Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming are checked below.

- Coloured covers / Couverture de couleur
- Covers damaged / Couverture endommagée
- Covers restored and/or laminated / Couverture restaurée et/ou pelliculée
- Cover title missing / Le titre de couverture manque
- Coloured maps / Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black) / Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations / Planches et/ou illustrations en couleur
- Bound with other material / Relié avec d'autres documents
- Only edition available / Seule édition disponible
- Tight binding may cause shadows or distortion along interior margin / La reliure serrée peut causer de l'ombre ou de la distorsion le long de la marge intérieure.
- Blank leaves added during restorations may appear within the text. Whenever possible, these have been omitted from filming / Il se peut que certaines pages blanches ajoutées lors d'une restauration apparaissent dans le texte, mais, lorsque cela était possible, ces pages n'ont pas été filmées.
- Additional comments / Commentaires supplémentaires:

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured pages / Pages de couleur
- Pages damaged / Pages endommagées
- Pages restored and/or laminated / Pages restaurées et/ou pelliculées
- Pages discoloured, stained or foxed / Pages décolorées, tachetées ou piquées
- Pages detached / Pages détachées
- Showthrough / Transparence
- Quality of print varies / Qualité inégale de l'impression
- Includes supplementary material / Comprend du matériel supplémentaire
- Pages wholly or partially obscured by errata slips, tissues, etc., have been refilmed to ensure the best possible image / Les pages totalement ou partiellement obscurcies par un feuillet d'errata, une pelure, etc., ont été filmées à nouveau de façon à obtenir la meilleure image possible.
- Opposing pages with varying colouration or discolourations are filmed twice to ensure the best possible image / Les pages s'opposant ayant des colorations variables ou des décolorations sont filmées deux fois afin d'obtenir la meilleure image possible.

This item is filmed at the reduction ratio checked below / Ce document est filmé au taux de réduction indiqué ci-dessous.

| 10x | 14x | 18x | 22x | 26x | 30x |
|-----|-----|-----|-----|-----|-----|
| 12x | 16x | 20x | 24x | ✓ | 28x |

The copy filmed here has been reproduced thanks to the generosity of:

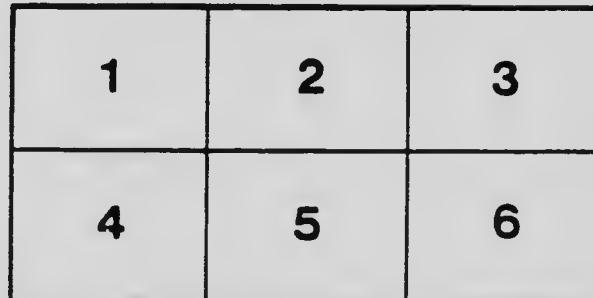

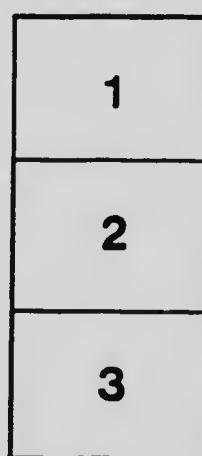

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filming.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

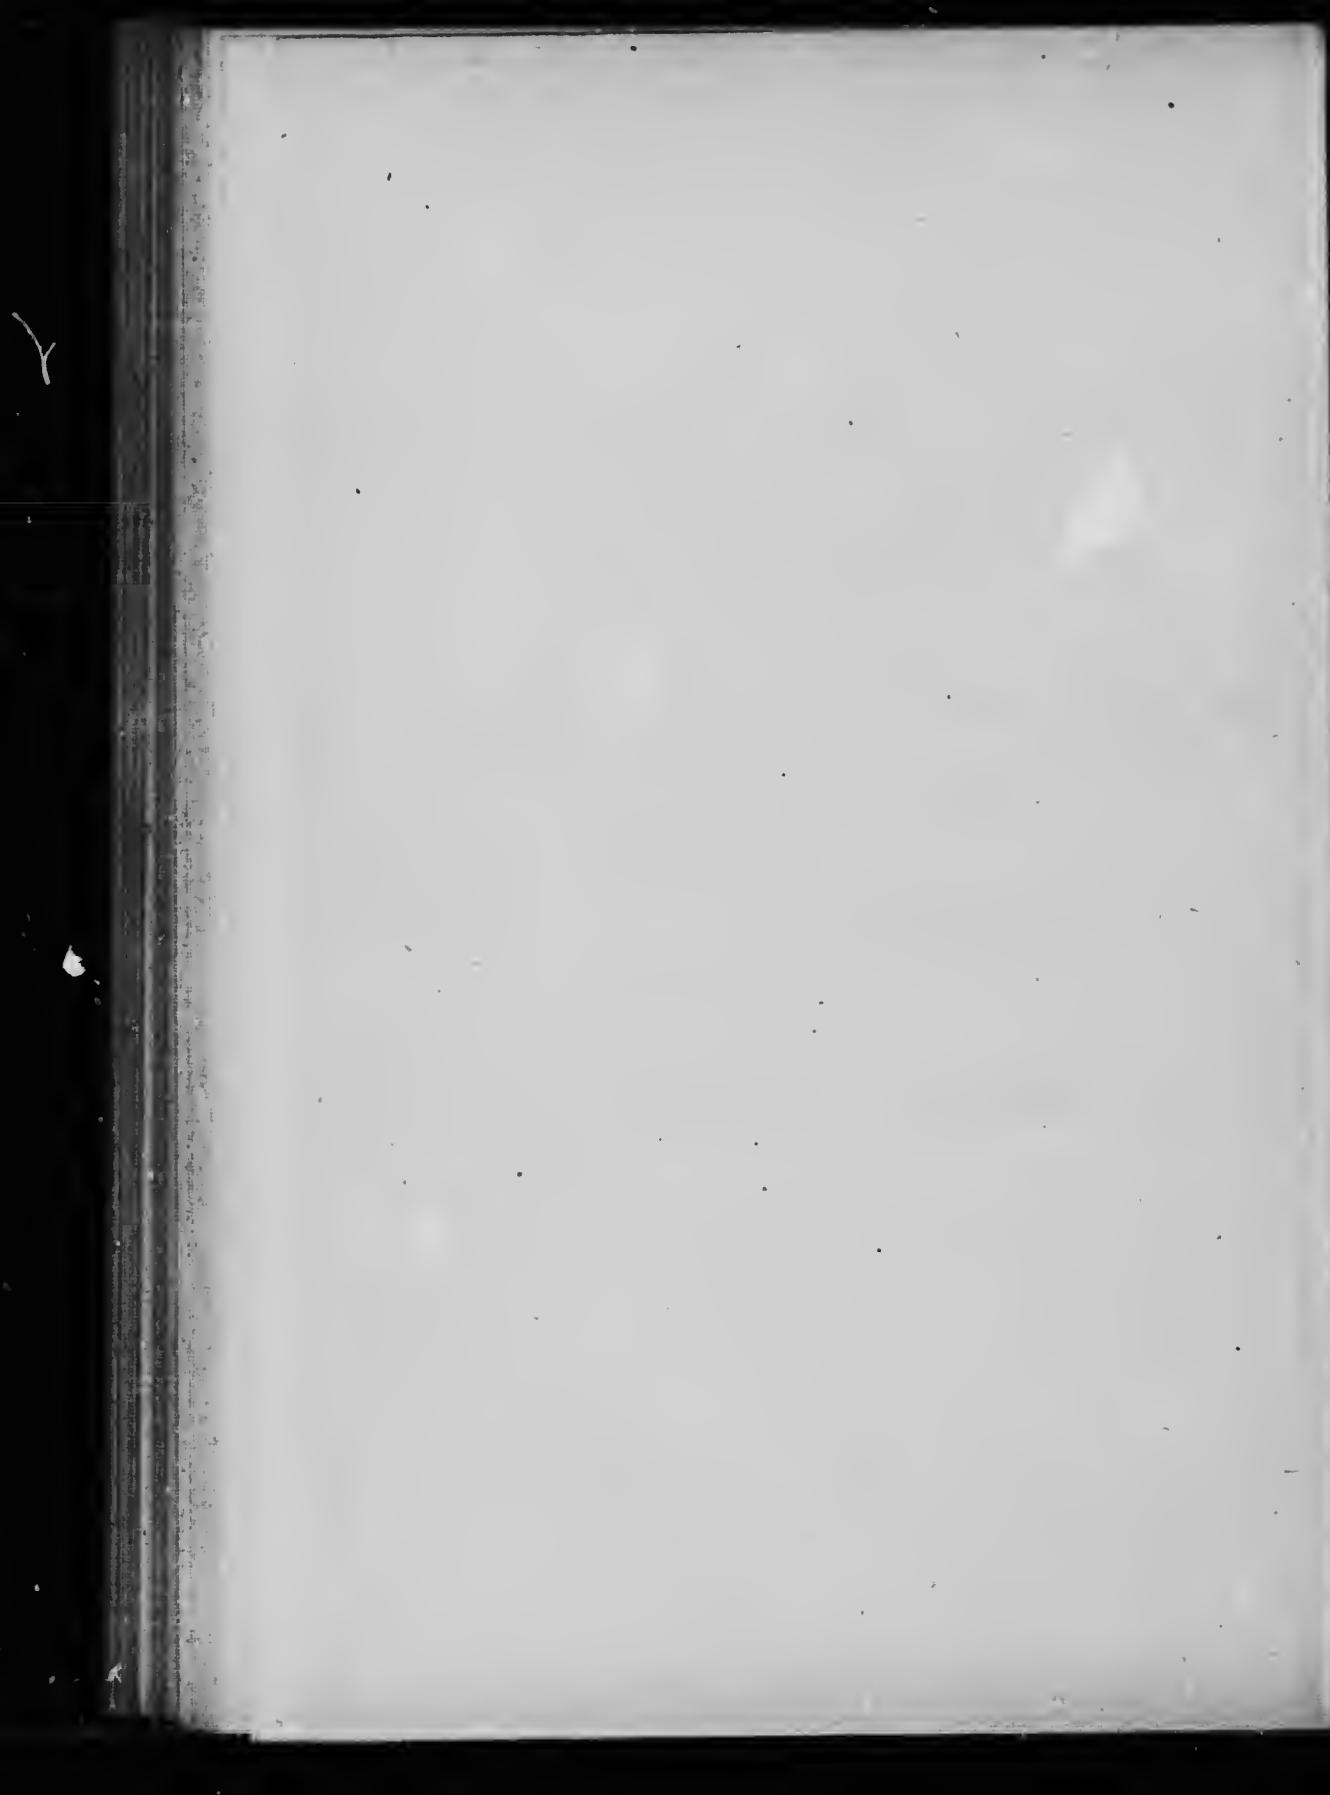

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

LABORATORY
OF THE
INLAND REVENUE DEPARTMENT
OTTAWA, CANADA

BULLETIN No. 360

BAKING POWDER

NOTES AND COMMENTS.

Under this heading, as occasion arises, the Bulletins issued by this Department will contain, as an appendix, such comment as may seem necessary or advisable upon matters relating to the work of the Department in connection with the administration of the Adulteration Act, the Fertilizers Act, the Feeding Stuffs Act or the Proprietary Medicines Act.

It frequently happens that correspondents ask information regarding the above Acts, of such a nature that the matter in question possesses general interest, and comment upon it would prove acceptable and useful to others than the immediate questioner. In such cases the reply may find a place in these columns. For convenience of reference these notes will be numbered in series.

A. MCGILL,
Chief Analyst.

LABORATORY
OF THE
INLAND REVENUE DEPARTMENT
OTTAWA, CANADA

BULLETIN No. 360

BAKING POWDER

OTTAWA, January 17, 1917.

J. U. VINCENT, Esq., K.C.,
Deputy Minister of Inland Revenue,

SIR,—I beg to hand you a report upon 213 samples of Baking Powders, purchased by our inspectors during the period, June to August of last year.

This important food material has been made the subject of systematic inspection on five different occasions before the present; and was last reported in March 1915. (Bulletin No. 308.)

The main reason for the present report is the desire to establish a standard for available gas, below which amount the article shall be held illegal. Apart from considerations of the wholesomeness of the ingredients and the harmlessness of the residues left in the bread, it is evident that the gas-producing power of baking powder is its most important character. An article which has been so badly made, or which has so much deteriorated through prolonged keeping, as to be incapable of yielding a reasonable volume of gas, is necessarily disappointing to the baker, and, beyond fixed limits, which should be legally defined, must be regarded as fraudulent.

The generally accepted and what may be regarded as the normal baking powder is expected to yield from 12 to 13 per cent. of gas (weight) when freshly made. The nature of Cream Tartar, which was the original acid ingredient of baking powders, doubtless determined this figure, which has been so long, and so widely accepted that any considerable departure from it would be confusing to the baker. (Bull. 308, p. 4.) Although burnt alum and other acid components which have more recently come into use in baking powders, are capable of producing a much higher percentage of gas, they have usually been reduced in strength by addition of starch or other neutral material so as to conform to the strength of Cream of Tartar.

The nature of a mixture of bicarbonate of soda with any acid substance is such that gradual interaction of the components must occur on prolonged keeping; and unless kept very dry and cool, this interaction may be quite rapid, and must result in the loss of so considerable an amount of gas as to render the article valueless for baking purposes.

The States of Florida, North Dakota and, I believe, some others as well as the Government of Western Australia (Gazette, July 17, 1914) have fixed 10 per cent of

gas as the minimum limit for a legal Baking Powder. The following tabulation of results obtained by this Department is of interest:

| Date of Inspection. | Number of Samples in which CO ₂ Determined. | Average Gas p.c. |
|---------------------|--|------------------|
| 1889.. | 149 | 8.17 |
| 1900.. | 156 | 9.80 |
| 1908.. | 158 | 10.24 |
| 1911.. | 150 | 11.90 |
| 1914.. | 251 | 11.31 |
| 1915.. | 196 | 11.91 |

The averages quoted include, of course, a certain number of samples whose content of gas fell short of 10 per cent; nevertheless the means found are well above this limit, and show continuous improvement in the quality of baking powder, from the point of view of gas production.

Details of gas producing power for the last two inspections are of interest:

| Available Gas. | | |
|--------------------|-------|-------|
| Above 13 per cent. | 1915. | 1916. |
| " 12 " | 48 | 53 |
| " 11 " | 52 | 56 |
| " 10 " | 62 | 51 |
| " 9 " | 45 | 13 |
| " 8 " | 12 | 6 |
| " 7 " | 15 | 6 |
| " 6 " | 5 | 4 |
| Below 6 " | 5 | 4 |
| Total.. | 251 | 195 |

It will be seen that 82 per cent. of the collection of 1915 and 88 per cent. of that of 1916, yielded more than 10 per cent. of gas. I am of opinion that 10 per cent. of available gas is a reasonable limit, below which a baking powder should be regarded as illegal.

It is however to be noted as important that a well defined method of working should be employed in estimating available gas. This is necessary because of the very difficult solubility of burnt alum, and because of the slow decomposition of bi-carbonate of soda at a boiling temperature, quite apart from the reaction of this salt with the acid ingredient of the powder. Bi-carbonate of soda is usually present in slight excess of the amount required to neutralize the free acid of the sample. Macara (Analyst, 1915, p. 272) has shown that this reaction, on sufficiently prolonged boiling, may go on until the sesqui-carbonate is formed; in other words, until 25 per cent. of the carbonic acid in bi-carbonate is driven off.

As already stated, the question of method has been especially studied, during the progress of the work herein reported. Three general types may be noted:

1st. Methods involving the absorption of liberated gas by soda-lime or by solution of potash (gravimetric).

2nd. Methods involving the absorption of the gas in measured excess of soda or barium hydrate solutions, and subsequent titration of the excess of absorbent (volumetric.)

3rd. Collection of the evolved gas over saturated solution of common salt, and measurement at definite temperature and pressure (gasometric.)

The effect of prolonged boiling; ratio of weight of sample to volume of solvent, and other points, have also been studied.

As the result of our investigations the following method of determining available gas in Baking Powders is recommended.

From 1 to 2 grams of the sample is used; this is boiled with about 100cc. water for 10 minutes from the time when boiling begins; with aspiration of a slow current

of air which carries the liberated gas through a series of U tubes, etc., arranged as follows:—

1. A short Liebig condenser, arranged so as to return the condensed steam to the boiling flask.
2. A U tube (or tower) containing pumice saturated with strong sulphuric acid.
3. A smaller U tube containing fragments of pumice saturated with strong sulphuric acid; or lumps of fused calcium chloride, which must be neutral.
4. A U tube containing soda-lime or Liebig bulbs containing 30 per cent. soda solution.
5. Duplicate of (4.)
6. A U tube like (3.)
7. Same as (6) and connected at exit end to an aspirator or suction pump.

(A T tube should be interposed between the exit end of number 7 and the suction. The third leg of the T tube carries a piece of rubber tubing and a pinch cock. The suction may then be turned on full, and the rate of the air current regulated by the pinch cock.)

U tubes 3, 4, 5 and 6 are weighed. Number 3 should not materially gain weight, and serves to protect 4 and 5. The increase in weight should be almost entirely confined to No. 4. When No. 5 begins to show notable increase in weight, No. 4 should be freshly charged.

After 10 minutes boiling the heat is turned off, but aspiration is continued for 20 minutes longer.

The decomposition flask may be charged with the sample and the water added through a funnel tube reaching nearly to the bottom of the flask; or, more conveniently by first charging with water, and dropping in the sample, wrapped in tissue paper immediately replacing the rubber cork which carries the funnel tube and the exit tube.

The air aspirated through the apparatus may be freed from carbonic acid by a soda lime tube, above the funnel tube. This precaution is not usually necessary, the error due to atmospheric CO₂ being so small as to be negligible. It is also desirable to have an absorption bottle immediately before the suction tube in order to observe conveniently the rate of the air current. A negative pressure must be maintained during the whole operation; but the rate of flow of air should not exceed three bubbles per second.

The source of the leavening gas, is always bi-carbonate of soda. The acid component, by which the gas is liberated, is Tartaric acid, either free or as Cream of Tartar; Sulphuric acid, as one or other of the dessicated alums, (usually soda alum) or Phosphoric acid, employed as Acid phosphate of lime, or as acid phosphate of soda. Sometimes mixtures of these are found, and, very commonly, alum and acid phosphate of lime are found together.

I think it desirable that manufacturers of Baking Powder should be required to state, on the label, the acid component used. The consumer has a right to this information, as also has the physician. Although investigation by a Board of experts of recognized competency (see Bull. No. 103, Department of Agriculture, Washington; or, Bulletin No. 308 of the Inland Revenue Department, Ottawa, p. 6) has shown that "When aluminium compounds are mixed or packed with a food, the quality or strength of said food, has not been found to be thereby reduced, lowered, or injuriously affected," many physicians, and a very large number of laymen are far from convinced that the continuous use of alum is without harmful effect upon the health. Indeed the report above referred to contains the following: "Aluminium compounds when added to foods in the form of baking powders, usually provoke catharsis. This action of aluminium baking powders is due to the sodium sulphate which results from the reaction." The inhibitive effect of alum upon gastric digestion is well established (Bulletin No. 68, Inland Revenue Department) and the great insolubility of dessicated

alum compels the inference that alum as such, remains in the bread in all cases where an alum baking powder has been used.

ALBUMEN IN BAKING POWDERS.

The addition of albumen to a baking powder would evidently increase its value, provided that the amount of albumen added was at all considerable. As a matter of fact, albumen to the amount of about $\frac{1}{2}\%$ of 1 per cent. of the weight of the powder has been found in some baking powders. It is inconceivable that such an addition can have any appreciable value, as rendering the article superior in baking. It is contended that the true reason for this addition of albumen is found in the fact that, on adding water to such a powder, the increased viscosity causes a persistent froth to be formed, and thus furnishes the vendor with a means of demonstrating apparent superiority, in comparison with other powders, which do not contain albumen. Of course such a use of the article is plainly for purposes of fraud; and several States of the American Union have forbidden the addition of albumen to baking powders, because of the fraudulent use of what is called the "Cold Water test" or "Water glass test" and the fact that the amount of albumen is so small as to possess no tangible value. It is scarcely necessary to add that, albumen being in itself a desirable food product, we cannot under the Adulteration Act, forbid its addition to Baking Powders. No intelligent buyer will permit himself to be deceived by the water glass test; and should actual deception be practiced, anyone has recourse under the common law.

Egg-SUBSTITUTES.

These are, for the most part, merely baking powders, to which has been added wheat flour rich in gluten; casein, or other proteid matter, and a yellow dye. This last is used to simulate egg-yolk; and possibly to deceive the purchaser into a belief that egg is present in the article.

The Government of Western Australia has legislated as follows: "The word 'egg' and expressions or devices which imply or suggest the presence of egg, or equivalent of egg, shall not be written on, or attached to any package which contains baking powder." Gazette, 17 July, 1914.

I regard this action as right and proper. The high price of eggs tempts the buyer to purchase anything that promises to be a substitute; and in this way, an article of little cost and of less value, is able to secure sale at an exorbitant price. The artificial colouring of a so-called egg powder, so as to make it resemble egg-yolk, should be forbidden by law.

Another class of egg-substitutes, not containing gas producing components is found on the market. For the most part, these articles consist of casein, with flour, some fat and a little sugar, coloured with a yellow dye. Fancy names like Egg-o-let, sub-egg-o, etc., have been coined for some of them. In all such articles, a plain statement of composition should be required on the label; and the employment of a dye should be forbidden.

It is hoped that this report will supply data upon which to establish standards for Baking Powder under the sanction of Section 26 of the Adulteration Act.

I beg to recommend its publication as Bulletin No. 360.

I have the honour to be, Sir,
Your obedient servant,

A. MCGILLI,
Chief Analyst.
