Mr. FOSTER. Of course the hon. minister has nothing to do with this except to put up the armouries decided upon by the Militia Department. In cases of this kind it would certainly be a great advantage to have the other ministers interested present. The Minister of Public Works is not supposed to understand thoroughly the policy of the Militia Department with regard to armouries and cannot give the explanations which the committee requires. One easily sees that if the Militia Department is going on some fixed principle as to armouries, we are entering upon a course which involves large obligations. It would be interesting to know how many of these armouries we have already built and how they square with the numbers of the militia in each place. Then we should know what is the minimum of the force which could reasonably expect to have an armoury. Then we should have the number and distribution of these armouries throughout the Dominion, because if the policy be a good one it will have to be applied not only to Belleville and the smaller places but generally. Quite true it is impossible to build them all in one year ; but if we start on a common policy, we should have the basis on which such expenditure is to be made. We cannot have that information to-night because the Minister of Militia (Sir Frederick Borden) is not here. I do not want to be carping but ministers seem to think they are not interested when the estimates are going through outside of their own. But in all these matters, especially Public Works, where that department builds for many different departments, it is important that the ministers of the other departments should be here while the estimates are going through. I do not think that is making too harsh a criticism. It may be all very well for our ministers to dine out and enjoy social festivities, but they should be here to attend to business. It is very nice to throw off dull care and get out of the atmosphere of the House when estimates, in which you are not directly interested, are on, but that is

not treating the House properly. The Solicitor General is here, showing a very good spirit of attention to business, and so is the Minister of Marine and Fisheries, I believe. We miss his presence very often and he is not here any too much. Then we have the Postmaster General—his interesting figure is generally here. But where are all the rest and where particularly to-night is the Minister of Militia and Defence when these estimates on armouries are being put through ? He ought to be here.

Mr. HYMAN. Unfortunately he had an engagement to-night which renders it impossible for him to be here.

Mr. FOSTER. But these engagements should not be the rule.

Mr. HYMAN. If the committee finds any objections, I am sure the Minister of Militia will be glad to add to the explanations I have given. It is almost impossible to lay down a rule which can be followed in all circumstances. There are so many things to be considered even beyond the unit of the militia. A drill shed may be required in a place where there are but 500 men—one that will suit the wants of that district. And if a small place has no provision of any kind for the militia, it may be necessary to build the armoury in that place before going on with a larger one. It will be impossible to lay down a rule which could be adhered to under any circumstances. Hamilton has a drill hall, but a new regiment is raised there, and it is incumbent on the department to provide facilities for the housing of that regiment. That is something which could not be well foreseen and I do not know that any rule can be laid down which would not be departed from in many instances.

Mr. FOSTER. There could be a general policy.

Mr. HYMAN. You must have headquarters for every corps where they can have storage for their arms. That is being proceeded with and will be completed as soon as possible, always remembering not to have too large an expenditure in one year.

Bowmanville public building, $7,200.

Mr. HYMAN. The total expenditure is $32,000.

Mr. FOSTER. The department bought the site I suppose?

Mr. HYMAN. Yes.

Mr. FOSTER. What is the population of Bowmanville?

Mr. HYMAN. When the building started it was 3,377.

Mr. FOSTER. What are the revenues ?

Mr. HYMAN. Postal, $4,736 and customs, $11,000.

Brantford drill hall—additions and alterations, $25,000.

Mr. HYMAN. This work is under contract and the vote now asked will practically complete the work. There was a question raised by the hon. gentleman for Brantford (Mr. Cockshutt) the other day as to whether a bowling alley should be put in the building.

Mr. FOSTER. A bowling alley ?

Mr. HYMAN. Yes, all the larger armouries are provided with bowling alleys for the recreation of the men.

Mr. FOSTER. This is for additions and alterations. Does it make practically a new building?

Mr. HYMAN. Not exactly, but it is a very large extention of the old building.

Mr. FOSTER. What will be the total cost?

Mr. HYMAN. It is estimated in the neighbourhood of $45,000.

Mr. WORTHINGTON. Is there more than one regiment in Brantford?

Mr. HYMAN. Only one regiment.

Bridgeburg public building, $16,000.

Mr. HYMAN. The need for this building is not to be estimated by the size of the place alone. Bridgeburg is a small place, of only 1,356 people. But it is a border town, just opposite Buffalo, and there is a large number of customs officers there doing inspection work, and there are other special reasons for the building.

Mr. FOSTER. What county is it in?

Mr. HYMAN. Welland.

Mr. FOSTER. What are the revenues ?

Mr. HYMAN. Postal, $13,661.

Mr. FOSTER. What makes it that size ?

Mr. HYMAN. It is a border town, and, I believe there is a great race-track in the vicinity which attracts an immense number of people from Buffalo.

Mr. FOSTER. What is the customs revenue?

Mr. HYMAN. This is part of Fort Erie and the customs revenue is $519,000.

Mr. INGRAM. Is the building located at the end of the International bridge ?

Mr. PATERSON. Yes.

Mr. INGRAM. Where the customs officers had their quarters before?

Mr. PATERSON. Yes. This public building has been asked rather by the department than by the people. It is a great manifesting point, just opposite Buffalo. Our documents were kept in a little room in the Michigan Central station which was entirely unsafe. This is a permanent building and absolutely needed in the public interest.

Mr. FOSTER. Had you rented quarters before?

Mr. PATERSON. So far as the Customs Department were concerned, the railway furnished us with a room, a place in their freight shed, but with no safe and no proper place for storing documents. We have a large transfer business, and a great accumulation of papers. It would have been very serious if a fire had taken place. The construction of this building was urged upon me by the inspectors and I am probably mainly responsible for the Department of Public Works taking it up.

Mr. FOSTER. What will be the total cost, and how divided?

Mr. HYMAN. In the neighbourhood of $25,000, made up of: contract, $15,000; heating, $2,000; wiring, $500; fittings, furniture, letter-box fronts, $3,000; sidewalk damages if necessary, $500, and contingencies to make up $25,000.

Mr. FOSTER. What did the site cost?

Mr. HYMAN. It cost $707.

Mr. FOSTER. This is a rather expensive building in which to store records.

Mr. HYMAN. There is the post office in addition, of course.

Mr. INGRAM. The land, no doubt, is rather high. But the building is necessary. They have a considerable staff of customs officers there. This is, no doubt, an important point.

Mr. FOSTER. Who is the contractor?

Mr. HYMAN. The contractors are J. E. Cutler and M. Vanderburg, of Welland.

Mr. FOSTER. Tenders were called for, I suppose?

Mr. HYMAN. Yes.

Mr. FOSTER. What is the building made of ?

Mr. HYMAN. Brick, with a stone foundation.

Mr. FOSTER. What rentals were paid before?

Mr. HYMAN. Post office, $120 and customs house, $124.

Chatham armoury, $55,000.

Mr. HYMAN. This is to complete building. The work is under contract. The site belonged to the government, but, as it was low, the foundation had to be heightened, which will increase the cost of the building $4,000 or $5,000 over what such a building would cost under ordinary circumstances. The total cost will be $65,000.

Mr. CLEMENTS. I must congratulate the government upon building this armoury for it is very much needed. I will ask the minister to see to it that it is completed as soon as possible. We have a very worthy regiment, who are much in need of proper quarters, the present quarters being very bad.

Mr. PRINGLE. I would ask the Minister of Public Works upon what principle the armouries are decided upon. I find in the estimates provision for armouries in a large number of places in Ontario and other provinces. We, in Cornwall, have been promised an armoury for some time. We are not so ambitious there as some other places are; we do not want a very extravagant building. But we have one of the finest battalions in eastern Ontario and they have no place whatever to store their arms. If the government could see their way to a reasonable expenditure, even an expenditure of $8.000 or $10,000, I think we could make it meet our requirements.

Some two years ago the then Minister of Public Works visited the town of Cornwall, looked at the different sites that were proposed, and gave every assurance that the armoury would be erected in a very short time. Since then we have heard nothing whatever about it. The town of Cornwall is the centre of three counties. Stormont, Dundas and Glengarry, and I understand from the military men that it is absolutely necessary that they should have a proper building for the storing of their arms. As I say, we are not so ambitious as Brockville, Belleville. Cobourg, London and a dozen other places in Ontario, we will be satisfied with a reasonable amount, $8.000 or $10,000 for an armoury will meet the requirements. But I feel a little sore that the town of Cornwall should be ignored completely, especially as two years ago the matter was taken into consideration by the Minister of Militia and also by the Minister of Public Works, and a definite promise, I understand, was made to the military men that we would have at least an armoury in that town.

Mr. HYMAN. The hon. member will understand that the initiation of such a building does not come from the Public Works Department, but from the Militia Department. I have no doubt that if the hon. gentleman makes as strong a case with the Minister of Militia as he has made here to-night, the Minister of Militia will give him every consideration. If the Militia Department asks for an armoury at that place, the Public Works Department will endeavour to make one which will be a credit to the department. I do not, of course, know the situation there, but I have no doubt in the world that Cornwall's time will come, and I am sure the Minister of Militia will be glad to listen to any representations that may be made.

Mr. PRINGLE. I waited on the Minister of Militia some two years ago with a deputation from the town of Cornwall, and also on the Minister of Public Works. The

Minister of Militia was not very definite in his promise, but the Minister of Public Works was very definite, and gave us very positive assurances that it would be only a short time before an armoury would be erected. Subsequently the Minister of Public Works, while passing over the Cornwall canal, visited the town and was shown the different sites that were suitable for an armoury, and he expressed a very strong opinion in favour of one of them, and gave us every assurance that the building would be erected. Now we are put off again.

Mr. HYMAN. It will come.

Mr. PRINGLE. If it will come, I am quite satisfied. Might I ask the minister when it is likely to come ?

Mr. HYMAN. Surely the hon. gentleman does not want me to make a definite pledge after a predecessor of mine has made a pledge which the hon. gentleman says he has not carried out.

Mr. PRINGLE. I should think the hon. gentleman would carry out the pledges made by his predecessor.

Mr. LANCASTER. I would like to ask whether the city of Chatham furnished a site for this armoury, or did the Crown purchase it ?

Mr. HYMAN. It is being erected on ground which belongs to the government.

Mr. WORTHINGTON. How many men are going to use it ?

Mr. HYMAN. One regiment.

Mr. COCKSHUTT. I desire to ask the hon. gentleman if any provision will be made in the city of Brantford for a parade ground. The building there is undergoing considerable alterations. I regret I was not in when they were under discussion, but I may take advantage of this item to remind the minister that we have very little ground there indeed, in fact no ground upon which a regiment can form up. The building itself is not large enough to accommodate the whole of the regiment, so that they can form up. The men of the regiment desire to know whether or not it will be possible in the near future to provide some ground in the vicinity that will be suitable for a parade ground. The hon. gentleman visited the city a short time ago, I believe, and he will know that what I ask for is a necessary adjunct to the building. I do not desire to criticise the item with regard to the armoury at Brantford at all, as I think the expenditure has been a wise one, and was necessary in the interest of the regiment. The regiment is now increasing its strength, I think two more companies are being raised at the present time, and this parade ground will be a very suitable adjunct to the present alterations that are going on. If the minister can see his way to provide a little territory there, near at hand, I think it can be procured for a reasonable price, it would be much appreciated by the regiment. I would also like to ask if it is likely that the improvements now going on will be completed in the near future. They have been under way for a considerable length of time. There is a little complaint about the dilatory way in which the contract is being carried on. I think the work is very good, but the progress is not all that could be desired. I would like to be able to give our friends an assurance that it will be pressed with all possible speed, and that this parade ground will come in the near future.

Mr. HYMAN. With regard to the work that is being done on the drill hall, the time for the completion of the contract expires on the 6th of October, and the department will endeavour to see that the work is completed by that time. Of course it will be impossible to have it completed before then. In regard to the question of procuring some extra ground in connection with the building, I think that Brantford has a right to it and it will be necessary for the government to procure a small piece of ground in addition to that which we have. From the present moment I contemplate being able to purchase that ground, provided the price is satisfactory. I think the city of Brantford has done a great deal towards the erection of this armoury in providing the site. It is a beautiful site, and I think there should be some additional ground, and I hope to provide that out of the present vote without asking the House for any further sum.

Cobourg armoury, $14,500.

Mr. BLAIN. On the question of armouries, I may say that I brought the attention of the Minister of Militia to the condition of the 36th Peel Battalion two or three years ago. There was a promise given at that time that the matter would be taken up and considered. We have a public building in the town of Brampton at the present time and a post office in an adjoining building. With a small expenditure, provision could be made in that same building for taking care of the arms of the 36th Peel Battalion. Some objection was raised to that proposition on the ground that the Public Works Department were unwilling to allow arms to be stored in the post office building. May I ask the minister if there is any such policy on the part of the department ?

Mr. HYMAN. Of course, so far as I am concerned, and the department is concerned, I can see no objections to storing the arms in the public building. I shall be glad if the hon. gentleman will let me have exact details of what he wishes to be done, and I shall be glad to discuss the matter with the Minister of Militia at the first opportunity.

Mr. LANCASTER. Does the town of Cobourg furnish the site for the armoury, or did the Crown purchase it ?

Mr. HYMAN. The government bought the site.

Mr. LANCASTER. What was the cost of the site ?

Mr. HYMAN. $6,000.

Mr. FOSTER. What is to be the cost of the building ?

Mr. HYMAN. $48,000.

Mr. WORTHINGTON. Is that for the accommodation of more than one regiment ?

Mr. HYMAN. In Cobourg there is the 4th Midland field battery and the 40th Northumberland regiment.

Guelph armoury, $40,000.

Mr. HYMAN. Guelph is the centre of military district No. 1 and is the headquarters of a number of corps. The estimated cost of the building is $125,000. The reason that the cost is larger than that of some other buildings of a similar character is on account of the large number of guns. The battery is to be doubled up and it will have twice the number of guns.

Mr. FOSTER. What has prevented the work from going on ? I see that this is a rebate.

Mr. HYMAN. We have just got the site. We have not made any expenditure. The plans and specifications are being prepared.

Mr. INGRAM. Where is the Guelph armoury to be located ?

Mr. HYMAN. On the fair grounds facing Huskisson Street—178 feet on Huskisson Street, 467 feet on Farquhar Street and 385 feet on Freshfield Street.

Mr. INGRAM. Does the hon. gentleman know the location himself ?

Mr. HYMAN. I do not. I never was in Guelph but once in my life.

Mr. INGRAM. Is it on what is called the market square ?

Mr. HYMAN. I am informed by the officer of the department that it is near the market square.

Mr. INGRAM. Does it take up all the ground they call the fair ground ?

Mr. HYMAN. I am unable to give the hon. gentleman that information.

Mr. INGRAM. I see the architect there and I presume he would know.

Mr. HYMAN. It is bounded by three streets and I presume that it will naturally take in all of the ground within these three streets.

Mr. INGRAM. I understand that the hon. gentleman will erect the armoury beside the parade ground where the men collect for drill. In some places the selection of the parade ground has been made at a considerable distance from the heart of the town or city and by reason of the long distance from the centre of the town regiments have not done well because you cannot get young men to attend drill when the parade ground is far from the centre of the town. I am glad to know that in the city of Guelph that difficulty does not present itself. In my own city, I know, it has been the means of the regiment being disbanded. The distance to the parade ground was so great that the men would not go. They have reorganized the regiment again, but I do not know whether they are going to make any greater success of it than they did before or not. They have made a mistake in that case which I hope will not occur again.

Mr. HYMAN. Wherever possible the armoury ought to be accessible to the town. But, a difficulty in regard to procuring parade grounds in close proximity to the armoury presents itself when we consider the cost of land in the centre of a city.

Mr. INGRAM. In the city of London you have made an improvement in your armoury by having it more centrally located.

Mr. HYMAN. Yes, but the old armoury was not out of the way.

Mr. INGRAM. Where do you have your drill ground ?

Mr. HYMAN. They use the park.

Mr. WORTHINGTON. I am glad to see that the hon. minister approves of having the drill hall near the parade ground. I think it is a very wise plan indeed, because if a drill hall is half a mile or so away from the parade ground it is a great inconvenience, especially to city corps, with whom most of the drill is done at night. Probably the men cannot get together before seven o'clock, and if they have to assemble at the armoury and walk half a mile to the parade ground it takes up half of the evening before they get down to drill. I think the question of having the drill shed at or in the vicinity of the parade ground is one that should commend itself to the hon. minister.

Mr. HYMAN. It is impossible to carry out both of the hon. gentleman's ideas. If you were to have both the parade ground and drill shed in the centre of the city I am afraid the cost would be such that the committee would never allow the department to commit itself to the expenditure of such a large amount of money. In London there is no drill ground attached to the armoury but there is a park two or three blocks

away from the armoury and the regiments march to the park and drill there. It is not expected that the department shall always provide a drill ground. It is only done where the cost is sufficiently reasonable to enable the department to do so.

Mr. BLAIN. On this question of the Guelph armoury the right hon. Prime Minister (Sir Wilfrid Laurier) made a rather extended tour in Ontario during the last election, and I noticed very many references in the daily newspapers of the time to statements made by hon. gentlemen representing constituencies and sitting on that side of the House. For instance, the former member for West Kent made the statement that he had fulfilled all the promises he had made because he had got so many thousand dollars expended in his county. On the question of the Guelph armoury I would like to draw the hon. minister's attention to this statement by the hon. member for South Wellington (Mr. Guthrie) as published in the 'Globe' of October 13, 1904:

> Mr. Guthrie said he had promised on his election to have the Guelph post office renovated and enlarged.

That was the promise, and to quote again:

> A third promise of his had been that he would secure armouries for Guelph, and he was glad to say that he had secured them at last and the plans were in the city now.

I wish to draw the hon. minister's attention to the fact. Perhaps he could state how hon. members on this side of the House could reach the government. That is the way hon. gentlemen opposite representing these constituencies reach the government and I thought perhaps there was a policy by which we could reach them. It seemed to be a general topic of discussion during the right hon. gentleman's tour through the province of Ontario. Whenever he went to a town an armoury was required, and the hon. gentleman representing the county, or the candidate, would stand up and say that he would get an armoury for that town if the constituency would support the present administration. I am supposing there are no politics in the hon. gentleman's department.

Mr. HYMAN. This is the first time I ever heard it suggested.

Mr. BLAIN. I suppose the hon. gentleman will repudiate the statement of the hon. member who represents South Wellington. That hon. gentleman made three promises to his electors: First, that he would get the post office renovated, and he was very glad that he had got the government to renovate it. The third was that he would secure armouries and he was glad to state to the electors that he had secured a promise from the government to erect armouries. I call the attention of the minister to the fact and I hope he will not allow this political warfare to creep into the administration of his department.

Mr. HYMAN. The hon. gentleman himself within the last ten minutes has asked the department to spend $10,000 on a building in his constituency. What is to be thought of the hon. gentleman (Mr. Blain)? Is it that he is trying to bribe his constituents by asking what is an unnecessary expenditure? I assume that hon. gentlemen on either side have a perfect right to look after the interests of their constituencies, and to make representations to the government in regard to the interests of their own districts. I promised to the hon. gentleman in regard to the matter which he brought up, a very sympathetic ear, and I shall be glad indeed if I am able to carry out his wishes in the matter. All ministers and all departments, I presume, are always open to have any member of the House make such representations on behalf of their constituents as they desire to make. I am always glad to hear from members on either side of the House.

Mr. PRINGLE. In reference to the armoury of which I was speaking a few moments ago, I find in the estimates of this year that provision is made for armouries at Belleville, Chatham, Cobourg, Guelph, Hamilton, Peterborough, St. Catharines, Stratford and Woodstock.

Mr. HYMAN. These are not initiatory votes for any of these works. Some of them have been there for two or three years.

Mr. PRINGLE. Some are no doubt for the completion of buildings already started. Two or three years ago we had estimates for Brockville, St. Thomas, Barrie and a number of other towns. I wish to impress on the hon. gentleman that the most important town in eastern Ontario, a town in the centre of three very important counties, has been neglected for many years notwithstanding that the military authorities interested have come here and presented the matter to the government, I think in an absolutely fair light, and have received assurances from the government that something would be done, at any rate, in the way of erecting a building in which they could store their arms; but nothing has been done. I am glad to hear the hon. minister say that it will come in due time. I would like a little more definite promise; I would like to see it come at once.

Mr. HYMAN. While you live?

Mr. PRINGLE. While I live. It has been hanging fire a good many years and I would like to see an item in the estimates for this year. As I said before we are not extravagant in our ideas. We simply want a good and substantial building suitable to meet the requirements there. I am not in

a position to say just what the requirements are as well as the officers of the battalion, who have come here on several occasions. I might say to the hon. gentleman that the officers of the 59th Battalion are not by any means all Conservatives. Those who are at the head of the battalion are very strong supporters of this government and they feel very grieved that they can get no satisfactory answer from this government as to what they are going to do in regard to an armoury there. As I said two years ago they were directed to select a site; they selected a site and submitted it to the government but the matter hung fire and they got promise after promise. Immediately prior to the election of last November it was stated without any question that the armoury would be erected at once and still I see nothing in these estimates for it. I, of course, expected that there would be something for the Cornwall drill hall and I have no doubt it will be in the supplementary estimates.

Mr. HYMAN. The hon. gentleman will understand that it is not the custom of any government to put initiatory expenditures in the main estimates. The hon. gentleman, like every one else, will have to abide in patience until the supplementaries are out. I shall be glad to listen to any representations of any hon. gentleman in reference to the matter.

Hamilton drill hall—addition, $50,000.

Mr. HYMAN. The item of $50,000 for the Hamilton drill hall does not cover the total expenditure that it will be necessary to make in the city of Hamilton. I know that a new regiment, a Highland regiment, has been lately formed in Hamilton, and although they have a very fair drill hall there the number of corps using that hall so crowd it that it will be necessary to make a new provision for Hamilton. I have not been able to reach the exact amount of expenditure that will be necessary because there will be some question as to whether it will be necessary to build an entirely new hall or whether a part of the old hall can be used. For that reason I am not able to give the exact expenditure, but I should say that the expenditure necessary to provide accommodation will be in the neighbourhood of $125,000 or $150,000. The matter has been carefully gone into; we have had several plans made but I have not been able to satisfy myself as yet as to the plan to be adopted. In this case I shall have to ask the House to pass the vote without any exact estimates, for the reason that I cannot tell how much of the old building we will be able to use.

Mr. INGRAM. I wish to read some quotations from a paper about promises by members.

Mr. HYMAN. The hon. gentleman is not surely going to read any promises made by the hon. member for Hamilton?

Mr. PRINGLE.

Mr. INGRAM. I am going to perhaps a higher authority.

Mr. HYMAN. There could be no higher authority.

Mr. INGRAM. When the premier was in South Wellington he assured the electors that the government had joined the government of Mexico in subsidizing a steamship line to that country which would afford a market for their manufactured goods. I have been wondering since this matter was discussed in the House whether that was correct or not. The other night when the estimates went through there was no line subsidized.

Mr. HYMAN. I do know, as a matter of fact, that although the bargain may not have been entirely consummated, the government are in negotiation with the Mexican government for the establishment of a line, not only on the Atlantic but on the Pacific.

Mr. INGRAM. If my hon. friend on your right (Mr. Paterson) will make that statement I will be glad, but he would not venture to do it when the estimates were up in the House.

Hawkesbury public building, $13,000.

Mr. FOSTER. How much will this cost?

Mr. HYMAN. This is just for completion. The estimate for the building complete is $18,000.

Mr. FOSTER. What is the population of Hawkesbury?

Mr. HYMAN. 4,150.

Mr. FOSTER. And the postal customs revenue?

Mr. HYMAN. The postal revenue is $2,944. They are making application for a customs office there; it is not established yet.

Mr. FOSTER. What are the rentals of the present accommodation?

Mr. HYMAN. $120 per annum.

Kingston military buildings—barracks, Royal Canadian Field Artillery, $20,000.

Mr. HYMAN. This is a revote. There has been no use made of it as yet, for the reason that it is not the intention of the Militia Department to proceed with the construction of these barracks until they are able to dispose of the land on which the old barracks are erected.

Mr. WORTHINGTON. Have the old barracks been condemned as being unsanitary?

Mr. HYMAN. I do not know that they have been condemned, but there have been protests with regard to them.

Mr. WORTHINGTON. Have there been any reports from medical boards as to the unsanitary condition of the buildings?

Mr. HYMAN. I think there has. I think the attention of the department has been called to their unsanitary condition.

Kingston military buildings—stable accommodation for field battery, $5,000.

Mr. HYMAN. This is in place of the building that was burned. This amount will nearly cover the cost.

Kingston Royal Military College—addition to drill hall, $6,000.

Mr. HYMAN. This is for the purpose of providing a drill hall and also a building which can be used in the winter as a skating rink for the Royal Military College. Plans and specifications were prepared, but the estimate was so large that we gave instructions to have new plans made. We hope to keep the cost within $12,000 or $15,000.

Kingston Royal Military College—servants' quarters, $8,000.

Mr. FOSTER. What is to be the cost of that building ?

Mr. HYMAN. If the hon. gentleman will allow the vote to pass, I shall be very glad to send him an estimate. As a matter of fact, I spent two hours to-day in consultation with the architect of the Militia Department, and this is one of the items on which they have not the full particulars. My recollection is that the cost will be in the neighbourhood of $15,000.

Mr. TAYLOR. Two years ago I had the pleasure of riding up past Kingston with the Minister of the Interior, and I drew his attention to the fact that in the neighbourhood of the military properties at Kingston there are two or three martello towers, which were erected there many years ago. The masonry is all in first-class condition, but during a heavy gale two or three years ago they were unroofed, and they have been left in that dilapidated condition. I think the department ought to spend a few hundred dollars in having these old land marks preserved. The Minister of the Interior fully agreed with me when I drew his attention to them.

Mr. HYMAN. I am very glad the hon. gentleman has brought this matter to my attention. The committee understands that the care of the military buildings is not vested in the Public Works Department, but in the Militia Department. I have asked the deputy to take a memorandum, and I will have the attention of the militia authorities called to the hon. gentleman's suggestion.

Kingston Royal Military College—stable, $5,000.

Mr. FOSTER. What is to be the full cost of that ?

Mr. HYMAN. This is a stable for the permanent corps, and it is to include quarters for the grooms. The cost will be in the neighbourhood of $18,000. I understand that these stables are built in accordance with the regulations, which require a certain space for so many horses and so many grooms.

Mr. LANCASTER. Is this stable being built inside or outside the grounds of the college ? I am told that objections have been raised on account of these stables being built too near the officers' quarters.

Mr. HYMAN. There has been no request made to the Public Works Department for any expenditure for a site, and, therefore, I presume that it must be the intention of the Militia Department to have the stables placed on the grounds owned by the department.

Mr. TAYLOR. The department owns about a thousand acres of land there.

London military buildings—magazine, $3,000.

Mr. KEMP. Where is that situated ?

Mr. HYMAN. The magazine has not yet been built. This vote is for the purpose of building one for the permanent corps of London. It is also intended to erect one at Winnipeg, one at Toronto and one at Montreal.

London military buildings—new stores building, $10,000.

Mr. HYMAN. This is also a vote which appears in the estimates for Toronto, Montreal, London and Winnipeg. It is for the purpose of providing a building at each of the different headquarters wherein material for the department can be stored.

Mr. FOSTER. What kind of stores are they ?

Mr. HYMAN. All kinds of camp stores. The ammunition will be kept in the magazine. These buildings are to be practically fire-proof buildings, and about 65 by 48 feet in area. Each will cost in the neighbourhood of $40,000.

Mr. INGRAM. Where will the London building be located ?

Mr. HYMAN. It will be on the line of the Canadian Pacific Railway, at the edge of the government property, near the ground where a corps is stationed.

Mr. KEMP. Will the work be gone on with at an early date ?

Mr. HYMAN. Yes. The specifications are made for some of the buildings, and we are going to build them on the same plan.

Mr. LEFURGEY. Before this military item is passed, I would like to call the attention of the minister to the condition of the drill hall, or, to speak more accurately, the drill shed at Summerside.

Mr. HYMAN. When we come to the items for Prince Edward Island that will be in order.

Mr. LEFURGEY. I do not see any item for Prince Edward Island, and that is the reason I put in a plea here. The drill shed at Summerside is not fit for the accommodation of the military men. It is an old building, standing on a public square. There is no floor in it, and it is absolutely impossible to use it in winter. I took occasion several times last session to talk privately to the Minister of Militia on this matter, and he promised that it would receive some attention. I think he said he would send a man down to investigate. I do not know whether he has brought the matter to the attention of the Minister of Public Works or not. If not, I would like to take this occasion to call his attention to it, in the hope that he will put a sum in the supplementary estimates to put the building into proper condition to be used or to erect a new building. We would prefer to have $10,000 voted to erect a permanent building, for the policy of the government is to erect permanent buildings for the accommodation of the militia throughout Canada.

Mr. HYMAN. I have explained to the hon. gentleman that the care of these buildings is not vested in the Public Works Department but in the Militia Department. I have asked the deputy minister to take a memorandum.

Mr. FOSTER. It would be a good idea to let the items that have to do with militia buildings stand and go on with the others. It is utterly absurd to take up these items and have the minister tell us that he will take notes and get from the Minister of Militia the information required.

Mr. HYMAN. This is the first one in which I have taken such notes. If my hon. friend will consent, I should be very glad to leave one item on which we could have a general discussion when the Minister of Militia is here.

Mr. FOSTER. Leave one or two.

London post office—addition to building and improvements, $20,000.

Mr. ELSON. What are these improvements?

Mr. HYMAN. It is intended to raise the back part of the west side of the office up to the full height of the building and to take in the balance of the ground which belongs to the department at the back end of the post office. It is intended to enlarge the working rooms down stairs and move those working downstairs to the story above.

North Bay public building, $15,000.

Mr. HYMAN. The customs revenue is $29,329, and the population 2,530, the cost will be about $40,000.

Mr. FOSTER. What justification is there for putting up a building of that size?

Mr. HYMAN. The population is increasing there very rapidly and it would not be wise to put up a building only suitable to the present requirements. In a growing town such as that, the department will be justified in looking to the future.

Mr. FOSTER. This is at the junction of the Grand Trunk Railway and Canadian Pacific Railway?

Mr. HYMAN. Yes.

Oshawa public building, $21,500.

Mr. HYMAN. There will be another vote required to complete this.

Mr. FOSTER. What will that cost?

Mr. HYMAN. A total of $31,000, including the furniture and letter boxes, &c. The postal revenue is $8,329, the custom duties $37,458, and the population, 3,494.

Ottawa departmental buildings—steel drawers and roller shelves, &c., $25,000.

Mr. HYMAN. That is the usual vote for the replacing of the old wooden drawers gradually with steel drawers, so as to make the buildings as fireproof as possible.

Mr. ARMSTRONG. Are tenders called for?

Mr. HYMAN. There are only four or five firms making them and they are all asked to tender.

Mr. TAYLOR. Who is supplying these?

Mr. HYMAN. The Eclipse Furniture Company of Ottawa, the Office Specialty Company, the Cabinet Company of Gananoque and a firm in Montreal.

Mr. KEMP. What is the advantage in this?

Mr. HYMAN. As the old wooden shelving becomes worn out we are putting in model shelving and drawers.

Mr. KEMP. They are not fireproof?

Mr. HYMAN. No doubt, but they are very much less liable to combustion than the wooden ones.

Mr. FOSTER. How much was spent on that last year?

Mr. HYMAN. From 1st of July to 31st of December, $31,000

Mr. FOSTER. To whom was it paid?

Mr. HYMAN. I have not the details, but it was distributed among these four firms.

Mr. FOSTER. Is there any difference in their prices?

Mr. HYMAN. I am advised that the prices are virtually the same for similar articles.

Ottawa public building—new coal shed, $10,000.

Mr. FOSTER. Where is that to be situated ?

Mr. HYMAN. No decision has been reached yet. We have now the coal-shed on the Canal basin, but the Department of Railways and Canals, who control that basin are continually asking the department for the removal of the building. It has storage room of only 2,500 tons. We rent another shed which holds 3,000 tons. It is not easy to find a site for a coal-shed near at hand, and we do not want to go too far on account of the cost of haulage.

Mr. INGRAM. From whom does the department rent this coal-shed, and for what rental ?

Mr. HYMAN. From Mr. C. C. Ray, at $400.

Ottawa public buildings—improvements in main entrance hall, renewal of sky-lights, windows, &c., $10,000.

Mr. KEMP. What are these improvements ?

Mr. HYMAN. It is intended to replace the present banisters in the main lobby with granite and to renew the risers. Then there will be the dressing down and re-rubbing of the stone work of the lobby. The skylights will be repaired, a certain amount of painting done and the leaded windows in different parts of the House will be repaired.

Mr. ARMSTRONG. Might I suggest to the minister, at the same time, to investigate the ventilation of this chamber and lobbies. I believe it would be wonderfully improved if proper men took it in hand.

Mr. HYMAN. I have heard no serious complaint. Of course, the building not being exactly modern in construction, it is somewhat difficult to ventilate it properly. Any suggestions that the hon. gentleman can give me, I shall be glad to receive.

Mr. ARMSTRONG. If the hon. minister will talk the matter over with members on either side of the House, I think he will understand that the ventilation is not what it ought to be. And if he will further investigate the conduits through which, as I understand, air is brought in from the side of the hill and that are covered with moss, and I might say filth, I think he will find it necessary to make some improvements.

Mr. HYMAN. I understood that the air came from the top of the building and reached us as pure as possible.

Mr. HENDERSON. I am very glad that we have not had so much ventilation as we had last session. I was almost obliged to threaten some officials of the House with dire punishment if they did not cease opening the ventilators behind us, almost destroying our health by subjecting us to draughts. I say, I am glad that has not been done, and I warn the minister that I will not submit to it and that there will be a rebellion——

Mr. A. JOHNSTON. Order.

Mr. HENDERSON——if it is attempted ; and the hon. gentleman who called 'order' may as well understand that we will rule the ventilators on this side, and they can do as they like about those on that side.

Mr. HYMAN. I shall be glad to carry out the ideas of the hon. gentleman as far as possible. But it will be easily understood that when some gentlemen come to me and complain that the room is too warm and others a moment later complain that it is too cold, it is somewhat difficult to manage the ventilators to suit all.

Mr. HENDERSON. No doubt we have to submit to some extra heat, but I prefer that to having the windows thrown open, perhaps without a moment's warning, letting in a draught that cannot but injure the health of those in the chamber. This used to occur at six o'clock, and, if a member remained in his place a few minutes after six, he was subjected to a draught which would give him a severe cold in a minute or two. I trust that the officers have learned a better way to ventilate the House, or that they will at least warn the members to retire before they open the windows.

Mr. HYMAN. Of course, the ventilation is more pressing during the warmer weather. And, of course, advantage is taken of the recess at six o'clock to ventilate the chamber. But the officials should at least wait a few minutes until members have left the chamber before they open the ventilators. If the hon. gentleman will call my attention to any difficulty that may arise, I shall be glad to remedy it if I can.

Mr. COCKSHUTT. Does the minister think that the amount here asked for is sufficient to do the work about this building that should be done in the near future. It seems to me to have become pretty dreary along these corridors. I used to think of the House of Commons as one of the places we read about—a sort of earthly paradise. But, walking along these corridors, I find the place not at all what I expected to find it. For my part, I would like to see it brushed up to a considerable extent in the near future. This estimate appears to me to be small in comparison with other votes that are being passed. It seems to me that there is room for a good deal of improvement. While I am on my feet, I desire to say a word—I do not know that it will be strictly in order in the discussion of this item—as to the accommodation afforded to members to carry on their corespondence. The desks in this chamber are narrow, and some of us have no place to write our let-

ters but at the desks. Those who have the advantage of private rooms, of course, are all right, but any one with considerable correspondence finds it difficult to carry it on in the House. There seems to be no quarters where quiet prevails.

I do not know whether this is the proper place to bring it up, but while these estimates are under consideration I think perhaps the hon. gentleman would consider a more comprehensive plan whereby a little additional room might be obtained where the members could have occasionally the use of a room for half an hour or an hour a day, where they can retire and do a little correspondence without being disturbed, as we are in the House or in the general committee room. The item he asks for is a very small one, and I think members on both sides of the House would join in advocating a sufficient vote to put the affairs of the House in a satisfactory condition. I understand that the legislative buildings in Toronto furnish to the members vastly better accommodation than is furnished to members in this House. If that is the case, it appears to me the minister might ask for a more liberal allowance in order to make the members a little more comfortable than they are. It strikes me as reasonabe that when members are spending so large a portion of their lives here it is but right to make them as comfortable as circumstances will allow.

Mr. HYMAN. The hon. gentleman will note that this vote is for a particular purpose. There are other votes in connection with buildings, there is also a general vote in the estimates for the care and maintenance of all the Ottawa buildings. From that vote each year a considerable amount of money is taken and spent in the direction the hon. gentleman refers to, cleaning, papering, painting and so on. We have here a large pile of public buildings. Some of the corridors are not exactly in the condition I would like to see them, and it is the intention this year to do something in that line. Numerous improvements can be made from time to time in different parts of the building. So far as accommodation to members is concerned, of course if it is the will of the committee that a larger expenditure should be made for that purpose, speaking solely for myself, I have no objection at all. I think the members of this House are entitled to more comforts than they receive at present, and they should be supplied with rooms where they can do their correspondence. As time goes on that which has always been a necessity becomes more of a necessity than ever. I do not know whether we will be able to put an item in the estimates this year. We have already considerably extended the accommodation, both for private members and for committees, the last few years. We have opened up the top flat both in the Senate wing and in the House of Commons wing, and probably all the space in this building that is possible to get is now fully occupied. I think the time has come when there should be better accommodation for the members themselves. I intend to discuss the matter with my colleagues, and to ascertain whether a vote can be taken to make an enlargement of the building in some other direction. This is not of course a new matter. It has been discussed in every session since I have the honour of sitting in this House. As I say, considerable improvement has been made and more room has been furnished, but we will have to consider the necessity of going still further.

Mr. ARMSTRONG. While we are on this item I would like to make a suggestion about lighting the approaches to this building. In an electrical city like Ottawa I think it would be both wise and easily possible to light up the walks leading to the main building a good deal better than is done at present. The electric lights and the gas lights furnished at present are in a rather crude condition.

Mr. KEMP. The minister mentioned about going over the rooms from year to year. I do not know whether it is by design or carelessness, but I certainly think that the members of the opposition are deserving of better quarters than they now receive in room No. 6.

Mr. HYMAN. I understand that two years ago, during recess, No. 6 was done over. Still I shall be very glad to do whatever is required there. As regards lighting, there is a vote now in the estimates for the purpose of improving the lighting. The matter is being attended to by the department. I will try and devise some means both of increasing the light and making a better appearance.

Mr. BARR. I am glad this subject has come up. I was rather surprised when I came to this House to find that the members were so poorly housed. They have indeed very poor accommodation, in fact almost none at all. In Toronto the members are very much better accommodated; no doubt the Toronto house is more modern and is provided with more conveniences. The quarters provided for the opposition in this House are certainly very inadequate. We are shut up in a little room with only three easy chairs in it for sixty or seventy members. It does seem to me that we deserve a little better accommodation than that. Even the Speaker's quarters here are poor compared with those afforded in Toronto. It would be well worth while to consider whether the Speaker's quarters might not be moved outside of this building and thereby afford so much more accommodation for private members. We

have to pass four, six and seven months of our time in this House, and, I think, we deserve more accommodation, and some place where we can do our correspondence without being interrupted.

Mr. INGRAM. I understand that some measurements are being taken around this building now ; is that with a view of enlarging the building ?

Mr. HYMAN. I do not think any measurements are being taken with a view of enlarging the building. Certain levels are being taken in connection with the Georgian bay canal survey. The matter has been discussed a number of times in the House, and a number of schemes have been submitted. I hope to be able to convince my colleagues that the time has come for the necessary enlargement of the quarters for members. There has been a scheme to have an extension from the present quarters occupied by the Speaker out to a line drawn from the building running north and south. That would provide a considerable number of quarters. The matter is under discussion at the present time. I do not know whether I will be able to include a vote for that this year, but I have taken the matter up and I am endeavouring to impress upon my colleagues the necessity for such an addition.

Mr. HENDERSON. While speaking of inconveniences in and around the House, I desire to draw attention to another matter to which I think I have never heard any reference made in this House. I refer to the character of the desks we have in this chamber. When the model for this desk was made I do not know. I think it must have been somewhere back about the time of Adam because it is something very ancient. I cannot conceive why it ever entered into the mind of the man who had charge of the furnishing of this chamber to put in desks with sloping covers. Why we cannot have a desk with a flat top on which we can place a book and know that it will not slide off and tumble on the floor is something that I cannot understand. These sloping desks are responsible for more profanity in this chamber than anything else I can conceive of. I believe that if a careful estimate were made of the books of reference from the library, the binding of which is practically destroyed from year to year by their sliding off the desks on the floor, there would be sufficient money saved in the course of a few years to put in desks properly constructed. There would not only be a saving in money but I need not tell hon. members of this House what a terrible nuisance would be avoided. An hon. member may get up to speak. He requires to have several volumes before him, probably copies of 'Hansard,' sessional reports of various kinds, or perhaps nothing more than sheets of paper. He lays them on his desk but the first thing he knows they are at his feet on the carpet. It is a terrible nuisance but it is one of those things that can be remedied and if it does cost a little money I think it would be worth while to make the change which I suggest. I wonder that this matter has not received the attention of the Minister of Public Works before this time or whoever has charge of this building. I am quite in earnest in what I say. I am not talking for talking's sake. If this improvement can be made it will be one which will be appreciated by every hon. member of this House. I see no advantage whatever in a desk with a sloping cover. I think we could all write on a flat topped desk just as well as we can on one that has a sloping cover. I invite the hon. minister's attention to the matter and I feel sure that he will find some way out of the difficulty and that before long we will be provided with more modern furniture and something that will not cause hon. members to reflect in such very strong language on the neglect of the government as I am sure many hon. members are obliged to do.

Mr. McINTYRE. Mr. Chairman, there have been a good many objections taken in regard to various points in connection with the accommodation in this House, and I do not wish to add to the number, but I do wish to express my sympathy with some of the points raised. As a new member I have not felt pleased or satisfied with the amount of accommodation given in various ways in rooms for correspondence. I have particularly felt the absence of a good strong light in this House and think that if changes were made in the desks it would certainly add to the convenience of members and by making them of a light colour they might reflect the light rather than absorb it. My strongest feeling of sympathy goes out to the hon. member for Halton (Mr. Henderson) in regard to what he said on the subject of draughts. The ventilation is not good and I suppose the lack of ventilation has caused those who are responsible to endeavour to supply it in some other way. During the evenings that I spent here in the earlier part of the session, I was conscious of the existence of strong draughts. I made various excursions upstairs to find out where they came from. I did not succeed in finding out but I was still conscious of the draught and of the results after leaving the House. At the present time I am conscious of a strong draught which apparently comes from this opening behind me. After I sit here I frequently have an attack of neuralgia and I sympathize very much with the hon. member for Halton if he has suffered in this way. I hope the ventilation may be improved in such a way as to do away with these draughts.

Mr. INGRAM. My hon. friend from Halton (Mr. Henderson) has spoken about books falling off the desks. One reason why books

fall off the desks so much is that the index to the 'Hansard' has been changed and it has been changed for the worse. I wish to enter my strong protest against the system of indexing the 'Hansard' that we now have. An hon. member may have four out of the five volumes and yet he is obliged to send to the library for the fifth volume to get the complete index. I hope that the committee in charge of the debates will revert to the old style of index so that when a member takes up a volume of 'Hansard' and looks over the index he will find what he wants.

Mr. FOSTER. That is as it should be.

Mr. INGRAM. It is the worst system of indexing we have ever had in this House since I have been a member of it, and the sooner it is changed the better. Here are five volumes of the 'Hansard' of last session. You may send for four of them and then you are obliged to send for the fifth in order to get the complete index. I do not know who advised the change but whoever did was very ill-advised.

Mr. HYMAN. That is a matter which is under the control of the Debates Committee, but I will see that the hon. gentleman's remarks as reported in 'Hansard' are forwarded to the committee. As far as the question of desks is concerned, I have never heard a complaint of that kind made before. I have had several books fall from the desk but I have always found other reasons for getting rid of any profanity without taking advantage of that particular one. If any hon. gentlemen would like their desks made in the way which the hon. member for Halton (Mr. Henderson) suggests I shall be very glad to have it done. It is not necessary that they should all be changed. If my hon. friend from Halton desires his desk made in that way I will have it done right away.

Mr. HENDERSON. That is the first promise I have ever received from the government and I shall be most happy to accept the offer. I will not then be able to say that the government never did anything for me.

Ottawa public buildings—pavement on Wellington street opposite buildings, $35,000.

Mr. KEMP. Does the government keep the street in repairs?

Mr. HYMAN. It is part of the undertaking of the government to keep that street in repair. There is no contract for the work yet. It is proposed to advertise for a contract and it is proposed to adopt the specifications that the city has adopted for pavements connected with that street.

Mr. INGRAM. Does that include the pavements on both sides of the street?

Mr. HYMAN. This is the roadway between the two sidewalks.

Mr. KEMP. Do you propose to pave it with asphalt?

Mr. HYMAN. There has been no decision arrived at as to whether it will be paved with asphalt or with some other kind of pavement. I understand that some of the streets connecting with this one are paved with bitulithic and some with asphalt.

Mr. FOSTER. What is the present roadway?

Mr. HYMAN. Part of it is paved with old blocks which are in a very dilapidated condition and the other part is a macadam roadway.

Mr. INGRAM. This includes the pavement between the walks? Does the government not keep up the walk on this side of Wellington street?

Mr. HYMAN. I understand the owners on the other side keep up the walk but the government keep up the walk on this side.

Mr. KEMP. Is it just proposed to pave the part of the street facing the government property and not beyond?

Mr. HYMAN. It starts with government property and ends with government property.

Mr. HENDERSON. I would ask as a matter partly of curiosity what it costs the country to keep up the four public buildings in Ottawa? I have heard it said that it costs $100,000 a year. I do not find fault with the amount, but I should like to know what the cost is?

Mr. HYMAN. There is a vote in the estimates for that particular item and I would be very glad to give full information when that item is reached.

Mr. KEMP. I understand that not only this season but in other seasons serious accidents have occurred on the sidewalk at the gate opposite the main entrance to this building owing to the sharp decline at that point not being covered with sand or ashes.

Mr. HYMAN. It is supposed to be, but several times I have noticed that it was not covered with sand I have called the attention of the architects and had it attended to.

Mr. CLARE. I notice that part of this item is a revote and that the item has been increased by $7,000 or $8,000. How is this work to be done? Have you had any tenders?

Mr. HYMAN. When an estimate is prepared it is not always necessary to take a vote for the full, amount of the expenditure. This was in the supplementaries last year and it is not intended to vote the whole amount this year. This $35,000 is supposed to cover the total estimated expenditure. Of course $28,000 of that can be spent before the first of June and the balance after the commencement of the next fiscal year.

Ottawa post office—restoration of burned building, and addition of new story, $80,000.

Mr. KEMP. When did the fire take place in that building ?

Mr. HYMAN. January 4, 1904.

Mr. KEMP. Over a year ago ?

Mr. HYMAN. Yes.

Mr. KEMP. How is it that it has taken so long to repair the building ?

Mr. HYMAN. It is owing to the character of the work. The hon. gentleman may have observed the great amount of stone cutting that is involved as the character of the work in the old building is being continued in the new story. The building is not only being repaired but a new story is being added, and the roof is of a new character. Everything is being done to hasten the work. The post office and customs departments are pressing this department and the work is being pushed forward.

Mr. KEMP. The work was not started until long after the fire.

Mr. HYMAN. All the debris had first to be cleaned out. A great deal of stone cutting had to be done before the laying was commenced. The work was commenced almost immediately. I remember bringing in a supplementary for this last year.

Mr. LANCASTER. Why is it that we see so much Cleveland stone used in this building instead of Canadian ?

Mr. HYMAN. Simply because whoever constructed the building in the first place thought it proper to have Cleveland stone, and the same kind of stone has had to be employed in the extension of the building.

Mr. LANCASTER. Could the building not be repaired without going to Cleveland to get stone and still retain its character ?

Mr. HYMAN. It is not possible to get stone to work in harmoniously with this in Canada.

Mr. LANCASTER. We have all kinds of stone in Canada.

Mr. HYMAN. In all buildings now being erected in Canada provision is made for the use of Canadian stone, but the appearance of this building would have been spoiled by using a different stone.

Mr. BLAIN. Is this being done by day labour ?

Mr. HYMAN. By day labour.

Mr. BLAIN. What is the total cost ?

Mr. HYMAN : The estimated cost is $160,000.

Mr. BLAIN. That is very much more than was stated in the first place. I suppose the extra story accounts for the increased expenditure ?

Mr. KEMP. How many stories will there be ?

Mr. HYMAN. Practically four stories and the basement, two additional stories. The old building really had no top story, as owing to the way in which the roof was made it was impossible to use the top story.

Mr. KEMP. It seems to me to be an extravagant piece of business. It is such a small area. I do not understand the transaction at all, it is so slow and so expensive.

Mr. HYMAN. In the first place the work to be done in the cutting and laying of the stone only amounts to $64,000. A great proportion of the expenditure is for the fittings for the building. Steel and iron work will cost $29,000, a new vault will cost $9.000, roofing $5,000, an elevator $6,000, the plastering and carpenter work is estimated to cost $10,000. The building has to be painted and glazed, a new clock is necessary, and then there is the heating, furnishings and fittings for the building.

Mr. FOWLER. What did the building cost in the first place ?

Mr. HYMAN. Three hundred and some odd thousand dollars.

Mr. INGRAM. From time to time we have voted money renewing furniture ; I would like to know what becomes of the old furniture ?

Mr. HYMAN. A considerable amount of renewal comes from the wearing out of furniture. In the case of this building the furniture was all destroyed by fire.

Mr. INGRAM. In this building, desks have been discarded which many men would be glad to get for use in their offices in the building, and no one knows what becomes of these desks. Some of these are very good and some account should be taken of them.

Mr. HYMAN. The deputy informs me that some four or five years ago there was a large collection of disused furniture on hand and a sale of it was held.

Mr. FOSTER. Did it realize much ?

Mr. HYMAN. I think two or three hundred dollars.

Mr. INGRAM. Some three or four years ago I wanted to get a table which I thought would do very well for one of the rooms ; but the table disappeared as well as some of the other furniture in the same way. If the furniture is disposed of, it is just as well that the country should get the benefit of it.

Mr. HYMAN. I have not heard any complaint of this kind before. The hon. gentleman knows that if my attention were called to anything of the kind, I would be glad to have it inquired into.

Mr. INGRAM. If the hon. gentleman would inquire a little more closely, he would find out enough to satisfy him.

Mr. HYMAN. If the hon. gentleman as a member of the House has any reason to make that insinuation, I think he should let me have the knowledge which he possesses.

Mr. INGRAM. I merely point out that it would be well for the hon. minister to make some inquiries.

Ottawa, Government Printing Bureau—to replace the present wooden roof by a fireproof roof and raise the walls for one additional story on main building and two additional stories on annex, $30,000.

Mr. BARR. Will this finish the work ?

Mr. HYMAN. It is practically intended to finish it, but there will be a small supplementary vote required.

Mr. KEMP. What is the object of doing this ?

Mr. HYMAN. The trouble in the Printing Bureau is that the work there has increased very greatly, and the present accommodation is not sufficient. I am simply providing this addition in response to the request of the Secretary of State, who has charge of the Printing Bureau.

Mr. BARR. Is this work done by day labour ?

Mr. HYMAN. No, by contract.

Mr. KEMP. Does the Secretary of State say that when this improvement is made we shall get the reports of the different departments more promptly ?

Mr. PATERSON. We will get them more quickly.

Mr. KEMP. But we will not get them promptly, as we would from an ordinary printer.

Mr. PATERSON. The Secretary of State has been complaining that the reason he cannot get out the reports more quickly is the lack of accommodation in the Printing Bureau.

Mr. COCHRANE. I have been informed that the trouble is that the ministers themselves do not get the reports in the Printing Bureau early enough. The Minister of Customs used to find fault with the amount of money expended by a previous government for printing done outside the Bureau, and the country was led to believe that when these hon. gentlemen came in, the Printing Bureau would do all the work. I think I am safe in saying that several thousand dollars are paid for printing outside the Bureau. The Minister of Agriculture especially gets a large subvention for a paper —he does not own the paper, of course, but his brother has stock in it. The Minister of Customs does not look as serious as I have seen him on this side of the House. He is getting old like myself, and he will have to answer.

Mr. PATERSON. You had better be careful, then.

Mr. COCHRANE. I think I stand as good a chance of getting through the pearly gates as he does. I saw to-day in the editorial columns of a paper a statement of the enormous sums paid for printing outside the Bureau, and I think the attention of the minister who has control of the matter should be drawn seriously to the fact. We have a Printing Bureau, and we are paying large sums of money for its extension, and I am willing to do it ; but if we have a Printing Bureau at all, we should have one capable of doing the work, instead of paying enormous sums to Grit sheets for advertising when they are not doing the work.

Mr. HENDERSON. I think that the fund to which the hon. member for East Northumberland (Mr. Cochrane) refers is what was familiarly known as the reptile fund, which is being continued by the present government. Hon. gentlemen opposite made serious complaints about it prior to 1896, but I fear that this reptile fund is growing very rapidly. I hope that when the Printing Bureau is extended, this fund will be somewhat reduced. I have no doubt that the Minister of Customs is quite familiar with the fund, because I have no doubt that he often used the terms along with the hon. gentleman who formerly sat in the next seat to him, but who has been elevated to the Senate. I see the hon. gentleman smiling as if he enjoyed these reminiscences of olden times. It is certainly very pleasant to us all to know that bygone days are not forgotten.

Mr. PATERSON. I can only say, so far as this item is concerned, that I do not remember finding fault particularly with the printing in days gone by. It did happen occasionally that there were matters which I thought might be improved, and I intimated it in as gentle a manner and in as subdued tones as I could command ; but it was not in reference to the printing. As to the reptile press, I think I have seen that term somewhere, but I am not sure that I ever used it. I do not feel that I have much to reproach myself with in regard to the criticisms I offered in days gone by. Things were not managed then. in my judgment, as well as they are now. There is perhaps room for improvement on the part of some of us, and it would certainly be a great improvement if we could get our reports out more rapidly. I may say for the hon. Secretary of State that I know that he has made representations to his colleagues time and again as to the necessity of enlarged accommodation for the Printing Bureau. I believe he bends every

energy to the work of getting out the reports. Some of them have had to be printed in outside offices; but this has been done on terms that have met the approval of those who are competent to judge what is fair and right in such matters.

Mr. COCHRANE. Do you have to send them to Montreal?

Mr. PATERSON. I think there is a complete supervision with reference to that matter.

Mr. HENDERSON. Does the hon. gentleman mean to say that there was not as good a supervision over that whole matter prior to 1896? We have no evidence beyond the statement of the hon. gentleman, given at random, that any improvement has been made. But we know there is a much larger reptile fund than formerly, and whoever has charge of the fund had better give more attention to it and see that the money is not wasted. One or two evenings ago I was very much surprised to read the long list of moneys paid newspapers supporting the government. I did not notice any, or scarcely any, sum paid to any newspaper not supporting the government. I suppose that is why it is called the reptile fund. I can see no necessity for scattering this money all over the country, when we have a Printing Bureau at Ottawa and a large staff of men to do the work.

Mr. INGRAM. I might point out to the Minister of Customs that previous to 1896 the reptile press was glad to get written manuscript, but under the new order of things the manuscript must be type-written. The reptile press must be getting very independent, and if they received fewer favours might be glad to take written manuscript. I have the authority of the Secretary of State for what I am saying.

Mr. KEMP. It would be more satisfactory if the Minister of Customs could assure the committee that after this large amount which he asks us to vote is expended on the Printing Bureau, we will be able to have work done there as rapidly and thoroughly as in an ordinary printing office. We have the statement of the Minister of Agriculture that he has had manuscript regarding the census lying in that Bureau over a year waiting to be printed. That is certainly not business like, and I cannot understand why the government does not have things put in proper shape in that Bureau. Why does not the Minister of Customs tell the House that the government will put this Printing Bureau into proper shape, so that it may be able to turn out work as quickly and as well as it can be turned out by other offices? If manuscript regarding the census has been lying there over a year, no doubt other manuscript has had the same fate. It is quite evident that the whole thing is not managed as it should be, and I would strongly urge that it should be looked into more carefully, and that the minister should give us a more definite statement than he is now able to do.

Peterborough Armoury, $30,000.

Mr. HYMAN. The Prince of Wales Canadian Dragoons, 'C' Squadron, have their headquarters at Peterborough, and also the 57th Regiment of Peterborough Rangers, comprising eight companies. It is intended to construct an armoury there the same as at Chatham. The total cost, including heating, wiring, fittings, sidewalks and contingencies, is estimated at $65,000.

Mr. FOWLER. Has the land been bought?

Mr. HYMAN. It has not, but the department are in negotiations with the city to acquire a piece of land, and also an adjacent piece which can be used for parade purposes.

Mr. FOWLER. Does it belong to the city?

Mr. HYMAN. A part does, but the undertaking is that the city shall acquire all this land and we shall buy it from it.

St. Catharines drill hall, $45,000.

Mr. LANCASTER. When will this be erected?

Mr. HYMAN. The time in the contract is the 20th October, 1905, and it is understood it will be completed then.

Mr. LANCASTER. How much has been expended already?

Mr. HYMAN. The total expenditure is $54,800. There is an estimate for heating and fitting, wiring, sidewalks and contingencies.

Mr. FOWLER. What is the total cost?

Mr. HYMAN. The contract is for $79,829. The 2nd Dragoons are there. It is the special headquarters of 'A' Squadron, also the 2nd Brigade of Field Artillery and the St. Catharines Regiment—three different units which require increased accommodation.

St. Mary's public building, $15,000.

Mr. HYMAN. The postal revenue is $7,051; the customs, $20,497; and the population, 3,884.

Mr. INGRAM. Where does the department propose to build this post office?

Mr. HYMAN. No decision has been arrived at. The plan of St. Mary's is in my office, and a number of lots are marked off on it which can be obtained. When the prices are had, a decision will be given.

Mr. BLAIN. When will the building be commenced?

Mr. HYMAN. As soon as it is possible to obtain a site.

Mr. BLAIN. What will be the total cost?

Mr. HYMAN. It is estimated the total will be $30,000. The building itself will cost $21,000.

Mr. FOSTER. What rentals are paid now ?

Mr. HYMAN. $240 and $340.

Sandwich public building, $15,000.

Mr. HYMAN. The population is 1,450 and the postal revenue $955. There is no customs revenue.

Mr. FOSTER. How much do you propose to spend ?

Mr. HYMAN. We propose to expend there about $17,000. Sandwich is the county-town of Essex, and besides, is immediately opposite the city of Detroit. We may expend a few dollars more on the elevation of the building than we otherwise would.

Mr. BLAIN. Is it the policy of the department always to purchase a site for a post office building ?

Mr. HYMAN. During the course of these estimates that matter has come up quite often. Municipalities sometimes offer the government a site. Of course, where the site offered is a proper one, we accept it.

Mr. BLAIN. That applies to armouries as well ?

Mr. HYMAN. Yes.

Mr. FOSTER. What are the rentals now paid by the government in Sandwich.

Sir WILLIAM MULOCK. The position of Sandwich is peculiar. It adjoins the city of Windsor and Windsor has a very considerable revenue.

Mr. FOSTER. Not post office revenue ?

Sir WILLIAM MULOCK. Yes.

Mr. FOSTER. How much ?

Sir WILLIAM MULOCK. Over $30,000. In addition it is an exchange office with the United States, and whilst a large part of the revenue that might in one sense be attributable to Sandwich goes to Windsor, there is a great deal of distributing work done at Sandwich for which no credit appears in the revenue.

Mr. FOSTER. How does that affect the question ?

Sir WILLIAM MULOCK. The hon. gentleman asked what the revenue was. I do not know what the revenue of Sandwich is as shown by the books, but these are adjoining towns rather running into each other, with suburbs, I believe, connecting.

Mr. FOSTER. They generally do.

Sir WILLIAM MULOCK. I do not know to what the point of that remark may be, but there are many towns whose suburbs do not connect with the suburbs of other towns.

Mr. FOSTER. Suburbs generally connect somewhere.

Sir WILLIAM MULOCK. I understand that there is a continuous suburb between these towns.

Mr. FOSTER. Sandwich is a sort of double suburb ?

Sir WILLIAM MULOCK. The business between the two is so divided that a large part of the revenue inures to Windsor, while the incoming business, from which no revenue is derived is distributed from Sandwich, that is Sandwich has to do a great deal of work for revenue is earned but is credited to Sandwich.

Mr. FOSTER. Is seems a little involved.

Sir WILLIAM MULOCK. I would be glad to make it plainer. Sometimes, it happens that people receive their letters through one post office, but send their letters out by another. In the present case there are letter-boxes along the route between Sandwich and Windsor, and as Windsor is a railway point and a point of distribution, the collectors along the route take the letters to Windsor, and the people along the route, as a rule purchase their stamps at Windsor and so Windsor is credited with a relatively large revenue.

Mr. FOSTER. That's not fair of Windsor, is it ?

Sir WILLIAM MULOCK. Sandwich, at all events does not get credit for the business it does because of the circumstances I have mentioned. Nevertheless, letters are distributed through Sandwich.

Mr. FOSTER. Are there two distribution ends ?

Sir WILLIAM MULOCK. Yes, Windsor and Sandwich.

Mr. FOSTER. Which is the biggest end ?

Sir WILLIAM MULOCK. I do not know what the hon. gentleman (Mr. Foster) means.

Mr. FOSTER. The hon. gentleman (Sir William Mulock) is trying to argue that Sandwich does more business than the returns show.

Sir WILLIAM MULOCK. I say that a part of the revenue which, under other circumstances would appear to the credit of Sandwich goes to Windsor on account of the proximity of the two places.

Mr. FOWLER. It seems to me that the Postmaster General (Sir William Mulock) has made a strong argument against this grant. Letters, it appears, instead of being mailed at Sandwich are mailed at Windsor. If the business is done at Windsor that is

the best reason in the world why you should not have an expensive post office at Sandwich. After listening to the lucid argument of the Postmaster General I think this item should be dropped.

Mr. FOSTER. At least it should be diminished by a few dollars. Well give us the present rentals at Sandwich anyhow.

Mr. HYMAN. The rental is paid directly by the postmaster.

Simcoe public building, $15,000.

Mr. FOSTER. What is the population of Simcoe, and what are the revenues ?

Mr. HYMAN. The population is 2,627, the post office revenue $6,351, and customs $35,077.

Mr. FOSTER. What does the minister propose to expend there ?

Mr. HYMAN. On the building itself, $21,000 ; heating, $2,000 ; wiring, $750 ; fittings, $3,500 ; and contingencies to make a total of $30,000.

Stratford armoury, $47,000.

Mr. FOWLER. Has the lot been selected ?

Mr. HYMAN. The hon. member for North Perth (Mr. MacLaren) will know the properties—the Moore property, the Myers property and the Burke property. The question of site is not entirely settled.

Mr. FOWLER. What does the minister expect to pay for the land ?

Mr. HYMAN. In the neighbourhood of $8,000.

Mr. FOWLER. How big is the site ?

Mr. HYMAN. The lots have a frontage of 104 feet, 20 feet and 36 feet—sufficient for the whole size of the building.

Toronto customs house—alterations and additions, $15,000.

Mr. HYMAN. This is all a revote.

Mr. KEMP. Why was not the work done last year ?

Mr. HYMAN. Some question arose as to the method in which this money should be expended. We have now arrived at a decision, the plans and specifications are ready, and we will proceed. These alterations are to be done on the main building of the custom house. In the first place, there is a change in the basement; then there is certain underpinning work, then on the ground floor a new staircase is to be built, improvements made on the front of the building, certain wooden and glass partitions have to be moved, something has to be done on the arches, laying a tile floor, the old windows to be taken out and new ones put in so as to give more light, a certain number of partitions are to be removed, a new stairway on the ground floor—all internal improvements.

Toronto drill hall—additional accommodation for new corps, $40,000.

Mr. KEMP. Has this work been commenced yet?

Mr. HYMAN. There are practically two works comprised under this vote, and I shall have to ask in the supplementary estimates for a considerably larger vote. Plans are all in the hands of the printers, and we shall proceed immediately with the work of raising the armoury on one side and making it deeper. In addition to that, it is necessary to provide very much more accommodation, practically the old drill hall will have to be enlarged. This is the building known as the armoury. It is contemplated to have nearly as much space in the new building as there is in the old building, it will nearly double the area, but the cost will not be as great as in the old building, because we can take advantage of one of the walls and there will not be the same amount of excavation. The building will be lengthened to the east. It is all on government ground that we own there now.

Mr. KEMP. Why has this work not been done before ? The Minister of Public Works last year told us that the reason the work was not proceeded with was because of the severe weather in the winter time. Then why did not the minster proceed with that work in the summer? Now I want to know if the government are really sincere in their promise to go on now. From year to year this estimate has been put in here, and nothing has been done whatever and all the time the different corps in Toronto are cramped for want of space; indeed I think they are worse off than in any other part of Canada.

Mr. HYMAN. The plans for the expenditure on the armoury itself are in the hands of the printers at this moment, and that work will be proceeded with at once. As soon as the specifications are ready we will advertise for tenders, and contracts will be entered into. So far as the larger work is concerned, it will take some time to prepare the plans and specifications.

Mr. MACDONELL. I desire to take advantage of this occasion to call the attention of the minister to the statement his predecessor made last year in discussing this matter, on March 9. Referring to the same matter the minister said :

The plans are under consideration, and I think in a few days they will be decided upon.

'A few days' have gone by, nearly a whole year, and nothing has been done. I can assure the minister that the people of Toronto are a good deal dissatisfied. As my hon. friend from East Toronto (Mr. Kemp) has said, the militia has not anything

like adequate accommodation for their quarters. As the minister may have heard, there has been considerable difficulty among some of the battalions, and some unfortunate unpleasantness has occurred just because of the cramped condition. The various corps endeavour to get proper accommodation, and in doing so encroach upon other regiments. Perhaps the minister is not to blame for what has occurred in the past, but I would urge upon him the wisdom and necessity of having this matter undertaken as soon as possible, and completed as soon as possible.

Toronto examining warehouse—addition to, $12,000.

Mr. HYMAN. That is under contract.

Mr. MACDONELL. I would like to ask the minster if it is the intention of the government to build a new customs warehouse at Toronto, and also if it is the intention of the government to build a new post office at Toronto. I see no appropriation in the present estimates for either of those works. though possibly the minister may bring down supplementary estimates for that purpose. However, I desire to call his attention to a statement in the Toronto 'Globe' of October 13, shortly before the then pending elections, under the heading of 'New post office for Toronto—A great building adjacent to the union station—customs warehouse, too—charges rendered necessary by railway expropriation.' Then it proceeds to say :

The application of the Grand Trunk Railway Company for an order to expropriate that part of the city of Toronto lying south of Front street, between the custom house on the east and York Street on the west, for a union passenger terminal station and other purposes, came before the Railway Commission to-day. During the discussion an important announcement was made as to what the Dominion government purposed to do in the city of Toronto. The present examining warehouse will be taken over for railway purposes, and in lieu thereof the government will build a large new examining warehouse west of the custom house on the south side of Front street. West of the examining warehouse a magnificent new general post office will be erected.

Then the article proceeds to quote Mr. Ross, superintendent of post offices. He stated :

Sir William Mulock, the Postmaster General, was desirous that such buildings would be erected as would meet the growing needs of the most important city in the Dominion from a postal standpoint. The present postal revenue of the city of Toronto is $1,000,000 per annum, and an annual expansion of from $60,000 to $100,000 had been the record during the past few years.

In the same issue of the paper appears an editorial under the heading 'The new post office and custom house':

With characteristic farsightedness Sir William Mulock has been laying his plans for perfecting the post office system of this city.

It has become the greatest revenue producing point, and more mail matter is handled here than at any other place in the Dominion.

The article commenced in that way and it concludes :

The government is to be heartily congratulated on its recognition of the needs and growth of Toronto.

This was all before the elections. We see a different aspect of affairs at the present time. In examining the estimates before the House can we see any appropriations for the purposes that were indicated in this issue of the 'Globe' by the hon. Postmaster General ? I would like to ask the hon. minister if it is his intention to put into the supplementary estimates appropriations for these works that are spoken of in this manner in this paper ?

Sir WILLIAM MULOCK. Does the hon. gentleman (Mr. Macdonell) desire to know what the policy of the Post Office Department is in connection with the proposed postal station near the contemplated Union statin ?

Mr. MACDONELL. A new post office for Toronto—not a branch.

Sir WILLIAM MULOCK. My advice is that we should erect on the south side of Front street at the corner of Front and Bay streets a postal station that would do, of course, general business and that would be of a sufficiently extensive character to meet the reasonable expectations of a growing city like Toronto. I attended a meeting of the Railway Commission in Toronto—I do not remember the date, but some time last fall—when they were dealing with the question of expropriations for the purpose of the Union station, and in order to prevent the railway companies obtaining the lots that we desire I announced to the commission what I am announcing to the committee now that the Post Office Department would require a strip of land, of probably 250 feet frontage on the south side of Front street extending southwardly to the lands to be taken by the railway companies. We want to be in direct connection with the railway so that postal cars can be dealt with adjoining the post office itself. As to the style of building I offer no opinion. It will be possible, I think, to utilize the upper flats as an examining warehouse and in connection with the customs building I believe that the railways, though this I only know from hearsay, desire to expropriate the land occupied at present by the examining warehouse. If they do it will be necessary to abandon the examining warehouse and find other accommodation for it. I think my hon. friend the Acting Minister of Public Works has been considering that question and thinks that he will be able to find accommodation for the examining warehouse between the main building of the custom house which is on the south-west corner of Yonge and Front

streets and the building the lower portion of which it is proposed to utilize for post office purposes.

Mr. MACDONELL. The Postmaster General has stated what his advice is. I would like to know whether the government is going to follow his advice. If that is his advice is the government going to follow his advice and are we going to have a new post office and custom house in Toronto as stated in the paper to which I have referred, the statement being made therein on his own authority ?

Sir WILLIAM MULOCK. I do not know that it has been made on my own authority. I did not see the article before it was published. But, it quite represents what I would like and what I hope for. I expressed myself somewhat in that way at the Railway Commission but our action depends somewhat on the action of the railway companies. The present Union station is west of York street and before the conflagration, not anticipating their moving their site, we had made some progress in acquiring a site for a postal station on the south-east corner of York and Front streets. That property was owned by the city but leased to the Canadian Pacific Railway and we had made arrangements with the city to convey that property to us for a figure that had been spoken of. The transfer had been practically arranged, and if it had not been for the conflagration we probably would at the present moment have been erecting our building on that land. Since then the idea has originated of abandoning the Union station at the west side of York street and building a new one easterly of York street extending to Bay street. If the railway companies carry out that policy and establish a union station coming down to Bay street then it is the policy of the Post Office Department to erect, if we can do so, if the government will agree to it and I think they will—I have no reason to doubt that they will—our postal station on the south-east corner of Bay and Front streets. If the railway companies locate the station easterly of York street then our policy is to locate our post office at the south-east corner of Bay and Front streets but we cannot conclude anything until the railway companies determine their course.

Mr. MACDONELL. Will that new building be a general post office ?

Sir WILLIAM MULOCK. Yes, it will do all the business of a post office but it will not mean that we abandon the one at the head of Toronto street. It will be as much a general post office as the other.

Mr. MACDONELL. There will be no new general post office on the present site ?

Sir WILLIAM MULOCK. Where ?

Mr. MACDONELL. At the head of Toronto street.

Sir WILLIAM MULOCK. No.

Mr. FOWLER. Do I understand the hon. minister to say that the railway companies propose to take the site where the examining warehouse now is ?

Sir WILLIAM MULOCK. I think that is part of their scheme. Is my hon. friend (Mr. Fowler) familiar with the situation of Toronto ?

Mr. FOWLER. Yes.

Sir WILLIAM MULOCK. Well then he will remember that the custom house is composed of two buildings, one the custom house itself on the south-west corner of Yonge and Front streets. They do not disturb that but southerly of that and adjoining the tracks is what we call the examining warehouse and I think they want to enlarge their strip of land so as to run their tracks through there.

Mr. FOWLER. Do you think it is good policy to spend $12,009 on additions to that building ?

Sir WILLIAM MULOCK. It has all been stopped.

Mr. FOWLER. But I see it in the estimates.

Mr. HYMAN. Of course, because the contract was let long before there was any idea of touching this building at all. The very moment the department had any notification of the intention of the railway companies the work was stopped. In any case if the railways took this building they would be required to pay the government for any work that has been done on the building even if we were to go ahead and complete the building. This contract has been stopped. There is only an expenditure requisite to finish the work of some $6,000. The question is now before the department as to whether it wil not be better to spend about half of that sum, about $3,000, to complete this building temporarily so that it can be used. At the present time they can make no use of the building whatever and we are now going to make an expenditure of about $3,000. It may be two or three years before the railway companies will actually take possession of the building and in the meantime we will remain in possession. If the railway companies take over the building they will have to pay us its full value. Then, it is the intention to acquire the whole of the land between the present custom house and Bay street. The corner part of it is to be used for the erection of a postal station and another portion will be used for the erection of the examining warehouse. That is the policy of the two departments. It is necessary for the pneumatic tube service and for postal purposes generally that the post office shall be in the immediate vicinity of the station. The policy of the government depends entirely on the action of the railways.

Mr. KEMP. The plans which were presented before the Railway Commission involve taking the land between the present custom house and Bay street for the Union station. Now, we are informed by the Postmaster General and the Minister of Public Works that it is the intention that this shall be taken for customs purposes and for the purpose of a sub-post office, so that the whole explanation which we have had is not at all clear. I repeat that this very site which these hon. gentlemen tell us is for the purpose of an examining warehouse, customs house and post office is the very location where it was intended to have the new union station, not west of Bay street.

Mr. HYMAN. They are taking more property than Bay street are they not?

Mr. KEMP. They are not going west of Bay.

Sir WILLIAM MULOCK. They are going to York street.

Mr. KEMP. There is no application.

Mr. HYMAN. We do not propose taking the whole depth, but the front.

Mr. KEMP. I understood they intend to take the whole.

Mr. HYMAN. They may, but we do not.

Mr. KEMP. Why, if this new building is being proceeded with, would you contemplate making this large expenditure? These improvements were commenced after the fire, but as I understood the minister some years would elapse before the new building is erected. May I ask the hon. gentleman when this question is to be settled?

Mr. HYMAN. I have no idea at all. The railways changed their plans. Their original plan was not to take this examining warehouse property from the government, but they found that it was necessary later to do so, because they could not otherwise run their tracks. No decision has yet been arrived at, and in the meantime we thought it better not to increase the examining warehouse, but to make it fit for use.

Mr. KEMP. Is it not possible to hurry the matter? The railways are slow, and the property holders' interests are being sacrificed by the long delay in dealing with the matter. Those who own the land have lost money by the delay. The government are interested; can they not hurry the matter along? I would press the necessity of something being done at an early date.

Sir WILLIAM MULOCK. What?

Mr. KEMP. I do not know. I think that with the influence of the government they could do something.

Sir WILLIAM MULOCK. Well what?

Mr. KEMP. I am not prepared to say offhand what steps could be taken, but surely something could be done by a conference between the four parties who are interested in the matter, the railways, the Railway Commission, the city of Toronto and the property holders.

Sir WILLIAM MULOCK. I noticed a report in the papers yesterday that the Railway Commission, at a recent sitting in Toronto, determined the terms on which the valuation should be made. It is optional, I suppose, with the railway companies to buy the property or not. I do not suppose there is any way in which we can compel them to go on and complete the purchase. They have given notice and it is for them to proceed. It is very unfair for them to lock up this property. I entirely sympathize with the property holders and I think that the people who are interested in the properties there have been very badly used indeed as from the moment notice of expropriation was given, they could not go on and rebuild, yet the railway companies did not complete their purchase and then the lessees who were liable to pay rental and taxes could not rebuild, could not fix locations elsewhere for their business and the whole thing is most unsatisfactory. It is an illustration, I think, of the unsatisfactory condition of the law applicable to the expropriation of lands by railways, and I think it indicates to us that the law requires amendments so that when railways contemplate demoralizing trade by giving notice of expropriation they shall be bound by that and perhaps be considered from that moment the purchasers, subject to the determination of value. Then they could not play fast and loose. The law is very unsatisfactory but it is that way. It has been built up in the interests of the railways. They were here, I suppose, when we knew nothing of railway law and it is only now that we are beginning to find the weakness of our railway law. I am not making any reflections on any one or on any government; we must all take our share of responsibility, but as I said, I think that the railway law with regard to the expropriation of lands is most unsatisfactory and unfair. There should be more mutuality about it, so that once a railway gives notice of expropriation it should be bound from that moment to proceed with the expropriation and purchase.

Mr. KEMP. Are they not liable to damages?

Sir WILLIAM MULOCK. I see by the newspaper reports that the commission, if they are correctly reported, found that the purchase shall be deemed to have taken place from the time of the notice, but I believe so far as the press reports are concerned, that they did not decide whether the owners are entitled to compensation for

loss of business. That point was raised, but does not seem to have been determined.

Mr. KEMP. If the railway authorities change their minds, what is the position of the property owners ?

Sir WILLIAM MULOCK. That is a point of law ; I do not know. It would be most unfair if they had no redress. At one time there was a clause in the Railway Act saying that a railway company might desist at any time after giving notice of expropriation and arbitration, no matter what progress might have been made. They could at any moment they chose, desist and there have been cases where railway companies have abandoned proceedings after the arbitration has made some progress. Possibly getting the idea that the award was going against them they desired to have new arbitrators to start again. I think that clause of the Act has been taken out, but some years ago it was the law and it was a most unfair provision of the law.

Mr. LENNOX. The Postmaster General spoke of the possibility that the railway company would expropriate the examining warehouse. I would like the Postmaster General to state whether the railway company can, as a matter of law, expropriate against the government. The Minister of Public Works referred to it, but I did not think he made it definite one way or another.

Mr. HYMAN. I think I was clear. There is no question of doubt that the railway companies cannot expropriate government property, but I did not suppose that the government could stand in the way of the city of Toronto if they came to a conclusion, and if the railway companies wish to purchase that property for the purpose of an approach to the station it seems to me that we should not adopt a dog in the manger policy. We should negotiate, the railways of course paying us full value for the property. It is a matter entirely for the government to decide whether they would retain the property or not.

Toronto military buildings—barracks for permanent corps to replace property sold to the city, $50,000.

Mr. MACDONELL. What headway has been made with regard to the erection of this new barracks ?

Mr. HYMAN. It is a large scheme. The headway so far has been that the requirements of the Militia Department have been furnished to the Department of Public Works and the Public Works Department is at the present engaged in making the necessary plans and specifications for the barracks.

Mr. MACDONELL. When is it expected that they will commence operations ?

Mr. HYMAN. It will be necessary to put another vote in the supplementary estimates for the year, and if the committee will allow this vote to pass, by that time I am sure I shall have full information. The hon. gentleman is aware of the negotiations that took place for the sale of one property and the purchase of another.

Mr. FOWLER. Why was that done ?

Mr. HYMAN. Largely to meet the wishes of the city of Toronto. It was felt, from the city's standpoint, that it was better to have the barracks for the permanent force in another location somewhat further removed from the city.

Mr. KEMP. When does the government have to abandon the present barracks ?

Mr. HYMAN. I really do not know that part of the arrangement, which was made by the Militia Department and not by the Public Works Department.

Mr. KEMP. Unfortunately, the Minister of Militia is not here.

Mr. MACDONELL. The great reason for haste is the absolute inadequacy of the present barracks.

Mr. HYMAN. As far as the Public Works Department is concerned, the very moment the money is available we will not lose any time in proceeding with the work.

Toronto post office—land, building, pneumatic plant and machinery, $100,000.

Mr. KEMP. What has been done about that ?

Mr. HYMAN. It is intended to have a pneumatic tube system to quicken the service between the railway station and the main post offices. The department are proceeding as fast as they fairly can. The pipe has been bought by contract. It is being manufactured in Glasgow, but it will be a considerable time before it can be delivered. The tenders were for 36,000 feet in Toronto and 8,000 in Montreal at $1.45 per foot. It was bought after public tenders were called for.

Mr. FOWLER. Can that not be made in this country ?

Mr. HYMAN. No. I think the lowest Canadian tender was $5 per foot.

Mr. FOSTER. What is the diameter of the pipe ?

Mr. HYMAN. Ten inches. The city of Montreal and the city of Toronto are the only places in Canada where the department propose at present to try the system.

Mr. KEMP. Where is it in existence in other parts of the world ?

Mr. HYMAN. In all the large cities of the United States and, I think, also in the large cities of England.

Mr. HENDERSON. What will be the rate of speed ?

Sir WILLIAM MULOCK. At least a mile in two minutes.

Mr. KEMP. This has nothing to do with the improvements that have recently been discussed ?

Mr. HYMAN. Yes ; it has to do with them so far, that we cannot determine where the terminal is to be until we know where the station is to be ; but we have ordered the pipes, and are proceeding as rapidly as we can.

Mr. FOWLER. Is there a vessel put in the tube ?

Sir WILLIAM MULOCK. Yes ; a carrier.

Mr. KEMP. Are there to be double tubes?

Sir WILLIAM MULOCK. Yes.

Mr. BLAIN. How long does it take now to convey the mail from the post office to the depot ?

Sir WILLIAM MULOCK. I suppose if this were to connect only with the main office, we might not adopt the system ; but Toronto is spreading out for a great distance westward. The Union station is not central, and with trains going and coming at all hours of the day, an hour's delay to a business man in getting his mail is very serious. Even the street railway is a very slow process for conveying the mails from the Union station two or three miles distant.

Mr. INGRAM. Instead of using your automobiles.

Sir WILLIAM MULOCK. We have tested them and found them a failure.

Mr. KEMP. They are out of commission ?

Sir WILLIAM MULOCK. I do not know that they have all been used up but we have tested them and they have been tested elsewhere and been pronounced unworkable.

Mr. HENDERSON. I understand that the scheme now proposed has passed the experimental stage and the minister has no doubt it will prove a success.

Sir WILLIAM MULOCK. No doubt about it.

Mr. FOWLER. Are the automobiles in working order ?

Mr. HYMAN. I understand they are pretty well worked out excepting one machine. There were six altogether.

Toronto post office—additional postal station, $60,000.

Mr. HYMAN. That is on 675-7-9-81-83, Young and Charles streets.

Mr. KEMP. Is the Queen street post office complete ?

Sir WILLIAM MULOCK. Yes, it is in operation.

Toronto postal station ' C '—quarters for caretaker, $1,500.

Mr. KEMP. Is that the Queen street post office ?

Sir WILLIAM MULOCK. Yes, we are making quarters in the building for the caretaker.

Some resolutions reported.

Sir WILLIAM MULOCK moved the adjournment of the House.

Mr. FOSTER. What does the government propose taking up to-morrow ?

Sir WILLIAM MULOCK. The Minister of Public Works thinks there is some understanding between the Minister of Justice and the hon. member for South York about proceeding with the Bill respecting the Railway Commission. When that is disposed of, we shall proceed with supply, public works estimates.

Motion agreed to, and House adjourned at 11.50 p.m.

HOUSE OF COMMONS.

THURSDAY, February 23, 1905.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 72) to incorporate the Canadian Canals Corporation.—Mr. Calvert.

Bill (No. 73) to incorporate La Compagnie du chemin de fer à Montréal, Québec et du sud.—Mr. Gervais.

QUESTIONS.

DEPORTATION OF IMMIGRANTS.

Mr. URIAH WILSON asked :

1. How many immigrants were deported from this country during the fiscal year 1904, and up to the 1st of February, 1905 ?
2. What were their nationalities, and what was the cause of their being deported ?
3. How many were deported for diseases, and for what diseases ? How many because they were liable to become paupers ?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). I am sorry to say that this answer will not be ready for some time yet and I would therefore ask that the question stand.

ACETYLENE GAS LIGHTS.

Mr. AMES asked :

1. How many oil lights, under the control of the Department of Marine and Fisheries, have

been, since the 1st of July, 1904, replaced by automatic acetylene gas lights ?

2. What annual saving will these changes effect ?

3. How many keepers have in consequence of these changes been dismissed ?

4. Who were they, and what were their former salaries ?

Hon. RAYMOND PREFONTAINE (Minister of Marine and Fisheries) :

1. Thirty-two.

2. $910.

3. Five.

4. Thomas Fraser, Windmill Point light, $180 ; John Hamilton, Hamilton's island light, $130 ; Barnaby Malette, lightship No. 1, $250 ; Vital Crépin, lightship No. 2, $300; Michel Allard, lightship No. 3, $300.

HALIFAX FISHERY AWARD.

Mr. A. MARTIN asked :

1. Has the government decided to distribute among the provinces interested, the amount of the award received by Canada, generally known as the Halifax Fishery Award ?

2. If so, on what basis is the distribution proposed to be made ?

3. If not, is the question to be submitted for decision to the Privy Council of England or the Supreme Court of Canada ?

4. Will the government take action in regard to the settlement of this question during the present session of parliament, if not, already settled ?

Hon. RAYMOND PREFONTAINE (Minister of Marine and Fisheries) :

1. No.

2, 3 and 4, answered by No. 1.

Mr. A. MARTIN. Is the third section of the question answered ?

Mr. PREFONTAINE. Yes, it is answered by the first.

Mr. A. MARTIN. It is not answered by the first. I must say that these questions are not answered. The third section of the question reads :

If not, is the question to be submitted for decision to the Privy Council of England or the Supreme Court of Canada ?

Is that answered ?

Mr. PREFONTAINE. Yes, that is answered, 'no', the same as the first part of the question.

DREDGING AT RUSTICO HARBOUR.

Mr. A. MARTIN asked :

1. What has been done by the government during 1904 to dredge the harbour at Rustico, Prince Edward Island ?

2. Has the sandbank in the harbour been removed ?

3. If not, what steps are to be taken to remove it ?

4. How much has been spent on this work last season ; what were the means used in performing the work, and who had charge of it ?

5. How many vessels were lost or stranded on this bar during the season of 1904 ?

Hon. CHARLES HYMAN (Acting Minister of Public Works). No dredging was done during 1904.

5. According to information supplied by the Department of Marine and Fisheries, only one vessel was reported wrecked at Rustico, during the year 1904.

RESOLUTIONS RE NORTHWEST TERRITORIES AUTONOMY.

Mr. W. F. MACLEAN (South York). I would like to ask the Prime Minister whether it is his intention to give notice of resolutions in connection with the Autonomy Bill and when we may expect these resolutions.

Sir WILFRID LAURIER. It is not expected that the second reading of this Bill will be taken for some time to come. I cannot say when the resolutions will be introduced, but they will be introduced in ample time for consideration on the second reading of the Bill.

INQUIRY FOR RETURNS.

Hon. GEORGE E. FOSTER. I would like to call the attention of the ministers to the delay in bringing down returns. The delay seems a little inordinate ; may be it is not, but I would like to draw the attention of the Premier to the following : There are the returns from the Minister of Railways with reference to the hay transport question. We think that by this time they should be ready and we would like to get them as soon as possible. Then there is one with reference to the Royal Mint and another, of which I cannot complain, because it has not been passed so long, with reference to public buildings in towns of 5,000 population, or less. That is a return which should take a very short time to prepare and I would be glad to have it as soon as possible.

Hon. H. R. EMMERSON (Minister of Railways and Canals). I might explain with reference to the motion for a return for papers connected with the transportation of hay that the mails and trains have been so impeded in Cape Breton that we have not been able to gather up the certificates. They have to be brought in from the different stations to Moncton and then forwarded on here. We have been waiting for a complete return and I can assure my hon. friend that the information will be brought down at the earliest possible moment.

Mr. FOSTER. That is a fair excuse unless we throw it back on the minister and say he is there to see that the trains are kept running.

STEAM COMMUNICATION WITH PRINCE EDWARD ISLAND.

Mr. A. MARTIN. Before the Orders of the Day are called I would like to ask the Minister of Marine if the steamers have succeeded in renewing communication with Prince Edward Island? What was the last trip the steamers made?

Hon. RAYMOND PREFONTAINE (Minister of Marine and Fisheries). I am not informed that the ferry has been resumed. I understand the last trip was made a fortnight or three weeks ago.

Mr. A. MARTIN. That is very indefinite. Is it not four weeks?

Mr. PREFONTAINE. I have not the exact date.

Mr. A. MARTIN. Has communication been renewed or is it still at a standstill?

Mr. PREFONTAINE. Communication has not been renewed.

QUESTIONS RE TRANSCONTINENTAL CONSTRUCTION COMMISSION.

Mr. E. D. MONK (Jacques Cartier). Mr. Speaker, before the Orders of the Day are called, I would like to ask the government if questions concerning the doings of the Transcontinental Railway Construction Commission can be answered and information can be obtained in regard to those questions, when they are asked in the usual form. I am tempted to seek this information because, on the 20th February instant, I put the following question:

1. Did the government, during the months of October and November, 1904, employ civil engineers to make a survey for a line of railway in the county of Joliette, Quebec?
2. For what object was this work and survey undertaken by said engineers, and was this work and survey undertaken in connection with the proposed Transcontinental Railway?
3. What was the total cost of this work and survey already accomplished by said engineers and their assistants?
4. Have said engineers made their report concerning this work and survey? If so, what was the date of said report?
5. Who was the overseer charged with the direction of this work, and what salary did he receive?

This question was answered in the following form:

Hon. H. R. EMMERSON (Minister of Railways and Canals). The government did not during the months of October and November employ civil engineers to make a survey for a line of railway in the county of Joliette, but I have reason to assume that the Transcontinental Railway Commissioners made a survey through that county, not under the direction of the government.

The point to which I wish to draw the attention of the government is that it seems to me that the Transcontinental Construction Commission, is so to speak, a department of the government. I believe that under the rules, questions can be put in this House to the government, to the ministers and to individual members. This last form is seldom adopted. Most of these questions in fact can only be answered by information sought in the different departments, sometimes far from Ottawa. That information is obtained from officials of the government at some remote places. It seems to me that a question put in this form is pertinent and should have been answered on the principle that this commission is really a servant of the government. The practical object of my question is to know in what form, according to the rules, questions must be put. If they are put in the form suggested to me by the government, will questions be answered or is the Transcontinental Railway Commission a body independent of this House?

Sir WILFRID LAURIER. The answer to my hon. friend (Mr. Monk) is to be found in a motion of which my hon. friend has himself given notice, asking all information with regard to these surveys. When the motion is reached, I have no doubt it will be carried, but it will have to be amended, because the information has to be obtained from the Transcontinental Railway Commission, and not from the government.

Mr. MONK. Perhaps my right hon. friend will allow me to say that that is not the information which I sought by my question. The information sought by the question I put was simply in relation to the fact. In the motion I asked for a copy of the report, detailed accounts of expenses and the names of the parties employed. The question I put had reference to a department of the government, and I think should have been answered in the form in which it was put.

Sir WILFRID LAURIER. If my hon. friend wants the information, he will have to make a motion. We have not the information in our hands, but shall have to obtain it from the commission itself.

THE CAPITAL OF SASKATCHEWAN.

Mr. J. H. LAMONT (Saskatchewan). Mr. Speaker, before the Orders of the Day are called, I wish to ask the Prime Minister if the Bill providing for the creation of the province of Saskatchewan fixes the permanent capital at Regina, as stated in one of the evening papers yesterday?

Sir WILFRID LAURIER. No. It is provisional only, and subject to the will and the determination of the legislature.

RAILWAY ACT AMENDMENT.

House in committee on Bill (No. 36) to amend the Railway Act, 1903.—Mr. Fitzpatrick.

On section 1—tenure of office of chief commissioner if ex-judge.

Mr. W. F. MACLEAN. Apparently it is the intention of the government to go on with this proposition and to recognize the principle of the promotion of judges. In a former discussion in this House I tried to show that it was bad policy to introduce this principle in this country, and I still hold the same opinion. The ends of justice will be better served if those who are appointed judges remain where they are, if hopes of translation to other boards or courts are not held out to them; if once they have taken office they concentrate their efforts entirely upon the interpretation of the law and the doing of justice, instead of trying to earn promotion to some other sphere where the emolument is greater. Bearing on that, I wish to read the opinion of a newspaper which is supposed to reflect the sentiments of the farmers of this country. Last week the 'Weekly Sun' said:

> Is it desirable that judges should be open to promotion by the government of the day? To ask the question, it seems to us, is to answer it. The courts must be free from any suspicion of subjection to political pressure, and how can such freedom exist if judges can be promoted at the will of the government? Give to an administration power to advance a judge who strains the law to favour the party in power in an election trial, and we shall at once have all the evils of an elective judiciary with none of the advantages of that system.
>
> Once a man is appointed to a seat on the bench it should be clearly understood by all concerned that he has nothing further to hope for or fear at the hands of the government of the day.

This utterance, which is supposed to reflect the opinion of the every-day farmer and the ordinary citizen of this country, expresses good policy. It is on the line of the precedent established in the old country. It is in the public interest that our judges should not have the chance of being promoted to offices with higher salaries, but that they should concentrate their whole lives to the doing of justice in the sphere in which they are placed. Hon. gentlemen opposite have asked, should a judge not aspire to promotion? I say he should not; I say that the door ought to be shut on such aspirations. True, this may be somewhat detrimental to the judge; but it is not the hopes or prospects of the judge that ought to govern us, but the doing of justice and the maintaining of the integrity of the bench, which is of much higher concern to the people of this country. I leave that point simply with that statement, and I go on to the next point, that is, that the government propose to make the chairman of the Railway Commission removable only upon an address of the Senate and House of Commons. This is a direct reversal of the policy that was laid down here by the government when they passed the Railway Act through this House. When they introduced the Bill to establish a railway commission consisting of the chairman and two assistant commissioners, they said: we do not intend to have these men placed as judges, but as lieutenant governors. The Hon. Mr. Blair, when introducing the Bill—said this:

> The opinion of council, in going over the Bill, was that it would be desirable to place the members of the commission very much in the same position as lieutenant governors under the British North America Act. It is a very cumbrous proceeding to invite the action of the Senate and House of Commons by an address. Cases might arise in which it would be very important and desirable that prompt action should be taken without waiting for a session of parliament.

Yet the proposal now is to absolutely reverse the policy that was then laid down as being in the public interest. I will quote from what Mr. Blair said in that respect:

> The Bill which we submitted last year contained, and the present Bill, when printed, will be found to contain a clause providing that the members of the commission are only removable on an address of both Houses of parliament to the Governor General. This, on full consideration, we concluded to change, and although the Bill when it is distributed will contain such a clause, it is an oversight which will be remedied in the committee. We propose that the members of the commission shall be removable in the same manner as the lieutenant governors of the provinces, namely, by the Governor General in Council for cause.

Now, I think the government are bound to give a reason for this reversal of policy. They said they wanted to have the members of this Railway Commission occupy the same status as lieutenant governors and they took power to the Governor in Council to remove them for cause. Now they are introducing a Bill to provide that the chief commissioner, if he happens to be a judge, can be removed only on an address of both Houses of parliament. A very interesting incident came up in the Railway Committee room this morning. We were discussing how the public might be relieved from certain conditions that exist in connection with railways, and it was argued with great vehemence by railway representatives that this Railway Commission was not only judicial but legislative.

Mr. FITZPATRICK. In what respect is it legislative?

Mr. W. F. MACLEAN. Read the Act in any of its sections almost, and you will find evidence of my statement. Take clause 25:

> The board may make orders and regulations limiting the rate of speed at which railway trains and locomotives may run in any city, town or village or any class of cities, towns or villages described in any regulation; and if the board thinks fit the rate of speed within certain described portions of any city, town or village, and allowing another rate of speed in other portions thereof.
>
> Section 25 (f). The board may make orders and regulations with respect to the rolling stock

apparatus, cattle guards, appliances, signals, methods, devices, structures and works, to be used upon the railway so as to provide means for the due protection of property, the employees of the company and the public.

All through that Act, this railway company is given practically legislative powers. The Minister of Railways argued all morning in the Railway Committee that great power in matters of legislation were practically vested in this Railway Commission. Then I come to this point, which I commend to the right hon. gentleman who says he has always been an apostle of responsible government. Where you have legislative powers conferred on anybody, ought not that body to be responsible? If this Railway Commission is vested with legislative powers and functions, it should be responsible to parliament, and it was with that intention that the law was made as it passed two years ago. Mr. Blair's argument was that the only way in which you could keep a check on this Railway Commission and compel it to discharge its duties was to make it responsible to parliament, that was why the commissioners were made removable by Order of the Governor General in Council, and in thus limiting their tenure of office, their conduct could be discussed in this House and relief obtained where required. If the conduct of these commissioners is subject to discussion in this House, then the responsibility will rest on the government either to remove them, if the House has censured their administration or change the law. It seems to me that the public interest demands that this commission should be kept as it is and the chairman, as well as every other member of that commission, be removable by Order of the Governor General in Council. I make the charge boldly that the government, by this amendment to the Railway Act which they are asking us to pass, are reversing their policy. Now that the elections are over, they are taking a step backwards in the interests of the railway companies; and because I brought Judge Killam's name into the debate, not in any spirit of criticism as regards that gentleman, who justly holds a high place in the judiciary, but because I thought that the government were not justified in placing the chairman of the commission, whether he might be judge Killam or anybody else, in a different position from that provided under the present law, the right hon. gentleman said I was casting a slur on a distinguished member of the bench. I was not doing anything of the kind, but the right hon. gentleman and his government are casting a slur on the policy they adopted two years ago, and which they led the public to believe would be maintained.

Mr. FITZPATRICK. My hon. friend will of course understand that when I say I cannot do better than refer him to the debate that has already occurred for an answer no discourtesy is intended. Almost everything my hon. friend has just said was then argued with equal force and emphasis, and I then endeavoured to reply as well as I could. My hon. friend knows the views I hold in common with himself respecting the promotion of judges meets with my entire approval, but the views he and I hold in common do not appear to have got beyond the apostolic stage. We are both apostles of a new idea, and new ideas do not advance as rapidly as we would like. In this country the principle of no promotion for a judge has never been accepted or acted upon, nor has it been acted upon in England to any great extent. It has been stated in England in the abstract, but has not been lived up to. In the present instance however, we are not dealing with the question of promotion, but with the question of the translation of judges from one sphere to another.

We transfer the judge from the position of judge of the Supreme Court to the position of chairman of the Railway Commission. That brings me to the other question my hon. friend brought up—the question of tenure of office. I understand him to put his argument in this way: It was intended, when this Railway Act was introduced, to make these Railway Commissioners practically controllable by parliament; the intention was that their conduct might be discussed in parliament with greater freedom than would be possible if they were judges. But I would point out that there is nothing here that departs from the principle laid down in the Railway Act. We do not depart from the principle of removal of members of the commission by the Governor in Council. We maintain that principle. But with respect to one particular class of persons, the judges of this land, we provide that if one of them is taken from his court and made chairman of the Railway Commission, his tenure of office should continue as it was before. It is not a question whether the chairman of the Railway Commission shall or shall not be removable by vote of parliament, but it is a question whether or not we shall take to ourselves the right to extend the sphere within which we may select our chairman of the commission, and whether we shall or shall not so arrange our legislation as to put us in a position to go to our judges and say to them: We can requisition your services for this position without in any way interfering with your tenure of office. We do not go beyond that. We do not say that if a layman is made chairman of the commission he shall not be removable by the Governor in Council, or that the two other commissioners shall not be so removable. The general rule with regard to the tenure of office remains the same; all we say is that if we hapen to take a judge as chairman of the commission then, with regard to that particular individual, his tenure of office as

judge shall not be altered. I hope my hon. friend (Mr. W. F. Maclean) understands that. These are the facts. If he misapprehends the Bill, it may be because he has studied newspaper reports about the Bill, rather than the Bill itself.

Mr. W. F. MACLEAN. Will the hon. minster permit me to answer him in one word?

Mr. FITZPATRICK. Certainly.

Mr. W. F. MACLEAN. The hon. minister says that this is an exception, and an individual case. I venture the prediction that every appointment hereafter will be of a judge from the bench, so that from this time forward—and that is the intention of the Bill—this principle shall always apply to the chairman of the commission.

Mr. FITZPATRICK. Of course, my hon. friend will realize that my obligation is to deal with the Bill and not with his predictions. His predictions vary so that it would be, perhaps, embarrassing to follow them. I would like him to do as I am doing—to deal with the Bill and leave the predictions aside. And let me ask him if my statement is not correct as to the actual provision of this Bill. Does not the tenure of office remain the same as it is now for members of the commission except in one particular case?

Mr. W. F. MACLEAN. The hon. minister is begging the whole question.

Mr. FITZPATRICK. I put the question if not to my hon. friend, to the House for his benefit. Does the general principle of appointment and tenure of office remain the same as before?

Mr. W. F. MACLEAN. Will the hon. minister allow me to ask him a question?

Mr. FITZPATRICK. Yes.

Mr. W. F. MACLEAN. Does not it follow that under this exception the general principle can be ignored for ever in the future?

Mr. FITZPATRICK. My hon. friend has not answered my question, but I will answer his. The general principle remains the same as before. If, in the future, instead of asking a judge to become chairman of the commission, we choose a chairman from the bar, or from outside the legal profession, he will be removable by the Governor in Council. There is no use in dealing with predictions about it. We have to take the responsibilities for the legislation we have introduced. But we want the legislation to be understood, and we want the House to pass upon the measure and not upon some misapprehension of the measure.

Mr. SPROULE. This is class legislation with a vengeance.

Mr. FITZPATRICK. It may be so in the view of my hon. friend (Mr. Sproule) but, of course, I cannot be expected to take that view. But, I would like to state my case in the meantime——

Mr. HAGGART. Will the minister answer this question: Suppose that two other commissioners are appointed under the same tenure of office as this chairman, what would become of the general principle of appointment ?

Mr. FITZPATRICK. The application of the principle is to the chief commissioner alone. That is the conclusive answer. Now, what will be the condition of affairs if this Bill goes through? You will find the Board of Railway Commissioners, so far as tenure of office is concerned, will continue to be, as they are now, removable by the Governor in Council. That will be the general principle. But, if you take a judge as chairman of the Railway Commission, then, so far as that person is concerned he will not be removable from his office except on the action of parliament. That is what the legislation provides. We desire to be able, if the man best qualified for this position happens to be a judge, to go to him and offer him the position with the assurance that, if he accepts it, he will be in no way prejudiced so far as his tenure of office is concerned.

Mr. HAGGART. It is confined them, to the chief commissioner ? I thought it applied to all.

Mr. FITZPATRICK. It is confined absolutely to the chief commissioner. And there is a reason for that. The chairman, so far as questions of law are concerned, is the supreme arbiter. His ruling upon a question of law is binding upon the commission. Therefore, it is desirable that we should have a man in that position—that honourable and important position—who has not only the necessary legal attainments, but, in addition, has had judicial experience. We think that, under certain conditions, this may prove most desirable. The chairman practically plays the part of a judge. From his judgment on points of law there are few appeals, and these under most restricted conditions. Now, we say, that, in order to enable us to secure the services of such a man, it is desirable to amend the law in this particular. I do not think I can add anything to this, I fear I have wearied the House by repeating what I have said before. But let the legislation be understood. I do not want the hon. member for South York (Mr. W. F. Maclean) —I say it without any discourtesy—to misrepresent the Bill, or hon. members generally to decide upon anything except the Bill itself.

Mr. LENNOX. I rise with some diffidence to speak upon this question, for certainly it is a question of difficulty. I do

not think it is free from doubt whichever way you look at it. Having given it consideration both when it was put before the House and to-day, and having listened to the Minister of Justice (Mr. Fitzpatrick), I am obliged to say that, in my opinion, the departure now being made is attended with danger. It is quite true that this Bill applies only to the chief commissioner. But, that being the case it applies to one who, as the Minster of Justice has said is in the position of a supreme arbitrator. A good deal of discussion has taken place throughout the country as to the peculiar and special powers that are given to the chief commissioner. But I apprehend that is absolutely necessary that these powers should be intrusted to the one who occupies that position. In this commission we have virtually two courts sitting, a court of three for the trial of questions of facts, and a court of one for the trial of questions of law. We must confine the decision of these cases of law, in the first instance, to some one who has a knowledge of law and is able to decide them. But all the same, we are giving this chief commissioner a great deal of power, very much more than we are giving to any of the others, and in proportion as we are giving him more power it is essential that we should be in a position, whatever his feelings might be, to control those powers in the interest of the country, in case it should happen—and that is possible, though not probable—that he does not appear to be acting in the interest of the country. There can be a great deal said in favour of the legislation that is now proposed. It is the same class of legislation that we are applying, as I understand, to the Auditor General. Is that correct?

Mr. FITZPATRICK. Yes.

Mr. LENNOX. In the case of the Auditor General, we have on many occasions pointed out the great benefit of the system we there adopted. I am convinced yet that it is a benefit. The difficulty that I see is this, that it removes to some extent the control that we have over the chief commissioner, and introduces what I regard as a great danger, the danger of political influence. In the case of the Anditor General there is no great power that can be rallied by him in his support so that he can virtually defy parliament. There is no great power that can be rallied against him so as to do him an injustice, or do the people an injustice by dismissing him when he is there in the interest of the people. But in the case of a chief commissioner who is controlling to a large extent the great railways and corporate interests of the country, there can be a lobby of such stupendous influence invoked as has never been presented probably upon any occasion in this House of Commons. When a question arises in this House we are confronted with great corporate interests, but usually by a corporate interest of one great railway alone, and fortunately for the balance of power, we have another great corporate interest, another great railway company, probably minimizing to some extent the influence of the other. But when we come to deal with these we have the possibility of that kind, the corporate influence of all the great railways of this country, and they are growing greater every year. We may have the influence of all the great railways on the one side and the people demanding a dismissal upon the other; and I venture to say, without any reflection upon parliament or upon any member thereof now sitting here or who may sit here, that it is not in the interest of this country, at least it is very questionable whether it is in the interest of this country, that we should have an official as commissioner in that position, as regards our right of removal. It is a very serious question, one of the most serious which parliament has been confronted with. It is a very radical departure from the principle upon which this matter was introduced in the first instance. It is a departure as to the appointment and control of at least a third of the commission, yes, more than a third, because it is the chief commissioner that has most control, the one who interprets the law. He has three-fourths as much power as the power of the other two combined. Therefore, though I do not want to be extreme, because I recognize the importance of looking at this matter calmly, still I desire to call attention to the fact that a great question is at issue here, and it behooves us to be careful in what we do. We may be confronted in the near future with the position of having a commissioner whom we virtually have not power to remove in the way that is proposed. Now, let me point out one other thing that probably several hon. gentlemen have thought of, though I do not think it has been mentioned. We might have this position of things, we might have a judge, or there might be in the eye of some administration a person for this position who is not a judge, but there is nothing to prevent them making him a judge, and so translating him from a judgeship to a commissionership in order to make him come within this provision. The Minister of Justice has said, and no doubt sincerely, that it only applies to a case where we remove a gentleman from the position of a judge and put him in this position, but we can put a gentleman in the position of a judge and within a week, or a month, or a year, remove him to the position of chief commissioner, and then this law applies to him. So you see what vast power, what vast political influence can be invoked under this provision. I do not mean for a moment that the administration have that object in view, that is not my view of the matter. I say that I wish to approach this statute exactly in the way the Minister of Justice says we should, and to deal with it after

looking at all possible eventualities. I am surely within the judgment of this committee when I say that this is a difficulty that may arise.

Mr. FITZPATRICK. My hon. friend (Mr. Lennox) supposes a case where the government, in order to bring a commissioner within the provision of this Act, might appoint a person as judge for the purpose of raising him to the office of commissioner. Not to say anything of the gross indecency of such a proceeding, I would like to point out that it would fail of its purpose. The commissioner is appointed for ten years, a judge at the expiration of ten years has not acquired a right to anything, he has no title to compensation. Now, with respect to the first question the hon. gentleman has put, when he says there may be danger resulting from the appointment of a man who is practically irresponsible. Of course, I do not admit that if a man is responsible to parliament he may be correctly described as irresponsible, but where he is practically irresponsible because of any inconveniences that would result from the proceeding such as adopted in the case of a judge. Does my hon. friend not remember that, assuming all the corporate influence brought to bear upon the commissioner, assuming his present position, and assuming him to remain in his present position, he would be just as liable to be subject to that corporate influence if he were a commissioner and held his position subject to the control of the Governor in Council, as at present.

Mr. LENNOX. What I mean is this, that we may find that this chief commissioner is not acting in the interests of the people, but that, in our judgment as representatives of the people, he is acting in the interests of railway corporations. We attempt to remove him and then that corporate influence is marshalled and brought into this House into the lobbies, and we are unable to remove him.

Mr. FITZPATRICK. I understand my hon. friend to say that if improper influences were exercised over the commissioner, as he holds his office subject to the control of the Governor in Council, there would be in the Governor in Council power to control that commissioner to the extent of obliging him to do what is right. That is what my hon. friend says.

Mr. LENNOX. No—if my hon. friend will pardon me for interrupting him. I do not mean necessarily an improper influence. I mean that the commissioner may not appear to be acting in the interest of the country—may be with the very best intentions and according to his judgment; but it is a case where we find it is not in the interests of Canada that that gentleman should occupy the position.

Mr. FITZPATRICK. In effect our positions are the same. My hon. friend sees that the interests of the country are better protected by the fact that the commissioner holds his office subject to the control of the Governor in Council. That is so, is it not? Now, my hon. friend is not forgetting the fact that the best control you have over any ruling or any decision given by the board is the fact that the same Governor in Council can, on appeal, set any one of these rulings aside. That is the best control you can exercise. It is not necessary that they should cancel the commissioner's appointment. If an improper ruling is made by the commissioners, all that a person who has suffered has to do is to take up the Railway Act, look at section 44 and he will find that the Governor in Council has power to amend or rescind that ruling on appeal. What more effective control could you have than that?

Mr. MONK. I would like to say that I think this Bill has many objections and presents a great danger. It seems to me that we are consecrating by legislation the principle of the promotion of judges, and thereby incurring the danger that has been mentioned by my hon. friend from South York (Mr. Maclean). It is sufficient to look at a paragraph in the clause under consideration to see that it involves the consecration of the principle of the promotion of judges, a principle which has never been admitted in England.

Mr. FITZPATRICK. Yes, it has been admitted.

Mr. MONK. It has been departed from on rare occasions and departed from here.

Mr. FITZPATRICK. Not on rare occasions.

Mr. MONK. On rather rare occasions. I would go the full length of what my hon. friend (Mr. W. F. Maclean) has said; I would not be prepared to admit the principle that a judge can be promoted, even in his own court, to the presidency of the court. The hon. Minister of Justice knows better than I do that this question has given rise to a great deal of discussion. I do not think you can find a single statute where the principle is as clearly enunciated as it is in this Bill we now have under consideration. Besides that, the hon. Minister of Justice has himself intimated that we probably will follow that practice. It was not a prediction that my hon. friend (Mr. W. F. Maclean) made. He was arguing from the inconvenience that would be caused in the future by this Bill if carried, and the hon. Minister of Justice himself says that we require as the president of this tribunal a man who not only knows the law, but who is accustomed to the judicial interpretation of the law. That is an intimation, a very natural one, but a very clear intimation, that not only will we con-

secrate the principle of the promotion of those who are called upon to discharge these functions, but it is probable that in future we will not only choose men who have a knowledge of the law, but men who are accustomed to the exercise of judicial functions. Of course, I quite recognize that the possibility of anything such as was suggested by the hon. gentleman who spoke before me is a very remote one. I do not think, as the hon. Minister of Justice has said, that we will at any time—although we see very extraordinary things nowadays —place a lawyer upon the bench to transfer him immediately to this important position, but I think it presents a danger of a different kind, and it is more than probable that if this policy is consecrated by the House, and if what was intimated by the hon. Minister of Justice is carried out, this position may become a shelving position, a place where we will shelve judges who have had some experience on the bench, and I think the principle that we are now called upon to consecrate is a dangerous one. But I would like further to call the attention of my hon. friend the Minister of Justice to this anomaly: We are establishing by this Bill a varying tenure of office. If we take a judge and place him in that position, making him independent of the executive, we are establishing a peculiar and special tenure of office. I am very far from disapproving of that principle; I think it is an excellent one. I would argue that the members who compose this commission ought to be in that position. Upon that point I differ from my hon. friend (Mr. W. F. Maclean). I revert to the old principle establed by the Settlement Act in 1701. Judges occupying high positions, occupying seats in the superior courts, ought all to be placed in the position that they cannot be removed except upon the joint address of both Houses. My hon. friend (Mr. W. F. Maclean) says that they are not open to criticism if we give them that tenure of office. They are. Judges can be criticised in this House freely. Their decisions are open to criticism by the representatives of the people, but their removal from office can only be subject to this important condition that the executive can only act upon the address of both Houses. Is that a too protected position to give men occupying seats upon what I would call a most important tribunal in the country I do not think so; in fact, I would almost argue—although this view is one which I have not carefully considered—that according to the spirit of our Constitutional Act of 1867, if not according to the letter, they have the right to that protection, because, if I remember the section well, all judges or superior tribunals are named by the federal authorities, and can only be removed on a joint address of both Houses. I would go to the length of saying that if the federal authority creates the tribunals that are called the superior courts, the judges are entitled to that protection. But my hon. friend the Minister of Justice sees what my objection is. It makes the tenure of office a varying one. If the office has been occupied by a judge for several years, it may afterwards be occupied by a man who has not had a seat on the bench, and who will be removable at will. I think that is objectionable. We ought to fix the tenure of office in an irrevocable way, and I am quite prepared to accept the tenure of office which I think would be the most suitable for a man occupying a position of that kind. There is another point of some importance worth the consideration of the committee, and it is this: Not only is the tenure of office of the chief commissioner a varying one, but it differs from that of the two other judges, if I may call them judges. I think they are. In the case of a judge being promoted to this position, he is in that position of independence which has always been considered, since the beginning of the eighteenth century, a matter of the supremest importance. He is independent of the executive, but his two colleagues who sit with him, whose jurisdiction is the same, except in one particular pointed out by my hon. friend the Minister of Justice, and who ought to be, I submit to this committee, in the same position of independence as the president of the tribunal, are in a very different position indeed. They are subservient to the executive and can be removed by the government. At any rate, they do not occupy that position of independence, which, under the special circumstances contemplated by this Bill, is assigned to the chief commissioner. I think that is very objectionable. I think the three members of the tribunal, although their attributes may differ in the particular pointed out by my hon. friend the Minister of Justice, ought to be placed on the same basis of independence. I do not know whether I expressed that opinion last year when the Bill was up for consideration, but my hon. friend the Minister of Justice will remember that the discussion upon that Bill was very long. and I, for one, would be of the opinion that they all ought to be placed under the same tenure of office. These men are called upon to decide most important questions. Their jurisdiction covers matters involving thousands and millions of dollars and, from a material point of view, they are occupied with things of far greater monetary value, as a rule, than are any of the other tribunals of the country. I think, under these circumstances, they are subject, as all judges are, to dangerous influences, and to render them perfectly independent I do not think we could do better than to apply to them that very important principle which was adopted in England at the time it was first consecrated in the Settlement Act.

Mr. HAGGART. Mr. Chairman, I am glad to find that the principle I advocated when

the resolutions were first introduced to the House seems to be very unanimously supported by both sides of the House. The principle may be departed from in some instances in Great Britain and perhaps in this country, but it is the principle which underlies the appointment of all judges in any part or portion of the empire, particularly in the Dominion, that when a man gets the appointment of judge he must expect to remain in that position for the full tenure of his office and must expect no promotion. If you depart from that principle once then you offer to the judge an opportunity of becoming a political partisan, because the support of a political partisan may give him promotion from one court to another. However, I am glad to find out that that principle of mine is supported by the Minister of Justice and is very generally adopted throughout the House. Now as to the other point, the tenure of office of judges when this Bill—I may call it an extraordinary Bill—gave to some gentlemen in this country greater powers than are given to any other gentlemen that I know of in any other part or portion of the world, it was intended to give them greater powers. When the ex-Minister of Railways introduced the Bill he intended to make this a court, and if I remember rightly, the commissioners were not to be removed without cause and only by address of both Houses of parliament. I protested, and if I remember rightly the right hon. gentleman who leads the government agreed with me, that the appointment should be during good behaviour or subject to removal by the Governor in Council. The Minister of Justice (Mr. Fitzpatrick) says that we have ministerial responsibility for this now, in the matter of appointment. What we wanted when the Bill was passed was to have legislative control over every action of that commission, and to have them directly responsible to this House through ministerial responsibility. You appoint a man who is only removable by addresses of both Houses of parliament and to that extent the right hon. gentleman who leads the government at the present day is relieved from any ministerial responsibility in the case. The Minister of Justice says 'no,' we retained that under the Bill; we have the power of revising any judgment that is given by this commission from time to time and of altering and amending it. They have on their own motion, if I understand the Bill, power to revise any judgment of the commission. The Minister of Justice would argue that that ministerial responsibility continues. How does it continue? Suppose they alter, amend or find fault with the judgment of the chief commissioner. How are they to punish him? He is not removable by the Governor in Council: he will go on giving the same opinions from time to time, forever. The anomaly of it is this: there are two parties on this commission who are directly responsible to this House and to the country for all their judgments; there is one whose tenure of office is entirely different, who is placed in the position of a judge, and whose opinions this House has no way of correcting, judging, altering or doing anything to unless there is some cause and an address is made by both Houses of parliament finding fault with him and asking for his removal. That is exactly the position in reference to the chief commissioner who is placed in the position of a judge. I differ from my hon. friend from Jacques Cartier (Mr. Monk) altogether, in reference to the contention that these parties ought to be given the powers of judges. For exceptional reasons extraordinary powers were given to the judges of this country; for the interpretation of the laws, for the decision between the government of the country and the individual and for a great many other reasons the judges of the country have to be entirely independent of political pressure, of the pressure of the government or of legislative pressure of any kind. This is an entirely different court. This is a court which primarily was in the hands of the legislature altogether, through its representatives, the Railway Committee of the Privy Council. For anything that the Railway Committee of the Privy Council did they were as directly responsible to parliament as it was possible to be. Is a chief commissioner appointed under this Act, with the tenure of office which is given him under this Bill, in that position? I contend that he is in an entirely different one and that there is no reason under this Bill to change or alter the tenure of office of the party who is chief commissioner. It may have been difficult for the government to get a chief commissioner who will have their confidence who is well known to be an excellent judge and fitted in every respect for the office. If you have such a man, give him the position, make provision if necessary for his retiring allowance, but do not alter the tenure of office, do not deprive this government nor this legislature of the power of control exercised by the Railway Commission as appointed by this Act. Do not take away part of the powers of the legislature because this is nothing else than taking away part of the powers of this House, exercised in giving them a different tenure of office.

Mr. FITZPATRICK. My hon. friend (Mr. Haggart) argues for ministerial responsibility with respect to the control of the Board of Railway Commissioners. My hon. friend will realize at a glance that the whole principle of the Railway Act under which the board was created, is a departure from that principle. The old Railway Committee of the Privy Council carried out the idea which my hon. friend had in mind. It was in operation for a great many years, but in 1903 it was decided that we should depart

from that principle and adopt the principle of a Board of Railway Commissioners, independent of parliament altogether, except in so far as parliament might exercise control over the commissioners in two respects, through the Governor in Council—mark you there is no direct control but control through the Governor in Council in two respects, first, in respect to the control in so far as appointment and tenure of office went, and then only in case they misbehave because their tenure of office was subject to their good behaviour. In addition to that parliament desired that that parliamentary control which my hon. friend speaks of should be exercised by the Governor in Council in the most absolute manner under section 44, I think it is, of the Railway Act, which provided that the Governor in Council not only should sit as a Court of Appeal, but that the Governor in Council should of his own motion have the right to interfere and to alter, vary or change any order made by the board. Now you have, in so far as control is concerned, the same supreme control over the action of the commissioners through the Governor in Council as you had before this Bill was introduced. There is no departure from that. What is the use of beating the air or fighting with windmills over this ?

Mr. FOSTER. Who is the wind-mill ?

Mr. FITZPATRICK. Let us realize what we are doing. We are now, Mr. Speaker, dealing with a concrete case, and my hon. friend (Mr. Haggart) if I have understood his argument correctly, agreed so far as the principle is concerned with respect to the particular appointment, but said: 'Make provision with respect to the particular appointment in the way you have provided, but do not make the principle general. Now we have departed from his view in this respect, that we have applied the principle to a class of persons and he wants to have it applied only to the individual. There is where I differ from my hon. friend from South Lanark.

Mr. HAGGART. The Minister of Justice argues that when we passed the Railway Act we made a departure altogether from our usual method of trying these cases. I differ from him entirely, and if he will follow his own argument afterwards he will see the fallacy of it. It was only for the convenience of the Privy Council that we delegated to the commission the right of inquiry into these cases. The Minister of Justice says the residue of power is in the Privy Council, and, therefore, there is a responsibility to parliament. Then the argument of the Minister of Justice fails altogether. Here is a court appointed for the convenience of the Privy Council, and there is no giving away of any power which the Privy Council had in the past, only a delegation of power. The Privy Council retains the power all the time, and, as the Minister of Justice says, is responsible for the judgment of the commission. Parliament intended that this commission should be controlled by this legislature, but if you appoint to the commission parties who are in no way responsible to the government for their conduct, then you vary the power and control which this House had hitherto over the commission.

Mr. W. F. MACLEAN. It has been contended in this House that the members of this commission are judges. They may be judges; I would not altogether dispute that, but they are more than judges. To them parliament has delegated the power to legislate in regard to railways, and I hold that when parliament has delegated powers it ought to have control. Parliament has retained control over all the commissioners except the chairman. The hon. Minister of Justice says that this case is an exception, and I wish to describe exactly what it is. This legislation is a reversal of the general principle by an exception that can be made continuous, that is, a complete reversal of policy. I have no doubt that it will be made continuous, and that for all time we shall have the chairman of the commission holding his office under a different tenure from that of his colleagues. Again, if we delegate parliamentary powers to these commissioners, making them more than commissioners, we ought to hold them in our hands as we did under the original law. But that is now changed in reference to the chairman of the commission, who happens to be a judge. I do not want to say anything personal, but I wish to ask if Mr. Justice Killam asked for this change ?

Mr. FITZPATRICK. I do not know whether he asked for the change or not. I know that we offered him the office and he has accepted. More than that, he is a most desirable appointment.

Mr. W. F. MACLEAN. He is a most desirable appointment, and I would like to see Mr. Justice Killam accept the office under the original conditions, and under them give the country the benefit of his valuable services. I agree with the hon. member for Jacques Cartier (Mr. Monk) that it would be better to increase the salary in this case than to consecrate, as we are doing, the principle that judges may be promoted.

Mr. MONK. I do not wish to prolong the discussion in regard to the character of this commission, on which a great deal might be said. I do not agree that the commission was instituted in order to relieve the administration of administrative work. This question has been studied a great deal in the United States and England, and I think that a perusal of what has been written on the subject will show that, on the contrary, the object of the institution of a Railway Commission is to remove the decision of cases

from the executive and to bring them under judicial consideration by making the Railway Commission a kind of tribunal. That being the view I take, I still think we ought to go the whole length and apply this tenure of office not only to the president of the commission, but to all its members, on account of the immense importance of the questions submitted to them and of the nature of their functions. My hon. friend the Minister of Justice is perhaps able to say what was the tenure of office of the British Railway Commissioners. My recollection of what happened in England is that a railway commission was resorted to, but did not operate satisfactorily and has since been abandoned. Has my hon. friend the Minister of Justice had occasion to learn what was the tenure of office of the Railway Commissioners in England.

Mr. FITZPATRICK. There were three appointed commissioners and two ex-officio —one each for England, Ireland and Scotland, and they had always to be superior court judges. In England the chief commissioner was the Lord Chancellor, in Ireland the Lord Chancellor of Ireland and in Scotland the Lord President of the Court of Session; that is, they took as chief commissioner the highest judical officer in the country. The term of office is for life.

Mr. MONK. I thank the Minister of Justice for that information. My hon. friend from South York must see that in England they consider the functions of these men as essentially judicial functions, and they are all protected—they cannot be removed without the intervention of parliament.

Mr. COCKSHUTT. The debate, as far as it has gone, seems to establish a few very plain facts. One is that we had a chairman of the Railway Commission and that we are now without him.

Mr. FITZPATRICK. My hon. friend has the habit of being exceedingly accurate, but he knows that the statement is not correct. We have a chairman now.

Mr. COCKSHUTT. We are making a further appointment under this Act.

Mr. FITZPATRICK. We have made it.

Mr. COCKSHUTT. Another point that is apparent is that the business of the country suffered by reason of the way the office was vacated. The chairman of the Railway Commission was a man of undoubted ability. He has dealt with very many important matters, and many others were under consideration. These matters were in an unfinished state at the time he left the office. Without any apparent reason the office was vacated.

The business of the country, so far as this commission is concerned, has been at a standstill for upwards of three months, and what the country wants to know is who is going to pay the immense damage caused by this delay. This Bill takes no cognizance of the main point which has been brought out by the experience of the past. That experience has shown that a man appointed to a high office can lay it down at a moment's notice without paying to the country any damage for the losses caused by his conduct. Because the chairman of the Railway Commission gave up his high office at a moment's notice, the business of the country has had to suffer, yet we are now proposing to make a new appointment without taking any means to prevent the recurrence of similar conduct. The new appointment we are hedging about with every safeguard, so far as the incumbent is concerned. We are promoting a man from a judgeship to be the head of that commission. I know nothing of the ability of the gentleman appointed. He may be everything he is declared to be, and I take it for granted he is, but I would like to point out that the business of the country is no more safeguarded in this proposed legislation than it is in the present law. I read over the Bill carefully and I cannot find in it any attempt to guard against a repetition of what has just occurred. Would the directors of any railway system appoint a man to manage that system and leave him perfectly free to resign without a moment's notice, either because he did not like the job or because he wanted to avoid some unpleasant or difficult business, or for any other reason, and leave him free to do so without giving any explanation and without their having any recourse against him. Under this Bill, it will be very difficult, almost impossible, to remove the chairman of that commission, but there will be no difficulty whatever on his part in laying it down. It seems to me that a safeguard should be provided so that he could not resign office without the consent of parliament. Parliament makes the appointment, and the consent of parliament should be required before he can be relieved of the office. I draw the attention of the hon. Minister of Justice to that fact. We have had a long debate on the appointment of judges, but I have yet to hear any satisfactory explanation why the chairman should be at liberty to lay down the office without giving due notice, notwithstanding that important matters may have come before him and be awaiting his decision. A great deal of expense and loss and inconvenience has been caused by the resignation of the late chairman. That gentleman was a man of high standing, who commanded the confidence of the public, while he presided in that court. So far as I am concerned, I always looked upon him as a higher authority than any hon. gentlemen opposite on railway questions, and particularly on the question of the cost of the Grand Trunk Pacific Railway. I looked upon him as an authority and the country did also.

An hon. MEMBER. Up to what date ?

Mr. COCKSHUTT. Up to November, 1904. He certainly was an able man, but he held his position only a brief time. During that time he had travelled a good deal about the country and heard many cases and in many of these cases had not given judgment. But apparently without any reason, he lay down this office, and we are now proceeding to make an appointment in his place. But in making this appointment we are not benefiting by the experience of the past. That experience should teach us to require of the new incumbent due notice of his intention to leave the office and due responsibility for any damage which his sudden resignation might cause parties interested. I trust that the Minister of Justice will consider the point I have raised and consider it in the same spirit as that in which I submit it. The gentleman who has received the appointment may be as eminent and learned as we are told he is, but what guarantee have we that he will not vacate his office without first obtaining our consent. We cannot remove him, but he may remove us. We cannot hold him, but he can hold us in the hollow of his hand, and he can step down and out at any moment without any regard to the business of the country.

Mr. FITZPATRICK. My hon. friend, no doubt, has considered this matter, as he does all matters, with a great deal of care. But he must not lose sight of the fact that if the chairman of the Railway Commission lays down his office before the expiring of the time fixed, he will loose his retiring allowance. If in addition, my hon. friend will give us the benefit of his business experience and suggest anything else we can do, I shall be very glad to consider his suggestion.

Mr. COCKSHUTT. I would suggest that he should give due notice of his resignation, so that the government may have some opportunity of putting some one in his place before he leaves the office. He could very well give due notice. He should be required to give decisions also in the cases he has had in hand. It seems to me that we ought to be able to make some provision which will prevent the holder of that office from giving it up without a moment's notice, leaving the business before the court unsettled, and saddling the parties interested with the delay and expense of going all over the proceedings again, and yet not be liable in the slightest degree to any penalty or damage.

Mr. W. F. MACLEAN. The point to which my hon. friend has called attention is most important. No doubt the resignation of Mr. Blair is the only instance we have had of a man holding high office, throwing it up without giving any notice and without any regard to the cases that were pending before him. That is no doubt the only instance of the kind in our history,

but it has had the worst possible effect on the morale of the whole service of the country. We have had the chairman of this Railway Commission resigning that office without warning, leaving a lot of unfinished business behind which he, as a judge sworn to do his duty, should have had completed, and doing this without any explanation. If the contention made by the Minister of Justice to-day is correct, the Minister of Justice and his colleagues are responsible for that Railway Commission.

I say, an explanation is due the country why that officer resigned. And there ought to be provision, whether in this law or in the general law against a recurrence of such a thing. It is a most deplorable thing, and some notice ought to be taken of it, some reprobation passed upon it. It is worthy of a resolution of this House, and perhaps such a resolution may be introduced this session. The case is that of a man holding the greatest office in this country abandoning that office, refusing to give judgment in cases he had heard, yet giving no reason for his conduct. And those who are responsible for his appointment and for the execution of the duties of that office have given no explanation. This is an injury to the public morals. The thing will not down. Those who are responsible must discharge their responsibility and explain the conduct of this man ; or if they are not in a position to explain it, they ought to free themselves from responsibility by letting censure rest upon him. And, having censured, they ought to make the law of the land such that so deplorable a thing cannot occur again.

Mr. FOSTER. Did I understand the minister to say that there was a penalty upon the chief commissioner if he resigned in a pet, or, whether in a pet or not, suddenly, after large questions have been brought before him and leaving those questions undecided ? If he does this, he should lose part of his emoluments.

Mr. FITZPATRICK. Taking the particular case of the new chairman of the commission, the fact is that he must sit for ten years more in order to get the benefit of his whole retiring allowance. Up to this time, Mr. Killam has sat on the bench for twenty years, and, therefore, has acquired the right to a retiring allowance of two-thirds of his present salary. His age, I believe, is fifty-five or something like that, and after he has held office for ten years longer, he will be able to retire with the full allowance that will be given him under this Act ?

Mr. LENNOX. Under section two he can retire at the end of fifteen years with an allowance.

Mr. FITZPATRICK. An allowance of two-thirds—that is what I said.

Mr. FOSTER. This would be only a partial disability then ?

Mr. FITZPATRICK. It means that he would not get the benefit of anything that would otherwise accrue to him under this Act.

Mr. FOSTER. The Bill makes provision for a chairman who 'has become afflicted with a permanent infirmity disabling him from the due execution of his office.' In such a case, does he forfeit any of his emoluments ?

Mr. FITZPATRICK. Yes. His position is that of a judge. If a judge is appointed to-day and to-morrow becomes afflicted with a permanent infirmity he is entitled to retire on an allowance of two-thirds of his salary. Or if a judge occupies his position for fifteen years and then retires, he gets two-thirds of his salary. Or, if he keeps a place on the bench for thirty years, regardless of his age he is entitled to retire on his full salary. If he has attained the age of 75 years and has been twenty years on the bench or if he is 70 years of age and has been 25 years on the bench he may retire on full salary. So far as Mr. Killam is concerned he has acquired the right to retire with a pension of two-thirds of his salary—that right accrued to him when he had been fifteen years on the bench. But he must sit ten years more—because then he will only be sixty-five years of age, but will have had thirty years on the bench—in order to get his full retiring allowance. If he retires in the interval, no matter what the cause—permanent disability or anything else—he does not receive his full retiring allowance.

Mr. FOSTER. Would bad temper be considered a permanent disability ?

Mr. FITZPATRICK. Some of us are infirm in that respect, I admit. But I hope that what happened before will never happen again. I think the penalty has been paid for what has occurred.

Mr. FOSTER. Does not the minister think there is some way of meeting the point ? Is it not fair that a judge put in this important position, having matters involving great interests to decide, should be precluded—unless he is disabled by the act of providence or something of that kind—from resigning until business before him has been disposed of, under penalty of forfeiting something he has already earned ? I have not learned what the practical situation is in this other case—whether there has been serious delay of important matters, or whether cases have to be gone over again at heavy expense. But, if that were the case we should provide against it occurring again, if we can. For, the minister will observe, there are two evils. In the first place there is the long delay of unfinished business—now nearly three months—because of the sudden termination of the career of one of the commissioners. Then, on account of that sudden resignation, if the evidence has to be gone over again, there is a duplication of expense and a very serious loss. Is it not reasonable that there should be some provision in the Bill to prevent a man from leaving undecided the cases he has heard ? That it is reasonable is shown by what right my hon. friend (Sir Wilfred Laurier) said concerning Judge Killam himself. He told us that Judge Killam would not accept this office at once, not because he was not willing to take the office and receive the emoluments, but because he said considerations of duty prevented. Judge Killam said: Litigants have come before me and I have heard their evidence and must give decision in these cases. I cannot accept the invitation of the Prime Minister until I have finished that business. That was honourable. That is the basis upon which these things should be done. But if a man is not controlled by such considerations, then he should be controlled by compulsion or under penalty. The minister could add such a provision with perfect propriety and I think the country would approve it.

Mr. FITZPATRICK. Under ordinary circumstances I should hate—that is I should much regret—being asked to make provision of that sort in connection with an office so important as this, an office to which we should appoint men of the highest possible honour—and that ought to be the best safeguard in cases of this sort. Still, I realize, in view of the experience we have had, that something of that kind should be considered. The difficulty was suggested by my hon. friend when the Bill was introduced. I have considered it and, have not abandoned the idea of meeting the difficulty. I have considered an amendment of the General Railway Act to meet some of the difficulties caused by the resignation of Mr. Blair. For instance, two members of the board travelled far and wide over the country and took evidence in important cases. These cases were not disposed of at the time of Mr. Blair's resignation, and it was my painful duty to advise the remaining commissioners that, quite clearly, they could not decide these cases, for the reason that one of them had not heard the evidence. We are endeavouring to meet that difficulty with the co-operation of Justice Killam by communicating with the parties and asking if they will give their consent to the disposition of the cases by the board as now constituted. My intention, I may say, is to move an amendment to the Act which will enable us to deal with such cases in the future. That is going as far as I have seen it right to go up to the present time. But I must confess that some amendment is needed, though I do not commit myself before having con-

sulted my colleagues by promising to make a provision in the direction indicated by my hon. friend ; but I will be glad of any assistance I can get in the direction of making it impossible that what has occurred may be repeated ; and before the Bill is read a third time I will ask for an adjournment in order to consider any suggestions I may receive from any quarter.

Mr. FOSTER. While my hon. friend is considering that, he must consider it doubly. There is the ordinary and general peccability and perverseness of human nature in the individual, an instance of which has been given in this case ; but he must also remember that governments are liable to error; and the fact that such a state of things has arisen at all has been, in the first instance, because of lack of judgment in the appointing power, which is the government.

Mr. FITZPATRICK. My hon. friend does not expect I am going to introduce an amendment to correct that ?

Mr. MONK. Has the hon. gentleman thought of applying the remedy that I think used to exist in France, under a very ancient law, providing that the judges could not get their breakfast until they had rendered judgment ?

Mr. FITZPATRICK. I am afraid that would be too harsh.

On section 3,

Mr. ARMSTRONG. Is there an age limit with respect to the commissioners ?

Mr. FITZPATRICK. Yes, the Railway Act, section 8, provides the age limit for commissioners at seventy-five years.

On section 4,

Mr. LENNOX. I have given notice to the Minister of Justice that upon the third reading of this Bill I propose to move that this clause be struck out. When the Bill was introduced I referred to this section, and gave some reasons why I thought it should not be left in the Bill. I do not propose to discuss the matter now, but merely to recall it to the attention of the minister, particularly in view of a good deal that has been said this afternoon.

On the preamble,

Mr. W. F. MACLEAN. Before you proceed any further, I propose to add one or two clauses while we are in committee on this Bill. I move in amendment :

That section 3 of the Railway Act, 1903, is hereby amended by inserting after the word 'persons' in the first line, the words 'and express companies.'

Section 3 reads :

This Act shall apply to all persons, companies and railways (other than government railways) within the legislative authority of the parliament of Canada, and shall be incorporated and construed as one Act, with the Special Act, subject as herein provided.

In substance, I propose an amendment that has already been before the House in previous sessions, namely, that express companies shall come under the jurisdiction of the Railway Commission. I am not going to take up the time of the House. I have often pointed out before that express companies are now doing more and more freight business in this country, and their rates are not at present under the jurisdiction of this commission. I think they ought to be. Every one admits it. They are carrying more and more the freight of the country, they are carrying more and more a class of freight that needs to be handled quickly, and they are entitled to better terms for that. But as a matter of fact, all these express companies are the railway companies. They are owned and controlled by railway companies, the railway companies consider them as assets; and, as I pointed out, the Canadian Pacific Railway Company, in its annual report, calls the Dominion Express Company the property of its shareholders. These companies are doing more and more business, they charge now what they like. They are doing a freight business, they are owned by railways, and if the railways are to be regulated in their passenger rates and freight rates, they ought also to be regulated in their express charges. This same matter has come up at Washington the other day. A man of very large capital and engaged in some large industries in Michigan, went so far the other day as to petition Congress to take action which was in substance an impeachment of one of the members of the Senate. The charge which he made in substance was that the senator had acted in such a way as to entrench express companies so firmly that they could not be regulated in their charges and that all the railway interests were against any attempt at regulation. In fact, the entire business community of the United States is up in arms against the express charges in that country but so strong is the railway lobby in Washington that up to the present time they have not been regulated, they have not been brought under control and so strong is the express lobby backed up by the railway interests that the American government and the Postmaster General of that government are not in a position to establish a parcel post system like that which we have in this country and which they have in England and Germany. The Postmaster General of the United States himself is my authority for the statement that the express companies are so strong that they have prevented the adoption of a parcel post system. If we wish to regulate the express companies now is the time to regulate them. As an endorsement of what I have said to-day I would call the attention of the committee to the fact that boards of trade everywhere have asked

parliament to bring express companies within the jurisdiction of this Act.

Mr. LENNOX. It was stated last year that possibly this amendment would conflict with some other parts of the Act. I have no doubt that the hon. gentleman (Mr. W. F. Maclean) who introduced the amendment has considered that question, and it would probably be important to the committee to know whether it is a fact that it does not require a change in any other part of the Act to give it full effect. I have not myself looked into the question, but the objection was raised last year when this amendment was introduced. While I am on my feet I would say, in regard to what my hon. friend has said about the Postmaster General of the United States, that we have a very high authority in this House on that subject. Towards the close of last session, the hon. Postmaster General (Sir William Mulock) called the attention of the House to the fact that we could not establish a free rural mail delivery in Canada, because in the United States the government had to yield to the demand of the mail carriers for increased wages, thus throwing the whole system out of working order. This was because the letter-carriers resorted to the carrying of parcels, thereby interfering with the express companies, and the express companies were enabled by their influence to bring such pressure to bear on the American government that the American government had to yield. This is in line with what my hon. friend has moved and it shows the enormous powers of these companies.

Sir WILFRID LAURIER. The government has no opinion to express at this moment upon the merits of the amendment introduced by my hon. friend for South York (Mr. Maclean), but I have to observe to him that his amendment is premature and that he is out or order.

Mr. W. F. MACLEAN. In what way ?

Sir WILFRID LAURIER. Because it is already before the House upon a Bill introduced by my hon. friend. My hon. friend's amendment is couched exactly in the same language as the Bill which he has introduced, which is Bill No. 4 on the order paper, and which is set down for its second reading to-day or whenever it is reached. Section 1 of the Bill reads as follows :—

Section 3 of the Railway Act, 1903, is hereby amended by inserting after the word 'persons' in the first line the words 'and express companies.'

That is the first section of the Bill introduced by my hon. friend.

Mr. W. F. MACLEAN. Yes.

Sir WILFRID LAURIER. And therefore it is out of order to move this section as an amendment to this Bill

Mr. W. F. MACLEAN. In answer to my right hon. friend (Sir Wilfrid Laurier), I beg to say that the procedure which I am following to-day is the procedure which we followed last session.

Sir WILFRID LAURIER. No.

Mr. W. F. MACLEAN. I beg the right hon. gentleman's pardon. I moved these amendments in exactly the same way and no objection was taken then, I consented to my right hon. friend taking four days in the week for government business relying on my being able to discuss these amendments. The right hon. gentleman is in this matter departing from the practice of parliament.

Sir WILFRID LAURIER. No.

Mr. W. F. MACLEAN. Again I say that these amendments were brought up in this way last session and with the understanding that I would have an opportunity of moving them, I consented to the government taking four days in the week. Now, my right hon. friend may be able to close me out, but I will ask the opinion not only of the chairman but of the House on this question. It is not going to facilitate the transaction of public business this session. I know what my right hon. friend wishes to do. He wishes to send me to the Railway Commission with my Bill. He brings in a new Bill of his own, we assist him all we can in getting his Bill through, but because I am a private member and he is the Prime Minster he has a law for himself, but he has not the same law for me. He may take refuge under a rule of order. I am going to sit down and let the chairman decide. I think I am quite in order and I hope the point will be discussed here before the ruling is given. Notwithstanding anything that is on the order paper, I say that when a public Bill is in committee it is the right and privilege of every hon. member, even if he is a private member, to make any amendment he sees fit to the Bill under consideration.

Mr. HAGGART. Before the point of order is decided I would like to discuss the question. A private member introduces a Bill in which there are certain clauses, the government introduces another Bill, and although it may be necessary to make the latter Bill workable that it should be amended, because the Bill introduced by the private member includes a clause similar in terms to a proposed amendment, you preclude a private member from amending the government Bill. I am aware of the rule of the House which declares that where a member gives notice of motion and it is on the order paper he cannot move that motion or what is set forth in that motion as an amendment to a Bill. The proper thing to do under those circumstances is to drop the motion, but I do not think that rule applies at all or that it can be held that

when a private member introduces a Bill he is precluded afterwards from moving any clause of that Bill as an amendment to a public Bill.

Mr. INGRAM. I would like to point out to my hon. friend (Mr. W. F. Maclean) that if, when he gave notice to amend Bill No. 36, he had looked at section 3, he would have found that the language he was using in the resolution would not apply to the section because he proposes to amend it by adding these words 'and express companies.' It was not necessary for the hon. gentleman to do that. All that he was required to give notice of was the word 'express.' Therefore, he would have got over the difficulty if he had paid attention to the wording and the objection raised by the right hon. leader of the government, would not apply to this case as I am afraid it does apply on account of my hon. friend having introduced his Bill first, as the right hon. leader of the government has said, and then having moved a resolution covering exactly the same thing afterwards.

Mr. SPROULE. I hold that we have followed this practice for many years. It is a common thing in this House to have two or three Bills standing as amendments to the election law, when the government move to bring in a Bill and ask that the Bills introduced by private members be allowed to stand as they will incorporate the clauses contained in these Bills in the government measure. Although there is a rule which says that you shall not anticipate what is on the order paper we do anticipate it by incorporating some of the clauses contained in these Bills, and when we have reached these Bills afterwards they have been allowed to drop. We have done that several times. All that my hon. friend would require to do, when he reaches his own Bill, is to say: I have incorporated the provisions that I intend to enact in this Bill, in an amendment to the Railway Act which you propose as a government measure, you have allowed me to do the same thing with Bills before and I am endeavouring to do it today.

Sir WILFRID LAURIER. I would in the first place answer my hon. friend from Elgin (Mr. Ingram) that the resolutions which he has addressed to the House have no bearing upon this occasion. My hon. friend from South York (Mr. Maclean) gave notice of his amendment, but he required no notice of an amendment to a public Bill. Notice of amendments is required only in the case of private Bills and he could at the table offer an amendment to a public Bill if it affected the Bill. Therefore, the question is not affected one way or the other by the notice. The amendment which he offers to the House is simply that we shall take the first section of his Bill and introduce it as an amendment in the present Bill. My hon. friend has been very candid as to why he acts in this manner. He has a Bill before the House and he can move it; he has let the opportunity of moving it pass three or four times, to my knowledge, and why would he not move it? Because the policy of my hon. friend is different from the policy of the government. I told him—it is on the record—when the Bill was first brought to the attention of the House that we had no opinion to offer upon it; we were not prepared to say yes or no. There is a good deal in the proposition he makes that express companies should be committed to the jurisdiction of the commission, but we informed my hon. friend that it was not our intention to take up this matter in the House; we wanted to refer it to the Railway Commission, there to be dealt with and discussed in the light of full information obtained from all parties interested in it. But this policy does not suit the convenience of my hon. friend.

Mr. W. F. MACLEAN. Hear, hear.

Sir WILFRID LAURIER. He will not have it this way and, therefore, because our views do not accord with his views, he will not accept the very reasonable offer which we made to him of referring this matter to the Railway Commission; he wants to get his Bill passed by a side wind, and he wants to bring it to the attention of the House in spite of the rules of the House. My hon. friend has no need of taking refuge and of crying misericordia because he is a private member. He has as much right as a minister to introduce legislation; he has availed himself of this right, but because the Bill we introduce does not suit him he wants to violate the rules of the House in order to offer his amendment to the House at this moment.

Mr. W. F. MACLEAN. Will the hon. gentleman quote the rule?

Sir WILFRID LAURIER. There is much latitude for amending. Any amendment may be brought in that has reference to the matter under discussion, but the rule is that if an amendment, which it is sought to introduce to the Bill before the House is already a notice for consideration on another proceeding, that amendment is therefore out of order. There is no doubt about that; every one knows it; but my hon. friend from Lanark (Mr. Haggart) has offered a most subtle distinction and it is this: That the rule will apply to a motion but not to a Bill.

Mr. HAGGART. Hear, hear.

Sir WILFRID LAURIER. Where do you get that?

Mr. HAGGART. I would say——

Sir WILFRID LAURIER. Allow me. It has no bearing, it is all technicality and no substance. There is no proceeding before the House which can be initiated, whether it be a Bill or anything else, except upon a motion. The Bill of my hon. friend, Bill

No. 4, stands upon the order paper in this way :

Second reading of Bill (No. 4), an Act to amend the Railway Act.

When the Speaker comes to call this order he will put the question to the House and my hon. friend (Mr. Maclean) will move for the second reading of this Bill. Therefore, it is not necessary at all to say that this rule applies to a motion and not to a Bill. Every Bill must be introduced by a motion and it would be, I think, the most extraordinary proceeding that a rule of that kind should apply when there is a motion and should not apply when it is a Bill under discussion. What is the essence and the object of this rule? It is simply to ensure that a matter which is before the House cannot be taken from its order as a substitute for another order. That is the ruling given by previous speakers. Bourinot, at page 442, note (i) says :

It is not regular to move as an amendment to a question a motion of which notice has been given—and when it appears on the notice paper in a particular place.

Mr. W. F. MACLEAN. Hear, hear.

Sir WILFRID LAURIER. Speaker Ouimet decided in 1889 (Journals, page 214):

It is not in accordance with the rules or parliamentary usage to take a motion out of its proper place, and move it as an amendment to another question.

Is it more in accordance with the usage of parliament to take a Bill out of its proper place ? To say that you cannot take a motion out of its place, but you can a Bill, is not sense, or I might use even stronger language. My hon. friend will have to exercise a good deal of reasoning in order to satisfy the House of the extraordinary proposition that a motion cannot be taken out of its order and a Bill can.

Then, May, which is a standard work on the principles of procedure, says :

Nor can an amendment be moved which anticipates a motion or amendment of which notice has been given on matters contained in the order of the day.

So, therefore, I submit, Mr. Chairman, that according to the principles of parliamentary usage this amendment is out of order.

Mr. HAGGART. In this case there has been no notice of motion given. My hon. friend proposes to amend a public Bill. The argument of the right hon. the Prime Minister is that this is virtually a Bill moved as an amendment to a public Bill. The rule of the House is clear, that no Bill can be moved out of its proper order. Is this the moving of a Bill out of its proper order ? The other rule which applies to motions something similar to this is that no motion of which notice has been given shall be moved in amendment to a public Bill, nor shall the substance of any motion. Does this come under either category? Not at all. Look at the absurdity of the position. A private member or half a dozen private members may give notice of Bills proposed, say on election matters or on a dozen other questions, and they may intend to move them. Then, according to the argument that has been advanced, because one of them has a clause in it referring to a particular election matter, it would not be competent for another member to move a similar motion in amendment to a government Bill, because some member or perhaps half a dozen members in the House had introduced Bills along the same lines.

Sir WILFRID LAURIER. Why certainly.

Mr. HAGGART. The object of the rule is to prevent a motion or a Bill being by any means or in any form moved out of its proper order in order that the House should discuss it. The other reason is that when a party gives a notice of motion that the motion should be on the order paper of the House, and that he should have an opportunity of discussing that measure, and that no other member of the House, by a side wind or an amendment to a public Bill, should take the credit of the motion which some hon. gentleman has moved. I contend, Mr. Chairman, that this does not come within either of these categories; this is a clause in a Bill which my hon. friend (Mr. Maclean) has introduced. He is moving it in amendment to a public Bill but that does not necessarily mean that it is the introduction of a Bill out of its ordinary course on the order paper.

Mr. INGRAM. There may be a difference of opinion as to the rule of parliament in connection with this matter. I think the first minister was not present when this Bill was introduced on the 9th day of this month. At that time a certain understanding was come to between the hon. member for South York (Mr. W. F. Maclean) and the hon. the Minister of Justice in reference to the discussion of this Bill. The discussion is thus reported in 'Hansard.'

Bill (No. 36) to amend the Railway Act, 1903—Mr. Fitzpatrick—read the second time.

Mr. SPEAKER. When shall the House go into committee ?

Mr. W. F. MACLEAN. I am quite willing that we should go into committee now provided that the Minister of Justice will give one or two days' notice of the third reading, as I have two or three amendments to propose.

Mr. FITZPATRICK. What my hon. friend really wishes, I presume, is to move, by way of amendment, the different clauses of the Bill now in his name on the order paper.

Mr. W. F. MACLEAN. Yes.

Mr. FITZPATRICK. I think it would be advisable to thresh them out in committee. There are some features in one of the clauses of his Bill which I think ought to be discussed.

Mr. W. F. MACLEAN. I am not quite ready to go on now, but will be on Tuesday.

That seems to me to be a sort of understanding between the Minister of Justice

and the hon. member for South York. Therefore, I think the hon. gentleman is fairly entitled to discuss his Bill now.

Mr. FITZPATRICK. My hon. friend is very kind indeed to champion the cause of my hon. friend from South York. If the hon. member for South York has had any understanding with me, I am quite sure he can state it himself, and I am willing to abide by it.

Mr. W. F. MACLEAN. If the hon. Minister of Justice asks me to explain, I will say that I understood that I might bring up the substance of my Bill in connection with his Bill to amend the Railway Act. I think we had that understanding, and I leave the Minister of Justice to say whether or not that is the case. Of course, that is quite outside of the question of order. I do not care how it is settled. I wish to see the rules of parliament observed ; but last session we proceeded in this way, and no objection was taken, and for that reason I consented, as I might not otherwise have done, to the proposal to take four days of the week for government measures.

Mr. FITZPATRICK. What my hon. friend from South York has said with respect to the understanding is absolutely correct, and I certainly was under the impression at the time he made the suggestion that he might move in committee. I was ignorant of the rule referred to by the Prime Minister. I do not want to break the rule of parliament, but I am sure that the Prime Minister will agree with me, that if the rule is such that the hon. member for South York cannot move now, a day ought to be fixed on which he could bring up his Bill for discussion.

Sir WILFRID LAURIER. I certainly did not confer with the Minister of Justice before I raised this point. I did not know of the understanding between the Minister of Justice and the hon. member for South York, or I would not have raised it. I will not press the point.

Mr. SPROULE. If I recollect aright, there have been many Bills in the same position, and no objection has been raised before. We followed the course proposed with regard to the Franchise law, the Election law and the Alien Labour law.

Sir WILFRID LAURIER. My hon. friend forgets that there is a difference between this occasion and the occasions to which he refers. On those occasions the government accepted the amendments, and the moment that was done, there was no question of order. But when a Bill of this kind is proposed, which the government does not accept, we have a right to invoke the rule.

Mr. SPROULE. I think that is a strange argument—that one rule is to apply to the government and another to private members. I thought parliamentary rules were to apply to the government and to private members alike ; but the Prime Minister has given an entirely different turn to them.

Sir WILFRID LAURIER. Not at all. If, when a government Bill is under consideration, amendments are moved and the government accepts them, no point is raised on either side ; but if the government or any one else objects, the rule applies.

Mr. SPROULE. That was not the case. Those Bills were on the order paper, and it was suggested that they could be better included in government Bills than passed as separate Bills. When the Railway Act was under discussion some of those Bills were incorporated in it. That was done because it was the usual practice that had applied, not only to railway Bills, but to many others. Several times we held Bills over so that a portion of them might be incorporated in some government Bill.

Mr. WHITE. I approach this question with a good deal of diffidence, I confess, because I have become somewhat rusty in my parliamentary law ; but I think the right hon. leader of the government is correct in his interpretation of the rule. A Bill standing on the order paper is really notice of a motion, and it seems to me that the rule that applies to motions would apply with equal force to public Bills. But there have been instances, and many instances, both under the present administration and under their predecessors, in which a public Bill introduced by a private member, or some of its provisions, have so commended themselves to the government that the government has been quite ready to accept them. The member who has introduced the Bill is advised by the government that they will accept either the whole Bill or certain portions of it ; and when the Bill is reached on the order paper, it is either dropped or the member who has introduced it moves that the order be discharged, and the Bill is taken up as an amendment to a Bill of a similar character introduced by the government. My own opinion is that the right hon. leader of the government is correct in his interpretation of the rule ; but as there seems to have been an understanding between the hon. Minister of Justice and my hon. friend from South York, I am sure that the government will carry out that understanding and allow my hon. friend from South York to proceed with his amendments when this Bill comes up at a future stage, if not at the present sitting.

Mr. HAGGART. Notwithstanding the statement of my hon. friend from North Renfrew (Mr. White), I must say that I entirely differ from him. A Bill is not a motion. Motions have often been dropped, because their being on the order paper prevented members moving them as amendments to Bills. My hon. friend suggests

that because of an agreement made between the hon. Minister of Justice and the hon. member for South York, we can set aside all the rules of the House. That is an anomalous position. It is only by the unanimous consent of the House that a rule can be set aside. I have been in the House a long while, and I have never before heard the rule in question applied to a Bill. I have heard it applied to motions hundreds of times, and I have seen the motions dropped in order that the members making such motions might be in a position to move amendments to Bills. But while we live we learn, and I learn now for the first time that this principle applies, not only to motions, but to Bills.

Mr. WHITE. I feel that I ought to defer to the superior knowledge of my hon. friend from South Lanark; but I frankly confess that when I had the honour of occupying the position of the Speaker of the House of Commons my hon. friend from South Lanark (Mr. Haggart) and myself differed upon points of order very frequently. Not only he but the other members of the government, of which he was so distinguished an ornament at that time, also differed from me with regard to points of order and procedure. I had up to that time given considerable study to those subjects, and I do not think it is quite within the province of my hon. friend from South Lanark to say that I ever assumed that because there happened to be an agreement similar to that in the present instance between the Minister of Justice and the hon. minister for South York (Mr. W. F. Maclean), namely, that this question should be taken up when the Railway Bill was being considered, such an agreement can set aside the rules of this parliament. I do not believe it can. I do not think the rules of parliament can be set aside by any such agreement, but if the Minister of Justice and the hon. member for South York did come to the agreement in question, it seems to me that the government ought, in all fairness to the hon. gentleman, to agree to the proposition he makes, and have the matter he has brought up discussed when this Railway Bill is before the House either at this or some future stage.

Mr. W. F. MACLEAN. While I agree in the opinions expressed by my grave and reverend co-members, I wish to say—and I would ask the Prime Minister to make a note of it—that when we are revising the rules of the House—and it is high time that we did—we should make provision that the same procedure ought to apply to public Bills as to government Bills. If a private member's Bill has to go to the Railway Committee so also should a government Bill. It is because there is a different procedure applied to public Bills than is applied to government Bills that I have to resort to parliamentary strategy and try to get my proposals discussed in connection with those of the government. The rule ought to be that exactly the same kind of treatment should be accorded to all amendments to the Railway Act. If that is not to be the case, and if I were introducing a Bill again to amend the Railway Act, I would simply put in one clause, a non-important clause, and keep my other ammunition in my pocket until the government Bill to amend the Act came up.

Mr. HENDERSON. As far as I can judge, the point of order raised by the right hon. the first minister is well taken. From my reading of the rule, I think there can be no two opinions about it. I think we had better not depart from the good healthy practice of sticking closely to the rules of this House. We do not know where a matter of this kind may end. I do not see how this House can be called upon to recognize any agreement made between two individual members which is not known to every member. My position is this, I intend to vote for this amendment, whether it comes up as an amendment to the Railway Act or a portion of the Bill of the hon. member for York (Mr. W. F. Maclean). It makes no difference, so far as my position is concerned, whether I vote to-day on this proposition as an amendment to the government Bill, or on some other day, when it comes before the House in the form of a Bill; but I do think we had better stand by the rules of the House and not have it said that one hon. member must have one rule applied to him and another hon. member have the benefit of a different rule. Possibly in a very short time I may be ruled out of order on the very point now raised. Why should I not have the same privilege as my hon. friend from York? I feel strongly that we should adhere to the rules of the House, and I desire to make it plain that, so far as my position is concerned, I intend to vote for this amendment regarding express companies, whether it comes in the form of an amendment to this Bill or of the Bill placed on the notice paper by the hon. member for York (Mr. W. F. Maclean) I understand the right hon. first minister has withdrawn his point of order, and now it is open to any other member to raise the same point, and I desire to do so. I submit to you, Sir, that the amendment proposed by the hon. member for York is out of order.

Mr. W. F. MACLEAN. After the declaration of the hon. member for Halton, (Mr. Henderson) I withdraw any claim to any privilege arising out of any understanding and I leave the hon. gentleman to shoulder the responsibility. You can report the Bill, Mr. Speaker.

Mr. SPROULE. As the government have taken two more of the days belonging to private members, it may be utterly impossible for this Bill to come before the House unless brought up in connection with some government Bill, and my hon. friend will be de-

prived of the right to have his Bill dealt with.

Sir WILFRID LAURIER. My hon. friend from York (Mr. W. F. Maclean) has had many opportunities of moving his Bill.

Mr. W. F. MACLEAN. I agree to that.

Mr. SPROULE. I understand that he could not go on for want of certain information which he desired to have when discussing it.

Mr. W. F. MACLEAN. That is right.

Mr. SPROULE. Then the government took the private members day away. In other sessions, when that happens, it is usual to draw attention to the fact that certain important Bills are on the order paper and permission is given to the member to bring his Bill before the House and have it dealt with, if not as a separate Bill, in connection with some government measure. We have done that frequently in connection with railway charters and the labour question and various other questions without objection ; and if we abandon that privilege to-day, we are giving up a privilege of our own, and our privileges are quite as important to us as the rules that govern us.

Mr. FITZPATRICK. A good deal of time has been wasted in discussing a matter which was settled some time ago. This Bill has been called several times. Sometimes it was postponed to suit the convenience of my hon. friend and other times to suit mine. It was understood between us that when the government Bill reached the committee stage, we would consider my hon. friend's amendments. But as regards the practice referred to by my hon. friend (Mr. Sproule) he is entirely in error. I have had more to do with these Bills than he has—if he will pardon me for saying so—and my invariable practice is, when I am introducing general legislation, to adopt any principle that I find in a Bill that stands in the name of any private member on the order paper. I adopt the principle of such a Bill of my own motion, just as I would have a right to amend my own Bill. But I cannot do that in this instance. If I felt free to adopt the principle of my hon. friend's Bill and add it as an amendment to my own, I would do so. But I intend to oppose his amendment and give reasons why the House should not adopt it.

Mr. INGRAM. Perhaps it would be possible to suggest a compromise that would satisfy both sides——

Mr. FITZPATRICK. To go on with our business would satisfy me perfectly.

Mr. INGRAM. That is just the suggestion that I was going to make. Suppose the hon. gentleman is allowed to proceed with his Bill ; and, then in view of the number of new members in the House who have not heard the matter discussed, we could refer it to the Railway Committee, with a view to having all interests heard and the matter fully discussed.

Mr. W. F. MACLEAN. I appreciate very much what the Minister of Justice (Mr. Fitzpatrick) has said ; and what he has said is exactly correct. But I do not wish to appear as taking advantage of any rule of the House. Nor do I wish to be heard in this discussion merely as a matter of courtesy. I thought I was within my right. But, of course, I defer to what has been said. Another opportunity will be afforded me to bring this measure up——

Sir WILFRID LAURIER. Next Monday.

Mr. W. F. MACLEAN. Yes, it will come up next Monday, and there will be an opportunity for discussion. All I had in mind was to facilitate the public business and help to make the session as short as possible. In view of the scrupulous consideration of the hon. member for Halton (Mr. Henderson) for the rules of order, I must go about it in another way.

Mr. WHITE. There is no difficulty in getting over the point raised by the hon. member from Halton (Mr. Henderson). If my hon. friend from South York (Mr. W. F. Maclean) desires to have his Bill discharged from the order paper. When it comes up for discussion he can do that and then he will be at perfect liberty to proceed with his amendment. The fact is, he wants to have two strings to his bow—he wants to move in committee, and, if defeated in committee he wants to take up his Bill. I think that would be contrary to all the rules of parliament.

Sir WILFRID LAURIER. That is what is called strategy.

Mr. DEPUTY SPEAKER. I must rule the point of order well taken according to rule 24, which says :

All items standing on the orders of the day shall be taken up according to the precedence assigned to each on the order book ;——

But there is a reservation made for government measures.

The right being reserved to the administration of placing government orders at the head of the list in the rotation in which they are to be taken on the days on which government Bills have precedence.

I find this amendment is identical word for word with Bill No. 4 which stands on the order paper as a public Bill.

Bill reported.

SUPPLY—MANITOBA ELECTION RETURN.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister) moved that the House go into Committee of Supply.

Hon. GEO. E. FOSTER. Will the right hon. Prime Minister (Sir Wilfrid Laurier) permit me to call his attention to a statement made by him yesterday in reply to a question by the leader of the opposition (Mr. R. L. Borden), who is not here to-day, on the subject of the elections in Manitoba :

I may inform my hon. friend (Mr. R. L. Borden) that I received to-day two memoranda from the Clerk of the Crown in Chancery on this subject, but I have not yet been able to look at them. I will be able to give him an answer to-morrow.

That 'to-morrow' is to-day. Can the right hon. gentleman give us any information on the subject now ?

Sir WILFRID LAURIER. I am sorry to say that the matter will have to stand over until to-morrow, because I could not look into it.

Motion agreed to, and House went into Committee of Supply.

At six o'clock, the committee took recess.

After Recess.

Committee resumed at eight o'clock.

Public buildings—Manitoba—Brandon drill hall, $20,000.

Mr. HYMAN. No expenditure has been made on that yet. There is one squadron of mounted rifles there.

Mr. BLAIN. What is the cost of building a drill hall such as is proposed to be erected in Brandon ? What would be about the difference in cost between erecting this building and a building of the same size in Ontario ?

Mr. HYMAN. The architect thinks there might be a difference of 10 per cent greater in Manitoba.

Mr. FOSTER. What is the material used ?

Mr. HYMAN. It will be a wooden building with brick veneer.

Mr. FOSTER. I was surprised when I was out there in some of those far western towns to find out how cheaply brick are produced. At Edmonton they produce brick for $5 a thousand, at Moosejaw for about $8. I think we pay more than that in the city of Toronto, or quite as much. Of course, bricks can be made cheaper at Edmonton, because coal is more easily procured. It seems to me that with brick so cheap in the west it would be cheaper in the long run to make the building of brick than of timber, or even of timber with brick veneering.

Mr. BLAIN. The minister said it would cost 10 per cent more to build in Manitoba ; but if bricks are so cheap there, where does the extra 10 per cent come from ?

Mr. HYMAN. There is a considerable difference in the price of labour and of other materials than brick.

Mr. W. J. ROCHE. I desire to bring to the attention of the minister the urgent necessity that exists for a drill hall in the town of Minnedosa. I think Minnedosa has got the largest company of any of the small places in the province of Manitoba, and in the drill contest in Brandon last year they carried off the major portion of the honours. Virden is a smaller town than Minnedosa. They make bricks in Minnedosa, and I would urge the claims of that town on the minister in fulfilment of the promise that was made last year.

Mr. HYMAN. I will bring the matter to the attention of the Minister of Militia.

Dominion buildings—Manitoba—renewals, improvements, repairs, &c., $8,000.

Mr. W. J. ROCHE. Who is the inspector for Dominion buildings now in Manitoba ?

Mr. HYMAN. Mr. Chisholm.

Mr. INGRAM. There is an increase of $2,000 over last year ; why is that ?

Mr. HYMAN. There is a larger number of buildings.

Selkirk public building, $15,000.

Mr. HYMAN. No site has been purchased yet. The building will accommodate customs, post office, Indian affairs and fisheries. The population at the last census was 2,188. Customs and postal revenues amounted last year to between $5,000 and $6,000. In order to accommodate these four offices I do not think we can put up a building there at a less cost than $16,000.

Virden drill hall, $20,000.

Mr. W. J. ROCHE. What is the size of that building ?

Mr. HYMAN. 60 feet 10 inches by 31 feet 8 inches.

Mr. W. J. ROCHE. What is it constructed of ?

Mr. HYMAN. It is brick veneer.

Mr. W. J. ROCHE. Had you to pay for the site ?

Mr. HYMAN. The site was given free.

Mr. W. J. ROCHE. When is it to be completed ?

Mr. HYMAN. In October of this year.

Mr. INGRAM. What is the total cost ?

Mr. HYMAN. The estimated total cost is $15,000.

Mr. INGRAM. Then what are you asking $20,000 for ?

Mr. HYMAN. I see that I have a memorandum in connection with this vote

which I was not aware of. I move that the vote be reduced to $15,000.

Motion agreed to.

Mr. W. J. ROCHE. Who has the contract ?

Mr. HYMAN. Mr. W. H. Ireland.

Winnipeg district military stores building, $10,000.

Mr. HYMAN. That was explained last night.

Mr. INGRAM. Is that the general system adopted all over the country ?

Mr. HYMAN. Yes, at the different headquarters.

Winnipeg—new immigration building, $62,000.

Mr. HYMAN. This is to provide for the completion of the building being erected at the request of the Department of the Interior. A contract has been let to the Manitoba Construction Company. The building is to be completed by the first of April, 1905. The total estimated cost is $177,000.

Mr. STAPLES. Where is this building to be located ?

Mr. HYMAN. The building is located on a site transferred from the Canadian Pacific Railway Company situated between Maple and Fonseca streets, and has an area of 200 feet by 61 feet 4 inches. The contract for the building is $162,000 and the total cost will be about $177,000.

Mr. W. J. ROCHE. Has there been any change since last year ?

Mr. HYMAN. Yes, the building has been made fire proof and increased in size.

Mr. W. J. ROCHE. It was estimated last year at $60,000.

Mr. STAPLES. Who has the contract ?

Mr. HYMAN. The Manitoba Construction Company.

Mr. INGRAM. Is that building in charge of the engineer located at Winnipeg or is there a superintendent for this work ?

Mr. HYMAN. No, it is under the supervision of the architect Mr. Joseph Chisholm.

Mr. INGRAM. A permanent officer ?

Mr. HYMAN. Yes.

Winnipeg military buildings—quarters for non-commissioned officers, including guard room, &c., $6,000.

Mr. W. J. ROCHE. Nothing has been spent on that ?

Mr. HYMAN. No, there has been no money spent on that. This is supposed to be quarters for the married non-commissioned officers of 'A' squadron, guard room, cells, quartermaster's stores, lecture room, &c.

Mr. INGRAM. Is this connected with the armoury ?

Mr. HYMAN. No, this is for the permanent force.

Mr. SAM. HUGHES. Has the hon. minister in his department a list of the military properties taken over from the imperial authorities by the colonial authorities ?

Mr. HYMAN. That will be in the Militia Department.

Winnipeg new post office—land and building, $300,000.

Mr. W. J. ROCHE. What was the cost of the site ?

Mr. HYMAN. The site cost $132,350.

Mr. W. J. ROCHE. What is the estimated total cost of the building ?

Mr. HYMAN. About $600,000.

Mr. W. J. ROCHE. Including the site ?

Mr. HYMAN. No, outside of the site.

Mr. W. J. ROCHE. The estimate is increased a great deal from that of last year.

Mr. HYMAN. Of course, the estimate was given before the contract was made.

Mr. W. J. ROCHE. Who recommended the site ?

Mr. HYMAN. I do not know, I am sure. This was very fully discussed last year in the House. It was a very profitable bargain. We could have sold the site any time for more money.

Mr. W. J. ROCHE. Is it a corner lot ?

Mr. HYMAN. No, it is not a corner lot. There will be space on both sides of the building.

Mr. W. J. ROCHE. What is going to be done with the old post office ?

Mr. HYMAN. The idea is to use the old post office building for a customs house.

Mr. W. J. ROCHE. There was a question raised last year by the hon. gentleman who represented Provencher in regard to the title of the old Bannatyne property which contained the stipulation that the site was only to be used for the post office building. He stated that the site was given for a small consideration on the understanding that it was to be used for a post office building. The hon. Minister of Public Works (Mr. Sutherland) stated that the matter had only been brought to his attention the previous day in regard to the title and that he would inquire into it. I do not think he ever furnished the House with any information on the subject. Was

there not some distinct understanding that that site was to be used for all time to come as a post office site ?

Mr. HYMAN. The deputy informs me that the matter was looked into both before and after it was mentioned in the House and that there is no evidence in the department of any kind on which such a statement can be based.

Mr. W. J. ROCHE. I will just read what the hon. minister said last year.

The matter of the title to the site of the post office in Winnipeg was brought to my attention only yesterday. I am having it investigated. I believe there is some condition, but I do not think it is so narrow as that mentioned by the hon. member for Provencher (Mr. Larivière), —that the site is to be occupied by the post office. I believe that the land was sold on the condition that it was to be used as a site for government offices.

Mr. HYMAN. Well, these are government officers.

Mr. W. J. ROCHE. So he must have had some evidence in his possession when he was able to make that statement.

Mr. HYMAN. I will ask the deputy to look into the matter.

Mr. INGRAM. What is the size of the site ?

Mr. HYMAN. The site is of an irregular shape, 166 feet front by 80 feet in one part and 134 feet in another part.

Mr. W. J. ROCHE. From whom was it purchased ?

Mr. HYMAN. W. F. Alloway and J. W. Good.

Mr. INGRAM. Is that not a very good price, $132,000 ?

Mr. HYMAN. That is the price. The information I received from the department is that the property could be sold to-day for more money. I know that the department has been looking for some more land there, and it is almost impossible to get any more land near the centre of the city for anything like what we would consider a moderate cost.

Mr. W. J. ROCHE. Who negotiated the sale ?

Mr. HYMAN. Thos. B. Metcalfe.

Mr. W. J. ROCHE. Did he receive any commission ?

Mr. HYMAN. There has been no expenditure other than the cost of the site.

Public buildings, Northwest Territories—barracks for permanent corps, Strathcona Horse, $40,000.

Mr. AMES. Where is that barracks ?

Mr. HYMAN. There has been no decision by the Militia Department yet as to the headquarters of the Strathcona corps, and therefore the matter is in that shape. This is for the permanent corps.

Calgary public buildings—enlargement of post office and examining warehouses, changes, fittings, &c., $40,000.

Mr. HYMAN. This building is being enlarged for the use of these different departments. The building has become altogether too small and it is being enlarged. The area of the present post office is 1,360 feet. With this addition there will be nearly three times that amount of area.

Calgary land titles office, $15,000.

Mr. W. J. ROCHE. Would the minister make an explanation ?

Mr. HYMAN. I think I shall ask to have that item stand.

Item allowed to stand.

Court House,—lock-up and police accommodation, $1,500.

Mr. HYMAN. This is to provide accommodation at different places.

Edmonton jail, $33,000.

Mr. HYMAN. This is for the continuation of the work on the jail there. It has been in progress for some time.

Mr. W. J. ROCHE. What is the total cost ?

Mr. HYMAN. The contract is for $50,150.

Medicine Hat, public building, $15,000.

Mr. HYMAN. This is to provide a public building at Medicine Hat. The postal revenue is $4,679 and the customs duties $26,113.

Moosejaw public building, $20,000.

Mr. W. J. ROCHE. What is that ?

Mr. HYMAN. That is for the purpose of a public building at Moosejaw. It is under contract. The postal revenue in the year 1903-4 was $7,800 and the customs revenue $49,700.

Mr. FOSTER. What are you building there ?

Mr. HYMAN. A brick building with stone foundation.

Mr. FOSTER. Can your officer tell you what he has to pay for brick there ?

Mr. HYMAN. Of course it is let by tender, but he thinks the price is between seven and eight dollars a thousand.

Prince Albert, public building, $40,000.

Mr. HYMAN. That is under contract.

Mr. FOSTER. How much is that to cost ?

Mr. HYMAN. $95,000.

Mr. FOSTER. What is the population of Prince Albert ?

Mr. HYMAN. The population is about 2,300 now, but this is for a court house, post office, customs house, land office and registry office.

Mr. FOSTER. And what is the revenue there ?

Mr. HYMAN. The postal revenue is $5,249 and the customs revenue $8,427.

Mr. SAM. HUGHES. What public buildings have they now ?

Mr. HYMAN. Nothing but an old court house and jail. They use an old one-story building for a land office.

Mr. FOSTER. How much was paid for this site ?

Mr. HYMAN. $1,400.

Mr. SAM. HUGHES. Then the building is not to be on the site of the old court house ?

Mr. HYMAN. No.

Mr. SAM. HUGHES. Why ?

Mr. HYMAN. The old court house, I am informed, is quite out of the town.

Mr. SAM. HUGHES. That might have been said when the town consisted of one street along the river ; then it was a couple of streets back, but there is a nice residental district growing up near the post office. A gentleman who is now in the Senate lives farther out than the court house.

Mr. INGRAM. When will that be completed ?

Mr. INGRAM. The contract was let on January 1, and the building will be completed in October, 1906.

Red Deer court house, land office and lock-up, $6,000.

Mr. HYMAN. That is under contract.

Mr. FOSTER. What is that to cost ?

Mr. HYMAN. The total cost is estimated to be $20,000.

Mr. FOSTER. When is it to be finished?

Mr. HYMAN. On November 20.

Mr. FOSTER. Well, it is a nice little town, and that is not too expensive a building for it.

Regina post office, custom house, &c., $20,000.

Mr. HYMAN. The postal revenue of Regina last year was $20,736 and the customs revenue, $241,000. I estimate that, Regina being the capital, the building will cost complete, $55,000.

Mr. FOSTER. Where is it to be placed ?

Mr. HYMAN. No site has yet been purchased.

Mr. FOSTER. Have there been any negotiations?

Mr. HYMAN. There have been some negotiations, but no site has been selected.

Mr. MONK. I would like to ask the hon. minister what the policy of the government is in regard to some of these estimates. We have voted this evening, and are no doubt going to be called on to vote again, sums of money which are destined to be expended for purely provincial works in the Northwest, such as jails and asylums. The Autonomy Bill, as it is called, will come into force on July 1 next, and what will then become of these votes? Some of them may not have been expended; some of the buildings are in course of construction, and some may not be commenced before July 1. What course does the government intend to take with regard to those works which are provincial in their nature? Because once parliament has voted an item, even for a work of a purely provincial nature, it cannot very well be varied. Parliament having voted a specific sum for a specific purpose, it must be spent for that purpose and for no other.

Mr. HYMAN. In any case, we have to carry out our contracts, and these votes are for contracts which were entered into by the Public Works Department some time ago. I do not know that the government have arrived at any conclusion, but after the Northwest Government Bill passes, there is no doubt that all the buildings intended for purely provincial purposes will be transferred to the provinces. The only difficulty will be as to joint buildings, which are used partly for provincial purposes and partly for Dominion purposes, such as the Prince Albert building, which is used as a post office and custom house and also as a court house. In such cases we shall either have to take over the building and make some financial allowance to the provincial government or they will take over the building and make some financial allowance to us. I do not see any other way in which we can do what is fair and right.

Mr. W. J. ROCHE. Has the government considered the question of a penitentiary for the Territories?

Mr. HYMAN. I do not know that the matter has been under consideration. I believe the Edmonton jail has been suggested for that purpose.

Mr. MONK. As some of these votes are for works of a purely provincial character, I think it would be advisable not to vote too large an amount for these purposes.

Mr. HYMAN. I am not going to ask for any new votes for works of that character. We are only providing for contracts which have already been entered into.

Saskatoon public building, $5,000.

Mr. HYMAN. The postal revenue in the year 1902-3 was $2,000 and in the year 1903-4

$4,195. Saskatoon is quite a growing town. The building is estimated to cost $9,500, and the total cost, including heating, contingencies, &c., at $14,500. The work is not yet commenced. The building will be of brick.

Mr. INGRAM. What is the population of the town?

Mr. HYMAN. I have not the present population. In 1901 it was between 500 and 600.

Mr. SAM. HUGHES. Saskatoon is a very nice place. It has derived its importance largely from the fact that during the last couple of years it has been the point where settlers coming in by the Regina, Long Lake and Saskatchewan Railway leave the railway and start to tramp to their destination. In a short time both the Canadian Pacific Railway and the Canadian Northern will have lines through Saskatoon, and it will then be an important town.

British Columbia—renewals, improvements, repairs, &c., to Dominion buildings, $8,000.

Mr. HERRON. I would like to ask the government if it has any intention to put up a public building in the town of Pincher Creek? We have never had a public building in that town, not even one in which to hold the court, and I think it has a population which fairly entitles it to a building such as those which have been erected in many other towns not so large and not increasing in importance so rapidly.

Mr. HYMAN. I would remind my hon. friend that if a public building is required there for the purposes of a court house, after the 1st of July it will be the duty of the new provincial government to take that matter in hand, and my hon. friend will have to make his representations to the provincial authorities. I am not aware of any representations having been made for the purpose of having this government erect a public building there, but am always glad to hear any my hon. friend has to make.

Fernie, B.C., public building, $10,000.

Mr. HYMAN. The postal revenue is $5,500; the customs, $8,200. It is estimated the building will cost $21,500. The site has not been selected yet.

Mr. W. J. ROCHE. Is there any difficulty about the location of the site?

Mr. HYMAN. I do not know of any.

New Westminster public building—enlargement for accommodation of Indian branch, $7,000.

Mr. HYMAN. This is asked for the purpose of putting up a building for the Interior Department; but since this vote has been placed in the estimates, I have had my attention called frequently to the overcrowding in the New Westminster building at present. The fishery branch of the Marine and Fisheries service may be put into that new building, which will add to its cost. The $7,000 is only intended to cover a building for the Interior Department.

Vancouver public building, $100,000.

Mr. HYMAN. This is not only to be a post office. It is intended for a post office, custom house and examining warehouse. The plans and specifications are being prepared. It is going to be very expensive. I do not see how that building can be put up at a less cost than $400,000 to $450,000.

Mr. BLAIN. When will it be completed?

Mr. HYMAN. As the contract has not been made yet, I am unable to say, but it will be completed as soon as possible, because there is great need for it at present.

Salaries to resident clerks of works, assistants, &c., public buildings, generally, $14,000.

Mr. HYMAN. This is to pay the salaries of the clerks of works and their assistants in other places than Ottawa.

Mr. FOSTER. How many are paid out of this $14,000?

Mr. HYMAN. Ten.

Mr. FOSTER. They are distributed all over, are they not?

Mr. HYMAN. Yes.

Mr. FOSTER. Can the hon. minister give the distribution?

Mr. HYMAN. There are two in Ottawa, one in Quebec, one in Winnipeg, two in Montreal, two in Victoria, one in Regina, one in Three Rivers.

Mr. FOSTER. Are there any in New Brunswick?

Mr. HYMAN. Yes.

Mr. FOSTER. Any in Nova Scotia?

Mr. HYMAN. Our work is done there by Mr. Doddrell, engineer of the department.

Mr. FOSTER. These are all the clerks of works employed in superintending public buildings throughout the Dominion?

Mr. HYMAN. Yes.

Mr. INGRAM. That does not mean architects?

Mr. HYMAN. No.

Mr. FOSTER. I did not notice that you read over any for Ontario.

Mr. HYMAN. Mr. Curry, the architect in Toronto, does our work there.

Mr. INGRAM. I suppose the hon. gentleman is continuing the system that has existed for years. Where there is a public work erected, you employ a superintendent of works at so much per day. That system has been continued for years, and every session it is objected to. These men simply

assist in prolonging the work by not insisting on more men being put on the building. You pay them from $2.50 to $7 per day, and the longer the building is under construction the better for them, consequently you will have a building take two years in construction which an ordinary contractor would build in four or five months.

Mr. HYMAN. Surely, the hon. gentleman (Mr. Ingram) has overstated the case. The contract for the construction of the building fixes a time within which it is to be finished. You must have a clerk of works, somebody who will represent the department in the work. We cannot employ architects all the time to do that work. In cities, for instance, in London or in Toronto, we employ an architect to overlook work of this kind. But, there are places where public buildings are under construction and where there are no architects. We must, in such cases, have a clerk of works, and I can hardly conceive of any way to pay him except by the day. You could hardly give him so much for the work——

Mr. INGRAM. Why not?

Mr. HYMAN. Well it would practically come down to so much a day anyhow.

Mr. INGRAM. You could pay such an officer percentage on the contract price. If that were done, he would have an interest in earning his money as quickly as possible, and he would insist on the proper number of men being on the job. On the other hand, if he is paid $5 or $7 a day, he will be very glad to have the time of construction an extended one. We suffer loss year in and year out in this way.

Mr. HYMAN. I have done a considerable amount of building and I never heard of the inspectors being paid on any such a plan as the hon. gentleman (Mr. Ingram) speaks of. I do not think that plan is followed by private individuals or companies. As I say, we employ an architect where we can, but in the case of a building being put up in a small town, it is impossible to employ an architect.

Mr. INGRAM. It is not necessary that a man should be an architect to be able to insist that the contractor shall carry on his work according to the plans and specifications, and shall put on enough men to finish the work in a reasonable time. In my own city, a building was erected by the municipality costing $50,000 or $60,000. The architect in charge was paid on the percentage plan, and he insisted on a proper number of men being employed. But he was inspector also of the government armoury building. He inspected the armoury building in the morning and the municipal building for the balance of the day. He could stand it to have only two or three men on the armoury, but he insisted on the full number of men on the municipal building. The result was that the municipal building was completed more quickly than the armoury was, which cost only about half as much. When you consider the number of buildings being constructed in the Dominion, you will see, that, in the aggregate this is a serious grievance. With private individuals it is by no means unusual to pay architects on the percentage plan. It is a common plan in all our cities.

Mr. HERRON. I would call the minister's attention to a case of this description. The building was under contract, and the inspector was appointed to oversee the work, I presume at a salary of about $7 a day. The unfortunate part of it was that this inspector was not a mechanic of any description. The building was about a year and a half under construction, and the inspector received $1,200 or $1,300 for his services.

Mr. HYMAN. Will the hon. gentleman (Mr. Herron) tell me to which case he refers.

Mr. HERRON. Yes, the court house at Fort Macleod. I do not think the inspector in that case had enough mechanical knowledge to superintend the building of a pumphouse to say nothing of a court house. Yet he drew a salary during construction.

Mr. HYMAN. The hon. gentleman (Mr. Herron) is mistaken in his facts. In the case to which he refers the inspector was paid $4 a day not $7.

Mr. HERRON. Will the hon. minister tell us what the inspector received altogether? My information is that he drew about $1,300.

Mr. INGRAM. What the minister says does not lessen the fact that inspectors are paid $7 a day in British Columbia.

Mr. FOSTER. Take one of these clerks of works as an example—take the one at Quebec. He is paid by the year, his salary being $1,282. Just what does he do? What are his duties from January to December ?

Mr. HYMAN. He practically has charge of all the government works in that vicinity.

Mr. FOSTER. What does the hon. minister mean by saying that he 'has charge' of these works?

Mr. HYMAN. He looks after all the buildings, sees that the caretakers do their work. In this particular case, the inspector has charge of the public buildings at Grosse Ile, and he has to go there very often. It is the duty of these inspectors to have charge of the public buildings in their districts.

Mr. FOSTER. Is his district the whole province?

Mr. HYMAN. No, we have an inspector in Montreal.

Mr. FOSTER. This inspector is for what is called the Quebec district. He has to go

to places where there are public buildings and make an inspection of those buildings.

Mr. HYMAN. He goes where we send him. We use these officers largely in the purchase of sites. No site is purchased by the department without a report either from an officer sent from the department or from one of these so-called inspectors.

Mr. FOSTER. When the government wants a site the inspector reports upon it? That is one thing he does. Does he oversee buildings under construction?

Mr. HYMAN. He supervises all the work of repairs and renewals—not necessarily new buildings, because in that case he would have to be on the new building all the time.

Mr. FOSTER. He has nothing to do with the new buildings?

Mr. HYMAN. That is all arranged by the architect. If, in any particular instance we can use one of these officers, we do so. For instance, in the post office building in Ottawa, the work is overseen by Mr. Adams who is paid out of this vote.

Mr. FOSTER. He is in Ottawa, and has nothing else to do, and so he is there. But in the case of this clerk of works in Quebec, if the government were spending $20,000 or $3,000 on a building at Grosse Ile the work would not be overseen by this clerk of works? The department must put on a man who would be there every hour of every day, in the case of an important building like that. I want to find out what these men do.

Mr. HYMAN. They visit the building during the course of construction, oversee the work.

Mr. FOSTER. Then he looks after making repairs on all public buildings in course of construction occasionally, and reports with reference to them. To whom does he report ?

Mr. HYMAN. Directly to the chief architect of the department.

Mr. FOSTER. Is he kept pretty busy ?

Mr. HYMAN. They have got plenty to do on the kind of work the hon. gentleman has just mentioned, where they represent the department.

Mr. FOSTER. Now with reference to the plans of all these buildings, are they made in Ottawa ?

Mr. HYMAN. Yes. There are instances where the department employs outside architects to make the plans and supervise. In all these cases the architects themselves do the whole work.

Mr. FOSTER. Supposing you are building a $20,000 post office in Quebec ?

Mr. HYMAN. In that case it would be done here.

Mr. FOSTER. The architects in the department here make the whole of the plans for that building ?

Mr. HYMAN. Almost invariably. But there are instances in which we employ an outside architect to make the plans, but that is not the rule. We keep our staff here for that purpose.

Mr. FOSTER. Now after you have prepared the plans and let the contract, do you employ a local architect for that building ?

Mr. HYMAN. Very often.

Mr. FOSTER. Do you also employ a man to oversee the work ?

Mr. HYMAN. Not where there is an architect.

Mr. FOSTER. When you employ an architect who does not oversee the work, how do you pay him ?

Mr. HYMAN. We pay him by commission, and from that commission he is supposed to employ a man on the work continually.

Mr. FOSTER. That is to say, in some cases. In the cases of all these buildings the plans of which are drawn here and where you do not employ an architect and a clerk of works, so to speak, locally, then, there is no other architect there but the government architect ; none that have anything to do with that building ?

Mr. HYMAN. No men who are paid by this vote.

Mr. FOSTE. I am speaking of men whom you employ to see that the architect's plans are carried out in the construction of the building ; that is a clerk of works, so to speak, temporarily there while the building is being erected. In that case you do not employ an architect ?

Mr. HYMAN. No.

Mr. FOSTER. Then you appoint a man who is to see that the building is constructed according to the architect's plans. In that case you employ of course a mechanic ?

Mr. HYMAN. We always do, a man, for instance, understanding masonry or carpentering.

Mr. MONK. Where extensive repairs are undertaken in the public buildings of a province such as we have been voting many thousands of dollars for, or where a public building is to be modified or improved, are the plans made beforehand in the department here ?

Mr. HYMAN. All made in the department here.

Mr. MONK. Who reports as to the necessity and approximate cost of those repairs ? This year we have voted about $200,000 for repairs and improvements on public buildings in the province of Quebec. These must have been preceded by a report to the minister showing a necessity for these repairs and an estimate of the cost. Who is that done by ?

Mr. HYMAN. That comes from the department who are using the building. For instance, in post office improvements the request would come from the Post Office Department asking for certain repairs or additions to be made. Then the Public Works Department have a staff here who prepare the plans for those works, repairs or additions.

Mr. MONK. I understand the call for repairs or improvements comes from the department interested. But before the estimate is placed before us, who gives to the government a report of the probable cost, and the necessity and extent of those repairs ?

Mr. HYMAN. The chief architect of the department.

Mr. MONK. Then he visits these places in order to prepare the estimate ?

Mr. HYMAN. He cannot personally visit all the places, but some members of the staff are sent to each of these places.

Mr. MONK. Then when the repairs are finally decided upon, who superintends the work of carrying them out ? For instance, we have voted $25,000 to make some changes in the front part of the post office in Montreal ?

Mr. HYMAN. That would be overlooked by the agents of the department in the different cities. In the city of Montreal we have a local man who is paid out of this vote we are discussing ; in that case he would overlook the repairs.

Mr. MONK. I heard the name of Mr. Béland mentioned for Quebec ; who is the man in Montreal ?

Mr. HYMAN. Mr. C. Desjardins is in charge in Montreal.

Mr. MACDONELL. Who is the man who performs the same duty in Toronto ?

Mr. HYMAN. Mr. Hamilton is in charge of all the buildings there, in so far as the employees are concerned. We generally employ Mr. Currie, the architect there, to make the plans, or to consult with in case of any renewals or repairs.

Mr. MACDONELL. I am speaking more especially of repairs.

Mr. HYMAN. Mr. Currie generally overlooks the repairs of the department there.

Mr. MACDONELL. A lot of repairs took place last year in the Toronto post office, who was the person ?

Mr. HYMAN. Mr. Currie, the architect.

Mr. BLAIN. In the case my hon. friend brought to the attention of the minister a few moments ago, the Macleod post office, Northwest Territories, I see the contract price is $13,973, and the clerk of works got $1,464 ; making for the architect and clerk of works $2,879. Is not that rather a high commission ? I want to ask the hon. minister this question : Has he not in his department officers who can prepare these plans without engaging an outside architect ? These are buildings that are being erected every day almost. New towns are springing up, appropriations are made and a court house that is suitable in one town is suitable in another town with very little alteration. Surely, when this Fort Macleod building was put up, the hon. gentleman had in his department plans and specifications suitable for that building without employing an outside architect at a cost of $1,415.

Mr. HYMAN. There is no architect.

Mr. BLAIN. Yes, Martel & Langelier, $1,415.

Mr. HYMAN. Those are the heating contractors.

Mr. BLAIN. Those were heating contractors ? On this point I would like an answer from the hon. minister as to what the policy of the government is. Are we to understand that when a building is to be constructed in Macleod, for example, the department have plans and specifications that would be suitable for a town of that size, or are we to understand that special plans are made for each town ?

Mr. HYMAN. The hon. gentleman will know that it depends altogether on the question of the site. It is almost impossible to have a plan that is equally suitable for two sites. Very little alteration makes it necessary practically to make a new plan. The policy of the department has been to do all that work in the department. But we cannot follow that policy at all times. There are occasions when we employ an outside architect, in which case he has the supervision of the building, and is paid a percentage for his work ; yet, in all those cases in which an outside architect is employed, his plans are sent to the department and examined by the chief engineer before anything is done.

Mr. MONK. Who is Camille Desjardins, who does the work mentioned by my hon. friend a moment ago in the city of Montreal, and how long has he acted in that capacity ?

Mr. HYMAN. About fifteen years. He is a brother-in-law of Mr. Justice Ouimet, and was appointed by him.

Mr. MONK. What is his remuneration ?

Mr. HYMAN. $1,080.

Construction of armouries, $50,000.

Mr. FOSTER. Is that the first construction ?

Mr. HYMAN. This is a vote that has been in the estimates for some years. It is asked for by the Militia Department for the purpose of constructing small armouries in different places.

Mr. FOSTER. What armouries are proposed to be constructed ?

Mr. HYMAN. I have no demand from the department as yet for these armouries to be constructed out of this particular vote.

Mr. FOSTER. Does the hon. minister think it is quite proper to come down here and ask for a lump sum of $50,000 or $100,000 when he has not even decided that the armouries are required ? That is no proper voting of money. You should not ask for a vote unless you have outlined what uses you propose putting it to, and are able to give details to a certain extent. This bulk sum voting of $50,000 or $100,000 and placing it in a minister's hands, especially those of the hon. Minister of Militia and Defence (Sir Frederick Borden), would never do at all.

Mr. HYMAN. The hon. gentleman will understand that contracts have been made, for which a certain amount of this vote will have to be used.

Mr. FOSTER. Give an explanation of that.

Mr. HYMAN. I am speaking of the new ones. That does not take up the whole vote.

Mr. FOSTER. What are those contracts, and what do they amount to ?

Mr. HYMAN. They are for armouries at Kaslo, Fredericton and Brockville.

Mr. FOSTER. What is proposed to be done at Kaslo ?

Mr. HYMAN. I see that Kaslo was completed out of this year's expenditure.

Mr. FOSTER. Well, drop that out.

Mr. HYMAN. The places at which these armouries are to be erected are Burford and Fredericton, and there is some expenditure at Brockville.

Mr. FOSTER. What is the expenditure for these three ?

Mr. HYMAN. About $30,000.

Mr. FOSTER. What is going on at Burford ?

Mr. HYMAN. An armoury is being erected.

Mr. FOSTER. Why is not the construction of an armoury at Burford, where you are spending $30,000, detailed here just the same as in those other cases in which you are making expenditures of from $10,000 to $30,000 ?

Mr. HYMAN. This is just a small expenditure.

Mr. FOSTER. What—$30,000 ?

Mr. HYMAN. No ; the expenditure is not $30,000. That is the expenditure for Burford and Fredericton together.

Mr. FOSTER. What is the expenditure at Burford ?

Mr. HYMAN. $9,900.

Mr. FOSTER. And at Fredericton ?

Mr. HYMAN. $12,000. And then there will be heating, electrical wiring and contingencies. The cost of the two buildings will be in the neighbourhood of $30,000.

Mr. FOSTER. That is what I understand. The hon. minister wants a vote for the construction of armouries of $50,000. A question brings out the fact that you are spending $9,900 on an armoury at Burford and $12,000 on an armoury at Fredericton. These expenditures may be all right, but what answer is there to the question : Why, instead of having it blindly for the construction of armouries, the minister should not have a vote for each, and should not put down 'armoury at Burford, $9,900' and 'armoury at Fredericton, $12,000' ? That is the way, I think, my hon. friend will admit it ought to be put in, and I would move that it be amended in that direction. Let us have it by all means in the vote, because you might as well just simply say : Here is $500,000 for the construction of armouries ; but that is not the way that votes ought to go through the House of Commons. There ought to be a definite building for which each vote is taken. In the way of repairs it is difficult to do that, because there are small repairs running from $10 to $300 or $400, but this is for the construction of a building.

Sir FREDERICK BORDEN. The policy of voting a lump sum for the purpose of constructing small armouries was adopted some years ago. I do not know whether it was adopted during the time of my hon. friend——

Mr. FOSTER. I do not think so.

Sir FREDERICK BORDEN. Well, three or four years at any rate and for this reason : Often times it is necessary to have accommodation which is not foreseen and cannot be foreseen perhaps, and it was thought desirable to vote a sum—I think we began with $35,000 or $40,000—to build armouries which would cost anywhere from $2,500 up to $10,000 each. It was considered to be good policy, the matter was discussed here and the House agreed to it and that is the reason, if it be a reas-

on, why this vote has been placed in the estimates. I think it is a good reason. My hon. friend from North Toronto (Mr. Foster) who I am sorry to observe just now seems to have some want of confidence in me—I thought he had the very greatest confidence in me—made some reference to the fact that I was not here last evening. I think the criticism he made was perfectly fair; I think the minister interested in votes ought to be here, but it so happened that I was not able to be here last night. My hon. friend (Mr. Foster) would have had an opportunity, had he been here during the last four or five years, of learning that a policy with reference to expenditures of this kind had been laid down. My hon. friend wanted to know what the policy of the department was. That was a perfectly proper question. If he had been here he would have known, because he would have heard it stated. Perhaps it would not be inopportune for me to read one or two statements which I made to the House some two or three years ago upon this very subject, and if the committee will bear with me for a moment I shall do so. In October 1903, my hon. friend from Peel (Mr. Blain) asked a question and in answer to him I made this statement, which will be found at page 13084 in the last volume for that year. I then said:

My hon. friend (Mr. Blain) will understand that it is impossible to do this work all at once. It will involve between one and two million dollars, and perhaps more, to properly house the different militia corps throughout this country. We are going on as rapidly as possible throughout the country, and I assure my hon. friend that we are selecting the places in which these buildings are to be constructed on the advice of military men and from a non-partisan, a purely military point of view. With regard to the rural districts and the smaller towns, where there is only say, one unit, my idea is that we should construct a substantial building which can be headquarters, armoury and storehouse, and with a room sufficiently large for a lecture room, where the officers who take an interest in military matters can bring their men together in the evening, and, by means of blackboards and so on, illustrate military affairs and give necessary instruction. This is the idea I have, and that I hope to be able to begin to carry out in the near future. My plan will include every village of any importance in the Dominion of Canada.

Later on I again discussed the matter and on the 8th day of October, I made this statement, which will be found at page 13403 of the same volume:

I have already referred to the importance of housing the militia. If we want to make the infantry force of this country what it ought to be, we must provide for every single unit, every company, sufficient accommodation for at least one hundred men where they may meet together and spend their evenings, using it as a sort of club room, and having blackboards and other means to educate themselves in the art of war. If you do that, you will excite renewed interest among the men, and you will get together and get the sympathy of the very best men in the community. You will not then have to worry over the question whether you are to pay them seventy-five cents or a dollar or fifty cents a day. It is not the money that brings that class of men out. It is the loyal spirit in them and the desire to serve their country; and all they will ask is the opportunity to acquire the necessary knowledge in order to do so.

I have read this simply to show that the matter has been under consideration, and that the department has adopted a policy with reference to it. I may, however, say to the committee that I believe we should have at every company headquarters, the headquarters of every unit, as I have said before, a substantial building. I had hoped that such a building in the rural districts might be constructed for $2,500 for the smaller ones up to $5,000 or $6,000 or $7,000 and that for a total of between $1,000,000 and $2,000,000 running over perhaps five, six or possibly ten years, which would not be felt very seriously in any one year, we might have the whole militia of the country on its present footing properly housed. I am bound to say—and the acting Minister of Public Works, I am sure, will not object to my saying so, that I have been disappointed in the cost of the buildings which have been constructed.

Mr. FOSTER. That is that they have cost more than you thought.

Sir FREDERICK BORDEN. They have cost more than we thought they would, and more than I think they should have cost.

Mr. FOSTER. That is the trouble with public works; it always has been, it always has been.

Sir FREDERICK BORDEN. I think some plan, some system can be devised by which these buildings can be constructed at a lower cost, and only yesterday I discussed this matter with my hon. colleague, the acting Minister of Public Works, and we agreed that there should be established an inter-departmental committee composed of officers of his department and officers of my department, one or two of each, who should meet from time to time, once a week, once a fortnight or monthly, and take up all these questions in which the Public Works and Militia Departments are jointly interested, where the Public Works Department is called upon to construct buildings or do work for the Department of Militia. This we intend to do, and I hope that in the near future, before this session is over, we will be able to lay before the House a scheme of a very definite character as to the cost of these buildings which will vary in size from those which would accommodate 100 or 125 men up to those which would accommodate 1,000 men. In the meantime I hope the committee will not refuse this general vote. It will be the

duty of my department to place in the hands of the Public Works Department a carefully prepared list of the places which first require buildings, the more urgent ones, and that list, I promise the committee, will be prepared by the military men of my department and submitted to the Militia Council. No list will be submitted to the Public Works Department or undertaken until it has been decided to be necessary and important in the public interest.

Mr. FOSTER. I am glad to have the minister present. It is a great pity he was not present last night, but we will excuse his absence of last night because he has acknowledged handsomely that he should have been here. That is a business view which we will take. I am sorry, too, that I have to put him to the trouble of spending 15 minutes going over what he has gone over before. He has to do it because I was not in the House last parliament. It was not my fault that I was not in the House and if he has been caused any trouble let him fight it out with the Postmaster General, who is peacefully reposing just ahead of him, for I believe he is largely instrumental in having prevented my presence here. I believe it was mainly through the kindly offices of the Postmaster General that I was deprived of being here during the last three or four years, and that consequently I have been obliged to trouble the Minister of Militia for fifteen minutes repetition of what he stated a few months ago. It is just that kind of light, thrown upon the subject by the minister who has the initiation of the votes, that helps the committee to understand what these votes are for, I said there was chronic trouble in the Public Works Department. It was so in my time. There was a continuous struggle of this kind—and I dare say that those ministers who have large works to construct experience the same difficulty today—that whereas as a business man you want to put up for a corps of one hundred men a storehouse and shelter, which a business man would put up for $2,000 or $2,500, when you come to have it done by the Public Works Department it would run up to $6,000 or $8,000. That is true with reference to post offices and public buildings of every kind. As business men and citizens of a common country, which is growing rapidly and in which the expenditures are enlarging in different ways, we must come to the conclusion that we shall have pretty hard times ahead of us to meet all the services of the country if we do not bring these down to an economical basis. I have every sympathy with the idea of having the militia of this country well cared for and having every one of these units provided with a home of its own ; but if you are going to do that, you have to get rid mighty quickly of the idea of spending $50,000, $60,000, $70,000 or $80,000 on these places. You cannot furnish all these units with proper accommodation under $4,000,000 or $5,000,000 or $6,000,000 if you go on in this way. That is what I meant last night when I asked where we would come out at if the minister proceeded on a fixed line of providing for all at that rate. We can give all these units decent housing if we make up our minds to put up businesslike buildings. I think that is an excellent idea of the Minister of Militia ; and if the Postmaster General and the Minister of Customs and the Minister of Public Works, with reference to their various constructions, were to have a sort of international conference at Ottawa in which they would get together with their officers and compare notes and bring matters down to a business level, they would economize more than they are doing now and would serve the country very much better. Mind you, I am not criticising in any carping spirit any expenditure for the necessary services of the country. We have to have them and more of them. But I remind the committee that we are at this moment setting up sister provinces and furnishing them, that this is going to cost this country a large amount of money, that our services are reaching out to distant places, and that these are becoming more costly. Therefore, we ought to set our houses in some sort of economical, businesslike order, and have the expenditures carried out in such a careful and reasonable way that the general distribution in the end shall not overburden the country to such an extent that we shall at some time get freightened at it or find it impossible and have to stop the very thing that we might have carried on if we had carried it on in a reasonable and economical way. Probably all ministers and governments make mistakes in that way, but every year makes it a more vital question with us in our growing country, and I am glad to hear the minister say he is proposing something of the kind. I do not forget that the Minister of Militia is on pledge that in the selection of sites for militia purposes he will act on the principle, not that Thomas or John or somebody else who has given good service to the party asks for something, but because it is necessary for the service. If I have caused the Minister of Militia and Defence trouble in asking for an explanation, the onus rests upon the interesting gentleman who sits beside him, the hon. Postmaster General.

Sir FREDERICK BORDEN. I am very glad that my hon. friend gave me the opportunity to make the statement which I have made, and I assure him that it was no trouble, particularly, as I have found that the seed I have disseminated has fallen on such good ground. I am glad to find that, after all, my hon. friend has not such a want of confidence in me as I might have been led a few moments ago to suppose he had. With regard to the large expenditure in the great centres, there are in the city of Toronto, for instance, probably forty units.

Mr. FOSTER. I am not quarrelling with a large expenditure in large centres.

Sir FREDERICK BORDEN. The large expenditure there is perfectly justifiable. The same is true of Montreal, Hamilton and other large centres. I do not think any one will complain of that. But we have to construct in the country districts in order to house the militia properly six or seven hundred buildings, because we have at least one thousand units. I think it is quite as important, perhaps more important, that we should provide places where these units can meet and spend their evenings profitably, than it is even in the cities. As I pointed out in my remarks of two years ago, I think it is of the utmost importance to the welfare of the rural militia that this should be done as soon a possible, and, as my hon. friend has pointed out, it cannot and will not be done unless we are able to do it at a much lower rate of expenditure than we have been involving the country in up to the present time. I think that with from $2,500 to $7,500, possibly $10,000, we ought to be able to get all the accommodation required for one, two, and in some cases three, companies in a country district.

Mr. COCHRANE. I would draw the hon. minister's attention to the fact that in the village of Colborne complaint is made that the cavalry corps there, has no place in which to store its guns and other equipments. Although the town is not a large one, this corps should be furnished with some place in which to store its equipment. I think at present it has to store them in Coburg. I heard one of the officers say last summer that they had not a cartridge in their possession. I thought it rather strange that we should have a cavalry corps there and yet not have a cartridge among them. That would be rather awkward if any trouble should arise. I would also draw attention to the fact that there is a militia corps in Brighton, and that in Brighton there is no place in which that corps can store its equipment. I have never had any ambition in the soldiering line, but as the representative of the people I am prepared to vote for any reasonable expenditure to house and equip these men properly and also to pay them for their services. I think they have been underpaid, and if they get enough now I am very glad of it. So long as economy and business like methods are practised, I think that our militia should be furnished with these things and above all with ammunition to use if necessary.

Sir FREDERICK BORDEN. The place to which my hon. friend refers is exactly one of these where a building of the kind I have described should be and will be constructed. With regard to the ammunition, I have no doubt that there is ammunition not very far away from the headquarters.

Mr. LALOR. As a representative of a rural constituency, I was much pleased to hear the remarks of the hon. Minister of Militia, I am glad to hear that he has outlined a policy by which he proposes to take care of the rural battalions. In the votes we have been giving to the militia for the building of armouries, it did strike me that all the money was going to the large towns and cities and that the rural battalions were being completely neglected. The county of Haldimand has one of the best battalions in the province. I am told that the 37th battalion is probably the best of those that go to the Niagara camp. Yet, in the whole county there is not one drill shed for that battalion. I hope that the hon. minister will see his way clear to furnish us with some drill halls in that county. The town of Dunnville, where I reside, is a large, prosperous and growing town, and it has a splendid volunteer corps. I have received a number of letters already, since I have been in the House, from Dunnville, asking me to bring this matter before the House so that the hon. minister might know that the company in Dunnville have no place in which to drill or store their arms, but have to rent a place and pay for it out of their own pockets. The officers are very anxious that a drill hall should be built there. I can not refrain from complimenting the hon. minister on the policy he has outlined, and I hope he will not forget that good old county of Haldimand when he is distributing armouries and drill sheds.

Mr. TAYLOR. I intended last evening, when the militia votes were being put through, to say a few words, but refrained from doing so as the hon. minster was absent. However, now that he is here I wish to draw his attention to some facts. I share in the pleasure of my hon. friend from Haldimand at the announcement of the minister that he intends to house all the militia in the rural districts, villages and towns. Gananoque is an important town. We have there a field battery, one of the oldest and best in the Dominion. We have also a rifle corps. A few years ago they had comfortable quarters containing a drill shed and an armoury, but my hon. friend tore that down and purchased another site. It was the intention of the government to provide housing for that corps but for some reason or other nothing was done, although ten years have elapsed.

Sir FREDERICK BORDEN. Not so long as that.

Mr. TAYLOR. It was in 1896—nine years anyway. I have asked repeatedly to have our boys housed again. They have had to rent an old warehouse in the centre of a lumber yard where the guns are stored as well as the harness and other accoutrements, but they have only room to run the guns in and no place suitable for the men

at all. I beg to draw the hon. minister's attention to the fact, and would urge on him the necessity of providing without delay an armoury in the town of Gananoque. I am sure my hon. friend has waited long enough now, and I hope that he will see that a sum is put in the supplementaries to provide for such a building. The site was purchased and paid for some eight or ten years ago, and nothing done yet. I referred to another matter last night when the hon. minister was not present nor was the hon. member for Kingston (Mr. Harty). But I had a conversation with that hon. gentleman afterwards, and he said he would remind the minister of the necessity of having the Martello towers at Kingston, which were injured a few winters ago by the wind storms, put in respectable repair. We have Americans coming to Kingston by the thousands every year, and it is certainly no credit to us that these towers should remain there with their tops blown off and in a dilapidated condition. I hope that the hon. minister will, the first thing this spring have these Martello towers repaired, otherwise they may tumble down altogether.

Mr. COCKSHUTT. Is a part of this vote to be expended for the purpose of erecting an armoury in Burford village? Burford is a flourishing village which has a very good company of dragoons. This company has no armoury or drill hall, but there is a building in course of erection. Might I ask the hon. minister what has been expended and what further will be expended on the armoury at Burford?

Mr. HYMAN. The contract for the Burford armoury it $9,900. That will complete the building.

Mr. MACDONELL. I would like to take advantage of the presence of the Minister of Militia to draw his attention to the Toronto drill shed. This $40,000 for the extension of a drill hall is a revote. I asked the question when this contract would be commenced, also the nature of the work and in what direction the extension of the drill hall would be made. It was pointed out, that, a year ago when this appropriation was put in the estimates, the then minister of Public Works stated that the work would be proceeded with at once, in fact he said, the plans would be perfected in a few days from that date—March 2, 1904—and immediately the plans were completed and the frost sufficiently out of the ground the work would proceed. I think the Minister of Militia (Sir Frederick Borden) knows better than any man in this country the immediate necessity for better drill hall accommodation in Toronto and the unpleasantness and difficulty among the regiments that has arisen because of the inadequacy of the present hall for all the troops there. The question is one of immediate importance to the militia men of Toronto. They have waited long for this extension, and they are anxious to know when it will commence, what direction it will take, and generally what it will be.

Sir FREDERICK BORDEN. I am not able to answer all my hon. friend's questions, but I think my colleague the Minister of Public Works will be able to give any information I cannot give. I wish to say, in a general way, that I consider the giving of additional accommodation to the militia force of Toronto a matter of the most urgent necessity. And, so far as I am concerned, I will continue to impress upon the Public Works Department the importance of giving that accommodation at the earliest possible moment. While I am not charged with the preparation of the plans and have not really examined them, I am told that an agreement or understanding has been reached, between the gentleman at the head of the engineering branch of my department and the chief architect of the Public Works Department, on a plan which will give all the accommodation that is required for the Toronto garrison. My hon. friend the Minister of Public Works will be able to tell the hon. member for South Toronto (Mr. Macdonell) when the work will be commenced.

Mr. TAYLOR. What about Gananoque?

Sir FREDERICK BORDEN. I had intended to reply to my hon. friend (Mr. Taylor) when somebody intervened. I can only repeat the assurance I gave the committee a little while ago, that we will proceed with the construction of public buildings for the accommodation of the militia in accordance with the most urgent requirements of the service in different localities as decided upon by the officers of the Militia Council. With regard to Kingston, I am glad attention has been called to that matter. That pertains to my own department exclusively. We have a vote out of which can be taken the sum necessary to make these repairs, and I will see that it is done.

Mr. P. H. McKENZIE. I wish to say a few words concerning the condition in this regard of the county I have the honour to represent, the county of Bruce. We have what our people consider a very good regiment in that county, without any accommodation whatever except small rooms, provided at low rentals, at the company centres. The policy of the Minister of Militia, as he has enunciated it to-night, has been laid before our people, and they very much approve of it. They are looking to the department now for more suitable accommodation for the regiment there, and I hope that when the minister is preparing his estimates he will not forget the great county of Bruce and will not give all the money to the cities and the portions of the country farther east. We in the west, look on ourselves as belonging to the fighting

races,—and we want consideration for our militia in that western part of Ontario.

Sir FREDERICK BORDEN. We in this House must know that we owe a very great debt to the county of Bruce for sending such a very able representive as it has to this House. I am glad to hear from him that the policy which was first outlined two or three years ago is approved by that county. I can only say what I have said before, that we will take this matter up and we will see to it that Bruce is not neglected—of course, in the order of merit.

Mr. PRINGLE. I join with the others in expressing my pleasure at the presence of the Minister of Militia (Sir Frederick Borden) to-night. Last night, while the items for armouries throughout the province of Ontario were under consideration I brought up the subject of the armoury for the town of Cornwall. I pointed out to the Minister of Public Works the great importance of the eastern district, and the splendid battalion in the counties of Stormont, Dundas and Glengarry, and the fact that that regiment was without a building even to store their arms. I stated that we in that section were very moderate. We quite agree with the proposition laid down by the Minister of Militia. We do not wish to see any such extravagant expenditure as that made in the town of Brockville, and then have the battalion disband and have a monument there to the Militia Department or the Public Works Department in the form of a building which cost, I think, in the neighbourhood of eighty or a hundred thousand dollars and is used only for social entertainments, and bazaars. We have in Cornwall a live battalion, one that is a credit to the province of Ontario. The officers of that department have waited on the Minister of Militia from time to time. They have not received from him any definite promise that I know of. They waited on the ex-Minister of Public Works, and that gentleman gave them a positive assurance that that armoury would be erected. Not only that, but he visited the town of Cornwall and went over the sites pointed out to him by the gentlemen who were extending to him the courtesies of the town. He approved of one site. The citizens naturally expected that the contract would be let immediately afterwards and that by this time they would have had a building ample for the purpose. Yet nothing has been done. The battalion feel very much aggrieved that they have been neglected. As I pointed out last night, the officer who is in charge of the battalion is a most active supporter of this government. My opponent in the last election is also an officer of that battallon and as I understand, a very capable officer indeed. He also, I believe, feels disappointed that nothing has been done. We had from the Minister of Public Works last night an assurance that it would come. If he had said not only that it would come, but that it would come within a certain period, I would have been satisfied with that and would not have had anything to say to-night.

Now that the Minister of Militia is here—he knows that the case is urgent. He knows that the officers and prominent citizens of the town have waited upon him several times urging that this building should be constructed. Perhaps he would be able to supplement the assurance I have received from the Minister of Public Works, and state definitely whether some portion of this $100,000 that we are now discussing is to be expended in Cornwall to erect a suitable building. As I have said, we are very modest. An expenditure of $8,000 or $10,000, I think, would be ample to provide accommodation for the 59th Battalion. I hope the Minister of Militia will give me definite assurance to-night that the building will be put under way this year.

Sir FREDERICK BORDEN. My hon. friend (Mr. Pringle) is perhaps not aware—I do not know that he is a military man—that the regiment to which he refers is a rural battalion and not a city battalion. It is a battalion composed of eight companies, two of them and not more than two, have their headquarters in the town of Cornwall; the remaining companies or units have their headquarters in probably six different places in that county, and perhaps the adjoining county. A few years ago it was recommended to the department that there should be a central armoury for country battalions, and that there should be one armoury alone for eight companies. That was found not to work, and that policy has been changed; in fact we have reverted to the old system of keeping arms at company headquarters. I may say to my hon. friend that I agree with him absolutely that there should be a building procured or constructed in the town of Cornwall, but it will be of the kind that I have described, and which I am glad to observe he is reasonable enough to be satisfied with, a moderate building which would also give accommodation for regimental headquarters. I would suggest that Cornwall being a growing town, probably we might provide for two companies additional, having in view the future. Subject to what I said a moment ago, that these matters must all be decided by the Militia Council, by the expert advisers of the militia and of the government, I think I can give the assurance that it will not be very long at any rate before provision is made for the regiment to which my hon. friend refers.

Mr. LALOR. I notice that some hon. gentlemen who have spoken asking for drill halls for their counties have received assurances from the Minister of Militia that drill halls will be built for them. I have not been fortunate enough to draw that promise from the Minister of Militia as to

whether he will remember Haldimand county. I have already complimented him on the policy he has outlined, it is a wise policy and in the interests of the rural militia. I think the great difficulty with rural battalions in the past has been that they have not received the attention they deserved. In fact my predecessor in this House not long ago alluded to the rural battalions as being the shadow of a shadow of a skeleton. That was not very complimentary to the rural battalions, especially as coming from a military gentleman himself. Now I hope the Minister of Militia will improve that state of affairs, and rejoice the hearts of the battalion of Haldimand county that I have the honour to represent, by promising that he will build a drill hall in the town of Dunnville.

Sir FREDERICK BORDEN. The appeal of my hon. friend is quite irresistible. If I did not refer especially to the county of Haldimand, it was not out of discourtesy, but because some one intervened before I had had an opportunity of speaking. I will only repeat what I have said, that I believe the county of Haldimand is one that is especially deserving as the regiment of that county is especially deserving. I have had the pleasure of seeing that regiment on many occasions, and it will give me a great deal of pleasure if the Militia Council should recommend my hon. friend's town as one of the early towns to receive a building of this kind.

Mr. MORIN. Am I going to be left out ?

Mr. MACDONELL. Would the minister tell us what he is going to do with the Toronto work ?

Mr. HYMAN. I explained last night that there are two works to be done in Toronto. One is the enlargement of the armoury, putting another story on the armoury to be used for storing the arms. The plans and specifications are now in the hands of the printers, and as soon as they are received tenders will be advertised for. As regards the other and larger work, the plans I understand are to be sent over to the Militia Department, whence they will be forwarded to Toronto to the officers there to pass upon ; then they will come back to the Department of Public Works. All that of course will take some time. As the building will be a large one costing some $250,000, it will take some time to prepare the plans and specifications.

Mr. MACDONELL. Is it the intention of the department to proceed with this work ? Last year we were told the same thing, we were told the plans would be finished in two days.

Mr. HYMAN. I think the hon. gentleman must have been mistaken, and that the minister had reference to plans for an addition, that is, putting on an extra story where the arms are to be stored. I cannot conceive that he referred to the larger work.

Mr. MACDONELL. I understand it is the intention of the government to proceed with this building in due course ?

Mr. HYMAN. Without question.

Mr. FOSTER. What is being done in Fredericton ? $12,000 of that vote I think is devoted to the armoury in Fredericton.

Mr. HYMAN. That is for restoring the building that was burnt.

Mr. LEFURGEY. I would like to call the attention of the Minister of Militia to the condition of the drill hall at Summerside. I have had several conversations with the hon. gentleman last year on this subject, and I had his assurance that the matter would be looked into and possibly something would be done. Up to the present there has been no move made. If it is the desire of the minister to have the efficiency of the different companies up to standard, and to keep up the interest of the rural and small town companies, he will have to provide better accommodation than we have in the town of Summerside. As I pointed out last night, we have an old building forty or fifty years old on our public square, with no floor and absolutely no accommodation.

Sir FREDERICK BORDEN. It is true that my hon. friend (Mr. Lefurgey) called my attention to the matter last year, and I had one of my officers visit the place and make a report upon the building. The question is now before the department for action. I hope that in the near future some action will be taken. I would like to add in this connection that it is impossible that all these buildings should be erected at once. I may be permitted to remark that in my own county we have a regiment of infantry of eight companies and two squadrons of cavalry, yet we have only an old wooden drill hall in the town of Kentville, which was built many years ago. There has not been a thousand dollars expended on buildings to house the militia in my county during the nine years I have been a minister. I tell my people that they must be patient. The time will come, I hope, when they will all be housed and I will ask some of my hon. friends to emulate my example and be patient.

Mr. LEFURGEY. We would almost prefer in my town to wait a year or two, if we had the assurance that a suitable building would he put up, and one which would at the same time be an ornament to the town.

Mr. HYMAN. Before we proceed further, there was one item left over in the Ontario list, on the understanding that the hon. Minister of Militia and Defence would make a statement in regard to it. I refer to the Woodstock armoury. I suppose there is no objection to passing that item ?

Mr. FOSTER. All right.

Ottawa public buildings, including repairs, ventilation and lighting, furniture, &c., $140,000.

Mr. INGRAM. What is this ? There was a vote last night for this same thing.

Mr. HYMAN. Oh, no ; but there was really a discussion upon this vote last night. This is the usual vote for the care of the buildings.

Rents—Dominion public buildings, $64,000.

Mr. PERLEY. Are these all in Ottawa ?

Mr. HYMAN. No ; the Ottawa rents amount to $47,111. These are the rents which the department pays for rented buildings throughout Canada.

Mr. PERLEY. I suppose these rents have to be paid as the leases are made ? I know the hon. gentleman had personally nothing to do with the renting of these buildings, but I hope he will be able to give us some assurance that he will stop this system. I think that probably, individually, we would all concede that the present system is a mistake. The government have rented buildings all over the city ; they have rented some good buildings and some poor buildings, and the rents are all high. Rumour says on the street that some of the rents are very high even for individuals to pay, but taking into consideration the rate of interest that the government have to pay for money, all of these rentals are high. I think that individually the hon. minister and all other members of the House will probably agree that if the government need all this accommodation they ought to provide it in some other way. They should erect a building. There is plenty of land in Ottawa, and the government could erect a fine building at no greater annual charge for interest than the rental which they are now paying. They are paying interest on about $2,000,000 in rentals for these buildings that they are now occupying, whereas they could buy land below the Supreme Court and erect a building there. I hope the minister will give us some assurance that he will not follow the system pursued by his predecessor in this regard.

Mr. HYMAN. I promised the committee at a previous sitting to make a statement in regard to this question. I quite agree that the time has come when the government should have a definite policy in regard to making provision for the different departments of government. It requires a considerable amount of material to be got together, details of space and everything of that kind. The architect of the department is at present engaged upon the matter, and I hope before the session is over to lay before the House some plan so that we may get rid of the large payments of rent, and house each department in a building belonging to the government.

Mr. PERLEY. Is it the intention of the hon. minister to try and arrange so that he will not have to lease any more buildings in Ottawa ?

Mr. HYMAN. I cannot say that, because, in the meantime, if there are applications made by any department for more room, and it is found by the Department of Public Works that they must have room, of necessity we must rent a building. But I promise that there will be no long leases, and that there will be no leases that cannot be got rid of when we are ready to go into a new building.

Mr. PERLEY. It is not only the question of money, but the question of extreme inconvenience that is experienced by the public when a department is divided up between two or three different buildings. The minister at the head of the department perhaps knows where the various branches are, but it is pretty hard for any other person to find the branch which he wants.

Mr. BLAIN. How much is being paid for rent for the building occupied by the Railway Commission ?

Mr. FOSTER. If the minister will just read the list of rentals for which this $64,000 is paid, that would give all the information.

Mr. HYMAN. They are as follows :

Geological Museum, Sussex St.. .. .. ..$	600
French translators office, Sussex St.. ..	600
Agriculture Department, Queen St	2,250
Central basin coal shed, Slater Estate..	360
Thistle Estate, Wellington St., gas inspection and weights and measures..	550
Inland Revenue, Sparks and O'Connor Sts	6,500
Methylated spirit warehouse and laboratory—Interior Department, cor. Queen and Lyon Sts..	1,200
Marine store house, Sussex St...	360
The Ottawa Building Company, limited, No. 98 and 100 Wellington St, for Custom Department..	1,500
Molson's Bank, Metcalfe St., two flats for Labour Department..	1,200
New building for Surveyor General's staff, cor. Metcalfe and Slater Sts., Ottawa Building Company..	3,000
Interior Department, including vault, Slater and Sherwood..	366
Interior Department, Imperial building, Queen St., for immigration branch.. ..	1,950
Mounted Police, 172 Wellington St., Slater and Sherwood..	1,140
Post Office Department, Sparks St. Chambers, Slater and Sherwood..	540
Post Office Department, railway mail service, 12 Albert St., Bate & Co..	600
Rooms occupied by Department of Public Works, Slater Block, Sparks St..	480
Militia and Defence, Slater St..	11,040
Railway Commission, Queen St..	5,300
Agriculture Department, Commissioner of Exhibitions branch, the Ottawa Investment Company, limited, cor. Metcalfe and Queen Sts., No. 94 and 96..	1,000

Corry Building, Rideau St., two floors for Georgian Bay and Montreal canal survey, &c., and portion of basement.. .. $5,285
Slater Estate, 193 Sparks St., two rooms 540
Orme Building, 193 Wellington St., two rooms.. 250
The Great Northwestern Telegraph Company, cor. Sparks and Metcalfe Sts., for the D. O. C., military district No. 4, five rooms.. 500

Mr. FOSTER. The whole of that makes up $64,000 ?

Mr. HYMAN. No ; that is just for buildings in Ottawa, making a total of $47,111.

Mr. INGRAM. Reverting to the preceding item, there is an increase of $15,000. The hon. minister has not explained the cause of that.

Mr. HYMAN. That is on account of the larger number of buildings. The care of the buildings we rent as well as of the buildings we own is included in that vote, and there are more buildings now to take care of.

Mr. BLAIN. The hon. gentleman stated that the policy would be to make short leases in future until the question of the erection of a larger building is settled. May I ask the hon. minister if any of the leases he has read over are long leases ?

Mr. HYMAN. The Woods building is the only one that can be called a long lease ; that has some seven years to run.

Mr. INGRAM. In the new short leases has the department done anything towards repairs or fixing up ?

Mr. HYMAN. That will come out of the vote previous to this ; this vote is simply for the rent.

Mr. INGRAM. Quite a large sum was spent by the government on the building at the corner of Metcalfe and Slater streets to put it in shape for the census department to use. In addition to that there is a large payment for rent. What I want to get at is whether the same policy has been carried out in this long list.

Mr. HYMAN. The only newly arranged building in which a large amount has been spent is the Corry building. In that there is no expenditure that we could not remove. All the other buildings are outside of the city of Ottawa.

Mr. INGRAM. Do the owners of buildings in Ottawa leased by the government have to pay any taxation to the city of Ottawa ?

Mr. HYMAN. In the only lease I have made I have insisted on having in the lease a clause to the effect that the taxes must be paid. That policy will be followed while I am in the department.

Mr. INGRAM. The taxes must be paid to the city of Ottawa by the owner of the building.

Mr. HYMAN. Yes.

Mr. INGRAM. In view of the fact that no taxes are paid to the city did the owner of the Census building make any substantial reduction in the rent to the government ? Did the government insist on such a low rate to which they were surely entitled ?

Mr. HYMAN. The proposition the hon. gentleman makes is a perfect business one, and I presume that was taken into consideration. I did not personally conduct the negotiations for these leases. They were discussed very fully.

Mr. PERLEY. I am glad to hear what the minister says about the payment of taxes and I hope he will make a change in regard to the renting of buildings. There is no doubt that some of these leases have been made at altogether too high a price and that the government is paying more than a private individual would pay in Ottawa for the same building. I do not know who is to blame for it, in the past, but I think the hon. gentleman is right in seeing that the city of Ottawa gets the taxes from any buildings which he rents in the future. I only hope that he will see that the government does not in the future pay exorbitant rentals such as have been paid for some of these buildings in the past.

Mr. BLAIN. Some new legislation was passed by the Ontario legislature last session to the effect that all public buildings in future shall be assessed and liable to taxation. I am not quite sure of the details of the Bill but it might be worth while to look it up.

Yukon public building, $105,000.

Mr. FOSTER. That is a large sum.

Mr. HYMAN. I have all the details of the expenditure here. I shall refer to one item so that the committee will understand the reason of the large expenditure. It is on account of the salaries being very large. For instance the post office. We are obliged to pay the caretaker $160 a month, practically three times the amount we would pay here. A charwoman there gets $150 a month.

Mr. FOSTER. And a living allowance ?

Mr. HYMAN. No. Then there is lighting $1,500, fuel which is very high $2,500, and repairs and maintenance, another large item. The Public Works Department have taken over all of this work. Heretofore a part of this vote was voted by the House to the Interior Department, but now the Public Works Department have taken the whole vote and are endeavouring to exercise

as careful a supervision over the expenditure as possible.

Ottawa public buildings—heating, including salaries to engineers, firemen, watchmen, $87,000.

Mr. HYMAN. That is the usual vote for this purpose. A large amount of it of course is for fuel.

Mr. INGRAM. Would the minister give an idea of how many men there are employed ?

Mr. HYMAN. I think in round numbers there are about 60.

Ottawa public buildings—elevator attendants, $11,000.

Mr. FOSTER. How many men have you ?

Mr. HYMAN. That is increased because some new elevators have been installed. There are 20 men.

Mr. ARMSTRONG. Where were the new elevators put in ?

Mr. HYMAN. One in the western block and one in the militia building.

Mr. FOSTER. What do you pay your elevator boys?

Mr. HYMAN. About $45 a month.

Mr. TAYLOR. How many elevators are there altogether?

Mr. HYMAN. 11 or 12. In this vote is included the cost of an engineer for the hydraulic elevator and of a fireman.

Ottawa public buildings—gas and electric light, including roads and bridges, $24,000.

Mr. ARMSTRONG. You intend doing away with the gas in the front of the buildings ?

Mr. HYMAN. I have instructed the architect to look into that. I intend to have some plan made to improve the lighting.

Mr. FOSTER. Do you generate the electric light?

Mr. HYMAN. No. It is bought by contract, all from one company.

Mr. TAYLOR. What became of the appliances that we put in ourselves a few years ago?

Mr. HYMAN. I am told that they were put in at least twenty years ago.

Mr. TAYLOR. It is not twenty years since the appliances were put in the basement of this building.

Mr. HYMAN. There was no plant put in the basement of this building for the generating of electricity. Transformers were put in and they are still in use, and I am afraid that we shall have to put in another set. With only one set of transformers, if anything goes wrong with them the House is liable to be in darkness, as happened once or twice last session.

Mr. FOSTER. What is the cost of the electric light to the government?

Mr. HYMAN. About $17,000. For the first three thousand lights we pay $2.25 per light per annum, and for all over three thousand, $2 per light, each lamp being of 16-candle power.

Mr. FOSTER. How did you come at that flat rate? You must have done it on some plan other than the rule of thumb. You must have ascertained pretty nearly the cost of generation, and fixed the rate accordingly, allowing the company its reasonable profit.

Mr. HYMAN. The power of the lamps was tested.

Mr. FOSTER. The department knows or ought to know what it costs to make each of these lights. Then, the question would come up, is it cheaper to buy the light or to generate it ? Having ascertained the cost of generation, how much profit do we pay over and above that?

Mr. HYMAN. I have not got the figures.

Mr. FOSTER. Will the minister look into that?

Mr. HYMAN. I will. I think it is a very proper question.

Mr. TAYLOR. You supply all the wiring and all the breakages and give $2 a light for the power?

Mr. HYMAN. Yes.

Mr. TAYLOR. That is what I do, and I get 20 lights at $30 a year to light my establishment; that is $1.50 per light.

Mr. INGRAM. During a certain number of months the lights are not used, a large number are very little used and many, I venture to say, are never used. Is the government paying $2 per light for those which are not used at all ?

Mr. HYMAN. There is no doubt about that, just as in your own house you would pay so much a light whether you used it or not

Mr. INGRAM. There is a vast difference between the two.

Mr. FOSTER. Would it not be possible to measure all the light used, and pay for it according to the amount consumed ?

Mr. HYMAN. Undoubtedly it would.

Mr. INGRAM. This city used to have a flat rate system, and those who had lights burnt them all night without paying any extra cost, but the companies do not permit that kind of thing to be done now. They have adopted the meter system. I suppose that is more profitable to the companies.

Mr. FOSTER. It may be, but the business system, both for the company and the consumer, is that the consumer should pay for what he actually uses. A flat rate saves a lot of trouble and may be better for the consumer in some cases, but the honest way is to measure everything and pay for just what you use, especially in an immense establishment like this, where you have so many lights that are not used all the time and so many used a very little part of the year. You are paying a flat rate, and may, on the whole, not be paying over much, but what I want to get at is the actual amount used, if it can be ascertained, and so come down to the basis of cost and profit.

Mr. HYMAN. I shall be very glad to have the matter looked into.

Mr. INGRAM. Is the contract let yearly?

Mr. HYMAN. It is a 10-year contract. It is some seven years ago the contract was made.

Mr. W. WRIGHT. Does the hon. minister get sixteen candle power? I have a pretty strong suspicion that the lights are not up to that standard. I think the price is not extravagant, having some little knowledge of the cost of electric lights, but I fear the lights are not up to the power claimed.

Mr. HYMAN. The arc lights are tested by the electricians of the department.

Ottawa public buildings—telephone service, $10,000.

Mr. INGRAM. What number of telephones is used?

Mr. HYMAN. Two hundred and forty-eight.

Mr. INGRAM. What is the increase over last year?

Mr. HYMAN. About ten or twelve.

Mr. BLAIN. Is there a special rate charged?

Mr. HYMAN. $35 per 'phone.

Mr. FOSTER. What is paid in the city?

Mr. HYMAN. $45 for office telephones and $25 for house telephones.

Mr. ARMSTRONG. Is not that excessive? In our little town we only pay the Bell Telephone Company $15 a year.

Mr. HYMAN. In the smaller towns telephone service is cheaper. Where you have connection with only 200 or 300 'phones, as in Petrolia, the cost is less than in a city, where you have connection with several thousands.

Mr. FOSTER. Has the hon. minister ever considered the possibility of having a system of departmental telephones on the automatic plan?

Mr. HYMAN. I have given it casual consideration, but am asked by one of the departments to take the matter up, and will do so when I have the opportunity.

Mr. FOSTER. No doubt, if the hon. minister goes into it thoroughly, he will find the automatic system very much less expensive. I am not saying that because I have some connection with an automatic patent—I have not made anything out of it—but because I have had occasion to look into it, and believe it could be used to great advantage for the departmental service. You do not require anybody to look after the central office. It runs itself and is just as true, in fact truer, than the manual switch system, because that depends on human agencies. The other is a perfectly constructed machinery which will run any number of years, which is almost unwearable, and in which everything runs automatically. It has also this other great advantage, which will commend itself to my hon. friend the Minister of Public Works. He often wants to talk confidentially with one of his brother conspirators in some other department—the Postmaster General, for instance. He does not want any risk of being overheard. Well, the automatic system is absolutely secret. It is impossible for anybody to break in between the two who are talking. My hon. friend can see what great advantage that is.

Mr. HYMAN. I shall look into that matter.

Mr. INGRAM. That system was here a year or two ago in Ottawa.

Mr. FOSTER. There are half a dozen systems.

Heating Dominion public buildings—fuel, $75,000.

Mr. INGRAM. Is that for buildings all over the Dominion?

Mr. HYMAN. Yes.

Mr. INGRAM. Is the contract system carried out?

Mr. HYMAN. All by contract.

Some resolutions reported.

Hon. Sir WILLIAM MULOCK (Postmaster General) moved the adjournment of the House.

Mr. FOSTER. What business are we to take up to-morrow?

Sir WILLIAM MULOCK. The Minister of Justice will move some Bills standing in his name, and then we shall go into supply. I understand the Minister of Inland Revenue will be prepared to proceed. If his estimates are completed, the Minister of Agriculture will take up some of his items, and, if these are finished, the Minister of Public Works will go on.

Motion agreed to, House adjourned at 10.55 p.m.

HOUSE OF COMMONS.

FRIDAY, February 24, 1905.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 74) respecting the Medicine Hat and Northern Alberta Railway Company.—Mr. P. Talbot by Mr. Parmelee.

Bill (No. 76) respecting the Red Deer Valley and Coal Company.—Mr. Campbell.

Bill (No. 77) respecting the Canadian Agency.—Mr. Bickerdike by Mr. Campbell.

Bill (No. 78) respecting the Macleod, Cardstone and Montana Railway Company.—Mr. Turriff by Mr. Campbell.

BATTLEFORD AND LAKE LENORE RAILWAY COMPANY.

Mr. PARMELEE moved for leave to introduce Bill (No. 75) respecting the Battleford and Lake Lenore Railway Company.

Mr. HENDERSON. I would like the hon. gentleman to explain that Bill. I do not know if it is a new Bill or an extension. I have a suspicion that it is extending a very bad Bill.

Mr. PARMELEE. I think it simply asks the construction.

Mr. HENDERSON. I think we are entitled to the explanation.

Motion agreed to, and Bill read the first time.

FIRST READINGS.

Bill (No. 79) respecting the Toronto, Hamilton and Buffalo Railway Company.—Mr. Zimmerman—by Mr. A. Johnston.

Bill (No. 80) to incorporate the Woodstock and Lake Huron Railway Company.—Mr. A. H. Clarke.

Bill (No. 81) respecting the Ottawa River Railway Company, and to change its name to the Central Trunk Railway Company.—Mr. Piché.

PROVINCIAL GOVERNMENT IN THE NORTHWEST.

Mr. FOSTER. Before the Orders of the Day are called, I would like to ask the First Minister as to the cause of the delay in printing of the Autonomy Bill.

Sir WILFRID LAURIER. I think there has been no delay so far. I am just as anxious as my hon. friend is to have the Bill printed immediately and to take it up as soon as possible. I expect to have it at the latest on Tuesday.

Mr. FITZPATRICK. I ought to say that I am responsible for some of the delay that has occurred. In consequence of an error in the description of the boundaries of the provinces, I had to get that corrected, which I did as soon as the Bill was in the hands of the Clerk of the House, and I returned it to him yesterday afternoon.

MANITOBA ELECTION RETURNS.

Mr. FOSTER. Has the First Minister had an opportunity to look into the question which I put to him yesterday as to the Manitoba election returns ?

Sir WILFRID LAURIER. I speak subject to correction, but I believe I am right, when I say that all these returns are in the hands of the Clerk of the Crown in Chancery, who is an officer of this House, and it seems to me that the procedure would be to have a motion made for his attendance here. I have been waiting for my hon. friend the leader of the opposition to return in order that I might confer with him on that point. I can see no objection to that.

CONTRACTS FOR GOVERNMENT WORKS.

Hon. CHARLES FITZPATRICK (Minister of Justice) moved second reading of Bill (No. 51) respecting contracts for government works.

Motion agreed to, Bill read the second time and House went into committee thereon.

On section 1—tenders to be invited ; exceptions ; contracts to be awarded by the Governor in Council—

Mr. FITZPATRICK. The first clause practically re-enacts the law as we have it now ; that is to say, it provides that the minister shall invite tenders for all works of which the estimated cost exceeds $5,000, the exceptions being those works which are of immediate and urgent necessity and those of which the estimated cost does not exceed $5,000. The new feature is the second paragraph, which provides that all contracts let by tender are to be let, not by the minister directly, but by the minister under the control and with the approval of the Governor in Council. Having looked into the law, I found it necessary to make this change. As a matter of fact, contracts for works costing less than $5,000 have been let without tender, but there has been no legislative sanction for that. I am making this change so as to provide for the full approval of council to every contract that is made.

Mr. HAGGART. As the laws stands, I understand that all contracts must be let by tender.

Mr. FITZPATRICK. The law as contained in 31 Victoria, chapter 12, section 20, re-enacted in the Revised Statutes as chapter 36, section 13 provides that all contracts shall be let by tender except works of im-

mediate and urgent necessity ; but in 1880 an Order in Council was passed authorizing the letting of contracts without tender in which the amount involved did not exceed $5,000. When I became Minister of Justice, on looking into the matter, I found that there was no authority for such an Order in Council, and I thought it advisable to get statutory authority for the practice. The only change is in the second paragraph, which provides for the approval of the Governor in Council.

Mr. HAGGART. It is exactly as I understood. I understood that the law in the past, except so far as modified by Order in Council, was that all works should be let by tender. The Bill is to legalize what has been done, and it is a very proper provision, with regard to some departments at any rate, that all contracts should be submitted to the Governor in Council.

Mr. INGRAM. How will this affect public works which were started three or four years ago and on which large sums of money have been spent, not by contract but by day's labour?

Mr. FITZPATRICK. Any works of that kind can be carried on.

Mr. INGRAM. In my constituency several thousand dollars have been spent by day's work on a harbour ; and I do not know whether the government intend to continue the work by day's work or by contract, or whether this Bill will affect that work.

Mr. HENDERSON. I do not understand that this Bill will affect a work of that kind at all, because it applies only to works under contract. The fact is, the government can spend hundreds of thousands of dollars on public works by private arrangement, by simply doing the work by day's work. The law does not prevent them. It only limits the powers of the government when they decide to do work by contract.

Mr. INGRAM. I was under the impression that any public work costing over $5,000 had to be done by contract.

Bill reported.

Mr. SPEAKER. When shall the Bill be read the third time ?

Mr. HENDERSON. To-morrow.

Sir WILFRID LAURIER. To-morrow.

RAILWAYS AND CANALS.

Bill (No. 53) to amend the Act respecting the Department of Railways and Canals, (Mr. Emmerson) read the second time and the House went into committee.

On section 1,

1. Section 11 of the Act respecting the Department of Railways and Canals, being chapter 37 of the Revised Stautes, is repealed and the following is substituted therefor :—

11. The minister shall invite tenders, by public advertisement, for the execution of all works, except in cases of pressing emergency in which delay would be injurious to the public interest, or in cases in which, from the nature of the work, it can be more expeditiously and economically executed by the officers and servants of the department, or in cases where the estimated cost of the work is less than $5,000, and it appears to the minister, in view of the nature of the work, that it is not advisable to invite tenders.

2. Whenever, in the case of any work, tenders are required to be, or are, invited, the minister shall submit all tenders received therefor to the Governor in Council, and the contract for the work shall be awarded under the direction of the Governor in Council.

Mr. EMMERSON. The terms are precisely those of the Bill which my hon. friend the Minister of Justice has just explained.

Mr. SPROULE. What are we to understand by the term 'the officers and servants of the department'? Would that cover any number of men the department might employ to do a certain work ?

Mr. EMMERSON. That would be the officers of the department, the regular employees of the department.

Mr. HAGGART. What are officers or servants of the department ? If this clause gives the minister the privilege of employing any number of men he pleases to do any particular work, it does away with the Act altogether.

Mr. FITZPATRICK. These words are taken from the old Public Works Act, 31 Vic., and I really do not know the meaning put upon them by the different governments. Strictly and literally they would mean all those who are in the pay of the department.

Mr. HAGGART. It ought to be limited to officers and servants who are permanently in the employ of the government. For the purpose of building a dam you might utilize day labourers who are idle part of the season, and in some cases that would be more economical, but the wording is such that it will allow the minister to dispense with a contract in every case.

Mr. FITZPATRICK. As these words occur in the first Bill, for which I am responsible, and the third reading of which has been held over, I will inquire and see how far we can limit the terms of the Bill.

Mr. SPROULE. Your engineers are officers and servants of the department. They might hire 100 or 1,000 men to do a work. Does that term include such men as the engineers may employ ?

Mr. EMMERSON. It would not do to confine it to the permanent officials. The main point of this is to meet cases of pressing emergencies. Take for instance the work on the Welland canal. We do not keep a permanent electrician there and consequently

we require to employ, from time to time, expert electricians to meet emergencies. If you were to limit us to the employment of permanent officials you would make it impossible for the department to secure the services of an expert who in cases where there was no permanent official, could be employed.

Mr. HAGGART. There is no limitation in the case of an emergency. You can employ then as many men as you like.

Mr. TISDALE. What is the change between the old law and the present ?

Mr. FITZPATRICK. It consists in this. Formerly when an appropriation was made by parliament, tenders were invited for the work, and the minister let the contract himself without going to Council at all. The intention of the amendment is merely to make it incumbent on the minister to go to Council with his contract so that it may receive the sanction of Council before it is finally awarded. I am not dealing with the question raised by my hon. friend from East Grey (Mr. Sproule) as to the meaning of the words in my Bill, but, with the meaning of the words in the original law relating to works to be executed by the officers and servants of the department. My judgment would be that the words are somewhat elastic and I suggested a moment ago, in answer to my hon. friend from Lanark (Hon. Mr. Haggart) that the matter might be left over for consideration when the Bill is up for third reading. In the meantime, I might inquire what has been the practice in the past and what has been the construction put upon these words during the time the law has been in force, that is, since confederation. I think this is largely a question of usage and of the construction put upon the words by parliament, and we shall be able better to express it when it comes up for third reading.

Mr. TISDALE. In both Bills ?

Mr. FITZPATRICK. My hon. friend (Mr. Tisdale) was not here when the Bills were introduced. There are three Bills. One has reference to contracts for government works. That stands in my name. It is a Bill of general application to be observed with respect to all government works. The next Bill is one to make the Act respecting railways conform with the General Act I have mentioned. I have amended the Act respecting railways and using practically the same terms as in the other. Then there is a Bill to make the Public Works Act conform with the General Act. The effect is the same in all—to compel the ministers to come to Council to get authority to let a contract.

Mr. FOSTER. Will the hon. minister read the clause in the old Act which was repealed—section 11 of chapter 37 of the Revised Statutes. We have not that before us.

Mr. HAGGART. Here is the clause :

> The minister shall invite tenders by public advertisement for the execution of all works, except in cases of pressing emergency——

Mr. FITZPATRICK. That simply reproduces the other.

Mr. EMMERSON. That was amended subsequently.

Mr. FITZPATRICK. I have the amendment here :

> The minister shall invite tenders by public advertisement for the execution of all works, except in cases of pressing emergency, in which delay would be injurious to the public interest, or in cases in which, from the nature of the work, it can be more expeditiously and economically executed by the officers and servants of the department——

Then, the change comes in here :

> ——or in cases where the estimated cost is less than $5,000, and it appears to the minister, in view of the nature of the work, that it is not advisable to invite tenders.

That was the amendment of 3 Edward VII, chapter 52.

Mr. HENDERSON. Who will decide whether the matter is one of pressing emergency or not, or whether the work can or cannot be more economically executed by the officers and servants of the department, or, according to the third exception, whether it is or is not advisable to invite tenders.

Mr. FITZPATRICK. The minister has been made the absolute judge since confederation. There has never been any change.

Mr. FOSTER. My hon. friend from South Lanark (Mr. Haggart) has read section 11 of chapter 37, respecting the Department of Railways and Canals, and that is the one that, by this is repealed ?

Mr. FITZPATRICK. Yes.

Mr. FOSTER. And, that at present is the law of the land ?

Mr. TISDALE. So far as railways and canals are concerned.

Mr. EMMERSON. It is amended.

Mr. FOSTER. There is nothing cited here as amended, and chapter 37 of the Revised Statutes must be the legislation on that subject, so far as the Department of Railways and Canals is concerned. That section allows works to be done without tender for any of three causes. The first is where the estimated cost is less than $5,000, and it appears to the minister, in view of the nature of the work that it is not advisable to invite tenders. Now, am I right in that respect ? If so this seems to

me a change which it is not advisable to make. There is a multiplicity of small works in the Department of Railways and Canals. If an analysis were made of the work, carried on by this department, I believe that the works costing under $5,000 would be a very large proportion of the construction work done under that department. Any one conversant with the railway system knows how many of its new buildings and that sort of thing along the railway come within a cost of $5,000. This would allow the minister to do that sort of work as he pleases, without inviting tenders. And that will result in the work being given to interested persons. It will practically shut out any competition in all that class of work, and I do not think it is healthy or right to shut out that competition. If there is a station house to be built along the line of the Intercolonial, the mere fact that it will not cost more than $5,000 is no reason why we should not have healthy competition in the building of that station. And what is true with reference to such a station is true with reference to a very large class of works under the value of $5,000 in this department. Now, parliament adopts this amendment, and it will become the rule that all that class of work will go out without tender. What is the advantage of tender? It is that you may curb unnecessary expense and secure competition, it is that money of the country should be expended as economically as possible. In the case of practically every one of these works there might be competition, and the effect of that competition would be to keep down the cost of construction. If there is any virtue in the tender system and in the economical administration of the public moneys, I think we ignore or deny that principle by this legislation. I am not in favour of extending this to the Department of Railways and Canals or the Department of Public Works. As to the other two cases, the first is 'except in cases of pressing emergency in which delay would be injurious to the public interest.' That, I think is all right and must be in the Bill. That is to prevent injury to the public interest in certain cases. As my hon. friend pointed out, this is absolute. Then there is the third case, 'in which, from the nature of the work, it can be more expeditiously and economically executed by the officers and servants of the department.'

That is in the decision of the minister, I suppose, as to whether it can so be done. But as the clause stands, he cannot do it in the case of a $5,000 expenditure, and under the arrangements, unless he does it by his officers and servants. There would be no reason for putting that in as a second case at all unless it were contemplated that these officers and servants should be the officers and servants at the time in pay of the department; otherwise it would all come in under the third case, the $5,000 expenditure, where it appears to the minister, in view of the nature of the work, that it is not advisable to invite tenders. Now, if the contention of the Minister of Railways is allowed that he can take one of his servants and make him superintendent of the job and employ help outside the employees of the department, why, that becomes as wide as it can become. I think it is dangerous and uneconomical.

Mr. FITZPATRICK. As I said some time ago, we are dealing with three different chapters of the Revised Statutes. We are dealing with the chapter which has reference to the control of government work, that was a Bill I had myself in my own name; then we are dealing with the chapter which has reference to the Public Works Act, and in addition to that, we are dealing with the chapter which has reference to government railways. That is the Bill we are now dealing with. Now, with respect to government works generally, provision was made that all public works should be let by tender, that was the original provision, with two exceptions: The first was with respect to works of an immediate and urgent necessity, and the next exception was in so far as the work was carried on by the servants of the department—I forget the exact words. Now, under the law as it stood an Order in Council was passed authorizing the minister to deal with a work in which the amount involved does not exceed $5,000 without inviting tenders. That Order in Council was passed in 1880 or 1881. Finding that there was no legislative authority for that Order in Council, I deemed it advisable to amend the law accordingly, and I did amend it some two sessions ago, but only with respect to public works, not with respect to the Department of Railways and Canals. Therefore, it is necessary now to amend the law with respect to the Department of Railways and Canals so as to make it conform with the Order in Council, and also with the general provisions applicable to the Public Works Act. The amendment was made with respect to the Public Works Act two years ago by 3 Edward VII., chapter 52, and the intention is to make that principle, which was then made applicable to the Public Works, now applicable to the Railways and Canals.

Mr. HAGGART. There is no limitation in case of emergency?

Mr. FITZPATRICK. No.

Mr. FOSTER. Then what seems to be necessary under that, would be to define the term 'servant and officers,' and that the minister will take into consideration before the third reading.

Mr. FITZPATRICK. I thought I would inquire as to what the practice has been in

the past, not the practice of recent years, but since the Act has been in force, so as to find out how far we can make an amendment which will conform to the practice itself.

Mr. FOSTER. I would rather see the Order in Council abolished.

Mr. FITZPATRICK. It never had any existence in law.

Mr. HAGGART. If I remember rightly, cases of emergency, by the rules and regulations, are decided by Council.

Mr. FITZPATRICK. No, by the minister. My hon. friend has the experience of a mininster in that department, whereas I have not, but I think he will find that the practice has been that the minister decided.

Bill reported.

SECOND READING.

Bill (No. 54) to amend the Public Works Act.—Mr. Hyman.

SUPPLY.

House in Committee of Supply.

Excise—salaries of officers and inspectors of excise, &c., to provide for increases depending upon the result of excise examinations, $390,718.75.

Hon. L. P. BRODEUR (Minister of Inland Revenue). There is an increase of $16,156.25, made up as follows:

	Increase.	Decrease.
Inspectors..	$ 200 00	
Collectors..	1,088 75	
Deputy collectors, class 'A'	1,088 75	
Deputy collectors, class 'B'	1,820 00	
Special class, excisemen.. ..	1,550 00	
First-class excisemen.. ..	10,100 00	
Second-class excisemen.. ..	3,017 50	
Probationary class..	2,000 00	
Accountants and bookkeepers	490 00	
Stenographers and typewriters	20 00	
Third-class excisemen..		$5,380 00
Messengers..		780 00

The aggregate amount of the increases is $22,316.25 and the aggregate amount of the decreases $6,160, leaving a balance of $16,156.25. I may say that most of these increases are in accordance with the law and the regulations of the department. The case of the inspectors, for instance, is determined by law. In regard to the deputy collectors, class A and first-class excisemen, these increases are in accordance with the regulations which have been in existence for about fifteen years.

Mr. FOSTER. Is that increase of $16,156 an increase in salaries under the regulations and not due to an increase in the number of officers?

Mr. BRODEUR. It is not due to an increase in the number of officers but last year we had what we call promotion examinations among the officers, and it is determined by the regulations that all who succeed in passing these promotion examinations receive promotion to the class to which they are entitled by the number of points they get in the examinations. The largest increase is $10,100 given to the first-class excisemen. These men were second or third-class excisemen, but having passed their promotion examination they are entitled under the regulations to the promotions which they received.

Mr. FOSTER. What is the system which the hon. minister at present carries out in reference to these widely distributed officers and the inspection of them in the performance of their duties? Have you here in Ottawa and throughout the Dominion a system of inspection to ensure that these officers are looked after in their work?

Mr. BRODEUR. We have inspectors in all the provinces. Take for example the province of Quebec; there are two inspectors to look after the head offices and the out offices. We have in Quebec five divisions. We have two inspectors to look after these five divisions. Each of these divisions has a collector who is the head of the division, but besides these officers we have also two inspectors, one for the Quebec district and another for the Montreal district. These two inspectors are obliged by the regulations and the law to go and inspect all the head offices and all the out offices in the province.

Mr. FOSTER. How often are these visits of inspection made?

Mr. BRODEUR. Every three months.

Mr. FOSTER. For each district?

Mr. BRODEUR. Yes, and once a month for every bonded warehouse.

Mr. FOSTER. To whom do these inspectors report?

Mr. BRODEUR. To the department.

Mr. FOSTER. Do they make their reports monthly?

Mr. BRODEUR. Yes, after their visits. Besides that, I may add, we have four general inspectors, one inspector of distilleries, one inspector of bonded warehouses, one inspector of breweries and one inspector of tobacco factories.

Mr. FOSTER. Where are these four inspectors located?

Mr. BRODEUR. These four are among the inspectors I have just mentioned. They have to look after the inspection of their own districts, but at the same time they have a general supervision over the whole country in their particular branches. Take the inspector of cigar and tobacco factories, for instance; he is living in the city of Montreal, he is attending to his duty there as inspector of the district, and at the same

time, once a year he is supposed to visit all the tobacco factories in the country.

Mr. FOSTER. He is supposed to; he does, I suppose?

Mr. BRODEUR. As a matter of fact he does.

Mr. FOSTER. And these inspectors report directly to the deputy of the hon. minister?

Mr. BRODEUR. Yes.

Mr. FOSTER. What are the general conditions of the tobacco industry as it comes under the observation of the hon. minister's department as regards extension or growth?

Mr. BRODEUR. The Canadian tobacco industry has increased largely of late years; in fact, about eight years ago there were only about 500,000 pounds of tobacco manufactured in this country, but now we have reached an output of nearly 5,000,000 pounds.

Mr. FOSTER. Do you mean manufactured out of Canadian product?

Mr. BRODEUR. Yes. Some years ago when the law was changed, tobacco manufacturers were permitted to mix foreign tobacco with Canadian tobacco to the extent of ten per cent, and in this 5,000,000 pounds are included that ten per cent.

Mr. FOSTER. How is it mixed—as a wrapper?

Mr. BRODEUR. In cigar factories it is mostly used for wrappers because the imported wrappers are more suitable than the tobacco which is grown in this country, but in the manufacture of cut tobacco they use also a quantity of foreign tobacco.

Mr. FOSTER. Personally what is the hon. minister's opinion from test as to the relative merits of foreign and home grown tobacco?

Mr. BRODEUR. I may say that I am not a smoker myself. I remember that question was put to me last year by an hon. member of this House and he was much surprised to hear me say that our Canadian tobacco was just as good as foreign tobacco. I was told so by men who had some experience in the matter although my opinion was controverted by some hon. members of this House whom I have the honour to see before me just now. I would not like to express as positive an opinion as I did last year but I am told by several competent men—I will not say that those who hold a contrary opinion are not competent—that we can grow in this country a very good tobacco which can take the place of foreign leaf.

Mr. FOSTER. Where is this growth chiefly extending?

Mr. BRODEUR. The growth of tobacco is carried on especially in the counties of Essex and Kent, in Ontario and in Montcalm, Berthier, Joliette, L'Assomption and Rouville in Quebec.

Mr. FOSTER. These are practically the only sections of the Dominion in which tobacco culture is extensively carried on.

Mr. BRODEUR. Practically. There is production also in the other counties, but the tobacco raised in them is sold on the open markets and does not generally come into consumption through the manufacturers.

Mr. FOSTER. The minister still believes in radical production for the Canadian tobacco industry.

Mr. BRODEUR. I think that the protection that was given to the tobacco industry in 1896 has had a good effect, as has just been shown, because in 1896 a very small quantity of tobacco was grown or manufactured in this country. That production has now been multiplied ten times, and I suppose it will have a good effect.

Mr. FOSTER. Is any of the Canadian leaf tobacco exported ?

Mr. BRODEUR. I do not think there is any large quantity, although some years ago an agent was sent, through the Department of Agriculture to Belgium to find if a market for our tobacco could not be opened there, but it did not result in success. I think our efforts should be to take hold of the Canadian market, and I think we can succeed in having our tobacco properly cured and properly prepared.

Mr. FOSTER. In the meantime you will compel the Canadians to consume their own product as far as possible ?

Mr. HENDERSON. Perhaps I may be responsible for some of the remarks that have been made by the minister with reference to the quality of Canadian as compared with foreign leaf. I do not desire to say one word reflecting upon the Canadian product, but I would be glad if the department with the technical knowledge they have would be able to so assist the manufacturers and producers that they would be able to assimilate the Canadian product in flavour and taste to the imported article. While the Canadian tobacco may be as good as any in the world still its flavour is sometimes repugnant to a smoker who is accustomed to using the imported tobacco. If an article is produced in Canada more like the American article, the consumption of the Canadian tobacco will be very materially increased and that of imported tobacco correspondingly reduced. I think that is the desire of the minister, I think that is what he is aiming at. It is an admirable policy and we want to encourage the home market for our produ-

cers, but we must produce an article in our own country that will, as nearly as possible, meet the wishes of the great number of smokers in this country. My own opinion is that that has not yet been accomplished, and as the quality of the leaf is equal to the foreign leaf the difficulty must be in the process of curing. When we can so cure our tobacco as to produce the flavour of the American tobacco we will find that the consumption of Canadian leaf in this country will be very much increased.

Mr. CLEMENTS. I quite agree with the hon. member for Halton (Mr. Henderson). I myself come from the tobacco district. I do not know whether the minister uses tobacco himself or not, but if he does I shall be very glad to take him down there and give him samples of the very best tobacco, as I believe, that is grown in the world. We grow the quality of leaf there and I quite agree with the hon. member for Halton that it is in the curing that we fall behind. I was speaking recently to a manufacturer of tobacco in my own town, an ardent supporter of the government, who told me that Canadian leaf, properly cured, is equal to any tobacco which is imported.

Mr. BRODEUR. Hear, hear.

Mr. CLEMENTS. It is an industry which is growing very rapidly, and I must give the present government credit for fostering that industry to some extent. I believe that a great deal could be done to assist tobacco growing in our country. I know that we grow it there and our farmers have found it a profitable crop at present prices. I believe the industry should be assisted and that the farmers should be encouraged in the growing of tobacco. Under these conditions our people would be able to supply the largest part of the tobacco consumed in this country. I would ask the minister to make every effort to assist us in that district in encouraging the trade. I might also say to the hon. minister that I agree with the hon. member for Halton and that the advice I have from manufacturers there is that a great deal could be done to improve the curing of Canadian leaf. I believe that the fault with our tobacco, at the present time, lies there.

Mr. BRODEUR. I am very glad of the expressions of opinion which I have just heard from the hon. members. Since I have been at the head of the department I have taken a great interest in the question of tobacco growing and of fostering, as much as possible, the increased production and consumption of Canadian tobacco. I do not know why we should not succeed in having in this country Canadian tobacco consumed instead of foreign leaf tobacco. I think that we can produce in this country just as good an article as the imported tobacco. Perhaps we cannot, in some instances, produce a leaf just as nice as those imported from Sumatra or Havana; but there is no reason why good plug smoking and chewing tobacco should not be made entirely from Canadian leaf. It has been suggested that the curing of the tobacco in Canada has not been very good. Our producers have not perhaps been very successful in that respect; but the government has taken every possible means to encourage them to give us a first-class leaf. A few months ago we sent to the state of Wisconsin, which has a similar climate to ours, some persons to study this question with reference to how the seeding is done and how the tobacco is cured. The governor of the state was good enough to place at the disposal of our agents his extensive farm, and to show them the various processes. They have reported to the Department of Agriculture, to which the question pertains more than it does to mine; but, at the same time, I am taking an active interest in the question, I feel strongly upon it, and I am going to do my best, and the government is going to do its best, to foster this industry in Canada. We found that the seeds used in Canada were not the best, and the two agents who visited Wisconsin are now delivering lectures in some parts of the country, and are supplying better seeds to the farmers. My opinion is that we should make extensive experiments on the experimental farm here. The Minister of Agriculture has already done something in that respect. I think we should try various kinds of seeds. I am glad to see that the feeling of this House is in favour of extending the production of Canadian leaf, and hon. members may rest assured that nothing shall be spared on my part, or on the part of the goverment, to encourage that industry, which is a very important one and deserves all the protection possible. We have been asked on several occasions by my hon. friend the Speaker and by other members to establish experimental farms in the districts where tobacco is produced on a large scale. We are considering that question, and if we find a means of making experiments on the experimental farm, we may afterwards establish experimental stations in some of the tobacco-growing districts.

Mr. CLEMENTS. I want to congratulate the minister on the efforts he is making on behalf of our tobacco growers. As an illustration, I may mention that only a short time ago I asked a tobacco manufacturer in my city if there was any prospect of our Canadian leaf being manufactured into cigars, and he told me that he had made some cigars from tobacco which had been cured for about four years, and had given some of them to some expert American cigar men who had been over here, and they pronounced them the best cigars they had ever smoked. Therefore, it seems to me that there is no reason why our Canadian tobacco could not be manufactured into cigars.

Mr. HENDERSON. I have not much confidence in the production of tobacco at the experimental farm at Ottawa. I think the minister will find it to be an absolute failure owing to the frost. The experiments should be carried on in a climate not so susceptible to early frosts. The production of tobacco in this country is not the difficulty. The counties of Essex and Kent alone, along with the counties in Quebec which the hon. minister has named, would produce far more tobacco than would be consumed in this country. The difficulty is that the flavour of the Canadian tobacco is not what the great bulk of the people of this country want. Whether it is better than or not as good as that of American tobacco, I will not undertake to say; but if you are going to obtain a large consumption of Canadian tobacco for ordinary smoking purposes, you must secure a flavour like that of the American leaf. For instance, if you can get a flavour similar to that of the tobacco manufactured by Sir William Macdonald in which I understand there is no Canadian leaf, there is no reason why you cannot supplant the American leaf ; and I am sure that could be done. There ought to be scientific knowledge enough in this country to discover where the defect is and to bring about the desired result. When you do that, people will buy the Canadian tobacco, not knowing whether it is Canadian or American, and you will have a very large consumption of our native tobacco. The production will take care of itself. Although there is only a limited area in the counties of Essex and Kent devoted to tobacco growing, that area produces an enormous crop. It makes a man think well of his country to pass through those counties and see the immense tobacco crop in those small fields ; and the production is capable of any degree of expansion. But let me impress this upon the minister, that he must exert himself to assist the curers of tobacco to obtain a flavour similar to that of American tobacco ; then I am satisfied that the consumption will go on as rapidly as we desire.

Mr. BRODEUR. I do not wish to express my own personal opinion as to the superiority of the Canadian leaf or of the foreign leaf ; but I have been told by many competent persons that the supposed inferiority of Canadian tobacco is a mere matter of prejudice. I have known several persons who, after having smoked for years tobacco made by Macdonald, which is made entirely from foreign leaf, afterwards tried Canadian tobacco made by some other Canadian company, and declared it to be just as good as the other. I think it is more a matter of prejudice than anything else, and I hope that every one who smokes will try our good Canadian tobacco, and that the farmers will do their best to put on the market a first-class article.

Mr. HENDERSON. The minister may be right ; it may be largely a question of taste. I am not saying that the Canadian tobacco is not as good as the American. It may be ; but that taste exists, and if we are going to have a large sale of Canadian tobacco, we must cater to the taste of the larger number. A very large number of smokers in this country prefer the flavour of tobacco made from the American leaf, and the efforts of the hon. minister should be along the line of assimilating the taste of the Canadian leaf to that of the American leaf. The moment that is accomplished, he will secure for Canadian tobacco a monopoly of the sale in this country.

Mr. BRODEUR. Some seeding has been done on the experimental farm and some small experiments made with some success, but I do not think that the frost is prejudicial in this section to the growth of Canadian tobacco. Take the county of Montcalm, which is in the same latitude as Ottawa, there very good Canadian tobacco is grown, just as good as that produced in the south. The state of Wisconsin is in the same latitude as Ottawa, why, therefore should we not produce in this section as good tobacco as is grown in Wisconsin ? The industry is in its infancy, but it is the duty of the government to protect that industry as far as possible and do everything possible to stimulate it.

Mr. SPROULE. The area in which you can grow tobacco in Canada is not at all limited. I saw tobacco grown forty years ago in districts where the frost was a great deal worse than it is to-day, and where you could not then grow wheat. There is no doubt a great deal of truth in the explanation of the hon. minister that the foreign leaf is preferred to the Canadian, simply because the people have acquired a taste for it. Let them begin to smoke Canadian leaf and they will find it just as palatable as the tobacco made by Sir Wm. Macdonald, of Montreal. I remember twenty years ago an old smoker telling me that he had smoked the Canadian twist made by the French habitant for 50 years and it was the best tobacco you could get. There is a lot of talk about the French, he said, but as long as they can make good tobacco, may God prosper them. Tobacco has been grown up in the Georgian Bay district, to my personal knowledge, for forty years, and can be grown in almost any county in Canada. But what I rose more particularly to inquire about was whether the government had made any effort at the experimental farm to ascertain whether tobacco could not be successfully grown in the prairies of the west, just as it is in the western prairies of the United States.

Mr. BRODEUR. I cannot say whether experiments have been made in the west, but I am inclined to think not. I shall be glad however to call attention to the suggestion which I think is a very good one.

Mr. HAGGART. I understand from the hon. member for Halton (Mr. Henderson) that if we could grow tobacco similar to that manufactured by Sir Wm. Macdonald in Montreal, that would settle the question at once. Is there any Canadian grown used in that manufactured by Sir William ?

Mr. BRODEUR. I think the proportion is five million pounds of Canadian tobacco against nine million of foreign leaf show the increasing popularity of our tobacco.

Mr. GUNN. Does he use Canadian leaf ?

Mr. BRODEUR. No, he might use Canadian leaf, but his license is only for foreign leaf. I have been told, however, that in some cases those who have licenses for foreign leaf use the Canadian leaf. They pay the same duty as on the foreign leaf, 25 cents per pound, and mix up the Canadian leaf with the foreign, but I do not think Sir Wm. Macdonald uses any foreign leaf.

Mr. A. H. CLARKE. Representing, as I do, a constituency in which tobacco is very largely grown, I wish to express my appreciation of the fostering influence which the policy of this government has had on that industry. In South Essex the growth of tobacco was begun earlier than in any other county of Ontario. Before the birth of any hon. gentleman in this House, the French Canadians there grew their own tobacco, and have been smoking it with a great deal of pleasure ever since. It is not many years ago when they could only get 4 cents a pound for their tobacco and then could only sell it with difficulty, but during the past year, under present conditions, they have sold at least 3,000,000 pounds and realized some $300,000 when they could not realize much from other crops on account of the wetness of the season. The people will commend the government if the government will not only continue the present policy of protecting the Canadian leaf but also establish some experimental station in South Essex in order that the leaf may be perfected so as to suit the taste of even the most particular. In Kingsville, cigars are now being manufactured wholly of Canadian leaf and a most successful trade is expected to be developed in that line. I would urge the government to continue the work of perfecting and protecting the Canadian leaf in every way possible.

Mr. INGRAM. I understood the hon. minister to say that all these different points were inspected at least once a year. If he will turn to K—51, he will find that the Auditor General complains that the inspectors have not furnished certain information, and that Montreal had not been inspected since April, 1900. In his letter to the department of March 21, 1903, he complains that the city of Montreal has not been inspected since 1900, and no explanation is given.

Mr. BRODEUR. This is a matter which is brought to my attention for the first time and I shall inquire into it. The regulations provide for an inspection at least once a year.

Mr. INGRAM. The peculiar point about this is the remarkable fact that there has been no reply by the department to the Auditor General's letter.

Excise—to provide for duty pay to officers serving longer hours at other than special survey, $1,000.

Mr. FOSTER. The amount is small ; to whom does it go?

Mr. BRODEUR. This is to pay deserving officers engaged in special service on account of the long hours, and, in some cases the disagreeable character of their work. In some cases they serve from 7 a.m. to 6 p.m., being required to be present from the time the factory opens until it closes in the evening.

Mr. FOSTER. Among how many officers is that divided?

Mr. BRODEUR. About twenty. Last year we spent about $700 on this account.

Excise—preventive service, $13,000.

Mr. FOSTER. What do the officers do for this service besides drawing their salaries?

Mr. BRODEUR. The preventive service, as my hon. friend (Mr. Foster) knows is to prevent violation of the laws and to effect seizures where violations have taken place. These officers move about the country, and, wherever they find violations to have taken place, they make seizures. I am informed that last year, about sixty seizures were made. The presence of those officers in the community has a good effect and is itself a prevention of violation of the law.

Mr. FOSTER. Does the fewness of the seizures prove that violations are few, or does it mean that the officers do not discover them.

Mr. BRODEUR. I think the violations are very few. We have first-class men connected with this service, some of whom have been with the department for many years. They are deserving men and are doing their best.

Mr. FOSTER. Do these preventive officers get any part of the proceeds of a fine?

Mr. BRODEUR. Yes, I think the seizing officer, if he is a preventive officer, is given one-half the proceeds of the seizure.

Mr. FOSTER. I notice that the payments made last year to informers represent a small total and were paid to but few persons. The total amount paid was $838,

so that the total value of the seizures would be only about $1,600.

Mr. BRODEUR. The penalties imposed by the judge usually are not large. They run from $5 to $100.

Mr. FOSTER. If a penalty is imposed and yet nothing can be collected, does the informer get anything?

Mr. BRODEUR. We pay, in that case, one-quarter of the amount.

Mr. FOSTER. The idea being what?

Mr. BRODEUR. It has been the custom in the department for many years. And it tends to encourage the giving of the information.

Excise—travelling expenses, rent, fuel, stationery, &c., $62,000.

Mr. FOSTER. How does the minister regulate the travelling expenses of the officers?

Mr. BRODEUR. In some cases officers must go to new places to remain for some time. If a bonded factory or brewery is started in a new place, we cannot choose a local man as officer, one who has not had experience. We have to send an officer from the department to look after the new establishment for a certain time. In that case, we pay not only travelling expenses but board.

Mr. FOSTER. How are the travelling expenses arranged?

Mr. BRODEUR. They are paid what they actually spend in travelling.

Mr. FOSTER. For which they have to give vouchers?

Mr. BRODEUR. Yes, as in the other departments.

Mr. BARR. How does the minister account for the increase in this estimate over last year?

Mr. BRODEUR. We have to open new offices almost every month. New breweries, bonded factories and bonded warehouses are opened, and these have to be provided for. In fact, the expense is larger on account of the increase of population and consequently in the work.

Excise—to pay collectors of customs allowance for duty collected by them for 1904-5, $5,500.

Mr. FOSTER. What does that mean?

Mr. BRODEUR. In some places, where we do not wish to appoint a regular officer of the department, we obtain the services of the customs collector, to whom we pay 5 per cent on collections up to $3,000, over $3,000 and up to $5,000, $100 per annum; over $5,000 and up to $10,000, $200 per annum; and over $10,000, $250 per annum. There is less expense than in the appointment of a regular officer.

Mr. FOSTER. Does the minister do that in every case where it can be reasonably done?

Mr. BRODEUR. In most of the cases where we can find a suitable officer in the Department of Customs, we generally make use of his services.

Excise—L. A. Frechette, for special translation, $100.

Mr. FOSTER. What is the special translation?

Mr BRODEUR. We have special regulations and departmental reports to be translated. Take, for example, the bulletins of the department. These call for special knowledge on the part of the translator, because of the many technical expressions used. Therefore, we secure the assistance of Mr. Frechette who is the chief translator of the House of Commons. The documents to which I refer are not tabled in this House, so we cannot get them translated by the regular officers of the House. They are simply departmental documents.

Provisional allowance of not more than $100 each to officers in British Columbia, Manitoba and the Northwest Territories, whose salaries from any government source do not exceed $1,000, $1,500.

Mr. BRODEUR. The reason for this vote is that we cannot get, in the provinces named, officers of the same class that we can get in the eastern provinces and for the same pay. As an instance, I may mention that I asked an hon. member of this House to recommend somebody for an office in British Columbia, and the party recommended absolutely refused to take the position at $500, which was the sum at which he would have to enter upon his work. Some years ago provision was made that all officers having a salary of $800 should receive $100 additional, and now we find it necessary to make this additional provision.

To enable the department to supply methylated spirits to manufacturers, the cost of which will be recouped by the manufacturers to whom it is supplied, and to pay for rent, light, power, freight, salaries, &c., $60,000.

Mr. BRODEUR. This sum is to enable the department to purchase alcohol and wood naphtha for the manufacture of methylated spirits to supply manufacturers, and to pay for rent, light, power, freight, salaries, &c. The amount expended the last fiscal year was $50,645.06, and $26,466.91 for the last six months, expiring on the 1st of January last. The manufacture of methylated spirits was taken over from the bonded manufacturers and carried on by the department, as a protection to the revenue, July 1, 1888. It was known that these methylated spirits were being used as a substitute for genuine potable spirits, which was objectionable, not only from a

revenue standpoint, but as well on the grounds of injury to the public health. The duty was only 15 per cent per proof gallon as against the then duty of $1.30, and the existing duty of $1.90 on spirits. It was thus deemed necessary to take sole control of its manufacture and to supply it to responsible persons for stated purposes. Two grades were established, viz.: No. 1, consisting of about 25 per cent of wood naphtha, and No. 2, consisting of about 50 per cent. Grade No. 1 is supplied to varnish and other manufacturers who have obtained the necessary permit from the department, and who have entered into bonds, with sureties in the sum of $2,000, that such spirits shall only be used for the purposes mentioned, and in the premises described in their application. The present price of this grade is $1.10 per gallon.

Mr. FOSTER. How do you fix that price ?

Mr. BRODEUR. We take about 15 per cent profit. If we use 75 per cent of wood alcohol for which we pay $1.40 and 25 per cent of grain alcohol, for which we pay about 25 cents, we add about 15 per cent to the cost of the raw material. As I say, the present price of this grade is $1.10 per gallon. It is used for the manufacture of varnish, liquid glue, mucilage, inks, leather dressings, stove and shoe polish, soap, &c. Grade No. 2 is supplied to the trade for burning, &c., without the issue of a permit, and without entering into bonds. This is due to the fact that the percentage of wood naphtha is so large that its use for potable purposes would be impossible. The reason of the price of the latter being higher than the better grade is owing to the large quantity of wood naphtha used, which costs the department $1.40 as against 25 cents per gallon paid for alcohol. Last year we bought $43,332.55 worth, and we sold for $68,325.69.

Mr. FOSTER. Where did you get your raw material ?

Mr. BRODEUR. We used to buy it from the Standard Chemical Company.

Mr. FOSTER. Where are their works ?

Mr. BRODEUR. They have works at Cookshire, Fenelon Falls, and I think Toronto.

Mr. FOSTER. Are these all the places in which they manufacture ?

Mr. BRODEUR. Those are the only places that I remember. I think they have four or five places.

Mr. BARR. How do you buy ?

Mr. BRODEUR. A contract was made some years ago with the Standard Chemical Company when the system was introduced here. The first contract was made with the Rathbun Company, and they refused to carry it out, and we gave it to the Standard Chemical Company. I think that company is a combination of the Rathbun Company and the Standard Chemical Company, that is my impression. The contract ceased some years ago and was not renewed. After I entered the department I concluded it was not a very good system, and that it would be better to call for tenders, and we did call for tenders in the months of December and January. I am not quite sure, but I think the contract is to be awarded to some other firm.

Mr. BARR. What is the lowest tender ?

Mr. BRODEUR. $1.29. The contract was given to the lowest tenderer with one exception—I must be frank with the House —there was a tender from an American firm offering to supply an American article free of duty ; but I refused to accept that tender, and recommended Council to accept the lowest tender for the Canadian article.

Mr. FOSTER. What did you pay before ?

Mr. BRODEUR. $1.40, now we are getting it at $1.29.

Mr. INGRAM. What method did the hon. gentleman adopt in calling for tenders ?

Mr. BRODEUR. We advertised in the newspapers for tenders for the supply of wood naphtha of a certain quality, which was to be approved by the department. We advertised in all the important papers of the country. The accountant informs me that he paid for advertisements in twenty-five papers.

Mr. BARR. Were any of those papers in Toronto ?

Mr. BRODEUR. Yes, there was the 'News,' I am informed, and the Toronto 'Globe,' of course.

Salaries of officers, inspectors and assistant inspectors of weights and measures, $63,750.

Mr. INGRAM. Is there any report published by the department giving a detailed statement of the inspections made by the different inspectors of gas and electric plants ?

Mr. BRODEUR. There is a report which will be found in Part II.

Mr. INGRAM. It is a very limited report merely giving the number of plants inspected.

Mr. BRODEUR. It covers several pages of the report. I do not know whether my hon. friend has seen it or not but it is in the second part of the Inland Revenue Report.

Mr. INGRAM. I have not seen the one for this year but I have seen it in other years'. A number of municipalities throughout the

Dominion, in Ontario, at all events, are very much interested in what they call municipal ownership, and they are very eager to secure information which the inspection of these various plants will give them. The only source from which they can get that information is through the government inspection.

Mr. BRODEUR. The report, as far as gas inspection is concerned, is to be found at pages 22-52 of the Inland Revenue Report. There are thirty pages devoted to the inspection of gas.

Mr. INGRAM. Is the method of reporting now adopted the same as it has been for years ?

Mr. BRODEUR. Yes, the same system.

Mr. FOSTER. Is the inspection of weights and measures being carried on in the same basis as it was eight or ten years ago ?

Mr. BRODEUR. No, there has been an improvement in respect to weights and measures.

Mr. FOSTER. What has been done ?

Mr. BRODEUR. We thought a good way to deal with the question would be to have a chief inspector here. Some years ago we appointed a chief inspector who is looking after the work that is done by inspectors and assistant inspectors of weights and measures. He is looking after their accounts and at the same time wherever there is a complaint, he, being a practical man, goes and investigates the matter. I am doing my best to prevent a continuation of the deficit which has been met with for many years in that branch of the service.

Mr. FOSTER. What does it stand at now ?

Mr. BRODEUR. Before I took charge of the department there was a deficit of $25,000 while last year there was a deficit of $18,000. I am strongly of the opinion that both ends should come together.

Mr. FOSTER. How are you going to make the two ends come together ?

Mr. BRODEUR. I have asked the inspector to look into the accounts and report ways in which more economy can be observed. I feel certain that we will be successful in reducing the deficit.

Mr. FOSTER. Are weights for the whole Dominion inspected every year ?

Mr. BRODEUR. Every two years.

Mr. FOSTER. Do you find many complaints as to wrong weights and measures ?

Mr. BRODEUR. No, not many, I think the law has a very good effect. I am inclined to believe that if we give that branch of the service close attention we will succeed in having a first-class service.

Mr. INGRAM. Has the hon. gentleman increased the number of inspectors throughout the country ?

Mr. BRODEUR. No, quite the contrary. In some places I have even refused to make new appointments because I found it was not necessary to do so.

Mr. WHITE. Is there a uniform charge for the inspection of weights and measures ? Are the manufacturers of scales, of whom there are several in the Dominion, charged the same rate as ordinary individuals for inspection ?

Mr. BRODEUR. Yes, they are charged the same rate.

Mr. INGRAM. In the matter of the metric system would the hon. minister explain what success he is meeting with ? The hon. gentleman will remember that last year we had Professor McLennan before the committee.

Mr. BRODEUR. As to the metric system I last year got a certain sum of money in order to disseminate, to as great an extent as possible, a knowledge of the system throughout the country. We have distributed to high schools and important schools generally metric sets in order to teach the school boys the system. It is now becoming more generally used in the schools of the country and the generation which is now growing up will certainly be au fait with it. I have been in communication with Lord Strathcona on the question, and he has kept me posted as to what is being done in England in that respect. It is not to be forgotten that last year a Bill was introduced into the House of Lords providing for the introduction of the metric system thus rendering the metric system compulsory in England. The Bill passed the House of Lords and was sent to the House of Commons but parliament adjourned before the question was decided by the House of Commons. I think the matter will come this year before the House of Commons in England. I have obtained copies of the Bill and the report of the discussion on the subject in England and I will be very glad to show these to any hon. member who would like to become acquainted with the Bill and discussions which have taken place there.

Mr. INGRAM. In pressing for the adoption of the metric system does the hon. minister meet with any opposition from any quarters ?

Mr. BRODEUR. So far we have had no strong opposition. The only representations which the department has received have been in favour of the adoption of the system.

Mr. HENDERSON. The hon. minister said that most of the high schools were being supplied with metric sets. Last year the hon. minister was good enough to send to the high school in my county one of the

sets. Where there is a second or third high school in the county will more than one be supplied ?

Mr. BRODEUR. Certainly ; wherever there is a high school, whether there are several in the county or not it does not make any difference. I would be glad to supply the schools referred to by my hon. friend with one of the sets each.

Mr. HENDERSON. I am very much obliged to the hon. minister and I will be glad to make another application to him for sets.

Mr. TAYLOR. About two weeks ago I left a letter in the hon. minister's office from the head master of the high school at Gananoque. I have had no answer to it yet. I hope instructions have been given to ship the metric system set which was asked for.

Mr. BRODEUR. It must have been sent. However, I will inquire into it.

Mr. TAYLOR. I left the letter addressed to the hon. minister with the hon. gentleman's secretary.

Mr. BRODEUR. It must have been overlooked because I usually answer all letters sent to me.

Rent, fuel, travelling expenses, postage, stationery, &c., for weights and measures, including amount for purchase of standards of the metric system, salaries and other expenses of inspectors, &c., $35,000.

Mr. FOSTER. These are standards for use at Ottawa ; are they ?

Mr. BRODEUR. Yes.

Mr. FOSTER. What do they cost ?

Mr. BRODEUR. Do you mean the metric system sets ?

Mr. FOSTER. Yes.

Mr. BRODEUR. $8.33 each.

Mr. FOSTER. What are these standards ? Are they what you call metric system sets ?

Mr. BRODEUR. Yes, they are metric system sets which have been imported from France.

Mr. FOSTER. How many of these are you purchasing, and what is the idea ?

Mr. BRODEUR. I am giving one to each high school.

Mr. BARR. Are you sending to each school or only to those that apply ?

Mr. BRODEUR. I am waiting for applications.

Mr. FOSTER. The purpose is just to educate the country up to it.

Mr. BRODEUR. Yes. To put it in the hands of teachers to educate the children attending the schools.

Mr. HENDERSON.

Mr. FOSTER. And when you have done the educational work, you are going to introduce the system ?

Mr. BRODEUR. Nothing has yet been decided as to that, but I suppose it will have to come. If this system is adopted in England, as is likely, I suppose we will have to do the same thing and also if it is adopted in the United States. I spoke of the movement that is going on in England and I may say that in the United States a very strong movement is being made with regard to the introduction of the system there. When it is introduced in England and the United States we will have to follow suit.

Mr. FOSTER. You do not propose to get a little ahead of them ?

Mr. BRODEUR. We have not yet decided as to that.

Mr. FOSTER. It is worth thinking about.

Salaries of inspectors of gas and electric light, $25,000.

Mr. A. A. McLEAN (Queen's, P.E.I.) What fees are chargeable by these inspectors of electric light and gas ?

Mr. BRODEUR. The average cost per meter is $1 for five years. There is a regular tariff.

Mr. INGRAM. Would the minister give us the instructions to the inspectors? What information are they supposed to supply to the department ?

Mr. BRODEUR. They have to inspect the meters which are brought to be inspected, they have in each office an apparatus to test electric light meters and those who want their meters inspected bring them there. They are inspected and stamped and certificates are given.

Mr. A. A. McLEAN. Are these fees paid by the consumer or by the company ?

Mr. BRODEUR. The fee is paid by the owner of the meter in all cases. If there is some difficulty between the contractor and the consumer, and the consumer wants to have his meter inspected, he asks for the inspection, and if there has been some mistake in favour of the consumer the contractor has to pay for the inspection. The same thing applies to gas meters.

Mr. A. A. McLEAN. Is any person appointed by the department to instruct these inspectors as to the manner in which they shall perform their duty ?

Mr. BRODEUR. Yes, instructions are of course issued as to the manner in which the inspection shall be made.

Mr. BARR. Is there any fixed charge that they can assess the consumer.?

Mr. BRODEUR. Yes, there is a charge. It is set forth in the Order in Council pass-

ed January 31, 1899. For meters of the capacity of ten lights and under, 75 cents; for meters of ten lights and not exceeding 20, $1.25; for meters from 20 to 30 lights, $1.75; for meters from 30 to 45 lights, $2.25; for meters from 45 to 60 lights, $2.75; for meters from 60 to 80 lights, $3; for meters from 80 to 100 lights, $3.50. This is for once in five years.

Mr. WHITE. With reference to the item of electric light inspection, I understand that the collectors of excise revenue in small towns are expected to perform that duty.

Mr. BRODEUR. The collectors simply collect the inspection fees.

Mr. WHITE. Take the case of the town I live in. The inspector lives in Ottawa. Have his expenses to be paid by the parties asking his services if he goes to inspect an electric meter or a number of electric meters at Pembroke? Are the expenses from here to that town added to the fees?

Mr. BRODEUR. No, that is paid by the department.

Mr. INGRAM. There is very little information in this blue book based on the reports of the electric light inspectors. Nothing is given as to the amount invested in each plant, the output of gas or electric light. Supposing a man wants to obtain information, for instance as to the amount of machinery and the output of electric light and gas companies, in order that municipalities desiring to go into the ownership of these services can obtain information as to the cost, there is no information of that kind furnished in this report. What I am now asking is whether it would be possible to have a report of the inspectors giving the cost of machinery in the various gas and electric light plants and the output. I do not mean to have them go into details as to the profit and loss because that would be unreasonable, but such a report as I have indicated would be of value to the municipality.

Mr. BRODEUR. The interference of the department in the question of gas and electric light is simply for the purpose of testing the measures that are used in connected with the gas and electric light; that is the full scope of the work of our department.

Mr. FOSTER. And it is not compulsory?

Mr. BRODEUR. Oh yes, it is compulsory, every meter has to be inspected. My hon. friend from East Elgin (Mr. Ingram) is asking me whether we could not give in our reports the output of each company and the amount of work which they are doing and all the figures that would be given, say, in a census of those companies. That does not at all pertain to our department. What we have to do is simply to inspect the measures used by those companies. We have no means of ascertaining their output, their wealth and their revenue. That does not pertain at all to our work, we have simply to test the measures. We test the weights used by a merchant but we are not supposed to find out how much business that man is doing and what he is worth. It is the same with the gas and electric light companies, and I do not think it would be possible, certainly it would be outside the scope of the present Act, to ask for this information because we have no right to get this information from these companies.

Mr. A. A. McLEAN. Supposing that the inspector found that the meters supplied by the company were of an inferior quality? Would it be his duty to make a report to the department?

Mr. BRODEUR. Yes, it is his duty to report to the department.

Mr. A. A. McLEAN. Then whose duty would it be to take measures to compel the company to supply proper meters?

Mr. BRODEUR. The company is notified to see that its gas is purified; and if it does not do so, it is subject to the penalty.

Mr. FOSTER. The verdict is only as to the quality of the gas?

Mr. BRODEUR. Yes.

Mr. FOSTER. What is the state of the ledger in regard to the electric light inspection?

Mr. BRODEUR. The revenue from gas and electric light inspection last year was $50,218.25, and the expenses, $33,426.15.

Mr. FOSTER. In these expenses you include everything?

Mr. BRODEUR. Yes; all the expenses in connection with the service.

Mr. FOSTER. How does the account stand in weights and measures?

Mr. BRODEUR. The expenditures last year were $84,768.82, and the receipts, $66,355.19.

Mr. FOSTER. Taking the two together you are about on an even basis. That is satisfactory as far as it goes. I have always had the opinion, and have tried to enforce it, that these are services that ought not to involve the government in any cost. They are business operations in which the revenue ought to be made to cover every expense that is incurred.

Metric system—to provide for the delivery of lectures and the publication of maps, charts, pamphlets, &c., relating to the metric system of weights and measures, $3,000.

Mr. INGRAM. Who is going to do the lecturing?

Mr. BRODEUR. No lectures have been given yet. My idea last year, when I first asked for this vote, was to send some person to deliver lectures before the various

boards of trade and such bodies as the Canadian clubs throughout the country. Last year I invited Professor McLennan, of Toronto University, to come and deliver a lecture here. He was kind enough to do so, and gave us a very interesting lecture, of which a number of copies have been distributed, and we are frequently asked to have more printed for distribution in the schools. My idea would be to have a small phamplet explanatory of the system prepared and placed in the hands of all the teachers and children in the public schools of the country. We have distributed sets of the metric system among the high schools, and we should distribute these little pamplets among the teachers and children in the lower schools. I think that would tend to popularize the system. As I have said, we may expect in a year or two to introduce and render compulsory the metric system in this country, especially if it is adopted in the countries with which we deal, such as England, the United States and Australia.

Mr. FOSTER. My impression is that you would not gain very much from a general distribution of a pamphlet among the school children; but I think it would be a good idea to distribute instructions on the subject among the teachers, so that they could give it to those who would make some use of it. I should think it would be an excellent idea to distribute among the teachers a pamphlet which would be explicit, definite, and not too long.

Mr. BRODEUR. That is part of the work I intended to do.

Adulteration of food and fertilizers, and the administration of the Act respecting fraudulent marking, $30,000.

Mr. FOSTER. Give us an idea of what is going on in that.

Mr. BRODEUR. The Adulteration of Food Act provides that food inspectors shall collect samples of food in different parts of the country every time they are so requested by the department. The samples so collected are sent either to the district analyst or to the department in Ottawa to be analysed. The result of the analysis is then published in bulletins, which are distributed to the members, and also published in our annual report. We find that a great many articles are adulterated, and my intention is to pursue a very aggressive policy with respect to these adulterations. For example, last year we had analysed some spices, most of which were found to be adulterated. The same was true with regard to jams and jellies. Samples of liquor were collected and, strange to say, most of them were found to be absolutely pure, except for the addition of a large quantity of water, which is not an adulteration under the Adulteration Act. We find that maple sugar and maple syrup are adulterated on a very large scale.

Mr. BRODEUR.

Mr. FOSTER. What with?

Mr. BRODEUR. With all sorts of things. Generally sugar cane and glucose are used, which are adulterations according to the Act, unless the manufacturers state on the label that the article is a compound. In some instances we have taken proceedings to obtain convictions against those violating the law.

Mr. BARR. Is it not a fact that several establishments in Montreal and other places manufacture very large quantities of what they call maple sugar from cane sugar and so on, which they ship to the old country with the result that the legitimate trade is being ruined?

Mr. BRODEUR. The chief analyst received instructions a few days ago to look into that question. It has been found, as my hon. friend has just said, that manufacturing houses are now making what they call maple sugar, but what has never seen the maple tree. It is my duty to see that these violations of the law are punished, and I intend doing so as early as possible.

Mr. FOSTER. We have had an adulteration of Food Act a number of years, can my hon. friend give us an idea as to what progress has been made in purifying the food stuffs of the country?

Mr. BRODEUR. The publication of the bulletins has had a good effect, but we shall have to follow a more aggressive policy. Last year I found that in spices the adulteration was in some cases simply horrible. I may say the same with regard to jams and jellies, but I must say, to the credit of the manufacturers, that they came to Ottawa to interview the department and agreed to take proper means to prevent adulteration in the future.

Mr. BARR. Have there been many actions taken under the Act? Last year, I believe, there was more adulteration than ever. Take for instance this manufacture of so called maple sugar, which has never seen the maple tree. Then take our jams and jellies, according to reports, the adulteration is worse in these than ever before.

Mr. BRODEUR. I am not ready to admit that the adulteration in jams and jellies is increasing, because I have the formal promise of all the manufacturers—of most of them at all events—that they will cease using glucose in such large quantities. There were strawberry jams manufactured, for instance, which were perfectly innocent of any strawberry. They were made out of apples which were boiled with some salicylic acid and glucose and sometimes hayseeds were used to make the mixture look like strawberry jam.

Mr. BARR. I am afraid we are making little progress in stamping out this adulter-

ation. Take our white wine vinegar, maple vinegar, and so on, it is well known that most of these are impure. It does seem to me that if a collection were made of these adulterations and the law vigorously applied, you would see a great improvement in a few months. But unless the law be applied vigorously, I am afraid you will not accomplish anything.

Mr. BRODEUR. My hon. friend drew my attention to the question of adulterated maple sugar. Well, since a few months we have secured five convictions.

Mr. BARR. That is a start.

Mr. BRODEUR. I hope it will go on. I am very well disposed to do my best because it is very important that our maple sugar industry should not be ruined.

Mr. HENDERSON. No doubt the information furnished by the chief analyst is very desirable and useful, but I fear a great deal of labour is spent to very little purpose, because that information does not reach the general public. What system has the minister of distributing the bulletins ? A member of parliament may get two copies and those may be the only ones that will reach his county.

Mr. BRODEUR. We are giving the bulletins to the members of both Houses and to those who are entitled to the distribution of public documents. More than that we distribute them gratuitously to all those who ask for them and send copies besides to all the vendors of the articles analysed. It would perhaps be better if a more general distribution were made.

Mr. FOSTER. How many were distributed last year ?

Mr. BRODEUR. A thousand copies of each bulletin and twelve bulletins were issued.

Mr. ARMSTRONG. This is a matter of great importance, especially to those firms which are trying their best to give the people a good article. I know of several industries that try to provide pure jams and jellies, but they are handicapped by men who are selling inferior articles at reduced prices. Would it not be wise for the hon. minister to spend a certain amount of money in publishing these bulletins in the weekly or daily papers ?

Mr. BRODEUR. The suggestion is a good one, but I would not like to accept if off hand, because the publication of these bulletins in the press would cost a great deal of money. I shall however, consider it carefully. Certainly, 12,000 bulletins is a very small number to be distributed throughout the country, and the people whom the information would most interest do not receive the bulletins at all, whereas if the matter appeared in the daily newspapers, it would reach those for whom it is intended, and would be of interest to all. I know a gentleman who put $15,000 into an industry of this kind only last year, and already he finds the inferior goods contracting his markets to a very great extent, because they are sold at low prices.

Mr. FOSTER. What is the minister's outside machinery for detecting adulteration ?

Mr. BRODEUR. In each district, we have a food inspector. Instructions are sent to these inspectors, from time to time to collect samples of the goods. Say, for instance, an inspector is instructed to collect samples of maple sugar. From a certain dealer he takes three samples. One of these is left within the vendor and the other two are sent either to the department here, or to the district analyst. And these are analysed.

Mr. FOSTER. He only collects samples as he is instructed to do so ?

Mr. BRODEUR. Yes. He gets instructions from the department to collect samples of certain articles and he does so.

Mr. FOSTER. Are the food inspectors kept busy at that ?

Mr. BRODEUR. These men, as a rule, are not only food inspectors but excise officers also, and, when not engaged in the collection of food samples, they are attending to other business.

Mr. FOSTER. I see here in the Auditor General's Report entries showing that one Thomas Kidd is a food inspector who is paid $500 salary and $116 for travelling expenses. He has an allowance for rent of office and so on. If he only collects samples as he is instructed to do, it seems to me Mr. Kidd does not do a very large amount of work.

Mr. BRODEUR. I think his inspection district covers the whole of Ontario, west of Toronto.

Mr. FOSTER. But he cannot have done very much to cover that district, because the travelling expenses with which he is charged amount to only $116. That would not carry him very far. It would be interesting to know just how many collections of samples this inspector has made. Does he have to travel to collect these samples ?

Mr. BRODEUR. Certainly.

Mr. FOSTER. The indications are that he did not do much travelling ; and, if not much travelling then not much collecting ; if not much collecting, then he has not done much for his salary, because I see he is confined to this duty.

Mr. BRODEUR. Many samples have been collected during the year, including a proportion from Mr. Kidd's district. Travelling in that district would not be so expensive as in others covering a larger area. In any

case Mr. Kidd's is a special case; I think my hon. friend (Mr. Foster) will not find any other food inspectors but have other work to do as excise officers, inspectors of weights and measures or otherwise in connection with the department's work. Mr. Kidd is the only case and I see that he was appointed in 1890.

Mr. FOSTER. It is not a question of when he was appointed, but whether the government are spending money and not getting due service for it. The other food inspectors seem to receive small salaries, and I imagine that most of them must do something else.

Mr. BRODEUR. That is true of all of them except Mr. Kidd. I was saying that he had been appointed many years ago, and I suppose that that is the reason he has no other work in connection with the department.

Mr. FOSTER. The inspectors seem to go only when they are instructed. Perhaps the minister has not given instructions to Mr. Kidd.

Mr. INGRAM. Has not the department changed its system within the last few years? Formerly samples of food for analysis were sent to the department here and the work was done here. But I think that analysts have been appointed for different parts of the country, and samples are now sent to them.

Mr. BRODEUR. I may explain that it has been found that these food inspectors have not work for the whole year round. They are supposed to work perhaps four or five months and for the rest of the year they have nothing to do. That is why, in the appointments lately made, we have tried to appoint men as food inspectors who were already in the service as excise officers or inspectors of weights and measures. Take a man in a district where there is only one bonded warehouse? He can easily absent himself from his place for a few days and attend to the collection of food samples. I see that Mr. Kidd is simply a food inspector. But his territory is a populous one, and, though he does not seem to have travelled much, he has certainly attended to his work in that district, as the chief analyst tells me that he has had samples from that district as from the others.

Mr. LALOR. How does the minister interpret the term 'adulteration of food?' The hon. member for East Lambton (Mr. Armstrong) has raised this point as to jam. Suppose an article is put on the market called raspberry jam. If it is in part raspberry jam but with apples used as a filler, would that be considered adulterated?

Mr. BRODEUR. Certainly, if it is not marked 'compound.' The law provides that if, on analysis it is found to contain any ingredient injurious to health, it is then declared adulterated. If it is not the pure article, but contains nothing injurious to health, the label must bear the word 'compound' or the party is liable to be prosecuted for violation of the law. That is the way we proceed with those violations. Take the case of raspberry jams put on the market without containing any raspberries at all. That would certainly be a violation of the Adulteration Act because they have no right to sell an article as raspberry jam if there is no raspberry at all in it.

Mr. LALOR. I am pleased with the interpretation of the minister. But I cannot see where any harm is done to the public when the article used as a substitute in the manufacture of a jam is a good article of food and not in any way detrimental to the people who buy it. Now, Canadian jams that are made and sold on the market are largely made from apple pummace, and then a certain amount of fruit is added in order that it may bear the name of the particular fruit that is stamped on the label. There is no harm at all done to the public who buy that, and I am glad to hear that it is not considered an adulteration where the substitute used is perfectly healthy and not in any way detrimental to any purchaser.

Mr. BRODEUR. If the substitute replaces absolutely the article which is named on the label, it is an adulteration. Take the case of strawberry jam. Strawberries are very scarce, and I am informed that instead of using the strawberries they are using turnips. There is no strawberry in it, and it would not be fair to allow such an article to pass without declaring it adulterated. The department declares that when a substitute is made for the genuine article, if it is not marked 'compound,' then the article is declared adulterated. If there is no strawberry in the jam at all it is declared adulterated, even if the foreign fruit is not injurious to public health.

Mr. LALOR. If the package is marked pure raspberry jam and 25 per cent of that is raspberry and the balance is apple, would you call that an adulteration?

Mr. BRODEUR. Certainly, the department would declare it an adulteration, because it is sold as pure raspberry jam, whereas 75 per cent of it is not raspberry.

Mr. A. MARTIN. Would it not be well to compel the manufacturer to state on the label the ingredients of which the article is composed? I do not know if that would be practicable, but it would relieve the public mind to know exactly what the article is composed of. If it was strawberry jam the people would like to know how much strawberry was in it and how much apple—compel the manufacturer to put the ingredients on the label.

Mr. BRODEUR. I am informed by the chief analyst that it would be very difficult

for manufacturers to comply with that condition. When an article is sold containing ingredients foreign to the article itself, then the manufacturer has to put the word 'compound' on the label, and the word has to be as prominent as the other words of the label. In that way the manufacturer can comply with the law, and that prevents a great deal of adulteration. That is what we are doing at the present time.

Mr. ARMSTRONG. With reference to the estimate, I do not think it is too large; in fact, I think it would be wise to make it larger, if by so doing you can inform people as to the kind of fruit that is put into the jams they are eating. From what I can learn, in many of the factories throughout the country, to a large extent, jams in particular are made up of most inferior fruits and turnips and glucose, and most inferior grades of these articles. However, I would like to ask, with reference to these bulletins, does the minister mean, when he says that 12,000 bulletins are issued, that each bulletin covers all kinds of food?

Mr. BRODEUR. Last year 1,000 bulletins covering each article were issued. We have twelve bulletins issued; one, for instance, with regard to milk, another with regard to spices, another with regard to jams and jellies, and so on; 1,000 bulletins regarding each article have been distributed.

Mr. ARMSTRONG. The minister must see that only 12,000 bulletins for the whole Dominion would be of very little use. When you expend $30,000 in obtaining the information, that information is certainly worth distributing far and wide. I would strongly advise the minister to make a still wider distribution of the bulletins.

Mr. BRODEUR. I am informed that the bulletins are not distributed to newspapers. I think it would be advisable to distribute them to newspapers, and I shall give instructions to that effect. The press usually takes a great deal of interest in these matters, and I think would be glad to publish the information.

Mr. ARMSTRONG. If you leave it to the newspapers, they are likely to pick out only such parts as they please and to publish a garbled statement. Would it not be wise for the department to issue a synopsis of the bulletins, and send the synopsis to the newspapers?

Mr. HERRON. Is it the intention of the department to continue the policy of prosecuting parties who sell goods marked as genuine when they are not genuine?

Mr. BRODEUR. We intend to enforce the law rigidly in that respect. Last year I found there were a great number of violations, and we must find means to prevent them if possible.

Mr. LALOR. I may inform the minister that he will find there are very few goods sold on the market to-day known as jams, for instance, that are pure. The department may go a little too far in that direction. The manufacturers of jams and jellies in this country have to compete with American and English jams, and I doubt if there is any jam sold to-day, either imported or Canadian, that is absolutely pure. For myself, I cannot see where it is detrimental to the public health if apple pulp is used along with other pure fruits. I hope the law will not be interpreted too rigidly in that respect, because it may have the effect of killing a very important industry in this country.

Mr. BRODEUR. I may say that my hon. friend is misinformed as to jams imported from England, because by the analysis we made last year we found that the jams imported into this country from England were absolutely pure. But we did not find the same thing in regard to the Canadian and American product. We not only collect samples of the Canadian product but we collect samples of goods which are brought into the country. I must say that it is to the credit of England that the jams and jellies imported from that country which we analysed last year were found to be absolutely pure.

Mr. ARMSTRONG. I cannot agree with my hon. friend from Haldimand (Mr. Lalor) in reference to allowing a certain amount of adulteration. There is no doubt that there is plenty of fruit in our country and there is no excuse for the factories not producing a good pure article. I know there are factories that are doing their utmost to produce a pure article, and it would be very unsatisfactory so far as they are concerned if any adulteration were permitted.

Mr. BARR. That would be all right if the department were as watchful in connection with goods imported from England or the United States. If our producers have to compete with outside manufacturers and if we allow Americans to send goods in here without carefully watching their product it would be a great hardship on our own manufacturers.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

NICOLA, KAMLOOPS AND SIMILKAMEEN COAL AND RAILWAY COMPANY.

House in committee on Bill (No. 34), respecting the Nicola, Kamloops and Similkameen Coal and Railway Company.

On section 3,

The company, as now organized, is hereby declared to be, and to have been since the pas-

sing of chapter 164 of the statutes of 1903, a body corporate and politic within the legislative authority of the parliament of Canada, with power to lay out, construct and operate the railway works described in the Acts of the province of British Columbia mentioned in the preamble, and with all the other powers therein set forth, so far as the legislative powers of the parliament of Canada extend, save and except only such provisions of the said Acts, if any, as are inconsistent with the Railway Act, 1903; but nothing herein contained shall affect or invalidate any action heretofore taken by the company pursuant to powers in the said Acts contained.

Mr. SPROULE. Is that the date of the Provincial Act?

Mr. HYMAN. Yes, this is the Bill that went to a sub-committee and the committee accepted the report of the sub-committee.

Mr. SPROULE. It seems to me that it raises a very important question. If there is a provincial Act, and litigation should arise under the provisions of the provincial Act, the fact that we are now declaring that from the time that Act was passed in the province the railway was a work for the general advantage of Canada, we are practically bringing it under federal jurisdiction and authority, and difficulty might arise. We would seem to be deliberately interfering with the powers of the province.

Mr. HYMAN. The Bill was carefully considered in committee; it also went to a subcommittee.

Mr. LOGAN. I was a member of the subcommittee which considered this Bill. The conditions are very peculiar as I remember it. In the first place in 1891 an Act was passed by the British Columbia legislature incorporating this company. In 1893 the company came to this House asking that this work be declared for the general advantage of Canada, but when they came here a question was raised as to whether or not the charter granted in 1891 had expired under the provision of the General Railway Act of British Columbia, which required that they should do a certain amount of work at a certain time, which had not been done. When this was brought to the attention of the House in 1903, there was a stay of proceedings until the British Columbia House had passed another Act reviving the old charter. On the receipt of a telegram from the British Columbia legislature stating that this Act had been passed, this parliament, in 1903, passed an Act declaring this work to be for the general advantage of Canada. When they came to get the Bill which was passed in 1903 by the British Columbia legislature, they found that it contained a clause which took the control of the rates out of the power of the Railway Commission and gave it to the Governor in Council of British Columbia. The question was then raised whether it was not ultra vires of the legislature of British Columbia to pass that Act, and consequently there has been some question with reference to the validity of the bonds of this company. Now as they desire to extend the line to a point on the Vancouver, Victoria and Eastern Railway, they come to parliament and ask us to pass this Act to validate their bonds and so remove any doubts about the British Columbia Act.

Mr. SPROULE. It may be that the province of British Columbia gave a subsidy and in consideration thereof reserved to themselves the right to control freight rates, but now we declare the work to be for the general advantage of Canada and bring it under the Dominion Railway Act. The rates on railways under the Dominion Railway Act are controlled by a commission, so that we take the power which the legislature reserves to themselves away from them, although they reserved it probably for a consideration. That is sometimes done as in the case of the agreement between the legislature of Manitoba and the Canadian Northern Railway. The legislature reserved the right to control freight rates in consideration of guaranteeing the bonds of the railway. In such a case, if we should declare the railway to be for the general advantage of Canada and thereby bring it under the General Railway Act, we certainly would be conflicting with their power to control freight rates, and the question would arise whether the provincial authorities or the Railway Commission would control the rates. The same question may be involved here.

Mr. LOGAN. The company has already, by the Act of 1903, been declared for the general advantage of Canada. Therefore this Bill does not affect it so far as that goes. But they ask us under this Bill for power to extend this road to connect with the Vancouver, Victoria and Eastern Railway at or near Grand Forks, and at or near Midway with the Columbia and Western Railway. We amend the second clause to read:

All powers of the company in relation to the railway which it now has authority to construct shall extend and apply to the extension authorized in section 1 of this Act.

I admit that it is a very much mixed up piece of legislation, but at the same time, as far as declaring it for the general advantage of Canada is concerned, that has been already done in 1903, in regard to the main portion of the road, and this is only continuing to the extension of that road the same provisions as were made in the Act of 1903. There did not seem to be any objection to the Bill; there were some British Columbia members present at the meeting of the sub-committee, but there did not seem to be any opposition coming from

British Columbia with reference to this matter.

Mr. SPROULE. I do not know if they got any subsidy from British Columbia and if in lieu of that, the legislature retained in their hands the right to control the rates. I think that before the Bill is read the third time is should be submitted to the Minister of Justice or some competent authority connected with the government to look into it and see that we are not infringing on rights belonging to the province.

Sir WILLIAM MULOCK. It is quite clear that we are not doing that because the amending words qualify that meaning.

So far as the legislative powers of the parliament of Canada extend.

We are declaring that the company shall continue to enjoy the powers it now enjoys by authority of its provincial Act so far as the legislative powers of the parliament of Canada extend. We do not purport to legislate in any way beyond our own powers. It is possible that a province may be able to legislate with regard to a local work to a greater extent than we can. Therefore, we do not purport by this amendment to ratify any powers granted by the provincial Act in excess of those powers which this parliament can grant.

Mr. SPROULE. This brings the freight rates under the control of the Railway Commission.

Sir WILLIAM MULOCK. All railways subject to this parliament are under the control of the Railway Act.

Mr. SPROULE. If we control the freight rates, how can the province ?

Sir WILLIAM MULOCK. It cannot. The moment it becomes a Dominion railway, it comes within the Railway Act. However, the hon. gentleman's suggestion that the third reading should stand over is not unreasonable.

Mr. E. M. MACDONALD. The point involved in this Bill is that this railway having been declared one for the general advantage of Canada, it declares that from the date of the passage of the Bill providing for that the company owning the railway has corporate rights and powers. This parliament alone is seized with the jurisdiction to deal with this railway in this declaratory way. That is the view of the subcommittee, and that view was shared by the hon. member for Norfolk (Mr. Tisdale), who drafted the amendment made to the third clause, and by the hon. member for Beauharnois (Mr. Bergeron), who were members of that committee.

Mr. SPROULE. I do not think it is competent for us to take over any provincial railway and destroy any rights the province has in it by saying that it is for the general advantage of Canada. That is a question of law to be determined ultimately by the courts. We have had that question before this House again and again, and there seem to be no decisions that touch directly upon it. We may be within our rights or we may not. If we are within our rights, we may be interfering with the rights that properly belonged to the province when it originally granted the charter for this railway.

Bill reported.

CONSIDERED IN COMMITTEE—THIRD READING.

Bill (No. 40) respecting the Niagara-Welland Power Company.—Mr. Guthrie.

SECOND READING.

Bill (No. 71) respecting the Great Northern Railway of Canada.—Mr. M. S. Schell.

SUPPLY.

House in Committee of Supply.

Adulteration of food and fertilizers, and the administration of the Act respecting fraudulent marking, $30,000.

Mr. ARMSTRONG. Before this item passes, I wish to say a few words with reference to the fruit industry. In the northern part of my riding we have one of the most promising fruit districts to be found in the province of Ontario. Situated as it is at the southern end of Lake Huron, it is generally conceded to have equal advantages to those of the Niagara district. Hence I think it is important that this matter should be gone into a little more fully. When we have proper transportation facilities and proper protection, I am satisfied that the fruit industry of our country will grow and increase as it should. Thousands of barrels of apples rotted under the trees in my riding during the last season simply because the transportation facilities were not what they should be, and because the protection to Canadian fruit was not sufficient to prevent fruit coming in from foreign countries. With reference to the adulteration of jams and jellies to which reference has been made, I would like to call the minister's attention to bulletin 96 of the Inland Revenue Department for 1903, which states that the analysis of jams and jellies selected indiscriminately over the Dominion showed the following results : raspberry jam—genuine 2 ; doubtful 1 ; adulterated, 16 ; total 19. Strawberry jam,—genuine, one ; doubtful, one ; adulterated, 17. Total, 19. Plum jam, —genuine, 3 ; doubtful, 1 ; adulterated, 8. Total, 12. Peach jam,—genuine, none ; doubtful, 2 ; adulterated, 5. Total, 7. Miscellaneous,—genuine, none ; doubtful, none ; adulterated, 2. Jellies,—genuine, 8 ; doubt-

ful, none; adulterated, 7. Showing that out of 74 varieties, only 14 were genuine. When we consider that the adulteration to a large extent is by means of turnips, which can be purchased at about $6 a ton, I am sure the hon. minister will readily see the importance of making a more thorough investigation of this subject than he has done. As regards the distribution of the bulletins, I wish to again impress on the hon. minister the importance of a more general distribution, and of giving to the public a short synopsis at least of the analysis of the jams and fruits that are canned in our country, showing the results of their analysis. And also information regarding the quantity brought into the country from outside. Take for instance canned preserves, jellies, jams, &c., there were imported in nine months, in 1904, $147,256 worth, or about $200,000 worth of these goods coming to our country per annum. I sincerely trust that the hon. minister will try and provide a remedy for this. We can grow the finest fruits in this country, and it has been proven within the last year that a great quantity of our fruits never reached the market and are not likely to so long as this heavy importation goes on. Take for instance the green fruits imported into Canada, in 1903 they amounted in value to $1,033,115, leaving out of question the dried fruits. I merely call the hon. minister's attention to these matters in order to impress upon him the importance of having the bulletins showing the adulteration of food distributed more largely, and also of making more public the amount of foreign goods in this line that are coming into our country.

Mr. BRODEUR. As regards the adulteration of raspberry and strawberry jams, as I explained this afternoon, we collected samples last year and found in many instances that there were violations of the Adulteration Act. In some instances the berries were not used at all and glucose was used instead of sugar. With regard to the imports, of course, in the amount mentioned by my hon. friend are included fruits, such as bananas and oranges which are not grown in this country, and dried fruits.

Mr. ARMSTRONG. I did not include any dried fruits.

Mr. BRODEUR. In any event I have no control over the importation of these goods as we cannot prevent their importation by the application of the Adulteration Act. We intend to take an aggressive policy with regard to the carrying out of this law and to spread the information among the public of the results of the analysis, so that the people may know whether the goods they are buying are genuine or not.

Mr. ARMSTRONG. Would it be too much to ask the hon. gentleman to exclude vegetables altogether out of the jams and jellies made in our country?

Mr. BARR. Did you find any turnips in them?

Mr. BRODEUR. We did not discover any vegetables.

Mr. BARR. They have been found, it is said, by the analysts.

Mr. FOSTER. Before this item passes, I wish to refer to two or three things that have been impressing themselves on my mind while listening to this discussion. In the first place, we are spending $30,000 per year, and it does not seem as if we were getting an adequate result in so far as the two chief things are concerned—first, the punishing of those who are guilty, and secondly, the dissemination of the results of these analysis by the department so that the people might be educated, and thus a general interest of self protection aroused which would help the department to get rid of these adulterators. You have an analytical department at Ottawa which costs $8,000 or $9,000 per year and which seems to be pretty well equipped, then you have outside resident analysts in the different cities who are available for the purpose of analysing the samples of food which may be put into their hands. You further have your inspector of food to whom a certain amount of money is paid, both as salary and travelling expenses. I suppose a good deal of analysis is done at the request of persons who send samples to the headquarters at Ottawa.

Mr. BRODEUR. Yes, to some extent.

Mr. FOSTER. That they do simply for their own information. Are they charged a fee?

Mr. BRODEUR. Yes.

Mr. FOSTER. Well, that does not amount to much. A man thinks there is adulteration and sends the sample for his own satisfaction, pays his fee, gets the analysis and uses it for whatever it is worth. But the analysing that is done for the purpose of detecting and punishing the adulteration of food is done mainly at the head office and by these local analysts. No less a sum than $30,000 is spent.

Mr. BRODEUR. We did not spend as much last year.

Mr. FOSTER. Well, that is the vote you are taking.

Mr. BRODEUR. Last year a vote was taken for $30,000 and we spent $20,900.

Mr. FOSTER. Then the minister did not do his duty last year, because we have had him acknowledging to-night that there is a great deal of adulteration. When parliament gave him $30,000 to detect and prevent adulteration, he sat down quietly and

only spent $20,000 of it. There is an economy which is laudable, but there is another which, in the face of a grave danger like this, is just the opposite. The aggressiveness which my hon. friend speaks about animated him but very little last year since he did not even spend the money put at his disposal.

Mr. BRODEUR. I was only there a few months.

Mr. FOSTER. What I spoke of refers to the department. Is the department doing what it ought to do with reference to these analysts in outside cities ? It gives a retaining fee of $200 and an allowance for office rent, apparatus and material, of about as much more. There is an initial expense of about $400 in each case. You have these analysts in Halifax, Montreal, Toronto, Victoria, Quebec, London, Winnipeg and Ottawa. When you incur this initial expense, it seems to me poor economy not to utilize the staff you thus retain. Now, what does the department do? In Halifax the officer retained analysed only 60 or 70 samples ; in Montreal about the same ; in Toronto about the same ; in Victoria only 26. In Quebec there was the initial expense, yet not a single analysis was made, so that the money spent was absolutely useless. In London only 9 samples were analysed. In Winnipeg the samples analysed number only 28. In Ottawa they gave the retaining fee, the office rent, the allowance for apparatus and material, yet did not call upon Dr. Valade to analyse a single sample during the year. Now, if these are the facts—and I suppose it will not be denied—we see that the department went to large expense to retain men and provide apparatus and material for the analysis of food, yet had not sprawl enough to have analyses actually made. And yet adulteration is rife in this country, as the minister has acknowledged He says he is determined to make an aggressive campaign against it. But though these manufacturers have been adulterating food, and are still adulterating, the department has not used, to any great extent, the apparatus and men at its disposal for the prevention of this adulteration. Then as to the food inspectors, the same remark applies. The department incurs the initial expense for salary and fees. It lets these officers travel a little, but not enough to collect many samples. There is a yearly expense of about $4,000 for these officers, yet the number of samples they have collected is very small. The minister will see what I am driving at—that if he is going to continue spending $20,000 in this kind of thing and have an establishment, he ought to go further and make his initial expenditure effective, even if a little more money must be spent. The minister now is like a gentleman who has an immense battery and with ammunition ready, but never loading or firing his guns, though the enemy are there and ready to be slaughtered—and deserving to be slaughtered, as he himself admits. This is a friendly criticism, and it is spoken in the hope that the minister will utilize the machinery he has provided to put down the great evil of adulteration of food. As to the education part of it, the distribution of 1,000 copies of each of twelve bulletins will not do it at all. Could not more of these be sent out with a view to arousing public interest ? No man wants to buy food that is adulterated and not worth the money that he pays for it. Yet nineteen-twentieths of the people have no idea but that they are buying good food. One way to get rid of adulteration is to arouse the intelligent interest of the consuming people to the fact that they are buying food that is either injurious or not worth what it costs them. The minister will do something now with the newspapers. I think that is a good move. An idea that suggested itself to me was that members of the House would probably be glad to assist in this distribution. If members knew that these bulletins were available for distribution, many would be glad to make up lists of people in their constituencies to whom they would like to send things, and who would be interested in the facts contained in these documents. In that way two or three hundred people might be reached in every constituency, and, with over two hundred members of the House taking an interest in it, the distribution would be very wide and, probably, very effective. Then the schools might be utilized and the boards of trade might be utilized. I should think that secretaries of boards of trade would be glad to distribute these bulletins. The best of trade is honest trade, and, beyond doubt, legitimate traders would be in favour of stopping adulteration and, in the general interest of trade, have nothing sold purporting to be pure food that was not actually pure. For my part, I have no objection to men selling or buying a mixed article, provided it is not sold under a false name. I believe that the prevention of adulteration of food is one of the most important subjects we can take up among the minor subjects in connection with our public policy. We had a discussion the other day on the prevention of tuberculosis. The carrying out of the reform in that direction would save life. The prevention of the sale of adulterated food saves life and promotes health. If the government is going to take this matter up at all, it ought to take it up with energy and purpose. It ought to terrify the evil-doer and arouse the victims to a sense of what is going on in the way of dissimulating, under false names, what I dare say in many cases are very noxious articles of food.

Mr. BRODEUR. I am glad that this discussion is taking place with regard to the adulteration of food. When I came into the department, I tried to acquaint myself as much as possible with this question, and

became much interested in it, and I have ever since been studying the best means of carrying out this very important law. There is no doubt that the adulteration of food is a very serious evil in this country. I trust that it is being gradually lessened, but at the same time if we do not continue to put forth efforts to stamp it out, it will become very serious again. I understand how important it is that we should take every means to prevent this evil spreading. My hon. friend has mentioned the fact that very few samples have been sent to our district analysts during the last year, and he argues therefrom that we have not done our duty. He must not forget, however, that most of the analyses, perhaps seventy-five per cent of the analyses that have been made during the past year, were made at the head office in Ottawa, instead of being made by the district analysts. It has been found very convenient indeed to have the analyses made here instead of by the district analysts, who are generally occupied with their own business. Take for example a doctor who has to look after his clients, he cannot devote the time which he ought to take in making an analysis of the samples which are sent to him. Perhaps some other analysts are in the same position. Then it has frequently been found that it was better to send the samples here to be analysed by the head office in Ottawa. Moreover, we have in many instances found different results from analyses made of the same article in different parts of the country; an analysis in the west may not give the same results as an analysis in the east though the article is the same. There is another thing to be considered, and which has been pressed upon my attention. Some of these officers do not devote much time to that business, and occasionally they get the analysis done by some one else. But we have to pay these district analysts a certain amount for each sample they analyse, besides the retaining fee which is given them. This makes it very expensive, much more expensive than to have the same samples analysed by our officers in Ottawa. The analysis made here does not cost anything, because the officers are paid a yearly salary; Mr. McGill, for instance, gets $1,800 or $2,000, and some others a lesser amount. So the Auditor General's Report does not give a fair idea of the number of samples which have been analysed during the year, because a great many other analyses are made besides those made by the district analysts. I have already mentioned that about seventy-five per cent of all the samples are analysed here at the head office of which no record is made in the Auditor General's Report. I may repeat what I have already said, that I intend to pursue a very aggressive policy with regard to the adulteration of foods. I have had several communications with boards of trade and with the Canadian Manufacturers' Association, which latter organization is taking a great deal of interest in this question. They have been good enough to mention the fact in their reports that we are trying to do our best to repress this evil, and it is my intention to pursue that policy rigorously.

Mr. FOSTER. That is all right so far as it goes, and that brings me to what I had in my mind but did not speak of before. You never can get as authoritative an analysis from one of your district analysts as you can from your central authority here. You must be better equipped here than any district analyst can be, with all your skill, and your knowledge, and your accumulation of experience. If I were living in a distant part of Canada and wanted an analysis made, I would send the sample to the central office here rather than to the local analyst, who might be busy with his own affairs. Then there is the cost of transporting all these samples back and forth, there is constant communication between them and Ottawa. Why in the world with your central laboratory here in Ottawa, should you pay a retaining fee to the district analysts and these allowances, with $100 rent for the office, and his apparatus, and cost of material, when you have right under your nose, in your own central organization, all these things much better equipped ? The amount that you spend on these men far distant for retaining fees would more than pay all the expenses of transit of your samples from these distant parts here to Ottawa, and the communications that take place. It seems to me the best method would be to abolish all these outside offices, whose work can only be partial and ineffective, and cannot have the authority of the central analysis. Do all your analyses at the central laboratory, and you would thereby save a good deal of money which now seems to be spent without much result. I am not saying anything against these district analysts. This practice has grown up with time. A man is justified in taking a retaining fee if he finds a department which is willing to give it to him. But the whole question is, having so much money, what is the best way to expend it, and it does not seem to me it is the best way, while you have a properly equipped laboratory here and able to do the work, that you should have these outlying offices where the business must be indifferently well done under the best circumstances, and where little of the work is done.

Mr. BRODEUR. With regard to these district analysts, I am inclined to take very much the same view as the hon. gentleman. In fact I may mention that several vacancies have occurred during the last year that we have not found it advisable to fill. In Quebec, for instance, I think the analyst has resigned and he has not been replaced, the analyst in St. Hyacinthe has not been

replaced, so also in Winnipeg. I think there are four vacancies now.

Mr. FOSTER. I would make about five more.

Mr. BRODEUR. Well, it is very hard sometimes to dismiss men who have been for many years in the service. Take Dr. Valade here in Ottawa, I think he has been nearly twenty-five years in the service. Perhaps the time has not arrived to do that, particularly since some of these men were appointed before this government came into power. I will take into consideration the suggestion that has been made. The hon. gentleman sees what I have done so far. I have refused to replace officers although I was pressed in several instances to do so when vacancies occurred for that very reason. I have not had much experience, because I have been only a short time in the department, but I am inclined to the belief that the suggestion which has been made by the hon. gentleman is absolutely correct and it is one which I have followed in so far as vacancies are concerned.

Mr. FOSTER. If my hon. friend does not wish to act harshly with these officers keep them at work until they die.

Mr. BRODEUR. But they cost money.

Mr. FOSTER. They do.

Mr. BRODEUR. Suppose that instead of sending samples to Mr. Macfarlane we sent them to Dr. Valade, we would have to pay Dr. Valade for each sample analysed. It is better to have them analysed by Mr. Macfarlane.

Mr. BLACK. I would like to endorse everything that has been said by the hon. member for North Toronto (Mr. Foster) in regard to the centralization of these samples. In the medical profession we adopt a rule like that in almost every province. I know that in my own province we do. While medical men, of later years, are equipped with the microscope and a great many of them make a study of bacteriology, yet the best and nicest way is to send to the provincial bacteriologists for our analysis. In cases of diphtheretic membrane and in the finer tests of urinalysis, we do not depend on the microscope or the tests of individual members of the profession however well we may think of our ability, because we know that at the central office greater expense has been gone to with the object of providing finer and nicer instruments and better results are obtained. I think that in the case of adulterated foods which is one of the most important questions that this House can consider, a question that affects the health of almost every family that buys these foods—and tons and tons are bought every year—it is very important that steps should be taken to find out to what extent adulteration is practised, and I am sure that no better step could be taken than by centralizing this service and providing it with the finest equipment that can be obtained. The adoption of this plan would make the service much more effective and better in every way.

Mr. COCKSHUTT. Mr. Chairman, I wish to put one or two questions to the hon. minister of Inland Revenue in connection with this item. The first one I would like to ask is how it is that so many analyses are made of products obtained from retail dealers when the department could attack the fountain head and find out what was in these foods without having to go to thousands and tens of thousands of retailers throughout the country ? The factories that turn out jams are very few in number, they can be counted on the fingers of one hand, or at most of two hands. Eight or ten analyses would show what these jams contain. Why should each retailer who is selling the products of these factories, the contents of which he does not know, be subjected to this analysis and test when the analysis could just as well be made of the article when it leaves the factory ? It has the maker's name on it. The maker should be held responsible for the ingredients that are in the article named. Take the question of spices, for instance ; spices are generally put up in cans or packages. The man who puts them up is the man who should know what they contain. If he does not know he does not know his business. Why should every retailer throughout the length and breadth of the Dominion be subjected to having his spices analysed, when the number of dealers in spices could be counted on the fingers of one's hand, or two hands ? Why should a thousand or ten thousand samples be taken and analysed when by going to the makers or those who mix or produce these spices the whole thing could be shut off at the fountain head ? It appears to me that the department covers too wide a field in endeavouring to shut off the stream at its outlet instead of endeavouring to shut it off at its source, because it is a well known fact that the principal place at which adulteration takes place is the factory. As to the matter of jams, this is a subject, of course, which is rather sweet, but to return to them I would like to ask the hon. minister if the basis of jam is turnips or carrots, it is classed as adulterated under the laws that govern the department. I think I am in a position to state that the basis of American jams is the articles named. Turnips particularly constitute the basis of jams. The turnip is a harmless article, but any one can see that when jams are sold at seven cents a pound, as they are mostly, they must be constituted of something other than fruit and sugar, because the labour, the package that contains the jam and the fruit and sugar cannot be brought together, put into the package and sold for seven cents a pound.

It is a self-evident fact that there is something else besides fruit and sugar in the jam that brings down the price. I have been consulting the returns in regard to the export of turnips which go to prove that in American factories these articles enter largely into the production of jams. During the past year there were exported from Canada, 1,085,000 bushels of turnips of a value of $107,000. Of this quantity, 1,067,000 bushels went to the United States. These, I am informed and I think correctly informed, are sent almost invariably to the jam factories of the United States. That may be a lamentable fact, but nevertheless I believe it is a fact. Now, we re-import from the United States a large quantity of jam and jellies, which, no doubt, to a considerable extent, contain these ingredients. I would like to ask the hon. minister, if, when these goods are analysed, the fact that they contain turnips or carrots is sufficient to bar them as adulterated foods. They are certainly not what they are represented to be, and if they are not what they are represented to be it would appear to be the duty of the department, if they want to put into general use only pure foods, to stop all goods that will not pass the test at the border. They should not be allowed to come into the country. You should not then attack the retail dealer who perhaps had nothing to do with the importation, who has had nothing to do with the making of them and who is not able to tell of what they are constituted. Therefore, I submit this proposition that any adulteration that takes place in the country takes place in the factory or the institution that puts up these goods or manufactures them. That is one point. The next point is that if it is sought to bring into the country articles which are impure, the proper place to stop them is at the border line. They should not be allowed to come into the country, but they should be stopped when they are being imported. That would not then throw the onus upon thousands and ten thousands of retail dealers throughout Canada when they actually do not know what the goods contain and who cannot correctly find out without going to a great deal of trouble. I submit these points to the hon. gentleman's attention. I believe that these are facts. If they are not, I would like him to point out to me wherein I have misstated the facts. I hope that in the future the department will attend more to confining their efforts to the source of the trouble instead of attacking the various branches of trade. I think the hon. gentleman would be conferring a great benefit upon the trade of the country if he would prohibit factories that offend against the law by manufacturing that class of food and turn it out, although they do it under a false name, rather than attack the retailer who is perfectly innocent and knows nothing about the contents. He is the man who generally has to suffer and the manufacturer seems to escape. I commend these points to the hon. gentleman's attention, and I hope he will reply to them.

Mr. BRODEUR. With regard to the collection of samples from the retailers and the wholesalers, I agree, to a certain extent, with the remarks made by the hon. gentleman (Mr. Cockshutt). I gave instructions some time ago that in future we should collect these samples on a larger scale from the manufacturers and the wholesalers. We find, however, a very great difficulty in obtaining samples from the manufacturers. They do not pretend to have them for sale, and we have some difficulty in collecting samples from them, but the suggestion made is certainly a good one, and I think that instead of going only to the retailers, we should also collect samples, when it is possible, from the manufacturers and the wholesalers, because if we succeed in impressing upon the manufacturer the fact that if he sells adulterated goods it will be published broadcast; then, I suppose, he will become much more anxious to sell only pure goods. We must, at the same time, remember that the wholesalers are not absolutely free from blame, because it happens sometimes that after the goods have left the hands of the wholesalers or manufacturers, they are mixed up with other materials, and the retailer then becomes responsible; but we must not forget that when we collect samples from the retailer. he gives us the name of the manufacturer, which, as my hon. friend may see in the report which he has before him, is also published. If the manufacturer has sold adulterated goods to the retailer, he is exposed to having his name published as it is in that bulletin. It has been said also that turnips are used on a large scale in the manufacture of jams. The chief analyst informs me that he has never found any turnips in the goods that he has analysed. I do not pretend to say that they are not used.

Mr. BARR. Does he say that in goods either from the United States, Canada or Great Britain, he has never found any turnips?

Mr. BRODEUR. What we have found is particularly apple pulp instead of strawberries or raspberries.

Mr. BARR. But in the jams?

Mr. BRODEUR. It is apple pulp which the chief analyst informs me he has found most in the jams that are adulterated. At the same time, this is certainly a violation of the law, because when I buy strawberry jam I am supposed to have strawberries, and if, instead of finding strawberries, I simply find apple pulp, to which has been added salicylic acid, coal tar dye and some other things like that, it is certainly a violation of the law. Jam is supposed to contain fruit, sugar and water, and

we sometimes find glucose instead of sugar, coal tar dye, salicylic acid and apple pulp. It is a very serious thing that manufacturers should put on the market goods in that condition, and even try to sell those goods as pure strawberry jam. I think the time has arrived when we should adopt an aggressive policy to prevent such things being sold in the future.

Mr. COCKSHUTT. With regard to the turnips, it was to the American trade particularly that I referred, not to the Canadian packers. I am not in a position to state what Canadian packers use.

Mr. BRODEUR. If we have samples directly from the wholesalers, I think we would reach that violation of the law. That is why I thought, in order to reach the source of the evil, we should go to the manufacturer and the wholesaler.

Mr. BARR. I thought my hon. friend told us there were no roots or turnips in the jams analysed ?

Mr. BRODEUR. I thought my hon. friend referred to the goods manufactured in this country. I do not know that they are using turnips in the United States.

Mr. LALOR. I would like to ask the minister how he manages in connection with imported jams, catsups, &c., from the United States ? How do you treat them in regard to adulteration ? I may say that the gentlemen who are talking about turnips in jams are not very well posted in the jam business. I think that when the minister tells us that apple pulp is more generally used, he is nearer the truth than the gentlemen who talk of turnips.

Mr. BRODEUR. We simply reach them in the same way as we reach the Canadian product ; an American sample is just as liable to be condemned and declared adulterated as a Canadian.

Mr. BARR. I think it is a most unfortunate thing for us in this country to put the screws on the Canadian manufacturers and allow the Americans to bring in goods that are not pure. We thought we had it from the minister that there were no roots found in the American importations that were analysed. I understand from a good authority that the Americans are using roots, and that they are underselling our Canadian manufacturers in different lines of this business, with the result that the Canadians are almost going out of the business, whilst the Americans are sending in their impure goods. I contend that the importations, even from the British islands, and particularly from the United States, should be very carefully analysed, and it should be placed beyond a doubt that we are not receiving from the American side, competing with our manufacturers, impure goods ; imported goods should be even more carefully analysed than those manufactured in this country.

Mr. ARMSTRONG. What is the result of the examination of goods from foreign countries ?

Mr. BRODEUR. As far as jams and jellies are concerned, as I said this afternoon, all the goods which were imported from Great Britain were found genuine. The chief analyst informs me that there were very few samples of American goods which were sent to be analysed, and in fact his impression is that there is a very small quantity of American jam used.

Mr. BARR. Have many American goods been carefully examined ?

Mr. BRODEUR. A few were analysed. The chief analyst is not very sure whether some have been examined, but, at all events, we have collected samples, and where we find American goods we certainly buy them to get them analysed just as we do the Canadian product.

Mr. ARMSTRONG. Let me call the minister's attention to the fact that $49,000 worth of these goods came from the United States. If only a very small quantity of these were analysed, it is very unfair to analyse the Canadian products so strictly. I might also call the minister's attention to the fact that of the $30,000 voted last year for the purpose of gathering and distributing information over $9,000 was not expended. Would it not be wise, after gathering the information, to spend part of that money in distributing it broadcast ? Then, I might ask the hon. minister if the officers of his department have the privilege of going into any factories in the country and examining food products ?

Mr. BRODEUR. Yes. The chief analyst has visited several factories in this country, and has also attended some congresses outside in order to meet American chemists and get information from them on the important question of analysing food products.

Mr. LALOR. I am sorry that the hon. Minister of Customs is not in his place tonight when this interesting discussion is going on. I believe the chief cause of this trouble about adulteration is that there is not sufficient duty placed on the goods that are imported into Canada. If you sit down at almost any hotel table in this country, you will find that the catsup on that table is imported from the United States ; and the same thing applies largely to all other table condiments. That applies even more to the west than it does to the east. If the government will place a much higher duty on these American goods and then enforce the law against adulteration, I believe the Canadian manufacturers will be only too glad to give the Canadian people better and purer articles.

Mr. BRODEUR. If my hon. friend refers to the figures of the census, I think he

will find that the quantity of these goods imported does not at all compare with the quantity produced in the country. I know that considerable quantities are imported into the Northwest and British Columbia, but a very small quantity is imported into the eastern provinces, where the fruits are produced.

Mr. LALOR. I may inform the hon. minister that over $200,000 worth of this class of goods were imported last year. Not one dollar's worth of these goods should be imported. They should be made in Canada, and they can be if the government will put a sufficient tariff on them.

Mr. AMES. I would like to ask the minister a few questions. How many collectors in the employ of the department are giving their entire time to the collection of samples of articles supposed to be adulterated ?

Mr. BRODEUR. There is only one who is devoting all his time to that work. The others are excise officers. We have ten food inspectors.

Mr. INGRAM. What is this man's name ?

Mr. BRODEUR. Thomas Kidd.

Mr. AMES. Are the samples collected by Mr. Kidd and the others who are partial inspectors, examined locally, or are they sent to the central bureau here ?

Mr. BRODEUR. Most of the samples collected last year were sent to the central office here.

Mr. AMES. Are the legal processes in regard to the adulteration of food initiated from here and carried on from here ?

Mr. BRODEUR. Yes, instructions are given from the department here to take proceedings.

Mr. AMES. How many proceedings have been taken during the past year ?

Mr. BRODEUR. No actions have been taken, but a large number of persons whose goods have been found to be adultered have paid the penalty imposed upon them. That penalty generally consists in the payment of the cost of the analysis, besides which we publish their names in the bulletin with the statement that their goods are adulterated. If they do not pay the cost of the analysis, then proceedings are instituted against them.

Mr. ARMSTRONG. About what is the cost of the analysis ?

Mr. BRODEUR. From $11 to $20.

Mr. AMES. I certainly agree with the hon. member for North Toronto in advocating the strengthening of this department. With its present inadequate staff it seems to me that no work of a far-reaching character can be undertaken. Apparently the work is left in a large measure to the local municipalities, who are only able to make prosecutions when they can prove that the food which has been analysed by them contains something deleterious to public health, which is very difficult to prove. For this reason the local authorities are unable to proceed. The work of protecting the public against fraud in the way of adulterations should be carried on chiefly by the Inland Revenue Department, but that department is very inadequately equipped for the great work it has to do. Looking over the reports which have come from the various analysts located at Halifax, Montreal, Toronto, Victoria and elsewhere, I find that there are practically but three substances which these local analysts have analysed—fertilizers, syrup and milk.

The analysing of fertilizers may be very useful, but does not create protection to the public health, and it is a work which seems to me to belong more especially to the Department of Agriculture. As for the analysis of milk, most of our cities are provided with a better way for detecting impure milk than the government of Canada. In Montreal we have a perfectly adequate system and I think that our local board of health looks after this very carefully and thoroughly. I would commend to the hon. minister, if he has not already adopted the system, to follow the same system in obtaining samples for the department. Our inspectors in Montreal are authorized when they suspect that milk which is being sold or about to be sold is adulterated, to stop the vendor, take a certain quantity of milk from his can and put it into two bottles, which are then sealed in such a manner that the seal cannot be tampered with.. One bottle is left with the milkman and the other is brought to the department and analysed. If it is found that the milk is below standard, the case is taken into court, and if the accused is not satisfied with the verdict, he is entitled to produce his own bottle and have a second analysis made. It generally turns out that the second analysis is identical with the first, so that he is practically self convicted. There is a great amount of adulteration in many articles of food at present in Canada, as we have discovered through our local analyses in the board of health at Montreal. For example, large quantities of candies are sold which are coloured by matter that may not be injurious, but certainly is not helpful to public health. We have made frequent analyses of ketchups, and have found that almost any ketchup analysed would stain a cloth which was placed in it, showing that it must contain dye stuff of some character, which is certainly not good for the human system. Other analyses of food stuffs are of a similar character, but being only a local board we have found it very difficult to proceed against those who sold the adulterated goods unless we were prepared to prove that the adulteration rendered the com-

modities injurious to the public health. Therefore, I would point out to the hon. minister that he has a very large field in which to operate, and if he can see his way clear to strengthen his department so that he may have inspectors to visit all parts of Canada and inspect not only the goods in process of manufacture but also samples of the goods in the packages, he will be conferring a great benefit on the community. Goods in the process of manufacture could be inspected by the same methods I have described in the case of milk. Goods in packages bearing the name of the maker carry their own identification. I do not think there is any department that calls at present more loudly for adequate enlargement so that the health of the people may be protected.

Mr. BERGERON. There is one subject to which I would like to call the attention of the hon. minister and which I think is germane to the subject in hand. I refer to patent medicines. This country is infested with patent medicines more or less good. Is there any inspection of these when they are put on the market at first or are they inspected now and then? I have a case in mind which happened in the latter days of December in Montreal of some people who were almost poisoned by a medicine called Stearn's headache powders. These powders are sold freely to any one who wants to buy them in all the drug stores. They are, I believe a most injurious medicine. They are supposed to be a very quick remedy for headaches, and must contain, I imagine, some very strong ingredients, and probably some poison. It is well that we should be very particular about the food we buy, but we should be still more particular about the medicines sold to the people and take some precautions to see that no medicine is likely to have a very injurious effect on those who use it. I would ask my hon. friend what protection, if any, he is prepared to give the public against patent medicines, which instead of doing good are doing harm ?

Mr. BRODEUR. There has been some agitation amongst physicians to have the packages or bottles containing patent medicines stamped with the formula of its contents. I may tell my hon. friend that there is a great difference of opinion on that point. We have the doctors on the one side and the druggists on the other. The druggists claim that that would be injurious to their trade. We are entitled under the law to collect samples of drugs and we do it very frequently, and when drugs are adulterated the same course is followed with regard to them as with regard to food.

Mr. BERGERON. I know that the doctors and druggists are not at one on that question. Many doctors are opposed to patent medicines and would rather give their own remedies, but the druggists find a great profit in selling those medicines. But since my hon. friend has all the machinery requisite in his department, would it not be possible for his chief analyst to have patent medicines collected and analysed and declare whether they are injurious or the reverse ?

Mr. BRODEUR. I am informed by the chief analyst that it would be very difficult to do that, so far as patent medicines are concerned, because as long as they correspond with the specifications it is almost impossible to declare them adulterated.

Mr. LALOR. Would it not be possible to find out whether they are pure or adulterated before they are freed from the customs and when the entry is being made to take them out of customs?

Mr. BRODEUR. That might perhaps be a good plan, but it would require an army of officers connected with all the different ports to inspect samples of all the goods entered. I am sure it would be a very costly experiment.

Mr. CROCKET. Has the department had any analyses made of fertilizers in New Brunswick? There are very serious complaints regarding the quality of fertilizers sold in that province. I have heard it said that farmers are very frequently defrauded, and if the department has any power to apply a remedy in the matter I would like to see that power exercised.

Mr. BRODEUR. Under the law persons selling fertilizers are obliged to have them analysed every year, sending samples to the office here for that purpose. I should be surprised to learn that fertilizers are sold that are not being properly analysed.

Mr. GUNN. In the case of a conviction, who is liable, the manufacturer or the wholesale dealer ?

Mr. BRODEUR. The man in whose possession the goods have been found and against whom conviction is secured. Any question between him and the manufacturer is a matter with which the department has nothing to do.

Mr. HENDERSON. I would like again to refer to the question of the fertilizers in New Brunswick. Recently I had a conversation with a gentleman who resides in that province, and he informed me that it is a matter of very serious complaint in that province with the farmers that they are getting a very impure article, in fact, not at all what they ought to get for their money. I would like to know whether the department takes cognizance of this and whether analyses of fertilizers such as are there are made, and what the results are.

Mr. BRODEUR. The chief analyst tells me that no complaint has been made to the department concerning fertilizers sold in New Brunswick. But if the hon. gentleman

(Mr. Henderson) can give us information on the subject I shall be glad to look into the question.

Mr. HENDERSON. I will give the minister privately the name of my informant.

Mr. LALOR. I have looked up the report of trade and commerce for 1904, and I find that pickles, sauces and catsups have been imported to the amount of no less than $371,000.

Mr. BRODEUR. It is a pity that Canadians do not consume Canadian goods.

Mr. LALOR. I quite agree with the minister, and I would go farther and say that it is a great pity that the government of this country does not put a duty upon these goods that would cause the Canadian goods to be consumed. But these adulterated goods are brought into the country and sold at such prices that our manufacturers cannot sell pure goods in competition with them. so, our manufacturers, to compete with this immense quantity of adulterated goods have to adulterate their own goods to a certain extent. The hon. member for York, N.B. (Mr. Crockett) has brought the matter of fertilizers before the House, and I am glad he has done it ? I do not believe that there is any commodity in which there is such a field for swindling the farmers as in fertilizers. The time has come when commercial fertilizers must be used in this country. In the United States they are being used to an enormous extent. If there are any goods that ought to be analysed and in respect of which the people should be protected against fraud, they are commercial fertilizers.

Public Works—chargeable to income—harbours and rivers—N. S., Apple river, wharf, $3,000.

Mr. PERLEY. I would like to say a word in a general way about these wharfs before we go on with the item. I find, in my own experience, a good many wharfs are built in places where they are absolutely useless. I should be glad if the minister would give some promise that all these wharfs that he is going to ask votes for to-night will be such as can be of use to those engaged in navigation and not merely to please individuals residing or having interests in the locality. I would draw the minister's attention to the fact that some peculiar expenditures are made out of votes given for wharfs. In the Auditor General's Report with reference to the harbour improvements in Glace bay, it appears that some of the money voted was used to construct an earth railway embankment and trestle approach to the coal pier and to put down a sufficient number of railway tracks thereon for the accommodation of traffic. I find that the Auditor General makes comment upon this expenditure as not being properly made in accordance with the vote. I think his objection is well taken. It looks as if the expenditure was made in the interest of one corporation there; and money voted for the construction of a wharf should hardly have been used for such a purpose. I know there is a wharf across the river in Hull, I suppose it cost $40,000 or $50,000, but I do not think the minister will say that that expenditure was justified by the amount of traffic done on that wharf. I hope he will assure the committee that he is not going to ask us to vote money to spend on wharfs that are going to be of so little use as that.

Mr. HYMAN. As regards the policy of the government in the erection of wharfs, I can assure the hon. gentleman that the department will take the greatest care in the expenditure of money. The circumstances under which wharfs are being constructed may be very different in one part of the country from those in another part. A wharf that might not be deemed necessary in the province of Quebec in a certain place where communication is largely by railway, might be necessary in another part of the country, on the great lakes or on the ocean, in Nova Scotia or New Brunswick, where there is no railway communication ; the expenditure might be justified in one case and not in another. In the particular case to which the hon. gentleman refers, I suppose, the Dominion Coal Company wanted to erect a wharf, and a wharf was also desired in the public interest. Therefore we made a business arrangement with the coal company, they erecting the wharf and we paying a certain amount of the cost. In that case we made provision towards building a wharf, because we knew that the public interest would be served by it. The company got what they want and the public are getting what they want from the construction of this wharf.

Mr. PERLEY. The explanation of the minister in that particular case seems to be satisfactory. I believe that the present acting minister has every intention of confining these expenditures to public purposes. I would like to ask him if the government has any policy with regard to the building of these wharfs, where to place them, and how much to expend upon them? I notice that last year there was a wharf built at a place called Lake Nominingue, in the province of Quebec. Now that is an inland lake somewhere about a hundred miles from the Ottawa river. There is nothing there I know of that the Department of Public Works has anything to do with. That is one reason why I ask if the government has any settled policy in building wharfs. I can understand the building of a wharf on the Ottawa river, which is a boundary between two provinces, but I cannot understand why the Department of Public Works should build a wharf at this little lake called Nominingue, in a little place away back in the bush. It is the terminus of a railway, it is true, but at the

same time it is an entirely provincial matter.

Mr. HYMAN. What is the cost of that wharf ? Have you got it there ?

Mr. PERLEY. $2,000 or $3,000. I am asking what the Dominion government has to do with building a wharf of that kind in the back woods ?

Mr. HYMAN. The hon. gentleman is entirely mistaken if he thinks we should only build wharfs on boundaries between provinces, or on the great lakes. It is the duty of the Public Works Department to build wharfs wherever they are required. That has been the policy of the Dominion government for many years. The hon. gentleman will understand that we cannot lay down any hard and fast rule with regard to these matters. As I have already tried to explain, a policy that might fit one province would not fit another. Those of us who are living where railway communication is easy must not forget that there are other places where there is no communication at all except by water. It is the duty of the government to take all these matters into consideration. We cannot lay down a hard and fast policy, I do not think the hon. gentleman himself could suggest any policy that would be better than to make expenditures wherever they are required in the public interest. We must consider every case on its merits, inquire into the character of the work, the cost of the work, and try to meet the needs of the people so far as we can according to the funds at our disposal.

Mr. MORIN. I believe the hon. minister said that wharfs are built wherever they are needed. I can tell him that he is very much mistaken. Would he tell me what is going to be done with regard to the pier at a place called Disraeli, in the county of Wolfe, for which $5,000 was voted last year ? Does the minister know anything about that pier, or does he care to know ? If he wants to know the history of that pier I will be glad to tell him.

Some hon. MEMBERS. Go on.

Mr. MORIN. At that place there is a small stream flowing into a river. There is a dam below the mouth of the stream, and when the gates are shut the water rises in the dam and overflows into the creek, which is called Black creek. The people built a bridge over that creek some fifteen years ago. Last year the member for the county of Wolfe, I suppose it was that hon. gentleman, began to move in the matter. I must say that I honour that hon. gentleman's spunk. He got this government to vote $5,000 to build a pier, and that pier, I suppose, was intended to accommodate a steamboat. Now, Sir, where is the boat ?

Mr. HYMAN. I give it up.

Mr. MORIN. There is no use for a boat, and there is no water to float a boat. I can tell the minister what was done. The people who live there are joking over this matter. The municipality gave a contract to parties to fill up this creek from one bank to the other, about 600 feet, with stone and earth, in order to make a roadway. Now that is the way that certain individuals blindfold the government. It is perfectly right ; if I could blindfold the government myself I would do it, because municipalities have as much right to get help from the government as railway or steamboat companies have. I asked for a bridge once and I was refused. If you ask for $5,000 to build a bridge they will not listen to you. But, the hon. gentleman just pulls the wool over the government's eyes, asks for a vote and it is given to him. If the hon. minister will send his engineer there he would be able to ascertain what the conditions are. I suppose the money will not be paid until the work is done. If he sends his engineer there to oversee the work he will find nothing but a pile of stones. That is only a sample of it.

Mr. HYMAN. I may say that the items under discussion now are wharfs in Nova Scotia. I have no objection, of course——

Mr. MORIN. I do not blame you.

Mr. HYMAN. I have no objection, of course, to the discussion wandering far afield from the subject before the chair. As to the particular subject brought up by the hon. gentleman, I have no notes. Wharfs in Quebec will be reached in due time, and I would be very glad to give whatever explanation is possible in regard to the awful state of affairs the hon. gentleman has been depicting.

Mr. INGRAM. In view of the fact that the leader of the opposition (Mr. R. L. Borden) is absent, and as he is familiar with the Nova Scotia items, I would suggest to the hon. Minister of Public Works that we take up the Prince Edward Island and New Brunswick items, because, by doing so, we will make better headway than if we attempt to continue the consideration of the Nova Scotia items.

Mr. HYMAN. Why ?

Mr. INGRAM. For the simple reason that hon. members on this side of the House are not well acquainted with the requirements of Nova Scotia. Unfortunately, our friends on the other side of the House have assisted in preventing us from getting our friends from that province to assist us in the discussion of these items.

Sir WILLIAM MULOCK. When does the hon. gentleman expect to get any of his friends from Nova Scotia to help him to discuss these items ?

Mr. LEFURGEY. We are prepared to discuss the Prince Edward Island items.

Mr. HYMAN. If hon. gentlemen opposite will allow these items to pass, I will be very glad to allow one item to stand, on which any discussion can take place. The Department of Public Works have a large number of estimates to pass. I am sure I have tried to meet the convenience of hon. gentlemen opposite as far as possible in putting through items. If they will allow these items to go through, we will allow one item to stand on which any discussion can take place, and then we will take up the votes from Prince Edward Island.

Mr. LEFURGEY. The hon. gentleman might take up the Prince Edward Island items now, because the Prince Edward Island members are all here.

Mr. HYMAN. I know several hon. members on this side of the House who stayed here at great personal inconvenience just for the purpose of being here when these estimates are under consideration. I notified them this afternoon at three o'clock, asking them to stay, and now that they are here, I am sure hon. gentlemen opposite will not press the request which they have made.

Mr. INGRAM. Do we understand hon. members from Nova Scotia are going to take part in the discussion of these items? I have no recollection of anything of that kind ever having occurred in the House. I think it is really unreasonable to expect the opposition to take these items up in view of the absence of the hon. leader of the opposition, who is the only man who understands the requirements of Nova Scotia.

Mr. HYMAN. It is a piece of nonsense for me to attempt to pass these items if hon. gentlemen opposite persist in their objection. If they say that they do not want the items to pass, it is impossible for me to go on with my estimates.

Mr. INGRAM. Has the hon. gentleman under his hand the information in regard to Prince Edward Island and New Brunswick?

Mr. HYMAN. Yes.

Mr. INGRAM. In that case, I think we would make better headway by proceeding to the consideration of these items.

Mr. HYMAN. There is no doubt of it. We will not make any headway at all if hon. gentlemen opposite simply say that they will not go on with these estimates. I think, considering the number of estimates the department has to put through and the very fair offer I have made, that we should leave one item on which all the items may be discussed, hon. gentlemen might consent to the passing of these items.

Mr. BARR. We do not know any item to hold them up on.

Sir WILLIAM MULOCK.

Mr. HYMAN. Hold them up on any item you like, and discuss any of them afterwards.

Mr. BARR. The hon. minister tells us that they have no policy whatever in so far as wharfs in Nova Scotia are concerned. They have built them here, there and everywhere, and they do not intend to give us any information in regard to them. We are unfamiliar with these estimates, but the hon. gentleman wants to run them through. We have our forces here from Prince Edward Island, and we are prepared to go on with the Prince Edward Island items, and intelligently vote on them if a vote is required. We cannot hold ourselves down to one item, because we might pass the item in regard to which we require an explanation. Surely the hon. gentleman must have some policy in regard to wharfs in Nova Scotia, if they are to be anything more than local works or works of general advantage to the whole Dominion.

Sir WILLIAM MULOCK. My hon. friend (Mr. Barr) hardly understands the suggestion of my hon. friend the Minister of Public Works. My hon. friend the Minister of Public Works did not mean that the reservation of one item should confine the discussion to that one item. All these items are embraced in one resolution, and if you allow one item to stand, then the resolution as a whole will stand, and when subsequently he moved that the last item be carried the whole of these items will be open for discussion. That is what he proposes, so that my hon. friend does not have to pick out any one of them. He will be able to discuss any one of these items.

Mr. BARR. We are just where we were. Here is item 131, which we ask to be allowed to stand, but that request has been refused.

Mr. LANCASTER. It seems to me that the suggestion of my hon. friend (Mr. Ingram) is a fair and reasonable one. I cannot see that the suggestion of the hon. Minister of Public Works, as emphasized by the hon. Postmaster General, does the government a bit of good. It is not the same thing to have a discussion on one item when it goes through at some future day, because in five or ten minutes the whole thing is over. The only hon. gentleman on this side who has any knowledge of Nova Scotia is the hon. leader of the opposition, who is absent tonight. It is well known why he is absent, and I do not think it is right or fair for the government to pass these items in regard to Nova Scotia. The hon. leader of the opposition has had an affliction in his family which the government must know of, and which has taken him away. He would be here except for that, and he is the only hon. gentleman on this side of the House who has any intimate knowledge of affairs in Nova Scotia. There is plenty of work for

this committee to do during the short time that we ought to continue to-night. We do not wish to be a party to obstructing the estimates of the hon. Minister of Public Works. We want to do this thing in a friendly way suitable to the convenience of hon. members, but the hon. leader of the opposition, being away, and the occasion of his being away being what it is, as is well known to the House, I think the hon. Minister of Public Works ought to comply with the request of my hon. friend (Mr. Ingram), who is the whip in charge of the opposition to-night in the House, and who, I think, is making a very reasonable proposition. We ought not to attempt to deal with any of the items in this resolution, but we should go on to the estimates for New Brunswick and Prince Edward Island.

Mr. HYMAN. I do not wish to appear discourteous in any way, I am satisfied that we should go on with the New Brunswick and Prince Edward Island items, but I feel, at the same time, that I have been really discourteous to hon. members on this side. The hon. member for East Elgin says that he has never heard the members on this side speak on these items. I am sure that the minister when putting through items should have the members for the constituencies with him to answer questions regarding the locality, the necessity for the work, &c. I do not see anything improper in that in any way; it is the members' duty.

Mr. INGRAM. If I have hurt the hon. gentleman's feelings, I am very sorry.

Mr. HYMAN. My feelings are hurt-proof.

Mr. LOGAN. I must protest against this proceeding in the House. There are 18 members from Nova Scotia.

Mr. LANCASTER. All on one side.

Mr. LOGAN. That is your fault, not ours. There are 17 members from Nova Scotia in the House I believe, to-night. I know that three or four of them intended leaving to-day for their homes, but they were kept here to-night because these items were coming up. We are not like the Ontario and Quebec members who can go home every week end; we are kept here from the opening to the end of the session. My hon. friend from Elgin is not serious in saying that a member supporting the government should not be here. Take for instance the very first item, that for Apple river. Apple river happens to be in my constituency and the hon. leader of the opposition (Mr. R. L. Borden) does not know any more about Apple river than does the hon. member for East Elgin.

Mr. LANCASTER. Oh, yes he does.

Mr. LOGAN. He has never been within 50 miles of Apple river.

Mr. LANCASTER. Say that when he is here.

Mr. LOGAN. Pardon me, I happen to be the representative of the county, and know very well its requirements; I know whether the wharf should be built there, I know the people living there and I do not think that any one could have a better knowledge of the locality, nor could give better reasons why the wharf should be constructed than the representative of the county, your humble servant. We have stayed here to discuss these items and to give the explanations which will be called for from the opposite side. Is it fair and reasonable that simply because the leader of the opposition is not here——

Mr. BARR. My hon. friend does not say that he should be here.

Mr. LOGAN. The circumstances under which he is away are painful, and we do not like to press the point quite so much as we otherwise might, but, at the same time, I think the minister has made a reasonable proposition, that we should take up some items, reserving, if you like, those for Halifax county, which the leader of the opposition formerly represented, and with which he is familiar, but do let us go on and discuss these items to-night and be courteous on both sides. We all know the painful circumstances under which the leader of the opposition is absent.

Mr. INGRAM. The Minister of Public Works has no cause for complaint so far as his estimates are concerned; we have treated him liberally.

Mr. HYMAN. I am not kicking,

Mr. LOGAN. He is not kicking, we are kicking.

Mr. INGRAM. I think the suggestion we have made is a reasonable one, and I know that so far as Prince Edward Island and New Brunswick are concerned we will make very good headway. It is a well known fact that the more members that are present, the better progress is made with the estimates.

Higgin's shore pier—works of reconstruction and repairs, $1,000.

Mr. LEFURGEY. Will the hon. gentleman explain?

Mr. A. A. McLEAN (Queen's, P.E.I.). Would the minister explain?

Mr. HYMAN. It is a revote. Ordinary repairs to the existing wharf.

Mr. LEFURGEY. What work has to be done?

Mr. HYMAN. Facing timber 200; crossties, 1,000 feet; fender-piles, iron, 1½ tons;

stone lifting on side, gravel filling on roadway. It is purely departmental.

Miminegash—extension of breakwater and cribwork revetment at inner end, $4,000.

Mr. HYMAN. This work is purely departmental work that the officers of the department recommended as being necessary. There is a cribwork revetment 120 feet by 12 feet wide and 6 feet high. There is an extension of the breakwater outward past a shoal, represented to be necessary to make the harbour safe of approach.

Mr. LEFURGEY. Will it be done by tender or by day work ?

Mr. HYMAN. The chances are by day work.

Mr. LEFURGEY. Is it the policy of the department in all repairs to breakwaters and wharfs and buildings to proceed by day work instead of by tender ?

Mr. HYMAN. The hon. gentleman will understand that there is great difficulty in small works of this kind in getting any one to tender, the difficulty being that the repairs that are necessary cannot be ascertained until probably some of the planks are removed. Within the last few days I had a case of calling for tenders for a work of this kind for a large amount, and it was impossible to have tenders because we could not give specifications; it simply said 'for renewal' and contractors either refused to tender or made their tenders upon the basis of an entirely new work. The policy is the same as that which has always been carried out by the Department of Public Works in works of this character.

Mr. MARTIN. Will this sum put it in good repair ?

Mr. HYMAN. That is the report of the officers of the department.

McPherson's cove, wharf, $9,000.

Mr. BARR. Is that by tender ?

Mr. HYMAN. That is by tender ; it is under contract at the present time. This is to complete.

New London—repairs to breakwaters, &c., $3,500.

Mr. HYMAN. Merely repairs to the existing wharf.

Mr. A. MARTIN. This is a very important wharf on the north side where harbours are not very numerous and where they are hard to approach. I know something about these harbours and spending small sums of money on them is almost money thrown away. Money has been voted several times for this New London harbour, but storms have carried the works away. I hope this vote will be sufficient to put the harbour in a permanently safe condition. I would like to know whether this is let by tender or by day work.

Mr. HYMAN. Of course the minister must be guided very largely by the reports of his engineers in matters of this kind. The report of the engineer was that this harbour was damaged by a storm in November, 1904. The vote was less, but this amount was put in simply to carry out the engineer's report to put the wharf in good repair.

Mr. MARTIN. Was the work let by tender before ?

Mr. HYMAN. Yes, the original work.

Mr. A. MARTIN. Who is the superintendent of the work ?

Mr. HYMAN. P. McCallum.

Point Prim Island, P.E.I.—wharf, $5,000.

Mr. HYMAN. The amount put in the estimates is only $5,000, but on further investigation it was found that the work will be larger than was anticipated, and I have given instructions to the engineer to examine further before proceeding.

Mr. A. MARTIN. This was in the estimates last year. Is it put here merely to figure up a large sum against the island, or is the work to be proceeded with ?

Mr. HYMAN. The vote was in the supplementaries last year. Then reports came to me that the cost of the work would be rather larger than I cared to ask the House for, and I am now trying to see if we cannot reduce the estimated cost.

Mr. W. F. MACLEAN. The right of way was purchased for $350, and I understand that the total cost of the approaches to the wharf was $396.04. This matter has been before the House on three or four different occasions, and the work is a very important one and should receive the immediate attention of the department. Point Prim Island is a long distance from any shipping port and is sadly in want of this wharf.

Mr. HYMAN. The fact that the item is in the estimates is proof that the government intends to go on with the work, but the cost is larger than we anticipated, and I am obtaining further information before asking parliament to supplement the vote.

Mr. A. MARTIN. The engineers of the government have been down there on more than one occasion, especially before the last elections, and the department ought now to have all the information it requires regarding the character of the work. I do not see the use of putting in a vote of $5,000, as was done last year and is now being done, and then telling the House that the department are waiting for the engineer's report, when the engineers have been down there and made their examination and ought to have reported. Surely if this wharf cannot be built for $5,000 and the govern-

ment intend building it, they should ask a larger vote.

Mr. HYMAN. We cannot increase the vote now in the estimates except by bringing down another item, and I desire to know what the wharf will cost before I ask for another vote. I do not want to begin a work that will cost $30,000 when only $5,000 are available.

Mr. INGRAM. Is it the intention of the department to go on with the work ?

Mr. HYMAN. If it be found to cost $30,000, I shall have to seriously consider whether I should ask for more money or let it wait. I hope we will be able to do the work for $15,000, but the estimates of the engineers are not entirely satisfactory, and I want to be certain before proceeding.

Repairs to piers and breakwaters, P.E.I., $6,000.

Mr. A. MARTIN. There are several works on the island which require immediate attention. One is the harbour at Mount Stewart in which I know the hon. gentleman from King's county (Mr. J. J. Hughes) is interested. That harbour requires dredging and also a little more wharf accommodation. The village is a growing one and has quite a large trade. If the minister can see his way clear to putting that harbour in repair, he will be doing a very necessary work.

Mr. HYMAN. I shall ask my engineer to take a note of the hon. gentleman's representations. My hon. friend will understand that this is not a vote for dredging but simply for repairs. Has the wharf he refers to been transferred to the government ?

Mr. A. MARTIN. I believe it has.

Mr. HYMAN. If not transferred to the government, we do not repair it.

Mr. A. MARTIN. Would it not be in the same position as some wharfs you are building in Nova Scotia ?

Mr. HYMAN. When we build any wharfs in Nova Scotia, the title is with the government.

Mr. A. MARTIN. This is in the same position.

Repairs to piers and breakwaters, P.E.I.—creosoted timber, $5,000.

Mr. HYMAN. This is to enable the department to buy a certain amount of creosoted timber, so that we will be in a position to make repairs quickly.

Mr. INGRAM. Did you purchase any last year ?

Mr. HYMAN. No.

Mr. INGRAM. Has any action been taken for the purchase of the material ?

Mr. HYMAN. We have given the order.

Richmond Bay, P.E.I.—reconstruction of wharf near Grand river ferry, $5,000.

Mr. HYMAN. This is for the work of reconstruction and repairing.

Rustico harbour, P.E.I.—breakwater on Robinson's Island, south side of entrance to harbour, $11,000.

Mr. A. A. McLEAN. I understand that last fall a vessel went ashore there by reason of the channel having filled up with sand. Investigation was made by the government engineers to ascertain the cause, and the hon. minister will no doubt have some information on that point. If the filling in was caused by the construction of this breakwater, the breakwater may not have been put in the right place. Last fall a vessel went ashore there and the loss was attributed to the channel shifting. I understand an investigation took place, and that perhaps the minister has information which would enable him to state whether the disaster arose through the construction of this work, or in what other way.

Mr. HYMAN. We have no information in the department as to the cause of the accident. I understand that this is a very difficult harbour. The object of this work is to produce, by the process of scouring, a channel which will always remain. The work is undertaken on the report of the engineer of the department which favours this as the proper way to carry it out.

Mr. INGRAM. There would appear to be two entrances to this harbour as there are two items.

Mr. HYMAN. There are two breakwaters, one on the north side and one on the south.

Mr. INGRAM. There is an item here of money paid to the King's Printer and charged to this work. What is that for ?

Mr. HYMAN. For printing the specifications.

Mr. A. MARTIN. Rustico harbour is one of the most important harbours on the north side. I see that this money was voted last year. I placed a question on the order paper as regards dredging done in Rustico harbour, and the minister, in reply, stated that there was none.

Mr. HYMAN. That is right.

Mr. A. MARTIN. I visited the place several times, and there was some dredging being done, but not by the usual dredge. Whether the Minister of Public Works has any knowledge of it or not, there was dredging there. Rustico harbour is in one of the most thickly settled parts of Prince Edward Island, and the people have been there a long time, many of them being French Acadians. There are many fishermen among them, yet they have no harbour or wharf accommodation. Their toil is very severe,

and some facilities for the pursuit of their avocation should be provided. For the last four or five years work has been done by day labour, and so badly done that the first storm swept it away. I hope that this time not only will a contract be given, but that the work will be promptly advertised and that there will be no delay.

Mr. LEFURGEY. I would like to go back for a moment to Richmond bay, reconstruction of wharf, and ask the minister if he proposes to let that contract by tender ?

Mr. HYMAN. I think the present intention is to do it by day's work. I see in the memorandum before me all the items with estimate of cost. I think the hon. gentleman (Mr. Lefurgey) heard me say that we advertised for tenders, but had no satisfactory response.

St. Peter's Bay—breakwater on east side of entrance to harbour, $7,500.

Mr. INGRAM. We would like some explanation about this ?

Mr. HYMAN. Tenders were called for, and some were received, but none of them satisfactory. Some ten days or two weeks ago, the resident engineer was asked to submit new plans and specifications, and on these, tenders will be called for.

Mr. LALOR. I am a new member of the House and not thoroughly posted in the rules, but I think there is not a quorum present.

Mr. HYMAN. I think the hon. member (Mr. Lalor) will find that there is a quorum ; twenty make a quorum and there are more than twenty members present.

Summerside harbour—breakwater, $20,000.

Mr. LEFURGEY. In what year was this work first before the House ?

Mr. HYMAN. The hon. gentleman (Mr. Lefurgey) has had a number of opportunities of discussing it. I think it was in 1899 that the matter was first brought before the House. The contract for the work was let in 1900.

Mr. LEFURGEY. I think it first came up in 1898.

Mr. HYMAN. I am only judging by the date of the contract.

Mr. LEFURGEY. Were tenders received for the work in 1898 ?

Mr. HYMAN. In 1900.

Mr. LEFURGEY. What was the cause of the delay for those two years ?

Mr. HYMAN. I have heard the hon gentleman discuss this subject several times. But, I shall be glad to go over it again. The hon. gentleman knows the situation there. There was a great question as to the character of the work to be constructed in that harbour. It is a very long breakwater—2,300 or 2,400 feet, if I am not mistaken—and a difficult work. After a certain progress had been made on the contract, the engineer of the department reported that it was questionable whether the character of the work being done in the shallower portion would be suitable for the whole work, and the contract, therefore, was not gone on with. A settlement was made with the contractor and the work has remained in that position ever since. So far as the department is concerned, I asked not only the engineer of the department, but the deputy to visit the work to see how it was standing the ravages of the ocean. The hon. gentleman knows that this is a very exposed place, and he knows that such a work as this has to be carefully considered. I have not fully persuaded myself that it would be in the interest of the public, or of the people of Summerside to make the rest of the work of the same character as that already done. I had hoped to visit Summerside last year, but was unable to do so. I have engineers making a full report as to the matter, whether we dare continue that work in the way it has been begun. There are few works of this character, and I am sure the hon. members from Prince Edward Island would not like to see a work gone on with that would be in danger of early destruction by the sea.

Mr. LEFURGEY. From the minister's standpoint what he has said may seem a plausible excuse for not finding out in the first place whether the work, as designed, would fulfil the purpose for which it was intended. It seems to me that the time from 1898 or 1897, when the plans were prepared and the matter brought before this House up to this year, is ample for the department to make up its mind. Now, in 1897 or 1898 when this work was called for, the department must have investigated and found that there was a necessity for it. The department must have reasonably satisfied themselves through their experts that the work would accomplish a great benefit to the harbour of Summerside. They must also have found out the class of work that would be required, and the conditions to which this breakwater would be subject to. They must have found out before asking for tenders that the work would be reasonably suitable to withstand the sea, and frost, and so forth. It seems to me that the department, after calling for tenders and getting a tender for $54,000, have been very lax in the pursuance of their duties in not pressing this tenderer to continue the work, or take it out of his hands and have an investigation in a year or two after the contractor had failed to proceed with this work. Now, we find that the contract was let in 1900, and here we are in 1905, and the minister comes and explains that he has sent a man down three or four years after the work has been

stopped to find out if the work is corroding, if it is standing the weather and the sea.

Mr. HYMAN. The hon. gentleman says three or four years, as a matter of fact he went down in March, 1904.

Mr. LEFURGEY. If the minister will look up the 'Hansard' he will find that we have been questioning the minister in respect to this Summerside breakwater ever since 1900. There was no work going on in 1904.

Mr. HYMAN. We stopped the work in 1904.

Mr. LEFURGEY. In 1900, when I was running an election in the county of East Prince, there was a flaring poster, as I have already told the House, published broadcast through the streets of Summerside, announcing that a breakwater would be built, and that from $15,000 to $20,000 per month would be spent on this work, and what a great boon it would be to the workingmen of Summerside. This work has been promised for years and years, and no further progress has been made. If it is the policy of this government to revote a work three or four years in succession to find out whether the class of work recommended by the department will stand the weather, then the public works of this country will be in a very bad state before we get anything accomplished. Now, I find that votes have been passed every year since 1898. I believe we figured it up a year or two ago and found that the votes and revotes for a contract that was originally to cost $54,000, amounted to $108,000 in the session of 1903. I think we had a vote last year and now we find another vote this year; so that altogether for a work that was originally to cost $54,000, we have voted over $150,000. All this time we find our Liberal friends in that province pointing to this aggregate of votes and saying: See how great an amount of money we are getting for public works in Prince Edward Island. I want to point out how the people of Prince Edward Island are being fooled in the matter of public works. In the estimates of last year there was a paltry sum of $13,000 for public works in Prince county, and I find that this year, of that $13,000, $10,400 is a revote—only $2,600 has been spent in the county of Prince during the last year. I am not objecting to the minister's estimates with regard to the amount of money voted for public works in the county I have the honour to represent. But I must insist upon the department proceeding with some degree of speed on the public works which are admitted by them to be required for the benefit of the shipping of that county. I would like to know from the minister whether they intend to build this work, if a new plan has been put before the government, and whether they will call for tenders for this work in the near future. I have received by the last mail letters from people in Summerside asking whether this work is to be continued.

Mr. HYMAN. I should be very sorry to remove anything from the estimates which would deprive the hon. gentleman of an opportunity of getting off the speech he has made on several occasions. The work is exactly in the position I have told him. I cannot alter the conditions. If it is found that a work can be constructed there of a character that will stand and serve the purpose, that breakwater will be constructed. The engineer has been asked to report; and when we get his report the department will decide what to do.

Mr. LEFURGEY. Will the minister tell me how they propose to go on?

Mr. HYMAN. By a new contract, by making plans and specifications for a work which will be of a character to ensure permanency. It is unfortunate, I acknowledge, the hon. gentleman has some grievance when he says that over $100,000 have been voted, and so little has been spent. He objects because a certain vote has been a revote.

Mr. LEFURGEY. It is to blind the people.

Mr. HYMAN. I quite concede that the people of the county have been blinded. But let the hon. gentleman possess his soul in patience. We will have the work investigated. I have no desire to delay the work if it is necessary. This is a very long work, some 2,900 feet, and it is necessary that it should be made of a permanent character when it is undertaken.

Mr. LEFURGEY. I think the department should now be seized of the knowledge whether this breakwater is going to be built, and how it is going to be built. Surely the people of Summerside ought not to be obliged to wait another year for that breakwater. Will the minister assure me that plans and specifications will be prepared, and tenders called for, and the work proceeded with in the spring?

Mr. HYMAN. There is no hon. gentleman to whom I would like better to give such an assurance. But I cannot give an assurance of that kind after the statements I have made that it is necessary for the department to be perfectly sure of the charaster of the work which they contemplate constructing there, in order that it may be of a permanent character. The hon. gentleman knows as well as I do that there are great difficulties, it is a large undertaking. He knows that a breakwater of that length reaching out into deep water requires to be carefully considered. I can only give the hon. gentleman the assurance that I will have reports from the engineers, and when we are satisfied of the proper

character of the work to construct there, we will go on.

Mr. LEFURGEY. There is no doubt the minister will find that they can put a breakwater there that will fill the bill.

Mr. HYMAN. There is no doubt that we could put a breakwater there that would fill the bill, but it would possibly cost $200,000 or $300,000. The question of cost comes in.

Mr. LEFURGEY. Then it is a question of cost?

Mr. HYMAN. Very largely.

Mr. LEFURGEY. May I ask the hon. minister what length they would go to in constructing a breakwater in Summerside harbour?

Mr. HYMAN. The good faith of the department is shown in entering into the original contract in 1900. The amount of that contract was $55,000. I do not think that the extension of a work of that character all the way could be carried out for that money. It is a question of cost, and we want to be sure before we proceed with the work. If, having a vote for $20,000, I entered into a contract for a work that would cost $150,000 or $200.000, I would be very seriously critcised in this House.

Mr. LEFURGEY. I think the hon. gentleman said last year that the amount that would be required to complete that work satisfactory would be in the neighbourhood of $150,000. May I ask the hon. gentleman if, in case the department find that a useful work can be constructed for that amount of money, we can have his assurance that the work will go on after a careful investigation has been made? I presume they have the details of this work in the department, and if he decides that it can be advantageously proceeded with at a cost of $150,000, will the hon. gentleman give us the assurance that it will be gone on with?

Mr. HYMAN. I am sorry I cannot give the hon. gentleman that definite assurance. I do not think I would be justified, with a vote of $20,000, in entering into a contract for a work that would cost $150,000.

Wood Islands—protection of southern breakwater from scour, $750.

Mr. A. MARTIN. There has been a good deal of money spent on this harbour.

Mr. HYMAN. It is quite a large work.

Mr. A. MARTIN. I know it. I am perfectly familiar with the work. I suppose the hon. minister has some information on that point?

Mr. HYMAN. Yes.

Mr. A. MARTIN. Before we pass from this item of $90,000 for Prince Edward Island, I would call the attention of the hon. Minister to the harbour of Belle River, on the southern side of the island, where there is a great deal of business done. I think a small appropriation, perhaps $4,000 or $5,000, would put that harbour in a very efficient condition. I think there are some reports in the hon. gentleman's department in regard to Belle River. I think that a sum was voted some years ago, or was proposed to be voted, for the improvement of that harbour. This is a section of the country in which a good deal of business is done, and if the hon. gentleman would give his attention to the matter, and look at the reports in his office, I think he would come to the conclusion that an expenditure such as I have suggested is necessary at this point.

Mr. HYMAN. I have asked the engineer to examine the reports in regard to that harbour.

Harbours and rivers, New Brunswick—Campbellton—wharf extension and repairs, $50,000.

Mr. INGRAM. Would the hon. gentleman give us a little explanation about that?

Mr. HYMAN. This work is under contract. The contract was let on the 11th October, and amounted to $35,300. In addition to that, the department were called upon, as the result of an arbitration, to pay $35,000 for the wharf. It is only fair to tell the committee that from the information the department have it will be necessary to ask for another vote in the supplementary estimates. The wharf at Campbellton is not at all sufficient for the amount of business that is being done there. There is the boat service by the south shore, which it will be imperative practically to provide a landing for. In addition to that, the number of boats loading lumber every year and the shipping generally are increasing to such an extent that the department will be justified in asking the House for a further vote, on which this whole work can be discussed.

Mr. CROCKET. What will the total cost be?

Mr. HYMAN. The amount of the contract which has been entered into is $35,300.

Mr. INGRAM. There may be some other questions to be asked in connection with that item.

Mr. HYMAN. There will be a new vote, and it can then be discussed.

Some resolutions reported.

Sir FREDERICK BORDEN moved the adjournment of the House.

Mr. INGRAM. I know that Monday is private members' day. Perhaps the hon. minister can tell us, if private members get through with their business, what the government propose to do after that?

Mr. HYMAN. Private members' work will be taken up, and if we get through with that we will go into supply.

Mr. INGRAM. On what items ?

Mr. HYMAN. I cannot answer that, but it will not be on the Public Works estimates.

Mr. INGRAM. Could any of the ministers say what estimates they will discuss ?

Mr. HYMAN. It is a difficult matter. If the hon. Minister of Agriculture is here, I think he will go on with his estimates, but I would not like to be bound down to saying exactly what we will go on with. It will be private members' day, and I suppose it will be taken up with private members' business.

Motion agreed to, and House adjourned at 11.05 p.m.

HOUSE OF COMMONS.

MONDAY, February 27, 1905.

The SPEAKER took the Chair at Three o'clock.

FIRST READING.

Bill (No. 82) to incorporate the Dominion Annuity Company.—Mr. Bole.

RIGHTS OF THE PROVINCES.

Mr. W. F. MACLEAN (South York). Mr. Speaker, before the Orders of the Day are called, I intend to ask the attention of the House to a very grave matter ; and, if necessary, to put myself in order, I will conclude with a motion. The very important matter to which I propose to call attention has reference to provincial rights, particularly the rights of the province of Manitoba, and I regret very much that neither the Minister of the Interior (Mr. Sifton) nor the late premier of Manitoba (Mr. Greenway), who has now a seat in this House, is in his place. It is largely because these hon. gentlemen have not chosen to call the attention of the House to this matter that I do so to-day. I think I can best bring the question immediately within the view of hon. members by reading a translation of an article that was published in 'Le Soleil' of Quebec, on February 11.

Mr. EMMERSON. Read the original.

Mr. W. F. MACLEAN. I will read the original, but for the benefit of the Minister of Railways, I will translate it ; I am quite competent to do both. 'Le Soleil,' which claims to be under the personal control of the Prime Minister and to speak for him, in its issue of February 11, made this declaration :

We declare once for all that 'Le Soleil' is the organ of the Liberal party, and by that fact is under the direction and absolute control of Sir Wilfrid. The supporters of Sir Wilfrid, and those who affirm themselves to be such, are begged to take notice of the present declaration.

On February 17, that paper, in an editorial, discussed the rights of the province of Manitoba in this way :

In proportion to her big sisters Manitoba will count as little more than a large county.

This is one of the reasons invoked by Manitoba's delegates to obtain an enlargement of her territory.

There is another. Quebec and Ontario have extended their limits, the one to the west, the other to the east, to attain on the north the shores of James bay.

Manitoba aspires to the shores of Hudson bay, on the northeast. It would be necessary to withdraw her boundaries several hundred miles towards the north, to cut the districts of Saskatchewan and Athabaska, and encircle that of Keewatin.

Manitoba is asking for treble her existing territory.

This enlargement is hardly possible.

The district of Saskatchewan opposes it, at least the part directly interested.

The finances of Manitoba in their actual state are not made to attract the free residents of the districts. Manitoba has a debt of $4,000,000. The school legislation of the little province is not of a nature to attract the immigrants who people the districts. The Northwest has its separate schools. Manitoba has abolished them.

Every good act has its reward, every bad act its chastisement.

Manitoba will remain lowest with her pretentious law.

In other words, a threat is here held out by the Quebec organ of hon. gentlemen opposite that Manitoba is to be kept in her inferior position, as compared with the other provinces, as a punishment because she chose to vindicate her provincial rights. She is to be denied territory, and worse things than that are to befall her. Again I say I regret the absence of the Minister of the Interior and the late Prime Minister of Manitoba. Among the laws of this country is a very important Act called the Dominion Lands Act. Reading from the Revised Statutes of 1886, I find that section 23 of that Act, under the head of School Lands, says :

Sections eleven and twenty-nine in every surveyed township throughout the extent of the Dominion lands, are hereby set apart as an endowment for purposes of education, and shall be designated school lands ; and they are hereby withdrawn from the operation of the clauses of this Act, which relate to the sale of Dominion lands and to homestead rights therein ; and no right to purchase or to obtain homestead entry shall be recognized in connection with the said sections, or any part of them.

Sections 24 and 25 provide how these lands shall be sold. Subsection 3 of section 25 says :

All moneys, from time to time, realized from the sale of school lands shall be invested in

securities of Canada, to form a school fund, and the interest arising therefrom, after deducting the cost of management, shall be paid annually to the government of the province or territory within which such lands are situated, towards the support of public schools therein; and the moneys so paid shall be distributed for that purpose by the government of such province or territory in such manner as it deems expedient.

Now, from the statement which was made to all Canada the other day, we must infer that the Dominion Lands Act is to be changed, and that in the province of Manitoba these school lands, which are now consecrated to public schools, not to separate schools, are to be sold, and the proceeds distributed in an entirely different way. That follows from the statement made here the other day, and on behalf of Manitoba I protest to-day against any such change in the law, or any such chastisement being meted out to that province as is proposed by this organ of the government. That organ wants Manitoba chastised because of certain laws which that province has passed in connection with the school lands, and yet this same organ is the mouthpiece of this government, of which the Minister of the Interior (Mr. Sifton) is a member, and of which the late premier of Manitoba (Mr. Greenway) is an ardent supporter. If any wrong has been wrought to the Roman Catholic minority of Manitoba in connection with the school question, is not that due to the Minister of the Interior and the late premier of Manitoba? They it was who caused the Manitoba legislation now complained of to be enacted. It was the Liberal party which passed it, and did so in the interests of that province. Yet to-day we have the Dominion government, of which these gentlemen are the mainstay, threatening, through its leading organ, to chastise Manitoba because of that very legislation. That organ says to the province of Manitoba: You shall not extend your bounds, you shall continue in the lowly inferior position you now occupy. On behalf of that province, and because these gentlemen are not here to raise their voices in its behalf, I raise mine.

Some hon. MEMBERS. Oh, oh.

Mr. W. F. MACLEAN. I raise my protest because the proposal about to be made here is of a most far reaching character. Not only the school lands of Manitoba, but the whole educational fund of that province, is to be changed by a general Act, which must follow from what was said here the other day. I draw the attention of the right hon. gentleman to this. If these important changes are to be made on the lines laid down by him, then it follows that remedial legislation is in order as concerns Manitoba. The argument is an a fortiori one. Remedial legislation must follow, and it will be introduced in this House by the right hon. gentleman who warned the country against such legislation eight years ago. There is this prospect for Manitoba, that all her schools lands are, in every probability, to be diverted this very session of parliament to other purposes than those to which they are devoted to-day by a general Act amending the Dominion Lands Act. Furthermore the Manitoba school funds are to be diverted by legislation which must follow as a logical sequence from the statement made the other day. Logically the right hon. gentleman is bound to introduce a Bill remedying the school grievances of the minority in the province of Manitoba, and yet these very so called grievances are due to the Minister of the Interior of this government and his friend (Mr. Greenway) who, I am told, is to be his immediate successor in this government. It was to give these hon. gentlemen an opportunity here to repudiate this language, to say they could not be parties to any such legislation, that I brought this mattter up to-day; and in all probability the absence of the hon. the Minister of the Interior from this House ever since the beginning of this session and the absence of the hon. member for Lisgar, (Mr. Greenway) to-day are due to their desire to shirk their manifest duty in connection with this matter. The hon. the Minister of the Interior was here only for a moment the other day, and his absence no doubt is due, as well as that of the other hon. gentleman, to what is in the immediate future in store for them. If what was foreshadowed the other day is to happen, it must follow that those school lands are to be diverted from their present purpose and a Remedial Bill introduced this session, and the party, which claims to be the defender of provincial rights from one end of the country to the other, is to-day doing nothing to prevent the shackles being put on the provinces of this great and free Dominion. These provinces are to-day free, and my right hon. friend must know that if there is one thing which the people who breathe the free air of the prairies, the people of the great west, value, it is their political liberty; and if the right hon. gentleman insists on shackling these people in connection with the dispossession of their school lands, he will make a great mistake. He apparently does not understand the genius of the western people if he thinks that by aid of any constitutional argument, he can interfere with the school lands of the province of Manitoba. I leave the case for the present but may have to return to it.

Some hon. MEMBERS. Hear, hear.

Mr. W. F. MACLEAN. But I shall wait until the Minister of the Interior is in his place. Again I call the attention of the right hon. gentleman to the absence of a number of his ministers from this House. The Minister of Public Works (Mr. Sutherland) is not here. I regret that he is ill, but the constitutional practice is that when a minister is not able to take his place in

the House he ought to vacate the position, both in his own interest and that of the country. The hon. member for London, (Mr. Hyman), who is discharging the duties of the Minister of Public Works, is contravening the constitution every day under the circumstances.

Some hon. MEMBERS. Oh, oh !

Mr. W. F. MACLEAN. Hon. gentlemen opposite laugh, but they used to attack the late government about this very thing. I regret that the Minister of the Interior, (Mr. Sifton) was not in his place at the time when these provincial rights which he held at one time to be most dear to the people of Manitoba, were being assailed. I recollect when that hon. gentleman came down to the province of Ontario and told the people of Haldimand that of all things the people of Manitoba did not want separate schools or remedial legislation imposed upon them. He came to the province of Ontario for sympathy on that score and he got it. But now if we are to believe the right hon. gentleman's organ, all that is to be taken back, the school lands are to be diverted from their proper purpose, and the hon. gentleman is bound, if he carries out what he promised, to introduce this session, an Act to remedy the school grievances of the minority of Manitoba. If any such thing be attempted, the wrong will be done, provincial rights will be taken away, and to-day, in the absence of the two hon. gentlemen to whom I especially referred, I rise to protest against the policy outlined by the right hon. gentleman in connection with these matters. I move that the House do now adjourn.

Right Hon. Sir WILFRID LAURIER (Prime Minister). One could hardly imagine that any hon. gentleman would rise to move the adjournment of the House for the purpose of inflicting on us such a ramshackle—if I may use such an expression—delivery as we have had from my hon. friend. He has given us a very modern exemplification of the old story of Don Quixote tilting against wind mills. My hon. friend is becoming every session more and more quixotic in his views and methods. Take this item which he has just read from the 'Soleil' and on which he has built so unwarranted a conclusion that the government contemplates introducing a Remedial Bill to amend the law of Manitoba. There is not a scintilla in the article of the 'Soleil' which can warrant any such conclusion. The whole thing is manufactured—I will not say wilfully—but if not, I know not how to characterize in what manner it was manufactured. Where is there a single word to warrant what the hon. gentleman sees there ?——

Mr. W. F. MACLEAN. I did not say that it was there.

Sir WILFRID LAURIER. My hon. friend admits there is nothing there to warrant his outbreak. The whole thing is in my hon. friend's own mind, and it is from his own mind alone that he has evolved the notion that this government contemplates any such thing as introducing a Remedial Bill for the province of Manitoba. That is the only authority he has for his remarks this afternoon. The thing is too absurd for consideration. My hon. friend professes to have his soul harrowed by the prospect he contemplates. Let me tell him once and for all that the government since 1896 has never contemplated introducing any Remedial Act affecting the province of Manitoba and does not intend doing so.

Mr. W. F. MACLEAN. What about the school lands ?

Sir WILFRID LAURIER. I may say to the hon. gentleman that the government has not contemplated and does not contemplate to introduce any law to amend the School Law. Is that categorical enough for the hon. gentleman?

Mr. W. F. MACLEAN. You cannot change the School Law without changing the Dominion Lands Act.

Sir WILFRID LAURIER. Then I will make my answer more categorical yet. The government has not contemplated, does not contemplate and will not contemplate any amendment to the Dominion Lands Act. I do not understand what the hon. gentleman is aiming at to-day. If he has any object it must be to try and create a false impression to arouse prejudices somewhere. But the hon. gentleman began by expressing his deep regret that the Minister of the Interior and the hon. member from Lisgar (Mr. Greenway) the former premier of Manitoba, were not in their seats. Why, Sir, it would have been very easy for the hon. gentleman to secure their presence in their seats if he wanted them to be present. Why did he not notify them that he wanted to bring before the House some question requiring their presence, and which required them to make some defence to charges that he intended to bring against them. Did the hon. gentleman notify the Minister of the Interior that he wanted him here to-day? Did he notify the hon. member for Lisgar that he desired his presence here to-day? I am in the judgment of the House when I say that the hon. gentleman, when he intended to bring charges against the members of the House, wilful and deliberate charges, has not had the manliness to notify them that he intended to do so. As to the 'Soleil,' I have no interest whatever in that newspaper, financial or otherwise. It generally supports the government, but sometimes opposes it. If the hon. gentleman expects me to be responsible for anything that is published in the 'Soliel,' he is asking more from me than one would ask

from any other member of parliament. The hon. member may be responsible for what appears in the Toronto 'World,' I have not had the same connection with the 'Soleil., I have nothing to do with the article in the 'Soleil,' which I had not read and had not heard of until it was read on the floor of the House.

Mr. W. F. MACLEAN. Mr. Speaker, the right hon. gentleman is trying to draw a red herring across the track. This newspaper which declares it is his organ, and he has not repudiated it, says that the province of Manitoba is to be chastised because of its pretentious school law, it is to be chastised by the right hon. gentleman and his party, and the chastisement is in evidence now before all the people. Manitoba expected that her boundaries would be extended, and she expected that the Minister of the Interior would be here to see that her boundaries were extended, but Manitoba is being chastised to-day, as the organ of the right hon. gentleman says, because of her pretentious school laws. They are not pretentious, they are constitutional, she had a right to make them, yet she is to be chastised to-day. The right hon. gentleman said practically the other day that the province was entitled to have its boundaries enlarged, it was entitled to be put on an equality with the other provinces. All over the country the statement has been published that Manitoba is being chastised because of her manliness in connection with public schools. The right hon. gentleman says he does not propose to interfere with the Dominion Lands Act. He does in substance, he does in a certain measure which I know of, where it is all outlined that the public school lands and the public funds in relation to education are to be interfered with. It may be in a special Bill, but the intention is to make laws in that direction. What follows then is this, that in the way the right hon. gentleman aproaches this question he is making flesh of one and fish of the other ; certain provinces are to enjoy certain school lands and others are to be denied them. If that is not an injustice and an interference with the lands of the province, I do not know what it is. The right hon. gentleman is trying to get away from this question in saying that he does not propose to introduce remedial legislation. He is bound to introduce it if there is anything in the constitutional argument he made here the other day. There is nothing in that constitutional argument, but there is a great deal in the constitutional argument that Manitoba is entitled to remedial legislation. If that is true, I will have to put up for the present with the trivial reply of the right hon. gentleman; but before two weeks are over, before another week is over, he will sing on the other side of his face. He will find that the people of Canada are in favour of the maintenance of provincial rights; they are not in favour of a paternalized autonomy like that which the hon. gentleman proposes. The people of this country believe in provincial rights as they have been defined and won out by the province of Manitoba. Again I say that the hon. gentleman is attempting a revolution, and the Minister of the Interior ought to be in his place here to-day, since these things are being done in the department over which he presides. The hon. gentleman asks why I did not notify the Minister of the Interior? Am I the Minister of the Interior's keeper? If he is not in his place, where shall I have to go to find him? It is not for the right hon. gentleman to say to me that I should notify this man or notify that man; let them be here to look after themselves.

Mr. HUGH GUTHRIE (South Wellington). The hon. member for South York (Mr. Maclean) who has just resumed his seat, may not be the keeper of the Minister of the Interior. But there is a rule of courtesy recognized in this House which requires that when an hon. member intends to bring up a matter pertaining particularly to any department, the minister presiding over that department must be notified. Ministers have all sorts of reasons for not being in the House. Deputations wait upon them from time to time, as we all know. We know not why the Minister of the Interior is not in his place to-day; but there is this much about it, it is a small thing and a mean thing for the hon. member for South York to make these remarks without having intimated to the Minister of the Interior that he desired his presence here. Now I desire on this occasion to enter my protest against such interruptions and interjections, on the Orders of the Day being called, as have been made by the hon. member for South York. If there is anything calculated to stir up strife and trouble in this country it is speeches such as that hon. gentleman has delivered, and articles that appear in his newspaper. If hon. members in this House would treat the question which the hon. member for South York has introduced, with calmness, with candour, with that liberality which no doubt they all possess, there would be no danger of producing that storm and that inflamed condition of the public mind which appears in the party press and among the people, which we see to-day, and will see throughout Canada. Now, the hon. member cites the case of Manitoba. I am not going to dwell on that, I merely say that so far as I am concerned, as a member of this House supporting the government, the question of schools in the province of Manitoba is a settled question. There is no analogy whatever between the conditions of Manitoba and the new provinces which are to be admitted in to the confederation; I say this now, although these are matters which will more properly come up when the Bill is read the second time. But when we per-

mit a province to come into this confederation, we permit it to come in on such terms as this House deems proper and equitable. It was so with the other provinces, and, I presume, will be so with the provinces that are to come in. Mr. Speaker, I only rise to protest against interjections and interruptions by hon. members such as those of the hon. member for South York (Mr. W. F. Maclean) who seeks both by his voice in this House and by the newspaper, which, fortunately or unfortunately, he controls, an inflammatory condition of indignation in the country. I think that, when the Bill is before us and when discussion is proper, then the hon. member for South York can enter any protest he sees fit. But, until that time, it is much better for the House and the country that we should remain silent on the subject.

Motion (Mr. W. F. Maclean) to adjourn, negatived.

STEAM COMMUNICATION WITH P.E.I.—SNOW BLOCKADE IN MARITIME PROVINCES—DELAY OF MAILS.

Mr. A. A. LEFURGEY (Prince, P.E.I). Mr. Speaker, I would like to ask the attention of the Postmaster General (Sir William Mulock) through the right hon. Prime Minister (Sir Wilfrid Laurier) to the condition of the mail service in Prince Edward Island. I received on Saturday a despatch from a resident of Tignish saying that, in answer to communications addressed to the postmaster of Charlottetown they have received absolutely no information as to the carriage of the mails, and the people throughout the district have now undertaken the service themselves, and the mails have been started by sleighs sent out by private individuals. It seems to me that this is very unsatisfactory, and, I should think, an illegal method of handling the public mails of this country. I will ask the right hon. First Minister to bring this subject to the attention of the Postmaster General and have some inquiry made into it. And, if the train service is so blocked that the mails cannot be brought through by the trains a service should be established by means of sleighs under official auspices, so that His Majesty's mails may not be entrusted to private individuals as they have been.

Hon. RAYMOND PREFONTAINE (Min- of Marine and Fisheries). I beg leave to communicate to the House a despatch I have just received :

Charlottetown, P.E.I., 27th Feb.

Steamers last crossing twenty-fourth ultimo, ice blockade still continues ; tried dynamite Pictou barrier Saturday, found useless ; 'Stanley' unable to get past Cape Bear. No crossing at Capes since twenty-third instant. Boats cannot overcome lolly, broken ice and deep snow ; railway blocked for two weeks.

A. LORD,
Agent.

Hon. H. R. EMMERSON (Minister of Railways and Canals). Apropos the subject raised by my hon. friend from Prince Edward Island (Mr. Lefurgey), I beg to inform the House and the country that the snow-blockade which has for some time existed on the Intercolonial—or that portion of it in the province of Nova Scotia—has been raised. I had communications to-day stating that the trains are now moving in and out of Halifax, and also between Sydney and Truro—so that the road is completely free. The Dominion Atlantic line which is the line running between Halifax and Yarmouth, had been closed for a week or ten days. Even the highways are entirely impassable. With the assistance of the Intercolonial and the using of the appliances of that road, the Dominion Atlantic has been opened up, and trains are now running over it. The blockade, of course has been a very great drawback to the business interests of the maritime provinces. Regretful for the past, I shall endeavour to make such arrangements as are possible with the clerk of the weather to prevent a repetition of such a stoppage of Intercolonial trains.

Mr. J. J. HUGHES (King's, P.E.I.). In reference to the question raised by the hon. member for Prince (Mr. Lefurgey), I might say that I made representations to the Post Office Department some time ago and was informed that the postmaster at Charlottetown had full power to employ teams to convey the mails when the trains were stalled—full powers to have the mails brought through by any means he thought advisable in the public interest. I have no doubt at all that the postmaster at Charlottetown is using the power intrusted to him to the best of his judgment and ability.

Mr. LEFURGEY. I do not wish to make this a subject of controversy. But, as I have a message from a resident of Tignish, I might read that to the House, and possibly it may satisfy hon. gentlemen as to my position :

Tignish, P.E.I., Feb. 25.

A. A. Lefurgey, M.P.,
Ottawa, Ont.

Mails started by private individuals without notice. Whear insolently answers. No explanation. Bring up demoralization before orders of day. Agnew wired Yeo to-day.

So, it would appear that the postmaster at Charlottetown had been appealed to in the matter and the people had received no satisfactory explanation of his conduct, and consequently had to use conveyances of private individuals to deliver the mails.

PROVINCIAL GOVERNMENT IN THE NORTHWEST.

Mr. HAGGART. I would ask the right hon. Prime Minister (Sir Wilfrid Laurier) when the Bills establishing the provinces

of Saskatchewan and Alberta will be printed ?

Sir WILFRID LAURIER. I expect they will be printed to-day or to-morrow.

Hon. CHARLES FITZPATRICK (Minister of Justice). The Bills were placed in the hands of the clerk of the House on Thursday last.

PRIVATE BILLS.

THIRD READING.

Bill (No. 34) respecting the Nicola, Kamloops and Similkameen Coal and Railway Company.—Mr. Galliher.

CONSIDERED IN COMMITTEE—THIRD READING.

Bill (No. 33) respecting certain patents of Jean Effront—Mr. L. P. Demers.

MOLSONS BANK.

House in committee on Bill (No. 14) respecting the Molson's Bank.—Mr. Ames.

On section 1,

Mr. CAMPBELL. I may just say that when this Bill was before the committee there was some opposition to it on account of the question not being settled as to whether the shareholders had authorized this change. Since then I have received a telegram from the general manager saying that the shareholders were notified and authorized the change at a special general meeting called for that purpose.

Bill reported, read the third time and passed.

SOVEREIGN FIRE ASSURANCE CO. OF CANADA.

House in committee on Bill (No. 26) to incorporate the Sovereign Fire Assurance Co. of Canada—Mr. E. F. Clarke.

Mr. W. F. MACLEAN. Mr. Chairman, before you report the Bill as the hon. Minister of Finance is in his place—and I am very glad to see him here looking so well—I wish to call his attention to the general insurance question, and particularly to the question which has arisen over in the United States. I am only going to take a moment because I would like to discuss this matter with him later on in the session, but I wish to give him notice to-day that a very serious question has arisen in the United States in regard to life insurance as controlled by private companies. He must know, as every one, I imagine, knows, that it came out the other day in the city of New York that the great Equitable Life Insurance Company of that city, that now controls five hundred millions of money in trust for its policyholders, is absolutely under the control of one man, who, with his family, owns $75,000 of the paid up stock of $100,000 which gives him the control of that company.

It has been pointed out by very important men in the United States and by the great newspapers of the United States that an effort was being made in New York by great capitalists represented by Harriman Gould and the great bond house represented by Mr. Schiff, of New York, to control this company and that they were willing to give $5,000,000 of ready money for the controlling interest in the shares of the Equitable Life. This has proved to be a matter of supreme interest to the people of the United States, that a few men with a very small capital could control the immense reserve fund for the benefit of the policy holders. It is proposed there now—and we will have to do the same thing, we will have to change our insurance laws—to enact that the policy holders shall have a great deal to say in the disposition of these immense trust funds, and I take this opportunity of calling the attention of the minister to it. I trust that, if not this session at a very early date, we will be able to cope with this great question, because if there is one thing of importance in connection with an insurance company it is that the trust moneys which are there for the security of the policy holders ought to have the best possible administration. I do not think the best administration of these funds can be secured when it is possible for their management to fall into the hands of two or three men who by controlling the shares of the proprietary company are free to do what they like with great funds of this kind. It is openly charged by the leading newspapers in the United States to-day that Harriman and Gould are anxious to get control of the Equitable Insurance Company in order that they may play ducks and drakes with the $500,000,000 of trust money which is the absolute property of the policy holders, in order that they may use it for their great railway propositions, and we are in danger of reaching the same condition in this country. I trust that later on some proper provision will be introduced into our General Insurance Act for the protection of the policy holders.

Hon. W. S. FIELDING (Minister of Finance). The proper protection—shall I say the adequate protection—of the moneys which are invested in the hands of the various insurance companies of our country, must always be a question of the utmost importance, and if at any time there may be doubt as to whether our legislation is sufficient on that point I am sure that my hon. friend (Mr. W. F. Maclean) or any other member would be only doing his duty in bringing the matter before the attention of the House. I hope it will be found, on an examination of the general insurance law and of the charters of the various companies, that our legislation in Canada is not open to the objections which might be taken in the case of United States companies. However, if there are some companies as to which that criticism might be offered, I quite admit

that it is a proper subject for consideration. I think that, in the main, our insurance legislation, both with regard to the General Insurance Act and to the charters of the various companies, is in a very sound position. If, however, anything can be done to improve it, I am sure as Minister of Finance that I shall be glad to accept suggestions from any part of the House so that so good a purpose may be carried out.

Bill reported, read the third time and passed.

CANADIAN CANALS CORPORATION.

Mr. W. S. CALVERT moved the second reading of Bill (No. 72), to incorporate the Canadian Canals Corporation.

Mr. W. F. MACLEAN. I would like to have a little information in regard to this Bill. I presented a petition from the county council of the county of York protesting against it, and I would like the hon. gentleman to make a little explanation so that the municipalities, if they are interested, can attend the meeting of the Railway Committee.

Mr. CALVERT. Mr. Speaker, the promoters of this Bill are asking for an Act permitting them to build a canal and railway combined. It is to commence on the Georgian bay and to cross over to Lake Simcoe, about 16 miles. Lake Simcoe is 131 feet higher than Lake Huron, and they intend to build a ship railway to raise the ships that 131 feet. Lake Simcoe is about 25 miles in length and they propose to build a canal about 99 miles in length and then another ship railway, which will be about 1¼ miles in length. Lake Simcoe is 466 feet higher than Lake Ontario and by these proportions of railways, together with the canal, they expect to be able to connect the Georgian bay with Lake Ontario, a distance of 72 miles. It is anticipated that it will save about 618 miles in a round trip. The cost is estimated to be about $45,000,000. I would like the Bill to go to the Railway Committee to be discussed there.

Motion agreed to, and Bill read the second time.

RED DEER VALLEY RAILWAY AND COAL COMPANY.

Mr. ARCH. CAMPBELL moved second reading of Bill (No. 76), respecting the Red Deer Valley Railway and Coal Company.

Mr. W. F. MACLEAN. I would like to ask the hon. gentleman if this is our old friend?

Mr. CAMPBELL. Yes, it is a very old friend, a very dear friend.

Motion agreed to, and Bill read the second time.

SECOND READINGS.

Bill (No. 73), to incorporate La Compagnie du Chemin de fer Montreal, Quebec et du Sud.—Mr. Gervais.

Bill (No. 74), respecting the Medicine Hat and Northern Alberta Railway Company.—Mr. Talbot.

Bill (No. 75), respecting the Battleford and Lake Lenore Railway Company.—Mr. Lamont.

Bill (No. 77), respecting the Canadian Agency.—Mr. Bickerdike.

Bill (No. 78), respecting the Macleod, Cardston and Montana Railway Company.—Mr. Turriff.

Bill (No. 79), respecting the Toronto, Hamilton and Buffalo Railway Company.—Mr. Zimmerman.

Bill (No. 80), to incorporate the Woodstock and Lake Huron Railway Company.—Mr. A. H. Clarke.

Bill (81), respecting the Ottawa River Railway Company, and to change its name to the Central Trunk Railway Company.—Mr. Piche.

QUESTIONS.

CIVIL SERVANTS' GUARANTEES.

Mr. CHISHOLM asked:

1. When did the Post Office Department begin to guarantee the bonds of the postmasters and mail carriers of the Dominion?
2. Are the civil servants in the outside departments, other than the postmasters, dealt with in the same way?
3. On what principle is the levy made on the postmasters?
4. What amount of money has been collected from the postmasters each year, and what is the total amount up to date?
5. What amount of losses has been sustained by the Post Office Department; and what has been the total net gain or loss to the Post Office Department?

Hon. CHAS. HYMAN (for the Postmaster General). The question doubtless refers to the assessment system inaugurated in 1898 by the department. It does not apply to all civil servants in the outside service of the Post Office Department, but only to employees in city post offices and to railway mail clerks, porters, transfer agents and other civil service employees who are actually engaged in the work of handling the mails. The rate of assessment is forty cents on each one hundred dollars of insurance required. The amount of such insurance is in accordance with the following scale: Every accounting postmaster, the revenue of whose office is under $2,000 a year, is required to give security to the extent of $800. Where the revenue exceeds $2,000 a year, but is less than $5,000, the insurance required is $1,200. Where it exceeds $5,000 but is less than $10,000 a year, the insurance required is $1,600. Where it exceeds $10,000 a year but is less than $15,000, the insurance required is $2,000. Where it exceeds $15,000 a year but is less than $25,000, the insurance required is $2,500. Where the revenue exceeds $25,000,

except in the cities of Montreal and Toronto, the insurance required is $3,000. In the case of the cities of Montreal and Toronto the insurance required is $5,000. Each postmaster of a non-accounting post office is required to give $200 security, and if the estimated revenue of his office does not exceed $100 a year, it is optional with him to give bonds or to accept the assessment system. The assessments since the inauguration of the system have amounted to the following :—

For the year ended 30th June, 1899	$12,773 48
For the year ended 30th June, 1900	8,479 93
For the year ended 30th June, 1901	8,930 02
For the year ended 30th June, 1902	10,088 52
For the year ended 30th June, 1903	11,970 25
For the year ended 30th June, 1904	10,891 71
For the seven months to 31st January, 1905	215 25
	$63,349 16

Out of this sum the department has paid in re-insurance and ascertained losses the sum of $19,909.51, leaving a balance of $45,992.68 to the credit of profit and loss account.

CONSUMPTION OF BINDER TWINE.

Mr. SINCLAIR asked :

What proportion of the binder twine consumed in Canada is manufactured (a) in Canade ; (b) in the United States ; (c) in other countries ?

Hon. WILLIAM PATERSON (Minister of Customs). The only way I can answer the question is as follows : The imported binder twine entered for consumption in Canada during the year ended 30th June, 1904, was :

	Lbs.	Value.
From United States	12,623,608	$1,459,113
From other countries	4,380	591

The binder twine manufactured in Canada, according to the returns for bounty purposes, from 1st September, 1902, to 30th June, 1904, was 16,165,048 pounds.

ST. ANGEL HARBOUR.

Mr. PAQUET asked :

1. How much was expended last year for the deepening of a harbour at St. Angel, in the county of Nicolet ?
2. At the request of whom were those works undertaken ?
3. Does the government purpose to continue those works ?
4. What additional amount would be needed to complete the harbour in question ?

Hon. CHAS. HYMAN (Acting Minister of Public Works) :

1. $11,723.18.

2. On the report of the assistant engineer of the department.
3. Yes.
4. $12,000 will be required to complete the deepening of the channel to 8 feet at low water across the Lake St. Peter's flats, at the mouth of the Nicolet river into Nicolet harbour, and for rip-rapping the jetty protecting the channel through the flats.

INSPECTION OF GAS AND ELECTRICITY AT THREE RIVERS.

Mr. PAQUET asked :

1. Who is the inspector of gas and electricity at Three Rivers ?
2. What salary is attached to that office ?
3. During the past year how much was the cost of that office, including the expenses of travel ?
4. To what sum did the receipts during the same period amount ?
5. Is the inspector supplied with an office and its accessories ?

Hon. L. P. BRODEUR (Minister of Inland Revenue) :

1. Joseph Ulric Dufresne.
2. $500.
3. $65.95.
4. $128.25.
5. He has an office in the public buildings at Three Rivers, which is provided with the necessary accessories.

ALEXANDRIA POST OFFICE.

Mr. MACDONELL—by Mr. Ingram—asked :

1. When was the contract for the new post office at Alexandria, Ontario, let, and when will it be finished and fit for occupation ?
2. Does the contract specify any date of completion ? If so, when ?
3. What is the cause of the delay, and who is paying the rent of the temporary premises, the government or the contractor ?
4. Who is the contractor ?

Hon. CHAS. HYMAN (Acting Minister of Public Works) :

1. On the 23rd of October the contract for the erection of the building was completed. The building is expected to be ready for occupation about the 1st of May.
2. Yes ; the 15th October, 1904.
3. The delay is due to the contractor. No rent is being paid by this department for post office premises.
4. Joseph Bourque.

PORT STANLEY HARBOUR.

Mr. MACDONELL—by Mr. Ingram—asked :

1. Has the harbour work at Port Stanley been let ? If so, when, and to whom ?
2. Were tenders called for ?
3. If so, from whom were tenders received, and what were their amounts ?
4. Was the lowest tender accepted ?

Hon. CHAS. HYMAN (Acting Minister of Public Works) :

1. No.

2. Yes.

3 & 4. Several tenders were received, but as the contract is not yet awarded, it is considered not in the public interest to disclose the amount of the tenders at present.

RONDEAU HARBOUR WORK.

Mr. MACDONELL—by Mr. Ingram—asked :

1 Has the harbour work at Rondeau been let? If so, when, and to whom ?
2. Were tenders called for ?
3. If so, from whom were tenders received, and what were their amounts ?
4. Was the lowest tender accepted ?

Hon. CHAS. HYMAN (Acting Minister of Public Works) :

1. No.
2. Yes.
3. Several tenders were received, but as the contract is not yet awarded, it is not considered in the public interest to disclose the amount of the tenders at present.

TORONTO HARBOUR WORKS.

Mr. MACDONELL—by Mr. Ingram—asked :

1. Were tenders called for on or about the 2nd of November, 1904, for the piling and breakwater at the eastern gap, Toronto harbour ?
2. If so, how many tenders were received ; who tendered, and what were the amounts of the tenders ?
3. Was the work then awarded ? If not, what is the reason that the work was declared off, and not then let ?
4. Were tenders called for the same, or substantially the same, work on or about the 26th January, 1905 ?
5. How many tenders have been received in response to this last advertisement ?
6. Is it true that the minister has referred these tenders to the chief engineer ? If so, why ?
7. Has any tender been accepted ? If not, what is the cause of the delay in awarding the work ?

Hon. CHAS. HYMAN (Acting Minister of Public Works) :

1. Yes.
2. Five ; but as no contract has been awarded, it is not considered in the public interest to make known the tenderers or amounts.
3. No ; the price of the lowest tender was considered too high.
4. Yes.
5. Five.
6. Yes ; as he required the opinion of his executive officer on the same.
7. No ; as further inquiry in the proposed method of doing the work is considered necessary from a public standpoint.

RETURNING OFFICER FOR SELKIRK, MANITOBA.

Mr. NORTHRUP—by Mr. Lancaster—asked :

1. Was the occupation of the returning officer appointed for Selkirk, in the province of Manitoba, in the last Dominion election, at the time of his appointment, that of bar tender ?
2. If not, what was his occupation ?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). The information of the government is that the returning officer for Selkirk in the last Dominion election is a clerk.

APPOINTMENT OF JOSEPH LEMIEUX.

Mr. AMES asked :

1. Has Joseph Lemieux received an appointment in connection with the lightship service ?
2. If so, when was he appointed, to what locality was he assigned, and what wages are paid him ?
3. Did the said Joseph Lemieux, prior to his appointment, make charges against the Quebec agent of the Department of Marine and Fisheries, and ask for an investigation of the same ?
4. Was such investigation granted ?
5. If so, has any report been brought down ? If not, what was the reason the investigation was not proceeded with ?

Hon. RAYMOND PREFONTAINE (Minister of Marine and Fisheries) :

1. Yes.
2. 26th July, 1904 ; steward in lightship 'Anticosti' ; wages, $45 per month.
3. No.
4. Answered by No. 3.
5. Answered by No. 3.

PRINCE EDWARD ISLAND FISHERIES.

Mr. ALEX. MARTIN asked :

1. To what extent, if any, have the fisheries of Prince Edward Island advanced within the last decade ?
2. Who are the officers charged with their supervision, and what are their duties and salaries ?
3. Have any new ones been appointed ? If so, what are their names, duties and salaries ?
4. Has the government any plan for the development of the deep-sea fisheries of Canada? If not, why not ?

Hon. RAYMOND PREFONTAINE (Minister of Marine and Fisheries) :

1. The value of the fisheries is practically the same.

2. J. A. Matheson, inspector of fisheries ; salary, $1,200 per year. J. B. Macdonald, assistant inspector ; salary, $1,000 per year. W. C. Hobkirk, fishery overseer ; salary, $550 per year. John Davison, fishery overseer ; salary, $200 per year. James A. McCormack, fishery overseer ; salary, $200 per year.

The duties of the inspector and assistant inspector relate chiefly to the enforcement of the fishery laws. They also direct and control the work of the overseers, and at the end of each season furnish the department with a full and detailed report of the season's fishing operations.

The overseers act under the instructions of the inspector in enforcing the fishery laws.

3. The assistant inspector is a recent appointment. The remainder of the question is answered by No. 2.

4. The general policy of the department embraces the development of the deep-sea fisheries.

MOUNT STEWART SHIPPING FACILITIES.

Mr. ALEX. MARTIN asked :

1. Have any representations been made to the government in reference to the shipping facilities at Mount Stewart, Prince Edward Island ?

2. Is the government aware that the wharf accommodation is deficient, and that dredging is needed in order to carry on increasing trade?

3. Has the government any engineer's report in respect of the condition of this shipping place ?

4. What does the government intend to do in the premises ?

Hon. CHAS. HYMAN (Acting Minister of Public Works). There are no papers to that effect in the department, but orders have recently been given to the district engineer to report at once on the conditions of the harbour.

CAPTAIN THOS. THOMPSON.

Mr. INGRAM asked :

1. Upon whose recommendation were the services of Captain Thomas Thompson, preventive officer at Port Bruce, Elgin county, dispensed with ?

2. Is his removal from office the result of any neglect of duty on his part ?

3. If not, what is the cause of his removal from office by the department ?

4. Is it the intention of the department to appoint a preventive officer at Port Bruce ? If so, when ?

Hon. WILLIAM PATERSON (Minister of Customs) :

1. The services of Thomas Thompson, preventive officer of customs at Port Bruce, were dispensed with by Order in Council, on the recommendation of the Minister of Customs.

2. His removal from office was not on account of any neglect of duty.

3. He was removed from office because the maintenance of a customs officer at Port Bruce was not considered necessary in the public interest.

4. It is not the intention of the Customs Department to appoint a preventive officer at Port Bruce.

GRAIN SURVEY BOARDS.

Mr. H. B. AMES (Montreal, St. Antoine) moved :

For copies of all petitions and correspondence between the Boards of Trade of Toronto and Montreal respectively, and the Governor in Council, in reference to the appointment of Grain Survey Boards, under the authority of the Grain Inspection Act, at Toronto and at Montreal ; and for copies of the Orders in Council whereby the aforesaid appointments were made ?

He said : It is incumbent upon me, Mr. Speaker, to state as briefly as possible, my reasons for asking that an order of this House be issued for the return I have just specified. This House will remember that last session there was passed a Grain Inspection Act. That Act was considerably amended in committee and finally passed. Clause 32 provides for the formation of a Grain Survey board, to be a sort of court of appeal from the decisions of grain inspectors in cases of dispute as to quality. That clause reads as follows :

The Governor in Council, on the recommendation of the Boards of Trade of Toronto and Montreal respectively, may appoint for any eastern division or district a grain survey board to be composed of such number of fit and qualified persons as in each case may be considered necessary or defined.

Then follows some immaterial matter about the powers of the board, but I want to point out the way in which that clause has been interpreted by the department. That clause was not in the Bill as originally drafted, but was inserted on the demand of the Boards of Trade of Montreal and elsewhere, speaking more particularly for the corn trade associations. About three weeks after this Act was passed, the Deputy Minister of Trade and Commerce wrote to the secretary of the Montreal Board of Trade as follows :

The Act of course provides for the recommendation by the Boards of Trade of fit and skilful persons to compose the Grain Survey Board, and the full provisions of the Act must be complied with before the new Board is in a position to act. Your Board of Trade will do well to make their recommendations so that they may be considered by the Governor in Council as early as possible.

In conformity with these instructions, and the evident interpretation put upon the law by the Deputy Minister of the Department of Trade and Commerce, the Montreal Board of Trade recommended the appointment of Mr. James Carruthers, retiring president of the Corn Exchange Association, Mr. H. D. Metcalfe, Mr. E. S. Jacques, Mr. C. B. Esdaile, and Mr. A. G. Thompson. At the same time the Toronto Board of Trade, after consultation with the grain people, made ten recommendations, and there were also recommendations made by the Board of Trade of Winnipeg. The government accepted the entire ten names submitted by the Toronto Board of Trade, but did not see fit to accept those sent in by the Montreal Board of Trade excepting three, namely: Messrs. E. S. Jacques, C. B. Esdaile and A. G. Thompson, and saw fit to add three additional names not recommended by the Montreal Board of Trade, thus making a board of six, upon which the Montreal Board of Trade had not even a majority. As soon as this was known in Montreal the members of the Corn Exchange Association met and passed the following resolution :

Resolved, that the Montreal Corn Exchange Association has learned with great surprise that the government has seen fit to disregard in part the nominations made by the Board of Trade for the Grain Survey Board at this port;

That the Association holds that, according to the inspection law, the nominations of the personnel of said Board rests with the Board of Trade, and it protests against, and resents the action of the government in disregarding the nominations remitted to it;

That the association protests the more strongly against the said action of the department because there is a strong belief among its members that Messrs. Carruthers and Metcalfe were not recommended by the Department of Trade and Commerce for appointment on the Survey Board because, in fulfilment of the instructions of this Association, they opposed before the parliamentary committee at Ottawa certain clauses of the draft Bill making the chief inspector's decision final, and that Messrs. Crane and McFee were recommended by the department for appointment for the reason that they opposed before that committee the expressed views of the Association in this regard.

The reason I have moved for the papers is to ascertain whether these resolutions and petitions were presented to the government, and whether the government saw fit to give any explanation to the Corn Exchange Association and the Montreal Board of Trade. The Board of Trade and the Corn Association claim that they were unjustly treated upon two grounds, as they set forth in their resolution. First, upon the legal interpretation of clause 32. I am prepared to admit that that clause is susceptible of divers interpretations, but when it was suggested, as I understand it was by the boards of trade, they supposed it to mean that the recommendations should come from the several boards of trade, and if it means anything else it means what those who suggested the clause did not intend it to. Evidently from the letter of the Deputy Minister of the Department of Trade and Commerce, quotations from which I have read, that was the interpretation put by the government themselves on that clause. The resolution of the Corn Exchange Association points out that they consider themselves aggrieved by the course of the government and pretend that the government did not act legally in the matter. And they base this claim on the fact that the clause makes provision that the appointees shall be those who will be recommended by the Montreal Board of Trade. But they still further protest that certian nominees were unjustly discriminated against. The five gentlemen who the Montreal Board of Trade recommended were gentlemen who stood very high in the estimation of those interested in the corn trade and the business circles of Montreal. They had served on the previous Grain Board and had given every satisfaction. Mr. Carruthers had just laid down his position as president of the Grain Trades Association, and Mr. Metcalfe was a well known and highly respected member of the same organization. Why these gentlemen should be struck off the list of recommendations and others substituted is at least hinted at by the resolution passed by the Grain Trades Association. They say they have reason to believe that Messrs. Metcalfe and Carruthers were struck from the list because they had the temerity, on the invitation of the government to come here and make certain strictures on the draft Bill as presented before parliament. And, because they made these strictures, their names were struck from the list of those supposed to be fit and skilful persons to carry the law into effect. They came simply as delegates. They came bearing resolutions passed unanimously—or practically unanimously; there were two dissentients—by the Grain Trades Association. They came not expecting that such actions would be to them a cause of disappointment or punishment. So, I think some explanation should be given to the commercial circles of Montreal as to these appointments. I would not for a moment be understood as stating that the gentlemen who were appointed by the government were not fit and competent persons for the position. Messrs. Crane, McFee and Morris are thoroughly good men, and that we all admit. But they are in no wise better fitted for the position than are those recommended by the Board of Trade and the Grain Trades Association; and we in Montreal cannot see why the government should discriminate and strike out the names of some who were recommended. As I have stated, in Toronto, the entire ten recommended were accepted; in Winnipeg all those recommended were accepted. I was informed by a gentleman to-day that when Hamilton made recommendations, they were accepted. And we would like to know why Montreal, in this particular case, should have been treated in this exceptional manner.

Sir WILFRID LAURIER. There is no objection to the production of the papers in this matter. They will be brought down at a very early day, because, I believe, they are already in the Department of Trade and Commerce. I would observe, however, that it is impossible for the government to accept the interpretation the hon. gentleman (Mr. Ames) has given of the Act he has quoted. Section 32 of that Act reads as follows:—

32. The Governor in Council, on the recommendation of the Boards of Trade of Toronto and Montreal respectively, may appoint for any eastern division or district a grain survey board composed of such number of fit and skilful persons as is in each case considered necessary or convenient, and such board shall have the powers——

—and so on, I understood my hon. friend to say that the government was bound to accept the recommendations which were

made by the Board of Trade. I must at once dissent from that interpretation. It cannot be admitted that the government will simply fill the part of a mere recording clerk for the Board of Trade. When recommendations are made to the government by the Board of Trade, the government is bound to consider the fitness of the persons proposed, but naturally would accept those recommendations unless there was cause to the contrary. At all events, that is the interpretation we have given to the statute, and I think that interpretation will be accepted by parliament. In this case the recommendations made by Toronto were accepted without dissent. So were the recommendations made by Winnipeg. But some dissent was expressed to the recommendations made by the Montreal Board of Trade. I do not mean that the fact that Messrs. Carruthers and Metcalfe were passed over would indicate anything against those gentlemen. I do not think it would be fair to imply or accept anything of that kind. But the Minister of Trade and Commerce informs me that these gentlemen have been passed over for good and sufficient reasons, which will appear upon the face of the papers when they are brought down.

STEAMSHIP COLD STORAGE—THERMOGRAPH RECORDS.

Mr. HENDERSON (Halton) moved :

For copies of all thermograph records of temperature taken on board Atlantic steamships during the calendar year 1903, stating : (1) name of steamship ; (2) date when thermograph was put in chamber ; (3) date when the steamer left the report ; (4) whether chamber was (a) cold storage ; (b) cool air ; (c) mechanically ventilated ; (d) ordinary, or whether the record was taken on deck or other place where the natural temperature of the air would be registered, unexposed to the sun's rays ; (5) where practicable, in what part of the chamber the thermograph was placed.

Sir WILFRID LAURIER (Prime Minister). There is no objection to the motion, but I understand that it will take a very long time to prepare this return.

Mr. HENDERSON. This information was moved for last year, and was brought down. But it is not in the possession of the clerk of routine and records—it is not available to members of the House. I am under the impression that the whole matter is in the hands of the Department of Agriculture.

Motion agreed to.

FREIGHT AND STORAGE CHARGES—SYDNEY INTERCOLONIAL RAILWAY STATION.

Mr. A. MARTIN (Queen's) moved :

For a return showing in detail all the collections for freight and storage at Sydney Intercolonial Railway station for 1900, 1901, 1902, 1903 and 1904 ; giving the names of shippers and consignees ; a description of the merchandise ; where from ; weight of each package : the amount received for storage, and from whom. Also a reference to the authority under which storage has been collected ; the rate, and by whom fixed. Also any refunds for freight and storage, and to whom paid.

Sir WILFRID LAURIER (Prime Minister). I am informed by the Railway Department that it is not customary to furnish such information as is asked for by this motion. It involves private business. Moreover, I am informed it will take almost a year to prepare such a return. I would advise my hon. friend (Mr. A. Martin) to allow the matter to stand and have a conference with the Minister of Railways. Perhaps the minister can give the hon. gentleman the information he wants.

Mr. A. MARTIN. The reason I have moved for this return is that I have received letters from parties, who complain that there is discrimination in freight and storage charges, some parties being charged more than others. I do not know any other way to get that information. If the order is too large, perhaps we might shorten it by making it apply only to one year.

Sir WILFRID LAURIER. If my hon. friend were to have a conference with the Minister of Railways, perhaps they could agree upon a form in which the motion could be carried.

On motion of Mr. Clements, the debate was adjourned.

BOUNDARIES OF MANITOBA.

Mr. W. J. ROCHE (Marquette) moved :

For copies of all petitions, memorials and resolutions from the legislative assembly of Manitoba, the executive of that province, and any correspondence relative to the extension of the boundaries of Manitoba to the west or north.

Sir WILFRID LAURIER. I would ask my hon. friend not to move this to-day. The correspondence is not complete yet, but it may be completed next Monday. Allow it to stand.

Mr. W. F. MACLEAN. If any correspondence is received between now and then, will that be included ?

Sir WILFRID LAURIER. Yes.

Mr. HAGGART. I suppose we will have it before the discussion of the Bills ?

Sir WILFRID LAURIER. I do not see any connection at all between the Bill now before the House and this question regarding the province of Manitoba, I cannot see that they have any relation whatever. It is intended to have the correspondence complete as soon as possible, probably this week.

Mr. W. F. MACLEAN. Is it not a fact that the province of Manitoba has asked some of this very territory which it is now proposed to include in Saskatchewan ?

Sir WILFRID LAURIER. Yes.

Mr. W. F. MACLEAN. I think therefore the question is pertinent.

Sir WILFRID LAURIER. I do not think it is, because the legislature of the Northwest Territories has passed a resolution against such a grant of their territory.

Mr. W. J. ROCHE. They have also passed a resolution favouring the incorporation of a portion of that territory in the province of Manitoba.

Sir WILFRID LAURIER. Yes, and I can inform my hon. friend that this territory is not at all included in the boundaries of Saskatchewan.

Mr. HAGGART. The right hon. gentleman has introduced this very subject in his speech introducing the Bill.

Sir WILFRID LAURIER. Certainly, I introduced it to say that we could not grant the prayer of the province of Manitoba, because the province of Manitoba asked for a certain portion of the territories under the jurisdiction of the Northwest legislature, and the legislature had refused to grant such territory. At the same time, I stated there was a portion of territory north of Lake Winnipegosis and Lake Manitoba as to which the legislature had expressed no objection to granting it to Manitoba. But we have reserved this, it is not included in the boundaries of the new province. Therefore it has no relation at all.

Mr. W. F. MACLEAN. I still hold that Manitoba has an interest in the territories to the west, which are still territories and not provinces. Manitoba has been looking forward all along to acquiring them, and I believe the Minister of the Interior has made statements to that effect, that some day Manitoba might look forward to including a portion of the territory of Saskatchewan. I think correspondence of that character is in the possession of the government, and we ought to have it in connection with the new Bill.

Mr. SPEAKER. Stand.

COLD STORAGE OF FISH.

Mr. ALEXANDER MARTIN moved for :

A return showing the number and location, cost and earnings, of the cold storage establishments called 'bait freezers,' of maritime Canada ; together with the returns, duly certified, of all such institutions, since 1900 ; the names and the salaries of all superintendents, officials and keepers of same ; and the amounts in pounds of the different kinds of fish therein stored ; the amount of bait from them used by bona fide fishermen, and the names of the same; together with all such information as may permit of the thorough examination of the question of government assisted refrigerators.

Hon. RAYMOND PREFONTAINE. I must inform the hon. gentleman (Mr. A. Martin) that some of the documents he asks for cannot be laid on the table. I am informed that the names of the fishermen are not on record. I do not know what the latter part of his motion means. Of course, the government has no objection to producing whatever papers can be produced, but the latter part of his motion cannot be complied with. I might suggest to the hon. gentleman that he call at the Department and indicate what papers he desires to obtain. The Department will furnish him with a list of those that can be produced. Let the motion stand in the meantime.

MOTIONS AGREED TO WITHOUT DISCUSSION.

For a copy of the report of Mr. Matheson relating to the alleged fraud in payment of fishing bounties.—Mr. Ganong.

For copies of all correspondence, letters, reports, petitions, memoranda, in possession of the government, or any member or official thereof, relating to the location and erection of a railway station at Grand View, on the Murray Harbour branch of the Prince Edward Island Railway—Mr. A. Martin.

For a return showing the total number of officers, civil engineers and other employees now engaged in the surveys of the Transcontinental Railway, and works connected therewith, under the Transcontinental Railway Construction Commission ; the name and place of residence of each of the above persons at the time of his appointment ; and the functions and salaries of each of the above.—Mr. Gervais.

For a return showing the business done in the Exchequer Court of Canada, under its admiralty jurisdiction, since the Admiralty Act of 1891 came into force ; giving by districts, (1) the number of actions instituted ; (2a) the number of interlocutory applications, and (b) trials ; (3) the amount involved.—Mr. A. H. Clark.

LABOUR UNION LABELS.

House again in committee on Bill (No. 10) respecting Labour Union Labels.

On section 7,

Mr. GUTHRIE. When this Bill was last in committee, the question was on an amendment proposed by the hon. member for St. John and Iberville (Mr. L. P. Demers), to the effect that the word 'incorporated' should be inserted in subsection A of subsection 1 of the Act. That motion was not disposed of at the time the committee rose and asked leave to sit again. I would like to draw attention to that clause of the Bill before it is passed over, or before any other clause is taken up. Now objection was taken seriously by many members that a labour union or association acquiring rights under this Bill to register trade marks or designs of their own, were not amenable to the common law, or to the

law of the land, statutory or otherwise. The hon. member for St. John and Iberville cited in support of his contention the case known as the Metallic Roofing Company of Canada vs. The Local Union No. 30 Amalgamated Sheet Metal Workers, International Association, and others, which is reported in the Ontario Law Reports, volume 5, 1903. In that case it was certainly held by the Chief Justice, Sir William Meredith, that under the title of the Local Union No. 30 Amalgamated Sheet Metal Workers, the union could not be sued. That case however went to the Court of Appeal, where it was dealt with on the 23rd of January last, and the Court of Appeal distinctly held, in the case reported in the 'Ontario Weekly Reporter' of February 7th, 1905, at page 35, that while the union might not be sued under its title of Metallic Roofing Union, still it could be sued in a representative action; taking for instance the executive committee of the union and suing them on behalf of themselves or of all the members of the union. The decision of the Court of Appeal in Ontario in this respect is fully borne out by the case cited by the hon. member for Nanaimo (Mr. Smith) in introducing this motion, the case commonly known as the Taff Vale case, reported in 1 Appeal Cases, 1901. The learned law lords who decided it held that the union could be sued whether registered or unregistered, and I assume that registration in England is equivalent to incorporation in this country. For instance, Lord Macnaghten in deciding that case says:

> I have no doubt whatever that a trades union, whether registered or unregistered, may be sued in a representative action if the persons selected as defendants are persons who from their position may be taken fairly to represent the body.

The judgment of Lord Lindley in the same matter reads as follows:

> I have, myself, no doubt whatever that if the trades union could not be sued in this case in its registered name, some of its members (its executive committee) could be sued, on behalf of themselves and the other members of the society, and an injunction and damages could be obtained in a proper case in an action so framed.

I maintain therefore that whether registered or unregistered, incorporated or unincorporated the union is amenable to the laws of the land. There is no association, no union or no individual who can escape liability merely by means of the assumption of a name not registered or not incorporated. It is so in reference to many other associations. Take an ordinary club, a hockey club, a cricket club, a sporting club or a club of any kind unregistered and unincorporated; surely no one will argue that the law of the land cannot reach the membership of such a club in an ordinary action for damages or an action of tort or contract. They are all amenable to the law and the law will reach the members of any trades union. I might call the attention of the House to the fact that in the first section of this Bill the expression 'labour union' means 'any and every association of working men or of working women, or of working men and working women.' Two or more people may form such an association. All they would have to do would be to associate themselves either in writing or verbally, but, I suppose, for more precision it would be an association with some articles of agreement in writing. What does the Bill ask? The Bill asks that such an association be allowed to designate its own work. That is all. Employers have their trade marks and their registered designs. They apply them to their goods. They have property in these trade marks and these designs, but the labour union or organization asks for no such privilege. It simply asks that a stamp be placed on the articles manufactured to show that this article has been manufactured by a certain class of labour. That cannot deteriorate the value of the goods and the label cannot be placed on the goods without the consent of the manufacturers. There is a clause which I may say is somewhat objectionable in the Bill as drafted. It is the clause to which attention was called by the hon. member for South Lanark (Mr. Haggart)—clause 10. That reads as follows:

> Nothing in this Act contained shall enable any suit, action, garnishee, interpleader or other proceeding to be brought, had or maintained against a labour union, except for the purposes of this Act.

I do not think that clause, when properly read, is of any force or effect whatever. It gives no power to the union nor to any individual to seek redress against the union and I believe that the Bill would meet all that is asked for if that clause were eliminated. In consultation with various members of the Dominion Trades Congress they have stated to me that they will be quite satisfied if that clause of the Bill is eliminated. The elimination of that clause will do away with any question as to their liability or responsibility in a suit. I look upon this matter as a simple request from a large body of the working people of this country to have a designation of their own placed upon the goods which they make. Their object, in the first place, is certainly to determine their own goods. Their object in the second place is to prevent fraudulent labels being placed upon goods to deceive the public or to deceive themselves with the idea that these goods have been made under what we know as union conditions. There are people who will buy goods made by union labour and none other and they have the right to do so if they so desire. It enables those people to protect themselves in their purchases. The statement emanating from the Canadian Manufacturers' Association, which has been supplied to all

members, probably, of this House, to the effect that no fraudulent labels exist is untrue because fraudulent labels are placed on goods. I do not know who places them there, but I have seen several fraudulent labels that have been taken from goods and which were placed there to lead the public to believe that the goods were manufactured under union conditions, probably that they might meet with a more ready sale, when, as a matter of fact, the goods were made under non-union conditions. I submit, Mr. Chairman, that the question of incorporation is not a question which we have to deal with in this Bill at all. There is an Act of this parliament, chapter 131, of the Revised Statutes of Canada, which provides for the reigstration of trade unions known as the Trades Union Act. Some unions have become registered under that Act, but that Act does not in any way involve or affect the question which arises in the present Bill. This Act was passed in order to legalize certain transactions or agreements between certain members of the labour unions and their employers, which, but for this Act might have been looked upon as Acts against public policy and therefore void in the eye of the law. In order to meet that condition of things this Trades Union Act was passed, but this Trades Union Act or the registration under it is not at all affected or brought into the discussion of the Bill now before the committee. In reading the clauses of that Act you will find it applies to the funds of the union, to the property which they may hold and to actions which may be brought against them in respect of the property they may hold, but to say they should be registered under this Act or incorporated, as the amendment moved by the hon. member for St. John and Iberville (Mr. Demers) says, is to my mind an unnecessary provision. There is no provision in the Act for incorporation. There is no provision in any Act I know of for the incorporation of these unions. The unions do not ask for incorporation. They are now amenable to the law. Then why not grant them the small request which they ask, to place a label designating their own work upon the goods which they manufacture, which label can only be placed there with the consent of the employees. I am most heartily in sympathy with this measure, I think it should be passed without amendment, and that there should be no condition of registration or incorporation attached to it. There is no necessity for such a condition ; it only makes the law more cumbersome, more expensive, more involved for the unions who make a very very simple request to have their own labour properly designated.

Mr. ALEX. JOHNSTON. There is one thing to which I desire to call the attention of the hon. gentleman (Mr. Guthrie) who has just taken his seat. He has said that labour unions are not incorporated and do not seek incorporation; I desire to know what particular unions he refers to. Does he speak of the Dominion at large or of one particular province?

Mr. GUTHRIE. I know of no unions which are incorporated and which use labels. In fact I know of none which are incorporated unless they are registered under that Act in Canada.

Mr. ALEX. JOHNSTON. The object of my observation was to point out to my hon. friend that in Nova Scotia they have a labour union which has been in existence for a great many years, which has probably a better record than any other labour union in the whole Dominion—and I say this without any disparagement to the record of any other labour union—I refer to the Provincial Workmen's Association, to which nearly all miners engaged in coal mining in Nova Scotia and many others as well belong. This is an incorporated body; it has been incorporated for many years and not only is the parent order incorporated but nearly all the various lodges throughout the province of Nova Scotia are incorporated bodies in accordance with the laws of Nova Scotia. These are the facts so far as my own province, with which I am more particularly familiar, in matters respecting labour administration is concerned.

Mr. FITZPATRICK. For the sake of information I would ask the meaning of the provision here in subsection 3. We have the words :

The expression minister means the Minister of Agriculture——

I would like to know the meaning of the other words, included in the section.

——and does not include the deputy minister unless herein expressly provided.

Why are these words added?

Mr. RALPH SMITH. I do not see any object in the words myself. I was looking over the section and I think they could be eliminated.

Mr. FITZPATRICK. I think that would be better.

Mr. DEPUTY SPEAKER. Mr. Demers (St. John and Iberville) moves to add the words at clause 1, 'duly incorporated.' The clause would then read :

The expression labour union means any and every association of working men or of working women or of working men and working women, duly incorporated.

Mr. ARMSTRONG. The hon. member for South Wellington (Mr. Guthrie) has given us to understand that the unions at the present time are amenable to the law. If so, what would be the objection to their being incorporated ?

Mr. GUTHRIE. The only objection is that incorporation causes trouble and expense, and the unions do not ask to be incorporated. If they are amenable to the law, as I submit they are now, there is no object in incorporating them. They can be sued, their property seized and sold, and in the well known case of Krug and the Labour Union Committee at Berlin, they have been restrained by injunction. I maintain that all bodies are amenable to the law whether registered or incorporated or not.

Mr. RALPH SMITH. The statement of the Minister) of Justice (Mr. Fitzpatrick when the Bill was being considered in committee had, I have no doubt, something to do with prejudicing the minds of the members of the House. At page 709 of 'Hansard,' in answer to a question by the hon. member for West Toronto (Mr. Osler) the minister said :

> I must confess that I have looked only somewhat hastily over this Bill and I should be glad now if the promoter would point out to me any similar legislation in any country. There is no such legislation that I know of anywhere, and there are some provisions which it would be my duty to oppose when we reach them.

Now, Mr. Chairman, I made a statement on the second reading of this Bill that there were 41 states in the union that had legislation on this question. I did not make that statement without knowing that it was correct, but I have taken the trouble to go over the whole of the statutes of the different states and I have compiled a list, because it is a very important thing to know that for this legislation there is a precedent in so many states of the union. I find that my original statement was correct. The Minister of Justice may at any time see copies of the statutes which I have in my desk. Some of these have been enacted since 1888, and are actually operated to-day on the very principle of the provisions of this Bill. Another thing is that in not one of these states where this same legislation is operative, are the unions compelled to incorporate. There is no provision at all for their incorporation; in fact there is special provision in the state laws against the necessity for the incorporation of trades unions. I submit that the statement that if it was agreed that there was no such legislation in any other part of the world it would prejudice the consideration of this Bill. That is a great mistake as I have said. I have a list before me of similar Acts of the states of Alabama, California, Arizona, Colorado, Kentucky, Delaware, Florida, Georgia, Idaho, Illinois, Indiana, Iowa, Kansas, Louisiana, Maine, Maryland, Michigan, Massachusetts, Connecticut, Minnesota, Missouri, Montana, Nebraska, New Hampshire, New Jersey, New York, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Dakota, Tennessee, Texas, Virginia, Washington, West Virginia, Wisconsin. These laws are all operative under the very provisions of this legislation that we are now asking this House to pass, and in not one of these state laws is there any provision for incorporation. I mention that because I have no doubt that many members were anxious, and I think that the minister or any member of the House was perfectly right in wanting to know whether such legislation exists.

Mr. LANCASTER. Is the hon. gentleman sure that the organizations in the states he has named do not register under the State Laws ?

Mr. RALPH SMITH. There is a special provision in the Bill that it shall apply to unions unincorporated. I have made investigation into this matter and I presented this case to the men interested in this legislation. They do not want me to support this amendment; they do not see why they should not have the right to register a label without being compelled to enter into an incorporation, and I will be compelled to vote against this amendment.

Mr. HAGGART. I was listening attentively to the observations of the hon. gentlemen opposite. The evident object of the Bill, although I have not paid much attention to it, is to incorporate a body of men for a specific purpose; for the sole and only object of having a label. The hon. member says they are liable anyway under the common law. That is true. If a dozen or two individuals own a political paper in a county town and do not choose to incorporate, they are all liable to any person who brings an action against them; but how would you like to bring an action against five or six hundred members of a labour union or association?

Mr. RALPH SMITH. Bring the action against the officers.

Mr. HAGGART. You cannot bring an action against the officers.

Mr. RALPH SMITH. It has been done repeatedly.

Mr. HAGGART. If the objection to incorporation is the cost, why not register the association, which will cost only $2 or $5. I do not know what the object of the Bill is entirely ; but we all agree that if there is any benefit in the union label, the possessors of that label should receive the benefit ; but we do not intend to give them the benefit if they cannot be made liable under any counter action. Clause 10 of the Bill provides that nothing in this Act shall enable any suit to be brought against a labour union except for the purposes of this Act.

Mr. RALPH SMITH. We are willing to strike that out.

Mr. HAGGART. It may be, as the hon. gentleman states, that there is legislation

of this kind in thirty different states of the union ; but let him be certain that there is not in those states some simple system of registration or incorporation which may render unions liable. It seems anomalous legislation to give a union corporate entity for one purpose only—the purpose of owning and using a label. That is the objection I have to the Bill. I have no objection at all to the members of labour unions receiving the benefit of their skilled work, and drawing the attention of the public to it by using a label, but let them be in the position of all other corporations of being liable.

Mr. FITZPATRICK. When this Bill was under consideration before, I confessed my ignorance of any similar legislation in any other part of the world. I appreciate the fact that the hon. gentleman who introduced this Bill stated that there were thirty-one states in the union in which similar legislation existed ; he also stated that there was similar legislation in England. I cannot profess to be familiar with the laws of the various states of the union ; but as his statements surprised me somewhat, I asked him to be good enough to give me some reference to the states where I could find similar legislation. He did not do so ; but I find in a report of the labour bureau of Washington a statement of the labour laws of the different states. I have not examined the legislation closely ; but my impression, which is confirmed by the very book which my hon. friend has sent to me, is that in all of these states registration is necessary. My hon. friend says that a union can be sued through any member of the union ; but my hon. friend is aware that there is no such thing as a representative action in any province where the civil law prevails ; and, moreover, there is no known system of law under which a representative action can be taken in a penal case. If there is a penalty, there cannot be a representation ; it is contrary to the most elementary principle of criminal law. It seems to me that it was agreed, when this question was last considered, that the Bill should be made applicable to all incorporated associations and unions, and that it was allowed to stand over in order that I might amend those sections which would need to be amended in order to make it apply only to such. It has been said that there are no incorporated unions, but I know that the ship labourers' union of Quebec is incorporated.

Mr. DUNCAN ROSS. Does not the law of Indiana distinctly include unions, whether incorporated or unincorporated ?

Mr. FITZPATRICK. I have not seen that, but I find a paragraph requiring a statement to be filed with the Secretary of State, and requiring the persons who seek to file the registration to give the name of the union and the name of the chief official connected with it. Protection is provided for by those who may be improperly dealt with as a result of that legislation. It does not seem to me that there is anything of that sort in the Bill we have here.

Mr. GUTHRIE. I submit there is sufficient protection in this Bill.

Mr. HAGGART. What is the meaning of the word 'company?'

Mr. GUTHRIE. Voluntary association. The law of the state of New York does not provide in any way for incorporation. It says that a union or association of employees may adopt a device in the form of a label, &c., for the purpose of designating the pro- registration or incorporation. It does not provide for registration. The law of Kansas is almost identical. There is nothing in it about registration or incorporation. It provides that whenever any association or union of workingmen have adopted for their protection any label or trade mark announcing that the goods to which such labels are attached were manufactured by the members of such association or union, it shall be unlawful for any corporation to counterfeit or imitate such labels or trade marks. There is nothing there about incorporation or registration.

Mr. LANCASTER. Is it not a fact that in that very state no association can have any legal existence unless registered?

Mr. GUTHRIE. I have looked into that very question and I failed to find anything to compel any union or association to register.

Mr. DUNCAN ROSS. Let me read the law of Indiana :

> The label, wrapper, mark, name, brand, stamp or device used or intended to be used by any union or association of workingmen or women, or both, whether incorporated or unincorporated, for the purpose of designating such goods or merchandise as are the products of the labour of the members of such union or association, may be registered, as provided in this Act, and receive the protection herein provided for.

Amendment agreed to.

Sections 7, 8 and 9 carried.

Section 10 struck out.

Section 11 and 12 carried.

On section 13, label not to be attached without consent of owner of goods.

Mr. HYMAN. I move that this clause be amended by inserting the words 'in writing' after the word 'consent' in the third line.

Section as amended agreed to.

Mr. FITZPATRICK. Merely for information I would ask the promoter of the Bill what is meant by the sixth clause?

Mr. RALPH SMITH. When the Bill was put into my hands this clause was not

drafted. I explained to the men who wanted this legislation that perhaps a union, which had agreed with a company that a certain label should be used, might subsequently have difficulties with the company, and the company would have large quantities of stock on hand marked with that label. The manufacturer might not then be able to sell his goods unless this provision were put in for his protection. This protects his business from being interfered with on that account.

Mr. FITZPATRICK. In the event of an agreement being made between the employees and the manufacturers, that in consideration of their giving him the use of a label he should give them increased wages or shorter hours and they should subsequently withdraw his right to use the label, his obligation to pay the increased wages or give the decreased hours would continue.

Mr. RALPH SMITH. When a manufacturer enters into an agreement with a union the contract is a voluntary one and the manufacturer must provide for his protection when the contract is made.

Bill reported.

Mr. SPEAKER. When shall the Bill be read the third time ?

Some hon. MEMBERS. Now.

Some hon. MEMBERS. At the next sitting of the House.

Mr. LENNOX. It cannot be read the third time now.

Mr. RALPH SMITH. Has the hon. member (Mr. Lennox) any objection ?

Mr. LENNOX. Certainly I have.

Mr. RALPH SMITH. Let him state his objection.

Mr. SPEAKER. If there is objection taken the Bill cannot be read the third time.

Mr. HAGGART. Is the committee stage a stage of the Bill, or are the committee and third reading one stage ?

Hon. PETER WHITE. With reference to your ruling, Mr. Speaker, of course, I do not desire to call it in question at all, but I would point out to the House that the third reading of a Bill may be taken upon the same day upon which it is considered in Committee of the Whole, provided the House so decides. If the House decided that the third reading should be given to-day, that could be done.

Mr. W. F. MACLEAN. It does not require unanimous consent ?

Mr. WHITE. That is the point.

Sir WILFRID LAURIER. The rule is that two stages cannot be taken on the same day except by unanimous consent, but the committee stage is not a stage.

Mr. WHITE. What I wish to point out is that a Bill must have three separate readings on different days. But, when the committee stage is taken, the third reading may be taken when the House so decides. That is, the fact that a member objects does not prevent the third reading.

Mr. LENNOX. But a member can object and have the question voted on..

Mr. SPEAKER. Perhaps the matter had better be dealt with in that way.

Mr. RALPH SMITH moved the third reading of the Bill.

Motion agreed to, and Bill read the third time and passed.

RAILWAY ACT, 1903, AMENDMENT.

House went into Committee on Bill (No. 2), to amend the Railway Act, 1903.—Mr. Lancaster.

On section 1,

1. Section 227 of the Railway Act, 1903, is amended by striking out the word 'or' in the third line and substituting therefor the word 'and,' and by adding after the word 'expedient' at the end of the section the words 'but wherever in any such portion of a city, town or village a railway crosses a highway at rail-level, the said speed of ten miles an hour shall in no event be exceeded, unless the company provides, by a watchman or gates at such crossing, protection against approaching trains for persons using the highway.'

Hon. CHARLES FITZPATRICK (Minister of Justice). This Bill was referred, at my request, the last time it was before the House, to the Railway Committee. I understand it was considered there and that the committee reported against it. I cannot see how the House can do otherwise than support the committee.

Mr. E. A. LANCASTER (Lincoln and Niagara). I do not think the House is bound to support the committee, particularly if the committee did not do what was quite right in the matter. I might point out, to begin with, that the Bill did not go to the Railway Committee by the unanimous consent of the House. Several of us on this side protested and I think, rightly protested, that measures to change the public laws of the country should be dealt with on the floor of this House. Bills proposed by the government or by anybody with whom the government are in sympathy, or with whose legislation they are in sympathy, are dealt with on the floor of the House. Take for instance the Bill that has just passed. No one suggested that that should go to any committee. The Minister of Agriculture is the minister mentioned in the Bill, but no one suggested that it should go to his department for consideration. And quite right ; the Bill should be dealt with on the floor of this House. I will point out also that this House has never dealt with the merits of this Bill. Last ses-

sion it dealt with a Bill something like this, but more objectionable in the opinion of the railroads and the people supporting them. This Bill has not been dealt with, but was referred, against the arguments of those who promote it, to the Railway Committee. And it has been dealt with there, as those who opposed the sending of it there expected it would be, in a very curt and careless way. I think I can convince the minister that no such respect as he seems to think should be had for this Railway Committee in regard to a public Bill of this kind. And, the first reason is that, though the counsel for the railways acknowledged that an amendment to the law should be made, it was not made by the Railway Committee. Mr. Chrysler, for whom we waited for three weeks to come before that committee and tell us why this Bill ought not to pass, admitted, as proposed in the first part of this section, that the word 'or' should be struck out and the work 'and' inserted. Yet, the Railway Committee did not do this. They did, I suppose, what they thought they were expected to do, and decided to report against the Bill. The government sent the Bill there, and I suppose the committee thought they sent it for that purpose. I am within the judgment of hon. members who were present in that committee when I say that the counsel for the railways made a very poor argument in support of the case of the railways and against the people, and that he was obliged to concede that the word in the section should be 'and,' not 'or.' That arose in this way: The Act provides that the track shall be fenced or protected. Everybody knows that it should be both fenced and protected, because the Supreme Court has decided—as hon. members have heard stated pretty often—that 'fencing' is fencing against adjoining owners, and has nothing to do with the highway. The section here proposed is to preserve the rights of travellers upon the highway—if the word 'traveller' is the right word to use;—the people who are properly, and in the exercise of their just rights, using the highway. 'Fencing' has nothing to do with this. It would have to do with protecting the track along the property of adjoining owners, with a view to keeping cattle off the tracks. The counsel for the railways had to frankly admit—if that can be called a frank admission which is dragged out of one—that the law ought to be changed, that this had nothing to do with fencing at the highway, and that even if there was an order of the Railway Commission for the protection of the highway, the railway companies could evade it because they have to fence 'or' protect, not fence 'and' protect. They have to fence against adjoining owners and then protect as the Railway Commission orders. I hope we shall not be obliged to confuse the two matters covered by this section. We ought to consider separately the first portion and strike out the word 'or' and insert the word 'and.' I do not know whether the minister would desire me to go on with the discussion of the other matter, or whether he will consent to deal at once with what I have suggested.

Mr. FITZPATRICK. I think the matter was referred to in the committee and was discussed, though I was not present in the committee. But I would like to see the decision of the committee approved of by the House.

Mr. LANCASTER. What the committee did was this: One gentleman after another spoke on the measure, there was a full hearing, and in the course of his remarks Mr. Chrysler made that admission. Then the chairman of the Railway Committee said, let us discuss the rest of the Bill first. Finally the chairman of the committee put the question as to whether the preamble should be adopted, some of us said, yes and some said, no, and he thinking that more said no than said yes, and the yeas and nays being called for, the preamble was declared lost. Then the committee reported here that they recommended that the Bill be not passed. I am not finding fault with what the committee did on that point of changing "or" to "and" in the way they had the Bill before them. But what I insist on is that public Bills should be dealt with in this House and not sent to this committee, which is a mere cul de sac, as I have said, a place that leads nowhere. The fact that we went into Committee of the House upon this Bill to-day without any order having been made about it on the paper, is proof of what I say that public Bills must be dealt with on the floor of this House. However, I do not want to be discourteous to the Minister of Justice, but I am saying what I said in the Railway Committee. But the Minister of Justice seems to think that simply because a committee reported against this Bill we should adopt that report. Let me ask him where that will put us. Parliament requires that public Bills affecting the laws of the country shall be dealt with in committee, in Committee of the Whole House prima facie. Now what is the use of sending a Bill to a special committee and then to sit here like so many wooden men, and say that we have nothing to do with it, having sent it to a committee—it is true, it is not the right place to send it, but we thought there was a special reason why it should go there, being a Bill affecting railway corporations, we thought they had a right to be heard, and so we sent it there that the committee might have plenty of opportunity to know what the railways thought about it. But having done that, we must now sit still in this House and adopt the report made by that committee and never scan it at all. Let me point out this to the Minister of Justice, very little attention is paid to these public Bills when they go into the Railway Committee, because

everybody knows that the Bill is going to be slaughtered when it gets there. In the Railway Committee twenty-three members voted for this Bill and sixty-one voted against it, not half the Railway Committee, not one-third of this House, not one-third of the members of this House voted against this Bill. The Minister of Justice may say, why did only twenty-three vote for it ? Let me tell him that more than twice as many voted against sending it to the Railway Committee, the members of this House did not want it to go to the Railway Committee, and a good many more of them voted that we should not send it to the Railway Committee than bothered about attending to it in the Railway Committee.

Now what is this ? This is changing a public law. The argument against this Bill in the Railway Committee was limited to this ; when counsel for the railways thought that we should deal with every individual case separately and on its merits, on the ground that the individual cases were distinct, that no two were alike. You would have had to deal separately with each question of a railway crossing. You would have thought from his argument that this Bill applied to all railway crossings in Canada, while as a matter of fact it is limited to a very small proportion of railway crossings. But the secret of the matter is this : The Railway Commission sits there as a court deciding these cases as a judge would, and the municipality is put to the expense of a law suit with regard to every crossing. The railways know very well that municipalities will therefore make as few applications as they possibly can. More than that, the cat was let out of the bag by the gentleman appearing on behalf of the railways when he said that my Bill was mischievous because it made the company pay the expense of this protection, even if it was necessary, Mischievous ! Mischievous for any representative of the people in this House to contend that when a railway creates a dangerous condition which did not exist until the railway went there, the railway should be at the expense of minimizing that danger as much as possible. That is the sort of language we hear in the Railway Committee. No hon. gentleman in this House would dare to say it was mischievous legislation. But the counsel employed by the railway companies who go to that committee, where we are sent against our will, when we are advocating a change of the law in the interests of the people says that the legislation is mischievous. When we ask him wherein the mischief lies he says because it puts all the expense upon the company. He does not conceive that the municipalities suffer any injury at all. My Bill is limited to tracks running on a rail level, my Bill is limited to cases where danger is created by the company. The municipalities are the original proprietors, the railway company is only a licensee paying no rent to the municipality. Prima facia, the municipality has a right to that highway, they use it for public purposes. My Bill however was limited to cases where danger is created by the company, who have the option if they wish, but think they ought not to be put to this expense, of making a bridge or of passing underneath through a tunnel. But because it is of more expense to them to go over by a bridge or underneath through a tunnel, and because they wish to avoid that greater expense, they characterize as mischievous the legislation proposed by an hon. member of this House making them liable for the danger they create. We are told it is mischievous to say that a railway should be held responsible for a danger that did not exist before the railway went there, notwithstanding that the railway is allowed to run freely in the interests of colonization, notwithstanding that the municipality is not allowed to say whether it shall cross their highway or not—realizing that in the interest of the country you must allow them to run on a level, more or less. If they run on the level, it is because it is to their own interest, and because they can run there for nothing, without being at the expense of making bridges or tunnels, and having a law changed which existed since 1857, and which involved the principle of declaring that in this particular class of cases they shall not exceed ten miles an hour without furnishing protection. Yet when anybody goes there and says this principle should be put into practice, this legislation should be passed—because by a decision of the Supreme Court it amounts to nothing as it stands—the argument of the Minister of Railways opposing this measure in the Railway Committee was that it was not necessary to have this amendment—he did not say so, but his argument was that the section was not necessary. His argument was that it was not necessary to have this section, He said that the Railway Commission, under other sections of the Railway Act, can deal with these matters as individual cases and that it is not necessary to deal with the thickly peopled portions of cities, towns and villages where the track runs at the level of the highway as a general thing. But, while he said that he did not suggest striking out the section. The section which I am amending says that there should be a different state of affairs in respect to thickly peopled portions of cities, towns and villages. The section that I seek to amend reads as follows, and there has been a provision of this nature in the law since 1857 :

> No train shall pass in or through any thickly peopled portion of any city, town or village, at a speed greater than ten miles an hour, unless the track is fenced or properly protected in the manner prescribed by this Act.

In 1903, we added some words to make sure that the Railway Commission would still have power which they have under the

other sections of the Act. By the other sections of the Act, as pointed out by the hon. Minister of Railways and Canals, the Railway Commission can deal with all these cases individually and he suggested—and counsel for the railways made the same suggestion—that they could deal with a certain class of cases that might be more dangerous than others. But, it never struck the hon. minister that I am now dealing with a certain class of cases of a peculiarly dangerous character, and that my proposed legislation is limited to these cases. Since 1857, parliament has thought that there should be a limitation imposed in regard to thickly peopled portions of cities, towns and villages. The Supreme Court, having decided that fencing meant fencing against adjoining owners of the track and that that was enough where the Railway Commission had not ordered a special protection, it is open to some of us in this House to provide either that the Supreme Court decision shall no longer apply, but that there shall be some general protection provided in the class of cases mentioned in the section, something that you do not have to go to the Railway Commission for particularly, or else strike out the section. If I believed what the hon. Minister of Railways and Canals contends for, I would move to strike out that section. But I do not admit that we should not have that special protection without having to ask for it in every case from the Railway Commission, and therefore I want to amend the section and make it practicable. If I am wrong in my view, this section should be struck out because in the view of the hon. Minister of Railways and Canals it is not necessary for the reason that you can get all you want individually from the Railway Commission, that having put into the Act some other sections which give you the power to go to the Railway Commission and get a special order in these particular cases you do not need this particular law. You do need it if you are not going to have a special suit against every railway in every case. Things are said in the Railway Committee by counsel for the railways that no one would say in this House. It was said there that all you had to do was to write a letter and the Railway Commission to make a special order in some particular case and they would make it. The Railway Commission have not been very well organized since they were established. They have not broken their backs in getting away with the work that has been put upon them since 1903. They have not made a great deal of progress in dealing with matters before them but they have made enough progress to issue a lot of hard and fast rules governing every poor man who goes there to get his rights. You cannot approach them under these rules which I hold in my hand unless you come according to the etiquete there laid down and yet we listened in the Railway Committee of this House to such statements as this: All you have to do is to write a letter. The rules of the High Court of Justice of Ontario are no more technical than these are. You have to state your claim in the same way, you have to prove service, wait for an answer and reply to that answer. You have the Exchequer Court practically so far as practice goes and in so far as every one of these crossings is concerned. Then, it is stated that there should be some rights in regard to this particular class of cases in all cities, towns and villages, and I invite the hon. Minister of Justice (Mr. Fitzpatrick) to seriously consider whether he is properly acting as Minister of Justice in this matter in assisting the hon. Minister of Railways and Canals or the railway corporations in frustrating legislation of this kind. Some remedy is required. It does not do to have the people of the small municipalities, the cities, towns or villages of this country obliged to go and make a special application in regard to each particular crossing to the Railway Commission. These cases are all alike. I point out again to the hon. Minister of Railways and Canals that the Bill which I introduced last year has been altered in two important particulars. Objection was taken to the Bill which I introduced last year because the Bill covered the incorporated limits of cities, towns and villages instead of being limited to thickly peopled parts. I have limited the Bill now before the House. Last year the Bill was objected to because I limited the protection required to watchmen, it being held that gates might be a better protection than watchmen. I have conceded that point. I have complied with two out of the three objections raised. Then there arises what I might call a constitutional question as to whether the people are to have their rights on the highways declared by parliament, by people who are entrusted with that question, or whether such legislation is to be delegated to a Board of Railway Commissioners who are not elected by the people and who are not responsible except to the government who appoint them. Under these circumstances I think the hon. Minister of Justice might suggest some way in which that could be accomplished if he thinks it can be accomplished in any better way than under this amendment. If he thinks it fair that there should be protection afforded to these people does he think it is fair that in respect to every little crossing in every little town coming within the certain limited class that I have described, you should have to make a special application to this Railway Commission and be subjected there to what?—to what counsel for the railway companies suggested, an order being made that this House would never make and which it could hardly constitutionally make that the municipalities should pay part of the expense.

Railways incorporated and built under the law indicating to everybody that they are properly protected in some way where they cross the highway at rail level in thickly peopled portions of cities, towns and villages, and the Railway Commission not elected by the people, having no general power to amend the law would be practically changing the law by saying that as parliament does not deal with that question, as parliament does not insist that this matter must be carried out, we do not suppose that parliament is unanimous in the opinion that the people have the rights that are contended for and we will say, seeing that parliament votes down a Bill of that kind, that they have as much right to pay part of the expense as the railway has. As the right hon. Prime Minister (Sir Wilfrid Laurier) is in the House and knowing that he cannot always be here in the evenings—I am not finding fault with him because he cannot always be here in the evenings—I would like to ask him if he does not think some remedy for the existing condition of things should be carried through by this parliament.

Rt. Hon. Sir WILFRID LAURIER. All I have to say to my hon. friend is that rightly or wrongly this matter has been referred to the Railway Committee and the Railway Committee has passed upon it. I may say that the invariable rule of the House is to adopt the report of its committees, unless there are strong reasons shown to the contrary.

Mr. LANCASTER. Is not that limited to private Bills ?

Sir WILFRID LAURIER. I see no reason why the same rule should not apply to public Bills. If a Bill is of such a character that the House thinks it advisable or proper that it should be referred to a committee of the House and the committee reports upon it, it would be expected that it would adopt the report of such committee. I cannot see any reason why there should be a difference in this respect between a public Bill and a private Bill. Whether it be a private Bill or a public bill, the moment the House has thought proper to refer it to a committee, the rule has been that the House should abide by the decision of the committee. It is not binding upon us; we can do the reverse, but it is a safe rule.

Mr. LANCASTER. What about the merits of this Bill?

Sir WILFRID LAURIER. The merits of the Bill were dealt with by the committee to which it was referred.

Mr. HAGGART. It is about six o'clock and as this is almost the last order of a private nature that is on the paper, and as we could hardly conclude the discussion on it to-night even if we did come back, I do not see the absolute necessity of calling us together to-night. I suppose the government are not ready with any of their work to go on.

Sir WILFRID LAURIER. Oh, yes, we are always ready. This is a private member's day, and if there is a desire on the opposition side to adjourn I have no objection. I move that the committee rise, report progress and ask leave to sit again.

Motion agreed to and progress reported.

Mr. W. F. MACLEAN. Is the House not going to sit to-night?

Sir WILFRID LAURIER. I understand that is the wish on the opposite side of the House, for a very laudable object, that there should be no sitting of the House, and I therefore move that the House do now adjourn.

Motion agreed to, and House adjourned at six p.m.

HOUSE OF COMMONS.

TUESDAY, February 28, 1905.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 83) respecting the Alberta Railway and Irrigation Company.—Mr. Turriff.

Bill (No. 84) respecting the Huron and Erie Loan and Savings Company.—Mr. Calvert.

Bill (No. 85) respecting the Bay of Quinté Railway Company.—Mr. Harty.

NORTHWEST TERRITORIES AUTONOMY BILL.

Mr. SPROULE. I desire to ask the right hon. the First Minister if any special instructions have been given regarding the number of Autonomy Bills to be printed ? We received one each this morning, and were informed that we could not get any more. It is very desirable that a large number should be printed, because there are many applications for them.

Sir WILFRID LAURIER. The government have no objections to printing a sufficient number.

INSPECTION AND SALE OF SEEDS.

House in committee on Bill (No. 7) respecting the inspection and sale of seeds.—Mr. Fisher.

Hon. SYDNEY FISHER (Minister of Agriculture). When this Bill was before the committee last, some hon. gentlemen took the ground that clause 11 went further than my explanation of what I considered

to be its purpose. I said I would submit their suggestions to the Department of Justice, and asked the officials to draft a clause which would meet the requirements which seemed to be in accord with my intentions and the views of the committee. They suggested a change in clause 11 and also the insertion of two words in clause 10. I move therefore that in clause 10, on the fourth line, after the words 'which he has reason to,' the word 'suspect' be added.

Amendment agreed to.

On section 10—examination of seeds—payment of samples—penalty for preventing examination.

Mr. LENNOX. The minister changed the penalty under this Bill to a large extent, but the penalty in this clause still remains. It provides for a penalty 'not exceeding $500.' I do not know whether the attention of the minister has been directed to that point, but I would suggest that this is a very large penalty, particularly having regard to the minister's own suggestion that the penalty should be made very moderate at the beginning. I am not going to argue the matter but simply call attention to it.

Mr. FISHER. I would point out that this is not a penalty for the contravention of the Act, but for obstructing an officer in the enforcement of the Act. I think that an offence of that kind may require a much heavier penalty than would an ordinary offence against the Act.

Mr. LENNOX. I agree with that; but, at the same time, I think that while the Act is new it may happen that when parties enter premises bona fide to carry out the purposes of the Act, those in charge, not having been educated to the new condition of things, may, to some extent obstruct the officer, yet without causing very great inconvenience. As this Bill is educative, as the minister has said, I think that a penalty of less than $500 would accomplish all the purposes sought to be accomplished.

Mr. FISHER. It would be only in flagrant cases that a penalty of $500 would be imposed by the court. The range of the penalty is from $25 to $500; and I think we might leave the discretion with the magistrate.

On section 11,

Any inspector, informant or complainant who finds or has good reason to suspect seeds to be sold, or offered, exposed or had in possession for sale for the purpose of seeding in violation of the provisions of this Act, shall take a sample from the said seeds and forward it to such person as the Governor in Council appoints as an official seed analyst to examine and report upon any seed submitted for analysis under the provisions of this Act.

Mr. FISHER. I wish to amend this section. It will be remembered that the hon. member for South Simcoe (Mr. Lennox) and others, thought the clause went further than the intention as declared by me and as desired by the committee. I submitted that question to the Department of Justice, and they suggested certain changes which, I think, meet the view of those who objected, and certainly cause the section to express more clearly what I desire. The section as I propose to amend it will read:

Any purchaser of seeds with respect to which he has reason to suspect or believe that any provision of this Act has been violated, or any person charged with the enforcement of this Act at his request may take a sample from the seeds and forward it to such person——

And so on as in the section already printed. That removes any doubt as to who may take this sample of seeds, and puts the section in the form which, I think, we practically all agree it ought to have.

Mr. LENNOX. That covers one point very well indeed. But there is another point that, probably, has been lost sight of. The minister will notice that, under section 10, where the official charged with the enforcement of the Act may take samples, there is a provision for payment; and it was urged, when we dere discussing section 11, that there should be similar provision here. That was mentioned when the matter first came up, but, probably, was not adverted to when we subsequently discussed this section. As regards the question of the purchaser taking a sample, the amendment seems to completely overcome the difficulty. But, as regards the person engaged in the enforcement of the Act, there is no provision that he should be entitled to take a sample only upon paying for it. I think that principle should be embodied here, as it has been in section 10.

Mr. FITZPATRICK. It seems to me that the conditions under section 10 and under section 11 are different. The person charged with the enforcement of the Act goes into premises to see whether the seed kept there is tainted, and takes a sample. There is nothing to suggest impropriety on the part of anybody. But, in the case of section 11, the purchaser complains, practically, that he has been defrauded, that the seed sold to him is not up to the standard set by the Act, and he asks the person charged with the enforcement of the Act to take a sample. There seems to me no reason why that person should be compelled to pay for the seeds.

Mr. LENNOX. Evidently, I have not made myself understood. What I have said does not apply to the purchaser—he takes a sample from his own lot of seed. But I call the attention of the Minister of Agriculture and of the Minister of Justice (Mr. Fitzpatrick) to the fact that, under section 10, any person charged with the enforcement of the Act may enter premises and take samples from any sack and so on, for

which sample the owner shall be paid at the current value of the seed. I do not see why if you pay in one case, you should not pay in the other. The conditions are exactly similar. With regard to the person who purchases the seed, of course there is no necessity ; but when you come to deal with the person going in and taking samples under section 11, he should be placed on the same basis as the person charged with the enforcement of the Act under section 10.

Mr. FISHER. From my understanding of the wording of the clause, I think it is clear that the sample would be taken from the seeds purchased, and would be done by the inspector at the request of the purchaser. I move to amend section 11 so that it should read as follows, after striking out the first four lines.

Any purchaser of seeds, with respect to which he has reason to suspect or believe that any provision of this Act has been violated, or any person charged with the enforcement of this Act, at his request, may take a sample from the said seeds and forward it to such person as the Governor in Council appoints as an official seed analyst, to examine and report upon any seed submitted for analysis under the provisions of this Act.

Amedment agreed to.

On section 12,

Mr. FISHER moved :

To add after the words ' inspector, informant or complainant ' the words ' person taking the same.'

Mr. LENNOX. I have not got anything of that kind in my Bill and some of my friends are in the same position. I suppose it has been reprinted ?

Mr. FISHER. I think the reprint has been distributed. ' Person taking the same ' is a description which would cover exactly what has been provided.

Amendment agreed to.

Mr. BOYCE. I desire to draw attention to section 17 where it says that the Governor in Council may make such regulations as he thinks necessary in order to secure the efficient enforcement of the provisions of this Act, and may impose penalities not exceeding $50 on any person offending against it. Is that not contradictory of section 8 and section 10? Might there not be an Order in Council inconsistent with the Act ?

Mr. FISHER. An Order in Council could not conflict with the provisions of the Act, it would have to comply with the provisions of the Act.

Mr. BOYCE. What would be the object of having an Order in Council providing for penalities where specified penalties are provided for by the Act?

Mr. FISHER. The Order in Council providing penalities would have to be for penalties not provided by the Act, but they could not be inconsistent with the others so provided.

Mr. BOYCE. Would it not be better instead of having penalities provided by Order in Council for something not specified in the statute, to have a general clause providing for cases not otherwise provided for by the Act?

Mr. FISHER. It is the usual procedure, when power is given for the making of regulations and rules—within certain limits which are here fixed—to allow the Order in Council to provide the penalties. That is the usual practice in other Acts, and I think it would be as well to comply with that practice here.

Mr. BOYCE. I would point out that this is a penalty and a quasi criminal proceeding and one is entitled to know on the face of the statute the penalty for such and such an offence. Under section 8, the limit of the penalty is defined ; then under section 10, which as the minister points out is not for an infraction of the Act, but the obstruction of an officer, the limit of the penality is defined, but then we have a limit here to be defined by something not contained in the statute, namely : a penalty to be provided by Order in Council so it would not appear upon the face of the statute with respect to the infraction of clauses penal in their nature. What the penalty is to be, except that there is a limit to the penalty for the infraction of these clauses is not defined. I would submit to the minister that it would be better to have this in a separate clause than to have the penalties dependent on an Order in Council as for instance, in the Criminal Code or the Summary Convictions Act, where penalties are provided for any other infraction of the Act not otherwise specially provided.

Mr. FISHER. These regulations are not in the Act. The rules and regulations are to be provided by Order in Council and the penalties for the infraction of them are also to be governed by Order in Council. There is a limit ; the Act says that the penalty should not exceed $50. The amount of the fine or the penalty would no doubt be increased in accordance with the gravity of the offence. The Act leaves to the Order in Council the making of the regulations and also leaves, within certain limits—the maximum fine being $50—the amount of the penalty. If we were to undertake in the Act to give the penalties we would encounter many difficulties, because the rules and regulations would differ from time to time and the penalty should differ with them. Therefore I think it is better to leave the penalties for the Order in Council as well as the rules and regulations, and I assure my hon. friend that that is quite in accordance with other Acts where the rules and regulations are fixed.

Mr. BOYCE. I may be very far astray but it looks to me as if this Act provided for every known case of infraction of the Act, and it seems a somewhat dubious proposition in connection with the enforcement of this Act for any person to have to consider that there may be offences created, that they may be offending against provisions of this Act of which they have no knowledge whatever, which may be contained in some Order in Council of comparatively recent date. The Order in Council will provide for an offence which the Act does not specially declare to be an offence. That is the danger that I would point out to the minister, that there may be an offence against the rules and regulations and a penalty attached to that offence which does not constitute a part of the Act.

Mr. FISHER. I think experience will teach that we may well leave it in the hands of Council.

Mr. COCKSHUTT. Before the Bill is reported I wish to say that I have had great difficulty in hearing the remarks of the hon. gentleman (Mr. Fisher) to-day. Several amendments, very important amendments no doubt, have been moved, but I have been entirely unable to follow even the wording of the amendments much less to follow the discussion on them. It may be strictly parliamentary, but it is not very edifying that we cannot follow the debate. I have in my hands a very voluminous correspondence on this question occupying a great many pages that I would have liked to have had an opportunity of submitting to the House, so that the gentlemen whose views have been entrusted to me might have been represented, but I could not see any place in the discussion where I could bring them in properly. The amendments suggested have been very far reaching, and I think the matter should not be rushed through in that way without giving hon. gentlemen an opportunity of finding out what the amendments are.

Mr. SAM. HUGHES. Now that the Minister of Justice is in his place I propose reading a letter addressed to the hon. member for Brantford (Mr. Cockshutt) from a gentleman in the riding I have the honour to represent. I may say at the outset that he is a very prominent Liberal and, I think is the best seed man in the Dominion of Canada. I shall ask the attention of the Minister of Justice to some points which he makes, in the hope that his broad sense of justice and knowledge of law shall induce him to take hold of the matter and have this Bill put in something like fair-play shape. The letter is from Mr. A. O. Hogg and is as follows :

Oakwood, Ont., Feb. 23rd, 1905.

It is not British justice that two men doing the same act one is allowed to go free and the other is punished. In reference to clause 3, we do not want to do any boasting whatever, but if you will make inquiries from people in the trade you will find that the statement we make will be verified, which is, that our firm has perhaps better equipment than any other firm in Canada for the handling, cleaning, storing and distribution of grain for seed purposes. We have made it a special feature of our business for eighteen years and we think we are situated in as good a section of country, with as high a class of intelligent farmers as can be found in Ontario. In corroboration of this, the four farms immediately surrounding our elevators at Mariposa would sell in the open market to-day for from $95 to $100 per acre, and one of these farms sold last week at $100 per acre, and many farms are of equal value, and the reason that these are so valuable is that they are specially adapted for growing high class cereals and clover seeds. One farm not two miles from our warehouse here has changed hands twice within the last two years at $105 per acre, and upon this farm we have had grown on contract grain for seed purposes, and we have no hesitation whatever in saying that it is utterly impossible to procure sufficient grain for seed that will comply with clause 3 of the Act. You will notice that this clause requires absolute purity unless you wish to plaster your bags with all kinds of weed seeds which may or may not be in the grain, but it would not be safe to sell it without putting them on, and though you had sold a man an assorted carload of seed grain by actual sample, have you any idea as a practical business man that when he received his carload and found the grain exactly like the samples, but with the bags branded with all these kinds of weed names, that he would not refuse to accept the goods, and yet it would not be safe for the dealer to ship the goods without all this disfiguring the bags with branding. Clause 5, however, may be a redeeming feature, as you will note that the government may pass regulations allowing a certain percentage of impurity and still allow it to be called pure, and yet when you come to clause 6 no matter how much branding you do, it is simply illegal to sell cereals, clover or timothy seeds with a mixture of more than five weed seeds to 1,000, and we want to say that there is not one firm in fifty in Ontario that can produce cereals that will pass this rigid section, and if the farmers cannot grow it how can the dealers supply the demand ? We have paid the farmers a bonus above the ordinary price of grain to induce them to use their best fields and give their best attention to produce cereals for seed.

Much stress has been laid on the cost of cleaning apparatus for handling seed. Might say that the cost of machines used exclusively for cleaning clover and grain for seed purposes by our firm cost over $2,000, and this does not include any machines or power for running them. The elevator we use for seed purposes cost over $10,000, in addition to machines, and it is specially built. All the planking in the bins having been planed on the four sides so as to have a perfectly smooth surface for the walls so that it is impossible for grain to get mixed. Now, what is the use of talking such nonsense as to say that $800 will put in a cleaning equipment ? What is the use of the cleaners without the power and building to handle the stuff in ? We export large quantities of clover seed and handle a good deal in Canada, and the department seems to overlook the fact that one of the essential things in handling clover seed, as you well know, is that if you sell a man say 200 bags of clover seed of a certain

grade he will throw it on your hands unless you have every bag of exactly uniform quality. To obtain this requires an additional equipment to cleaning machinery.

I would like the minister to catch these words: I will read them again.

To obtain this requires an additional equipment to cleaning machinery.

As the Bill first read, on a car of oats containing say 400 sacks the minimum fine would have been $2,000, but clause 8 now reads that the minimum fine for a transaction shall be $5. If you can induce them to allow some such margin of percentage as the difference between clause 8 and what it previously was in allowing impurities in cereals and clover seeds without the necessity of branding the bags, you will have accomplished a good deal for the seed trade and also of the farmers who produce seeds in Ontario.

We have taken the trouble to figure up our total purchases of grain at our twelve different buying points last year, and in addition to the grain grown on contract for seed purposes, each of our buyers has instructions to select any farmers' lots that are sufficiently clean and known to be true to name for seed purposes, and last season out of the total quantity of grain received by us only nine and a half per cent of the receipts were considered fit for seed purposes, without any legislation, and unless clause 5 will allow as much latitude as clause 6 provides and still be called pure we are quite satisfied that not one per cent of the grain purchased at our twelve points will grade No. 1 under the Act.

I may tell the minister that this district has no rival in the Dominion of Canada for clean farms.

Bonus growing.—Farmers last year received from our firm alone a bonus of over $2,000 above the ordinary market value of grain on the nine and a half per cent of our receipts used for seed purposes, and we feel that we have done a great deal more to bring about the demand for good quality clean seed grain than any legislation can do, and if the effect of this legislation to-day is to prohibit what has been done, it must be borne in mind that the growers of the grain who are the farmers, who do not go into the business on their own account, will be the losers as well as the firms engaged in the trade. Statements made in House of samples of cereals shown in the seed laboratory that the Bill as it stands, are not correct. Only one sample shown would be prohibited under clause 6, but we wish to call your attention to the fact that on the analysis made in the laboratory only one, or two of the twenty odd samples shown would be allowed to grade No. 1 under clause 3 till we know what provision clause 5 will allow, and we think it absolutely unfair that this argument should be used when it is not in accordance with the facts, as it is well known by all present on the deputation that the samples shown of cereals, were our samples.

If the statements contained in this letter are questioned, and it is necessary, we give you authority to use our name to corroborate the statements.

The figures given you as to cost of cleaning plant, &c., are simply for grain cleaned and sold in Canada, and has no reference to an expensive warehouse we have at Port Hope, used for cleaning and handling fancy peas, which is a very large trade, but these peas are sold mostly outside of Canada.

This letter is from Mr. A. O. Hogg, of the firm of Hogg & Lytle, seed merchants of Oakwood, Ont. Mr. Hogg is a strong Liberal and a man who is sincere in every word he utters; he has appealed to the Minister of Agriculture personally and he has placed before him the evidence which he was able to produce. I can see no reason in the world why the statements of this gentleman should not have some influence on the government in relation to this question.

Mr. BOYCE. Before the Bill is reported I desire to draw the attention of the Minister of Agriculture and also of the Minister of Justice to subsection 2 of section 8. When the Bill was last in committee, I drew the attention of these two ministers to this apparently extraordinary section which provides:

Nevertheless, if the accused proves to the magistrate before whom he is tried that the package, sack, bag or receptacle containing the seed respecting which the complaint or information is laid, was purchased by him directly from a seed merchant domiciled in Canada, and was not opened, or the state of the seed was not altered, while it was in his possession, and he had no reason to believe that the seed did not comply with the provisions of this Act, he shall, upon disclosing the name of the person from whom he purchased the seed, and the place and date of the sale thereof, to him, not be liable beyond the costs of prosecution.

I submit to the Minister of Justice that the exceptions in the subsection clearly make out a case of immunity under the law. It would be equally just to prosecute both the thief and the innocent receiver of stolen goods, as it would be to prosecute in this case both the principal and the innocent agent. What greater innocency could be established from a legal point of view than to establish the facts set out in this subsection—that he innocently purchased the seed; that the package was not opened; that its condition was not altered while it was in his possession, and that he had no reason to believe that the seed did not comply with the provisions of this Act. Why, should a retailer who has given proof of all this, be mulcted in the costs of the prosecution. I will submit to the ministers that the words: 'Beyond the costs of prosecution' should be stricken out of this clause, thus rendering it obligatory as the section provides, that proceedings be instituted against the person domiciled in Canada who is liable under the Act for offences against the Act and who would be guilty. Otherwise, penalties would be visited upon the person who actually was guilty of an offence against this Act, and would also be visited, in the shape of costs, upon the person who innocently was a handler of seed bags, the contents of which he did not know and which in his possession were not altered. A man who merely had a sealed pack-

age in his possession could not be found guilty, and yet this subsection would find him guilty to the extent of making him pay the costs of prosecution. It is a compromise and a compromise against a person who establishes by statutory essentials his innocency, and who notwithstanding has to pay the costs of the prosecution, which might be very heavy.

Mr. FITZPATRICK. If we ever are to get to the end of this Bill it can only be by observing the rules of the House. This Bill came up for its third reading and it was referred back to the committee for the purpose of reconsidering clauses ten and eleven. So far as I am concerned I am not disposed to reopen the whole question by discussing every clause of the Bill.

Mr. COCKSHUTT. I suggest to the minister that this Bill should be allowed to stand for to-day. The House has not been able to grasp the meaning of the amendments which the Minister of Agriculture has just read, and it is only reasonable to ask that we should be placed in possession of a copy of these proposed amendments so that we may know what they really are. In view of the very great importance of this measure, the Bill should be allowed to stand until we can study the amendments and discuss them intelligently. The Minister of Justice well said that the discussion should be confined to the clauses that are amended. But we should have a copy of these amendments before us, so that we could look over them and understand what they mean. I hope the hon. minister will let the Bill stand until we have time to look over the amendments.

Mr. BOYCE. I would draw the attention of the hon. minister to the fact that when this clause was under consideration before, as when other clauses were under consideration, the Minister of Justice was not in his place; and the hon. Minister of Agriculture admitted that several clauses, as to which there were objections of a technical character, had not been submitted to the Minister of Justice. It was for the purpose of drawing this clause, as well as the clauses under direct scrutiny, to the attention of the Minister of Justice, that I rose. I think it is sufficiently important to justify me in moving that the Bill be again referred to the committee for the consideration of that point.

Mr. SPROULE. I respectfully submit that that is quite unnecessary. We are now in Committee of the Whole, and it is quite competent to move the reconsideration of any clause of the Bill.

Mr. FISHER. I think the hon. member for West Algoma (Mr. Boyce) has a little misunderstood what we agreed upon the other night in the committee. There were certain doubts raised in regard to clause 11, which I quite admitted might be referred to the Department of Justice, so that it might be made clear that it expressed what I intended and what I gathered to be the sense of the committee; but I do not think it was intended to refer any of the other clauses or that one which my hon. friend brought up. That clause was discussed at some length and was eventually accepted by the committee, though, of course, my hon. friend did not agree with the decision of the committee. I moved that the Bill be referred back to the committee for the express purpose of amending these clauses 10 and 11. That has now been done, and I do not think it would be in the interest of the Bill or in the interest of the House further to discuss matters which have already been settled. As the hon. member for East Grey (Mr. Sproule) says, there is no need of going out of committee in order to go back into committee. We are now in committee, and any member may move for the reconsideration of any clause in the Bill.

Mr. HAGGART. Let us clearly understand that. When a Bill is recommitted for the purpose of our considering two clauses, can any other clause be considered?

Mr. SAM. HUGHES. I know it is of great consequence to the Minister of Justice to have to sit and listen to this thing; I know he wishes the Bill were in another climate; but I think we would like to have him apply his genius to it and make it as perfect as possible.

Mr. FITZPATRICK. It is so perfect that I do not see any need of that.

Mr. WHITE. If the Bill is referred back to the committee for the purpose of considering certain clauses, these clauses only can be considered; but when the amended Bill comes up for consideration, and the motion is made to read the amendments, then the whole Bill is open for discussion.

Mr. FITZPATRICK. Exactly; that is in the House.

Mr. MACLAREN. As a farmer myself and also engaged in a business which obliges me to travel all over the country, I may say that no one is more anxious than I to have pure seeds sown on our lands, and no one can feel more disappointed when he sees a farm covered with mustard and all kinds of obnoxious weeds. At the same time I think we had better refer this Bill over to the Agriculture Committee, because that committee is in a better position to get the views of the farmers as to what should be done. I have a letter here from one of the seedsmen of my city objecting very seriously to this Bill passing in the shape in which he received it a few days ago, and he wants it amended in many respects. I am in favour of abolishing by every means weeds as much as possible, but I would like to have something done that would be practicable; and I

think we should pause and reflect very seriously before passing a measure such as this, which may have the effect of making it almost impossible for a man to deal in the seed business at all. I would therefore strongly urge that it would be sent to the Agriculture Committee and let that committee amend and put it in such shape that it will be practicable.

Mr. LALOR. May I be permitted to ask whether there is such an organization as the Canadian Seed Growers' Association, and who are the members of that association ?

Mr. FISHER. There is a Canadian Seed Growers' Association, but I could not undertake to give my hon. friend the names of its members. They are spread over a very considerable part of the Dominion of Canada.

Mr. LALOR. Is not that association organized for the purpose of furnishing pure seed to the people of this country ? and have they not seed for sale, which will be recognized as pure seed ?

Mr. FISHER. I have not with me the by-laws of the Seed Growers' Association. I was not even present when the association was formed, having another engagement; but I understand that the Seed Growers' Association was formed for the purpose of growing improved seed by selection and other means; and I believe that one of the objects of the association is to create a register for pure seeds, somewhat similar to the register for pure live stock, under certain rules, regulations and conditions. I cannot tell what these rules, regulations and conditions are. I am not sure that they have even been formulated.

Mr. COCKSHUTT. Might I ask the hon. minister if any servant of the Seed Growers' Association is in the pay of the government or of the Department of Agriculture ?

Mr. FISHER. Yes, I believe the Seed Commissioner of my department is acting as the secretary of that association.

Mr. COCKSHUTT. Is that not calculated to still further jeopardize the interests of the trade ? If the Seed Growers' Association is provided with servants free of charge, while men selling seeds have to pay their own hands, will not the competition tend to grow worse between the Seed Growers' Association and the seed dealers of Canada ? It is only within the last day or two that my attention has been drawn to the fact that such an organization exists, and if that association is going to raise seed under government paid servants and compete with those who have no such government paid servants, it does not appear to me to be legitimate competition.

Mr. FISHER. I am not aware that the Seed Growers' Association has anything to do with the sale of seeds. The officer of the department certainly has not. I have no doubt that members of the Seed Growers' Association will themselves sell seeds. One of the objects of the association is to encourage the growing of better seed, but I do not think that will interfere in any way with the business of the seed dealers of the country. On the contrary, I think it will enable them to get good seed from the growers. The object of the Seed Growers' Association is to improve the seed grown, and in that way to aid those who deal in seeds as well as those who grow them.

Mr. COCKSHUTT. I understood that the object of the association was not only to raise seed, but to sell it direct to those who consume it. That was part of my information which may be wrong, but if it be correct it appears to me that we are creating an unfair competition.

Mr. FISHER. I do not understand that the association has anything to do with the sale of seeds. The men who belong to the association can sell them, just as men who belong to the Live Stock Association can sell their stock.

Mr. LALOR. Will the Department of Agriculture recommend the seeds grown by the Seeds Association ?

Mr. FISHER. If seeds grown by members of the association were submitted to the association and registered as pure seeds, the department might put its imprimatur on that register or certificate, just as they would in the case of pure stock, but the department would not recommend that these seeds be bought. All the department would do would be to certify that they came up to a certain standard.

Mr. LALOR. This will be the germ of competition by the association against ordinary seed growers. The latter will have to compete with an association which is officered largely by men paid out of the public exchequer and connected with the Department of Agriculture, and I am also advised that the Minister of Agriculture is himself a member of the association. It does not seem to me fair that the ordinary seed merchant should have to compete with an organization of that kind. Whether that be the case or not, to the ordinary individual it looks as if the Bill now before the House were in the interests of the Seed Growers' Association; and, of course, the farmers will naturally go to an association which is so closely identified with the Department of Agriculture. That is not fair to the farmers or seed merchants or the wholesale trade.

Mr. FISHER. My hon. friend has put the cart before the horse. The Bill is not introduced for the benefit of the association, but the association has, to a large extent, grown out of the agitation in favour

of pure seeds, just as other associations for the improvement of various branches of agriculture have grown out of the knowledge of what can be done by co-operation or organization. Any one who chooses can join the association. There is not even a fee required. I am not a member of it myself. An officer of my department is connected with it at present as secretary, but that is only while it is in its formative stage; and it is not intended that any officer of my department shall continue long to be an officer of it.

Mr. WALSH. This association will compete with the other seed growers and sellers.

Mr. FISHER. The association has no power to sell seed, and its individual members will certainly come under the operation of the law just the same as anybody else.

Mr. COCKSHUTT. But I understand that under this Bill the deputy minister is to be the judge and jury in determining whether or not certain seeds come up to the standard. If this officer is also an officer of the Seed Growers' Association, will not this happen? If samples be sent in by two persons, one of whom is a member of the association and the other is not, the outside dealer will be handicapped by the fact that he has to send in his samples to an officer of that association, the members of which are competing with him in his business. If an official of the department is also at the head of the association, you may have a combine. It does not seem to me wise that any officer of the department should become an officer of the association, especially when he has to sit in each case as judge and jury. All samples of seeds must be submitted to him; and if he is interested in the association, that may incline him to lean a little more one way than the other. The fact of his being an officer of the association would probably lead dealers to suspect his decisions, though they might be perfectly right. I would be sorry to see any official of the department connected with a corporation that may compete with private dealers.

Mr. FISHER. This association does not come into competition with the seed dealers in any shape or form. It is not the deputy minister who is secretary of the association, but the seed commissioner, and he is simply acting as such at the start, and will cease to hold that office within a very short time.

Mr. COCKSHUTT. I ask that the committee be allowed to sit again for further consideration of the proposed amendments, as it is desirable that we should have an opportunity to look over them.

Mr. FISHER. These amendments are simply carrying out what was suggested a few days ago. I am willing to give the House an opportunity to discuss them, however, if the hon. gentleman wants us to reconsider them.

Mr. COCKSHUTT. The hon. minister thinks we can understand clauses we have not seen at all, though many legal gentlemen differ in their opinions regarding the proposed amendments. It will do them no harm to let them lay over a day or two, and give us a chance to investigate them and compare them with the Bill itself.

Mr. FISHER. The Bill was referred back for the purpose of thoroughly considering the amendments proposed by the Department of Justice to meet the views expressed the other day.

Mr. SPROULE. There is considerable need for time to consider the amendments, and the question is whether the House has had time to do this. In my opinion, the hon. minister should grant the request of the hon. gentleman from Brantford. It could not interfere with the passage of the Bill afterwards.

Mr. WHITE. I would suggest to the Minister of Agriculture (Mr. Fisher) that he agree to the proposition made by the hon. member for Brantford. For he can see quite clearly that if he refuses that reasonable proposition and the committee now reports the Bill, when the Bill is brought up for third reading, the hon. member for Brantford may move the House back into committee. Under these circumstances it seems to me that the minister might well yield the point, especially as the hon. member for Brantford has not had an opportunity to consider the amendments proposed in the Bill.

Mr. FISHER. I was going to suggest that we should report the Bill, but not read it the third time to-day. When the third reading is proposed, if my hon. friend from Brantford (Mr. Cockshutt) wished to change it in any way, he can move that the Bill be again referred to the Committee of the Whole to consider these proposed changes. That is the appropriate and simple course.

Mr. TAYLOR. That will do.

Bill reported.

RAILWAY ACT, 1903, AMENDMENT.

Hon. CHARLES FITZPATRICK (Minister of Justice) moved the third reading of Bill (No. 36) to amend the Railway Act, 1903. He said: This is the Bill we had up the other day with respect to provision for chairman of the Railway Commission.

Mr. HAUGHTON LENNOX (South Simcoe). I gave the Minister of Justice (Mr. Fitzpatrick) notice that I proposed to move to amend this Bill by striking out section 4. That section reads as follows:—

If, between the date of the appointment of any such chief commissioner or of his resignation of his office as such judge and the date of his resignation of, or retirement from, the office of chief commissioner, the salary attached to the judicial office which he held at the time of

his appointment, or which he resigned for the purpose of accepting appointment as such chief commissioner, has been increased, the annuity to be granted to him under this Act may be increased in the same proportion.

By sections 2 and 3, provision is made that the chief commissioner, being a judge of the Superior Court at the time of his appointment as chief commissioner shall be entitled to the allowance that he would have been entitled to if he had continued in office. These are very considerable advantages, and the section, in this respect, probably goes as far as the circumstances of the country will justify. It has been determined by parliament, that, if a judge holds his office for fifteen years, and, at the end of that time retires from his position through permanent affliction, he shall be entitled to two-thirds of the salary he would be entitled to as judge. And the same Act which so provides contains a further proposition that when a judge attains the age of 75 years and has been for twenty years on the bench, or attains the age of seventy years and has been for twenty-five years in office; or when, regardless of age, he has been a judge for thirty years, he shall be entitled to retire upon an allowance equal to his full salary. Judge Killam, having been appointed from the bench to the chief commissionership, is entitled to all these advantages, just as if he had continued to be a judge. The Act will apply in every case where we appoint a judge of a Superior Court to the position of high commissioner. Judge Killam has been upon the bench for twenty years and is now fifty-five years of age. He is now appointed to the chief commissionership. If he continues in that position for ten years, he will, under subsection (c) of section 3 of this Bill, be entitled to full retiring allowance as a judge, and, in the meantime, he will have the advantages that accrue from his new position, as an extra, amounting, in ten years to $30,000. Then, under section 2, he is immediately entitled, if he retires from his position, to a retiring allowance of two-thirds of his salary. The proposition is that, if we change the status of retiring allowances of the judges, the gentleman now appointed, or any who may hereafter be appointed from the bench to the chief commissionership, will be entitled not only to all the benefits that accrue from the office of chief commissionership, but shall be entitled also to all the advantages accruing to those who continue to labour on the bench. I cannot see the justice of that position. It can work a very great injustice in many instances. Why, if we should increase the salaries of the judges to $15,000, the gentleman who takes the position of chief commissioner to-day can resign to-morrow, having been twenty years upon the bench,—he could do so even if he had been there but fifteen years—and can have an allowance of $10,000 a year, which is as great as the present salary of his office. Either upon resigning his position or retiring because of permanent disability, he would be entitled to all the benefits that would accrue to the judges who continue to discharge the functions of their office. I object to this as urgently as I possibly can; and I hope that hon. gentlemen on both sides of the House will consider the matter carefully, in order, that no man, however eminent may have the advantage attaching to two positions. As I have shown the increase of salary to Judge Killam by reason of the new appointment is $3,000 a year, or $30,000 in ten years, with all the possibility that the salary attached to the new position may be increased. He would also benefit by salaries of the judicial office hereafter. The gentleman who takes the position of chief commissioner has unlimited time, from the time of his appointment to that of his retirement of his position, which may be twenty or thirty years. He has all the chances accruing to the bench in that time.

Take the instance of Judge Killam as an illustration. He may remain in this position for twenty years, he may have been paid an additional remuneration by reason of that changed position of $60,000. In those twenty years great changes may take place in this country, and the salaries of judges may be greatly increased, involving an additional retiring allowance which may amount to $15,000—I am speaking of a Supreme Court judge. This gentleman would then be entitled by reason of the arrangements we are now making to this additional retiring allowance. I need not say more about this. I feel strongly that we are moving in the wrong direction if we pass this clause. I therefore move that Bill (No. 36) to amend the Railway Act, 1903, be referred back to the committee to amend the same by striking out paragraph 4 thereof.

Mr. FITZPATRICK. As I explained when this Bill was introduced and on several occasions during the progress of the debate in committee, the intention is to provide that a judge who holds the position of chairman of the Railway Commission shall be in no way prejudiced by reason of his acceptance of that office, either with respect to his tenure of office or with respect to his retiring allowance. This clause is merely intended to give effect to that intention with respect to any increase of salary that may affect a judge during the time this commissioner shall occupy his position. Now, this section is as necessary as any of the other sections we have introduced to carry out the object we have in view; therefore, I am sorry to say I cannot accept the amendment suggested by my hon. friend (Mr. Lennox).

Mr. SPROULE. This seems to me to be class legislation of a most extreme character.

Mr. FITZPATRICK. I think we have heard that before.

Mr. SPROULE. You cannot hear a good thing too often. As long as the minister refrains from doing what in our judgment is right, we cannot remind him of it too often. This is made practically for the judges and for no others, and cannot be taken advantage of by any others.

Mr. FITZPATRICK. I am afraid that is true.

Mr. SPROULE. It is objectionable in this feature, that it gives him the advantage of a higher position as well as the advantages that may accrue in future from any increase in the salary of judges. I think it is very improper and unjust legislation.

House divided on amendment (Mr. Lennox).

Amendment—Mr. Lennox—negatived.

Bill as amended, read the third time and passed.

THIRD READINGS.

Bill (No. 51), respecting Contracts for Government Works.—Mr. Fitzpatrick.

Bill (No. 53), to amend the Act respecting the Department of Railways and Canals. —Mr. Emmerson.

Bill (No. 54), to amend the Public Works Act.—Mr. Hyman.

SUPPLY—ABUSE OF FRANKING PRIVILEGES.

Hon. W. S. FIELDING (Minister of Finance) moved that the House go into Committee of Supply.

Mr. H. B. AMES (Montreal, St. Antoine). Mr. Speaker, before the House goes into supply I wish to raise a question in reference to what certainly seems to me to be an abuse of the franking privilege. A number of my constituents and a number of constituents of other members of this House have, within the last few days, received, franked free through the mails, advertising material from a Montreal house engaged in the sale of dental goods called 'The Franco-American Dental Institute,' manufacturers of and dealers in dental supplies. I have received from various gentlemen letters from St. Thomas, Ottawa, Montreal, Quebec, Toronto, in fact all parts of the Dominion, from dentists and other persons engaged in similar lines of business, saying that this advertising material which is purely commercial, has been sent to practically all the dentists throughout these two older provinces. This matter was brought to my attention by a business man in Montreal, in a similar line of wholesale business, who complains that one of his competitors is taking advantage of His Majesty's mails and securing the free distribution of a large quantity of advertising material for purely commercial purposes, and I was informed by one of these gentlemen that if necessary he would produce witnesses to describe what they had themselves seen of the preparation of this advertising material in a business house in the city of Montreal.

Mr. LANCASTER. Where were they mailed from ?

Mr. AMES. The letters were apparently all prepared in the city of Montreal and were then evidently brought here and franked.

Mr. LANCASTER. How were they franked ?

Mr. AMES. They were all franked in the same way. I would like to send these over to the Postmaster General in order that he may himself see the franks to which I refer.

Hon. Sir WILLIAM MULOCK (Postmaster General). Mr. Speaker, I quite agree with the hon. gentleman (Mr. Ames), who has brought this matter to the attention of the House, that the use of the frank for such a purpose as this is certainly contrary to the meaning and the spirit of the Act which allows the franking privilege to members. It is not the first time that the franking privilege has been abused ; it is not the first time that I have had occasion on the floor of the House to call attention to abuses of various kinds. How to prevent these abuses is another thing. In regard to this particular question I have myself received complaints—only to-day, however—and I made inquiry of one of the gentlemen. I find that a number of names or initials have been used. The envelopes which the hon. gentleman has sent to me all bear the initials of one member, but other frankings have taken place with the initials of various members, as far as I am able to discover, without the authority of the owner. Nevertheless the practice has grown up in this House of having the initials stamped, and the franks put on by a stamp have been accepted in the post office. Stamps can be obtained or copied and this system affords a very easy way for persons to make this unwarranted use of the franking privilege. Last year my deputy called my attention to the matter and recommended to me that in future we should require the members to sign their names.

Some hon. MEMBERS. Hear, hear.

Sir WILLIAM MULOCK. And if this is the wish of the House I am quite prepared to adopt it.

Mr. LOGAN. The initials would be sufficient.

Sir WILLIAM MULOCK. My hon. friend (Mr. Logan) suggests that the signing of the full name would be to laborious. I am quite prepared to adopt whatever regulation appears to recommend itself to the good judgment of this House. The old system of using a stamp, I think, ought to be abolished. I would draw the inference from the present expression of poinion that the House desires me to prescribe a rule that the frank shall be signed either the full signature or the initials.

Some hon. MEMBERS. The initials.

Sir WILLIAM MULOCK. I am quite prepared to adopt such a regulation. If I can take the opinion of the House in an informal way I would say that the initials have it.

Some hon. MEMBERS. Hear, hear.

Sir WILLIAM MULOCK. If I am right therefore, in assuming that it is the wish of this House that in future we shall not accept franking by a stamp, then I will require the initials. I draw that conclusion and will act accordingly.

An hon. MEMBER. How about the departments ?

Sir WILLIAM MULOCK. The departments frank under the terms of an Order in Council of a good many years' standing. It may be necessary, in view of this expression of opinion from the House, for the government to reconsider that Order in Council. The Order in Council has been in force for about 15 years, having been passed I think, in 1891.

Mr. W. F. MACLEAN. What the hon. gentleman says applies simply to our own post office.

Sir WILLIAM MULOCK. I am now speaking of our own post office, and I understand that it is assented to by this House that we shall discontinue the use of the

stamp and require the initials of the members. To that extent the change will come into effect at once.

Mr. AMES. There is just one remark that fell from the lips of the Postmaster General to which I would draw attention. He stated that in this particular instance these stamps have been used without the authority of the owners thereof. I would like to know whether the use of such a stamp without the authority of the owner is not a grave breach, if not of law, certainly of courtesy to this House, and I would like to ask if any steps are being taken to punish the people who are using stamps without authority ?

Mr. W. F. MACLEAN. And to collect the postage.

Sir WILLIAM MULOCK. No person is more anxious to protect the revenue of the Post Office Department than myself, but the hon. gentleman will bear in mind that this only occurs, as a rule, about the commencement of each parliament.

Mr. COCHRANE. And at election times.

Sir WILLIAM MULOCK. Not the commercial, it is the political literature that we complain of at election times. Last year we had some reference to conditions of that kind, but this particular form of abuse, as a rule, occurs only in the case of new members who are not quite familiar with the practice and spirit of the law and are a little more careless and a little more generous than they should be. When you ask a member—I have asked them over and over again—if he has permitted the use of his stamp in this way, you always get the answer, 'oh, no, no, no.' He is quite indignant, but when you press him you will find that he may perhaps have allowed it for some trifling use, not to the extent to which it has been used, and he may be quite innocently more or less to blame. So that, in one sense I was correct in saying that the abuse is without authority. In another sense I should qualify that, by assuming that members have not been sufficiently guarded in the quasi authority they may have given, and the debate I am sure will be beneficial in preventing any abuse especially if the rule I have referred to be followed.

Hon. PETER WHITE (North Renfrew). When the Postmaster General is considering this question as it effects members of parliament, I trust he will have some regard to the abuse of the franking privilege by members of the government. For a considerable time before the date of the last election, a very large quantity of literature was circulated throughout the length and breadth of this Dominion and franked by the Postmaster General ; not by one of the deputy ministers but by my hon. friend the Postmaster General himself.

Sir WILLIAM MULOCK. Excuse me, just there. I challenge any one to produce any political literature franked by me during the recess.

Mr. WHITE. Then all I can say is that had I known the Postmaster General would deny the charge, I would have had the evidence here to prove the truth of my statement.

Sir WILLIAM MULOCK. I can only say that there is no such evidence in existence.

Mr. WHITE. I have in my possession the political literature of one political party —not the party to which I belong but the party to which the Postmaster General belongs—and I know as a matter of fact that it bore the frank of the Postmaster General.

Sir WILLIAM MULOCK. My hon. friend is not fair ; I have denied his statement.

Mr. SAM. HUGHES. How do you know ?

Sir WILLIAM MULOCK. I do not think it is fair for my hon. friend from Renfrew (Mr. White) to make that statement, because I never gave any such authority, and I am satisfied the thing never occurred.

Mr. WHITE. I am glad to hear the Postmaster General say that he never gave authority to frank this political literature with his frank. He may not have given that express authority, but it was a matter of notoriety throughout the province of Ontario at all events, that this literature was being circulated with his frank. I do not know that there would have been quite so much objection to the Postmaster General having adopted that course——

Sir WILLIAM MULOCK. I did not adopt it.

Mr. WHITE. Well, from somebody having adopted that course——

Sir WILLIAM MULOCK. No one ever used my frank.

Mr. SPEAKER. The Postmaster General denies that his frank was so used, and I do not think that the statement should be insisted on.

Mr. WHITE. I abide by your decision, Mr. Speaker, and of course I am bound to accept the statement of the Postmaster General that he did not authorize the use of his stamp——

Sir WILLIAM MULOCK. Nor was it done.

Mr. COCHRANE. It was.

Mr. WHITE. If the Minister of Justice is in his place, I would like to hear his opinion as to the unauthorized use of those stamps to which reference has been made. I do not pretend to be a lawyer ; I do not know what the legal effect of the use of these stamps by an unauthorized party may

be, but I do think it ought to be punishable in some way.

An hon. MEMBER. Forgery.

Mr. WHITE. I should think it would be forgery. Whatever may be the fact as to the Postmaster General's frank, there is no doubt that this large quantity of literature was circulated through the mails on behalf of the Liberal party. The same privilege was not accorded to the Conservatives. I know that in my own case a newspaper offered to send into my constituency two or three hundred copies of the daily issue during the six weeks preceding the election, and when I accepted the offer it was found that the rules of the Post Office Department precluded the newspapers unless they were put in separate wrappers and postage paid on each. Of course the newspaper proprietor who was willing to supply the papers free could not be expected to pay the postage thereon. It is therefore that I say that this system, not only affected beneficially the Liberal party, but it affected prejudicially the Conservative party during the last election.

Mr. SAM. HUGHES (Victoria and Haliburton). I have another matter to take up with the Postmaster General. During the last campaign in my riding there were great parcels containing Liberal campaign literature circulated in my county—I do not know exactly what they were, but as nobody read them it makes no difference. The last letter of the frank used was a 'B,' but I cannot say whether it was the initial of the member for Ottawa or not. I want to ask the Postmaster General, if he knows that these things were franked through the mail outside of the session, by some member. I also want to ask the Postmaster General if he gave any order to the various postmasters throughout the country to allow this literature to be posted at the local post offices with these franks on; did he give the postmasters authority to accept a frank at the local post offices instead of having this mail matter posted at Ottawa? We might as well have the Postmaster General on record.

Sir WILLIAM MULOCK. I am quite prepared to be on record. In reply to the hon. member for North Renfrew, I here say the stamps used in the Post Office Department are in accordance with the Order in Council passed many years before we took office. My official stamp is under the control of my private secretary. I know him too well as a reliable officer to believe for one moment that he ever allowed my stamp to be used for the franking privilege during the election to which my hon. friend has referred—I am speaking of during the recess, or since the prorogation of parliament, and that is to what the hon. gentleman alludes. Knowing the fidelity of my private secretary, I am satisfied, as I am of my existence, that he never allowed my stamp to be so used, and I am sure it never was used during the recess in question for the transmission, through the mail, of political matter such as is spoken of now. Since my hon. friend (Mr. White) is so positive about it and states that if he knew the matter was coming up he could produce proof, I would ask him to do so at the earliest possible moment.

Mr. WHITE. I shall endeavour to do so.

Sir WILLIAM MULOCK. I shall investigate the case, for I know that under no circumstances did I ever sanction such a thing being done. As I have said, I have too much confidence in the fidelity of my secretary, to think that even by accident he would allow it to be done; nothing could be further from my practice or my wishes. I did send some political literature myself when I was a candidate during the recess, and I sent it from Ottawa; but I purchased stamps in the ordinary way from the post office, and every piece of that literature bore one of His Majesty's stamps in accordance with Post Office Act.

Mr. TAYLOR. Everybody ought to do the same.

Sir WILLIAM MULOCK. I think so, and I will tell you of a very bad example. When I took office in 1896, one of the first instances of abuse of law brought to my attention was that some 240,000 pieces of political literature were sent out after the prorogation of 1896 under the frank of the then Minister of Agriculture. The postage on that would have amounted to thousands of dollars. It was an abuse then and it is an abuse now, and I will not defend it no matter what minister or cabinet permits it. My hon. friend (Mr. Sam. Hughes) asked me if I authorized or knew of the matter to which he referred. When I say I did not authorize, I also mean that I have no knowledge of any such transaction. I do not know whether it occurred or did not occur. No local postmaster would have the right to allow to go through his post office free any mail matter originating there as described, and if my hon. friend would give me the name of the postmaster who did so, I will have an investigation into the case and see where the responsibility is.

Mr. SAM. HUGHES. When the literature came into the county of Victoria it had no postmark on it, but only a monogram, the last letter of which was a plain B. This literature was sent to every elector in the riding which I have the honour of representing, Liberal and Conservative alike, with the compliments of the Liberal Association. Why were the packages not stamped at Ottawa? I presume that some arrangement was made by which they were sent out in bags. I could not understand that they were franked by any minister. I thought the

initials were those of the member for Ottawa.

Sir WILLIAM MULOCK. If the hon. member will produce to me any of this franked literature, I will endeavour to trace it up. On his vague description of the frank I cannot know anything about it. But on no occasion have I authorized any violation of the law. Exception is taken now, and very properly taken, to the franking of these advertisements of dental goods. Last year my attention was called to another equally grave abuse—the franking of literature issued by the Manufacturers' Association of Canada, and sent everywhere. I received a complaint from a citizen of the town of Brockville, informing me that there had been such a deluge of that class of mail matter sent from Ottawa to Brockville, I think under the frank of my hon. friend from South Leeds (Mr. Taylor) that the office was blocked with it for two or three days, and in that interval he was unable to get the despatch of his mail matter. So that hon. members will see that the abuse complained of as occurring, perhaps at the instance of new members, did not begin to-day.

Mr. E. COCHRANE (East Northumberland). I think it would be pretty easy for the hon. Postmaster General to find out where all this literature came from when it was mailed in Ottawa. Not only was it sent to the electors of the riding I represent, but they had the impudence to send it to me, and when I opened it I found that it had the compliments of my opponent on it. The hon. Postmaster General holds up his hands in holy horror, but I do not see why my opponent should have some gentlemen, whose salaries are paid out of the funds of the people of Canada, stamping his literature in Ottawa and the post office robbed of its legitimate revenue for carrying it. Now, that literature was stamped by some minister. It was done in a sly kind of way. The literature that came into East Northumberland was not stamped with a stamp. There was on it an imitation of some letters that I could not make out. But the work was done in some of the departments, otherwise the post office at Ottawa would not have accepted the literature and sent it all over the country. It had in it those pointers Nos. 1, 2 and 3 which the Minister of Customs paid for out of the money of the people of Canada, and I thought it was rather cruel to rub the fact in in that way. I do not know whether this literature did hurt me any or not. I was returned, though they did their best to defeat me, not only by means of that literature, but by means of a lot of money which I suppose they got out of this railroad scheme.

Mr. H. LENNOX (South Simcoe). With regard to the question referred to by the Postmaster General, as to whether the House was of the opinion that the franking privilege as it was formerly understood should be continued or discontinued, I do not see that any difficulty would arise from asking members to put their initials on letters, but great difficulty will arise if we cannot use our ordinary stamps for sending out the kind of literature which we often send out, such as speeches and blue books. It is undoubtedly in the interest of the public that the proceedings of parliament should be known, and naturally the people of a riding are more interested in the speeches of their own member than in the general proceedings of the House. Therefore, I think an intermediate course might be adopted by allowing franking by stamp upon literature inclosed in Hansard envelopes and requiring letters to be initialled.

Mr. HENDERSON. I desire to say just a few words with reference to the matter brought to the attention of the House by the hon. member for Montreal. For some time prior to the last general election, the county of Halton was flooded with literature sent out from Ottawa. I would not have objected so much to the fact that that literature was sent free, as to the fact that my opponent should have had the privilege of flooding the county with literature free of postage, whilst I was debarred from the same privilege. The franking privilege of members of parliament ceases of course at prorogation, but in my case, as in that of the hon. gentleman from Northumberland, an official of the government used his franking privilege on behalf of my opponent and of course was not willing to extend the same favour to me. But what made the thing more objectionable still, was that not only were pointers one, two and three distributed all over the country, with the picture of the Prime Minister on the front page, but these pointers were stamped with the compliments of my opponent. That I thought was carrying the thing a little too far. I would naturally have assumed that this literature was sent out by the government in their own interest as campaign sheets, but when it was also found to contain stamped inside the compliments of my opponent, the matter became a personal one. The hon. the Postmaster General is perfectly right in his contention that the department should be protected somewhat better than it is. I do not say that he is aware of the practice I have referred to, but certainly it was a grave abuse of the franking privilege. It was not an abuse of that privilege by any member of this House but by some official of the government. We should have an investigation to find out who the official was that put his frank upon what was not simply campaign literature but private matter, made private by the fact that the compliments of the candidate were stamped inside. Had that matter been paid for in the usual way, it would have cost probably $400 or $500 to send it out.

An hon. MEMBER. Whose frank was on it ?

Mr. HENDERSON. I am unable to say. I searched through the civil lists to find out initials that correspond to those stamped on this campaign literature but could not find any. Of course they may have been the initials of some official who had been appointed after the last civil service lists were published. I do not know that even those packages went through the post office of the House of Commons, but I am under the impression that they were mailed direct from some department of the government, and that department should be held responsible. That is the practice which the Postmaster General is quite justified in saying we should not put up with. No doubt he will carefullly investigate it and see whether he cannot exercise some control over his colleagues.

Mr. TAYLOR. The hon. the Postmaster General was told a few moments ago by some one behind him that during last session commercial literature published by the Manufacturers' Association was distributed through the post office at Brockville bearing the frank of the hon. member for South Leeds. I have been a member of this House some twenty-one years—I think the Postmaster General and myself came in the same day—and during all that time I have never violated the franking privilege. During the session I have the right, as has every member, to send all mailable matter through the post office free, and as whip of the party it has devolved upon me in the sessions preceding general elections to send out literature to constituencies not represented on this side of the House. Last session certain literature was prepared by the Manufacturers' Association, but it was not commercial literature. It was literature intended to convince the people of the great value of protection to our Canadian industries.

Sir WILLIAM MULOCK. Was it of a non partisan character ?

Mr. TAYLOR. To a certain extent it was, and it certainly was not of a commercial character. It was pointing out the value of protection and showing up the hypocrisy of this government in pretending to be anti-protectionists while at the same time they did not dare carry out their principles but felt compelled to steal the clothes of their oppponents. That was the class of literature that I franked last session, but while the opposition sent out hundreds of pounds—

Sir WILLIAM MULOCK. Carloads.

Mr. TAYLOR. The Reform party and its whips and the officials of the different departments were sending out tons to every hundred pounds we sent, and the campaign literature was mailed free from the public departments, franked by the officials of this country, during recess, when we had to pay out of our own pockets for every pamphlet we mailed. I have at home one of these documents that came to me just preceding the campaign, franked by a government official, which I shall be happy to produce to the House whenever required. In direct contravention of the law this literature was sent out during recess by officials of the government and every riding of the country flooded with it. I have some of it franked by the Minister of Trade and Commerce and some that came last fall bearing the initials 'J. S., M.P.'

Mr. W. F. MACLEAN. John Smith.

Mr. TAYLOR. No, they are the initials of the Minister of Public Works. Some two or three years ago, during recess, Mr. Britton received a pamphlet with my frank on it, and the charge was made against me in the local press that I was franking literature during recess when I had no right to do it. I offered to make a wager that I had not.

Some hon. MEMBERS. Oh, oh.

Mr. TAYLOR. And there it remained while the House was in session, detained by the Postmaster General or somebody else ; and it did not leave Ottawa until last fall. And, from reports I get from all over the country, I am certain that much of the literature that was mailed here during the session never reached its destination until the elections were over—impounded by the Postmaster General or some of his officials.

Mr. SAM. HUGHES. If I might interrupt to ask my hon. friend a question, I would like to know if he is aware that literature mailed here during the session by thousands of copies by your humble servant, for instance, has never reached its destination yet ? I am told that eight hundred bags of such literature franked from this House is in some subterranean passage of the post office of this city, and there remains to this day.

Mr. TAYLOR. It may be that the literature that my hon. friend from Victoria (Mr. Sam. Hughes) refers to met the same fate as that sent to a postmaster in the west, who admitted that all the literature of that kind that came to his office he put in the stove.

Mr. SAM. HUGHES. There are lots of honest postmasters.

Mr. TAYLOR. This literature may have been put in the stove without leaving Ottawa at all.

Mr. SAM. HUGHES. No ; I am told that eight hundred bags of it are stored in this city.

Mr. TAYLOR. Perhaps the Postmaster General will have that investigated. It will be interesting to know if this amount of mail matter, which should have gone forward as soon as it was put in the charge of the post office, is still stored in this city. I want to repeat that during my twenty-one years in parliament I have never used my

frank illegally. But the Postmaster General and his colleagues have franked campaign literature to be sent out during the recess, when the law giving the members of parliament the franking privilege does not apply.

Sir WILLIAM MULOCK. The hon. gentleman said I did.

Mr. TAYLOR. I did not say the Postmaster General (Sir William Mulock), but his colleagues. I have had some of this literature in my own constituency, and so have my hon. friends about me—my hon. friend from Renfrew (Mr. White), my hon. friend from Northumberland (Mr. Cochrane), my hon. friend from Halton (Mr. Henderson) and others. Our constituents received that literature—Facts for Electors, Nos. 1, 2 and 3—inclosed in envelopes provided by the government, and mailed during the recess under frank, sent out with the compliments of our opponents, and sent out illegally. Whereas, to distribute our campaign literature during the recess, we had to buy postage stamps just as the Postmaster General had to do in his own case.

Mr. DERBYSHIRE. That is too bad.

Mr. TAYLOR. It was too bad for us, but my hon. friend from Brockville (Mr. Derbyshire) could have his sent out free, even though it was in plain violation of the law.

Mr. J. FINLAY (East Peterborough). I am surprised that my Conservative friends should talk as they do. I received campaign literature from my opponents, and it was franked by Mr. Carscallen, and stamped 'with the compliments' of John A. Sixsmith, my opponent. That literature was received, not only by many of my friends, but even by myself.

Mr. COCKSHUTT. In view of the facts adduced, I think the hon. Postmaster General (Sir William Mulock) ought to withdraw his statement that new members have abused the franking privilege. I hope he will not include the members on this side, because I think that ample testimony has been brought forward to show that this privilege was abused in former parliaments. I think that to cast an imputation upon the new members of abusing this privilege is not right.

Sir WILLIAM MULOCK. My hon. friend from South Leeds (Mr. Taylor) says that he never illegally stamped any literature—never made an illegal use of the franking privilege. I will admit that the law does not specify the kind of literature that may be franked by members of parliament during the session; each member is left to be the judge of his own conduct in the matter. The literature that my hon. friend franked by tons, the editor of which, I think, was Mr. Griffin—I had quantities sent to me—was not political literature; did not purport to be political literature; and I think the organization that caused it to be printed would resent the statement that they were a political organization. My hon. friend from St. Antoine, Montreal (Mr. Ames), objects to the franking of literature such as has been referred to, that is literature of a commercial character. Well, what was the literature sent out by hon. gentlemen opposite last year? It was of a commercial character.

Some hon. MEMBERS. No, no.

Sir WILLIAM MULOCK. It was not political literature.

Mr. SAM. HUGHES. Yes, it was.

Mr. TAYLOR. It was national political literature.

Sir WILLIAM MULOCK. It was not political literature according to the definition of my hon. friend and others; it had no bearing upon elections; and, therefore, it ought not to have been sent out under frank. Yet it was sent out in such quantities as to conjest the mails in Brockville and other places, even to the extent of blockading the work. As to the observation of my hon. friend from Victoria (Mr. Sam. Hughes), that eight hundred bags of literature, franked by himself, did he say?

Mr. SAM. HUGHES. No; but franked by the Liberal-Conservatives in this House, who have a perfect right to frank it.

Sir WILLIAM MULOCK. It is always with great fear that I venture to cross swords with my hon. and ferocious friend from Victoria (Mr. Sam. Hughes); but if I might, with all mildness, suggest something, I would say that I am satisfied he is entirely in error. Mail matter mailed in this House, no matter by whom, is delivered to a man who is an officer of the House. He is not under the orders of the government or of the Postmaster General—he is an officer of this House, and is amenable to this House. And my hon. friend from Victoria says that eight hundred bags of literature posted last session here are still concealed somewhere in the precincts of this building.

Mr. SAM. HUGHES. No; in the city post office.

Sir WILLIAM MULOCK. Why, that is simply absurd. The city post office was nearly burned down——

Mr. LOGAN. That is what burned it.

Sir WILLIAM MULOCK. I should not be surprised if Providence did smite the post office for that. The hon. gentleman (Mr. Sam. Hughes) says this literature was stored in the basement of the city post office. That building was burned from the roof down to the working floor, and we had immediately to take possession of the basement and fill it with the staff. And they have been in occupation of the basement

ever since—that is, for more than a year, or from a time beginning long before the posting of this literature last session. So the hon. gentleman will have to find some other place in which to charge that this literature is stored, for it could not be in that building. Now, the hon. gentleman has made a statement. Let him prove it. Let him give me some inkling of facts so that the matter may be looked into.

Mr. COCHRANE. Will you appoint a commission ?

Sir WILLIAM MULOCK. I will investigate the case. I say that the postmaster and the acting postmaster of Ottawa are as reliable gentlemen as are to be found in the service, and they would be the last persons in the world to do the thing the hon. gentleman (Mr. Sam. Hughes) says has been done. Therefore, I feel certain that no such thing has occurred as the hon. gentleman has charged.

Mr. COCHRANE. The hon. gentleman (Sir William Mulock) had better investigate what has occurred. I say that during last session many communications were received from Liberal candidates throughout Canada which contained campaign literature sent from Ottawa under frank, and marked 'with the compliments' of some candidate in opposition to the Conservative party. It is true that Conservative members in this House sent out literature under frank. But this they had a perfect right to do, as the Postmaster General knows, for it was posted during the session. And he wants simply to draw a red herring across the track. But our complaint is that the Postmaster General or any other minister of the Crown has no right to send out documents during the recess from their departments other than reports and official documents. But they went further. After the session they not only sent out this literature, but they had the hardihood to put our opponents' compliments on it, and that was done with the stamp, no doubt, paid for by the people's money. That is what we complain of. I don't want the Postmaster General to delude public opinion by saying, 'Oh, you are another.' We have got sick and tired of that. The Postmaster General tried to use his authority to prevent us from using our privileges as members of parliament last session in sending out literature and having it brought into the House. We have a perfect right during the session to send out literature and stamp it, and we will accord to the Postmaster General and his ministers the same privilege we enjoy. But after the session was over, when we were right upon the heels of an election, I complain that we had literature that was written by our hon. friend's secretary, when we were paying him a salary for doing it, and that was sent out with the likeness of Sir Wilfrid Laurier upon it ; and then to add insult to injury, they put on that literature 'with the compliments' of our opponents.

Sir WILLIAM MULOCK. My hon. friend said they had a perfect right during the session to frank whatever they liked.

Mr. COCHRANE. I did not.

Sir WILLIAM MULOCK. Perhaps he intended to say that. It is not a question of legal right, it is a question of propriety and good taste. If any gentleman franked these advertisements of dental supplies, I presume he can find nothing in the law to make it illegal ; yet public opinion in this House is against such an abuse; and I think public opinion is also against the abuse I referred to of transmitting through the mails, even during the session, of matter which is not properly parliamentary literature and connected with public life. It is equally improper and illegal after the session, in my opinion.

Mr. T. S. SPROULE (East Grey). While this subject is under consideration I want to say that it is generally believed, and I think with good grounds for the belief, that a large amount of literature which we sent out from this House last session never reached its destination. I know for a fact that when the campaign was on at various places in my riding, I inquired whether they had received literature from Ottawa during the session, and in many cases the answer was that they had not. I addressed that literature, I franked it and sent it out, it went into the post office here, and where did it go after it left here? It was in the possession of the Postmaster General's employees, there is no doubt whatever of that, and some person must have made away with it, because it never reached its intended destination. I believe the same thing took place in many portions of this country, literature addressed and franked here, with the compliments of our opponents on it, was sent all over our county.

Sir WILLIAM MULOCK. Both sides did it.

Mr. SPROULE. No, I never saw or heard of it being done except by the Liberal side. I know that my opponent had his compliments put on the literature that was sent out, and some was sent to myself, while the election was going on, and it was distributed all over my riding. When I went into North Grey, I found some distributed there, presumably from Ottawa. Now that was improper and illegal. I could not ascertain whose frank had been used, because the letters were so blurred that you could not read them. In some cases there were letters but you could not fix it on any member. It was sent out in large quantities. Certainly that went through the post office, and it was supposed to have come from Ottawa, and it was franked with the compliments of my opponent on it. I think

that was very wrong. A privilege that was enjoyed by one side ought to be enjoyed by the other side as well. It was illegal and improper, yet it was done. Now I have sometimes questioned whether the explanation was that this literature never went from Ottawa, or whether it was intercepted at Toronto or some other point on its destination, or whether it was made away with by some of the Postmaster General's friends, the postmasters throughout the country. I have sometimes wondered whether it might not be the case that it was made away with by the postmasters, and that opinion was strengthened by the fact that was brought to our notice last session, namely, that away out in the Northwest Territories our literature was deliberately thrown into the fire by the postmaster and burned. That was stated in this House for a fact, and there was no contradiction. I do not know whether the postmaster was ignorant of his duties, but he was known to be a friend of the Postmaster General and his supporters; but he never even handed out the stuff from the post office, it was sent out and burned.

Sir WILLIAM MULOCK. Would the hon. gentleman give me the name of that postmaster?

Mr. SPROULE. I do not remember the name now, it was in the Yorkton district. The statement was made in the House, and the name of the postmaster was given in the House, and attention was drawn to it; therefore I am within my rights in referring to it again. Although I cannot give the name from memory, I am sure the name can easily be found and given to the Postmaster General. That took place in one portion of the country, may it not have taken place in any other portion of the country? I am not saying that is the case, but at any rate it is a fact that can be established beyond question that many parties to whom literature was mailed here during the last session of parliament, never received it. I think it would be quite in order for the Postmaster General to inquire into many of these cases and ascertain where the abuse takes place.

Mr. A. ZIMMERMAN (West Hamilton). I am glad that this matter has come before the House. I think that many people are guilty of abuse of the franking privilege to which allusion has been made. We know that that has always been done by both parties ever since we have had a government in this country. I have a letter that I received this morning from one of my constituents, in which he complains that business literature is being franked to different business concerns in this country. I will read the letter:

There is another matter which I have been requested to bring to the notice of the Postmaster General through you. The dentists here, and no doubt throughout the country, received the inclosed sealed package containing advertisements and price lists, and franked by a member of parliament. I do not know whether that is a customary practice or not, but it struck some of my friends and myself as savouring of a breach of parliamentary privilege, and has given rise to considerable criticism in certain circles. I leave the matter in your hands to do as your judgment dictates.

Now, Sir, if it is the rule, or the law, to allow that kind of matter to be franked, I trust the government will immediately take steps to put a stop to it. It is unfair to other business men, it is unfair to the whole country, that public money should be used to convey advertisements going from this House by the thousands every day. I would like to ask the Postmaster General whether it is customary to allow private advertisements to be franked by members of parliament, and by members even who have no interest in the business, so far as we can see. So far as I can make out the member had no interest whatever in the business of this firm.

Mr. SAM. HUGHES. Whose frank is it?

Sir WILLIAM MULOCK. The subject to which my hon. friend from Hamilton alludes was brought up by anothe member of this House some time ago during this session and I then gave an explanation which will appear in 'Hansard.' My hon. friend will perhaps be willing to read my explanation in 'Hansard' given to the hon. member for St. Antoine division (Mr. Ames) because he refers to the very same abuse to which my hon. friend from Hamilton West (Mr. Zimmerman) refers.

Mr. SAM. HUGHES. Would the hon. gentleman be good enough to tell us whose frank was used?

Mr. ZIMMERMAN. I have not the envelopes in my possession at the present time, I have sent them to the Postmaster General.

Mr. SAM. HUGHES. Does the hon. member know whose frank it is?

Mr. ZIMMERMAN. It is the Dental Supply Company's circular and price-list.

Mr. SAM. HUGHES. How can the member make the statement that the gentleman whose frank was used had no interest in the business if he does not know who he is?

Mr. ZIMMERMAN. I made some inquiries, and my impression was that the member was not in the business.

Hon. JOHN COSTIGAN (Victoria, N.B.). While this matter is up, I would like to say a few words on it because my attention has been drawn to it before and I have discussed it with a number of members. There is another feature about the franking privilege which has not been touched on. In former years it was a greater convenience

to members than it is to-day for we used to be able to frank our letters with our initials or our stamp and we could mail them from our hotels or private residences at the nearest post office box in the city, which was a great privilege. An abuse grew up and the attention of the House was called to the fact that the initials were easily imitated, and this led to such an abuse that the Postmaster General of the day very properly put a stop to that system and ordered that our frank should be good only in the post office in the House of Commons. It is a great inconvenience not to be able to post letters at post boxes through the city and to have to bring them here to the House of Commons. Those who discussed the question know that there is good reason for restricting the privilege to the House of Commons post office, but we suggest to the Postmaster General that he might extend that privilege so that any member who chose to frank a letter by writing his full name on it could post it in any part of the city. There would be little danger of the full name being imitated, while there was evidence that initials were being frequently copied. Members have received several letters from the post office with apparently their initials, although they had never seen the letters. The Postmaster General has said that he would accept a suggestion in favour of doing away with the stamp and requiring the use of initials. That is all right, but I ask him to take into consideration the suggestion that such members as choose to frank their letters with their full names should be allowed to post them at any post box in the city.

Mr. HENDERSON. Mr. Speaker, I simply desire to ask the hon. gentleman who made the statement a few moments ago (Mr. Finlay) with reference to literature that went into his riding, whether the literature was franked during the last session of parliament or after the House prorogued. We on this side got the idea that he was referring to literature sent out after the conclusion of the last session, whereas, I rather think the literature the hon. member refers to was sent out during the last session, quite correctly under the regulations. I would like the hon. gentleman just to state the case.

Mr. FINLAY. It was before the election.

Mr. SAM. HUGHES. During the session ?

Mr. FINLAY. No, after the session.

Motion agreed to, and House went into Committee of Supply.

At six o'clock, committee took recess.

After Recess.

Committee resumed at eight o'clock.

Archives, $20,000.

Hon. SYDNEY FISHER (Minister of Agriculture). The increase in this vote over that of last year is due to the very large expansion of the work in connection with this branch of the department. About a year ago an archivist was appointed and new duties were allotted to him. A report was made to Council which authorized the transfer of various documents in other departments to the archivist's branch and the archivist was given the custody of these records. A building is needed to house these documents ; that building is now under contract and the contract requires it to be finished on the 1st of next October. We will then transfer the documents from all the departments, classify them, catalogue them and place them in such form that they will be available to the public for reference. This will involve more work in that branch. In addition, I had the new archivist inquire into the condition of affairs in the archives branch and make a careful examination. There was no catalogue of the papers which are called the Archives of Canada and this made it very inconvenient for students of our history. The work of cataloguing is advanced to a considerable extent and will be pressed to completion. In connection with the copying in Paris of documents which bear on the early history of our country, I may say that for years we had two gentlemen there, Mr. Marmette and Mr. Richard, who had chosen out documents which referred particularly to the French regime in Canada and these gentlemen reported that these documents ought to be copied and placed in our archives. A large number of such documents have been chosen, but a comparatively small proportion of them has been copied and sent out here. A certain expenditure has been made each year in this work.

Mr. MONK. Who is in charge of that ?

Mr. FISHER. Mr. Tantet an officer of the French government in the Bibliotheque Française has been in charge of the actual copying work. It is considered that there is no necessity to spend further money on the selection of these documents until we have made more progress in copying those which have already been selected. Under Mr. Tantet, expert coypists of the libraries in Paris are engaged in this work, which we wish to press forward more rapidly than in the past. In addition to the archives in Canada and to the records of the other departments under the control of the government, there are a very large number of important historical documents and papers scattered throughout private libraries, in some cases in the possession of private individuals, and in other cases in possession of various local historical societies. It would be impossible to get copies of these documents within any reasonable period of time, but the greater number of them are available to the public under certain restrictions, and it is proposed to publish a guide to these documents, indicating their existence, where they are to be

found and what their character is. The student of history will be able to refer to this guide which can be prepared at a comparatively small cost. One thousand dollars will be devoted to that purpose. Also, there are a large number of historical documents bearing on Canada, not only in Paris but in Great Britain as well as in Spain, Italy and other continental European countries. We wish to find out where these are, and what their nature is so as to be able from time to time to obtain copies. I think the House and the country will agree with me that this subject of the collection and preservation of our archives is one of great interest and importance, and that it is time we should take the necessary steps to secure a systematic and efficient administration of this branch of the department.

Mr. STOCKTON. I fully agree with what has been said by the minister as to the desirability of acquiring all historic documents and data that we can possibly get to be placed in our archives for the benefit of Canada. If, however, the minister would endeavour to get the original documents which are scattered throughout the country, instead of copies of them, it would be very much better, because it is always an object on the part of the original investigator or the historical writer to consult the original documents. I am glad to know that such progress has been made and is being made with respect to the documents in Paris. I would like to know what progress is being made with respect to the documents in the record office or in the foreign office in London. At the time of confederation all the public documents of the province of New Brunswick were taken to London, and consequently those who take an interest in historical studies have been at a great disadvantage as far as New Brunswick is concerned. I think the additional amount will be well expended if it is used in collecting historical data with respect to the Dominion of Canada. Every year that passes will make it more difficult to collect that data, and the more vigorous we are in attempting to collect it now, the better it will be for the archives department and for the future writers of the history of our country.

Mr. FISHER. I am very glad to hear what my hon. friend has said, and I quite agree with the expressions he has used. I would like very much to get the original documents, and whenever we can we do so to the extent of our finances, but in very many instances the owners do not wish to part with original documents, and then we have to take copies. This is the case almost entirely in Europe. For a number of years past we have been spending about $5,000 a year on the other side of the Atlantic, of which about $1,000 has been spent in Paris and about $4,000 in London. The great bulk of the copies we have received in our archives library here have come from London, and not from Paris. Out of three thousand volumes which we have in our archives, only 229 have come from Paris. Each of these volumes contains a number of documents, so that the three thousand volumes would represent about half a million documents. I have been myself almost startled at the figures that have been given me of the number of documents we have in our archives. There are about half a million documents there besides the bound books. A little while ago we received from the Secretary of State's Department alone over a million documents to take charge of and look after; but we had not sufficient accommodation or facilities for dealing with them. That is one reason why it is so necessary that we should have a new fireproof building where these documents could be safely stored, classified, catalogued and made available. At the present time, in the various departments, the great majority of the documents are stored away in boxes in out of the way corners and rooms and are quite inaccessible, and in many instances there does not seem to be anybody who knows what these boxes contain. We shall have to take these documents and put them in a building where they will be safe, and then classify and catalogue them. This is a part of the work to be done as soon as the new building is ready.

Mr. STOCKTON. I had occasion three or four times to consult the archives in Ottawa and the arrangements seemed to me to be very good indeed. I was anxious, a few months ago, to get some documents respecting the early history of New Brunswick, and I went to the archives department and in a very short time got copies of just what I wanted. They had not the originals, but they had copies which had been obtained from the offices in London. Therefore, I think we ought to feel somewhat proud that we are getting along as well as we are respecting the archives of Canada.

Mr. INGRAM. Has the minister enlarged the distribution of the report of the archives?

Mr. FISHER. The report is printed as a parliamentary blue book. It is parliament that decides the number to be printed.

Mr. INGRAM. I understood the minister to state two or three years ago that he was going to supply the high schools with copies of these reports ?

Mr. FISHER. The printing of that report is under the control of the House of Commons, not of the department, and the number of copies to be printed is decided by parliament through the printing committee. We have no control over it. We simply have a certain number of copies supplied to us as a department.

Mr. INGRAM. I understood that the minister was going to recommend a larger distribution of these reports.

Mr. FISHER. If I made that agreement, it has escaped my memory. We have had a mailing list of the copies supplied to us, just as we have had a mailing list for our departmental reports, and we have always been able to meet any demands that have come to us.

Mr. MONK. Does the report show what number of documents have been copied in England or in France during the year or the expense incurred ?

Mr. FISHER. We spend just a little under $5,000 each year in Europe. I have not any figures to show the number of documents copied. The people in London are engaged by the High Commissioner's officers and those in Paris are engaged by Mr. Tantet, an officer of the Bibliothèque Française, and are paid at a fixed rate per folio. One of the objects in asking for this greater expenditure is to increase the number of those working in Paris and have the documents copied more rapidly.

Mr. INGRAM. Will the hon. minister explain the item of $1,000 on page D—31 of the Auditor General's Report, paid Wm. M. Kearns for some books ?

Mr. FISHER. That was the price of some books sold by Mr. Kearns, auctioneer, for the estate of the late Hon. Louis Masson, of Montreal. We think we have made a very good bargain. There were United States purchasers bidding against us, but we were able to secure the works, and immediately afterwards were offered a very considerable sum over what we paid for them if we would allow them to go to the United States. They are works of the greatest historical interest and our experts, Messrs. Sylvain, Suite and Descelles, librarians, very strongly recommended us to get them even at a figure very much higher than we bought them for.

General statistics, $18,200.

Mr. INGRAM. There is an item concerning which I would like to ask a question. I was not here when it passed. Each member is supplied with a monthly report of the Patent Record unbound. At the end of the year we have 12 copies. Why should members not be supplied with a bound volume containing the 12 monthly reports ? I appreciate these reports very highly because I receive a number of inquiries concerning them every year. There is another point I would submit to the hon. gentleman. If you want to get a type written copy of the explanation of any patent, you have to pay a very high figure for it. In Washington one has only to pay a few cents. The department would do well to make a change in this respect and follow the example set by Washington. At this moment I have inquiries from the United States for copies of patents, but the figure asked—although not too high for the amount of writing to be done—is still so much higher than that charged in the United States that it deters people from getting it.

Mr. FISHER. With regard to members getting bound copies, we only bind three or four for the use of the department. We keep the unbound copies, and when any one makes application for a description of a patent, we use those extra copies, and the patent examiners must have them all the time on hand for their own reference. In the United States the conditions are very different from what they are here. There is such a large demand there for descriptions of patents that the American Patent Office find it economical to print a description of every patent issued, drawings and everything. Once these are printed, copies can be supplied at a nominal figure. But here there might not be a demand for a single copy of more that one-quarter of all the patents issued in a year, and if we went to the expense of printing them, we would have to ask for a much more considerable sum than we are doing. Even then, I fear the great bulk would never be asked for.

Mr. INGRAM. Our present method discourages the sale of any of these copies. You have to pay $3 or $4 now to get a copy of a patent, whereas if the price were nominal there would be a great demand for these copies which does not exist now. And if you sold a few copies, that would meet the cost of the printing generally.

Mr. FISHER. Of course if any one wants a patent merely out of curiosity, intending to throw it away immediately after looking at it, he will not care to pay $3 or $4. But if he wanted it for any serious purpose, he would consider that a very trifling expense. The officers of the department have carefully looked into the matter on several different occasions and they consider that the expense would be too great.

Mr. INGRAM. I think the hon. the minister would find that if the price were considerably reduced, there would be demand for copies which would pay for the expense of printing. My hon. friend promised to tell us about the amount he was going to ask for for the collection of statistics, criminal statistics, census statistics and the others to be gathered by the Department of Agriculture.

Mr. FISHER. I have not been able to go into further details, and this item of $18,200 is simply a repetition of last year's vote. The Census Bill has only just passed through the House, and I have not yet been able to make careful, detailed calculations of the expenses under it. But I will try to make these calculations and be ready to give the information my hon. friend asks when I propose, as I mean to do, the supple-

mentary vote. That vote will probably be larger than this. This a mere repetition of the vote which we had last year, and I am not now prepared to give the details the hon. gentleman asked for.

Aid to agricultural societies, $7,000.

Mr. FISHER. This is required in order to give the usual aid to agricultural societies in the Northwest. I have frequeatly explained that, in the different provinces the provincial governments aid agricultural societies, but, there being no provincial government in the Territories, parliament has voted this sum year after year. In view of the fact that Bills for the creation of new provinces are before the House, I do not know whether this vote will be needed. But those Bills have not yet been passed, and we cannot know what the arrangement will be. I think it better to vote it this year and have it available for next fall, the time when the payments are made, as, I suppose that the provincial organization will not by that time be ready to take up this work; and certainly it will be a pity to have a cessation of the assistance to the agricultural societies.

Mr. SPROULE. Will the minister divide it between the two provinces that are being formed?

Mr. FISHER. It is paid through the secretary of agriculture for the Northwest.

Mr. SPROULE. How many agricultural societies are there in the Northwest ?

Mr. FISHER. In 1904-5, there were thirty-one societies.

Mr. INGRAM. With what membership ?

Mr. FISHER. I may explain that the secretary of agriculture for the Northwest supplies us each year with a list which indicates what amount should be sent to each society. Formerly it was paid on a per capita basis of membership, but lately the Department of Agriculture in the Northwest has taken account of the money raised by the agricultural societies themselves, as well as the membership. We have not, for a number of years back, undertaken to decide what each society should have. That has been left to the Department of Agriculture of the Territories. They know that there is $7,000 coming, and they send us a statement and vouchers that the several societies have fulfilled the conditions, and we send a cheque to each society. I have here a list showing the membership of the societies in 1903, but not for 1904. The Regina society had a membership of 334, that being the largest society, and the smallest society had a membership of 75. They average about 150 to 200.

Mr. SPROULE. They would receive an average of about $225 per society?

Mr. FISHER. Yes, I believe the territorial government give them some allowance also.

Mr. SPROULE. Is the grant from the Dominion paid according to the amount the society raises? Formerly the rule in Ontario was that the province paid $2 for every $1 that each agricultural society raised.

Mr. FISHER. It is upon that that the territorial grant is based, and the secretary of agriculture of the Territories, when he divides the $7,000 here voted and gives us the items, takes that into consideration, I believe. In Quebec, I think it is the same as in Ontario, the assistance from the provinces varies according to the amount the society raises. That cannot be carried out in this case because the amount is fixed.

Mr. SPROULE. Would this vote be available if new provinces are established in the Northwest? Would the Auditor General be satisfied to pay out on such a vote as this?

Mr. FISHER. I could not say positively as to that. This is simply an appropriation to aid agricultural societies.

Mr. SPROULE. In the Northwest Territories?

Mr. FISHER. It does not say so. As a matter of fact it has been used only for the Northwest Territories. I think it is not likely that by the time this grant is needed, next fall, the provincial governments will be in a position to do this work, and I think it would be unfortunate if any lapse should occur and the societies should not get the usual aid.

Towards compiling historical data in regard to the Acadian families in Canada, $1,400.

Mr. STOCKTON. I would like the Minister of Agriculture (Mr. Fisher) to state to the committee who is compiling this historical data, how long the work has been going on, and what progress has thus far been made ?

Mr. FISHER. The gentleman who is doing this work is Mr. Gaudet, who was recommended to me many years ago by the gentlemen in the House of Commons and Senate, on both sides of politics, who represented constituencies in which there were a large number of Acadian residents. He was accustomed to this work ; and at that time representations were made that probably the work would be accomplished in a few years. The period was not definitely indicated, but it was expected that the work would go on with fair rapidity. I must say frankly that I have been disappointed in the progress of the work. Mr. Gaudet has collected a great mass of information, partly by travelling about in the maritime provinces, partly by a careful examination of local, municipal and other records, which

mass of information he has been working at to try and complete the first volume of his record. But almost invariably when he has reached a certain point in this work he has found other information which has delayed the final compilation, if I may call it such, or the making up of the final record; and the result is that to-day not a single volume has been published or is finished. I have asked the archivist, Mr. Doughty, who is an expert in this kind of work, to take up this matter and go into the records which Mr. Gaudet has collected, and see if he can find means by which this work can be more rapidly and more successfully conducted. I may say that Mr. Doughty has done this to a very considerable extent; he has not examined the whole of the records yet, but he has examined them to some extent, and he finds that there is a mass of information there which will be of great value. But that information has to be carefully gone over and systematized before it can be published. Mr. Gaudet is doing that now, and I believe that within a reasonable time, with the supervision and assistance of Mr. Doughty, he will be able to complete the first volume. I may say that the information he has found is far greater than could be published in one volume, but it is so mixed up, if I may use that term, that it is impossible for him to select and pick out a portion and bring it to the condition necessary for publication. I believe, however, that with the supervision and assistance Mr. Doughty can give him, within a reasonable time he will be able to eliminate from this mass of information such portions as can be published in one volume, and then go ahead with another portion and prepare it for another volume. The mass of information he has obtained is enormous, and quite sufficient for several volumes, but it needs careful going over to bring it to a condition where it will be ready for publication.

Fumigating stations, $4,000.

Mr. FISHER. These stations are at St. John, N.B., for the maritime provinces; St. Johns, Que., for the province of Quebec; Niagara Falls and Windsor, for the province of Ontario; Winnipeg, for the province of Manitoba; and Vancouver, for the province of British Columbia. Of course, there may be some slight importations at other ports, but these are the most important and convenient.

Exhibitions, $75,000.

Mr. FISHER. This vote is for the next fiscal year, and is to cover the completion of the exhibition at Liege, Belgium, which commences about the 1st of May next, and which we have accepted an invitation to take part in; also it is intended to continue, to a certain extent, to take part in what is called trade exhibitions in England, the first of which we took part in during last fall, and which seems to have been a very successful investment of money. Roughly speaking, I think that $50,000 or $60,000 of this vote will be needed to complete the Liege exhibition, and the balance will be used for the trade exhibitions in Great Britain.

Mr. J. D. REID. How much was spent on the St. Louis exhibition altogether?

Mr. FISHER. Up to the present time $298,000 has been spent, and I think $10,000 or $12,000 more will be required to close up all the accounts, making a total of just about $310,000.

Mr. J. D. REID. I suppose all the goods that were sent there will be sold and deducted from that amount?

Mr. FISHER. No. A few goods were sold there, but very few. In the first place, the customs regulations are such that it is actually cheaper to bring the goods back here than to sell them there. In the next place, a very large proportion of the goods that were sent there were not of a perishable nature, and are to be utilized for the Liege exhibition and others; they are what I may call permanent exhibition stock. I was asked this morning, and I find that in the neighbourhood of $35,000 has been spent on what we may call permanent exhibition stock. This was bought for the St. Louis exhibition, and is still available for use in other exhibitions, and I would not think of selling it. It is a stock that is far too valuable to sell. I do not want to boast, but I will say that we had at St. Louis a mineral exhibit which has not been equalled by any exhibit ever shown at any exhibition in the world. That is talking pretty big, as we say, but at the same time I have the statement of disinterested parties, Americans, well able to judge, and that is their opinion. That exhibit contained a lot of minerals that were very valuable, but which were so exceptionally good as exhibits that I felt it was in our interest to purchase them rather than to have them owned by anybody else. We had one exhibit there for which we spent about $8,000, but which we could sell to-day for much more than that. I would not think of selling it, so long as we are going to exhibit at international exhibitions. There were other exhibits of timber, fur, &c., that cost considerable sums of money, but which attracted great attention, and which it would be very hard to replace. The money value of these is not so great as the expense of collection. We have had to send men all over the country to collect them, and the cost of collection was more than the cost of the exhibits. We own these now, and in the future will not have to go to the expense of collecting; this will enable us to put up an excellent exhibit at Liege at less cost.

Mr. J. D. REID. I had not the pleasure of being at the St. Louis exhibition, but I inquired from gentlemen who were there and

they congratulated us on our fine exhibit. With reference to this exhibit in Belgium, is it the intention of the government to have an exhibit somewhat similar to the Glasgow exhibit or is it to be larger or smaller ?

Mr. FISHER. The cost will be more ; it is a larger exhibition than the Glasgow exhibition. We are going to have a Canadian building with all our exhibits in the one building, and this costs more than to have space in each of the buildings, but we have found by experience that it is far more effective. It saves a little in cost of administration but in effectiveness there is no comparison. At Liège we have to pay a rent for the land on which our building will be placed, half a dollar a foot, amounting in all to about $7,000. The contract price for the building is about $33,000. It is a large item and when I first got the estimate I shrank from it, but when I came to examine the alternative of obtaining space in the different buildings and the difference in the cost of administration and management, I came to the conclusion that even at that expense, if we were going to exhibit at all, it was best to undertake that expenditure. The estimate to-day is that the Liège exhibition will cost from $120,000 to $125,000. Judging from my experience we will be able to keep within that. I estimated that our expenditure at St. Louis would be about $300,000 ; it is going to cost about $310,000, so I think I was fairly accurate in that estimate. The Glasgow exhibit cost about $70,000 or $75,000.

Mr. J. D. REID. I agree that if you are having an exhibit of any kind which is for the purpose of advertising our country you should have a good one, because otherwise the money would be entirely thrown away. I understood that the expense of this was to be about $75,000.

Mr. FISHER. The $50,000 is to be expended after the 1st of July. All the expense of preparing the exhibits, sending them over, erecting the building and all other expenses up to the 1st of July is paid out of this year's vote, the $200,000 we had this year.

Mr. MONK. What amount has been spent on the Liège exhibition?

Mr. FISHER. I am told that up to the present time, although I have not the exact figures, we have spent about $25,000 or $30,000. We have not yet sent a cheque for the buildings, but we will have to do so in a few weeks.

Mr. J. D. REID. Is not half a dollar a foot rather a heavy rental ?

Mr. FISHER. That is not an unreasonable charge for space in exhibitions of this kind. Sometimes they charge as much as a dollar a foot.

Mr. J. D. REID. Who is the commissioner ?

Mr. FISHER. We have a permanent exhibition commissioner, now in the department, who has been in the department for about four years, Mr. William Hutchison. We will have to appoint another commissioner for the Liège exhibition, because Mr. Hutchison does not understand French,

Mr. J. D. REID. Will Mr. Hutchison be there too ?

Mr. FISHER. Oh, yes, he is the business commissioner, who will attend to the administration and will certainly have to be there. If he understood French it probably would not be necessary for me to appoint anybody else, but under the circumstances I would not like to put the business work of the exhibition under the management of an inexperienced person. I believe that the success of our exhibitions lately has been very largely due to the fact that we have at the head of that department, Mr. Hutchison, who for three or four years has had great experience in exhibition work.

Mr. J. D. REID. Is he a permanent employee, and if so, at what salary ?

Mr. FISHER. He is permanent at $3,000 a year.

Mr. J. D. REID. And expenses ?

Mr. FISHER Yes, when they are incurred.

Mr. U. WILSON. Will the minister give us a further explanation as to these exhibitions in England ; do I understand that he expects to make them permanent.

Mr. FISHER. My hon. friend misunderstood me if he thought I said they would be permanent. In England there are held annually what are known as trade exhibitions; at the Islington Agricultural Hall in London there are held five or six of these each year. Last fall there were three which came within a week of each other, each lasting ten days. One was the exhibition of the grocers and allied trades ; another, the bakers, and another a dairying exhibition. We had been for several years invited to take part in these exhibitions but for one reason or another we had been unable to do so. My officers and I were impressed with the value to Canadian trade of our taking part in these exhibitions which are attended by the retail and wholesale merchants from all over the country, who pick up new ideas in any of the trades in which they are specially interested. We took part in these three exhibitions last fall.

Mr. U. WILSON. What was the cost ?

Mr. FISHER. The cost amounted to about $5,000 each. There was another exhibition of a somewhat similar character called the Colonial Products exhibition held in St. Georges Hall, Liverpool, and we also took part in that at an expense of $5,000

or $6,000. The trade journals of the old country have universally congratulated us on having shown Canadian products at these exhibitions, and our experience is that our exhibits have caused a good deal of stir among the trades interested. I believe this work is of the utmost value to us in pushing our agriculture and food products in the English markets. So far as my opinion is concerned, I believe we should take part another year in some of these exhibitions, though not necessarily in the same ones as last year. An expenditure of $15,000 or $20,000 in such work is of the greatest value to Canadian trade in the English market.

Mr. U. WILSON. Did the $15,000 for the three exhibitions cover the cost of collecting the exhibits and forwarding them to England?

Mr. FISHER. Yes.

Mr. U. WILSON. Did you have to get new exhibits for each exhibition?

Mr. FISHER. No. Part of the exhibits could be shown at the three exhibitions. At the grocers' exhibition we had canned goods, bacon, pork, and some butter and cheese ; at the dairy exhibition we had butter and cheese, eggs, and dressed poultry; at the baker's exhibit, we had butter and lard, some canned goods, flour, breakfast foods and articles of that kind. At these exhibitions, of late years we have set out the exhibits in an attractive and striking way which might perhaps be called a trick of the trade; something like what shop keepers do in what is called window dressing. At these three exhibitions in London we used these same decorations, although the exhibits themselves were changed. I am glad to say that I have some officers in my department who are experts at displaying our goods ; and when presented in this manner the exhibits attracted a good deal of attention.

Mr. U. WILSON. You will only have to renew the expense once a year ?

Mr. FISHER. If the three exhibitions were held in the same hall, yes. But in the change from London to Liverpool, we had to renew the decorations. A good deal of this decoration is of grasses and grains which are very effective and very beautiful, and these we have to renew from time to time.

Mr. J. D. REID. Who had charge of the London exhibit?

Mr. FISHER. Mr. Hay and Mr. Brodie; the latter gentleman speaks French very well and he has gone to Liége. Mr. Race showed great aptitude at St. Louis, and I got him to go to Liverpool; he is not a permanent officer.

Mr. J. D. REID. Are these the only exhibitions we are to take part in during the coming year?

Mr. FISHER. The Liége exhibition and these trade exhibitions in London are the only ones provided for in this vote, and the only ones we have so far considered.

For renewing and improving Canadian exhibits at Imperial Institute, London, and assisting in the maintenance thereof, $8,000.

Mr. INGRAM. What changes have taken place in this office ?

Mr. FISHER. We pay £450 a year as a contribution towards the general maintenance of the institute. In addition, we pay a rental at the rate of £250 a year for a city office ; but this only commenced on September 29 last. We pay Mr. Harrison Watson's salary at the rate of £300 sterling per annum ; he has been the curator of the Imperial Institute for many years. We shall have to spend about £100 a year for office expenses and typewriting assistance, making a total of about £1,100 sterling. I have always expected that something would have to be spent in repairing and renovating the exhibits in the institute. Last fall, when the gentleman whom I sent in connection with other exhibitions were in London, I asked Mr. Brodie and Mr. Hay to report what ought to be done to make the exhibit in the Imperial Institute a thoroughly effective one. I have that report, and it is evident that a great deal will have to be done. As soon as the exhibits for Liège are sent away, I hope to start on that work. Of the vote of $8,000 for the current year, I have just accounted for about $5,000, and I propose to apply the other $3,000 in preparing and sending forward exhibits to the Imperial Institute, where I hope to have them installed before the 1st of July. Some of the officers who are going to install our exhibits at Liège are expected to be free in time to return to London and start the work at the Imperial Institute. That is one of the advantages of having a permanent staff of officers for exhibition work.

Mr. KEMP. What is this city office for ?

Mr. FISHER. It is for two purposes. In the first place there has been a constant objection that the Imperial Institute was too far in the west end to be convenient for business men. In connection with the city office there is a show room, where I hope to have brief temporary exhibits. For instance, one week we may have an exhibit of canned goods, another week bacon and pork, another week something else ; and each exhibit will be advertised beforehand to the trade specially interested in the particular line of products exhibited. The exhibits in the city will be exhibits of goods of a perishable nature, lasting only a few days or a week, whereas the exhibition at the Imperial Institute at South Kensington is one of a more permanent and general character. At the city office we might have in the course of the year fifteen or twenty different exhibits.

Mr. KEMP. The office will be run the whole year round ?

Mr. FISHER. Yes.

Mr. KEMP. Then you will require a permanent officer ?

Mr. FISHER. Yes.

Mr. KEMP. The amount is scarcely sufficient to carry such an enterprise in the city and do it effectively.

Mr. FISHER. We expect that Mr. Watson, with an ordinary clerk, will be able to alternate between the exhibit at South Kensington and the office in the city. When the exhibit is going on he will spend most of his time there and have his clerk at the South Kensington Institute.

Mr. KEMP. Does he give all his time to this work for the sum of $1,500 a year ?

Mr. FISHER. Yes, he does nothing else. He only got $1,200 for a long time.

Mr. KEMP. Can you get a good officer for that price ?

Mr. FISHER. I am surprised that Mr. Watson is contented, but he is an efficient officer. He has been there a long time, and is well up in Canadian products and affairs, and a most suitable man for the purpose.

Mr. KEMP. He is a very fine man.

Mr. FISHER. I cannot see why he is willing to go on at the low price, but he is.

Mr. KEMP. He is a very efficient gentleman, and I am surprised at the smallness of his salary. He must have some private income.

Mr. FISHER. I know nothing about that.

Mr. LALOR. What inducements are held out to manufacturers to exhibit ? Have they to pay their own freight, or what means should they take to have their goods exhibited ?

Mr. FISHER. I have not made out any special rules regarding this exhibition. In preparing exhibits, if the manufacturers will supply the goods, we have always been in the habit of sending them forward at our expense and looking after them. I suppose we will have to do that in connection with the Imperial Institute exhibit.

Mr. INGRAM. The hon. gentleman is referring to exhibitions, not to the Imperial Institute.

Mr. FISHER. We will do the same in that case.

Mr. INGRAM. I think the hon. gentleman has been a negligent sinner once more. He has not carried out what he promised last session and the session before that, and has not much of an excuse to offer.

Mr. FISHER. I have not got on as fast as I would like.

Mr. BLAIN. In what condition is the Canadian exhibit in the Imperial Institute at the present time, and how is it constituted ?

Mr. FISHER. I do not know if I could tell the hon. gentleman.

Mr. KEMP. The hon. gentleman is ashamed of it.

Mr. FISHER. I do not want to say much about it.

Mr. BARR. Is it increasing or decreasing ?

Mr. FISHER. It is very much in statu quo at present, but before next July, I hope to be able to increase it very considerably.

Mr. KEMP. It is not a credit to the country, that exhibition in the Imperial Institute.

Mr. SPROULE. What is the use of spending $8,000 if we make no efforts to improve it ?

Mr. FISHER. We did not spend it last year at all, but I hope that by the end of this year we will be able to make the exhibit fairly creditable. I may not succeed in doing all I would like before the 1st July, but will make a decided effort.

Mr. SPROULE. What do you propose doing ?

Mr. FISHER. I propose to collect exhibits this year as much as I can with the money at my disposal, and send them over and set them up. Once the installation at Liège is completed, I hope to turn some of the staff back into London to do the installation there. The Liège exhibition must be installed by the 1st May, and I will have May and June to work in the Imperial Institute at London.

Steamer service at Grosse Isle, $55,000.

Mr. FISHER. The amount of the contract is $83,000 for the vessel, and it will take the vote of last year of $30,000 and this year's $55,000 to pay for it. When I asked for $30,000 last year, I did not know what the contract would come to. We invited tenders from a considerable number of builders, and eventually awarded the contract to the lowest Canadian tenderer. There were tenders from abroad at a lower price, but we thought it only fair to give a chance to Canadian builders. Bertram & Company, of Toronto, are the contractors.

Mr. BARR. When will the contract be finished ?

Mr. FISHER. The vessel is to be delivered in September. There were other tenders that ran up to $110,000, and the tender we accepted was the lowest Canadian tender. It will be an iron steamer 120 feet long and otherwise in proportion.

Mr. SPROULE. I presume you expect to spend this $30,000 voted last year before the 30th June next, and the balance is to pay for the rest of the contract ?

Mr. FISHER. Yes.

Mr. J. D. REID. $80,000 seems a high figure for a vessel 120 feet long.

Mr. FISHER. We asked for tenders from some four or five builders in Canada and two in Scotland. The offers from Scotland were lower, but we thought it would be fair to add 25 per cent to them to account for the duty which the Canadian builders said they had to pay on the material. When we did that, the Scotch tenders came higher than $83,000. The 25 per cent is an arbitrary figure, but it is about what the average duty would be, and I thought it best to give the contract to a Canadian builder on reasonable terms.

Mr. J. D. REID. I understand that, of late, they have been building large steel steamers in Toronto for prices quite as low as are demanded in the old country. Had the minister made inquiries he would have learned that a large number of lake vessels have been built in Toronto. Therefore, if he has added 25 per cent, he has simply given a profit of 25 per cent or $20,000 to the builders over and above what the vessel could have been built for if the contract had been by tender.

Mr. FISHER. It was by tender, and none of the tenders were opened until all were in. There was one Scotch tender for $67,000, another for $73,000 ? The Bertram tender was for $83,000 and the Collingwood Ship-building Company and the Polsons each $110,000.

Mr. J. D. REID. On the same specifications?

Mr. FISHER. The same in every way.

Mr. J. D. REID. Is it understood that there are to be no extras?

Mr FISHER. There would have to be a change in the specifications to have extras. The specifications were prepared by the Department of Marine and Fisheries just as they prepare them for themselves when they have to order a boat. Of course, the officers of my department explained the work to be done by the boat and what she would need.

Mr. SPROULE. The minister has taken a novel way of introducing the protection principle when he says that he added 25 per cent to the Scotch tender. It seems a strange way to overcome a protective duty in the interest of Canadians. I am not objecting to it but I think it is a very bad principle to introduce.

Mr. FISHER. I think it is the principle that has been acted upon by the government in a great many instances.

Mr. SPROULE. I do not remember having heard it explained or defended in the House before.

Mr. FISHER. When the matter was discussed, I was informed that the Public Works Department act on this principle.

Mr. SPROULE. In connection with what work?

Mr. FISHER. I cannot say; I was simply told they acted on the principle of adding a percentage to the tender of the trans-Atlantic contractor, so as to make it as fair as possible for our own contractor.

Mr. SPROULE. I have heard it explained that it cost something to bring a vessel across the water, and that must be taken into the calculation in comparing tenders. But I cannot remember having ever heard of the addition of a percentage to the tender from outside of Canada in order to be fair to our contractors.

Mr. J. D. REID. The Minister of Agriculture does not appear to be as economical as the Minister of Marine and Fisheries (Mr. Préfontaine). I think that when that hon. gentleman wants a steamer he purchases it on the other side of the water. Is it not true that the government purchased a steamer last year, ordering it from the other side of the Atlantic on the ground that it could be built there at a less price than here?

Mr. FISHER. I think the reason was that they could not get it delivered here in time. I might say that these tenders from the other side of the water were for a vessel delivered at Quebec.

Mr. SPROULE. That is why I made the inquiry—because I understood that the cost of delivering the vessel on this side was the only item in the calculation in considering Canadian tenders. Now, it is put on the ground of protection. This is an illustration that devised many means to introduce the element of protection, though they would not admit the principle openly. They have accomplished it in a round-about way in many instances, of which this is one.

Mr. J. D. REID. Has the minister named the vessel? I think we should decide on a name. I think we ought to call her the 'Minnie M.'

Mr. FISHER. I do not know that name?

Mr. SPROULE. What speed will the vessel have ?

Mr. FISHER. The specifications require 12 knots.

Mr. SPROULE. The vessel is for quarantine purposes. Will she carry passengers?

Mr. FISHER. We have constantly to send numbers of people from the quarantine station at Grosse Isle to Quebec—people

whose time of quarantine has expired—when there is no vessel to carry them. The vessel has to carry also a disinfecting apparatus, so that if a ship comes that requires disinfecting that can be done.

Mr. SPROULE. Has the department any different method for disinfecting ships from that which was in use some years ago ?

Mr. FISHER. I do not know of any change within the last seven years. This vessel will have what they call the sulphur blast furnace.

Steamer for service at William Head, $20,000.

Mr. FISHER. I have not been able to make a contract for that ship yet. Specifications are now being drawn up by the Department of Marine and Fisheries. I hope to get the ship built on the Pacific coast.

Mr. BARR. What is the object of this vessel ?

Mr. FISHER. This vessel belongs to the quarantine station at Victoria. We have to have a small steamer there to run out to the ships as they come in, and take off passengers if necessary.

Mr. SPROULE. Have you any reason to hope that you will be able to get this built in British Columbia ?

Mr. FISHER. Yes.

Mr. SPROULE. Specifications were prepared last year, what is the cause of the delay ?

Mr. FISHER. Specifications were prepared, but they were on too extensive a scale, too large a ship altogether, and I insisted upon having specifications for a smaller vessel.

Mr. SPROULE. What are you doing the service with now ?

Mr. FISHER. An old boat which has been under constant repair, costing us very heavily every year, and which is not fit for the service. Sometimes I almost wish that she might be lost, she is absolutely unfit for service.

Salaries and contingencies of organized districts, and public health in other districts, $150,000.

Mr. HERRON. I would like to ask the minister for some information regarding some unsettled claims in the town of Pincher Creek where I live. Three or four years ago there was a small-pox epidemic in the Northwest Territories, and it broke out in that town. The Northwest government took steps to prevent the spread of the disease, they appointed health officers and a committee to look after the matter. They quarantined several houses in the town, and held people occupying them under quarantine. When the time came to settle, the Northwest government had not sufficient funds to meet all the claims, because there were other cases in other towns. I understand that an agreement was arrived at between the Dominion government and the government of the Northwest Territories, and the cases were handed over to the Department of Agriculture. In some of the towns in my district the claims were settled in their entirety, but for some reason of which I am not aware, in other places they were not satisfied. There are two towns in the district which I represent, where not over twenty-five or thirty per cent of all the claims have been settled, though they were certified to by the health officer, or the health committee appointed by the Northwest government, and sworn statements were submitted. I would like to ask the minister if he can tell me why these claims have not been paid ? I think they should be paid, it is in the interest of the country that they should be paid.

Mr. FISHER. I may say to my hon. friend that I do not quite understand the situation as he has described it. I was not aware that the Northwest government had any health officers there apart from those we appoint and pay. But the hon. gentleman seems to indicate some local or other health officers. As a matter of fact, we had to deal with the small-pox epidemic in the Northwest, and we did so through Dr. Patterson, who was appointed by us to superintend this work in the Territories. Everything the hon. gentleman describes came before Dr. Patterson, and he made reports upon it to the department, passed the various claims and so forth, and wherever he passed claims we paid them. I do not remember at the moment any cases which were not settled, though in some cases we did not pay the full amount claimed, but in those cases the matter was amicably adjusted. I am not aware that there were any outstanding claims. If my hon. friend would give the names of the places and the individuals whose claims remain unsettled, I will be glad to look into them, if they are certified and approved by the officer in charge.

Mr. HERRON. The Dr. Patterson to whom the minister refers did make a visit to this town in order to settle these claims. He came there and spoke to one or two men of the town, I do not think there were three men who knew of his business in the town, although there were over twenty interested in these claims. When he came at noon he said he would be there the whole afternoon, and he went away in an hour or two, and never made any investigation of the claims, good, bad or indifferent. I was there, and am able to make this statement. He put his own interpretation upon our claims, and they have not been settled to this day. I hope the minister will look into this matter and set it right. I can give all the details, the names of the applicants, and everything necessary to justify my statement. I am now speaking of Pincher Creek, but I

believe there were similar claims unpaid at Fort Macleod. This occurred four years ago last February. The disease broke out in Pincher Creek about the same time. I know of one instance where the officers took possession of a vacant house, placed patients in same, also furniture and bedding, and it all remains in that house up to this time. The board of health recommended that the building should be burned down, but no action has yet been taken.

Mr. FISHER. I will look into the matter and see what has been done.

Mr. W. J. ROCHE. The hon. gentleman has a number of officers to guard the frontier in Manitoba from contagious diseases. Has the minister appointed any new officers during the past year? He had Dr. Riddell at Crystal City, Dr. Thorburn at Deloraine, and Dr. White from some other place down there.

Mr. FISHER. No, we have taken them all off. Small-pox seems to have practically disappeared from the United States and we have felt justified in withdrawing these officers.

Mr. W. J. ROCHE. Small-pox is the only disease that you guard against?

Mr. FISHER. Yes.

Mr. SPROULE. How many officers have you appointed for the unorganized districts and what are their salaries?

Mr. FISHER. Those along the frontier are appointed from month to month and are paid $100 a month except a few in the west where the expenses are higher and where they are paid $125 a month, as they are not resident at the places at which they are stationed.

Mr. SPROULE. If you have dispensed with the services of so many medical men and do not intend to employ them again, except an emergency arises, why do you want this large vote?

Mr. FISHER. I do not now expect to need all that, but at the time these estimates were made up, two or three months ago, we could not be very sure. We may be able to get on with $20,000 or $25,000 less and I would be willing to reduce the vote by $20,000.

Mr. SPROULE. How much did you spend last year?

Mr. FISHER. The Auditor General's Report will show what we spent last year; I am speaking now of the current year. I do not think we will spend $150,000 this present year, because the necessity for watching the frontier has ceased during this current fiscal year, and if nothing occurs to require the reappointment of these men during the next four or five years we will not spend the $150,000.

Mr. HERRON.

Mr. J. D. REID. The Auditor General's Report shows that last year $106,216 was spent, $73,056.60 for the organized districts and $33,159.40 for the unorganized districts, for public health generally. The minister states that he will not require $20,000 of last year's expenditure this year, so that about $83,000 should cover the expenditure for this year.

Mr. FISHER. Of course the organized districts are all we can surely count on. The other work is intermittent in its character, but we never know exactly what we will be called upon to spend.

Mr. J. D. REID. Last year $73,000 was for the organized districts and $33,000 for the unorganized districts. The hon. minister does not mean to say that that will be increased at all.

Mr. FISHER. There must be some mistake there, because last year I think we spent nearly $150,000; otherwise I would not have asked for the $150,000.

Mr. J. D. REID. There must be some other portion of the Auditor General's Report which my hon. friend has not seen.

Mr. FISHER. Some years ago, I asked for $80,000 for the organized districts alone, but I was forced to take a supplementary estimate and I think it came to $100,000 altogether. That has been the expenditure generally.

Mr. J. D. REID. You should not take a larger vote than is required for this purpose, because there is great temptation to use the money for some other purpose. The Auditor General has complained in respect to matters of this kind.

Mr. FISHER. I do not want the temptation of getting more money than I actually need.

Mr. SPROULE. Then why do you not act on that principle?

Mr. J. D. REID. The minister says that this year he does not want within $20,000 of what he expended last year. He spent $106,000 last year and $20,000 less would be $86,000. If he gets $100,000 it ought to cover all requirements.

Mr. FISHER. In the year 1902-3, we expended on the organized districts alone $99,000, so that there appears to be something omitted in the Auditor General's Report. I am perfectly willing to let the item stand until I get further information, but if the hon. gentlemen wish to pass the vote I think it might be reduced to $130,000.

Mr. SPROULE. You must have had some memorandum to present to Council on which to base your request for this vote.

Mr. FISHER. I have not that memorandum with me at present.

Mr. INGRAM. The expenditure last year according to the Auditor General's Report was $217,000, and if you deduct the $99,000 for cattle quarantine it leaves a balance of $118,000 expended in this way.

Mr. FISHER. The estimate for 1905-6 shows $105,000 for organized quarantine work; $15,000 for frontier work, and $10,000 for Northwest Territories, or $130,000 in all.

Mr. SPROULE. The minister had better let the item stand until we get the information.

Mr. FISHER. Very well.

Item allowed to stand.

Tracadie Lazaretto, $6,000.

Mr. SPROULE. Why is this vote increased $500?

Mr. FISHER. The physician there is experimenting on a new treatment and he wishes to continue his experiments more extensively. That accounts for the larger part of the increase, and then there are some little travelling expenses which the doctor has to incur in examining into reported cases of leprosy.

Mr. J. D. REID. Are the lepers increasing?

Mr. FISHER. It varies a little. There are seventeen now and two years ago there were twenty-one.

Public Works Health Act, $6,000.

Mr. FISHER. The statute passed some years ago requires that certain facilities in the matter of hospital accommodation and so on, shall be provided by contractors on public works. We have a gentleman who visits these works and sees that this law is properly carried out.

Mr. J. D. REID. I see that last year the expenditure under this head was only $3,500.

Mr. FISHER. I asked for the vote of $6,000 last year in anticipation of the construction of the Transcontinental Railway. So far we have only expended about $3,000, but before the end of the current fiscal year we may have to expend more. So far, I am very pleased to say, there has been no unusual occurrence. The ordinary routine inspection has been sufficient. We have had very little in the way of complaint, and our inspector has been able, by ordinary travelling, to overlook the work and make satisfactory reports. As an instance of what might occur at any time, a report came to the department that there was an epidemic of a peculiar disease on a certain work. The inspector immediately went off to inquire into it, and returned within a week with the statement that there was no foundation for the report. When a report of that kind comes to the department, however, we look into it at once.

Winnipeg and St. Boniface hospitals, $4,000.

Mr. W. J. ROCHE. How are the grants to these hospitals made?

Mr. FISHER. The vote is divided between them according to the number of patients, at the rate of so much per day.

Mr. URIAH WILSON. It was stated in this House a year or two ago that the reason we had to give so much to hospitals in that part of the country was that a large number of immigrants were taken to them, and it would be unfair to throw the whole burden upon the people there. Will the minister state how many are in the hospitals, and what proportion are immigrants?

Mr. FISHER. I have no report of the number there at present, and I do not think that would influence the grant. It is the number of admissions of newly arrived people during the year that regulates the amount we send to each hospital.

Some resolutions reported.

Sir WILLIAM MULOCK moved the adjournment of the House.

Mr. SPROULE. Might I ask what work will be taken up to-morrow?

Sir WILLIAM MULOCK. The Minister of Agriculture will proceed with the third reading of the Seeds Bill.

Mr. BARR. Will that take the whole day?

Sir WILLIAM MULOCK. It is possible, judging by the past. If that be passed, the Minister of Marine and Fisheries, if he is ready, will proceed with his Seamen's Bill, and Mr. Fitzpatrick may proceed with his Bill to amend the Franchise Act. If we go into supply, the Minister of Railways and Canals will proceed with his estimates, and the Minister of Agriculture may take up the items he has left unfinished to-day.

Motion agreed to, and House adjourned at 10.20 p.m.

HOUSE OF COMMONS.

WEDNESDAY, March 1, 1905.

The SPEAKER took the Chair at Three o'clock.

CERTIFICATE OF ELECTION.

Mr. SPEAKER. I have the honour to inform the House that the Clerk has received from the Clerk of the Crown in Chancery certificate of the election and return of Emmanuel Bernard Devlin, Esq., for the electoral district of Wright, in the province of Quebec.

MEMBER INTRODUCED.

Emmanuel Bernard Devlin, Esq., member for the electoral district of Wright, was introduced by Sir Wilfrid Laurier and Hon. N. A. Belcourt.

QUESTIONS.

IMMIGRANTS DEPORTED.

Mr. URIAH WILSON asked :

1. How many immigrants were deported from this country during the fiscal year 1904, and up to the 1st of February, 1905 ?
2. What were their nationalities, and what was the cause of their being deported ?
3. How many were deported for diseases, and for what diseases ? How many because they were liable to become paupers ?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister) :

1. During the fiscal year 1903-4 359 immigrants were deported. From 1st July, 1904, to the 1st of February, of the fiscal year 1905, 387 were deported, making a total of 746.

2. Deported immigrants were of the following nationalities :—

Russians	202
Syrians	173
British	140
Japanese	25
Poles	24
Armenians	23
Hebrews	22
Galicians	22
Italians	17
Germans	16
Norwegians	15
Finns	12
Austrians	11
Roumanians	11
Swedes	8
Danes	5
Lithuanians	4
Hungarians	4
Chinese	3
Turks	2
Belgians	2
Americans	2
Buckowinians	2
Icelanders	1
Total	746

3. Deportations were for the following causes :—

Trachoma	502
Physical infirmity	25
Consumption	23
Insanity	19
Mental infirmity	14
Favus	13
Rheumatism	8
Tuberculosis	6
Crippled	5
Epilepsy	5
Poor physique	4
Heart disease	3
Bronchitis	3
Melancholia	2
Syphilis	2
Chronic dysentery	2
Varicose ulcer	2
Blindness	2
Rheumatism and heart disease	2
Mixed conjunctivitis	1
Conjunctivitis	1
Gout and debility	1
Idiocy	1
Tabes	1
Pregnancy	1
Deformity	1
Gonorrhœa	1
Deaf mute	1
Small-pox	1
Inflammatory rheumatism	1
Physical and mental infirmity	1
Cancer	1
Adenitis lymphatics	1
Hæmoptysis	1
Imbecile	1
Broken back	1
Hernia	1
	660
Likely to become public charges	60
Accompanying deported persons	16
Criminals	6
Refused by United States officers	3
Bad character	1
	26
Total	746

CARRIAGE OF MAILS BETWEEN COLDWATER AND LOVERING.

Mr. BENNETT asked :

1. Who is the present contractor for carrying the mails between Coldwater and Lovering ?
2. When does the contract expire ?
3. What is the remuneration per year for such service ?
4. What is the date of execution of such contract, and when does it expire ?
5. Were tenders invited for such service ?
6. If so, who tendered, and what was the amount respectively of such tenders, if any ?

Hon. Sir WILLIAM MULOCK (Postmaster General) :

1. W. H. Lovering.
2. 31st March, 1905.
3. $130 per annum.
4. 13th day of March, 1901—31st March, 1905.
5. & 6. Tenders were not invited in 1901, but were invited in 1897 when the contract was awarded to W. H. Lovering the lowest tenderer, at $130 a year, and on its expiry in 1901, was renewed as authorized by the Post Office Act with the same contractor at the same price.

LIVE STOCK RECORDS OF CANADA.

Mr. A. MARTIN asked :

1. What steps have been taken to secure the nationalization of the live stock records of Canada ?
2. Are national records likely to be established in the near future, and under what conditions ? If not, why not ?

Hon. SYDNEY FISHER (Minister of Agriculture). Will the hon. gentleman let that stand ? I will have the information, I hope, to-morrow.

COPYRIGHT PHOTOGRAPHS.

Mr. AMES asked :

1. Were representations made to the Department of Agriculture in the month of April, 1903, in reference to the inconvenience of the long inscription required on copyright photographs ?
2. Did the government take the request of Messrs. Wm. Notman & Son, of Montreal, Stephen J. Thompson, of Vancouver, B.C., and W. J. Topley, of Ottawa, into consideration ?
3. Is it the intention of the government to introduce legislation in the near future to amend the Copyright Act on photographs, in conformity with the suggestions contained in the aforesaid communications ?

Hon. SYDNEY FISHER (Minister of Agriculture) :

1. Yes.
2. The government did not think it was wise to introduce a special Bill for the purpose of making that amendment to the Copyright Act.
3. The matter is under consideration.

CONVICTIONS BY JUDGE PRENDERGAST.

Mr. LAKE asked :

1. Were two men named Hamelin and Goselin sentenced to imprisonment in the penitentiary for horse-stealing by Judge Prendergast in 1902 ?
2. What was the length of sentence in each case ?
3. Were they released before sentence expired ?
4. If so, at what date, and for what cause ?

Hon. CHARLES FITZPATRICK (Minister of Justice). In answer to my hon. friend, it is contrary to the well established usage of parliament to answer questions of this sort; and if the hon. gentleman will permit me I will send him over the reference in Todd where he will find the rule stated.

FITTINGS OF THE STEAMER 'ACADIA.'

Mr. AMES asked :

1. What disposition was made of the furniture and fittings of the steamer 'Acadia,' formerly in the service of the Department of Marine and Fisheries ?
2. At what time, in what manner, to whom, and for what consideration were these articles disposed of ?

Hon. RAYMOND PREFONTAINE (Minof Marine and Fisheries):

1. They have been stored.
2. Answered by No. 1.

STEAM LAUNCH 'MAISONNEUVE.'

Mr. AMES asked :

1. What has the steam launch 'Maisonneuve' cost the government since her purchase for the following :—(a) repairs, (b) fittings, (c) provisions, (d) fuel, (e) other supplies, (f) salaries and wages ?
2. How many persons compose her regular staff and crew ?
3. How many months was she in active service in 1903, and during 1904 ?

Hon. RAYMOND PREFONTAINE (Minof Marine and Fisheries):

1. (a) $1,640.85, (b) $1,243.98, (c) $450.22, (d) $274.61, (e) $1,482.09, (f) $3,388.13.
2. Five, with three additional when employed in surveys.
3. Three months in 1903 and seven and a half in 1904.

ANTICOSTI LIGHTSHIPS.

Mr. LEWIS asked :

1. What was, in each case. the stipulated contract price of the 'Lurcher' and of the 'East Point,' Anticosti, lightships ?
2. What additional amounts did the contractors receive in respect of these ships ?
3. What further expenditure for alterations, repairs and renewals, have been incurred up to January 1st, 1905 ?
4. According to the contract, upon what date or dates were said boats to be completed and delivered by the contractors ?
5. Was there any forfeit stipulated in the contract for delay of delivery ?
6. Were the contractors in any way penalized for failure to complete the contract within the time limit ?
7. Is the 'Lurcher' lightship in position at the present time ? If not, why not ?

Hon. RAYMOND PREFONTAINE Minister of Marine and Fisheries). I would ask the hon. gentleman to move for an order for papers. The answer will be too voluminous

STEAMERS OF LIGHTHOUSE AND COAST SERVICE.

Mr. LEWIS asked :

1. At what port or ports did each vessel under the control of the Department of Marine and Fisheries call between the 31st of October and the 4th of November, 1904, inclusive ?
2. Where was each vessel on the 3rd day of November last ?

Hon. RAYMOND PREFONTAINE (Minister of Marine and Fisheries). I would ask the hon. gentleman to proceed in the same manner. There is no disposition to withhold the information, but it cannot be obtained without a good deal of trouble.

WHARF AT BIC.

Mr. BERGERON asked :

1. Some days before the month of November last did the government enter into a contract with one P. Ross for the purchase of land for the building of a road leading to a wharf that was to be constructed at Pointe à Côté at Bic ?
2. If so, how much did Mr. Ross receive for his land ?

Hon. CHARLES HYMAN (Acting Minister of Public Works) :

1. No land was purchased from Mr. Ross ; but Mr. Ross gave, in writing a promise of sale of a right of way, to our resident engineer, on the 8th of December, 1904.
2. No action taken.

RESIGNATION OF THE HON. CLIFFORD SIFTON.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). I have to inform the House that my colleague, Hon. Mr. Sifton, has resigned his position in the government, and as Minister of the Interior. Mr. Sifton finds himself unable to agree with the terms of the Bill which has lately been introduced for the admission into the Dominion of the provinces of Alberta and Saskatchewan, his disagreement being confined altogether to the educational clause. After a conference with him, the following correspondence has been exchanged between him and myself :

Ottawa, February 27, 1905.

Dear Sir Wilfrid,—After giving my best consideration to the matters which we discussed last evening, I have arrived at the conclusion that it is impossible for me to continue in office under present circumstances, and that it is better for all concerned that I should act at once. I therefore beg to tender my resignation as a member of the government. I trust that the unhappy necessity which has arisen will not in the least impair the friendship with which you have been kind enough to honour me.

Believe me,

Yours most faithfully,

CLIFFORD SIFTON.

Right Hon. Sir Wilfrid Laurier, G.C.M.G.,
Ottawa.

To this I answered yesterday in the following terms :

Ottawa, February 28, 1905.

My dear Sifton,—I received yesterday your letter of same date, whereby you tender me your resignation as a member of the government.

There is no alternative to me, but to accept it, and with much regret, it will be my duty to place it in the hands of His Excellency.

After our conversation of the other day, I had left you with the impression that the differences between us were more of words than of substance, and until I received your letter, I had cherished the hope that it would be possible ere this to find a comparatively easy solution.

Whilst I feel more regret than I can express at this termination of our official relations, let me assure you that should our old friendship be ever impaired, the fault will not be mine.

Yours very sincerely,

WILFRID LAURIER.

The Hon. Clifford Sifton, Ottawa.

The resignation has been placed in the hands of His Excellency, who has been pleased to accept it.

Hon. CLIFFORD SIFTON. The statement made by the right hon. the Prime Minister (Sir Wilfrid Laurier) necessitates a very short explanation to the House on my part. When it was determined that during this session of parliament legislation should be introduced creating new provinces out of a portion of the Northwest Territories, I felt called upon, in view of the history of the educational question in Canada, to give very serious consideration to the position which I should take with regard to the legislative power to be conferred upon the provinces in regard to the subject of education. It was necessary that conferences should take place with members of parliament representing the Northwest Territories and with the representatives of the Territorial government, upon the subject of education and other subjects involved in the Bill. These conferences were unavoidably postponed until after the beginning of the new year, by reason of the absence of the Prime Minister, who, after the general election, was compelled to take a short rest, and was therefore absent from the country. Shortly before the time fixed for holding these conferences I was compelled by my own state of health to leave Ottawa, and was therefore unable to be present at the discussions which took place. Before leaving I discussed with the Prime Minister most of the subjects that necessarily required to be dealt with in the Bill which was to be introduced, and so far as I was able to do so at that time, I communicated my views to him upon the various subjects. I may say that when I went away I did not anticipate that it would be considered necessary to introduce the Bill for creating the new provinces, before I returned. As members of the House are aware, I returned to the capital on Thursday afternoon. I immediately took occasion to read carefully the speech which the right hon. the Prime Minister (Sir Wilfrid Laurier) had delivered in introducing the Bill. I regretted that in the right hon. gentleman's address I found some principles enunciated with which I am unable to agree. On Friday, the next day after I returned, at the earliest possible moment, I procured a copy of the educational clause of the Bill which my leader had introduced. That clause is as follows :

16. The provisions of section 93 of the British North America Act, 1867, shall apply to the said provinces as if, at the date upon which this Act comes into force, the territory comprised therein were already a province, the expression 'the union' in the said section being taken to mean the said date.

2. Subject to the provisions of the said section 93, and in continuance of the principles heretofore sanctioned under the Northwest Territories Act, it is enacted that the legislature of the said province shall pass all necessary laws in respect of education, and that it shall therein always be provided (a) that a majority of the ratepayers of any district or portion of the said province or of any less portion or subdivision thereof, by whatever name it is known may establish such schools therein as they think fit, and make the necessary assessments and collection of rates therefor, and (b) that the minority of the ratepayers therein whether Protestant or Roman Catholic, may establish separate schools therein, and make the necessary assessment and collection of rates therefor, and (c) that in such case the ratepayers establishing such Protestant or Roman Catholic separate schools shall be liable only to assess-

ment of such rates as they impose upon themselves with respect thereto.

3. In the appropriation of public moneys by the legislature in aid of education, and in the distribution of any moneys paid to the government of the said province arising from the school fund established by the Dominion Lands Act, there shall be no discrimination between the public schools and the separate schools, and such moneys shall be applied to the support of public and separate schools in equitable shares or proportion.

That is the clause which is contained in the Bill which was introduced by the leader of the government. Between Friday, when I procured a copy of the clause, and Monday morning I gave the subject my best consideration, and I had the privilege in the meantime of having an interview with the Prime Minister on the subject. As the result of such consideration I determined that I could not endorse or support the principle of the educational clauses. Under these circumstances, Mr. Speaker, my duty became perfectly clear, and on Monday morning I wrote to the Prime Minister tendering my resignation as a member of the cabinet. Subsequently, I expressed the desire that my resignation should be acted upon at once and to that wish the Prime Minister has now assented.

In conclusion, Mr. Speaker, not intending and not considering it proper at this time to enter into a discussion of the merits of the matter which has caused the difference between myself and my leader, I have only to add my regret that circumstances have compelled the severance of my official relations with my leader and with my colleagues with whom my relations have always been of the most harmonious and pleasant character, and with whom upon other questions I am in entire accord. The circumstances, however, in my judgment, make my duty perfectly clear, and it does not seem possible for me to properly consider anything except the principles which are involved.

Hon. GEO. E. FOSTER (North Toronto). Mr. Speaker, I quite agree with the hon. gentleman, the retiring minister (Hon. Mr. Sifton) that this is not the time to undertake the discussion of the principles involved in the Bill. But, with the two statements which have been read and with the reading of the statements and the causes which make the reading of the statements necessary this afternoon, we alone have to deal and with these I shall deal for a moment with your kindly permission. It did not come as a matter of surprise to this side of the House that the Minister of the Interior should at some early period read his letter of resignation, or give his reasons for resigning to this House, nor do I think it came as a matter of surprise to hon. gentlemen who are within the secrets of the party on the other side of the House. We all remember the peculiar circumstances under which this Bill appears to have been framed and to have been rushed before the House. It did seem an odd and almost unexplainable thing that a Bill of such importance should be framed in the absence of two of the most responsible ministers in the House as regards the country and the scope of territory in which that Bill was to be operative, and having respect to the declaration of policy which I think a year or two ago was made in this House when, with some new idea of a division of ministerial responsibility, it was announced that certain ministers were to be held more or less accountable for the particular provinces or sections from which they came. This was exemplied in the case of the hon. Minister of Agriculture (Mr. Fisher) in his intermeddling with the militia matters of this country. During the last few weeks this important Bill has been framed and has been laid before the House in the absence of the hon. Minister of the Interior, who was especially charged with the supervision of and the responsibility for the Northwest Territories and the west generally. We were led to think that possibly the second chapter of what took place on an almost similar line a year or two ago was being prepared for the House and the country. It is well known that at that time a most important railway Bill was conceived and formed and was almost, if not quite, presented to this House behind the back of the responsible Minister of Railways and Canals, whose office it should have been to have aided in the consideration and preparation of that Bill. We were of late led still more to suppose this from a remark which fell casually, but rather acridly, from the lips of the right hon. Prime Minister (Sir Wilfrid Laurier) himself, who, when, not long ago, asked about the time when we might expect the introduction of the Bill, gave as his answer that it would probably be introduced at a certain time, and when some inquiring minds on this side of the House put the question to the right hon. Prime Minister as to whether the hon. the Minister of the Interior would be back by that time, the right hon. Prime Minister, as I say, rather sharply retorted that he did not know whether he would or not, but that he, the Prime Minister, would be here. Taking all this with the history of this Bill into consideration it did not come as a surprise to this part of the House, and I doubt very much if it fell as much of a surprise upon hon. gentlemen on the other side of the House. But, it is a still stranger thing that the hon. Minister of the Interior, a most important member of the cabinet at any time and a specially important member of the cabinet as regards the conception and arrangement of this Bill, did not actually know, although it is supposed that telegraph wires stretch from here to almost all parts of the United States of America in some particular portion of which the hon.

Minister of the Interior has been for the past number of weeks, of the educational clauses of this Bill until after he had returned to this city and to this House when he obtained a copy of the clause. One would have thought that on the general theory of responsible government, of a cabinet acting unitedly, of a cabinet acting wisely, consulting with every unit of the cabinet, as, I think it is in duty bound to do, in order to secure the united wisdom of the whole of the cabinet, that the hon. Minister of the Interior would have been consulted with, not even by telegraph or letter does it seem that the hon. Minster of the Interior was apprised of the one prominent clause in the Bill in which it would be supposed naturally that he would be very much interested.

The excuse, the reason, is given to-day—and we are bound to take the reason in a parliamentary sense—that the hon. gentleman is retiring because he could not find it consistent with his principles to accede to that particular clause in the Autonomy Bill, but from what I have stated and from what we have seen, it would be easily inferred, I think, by any member of this House that there is a reasonable doubt as to whether or not that was the cause of the resignation, as to whether the deliberate actions of the Prime Minister and the rest of the Cabinet heretofore have not made it quite abundantly apparent that it was the intention to get rid of the hon. gentleman whether he got out on this particular clause of the Bill or on some other. The Prime Minister has not quite satisfied the curiosity of the House. Outside of the information which was conveyed to us by the bulletin boards there are other rumours which are abroad in the corridors of this House, abroad on the streets of the city and, I dare say, are tingling the wires, which stretch from Ottawa to different parts of this country even now while we are speaking. And why? It is stated that another important minister, another important member of the cabinet of the right hon. gentleman, is deliberating as to whether he shall not follow in the tracks—no, I would not put it that way—but follow, at least, the example of the hon. the Minister of the Interior who has retired, in also expressing his formal and unqualified dissent from this Bill. There might be some reasons which would impose on us the idea that there is truth in that. I could hardly reconcile to my own mind the idea of a Prime Minister and a cabinet undertaking to frame and to put before the country so important a Bill as this, involving no trivial and unimportant financial burdens, but involving very onerous and continuous and growing financial burdens upon this country, I cannot, I say, understand how a Bill of that kind could be conceived, put into form and introduced into this House in the absence of the Minister of Finance, who is responsible, if any man in the cabinet is responsible, for the financial interests of this country. Was he also altogether and entirely in the dark with reference to this Bill? Did he know the clauses, financial or otherwise, before he came back to Ottawa and ascertained what they were by asking for a copy of the Bill? Was there such an urgent necessity for the introduction of the Bill that a delay of at least two or three days could not have been given until both the Minister of the Interior and the Minister of Finance should have had opportunity to meet their colleagues in Council and by word of mouth and interchange of ideas, see if an amicable and united conclusion could not be had? Now, we would be very loath to lose the Minister of Finance.

Some hon. MEMBERS. Hear, hear.

Mr. FOSTER. His pleasant countenance is always an inspiration to us—when it is not the opposite, and it is not often it is the opposite. But we would like to have this set at rest and to hear the Prime Minister state whether there is any truth in the rumour which is persistent that the Minister of Finance, not having been consulted, is not altogether at one with the rest of the cabinet in relation to this Bill. We must bid adieu to the Minister of the Interior with varying feelings. We do it some with sympathy; some will say he has fought the fight and finished the course—I am not going to say how good a course it was—and he has entered into his reward. Probably he has had his reward before; possibly, like the late Minister of Railways and Canals, there is some glorious future awaiting him in some of the large official charges of this country. Anyway, if he leaves us as Minister of the Interior, he has not stated that he is going to leave us as member and we will still have him with us to remonstrate with and to counsel and as far as we can abiding in good will and friendship.

Mr. W. F. MACLEAN (South York). Mr. Speaker, partly as a question of privilege I desire to refer now to the question before the House, and I would ask the right hon. gentleman, who lives in the ramshackle house now, and who is the Samson who has pushed down the pillars and has the roof upon him and his co-ministers in the government? The other day the right hon. gentleman said I was quixotic. Well, there is this at least to be said about Don Quixote, that he was a country gentleman, a man of high honour and that he died with good Christian burial. If I must search for a historical reference to the hon. gentleman after what has happened here to-day, I could think of no one else than one of these autocratic Russian grand dukes of whom we hear at the present time. He has confessed here and the late Minister of the Interior has confessed here that in this House on Monday of this week when I asked where was the Minister of the Interior and the right hon. gentleman said it was for me to have him here, that he

knew then, as the House knows now, that he was not in his cabinet and was not in his administration. What is the reason of all this ? This autocratic Prime Minister that we have in this country eight years ago using the words of Bismarck said: We shall not go to Canossa. The right hon. gentleman has been to Three Rivers; he has made the treaty of Three Rivers, and in pursuance of that treaty he has chosen in his autocratic way to bring down a Bill dealing with the great questions now at issue without consulting his colleagues. It is said that in the preparation of this Bill he consulted only three of his ministers, of whom two came from his own province of Quebec. I do not propose to discuss the Bill, but I know now why the Minister of the Interior has left the government; it is now known that it is on the school question and it is on the land question as I said on Monday—but it is more. The right hon. gentleman in introducing a certain measure in this House argued on three grounds, the constitutional ground, the ground of policy, and he argued for separate schools per se and it is because the proposition is for separate schools per se that the late Minister of the Interior has had to leave the administration.

Mr. SPEAKER. I presume the hon. gentleman (Mr. W. F. Maclean) intends to conclude with a motion)

Mr W. F. MACLEAN. Yes, I have certainly the right to speak somewhat from the standpoint of privilege, but I intend to conclude with a motion. There is another thing in regard to this question. There is a good old verse in the Bible which says that all they who take to the sword shall perish by the sword; and I say that all those who take to provincial rights and school questions will die by provincial rights and school questions. The handwriting is on the wall.

Some hon. MEMBERS. Oh, oh.

Mr. W. F. MACLEAN. Yes, and the right hon. gentleman has lost not only his Minister of the Interior, the Napoleon of the West, but that panegyrist of his, who set the right hon. gentleman up as the greatest statesman we have ever had in this country, and who glorified the late Minister of the Interior as the Napoleon of the West. The two of them are now joined together against the right hon. gentleman. He has lost his chief organ, the Toronto 'Globe,' or this question ; he has lost the Montreal 'Witness,' another of his organs ; and I am afraid that he is now about to repudiate the last organ he appears to have left, 'Le Soleil,' that organ which, in its pontifical way, said the other day : 'We are the organ of Sir Wilfrid, and every one must take note of it and govern themselves accordingly.'

I now come to the question of the school lands and the way little Manitoba is treated ; and again I call the attention of the hon. member for Lisgar (Mr. Greenway), who is now in his place, to this declaration of the leading organ of the right hon. gentleman, that it was the intention to punish Manitoba because she had vindicated provincial rights in connection with educational matters. The province of Manitoba has an area of only 74,000 square miles, while the proposed provinces are to have an area of nearly 300,000 square miles each. But the province of Manitoba happens to be in favour of public education, and she is to be punished ; and now the House and the country will be able to see how all this came about. If you extended the limits of the province of Manitoba to the west, the result would be that the portion of territory to the east would have the right to regulate its own educational affairs, while the other portion of the same territory would be shackled. That is the reason why Manitoba is being punished. And so it turns out, after all the taunts that I was met with here on Monday, that I was right when I said that Manitoba was being punished, and that the Dominion Lands Act would have to be changed in order to carry out the proposal made in the Bill. I was given what was called a categorical denial ; but to-day I have received a categorical affirmation from the late Minister of the Interior, I warn the right hon. gentleman that he is engaged in a quixotic career if he fancies that he and his party, which claims to be the party of provincial rights, can shackle the two new provinces of the west and impose a separate school system upon them without consulting the people. He does not consult his own ministers—the confession is made to-day. And what is to be the fate of that minister who to-day declares that he has not been consulted? He is to be Tartified and Blairified, like the other ministers who have resigned ; and the same fate awaits any one else who chooses not to come under this new czardom which we have in this country, under which not even a cabinet minister is to be consulted in regard to public policy ; under which that great free west, which feels more keenly on these great public questions than we do in the east, is not to be consulted through its recognized minister, but this hasty and ill-advised proposal is to be introduced into this House in his absence.

I congratulate the late Minister of the Interior upon having the courage to come out. I can say this at least of him, that he has justified to-day that mission which he made several years ago into my own province, into the county of Haldimand, to say that he came to the province of Ontario to ask for our sympathy because it was proposed to put shackles upon his province ; because, he said, if the province of Manitoba is shackled to-day, the time will come when the greater provinces to

the west will be treated in the same way. It turns out now that this treatment is being meted out by the czar of the Liberal party without consulting his colleagues. And this man of autocratic tendencies gets up in this House and reads us a lecture and calls us all kinds of names; and yet, within less than forty-eight hours of his lecture to me, everything I said has been justified and proved true. The right hon. gentleman to-day stands discredited in this House. He stands discredited of his own colleagues; he stands discredited in the different provinces, especially in the province of Ontario, and by his own newspaper, the 'Globe.' The right hon. gentleman quoted George Brown. The right hon. gentleman actually read into the constitution the utterances of George Brown's newspaper and George Brown's speeches, in justification of this proposal of his to shackle these great new provinces of the west. The right hon. gentleman has failed. He has no justification for his proposal except as a matter of policy. But he has not made it a question of policy. He made a bogus constitutional argument, and then he made a moral argument, and that moral argument was what? Many a time in this House the right hon. gentleman has read us a lesson about respect for our neighbours; but there never was a more insulting statement made to the people of the United States than that statement of his that they were immoral, that divorces, lynchings and murders prevailed in their country, and that the reason of Canada's superiority in this respect was that dogma was taught in our public schools.

Some hon. MEMBERS. Order.

Mr. W. F. MACLEAN. What the people of Canada believe in is the separation of state and church. With regard to what is embodied in the constitution, so far as Ontario and Quebec are concerned, we say all right, we accept the situation.

An hon. MEMBER. Thank you.

Mr. W. F. MACLEAN. Nay, more; I go further and say, I for one would not lift my hand to prevent the people of these western provinces having separate schools if they desire them. But my plea is that the question must be left to them—that we must not impose these schools upon them. I am ready to declare here or anywhere else—shall I say as a radical or a democrat?—for the principle of the entire separation of church and state, so far as our constitution will permit it. The right hon. gentleman is in this House to-day as the champion of a new alliance between church and state. Again I warn him that he is on dangerous ground. Again I tell him that he who takes to the sword shall perish by the sword. He who apparently, a few weeks ago, entered on a long career of office, is to-day face to face with the handwriting on the wall. I would like to see the right hon. gentleman introduce great measures into this House, and not bring up questions of this kind. I do not want to say anything against my hon. friend who has retired from office to-day; but if there is one thing he can recall, it is this: He came in on that wave; he goes out on that wave; whither it will carry him I leave him to find out in his own experience.

Mr. LEIGHTON G. McCARTHY (North Simcoe). Mr. Speaker.

Mr. SPEAKER. There is still no question before the House.

Mr. W. F. MACLEAN. I move the adjournment of the House.

Mr. LEIGHTON G. McCARTHY. The hon. member for South York (Mr. W. F. Maclean) has referred to matters which, perhaps should not have been referred to in discussing the question before the House. But, lest my silence should be misconstrued, I desire to make a short statement. I occupy, on this question, a much different position from that occupied, probably, by any other member in this House. My hon. friend from South York refers to the campaign of some ten years ago in the county of Haldimand. The fact was referred to that, on that occasion, the ex-Minister of the Interior (Mr. Sifton) and myself stood on the same platform when we were fighting the men who are now calling in question the actions which have taken place and have caused that hon. gentleman's (Mr. Sifton's) retirement. Therefore, for the last ten years, my position on the school question has been defined. I also fought on the school question in 1895 in Cardwell, and again in June 1896 was the school question fought out in my riding. From that day to this, I have remained firm and free, so far as my constituency was concerned, upon this question, and I have been thrice endorsed upon it. Therefore, I simply rise to announce to this House as I announced the first time I spoke in the House and as I have previously announced to individual members, that I am, like the ex-Minister of the Interior, absolutely opposed to the education clauses as submitted in the Autonomy Bills; that I will oppose them and oppose them unalterably.

Mr. T. S. SPROULE (East Grey). I do not rise to anticipate the discussion on the Bill that will shortly be before us or to explain to the House where I stand on the question—I think my position is pretty well known. But I rise merely to say that, so far as the Prime Minister has given this House his confidence, and so far as he has explained the position, all is well. But some of us thought he might well have gone a little further. Perhaps to expect that would be to ask him to anticipate events. He did not indicate in any way who is to be the incumbent of the office

which has just been made vacant. However, that is something that concerns him more than it does us on this side of the House. But, in view of the loss from the cabinet of the representative of Manitoba and the Northwest,—and a man regarded by many as one of the ablest members of the cabinet to which he belonged, I wish to ask the Prime Minister if he does not think that it would be well to tell this House that he is prepared to drop that clause of the Bill? I wish also to congratulate the hon. member for Brandon (Mr. Sifton) who has just resigned, and to congratulate ourselves who are opposed to this feature of the Bill upon the acquisition by our ranks of that hon. gentleman and also of the hon. member for North Simcoe (Mr. L. G. McCarthy).

Mr. L. G. McCARTHY. Don't call the hon. member for North Simcoe an acquisition.

Mr. SPROULE. I hope that many others on that side will find that open confession is good for the soul, and will rise and do as these hon. gentlemen have done. While I am on my feet I would like to say a word with regard to the number of copies of the Bill distributed so far. Eight days ago the Bill was introduced. Up to to-day each of us could only get one copy of the Bill. Yesterday, the Prime Minister said that there was no objection to having a large number struck off. It would only take two or three hours to strike off a couple of thousand copies of the Bill. It seems strange to us, therefore, that up to the present, we have been able to get only four or five copies each. I made inquiry of the Printing Bureau and they told me: We were instructed to give no information as to the number of copies of the Bill to be printed. It seems strange that there should be such secrecy. I would ask the Prime Minister if he knows any good reason why we should not get more copies of the Bill, and whether he will give instructions that a much larger number be printed, because there is an urgent demand for them from many parts of the country. I myself have applications for at least a hundred copies of the Bill. Yet, though it is eight days since the Bill was introduced, I am able to supply only five.

Mr. SAM. HUGHES (Victoria and Haliburton). It is not my intention to speak on this matter, further than to congratulate the late Minister of the Interior (Mr. Sifton) on the action he has taken in withdrawing from the present government. I take this opportunity of stating that, as soon as the Bill was introduced, knowing the action that the late Minister of the Interior had taken in 1895 and 1896, when the Manitoba school question was under discussion, though I had no consultation with the hon. gentleman, I had absolute faith that he would take the course he has taken to-day. In justice to that hon. gentleman I may say that I am in a position to state positively, knowing whereof I speak, that it was his desire that the Manitoba school question should be kept out of the arena of Dominion politics and be settled in a satisfactory manner by the province. That was the wish also of many hon. gentlemen on the Liberal-Conservative side of this House. But the wishes of those gentlemen and of the late Minister of the Interior were not gratified. I felt that there was no other honourable course open to the late Minister of the Interior, than that which he has taken, and I had the most perfect confidence in his strength of purpose and knew that he would not tolerate the infliction upon the Northwest of the clause in this Bill relating to education. I ask the Prime Minister; I appeal to his patriotism—and he pretends to be patriotic—in view of the fact that the Minister of the Interior has retired and that other ministers hang their heads when this Bill is mentioned; in view of the fact that many hon. members behind him will not and dare not support him; in the interest of the west and of the financial and commercial institutions that depend upon the development and progress of that great country, I appeal to him to pause in pressing this Bill. He cannot but know that the great tide of immigration now flowing toward that country, once checked will not easily resume its course. I predict, if he goes on with this Bill—and I am not the only one who predicts—dire disaster to this country.

An hon. MEMBER. War.

Mr. SAM. HUGHES. War? Sir, if because a few half-breeds on the banks of the Saskatchewan refused to accept the new and reasonable method of survey instead of the old one to which they were accustomed, the First Minister would have been justified in shouldering his musket in their support, as he declared in 1885 he would have done, then far more would the boys in the Northwest—it will not need the boys from Ontario—be justified in shouldering their muskets in resistance to the tyranny the Prime Minister proposes in this Bill. His action, if he persists in it, will check the tide of immigration into that country and will produce a crisis in the financial and business affairs of the Dominion. I ask the First Minister to give his most careful attention to this idea. He can turn a corner as quickly as anybody can. It is not too late for him yet. Let him withdraw these clauses of his Bill, and leave it to the Northwest to settle this matter.

Mr. GEORGE TAYLOR (Leeds). I do not rise to discuss the Bill which has led to the resignation of the Minister of the Interior (Mr. Sifton) but only to congratulate my hon. friend from North Simcoe (Mr. L. G. McCarthy) on having already de-

clared his attitude. He is not a member of the cabinet; but I presume that he was a prospective minister. I have been waiting to hear from another gentleman who sits close to that hon. member. I refer to the hon. member for North Ontario (Mr. Grant). At a by-election in that constituency, I had the honour to go there to say a word on behalf of the hon. member for North Toronto (Mr. Foster) who was then a candidate in North Ontario. And one of the principal things brought against the hon. member for North Toronto in that campaign, was that he had supported the Remedial Bill, and if elected would advocate the granting of separate schools in the Northwest. That was the principal argument used in that by-election to further the election of the hon. member for North Ontario, and I now expect to hear from him that he will follow the hon. member for North Simcoe and declare the position he purposes taking when the Bill comes up.

Mr. HUGH GUTHRIE (South Wellington) On the motion to adjourn, moved by the hon. member for South York (Mr. W. F. Maclean) and on which several members have spoken, some of whom have said that they are unalterably opposed to clause 16 of the Bills creating two new provinces in the Northwest Territories, I would say on my own behalf, speaking for myself only, that I am unalterably in favour of that clause 16 in the two Bills shortly to come up for a second reading. So far as I have been able to gather, the only point urged to-day is that made by the hon. member for North Toronto (Mr. Foster) who says that the Bills are hurried ones. Surely he does not mean that these are new Bills. I remember last session hearing this matter discussed, if not in the House at all events around the House, and likewise the session before that. They are, I submit, two of the best considered Bills that have ever been brought forward; and although they may not have been as fully discussed with some members of the government as they might have been, still I venture to say that during the past five or ten years no question has received greater consideration. If I read parliamentary practise aright, if I understand Todd's parliamentary procedure and May's usages of parliament, I believe I am correct in saying that it is the Prime Minister who should introduce measures of the kind we are now discussing; and if any of the members of his cabinet are not in accord with him, they have one duty to perform and that is to resign. If the ex-Minster of the Interior (Mr. Sifton) found he could not support the government in this matter, he has taken the proper course; but as I understand the question, so far as it has now gone, there is a distinct desire on the part of hon. members opposite, evinced both in their speeches and their newspapers, to create some inflammatory condition in this country which there is nothing in the Bills introduced to warrant.

Some hon. MEMBERS. What about the Globe?

Mr. GUTHRIE. I have read the editorials in the 'Globe,' in which that newspaper takes issue with the government regarding the educational policy laid down in the Bills presented to this House. I am sorry that the 'Globe' cannot see as the government do on this question, but the 'Globe' is only one newspaper, and we are legislating for the whole Dominion. If the 'Globe' cannot see eye to eye with us, that is no reason whatever why we should turn back from what we believe to be our duty. The majority of this House and the country, I am convinced, are of the opinion that the measure submitted to us is right and just; and in that belief I think we should go forward notwithstanding the Toronto 'Globe' and the organ of the hon. member for South York (Mr. W. F. Maclean) and those other organs which are criticising these Bills very adversely at present.

Mr. FOSTER. I do not want the right hon. the First Minister to forget the second question that I ventured to put to him so that he may settle, if it is in his power to do so, these disquieting rumours which have been given currency with reference to the attitude of some others of his ministers on this Bill. We have had a most important piece of information from the hon. gentleman who has just spoken. He has just told us that this Bill has been discussed for two sessions, and he has informed the House with all becoming gravity that it is still being discussed. Where? Is there an inner circle somewhere?

Mr. GUTHRIE. I said around the House.

Mr. FOSTER. Is there a circle within a circle in the party headed by my right hon. friend, and at the head of which is probably the right hon. gentleman who leads the government? Is there an inner circle which takes up these things in advance and discusses and settles them and brings them to a point where they are in the position of not being new matters but things well discussed and settled during these two years? Last year my hon. friend the Minister of the Interior (Mr. Sifton) was, I believe, present in this House and in his wonted health. He was also present the year before last in equally good condition. During all that time, as we have just been informed, the principles of this Bill were being discussed, and surely if any one of them was discussed it must have been that one dealing with the school question. But evidently the Minister of the Interior was not in that warm current.

Mr. SPEAKER. Is the hon. gentleman bringing up some new matters? I would

remind him that he has already spoken once.

Mr. FOSTER. I spoke not on the adjournment but on the ministerial explanation, and I am now calling the attention of the First Minister to the question I have just put. I also want to call his attention to something else. It is in the interests of the country that we should know whether two or three days ago, after conferring with the Minister of the Interior, my right hon. friend still had hopes that the Minister of the Interior would accede to what was evidently a proposition put to him, possibly in modification of this clause of the Bill, and that his resignation at the last moment came as a disappointment. It would be interesting to the House to know whether the right hon. gentleman made any advance towards a compromise in the Bill as presented, in order to retain his colleague in the cabinet. I want to call to the attention of my right hon. friend two other matters, which I may as well bring before him now, as otherwise I should have to call his attention to them later. I find that in the printed Bill there are material alterations as compared with the Bill laid on the table, when introduced by the right hon. gentleman. What is the cause for these modifications? Have some modifications been made between the time this Bill was introduced and the time when it was sent to the printer, with a view of retaining in the government the Minister of the Interior or any other aggrieved minister? When my hon. friend here to my right asked for the printing of a larger number of copies of the Bill, it struck me that perhaps there was method in not printing too many copies, because, before the next printing takes place, it may possibly be that some other clauses will be modified in order to retain members who are at present recalcitrant, or to gain the favour of those who are opposed to the Bill as it stands. But I call my right hon. friend's attention to this peculiarity, that some of the clauses of the Bill which he put in Mr. Speaker's hands do not appear in these Bills, the swamp lands clause for instance.

Sir WILFRID LAURIER. I think the hon. gentleman is mistaken.

Mr. FOSTER. I think not. I had a copy of the Bill and read it, and I am sure that was not in the Bill. I merely mention the matter so that the right hon. gentleman may notice it. There is one other thing I would like to speak of. We have had placed in our hands what purports to be a history from official sources of the legislation of the united provinces of the Dominion since confederation. I do not know to whose courtesy we are indebted for this. It is useful in its way, so far as it goes. But it has been stated in the public press that it was arranged and collated by the Secretary of State, and publicity has been given to that statement, and it is believed by a great many people. I do not know whether that is the case or not. I have no objection to the government giving us all and the fullest information with reference to the subject, but I do object to the government putting anything in circulation as official information if it has been done under the auspices I have mentioned, and as has been reported in the press, because the information is more than a statement of facts, and is shaped into an argument from the beginning to support the contention of the government. I hope my right hon. friend will be able to say that this has not been prepared by the government or any member of the government, or officials connected with the government. It seems to bear the impress of being printed in the Government Printing Bureau, though that may not be the case. However, as that has been current, I bring it to the attention of my right hon. friend so that he may mention it, if he will be kind enough to do so, in connection with the other points I have raised.

Hon. JOHN HAGGART (South Lanark). In order to emphasize some of the remarks of the hon. member for North Toronto (Mr. Foster) I wish to draw the attention of the premier to a statement he made in the ministerial correspondence which he read as having taken place between him and his late colleague. It is to my mind a very curious statement. He said that in consultation with his colleague he hoped he would be able to yield somewhat to his views so as to retain him in the cabinet. Now what the House wants is a clear cut statement from the premier whether he is wedded to that particular clause of the Bill regarding separate schools, or whether he is prepared to do what his colleague wishes him to do in order to retain him in the cabinet, and in order to meet the wishes of a great number of his supporters in the House in that direction. The difficulties may be all removed, there may be such an alteration in that clause as that it may receive the support of the whole House.

Sir WILFRID LAURIER. I have no observation of any kind to offer to the House on this occasion, because the occasion does not call for any observation from me beyond the statement which has been made by myself and by my late colleague, the present member for Brandon (Mr. Sifton). The hon. member for South York (Mr. Maclean) knows better than anybody that on such an occasion ministerial explanations are to be given when a gentleman withdraws from the administration, and it is left to the prime minister and to the minister withdrawing to make such explanations as they deem fit. I rise simply to answer one question, though it is not at all pertinent to the issue, because everything that has been said here on this occasion beyond that which

refers to the withdrawal from the cabinet, is aside altogether from the issue. But the hon. gentleman has questioned me with regard to a pamphlet which has been issued purporting to be certain collations from the debates of this House on a former occasion on the question of separate schools. I was not aware until this moment that this pamphlet had been distributed, and I shall make inquiry and ascertain who is responsible for it. I do not mean any discourtesy to the House, on the contrary; the House is entitled to the amplest information, and that it shall have at all times, and I hope before this matter is settled. But many of the matters which have been introduced today are absolutely foreign to the question which I was forced to bring before the House, that is to say the resignation of my hon. friend from Brandon. The other questions will come up at a later date. Some remarks have been made, for instance, by the hon. member for South Wellington (Mr. Guthrie) when he said that this Bill had been before the House for two sessions. That was evidently a slip of the tongue, and was easily answered. My hon. friend meant only to say that the question of autonomy had been discussed for two sessions. Everybody knows, especially the members who were in the old parliament, that for the last two sessions the question of autonomy for the Territories has been under discussion; I presume that is what my hon. friend had in his mind when he spoke on this Bill. But the only object I had in rising was to refer to a statement—not a statement but an insinuation, made, I think, by the hon. member for South York. The hon. gentleman insinuated that in bringing forward this measure there was an intention on my part in some way to get rid of the Minister of the Interior. I simply notice the statement to give it the most emphatic denial that I can. Whatever may be the differences of opinion between myself and my late colleague, I am sure he will acquit me of having had any idea of acting deceitfully towards him. I am sure that no one knows better than himself that it is with extreme regret that I have to lose his valuable services, and if I could have retained them I would have done so with great pleasure. When the hon. member for South York insinuates that I was conspiring in some way to get rid of my hon. friend from Brandon he makes an insinuation which is absolutely without the shadow of foundation.

Mr. SPROULE. We are entitled to some information showing why we cannot get more copies of the Bill.

Sir WILFRID LAURIER. My hon. friend is very persistent in his question. I may say at once that this matter of printing is not in my department, it is in the hands of the Secretary of State. The hon. gentleman will not be surprised perhaps to learn that I have many things to attend to these days, but I will not forget the subject and will communicate directly with the Secretary of State.

Motion (Mr. W. F. Maclean) to adjourn, negatived.

INSPECTION AND SALE OF SEEDS.

Hon. SYDNEY FISHER (Minister of Agriculture) moved the third reading of Bill (No. 7) respecting the inspection and sale of seeds.

Mr. W. F. COCKSHUTT (Brantford) moved:

That the Bill be not now read the third time, but that the same be referred to a special committee to be named by the Prime Minister and that the said committee shall have power to send for persons, papers and records, to examine witnesses on oath and such other powers as may be necessary.

He said: Mr. Speaker, in making this motion I desire to offer but a few remarks. We have taken exception to various clauses of the Bill from time to time as they have been before the House, and though some few minor amendments have been made, I think that the Bill has not received that attention it should have received. We have called the attention of the hon. Minister of Agriculture (Mr. Fisher) to various points in the Bill——

Mr. SPEAKER. I think the hon. gentleman's motion is out of order. The rule appears to be that no amendment, not merely verbal, shall be made to any Bill on the third reading.

Mr. COCKSHUTT. I am not making an amendment to the Bill. This is a motion asking that it shall be sent to a special committee, and that it shall not go to the third reading at all. I have consulted an authority on the point. I am quite willing to abide by the ruling of Mr. Speaker. This is an amendment moved that the Bill shall not go to the third reading now, but that it shall be referred to a special committee, not a committee of the House, but a special committee to be named by the right hon. First Minister. I shall wait until Mr. Speaker decides the point.

Mr. SPEAKER. I think the first motion should be to discharge the order, and then to refer this to the committee.

Mr. WHITE. My hon. friend (Mr. Cockshutt) may move that the order be discharged for the third reading and that the Bill be referred to the special committee.

Mr. COCKSHUTT. I will move:

That the order for the third reading of Bill (No. 7) be discharged, and that the same be referred to a special committee to be named by the Prime Minister and that said committee shall have power to send for persons, papers and records, to examine witnesses on oath and such other powers as may be necessary.

I was desirous of pointing out that various amendments have been made to this Bill since it came before the House. Some of these we have been able to comprehend, others we have not. I must say that it remains in a very unsatisfactory state now, in so far as I have been able to gather the opinion of the House on the matter. The hon. Minister of Agriculture yesterday, for some reason or other, was in very poor voice for him. We could not very well hear what he said, and therefore we were unable to take that part in the debate which we should like to have taken. Therefore, I feel called upon to move this amendment which I have just offered to the House. In the first place, I desire to point out that the time mentioned in clause 1 is too limited. That I have previously drawn attention to, and it is not necessary to give further reasons than simply to say that this is a serious objection to the Bill. Then clause 3, providing for the placarding of the sacks, is also a most objectionable one. The hon. gentleman has had pointed out to him time and again that it was impossible to carry out this provision of the Bill, but he refuses to take any notice of that objection, which, all the trade will tell him, is absolutely well-founded. It is impossible to placard these bags even if we were willing, because if the seed should contain any of these weeds which are enumerated, it is necessary to placard the bag with the names of these weeds. It is impossible to do that. Further, seed for the foreign market would not be accepted in bags placarded in this way, and for that reason I desire again to point out to the hon. minister that it is impossible that this provision can be carried out. Then as to the exemption of the grower while the dealer is prohibited from selling this article, I desire again to point out that there are serious objections to this provision. The hon. minister announced that his object in bringing in this Bill was to ensure the purity of seed, but it turns out, in view of this provision of the Bill, that it is not for pure seed at all. If that were the object of the Bill, that clause should not stand for a moment. That particular clause cannot stand the test of good judgment at the hands of this House; therefore, I think the hon. gentleman should recall that clause. Then in regard to the standard for seed that he sets up. I have submitted, and I am sure it has not been controverted by the hon. gentlemen opposite, nor can it well be, that it is impossible to comply with the provisions of clause 4, I think it is. It is impossible for us to get a large amount of seed of No. 1 quality. No. 1 quality will be a very scarce article according to the Bill. The Bill makes it difficult to procure No. 1 quality, but when you have procured that quality you have not a first-class seed by any means. That, I think, is a very serious objection to the Bill. The hon. minister sets up a standard for No. 1 quality, and after he has obtained that quality, according to the test of purity which he makes, he has a very inferior quality of seed, as he takes no stock in the colour of the seed nor in the size of its development. These are two very important factors in seed which the hon. gentleman discards entirely. The evidence taken by the Royal Commission that inquired into the matter in England discloses the fact that two of the prime necessities of No. 1 seed are that it shall be of large well developed size and have a good bold colour. Both of these items are absent in the hon. minister's estimate of No. 1 seed. There is another very good reason why the clause setting up a standard for No. 1 seed should meet with the opposition of the House. The requirements of the clause are such that only a limited quantity will pass the tests, and will not be the best of seed by any means. But it must be placarded nevertheless as inferior if it contains five out of a thousand weed seeds. That is surely a great injustice to a large amount of the product of this country, because having to be placarded it makes it comparatively unsaleable. It is placed at a discount on the market, because you have branded upon it all the various impurities which it contains, though they may be very limited in quantity.

It is quite possible under this Bill that these weed seeds may prevail to the extent of 10, 15 or 20 to the thousand, and still you will have a very much better article than you would have with a sample that is poor in germination, but true to name and which at the same time may have only five weed seeds to the thousand. Therefore, I think the hon. gentleman has missed the object of the measure entirely in setting up his standard. He has not got a good standard for No. 1 seed after having graded it according to this Bill. For this and for various other reasons that have already been adduced in the House, and that are convincing to the judgment of all men who desire to have a good practicable and workable measure, I believe that this Bill should be submitted to a special committee where the evidence of those well qualified to judge can be obtained and the matter can be fully threshed out before a committee of farmers, growers, dealers and all concerned. Let every clause stand on its merits and if it is found that the Bill will pass before this committee and is believed to be a workable and practical measure which will serve the best interests of agriculture in this country by all means let us pass the Bill. But if it is not found to be such a Bill as will pass the ordeal of a committee, either the Committee of Agriculture or a special committee to be named by the Prime Minister, then I think the hon. gentleman should introduce into it such amendments as will make it a satisfactory measure. I am sure that he has misgauged the feeling of the country to a

large extent. The farmers in the district from which I have the honour to come are, I believe, strongly opposed to this measure. S. Herrold & Son, of Brantford, who are well known to the Minister of Customs and who are not political friends of mine write me a very strong letter in which they inform me that the farmers in that district are dead against the Bill; that they are unalterably opposed to this Bill. I have letters from Mr. Bruce, who formerly sat in this House, from Mr. Ewing, of Montreal, from Mr. Hogg, of Oakwood, from Mr. Steele, of Toronto, from Mr. Keith, of Toronto, and others who stand high in the trade, every one testifying that they do not think the Bill practicable and workable. These men have spent their lives in the business and are thoroughly familiar with the requirements of the trade and of agriculture, and I maintain that if the minister persists in forcing this Bill through the House it will either drive out from the trade the men legitimately entitled to stay there or it will become a dead letter on our statute-book. Both of these results are undesirable and the minister cannot wish for either of them to come to pass. I ask then that in fairness to all concerned, this Bill should be submitted to a committee where persons, documents, and evidence may be adduced to show the various features of the Bill that are impracticable and unworkable or wherein it fails to meet the wishes of the hon. gentleman who has introduced it. If this is done, I think we will secure a practicable and workable measure, and I again suggest to him that he should read carefully the evidence taken by that British committee of which I have spoken which was appointed to deal with this very subject. The members of that committee travelled from end to end of the British Isles, took the evidence of all parties concerned and of every one interested in seeds and after having deliberated and taken evidence under oath they submitted that in their opinion it was not desirable that government control should be introduced. If this is the case in Great Britain and they are the best judges of seed in the world to-day,—we have no men in this country who can equal them—I submit that the hon. gentleman should take a leaf out of the book of the British government and appoint a committee to deal with this matter, a committee who will thresh out every clause of the Bill. I wish to point out one of the amendments which the hon. gentleman put in with regard to the labelling of screenings which he allows to be held for export, whereas a large number of better seeds between screenings and No. 1 are not allowed to be held for export. Therefore a man must either not hold these seeds or label good seeds as screenings. Surely he does not want to insist on trying to carry out so unreasonable a provision as that. The hon. the leader of the opposition (Mr. R. L. Borden) pointed out when this amendment was introduced that it bordered very close on nonsense and so it does. The minister allows the lowest grade to be held as screenings if for export, but the many intervening grades between screenings and No. 1 he refuses to allow to be held. Surely in view of this the minister will not insist on passing the measure through the House. It is very ill-considered, there is no hurry about the Bill, and I submit that it is far better to have a delay of two or three weeks and have a practicable working measure that can be carried out than to come to this House and insist without due consideration on the passing of this measure. I am sure that 50 per cent of the members could not hear the hon. gentleman yesterday when the amendments were introduced. We were asked to vote these amendments blindly and to take the whole dose down at once. It is surely not in the interests of enlightened legislation, not in accordance with the wishes of the members of the House of Commons of Canada, that we should endorse a Bill that contains so many imperfections; there are as many imperfections in it as there are in the seeds which the hon. gentleman describes. Twenty-five varieties of weeds may be in the seeds and I am sure there are more than 25 imperfections in this Bill that might be easily remedied by reference to a committee. I have pleasure in moving that this Bill be not now read a third time but be referred to a committee.

Mr. FISHER. Before you put the question, I would like to say in reference to the remarks of the hon. gentleman, that this whole question has been threshed out. I think that everything the hon. member has said has been said in the House by himself perhaps more than once. The hon. gentleman asks that the Bill be referred to a special committee, but the Bill has been through a general committee, through the Committee of the Whole House, and I do not think any better committee could possibly be struck to consider it any further. The Bill has been before the House not in every detail as it is now, but in principle, for the last three sessions. There is no question of precipitancy, there is no question of hastiness, there is no question of lack of consideration. The hon. gentleman himself and other gentlemen on both sides of the House have discussed every detail of this Bill over and over again. Every detail has been discussed in committee and now the Bill is up for its third reading. I cannot see any utility in delaying the passage of the Bill or referring it back to any special committee for any particular object. I can therefore only ask the House to reject the amendment of the hon. member and ask that the Bill be read a third time and be sent up to the Senate.

Mr. LENNOX. I do not wish to say more than a few words, although I regard this as

a very important measure. The amendment leaves to the leader of the government the selection of the committee or the composition of the special committee to which this Bill might be sent. This is not a new question, but there are new features in connection with this Bill. It is casting no reflection upon the ability or the energy or the care of the hon. minister who introduced the Bill to say that if we submit this to a committee having special knowledge of the matter and having special facilities for investigation, good as the Bill may be, it will be greatly improved.

Throughout this whole discussion I have desired that this Bill should be referred to the Committee on Agriculture. What have we a Committee on Agriculture for if not to consider such questions as this ? The fact that it has been before the Committee of the Whole House is no answer to the present motion for a reference. It is provided by our rules, and sanctioned by our practice, that a motion of this kind may be made at any stage of a Bill. I do not wish to be considered as opposing the principle of the Bill. I recognize that the minister has devoted much time and care to it, and it is shorn of many of the objectionable features which it had when it was introduced. Although I believe, as the hon. member for Brantford has suggested, that it is still full of the seeds of imperfection, yet these might be very well eliminated if it were referred to a special committee ; and we have excellent examples for that course. We have the example of Great Britain, a country many centuries older than our country, where, after a full and exhaustive investigation, it was decided that such a measure was not adapted to the conditions of the country ; and there may be ground for pausing to see whether this Bill is adapted to the conditions of Canada. At all events, we would have experts on these matters, not only on the committee but coming before the committee to give evidence. We would also have, what the members of the administration, from the Prime Minister down, have been pressing in Railway Bills that those most interested can come before the committee as they cannot come before the House, and express their views. I am entirely in accord with the practice that has prevailed, of threshing out these matters before the House ; but this is a matter requiring special investigation, and the knowledge of experts and practical farmers. I believe it is highly in the interest of agriculture that the Bill should be referred to the Committee on Agriculture, with power to send for persons, papers and documents, and that there should be a thorough investigation in order that the faults still in the Bill may be eliminated, or, if not, that the Bill be discontinued.

Mr. BOYCE. I am sure that the House cannot fail to recognize the labour which the hon. Minister of Agriculture has bestowed upon this Bill, in the honest and faithful endeavour to obtain by legislation pure seed for the farmers of this country. But if, as appears to be the case, the Bill, which has been through several stages in this House, has, in some of its details fallen short of the object in view, if it does not go the length of providing the remedies desired, the hon. Minister of Agriculture should hesitate before he obstructs such further investigation as would throw light upon the Bill, and enable it to become more workable. The hon. gentleman suggested, I think, in committee, that I was here to oppose the Bill. I am not opposing it. I recognize that the principle involved in the Bill is one very much to be encouraged, and I would not detract one iota from the credit due to the hon. minister for the labour which he has bestowed upon it. There are three classes affected by this legislation—the seed merchant, the farmer who purchases seed, and the farmer who grows his own seed. The farmer who grows his own seed has a different line of argument to advance with respect to the provisions of this Bill, from those of the farmer who purchases his seed. The latter is entitled to the fullest protection. In my opinion, which entirely coincides with that of the hon. minister, it is of the utmost importance that pure seed should be guaranteed to the trade at large. As the hon. minister has said, this Bill has been before this House practically for two years. That may be so : but when it came to be considered in committee during the first few days of the present session, it was found to be so weak and to fall short in so many important respects that the hon. gentleman was forced to withdraw it and have it reprinted ; and when it came down yesterday in its reprinted form, we found it to be still imperfect. In one clause especially, it had to be amended. So the hon. minister is learning day by day that even when this Bill goes through its final stages, there will be much in it to be altered ; and if it can be altered in one respect, it can be in others. I have not heard the hon. minister say that he has received expert testimony upon the clauses referred to by the hon. member for Brantford. It is of the utmost importance that expert testimony should be had before the various clauses of the Bill can be intelligently dealt with. I therefore submit to the hon. Minister of Agriculture that it would be in the interest of the purpose of this Bill, as a practical working measure, to have it put into such form that it would serve the interest of all the classes of people sought to be benefited or protected by it. There is one clause to which I have repeatedly, I fear with tiresomeness, drawn the attention of the House and the hon. minister, that is, subsection 2 of section 8. It is from my point of view an unheard-of thing to legislate that the honest agent for

the sale of seeds, who is entitled to the immunity provided by this subsection, should, notwithstanding that the section declares him to be immune and not liable to conviction, be mulcted in the case of conviction, while the principal, when his name is disclosed by the agent as a condition precedent to his statutory innocence being established, is also prosecuted. Now, I say in all seriousness and candour that it is an unheard-of proposition, that the innocent receiver of stolen goods, not knowing them to have been stolen, should be liable to prosecution as well as the thief. If it were only to save the innocent dealer, who does not open the package, who does not know the state of the seed, and who had no reason to believe that the seed did not comply with the provisions of the Act, and discloses the name of the person from whom he purchased the seed, and the date and the place of the sale, I say the Bill should be altered. If only for the purpose of protecting from prosecution a man of that character, a man who is innocent according to the spirit of the Act, it would be well for the minister to hesitate before pressing this Bill through the House. I sincerely trust the hon. minister will give his best consideration to the motion of my hon. friend from Brantford (Mr. Cockshutt), if not upon all the grounds suggested by him, upon general grounds, and in order that we may have a useful and workable piece of legislation which would really protect the class of people it is intended to.

Mr. ELSON. Representing a purely agricultural constituency and being a practical farmer myself, I have taken a very deep interest indeed in the Bill introduced by my hon. friend regarding the inspection and sale of clover and other seeds, and I desire to compliment the hon. gentleman for what I believe is an honest effort on his part to bring about such legislation as will enable our farmers to obtain clean and pure seeds. I fear, however, that the provisions of this Bill will not have the desired effect, either as regards the farmers or the merchants, and certainly not that which the hon. minister himself desires. I am convinced that if it should become law, it will decrease the price of clover seeds which the farmers have to sell and increase the price to those farmers who have to buy it, and who are the only members of our community who would after all require to purchase. Let me illustrate my argument. Let us take say four farmers who have each ten bushels of clover seed to sell. The Bill provides that a farmer may sell his seed to another farmer without coming under the provisions of this measure ; but if a farmer should have to go around among his neighbours and peddle his seed, that would not be only a humiliating position for him to occupy, but he would soon find that he would not get much sale for it. I fail to see how we can very well dispense with the services of the middle man or the merchant in the sale of our seeds. Then when farmer No. 1 brings his ten bushels of seed to the merchant, the merchant, with his keen eye or glass, finds that it contains noxious seeds, and he says : There is an inspection law at present and this seed will not stand inspection and grade as No. 1, consequently I can only give you a low price for it. The farmer, who has no other recourse, must take the price offered. When farmer No. 2 comes with his ten bushels, the merchant says to him : Your seed is not quite so good as that which I have just got, because it contains a quantity of oxeye daisy, mustard and other bad seeds, and consequently I can only give you a low price. The farmer, of course, must take the price offered, and his seed is dumped into the same bin with that of farmer No. 1. Then comes along farmer No. 3, and the merchant says to him : Your seed contains a certain proportion of noxious seed, and I can only give you a low price. The farmer again cannot help himself, and sells at the price offered, and the merchant dumps No. 3 seed into the same bin with the others. Then farmer No. 4 appears on the scene, and his ten bushels are fairly good seed. The merchant says : I cannot detect very much noxious seed in your ten bushels and I will give you a fairly good price, and he buys it and dumps that also into the same bin. So that there are forty bushels in the same bin. Then the inspector comes along, dips out a little of the seed from the bin, examines it and grades it as No. 1. When a purchaser comes to buy some clover seed, the merchant says to him : I have here a bin graded No. 1 by the government inspector, but I must charge a big price for it ; but the purchaser, of course, can do nothing else but buy, and he gets his portion from the top. Another purchaser comes, and another, and so on. But at each sale the merchant has to dip deeper into the bin ; and according as the quantity in the bin decreases, the quality of the seed becomes worse. But it has all been graded as No. 1, and the last purchaser pays the same price as the first. So that the farmer who sells has to take a low price, whereas those who buy have to pay a big price, and the profit is to the merchant, who, of course, in view of the uncertainties and difficulties with which the law surrounds him, is entitled to a fairly good price in order to enable him to handle the goods at all. Any legislation which turns against the interests of the farmer should be most carefully considered. If the Minister of Agriculture could devise some means for winnowing out the noxious seeds from the good, thereby giving to the farmer the clean seed on the one hand and the noxious weed seed on the other. There could be no objection to this measure, but so far, we have no machine which will accomplish that. But if the hon. minister could succeed in obtaining such a machine and have it put upon the market, he would certainly be rendering greater service to the

farmers of the Dominion than has ever been rendered by any previous Minister of Agriculture. We have heard, it is true, within the last three or four months, that certain gentlemen on the other side of the line, who are gifted with wonderful inventive genius, have invented a separating box which has been introduced into Canada, and which they guarantee will separate the sheep from the goats when an election is on, provided, however, that the person to whose lot it may fall to operate the machine does so as intended by the inventor. But although that machine was introduced into the province of Ontario at the last general elections, it evidently was one of those machines which did not meet with the approval of the farmers, judging from the tremendous vote they gave against the late provincial government.

I feel that legislation is against the agricultural interest of this country, is legislation in the wrong direction. Why, our agricultural interest is the greatest interest we have, it is the foundation of our prosperity; and legislation that bears against that interest is an injury to our country. We are proud of the millions of acres of fertile land belonging to the Dominion of Canada where millions of settlers may make their homes. As each settler tills his farm, the soil yields its return to his labour. His children grow up about him, and as they grow their little hands do what they can to help their parents. And as they grow to manhood and womanhood they branch out and more settlers' homes are established. And the wealth that is produced, being greater than the people can consume, it is exported, and brings back to the Dominion gold for our exchequer. And, better than gold, better than diamonds and rubies, it brings to our shores the man of intellect and energy and ambition to settle upon our lands and till them, to build up our country until it becomes the strong right arm of the British empire. Now, Mr. Speaker, through you I desire to appeal to every honourable gentleman in this House, who, like myself, is a practical farmer and desires that the produce of his lands shall not be lowered in value on the one hand or overcharged for on the other—through you, I appeal to these hon. gentlemen not to support the third reading of this Bill, through you I appeal also to the professional gentlemen in this House—and there are a fine lot of them here. No men are more anxious than they that our farmers shall prosper, knowing, as they do, that, if the farmers prosper, they have a better opportunity to obtain all that is right and honest from that portion of the agricultural community to whom they may be called upon to give their professional services. Once more, through you, I appeal to the business men in this House. We know that none are more anxious than the business men of the country that our farmers should prosper. They know that when the farmers prosper the whole country prospers, that bills are more easily collected, that, in fact, the prosperity of the farmer seems to oil the machinery of business so that it moves on smoothly and effectively, as we all desire that it should. This Bill has been discussed at considerable length, yet, what I would like to see is the Minister of Agriculture, of his own accord, lay the Bill over until next session. We are told that in the multitude of counsellors there is wisdom. And I am sure the wisdom would be pouring in from hundreds of thousands of farmers all over the Dominion, between now and next session; and, undoubtedly a better Bill would result.

Here is what I would suggest to the hon. minister: Instead of going on with this Bill let the government offer a prize of $1,000 or $2,000 to any person who will invent a fanning mill that will entirely eliminate the noxious weed-seeds from the good seeds and that can be sold at from $30 to $50. Such a machine would be within the reach of every farmer, and its use would overcome the difficulty that is sought to be met by this Bill. Every farmer would clean his own seed at home, and no noxious weed-seed would be taken to the market at all. There would be no difficulty for the farmers, no difficulty for the merchant, no difficulty for the Minister of Agriculture;—everything would be right and prosperous without the need of such legislation as is here proposed. In closing my remarks, Mr. Speaker, I thank you and the attention they have given me during this my first speech in the House of Commons.

Mr. SPROULE. I wish to congratulate the farmers of Middlesex and of the country upon the able representative whom they have sent here to speak on their behalf. After the appeal he has made to the Minister of Agriculture, it is hardly to be supposed that that hon. gentleman will persist in forcing this Bill to a third reading at the present time. But I rose more particularly to refer to another question in connection with the Bill. While I support the motion of the hon. member for Brantford (Mr. Cockshutt) that this Bill shall be sent to a special committee, where evidence from all sources may be taken in regard to the important questions involved, the committee to which above all others, this Bill should be sent is clearly, in my opinion, the Agricultural Committee. Years ago we had an inquiry in this House which lasted for several weeks. Its object was to help in deciding whether it would be beneficial and in the interest of that important class, the farmers of the country, that we should have an Agricultural Committee, and that all questions affecting the interests of the farmers coming before this House, and all measures and proposals for the benefit of

the farmer, might be considered by that committee. And for what purpose? So that the committee could call before them persons who could give evidence or information, and also consider papers that would assist them in reporting to the House suggestions to be carried out in the interest of the great farming class. That committee was established. It is a large committee. I believe that every farmer in this House is a member of that committee. What could be clearer than that it is to such a committee that this Bill should be referred? Agriculturists are more interested in the subject of this Bill than are any other class; and the farmers on the Agricultural Committee would be more likely to pay direct attention to it than would any class in this House. For that reason, it has been the rule to send questions of this nature to that committee. But the Minister of Agriculture, for reasons best known to himself, sees fit to avoid sending this Bill to the Committee on Agriculture. When a Bill comes up that is of interest to the railways, what is done with it? For instance, a Bill comes up relating to cattle-guards. The farmers are interested in that Bill on the one hand and the railways on the other. That Bill is sent to the Railway Committee, where railway interests always seem to be dominant. The government insist on sending it to that committee. And with what result? Such Bills are nearly always killed in the Railway Committee. Or, when a Bill is introduced in regard to ditches and water-courses, giving property owners the right to drain across the railways, though the farmers are interested, the Bill goes to the Railway Committee on railways, where the railway interests are dominant. So, when a Bill is introduced in this House which affects the interests of only one class, the agriculturists of this country, why is it not sent to the Committee on Agriculture?

The Minister of Agriculture refuses to allow that Bill to go there, and I say he discredits the committee that he is responsible for appointing every session of parliament. He discredits the agriculturists on that committee and says by his conduct that he is not prepared to trust them, intimating that either they are not intelligent enough to do what would be in the interests of the farmers, as otherwise he would entrust them with the consideration of this Bill. It was for that purpose this committee was appointed. Years ago we had Bill after Bill in which the farmers were interested, every one of which were sent to that committee, but when the present Minister of Agriculture took charge of the department, he who professes to be so great a friend of the farmer, he will not allow these Bills to go to the Agricultural Committee where we could take evidence and present the findings of the Committee to the House. The other day the minister said, speaking of this committee, that the Committee of the Whole House was much better. But no one knows better than himself the disadvantage of discussing questions of that nature before a Committee of the Whole House. What are the disadvantages? One is that you cannot bring the farmers here and get their opinion on it, but you can bring them before the Agricultural Committee. You cannot bring the seedsmen here and ask them questions before a Committee of the Whole House, but you can do so before the Agricultural Committee. You cannot take their evidence here, but there you can take the evidence of all parties concerned. While you might name a private committee that would be perhaps equally valuable with the Agricultural Committee, still I hold that the Agricultural Committee is the proper one to deal with this Bill, where it can be considered from a farmers' standpoint, and where the farmers themselves can be asked their views upon it. If, after doing this, we could manage to prepare a Bill that would accomplish the object the minister has in view, it would be desirable to do so. I am not opposing the Bill, because I believe it to be one of great importance, but I desire to see the Bill, when it is passed, made workable so that it will be a real advantage to the farmers and to the seedsmen in carrying on their operations.

Mr. HENDERSON. I simply desire to say that I am anxious that the Bill before the House should, if passed at all, be passed in the very best possible form. I am desirous that the farmers of this country should be put in a position to secure the best and the cleanest seeds that can be obtained. While I propose to vote in favour of this amendment, I distinctly desire it to be understood that I am in no way opposed to the Bill. The effect of this amendment may be to delay its passage for a short time, but I hope it will also have the effect of further perfecting the measure and making it what I trust the Minister of Agriculture desires it should be, a good Bill, a Bill in the interests of the agriculturists of this country. While I support the amendment, I do not wish to be understood as being in any way opposed to the Bill.

Mr. INGRAM. I desire to duplicate the words just spoken by my hon. friend from Halton (Mr. Henderson).

Mr. WM. WRIGHT. When this Bill was in committee I expressed the conviction that it would be found unworkable if it became law. I think the penalty clause of the Bill is objectionable. It provides a penalty for selling seed as No. 1 which does not come up to the requirements of this measure. I want to ask the Minister of Agriculture whether he knows that seed is sold by the wholesale seedsmen of this Dominion as No. 1. I know from personal experience that some of the largest wholesale seedsmen in the country do not sell seeds

by number. You might buy any quantity of seeds of any kind without their being numbered at all, although of course some are of a better quality than others. I may mention that some wholesale seedsmen classify their seeds—I refer now to clover and timothy seed—by the names of certain animals. A superfine seed they would call by the name of some fur bearing animal, for instance, the ermine, and they would classify other grades by the names of other fur bearing animals. Grasses are named in the same way. So these dealers might sell any quantity of seeds of any kind without being liable, under this Bill, for selling seed as No. 1. I cannot find anything in the measure by which you would be able to touch them if they sold seed under some particular name. Then there is another penalty provided if the dealers do not put a certain brand on the bag or receptacle containing seed, giving the name of the noxious weed seeds it may contain. Suppose that the wholesale seedsmen of this country agree to put a particular label or ticket on every bag of seed they sell, showing that the seed may contain the different weed seeds mentioned in the Bill; they might put these labels on all the seeds sold and there would be no means of determining what they were selling as No. 1, they would be within the requirements of the Act and could not be punished. So there would be no remedy for a farmer if he bought impure seed. I object to the legislation passing through this House that will not be effective. I am heartily in accord with the Minister of Agriculture in his desire to get clean seeds for the farming community, and if the Bill was likely to be effective even in a small measure in bringing this about, I would give it my hearty support. But there are many ways in which the penalties might be evaded, and a great deal of seed could still be sold without the purchaser being able to get at the wholesaler if he sold impure seed. I think it would be well to have this phase of the Bill thoroughly looked into, and I think it would be well to send the Bill before the Agricultural Committee where we could hear, not only the farmers and the wholesale seedsmen, but also the retail dealers throughout the country. These latter are an important class, and the Bill ought to be carefully considered from their standpoint, as well as from the standpoint of other persons interested, in order that we may crystallize all the information into legislation which will be a benefit to the farmers of this great Dominion.

Mr. CLEMENTS. I agree with the remarks of the hon. member for Middlesex (Mr. Elson) in speaking on this Bill. He spoke as a farmer, and I speak as a farmer myself. We are all interested in any measure that is calculated to benefit them. Like the hon. member for Halton (Mr. Henderson), I am going to vote for the amendment, not because I am opposed to the principle of the Bill, but because I think that in its present form it is not in the interests of the farmers. I think the Bill can be greatly improved by sending it to the Committee on Agriculture where the farmers can be heard on it, as I think they should be heard on it. I am opposed to it for several reasons. In the first place, I think in its present form it would be detrimental to the farmers in selling their clover and other small seeds, because it will amount just to this, that a few dealers who will go into the business after this Bill becomes law will be mulcted one or two dollars per bushel on every bushel of clover seed they sell. I am also opposed to it because it will have the effect of driving a certain class of people out of the trade, who are to-day doing a great deal to supply farmers with good seed, I refer to the millers. I know what they are doing in this direction, I have been in the milling business myself for the last ten years, and I know to what trouble they have put themselves in order to get pure seed for the farmers at actual cost. I just wanted to offer my objection to the Bill as it is at present and I trust that the hon. Minister of Agriculture will not be so arbitrary but that he will be a little more lenient in his views and allow this amendment to carry and possibly next session, or at some time in the future, allow the Bill to be presented in a more practical form.

Amendment (Mr. Cockshutt) negatived on division.

Mr. HAUGHTON LENNOX (South Simcoe) moved:

That the Bill be not now read the third time, but that the order for such be discharged and that it be referred back to the committee of the whole with instructions to amend the 10th paragraph thereof by striking out the word 'five' where it occurs between the words 'exceeding' and 'hundred' in the fifteenth line of said paragraph and substituting the word 'one' therefor, and by striking out the word 'twenty' from the said fifteenth line.

He said: I wish to direct the attention of the House to the wording of section 10 for a moment. The 10th section provides that any person charged with the enforcement of the Act may enter upon the premises of the owner or other premises, including the premises of a railway or steamboat company and may take samples and so on. Then it goes on to provide that any person who obstructs or refuses to permit the making of any such examination or the taking of such samples of seed shall upon summary conviction be liable to a penalty not exceeding $500 and not less than $25. The other section providing for penalties is section 8. I pointed out at an earlier stage of the discussion that the penalties under section 8 might amount to as high as $25,000, and the hon. Minister of Agriculture (Mr. Fisher), upon further considering the Bill saw his

way to amending the section and reduced the penalty so that the maximum in each case will not exceed $25. This is a large penalty and it is for a new offence, an offence which might arise without any intentional wrong on the part of the person who is to be fined. The Bill provides that this fine may be imposed not only upon the owner but upon any person who is in possession for the time being of the seed. It may be a railway company, a common carrier, it may be any person on whose premises the goods are temporarily deposited or housed and it may be even a person who is driving a load of grain to market. If an officer comes up and insists upon making an examination and if this person refuses or obstructs in any degree he is liable to a fine of $500 if the magistrate sees fit to inflict a fine to that extent. This is, as the hon. minister said the other day, to some extent, an experimental matter. This is a matter of educating the people up to a certain standard and it is not advisable that we should have drastic legislation at the beginning. Would it not be manifestly unfair if a railway company which was carrying this grain from place to place, refused in such case to stop its train in order to permit of the examination here spoken of being made? Yet the result would be that if a railway company refused to delay its trains in order to permit of this examination being made it could be fined $500. We must be reasonable in these matters. A gentleman who has a number of people in his employment may be about closing his premises. An officer of the government steps up at about the time they are closing and says: I demand that I shall be permitted to go through and make a thorough examination of the goods in this warehouse. If you obstruct me you are liable to a fine of $500. The merchant says: I am going to close my premises and you may come back at some more convenient season. Then, he is liable to a penalty and to a penalty of $500 if he is taken before a partisan magistrate who sees fit to go to the full statutory limit. Other cases may arise. A merchant has married a wife and as scripture hath it, 'therefore cannot come' to wait upon the government official forthwith, and he too therefore will be fined $500 if the instrument of the government for the time being should summon him befor a partisan magistrate—and we have had glaring examples of partisan magistrates time and again. I feel that there is a bond of sympathy between the hon. Minister of Agriculture and myself as farmers engaged in the common undertaking of expediting the business of this House, as we are both trying to do to-day, and also in bring good results to the farmers, and I would say to my hon. friend that taking it all in all, as this is to some extent an experimental matter, it is unwise that we should put this drastic measure in force in its present form. I therefore propose to change the maximum fine from $500 to $100 and make the lowest penalty $5 instead of $25. It will be carrying out the principle involved in the law, it will afford reasonable means of enforcing the law, it will be a protection to the man who until the law becomes known, bona fide objects to inspection, and at the same time it will give ample power to the government officials. And, if a further argument is required I will point to the fact that this penalty of $500 stands side by side with the penalty under section 8 which has been reduced to $25. Surely this penalty under section 10 might be reduced to $100.

Mr. FISHER. I would say in reply to the arguments of the hon. gentleman (Mr. Lennox) in the first place, that this question was discussed in the committee and the committee decided to retain the penalty as it is. I would say again that this penalty is not a penalty under ordinary circumstances for the contravention of the law, but it is the penalty for a person who obstructs an officer in the discharge of his duty, a serious offence, an offence which must be deliberate as the officer will have to declare what his duties are and what he is there for. The penalty of $500 is the limit. I can imagine circumstances under which a person would obstruct an officer in the execution of his duty in carrying out the law where $500 would not be at all too much as a penalty for the offence. But, the penalty of $500 is not necessary. The penalty is to be $25, and it may be increased up to as high as $500. Under these circumstances I do not think the penalties as herein described are too great, and I must ask the House to reject the amendment.

Mr. BLAIN. I understand that this Bill, if adopted, will not interfere with the sale of seed from one farmer to another. I wish to draw the minister's attention to a new form of selling seeds in Ontario by one farmer to another and perhaps I can do so by reading the following advertisement:

Seed Fair, Town Hall, Brampton, Saturday, February 25th.

Under the direction of the Peel Farmers' Institute, Professor Zavitz, Guelph Agricultural College, will be present and deliver an address on 'Selection of Seed' in the afternoon.

All persons having seed grain, clover, grass, corn or potatoes to dispose of are invited to bring samples (two bushels). Open to everybody, but exhibitor must become a member of Farmers' Institute.

Exhibits of new varieties are specially desired, even though not for sale.

The Institute will not assume responsibility for quality of seed.

Send in your entries as early as possible, stating variety, quantity for sale and price per bushel.

This is a splendid opportunity to sell seed. The demand will be good, as seed is scarce.

G. Downey, President. T. J. Cumberland, Secretary.

The point I want to ask is whether this Bill if adopted will interfere with the farmers' institutes having seed for sale in the manner set forth in this advertisement.

Mr. FISHER. I am not prepared to give a legal opinion but I would say that the Bill would tend to the sale of pure seed and to the sale of seed under the circumstances mentioned.

Mr. BLAIN. Clause 2 of section 3 of the Bill says :

The provisions contained in this section shall not apply to the sale of seed that is grown, sold and delivered by any farmer on his own premises, for seeding by the purchaser himself, unless the purchaser of the said seed obtains from the seller at the time of the sale thereof a certificate that the said seed is supplied to him subject to the provisions of this Act.

Here is a clause which states that a farmer can sell to his neghbour farmer on his own premises without being subject to the penalties under the Bill. Here are farmers who bring the seed together in large quantities at what is called a seed fair, and I do not think it would be in the interest of the farmers or of the country that a Bill should be passed that would prohibit the farmers from bringing their seed in and selling it at such a seed fair as that to which I have just referred.

Mr. LANCASTER. In reference to the amendment of the hon. member for Simcoe (Mr. Lennox) the minister has not disputed that this is a new offence which has been created and if he does not realize it I can assure him that so far as I am concerned, I am satisfied that the penalty is very large for a new offence. What is the offence ? The offence is one that might very innocently be technically perpetrated by a man who would then be fined $500. It is not necessary under the section that the person proceeded against should be offering this seed for sale at all. Anybody who happens to have seed in his possession that some informer thinks might possibly be sold—and of course anything we have might possibly be sold without our being in the selling business—anybody, a professional man or a manufacturer or a clergyman without having anything to do with the growing of seed, who may be the custodian of seed which he holds in trust for somebody else, may be fined, for the informer does not have to prove that he is advertising it for sale or recommending people to buy it or in any way advancing the idea that he has it for sale. Under these circumstances there should be a very small amount of fine if it is only a trivial offence as is likely. The offence is not as serious as striking a man over the head yet a magistrate for such an offence as that could fine a man $1 only.

Mr. LENNOX. But he is not a great government official.

Mr. LANCASTER. No, as my hon. friend very properly interjects he is not a government official but at the same time I think these things should be looked at seriously by the Minister of Agriculture. Here is a matter that many people would not consider an offence at all and there could be no unanimity as to whether it is proper to fine an offender under it, yet there is no chance for a magistrate to levy a fine of less than $25. If the rules of the House would permit it, I would move an amendment to the amendment making the minimum fine $1 instead of $5. I think we should vote for the amendment to make the minimum fine at most $5 and the maximum fine $100.

Amendment (Mr. Lennox) negatived on division.

Motion agreed to, and Bill read the third time, and passed.

SUPPLY—INTERCOLONIAL RAILWAY ANNUAL STATEMENT.

Hon. H. R. EMMERSON (Minister of Railways and Canals) moved that the House go into Committee of Supply. He said : It has been usual in years gone by, to such an extent that it has become a custom of parliament, for the Minister of Railways, before the House takes into consideration the estimates relating to his department, to make a statement to the House with regard to the conditions prevailing in connection with the Intercolonial Railway during the preceding fiscal year, and also with respect to the conditions prevailing on the railway during the current fiscal year, particularly with regard to the financial aspects of these conditions.

Last year it was my duty to present a statement covering more than half a year, during which I was not connected with the administration of the Intercolonial Railway. The figures for the year ending the 30th of June last were given to the House before prorogation; so that I am in the position of having presented a statement covering a part of a year for which I was in a measure responsible, and I am now called upon to deal with Intercolonial affairs for another year which is but a little more than half spent.

That hon. members may have the facts clearly in mind, however, let me briefly state the results for the year 1903-4. The earnings amounted to $6,339,231, being $14,-908 more than those of the preceding year. The expenditure was $7,239,982, being $1,-043,329 more than those of 1902-3. This left a deficit of $900,751, which was considerably the largest in the history of the government railway.

I am quite aware that nothing I can say in explanation of that shortage will prevent hon. gentlemen opposite from criticising the administration of the Intercolonial from the

standpoint of financial results. They will, in accordance with what are deemed to be legitimate parliamentary tactics, make the most out of the bare fact that there has been this large deficit. I would say very freely, let them do so. I propose to state the facts with the utmost frankness, and leave the matter to the honest judgment of those who are disposed to fairly take into account the conditions which brought about that deficit. How was the increase of $1,043,329 in the expenditure made up? Let us look at the items in detail. The increases in the operating expenses were as follows:—

	Increases.
Wages, enginemen and firemen	$118,551
Fuel	123,202
Repairs to locomotives	184,779
Oil, waste and tallow	4,167
Water	3,909
Repairs to passenger cars	28,629
" postal, express and baggage	21,352
" freight cars and vans	188,418
Wages, conductors, baggagemen and brakemen	153,384
Wages, trackmen	52,708
Ties	1,125
Timber and lumber	21,572
Repairs to wharfs	9,208
Clearing ice and snow	41,172
Wages, station masters, &c	94,025
Salaries, general offices	16,117
	$1,062,218

The difference between this sum and the smaller figure quoted arises from the fact that there were small decreases under other heads.

Mr. BARKER. Will the hon. gentleman allow me to ask him, when he is giving some of these increases, such as those of station masters, to say whether there was an increase in the number of men employed or only an increase in wages?

Mr. EMMERSON. I quite appreciate the question of my hon. friend, and before I am through, I will fully explain that. I think I can the more briefly do it if I bring it in its order; because I do not wish to weary the House, and I want to get through with these figures, which are necessarily dry and prosy, in as concise and brief a way as I possibly can. It will be seen that the main item of increase is to be found in the bill for wages. The increases in wages last year as compared with 1903 were as follows:

Enginemen and firemen	$118,551
Conductors and trainmen	153,384
Trackmen	52,708
Station masters and operators	94,025
Mechanics	78,304
Total	$506,972

This shows a total increase in the matter of wages alone up to June 30, 1904, of $506,972. I am not disposed to apologize for that fact. It is an item to which exception can only be taken on two grounds, namely, that the government is paying more for skilled and ordinary labour than is being paid by railway corporations and private employers, or, that the Intercolonial Railway is employing more clerks and more men than are necessary to operate the railway. Neither assertion can be made in fairness. We are not paying any more than is being paid by other railways or by industrial corporations throughout Canada, and, indeed, for some classes of labour we are paying less. It is of course true, that we have been giving employment to more men than was the case formerly, but let me point out that the number of men required on a railway is directly connected with the volume of traffic, and it must be remembered that within six years the business of the Intercolonial Railway has more than doubled, and that during the past year even, there was an appreciable increase in the traffic of the Intercolonial Railway.

At six o'clock, committee took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

OTTAWA ELECTRIC COMPANY.

House in committee on Bill (No. 12) respecting the Ottawa Electric Company.—Mr. Galliher.

Sir WILFRID LAURIER (Prime Minister). This Bill was approved by the Private Bills Committee, to which it was referred, and reported with some amendments. I understand that the city of Ottawa took exception to the Bill, and takes exception to it even in its amended form. It has been suggested to me that, perhaps, the interests of all parties, the promoting company and the city of Ottawa itself would be best served by referring the Bill to a special committee, so that the parties might have an opportunity of discussing it. I do not know much about the Bill, except from what I have read about it casually and from a cursory reading of the Bill itself. I understand that the Bill has merit, but also that the provisions go much further than the city of Ottawa would like. The reference to a special committee will not commit the House to anything. It is true that it is usual for the House to approve the report made by a committee. Yet, in view of the strong opposition made by the city of Ottawa, which is very much interested in the Bill, it has been suggested to me, and I make that suggestion to the House, that, instead of proceeding with the Bill, the order be discharged and the Bill be referred to a special committee to be composed of Messrs. Fitzpatrick, Haggart, McIsaac, Monk, Galliher, Bergeron and Dugas. Or,

if there are some hon. members whom it is particularly desired to add to the committee, I would have no objection. But, I think this is a fair, representative committee that would do the subject full justice and give a satisfactory report.

Mr. FOSTER. Would that committee have any special power more than any other? Would it simply hear the parties?

Sir WILFRID LAURIER. The committee would have no power except those ordinarily possessed by a committee. The object I had in view was to have the representatives of the parties, the Ottawa Electric Company and the city of Ottawa, come together and present their views, so that the House might have a report upon which it could reach a satisfactory conclusion.

Mr. W. F. MACLEAN. I have no great objection to the committee as named, but I would like to see on it some one who represents the views of the cities in regard to these questions. I do not quite say they are entitled to representation. We have heard a great deal about vested rights. Now, the city of Ottawa has vested rights, as other cities have. The cities of this country have a vital interest in the maintenance of their rights as against the aggressions of corporations that receive franchises. I cannot object to the proposition of the right hon. Prime Minister (Sir Wilfrid Laurier), for it is evidently the beginning of a new day that will be welcomed by those who are trying to defend municipal rights as against the inroads being made not only in this legislature but in every other legislature. I say it is an indication that things are changing. And I congratulate the right hon. gentleman upon the fact that at last he thinks it worth while to call a halt in a Bill of this kind and send it to a special committee for consideration. If that is his wish, I cannot object. But I tell him now that the principle involved in this Bill is important, and the raid on the rights of municipalities so direct, that, no matter what the committee may say, unless they deal with the vital point and strike out the clause which enables the company to violate a solemn agreement with the municipality, the Bill will not be satisfactory to the organization of cities of this country. Still, as this is an indication of change of heart on the part of the Prime Minister, and of a determination to try to do better, I cannot but accept it. I would advise the city of Ottawa to be heard before this committee. And I trust that the cities all over the country will be heard, as the question is one of supreme importance.

Mr. FOSTER. I believe it has been stated by some in the city of Toronto who favour the municipality's contention, that they had no opportunity of appearing and making their statement with reference to the Bill. While the city members are here and represent the city in that respect as in others, yet, if a special committee is appointed, as my right hon. friend suggests, due notice can be given and the representatives of the municipalities can be heard. I quite see that the vital point in the Bill is as to the powers of muncipalities, that they shall not be overridden by corporations. I would sugest to my right hon. friend (Sir Wilfrid Laurier) that he might well add two members to that committee.

Sir WILFRID LAURIER. I may say to my hon. friend from South York (Mr. W. F. Maclean) that I feel very much gratified that for once, at all events, I have been able to satisfy him. I accept his compliment; when he is reasonable he will always find me reasonable. When he makes a proposition of this kind that has merit, I have no objection to it. Both he and my hon. friend from North Toronto (Mr. Foster) suggest the addition of names to the committee. I do not think I could do better than add to the committee a gentleman who has taken a deep interest in municipal matters, my hon. friend from St. Antoine Montreal (Mr. Ames), and also Mr. Zimmerman.

Mr. SPROULE. Why not put on one of the members from Ottawa?

Mr. BELCOURT. Both of the members for Ottawa will consider it their duty to appear before the committee.

Mr. W. F. MACLEAN. Could not the Prime Minister add to the committee Mr. Macdonnell, of South Toronto?

Sir WILFRID LAURIER. We have nine members, and I think that is about as many as we ought to have for such a committee. I think it is a fair and representative committee. I know that the city of Toronto wants to be heard, and, no doubt, they will be represented by counsel and, probably, also by the mayor. I move that the committee rise, report progress, and ask leave to sit again.

Motion agreed to, and progress reported.

Sir WILFRID LAURIER moved:

That the order be discharged, and that the Bill be referred to a committee composed of Messrs. Fitzpatrick, Haggart, McIsaac, Monk, Galliher, Bergeron, Dugas, Ames and Zimmerman.

Motion agreed to.

NORTHWEST TELEPHONE COMPANY.

House in committee on Bill (No. 28) to incorporate the Northwest Telephone Company.

Mr. TURRIFF. As this Bill has been sent to be reprinted, I move that the com-

mittee rise, report progress and ask leave to sit again.

Mr. FOSTER. For what reason ?

Mr. W. F. MACLEAN. The understanding was that the Bill was to be reprinted so that we would all be able to have an opportunity of seeing what the amendments were, and the intention was to draft it rather carefully so that it might meet the case.

Motion agreed to.

SECOND READINGS.

Bill (No. 82) to incorporate the Dominion Annuity Company.—Mr. Bole.

Bill (No. 83) respecting the Alberta Railway and Irrigation Company.—Mr. Turriff.

Bill (No. 84) respecting the Huron and Erie Loan and Savings Company.—Mr. Calvert.

Bill (No. 85) respecting the Bay of Quinté Railway Company.—Mr. Harty.

SUPPLY—INTERCOLONIAL RAILWAY, ANNUAL STATEMENT.

Hon. H. R. EMMERSON. When the House separated for dinner recess, I was pointing out the fact that in this country to-day there were conditions prevailing which necessitated the payment of larger sums to wage earners. Every one familiar with the progress of events in Canada knows that during the past seven or eight years we have been passing through a period of unparalleled prosperity. The demand for labour has been such that the scale of wages has steadily risen year by year. Every employer has had to grant large increases, and the Intercolonial has not been able, even though an effort had been made in that direction, to escape from these conditions. I lay it down as a principle that the government of Canada, under similar conditions, cannot be expected to pay a lower scale of wages than is established by the rates current on the corporation railways and in private workshops. It will be said however, that ordinary railway corporations and private employers have been able to meet these new conditions in the labour market without loss. That may be so. Such an argument does not meet the case of the Intercolonial. Ordinary railways and ordinary employers are able to make adjustments which the Intercolonial cannot at present make ; they can raise their rates or charge more for the products of their factories and workshops. The Intercolonial has fixed rates. There may come a time when it may be necessary to depart from this policy, but that is not likely to come until parliament has equipped the Intercolonial as it should be equipped, and it is then still found impossible by a large sum to make ends meet. Nor can it be said that the Intercolonial gives employment to more men than are necessary for its proper operation.

Now let us look as this matter of deficits fairly and candidly. As has been often said, and as I endeavoured to make clear last year, the Intercolonial was never built to pay. Its location and its purpose make this impossible, even though it were desirable. What are the facts ? If the administration of the Intercolonial be criticised along the line of relative party responsibility, during the eighteen years of the Conservative regime, the deficits aggregated $3,730,733, or an average of $203,901 per annum. From 1897 to 1904 the total net shortage has been $1,658,856, or an everage of $156,381 per year, nearly $50,000 per annum less than the average during the eighteen year period I have referred to. In face of facts such as these it appears to me that we ought to be in a position calmly to look at this matter without recrimination or the introduction of a partisan spirit. All said and done, the management of the Intercolonial should be judged on its merits, apart from partisan considerations. It is a national railway, constructed for a special purpose, and operated under conditions which make it unreasonable to judge of the results by a comparison with those achieved by railway corporations.

Leaving that view aside for the moment, let me point out that an important consideration in the management of a large railway is the expenditure on maintenance of way. The Intercolonial Railway has probably the best roadbed in Canada, and it is good policy and true economy to maintain it in such condition. Last year the cost of maintenance, as compared with the previous year, was : For 1904, $1,491,673 ; for 1903, $1,386,350, an increase for 1904 over 1903 of $105,323 in the matter of maintenance of way charges alone. The clearing of ice and snow cost $130,652, or an increase of $41,172 as compared with the previous year. This was entirely an unavoidable result. The cost of ties put in, of which 5,000 more were laid down than in 1903, was $194,458. There was an increased cost of $1,125. Take another item of the fixed expense, the cost in connection with our stations. A comparison shows a decrease for the year of $5,298 for fuel, oil, light and so forth, indicating economical management, while there is an increase of $94,025 in the salaries and wages paid. This was unavoidable in fairness to our staff. As showing the expansion of the Intercolonial Railway, I may say that in 1896 it cost $303,796 for salaries and wages in connection with our stations as compared with $738,964.

It is, however, in the mechanical operation of a railway that serious leakages may occur, and experts are disposed to analyse the expenditure under this head with some care. The cost of the mechanical de-

partment last year was $2,796,909, showing a net increase of $672,100 over the preceding year. This increase was made up as follows :—

Enginemen's wages	$118,551 00
Mechanic's wages	78,304 67
Fuel	123,201 93
Rolling stock replaced	312,872 59
Material	39,170 77
Total	$672,100 96

The number of men employed—and here I trust to have an opportunity of answering a question put to me by the hon. member for Hamilton (Mr. Barker)—in the mechanical department, which includes enginemen and trainmen as well as mechanics, was increased during the year from 858 to 957, thus accounting for a part of the added cost. The betterment of wages represents a greater proportion of the increase, however, and I shall be prepared at any time to give details in respect of the wages paid to the mechanics and to the other employees on the Intercolonial Railway. In this connection, I might call the attention of the House to a comparison of the number of men employed. The statements which I have before me refer particularly to the conductors, baggagemen, brakemen and trackmen. As to the conductors, the statement is as follows :—

Year.	No. of Conductors.	Maximum Wage per day.	Minimum Wage per day.
		$ cts.	$ cts.
1896, 30th June	134	2 50	1 90
1903, 30th June	212	2 75	2 00
1904, 30th June	221	3 25	2 50

As between 1903 and 1904 there was a difference as between the minimum wage paid of fifty cents ; that is to say, that in 1904 the minimum wage paid was fifty cents higher to conductors than it was to 30th June, 1903. Now, as to baggagemen, the results are as follows :—

Year.	No. of Baggagemen	Maximum Wage per day.	Minimum Wage per day.
		$ cts.	$ cts.
1896, 30th June	22	1 60	1 30
1903, 30th June	41	1 85	1 30
1904, 30th June	82	2 35	1 60

Showing increases ranging from twenty-five to fifty cents in the rate of wages paid this class of employees on the Intercolonial Railway. As to brakemen, the figures are as follows :—

Year.	No. of Brakemen	Maximum Wage per day.	Minimum Wage per day.
		$ cts.	$ cts.
1896, 30th June	301	1 60	1 25
1903, 30th June	507	1 75	1 30
1904, 30th June	517	2 15	1 50

Showing, as respects the brakemen on the Intercolonial Railway, a very material and very substantial increase in the rate of wages paid to them. I would mention this fact, and I think it but fair to say, that in the statement as to the baggagemen employed in the year 1896, five of the twenty-two we then had were paid $50 per month. The result is summed up in this table :

Total wages of conductors, trainmen, baggagemen and brakemen taken from statement in car expenses for the year :

1895-6	$255,412 68
1902-3	497,753 65
1903-4	651,137 08

While it does not properly come in at this moment yet it may be opportune to now refer to the trackmen's wages. The trackmen regularly employed in the month of June 1896 and 1904 numbered :

1896	641
1904	851

The average monthly number of regular trackmen employed during the years was :

1896	643
1903	868
1904	882

The wages paid to the foremen and trackmen were :

	Foremen.	Trackmen.
1896	$1 60	$1 15
1903	1 75 to 2 00	1 30
1904	1 85 to 2 25	1 30 to 1 40 & 1 50

The difference between the maximum wage paid to foremen and trackmen both in 1903 and in 1904 is accounted for by the location of the men. The men employed at terminals and large divisional points, and in the large yards in the centres of population, are paid a higher schedule of wage than are those who are employed in rural sections and along the line generally, that being under an arrangement entered into with the organization of trackmen based upon the idea that the cost of living at these larger communities is greater than in the rural communities. The wages of other important classes of employees have been increased in even a larger proportion, as I shall show in the committee stage.

The increase of $123,201 in the fuel bill is accounted for by the consumption of 33,213 more tons of coal, owing to the increased

equipment and also to the severity of the weather last year and also, in part, to the higher price, by about 25 cents per ton, paid for coal during the fiscal year 1903-4 as compared with the fiscal year 1902-3.

The charges against repairs to engines, which were increased by $184,000, were incurred in an effort to improve the efficiency of the motive power. Eight new locomotives were purchased at a cost of $149,350 to replace an equal number which were worn out or which had become obsolete, as against three thus treated in 1903. Four new locomotive tenders and three new boilers were also built and charged against this account. The increased charges against car expenses amounted to $231,000 and are to a certain extent explained by the payment of higher rates of wages and the higher cost of material. The particular reason, however, lies in the desire of the management to maintain the efficiency of the rolling stock. During the year, 462 new freight cars and one new second-class passenger car were purchased at a cost of $357,000, charged against maintenance account. This shows an increase of 160 new freight cars purchased out of revenue as compared with the number purchased in 1903, the difference in cost being $160,314. Three express and baggage cars were also purchased to replace similar cars, which accounts for the increase of $21,351 under that head.

Mr. HAGGART. You are talking of revenue account altogether ?

Mr. EMMERSON. Altogether of revenue account; I am not referring to the capital features at all, and while I have been definite in the statements I could not venture to impose upon the House any more wearying details but I could go into further figures showing accurately the increase in the operating expenses of the Intercolonial Railway for the year 1904 as compared with the preceding year. I shall speak of it now in a general way and perhaps hon. members can elaborate for themselves, and can well understand why it is that with certain objects in view the management, in carrying out these objects or attempting to carry them out, necessarily incurred very much larger expenditures during 1903-4 as compared with the preceding fiscal year. These efforts and these expenditures were put forth and incurred in an effort to give a modern service to the public.

The causes for larger expenditures may generally be summed up under the following heads : 1st, increased traffic ; 2nd, better service for the travelling public, involving more trains, faster schedules, and more comfortable travelling ; 3rd, more luxurious and more expensive passenger cars ; 4th, increased number of cars and improved service for freight traffic. I might mention in this connection that for the year 1903-4 we had on the Intercolonial what was known as the fast freight, a train specially designed to serve the business interests of Ontario and Quebec—an expense which in the preceding years was not incurred. This train was put on for the purpose of furthering the interests of Canadian imports and exports through Canadian shipping ports, and in order to meet the wishes of the business men of Toronto, Montreal and other manufacturing centres. That train ran on practically express time from Halifax to Montreal, and connected at Truro with Sydney, and at Moncton with St. John. So that I can very well emphasize the statement that one of the features of the increase in the working expenses of the Intercolonial for 1903-4 was the improved service for freight traffic. The fifth head would very naturally be heavier and consequently more expensive engines. The sixth is increased cost of materials. That is recognized not only in the east but in the west. Lumber and all other materials necessary in connection with repairs and construction work have all increased. Here I want to make one statement which may be contrary to the ideas that prevail throughout Canada to a large extent, but of which I defy successful contradiction, that every kind and description of material required in the operation of the Intercolonial, and in the repair of its rolling stock, its station buildings, its roadbed and its right of way, is purchased at a less price, certainly at no higher price, than is paid for similar materials by other great railway corporations in Canada. I know that to be a fact by comparison. The last and by no means the least cause of increased expense is the higher rates of wages to enable us to command efficient service. Constantly increasing expenditures under these heads are absolutely necessary if we are to keep pace with the advances of other railways in Canada. We have either to bear the cost of improvements or refuse to meet the requirements of the public. When I say the requirements of the public, I mean the requirements of the people of all Canada ; because all the people of Canada are interested in the Intercolonial Railway. Despite anything you may say, there is not a province that is not deeply interested in the success of the Intercolonial—in its efficient and proper management. Another item to which I have not referred, for which I have not the exact figures, and certainly a not unimportant item, is the cost to which the railway is put by unusually expensive repairs. Accidents occur on that road as they do on all other railways, and unfortunately, during the last year as well as during the current year, there have been some accidents that have involved very heavy expenditures in the way of repairs and in the payment of damages resulting from the destruction of freight.

Mr. HAGGART. Were they paid before the 1st of July last ?

Mr. EMMERSON. Yes. Those to which I refer were paid before the 1st of July 1904; but unfortunately, we have also had during the current year some expenditures in that direction which have gone to swell our total increased expenditure. Now, I have endeavoured as briefly as I possibly could to deal with the financial conditions of the railway during the fiscal year 1903-4.

I shall deal now with the six months periods between the 1st of July, 1904, and the 1st of January, 1905; and it would naturally be expected that I should give a statement of the results of the operations for the current year, and at the same time forecast the net result on the 30th of June next. If that forecast is not a rosy one, if it is not bright hued, it is through no fault, as I contend, of the management of the Intercolonial or of the head of the department.

Mr. KEMP. Will the hon. gentleman allow me to ask him a question before he leaves the 1903-4 statement? He has told us the amount of the extra expenditure owing to the increased price of materials and the advance in wages. I did not hear him say what extra traffic or revenue that brought.

Mr. EMMERSON. I will deal with that in committee. As I stated to the House at the outset, I did not wish to impose upon the House too many wearying details and figures, and I have reserved for consideration in committee some of the minutiae of the expenditure and of the results of the year's operations. I will endeavour to satisfy my hon. friend as to that. There was an increase in the revenue in 1903-4 over that of the year 1902-3. The increase was not so very large, and I do not feel called upon to go into the details of it; but the increase in the working expenses of the road have been so very great that I felt it was due to the House and the country that I should explain the various causes which led to it. I think I can fairly claim that for the six months from the 1st of July to the 1st of January last, the operations of the road were carried on with care and with due regard to economy, but there were conditions during that period which naturally produced results that are not pleasant to contemplate. For the six months ending 31st December last, the earnings were $3,621,263, and the cost of operation $4,103,402, leaving a deficit for that period of $482,139. As compared with the same period last year, the revenue shows an increase of $226,629 and the operating expenses an increase of $412,572. In this period considerable increases of salary and wages took place. These increases applied chiefly to the mechanics in the shops and the clerks.

Mr. HAGGART. Did the hon. gentleman say that the operating expenses for the six months ending January last, as compared with the six months of the preceding year, show an increase of $412,000?

Mr. EMMERSON. To be exact, $412,572. For several years the clerks who, as a class, were receiving low compensation, had been pressing for general increases. I did not think that the financial conditions on the Intercolonial Railway warranted action of that character, but in December last, I went carefully over the salary list and made a re-adjustment. I informed deputations who waited upon me in February and March of last year that the matter would require considerable study and that whatever advance I was able to allow would date from the 1st July, last. This was in order to be perfectly fair with the clerks and not make them suffer from any unavoidable delays which might occur. Let me say right here that no large railway in Canada is carried on with a smaller cost for management and clerical help than the Intercolonial Railway. I have had occasion to make comparisons between the salaries on the Intercolonial Railway and those paid by railway corporations, and the figures do not in any way demonstrate that we are paying the Intercolonial Railway staff proportionately as high as those railway corporations pay theirs. Looking ahead, I am unable to predict anything else than a large deficit for the current fiscal year. The conditions which have prevailed for months past, and which practically are prevailing now, point to that unfortunate result. We have had a winter of unprecedented severity in the maritime provinces. The snow fall has been phenomenal and the weather conditions such that the Intercolonial Railway and all other railways have been practically paralysed. For days together all traffic has been stopped, storms have followed each other at short intervals, and all this has meant the burning of the candle at both ends. On the one hand we have an extra cost of operation and on the other a decrease in our revenue. The delay to trains on the Intercolonial Railway during the past two months have been startling, but it has been entirely unavoidable. Crews are started out, they get to a certain point and are there stalled up by reason of storms. They cannot make their crossings regularly, and crews that should go a run in eight hours are obliged to devote perhaps twenty-four or thirty-six hours to making it—all at the cost of the railway, not at the cost of the men. Every one in this House is so familiar with the conditions that govern, that it is not necessary for me to go into details. The severity of the winter and the extraordinary snow falls will necessitate very large expenditure in connection with the spring work. Hundreds, even thousands, of men have had to be employed all the way from Sydney to Montreal and St. John to Halifax, and on all the branch lines, in shovelling snow. On account of the depth of the

snow, the snow ploughs have been practically useless, and every train had to be accompanied by an army of men to clear the road. But unfortunately we have not been able to succeed in keeping our trains moving from one end of the line to the other. Halifax has been closed for days at a time from the outside world, so far as railway communication is concerned. The line from Truro to Sydney was blocked for a long period. The mails could not be carried, passengers were stalled at all points, so that practically traffic has been paralyzed. If we had more locomotives, we would certainly be in a position to overcome in some degree the shortage of cars, but coupled with all these other drawbacks there has been a shortage of motive power. When I say a shortage of motive power, I want to make this statement—and I make it unhesitatingly—that the Intercolonial Railway on December 1, 1904, instead of having the number of engines it ought to have, was short of the requisite quantity by fifty. At least fifty additional locomotives are required. Further, I am told by those who ought to know, that there should be seventy-five additional locomotives for the purpose of attending properly to the traffic and the freight.

I do not attach blame to any one on that account. There has been an increase of traffic; but there has not been always money at the disposal of the department to purchase additional engines. During the present winter it has occurred that, for days and days, there would be from 1,200 to 1,500 loaded freight cars on the Intercolonial Railway which could not be moved, because of the want of motive power. If we had more engines we could overcome, in a measure, the shortage of cars on the road. We only have about 12,000 freight cars altogether, and there certainly should be more, considering the length of haul as compared with other lines. Take the Intercolonial Railway between Montreal and Halifax, as compared with the Canadian Pacific Railway between those points. We have not twice the mileage, but we have a much greater mileage than the Canadian Pacific Railway in placing our cars at the point of destination. The Canadian Pacific Railway, by reason of its shorter haul, can get its freight cars to destination in comparatively quick time and return them for use, or have them in use along the line. Weather conditions this winter have intensified our difficulties in that respect, making it impossible to meet the requirements of the traffic. There has been a universal cry, from Montreal to Sydney, for additional cars to accommodate the ordinary business of the country. I was at Moncton on one occasion, I think in the latter part of December, when one great flour company in Montreal made a call for 100 freight cars—wanted them immediately. Yet the conditions of the Intercolonial Railway only enabled us to furnish at the time twenty cars, or one-fifth of the number these shippers needed for immediate use. Thus it will be seen that there have been many drawbacks in the operation of the Intercolonial Railway within the past few months, and that the road has been handicapped in these things.

Now the financial results on the Intercolonial Railway have been unsatisfactory during the past two years—certainly very unsatisfactory. But that has not been caused by mismanagement or lack of foresight. No blame can be attached to the administration. As I said, the drawbacks have been due to conditions beyond the control either of the minister or the officers of the railway. What we need is better and more complete equipment. I feel that the time has come when hon. members on both sides should realize this and, in a fair and generous spirit, provide sufficient equipment to enable the road to operate without being handicapped by the disadvantages under which it works at present. There has been an expansion of traffic on the road during the past six months, as compared with a like period during the preceding year, an expansion which only heightened our difficulties because of the want of motive power and of cars. The want of motive power increases the difficulty arising from the lack of cars. There has been a general increase of the traffic, and a steady increase, during the last few years, as shown by the additions to the revenue. We have had a better service, not merely passenger, but freight service. Quicker time has been made in the transportation both of freight and of passengers, and there has been greater regularity in delivering traffic at its point of destinataion. We are gradually improving our passenger service; and I am sure that the inauguration last year of the new train known as the 'Ocean Limited' will be recognized by all who have knowledge of that service as a distinct improvement in the accommodation for passengers on the Intercolonial Railway. From about the beginning of July until the middle of November we were operating two through passenger trains between Montreal and Halifax, and between Montreal and the maritime seaports. These trains were very handsomely patronized. The 'Ocean Limited' was an experiment. It was an additional fast service, a limited express, with only a stated number of stops. Passengers who boarded that train at Montreal, with a view to reaching Halifax or St. John, knew to a certainty almost that they would be there on time. The running time was shortened very considerably. And, when that train is again placed upon the route, as I hope it will be during the coming summer, I believe the time will be further shortened at least one hour between Halifax and Montreal.

Mr. HAGGART. What was the actual difference in time between it and the Cana-

dian Pacific Railway between the same points ?

Mr. EMMERSON. I think we made about the same time.

Mr. HAGGART. What was the difference in the time of starting ?

Mr. EMMERSON. About fifteen minutes or half an hour. We served a section of country that the Canadian Pacific Railway did not serve. We got a tourist business which they could not possibly get. We catered to the watering places on the lower St. Lawrence and at the head of the Baie des Chaleurs and all along the north points. of New Brunswick, while the Canadian Pacific Railway did not reach these points. We catered also to the Cape Breton tourist traffic. Now, we have had, and we have on the Intercolonial line, especially during the last eight months, more luxurious passenger cars. I am sure this must be self evident to the travelling public. Our cars to-day cost very much more than they did, not that they cost more than they should, but the character of the cars is such that they cost more than we were paying for cars some years ago but the different classes of cars are the same. We carry more passengers on those cars ; so that there is not merely increased freight but more passengers carried to-day. There is increased safety as well, because the style of cars and the way they are constructed make them much more safe to the travelling public than the cars which in times past were furnished for the use of passengers on the Intercolonial. I have adverted to the fact that we have a better freight service, and we have added to the freight service. I have also adverted to the fact that we have an increased number of trains, meeting the requirements of the public on all sections of the road. All this goes to prove that we are advancing the interests of the whole country in thus furnishing to the people of Canada a better passenger service and a more regular and frequent service, because the people of today require that. A few years ago it was not necessary; one train a day was then sufficient, the people did not look for more. Today they are expecting more, nay, they are demanding more; and it is for the Intercolonial to furnish a service that will meet the requirements of the country through which it passes, that will meet the requirements of the people of all Canada, because all Canadians patronize that railway. Now that we have heavier engines, of course they haul heavier loads. These locomotives cost more. We have, as I have explained, replaced a number of old locomotives with new ones out of current revenue account. Those that were replaced cost a great deal less than did those which were previously in use. Now I think I have given to the House a clear, certainly a full, statement of the financial conditions of the Intercolonial, not only during the fiscal year 1903-4 but for the six months between the 1st of July and the last of December, 1904.

Mr. HAGGART. On the fiscal point, before the minister leaves it, would he be kind enough to tell me what the expenditure on capital account was for 1903-4 and for the six months that he mentions up to December ?

Mr. EMMERSON. Before coming to that I want to answer a question that was put to me by the hon. member for Elgin (Mr. Ingram) as to mileage. I have pointed out the increased cost of coal, giving the reasons therefor, showing that the heavier traffic involved an increased consumption of fuel and of oil and waste. I do not know that I have explained with respect to the six months, and perhaps I should do it now. The increased charges in the motive power department for the six months of 1904 from July to December, compared with the corresponding six months of the previous year, and amounting to $261,000, are principally accounted for by the larger amount of traffic handled. This increased traffic is indicated by a much greater locomotive and car mileage, amounting to from 12 to 14 per cent ; a greater amount charged against wages of engine crew, $70,400 during the six months as compared with the like six months of the preceding year. That is due, one-half to the increased engine mileage, and one-half to the higher rates of wages. The heavier traffic involved an increased consumption of fuel to the value of $125,000, and of oil, waste and so forth, to the value of $4,800, thus accounting for the increased expenditure during six months between July 1st and December 31st last as compared with the like period between July 1st, 1903, to January 1st, 1904. There is an increase in the cost of repairs of locomotives for the six months amounting to $51,500. This is partly accounted for by the increased engine mileage, it being 4,690,000 for the six months of 1904 as against 4,050,000 for a like period in 1903. The remainder of the increase was made necessary by the higher rates of wages generally prevailing all over the country which we felt constrained to accord to our men from the 1st July, 1904, and aggregating about $100,000 per year for the whole mechanical department. That accounts for $50,000 at least of this increase of upwards of $400,000.

Now these figures I have just given account for a total of about $252,000 out of the $261,000 of extra cost, that is the $261,000 in connection with the motive power department. The increased cost in the car department, amounting to $29,000 is properly accounted for by the increased rate of wages and the increased car mileage. The car mileage increased from 40,000,000 in the six months of 1903 to 45,500,000 in 1904. Summed up, the six months from July to December, 1904, we have the larger

traffic, the engine mileage increased from 4,047,000 in the six months of 1903 to 4,690,000 in the like period of 1904. About 200,000 miles of the increase of 600,000 was due to the 'Ocean Limited' express. I may say that the 'Ocean Limited' express held its own, and there was no loss particularly on that train as compared with other trains in the service. The cost of engine crews and fuel was largely increased during the period. We paid higher wages to the shopmen in order to meet the market rates but we did not pay our shopmen appreciably higher wages than those paid by the Canadian Pacific Railway. I am making comparisons between the wages paid at Moncton by the Intercolonial and the wages paid at McAdam, the headquarters of the mechanical department of the Atlantic division of the Canadian Pacific Railway. These increased rates could not consistently be denied however much they have affected the balance sheet. It was due to the men. It was only in accordance with the conditions prevailing in the country in connection with other railways and in connection with manufacturing and industrial establishments throughout Canada. Taking it all in all I think it can be said that the cost of the Intercolonial Railway in respect to its mechanical department, its operating and track departments and in maintenance of way and operation of its trains, is not extravagant as compared with the cost of like services on other roads.

Mr. INGRAM. What number of engines were not in proper state of repair on the 30th June last, and on the 30th of January of this year ?

Mr. EMMERSON. I have not that statement here. I will furnish the information at a later stage when the estimates are under discussion. I was asked by some hon. members for the increase in the capital expenditure.

Mr. HAGGART. I was asking what the capital expenditure was for the last year and the last six months. The hon. gentleman quotes the ordinary revenue and expenditure.

Mr. EMMERSON. I thought I had the capital account with me but I shall furnish my hon. friend with it. I am not dealing with the capital expenditures. I have not seemingly brought the papers to the House I could give the working expenses.

Mr. HAGGART. There is an item in the minster's report which gives the expenditure as $1,880,856. I suppose that is expenditure on capital account ?

Mr. EMMERSON. Yes.

Mr. HAGGART. But, there is nothing about the six months. I would like to know that.

Mr. EMMERSON. I can readily furnish that. The item which the hon. gentleman has quoted shows the expenditure for the year ending 30th June, 1904. I was going to refer hon. gentlemen to the report of the department which has been before the House. It affords full and complete details in respect to both earnings and expenditure for the past fiscal year. I think it is to be found in the report of the Department of Railways and Canals for 1904, about page 60, and the following pages. In dealing with the capital expenditures for the past six months or discussing that feature or phase of the question, I have not apparently charged my notes with these items.

Let me say in conclusion that while I regret not being able to present a more pleasing picture in connection with the Intercolonial Railway I feel that the statement I have made shows the actual conditions relating to the railway. I have endeavoured to present the facts relating to the railway and the facts alone. I have said elsewhere that I have great faith in the future of the Intercolonial Railway. I have great faith. I look upon the Intercolonial Railway as a public work that has done more for Canada than any other expenditure made by Canada since we became a Dominion. I think it has cemented the people together in a way that would never have occurred had we not built that road in the way in which we did. I feel that as to the future the possibilities of the Intercolonial Railway are very great indeed. I know that too frequently we forget the fact that the Intercolonial Railway had at its inception, and still has, very many drawbacks. I think we are too apt to forget that in so far as its freight rates are concerned it is handicapped. It is handicapped by reason of the water competition between the great commercial metropolis of Montreal and points down by the sea. Take the operation of the Intercolonial Railway from Montreal to Sydney; there you have the railway practically climbing the hill, not in respect to grades, but in respect to competition. During quite a number of months in the year at least it encounters the competition of the great waterway between Montreal and the Sydneys. At nearly every point along the line of the Intercolonial Railway you find good harbours connected with the Intercolonial Railway. It has been the policy of the government to expend large sums in connection with the Intercolonial Railway and doing everything possible to perfect its terminals. At the same time it has been the policy of Canada to furnish splendid shipping facilities at the different harbours. One is brought in competition with the other, although we would not have it otherwise. It is in the interest of the people of Canada, and yet at the same time we should not forget that these conditions do exist; that although the Intercolonial Railway when built and opened up in the early seventies had to meet that competition and

has had to meet that competition from that day to this. It has been a live competition and in addition to that the parliament of Canada has expended large sums of money to do what?—to provide another competitor for the Intercolonial Railway, in the construction of the Canadian Pacific Railway short line between Montreal and the harbours of the sea. It was created by Canada in competition with its own road. Who will say that it shoud not be so? It was necessary, I admit it. But, this fact creates some excuse for the Intercolonial Railway. We must look the facts in the face. We must not condemn the Intercolonial Railway because the people or parliament of Canada felt that it was in the interest of all Canada that there should be this competition. I have said to-night that there, perhaps, is a remedy and that remedy may necessarily have to be applied. I have endeavoured to show that the time may come, and must necessarily come, when there will be applied as a remedy an increase in the rates on the Intercolonial Railway, but that that remedy should not be applied until the Intercolonial Railway is placed in a fair position, until it is properly equipped, until it is placed in a position whereby it can, to the best possible advantage, carry out its objects and its aims, and can transport its traffic to the best possible advantage at a minimum cost. I know that a good deal of capital is sometimes made—I do not say unfairly made,—but there seems to be an attempt to make capital against the Intercolonial Railway from a sectional standpoint. I have stated over and over again in this House, whenever I have had an opportunity to speak at all with respect to the Intercolonial Railway, that I believed the Intercolonial Railway was doing as much good for the great cities of Quebec and Ontario as it was doing for any section of the maritime provinces. Nay more, Mr. Speaker, I think that it is accomplishing and doing more good for the manufacturing and industrial interests of Ontario and Quebec than it is doing for any single industry or for all the industries in the maritime provinces. We talk about the deficits of the Intercolonial Railway. That railway was built as a great highway connecting the four provinces of the Dominion ; it was built in consequence of the pact of confederation. It was built because the delegates at Quebec and at Charlottetown agreed that it should be built and that it should be built at the expense of Canada. It has been operated, and year in and year out when parliament has been asked for a vote for the work of improving the Intercolonial Railway there has been cavilling. I ask you, Mr. Speaker, to think of the results of the operation of the Intercolonial Railway and to compare them with the results of the operation of the canal system of Canada. Canada has expended some $72,000,000 on the Intercolonial Railway ; has expended upwards of that sum on the Canadian Pacific Railway and has expended some $80,000,000, at least an amount equal to the amount expended on the Intercolonial Railway and Prince Edward Island Railway, on its canal system and it is costing to-day to operate these canals a sum of money somewhere between $800,000 and $1,000,000 per year. Are there any complaints because of the deficit in connection with the canal system? Do you hear any cry from the east or west, from any section of Canada, as respects that expenditure ? You do not, Sir. Why ? Because the people of Canada realize that the canal system is in the interest of the trade of the country, is in the interest of the business of the country and in the interest of Canada. The Intercolonial Railway was placed upon the same plane as were the canals of Canada at the time of confederation. They were looked upon in the same light ; they were both designed to be great highways for the use of the people of Canada, and there should not now be any niggardly business with respect to the Intercolonial Railway any more than with respect to the perfecting and maintaining of our canal system. We charged, until the past two seasons, a toll upon every ton of traffic that passed through our canals. Two years ago it was thought to be in the interest of trade, in the interest of the export and import business of Canada that those tolls should be abolished. We did it, we did it willingly, and the people of all Canada approved of that Act ; and I am sure that the people of Canada would approve of any steps that may be taken by this parliament to perfect the Intercolonial Railway, to make it a railway that shall be the pride of all Canada, a railway that will serve the interests of the country and even although there is a deficit, because of extra wages, we cannot turn the screw and put up the rates as can be done in connection with other railways. We cannot do that because it would be a violation of pledges to which this country committed itself in 1867. We cannot do it except as a final resort. But why should there be any outcry against making the road one that will meet the demands of the country and be a credit to it? I trust that the estimates which have been placed before hon. members and to which their consideration is being invited will be generously discussed and that they will be readily approved by this House.

Hon. JOHN HAGGART (South Lanark). The hon. gentleman at the head of the Railways and Canals Department (Mr. Emmerson) in treating of the Intercolonial Railway, has at least given us a candid statement of the position of that road. Where is the glowing future that was promised us three or four years ago after the acquisition of the Drummond County Railway,

after the bargain for the entrance into the port of Montreal by an expenditure of $140,000 ? Life was to be put into the old road and the expenditure was to be justified in the future. The minister at that time compared the position of the road to that of a business concern moving from a back street into a front street ; there might be a large expenditure but he promised it would be fully recouped to the country. The hon. gentleman has given a candid statement in reference to the condition of that road. We have expended on the Intercolonial Railway, on capital account alone, $72,000,000. Besides that, if I remember rightly, that does not include last year's acquisition of that road in New Brunswick, that great addition to the Intercolonial Railway for the purchase of which we expended $1,250,000, and perhaps an amount nearly as large for the purpose of making it a road fit to travel on.

Mr. EMMERSON. I would say to my hon. friend that only $800,000 was paid for that road.

Mr. HAGGART. If I remember rightly the minister was to pay nearly $900,000 in cash and there was an amount required for equipment which made it $1,250,000.

Mr. EMMERSON. My hon. friend (Mr. Haggart) is certainly forgetful of the facts ; the amount was simply $800,000 in cold cash and that is all there was.

Mr. HAGGART. There is no expenditure besides that on the road?

Mr. EMMERSON. Nothing.

Mr. HAGGART. $800,000 in cold cash for the purpose of acquiring that road on which the total revenue was in the neighbourhood of $37,000. I think that perhaps I am doubling the amount and it was not able to pay the expenses during the year.

There was also an expenditure on account of the Drummond County Railway of $1,400,000. The minister promised, when he acquired the road in New Brunswick, that a separate account of it would be kept so that we would know what the acquisition had cost the country, but we have not that statement—the hon. minister has evidently forgotten his promise altogether—and it is very difficult to separate the accounts from those of the Intercolonial. The hon. gentleman makes a comparison between the railways and the canals. He says that the expenditure on the canals amounts to $87,000,000, which counterbalances the expenditures on the Intercolonial. Unfortunately, it does not do anything of the kind. Let us look at the expenditures on the Intercolonial Railway for the last few years. The hon. gentleman states that the deficit for 1903-4 is in the neighbourhood of $900,000; but looking at the statement of the actual receipts and expenditures given in his report, I find that the actual deficit is $871,398. The expenditures on capital account on the Intercolonial Railway for the last few years have been as follows : In 1896, $259,000; in 1897, $145,000; in 1898, $252,000; in 1899, $1,081,000; in 1900, $1,796,000; in 1901, $3,633,000; in 1902, $4,621,000, and in 1903, $2,254,000. Now, let us look at the receipts. In 1898 there was a surplus of $70,000, in 1899, a surplus of $210,000, in 1900 a deficit of $150,000, in 1901 a deficit of $525,000, in 1902 a surplus of $57,000, in 1903 a surplus of $110,000 and in 1904 a deficit of $871,398. The hon. gentleman says that for the last six months the deficit will be in the neighbourhood of $482,000. The hon. gentleman stated last year, when he was addressing the House, that the deficit on eleven months of the year was $585,000; but the result at the end of the year is a deficit of $871,398.

Mr. EMMERSON. I said at the same time that there would be a very much larger deficit.

Mr. HAGGART. Here is what the hon. gentleman said:

> In 1903 the receipts for eleven months were $5,790,876 ; expenses, $5,720,550. This shows a profit for the eleven months ending May 31, 1903, of $70,317.63, as against a loss during eleven months of 1904 of $585,382.39. It also shows that the receipts for the eleven months ending May 31, 1904, were $5,621 in excess of the same period in the previous year.

Applying the same system of calculation this year the deficit will be in the neighbourhood of $1,500,000. However, the fact remains that for the last four years we have been expending on capital account on the Intercolonial Railway an average of over $3,000,000 a year, and we have a larger deficit besides. Now, when is this going to end? The hon. gentleman says that we cannot help it—that the only prospect in the near future is that when the Intercolonial has the proper equipment there will be an increased revenue. He says that the reason for the deficits is that from Montreal to Halifax the Intercolonial runs along the St. Lawrence river and along the sea coast. The modern idea is that a canal along the line of a railway assists the railway instead of being an injury to it financially. Probably the most prosperous railways we have in Canada run along the St. Lawrence river. Is this thing to go on for ever? Are we always to have a capital expenditure of over $3,000,000 a year and a deficit of over $1,000,000 upon the Intercolonial Railway—a road which was managed by myself with entirely different results. We have also the extraordinary statement of the hon. gentleman that this road could not carry the freight which offered last year for lack of freight cars and locomotives, and that to equip the road fully we require seveny-five more locomotives. Yet it was only about a year and a half ago that there was such a plethora of locomotives that the Intercolonial Railway was able to lease 36 to the Canadian Pacific Railway. What amount of

increased freight has there been during the last year? Looking at the figures I find that there has been a very small increase. The hon. gentleman says that the increased expenditure is occasioned partly by the increased cost of mechanical repairs—that he has to pay more for engineers and workmen than formerly. This is a pretty state of affairs.

The hon. gentleman and his predecessor have been furnished to any extent with new locomotives and freight cars, and yet expenses for repairs are greater now than ever they were in the past. He states too that one of the reasons for the large expenditure is that you have to pay the men modern wages. Well, we heard the same thing last year. He then accounted for the deficit by saying he had to pay men up to the standard paid by the Canadian Pacific Railway and other railways. Have we got an increased standard now? Has the standard increased since last year to such an extent that he is enabled to account for the deficit between this year and last by the increased expenditure on this head. But the generosity of the hon. minister is easily accounted for. He says that in December—perhaps it was in November—occurrences happened which caused him to make an arrangement that I think is without precedent in any railway management or corporation in this or any other country—an arrangement under which he only provided for an increase of wages in the future, but for an increase during the six months past. That is a generosity which no doubt should commend itself to the Canadian people? The particular time in which these occurrences happened is rather significant. True, the hon. minister said it was the beginning of December, but I am strongly inclined to believe that though the Order in Council may have been passed at that particular time, the understanding, from one end of the road to the other, was that the men were to receive six months increase of pay on account of the severity of the fall or the probable severity of the winter which was to follow.

Mr. EMMERSON. That was a mere coincidence.

Mr. HAGGART. The hon. gentleman must not take this in a joking manner. There are two or three things to be considered in this connection. Can a government conduct a railway as economically as a company can? My experience on the Intercolonial Railway shows me that the government could, as the minister says he can, purchase anything for the use of that railway as cheaply as any railway company. I believe he can do it cheaper for the merchants prefer to deal with the government; and I believe he can get men for cheaper wages than any other corporation in Canada can.

Mr. EMMERSON. Do you think we should?

Mr. HAGGART. I think that you do it. I think you get them as cheap as any other railway in Canada does.

Mr. EMMERSON. You said we could get them cheaper.

Mr. HAGGART. Yes.

Mr. EMMERSON. Do you think we should?

Mr. HAGGART. The wages in the maritime provinces are cheaper than in the west, and we are paying higher wages on the Intercolonial Railway to our employees than the Canadian Pacific Railway pay their employees in a similar portion of the country.

The hon. gentleman tell us of the advantages he offers the people of the east—that he has put on a fast freight train for the purpose of accommodating the people of Ontario and Quebec. But the hon. gentleman should show some facts or results to warrant the enormous expenditures he has made. Can he tell me that the through freight has increased at all during the last eighteen or twenty years? I tell him that the through freight over the Intercolonial Railway, notwithstanding its extension to Montreal, notwithstanding its right to pass over the bridge into Montreal, is less than it was fifteen or sixteen years ago. Then he has made an enormous expenditure on the 'Ocean Limited.' What was the necessity for that? You have an express running down from Montreal to Halifax, but in addition to that you put on another in competition with the Canadian Pacific Railway and as he has told us it starts, these two express trains start within fifteen minutes of each other and arrive at the same time in Halifax. Why was that done? I venture to say that the hon. gentleman lost over $200,000 per year on that train.

Mr. EMMERSON. It paid its way.

Mr. HAGGART. He says there was no loss, but he must take into account the amount of passengers and freight it takes from the other express train on the Intercolonial Railway from Montreal to Halifax. I have heard railway experts say that the loss to the country for the time the hon. gentleman has been running that train, say five months in the year, would be $225,000. It is all very well to give the finest possible accommodation to people travelling on that road, and the people in this section of the country have no objection to anything of the kind, but what we require is that there shall be some economy in management and some reasonable proportion between expenditure and revenue. There can be no justification for saddling this enormous deficit on the surplus earnings of the people of this country; and no sane man will for a moment entertain the idea that this $4,000,000 of

a deficit could not be much better expended than losing it in that sink hole, the management of the Intercolonial Railway. The hon. gentleman has made a candid statement. Every year we have had promises from this government of more economical administration and less unsatisfactory results, but, as I shall show at another stage, the expenditure has been increased from year to year. Take for instance the Prince Edward Railway road, on which there has been no increase in the mileage. From 1888 up to 1898 there was an expenditure on capital account of only about $8,300 and since then it has amounted to $17,541 in 1898, $22,000 in 1899, $53,000 in 1900, $280,000 in 1901, $829,000 in 1903 and $698,000 in 1904. I suppose that includes the branches built to that road. In 1890-91 the working expenses were $257,990 and the gross earnings $174,-258. In 1891-92 the working expenses were $289,706 and the gross earnings $157,442. But let us come down to modern years. In 1900-01 the working expenses were $261,766 and the gross earnings $193,833. The following year the working expenses were $270,-159 and the revenue $197,999. In 1902-03 the working expenses were $259,637 and the gross revenue $217,714. Last year, 1903-04, the working expenses increased to $335,693, as compared with gross earnings of $234,-390, showing a deficit of $100,000 in that one year. This is but a sample of the increase in the working expenses and in deficits on all the railways under the control of the government. The hon. gentleman says he is going to remedy these things in the future when he has sufficient rolling stock.

He requires at least seventy-five locomotives in order to furnish an efficient service. But he does not think it likely that he will get more than twelve locomotives a year. That is, six or seven years must pass by before he can have the road in what he considers an efficient working condition. Last year the hon. gentleman got twelve locomotives and about $1,000,000 for capital expenditure. The year before he got $3,000,-000 or $4,000,000. In order to get the road up to the standard the hon. gentleman contemplates we must expect a large expenditure. But it is noteworthy that both the hon. gentleman and his predecessor have carefully avoided telling the House and the country what these proposed improvements will cost, or when we may hope to have the road upon a paying basis. For my part, I protest against all this. I believe that, with proper management, but without increase of the passenger rates or the freight rates, the road could be operated without a single cent of deficit. I know parties who looked into the matter, and they came to the conclusion that, with ordinary good business management, the road ought to yield good returns. And they were willing to take over the road and pay a handsome sum for it, believing that good profits would accrue under efficient management. There is no reason why the Intercolonial Railway should be used as a political engine to further the ends of hon. gentlemen opposite. Any advantage from such a course must soon cease. The time will come when the repetition of these things to win political favour will be a weakness rather than a strength. If the hon. gentleman wishes to show successful management, let him run the road as other roads are run. Look at the Canadian Pacific Railway, the Grand Trunk Railway, the Canadian Northern—look at every enterprise in the country that is managed on commercial lines. For the last two or three years the condition with them has been one of plethora. But we find the reverse on the Intercolonial Railway. That road has been going from bad to worse. If the present negligent, loose management continues, instead of a deficit of $4,000,000 a year, we may find the operation of the road to cause even greater loss to the people of Canada.

Motion agreed to, and House went into Committee of Supply.

Railways and Canals—chargeable to capital—Intercolonial Railway—to increase accommodation at Sydney, $81,500.

Mr. TAYLOR. The minister will please make an explanation of each item as it comes up.

Mr. EMMERSON. Of this $81,500, $66,-000 is a revote. This was the old balance due on the station building under construction there and other improvements. The improvements and the need for them was explained last session.

Mr. J. D. REID. Is this being built by contract, and who are the contractors ?

Mr. EMMERSON. It is under contract, the contractors being Messrs. Chappell Bros.

Intercolonial Railway—original construction, $2,000.

Mr. EMMERSON. This is to settle claims for land and damages that come up from time to time which, apparently, have been overlooked in the construction of the road. We got $2,000 last year for that purpose, but I believe we expended, up to 1st January last, only about $14. But, as a precautionary measure, we ask for $2,000.

Intercolonial Railway—to strengthen bridges, $142,000.

Mr. EMMERSON. This is a revote.

Mr. BENNETT. Last year the amount voted was $385,000. How much of that vote has been expended ?

Mr. EMMERSON. Only about $8,000.

Mr. BENNETT. Do I understand that only $8,000 has been expended of a vote of $385,000 ?

Mr. EMMERSON. Yes ; and the hon. gentleman (Mr. Bennett) will readily understand it. This vote was not passed until late—too late for much work to be done.

Of course, contracts were let. There are a number of bridges for which tenders were asked and contracts entered into. The works are now under construction. There are several contractors—the Canadian Bridge Company and the Dominion Bridge Company have the greater number of the contracts.

Mr. BENNETT. How much is under contract to-day ?

Mr. EMMERSON. Sufficient to require about $235,000 to be paid to these companies up to the 1st of July, and this $142,000 re-vote will be required from the 1st of July in the next fiscal year.

Mr. BENNETT. Then do we understand that $250,000 will be required up to the 1st of July for the work now under contract ?

Mr. EMMERSON. Yes, $243,000 to be exact.

Mr. KEMP. Could not a portion of this money be properly put to revenue account instead of capital account ? Is it not actual repairs to some extent ?

Mr. EMMERSON. No.

Mr. KEMP. Well, repairs to bridges.

Mr. EMMERSON. That is another item altogether.

Mr. KEMP. What did that amount to last year ?

Mr. EMMERSON. That is a separate item. This is for the purpose of making stronger and heavier bridges. We are using a class of locomotives that will, in many instances, be double the weight of those that were in use on the Intercolonial a few years ago. Necessarily we have to have all equipment to correspond, the bridges, the roadway, the round houses, the turntables, everything must correspond as to quality, class and size.

Mr. KEMP. Is it all for new bridges ?

Mr. EMMERSON. Yes.

Mr. KEMP. What was done with the old bridges ?

Mr. EMMERSON. As a rule they are doubled up and put into smaller spans, making them stronger ; that is making them equal in strength but with shorter spans.

Mr. A. MARTIN. Where are the new bridges ?

Mr. EMMERSON. They are on the Intercolonial. One of those bridges taken from the Intercolonial, that is the south-west Mirimachi bridge, has been removed to Prince Edward Island and is being put up over the Hillsboro' river. It is not up yet, but it is in course of erection.

Mr. KEMP. The point I was trying to get at this : It seems to me a part of this money should be charged to revenue account. The cost of the original bridges was charged to capital account, then the new bridges which are to replace them are charged to capital account. There is a certain amount of wear and tear, and it seems to me it is putting into capital account that which should properly go to revenue account.

Mr. EMMERSON. The same system of book-keeping has been in existence for many years.

Mr. KEMP. As a matter of fact, last year capital account was nearly $2,000,000, and I see in capital account a very large number of items that should properly go into revenue account. Of course if you do that, it will increase the deficit, and I suppose the hon. gentleman wants to avoid that as much as possible.

Mr. BENNETT. As I understand the minister, there are now under contract $243,000 worth of bridges. Will he give us a list of those bridges, where they are, and the cost of each of those that are under contract ?

Mr. EMMERSON. There is the Sackville bridge, which will cost upwards of $62,000. I have stated that there were bridges under course of construction on which we would require to pay $242,000, which is part of the $385,000 voted last year. There is the Laplante bridge, a small one requiring $6,930 ; the Sutherland river bridge, $21,619 ; Salmon river bridge, about $19,800 ; Nicolet river bridge, $59,000.

Mr. KEMP. Are you already strengthening bridges on the Drummond County Railway ?

Mr. EMMERSON. We want a class of bridges that will meet the strain of the heavy engines. That is one of the disadvantages under which we labour in connection with the operation of the road between Lévis and Ste. Rosalie. Then there is another Nicolet bridge, No. 2, $55,000. Then there are some smaller bridges, making a total of $242,000.

Mr. KEMP. Are the heavier bridges necessitated on account of the freight traffic or passenger traffic, or both ?

Mr. EMMERSON. On account of heavier engines used for both passenger and freight traffic.

Mr. KEMP. Is the hon. gentleman contemplating going into the grain carrying business to Halifax again, or is any of that traffic being taken over by the Intercolonial the same as the season previous ?

Mr. EMMERSON. We were obliged this year to refrain from entering into a contract in connection with the Allan Line of steamships for certain export trade of the maritime provinces, in consequence of our inability to furnish cars for that grain. We hope with the facilities that will be furnish-

ed before next year, that we can engage in that traffic.

Mr. KEMP. I see that in the months of November and December, 1903, and January and February, 1904, there was a considerable amount of grain carried from Parry Sound to Halifax for export, wheat and corn The arrangements which were made with the Intercolonial required the rate of freight to be divided between the three roads over which this grain went, the Canada Alantic Railway, the Grand Trunk Railway and the Intercolonial. One rate was 5·15, another 4·90, and in one case, 4·94. I see 31,836 bushels were carried from Parry Sound to Halifax, at 4·90 per bushel. Now the mileage was 346 miles for the Canada Atlantic Railway, 34 for the Grand Trunk, and 828 for the Intercolonial. The rate was divided in this way: The Canada Atlantic Railway received their share 2:15 cents, the Grand Trunk Railway ·60 and the Intercolonial Railway 2·15, exactly the same as the Canada Atlantic Railway while the Canada Atlantic Railway mileage was 346 miles and the Intercolonial Railway mileage was 828 miles. Is that a proper way in which to conduct this kind of business? Can the Intercolonial Railway enter into a bargain of that kind and consider that it is profitable? I would like to have an explanation from the hon. minister.

Mr. EMMERSON. I can easily give the explanation that has already been given to this House. That was a transaction in connection with the carrying of certain traffic to Halifax and at the same time the bringing back of certain imports brought in by steamer to Halifax, and the two together—this traffic going down in the cars and the other traffic coming up in the return cars—made a profitable transaction for the Canadian Pacific Railway. That transaction was deemed to be, from the financial standpoint, in the interests of the Canadian Pacific Railway, taking into consideration the traffic that came in by the steamers at Halifax and was transported to Montreal and other ports.

Mr. KEMP. I may say that I do not take any stock in the explanation which has been furnished the hon. minister in respect to this transaction. I look upon it merely as a political transaction. On almost every occasion when it is thought that there is an election coming on it seems necessary to demonstrate to the people of Halifax that in some way or other Halifax is to become a great grain shipping port. This is one instance, and an instance of a similar character occurred a few years ago. The fact of the matter is that the Canada Atlantic Railway did not make very much money on the carrying of that grain 346 miles for 2:15 cents and if that is the case with the Canada Atlantic Railway, what a loss must the Intercolonial Railway have suffered in carrying it at the same price 828 miles? It stands to reason to my mind that this is a transaction that will not stand argument on its merits. I say it is a political transaction rather than a business one.

Mr. EMMERSON. My hon. friend is not warranted in making that statement. It is easy to make such a statement. It does not prove anything. I think the traffic manager of the Intercolonial Railway ought to be quite as competent and quite as capable as the hon. gentleman in reaching a conclusion. This matter was not preceding an election. This was something that transpired in the fall of 1903.

Mr. KEMP. When it was thought there was to be an election. The election was postponed.

Mr. EMMERSON. Nobody thought that but somebody who wanted to figure and speculate on elections. You can hardly have a business transaction without connecting it with some political occurrence, and if these things are to be discussed purely from that standpoint, if every expenditure on the Intercolonial Railway is to be a political transaction it is a very strong argument against the government ownership and operation of railways, I grant you. But, it does not do away with the statement which I have made on the authority of the traffic manager that the two transactions, the carrying of the traffic down to Halifax and the entering into a contract to bring a certain quantity of imports up to Montreal made it, certainly, if not a very profitable transaction, at least one that was in the interests of the Intercolonial Railway. We had the cars and we had the men, we wanted to give them employment, we wanted the traffic, and if that traffic can be secured and that employment given without serious loss it is to the advantage of the Intercolonial Railway.

Mr. KEMP. Why is it that the earnings are divided up in that peculiar manner when the mileage is more than double on the Intercolonial Railway? Why will the hon. minister allow the Canada Atlantic Railway to get so much more than their fair share in respect to a transaction of that kind?

Mr. EMMERSON. For the reason that all traffic arrangements in connection with the Intercolonial Railway and all passenger arrangements have to be calculated on the basis of the least mileage; that is to say that a passenger ticket from Montreal to St. John on the Intercolonial is sold at the same price as a ticket over the Canadian Pacific Railway to St. John, although the route over the Canadian Pacific Railway is much shorter. That is necessitated by reason of the conditions. Whether we have the traffic or not we have to run our trains. We have to base the rate at the minimum mile-

age and of course it places the Intercolonial Railway at a disadvantage. But, it is better for the Intercolonial Railway to take that traffic down, because these cars are furnished with a return traffic in the imports which are brought to Halifax by the steamers. Instead of taking the cars down as empties, we have the advantage of this traffic down and it gives business to Canadian ports. The earnings arising therefrom make it a paying transaction for the Intercolonial Railway and it is to the advantage of the Intercolonial Railway to accept such traffic.

Mr. KEMP. The St. John mileage is 346 miles. It is the same mileage as that of the Canada Atlantic Railway, yet the Intercolonial and the Canada Atlantic Railway had exactly the same earnings.

Mr. EMMERSON. It is based on the minimum mileage. The mileage of the Canadian Pacific Railway would govern. We have to make a detour around by the St. Lawrence and the Baie des Chaleurs, but in the calculation of the freight rate of the mileage we are controlled and governed by the shortest distance from Montreal to Halifax by way of the Canada Pacific Railway.

Mr. KEMP. I have been unable to make myself clear, I am afraid. The shortest mileage is 346 miles, while as a matter of fact the rate which the Intercolonial Railway got was exactly the same as that which the Canada Atlantic Railway got for 346 miles. That is the point I have been endeavouring to make clear to my hon. friend.

Mr. EMMERSON. I recognize the point made by my hon. friend, but to the extent of that increased mileage on the Intercolonial Railway the Intercolonial Railway suffers because it has to accept freight based on the shorter distance although its own mileage is greater.

Mr. BENNETT. May I ask the hon. minister how much grain, if any, was received and exported through the government elevators last year at St. John and Halifax ?

Mr. EMMERSON. Do you mean the current year ?

Mr. BENNETT. During the season of navigation of 1904.

Mr. EMMERSON. There is a return. I cannot carry it in my mind, but there was some.

Mr. BENNETT. The hon. gentleman has officers there, perhaps they could tell us within 2,000,000 or 3,000,000 bushels how many bushels were received at St. John or Halifax ?

Mr. EMMERSON. I cannot tell. There is a return before the House. It was brought down last session. It was no very substantial amount, but my hon. friend over there has been telling us about it and there has been a discussion about it already.

Mr. BENNETT. My reference is to the quantity of grain carried in 1904, and I am serious about it because of the fact that I am informed that the Canada Atlantic Railway carried more grain to Depot Harbour last year than in any preceding years, and I wish to learn who took care of that grain afterwards and whether the government got the benefit of carrying it over the Intercolonial.

Mr. EMMERSON. My hon. friend is asking about the period between July, 1904, and this date. We have not carried any and I explained to the committee the reason why we did not carry any. We were unable to undertake to enter into any agreement with the Grand Trunk Railway and the Allan Line of steamers to accept certain export traffic that was offered because we could not furnish the cars to go on the Grand Trunk road, and we feared to enter into this engagement lest we would be held for damages by the Allan Line of steamers. That is to say, there was certain traffic offered by way of our maritime ports and in order to secure it, it would be necessary for us to send our cars up on the Grand Trunk Railway. They had not the cars, they would not furnish them and we could not, and therefore we had to decline the business. I hope in the interest of the Intercolonial Railway and of Canadian maritime ports that that difficulty will be removed, and removed this session of parliament, by a vote that will enable us to have sufficient rolling stock to meet the requirements.

Mr. A. A. McLEAN. I would like to make a few remarks on this item with regard to the carrying of grain to Halifax. In the last campaign one of the great arguments used by government candidates was that by the building of the Grand Trunk Pacific to Moncton that road would be in a position to carry freight from the west to Moncton, and that it could be taken from there to the ports of Halifax and St. John by the Intercolonial Railway. If the Intercolonial Railway to-day is not in a position to carry grain, then I think the hon. minister should show to this House to-night when it will be in a position to do so, and what the cost will be in order to make that railway capable of carrying grain. There is no doubt, Mr. Chairman, that this is a great industry, and that the road to-day should be in a position to carry all the grain that can be taken to St. John and Halifax. We have been told for many years in parliament that these two ports were to be the great winter ports of this country, and that Portland, which is now used by the Grand Trunk Railway will not be the port which will be used by the Grand Trunk Pacific but that they

will use St. John and Halifax. I think that if these two ports are to be used for the export of grain and other commodities from the west, the minister should fully explain to this committee how much it will cost and when he will be in a position to put that road on a fair and proper basis for the carrying of these products.

Mr. HENDERSON. I do not quite understand the relevancy of the remarks of my hon. friend from Prince Edward Island. He started out by speaking about some argument used by government speakers during the last campaign to the effect that Grand Trunk Pacific traffic was to go to St. John and Halifax by way of Moncton. Undoubtedly that will be true, but that freight will go over the Grand Trunk Pacific, which does not go over the route of the Intercolonial Railway. The argument made by hon. gentlemen opposite and especially by the hon. member for Toronto, as I understand it, is that it is impossible to carry traffic over the Intercolonial Railway because of the greater distance. A great deal of that difficulty is imaginary in the mind of my hon. friend, but if that is a difficulty it will be obviated by the shorter distance over the Grand Trunk Pacific to Moncton, the direct short line through New Brunswick. The Intercolonial will not take charge of the carrying of all that traffic down to Moncton and I assume that the cars when they reach Moncton will go on to St. John and Halifax.

Mr. KEMP. What I wanted to make clear was that I thought the Intercolonial Railway was not getting a fair share of earnings so far as the mileage is concerned.

Mr. EMMERSON. The mileage is apportioned by the shorter distance and we must be governed by that distance. Although our actual mileage distance may be longer, we cannot collect for the full distance as by arrangement among all the railways we are bound by the shortest distance between certain points.

Mr. KEMP. You call the haul 346 miles from Montreal to Halifax.

Mr. EMMERSON. I cannot recall the exact figure; of course my hon. friend would not expect me to be familiar with such details. I am only speaking in a general way. I know it is much less than the actual distance, but we are governed by the short haul distance.

Mr. BENNETT. Do I understand the minister to say that the two elevators at St. John and Halifax were standing practically idle last year and that no grain passed through them? Can the minister tell where the grain was exported that the Booth system took in at Depot Harbour, because I understand they received over 15,000,000 bushels last year.

Mr. EMMERSON. I am not in a position to say: I know it did not go over the Intercolonial Railway.

Mr. BENNETT. Was any received at either St. John or Halifax?

Mr. EMMERSON. I have said that from the 1st of July down to the present time this year we have not received any grain at the elevator at Halifax or St. John. I cannot make myself any more explicit.

Mr. BENNETT. Is there a staff at each elevator, and what is the cost of keeping it up?

Mr. EMMERSON. There are watchmen there, we do not keep a staff of men; we only keep men when there is business and unfortunately, on account of the conditions prevailing this year, we could not accept the business and therefore could not do it through these elevators.

Mr. BENNETT. How much grain was exported by the Canadian Pacific from St. John?

Mr. EMMERSON. I cannot say.

Mr. BENNETT. I would think a matter of that kind would be of some interest to the minister or to the officers of his department.

Mr. EMMERSON. That information is not in our possession; we cannot get that. My hon. friend could possess himself of that information as readily as I.

Mr. BENNETT. The department could easily find the sailings of the different ships during the season.

Mr. EMMERSON. It is not all grain.

Mr. BENNETT. The quantity of grain could be arrived at pretty well.

Mr. EMMERSON. I do not think the department is chargeable with any negligence for not having that information.

Mr. LENNOX. I understand the minister to say that they could not carry this grain because of not having the proper equipment of freight cars. I also understood from remarks of the minister and of the hon. gentleman from Lanark (Mr. Haggart) who replied to him that a large amount of money is now required in order to properly equip the line. We also had a statement in the House to-night that we have been spending on capital account during the last seven or eight years, millions of money yearly, not only to keep it up to an efficient condition, but to place it in a more efficient condition than it was before. In 1903, in the matter of passenger cars, which we need not deal with at present, and in the matter of engines and freight cars, the Intercolonial was represented to be one of the best lines in Canada. In that year the Grand Trunk Railway had for every 100 miles of its

railway 775 freight cars, and the Intercolonial 774, a difference of one; and for every 100 miles the Grand Trunk had 22 locomotives and the Intercolonial 21. So that practically these two lines were upon the same basis as regards equipment for carrying freight. Since 1903, the Intercolonial has not been going back, but going forward, by leaps and bounds, in the matter of expenditure on capital account for equipment. Therefore it seems extraordinary that the minister should be in the humiliating position to-night of having to admit that the Intercolonial is practically unable to compete for the carrying trade of the country by reason of not having the necessary means of transportation either in engines or cars. Will the minister explain how that happens?

Mr. EMMERSON. I thought I did explain. I said that in order to get that traffic the Grand Trunk complained of a very great shortage of cars and that the Canadian Pacific Railway was in an equally deplorable condition. I also said that the Grand Trunk required us to furnish cars to go on its lines to gather up the traffic that would go over the Intercolonial and that we were not in a position to do that.

Mr. LENNOX. Will the minister state what equipment per mile or per 100 miles the Intercolonial should have in order to promptly handle the traffic which would legitimately come to it?

Mr. EMMERSON. I am not in a position to state that.

Mr. LENNOX. Then, how are we to deal with this question? The hon. gentleman is not in a position to handle the freight delivered at the elevators on his own line.

Mr. BENNETT. That was easy, because there was none.

Mr. LENNOX. He is not in a position to tell us the amount of freight carried by the rival railway, the Canadian Pacific Railway. These are matters that an up-to-date minister, such as we have, should know. He is not able to tell us what equipment the Intercolonial requires. How is the committee to judge what amount of money should be voted, if the minister, who is substituted for another minister who was not found to be efficient, cannot tell us the first conditions which should be the basis on which we can vote this money.

Mr. EMMERSON. I must say that I have not the information down to the niceity that my hon. friend would like.

Mr. INGRAM. Is any part of this expenditure to be on the Prince Edward Island Railway?

Mr. EMMERSON. No. This is simply for the Intercolonial Railway proper.

Mr. INGRAM. Will the hon. gentleman tell us what he proposes to do on the Canada Eastern Railway respecting the bridges?

Mr. EMMERSON. That is not involved in this vote at all.

Mr. INGRAM. It is involved in my question, and there seems to be no other item on which I can discuss it. The hon. gentleman stated that the government had paid $800,000 for the Canada Eastern Railway, and he left the inference to be drawn that that was the total expenditure on that road.

Mr. EMMERSON. I hope the hon. gentleman will not draw any such inference.

Mr. INGRAM. That is the inference I was justified in drawing from the hon. gentleman's bald statement that the road cost this country $800,000; but that statement is not justified by the facts. In the first place, the government must know that it will require a very large expenditure to put that road in a good state of repair. We should be informed whether the government intends to use large engines, to strengthen the bridges and to replace the iron on that railroad or not, and we will wait with a good deal of patience for the hon. gentleman to give us some information on these points.

Mr. GERVAIS. I would like to ask the hon. Minister of Railways and Canals whether or not he intends to grant passes on the Intercolonial Railway to the twenty-four legislative councillors of the province of Quebec. As a matter of fact, I know that the members of the Legislative Assembly of that province have been receiving passes on the Intercolonial for years, and I think the members of the Legislative Council are entitled to the same privilege for the same good old reason which militates for the granting of passes to the members of the Legislative Assembly. I have been asking the hon. Minister of Railways and Canals many times for the granting of these passes, and I would like to know whether or not he intends to grant the prayer of our legislative councillors.

Mr. EMMERSON. I would be very sorry if my hon. friend (Mr. Ingram) inferred from any remarks that I made, either to-night or last year, that some expenditures would not be required on the Canada Eastern Railway. I stated that we had paid the Alexander Gibson Railway Company $800,000 for that road such as it was. We have operated it with an improved train service. The road is in such a good condition that we are running fast trains over it with small engines, it is true. We will not require to put on our heavy engines. We will not require to strengthen the bridges in the same way as we are doing on the main line. This is practically a branch line, and on all our branch lines we are not making the road up

to the standard of the main line. Therefore, I do not expect there will be any necessity for any very great expenditure on the Canada Eastern.

Mr. J. D. REID. When the minister was submitting to the House the purchase of the Canada Eastern, he showed us that that railway had made, in the year before we purchased it, the magnificent sum of $2,900.

Mr. EMMERSON. More than that, was it not ?

Mr. J. D. REID. No ; I think it was $2,900. Can he tell us if this year it is paying operating expenses ? Will he be able to show the House that, after operating it one year, it has given a revenue sufficient to pay 3 per cent on the money the government had to borrow to pay for it ?

Mr. EMMERSON. The conditions on that road, as on all other portions of the Intercolonial Railway this year, are such that I cannot promise any very great surplus. In fact, it is only a question how far down we can keep the deficit. But we are not to be judged by this year. I am in hopes that our climate will get back to its normal condition, and that things will go more favourably on the Intercolonial Railway and the Canada Eastern.

Mr. J. D. REID. Are the operating expenses of that particular road now being kept entirely separate from those of the main line of the Intercolonial Railway, as is done in the case of the Prince Edward Island Railway ?

Mr. EMMERSON. No, it is treated just the same as any other branch of the Intercolonial Railway. The Prince Edward Island Railway is a railway separate and apart from the Intercolonial Railway, although under the management of the general manager of the government railway.

Mr. J. D. REID. But that is not the system followed by private corporations. Take the Canadian Pacific Railway branch between Prescott and Ottawa ; it is part and parcel of the main line, and yet its expenses are kept entirely separate from those of the latter.

Mr. EMMERSON. But, although operated by the Canadian Pacific Railway, that road is run as a separate railway.

Mr. J. D. REID. Why should not this be run in the same manner ?

Mr. EMMERSON. That would necessitate greater expense. Our book-keeping is done at Moncton for the whole system. We do not want to have a separate superintendent and separate officials and separate books for this road.

Mr. J. D. REID. But the road I refer to between Prescott and Ottawa has not got a separate superintendent or separate shops or anything of that kind, yet its accounts are kept separate, and this does not necessitate any extra officials in any shape or form. Its accounts are kept separate in order that the Canadian Pacific Railway shareholders may know whether the purchase of that branch is a paying investment or not. I do not see why the same thing should not be done on the branches of the Intercolonial Railway. There is no reason why the same superintendent at Moncton should not operate this particular branch. In fact, it ought to be operated more cheaply than when it was an independent line, because then it had a superintendent of its own and special car shops, whereas now it is managed by the general superintendent of the Intercolonial Railway, and its repairs are done in the car shops of the government line. But there is no reason why separate accounts should not be kept of its operating expenses and revenue, so that we might know the result of this investment by the government. According to the statement of the minister last year, the profits on this Canada Eastern were practically nil, and I can quite understand that the result this year will be much worse, but it would be interesting to the country to know what that result actually is.

Mr. EMMERSON. The same course is being pursued with regard to the Canada Eastern as has been followed all along when purchases were made of other lines as branches for the Intercolonial Railway. Many years ago, when the late government purchased the Cape Breton line, that was made a part of the Intercolonial Railway, and its accounts were not kept separate. There was no distinctive line drawn between that portion of the road and any other. When Sir Charles Tupper, in 1879, bought, as Minister of Railways, the River du Loup branch, there was no distinction made between that branch and the main line. The same course was followed when the St. Charles branch was built. None of those branches can be shown to have been successful or unsuccessful, as far as the book-keeping of the Intercolonial Railway is concerned. The same is true with regard to the Drummond branch. There has been a return asked for in connection with the Canada Eastern, and that return is being prepared in so far as the information asked for is available, but there is no distinct operation of that road as against any other portion of the Intercolonial Railway.

Mr. J. D. REID. Because twenty-six years ago a certain system was followed is no reason why that should be persisted in. If the hon. minister wishes to be progressive and manage the Intercolonial Railway and its branches as other railway corporations manage their lines, he would keep his accounts differently, and we would be able to know exactly what portions pay and what do not ; and having this knowledge, we

ought to be able to stop the leaks and effect some economy.

Mr. EMMERSON. I have simply been stating the facts as they are, but the argument of the hon. gentleman is one open for consideration.

Mr. J. D. REID. I understand from the hon. minister that his intention is strictly to follow in the lines which Sir Charles Tupper laid down some twenty-six years ago, and, rather than break away from that precedent, he is prepared to go on in the dark for all time to come and leave the country in ignorance as to really what portions of the railway system pay and what do not. I think we are entitled to be put in such a position that we may be able to judge whether these branch lines will pay or not; and so may be able to come to a wise decision in case other branch lines are offered to us. The Canada Eastern was added to the Intercolonial Railway through the influence of the present minister. I, for one, would like to know the result of that purchase. I believe that the minister should keep that entirely separate. I think that, at least as long as he occupies the position, he should afford us information from which hon. gentlemen could judge what the result of that purchase has been. I understand that other branch lines have been offered for sale to the Intercolonial Railway, and, no doubt, some of these propositions will be brought to the House. We ought to be in possession of information which will enable us to decide whether such purchases should be made or not.

Mr. GERVAIS. I would like to have an answer to the question I put to the minister about granting passes to the legislative councillors of our province.

Mr. EMMERSON. I will inquire into the matter and let my hon. friend (Mr. Gervais) know to-morrow.

Mr. SPROULE. Did I understand the minister to say that he cannot ascertain whether this branch of the Intercolonial Railway is paying or not? If that is the case it seems to me to be a very strange thing.

Mr. EMMERSON. Has the hon. gentleman (Mr. Sproule) been absent from the House?

Mr. SPROULE. No, I have been here all the time.

Mr. EMMERSON. I hope I made myself understood. I stated that there was no branch of the Intercolonial Railway for which separate books were kept, that all the branches were operated as part of the system. The Rivière du Loup branch, the St. Charles branch, the Cape Breton branch, the Drummond County branch—all these as they were acquired were taken over and run as part of the system.

Mr. SPROULE. When the Prince Edward Island Railway was proposed to be extended we are told that it would add to the mileage and make the Intercolonial Railway pay.

Mr. EMMERSON. That was taken over when Prince Edward Island entered confederation.

Mr. SPROULE. But the argument that was put forward when we where asked to vote money for the extension of it is what I have stated. When the Drummond County Railway was purchased, we were told that it was to bring the Intercolonial Railway up to the great metropolis of Montreal where it would gather freight to make it a paying road. And we were told that when the accounts were analysed it would be found a paying part of the road and would help to put the Intercolonial on a paying basis. And, last year, when the Canada Eastern was purchased, we were told that it would help to make the Intercolonial pay. But when the government went to the country in the general election, one of the arguments advanced from that side was that the Intercolonial never had and never would pay, and so the government would not be justified in undertaking to build and operate a transcontinental line as proposed by the leader of the opposition. It was said that the more branches we purchased for the Intercolonial the worse it would be. I made up my mind either that the arguments presented in support of purchasing the Canada Eastern were misleading and improper, or those who used them were dishonest in that use, or else that they were wholly ignorant of what would take place. We have not the advantage of time to prove the correctness of our policy, but we can only reach the conclusion that the government were very unwise in buying the Drummond County road if the Intercolonial was running farther and farther behind. And the same was true of the Canada Eastern.

Mr. EMMERSON. The hon. member for East Grey (Mr. Sproule) says that when the Prince Edward Island line was purchased, the statement was made that it would make the Intercolonial a paying road. The hon. gentleman is an old parliamentarian. He must have been here when Prince Edward Island came into the union, and he knows that the taking over of the Prince Edward Island road was part of the terms of the confederation.

Mr. SPROULE. I know that.

Mr. EMMERSON. Then the hon. gentleman cannot say that it was promised that this would be the means of making the Intercolonial pay.

Mr. SPROULE. I said that it was stated that the longer a through line was the more likely it was to pay.

Mr. EMMERSON. But this is an isolated line on an island in the gulf.

Mr. SPROULE. But it was practically to be an extension of the line with boats connecting.

Mr. EMMERSON. There is not a connection in that sense. There is a steamship company that runs a boat, but not as part of the railway.

Mr. SPROULE. Does it not carry freight?

Mr. EMMERSON. Just as any other vessel would. But they are not run in connection with one another. I think he must admit that he was mistaken in putting the Prince Edward Island Railway in this class. His contention practically comes down to the Canada Eastern. He says I made a statement last year that, in order to help in making the Intercolonial pay the Canada Eastern should be purchased. I did not say that, or make any promise——

Mr. SPROULE. But the hon. gentleman said that it would be a paying concern——

Mr. EMMERSON. No, I did not even go as far as that. What I said was that it was in the interest of the Intercolonial to purchase the Canada Eastern for the purpose of protecting its own territory and preventing it being invaded by the Canada Pacific Railway—that is, the northern section of the province. I said it would be to the advantage——

Mr. SPROULE. In what way?

Mr. EMMERSON. To save to the Intercolonial the traffic it has hitherto enjoyed. If you did not secure that road you were in danger of having a large proportion of the traffic which has heretofore gone over the Intercolonial diverted from that road. That was the ground I took. I made no promise that the branch would pay. It is true, as the hon. member for Grenville (Mr. J. D. Reid) has stated, that the statement of the road for the last year preceding the purchase was a good one. I showed from the returns that there were years when the road had paid $30,000 or $40,000, and I think that one year it went as high as $50,000 of net earnings. It was for the House to draw its own conclusions from those figures. I gave no promise.

Mr. SPROULE. That is along the line I made the statement—it would be an advantage to the Intercolonial to gather up the freight and save its traffic. If you save its traffic, do you not help the road, and help to make the Intercolonial a paying concern?

Mr. EMMERSON. We save the traffic that originates on the Intercolonial itself and has originated, but which would or might be gathered up by the Canadian Pacific Railway if they acquired the Canada Eastern. The Intercolonial now has complete control of that traffic by acquiring the Canada Eastern and preventing any other railway from getting it. They save it for themselves and they prevent it from going out over the Canadian Pacific Railway.

Mr. SPROULE. Strange to say, we find the Intercolonial running further and further behind even after that is done. I think the government's book-keeping is wrong all the time. It should be an easy matter to know whether any portion of the road is paying or not. I understood the explanation of the minister was to the effect that it would be to the advantage of the Intercolonial, it would be a better paying concern if we had the Canada Eastern, and therefore he purchased it. Now he has to admit that the road is running still further behind than before he purchased the Canada Eastern.

Mr. J. D. REID. I would like to hear the Minister of Finance on this question. The Minister of Railways has stated that for the last twenty-nine years they have not changed their mode of book-keeping in regard to the Intercolonial. Now could not the Minister of Finance join me in an appeal to the Minister of Railways to have this particular branch kept separate the next year or two, so that we may see exactly what the results are?

Mr. BLAIN. If the minister will not keep a separate account perhaps he would lay before the committee now a financial statement of the Canada Eastern for the last two or three years, so that we may have the opportunity of making some comparisons. I am only asking the minister to give us the information that his government had already secured before they entered into the purchase of this road.

Mr. EMMERSON. I have already furnished it to the committee.

Mr. INGRAM. When this matter was up for discussion last year some hon. gentleman from Nova Scotia advocated the government purchasing a lot of these small lines of railways. I want to say, as a member representing a constituency in Ontario, a province in which the people have built their own local railways and paid for them, that we have no right to contribute towards purchasing these small lines of railways or assisting in their construction. It is about time that kind of thing was stopped. If the other provinces desire to have local roads of a purely local character, they should, as the older provinces have done, construct them for themselves. As a representative from Ontario I desire to protest against this thing going any further. It is only fair to that province that other members from Ontario constituencies should enter a protest, let some of the members sitting on the government side raise their voices against it. Ontario has been compared to a milch cow for a number of years,

it is about time that she was dry to calls of this kind.

Mr. KEMP. I would like to inquire from the minister if he is still carrying hay or other commodities free of charge ?

Mr. EMMERSON. Yes, we are carrying some hay that was ordered during the time of free transportation, but we could not furnish cars to carry it in consequence of difficulties in transportation.

Mr. KEMP. That will go on indefinitely, I suppose ?

Mr. EMMERSON. No, there is a limit to the quantity ordered.

Mr. KEMP. Would the minister say on what principle he has been carrying hay free on the Intercolonial ? What precedent has he for that ?

Mr. EMMERSON. We had a precedent when there was a coal famine in Ontario and Quebec in 1902, when a like privilege was given to the municipalities to transport coal free over the Intercolonial from Nova Scotia coal mines, or from any point on the Intercolonial.

Mr. KEMP. I never heard of any coal being transported to Ontario points free of charge.

Mr. EMMERSON. There was. I dare say things have happened which my hon. friend has not heard of.

Mr. TAYLOR. I would inquire from the minister if there is a suit pending, or some commission inquiring into a bargain that was made between the Intercolonial and the Grand Trunk when the Intercolonial was extended into Montreal, as to the Grand Trunk handling the traffic not specially routed to be handled over the Intercolonial. I ask, because I can inform the minister that I know of a case where freight was specially routed to be handed over to the Intercolonial at Montreal, and instead of going that way it was sent through to Boston. The bill of lading was to Montreal and thence by the Intercolonial to Halifax. I saw the bill of lading myself.

Mr. EMMERSON. I would be glad to have the information from my hon. friend. I may tell him that there is pending an arbitration between the Grand Trunk and the Intercolonial as regards the traffic exchanged at Montreal and Ste. Rosalie. That arbitration is being held under a clause in the original contract and Act of parliament, which provides that where a dispute arises arbitrators shall be chosen, and the method of choosing the arbitrators is stated, and that has been done. There have been disputes which have reached a culminating point, the case is being heard, and evidence is being placed before the arbitrators. I cannot say as to the state of the proceeding but I know it has been pending for some time.

Mr. KEMP. What ground do the government take in regard to this—that the Grand Trunk are violating their agreement by sending freight to Montreal ?

Mr. EMMERSON. That the Grand Trunk Railway Company who were bound to hand over all unrouted traffic from the west to the Intercolonial Railway have handed it over in some instances to the Canadian Pacific Railway and in other instances they have allowed it to go by other routes and in that way the Intercolonial Railway has been damaged.

Mr. GERVAIS. Mr. Chairman, before this item is passed I would like to say a few words about the fish trade in Montreal in relation to the management of the Intercolonial Railway. Every one knows that the Intercolonial Railway has not been doing a very paying business for the last few years, or in fact, since its inception, but on the other hand, not many people know that in Montreal the fish dealers are paying a large amount per week to the Grand Trunk Railway Company for the transportation of fresh fish from Boston, or Portland to Montreal. Not many people know that in Montreal the fish dealers are paying about $25,000 per week as the price of such American fish. I was taught when I was at school, because I was not born in the maritime provinces, that there are quite a lot of fish in the Gulf of St. Lawrence and the Baie des Chaleurs. It is a matter of regret to the fish dealers of Montreal that there are no proper express facilities to bring up to the fish market in that city the fresh fish which can be caught in the gulf and around the shores of New Brunswick and Nova Scotia. I have been calling the attention of Mr. Tiffin, the traffic manager of the Intercolonial Railway, to these facts, but no satisfactory answer has been conveyed to me. I now call the attention of the committee as well as that of the hon. Minister of Railways and Canals to this condition of affairs. I think something should be done to secure for the Intercolonial Railway several thousand dollars per month and many thousand dollars to the good fishermen in the provinces of Nova Scotia and New Brunswick.

Mr. EMMERSON. I quite concur in the laudable object which my hon. friend has in view, but I would point out to him that this traffic is all done by the express companies. There are furnished on the Intercolonial Railway from Mulgrave and from Cape Breton right up through the provinces of Nova Scotia and New Brunswick facilities for the transportation of fresh fish with proper refrigerator cars and during the fishing season these facilities are available for those who wish to engage in that traffic. A very large business is done, comparatively speaking, between the Cape Breton fisher-

men and the people in Montreal, and at other points in the west. This can be done as well by those along the Baie des Chaleurs if they are prepared to engage in this trade. I think the principal reason why fish from Baie des Chaleurs does not find a market in Montreal is that the fishermen in that section years ago sought out a market in the United States, and when you get traffic going in a certain channel or groove it is very apt to continue in that groove unless by some extraordinary means it is diverted from it. I am sure that this matter largely depends upon those engaged in the business. I can assure my hon. friend that we want the traffic. If it can be doubled or trebled it will be greatly to the satisfaction of the management of the Intercolonial Railway, and we are at all times ready to facilitate that traffic as much as possible.

Mr. GERVAIS. I have been discussing this matter somewhat thoroughly with hon. members from down by the sea, and I am informed that many fishermen in the maritime provinces prefer to ship their fish to Boston and Portland and that the good people of Montreal are reimporting that fish from Boston and Portland. The reason of this is that the Intercolonial Railway is not thoroughly equipped with modern transportation facilities according to the German system by which live fish can be transported from the sea to the market. I beg to dissent from the statement of the hon. minister that proper transportation facilities are provided for fish dealers in Montreal. That is not so. I was a passenger on a train coming from Nova Scotia to Montreal last summer. There were three or four parties in the three or four cars attached to the engine. When the express reached Metapedia three or four fishermen were on hand prepared to ship their fish, but the good employees of the Intercolonial Railway said: it will delay the train too much; we have not time to load the fish, whereupon the train started for Montreal at full speed. If you wish to secure the fish trade, proper transportation facilities must be provided on the Intercolonial Railway trains and the Intercolonial Railway employees must be courteous and obliging to the shippers. This is the only way in which we can secure a profitable trade for our Railway. I am bringing these facts to the attention of the chief official of the Railway Department. We want proper transportation facilities according to the modern type, according to the German type.

Mr. A. JOHNSTON. Before the item is finally disposed of, I might say, in regard to some of the matters to which the attention of the committee has been directed by my hon. friend from St. James, Montreal (Mr. Gervais), that in so far as I am aware, and I think I have a knowledge of the facts, the fishermen of the maritime provinces are fairly well satisfied with the transportation facilities afforded them in recent years on the Intercolonial Railway.

Mr. GERVAIS. We are not in Montreal.

Mr. A. JOHNSTON. That is the fault of the people of Montreal. The statement which my hon. friend makes that the people of the maritime provinces are shipping their fish to Boston and from thence to Montreal I do not think will be borne out by the facts. Their fish to-day is carried from the maritime provinces to the markets of Montreal and various other Canadian markets. I think if my hon. friend would consult the returns of the Intercolonial Railway he would find that the traffic in fresh fish in recent years from Port Mulgrave on the Intercolonial Railway is very large indeed. He will find that no fresh fish from that portion of the maritime provinces goes anywhere else than over the Intercolonial Railway to Montreal and various other Canadian cities. I say this because I have heard on several occasions during recent years, men engaged in this fish trade expressing themselves as reasonably satisfied with the transportation facilities afforded by the Intercolonial Railway. I do not assume that the Intercolonial Railway is finished in this respect. I believe it is improving every year, and I have no doubt whatever that the purpose of the Intercolonial Railway is to still further perfect the transportation facilities for carrying fresh fish from the maritime provinces to the markets in Montreal and to the American markets. That is the position so far as I understand it among the fishermen in the maritime provinces.

M. GERVAIS. I would like to ask the hon. member for Cape Breton (Mr. Alex. Johnston how he can explain the fact that the good people of Montreal are paying large sums per week for express charge to the Grand Trunk Railway Company for the transportation of fresh fish from Boston or Portland? I would also ask him to explain why our fish dealers in Montreal are paying over $25,000 per week for American fish caught on the shores of Maine or Massachusetts. I would like the hon. member to explain these two facts, to explain why the good people of Montreal should have their fish supplied from the United States when they could obtain such a splendid supply from our sister provinces down by the sea.

Mr. A. JOHNSTON. These two facts which my hon. friend (Mr. Gervais) has mentioned are susceptible of explanation. The people of the maritime provinces are selling all the fish they can catch at the present time and I assume they are selling where they are getting the best price. The Montreal dealers, I presume are importing fresh fish from Boston because they cannot get it anywhere else. My hon. friend will not suggest that the good people of Montreal should be deprived of the privilege of

having fresh fish. If they cannot get it in the maritime provinces I take it they are going to get it somewhere.

Double tracking parts of line, $100,000.

Mr. KEMP. Where is this double tracking?

Mr. EMMERSON. This double tracking is being done coming out of Halifax, out to Windsor Junction where the D.A.R. branches off and also between Stellarton and New Glasgow.

Mr. SPROULE. There are some of these items that I know some members who are absent wish to discuss. We have made a pretty good run and I think we should stop here.

Some resolutions reported.

Hon. Mr. FIELDING moved the adjournment of the House.

Mr. SPROULE. Would the hon. minister inform us what work will be taken up tomorrow ?

Mr. FIELDING. There is a Bill standing in the name of the Minister of Marine and Fisheries which I think it was understood would come up to-morrow. If that does not come up or if it is not ready we will go into supply and the Minister of Railways will continue with his estimates.

Motion agreed to, and House adjourned at 11.40 p.m.

HOUSE OF COMMONS.

THURSDAY, March 2, 1905.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 86) respecting the Ontario and Minnesota Power Company.—Mr. Campbell.

Bill (No. 87) to incorporate the International Terminal and Bridge Company.—Mr. T. G. Johnston.

Bill (No. 88) to incorporate the Athabaska Northern Railway Company.—Mr. Turriff.

QUESTIONS.

VETERINARY INSPECTORS.

Mr. CLEMENTS—by Mr. Sproule—asked:

1. How many inspectors or veterinary surgeons have been employed by the government for the years 1902, 1903 and 1904, for the prevention of hog disease, or other animal disease in West Kent ?
2. Who were the officials, and who are engaged at the present time ?
3. What salaries were paid to each, and what is paid at the present time ?
4. Does the government intend keeping present officials retained at present salaries ?
5. If that said disease, known as hog plague, has abated in the said county, what are the duties of above officials ; and are they allowed expenses outside of present salaries ?

Hon. SYDNEY FISHER (Minister of Agriculture).

1. In the year 1902, three veterinary inspectors were employed. In 1903-4, the number was increased to 5, while at the present time, 4 officers are engaged in dealing with animal diseases in West Kent and adjoining territory.

2. In 1902 the only resident officer was Dr. J. Kime, jr., V.S., of Chatham, but in the latter part of the year, owing to an extensive outbreak of hog cholera, it became necessary to transfer to the district, Dr. M. B. Perdue, V.S., formerly of Kingsville, Dr. G. W. Orchard, V.S., of Windsor, and Dr. J. H. Tennent, V.S., of London.

In 1903 the officers engaged in the work were Drs. Perdue, Orchard, Kime, and for a short time, Drs. Hopkins and Whyte of Ottawa. Towards the end of the year, Dr. W. B. Rowe of Blenheim, and Dr. M. Philips of Chatham were also engaged.

In 1904, Drs. Perdue, Orchard, Philips, Kime and Rowe looked after the work without outside assistance. Dr. Orchard has recently been removed, and the staff at present consists of Drs. Perdue, Kime, Rowe and Philips.

3. 1902. Dr. Perdue, 8 months at $75, 4 months at $100. Dr. Kime, $650. Dr. Orchard, $500 p. a.

1903. Dr. Perdue, $1,200 p.a. Dr. Kime, $250 p. a. Dr. Orchard, 3 months at $500, 9 months at $1,000. Dr. Rowe, 3 months at $250 p. a. Dr. Philips, 1 month at $600 p. a.

1904. Dr. Perdue, 3 months at $1,200, 9 months at $1,400. Dr. Kime, $250 p. a. Dr. Orchard, $1,000 p. a. Dr. Rowe, $250 p. a. Dr. Philips, 6 months at $600, 6 months at $800.

Present staff : Dr. Perdue, $1,400 p. a. Dr. Kime, $250 p. a. Dr. Rowe, $250 p. a. Dr. Philips, $800 p. a.

Drs. Tennent and Whyte, both permanent officers of the department, were in receipt of salaries of $1,200 p. a.

Drs. Kime and Rowe, being resident practitioners, are paid $250 per annum, with an allowance of $5 per day for each day above fifty, in which they are employed by the department in any one year.

4. The policy of the department is to maintain within the quarantined area a sufficient number of officials to deal in an effective manner with outbreaks of disease.

5. Although the disease has abated to a considerable extent, the outbreak is by no means at an end, fresh cases still being reported, though not to so large an extent as formerly. The district is still under quarantine, and all hogs are inspected and passed,

under permit, by one of our inspectors before being allowed to leave the infected area. The inspectors also deal with outbreaks of other contagious disease in animals.

There are also a large number of farms still under quarantine, the necessary cleansing and disinfection not having been yet completed.

All the inspectors at present employed in West Kent are allowed their actual travelling expenses.

DOMINION LANDS.

Mr. LAKE asked :

1. What are the lands referred to in the speech of the Prime Minister on the 22nd instant, Hansard, page 1518, as follows :—' Or if the price of government lands for sale were to be increased over the present very moderate, &c.' ?
2. At what price are these lands offered for sale, and under what terms and conditions ?
3. Are they open to purchase by any applicant who applies for them ?

Right Hon. Sir WILFRID LAURIER (Prime Minister).

1. Ordinary Dominion Lands in Manitoba and the Northwest Territories which were sold at the rate of $3 per acre.
2. $3 per acre was the price fixed by Order in Council ; but the lands are not offered for sale, but sold to settlers only.
3. No.

Mr. FOSTER. In reference to that question which the right hon. Prime Minister has answered does he know just at present whether such lands on sale at $3 per acre are open to all applicants who are settlers or all who are applicants ?

Sir WILFRID LAURIER. No, except where it would be a special hardship to refuse an application.

Mr. FOSTER. Such have to come before the minister to determine whether it is a case of that kind or not ?

Sir WILFRID LAURIER. I do not know that.

AUDIT OFFICE AND TREASURY BOARD.

Mr. LENNOX asked :

Does the government propose at the present session to introduce legislation with a view to secure the harmonious and more efficient and satisfactory working of the Audit Office and the Treasury Board ?

Hon. W. S. FIELDING (Minister of Finance). The government are not aware that there is any inefficiency in the administration of the Department of the Auditor General of the character indicated in this question, and we hope it will not be necessary to introduce legislation to correct such a class of inefficiency. However, the whole matter may still be held to be under consideration.

CHILD IMMIGRATION.

Mr. U. WILSON (Lennox). Mr. Speaker, before the Orders of the Day are called I would like to call the attention of the government to a paragraph that appeared in yesterday's ' Citizen ' to the following effect:

Admiral Freemantle presided at a meeting at which was placed before the Southwark ratepayers Mrs. Gloses' scheme for the emigration of pauper children to Nova Scotia. It was explained that the Canadian government, Lord Minto and the Duke of Argyle all favour the scheme, which furthermore would be a great pecuniary saving to the ratepayers.

I may say that there has been a good deal in the papers about the kind of immigrants who are coming to the cities and town of this country. Some of the benevolent associations have been taxed to their full capacity and a little more to provide for them during the winter, and I hope there is nothing in this paragraph because I do not think this would be a desirable kind of immigration for us to bring to Canada.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). Would the hon. gentleman send me the information that he has and I will give him an answer to-morrow ?

Mr. U. WILSON. I may say that I sent the right hon. gentleman yesterday a notice of this matter and I inclosed a clipping from the ' Citizen.'

Sir WILFRID LAURIER. My hon. friend told me that he was going to bring the matter up on going into Committee of Supply. The House will be going into Committee of Supply shortly.

Mr. U. WILSON. I saw the ex-Minister of the Interior (Mr. Sifton) outside afterwards and he said he would inform the right hon. First Minister and that he would much prefer that the matter be brought on the Orders of the Day saying that he himself would answer it.

Sir WILFRID LAURIER. I will send over to the hon. gentleman the information placed in my hands.

THE MINISTER OF PUBLIC WORKS.

Mr. W. F. MACLEAN (South York). Mr. Speaker, before the Orders of Day are called I wish to refer to a matter of considerable importance to my own province of Ontario and to put myself in order I intend to conclude with a motion. The matter to which I purpose calling the attention of the House is the somewhat equivocal position occupied by the hon. member for London (Mr. Hyman) in this House. Ever since the last general election the hon. Minister of Public Works (Mr. Sutherland), who sat in this House for North Oxford, has not

been here. I understand that he is very ill. I am sorry to know it. I have a great respect for that hon. gentleman and I believe he enjoys the respect of every one in this House, but in strenuous times like these we have a constitutional practice to uphold, and I do not think the position occupied at the present moment by the hon. member for London as acting Minister of Public Works is quite within the constitution. Nay, I will go further and say that I believe that the hon. member for North Oxford has already placed his resignation as Minister of Public Works in the hands of the right hon. gentleman who leads the government (Sir Wilfrid Laurier). Probably he may have in his pocket to-day the resignation of that hon. gentleman but, at all events if he be ill—and I am sorry to say that he is ill—in times like these I say that if we are to respect the constitutional practice it is the duty either of the hon. member for North Oxford to resign his position as Minister of Public Works or it is the duty of the right hon. Prime Minister to ask for that resignation, and if he desires the hon. member for London to fill that position the constitution requires that that hon. gentleman shall go back to his constituents for their endorsation. My object in calling attention to this condition of affairs is that matters of high policy are before the people of Canada to-day and a splendid opportunity is presented to test public feeling on these questions. If the right. hon. gentleman has confidence in his policy ; if he has confidence in his great majority—I would ask him what his majority is ?

An hon. MEMBER. Seventy.

Mr. W. F. MACLEAN. I understand it is over sixty if there have not been some defections within the last day or two. Be that as it may the constitutional practice requires that the man who is filling the portfolio of Public Works should enjoy the confidence of his constituents and be re-elected. If the Prime Minister has the resignation of Mr. Sutherland in his pocket he ought to make the country aware of it. It is putting the hon. member for London (Mr. Hyman) in an anomalous position. Then there is another thing; the man who does the work is entitled to the pay, and if the member for London does the work he ought to draw the salary. As a man from the province of Ontario, I am anxious to see our cabinet ministers occupy their positions in good standing, and I do not wish it to be pointed out that a minister from that great province is declassé in the cabinet. Let him have all the honours he is entitled to and let him have them in a constitutional way. I believe the Prime Minister is possibly in a position to declare that the seat for North Oxford is vacant, and at the same time he is in a position to declare that the seat for London shall be made vacant. Perhaps my hon. friend from London (Mr. Hyman) would prefer to run in North Oxford, but I do not care particularly about that so long as he has the endorsement of the people of his own province and his own neighbourhood who ought to be permitted to pass judgment upon him and upon those with whom he is associated in the government. I beg to move that the House do now adjourn.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). My hon. friend (Mr. Maclean) is getting into the habit of moving the adjournment of the House daily. If he finds some pleasure in that nobody can find any very great displeasure, and I do not think it concerns the House very much that he should continue to pursue such a course. The hon. gentleman (Mr. Maclean) says that if I had in my pocket the resignation of the member for North Oxford (Hon. Mr. Sutherland) it is my duty to give it to the House. The hon. gentleman is quite right in that; it is the only thing in which I can agree with him. For once, I congratulate him on being correct in his law if not in his facts. The hon. gentleman (Mr. Maclean) stated that he had reason to believe that I had such resignation in my pocket. I would be glad to know where the hon. gentleman has obtained such information. I do not think he will venture to give it to the House, and if he does I shall afford him an opportunity of doing so.

Mr. W. F. MACLEAN. I will tell the right hon. gentleman what I think.

Sir WILFRID LAURIER. Oh, no; I want my hon. friend to tell me where he got the information that at this moment I have in my pocket the resignation of the Minister of Public Works. I think I know his source of information, and I think it is to be found in the fertile imagination of the hon. gentleman from South York. I am afraid there is no other source than that, because as a matter of fact I have not the resignation of my hon. friend the Minister of Public Works. He has never offered it to me. If the Minister of Public Works had offered me his resignation simply because his health was not good, I can tell the hon. gentleman from South York that I would have asked the Minister of Public Works to keep his resignation back.

Some hon. MEMBERS. Hear, hear.

Sir WILFRID LAURIER. I would have told the Minister of Public Works that members on both sides of the House, with one single exception, would be glad to know that there was hope that he would take his place again in this House as Minister of Public Works. My hon. friend the Minister of Public Works has not offered me his resignation and I am very thankful that he has not. One observation more; the

hon. gentleman (Mr. Maclean) says that the hon. member for London (Mr. Hyman) who is acting as minister ought to have the pay —well, apparently that question does not trouble my hon. friend from London (Mr. Hyman) and I cannot see why it should trouble my hon. friend from York (Mr. Maclean).

Mr. W. F. MACLEAN (South York). The Prime Minister has two great weaknesses; he has the weakness of making the effort of his life and he has the weakness when violating the constitution to take refuge in personal friendships.

Some hon. MEMBERS. Oh, oh.

Mr. W. F. MACLEAN. Hon gentlemen opposite may jeer, but what are the facts? It is all very fine to say that we have a constitution, but if we have we ought to respect it. We ought not to be constantly violating it, because it suits party considerations, and because the Prime Minister is afraid to test public opinion in the province of Ontario. That's what's the matter. It is very nice to hear about personal honour and about regard for an hon. minister who happens to be ill, but there are more than personal matters to be considered in the conduct of public business. We want a Minister of Public Works who has the endorsation of his constituents, and that we have not. We do not know how long we may be without such a minister, and though that may be the Prime Minister's view of the constitution it is not the view of the constitution that obtains in England.

Sir WILFRID LAURIER. My hon. friend is wrong there.

Mr. W. F. MACLEAN. The right hon. gentleman asks me how I know that he has in his pocket the resignation of the hon. member for North Oxford. Well, I believe that the hon. member from North Oxford from a sense of honour and responsibility to the public, would have long since placed his resignation in the hands of his leader. I leave the case there and I say that the present state of affairs is not satisfactory and ought to be corrected. I hope yet to bring the Prime Minister to my way of thinking on this matter. He is not above changing his mind; I believe that since yesterday a wonderful change has come over his mind and perhaps over his heart as well, and that we will see a very pronounced modification of the policy which he announced the other day. I have the greatest respect for the acting Minister of Public Works (Mr. Hyman); I meet him every day and I am glad to meet him, but I would like to see him in this House enjoying all the honours he is entitled to. I trust that the Prime Minister will give the hon. member for London (Mr. Hyman) his full dignity and at the same time maintain the principles of the constitution.

Motion to adjourn, negatived.

SUPPLY.

House in Committee of Supply.

Intercolonial Railway—diversion of line at Mitchell, $15,000.

Mr. EMMERSON. This is a revote. By the 1st of July next we shall have expended about $10,000 of the vote of $25,000 made last session. There is at that point a very bad curve of seven degrees which it is proposed to bring down to two degrees. There is also a bridge, which it is proposed to replace.

Mr. FOSTER. Where is Mitchell?

Mr. EMMERSON. It is on the Drummond Counties line.

Mr. FOSTER. What is the work supposed to cost altogether?

Mr. EMMERSON. $25,000. The contract for grading is $12,000, and the rest of the amount covers land damages for right of way, the cost of the permanent way, ballasting, changing the telegraph line, and so on.

Mr. FOSTER. How much of a diversion does it make from the main line?

Mr. EMMERSON. The present line is 8,740 feet in length, and it will be reduced by 1,237 feet. The grade will also be reduced to four-tenths.

Mr. FOSTER. There is also a diversion of the line at St. Leonard Junction. Is that on the same line?

Mr. EMMERSON. Yes.

Mr. FOSTER. What is the reduction there in length, in curve and in grade?

Mr. EMMERSON. We reduce the curve from five to two degrees, the grade to about eight-tenths, and the distance about 128 feet in 5,850 feet. We do not make the diversion in order to shorten the distance, but in order to reduce the grade and the curve.

Mr. FOSTER. Are there any other diversions on the Drummond line?

Mr. EMMERSON. These are the only two, I think.

Mr. INGRAM. How far is this curve from the bridge?

Mr. EMMERSON. Both the curve at Mitchell and the curve at St. Leonard Junction are near the bridges.

Mr. INGRAM. Does the change involve raising the grade of the bridge at the other end?

Mr. EMMERSON. I can show the hon. gentlemen a plan, which was here last session. The bridge as located was too low, and it was necessary to raise it anyway.

Mr. LEMIEUX. This curve is partly in the county of Drummond and partly in Nicolet. It is in the form of an 'S' and a really bad curve.

Mr. FOSTER. Are there many such curves on that road ?

Mr. LEMIEUX. The minister says there are only two.

Mr. FOSTER. I suppose there will be many more at the next election.

Mr. LEMIEUX. This was voted long before the election ; there are no votes there.

Mr. OSLER. Has any separate account been kept as to what was spent on the Drummond County line since the government took it over ? I think the House is entitled to that information and it should be kept separately.

Mr. EMMERSON. There has been no special account ; I do not think the amount has been very large in the main. This change is one of the largest made in connection with this road.

Mr. MORIN. Would the minister be good enough to tell the committee the difference in the location of the old bridge and the new bridge that he proposes to build ? How far will the new bridge be up the river from the old bridge ?

Mr. EMMERSON. The plan will show that.

Mr. MORIN. I fail to understand the position of the government in 1898 and its position to-day. In 1898, when this road was bought, it was stated in the House, time and time again, that it was a first-class road, it was a cheap road, and the government could not get along without buying it ; they were buying a mint in buying that road. I have known that road for a very long time. When the road was first built it was a straight road without curves, and to-day it is a road with sharp and heavy curves. How was that done ? Would the minister explain that to me ? The minister was not in office at that time and I do not propose to charge him with false representations made at that time, but nevertheless they were made.

Mr. EMMERSON. Two swallows do not make a summer nor do two curves on a road condemn the entire road. I think it certainly speaks well for the accuracy of the reprsentations made as regards that road that it has been found necessary to change only two curves on it. The Intercolonial Railway is recognized as one of the standard roads of Canada, and yet we find it necessary to correct curves on it. We are asking $60,000 to correct the curvature at Birch Cove the approach to the city of Halifax, and there are other curves and other grades on the Intercolonial Railway. But because of that you would not condemn the Intercolonial Railway ; you would say that, generally speaking, it is one of the best roadways to be found in all Canada.

Mr. MORIN. I agree to that, but as I said before that road was highly recommended in the House.

Mr. EMMERSON. This does not condemn it.

Mr. MORIN. There is a place, not far from that point called St. Germain, where the roadbed is overflowed for about 6 miles every year. The government, some years ago, had to put rails on the ties to keep the road from floating out. Then they raised the road about three feet. How does it come if the road was so good in 1898 that it has become bad since then ? The road then had light curves ; now it has heavy curves ; then it had good bridges, now you are taking bridges away and building others. What is the use of trying to blindfold people in that way ? I know very well that the road at that time was not even a second-class road. I understand what a good road is as well as any man in the House and that road, at that time, was not a second-class road, yet it was highly recommended, and to-day it has very much deteriorated. How can you account for that ?

Mr. HAGGART. The statement of the minister is correct. There is a great deal in his statement that the road must have been of an excellent character when it was necessary to take out only two curves. The House requires a little more authority than the bald statement of the minister in reference to that. If I am not mistaken a good many more improvements have been made, and as the hon. member for Dorchester (Mr. Morin) said when we were asked to take over that road, it was said to be a first-class road, capable of running on the same time schedules as the Intercolonial Railway. We paid $1,429,000 for it at the time and the minister of that day promised to keep the accounts separate just as he promised to keep a separate account of the Canada Eastern. The House is entitled to know from the minister what the expenditure on capital account on that road has been since it was purchased in 1898. Then we will be able to judge, outside of the mere statement of the minister, whether it has been found necessary to make only two improvements on the road. If I remember rightly when the road was taken over, there was a report from the Department of Railways and Canals in reference to the character of the road. The report from the department stated that there was one very heavy curve which it might be necessary to take out and to change the gradients on the ap-

proach to it. What amount of money have we expended on what has been alleged in the House was an entirely second-class road at the time of the purchase, and what expenditure have we made on capital account on that road up to the present day.

Mr. L. LAVERGNE. (Translation.) The hon. member for Dorchester (Mr. Morin) does not know what he is talking about when he says the government have added three feet to the roadbed at St. Germain. That statement is entirely inaccurate. Nothing was done but to extend the yard so as to devote more space to the traffic which has considerably increased since the purchase of the Drummond by the government. In reference to Mitchell, at that place there is a dangerous curve and the government does very well in rectifying the error made at the time of the establishment of that line. I think it is incumbent upon the engineers in charge of the Intercolonial to see to it so as to prevent the accidents that might occur at that particular place, instead of waiting any longer. Far from deserving any blame, the government are entitled to our congratulations on account of the wise measures taken. Moreover, we must bear in mind that the Drummond brings a good revenue to the Intercolonial. If there is a division which covers all its expenses and yields profits, it is that of the Drummond. We must not be stingy about the necessary repairs in order to better accommodate the traffic in that part of the country and to protect the lives of the travelling public.

Mr. MORIN. Mr. Chairman, the hon. gentleman (Mr. L. Lavergne) has spoken in French. I could reply in French; but I am going to reply in English. I have been talking about one thing and my hon. friend is talking about another. There it is. I stated to the House that the facts had been misrepresented in 1898, when the road was bought. That is what I said before, and that is what I say still. My hon. friend says that this place St. Germain is a grand place with a great traffic. I have not the least doubt about it; and I do not say a word against St. Germain. I am only talking about what the government then told the House. They told us that this was a first-class road, and that by buying it we would give the government a great chance to make money. They told us: We are going to have a through road from Halifax to Montreal, and it will be a grand help to the road we have now. Well, where is the grand help to-day? A deficit of a million dollars. How do you account for that? It only shows that that side of the House tried to blindfold this side in 1898, and they are trying to do it to-day; but they will not succeed. The proofs are there; the words that were spoken are there. And the money has been paid out—$1,600,000. That is what I said before, and that is what I say now; and I do not take one word back.

Mr. OSLER. The hon. minister (Mr. Emmerson), replying to me a moment ago, said it would be easy to get these figures showing the capital expenditure in connection with the Drummond County road. Will the hon. gentleman kindly furnish the figures so that we may have them before the matter is taken up again?

Mr. FOSTER. And I think that the minister, when bringing down that information, should bring down further information concerning which, no doubt, discussion will arise. It is possible for ministers to make statements in the House when bringing new schemes before parliament, which statements may not turn out to be true. Various reasons may be urged in excuse. But it is always an excellently good thing to sift these statements and promises made when a new scheme is brought before parliament and compare them with the actual results. That is what I think we ought to do now. We ought to know how far these statements made by the ministers when they were purchasing this road have been proven true. Now, not only were statements made with regard to the condition of the road—its grades and curves, and so on—but there was also a most important consideration in the way of traffic advantages that we were to gain from this purchase. Certainly parliament at that time would have taken a very different view of the question if they had been told that they were merely purchasing an extension for the Intercolonial Railway without any advantages in the way of interchange of freight and consequent increase of through traffic for the Intercolonial Railway. Statements were made as to the kind and amount of traffic that the Grand Trunk Railway were to hand over to the Intercolonial Railway, especially freight traffic. Has that forecast made by the ministry been realized? Has that agreement been carried out? I have had an opportunity to look over what is called the 'statement of the case' before the arbitrators, whose labours, I imagine, are just now about finished, as to the points in dispute between the Grand Trunk and the Intercolonial. And there can be no stronger condemnation of the promises made and statements put forth by the Minister of Railways and other members of the government in support of the proposed purchase of this railway, than the statement of the government a few years later, as to the absolute non-fulfilment of the conditions that form a part of the consideration paid for in the purchase of that road. If these statements are true—and at least they embody the view of the government on the subject—the non-diversion of freights is established. As to whether the Grand Trunk Railway can be held in damages is another matter. But no one can read this 'statement of the

case' and not be convinced that the results that were so rosily pictured and that were anticipated by the government, have not been realized. Consequently, the money of this country was paid for a consideration the country has never received. We did get the road. It certainly was not a first-class road. A large amount has been spent on capital account in order to make it a running road at all in connection with the Intercolonial Railway. That expense has to be borne. But we got none of the vast gathering of traffic from the west which was to be picked up by the Grand Trunk Railway system and handed over to the Intercolonial Railway. Instead of the promised delivery of traffic to our road, we have practically a systematic diversion of traffic carried out by the Grand Trunk, if the allegations of the government in these latter years are true—and I presume they are. Now, we must go into that question. We must hold the government responsible for the pretenses under which it makes a purchase with the people's money. We want to know exactly how their scheme has turned out. So I would like the minister to bring down a statement showing for each year what traffic has been transferred to the Intercolonial according to the agreements, we were told, had been made. Without going into details, the minister will know what we need, and will afford us such information on this subject as he has in his possession. My hon. friend (Mr. Emmerson) was not responsible for this purchase. I do not know whether he would have recommended it if he had been minister at that time. It is well, for his sake, as well as for ours, that we should know just how things have turned out up to this date, and how we stand with reference to the Drummond County road and this promised transfer of traffic.

Mr. EMMERSON. The information asked for will be produced. I might say in this connection that the contract entered into in 1898 might very well have been a good contract, a justifiable contract, on the assumption that both parties to the agreement would carry out the promises made under it. I think parliament had a right to assume that the Grand Trunk Railway, in entering into a contract to do certain things, would, bona fide, fulfil their obligation. Upon that assumption, the contract could very well have been approved by parliament. And yet the contract may not have been fulfilled. The Grand Trunk may have failed to carry out its obligation in later years. That would not be a condemnation of the contract; rather would it be a reflection upon one of the parties to the contract who had obligated themselves to do certain things and failed to do them. However, that is neither here nor there.

Mr. FOSTER. That will appear better when we get the information.

Mr. EMMERSON. It can be discussed then, and we will be in a better position to determine whether it has been fulfilled, either in the letter or in the spirit.

Mr. OSLER. In reference to what the minister has just said, it was pointed out from this side of the House in the strongest manner possible when that contract was made, that the obligation on the part of the Grand Trunk was an obligation in word only, and that there was absolutely no reason to suppose that the contract was binding on the Grand Trunk.

Mr. EMMERSON. Lawyers differ.

Mr. OSLER. But the government took no step whatever to try to make that contract more binding; and if it has turned out as the opposition said it would, then the government are entirely to blame, as they knowingly entered into a contract with this grave defect in it.

Mr. EMMERSON. 'Wilfully and with malice afore thought.'

Mr. OSLER. If the minister says that, I will accept it—that they wilfully entered into a contract knowing there was a weakness on one side. It was not a bargain made between two parties who were anxious to effect a business transaction.

Increase of accommodation at Moncton, $110,000.

Mr. EMMERSON. Last year we voted $210,000, and we have expended $100,000 during the year, so this is a revote of $110,000.

Mr. FOSTER. How much altogether do you propose to expend down there?

Mr. EMMERSON. If it becomes necessary to build additions to the general offices at Moncton, the total, with what has been already expended, would amount to half a million dollars. That involves the enlargement of the machine shop and also erecting another shop, and putting a second story on the car shop. There are quite a number of large items. It also involves the purchase of additional land, some fifteen acres near the present station; it is between the north line and the line which runs to St. John. We are much cramped for room, and besides are expecting the entry of the Grand Trunk Pacific into the city of Moncton, which will make it necessary for the Intercolonial to acquire some of that land. My hon. friend from Lanark (Mr. Haggart) who was Minister of Railways, must know that the purchase has been under consideration for some years, and now it will have to be effected.

Mr. FOSTER. What has been done to the general offices?

Mr. EMMERSON. If the work of the railway increases, there will have to be an-

other wing. Within two or three years we have furnished a third story. There is no elevator in the building. If it is not possible to add another story, we will have to build another wing. They are very much cramped for room now. I had an opportunity a few weeks ago of going through the building, and I certainly felt that, for sanitation purposes, the condition should not be allowed to continue—for that consideration alone, if for no other.

Mr. FOSTER. Bad drains?

Mr. EMMERSON. No, too many in a room.

Mr. FOSTER. I think that could be arranged without making any capital expenditure.

Mr. EMMERSON. Perhaps my hon. friend means to intimate that we might dispense with some of the officials there; it might be arranged in that way no doubt. But I think that is a proper capital expenditure on the road.

Mr. OSLER. Would it not be better to face this matter at once? We are year by year increasing the debt of the country, nominally, by increasing the capital expenditure on the Intercolonial. Let us wipe off the deficiency year by year and face it, else we will have a debt running up into a hundred millions, on only nominal assets of the country. We have been spending everything on this road out of capital, let us change the system so that the people may see exactly what it costs each year.

Mr. EMMERSON. I think there are other railways besides the Intercolonial that have to make expenditures on capital account, and to do so they have to come to parliament for power to issue additional stock. Since I have been in this parliament, although it has been but a few years, I have seen great railway corporations of the country coming here and asking for power to make betterments on their roads, construction, and improvements of their terminals, and improvements in their offices and their buildings. I think it is not an unusual thing for railways to do that, and it is not to be condemned, if it is necessary, even on the Intercolonial.

Mr. OSLER. The minister is quite right in that, but there is this difference, that these companies who come asking for power to increase their capital, have to go to the public to borrow it, and they could not borrow it unless they increased the capital to pay interest. But in this case there is no possibility that these expenditures are going to pay interest.

Mr. MORIN. The minister is quite right in what he says. But while some companies come here asking for changes in their Acts of incorporation, others come here and sell their roads out and out to the government. We have a sample in the Drummond County road and another in the Canada Eastern. Those people got rid of their roads, and got their money.

Mr. EMMERSON. They say they lost money by it.

Mr. CROCKET. I would ask the minister if it is the intention of the government to provide a new station for Fredericton? The station of the Canada Eastern in that city is entirely inadequate and unsuitable for a city of the importance of Fredericton. I may say also that the station of the Canadian Pacific Railway at Fredericton is not sufficient to meet the requirements of that community. I have heard it frequently suggested that the matter should be taken up by the Minister of Railways with the Canadian Pacific Railway, to see if some agreement could not be arrived at by which a union station could be provided for that city. I call the attention of the Minister of Railways to this matter so that he may give it his consideration.

Mr. EMMERSON. If my hon. friend will only square himself with my hon. friend who sits in front of him (Mr. Haggart), I think I may safely take that into consideration. But I do not want the Canada Eastern to earn the title of being a sink hole for expenditure, as it was alleged to be by the hon. member for Lanark. The purchase of the Canada Eastern has been so recent that I have not had time to consider making any serious betterments. The station that was used in connection with it at Fredericton has been of some service I think, but I am not personally aware whether or not it meets the requirements of the traffic. Of course, all these things have to be taken into consideration in connection with the road. I have felt that the Canada Eastern must in a measure work out its own salvation, and if the traffic on that road and the conditions prevailing on it justify improvements, they will be provided. But I have not ascertained yet that there is any great necessity of the immediate construction of a new station at Fredericton.

Mr. FOSTER. In reference to the minister's statement that part of this is to go towards expenses upon the general offices there, I would like to have from the hon. minister a very short statement as to the line which he draws between capital expenditure and expenditure out of current revenue as regards those different matters of construction along the Intercolonial Railway. In looking over the matter and from the discussions which have taken place here in the past, it would seem that there has been a very easy, if not a very excellent method of reducing deficits by charging to capital expenditure, when you have the country to draw upon, what ought properly to be paid for out of the current earnings of the railway. I know there is sometimes difficulty

in drawing an exact line between capital expenditure and expenditure out of current income, but there must be, and I believe there is, a pretty well defined line all along the course of railway construction,and maintenance and I would like to have the hon. minister give us the principle upon which he is now administering the road in that respect and also give to this committee some information as to the principle which is carried out by other railway corporations both in our own country and in the United States. The hon. minister will surely see that unless great care is taken in that respect there could be no fair statement made to the country, and no fair inference drawn as to the Intercolonial Railway in the matter of its expenses and its income and as to how it is being managed. From impressions which I have had I think a great many things are being charged to capital now which were not formerly charged to capital. However, it will open up way for a proper apprehension and subsequent criticism if the hon. minister will now state what the line is on each side of which he puts respectively capital and expenditure and expenditure chargeable to current revenue.

Mr. EMMERSON. Mr. Chairman, I think it is very easy to lay down the rule which has been adopted, and I think fairly well followed on the Intercolonial Railway. It is recognized by all railway authorities that any expenditure to the extent to which it is a betterment of the railway is a fair charge against capital account. The creation of something which has not heretofore existed, some work in connection with the road which is necessary for its successful operation, any improvement in the matter of appliances, that is some appliance which has not heretofore been in existence in connection with the railway, I think constitutes a proper charge against capital account—anything which is not in substitution of something else. There may be a necessity on the railway of replacing something that existed—there are modifications to that rule—but to a certain extent that is not chargeable to capital account.

Mr. FOSTER. To what extent ? Give an instance.

Mr. EMMERSON. To the extent to which it is a non-existing improvement it may be chargeable to capital, but to the extent to which it is a substitution of something that has heretofore existed it will be fairly I think, a revenue charge. It is very difficult to define the exact line between the two.

Mr. FOSTER. For instance if the hon. gentleman were taking up 60-lb. rails and and putting down 90-lb. rails ?

Mr. EMMERSON. There is a difference. There has been a special rule and it has been followed in connection with that. That has been discussed in this House time and again. I am making a general statement as to the course which is followed. I think that when my hon. friends opposite were responsible for the Intercolonial Railway and since, there have been special expenditures chargeable to capital account which would not perhaps comply with the strict rule or come under the definition that I have referred to.

Mr. HAGGART. The remarks of my hon. friend from North Toronto (Mr. Foster) open up a very nice question as to what should be charged to capital and what to revenue account. An extravagant minister, a minister who is lavish in expenditures,——

Mr. EMMERSON. That does not apply to me.

Mr. HAGGART. Not at all. There should be no capital account on the Intercolonial Railway from Montreal to Halifax or any portion of it as at present constituted. I am laying down a principle, not my own, but the principle of the leader of the Liberal government, Mr. Mackenzie, who contended that a capital account is only an excuse for bad management of the road. It is no use of making comparisons between the expenditures of one government and another. If a minister is allowed to charge things to capital account which otherwise will go into ordinary expenditures there is no limit to the extravagance which may take place. The idea of the hon. gentleman expending on a road which has been finished for nearly forty years a sum of money equal to nearly $4,000,000 a year for three or four years——

Mr. EMMERSON. It is only 30 years really since the northern division was opened up to Rivière du Loup.

Mr. HAGGART. Part of it was finished before confederation.

Mr. EMMERSON. I am speaking of the road, from Moncton to Rivière du Loup That was not opened up until 1875.

Mr. HAGGART. Never mind, about a year or two. The hon. gentleman is concerned about small matters. It is 40 years fully. This is 1905 and part of the Intercolonial Railway was running in 1865. Is that not 40 years?

Mr. EMMERSON. That is perfectly right, but I was speaking of the northern division to Moncton.

Mr. HAGGART. I was speaking of the Intercolonial Railway as constituted then and making a comparison with it as constituted now. Mr. Mackenzie said that there should be an end put to the capital account on the Intercolonial Railway. Yet, we have a capital account on a road that has been running from Montreal to Halifax for 40 years for the purpose of covering up expenditures for betterments on the road. You

will go down there and find perhaps $8,000,000 or $10,000,000 have been expended on improved facilities along the line, lengthening sidings, building sheds, and upon the smallest possible improvements and in order that the hon. gentleman may have a good showing in the House he charges these to capital account. The hon. gentleman says that these items were charged by the Conservative government in exactly be same manner. Let me tell him that when I was managing the concern such an expenditure as that at Moncton would be charged to ordinary revenue and not to capital account.

Mr. EMMERSON. I am afraid you did not know much about it, if you make that statement.

Mr. HAGGART. If the hon. gentleman would have a little less of that nigger minstrel style in him and adopt a little seriousness it would add to the dignity of the proceedings and of the hon. gentleman. He has adopted that style a little too much lately and he must expect a lesson or two. He is hardly rightly seated in his position up to the present, and he is new to the proceedings of this House, but I can tell him that we have not been accustomed to that hitherto. We have been accustomed to seriousness in the debate and seriousness in answering questions, and not shifting it off in that easy, laughing, nigger minstrel style. I said that under the Conservative administration expenditures for renewing rails on the Intercolonial Railway and such like would be charged to ordinary revenue and not to capital account. That system was changed at the instance of the late Minister of Railways, and so there can be no fair comparison made between the management of the railroad under the Conservative government and its management under the Liberal government. The only real solution of the difficulty is that proposed by my hon. friend (Mr. Osler) and that is, that it is high time that the capital account upon the Intercolonial Railway should be closed, so that the country may see at once what we are really expending on the operation of that road. It does not make much difference to those who know, how the thing is done because they can look at the expenditure on capital and the expenditure on revenue and tell at once how matters stand ; the present system only deceives the general public and it deceives them in their efforts to make a comparison of the management of the Intercolonial Railway as between the government and the late government.

Mr. EMMERSON. It is to be regretted I suppose that any criticism of mine should cause the hon. gentleman (Mr. Haggart) to forget the ordinary courtesy that one member owes to another. No doubt I have a great deal to learn about the proceedings of this House as well as about all other matters, but I believe I will have to travel further than my hon. friend to seek a competent teacher, for I fear I can learn nothing from him. The hon. gentleman made the statement that it is 40 years since the Intercolonial Railway had been completed, and that the expenditures on it have been going on since. The Intercolonial did not come into existence as such until after the year 1871, and it was not completed between Truro and Rivière du Loup until the year 1876. Before that, there were in existence two railways : one known as the European and North American running between St. John and Shediac ; the other known as the Nova Scotia Railway running from Halifax to Truro and thence to Pictou. I made the statement, and I repeat it, that since it has been an Intercolonial railway there has been a uniform rule adopted as to the charging of expenditures either to capital account on the one hand or to revenue on the other. That rule has been followed ; and it is supposed to be in accordance with the standard laid down by railway experts. There may have been variations from time to time, but that is true under every administration of the Intercolonial. I ventured to call in question the statement of my hon. friend (Mr. Haggart), that when he administered the Intercolonial, if there were new car shops or new offices constructed at Moncton, the expenditure would be charged to revenue. What seems to have made him very angry, was my statement that he would not have given utterance to such an assertion if he were familiar with the transactions connected with the Intercolonial during his time. I speak whereof I know. I say that since it has been an Intercolonial such things as new car shops and new machinery for the construction of locomotives were charged to capital account.

Mr. HAGGART. Do I understand the minister to say that in my regime it was so charged ?

Mr. EMMERSON. Yes.

Mr. HAGGART. I deny it.

Mr. EMMERSON. Had I known that my hon. friend would have questioned this fact, I would have brought the proof ; the public accounts will show it clearly. But, this discussion takes place year after year and is somewhat academic, for, after all so far as the people of Canada are concerned, it is a question of bookkeeping. The bills have to be paid by the people of Canada, and whether the charge is made to capital account or to revenue account, it makes very little difference to them. Since I have been in the department, I have endeavoured to have the accounts appear as they really were. I am not afraid of deficits——

Mr. FOSTER. Evidently not.

Mr. EMMERSON. I am no more afraid of deficits, incurred on the Intercolonial, than were the gentlemen on the other side of the House afraid of deficits which were incurred on the canals of Canada. I recognize the true cause of deficits on the Intercolonial, and the people who are interested in carrying out the obligations assumed at confederation also recognize that cause. We all know that the deficits on the Intercolonial are charged against the maritime provinces. But, the International is surrounded by conditions which are peculiar to that railway and to its location. I would apologize for deficits that were due to unwarranted expenditure ; I would apologize for deficits that were due to extravagance ; but I am not going to apologize, I do not think there is any necessity for apologizing, for deficits that are due to causes over which I have no control, and to conditions which were connected with the Intercolonial when it was first established.

Mr. OSLER. I take issue with the minister when he says that this is an academic discussion; it is a most important discussion. The accounts of the Intercolonial Railway as rendered show that the amounts charged to capital account are to a very considerable extent amounts that would not be charged to capital account by any business railway. I am not going to grumble at the cost of the Intercolonial Railway to the country. It is necessary to this country that that railway should be operated, and operated efficiently, even if it be at a loss; but it is an absolutely wrong principle to charge up that loss year after year to capital account. Let the country see and realize exactly what this railway is costing; that is the proper and the honest way of rendering accounts. We are now face to face with a vaster problem than that of the Intercolonial Railway; we are face to face with the problem of the Transcontinental Railway fathered by this government ; we are face to face with the question whether, in connection with that railway, we shall face the true position as it may turn out, or try to fool the people by adding year after year to capital account what should be charged to maintenance account. This is a most serious question for this country, because we may find ourselves in a position with respect to that road in comparison with which the deficiency in connection with the Intercolonial may be a mere bagatelle. I think it is a recognized principle that the capital expenditure on a new road during the first ten years after it is opened equals the original cost; but after a road has been running for twenty years or more, and has reached the highest standard—and the Intercolonial is at a very high standard, in my judgment, after having travelled over it last year—all charges on it should go to expenses and should not be added to the public debt of this country. There are charged in this capital expenditure, amounts which no railway company, having to make a report to its shareholders, would dare to charge to capital account. I would like the minister to tell us the amount that has been expended on rolling stock, for instance and charged to capital account since 1896, also to give us a list of the rolling stock as it now exists, with a statement of its value; and I think we shall find that millions of dollars properly chargeable to revenue account, have been charged to capital account. I do not think the minister can point to a single railway report in the library which shows the same class of items as are contained in this list charged to capital account. This is a good time to bring this matter up, so that we may know how these charges are going to be made in connection with the Transcontinental Railway.

Mr. FOSTER. We have come to a point in reference to the Intercolonial Railway and its management which I think is somewhat of a crisis; and, so far as I am concerned, I propose to push the question until we get down to some settled system of making a balance sheet which will show the general results of the operation of that road. I take exception to one remark of the hon. minister, and I do it with all kindness to him. He says that it makes no difference whether you charge the expenditure on the road to capital account or to running expenses, that it is a mere matter of bookkeeping, and that in either the country has to pay. I take strong exception to that. It makes no difference, may be, so far as the total amount of money to be paid by the country in a single year is concerned; but it makes very great differences in other respects. If you are going to charge these expenditures to capital account just as it pleases you for the time being, and that becomes the practice, it tends inevitably to extravagance in the management of the road. The minister may be the best possible kind of a minister ; but so long as he can dip into the public till for expenditures of different kinds, with the tremendous pressure which is behind him—and no one knows that better than the minister himself—he will be met by regular appeal, what does it matter to you? Just charge that to capital expenditure, and it does not appear in the deficit. I say it has a most injurious effect, and it tends to extravagance which will increase from year to year. It has another effect. It not only tends to extravagance so far as the administration of the department by the minister is concerned, but it puts the whole business in a false light before the country, and tends to prevent the country from being aroused to the real facts of the case, and to the necessity of making its protest and its pressure for improvement. The country is not so apt to take into con-

sideration the capital expenditure upon a road as the difference between the running expenses and the current income. If, therefore, by this easy method, which is nothing more than bookkeeping, you can charge to capital that ought to go into current expenditure, and which would therefore swell the deficit, you prevent the people from knowing the real state of things and consequently prevent the remedy from being applied. Now, the Prime Minister, not once, but many times in the province of Ontario, if not elsewhere, made this statement in the course of the last election, that the Intercolonial Railway was an instance which would serve as a compleate warning to any government undertaking to operate a road under government ownership. He said that it never had paid, that no minister had been able to make it pay, which was not quite correct, so far as meeting the ordinary yearly expenses by the receipts was concerned. Of course, if you take interest into account, no minister ever made it pay.

He bethought himself just then that he would make a condemnation of his own ministers in that respect, and he gave the reason why; he said it was because it was managed under a vicious system. That was a very strong statement for the Prime Minister of a country to make, that an immense road, the operation of which involved millions of dollars of current expenditures and capital expenditures, was an unproductive road, and was in a state of constant and chronic deficit, because, forsooth, it was managed under a vicious system. The country has come to the point, I think, that it wishes to inquire into that system, and to see whether there is not a better one. It will certainly not be helped in that inquiry by a loose system of charging to capital expenditure what ought to go to current account, even although it would swell the deficit. There is another remark to which I wish to take exception. I notice that the minister of late has taken it into his head to make a ready answer to all allegations of large expenses and inadequate returns, as compared with other roads, by saying that it was never intended that the Intercolonial Railway should pay, that it was a road conceived under conditions which were not considered absolutely essential to a paying road; that it is a convenience for transportation and connection between outlying and distant provinces, and consequently is not to be treated as a commercial road. There is something in that argument, but it can be made too much of, and I think the minister is making too much of it in using it every time as a mitigation of large deficits and expenses. It is true there were deficits, but it is also true that it was never contemplated, and never need be contemplated, that the Intercolonial Railway, if well managed, would not be able to pay its current expenses and, at the same time, be run as an up-to-date railway. I have no doubt that the Intercolonial Railway, if it were run under a proper and not under a vicious system, would be able to pay its expenses from year to year, and conduct its business on the same lines as other great railways do with regard to capital and current expenditures. In one of the best years in a series of the best years Canada has had, during which all other railways are showing increased traffic and decreased expenses or, if not both of these, increased net profits year by year, here we have at the end of these prosperous years the Intercolonial Railway, which has been in operation for thirty years, with a settled road and a fine roadbed, with all its initial expenses paid, showing a larger deficit than it has ever had before. These are things that need to be taken up seriously by both sides. I am not finding fault with the officials of the railways; I believe that one of the good characteristics of the management of the road by my hon. friend from Lanark (Mr. Haggart) was that he largely threw the responsibility of management on the officers of the road, that he largely gave to them the power of employing as many men as they wished and no more than they wished, and of dismissing men who were inefficient. How is it to-day? We find the vicious system that the Prime Minister spoke of, this miserable system of patronage which, from the furthest end of the Intercolonial Railway until you get up to Montreal, is the bane and curse of that railway. I say that there is not a shadow of doubt in my mind, that if you were to put the management of that railway in the hands of a commission of men who were free from the annoyance and expense of partisan appointments, and were held responsible for the management of that road, the Intercolonial Railway could be made to pay. It cannot be made to pay under the present arrangement, under which, from end to end of the road, there is a constant fight carried on by outsiders to shove men into the service, and few ministers are strong enough to stand up against that pressure. These are matters to which I wish to call the minister's attention. They will be discussed in this House, and the country is in the mood for seeing them discussed and settled. I hope we will take hold of this subject, not so much by one making charges and another defending himself against the charges, but by sitting down together on both sides of the House trying if we cannot make the Intercolonial Railway a better road than it is, not so much in equipment of rolling stock and perfection of roadbed, as in the methods of management and the returns it makes to the country.

Mr. BARKER. I have in the last three or four sessions discussed the questions that have now been discussed by the hon. member for South Lanark (Mr. Haggart), the member for North Toronto (Mr. Foster) and the member for West Toronto (Mr. Osler);

and I do not think that the long discussions we have had upon this subject of capital account were wholly without effect even upon the government. The hon. gentleman has told us this year that his loss in working the Intercolonial Railway was something near $1,000,000. That was dead loss to the country in the operation of the road at a time when all the other companies are working with very handsome profits. What I have contended year after year since I have had the honour of being in this House was that the government were so keeping the accounts of this government railway that it was absolutely impossible to compare the management under this government with the management of previous governments, and that it was even impossible to compare the management in one year under the present government with the management in another year. There ought not to be any difference whatever between the system of keeping the accounts of this government railway and the accounts of ordinary railway companies. If anything, the government should be more determined even than other companies to abolish, if possible, the capital account. Instead of the government doing that, it has been their policy year after year to avoid the fair responsibility for working expenses, and to make fictitious profits or reduce the actual losses of operation by what would be called hocussing the accounts if the same things were done by an ordinary corporation. I have on many occasions in this House had to call attention to the manner in which the rolling stock was maintained, and I am glad to say that during the past year the hon. gentleman who now is at the head of the department has done something to improve matters in that respect. I think that the account he has brought down, bad as it is, far as it is from being what it ought to be, is far better than, as regards rolling stock, it has been during the last five years. He has got back near to what the maintenance of rolling stock was under the administration of the hon. member for South Lanark (Mr. Haggart). But the hon. gentleman has charged up to capital account, that is he has added to the debt of this country, the cost of 235 articles of rolling stock, from locomotives down to flat cars.

Now, while the hon. gentleman has done that, he has actually had dead stock that he ought to have repaired and put into service, charging the expenditure to working expenses, to a greater number than he bought at the cost of the country. At the end of the year he had 268 articles of rolling stock absolutely out of service, unfit for any use and not capable of repair, according to his own statement. With this number of all descriptions out of service, he buys an extra 235 and charges them up to the debt of the country. Now, what possible excuse can there be for anything of that kind? The hon. gentleman may say, perhaps, that a few of them would fall into decay or be broken up in the last few months of the year. But 119 of these were actually out during the whole year, and returned by him the previous year as being unserviceable and requiring to be rebuilt. He shows that on the face of his report. He starts with 585 out of service at the beginning of the year. He rebuilds 466, and the difference 119, he carries as dead stock, old lumber, for the whole twelve months not spending one dollar upon them. He is enabled to do that of course, because he has a splendid paymaster behind him, and charges the new stock to the debt of the country. What could exemplify more clearly the danger and folly of carrying out this system? It has been pointed out over and over again, and shown by the figures from the minister's report, that the predecessor of the hon. gentleman when, in certain years, he showed a small profit in the working of the railway, had he kept his accounts according to the ordinary system of companies, instead of a profit would have had a very large deficit. Yet, in the face of that fact, we had the Finance Minister telling the House and the country how gratifying it was to find that under the administration of this government the Intercolonial line, which had formerly been worked at a loss, was now a source of profit to the country. The hon. gentleman (Mr. Emmerson) is reaping some of the results of that course. He has had to go into the repairing of rolling stock. If these 585 articles of the rolling stock had been kept up as an ordinary railway company would have kept them up, the hon. gentleman would have been saved a large expenditure. But he has had to do this year more than his predecessor had to do in the same time. His predecessor would have made a very vigorous effort to show a profit instead of this loss of over a million dollars. And the hon. gentleman (Mr. Emmerson) himself has not had the backbone to face the situation, but has carried over 268 articles of rolling stock and replaced them with 235 at the expense of the country. I do not wish to spend time on this subject. The matter has been fully dealt with. All I say is that on a government railway every effort should be made—and I do not see any difficulty in carrying it out—to absolutely abolish the capital account. It has been laid down by many writers on railway subjects that the true principle is this: Once a railway undertaking is in operation, it should maintain itself, and, according as it succeeds or fails in doing that it is to be judged as a profitable or losing concern. It may be very difficult to carry that out in the case of a private corporation that has to borrow money from the banks and from the public and must sometimes yield to necessity. But there is no reason whatever why a great country like the Dominion of Canada should have to make any pretense in these matters.

If our great railway is failing to carry itself, why should not that fact be made known to the public? It may be said that in the east they do not desire to have a bad showing for the road at the end of the year. I think that is a mistake. I think, that, in the interest of the maritime provinces the actual working operations and conditions of the road should be shown. No person in the western provinces desires to interfere for a moment with the operation of the Intercolonial line. No one wants to look upon it as a drag upon the country. We recognize its usefulness; we know what its object was, and we are prepared to stand by it. But, in the interest of the country, in the interest of the maritime provinces themselves, whose people, I am sure, are just as anxious to see the accounts properly kept as we are, a change should be made. Therefore, I never had any hesitation, any more than I have at this moment, in criticising fairly what I think is wrong on the part of the government in the management of this road. And, with regard to this matter of rolling stock and other items that will come up presently, I say, unless the hon. gentleman (Mr. Emmerson) makes a reform in the keeping of the accounts we shall never know, during the existence of this government, what that road is earning or losing.

Mr. HENDERSON. I gladly add my opinion to those that have been expressed by hon. gentlemen within the last hour or so as to the mode of keeping the accounts of the Intercolonial line. I have never hesitated in this House, in years gone by, to declare that I thought the time had arrived, even with the public accounts of the Dominion of Canada, that there should be no capital account. There can be no question about it that throughout the country many people are misled as to the actual results of the financial operations of any particular year. Last year, we were told that we had a surplus of some sixteen and a half millions of dollars; and, doubtless, many people in the country believed that such a surplus actually existed. But the public accounts tell a very different story, when we put the two accounts together and compare our total revenue and our total expenditure. I hold that it is not treating the public fairly to keep the accounts any longer in this way, because there is doubtless a very great misapprehension in the mind of the general public. Now, if that applies to the Dominion of Canada, it applies with at least equal force to the Intercolonial Railway. There are many people who believe that in bygone years, more particularly under the regime of the present government, the Intercolonial was a paying institution, notwithstanding the fact that during the first five years of the present government that road actually cost the country some $13,000,000 more than the revenue derived from it.

I say that condition of things ought not to exist. It is the people's road, and the people ought to know without any doubt what it costs to operate the road. I heartily approve the sentiments expressed here today, that some change ought to be made in the system of keeping the accounts of this road. At any rate, the public should be made aware at the end of every financial year exactly how much the road has cost, all told, more than the revenue derived from it. I am not one of those who want the Intercolonial to be a money-making institution for the country, I do not consider that is the purpose of public works. We do not expect to get profit from our canals, we do not expect to get profit out of the expenditure we make on the St. Lawrence river and other rivers, or out of the many harbours that we dredge and spend public money on—we do not expect to get a direct profit; the profit comes in an indirect way, and the same with the Intercolonial. It is the people's road, it is there for a purpose, and as long as it accomplishes that purpose without a loss to the country, I think the country will be satisfied. But the country will not be satisfied to find out in after years that we are loaded up with many millions of addition to our public debt on account of the operations on this road, when from time to time and from year to year they were given to understand that a surplus had been earned by the road. I trust the minister will give consideration to this question. I will hail with delight the time when a change will be made in the whole system, and when the people of this country who own that road shall know each year what the road is costing over and above the earnings. In no other way do I believe that the expenditure will be brought within the revenue. I think a change of system in the book-keeping on that road would be the first means of drawing attention to it and bringing the cost of maintenance within the scope of the revenue derived from the earnings of the road.

Drummondville—improvements at, $23,000.

Mr. FOSTER. What are the improvements at Drummondville?

Mr. EMMERSON. A new station, a platform, the purchase of land, and converting the present station into a freight shed. It is also required to put in a tank there, and we want additional sidings.

Mr. FOSTER. Now would the minister in this case, as a sample of what he ought to do in every case, read the details of the estimate, how much for each thing that is going to be done?

Mr. EMMERSON. Station and platform, $12,500; land, $2,000; extension and making new engine-house to meet additional sized engines, $1,500; freight shed, $1,500; building a tank, $5,500; electric wiring,

$500; additional sidings and cost of engineering, $4,500, making in all $28,000. We estimate the expenditure made this year at $5,000.

Mr. FOSTER. What is the cost of engineering?

Mr. EMMERSON. The whole cost of engineering, with advertising and inspecting, $1,500, leaving a balance of $23,000, $11,000 of which is a revote.

Mr. FOSTER. What have you there now?

Mr. EMMERSON. We have an old station that we have to abandon, but it will be used as a freight shed. We have to build a new station and acquire land for it.

Mr. OSLER. Surely charging a new tank to capital is going too far.

Mr. EMMERSON. It is not replacing one.

Mr. TAYLOR. Among the improvements that ought to be made at Drummondville, I think the hon. gentleman ought to either put in an improved system of switches, or to have better attendance. I was coming up on the 'Ocean Limited' in August last, and we stopped at Drummondville station. I was on the last car on the train, a pullman, and I stepped out on the platform and walked along in front of the train, thinking that when it started off I would jump on a forward car. I did so, and passed through the train, and as I stepped on to the last car on the train I noticed a switch and an engine standing on it. The switchman threw the switch too soon, with the result that the front trucks kept on the main line, but the hind trucks took the siding and came into collision with the engine. The car I was on, broke loose from the others and stopped instantly, and threw me out fully fifteen feet on my head in the ditch, injuring me considerably. I think that either the management of the switch was very bad, or there was a bad switch. I never brought it to the attention of the minister before; but I was so badly injured that two or three accident insurance companies I was in had to pay compensation for the time I was laid up. I think the management of the Intercolonial ought to handle its passengers better than that. Besides, there was the severe damage that was done to the pullman car that struck the engine. I do not know whether the circumstances were ever brought to the knowledge of the minister.

Now I want to say in reference to keeping the accounts of the Intercolonial, that if any business concern in this country—and this government is supposed to be a business government and to do business on business principles—if any manufacturing concern, of which we have hundreds in this country, if the president of any manufacturing concern were to come down to his shareholders with such a statement as the minister has just given the House, he would lose his job in twenty-four hours. Every manufacturing concern in the country shows a statement every year, there is a property account and a machinery account, showing the cost of running that machinery during the year. The repairs made to it, and so forth are not charged to the machinery account, they are always charged to the expense account, as it should be on the Intercolonial Railway; running expenses, wear and tear, all ought to be paid out of current expense. What will the capital account amount to now?—three or four times the value of the road, or the amount that a similar plant could be erected for to-day, because it has been the practice, and it is more so to-day than ever before, to charge every expenditure up to capital account. Business concerns keep their machinery in perfect running order from year to year, and in their annual report it is stated that their machinery is being kept in first-class condition and that the cost is being charged to current expenses. Then, if a business concern has profits there is a credit to wear and tear of machinery against that account every year. It ought to be the same way on the Intercolonial Railway. If you have earnings you should credit something for the depreciation of property every year. That is done by every business concern in the country.

Mr. EMMERSON. The hon. gentleman means a charge instead of a credit. So much depreciation of property should be charged up against the profits.

Mr. TAYLOR. It is credited to the machinery account. The machinery account is reduced in value ten per cent every year and charged to profit and loss.

Mr. EMMERSON. The result is the same.

Mr. TAYLOR. But the hon. minister does not take the expenditure out of current revenue, but charges it to capital as he has done at Drummondville in connection with the building of a new platform when there is already a good platform there. I notice in the estimates an item for new machinery for locomotive and car shops. This is the ordinary machinery required to repair something that has gone out of order, yet, it is charged to capital account.

Mr. EMMERSON. I can explain that to my hon. friend.

Mr. TAYLOR. In addition, I find semaphores charged to capital account and the replacing of a building which has been worn out in the service is also charged to capital account. There surely ought to be something taken out of current expenditure to replace a building and to replace ordinary rolling stock. This is a matter to which my hon. friend from Hamilton (Mr. Barker) referred a short time ago. A lot of new cars were bought to replace old ones which had been worn out in the service and they were

charged to capital account. I do not think it is in accordance with business principles to allow expenditures that ought to be chargeable to ordinary expenditure to be charged to capital account. These expenditures should be charged to capital account so as to let the people know at once how much this road is losing for them. If that were done the people of this country would soon say : Let us try running this road without a political head. Let us put it in the hands of a commission and run it on business principles. I do not know that the tariff of rates should be as high as those on other railways, although it is pretty high. I am a large shipper over that road down through that eastern country, and I find they charge good rates going down, whatever they may be coming up. Let the rates be fixed at a price to pay running expenses if they do not pay interest, but certainly the accounts, should be kept in a different manner.

Mr. FOSTER. In this case where you make a freight shed out of an old station do you charge the making of the change to capital account ?

Mr. EMMERSON. Yes, because the other building is still in existence as part of a capital investment and this is a new station, something that they have not had before. They have not had facilities there.

Mr. FOSTER. But, you have a station there now and you are going to build a new station.

Mr. EMMERSON. It is a freight shed now. There has been no such thing previously.

Mr. FOSTER. You called it a station.

Mr. EMMERSON. It was a so called.

Mr. FOSTER. Well, you are going to make some little changes in the station and call it a freight shed.

Mr. EMMERSON. No, it is absolutely a new station.

Mr. FOSTER. I am not talking of the station. I am talking of the freight shed.

Mr. EMMERSON. It is to be converted into a freight shed.

Mr. FOSTER. You say it is a freight shed now.

Mr. EMMERSON. No, it is a building that has been utilized as a station. We are going to utilize it as a freight shed.

Mr. FOSTER. How much work are you going to do on it ?

Mr. EMMERSON. There is very little work to be done on it.

Mr. FOSTER. And yet you charge that to capital ?

An hon. MEMBER. Do they charge a door knob to capital ?

Mr. FOSTER. Do they charge a door knob to capital ? Yes. Why, they charge for renewing a portion of a partition simply in some of the offices in Moncton. I am making a list. I will have a very interesting list when we take up this discussion again. Items of $7.50, $4 and $5 for little things that are necessary improvements are all zealously charged to capital account, small in themselves, but in the whole going up to tens of thousands of dollars.

Mr. EMMERSON. The machinery referred to by my hon. friend from Leeds (Mr. Taylor) is machinery that is required for the construction of engines. A session or two ago the hon. gentleman who was then the member for Jacques Cartier and who to-day represents that constituency (Mr. Monk) pointed out, that it would be in the interest of economy on the Intercolonial Railway that locomotives should be constructed, and he advised, and at that time the committee advised, that the work should be extended so that they could with facility and under economical conditions construct locomotives. In accordance with that idea a new erecting shop is about being constructed and new machinery to equip it is being furnished. This vote includes these provisions.

Mr. FOSTER. Here is another sample I have just got hold of. There was a baggage-room somewhere. It had been in use, I do not know how long, but it came to be necessary to remove that baggage-room a little way and they charged that moving, costing a few dollars, to capital account.

Mr. EMMERSON. Where was that ?

Mr. FOSTER. I will find out where that was.

Mr. BLAIN. I would like to ask the hon. minister to give the committee the benefit of his experience in respect to the manufacture of locomotives and cars under the management of the Intercolonial Railway as compared with those that have been purchased elsewhere.

Mr. EMMERSON. The year before last three or four locomotives were turned out from the workshops at Moncton. I have understood, and I make this statement on the authority of the practical men who run these locomotives, the locomotive engineers themselves, that they are really a class of locomotives superior to any that have been purchased either in Canada or out of it. That may be a natural prejudice on the part of the men in favour of the products of the Intercolonial workshops, but it is the testimony—given for what it is worth—of the employees of the road who are locomotive engineers. I have heard machinists say the same thing and these locomotives

are of a very superior class as I believe. They are very durable. They have a number of locomotives on the Intercolonial Railway that have seen pretty hard service, that have been in use for years and they are said to have proved the durability of the work that has been done there. They do not make any new cars as far as I am aware. They reconstruct them and in this connection I will deal with the question raised by my hon. friend for Hamilton (Mr. Barker) and I will be able to place him in possession of more information in connection with these operations. But, I think I can fairly say that during the past year there has been more of that reconstruction work in the workshops at Moncton and elsewhere on the Intercolonial Railway than has ever before been the case, and that increased efforts are being made in that direction.

Mr. BARKER. I said so in regard to the last four or five years.

Mr. EMMERSON. When another item is reached I will be able to furnish my hon. friend with additional data to confirm him in his judgment.

Mr. FOSTER. To what account are the wages charged when you replace light rails with heavier rails.

Mr. EMMERSON. I am told they are charged to revenue.

Mr. BLAIN. Were these four locomotives constructed at Moncton, built as cheaply as locomotives of the same kind and capacity could be purchased outside ?

Mr. EMMERSON. Until the past couple of years I do not think there was a strict account kept of the cost of each particular locomotive. Under the present administration of the mechanical department, I understand that such is being done. There have been no locomotives constructed during the past year, so that we have no record to go by. I have been informed by the superintendent of motive power, that engines can be built at Moncton as cheaply as they can be purchased elsewhere. Of course I am speaking generally, and I do not say that that takes into account interest on the expenditure for shops and machinery. My statement is simply from a conversation which took place on this very point, and I would not wish to be bound to exact data in that respect.

Mr. OSLER. What is the capacity of these shops ?

Mr. EMMERSON. I have explained that all the parts were not constructed at Moncton because we did not have the necessary machinery. Certain parts of the locomotives were purchased and brought to Moncton, but it is now proposed to get machinery to enable us to construct practically everything that goes into a locomotive.

Mr. OSLER. How many engines a year will you turn out ?

Mr. EMMERSON. We probably cannot turn out very many, but this machinery will enable us to begin.

Mr. OSLER. To expend money for the purpose of erecting shops with the idea of experimenting on turning out four or five engines a year is an absolute waste of money.

Mr. EMMERSON. That is the abstract truth, but I may say that we have large shops at Moncton, and while we are not going into the business of constructing locomotives, yet we intend to have machinery which will enable us to do all kinds of repairing. Incidentally, when the men are not engaged in repairing work their time can be devoted to the construction of new locomotives. I do not think it would pay to put up a shop for the construction of locomotives, especially when these shops would only have a limited capacity, but I do believe it would pay to do all our repairing and incidentally to construct locomotives.

Mr. OSLER. It will not pay to build them in any shape or way.

Mr. BLAIN. This expenditure is not in the interests of the people. It ought to be the policy of the government to establish a complete repair shop, manned to meet the requirements of the road, but to speak of purchasing machinery to enable men not otherwise engaged to produce new locomotives is a thing that no successful business man would think of. When the minister asked for this vote of $92,000 he surely must have had some carefully considered plan, and he should be able to tell us what results can be obtained from such an expenditure. Is it the intention of the government to commence the manufacturing of locomotives.

Mr. EMMERSON. I thought I made myself understood. It is not necessary for us to commence the building of locomotives. We have been building them, and it is proposed to continue, and incidentally to utilize the machinery which is absolutely necessary for the economical repairing of engines.

Mr. BARKER. With regard to the four locomotives which the minister said he had constructed, were they constructed on revenue account or on capital account ?

Mr. EMMERSON. They were constructed on revenue account.

Mr. BARKER. Then I presume the hon. gentleman is not able to give us the exact cost of these ?

Mr. EMMERSON. Oh, no.

Mr. BARKER. And there are no means by which we can ascertain whether the locomotives are being expensively built as

compared with the cost of purchasing or not ?

Mr. EMMERSON. No, only a general statement.

Intercolonial Railway—increased accommodation at Antigonish, $9,000.

Mr. EMMERSON. This is a revote. Last session $14,000 was voted for a new station. The total cost of the work will be $14,000.

Intercolonial Railway—improvements at Newcastle, $25,500.

Mr. FOSTER. This is a new vote, and we want a full explanation of it.

Mr. EMMERSON. This is for an enlargement of the engine house to meet the necessities in connection with the new locomotives.

Mr. BARKER. How many additional stalls ?

Mr. EMMERSON. There are eighteen stalls. This does not increase their number, but it lengthens them to enable us to accommodate the new and enlarged engines.

Mr. BARKER. How much does the hon. gentleman propose to use in enlarging the engine house ?

Mr. EMMERSON. $20,000. We propose also to put in a water service at a cost of $4,000, and the cost of engineering inspection is $1,500, making a total of $25,500.

Mr. OSLER. Are these charges in connection with your own men on the railway ?

Mr. EMMERSON. We have engineers employed in connection with capital expenditure.

Mr. OSLER. Will this be let by contract ?

Mr. EMMERSON. Yes.

Mr. OSLER. What is the cost of the engineering ?

Mr. EMMERSON. It is not given separately in the details furnished to me, but I am told that it is between $400 and $500.

Mr. OSLER. On almost every item which has been under discussion this afternoon, there is a considerable charge for engineering. I would like to know what engineers these are ?

Mr. EMMERSON. We have on the Intercolonial Railway what are called construction engineers. They are not connected with the maintenance of way engineering department ; but construction work required anywhere on the line or on the Prince Edward Island Railway is done under their supervision, and the time expended by them in connection with each work is chargeable to that work.

Mr. OSLER. How many such engineers have you employed, are they on the permanent list, and if so will you give us their names ?

Mr. EMMERSON. Including the draughtsmen there are about ten.

Mr. OSLER. If there are ten on new construction work, I think we are entitled to know their names and the salaries paid to them.

Mr. FOSTER. And where they are stationed.

Mr. EMMERSON. The headquarters of all of them are at Moncton.

Mr. OSLER. We would like to know what their pay is and under whose supervision they are.

Mr. EMMERSON. They are under the supervision of Mr. W. B. Mackenzie, the chief engineer, and comprise his staff. Some of them are draughting engineers, others are those who go out and supervise construction, make surveys and examinations. They are really a permanent staff. Their salary is apportioned and charged up against each particular work in proportion to the amount of time these officers spend on it. That system has been in vogue for a long time.

Mr. OSLER. They are appointed by the chief engineer ?

Mr. EMMERSON. I think most of them have been there for years. I do not know who made the appointments, I know that I have made none ; the staff was there when I went into the department. The members of the staff are :

W. B. Mackenzie	$3,000 00
A. C. Selig	1,400 00
R. W. Simpson	1,540 00
John Forbes	1,570 00
F. Beauleau	900 00
J. E. Brouseau	900 00
E. C. Cook	1,080 00
R. A. Frechette	1,080 00
M. McKean	1,080 00
A. Sincennes	960 00
A. G. Tapley	800 00
R. T. Wilkes	960 00

Mr. OSLER. Then each year about $15,500 of salary is charged to capital account ?

Mr. EMMERSON. Yes.

Mr. OSLER. They are all charged to capital account whether there is any work done or not ?

Mr. EMMERSON. I can assure my hon. friend that they are all at work. I personally know that.

Campbellton—improvements at, $12,000.

Mr. BARKER. That is a new vote.

Mr. EMMERSON. Yes, that is a new item. We are putting in there an ash conveyor, to cost $1,000 ; a sand drying apparatus and building, at a cost of $2,000 ; an extension of the water supply to cost $3,000, and we are putting up a building

for express and baggage and conductors that will cost $3,000 ; a freight shed, $1,500, and a building for car inspector to cost $300. Here comes in again the engineering item of $1,200, making a total of $12,000.

Mr. OSLER. It appears to me that the total of the amounts voted in this way for engineering in the different items come to more than the $15,500 for salaries.

Mr. EMMERSON. It is not all for engineers ; it includes the inspection work. There has to be an inspector on all these works employed by the day. The specifications are prepared, the plans are all made and it is advertised ; the contract is entered into, and the inspector employed and is paid per diem.

Mr. BARKER. Is he a regular officer of the department ?

Mr. EMMERSON. No, generally we employ some skilled man, usually in the community.

Mr. BARKER. As a rule, it is somebody who has had experience in that line. He may be a friend of the contractor if he is a local man.

Mr. EMMERSON. We generally succeed in avoiding that.

Mr. BARKER. The man who gets the contract is generally a friend of the government, and I presume the inspector is too.

Mr. EMMERSON. As a rule, the local men do not get the contract. I do not know how it is, but not in one case in fifty does a local man get the contract.

Mr. OSLER. Why does the hon. minister employ inspectors for this work when he has his own staff of engineers ?

Mr. EMMERSON. We want a man there by the day.

Mr. OSLER. But the minister has his own staff. Why, then, should he employ an outsider ?

Mr. EMMERSON. Because it is absolutely necessary. You would not want to have an engineer from Moncton on each of these works and staying on the work from early morning until night. We want a man who is a practical, skilled man, a man with knowledge of the actual work. He stands over the contractor and sees to it that the specifications are carried out.

Mr. OSLER. Pretty expensive men.

Mr. EMMERSON. I think it pays.

Intercolonial Railway—diversion of public road to eliminate a crossing at rail-level between St. Cyrille and Drummondville, $500.

Mr. MORIN. How about this crossing?

Mr. EMMERSON. That is a re-vote. The work is done under arrangements entered into with the municipality to change the roadway. It is a saving to the railway.

Mr. BLAIN. Does the municipality pay part?

Mr. EMMERSON. Yes.

Intercolonial Railway—additional sidings and spur lines, $135,800.

Mr. BARKER. I think we must ask the minister to give us detailed information about this, and I doubt whether he would be able to do it now.

Mr. EMMERSON. I can hardly do it before six o'clock.

At six o'clock, committee took recess.

After Recess.

Committee resumed at eight o'clock.

Intercolonial Railway—additional sidings and spur lines, $135,800.

Mr. BARKER. I would ask the minister, with regard to this item and all similar items, to give us as minute details as possible. We want to know where the sidings are to be constructed, and we want to know it, I may tell the minister, for this purpose : Eighteen months or two years hence we will be discussing the expenditures now authorized, and whoever will occupy our seats at that time will want to be able to refer to what the minister says to-day of the purposes for which he asks this money. I would like him, therefore, to tell us what sidings he proposes to construct, where they are, and the amount for each.

Mr. EMMERSON. Hon. members will see that last year we had a vote of $23,700 for spur lines, aside from the sidings. Now this year we have combined the two. There is required for a spur line from Fort Lawrence, in Cumberland county, to the government wharf, estimated to cost $15,000, it is 1·23 miles in length. We will require a spur line west of Rivière Ouelle which is estimated to cost $8,000, and is 1:45 miles long. We will require a spur line at Trois Pistoles, estimated to cost $16,500, length 2½ miles. We will require an extension of sidings at Jefferson's, to cost $1,000.

Mr. BARKER. What is the length ?

Mr. EMMERSON. We have not got the length, it is an extension.

Mr. BARKER. That is just one of the particulars we desire. You have a siding there now, we want to know how much you are going to add to it.

Mr. EMMERSON. We want to extend that siding in order to accommodate the longer trains we are now hauling over the Intercolonial.

Mr. BARKER. How many feet ?

Mr. EMMERSON. I have not here the length of these sidings.

Mr. BARKER. I would point out to the minister that before he authorized the application for this $1,000 to His Excellency the Governor in Council, the minister must have satisfied himself from the officials of his department that it was required. Now we want to know that, because we have been going on year after year authorizing millions of money for this road, and we have come to the conclusion it is about time a little effort were made, on the part of the opposition at all events, to know just what the money is wanted for.

Mr. EMMERSON. I am endeavouring to give that information. It is a mere matter of the extension of a siding. On the advice of the engineers, I authorized it to be put in the estimates, relying upon the accuracy of their judgment and their bona fides as to the estimated cost. It could not be expected of me that I would be able to judge personally as to whether their figures were correct, even though an exact limit were given. I hardly think it would be expected of me to figure out and compute in all circumstances, the exact cost. They make their report, and they say a certain amount of money is required for an extension of a siding. They state that the siding at Jefferson's will cost $1,000.

Mr. BARKER. Will the minister allow me to interrupt him ? What we object to, and what we have been continually objecting to for three or four years, is that the minister of the department—I am not finding fault only with the present minister—has asked for $150,000 or $135,000, as the case may be, for a lot of sidings. He may spend $500 on one siding, on this one for instance, instead of $1,000 and then, if he pleases, he may spend the other $500 on some other siding that he has not been authorized to spend it upon. We want to know exactly what is wanted for these sidings, how many feet the extension of each is and all about them.

Mr. EMMERSON. As far as the money that is appropriated now is concerned, the money in each particular item is applied to that item. It is not diverted. We discussed this matter last year, the items were gone over in detail and I have required this year a specific statement as to the cost of each particular extension of a siding. I have not asked particularly for the information as to the length. I suppose I might have done that. But, each particular item asked for, the details of which I am endeavouring to give, is for the particular work named and is to be applied to that particular work.

Mr. BARKER. I think we are entitled to know the length, but I do not wish to delay matters. I understand the hon. minister now to say to us that this vote of $1,000 is appropriated specifically to Jefferson's siding, and that if it is not used for that purpose it will not be used for any other purpose.

Mr. EMMERSON. No, it will not be.

Mr. BARKER. So that the Auditor General will be governed accordingly. The hon. minister will recollect the reason why I make the point. Two or three years ago money granted in bulk was taken by the minister of the day and used for purposes quite outside of the vote. The Auditor General then said that he thought it was wrong, but if the hon. minister puts himself on record now that this $1,000, if not used for this purpose, shall not be used for any other purpose, I am content.

Mr. EMMERSON. Certainly, we discussed the matter and I remember my hon. friend taking the same ground last year that he takes now. I was quite in accord with him and at that time in the supplementary estimates there were more particulars given in reference to these sidings than had been given in the main estimates. I had nothing to do with the preparation of the main estimates last year, but this year in preparing the main estimates particular amounts were assigned to the particular works for which they are asked and they will be so applied. At Monastery, there is to be an extension of the loading siding which is estimated to cost $300. At South River a loading siding is estimated to cost $800. Between New Glasgow and Woodburn there is a crossing siding required that will cost $3,500. At Pictou Landing, opposite the town of Pictou, there is a siding in connection with the shipments of coal which will cost $4,000.

Mr. BARKER. Why should that not be a specific grant ?

Mr. EMMERSON. Well, with the view of not multiplying the number of resolutions in the estimates, I have grouped these together in such a way that there will not be such a mass of detail or such a number of specific items as there otherwise would be.

Mr. BARKER. That is another point, if the hon. minister will allow me, that we called attention to last year. The hon. gentleman, for instance, in these preliminary estimates—I presume they are only a small part of what we will ultimately have before us—is asking for $2,676,000 in about three quarters of a page. The saving of a page or two of printing may be very important to the hon. minister, but it strikes me that if a little more expenditure was devoted to printing, say, about two pages more in these estimates, thus giving us such a detail as $4,000 for the siding at Pictou, it would be somewhat to the public advantage. I call

the hon. gentleman's attention to his own estimates in the canal department, because the hon. gentleman there does not object to giving us an item of $500, or $600. He takes up three or four pages with those estimates.

Mr. EMMERSON. I have in these given an item of $500.

Mr. BARKER. I know, but here are the whole estimates amounting to $2,676,000 given in about three quarters of a page. He cannot help what is past, but I appeal to the hon. gentleman that this point will not be overlooked in the preparation of the supplementary estimates. He knows exactly what I am driving at. He knows what has been said year after year here, and I ask him to be a little more specific in these things. It does not add any appreciable amount to the expense of printing. The cost of printing is nothing to the cost of the time that we spend in discussing the matter here and which would be saved if he would give us some details in these estimates.

Mr. EMMERSON. I had in view the idea of saving a little of the time of the committee in preparing the estimates in this way. I see what my hon. friend contends for. Then, there is the Glengarry loading siding which is estimated to cost $500. At Windsor Junction we want additional sidings and these will cost $10,500. Windsor Junction is the point where the Dominion Atlantic connects with the Windsor Branch Railway which is part of the Intercolonial Railway system and also connects with the Midland Railway which runs through the counties of Hants and Colchester to Truro.

Mr. BARKER. Will the hon. minister allow me to use that illustration to show what I mean ? He is asking for a vote of $135,800 of which he proposes to spend $10,500 for sidings at Windsor Junction. Gentleman from New Brunswick or Nova Scotia taking up these Intercolonial estimates and seeing that item of $135,800 cannot give any of us the slightest information, but if they were so set out as to show these items of $10,500 for sidings at Windsor Junction, $4,000 for a siding at Pictou and $500 for the Glengarry loading siding, these gentlemen would tell us at once that these were all right or the opposite as the case might be. I think some hon. gentleman told us last year that it cost us $28 a minute to carry on the proceedings of the House. We lose five minutes discussing a question of $500 when, if these estimates were printed in a little more detail, all these items might pass without observation.

Mr. EMMERSON. I think I would be willing to make almost any sacrifice of principle in order to save the time of the committee.

Mr. INGRAM. I would like to say that the hon. minister has given us a number of sidings that he is asking $59,500 to construct. He has $19,700 more than he wants, but he does not tell us how many sidings he proposes to construct with that money. The engineer, and in some cases the roadmaster, is sent out to make a report on the extent of the siding needed and its probable cost, and the railway authorities must have that information. Unless the House gets it we cannot know what the minister is doing with the money. We should know how many feet will be built each year, or else it would be quite possible to take this money and devote it to some other purpose.

Mr. EMMERSON. I will give the details. At Enfield, extension of siding, $200 ; Oxford junction, additional siding and loading ground, $7,000 ; Springhill junction, additional siding, $7,000 ; Aulac, loading siding, $1,000 ; Bloomfield, extending crossing siding, $1,500 ; Penobsquis, extending crossing siding, $4,000 ; Catamount, extension of siding, $200 ; O'Brien's crossing, three miles west of Beaver Brook, siding, $500 ; at a point two miles west of Bartibogue, siding, $500 ; at Bentpoint, crossing, siding, $4,000 ; at Beresford, extension of loading siding, $4,900 ; Dalhousie junction, extension of siding, $700 ; Flat Lands, crossing siding, $4,000 ; Causapscal, extension of siding and crossing siding, $4,400 ; Amqui, loading siding, $500 ; Cedar Hall extension of siding, $600 ; top of grade west of St. Moise, siding, $2,700 ; at Kempt, loading siding, $1,250 ; Rimouski wharf, branch siding, $500 ; Sacre Cœur, extension of siding, $1,500 ; top of the grade west of Bic, crossing siding, $3,000 ; St. Fabien, extension crossing siding, $2,000 ; St. Cimon, extension of loading siding, $750 ; St. Arsene, extension crossing siding, $500 ; Rivière du Loup wharf, branch siding, $4,000 ; Old Lake road, crossing siding, $4,000 ; St. Andre, extension of crossing siding, $1,200 ; Ste. Louise, extension of crossing siding, $1,250 ; Elgin road, extension crossing siding, $500 ; St. Jean, Port Joli, $1,200 ; Trois Saumons, $600 ; L'Islet, siding, $3,500 ; Cap St. Ignac, construction of a 'Y,' $2,500 ; St. Francois, extension of crossing siding and loading siding, $1,500 ; St. Henri junction, crossing siding, $3,500 ; siding for transferring cars from Intercolonial Railway to Quebec Central Railway, $500 ; St. Jean Chrysostôme, extension of loading siding and filling for loading ground, $1,500 ; Chaudière, curve siding, $500 ; St. Nicolas, siding, $500 ; Nicolet, siding, $1,100 ; Carmel, to extend loading siding, $1,500 ; contingencies covering items of engineering, &c., $7,950.

Mr. BARKER. The hon. gentleman has about forty-five items running from $500 to $18,000, and I am quite sure that he will see that there is very little use in the opposition criticising these estimates unless the gentlemen who represent the districts affected

have an opportunity of knowing what the proposed expenditures are. If we had in the estimates these particulars which the hon. gentleman has read in about fifteen minutes, they could have been given in about a quarter of a page. We would then have had the information in regard to every one of these items, and we would have known whether they were proper items from our point of view, or whether there was anything to criticise in them. As it is, we come here and have about one minute's consideration to give to each item. We cannot do our duty in criticising the estimates, and we may occupy time which is valuable and costly. The hon. gentleman will expend in a discussion of this kind more money than would build one of these short sidings.

Mr. INGRAM. It is unfair to expect this side of the House to approve of this vote with the limited amount of information which is given us. The minister might as well offer no information to the House at all. Every year similar votes are asked for. I think the parties who have recommended the construction of these sidings should have stated the number of feet to be constructed, and the supposed cost. If we had that information, the report of the minister of the following year would tell us exactly what had been done. Otherwise, we are in the dark, and the hon. minister might as well expect these items to go through without offering any information. I for one protest against it.

Mr. EMMERSON. The items are purely departmental, recommended by the engineer and the management of the Intercolonial, and I thought I would save the time of the committee by having them grouped together.

Mr. INGRAM. I think I can figure out exactly how these items have come to be placed in the hon. gentleman's estimates. Supporters of the government through whose constituencies this railway runs, go to the department and say, it is necessary, in order to meet the requirements of this particular district, that the sidings should be extended. The railway officials in the department ask: What will it cost? The answer is that it will cost $1,000, $2,000, $3,000, or $4,000, as the case may be. The item is recommended to Council, and it appears in the hon. gentleman's estimates, and when he is asked for the information in this House, he is not able to give it, because I venture to say that his officers have not figured out the number of feet or the estimated cost of the siding. That is the way it occurs to me that these items have been placed in the hon. gentleman's estimates; because if the engineer asked for any of these sidings, he would state the number of feet and give the estimated cost in a businesslike way. In one instance, where $59,000 is to be expended, the hon. gentleman has told us the number of feet; but in another case where he is going to spend double that amount, he cannot tell us the number of feet. There is not a railway company in America that would make a proposition of that kind to its directors without giving the particulars.

Mr. EMMERSON. My hon. friend has drawn on his imagination. I do not know what weight any assurance I could give to my hon. friend would have, but I can only say to him, and I say it with a full knowledge of all that my words import, that there is not a single item of all these sidings mentioned here that has been the subject matter of any representative of a constituency going to the officials and making representations in the way my hon. friend has described. More than that, there is not a single siding that has not been surveyed and been the subject matter of inquiry by the officials themselves; and I have no doubt that all these details as to the length of each siding are in the possession of the engineers. I have said very frankly that I have not that, that I had not asked for it; because, relying upon the reports of the engineers that a certain siding was required and that it would cost so much, I authorized the vote for it to be placed in the estimates. I am quite sure that was the case with all these items.

Mr. BARKER. Will the hon. minister be able to give us the lengths of these various sidings if we allow the item to stand until to-morrow?

Mr. EMMERSON. I would have to send to Moncton for that. I will furnish that information afterwards in connection with some supplementary estimates, so that it can be placed in 'Hansard.'

Intercolonial Railway—station at St. Moise, $2,300.

Mr. BARKER. When there are several items for the one place, as at St. Moise, they should be all placed together.

Mr. EMMERSON. This work is west of St. Moïse station.

Mr. INGRAM. How large a place is this?

Mr. EMMERSON. St. Moïse is a summer resort on the lower St. Lawrence, a growing place.

Mr. INGRAM. What is the population?

Mr. EMMERSON. I do not know the exact population, but I know that this station serves a very large back country. It is not simply the cluster of houses around the station that is to be considered, but the amount of traffic that is assembled there from the surrounding districts.

Mr. INGRAM. I think this is another case in which the minister is drawing on his imagination.

Mr. EMMERSON. I am familiar with the place; I have been there.

Mr. INGRAM. A freight shed was moved and extended there last year on which you spent $3,500; now you propose to spend $2,300. That is $5,800 at this very important place as the minister says, drawing on his imagination.

Mr. EMMERSON. I am open to all kinds of charges, but I do not want to be charged with drawing on my imagination when I have given the facts with respect to any one of these votes. There is a dwelling for the agent, which is necessary to have, and which will cost $1,000. There is also a station which is to cost $3,500 and grading and contingencies will cost $1,300, making $5,800. We have an appropriation for the current year of $3,500, leaving $2,300 to be voted for 1905-6.

Increased accommodation at Memramcook, $4,000.

Mr. EMMERSON. There was a vote last year for this.

Mr. BARKER. You are adding $3,000.

Mr. EMMERSON. Yes, we asked $5,000 last year. I explained at that time that this was not the full cost of the station. We will expend in this year $3,000 and it is estimated that that will leave $2,000 of a revote, and we will require $2,000 more in order to complete the total work which will come to $7,000.

Mr. BARKER. What is the nature of that work?

Mr. EMMERSON. We have a new station and we are converting the old station into a freight shed, and we also require to do certain grading. There has been practically no freight accommodation there and the freight shed will cost $5,000. We have to buy some land there which will cost $200 and the grading will be $1,000.

Mr. BARKER. You add that to the debt of the country?

Mr. EMMERSON. It is an improvement; a betterment. There are contingencies of $800, making a total of $7,000.

Mr. BLAIN. What would the revenue be in a station of that size ?

Mr. EMMERSON. It is a very important station.

Mr. TAYLOR. They all are.

Mr. EMMERSON. Yes, in their own opinion they are; it is so represented. The revenue is about $5,600. This is a large parish and a growing station. They are developing oil fields in that section of New Brunswick and an oil refinery is now under construction not very far from the station.

Mr. BLAIN. I notice that the hon. minister has several votes for converting the present passenger stations into freight sheds. Might I ask the minister if along the line of the Intercolonial, at places such as that under discussion, it is the policy to have the freight shed separate from the passenger station?

Mr. EMMERSON. That is the policy. It would be impossible and it would be very poor economy indeed to have a freight shed as part of a station.

Mr. SAM. HUGHES. It is a very common thing.

Mr. BAIN. It seems to me that where the revenue is less than $6,000 in prosperous years, a well constructed station with passenger station at one end and a freight station at the other would be all sufficient and would be very much more compact and very much better in the interest of the public than to have two separate buildings. I may be wrong about that, but in Ontario there are many stations of this kind at points where I am sure the revenue is very much in excess of $6,000 per annum. I was very much surprised to notice that the old shed is so often discarded and that we are now adopting the policy of converting passenger stations into freight sheds and erecting new passenger stations.

Mr. CROCKET. I notice that, there is no provision among these items for any improvement to the roadbed of the Canada Eastern Railway recently taken over by the government. Would the minister be good enough to state to the committee what the intentions of the department are with regard to the improvement of the roadbed of that line? I understand that when the minister proposed this purchase to the House last session he spoke glowingly of the earning prospects of the line, and intimated that if it were put in good condition and properly equipped it would pay. In the course of that discussion the hon. minister, questioned in the matter by one of the members from Toronto, said :—

It would not necessarily require to be up to the standard of the Intercolonial Railway, because it is not a trunk line and never will be. Without getting a report from an engineer, I have been over the road and am satisfied that $1,000 a mile will make it a splendid, up-to-date road, and in my opinion this road, in the course of next year or so, will be worth $1,000,000, especially considering the situation of the government as regards the Fredericton bridge.

I would like to know if it is intended to take up this work to any extent during the present season ?

Mr. EMMERSON. We have already been improving the Canada Eastern, paying out of revenue account. We have put in quite a number of sleepers, and that work will go on gradually. I made the statement last year that I believed $1,000 a mile, or about $100,000, would put that road in a condition to meet all the requirements. I

still stand by that. We are gradually improving it, but as it is paid for out of revenue, I do not ask any special vote. As to the necessities that may arise, I am not, at the moment, able to advise my hon. friend. The road now has better cars and engines and runs faster trains than before. This was done without great outlay because we could take from the Intercolonial Railway some of the smaller cars which are outclassed on the main line. In this way we are able to give the better service without material increase in the cost to the Railway Department.

Mr. CROCKET. Has the minister a report from an engineer showing what will be required to put the road in proper condition ?

Mr. EMMERSON. A report was laid on the table last year ; covering report of the engineer on the roadbed and bridges, reports as to the mechanical outfit and general conditions for the road. That return, which was furnished when the matter was under discussion, will be found to contain all the information.

Mr. CROCKET. I understood from the passage I have quoted that the minister at that time had not the report of an engineer. If there is no report, is it intended to have one during the present season ?

Mr. EMMERSON. If my remarks were made at the time the resolution was under discussion, there was a report of the engineer on the table of the House at that time. I was speaking about what I had gathered from going over the road.

Mr. MORIN. The minister said a while ago that he did not know the population of this place St. Moise. Would he like to know it ? Has he not the latest report of the population of that place ?

Mr. EMMERSON. I should be delighted to know it. I suppose I have the report, but it is not before me.

Mr. MORIN. The minister would like to know it ? Well, the census report shows that there are 908 people in that parish—not in the village, but in the parish.

Mr. BARKER. If the minister will allow us to go back for a moment I would like to refer to one of the details of this item of $135,800 for additional sidings and a spur line. That is an item of $18,000 for a spur track at Rivière Ouelle. 1 45-100 miles. This is at the rate of $12,000 a mile which is a fair estimate, perhaps, for a spur track. But, I find that while the hon. gentleman wants to spend $18,000 during the coming year on this spur track, he spent in the year ending June 30, 1904, $32,369. How much he has spent in the current year I do not know.

Mr. EMMERSON.

Mr. EMMERSON. No, that was spent on the branch line running down to St. Denis wharf, the Rivière Ouelle wharf.

Mr. BARKER. He told us that this was a spur track at Rivière Ouelle.

Mr. EMMERSON. Near Rivière Ouelle.

Mr. BARKER. That is one of the difficulties we get into by the hon. gentleman coupling them all up.

Mr. EMMERSON. I spoke of this spur track as west of Rivière Ouelle. The Rivière Ouelle branch is a short branch line connecting the Intercolonial Railway and the ferry wharf opposite Murray bay, a place that is frequented very largely by tourists. In the summer season we have a special sleeper which runs from Rivière Ouelle wharf through to Quebec with the American cities, so that tourists can get it at night.

Mr. BARKER. How far is the new siding from that ?

Mr. EMMERSON. It is over a mile west of Rivière Ouelle.

Mr. BARKER. Then, the hon. gentleman is building two tracks, one costing over $32,000 and the other $18,000 ?

Mr. EMMERSON. The Rivière Ouelle branch cost more than that.

Mr. BARKER. That is the expenditure for one year. These two lines are within a mile of each other.

Now surely we ought to have an opportunity of criticising expenditures of that kind. Who is there in the province of Ontario or in the west who can possibly criticise the estimates without that knowledge? If we had these details—I am simply making an illustration of what we want—if we had these details, any gentleman in that district could have taken the minister's estimate of $18,000 for a spur track at Rivière Ouelle, and he would have seen that we had been already, within twelve months, spending $32,000 within a mile of it. That would have been subject for criticism. As it is, though the hon. gentleman introduced a general blanket resolution for $135,000, and asks us, because he has confidence in his officers who tell him that they want $135,000, to vote it without a word.

Subway near St. Fabien, $7,650.

Mr. EMMERSON. This amount is required for a public road near St. Fabien station, which is located about 1,000 feet east of the station. There is a very steep hill there, and the people of that section coming down this steep hill are brought down to the track crossing, and that track crossing is very near a large snow shed. It is a very dangerous crossing. The people of that section sent in a petition representing the conditions, and I had them inquired

into by officers. They asked that the road, instead of stopping at the foot of this hill and crossing that track at a very dangerous point, should be extended onward where there is an embankment, and that there should be an under crossing, or a subway, built under the embankment, thus avoiding the dangers incident to that particular crossing. It crosses the railway at a point where everything is hidden from the approaching traveller until he is on the track.

Mr. BARKER. Just like this item of $125,000 which hides everything.

Mr. EMMERSON. I congratulate the hon. gentleman on his apt remark. But the hiding in that case was unintentional, and the hiding at this station inevitable.

Mr. BARKER. Going back to the previous item—in 1903-04 the hon. gentleman spent for a spur track at Rivière Ouelle $32,000, he is now asking to spend next year $18,000 at a siding which, he says, is a mile away from it. I do not know what he has spent in the twelve months intervening between these two expenditures; he may have expended $20,000 for aught we know. But how is it that we are expending at two places within a mile of each other so much money? What is the reason for it?

Mr. EMMERSON. The Rivière Ouelle spur line, as the hon. gentleman calls it, was not a spur line at all, it was a branch line, We have an engine there connecting the Intercolonial with Murray Bay. An amount was voted for it by parliament two years ago, and the work was let by contract. Parliament also voted a sum of money for a large breakwater or wharf, which is made a landing place for a ferry. It is about a year and a half since that branch was completed, and during the last two seasons it has been in operation as a branch of the Intercolonial. Last year $32,000 was paid out in a final adjustment of the contract.

Mr. FOSTER. How much did the whole branch road cost?

Mr. EMMERSON. It was before my time. I do not bear it in mind.

Mr. FOSTER. What is the length?

Mr. EMMERSON. About seven miles.

Mr. FOSTER. You built a branch line of seven miles in length down to the St. Lawrence.

Mr. EMMERSON. Yes, I think some call it Rivière Ouelle wharf, others call it the St. Denis wharf. Now the people of Murray Bay are entirely shut out from any railway communication other than that afforded by the Intercolonial and this ferry across the St. Lawrence. The Murray Bay people and Charlevoix people are shut out from railway communication. This year an attempt was made to keep the ferry open during the winter season so that the people on the north shore of the St. Lawrence might have communication with the outside world.

Mr. TAYLOR. We want to know why the minister is building another spur within a mile of it, running down to the same Rivière Ouelle.

Mr. EMMERSON. No, this is a spur line in connection with the loading and gathering up of lumber for the benefit of traffic on the Intercolonial. It is over a mile I think beyond Rivière Ouelle.

Mr. TAYLOR. What do you want the spur line there for?

Mr. EMMERSON. For the purposes of Intercolonial traffic.

Mr. TAYLOR. It is a mere siding on the Intercolonial, not a spur running out into the country?

Mr. EMMERSON. It is a spur siding, not a branch line.

Mr. SAM. HUGHES. Does it run to anybody's mill?

Mr. EMMERSON. Yes, Mr. Price has a mill there, I think it runs to more than one mill. It is 1·45 miles long.

Mr. FOSTER. Did the minister say anything as to the increased traffic which has taken place over the road since the branch line has been built, and the wharf with which it connects? I suppose the wharf was not built by the Intercolonial Railway.

Mr. EMMERSON. I think the wharf was built some years ago, and that it has been there quite a number of years. It was not built by the Intercolonial Railway, but the Intercolonial Railway connects with it. It was a Public Works Department construction, and built quite a number of years ago for the benefit of the Rivière Ouelle people. They had packets running over there. Now they have steamers, and by reason of the fact that the Intercolonial Railway has made connection, the tourists that go to Murray Bay are enabled to reach there much more quickly, and I think there has been quite an influx of traffic.

Mr. FOSTER. Will the hon. minister look that information up, and give us the total cost of the six miles and a statement as to the growth of traffic within the last two years? What is the policy of the Intercolonial Railway in reference to branch spurs of a mile or a mile and a half or two miles in length? For instance, I am a manufacturer and have a mill a mile or two from the railway; I am anxious to get my products on to the road instead of hauling them by wagon or by sleigh, and I make application to the Intercolonial Railway to put in a spur—what is the policy of the railway in that respect?

Mr. EMMERSON. I am informed that the policy in connection with such sidings

is that the grading is done by the Intercolonial Railway and that the other parties pay so much for the rails.

Mr. FOSTER. The railway grade and the parties interested pay for the rails ?

Mr. EMMERSON. Yes, they make some contribution. There is an arrangement reached between the parties. I think it is uniform and that it is open to all. I am not sufficiently acquainted with the details to make a definite statement as to this point.

Mr. FOSTER. Is that what has been done in this case ?

Mr. EMMERSON. There has been a contribution, I think, in this case.

Mr. FOSTER. The hon. minister might look that up and give us that information too. There must be a general policy in connection with this work all through.

To increase accommodation at Amherst, $28,000.

Mr. FOSTER. What is this ?

Mr. EMMERSON. This is in connection with the Amherst station and yard. The Intercolonial business at Amherst has grown with wonderful rapidity. The establishment of the car works there and quite a number of other kindred industries, the new foundry and machine shop and the enlargement of the Robb engineering works, together with a new woollen industry and several other establishments, which I cannot at the moment recall, have added very largely to the traffic of the Intercolonial Railway at that point. The railway has under consideration the question of enlarging the yard and in some way improving the conditions as to the station accommodation. I do not know just exactly what form finally this will take. I was personally in company with the general manager, who was called to look over the situation, but as to how we can remedy it I am not in a position at this moment to say.

Mr. FOSTER. But some work has been done and some money has been expended ?

Mr. EMMERSON. That was in the outside yards. We have extended the yards and sidings away out towards Nappan. There is such a congestion of streets and houses encroaching on the railway, and there was originally such an insufficient quantity of land reserved for the purposes of the railway, that it is now found necessary to have all the shunting sidings placed at a remote distance from the station. The increase in the number of trains has proved the necessity of an additional track. Quite a number of passenger trains meet there during the day, and we will certainly require an additional track at that point. But there is not width enough between the station and the car works of Messrs. Rhodes, Curry & Co., Limited, which are directly opposite. There is back of the station quite a plot of land which belongs to the Intercolonial Railway. It has heretofore been utilized by the citizens of Amherst as a street, and the proposal is to have the station moved back on that plot in order to make it possible to have an additional track. We propose having, in that connection, umbrella sheds and a concrete platform. The traffic earnings of the Intercolonial Railway at that point, I think, last year were upwards of $280,000. I know there was a marvellous growth, and certainly the conditions would require some improvement.

Mr. FOSTER. How much is it proposed to expend ?

Mr. EMMERSON. I am now asking for $28,000, of which $15,000 is a revote.

Mr. FOSTER. I know what you are asking for. How much is it proposed to expend ?

Mr. EMMERSON. The total amount of the proposed expenditure is $44,000. It is estimated that $16,000 will be expended this year, leaving a balance of $28,000.

Mr. FOSTER. The hon. minister says that he does not know what he is going to do.

Mr. EMMERSON. To a certain extent. I do not wish to be misunderstood by the committee. We propose double-tracking the line for 3,500 feet. There is no question as to that. We propose an improvement in the yards, and in the lumber yard connected with the station we propose an expenditure of $8,000. We require some large cattle pens, because of the maritime winter show being held there, a show such as they have in Guelph every year. That involves an expenditure of $1,000 ; and we want to improve the water service, which will cost $3,000 more. We want to have an engine-house, which will cost $1,500. We must keep a shunting engine at Amherst all the time in consequence of the increased business. The concrete platforms and sheds are estimated to cost somewhere in the vicinity of $5,000. As to what shall be done in connection with the station, it has not been determined, but of this $44,000, we have asked for $15,000 towards that.

Mr. FOSTER. I acknowledge what the minister has been saying with reference to Amherst. Amherst is a busy little town, there is no doubt about it and it is growing. One thing that strikes me about a good many of these estimates is that the minister is entering into an expenditure without a defined plan as to how far he is going. He has had his officers I suppose to thoroughly investigate the whole matter, make their plans and base their estimates upon these plans, and he comes to the House for a vote, but before the vote is taken we should have some definite statement as to the entire cost. So much money is asked for now, but the

minister is not sure what it will run into before he gets through. The trouble of the whole matter is that the money seems to come very easily ; all the minister has to do is to ask parliament for it and get it——

Mr. EMMERSON. That is not easy.

Mr. FOSTER. It is comparatively easy, but it will never be so easy again as it has been, so long as some of us here are members of the House. The minister will have had put through about $2,000,000 to-night, and the information concerning it is all contained on one page of this small book of the estimates. What has caused delay to-night, has been that those who have been criticising have been unable to get information. I hope that the minister next year will be able to tell us the expenditure on every siding and that he will set it down in the estimates together with the length of the siding, so that we may be able to know what the vote is asked for. Then there will be no delay. But to bring down an item for $132,000 and to oblige us to find out after two hours work that there are fifty or sixty different sidings scattered all over the whole Intercolonial, which are to be built out of that money, is the cause of a great deal of trouble. The minister would consult his own convenience and help us very much, if, in making out his estimates next year he would detail all these different things. Here we are with a railway which has a very large deficit, which has a very large capital expenditure, which has run the country into large expense already, and yet to listen to the minister asking for thousands of dollars for works all over the most settled parts of that road, one would almost come to the conclusion that the people have had no facilities for business in all these years, and that during the last year or two the minister had come to the conclusion that some sort of accommodation should be given to all these places. No one will dispute that there should be such accommodation as the business requires. What we would like to know is that the business of the place warrants the expenditure. What is the rule that the minister observes with reference to these ? I suppose requests come to him from the inhabitants of the different places ?

Mr. EMMERSON. From boards of trade and town councils and members of parliament. I had a conference with the board of trade at Amherst for instance.

Mr. FOSTER. All these are legitimate sources whence these requests should come, but after all the requests are in I suppose the minister has reports from his officers who take into account traffic considerations only as a basis. In some cases it would be well for us to have these reports so that we may see just what the officers who are always non-partisan and look towards the traffic of the railroad rather than anything else, recommend with regard to these different things.

Semaphores at stations, $1,000.

Mr. BARKER. Has it occurred to the minister that he is seriously asking parliament to grant him 60 cents a mile on the Intercolonial for semaphores ; a railway that has been in operation for fifty years ? Does he realize that he is charging this to capital account? Surely that is running the capital account mad. It is an outrage that this item should be put on the estimates as a charge against the capital of the country. The line must be drawn somewhere, and I ask the minister to strike out this item. If it is not withdrawn I shall take some opportunity on concurrence, or at some other time, to have a vote of the House on this question.

Mr. EMMERSON. These are semaphores at stations where they have never had them before. The railroad must be increased in value to that extent, and as such it is a betterment. This is a vote that goes on year after year. It is not replacing something, but it is creating something that has never been on the railway.

Mr. BARKER. A few years ago I found an instance where a bucket at one of the intercolonial stations had been charged to capital account. Somebody wanted to do some whitewashing with the idea of improving the station, and so a water bucket was added to the debt of Canada. This vote is something on a par with that. I shall take the sense of the House on the question as to whether that sort of thing is capital expenditure or not.

Mr. PATERSON. Would not the hon. gentleman draw a distinction in the case of absolutely new semaphores——

Mr. FOSTER. It was a new bucket too.

Mr. PATERSON. I do not remember about the bucket, but there is a distinction between a new semaphore erected for a new station and a semaphore erected to replace an old one which originally had been charged to capital.

Mr. FOSTER. Supposing there were a ton of axle grease required on the railroad more in 1905 than in 1906, would that be charged to capital account ?

Mr. PATERSON. There is no analogy.

Mr. FOSTER. It runs much easier.

Rolling stock, $698,500.

Mr. OSLER. I would ask the minister to allow this item to stand until he gives the House the information which I asked for this afternoon, namely, the expenditure on capital account on the Intercolonial Railway from 1896, and previous to that date if he wishes, the amount of rolling stock that has been charged to capital account since 1896, with the amount of rolling stock that

was in use in 1896 and the amount that is in use now, and the number of engines and cars under the various classifications. We cannot discuss this item without that information.

Mr. INGRAM. And in addition to that, the rolling stock that was not in a proper state of repair on the 30th of June last, and on the 1st of January last.

Intercolonial Railway—improving grades on line, $22,000.

Mr. EMMERSON. This is to improve the grades on the line between Daveluyville and St. Wenceslas. In connection with this work it will be necessary to build two arch culverts. The grades will be improved at two points. At one point, two miles west of Daveluyville, two reverse grades of 1 per cent—one 600 feet long, the other 700 feet long—will be taken out, and the track made level. A bridge of 21 feet span will be replaced with a 10-feet arch culvert. At the other point, one quarter mile west of St. Wenceslas, two reverse grades—one 0·75 per cent, 1,000 feet long, the other 1·12 per cent, 100 feet long—will be replaced by 1,000 feet of level track and 1,000 feet of a 1 per cent grade. A bridge of 25-feet span will be replaced with a 16-feet arch culvert.

Intercolonial Railway—extension to Sydney Mines, $50,000.

Mr. EMMERSON. This is to connect the Intercolonial with Sydney Mines from the landing at North Sydney. Sydney Mines has recently forged ahead, the Nova Scotia Steel Company having enlarged its works there.

Mr. FOSTER. What is the distance ?

Mr. EMMERSON. It is about two and three quarter miles.

Mr. FOSTER. Is all the expense being borne by the country ?

Mr. EMMERSON. Yes.

Mr. OSLER. The usual custom, where a railway builds a siding to a mine or a mill, is for the mill owners or mine owners to put up the money.

Mr. EMMERSON. Sydney Mines is a large town. It has a mayor and all the modern equipment of a town. Its population is about 7,000.

Mr. OSLER. As the minister mentioned Sydney Mines and the works of the Nova Scotia Steel Company, I thought the extension was to its mines. At any rate, what I say applies to several of these items. The usual custom is to require those who want a siding put in to a mine or a mill to deposit the money or pay a part of the cost, which is rebated to them from freight ; so that the railway company is not out of pocket if the enterprise is not a paying concern to the railway. I think that plan ought to be adopted by the Intercolonial Railway absolutely. If not, pressure is likely to be brought to bear, from political interest, to have lines built to mills or mines that will never pay the cost.

Mr. INGRAM. Has North Sydney anything to do with this extension ?

Mr. EMMERSON. No. This is two miles or a little over beyond North Sydney.

Intercolonial Railway—steel rails and fastenings, $380,000.

Mr. BARKER. Where is that to be expended ?

Mr. EMMERSON. We obtained last year $495,000, and it is estimated that this $380,000 will provide for the laying of 200 more miles of the Intercolonial Railway with the heavier rails.

Mr. OSLER. The cost of new rails is how much ?

Mr. EMMERSON. The cost at the present place would be upwards of $30 per ton.

Mr. OSLER. This is only the difference between the cost of the new rails and the value of the old rails as taken up, as the minister stated this afternoon.

Mr. EMMERSON. Yes.

Mr. OSLER. How many tons of rails is this going to supply ?

Mr. EMMERSON. About 25,000 tons.

Mr. OSLER. That is $750,000, or at $28 per ton, $700,000. The minister is asking $380,000 for it.

Mr. EMMERSON. I am putting in the total of 80 pound rails and fastenings which include the angle plates, bolts, nuts and tie plates. The total is $822,415.49.

Mr. BARKER. That includes the fastenings without labour ?

Mr. EMMERSON. The labour is provided out of revenue.

Mr. BARKER. There is no doubt about that ?

Mr. EMMERSON. So I am informed by the engineer who ought to know. I know that in the estimate before me there is no charge for labour. This is, less the credit of the rails that are taken up as well as the angle plates and nuts, $442,490. This leaves a balance of $379,925.45 which for greater ease we call $380,000.

Mr. OSLER. Then you are charging the bolts and fastenings to capital ; there is no allowance for the old bolts and nuts.

Mr. EMMERSON. We are allowing for the old ones taken up.

Mr. BARKER. If the minister was taking up a 66 pound rail and replacing it with a new 66 pound rail how would he charge it?

Mr. EMMERSON. If the old rail were entirely worn out it would perhaps be properly charged to capital account. I do not know the custom, I have not had that particular phase of the question presented to me.

Mr. BARKER. But the hon. gentleman has been in the House for three or four years when this very question was being discussed.

Mr. EMMERSON. Oh that is hypothetical.

Mr. BARKER. No, it is a practical question. If the hon. gentleman were replacing 66 pounds of old scrap rail with 66 pounds of new rail, the whole expense would be borne by his revenue. Why does he charge 80 pounds when he is only putting in, and actually improving his track, by 14 pounds of rail.

Mr. EMMERSON. We give credit for the 66 pounds.

Mr. BARKER. That is scrap.

Mr. EMMERSON. It is not worn out, we sell it for $20 a ton.

Mr. BARKER. But the hon. gentleman knows that the charges are all alike. If he takes up 20 pounds of old rail a large portion of it must be scrap as on every railway. Some of it may be good and may be sold as second-hand rail. I believe that some of it is placed on the Prince Edward Island Railway and some of it sold, but a large part of it must be scrap. The hon. gentleman puts in an additional weight of 14 pounds and instead of charging to capital only this 14 pounds he charges the whole 80 pounds to capital and gives a credit only for the scrap. The hon. gentleman knows perfectly well and Mr. Pottinger his general manager will tell him, that he makes money and improves his revenue at the expense of capital by every 80 pound rail he puts in. When I asked Mr. Pottinger the year before last whether as a railway man he considered he was justified in charging the 80 pound rail to capital, his answer was : Why should I not do so if parliament votes the money ?

Mr. EMMERSON. We are asking a vote to relay the Intercolonial Railway with 80 pound rails. We are taking up the lighter class of rail and for the 200 miles taken up we allow $20 per ton. The difference is therefore a charge against capital account.

Mr. FOSTER. What is the weight of the present rails—66 pounds ?

Mr. EMMERSON. We are taking up 67 pound rails.

Mr. FOSTER. If the minister went into the market for 67 pound rails what would he pay per ton ?

Mr. EMMERSON. I presume he would pay the same price per ton. There is very little difference between the heavier and the lighter rails. I think, according to quotations which I have seen recently, they are practically the same.

Mr. FOSTER. What would be the proportion of mileage which the two classes of rails would lay?

Mr. EMMERSON. We are simply charging for the 200 miles that we have laid down. For the 80 pound rail the tonnage per mile is 125·7 tons to the mile and for the 67 pound rail 105·2 tons to the mile.

Mr. INGRAM. I understand that the minister proposes to lay about 200 or 250 miles of rail for which he will pay about $700,000. Last year he laid 161 miles of rail. Will he give us an idea of the cost of the 110-pound rail he laid ?

Mr. EMMERSON. These were special rail, purchased from the Chignecto Marine Railway Company, a rail that was brought to Canada for the purpose of the ship railway. The Intercolonial purchased them last year, I believe. I am not personally familiar with the transaction, as it took place before I had any connection with the department.

Mr. INGRAM. Do we understand that the minister has a big stock of these rails on hand ?

Mr. EMMERSON. They are all laid.

Mr. OSLER. The only amount that ought to be charged to capital account in this connection is for the increased weight of the new rail. The track was there, laid with 67-pound rails, which are replaced with 80-pound rails. There can be no increased value except in the increased cost of the heavier rails. The minister says that for these 250 miles, he will buy 25,000 tons at $28 a ton, which will amount to $700,000. He gives credit at the rate of $20 a ton for rails that are replaced. They are less cost —they would be lighter. Twenty dollars a ton for twenty-five thousand tons would amount to $500,000, and the difference between that and $700,000 is $200,000. There is no possible excuse even on the minister's own statement for charging to capital account more than this difference. The minister is taking $380,000, which means that $180,000 is an absolute mis-charge, and, to that extent, his statement is misleading. That $180,000 should come out of the earnings of this railway as submitted to the House. There is no excuse ; no explanation can be made ; it is an absolute falsification, so far as the revenue and expenditure of the railway is concerned, if these figures are allowed to go through and this sum to be charged to the capital expenditure of the railway.

Mr. EMMERSON. This is the course that has always been pursued——

Mr. BARKER. Not at all.

Mr. EMMERSON. I beg the hon. gentleman's pardon——

Mr. BARKER. I beg the hon. gentleman's pardon. I went into that three years ago. Hon. Mr. Blair made that assertion and I proved by producing the reports that under Hon. Mr. Haggart not only was no amount charged to capital that might not properly be so charged, but he charged to revenue even the increased weight of the rail, which he was not obliged to do.

Mr. EMMERSON. My information is that that was the rule, as applied to the Intercolonial. Whether there were such replacements of rails as far back as Hon. Mr. Haggart's day, I do not know.

Mr. FOSTER. When the hon. minister says that was the rule——

Mr. EMMERSON. I say it has been the rule on the Intercolonial Railway.

Mr. FOSTER. Under Hon. Mr. Blair ?

Mr. EMMERSON. And before Mr. Blair's time I believe.

Mr. BARKER. That was refuted absolutely.

Mr. EMMERSON. My information is different—I cannot speak of the matter personally. My hon. friend (Mr. Barker) makes the statement the other way. I am bound to accept his statement, but I can also rely, I think, upon the information given to me ; and that information is that this is the rule. I do not know what the rule is on other railways. My hon. friend from West Toronto (Mr. Osler) is a director of the Canadian Pacific Railway, I believe, and would know what the rule is on that road. That company may not have been laying the heavier rails for many years, and perhaps are not put to the question of how to make this charge.

Mr. OSLER. The minister, I think, will know that I have always had a great reluctance in speaking on any subject in this House, to back up my opinions by saying what the Canadian Pacific Railway or any other company had done. I have great reluctance in mixing up with the discussions here, knowledge which may be said to come to me personally. But I may say that I do not believe there is a railway on this continent that, if it had an item like this before it would charge to capital as much as I am suggesting now should be charged—the difference between the weight of the rail taken up and that of the rail which replaces it.

Mr. BARKER. I would add that if the minister will look into the question, he will find that in the first year of Mr. Blair's administration of the Intercolonial, he charged this item of steel rails just as Hon. Mr. Haggart, his predecessor, had been charging it, and as we say it ought to be charged. It was afterwards that Mr. Blair changed his system, and began to save his revenue by charging expenditures up to the debt of the country that should have been paid out of ordinary working expenses.

Mr. FOSTER. The statement made by my hon. friend from West Toronto (Mr. Osler) was a very strong and very clear statement. If that statement is correct, and if the basis, the arrangement laid down by the minister himself is correct, that all that is to be charged is the added cost, then the two corroborate each other ; and if these two be true, the practice of the minister, as exemplified by the vote he is asking here to-night, is dead against both these positions. Then the minister falls back on the assertion that it has been the practice to filch—there is no other name for it—from capital in order to save the appearance of a deficit or diminishing of the revenue. He says it has been the practice in the Railway Department. Now, we want to know the facts in that case. Has it been the practice to do that ? How long has it been the practice to do that, and is the statement that my hon. friend from Hamilton (Mr. Barker) makes a true statement or not, that it was not the practice under the Minister of Railways of the previous government ? I think this is a very important matter. It has been talked of in this House in committee over and over again every year, and I think we have come to a point now where we must insist that attention should be given to it, and I think it is better that this item should stand to-night. The minister can inform himself from his department, he can take the time to do so, and give us the information, and let us come down to an honest and proper basis for making our estimates as regards capital and revenue. Now, if the minister will do that, we will get at least what was the practice of the department. He has an idea that it was so and so ; he is not supposed to know exactly what has been going on there all the time, because he is new to his position ; but he has officers who can give him that information, and a little search would enable him to state authoritatively on that point. This is a striking case. Now, let us know what we are going to do in the future. I, for one, have a strong opinion that we ought to make honest estimates, no matter where the deficiency falls.

Mr. EMMERSON. The facts are entirely before the House. It might be interesting to know, as a matter of research, what had been done in the past. I know that last year the item of $495,000 was voted in this particular way. I have followed the precedent established at that time so far as I am concerned. In the previous year, when

the estimates went through, the present Minister of Finance was the acting Minister of Railways. At that time there was a discussion the same as at present. There is no misunderstanding as to the application of the vote. Everybody knows for what purpose the money is asked and the circumstances under which it is expended. It seems to me that, under these conditions, this vote should pass as it is now. So far as I am personally concerned, I shall certainly take into consideration the features of the case presented by my hon. friend, who speaks with knowledge of what the Canadian Pacific Railway and other railways do. There is one thing about it; according to the views I hold with respect to the Intercolonial, I am quite prepared to insist that every dollar should be rightly placed. I am not afraid of the items appearing in the revenue charge if it is proper to place them there, and I do not want to put them in capital account if they do not belong there. Those are the views I hold. But this course was followed last year; there was not a very full discussion, certainly not so full as we have had to-night. I would ask that this vote be allowed to go as it is, and, so far as I am concerned and have anything to do with the matter in the future, I shall deal with it from the standpoint of inquiring into the actual facts. I am sure I shall be borne out, not only by my friends opposite, but by our friends on this side.

Mr. FOSTER. The minister has been frank, and, so far as he has stated his position, it is satisfactory to the committee. But here is the point with me. Has the minister himself any doubt at all that upon this single item which is now under discussion the facts of the case are as stated by my hon. friend from Toronto (Mr. Osler)? Has he the least doubt in the world that he is asking for capital to do more than to replace the road in the exact position it was in before? Now, he has an answer to that or he has not. If his answer is that it appears from that reasoning and from the facts that he is taking from capital to run the road, then I think he is bound to take the matter into consideration and make his decision before this passes, no matter what the practice has been in the past. We ought to stop the very moment we are agreed that the practice is as bad as it has been proved to be in this particular instance. The minister would not ask us to give him a sum on capital account for the payment of his conductors, for the payment of his bills for coal for running the road, or for anything else than that which went absolutely into running expenses. Now, here is an item which runs up into the hundreds of thousands of dollars, in which, on a showing which is incontestible and as to which there has been no answer, he is taking about $200,000 out of capital and is throwing it into the running expenses of the road, taking $200,000 off this vote, and the minister is able to put on heavier rails in place of lighter ones, and have his roadbed, his track and everything just as it was before, and the difference between the cost of the two is all that he ought to take out of capital for that purpose. Surely there does not seem to be any doubt about that. Although we acknowledge the fairness with which the minister has met us, yet I believe it would be better for him to allow this to stand and to make up his mind with reference to the principle. It is no disparagement at all to a minister, when he finds that he is asking for something that he ought not properly to ask for, and if, after looking into it, he finds that it is not the right way, no matter what others have done, to say that he proposes to do what is correct in the matter from this time on, and not to step off a $200,000 platform of error on to his platform of true and honest estimates that he is going to rear after this particular vote is through. I want the minister to understand that this is a matter which I think is vital. We might just as well take our stand upon it and fight it out now on both sides of the House as to have it going on and being a perennial sore from year to year. I think the minister agrees with me in that respect, that he ought to make honest estimates.

Mr. EMMERSON. I certainly agree with my hon. friend that we should make honest estimates, but I am not convinced that the statement of the hon. member for Toronto (Mr. Osler) is correct as to the way in which these estimates should be prepared. Now, it seems to me, from my standpoint at least, that in this instance, where an allowance is made for rails, and there is a difference in their value, as respects the worn rails, a sufficient allowance is borne by revenue, and the difference of the $380,000 should be borne by capital.

Mr. FOSTER. The hon. minister is shifting his ground.

Mr. EMMERSON. There is no deception in respect to the matter. It is quite apparent on the face of it as to what is to be done, as to the actual facts and circumstances of the whole transaction and one can form a judgment in respect to them. It seems to me that as it stands the cost of the 80 pound rail, less the credit of the other rail, is a fair charge against capital account.

Mr. FOSTER. Suppose that the hon. minister could not sell these 67-lb. rails that he has taken up for more than $10 a ton, would he consider it right to take the difference between $10 and $28, calculating it out as we have calculated it here to-night, and charge that to capital? Suppose he could not sell these rails for more than $5 a ton, would he consider it right to do that? Suppose he could not sell them for a dollar a ton, that they went just as scrap and poor at that, would he consider it right to take the

balance out of capital? Why could he not sell them for more than $10 or $5 a ton? Simply because they had been worn out in the service of the railway. When he was putting on new rails what is he doing? He is making provision for worn out stuff and provision for worn out stuff must be borne by the current revenue of the railway and not by capital. There cannot be any escape from that reasoning, surely. We are not trying to make arguments one against the other and seeing who will get the best of it. That is not it. We are trying to come at the truth. Why do you sell these old rails at $20, for I am coming to the hon. minister's own price? You sell them at $20 because they have been on the Intercolonial Railway for a number of years, they are worn and they are not worth more than $20. They have been worn in the service of the road. The service of the road has been to produce revenue and the hon. minister is replacing what was worn in the service of the road to produce revenue by getting capital to put a good rail in the place of the worn out rail. It seems to me so clear that the hon. minister must see it, as I think he does see it, and as I think we all will see it. If that be true, it is absolutely wrong—I am not going to say dishonest—to take capital to fill that gap.

Mr. OSLER. With the hon. minister's last word before he sat down I agree most thoroughly. He sat down with a statement that the difference between the cost of the new rail and the price of the old rail should be charged to capital. I agree with that Taking his figure of $20 as the value of the rail and his figure of $28 as the cost of the new rail, that is $200,000, which, according to that contention, should be charged to capital. But the minister is asking for a charge of $380,000. The hon. minister says there is no dishonesty at all—I do not for a moment suggest such a thing, but if that statement goes out in connection with the Intercolonial, and this is one of many items, the fact remains absolutely that there is a false statement in so far as the earnings and revenue of the Intercolonial are concerned to the extent of $180,000 in this one item. I am speaking only of it being a false statement in the sense that it is incorrect bookkeeping and that it conveys a false impression to the public in respect to that $180,000. It ought to be charged to revenue and not to capital, and if this item goes through then the Intercolonial statement for next year will be false to the extent of the amount which I have mentioned in this one item alone.

Mr. BOYCE. Would the hon. minister state what contracts for rails have been closed during the past year with the Lake Superior corporation and what deliveries have taken place?

Mr. FOSTER.

Mr. EMMERSON. Two contracts with the Sault Ste. Marie Company, the first given in September for 10,000 tons and another in October, I think, for 10,800 tons more, were entered into. Twenty-eight thousand tons have been delivered. There have been no other contracts entered into or arranged.

Mr. BOYCE. What were the prices of these rails?

Mr. EMMERSON. The prices were to be fixed by the open market price plus the duty. The open market price, I think, on the 1st October was to govern the first 10,000 and the open market price on the 15th November was to govern as to the delivery of the 10,800 tons.

Mr. BOYCE. Could the hon. minister state what amounts have been paid for these rails or if they have yet determined the actual cost of them?

Mr. EMMERSON. That has not yet been determined. There was an amount paid them pro rata on the advice of the chief engineer pending the decision. The decision was to be made by the Minister of Railways and Canals.

Mr. BOYCE. What was the amount that was paid?

Mr. EMMERSON. I think it was $23 a ton, but I will not be certain. At any rate there was a large margin reserved to protect the department, and I am endeavouring to get information from standard dealers in England as to the actual sales in order that I may determine the prices that ruled on the 1st October and 15th November last respectively.

Mr. BOYCE. Were these the dates that were to govern the price?

Mr. EMMERSON. I know the last was the 15th November. I am quite positive also that the first was the 1st of October, but I speak subject to correction. I am quite certain, however, the first was the 1st of October.

Mr. BOYCE. What other contracts for rails for the Intercolonial have been closed?

Mr. EMMERSON. No other contracts have been entered into other than these two.

Mr. BOYCE. I mean with any other companies or individuals. I am not speaking only of the Lake Superior Company.

Mr. EMMERSON. These are the only contracts that have been entered into by the Intercolonial.

Mr. BLAIN. The hon. minister did not state at what points the new rails are to be laid down during the coming summer on the Intercolonial Railway.

Mr. EMMERSON. On the eastern division about three-quarters of a mile ; between St. John and Shediac about sixty-two miles,

and the balance of the hundred miles between Moncton and Lévis.

Mr. FOSTER. I would ask the minister to allow the item to stand until he will be kind enough to give us the information with reference to what has been the practice in the department.

Mr. EMMERSON. Could not the item be passed in the meantime ?

Mr. FOSTER. I do not think we will ever get a simpler or a clearer point on which to take up our respective positions than this is, and no time will be wasted by allowing the item to stand.

Mr. EMMERSON. I have no desire to rush the items through.

Mr. INGRAM. Let me remark here that the statement made by the Minister of Railways last evening in reference to the Intercolonial was one of the most doleful and discouraging I ever heard a Minister of Railways make in this House. In view of the method pursued at the present time of charging to capital account, items which should be charged to revenue, the statement of the minister was even more doleful than would appear on the surface. I listened very attentively to the hon. gentleman and I regret that while he gave several excuses for the immense deficit, he failed to suggest a remedy. I disagree entirely with the statement of the minister, that it matters very little to the country whether items are charged to capital or to revenue, because the people have to pay them anyway. It is all very well for members of this House on both sides who fully understand the situation, but the people generally have not the advantages we have here, and they are consequently not in a position to judge of the merits of the management of the Intercolonial. The minister evidently wants to be honest in the matter ; I give him the credit that he evidently is not trying to hide anything. While I have always been in favour of government ownership of railways I have always held that the management of our government railways was not conducted on proper principles. I say now as I have often said before, that I do not accuse the Liberal party any more than I have accused my own party, with improper management of our railways. It does not make any difference how competent your general manager may be, there is too much interference with him to permit him to manage the railroad properly. Every officer on our government railways is being interfered with from time to time by politicians and others, and in consequence of that interference they are not allowed to use their judgment and their experience as they otherwise would. It is because of that interference that the people of Canada are called upon year after year to make up by indirect taxation enormous deficits on the Intercolonial. Let me say here that the Minister of Railways would do a good thing if he were to keep the accounts of the government railways as other railway corporations keep their accounts. If he did that he would show the people of Canada that under the present system of management large annual deficits cannot be prevented, and public feeling would be so stirred that a demand would come from the people of Canada for a change. If the government railways were taken out of the sphere of political interference and placed, say under control of a properly constituted commission, I feel satisfied that they would be an asset of which our country might be proud. I have had experience in supporting a government in this House years ago, and I know that members are frequently called upon to do certain things for their constituents which in their own good judgment should not be done. If our government railways were placed entirely under control of a commission, the supporters of the government would be relieved of this unpleasant task, and in their interest as well as in the interest of the country the outcome would be beneficial. I am not criticising our government railways in any carping spirit. I realize that we have 1,400 or 1,500 miles of government railways in Canada, and that the more politics is kept out of the management, the better it is for all concerned. I trust that the minister will bring down the information asked for to-night. I for one will hold up both hands in support of the minister, if he carries out that policy. I tell him that if he endeavours to control the government railways in the interest of the people of the country and in as economical a manner as possible he will be supported by public opinion.

Mr. EMMERSON. I court the fullest criticism of the management of the Intercolonial, so long as that criticism is based upon facts and not upon any political or partisan motives. I recognize that the Intercolonial by reason of the circumstances that surround it, has reached a time in its history when it certainly demands the earliest consideration of the people of the country.

Mr. FOSTER. Hear, hear.

Mr. EMMERSON. I recognize that. I recognize the fact that there are two or three very large corporations that are looking with longing eyes on the Intercolonial, and I think I can also recognize the fact that it is a question between, and among, these corporations as to how the spoil is to be divided. I also recognize that anything that can be said in this House or before the country to the discredit of government management of the Intercolonial will only serve to improve the prospects of these corporations ; and, without mentioning the particular corporations, I can quite understand why it would be in their interest that the people of this country should be educated up to

the point of condemning every transaction in connection with the Intercolonial. Now, notwithstanding all this, notwithstanding the fact that I see the dangers ahead, I am quite prepared, as Minister of Railways, to have the whole situation exposed to the gaze of the public. I am not saying this in any heroic way, but I am speaking of it as a necessity in the interest of the road itself. If there are difficulties which are within the control of the department, those difficulties should be grappled with. I have endeavoured to point out, in a non-partisan spirit, difficulties which I believe exist and over which I think we could not have any control. I endeavoured, in my statement last night, to present the actual facts, and to show that in almost every instance in which there was a deficit, the expenditure was beyond the control of the department—such as the extra wages, the repairs to rolling stock, and the purchase of rolling stock out of revenue. My hon. friend from Hamilton has said that the conditions of the Intercolonial in this respect are much better to-day than they were on a previous occasion.

Mr. BARKER. They ought to be, too.

Mr. EMMERSON. So they ought to be; I grant it; the extent to which they ought to be is demonstrated by the extra expenditure in the working expenses during the past year and the current six months. With regard to the book-keeping, how long that has prevailed on the Intercolonial, I am not prepared to say. If you compare this year with last year or with the last four or five years, you find the same conditions. How far back they go I do not know; nor do I know whether there was any occasion in the years gone by to substitute a heavier for a lighter rail. For the reason stated, I am quite prepared to have the information with reference to this item brought before the House. I have given the reason why I think this vote should be passed; but, in deference to the views expressed, I am quite willing that it should stand in the meantime.

Mr. BARKER. In answer to what the hon. gentleman has said, I admit that the rolling stock is in a better condition; why should it not be? For years under the present government we have been voting enormous sums of money to buy new rolling stock. During the year 1903-04 we paid $643,000 for new rolling stock; for the current year the hon. gentleman took a vote of $1,000,000 for the same purpose, and as he is not seeking a revote of that, I presume he is spending it.

Mr. EMMERSON. What I said was that with respect to the rolling stock that has been purchased out of revenue, we are in a better position than we would have been last year.

Mr. BARKER. I admit that; but under what pressure from this side of the House has that been accomplished? For four years we protested against the fact that year after year the government were allowing greater numbers of cars to fall into disuse, to go on to the dump heap, until in the beginning of last year they had 558 cars of dead stock on their hands. We pointed out that while the government in order to save their working expenses, neglected to repair these cars, they were spending millions in buying new rolling stock on capital account. At present the hon. gentleman is asking $698,000 more for rolling stock, although he is rather boastfully saying now that the rolling stock is in a good condition. I do not know whether the hon. gentleman is going to ask us for anything more. Last year I think we had about four supplementary votes before we got through. But surely, under such circumstances, the rolling stock should improve. Now, let me say this about the Intercolonial Railway. We have criticised its management. We want the Intercolonial to get a fair chance to show what is in it. We want the officers and the staff of the Intercolonial to have the same chance as the officers and the staff of every other railway in this country; and I believe that if the official staff of the Intercolonial had had that freedom from interference on the part of politicians that railway companies have, there would have been a very different result, in the earnings of the line. We are not despondent. I do not know whether the hon. gentleman has any reason for despondency with regard to the Intercolonial Railway. We used to hear the hon. Minister of Finance and other ministers boast of the brilliant prospects of that railway under present auspices; but since about a year ago we have been hearing a very different tale from them. The hon. gentlemen who used to boast of this railway are now becoming despondent—why? Are they crying stinking fish? Are they trying to get rid of the railway? Is there some applicant for it in the market? How is it that the men who a few years ago were so boastful of this line, are now so despondent that the minister yesterday made a speech that was characterized on this side of the House as the most despondent ever uttered with regard to this railway? That is the position we take; we believe that this railway ought to have a fair show. In the last four years every railway in Canada has been almost over-burdened with traffic. The Grand Trunk Railway and the Canadian Pacific Railway have been earning enormous sums above their working expenses. The government railway alone has been a burden. We say: Give the staff of the Intercolonial the same freedom, the same opportunities that are enjoyed by the staffs of the Grand Trunk Railway and the Canadian Pacific Railway, and under proper management freed from political interference and officialism the results would be very different from what they are and what they have been.

Mr. ALEX. JOHNSTON (Cape Breton). Before you pass from this item, Mr. Chairman, there are one or two things I desire to say in answer to the hon. gentleman who has just taken his seat (Mr. Barker) and to the hon. member for Elgin (Mr. Ingram). They have been pleased to criticise the statement of the Minister of Railways yesterday as the most doleful ever presented to this House. The people throughout this country, but more particularly the workmen along the line of the Intercolonial who are a very important class of people in this country will not criticise that statement as the most doleful ever presented to this parliament. They will regard it as the happiest statement for them and therefore for the country that has ever been presented by a Minister of Railways. The Minister of Railways has been able to say that for the first time in the history of the country he has been able to do justice to the men employed on the Intercolonial. Time was—and those of us who live on the line of the Intercolonial remember it very well—when the workmen on the Intercolonial appealed to former Ministers of Railways and appealed in vain that justice might be done to them. There never was a time in the history of the Intercolonial Railway when the officials of the road were so free from interference from politicians and others as at the present time. I want to call to the mind of the hon. member for Hamilton (Mr. Barker) this fact that if he seeks to know what has been transpiring with respect to it he would do well to consult with the officials on the Intercolonial who were there previous to 1896; he would learn where the interference came from in those days. That was the day when shingles were being issued all over the Intercolonial Railway. The line was more noted for the purpose of carrying shingles in 1896 than for any other purpose.

Mr. LENNOX. It is hay now.

Mr. JOHNSTON. My hon. friend says it is hay. Yes, very true, and he will find that those responsible for the management of the Intercolonial Railway will be in a position to go before the people of this country and justify to the full their conduct in connection with the carrying of hay.

Mr. LENNOX. The have not done so.

Mr. ALEX. JOHNSTON. We will be prepared to go with the hon. member for East Simcoe to the people of this country and to justify our conduct in this connection. We will take issue with our friends opposite on this question as we have on every other question in connection with the Intercolonial Railway since 1896. I tell my hon. friends opposite that they do not know the conditions that prevail along the Intercolonial Railway to-day. I believe what is more that they do not know the conditions that obtained along the Intercolonial Railway previous to 1896. The men who were ashamed of the Intercolonial Railway then, when it was in the hands of hon. gentlemen opposite are to-day prepared to go before the people of this country and to say that they are proud of the Intercolonial Railway to-day. Was there any one in this country who was proud of the Intercolonial Railway during the days when it was administered by our hon. friends opposite? I want to know if there is one member on the opposite side who is prepared to stand in his place to-night and say that previous to 1896 the Intercolonial Railway under Conservative administration was creditable to the people of this country. Is there one among them to-day prepared to deny the fact that the Intercolonial Railway to-day is a credit to the people of this country? The Minister of Railways told the House yesterday that it was not the purpose of the Intercolonial Railway from the time it was started to make money for the people of Canada. He said truly, and I support the statement in its entirety, that the Intercolonial Railway ought to be regarded, has been regarded, and will continue to be regarded as a complement of the canal system of this country. Those of us who live along the line of the Intercolonial are not whining and complaining day after day about the moneys that are being spent by the people in maintaining the efficiency of the canal system of this country. We regard it as important to the people of Ontario that the canal system should be maintained in its efficiency, and we are not going before the people and complaining that the money is being wasted and squandered upon them. For five years I have sat in this House and listened to a former Minister of Railways complaining about the money that was being spent upon this road. Member after member sitting opposite told the people that it was idle to waste money on the Intercolonial Railway, that it was to be a sinkhole for the money of the people of this country and still they are not satisfied. Who was it that tried to dispose of the Intercolonial Railway? My hon. friend from Hamilton (Mr. Barker) a few moments ago expressed a fear that the present Minister of Railways and the present government were desirous of parting with it. Who are the only political party in this country that ever tried to dispose of the Intercolonial Railway? Let them read the record of their party previous to 1896, and they will find that they were prepared to hand over to the Canadian Pacific Railway this Intercolonial Railway. Who was it that did everything possible to cripple the services of the Intercolonial Railway? Who was it that entered into a contract with the Canadian Pacific Railway to render practically useless to the maritime provinces and the people of this country the Intercolonial Railway? Let them call to mind the agreement, entered into by the former Conservative administration of the Intercolonial with the Canadian Pacific Railway. The Liberal

party has been found fault with by hon. gentlemen because it was thought desirable in the interest of the people of this country, but more particularly in the interests of those served by the Intercolonial, to cancel that agreement. For my own part I have nothing but admiration for the management of the Intercolonial Railway since 1896. I am prepared to go before my own people and I am quite sure that every member on this side of the House is prepared to go before his constituents and defend the management of the Intercolonial Railway since 1896. I say that there have been deficits on the Intercolonial Railway; these deficits are not new, they existed in former times and I have no doubt that they will continue to exist. I do not know whether they will ever be avoided, but I do know that the people of this country are getting good value for them, are getting much better value to-day for the present deficits of the Intercolonial Railway than they did for those that existed before 1896. The people are given a good service to-day. It remained to the Intercolonial Railway since 1896, it remained to the present government to raise the standard of the railway travel in this country. They set the example and other roads have been obliged to raise the standard of their travel and the comfort of their passengers and therefore it is that all sections of this country, but more particularly those sections traversed by the Intercolonial Railway, are prepared to defend in all respects the management and administration of the Railway Department from 1896 to the present time.

Mr. A. A. McLEAN. One remark was made by the hon. gentleman (Mr. A. Johnston), who has just taken his seat, which, I think, is not exactly correct. He stated that, so far as he knows, every railway official on the Intercolonial—which, I suppose, would include the Prince Edward Island Railway —was left free from political influence. I wish to tell this House that at the last election on the 3rd of November last, a large number of Conservative officials on the Prince Edward Island Railway were handed the book and the bribery oath were put to them. I ask whether that is political influence or not? I ask whether that is freedom or not? I think the statement made by the hon. gentleman is not borne out by the facts. He has made another statement—that the people of the maritime provinces are satisfied with the Intercolonial Railway as it is conducted to-day. But if you will remember the statement made by the minister yesterday, he told us that he was unable to carry the grain from the west to Halifax and St. John, because he had not sufficient rolling stock. At the same time, these gentlemen put upon the statute-book a law which provides that the money of the people of Canada shall be used in the construction of another road paralleling the Intercolonial and taking away the traffic that ought to go to that road. If the Intercolonial Railway today is deficient in rolling stock to carry the grain from the west to the ports which they boast so much about as the winter ports of this country, why is not the public money used to put this road in a proper state to carry this business instead of wasting it in constructing a road to be handed over to the Grand Trunk Pacific that they may carry the grain to the foreign port of Portland? I think that when these hon. gentlemen say that this road is in efficient condition, they do not speak by the book. They boast of the increase of wages. I have no fault to find with them for the increase of the wages if they have the money to do it. But they have not the revenue, because they have not the traffic, and they say they have not the traffic because they have not the means of carrying it. But when did they raise the salaries of the officials? Immediately before the election of 3rd of November last. The Minister of Railways (Mr. Emmerson) went down to Moncton some time in October. Conferences were held at the office in Moncton. Delegations were there from every department in the Intercolonial Railway to meet the minister—that is reported in the public press, at any rate. Arrangements were made at that time for the increase of wages all round, with the exception of the staff in the accountant's department of the railway.

Mr. A. JOHNSTON. How many increases in wages were there before that?

Mr. A. A. McLEAN. Perhaps the hon. gentleman (Mr. A. Johnston) can tell. At any rate, these increases were made at the time when the government party required the votes of the officials of the railway.

Mr. DEPUTY SPEAKER. The item stands.

Some resolutions reported.

Hon. W. S. FIELDING moved the adjournment of the House.

Mr. BARKER. May I ask the leader of the House what work will be taken up tomorrow?

Mr. FIELDING. I think we shall resume in supply, continuing the consideration of the estimates of the Minister of Railways.

Motion agreed to, and House adjourned at 11 p.m.

INDEX

FIRST SESSION—TENTH PARLIAMENT, 1905.

Abbreviations of well known words and Parliamentary expressions are used in the following :—1°, 3°, First Reading, Second Reading, Third Reading ; 3 m. h., 6 m. h., 6 w. h., Three Months' Hoist, Six Months' Hoist, Six Weeks' Hoist ; *, without remarks or debate ; Accts., Accounts; Adjn., Adjourn; Adjd., Adjourned ; Amt., Amendment ; Amts., Amendments ; Amalg., Amalgamation ; Ans., Answer ; Ass.; Assurance ; B., Bill ; B.C., British Columbia ; Can., Canada or Canadian ; C.P.R., Canadian Pacific Railway ; Com., Committee ; Co., Company ; Conc., Concur, Concurred, Concurrence ; Consd., Consider ; Consdn., Consideration ; Cor., Correspondence ; Deb., Debate ; Dept., Department ; Depts., Departments ; Div., Division ; Dom., Dominion ; Govt., Government ; His Ex., His Excellency the Governor General ; Hse., House ; H. of C., House of Commons ; Incorp., Incorporation ; Ins., Insurance ; I.C.R., Intercolonial Railway ; Man., Manitoba ; Mess., Message ; M., Motion ; m., moved ; Neg., Negatived ; N.B., New Brunswick ; N.W.T., North-west Territories ; N.S., Nova Scotia ; O.C., Order in Council ; Ont., Ontario ; P.E.I., Prince Edward Island ; P.O., Post Office ; Par., Paragraph ; Prop., Proposed ; Q., Quebec ; Ques.
