## Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming are checked below.

- Coloured covers / Couverture de couleur
- Covers damaged / Couverture endommagée
- Covers restored and/or laminated / Couverture restaurée et/ou pelliculée
- Cover title missing / Le titre de couverture manque
- Coloured maps / Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black) / Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations / Planches et/ou illustrations en couleur
- Bound with other material / Relié avec d'autres documents
- Only edition available / Seule édition disponible
- Tight binding may cause shadows or distortion along interior margin / La reliure serrée peut causer de l'ombre ou de la distorsion le long de la marge intérieure.
- Blank leaves added during restorations may appear within the text. Whenever possible, these have been omitted from filming / Il se peut que certaines pages blanches ajoutées lors d'une restauration apparaissent dans le texte, mais, lorsque cela était possible, ces pages n'ont pas été filmées.
- Additional comments / Commentaires supplémentaires:

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured pages / Pages de couleur
- Pages damaged / Pages endommagées
- Pages restored and/or laminated / Pages restaurées et/ou pelliculées
- Pages discoloured, stained or foxed / Pages décolorées, tachetées ou piquées
- Pages detached / Pages détachées
- Showthrough / Transparence
- Quality of print varies / Qualité inégale de l'impression
- Includes supplementary material / Comprend du matériel supplémentaire
- Pages wholly or partially obscured by errata slips, issues, etc., have been refilmed to ensure the best possible image / Les pages totalement ou partiellement obscurcies par un feuillet d'errata, une pelure, etc., ont été filmées à nouveau de façon à obtenir la meilleure image possible.
- Opposing pages with varying colouration or discolourations are filmed twice to ensure the best possible image / Les pages s'opposant ayant des colorations variables ou des décolorations sont filmées deux fois afin d'obtenir la meilleure image possible.

This item is filmed at the reduction ratio checked below / Ce document est filmé au taux de réduction indiqué ci-dessous.

10x	14x	18x	22x	26x	30x
12x	16x	20x	24x	28x	32x

The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shell contains the symbol → (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

OTTAWA, CANADA

BULLETIN No. 282

CATTLE MEDICINES

OTTAWA, March 13, 1914.

Wm. HIMSWORTH, Esq.,  
Deputy Minister Inland Revenue.

SIR,—I have the honour to present a report dealing with 120 samples which may be classed as Cattle Medicines, although many of them possess very questionable value as such. A considerable number of these articles have come into the hands of our Inspectors as Stock Feeds; and I called your attention in August, 1912 (See Bulletin 241) to the fact that of 138 samples purchased as Stock Feeds in that year, 41 samples were found to belong more properly to the class of substances dealt with in this report.

The term Feeding Stuff is defined in the Act of 8-9 Edward VII as "Any Article offered for sale for the feeding of domestic animals, and feeds claimed to possess medicinal as well as nutritive properties, etc." It would appear that articles claiming to be Feeds must primarily possess nutritive properties, although the fact that they have medicinal value as well as nutritive value may not prevent their classification as Feeds.

It must be confessed that some degree of ambiguity attaches to the definition given in the Act. In many, perhaps in most of the samples herein reported, such nutritive value as may be possessed by the article, is due to components like linseed meal, bran, screenings, etc., employed rather as a diluent than as an essential part of the mixture. If purchased for the sake of its content in nutritive matter the price is out of all proportion to the value of the article; while if fed to stock for nutritive purposes only or chiefly, the drugs present would prove harmful, or even fatal, in the large doses which such usage would necessitate.

It is very desirable so to define Cattle Feeds and Cattle Medicines that the two classes shall not overlap; and I would suggest amendment of Section 2 (b) of the Feeding Stuffs Act, by omission of the phrase "and feeds claimed to possess medicinal as well as nutritive properties." When an article claims to possess medicinal properties it becomes a drug, or medicine, and ceases to be a food in the usual sense of that term.

No systematic inspection of this class of articles has been made since 1906. In that year a report upon 35 samples was published as Bulletin No. 117. I am unable to offer any comments upon the subject more to the purpose than those made by my predecessor in office in his letter of submission to the bulletin named. Speaking of the 35 samples then reported, Mr. Macfarlane says:—"It will be seen that only 5

out of the 35 samples are cattle medicines intended for use in cases of specified disease, while the other thirty are supposed to be applicable to all the ills that cattle flesh is heir to. This supposition is sustained by the claims actually made on behalf of about two-thirds of these samples on their labels or wrappers, and noted in the column headed 'Inspectors' report.' Others were sold in bulk and without any claim having been made. Some of the claims recorded would really be comical as regards the universal applicability of the medicines if it were not too serious a matter for the poor animals to whom they are to be administered.

The condition powders consist largely of linseed meal, or bran in which are distributed more or less of other substances which are supposed to have purgative, diuretic, haematonic or tonic effects. These powders are in fact the proprietary or patent medicines supposed to be good for farm animals. They vary very much as regards composition. Some condition powders contain chlorides and nitrates. In a fourth only the sulphates are present in considerable quantity. In some free sulphur appears to be the characteristic constituent, and, in others, antimony. It does not seem fair to the farmers that remedies differing so much in their ingredients should be sold under a common name, nor can it be advantageous to his animals to have medicines administered without much regard to the nature of the disease. The "regulators" contain, as a rule, iron salts, but otherwise are just as diverse in composition as the condition powders. Among the specific remedies the worm powders exhibit similar diversity in composition, and do not seem to contain the drugs usually prescribed by veterinarians as vermicides.

That there are remedies for specific diseases, used in veterinary practice, which are sold as such is no doubt the case, but as regards the universal cattle medicine or "cure all," it is very doubtful as to whether the farmer obtains value for his money. How to regulate the traffic in these it is difficult to say."

These remarks apply in a general way to the samples herein reported. Without going so far as to say that proprietary remedies claiming to possess curative properties of a vague and indefinite nature, and for this reason to be almost universally applicable, are without any value to the farmer, it is safe to say that these panaceas exhibit the same objectionable features that are found in the majority of patent remedies offered for human use.

They are for the most part composed of very cheap materials which their claim to be patent medicines enables to be sold at very high prices. A little thought will suffice to convince any one that truly potent and effective drugs cannot be present in an article to be used by an unskilled person or fed at haphazard to an animal. Such drugs can only be employed with the guidance of a properly qualified veterinarian.

The most valuable of these articles owe their value as they possess to their content in spices and similar material, intended to provoke appetite; and would be more correctly offered as Condiments than as Medicines.

It is to be noted that many of these articles contain "Screenings" as a filler. In some of these we have noted weed seeds, as was to be expected. Whether or not such seeds are vital, and therefore constitute adulteration under the Seed Control Act, has not been ascertained; but it is probable that many of them are capable of sprouting and growth. This point will be more particularly investigated when Cattle Medicines are next inspected.

This report will enable farmers to judge the nature of the articles with which it deals; and I beg to recommend its publication as Bulletin No. 282.

I have the honour to be, sir,  
Your obedient servant,

A. MCGILL,  
*Chief Analyst.*
