Overland
TRADE MARK REG.

A Comprehensive Line of Automobiles All New Values

From your point of view this announcement is most important.

For herein we set forth the achievement toward which the Willys-Overland Organization has aimed for the last eight years.

This achievement in a word is the completion of our gigantic organization to a point where we could make and market a comprehensive line of automobiles under one head.

One executive organization,
—one factory management,
—one purchasing unit,
—one sales expense,
—one group of dealers,
plan, produce and sell the entire line.

Buying power is concentrated. Costs are distributed over all these cars. The savings are tremendous.

As a result we are producing cars of exceptional quality—and marketing them at unusually low prices.

Every car is built to a rigid standard of performance, comfort and appearance.

The new Light Four at \$930 is a striking example.

It has good style—built low with harmonious and full sweeping body lines. It is a beautiful car in every sense of the word.

The motor is powerful, quiet and of sturdy construction. The turning radius is short. The car has a quick acceleration and is built to tour safely and comfortably from the Atlantic to the Pacific.

And with all these good qualities *it rides beautifully*. The soft cushions, the long resilient cantilever rear springs, the large tires (31x4) and the proper balance in construction absorb all types of jolts—the choppy cobblestone, the cuppy macadam and the heavy ruts and thank-you-ma'ams of the highways.

Yet this is but one of the new Willys-Overland values.

Never before have the economies of vast production been available for buyers of every class of car.

And the Overland Policy of greater production, higher quality, lower price is exemplified in every model and type.

Catalogs on request. Please address Dept. 918

THE GRAIN GROWERS' GUIDE

(543) 3

A PINK NOTICE

A pink notice attached to this page shows that your renewal is due. We hope you have enjoyed The Guide and that you will send us \$1.50 for your renewal at once, using the blank coupon and the addressed envelope which will also be enclosed. We always give several weeks' notice so that subscribers will have plenty of time to forward their renewals and not miss any copies of The Guide. We cannot supply back numbers of The Guide, so we hope you will not delay in sending your renewal. When requesting a change of address, please give us three weeks' notice. If the date of the address label on your Guide is not changed within a month after you send your renewal, please notify us at once. It is always safer to send your money by postal, bank or express money order. Mail your \$1.50 today.

SUBSCRIPTIONS AND ADVERTISING

Published every Wednesday. Subscriptions in the British Empire \$1.50 per year, except Winnipeg City, which is \$2.00 per year. Foreign and United States subscriptions \$2.50 per year. Single copies 5 cents.

Advertising Rates

Commercial Display—20 cents per agate line. Livestock Display—16 cents per agate line. Classified—5 cents per word per issue.

No discounts for time or space on any class of advertising. All changes of copy and new matter must reach us seven days in advance of date of publication to ensure insertion. Reading matter advertisements are marked "Advertisement." No advertisement for patent medicines, liquor, mining stock or extravagantly worded real estate will be accepted. We believe, thru careful enquiry, that every advertisement in The Guide is signed by trustworthy persons. We will take it as a favor if any of our readers will advise us promptly should they have any reason to doubt the reliability of any person or firm who advertises in The Guide.

Winkler Dismisses Jacobs

Serious Rupture Occurs Between Minister and Agricultural College Board

Last week, Hon. Valentine Winkler, Minister of Agriculture of Manitoba, announced that he personally had discharged F. S. Jacobs, Professor of Animal Husbandry at the Manitoba Agricultural College, Winnipeg. Behind this announcement there are a lot of facts and explanations that have not been given to the public. The situation has practically reached a crisis between Mr. Winkler and the agricultural college authorities who maintain that the minister has entirely over-stepped his authority in a number of cases in dealing with college matters. On February 16 the advisory board of the agricultural college met at the college. The board consists of ten members including Mr. Winkler and under the Act the board is given absolute power to engage and discharge the staff of the college. Mr. Winkler appeared at the meeting and demanded that Professor Jacobs be discharged from the staff for incompetency and pointed out that he had not given satisfaction in purchasing cows for the minister's cow scheme.

The meeting was exceedingly hot. The ministers found that most of the members of the board were not prepared to yield their powers to him and they told him so with great frankness. They informed him that as a professor and manager of the college farm at the Agricultural College, Professor Jacobs was efficient and satisfactory and that they had no intention of discharging him because of any personal quarrels or differences with the minister. Mr. Winkler and President Reynolds, it is said, came into conflict because Mr. Reynolds frequently corrected mis-statements which Mr. Winkler placed before the board. Finding that he could not bend the board to his bidding the minister threatened that he would take the matter in his own hands, which he did a little later by having Mr. Jacobs' name struck off the pay list. The minister has no authority to discharge Professor Jacobs, but the government holds the authority to pass on the pay list, and Mr. Winkler has used this arbitrary power to override the advisory board and the President of the college in order to gratify what seems to be largely a personal spite.

The Cow Buying Trouble

The trouble between the Minister and Professor Jacobs arose when Mr. Winkler's famous cow scheme was inaugurated. He insisted upon Professor Jacobs taking charge of the administration of the act, in addition to his duties as professor at the college and manager of the college farm. No instructions or system was mapped out for handling the cow scheme and the first purchase of cows Mr. Winkler thought cost too much and ordered a lower price to be paid. The next purchase was the cows that were rejected because of supposed poor quality. Mr. Jacobs about this time relinquished the cow scheme in order to give proper attention to his duties at the College. Shortly after this the minister announced that he had been "let out" as manager of the minister's "cow scheme" because of the purchase of the cows that were unsatisfactory and tried to make him take the cows off the hands of the gov-

ernment. There seems to be very decided differences of opinion as to whether these cows were worth the money paid for them.

Another big difference of opinion arose when Mr. Winkler himself went into the cow buying business. He attended a sale in Winnipeg and purchased a young Holstein cow for \$550, and sent it out to the agricultural college. Professor Jacobs and his assistant, Professor Wood had previously decided that they would be unable to make any purchases at this sale. It turned out that the cow had no official record either for quality or quantity of milk. Later under actual test at the college the cow fell very far short of what any cow worth \$550 should yield. Consequently Professor Jacobs and his assistant, Professor Wood, placed a valuation of \$200 on the animal, which, naturally, greatly annoyed Mr. Winkler. For this and other differences of opinion it has been known for some time that Mr. Winkler has been determined to discharge Professor Jacobs, despite the fact that he is giving good satisfaction as professor at the college and is very highly thought of both by the staff and by the student body.

Mitchell, Black and McMillan

It is only a few months since Professor Mitchell of the Dairy Department of the college resigned and went to New Brunswick. The chief reason for his leaving was because of trouble between himself and Mr. Winkler. As professor of dairying he was under the Agricultural College board, but as dairy commissioner he was under the Minister of Agriculture. The friction between himself and Mr. Winkler became so acute that he thought it advisable to accept another position to save himself from the same kind of treatment that has been handed out to Professor Jacobs. Professor Mitchell has a Dominion wide reputation as being one of the foremost dairy authorities in Canada.

It will be remembered that one of the first acts of Mr. Winkler after the change of government was to discharge President Black, without consulting with the advisory board in any way, tho the advisory board was the only body that had power to take such action.

For more than a year there has been no Deputy Minister of Agriculture, since A. J. MacMillan resigned because he could not get along with Mr. Winkler. Mr. MacMillan was not allowed the proper authority of a deputy minister, but was treated more as a departmental clerk, and resigned voluntarily because the position was unbearable.

From all information available it is quite apparent that Mr. Winkler is determined that he shall run the Agricultural College absolutely, despite the fact that the advisory board under the law is constituted for that purpose and is given full authority to run the college. The action of the minister is crippling the work of the college and is humiliating to the board which the government has appointed to carry on the work. Mr. Winkler knows little about the work of the Agricultural Col-

"WESTERN CANADA'S GREATEST SEED HOUSE"

Chalmers is a car, a man, an institution

Success drives to business in a Chalmers. For,

Chalmers is a symbol of success that attracts successful men.

Chalmers is a car, a man, an INSTITUTION. The world knows this institution.

All men know this mounting Chalmers success to be the living product of an ideal. They know the man who had the energy, the will, the integrity, the honesty of purpose, AND the capacity to turn his ideals into reality.

Among business men, as among owners of cars, Chalmers is a name vibrant with action.

Where employes of labor study "Welfare" plans, Chalmers methods are adopted. Factories are built in every land—like the Chalmers factory. Wherever efficiency is the topic—Chalmers is the example familiar to all. In sales conventions, men are inspired by the sound business philosophy of Chalmers.

The Chalmers success is broader than motordom. It stands a beacon among the world's great industries. It is to be expected that business men should drive cars from the Chalmers institution.

Courage attracts. The pursuit of the Ideal is a magnet for leaders of men.

Other men with ideals, men of action, names to conjure with in the motor industry joined with Chalmers in carrying on his work.

Now to say of a man, "He is a Chalmers man" marks him for a big man.

Skilled workmen came to Chalmers keen to produce the ideal car. The Chalmers ideal placed them in surroundings that breed a healthy ambition to excel.

The factory, planted in what was then the sunlit prairies of Michigan, grew a monster plant, with floor space a million feet. Around it was built a city peopled by master car builders and their folks—30,000 or more.

Ever growing, ever succeeding, this giant industry rose a pattern for all industries, a landmark in motordom. The very bricks are alive with the power impulse of the Chalmers ideal.

Far afield this force is felt.

In every city local success joins hands with Chalmers success. Big men in every territory represent Chalmers.

Men with the good sense to serve well their customers, are linked to the Chalmers organization. The Chalmers spirit of service to the public reaches out through these men.

NOW, CHALMERS CREATES A CANADIAN FACTORY

The institution bridges the boundary. The Canadian Chalmers is made in Canada. Chalmers owners in Canada are served by a Canadian organization.

The Canadian factory is cast in the Chalmers mold. It is one with the Chalmers institution.

Chalmers in Canada—Chalmers in Detroit—one institution—one ideal. There lives in both the high purpose that conceived, created and maintains the Chalmers organization.

In Canada the custom grows to speak with pride of "my Chalmers."

Here, as throughout the world, Chalmers stands a name to be envied. Not only among motorists, not only among business leaders, but in the entire field of industrial activity.

Chalmers is a car, a man, an institution.

The Grain Growers' Guide

Winnipeg, Wednesday, March 28, 1917

THE DEPARTMENT OF AGRICULTURE

Probably the most important department of the Manitoba government is that of agriculture. Under the old government this department was conducted very largely as a political side line and the agricultural interests of the province suffered in consequence. When the new government came into power with progressive policies it was hoped and expected that the Department of Agriculture would take on the progressive character of the government's program. But, instead of this the administration of the Department under Hon. Valentine Winkler has not come up to expectations. Almost from the beginning there has been more or less friction between the minister and the Agricultural College authorities. Finally it has reached an open rupture between Mr. Winkler and the advisory board of the college. The advisory board is composed of men and women who know Manitoba and its needs, who were selected for their capabilities and who under the Act have authority to conduct the college. The faculty of the college consists of men and women who have been selected from all over the continent because of their special ability to conduct the various departments of the college work. Yet the Minister has apparently determined that it is his duty to run the college. He has overruled and defied the advisory board and quarreled with a number of the leading members of the teaching faculty. He has made regulations that have decidedly curtailed the effectiveness of the college work. It has been apparent for some time that unless a radical change is made the Agricultural College will deteriorate rapidly. No good men and women with ability and independent spirit will consent to act on the advisory board, nor will it be possible to secure or retain capable teachers on the college staff if the present situation continues. The Minister of Agriculture is not an agricultural expert and is not in touch with the work of the Agricultural College. Neither has he in his department experts capable of judging of the work of the Agricultural College. He is however apparently determined to dominate the college regardless of the danger of such an attitude towards this great institution. The Agricultural College should be the centre of a great educational work which should reach the farthest corners of the province and have the unqualified support and co-operation of the Department and Minister of Agriculture. If the advisory board and the teaching faculty are not capable of performing their duties it would be different. But their qualifications have never been questioned. It would be dangerous in the extreme and would be an unheard of precedent to place the administration of the college in the hands of the Minister of Agriculture. The present system of college administration has been decided upon as the best and is the one adopted by other agricultural colleges and by most educational institutions. The future of agricultural education in Manitoba depends largely upon the development of the Agricultural College and its extension work and it will be a great loss to the province if this work is crippled by arbitrary interference and domination on the part of the Department of Agriculture. But the complaint against the department does not end with the college. It extends into almost every branch of the departmental work. It would appear that the department is not well organized. It is also suspected that many of the employees were appointed because of their political activities in support of the party more than because of any special ability for the work they are supposed to do. There has been no Deputy Minister of Agriculture for more than

a year and there is no definite leadership in agricultural policy in the department. The Manitoba government holds the record of being one of the most progressive governments in Canada. We believe that it has fulfilled its pre-election pledges better than any other government that has held office in Manitoba or any other province in Canada. Its general administrative record stands high. It is unfortunate that the most important department should be the weakest. If this weakness were of a passive character it would not be nearly so dangerous as the present situation which is crippling and retarding agricultural development throughout the province. On another page in this issue are given some of the facts of the trouble between the Minister and the Agricultural College.

THE RUSSIAN REVOLUTION

There is world significance in the Russian revolution. A great people, hitherto governed by the caprice of officialdom, has suddenly asserted its adherence to the principle that governments should be subservient to the will of the governed. It is too early to speculate as to how far the swing of events will carry Russia in the direction of popular government, but indications are not lacking that the empire is ripe for at least a constitutionally restricted monarchy with the real power in the hands of the representatives of the people. In any case the events of the last few days must profoundly influence the progress of world events. Hopes are entertained that the immediate effect will be a more vigorous prosecution of the war. Another effect must be the strengthening of democratic sentiment now smoldering in Germany and which may yet be worth many army divisions in the overthrow of German militarism. History clearly shows that with each successful revolution against entrenched autocracy the fires of liberty have burned brighter in other countries. Even on the American continent the hands of those who are struggling for greater political freedom will be strengthened by the success of the great and bloodless revolution that has taken place in Russia within the last few days.

The hope that internally the revolution will result in more than a change of rulers is strengthened by the fact that the nominal representatives of the people have triumphed in a long drawn out contest for power with the bureaucracy in whose hands the control of the empire was centred and which represented all that was undemocratic and reactionary in Russian politics. The not representative in the sense in which we understand the term the Duma does represent the progressive and democratic element in the national life of Russia. Created in 1905 by the edict of the Czar, its members are not chosen directly by the people, but are elected by delegates which are chosen by town or district assemblies; these representing all classes of the population. The not entrusted at the time of its creation with the power of initiating legislation, provision was made that its assent should be secured before a law could come into force and it has also had some supervisory power over the acts of authorities appointed by the Czar. Brought into actual touch with imperial affairs and with its actual powers so circumscribed there naturally resulted a contest with the well-entrenched and reactionary bureaucracy for a wider control in the government of the state. In this contest the Duma voiced the democratic aspirations of the Russian people. Its triumph in the present crisis is, therefore, an indication that a permanent forward step has been made by a great people in their struggle for liberty. The revolution has been hastened by the circum-

stance of war. Ever since the outbreak of hostilities there have been rumors of divided councils in the conduct of that colossal enterprise. In spite of the strictest censorship it has become widely known throughout other nations, and doubtless throughout Russia as well, that German influence was at work in high places by which the conduct of the war was prejudicially affected. The Duma evidently stood for greater efficiency and energy in carrying on the war. The struggle with the constituted authorities over this question has been one of the chief factors in hastening the political climax in which the Czar and his family have been deposed, the old bureaucracy removed and its place taken by men who are close to the Russian people, and the ground cleared so that the foundation for a truly democratic government can be laid. Much is said of the new and chastened world that will emerge from the present conflict. If Russia's participation in that conflict results in democratizing her institutions and freeing her people from the thrall of the bureaucrats she will be amply repaid the millions of men and billions of treasure be the measure of her sacrifice.

WIN THE WAR CONVENTION

The movement in support of the Win-the-War Convention to be held in Montreal next month is being supported in cities all over Canada. The aim is to have about 1,200 delegates present from the nine provinces, representative in numbers as well as by occupations. Executive committees from the provinces are to have a two days' session in advance to prepare a program for the larger convention.

The movement originated in Toronto and has the support of citizens of both political parties, according to the announcement to the public. It is to be hoped that this convention will be able to crystallize into concrete form a plan for national action which will win the support of public opinion. Nothing is to be barred from discussion and by getting all the provinces together it is hoped to get a united action that so far has not been all that could be desired.

Every good citizen of Canada is anxious to bring the war to a successful termination at the earliest possible moment. Anything that will facilitate this desired end will receive the hearty support of the people. The Ottawa government needs more ginger and if this convention can only bring this about it will have accomplished a great deal. It can also aid towards a better understanding between East and West and between French and English. Whatever tends towards these good purposes is much to be desired.

SUCCESSFUL WAR LOAN

Announcements from Ottawa are to the effect that the new war loan of \$150,000,000 will be very considerably over subscribed. The bonds selling at 96 with five per cent. interest make a very attractive investment and large financial institutions as well as individual investors have taken large subscriptions. A very considerable number of small investors have also purchased war bonds in smaller amounts. It is quite evident that there is plenty of money in Canada to finance the country's part in the war. Domestic borrowing which has now been instituted since the war will no doubt be followed in the future for financing the needs of the country. With so much money in the country it is unfortunate that a larger part of it has not been secured by taxation for war purposes. The government could quite easily have secured larger revenues and kept down the

aggregate of the great war debt which is being steadily piled up. Another serious aspect also is that the income from the war loans is not taxable until the maturity of the bonds many years hence. In case of an income tax being inaugurated in Canada this fact would reduce the volume of revenue to be derived by income taxation.

ROSS RIFLE CONTRACT CANCELLED

It will be good news to the people of Canada that the government has finally cancelled its contract for the manufacture of Ross rifles. If stories from the firing line can be believed the Ross rifle has caused the loss of many lives of Canadian soldiers. No matter what virtue the Ross rifle may have for target or sporting purposes there seems no doubt about its inefficiency in warfare. It has taken a long time for the government to realize this fact. It is intimated that the Lee-Enfield rifle will be manufactured in the Ross factory for the equipment of the Canadian army, but that it will take practically a year to put the factory in shape for turning out Lee-Enfield rifles in large quantities.

NEWS OF WAR

The news from the firing line for the past week or two has been encouraging. The Germans have been unable to withstand the new onslaught of the British and French artillery. The enemy's loss of life has been enormous, but it is now expected that they have reached the limit of their retreat and will contest every inch of ground henceforth. The preparation of the allies on the West front however, is such as to give confidence that the Germans can make no important success on that quarter. The submarine menace has proved serious, but it has not starved out the British people by shutting off shipping. Some day we shall know what has happened to the

submarines. There is no official report, but it is quite apparent that the British admiralty has devised some scheme by which a large number of submarines have been captured or destroyed. Meanwhile the German people are suffering from food shortage, and riots are reported as common occurrences. On the East front the Russians seem to be making good progress despite the revolution at home. The armies of the Sultan are being broken up in Persia and new territory has been taken from the enemy. With recent events before him the Turk must begin to wonder about the future of his domain in Europe. Rumors come from Austria that the new Emperor is anxious for peace and would be glad to get out of the war if the Kaiser would permit it. It is impossible to ascertain the correctness of these rumors, but it would seem that there must be some foundation for them. Austria has nothing to gain and is steadily becoming more and more subject to Germany. Any sensible Austrian should be anxious for peace. The United States is practically at war with Germany today and many expect the declaration will be made when Congress meets on April 2. Tremendous preparations are being made with the utmost speed to prosecute the war on land and sea and in the air as soon as the declaration is made. The entry of the United States into the war will be another nail in the coffin of the Kaiser.

It should not be forgotten that all the Russian and Prussian methods are not confined to countries under autocratic form of government. There is a country under a democratic form of government that every reader of The Guide is quite familiar with and in this same country both the Russian and Prussian method have been used to enable a comparatively small number of the people to put their hands into the pockets of the other people. What is the use of these people being burdened with the responsibility and danger of running an

autocratic government when more money can be made by proper manipulation of a democratic system.

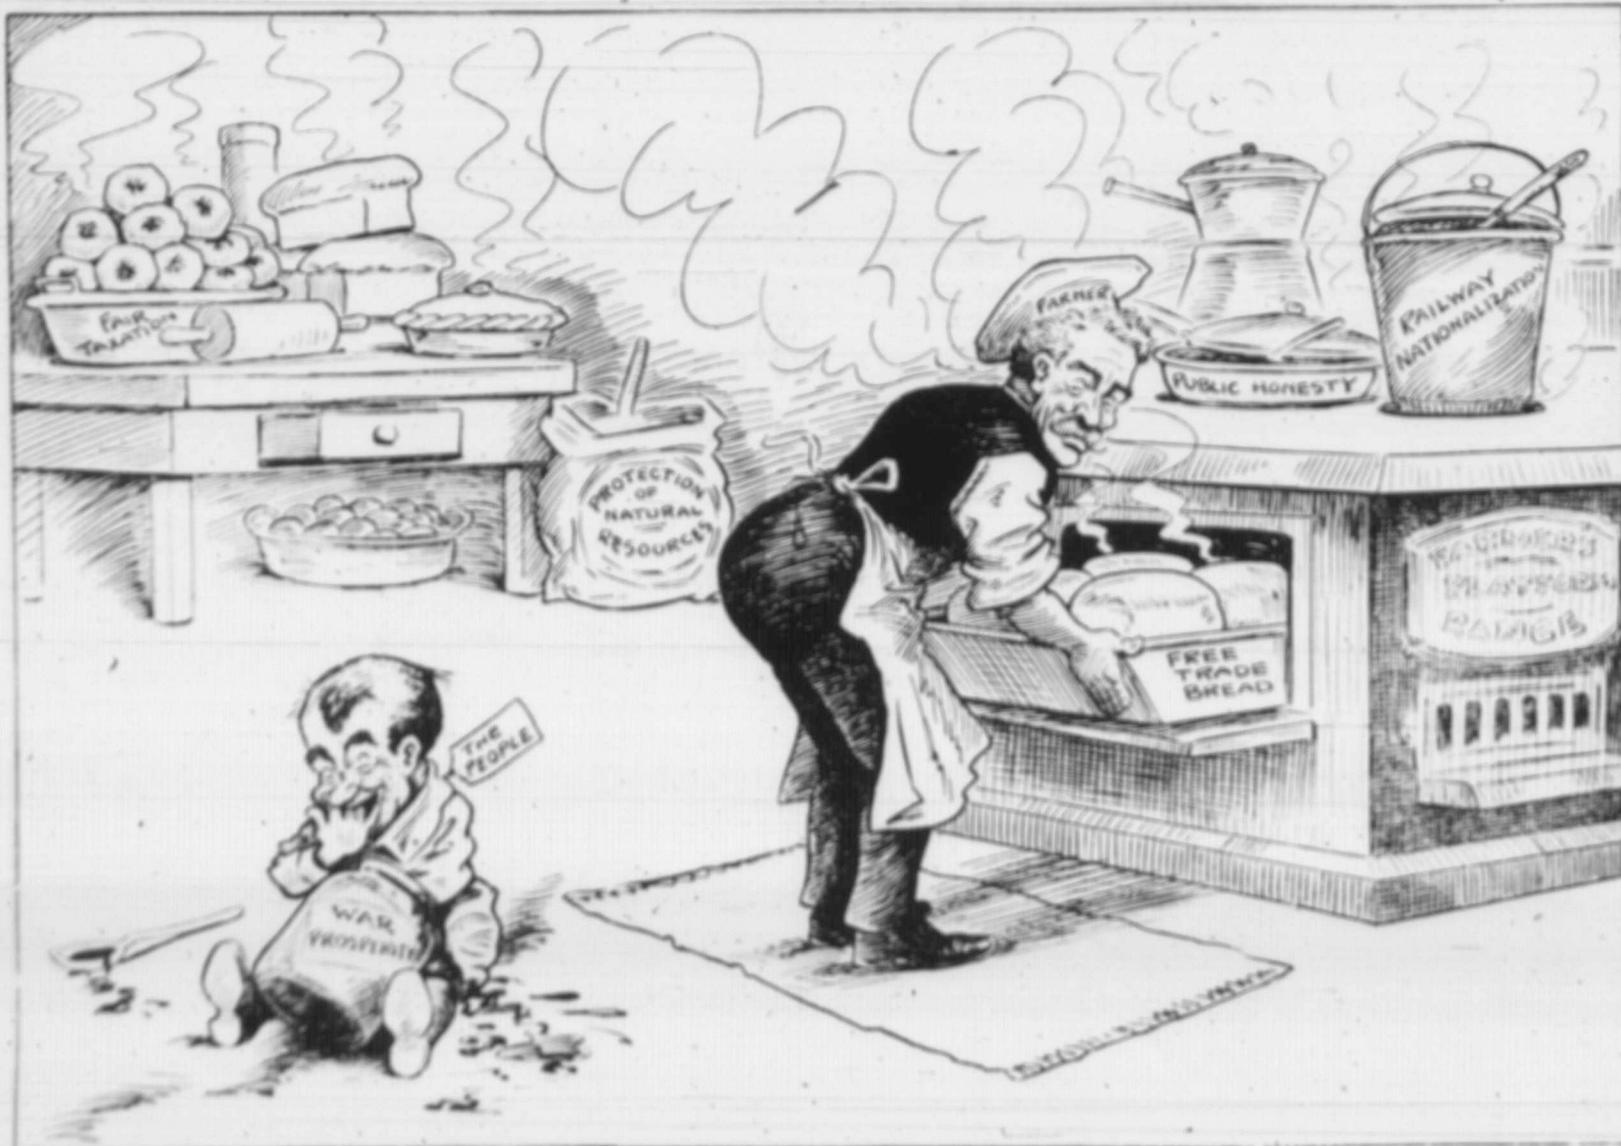

While the nations of Europe are busy in breaking down antiquated and dangerous governmental systems, of which hereditary nobility is one of the accompaniments, Canada is following the reverse procedure. We are starting to build up a nobility just as the rest of the world is getting sick of it and discarding it.

Royalty seems to be having hard sledding these times. First it was Portugal, then it was China, and now it is Russia that has decided to do away with the luxury of royalty and nobility and establish a government of the people.

If the Russian revolution spreads to Germany and the whole tribe of the Hohenzollerns from the Kaiser down are cleaned out there will be an early and satisfactory end of the war. Such a revolution however, will not be easy of accomplishment as the old system is more firmly established than in Russia.

An income tax in Canada would compel a lot of our extremely wealthy people who are adding to their wealth faster than ever to contribute a reasonable share towards the expenses of the country. Does anybody know why under the heavens the Dominion government refused to establish an income tax?

A well known journal calls attention to the tendency of war inventors to imitate nature and make use of her long evolved methods of protection. Vessels are now copying certain bugs by carrying smoke balls which generate in a few minutes sufficient smoke to hide completely a vessel threatened by a torpedo attack.

THE COOK THAT KEEPS CANADA'S KITCHEN GOING

Farmer: He will need something substantial when that jam is all gone.

Seed Grain--Preparation and Seeding

Seed Defects—Varieties to Sow—Cleaning and Testing—Time, Rate and Depth to Sow

By John Bracken, Professor of Field Husbandry, University of Saskatchewan

Over thirty-five million bushels of seed will be sown this spring on the farms of Western Canada and the yield and quality of the crop will depend in a large measure upon the character of the grain used.

The characteristics of productive seed of any variety are high quality and high purity. By high quality is meant freedom from damage from frost, bin burning, sprouting, weathering, rust and immaturity, and absence of shrunken and broken kernels. By high purity is meant freedom from weed seeds, disease, other classes of grain and other varieties of grain.

The most common defects found in seed grain are: (1) Weed seeds; (2) Disease; (3) Small and shrunken seeds, or seed of weakened vitality; (4) Dead grains; (5) Unsuitable varieties.

The weed seeds most often found in wheat, oats and barley are wild oats, cockle, wild buckwheat, and tall mustard, but in poorly cleaned, or uncleansed samples many others may be found. In flax—blue burs, hare's ear mustard, common mustard and false flax are the most common impurities.

The smut diseases cause much loss annually to western farmers. These fungus plants not only lower the yield of crops, but the quality as well. If living smut spores (which function as seeds) are sown with the seed, the crop is sure to be infected.

Small shrunken or weak seed produces weak plants that are less productive and much less likely to withstand spring frosts after the plants are up. This is where the chief danger lies in using grain from a rusted crop.

Dead grains produce no crop. Frost often kills the seed of the oat crop, while heating often destroys the vitality of wheat and other grain. It is always wise to test the seed for both percentage and vigor of germination. This is particularly advisable after a season when early fall frosts have been known to occur as well as in cases where dampness or heating in the bin have been suspected.

The Best Varieties To Grow

The following are the best available varieties for Saskatchewan conditions:

Wheat, Marquis.—High in quality, short straw, early in maturing, non-shattering good yielder. This variety is more likely to give more satisfactory returns than Red Fife on heavy soils, on fallowed land, in moist regions where fall frosts are feared and in those areas where a short straw is preferred.

Red Fife.—High in quality, long straw, late in maturing, a good yielder. It is suited to the lighter and earlier types of soil, to the drier parts of the province, to all regions where fall frosts are not feared, and where long straw is desired.

Pioneer.—High in quality, long and weak straw, earlier than Marquis, fair yield. It is a good wheat for all regions where Marquis is not early enough and where the crop seldom lodges.

Prelude.—High in quality, short straw, earlier than Pioneer, bearded, shatters easily, low in yield. This variety may be found satisfactory in regions north of the present wheat growing area, but on account of its low yield it is not worthy of a place in districts where Marquis matures.

Oats; Banner.—High yield, strong straw, late in maturing—the old standard oat and a general favorite still.

Victory.—High yield, strong straw, late in maturing, excellent quality. A keen rival of Banner.

Gold Rain.—High yield, strong straw, medium

early, excellent quality, yellow color, an excellent medium early variety.

Daubeney.—Medium to low in yield, strong straw, early, excellent quality. Only recommended for late seeding.

Barley; O.A.C. No. 21.—Six rowed, bearded, hulled, very productive, medium early. The leading and most popular sort.

Hannchen.—Two rowed, bearded, hulled. A "nodding" barley, very productive, later than O.A.C. 21. The heaviest yielding two-rowed barley. A good variety where longer straw is desired and where a few days later in maturing is not an objection.

Golden Thorpe.—Two rowed, bearded, hulled. An "erect" barley, very productive, later than O.A.C. 21. Stiffer in the straw than Hannchen, and a better looking grain. Suited to heavier and richer soils.

Spring Rye; Common.

Winter Rye; N.D. No. 959 or Saskatchewan.

Flax; Fremont.—Brown seeds, purple blossoms, productive, medium early.

Peas; Solo.—A heavy yielding, rather late sort.

sown placed sixty times these numbers on the land. And yet practically all could have been removed with a fanning mill.

It is important that the crop producer know not only the proportion of his seed that will grow, but also the vigor of the possible growth. Both the percentage and vigor of germination can be determined by giving a definite number of the grains opportunity to grow. A box of moist soil or two layers of dampened blotting paper will serve this purpose. It is only necessary to count out a number of seeds, usually one hundred, and after planting them in the soil or placing them between the blotters, keep them moist and at the temperature of the ordinary living room and count the number that germinate on the fourth and each subsequent day.

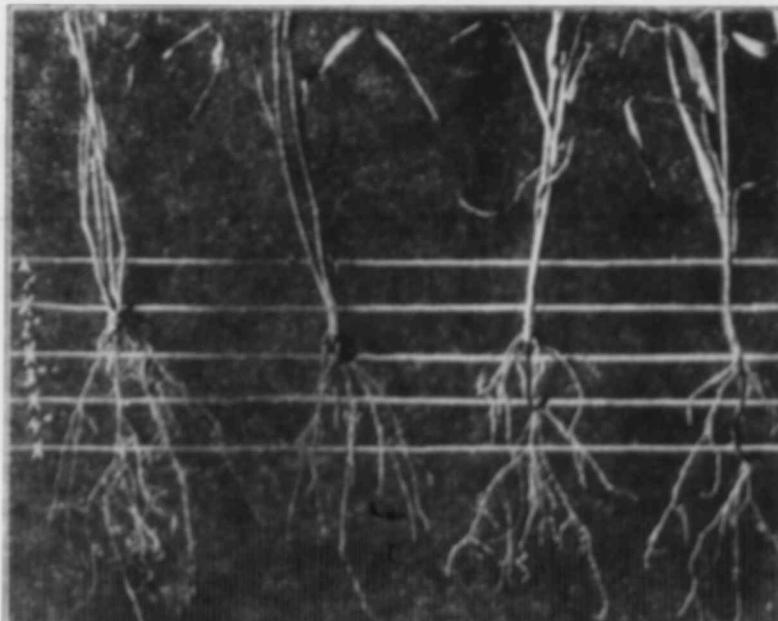

From such a test one will gather an accurate idea of the percentage germination and the relative vigor of the growth from the seed he is about to use. The best seeds will germinate first and develop the most vigorous plants, while the poorer seeds will either not grow at all or produce only a feeble growth. Of course the seed under test should be protected from frost and kept from drying out.

Dates of Seeding

Conclusive data on the subject of time of seeding in Western Canada are not yet available. The general opinion among experienced farmers is that wheat should be sown as soon after April 10 as the land is fit, and oats and barley in the three or four weeks following April 25. We have observed that on land that is in good condition the longer wheat is left unsown after the first of May, and oats and barley after the middle of May, the lighter the yield is likely to be. In the dates of seeding trials at Saskatoon carried on during the last three years, April 20 proved the best date for seeding wheat on fallow and April 30 on fall plowing. Oats, barley and flax produced the most when sown between April 20 and May 20. Winter Rye on fallow yielded most when sown the first few days of September and on fall plowing when sown August 20. April 30 with peas proved the best time to sow.

The best time to sow in any given district varies with: (1) The probability of early fall frosts—the greater the danger the earlier the seeding should be done. (2) The amount of water stored in the soil—the drier the soil the earlier the crop will mature and, therefore, the later

it may be sown and yet avoid frost. (3) The productivity of the soil—the more rank the growth, the longer the crop will take to ripen, hence the earlier it should be sown. (4) The type of soil—a heavy soil is a cold soil, a light soil a warm one. Crops ripen later on heavy soils and, therefore, need to be sown earlier. (5) The time required to mature the class or variety or crop used. Under the different conditions that exist in this province, six-rowed barley, spring rye and flax ripen in from 75 to 110 days; two-rowed barley in 85 to 115 days; oats (standard varieties) 90 to 120 days; wheat 90 to 140, and peas 95 to 140. Obviously the late ripening crops should be sown first unless they are too tender to resist spring frosts. (6) The resistance of the crop to spring frosts. The less frost in spring a crop will stand the later it should be sown. If good seed is used, most cereals will survive after heavy spring frosts, but it has been observed that wheat and rye are rather more resistant to low temperatures than oats or barley. (7) The liability of the district to

Root development of wheat seedlings sown at different depths. "Sow into the soil" is a good motto.

Arthur.—A heavy yielding, medium early variety.
Golden Vine.—A popular small seeded, medium early sort.

Cleaning and Testing Seed

A good fanning mill properly handled will in addition remove small shrunken grain, weed seeds, smut balls and many of the dead and weakened grains. In seasons when much of the grain is shrunken or frosted, and some of the seed damaged, impure, or dead, the use of the fanning mill is essential if best results are to be obtained.

Since the writing of this article was commenced a sample of "cleaned" wheat containing at the rate of 1,920 wild oats per bushel (16 per one half pound) has come to hand with the request that we advise the sender whether he should get a new fanning mill or not. Another sample taken from a farmer's drill contained 7 smut balls, 226 wild buckwheat, 2 wild mustard, 2 tall mustard, 12 lamb's quarters, 1 blue burr, 2 docks, 1 hare's ear mustard, 1 barley, and 8 oats in a single pound. Every bushel

Farm Experiences

GROWING 300 BUSHELS PER ACRE

In one of your recent issues I noticed one of your advertisements concerning the "Table Talk" potato and wish to give my experience regarding potato growing, and especially this variety. I plant my potatoes with the use of the plow, and in regular rows, about May 24. I select a piece of land of about $1\frac{1}{2}$ acres, with a slight slope, and spread it thickly with well-rotted manure, about two or $2\frac{1}{2}$ tons per acre. I treat my seed potatoes with bluestone, using the same formula one does when treating wheat, before cutting the potatoes for planting. I always leave two good eyes on each cut, and plant about 14 inches apart in rows. When potatoes have just started to sprout I give the land a stroke with the harrows, and then again when the potatoes are just beginning to show above ground, and then the usual necessary amount of hoeing and care during the summer.

I planted 10 lbs. of pure Table Talk seed last year and when I gathered the harvest I had 450 lbs., or $7\frac{1}{2}$ bushels from the ten lbs. They are assuredly one of the best crop producers for Saskatchewan. As a rule my acre and a half grows about 300 bushels per acre. Of course it depends considerably upon the season and weather conditions.—Prairie Farmer.

STOPPING SOIL DRIFTING

The soil is drifting badly in this district, due to lack of humus, and also the lack of windbreaks. This soil is a sandy loam and has been under cultivation about ten years, but not until about three years ago did it begin to drift badly. The summer fallow is the worst problem, and the only way that I can overcome drifting on it is to disk the stubble when the weeds begin to grow in the spring, so as to delay the plowing as long as possible. Any place that has a tendency to drift I never harrow at all. A few loads of straw scattered on the plowing will stop that. I don't put any straw on until after the seed is in, then I give it a good covering. I pick a windy day for spreading the straw.

Last spring I seeded about 85 acres of summer-fallow with wheat, and it was just coming thru the ground when along came a strong wind. There was just about two acres that started to drift first, but soon there was a strip clear across the 85 acres about 200 yards wide, so I hitched a team on the rack and loaded up with straw and then went to the place where it started to drift and pitched off my load, and the wind scattered it about. I put about eight loads of straw on that place and it stopped the drifting. We had about two weeks of windy weather after that but it did not do any great damage to the field. My neighbors seeded twice over and some three times and then got nothing, and I honestly believe that I would have been in the same fix had I not put the straw on, because if one patch starts to drift it will keep getting bigger until it is all drifting. The straw not only stops drifting but helps to keep the moisture in the ground. I could have put twice the amount of straw on, and then not have interfered with the growing crop. This spring I shall do so, and I know that I shall get good results.—C.P., Taber, Alta.

GOPHER EXTERMINATION

The greatest help in gopher destruction, but one which has not been advocated in bulletins or the press, is used to a certain extent in this district, and is most effective when used with oats prepared according to the North Dakota formula. We use what we call gopher boxes, that they are not boxes in the generally accepted use of the term. They are hollow tubes about four feet long. Six of these placed on each side of a quarter section, where there are a number of gopher mounds or gopher

trails coming in from vacant lands, will practically stem the invasion. In each of these boxes we place a tablespoonful or two of the oats coated with this dry poisoned sweetened mucilage. Once a week is often enough to visit the boxes and you can usually drive around the farm with the buggy. These are quite as good any place on the farm, but might be broken by stock if placed unprotected in the pasture. No stock can get at the poison and I have never yet seen a bird or prairie chicken that was killed with poison from them.

Perhaps the handiest way to make these boxes is with 6-inch shiplap, nailing three four-foot lengths together so that they form a triangular tube, with plenty of room for a gopher to enter from either end. A square or round one would be quite as useful, but requires more labor in making. Made on this plan 144 ft. of lumber will make two dozen boxes. Some quarter sections will require more and some less.

Were the whole township, municipality or province supplied with these boxes for three years—and each box will last longer than that—and two or three farmers in each township engaged to keep a supply of poison in them, once a week in the early part of the season, and once a month later, it would mean extermination of the gopher.—M. E. Graham, Tring, Alta.

RAISING CORN SUCCESSFULLY

Can corn be grown successfully in this northern climate? I say, "Yes," but not with as great certainty as in Ontario or southern and central States, since we are much more liable to early fall and sometimes summer frosts. Spring frosts set it back so that it is caught by early fall frosts before it has had time to mature. But in any case whether it comes to maturity or not, it is one of the very best fodders for winter feeding of stock, in fact, I think it has no equal. A greater number of tons can be grown to the acre and with less expense than any other crop I know of. The land is also left in the pink of condition for any crop one may desire to put on it the next year.

In 1914 I planted my corn on May 12, and cut it on September 10. Three-fourths of my corn that year was well matured and fit for seed if properly cured. I husked 250 bushels of excellent corn, partly for seed, and fed the balance to the stock as we hauled it in each day, and they did remarkably well. I put this husked corn in a slatted crib such as we used in the East, but it proved a failure, particularly for seed purposes. Corn for seed purposes should be carefully selected at time of husking and stored in a dry and reasonably warm place where the cob of corn will be thoroughly dried and escape the chances of being frozen. After it has been thoroughly dried it can be stored in any building, regardless of frost, so long as it is kept dry. Some of the corn referred to above, that I stored in the attic of our house for seed, proved to be excellent. In testing it for seed it germinated 99 per cent.

Corn is a crop that will do fairly well on average land. But land cannot be made too rich for corn. I usually put our winter manure from the stables on ground intended for corn, plow early in the spring and keep well harrowed and clean till planting time, say about May 12 to 20. For fodder or silo purposes, I drill it in with the ordinary grain drill, planting three rows at a time. About one peck to the acre has given me splendid results. The stocks are much finer and the yield is larger than when planted in hills. To grow well matured corn for seed purposes, planting in hills about three feet apart is more certain of success.

There is no doubt about the silo being the best method of storing corn for winter feeding. But in the absence of a silo a very good plan in an ordinary winter, if it is well stocked, is to take a manure boat and bring in each day what you think

will make a good ration for your stock. Both cattle and horses relish corn, particularly so if it has been cut before the frost, is nice and green and plenty of nice ears of corn on it. They won't leave a stock of it, even when fed in the yard during the day. 1916 was a splendid corn year, but unfortunately, what little corn I had got very badly smashed up with the hail, which delayed it at least a week. While it fully recovered, the set-back was sufficient to keep it from maturing as well as the 1914 crop. As a fodder crop and a land cleaner I feel that too much praise could not be given the corn crop.—R.J.D., Man.

REVENUE, COSTS AND PROFITS IN DAIRYING—TESTING PAYS

We started keeping records in the spring of 1915 when we had six cows of a very indifferent type, but all of them comparing favorably with the average farmer's cow. But after the better farming train had been in our town we began to question if our cows were helping us or if we were just keeping them. So we sent to the Dairy Branch at Ottawa for record sheets and as our cows freshened we began keeping records of their individual milkings. We bought a set of spring scales and fixed up a record board to hold the sheets, attached a short pencil with a string, and from the first found that the extra work did not amount to much and it was not very long until we began to know definitely what each cow was producing. About this time too we started paying more attention to the care and feeding of the cows and that summer even when the pasture was at its best we fed a certain amount of meal just to see if we could increase the milk flow. Out of six cows under test we found that two of them responded to the extra feed and that the others did for a short time but not for long enough to pay for the extra feed. So we thought that it was time for a change.

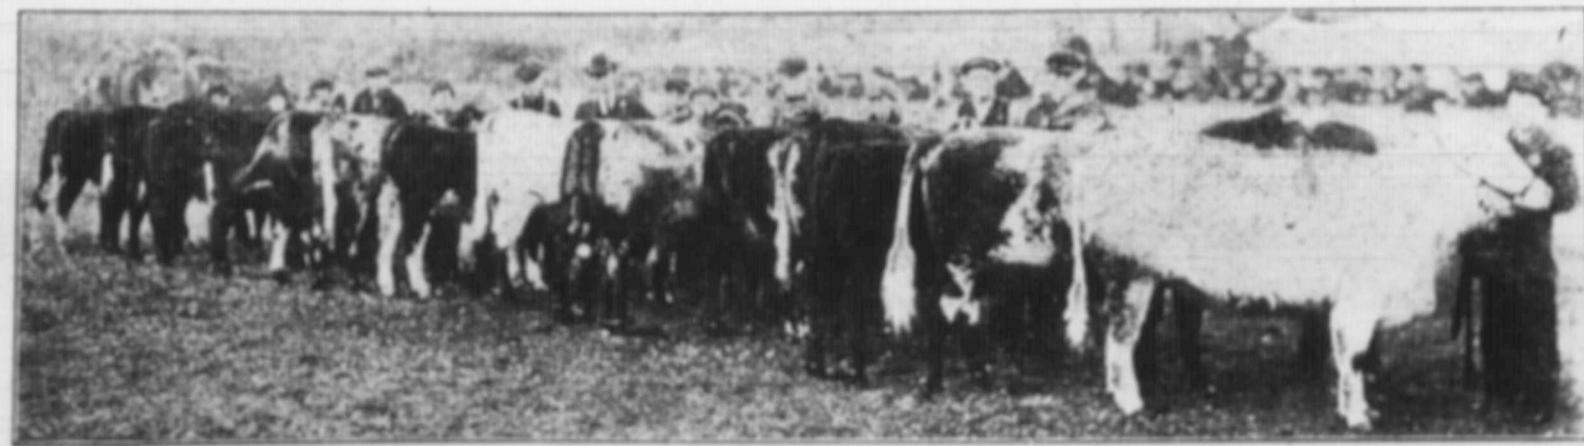

I may say that I have set a standard to try for at present, namely 10,000 pounds per lactation period of about 12 months. It may be some time before we get all our cows up to that but we hope to be able to do so yet for we find from keeping records of milk and also of feeding and other expenses that a cow that only gives around 6,000 pounds does not much more than pay for her board, etc. In our first year of testing we had more than one cow that was not much better than her board so we kept the two best ones that year, sold the four poorest ones and bought three good-looking Holstein grades, two of them mature cows and one heifer. We had two heifers of our own raising from the two best cows so that we had four mature cows and three heifers (two years old) all Holstein grades. We began again keeping records that year, also paying closer attention to feeding before freshening than I had done before, because I have come to this conclusion that when one begins keeping records of milk he will begin to try and help the cows with better feed and better care than before testing them, for after all it should be the aim of all dairymen to get the best results for the feed and time expended on his cows.

This year up to August our average was much better, even with the three heifers in the herd, than it was last year. Here is a special test of all our cows for 30 days when they were all milking and getting good attention. It will show the ages, date of calving and amount of milk for a 30 days' period.

Name.	Age.	Date last calf.	Total lbs. of milk.
Spot	10	June 17	1849
Beauty	5	June 2	1437
Lily	5	March 3	1258
Flossie	5	February 28	1288
Daisy	2	April 6	922
Mollie	2	April 12	794
Nancy	2	April 2	763

Seven cows, total for month of July. \$301

Farm Tree Plantations

Starting is Easy - Cost - Beneficial Effect of Trees

By D. F. Stewart, Dunstan, Man.

Manitoba today is an open country and, as such, has all the difficulties of an open country to contend with—winds, hot and cold, drought, frost, hail, snow drifts, blizzards, lack of shade, scarcity of birds, lack

In this very practical article Mr. Stewart deals with the possibilities of farm tree plantation in his home province. The lesson told is applicable to all three provinces. We should like to have from our readers their experiences in tree planting. Tell why and what you planted, the cost, the success or failure you have had and the practical value as well as satisfaction you have received from your investment.

of wood, monotony of view, lack of moisture, streams, springs and wells. There is no one material thing that would effect such a great change in this province as trees. Indeed, it might be said that to turn our treeless prairies into a wooded country would revolutionize the province.

It would be very easy to tree Manitoba. It is not difficult now even on the bare prairie, with reasonable cultivation, to grow certain varieties of trees and to grow them quickly. There are other varieties of trees, and the most desirable ones, that require the shelter of the more rugged ones, but those who practise tree culture say that it is not only easy on the prairie but exceedingly pleasurable.

Two acres of plantation land on each quarter section, viz., 1 acre on the north limit and 1 acre on the west limit, would change Manitoba from an open country to a treed country. In order to grow the trees a strip of land one rod wide, that is 16½ feet, should be summerfallowed the season before the trees are planted. This strip should be planted the next spring with four rows of trees four feet apart in the row, which would require 5,280 trees for the quarter section. The Department of the Interior will be delighted to furnish the trees and to advise as to the varieties which will be the best to grow in the different districts or on the particular farm in question. A number of varieties are available: poplar, willow, cottonwood, ash, elm, Manitoba maple, spruce, pine, balsam, tamarack, basswood. Besides these a number of admirable shrubs and fruit trees may be grown: elder, sumach, mountain ash, cherry, plum, crab apple, hawthorn, and others.

The cost of plantation is as follows:

Summerfallowing 2 acres	\$ 16.00
Planting 2 acres	20.00
Cultivating 4 acres @ \$20 per acre	80.00
	\$116.00

It is only necessary to have a beginning made. There is in this a golden opportunity for some progressive young Manitoban to write his name on the history of the province. When one man does it, his neighbor will follow suit, and in a short time the plantation habit will be established. There can be no question of the value of such plantations. I do not mean that a single plantation would be of any great value, except to the farm on which it is situated, but if trees were planted generally, there is no doubt of their great economic value, not to mention their beautifying effect on the landscape.

Beneficial Effects of Trees

The trees would stop the winds, both hot and cold. In summer the hot winds cause great damage to the crops in the open country. During 1916 the hot winds did much more damage than the rust. Indeed, I think it is generally admitted that the damage by rust was merely incidental to the damage done by the winds. Not only would the trees form a windbreak and prevent the steady onset of the hot, parched winds which we have so often now, but the trees would cool the air. In winter the severe winds, and particularly the blizzards would be put an end to. One of the greatest objections to winter life in Manitoba is the severity of the wind, that is, in the open districts. In the wooded parts of Manitoba the severity of the winter is much ameliorated by the absence of winds and blizzards. If the whole country were planted with wind breaks there would be an effective end put to winter wind storms. I might just remark at this point that very few farmers would stop at a shelter break of two acres on a quarter section. The value of the trees would prove so great that there would be substantial plantations on many farms.

Drought is greatly increased by the winds, both

in summer and in winter. The plowed fields suffer the most. Literally tons of moisture are carried away from the plowed ground by the winds of a few days in summer and the winds have nearly as much effect in drying the bare black soil in winter. Every farmer knows the difference between the quantity of moisture in ground that has been covered even lightly with snow during the winter and in ground that has been exposed to the winter wind. There are cases in this district where men in 1916 grew 25 bushels an acre of wheat of good grade in fields sheltered by timber belts, while unsheltered parts of the same fields produced seven or eight bushels of very low grade wheat. The damage was done by the hot winds of a few days, and there is no doubt that in the cases in point the heat of the winds was tempered in passing thru the trees. I have no authentic information as to the difference in temperature of wind after passing over bare ground in summer and after passing thru trees, but there is no occasion to prove the great difference to the farmer, his own face tells him the great variation in temperature as he passes the summerfallow and the wood lot. The wind passing over the growing grain crop is in temperature between that passing over the bare ground and thru the trees. In passing over the grain it is somewhat

driving in the shelter of the trees is a pleasure, while driving in the open, particularly in severe weather, is anything but a pleasure. With shelter belts around each farm our high winds would be reduced to a minimum and with the winds would disappear the snow drift as well as the soil-covered snow road beside the summerfallow. I quite appreciate the fact that in individual cases a single shelter belt might increase the drifting locally rather than lessen it, but with timber belts general over the country our winter roads would be very much better than they are now and not only driving for pleasure, but freighting, could be done easier and with more comfort than at the present time. One of the incentives to rush our grain to market in the fall of the year is the fact that winter teaming in the open is very expensive, not to mention the discomfort of it. The winter season is the proper season to market our grain. Much time is now devoted to hauling grain to market that should be devoted to cultivation of the soil, and one of the causes of this is the snowdrift and sand-covered road of winter.

The blizzard is a fearful thing to many people, but the blizzard is unknown in the timber country.

Becoming An Arid Country

Trees are a benefit and comfort not only to man but to the beasts and birds. In summer our domestic animals thrive much better when they have a shade to which they can go during the hottest part of the day. The birds also congregate where there are trees, and the birds are surely the farmers' friends. They destroy not only insects but weed seeds. Indeed, in this matter of weed seeds alone the shelter belt would be of benefit to the farmer, as the wind is now one of the chief agents in scattering noxious weed seeds.

Shelter belts would also furnish a considerable amount of wood. Four acres of a plantation on each quarter section would furnish sufficient fuel for domestic use on the farm apart from the coal required for heavy firing in the coldest winter weather and also sufficient fence posts for farm use.

I need not say that a treed country is much more beautiful than the bare prairie. We learn in time to love even the monotony of our prairie homes but we must confess that the shelter belt adds much to the beauty of the landscape.

I have been nearly a generation on the prairie and there has been a great change in the matter of the watering of the prairie in that generation—a change much for the worse. We used to have pools of water and streams everywhere, and it was easy to get a well of water. The sloughs retained water throughout the summer, the grass grew luxuriantly around them and the air was moist. We have drained the land everywhere, have cultivated the

fields, and there are furrows in every field leading into the drains. The result is that the winds carry away the moisture from our tilled soil. In the spring the snow melts, the furrows and the drains carry the water into the creeks, the creeks carry it into the rivers, and the country is arid. The air is dry, the soil is parched and there is no water to be found in our streams. The remedy for this is the tree and it is a complete remedy. And there is no other remedy. If it were only the surface of the ground and what is above it that is parched it would not be so bad, but even the springs under the ground are dried up. Conditions are growing worse from year to year as they needs must for every year we are cultivating more ground, making more furrows.

THE GRAIN GROWERS' GUIDE

(551) 11

BOX SOCIAL RAISES FUNDS

Hugh C. Symington, secretary of Silver Lake Local No. 196, has recently forwarded the sum of \$28.00 to the Central office as a contribution to the Red Cross Fund, also the sum of \$11.50 for the U.F.A. Organization Fund, which we very much appreciate. These amounts were raised by the union at a box social. Mr. Symington states that the union has considered the hail insurance scheme favorably as a means of raising funds for the Central office.

MORE CONVENTION EXTRACTS

Mr. Wood in introducing F. M. Black, president of the Calgary Board of Trade, said:

"A year ago when we sat down to our first banquet, Mr. Black sat down by the side of me to brush some of the soil off while I presided at my first banquet; that was the beginning of our acquaintance. During the last year no man has done more to hold up my hands in the work that I had in hand than Mr. Black; no man has been more sympathetic in the work that I have been trying to do; in the ideals that I have been trying to hold up. This assistance has been very, very much appreciated by me and this relationship has grown into a very sincere friendship that I am proud of and esteem very highly. During this term of acquaintance and working together I have heard Mr. Black make quite a few speeches, some good, some tolerably good, some very good. Two things I always admire about his speeches are, he never has a very great deal to say, second, he always stops when he says it."

Mr. Black: "After an introduction like that a man is pretty well nonplussed, but I will tell you what I will do, I will take it out of him (President Wood) before I finish, but I have to deal with another man first. The president asked me if I would endorse what Mayor Henry said about you coming to Edmonton all the time for your conventions. I am awfully sorry I cannot do that, as I am here in a semi-official capacity, at least, for the city of Calgary, I cannot altogether yield to his requests, but I will split fifty-fifty with Mayor Henry, so you can see how easily we can co-operate when we get down to it."

"As I am here tonight in the capacity of a guest I feel the first thing I ought to do is to offer congratulations to this organization on the wonderful progress it has made. I am offering it to you present as members. You have not possibly made such a tremendous advance as you would have liked. I thought I noticed in the papers there was a slight measure of disappointment, but at the same time you have reason to be thankful, and I am going to give you half a dozen words which President Wilson published in a magazine not long ago."

"Some men swell and some men grow."

"When you get a swollen organization you have a boom, somebody pricks it, the air goes out and you have a collapse; but when you have something that is making a normal growth you may expect fairly and reasonably that it will be a continuing and permanent organization. So I take it that that is the goal you are aiming at today, and if I can read the signs of the times aright in any measure you are fairly on the way to it now. Let me say on that point, however, if I can quote Shakespeare correctly: 'Oh it is glorious to have a giant's strength, but cruel to use it as a giant.' And so when you attain your full stature of manhood I trust that all your actions may be tempered with the manly sense of restraint."

Buy War Bonds

"The second thing I wish to congratulate you upon is the measure of prosperity which has come to you during the past year, and I am passing on to you a message which came to me the other day from the Honorable Sir Thomas White, finance minister of the Dominion—don't get excited, it was a circular letter asking the Board of Trade to do what they could to assist in the campaign of thrift throughout the Dominion. So I just wish to commend this fact to you people here, that it is your duty to assist in every way you financially can in carrying on of the war. Already opportunities have been given for that and more are in store. By every dollar that you can put into war loans, bearing the interest rate that is being paid, you are just assisting so much in furnishing the silver bullets which will ultimately bring the war to a successful conclusion, plus the manhood which we have so generously supplied from our Dominion of Canada.

Alberta

This Section of The Guide is conducted officially for the United Farmers of Alberta by P. P. Woodbridge, Secretary, Calgary, Alberta, to whom all communications for this page should be sent.

Therefore, after the measure that you can, do so, and remember this, that when you have bonds of the Dominion of Canada in your possession, you can walk into any banker's office in the wide Dominion and demand pretty nearly the face amount of a loan against such collateral. And, when a man is hard up, and his cattle aren't finished and his hogs still want a little more feed, such is not a bad position to be in.

"Another thing I wish to congratulate you upon is your president. In honoring him as you have done you have honored yourselves. But he has to be awfully careful as to what he claims to be. Just this morning he sat at a table with three Scotchmen and said, 'You know, I believe I have a little Scotch in me.' I didn't believe it, because we now have prohibition and it is not so easy to get 'a little Scotch' as it used to be. I said, 'I think you have to show us some proof.' 'Well,' he said, 'I have a herd book at home with the whole pedigree.' He has not proved that yet, but if I were to give you a word picture of your president, this is how I would do it:

In caution he is a Missourian;
In complacency he is an Englishman;
In humor he is an Irishman, and
In economy he is a Scotchman.
He has the ardour of youth;
The vision of a prophet, the patience
of Job.

And the wisdom of Solomon.

"Now, the worst trouble about our good friend is his name. He gets mixed up with other men of the same name; it is a pity it is so common. If it were Black, for instance, it would be different, but he is only Wood. Down in Winnipeg a man said to him, 'Mr. Wood,' and he answered, 'You have got the wrong Mr. Wood; it's the bald-headed one you want.' However, I'd like to give him another name and I'd call him 'Co-operation Wood.' He speaks very frequently on that and it is possible that it is along those lines he has referred so kindly to myself.

"I'd like to add to it another word, and say we can gain solidarity thru service, and that is the only way, and one of the ways thru which men of affairs and men and women in any ranks of life can come together. There are some things possibly on which I could take issue with Mr. Wood. I might debate with him the wisdom of emphasizing class as much as he does, and try to substitute for that the idea which I am giving you, solidarity thru service. I feel keenly on that; I sympathize very fully with what Mr. Maharg has been saying tonight because those problems 'Returned Veterans' are first going to be the problems of the cities, and if you like of the business classes in the cities, therefore you men and women assuring the men in the ordinary business organizations of the cities of your support and your co-operation will inevitably win the love and affection of those men who first of all try to grapple with national difficulties as they arise.

Solidarity Thru Suffering

"The second thing is that we can gain solidarity thru suffering. We are doing that in Canada in a measured degree today."

Mr. Black then referred to the incident of an Edmonton public school teacher who had given his life at the front; had put his coat on the private next to him who complained of feeling cold. The bearers took the private away instead of the officer and when they came back in the morning he had passed away. This is understood to be Lieut. Drader.

"President Lincoln" continued Mr. Black "once said: 'Let us here highly resolve that those who have died shall not have died in vain, that government of the people by the people and for the people shall not perish from the earth.' I believe fifty years have passed since that time. We are engaged in the struggle of all time, sufferings unknown and unprecedented have come upon us; let us therefore see to it that you and I, be we organized farmers, country people or urban people, do our best by unity and co-operation, sympathy, solidarity of service and solidarity thru suffering, to make our country worthy of the men who have laid down their lives that we

may be free to seek the ends we think best and right for ourselves and others."

DONATIONS AND ADVERTISING

The little Round Lake Union, No. 224, has sent in a donation of \$40 to the Red Cross Fund, which we greatly appreciate. The union states that they feel an injustice was done them by the recent editorial in the Winnipeg Free Press and are sending this and future contributions thru the Central office, so that we may have a record of what they are doing. This of course makes more work for us, but as the Free Press does not approve of people making contributions to war funds without advertising themselves in the newspapers, the little Round Lake Union is probably following the right lead.

PROGRESS AND ENTHUSIASM

Director Jas. Miner, of Bawlf, sends in a very interesting report of his visit to Dorelee and Bashaw. Mr. Miner has been visiting a number of unions recently and reports good progress and great enthusiasm everywhere.

OLDS UNION REVIVAL

Olds Union, No. 11, has recently experienced a revival, having now over 100 members, which places them about where they used to be after three or four years during which the union has been practically dead. Here are a few extracts from the local paper which help somewhat to explain the revival:

"A largely attended meeting of the U.F.A. Local was held in the Town Hall on the afternoon of Saturday, February 24. One of the chief matters under discussion was the seed grain problem with which the union is taking steps to deal."

"The officers and older members of the union expressed themselves as being highly gratified at the apparent revival of interest and the large increase in membership which has taken place during the past two months. A special joint meeting of the U.F.A. and the directors of the Agricultural Society has been called for 2 p.m. on Saturday, the 10th instant, at which the matter of farm help will be discussed, at the request of the Department of Agriculture at Ottawa. All farmers, whether members or not, are invited to be present."

This is what the secretary says about our hail insurance proposition: "This is the first year for the U.F.A., it is either win or lose. It is not a matter of us trying to get our share alone, but we should beat the other fellow and let them see that the U.F.A. can deliver the goods."

MOYERTON SPENDS GOOD EVENING

E. H. Benner, secretary of Moyerton Local, No. 184, reports: "At the meeting tonight we had a good turnout. The debate took the form of a sharp practice. About twenty subjects were discussed and a very delightful evening was spent. At the next meeting to be held on the 24th inst. a literary and musical entertainment will be held after the ordinary business is finished. This is in charge of W. H. Collins, who has had a good deal of experience in this line. We expect an interesting evening."

ARRANGING GOOD SERIES OF MEETINGS

Director J. E. Blore, of Craignyle, reports that after an exciting trip home on the C.N.R. from the convention, he has now got things in shape at home so that he will be a little freer to attend to the work of the organization. Mr. Blore reports that he is corresponding with the deputy minister of agriculture to arrange meetings on the various railroads and that where he cannot personally accompany their speakers he intends to appoint a substitute to go in his place for the express purpose of stimulating U.F.A. organization. He is arranging with the Department of Extension, University and the Poultry and Egg Selling Organization Branch of the Dominion Government, for a series of meetings. Arrangements of this kind should be very valuable to the locals and should assist considerably in the problem of providing a program

sufficiently attractive to get the members out.

GOSPEL ACCORDING TO THE GUIDE

On March 2 a box social and dance took place in Kilo school, sixteen miles south of Provost, in aid of the Patriotic Fund. The proceeds amounted to \$101. Before the boxes were sold Messrs. Kenneth Watson, of Provost, and W. G. Farquharson and A. C. Muir, of Eye Hill, addressed the gathering and proclaimed the gospel according to The Grain Growers' Guide. Their texts were taken from the slogan of that periodical "Organization, Education, Co-operation."

The meeting signified its desire to organize a branch of the U.F.A. The following officers were appointed: President, A. Platten; vice-president, S. Ongland; secretary-treasurer, Anton Ongland. Seventeen members were enrolled. On March 9 the same gentlemen visited Hendersonville school and there too a local was started of which Chas. A. Henderson is president, Louis Johanson, vice-president, and Otto Opseth, secretary-treasurer. Nineteen members were enrolled. Organization being completed the floor was cleared for dancing and a most enjoyable evening spent. The officers of both these new locals are good live men and well qualified to carry on the work.

HOMESTEAD DUTIES AND LABOR

Considerable interest is being shown in regard to the regulations regarding homesteaders who wish to work out in the more settled districts. As you are probably aware, arrangements have been made to release homesteaders this year and the time which they are actually working on farms in other parts of the province will be counted as residential duties on their own homesteads. The following is the text of the arrangements as forwarded to us:

"Notwithstanding anything contained in the Dominion Lands Act or the amendments thereto, during the remainder of the year 1917 the holders of homestead pre-emption or purchased homestead entries who are employed as farm laborers within the Dominion of Canada may be allowed the period of such employment as a like period of residence in connection with their respective entries, subject to the following conditions:

1.—The time of employment to be counted as residence duties must be subsequent to the actual date of entry in each case.

2.—The provisions of this order shall not apply to unperfected proxy entries, nor in any case in which the entrant is engaged in any other employment than actual farm labor.

3.—As soon as possible after the entrant commences work, it shall be his duty to forward to the agent of Dominion Lands for the district in which the land is situated, sworn evidence satisfactory to the Minister of the Interior, giving particulars of the land held under entry, the nature of the work performed, where performed, date of commencement and probable duration.

4.—Within thirty days after the term of employment has expired, and in any case not later than the 1st of February, 1918, the entrant shall file with the local agent for the district sworn evidence satisfactory to the Minister of the Interior of the time actually spent on the farm work.

5.—In the event of the cancellation of any entry for the default in the performance of the conditions thereof, nothing in this order shall be held to confer any right or claim upon the former holder of any such entry, who, being engaged in farm labor in Canada as aforesaid, has failed, prior to the date of cancellation, to notify the agent of Dominion Lands for the district of the fact of his being so engaged.

6.—The entry of any person complying with the foregoing provisions shall not, during the period of his employment on farm labor, be liable to cancellation by reason of his failure to perform the cultivation required in connection with his entry.

7.—Notwithstanding anything contained in the Dominion Lands Act or the amendments thereto, the cultivation required to earn patent in such cases may be performed in two years instead of three.

8.—In any case in which the Minister of the Interior is not satisfied as to the bona fides of the case, he is authorized to withhold the benefits provided for the foregoing."

(Signed) F. K. Bennett,
Asst. Clerk of the Privy Council.

FARM LABOR QUESTION

There has never been a time since the Canadian West has been growing wheat for export and quite possibly there may never again be a time of equally imperative demand for the absolute maximum of production in the Canadian prairie provinces as that which obtains for the year 1917. Food supplies of all kinds the world over are low, dangerously low, and should the war continue in Europe for another year or two there is danger of a very wide-spread scarcity bordering on famine with possible consequences of the utmost seriousness. But even if the war should end before the year 1917 has spent itself there is sure to be the utmost need for every bushel of wheat which the western prairies can produce.

It is true that the suggestion of the Federal Government to take over the entire 1917 wheat crop at an arbitrary price which would probably bring a net return to the western farmers very close to, if not actually under the cost of production has placed somewhat of a damper upon what had been an enthusiastic campaign for a maximum of production. It is scarcely conceivable, however, that after the action which was taken by the Canadian Council of Agriculture the authorities at Ottawa can be so short-sighted as to discriminate against western agriculture by commanding the 1917 wheat crop at an arbitrary price, close to the cost of production, while at the same time allowing all other industries to fix their remuneration for production or for service with no limit other than that which is forced upon them by the competition of other countries over a high wall of protective tariff.

Believing fully that the Federal Government has thought better of its contemplated action in this regard and that the wheat production of 1917 will be permitted to compete with the wheat of the world in establishing its value, we believe that every farmer in Western Canada should bend his energies to secure a maximum production for 1917 and if allowed the same opportunities in the marketing of his crop that are allowed to all other producers we feel confident that he will secure a return which will make the heavy sacrifices necessary to attain such production a sound investment.

Ottawa Not Practical

One of the great difficulties with those who at Ottawa control our destinies is their lack of familiarity with local conditions as they are in the west. It has been in the minds of many that vast acreages of new land could be brought under cultivation in the spring and produce a paying crop during the current year. Every westerner knows that this is entirely impracticable. The only ways in which the production for 1917 can be materially increased are by such means as better cultivation of the land in the spring and possibly following up with harrowing after the crop is up in order to conserve the moisture and thus help to insure the crop against possible drought during the summer. The only means by which any considerable acreage could be added to the normal acreage for the current year would be by plowing and putting into grain such lands as under normal conditions would be put under summerfallow. Every experienced farmer knows that to crop land in any year which ordinarily and in the regular rotation which every good farmer practices should this year be brought under summerfallow is nothing less than mortgaging the future for a term of years. Once a regular rotation has been interfered with by foregoing a year's summerfallowing it means not only that there cannot be a maximum production in 1918 but also that for several years there must be a special effort and sacrifice to bring back the farm into the regular cycle of operations. It is therefore essential that a more than ordinarily profitable price should be obtainable for the crop of 1917 or no farmer can reasonably afford to increase his acreage by putting into crop such land as he would normally summerfallow.

It is of course true that here lies an excellent opportunity for truly patriotic endeavor by men on the land who can afford to take the risk themselves and who will not be in danger of financial failure by so doing. But on the whole the best permanent interests of this country can be served only by the practice of the very best methods of culti-

Saskatchewan

This Section of The Guide is conducted officially for the Saskatchewan Grain Growers' Association by J. B. Musselman, Secretary, Regina, Sask., to whom all communications for this page should be sent.

vation, war or no war. There was the same imperative demand for maximum production during 1915 and 1916, though certainly the food shortage of the world was not then so evident, but it should be apparent to everyone that a maximum production in any one year must discount the possibility of production during the succeeding year.

No pains should be spared in assuring that such acreage as is sown is put in in the best possible shape and with the best possible cultivation and to ensure this it is absolutely essential that a very large amount of outside labor be imported. The government—both federal and provincial—are doing splendid work in this connection.

The Department and Labor

The following is a copy of a circular letter sent out by the Bureau of Labor, Agriculture Department, Regina, to all local secretaries of the association. It is sincerely to be hoped that each has responded with alacrity to this appeal for co-operation in an effort to solve this pressing problem in the best interests of all.—J.B.M.

Regina, March 16, 1917.

Dear Sir:—The Department of Agriculture in co-operation with the Dominion Immigration Department, is sending special farm labor agents to the United States for the purpose of securing farm help for Saskatchewan.

In order that our agents may be able to select the right kind of men it will be necessary for them to have definite positions to offer prospective laborers. It is therefore essential that we secure as quickly as possible applications from farmers requiring help for the coming summer. Will you be good enough to bring this matter to the attention of the farmers in your district at the earliest possible date.

In order to secure men from the States it will be necessary to pay a higher wage than that paid in the States. A wage of \$50.00 per month for eight months' engagement will make it possible for us to secure first class men. We expect that the men secured by our agents from the States will begin to arrive about the end of March and the first week of April. Only those farmers who have applications on file with us will be assured of getting men. Will you accept applications from farmers in your district and forward same to us. Applications for men should state wages and length of engagement, whether all-round farm hands or stock men, it should also give the name of some person at the nearest railway station who will direct men to farmers.

Thanking you in anticipation for your co-operation in this matter.

Yours faithfully,
THOMAS M. MOLLOY, Secy.

A GRAIN GROWERS' SUNDAY

Central Secretary:—Traversing A. E. Randall's ideas totally, I see no reasonable objection why we should not have a G.G. Sunday. There are many good reasons why there should be such a day set apart for us who want it. It will not be compulsory for Mr. Randall to observe it. Mr. Randall selects the strangest bodies—Buddhists, Mohammedans, Mormons, Confucians, Agnostics, Pagans—this is the usual "smart" Free Thinking "style" to lump us together. We have many nationalities here, Japanese, Chinese, etc., but the people with Christian views outnumber these strange bodies. We learn at church the Almighty One is "Our Father" and these strange people, even Agnostics, are His children and we must be charitable to all men because of this. The Christian church is the greatest unifying factor in our midst. It is complained that we farmers and our families live isolated lives. The church brings us together on these prairies week by week, rubs the rough edges off us, makes us friendly and does more to make us good neighbors and sociable than any other organization we have. Frankly, I go to church because I note the best people of our neighborhood go, the people with the best reputations, those (on the

whole) who are the most straight forward and upright in their lives and dealings. Mr. Randall gratuitously says: "There is no good in going to church; those who don't go are just as good." I have mixed freely with men calling themselves Free Thinkers and Atheists, and I know better. At church one's thoughts are directed to the best views of life. We are lifted above our narrow self. We learn there are greater ideals in life than grasping dollars or material success. We find the purest and highest ethical principles taught there.

I am glad that in some Grain Growers' Conventions the meeting begins with singing "Praise God from whom all blessings flow," and the Lord's Prayer is offered. I have seen Catholics and Protestants meet at the same church on these prairies. They are not my "creed," but I have regularly attended Methodist, Presbyterian and Moravian services and find no difference in the teaching. Many of the sects differ only on points of church government and are steadily uniting. For ten years I was connected with a large Union church and no man was asked of his "creed."

I had a son killed in France last November. He wrote home that the men are not altogether saints but only a few believe there is no God and no hereafter. "Ralph Connor" (Dr. Gordon) tells us he has ministered with acceptance to dying Catholic soldiers and carries a Crucifix for the purpose. Indeed our soldiers at the front are being ministered to by Chaplains of all Christian denominations and find little difference. We farmers, too, can have a united service once a year surely.

WM. HODDEN.

Dundurn, Sask.

CRAIGEN HOUSES ENTHUSIASM

Central Secretary:—I feel I should be remiss in my duty should I omit to write a few words of appreciation of our District Director, P. L. Craigen, who held a meeting here on February 1.

Owing to 30 degrees below weather, only about 20 stalwarts braved the elements, but they were amply repaid by the very interesting and highly instructive address to which they were privileged to listen.

One point that especially commanded Mr. Craigen's words was the lack of more or less abusive comment against the local powers-that-be—storekeepers, lumbermen, etc. Many speakers, while doubtless equally sincere in their wish to better conditions for the agriculturist, adopt unfortunate methods and leave everyone feeling rather sore and an unavoidable suspicion of mistrust between country and town.

Mr. Craigen touched briefly upon conditions in the early days which led up to the necessity for the farmers' organization and traced the history and developments of the movement from that date till the present time; and of the various offshoots from the original association.

We were especially interested in the elevator question as we are hoping to see a co-operative elevator at Virdor and indeed, the history of the phenomenal success of the Saskatchewan Co-operative Elevator Company would excite enthusiasm anywhere. The same success has attended all the farmers' associations and I think it speaks volumes for the ability of the leaders that with no more support than they have had, they can point to such achievements. It makes one wonder, supposing all the farmers would get in line, what is there that the association could not do for its members?

Mr. Craigen is certainly the "right man in the right place," and we hope he will be able to make us many more visits as beneficial as that of February 1. One such meeting creates more interest than weeks of well meant but more or less unavailing effort on the part of our local leaders, "prophets without honor," and we trust that in time it will be possible for the central

executive and district directors to visit all locals at short intervals.

LEWIS JOHN HARVEY,
Secy.-Treas. Virdor G.G. Assn. Ltd.

ANNUAL MEETING AT SWANSTON

Central Secretary:—Owing to stormy weather which interfered with our annual meeting which was called for January 17, the officers of Swanston Grain Growers' Local were obliged to postpone their meeting until January 24. The meeting of this date was quite representative and the following officers were elected for the ensuing year: President, Percy E. Roblin; Vice-President, Peter Hill; Directors, R. Law, Wm. Walker, Jno. McKay, Webber Balkwell, Wm. Allen; Members, P. E. Roblin, Peter Hill, Jno. R. Law, Wm. Walker, Jno. McKay, L.M., Wm. Allen, Melville Allen, Jas. Hill, W. T. Patterson, Peter Hill, Jr., Geo. Foster, Webber Balkwell, Thos. Watson, Chas. Watson, Wm. Watson, Alfred Watson, Jas. Danbrook, all of Govan.

The newly appointed secretary was Webber Balkwell, Govan P.O. Kindly revise your mailing list to his name, instead of mine, as it now is. Mr. Balkwell is mailing you the central dues which I presume will reach you about the same time as this report.

In a recent letter from you, you intimated that you have not received the dues from this local for 1916. This, however, must be an oversight on your part, as we hold a receipt from you, dated February 5, 1916, for our dues sent you by Jas. Danbrook who was acting secretary in my absence. This receipt I have given Wm. Allen, our official delegate to Moose Jaw, and trust that the matter will be satisfactorily arranged.

PERCY E. ROBLIN, Secy.

PANGMAN W.G.G.A. COLLECTS

Central Secretary:—Find enclosed \$11.50 for the Belgian Relief Fund, the proceeds of a collection taken at a social on December 29.

MRS. C. CLEWS,
Secy., Pangman W.G.G.A.

LAC VERT WOMEN SEND \$50.00

Central Secretary:—Would you kindly accept the enclosed \$50.00, raised by the Women's Section of the Lac Vert Grain Growers in aid of the suffering Belgians.

PERCY HEUGH,
Secy.-Treas., Lac Vert Local.

GETS LIFE CERTIFICATE

Central Secretary:—Received the life membership certificate and frame which I consider splendid indeed. Please accept my sincere thanks for same and oblige,

S. W. HOLLAND.

TO EMERGENCY FUND

Central Secretary:—Enclosed is a money order for \$22.50 given by Thornfield G.G.A. for the Emergency Fund.

This local has undertaken to collect subscriptions and renewals for The Grain Growers' Guide.

ALF. N. MANN,
Secy.-Treas., Thornfield G.G.A.

BUILDING FIGHTING FUND

Central Secretary:—Enclosed please find donation of fifteen dollars (\$15.00) toward the Fighting Fund of the association.

GEO. B. HARE,
Secy.-Treas., Camberley G.G.A.

RE FIGHTING FUND

Central Secretary:—Enclosed you will find money order for \$12.75 to apply on Fighting Fund.

B. A. HAMPTON,
Secy.-Treas., Kalamazoo G.G.A.

ORDERING LUMBER AHEAD

Central Secretary:—About January 24 I ordered a car of lumber thru you which I have finished unloading today. It is the best car of lumber I have had yet thru the Grain Growers and was all satisfactory.

J. W. BARKER,
Secy., Percy Co-op. Assn., Ltd.

Central Secretary:—I am dropping a line to you, to let you know that the car of lumber came thru in due time, and turned out to be exactly as ordered. The quality was excellent, and all parties concerned seemed well satisfied.

A ROUSING CONVENTION

The Grain Growers of Springfield district met in convention on Friday, March 16, in the Presbyterian church at Hazelridge. The meeting opened about 3:30 p.m. with Mr. John Holland, the district president in the chair and an attendance of about thirty-five. The first matter taken up was the National Platform issued by the Canadian Council of Agriculture. After a short address by W. R. Wood, of Neepawa, dealing with the main principles of that platform, there was a free and very complete discussion of the measures proposed. While some details came in for criticism, the general feeling was strongly in favor of adopting the platform entire.

After an address by Mr. Robt. Fisher, reviewing the work of the year, the election of officers was proceeded with as follows:—President, John Fisher, Hazelridge; Vice-President, Robt. Edmunds, Oakbank; Secretary, P. H. Hudson, Plympton; Representatives on Central Board, H. W. Lathwell, R. R. No. 3, Winnipeg. The convention then adjourned and were entertained to tea by the local branch at Mr. Scott's. The evening session opened at 8:15 p.m. with Mr. John Fisher, newly elected president in the chair. The following resolutions after some discussion were adopted:

1—Resolved that whereas we have deliberately discussed in detail the reform policies as outlined in the Farmers' Platform, and whereas we consider they will minister to our best interests we heartily pledge ourselves to support said policies.

2—Resolved that all grain and farm produce should be sold on the central system, rather than by the bushel of odd weights as are now used.

3—Resolved that whereas no organized attempt has been made to find employment for returned soldiers in our district, and whereas no official attempt has been made to deal with the problem of labor shortage, and whereas at present government positions are held by men of physical fitness, fit for military service, and whereas people of alien birth are in many districts refusing to assist in the labor of agricultural production unless at exorbitant and impossible wages, we The Springfield District Grain Growers' Convention call upon the National Service Commission to take immediate action in these matters.

We also suggest to the National Service Commission, the advisability of adopting the plan in operation in the Mother Country, by which women are being employed in many positions for which they are found suitable, but which formerly have been held by men, in order that as large a number as possible of men of military fitness may be released for agricultural production or active military service.

4—Resolved that whereas experience has shown that the existence of forest belts is of great benefit to agricultural production by conserving moisture and sheltering from hot winds, therefore we urge upon the Provincial Department of Agriculture, the imperative need of taking action to promote forestry in the province and especially in those districts where drought is frequently a menace.

Two Stirring Addresses

A musical and literary program had been prepared for the occasion, which with two addresses made up a very pleasant and profitable evening's entertainment. The first speaker, W. R. Wood, of Neepawa, dealt with some of the general principles embodied in the Grain Growers' movement in its relationship to the Empire, the Nation, the Province and the local community. He was followed by Rev. R. A. Hoey, of Dugald, Manitoba, who gave a magnificent address on "Citizenship" especially in relationship to the modern development of the international spirit. He said the task of the next twenty-five or thirty years is the task of beating the national spirit from which we are slowly detaching ourselves into the international spirit of human brotherhood—the citizenship of humanity.

The difference between the present and the ideal is the difference between a pile of bricks and a beautiful cathedral—between discord and unity. We are not at one in the world. We need the unifying spirit of a practical and humane cosmopolitanism. We must begin scientifically to relate the elemental facts at our disposal. We have tried the despotic method and the political method and the theological method, but the world wants the application of the scientific method—a method in which due weight is given

This Section of The Guide is conducted officially for the Manitoba Grain Growers' Association
by R. C. Hendry, President, 404 Chambers of Commerce, Winnipeg, to whom
all communications for this page should be sent.

to all the data and in which blind injustice is not permitted to dominate.

God has made the earth very solid and very round, and yet there are different zones. For the fullness of its life each zone requires the best of what the others produce. And while the zones are separated in space, they are united by great commercial waterways across the intervening seas. It is of the first importance for the successful existence of a united humanity that these great channels of world commerce be maintained inviolate. And they who with superlative audacity would place barriers upon these highways of the world's life must be condemned as traitorous to the wellbeing of the race. The commonweal of mankind stands inexorably behind the demand for Free Trade.

But one says Free Trade will build up Germany. What of it? If there is any task before the world today greater than the task of crushing—crushing the German military spirit, it is the task of going to the people of that great, sorrowing, burdened, heart-broken land, when it is fully chastened and purged of the demoniac possession under which its human soul has been enthralled, and building it up again into the glorious fabric of a unified and coherent mankind. Let Free Trade come, that as soon as possible after the war it may help to bind up the broken heart of the world.

It is the man who thinks that a Scotchman is better than any other man on earth or that an Englishman is just a degree or two nearer absolute perfection than all the rest of the race that is a danger to the common welfare.

The history of our children are given to study at school is narrow and warping and selfish. It will help to make them conceited and vainglorious—but it will never give them the world consciousness, the international spirit, the feeling of brotherhood for all mankind.

Religion Falls Far Short

Religion has not done all, is not doing all it should be doing to lead us to unity. It has too long countenanced this damnable pagan system of overlapping of denominations. The discords and suspicions and jealousies that have been allowed to separate us are a standing disgrace to our Christianity. The Irish Orangeman and Roman Catholic are side by side fighting a common enemy in Europe—and they are looking to us for united support. We ought to reach a religion which will support them with a common morality.

There is in our spirit far too much superviliousness, far too much exclusiveness, far too much jingoism. We are not the people we think we are. We are not as civilized nor as Christian as we deem ourselves and many another nation is not so heathen nor so far behind us as we judge.

Sometimes when I pray "Thy kingdom come," I have a vision. It is the vision of a united language, the language of humanity, of a parliament, the parliament of all mankind, of one flag, the union of all the flags, of one church, the church of the living God. And so when we endeavor to cultivate citizenship, let it be the citizenship of the kingdom, the kingdom that is coming, the kingdom for which we labor and pray."

Mr. Hoey's address was listened to with close attention and enthusiastically applauded. The Grain Growers' movement both in Springfield and elsewhere will be well advised to call upon Mr. Hoey again, when sane and carefully reasoned exhortation of the modern democratic movement is desired. The singing of the national anthem brought to a close a most inspiring and satisfactory district convention.

BAGOT WOMEN'S AUXILIARY

Our Auxiliary has a membership of twenty-three. We hold monthly meetings—meeting on the last Saturday of each month. We missed our meeting in January on account of weather conditions. In February we had the report of the Brandon convention and an address on Temperance and Community work and sewing. Five dozen shirts were

Manitoba

acted as judges and gave a verdict of five points for and five points against.

Mr. and Mrs. A. Hill (the latter of whom has a very pure soprano voice) sang a duet "There's a long, long trail a' winding" which was very heartily encored. Mrs. Horning gave a reading and after a song by Mr. Williams the Musical Club sang "Good-night, Gentlefolks, Good-night." Mrs. George Fowler accompanist.

Lunch was served and after an interval for social intercourse, the floor was cleared for dancing and music supplied by Mrs. Fowler and Messrs. Creighton and Crowhurst. We think the attendance as stated above indicates the popularity of the Binscarth Annual Socials.—Binscarth Express.

LITTLE SOURIS WOMEN'S AUXILIARY

The women of Little Souris held a meeting on March 15 for the purpose of organizing a Women's Auxiliary of the Little Souris Grain Growers' Association. Ten members joined at this first meeting and as soon as the roads improve we expect more will be able to attend and join our auxiliary. Mrs. A. G. Thornton was elected President; Mrs. J. McElvie, vice-president, and Miss Gladys Thornton, secretary.

Note.—It augers well for the future of the Little Souris Grain Growers' Association when the women are interested enough to organize an auxiliary. We are very glad to welcome them and recognize the good they may do in our association work and in many ways raise the standard of a higher community life in the districts organized.

LONGBURN ENDORSES THE FARMERS' PLATFORM

At the last meeting of the Longburn G.G.A. the Farmers' Platform was taken up for discussion. It was all endorsed with the exception of clause 2, plank 2, and we decided to leave this part until we would have more definite information regarding it. This clause refers to having an income tax. This will be taken up at a later meeting after we get some information on this clause.—Extract from a letter from G. G. McArthur, Secy.

CARMAN DISTRICT HOLDS CONCERT AND SALE

A Sale of Work, Concert and Dance was held in the Obermule School House near Dinsmore on March 2, in aid of the Red Cross Fund. It proved a great success. After a lengthy program Mr. H. Hedger, one of our grain growers, commenced to sell the many articles contributed. It was evident at the commencement that the farmers were all well supplied with the needful—as bidding was brisk. Two quilts donated by Mrs. McCracken and Miss Colelough realized a good sum. An autograph cushion made by Mrs. Maurice Davies, our sec-treas, brought in \$45.00. The whole result of the sale was \$291.00.

ROARING RIVER MEETING

The March meeting of the above association was held on Wednesday the 7th March and altho the attendance was not large yet a very profitable time together with lots of business was disposed of. The opposition of the Provincial government with regard to the Recall Bill came up for discussion. On the Friday night following we held our Annual Concert and Social and we had a packed house which is very gratifying as the proceeds were for patriotic purposes. Our District President Mr. A. McLary was with us on this occasion and acted as chairman. The program was of the usual Roaring River quality and reflected great credit on the committee in charge; credit is also due the three ladies in charge of the refreshments and who helped to make the evening a success.

JOHN LIVESAY,

Sec-Treas.

A NEW BRANCH FORMED

A branch of the G.G. Association has been organized at Spruce Creek (near Dauphin) with fourteen members at present for which the secretary has forwarded the proportion of fees to the Central Office. They expect to do some co-operative buying among their members. Mr. H. A. Timm has been appointed secretary-treasurer of this new branch, which we hope to see increase in membership in the very near future. Our best wishes are extended to them in their new activities.

HIGH-CLASS "BRITISH" MACHINERY

The "Marshall" Oil Tractor

FOR KEROSENE OR GASOLINE
Built Like a Battleship

Runs Like a Watch

The Dreadnaught of the Prairies

This Tractor is made in two sizes, 16 H.P. Drawbar, giving off 30-35 Brake H.P. on the pulley; 32 H.P. Drawbar, giving off 60-70 Brake H.P. on the pulley. They are economical in fuel, durable and reliable. Guaranteed of finest materials and best workmanship. They need few repairs.

IF YOU WANT SATISFACTION BUY OUR TRACTOR, AND THAT WILL STAND UP AND GIVE YOU MANY YEARS OF SERVICE

Farmers are seriously warned not to be misled by the light, short-lived, inferior, cheap (so-called) tractor; it will not stand up and only causes trouble, vexation and loss.

3 MACHINES IN 1

A perfect seed bed is an important as to sow as plant. The Western Farmer, Facer and Harvester makes a perfect seed bed and can do it in one operation. It will double profits on crops. Made in Canada. 1 and 3 sections. Sold to you on one year's trial.

WHEN WRITING TO ADVERTISERS PLEASE MENTION THE GUIDE

Seed Grain—Preparation and Seeding

Continued from Page 7.

hot winds in late summer—the greater the danger, the sooner the crop should be sown.

Early seeding is desirable (1) in all areas subject to early fall frosts; (2) on fallow land; (3) on rich productive and heavy soils; and (4) with all late maturing crops. Later seeding is permissible: (1) in areas where fall frosts seldom do damage to the crops; (2) on light warm soils; (3) on fall or spring plowed or stubble fields containing little moisture, and (4) with all early maturing crops.

Rates of Seeding

The normal amounts of seed used on medium soil types in Central Saskatchewan are for wheat, $\frac{1}{4}$ to $\frac{1}{2}$ bushels per acre; oats, 2 to 3 bushels; barley, $\frac{1}{4}$ to $\frac{1}{2}$ bushels; winter rye, $\frac{1}{4}$ to $\frac{1}{2}$ bushels; flax, 25 to 35 pounds, and peas, 2 to 3 bushels.

The amounts used in different parts of the province vary, with wheat from $\frac{1}{2}$ bushel to 3 bushels; oats from 1 to 5; barley from 1 to 3; winter rye, $\frac{1}{4}$ to $\frac{1}{2}$; flax, from 20 to 50 pounds, and peas, $\frac{1}{2}$ to 3 bushels per acre.

As little as $\frac{1}{2}$ bushel of wheat and 1 bushel of oats are reported to have given good returns on light soils in Southwestern Saskatchewan in a dry year, while as much as 2 $\frac{1}{2}$ bushels of wheat and 5 bushels of oats are sometimes used on fallow land on the heavy, rich soils of Northern Alberta and Saskatchewan.

The rates that have given the largest returns in our rates of seeding trials, on fallow, are: wheat, $\frac{1}{4}$ bushels; oats, 3 bushels; six rowed barley, $\frac{1}{2}$ bushels; winter rye, $\frac{1}{4}$ bushel; flax, 20 to 28 pounds, and peas, $\frac{1}{2}$ bushels.

The amount of seed that shall be used under any given set of conditions varies with: (1) The kind of soil, whether heavy or light; (2) The preparation, whether fallow, breaking or stubble; (3) The time of seeding, whether early or late; (4) The danger of fall frosts; (5) The proportion of the seed that will grow; (6) The number of seeds in a bushel.

Relatively larger quantities should be used (1) on heavy soils; (2) on fields such as the fallow which contains a good store of moisture; (3) in all areas subject to early fall frosts; and (4) when the seeds are above the normal size and, therefore, relatively few per bushel. If the percentage germination is low, heavier seeding should be practised.

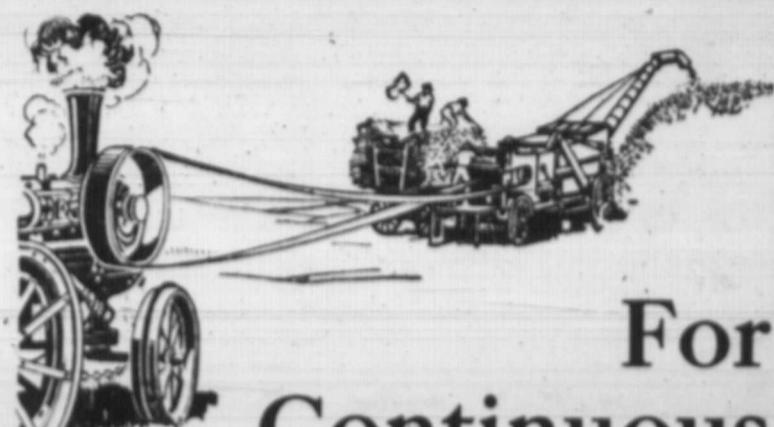

Smaller quantities may be used (1) in dry areas; (2) on light soils; (3) on stubble lands which contain but a limited supply of water; (4) where there is no danger of fall frosts and (5) when the seeds are small in size but normally developed. Thinly seeded fields withstand the most drought, but thickly seeded ones mature earlier.

Depth of Seeding

Wheat, oats, barley, rye and peas are usually sown from one and one-half to three inches in depth and flax a little shallower; but the depth should vary with: (1) The depth at which firm, moist soil is found; (2) The kind of soil; (3) The time of seeding.

In order to grow, seeds must have heat, air and moisture. The place in the soil where optimum amounts of all these can be obtained is generally the best depth to sow. In this country, moisture is the most important of these factors and therefore, generally controls the depth to which seeds should be placed.

Very often the soil is not properly prepared and as a result the surface is dry to a considerable depth. Under these conditions the best depth to sow cannot be foretold. In loose soil the seed should be sown deeper than in firm soil. On fall or spring fallow land it should be sown deeper than on fallow land and on light land deeper than on heavy land. Early seeding should generally not be done as deeply as later seeding. On stubble fields a common fault is too shallow seeding. "Sow into the moisture" is a good motto if the soil has been managed in such a way as to have the moisture within 1 to 3 or 4 inches from the surface.

For Continuous Service Buy This Thresher Belting

Threshing conditions are hard on belts. The belts are left outdoors in all kinds of weather, roughly handled.

Economical belt operation depends entirely upon the belt's ability to meet these destructive conditions continuously without injury to the belt and without shut downs or delays.

Even more—the income and profit of the entire outfit depend upon the belt's reliability.

Because of these very needs, Goodyear Thresher Belting is specially built for one work—running thresher machines.

Every feature of its construction has been utilized with the idea of giving continuously good service at this work.

That is why the belt is thoroughly saturated with rubber and then stitched, both features holding the plies firmly together.

The seam is sealed with rubber.

The splice is made to stay made.

To resist the attacks of weather and rough handling we have protected this good belt with a weatherproof cover.

All these features add long life to the belt. All give greater safety. All insure continuous service. Because it is a better belt—because it gives lower cost—because you can depend upon it—use Goodyear Belting.

Your Hose Requirements.

If you want a tank hose of extra quality, buy Goodyear "Yellow Jacket" Agricultural Suction Hose. The strong, woven cover resists wear. The flat wire lining prevents collapsing.

"Goodyear" Quality Injector Hose has its wire lining firmly imbedded in rubber.

"Goodyear" Quality Discharge Hose takes the water where you want it. Full information is only as far away as the nearest Goodyear Branch. Write them.

The Nightingale of Phonographs —

You can now have all the music of the world in your home at a price that is sensational low. This beautiful new phonograph gives perfect reproduction of all Columbia and Victor records, and at the same time gives you an instrument of surpassing grace and many exclusive advantages.

31 inches high in playing position. With lid closed, the Carola stands 22 inches high, x 13 x 11 inches.

Weights only 11 pounds. Plays all Victor and Columbia Records. Uses any standard needle. Sound waves do not pass through metal. Turn arm is of solid brass. This prevents rasping metallic ring. Remains seated and you can easily rewind or change records. One winding place over 12 turn record, or two 10-inch or three 8-inch records. Every musical note produced by all its fulness and richness. Body is made of acoustic metal, strong and durable. Mahogany finish. The appearance is a surprise. It is beautiful, artistic and unique. The great and exclusive of its field, we believe you will agree, follow it is the most looking little phonograph in the world. Small and convenient to handle. Light enough to carry about the house; ideal size for yacht, to take to summer cottage, or in motor car. Dust proof compartment specifically designed to contain records; this glass protection against dust, dirt and damage and keeps records always ready aromatic. A home extra! Top can easily be lowered and raised, enclosing entire phonograph, making it one complete unit and protecting all working parts. Nothing is exposed to get injured or to spoil appearance.

Write or Use Coupon Today!

You have no conception of what marvelous music this machine makes until you have heard it. Owners of phonographs, costing hundreds of dollars more, vow they cannot tell the difference.

When it arrives in your home, it will be one of the happiest moments in your life. You can dance all the latest dances in your own home. It will be an endless source of delight and comfort to the entire family and makes an ideal present.

Cleaning Seed Grain

A Two Mill and Grading System used by a Saskatchewan Farmer

By Paul Gerlach, Allan, Sask.

Winner of First Prize for World's Best Wheat in 1913 at International Dry Farming Congress

The question of grain cleaning at this time of the year is an important one with the grain growers, and too often this is not given the attention it should have.

When one considers the great amount of wheat grown in the western provinces and the difficult problem of securing good, pure seed, free from other grains, weed seeds, etc., some time may be profitably spent looking into this matter.

Personally, I do not consider it at all sufficient to rely on the various mills I possess to do my re-cleaning and grading. The first step toward good seed should be hand selection of plants in the field, and the product from them allowed to multiply until sufficient has been secured to furnish seed enough for my whole requirement. Hand culling in the field is resorted to before and during harvest and threshing is done with a small machine which permits me to use ample care in keeping my seeds pure and clean. I use a small grain cleaner for re-cleaning seeds from my plots.

For years I have made a specialty of growing seed wheat and have not been able to secure a mill that would do the cleaning and grading to my satisfaction. Nearly every careful farmer realizes how difficult it is to remove cockle, buckwheat, barley and oats from wheat. Some of these seeds are long and slender, others are short and thick. When seeds have the same thickness and weight of the wheat kernels a screen cannot remove them. I have four different mills and graders and by passing the seed thru a combination of three of them I can do very good work, provided I have the right grade to begin with.

I have prepared a chart which will give an idea of my plan of operation.

How The Cleaning Is Done

The grain is first elevated from the bin into the hopper of a mill from which it passes over a short screen having triangular holes, 3-16 inch from point to point, and the apex of the hole extends toward the higher part of the screen. Buckwheat is nearly all taken out here owing to the shape of the hole which permits this troublesome seed to pass thru and only the smallest wheat and such seeds as mustard, lamb's-quarter, etc., will be removed and conducted into a box.

The grain next passes over a screen having perforations large enough to permit all wheat to pass thru and large obstructions, etc., go over. To assist in removing any oats, an oil cloth apron

poses. It is highly important that the speed of the machine be very uniform—only some power such as a gas engine is reliable.

By lowering or raising the rear end of the long-mesh screen quite a variation is made in the amount of seeds screened out. The shake of the mill should not be too vigorous to cause seeds to dance about too much. The mill I have is equipped with automatic cleaner under this screen which prevents it from becoming clogged. This extent of re-cleaning is about all the ordinary grain ever receives and very much of it never obtains that.

After the wheat has passed thru mill number one it is elevated and passed thru an imported mill, made in Dresden, Germany, which is devoid of any fans or screens, but does most excellent work. In theory it is radically different from all other mills. Instead of making a separation of grain by weight or size, the length of the kernels

is taken into consideration, and the grading is done by taking advantage of that fact.

The mill is composed of two drums which are united together by a band of steel having large holes, making one continuous cylinder. The material of which the drums are made is zinc, about 3-16 inch in thickness and honeycombed with cells. The cells in the first section are deep enough to permit a grain of wheat to find lodgment within, while oats, barley, etc., project beyond the cells. The drum revolves seventeen revolutions per minute and in revolving the normal wheat grains, or anything smaller, are elevated to a height of 90 degrees or over and are then dropped on a pan and conveyed by means of a spiral conveyor, to the second drum. Then they

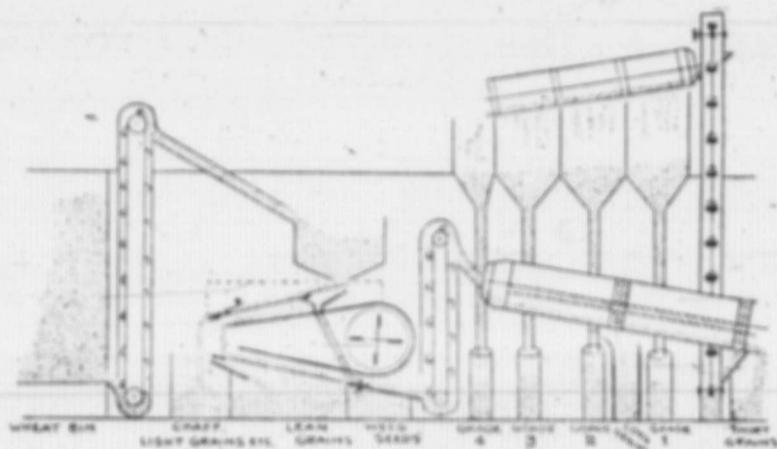

Diagram of the mills and grader used by Mr. Gerlach. The size of grain to be cleaned is on the left.

rests over the screen which causes many of the oat seeds to pass flatly over the holes.

The wheat, after passing thru the screen, drops on a shelf and is guided to the rear of the mill where it is permitted to drop thru a strong blast of air to the long-mesh screen, having large enough apertures to remove any grains not suitable for seed as regards thickness. The blast of wind must have sufficient strength to blow out any grains not heavy enough for seed pur-

are released and permitted to drop to the bottom where another separation takes place. The cells in this drum are shallower, only half grains of wheat, or very short ones, buckwheat, cockle, etc., are permitted to enter deep enough into the cells that when elevated they will remain inside until sufficient height is attained that they, when released, fall on the pan and are conveyed by lower or rear end of the cylinder and means of the spiral conveyor to the

An Advertisement to Wives

Perhaps you don't want your husband to insure his life. The possibility of his dying suddenly seems too awful to think about. And getting money as a result of such a tragedy offends your conscience.

Well now, do you know two widows, one left comfortably provided for by life insurance money and another left destitute? Ask them what *they* think of life insurance. Then draw your own conclusions.

If what they say leads you to believe in life insurance—as we believe it will—ask for our free booklet "Safeguard your legacy." It will tell you about an Imperial Life Policy in which your husband can save a few dollars each year. Then if he should die we will pay to you as long as you live—regularly—each month—a certain amount of money to keep you and the little ones from want.

Fill out and mail the coupon below.

SAVES TIME!

The faster you turn the Sharples, the quicker you finish skimming! For instance: If by turning a Sharples at 45 revolutions per minute you get through separating in 15 minutes, you can get through in 10 minutes by simply increasing the speed to about 55 revolutions. The Sharples is the *only* separator that can be "hurried"—a mighty handy thing when you are hurried.

Now consider the time saved in cleaning the Sharples. The bowl is the most simple in existence—just one piece in it, no discs or blades. Simply run a brush through it once or twice—and cleaning's done!

Furthermore, the Sharples requires oiling only *once* a month—and in only *one* place. Just pour a little oil into the enclosed gear case—more time saved!

SHARPLES SUCTION-FEED CREAM SEPARATOR

- the *only* separator that skims clean at widely-varying speeds
- the *only* separator that delivers cream of unvarying thickness—all speeds
- the *only* separator that you can turn faster and finish skimming quicker
- the *only* separator with just *one* piece in the bowl—no discs, easiest to clean
- the *only* separator with knee-low supply tank and a once-a-month oiling system

Remember that all separators lose considerable cream when turned below speed—*except Sharples!* The Sharples gets all the cream no matter whether you turn it fast or slow. It saves up to \$100 a year more than other separators. Cordially welcomed by women, owing to its easy turning and easy cleaning. Over a million Sharples users. Write for catalog to Department 84.

A Great Combination

The Tractor is the Big Four with twenty H. P. at the drawbar
The Plow is the Emerson attached directly to the Big Four "20"-35

WHEN you get a Big Four Tractor, you get a dependable standardized four-cylinder Tractor—a proved success for ten years. When you get an Emerson Plow, you get the benefit of experience of men who have been building plows a lifetime. We have combined the two, and added the power hoist. The Big Four Motor raises and lowers the plows with one touch of your foot, whether tractor is moving or standing still. When plows are raised they are out of the way of everything, and when they are lowered they are adjustable to the depth you wish to plow. Don't waste room and time in turning. Back up and plow out the corners. When the tractor is to be used for other work than plowing, the plows may be quickly detached. The Big Four "20"-35 has two speeds forward and reverse—burns gasoline or kerosene—is adapted to practically all soil conditions. Handles readily harrows, disks, pulverizers, drills, mowers, etc., and all belt work.

Securing and Maintaining Credit

A Symposium of the Ideas of Men who have had years of Experience in Credits

By W. W. Temple

The one big item in the working capital of the individual or the merchant is his credit. It is the most valuable of all assets, and the most fickle, in that its absence results in its loss, and its loss often spells ruin for those who may be unfortunate enough to be divorced from it.

What would Western Canada be today were it not for the credit that was so liberally extended for its development? The industries and railroad facilities that contribute so much to the development of any country would not have been possible. The homesteader, the very backbone of Western Canada, were it not for the liberal credit extended by those engaged in practically all lines of merchandizing, could he have taken up a raw piece of prairie land, built a home on it, acquired equipment and horses to develop it, and kept himself and family in food and clothing until this land commenced to produce an income?

A few months before the European conflict was forced upon us, we began to notice a decidedly chilly atmosphere prevailing when we came to arrange for our former very liberal line of credit. Some were denied any further credit accommodation, some lines of credit were reduced to a finely drawn limit, loans on city properties were entirely cut off, and farm loans refused or severely reduced.

The European war following so closely upon this turn of events led many to blame the war for it all, but the war has served more to furnish the insolvent, and those upon the verge of insolvency, with an alibi than it has a cause for insolvency. Many predicted that the country was going to the infernal "Bow-wow's." It wasn't. We merely had something coming to us, and had commenced to get it months before the war broke out.

Lessons in Economic Credit

We had been flirting with disaster by indulging in extravagant use of our credit. In other words, we had been abusing our credit, and our financiers decided it was high time to call a halt, and show us the error of our ways. They said to the business man—"You cannot borrow an unlimited amount of money, to enable you to extend unlimited credit to your customer, in the haphazard manner you have in the past. You have been taking a long chance on almost anyone you could get to carry away your merchandise. What do you know about the real financial worth of this or that party, who are indebted to you for such unreasonable amounts, and for such an unreasonable length of time. You must make your money work harder for you. It is not earning anything when you have it tied up in customers who can't meet their obligations promptly. If you expect us to assist you in financing your business, you must know more about your customers' financial worth. Make them show you that they are worthy of the credit for which they apply, because you will be required to show us.

We must know that you are putting our money in the hands of only those who will be able to repay it when due. You must make your customer understand that when he does not meet his obligations to you promptly, he jeopardizes your standing with your financiers. You must make him understand that self-preservation forces you to deny him credit, or an extension on an old debt, to enable him to buy an automobile, take pleasure trips, buy another parcel of land, or to otherwise expend injudiciously, or to expand his operations, beyond a point consistent with safe and sound business principles."

Results of Reconstruction

As a result of this wise counsel, merchants have been offering premiums in the way of lower prices and discounts to the consumer for cash, short terms, and prompt payment. Credit associations are being formed, and the consumers' abilities and disposition to pay promptly

are being searched and recorded for future reference, as they never were before, and it has become a not uncommon occurrence for a consumer to go to his market and find himself confronted with the alarming fact that he is no longer able to obtain the credit he once enjoyed. It may be for one, or several of many reasons. He may not have met his past obligations in a manner satisfactory to his creditors. He may have refused to give sufficient information in regard to his affairs to enable his creditor to judge intelligently his credit worth. He may have practised deception to obtain credit, or he may not be deserving of credit because of one or several of many moral reasons, such as being a poor manager, shiftless, careless, unprogressive, extravagant in his living, etc., etc.

We believe we have made quite clear the status of the merchant and what he must do to make good his credit, and will now endeavor to point out the way for the consumer to establish and maintain his credit.

How to Establish and Maintain Credit

Good credit enables all to add to their abilities to carry on their vocation, to buy to the best advantage, and thereby to increase their earnings. Large assets are not always necessary to establish credit, but it is necessary that the amount of credit extended be of an amount relative to the actual assets and in harmony with the reasonably assured income.

When making application for credit there should be no hesitancy in offering a frank and true statement of one's affairs. This statement should show not only the assets in real and personal property, but most important of all, it should be made to reflect the ability to pay, by showing from what source the money is to be obtained to pay one's obligations. The merchants' financiers are making it necessary for them to request statements from their customers, so that they may be able to show the financial worth of those in whose hands they are placing their money. This is being done to secure information to enable business to be conducted intelligently, and is not, and should not be taken as a reflection on one's honesty or character.

When a merchant extends credit to a customer, he becomes in a sense, that customer's partner, and as such is entitled to know the conditions of the customer's affairs at all times. A statement of one's affairs should be given just as freely to the merchant as to the bank, when borrowing money. The merchant's goods represent real money, and should be treated as such, in seeking or giving credit.

If, upon receipt of a statement, the merchant is of the opinion that the consumer is applying for more credit than is warranted by his assets and his ability to pay, the consumer should curtail his requirements accordingly. The merchant is more likely to over-rate than to underrate the amount of credit he should judiciously extend to the consumer, because he is anxious to increase his volume of sales. The consumer should welcome rather than resent the merchant's advice in this connection. It will have a tendency to make the consumer a more careful buyer, more conservative about incurring debts, and as he has not over-bought it will make it easier for him to maintain his credit he has started to create.

Having obtained credit, you are then confronted with the task of maintaining it until you have it firmly established, a fixed and permanent asset that you can rely upon at all times.

When money is borrowed from a bank, a definite date for payment is always arranged. This is as it should be, and the same arrangement should always exist between the consumer and the merchant. The best possible way for a debtor to establish his credit beyond the slightest reproach, is to pay his obligations on or before the date of ma-

Credit
in Credits

turity. This however, is not always possible, even with those who enjoy that most enviable reputation of being an "A-1" credit risk.

Frankness Necessary

The next best thing to do then, is for the debtor to go to the creditor on or before the due date of the obligation and explain frankly his condition, and arrange for an extension or a renewal. Practically all creditors realize that there are many reasons why a debtor might be unable to meet his obligations when due, and most of them will be found willing to give their debtors' conditions every reasonable consideration, but the creditor should not be expected to take it for granted that the debtor has a sufficient and reasonable excuse for not paying as agreed, nor should the debtor take the privilege of an extension without the consent of the creditor.

The creditor, only, has the right to grant an extension of time on an obligation, and the debtor should, in every instance, give the creditor the opportunity of exercising that right. Any creditor would rather grant an extension than to have the debtor take it of his own accord. If the debtor stays away from his creditor, and does not go near him to ask for an extension on a past due obligation, he is not only taking something that does not belong to him, and using his creditor unjustly, but is also jeopardizing his own reputation as a credit risk. This is one of the most important features in establishing one's credit, and one that has been more neglected than any other.

If a debtor absents himself from his creditor for any length of time after an obligation has become due, a written request to call and adjust the obligation is made necessary. Right here is another serious stumbling block for the debtor. Too many debtors take offence at a notice of this kind, and are so unappreciative and inconsiderate of the rights of the creditor that they manifest their resentment in various ways, some going to the extent of being impudent to the creditor for daring to ask for the consideration that justly belongs to him.

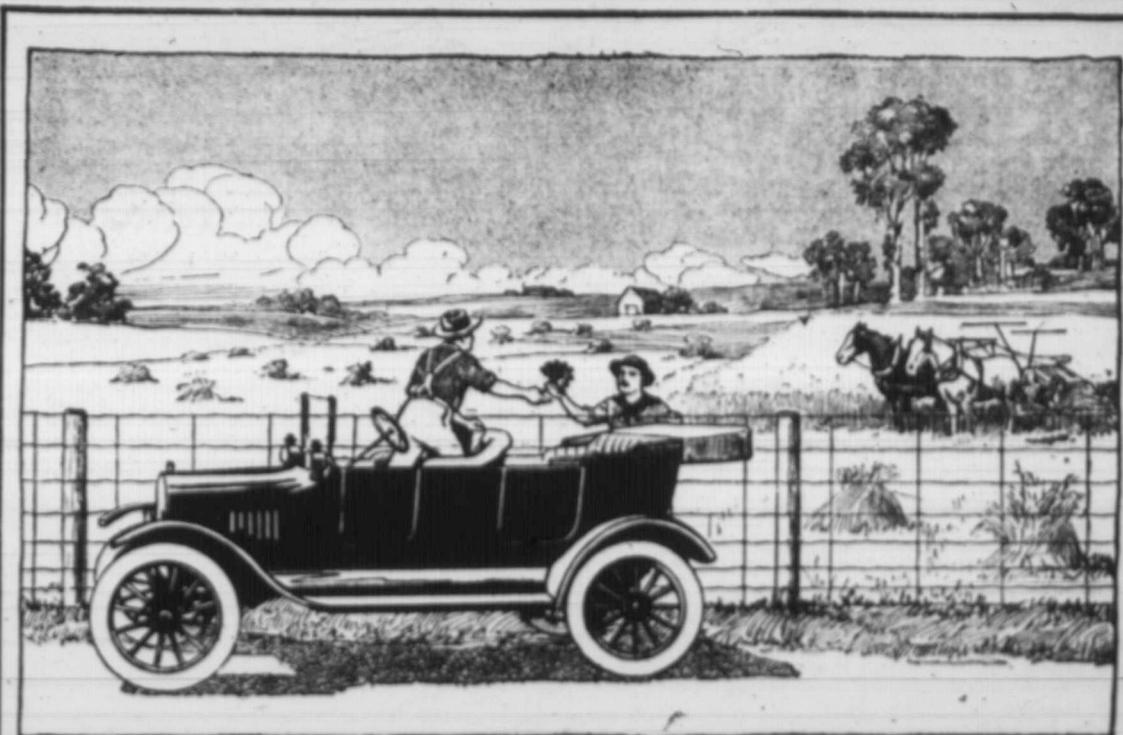

Such actions on the part of the debtor are all wrong, and Mr. Debtor, if you have any pride in your credit, if you want to treat your creditor as you would have him treat you, if you owe him an obligation that is past due, and you haven't of your own accord gone to him and arranged for an extension, if he asks you verbally or otherwise for an adjustment of it don't assume an air of wounded dignity and endeavor to "Ball him out" for it.

Remember that what he is asking for is his very own, not yours to do with as you see fit. You owe him an explanation and prompt satisfaction regarding your indebtedness to him. See that he gets it. Don't imagine that because your property statement shows a tidy surplus you are so good that you don't have to pay at the agreed time. Your credit worth will be judged more by how you pay than by what you possess. Your possessions serve only as a security, and while they may be a consolation to the creditor, they are of no practical use to him except as a last resort to obtain satisfaction. No creditor wants to extend credit to a debtor against whom he anticipates that he will be compelled to take legal steps to effect collection, no matter how valuable the debtor's possessions may be. It is the debtor who pays his obligations promptly or arranges for an extension of such obligations that is sought out by givers of credit. It is such debtors that will always enjoy continued credit and the most economic buying efficiency.

Don't Disregard Creditor's Notices

Next to resentment at being notified of a past due indebtedness the most frequent and serious mistake made by any debtor is that of disregarding such notices. Some do this with the deliberate intention of avoiding adjustment of the obligation, while many others do it innocently, thinking that if they can't pay, it is of no use to call on the creditor. This is indeed a wrong impression and one that has been the cause of many honest and well meaning but misin-

Real Daylight Saving

In the harvest time every hour between daylight and dark is worth money to the busy farmer.

You get an early start in the morning intending to do a big day's work, but the

binder, mower or other implement breaks down and you must go to town for the repairs. If you have a Ford you are soon away and its speed clips two hours off the former three-hour journey there and back.

Count up the extra half days that a Ford will save you

during the rush of seeding, haying and harvest. You will find that the Ford will save you a week or more of valuable time on your necessary trips alone.

Many times you will want to take some produce along with you. Then your staunch

Ford is ready to carry a load of 1000 pounds. How handy this would be!

Once you own a Ford and find out the many ways you can use it for business and pleasure you will wonder how you managed without it.

The Ford is an economical investment, and a necessity on every farm.

Registered Marquis Wheat

We have a small quantity of choice registered Marquis Wheat left over from our big seed grain competition. This wheat was carefully selected from the best grown in the Prairie Provinces. It is all first generation, that is, grown from hand-selected seed, guaranteed to be absolutely pure in variety, free from all noxious weed seeds, plump, free from frost, and germinating 95 per cent. There is no better seed available for a small seed plot of from a quarter to two or three acres from which to grow the seed for sowing a larger acreage next year. Any person who wishes to become a member of the Canadian Seed Growers' Association may use this seed as foundation stock and become eligible for membership. This wheat is all put up in 20, 40 and 80 lb. sacks, inspected and sealed by an expert Inspector of the Seed Growers' Association, which guarantees the quality. The price at which we will sell this seed, sacks free, is: 20 pound sack, \$1.40; 40 pound sack, \$2.00; 80 pound sack, \$3.00.

With each order we will send instructions prepared by Seager Wheeler for preparing the seed plot, taking care of the grain, hand selection in the fall, threshing and maintaining the standard of quality. We have only a small quantity and orders are limited to 5 bushels each, orders to be filled in the order in which they are received.

\$15,000,000 Loss through Smut —

J. H. Grisdale, Director-General of the Experimental Farms for Canada, estimated the loss by Smut in the whole of Canada in 1914 at fifteen million dollars.

In view of the greatly increased acreage in the West in 1915, it is probable that the loss through Smut very greatly exceeded fifteen million dollars for the whole of Canada in 1915.

FORMALDEHYDE

The only effective treatment for Smut in all grains

OTHER USES

Potato Scab.—Make a solution of one pint (1 lb.) of Formaldehyde to 30 gallons of water. Soak the seed potatoes for two hours, then cut for planting. Disinfect bags also to prevent re-infection.

N.B.—Treated potatoes not used may be fed with safety to livestock.

Onion Smut.—Use one pound of Formaldehyde to 25 gallons of water. Sprinkle seed and cover to retain fumes for few hours, then dry and plant.

Kills Flies.—Mix 90 parts of water to 10 parts of Formaldehyde and 2 parts of sugar on flat saucer. Place sponge in middle of solution. This mixture attracts and will kill flies almost immediately after drinking. Renew mixture every few days.

Purifies Stables, Stalls and Milk Cans, Kills Disease Germs in Kennels, Chicken Houses and Clothing, Deodorant for Refrigerators, Sinks, Drains and Cesspools.

See Article in this issue for other uses of Formaldehyde

Formaldehyde Kills Germs

Great Britain looks to Canada for her food supply. The Government of Canada requests increased food products. Formaldehyde will increase your yield per acre, improve the quality of your grain and command a higher price.

Seed Treatment for Disease

Formalin, Bluestone, Hot Water Treatment

By Prof. J. Bracken, Saskatchewan University

The Formalin treatment when properly applied and used annually will control the covered smuts of wheat, oats and barley and the loose smut of oats, providing infection by spores from "smutty" bags or other containers after treating is prevented. It will also aid in the control of flax wilt.

Formalin is a trade name for a 40 per cent solution of formaldehyde. One pound (16 ounces) of this solution will

but is not satisfactory for the smuts of other crops nor for flax wilt. If this treatment is to be used, five pounds of the commercial quality copper sulphate should be dissolved in fifty imperial gallons of water, by suspending it in a bag for a period of eight to twelve hours in a barrel of water. With bluestone, either "dipping" or "sprinkling" may be practised. The same care should be taken to remove smut balls and to insure the wetting of the whole surface of all seeds. If the seed is "dipped" it ought not to be left in the solution for more than two or three minutes.

Some precautions are necessary in using formalin and bluestone.—The strength of the solution used should be neither greater nor less than that given above. The seed should not be allowed to freeze hard while wet or the germination will be injured. Grain that has been treated with bluestone should be spread out in a thin layer to dry immediately after the operation. If treated with formalin it should be covered for a period of three hours after treatment, and then permitted to dry as quickly as possible. If allowed to remain damp for too long a period the vigor and germination become impaired. Generally speaking, seed grain should not be treated very long before it is sown. In actual practice, treating the day before it is needed is the common rule; the longer it is left unsown after being treated, the less vigorous the germination. This is particularly true if bluestone is used. Every care should be exercised to see that "treated" grain is not reinfected by being handled in smut infected bags. Treating grain increases its bulk, and of course allowance for this should be made when sowing.

Many machines for the treatment of grain for disease are on the market. They are good insofar as they facilitate the speed of the operation and at the same time insure the wetting of the entire surface of each seed. The suit-

stirred in forty imperial gallons of water gives the proper strength for treating cereal grains. The seed may either be "dipped" in this solution, or it may be put in a pile on the floor and "sprinkled" with it.

Gives the right strength of solution, only two other things are essential to kill the spores: (1) the unbroken smut balls must be removed either by the fanning mill or by "floating" them off the surface of the liquid—the solution will not penetrate to the centre of an unbroken smut ball, hence this precaution must be taken to remove them—and (2) the entire surface of each seed must be moistened.

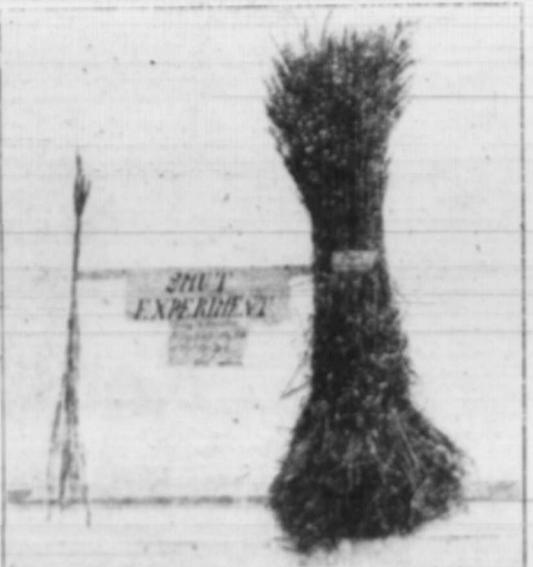

If the seed is "dipped" it should not be left in the solution for more than four or five minutes before being removed and spread out to dry. Formalin does not weaken in strength as is ordinarily supposed, and may be used as long as the supply lasts.

If the grain is "sprinkled" about one gallon per bushel should be used. As the solution is being applied, the grain should be shoveled or turned over and over in order to insure uniform and thorough moistening of the whole surface of each grain. After sprinkling with formalin the grain should be heaped up in a pile and covered with bags or blankets for about three hours, when it should be uncovered and spread out thinly to dry.

In treating flax, the sprinkling method should be used. A very fine spray is preferred and the seed should be stirred continually as the liquid is applied. All other operations are similar to those followed in treating wheat with the exception that flax must be raked over occasionally as it dries in order to prevent the seed "caking" or clinging together in lumps and thus causing trouble in the drill.

The Bluestone Treatment

The Bluestone treatment will control the covered or smutty smut of wheat,

1.—The Formalin treatment controls "Bust," "Covered," or "Stinking" Smut. These two sheaves are from treated seed. The little sheaf shows the proportion of diseased plants from treated seed.

2.—Two sheaves from untreated seed. The sheaf on the left shows the proportion of diseased plants from untreated seed.

ability and durability of the various makes are usually not difficult to estimate.

The Hot Water Treatment

The hot water treatment will control all the smut diseases of cereals, but is very laborious and time consuming. It is only advisable for the smuts the other treatments will not control, viz., the loose smuts of wheat and barley. In

March 28, 1917

ease

the smuts of wheat and barley is outlined as follows:

"Preliminary Treatment—Bring the temperature of a quantity of cold water in a barrel or tank up to 86 F., pouring in hot water until the thermometer registers 86 F. and not more nor less. Use a reliable thermometer. Fill the grain bag three-quarters full with grain and tie it up loosely. Immerse bag with grain into the water, moving it up and down several times. Allow grain to soak four hours. Should the temperature sink below 68 F. allow five hours for soaking. Treat preferably in a heated room to avoid the inconvenient fall in temperature of the water.

"Final Treatment—Bring the temperature of water in a second barrel up to 112 F. Remove bags with grain from the "soak" and transfer to the second barrel. Keep immersed for 15 to 20 minutes. Meanwhile have water in a third barrel brought up to a temperature of 129 F. After the 15 to 20 minutes in the second barrel, transfer the grain quickly into the third barrel. Here the grain remains a further 10 minutes. Under no circumstances extend the time stated, or shorten it. Neither be careless or disregard accuracy of temperatures, or the treatment will not be successful. Should the temperature in the third barrel sink below 122 F. after the grain is put in, raise the temperature by carefully adding hot water from a sprinkling can. Never pour hot water directly on the grain. The larger the volume of water the more easy it will be found to maintain the temperature. After the 10 minutes in the third barrel have expired, take out the grain, drain and spread out to dry."

Cleaning Seed Grain

Continued from Page 17

into a box. The cylinder rotates on an incline which causes the grains that are not elevated into the pan, to gradually tumble downward until they reach the perforated band and drop thru the large holes into a receptacle. In the first section the oats, barley and extra long grains of wheat are separated from the normal length grains and in the second section all grains shorter than the normal length ones are removed.

I may also say that just beneath the pan mentioned before are small scrapers attached flexibly on a steel rod which are so arranged that they scrape off any grains that might have a tendency to remain within the pockets when it is desired to have them removed. By raising or lowering the pan slightly a variation may be made, either more or less can be elevated as desired. This mill is superb for removing such seeds as wild oats, vetch or buckwheat.

Grading The Wheat

The wheat, after leaving the mill mentioned is elevated to the grader on the floor above. The first section screens out any bran or split grains that may have passed over the screen in the fanning mill below. The second section takes out a grade of wheat slightly larger than the first section, and the third section removes all but the very largest kernels, thus four distinct grades are made and each is dropped into a hopper from which a spout leads into bags attached below. The bag containing the seed wheat rests on a scale, which aids the operator greatly in weighing the cleaned grain without lifting the bags.

I use a six horse power gas engine which furnishes ample power to operate all the machinery mentioned, besides an eight inch burr grinder.

GET THE EIGHT HOUR DAY

Washington, D.C., March 19.—The Adamson eight-hour railroad law was held constitutional and valid in all respects today by the supreme court.

The decision makes eight hours the standard of a day's work and wages for men in operation of trains, and legalizes the wage increases which went into tentative effect on its passage.

This decision of the supreme court came at practically the same hour as the yielding of the railroad managers to the demands of the railway brotherhoods for the recognition of the eight hour as a basic day.

Dairy, Limited

The Connecting Link

Selling Cream to us has brought Prosperity to thousands of Farmers

The E.C.D. Cream Can is a link between the homestead and the modern farm home. Write us for information.

Edmonton City Dairy, Ltd., Edmonton, Alta.

By the terms of the settlement, the combined salary list of the railroads will be increased approximately \$60,000,000 a year, according to conservative estimates. The number of workmen profiting by this increase will be more than 300,000.

That the crisis resulting from the sinking of the three U.S. ships by German submarines was the prime factor in clearing the situation and restoring the country to normal conditions insofar as its transportation facilities were concerned, was conceded by all.

The Agreement

The agreement signed by the representatives of the brotherhoods of the roads and by the railroad managers reads as follows:

"In all road service except passenger, where schedules now read 100 miles or less, nine or ten hours or less, overtime at 10 or 11 miles per hour, insert 'eight hours or less for a basic day and 12½ miles per hour for a speed basis' for the purpose of computing overtime.

"Overtime to be paid for at not less than one-eighth of the daily rate per hour.

"In all yard service switching and hostelry service, where schedules now read 'ten, eleven or twelve hours or less shall constitute a day's work' insert 'eight hours or less shall constitute a day's work at present ten hours pay.'

"Overtime to be paid for at not less than one-eighth of the daily rate per hour.

"In yards now working on an eight-hour basis, the daily rate shall be the present ten hour standard rate, with overtime at one-eighth of the present standard daily rate.

"For all classes of employees in passenger service where the rule now reads 'eight within twelve hours' it will be amended to read eight within ten hours."

The organization which has effected this change in U.S.A. is an international one and it is thought only a matter of time until Canadian operators demand similar concessions. That the railroads will resist it is a foregone conclusion.

SWEET PEAS

Sweet Peas are one of the fine flowers and they do exceptionally well in Western Canada. They grow to a height of four to six feet so need a trellis to climb on. Poultry netting is fine for this. Protection from winds is also important. The Sweet Peas should be planted as soon as the soil can be worked. Plant the seed in a trench five to six inches deep. Cover an inch or two and then fill the trench as the plants grow. The blossoms should be picked every few days. If left on till pods form the plants will stop blossoming.

Most people either raise twice as many chickens as they should or provide half enough brooding equipment. Plan your equipment for the worst weather than can be expected.

Long, pointed, short, round, thin or too thick shelled eggs should not be used for hatching purposes.

Farm Management

This is a vital subject to every farmer who is anxious to make progress, provide himself with a better home, educate his children and enjoy some of the comforts of life. The book entitled "Farm Management," by G. F. Warren, is regarded by all authorities as the very best information on the subject of farm management that has yet been published. The author has made a life-long study of the success due to the proper management of farm business.

Probably seventy-five per cent. of the farmers in Western Canada are losing anywhere from \$100 to \$500 per year, according to the size of their farms, by not applying the best business methods to their work. How many farmers are able to tell how much money they are making out of their farm and which branch of their farming operations is paying the best return? No matter whether a farmer is engaged in grain growing, livestock dairying or any other system of farming, he will find it dealt with in this book.

Perhaps the most valuable portion of the book is that showing farmers how to keep simple records and accounts. This matter is set forth so clearly that even the most ignorant farmer can take a notebook and pencil and work out a system of book-keeping that will show him whether he is making a profit or loss and which department pays him the best.

E. R. Hailettar, Trochu, Alta., a farmer who purchased this book from us, says: "I find it a work of unusual excellence and merit; it is clear cut, direct and full of material needed by any up-to-date farmer who hopes to succeed in climbing on to a green branch of prosperity. Indeed this is a masterly treatment of the subject, and I confess that I would not do without it for ten times the price. It contains 600 pages, is printed in large type, well illustrated, fully indexed and handsomely bound. Postpaid \$1.90

Management of Mare and Foal

Before and after foaling—Caring for weak foals—Preventing Navel Ill

By Dr. C. D. McGilvray, Winnipeg, Man.

The average period of pregnancy in the mare is eleven months, though some mares normally exceed that period by two or three weeks. The foal that is born at a period of two or three weeks less than the eleven months is, on its arrival, often weak and lacking in vitality.

Throughout the period of pregnancy there is ever present the possibility of influences intervening which may produce abortion. By "abortion" is meant the premature expulsion or delivery of the foal at a stage when it has not attained sufficient development to live external to its parent. It is generally admitted that with some mares there is apparently a predisposition to premature delivery, and a trifling cause may make them abort or cast the foal before the proper time. Others, tho exposed to the same influences, may not.

Abortion may result either from accidental causes or thru the agency of disease germs. The causes of accidental abortion are numerous, but the way in which many of them operate in caus-

ing premature expulsion of the foal is not fully understood.

Thus adverse weather conditions and irregular seasons, and certain odors, such as the smell of fresh blood, are considered as predisposing influences. There is no doubt that food of bad quality, especially when damp or damaged by the presence of moulds, rusts and snouts, is particularly injurious. Direct injuries, such as kicks and blows to the abdomen, or excessive exertion, especially after a long period of idleness, are liable to produce abortion. Severe straining at heavy loads should always be avoided, as not only is it liable to produce immediate abortion, but may cause an altered position of the foal, which may subsequently cause difficult delivery, with serious results to both the mare and foal.

Poorly fed and neglected animals frequently abort, yet perhaps not any more frequently than those which are kept pampered and fed too abundantly on stimulating food, with little exercise. Over-feeding and too high a condition with consequent fullness of blood, may lead to a congested condition of the womb, with bad effects.

Diet of Pregnant Mare

In the general care of the "in-foal" mare there are certain factors which should be observed. The food supplied should be of good quality, easy of digestion, and of such a nature as not likely to cause constipation. Damaged or spoiled fodder, and that of a bulky, coarse, indigestible nature, should be avoided. As habitual over-loaded and constipated condition of the bowels tends to cause straining, which may become harmful.

The diet should be such as to make for normal conditions, such as would prevail under natural conditions where mares are on grass. This means that the mare should have opportunity to exercise, and be fed on laxative foods, or, if grass is ready, be in pasture. When mares are to foal before grass is ready, a laxative condition may be secured by feeding bran and roots if they are at hand. As the mare nears foaling time, she should get a more limited quantity

of roughage, and the quality should be good. If sheaves, hay, or straw are fed, the amount should be cut down to about three-quarters of what she usually eats, and if clover or alfalfa hay is at hand it may be fed in limited quantities. Most mares may be wintered with very little grain, especially when they get sheaves, but as foaling time approaches they should get about six pounds a day of a mixture of half ground oats and half bran, and some salt. Cutting down the roughage, and giving the bran with plenty of exercise or work, should keep the mare in good condition.

Moderate, regular work is a positive benefit to in-foal mares, whereas idleness often contributes to weakness in the foal and difficulty in foaling. Mares receiving ample exercise have the normal functions, digestion and elimination, stimulated, and this in turn makes for the more natural performance of the function of giving birth. It is particularly important that mares which are disposed to be sluggish be made to exercise thoroughly.

A condition quite frequently met with in pregnant mares, particularly during the late winter months and early in spring, when kept confined in the stable and deprived of sufficient exercise, is the appearance of what is termed "edema," or dropsical swellings of the limbs and under surface of the belly. It may result from pressure of the gravid womb on the blood vessels, and an anæmic condition of the system, commonly known as a watery condition of the blood. The swelling commences usually at the lower part of the hind legs and gradually extends upwards. The front legs may also become affected and the swellings extend along the under surface of the belly from in front of the udder or bag towards the breast. These swellings sometimes cause inconvenience and difficulty of movement to the mare. However, the condition in most cases is not a serious one and can be remedied by exercise and hand rubbing of the swollen parts, or bathing them with hot water. In those cases the mare should be made to take exercise during a reasonable period each day. The swellings invariably disappear of their own accord a few days after foaling.

Pregnant mares should not be given large quantities of ice-cold water to drink, nor fodder coated with white frost, as the fetus is extremely sensitive to the action of cold when thus introduced. The cold induces activity of the fetus, or unborn foal, and encourages premature contractions of the womb.

As a rule the use of drugs should be discouraged unless actually necessary for the cure of disease. Above all, extreme caution must be exercised against the use of severe physics in pregnant mares. If the bowels are constipated, it is much better to endeavor to correct by diet of a laxative nature, such as bran mashes and linseed. Colicky pains are sometimes observed at intervals in some mares during pregnancy. If the attacks are slight, it is better to resort to simple means of treatment, such as applying hot cloths to the belly and injections of warm water, and avoid the indiscriminate use of drugs.

Good grass pasture make the best environment for the mare and foal. When mares fail before grass is ready bran and roots are an invaluable part of the diet.

**There is
DEATH
for a Gopher
in every
grain that
is Poisoned
with**

"GOPHERCIDE"

(SOLUBLE STRYCHNINE)

"Gophercide" is a unique preparation of strychnine, specially devised to exterminate gophers with the least possible trouble or waste.

While retaining all the deadliness of strychnine, it has been made many times more soluble, so that preparing the "gophercided" grain is very easy. No vinegar or acid is needed—just warm water—and the solution obtained soaks readily through and through the grain, leaving no trace on the outside of the deadliness within. Even if exposed for some time to the weather, the poison stays in every kernel, and no matter when the gopher gets it, he will trouble you no more.

crushed oats should be withheld and only the bran given.

If, owing to difficult delivery, any wounds or injuries have been inflicted to the walls of the passage, they should receive immediate attention, and be cleaned with warm water to which should be added a little creolin or carbolic acid.

If the membranes, or "after-birth," are not expelled soon after delivery of the foal, or within twelve hours, they should be carefully removed, and for this operation a qualified veterinary surgeon should preferably be obtained.

In cases where parturition in the mare has been difficult and prolonged, and after delivery straining is still noticeable, or the mare shows signs of prostration and collapse, skilled advice and help should always be obtained as soon as possible to prevent unfavorable results.

Care of the Foal

Beginning with the time it is born, if it has been expelled in the infant membranes, it should be freed from them immediately, otherwise it may be suffocated. If the mother does not commence to clean the foal by licking its skin, she may be encouraged to do so by sprinkling a little bran or salt on the body of the foal. Should this not induce her to do so, then the body of the foal should be well rubbed with a cloth or a wisp of hay until completely dry.

A condition sometimes encountered in the foal at birth is that of suspended breathing, in which case it may be noticed to be lying apparently lifeless, or making feeble attempts at breathing, and unless breathing is speedily established death may result. To avert this, haste is necessary. The fingers should first be inserted into the nostrils and mouth, and any mucus or phlegm which may have collected should be removed as its presence is often a hindrance to breathing. The mouth should also be slightly opened, and the tongue grasped with the fingers and gently pulled forward a little, as sometimes it may be found impeding the throat cavity. Blowing into the mouth and nostrils and slapping the head and chest with the hand or with a cloth dipped in cold water are of benefit to stimulate breathing. The body may also be raised in such a manner as to cause the head to be at a lower level, in order to send the blood to the brain. As a means to this end, it is customary to take hold of the hind limbs and keep the body suspended head downwards for a short time. In addition, artificial respiration can also be resorted to by moving the limbs slowly backward and forward and alternately compressing and relaxing the walls of the chest.

Preventing Navel Ill

Attention should also be directed to the navel cord, and if it has not been severed it should be severed by scraping thru with a clean knife, about two inches from the body. Opinion seems to be divided as to the advisability of tying the navel cord, and it would appear, under ordinary conditions, that there is no particular necessity for tying it. When it is deemed advisable to do so, the precaution should always be taken to make use of a piece of string which is absolutely clean, and which has first been soaked in an antiseptic solution, such as clean water to which has been added a little carbolic acid. It must always be kept in mind that the severance of the navel cord, whether by artificial means or not, affords a ready entrance for disease-producing germs, and on that account all precautions must be taken to protect the navel from dirt contamination and infection. The value of such precautions is well recognized, and they are indispensable factors tending to prevent that scourge of foal life known as "Navel Disease" or "Joint Ill." Towards this end the navel of foals at birth, and for a period of at least a week thereafter, should be protected against all possible sources of dirt contamination. The navel and the skin surrounding it should be treated daily with an antiseptic solution, such as a three per cent. solution of creolin or carbolic acid, or painted over with tincture of iodine, which is no doubt the best. If nothing else is available, it can be smeared with oil of tar. In treating the navel one must avoid touching it with the hands until they are perfectly clean. A very good way

is to place the antiseptic solution in a clean cup and when the foal is standing hold the cup up against the belly and allow the end of the navel to remain immersed in the solution for a few minutes. An additional precaution can also be afforded by applying a bandage covering the region of the navel and securely tied and fastened up over the back to keep the bandage in place.

The stall in which the mare and foal are kept should be maintained in an absolutely clean condition, with plenty of clean bedding. In some cases where the navel cord has been severed or torn off close to the body, bleeding may take place, and while it may not cause death, yet it may be sufficiently severe to endanger the life of the foal. When the bleeding is slight, it may not continue very long, but, if profuse, steps should be taken to check it. If the cord is sufficiently long, it can be ligated or tied firmly with a piece of clean string, which has first been soaked in a solution of carbolic acid or creolin. If cut or torn off too close to the body to permit of tying, the bleeding may be checked and arrested by applying powdered alum or tannic acid, or, in an emergency, by dusting over thickly with dry flour, and applying a bandage over the navel so as to compress it.

If the foal arrives in a strong and healthy condition, it will soon begin to tumble about and make repeated attempts to get on its feet; and, so doing, will begin to find its way to the dugs or teats and start to suck. If, however, it arrives in a weakened condition, or lacking in vitality, it may be unable to stand or support itself on its legs. In this case the mare can be milked by hand and the milk fed to the colt from a bottle every hour or so. Whenever an attempt is made by the colt to get up on its feet, it should be assisted and held steadily until it gains confidence in itself. Where the inability to stand is due to weakness of the ankles, the fetlocks and pasterns can be supported by means of bandages, or, better still, leather supports, laced around and padded with cotton or muslin to prevent chafing the skin.

In all cases, as soon as the foal is able to walk, and weather conditions are favorable, both it and the mother should be turned out to pasture, as exercise and outdoor conditions are more conducive to a state of health. Under ordinary conditions, if required, the mare can again resume moderate work in the course of a couple of weeks after foaling.

The above article is available in Bulletin form and can be had by writing the Publications Branch, Department of Agriculture, Winnipeg, and asking for Bulletin No. 11, on Management of the Brood Mare and Foal.

Farm Tree Plantations

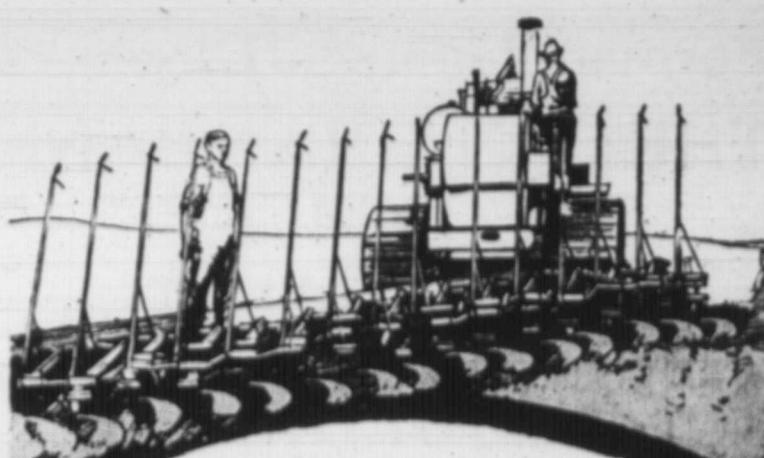

Continued from Page 9

opening new drains and thus allowing the sun, the wind and gravitation to rob the earth of its water supply.

In some districts in Manitoba cattle raising has had to be abandoned owing to the lack of water and individual farms here and there have also been abandoned because the soil has become so dry that grain raising is no longer profitable.

There is a great difference between farm life on the open windswept prairie and on the well sheltered farm. The shelter belt is not only an economic advantage, but it is comforting to man and beast. I know sheltered farms on which the cattle lie out on the stormiest days that come and feed at the straw pile in comfort, because the farm is well protected by the woods. There is no doubt that Manitoba will yet be treed. The only question is when are we to do it? Now is the time to make a beginning right now, this year. Don't put it off.

Currants grow to great perfection when good varieties are planted and given good care. The Perfection, Fay's Prolific, Red Cross and White Grapes are good varieties. Plant these at least four feet apart in the row and keep them well cultivated and free from grass and weeds; each year cut out oldest canes. Ten to twelve canes is enough for each bush. Remove two or three of the oldest canes each year. Some protection as a windbreak will be a great aid to the currant.—N.D. Agricultural College.

Choice Farm Lands

WILD AND IMPROVED FOR SALE

We own and have for sale thousands of acres of improved and raw lands in the recognized wheat districts of Saskatchewan, viz., Zemeta, Estevan, Broadview, Grenfell and Young, Sask. All of our lands were carefully selected several years ago; soil is best; distance, one half to eight miles from good towns, on main lines of Canadian Pacific and Grand Trunk Railways.

We only want First Class Successful Farmers who can make good if given the easy terms we offer. No others need apply.

At Zemeta and Young, Sask., we operate two big wheat ranches of several thousand acres, and buyers of our farms located near those ranches are welcome at all times to consult our Superintendents.

We are not simply in the real estate business, but our large permanent interests in Western Canada make us vitally interested in the personal success of every farmer who buys our farms.

Our prices and terms to right parties will be found very reasonable. Crop payments if desired.

Buying Government Bonds

Backed by the Taxing Powers of the Government they are Safe

By J. A. Anderson

In discussing the question of satisfactory investments for farmers, the educative features of the domestic war loans issued by the Government of the Dominion of Canada cannot be overlooked and their effect should be lasting and highly beneficial. Many farmers have subscribed to these loans solely from the patriotic motive of assisting to make the loans successful, and have thus for the first time ventured into what may rightly be termed the high class investment field.

The feeling of security, together with the satisfactory interest return which possession of these bonds give, will inevitably create a desire for further investments of a like character, and it is in the creation of this desire and its eventual satisfaction that we look for the greatest benefit to accrue to those farmers so fortunate as to have been able to participate. That this much good has already been accomplished is without question, but if the value of it is to spread, individual farmers must learn to discriminate between good bonds and bad bonds.

Broadly speaking, the highest class of investment is limited to bonds backed by the taxing power of the government, whether federal, provincial or municipal, which issues them. The interest return in this field is so satisfactory, and the conditions of issue as to length of term, denomination of bonds, place of payment, etc., so varied that we see no reason why farmers should not be strongly advised to limit their purchases for investment to bonds backed by this essential taxing power.

Even in this field there is a wide variance in the value of bonds issued by the various authorities, but the measure of risk can usually be safely determined by the interest yield, and where the yield is high, greater caution is required in purchases.

Naturally the business of buying and selling bonds centres in the larger cities, but as there is no more mystery about the business than in buying and selling wheat, the same procedure can be safely followed—buy your bonds thru recognized brokerage houses—these houses to continue in business must sell you good bonds and if your purchases are confined to bonds backed by the taxing power before mentioned, you are indeed unlikely to be led astray.

Banks Collect Interest

In surveying the field in which to make your purchases, no hesitation need be felt in purchasing bonds of cities, towns or governments away from home—no difficulty will occur in the collection of your principal or interest, as our Canadian banks are fully equipped for such work, and all it is necessary to do is to hand the coupon for your interest, or the bond itself, if collection of principal is involved, to your local bank and by paying a very small charge, usually one-eighth of one per cent.—the collection will be effected.

We will attempt to give herewith a short list of securities which will indicate a wide range of good bonds together with the interest return thereon, and an approximate price at which they may be purchased.

NAME OF SECURITY	Date of Maturity	Present Selling Price	Interest Return
Anglo-French	Oct. 15, 1920	about 92½	7½%
United Kingdom of Great Britain and Ireland, 1-2-3-5 year secured gold notes	Sept. 1917 to Nov. 1921	95 to 98½	7½%
Dominion of Canada 5%, 10-15-20 year bonds	1925-1936	96½ to 97½	5.30%
Province of Saskatchewan	1923	93	5.35%
Province of Alberta	1926	98	5.1%
City of Winnipeg	1933	86	5.35%
City of Moose Jaw	1954	89	5.75%
Town of Dauphin, Man.	1917-1933	100	5%
Rural Telephone Bonds	1932	105	6½%

Many other examples might be given but the above is sufficient to indicate a considerable range of different securities and their values. It must not be inferred that it is necessary to hold these to maturity—on the contrary, there is a ready market for them, and they can be disposed of at almost any time.

This is the class of bonds which, if our farmers would confine their purchases to would stop the large loss which now annually occurs among farmers by the purchase of stocks of unknown companies, for the exploitation of unknown patents, the development of unknown mines, the planting of distant tropical countries, and other unproductive products of the glib promoter or stock salesman.

SUCCESSFUL CO-OPERATIVE STORE

In 1913 the firm operating the country store at Leo announced its intention to close up on the first of the year. A few of the customers of this store realizing what inconvenience the closing up of the store would bring to themselves and the community succeeded in obtaining an option on the merchandise of the firm and the promise of a lease of the buildings, and called several meetings where it was decided to take advantage of the new Alberta Act re co-operative associations. Statutes of the association were drawn up and all requisites of the law fulfilled. The statutes provide that the shares would be of \$25.00 each, but that a member had to own two fully paid up shares before any profits could be withdrawn. While we were anxious to secure as many fully paid up shares as we could, we first accepted a cash payment of \$10.00 and a note for the balance in order to give a chance to anybody to become a member.

Business Organization

We have five directors who are elected for eighteen months, two, -two and one going out every six months unless re-elected by the general meeting. This leaves always a majority of the board well acquainted with the business. Twice a year we have a general meeting where only members, owners of at least one fully paid up share, can vote. No proxy is admitted, and a member has only one vote regardless of the number of shares he may own. The shares when fully paid up receive an interest of 5 per cent. per annum. After such payment 10 per cent. of the remaining profits are put to the general reserve and the disposal of the 90 per cent. is decided upon by the meeting, which decides if it will be kept in reserve or paid out. If paid out it is distributed between the members on the percentage of their dealings according to the Rochdale principle.

Of course the organizers had to work hard for the organization and after three months succeeded in placing twenty-three shares or \$575, and as the goods in the store amounted to \$4,780 this was not very encouraging. But they succeeded in making an agreement with the vendors by which they would pay out of the profits.

Following are the figures of the business:

Sales Amount	Net Profits
Jan. 1 to June 30, 1914	\$ 3,839.72
July 1 to Dec. 31, 1914	11,095.67
Jan. 1 to June 30, 1915	13,155.38
July 1 to Dec. 31, 1915	14,744.69
Jan. 1 to June 30, 1916	14,844.25

Total profits \$6,111.74

meeting of February, 1916, has decided that in order to increase our working capital all profits which otherwise would have been paid in cash would be paid in ten year bonds bearing 8 per cent. interest. This conservative policy has been eminently conducive to the good credit one enjoys on the market.

I may add that only members get a dividend, the less number of members the bigger is the dividend. The first dividend with only a few members was 30 per cent., the second one 14 per cent. and the next ones 10½ and 10 per cent.

We sell at prices prevalent in our vicinity. We do not think it a good policy to cut prices and so put ourselves in trouble with the wholesalers. We aim to make our business a real sound business and do not discount profits which might not realize.

Support of Bank

We have now entirely paid our vendors and we have no difficulty in obtaining from our local bank sufficient advances in order to get most of the discounts on our purchases. We carry about \$8,000 of stock and our sales are increasing from month to month. From the start we had, and have had, a very good manager, and this is a very important item.

We do not give a partial dividend to non-members, but we admit anyone who will make even so small a deposit as one dollar so no one has any excuse for not becoming a member, and by this policy we see our capital increasing constantly as the deposit of one dollar insures us that \$49 of profits will stay in the business in the course of time. There is in our mind no question that if we were situated in a town with railroad facilities our business would increase considerably, and we are satisfied that what we did others can do in any place where 150 to 200 customers can be counted upon.

We shall always be glad to help by our advice and our experience any association who might wish to start, as we are satisfied that the real good will only be attained when there is enough of these small associations to form a sort of federation whose buying power would have to be recognized.

T. GEORGES FIGAROL,

Ed. Note.—The Guide will be glad to hear of and publish an account of any co-operative business operations, successful or otherwise, that any of its readers can supply.

FARMERS GET MONEY AT 5%

Washington, D.C., March 19.—The farm loan board announced today that the interest rate on all loans made to farmers throughout the country by federal land banks would be five per cent.

A rate of four and one-half per cent. on bonds to be issued by the land banks also was officially announced.

FORD TRACTOR FAKE

Recently a tractor company, called the Ford Tractor Company, Inc., of Minneapolis, has been advertising stock for sale. A considerable number of pamphlets, leaflets, etc., regarding this company have been distributed thru Western Canada. Therefore a wider knowledge of the operations of this company should be welcome to farmers. After many requests from newspaper publishers and other members, the Associated Advertising Clubs of the World, thru their Vigilance Committee, investigated thoroughly this company and have prepared a report on it, issued February 23, 1917. The report is substantially as follows:

The Ford Tractor Company of Minneapolis has an authorized capital of \$10,000,000, of 1,000,000, \$10 shares. Of this \$1,000,000 is preferred stock. The stock is being sold by New York brokers, Robert P. Matches & Co., thru newspaper advertising and direct mail circulars. There is absolutely no connection between this company and the Ford Motor Company, of Detroit, manufacturers of Ford automobiles. The tractor being advertised by the Ford Tractor Co. is not the tractor Henry Ford & Son are said to be designing, nor have Ford & Son had anything whatever to do with the tractor of the Ford Tractor Company.

The name Ford was obtained by searching the directory of the city of Minneapolis, where the name Paul Ford was found by W. B. Ewing, the organ-

The Miniota Farmers Mutual Fire Insurance Company of Manitoba

Head Office : Beulah, Manitoba

Licensed to do business in Manitoba and Saskatchewan

31st Annual Statement

The Miniota Farmers Mutual Fire Insurance Company's report for the past year again shows a considerable increase in amount of business, and also in assets.

The increase in the amount at risk is the greatest since the Company commenced doing business. A considerable percentage of this increase came from the Province of Saskatchewan, where a number of new agents have been appointed during the last two years, who have been forwarding us good sound business.

The amount at Risk on December 31st, 1916, was \$19,044,226.00, as compared with \$16,480,546.00, as shown in last year's report, being an increase of \$2,563,690.00. The assets amount to \$363,140.71, being an increase of \$37,557.48 over those of 1915. The cash assets amount to \$78,837.65, being an increase of \$1,734.11, over the Report of 1915.

Losses of 1916 have been heavy, the total amount paid in 1916 being \$39,622.08. When compared, however, with the large increase in amount of business the loss increase is not excessive.

Notwithstanding the heavy losses, we have not had to raise the annual assessment, which still remains at 15 per cent. of the premium note. This is the lowest rate collected by any Mutual Company doing business in the West today.

The Financial Statement follows:

RECEIPTS, 1916

Balance in Banks, January 1st, 1916	\$16,457.32
Balance in Treasurer's hands, January 1st, 1916	249.17

The Farmers' Phone

Gives Unequalled Service

Stock at Regina

KELOGG Code No. 2839 Farm Line Telephone is especially built for the severe rural line service. It has sturdy, well seasoned, quartered oak cabinet; Kellogg standard long distance transmitter (over two million of one type in use), powerful five bar generator; reliable, durable, receiver with Kellogg Bakelite shell. This telephone gives the most reliable service, with the least amount of repairs. Its use throughout the world proves it the unequalled farm line phone.

We have a stock of these subscriber and profit making telephones at Regina, Saskatchewan, ready for prompt delivery. Here you can buy from us complete supplies, including these splendid telephones and your orders and inquiries will have our prompt, intelligent attention.

Do you need wire, pole or line hardware, tools, batteries, etc., for your spring work?

A selected stock for spring renewals and extensions, with switchboards and telephones, ordered now will mean a saving and enable you to give a better service. Write us today.

We issue a booklet entitled "How to Organize a Rural Telephone Company," and we will forward this on request.

Manufacturers of Standard Telephone Equipment.

REGISTERED MARQUIS WHEAT

We have a small quantity of choice registered Marquis Wheat left over from our big seed grain competition. This wheat was carefully selected from the best grown in the Prairie Provinces. It is all first generation, that is, grown from hand selected seed, guaranteed to be absolutely pure in variety, free from all noxious weed seeds, plump, free from frost and germinating 98 per cent. There is no better seed available for a small seed plot of from a quarter to two or three acres from which to grow the seed for seeding a larger acreage next year. Any person who wishes to become a member of the Canadian Seed Growers' Association may use this seed as foundation stock and become eligible for membership. This wheat is all put up in 20, 40 and 80 lb. sacks, inspected and sealed by an expert inspector of the Seed Growers' Association, which guarantees the quality. The price at which we will sell this seed, sacks from, is: 20 pound sack, \$1.40; 40 pound sack, \$2.00; 80 pound sack, \$5.00.

With each order we will send instructions prepared by Seager Wheeler for preparing the seed plot, taking care of the grain, hand selection in the fall, threshing and maintaining the standard of quality. We have only a small quantity and orders are limited to 7 bushels each, orders to be filled in the order in which they are received.

Address The Grain Growers' Guide :: Winnipeg, Man.

Hardy Western Grown Small Fruits

Fruits like the above can be produced in abundance anywhere in Alberta, Saskatchewan and Manitoba from our hardy Northern Manitoba grown Fruit Trees. We have been in Manitoba since 1891 and sell nothing which will not do well anywhere in Western Canada. Write for our catalog and descriptive price list of Hardy Apples, Crab Apples, Raspberries, Strawberries, Plums, Windbreak, Ornamental and Evergreen Trees. Reference: Bank of Commerce, Dauphin, Man.

Valley River Nurseries, Valley River, Man.

WHEN WRITING TO ADVERTISERS PLEASE MENTION THE GUIDE

izer of the company. This man Ford had never even met Ewing before, but they then and there entered into an agreement by which Ford, in return for certain considerations, was to give full use of the name "Ford." Wholly untruthful assertions were made regarding the accomplishments of Ford in designing the tractor, all of which was carried out by another individual. Ford was to receive a salary and be known as Supervisor of Construction, which position he never filled in actual practice. Ford acknowledged these facts and many more showing the cupidity of this organization.

In some literature which the company circulated pictures of various parts of the so-called Ford plant were shown, which were not views of the Ford plant but views of other plants where some of the work for the Tractor Company was done. The building of the Ford-Tractor Company, which was occupied with another small tractor company, called the M. & M. Tractor Company, was 27 x 48 feet, two stories high.

When the Ford Tractor Company was turning out no tractors whatever, their stock selling literature said, "This company is now working night and day producing Ford tractors. Orders are pouring in from all sections of the world much more rapidly than the company is able to turn out the tractors." They may have had the orders and money, but they were not filling them.

There are all kinds of other facts equally condemnatory of the company. This ought surely to give the public a little idea of the operations of one of these companies. The size of factory is typical of some other tractor companies organized in the past two or three years.

MEAT ON THE FARM IN SUMMER

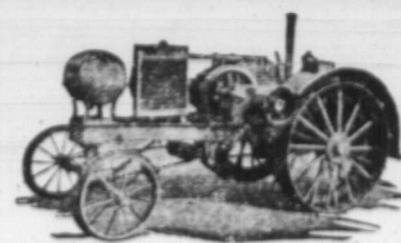

One way to have a supply of fresh meat in summer, if not convenient to the butcher shop, is for a number of farmers to form a Beef Ring. Most of the agricultural colleges issue bulletins that explain the Beef Ring, giving a constitution and by-laws and explaining just how a Beef Ring is operated.

Another way to have fresh meat is to can it. Canning meat is easily done and is proving very satisfactory. The lean meat is cut in pieces that will easily go into a fruit jar. The covers are lightly put on and the jars put into a boiler with a false bottom and water enough to cover the jar. Boil 5 hours if it is beef, pork requires 4 hours boiling and chicken 3½ hours. Full instructions for canning meats as well as for fruits and vegetables were given in The Guide for July 26, 1916.

In making salt pork, first rub each piece with fine salt, the next day cover with a brine made up of 10 pounds of salt and 2 ounces of saltpeter to 4 gallons of boiling water. This will be enough for 100 pounds of pork. Leave in the brine till needed. For hams and bacon rub each piece with salt, the next day pack in a barrel or stone jar, cover with a brine made up of 8 pounds salt, 2 pounds brown sugar and 2 ounces saltpeter dissolve in 4 gallons of boiling water; after cooling pour over the meat. Bacon should be left in the brine 4 to 6 weeks and hams 6 to 8 weeks. There are many ways to improvise a smoke house. One of the simplest is to invert a barrel, suspend the hams and bacon from the bottom by passing a string thru holes in the bottom of the barrel and run a stick thru the loop. Make a fire-place 3 to 5 feet from the barrel and lead the smoke into the barrel with a length or two of stove pipe. Maple wood is regarded as the best fuel. Hardwood is preferable to soft wood. A slow fire is best with a constant fire the meats may be smoked enough in 2 or 3 days. A more uniform smoking is secured when a fire is built once a day and the smoking kept up for a week or 10 days or a fire every other day for 2 weeks. —N.D. Agricultural College.

Cold storage is not the only solution of the egg problem. Early hatched pallets of the very best breeds that begin to lay in the fall is one that promises to make good. In order to "change the dates" on hens an incubator will probably be needed.

Yards sowed to oats furnish hens and chicks material that can be supplied in no other way than by green food in some form.

Waterloo Boy Kerosene One-Man Tractor

Starbuck, Man., Nov. 13, 1916.
Gasoline Engine & Supply Co.,
Winnipeg, Man.

Dear Sirs—As I have now completed my first season's work with the "Waterloo Boy" Model B Kerosene Tractor, I can say I am well pleased with it.

The "Waterloo Boy" Model B Tractor is all you claim it is. I plowed 142 acres of summerfallow and 220 acres of fall plowing, pulling three fourteen-inch plows, at an average depth of six inches, using two gallons of kerosene per acre, one-half gallon of gas engine oil, and two gallons of castor gear oil per day.

I also did some discing this summer, pulling a ten foot double disc, which is a good ten-horse load. It sure is the power for farming.

Yours truly,
JACOB RASMUSSEN.

A Sensational Book!

The author takes off his coat and wades right into his subject with bare facts. He doesn't call a spade a spade. And his subject is one involving the use of unadmirable language! There are 182 pages of it in this book, dedicated by the author to the farmers on the Canadian prairies. It is a study in economic pessimism, admitting that "The farmers expect the farmer by totally disengaged legal authority." The book lays bare the maze in which the farmer is lost and shows him how to find his way out of present difficulties—out of political influences and economic surroundings—co-operation, political influences and the ballot, Banking, railroads, market, transportation and many other important factors are discussed brilliantly and fearlessly. If you want the well told *Answers* and your advice *GET THIS BOOK*.

Good Tubes Are Important

The importance of your tubes must not be judged by their price. For on their efficiency depends to a large extent the life and mileage of your casings.

Every year thousands of motorists shorten the life of their tires through under-inflation. Slow leaks in tubes cause hardly noticeable, but none the less dangerous, under-inflation. And by slow leaks we do not mean a discoverable hole, but the imperceptible seepage of air through the tube itself.

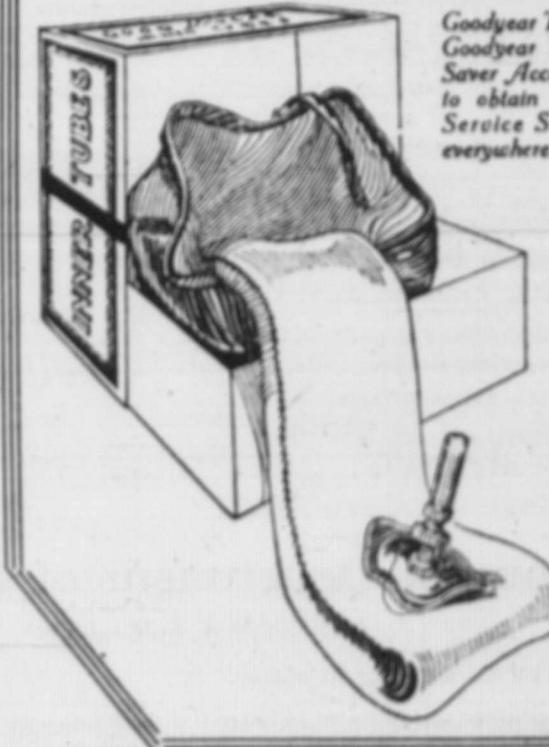

To meet these conditions we produce Goodyear Laminated Tubes. Finest quality rubber is rolled into sheets as thin as the paper you hold. Only in such thin sheets can possible flaws be detected and eliminated. Then the now perfect sheets are built up, layer on layer, into extra thick, extra good tubes.

This quality-giving process and fine rubber are the reasons why Goodyear Tubes hold air longer, give greater service, save tires.

If tire expense seems exorbitant, ask your dealer for Goodyear Tubes.

THE GRAIN GROWERS' GUIDE

(571) 31

better, taking better care of the cows, culling out the poor ones and breeding to the sire most likely to get the kind he wants.

By testing and using a good sire, even if our herd is only grade, its records can be made to compare favorably with some cows that may be pure bred. Some day I hope to have pure bred cows but just at present I am trying to build up a good herd of grades and feel that my efforts have so far not been in vain.

In summing up would say that all who make a pretense of keeping cows should test them. The Department of Agriculture at Ottawa, supplies the record sheets free and a set of scales can be bought for about \$1. Provide the best feed you can to keep your cows milking at least 10 months in a year, such as good green oat sheaves, corn, roots, and even good prairie hay. For meal I find that crushed oats and bran equal parts and fed at the rate of 1 pound of meal to 8 pounds of milk when on pasture and 1 pound of meal to 4 pounds of milk when the pasture is poor or cows are stabled gives pretty fair satisfaction. Of course one must treat each cow as an individual, as each cow will not respond to exactly the same treatment.—J.B.W.

SOW THE BEST SEED

An unsuccessful experience is often more valuable than the reverse. I will pass on one with regard to buying "new seed grain." A surplus of money and a desire to sow the best, accentuated by extravagantly worded advertisements, may induce many to invest in large quantities of new seed. Two years ago I saw a neighbor spend a large sum on a new kind of wheat for a large acreage. It proved unsuitable to the district and was almost a failure; blaming the season he sowed it again this year, with poor results, and is now discarding it after losing two crops on breaking and an initial investment of high cost in seed. It is better to sow one or two acres of any new variety to test its adaptability to local soils and conditions before making any change of seed for the main crop. It has been proved conclusively that there is no benefit in new seed grain thru the change in location. The benefit must lay in purity, regeneration, uniformity and vitality. In several experiments I have found no increase in yield from a similar sample of grain, if obtained from a distance, to that of my own selection. Last season several farmers here purchased flax seed from a seed firm in preference to local stock. The result in each case was a lower yield, and an introduction of two new varieties of noxious weeds. Sow the best, but be more than careful what you sow.

T.W.W.

MAKING BETTER USE OF STRAW

In some places some dairymen make much better use of straw by gathering all the coarse hay left in the mangers after feeding and running it thru a straw cutter and adding enough finely cut straw to make a day's ration for their herd. This finely chopped feed is then allowed to soak for twenty-four hours in a tank filled with crude molasses liquor, prepared by mixing molasses and water in the proportion of one quart of crude molasses to nine quarts of water. Before feeding it is placed on a drain board and the surplus moisture allowed to drain back into the tank. After draining it is better to mix the grain to be fed with the molasses mixture, altho good results can be obtained by placing the grain on the feed in the manger. The molasses used should be a good grade of crude molasses and can be purchased in barrel lots. Care must be exercised in using this feed as it will ferment or decompose in the manger unless it is kept clean. This mixture furnishes a bulky succulent feed and one that is eaten readily by the cows. It will go a long way in providing succulent in the ration where silage or roots are not available.

Imitate nature in hen hatching. Either make the nest in a bottomless box on the ground or put an overturned sod in the bottom of the nest. This assists the hen in controlling evaporation from the eggs.

Have you taken that annual farm inventory yet? It should be taken before the spring rush begins.

"Do your bit"
and make the land
beneath your stumps and willow
brush earn dollars
as well.

use a
Kirstin Stump Puller
"MADE IN CANADA"

With the increasing demand for food stuffs which now exists in Europe the Government has sent out a timely call for increased production and you can "do your bit" at home by making every foot of land produce, not stumps or willow, but crops to feed our soldiers at the Front.

Almost every farm has two or three acres, and possibly several more, of land which have a few deep rooted stumps or willow brush that you haven't been able to pull without a great deal of effort.

Clear up this land—yank out the stumps and pull the willow brush. At the outside you cannot cultivate more than 50% of the average partly cleared piece of ground.

The Kirstin method is guaranteed to clear your land from 10% to 50% cheaper than any other method.

When you buy a Kirstin Stump Puller you get a Guarantee Bond which protects you against breakage—flaw or no flaw—for fifteen years and the helpful advice of our land clearing experts is at your service for all time.

Act now—send for our illustrated book "The Gold in Your Stump Land" and details of our profit-sharing plan—sign the coupon and mail to-day.

Special attention given to health and the needs of delicate and growing girls carefully considered. Good grounds, Tennis Court and Skating Rink. Steam heat and electric light. Perfect sanitary arrangements. Spring term begins April 16th.
WRITE FOR PROSPECTUS

INTERIOR FINISHING OF HOUSES

Many people constantly write to The Guide, asking advice on the interior finishing of houses, both on wood and metal work. Most of these inquiries, so far, are in regard to wood work, altho there is a growing interest in metal as a finishing material. The time to plan the interior finishing of the house, even to the tinting of the walls and the curtains at the windows, is before the contract is let, and the way to set about it is to plan the type of room one wants to have, or that one's furniture permits one to have.

Suppose, for example, one wishes to use the new rough, or sand finish plaster upon the walls—it will have to be so specified in the contract; not only that, but it will determine the type of furniture which must be used in the room. The furniture, ordinarily known as "parlor furniture," and covered with dainty silk brocade would not do at all in such a room. Then, again, substantial oak furniture, and particularly that of the mission style, is most suitable in a rough plastered room. Old mahogany or walnut chairs covered with horsehair could be used if the plain walls of the room are broken up by panels with narrow picture moulding, or if the windows are tinted or painted a deep cream, or a pale buff, using the same shade for the doors and window casing.

The walls can be very well finished by using wall board, instead of plaster and, when properly used, wall board permits of some splendid paneling effects. The walls can also be just as beautifully tinted, or painted, as those of a plastered room. Wall board manufacturers supply very good booklets, both on the material and the manner of putting it up.

Finishing Woodwork.

Oak, or B.C. Fir are most generally used in this country, as finishing wood work. Most houses are finished with a golden oak stain, over which a high varnish is applied. It is not a beautiful finish. Either of these woods finished with a flat stain and varnish, giving a waxed, rather than a glossy appearance, is quite beautiful. Golden oak stain has been so generally used that many people do not know there are different stains which may be applied to wood work, including dark brown, black, silver grey, bronze, and lighter greens. The shade which tones in best with the furniture should be used.

If one wishes to go to the expense, one can use enamel in either white or ivory shades with some wood work. Such a finish cannot be used with golden oak furniture, but could be with mahogany or walnut, or the darker colored oak, but it makes a very pleasing finish and permits of a great variation of wall color, when it comes time for redecorating.

Three kinds of wood are used in the finish of our floors in this country, edge grain fir, maple and oak. All of these woods properly treated make beautiful floors. When hardwood floors first came into vogue they were invariably left the natural color and varnished or waxed, but it was found that this treatment was such a flagrant breach of the law of decoration which demands that the floor shall be the darkest part of the room, that house decorators have universally raised their voices in loud protest against it. The only alternative is to stain the floor before the final finish is applied and the most general choice of color is a light brown, tho there is nothing to hinder a floor being stained a soft green, or grey or any other of the shades in which wood stains can be procured. A stained floor with a dull wax finish is a thing of beauty which the housewife can bring about thru her own efforts. She should see to it, first of all, that the floor is perfectly clean and free from dust, then stain and apply the wax, rubbing it in with a stiff-bristled brush.

There are four popular methods of treating the walls of a room, namely by tinting with one of the cold water preparations, painting with the new dull paint, covering with wall paper or, in the case of sand finished plaster, leaving it the natural grey color. So much has been said in these columns from month to month about the first two of these methods and the excellent results which they give in home finishing that it only

"Business and Law" supplies the necessary legal and business information together with the approved forms for the successful conduct of practical business of every description. This invaluable points on practical law and valuable business helps and hints are arranged systematically under appropriate headings, fully indexed in bold faced type so that the reader can secure the information required with little delay. This work also contains chapters on letter writing, various swindling schemes and how to guard against them, census tables, tables for rapid computation and ready information, and a miscellaneous collection of useful information pertaining to all the business and social relations of life. This book is written especially for the layman, and is easily followed and understood. The internal tables will tell you at a glance the amount of interest on your money, and notes you may have given or received. "Business and Law" will enable a farmer to avoid many costly errors which he might otherwise make in his business undertakings.

The book is nicely bound in Morocco, is printed in plain type and contains 560 pages. Its regular price is \$5.75, but The Guide will send it free and postage prepaid to anyone who will collect two subscriptions (new or renewal) to the Guide at \$1.50 each and send the names of the subscribers and the money collected to The Guide office, or one two-year subscription at \$3.00 will earn this book.

Electric Hand Lamp FREE

Practical, portable, light, safe, sure and always ready.

A full sized sturdy lamp which can be used in the home, around the house or in the barn. Nothing to get out of order. Batteries last four to six months. New ones can be obtained anywhere. \$1.00 in height, can be carried by hand or ball.

This lamp will be sent free and express prepaid to anyone who will collect four yearly subscriptions, new or renewal to The Guide at \$1.50 each, and send the money collected and the names and addresses of the subscribers to The Guide office, or if you can collect a two-year subscription at \$3.00 it will count the same as two one-year subscriptions at \$1.50.

Send your subscriptions to The Circulation Department,

GRAIN GROWERS' GUIDE, WINNIPEG.

MAR.

remains in this article to emphasize once again the splendid service the makers of both these materials render to the householder in providing the most beautiful booklets and portfolios giving suggestions for color schemes. True the object of these portfolios and booklets is to bring their producers more business, but they are just as helpful to the amateur decorator as if philanthropy had been the intention. Good plain wall papers are beautiful but expensive, and nearly all patterned papers are ugly when spread over a good expanse of wall space. Leaving the sand finished plaster its natural grey color can be done very successfully in a sunny room if sufficient color is introduced in the furnishings and pictures to enliven it.

Metal in the House

The main, and practically the only, uses to which metal can be put in interior finishing is on the ceilings and side walls. Metal ceiling is made in a great variety of patterns and many of them are very beautiful ones. Metal ceiling is made to fit any size room. The average size sheet of metal is 24 inches square, the some are 24 x 48 inches. The cornices for arranging the connection between the ceiling and the side walls are all sizes, from 2 inch projections to 12 inches and larger. Metal ceilings are sold by the hundred (100) square feet, covering measure, i.e., to cover 100 square feet when put up.

All manufacturers supply, free of charge, blue prints of plans showing the layout of different panels, moulds, cornices, etc., to assist in erection, and full directions for putting up the metal is furnished with all orders. Practically anyone can put up a metal ceiling, who can use a hammer. It is always advisable to have all ceilings and walls on which metal is to be applied close boarded, tho in many instances metal is put up on strapping with two foot centres. This is not a good practice and, particularly, in a cold climate like Western Canada. Indeed, in this climate, it is desirable to use a layer of paper between the wood and metal. It takes a very short time to erect a metal ceiling.

All metal ceilings and sidings receive one coat of paint before leaving the factory. Usually it takes two coats more to finish the ceiling or side walls satisfactorily. Any color or decoration scheme desired can be used. The paint stays well on the metal and, except in cases of extreme heat, such as during a fire, it does not come off. It can be re-washed after decorating with good castile soap and water or at any time one feels like washing the ceiling.

A metal ceiling, or side wall, is sanitary, very reasonable in price, and is said to effect some saving in insurance. It is also vermin-proof and, to some extent fire-proof. Metal walls and ceilings are used in all classes of buildings, including churches, hotels, schools, stores and residences. Metal manufacturers also supply designs for mantles around fire places and also for bath rooms which can be made very beautiful by painting the desired color. Metal lath is often used at the present time with plaster in the best houses.

It is not the intention of this article to tell the readers how each of their homes should be finished, but to drive home the necessity of having the whole matter settled to the last detail before the first nail is driven. Then, and then only, can the necessary compromise be effected between furniture and wood-work, and between the color scheme and the lighting and between the wall material and the type of furnishing one may have in mind.

Note.—Some of the booklets and portfolios referred to above are supplied to the home-builders free, while for others a nominal charge of fifteen cents is made.

A stout, baggage-laden old English gentleman was trying to make a hurried exit from a railway carriage. At the door he stumbled on the foot of a brawny Scot.

"Hoots, toots, mon!" groaned the Highlander. "Canna ye look whaur ye're going? Hoot, mon, hoot!"

The burdened traveller slammed the door behind him and shouted thru the window:

"Hoot yourself! I am a traveller, not an automobile."

MAN.

Brick Construction

Best and Cheapest

The average man builds two homes in a lifetime. The second one is the permanent investment, and as it will live after him should express the owner's ideas concerning comfort, convenience, beauty, durability and economy of upkeep.

A Red Brick House only will combine these features. Why? Because...

A Red Brick Veneered House is permanent, need not be painted, carries a low insurance rate, is the coolest in Summer, the most easily heated in Winter, will not absorb moisture like cement, is not liable to disintegrate because of the extremes of heat and cold in Canada, like stucco, and, above all, will grow more beautiful each year.

Because of these facts, a brick house is the cheapest. The first cost is a little more, but in five years the actual cost is less. We are selling more Red Veneer Brick to farmers every year.

GOPHER POISON

An American farmer gives the following recipe for preparing a very effective and inexpensive gopher poison. Procure from your druggist or mail order house two ounces of Tansyless Extract of Worms (the sure of the real article, as all other preparations of this kind are very bitter and expensive). Add to this one dram of oil of anise, two tablespoons of sugar, and two cups of common flour. Soak a gallon of wheat or oats over night in water and while still quite moist stir in the above mixture. This gives you as much prepared poison for fifty cents as you usually pay one dollar and a quarter for, and is quite simple to prepare.—Advertisement.

A Book That Brings New Light On Profitable Farming

WE want every Farmer in Canada to have a copy of our latest edition of "What the Farmer Can Do with Concrete." It contains complete yet simple directions as to how you can build with Concrete, in your spare time. Shows how the farmer himself, without previous experience and at small cost can get satisfactory results.

The book will make you enthusiastic for Concrete. It will, if you accept its advice and act on its instructions, enable you to have farm buildings completely sanitary, entirely water-proof, and proof against the ravages of time and weather.

Quality-First Telephones

Canadian Independent Telephones are first and foremost a high quality product. The materials and workmanship are of the best. The design is up-to-date in every respect.

They are made by a Canadian company, with a full knowledge of Canadian telephone requirements, based on years of experience in building telephones for Canadian Independent Telephone Systems.

A big Canadian company, with a complete and modern plant, builds and guarantees them. It makes rural telephones, automatic telephones, inter-communicating telephones, switchboards, etc. It supplies all construction materials required to build any size system.

It is a "Square Deal" company—one price to all. Why go out of Canada for telephones, when the most satisfactory ones for Canadian conditions are built right here in Canada?

Get the No. 6 Bulletin, which describes them in detail.

We will now carry a stock of telephones, parts and construction materials at Regina. The Independent Electric Co. are our Western Distributors.

Securing and Maintaining Credit

Continued from Page 19

formed debtors being rather severely dealt with.

A debtor should, if possible, call on his creditor immediately upon receipt of a request to do so, even tho it may be necessary to inconvenience himself somewhat. Telling this, he should write the creditor explaining why he cannot call at once, and advising when he will call.

Merchant creditors sometimes find a few debtors who will spend their cash with one merchant while owing a past due obligation to another in the same line. On first sight this might seem to be the maximum of unadulterated inconsiderateness and unappreciativeness. In a few instances that may be so, but in the majority of cases we find, after investigation, that the action is again the result of misinformation or lack of information.

Mr. Debtor, if you owe a merchant an account, and you need something in his line and have the money to pay for it, go to that merchant and spend your money. He will appreciate it. He will like you for it and deal more leniently with you on your past due indebtedness because of your fairness and your consideration of him. He deserves it for having helped you by giving you credit when you needed it, and for continuing to carry you for the amount you owe him. Don't lose sight of the fact that if the merchant had from you that which was justly due him, you might not have that money in your pocket to spend.

Don't imagine that the merchant you owe will take the money from you and apply it on your indebtedness, and tell you to go to pot for the merchandise you need. You will find him willing to meet fairness with fairness. It must be admitted that there are a few creditors who use very poor judgment in their collection endeavors in that they have been known to attempt to force collections from honest debtors who have not been able to pay because of reverses over which they had no control, such as crop failure, serious illness in the family, etc., but these cases are very much the exception.

In many such cases, however, the debtor himself has been largely in fault for not going to his creditor and explaining his condition and arranging for an extension.

Now, Mr. Creditor and Mr. Debtor, get together. When you transact business, have a perfect working agreement as to terms as well as to prices and transact business along correct business lines. Live up to those terms to the letter, if it is in your power to do so, and if it is not, talk it over together frankly and make some other arrangement.

Your interests are identical. Successful farmers make successful merchants. Successful merchants make good, live towns and cities. Good, live towns and cities increase farm land values and contribute directly and indirectly to the success of the farmer in numerous and varied ways. The success of one depends upon the success of the other. Get together and work together to your mutual benefit. Let no man play solitaire. It's a lonesome game at best, with nothing to conquer but an imaginary foe. Let your efforts be united. Live and let live, and the result for all will be spelled Success.

CHURNING TEMPERATURES

In churning the butter should come in half an hour, if it does not, it usually means that the cream is too warm or too cold. Professor Keithley, of the North Dakota Agricultural College, has found that in the winter about 60 degrees is the best churning temperature and in the summer 52 to 55. Cream from a cow that has just freshened should be churned at a lower temperature than cream from a cow well along in her milking period. Such feeds as grass, alfalfa hay, oil meal, and silage produce a cream that can be churned at lower temperatures, while timothy and prairie hay, straw, corn fodder and cotton seed meal produce cream requiring a higher churning temperature. A dairy thermometer is a necessity in butter making. The 35 cents that it costs may easily be saved at one churning.

"Everything for the Barn" 2

The Men Behind the Gun

Who are always at the front when it is a question of introducing new ideas for turning out high-class work and saving our customers money

- (1) We were the first to manufacture semi-steel Master Gears, solid steel Pinions and other parts for the different makes of Traction Engines. We carry a large stock at all times. Hundreds of our gears are now in use—ask the men who have them.
- (2) We were the first to re bore cylinders, make new pistons and rings. In the past two years over two hundred sets of cylinders have been re-bored in our shop. Why buy new cylinders? See us first.
- (3) We were the first to install an Oxy-Acetylene Welding Plant in Calgary, five years ago, and since then we have welded thousands of broken castings which have been very satisfactory and we have saved our customers time and money.
- (4) We were the first to manufacture Chrome Nickel Steel Valves for Traction Engines; also Die Cast Habbit Bearings.
- (5) We were the first to install a machine for recutting the rolls on feed grinders.
- (6) We were the first to build Gasoline Engines. Our Alberta Special 4 h.p. Binder Engine was the first engine built in Alberta.
- (7) Now, we have a BRAND NEW ONE. We are the first to Oxy-Acetylene weld scoured cylinders on automobiles and gasoline engines, re-grind them, and guarantee to make them as good as new.
- (8) Our business has grown by leaps and bounds because we do good work, give good service and are always at the front.

CALGARY, ALBERTA

The Bull Dog Smut Cleaner

Made to Prevent Loss by Smut and Does It

Well braced throughout.
Operated by hand or power.
Large galvanized non-rustable tank.

Special patented device for treating Oats and Barley same as Wheat, found on no other mill.

No. 18—Capacity 80 Bushels Per Hour

If your dealer does not handle the Bull Dog Smut Cleaner write us direct, mentioning this paper.

This machine is so constructed that all smut balls are taken out of the grain and are skimmed off; the good kernels which may be infected with smut are thoroughly immersed in the formaldehyde solution. They sink to the bottom of the tank and are elevated out by means of carrier or drag. This carrier sets high enough so that the grain can be elevated into a wagon box.

These machines are very effective in removing King Heads, due to the fact that they will float and the wheat will sink. King Heads are removed by a skimmer as they rise to the top of the solution. With these machines we absolutely guarantee to prevent smut if the proper solution of 10 per cent. formaldehyde is used.

Twin City Separator Company

Winnipeg, Manitoba, Canada

Manufacturers of the Famous Bull Dog Feeding Mills, Wild Cat Separators and Grain Crushers. Address all correspondence for Southern Alberta to R. W. DOW, Box 1406, Calgary, Alta.

STOCK—MISCELLANEOUS

Eggs for Empire!

In the campaign for increased food production by which Canadian farmers are helping win the war, the busy cackling hen is playing no mean part. Canada's egg exports to Great Britain have increased enormously during the war. In 1916 Canada sent Great Britain 12,091,621 dozens of eggs, being an increase of 11,944,470 dozens over 1913. Experts predict another big increase this year. Western farmers are responding nobly to the appeal for more and more foodstuffs for the Allies. Many more eggs for hatching will be required this year than ever before.

Poultry breeders who are producing the stock from which the bulk of Canada's increased egg production must come find The Guide the best advertising medium they can use. Those who have once used The Guide continue to do so, while the story of their success is pointing the way of marketing success to many others. During February last The Guide carried more poultry classified advertising than its two principal competitors combined. These letters explain the reason why:

Enclosed find \$3.20 for ad. enclosed, for two insertions. I sent you a few short ads. for insertion last year, with the result that in ten days time I was clean sold out, but it did not stop at that. I had to return 70 or 80 orders, and am getting orders right along this winter on strength of last spring's ad. That's getting more than results. I am half afraid it's going to be another joke on me this year, as I have only about 100 cockerels available. That's the reason I did not put in insertion earlier. Kindly put ad. in at once.—F. A. Cleophas, Belfast, Sask., Feb. 20, 1917.

I am well pleased with results from advertising in your poultry columns, so please continue my ad. 4 times.—B. Clark, Willow, Sask., April 21, 1916.

(Advertised White Wyandotte Eggs.)

We might say that the ad. has proved very satisfactory and had we any more chicks to dispose of we would continue.—Mapleton Farm, Lower Fort Garry, Man., May 27, 1916.

(Advertised eggs and baby chicks, 18 varieties).

SEED GRAIN AND GRASSES

REGISTERED MARQUIS WHEAT—WE HAVE
a small quantity of choice registered Marquis
wheat left over from our big seed grain
competition. This wheat was carefully selected
from the best grown in the prairie provinces.
It is all first generation, that is, grown from
hand selected seed guaranteed to be absolutely
pure in variety, free from all noxious weed seeds,
plump, free from frost and germinating 95%.
There is no better seed available for a small
seed plot of from a quarter to two or three acres
from which to grow the seed for sowing a larger
acreage next year. Any person who wishes
to become a member of the Canadian Seed Growers'
Association may use this seed as foundation
stock and become eligible for membership. This
wheat is all put up in 25, 50, 100 lb. sacks.
Inspected and sealed by an expert inspector of
the Seed Growers' Association, which guarantees
the quality. The price at which we will sell this
seed, sacks free, is—25 pound sack, \$1.10; 40
pound sack, \$2.65; 50 pound sack, \$3.00. With
each order we will send instructions prepared
by Seeger Brothers for preparing the seed plot,
taking care of the grain, hand selection in the
fall, threshing and maintaining the standard
of quality. We have only a small quantity and
orders are limited to five bushels each, unless
to be filled in the order in which they are received.
Address, The Grain Growers' Guide, Winnipeg,
Man.

TALKS ON TRACTOR FUELS

By The Imperial Oil Company, Limited

MANY tractor farmers had good success using kerosene for fuel last year. Kerosene is cheaper than gasoline, it is more powerful. If you have not used kerosene before, try it this year. Ask your manufacturer for suggestions. Whether you use kerosene or gasoline, the best place to get your fuel is at an Imperial tank station.

500 prairie stations, one of them near you, will sell you SILVER STAR KEROSENE, ROYALITE GOAL OIL or PREMIER GASOLINE.

FOSTER ON WHEAT PRICES

The Winnipeg Telegram, the government newspaper in Winnipeg, on March 22, contained the following statement and comment in regard to the proposal to purchase the Canadian wheat crop and the recent consideration of the same by the Canadian Council of Agriculture. The statement is interesting to every Western farmer, and is, therefore reproduced here in full.

Ottawa, Ont., March 21.—Sir George Foster, minister of trade and commerce, in a statement today reviewed the British proposal to purchase the 1917 Canadian wheat crop which was rejected by the representatives of the western farmers. The Canadian government is acting simply as an intermediary. Great Britain makes the terms of the offer, and its acceptance or rejection rests solely with the representatives of the western farmers, and that it is not a satisfactory proposition to them has been indicated by the action of these representatives. Their rejection may mean the abandonment of the scheme by Great Britain, and if so this year's Canadian wheat crop will have to find its way to Europe by private enterprise, with such a market already in a great measure filled by government purchases elsewhere.

In his statement, Sir George Foster has not mentioned the possibility of three years' Russian wheat crop being placed on the market in 1917 and 1918. There is an apparently justifiable expectation that Turkey will be out of the war by August, and with the opening of the Dardanelles 700,000,000 bushels of Russian wheat will be available for European consumption and the requirements of Europe will not exceed that amount. Russia's indebtedness to England and France will make the purchase of Russia's crop almost compulsory to liquidate the indebtedness and re-establish Russia's credit. France, Italy, Greece and Serbia's requirements can be and will be satisfied if possible from Russian granaries, owing to their proximity and the scarcity of ocean tonnage. Under these and other conditions it is believed the representatives of the western farmers have taken a gambler's chance on a greater return than the positive assurance of a big profit in the British offer submitted and rejected.

Statement by Sir Geo. Foster

Sir George's statement is as follows: "The situation in brief, is as follows: The government of Great Britain has purchased the whole available surplus crop of Australia, for both the past and current years. The price paid to the Australian farmer is in the neighborhood of \$1.12 per bushel, delivered at the port of export.

"The British government has taken measures to control the surplus crop of India and Egypt, two of its wheat producing dependencies. It has also called for the total product of the British farmer and has fixed a price of 67 shillings per quarter, about \$1.82 per bushel.

"When I was in London in December last, an urgent desire was expressed to secure the wheat surplus of Canada for 1917, and I discussed the matter thoroughly with the wheat commission which is charged with the purchase of wheat for the necessities of Great Britain, France and Italy.

"The British government is not only anxious that Canada shall grow the largest possible crop of wheat this year, but it desires to know now that it can depend on getting all that Canada has to export and to be relieved to that extent from some of its anxiety as to sources of supply.

Books Supply From Empire's Sources

"It has sought to secure, as far as possible its supply from Empire sources, and stated to me that it relies largely on the patriotism and power of production of Empire farmers to contribute their full measure of output this year and to sell it to the government at reasonably remunerative rates.

"The geographical position of Canada, taken in connection with sea war dangers and shortage of transport tonnage, makes it of great importance that its surplus supply should be at the sole disposal of the British government. Under certain conditions it might mean the salvation of the British people and the decisive factor in the decision of the war.

Farmers' Letter File

SAVER TIME AND MONEY

It will save several hours the cost in every Farmer's yearly. The Farmers' Letter File contains pockets for all the letters of the alphabet. Letters from relatives and copies of letters you send, as well as your receipts, can thus be filed alphabetically and be found in an instant whenever you want them. This file is 11½ inches by 9½ inches, and will accommodate letters of any size up to 8½ inches by 11 inches. When closed the file is 1½ inches thick and opens flat. An attention to detail is evident in every letter file. With each file is six sheets of "Manfield" Carbon Paper, for taking copies of letters with pen or typewriter, also six "Manfield" Postage Labels, especially for writing letters, of which postage rates are to be taken. \$1.00

On the Job Laying Though Snowed In

Under the most severe weather conditions, you will get plenty of eggs if your hens are properly housed and fed Royal Purple Poultry Specific as directed.

Jno. Cutting, Ospringe, Ont., writes as follows:

"Dear Sirs.—Kindly send me your free booklet on Stock and Poultry. I have used your Poultry Specific all winter, and I would not want to be without it. For fattening chickens, and making hens lay it can't be beaten. I have also used the Stock Specific, and find it as represented."

Royal Purple Poultry Specific

In summer, fowl get grain, herbs, grass and insects, which are Nature's assistants for producing eggs. In the winter and spring, fowl get practically the same grain, but must have a substitute for the herbs, insects. Royal Purple Poultry Specific, manufactured from Roots, Herbs, Minerals, etc., is a most perfect substitute, increases the egg production at once, and makes the hens lay as well in winter as summer—keeps the fowl active, vigorous and healthy—prevents chicken cholera and kindred diseases.

Sold in 25 and 50c. packages, also \$1.50 and \$5.00 air-tight tins. We also manufacture Lice Killer, 25 and 50c. packages; Roupe Cure, 25c.; Disinfectant, 25c., 50c., \$1 sizes.

Secure these products from our dealer in your town.

FREE BOOK

Write for FREE 88-page booklet describing all common diseases of stock and poultry. It tells how to build hen houses and how to raise calves without milk.

supplies, this leaves from 25 per cent. to nothing available for commercial freight offering.

"As the war goes on this condition of things will not be likely to grow better—it may probably grow worse. Even if war ceases the demand for tonnage to transport to their homes the men and equipment released from the front will for many months be little less urgent than now. The uncertainty of transport will surely affect prices and may very seriously affect them. But if the farmer sells now to the British government his money is sure and he need trouble nothing about transport—the British government will attend to that.

"It must be remembered that the British government cannot wait until next autumn to look out for its food supplies. It must make certain of all possible as soon as possible. That is why it has arranged already for the British, Australian, Indian and Egyptian surplus. That is why it wishes to secure the Canadian surplus and secure it now."

price realized has been 22½ cents per pound.

I exhibit at most of the poultry shows in Alberta and have secured a good number of prizes, especially in the turkey classes, having one hen that has won ten first prizes. I would impress this simple fact on every poultry keeper: Exercise every care in selecting your breeding stock, kill all indifferent specimens, breed only from the best and then you can prove by show competition that you have something better than the average.

A. HATCHER,
Pres., Calgary Poultry and Pet Stock Association.

HOW TO MANAGE AN INCUBATOR

It is necessary for the incubator to be set solidly and level, preferably on a stand, in some place free from draught and under lock and key to prevent inquisitive meddling. A few minutes of ignorant fooling about an incubator may spoil an entire hatching. The temperature of the room should be at least between forty and fifty degrees.

The use of good oil in the incubator lamp will ensure a steady flame without smoke. The air must be moist as well as warm; hence don't forget the water pan in the case of a hot water incubator, while a box of moistened earth, placed underneath, will do no harm. For a hot air incubator a piece of dampened canvas, placed under the egg trays, will help the chicks to peck their way out.

The quality of the eggs is the first factor in successful incubation. Get them not more than two days old if possible. Discard large, thin-shelled and uneven ones. Examine closely for possible cracks and handle very carefully. Do not place in the incubator until it has been running two or three days for warmth without a thing in it. Once a day the eggs should be turned over and allowed to air for ten or fifteen minutes. A chalk mark on one side will enable you to keep track of those you have turned over, the mark being up one day and down the next.

After eight days in the incubator the eggs should be tested for fertility and all infertile eggs removed. Hold up to the sun or a candle. If clear the egg is not fertile. A spider-like blotch is the indication of fertility.

Cross-bred and inter-bred eggs produce weak chicks. Get your hatching eggs from a true-bred flock. If you have to help some poor little chick to get out of his shell prison, do it gently in order not to pull off the little fellow's skin. If you have to leave the incubator for a while, leave the heat at 98 to 102 degrees, which is best temperature at all times. Even the machine indicates 103 as the right degree, a little less is better than more.

Getting the Machine Ready

"The brooder or foster mother should be got ready the day before the chicks are expected. It should be clean and warmed to about 60 to 65 degrees. The chicks can be placed in it when about twenty-four hours old. They should then be fed on chopped hard boiled eggs every two hours. After two days old they can be fed boiled rice and small wheat or bought patent chicken feed. Give plenty of drink, either milk or water, in a pan which they can't upset or get drowned in. Chickens can be given to broody hens to raise if desired. They should be placed under the hen at night. Chickens which are confined should be given plenty of green feed, but they do not do as well as the ones that run about. The best hatching I ever had from one lot of eggs was 367 out of 400, twenty-two of the eggs were infertile and the others had dead birds in them, except one which got broken."—H.E.W. Haak.

Do what you can to induce the hens to lay near home. I find barrels laid on the side make good nesting places. Place the barrel in any out-of-the-way corner, among brush if available, and with a few leaves inside. If the nest is provided with an egg, so much the better. About eighteen eggs I consider sufficient for a setting, and a well developed hen will manage that number well.

For fattening turkeys I prefer corn meal and boiled potatoes, mashed up together with a little milk, but in the West corn meal is often too high in price, so I use oat chaff instead, and they put on flesh well with it. I may add that even when fattening you must still let the birds have free range or they soon lose their appetite. I find that birds weighing about ten or twelve pounds at Christmas find the readiest sale. For the last four years the average

If the hens get in the habit of eating eggs, put a few china eggs on the floor of their pen and let the fowls pick at them. Sometimes that will discourage the egg-eaters somewhat.

Some poultrymen claim to break up the egg-eating habit in fowls by blowing an egg, then filling the shell with mustard and cayenne pepper made into a thick paste with water. It is said that this cures the taste for eggs.

Secure More Pails of Milk From Your Herd

Royal Purple will increase the flow of milk from 3 to 5 lbs. a day if used according to directions. Mr. Norman C. Charlton, Scott, Saskatchewan, states:

"I am from Ontario and fed your Royal Purple Stock Specific when in Brownsville. My cows made the largest average and tested 5 pounds over average at C. M. P., Brownsville. I believe you make the best conditioner on the market."

Royal Purple Stock Specific

The great farm animal conditioner and fatterer is used in almost every progressive stock-raiser's stable in Canada. Good for all stock in a run-down condition. Can be used occasionally or continually without showing bad after-effects. Royal Purple Stock Specific is purely a digestor and blood purifier. It aids digestion to such an extent as to produce the very best results, and obtain the maximum amount of good from the food eaten. It will enable you to fatten your steers and hogs a month earlier, thereby saving a month's feed and labor.

Mr. Malcolm Gray, of Komoka, states:

"In regard to the feeding of Royal Purple Stock Specific, I had two lots of hogs. To the first lot I fed Royal Purple Stock Specific, and when I sold them they averaged 196 lbs. each. On the second lot I did not use Royal Purple Stock Specific, and at the same age they averaged only 150 lbs. each. They were both the same breed and one lot had as good a chance as the other. We have also fed Royal Purple Poultry Specific with excellent results."

Royal Purple Stock Specific is put up in 50c. packages and large \$1.50 and \$5.00 tins. Secure our products from our dealer in your town. Write for free booklet on how to treat all common diseases of stock and poultry. Tells how to build hen houses and how to raise calves without milk.

GIRLS DOING THEIR BIT

We have heard a great deal about girls doing their "bit" during the war, when harvest came, with such a shortage of farm help I decided it was time for me to do "my bit."

For the past four years I have worked at stenography and bookkeeping, and although I was born and raised on a farm I had forgotten nearly everything I ever knew about farm work, especially how to use a fork. However, as that was the work which was behind on the farm at home I reasoned that if I was able to do it once I could do it again and on October 1 I resigned my position as bookkeeper and went back to the farm.

We had quite a large patch of potatoes to dig, and only father and I to do it, so we began on Thanksgiving day to dig the potatoes. The crop was light, but of course the same amount of digging was required. We finished in about a week.

Then came the hay, or rather the hauled grain, as we were in the hauled belt and cut our grain for feed. We estimated there were about thirty loads and the weather was severely cold. It was bunched and the snow, which was soft, had settled into it and soaked it to the bottom. Mother and I shook it all out and after it had dried we coiled it and father and I began hauling it in. The first two days I wore my dresses with my sport coat and peak cap, but on the third morning father came in and said it was very cold and that I had better put on my brother's old overalls, that he had left at home or I would freeze.

Now I had never worn overalls and felt I didn't want to, but I was determined to finish my job so I looked up the overalls and put them on over my dress and sweater. This with a pair of kid mittens and my deer-skin moccasins completed my costume. I went out feeling rather awkward and when father laughed and said I made a good boy, I just told him if he laughed at me I wouldn't wear them at all. So he said I was alright and that I needn't take them off.

I wore my borrowed clothes for the remainder of the ten days it took to finish our task and although it was very cold and far from being the bark it looked, I felt when it was over, that I had made an attempt at least, at doing "my bit."

POLLY.

LET CHILDREN HELP

I'm a farmer's wife with five small girls, the oldest past six years, and the youngest fourteen months.

My husband runs a large place, having one thousand acres ready for seeding. I'm very much in favor of children helping in the homes and I think the younger they start the better, especially these days when neither I nor my neighbors can procure help.

The only way I've been able to get along is with the help of my little girls and it's wonderful how they can help, and they learn to depend on themselves. Every one, but the baby, does something, such as taking care of the baby, running down cellar for the numerous things to take down and bring up, running up stairs with dirty linens, and bringing down clean, dusting and often making beds on very busy days. Cleaning out the lower cupboards and knife drawers, putting in clean papers. And how they do enjoy helping me. And then the idea is to encourage children when they want to do things, not to put them off all the time.

On baking days I often leave them a piece of dough or pastry with a little fruit, and let them make their own little pie or loaf and how delighted they are. I just leave them to themselves as they learn by watching me.

I think the greatest mistake a mother makes is not teaching the boys to do little things in the home, if they only knew how the young wives appreciate when the husband will notice how tired she is, and would say: "You sit down, I'll get that coal for you."

But there are hundreds of men that sit in the house and enjoy reading or smoking, when the wife is so tired, never having a minute all day to rest, and is glad when the last thing is done that she may crawl in bed.

If the boys are brought up to it, they will quickly see many little things that will save the mother so many steps.

O. T.

MAKING A SET OF FURS

I see in The Guide of January 17 your request for helpful hints for housewives such as the making-over of garments.

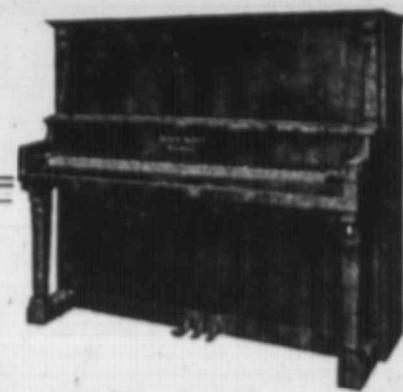

So here I am, sisters, to give you freely the benefit of my years of experience in making-over. I have been a dressmaker for years, yet I enjoy making over an old, rejected garment more than making a new one. And why not? If God chose the weak things of the world to confound the mighty may we not follow the example He gave us and take the comely things and change them into "A thing of beauty which is a joy forever."

So now as the winter here is so cold and we all need warm garments I will tell you how I made a set of comfortable furs for myself at small cost. I bought an old-fashioned jacket of mink marmot for \$5.00, tight fitted, with large sleeves and an old muff to match. The fur was not badly worn and almost every inch counted in cutting. The first thing I did was to cut a paper pattern of the collar I liked best. Then I ripped the jacket, taking off the collar first and re-sewing it to put on the collar without alteration. Next I ripped the sleeves out and front facings, removing the lining. Next, I turned the jacket inside out and pinned the pattern to it without ripping the shoulder seam. I marked around with a lead pencil and cut with a small sharp scissors, or better still, a sharp knife with a board under. As the jacket was too short I used the bottom half of two of the muff trimmings to put to the bottom of the front pieces to make it long enough. Next I faced the entire raw fur edges with stout lining, sewing it stitch by stitch, with the inside of skin next me and the strip of cloth on the far side, keeping the fur brushed back under cloth so none shows in seam. Then I turned the cloth inside the skin and basted to skin. Next I lined the entire collar with coat canvas and basted to skin, then covered the canvas with a layer of sheet wadding and basted again. I cut the shoulder cape from the top part of sleeve and finished lower edge with a strip of lining as the other edges, also canvas and wadding. Next I sewed in shoulder capes turning fur sides together, gathering the shoulder between notches in pattern and sewed with a waxed linen thread, basted in cape linings an inch from edge, then turned edges of lining under and sewed to strip of lining with a hemstitch. Next I put in hooks and eyes, putting bill of hook thru fur, also point of eye, basted remaining lining to position and finished as capes. Then I put on the collar, sewing the outside first and finishing on the inside. Make a covered button and cord loop for the front extension which keeps out the wind at neck.

Making The Cap

I cut the cap from the pieces at bottom of skirt and under arm of jacket, fur running up and down or falling downward. I lined with canvas and wadding as the other, and finished with a lining as per paper pattern of lining, same as collar. First finished edge of lining with a ribbon and sewed to edge of cap with a blind hemstitch, dent the crown in and it is ready to wear.

Out of the remaining scraps of fur I made the muff. This is the most difficult because of the piecing of the scraps. The fur must all fall one way unless it be a straight pile fur such as beaver, lamb, or astrachan dog which is very curly. I cut all the largest pieces first on a straight line of the fur lengthwise

Mason & Risch Pianos

"From Factory to Home"
Twenty Branch Stores

REASONS WHY

We offer some reasons why you should purchase a Mason & Risch Piano.

We are manufacturers on a large scale of both Pianos and Player Pianos. Our Factory is a model plant and one of the best equipped in the country.

We have been building Pianos and satisfying the most exacting demands of musicians for half a century.

There is beauty of design and finish, workmanship that exhibits great ability and skill, and a tone of wonderful depth and sweetness.

It is sold on its merits and backed by our strongest guarantee. It has justly earned the reputation of "The Piano with a Soul," and stands pre-eminently as a

Twentieth Century Ideal

Our Factory-to-Home selling plan enables you to save 25 to 30 per cent.

In our Exchange Department you will find an exceedingly fine list of pianos that have been taken in exchange on Players, and you may be able to select just what you need for the present in this department.

Write our nearest Branch Store and we will immediately send you complete catalogue and full information and our easy terms of payment.

By DIXIE PATTON

THEY NEEDED SYMPATHY

The other day a friend and I were going down Portage Avenue when we saw a very strange thing happen. It was one of those warm days when the streets were flooded and nearly bare to the asphalt in the middle.

A team with a load of coal started to cross Portage Avenue and got stuck right across the car tracks. The driver tried them slanting one way and slanting the other, and he prodded and coaxed but the horses would give a long pull and then give up. And any minute a car might come along and expect to get up or down town.

Another teamster, seeing the plight of the coal man, drove his team up behind the coal sleigh and shouted encouragingly to his horses, and the coal man shouted encouragingly to his horses, and lo and behold they immediately drew the sleigh off the tracks and the team behind had never been attached to the sleigh that was stuck, and had never even touched it.

Now wasn't that funny? It seemed as if all that the team needed was a little sympathy and the idea that some other horses were willing to co-operate with them.

DIXIE PATTON.

MY VISIT TO FAIRYLAND

One day as I sat watching the beautiful, glittering snow, a form seemed to rise out of it. It was nearly as transparent as glass and as beautiful and fair as the snow itself, with wings that seemed set with diamonds. Rising to her full height (for as I suppose you have already guessed she was a fairy) she accosted me thus, in words as soft as the breezes and a smile that almost surpassed the sun in radiance.

"Behold! I am Queen of the Snow Fairies, long have I read your most secret thought and most cherished wishes and now because of your firm faith in fairies I am going to give you your merited reward. I come from the cold but beautiful north, the land of the Snow Fairies and your reward shall be a trip to my shining palace." Then flapping her wings three times she said in her beautiful voice: "Come, this has been your wish, it shall be granted."

Then taking my hand, I suddenly felt myself becoming as light as light could be and I had wings nearly as beautiful as the fairy's own. Then flying over hill and dale, thru clouds all silvery and soft, we went on and on. We flew for many hours, each minute becoming colder, till the fairy turning to me said: "Mortals such as you, are not used to the cold here, I shall put this on you."

So saying, she spread over my shoulders a most beautiful, glittering shawl, which though seemingly made of snow, was as warm as could be. Finally we reached her palace. Here was a sight to see.

Hovering over and around it were beautiful snow fairies that fairly dazzled my eyes with their brilliancy.

As we drew near they cried out: "Oh,

welcome, welcome, fair Queen and your guest."

The Queen bowed her head and smiled her radiant smile. Then turning to me, she said: "See what a welcome awaits you here, my child—ah, but I see these things seem to dazzle your eyes," and touching them with her cold marble-like hands, I could immediately see without difficulty. "Come," she said, "I must show you my palace." As we came up to the doors they were thrown open by fairies, who bowed their heads low and we, passing thru, came to a room, the gorgeousness of which I lack words to describe. It was set with gems of all kinds and the whole place was lighted to an uncommon brilliancy. I looked around to discover where the light came from, and lo! I found that the fairy Queen herself was the cause of it, for all around her there played lights of all colors of the rainbow. We passed on from one room to another, all as beautiful as the first, while soft, sweet strains of music seemed to fill the air.

After she had shown me her palace she took me to her garden where the perfume and beauty of the flowers quite bewildered me. After this was all done she said: "This is all I shall show you this time but you shall come again."

Then gathering some of the flowers, she

gave them to me, and after bidding good-bye to the other fairies, we started on our homeward journey. We went the same way as before, so I have nothing to tell as to our return. At last we reached home and then the fairy told me: "As long as you continue to believe in me I will always be your friend." Then, turning around, she sank from view while I stood calling: "Good-bye."

WINNIFRED WINTER.
Lacombe, Alta. Age 14 years.

THE THREE SNOW FAIRIES

Once there were three snow fairies and they had very beautiful names. They were: Molly, Dolly and Polly. You could never see such busy fairies as they were. Never an idle moment had they, for Molly must spin and Dolly must bake and Polly had all the butter to make.

These fairies lived under the sun, where it could shine upon them and make them happy.

The fairies were always gaily dressed. They never had sad faces but were bright and happy. They had a very beautiful home. In the home was a lovely parlor where they always had happy times together.

In the morning they all got up quite early and did all the housework. Then in the afternoon they went shopping. When they came home they brought the nicest gifts for each other, and some for poor boys or girls that they found in their Xmas stockings.

CLARA KAPLUNOVITCH.
Stratford School, Winnipeg. Age 11.

THE NORTHERN LIGHT FAIRIES

Last night when the Northern lights came up I saw a great number of gay fairies dancing and playing. There was one old fairy that just made me think he was winter. He was sitting in his hut looking very grim.

A very young fairy from the south came with the Queen of Summer under his arm. He walked into the hut of Winter. Winter was sitting by the fire. Winter told him that no one was strong enough to do him any harm or make him lose his high position.

The young fairy only laughed a scornful laugh. Then he just slipped the Fairy Queen of Summer from under his arm and set her in front of old man Winter. You should have seen him fade away. The next moment one could see nothing but the chair which Winter had been sitting on.

Then the young fairy took the Queen to her home. He had worked a lovely deed, for everything looked as exactly like the Queen of Summer as was possible.

ROSE JULIA GERDING.
Favor, Alta. Age 12 years.

THE SNOW QUEEN

One day the Snow Queen sat in her palace of ice. She looked south and saw all the plants suffering from cold because they had no clothes.

Quick as a wink, she got her spinning wheel and was spinning a beautiful robe of snowflakes for them. When this was ready she spread it over them.

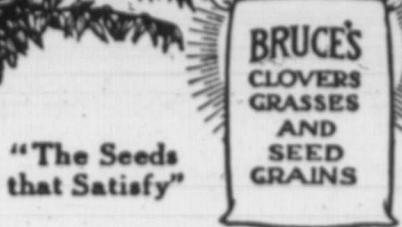

The plants were so glad, you can't think, for they had frozen. They thanked the Snow Queen very much for her kindness.

KRISTINE MOLLY KALDON.
Lethbridge, Alta. Age 10.

THE FAIRY AND THE DOG

It was on Christmas eve when I was going out. As I was closing the door behind me I saw something on the ground. As it saw me it flew up. I was frightened and the dog was barking at it. When I knew it was a fairy I wanted to call the dog back but it did not come. All at once the fairy came down and got a hold of the dog's tail and then went up again. When she was out of sight I saw something yellow coming down. When it fell on the ground I saw it was a dog. The fairy had let him fall and so he came to me again.

Manufactured under experienced superintendents by skilled mechanics with whom honest workmanship has become a habit, it has quality. Designed by the men who have helped to simplify photography, it has been possible, through quantity production combined with high efficiency, to produce this camera of real quality at a low price.

It has the new Brownie Ball Bearing shutter, with cable release, having both time and "bulb" actions and snapshot speeds of $\frac{1}{2}$, $\frac{1}{3}$ and $\frac{1}{12}$ of a second and is equipped with Kodak Auto-time Scale as an aid to correct exposure.

Loads in daylight with ten, six or two exposures cartridges, has automatic focusing lock, reverse finder, two tripod sockets, genuine leather bellows, is constructed of metal throughout and is covered with a durable and attractive imitation leather of the finest quality. With its black enamel fittings it is a handsome as well as an efficient camera.

It is autographic, of course, all of the fading Brownies and folding Kodaks now incorporate this valuable feature, by which you can date and title each negative at the time of exposure.

No. 3A Folding Autographic Brownie, monocular achromatic lens, \$10.00. Do., with Rapid Rectilinear lens, \$10.00. All Dealers'.

Easter---It's Origin and Customs

By E. L. Chicaudt

At Easter we celebrate the resurrection of Christ, and whilst for all Christian peoples the origin of the feast is, of course, the stupendous miracle of the rising from the tomb, most people are nevertheless unaware that the feast, tho' apparently of distinctly Christian expression, has many pagan associations. The word "Easter" itself is especially significant, coming down to us, as it does, from pre-Christian days, whilst the customs belonging to the spring festival are mainly survivals of pagan worship and festivity.

The word "Ostara," or "Eastræ," from which our modern "Easter" is evolved, means a breaking or bursting forth, and in the mythology of Northern Europe, Eastræ was the goddess of spring. In the days following the disappearance of the snows, when the grass began to sprout and the trees to bud, when winter had been surely banished and spring had commenced her reign, then the feast of Eastræ, the spring goddess, was celebrated with much ceremony and merry-making. Thus in the symbolic bursting forth of spring from her wintry tomb, which they observed, there was a figure of that greater "Eastræ" which in future years was to be substituted for the old festival and celebrated until the end of time.

In Pagan England

When the Angles and Saxons came to Britain they still clung tenaciously to their pagan mythology, and among the feasts which they set up in their new home was that of the spring goddess. Then came the Roman missionaries, and England, Christianized, banished all her ancient deities and their feasts except that of Eastræ, which, now endowed with a newer and fuller significance, retained its pagan name and many of its more innocent associations. Annually on this day the altars were decorated with flowers, the first tokens of spring, whilst the whole populace, young and old, gave itself up to enjoyment.

And so from the days of our pagan forefathers we get the feast of Easter and all the pomp and ceremony with which we usher in the feast and the festivity and merry-making with which it has long been associated are relics of the homage paid centuries ago to the goddess of spring.

It is doubtless from the ancient worship of the constellations and material elements that the vagaries of the sun have always been so intimately connected with Easter. A stanza of an old poem runs:

"But oh, she dances such a way
No sun upon an Easter day
Is half so fine a sight."

It was a general belief in England that the sun danced on Easter Sunday morning, and people rose with the dawn to see the interesting spectacle; and even to this day in Ireland nurses hold their charges to the window in anticipation of this phenomenon.

Easter Eggs

Eggs are still intimately connected with Easter, and this, too, is traceable to ancient times. In the earliest systems of philosophy the egg was the emblem of life, containing as it does all the elements of life. Their use at the spring festival symbolized the awakening of the earth to a new existence, whilst the colorings of the eggs represented the tints of reascent nature. On the continent and in parts of England, the custom of coloring eggs at this season is still prevalent. Cochineal, logwood and other coloring matters are used for tinting these "pase eggs," as they are called—probably from Pasch—or they are stained by boiling with ribbons of various hues. Then at a picnic held on Easter Monday, the principal feature consists of rolling these eggs against each other on the grass until they are broken, when the merry-makers proceed to eat them.

In olden times, an egg laid on Good Friday was held to have special properties, and the shells were carefully kept.

as it was believed that a piece thrown upon a burning house would immediately extinguish the fire.

A Curious Custom

A curious old custom, probably symbolic of the resurrection, used, at Eastertide, to be celebrated in various English counties and especially in the north. This was known as "heaving." On Easter Monday the men lifted the women, and on Tuesday the reverse took place and the women "heaved" the men.

Weather proverbs have been associated with this season from time immemorial. In Hertfordshire there is a saying:

"A good deal of rain on Easter Day,
Gives a crop of good grass but little
good hay."

And another version runs:

"If it rains on Good Friday and
Easter Day,
There'll be plenty of grass and a
little good hay."

Also in many agricultural districts it is a firm belief that the weather experienced at Eastertide will occur also at harvest.

The End of the World

Another strange belief, associated with this season, is that the end of the world will come when Good Friday occurs on the Feast of St. George, April 23, but, as far forward as astronomers have computed, these two feasts do not coincide.

One more survival of Druidical times exists at Easter, and this is the custom still extant in many places of making offerings to the clergy, which are known as "Easter dues." On the authority of Southeby we have it, that on the kindling of the sacred fire a man who had not paid his dues was refused a spark. Nor might any of his neighbors assist him, and he and his family were deprived of it until his debt to the priests was discharged.

And so in one of our most sacred and solemn festivals have we so curiously assimilated the Christian observances and the customs which in pagan days were tributes to the goddess of spring.

Farm Women's Problems

Continued from Page 42

minced and potato roll is both economical and filling, try it! A cup of mashed potatoes, a cup of flour, a tablespoon of butter, a little baking powder and salt. Work into a paste, roll as thin as possible and spread with minced meat. Then roll as for jelly roll and bake in a hot oven. It is nice either with or without gravy. This recipe also makes an excellent crust for deep meat pies, a little water can be added, if necessary, to bind it.

Of course, we all make pancakes, but did you ever try bread dough, fried in a similar manner? Cut off small pieces as lightly as possible and fry a golden brown, taking care, at the same time, that they are cooked thru. Hot, with syrup they are delicious.

Another thing that only costs the trouble of making is buttermilk cheese, but since it is a butter saver it is worthy of consideration, especially when butter is short as it so often is just now.

My boys are very fond of it for their school lunches.

When I intend making it I run the buttermilk right off into a saucepan and leave it to stand until the following day, when I put it on the stove and let it get thoroughly hot. Then I take it off and let it stand until quite cold, when it will be found that the curds have all settled at the bottom and that most of the whey can be carefully poured off. Then I sprinkle the curds with salt and tie up in a muslin bag to drain, when it is ready for use.

War prices make economy more necessary than ever, but on the farm, at least, we are fortunate in being able to raise much wholesome food for our little ones.

A MOTHER OF FOUR.

Farm Women's Clubs

NOTE—Any woman in Saskatchewan who feels that she would like to have a Woman's Section of the Grain Growers' Association in her district, should communicate with the provincial secretary, Miss Erma Stocking, Delisle, Sask.

Any Alberta woman who would like a Woman's Section of the United Farmers in her district should write to Mrs. H. M. Barrett, Mirror, Alta., who is the woman's provincial secretary for Alberta.

Any Manitoba woman who would like a Woman's Section of the Grain Growers' Association in her district should write to Mrs. F. H. Whincke, Stony Mountain, Man.

A FLEDGLING SOCIETY

We welcome to our ranks the members of the Women's Section of the Glenside Grain Growers. Their secretary, Mrs. Jas. Gifford writes that Mrs. Riggall, director, explained to them in a very pleasing manner the method of organizing and the different work that might be taken up.

Their president, Mrs. W. Mackin, was their hostess at their first meeting. There was a committee appointed to visit the sick; a franchise committee; a press reporter and a temperance reporter.

BUYING SCHOOL DISHES

We acknowledge with pleasure the receipt of ten dollars from the Neidpath Women Grain Growers, sent for the Red Cross Fund. They have voted five dollars to buy dishes for their school and twenty-five dollars to pay the expenses of the delegate to the provincial convention. A Box Social was given to raise the necessary funds, and seventy-two dollars were realized from that source. They have a membership of seventeen and look for an increase in their numbers when spring arrives.

E. STOCKING.

ENCOURAGING ART

The Ladies' Home Journal gives the following glimpse of the work being done by the Federation of Women's Clubs.

The aim of this department is to arouse an increased interest in art and a fuller appreciation of all its various forms; to cultivate public taste, so the people of America will recognize and cherish the beauty of our natural scenery, and will demand that handicraft shall have as one of its fundamental principles the highest artistic qualities. But we wish particularly to emphasize the desirability of becoming familiar with the fine arts of our own country, with American painting and sculpture.

All cities without a permanent art gallery should have an annual exhibition of pictures the best they can afford, and everyone, especially the school children, should be urged to attend.

Art is being well taught in most of our public schools, not for the purpose of making artists, but for the purpose of cultivating taste. In many schools, however, the rooms are bare and unattractive. Club women should see that the schoolrooms of the cities and of the surrounding rural districts are brightened by a few carefully selected colored prints, which can be obtained at small expense. The colored reproductions of paintings published in The Home Journal should be carefully preserved and used for this purpose, and for class study.

Mothers should do all they can to cultivate a love for beauty, a love for art, in their children. To interest them in the fine arts have them make scrapbooks of all the pictures of paintings and sculpture they can collect; talk to them about the artists, tell them interesting stories of their lives; teach them to see the difference between good pictures and the so-called comic supplements of our papers.

One of the most important divisions of our department is civic art. Its field is very broad, as it includes all outdoors. It strives, by means of lectures and exhibits, to encourage the improvement of lawns, large and small; to promote flower gardening, which has lately become so popular; to regulate the advertising bill-boards, which disfigure so much of our landscape; to advocate the laying out of parks and preserving the scenic beauty of our country; to shade highways, as several of our states are now doing; to cultivate public taste, so the monotony and ugliness of our typical American city may be changed; and to encourage a suitable style of architecture, so our towns may become more attractive and picturesque.

Minnesota, thru its State Art Society,

is doing good work by providing plans for model farmhouses and inexpensive homes, and the Art Department of South Carolina has published a book, "Modem Village Homes," which is distributed free to all interested.

Of all these different phases of the work of this Department we wish to speak particularly of the work of regulating the billboards. We all acknowledge that they destroy the beauty of our natural scenery, that they disfigure our cities, that they often obstruct our views of fine buildings and of monuments of art, yet we do not unite to prevent this method of advertising.

Much of this billboard advertising appeals to the trade of women; if they united and said they would not buy goods thus advertised, do you not believe that those offensive signs would disappear? This actually occurred in the little town of Grand Rapids, Wisconsin. There the women wrote to the manufacturer of a certain flour that they would do without that brand of flour until the objectionable signs were removed; and it is gratifying to note that they were removed.

STUPIDITY IN CHILD RAISING

The poet Lampman has written:

"Wisest is he, who, never quite secure,
Changes his thought for better day by
day;
To-morrow some new light will shine,
be sure,

And thou shalt see thy thought
another way."

It is to those women who have not been afraid in their lives first to think, and then if need be to change their thought that I want to talk for a little while today.

For years past "new light" has been slowly entering this region of child life, but like as in ages gone when the Light of Life came to the world in many cases "the darkness layeth not hold upon it."

The early idea of our so called Christian civilization seems to have been that the child entered the world dropped there by an inconsiderate Providence, filled with all evil and mischief. Wherefore, like any other wild animal, the child had "to be broken in." The breaking in took various forms. We have the Mr. Murdstone of "David Copperfield." We have the old English grand-dames who sat on raised platforms, armed with long handled fans which could easily be converted into implements of chastisement, for any who offended. No member of the family ever thought of being seated when addressing this lady. We have the parents who knew of one form of guidance only, and that was punishment with the rod.

Such types or some very similar exist even to the present day, though they are no longer the rule.

I will never forget one day when visiting in what used to be called "the Ward," hearing doleful sounds issuing from the little cottage wherein dwelt a young widow of Irish extraction. The poor soul supported herself and four little girls by washing, and it was hard work. Elizabeth, the eldest, was a typical "little mother." I never knew "Liz" to do anything wrong. Rosie, the next was an imp, as pretty and dainty as a picture, and into every mischief possible. Greta, the third, was one of those jelly-like, boneless children, who will let themselves drop in a heap, at any moment without the slightest warning, who appear always sulky, and stand on one leg with their fingers in their mouths, when spoken to. (How many of poor little Greta's peculiarities were due to her upbringing it is hard to say). Agnes, the youngest, was a dear little good natured smiling baby of perhaps two years old.

Attracted by the strange chorus of howls issuing from Mrs. O'Flaherty's residence, I knocked, and without waiting for more than a "Come-in," I entered. Mrs. O'Flaherty was in the centre of the "back room" in front of an overflowing tub. She stopped washing only long enough to wipe off her hand,

Matthews Blackwell Limited, Established 1852, James and Louise Sta., Winnipeg

shake hands, and dust a chair, asking me to be seated. In each of the four corners of that room was a weeping little girl. The wailing had ceased for a moment on my entrance, but was tuning up again to the accompaniment of the steady dub, dub, of the mother's wash board. "Why, Mrs. O'Flaherty," I gasped as the steam cleared off my glasses, and I took in the situation, "what in the wide world is the matter? What have they been doing? And Lizzie, too, why?" "Ah, Liz do be a good gurl, Miss," and she turned loving eyes in the direction of her eldest born. "But Rose, she do be bahd—but I'll tell ye how it is, Miss. This is Friday—an' Friday do be whupping day—'with a delightful Irish twinkle. "But surely, Mrs. O'Flaherty, you don't whip every one because it is Friday?" "Yis, that I do," making herself look severe again. "I whup them as be bahd because they do be bahd," frowning at the delinquent Rosie, "an' I whup them as be good to show what they will get if they be bahd." With a little dimple at "Liz" and the baby.

Now Mrs. O'Flaherty was young and very ignorant, and was doing her best "to raise her children" in a decent and God-fearing manner. Her method on the surface may appear crude, but in its essentiality, does it really differ greatly from the action of the mother who, without any real thought as to the physical or spiritual character of her own child, does the things that "they say" are good, without even much consideration as to who the "they" may be—who feeds her babe at the breast whatever her neighbors in turn recommend, because said neighbors had fed their own children thus—who gives the teaching of the child to anyone who is interested or paid enough to assume the responsibility? Is it very different from the method of the school or even the Sunday school which attempts to satisfy the mental or spiritual needs of forty or fifty children all at different stages of development, and of different character and thought with precisely the same lesson? Or is it different from the action of any parent or teacher who attempts to teach every child by the same method, to punish every child by means of the same punishment, or to mould every child by the same standard?—By Dr. Laura Hamilton, in *The Canadian Home Journal*.

VOTES AND DUTIES

Following the announcement that the Ontario government intends granting women the privilege of voting in provincial elections, comes the suggestion that the municipalities should be authorized to impose the poll tax of one dollar upon the female as well as the male voters. Equal privileges, equal responsibilities. And the municipalities need every dollar they can raise.

The government may not decide that extra responsibility should accompany the privilege in this instance. Women are winning the franchise in many centres, but no new duties are being exacted of them. Jury service and such unpleasant public tasks are allotted to the male voters only, as a rule, and a small section of them at that. Every male between the age of 18 and 60, who is physically fit, is liable for war service the moment the Militia Act is put into force, and must submit willy nilly. He may not be in sympathy with the cause, and may really have religious scruples that compel him to hesitate before shouldering a gun, yet he must bow to the government's will or take the consequences, which in certain circumstances may mean death. Implicit obedience is demanded of him and he must subordinate his personal convictions to the public need. In all the belligerent lands except Canada, Australia, the Union of South Africa and some other colonies, compulsory service is in force, for the male citizens. The women are voluntary agents now as in normal times.

If in the course of time the franchise is granted to women on the same basis as to men, they will be the privileged sex. They will be entitled, for example, in the event of a referendum on conscription—to say whether or not the men shall be compelled to shoulder arms. They themselves will be immune.—Montreal Gazette.

This Free Book is Invaluable to Every Householder

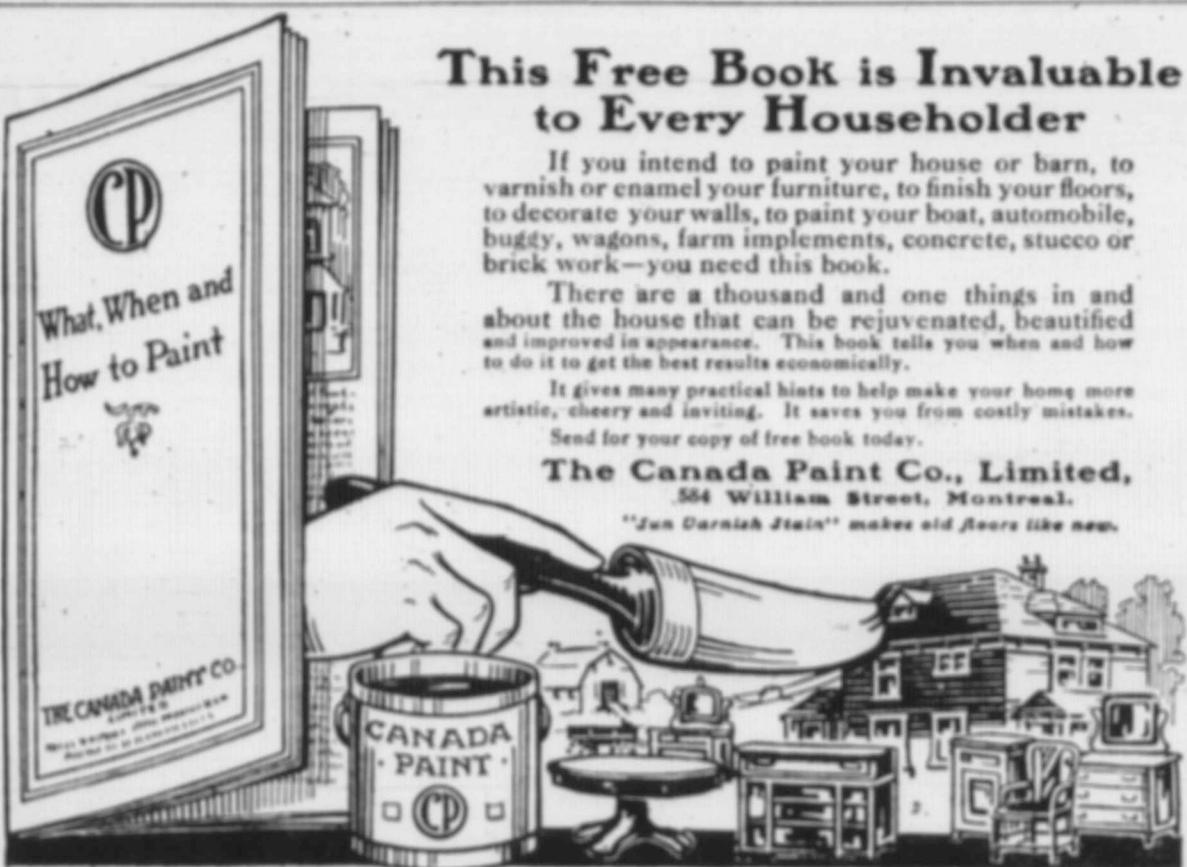

If you intend to paint your house or barn, to varnish or enamel your furniture, to finish your floors, to decorate your walls, to paint your boat, automobile, buggy, wagons, farm implements, concrete, stucco or brick work—you need this book.

There are a thousand and one things in and about the house that can be rejuvenated, beautified and improved in appearance. This book tells you when and how to do it to get the best results economically.

It gives many practical hints to help make your home more artistic, cheery and inviting. It saves you from costly mistakes. Send for your copy of free book today.

The Guardian of the Oat Dish

None But the Big, Rich, Flavory
Grains Go Into Quaker Oats

Why is Quaker Oats, the world around, the dish of the connoisseurs?

Because it is flaked from the queen oats.

Because all the little oats—starved and insipid—are barred from this premier brand.

Because every flake is luscious. The flavor and aroma give it vast distinction.

It makes a winning dish. Children delight in it. So they get a wealth of this nitrogenous, vim-creating food.

Isn't that your idea of an oat dish?

If it is, be sure you get it. It costs no extra price. Any grocer will supply it if you specify Quaker Oats.

Quaker Oats

The Vim-Food Luxury

Oats contain over 16 per cent of nitrogenous protein—the most costly element in food.

They are rich in phosphorus and lecithin, which are brain and nerve constituents.

They are energizing, spirit-giving, and a perfect food for growth. That is why oats stand foremost as a child's food. But older people never cease to need the vitalizing oat.

Britain MUST Have Food!

INCREASE THE FOOD SUPPLY AND VICTORY IS SURE.

CANADA—THE FARM—FOOD PRODUCTION. The Government of Canada in its second annual series of advertisements as concerning increased food production, clearly defines the vital part the Western farmer is playing in bringing the war to a successful and quicker issue. The first ad. appears on page 47 of The Guide dated March 21, 1917, and the second on page 30 of this number.

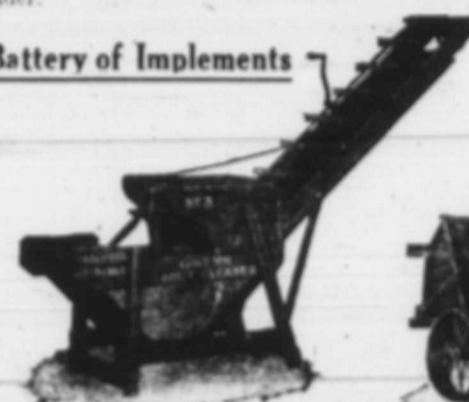

It is pointed out that Canada is the nearest producer of staple foods, and Britain appeals to Canada for this reason. The magnificent response our farmers made to the Government's appeal last year truly exemplified the spirit of a patriotic people. We are quite sure that every effort will be made by one and all this year to cultivate every possible piece of land—to send to Great Britain food in abundance—a contribution to our worthy cause, which will make the enemy cower under.

A Battery of Implements

The Automatic Grain Pickler

Wood on Wheat Prices

Continued from Page 47

ing is completed on account of the comparatively short water haul as against the Australian distance.

"Take again, the price guaranteed to the British wheat raiser, which is about \$1.82 a bushel. I have seen recent quotations from the Liverpool market, and No. 1 Manitoba northern was quoted as 32c. a bushel higher than the British wheat. Add this to the 12c. difference between \$1.70 and \$1.82 and it will be seen that the British farmer is getting 44c. a bushel more than the Canadian council of agriculture asked for our wheat.

Came from Britain

"Sir George holds up the idea that we may, unless we make this contract, have our wheat left on our hands, to dis-

pose of as best we are able on an open market. It is hardly necessary to remind Sir George that the Canadian farmers have not asked the British government to guarantee any price. The proposal comes from the British government.

"I am reliably informed that the British grain commission last fall expressed a willingness to put a minimum of \$1.50 and a maximum of \$2.00 on No. 1 Northern, Fort William, on the 1916 crop. Sir George has not yet definitely told us that they are not still willing to take our suggestion of \$1.50 and \$1.90—minimum and maximum—on this year's crop.

"The price that Sir George suggests, if present conditions continue will be fixing the price of the average of the different grades of Canadian wheat at a figure no better than the price of feed.

"It will not pay to sell wheat at that price. Those people who tell us how to

farm say that there is more money in feeding wheat at \$1 a bushel to hogs which will sell at \$6.00. Hogs are now worth as high as \$15.00 at times at Calgary, so it can easily be seen that there will be a great deal more feeding done if there is anything like the suggested price put into effect."

No Encouragement

"It is impossible for me, and I think I can speak also for the Canadian Council of Agriculture, to understand how Sir George expects to encourage the production of wheat by putting a feed price on that product. We have not been shown why the price we fix is not a reasonable one under present conditions of high prices and high wages. We have not been shown that this price is above that to be paid for the Australian crop, nor have we been shown that it is above that agreed upon with the British producer. We have not been shown that the Cana-

dian farmer is under any moral obligation to produce wheat for the empire at a cheaper price than the British Farmer, or the farmers of any other part of the empire."

"I still believe that the action of the Canadian Council of Agriculture was just and fair and reasonable, and until I have some good reason for changing my mind, will continue to hold the same opinion."

These Valuable Prizes Given Away by the Nor'-West Farmer

Overland
MODEL 75B
New Series

How Many Kernels in 10 lbs. No. 1 Northern Wheat?

FIRST PRIZE—Five-Passenger Touring Car. Overland New Series Model 75B.

\$1500.00 in Prizes

We believe a more attractive lot of valuable prizes could not be selected than those listed above. The first prize is the Overland New Series Model 75B car, as illustrated—fully equipped with self-starter and electric lights, 31x4-inch tires, 104-inch wheelbase, cantilever rear springs, streamline body, and deep, soft upholstering. The second prize will be equally acceptable. It's a genuine Mason & Risch Piano, mahogany, walnut, weathered oak, or fumed oak finish, full 7 1/3 octave, 3 feet 4 inches high. The regular retail price, anywhere in Canada is \$475.00. It is just the piano you would buy, and none better is turned out of the Mason & Risch factory. The third prize will be very popular—an Edison New Diamond Point Phonograph, complete with cabinet and choice of twenty-five records. The retail price of this outfit is \$75.00. Each prize will be delivered absolutely free of all carriage charges at the nearest station of the lucky winner.

Who May Enter the Contest

Any person may enter this contest, but all estimates must be accompanied by one or more subscriptions to The Nor'-West Farmer for at least one year FOR BONA FIDE FARMERS LIVING IN WESTERN CANADA. Contest closes May 1, 1917.

The Wheat Sample

was selected for us by the Chief Grain Inspector's Office, Winnipeg, under the supervision of Prof. S. A. Bedford, Sup't. Manitoba Demonstration Farms, and sealed by him. It is a good average sample of No. 1 Northern, perhaps half Red Fife and half Marquis, and has been deposited by Prof. Bedford in the vaults of The National Trust Co. for safe keeping, where it will remain until the close of the contest, when it will be opened and officially counted by Prof. Bedford. We do not know how many kernels there are in the canister, and no one else will know until Prof. Bedford makes his official count at the close of the contest.

How to Earn Estimates

The subscription price of The Nor'-West Farmer is \$1.00 per year, two years \$1.50, three years \$2.00, four years \$2.50, and five years \$3.00. A subscription for one year will earn two estimates; two years, five estimates; three years, eight estimates; four years, eleven estimates; and five years, fifteen estimates. By getting subscriptions from friends and neighbors a great many extra estimates may be earned. Thus, five subscriptions for one year each would earn ten estimates; for two years each, twenty-five estimates; for three years, forty estimates; etc., etc. Estimates and subscriptions may be sent in by anyone, but the subscriptions must be for bona-fide farmers.

Read This

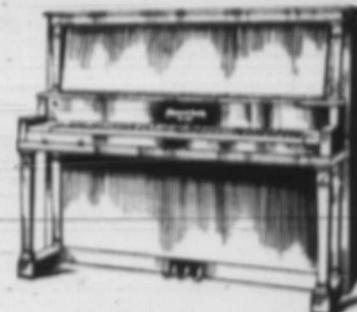

Note carefully the paragraph on how to earn extra estimates. By taking advantage of our low rate for long term subscriptions, you can multiply your chances of success a great many times, as the more estimates you send in the greater chance you have of winning. Also, you can easily earn extra estimates by getting subscriptions from friends and neighbors. Every one of your neighbors should take THE NOR'-WEST FARMER. See them at once.

REMEMBER

All Subscriptions must be for bona-fide farmers; otherwise estimates will not count. Any one, however, may send in the names.

This Canister contains ten pounds of No. 1 Northern Wheat personally selected by Prof. S. A. Bedford, and is now stored under lock and key in the vaults of the National Trust Co., Winnipeg.

Those who first answer this question correctly, or most nearly correct, will win these valuable prizes if they are willing to invest \$1.00 in a year's subscription to THE NOR'-WEST FARMER. All we ask you to do is to estimate the number of kernels in ten pounds of No. 1 NORTHERN WHEAT. The NEAREST CORRECT estimate first received wins this model 75B Overland Touring Car, the second-nearest estimate first received wins the Mason & Risch Piano, as good an instrument as is turned out of their factory, and the third-nearest correct estimate first received wins the Edison New Diamond point Phonograph.

SECOND PRIZE—Mason and Risch Piano
Value \$475.00.

How to Estimate

The persons who win these prizes will be those who use intelligence in estimating. Do not merely guess. A good way to do is to actually count out, say, one pound or half a pound of wheat. Do this with several representative samples, and from the average count you get, the approximate number of kernels in ten pounds may be easily estimated. There are a good many thousand kernels in ten pounds of wheat. A lot of people will be cautious in estimating, so if you are careful you have a splendid chance of winning. These Big Rewards will be delivered to the respective winners F.O.B. their nearest stations.

The Nor'-West Farmer

In the pilot farm paper in Western Canada. It is published in Winnipeg on the 10th and 20th of each month, and is edited by men who have learned agriculture in actual experience. They are men who have come from the farm and know farm conditions in the West as they actually are. The best farmers in the country also relate their experiences in the columns of The Nor'-West Farmer. Often do we receive letters from subscribers stating that the helpful information and advice in some one article has saved them more than the subscription price for the rest of their lives. Legal and mercantile advice is freely given thru our columns to subscribers without charge. Regional departments are provided for the discussion of all questions relating to the farm, including Pasturage, Live Stock, Dairy, Gardening and Forestry, and a regular fortnightly review of the stock and grain markets. The Home Circle, conducted by our lady editor, a mother, and a farmer by instinct, will appeal to every woman in the land. No Farmer's wife or daughter can read this department without getting a new vision of woman's place on the farm. Our Home Circle radiates enthusiasm that is contagious.

THE NOR'-WEST FARMER LTD.
WINNIPEG : MAN.

USE THIS COUPON

THE NOR'-WEST FARMER, LTD.,
WINNIPEG, CANADA.

Gentlemen—Enclosed please find \$... being my subscription to The Nor'-West Farmer for ... years. I am a bona-fide farmer and understand that this subscription is The Wheel Estimating Contest as advertised. I also understand that if any of these estimates is the best earned or most nearly correct one received, that I am to get the Model 75B Overland Touring Car; if second-best received, the Mason and Risch Piano; and if third-best received, the Edison Phonograph, delivered free of further charge to my nearest railway station. In case of a tie, the estimate first received ranks first. My estimates are as follows:—

Name: _____
P. O. _____
N. B.—If other subscriptions are received, send in names and estimates on a separate sheet of paper, with remittance to same name.
