© 1997

The copy filmed here has been reproduced thanks to the generosity of:

Library
Agricultura Canada

The Images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche sheet contains the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque
Agriculture Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon la case: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

VALUE OF CASTRATION AND DOCKING

BY

NORMAN STANSFIELD AND ARTHUR MORTON.

It is useless to advocate a practice which does not show returns in dollars and cents. Money returns appeal to all who regard their operations as a source of revenue and a means of a livelihood. If after looking into such returns the practice is not followed then nothing further can be said on the subject. In order to obtain the fullest returns it is necessary to sell the finished product for the highest market price. A slight premium is always paid for a first-class article when it is sold. These premiums are the returns which change an investment from a mediocre one to a good one.

These photographs represent carload lots of lambs of approximately the same age which were sold on a Canadian stockyard and the final photographs show the difference in the carcass. The buyer values the live animals from the dressed carcass standpoint.

WHY CASTRATING PAYS.

1. Castrated lambs are not as restless as ram lambs and attend to their business better which is getting fat and ready for the block.
2. Wethers are easier to fence and herd on the farm.
3. Wethers do not annoy the ewe and ewe lambs in the flock. The wether lambs can be left in the ewe flock without danger. Ram lambs must be separated or breeding will take place.
4. On the same feed and under the same conditions wethers will grow bigger and fatter than ram lambs.
5. If the market in the Fall drops and becomes dead, the wethers may be carried over but the ram lambs must be sold at any price.
6. Finally and most important, wethers sell at a premium above ram lambs on the market.

Fig. 1.—Showing carload of docked and castrated lambs which were rated as No. 1 and brought the highest price, \$16.50 per hundred. These lambs averaged 93 pounds per head. Average value per lamb \$15.34.

Fig. 2.—Represents carload of undocked and uncastrated lambs which were rated as Common and brought \$14.00 per hundred. Note the nondescript breeding, lack of uniformity and the signs of general neglect. The average weight was 68 pounds per head. Average value per lamb \$9.52.

Fig. 3.—Average lamb of No. 1, carload.

Fig. 4.—Average lamb in carload lot rated as Common showing every evidence of neglect.

MAY 31 1919
INT. AGR. INST.

Fig. 5.—Cross section of the carcass of an average lamb in carload rated as No. 1. This meat is well finished without excessive fat and the lean marbled in an attractive manner. A roast from this carcass would be appetizing and would satisfy the most fastidious.

Fig. 6.—Cross section of carcass of the average lamb in common carload. The lack of finish is obvious. After cooking there would be no fat left.

WHY DOCKING PAYS.

1. The tail is useless and a detriment.
2. Manure gathers on a long tail, but . . . docked this cannot occur. Maggots often appear on the rumps of lambs and sheep where manure is caked. These pests cause considerable loss and stop growth. In the case of small lambs, often the manure cakes so hard that it is impossible for the bowels to act and death follows.
3. Docking is a sign of careful management. It makes the animal more attractive and, therefore, easier to sell. A buyer will not purchase the neglected flock until he has purchased all the good quality lambs.
4. All ewe lambs should be docked because it makes breeding easier and does not waste the strength of the ram. A long tail obstructs and impedes during the breeding season.
