlemen have who have kept up a constant and close acquaintance with it. In 1904-5 there was a vote of $411,000 for this work, and now we are asked for $300,000 for 1905-6, a total of about three-quarters of a million dollars. I would be glad if the minister would state in a brief comprehensive way just how this waterway stands. By the courtesy of the minister I have a small plan of the work, and if he would give us an idea how far the improvements are made and what kind of navigation is afforded as to depth and width, but chiefly as to depth, I think it would be a good thing for the committee and for the public. When the public hears of this work it usually hears of it in sections, but I would like a comprehensive account of what has been done and what is necessary to be done and what navigation is now provided for. For instance, commencing at Georgian bay what is the state of navigation up to Lake Simcoe ?

Mr. EMMERSON. Nothing has been done there. The works now completed begin at Kirkfield and go down as far as Heely's Falls.

Mr. FOSTER. Going through Balsam lake past Fenelon Falls, through Sturgeon lake down to Pigeon lake——

Mr. EMMERSON. I do not recollect the various points, but I know the canal goes via Peterborough to Heely's Falls.

Mr. FOSTER. What navigation is provided for over the distance referred to by the minister ?

Mr. EMMERSON. Six-foot navigation.

Mr. FOSTER. Is it actual navigation ? Are they facilities that are being used ?

Mr. EMMERSON. Constantly used between these two points.

Mr. FOSTER. Where are the works now under construction ?

Mr. EMMERSON. Between Balsam lake and Lake Simcoe. When these works are completed we shall have a complete system of navigation from Lake Simcoe down to Heely's Falls.

Mr. FOSTER. What is necessary in order to complete the work between Kirkfield and Gamebridge ?

Mr. EMMERSON. That is all under contract—sections 2 and 3. There is hydraulic lock No. 2, two miles north of Kirkfield. When the two sections which include the hydraulic lock, are completed; the navigation from Lake Simcoe to Heely's Falls will be completed with a six-foot depth of water.

Mr. FOSTER. Will that allow towing ?

Mr. EMMERSON. Yes.

Mr. FOSTER. Are these votes here being expended upon those stretches ?

Mr. EMMERSON. Yes.

Mr. FOSTER. When will the work now in hand be completed ?

Mr. EMMERSON. This season.

Mr. FOSTER. When you leave Heely's Falls, how is it from that to Trenton ?

Mr. EMMERSON. That is the section about which there is a doubt as to the route to be adopted. There are two routes when you get to Lake Ontario, one is by way of Port Hope.

Mr. FOSTER. You want to get from Heely's Falls to Port Hope.

Mr. EMMERSON. One route is by way of Trenton and another by way of Port Hope. Another is suggested by way of Cobourg, and still another which has been brought to my attention within the last few weeks or days, by way of Presq'ile harbour.

Mr. FOSTER. Then nothing is done in the way of helping navigation from Heely's Falls down to Trenton ?

Mr. EMMERSON. No.

Mr. SAM. HUGHES. I have had the privilege of living along the route, and I am delighted to see that hon. gentlemen on both sides of the House are taking an interest in this important waterway. I may inform the hon. member for North Toronto (Mr. Foster) that the Georgian bay is 580 feet above sea level. From Georgian bay to Lake Couchiching is about thirteen miles.

Mr. FOSTER. Why did you not go up by Severn river ?

Mr. SAM. HUGHES. That is a rocky country and would be quite circuitous. The recommendation I believe is in favour of the direct route across from Lake Couchiching and coming in by Waubaushene. Lake Couchiching is 719 feet above the level of the sea. Thence down Lake Simcoe to Gamebridge and then up Talbot river, there is

some cutting between Simcoe and Balsover. Then coming to Kirkfield there is a lock about 50 feet high. Balsam lake is 838 feet above sea level and is on the height of land. From Balsam lake you pass through Rosedale river into Cameron lake. There is a lock between Balsam lake and Cameron lake at Rosedale of three or four feet. From Cameron lake you pass into Sturgeon lake by two locks twenty-eight feet in height. From Sturgeon lake you pass into Pigeon lake by a lock at Bobcaygeon about six or seven feet high. From Pigeon lake it is a level sail to Buckhorn, where there is a lock. Then you pass into Deer and Lovesick lakes. At Burleigh Falls there are locks entering into Stony lake and Clear lake. Then by Clear lake you pass south to Lakefield and on to Peterborough where you reach the lift-lock From below the lift-lock at Peterboro' there is uninterrupted navigation down to Hastings at the foot of Rice lake, where there is a lock. From Hastings to Heely's Falls there is uninterrupted navigation. There may be some work to be done from Campbellford and Chisholm's Rapids down to Trenton, about nine and a half or ten miles, that can be overcome by damming the river. I may point out that at the present moment there is uninterrupted navigation from Kirkfield to Heely's Falls, at least in the summer time. As soon as the locks are completed at Kirkfield there will be uninterrupted navigation from Orillia to Heely's Falls, leaving only the two ends to be completed, and these are the pieces of work I am urging on the minister now to complete.

Mr. FOSTER. What is the mileage from Heely's Falls to Lakefield ?

Mr. SAM. HUGHES. The entire mileage is nearly 200 miles. There is not one foot of cutting except at the western end. There will be no cutting whatever excepting it may be half a mile here and there. It is all the way natural shores where steamers can go full sail ahead.

Mr. FOSTER. I am obliged to the minister and to his efficient deputy head on this side of the House for the information.

Mr. WARD. I would like to ask the minister if it is intended to make any further surveys by way of Trenton before the terminus of the canal is decided upon?

Mr. EMMERSON. That matter has been brought to my notice so recently that I am not in a position to determine. I have placed the matter in the hands of the chief engineer, and we will have to inquire as to the possibility of that route. It is no use to have a survey there unless there is some prospect of making it available for the purposes of the canal. Of course there is a resolution of the municipalities favouring it.

Mr. FOSTER. What was it that caused the survey to be started by way of Cobourg?

Mr. EMMERSON. Instructions were given to the chief engineer to study out all these possible outlets of this waterway on Lake Ontario, and the engineer in charge determined that Cobourg was worthy of study.

Mr. FOSTER. That was the engineer's initiative.

Mr. WARD. I would like to mention to the minister that he is a little mistaken in saying that the survey by way of Cobourg was initiated in December. I heard towards the end of October that surveys were going on then at Cobourg.

Mr. EMMERSON. That is an error. I have a memorandum from the engineer about the commencement.

Mr. WARD. I heard during the election campaign that the very engineers that were engaged in the survey of the Port Hope route were at the same time making a survey by way of Cobourg. That was the first I heard of it.

Galops canal—to stop leak in bank, $25,000.

Mr. EMMERSON. This was rendered necessary owing to leaks in the banks. During the construction years ago some cribs were left in the banks of the canal. Since the level has been raised increasing the pressure, the water has forced itself through and along the cribs. The work is done by contract and tender, Mr. O'Leary having the contract.

Mr. J. D. REID. I cannot understand exactly how this leak occurred. I remember that there used to be a small leak about that point some years ago, but I understand that that was provided for in the original contract, and that it was supposed to have been well taken care of by the contractors when they were doing that excavation work and strengthening the bank. That bank was raised some six feet all along there.

Mr. EMMERSON. That increased the pressure according to the report of the engineers and therefore increased the leak.

Mr. J. D. REID. Of course it increased the pressure, because there were six feet more of water in the canal, but then the contractors were supposed to put in rock and earth sufficient to strengthen the bank and the work could not have been done properly by the contractors when they built that part of the work.

Mr. EMMERSON. I know that is absolutely necessary and the chief engineer tells me that that was not the cause of the difficulty.

Mr. J. D. REID. I remember the work going on there at the time and it was sup-

posed to be to strengthen the bank in order to prevent a leak of any kind occurring. My opinion is that that work was not properly done when the contractors were filling in the canal bank.

Mr. EMMERSON. The chief engineer tells me that the work was properly done in the original construction as far as the making of the bank is concerned and that the leak was the result of the pressure on the renewed bank.

Mr. J. D. REID. How is that work to be done ?

Mr. EMMERSON. The crib is to be taken up. That is under contract now and the vote of $25,000 will certainly complete the work.

Mr. J. D. REID. I asked the hon. minister last year that he should do something with the view of having the bridge at Cardinal properly attended to. Here is the question I asked last year :

Mr. J. D. REID. Has the minister done anything about arranging to have the bridge at Cardinal swung by some other means than hand power ?
Mr. EMMERSON. That matter is receiving the attention of the department now.
Mr. J. D. REID. It was receiving it a year ago.
Mr. EMMERSON. I had the papers under consideration this morning, and some instructions were given with a view to having that work done at once, so that the bridge will be swung by electric power.

That is a year ago and still there has been nothing done.

Mr. EMMERSON. Arrangements were being entered into at that time with the Edwardsburg Starch Company with the view to having the bridge swung that way. That is being carried out and I am in hopes that it will be fully completed so that there will be no further difficulty in that directon.

Mr. J. D. REID. Will it be completed at an early date ?

Mr. EMMERSON. We expect it to be completed at a very early date.

Mr. J. D. REID. Has the contract been let to the Edwardsburg Starch Company ?

Mr. EMMERSON. There have been some differences between that company and the Department of Railways and Canals, but the whole matter is under negotiation now with the view of settling all these difficulties. They have agreed to do the work for a certain consideration and while the contract has not been actually signed and executed, yet I have no doubt but that it will be fully completed and carried out.

Mr. J. D. REID. Will the hon. minister state if the item of $26,500 for the Galops rapids will complete the work or will there be any further votes for that work ?

Mr. EMMERSON. Nothing more for that.

Mr. J. D. REID. That finishes it ?

Mr. EMMERSON. That finishes it.

Cornwall canal—to fill in space between old and new locks at foot of canal, $4,000.

Mr. FOSTER. Is that to be done by contract ?

Mr. EMMERSON. Yes.

Mr. FOSTER. $2,000 was voted last year. Has anything been done yet ?

Mr. EMMERSON. No, nothing has been done. There was nothing voted last year.

Mr. FOSTER. Yes, $2,000.

Mr. EMMERSON. That is an error.

Mr. J. D. REID. What is the intention of the government in so far as that lighting contract is concerned ? Is it the intention of the government to take over the lighting plant and work it themselves or allow it to be continued under the contract which exists ? The government have the power of expropriation. I think the question came up last year.

Mr. EMMERSON. There are no reasons which suggest themselves to me now why we should undertake to expropriate at this time.

Williamsburg canals—to purchase steam hoist and steam pump, $1,500.

Mr. J. D. REID. What about that ?

Mr. EMMERSON. There has never been a steam hoist or a steam pump on the Williamsburg canals and for the heavy work now being done one is necessary.

Mr. J. D. REID. I think there was an item in the estimates last year for building a new gate lifter. What has been done in regard to that ?

Mr. EMMERSON. It is being built.

Mr. J. D. REID. Is the building being built by contract ?

Mr. EMMERSON. It is being built by contract.

Mr. J. D. REID. Who has the contract?

Mr. EMMERSON. I really cannot recall.

Mr. J. D. REID. The reason I asked is that I have seen no advertisement for that.

Mr. EMMERSON. The engineer tells me there were advertisements.

Mr. J. D. REID. What is the minister going to do about that position of collector on the Wallaceburg canal ? I see here at Cardinal the collector got $1,051.51, and last year he did not collect a cent of canal tolls.

Mr. EMMERSON. Later on I will have an opportunity of discussing the matter of collectors. I shall probably be in a position to announce the policy of the government as to whether or not we will resume the collection of tolls.

Mr. FOWLER. In the meantime the minister might intimate what this $1,051 was paid for.

Mr. EMMERSON. That has been explained time and time again. The tolls were abolished for a period of two seasons, but it was necessary to continue the collectors to keep a record of all traffic over the canals with a view to determining the effect of making the canals free, to ascertain whether the traffic was increased by that or not, and generally to determine as to the effect of that policy. That has been in effect for two seasons.

Mr. FOWLER. How is the amount arrived at ?

Mr. EMMERSON. Collectors were paid stated salaries, and they were continued. If the canals are continued free, there will have to be a decision made with respect to these officials.

Murray canal, $18,000.

Mr. FOSTER. The minister might explain this.

Mr. EMMERSON. There are at each side of each end of this canal ten isolated wooden cribs, connected by four stringers and flooring. The cribs are 24 feet apart, making 20 cribs at each end. These cribs and flooring are almost entirely decayed, having been built about twenty years ago. It is proposed to build them of concrete from a height of one foot below low water mark, standing 8 feet above low water mark. The wall is to be 9 feet high, 25 feet 6 inches thick for 5 feet, then 2 feet thick for the balance. The size of the pier is 25 by 30 feet, making 100 yards in each pier. Two piers have already been built out of the appropriation for repairs. Eighteen remain to be done at each end. An appropriation will be asked next year to rebuild the western end in the same way. It seems to be in the interests of economy to have these cribs rebuilt in this way with concrete.

Mr. FOSTER. Can the minister state the volume of traffic passing through the Murray canal, and whether it is increasing or decreasing ?

Mr. EMMERSON. From memory, I would say that last year it was somewhat less than the previous year. There have been some fluctuations, but in the main there has been an increase.

Mr. FOSTER. Has the minister an idea of what tonnage goes through that canal ?

Mr. EMMERSON. I cannot give my hon. friend a statement of that ; I do not carry the figures in my mind. I had the general result before me not long since, but I cannot exactly recall it.

Mr. FOSTER. It would be interesting to know whether the trade through that canal has been increased by it.

Mr. EMMERSON. There has been an increase in the trade, but whether it is true to that canal I am hardly in a position to say.

Welland canal—chargeable to income, $85,000. Stone protection to banks of new canal, $10,000.

Mr. EMMERSON. There was a vote of $20,000 last year ; $10,000 only was expended, and we are asking for a revote of $10,000.

Mr. FOSTER. Is any part of the next vote for $30,000 a revote ?

Mr. EMMERSON. No part of it is a revote. $30,000 was expended last year. This work has been going on from time to time, and it is being done by the canal staff. On the works at Port Dalhousie there was expended, up to December 31, 1904, $50,400, and there yet remains to be done $39,200. The total cost of this work was estimated at $89,600.

Mr. FOSTER. What was the income from the Welland canal last year ?

Mr. EMMERSON. There was no income from the tolls.

Mr. FOSTER. Then how do you charge it to income ?

Mr. EMMERSON. It is a fiction ; there is a small income in connection with leases, I think.

Mr. HENDERSON. The minister says that this work is being done by the canal staff. Are we to understand that there is a regular staff of workmen at all times repairing the canal ?

Mr. EMMERSON. During the summer season. There are workshops at Port Dalhousie. That has been the system for years. They make the repairs to the gates, and when they have no repairs to do they make new gates to have them on hand.

Mr. HENDERSON. How many men of that class are regularly employed on the canal? It seems to me that work of this kind should be done in some other way.

Mr. EMMERSON. If my hon. friend were to visit the canal and become acquainted with the character of the work these men are doing, he would appreciate the fact that it is in the interest of the canals to have that work carried on in that way. Old gates which are partly decayed have to be renewed. This could not be done by contract. The material is purchased by tender, and is kept there properly housed and dried, so that the very best material

is used in repairing old gates and making new ones. Spare gates must necessarily be kept on hand in case of accidents, because accidents do occur. Vessels going through the canals sometimes run against gates and break them, and to avoid delays it is necessary to have gates on hand ready to be put in position.

Mr. HENDERSON. I suppose these men are discharged in the fall of the year ?

Mr. EMMERSON. Yes.

Mr. HENDERSON. Very nice patronage for some members along the line of the Welland canal.

Mr. EMMERSON. I suppose that is a necessary incident of having them.

Mr. FOSTER. Are these men practically permanent temporaries—that is, the same skilled men kept on year after year ?

Mr. EMMERSON. Yes. Many of them have been employed right along for years. Of course, at times, if there is a great rush, it is necessary to have additional ones.

Mr. LENNOX. The minister says that they not only repair gates but make new ones. In that way do they make all the gates we require, or does the government sometimes have to buy gates ?

Mr. GERMAN. The gates are all made by the employees on the canal.

Mr. J. D. REID. In purchasing supplies for the canals, I understood the minister to state that he always asked for tenders ?

Mr. EMMERSON. The iron work in connection with these very gates is done by contract. I am speaking of the Welland canal. I may say that the valves and the hanging gear, neither of which worked satisfactorily, are being changed. The chain valve is being replaced by what is known as the butterfly valve.

Mr. J. D. REID. What I cannot understand is that although these canals are all new, the cost of maintaining them has increased. On the Williamsburg canal the repairs last year cost $20,254, and the wages paid out amounted to $10,212. The expenditure on that canal is double what it was a few years ago when the canal was old and needed much greater repairs. Perhaps the minister can explain why the expenditure has increased so rapidly.

Mr. EMMERSON. A new canal is much more expensive than an old canal. The new banks are much more difficult to keep in repair than old banks, because the settlement caused by time makes the latter more impervious to water and less liable to be worn away. Then, there has been a substantial increase in the wages paid.

Mr. FOSTER. Do these repairs extend over the whole length of the Welland canal?

Mr. EMMERSON. Yes.

Mr. FOSTER. What is the length of the Welland canal ?

Mr. EMMERSON. Twenty-seven miles.

Mr. FOSTER. It is a very large amount. There was spent last year on the Welland canal $85,000 or $86,000 for labour and materials. Who hires the men and sees that they do their work, and who purchases the supplies and sees that they are got at the proper rates ?

Mr. EMMERSON. This work is entirely in charge of the superintending engineer of the canal, J. L. Weller, a very competent man. With regard to the supplies, tenders are asked for annually for all the materials required, by public advertisement, and the tenders are submitted to the department here. They come under my personal supervision, and the contracts are awarded to the lowest tenderers. Everything that is used in connection with the canal, whether tools or materials, is the subject of tender and contract.

Mr. FOSTER. What is the area of these tenders? They must be merely local, are they not?

Mr. EMMERSON. The advertisements are quite general. Some of the successful tenderers are in St. Catharines, but parties at Hamilton, Toronto and other points also tender.

Mr. BLAIN. Are we to understand that the engineer employs them in connection with the Welland canal ? That is not in accord with the policy laid down by the hon. minister the other evening when he said he invariably consulted the sitting member. In this case is the sitting member not consulted?

Mr. EMMERSON. I think my hon. friend hears something said and then puts his own interpretation upon it. I made no such statement. What I said was that in so far as patronage was concerned, if it became a question to be decided by me, I would always consult my friends ? My hon. friend is welcome to any benefit he can get from that statement. But I have to-day been asked a question regarding this particular canal, and I have said that the appointment of the officials is made by the department, but that the employment of men from time to time is done by the superintending engineer. The selection of permanent men is submitted to the department. In some cases, where it is necessary, the appointments are made by Order in Council. In others they are made by the department.

Mr. BLAIN. I do not wish to misrepresent the hon. gentleman, and I am quite sure he does not wish to misquote me, but he has misquoted me none the less. I asked the other evening the same question, namely, what the policy of his department was in

respect to the employment of men, and he gave me a straight answer, which no one could misconstrue. His answer was that the policy of his department was to consult the sitting member in the county. My hon. friend shakes his head but 'Hansard' will prove that I am correct. The item was repairs to the Cornwall canal and the question was raised concerning the large number of men employed on that canal in election time. But this evening, in answer to the hon. member for North Toronto, (Mr. Foster) my hon. friend said that the employment of the men was in the hands of the engineer. I asked him if that was the policy of his department, and he said it was. I would like to know what is really the policy of the department in this matter.

Mr. EMMERSON. In cases where questions arise in my department concerning the employment of men and the names are submitted to me, I say frankly that if I have the opportunity, I consult the sitting member, provided he is friendly to me and the administration. But speaking now of what has transpired in connection with this canal, I repeat that the superintending engineer selects the temporary men, and where permanent men are required, those recommended by our friends and who are satisfactory in other respects get the appointments.

To build retaining wall in rock cut, Welland canal, $60,000.

Mr. J. D. REID. Has the government any policy as regards the deepening of the Welland canal to 20 feet ?

Mr. EMMERSON. That has not been determined.

Improvements, Trent canal, $17,000.

Mr. FOSTER. What is to be done with that ?

Mr. EMMERSON. These improvements consist of the entrance pier at Lovesick, $2,000 ; Young's Point landing pier lower entrance, $3,000 ; Young's point new swing bridge, $3,500 ; removing shoal in river below Hastings, $2,000 ; removing shoals in river below Peterboro, $2,000 ; Young's point entrance to lock, $3,000 ; purchase of concrete mixture in connection with repairs to canal, $1,500.

St. Ours canal—new booms and pier, $7,300.

Mr. EMMERSON. The present conditions for mooring are quite insufficient. In order to remedy this condition, the piers are to be extended some 200 feet. I am advised by the engineers of the department that this is a very urgent improvement. It will cost $7,300.

Repairs to guide piers, Greece's Point, $4,660; building new lighthouse, $190 ; rebuilding Grenville wharf, $23,000.

Mr. PERLEY. What is this for ?

Mr. EMMERSON. These piers were built in 1880 and a portion of them require to be rebuilt. They also require a new lighthouse which will cost $190. Then the Grenville wharf will require to be rebuilt. We asked a vote of $23,000 last year but that was not expended and I am asking a revote.

Mr. FOSTER. That should be down as a revote.

Mr. EMMERSON. It is a revote of $23,000.

Mr. FOSTER. The minister must have been very careless in framing his estimates —there are several of these errors.

Mr. EMMERSON. They were sent to the printer by the department in proper shape.

Mr. FOWLER. The proof-reading is bad ?

Mr. EMMERSON. It certainly is bad. I found a number of errors of this character.

Mr. LENNOX. Last year it was the same way.

Mr. EMMERSON. Special care was taken by the officials of the department in this matter this year because I found it very embarrassing last year on several occasions when there were revotes that were not so marked.

Mr. FOWLER. Who does the proof-reading ?

Mr. EMMERSON. I do not know. I suppose it is done in the Printing Bureau.

Mr. FOSTER. Are you making a new wharf there ?

Mr. EMMERSON. There was a wharf there, and we are rebuilding. This is a revote from last year.

Mr. FOWLER. This is a large amount of money.

Mr. FOSTER. Is it for canal traffic ?

Mr. EMMERSON. It has always been used in connection with canal traffic.

Mr. FOSTER. Was this by contract ?

Mr. EMMERSON. Yes, the contract was given to Messrs. Martineau & Son after public advertisement calling for tenders. The contract was made on December 5th ; no work has been done owing to the late date at which the contract was let.

Mr. FOWLER. Is the minister taking out the old wharf to put in the new one ?

Mr. EMMERSON. We take out the old wharf down to water-level.

Mr. FOWLER. What are the dimensions of the wharf ?

Mr. EMMERSON. It is about 300 feet long. There is a large amount of concrete work in it.

Mr. PERLEY. This wharf is necessary. A wharf has been there ever since I can remember. I am glad the minister has given a contract for the work, because I see that last year, in building guide piers at the same place, the department paid for spruce and hemlock timber $30 a thousand feet, a larger sum than I have ever been able to get for it in my experience.

Mr. FOWLER. There was a guide-pier built last year. Can that be utilized in connection with the new work ?

Mr. EMMERSON. The guide-pier is different from the wharf.

Mr. FOSTER. What has the minister to say about paying $30 a thousand for timber that a practical man says he never could get so high a price for ?

Mr. EMMERSON. Of course, this was a year previous to my incumbency in office. I am advised by the chief engineer that all the material was purchased by tender and contract.

Mr. FOSTER. But if tenders are called for and all of them seem high the minister is bound not to accept any of them.

Mr. EMMERSON. In any such cases coming under my own notice I certainly hesitate to accept any tender, and I am satisfied that is the course pursued by the department generally.

Mr. FOWLER. Was it because of extraordinary size of this timber that so high a rate was paid ?

Mr. EMMERSON. The chief engineer tells me that for the kind of timber purchased $30 a thousand was not out of the way. I cannot give dimensions but I can furnish a statement later on if the hon. gentlemen desire it.

Mr. FOWLER. This was spruce and hemlock timber and, it was charged for at this high rate. There could have been no justification except its size and quality.

Mr. GERMAN. And its length.

Mr. EMMERSON. The length I include in the size. It would need to be extraordinary in some way to be worth $30 a thousand.

Mr. HENDERSON. I understand this would be the ordinary timber used in crib-work. I do not suppose there would be much difference between that and cribs constructed elsewhere. My recollection is that in my county where some work was done constructing a pier, hemlock timber was bought for about $17 a thousand from a mill on the Georgian bay, delivered on Lake Ontario. Certainly $30 a thousand seems to be an extraordinary price.

Mr. EMMERSON. I think I am right in stating that this timber was bought by competition, and that was the lowest tender for that class. It certainly could not be very much out of the way, because where there is competition the tenderers are not very apt to make the price unreasonably high if they have any hope of geting the contract.

Mr. FOWLER. Some departments have a peculiar way of bringing about competition. They invite two or three of their friends doing business to send in tenders.

Mr. EMMERSON. This was done by newspaper advertisement.

Mr. FOWLER. As I understand, this was piling, and piling is not usually bought by the thousand feet.

Mr. EMMERSON. I have not referred to the Auditor General's account. Will the hon. gentleman state what kind of timber it was that we paid $30 for ?

Mr. PERLEY. Page 123—timber, spruce and hemlock, per thousand feet, $30. It does not say what size.

Mr. FOWLER. Surely the minister can tell what work was done there, whether it was piling or not.

Mr. PERLEY. I would call attention to this fact. The minister says he advertised for tenders. I would like to know how he managed it, because there is no newspaper in that county except one, and that is miles away from the spot. If tenders are asked for from private parties, as I understand is sometimes done, and people are asked to tender, that is one thing entirely different from asking for tenders in a large city where newspapers are numerous.

Mr. EMMERSON. Tenders were asked for by advertisement, as I am advised by the engineer, in the papers of Ottawa and Montreal, and in local papers if there are any in the county. That is the usual way. But it was all by newspaper advertisement.

Mr. FOWLER. If this was ordinary crib-work, it is the very roughest kind of timber that is used for that purpose, and the price charged here is at least double, no matter what the length, because knotty, rough timber is used generally for that purpose.

Mr. GERMAN. I beg the hon. gentleman's pardon, it is usually the best timber that is used in crib-work, not rough timber. What makes the price of timber sometimes abnormally high is its length and the time of the year it has to be supplied. The time of the year it is supplied, the length of the timber, the quality of the timber, are all considerations which go to enhance the price, and it is a good quality of timber that is required for crib-work.

Mr. HENDERSON. I do not profess to have any professional knowledge, but I understood from the minister that the work in question was the construction of a wharf on foundations that already existed there.

Therefore, I have no right to assume that the timber would be of any extraordinary length. I would assume that the timber was like that used in my own county. I find there was paid last year for 778 feet of hemlock $20.50, and to my mind the hemlock in the two cases would be very much similar. In one case it is $30 a thousand, in the other $20.50.

Mr. FOWLER. The hon. member for Welland (Mr. German) says the season of the year at which the timber is procured would make a difference in the price. Granting that, it would show bad management on the part of the department if they did not procure this timber at a season of the year when it could be most cheaply procured. They waited until it could be procured only in the most expensive way. It was not a rush order. As to the length of the timber, we cannot get any information.

Mr. EMMERSON. I will explain why it could not be bought at the proper time. In the year previous the appropriations were abnormally late, and the department cannot undertake works unless parliament has appropriated the money.

Mr. FOWLER. You often do it.

Mr. EMMERSON. No. I want to say frankly to my hon. friend that we do not do it, and I have felt embarrassment on more than one occasion, and was delayed for some months in accepting tenders because the appropriations had not been voted.

Mr. PERLEY. I think the explanation of the minister is a lame one, because you can get timber in either winter or summer. I have bought a lot of timber and used it in building piers, both in winter and summer. The timber can be had on the spot about as cheap in one season as another.

Some resolutions reported.

Sir WILLIAM MULOCK moved the adjournment of the House.

Mr. FOSTER. What work will be taken up to-morrow ?

Sir WILLIAM MULOCK. The Minister of Agriculture will take the third reading of the Census Bill. Then we will go into supply, and the Minister of Railways will finish canals, and the acting Minister of Public Works will proceed with his estimates ; if not, the Minister of Agriculture will proceed with his.

Motion agreed to, and House adjourned at 11.25 p.m.

HOUSE OF COMMONS.

WEDNESDAY, February 22, 1905.

The SPEAKER took the Chair at Three o'clock.

Mr. HENDERSON.

FIRST READING.

Bill (No. 71) respecting the Great Northern Railway of Canada.—Mr. M. S. Schell —by Mr. Calvert.

QUESTIONS.

STEAMBOAT COMMUNICATION—ST. FRANCOIS AND QUEBEC.

Mr. BERGERON asked :

1. Has the government, or any department of the government, received a request for a subsidy for a steamboat, or for a line of steamboats intended to run between St. Francois, Island of Orleans, and Quebec ?
2. If so, by whom was the said request made, and what is the date thereof ?
3. Is it the intention of the government to grant such subsidy ?

Hon. WILLIAM PATERSON (Minister of Customs) :

1. Yes.
2. Request was made under date of October 13th, 1904.
3. The government has decided not to grant the subsidy requested.

WATER POWER FROM BEAUHARNOIS CANAL.

Mr. BERGERON asked :

1. From the 1st of January, 1901, to the 1st of January, 1905, has there been any correspondence between the Department of Railways and Canals, or any other department, and the mayor of the town of Beauharnois, or any other person representing the town of Beauharnois, regarding the obtaining of a water power at the fifth lock on the Beauharnois canal, or at any other lock on the said canal, for the purpose of procuring motive power for the manufactories and the electric light in the town of Beauharnois ?
2. If so, what is the nature of such negotiations, and what is the result thereof ?

Hon. H. R. EMMERSON (Minister of Railways and Canals) :

1. Yes.
2. The nature of the negotiations was for the obtaining of water with a view of establishing manufacturing industries.
3. No final conclusion yet reached.

REVENUE FROM OSHAWA HARBOUR.

Mr. BLAIN asked :

What amount in revenue has been received from the Oshawa harbour ?

Hon. R. PREFONTAINE (Minister of Marine and Fisheries). $804.69.

LOBSTER FISHING, N.B.

Mr. GANONG asked :

What was the open season for catching lobsters in district No. 1, New Brunswick, for the years 1903 and 1904 ; and what is the open season for 1905 ?

Hon. R. PREFONTAINE (Minister of Marine and Fisheries). In 1903 and 1904 the lobster fishing season was from the 6th January to the 29th June, both days inclusive. The lobster fishing season in Charlotte county in the year 1905 is from

the 15th December to the 30th May, both days inclusive.

COLD STORAGE PLANTS FOR BAIT.

Mr. GANONG asked :

1. How many cold storage plants for bait have been erected ?
2. What are their locations, and what is the respective cost to the government ?
3. What did each cost the government for maintenance in 1904 ?
4. What amount of bait was handled in each for 1904 ?
5. Are there any similar plants now under contract ? If so, where are they to be located, and what amount is to be contributed by the government respectively ?
6. Is it the intention of the government to have a cold storage plant for bait erected at any point on the Bay of Fundy this year ? If so, at what place ?

Hon. R. PREFONTAINE (Minister of Marine and Fisheries) :

1. Twenty-nine.
2.

3. All the accounts for the bonus on bait frozen for the year 1904 have not yet been received.

4. Frog Pond, 11,150 pounds; Miminegash, 40,000 pounds ; Alberton, 40,300 pounds ; North Rustico, 40,084 pounds ; Bayfield, 45,500 pounds ; Eastern Harbour, 43,200 pounds ; Ingonish Ferry, 42,200 pounds ; Petit de Grat, 40,000 pounds ; Whitehead, 41,000 pounds ; Port Beckerton, 34,000 pounds ; Shediac, 43,000 pounds ; Ketch Harbour, 42,000 pounds ; Half Island Cove, 45,000 pounds ; Sambro, 50,900 pounds ; Sandy Cove, 46,000 pounds ; La Have, 21,-000 pounds ; Westport, 44,190 pounds ; Clark's Harbour, 22,000 pounds ; Bonaventure River, 49,800 pounds ; Caplin, 38,800 pounds.

The reports from the other freezers do not specify the quantity of bait frozen during 1904.

5. Yes ; one at Anse à le Barbe, Gaspé, and another at Lockport, Nova Scotia.

Under the regulations covering the construction of these bait freezers the department pays half the cost of construction and equipment up to a sum of one thousand dollars.

6. The regulations provide that in any locality where twenty or more fishermen form themselves into an association, with a capital stock of not less than five hundred dollars, the department will give the assistance referred to in answer to question No. 5.

THIRD READING.

Bill (No. 5) respecting the Census and Statistics.—Mr. Fisher.

SUPPLY—MANITOBA ELECTION RETURNS.

Hon. RAYMOND PREFONTAINE (Minister of Marine and Fisheries) moved that the House go into Committee of Supply.

Mr. R. L. BORDEN (Carleton, Ont.) Mr. Speaker, before you leave the chair, I would like to ask the right hon. Prime Minister (Sir Wilfrid Laurier) whether or not he has an answer to the question which I put in his absence the day before yesterday in regard to the alleged non-performance by the deputy returning officers in Manitoba of the duties which are distinctly cast upon them under the terms of the Dominion Election Act of 1900. I do not know whether the attention of my right hon. friend has been directed to what I then mentioned or not. I gave a reference to the statute under which the Clerk of the Crown in Chancery is obliged to provide lists for each of the polling sections as well as a reference to another section of the same statute under which the returning officers are bound to return to the Clerk of the Crown in Chancery certain documents and papers which have been used in the respective polling subdivisions. I pointed out also that these documents have not been returned to the Clerk of the Crown in Chancery, so that they cannot be made available in certain legal proceedings which are now pending in the province of Manitoba, and I would like to know whether or not the government is in possession of any information as to the conduct of these gentlemen who are officers of this House and whose conduct therefore is a legitimate subject of inquiry

in parliament and possibly of action by parliament.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). I may inform my hon. friend (Mr. R. L. Borden) that I received to-day two memoranda from the Clerk of the Crown in Chancery on this subject, but I have not yet been able to look at them. I will be able to give him an answer to-morrow.

SEIZURE OF THE SCHOONER 'AGNES G. DONOHUE.'

Mr. D. D. McKENZIE (Cape Breton). Mr. Speaker, I desire to call the attention of the government to a report that appears in the Halifax Morning Chronicle of the 17th inst., in reference to the schooner Agnes G. Donahue and her crew. This is a vessel that was owned in the city of Halifax and which some time in September last started on a sealing voyage down to the southern sealing grounds. While on her way down there she was captured by the government of Uruguay, one of the republics of South America. My information is that she was seized on November 11 last, and that the crew of nineteen men and the captain are still prisoners on board of the schooner, that they are not allowed to leave the vessel and that although a trial took place in the Supreme Court of that country, nothing whatever has been proven against the schooner. Still, she is in the hands of the government, the nineteen men with the officers are still prisoners on board the schooner and nobody is allowed to communicate with them. I am not sure whether this matter has been brought to the notice of the government or not, but I am sure that it is a question that shoud receive due consideration and immediate attention. I have been informed that some steps were being taken by the authorities to make good the damages to the owners of the vessel, but I am also informed that there is nothing in contemplation to be done for the men. Now, Mr. Speaker, I would respectfully urge that as provision is being made for the owners of the vessel who have lost the services of the schooner and the profits that they might have made out of the voyage, some consideration also should be shown to the men. The men were only working on shares. They had no fixed wages from the owners of the schooner. They were to receive so much for each skin that was caught. These nineteen men are thrown out of their employment and the loss entailed upon them by the three or four months idleness during which they are kept prisoners, and the time it will take them to return to their homes again is a very serious matter to them.

Mr. R. L. BORDEN. What was the alleged cause of the seizure ?

Mr. D. D. McKENZIE. It is alleged that they were poaching, but I am informed on what is considered good authority that there is no law or regulation in that country in respect to sealing, and that this vessel was four miles off the shore when she was captured and furthermore that although there was a trial nothing was proved against her. Although this case as an international question may be considered small, still to those who are particularly concerned it is a very big question, and I urge upon the government that if justice is to be done to these parties it should be done quickly. Where the home government has to deal with a matter of this kind progress is usually very slow. I hope that in dealing with this case there will not be a repetition of those slow methods if justice is to be done to those who are immediately concerned. I would respectfully commend this matter to the attention of the government.

Hon. RAYMOND PREFONTAINE (Minister of Marine and Fisheries). Mr. Speaker, the question is a new one to the House I am sure, but it is not new to the department. We had a complaint, I think, about a month ago about this act on the part of this southern republic, the seat of whose government is at Montevideo. We took the matter in hand at once and we entered into communication with the home government in order to secure the release of the men. After a couple of cables we were informed that the men had been discharged, but that the government at Montevideo intended to keep the captain in jail although there was no law to keep him in jail, but from the information we gathered they were preparing the law to meet the case. We, therefore, again put ourselves in communication with the home government and presented the facts as we were informed. We have received no reply yet to the last communication we have had with the home government on the question. I understand that the British consul at Montevideo is doing his best under the circumstances. It is one of these extraordinary cases that will happen now and then in these countries. The hon. gentleman may rest assured that we are not at all losing sight of the question and we are anxious for an early settlement so that justice may be done to a Canadian.

Mr. FOSTER. You are not sending the Canada down there.

Motion agreed to and House went into Committee of Supply.

Railways and Canals—chargeable to income—arbitrations and awards, $4,000.

Mr. EMMERSON. This is the usual vote.

Mr. BLAIN. Would the minister explain how that amount was expended last year?

Mr. EMMERSON. We only expended up to Jan. 31 $115.20 out of the $4,000. A vote of $4,000 is taken annually ; sometimes the full amount is expended, sometimes it is not.

Surveys and inspections—canals, $3,000.

Mr. PERLEY. Has the superintendent been appointed for the Carillon and Grenville canal, and if so, who?

Mr. EMMERSON. A gentleman was recommended to me whose name I think was McCoy.

Mr. PERLEY. Will the minister tell me what his experience consists of and what his previous business was?

Mr. EMMERSON. I will not be certain as to that. The name was submitted to the superintending engineer of the canal to inquire as to his qualifications; the chief engineer tells me that Mr. Marceau is quite satisfied with the qualifications and with the information which is secured with respect to the nominee or candidate for the position. My instructions were carried out and his appointment has been made.

Mr. PERLEY. I would like to ask the hon. minister whether he expects a man in this position to be really the superintendent of the canal, or whether he is appointed nominally for the sake of the salary; because I am given to understand that this man has been hitherto a marble cutter and manufacturer of tombstones?

Mr. EMMERSON. The superintending engineer is the man with the technical skill, while the superintendent or overseer is required to be simply a business man, with the ordinary tact and judgment that would be required for the carrying on of any business.

Mr. PERLEY. I thank the minister. I simply wanted to get that information, because on that basis the man is a good man.

Mr. FOSTER. What is the salary attached to the position?

Mr. EMMERSON. $1,000.

Mr. FOSTER. What are the duties such a man has to perform?

Mr. EMMERSON. He has the employment and direction of the men, the looking after the repairs, the direction of the traffic passing through the canal as respects the opening of gates and the order in which vessels shall be taken through, and generally the oversight of the canal.

Mr. FOSTER. Does the minister lay down the principle in employing men to be overseers of canals that it makes no difference at all whether they have had any previous experience in canal work—I mean the technical business details connected with the management of a canal? Certainly there would not be much that a man would gain in a tombstone business to fit him for that particular kind of work. Surely there ought to be some special qualification in the line of the work which he has to do to fit him for a position of that kind and to entitle him to his salary.

Mr. EMMERSON. On all these canals the work of construction is under the charge of the superintending engineer. The superintendent as such has nothing whatever to do with that. There are no men in training for positions as superintendents of canals. There are men employed as labourers, for the opening and closing of gates and the turning of bridges, but there are no men who are in a lower position and who climb up step by step to a higher. I have no doubt that occasionally there might be a man who commenced on the canal as a labourer and who would eventually reach a much higher position; but these are very few and far between, and the only thing that is left for the department to do is to select men with good business qualifications, with tact and judgment and some executive ability, because they have to carry on transactions on the canal in a business way with the public.

Mr. FOSTER. Such, for instance, as——

Mr. EMMERSON. Very largely in connection with differences arising between different transportation companies as to which shall have precedence, and so on; he has to do with directing the men, where material is to be taken, and he must see that the boats do not go through at a higher speed than is required by the regulations.

Mr. FOSTER. And all that would be excellently well understood by a tombstone maker.

Mr. EMMERSON. Yes, and a poet might do it.

Mr. FOSTER. A thousand dollar man to take charge of a canal under the superintending engineer, it seems to me, ought to be a man who would have some knowledge of transportation; at least, he should not be afraid of the water. He ought to know something about building, particularly that kind which goes on about a canal. The superintending engineer cannot be always on the works. He would lay out the works, as I understand, and the superintendent would see that they are completed according to his directions. It does not seem to me that a tombstone maker has any particular qualifications to entitle him to be chosen by a superintending engineer for this work. The minister says that there are no persons going up step by step. No, and there never will be any chance for them, so long as he goes outside to search for tombstone makers to make them superintendents of canals. Even though a man is a business man in a tombstone way, it does not follow that he would be a very capable man for this kind of work. He would always be looking forward to the future; the present would have no interest

for him. I would suppose that the experience acquired by a man engaged in tombstone work during the course of a long and mournful life would not be such as to qualify him for this class of work.

Mr. EMMERSON. My hon. friend will perhaps admit that a marble worker and even a carver of tombstones might be a good business man. A few years ago, when my hon. friend had some responsibility for the management of the canals, the superintendent of the Cornwall canal was a blacksmith, and I have not heard that that prevented his being a successful superintendent. In the Williamsburg canal the late government had a doctor as superintendent. I do not know what particular qualification a doctor might have for the work except that he might be a good bone setter and set a broken leg in case of accident. After all it simply resolves itself down to this, that the man who makes a successful superintendent must have a good business head and good executive ability.

Mr. PERLEY. I have listened attentively to what the hon. minister has said. But in the county I have the honour to represent, I find that the position is supposed to be a political appointment and that the appointee must be politically qualified, whatever qualification he may have in other respects. I hope the hon. minister does not make all his appointments on that basis. As regards the man in question, whose name is McCoy, he is a very respectable citizen and a very decent fellow. If the appointment is to be a political one, I have no objection to this particular nomination, but I do not think it is good for the service to have the impression generally created that when a position of that sort becomes vacant on a canal, it can only be filled by some one who has political pull.

Mr. EMMERSON. Before making this appointment, I had the qualifications of the applicant inquired into, and the superintending engineer, Mr. Marceau, reported that he was well qualified. I carried out Mr. Marceau's recommendation. The appointment was not strictly political. Mr. McCoy was appointed on the recommendation of the superintending engineer, who said he was well qualified, but in addition he was a friend of the administration, and of course, other things being equal, I would give our friends the preference. That is a necessary incident of party government, and the case in question is one to which exception would not be taken by any hon. member opposite. They have had their day and may have it again in the distant future. We have followed what has been the course since confederation and what I fancy will be the course so long as party government prevails in Canada and human nature is what it is.

Mr. COCHRANE. What salary has this gentleman and does he live near the canal ?

Mr. EMMERSON. A salary of $1,000 providing he attends to the duties of his position and regardless of where he lives.

Mr. COCHRANE. Does he get any pay for going to his work ? We have a superintendent on the Murray canal who gets $1,000 but who will not condescend to live near the canal. He lives in Brighton and is paid for 255 trips down to the canal at the rate of $1.50 a trip.

Mr. EMMERSON. He is not superintendent.

Mr. COCHRANE. He has charge of the canal and is called a superintendent with us. He gets $6 a month for his house and $6 a month for his office, but he has no other office than that which is in the government building. When he takes a trip down to Trenton he gets $3 a trip, and when he goes visiting his own home he charges the country $2 a trip. The hon. minister may laugh, but it is easy for him to laugh as he is not the one who pays.

Mr. EMMERSON. You should rebuke your own friends for laughing.

Mr. COCHRANE. The high school teacher in Brighton gets $1,000 a year and provides his own house. It is ridiculous to give this official $1,000 and then pay him for every day he goes down to his work. Every time the superintendent of the Murray canal goes from Brighton down to the canal he gets $1.50 a trip and the trips amounted to 255. He also gets $6 a month for his house allowance and $6 for the office, though he has no office except that built by the government. He gets paid for trips going down to Trenton, which is only a short distance from the eastern end of the canal, $3 a trip, and when he goes to the country to visit his friends he gets $2 a trip.

Mr. BICKERDIKE. This gentleman does not go to Brighton.

Mr. COCHRANE. You are chuck full of information. Does this gentleman get paid for going to his work on the canal in addition to his salary and does he get any allowance for house and rent ?

Mr. EMMERSON. The superintendent of this canal lives right on the spot. With respect to the Murray canal, my hon. friend knows, because he was familiar with the canals in that section in bygone days, that the gentleman now occupying the position of superintendent is paid just in the same way as was his predecessor. His predecessor under the former government was paid a salary and given so much allowance for driving to the canal. It appears that has been continued. I am glad my hon. friend has brought the matter to my notice. I shall inquire into it. But I am advised that it has been the course of the department since long before the present government came into power. I will get the exact facts

as to the expenses charged, and learn whether these expenses are properly chargeable to the canal.

Mr. COCHRANE. Here is another case of 'You did the same.' We have heard that until it has become stale; and, to my mind, even when it was fresh it was no justification for extravagance on the part of this government. When in opposition they charged the government of that time with extravagance and promised to do better. And now the minister tries to defend what he must know to be dishonest so far as this superintendent is concerned by saying that the same was done in previous years. The former superintendent was dismissed, and the cause of his dismissal was that he made these charges. Yet, to-day, the salary paid to the present officer is justified on the ground that it was paid to the previous occupant of the office. That is no justification. The only way to justify it is to show that the man is entitled to it. The minister says he will inquire into the matter. We have the Auditor General's Report for the facts, and if that is not enough, I do not know to whom the minister will apply. I never was more disgusted in my life than when I travelled over that canal during the last election, and found that the office occupied by this official was built at the public expense, and yet he was getting $6 a month for office rent. The minister says that the position of superintendent of the canal does not call for special qualifications, but that a marble cutter can fill the office. I do not know what officer can require special qualifications if this one does not. Does the minister mean to tell me that the engineer in charge of the canal is there all the time to see to it that the public money is not wasted? If, when the frost comes out of the ground in the spring a part of the embankment slides down into the canal, is it not clear that a man of brain power and business capacity is needed to handle the men to make the repairs? If men have been put into such positions simply because they are good party men, and regardless of their qualifications for the duties expected of them, it is time to call a halt. Here is a man receiving $1,000 a year, when the high school teachers in the same section receive no more, and then he gets an allowance for an office rent when the government itself has provided the office.

Mr. LEWIS. Is it not possible and advisable to fill these positions in connection with the canals and lighthouses from the ranks of men who are acquainted with navigation matters. We have now a considerable commercial navy, and the men engaged in it have not many positions ashore open to them. Would it not be wise for the minister to fill such places as this with men, even his own party friends who are familiar with vessel transportation and the use of the canals? I would strongly urge this course.

Mr. EMMERSON. I presume you will find many men of that class with the necessary ability. My hon. friend from North Toronto (Mr. Foster) asked a question last night with regard to the timber for the guide-piers on the Carillon and Grenville canal. Of course, that was for last year, and is not involved in this vote, but I desire to explain the matter. This timber was supplied under a contract which was entered into after tenders had been called for by newspaper advertisement. The contract was based on schedule rates. The lowest tender, that of Martineau, Son & Lemoine, was accepted. In the Auditor General's Report I find that the total cost was $19,788.55—that being the result of the final adjustment between the chief engineer and the contractor. The price of the spruce and hemlock was $30 per thousand as stated last night, pine timber being $35 and tamarack plank also $35. We have here also the concrete, the stone filling and all the other items entering into the construction of this guide-pier. The best criterion by which to judge whether the prices were reasonable or not is found in the fact that there was open competition and that six tenders were received.

Mr. PERLEY. The explanation of the minister is satisfactory, so far as it goes. But he must have had a very unfortunate experience with the people who tendered, because, while $35 per thousand for pine, is fair enough, yet $30 for spruce and hemlock in that locality where the timber is grown and made is out of all reason. I have never known such prices to be paid, and I have bought and sold a great deal of these woods.

Mr. EMMERSON. I have already stated that this was a competitive price, but I should also call the attention of the committee to the fact that this price is for the timber in the work, with all the labour upon it employed in putting it there. If the hon. gentleman will consult the Auditor General's Report, he will find that there is nothing there for labour, except an item for taking down certain work as ordered,—a special matter. But all these items are computed at a certain price, with the labour included, that is to say, the timber used is measured after it has become a part and parcel of the whole and completed work. I think that is an element which would affect the judgment of my hon. friend from Argenteuil (Mr. Perley).

Mr. BLAIN. Is that the customary way in his department of measuring timber? If it is not, why was there an exception in this case?

Mr. EMMERSON. The engineer says that is the customary way in making up the final estimates of the department where it is by schedule rate; because concrete must mean concrete completed and placed

in the work where it is required, and where the specifications design it should be; and timber must mean the timber as a part of the completed work placed in the position where the requirements of the specifications designed.

Mr. BLAIN. Am I to understand that in every case the contractor who does this work supplies the timber?

Mr. EMMERSON. That depends upon the call for tenders, that is always specified. In some instances the department would furnish the material, and then it would be a tender for doing the work and putting it in place. It depends upon how the call for tenders goes forward. If you are simply asking for tenders for timber, then of course it would mean the measurements before it became a part of any work. But where you are asking for tenders for the construction of a guide pier, then the schedule prices would mean timber or concrete as part of the completed work.

Mr. LALOR. What is the length of this timber? That makes a considerable difference.

Mr. EMMERSON. The timber was from 20 to 25 feet in length.

Mr. FOSTER. What was the nature of the work?

Mr. EMMERSON. Cribwork and concrete.

Mr. LALOR. $30 would be a pretty steep price for hemlock timber. I have taken contracts where I got it at a much better price than that.

Mr. EMMERSON. My hon. friend must bear in mind this fact, that we invited tenders, and there were six tenders, of which we chose the lowest. The whole public of Canada had an opportunity to tender, what more could be done? No exception can be taken to the action of the department. Of course it may be said, oh, this could be done for less. The opportunity was open to the hon. gentleman himself to tender.

Mr. LALOR. Did you advertise for these tenders?

Mr. EMMERSON. I stated time and again that we advertised in the newspapers of Ottawa and Montreal, and at points between.

Mr. MONK. The grievance to which I wish to call my hon. friend's attention is one which we suffer from at Côte St. Paul. I endeavoured to obtain a redress of that grievance by writing to the employees of the department on the canal at Côte St. Paul. Last year I had some communication with the minister; but I think it is absolutely necessary to bring the matter before the House, and I would ask my hon. friend to give a strict order that the proper remedies be applied to that grievance. As the hon. gentleman is probably aware, on the Lachine canal at Côte St. Paul, there are a certain number of manufacturers who use the water-power from the canal. They depend upon that water-power to a very large extent in carrying on their manufacturing business. The complaint which I urged last year on their behalf and brought to the notice of my hon. friend, was that the water levels during the winter months are not properly kept up on all parts of the canal. There is a part of the canal below Côte St. Paul which, according to the complaints that have been made to me, is kept abundantly supplied with water, or at any rate receives a larger portion of water than the part at Côte St. Paul itself. This grievance only appears in the winter, because in the winter the supply of water in the canal for the purpose of manufacturing is not as regular as in the summer, because as is contended, the levels vary in the lake, and perhaps on account of the ice also. I will read to the House a letter I have received in connection with this matter, and then I will send to my hon. friend at his department a tabulated statement of the variations of the levels, which would be too long to read here. I really believe, after the efforts I have made to secure from the employees of the canal proper attention to this matter, that it has been neglected, and that by bringing it to the notice of the department a word from the minister will probably suffice to procure the necessary degree of vigilance. These manufacturers suffer a great deal of annoyance, and some loss, which could be avoided if proper care were taken. This is the letter I have received from one of the manufacturers:

Dear Sir,—Attached is a copy of a letter written yesterday to Mr. O'Brien——

Mr. O'Brien is one of the chief employees on the canal.

——which is largely self-explanatory. We are also returning his letter of the 11th instant, as sent you, having carefully noted his contentions.

If our trouble was caused entirely by low water in Lake St. Louis, as he contends, our demands would be unreasonable to say the least. We have asked nothing unreasonable, however. What we have all along held is that the level below is kept up regardless of any and all conditions, while our supply level is continually fluctuating. The figures we give him in the letter attached show our position. On Monday the level below was 14 feet 4 inches, the level above was so low as to be entirely useless. No doubt some shortage at Lachine is a frequent occurrence at this season of the year, but we only ask a fair division of such shortage. Surely there is nothing unfair or unreasonable in our asking that the other users of the water bear their proportionate burden of existing conditions rather than have it all fall upon us as at present.

You will also observe the fact of the fluctuation in our supply level. One day it is up, the next it is down. Some days it is up in the

morning and down again in the afternoon. Now if the whole cause was a shortage at Lachine, would there be this rapid fluctuation ? Would there not be a low level of more permanency than this ? We think so. The difficulty is simply that the man at St. Paul locks is instructed to keep the level below at some 14 feet 4 inches, and he does it regardless of whether we have an inch of head left or not.

Last year the trouble started in December, 1903, but this year we did not feel it until January. It always lasts until the canal is emptied, so that our period of difficulty is somewhat lengthier than the two months which Mr. O'Brien speaks of, being more like four months.

Now instead of complaining of this, which I think amounts to neglect and carelessness, at the beginning of the session when this trouble recurred, I wrote to the employees of the canal. I wrote particularly to Mr. O'Brien in regard to this. I do not think Mr. O'Brien is at fault, but I think there are some men in charge of the regulation of the levels who require to be informed by the department that they must more carefully attend to their duties. If the hon. minister will be kind enough to give such an order, I think that fact, with the fact that the matter has been discussed publicly, will bring some relief to these manufacturers who are certainly entitled to it. There is just one other point to which I wish to call the hon. minister's attention while I am on my feet. As the hon. gentleman is aware there is going to be a bridge built at Atwater avenue this spring. I have no doubt that the bridge is at present ready, that all the structural pieces have been completed, and I have no doubt whatever that if the pieces were brought upon the ground, all the work along the canal done and everything ready it would not be necessary to take the water out of the canal for more than three weeks. That is not the opinion of an expert which I express, but it is an opinion which I have arrived at from what I have been told by builders and contractors. There is a question this spring of drawing off the water from the Lachine canal for six weeks and the opinion of the superintendent of the canal in Montreal is that it will be necessary to remove the water from the canal from March 15 until May 1, even though day and night work is resorted to.

Mr. EMMERSON. That is always required.

Mr. MONK. I do not think so.

Mr. EMMERSON. I think that is part of the contract.

Mr. MONK. No, I do not think there can be any such stipulation in the contract. I do not know what this contract is, but I do know that there is no clause in the contract which provides that the water shall be drawn off from the 15th March to the 1st of May ; in fact I am morally sure there is no such clause.

Mr. EMMERSON. There is a clause requiring them to work day and night.

Mr. MONK. No doubt, and no doubt there is a stipulation on behalf of the contractor that the water shall be drawn off for a sufficient time to allow him to perform his contract. I believe that if the contractor is told that he will be kept strictly to his contract it is possible to put that bridge across the canal in less time than six weeks. I am sure it is possible and I would invite my hon. friend to endeavour to secure from the contractor an undertaking that the day the water is drawn off he will be ready to go to work, put on day and night shifts of workmen and endeavour to complete that work in a shorter time than six weeks. As my hon. friend can readily imagine it is a severe privation for the manufacturers who use the waters of the canal to be deprived of water during such a long period as six weeks. They are obliged to have recourse to electricity or steam power, and it is a serious interruption to their work and it is a serious loss not only for themselves but for the men whom they employ. I think if my hon. friend will give instructions to the superintendent of the canal at Montreal to endeavour to secure the performance of this work in a shorter time than six weeks he will undoubtedly succeed and will deserve the gratitude of the people interested.

Mr. EMMERSON. I would inform my hon. friend that the department has already taken the steps to which he makes reference. If we only had the Atwater avenue bridge to build we might complete that within a certain time, but there are other works which necessitate the removal of the water from the canal. There is a retaining wall that has to be rebuilt and there is some stone lining that is absolutely necessary and the canal will have to be dewatered to provide for these. As respects the complaint of those who utilize the water power on that canal if it is due to the negligence or inattention of any of the officials of the canal I shall certainly see that it is remedied. If by any precautionary measures, the officials can prevent the difficulty complained of, it is certainly the duty of the department to have it done. There is, however, a question whether the cause is due particularly to any want of care on the part of the officials. The question of ice is one that has arisen in connection with the Cornwall water-powers, and the department has contended that the remedy should be applied by those who use the water-powers. Those who use the water think that the expense should be borne by the department. Of course, many of these water-powers, as my hon. friend knows, are leased for practically a nominal sum. Years ago the rental was fixed at a very low rate and it has continued necessarily because the leases were for long

periods. The department does not operate the canals simply to develop water-power, That is only an incident. The department is not, I think, justified in expending large sums or any sum with the view of developing water-power. I think it very properly leases these water-powers where they do not interfere with navigation, but I doubt whether the department is justified in making expenditures or going to any expense to provide water-powers. That should be borne by those wishing to develop and utilize these water-powers.

Mr. MONK. I do not think the ice has anything to do with the shortage of water. It is possible—I do not know very much about the matter myself—but I do not think so because it has never been mentioned by any of the parties interested. In regard to what my hon. friend says about the government not being bound to furnish water-power or to make any expenditure in that connection, and in regard to what my hon. friend has said as to the advisability of manufacturers securing power elsewhere if they are not satisfied——

Mr. EMMERSON. I did not make that statement.

Mr. MONK. Well, my hon. friend said that it was an incident of the canal that water-power is furnished and that if it caused inconvenience to these gentlemen they might secure their power elsewhere. That is what I understood the hon. gentleman's statement to be.

Mr. EMMERSON. No, I do not think I made that statement nor did I make any insinuation of that kind. I said it was only an incident and that the department was not justified in making expenditures with a view to developing water-power.

Mr. MONK. That is the point I am coming to. The department is justified in seeing that its servants do their work properly. We have men there who are paid to look after the levels. The work which they have to do is to see that the proper level is kept up in the canal. If these water-powers did not exist on the line of the canal it would not be necessary to keep the staff which we have there, but being paid to do that work all we ask is that they shall do it properly. As I stated to my hon. friend a moment ago I would not have brought the matter up here ; I fancied that I could secure vigilance in the performance of their duty from these men, whoever they are—I do not know them—by correspondence with themselves, but my efforts have proved fruitless. I do not blame the government for this state of affairs. If there is anybody to blame it is these men who are not under the continual superintendence of the minister, but I know perfectly well that if the minister give them a warning that this matter is being closely watched and that being paid to do this work of watching these levels they must see that the water which is there, whatever may be its quantity, is supplied evenly to those who use it, I know that will be more effectual than anything I can do.

Now, in regard to the bridge. Of course, if my hon. friend is right in saying that a contractor cannot be expected to do this work in less than six weeks, there is an end to the matter. But I am not aware that there are other bridges to be put on the canal, nor am I aware that this particular contractor, whose name I forget for the moment, has any other work to do on the Lachine canal than the erection of this bridge. If that is the case, and if my information is well founded that the bridge itself can be set in position in half the time, in three weeks or even in four weeks, why should the manufacturers who happen to be there be deprived of the use of this water which is so essential to them for the carrying on of their industry? If my hon. friend will ask the superintendent in Montreal to give his special attention to this question of time he will find that within the period of four weeks he could have the bridge erected and the work which my hon. friend mentioned, which is to be done on other parts of the canal, not so considerable as the erection of the bridge, all complete with a very great saving of time.

Surveys and inspection—railways, $18,000.

Mr. BLAIN. The minister passed an item the other evening of $20,000 for a special survey of the Welland canal. I would ask the minister how much money was expended last year for surveys of all the different canals of Canada?

Mr. EMMERSON. This is for surveys and inspection of railways. Every railway to which is granted a charter and a subsidy given has to be inspected and for this purpose we have to send out engineers all over the country. The usual vote has been $18,000 per annum. Last year up to the 31st of January, 1905, we expended about $7,650 on the inspection of railways.

Mr. BLAIN. That is not the survey and inspection of canals, which is the item under discussion. The railway item comes next.

Mr. EMMERSON. We have passed that, we are at the $18,000 item. Reverting to that I would say that this is in connection with the inspection by our officers of the canals, especially in relation to the granting of water-powers. The hydraulic engineer from time to time goes out and visits the several canals when applications come in asking for powers. He makes a report to the department and it is upon those reports that I am able to determine whether these applications shall or shall not be granted. The amount expended from July 1st last to Jan. 31st was a shade over $1,000.

Mr. INGRAM. Will the minister give the different canals which have been inspected since last year?

Mr. EMMERSON. The hydraulic engineer went to the Welland canal, the Cornwall canal, the canal at Morrisburg, and the Trent canal. We are constantly receiving applications for the granting of water-powers and I find it necessary to spend a sum of money in connection with the reports and surveys of the different canals.

Mr. INGRAM. Do I understand that all these were surveyed last year?

Mr. EMMERSON. Since the 1st of July we have expended $1,036.94 on this work up to Jan. 1.

Mr. INGRAM. I am not complaining of the amount of money that has been expended in that way; all I want to get is the number of inspections that have been made since last session or during the past year.

Mr. EMMERSON. I speak from memory as to the inspections. There is an annual vote, and has been for years, of $3,000 to meet that contingency.

Railway statistics, including clerical assistance, &c., $2,500.

Mr. EMMERSON. This is the usual vote in connection with extra work during the session.

Salaries—extra clerks, copyists and messengers, &c., $4,000.

Mr. EMMERSON. This has been increased on account of the employment of two additional assistants.

Mr. BLAIN. May I ask who they are and why they are exempted from the provisions of the Civil Service Act?

Mr. EMMERSON. Miss Helmer and Miss Mahon. It was found necessary to have them.

Salaries of engineers, draughtsmen, extra clerks and messengers, &c., $31,500.

Mr. FOSTER. Why is the increase asked for?

Mr. EMMERSON. I can give it in detail.

Mr. FOSTER. You have $1,000 more.

Mr. EMMERSON. In the first place the inspecting engineer received an increase of $200, that is Mr. E. B. Johnston. He was receiving $2,400 which has been increased to $2,600. Mr. Alward, assistant law clerk, has been increased from $1,200 to $1,400. These two items account for an increase of $400. Miss Graham received an increase of $50, from $650 to $700, and 12 received increases of $50 each. There was an extra clerk, translator, put on, M. J. Lyons, $500. That accounts for the $1,500 increase.

Costs of litigation in connection with Railways and Canals, $6,000.

Mr. FOSTER. What was spent on that last year?

Mr. EMMERSON. From the 1st of July to the 1st of January, $2,639.78. The amounts paid were: E. H. McAlpine, in connection with the Canada Eastern Railway, for services in connection with the searching of the title, $1,162.54; S. A. Mackay, in connection with the Culbute canal claims, $1,000; Arthur Lisle, in connection with the Calumet claims, $1,000; Deland & Brassard, in connection with the claims for the Chambly flooding, $218; and mis cellaneous items, $59.24.

Mr. HAGGART. I thought the Culbute claims were all settled long ago?

Mr. EMMERSON. These are flooding claims that were continued up to early last spring, while the canal was really in commission, though not in use. About the only use that was made of it was made by the lumbermen. I had the question of the legal status of the department and the responsibility of the government in connection with that canal inquired into, and I was advised by the Department of Justice that it would be necessary to abolish it legally by a proclamation in the 'Canada Gazette,' in order to put it out of commission. This was done; but it does not seem to have annihilated the claims for damages. This year, quite recently, the usual claims have been coming in. But it is not a canal, and it is not maintained by the government as one.

Mr. HAGGART. If I remember rightly, the dam which caused these damages was removed altogether by the government. First of all, the damages done by the dam were assessed, and I think they were paid by the government two or three times over. Then the government removed the dam altogether, so that no damages could accrue from the government work.

Mr. EMMERSON. It is a question whether the government in starting to remove the dam did not recognize the liability. But, apart from that, the government did not remove the dam. They started to do it, but the transportation people and the lumbermen entered a protest against its removal, claiming that it was a vested right, that it had been in use by them, and that its removal would cause very serious disaster to the navigation of the Ottawa waters in the way of bringing down lumber.

Mr. FOSTER. Mr. McAlpine seems to be fortunate in having pretty constant employment by one or other of the ministers.

Mr. EMMERSON. Let me explain to my hon. friend that Mr. McAlpine has been the agent of the Minister of Justice at St. John for the province of New Brunswick or a portion of the province, and that when the legal matters go from the several departments to the Department of Justice, the Department of Justice employs its agent

at the particular point where the work is to be done.

Mr. FOSTER. What I wanted to call the attention of the House to was this, that Mr. McAlpine seems to be badly treated by the Justice Department, or else that he places a large estimate on his legal services. For instance, I find that last year he rendered a bill for $900 for services in connection with the purchase of the Canada Eastern Railway, and that when that came before the Justice Department, which has never been accused of illiberality, I think, but which pays its agents generously——

Mr. EMMERSON. They tax all the bills.

Mr. FOSTER. From the bill of $900 the sum of $540 was taxed off, bringing it to the more respectable dimensions of $360. I can imagine what a sad disappointment there was; but, all the same, it would seem as if, in the cases in which this taxing arrangement is not carried out, the department would be paying almost too much for the services of Mr. McAlpine. He seems to have a high estimate of the value of his services as compared with the Justice Department.

Mr. HAGGART. Why was any amount paid to Mr. McAlpine at all in connection with the purchase of the Canada Eastern Railway? I thought the rule was that the expenses of verifying the titles are paid by the seller.

Mr. EMMERSON. That cannot be the rule either in this or any other country. Suppose that we had purchased the Canada Eastern without having the title thoroughly inquired into, suppose that the department depended upon the word of the vendor, and afterwards it turned out that this whole railway was encumbered, do you think the department would not be held responsible for not having had its own legal adviser go through the title.

Mr. HAGGART. There is no difference with us on that point, but I say that the seller furnishes an abstract of the title and the purchaser sees if that abstract is correct, but as a general rule the seller pays for the search.

Mr. BLAIN. On the question of damages to pay for property flooded, the minister says that that account is closed, but that notwithstanding claims are coming in from time to time. Does his department intend to pay these claims in the future?

Mr. EMMERSON. No.

Mr. BLAIN. Nothing more will be paid?

Mr. EMMERSON. Not a cent.

Mr TAYLOR. Is any portion of this $6,000 to pay for expenses in connection with litigation concerning the extension of the Rideau canal and is he proceeding with that extension?

Mr. EMMERSON. I explained, when my hon. friend was absent, that we had run against quite a barrier in this matter. A question arose regarding interference with a mill property, and the owners, Messrs. Tett Bros., asked what seems to me a very exorbitant sum, and certainly until I can be satisfied that the property can be secured at a reasonable price, I would not be inclined to move further in the matter.

Mr. SAM. HUGHES. Last night the hon. minister promised to give details of the agreement between the Dominion and the provincial authorities of Ontario regarding the taking over of the waterways north of Balsam Lake.

Mr. EMMERSON. I said I would explain the position in which the matter was. The negotiations are not quite complete. The officers of my department met the officers of the Crown Lands Department of Ontario at Toronto and arranged on a certain basis on which we would take over these works which had been constructed by the province and free the province from any future expenditure on their maintenance. The waterworks we would have charge of, and we would have a dam built. That has been made the subject matter of a report to Council, which is submitted to the provincial government at Toronto, and we hope to have the matter carried out because the negotiations were practically concluded but were not put in the shape of an Order in Council on behalf of either government.

Mr. SAM. HUGHES. What need is there for this work if you are not going to complete the two ends of the canal?

Mr. EMMERSON. Why does my hon. friend assume that we are not going to complete the two ends of the canal?

Mr. SAM. HUGHES. I see nothing in the main estimates. However, we live in hope, and I hope there will be an amount of two million or three million dollars in the supplementaries.

Mr. EMMERSON. We could not spend that much this year.

Mr. SAM. HUGHES. But you could let contracts for the whole work as used to be done formerly and the work would be done much more expeditiously if that plan were followed.

Mr. EMMERSON. Why did you not come to that delegation this morning?

Mr. SAM. HUGHES. I had every faith that the Postmaster General, would bring that canal up to Aurora.

Maintenance and operation of the Board of Railway Commissioners for Canada, $60,000.

Mr. KEMP. Is that the whole cost for the year?

Mr. EMMERSON. No, there is $30,000 provided by statute in addition to this.

Mr. KEMP. Are the appointments of the Railway Commission subject to the approval of any department of the government?

Mr. EMMERSON. No, they are subject to the approval of the Governor in Council, being brought to the notice of the Council by the Minister of Railways under recommendation or report.

Mr. KEMP. Then the appointments have to go to the Department of Railways and Canals?

Mr. EMMERSON. That is simply the avenue by which the Board of Railway Commissioners reach the Governor in Council.

Mr. KEMP. The Department of Railways and Canals, I presume are notified from time to time as to the rulings and decisions of the Commission?

Mr. EMMERSON. No, that has not been so far the case. The rulings are not sent through the department. As to their expenditures, they simply send in their recommendations for accounts, and payments of accounts and auditing are the work of the Department of Railways and Canals.

Mr. KEMP. Is the Minister of Railways and Canals, or is any other minister, prepared to make an explanation of the revision of freight and passenger tolls which the Commission authorized, as published in the 'Canada Gazette' in December last? The maximum passenger rates in that schedule are higher than those that have been in effect heretofore as authorized by the Railway Commission of the Privy Council. And, the same is true of the freight rates. There has been a good deal of discussion of this subject in the press, and it would be interesting if the minister could give us the reasons for these advances. There has been an agitation in the country for lower freight rates upon certain roads and in certain sections, and I have not found in the press any articles justifying these increases. And the public are not able to ascertain from anything that comes from the Railway Commission why these advances were made.

Mr. EMMERSON. The Department of Railways and Canals is in no way consulted with respect to these matters, nor has it more knowledge concerning rates fixed by the Commission that any hon. member of this House has. Speaking under correction, I believe the law provides that every railway in the country shall file with the Railway Commission a statement of the rates it intends to put in force. That statement must be published in the 'Canada Gazette.' But, before it can be enforced, it must be passed upon by the Railway Commission and must receive their approval. The publication in the 'Gazette' is to give the public notice of what the railways propose to do. I think it is proposed that this shall be done annually some time near the close of the calendar year. Copies of these proposed tariffs are not filed with the Department of Railways and Canals. That is about all the information I can give the hon. gentleman.

Mr. KEMP. As I understand it under the old regime, if any new rates were decided upon by the Railway Committee of the Privy Council, it would have been proper and right for any member of the House to inquire why these changes had been made, and it would be the duty of the government to make such an explanation. Do I understand that, under the Railway Act and under the Railway Commission, the public are unable to get such information as they were able to get in this way in times gone by?

Mr. EMMERSON. I think any member of this House can move for a return of the rates fixed and of the judgments delivered by the Board of Railway Commissioners in connection with rates;—for in each case, there is an application, and there must be a determination, a judgment. The commission is supposed to be entirely independent politically and free from governmental action. Bnt, of course, it is subject to the order of this parliament for returns, and I am sure it is quite open for the hon. member (Mr. Kemp) to secure the information he desires in the way I have indicated.

Mr. KEMP. It is not necessary to move for such a return, because the information to which I refer is already published in the 'Canada Gazette.'

Mr. EMMERSON. Is not that merely a notice of what they intended to apply for?

Mr. KEMP. No. I presume it is a notice——

Mr. EMMERSON. My hon. friend will pardon me; I tried to make myself clear. The publication in the 'Gazette' would be a notification to the public that they sought to have certain rates in force. A certain time must elapse before the commissioners determine the question, and when it was determined, there would be a publication in the 'Gazette' of the judgment of the commission. That is as I understand the law, it is a question of law.

Mr. KEMP. That may be correct, and no doubt it is. But as a matter of fact, these tables are very complicated, they take up a great many pages of the 'Canada Gazette,' and it is very difficult to fathom them. The ordinary merchant of the country is unable to do it. He does not see the 'Canada Gazette,' he does not know that such rates have been published, or that the railways are asking for these changes. What the hon. gentleman refers to is probably the order

putting the rates into effect, it amounts to that. The point I wish to make is this: Supposing that, for any reason which is known to the Railway Commission, they see fit to adopt the policy of advancing rates or of reducing them; supposing the members of this House representing the people desire to know what reason has moved the commissioners in the course they have taken, how are they to get that information? The 'Canada Gazette' contains the bald notice, there is no explanation of policy; and it seems to me that it should be the duty of the Minister of Railways, as his department is responsible, as he has said, for the operation of the commission, to some extent, to show why the Railway Commission have effected radical changes.

Mr. EMMERSON. Of course the commission are operating under a statute, and of course the Minister of Railways or any officer of the department would have no more power, unless it is given by that statute, to go in and get that information than would my hon. friend. I have no doubt that if my hon. friend went into the Department of the Railway Commissioners he could get the information which he seeks. I, probably, could get it, or any member of this House. But there is no provision, as I understand, in the Act enabling or requiring the department to do that, and to disseminate that information.

Mr. KEMP. Then it is an oversight in framing the Act. Are not the public to be as well protected under the new Railway Act as they were under the old regime of the Railway Committee of the Privy Council who controlled these matters, and is it not possible that the minister may have overlooked some clause in the Act by which this information may be obtained and published, through this House, so that such matters may be discussed on the floor of the House? I would like particularly to call the attention of the minister to the fact that in December last there were a great number of tables published in the 'Gazette,' both in respect to freight and passenger rates, and some of these were advanced, that is to say, maximum rates in both cases were advanced. Now why was that advance made? How are the people to know that such an advance is necessary?

Mr. EMMERSON. There was no advance made, it was only a proposal by the railway companies to advance; but as I understand it, the advance has not been approved or sanctioned by the Railway Commission, and therefore is not in force.

Mr. KEMP. Well, I am glad for that much information on this subject. Is it going to be approved by the Railway Commission? A long time has elapsed.

Mr. EMMERSON. Now you have me.

Mr. KEMP. Well, will the Minister of Railways do this, will he inquire into the matter and tell us at some future time, when these estimates are going through, what is going to be done, and will he give us some information on this matter I have referred to?

Mr. EMMERSON. I will inquire into it.

Mr. INGRAM. More than that, I see nothing in the railway report, nothing has been submitted to parliament showing the amount of work the commission has done since these appointments and changes were made, or anything concerning the Railway Commission. We are in no position to judge as to whether they perform good work or bad. Moreover, the Railway Commission has already called in certain interested parties who are concerned in certain cases, and it is known that they have been deliberated upon, and now these same parties who had to appear before are obliged to appear again in order to have their cases tried over again. We have no information at all in regard to that. From time to time we get letters from correspondents who are interested in these cases, asking us for the information, and when we apply to the Railway Commission for the information, it is a long time before we can accomplish anything. I say that some kind of report should be made to parliament each session giving some details of the wrok of that commission. It is a very important body, and the public are much interested in what they are doing.

Mr. LENNOX. This is a new matter, and I want to get some information from the minister, and it is well that we should begin correctly. There is a good deal of information that the minister certainly can give us. This department, I understand, is under the control of the Minister of Railways, am I right in that?

Mr. EMMERSON. Well, no, it is not. I have stated with some particularity the connection between the Department of Railways and Canals and the Board of Railway Commissioners. But in a sense it is not under the control of the department. I am merely the avenue, they address me, because I happen to be the Minister of Railways, about certain matters, and I bring them to the notice of the Council. As to the appointments, that is a matter provided for by statute. But in other respects I have no control over or connection with that department. It is non-political entirely, and not departmental.

Mr. LENNOX. I paid a great deal of attention to what the minister was saying in replying to my hon. friend from Toronto (Mr. Kemp), and I think I understood what he said, although there is a good deal of noise by talking in the House. But I understand that as regards the decisions come to by that tribunal and the reasons therefor, the Minister of Railways has nothing particularly to do with them.

Mr. EMMERSON. I am not advised of them.

Mr. LENNOX. Exactly, he does not supervise it in any way, and for the reason that they are virtually in the position of judges, and like any other judges they do not come under any particular department except that we can appeal to the Minister of Justice with regard to judges generally. But there is another branch that I think remains strictly under the control of the Minister of Railways, and that is the matter of expenditure, the composition of the tribunal, the salaries, the number of officials employed in connection with it, the general establishment, such as offices and office equipment, provisions made for transportation by cars and otherwise—all that would come under the control of the Minister of Railways. Am I right in that ?

Mr. EMMERSON. Measurably that is so. The appointments are made by the commissioners, appointments for clerical assistance and all that. They select their men. I could not on my own recommendation appoint any one to that commission, the Governor in Council could not. The appointments must be made on the nomination of the commissioners, first had and obtained, before the Governor in Council can take any action in the matter.

Mr. HAGGART. Nonsense.

Mr. EMMERSON. Look at the law.

Mr. INGRAM. Here is subsection 2 of section 48 :

> The minister may, with the approval of the Governor in Council, appoint and direct any person to inquire into and report upon any matter or thing which the minister is authorized to deal with under this or the Special Act.

Mr. EMMERSON. Get the provision in regard to appointments to their staff. It is not necessary to have any excitement over the matter. I am only speaking of the way I read the law and of the contention of the commissioners. If my hon. friend (Mr. Ingram), whom I regret to have interrupted, will look at the provision of the statute relating to the appointments to the staff of that commission he will see where the power is given them to nominate and upon their nomination, and only upon their nomination, can the Governor in Council act.

Mr. INGRAM. Then, the clause following that is section 49, dealing with the powers respecting inquiry, entry, inspection, attendance of witnesses and so on. Any information that the hon. minister desires to obtain in connection with the Railway Commission may be obtained by order of the Governor in Council. Surely that is plain.

Mr. LENNOX. In reference to this matter we may as well understand where we are at. We have certain gentlemen who are appointed by the Governor in Council as a commission and who are officers of the administration. That office involves the expenditure of a large sum of money, the property of the people of Canada. It must be under the control of some department of government. I naturally thought upon looking up the statute that it would be under the control of the Department of Railways and Canals. I find in the estimates this item :

> 114. Railway Commission—maintenance and operation of the Board of Railway Commissioners for Canada, $60,000.

If the hon. minister is the member of the government who has the control and management of that department, it is from him I wish to get the information. If the hon. minister is not the gentleman who has control of that matter then I know he will give me the information as to what member of the government has control of it. I am not asking any returns as to the decisions made by that tribunal. That is a matter which, if we inquired for it, would perhaps come from the hon. Minister of Justice, but the management of the board which we created, the expense attending that board, the general operations of that board and the way in which it is working are matters, if I understand it properly, that are within the control and general direction of the Minister of Railways and Canals. If not so, it ought to be so. If not so it is contrary to the understanding on which that board was created.

Mr. EMMERSON. Will my hon. friend pardon me ? I just want to call his attention to one point. The point is this : Can the Department of Railways or any other department of the government control the movements of the board ?

Mr. LENNOX. In some ways they can.

Mr. INGRAM. In what direction ?

Mr. EMMERSON. Have we power to direct where they shall hold their meetings or under what circumstances they shall hold them ?

Mr LENNOX. If it were necessary to discuss that question I would go into a discussion of it, but I do not think it is necessary at this time. I do not think they can control them in the way the hon. minister suggests. But, we are not pursuing that inquiry at the present time, This board of commissioners was appointed during the time that the hon. Minister of Railways and Canals was in office, but we have as yet had no information as to the expense incurred, as to the extent of the staff, as to the particulars of the offices that they fill, as to the mode of their travelling about the country or as to any investigation they have made. No information is given to the public to enable the

public to determine whether it is a successful institution or otherwise. It is right that the hon. minister should tell us now in a general way by a general introduction, by a speech of a quarter of an hour what this commission has done and if a quarter of an hour does not give us the information, by a speech of half an hour, or an hour, or by a speech of sufficient length in the same way as he has on former occasions introduced to the House the subject of railways. He should make a concise statement of how this commission has been working up to the present time. When we created this tribunal it was created with the understanding that it should be responsible to parliament and immediately under the control of the Minister of Railways and Canals. If I am wrong in that, it is all the more reason why we should have a clear statement. This being a portion of his department we should have a concise statement from the hon. minister verbally now, but we should also have a concise report in printing or in writing laid before parliament so that we could intelligently discuss this matter and intelligently ascertain whether this tribunal had been successful or not.

Mr. INGRAM. Surely there can be no question about the power of the Governor in Council to demand that kind of a report. Again I wish to call the attention of the hon. minister to section 45 which reads as follows :

> The Governor in Council may at any time refer to the board for a report, or other action, any question, matter or thing arising, or required to be done, under this Act, or the Special Act, and the board shall without delay comply therewith.

Suppose the Governor in Council desires a report from the Railway Commission as to what they have done from the time of their appointment up to the present moment for the purpose of submitting it to parliament, surely that section alone gives the Governor in Council power to get a report of that kind. It seems to me to be a very peculiar state of affairs, that parliament having created a railway commission, the chairman of which cannot be removed without the consent of the House of Commons and the Senate, we are to be called upon to vote $60,000 or $90,000 a year for their sustenance and we are not to have any report from the board which we have created to show what they have done during the past year. It would be a remarkable state of affairs and I do not think that this Act ever intended to do anything of the kind. The Act, it seems to me, has provided ways and means by which parliament may be supplied with the information that it may desire in connection with the working of this commission.

Mr. LENNOX.

Mr. A. A. McLEAN. I would like to ask the hon. minister a question in reference to other matters connected with the Railway Commission. I would like to know whether these commissioners have power to regulate freight tariffs on the government railways and also if they have power to regulate the tariffs of subsidized steamers, or whether that is a matter which is in the hands of the Minister of Trade and Commerce. I know that there is a good deal of dissatisfaction in reference to the rates which are charged on subsidized steamers, and it seems to me that there is no regulation at all and that the steamers can charge what they please. I think that if this Act does not cover this ground an amendment should be made in order that all these tariff matters should be under one head.

Mr. EMMERSON. The commission has no control over the government railways of Canada, nor has it any jurisdiction in respect to steamships or the rates charged by steamships. I am not disputing or contending that such and such things should not be. I am only endeavouring to point out what I consider to be the law. I am quite free to admit that there should be a report from the commission. I am quite in accord with what has been stated in that regard and I think that the commissioners should make a report from time to time to the Governor in Council through the Department of Railways and Canals, for, as my hon. friend from Simcoe (Mr. Lennox) says, if this commission is not in any way connected with the government through the Department of Railways and Canals, he cannot see any other department by which it would be thus connected. I quite agree with him that the natural avenue and channel between that board and the government is through the Department of Railways and Canals, but it does not seem to me that the Act makes proper provision for that.

Mr. KEMP. The hon. member for East Elgin (Mr. Ingram) has read the clause in the Act providing for that.

Mr. EMMERSON. Section 45 which was read does not apply at all. That is qualified ; it says :

> The Governor in Council may at any time refer to the board for a report, or other action, any question, matter or thing arising, or required to be done, under this Act, or the Special Act.

The Act must require the thing to be done before the board can be required to do it. In the same way if my hon. friend refers to section 48, subsection 2, he will find :

> The minister may, with the approval of the Governor in Council, appoint and direct any person to inquire into and report upon any matter or thing which the minister is autho-

rized to deal with under this Act or the Special Act.

There is a qualified authority, but if there is any section in the Act which gives authority over the board, commanding them and giving them authority to report I have failed to see it, and if there is any section which places the board in any sense under the direction and control of the Department of Railways and Canals, I would like to have it pointed out to me, because I can quite understand and fully appreciate all that has been stated with respect to the defects in that respect.

Mr. HAGGART. Now that the minister's attention has been drawn to the subject I think his interpretation is correct. It is only when a special subject is referred to them that they are to report. There should be a clause inserted in the Act which would compel them to report to the House.

Mr. EMMERSON. I agree entirely.

Mr. HAGGART. They seem to be in a peculiar constitutional position, totally independent of the government and parliament. There is a clause in the Act which I think ought to be amended as it confers an extraordinary power to give to any railway commission.

There shall be attached to the board, such officers, clerks, stenographers and messengers as the board, with the approval of the Governor in Council, from time to time appoints.

What business have they appointing any officers at all ? That is a prerogative of the Crown. The appointment of officers of that kind should be done on the responsibility of ministers who are accountable to this parliament. The section proceeds.

The board may and will dismiss any employees.

Another power is given to them ; they can make a check upon the funds belonging to the Dominion for the purpose of paying these officers. I never heard of any such powers being granted to any commission under the sun. The principle of the constitution is the responsibility of ministers of parliament for appointments ; the prerogative and honour of appointment belongs nominally to the Crown, really to the Crown on the recommendation of his advisers. That is changed altogether. I suppose it is a nominal privilege and that the board do not consult even the Minister of Railways in reference to any appointment. They send in the name and you are obliged to approve it or otherwise the board will say : We cannot get along without these parties and if the minister refuses to appoint them there is an end of the commission. The commission should be a part and portion of the Railway Department, responsible, as every other branch of the service is, to the Crown and parliament.

Mr. FOSTER. The position certainly has developed differently from what I thought it could possibly do, and as the Prime Minister is now in his seat I shall state what has occurred. We have here in vote 114 an item for the maintenance and operation of the Board of Railway Commissioners and the House is asked to vote them $60,000. We come to the Minister of Railways who is putting the vote through, and in accordance with our rights the House does not propose to vote any money unless it knows in the first place what it is wanted for, and, in the second place, if it is a continuing service what they did with the vote that we last gave them. When we asked the Minister of Railways about this he says : I have no report from the commission, nor has the House any report from the commission, and now it appears, when we look into the Act as my hon. friend (Mr. Haggart) has said, that there is no provision in the Act by which they are compelled each year to report to parliament what they, as the servants of parliament and the servants of the country, have done with the money which has been given them by the parliament the preceding year, and no method at all of communication between them and the public through the medium of parliament. The House is entirely within its rights in saying that it cannot vote $60,000 in addition to the vote of last year for the commission unless it has a report from the commission as to what it did with the money last year. It has been stated very clearly by several members that the House and the country have a right to know by yearly report just what the commission has done, just as the railway or any other department furnishes a report. When you come to the question of the appointment of staff, there again, as my hon. friend (Mr. Haggart) has stated, an anomalous position is created. It is possible that if the commission says: We want such and such persons at a such and such salaries, the Governor in Council may say : We do not approve of it. Then the commission will say to the government and will appeal to the country : Here are absolutely necessary officers that we want for the doing of our work and the Governor in Council has refused to appoint them. That is, there is no place where you can apportion the responsibility. These men act entirely by themselves and we cannot call them to account nor can we call anybody to account under this law for full information as to the disposition of public moneys with reference to the operation and maintenance, of the board including the hiring of clerks, &c. Evidently there is a screw loose somewhere that ought to be put into the machine.

Sir WILFRID LAURIER. I must say that I have a confession to make to the House and a confession that is not pleasant to me. I did not know that the com-

mission was not only not empowered but not obliged to make a report. I have always understood that it was part of the duty of the commission to make a yearly report of their operations ; not only of the money which we gave them to spend as to how they have expended it—and for this we are responsible to parliament—but also of their operations, what they have done, what cases they have decided, so that the public could know exactly what has taken place. We have a right to that information and if it is found after a conference with the Minister of Justice and the Minister of Railways, who is more familiar than I am with the Act, that the commission is not bound to make such a report I think we should enact legislation this very session to have such a report from the commission. I shall at once call the attention of the Minister of Justice to this. If the commission is not under obligation to make such a report it is due to parliament that it should be at once put under such an obligation. With regard to the appointment of the staff of the commission there must be something more in the Act than what has been read by the hon. member for Lanark (Mr. Haggart). I know that we have had recommendations from the commissioners for appointments to the staff. Sometimes we agree to them and sometimes we disagree. Sometimes we take their recommendation and sometimes we do not ; and I am more than surprised to hear my hon. friend the ex-Minister of Railways say that the commission have power to make any appointment without any reference at all to the Governor in Council.

Mr. HAGGART. I did not say that.

Mr. LENNOX. In section 21, subsection 2 it is provided :

> There shall be attached to the board such officers, clerks, stenographers and messengers, as the board, with the approval of the Governor in Council, from time to time appoints, at such salaries or remunerations as are recommended by the board and approved by Governor in Council. The board may, at will, dismiss any such employee.

Mr. HAGGART. That is extraordinary power—the power of dismissing and appointing. The Governor in Council has only the approval.

Sir WILFRID LAURIER. No. As we have read the statute and acted upon it, we have received recommendations from the board, and have given our approval or our disapproval, as in our judgment the circumstances justified. As I understand, the government has not the power of initiating appointments. These have to be made on a report of the commissioners; but the commissioners cannot make any appointment of themselves. As I read the statute, the government has power to appoint on the recommendation of the board. I gave the House some time ago a list of the appointments which have been made, and which now constitute the staff of the board.

Mr. LENNOX. I hope the right hon. gentleman does not understand that I thought otherwise. I simply called his attention to the provision, so that he would see that it was as he suggested.

Mr. KEMP. I suppose that as a matter of courtesy the Minister of Railways and Canals, until the law is amended, can from time to time get such information from the commission as the members of the House desire in regard to such matters as those I have referred to, and I hope he will try to get the information as soon as possible.

Sir WILFRID LAURIER. I would suppose that even if the law were silent on this point, the commissioners themselves would make a report. If they failed to do so, the law could be amended, even in this very session.

Mr. FOSTER. Although the law may have to be amended, and that will take some time, I think that if the proper minister suggested to the commissioners that they should make a report as soon as possible, they would do so, even though no law required it.

Sir WILFRID LAURIER. Hear, hear.

Mr. INGRAM. I think that report should include both the cases that have been decided and those that are still pending before the commission. I have had a number of inquiries in regard to such cases. There have been long and unsatisfactory delays, and certain municipalities are anxious to get this information in order to know where they stand.

Mr. LENNOX. I would call the attention of the right hon. gentleman to another view of the matter. Aside from the fact that we have no means of compelling a report, I apprehended that the Minister of Railways and Canals could give us general information as to the expenditures that had been incurred in connection with the commission up to the end of the last fiscal year. That information has not been given as yet, but I presume the minster is ready to give it.

Mr. EMMERSON. I can give that to my hon. friend. During the past year, from July 1 to January 1, there was expended $20,906.49 for maintenance and operation and $14,416.56 for salaries.

Mr. SPROULE. Can the minister inform us whether any new appointments have been made to that commission lately, or whether any names for appointment have been submitted for the consideration of the Governor in Council, whose approval I take it is necessary?

Mr. EMMERSON. There have been no appointments made lately, but there have

been recommendations which have not yet been acted upon.

Mr. SPROULE. Have the names of the following gentlemen, or any of them, been submitted: James Clark, who is, I believe, a conductor on the Canada Atlantic Railway; D. J. McQuaig, who is at present a foreman on that railway; and P. Roy, at present an engineer on the same railway? I want merely to say that these men were found to be very active partisans in the late elections, and they gave it to be understood by their friends that they were promised positions on this commission. My curiosity is aroused to know whether the government have fulfilled that promise, if such was made, or, if not, whether they intend to do so at an early date?

Mr. EMMERSON. I have never heard any of the names mentioned by the hon. gentleman in connection with the Railway Commission in any way.

Mr. BLAIN. In the expenditure for last year I see an item of $1,250 for the services of one of the members of the commission prior to its inauguration. One of the gentlemen mentioned for the chairmanship was sent to the United States at an expenditure of $1,250 to make a report to the government as to the working of the United States Commission. I suppose there will be a report from that gentleman, and possibly the hon. minister can lay it on the table.

Mr. EMMERSON. The gentleman who became chairman of the commission was employed in that work. The Act was not brought into force in time to have him appointed, and it was necessary that he should confer with a similar board that had some experience in the United States. He was employed for that purpose, and his expenses were paid.

Mr. BLAIN. I do not wish to question the amount, which is not large. But this gentleman was paid $50 a day. And the minister will bear in mind that this was spent before the inauguration of the board. I suppose this gentleman was not sent to the United States without the authority of some one, and I suppose it was by the authority of the Department of Railways and Canals. Here is an officer sent to the United States at an expense of $1,250 to investigate something—to find out about the workings of the railway commissions of that country, with a view to the organization of a commission here. Surely the minister would not say this officer was to make this investigation and return, and yet not report to anybody.

Mr. EMMERSON. Whatever report he gave he gave to his fellow commissioners, I think.

Mr. BLAIN. They were not then appointed.

Mr. EMMERSON. They were appointed immediately on his return. He utilized, in the organization of the board, the information that he had collected. There has been no report, so far as I know. I was not connected with the department at that time, so cannot speak from personal knowledge.

Mr. INGRAM. What did the minister say was the cost of the car for the use of the commission?

Mr. EMMERSON. About $20,000.

Mr. INGRAM. That was included in the $60,000 last year, yet the hon. gentleman is asking as large a vote this year. He does not expect to buy another car, I suppose?

Mr. EMMERSON. The amount voted last year was $100,000.

Mr. INGRAM. But the hon. minister must recollect the facts. The sum of $100,000 was put in the estimates of 1903-4 by the gentleman, then Minister of Railways, who afterwards became chairman of the commission.

Mr. EMMERSON. I think the hon. gentleman (Mr. Ingram) will find that there was an item of $40,000 and also an item of $60,00, and out of this came the cost of the car.

Mr. INGRAM. The hon. minister is asking for $60,000, and also for $29,000 in addition.

Mr. EMMERSON. That $29,000 is by statute, and the $60,000 is to pay for the staff and expenses that I have given.

Mr. INGRAM. And the same items were to be paid with the estimates voted last year. The minister has a total of $89,000 to pay these expenses. On that calculation there is a reduction of $11,000. Yet, out of the vote of $100,000 last year, $20,000 was paid for the car. That means that there is an increase of about $9,000 this year.

Mr. EMMERSON. It is only within the year that the staff has been organized, and that explains the difference.

Mr. BLAIN. It is expected that $100,000 annually will be about the total charge upon the country for the commission?

Mr. EMMERSON. The hon. gentleman (Mr. Blain) will probably recollect that Mr. Blair stated, when the Railway Act was going through parliament, that the commission created by that Act would cost about $100,000 a year.

Mr. BLAIN. I recollect that. But, now that the commission has been organized and commenced work, does the minister think that $100,000 will be sufficient to meet the expense?

Mr. EMMERSON. I think that $100,000 will more than meet the expenses that are

now being incurred, or that may be anticipated in connection with the board.

Mr. MACLAREN. Is it the intention of the government to add two others to the commission, making five instead of three ?

Mr. EMMERSON. I do not think there is any such expectation. Such a matter has not been the subject of consideration.

Mr. FOSTER. Did I understand the minister to say that there had been no report by Mr. Blair of the preliminary examination he made in the United States ?

Mr. EMMERSON. I said I assumed that he had reported to his board, and utilized the information he got in organizing the commission, but that he had not made any report to the government or to the Department of Railways on the subject.

Mr. FOSTER. I would suggest that we ought to have the report Mr. Blair made to the authorities to whom he reported, whoever they were. He was sent there to get preliminary knowledge and assistance in constituting the board and laying out its plans. It is important that the House should have that report, so that we could see what was done in the United States. No doubt it would be a pretty exhaustive report. The cost was $1,250, and we ought to know whether we received the benefit of our money. As I understand it, this $60,000 takes in everything except the statutory salaries of the commissioners themselves and the secretary.

Mr. EMMERSON. That is by statute.

Mr. FOSTER. What are the particular services given by the staff ? Does the minister know anything about that ?

Mr. EMMERSON. I can give some idea of the work done.

Mr. FOSTER. I have here a return in answer to the order of the House giving the names of officials and employees of the board. It might be as well to read it, so that 'Hansard' may have it :

Officials, clerks and employees on pay-roll of the Board of Railway Commissioners for Canada on first of January, 1905, with the amount or salary in each case :—

	Per annum.
Hon. M. E. Bernier, deputy chief commissioner	$8,000 00
James Mills, commissioner	8,000 00
A. D. Cartwright, secretary	3,000 00
George A. Mountain, engineer	4,800 00
James Hardwell, chief traffic expert	3,500 00
A. G. Blair, jr., law clerk	2,500 00
J. E. Duval, inspector of accidents	2,200 00
G. A. Brown, chief clerk, traffic department	2,000 00
E. C. Lalonde, inspector of accidents	2,200 00
E. A. Pruneau, registrar and accountant	1,800 00
J. H. Dessier, assistant engineer	1,800 00
T. E. Simmonds, assistant engineer	1,800 00
H. W. Messenger, clerk	900 00
Norman Ham, clerk, traffic department	900 00
B. Chevrier, clerk and stenographer	800 00
F. C. McGee, clerk and stenographer	800 00
C. E. MacManus, clerk and stenographer	800 00
John W. Thompson, clerk, record department	800 00
T. Chandler, chief messenger and court usher	700 00
L. J. Lewis, clerk and stenographer	600 00
L. N. Cameron, clerk and stenographer	550 00
D. Langelier, messenger	500 00
William Woodruff, cook on official car,	$60 per month.

These are in addition to the salary of the gentleman who takes Mr. Blair's place, Judge Killam, and who gets $10 000 per year. That will make altogether for salaries of the staff, as it was constituted on the 1st January, 1905, and the new chief commissioner's salary, an expenditure of about $59,000 per year—say $60 000 per year on that board alone. Besides that, we have to add the car which gives them transport and its maintenance. Then, does the minister know the amount that is expended for quarters for this commission ?

Mr. EMMERSON. About $1 230 a year—cook and chief and quarters.

Mr. FOSTER. I mean the housing of the commission. I suppose rentals have to be paid ?

Mr. EMMERSON. That is in the Public Works Department.

Mr. FOSTER. It is not included in this vote, but I wanted to get at the total cost of this commission when fully formed.

Mr. EMMERSON. I hope it is fully formed now.

Mr. FOSTER. It may be; but it is an infant yet, compared with what it will be. I see there is a law clerk employed. Do the board depend for legal instruction on their law clerk ? I would suppose that, two of these gentlemen being lawyers—one a very eminent lawyer, the chief commissioner—it would not be necessary to employ a legal man to advise them. Is that the office of the law clerk, or does he simply look after things under their direction ?

Mr. EMMERSON. His work is more of a solicitor's, going through documents, which would hardly be a part of the duty of the chief commissioner.

Mr. FOSTER. That is, the law clerk is not a counsellor, but a clerk with a knowledge of the law ?

Mr. EMMERSON. That is as I understand it. I purpose asking the commissioners for a full report, and will lay it on the table as soon as I get it.

Mr. FOSTER. Will the minister get the report made by Mr. Blair ?

Mr. EMMERSON. I will have a full report. I was wondering whether that was in writing.

Mr. FOSTER. I have noticed that there was a certain line of economy at certain times in the correspondence of the late chief commissioner with the government. There is not very much of that observable when examinations are being carried on and the expenses piled up. But when it comes to the writing of a letter or a long telegram, he drew the line at that very sharply.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

THIRD READINGS.

Bill (No. 42) respecting the Vancouver, Westminster and Yukon Railway Company.—Mr. Macpherson.

Bill (No. 48) respecting the Toronto and Hamilton Railway Company.—Mr. Calvert.

SECOND READINGS.

Bill (No. 64) respecting the Central Counties Railway Company.—Mr. Stewart.

Bill (No. 65) respecting the James Bay Railway Company.—Mr. Watson.

Bill (No. 68) respecting a Patent of the Paper Goods Company, Limited.—Mr. Macdonell.

SUPPLY.

House in Committee of Supply.

Maintenance and operation of Board of Railway Commissioners for Canada, $60,000.

Mr. LENNOX. I think this item had better stand, because I do not think we can discuss it profitably at the present time. I do not think the committee feels like letting it pass as it stands, until we get the information which the minister proposes to bring down, then we might consider it again.

Mr. FOSTER. It may be some time before it can be brought down. If it causes any inconvenience to the minister, it might be passed with the admission that we can take it up at any time the minister is in his estimates, and discuss it further.

Mr. LENNOX. I have no objection to that. In the meantime I wish to call attention to another matter before we pass away from this subject. I noticed in a statement furnished this afternoon and which was read by the hon. member for Toronto (Mr. Kemp), that there are three items of $800 each for stenographers. This, I understand, is one for each of the members of the commission. If the minister is not prepared to explain it now, I hope he will be able to explain it definitely when we come to this item again; we want to know why that expenditure is necessary. It is not a very large item, but it appears to me unnecessary. I think the matter has been up for discussion to some extent by members of the government to whose attention it has been drawn.

Mr. KEMP. I would like to ask the minister how long he thinks it will take to produce the information promised on the question as to whether there was an attempt made to advance the passengers and freight rates. The general impression in respect to this matter is that the rates have actually been advanced. The minister was under the impression this afternoon that the rates were merely published, but that they had not been advanced.

Mr. EMMERSON. That is the impression I gathered.

Mr. KEMP. The impression I gathered from the press reports was that the rates are actually advanced and in effect at the present time.

Mr. FOSTER. Will they appear in the 'Gazette'?

Mr. KEMP. The explanation of the hon. minister in regard to that was that it was a notice that appeared in the 'Gazette.' The impression which the newspapers have in regard to the question is that the rates are actually in effect. How long does the hon. minister think it will take him to get the information and make a statement in regard to this question?

Mr. EMMERSON. I think that the chairman of the commission and his colleagues are up in Ontario at the present moment, but immediately on their return I will personally see the chairman and ask him for a report. I may say that the department has already called the attention of the commission—I learned this since the matter was up for discussion before recess—to the fact that a report from them as to their work would be desirable. That has not yet been received. That was at a time when the commission was without a chairman. Now that it has been fully reorganized, I shall have an opportunity of conferring with the chairman of the commission, and I trust that such a report as will meet the requirements of the House will at once be brought down.

Mr. FOSTER. Is the hon. minister able to give the expense incurred on account of rentals yet?

Mr. EMMERSON. I have not had an opportunity of getting that information.

Mr. HYMAN. That item will likely be up to-night. I will have the information. I do not remember the exact amount, but I think it is about $5,000.

Mr. LENNOX. The hon. minister's attention was probably diverted from the matter to which I alluded a moment ago. I do not know whether he proposes to

answer the question that I asked as to the stenographers.

Mr. EMMERSON. There were three stenographers asked for. One was a general stenographer for the work of the department. Another was a French stenographer, who understood French, and who could write shorthand and typewrite in French. Another of the commissioners had a stenographer to do the work in his particular branch.

Mr. LENNOX. Does the hon. minister understand that it is necessary to maintain a staff of three stenographers ?

Mr. EMMERSON. They stated that they required three stenographers. That was the recommendation of the full board. They nominated their stenographers, and said that the work could not well go on unless they were provided with these stenographic clerks. They were appointed in view of the strong representations which the board made. You can very well understand how difficult it is for objection to be made when they say that they require certain officers in order to do the work expeditiously and efficiently. To raise any bar or objection to the appointments simply places them on the defensive, and they say : Well, we cannot do this work ; it is impossible for us to carry on the affairs of the commission unless we have these officials. That is practically the condition of affairs when any question arises as respects the appointment of officials to their staff.

Mr. LENNOX. I want to be perfectly candid with the hon. minister, and probably that will enable us to get back to the point. What I am told is that originally it was not contemplated to have three stenographers, but that one of the commissioners, who for the present, I need not name, insisted upon having one appropriated to himself, and that occasioned a deadlock. That commissioner went on strike because that request was not complied with.

Mr. FOSTER. Went on strike ?

Mr. LENNOX. Went on strike, and would not join with the chairman of the board in discharging the duties of the board until that request was complied with. I am told that the ministry did not at once see the necessity of complying with the demand, and that occasioned a prolonged strike. I am not sure of the number of days. I think it has been mentioned as fifteen. It is also stated that finally, not the commissioners but the government, capitulated and this extra stenographer was appointed. I believe there were other officials appointed in the same way, but I got my information as to this more directly. The hon. minister, as a member of the government, will know whether this is correct or not. It is not a question of the amount involved, although the total is very large, but it is the principle that I am directing my attention to.

Mr. LENNOX.

Mr. EMMERSON. All I can say to my hon. friend is that I know nothing of any internal——

Mr. LENNOX. Or infernal——

Mr. EMMERSON—arrangements of the commissioners as to whether they were on strike or disputing amongst themselves. The recommendation was signed by the full board, and it was placed in my hands.

Mr. FOSTER. Did that come after the strike or before ?

Mr. EMMERSON. I cannot tell whether there was a strike. If my hon. friend (Mr. Lennox) says there was, I cannot question his statement, and I have no wish to ; but if there was a strike, it was not brought to my notice by any one of the commissioners.

Mr. FOSTER. Does the hon. minister know whether there was any stoppage of pay for the fifteen days ?

Mr. EMMERSON. No ; the pay has gone on, as far as I know. But I may say very frankly that when this recommendation came into my hands, I arranged for a conference with the commissioners as to the necessity of the appointment of the officials. It is very natural that we should have a full explanation as to the requirements. The view of the commission was that they needed these officials, and I am not sufficiently familiar with the work of their department to be in a position to state that they were actually wrong in the matter. I must submit to their judgment as respects that.

Mr. TAYLOR. I understood the hon. minister to say, in reply to my hon. friend from Toronto (Mr. Kemp), that the new tariffs adopted by the railways and approved by the commission did not increase the freight rates. I know as a shipper——

Mr. EMMERSON. Let me correct my hon. friend (Mr. Taylor). The statement I made to the hon. member for Toronto (Mr. Kemp) was that the new tariff that was advertised in the 'Gazette' was not an approved tariff, but was simply a notice under the Act of tariff rates that had been filed for approval, and they were published in the 'Gazette' with the view of giving notice to the public of the proposals of these several railways. They were then subject to the approval of the board, but since that date they have not been passed upon very largely, I think, because there was no chairman of the commission. That is my understanding of it. I am not going to say that I am correct ; I am only speaking of my understanding of the situation with respect to these freight tariffs. Whether they have been since approved of, and whether or not they are in force to-day, I cannot say.

Mr. TAYLOR. I know as a matter of fact that whether approved of or not the railways have put them in force, and I

know that the rates have increased from the old tariff in some cases nearly 50 per cent. The railways companies are acting on it and charging the increased tariff rates and I understand they are doing so with the approval of the commission.

Mr. CAMPBELL. I may say that so far as the rates on grain and flour are concerned, the railway companies did advance the rates, but on account of the commission not approving of the new tariff they were obliged to abandon it. The advanced rate, I think, was enforced for only four or five days after which they returned to the old rate and the shippers are all putting in claims to the railways for rebates of the extra amounts collected during the four or five days. At the present time, so far as flour and grain is concerned, there is no difference from the rate that was in force early in the season.

Mr. TAYLOR. It would be well for shippers throughout the country to know that. In some lines they have been paying the advanced rate from the time it was enforced and they are doing that to-day.

Mr. LENNOX. At the time this matter was under discussion in the newspapers it was first announced that a rate had been fixed by the Railway Commission by which people would have to pay a larger sum. A day or two afterwards it came out that this was a maximum rate and being only a maximum rate it would not necessarily affect the public or compel them to pay increased rates. It seemed to be admitted by the newspapers—and this was stated on the authority of some official in one or two newspapers—that it was necessary in order that the railways should be able to collect a toll that they should have the approval of the board within a certain time. They had gone to the Railway Board under that law which compelled them to get the approval of the board within a certain time, and it was stated that the board had formally approved of the maximum rates without considering the merits of the matter and that afterwards within the proper time the board would consider the question of what the actual rate should be. I do not know if this statement is correct; I only mention it to the minister on the chance that it may recall something to his mind.

Mr. EMMERSON. That is not my understanding of it, although my friend may be correct. I have very simply stated my impression to the committee and I have assured the committee that I will lay upon the table of the House a full report in connection with the whole matter so that the committee can fully understand the exact situation.

Mr. FOSTER. While the minister is doing that, if he will be kind enough to inform himself as to the special duties of these special men, and on what ground they were appointed to these special positions, I would be very much obliged.

Canals staff and repairs, $803,039.

Mr. EMMERSON. This is less than the item of last year, by $30,000. On the Lachine canal last year we asked for $133,265; this year we are asking for $133,030. On the Soulanges canal the expenditure has been lessened from $52,850 to $41,730. That was largely due to a lessening in the cost of the staff and also in the cost of repairs. There has been generally a lessening in the repairs at the different canals.

Mr. FOSTER. What change is made by the fact that the government is not now collecting tolls? Is not a large amount of the office work and staff work which would otherwise be necessary avoided by the fact that you do not now have to collect tolls? What is the amount of that reduction?

Mr. EMMERSON. The next item is the one that covers that, salaries and contingencies in collector's offices. I may say with respect to the question that has been raised that I intimated yesterday that before I had concluded with my estimates I would be in a position to announce to the House the policy of the government with respect to the continuing of the non-collection of tolls. That has not yet reached a point where I could make an announcement. Should it be determined to discontinue the collection of tolls on the canals, we shall of necessity dispense with the services of a large number of officials. I cannot say that they have less work in a sense. They do not collect, but their time has to be given to the work. They have to keep a correct record of everything that goes through the canals; the only difference is that the parties are not called on to pay the money. That record is furnished to the department. That has been done to learn whether there has been any appreciable effect on the traffic from the abolition of canal tolls.

Mr. FOSTER. How many years has the freedom of the canals been in operation?

Mr. EMMERSON. For two seasons.

Mr. FOSTER. And for those two seasons you have been keeping a complete record of everything passing each way?

Mr. EMMERSON. Just the same as if tolls had been collected.

Mr. FOSTER. The only thing you are not doing is taking the money?

Mr. EMMERSON. That is all.

Mr. BLAIN. What was the total revenue per annum from the canal?

Mr. EMMERSON. The year preceding the last season it would have been $325,000, and last season it would have been $288,000; I am speaking from memory. There was

a decrease last year as compared with the preceding year, that was largely in excess of the year 1902-3, and both years, 1902-3 and 1903-4. were largely in excess of the preceding year.

Mr. BLAIN. How does that compare with say ten years ago?

Mr. EMMERSON. I think that for a number of years the revenue was practically stationary. Many years ago it was larger. As my hon. friend knows, transportation by water-routes is less now than it was twenty-five years ago.

Mr. FOSTER. Do you mean absolutely or comparatively?

Mr. EMMERSON. Comparatively. There was a larger proportion of the traffic of the country carried by water.

Mr. KEMP. There is more tonnage to-day than there was at that period?

Mr. EMMERSON. Yes, there is more tonnage.

Additional to persons employed permanently in the public service, and remuneration to any other persons for services rendered for and in connection with passing vessels through the canals of the government of Canada, from midnight on Saturday to midnight on Sunday, notwithstanding anything in the Civil Service Act, $20,000.

Mr. EMMERSON. I may say that this is in excess of the vote of last year. We have found during the last two years that the annual vote of $18,000 has been too little. We are paying larger wages to the men, and there is more night work and Sunday work. At certain seasons of the year certain canals are open on Sunday towards the close of navigation, and there is more night work necessary for the traffic which requires expedition and speed. So that instead of asking for an annual vote of $18,000 and a supplementary vote, I thought, on the advice of the officials, that it was better to ask for the $20,000 and be done with it.

Belleville armoury, $30,000.

Mr. HYMAN. This is a revote from last year. A site has been given by the town, but there is some dissatisfaction with it, and the department is at present in communication with the authorities of the town with regard to a change of the site. Immediately after the site is settled on, the building will be proceeded with. It will be practically the same as the Chatham building, the total cost of which is about $65,000.

Mr. FOSTER. Does the minister know what the policy of the government is in reference to armouries? Are they going on putting up now one and now another without any fixed policy?

Mr. HYMAN. There is quite a large town there, the town of Belleville, and a regiment of eight companies, which has no armoury. It is the policy of the government where there are regiments of that size to provide armouries, but of course the whole of Canada cannot be provided for in one year.

Mr. FOSTER. What is the minimum force that must be in a place to entitle it to an armoury ?

Mr. HYMAN. Where there is a country battalion, there should be an armoury, not a large armoury, but some place where the arms can be stored and which may be used as headquarters.

Mr. FOSTER. In such a small place what would be the cost of a respectable armoury ?

Mr. HYMAN. That would depend on the unit of the battalion. The cost runs all the way down to $5,000.
