BY MAIL POST-PAID.

KNOW YOURSELF.

A Great Medical Work on Manhood.

Exhausted Vitality, Nervous and Physical Debility, Premature Decline in Man, Errors of Youth, and the untold miseries resulting from indulgence in excessive habits, for every man, young, middle aged and old. It contains the prescriptions for all such and chronic diseases, each one of which is invaluable. So found by the Author, who has been cured of every such as probably never before fell to the lot of any mortal. It is a work of great value, and is a French manual, engraved, revised, full gilt, guaranteed to be a first class work, and is a most valuable and profitable work, and is a most valuable and profitable work, and is a most valuable and profitable work.

FOR SALE.

Address the Peabody Medical Institute, or Dr. W. H. Parsons, 100 South Street, Boston, Mass., who may be consulted on all diseases requiring skill and experience. Circulars and descriptive literature will be furnished free of charge. Treatise sent by mail, postage paid, in an envelope of the Institute, and is a most valuable and profitable work.

JOHNSON'S ANODYNE LINIMENT

PARSONS' PURGATIVE PILLS

MAKE HENS LAY

CHICKEN CHOLERA.

STRICTLY PURE. HARMLESS TO THE MOST DELICATE. In Consumptive Cases.

It approaches so near a specific that "Ninety-nine out of a hundred" are cured. The directions are strictly complied with, and the cure is permanent.

As an EXPECTORANT it has no Equal. It contains no OPIUM in any form.

Agriculture.

Straw as Food for Stock.

The market price of straw must be set down as nothing. Farmers who sell it on the city markets at two or three dollars a load and stand most of the day before they can effect a sale, lose heavily by the transaction.

Let us reason from a hay ration standard. A steer weighing 1200 lbs. will require about twenty-five pounds of dry matter per day to keep him in a good thrifty condition. This may be represented by thirty pounds of hay, which contains the right proportion of flesh and fat forming materials for the purpose mentioned. Reasoning hay at \$10 a ton, the cost of a daily ration would therefore be fifteen cents.

Let us now compare this with a straw ration. The objection to feeding straw alone is that it contains too great a proportion of fat and heat producing material, so that the animal has to get enormous quantities before it gets sufficient nutriment to repair the waste of or increase the other tissues of the body. It will thus be seen that it will require the addition of such nutriment as bran, linseed cake or linseed meal. There are, however, a few other foods rather more concentrated, but are not so readily procurable. A daily ration of fifteen pounds of straw, ten pounds of oil cake, and five pounds of linseed cake, has almost the exact nutritive equivalent of the hay ration. Calculating the straw at nothing and the oil cake at one cent a pound, we get seven-and-a-half cents as the cost of the straw ration, which is exactly half the price of the hay ration. In other words, the straw ration may be raised to \$6.00 per ton. In this computation pure straw is taken; the chaff has a much higher nutritive value, and if the quantity of straw fed is increased, the nutritive value of the ration will then be as good as the best mixture of timothy and clover.

These figures, combined with the experience of feeding cattle on straw alone, lead to the conclusion that straw is the cheapest ration when fed with concentrated foods, and the dearest when fed alone; for in the former case animals can put on flesh in the latter case they lose it. In condition, which reduces the value of straw to a minimum quantity.

But the objection may be taken that the straw is of some value as a valuable nutriment, and that the nutritive value of the ration is about the same after it passes through the animal system as before. If we take into consideration the nutritive value of the straw, and the effect which it has on the animal, we find that the nutritive value of the ration is about the same after it passes through the animal system as before.

The Preparatory Education of the Farmer.

One half or more of the men of our country pursue farming as a vocation, or at least one-half of our people live upon farms. Their substance and their wealth is derived from the soil. The more skillful and intelligent these tillers of the soil are, the more beautiful returns do they obtain as a reward for their labors. It has long been a well recognized fact that something more than mere force is required to make farming a success. There must be an intelligent mind directing the expenditure of force in order to bring the best returns for the labor bestowed. A man may be endowed with the strength and powers of endurance of a Hercules, and be not sparing in exercising his physical powers, yet his farming operations may not be successful. The labor put forth by his hands, and the force of his arms, may be of no avail. Another farmer may possess a very fair physical organization, yet, if he possesses an intelligent mind, and understands the business well, he will direct his own labor and that of others as to enable him to reap abundant harvests and become prosperous. There are many difficult problems connected with the business of farming, and the farmer should be prepared to solve them. Crops on certain fields are seen to fail, or to prove less productive than the condition of the soil, and the fertilizers applied, seemed to indicate that the soil should be what is lacking in the soil, or the cause of the failure, is for the farmer to determine. The farmer also has to determine the best means of renovating exhausted soils, composed of different soils; the best treatment for the one will not be equally beneficial to the other; the treatment must be adapted to the kind of soil and its condition. Diseases attack growing crops, and the true nature of the afflictions, and the best means of remedying the trouble must be determined. Various obstacles are encountered by the fruit grower, all of which require intelligent consideration in order to be successfully removed or overcome. There must be intelligent supervision of the feeding of farm stock, of the dairies, and of the other matters of the farm, or there will be losses constantly occurring. The butter and cheese product of many farms is of only second rate quality simply because the owner of the farm does not sufficiently understand the art or science of dairying to enable him to direct operations in such a manner as to secure the production of a first-class article.

Keeping Roots in Winter.

We are asked by a correspondent to state the particulars of a house in which he may keep his roots during the winter. He does not need a house of any kind. We suppose from the tenor of his letter that he has a large amount of roots, though he does not tell us what kind they are. It is just as well, and perhaps better, to preserve them in pits in the ground. It is certainly cheaper. If it is managed, dig them after the first frost, throw them into long heaps two or three feet high and a half dozen feet wide, and cover with a few inches of soil. This will protect them from the severe frosts, and in a few weeks they can be placed in the pit. Turnips and carrots are harder than mangolds, and need not be dug until they are ready to pit them, unless we are ready to pit them, unless we have plenty of time to treat them as we have prescribed in relation to mangolds. The pit is made as follows: Select a site where you will be sure that no water will stand in winter, and if there is not natural drainage, some provision must be made for carrying off the water. Dig the pit about four feet deep and six feet wide, and pack the roots evenly across the pit, and even with the surface of the ground. Do not pack them all closely together, leaving a space between about every four feet of roots. This will enable you to open one section and use the roots without disturbing the others. The space between the sections or rows should be about a foot. Now fill up these spaces with earth, and make a mound of earth on top. Nobody wants any better way to keep roots.

Another plan is to select just such a site as we have already described, and excavate a bed of any size desired twelve inches deep. Now fill in the roots and build them up in a pyramid of five or six feet in height. Now apply four inches of straw to the sides of the pile, and cover this with about a foot of earth. In a very cold climate, in a climate for instance, as with that of Lenox, and in a winter more or less severe, it would require more earth. To provide means for the moisture to escape, take three inches of drain pipe, and insert it at the top. About as every cold weather these should be stopped up. This is a Scotch method which is practiced in this country to some extent with very satisfactory results. One who practices says that he has never had any roots in a fine condition all through the winter, and some of his pits have contained hundreds of tons of mangolds.—Western Rural.

What are contagious diseases? they consist of tumours formed by an enlarged growth of the papillae of the skin, which is covered by thickened epidermis. They are vascular and are provided with blood vessels and nerves, excepting the hardpan disease. It is probable that they are parasitic in their nature, and it is known that they are both constitutional and contagious. The most effectual remedy is to destroy the disease growth by caustics, as carbonic acid, nitric acid, nitrate of silver, or salphate of copper, and to dress the wound produced by ordinary means, as with tincture of iodine, and new healthy skin is formed. A continuous course of antiseptic and alterative medicine might be useful, as half-ounce doses of hypophosphite of soda daily.

Young pigs are subject to the disorder known as spinal meningitis. It appears as a stiffness in the loins and hind legs, and sometimes as complete paralysis in the hind parts, which are dragged about as the animal moves. The disease consists of inflammation of the membrane covering the spinal cord and is caused by cold, indigestion, or by constitutional tendency. It is not wise to apply turpentine or mustard paste, made with hot water, to the loins after hot fomentation, and to give cooling, laxative, and diuretic medicines, as one ounce of opium salts with a drachm of cream of tartar or a tablespoonful of castor oil. Powdered charcoal is often used when the disease is caused by indigestion and disordered stomach.

Unthinking farmers will sometimes place a colt or young horse by the side of a horse of more mature years, and expect it to do an equal amount of work without injury. Such a thing is not only cruel, but unwise. Many promising horses have been ruined by such treatment.

Middle aged catt. yield the best flavored and most nutritious beef, not so rapidly as would manure

VALUABLE PROPERTIES FOR SALE!

Near Fredericton,

A PORTION of the "Hamstead" belonging to the Estate of the late Bartlett Hamstead, fronting on the Old Kingsroad, containing about two miles of land, including five hundred and fifty acres, and a small farm, and is situated on the best of the city, and is a most valuable and profitable property, and is a most valuable and profitable property, and is a most valuable and profitable property.

Town and Country.

Mr. Isaac K. Long has returned from the West. Mr. George L. Watmore is home from the North West.

The regular Monthly Meeting of the City Council will be held next Tuesday evening.

Chief Justice Allen was at the Charter House Hotel, London, G. B., on the 6th inst.

A new Post Office has been opened at Central Haynesville, York Co., with Mr. William Billing as Postmaster.

The contract for clearing the sidewalks of Snow during the winter, has been awarded to William Smith, for \$95.

Mr. J. B. Beverly, formerly of Fredericton, has been elected Secretary of the St. Andrews Society recently organized at Moncton.

St. Andrew's Baptist and Unitarian churches, were destroyed by fire last Wednesday night.

John Pugh fell through the ice on the river last Wednesday afternoon, and was with difficulty rescued.

De. O'Neill of Woodstock fell on a slippery sidewalk a few days ago, and broke the top of one of his knees.

McMurray has laid on our table a copy of William Mason Turner's popular story, 'Magpie', or the Legend of 'Lover's Leap'.

At the Edinburgh University Matriculation Examination, Mr. W. Duff, of the winner of the Gilchrist Scholarship.

James H. Jacques, a well known and highly respected citizen of Woodstock, died on Monday morning.

St. Andrew's correspondent of the Montreal Times, writes that the Rev. Mr. W. Smith, the father of the present Fredericton for the past two years.

SPECIAL NOTICE.

As we intend closing our books the last of December, all cash paid on account, and all bills sent in before that date, will be highly appreciated.

The time has been for accounts to run from three to four months, but in most cases they have run six, nine, twelve, and eighteen months and even two years.

As we believe this a wrong principle, and as we are not in a position to do business in that way, we have determined to make a new start, from the first of the year.

THE DOUGLAS HEIR.

CHAPTER XVIII.

JEALOUSY.

Mrs. Coolidge and her daughter had only been some ten minutes on their way when the latter discovered that she had forgotten her pocket-book and memorandum, consequently they had to return for it.

Isabel had entered the house, intending to run up stairs and back again, but hearing low voices in the library, she stopped to listen a moment, wondering who was within; then, with flashing eyes and flushed cheeks, she stepped to the door and beckoned to her mother to come in.

Mrs. Coolidge quickly obeyed the summons, and as soon as she learned who were the inmates of the library, she threw open the door, and just in season to behold the scene described in the last chapter.

With a feeling of utter dismay Brownie then gazed herself from Wilbur Coolidge's face, and started to leave the room. But the two women barred the way, and would not let her pass; while Mr. Coolidge demanded, in stern tones:

"What is the meaning of this act of defiance?" Wilbur colored deeply, but braced himself for battle. "Mother—Isabel—let Miss Douglas pass!" he pleaded, in a piteous appeal.

"Then I address a note to you which will be a fair one, you will get it!" "Yes!" "Then I address a note to you which will be a fair one, you will get it!"

"I beg your pardon," he said, starting when he heard the hall clock strike, "but I intended to see Mr. Douglas, I have a little piece of property belonging to her, which I desire to return."

"Miss Douglas, would you make use of my key?" "Yes, and be very thankful for it," she replied, her eye brightening.

"You shall have it; I will make it my first business to obtain a good recommendation for you as soon as he returns, and send it to you."

"Thank you, you are very kind," and a tear sprang to her eye at his thoughtful words.

"What do you go for?" he asked, as he was about turning away.

"Can I help you in any way?" "If you will order the cab for me, it will save me a little trouble," she answered, smiling warmly.

"Anything that I can do will be a pleasure," he replied, though an expression of surprise swept over his handsome face as he bowed and left her.

In two hours she was ready, her trunk strapped and in the lower hall waiting for the cab.

With a nearly breaking heart, Brownie sought Viola and Alms to bid them farewell.

They were deeply distressed at the thought of parting with her, and protested loudly against it.

"Did not reply, and she went on: 'But we found that she had been taking which would not completely during the night of the opera, and she could only breathe a prayer that her successor might be conscientious and wise in her dealings with them.'"

Mrs. Coolidge and Isabel ignored her departure, entirely, and did not show themselves, much to Brownie's relief.

Adrian Dredmond left the Coolidge mansion in a fever of impatience and indignation.

"That any one should accuse Brownie Douglas of the crime of theft was sufficient to drive him wild."

What had she stolen? Surely nothing of Miss Coolidge's beauty or breeding, he thought, with a contemptuous sneer for his mad fathomed her ill-nature and desire to injure the lovely girl at once, and Miss Isabel had neither beauty nor good breeding to lose.

"He is so innocent as an angel," he murmured, softly, then added, with a smile: "And they are hard-hearted as devils!"

Did you not know that they had been reading with tenderness care? Had she not the blood of royalty in her veins? and had he not seen her in all the brightness and purity of her young life and been assured of her integrity by his friend Gordon?

"How well I remember that scene in the vestibule of the Art Gallery, when she had appeared like some beautiful vision to him, with her bright, sweet face, and clad so richly, yet simply, in her plain black silk, protesting her loyalty in the matter."

He looked and considered her had been looking, with a sad smile, at the thought of the girl who had been so true to him, and he had not seen her in all the brightness and purity of her young life and been assured of her integrity by his friend Gordon?

"He is so innocent as an angel," he murmured, softly, then added, with a smile: "And they are hard-hearted as devils!"

He wanted a key and to be forgiven. The following is given as a true story, and the little comedy was played in the Pullman bound from Scotland to London recently.

QUICK TRANSIT from a state of feebleness, bodily languor, and nervous irritability—induced by dyspepsia—to a condition of vigor and physical comfort, follows the use of the standard regulating tonic and stomachic, Northrop & Lyman's Vegetable Discovery and Dyspeptic Cure, which speedily conquers indigestion, Constipation, Bilious Complaints, and Female Complaints, purifies the Blood, and reinforces the vital energy.

An Innocent Man sacrificed by a Nursing Bottle. She was a thin, narrow, dark visaged woman, with specs on, and she carried a package. She entered a railroad car, and looking furtively at a manly clad man exclaimed, "touch not, taste not, handle not," and she pointed with a crooked forefinger to the glass flask protruding from his breast pocket.

What's the matter?—Used up with asthma. Go to the drugist and get a bottle of Minard's Honey Balsam; it is a positive cure for asthma.

He wanted a key and to be forgiven. The following is given as a true story, and the little comedy was played in the Pullman bound from Scotland to London recently.
