# THE GRAIN GROWERS' GUIDE

ORGANIZATION · EDUCATION · CO-OPERATION

### A WARNING TO THE POWERS

The arrival of the organized farmers at Ottawa on December 16 will mark a new era in Canadian affairs. Never before was such a representative delegation gathered together in Canada. They are going to Ottawa to demand that their rights be protected and that they be no longer compelled to carry on their shoulders the tariff-enriched magnates and the BARONS of SPECIAL PRIVILEGE. Of course, the members of the House of Commons will be all smiles towards the farmers. But smiles will not satisfy this time. Both the political parties will make a tremendous blunder if they refuse to give the farmers a square deal. Governments cannot live forever upon a foundation of unfair dealings with the masses.

**Grain Growers** have got a measure of relief from the Elevator extortions, the "MIDGET" will free them from the Flour Combine

## THE "MIDGET" PATENT ROLLER FLOUR MILL

### What It Is

A Complete Roller Flour Mill in one frame driven by one belt.

Floor space occupied, 10 ft. by 4 ft. Height, 6 ft. 3 in. Requires 3-horse power to drive.

Contains four pairs of Rollers and four Centrifugal Flour Dressers.

### What It Does

Makes 196 to 220 pounds of flour per hour.

Produces results equal to the largest mills.

Does NOT require an experienced miller to operate.

Leaves Bran and Shorts with farmers for feed.

"A gentleman in Canada who knows the "MIDGET" and its success wherever introduced, writes me as follows: 'I know the machines are doing well in England and they ought to do better in this country, as the wheat and weather are more favorable for milling operations. . . . I should say the machine will have a great future in this country.' BEWARE of imitations, friends! C. LUNN.

This Mill with WHEAT-CLEANER, Gasoline Engine and Building, costs less than a Modern Threshing Outfit, and will run 12 months in the year and 24 hours per day

For Booklet, with full particulars and plans for installation, &c., write to

ONE OF THESE MILLS WILL SHORTLY BE OPERATING AT JASMIN, SASK.

## CHAS. LUNN, JASMIN P.O., Sask.

### Last Week in Alberta Legislature

The third week of the present session opened quietly, but on Thursday work had reached the interesting stage, and from now on there will likely be something doing and divisions will be frequent.

Monday saw the debate on Bramley Moore's resolution asking that the natural resources of the province should be handed over to the province for the benefit of the province. Mr. Moore in moving the resolution, said in the course of a lengthy speech, that the fisheries, timbers and minerals should be under the control of the province and not of the Dominion. So, too, the water powers should be controlled by the province and either allotted to individuals or administered by the government for the general public. Speaking of the settlement of vacant lands he thought some treaty should be made with the Dominion whereby these lands should revert to the province.

"We have still another grievance," he said. "Alberta is now the dumping ground for Eastern Canadian goods. This is unfair to us because the East by means of its high tariff says we must accept no other but their goods. I am a strong free trader." Mr. Moore concluded by saying that all the provinces in the Confederation should be kept on an equitable basis. Alberta is our country, and to speak figuratively now she only has a cotton dress when she is entitled to a silk one.

Mr. Bennett wanted to know if any further information will be forthcoming regarding the year's finances. Premier Sifton replied that the estimates would be brought down at an early date and would include all under royal warrants, and these would also be brought down.

#### Compulsory School Attendance

The act respecting truancy and compulsory school attendance was introduced by Hon. C. H. Mitchell, who explained how it differed from the present school ordinance. The new act makes it compulsory for a child to attend school for the full term when of school age, which is stated to be from 8 to 13 years, and the penalty is fixed at a maximum of \$10. An important provision is that children of school age shall not be allowed to work out during school hours unless there is a valid excuse. The appointment and control of truant officers will rest with the towns and cities. In rural districts the minister of education has the right to make appointments as he also has in the cities and towns if the school boards fail to act before a certain date.

#### University Act

Hon. Mr. Mitchell, in moving the second reading of the act respecting the University of Alberta, said that the necessity for having the work carried on in the best way was daily becoming more apparent. The present act is not sufficiently clear respecting the functions of the different bodies connected with the University. The new bill provides for a board of governors of nine appointed by the Lieutenant-Governor-in-Council to whom will be entrusted the financial management and the property which they can handle subject to the assent of the government. The senate will be much larger than at present, and dentists, surgeons and other similar bodies will be given representation under certain conditions. The faculty will be represented on the senate, and the convocation will also elect some of the members. Powers will be given for raising money under certain conditions, and an important provision is that in future fifty per cent. of the money collected under succession duties is to be devoted to the University. This amount is not very large at present, but is growing rapidly.

#### Act Respecting Loans

Hon. Mr. Sifton, in introducing the act respecting the raising of loans authorized by the legislature, said the bill required little explanation as it did not authorize loans but only indicated the manner of raising loans when they are

# The Grain Growers' Guide

R. MCKENZIE, Editor-in-Chief G. F. CHIPMAN, Managing Editor

Published under the auspices and employed as the Official Organ of the Manitoba Grain Growers' Association, the Saskatchewan Grain Growers' Association, and the United Farmers of Alberta.

THE GUIDE IS DESIGNED TO GIVE UNCOLORED NEWS FROM THE WORLD OF THOUGHT AND ACTION and honest opinions thereon, with the object of aiding our people to form correct views upon economic, social and moral questions, so that the growth of society may continually be in the direction of more equitable, kinder and wiser relations between its members, resulting in the widest possible increase and diffusion of material prosperity, intellectual development, right living, health and happiness.

THE GUIDE IS THE ONLY PAPER IN CANADA THAT IS ABSOLUTELY OWNED AND CONTROLLED BY FARMERS. It is entirely independent, and not one dollar of political, capitalistic or special interest money is invested in it. All opinions expressed in The Guide are with the aim to make Canada a better country and to bring forward the day when "Equal Rights to All and Special Privileges to None" shall prevail.

authorized for future bills. It provides that loans may be raised in permanent stock, debentures or subscribed stock as may be thought best at the time.

On Tuesday Premier Sifton introduced "An act respecting the bonds guaranteed by the Alberta and Great Waterways Railway Company, being an act to specify certain defaults and consequent rights of the province." This will come up for discussion on Friday.

The debate was resumed on Bramley Moore's resolution, which was seconded by J. K. Cornwall and who explained the resources of the north. He said: "If we can get hold of our natural resources then it is only a matter of administration as far as Alberta is concerned." He also spoke of the destruction of timber and said that in the last ten years there has been enough timber destroyed in the north country to pay off all our provincial debt and to build a large number of railways.

Premier Sifton followed and said in part: "I have always believed that we should administer our mines and timber. The question is not now whether we would like to control our natural resources, but what is the best way to get them. I have already discussed this matter with my government and we intend to keep up negotiations with the federal government with the end in view as set out by the resolution." He suggested that the resolution before the House should be withdrawn, but before this course was taken Mr. Michener had risen to speak. Mr. Michener strongly supported the resolution and dwelt with the stand taken by his party at the time the autonomy bill was introduced in the Dominion parliament.

#### Returns Wanted

Mr. Bennett presented two resolutions, one calling for all correspondence, etc., in connection with the resignation of the Rutherford government and the calling upon Mr. Sifton, and the other calling for all documents relative to the acquisition of a boulevard along the Bow River. The premier said the returns asked for would be tabled shortly.

#### Beet Sugar Bounty

Hon. Mr. Marshall introduced a bill respecting the bounty on beet sugar. This abolishes the bonus of 1/2 cent per pound the first three years and 1/4 cent the next two years paid on beet sugar.

Hon. Mr. Marshall also introduced a bill respecting the rights of married women. This provides that the widow of a man who dies leaving a will by the terms of which his said widow would in the opinion of a judge before whom the application is made receive less than if he had died intestate may apply to the supreme court for relief.

Among many motions were the following respecting railways: The Chestermore and Calgary Suburban Railway; The Blundman Valley Electric Railway Co.; The Lacombe, Ballocksville and Aliz Railway Co.; The Fischer Creek, Cardston and Montana Railway.

#### Wednesday's Session

Wednesday's session was quiet, except that it was shown that a division will be taken on Bramley Moore's resolution. Mr. C. M. O'Brien spoke strongly on the subject from the standpoint of the Socialist party, explaining the Karl Mac materialistic conception of history and the Malthusian theory of population. Mr. Patterson in a brief speech supported the sentiments of the resolution.

Among the petitions, first readings, etc., of private bills, the following respecting railways were found: Edmonton Interurban Railway; High River and Hudson's Bay Railway. Most of the session was spent in discussing the act respecting truancy and compulsory school attendance by the committee of the whole house.

#### Thursday's Session

Thursday afternoon witnessed the first real set-to of the session, and it looks as if something serious might yet be attempted. The debate on Bramley Moore's resolution was resumed by Mr. H. B. Bennett, who was in a bantering mood and good naturedly got after some of the members for what he termed their change of front. He was afraid that it was too late to get everything asked for, but several local matters could still be secured, such as the

royalties on coal, timber and grazing leases. He concluded by saying that the Prairie Provinces should have their natural resources, as the great province of Ontario to the east and the great province of British Columbia to the west already had.

**Questions Answered**

Dr. Rutherford was informed that from September 1, 1905, to May 31, 1910, there was expended for the construction of buildings other than telephone construction, \$7,597,892.99; for the purchase of sites other than telephone construction, \$465,346.30; and for the construction of steel bridges, \$726,425.06. Mr. Bennett was informed that Mr. C. A. Master, K.C., of Toronto, had been employed temporarily as a legal adviser.

**Hail Insurance**

Mr. Muehler was told that the total expenditure for hail insurance up to November 23, 1910, was \$309,914.53, and the total receipts for the same period was \$111,152, a deficit for the season of \$198,762.53. Dr. Rutherford received information that the amount advanced to farmers associations unpaid on May 31, 1910, was \$39,335.36. He was also told that the amount of interest standing to the credit of the Provincial Treasurer on May 31, 1910, re sale of C.N.R. bonds was \$63,787.66; re Alberta and Great Waterways railway on the same date, \$195,404.13, and on July 12, 1910, \$198,493.17.

Mr. Bennett moved for a return showing all letters, etc., in the custody of the government regarding the A. & G.W. and the Canada West Construction Co. subsequent to June 1, 1910, and these were laid on the table by the premier.

**Election Act**

Mr. Bennett introduced an act to amend the Alberta Election Act. This provides for an amendment making it impossible for a judge to be appointed to a political office until six months after his resignation as a judge, and that all vacancies in the legislature must be filled within forty days. Several private bills came up for consideration, and Mr. O'Brien's Payment of Wages Forfeitedly bill received its second reading.

The house then went into committee on the Canadian Northern railway Co.'s bill of incorporation. This provides for the granting of a charter containing two provisions, one to build a line from Edmonton north to Pine Pass through the Peace River, and the other from the proposed Edmonton and Calgary branch of the C.N.R. westward from Rocky Mountain House to the Brazeau. The fight on this bill was bitterly waged, as it differs materially from the model bill adopted by the legislature some years ago. Mr. Bennett, who led the attack, based the attack on this and twitted the members with inconsistency. The head office of the company can be established anywhere the directors may see fit, and there was a strong fight on this point. As was to be expected, every amendment was defeated, but the opposition was not confined to the members on the left of the speaker, as several government supporters lined up in the fight. Notice was given that every clause of the act would be contested when the bill was reported and a division taken every time, so an interesting report will be forthcoming.

On Friday afternoon the house was quickly at business and Mr. Marshall's bill respecting the rights of married women was referred to the committee on legal orders.

**An Autocratic Ruling**

Then another stand-up fight occurred, and the speaker apparently lost his head, giving a ruling which was, to say the least, of a very autocratic order and worthy of an officer in the realm of the Czar. The famous Alberta & Great Waterways Railway Company again was up for discussion, and Mr. Bennett moved that it be adjourned as the necessary legal notice had not been given. The speaker asked for a vote and declared that the bill should be read. Mr. Bennett and Mr. Muehler, in accordance with the rules of the house, demanded that the vote of the members be procured, but although Mr. Bennett was able to instance precedents in other parliaments of the Em-

pire, the speaker apparently made a ruling of his own and refused the vote. The speaker was palpably wrong, and such a ruling will not tend towards harmony as it was a good instance of the gag rule.

Premier Sifton, in a very brief speech, then moved the second reading of the bill, which provides for the placing of the \$7,400,000 secured by the A. & G.W. bonds in the revenue fund of the province.

The premier said that this bill was practically the foreclosure of an agreement for the nonfulfillment of contract, and asked for the support of the house.

He was followed by ex-Attorney-General Cross, who strongly opposed the bill and who outlined the policy on which the Rutherford government was returned to power. The debate was adjourned till Monday next when others will speak, and it is not likely that a vote will be reached for some time. From present indications the vote is going to be a close one as Mr. Cross seems to have quite a large gathering, and the old waterways deal will probably be opened up once more.

Mr. Cornwall got his Canadian Northern Railway bill through the committee of the house, and it will come up for the third reading on Monday. Hon. Mr. Mitchell's act respecting truancy is now being considered by the committee.

**One Bill Passed**

The net result of almost three weeks' work so far is that one bill has finally been adopted. This is an important one, however, and Mr. Marcell is to be congratulated in having been successful in getting it through the house so quickly. It was the act respecting charges upon land contained in certain instruments.

So far committees have not got down to work to any large extent, and the members have been satisfied with a few hours' work per day. Commencing next week, however, it is proposed to commence night sittings, so the chances are that something may be accomplished and that the session will soon be at an end.

There does not seem to be any further important legislation foreshadowed, although it is rumored that some necessary amendments to the Dairymen's Act will be introduced and that several of the existing acts will be considerably amended.

The one point which impresses itself strongly is the great need for the farmers to have a representative on hand who will be prepared to watch their interests and to give information to the various committees. It appears that the railways and other interests have been on the ground floor for some time, and if the farmers are to reap any advantage they too must be on hand to suggest legislation, possibly even prepare it, and see that the committees are made thoroughly conversant with same. This is the observation of one person after watching proceedings for a few days. The farmers must be prepared on all these questions if they will ever be successful. This is hardly reporting proceedings of a legislative assembly, but thoughts prompted by the action of the legislature on a private railway bill.

**CHINA'S PARLIAMENT**

China is moving very rapidly in constitutional changes. Of that one may be sure, in view of the recent developments concerning the convoking of the imperial parliament, which was originally fixed for the year 1913. In advancing the date two years the throne may not meet fully the demand of the newly-constituted Senate, which asked that the Parliament be summoned "at once" or "very soon," yet the conclusion is a substantial one. Evidently popular sentiment favors a little delay as possible in the complete establishment of representative institutions; indeed this was publicly admitted in the Senate only the other day by Prince Yu Liang, a member of the grand council, in saying that "the entire nation, from the highest classes to the lowest, was agreed upon the necessity of the early establishment of a general Parliament." We read that the senators received this declaration from one near the throne "with prolonged cheering"; and it is worth recalling in this connection that the Senate is composed of 100 members elected by the provinces, and 100 ap-

pointed by the central government. With so strong an element in its composition under imperial rather than popular influences, it is all the more impressive that this body should have forced the government to advance the date for the introduction of a complete parliamentary system.

Parliamentary institutions are so alien to Chinese traditions and experience that their working will present problems of a peculiarly difficult nature. As yet the country has developed no strong central government such as the Japanese made the pivot of their experiment in this direction. Back of Parliament in Japan stands the mikado, the oligarchy of old ruling families and the army, which combine to furnish the state with a stability not easily surpassed. Even in Turkey today, with constitutionalism in some sort of operation and a Parliament in session at Constantinople, there is an equilibrium supplied by the arbitrary power wielded unofficially by the Young Turks secret committee, which really controls the army. China's central government, however, is exceedingly weak, compared with Japan's. The emperor is an infant and there is little indication that the regent is a strong man capable of exerting the influence of the throne. The Chinese army is still in the embryonic stage. The empire is an enormous country in territorial extent, and it contains an immense population. Whether a Parliament would strengthen nationalistic forces is a question to be determined by experience, but there are reasons for thinking that such a central body of representatives of all the provinces would indeed promote the consolidation which all true patriots of China most desire, to the end that the empire may never become so disorganized as to fall a prey to foreign powers. With all of the difficulties the new Parliament must encounter, its early establishment seems in line with progress and the real interests of the Chinese people.—Springfield Republican.

**BIG OCEAN LINERS**

Vancouver, B. C., Nov. 22.—Specifications are now being prepared for new liners to operate between Vancouver and the Antipodes, which will be twelve-thousand-ton vessels. When the company bid for a renewal of the service at Ottawa, Sir James Mills submitted to the federal authorities the views of his fellow directors, and he has received the assurance that the mail contract will be of such a length as to justify the company building 14,000 ton steamers for the Vancouver service. While Canada has come to a decision, Australia remains to be heard from. Sir James has just sailed from San Francisco for Sydney.

**CANADA'S DAIRY TRADE**

Ottawa, Nov. 20.—J. A. Riddick, in a report recently issued in respect to the dairy trade of the Dominion, states that the total exports for the last fiscal year show an increase in value of the dairy products reported amounting to \$1,406,718. Mr. Riddick, on the basis of an annual consumption per head of \$10, estimates the value of the products consumed during the year 1909-10 to be \$75,000,000, which, added to the value of the exports, given as \$23,000,000, makes a total of \$98,000,000 as the total value of the dairy production in Canada for the year.

**SHAREHOLDERS' MEETING**

The annual meeting of the shareholders of the Winnipeg industrial exhibition was held at the Chambers of commerce, Winnipeg, when the following motions were adopted:

1. Proposed by Alderman Milton and seconded by Alderman Cass, that a vote of thanks be tendered the members of the retiring board of directors for the very efficient manner in which the affairs of the association had been conducted during the past year.

2. Proposed by F. W. Drewry and seconded by G. F. Bryan, that the shareholders of the Winnipeg Industrial Exhibition association in annual meeting desire to express their thanks to the provincial government and the council of this city of Winnipeg for their continued financial support by which they are enabled to offer more generous premiums.

3. Proposed by W. J. Black and seconded by W. G. Scott, that a vote of thanks be tendered to the railroad companies for the excellent train service rendered this year and the assistance given in reduced rates.

4. Proposed by F. J. Cox and seconded by A. C. McRae, that the members of the Winnipeg industrial association desire to express to the representatives of the press who have during the past year stood so loyally by the exhibition, their appreciation of the services rendered by them.

5. Proposed by W. J. Black and seconded by G. H. Greig, that the association be called the "Canadian Industrial Exhibition" instead of the Winnipeg Industrial Exhibition. In bringing forward this motion Mr. Black said he thought it was time that the name was changed, because the exhibition had outgrown the name of "Winnipeg" and had become "Provincial." He thought that in keeping with the work which had to be done the name "Canadian" should be substituted for the name "Winnipeg." It must remain the industrial exhibition and he would like to live to see it become the real industrial exhibition of the Dominion. The reason for his bringing forward this proposal was that he thought the broader and bigger name "Canadian" would draw the people from all parts closer in touch with it.

**EXHIBITION DIRECTORS MEET**

At a meeting of the directors of the Winnipeg Industrial Exhibition association held Thursday, Nov. 24, Mayor Sanford Evans was elected president, and A. A. Gilroy, vice-president; the following committees were appointed:

Executive committee composed of the president, vice-president, the chairman of each of the standing committees, the treasurer and the manager.

Grounds and buildings—J. M. Ross and Wm. Brydon, chairman; F. W. Drewry, Geo. H. Greig, Dr. Little, A. C. McRae, Jas. McDiarmid, and H. G. Spurgeon.

Attractions—A. A. Andrews, chairman; F. W. Drewry, G. F. Galt, A. A. Gilroy, J. M. Ross, and D. E. Sprague.

Printing and Advertising—F. W. Drewry, chairman; A. A. Andrews, D. C. Cameron, A. A. Gilroy, and Wm. Whyte. Prize List—Geo. H. Greig, chairman; W. Brydon, D. C. Cameron, C. W. Graham, A. A. Gilroy, Dr. Little, Jas. McDiarmid, and Hugh Sutherland.

Gates and Tickets—D. E. Sprague, chairman; W. Brydon, Hugh Sutherland, and Wm. Whyte.

Racing—A. C. McRae, chairman; C. W. Graham, Dr. Little, J. M. Ross, D. E. Sprague, H. C. Spurgeon and Hugh Sutherland.

Dogs—H. C. Spurgeon, chairman; C. W. Graham, and G. F. Galt.

A vote of thanks was passed to A. A. Andrews, the retiring president, for his services during the past three years. It was decided to draw the attention of the city council to the loss of the old main building and asking them to take action to replace the same at the earliest possible moment. The following were also elected patrons: Earl Grey and Lord Strathcona, and honorary directors, the board of control and J. C. Easton.

# The Grain Growers' Guide

Winnipeg, Wednesday, November 30th, 1910

## THE PRICE OF FLOUR

The announcement was made last week that Ogilvie's and the Lake of the Woods Milling companies had reduced the price of flour five cents per sack, or ten cents per barrel in Winnipeg. The fact that the wheat market is somewhat firmer causes astonishment that the milling companies should reduce prices, but one of the officials of a milling company is credited with the following remark: "The lower price of flour is not due to the condition of the wheat market, but to a cutting of prices by the companies." This remark certainly has a good sound but our readers should not be misled to think that the price war in flour will cause any substantial reduction in the cost to the consumer. It is also interesting to note that an advance in price of \$2.00 per ton in shorts and bran was announced at the same time. At the present time there are four big flour milling companies in Canada, Ogilvie's, Lake of the Woods, Western Canada, and the Maple Leaf Milling Company. These milling companies have their plants scattered from Portage la Prairie to Montreal, and handle a large portion of the western wheat crop. The flour made by these mills is second to none in the world, and holds its own with all comers in the markets of the Old Country. It seems strange to the average observer that flour manufactured in Winnipeg from wheat grown in Saskatchewan or Manitoba, sells cheaper in Nova Scotia than it does in Winnipeg, but if this is in any way astonishing, it may be carried further than stated with the utmost truth, that the same flour is sold even more cheaply to the British consumer. Yet our Canadian milling companies assure us that they are conducting their business so as to sell their flour at the lowest possible cost to the Canadian consumer. It would hardly seem fair to the consumer in the West that the advantages bestowed through the natural fertility of the soil should be so completely offset by the millers in placing their produce upon the British markets cheaper than upon the home markets. Canadian wheat at Winnipeg sells at ten cents per bushel lower than American wheat in Minneapolis. Yet flour from the Minneapolis mills and from the Canadian mills compete openly on the British market. Does this show that the Minneapolis cost of manufacturing is lower than the Canadian, or does it show that the Canadian millers are getting a much larger profit upon their products? No person will suggest for a moment that the Canadian millers sell their produce on the British market at a loss. If then the British trade is profitable, how much more profitable is the Canadian trade? Further facts of importance in connection with the milling industry are the reports of the annual meetings of the milling companies, showing extraordinary profits that are made. The capital stock of the milling companies in Canada does not all represent actual cash invested by a great deal. The milling companies understand the watering business as well as do other manufacturing institutions, and it is also notable that the leading men in the milling industry are closely connected with other large businesses. Among them are railway directors, bank directors and directors of other large corporations. If there is no combine among the flour milling industries, then appearances are deceitful. Perhaps the fact that the Canadian millers are protected by a duty of twelve cents per bushel on wheat and sixty cents per barrel on flour might explain in part why they can charge a higher price

in Canada than in Free Trade England. If this does not bring sufficient explanation then an investigation of the capitalization might assist some.

## SASKATCHEWAN ELEVATOR COMMISSION

A careful consideration of the summarized report of the Saskatchewan elevator commission published in our last issue indicates considerable study on the part of the commissioners. They have examined various schemes presented to them but have practically dismissed them all as unworkable and have evolved a new scheme which they consider to be suitable to the needs of Saskatchewan. The finding of the commission will meet with some favor as well as opposition among Saskatchewan farmers. Undoubtedly the ideal system would be that of state ownership with proper provisions for a sample market with full protection being given to the grain of the individual farmer from the time it is harvested till it reaches the Liverpool market. Of course it would depend entirely on the farmers themselves whether such a system as outlined by the commission would be a success, and it places on the farmers the whole burden of responsibility. We do not think the farmers are averse to taking their share of responsibility, but the government is merely a committee of the people's representatives to carry out their wishes, and if the Grain Growers of Saskatchewan prefer government-owned elevators to the scheme outlined by the commission, they have a perfect right to demand that the government should inaugurate such a system. The report of the commission is not binding either upon the Grain Growers or upon the government. The matter is still open and it is the duty of the Grain Growers to decide which course they will pursue. The Saskatchewan Grain Growers' Association have been unanimous for government ownership for several years, and if they are still of the same mind they should know more of their own needs than any commission. There is one phase of the report of the Saskatchewan commission which we think was a most unwarranted attitude to be taken by the commission, that is their remarks about the elevator system in Manitoba. The following is the paragraph to which we refer:

"The Commission are unanimous in holding that a scheme similar to the Manitoba scheme would not be satisfactory to the farmers generally on the one hand, and on the other would probably end in financial disaster by various conceivable devices of bookkeeping the facts may be more or less concealed for a while, but if there is anything of a business character that can be forecasted, such a scheme runs the greatest possible financial risk."

The commission dismissed the whole thing with the sweeping inference that the Manitoba system will probably end in financial disaster. With all due respect to the Saskatchewan elevator commission we do not think their information was sufficient to warrant such a statement. The Manitoba system is as yet untried. We do not think the Manitoba system is what it should be, but we believe that it will be a complete success if certain amendments are made to the act along the lines suggested to the government by the Manitoba Grain Growers. Again, the Saskatchewan commission assumes that certain crooked work will be done to keep the books of the Manitoba commission from showing the true facts of the situation. We think it would have been wise and courteous for the Saskatchewan

commission to have allowed Manitoba to work out her own problems without interference. The Saskatchewan problem is enough without adding Manitoba's troubles as well. The Saskatchewan commission said either too much or too little. If they have information warranting their statements regarding Manitoba they should have given it in detail for the benefit of the public.

## THE WEEK AT OTTAWA

Our report from Ottawa for last week shows that the members spent most of their time squabbling over political matters which were of little interest and certainly of no benefit to the country. It will be noted that Sir Wilfrid Laurier says that a tariff commission will investigate the implement question in the West. If the government insists upon appointing a tariff commission it will be doing just what the farmers of the West do not want. There is no more need of a commission to investigate the iniquity of the implement tariff than there is need of a commission to ascertain that the Ottawa government is not doing its full duty towards the people of Canada. Both are self-evident truths and need no investigation. There is undoubtedly a strong element in the House of Commons in favor of the "Stand Pat" attitude which is nothing more or less than the attitude of the Canadian Manufacturers' Association. Both parties in the House of Commons are still talking to enjoy the sound of their own voices, but there is nothing yet being done of definite character. The speech of W. J. MacLean in favor of protection would be amusing if it were not serious. Our readers will recollect that a few weeks ago we published a letter from the editor of The Toronto World, of which paper Mr. MacLean is the proprietor, asking the Canadian Manufacturers for contributions to support their paper. Thus the Canadian manufacturers have an organ in the Toronto World and an organist in its proprietor. Mr. MacLean is on the right track, however, when he is dealing with the railway question as well as the telegraph, telephone, express company and cable business. The trouble with protectionists is that they are never consistent. They are protectionists when it affects their own pockets, and free traders when it affects anybody else. Mr. Monk's bill respecting co-operative credit societies should be able to get through the House this session if members will get down to business and quit party politics. There is considerable to be said in favor of the scheme of submitting the naval question to the people, because it is following out the principles of Direct Legislation, without which no people can rule their own country. The amendment introduced to the Bank Act is a wise one. At the present time there is no government inspection of the banks. Of course the banks do not want any government inspection. They prefer a monopoly over which there is no control. Another amendment to the Bank Act should be one that would leave the Bank Act open to revision at the will of parliament instead of every ten years as at present. The Bank Act is something that should be framed for the good of the people and not for the special benefit of the bankers.

Something should be done with those travellers from the old country who take a three weeks trip through Canadian Clubdom and then go home and pose as authorities on Canadian sentiment.

### THE FARMERS AT OTTAWA

Recent dispatches from Ottawa suggest the likelihood that the Dominion Parliament will adjourn on December 16 for that day, and give all the members and senators an opportunity to hear the organized farmers present their case. This is certainly the course that should be pursued because what the Western farmers have to say when they go to Ottawa is applicable to every member of the Dominion Parliament. The condition of affairs existing in the agricultural communities of Western Ontario and the Prairie Provinces are not a subject of interest to the government alone, but should be vitally important to every member of Parliament. The government is merely the executive committee of the Parliament, and it would be unfortunate if the presentation made by the farmers should reach the ears of only the members of the government. This is the first time the farmers of Canada, in representative capacity, have taken their grievances to Ottawa to demand redress. This fact in itself is of sufficient importance to demand the attention of any man who has any part to play in the making of the laws of Canada. The fact that the articulate voice of the agricultural class expresses strong disapproval of existing legislation on a number of national questions settles beyond a possibility of doubt the verdict that things are not what they should be. If the members of parliament will give close attention to the grievances presented by the farmers and make an honest effort during the present session to enact legislation that will give a square deal to every interest in the country they will be performing their proper function. There are far too few of our members at Ottawa animated by an honest and sincere desire to improve conditions. The majority of them give little heed to national affairs unless it be to add their voice in approval or condemnation of the actions of the party which happens to be in power. If the game of party politics (for the benefit of the parties or the friends of the parties) was not quite so faithfully followed the common people would secure much greater benefit from federal legislation than they do at the present time. Although it seems like an absurdity to suggest it, we nevertheless present it as a fair proposition that the Dominion Parliament should deal with the demands of the farmers upon their merits and not as political motives may prompt them.

### THE COAL COMPANIES' LAMENT

A loud wail, in the shape of a sixty page pamphlet, is being sent throughout Canada by the coal companies of Nova Scotia in protest against any reciprocity treaty with United States. The prime mover among the coal companies is the Dominion Coal Company, of which Mr. J. H. Plummer is President. Mr. Plummer takes it for granted that the people of Canada have a great affection for him and his company, in fact so much so that they would not in any way interfere with his business. He presumes that in case of reciprocity in coal, that he would be expected to find his market so long as he is not privileged by the tariff to extort undue profits from the people. The people of Canada care as much about the Dominion Coal Company as that same company cared about the shareholders of the Dominion Iron and Steel Company, when it repudiated its contract and did its best to ruin those shareholders. Of course that was all right in Mr. Plummer's mind to squander the resources of his company and if possible cripple or ruin the steel company. The cost of the whole trouble came out of the pockets of the people, and Mr. Plummer wants them to keep on paying. The reason why the Nova Scotia coal

will not sell in New England market, Mr. Plummer explains it, that the American coals are "generally more desirable." If that is so then it is all the more reason why we should not have a tariff on coal, because we want in this country the best that can be secured at the cheapest price. Mr. Plummer also explains another trick which has frequently been suspected of on the part of Canadian manufacturers. He says that the Nova Scotia dealers in trying to sell their coal in the United States have made to the American "concessions in price equal to the amount of duty." It would seem a fair proposition that the Canadian consumer should receive the same "concessions" as does the American consumer, because it would not be considered for a moment that these concessions eliminate all the profit from the sale of the coal. This in itself should be a sufficient answer to the coal dealers and should remove the last objection against taking the duty off of coal-coming into Canada. Mr. Plummer's talk about combines, the revenue of the Nova Scotia government, the Intercolonial Railway and the Montreal Harvest Commissioners, amounts to nothing. The coal companies of the Maritime Provinces are capable of taking care of themselves and they should be made to do it and no longer perch themselves upon the backs of the Canadian consumers and assume a monopoly of loyalty and patriotism. Mr. Plummer is deserving of a great deal of commendation for the frankness with which he states his case. He answers his own arguments so completely that his whole case is really a good argument for taking the duty off of coal.

### AN UNNATURAL MIGRATION

Every little while we receive a letter from a subscriber saying that as he has quit the farm and is moving into the city he will therefore have no further interest in The Guide nor in the associations. This shows an unfortunate condition of affairs in this country, and is a movement which has worked out in Ontario and the other Eastern provinces greatly to the detriment of the country as a whole. It is a clear proof that agricultural conditions are not as they should be or men would not be so anxious to leave the farm. This movement towards the city is due to a great many things; sometimes it is on account of failing age; sometimes to secure educational facilities for the children; sometimes to secure better financial returns for money invested; sometimes to secure freedom from isolation which frequently is a feature of farm life in the West. All these causes which drive the farmers from their farms and many other causes are due largely to unfair conditions which prevail on account of legislation placing undue burdens on the agricultural communities. As a rule the farmer who retires, from whatever cause, and takes up his residence in the city is not henceforth a contented man. The rush and whirl of city life is not congenial to one who has spent his lifetime in a rural community. Nature never intended that human beings should be huddled together as they are in our large cities. Rural life surrounded by proper conditions is the ideal. It is to secure these proper conditions that the organized farmers are fighting today. When proper facilities are placed at the command of the rural resident and he is not called upon to support other classes in the country, life on the farm will then afford good remuneration for the labor expended, sufficient time for study and thought, and an ideal environment in which to rear a family and equip them for a life of service, which is the proper function for every individual.

There is no doubt but that attempts will be made in all directions and by various interests to detract attention from the immense question of tariff reform, but it will

all be of no avail. The customs tariff of Canada has got to go down a great deal lower than it is today. Day by day this is becoming the determination of the ultimate consumers upon whose back the tariff burden rests. They will not be put aside from the task to which they have set themselves. The two parties in the House of Commons at the present time are largely sparring for wind on the tariff question. Both seem to be afraid to do anything that will be for the good of the people.

### SOME TARIFF VAGARIES

In the tariff schedule of 1907 there are 711 items, 221 being free. Farmers get the benefit of free twine, cream separators, and barbed wire. Practically all the other free entries are for the benefit of the manufacturers. Since 1907 twenty items have been placed on the free list by order-in-council and thirteen other items have been reduced. It is surprising how the government finds out the requirements of the manufacturers, while they do not seem to be able to discover that there is any necessity of placing any articles on the free list for the benefit of the producers of food products, or the consumers of manufactured articles. Does the fact that the Manufacturers' Association retains a high salaried tariff agent explain this difference? The manufacturers of leather get their raw material, such as hides, free of duty, and get a drawback on stearine, caseine, hyposulphates, and other articles used in the production of leather. Of course they are protectionists when it comes to leather, and free traders when it comes to other commodities. The manufacturers of mowing machines, reapers, harvesters, binders, and attachments for binders get a drawback of 99 per cent. on all duty paid on rolled iron, rolled steel, and pig iron. The thousands of blacksmiths who make a pecunious living in our many towns and villages throughout Canada manufacturing bolts, mending chains and the thousand and one things that farmers require, do not get any drawback. They have to pay full duty. Truly we have a paternal government protecting the wealthy manufacturer at the expense of the artisan.

The announcement is made that Mr. J. E. Cyr, ex-M.P. of Provencher, Man., has been appointed superintendent of public works for the Dominion Government in Manitoba. Mr. Cyr has had considerable political experience and has been a valiant worker in support of the present administration. He is also a journalist of considerable experience, and of course this qualifies him eminently to be superintendent of public works. It is but another instance of rewarding the faithful.

The manufacturers and their supporters in Parliament lay very strong emphasis on "Vested Interests." This is certainly a wise precaution, and they should consider when dealing with this subject that for every dollar of manufacturers' "Vested Interests" the farmers have four or five. Of course there are more farmers and it does not look so big when taken individually.

Last week the council of the University of Manitoba by a vote of 29 to 6 decided that the new University should have power to give instruction in all branches of higher education. With this as an ideal, and generous public support, a provincial university will fill a great need in Manitoba.

The number of Ottawa delegates is growing rapidly. It is the most important move ever made by the organized farmers of Canada. No local association can afford to miss having a representative in the delegation. If each local cannot finance a delegate, two or three locals can combine and send one.

# Manitoba Teachers in Britain

A Story of the trip taken last summer by a number of Pedagogues from the Prairie Province through the old lands, and the impressions gained by so doing

By THOMAS LAIDLAW

**I**T IS with mixed feelings that a man contemplates a return to his native land, after an absence of 25 years. Through the "dim divine" of time and distance memory calls up old faces and old scenes while reason tells him that the faces at least must have changed. The older people whom he knew, and looked up to with respect, have gone, most of them to that bourne whence no traveller returns. The boys with whom he played, and fought, have grown up and like himself perhaps have wandered far.

"The wee bit laughing lassie's  
Noo a guid wife growing auld,  
Wi Jennie at her apron and Jamie on her  
knee."

Only the scenes remain the same; they do not change. The burn where he waded and fished and fell in, still "rattles through the clashan," the hills are blue or grey or gold, as the mists fall or the sun shines on them. If the returned wanderer be Dumfriesshire bred, he will find that Queensbury still stands guard at the head of the glen, that the mists hang heavy on the top of Burnswark, and that Criffel and Skiddaw still rear their heads on the English side of the border. Ah, The Border! What glamor and romance hang about its history. The grey "peel" or ruined tower still to be met with here and there, bear eloquent if silent tribute to the grim life of the old days, when a man rode out armed with Jeddart axe or border spear to drive a foray from his neighbor or the English, it mattered little to him for "they stole the beeves that made their broth from England and from Scotland both." These stark moor-trooping Elliots or Armstrongs or Rutherfords, or by whatever name they were called. But it is not only the ruined peel, and Border memories that haunt him. Here and there on the hill-sides are the cairns or heaps of stones that mark the graves of the martyrs. The witnesses for Messiah's crown, who braved the wrath of kings and priests, and who left home and wife and children and all that a man holds dear, to hide in the moss hags and among the mires; yea who gave up life itself for the sake of Christ's crown and The Covenant. But surely in death theirs was the victory, and their country owes them much. Their names will live, renowned in Scotland's history, while the names of their persecutors will be forgotten or be remembered only with shame. But these days have gone. The sword and spear are left to rust. Persecution's fires are out, upon old shelves her relics lie, mute memorials of the cruelties of an iron. And here am I in Scotland already, while our party has not yet left Winnipeg.

### How the Trip was Arranged

It was my good fortune a year ago last July to meet a young Englishman named Ney, who was associated with me in reading the papers of candidates for teachers' certificates. In the course of our work, Mr. Ney asked me, how many teachers I thought would undertake a trip to the old land if such a trip were organized. With Scotch caution I replied it would depend entirely on the cost. "Oh," he said, say \$200. "They will all go at that price," I returned, "but it can't be done." Nothing more was said and I had forgotten the conversation, until last February when I received a letter from Mr. Ney, saying that he had almost completed arrangements and that the visit to the Motherland was assured. He went over to England in March to make final arrangements there, returned in June, and on the 5th of July the party of Manitoba teachers, a hundred and sixty-five in number left Winnipeg with him on the long journey.

The reception given them on their departure by the Winnipeg city council was only a foretaste of the joys to come. A special train had been provided for the party, and the long run to Montreal was made in excellent time. At Toronto, a short halt was made, and the teachers were welcomed by the mayor and council, entertained to luncheon and then taken for a drive through the most interesting parts of the Queen City of the East. Rested and refreshed, the journey was resumed and Montreal reached about eleven o'clock in the evening. From the station, the party was conveyed in brakes to the dock where they embarked on the Allan Line steamer *Virginian*.

Here let me say that the attention shown to the party by the officials of the C.P.R. and Allan Line could not have been excelled in courtesy and consideration.

Early on Friday morning we were all on deck to gaze at the shores of the mighty St. Lawrence. The greatest water-highway in the world. Not half a dozen of our number had ever visited the

and the barren shores of Labrador, round which Norman Duncan has flung such a pathos and halo of romance. Some of his descriptions rose to mind as we gazed at the fishing fleets lying in the harbor or putting out to sea, and many a silent prayer went up that the Great Father would keep safe and give bountiful harvest to these hardy toilers of the great deep.

"Buy my caller herring, ye wha ca'  
them vulgar faring,  
Wives and mithers 'maist despairing  
Ca them lives o' men."

### Among the Icebergs

Soon we are wondering whether we will get through the Straits of Belle Isle without a fog or if we shall see an iceberg. Both of these things happened. We got through without a fog, and we saw not one but many icebergs. Eight of these monsters from the frozen North were lying in the Straits when we passed through, while the towering peaks of many more glittered on the far horizon. Contented were we to give them a wide

Arrangements for their accommodation in the city had been made beforehand and every one was comfortably not to say luxuriously housed in one of the best parts of London that night. But that ride from Liverpool to the city will not soon be forgotten. The smooth, gliding speed of the train, the green fields, the trim hedgerows, the trees, the scent of the clover and flowers, floating in through the open window, the riot of color everywhere, were all new to the Canadian visitors, and many were the exclamations of delight as they sped on.

On Saturday they were taken for a three hours drive through the heart of London, accompanied by guides, from the London and National Teachers' associations, who provided the buses. The Strand, Oxford Street, Piccadilly, so long merely names were now a reality, to the visitors from the Western Plains; the roar and rush of London's traffic was in their ears, as enchanted and partly bewildered they drove through the streets. In the evening at seven o'clock there was a special reception to the visitors by the London teachers, and the Manitobians were officially welcomed to England. At ten o'clock another reception was accorded them by the proprietors of *Lloyd's News* and the party was shown the printing and publication of one of the most widely circulated English journals.

### Entertained Royally

On Sunday the Zoological gardens are closed to the public, but were open to the visitors from the Prairies, who had a splendid opportunity to enjoy the sights undisturbed by the crowd. The two following days or the mornings at least, were spent in visiting the London schools which were still in session. While on the afternoon of Monday they were received by the Rt. Hon. Walter Ransiman, president of the board of education, and afterwards were entertained at Stationer's Hall by Sir Isaac Pitman and Messrs. Longman Green and Co. On Tuesday afternoon Mrs. Alfred Emmett, wife of the deputy speaker of the house of commons was at home to the teachers from Manitoba, and in the evening a reception was given them by Messrs. Novello & Co., the great musical publishers.

Wednesday and Thursday were spent in visiting Kew and Richmond, Windsor Castle, Eton and Stoke Pogis. At Kew and Richmond the party was met by the mayor and council, and a visit was paid to the beautiful gardens. How beautiful they are is beyond my power of description, so—

"Here my muse her wing maun cower,  
Sic sights are clean beyond her power."

The green lawns, the stately trees, the harmony of color everywhere, the quiet and peace that lies over it all must be seen and felt to be appreciated. It is also useless for me to attempt to convey any idea of the extreme kindness of the people who received us everywhere. Sir James Snylper, Lady Yoxall, the mayor and mayoress could not do too much to make our visit a pleasant one, while the teachers of the two places exerted themselves to the utmost to entertain their fellow-workers from over the seas.

### At Windsor Castle

At Windsor Castle we were delighted with all we saw. The relics of the past and the splendor of the present were there side by side, and when we came out it was rather a dazed and breathless party, that turned their steps to St. George's Chapel. With hushed feet, they trod the ancient cloisters, and gazed reverently if curiously at the historic altar. Luncheon was provided in the hall of Sir Christopher Wren, and we sat down to the meal surrounded by life size paintings of the kings and queens of England that adorned the walls.

Perhaps the visit to Eton will linger as long in the memory, as the memory of

King Motor on the Noble Farm, Glenora, Man.

old land before, and few of them had been outside of Manitoba. So it was all new and strange and wonderful.

### Viewing Old Quebec

The great river, the quaint old-fashioned houses of the French settlers, the shagging villages, the inevitable convent-roof and church-spire were all matters for wonder and comment. As the day wore on interest never waned, and speculation was rife as to what we would see round the next bend of the river. Soon the famous old city of Quebec rose to view. The frowning ramparts, the steep cliffs, the Citadel, Wolfe's Cove, the Plains of Abraham, and history crowded thick and fast on the memory. For we were looking on the spot where over three hundred years ago, was decided forever the great question as to whether the Saxon or the Gaul should rule on the Western continent. Here is where the fleet was stationed under Admiral Saunders, there the Beauport shore; here the path up which Wolfe's men clambered on the eventful night of the 13th. In fancy we can see again the red masses drawn up on the plain above the heights, see the astonished but undaunted Montreal, when day broke leading his white-coated battalions and voyageurs against the foe. Side by side they sleep peacefully enough now, the two great generals and their men, and we hope that never more will the roar of an enemies' guns be heard by Quebec or Canada.

At Father Point we dropped the pilot, took on the last mail and considered that we were fairly afloat. As we steamed on, the towering headland of Gaspé gave way to the rocky coasts of Newfoundland,

berth. Just at sunset on Sunday night we were clear of the land. For long we watched the lights twinkle on the rocks as they sent their warming rays, far out to sea; faint and more faint they grew; distant and more distant came the sound of the fog-horn, until it died away, as lonely, rugged Belle Isle, sank from sight, and Canada was left behind. But it gave some of us pause when we remembered that we had left Winnipeg on Tuesday afternoon, that we had been travelling steadily ever since and were only losing sight of our own shores on this Sunday night.

The voyage on the whole was uneventful. Deck quilts, shuffleboard, books, letter-writing, served to pass the time, until the Irish coast rose to view on Friday morning. We were fortunate to sight in the Irish Sea a portion of the British fleet, about which we had heard so much but which none of us had ever seen. As they came stealing silently out of the mist, those grim, grey-sided guardians of the silver coasts, a thrill of pride shot through every heart. Giant line-of-battle ship, swift cruiser, wicked torpedo craft were all there.

At Liverpool the party was met by representatives from the National Teacher's Union, and the London Teacher's Association. A special train was waiting to convey them to London, and they were whirled off to the great Metropolis at sixty miles an hour. At first the engines and carriages were fair mark, for amused and sarcastic Canadian criticism, but they had not been long in England when they arrived at the conclusion, that the people of the old land have little to learn about railroading.

# Elevator Exaction Again

Big interests of Winnipeg Grain Exchange attempting to Destroy Small Dealers and Commission Men and thus Kill Competition

By ONE WHO KNOWS

**A REWARD EQUAL TO NINETENTHS OF THE FINE WILL BE PAID BY THE WINNIPEG GRAIN EXCHANGE TO ANYONE SECURING INFORMATION WHICH WILL LEAD TO CONVICTION OF MEMBERS GUILTY OF INFRACTIONS OF THE COMMISSION BY-LAW.**

The fact that the council of the Winnipeg Grain Exchange have promulgated such drastic orders, implying the re-introduction of the famous or infamous "Search Letter or 3rd degree Sweat Box System" is highly interesting indeed, particularly in view of disclosures during the recent court proceedings concerning the celebrated "Commission Rule No. 19" and the "\$50 per month salary clause." The commission rule which was suspended over a year, was recently re-established, carrying with it the commendable feature of the one cent per bushel commission charge, or the fee levied by track buyers and commission dealers who handle car lots of grain direct from the producer. When the one cent commission rule was dispensed with over a year ago, by the elevator interests in the Exchange who control the vote, much surprise was expressed by those who failed to understand or appreciate this apparent magnanimity on the part of the elevator people, it being impossible to conceive why matters so trivial as one cent per bushel should concern the elevator magnates of this country. The suspension of the one cent commission charge was, however, a question of grave concern to the track buyers and commission dealers since it represented their entire revenue, and the re-establishment of this feature of the by-law will no doubt be hailed by the smaller dealers with pleasure.

## Throttling Competition

However, ingeniously coupled with the excellent feature of the one cent commission charge in the commission rule, we find certain restrictive features, notoriously coercive and tending to absolutely throttle competition by eliminating from the grain trade dealers engaged in the carlot business, such as track buyers and commission men. This is accomplished by the re-introduction among other things of that highly celebrated and thoroughly court-aided "\$50 per month salary" clause.

Quoted below is a clause from the commission rule affecting track buyers and commission dealers:

By-law 19, Sec. 6.—"or shall, except as hereinafter permitted, directly or indirectly pay or give, or offer to pay or give any consideration of any kind whatsoever to any person, firm or corporation to influence or procure shipments or consignments of grain to any member of this association, or to any firm or corporation admitted to trade therein; provided however, that nothing herein contained is to prevent the regular employment by members of this Exchange of legitimate registered travelling men who devote their whole time to the business of their employer, or registered track buyer, who is paid a salary of not less than (fifty dollars (\$50) per month, nor the regular employment by an elevator operator or elevator employees on salary (or part salary and part commission) at any country point."

Penalties provided for infraction of above by-law include fines of from \$500 to \$1000, censure, confiscation of property and expulsion from the Exchange. It will be seen that under the present commission rule track buyers are prohibited from "paying or giving any consideration of any kind whatsoever to any person, firm or corporation, to purchase carlots, influence shipments or procure consignments of grain," but may employ travelling men, entailing an expense of about \$300 per month, and agents at country points, "at a salary of not less than \$50 per month." These restrictions, however, do not apply to elevator owners, who may employ their country agents on a basis of "part salary and part commission."

## The Absurdity of the Case

The carlot business is handled at a gross profit of only one cent per bushel,

and it will readily be seen that the revenue derived therefrom would not warrant paying such salaries to country agents as would induce men to devote their whole time to the carlot business, but would permit of paying a percentage per bushel or commission per car on the amount of business done, and such remuneration though small, would prove attractive to an agent otherwise employed and deriving revenue from another source. Experience has proven that country agents on the average do not handle over three cars of grain per month. This means a gross revenue to the employer of \$30, from which, of course, must be deducted all expense incidental to the handling of the grain, leaving a net revenue of about \$20 on the three-car transaction. The iniquity of having to pay such a country agent \$50 per month needs no comment, nor does it require a mathematician to figure out the loss to a track buyer who may have one hundred odd agents in his employ at \$50 per month.

In defending this nefarious \$50 per month scheme, the elevator interests have always contended that the payment of a percentage per bushel or per car, was a

trouble in the old Grain Exchange. Disgraceful, not only because it is coercive and illegal, but because it has already brought many of the Exchange members before the courts, some within the shadows of the prison bars, and at least one or two have sought relief in exile in foreign climes.

During the past fifteen years many nefarious schemes have been launched by the elevator interests in the Grain Exchange for the purpose of eliminating the track buyer from country markets. Now the despicable practice, espionage is to be inaugurated, placing a member who is contemptible enough to accept a bribe, on a par with a common whiskey detective.

Gentlemen of the Winnipeg Grain Exchange, you have lauded yourselves before royal personages, retailed your virtues at the Canadian Club, proclaimed yourselves at every opportunity men of dignity, high standing, philanthropy and integrity. Don't you feel ashamed of yourselves?

## An Explanation

Note.—To bring the preceding paragraphs within the comprehension of readers who are new to the West, or who have not followed matters pertaining to the grain trade closely, a few words of explanation are necessary. Some few years ago the Winnipeg Grain and Produce Exchange, a chartered corporation, found themselves in trouble in the courts, the main complaint being on account of the commission rule of that body. The clause of that rule prohibiting the handling

Cleaning Seed Grain on Maple View Farm, the property of J. W. Hinckley, Nelsburg, Neb.

breach of the commission rule, and rendered the dealer employing such practice liable to the penalties provided for "rebating commissions." The utter unreasonableness of such argument is only exceeded by the criminal motive behind it. One cent per bushel is the track buyer's gross and only revenue and his to do with as he may see fit, therefore a commission rule which stipulates that no part or percentage of this one cent shall be paid to country agents, might as well go further, and declare disbursements for advertising, telegraphing, office expense, etc., in connection with a track buyer's business as a "rebate of commission" and contrary to the by-laws, and why stop here; would not household expenditure be regulated by this commission rule, which aims at preserving intact the track buyer's one cent per bushel revenue?

## Fat for Elevator Men

From the foregoing it will be seen that the commission by-law plainly spells protection for the elevator interests, and "bone yard" for the track buyer, coercive, because it denies the track buyer the privilege of exercising such a natural impulse and business practice of engaging the best man available as his agent, employing him at his worth, or on terms commensurate with the volume of business transacted; also because through the medium of a "search letter" a member may be forced to disclose to the council of the exchange the amount of remuneration paid his agents, and divulge the cost of obtaining and maintaining his business, thus possessing his business competitors of information which would enable them, under the "commission rule" to regulate and control his business operations; illegal, because the best, and certainly the highest legal authority in the province has declared it so, and amenable to the attorney general's department, the boasts about a "voluntary" association's immunity notwithstanding. As a matter of fact the restrictive measures of this by-law concerning remuneration to country agents has never yet been enforced, but an attempt to enforce it about four years ago was the cause of nearly all the

trouble in the old Grain Exchange. Disgraceful, not only because it is coercive and illegal, but because it has already brought many of the Exchange members before the courts, some within the shadows of the prison bars, and at least one or two have sought relief in exile in foreign climes.

During the past fifteen years many nefarious schemes have been launched by the elevator interests in the Grain Exchange for the purpose of eliminating the track buyer from country markets. Now the despicable practice, espionage is to be inaugurated, placing a member who is contemptible enough to accept a bribe, on a par with a common whiskey detective.

Gentlemen of the Winnipeg Grain Exchange, you have lauded yourselves before royal personages, retailed your virtues at the Canadian Club, proclaimed yourselves at every opportunity men of dignity, high standing, philanthropy and integrity. Don't you feel ashamed of yourselves?

Note.—To bring the preceding paragraphs within the comprehension of readers who are new to the West, or who have not followed matters pertaining to the grain trade closely, a few words of explanation are necessary. Some few years ago the Winnipeg Grain and Produce Exchange, a chartered corporation, found themselves in trouble in the courts, the main complaint being on account of the commission rule of that body. The clause of that rule prohibiting the handling

of grain for less than one cent a bushel is a commendable one, in that it gives the commission firms a chance to live in competition with the elevator interests. At first glance the annulment of the rule would appear to be in the interests of the farmers but a thorough knowledge of the methods of the elevator concerns throws a different light on the subject. This commission of one cent per bushel is the only means a commission man has of making a living. The elevator firms are strong enough and have so many sources of income that this one cent commission is of less consequence to them. But without it applying they would soon be able to put commission firms out of business and be free to "farm the farmers" according to the dictates of their own sweet will. Coupled with this one cent per bushel proposition is another which makes it contrary to the laws of the Exchange to retain an agent at any country point unless he is paid at least \$50 per month. How this would work against the commission men and in favor of the elevator concerns is shown in the above article. When this rule was brought to the attention of the courts in 1906, the council of the old Exchange was given twenty-four hours to take the rule out of operation, which was speedily done. But the elevator interests, who then, as now, dominated the Exchange, saw a way out of their difficulties. The old Exchange charter was allowed to lapse, and a new so-called "voluntary" association was formed. The difference lies in this. The old Exchange was a chartered corporation and without question amenable to the courts, but those controlling the present Exchange claim that present legislation, does not affect them as a corporation, since they are simply a group of individuals, who voluntarily associate themselves together for the transaction of business. Several leaders of the legal fraternity have given their opinion that the present Exchange comes as much under the jurisdiction of the courts as did the old one.

The commission firms are up against a hard proposition, in that while they

desire the retention of the one cent rule they do not want the \$50 rule. Both rules are contained in the same by-law, so that to retain one both must be retained. Until a few days ago no effort was made to enforce the \$50 rule, but the council of the Exchange have now evidently made up their minds to follow it out. The "search letter" system referred to in the article is a ruling of the council which makes it compulsory for commission firms to render accounts of their business to the council in order that this body may determine whether or not they (the commission firms) are observing the commission rule. The commission men see no reason for submitting their business transactions to men who are their business competitors, and knowing every detail of the commission firms' business, could soon put them out of business. It is probable that there will be another fight before the elevator interests are again put in their places.—Ed.

## HARD LUCK ADAM

(By Grantland Rice)

Adam had no Easter hat to buy for Mrs. Eve;  
Adam had no "cost-of-living" troubles to aggravate;  
Adam had no job to hold by slaving day or night,  
Adding columns—beating carpets—planning stuff to write;  
Adam had no hectic cinch—played across the boards,  
Everything that Nature and an idle life affords—  
And yet I wouldn't exchange with him or trade my bitter cross—  
He never saw a triple drive the winning run across.

Adam had no dress to buy to calm his spouse's grief—  
(All that Adam had to do was go and pull a leaf)—  
Back in Father Adam's day—long and long ago,  
There was not an Aldrich nor a crusty Uncle Joe;  
Raving politicians never raved about the land,  
Double-crossing voters in a way to beat the band;  
But with it all poor Adam never had a chance to dream  
Of old three-hundred hitters and a pennant-winning team.

Adam living on Easy street—dreaming in the sun;  
Never a policeman there to cut in on his fun;  
Never had a cook around threatening to leave—  
"Bridge" was not invented in the days of Mrs. Eve;  
Take it up and down the line in those golden days,  
Adam had it on us in a hundred different ways;  
And yet with all his blessings what a dull and massive pall—  
Poor old Father Adam never saw a game of ball.

## OPENS BIG TRACT

Vancouver, B.C., Nov. 23.—In connection with the proposed Mackenzie & Mann trans-provincial line from Stewart, B. C., to Edmonton, north of the G. T. P. route, announced several weeks ago, two features of importance have developed. Application for the charter will be made to the Dominion parliament at the approaching session, while one of the links will be the Alberta and Great Waterways Railway projected from Edmonton to Fort McMurray, if the firm is successful in its negotiations with the Alberta government to acquire the control of that charter. Other interests also seek the same franchise. A bill seeking to transfer the Waterways charter to a new company, it is expected will soon be placed before the Alberta legislature. The proposed trans-provincial railway of Mackenzie & Mann will, it is claimed, develop larger and more fertile agricultural regions than those tributary to the G. T. P. Detailed information in the possession of Mackenzie and Mann shows that there are over 1,000,000 acres of arable land in the Naas Valley alone. Mr. Lewis, the firm's engineer, who has been over the district this summer, states that easy grades can be secured. Survey parties will be placed in the field early next spring, when Mackenzie & Mann will likely place a small steamer on Mesquid lake in the Naas Valley in connection with their activities in that district.

# Direct Legislation

OR

## The Initiative and Referendum: What it is and why we need it

By ROBERT L. SCOTT

FOURTH ARTICLE

In our last chapter we devoted some consideration to objections which are constantly urged by opponents of **Direct Legislation**. It may seem unnecessary to the careful and conscientious investigator to reply to these but we purpose devoting a little more attention to them in order that we may convince some who are open to conviction but have commenced the investigation of the question with a preconceived bias.

We have seen that the people of Oregon, where **Direct Legislation** has become a practical fact, do not vote blindly or ignorantly upon the issues that are submitted to them, that the voters are discriminating in their choice upon all measures of public importance. Upon this point would it not be fair to say that if the people do not understand the laws which are submitted to them, and under which they are to be governed, the adoption of such laws should be delayed until the people do understand them. If the politicians propose laws so complicated and intricate that the people do not know what they mean, that very fact is conclusive proof that such laws are not badly needed. No laws should be passed in any democracy until the majority of the people are sufficiently educated to understand them and to demand them for the benefit and protection of all.

### DIRECT LEGISLATION AS AN EDUCATIONAL INFLUENCE

The influence of **Direct Legislation** as an educator can scarcely be over-estimated. When public issues are submitted to the people the people study them and devote to public affairs much the same discrimination which they exercise in the conduct of their own private business. The experience derived in Switzerland and various states of the American Union where **Direct Legislation** is in force all goes to prove that nothing has so much tended to the awakening of the public conscience and intelligence as giving the people the final word in determining the legislation under which they, and the democracy of which they are part, shall be governed. All permanent progress, in any country or any sphere, must and can come only through education.

### THE MEANS OF EDUCATION

In this matter we propose that the provinces of Canada shall adopt the same method of informing and educating the people as that practised in the state of Oregon. An official pamphlet should be issued by the provincial secretary to every elector in the province at least ninety days before each election. This pamphlet should contain an exact copy of the measure or bill to be submitted to the people. Parties wishing to file arguments for or against any bill or measure should be entitled to do so. These arguments should be printed and published as part of the official pamphlet and for which the parties submitting such arguments pay their proportion of the cost of printing and publication. The cost of insertion of arguments in the Oregon official pamphlet in past elections has been approximately one hundred dollars per page. The incorporation of the official pamphlet into the scheme of **Direct Legislation** is one of the most important, and essential to the best success of the innovation. If the legislature refuses to provide this, along with the other machinery, the people can easily possess themselves of it through the **Initiative** law, by means of **Initiative** petition. It is an interesting fact that **Direct Legislation** was first actively promoted in Oregon—or at least forced into the sphere of practical politics—by business interests and machine politicians who thought they could easily control public opinion through the corrupt influence of a subservient press. The official pamphlets, to which anyone who wished to file an argument and pay the price, had access, along with other unexpected developments, completely upset the calculations of the machine element, and now the same forces are exerting every possible influence to minimize the efficiency or actually destroy the system which made the people the masters and dethroned the bosses. No more eloquent proof as to the desirability and efficacy of **Direct Legislation** in permitting the people to manage their own affairs could be advanced.

### THE COST OF DIRECT LEGISLATION

The cost of government under the system of **Direct Legislation** is a point upon which those unaccustomed to its actual working ask many questions. The cost of submitting measures to the people is small. It is usually done at the general elections in the ordinary course of events and by the same officials who administer the present election laws. The cost of submitting large issues to the people is infinitesimal as compared with the cost to some large corporations of campaign funds which are spent in effecting the election of the politicians with whom the corporations are in alliance. If it pays a corporation to spend money sufficient to finance election campaigns on behalf of their favorites, will it not pay the people to spend enough money to give effective voice to the management of their own business? More money is now wasted annually in connection with the compilation of voters' lists in the province of Manitoba than would be necessary to provide the machinery for **Direct Legislation**.

This is a question often asked by those who are not willing to trust the people. Some imagine it will keep politics in a constant state of turmoil. These people forget that man is by instinct a conservative animal. Revolution and frenzy only come upon men and nations where the people have long dwelt under tyranny and oppression. Where free institutions are, men always take the course of least resistance. Men only go to dangerous extremes in the first taste of ungovernable freedom after the overthrow of despotic or oligarchic forms of government. The period after the French revolution was a natural reaction from the corruption and domination of one of the worst governments to which men have been known to submit. The result was worse tyranny—that of blood and war, of the doctrine of might is right—with the most shameful disregard for human life and human rights the world has known in the history of modern times. Safety lies in securing for the people the maximum of responsibility with the minimum of compulsion and the desire of a people to do right because they discern it to be right. This can be attained only through education. **Direct Legislation** is a most powerful educator. The people are capable of self-government. They always choose wisely upon the main question if submitted to them, after sufficient education **Direct Legislation** will give them a chance.

### A LIST OF OPINIONS

**Direct Legislation** is not a measure advocated by a peculiar class of people of peculiar opinions. It is advocated by men of all shades of opinion and all schools of thought. Many eminent economists and politicians of widely varying opinion upon other questions unite in advocating the placing of more power and more responsibility in the hands of the people. The following is a list of opinions of prominent men culled from among many which we have not space to publish.

A. M. Fraser, Esq., Winnipeg: "I believe in **Direct Legislation**. Previous to coming to Winnipeg I lived in Switzerland where I had an opportunity of observing the system at close range, and I consider that country one of the best governed democracies in the world."

Lord Salisbury, the great English statesman, once prime minister and leader of the Conservative party: "I believe that nothing could oppose the bulwark to popular passion except an arrangement for deliberate and careful reference of any matter in dispute to the votes of the people, like the arrangements existing in the United States and Switzerland."

Francis E. Willard: "I believe in **Direct Legislation** and think it is so greatly needed that language cannot express the dire necessity under which we find ourselves. The reign of the people is the one thing my soul desires to see; the reign of the politicians is a public ignominy. I also believe that **Direct Legislation** is certain to become the great political issue of the immediate future. The people are being educated by events. They are coming to see that there is no hope for reform under the existing system of voting."

Prof. Frank Parsons in *The City for the People*: "The fundamental questions are: Shall the people rule or be ruled? Shall they own the government or be owned by it? Shall the laws passed and put in force be what the people want, or what the politicians and monopolists want? **Direct Legislation** answers these questions in favor of the people, and it is the only thing that can answer them in that way, except a miraculous conversion of the politicians to wisdom and angelhood."

Prof. Lecky, Conservative member of British parliament, and author of *History of European Morals*: "The **Referendum** would have the immense advantage of disentangling issues, separating one great question from the many minor questions with which it may be mixed. Confused or blended issues are among the greatest political dangers of our time. The experience of Switzerland and America shows that when the **Referendum** takes root in a country, it takes political questions to an immense degree, out of the hands of the wire-pullers and makes it possible to decide them mainly, though perhaps not wholly, on their merits without producing a change of government or of party predominance."

Gov. Charles N. Herrick of South Dakota: "Since the **Referendum** has been a part of our constitution, we have had no charter-mongers or railroad speculators, no wildcat schemes submitted to our legislatures. Formerly our time was occupied by speculative schemes of one kind and another, but now these people do not press their schemes on the legislature, and hence there is no necessity for having recourse to the **Referendum**."

Senator Bourne of Oregon: "The public servant who will not trust the people should not be trusted by the people."

Wendell Phillips: "Trust the people—the wise and the ignorant, the good and the bad—with the gravest questions, and in the end you educate the race. At the same time you secure, not perfect institutions, not necessarily good ones, but the best institutions possible while human nature is the basis and only material to build with."

Sir Francis Adams, British Minister to Berne, Switzerland, states: "The **Referendum** has struck root and expanded wherever it has been introduced, and no serious politician of any party would now think of attempting its abolition. The Conservatives who violently opposed its introduction became its earnest supporters when they found that it undoubtedly enacted as a drag upon hastily and radical law-making."

"Under the influence of **Direct Legislation** a profound change has come over parliament and the people. The net result has been a great tranquilizing of public life."—Pres. Numa Dros, of Switzerland.

# The Wisconsin Progressive Platform

Those who believe in the orderly constitutional and peaceable restoration of the government to the people and making it at all times responsive to the real sovereign power of a democratic republic, will find in the recent platform adopted by the Republican party of Wisconsin one of the best political manifestoes for immediate practical advance that has been given to the public. The principle demands of this platform are as follows:

The initiative, referendum and recall, second choice primaries, anti-lobby law; graduated income tax, employers liability law, and valuation of corporations; physical valuation of railways, and more stringent regulation of them, national conservation of national resources; regulation of work hours for women and children.

The platform also denounces the Payne-Aldrich tariff act and opposes ship subsidies. It points out the important fact that the railway bill was changed by the progress from a menace to a benefit, but that it should be further amended.

The trust plan is highly significant as it really creates new classification of combination. The Sherman act was never intended to operate against labor unions and farmers co-operative associations. It is framed to meet a widespread demand of the people to reach abuses on the part of public utilities, and great industrial combinations of capital. It has been seized upon by reactionaries for the purpose of destroying labor unions.

The platform contains an admirable demand that the postal savings bank law shall be amended in order to prevent concentration of postal savings in large centres, and they are used by the great corporations and banking interests of Wall Street. This is a most important demand as every patriot who calls to mind the insurance exposures which came to light at the time of the Armstrong committee's investigations must admit.

It further rightly holds that: "Exceptional conditions in Alaska require that the Federal government should construct, own and operate the railroads, docks and steamship lines necessary to the opening up of Alaskan coal fields and other natural resources.

Wisconsin to-day is in the very van of the States in demanding legislation that will meet the people in reality as well as in theory, the sovereign power, and in which the governments concern for the well-being of the people is a paramount consideration of the dominant parties.

This enviable position is chiefly due to the disinterested and lofty patriotism, the courage and ability of one man, Robert M. LaFollette. He has stood for the people like a stone wall. He has won their battles against odds that would have crushed and overwhelmed a man not strong in the courage inspired by moral enthusiasm and loyalty to duty.

When he came upon the political stage he found his State government the bondslave of public service corporations and other privileged interests. The people's supposed representatives were the truckling servitors of corporate wealth. He opened war against corrupt privilege and was admonished by those in power that if he continued his attacks on entrenched and lawless wealth he would be relegated to private life and be kept there. He refused to bow down to the political mentors and he good. Therefore he was banished from public life and kept for years in retirement. The machine determined that he should never again enter public life, unless he was willing to "be reasonable." He appealed year after year to the people and systematically educated the intellectual and conscience side of the Wisconsin electorate, until he became more powerful than the money-controlled machine and the experienced bosses who manipulated it. He was elected Governor, in spite of the opposition of the United States senators, the corporations and the machine politicians.

Later he was sent to the United States senate, but not until he had inaugurated his great reform program looking to the overthrow of corrupt corporate wealth and its political machine.

When he arrived at Washington it was expected that he would become less radical, but here again he stood invincible for honest government and the people's rights. The administration was too beholden to the interests to show him any

favours. Ten thousands of people imagined that Mr. Roosevelt would make him a cabinet official if he would accept a portfolio, and if not, that he would certainly make him one of his close counsellors; but in this way they were disappointed. Mr. Roosevelt was a "practical man." He chose for his official family Root and Cortelyou, Knox, Bonaparte and men of their ilk, who were high in the favor of Wall Street, and the great public service corporations. When he wanted to consult a Wisconsin senator, he sent for Mr. Spooner, the arch-enemy of Senator LaFollette, a man who stood as high in the favor of the corporations as did Senators Lodge, Aldrich or Knox. This treatment by Mr. Roosevelt greatly heartened the representatives of the corrupt regime in Wisconsin.

Mr. Taft followed Roosevelt's example in his treatment of Senator LaFollette.

The enemies of popular sovereignty soon came to see that their hope lay in destroying the corruptible tribune of the people, and a deep laid plan was made by the corporate interests to end the political career of this formidable and incorruptible statesman. Money was literally poured into the state, to be spent like water in order to defeat him in the late primaries. The administration lent aid and comfort to his enemies and no stone was left unturned to compass his overthrow. It is estimated that not less than two hundred thousand dollars was spent against him. In spite of the fact that the direct primaries had done away with party conventions, a make-believe convention was held in June by the machine politicians. President Taft sent a telegram of felicitation to the Wisconsin Republicans assembled in convention, and Vice-president Sherman who was present, stated that he was sent there by President Taft. This fake convention endorsed the tariff and the Taft administration, but entirely ignored Senator LaFollette.

Meanwhile the senator's long and faithful service in the people's behalf had undermined his health, and when the campaign opened he was not able to make a single speech. His entire expenses for the campaign was \$5,500; yet when the people registered their votes on September sixth, the result amazed friends and foes alike. Senator LaFollette received 102,000 majority, carried every one of the seventy-one counties of the state and winning a majority of 40,000 over the combined votes of the administration Republicans, the Democrats and the Socialists.

The power of the corruptionists and the machine was broken and the splendid progressive platform adopted the last week in September was the natural outcome of this long, often discouraging, but finally victorious struggle of the intrepid leader whose example should be a perpetual inspiration to genuine patriots and lovers of justice and popular sovereignty everywhere. He has been one of the principal John the Baptists of the new democratic renaissance.—Twentieth Century.

### CANADA'S GROWTH

A Washington, D. C., dispatch of Nov. 23 said: "Contemplating the adoption of some of this government's improved census-taking methods in connection with its next census, the Canadian government has sent to Washington E. S. MacPhail, of the census bureau of Canada, to consult with Director Durand regarding the operations of the American census bureau. The two officials have been in conference during the past two days. Mr. MacPhail said today that according to the official estimates the next Canadian census, which will be taken in June, 1911, will show a population of about 8,000,000. This would be an increase of 2,700,000 or about 50 per cent. over the figures for 1901. 'We hope,' said Mr. MacPhail, 'that a large percentage of the increase will be shown to be on account of American immigration.'"

### VERY KIND INDEED

**Dry Your Clothes on a Wet Washday**  
With a New Perfection Oil Heater

When clothes can't be hung outside, and must be dried in a room or cellar, the New Perfection Oil Heater quickly does the work of sun and air. You can hang up the wet clothes, light your Perfection Oil Heater, open the damper top, and the heat rises and quickly dries the clothes.

Do not put off washing to await a sunny day in order to avoid mildew. Dry your washing any day with hot air from a

**PERFECTION**  
SMOKELESS  
OIL HEATER

Absolutely smokeless and odorless

It gives just as much heat as you desire. It is safe, odorless and smokeless.

It has an automatic-locking flame spreader, which prevents the wick from being turned high enough to smoke, and is easy to remove and drop back, so the wick can be quickly cleaned. Burner body or gallery cannot become wedged, because of a new device in construction, and can always be easily unscrewed for reworking.

An indicator shows the amount of oil in the font. Filler-cap does not need to be screwed down, but is put in like a cork in a bottle, and is attached to the font by a chain. Finished in Japan or nickel, strong and durable, well-made, built for service and yet light and ornamental. It has a cool handle and a damper top.

Dealers Everywhere. If not at yours, write for descriptive circular to the nearest agency of the

**The Imperial Oil Company, Limited.**

## Manitoba Teachers in Britain

Continued from Page 5

magistrates and councillors, received the party in the City Chambers where afternoon tea was served, and a visit was afterwards paid to the Museum. But space forbids that I dwell much longer here, though one would like to linger in St. Giles' Cathedral, and wander through the historic Greyfriar's churchyard. In the evening, another reception was given us by the chairman of the school board; Sir Edward Perrott, the president of the merchants' company; Mr. Gulland, the liberal whip; Mr. Murray and a number of other prominent ladies and gentlemen. This was one of the most enjoyable evenings spent in the old land. It was amusing to hear one Scottish gentleman exclaim of the visitors, "Why they are all Scotch, at least most of them have Scotch names." While on the other hand one of our Manitoba girls was heard to say, "They are just like Canadians, it is like being at home."

### Stirling Castle

The following morning we were the guests of the Thomas Nelson & Sons Publishing Co., who provided a special train to take us to Stirling and Dunfermline. Standing on the Castle rock at Stirling we looked out over a scene that is not surpassed in beauty by anything we saw in Scotland. For broad extended far beneath the varied realms of fair Monteith, and the beautiful Carse of Stirling while the wandering forth in its meanderings, only heightened the charm of the scene. From the Castle walls we saw within a radius of two miles eight of the battlefields that are famous in Scottish history, and in fancy we could see again, the plaided warriors of the North marching in from their mountain fortresses, with the long, light, swinging step, that is learned only on the heather; see the flashing claymores, and hear the bray of the great war-pipe as it urged them to the charge. "Thick beat the rapid notes, as when, the mustering hundreds shake the glen." Falkirk where heroic Wallace saw the stubborn ranks of his spearmen broken by the English cloth-yard shaft; Bannockburn, where Bruce overcame the English host, and won his country's independence; Sauchieburn where a rebellious son triumphed over the weak James III; Sheriffmuir where the forces of the "old Pretender" went down to defeat; all were interestingly recalled, as the sites were pointed out by the guides.

### The Famous Abbey

Returning to Dunfermline, the afternoon was spent in a visit to the magnificent Carnegie Baths, and afterwards the famous Abbey where lie the bones of so many of the Scottish kings and queens. The tomb of Malcolm and Margaret was shown us, as well as that of Robert the Bruce, and to crown the day, tea was served in the beautiful Pittencrieff glen. There are some places that have to be seen to be appreciated and this is one of them. I cannot describe its enchanting beauty. It was a very happy and contented if rather a tired party of teachers that returned to Edinburgh in the evening.

The following day a trip was made to Loch Lomond. The morning was beautiful and the sail up the Loch was delightful but the afternoon proved wet and gray, as sometimes happens even on "The bonnie, bonnie banks of Loch Lomond."

On Saturday we had to be on the wing again, and it was with a sigh of regret that we bade good-bye to our Scottish hosts and to Scotland. For somehow the gray old land had gripped even the lightest of us, and we began to understand a little of the feeling that inspired those exquisitely beautiful lines of Stevenson's when he cries—  
"Be it given to me to behold you again in dying.

Hills of home; to hear again the call,  
To hear round the graves of the martyrs,  
The pee-wees crying  
And, hear no more at all."

Carlisle was the next point in our wanderings. Here we received a royal welcome. The homes of the best people were thrown open to the visitors, and two delightful days were spent in the ancient and famous Border City. It will be long indeed, before the Canadians forget the hospitality of the people of Carlisle.

Windermere next and the famous Lake Country of England. From Bowness

pier to Ambleside by steamer, through the most beautiful part of Lake Windermere, thence by coach by way of Rhydal to Grassmere, then over Red Bank to Skelwith, thence over Ouen Fell to view Elter Water, Langdale. Langdale Pike to Yewdale and Couiston, and on from there by train to Barrow to accept two days more of the most generous English hospitality.

Space does not permit on my dwelling on the beauty of the English Lakes. But two pictures stand out very clearly in my memory, of our trip to the old land. One is the view from Stirling Rock, the other the English Lakes. No wonder that poets were born here,—Wordsworth, Coleridge and the other Lake poets surely drank from the very fountain head of inspiration, in this poetic district.

### At Barrow

At Barrow as I have said we were received with open arms. The mayor and council had made elaborate preparations for their guests. A reception in the City Hall; a visit to the Vickers Maxim works, the steel works, and pulp works fully occupied the morning. While luncheon on the beautiful grounds of Furness Abbey, and a drive to Biggars Bank caused the afternoon to speed all too quickly. In the evening a dance was given by the mayor in the Town Hall and the last night in England, will be a night long remembered by the Manitobians. But all good things must come to an end, and next morning found the party en route for Liverpool to commence their long journey home.

### Homeward Bound

On the 25th Aug. we embarked on the good ship Tunisian. The voyage was pleasant even if a little rough weather at the beginning did lead many of our number to lean over the rail and gaze earnestly if not pensively on the tumbling sea. Unfortunately two members of our party were taken ill with diphtheria, and

in the south there lingers more of the old feudal spirit. The landed interests are supreme, and though the imperial spirit may be no stronger there it is more insistent. In the north we saw more of industrial England, where life is more eager, and men carry themselves with a more aggressive swing. I heard on every hand, that drinking though still common is much less so than it was twenty years ago, I think perhaps that this is particularly true of Scotland. At least such was my own conclusion, and such was the idea I received from men with whom I discussed the question. More than one told me that it is a result of Lloyd-George's budget. If that be so, evidently, there is a price beyond which the thrifty Scot is not prepared to go, even for his morning dram. But I also observed and heard on every side, that people do not attend church as regularly as they used to do. The church has to a great extent lost its hold upon the masses, and to-day does not fill the place it used to hold in the life of the nation. Doubtless a remedy will be found that will correct this, but in the meantime it is bad.

### Annexation Bogey

One thing that amazed me was the frequency with which we were asked of the likelihood of Canada throwing in her lot with the United States, or declaring her independence. Though we assured them that it was only in the old country that we had heard such pernicious doctrines, the feeling that one of these things will happen seemed to prevail. In speaking at one or two of our gatherings I never failed to point out that when British regular and stalwart Canadian stood shoulder to-shoulder and died side by side on the African veldt they sealed their kinship as brothers in blood and loyal sons of the Empire.

There are writers to-day who are fond of describing the British as a decadent race. We saw no signs of decadence; true there is great poverty and wretched-

we press on. But in our visions and in our nation-building, God grant that we lose not sight of the best traditions of the old land. Wheat fields, and factories and cities do not make a nation; not these but men. Men with high courage, a deep-seated sense of truth and justice and right; and with a supreme faith in their Creator; these are what make a nation.

"Lord God of Hosts be with us yet  
Lest we forget; lest we forget."

And now I have nearly done. The teachers enjoyed their holiday. But if a pleasant holiday was all we gained, then our long journey was taken in vain. I think however, we came back with a knowledge of the homeland which we never had before, with a broader sympathy for and a better understanding of our kin in the Motherland. With a deeper knowledge of, and a greater devotion to duty than we have had before, with a greater reverence for the past, and a brighter hope for the future; with a deeper pride of race without which no nation can excel. We will be better Britons and better Canadians because of this visit to the cradle of the race, and above all better teachers because of the broader outlook which we had this summer. And so we are contented to return to the great Western land whose lure is in the blood, for are not we of this nation in the making.

"I am content with Canada, and ask  
No fairer land than has been given me,  
No greater joy, no more inspiring task,  
Than to uphold and share her destiny."

My lord, "the carriage waits without!"  
"Without what, thou base varlet—  
without what?"  
"Without horses, my lord—it is the  
automobile."

BRANDON, MANITOBA

### OUR OTTAWA SERVICE

Our readers will notice that we are now getting a special and direct service from the House of Commons, independent of all political papers. THE GUIDE has a special correspondent in the Press Gallery at Ottawa, who will devote his attention to supplying news of interest to Western farmers. A careful account will also be taken of the attitude and votes of Western members on vital Western questions. It is due to Western farmers that they should know what their representatives are doing at Ottawa. For this reason we have our own independent representative.

had to be left behind at the Canadian quarantine station, much to the regret of the others. Regret however was mingled with thankfulness, that the whole party was not quarantined. Not much sleep visited the eyes of the Manitoba teachers the night we stopped at Grosse Isle. This unfortunate occurrence was the only thing, that marred the pleasure of the trip and in truth it was serious enough.

On arriving at Montreal, we found the same train, and crew waiting in readiness to carry us back to Winnipeg which we reached safely on the evening of Sept. 4th.

### Impressions Received

In closing just a word as to some of the impressions we carried away. Perhaps the thing that struck us first was the beauty of the whole country. The vivid green of field and hedgerow, the well kept roads, the stately trees, the houses, white-walled and red-roofed, in striking contrast with the green surroundings; the wealth and variety of color everywhere. All appealed to the Canadian eye, as so different from the unbroken expanse of our, "far flung fenceless prairies". Canada can boast higher mountains, wider plains, broader rivers, and scenery on a more magnificent scale, but for simple beauty, it is difficult to surpass that of the home land.

Again we were struck with the hospitality and friendliness of the people. Western people pride themselves on their open-handed generosity, but we had to go home to learn what is meant in its fullness by the expression, "the rare old gift of hospitality." No trouble was too great when undertaken on our behalf; no expense was too burdensome; in a word nothing was too good for these kin from beyond the seas.

We could not but be struck too, with what seemed to us as a difference between the people of the South and East of England compared with the people of the North, and of the Scottish Lowlands.

ness in the slums of the great cities. But the slums are after all not the whole country, and much is being done to-day to improve the conditions in these localities. Throbbing industry, verile life, steady progress, marked what we saw of the Mother country, and we come away with the feeling that she is yet far from the zenith.

"The old nursing mother's not hoary yet,  
There's sap in the ancient tree,  
She lifteth a bosom of glory yet  
Through the mists to the sun and the sea  
Fair as the queen of Love, fresh from the foam

Or a star in a dark cloud set  
Ye may blazon her shame ye may leap at  
her name

But there's life in the old land yet."

It is impossible to compare the two countries England and Canada. The one so old and established; the other so new and in the making. In the old land, tradition everywhere, everywhere the past, with its mistakes and its lessons and its achievements, urging and crying them on. Perhaps they reverence the past too much, are too much afraid to disturb its sacred dust, but with patient Saxon spirit, slow it may seem in our eyes, they are pressing on toward the goal, and are still the leading nation of the world.

### The Canadian Outlook

With us it is different. Cut off from the past and its traditions, with no history to speak of; in our new land we look forward to the future, to a great future. On all sides we hear it calling. In our dreams, we see the trackless wilderness, converted into yellowing wheat fields; we see long lines of railways, stretching away, East and West and North and South, we hear the whirr of machinery, as great factories spring into existence; cities that will out rival the ancient splendor of Carthage and Greece and Rome, spring out of the future. And young and full of vigor and life and hope

# Co-operative News

### FARMERS' CO-OPERATIVE MEETING

The farmers of Broderick, Sask., held their first co-operative meeting on November 5. The meeting was to have taken place in the store and warehouse of Mr. Gruenrud, but owing to the large turnout of members the town hall was put in order for the assembling.

The speakers of the evening were: Hon. P. M. Henricks, of Outlook, and W. J. H. Traynor, manager of the Farmers' Co-operative Co., Ltd.

At the close of the speaking, which lasted something over two hours, the following were elected officers of Broderick Branch for the ensuing year: President, P. M. Henricks; vice-president, John Bennett, J.P.; secretary-treasurer, Lyon Findlater; directors, Hans Anderson, Ben Gruenrud, W. H. Libbutt, E. Wightman and Wm. Ross.

At this juncture the meeting was on the point of breaking up when the manager of the hotel came forward, announcing the pleasant news that the use of the hall to the Farmers' Co-operative Co., Ltd., was free, as it ever would be in the future for meetings of that organization, if not otherwise occupied, and that he hoped all would retain their places until served with lunch, which was immediately forthcoming in the shape of choice sandwiches, cake, hot coffee, etc.

This concluded one of the largest and most enthusiastic meetings of farmers ever held in this section. It is stated the membership of the branch is 142, and that similar virogous organizations exist, surrounding all stations from and including Outlook to the Elbow.

### CO-OPERATION AND EDUCATION

"Co-operation and Education" formed the theme of an address delivered by Mr. D. J. Shackleton at the Nelson Co-operative Society's jubilee celebrations, Scotland.

Mr. Shackleton said the pioneers of the movement had to struggle hard against tremendous opposition and much criticism. Many changes had taken place since the co-operative movement first started. Long before the State had realized its responsibilities the co-operative movement had begun its evening classes, and along with the mechanics' institutes of thirty or forty years ago, they were the means of giving what was now looked upon as secondary education. Even now, when the State had begun to realize its responsibilities, the co-operative movement was not going to drop its educational work. The latest kind of education which they expected the co-operative movement to help on was that of giving their young men an opportunity of a university education. Though they could not expect them to go to the university to receive it, they could bring the university men down to them. Under the Workers' Educational Association, helped on by the co-operative and the trade union movements, they were providing today in some 1,500 cases education of a distinctly university type. This would make the power of the workers far greater than it ever had been up to now, for they would be making them equal to what were known as the governing classes of the country, and they were going to make the people, as far as they could, the real governing classes. Pleading for a greater recognition of the women's work in the movement, Mr. Shackleton incidentally referred to his Women's Enfranchisement Bill. He said that that was only to the women. When they could carry a second reading of a Women's Enfranchisement Bill in the House of Commons by a majority of 109 it was a sign of the times.

### AMALGAMATION

Mr. John Houston, at a recent meeting held in Glasgow, addressed the educational committee of St. George Society—a society which has at the present time a committee endeavoring to draft a scheme of amalgamation—should begin their winter's educational work by a lecture on "Amalgamation." Mr. T. Miller (chairman of the educational committee) presided, and was accompanied by Mr. John Houston, who was the lecturer of the evening.

tion more or less tentatively, it is true, but still considering it; and it was fitting that the educational committee of St. George Society—a society which has at the present time a committee endeavoring to draft a scheme of amalgamation—should begin their winter's educational work by a lecture on "Amalgamation." Mr. T. Miller (chairman of the educational committee) presided, and was accompanied by Mr. John Houston, who was the lecturer of the evening.

The chairman, in his opening remarks, referred to the committee which had recently drafted a scheme for amalgamation. This scheme, drafted by men who were supposed to represent the wisdom of the movement, had not received the support of any society. He contended that the methods of twenty years ago were not sufficient for today. The industrial revolution which was going on all around them had affected not only production but distribution, and co-operators would recognize this and adopt modern methods.

Mr. Houston then delivered his lecture. On rising, he was received with applause. He did not intend to deal with a scheme of amalgamation—that was a job too big for him. He intended merely to touch on the general principles of the subject. In some things the movement was weak. It was weak in so far as there were people inside the ranks who were there for what they could get out of it, and not for any love they had for its principles. These people required to be taught that they had duties to perform as well as benefits to receive, and to wisely consider the claims which the better conditions of labor had on their conception of what was right. This might not appear strictly in keeping with the subject, but he liked to put the principles as a test of any proposal for the consolidation of the movement. Amalgamation was a principle identical with co-operation. The proposal to unite several parts which had a common affinity into one whole was itself reasonable; and the difficulty was to justify the present state of matters in Glasgow from any co-operative standpoint, while it was wasteful and unbusiness-like. Indeed, from the want of uniformity in their methods and the individualistic character of their trading, they were more in accord with that competitive method to which co-operation was supposed to be opposed. Amalgamation would remove this inconsistency, it would effect a saving from an economic point of view, it would co-ordinate the work of the societies and prevent waste and overlapping, it would ensure uniformity of method, and it would ensure a uniform dividend. At present the seeming gain of one society at the expense of another was in reality a weakness, for, as in nature, if one member suffered then the whole body felt the pain. The need for action was urgent, not only for putting an end to the anomalies mentioned and vindicating co-operation from the charge of dissension, but for the purpose of endowing it with greater power and enabling it to accomplish greater triumphs. A wider outlook and greater elevation of principle would commend it to the support of many who hitherto have kept aloof because of the narrow commercial lines on which it has been run. Opposition to amalgamation was to be looked for. The timid and fearful they had always with them, and the most liberal mind deep down had conservative leanings on some matters almost impossible to eradicate. Many, again, refuse to give the matter the slightest consideration; but, fortunately, there were others who were only too anxious to make the movement more fully correspond with the name by which it was designated. In any case, no matter from what point of view it was approached, there could be no justification for its rejection without consideration, and such a step was likely to have the effect of restricting further progress, and might be of irremediable injury to the movement. He would be loath to contemplate failure in the

efforts being made to this end, but even in failure it was to be remembered that it was not by material results only that such efforts were to be judged. The qualities they possessed and exercised, the motives that inspired even in seeming failure, found a sure and lasting reward.

### DUTY OF CO-OPERATORS

"The Scottish Co-operator" has the following to say about the duty of co-operators:

Co-operators must recognize that upon them is placed a special duty in the education of public opinion in all that affects economic and social conditions. If they allow their movement to become merely another factor in the competitive struggle, and without the inspiration of great social and economic reforms, they will condemn it to futility, and they will be beaten in the struggle. Unless they give their members an inspiration and an ideal, they will, in a short time, find that they have only got those who are connected with the movement for what they can get out of it. Even from that point of view they ought to see the folly of taking too narrow a view of their work, for by so doing they are only helping to buttress up the capitalistic system, not only in commerce and industry, but in government. An enlightened selfishness should compel them to enlarge their mental horizon.

## SEED SELECTION

(By Prof. W. Brodriek, of the Manitoba Agricultural College)

There are a great many factors which affect in many ways the yield of our farm crops. Some are within the control of the farmer, others he has no influence over.

The condition of the soil, of course, is a very important factor in the production of farm crops. Much of the success of the crop depends not only on the amount of fertility or plant food in the soil, but a great deal depends on the availability of that plant food for the use of the plants. This is influenced a great deal by the system of farming followed, and also by the amount of cultivation to which the land is subjected.

### Condition of the Soil

A great deal also depends on the physical conditions of the soil. It must be porous to allow a free circulation of air about the plants, but also compact enough to prevent becoming dried out.

Heat and moisture are as essential in the production of farm crops as plant food. Hence the season with its varying degrees of heat and moisture has a marked influence on the crop. Extremely dry seasons tend to reduce the yield on account of an insufficiency of moisture in the soil; moisture being very essential for the reason that all the food which the plant uses in its growth is absorbed in a dilute form. Wet seasons are often detrimental to the crop in many ways. Extreme wet in the spring of the year tends to retard the development of the crop by keeping the soil at a low temperature and thereby retarding the germination of the seed. Excessive moisture later in the season often does serious injury to the crop by encouraging the development of various fungus diseases, as rusts, smuts, blights, etc.

### The Seed

Making an allowance, however, for these various factors which control to a limited degree the yields of our farms, there is still another factor which exerts a strong influence on the crop. That is the seed. That factor is very much within the farmer's own hands. If he be content to use immature, undeveloped seed of low vitality, he must be content with small, undeveloped crops.

The general vigor and productiveness of a crop may be maintained, and to a certain extent increased, by paying careful attention to the quality of seed used. The seed used for our grain and general farm crops should be selected from only those crops which show a decided tendency towards vigor and productiveness. Such characteristics are as truly transmitted from plant to plant through the seed, as like characteristics are transmitted from parents to offspring in the case of animals.

Investigations which have been carried on during recent years in the systematic selection of the seeds of grain and other farm crops have clearly demonstrated the fact, that greatly increased yields could be secured by careful selection of the seed.

The growing on Canadian farms of seed improved by selection promises to be a very remunerative occupation. The increased yields which are obtained by using this improved seed are bound to create a large demand for seed of high quality. Farmers of the Western provinces who have clean farms will do well to take up this work of seed-selection. They will, in that way, create a supply of home grown seed of high quality, which will find a ready market in their own localities.

The advantages of using home grown seeds are many. Seed from plants which have been thoroughly acclimated is bound to produce plants which are hardier and more vigorous than seed which has been produced under very different climatic conditions.

The belief seems to be common that a change of seed is necessary every few years. Under some conditions this practice may be advantageous, but, as a rule, it is to be condemned. Generally speaking, much better results can be obtained by keeping the old and well tried varieties, which have been found to be suitable to any particular locality.

By following up a careful system of

selection of the seed from year to year that tendency for the crop to "run out" will soon be overcome. Seed only from plants which show a strong tendency toward vigor and productiveness should be used. Attention should also be paid to the screenings of the seed. All small and inferior seed should be removed, and only the largest and best developed seed should be kept for seeding purposes.

The history of the young plant is such, that in its early life, until it gets a proper hold on the soil, it must depend on the food stored up in the seed for its surplus of nourishment. It is very essential then, that the seed be large and well filled with food that the young plant gets a good start in life.

### The Work of Selection

The work of selection in the case of grain crops can be done best just before harvesting or when the grain is still standing. At this season a few hours is sufficient to select a fairly large quantity of the best heads from the largest and most vigorous plants in the crop. The best plan is to walk right through the crop, in doing the selecting, as in that way you can find the best plants and secure the best heads obtained.

To obtain the best results it is essential that this selected seed be sown on the best soil on the farm. It should be rich in fertility and in a good state of cultivation. The seed should be sown thinly. If sown with a drill it is a good plan to stop every alternate spout. This thin sowing will induce the individual plants to "stool out" and develop into strong vigorous plants.

Then before harvesting, again select from this improved grain a quantity of heads for the following year's sowing. By keeping up this systematic selection from year to year, it will soon be noticed that the general vigor of the crop will be greatly improved and the yield greatly increased.

## DRY FARMED GRAIN FROM A MILLER'S STANDPOINT

(By Leman P. Wood, Manager Russell-Miller Co., Billings, Mont.)

The farmer and the miller are mutually interested in the production of wheat. It is impossible for one to succeed without the co-operation of the other so as to produce the largest yield of wheat from which the best quality of flour can be produced. When the hum of the threshing machine begins in the fall the careful miller begins anew to analyze the wheat offered for his next season's supply. The raising of wheat in the dry farmed sections of the West has brought an unfamiliar variety, and many millers, without testing it carefully, have allowed themselves to become prejudiced against it on account of its appearance, as much of it has a shriveled and shrunken kernel. It greatly resembles the wheat raised in the older settled sections of the country during exceptionally dry seasons.

To make good flour the millers must have wheat of the requisite gluten content, and, furthermore, the gluten should be of the right quality for bread-making purposes. Do the wheats grown by dry farming methods possess such qualities? Briefly answered, yes, when the land is properly tilled and the best varieties of hard wheat grown.

To determine the milling value of any wheat there are four questions to be answered, namely: What kind of flour will it make? Will it yield sufficient flour to be milled profitably? Can it be bought at a price to be milled at a profit? And will there be sufficient of it to warrant its use?

The first question is, "What kind of flour will it make?" In determining the flour quality of wheat, it is necessary to first find out the quality and quantity of gluten which it contains, for upon the gluten depends the bread-making power of the flour. It is characteristic of all grains grown with a restricted amount of moisture to contain more protein or gluten and less starch than when the grain is grown under similar conditions, but with an abundant or excessive amount of moisture. That is, pound for pound the dry-farmed wheat is richer in gluten than that produced where larger amounts of water are available.

Numerous analysis of wheats and other grains grown with varying amounts of water have shown that beyond a certain point additional water makes a soft, starchy wheat. The quality of the wheat as hard or soft can be greatly influenced by control of the water supply. Water is the medium or vehicle for transporting the nitrogen and mineral compounds from the soil to the plant. With a large amount of water these food materials are excessively diluted, and hence the plant is fed on thin ration, while on the other hand, with less water, the plant food is more concentrated and the fresh crop feeds upon a strong ration.

### Gluten Contents of Wheat

In the case of the dry farmed wheat, the crop has a larger amount of food and in a more concentrated form at its disposal, and as a result a grain is grown richer in the more valuable nutrients, as gluten or protein. In short, nature puts into the dry farmed wheat practically the same amount of valuable building material that she does in the "wet farmed" wheat, but as the water causes a greater number of pounds to be produced of the "wet farmed" wheat, it follows that the essential building materials are in a more concentrated form in the dry farmed wheat, hence the result, stronger and more glutenous wheat. After a certain point is reached additional water causes a starchy development or a diluting of the gluten with the starch. Starch growth may also be produced by other causes, as inherited characteristics.

In the past year I have examined a great many hundreds of samples of both irrigated and dry farmed wheat and have had several hundred samples tested by our wheat and flour inspector, T. W. Gannon.

In reply to an inquiry Mr. Gannon wrote me as follows:

"I am very much impressed with what I have tested and find dry farmed wheat very much superior to irrigated wheat from a flour quality standpoint; it has a much better quality of gluten and will produce a higher quantity and quality of bread than the other."

### Record of the Tests

The record of the samples I have had Mr. Gannon test shows that the dry farmed wheat runs more uniform in quality and quantity of gluten than the irrigated wheat. The dry farmed wheat runs from 35 to 47 per cent. of good quality of gluten, with the exception of one sample. Some of the irrigated wheat runs up to 44 per cent., and others as low as 30 per cent. In some the quality was good, while in others it was very poor. All in all, we could use every sample of dry farmed wheat that was tested, but had to reject quite a lot of the irrigated wheat that was offered. The samples tested were not selected but were taken from the market's offerings.

### Bread Making Value

It should be frankly stated that while dry farmed wheats are rich in gluten, it does not always follow that the gluteins of all such wheats are necessarily of the best quality for bread making purposes. Just what varieties will eventually prove the best producers of quality in flour remains to be determined, and in solving this the farmer and the miller should co-operate. Some wheats raised by either dry or wet farming methods do not make good bread flours. In judging the quality of the flour the housewife is the final arbiter. Wheat must be grown from which, when milled, the housewife can make good bread—no matter what the name of the wheat.

### Milling Yields

The second question is, "Will it yield sufficient flour to be milled profitably?" The answer is, yes. When a miller talks of yields he means the amount of wheat required to make a given quantity of flour. Some millers seem to think that if they can get a barrel of flour from the least number of pounds of wheat that they are the greatest millers. Such is conceded to be a mistake by good millers. In the great milling states of Minnesota and the Dakotas the successful millers are satisfied if they can make a barrel of flour from four bushels and thirty to forty pounds of average wheat, and the miller who grinds dry farmed wheat can do nearly as well as that.

### Prices and Profits

Question No. 3 is "Can it be bought at a price to be milled at a profit?" Local conditions and transportation largely govern this. As with any other staple, the price of dry farmed wheat must be governed by the world's markets. The

miller who buys it cannot afford to pay more than it is worth to him, and if he does not pay enough he will find his competitor getting his supplies. While in some instances the price the farmer receives may seem too low, on account of freight rates, it must be remembered that dry farming is opening up a large section of country from which, as yet, the volume of traffic is comparatively small.

The dry farmer must expect to have his wheat graded and sell it on such grading. All dry farmed wheat is not No. 1, by any means, and the fellow who hasn't No. 1 shouldn't expect the top price. Also there is more dockage in dry farmed wheat, as there are many more small grains in it which necessarily must be wasted in cleaning it. The miller cannot afford to pay full price for the wheat that he cannot grind. The farmer should clean his wheat at home or expect the miller to take dockage enough to pay the cost of doing the farmer's work for him.

### Future Supply

The fourth question is "Will there be sufficient of it to warrant its use?" The millions of acres now lying idle which are capable of raising good crops by dry farming methods are sufficient answer. The pessimists will tell you that these lands will not raise good crops, but the pessimist said, years ago that railroads couldn't be run across the Western prairies, as there was no wood with which to fire the engines. When the need arises the Lord always sends some man to teach others how to take care of that need. He sent us a Hill to show us the way to the desert, now He has sent us a camel (Campbell) to carry us into it.

### Varieties to be Grown

In the selection of the varieties of wheat to be grown, the farmer, like any other business man, must first find out what he can best produce and what he has a market for, in order to get the best results for his labors. I strongly urge upon all interested in dry farming lands the importance of early learning what are the best bread wheats and then to produce those wheats under the best dry farming conditions. I am not prepared as yet to advise what these best varieties are, other than strong hard wheats with gluteins that impart quality in bread making. So far, the Turkey red winter wheat has proven a valuable acquisition and an effort should be made, wherever conditions warrant, to extend its production by dry farming methods.

I wish to give credit to Prof. Harry Snyder, chemist of the Russell-Miller Milling Co., for the valued assistance given in the preparation of this paper. Much of the chemistry stated here has been furnished by him, and many of the conclusions drawn are based on data he gave me.

### Co-operation of the Millers

The company with which I am associated, the Russell-Miller Milling Co., has recently completed and has in operation at Billings, Mont., a thoroughly modern brick, steel and concrete flour mill, and we are glad to use dry farmed wheats when they come up to our standards. We will be glad to co-operate with any farmer or association in encouraging the growth of more, and where possible, better dry land wheat. We believe that any responsible milling firm will be glad to do likewise.

In conclusion, this may be said of dry farmed wheat: It is rich in gluten. It produces a flour from which bread can be made rich in gluten or protein. Such bread has a high food value, as it contains a goodly supply of the most valuable of all nutrients, the material that is the most expensive and the most valuable for the support of life. It cannot be too strongly emphasized that the dry farmed wheats are among the most valuable for purposes of human nutrition. The dry farmed wheat, feeding upon a concentrated ration of the choicest stores of plant food, in its turn produces the most valuable human food—the staff of life.

## The Brunswick

Corner of Main and Rupert Streets, Winnipeg. Newly renovated and furnished. Attractive dining room, excellent service. New fireproof Annex. Opened July 14th. Containing 30 additional single bedrooms, two large parlors, shine stand and barber shop. Finest liquors and cigars at popular prices. FREE B.C. meals all trains. James Furlin, Prop.

Rates: \$1.50 and \$2.00 per day

P.S.—The proverbial loneliness of our Western Prairies has ceased to appal the Settler since the advent of **BUCK-EYES**

**A SHORT CUT TO THE MILLENNIUM?**

King C. Gillette, the Safety Razor man, not being satisfied with his position in the field of industry, has branched out into the field of finance, and is issuing the prospectus of the "World Corporation," of which he proclaims himself the discoverer of the principles and the inventor of the system. Conceiving the idea, as stated in his text, that "economy, stability and absence of friction are the striking characteristics of large corporations, the larger the corporation is, the more diversified and extensive its field of operations, the more these characteristics stand forth," he has gone the haute financiers of Wall Street one better. He is the incorporator of a company with unlimited capital, whose business, to summarize it briefly, is to buy up the securities of all the other corporations in the world, with the result, "That the World Corporation will displace all governments. Nations will be helpless in its grasp. Absorbing, controlling and eventually directing industrial life, it will tear the barriers of caste and nation and combine in one brotherhood all the people of the earth for one common purpose."

Perhaps the most naive of these statements is the following: "World Corporation invites the participation of every individual in the world regardless of race, creed, age or sex. IT RECOGNIZES DOLLARS NOT INDIVIDUALS." This last sentence throws us down once more to the plane of every day existence from the glowing heights of imagination to which the consideration of this great Leviathan which will bring "all nations and all peoples into one corporate body, possessing one corporate mind," leads. It thrusts us back to earth with an abruptness which is shocking to those who have soared with Mr. Gillette into the realms of the infinite.

Mr. Gillette expects the paid up capital held in the United States alone inside of the "next five years to amount to no less than fifty billion dollars." Of course it is a very simple matter to obtain this sum as appended table shows: A buys one thousand shares of World Corporation; World Corporation buys one thousand dollars' worth of Pennsylvania Railway from B. B buys 1,000 shares

of World Corporation; World Corporation buy \$1,000 worth of Southern Pacific from C, and so on ad infinitum, the result being that the working of this wonderful endless chain is infinite in its possibilities. As Mr. Gillette suggests, "Nothing has been lost or gained in this transaction from a money standpoint, but where there were five speculative securities on the market before, there is only one security which is absolutely fixed in value and non-speculative."

What Mr. Gillette really intends to accomplish with this Utopian scheme of his is hard to conjecture; were he named Monroe or Sheldon we would not need to seek far for an object. It is difficult to conceive of a hard-headed New England business man entering into such an impracticable scheme without some ulterior motive. But perhaps we do Mr. Gillette an injustice. To put it mildly, however, it may only be one of the eccentricities of genius.

**A NEW FLOUR MILL**

For many years there has been a strong demand in the West for a flour mill, of a cost reasonable enough to allow of its purchase by men of limited means. After a number of years of experiment the Midget Mill has been perfected and patented. The object of its introduction was to fill the demand above given and the experience of small millers in England proves that the Midget will do all that is claimed for it.

This little roller mill sells for \$2000 and the cleaner which goes with it for \$300, f.o.b., Winnipeg or Saskatoon. Besides these two machines all that is needed to set up a first class flour producing business is a gasoline engine and a small building. The whole outfit can be purchased for the price of a first class threshing outfit, and it will run twelve months in the year and twenty-four hours per day if required.

This equipment will grind 280 pounds or 4 2-3 bushels of wheat per hour, yielding 195 pounds of good quality flour, 45 pounds of shorts and 30 pounds of bran. One of these mills is being installed at Jasmin, Saskatchewan, under the supervision of Charles Lunn, who is interested in its introduction into the West, and

within a short time it will be producing results.

The floor space occupied is 8 feet by 4 feet, the driving pulley, which is 20 inches in diameter, projects 20 inches beyond the end of the mill, the height is 6 feet 3 inches without the exhaust fan, this gives precisely the space required in a building for the mill. Its weight is about 2 tons 10 cwt. The mill is driven by a single 3 inch belt. The power is about 5 H.P. The speed of the driving pulley is 300 revs. per minute.

In the whole machine only one elevator is used. This is built in and forms a part of the machine. Owing to the short, quick process employed, the resultant flour is kept clear and bright, its natural color is preserved, and its volatile oils are not evaporated by reason of the interminable operations which obtain in modern practice, where endless elevators and spout connections are employed. In consequence the flour made on the Midget is a better color, retains its natural moisture longer, and makes a sweeter loaf than that made on the elaborate plants.

**DOMINION CROP REPORT**

Ottawa, Nov. 26.—Census bureau reports on Canadian crops as follows:

The closing months of the year give good reports for nearly all of the field crops of the Dominion. Potatoes alone indicate partial failure, and in all the provinces there are complaints of rot in the fields and in the heaps for winter storage. The area is 503,222 acres, and the estimated yield 74,048,000 bushels, being an average of about 147 bushels per acre, which is nearly uniform for all the provinces. The quality is 84.42 per cent.

Turnips and other field roots show a quality of 88.37, a yield per acre of 402 bushels and a total yield of 95,207,000 bushels for a crop of 236,622 acres. Hay and clover are computed for 8,515,400 acres and a yield per acre of 1.82 tons. The quality is 90.45 per cent., and the total yield 15,497,000 tons.

Fodder corn has an estimated yield per acre of 9.38 tons, which upon an area of 271,950 acres gives a product of 8,551,000 tons.

Sugar beets are grown more extensively in Ontario and Alberta, where they supply roots for three sugar factories. The area in crop this year is 16,000 acres, which is a substantial increase upon last year. The yield per acre is 9.69 tons, the total yield 155,000 tons, and the quality 93.15 per cent. The roots supplied to the Berlin factory are testing 17 per cent. of sugar, and at the Wallaceburg factory 16 per cent.; but a product of 5,000 acres in Ontario is being shipped to factories in Michigan. The product of 8,800 acres in that province is marketed at Wallaceburg and Berlin, where the average price is about \$5.86 per ton or better than \$57.80 per acre.

Computed at the average local prices the market value of potatoes this year is \$33,446,000, of turnips and other roots \$21,444,000, of hay and clover \$149,716,000 of fodder corn \$11,957,000, and of sugar beets, \$887,000.

The report on fall wheat sown this year shows an area of 790,500 acres, whereof 682,500 acres are in Ontario and 107,800 acres in Alberta. Last year the area was 609,400 acres for Ontario and 98,000 in Alberta. The condition of the crop is reported at 95.40 per cent., as compared with 93.60 last year.

The per cent. of fall plowing completed this year compared with the area planned for is less than last year, but the report is made for a period one month earlier. The per cent. of summer following compared in the same way is somewhat lower, but increases are shown for Saskatchewan and Alberta.

## NOTICE TO CORRESPONDENTS

This department of The Guide is maintained especially for the purpose of providing a discussion ground for the readers where they may freely exchange views and derive from each other the benefits of experience and helpful suggestions. Each correspondent should remember that there are hundreds who wish to discuss a problem or offer suggestions. We cannot publish all the immense number of letters received, and ask that each correspondent will keep his letter as short as possible. Every letter must be signed by the name of the writer, though not necessarily for publication. The views of our correspondents are not of necessity those of The Guide. The aim is to make this department of great value to readers, and no letters not of public interest will be published.

## FARMERS, GET BUSY!

Editor GUIDE.—On the 12th of October a letter on taxation was printed in *The Guide* signed "Reader," showing where the farmers had to bear the burden of the taxation and the speculators and money lenders go free. In the same issue we have an estimate by E. C. Drury, of the actual cost of the tariff to the average farmer, i.e., \$200 per year. It is also worked out in your issue of the 5th of October that the homesteaders tariff burden is \$215.85. In your October 19th issue under the head of "Who pays the tariff," the \$200 per year the tariff cost to the farming population amounts to \$40 per head per annum, while the customs revenue for 1909 works out at an average of \$7 per head for the entire population of Canada. I think that the above statements prove that the farmer bears far more than his share of the cost of governing the country.

Geo. Langley, M.P., in *The Guide* of September 21st, is credited with saying that any combination of men taking up the practical working of government, i.e., making laws and administering them, should represent every interest in the community. For only as each interest is represented, can justice be done. Now let us see how this works out. During the recent trip of Sir Wilfrid, Mr. Graham is credited in a speech, delivered at Prince Rupert, with the statement that the interests of the investing public must and would be protected. Has anyone heard him say as much for the farming industry? The western provinces are purely agricultural, that is: the bulk of the people paying \$40 per head live in the western provinces. Did they get a square deal when they were made provinces? The Liberal government of Saskatchewan say they did and the Conservatives of Manitoba are asking for the same kind of bargain. As both parties have endorsed it, it would appear to be a fair deal; but is it? The amount you take into consideration the amount that is being paid by these farmer provinces in taxes? No. We were not even granted our request that the government take over the terminal elevators, or that the Hudson's Bay Railway, if built, will be operated by the government. Another point delegates to Ottawa would do well to remember is the silence of both parties in regard to all bank charters expiring in 1911, and on what terms the government proposes to renew them.

Now, why does the farmer get left every time? Simply because the farmer has not taken enough interest in the government of his country. He has whooped and hollered for his party at election time, only to find after another election was over that, some lawyer, doctor, elevator man, banker, or anyone (as long as he was not a farmer) represented, or I should say misrepresented him. If he took any interest in public affairs and tried to mend the present conditions, he made himself so busy begging the powers that be for reforms that he had no time to seize the reins of government and legislate for himself, and his class. Be men! Quit your begging. You have the power. Why not use it? You bear your share and more than your share of the taxation. Elect men from your own ranks to spend it. Then, and not until then will you get a square deal.

THOS. P. CONLAN.

## DO BANKS PAY TAXES?

Editor, Guide:—President Lincoln, in his message to congress on January 7,

1863, said: "It would be unjust to the people at large to exempt banks enjoying the special privilege of circulation from their just portion of the public burden." In other words, Lincoln saw clearly that if banks enjoy a special privilege they should pay taxes on the value of that privilege. In Canada there are 28 chartered banks enjoying the special privilege of note circulation. Their note circulation is over \$90,000,000. That is, the government gives them the special privilege of issuing currency equal to their paid up capital. The paid up capital of the Grain Growers' Grain Co. is \$290,000. Now, suppose the government were to license this Grain Growers' Grain Co. to print and issue "Promises to pay" like bank notes up to that \$290,000 and use it as currency, would that not be a "cinch"? But our banks have that "cinch" up to nearly \$90,000,000, and they pay no taxes for the value of that

these wrongs! Should we not get up and expose the "patent frauds" that are being worked on us and present them to Laurier and demand that he act at once in our interest!

In other countries banks pay taxes, so why not in Canada? They pulled over \$16,000,000 in dividends out of us last year, so are they not able to pay taxes! In Austria-Hungary banks pay a heavy tax on their circulation, and the government claims all their earnings over 7 per cent. That is a sample of how they pay taxes elsewhere, so why not in Canada!

Why could not the government issue all money and then loan it to the banks at so much per cent. interest? By all means let the intelligent Grain Growers and farmers look into and study our banking institutions and they will find as colossal a graft as there is in the grading of grain at the terminal elevators.

## THE MONEY QUESTION.

## REPLY TO SIR G. W. ROSS

Editor, GUIDE.—In your issue of Nov. 2nd I notice an article by Sir G. W. Ross on "Reciprocity or Protection." I noticed this article in the *Globe* some time ago but passed it by unheeded but seeing it in *The Guide* with comments appended by editor of the *Standard* I deem public perusal of the article advisable lest it should mislead some of the "tariff reform" faith as it evidently is intended to do. The article is tantamount to "boys be good and pay us our taxes." In the first place the writer says "a treaty is not advisable as without such we are at liberty to deal with the tariff from year to year." Now, sir, I understood Sir Wilfrid to say that the government was opposed to tinkering with the tariff and that once in seven years was considered sufficiently frequent, and I believe the government are endeavoring to carry out

Chas. G. Crossman's Team

"cinch" over the rest of us. The government would not let me buy a toy, an implement, a cigar, without taxing me from 20 to 30 per cent. on it. But it gives banks the use of \$90,000,000 and asks them to pay not a cent of taxes. But it taxes our food and necessities over \$100,000,000 a year. How is that, Mr. Farmer? Do you call that justice? Have you talked to your M.P. about this fraud? What did he say? Have you written Laurier and Fielding about it. Fielding is Finance Minister and is directly responsible for this fraud, on you. Certain private parties have just put up \$120,000 for him as a gift. Is it not easily seen that some one interested in the banking graft has contributed.

He is the man who taxed about \$14,000,000 out of our hides and then handed it over as a gift to certain rich companies engaged in iron and steel production. What will you bet that some of them did not contribute heavily towards the \$120,000? Is it not easily seen how public men are bought and bribed to betray you into the hands of special interests? Any wonder that this same Finance Minister Fielding must go to England to borrow millions to meet a maturing obligation? Why does not the opposition fight and expose

that principle regarding the tariff. Now in order to encourage trade it is necessary to have something that traders can depend upon; for example: If certain fixed trade relations were made with the U. S. for, say, ten or fifteen years, then people would know just what to depend on as regards "tariff" for a certain time and could act accordingly. Whereas if things are subject to alteration at any time there would not be the same amount of encouragement for people to go into business. Of course we know that in either case there is no compulsion and even with free trade with the United States, Canada will still continue to deal where it best suits her interests. Secondly, this worthy senator seems to think that if free trade was established with the U. S., Canadian commerce would be all muddled up. This in itself seems an admission that trade would turn to the U. S. in considerable volume which would not be the case unless warranted by the advantage gained. As to the bolstering up the inferior American wheat by the superior Canadian article; this is ludicrous. Does Sir G. W. think the farmers are going to fall in such a trap if it was set? But such an idea shows its own absurdity. How is it that the farmers in the U. S. can and do get a higher price for their inferior wheat than the Canadian farmer gets for his good wheat.

Readers of *The Guide* will please take notice that our offer to give a thirteen weeks trial subscription to our paper for 10 cents expires December 1st. This has been an experiment and has resulted satisfactorily. However if subscriptions expire during seed time or harvest they are usually neglected by the farmers. We can therefore accept nothing less than yearly subscriptions after December 1st.

It would seem that under existing circumstances the "superior" Canadian wheat requires bolstering up or at least the price we get for it.

Again he says, "the rates on ocean going freight depends largely upon obtaining cargoes both ways" and argues that if we had free trade with the U. S. ships plying between Canadian and European ports would have no cargoes going to Europe and hence would increase the rates on goods coming to Canada to even up matters. Now, sir, knowing a little of the methods adopted in similar cases, I do not think such a course would even be thought of by any steamship company, and if it was tried it would be a kind of "still born" affair—dead before it came into existence. Why? Simply because they would not get the goods to carry. Then how would such an emergency be met? Simply by following the method now adopted in such cases, that is to say, companies would reduce their transportation facilities on such trade routes to the minimum requirements. It must not be forgotten that with such a disturbance in present trade relations, Mr. Ross seems to think reciprocity would be responsible for, would not effect the outgoing traffic from Canada only but equalize the incoming, so that there would be simply a falling off of trade on certain trade routes, both going from and coming to Canada, hence steamship companies would transfer some of their ships to other routes, perhaps to new ones opened up by this commercial upheaval. And the remaining ships would still get cargoes both ways and that in paying quantities without doubling freight on goods coming to Canada. Again, Sir G. W. Ross refers to the change in transportation facilities since 1866, but makes no mention of the vast changes that have been wrought in other directions, especially in the West, such changes in fact that transportation advances have not been and are not equal to, and the abuses of these transportation facilities as they now exist are largely responsible for the strong feeling in favor of better trade relations with our next door neighbor. Sir G. W. further refers to the amount of money invested in railways and canals, the amount being some \$380,000,000 and states that Canada is the principal shareholder but I notice that the *Standard* in commenting on this part of Sir G. W.'s article, says that at least two-thirds of this invested capital is "British"—not Canadian, but be that as it may we are being pleaded with to leave matters as they are and not break faith with those who have invested their money for the purpose of accommodating, who? The farmers? Well I guess not, rather for the profits the investments returned the speculators, who have largely acquired these transportation facilities. Were we receiving fair treatment at the hands of these people, Sir G. W. Ross might with better grace ask us to stand by them. According to this same argument of Sir G. W., we should continue patronizing even the terminal elevators with their attendant evils and similarly we should cease thinking of sending our grain West instead of East, or in fact of opening up any new trade relations that would divert these veins of commerce that have been pulsating for years and whose manipulators have grown corpulent with the unjust tolls levied on those producing the wealth that flows through these arteries. We are told that when the Panama Canal is opened for traffic that our Western trade will largely go that way. Then Sir G. W. Ross will have to get busy. Lastly the writer refers to the Imperial side of the matter and argues that British Preference should be seriously considered even hinting that our National relations with the Mother Country might be weakened. Now, sir, I do not believe that Canadians want any preference in the British market that would revolve on the British consumer, but rather preference only in so far as mutual benefit might be derived. Any action on the part of Canada beyond this would be an exhibition of very low grade loyalty. It puts one in mind of a big robust boy always hanging around his father and constantly begging favors, instead of getting out and rustling for himself and making an honorable living. Such a person, man or boy, does not typify the true Canadian, but rather the boy that says, "Father, let me look after myself, I am strong and able to fight life's battles but if you ever need me you may depend on Jack." English statesmen are constantly saying that Canada should make the best bargain she can no matter where and scoff at the idea of

## GERMAN COST OF LIVING

Berlin, Nov. 23.—The Socialist interpellation as to the high price of meats was discussed in the reichstag to-day. Johann Rupp, conservative, admitted that the prices were too high in many cities, but he blamed the middleman and was opposed to the opening of frontiers to foreign importation at the present time, which, he said, was inopportune for such a concession.

Herr Delbruck, vice-chancellor and minister of the interior, said that Chancellor Von Bethmann-Hollweg upon the solicitation of the South German governments had sanctioned the importation from France to a fixed number of cattle and swine weekly.

The importation of cattle from America which was prohibited originally owing to the prevalence of Texas fever, could not be permitted on veterinary grounds. American fresh beef was also barred because of Texas fever, but if the prohibition were abrogated, the importation would still be impossible owing to the provision of the meat inspection law which requires fresh beef to be imported in whole or half carcasses with the internal organs intact.

Baron Schulermer, the Prussian minister of agriculture, agreed that in most cities meat prices have reached an abnormal height, but was not due to an inadequacy of home supply.

such interfering with the loyalty of Canada to the Mother Country.

ANDREW RUSSELL  
Rocky Coulee, Alta.

## ARE ALL FREE TRADERS

Editor, GUIDE:—Your article in THE GUIDE of November 9th re "Protection and Revenue" so agrees with my own opinion that I cannot help but congratulate you for its production. You say the net revenue collected for 1909 on agricultural implements was \$142,602.94. As I see it, this figure means that farmers bought from foreign countries (United States) implements to the approximate value of \$800,000 on which the government collected duty of 17½ per cent. On the other hand the Canadian farmers bought from the Canadian manufacturers, implements valued at over \$12,000,000 that practically pays no duty into the Dominion treasury, but that the farmers pay the manufacturers 17½ per cent., because we cannot buy Canadian made machines any cheaper than foreign made ones. "The Sun" makes the statement that in 1909, the International Harvester Company received a rebate of \$21,559 duty paid on imported raw material, entering into the manufacture of its finished produce, and the Massey-Harris company received in the same year a rebate of \$175,973 through its Toronto and Brantford factories. Just think of it, gentlemen, those three concerns received a rebate from Ottawa of nearly \$200,000 or \$33,371 more than the government received, and still the privileged few cry out for more pay. Quite natural. More power to THE GUIDE. The Dominion of Canada has nothing to lose, but everything to gain, by having a great big reduction in the tariff, especially in natural products. Reciprocity with the States is the slogan for us. Why? Because, although preferential trade with the Mother Country, may and I believe is to our advantage, we cannot hope to get it as the working men got enough of protection in Britain fifty years ago, the time of the corn laws. Just take a look at the situation across the 49th parallel. How the conditions there would affect us if we had free intercourse.

Nov. 7th. Wheat at Fort William 91½c.; at Minneapolis, same day \$1.01. Live Stock, Toronto, choice cattle, \$5.75; Chicago, choice stuff, \$7.50. Hogs, Toronto, \$6.75. Chicago, \$8.45. If we had recourse to the American markets through a fair deal in natural products itself, it seems to me that in ten years time and right now we would have a natural market at our door that would mean much for Canada. This letter will help to show Mr. Meighen and others of his kind, that we are not what he represents us to be, all protectionist and just a few disgruntled Grain Growers in the West, for Free Trade. There is no doubt but that the Grain Growers of the West are getting very embarrassing to the high tariff people of the East. As they are aware, that when the farmers of Canada begin to think and act for themselves, the days of special privilege are gone.

JAS. RUSSELL.

Craven, Sask.

## REVENUE OR PROTECTION?

Editor, GUIDE:—The present Canadian tariff has been described by different parties as a revenue tariff, a protective tariff and a revenue tariff which also protects. The name or purpose of the tariff determines our attitude towards it as patriotic citizens. If protection is the sole object, then our duty is to purchase Canadian goods only, with the result that no revenue can be obtained from the tariff. If revenue is the one object, our duty is to purchase foreign goods only, as they are the only source of a direct tariff revenue. A tariff for both protection and revenue is an absurdity as the one destroys the other. If the duty on a foreign article is placed so high as to thoroughly protect the domestic manufacturer, no revenue can be obtained from it. If it is placed low enough to admit of entry for revenue purposes, the home manufacturer enhances the price of his article to a similar extent, thus drawing from the people a heavy tax which does not reach the national treasury. We should thoroughly assure ourselves of the purpose for which the tariff was framed and if it is revenue only, then for the future we must and shall buy in the foreign market only, those articles

and commodities from which that tariff revenue can be obtained.

ALEX. BROWN.  
Glencora, Man.

## MR. ROBERTSON ON TARIFF

Editor, GUIDE:—In your issue of the 16th I notice that it is your intention to have a representative at Ottawa this winter to write a weekly letter on Free Trade for THE GUIDE from an "impartial standpoint," and further on you say, "It will be of interest to our readers to know that our representative is a believer in the principles of Free Trade as it is practiced in England." I fail to see how your representative can write from an "impartial standpoint" if he is a free-trader. In the circumstances I am afraid some of your readers will hardly find the promised letters interesting as they are not all in favor of Free Trade. I have resided in this country nearly eight years and during that time I have never heard any farmer express a wish for "Free Trade as it is practiced in England." Tariff reform, or in other words an adjustment of some of the duties on certain articles would be beneficial, such as a reduction in the duty on farm implements, and on lumber, but I doubt if the abolition of protection would appeal to farmers. It seems to me that the high price of lumber is even more injurious to the prosperity of the country than the prices of farm machinery for it affects all classes more or less. I believe a certain kind of rough lumber is allowed free of duty from the States into Canada, but the Canadian lumbermen, seem to be determined to put a stop even to this little advantage, by objecting to the retailers handling it. This to the ordinary man in the street, appears to be unfair, and savors of a combine.

It is a fact that owing to the high price of lumber, people think twice before they build, and many don't build at all, preferring to exist in a small shack or sod house for the present. Free trade in England and Scotland has certainly not been beneficial to the farmers there, otherwise the majority of them would not now wish for tariff reform. If you have free trade, it of course means taxes in some other form, to carry on the government of the country, and some of these taxes might press rather heavily on the farmers.

JOHN ROBERTSON.

Bradwell, Sask.

Note—We still think our Ottawa representative is better on account of his Free Trade beliefs than if he were a protectionist. Mr. Robertson's views on Tariff Reform in England is a matter of opinion; Free Trade in England and its benefits is a matter of fact.—Ed.

## RAZE THE TARIFF WALL

Editor, GUIDE:—I wish to say a word with so many other writers, against the cursed tariff. Any argument in favor of a tariff on imported goods, especially on farming utensils and the necessities of life has not got a foot to stand on. Tariff as imposed in Canada is obsolete and out of date. It puts an artificial value upon everything. It is the country's curse and so cumbersome to do business under, that to the majority of us, it has become unbearable and cannot be longer tolerated. It is expensive to collect and gives great scope to dishonesty by the collectors as I can testify. "Free Trade," Vivian, M.P., said recently, "is Britain's greatest asset." And he is right. It would be Canada's great asset also, if not her greatest. Our opponents say, "See how Canada has prospered under the tariff laws." Then how much more would Canada have prospered by free trade. I venture to assert at least 30 per cent. more. Sir Wilfrid Laurier said, or meant as much, that sufficient taxes could not be raised in this new country but by imposition of the tariff. Well, does Sir Wilfrid know that this statement was not altogether true? The things which ought to be taxed are in a new country as well as in the old; that is land, house, property, stocks, legacies, etc., etc., and if the owners of these don't respond to a call the property could be sold by the authorities. Perhaps Sir Wilfrid would like to favor land dealers and syndicates and manufacturers to the end of his time. The government made a gross mistake when they allowed dealers to handle the land at all. All that dealers have done and are doing was and is to raise the price of land beyond its real value. They are the drones of the community who live off the workers; they have partially ruined the country and we have the gov-

ernment to thank for it. They prevent residence on the land which ought to have been kept in trust for farmers only. Many a settled farmer in Canada would have bought another quarter or perhaps two in order to give him a little scope to improve his position and raise food for the people, for a quarter section is only half enough, but he is unable. The dealers have managed to raise the price to an unprofitable pitch. This is another kind of tariff and a heavy one which farmers have to contend with and which the government ought to have prevented. As to manufacturers, so befriended at the expense of the farmer, and consumers;

**Synopsis of Canadian Northwest Land Regulations**  
ANY person who is the sole head of a family, or any male over 18 years old who may homestead a quarter-section of available Dominion land in Manitoba, Saskatchewan or Alberta. The applicant must appear in person at the Dominion Lands Agency or Sub-Agency for the district. Entry by proxy may be made at any agency, on certain conditions, by father, mother, son, daughter, brother or sister of intending homesteader.  
Duties—Six months' residence upon and cultivation of the land in each of three years. A homesteader may live within nine miles of his homestead on a farm of at least 80 acres solely owned and occupied by him or by his father, mother, son, daughter, brother or sister.  
In certain districts a homesteader in good standing may pre-empt a quarter-section alongside his homestead. Price \$3.00 per acre.  
Duties—Must reside six months in each of six years from date of homestead entry (including the time required to earn homestead patent and cultivate fifty acres extra. A homesteader who has exhausted his homestead right and cannot obtain a pre-emption may take a purchased homestead in certain districts. Price \$3.00 per acre. Duties—Must reside six months in each of three years, cultivate fifty acres and erect a house worth \$300.00.  
W. W. COOK,  
Deputy of the Minister of the Interior  
N.B.—Unauthorized publication of this advertisement will not be paid for.

as the country has them to-day we would have been better without them, if we only had free trade. At present we are subjected to the necessity of buying nearly all our manufactured goods at 20 per cent. inferior quality compared to what we would get under free trade competition. That benefits the manufacturer only at the expense of the consumer. From a farm wagon down to a needle all things counted the tariff is about forty per cent. Every herring ought to hang by its own tail and if the manufacturer cannot stand in open competition let him fall, we have supported him long enough. We should not only have reciprocal trade with the United States but we ought to have it with Great Britain and Ireland also. This policy would not only advance the prosperity of Canada but it would help the hard workers of the Motherland to earn better wages and also show more of a spirit of loyalty to the Empire which under the present preference law seems very meagre indeed.

JAMES HOGG.

High River, Alta.

**FARMERS' PARTY NEEDLESS**

Editor GUIDE:—Under the above heading the discussion between Mr. Langley and Mr. Kirkham in THE GUIDE provides very interesting reading. The question at issue is one that will, I think, sooner or later, come more prominently before your readers, depending, no doubt, on the success or otherwise of the farmers' organizations. Meanwhile, however, the safest policy to pursue is to steer clear of a third political party, or, in fact, any particular political party. Farmers, as a class, need educating for some years yet along the line found in THE GUIDE before they could be depended upon to vote right.

In the meantime why not take a leaf out of the Canadian Manufacturers' Association's book and press upon the party in power—Liberal or Tory, it matters not—and demand legislation for our benefit. That is what 2,500 Canadian manufacturers are doing and have done successfully, as every farmer knows or ought to know. Cannot we, 50,000 farmers, by working along the same lines, get what we want, and want badly? Surely! If we use the little intelligence we have and use it rightly we will put party politics aside and vote for legislation for the farmer; then, and not till then will we get or deserve our rights. The farmers are going in the right direction now, if they have the gumption to keep going straight ahead, neither turning to the right nor to the left. "Organize and Educate" should be our war-cry and it will lead us to victory.

"BRIGHTHOLME."

**A FARMERS' COMPANY**

Editor GUIDE:—In compliance with your letter of recent date I enclose herewith \$1.00, subscription for one year for THE GUIDE. I might say in connection herewith that we are, we might justly and proudly say, purely a farmers' institution. Our head office being located at Weyburn, Sask., and the branches in the surrounding towns, you can readily see that our customers are the farmers and the business men doing business in these farm towns. We are, therefore, interested in any organization that is wholly and truly for the interest of the farmers, our customers. You seem to present such claims in your letter to us, and hence please accept one dollar with hopes that you make good your claims, and if you do we wish you success.

CHAS. C. JOHNSON,  
Manager Weyburn Security Co.  
Weyburn, Sask.

**A WISE FARMER**

Editor GUIDE:—I shipped a car of wheat from Anderson Siding on November 9th, and of course I was warned by those not interested that it would only grade No. 2 or No. 3 Northern. On the contrary it graded No. 1 Northern with 1 per cent. dockage, thanks to the manager and his efficient staff.

E. D. MAGWOOD.

Killarney, Man.

Not long ago a promising poet whose contributions were printed in the Century magazine was discovered to be a prisoner in a Minnesota penitentiary. And now a prize poetess turns up in a Minnesota insane asylum. It is evident what poetry is coming to.

**SASKATCHEWAN AGRICULTURAL MEETINGS**

The letter before the name of each place indicates the seed grain judges or speakers who will attend the seed fair or meeting at such place. Those places holding a seed fair are indicated by the letter x. Following are the key letters:

- (a) Prof. W. J. Rutherford, Saskatoon.
- (b) Prof. John Bracken, Saskatoon.
- (c) Prof. T. N. Willing, Saskatoon.
- (d) A. F. Mantle, Deputy Minister of Agriculture, Regina.
- (e) L. A. Zufelt, Sask. Govt. Creamery Inspector.
- (f) F. H. Reed, Sask. Representative of Dominion Seed Branch.
- (g) Arch. Mitchell, Asst. Supt. of Tree Planting, Indian Head.
- (h) Miss Lillian K. Beynon, Editor Woman's Page, Manitoba Free Press.
- (i) Thos. R. Brown, Regina.
- (j) Adna Blackstock, Paynton.
- (k) George P. Campbell, Ellisboro.
- (l) R. H. Carter, Fort Qu'Appelle.
- (m) R. E. Drennan, Canora.
- (n) Geo. Harvey, Indian Head.
- (o) W. McCorkell, Moosomin.
- (p) Wm. McDermid, Haleyonia.
- (q) F. Pott, Qu'Appelle.
- (r) A. J. Quigley, Sintaluta.
- (s) A. P. Stevenson, Dunston, Man.
- (t) John R. Scharff, Hartney, Man.
- (u) George L. Smith, Saskatoon.
- (v) Percy Reed.
- (w) J. A. Mooney, Regina.
- (x) Hon. W. R. Motherwell, Minister of Agriculture, Regina.

The following meetings are yet to be held:

- Dec. 1 —(i-r) Frobisher; (g-p) Scott.
- " 1-2 —(k-v) Langham x.
- " 2 —(i-r) Bienfait; (m-n) Lemberg; (b-t) Maryfield.
- " 2-3 —(c-s) Carlyle x; (g-p) Unity x.
- " 3 —(b-t) Fairmeade; (m-n) Killalee; (i-r) North Portal.
- " 5-6 —(k-u) Canora x; (b-o) Rosethorn x.
- " 5 —(a-l) Glenavon; (m-n) Grayson; (g-p) Landis; (d-r) Macoun; (c-s) Manor.
- " 6 —(g-p) Biggar; (d-r) Midale; (c-s) Wauchope.
- " 6-7 —(m-n) Dubuc x; (a-l-h) Sintaluta x.
- " 7 —(d-r) Griffin; (k-u) Invermay; (g-p) Normanton; (c-s) Redvers.
- " 7-8 —(b-e) Skipton x.
- " 8 —(g-p) Hope Hall; (k-u) Kuroki; (i-r) Lang.
- " 8-9 —(c-s) Lumaden x; (a-f) South Qu'Appelle x; (d-w) Arcola x; (m-n) Stockholm x.
- " 9 —(g-p) Kinley.
- " 9-10 —(i-r) Milestone x; (b-o) Prince Albert x; (k-u) Wadena x.
- " 10 —(c-s) Disley; (g-p) Juniata; (a-l) Pense; (m-n) Waldron.
- " 12 —(m-n) Bangor; (c-s) Bethune; (k-u) Quill Lake; (i-r) Wilcox.
- " 12-13 —(a-l) Maple Creek x.
- " 13 —(m-n) Atwater.
- " 13-14 —(c-s) Craik x; (i-r) Moose Jaw; (b-o) Tisdale; (k-u) Watson.
- " 14 —(a-l) Gull Lake x; (m-n) Spy Hill.
- " 15 —(k-u) Englefeldt; (c-s) Girvin; (m-n) Tantallon; (a-l) Waldeck.
- " 15-16 —(b-o) Kinistino x; (i-r) Mortlach x.
- " 16 —(m-n) Rocanville; (a-l) Rush Lake.
- " 16-17 —(c-s) Davidson x.
- " 17 —(k-u) Dana; (a-l) Herbert; (m-n) Welwyn.
- " 19 —(c-s) Bladworth; (a-l) Swift Current.
- " 19-20 —(k-u) Vonda.
- " 20 —(c-s) Kenaston.
- " 21 —(c-s) Hanley.

In addition to these, several other circuits of meetings will be held in January. There will be seventeen meetings within a radius of fifteen miles of Moose Jaw, ten on the Outlook branch, eight on the Goose Lake branch of the C.N.R., seventeen on the G.T.P. east of Saskatoon, and many others in districts where dairying is an important industry.

**Henry George's Works**

The questions of land monopoly, land value taxation and the "single tax" are arousing great interest in Western Canada. A number of the readers of The Guide have asked where they can secure the works of Henry George, the great economist and humanitarian who fought so valiantly in the interests of the common people. "PROGRESS AND POVERTY" is recognized as being George's greatest book, and also as one of the greatest books published by any author during the past century.

"THE LAND QUESTION" contains "Property in land; a Passage of Arms Between the Duke of Argyle and Henry George," as well as an open letter to Pope Leo XIII. on the "Condition of Labor." We have twelve paper bound copies of both "Progress and Poverty" and "The Land Question," which will be sent postpaid upon receipt of 55 cents each.

**Direct Legislation**

If you are interested in improving the system of government in Canada you should study Professor Frank Parson's book entitled "The City for the People." He devotes a great deal of attention to Direct Legislation, and this is considered the best book published on the subject. He also deals in the same book with Public Ownership, Home Rule for Cities, and the Merit System for Civil Service, and the best means of Overcoming Corruption. Professor Parsons in his book shows how reforms have been accomplished in Switzerland and in some of the American cities by means of the Initiative, the Referendum and the Recall. Paper covers, 50 cents, postpaid.

**Dry Farming: Its Principles and Practice**

By William McDonald, M.S., Agr., Sc.D., Ph.D.

The author of this book, in addition to his experience in the Transvaal, has visited all the important experiment stations in the United States where dry land investigations are being conducted. On this account the book is replete with the very latest information that is drawn from Utah and Montana, where dry farming has been conducted very successfully. Professor W. J. Elliott, who is in charge of the C.P.R. Farm at Strathmore, Alta., says: "I could certainly recommend 'Dry Farming' to all those who are considering this work in any one of its phases, and in fact for the man who is farming under more humid conditions there are many points that will aid him very much in the handling and treatment of his soil." The book is written in a simple style that may be understood by every man who reads, and in fact, so well has the author prepared this work that it reads like an interesting novel. It contains 290 pages and is well illustrated; \$1.31, postpaid.

**Sixty Years of Protection in Canada, 1846-1907**

By Edward Porritt

Western farmers at the present time are intensely interested in the tariff, and are anxious to secure information upon tariff matters. The above mentioned book by Edward Porritt is the best work on the subject. Mr. Porritt is a British Free Trader, and was for two years a lecturer in Harvard University on political economy and Canadian constitutional history. In 1905-6 he travelled with the Canadian tariff commission and devoted a great deal of study to the Canadian tariff and the abuses which have followed protection. Mr. Porritt's book is entirely non-political and is a study of the tariff history of Canada for the last sixty years. It is written in a most interesting manner and at the same time contains exact information on trade and manufacturers and the methods by which tariffs are made. Every farmer who is interested in tariff reduction will find Mr. Porritt's book the most valuable one that he can secure. He will also learn how the manufacturers lay aside politics in their efforts to have the tariff burden increased. If every farmer in Canada would read Mr. Porritt's book, the "system of legalized robbery" would come to an end inside of one year. The book contains 478 pages and is fully indexed. It will be sent to any reader for \$1.50 postpaid.

**Audel's Gas Engine Manual**

By Th. Audel

The great need of the West is men to sow, till and gather, and these are the functions that the internal combustion engine furnishes the agriculturist to quadruple the labor that man furnishes. With the Gas Tractor the soil is broken, the land cultivated and the crop threshed with the minimum amount of manual labor and with an ease and convenience that steam power was never able to furnish. Then the various details of the farm work are taken care of by the stationary gas engine and furnishes the power for the sawing and chopping, pumping, churning, washing machine and separator, in fact all the chore work is taken care of by the gas engine. It is natural, then, that every farmer wants education in the operation of the Gas Engine, and no better book can be found that takes up the various details of construction and operation and in easily understood language, than Audel's Gas Engine Manual furnishes. It takes up the care and management of Gas, Gasoline and Oil Engines, Marine and Automobile Engines. The book contains 512 pages and is well illustrated by diagrams and printed in large, clear type on good paper. Postpaid \$2.00.

Book Dept., Grain Growers' Guide, Winnipeg

# SASKATCHEWAN SECTION

This Section of The Guide is conducted officially for the Saskatchewan Grain Growers' Association

## SASKATCHEWAN GRAIN GROWERS' ASSOCIATION

Honorary President:  
E. N. Hopkins, Moose Jaw

President:  
F. M. Gates, Fillmore

Vice-President:  
J. A. Murray, Wapella

Secretary-Treasurer:

Fred. W. Green - Moose Jaw

Directors at Large:

E. A. Partridge, Sinaluta; George Langley, Maymont; F. W. Green, Moose Jaw; F. C. Tate, Grand Coulee; A. G. Hawkes, Percival; Wm. Noble, Oxbow.

District Directors:

James Robinson, Walpole; J. A. Maharg, Moose Jaw; Charles Dunning, Beaver Dale; John Evans, Nutana; Dr. T. Hill, Kinley; Thomas Cochrane, Melfort; Andrew Knox, Colleston; George Boerma, North Battleford.

## Saskatoon Conference Papers

The following papers were read at the Saskatoon Conference of the S.G.G.A.

### FUTURE PROSPECTS FOR THE DEVELOPMENT OF OUR ASSOCIATION

(By President Gates)

The future development of our association is a necessity. The work to be done is only at its commencement. We must solidify and above all embrace all. As the knowledge of the work we are doing becomes more widely known the more it will commend itself to the Grain Growers who have either not had the objects and aspirations of our association clearly placed before them or their interest sufficiently aroused. Judging from past experience it would seem to be necessary to continually put before the farmers the necessity which exists for them to unite if they are not to be the prey of other interests who do unite, and for the purpose of agitating for reforms, redress of grievances and advanced legislation which shall render their condition and environment more suited to the enlightened age in which we now live. The prospects for increasing both interest and membership appear good. There are many serious problems confronting the tillers of the soil, and it would seem that these must be persistently placed before them, first to create, and then to sustain their interest. This entails heavy work and has reached a point when the voluntary efforts of our more enthusiastic and energetic members are insufficient, and measures will have to be taken to provide additional means for propagation.

Just what form such extra effort should assume will be a matter for consideration by the Directors. A paid organizer for the province, or one for each district, or a paid president or executive are possible solutions. Whatever course is adopted, the necessity exists and should be met. But further development is also a duty. There should be no question in any man's mind but that he should be one of us, and there should be no question in any member's mind but that it is his duty to induce others to come in. If he is convinced of the benefit of the association to himself then he must be convinced that it is good for his neighbor, and it becomes his duty to see that his neighbor does his duty and takes a hand in the work. A life is not worthy that does not contribute towards the betterment of conditions, and some sacrifice is exacted from all of us if we are to be credited with having helped to keep the wheel of progress turning. I have seen a load of grain being hauled up a slope to an elevator proving too much for the tired team, all but slipping back to be overturned, but see a man to the wheel! With all his force. The need is for a strong boost. The load moves up, the top of the slope is gained. Just such a boost by you men may result in the association attaining some object for which it has been working and striving. The development of our association will be a divided advantage. We have gained in the past financially and intellectually, and for that very reason our prospects for further development are largely increased. Is it not evident that where we have gained little things in the past that when our association shall have embraced all the thinking men of the country, and stand as the most united and numerically strongest body in the province, we shall accomplish great things?

Tariff reduced, freight rates lowered, extortion abolished, a clearer and more direct voice in respect to legislation. These are some of the objects towards which we are now looking, and who will say these things, when accomplished, will not be to our advantage? The advantages of an association like ours growing and growing and growing, keeping pace with the development of the country and alert in our interests are not to be enumerated, but if once grasped by the mind should hold fast every man who has any interest in his own welfare or in the progress and prosperity of the land in which he lives. The advantage of having

an association that will voice the wishes and desires of the farming class is tremendous. The feeble voice of an individual farmer, however loudly he may shout, may not attract much notice, but the shout of thousands may cause the walls of Jericho to fall or a government to pay heed.

Then the social and educational side. Our movement, remember, is but an infant yet. Wisdom comes with age. Slowly perhaps, but none the less surely constant association between the members of the local associations will lead to more friendly intercourse and eventually to a thorough understanding as to what is best. Then our further development may be regarded as a triumph. Farmer's organizations were long a by-word, and we should be on our nettle to be a living growing proof that reason dominates our councils, determination animates our members and that self-sacrifice for the general good are attributes to which we can lay claim. We have a right to be proud even to-day at the position to which we have attained, at the respect and attention accorded to us—and we should feel stimulated to further exertions to raise our association still more in the estimation not only of those in authority, but the estimation of the people among whom we live, that they may feel the spur of ambition to join in the great progressive movement and become life-long members.

Knowledge of our work is spreading, means of communication are increasing, the young are imbibing education, the spirit of co-operation is growing, and the need of drawing together of those who render productive our land is felt, and I doubt not at all but that our grand association will develop and expand until it embraces all and truly represents the needs and aspirations of the grain growing or farming community.

### OUR GREATEST DEFECTS AND HOW TO OVERCOME THEM

(By Dr. Hill)

"He who by any exertion of mind or body adds to the aggregate of enjoyable wealth, increases the sum of human knowledge or gives to human life higher elevation or greater fulness—he is in the large measure of the word a 'producer,' a 'working man,' a 'laborer,' and (in proportion to his exertion) he is honestly earning honest wages. But he who, without doing ought to make mankind richer, wiser, better, happier, lives on the toil of others—he, no matter by what name of honor he may be called, or how lustily the priests of Mammon may swing their censers before him, is in the last analysis but a beggarman or a thief."—Henry George.

Our greatest defects are lack of enthusiasm, lack of confidence and faith in our cause, too morbid a conception of our duty and responsibility. Our prophetic vision is distorted. We are looking too much to how much we can do. Shakespeare said: "We live in deeds and not in years, and he best lives who thinks the best and acts the noblest." Our organization lacks strength and continuity of purpose. Our object is not merely to get government ownership of elevators, free trade, reciprocity or low tariff; construction of the Hudson's Bay Railway, etc. These are but links in the economic, social and political advancement of our people. We are citizens of a young and growing country. We are now laying the foundation of a mighty fabric. We are reformers of a higher order. To us is committed the task of advancing the cause of social, political and moral liberty. It was said of the reformers in the old days that they commenced by reforming themselves.

During the repeal of the Corn Laws, Cobden said to Bright: "Oh! come and help us in this cause." Bright replied: "I cannot. I have a wife who lies dead

at home." Cobden said: "Come with me and I will take you to a thousand homes where the wife and the breadwinner—We dead for the want of bread." Bright joined Cobden with his eloquent tongue. They marched through the land like a flame of living fire and soon those infamous laws were repealed, and the common people had bread enough and to spare.

Our defects lie not so much in the disease of our organism, as in the sterility and indifference of our members. It is the digestive functions of our members that need tone and vitality. More a lack of iron in the blood. We should ever remember that we represent the mighty forces of democracy. To us is committed the task of directing this organization.

Let us heed what Napoleon said regarding China: "There lies a mighty giant. Let him sleep unless you can control him, or he will be a mighty force of destruction."

### THE INFLUENCE OF OUR ASSOCIATION ON LEGISLATION

(By F. C. Tate, M.L.A.)

When we come to examine the reason why any body of men influence public opinion and finally have their opinions embodied in the laws of the country, we find that some men have labored perhaps for years to lead men's minds to view things in a somewhat different way than they have done before. In other words they are the prophets of the cause and are the men who prepare the ground and sow the seed, and watch it in its earlier stages of growth. These men are often called dreamers or hermits by the ordinary man, but the thinker sees their work is of first importance and strives to help the cause along. After the people get interested, the men of affairs or the practical men take the matter in hand and get the thought put in action through the union of men who have a common interest working together.

In our Association we find the same causes have been at work. For years the prophets have been at work in various ways advocating a union of farmers for purposes of self-improvement and the betterment of conditions. For instance, the Grange, Patrons of Industry, and last, our own body. At first public ownership was proposed and got very little consideration. Then it was listened to but was called visionary. Afterwards public men began to think that we were in earnest and gave us some consideration. Next it became a question of practical politics and is receiving a good deal of attention that will finally result in some legislative action.

Our secret of the power we already have is this: The desire and the determination to right by all classes of the community. To advocate our own interests without injuring the rights of any other class or body of men. Another is that we have kept ourselves as a body apart from the political parties. We have looked to the men who are managing the affairs of the country as simply the servants of the people, and as such, willing to listen to our requests. Governments are always ready to listen to a large body of men and grant their requests, unless there are opposing interests who can bring strong pressure to bear in another direction.

Our weakness is caused by a lack of unity of purpose. Sometimes spreading ourselves too much, and sometimes a determination to have our own way. And again, allowing ourselves to be used by politicians for their purposes, who may, after using us, throw us aside. But after looking at it on all sides we can see that we have made solid progress. People are thinking as never before. The public are looking on our cause with more favor. We loom large in the public eye, and farmers are seeing where their strength lies, and are looking to the future with more hope.

Let us follow our ideals. Educate and organize, and we shall finally succeed in

placing our ideas on the statute books of our land. Truly a large undertaking, but I think, a possible one.

### SHALL WE USE MORE THAN ONE LANGUAGE IN OUR WORK, AND WHY?

(By Thos. Cockrell)

Now, I would like to modify that a little and make it "should" instead of shall. We have mixed settlements of different languages, and we have whole settlements of almost one entire language; such as Germans, French, Ruthenians, and the Doukhobours, who are practically unable to understand your meaning when given in the English language.

As these people are to be Canadianized and made into citizens of this grand country it stands to reason that we should go to them and teach and explain to them in a way and manner in which they may better understand the object we have in view, viz: the betterment of the condition of the Grain Growers and farmers in general. Some of them have come from a country of oppression. They know what it means to be borne down by aristocracy and men in high position. We should show them that they are in a country of free institutions where every laborer is worthy of his hire, and where there is an error between law and justice we are trying to correct that error. We should get them interested to the extent that they will feel a fellow-interest in the undertaking which we have in hand. It will be only a matter of a few years when they, or at least their children, will in all probability be among the leaders in the organization. We should show them our object is not to dig for a mere living. Neither to take away any privilege that justly belongs to another. But to up-build and strengthen the mental and moral character that furnishes the stamina to move this mighty world along.

As the Anglo-Saxon race is the dominant race, and as the English language is predominant, I believe it is just and right that we should show to these people some consideration. We should teach the parents of to-day, and as their children are being sent to English speaking schools this same spirit will be instilled into the minds of the rising generation, and the influence for good will be so far reaching that it is hard to conceive where the end might be, for in the rising generation is the future hope of the progress of this as well as all other countries. It is said that to teach a child we should begin two generations before that child is born. In other words, we should begin with the grandparents when they were children. While we are looking out for the young generation let us try to educate the parents so that they may reap some of the benefits to be derived from the present good. That they may join us and help to strengthen us in our present fight for reform, and to enroll such a number asking for the same thing that our Dominion and our provincial authorities will not only listen to, but must acknowledge that our demands are just and honorable, and grant them to us.

To do this, and to arrive at the right solution, I think we should go to these people in their own language pure and simple, the same as if we were teaching a child to talk. Who would think of reading a lecture in theology to a child beginning to talk. In going to these people in this manner, we might well feel proud

that we are able and willing to help these, our fellow men, to a higher and more noble life, which will be not only a benefit to them but to us individually, to the association, and to the world in general. When I was a boy in school, one lesson in our old reader began thus: "We must educate, we must educate. If we do not, short will be our race from the cradle to the grave."

Educate must be the watchword. We should strive to make this an organization of which we may all feel proud, and say without boast that we are second to none.

**SUGGESTED CONSTITUTIONAL AMENDMENTS**

(By H. Dorrell)

By the creating of the Grain Growers' Association a great force and a mighty instrument for good or for evil has been set in motion, and it devolves on the fathers of this movement to give to it such a constitution, that the primary aims of our association are safeguarded, the principle of equal representation at the councils of its members maintained, and above all that by careful sifting and selection, the best brains and characters in the province may be always found at the head of our organization.

Now in my opinion our present constitution fails in all three of these essentials; To the first the words "any person" in clause II opens a wide door, and may weaken our presentations to the outside world; our aim should be to have only those who are or have been, actual working producers. Dr. Robertson recently made the statement that "labor was a better educator than books" and while books are necessary to build up the mind of man, only daily toil that has met the many existing impediments to its true reward will produce the men that by their sincere convictions, their enduring patience, and unswerving fidelity will reach the ends our organization stands for.

In the second essential, our present system of dividing the province and choosing a director from each is more crude than just. Representation by population is a part of the Canadian constitution. Now I find that according to the agricultural report for 1909 that in district No. 1 there are 18,831 farmers; in No. 2 there are 11,934 farmers; in No. 3 there are 16,218 farmers; in No. 4 there are 19,380 farmers. In all five others, there are 16,769, yet each district has one and one only representative on the board of directors for the other directors may be picked up anywhere, whoever may be the man of the hour.

In the third essential, that of selecting our best men our constitution is very weak; other orders than our own have suffered from the hasty selection of leaders and trustees from a large body of delegates met together but for a short time, imperfectly acquainted as to fitness or character, and where the loudest to acclaim or the "lolly good fellow" is often installed in office. So far we owe our success in this matter to fortune, not to constitution. Our leaders should be selected first by their neighbors in the sub-associations, then in their districts before being eligible to the board of directors. In the first place then I would suggest that the word "person" should be changed to "bona fide" grain growers. We pretend to speak for and as Grain Growers, and the fact that others may be members weakens our position and makes us open to the attack that we are a body any mal-content may join.

Then in order to make our annual conventions more widely and effective, and also to enable all our members to get together and discuss and educate themselves on the questions of the day without travelling a long distance; divide the province into a number of districts according to population; it would seem to me that our rural provincial constituencies would be about the right size and are supposed to be based on population. Each district might have its annual convention and after due consideration elect one or two delegates to the provincial convention. This would ensure only the best men from all parts of the province being eligible for the directorate, and the cream of the province would rise to the top.

In order to ensure a true representation of the members at the convention, at the request of a minority or any question, the voting power of each delegate might be taken on the number of paid-up members he represented in his district. Another advantage of having each riding a district

would be to bring the member in the legislature more under our control, which is no small matter when the looked-for government ownership of internal elevators comes into operation, besides the many other subjects we must look to our local house to reform. An addition too might be made to the constitution by recognizing the important work of education and organization, provision should be made that this should be continuous for the need will never cease, and a systematic provision should be made for it by the constitution for all time. As many of our members favor the principles of the "referendum" why not try it in our constitution? It would strengthen our position if we ever ask for it.

Gentlemen, I hope these few suggestions may help some in perfecting our organization and while we can never attain a faultless constitution, still we may give equal opportunities to all our members to make their minds effective on every question that may come before our body and give us a leadership that would create an ambition among our young men to attain to that position, which would be one of the highest in honor in the province.

**WHAT LOCAL ASSOCIATIONS COULD DO THROUGH THE JOINT STOCK COMPANY ACT**

By J. A. Maharg

This is a subject which I am entirely incapable of even doing partial justice to. The possibilities open to local associations through the medium of the Joint Stock Company Act are so numerous that in the few minutes allotted to me I can only touch on a few of the points which seem of most importance to me.

In glancing over this subject naturally the first thought would be the possibilities from a monetary standpoint. And unless the promoters of a joint stock company are able to show that it will be a success financially they will find it difficult to induce many to subscribe for stock. Unfortunately for a great many people, (myself included), we give this monetary consideration too prominent a place in our every-day life. We want to see the dollars bulging out of the wheel before we are willing to put our shoulder to it to help keep it going. We want the rough places smoothed over so that it will be easy going. The conditions that the Grain Growers are subjected to at the present time are such that in my opinion local associations taking advantage of the Joint Stock Company Act could well afford to regulate the direct monetary consideration back to second or third place, possibly a lot farther. Now this may sound rather strange being in direct opposition to the rules of finance. Nevertheless it is my firm conviction that there are more important things than the matter of dividends to be taken into consideration in connection with our local associations forming joint stock companies. To me the bringing together of the different units of the Grain Growers and unifying them in one great body for the mutual benefit of all cannot be measured at the present time by any financial rule yet made. The education received through coming in contact with one another, the interchange of ideas, besides cultivating the spirit of come and go or give and take, the one thing so necessary in every body of men, no matter what they are, trying to accomplish those things in themselves, seems to me to be of more importance to the Grain Growers at the present time than a little financial gain.

Then the education received through coming into closer contact with the business world inspires more confidence in the ordinary Grain Grower. He becomes more familiar with figures. Gets a clearer conception of the tactics employed by business concerns in the matter of sales, transportation, distribution, etc. All those things have a tendency to give them greater confidence in their ability to conduct their own affairs. Having some confidence in their own business ability they are not dumfounded when a proposition is laid before them, such as building interior or terminal elevators, building railroads, handling our wheat right from our wagon to consumers' flour bin. Buying all our necessities direct from the manufacturer, and a great many other things that we are just as capable of doing as are those that are doing it for us at the present time. If present conditions continue to exist and get less favorable as rapidly in the future as they have in the past, I can see no remedy for relief, unless along lines something similar to those

suggested. And it is possible the joint stock company in connection with our local association, would have a tendency to develop something like this more rapidly than it otherwise would.

I have been a member of a purely farmers' joint stock company for a long time and have had no reason to regret it. When we organized we paid in 15 per cent. of the amount subscribed and in four years the profits had paid the remaining eighty-five per cent. and set aside a nice sum for working capital.

You ask how we accomplished this. First, we built an elevator to handle our own wheat so we would be satisfied we were getting justice. Then we gradually worked into merchandise, confining ourselves to the more heavy and bulky articles, such as lumber, coal, twine, harness, wagons, plows, harrows, cultivators, seeders, drills, carriages, cutters, sleighs; all kinds of building material, such as doors, windows, finishings, nails, building paper, cement, wall plaster, etc.; fruits, flour, bran, shorts, coal oil, etc. These goods were bought in large quantities and were sold to the public and shareholders alike and at a reduction of from ten to thirty per cent. less than they are usually sold for elsewhere.

There seems to be something holding our Grain Growers back in taking advantage of the benefits of our association. Also the Joint Stock Company Act. It seems to me that we will have to devise some scheme or other to make our association more attractive, so that it will have a greater tendency to hold our association together. As I have said joint stock companies are successful financially but there is no way at present by which those companies can co-operate to help one another. At least if there is, I am unaware of it. If we had some means by which they could co-operate one with the other in buying, distributing, financing, and many other things which would be beneficial to them, it would help us wonderfully.

**TREGARVA LIFE MEMBERS**

A very enthusiastic meeting of the farmers of the Tregarva district took place in the Grain Growers' Hall at 2.30 on the afternoon of the 18th. The occasion was the visit of Messrs. Hawkes and Brown from the central association. The meeting opened by singing, "The Maple Leaf Forever." The chair was occupied by the president, Mr. Busby, who in his remarks referred to the fact that the crowd would have been larger only they had been disappointed twice before in not securing speakers; and also because of a funeral in the neighborhood. He, however, was pleased to see so many out.

The next on the program was an instrumental selection by Messrs. Brown and Seed. Following this Mr. Brown delivered several papers that had been given by prominent men at the Saskatoon conference. Mr. Crispin then gave a song entitled, "The Man Behind the Plow," which was very well received. Some little time was taken up in discussing the papers read. Special attention was paid to Mr. Dorrell's paper regarding who would be members of our association, and the definition of a "bona fide" farmer. The audience were here given another instrumental by Messrs. Brown and Seed.

Mr. Busby then introduced Mr. Hawkes who took up the history of the association and traced it from the date of its inception up until the present time, showing what it had accomplished in the interests of the farmers. He also dealt with the Ottawa trip, and the subjects that would come up at the interview with the government. Also the interior elevator question, and organization work. Lastly he took up the Life Membership scheme and explained it in detail, and asked for volunteers. Was he surprised? Well, rather! Why, they crowded up so fast that they kept the secretary busy for a long time writing our receipts and taking the money. When all was counted up, it was found out that twenty men had that day joined the association for life. Mr. Sutton, the local secretary, also secured some eight or ten annual members, and sold a large number of membership buttons. After a vote of thanks being tendered to the speakers, the meeting closed by singing, "God save the King." The officers of the Tregarva association are certainly to be congratulated on the live membership they have.

**LUMSDEN MEETING**

A very enthusiastic meeting of the

**NOTICE**

NOTICE IS HEREBY given that application will be made to the Parliament of Canada, at the present session thereof, for an Act to incorporate a company under the name of the "GRAIN GROWERS' GRAIN COMPANY" with its Head Office at the City of Winnipeg, in the Province of Manitoba, with power to take over, acquire and carry on the business of the "GRAIN GROWERS' GRAIN COMPANY, LIMITED," a company incorporated under the Joint Stock Companies' Act, and amending Acts, of the Province of Manitoba, and for such purposes to buy, purchase, lease or otherwise acquire the property, assets, and undertaking of said Company as a going concern, and to pay for the same by cash or shares, debentures or securities of the new company, or partly by cash and partly by shares, debentures or securities of the new company or upon such terms of amalgamation as may be agreed upon between the shareholders of the old company and the new company, and with the same powers as are now possessed by the said "Grain Growers' Grain Company, Ltd."

BONNAR, TRUEMAN & CO., Solicitors for the Applicant. DATED at Winnipeg this 25th day of November, A.D. 1910.

**AVIS**

Avis est donne par le present qu'une application sera faite au Parlement du Canada a la presente session pour obtenir un Acte concernant l'incorporation d'une compagnie sous le nom de "GRAIN GROWERS' GRAIN COMPANY" ayant son bureau principal a Winnipeg, Manitoba, et avec le pouvoir de prendre, d'acquerir et de poursuivre le but et l'objet de la compagnie "GRAIN GROWERS' GRAIN COMPANY, LIMITED," une compagnie incorporee en vertu de la "Joint Stock Companies' Act," et des amendements du dit Acte, de la Province du Manitoba, et a cette fin, pour acheter, acquerir, louer, occuper les propriétés, mobilières et immobilières, et d'entreprendre de la dite compagnie, et de payer argent comptant, ou en actions, ou en debentures, ou en garanties, de la nouvelle compagnie, ou partiellement en argent comptant, ou partiellement en actions, ou partiellement en garanties, de la nouvelle compagnie; ou selon des termes d'amalgamation tels qu'il sera convenu entre les actionnaires de l'ancienne compagnie et de la nouvelle compagnie, et la nouvelle compagnie aura les memes pouvoirs que la compagnie "Grain Growers' Grain Company, Limited."

BONNAR, TRUEMAN ET CIE, Advocats du les requerants. Date a Winnipeg, le vingt-cinquieme jour le Novembre, 1910.

Lumsden Grain Growers' Association took place in the council chamber on the evening of the 17th, President Russell in the chair. The meeting was addressed by Messrs. A. G. Hawkes, and R. J. Brown. Mr. Brown referred briefly to the conference at Saskatoon, and gave the audience the benefit of several papers which were read there by the leading men of the Association.

Mr. Hawkes took up the provincial elevator question, and the report of the elevator commission, and stated that as a directorate they could not pass an opinion on it, as they had not had time to go into the matter fully. However, it was likely that another meeting would take place in the near future when the matter would be fully gone into.

He next took up the subject of the Ottawa delegation, and explained it in detail, and urged the Lumsden association to be well represented.

Next he took up the Life Membership scheme, explaining its workings fully, and calling on the audience to respond; and before the meeting closed he had the pleasure of seeing seven men come forward and voluntarily pay their Life Membership fee. The meeting closed after a vote of thanks to the speakers.

**ZID ELECTS DELEGATE**

A meeting of the Zid Grain Growers' Association was held in the Zid school-house, with Mr. J. McCredy acting as chairman. After a few remarks by the chairman, Messrs. Dr. McNeil and Macbeth Malcolm were called upon to explain to the meeting the objects of the convention of Grain Growers at Ottawa next month. This they did and conveyed to the meeting the information that Mr. T. Lawrence, of Hanley, asked them to state that he would be willing to subscribe \$10 towards the cost of sending a delegate

from the Zid Grain Growers' Association to attend the convention at Ottawa. Some discussion took place as to the chances of the Association being able to raise the necessary funds to pay the expenses of a delegate, but upon Messrs. MacNeil and Malcolm stating that they, too, would be willing to assist in this respect it was decided that a delegate should be sent, and Messrs. J. W. Tracy, J. McCready, and Geo. Reynolds were nominated. A ballot was taken which resulted in the election of Mr. Geo. Reynolds, who, in a few suitable words, thanked the meeting for the honor they had conferred on him. A subscription list was then passed round and in a few minutes the sum of \$70 had been subscribed. Another meeting will be held next Monday night at the same place, and if those soliciting subscriptions report that enough money is in sight another delegate will be elected. Some of the signers to the subscription list stated at the meeting that if a second delegate were to be sent they would double the amount of their present subscription.

**BRITISH TRADE BIG**

The values of the imports, exports, and re-exports of the United Kingdom (merchandise only) for the third quarter of 1910 have each been greater than has been recorded for the third quarter of any previous year.

The totals for the first nine months of the year were as follows:

Imports	£487,311,000
Exports:	
United Kingdom Produce	318,577,000
Foreign and Colonial	78,441,000

The increase on the figures for the first nine months of the year 1909 were:

Imports ..... £37,530,000 or 8.5%  
Exports:

United Kingdom Produce	41,240,000	14.9%
Foreign and Colonial Produce	11,064,000	16.4%

"Raw materials and articles mainly manufactured" account for more than £285,000,000 of the increase of £375,000,000 in imports. £30,000,000 of the increase of £41,000,000 in exports of United Kingdom produce are accounted for under the head of "Articles wholly or mainly manufactured."

Some part of the increases must be attributed to the fact that prices have been higher this year than last, but this consideration is not sufficient to account for the bulk of the increases, which reflect a real and substantial growth in the volume of trade.

The total value of the merchandise imported into the United Kingdom from Canada during the nine months was £18,509,000, and that of the produce and manufactures of the United Kingdom exported to Canada £14,584,000. Foreign and colonial merchandise to the value of £2,250,000 was also exported from the United Kingdom to the Dominion during the same period. The figures for the corresponding period of 1909 were: Imports from Canada £16,541,000; exports to Canada of United Kingdom produce £11,455,000, of foreign and colonial produce £1,765,000. The growth in imports from Canada has thus been 10 1/2 per cent., and in exports of United Kingdom produce thither no less than 27 per cent. on last year's figures.

Among the principle imports and exports were the following:

Imports from	Nine months ending	
	30th Sept.	Value
Canada	1909	1910
Articles	£	£
Wheat	4,761,000	5,118,000
Wheat-meal and flour	738,000	1,122,000
Bacon and hams	1,148,000	1,114,000
Cattle	1,528,000	982,000
Cheese	3,074,000	2,827,000
Canned salmon	356,000	698,000
Wood, sawn or split, planed or dressed	2,153,000	2,454,000
Exports to Canada (U. K. produce):		
Iron and steel and manufactures thereof (so far as separately distinguished in the monthly accounts)	1,089,000	1,393,000
Cotton piece goods	981,000	1,268,000
Woolen and worsted tissues	1,757,000	2,032,000

**MANY NEW RAILWAYS**

Ottawa, Nov. 23.—The Canada Gazette contains notice that application will be made to parliament for authority

to construct branch railway lines as follows:

From Grosse Isle, Man., northerly to Grand Rapids, with a branch to Sturgeon Bay;

From Wassewa, Man., westerly and northerly to or near Ethelbert, Man.;

From Yorkton, Sask., northerly to or near Hudson Bay Junction, Sask.;

From Craven, Sask., northeasterly to or near Hudson Bay Junction;

From Craven, Sask., easterly to Rossburn, branch of the Canadian Northern railway, east of Yorkton;

From Craven, northerly through or near Humboldt to or near Prince Albert;

From line D. westerly to a point between Davidson and Aylesbury;

From a point near Kinistino northeasterly to or near the Pas Mission;

From line D in or near township 40, range 7 west, second meridian, westerly near Jack Fish lake northwest of North Battleford;

From or near Moose-Jaw northwesterly to join the Vegreville-Calgary line of the Canadian Northern railway between Camrose and Stettler;

From the international boundary near range 7 west, fourth meridian northerly and easterly to a point near or west of Battleford;

From or near Macleod, Alta., northeasterly to the Saskatchewan and Calgary line of the Canadian Northern railway in or near ranges 1 to 4 west, fourth meridian.

From the Maryfield-Lethbridge line of the Canadian Northern railway at or near ranges 1 to 4 west, fourth meridian, westerly via Cardston to or near Pincher Creeks;

From the Maryfield-Lethbridge line of the Canadian Northern railway in or near ranges 1 to 4 west, fourth meridian, northwesterly via Taber to a junction with line L;

From the Maryfield-Lethbridge line of the Canadian Northern railway between ranges 1 and 10 west, fourth meridian, northwesterly to a point in or near townships 20 to 25, range 6 west, fifth meridian;

From Lloydminster northwesterly and westerly to Bruderheim;

From the Edmonton and Slake Lake railway north to Morinville to a point in or near township 6, range B west, fifth meridian;

From or near Fort Pitt northwesterly to the Athabasca river.

Application will be made for power to lease the Kootenay Central railway to the C. P. R.

**BRITAIN'S AIR FLEET**

A London cable of Nov. 25 said: Arrangements are being made by the government for the formation of the first actual air fleet, and it will be in commission during 1911. The fleet is to consist in the first instance of six airships and six aeroplanes, and these practically represent a "battle squadron" and a "cruiser squadron."

The airship squadron is intended for the more serious strategical work of defence in reconnaissance, and for undertaking long journeys. The aeroplane squadron is for the shorter tactical scouting work. The former, minus the naval craft, is to be headquartered at South Farnborough, in Hampshire, and the latter at Durrington, in Wiltshire. This fleet in 1911 will be as follows:

**Airship Squadron**

Base, South Farnborough, Hampshire.		
Name	Origin	Persons Carried
Beta	British	4
Gamma	British	6
Lebaudy	French	20
Clement-Bayard	French	20
Delta (building)	British	6
Naval ship (building)	British	8

**Aeroplane Squadron**

Base, Durrington, Wiltshire.		
Name	Type	Persons Carried
Short-Wright	Aeroplane	
Farman	Biplane	
Paulhan	Biplane	
Bristol	Biplane	
Bleriot	Monoplane	
Army type	Aeroplane	

**TOLSTOI DEMONSTRATIONS**

London, Nov. 23.—The St. Petersburg correspondent of the Times describes the situation arising from the student demonstrations in honor of Tolstoi as serious. A large force of police scattered the crowds to-night outside the university. Twenty students were injured. Serious trouble is feared to-morrow, and troops have been ordered to hold themselves in readiness.

*"It's time you owned a Waltham"*

**WALTHAM**

is the watch of established reputation for accuracy throughout the world. It has had the unqualified endorsement of jewelers, whose knowledge of watch-making is both practical and technical, for nearly three-quarters of a century. The Waltham Colonial Riverside Maximus movement is the newest word in watchmaking. A thing of beauty, and a watch of splendid accuracy. Made as thin as it is safe to make a reliable time-piece. Ask your Jeweler.

# PREPARE FOR THE FUTURE

## A Call to Western Farmers

**T**O MEET the expansion of trade and provide capital for the further extension of business, a large block of Grain Growers' Grain Company Stock will be sold within the next few months. With the standing which the Grain Growers' Grain Company has today, and the price at which the shares are offered, the available stock should soon all be taken up. If it were offered to the general public without restriction as to the number of shares which each man could take, it would be all purchased within a very short time. But, when the Company was started, a wise provision was made whereby the farmers were the only people who were allowed to purchase this stock. This arrangement was made to protect the farmers' rights and prevent outside interests ruining the Company. If this Company is to grow and do the work which we all hope it will do, it must have more capital, and, according to the by-laws, this capital must all come from the farmers. The Grain Growers' Grain Company is the Farmers' Own Company and it will be whatever they make it.

These are two of the lines of development which the Company hopes to take up, just as soon as sufficient capital is subscribed. There are many other lines of buying and selling to which the co-operative principle can be applied with advantage and which can be taken up as soon as a sufficient number of farmers are willing to co-operate and subscribe the necessary capital. The field for co-operation among the Western farmers is practically unlimited.

### The Purpose of the Company

As stated before, the object in starting the Grain Growers' Grain Company, was to secure for its shareholders higher prices for what they had to sell and enable them to purchase their necessities at cost and not so much to pay large cash dividends on the stock. At the same time good dividends have always been paid and the shareholder may always count on as good a rate of interest on his money as he could secure from other equally safe investments. After a reasonable interest has been paid on the stock the balance of the profits will be added to capital, thus increasing the value of the shares and enabling the Company to do greater work in buying and selling and effect a greater saving to its shareholders than it could otherwise do. In the four years the Company has been in business, it has so improved the grain market that every farmer is now able to get \$25 to \$50 a car more for his grain than he could have got a few years ago. By entering the milling business it can raise the price of grain still nearer its real value and at the same time reduce the cost of flour to the farmer; by entering the lumber business it will enable the farmer to make a large saving on every foot of lumber he buys.

### The Company's Standing

That the Grain Growers' Grain Company is making great progress and is on a very sound financial basis is shown in the following summary of its business since it was started in September, 1906:

	1906-07	1907-08	1908-09	1909-10
Bus. Grain handled . . . . .	2,500,000	5,000,000	7,500,000	16,400,000
Bus. Grain Exp't'd . . . . .	.....	.....	2,000,000	6,000,000
Shares Sold . . . . .	1,853	2,932	7,558	14,131
Paid up Capital . . . . .	\$11,795.00	\$20,385.00	\$120,708.00	\$292,957.55
Profits Earned . . . . .	790.54	30,190.24	52,902.08	95,662.78

It will be seen by these figures that the volume of business has been practically doubled every year and that the Company has always been able to clear a good profit. This year, in spite of poorer crops, it is handling considerably more grain than ever before. With this rate of progress it will soon be handling 50 to 60 million bushels of grain per year. To provide capital to meet this enormous expansion, is one of the reasons why the Company desires to sell as much stock as possible at the present time.

### A Safe and Sure Investment

The Grain Growers' Grain Company is a limited Company, and no shareholder can possibly be liable for more than the amount of stock he has subscribed for, i.e., \$25, \$50, \$75 or \$100, depending on whether he has one, two, three or four shares respectively. The Company is now well established and is making rapid progress, and, as was shown in the figures given above, is clearing a good profit. Every by-law has been placed on the books of the Company that would protect the interests of the shareholders and assure them that the Company shall always remain a Farmers' Co-operative concern. Every farmer who has a few dollars lying in the Bank should invest it in this stock. He would receive two or three times as much interest on his money; interest would be paid him since June, 1910; his stock would increase in value, and, above all, he would be building up a Company which would enable him to save hundreds of dollars on his sales and purchases.

### Large Flour Mill Necessary

Then, also, as soon as sufficient capital can be raised, the Company purposes entering upon the milling business. Four years ago the Western farmers organized the Grain Growers' Grain Company and went into the Grain Commission business in order that they might improve market conditions and secure more nearly the value of their grain. That this Company has fulfilled their purpose and enabled them to get more nearly the value of their grain than they got a few years ago, no one can deny. But even yet there is often a wide margin between the price of grain and its true value, particularly in the lower grades. The price the farmer pays for his flour and oatmeal is altogether out of proportion to the price paid him for the wheat he sells. Many believe, and rightly so, that a large flour mill and oatmeal mill would do much to reduce this wide spread between the prices of wheat and flour and would raise the price of grain to the farmer. This is a strong reason why the Company should be supported and capital subscribed at once.

### Now is the Time to Purchase Stock

The shares are still offered at par value, \$25.00 each, while they are really worth \$30.00, over \$50,000.00 of profits having been added to the capital during the past two years. It is quite probable that before long the shareholders will decide to advance the price of these shares and, therefore, we want as many farmers as possible to join the Company now. While the benefits of this Company have always been shared alike by shareholder and non-shareholder, there is no guarantee that such will always be the case. When the Company is supplying its shareholders with lumber and other commodities at cost, every farmer will want to be a shareholder, and now is the time to purchase the stock. Any money that is paid on stock now will bear interest since July 1, 1910. Interest is allowed on the amount of money paid. The whole price of the shares may be paid at the one time, but, if the applicant is not in a position to pay the full amount, liberal terms can be arranged for. Any farmer who is interested in this co-operative movement and believes it possible to improve his position and save money, should subscribe for stock at once. Any person desiring more information concerning the Company, or wanting application forms should write to the office of the Company in Winnipeg.

### Cheaper Lumber Wanted

Another line the Company has in view is the supplying of lumber to the shareholders at reduced rates. This is a commodity which every farmer must use and which would be used more than it is if it could be secured at anything like a reasonable price. Why has the farmer to pay such a high price for lumber? Because the supply is controlled by a monopoly and he cannot buy a foot unless it comes through the Lumber Combine. The Grain Growers' Grain Company aims at purchasing its own timber limits and supplying lumber to its shareholders at cost. What this will mean in reducing expenses on the farm and enabling the farmer to provide better buildings for himself and his stock can scarcely be estimated in dollars and cents.

sum of ten cents should be collected from each member and paid into the treasury for emergencies, and that the meetings should be held on the first Saturday in each month during the winter season.

WM. LINDSAY, Sec.

Strome, Alta.

**AVONDALE IN LINE**

At the last regular meeting of Avondale Union, Mr. James Gordon was unanimously appointed our delegate to the Ottawa conference. Mr. Gordon is leaving at once for Saskatoon and will join the delegation at that point. He has our credentials, however, and will be one more for the quota from Alberta.

E. A. BEST, Sec.

Carbon, Alta.

**DELEGATE APPOINTED**

The last meeting of Cumberland Union held on November 16, proved to be another large success. All the intelligent farmers are fully aware of the fact that well organized unions can do lots of good work to improve the social and pecuniary conditions of the farmers. The Ottawa delegation question came up for discussion again, and we can congratulate ourselves upon the fact that we have been fortunate enough to secure the services of J. R. Golden, our vice-president, as the delegate to represent Cumberland Union. It was also decided that a social should be held in the near future under the auspices of this union, and all the members are taking a great interest in the matter, so nothing but success is expected.

K. EM. SWALLING, Sec.

Balermo, Alta.

**AN ORGANIZATION TRIP**

Mr. D. W. Warner recently spent several days on an organization trip along the Wetaskiwin line of the C. P. R. Arriving at Provost on November 8, he drove out to Rosenheim for an afternoon meeting, which proved to be a very satisfactory one. A temporary organization was effected with a night set to complete the permanent organization by the members themselves in two weeks, when a report will be sent in to the Central. The same evening a meeting was held in Provost, and great interest was shown by the members on all the topics touched upon.

On November 9 an interesting meeting was held at Hayter, and a successful local union organized. There is every prospect for a large membership here, and the increase will start at the next meeting which will be held in ten days. In the evening a meeting was held at Stainsleigh. A good strong union is at this point with the members full of enthusiasm, about 35 being out to hear what was doing at Central headquarters. This local has some first class timber in its ranks, which is going to be a great support to the cause.

On November 10 an afternoon meeting was held at Silver Lake and a temporary union organized, with a good promise for doubling themselves at the next meeting, to be held in about a week, when the permanent officers will be elected. Owing to the delay in the mails, caused by infrequent service, it was not thought advisable to proceed further at that time, as it takes a long time to work up a meeting among the farmers when they are scattered. Through a mistake in the advertising the farmers in the Parkson district gathered together a day too soon, but this is a good locality, and the members of Provost Union will see that a Union is organized there at an early date.

During this trip Mr. Guy W. Johnson, of Provost, placed himself at the disposal of Mr. Warner and gave him every assistance possible, doing a great deal to ensure a successful trip, and a great deal of thanks are due him for his self-sacrifice in the cause of the work.

**CONVENTION RESOLUTIONS**

Our meeting of Blackfoot Union took place at Jarrett's, on November 10 at 8 p.m., and practically the only business done was the putting of resolutions to be submitted by us at the U. F. A. convention, and the following were adopted: "That seeing that the work of the U. F. A. is crippled for want of funds to cover cost of educating the farmer to need of co-operation and organization it is desirable to create a self-denial fund, the money derived from same to be invested and the interest only used." "That the clause

by which railway companies refuse to recognize any liability for loss of stock if left within half a mile of a railway crossing, be abolished." "That the rate of interest which the farmer at present is compelled to pay is exorbitant and is retarding the development of the country. The provincial government is, therefore, strongly urged to procure the cheap money which is awaiting use in Europe and Great Britain, and use same for farmers' loans at five and six per cent."

Our president, Mr. Donaldson, and myself were invited to help organize a new union seven miles south of Kitscoty last Saturday. It entailed a round trip of 34 miles but we were glad to be of assistance. We found a body of men very keen on the subject, and are confident that a strong union will result at Tepee Lake.

JAS. STONE, Sec.

Blackfoot, Alta.

**ENTHUSIASTIC JOINT MEETING**

The regular meeting of White Lake Union was held on November 12, and there was a fair attendance of members to discuss the various matters connected with the U. F. A. The principle topic was the sending of a delegate to Ottawa. Representatives were present from Rocky Coulee Union, and on their suggestion it was decided to have a large joint meeting and invite Jumbo Valley to be present.

On Monday evening the Rocky Coulee school house was filled with farmers from these three unions, all bent on threshing out the delegation question, and other matters as well, and after much discussion it was decided that Andrew Russell, president of White Lake Union, should be the delegate to represent the four unions. It was further decided to hold a large entertainment on the evening of November 29, for the purpose of defraying a part of the delegate's expenses.

After the business of the evening was finished Mr. Russell, and Mr. Barker, of Jumbo Valley, spoke ably on the tariff and other questions which will be before the house this present session. The farmers were very enthusiastic here and all hope that the delegation going to Ottawa will have a good effect.

ROY LUCHIN, Sec.

Rocky Coulee, Alta.

**NEXT IS CREIGHTON**

The organization meeting at Creighton was a little disappointing in regard to numbers, but it lacked nothing in enthusiasm, and we are confident that before spring there will be very few farmers in this district who have not become members. Ten members joined at this meeting, and the officers elected are: G. T. McAllister, Mannville, president; and G. Bennett, Mannville, secretary-treasurer.

It was decided to hold regular meetings every second Tuesday during the winter, and besides the regular business there will be some special subject up for discussion, or a social program arranged when the farmers' wives and families will be invited, so we expect that our meetings will be looked forward to with a great deal of interest.

G. BENNETT, Sec.

Mannville, Alta.

**EARLIE ALSO THERE**

Mr. Donaldson and Mr. Stone, of Blackfoot, were at Earlie on November 12, to organize a local union, and they found a most enthusiastic meeting of farmers awaiting them. After listening with a great deal of interest to the addresses presented, it was unanimously decided to organize a union to be known as Tepee Lake, and the following officers were elected: President, R. C. Campbell; vice-president, W. Plater; secretary-treasurer, D. King.

D. KING, Sec.-Treas.

Earlie.

**FIX THE FIRE GUARDS**

At the last meeting of Kipp Union, held on November 12, several of the members made a kick in regard to the condition of the C. P. R. fire guards around Kipp. It seems that they have been left in such bad shape that they are practically no fire guards at all, there being about 200 much grass on them as there is on the prairie. The secretary received instructions to write the general secretary and request him to try and get them put in shape, as feed is scarce enough now without taking chances on being burned

out. With regard to the Ottawa delegation, we have decided to immediately get in touch with the other unions in our locality, and try and send one or possibly two delegates out of this district.

THOS. SCOTT, Sec.

Lethbridge, Alta.

**IRON SPRINGS STILL GROWING**

Iron Springs Union is one of the newly organized ones in Southern Alberta, but we have already secured fifty-nine paid up members, which is going some. It has been resolved that we report in favor of incorporation of the U. F. A., and also that we favor the resolution presented by Blackfoot Union, for assistance in boring deep wells. We are also in favor of the proposition made by Summerview Union, that the executive take up the matter of the lumber industry and the advisability of owning lumber mills.

THOS. H. WYMAN, Sec.

Iron Springs, Alta.

**ENTHUSIASTIC MEETING**

The meetings of Gadsby Union were discontinued during the summer months, and only resumed the latter part of October when we received a visit from Mr. T. L. Swift, of the Grain Growers' Grain Company. We are not sure yet whether we will be able to appoint a delegate to go to Ottawa, but are looking into the matter at once, and if it is at all possible to do so we shall be represented.

After the routine business had been completed our president, Mr. Presley, in introducing Mr. Swift spoke of him as having a reputation in the country as a platform speaker and orator, and though Mr. Swift disclaimed the title he showed in his address that the honor was well deserved. It can safely be said that the farmers present were shown a few things in regard to the working of the terminal elevators that explained a few mysteries. Mr. Swift used a blackboard and showed figures which were official,

and carried conviction to the minds of all present, that a system that allows such juggling with a product of the country ought to be swept out of existence without delay. Government owned and operated elevators are the only cure and the farmers of the West are going to have them. Mr. Swift also touched deeply upon the subject of direct legislation, and with his humorous way of putting his point, and his Irish stories, gave his audience a most enjoyable and instructive evening.

Mr. Swift put new life into our Union, and we expect to have a good winter season of propaganda, and that will add more names to our membership list. Some of our members have taken stock in the Grain Company and a number intend to ship their grain to them. Mr. Swift received a cordial request to pay another visit to Gadsby some time during the winter. Our meetings will now be held on the second and fourth Saturdays of the month and regular reports of same will appear in THE GUIDE.  
GEO. M. DRINNAN, Sec.  
Gadsby, Alta.

**PINCHER CITY ORGANIZED**

Realizing the fact that they were cut off from the existing unions by the natural run of the land, a number of farmers in the vicinity of Pincher decided to organize a new union under the name of Pincher City. N. H. Nathurst, vice-president of Summerview Union, occupied the chair at the organization meeting, and a large amount of business was transacted. It was decided that Pincher City Union should meet the second and fourth Saturdays of each month, and from now on specific business will be attended to and duly reported. Enthusiastic officers have been appointed and Pincher City will grow rapidly. The first officers elected are: President, James Cook, Pincher; secretary-treasurer, J. M. Liddell.

**WHEATLAND CENTER ON DECK**

At the regular meeting of Wheatland Center Union held on November 12, it was decided that our local would send a delegate to the conference at Ottawa. Wishing every success to our delegation.  
J. QUINSEY, Sec.  
Noble, Alta.

Another active union has been organized in Southern Alberta by Mr. J. Quinsey, this time at Turin, which is situated in township 11, range 19, west 4 meridian. It is in a very level part of the country and appears to be fine farming land, settled by a very active and energetic bunch of farmers. Unfortunately they did not secure a crop this year as the settlement is a new one, and it is nearly all new breaking, but they will be heard from in future as a grain-raising centre. They are anxious to know what will be done towards securing seed grain for the farmers next year, as a number may require assistance. Turin Union starts out with a membership of eighteen and the officers are: President, B. B. Spencer, Turin; secretary-treasurer, N. E. Woodcock, Turin.

**WORLD'S WHEAT CROP**

Ottawa, November 19.—A cablegram received today from the International Agricultural Institute, Rome, gives the yield of wheat crop, estimated November 1, as follows:

Great Britain and Ireland, 61,865,000, compared with 64,250,000 last year.

Russia, 798,768,000, compared with 917,634,000 reported last month, and 784,203,000 last year.

Total northern hemisphere reported to date, 3,115,862,000, compared with 3,192,448,000 last month, and 3,074,042,000 last year; 1909-10 crop: Chili 29,365,000; Algeria 39,375,000. Area, 1910-11: Chili, 2,577,000; Australia, 7,210,000 acres.

**ST. HELENA BEGGARED**

The 4,000 inhabitants of the island of St. Helena, which will be one of the famous spots of the world as long as there is any history, are in sorry plight owing to the removal of the British garrison, which was maintained there until 1906. The exports have sunk far below the imports, and many of the inhabitants are in a state bordering on beggary. In the days when the Suez canal was only a dream, and England's marine trusted to wind rather than steam, St. Helena was an important port of call on the voyage to the Cape. Now

# Poultry

## The Development of Canadian Poultrying

Depends on the Farmer and True Co-operation

By JOSEPH L. MURRAY

I want to write something, if brief, about the possibilities of the Canadian poultry industry. Not that end of the business which is of especial interest to the fancier, or the exhibition specialist, but that feature which makes of poultrying a very important department of agriculture, and a factor in the nation's development. Canadians have been, and are, peculiarly slow in grasping the magnitude and the enormous possibilities of poultrying. The hen is regarded as something too insignificant for serious consideration, and her economic value is not appreciated.

Compared with the big, mild-eyed dairy cow, or the massive compact Shorthorn, the hen looks small and undignified, I am free to admit, but in estimating the value of the world's food products she invariably and unmistakably proves herself a consideration which must be reckoned with, and seriously. The poultry products of the American Republic, for instance, last year reached the astonishing total of six hundred and twenty-five

million dollars. The ones cited, however, should be sufficient to convey to the reader an idea of the importance of the much neglected hen, and her value products, when considering the agricultural industries of the United States, and the development and progress of the American Republic in agriculture generally, is undoubtedly enviable. Now, to more impressively drive home the fact, examine Canadian poultry statistics. We are told by poultry educationalists that Canada is producing annually poultry products to the value of twenty-five million dollars. The United States is producing to the extent of six hundred and twenty-five million dollars. With a population of about ten times ours they are producing about thirty times the poultry products that this country is producing. In other words the United States is beating us three to one per head of population.

I have drawn this situation to the attention of different farmers, and they seem surprised beyond comprehension. To

been reckoned equal to the pure-bred bird.

How long is this situation to exist? When will it be improved and the poultry industry take the place it should among the factors in this nation's agricultural development? When, in my humble opinion, two things happen—first when the Canadian farmer begins to really appreciate the enormous profit-making possibilities presented by the poultry business, and, secondly, when market conditions shall have been so reformed as will ensure to the man who produces the article, a fair share of what it cost the consumer.

The farmer must be shown a scheme—a way, whereby he is going to make more dollars for his own individual self, and poultrying will be to him magnetic. It is, therefore, desirable to encourage the farmer, and those in a position to do so should by example and instruction help him, and be even willing to stand back of him. The farmer will be better off for it, and the country will have benefited.

Co-operation among farmers in the producing and in the marketing of poultry and eggs is the very corner-stone of success. But it must be co-operation that will take out of the pockets of the middleman and the buying combines, the trust organizations, and the carrying corporations, the tremendous profits now made by them, and place these profits where they belong, in the pockets of the producers.

This is possible; it is practical, and I believe its execution will be the solution of Canadian poultrying. The result would redound to the advantage of the individual farmer, and many of those who are carrying over an annual deficit from year to year would find themselves comfortable, and finally the country would collectively profit because agricultural values would be speedily advanced, and the possibilities of increase are almost unlimited.

### THE TURKEY

The bronze turkey is the acknowledged king of all poultry. The turkey is evidently of American origin. The wild turkey was found in abundance by the pioneers of the eastern, southern and western sections of the United States. They existed also in great numbers in Mexico long before this time. It is evident that the turkey was introduced into Europe from America. The following historical review of this matter was written by Rev. C. E. Peterson, and covers the ground completely.

"At what time the domestic fowl was first introduced into England is unknown, but there is a tradition in Cornwall that it was originally brought to that part of the coast by the Phenicians when they came to traffic for tin and copper with the natives previous to the Roman invasion; and to this day, in some parts of the country, it is called the Persian bird, but why this latter does not appear; and further, it is especially noted by Cesar (De Belle) that the cock, the goose and the hare were among, of not the whole of, the domestic animals of the ancient Britons, and kept by them for pleasure only, before his invasion of the country, but that soon after their scruples in this direction disappeared.

However that may be, it is certain the Romans brought with them the "fighting cock" both to the south and the north of England; clear proof of which are the bones, nay, the very metal spurs used in their contests, that have been found both in Surrey and Cornwall.

One metal spur was dug up in Southwark, and a pair in an old Roman wall in the latter county, besides others that unfortunately were not preserved or sufficiently noted.

That these same ancients were not acquainted with the turkey goes far to somewhat settle the disputed question, whether the turkey is a native of this country or not, being now taken for granted by all naturalists and historians that the new world was its birthplace, and from there was introduced into the old world.

It is interesting to note the writings of old historians, a few of which follow:

The first author of whom any mention is made of the turkey is the Oviedo, who wrote about the year 1525. He has described them minutely with that curiosity and attention which new objects generally incite, and as he was acquainted with no name of these birds, till then unknown to the Europeans, he gave them that which he thought most suited to them. He called them a kind of peacock, and he relates that even then, at this early date, on account of their utility

and the excellent taste of their flesh, they were not only reared and domesticated by the Europeans in Spain, where they were first found, but that they were carried first to New Castile and to the West Indian Islands.

Lopez de Gomara, whose book was printed in 1553, makes use of Gallopavo, and says that the fowl resembles in shape the peacock and the domestic cock, and that of all the fowls in New Spain its flesh is the most delicious.

In the year 1584 wild turkeys were found in Virginia, and Rene de Laudonier found them on his landing in North America in 1584.

That these fowls were not known in England in the beginning of the sixteenth century is very probable, as they are not mentioned in the particular description of a grand entertainment given by Archbishop Nevil; nor in the regulations made by Henry VIII, representing his household, in which all fowls used in the royal kitchen are named.

As these fowls are found at present in Asia and Africa, it may be worth while to briefly mention that as much proof can be given that they were not known there until introduced by Europeans."

The standard weights of young turkeys are: Adult cock, 36 pounds; yearling cock, 33 pounds; cockerel, 25 pounds; hen, 20 pounds; pullet, 16 pounds.

Color of body, black, beautifully shaded with bronze. Fluff, black, each feather ending in a wide black, bronze band extending across the feather, with a narrow edging of white. Male's wings bows a brilliant bronze with greenish lustre. Each primary feather must be evenly and distinctly barred across with parallel bars of black and white throughout the length of feather.

#### White Holland Turkey

The White Holland turkey is said to be a native of Holland. This breed of turkeys is far and away larger and much more beautiful fowl than the common white turkey of Holland.

The standard weights are: Cock, 26 pounds; cockerel, 18 pounds; hen, 12 pounds; pullet, 12 pounds.

The plumage is pure white throughout. Shanks and toes, white or pinkish white; eyes, hazel; head, rich red, changeable to bluish-white.

#### Narragansett Turkey

The Narragansett turkey is a native of Rhode Island and Connecticut. They are next to the bronze variety in size, the standard weights being: Cock, 30 pounds; cockerel, 20 pounds; hen, 18 pounds; pullet, 12 pounds. Disqualifying weights: Cock, less than 22 pounds; hen, less than 14 pounds. In plumage color this turkey is black, each feather ending in a broad, light steel-gray band edged with black.

#### Buff Turkey

This variety is of American origin, having been brought out a few years ago. Plumage color, pure buff, the wings being a very light shade of buff. Standard weight: Cock, 27 pounds; cockerel, 18 pounds; hen, 18 pounds; pullet, 12 pounds. Disqualifying weights: Cock, less than 18 pounds; hen, less than 12 pounds.

#### Slate Turkey

This variety is also of American origin. These fowls when right are almost blue in color, the shade resembling that of the Blue Andalusian, the female being much lighter in color than the male. The standard calls of a plumage color, slaty or ashy-blue, sometimes dotted with black. The standard weight are: Cock, 27 pounds; cockerel, 18 pounds; hen, 18 pounds; pullet, 12 pounds. Disqualifying weights: Cock, less than 18 pounds; hen, less than 12 pounds.

#### Black Turkey

The Black turkey is a native of America. In plumage color they are a lustrous black throughout. Standard weights: Cock, 27 pounds; cockerel, 18 pounds; hen, 18 pounds; pullet, 12 pounds. Disqualifying weight: Cock, less than 20 pounds; hen, less than 12 pounds.

The Barred Plymouth Rock Hen

million dollars. This amounts to more than the total wheat crop of the same country in 1908 by nine millions of dollars. It is nearly one-half the value of all the cattle on the farms in the United States on January 1st, 1909, and that, be it noted, is putting only the annual income from poultry products against the total value of the cattle. What is perhaps more readily and generally appreciable in the way of comparison is the fact that the poultry product alone is more than half the total agricultural exports of the United States for the year nineteen hundred and nine. It may be added that this poultry product is twice the value of the whole potato crop of the North American continent. It is nearly equal to the farm value of all the barley grown in the world two years ago. It is greater than the farm value of the total sheep and swine in the United States on January 1st, 1909.

One might go on with those surprising and startling comparisons almost indef-

them the hen appeared as an industrial joke—something for the women and children to amuse themselves with. These men, and what I am about to say is true of Canadian farmers as a class, readily acknowledge the importance of carefully studying Shorthorn, Ayrshire and Jersey pedigrees, and admit the absolute importance of having none but the best breeding animals on their farms, but in poultry they have failed to see the difference between the type of fowl which will produce chickens which are matured at two and one-half pounds, and the type that produces healthy and vigorous chickens which at maturity weigh from five to six pounds. Wisely and well the standard-bred cattle have been carefully stabled, and forced ahead in stall feeding, but with utter blindness to self-interest Canadian farmers have allowed that empress of farm productivity, the hen, to scratch for her living, steal it, or starve for want of it, and the veriest scrub has

## A PROFITABLE STEER

A bulletin published by the Missouri state board of agriculture describes the points of the profitable steer as follows:

The head should be short and small because it does not contain any valuable flesh and because a short head invariably goes with a short, thick-set body.

The forehead should be full, broad and high so as to show intelligence.

The mouth should be large and the muscles of the jaws well developed, so as to indicate good food grinding apparatus.

The eyes should be full, bright and clear, because this indicates great vitality and vigor, two of the most important qualities.

The neck should be short, thick and set firmly on the shoulders, because this indicates a short, thick-set body and a tendency to lay on flesh.

The shoulders should be compact and well covered with flesh, so as to give smoothness of form and flesh on fore-quarters.

Strong, straight and wide-apart fore-legs are wanted to give a good foundation for the fore-quarters. Legs should be short because they are not worth much, and anyhow, short legs are stronger than long ones. The chest should be wide, deep and thick through the heart, so as to give plenty of room for the most important organs of the body, namely, the heart and lungs. The brisket should be deep and moderately projecting and breast wide because they go with a well-formed chest.

The girth of the animal should be large, because this indicates a good chest. The crops or that portion just behind the withers, should be full, because this is one of the valuable meat portions.

The back must be short, straight and broad. Short because a short-backed animal is an early maturing one. Broad so as to give room for lots of flesh. Straight so as to give good support.

Ribs should be well sprung and arched in order to give plenty of room for the digestive organs. It is a well-founded fact that a large, deep chest and a capacious stomach are good indications that an animal has the capacity to utilize large quantities of food and make rapid progress in fattening. The ribs should be well covered with flesh, because this is a good indication that the animal fattens well.

Wide hips are wanted because wide hips go with broad loin and the loin is the most costly portion of the beef. Loin should be full and thick for the same reason.

The rump should be long, level and wide, so as to give plenty of room for full and well fleshed, in order to yield plenty of good round steak.

The hind legs should be short and straight, so as to give good foundation for hind quarters. The tail should have a smooth base, fine bone and a fine hair switch. Smooth base so there will be no fear of having lumpy patches of fat gathered there. This is very objectionable, because it spoils the looks of the steer, and looks go a long way in affecting the sale of an animal. Fine bone in the tail indicates that the animal is fine boned.

## SHEEP ON THE FARM

Everyone who knows anything about sheep or the farm is aware of the fact that they will eat practically everything that grows upon the farm except mullein plant and thistles. Sheep are the best scavengers that we can have on the farm when it comes to cleaning out weeds. And we have seen sheep eat thistles—not growing thistles in the fields, but in winter we have noticed our lambs, and other sheep as well, pick the thistles out from the rest of the hay and eat them with apparent relish. The matter of how to rid the fields and pastures of obnoxious weeds is an ever-increasing problem, but if more diversified farming were practiced we firmly believe that the weed question would

be easier of settlement. The good Lord has established a sort of equilibrium for all nature, and just as soon as this balancing of parts is broken, just that soon must more stringent means for controlling our operations be employed. The one-crop farmer and the farmer who raises but one kind of live stock is sure to get into all kinds of trouble. Weeds and insect pests will work injury to his crops, and sickness is more likely to overtake his animals. Besides, when a farmer raises but one kind of live stock he is more subject to the fluctuations of the market, and his property depends entirely on the market for one class of live stock. Were he producing all classes of live stock for which his farm is suited he would be sure of good prices on part, for the markets are seldom off on all classes of animals at the same time.

The weed problem resolves itself largely into this: The very best kind of farming to follow for the farmer is the kind that is going to make life most miserable for the weeds. That means a good rotation of crops and the different classes of live stock to feed them to; this last includes, by all means, sheep. They will bring in more clear money, kill more weeds, and utilize more waste feed than any other animals on the farm. We know this to be a fact, and it is the experience of all who have had anything to do with sheep. It must not be concluded from this, however, that the way to kill weeds on the farm is to simply buy sheep and turn them in. In nine cases out of ten the big weeds which you fondly expected to see succumb to the onslaught of the bovine race will remain unfeared. Sheep do not like rank growing vegetation of any kind much less do they like rank, coarse weeds. Sheep, as weed-destroyers, must be handled with skill. They will eat the younger shoots of weeds in many cases in preference to grass. To get sheep to do their best work on pasture weeds, mow the weeds off and then notice the sheep go after the young shoots as they reappear. We have seen them almost completely rid a field of rank weeds in this way. The pasture was badly set with perennial weeds and after the sheep had grazed over it for about three years the weeds were practically all gone. Each year the weeds were mowed off sometimes twice, and the new tender shoots were largely nipped off by the sheen. This process starved the root system by removing the leaf system, and so weakened the plants that they no longer grew well with the sheen grazing on them, and at the end of three years they were practically all gone. Since then the sheep have been sold off the place, and the pasture is set as thickly as ever with the rank weeds. Their roots were not completely killed, and then given a chance commenced to grow again. Sheep will take care of most pasture weeds if they can have them served up tender and fresh—as in the case of the field weeds, which cause so much trouble, will be less obnoxious if a good crop rotation is followed. The rotation which is best for the farm crops is usually the worst for the weeds.

## THE YOUNG PORKERS

The first week after farrowing is the critical time in the lives of the young porkers. Give the sow nothing but water the first day. After that she will take a little feed, but the amount should be increased slowly. If the pigs show signs of scouring, cut out the slop and give the sow some blood meal. Blood meal will cure scours in any young animal, and some of it should be kept on hand all the time. Twenty-five pigs out of every hundred are lost at farrowing time or soon after. This is altogether too big a slice to take out of the profits. Get the pigs to eating for themselves as soon as possible. Then provide a hog pasture for them. The way to produce cheap pork is to have plenty of grass. Rape makes the most reliable hog pasture. Alfalfa is better, but it can not be grown so easily in this country. If you want your hogs to keep growing

you must keep them free from lice and worms. Dipping or spraying with some coal tar dip will fix the lice. Plenty of pure water and pumpkins, of charcoal and coppers, will help the pigs to get the best of the worms.

## C. P. R. FINED

Toronto, Nov. 25.—"Why should these poor beasts be made to suffer because somebody mislaid a health certificate?" Crown Attorney Corley remarked in the police court here the other day, referring to the last charge brought against the C. P. R. for "cruelty and unnecessarily ill-treating animals," by allowing them to go without food or water while in transit for a longer period than 28 hours.

"It's lack of humanity to allow the animals to stand on a siding loaded after such a long trip," he said.

This was in connection with six carloads, 155 head of cattle shipped from Winnipeg by Henry Murvey to Charles Maybee, cattle dealer. It was 43½ hours from the time of loading at White River until they were unloaded at the Western cattle market.

"But the health certificate was missing at the Parkdale station," contended C. P. R. Counsel Spencer, and Superintendent Walker refused to allow their unloading until cleared by that certificate. At Toronto they were only 3½ hours late, that delay occurred between Muskoka and Toronto, where there is no feeding station.

"Then some of your officials blundered," threw back Mr. Corley. "Why didn't you give them water at least." "The market superintendent wouldn't

let them be taken off. A mistake is never wilful."

Though regarding the mislaid paper as a regrettable fact, Magistrate Kingsford held that so long as the cattle were in the care of the railway that corporation was responsible. The fine was \$100 and costs.

## PREDICTS WAR

New York, Nov. 25.—Capt. H. H. Rogers, son of the late Standard Oil financier, whose hobby is the study of military affairs, has just returned to New York from a long trip of observation in the army camps of France and Germany. He brought home with him the unpleasant prediction that Japan will provoke war with the United States some time before the Panama canal is opened. This is not only the belief of Capt. Rogers, but the consensus of opinion, he says, of the military men he met during his stay abroad. Rogers is a captain in the 2nd regiment of the National Guard of New York. Summing up what he gleaned abroad, Mr. Rogers said: "The control of the Pacific is between her and the United States, and she means to get it. Notwithstanding all this recent peace talk in Japan, that nation is going to strike, and strike before the Panama canal is opened."

A physician was once arguing with his lawyer friend concerning the personal characteristics of one of the latter's clients. "It's no use," he said finally, "you can't make an angel out of a man." "No, that's so, I can't," rejoined the lawyer with feeling. "We have to leave that for you doctors."

## Hints for Santa Claus

Christmas season is approaching all too rapidly, and the advice most acceptable now will certainly be hints or helps in selecting and making suitable Christmas gifts for both rank and file of creation, as it's pretty safe to say that everybody, young or old, rich or poor, will either give or get a Christmas gift. This means a great deal of labor and a great, great deal of thought by the gift-givers. Unless the purse is very heavy and the friends few, many brows will be puckered and many backs weary and many fingers sore long before jolly old Santa Claus scrambles off the last snow-covered roof and heads his fleet-footed reindeers for their mossy stables in the white north-land. Every woman at least expects to help old Santa out, and many men often lend a hand, too, though they find it very trying work and generally welcome any suggestions that come their way. However versatile and competent a man may be in everyday affairs, when he faces the question of gift-giving instantly his mind becomes a blank and refuses to be coerced into any action whatsoever. Absolutely no idea will present itself. Many feminine minds balk in the selfsame way. One would think they had never seen a book or a fancy picture, a candlestick or reticule, a piece of music or a pretty flower pot, a card case or fancy box of bon-bons, a mirror or a million other trifles so acceptable to "the lave." This of course is all very well for the ready-to-wear gifts that only means the handing over the price, but many generous souls abound who like to give their "labor of love" as well as the price, and for those are appended a few suggestions that should be acceptable to their contemplated recipients.

One gift that cannot come amiss to anyone and is always in season is a nice cushion slip, or a cushion complete is better, of course, being then ready for service without further outlay or work by the receiver.

### TIMELY GIFT FOR A MAID

A blue and white hug-me-tight finished in blue and laced with blue ribbons. Commence the back by making a row of forty-four plain stitches, and turn; make four chain stitches, then one single crochet between fourth and fifth plain stitch of first row; make four chains, one single crochet between eighth and ninth stitch, and so on to end, making a row of eleven holes in all. Turn and put four plain stitches in each hole. Repeat until there are thirteen rows of plain stitches. Turn, make three holes, and fill in with plain stitches, as before, making three rows of three holes each for the shoulder. Then widen at both ends by adding four plain stitches in first and last holes, repeating until there are three rows of five holes each. Then widen on outer edge only by adding four plain stitches in first hole; make six holes

and fill in, continuing until there are six rows of six holes each. Make the other shoulder and front in the same way. This gives the foundation of the garment.

In making the edge, use colored wool for the chain stitches and white for the plain stitches. Crochet a row of holes round the entire garment, being careful to make the stitches loose enough to lie flat. Fill in with four plain stitches in each hole, as before, adding an extra four for fullness at each corner—in the first row at the right side of corner and in the second at left side. Repeat until there are four rows of plain stitches and finish with a row of holes, using colored wool.

Form the armhole by lacing the front and back together at each side with cords crocheted from the wool and tassels of the same or satin ribbon to match the color of the trimming wool. Four skeins of 3-ply Bee-Hive fingering in white and one of pink or blue will make this useful and pretty gift.

The linen handkerchief case is made of white linen worked in white floss and lined with colored silk. The case is 6 by 9 inches, finished. Stamped linen and cotton for working cost 45 cents.

One of the new and extremely popular silk and tinsel elastic belts in Persian or Dresden patterns to be had in

Here is shown a cushion cover in scrim, not so long as the other shown. The

pattern is in daisy sprays done in hardanger work. The simple lace edge is crocheted from the hardanger thread. The plain centre leaves room to work the name of college or club or society and would thus be a very suitable gift for a student or member of a club.

One of the new shoulder scarfs made from two colors of chiffon, one plain width of chiffon for interlining or foundation upon which to tack the outer folds. The ends are finished in silk balls to match.

Little girls' bonnet knitted from Angora yarn and ruffled with a fold of ribbon and loops and strings.

A pretty little design for pin cushion, which needs no explanation.

Oblong Cushion slip of heavy scrim with hardanger work. The edge is done in square scallops, behind which a ruffle of torchon lace is sewn. The oblong is the favored shape at present in cushion forms.

### GRANDMOTHER REMEMBERED

A pretty shawl crocheted from mauve and black (or any preferred colors), Bee-Hive 3-ply fingering wool. Make a small chain in the centre and widen in all directions as the work proceeds.

Another style of blouse improver.

Dressy collar and yoke to smarten up a plain or dull gown. May be made of colored lace and insertion.

Bedroom slippers of Paisley wool, knitted and finished with soles sewn on by hand.

A handsome neck-scarf made from heavy figured silk in satin finish. A crimson ground with black figures would be suitable wadded with sheet-wadding and fastened with dome fasteners.

Collar bow made from silk like blouse and very soft quilled lace.

A tie scarf knitted in heavy silk to harmonize with suits makes a nice gift

for a man; or a plain netted neck scarf in fine wool with fingered ends.

Either **handkerchiefs** with a hand embroidered initial to give it the personal touch would be acceptable.

It is hoped that Santa Claus will receive his copy of "The Guide" in time to benefit by these hints.

**LADIES' CLUB**

Editor, Fireside.—A very successful gathering of the Streamstown ladies was held at the residence of Mrs. J. N. Swift on the 15th inst. for the purpose of forming a Ladies' club in connection with the Streamstown branch of the U.F.A., the objects being: (1) To further the interests of the farmers by raising funds in various ways; (2) To discuss dairy work, housework, poultry raising, needlework, etc.; (3) To arrange social gatherings, etc., etc. The various officers were voted for and elected.

A. SWIFT, Secretary.

receive a very special reception as being the first organization of its kind in Alberta; at least the very first to report itself to The Guide. May every success attend your pioneer movement. If you had sent a full report of the meeting and the names of all the officers space would be given it in this department, and it would materially aid other districts who contemplate forming. Perhaps you will send on this information yet. Other districts that have this work in mind might wish to write to some of your officers for hints.

If a suggestion may be permitted, it is that the name selected for the club will indicate the scope or compass of the club. For instance, we have "The Canadian Women's Press Club" and the "Women's Canadian Club," each of which practically explains the ground covered by that club. Suppose "Women-Farmers' Club" were the name selected, it could then be used by every organization of its kind in the West, and would it not be to have one common name so that when Dominion or provincial conventions are held (as they will be held some day) there would be greater unity and cohesion in the work? One has only to mention the W.C.T.U. to understand just what is meant; or Teachers' associations; or the Farmers' associations. If, some day, the women of the West want some special legislation enacted, would it not give greater force to have them all affiliated under a common name? We women of the West build for the future rather than the present.

Let the name go as it will, but let us have early notice of every club formed, always including the names of the officers and the club name. It would also be well to send in an account of the ground covered at each meeting so as to encourage others until the good movement becomes general. Congratulations to Streamstown Ladies' Club! Who comes next!

**THE LONELY ROAD**

(By Margaret O'Grady)

Henceforth our ways must grimly lie apart,  
Yet, haply thus, because you wished it so,  
For me the lonely road, and you, Sweet-heart,  
Journeying wide and far, again shall know  
The clinging lure of kisses deeply pressed  
On love-starred, shining eyes for kisses made.

Then, faltering on, perchance I pause to rest,  
And dimly seek the place where Love was laid.  
When in the perfumed dusk of her sweet hair,  
Your groping hands are lost, sigh not for one  
Who lived and loved but once and only dare  
To whisper it when Love itself was done.

I gave you all. 'Twas not enough, you see.  
For you life's best. The lonely road for me.

**VENTILATION**

The furehanded householder will no doubt have been prepared to greet old winter with the usual barricade of double doors and double windows and earthen bankings and battennings galore and every other known device for keeping winter's partner, Jack Frost, at bay, and incidentally to spare the fuel pile. The summer kitchens will be deserted for a spell and only serve as storage rooms for odds and ends that cannot be accommodated elsewhere, and all the regular kitchen work will be carried into the living room to be performed there. Closing up windows and doors and narrowing down the house space by one room, extra labor done inside, and perhaps treble the occupants, as the men folk spend much time indoors in winter, make a difference in the atmosphere that is perhaps little appreciated by the "possessors of the plains." The main concern is to keep warm.

Beds and clothing receive very imperfect airing; sweeping goes on with

closed doors and shut-in little ones inhale the dust. In many homes rough grains are cooked daily upon the kitchen stove for stable feed, filling the living room with noxious steam that filters through the house, upstairs and down, and freezes on the windows, only to melt off again in steam when extra warmth affects it; the atmosphere is chronically charged with health-destroring vapors that soon begin to leave their mark upon the family's health. The importance of ventilation is not fully recognized and "colds" are the order of the day, especially for the women and children; lassitude and a general run-down-ness pervades the household, the depression being vaguely attributed to "winter weather." The winter weather is beyond doubt the bracing season in which to regain the system's loss during summer's heat, lighter diet and heavier work. Be sure the fault does not lie with the weather. Rather look to the ventilation. Every bedroom window should be put up with hinges at the top, and screen hooks on the sides of the sash inside, with corresponding screw-eyes on the window jam. This is quite all the security needed to fasten the window shut. Two more screw-eyes, one on each side of the window frame, just barely on the outside (and easily reached from within the room) into which the hooks can catch, will fasten the window open, which is quite important as fastening it shut, for if left to swing free on its hinges the wind may break it or it will not admit the air. The small slat-covered holes in the bottom of the sash are wholly inadequate to admit sufficient pure air even if left open day and night, should the room be occupied. In some of the newer designs of storm sash a small pane is set in a moveable little sash at one corner of the window, so as to slide open or shut as desired. These windows cost more and do not serve the purpose as well; and if you already have the old style, a pair of hinges will make them up-to-date. The advantage of the hinged window over the one with the sliding pane is that the room can be flushed with fresh air in a very few minutes, while the other takes an indefinite length of time. Another advantage is that no ice will form from melting frost between the two sashes, as the outer one may be opened to allow the water to run out over the sill. Many windows have been frozen shut for half a winter from this cause. Where then was the ventilation?

If bedroom windows are raised to the limit, and the storm sash hooked open and the bed clothes stripped back and closet doors, if any, opened wide before one leaves the bedroom in the morning very soon all impure air will be driven out and the windows can then be almost closed for the day. The custom of sleeping with closed windows is a very injurious one, and too much cannot be said against it. Cold air is not always pure.

Keeping the downstairs aired is an easier matter; opposite doors or a door and window may be opened at the same time and a strong breeze allowed to sweep through for a few minutes to carry out the stale odors. This done frequently during the day will mean a vast improvement. Many acknowledge the importance of fresh air in the day time, but seem to harbor an idea that it is baleful at night as causing colds when the vitality is low. How plainly in error they are. If vitality is lower at night than in daytime then surely is fresh air a greater necessity at night than in the day when vitality is highest. So many people believe that colds come from exposure to draughts or to suffering from exposure to severe cold in the open air. This is a mistake. The theory is that draughts upset the circulation and close the pores of the skin, which, in conjunction with other organs, cleanse the system of waste. The draught "first repels and then brings on excess of blood to that portion of the body exposed to its force, and also the walls of the nasal cavities, where the increased blood pressure causes the membrane lining the nose to secrete too freely. This wastes the mucin, that disinfectant which the nasal secretion contains. Hence if we enter a room in which there are micro-organisms after having been in a draught which has wasted our supply of mucin the

germs are not killed in the nose, but get into the blood alive where the white corpuscles have to fight them. Hence it is evident that if we keep always in pure air the cold microbes would be powerless.

Colds-like many other complaints are caused by microbes which multiply in great numbers in all rooms where people congregate, but especially if these rooms be hot and unventilated. These microbes enter the system in large numbers; if the vitality is normal they die early without doing much injury; if the vitality is low, then they get the upper hand and the subject must be taken in hand for repairs. Fresh air day and night is nature's panacea.

### PASTEURIZING DEVICE

Mrs. Jones' letter received. An illustration of a pasteurizing device is being prepared to appear in an early issue.

### TEARS

(By Lizette Woodworth Reese)  
I consider Life and its few years;  
A wisp of fog betwixt us and the sun,  
A call to battle and the battle done,  
Ere the last echo dies within our ears;  
A rose choked in the grass; an hour of fears;  
The gust that past a listening shore do beat;  
The burst of music down an unlistening street,  
I wonder at the idleness of tears,  
Ye old, old dead, and ye of yesternight,  
Chieftains and bards and keepers of the sheep,  
By every cup of sorrow that you had,  
Loose me from tears, and make me see aright  
How each hath back what once he stayed to weep—  
Homer his sight, David his little lad.  
[This little poem is said to be the finest piece of work done by an American writer].

### GEMS OF TRUTH

Genuine saints do not invent nor display their own aureoles. Even Moses wist not that his face shone.

"Strength of character depends largely upon the use of past mistakes. Nothing teaches like experience."

To 'e cross-grained by nature is a misfortune; to refuse the straightening and polishing of grace is a sin.

Conviction, were it never so excellent, is worthless till it convert itself into conduct.—Carlyle.

There is no way of keeping the heart clean save by aiming at positive virtues.—Rev. Trevor H. Davies.

### WHITE PLAGUE FIGHTS

What are the women in the country districts doing for the suppression of that great scourge—consumption, so familiarly known now as the Great White Plague?

In the cities and large towns everywhere women are busy organizing themselves into committees and deputations to investigate conditions that affect the public health, and to wait upon civic authorities where necessary to urge for needful improvements so that every worker shall have a chance for health.

Great progress has been made this season through lectures to the children in the schoolrooms, on how to combat the White Plague.

Every country school should have a lecture at least once a term so that every child may become fully informed of the causes and progress and effect of this dread malady, and also its prevention and remedy.

Let us protect our children. Mothers should not relegate this imperative work to the slow-moving men. You are the natural custodians of the family health, appointed by mother nature; therefore, this work is yours. See ye to it.

### WAS HE A COWARD?

(Nellie Stevenson)

"Now for a ride!" exclaimed Dick, the biggest of the boys who were playing on the pavement, as he noticed a heavily loaded wagon being drawn slowly down the street. "No, let's play on. Mother told me never to steal rides that way.

# Ladies' Suits, Coats and Hats

There is always some particular time when seasonable apparel can be bought to best advantage. To the buyer of ladies' ready-to-wear garments we say that NOW is that time; because there is still sufficient wearing time ahead to enable her to secure the fullest possible value from that purchase.

## Heavy Reductions

are made in spite of the fact that no more up-to-date or desirable garments for present wear can be had in the city. Moreover, every garment is a Fairweather garment and carries all that the name implies in regard to style and quality. We invite early inspection for these.

# The Edison!

The Latest Style EDISON Phonograph in Our Grand New Outfit — this superb entertainer, Mr. Edison's latest, final improvement of phonograph—shipped

# FREE!

Yes, free. I don't ask a cent of your money —I don't want you to keep the phonograph— I just want to give it to you on a free loan— then you may return it at my own expense.

## Read the Offer:

I will ship you free this grand concert outfit, Fire-side Model, with one dozen Gold Molded and Amberol records. You do not have to pay me one cent C. O. D. or sign any lease or mortgages. I want you to get this free outfit—the masterpiece of Mr. Edison's skill—in your home. I want you to see and hear Mr. Edison's final and greatest improvement in phonographs. I want to convince you of its wonderful superiority. Give a free concert, give a minstrel show, music, dances, the old fashioned hymns, grand opera, comic opera—all this I want you to hear free of charge—all in your own home—on this free loan offer.

**MY REASON**—My reason for this free loan offer, this extra liberal offer on the finest talking machine ever made—see below.

**MR. EDISON Says: "I want to see a Phonograph in every home."**

The Phonograph is the result of years of experiment; it is Mr. Edison's pet and hobby. He realizes fully its value as an entertainer and educator; for the phonograph brings the pleasure of the city right to the village and the farm home. Now, the new Fire-side Edison Phonograph of our Grand Outfit improved Model, is the latest and greatest improved talking machine made by this great inventor. Everybody should hear it; everybody must hear it. If you have only heard other talking machines before, you cannot imagine what beautiful music you can get from our new outfit. This new machine is just out and has never been heard around the country. We want to convince you; we want to prove to you that this outfit is far, far superior to anything ever heard before. Don't miss this wonderfully liberal offer.

## My Reason

I don't want you to buy it—I don't ask you to buy anything. But I do feel that if I can send you this great phonograph and convince you of its merits, of its superiority, you will be glad to invite your neighbors and friends to your house to let them hear the free concert. Then, perhaps, one or more of your friends will be glad to buy one of these great new outfits. You can tell your friends that they can get an Edison Phonograph outfit complete with records for only \$2.00 a month—\$2.00 a month—the easiest possible payment and, at the same time, a rock-bottom price. Perhaps you yourself would want a Phonograph, and if you ever intend to get a phonograph, now is the chance to get the brand new and most wonderful phonograph ever made, and on a most wonderfully liberal offer. But if neither you nor your friends want the machine, that is O. K.; I simply want you to have it on a free loan, and perhaps somebody who heard the machine will buy one later. I am glad to send it on a free loan offer anyway. I will take it as a favor if you will send me your name and address so I can send you the catalog—then you can decide whether you want the free loan. There are no strings on this offer, absolutely none. It is a free loan that is all. I ask not for one cent of your money, I only say if any of your people want to buy a phonograph, they may get one for \$2.00 a month, if they want it.

**Now, remember, nobody asks for a cent of your money**

I want every responsible household in the country, every man who wants to see his home cheerful and his family entertained, every good father, every good husband, to write and get these free concerts for his home. Remember, the loan is absolutely free from us, and we do not even charge you anything C. O. D.

## Write for the FREE Edison Catalog

In this catalog you will find a complete list

of music and vaudeville entertainments. You can pick out just the kind of records you want for the entertainment you want on this free loan in your own home. Get this catalog at once, then you can decide whether or not you want a free loan and when you want it. You can also decide just the music you want. Remember, I will appreciate it as a favor if you will give me the opportunity of sending you this latest style machine—the climax of Mr. Edison's skill—on this free loan offer. I will appreciate it especially if you will send me your name and address anyway right now, so I can fully and clearly explain our methods of shipping the Edison Phonograph on a free loan offer. **SIGN THE COUPON TODAY.
