A MONSTER TIMBER RAFT.

AN EXPERIENT THAT MAY REVOLUTIONIZE TIMBER CARRYING-PRECAUTIONS TO ENSURE ITS SAFETY.

HALIFAX, N. S., May 22.—The monster timber raft being built at Joggins for New York is rapidly approaching completion, and will be one of the wonders of recent years. It will be 410 feet long, 50 feet wide, 30 feet deep, will contain 2, at 12 o'clock noon, in front of my store, New 225,000 superficial feet and weighs 6,000 castle, the property known as the of the raft is the system of chains by which it will be held together, and these are so skilfully arranged that no undue strain will be borne by any one. A two-inch chain with links eleven by seven inches inch chain with links eleven by seven inches runs through the centre from stem to stern. From this cross chains of one and a quarter inch extend laterally every seven feet, not opposite each other but alternately. Arranged near the bow and stern are three bridle chains of one and a half inches, extending from the central chain in herring-bone form at distances of 20 feet apart. When the raft is completed the projecting ends of all these lateral chains will be made fast to chains which are to encircle the whole fabric, pinding together the whole mass. The breaking strain of the main chain is 80 tons, and of the encircling chains 24 tons, chain, which is also the tow-chain, to have a spread of twelve inches. A marked feature of the whole system of chain work is that the pull on the centre-chain in towing causes the strain to be equally distributed among all, and tends to lighten them still more. If this monster raft gets to New York safely, it will revolutionize the whole lumber carrying "Royal to mislead the public in supposing it to be "Royal" to mislead the public in supposing it to be the only pure powder.
