5^o. L'Auditeur Général fera tous les états des comptes pour la Législature ou autres départemens publics du gouvernement, et ces états devront porter la signature de l'Auditeur et de l'Inspecteur Généraux.

6^o. Afin que les comptables puissent faire la due communication des rapports sur leurs comptes, l'Auditeur Général leur transmettra des extraits certifiés de la décision du Comité du Conseil sur le compte.

7^o. Pour mettre l'Auditeur Général en état d'exécuter les devoirs de sa charge il pourra avoir libre accès à toutes les archives du Conseil Exécutif relatives au Comptes, avec la permission d'en faire tels extraits qui seront nécessaires pour établir le principe sur lequel il a été donné une décision dans quelque cas.

H. W. RYLAND.

Château St. Louis,

Québec, 14 décembre 1826.

Monsieur,

J'ai ordre de Son Excellence le Gouverneur-en-Chief de vous remettre ci-inclus le rapport du comité de tout le Conseil du cinq courant, sur les réglemens proposés pour conduire les affaires des Bureaux de l'Auditeur et de l'Inspecteur Généraux des Comptes Publics Provinciaux, et Son Excellence demande qu'en mettant de nouveau le rapport devant le Comité pour sa considération, vous lui mentionnez que Son Excellence l'ayant lu, n'a d'objection à faire aucune partie, si ce n'est aux réglemens proposés qui obligent les comptables à envoyer leurs comptes au Secrétaire Civil de même qu'à l'Auditeur Général en second lieu avec son rapport (selon qu'il est ordonné par la première, la quatrième et la cinquième règle, dans le rapport,) excepté aussi la partie de la septième règle qui a rapport à la réquisition, à être envoyée du Bureau du Secrétaire Civil pour avoir les ordonnances qui ont été recommandées dans les rapports approuvés du Conseil.

Son Excellence est encore d'avis que la meilleure marche à suivre dans le service public, et en même tems la plus facile, et celle qui mettrait les comptables et les autres départemens publics en état d'obtenir plus aisément tous les renseignemens nécessaires, serait de faire un règlement pour obliger les comptables d'adresser tous les comptes d'une nature publique à l'Inspecteur Général des Comptes Publics, qui lui les transmettrait à l'Auditeur Général, des mains de qui ils passeraient accompagnés de son rapport, au Greffier du Conseil pour être mis devant le Comité du Conseil; et du Comité du Conseil avec son rapport au Bureau du Secrétaire Civil pour être mis devant le Gouverneur; et que cette marche, peut être suivie (sans aucun renvoi spécial à aucun périod du Bureau au Secrétaire du Gouverneur), en établissant et en enregistrant un ordre permanent à cet effet dans les différens départemens et sur les livres du Conseil, ce qui préviendrait la nécessité de tout autre renvoi spécial. Et quant à la partie de la septième règle proposée ci-dessus mentionnée, son Excellence considérerait l'approbation du Gouverneur par écrit sur la face du rapport du Conseil recommandant l'émission d'ordonnances, comme une autorité suffisante à l'officier propre pour expédier les ordonnances selon la pratique établie jusqu'ici à l'égard de semblables rapports approuvés.

J'ai l'honneur d'être

Monsieur,

votre très-obéissant serviteur,

Castle of Saint Lewis,
Quebec 21st February, 1827.

Sir,

I am directed by His Excellency the Governor in Chief, to transmit to you, to be kept on Record in your Office, for the information of the Executive Council, the inclosed copy of additional instructions given to the Inspector General of Provincial Accounts, for his Government in the execution of the duties of his office.

I have the honor to be,

Sir,

Your most obedient Servant,

(Signed) A. W. COCHRAN,

The Honorable H. W. RYLAND, Esq.

Sec'y.

Examined and certified,

H. W. RYLAND.

L. S.—By His Excellency George Earl of Dalhousie, Knight Grand Cross of the most Honorable Military Order of the Bath, Captain General and Governor in Chief in and over the Province of Upper and Lower Canada, &c. &c. &c.

To Joseph Cary, Esquire, Inspector General of Public Provincial Accounts.

You are to be governed in the execution of your duties as Inspector General of Public Provincial Accounts, by the following additional Instructions :

1st. All accounts are to be sent to you in future by the Public Accountants, instead of passing as heretofore through the Office of the Civil Secretary.

2nd. You are, as formerly, to make such remarks as occur to you to be necessary, and to transmit them to the accountant for explanation.

3rd. So soon as the explanation is received you are to transmit the accounts (either with remarks and explanations or without them, as the case may be,) to the Auditor General of Public Accounts, adding the words "examined," and "with remarks," (if any there be,) as has been heretofore practised.

4th. You are as heretofore to countersign all Warrants which shall be recommended by the Committee of Council to be issued previous to their being transmitted by the Clerk of the Council to the Civil Secretary for the Signature of the Governor.

5th. You are at all times to have free access for your information and guidance, to all Reports on matters of accounts that have been approved of by the Governor, which are to be kept by the Clerk of the Council in a separate book from Reports on other matters.

6th. All accounts, papers and documents after being reported upon by the Auditor General, shall remain in his custody, but you are to have free access and reference thereto at all times.

7th. You are to make out all statements of Public Accounts, as well those required for the Legislature as for Public Departments, subject to the revision of the Auditor General, and the subsequent Report of the Executive Council, if specially referred.

8th. If you shall except to any article in an account, you are to state the authority on which it is disallowed, and also the precise sum that is objected to.

Quebec, 20th December, 1826.

(Signed) DALHOUSIE.

By His Excellency's command.

(Signed) A. W. COCHRAN.

Examined and certified,

H. W. RYLAND.

demens proposés, et recommande humblement qu'il soit donné à ces officiers des instructions conformément à iceux.

Monsieur,

J'ai ordre de Son Excellence le Gouverneur en Chef, de vous transmettre pour être enregistrée dans votre Bureau pour l'information du Conseil Exécutif, la copie ci-incluse des instructions additionnelles données à l'Inspecteur Général des Comptes Publics Provinciaux pour le guider dans l'exécution des devoirs de son Bureau.

J'ai l'honneur d'être,

Monsieur,

vos très-obéissant serviteur,

H. W. RYLAND.

L. S.—Par Son Excellence George Comte de Dalhousie, Chevalier Grand' Croix du Très-Honorable Ordre Militaire du Bain, Capitaine Général et Gouverneur-en-Chef dans et pour les Provinces du Haut et du Bas-Canada, &c. &c.

A Joseph Cary, écuyer, Inspecteur Général des Comptes Publics Provinciaux,

Vous aurez à vous conformer dans l'exécution de vos devoirs comme Inspecteur Général des Comptes Publics Provinciaux aux Instructions additionnelles qui suivent :

1°. A l'avenir tous les Comptes Publics vous seront envoyés par les Comptables, au lieu de passer ci-devant par le Bureau du Secrétaire Civil.

2°. Vous aurez, comme précédemment, à faire telles remarques qui vous paraîtront nécessaires, et à les transmettre au Comptable pour qu'il donne des explications.

3°. Aussitôt que les explications seront reçues, vous aurez à transmettre les comptes (soit avec les remarques et les explications, ou sans elles, selon le cas) à l'Auditeur Général des Comptes Publics, en ajoutant les mots "examiné" et "avec remarques" (s'il y en a) comme la pratique a été ci-devant.

4°. Vous aurez, comme ci-devant, à contresigner toutes les ordonnances que le Comité du Conseil recommandera d'émaner, avant qu'elles soient transmises par le Greffier du Conseil au Secrétaire Civil pour recevoir la signature du Gouverneur.

5°. Vous aurez en tout temps accès libre, pour y puiser des renseignements et des règles de conduite, à tous les rapports sur des matières de comptes, qui ont été approuvés par le Gouverneur, et qui doivent être gardés par le Greffier du Conseil dans un livre séparé des rapports sur autres matières.

6°. Tous les Comptes, Papiers et documens, après que l'Auditeur Général aura fait son rapport sur iceux, resteront sous sa garde, mais vous y aurez accès et en aurez la communication libre en tout temps.

7°. Vous aurez à faire tous les Etats des Comptes Publics, tant ceux demandés par la Législature, que ceux pour les Départemens Publics, sujets à la révision de l'Auditeur Général et au Rapport subséquent du Conseil Exécutif, s'ils lui sont spécialement renvoyés.

8°. Si vous objectez à quelque article d'un compte, vous citerez l'autorité sur laquelle vous l'aurez fait, et aussi la somme précise à laquelle vous aurez objecté.

Québec, 20 décembre 1826.

(signé) DALHOUSIE.

Par ordre de Son Excellence

REPORTS

OF THE

SPECIAL COMMITTEE

To whom was referred that part of the Speech of His Excellency the Administrator of the Government at the opening of the Second Session of the Thirteenth Provincial Parliament of Lower-Canada, relating to

Roads and other Internal Communications,

AND OTHER REFERENCES,

with power to report from time to time.

FIRST REPORT.

1st Report. **Y**OUR Committee being persuaded from the information given by the persons whose Evidence will be found in the Appendix, and from the information possessed by some of the Members of your Committee, that the opening of the Road prayed for by the Petition of divers Inhabitants of the Eastern Townships, situated in the County of Buckinghamshire, referred to your Committee, would be of great advantage to Agriculture by facilitating the means of settlement to numerous families, and thereby benefit both the said families and the public, have thought it proper to make it the subject of a first Report.

Your Committee are of opinion that the present state of the settlement already formed, as well on the line of the Road prayed for, as on both banks of the River Becancour; and the private labour of the Settlers and the expenses they have already incurred in opening the necessary communication with the old Settlements of the Saint Lawrence, form a good title to the assistance

of the Legislature, and ensure the future keeping up and repairing of the Road prayed for. And further, that continuation of this Road (in a few years) from the River Becancour as far as Craig's Road, may be of still greater and more general utility.

That, lastly, moved by these considerations, your Committee are of opinion that it is expedient and desirable that the Legislature should grant a sum not exceeding Four hundred and seventy pounds currency, for opening a Road between the first and second ranges of the Townships of Blandford, from the rear line of the Seigniori of Gentilly as far as the River Becancour.

The whole nevertheless humbly submitted.

F. BLANCHET,

17th December 1828.

Chairman

SECOND REPORT.

Second Report. **Y**OUR Committee thought it right in the first instance to turn their attention to the Roads which it might be necessary to open for the purpose of facilitating new settlements, and the probable expense thereof.

On the Petition presented to your Honorable House on the 23d December last, and the proceedings had in the Committee which has already sat on the subject, and which will be found in the Appendix, your Committee are of opinion that it is expedient to grant a sum not exceeding Four hundred Pounds currency, as an aid in opening the Road described in the Petition; and that before the application of the said Sum, it would be proper that the said Road should be *verbalisé* according to Law.

Your Committee proceeded further to take into consideration the opening of a Road for the Inhabitants of the Township of Tring; and from the information they have received on the subject, are of opinion that it is expedient to grant a sum of money not exceeding one hundred and seventy pounds currency for opening a Road, as a continuation of the Road already opened in the Parish of St. Francois de la Nouvelle Beauce on the west and near to the Church of St. François to the new settlements in the said Township; provided that the said Road be also *verbalisé*, according to Law, previous to its being begun.

Proceeding further to the consideration of the utility of opening a Road from the present settlements in the Town-

ship of Frampton to the north-western line of Cranbourne, a distance of about eight miles, in which distance there are already several settlements; Your Committee after having considered the information and the plan laid before them by William Henderson, Esquire, are of opinion that it is expedient to grant a sum of money not exceeding Two hundred and forty pounds currency, for opening the said Road, which is already *verbalisé*.

Your Committee next proceeded to take into consideration the Petition of divers inhabitants of the Township of Grenville and other Townships, and of the Seigniori of La Petite Nation. The subject of this Petition appears to be of the greatest importance, and is intimately connected with the general communications of this part of the Province: and further, it will be necessary that your Committee should have before them more particular documents than are at present in their possession concerning this subject. Your Committee have adopted measures for obtaining such documents, and will have the honor of submitting them to your Honorable House with their general Report on the Internal Communications of the country.

The whole nevertheless humbly submitted.

F. BLANCHET,

Chairman.

14th January 1829.

THIRD

Appendix
(P. P.)

Third Report.

2d Feb. 1829.

THIRD REPORT.

YOUR Committee thought it their duty to turn their attention to the existing Road Laws. These laws are, in the opinion of your Committee, prejudicial to the formation of new settlements, and not adapted to the present state of the country. It costs Twenty pounds currency to have a bye-road laid out at a distance of thirty leagues from the seats of jurisdiction. Now, who among the inhabitants of a new settlement are able to pay that sum? Another defect in the Law is, that the inhabitants are under the necessity of paying the same fees to the Grand Voyer, whether the *Procès Verbal* be homologated or not; so that the Grand Voyers have no interest in the homologation of their *Procès Verbaux*. Your Committee believe then, that the management of the Roads should be left to the Inhabitants, but they do not believe this can be done until the Counties shall have been re-organized. And this is an object very much to be wished for, since the Legislature would not then be obliged to make appropriations for the opening of Roads of merely local utility in the Counties, and its attention would be directed to the great Roads alone.

Your Committee then turned their attention to the Roads and Communications which it would be expedient to open and complete, as well with a view to the formation of new settlements as for affording facility to travellers. The necessity of forming new settlements becomes more and more pressing, for there are Parishes in which fathers of families live on mere building Lots:— This is a most alarming circumstance, because it tends to the rapid introduction of poverty among the agricultural classes.

Your Committee then regard the formation of new settlements on good land as the most effectual and least expensive mode of preventing so serious an evil; but, in addition to the pressing necessity of furnishing lands for the superabundant population of the Province, (to which nothing can contribute more than the opening of Roads communicating with the tracts of uncultivated and fertile land by which we are surrounded) there are considerations which at the present time render this measure one of which the necessity is altogether peculiar. The failure of the harvest in the season which is just passed has produced in some parts of the Province such extreme misery, that, unless public assistance be given, the most dreadful consequences are to be apprehended; and such assistance can be in no way more effectually given, whether the advantage of the public or that of the sufferers themselves, in whose favour pecuniary aid is prayed for, be regarded, than by providing them with such employment as will enable them to be busied in a manner at once beneficial to themselves and advantageous to the public.

Your Committee therefore take the liberty to submit to the consideration of your Honorable House the expediency of opening the following Roads with a view to the formation of new settlements, with the expense which will probably be incurred in so doing:

For opening a Road from Metis to the Missionary Station of Ristigouche, and for making the necessary surveys, in addition to the sum already voted, Three thousand pounds.

For repairing the Road from Temiscouata, and the Bridges thereon, Eight hundred pounds.

That, as soon as, between the River Ouelle and Kamouraska, there shall have been conceded in the rear of the old Settlements not less than one hundred lots of the said land to actual settlers, it shall be lawful for the Governor, Lieutenant Governor, or Person administering the Government for the time being, to cause the proper Surveys to be made for tracing, making and opening a Road of communication to and from such new settlements, and that there be appropriated for this purpose, a Sum not exceeding Five hundred Pounds.

That, as soon as, in the rear of the old Settlements of L'Islet, there shall have been conceded not less than one hundred lots of the said land to actual settlers, it shall be lawful for the Governor, Lieutenant Governor, or Person administering the Government for the time being, to cause the proper Surveys to be made for tracing, making and opening a Road of communication to and from such new Settlements; and that there be appropriated for this purpose a sum not exceeding Five hundred Pounds.

That, as soon as, in the rear of the Bras St. Nicolas in the

County of Devon, there shall have been conceded not less than one hundred lots of the said land to actual settlers, it shall be lawful for the Governor, Lieutenant Governor, or Person administering the Government, for the time being, to cause the proper Surveys to be made for tracing and opening a Road of communication to and from such new settlements, and that there be appropriated for this purpose a sum not exceeding Five hundred Pounds.

That, as soon as, in the rear of the old Settlements of *La Rivière du Sud* there shall have been conceded not less than one hundred lots of the said land to actual settlers, it shall be lawful for the Governor, Lieutenant Governor, or Person administering the Government for the time being, to cause the proper Surveys to be made for tracing, making and opening a Road of communication to and from such new Settlements, and that there be appropriated for this purpose a Sum not exceeding Five hundred Pounds.

That, as soon as, there shall have been conceded not less than one hundred lots of the Crown Lands lying between the Township of Tring and Lake Saint Francis, to actual Settlers, it shall be lawful for the Governor, Lieutenant Governor, or Person administering the Government for the time being, to cause the proper Surveys to be made for tracing, making and opening a Road from the Township of Tring to Craig's Road, and that there be appropriated for this purpose a Sum not exceeding Three hundred Pounds.

Your Committee then proceeded to the consideration of several other Roads which it would be expedient to cause to be completed.

Your Committee recommend that in addition to the Sum already voted, for completing the Kennebec Road, there be granted a further Sum not exceeding Five hundred Pounds.

A Sum of One thousand six hundred Pounds for completing the Craig's Road, over and above the Sum of Four hundred Pounds already appropriated for this purpose.

A Sum of One thousand six hundred and sixty Pounds for completing the Road from the Township of Hatley to the Yamaska Mountain.

Another Sum of One thousand six hundred and sixty Pounds for completing the Road from Melbourne to the Yamaska Mountain.

Your Committee cannot but remark that in a military, commercial or agricultural point of view, it would be of great advantage that a Road should be opened from the Black River to the termination of the old road to the Forges, which is now abandoned, or in the rear of the Townships of Caxton, Brandon and Kildare, and thence through the Townships and the waste lands as far as Granville on the River Ottawa; and from the said Township as far as the Township of Hull, at the Falls called *La Chaudière*, on the same river.

Your Committee recommend that for these purposes there be appropriated for the present year, a Sum not exceeding Four thousand Pounds.

And a further Sum of Five hundred Pounds for the exploration of the Country between the River Saint Maurice and the River Ottawa, as well with a view to gain sufficient information for tracing the said Road in the manner most conducive to the public advantage, as for obtaining a knowledge of the natural productions, the quality of the soil, and the extent of the said tract of country.

For opening a Road from the old Settlements in the rear of Berthier to Brandon, Three hundred Pounds.

The whole nevertheless humbly submitted.

F. BLANCHET,

Chairman.

2d February 1829.

FOURTH

FOURTH REPORT.

Fourth
Report.

11 Feb. 1829.

YOUR Committee have continued their researches with respect to the other parts of the Province in which it would be expedient to form Settlements, with a view to furnish Lands in the proximity of the superabundant population of certain Parishes in the several Districts. Lake Etchemin, which lies in the more remote part of the country south of Quebec, has been explored, and the lands around it (which are the property of the Crown) have been found to be of excellent quality—the Parishes which lie near it are burdened with a surplus population. Your Committee, then, take the liberty of recommending a grant of a Sum not exceeding Three hundred Pounds Currency, for opening a Road of communication thereto, as soon as one hundred lots of Land shall have been conceded to actual Settlers, by the Governor, Lieutenant Governor, or Person administering the Government of the Province for the time being.

Your Committee also believe that it is desirable that Settlements should be formed in the Eastern Townships lying west of the River Chaudière and Lake St. Francis, where a great number of Canadians might be settled. Your Committee take the liberty to recommend a grant of the Sum of One thousand pounds for opening a Road from Dudswell, in the District of Three-Rivers, to meet a Road already opened in the district of Quebec, as far as the Township of Ireland; and of a Sum of Three hundred pounds to open a Road from the Township of Broughton to Leeds. (This last mentioned Road has been already verbalized.)

Your Committee believe also, that it would be advantageous to open a communication between the River Chateaugay and Godmanchester, and thence to St. Regis: Your Committee recommend a grant of a Sum not exceeding One thousand five hundred Pounds Currency.

Your Committee cannot too strongly recommend the opening of Roads in the neighbourhood of Quebec, with a view to form an easy communication with the River Jacques Cartier; these Settlements in the vicinity of the Town may afford the means of subsistence to a great number of poor people: Your Committee recommend a grant of the Sum of Two hundred and fifty Pounds, for establishing a communication from Val-Cartier to Lake Saint Charles, which would shorten the Road to Quebec five miles; another Sum of Five hundred Pounds for opening a communication between Stoneham and Tewksbury; and another Sum of Two hundred Pounds for opening a Road from the old Settlements to Neuville.

The whole nevertheless humbly submitted.

F. BLANCHET,

Chairman.

11th February 1829.

FIFTH REPORT.

Fifth
Report.

14 Feb. 1829.

YOUR Committee have directed their attention to the bad state, during the rainy seasons, of the Roads by which the Towns of Quebec, Montreal and Three-Rivers are approached. To put these Roads into a durable condition, would demand the expenditure of a Sum beyond the means of those who are by Law bound to do it. For it appears to your Committee that good Roads can only be effectually obtained by adopting the system of Mr. McAdam. Your Committee venture to recommend to Your Honourable House that an aid be granted to each of the said Towns for Macadamizing the Roads leading thereto.

Your Committee further believe that there ought to be a good Carriage Road from Shipton to the Saint Lawrence, and there-

fore recommend a grant for opening a Road on the east side of the River Saint Francis to St. Grégoire; also, a grant for the Road across the Longueuil Swamp to Chambly; and for the High-Road of communication between the Province and the United States, that is to say, the Road from Laprairie to Saint John.

The whole nevertheless humbly submitted.

F. BLANCHET,

Chairman,

24th February 1829

SIXTH REPORT.

Sixth
Report.

10 March 1829.

YOUR Committee having taken into their serious consideration the Instructions respecting the Sale of the Crown Lands, are of opinion that the severity of the climate, the poverty of the Settlers, and the difficulties attending the opening and clearing of new Lands, are obstacles which render the introduction of such a system inexpedient.

Your Committee have also procured a figurative Plan of the Saint Lawrence from Kingston in Upper-Canada, to the Anse Tablon on the Coast of Labrador, with the Seigniories, Town-

ships, &c. in the Province of Lower-Canada: and your Committee have the honour to submit the same to Your Honourable House as forming part of the present Report.

The whole nevertheless humbly submitted.

F. BLANCHET,

Chairman.

10th March 1829.

ORDER OF REFERENCE.

HOUSE OF ASSEMBLY,

Saturday, 13th December 1828.

Saturday, 29th November 1828.

RESOLVED, That that part of the Speech of His Excellency the Administrator of the Government at the opening of the present Session, relating to Roads and other Internal Communications, be referred to a Committee of Five Members, to report thereon with all convenient speed, with power to send for Persons, Papers and Records.

Ordered, That Mr. Blanchet, Mr. De St. Ours, Mr. Stuart, Mr. Bourdages and Mr. Proulx do compose the said Committee.

Attest.

W. B. LINDSAY,
Dy. Clk. House of Ass'y.

Monday, 1st December 1828.

Ordered, That the Petition of divers Inhabitants of the Eastern Townships, situated in the County of Buckinghamshire, be referred to the said Committee.

Attest.

W. B. LINDSAY,
Dy. Clk. House of Ass'y.

Friday, 5th December 1828.

Ordered, That Mr. Louis Lagueur be added to the said Committee.

Attest.

W. B. LINDSAY,
Dy. Clk. House of Ass'y.

Ordered, That the said Committee have leave to report from time to time.

Attest.

W. B. LINDSAY,
Dy. Clk. House of Ass'y.

Friday, 26th December 1828.

Ordered, That the Petition of divers inhabitants of the Township of Grenville and other Townships, and of the Seigniory of La Petite Nation, be referred to the said Committee.

Attest.

W. B. LINDSAY,
Dy. Clk. House of Ass'y.

Monday, 12th January 1829.

Ordered, That Mr. Laterrière be added to the said Committee.

Attest.

W. B. LINDSAY,
Dy. Clk. House of Ass'y.

MINUTES OF EVIDENCE.

THURSDAY, 11th DECEMBER, 1828.

FRANCOIS BLANCHET, Esquire, in the Chair.

Joseph Bouchette, Esquire, Surveyor General, called in, and examined:

ARE you acquainted with the Townships of Stanfold, Bulstrode, Blandford and Maddington?—I am.

Are the soil and situation of these Townships favorable for agricultural settlements?—Yes; in general.

Do the Seigniories adjoining these Townships still contain a number of unconceded Lots of Land sufficient to supply the demand therefor of the younger Farmers who wish to settle themselves on land of their own?—There are still some Lots to be conceded in the Seigniories, but I cannot say how many.

What part of these Townships do the new Settlers appear to prefer, and where, in fact, are the Settlements already begun the most numerous?—They generally prefer the Lots on the River Bécancour.

What is the state of these new Settlements; and can you inform the Committee what is the number of families or persons already settled in these places?—There are many Settlements in Blandford, Maddington and Bulstrode, but I cannot exactly say what progress they have already made.

Is the progress of these Settlements retarded by the want of a Road; and to how many families would the opening of the Road mentioned in the Petition referred to the Committee, [The Petition of divers inhabitants of the Eastern Townships, situated in the County of Buckinghamshire, was here shown to the Witness,] afford readier means of settlement; and what means of communication with the old Settlements have the families now established in these Townships?—Yes; the want of communication considerably retards the settlement in these parts.

Have the persons holding lands in these Townships themselves worked at the opening of the Road prayed for, or of any other?—Yes; and especially the inhabitants of Blandford, who have themselves opened a good winter Road between the 1st and 2d ranges, where a piece of Land, 66 feet wide, has been specially reserved in the Letters Patent of this Township; and according to the Report of my Deputy, who surveyed and laid out the Township in 1821, the place where the Road passes appears to be the most fitting, and offers easy means of settling on the road itself, to 192 inhabitants, at 100 acres each, and I am informed that many Settlements are already made on this Road.

Is it beyond the means of the Settlers in these parts to open and complete the said Road?—I believe very much beyond them.

At what distance from the Settlements on the banks of the Saint Lawrence are the new Settlements on the River Becancour; and would these last have no means of communication by any other line than that on which the Petitioners pray that a Road may be opened?—The Settlements in these parts are most numerous on the River Becancour than elsewhere, and from these Settlements to those of Genilly the distance is between five and six leagues. I know of no route by which the communication could be more easily effected than by passing between the 1st and 2d ranges of Blandford.

Do you know what reasons the Petitioners have for desiring a Road between the 1st and 2d ranges of Blandford, rather than elsewhere?—Because it would evidently be of more advantage there than elsewhere; more easily made and more certainly kept in repair: 1st. Because Settlements are already commenced there, and 2dly, Because the Lots of the 1st and 2d Ranges having their respective fronts on this Road, they are nearer to each other, and there will be houses and clearings on both sides of the Road, and lastly; Because the Crown and Clergy Reserves are at a distance from this Road, which is a point of the greatest importance.

How much would it cost to open and complete this Road; what is its length; from what point on the Saint Lawrence ought it to commence, and how far would it be necessary to carry it?—I cannot exactly tell the distance. I think it is about 5 or 6 leagues; it would require from £90 to £36 currency per mile, provided the money was economically employed.

What is about the Sum already expended on the said Road?—I cannot say.

Would any other public advantages than those already mentioned in your answers, attend the opening of this Road?—Yes; besides those of which I have just spoken, it is sufficient to refer to the map of the Province to be convinced of the utility of continuing such a Road as far as Craig's Road, the distance of which from the River Becancour does not exceed six leagues within the Township of Tingwick: from this point, the communication between the Eastern Townships and Quebec, may be estimated at 30 leagues by Craig's Road, and at about 29 leagues by the Road passing through Genilly, of which there are 12 leagues of land carriage, and the remainder by the River Saint Lawrence, which considerably facilitates the conveyance of goods by means of the River and the Steam Boats; and further, the opening of the Road prayed for, will open a communication with and facilitate the formation of numerous Settlements in this interesting portion of the Province.

Mr. Charles Turgeon, called in, and examined:

Are you acquainted with the Townships of Stanfold, Bulstrode, Blandford and Maddington?—I am but little acquainted with the Townships of Bulstrode and Stanfold, but tolerably well with those of Blandford and Maddington.

Are the soil and situation of these Townships favourable for agricultural Settlements?—The River Becancour runs through the middle of these Townships, that is to say: between Stanfold and Bulstrode on one side, and Blandford and Maddington on the other. This River waters a spacious plain, in which lie several other Townships besides those above mentioned: this Plain is rendered fertile by many small streams running into the Becancour; the soil is rich and might afford means of settlement to more than 5000 Settlers, equally advantageous for the Settlers themselves and the Province.

Do the Seigniories adjoining these Townships still contain a number of unconceded Lots of Land sufficient to supply the demand therefor of the younger farmers who wish to settle themselves on land of their own?—I know little of these Seigniories, but the anxiety shown by the young farmers to procure Lands on the River Becancour gives me reason to believe that there are few or no lands in these Seigniories yet unconceded.

What part of these Townships do the new Settlers appear to prefer; and where, in fact, are the Settlements already begun, the most numerous?—The River Becancour, which as I have before observed, serves as a central point to the said Townships appears to be preferred, among the new Settlements, and, in fact, it is there that the Settlements are the most numerous.

What is the state of these new Settlements; and can you inform the Committee what is the number of families or persons already settled in these places?—The Settlements on the River Becancour are in a sufficiently advanced state. I cannot exactly say how many families are there settled: I feel persuaded they exceed fifty.

Is the progress of these Settlements retarded by the want of a Road; and to how many families would the opening of the Road mentioned in the Petition referred to the Committee [*The Petition of divers inhabitants of the Eastern Townships, situated in the County of Buckinghamshire, was shewn to the witness*] afford readier means of settlement; and what means of communication with the old Settlements have the families now established in the Townships?—The necessity under which the Settlers find themselves of carrying on their backs, the numerous articles for which they have occasion during the summer, from the Settlements on the St. Lawrence to those on the River Becancour, is severely felt by them, and exposes them to great privations, by which means many of those already settled there become disgusted, and those who wish to settle are deterred from doing so. Now, the opening of the Road prayed for would, I think, procure and facilitate the means of settlement to more than 5000 families.

Have the persons holding lands in these Townships themselves worked at the opening of the Road prayed, or of any other?—The landholders in Blandford have already made a very convenient winter Road of the Road prayed for. Some other persons settled lower down the River have opened another leading out of it between Blandford and Maddington; and some Lumbermen, a few years ago, opened a third at a distance of about a league from that last mentioned.

Is it beyond the means of the Settlers in these parts to open and complete the said Road?—Even if they united all their labour and all their means, they would be unable at present to open a Summer Road.

At what distance from the Settlements on the Banks of the St. Lawrence are the new Settlements on the River Becancour; and would these last have no means of communication by any other line than that on which the Petitioners pray that a Road may be opened?—The Settlements on the River Becancour are about five leagues from those on the Saint Lawrence. In addition to what I said in answer to the seventh question I may add, that the River Becancour itself affords the means of water communication, but about the middle of the Township of Maddington it becomes full of rapids, and the Portages are now impassable. Altogether, this means of communication is very dangerous.

Do you know what reasons the Petitioners have for desiring a Road between the 1st and 2d ranges of Blandford rather than elsewhere?—Among other reasons for this preference are these: this Road is in a more advanced state than any other, and the great number of Lots granted and on which Settlements are made in the 1st and 2d Ranges, affords more certain means of keeping it in repair:—The land necessary and fit for the Road has been reserved in this place; and further, there is a Road in the Seigniorie of Genilly leading to the Township already *verbalisé* and on the point of being opened.

If the Legislature were to grant a pecuniary aid for the opening of the said Road, what means are you acquainted with by which the future keeping up and repairing of the Road might be provided for; suggest those means to the Committee?—I consider the means pointed out in my answer to the preceding question, that is to say, the speedy settlement of the two Ranges which are separated by the Road, as certain.

How much would it cost to open and complete this Road; what is its length; from what point on the Saint Lawrence ought it to commence, and how far would it be necessary to carry it?—The opening and completing of this Road would cost, in my opinion, about £125 currency per league. Its length is about five and one half leagues, which would require a Sum of £687, provided that such Sum was placed in the hands of persons of integrity and experience, who would conduct the work with suitable economy.

What is about the sum already expended on the said Road?—I cannot say what sum.

Would any other public advantage than those already mentioned in your answers attend the opening of this Road?—In my answer to the second question, I mentioned a spacious plain, in the centre of which flow the waters of the Becancour. This Plain

Appendix
(P.P.)

Plain offers vast tracts of land adapted for the formation of Settlements equally advantageous to those by whom they may be commenced, and to the Province in general; if, therefore, the Road prayed for, were granted, besides the great advantages which would arise to the individuals through whose lands it might pass, and to the Settlements on the River Becancour, it would form a direct communication between the old Settlements and the fine and extensive country of which I have just spoken. This Road might in a short time be continued as far as Craig's Road, and would then form a shorter and more direct communication with the Settlements on the Banks of the Saint Lawrence.

Is there any easy and safe landing place for Steam Boats and other craft, on the South side of the Saint Lawrence near Gentilly?—Yes; there is in the Parish of Saint Pierre les Becquets which joins that of Gentilly, at a place called Livrard, a very safe and convenient landing place for Steam Boats and other Vessels.

Jean Langevin, Esquire, called in and examined:

Are you acquainted with the Townships of Stanfold, Bulstrode, Blandford and Maddington?—Yes; and particularly with the Townships of Blandford and Maddington.

Are the soil and situation of these Townships favorable for agricultural Settlements?—Yes; and on this point I take the liberty of referring the Committee to the Petition of the inhabitants of these Townships which notoriously, on this point, contains the exact truth.

Do the Seigniories adjoining these Townships still contain a number of unconceded lots of Land sufficient to supply the demand therefor of the younger farmers who wish to settle themselves on land of their own?—No; for there remains but few lots in these Seigniories worth cultivation which are now unconceded.

What part of these Townships do the new Settlers appear to prefer; and where, in fact, are the Settlements already begun the most numerous?—The new Settlers who are looking for land generally prefer those lying on the banks of the River Becancour, and in fact it is there that the settlements most rapidly increase, and are at present most numerous.

What is the state of these new settlements; and can you inform the Committee what is the number of families or persons already settled in these places?—The first Settlement was made in 1825, and was made in Blandford by two families from the adjoining Parishes. In July 1827 the population on the banks of the River Becancour within the Township aforesaid, was about 100 persons, and in November last it amounted to 150 persons, all Agriculturists.

Is the progress of these Settlements retarded by the want of a Road; and how many families would the opening of the Road mentioned in the Petition referred to the Committee [*The Petition of divers inhabitants of the Eastern Townships, situated in the County of Buckinghamshire, was here shown to the witness*] afford readier means of settlement; and what means of communication with the old Settlements have the families now established in these Townships?—The opening and completing of a good Road between the Parish of Gentilly and the River Becancour would have the effect of rapidly settling the few Lots which remain unconceded along the said Road as well as those on each side the River Becancour and its tributary streams, for many leagues above and below the said Road. The land watered by these Rivers would be capable, when fully settled, of maintaining a population of more than 20,000 souls. The families now settled in these parts communicate with great difficulty with the neighbouring Parishes, particularly in summer, when, to use the vulgar expression, the whole of the carriage is effected "on men's necks."

Have the persons holding lands in these Townships themselves worked at the opening of the Road prayed for?—Yes; they made a good winter Road which is already much travelled both in summer and winter: other landholders have also begun on the line between Blandford and Maddington another Road from the River Becancour, and a place in Gentilly, which Road is also much travelled.

Is it beyond the means of the Settlers in these parts to open and complete the said Road?—Yes; very much.

At what distance from the Settlements on the banks of the Saint Lawrence are the new Settlements on the River Becancour and would these last have no means of communication by any other line than that on which the Petitioners pray that a Road may be opened?—The distance from the new Settlements on the River Becancour and those in its neighbourhood to the River St Lawrence is from 5 to 5½ or 6 leagues. Besides the Roads mentioned in my answer to the seventh question there is another in Maddington made by Lumbermen, which affords the means of communication between the Settlements on the River Becancour and those in the Parish of the same name. There is also another communication by water, by means of the River Becancour itself, but this is very long and dangerous, and frequently even impracticable.

Do you know what reason the Petitioners have for desiring a Road between the 1st and 2d Ranges of Blandford rather than elsewhere?—The reasons, in my opinion, are as follows: Sixty-six feet of land in breadth was reserved for this Road in the Letters Patent of Blandford: it would there be the most central. All the Lots in Gentilly on the continuation of this Road (which has been verbalised) are taken, as are also a great number of those in Blandford; many lots are actually settled upon in Blandford at both ends of this Road. All the lots in Blandford lying on the River Becancour, except the Clergy Reserves, are taken also, which afford certain means of keeping the Road in repair after it is opened; there is no reserved lot on this Road. Lastly, there is considerable more work done on it than on any of the others. The other two Roads are not so central. That in Maddington is not at all so; it winds much and passes in great part through unsurveyed lands. The other Road on the line between Maddington and Blandford occupies ground which was not reserved for that purpose; the principal part of the land in Maddington which lies near it is unsurveyed; that which lies in Blandford is entirely composed of reserved lots, which renders the period when they will be settled very distant and uncertain. The Settlements on this Road nearest the River Becancour are those of the 3d concession of Gentilly.

If the Legislature were to grant a pecuniary aid for the opening of the said Road, what means are you acquainted with by which the future keeping up and repairing of the Road might be provided for; suggest these means to the Committee?—These means are certain and are stated in my answer to the preceding question, for there can be no doubt that a Road settled on each side will be well kept in repair.

How much would it cost to open and complete this Road; what is its length; from what point on the Saint Lawrence ought it to commence, and how far would it be necessary to carry it?—The opening and completing of this Road, commencing at the River Becancour and carrying it as far as the entrance of the wood at Gentilly, on the lots of the 2d concession, which would make a distance of about 5 leagues, might cost about £600 currency, provided the work was conducted by persons of integrity and experience, and the money laid out with the greatest economy.

What is about the sum already expended on the said Road?—About £150.

Would any other public advantages than those already mentioned in your answers attend the opening of this Road?—Yes; because this Road will not only be useful to the Proprietors of the land over which it will run, but will open a direct communication between the old Settlements and a great extent of country fit for settlement, of which the River Becancour forms the centre, and by means of which River the several Settlements may have communication with each other by canoes in Summer, and by a fine Road on the ice in winter, and this from the Falls in the Township of Maddington in ascending the River towards the North East, because this Road may hereafter be continued as far as Craig's Road, and will then become of still more general utility.

Is there any easy and safe landing place for Steam Boats and other craft, on the south side of the Saint Lawrence near Gentilly?—Yes, at a place called Livrard in the Parish of Saint Pierre les Becquets adjoining that of Gentilly there is a very safe and convenient landing place for Steam Boats and other vessels.

Charles Langevin and Louis Abraham Lagueur, Esquires, having been called in, and the preceding evidence of Jean Langevin, Esquire, having been read to them, they confirmed the same.

Monday,

Monday, 15th December, 1828.

William Green, Esquire, called in; and being requested to communicate to Your Committee any Plans in his possession of the unexplored parts of Canada, he communicated the following:—

- 1°. A Map of the River St. Maurice from Lake Opigewan to its mouth, made by Mr. Commeau, a Trader.
- 2°. A Map of the River Montmorenci, from its source to the Falls, made upon Birch by Michel Tsioui, a Chief of the Lorette Indians.
- 3°. A Map of the Country between the Saguenay and the River Saint Maurice, made upon Birch by Nicolas Vincent, Principal Chief of the Lorette Indians.
- 4°. A Copy of the said last Map upon Paper.
- 5°. A Map upon Birch of the River Jacques Cartier, Batis-can and Sainte Anne, by André Romain, a Chief of the Lorette Indians.

Wednesday 17th December, 1828.

Alexander Joseph Wolff, Esq., a Justice of the Peace for the District of Quebec, and Captain in the Saint Ambroise Division of Militia, being called in, informed Your Committee:—That he served in the 60th Regiment from the beginning to the end of the Peninsular War, and that he served also in Egypt, and obtained half-pay as Ensign and Adjutant in the 60th Regiment, in November 1824, and immediately went to the new Settlement of Valcartier, where he has since resided with his family upon Lands purchased by him there. That he has had occasion here to turn his attention somewhat to the making of new Roads; more particularly afterwards, in 1826, when he was employed to superintend the making of the Road from the Portage at Temiscouata to the extremity of the Lake of that name, a distance of 36 miles, through the woods, of a foot-path. That he had upon an average 50 men under his command, all Canadians; their wages were 2s. a-day in cash, payable every Saturday, or earlier if they required, in hard money, which he considered that they preferred to paper money. They asked him 2s. 6d. per day, but in consequence of his promising them hard money, they consented to come at 2s. per day. That he was sensible of this before commencing the enterprize, and got his money, amounting in all to £500 currency, in Dollars, which he changed in Dollars, half Dollars, quarter Dollars, and small change. That he allowed them 1 lb. of Pork, 1½ lb. Biscuit; and 3 Gills of Pease in lieu of liquor, per day; he could have got liquor, but he was afraid they would get drunk with it, but he preferred giving them pease, of which they could make wholesome soup. They at first refused to come under 2s. 6d. per day, but he insisted on giving only 2s., and succeeded in getting 10 men at 2s., with whom he set off in the expectation that others would follow, which actually took place, and the next day he was joined by about 40 more.—When he went there he found only a foot path, and of the whole Road, only about 3 miles long a cart could pass with difficulty. In making the Road, he cut down, cut up, and rolled off the logs as he went on; he did not use fire; he made in one place more than two miles, and opened ditches on each side of about 2 feet in depth and as much in width; the causeways were made with cedar logs about one foot diameter, which he split into two and put the flat side downwards and the upper surface covered with mud and gravel taken from the ditches on the sides; about one third of the Road consists of causeways made in this manner; they had previously been made with sapin logs about 5 feet long; the Road appeared originally opened 6 or 8 feet wide, and was grown up with Cherry Trees of a considerable size, which he had to remove; in some places the Cherry Trees were so thick as to join and form an arch over the Road; he found three mountainous tracts of country, over which the Road passed, which were very rocky: in order to avoid one of the mountainous tracts he opened a new Road, and shortened the distance by three or four acres; another hill was so steep that he was obliged to cut zig zag at the bare for about 100 yards: these mountainous portions of the Road covered altogether an extent of about 4 or 5 miles in length; he had to remove a great number of large rocks of grey stone. That he had powder but did not use it, because he thought it more advantageous and less expensive of time and money to build heaps of wood over them, to which he set fire, and when the rocks were very hot they threw water over them, and broke them easily with large sledges, and applied the fragments in filling up holes in the Road; he was three months in com-

pleting the Road with about 50 men—sometimes more, sometimes less; the whole sum put at his disposal for making the Road was £550 currency; he expended in making it a sum of £500, leaving a balance to the good of £50; he made a number of small Bridges, but cannot state how many. There is a large Bridge over River du Loup which he was told cost £1200, is about 300 yards long—much decayed. That upon observing that the Bridge was much decayed, on his return he employed a Ship Builder or Mill-Wright on the spot to examine it, with a view to ascertain if the Funds remaining were sufficient to repair it. His report was that it would require a much larger sum to repair it. He employed a man for the purpose of shovelling off the snow during the winter, in order to keep the Bridge light, and thereby make it last longer, and to prevent it being carried off by the ice in the spring, for which he paid £4 10s., which he considered a sufficient remuneration for his trouble during the winter, and which he did under the sanction of His Excellency the Governor in Chief;—this money was paid out of the balance remaining in his hands, as he has above mentioned. That he was allowed, as Superintendent, 15s. currency per day. There was no particular bargain about the provisions, and he took his own.

Is the Road now passable for Carriages and Horses?—The Road was passable for Horses and Carriages when I left it, and we were followed by Carts and Horses. I used them myself for travelling the Road. I saw in the Newspapers, in the following winter, that four hundred Horses with sleighs loaded with wheat, came from New-Brunswick through this Road to Canada, which had never been done before.

Have you any reason to believe that this Road has been beneficial to the Settlers within our lines, and that they were satisfied therewith?—I have no doubt that this Road has been very beneficial. I have in my possession a Copy of a Letter from L. C. Frazer. (the original was delivered in to Major Eliot) resident at Lake Temiscouata, from which it appears he is very much satisfied with the Road. There is a man known as Captain Hebert, principal merchant in Madawaska, who brings to Canada through this Road every year between 20 and 30 carts, which return loaded with merchandize from Canada to Madawaska every year; and he told me that he was highly satisfied with my proceedings; and he told Colonel Frazer that if the former sums of money had been laid out in the same manner the Road would have been good. It is however necessary that some repairs should be made to the Road every year, as there are no settlers upon that Road to maintain it in good order. There is not an habitation for 24 miles on this Road, and it would be very desirable that some settlement should be made upon it to afford relief to travellers and to the people carrying the Halifax Mail. Col Frazer wrote to me in November last, to petition the House for an aid towards repairing the roads, particularly those parts which had not been finished before, and mentioning that the road was getting out of order, particularly the Bridge over River du Loup.

In your opinion which is the best mode of making public Roads? by contract or under the superintendance of fit and proper persons?—It will never do by contract, because the Commissioners hardly ever go themselves, and they send some persons in their place who often do not go themselves, so that the work is not properly overseen. The Commissioners generally contract with some principal Contractor, who contracts with Sub-contractors, who do the work by means of the labourers whom they employ, or other sub-contractors who employ labourers: the principal Contractor gets as high a price as he can from the Commissioners and gives as little as he can to the Sub-contractor, who do as little work for their money as they can, and are quite satisfied if their Road be received, whether good or bad. The Road also is frequently made to have a good appearance with bad materials, and even where it is passable is often not durable, by reason of the insufficiency of the work done; the profit of the principal Contractor and of the Sub-contractor must both be paid out of the sum allowed for the Road; all that the principal Contractor cares is that the Road be received, and cares not how it is made:—whereas, if a fit and proper person be appointed to superintend the Road with a fixed allowance, it would be both his duty and his interest to see the work done as creditable to himself in particular, and as a recommendation for future employment.

Will you deliver to the Committee a Copy of the Letter from Mr. Frazer to Major Eliot, referred to in the preceding examination?—I now produce a Copy thereof. [The witness delivered in the same, which was read as follows:

“Entrance of the Portage,
St. Patrick, 19th Aug. 1826.

“SIR,

“I have the honour to state for your information that Mr. Wolff has reached the Lake, and beg leave to add from the im-

Appendix
(P. P.)

improvements I personally observed on my way the other day which are made, as well as the opinion of every one who travels through the Portage, I conceive it due to the exertions and endeavours of that Gentleman, to say he has done above expectation, considering the time he has been employed and the limited means lodged with him, together with the serious sums that have on former occasions been expended under the superintendance of others; and cannot refrain from expressing that he has far surpassed them in the performance of the duty with which he was entrusted.

I have the honor to be,

Sir,

Your most obedient Servant,

ALEX. FRASER."

Major Eliot."

Friday, 19th December, 1828.

Jean Baptiste Taché, Esquire, Notary Public, of Kamouraska, called in, and examined :

Will you be pleased to say if the want of Roads to reach the Lands fit for cultivation, and for making new Settlements, greatly retards the progress of Agriculture on the south shore and the settlement of this part of the Country; and do you know if the quality of the Lands at a distance from the River be good in general?—I have heard from several huntsmen who have been over the Lands which are situated in the rear of the Seigniories of Ste. Anne Lapocatiere, Rivière Ouelle, Fief St. Denis and Kamouraska, between these Seigniories and River St. John, that this tract of land was generally good and fit for cultivation. The Fief St. Denis, which has been lately explored by a Surveyor who has surveyed it, and which stretches farther inland than the neighbouring Seigniorie has a very fertile soil, and beyond this Fief, the Land as far as the eye can reach in every direction appears to be very fit for cultivation. The want of Roads is in my opinion one of the principal causes which retard the clearing of Land, not only of those I have just mentioned, but also of all the others on the South Shore.

Are the Laws of the Country for opening Roads prejudicial to the formation or promotion of new Settlements; and if they appear prejudicial to you or insufficient, what means of remedying thereto would you recommend?—They are not only prejudicial to the formation of new Settlements, but they manifestly prevent the progress of those which are already begun. I consider the actual Road Law as very prejudicial to the progress of the country, in as much as the cost of the *Procès-Verbaux* for the opening of new Roads is enormous compared with the scanty means of the country people. That this expense added to that for opening the Roads is oppressive to the new Settler. That even in cleared Land, a *Procès Verbal* made at the distance of about thirty leagues from Quebec (and I will mention Kamouraska for instance) does not cost less than £20 and some odd shillings, including the expenses at the Prothonotary's Office, and the allowance made to the Surveyor. That this takes place for the shortest Road which is marked out. That the power which the Law gives to the Grand-Voyer is by far too extensive. That there is no certainty in their judgment. That that which is approved of by one Grand-Voyer is disapproved of by the next; and it is within my knowledge, that a road traced, on a farm cultivated, by one Grand-Voyer in a space of less than half a league, was changed two or three years after by his successor; which drew about twenty proprietors into an expense of more than £40 to give to the Grand-Voyers for the two *Procès-Verbaux*, besides the loss of time in taking down, and making new Bridges and the Road. I think that a means of obviating these difficulties would be to give a fixed salary to the Grand-Voyer, and not permit him to receive any fees; or to convert the office of Grand-Voyer into an office of Record in each County, and that the new Roads should be traced for the future by a Committee of five Farmers in each Parish, named at an annual election, in the same manner as the Sous-Voyer is at present elected. They would fix the place of the new Roads asked, would draw a *Procès-Verbal* thereof, would deliver the same to the Keeper of the Records, who would be authorized to deliver Copies thereof when wanted.

Mr. Augustin Balantyne, Deputy Provincial Surveyor, being

called in, informed Your Committee: That he has been employed to survey Lands in the rear of the Parish of Kamouraska and River Ouelle, at the distance of about six leagues from the St. Lawrence; that the Land is good and level, and fit for making new Settlements;—communications might with facility be opened with the River Saint John at that place; that the Lands of the neighbouring Seigniories are chiefly conceded with the exception of the Fief St. Denis, where there are still some concessions to be made, but not sufficient for the demand, and the want of new Settlers; that the great obstacle to opening or forming new settlements is the want of Roads; that the present system of opening Roads is so expensive that it is impossible for new settlers to bear the expense of it, with the rents which they are obliged to pay for their lands; that he believes that an easy means of forming a new settlement would be the opening a proper Road through good Lands, which it is impossible to effect with the existing Road Laws; that he believes it would be expedient to open such Roads on the south shore through the Lands, to be settled at the distance of about ten leagues, or in such parts as land fit for cultivation is to be found; that from the information he has been able to collect, he believes that the principal branch of the River Saint John is distant about twenty leagues from the Saint Lawrence at L'Islet; that behind River Ouelle he does not believe it more than fifteen leagues.

Anthony Gilbert Douglas, Esquire, late Captain in His Majesty's Canadian Fencible Regiment, called in, and examined :

Have you had any and what means of becoming acquainted with the modes in use for the making of Roads through Forest Lands in this Country?—For the last six years I have been employed in making Roads in the woods. When the trees are cut down, the Canadians not using oxen lose a great deal of time in making heaps of the same. The oxen would also be of service in ploughing such parts of the Road as is fit for it, which would cut down the brushwood and even part of the roots.

What is the average expense of making Roads through such Lands, and what are the processes used; are any Roads required to be repaired or opened in the part of the country in which you live, the repairing or opening of which would be of general benefit to the Province?—The average price of labour cannot be easily ascertained, owing to a variety of circumstances. I think it may be stated at from £80 to £130 a league. In the woods, the Roads should not be more than 16 feet wide, the wind would then do it less damage. The clearance which is required frequently cost more than it is worth. The causeways in the swamps should never be made with large logs. Several beds of Shrubs, alternately covered with the ground taken from the ditches, would answer the purpose better. The Saint Gregoire Road would require a grant of money to defray the expense of keeping it in repair. Last Autumn and the whole of last Summer has been very rainy. The Townships through which it passes (for reasons which it would be tedious to detail) are but thinly settled. It is consequently expected that the public will assist. A Road of 40 or 50 arpens, from the extremity of the St. Esprit Road in the Parish of Nicolet to the St. Gregoire Road is here recommended. A few miles (twelve I have been told) opened in the Township of Hereford, would communicate with Portland.

State particularly the public advantage which would accrue from the opening of such Roads?—The River most commonly freezes over at Pointe aux Sables, instead of Three-Rivers. The Township people would have the choice of both Roads, that of Nicolet and La Baie. The Parishes on the north side could at all times go to trade in the Townships. The communication with Portland presents a great advantage to the whole of the Province. The twelve miles opened in Hereford would take us to the good Roads of our neighbours. The Port of Portland never freezes. The English Packets would reach it as easily as New-York, and would be much nearer to Halifax and New-Brunswick. The distance from Portland to Three-Rivers does not exceed 225 miles. The Government Despatches, the Merchants and Travellers would reach sooner; exclusive of the advantage of new branches of trade for the Townships and both Shores of the St. Lawrence.

What would be the probable expense?—Not being acquainted with the nature of the ground of Hereford, nor even with that at the end of the Parish of Nicolet, I beg to refer to my second answer.

What in your estimation is the most advantageous mode of applying public money to these purposes? Should the work be done by contract, or would it be more advantageous that the Road

Road be opened under the superintendance of some fit person employed and paid for the purpose; state fully and particularly what you consider to be the advantages and disadvantages of the two modes respectively?—The Commissioners according to law advertize for the lowest tenders; but this low tender is sometimes very high, for every Contractor ought to secure to himself a profit of forty per cent. since he runs the risk of being ruined by a suit, previous to the Road being accepted of. If the Contractor undertake a great deal he will necessarily give out some part of his undertaking to sub-contractors, who will use the same reasoning. This explains the reason why the £53,000 voted for internal communications have hardly produced a short Road in the whole Province. The second method is therefore preferable, but there is danger in that also. It would be proper to have a suitable person placed at the head of this new Department, with orders to employ Militia Officers in the Parishes, with fit country people to assist them, and they would be paid; but they would supply them fit workmen by the day or by the month, and finding themselves with provisions. In some cases they might be allowed the transport of their provisions. The Head of this Department ought not to have any money at his disposal. He might draw upon the Receiver General or upon such other person as might be appointed, as often as the case might require, but in all cases upon affidavits being produced of the performance of the work, or the attested accounts of the aids which he might have employed.

The Honorable *Louis René Chaussegros De Léry*, a Member of the Legislative Council, called in, and examined:

Is the Road from Longueuil to Chambly much frequented, and by whom?—This Road serves as a communication for more than ten Parishes and for the Townships which have their outlet across the Mountains of *Rougemont de Masku*, and consequently is one of the most frequented,

What parts of it are a front Road, and what parts of it a by-road?—This Road is about $4\frac{1}{2}$ leagues in length, and the whole of it is a front Road, with the exception of three by-roads which form together about three quarters of a league.

Could the by-road be paved with stone by the persons obliged to maintain it, or would a public aid be absolutely necessary to render it good during the whole year?—I do not believe the by-roads could be paved with stone at the expense of the inhabitants who are obliged to maintain them, without a public aid. A Turnpike could alone render these by-roads good in all seasons.

Could those parts of the road which are a front road be paved with stone by the persons obliged to maintain them, or would a public aid be absolutely necessary to render this road good during the whole year?—There are in those parts (the front road) two bogs of about 40 acres in length, which are covered with water every spring, and even in summer, by the falls of rain, which wash away the earth which the inhabitants cart for the repairing of them. A public aid or a turnpike would be, in my humble opinion, the only means of rendering all this Road good and practicable.

What extent of by-road is there on the public road from the *Côte des Neiges* to the arrival at Plouf, and what number of persons are obliged to maintain it?—Between the *Côte des Neiges* and the arrival at Plouf, this is a continuation of four or five by-roads of 30 acres each, united together by a square of about 10 acres, formed by a part of the road of the *Côte de Vertu* at St. Lawrence. I cannot at present state what number of persons interested are obliged to maintain them, not having before me the *Procès-Verbaux* which oblige them: each individual share is but small, and I believe that with a public aid one might succeed in paving them with stone.

What extent of front road is there between the same places?—Six or eight acres on the front Road of *Vertu*, and the street of St. Lawrence village, which is considered as a front road at the charge of the inhabitants of the said Village.

What would be the best mode of rendering the by-roads in general better than what they are?—The best means of rendering the by-roads in general good would, in my humble opinion, be in the first instance to widen them to 30 feet: these by-roads were only originally 20 feet, the ditching has taken away 7 or 8 feet therefrom, so that at this moment the carriage road is only 12 or 15 feet. That being done, the Law should render that obligatory to the parties interested, which was only optional; that is to say, the keeping of the by-roads in repair, and by an amend-

ment of the Road Bill which allows the parties interested to give out their respective by-roads to Contractors. The *Sous-Voyer* then only has the Contractor to oversee. I ought to remark that this amendment to the Road Act will expire on the first May next.

What extent of by-road and of front road is there on the public road in the Island of Montreal, between the City and the crossways in the Parish of Sault au Recollets?—The extent of the Road between the City of Montreal and the Cross-ways, in the Sault au Recollets, is about the same as that between the same City and L'Abord à Plouf; that is to say, about 2 leagues and a quarter, of which about thirty acres, either up or down the *Rivière des Prairies* to reach the different cross-roads, are front roads.

What number of persons interested are obliged to maintain those by-roads?—I cannot precisely say the number of persons who are interested in keeping these by-roads in repair, not having a statement of it; but with the exception of those portions of the by-road in the Parish of Montreal, called, I believe, *Route de la Visitation*, which the inhabitants of the Sault au Recollets are bound to keep in repair, the portions in the others are not very considerable.

What parts of them could be paved with stone at the expense of the persons interested, and what would probably be the amount of their cost; could some parts be only paved with a public aid, and what extent?—I have no experience in the making of Roads after McAdam's manner, therefore I cannot say what would be the expense of coating these Roads with stone, which I must say is already too stony. It would certainly be necessary to have an aid for that purpose.

What parts of the by-road between St. Martin's Church and the Ferry could be paved with stone at the expense of the persons interested, and what would probably be the amount of their costs; could some parts be only paved with a public aid, and what extent?—I do not know any part of this Road which could be coated with stone at the expense of the parties interested, and much less what the expense would be. The whole of this extent should be at the public expense, or that of the whole Parish, which the inhabitants would certainly not like.

Monday, 22d December 1828.

Alexander Joseph Wolff, Esquire, again called in, and examined:

Have you in your possession any Reports or Copies of Reports, Accounts or Copies of Accounts, by you made or rendered, concerning the Road of the Portage of Temiscouata, and if so, be pleased to communicate the same for the information of the Committee?—My Accounts I sent to Major Eliot; I have Copies of them at my house at Val-Cartier. The paper which I now produce is the Report by me made on the 25th August 1826, to His Excellency the Governor in Chief, of the works done on the Road under my superintendance. I lay before the Committee the Letters received by me from Col. Fraser respecting this Road.

[The witness delivered in the same, which were read, as follows:]

“REPORT of the Works done on the Portage to Lake Temiscouata, from the 15th June to the 19th August 1826, under the superintendance of A. J. Wolff, Lieut. Half-pay, 60th Regt. appointed by His Excellency the Governor in Chief, as Commissioner for the said Works.

Quebec, 25th August 1826.

“On the 15th June I caused a party of laborers to move from the St. Lawrence to la Rivière Verte, under the care of an assistant overseer, when I followed next day with another party, and on my arrival I found that part of the Road leading to the Bridge in want of new pavings and other repairs. I began the works there. The Bridge I had completely repaired, as it was in a very dangerous state, when I proceeded with a second squad to the Bridge over the Ruissseau Morneau, which was reported to me almost impassable, as a woman (Mrs. McDonald) narrowly escaped from breaking a leg. I found it necessary to have an entire

Appendix
(P. P.)

entire new bridge built; after which done, I employed the whole of the party on the Road between these Bridges, in renewing and repairing all the causeways, which are numerous, removing or levelling detached pieces of rocks and other obstacles, and had the Road opened where it was requisite. On my way from Cote's House to the Green River, although that part of the Road is considered fit for wheel carriage, but from the decayed state in which I perceived the pavings to be, and consequently dangerous to the public, I therefore, when the two bridges and the road between were in a state so as to prevent accidents, employed the men in repairing the causeways on that part of the road, as it was found almost impracticable to bring up the provisions and stores for the working party. I also conceived that from the Bridge of La Rivière du Loup to Rivière Verte the road is much in need of being opened, which however I have declined doing for the following: considering the works required on the whole of the Portage, especially from La Petite Fourche to the Lake, and the limited sum granted, I proceeded with the idea of going through the whole of the road by doing the most required, and on arrival, take a view of what sum had already been expended, so as on my return equally to bestow where needed the remainder, otherwise I might have been led into the error, more partially to apply the money on a proportion of the road than on another.

I then returned to the road above Ruiffeau Morneau, which for about a mile distance is sufficiently open, but covered with detached pieces of rocks, which were either removed and the holes filled up with smaller rocks, gravel or ground, or broken up. From whence to La Savane des Roches, a distance of about two miles, the road was much choked up, and was opened to a breadth of about 24 and 30 feet; the whole of the pavings, which are here very numerous and in some places of extraordinary length, were renewed or repaired; ditches were opened, and drains made where practicable.

I endeavoured to make Les Roches practicable for wheel carriage by breaking up the largest detached pieces of rocks, levelling the road with their fragments, and covering nearly the whole of the centre with gravel and ground; and I may add, that I succeeded, as Col. Frazer reached St. Francis River two or three days after, with a cart loaded with about 4 cwt. I had the road opened to about 25 feet.

From the Savane des Roches to the Bridge over the River St. Francis, about a mile distance the road was much covered with detached pieces of rocks, some of which were removed and others broken up, and the vacancies filled with gravel and ground, the road was opened to a considerable breadth. The bridge over that river, I found dangerous from its inclining situation to the south, owing to the beam on that side being very weak; I caused the bridge to be undone, and had a new beam placed in lieu of it, and the bridge covered with new cedar.

From St. Francis to the Grande Fourche, the road at the foot of the mountain is very swampy, and the whole of the pavings were repaired or renewed, as circumstances required; ditches and drains were made to turn the water off the road; approaching at the beginning of the ascent large detached pieces of rocks were met, which were removed, although some of very considerable size, and the holes levelled with gravel and ground, the road being much choked up with bush, and I caused it to be opened to a breadth of from 24 to 30 feet.

At Ruiffeau Salop the pavings were very bad, so that new logs were required, the road being very swampy, they were made as well as a new bridge over the Ruiffeau. From thence to La Grande Fourche, about 1½ mile, the road was opened to a breadth as above, and a paving of a very considerable length was almost renewed. The bridge over the River was repaired.

From La Grande Fourche to the foot of that mountain, new pavings were made, and ditches with outlets opened to draw the water from the road, and as the whole of that part appeared to be constantly under water, gravel with ground was made use of to higher the centre of it, and caused the water to find its way into the ditches. The detached broken rocks were removed, which labour was required through the whole part of the road from thence to La Petite Fourche, as likewise opening it, as it was much choked up; a number of ditches were cleared and outlets made, at intervals of about ¼ of a mile, the causeways removed, renewed, and others repaired. The bridge over Petite Fourche was covered anew with cedar wood.

For about ½ a mile beyond La Petite Fourche, appeared to be a very swampy part of the road, consequently different ditches and outlets were necessary, and the pavings renewed and repaired as before; the road widened to about 30 feet. I found here, even at this season of the year, (far advanced in July, whole pavings floating; the same operations were made, as circumstances required, till the foot of Buard Mountain. A new bridge was made over the Marais Sangsue. I had an opportunity of observing of what utility ditches and outlets are, as the day after

completing the swampy part above referred to (as far as under the present circumstances were permitted) a very great fall of rain was experienced and the road was perfectly dry in about two hours after. It was necessary to open the Road all along from La Petite Fourche to the foot of the Mountain, to a great breadth, from its swampy nature, that the sun, in addition to the ditches and outlets, may assist in drying it, by having a free access to it as well as the winds.

From the foot of the Buard Mountain for about 2 miles, the road was much covered with detached rocks, some of such size, as rendering their removal impossible, I had recourse in instances to fire, which I caused to be made on them, and when thoroughly hot, (the party in the mean time being employed in opening the road) had cold water thrown upon them, which became much easier to be broken up, and levelled with ground; I found this method shorter than blasting, dry wood being every where at hand, and no delay or loss of time occasioned: the rocks of lesser dimensions were removed or broken up. The fragments made use of in low and swampy places, the pavements were either renewed or repaired, as the case did require, and the road opened as before. A very steep and rocky descent I have partly avoided by turning off the road a little to the south, which part was rather low, but I had it filled up with gravel and ground lodged in a bed of logs. Proceeding on, I found some pavings unnecessary (where the water had to be drawn off the Road by means of the ditches and outlets, and which were consequently taken up.) From thence to the Rocky Mountain, opening and removing detached pieces of rocks and wind-falls was continued, and some pavings renewed and others repaired.

The Rocky Mountain is considered the worst part of the Portage Road for the present mode of conveyance, it being covered for about a mile with detached pieces of rocks of all dimensions, some so large as permitting no removal; but had the road raised to a level with these rocks, and a great many were removed and broken up, as circumstances required and permitted; the fragments were used to level the lower parts. This part of the road was at some time (and appears to have constantly been) inundated by springs out of the rocks, which I have succeeded in turning off the road, by outlets, and altering their course. The product of these springs is great, as whole and large pavings were found floating in their waters, even at about ¼ a mile beyond them.

Previous to my attempting any improvements on the Rocky Mountain, I caused a road to be cut to the S. S. East of it, to try avoiding it, which at the same time would have shortened it for upwards of 4 acres; but this new passage did not meet my expectation, and will prove of advantage to foot passengers only for the present, as the end of it proves too steep; but have no doubt, that at a future period, it might, at an inconsiderable expense, be made by far superior to the original road. From the Rocky Mountain to the bridge over the little lake River, the road with few exceptions is very swampy, and covered necessarily with many pavings, which were repaired, ditches cleaned and outlets made, additional pavings required, and the road opened to a great extent. The bridge over that River covered anew with cedar, from whence to the Ha! Ha! River the same defects were found (except that this part is not so swampy,) and necessarily the same mode of improvement had recourse to, and the bridge over that River covered anew, it having been burned. The ascent, immediately on crossing that bridge, was very steep (although not long,) and reported very dangerous in winter; I had it improved as much as practicable for the present, in turning in a zig zag way, and I am of opinion it will be found a very easy ascent or descent at present.

From the Ha! Ha! River to the Lake, the Road was opened as its nature seemed to require, in several places new pavings in addition to the former were necessary, and made with ditches and outlets, and others required a great deal of repair; but I am concerned to have to state that this work was but partially and hastily done, as the hay season had approached, the labourers withdrew to their homes, and I had a few to continue with, without prejudice to the public interest, and had reason to be satisfied of having previously employed a party of labourers from the Lake to meet me, in order to accelerate the work, or otherwise this part of the road, a distance of about one league, would have been much less improved.

I consider it my duty to state, that although much has been done to the Savane des Roches, yet that part of the Road still requires great improvement to make it practicable for wheel carriage. The Bridge over the River du Loup has been reported to me by several living on the Portage to require a deal of repair, and should it not be done this fall, the Bridge is much exposed to be destroyed next spring.

From the fires which have taken place in the woods on the Portage, it must be expected that the road will be much inconvenienced by wind-falls, as the fires have got deep into the ground

ground, and consequently much injured the roots, as also some of the pavings have been destroyed.

(Signed)

A. J. WOLFF.

ADDENDA to the Report of August 1826, of work done on the Portage Road, to Lake Temiscouata :

On the 18th of September, I resumed the works at Green River with repairing the causeways which were much injured by the fires in the woods, clearing the road of numerous windfalls occasioned by the same, and making other improvements I had left until my return from the Lake, when I proceeded on in the Summer, which I was prevented to accomplish in consequence of the men leaving me on the approach of the harvest.

La Lieue des Roches being the worst part of the Road, I particularly applied my attention to it, and employed the party with carts and horses for the conveyance of sand and gravel nearly a fortnight, which was not to be had but at a considerable distance, and a great number of loads were wanted to cover the centre, (say 3 feet broad and 1 deep) for the whole of that distance, and also widened the road by removing rocks or breaking them up, to make it practicable for wheel carriage, and where circumstances permitted, had outlets made.

From thence I proceeded on with the works, removing or repairing causeways and bridges destroyed or injured by fires, which I found had done serious damages throughout the Road; I cleaned it from the numerous wind-falls, and as some rainy days offered me an opportunity to observe where ditches and outlets would prove of utility, I caused them to be opened.

On my arrival at the Ha! Ha! Bridge, from whence to the Lake, the Road had not been finished in the summer, owing to the labouring men leaving me before I expected, consequently that part was much in need of improvement, more so from the causeways being seriously injured by the fires, and the roads intercepted by a number of windfalls, which blocked up the ditches and outlets, I caused the causeways to be repaired, ditches and outlets to be opened, and the other impediments removed as far as circumstances would admit.

On my approaching, and when at the Lake, I was informed by every traveller, without exception, that the Road from the Bridge over La Rivière du Loup to La Rivière Verte was almost impracticable from windfalls occasioned by fires and a subsequent gale of wind, and from the very bad state of the causeways; which induced me, although without authority, to have it cleaned and the causeways renewed and repaired.

It gives me satisfaction to be permitted from observation, to state that wheel carriages are now preferred to the *menoir* by travellers who have passed through the portage since the road has undergone repair, and that but few *menoirs* are used, and those by people wishing to return disencumbered, having reached their destination.

Great windfalls are to be expected from the extensive fires which have ravaged the woods and consumed the ground deep below the surface, consequently the roots are much damaged. With respect to the Bridge over Rivière du Loup on the Portage Road noticed in my Report of August last, I beg to refer to the accompanying statement of Mr. Jean Michel Duchêne, mechanist.

(Signed)

A. J. WOLFF.

Present state of the Portage of Temiscouata, and method proposed for its improvement :

Quebec, 10th August 1823.

After an attentive examination of the country on the right and left of the Portage Road for eight days, and having during that period traversed a space of from 59 to 60 miles through the woods, I am of opinion from the great extent of swampy ground and high mountains passed over during that period, that it would be much better to continue the present line of the Road than to give it a new direction. I must however at the same time beg to add, that when the leaves are off the trees it may be possible to avoid many of the bad parts, which I was in all probability prevented from doing from the circumstance of my not being able to see more than a few yards in any direction.

Assuming it therefore as a point decided on, that it would be better to continue the present Road, I shall proceed to make some remarks on its present state, with such suggestions as I should think might lead to its improvement; but in the first place I consider it not unimportant to state that although the Portage is at present in so wretched a state that a person who has not been there can scarcely form any idea of it; yet the Merchants (or Storekeepers) of Madawaska do now get their supplies over it, in preference to going down the St. John's River to Fredericton, to which place they cannot go and return in less than nine days, where, as in the same time or a little less, they can travel to Quebec, and back again, with the advantage of getting their goods at a much lower rate.

The Madawaska Settlement at present consists, according to Mr. Ringuet the Curé, of 140 families, which taken at the common average of from 5 to 6 persons each, will give a population of nearly 800 souls; this estimate I do not consider to be over-rated, aving taken the opportunity of my being there on a Sunday, to go to the Church, which I found, though of a considerable size, literally as full as it could hold.

From Côté's house on the banks of the St. Lawrence to the River Verte, nine miles, the Road is practicable for carts carrying about 4 cwt; but from thence to Long's, 27 miles, the only mode of conveyance is on a *menoir* or species of sledge, formed by two shafts united by three cross beams, with four uprights to fasten the load on with; one end of each shaft is suspended to the harness of an ox or horse, and the other trails along the ground: on this machine which is generally taken the whole way across the Portage, a load of from 2 to 2½ cwt. is carried in two days, and one to return for the sum of 4 or 5 dollars. There is no difficulty in getting *habitans* to undertake the job, but they try their utmost to impose on strangers; and asked me 8 or 10 dollars each, although I only paid 5, and detained them on the road.

From the River Saint Lawrence to the River Verte, 93 miles by the Road, but not more than three French leagues in a direct line, belongs to the Seigniorship of the River du Loup, and every lot on that space except two or three being conceded, the Censitaires are obliged by Law to open and keep in repair the Road along the front of their respective Lots, and as this space is already practicable for carts carrying from 4 to 5 hundred-weight, it appears less necessary to expend money on it than on the remaining 27 miles of the Portage.

It is however proper to observe that from the end of Nouvelle Ecoffe to the commencement of the Settlement at the River Verte (5 miles) the Road has never been opened more than a few feet wide, and that at the present moment the branches overlap one another on the greatest part of this space, which indeed is the case on almost the whole of the Portage, except at the Clearing, a circumstance in itself sufficient to prevent it being a good Road.

From the River Verte to a little beyond the end of the 13th mile (3½ miles) the Road is very much covered with detached pieces of rock, some of large dimension, requiring either to be removed or broken up, neither of which would be difficult; and this space, as well as from the 14th to the 16th mile, has very little timber upon it, and even what there is, is generally small pines or cedars, which on this part of the Road might be cut down so as to open it to a sufficient width, (say 30 feet) at a trifling expense.

In many places the causeways are made with sapins or cedars mixed, and I remarked that almost without exception, when the former were completely rotten and broken in pieces, the cedars were almost as perfect as the day they were put down.

It is necessary to state that there are a great many portions of the logged parts of the whole of the Portage which are so completely out of repair, that it is quite astonishing a horse can drag a load through them, for although many of them have had new Logs only three or four years ago, yet having been made of sapins (with cedar standing close by) and frequently of very small dimensions, they could not be expected to last long, the consequence is, there are chafins in many places, of from 5 to 10 feet wide, with scarcely a single log on them, and in others great numbers of logs are lying about quite loose, and it is astonishing to see with what sagacity and care the unfortunate animals contrive from repeated practice to scramble over them. It is however a circumstance which I believe rarely occurs, that any load passes over the Portage without the horse sinking repeatedly so deep into the mud, even in the very driest season, as to render it necessary to unharness him for the purpose of enabling him to scramble out of it, which is generally done with the assistance of the driver, who then unloads the vehicle, and puts all together again in the best way he can.

With respect to the Savane des Roches, which is logged from 900 to 1000 yards, should it be deemed advisable only to put it into a state of repair for the present mode of conveyance, the remedy to be applied is clearing out the ditches and replacing the

Appendix
(P. P.)

Appendix
(P. P.)

the worn out logs with cedars, but as Roads thus constructed are but bad at the best, the only effectual mode of making it good, is to take up the logs and sleepers and replace them with cedars laid flat on the ground, putting a second layer where necessary, and covering these up with mud taken from the ditches, then putting on a coat of gravel, of which there is an abundance of very good on almost the whole of the Portage; taking care at the same time to make wide and deep ditches with drains and an outlet sufficient to convey the water off if possible; these drains and ditches should also be constantly examined to see that they are free from obstructions, and not left as they have been until there are large trees growing out of the middle of them. By this method, and a little looking after, I have no doubt that there are very few, if one, of the swampy parts of the Portage which may not be made sound and good; it would however be necessary in a few years to put more gravel on it. This method it must be admitted would be attended with a considerable expense, but when the importance of a good line of communication between the Provinces is, taken into consideration, I cannot help thinking it would be much more advantageous than to make any temporary repairs by the plan at present adopted.

From near the 14th to near the 16th mile, or a space of about 2 miles, is almost one continued bed of solid rocks, extending such a distance to the right and left as to preclude a possibility of their being avoided; there does not appear any other method of improving the Road so as to make it practicable for wheel carriages, but that of widening the present tract by filling up the interstices or inequalities of the surface with pieces of rock of which there is an abundance lying about in every direction, and then putting on a layer of stone broken to about the size of an egg, covering this again with gravel whenever it can conveniently be procured.

From near the 16th mile to the River Saint Francis the side of the Mountain is in several places very steep and covered with rock, much of which should be moved off the road or be broken on it.

From the River Saint Francis to the Lake there are 8 or 10 ledges of rock running across the road which require blasting; these ledges are in general from 15 to 20 feet in length with an elevation of from about 30 to 45 degrees, which would make it difficult to get carts with loads over them; one of the pensioners at the River Verte being a minor and desirous of employment, it would only be necessary to provide him with tools, &c.

It might also be necessary to blast some of the largest of the detached rocks at present on the Road. From the River Saint Francis to the Lake Temiscouata the swampy parts are so numerous that it would be endless to attempt to particularize them; I must therefore beg to refer to my plan for their position and extent, merely observing that the same method is recommended with respect to them as is pointed out for the Savane des Roches.

The bridges over the different streams crossing the road being of sufficient breadth and in very good repair, with the exception of a few rails and cross planks or logs, a very trifling sum would be required on that account.

The principal mountains are the one at the commencement of the Portage, the new Caledonian Hill, that on the eastern bank of the River Verte, both sides of the Saint Francis, the Grand Fourche and Mountains Buard, the whole of which require to have their steepest parts scarped so as to make it easy for loaded carts to ascend them.

Having measured the distance in a number of places between trees standing directly opposite one another, of apparently from 20 to 30 years growth, it appears evidently that this Road has not during that period been opened wider than from 12 to 15 feet, and as its general direction is nearly E.S.E. the rays of the sun can never assist in drying it, except for a short time in the morning, when they have the least power: the consequence of which is, that places which would be dried by a few hours exposure to the sun and wind are never free from moisture.

I should therefore beg to recommend as a preliminary step to any other improvements, that the bush along the whole of the Portage should be cut down to an average width of at least 30 feet, and every effort made to drain the water off.

And as a very considerable portion of the Road lies over a tract of gravel and rock which would not require to be more than from 15 to 20 feet wide, an additional breadth may be given to such of the swampy parts as cannot be drained, so as to allow the sun to act with all its power in assisting to keep them dry. It must however be admitted that the breadth proposed would not guarantee the Road from the effect of windfalls, which cannot be guarded against, except by giving the whole Road a breadth of at least 60 feet.

The expense of opening 30 miles to 30 feet wide, allowing 7 feet for the breadth of the old road, at 12 dollars an acre, and three of them to a mile, would not amount to more than £360.

I have put the extent to be opened at 30 miles, having deducted from the whole distance 5 miles for clearings, and the remaining 24 miles for parts where the Road has been burnt.

The work proposed to be performed on the Road being of a nature totally different from any I have ever been employed on; I am unwilling to hazard an opinion as to the probable amount requisite to carry it into effect; but I should imagine it would require nearly a hundred pounds a mile on an average, or about £4000, which sum it is to be hoped would cover every expense, and make the Road a very good one.

From Long's to the Dégélé, 15 miles, there is only one stream of any consequence to be passed, which is called the Cabonot, distant one league; this stream is from 20 to 30 feet wide, with firm banks, and at this season is not a great depth, but in the spring and fall is said to be much increased by the waters from the mountains. At present this stream is passed over by means of a tree which lies across it; about three-fourths of a mile up this stream Long has a clearing of a few acres.

From Long's to Dégélé, a Road might be easily opened; principally along the top of the flat mountains which surround the Lakes passing in the rear and in the sight of Dall's House; were this portion opened, the whole line would be practicable for foot passengers to the Little Falls of the Madawaska, a new Road having been made from 12 to 14 feet wide, commencing at the Dégélé, and passing along the right bank of the Madawaska, terminates at the junction of that River with the St. John, a distance of about 30 miles.

From the commencement of the Madawaska settlement to the Church there is no road, with the exception of such detached portions as are left between neighbours for their mutual convenience, although the land is cleared on both sides of the St. John's River, with exception of the Indian reserve.

(Signed) A. ELIOT,

Br. Major, 68th Regt.

Lake Temiscouata,
19th February 1827.

My Dear Sir,

I have postponed to write to you so long; I do not know which way to offer you my apology. The Curé, Captains Hebert and Bellefleur promised, *en passant*, they would send me in writing, to be forwarded by me to you, how much they do approve the improvement on the Portage Road done under your directions. Little can be added when I can assure you 330 loaded horses, chiefly wheat from Madawaska, have travelled this way since the 8th January, with at least twice the number of people, who had but one opinion in praising and wishing you future success.

This day week I had the misfortune to learn my mill at the Rivière des Caps, was consumed either by stupidity or negligence. This is the second grist mill the fire has devoured of mine since 2d Novr. 1826. I shall be happy to hear from you and learn of your return to this wild part next summer.

With sincere regard, I duly am,

My Dear Sir,

Your most obedt. servant,

ALEXR. FRASER,

J. A. Wolff, Esq.

Lake Temiscouata,
8th November 1828.

My Dear Sir,

Complaints on the Portage Road are multiplying, the Bridges, whose repairs were not renewed by you, are at present most impracticable.

Mr. Germain Dechêne, of the River des Caps, who has the contract of the Mail to Fredericton, has applied to Mr. Stayner, D. P. M. G. on this behalf.

I trouble you, my Dear Sir, so that you may petition for the necessary aid.

A Gentleman, (H. G. Deane, Esq.) left this two days ago on his return to the United States; he went only to the River St. Francis

Francis for, I suppose, to see the run of that River and report; therefore, I presume, until our boundaries are defined, Government will be loath to disburse for this communication—however the Portage is this time wretchedly bad. The body of a poor man was found by Mr. Dall's sons, about a mile below their house on last Monday, lying stretched on the beach, supposed by the people whom I called as an inquest, to have perished by wet and cold, as he had clothing barely to screen him from the rays of a warm sun. I expect people from Malawaska, probably will learn something respecting this unfortunate creature. Our conjectures are he was an Irishman, aged near 30 years: had a little thread, 4 needles, a thimble and Tailor's measure in his pocket, about one pound bread,—a rag indicated he had been a tailor.

With due esteem, I remain,

My Dear Sir,

Your most obedient Servant,

ALEXR. FRASER,

A. J. Wolff, Esq.

William Henderson, Esquire, called in, and examined:

Have you had occasion to direct your attention to the matter of internal communication in this district?—Since the year 1822, I have been actively engaged in forming a new settlement in the north-easterly part of the Township of Frampton, and in that part of Standon adjoining it. From this circumstance my attention has been particularly turned towards the subject of facilitating internal communication and the consequent settlement of the waste lands in the Counties of Dorchester and Hertford. My local experience is too limited to enable me to form any correct view of this subject in any other portion of the District.

Have you ever had occasion to consider this matter in its relation to and connexion with the establishment of new Settlements?—I have very lately directed my whole attention to the subject of internal communication in its relation to and connexion with the establishment of new Settlements. The results of my experience and enquiries has been collected in the form of a paper with the requisite tables and proofs, which has been submitted to the Society of Arts and Sciences. The annexed table is a summary of the whole, from which it appears that in 7 years 150 poor families may be settled on the waste lands by a loan of a sum under £900, to be repaid in the course of six years, and that it is highly probable a gain of £900 or upwards would revert to the public by the transaction, exclusive of the value of the lands settled. This is to be produced by furnishing labour to the new settler on the spot, without charge to the public, and without the necessity of undertaking any public works for this end.

What are the Roads which in your estimation it would be most expedient now to cause to be opened?—Before mentioning new Roads, I beg to be permitted to say that the improvement of Craig's Road and of the Kennebec Road, are objects of much importance to this District; but I am of opinion that no outlay on these Roads can be permanently advantageous, until a sufficient number of Settlements are established upon them to keep up repairs. Unoccupied Lots upon the Road should be generally taxed to maintain their respective portions of the Road in good repair, and lands in the vicinity likely to be benefited by these grand lines of communication ought also to contribute, although in a minor proportion. A new Road from St. François on the Chaudière towards and along the southerly bank of Lake St. François, and thence following the outlet thereof to Sherbrooke, would be found advantageous in promoting the settlement of a large tract of what is generally believed to be good land; and would moreover open a direct communication between Quebec and the capital of the new district. I state this however with some little hesitation, as the *locale* of this part of the country is to a great extent unknown. To the eastward of the Chaudière, particularly in the Counties of Dorchester and Hertford, the country has been to a considerable extent accurately and even minutely surveyed as far as the heads of the waters falling into the Saint Lawrence. I can therefore state my opinion more decisively as to what new Roads ought to be opened in that quarter. The first in importance is that which has already been traced by Mr. Ware (in 1825) by order of Government, commencing at No. 14 in the 9th Range of Frampton and ending at the River

St. John, where that important stream first becomes navigable. To understand this the better I have annexed a small sketch of this proposed Road with the adjacent countries; Although roughly executed it will be found sufficiently accurate to enable the Committee to form an opinion of the importance of the proposed Road. When Mr. Ware run this Road, he was anxious to take the most direct course, although in its progress through the Township of Standon it passes through lands that cannot be cultivated. For this reason I traced a line from the easterly angle of Frampton close to the Cranbourne side of the boundary between that Township and Standon, through excellent land as far as Lake Etchemin, which offers a situation for settlement not perhaps equalled by any unsettled part of the district. I would therefore recommend deviating from Mr. Ware's line at the northerly angle of Cranbourne, and follow that which I have traced as far as the aforesaid Lake, where the Road may end for the present. The total distance I propose opening on this Road would be 14½ miles. The next Road I should recommend is from the Seigniorie of St. Joseph through Cranbourne, between the 7th and 8th ranges until it intersects the one from Frampton, 1½ mile north-west of the said Lake; this Road would be about 12 miles in length. And two other Roads of 9 or 10 miles each, one from the advanced Settlements in the River du Sud towards the source of the main branch of that River, and one between the River Ouelle and Kamouraska towards the sources of the River Ouelle, provided that these last mentioned Roads can (from the information of persons better informed than I am) be undertaken with the same absolute certainty of thereby causing immediate settlement to take place, as I can vouch for being the case with Cranbourne and Frampton.

Be pleased to state your grounds and reasons for recommending the opening of these Roads, their relative importance, the effects which they would be likely to produce upon new Settlements, and their probable expense?—My reasons for recommending Roads to be opened at the public expense at the Rivière Ouelle, Rivière du Sud, and through Cranbourne and Frampton to Lake Etchemin, are:—In the first place, the speedy and general improvement of the most valuable portion of the district of Quebec, which can only be effected by the opening of new Roads in various directions. The old Seigniories have become so very populous that very little land remains in any of them to be granted. An immediate influx of native population may confidently be expected to take place in the waste lands, in rear of the seigniories, the moment these lands are offered for settlement and Roads to them opened. It may with all safety be computed, that at least 20 families per annum will be induced to settle on each of the Roads I have proposed: as a double advantage is opened for indigent persons (as almost all new Settlers are) viz: a good road to their location, and work upon that Road to enable them to purchase provisions while their own lands are unproductive. The difficulties experienced in settling the Kennebec and Craig's Roads, viz: their extreme remote situation from old Settlements, will be avoided in these I have proposed; as all of them are in the immediate vicinity to thickly settled portions of the District. By opening these Roads and effecting settlements on the adjoining Lands, three great points will be established ten miles in rear of the actual settlements, which by spreading will become connected with each other, and in the course of a very few years effect the settlement of the whole tract immediately in rear of the Seigniories from the River Chaudière to the River du Loup, while at the same time they will form advanced positions, ready to push further Settlements into the extensive and valuable tract of country watered by the River St. John. In a political point of view the advantages to be reaped are still more important. It will be found connected with the direct interest, nay further, perhaps even the future safety not only of the Province but even of the whole of British America. The different points I have proposed carrying these Roads to, are within two or three miles of the boundary claimed by the United States. If that boundary should happen to be conceded to our grasping neighbour, it is quite obvious that the immediate occupation of the country lying between it and the Saint Lawrence by British Subjects, becomes an object of vital necessity, for from the denseness of a loyal and hardy population alone, can the slip of territory remaining to us, be retained from further encroachment, even in time of peace. On the other hand should Great Britain be successful in retaining the immensely valuable valley of the St. John; by immediate and actual possession alone, can we hope for its ultimate annexation to Canada; and to effect this we must be previously prepared by opening direct communications to the River Saint John at several parts, with all convenient speed. In either case, therefore, whether the disputed territory is retained or wrenched from us, it is obvious that our future safety and welfare depends upon settling the intervening country as soon as possible.

Appendix
(P. P.)

possible. The probable expense of these Roads must of course depend upon the manner in which they are to be opened ; and the portions immediately joining the present Settlements will probably cost somewhat less than what is further off. I should propose that the Roads I have proposed to be opened and made passable for carts, ten feet wide, with a quarter of an acre of the wood chopped on each side, the total expense of which will not exceed 17s. 6d. per arpent, or £24 10s. per mile, to which must be added £5 10s. per mile more for bridges, and unforeseen contingencies, in all £30 per mile. The cost of the four Roads would therefore stand thus:

That from Frampton to Lake Etchemin,	14½ miles,	£435
from St. Joseph to Lake Etchemin	12 do.	360
from River du Sud,	9 do.	270
from River Ouelle,	9 do.	270
		=
	Total,	£1335

But it would not only be unnecessary, but even a disadvantage to expend the whole of this sum in one year : for if the Roads are opened faster than the Settlements progress they will be liable to get choked up again with young trees and weeds. In 1829 I would propose that the whole of the Roads should be opened as a Bridle Path or Winter Road, which would enable settlers to make the better choice of Lots ; and in addition to this about two-fifths of the Road completed in the way I have proposed ; this would require one half of the Sum appropriated. In 1830 another quarter might be expended, and in 1831 the remainder, by which time, on the Frampton Road at least, and I fully believe on the other three, sufficient lands would be occupied to maintain the Road in repair according to Law. I am particular in recommending the Road to Lake Etchemin. The Lands surrounding that beautiful sheet of water are of the most excellent quality ; and from its central situation could not fail, when occupied, to have the effect of spreading extensive settlements on all sides over a large tract of most valuable land, which cannot be so readily approached in any other direction. A village established on this Lake (which is deep and navigable) in the direct Road to United States and the Lower Provinces, would possess advantages not inferior to any other in the whole district.

What would be the effect of this outlay of the public capital upon the poorer classes of persons resident in the country Parishes ; might it be so done as to furnish a fund out of which these poorer classes would be enabled at once to supply themselves with seed wheat in the spring without any public loan for that purpose ?—The outlay of the small sums I have proposed would as far as they go, be of the most vital importance to the poor inhabitants of the adjoining Parishes. In Ste. Claire (which joins Frampton) I speak from personal observation and knowledge of the fact, the utmost distress actually exists from the partial failure of the wheat crop last year, and an entire failure this ; scarcely one in twenty have reaped the amount of seed they sowed ; and I feel quite certain that not less than 70 or 80 families in this Parish alone will be utterly destitute before the spring, and of course entirely unable to sow any crop whatever without liberal assistance. I am most decidedly of opinion, that the very best way of relieving this distress, will be that of affording such as require it labour on the spot. Want of markets in distant parts of the country for bulky articles of produce operates as discouraging extensive exertions in farming. Opening new Roads will induce accessions of new settlers, who must necessarily, at least for the first year, depend upon their next neighbours for provisions : this will sti-

multate exertion, while an unqualified donation might have a quite contrary effect. There can be no doubt but that the Sum I have proposed to be expended in 1829, on the Road from Frampton to Lake Etchemin, viz : £217 10s., could most easily be created into a fund for relieving the poorer inhabitants of the Parish of Ste. Claire, and providing them with seed wheat and other seed corn. I will not however venture to assert that this sum will be sufficient for all who may need assistance in that Parish ; but if to it is added the sum petitioned for by the Settlers in Frampton, to build a free bridge over the Etchemin in the immediate vicinity of St. Claire, there will be enough. It is particularly desirable on this head that whatever money is granted in aid of that bridge should be voted on the single condition that no toll should be exacted, and that it should be built next spring and summer, in order that the indigent inhabitants in Ste. Claire might be employed in the months of February and March in getting out the timber : this indeed ought to be a special condition in the grant. If it is stipulated as a preliminary step that the bridge be homologated in order to provide legally for its future maintenance in repair, (an object the petitioners will not fail to do without compulsion) the next season will be lost before the form can be gone through ; and a most important benefit drawn from the necessitous poor. No work of any consequence could be performed on the proposed Road previous to the sowing season ; therefore whatever portion of this sum might be allowed in order to procure seed, must be almost all in advance ; and it will not be safe to calculate at more than one third or at most one-half of the sum appropriated for the Roads, or for the bridge, as set apart to purchase seed grain, for the labourers must have provisions furnished for themselves and families while working as proposed.

Be pleased to state practically and in detail the process by which you think this might be effected ?—In answering this I shall confine myself to the money proposed to be expended in Frampton in order to assist the poorer inhabitants of Ste. Claire ; of course it will equally apply to the other Parishes. In addition to the Commissioners whom His Excellency the Governor might see fit to appoint to carry these objects into operation, it would be necessary to name some respectable person residing near the place where the Roads, &c. are to be opened, and if possible interested in their progress, to superintend the work ; and also the Curé of Ste. Claire to distribute the seed grain and recommend such as he might think the most likely to want employment as the means of paying for it. The Commissioners resident at Quebec would have to lay out one half of the money in grain for seed, reserving the remainder for the purpose of purchasing provisions and paying the transportation, with a small reservation in cash for paying the overseer to see the work properly performed, which the superintendant could not be expected to do at any considerable distance. This latter object, transportation of seed and provisions, should be exclusively given to such of the more necessitous poor in Ste. Claire as were possessed of a horse. Provisions cannot be purchased in the Parish, consequently it is an object to the poor to have it provided for them on the spot, and as such much more acceptable even with the most dissipated and thoughtless than even money itself. All the work would of course be performed at so much an acre for Roads, so much for Bridges or other work, and when finished, a note from the Superintendant would enable the labourer or workman to settle with the Curé for the advances made to him, or provisions required while performing the work.

Tuesday, 23d December, 1828.

François Doyon, of the Township of Tring, on the west of the River Chaudière, in the rear of the Parish of St. François, being called in, informed Your Committee; That he has resided in this Township since the month of March last; that there was a Road opened commencing at the second Concession of the Seignior of Saint Francis or Vaudreuil to the west branch of the River nearly opposite his residence; that this Road can be considered more as a winter road than as a road for wheel carriages; the trees have been felled to the breadth of about twenty feet through the whole length of the Road, but in the rainy seasons, the Spring and Fall, it becomes impassable, and even in Summer; that there are several inhabitants residing in the Township of Tring; that they have but lately settled there; that they have not the means of completing the Road on account of the labour; that they should have to cut through the standing wood to arrive there; that this Road in part crosses the *De Léry* Seignior, and this Seignior will do nothing because he is not obliged by Law; that the inhabitant on whose land this Road was made has stopped it up, so that they have no means of passing; that by the distance he is obliged to go round he has ruined his horses; he therefore prays in his name and in the name of the persons settled in the said Township that some remedy be applied to this evil, either legalizing the said road, or granting a pecuniary aid to have it made; that the want of a sufficient Road very much delays the settlement of this Township: several inhabitants wish to settle themselves there, but are prevented on account of the bad roads.

Augustin Bolduc, of the same place, being called in, and the testimony of *François Doyon* having been read to him, he concurred therein; and states further: That there are thirteen Settlers in the Township of Tring, three of which actually reside there; that they are two leagues and three quarters distant from the old Settlements; that the lands are three acres in front by 80 in depth—the lands on which they are settled belong to them, they have deeds of concession; they pay for the lands £50 for 90 acres; they do not pay the legal interest on this Sum; they pay 15s. for the first five years, and the interest augments 15s. every five years till it amounts to the legal interest. The rent is always redeemable by paying the capital, and they consider themselves the real proprietors of the said lands.

Jean Veilleux, Farmer of Saint François, Nouvelle-Beauce, and Proprietor of Land in the Township of Tring, being called in; and the testimony of *François Doyon* having been read to him, he concurred therein.

François Xavier Verrault, Esquire; Notary Public, residing at St. François, Nouvelle-Beauce, having been called in; and the testimony of *François Doyon* being read to him, he concurred therein, and further stated, that it would require from £300 to £350 to make the Road mentioned; that the people are willing to keep it in repair, and that they are obliged by their deeds to give one day's work for each farm on this Road for five years.

Friday.

Friday, 26th December, 1828.

William Henderson, Esquire, again called in; and examined:

After the opening of new Roads, what means do you know of keeping them in repair, and if you do not know of any what are the means you would suggest?—In the lands which are granted the Grantees are obliged to keep the Roads in repair. The Roads from Frampton and from St. Joseph to Lake Etchemin are verbalized, and of course means provided thereby for their future maintenance. On the Crown Lands measures should be taken to provide for their being sold, in order to bring the act of homologation into operation so far as regards the ungranted lands. The Road from River Ouelle and that from River du Sud, as they pass partly through the property of private individuals, and partly through Crown Lands, the grants should be conditional—that both of them should be homologated according to Law in order to provide for their being kept in repair after they are made.

Are there any parts of the country through which you recommend Roads to be made, that it would be advantageous to explore with this view before coming to any final determination upon their expediency, and also to ascertain the expense of opening such Roads. That part of the Counties of Dorchester and Hertford through which the Roads I have more particularly recommended, would pass, viz.: from Frampton on the Etchemin, and from St. Joseph on the Chaudière to Lake Etchemin, has been very accurately and even minutely surveyed within a year or two back, as may be perceived by the plan annexed to my evidence taken on the 22d instant, and the countries through which the Roads from River du Sud and River Ouelle would pass is also sufficiently known, to render any previous survey unnecessary for the short distance the Roads are intended to extend into the interior. These Rivers, viz.: the Etchemin, Du Sud, Ouelle and also the Du Loup, communicate with the waters of the River St. John by short portages, which have been known and frequented from the earliest periods of the colonization of Canada. The maps published by Bellin, Engineer in the French marine, and also Mitchell's map, prove that these Portages were commonly used nearly a century ago, and even to this day the New-Brunswick Indians visit Quebec by the same routes. But this is the only portion of the district, where new Roads are particularly required, that, as far as I am informed, is sufficiently known by any actual scientific investigation, to enable me to recommend any immediate expenditure of public money upon new Roads, without the advantage of a previous survey. It appears to me that in projecting new Settlements, or opening any extended Roads of communication between those that actually exist, the first point of departure is a competent geographical and geographical knowledge of the country intended to be improved: without this preliminary information, little worthy of legislative interference, can be effected in a general way. Money may be very judiciously appropriated towards opening new Roads for a short distance, at different points from the more distant settlements, in detached parts of the country, such as those I have recommended. But no grand highways of general communication between these isolated settlements, no back-bones of internal thoroughfare (if I may be permitted to use the expression) can be attempted with any certainty that the money expended will be applied to the best advantage. For the little geographical knowledge we actually possess of the country, it is greatly indebted to Colonel Bouchette, a gentleman, for whose professional talents and public zeal I entertain the very highest respect. His valuable map of Lower-Canada reflects great honour upon his native country, and I will venture to assert that his statistical work now in progress will do him equal credit. In common with many others, I deeply regret that his patriotic exertions have been so little beneficial to himself: I sincerely hope that the Legislature will embrace the opportunity now offered to reward him handsomely for his very splendid map, and at the same time secure the publicity of his valuable statistical work, with a new and correct addition of his Atlas, as an important desideratum to the subject in question. But the most scientific geographers, can effect little more than compile and arrange general maps from the materials and information of the practical performer in the fields—if the labours of the latter are defective, or if large spaces of territory occur where no surveys have ever been attempted, the works of the man of science must unavoidably suffer from circumstances over which he can have very little control. Colonel B.'s map of 1815 is, so far as any information is given, most correct, even to minute particulars; but it is to be regretted that great spaces in the townships, and even the greater part of the seignories, are almost blanks, from a deficiency of matter to give correct information;—and moreover, a great many of the earlier

surveys performed, or more correctly speaking, said to be performed in the Townships, are utterly unworthy of confidence.—Since this work has been given to the public, the indefatigable author has collected a vast mass of information as well from his own observations as from those of his talented family, and other sources, which would render a new edition incomparably more valuable than that compiled nearly 15 years ago. But still a great deal remains to be done—few of our numerous rivers have been accurately surveyed, and many not even explored, even as to their general course; of none do we possess any correct information respecting their magnitude in volume of water, or obstructions to navigation. A very small sum of money judiciously applied, by persons anxious to obtain the most information for the least expense, would furnish all the general information required on this interesting subject. If I might be permitted to suggest any measure not immediately within the scope of the queries proposed to me, I should recommend that a small annual grant might be placed at the disposal of the Society of Arts, for the express and sole purpose of encouraging winter surveys, and summer exploration of a few of the more important streams in the Province. It is highly probable that in the course of a very few years we should, by this measure, be put in possession of the general course of all the principal Rivers in the country, and at an expense, perhaps not exceeding one quarter of the cost of effecting it in any other way. I am confident that during the dull season of winter, many enterprising young men, every way qualified for the undertaking, and even professional Surveyors, would be found eager to get themselves noticed in this way, who would not expect any remuneration beyond their bare expenses. If aided by the unemployed Engineer or Naval Officers, (at a season when their services could not otherwise be required) in the astronomical department, much, very much would be effected, at a small cost to the public. Tolerably accurate surveys, and statistical information respecting the undermentioned Rivers in particular, are very much wanted:

- The Gatineau and three or four other large feeders of the Ottawa River, of which we have not even the slightest acquaintance beyond the fact of their existing.
- The Ottawa itself above the junction of the Madawaska as far as Lake Temiscaming.
- The Head Waters of the L'Assomption and Masquinongé.
- The St. Maurice.
- The Batiscan.
- The Ste. Anne.
- The Jacques Cartier.
- The Montmorenci,
- The Ste. Anne of Northumberland and the Gouffé on the north side, and
- The upper part of Yamaska.
- The St. Francis, particularly from Sherbrooke to Lake St. Francis, and that Lake itself almost unknown.
- The Nicolet, which is imperfectly unknown.
- The Bécancour, hardly known at all.
- The Great Branches of the Chaudière, particularly the River Beauvage and Bras du Sud, which last River traverses a tract of fertile country almost totally unknown to any but the Indians.
- The Rivière du Sud.
- The Rivière Ouelle.
- The Rivière du Loup;
- And last, but not least, the magnificent River St. John, and its many Branches and Lakes;

Similar encouragement might be given towards obtaining Geological Reports. The valuable documents in this Department, furnished by the Saguenay expedition, are splendid proofs that there are men in this country every way qualified to afford the public all the information required on that head—if facilities are offered for employing their talents, such as that above-mentioned.

Are the Lands through which these Roads will pass, free and common socage Lands or feignorial Lands?—The Road that I have recommended from Frampton to Lake Etchemin, has been, as I before mentioned, traced by order of Government, with the intention of becoming a grand communication from Quebec direct to the River St. John. About one half of the land it passes thro' is private property, held by one or two considerable landholders by very recent grants in socage tenure—the remainder is thro' ungranted Lands in Cranbourne, no portion of it goes thro' any Crown or Clergy Reserves. The Road from St. Joseph to Lake Etchemin, is intended to pass thro' 9 miles of ungranted Lands in Cranbourne, the remainder of its proposed extent is thro' lands belonging to one proprietor, half of it in the Seignior of St. Joseph. The Road from Rivière Ouelle will pass through

through a feignory one half of its length, the remainder thro' ungranted Lands. The Road from Rivière du Sud, partly through the Fiefs of Lepinay and Ste. Claire, and remainder on Crown Lands in Ashburton.

Would it be reasonable to expect that such proprietors would contribute to the expense of the Road?—To this I can only answer as far as myself am interested; that all possible exertions are making to open other Roads than those here proposed, which would absorb all the means I can devote to that object, especially when it is considered that the influx of Settlers, that will be occasioned by opening the Roads proposed, will require heavy advances in provisions and necessaries to support them the first year. Upon this head I may also be permitted to remark that since the commencement of our Settlement in 1823, we have opened or been the cause of opening, at private cost, upwards of 14 miles of good Roads in a country until then entirely unknown, and that we have not had a single penny of the public money, either from that voted for internal communications in 1816 or from any other source. I may add, neither countenance nor encouragement, in our arduous and expensive undertaking in any other way. If I might presume to answer for the other individuals, through portions of whose Lands the Roads I have proposed may pass, I should say that all of them are using their utmost endeavours towards opening Roads and settling their lands, and that any further outlay on their part would be impossible, especially when it is considered, that these Roads will be undertaken for public benefit alone, and without any consideration for private interest; but all reasonable facilities to settlers on these Roads so far as they pass over private property may be relied on, both as to the terms of letting the lands, and assistance afforded to the needy.

What would be the operation of the late order for the sale of Crown Lands upon the projected settlement upon these Roads?—If the late arrangements respecting the disposal of the Crown Lands are liberally construed, I am of opinion that the result might operate favourably towards effecting their Settlement. If lots of not less than 1200 acres are from time to time offered for sale, in such parts of the country as applications may be made from, and where appropriations of public money has been made for the conditional opening of Roads when the lands are sold, I am of opinion that respectable purchasers would be found, who would of course be interested in the immediate settlement of the lands so acquired; but in the way that arrangement has been hitherto acted upon, nothing good can be expected. I conceive so far from this, that it must eventually extinguish every attempt at any thing like extensive settlement. In the new system, as well as the one it supplanted, it appears to be a *sine qua non*, that no lands should be disposed of to any person that are able either to improve or pay for them. Lots of one and two hundred acres can suit none but the actual cultivator. Experience has proved that actual Settlers cannot be found among persons possessing the means of living out of the woods; a new Settler, so far from being able to purchase the land he improves, cannot even pay the most moderate rent for many years, and to succeed at all must moreover have assistance either in provision or labour on the spot, for the first year at least. If lands are to be sold (all which the propriety of may be doubted) it ought to be in large blocks worth the attention of monied persons. I think however the better and wiser plan would be to grant all the lands gratis, on condition of effecting certain ameliorations in a given time. It may however be observed, that no one system can be adopted, that ever will be successfully put into operation in all parts of the Province so extensive as Lower-Canada, and possessing such varieties of soil and climate. Soccage Tenure may perhaps answer the purpose of Landholders in the more fertile upper districts, but feignorial grants are alone suited to our portion of the Province. As for the present pedlar system of offering hundred acre Lots of Land, in the Townships, for sale among the *habitans*, so far as getting rid of a few of the most valuable Reserves, intermixed in the older Township Settlements, at about a quarter of what they are worth, can be deemed advantageous,—the measure may that far be successful—but in any other view it does not require the gift of prophecy to foresee its complete failure. So far as its operations have hitherto extended, I have known cases where lands worth 10s. an acre were put up and sold for 2s, while other lands in the neighbourhood not worth one quarter of what was sold for 2s. could not be had under 5s—of course all the first sold, but not an acre of the last. The places chosen for the sales were equally absurd as the valuation put on the lands. Instead of putting up the Lands at Quebec, Montreal, or even Three-Rivers, where they might expect competition among the bidders, out-of-the-way country places are chosen, at some of which not one single soul appeared at the sales, while at others the lands were adjudged to the first and only bidders. In this district not an acre

was sold to the actual Settler, although every means were taken to compel them to become the sole purchasers. So far as this part of the Province is concerned I think, that the ultimate and only result to be anticipated by this new arrangement, as it is called, will be that of depriving the native inhabitants and poorer class of emigrants of the means of obtaining any part of our extensive wastes to cultivate for their support; while the insignificant sums obtained from the few sales, that may now and then take place, will not pay the expenses of effecting them.

Jean Baptiste Fortin, Esqr. one of the Knights representing the County of Devon, called in, and examined:

Do you know the Lands in the County of Devon, their proximity to the Rivers, and whether there are sufficient young persons to settle them?—I particularly know all the Lands conceded, they generally are susceptible of being settled, and there are more than enough of young persons to settle on them. The greater part of the lands and the 4th range in particular, generally belong to persons settled near the Saint Lawrence, who cannot settle there at present because they draw their fuel and the necessary food for their lands, from there. In preserving those which are susceptible of cultivation it is always with the intention of their serving hereafter to settle their children, but as to the adjoining Lands, they are separated by a chain of mountains which run almost from one end of the county to the other; the Lands adjoining these mountains in the rear are in some places of a very good soil, and produce fine timber, but there are great parts, particularly the adjoining Lands, that are very mountainous. I have not a perfect knowledge of the Lands distant from those mountains. From such information as I have, the greater the distance from the rear of the lands, the better adapted are they for Settlements, particularly near St. John's River. As to the Rivers; the River called Bras St. Nicolas runs through all the Lands of the county, the south-west part of the Parish of St. Thomas excepted. This River is of considerable extent, but I do not believe that it could ever be improved so as to bear vessels, and the reason is that its outlet into the Saint Lawrence is a fall which is an insuperable obstacle. Following its course towards the rear of the Lands, it becomes crowded with rocks and rapids, but it may serve, as it has frequently done, to float timber, that is to say, saw logs. Timber has already been floated on the River nearly down to the mills, but I do not know its head. The same may be done on the south River, but I have no knowledge of the part which is in the interior. The same obstacles exist respecting this River as respecting the River called the Bras St. Nicolas.

Can you name any person in Town who might give information respecting the Lands of this County?—I know of no other than Mr. Bouchette, Junior, who surveyed those Lands last year. For my part I derive my information from old persons, most of whom are dead, and were in the habit of shooting there, but the game being destroyed, the place is no longer resorted to by young persons.

Might not the River du Sud and the Bras St. Nicolas be rendered navigable, and at what expense?—I believe that some parts of the Bras St. Nicolas might be improved, so as to bear canoes or boats, but I believe that there would always be some impassable parts, such as the fall at its outlet.

What parts of the ungranted Lands of the Crown in your County would, in your opinion, be most fit for Settlements for young persons, and what Road would be necessary to give them access to that place, and what would such a Road cost?—I believe that the part most deserving of attention is that near St. John's River. It would be expedient that the Settlements be along the River, where there is a tract sufficiently extensive to justify the expense of making a Road thither. I have always heard old people say, that the distance from the River to l'Islet, was from 20 to 25 leagues, but at present it is said that there is not more than from 12 to 15 leagues, but these old people will not believe it. The most proper place that I know of is in the valley between the mountains opposite the Church of l'Islet. It is very easy to cross these mountains, for in the inter-sections of the mountains there is a space sufficient for a commodious road, by making a circuit of about six arpens, and that circuit once made, no similar impediment afterwards occurs in a considerable distance. I know of no impediments in the interior, but I have heard from hunters that there was no insuperable obstacle to attain Saint John's River; I think that such a Road would cost about £100 a mile.

E.

Saturday,

Saturday, 27th December 1828

Monday, 29th December 1828.

Jean Baptiste Bournival, of the Parish of Rivière du Loup, called in; and examined:

Have you had any and what means of becoming acquainted with the new Settlements in the Township of Caxton in the rear of Point du Lac and Machiche, in the District of Three-Rivers? I have had opportunities of becoming acquainted with the Township of Caxton, by having done work at different places in the said Township. I have also been all over the said Township.

When was this Township first surveyed? when were the Settlements first commenced? what is the number of actual Settlers at present?—The Township was surveyed 3 or 4 years ago. It is now 3 years since the first Settlement was commenced. There are seven or eight persons residing in the said Township.

What was the state of the communications to that Township when this Settlement was first commenced? Had the new Settlers any obstacles to encounter in this respect? Have they been in whole or in part surmounted, and by what means and to what extent?—It was necessary to pass through the woods, with great difficulty, for the distance of one league in St. Joseph, and as much as one league in the said Township. There was no other way of carrying provisions and other articles for the whole of this distance than on men's backs. There were high hills to ascend and difficult swamps to cross: these obstacles have in some measure disappeared: First—Because the Lots in St. Joseph have been conceded since that time as far as the line of the said Township, and, Secondly—Causeways have been made across the hollows as far as the said Township. Part of the Road has been made and other parts cut through by the inhabitants of St. Joseph and those of the Township, and thence continued about a league and a quarter by the Landholders in the said Township:—a bridge of some length having been built across the River Machiche by Sueton Grant, Esquire.

Are there any and what water communications between this Township and the River Saint Lawrence or the Saint Maurice; and what is the distance of this Township from these Rivers respectively?—There is no communication with the River Saint Lawrence or the River Saint Maurice. The length of the Road which would be required to reach the Rivière du Loup is about a league and a half, and from that place the water communication with the River Saint Lawrence is very easy. The distance to the River Saint Maurice is about the same; but it is in the distant parts of the Township towards the 19th or 20th Range, where it is to be presumed that settlements will not be very soon made.

Could the inhabitants of this Township communicate more shortly with Three-Rivers by a Road striking the Forges' Road, and if so, describe the same, particularly the nature of the country through which such Road would pass, and the probable expense thereof?—Yes; the communication would be shorter for the inhabitants in the 7th and 8th Ranges, and the length of new road to be made to meet the Road to the Forges would not be more than one league, and the whole distance to Three-Rivers not more than seven leagues and one half. The land is swampy as far as the Road to the Forges; this would cost about One hundred pounds: but to carry the Road as far as the Settlements actually commenced would cost more, without giving the inhabitants the means of communication with the neighbouring Parishes, or with the navigation of the Rivière du Loup.

What is the amount of clearings in the said Township, the number of Houses, &c.? Be pleased to give the Committee any statistical information you may have concerning the said Township?—Thirteen Lots opened are partly cleared; Six or seven houses, and several barns.

By what description of Settlers was the said Township first settled? What is its present population? What is the state of their pecuniary means? and by what circumstances have these means been advantageously or disadvantageously affected?—Principally by Canadians; there are but few persons now resident there; the year being bad, even the inhabitants of the upper settlements of St. Joseph adjoining the said Township, as well the greater part of those of the Township itself, have been forced to leave the place for the present.

In what quantities are the lands of this Township distributed?—The Lots are 6 arpents or thereabouts by 20 arpents.

Mr. *David Grant*, of Three-Rivers, called in; and examined:

Have you had any and what means of becoming acquainted with the new Settlements in the Township of Caxton in the rear of Point du Lac and Machiche, in the District of Three-Rivers?—I have been in the Township of Caxton several times, but cannot say that I have any particular acquaintance with the Settlements or the Townships.

When was this Township first surveyed? when were the Settlements first commenced? what is the number of actual Settlers at present?—It was surveyed in 1824, and the Settlement first commenced in 1825, but I have no knowledge of the number of actual Settlers at present.

What was the state of the communications to that Township when this settlement was first commenced? Had the new settlers any obstacles to encounter in this respect? Have they been in whole or in part surmounted, and by what means and to what extent?—The communication for about 8 or 9 miles to the Township was by the upper part of Machiche through the woods, the obstacles were a great number of deep gullies which crossed the path, these obstacles have in part been surmounted by making bridges at the bottom of the ravines, and clearing a Road a considerable way into the Township.

Are there any and what water communications between this Township and the River Saint Lawrence or the Saint Maurice; and what is the distance of this Township from these Rivers respectively?—This question I cannot answer from my own knowledge. The distance to the Saint Lawrence may be about 18 miles.

Could the inhabitants of this Township communicate more shortly with Three-Rivers by a Road striking the Forges' Road, and if so, describe the same, particularly the nature of the country through which such Road would pass, and the probable expense thereof?—I am equally incapable of answering this question, but it is supposed the communication would be shorter (not with the actual Settlement) but with some of the back ranges.

What is the amount of clearings in the said Township, the number of Houses, &c.? Be pleased to give the Committee any statistical information you may have concerning the said Township?—I cannot say, I am not sufficiently acquainted with the Townships to afford the Committee any particular account of it.

By what description of Settlers was the said Township at first settled? What is its present population? What is the state of their pecuniary means? and by what circumstances have these means been advantageously or disadvantageously affected?—Principally by Officers and Privates of the Militia.

In what quantities are the lands of this Township distributed?—In quantities not less than 100 acres to Settlers, and not more than 1200 to Officers: Captains have 800; Lieutenants and Ensigns 500 each.

Andrew Paterson, Esquire, called in; and examined:

Have you had any and what means of becoming acquainted with the new Settlements in the Township of Caxton in the rear of Point du Lac and Machiche, in the District of Three-Rivers?—I was up at the Township of Caxton in September last, to visit my land and improvements.

When was this Township first surveyed? When were the settlement first commenced? What is the number of actual settlers at present?—I believe it is four or five years since this Township was surveyed, soon after the Survey was finished, the Settlement commenced: of resident Settlers, there are I believe about 12 families, consisting of upwards of 30 persons.

What was the state of the communications to that Township when this Settlement was first commenced? Had the new settlers any obstacles to encounter in this respect? Have they been in whole or in part surmounted, and by what means and to what extent?—When the Settlements were first commenced the only way

way of reaching the Township was through the woods, which greatly retarded the Settlement of the Township. Sueton Grant, Esquire, the Agent, and some others, have got a Road cut thro' the woods, but as the stumps are still standing, it is a very bad route, and it is with difficulty that a cart can reach the Settlement; this Road, I think, goes to the first, and probably up to the second Concession.

Are there any and what water communications between this Township and the River Saint Lawrence or the Saint Maurice; and what is the distance of this Township from these Rivers respectively?—A Road might be cut through to the Rivière du Loup or the Saint Maurice, which would enable the Settlers to reach the Saint Lawrence with rafts or boats from either of these Rivers; the River Machiche runs through the Township, but it is not navigable even for small boats. From the best of my knowledge I think this Township is about equal distances from the Rivière du Loup and Saint Maurice River, say about six or seven miles, but the Settlements are nearest the former of these Rivers.

Could the inhabitants of this Township communicate more shortly with Three-Rivers by a Road striking the Forges' Road, and if so, describe the same, particularly the nature of the country through which such Road would pass, and the probable expense thereof?—The most direct road from Three-Rivers to the Township is by way of the Forges of Saint Maurice, and I have been assured by a person who passed that way that the distance does not exceed sixteen or seventeen miles. I should think that a Road might be run all along the front of the Township, back to the fourth or fifth range, and down to the Forge Road, which is good to Three-Rivers, for about eight hundred pounds. Some years ago a sum of money was voted for the internal improvements in the County of Saint Maurice, only a small portion of which has been expended, the remainder, if applied, would be sufficient to cover the expenses of making the proposed Road in the Township.

What is the amount of clearings in the said Township, the number of Houses, &c? Be pleased to give the Committee any statistical information you may have concerning the said Township?—I think about 200 acres are already cleared, or under clearance, in the Township, and about 14 houses built, the failure of the crops this year and the want of Roads has prevented many Settlers from occupying their Lands, and in many places they have not the means of getting their crops out from the clearances, the lands are very good in many places, and would soon be settled, if roads were opened, the Seigniorial Lands in Machiche which joins the Township being all conceded.

By what description of Settlers was the said Township first settled? What is its present population? What is the state of their pecuniary means? and by what circumstances have these means been advantageously or disadvantageously affected?—This Township is granted, I believe, principally to persons that served in the Militia during the late war. I cannot state exactly the population of this Township as many of those who hold Location Tickets remain on their Lands but for a short time in the year, most of the Settlers are very poor and have not the means of paying for their Patents; while I was up in the Township several of the Settlers applied to me to know if I thought Government would grant them delay, for if this was not done it would be better for them at once to abandon their lands than improve them, and lose their labour; indeed, some of them were in hopes that as they had served in the Militia, Government would give them a title to their lands without payment of fees.

In what quantities are the lands of this Township distributed?—The Lands located, I believe, are as follows; to the Honorable Matthew Bell, 1200 acres; Sueton Grant, as Agent for the Township, 1200 acres; Lieutenants Dame and Paterfon, 500 acres each; Ensign Grant, 500 acres, and about 60 Lots of 100 acres each granted to different individuals.

Tuesday, 30th December 1828.

The Honorable Matthew Bell, called in; and examined:

Have you had any and what means of becoming acquainted with the new Settlements in the Township of Caxton in the rear of Point du Lac and Machiche, in the District of Three-Rivers?—I have never been in the Township myself, but having

taken the Lands due to me for services as a Militia Officer, I have enquired into the state of the Settlements. I have performed my Settlement duty, but at great expense for want of roads, and intend to have the same settled so soon as roads are made to enable me to place people on the same.

When was this Township first surveyed? When were the settlements first commenced? What is the number of actual Settlers at present?—This Township was surveyed in 1824, and I have understood for the purpose of granting lands to Militiamen who had served during the late war. Mr. Sueton Grant was appointed Agent, and to him I would beg leave to refer the Committee for further information in this place.

Are there any and what water communications between this Township and the River Saint Lawrence or the Saint Maurice; and what is the distance of this Township from these Rivers respectively?—There is no communication between this Township and the River St. Maurice, and if there were, such would fall in a good way above high Falls and difficult Rapids—a communication with the stream of the Rivière du Loup, I have understood, could be easily obtained.

Could the inhabitants of this Township communicate more shortly with Three-Rivers by a Road striking the Forges' Road, and if so, describe the same, particularly the nature of the country through which such Road would pass, and the probable expense thereof?—I am of opinion that the first Settlements must necessarily communicate with Three-Rivers by the Machiche Road which is made up to the Township or nearly so. It is probable that the east end will be nearer Three-Rivers by a Road through the lands reserved for the Iron-works of St. Maurice, but as the roads from those works in that direction have been abandoned for many years, they would have to be made anew—the ground, at least a part of it, I know to be very hilly, with great ravines; and two very extensive swamps which were once bridged over with logs (pontons) and now are in a very bad state.

By what description of Settlers was the Township at first settled? What is its present population? What is the state of their pecuniary means? and by what circumstances have these means been advantageously or disadvantageously affected?—I believe that the Township was reserved exclusively for the benefit of Militiamen, and to be settled on by them; and it was expected they would have been aided in the settlement by their relations and friends in the neighbourhood; and I doubt not that the want of Roads to communicate is the sole cause of this Township not having already been peopled by Canadian Farmers—many of whom entitled to Lands have not taken out their Location Ticket from knowing of the impossibility of getting to the spot.

Sueton Grant, Esquire, called in; and examined:

Have you had any and what means of becoming acquainted with the new Settlements in the Township of Caxton in the rear of Point du Lac and Machiche, in the District of Three-Rivers?—Having been appointed Agent for superintending the Settlement, I have had an opportunity of becoming acquainted with the Township of Caxton.

When was this Township first surveyed? When were the Settlements first commenced? What is the number of actual Settlers at present?—The Survey was begun in 1823 and completed in 1824. The number of Resident Settlers at present is very small, not more, I believe, than two families.

What was the state of the communications to that Township when this Settlement was first commenced? Had the new Settlers any obstacles to encounter in this respect? Have they been in whole or in part surmounted, and by what means and to what extent?—When the Settlement was first commenced in 1825, the communication was (and still continues to be) by the concession of St Joseph in the Parish of Machiche. The Settlers had then to encounter the difficulty of opening a Road, thro' the woods, of more than a league in this concession, over a very rough country, cut up by ravines of great depth. These difficulties have been partly surmounted since, by the new Settlers (who had taken concessions of all the Land along the Road up to the Township) aided by the Caxton Settlers; but this communication will never, or very remotely, be of much use for loaded carriages, on account of the immense and almost inaccessible hills on the sides of the ravines which cross the Road, of which there

Appendix
(P. r.)

there are no less than six within this distance, and which by this route, cannot be avoided.

Are there any and what water communications between this Township and the River Saint Lawrence or the Saint Maurice; and what is the distance of this Township from these Rivers respectively?—There are no immediate communications by water between this Township and the St. Lawrence or the St. Maurice. The horizontal distance to the St. Lawrence may be about six leagues. The St. Maurice is much nearer to the remote ranges on the Crown Reserves, but I have no idea of the distance.

Could the inhabitants of this Township communicate more shortly with Three-Rivers by a Road striking the Forges' Road, and if so, describe the same, particularly the nature of the country through which such Road would pass, and the probable expense thereof?—I can give no information to the Committee on this question from my own knowledge, but I have been informed by persons well acquainted with the country, that the distance of Road required from the 8th or 9th Range (Clergy Reserves) would not be more than one league, mostly through swamp, to the Forges' Road. In this way the communication would certainly be shorter to Three-Rivers, but not shorter to the St. Lawrence by Machiche or by Rivière du Loup. The expense of making the Road cannot be great, and no doubt, in time, it would be very convenient for the Settlers; but I humbly think, it cannot be of much immediate use; the new Settlers will naturally have recourse to the neighbouring Settlements for succour, where they can obtain provisions, &c. for their labour. The Road to Three-Rivers by the Forge Road, a distance of seven or eight leagues, without any house or establishment of any kind intervening, except the Forge Establishment, can only be useful when the Settlement is advanced, and have provisions to spare for the market.

What is the amount of clearings in the said Township, the number of Houses, &c.? Be pleased to give the Committee any statistical information you may have concerning the said Township?—The amount of Land located, on which the Settlement duties have been made, is 4800 Acres, and these are distributed through the first seven ranges; the amount of clearing on all these, 112 acres; the distance of Road opened through the Township about one and a half leagues, and the number of houses, ten, but some of them very indifferent. Owing to the failure of last year's crop, the inhabitants of the upper part of St. Joseph, adjoining Caxton, as well as some from the Township, have removed to the old Settlements for the winter. When the Settlement was begun in 1825 and 1826, one hundred and sixty-seven Privates of the late incorporated Militia made application to me, as Agent, for Land in this Township, but very few came forward for their Location Tickets, for finding that some Officers (who are entitled to large tracts, and are not obliged to more settlement duties than private-) had taken their land in the front of the Township, which necessarily threw the Militiamen further back in the woods, so that they were discouraged for want of communication to their Lots, which, at that time, were distant from three to five leagues from any road. A Road crossing the first five or six ranges to the Clergy Reserves would have obviated this difficulty. Nearly all the Land in these Ranges, except the upper part of the first and second are fit for cultivation. The country abounds in timber of every kind, amongst which are pine, spruce and oak (red oak.) It is irrigated by a number of small rivers, amongst which a branch of the River Machiche, on which are a great number of mill seats, besides many beautiful Lakes. On the last mentioned River a saw-mill has lately been erected at the distance of only ten acres from the front line of the Township; but at present it is only useful to the adjacent settlement, there being no possibility of bringing its produce to market. To explain more fully the situation of this Township with respect to the neighbouring parishes, I beg leave to state to the Committee, that the concessions of St. Joseph Belle-Chasse and Pique-dure, in the Parish of Machiche, run parallel to each other at No. 45^o W.—a new Road to commence on the St. Joseph Road, about two miles below the front line of Caxton, and running at right angles with the St. Joseph's, would cut the Road of Belle-Chasse to the southward at the distance of 40 acres, and continuing in the same direction, would intersect that of Pique-dure at the distance of 20 acres; producing it still 15 or 16 acres further, would strike the Rivière du Loup below the Châte de l'Eturgeon, from whence the River is navigable for boats and rafts to the St. Lawrence. This would afford an excellent communication from the Township (by the Road of Pique-dure, thro' a thick settled and rich country without lengthening the distance) to the St. Lawrence at Machiche; but what is of greater importance, a water communication to the Three-Rivers and Quebec Markets for Lumber and Pot-ashes, &c. But what would be more immediately conducive to the ease of the Settlers,

and the settling of the Township, would be the opening of a Road prayed for through the first five or six ranges, to the tract set apart for a village. The aid prayed for, if the work were given out in very small contracts, or by daily labour, would be fully adequate (in the opinion of all the Settlers) to the completion of all these improvements, and would besides relieve the distresses of the inhabitants of the back concessions occasioned by the failure of the crops of last year.

By what description of Settlers was the said Township first settled? What is its present population? What is the state of their pecuniary means? and by what circumstances have these means been advantageously or disadvantageously affected?—The Settlers are principally Canadians. The probability is, that it would be almost exclusively settled by the surplus population of the Parishes of Machiche, Rivière du Loup and Maskinongé, where the Seignories are nearly all conceded.

In what quantities are the Lands of this Township distributed?—The Land is laid out in Lots of 100 acres each, and they are distributed for the most part from 100 acres to 500 acres.

Wednesday, 31st December 1828.

Mr. Louis Bernard, of the Parish of Pointe aux Trembles, having been called in, informed Your Committee; That the powers given by the Law to the Grand-Voyers were far too great, inasmuch as it was impossible to adduce evidence against them; that in consequence of this, a Grand-Voyer might lay out a Road while sitting in his own room, without its being possible for the parties to prove the contrary. That the power of laying out or altering the Roads ought to be given to a majority of the inhabitants of the Parishes or Districts, a meeting of whom should be called for that purpose; or that the parties should have the right of naming disinterested persons as jurors, for the purpose of visiting and inspecting the places in question, and giving a decision: That the costs to which the inhabitants of the country are subjected in causing Roads to be laid out are very burthenfome, and to the inhabitants of new Settlements insupportable. That in cases wherein there is some want of formality, the expenses are the same, so that Grand Voyers are not interested in avoiding such errors, from which they rather derive advantage:—this is the opinion of the inhabitants with whom I am acquainted.

Friday, 2d January 1829.

The Reverend Messire Michel Dufresne, called in; and examined:

Have you had occasion to direct your attention to the matters of Internal Communications in any part of this District, and particularly to and in the Seignior of St. Giles and the Townships beyond it?—I have scarcely applied my attention to these subjects as there is a Road which runs through Saint Giles, in a direction nearly North-North-West, about twenty-one miles long; which Road is a communication for the inhabitants of Saint Giles, south-west of the River, for those of Saint Sylvestre or the upper part of Saint Giles, for the Townships of Leeds, Inverness, New-Ireland, Halifax, &c. Although Saint Giles has been settled about sixty years, the Settlements are confined to the Banks of the River Beauvillage, and are scarcely extending, either on account of the swamps, which are extensive, or of the frequent frosts or the inundations of the said River which are occasionally the cause of considerable losses to the inhabitants. There are a few settlers on the other side of the River (to the North-East) who have not as yet any highway, the Grand-Voyer having very recently made a *Procès Verbal* respecting one; hitherto the inhabitants on the North-East of the River, about eight in number, have made use of Craig's Road, crossing the River nearly opposite their Settlements, except when the waters are high.

What means have you had of becoming acquainted with the same?—Having been very often at Saint Giles and at Saint Sylvestre, I have had an opportunity of becoming personally acquainted with the subject. I have never visited the Townships of Leeds or Broughton which are adjacent to the Parishes in which I officiate.

officiate. The only information I possess respecting those places is from hearsay.

What are the Roads and Bridges, and their state, in the country comprising the Seigniorship of Saint Giles and the Township of Leeds?—In Saint Giles and Leeds there is only one Road, that which I have just mentioned, and in Saint Sylvestre, (a new Parish lately erected as well as Saint Giles, by a canonical authority) there is moreover Sainte Marie Road which joins Craig's Road at the seigniorial line which separates Saint Giles or Beaurivage from Leeds, and forms an acute angle with that Road. Craig's Road as far as Leeds is generally good, with the exception of the four or five last miles which are bad; this country being extremely mountainous and strewed with large stones, and in the low grounds abounding in swampy places. From the account of travellers, I have reason to believe that Road is worse; Sainte Marie Road is also bad, but the inhabitants settled along it being very active, are very ready in repairing it. It is well to observe that Saint Sylvestre is quite a new settlement, not having been in existence more than nine years, and more than 400 Lands are already conceded, and about 200 settled by as many Canadian and Irish families, for the most part Catholic. There are six bridges, of which five are in Beaurivage and one in Leeds, one on the *Rivière au Pins*, another on the *Rivière à la Fourchette*, a third on a small stream, the name of which I do not know, a fourth on the *Rivière du Four*, a fifth on the same River—Sainte Marie Road, and the sixth in Leeds on the River Bécancour. These Bridges are in good repair with the exception of the third and fourth, which I sometimes found impassable, having been carried away by the rise of the waters, and it was necessary to cross these Streams at the risk of being upset by the stones at the bottom.

What in your opinion would be the best course of the Roads, the fittest places for locating the Bridges—the inconveniences to which the inhabitants of those countries are now subject? what would be the probable expense of the Bridges, and making and repairing the necessary Roads?—It is very difficult to direct where the Roads ought to be opened and the Bridges built, on account of the swamps and unfavourable ground which might be met with in the given direction. There are already in Saint Sylvestre three or four roads cut through, which will soon be rendered practicable by the activity and labour of the inhabitants who have no idea of requesting aid from the Legislature. Two bridges on the River Beaurivage, one towards the old Mill, and the other some leagues above, would be useful. I have certified to Monsieur Panet, a very accurate plan of the Seigniorship of Beaurivage, and I do not doubt that His Lordship would lend it with great pleasure for the information of the Committee. It is also very difficult to state the probable expense of the several objects mentioned in this question. I believe however, that with £4000 or £5000 well employed, much work might be done. My Parishioners at present find no other inconveniences than those I have already mentioned, such as the rise of the waters, the frosts, and the swamps on their lands, and these are too much.

Be pleased to state your grounds and reasons for recommending these Roads, their relative importance, and the effects which they would be likely to produce upon new establishments?—Saint Giles being inhabited by poor persons, and the Lands being generally undervalued, I do not see that for the present it would be necessary to apply much money there, these poor people, far from being able to send their grain and provisions to market, would much need their importation. I have officiated six years for them, and I can say with truth, that I have not received from them 50 bushels of Tythe Corn a year. What trade could such people make? and I believe that many years will pass before they have a superabundance. The Settlement of Saint Sylvestre is advancing with astonishing rapidity: I have already said that not more than nine years have elapsed since that part of Beaurivage began to be settled, and I am not afraid to say that as much labour is performed there as at Saint Giles. A small grant of money for Saint Sylvestre might redouble the exertions of its inhabitants. Care in the selection of the persons to be intrusted with such monies (should any be granted) would be necessary, and the opinions of the persons interested ought to be taken as a guide for the better application of the monies for their benefit. Before finishing, I venture to suggest an idea to the Committee for bettering the condition of the inhabitants of Saint Giles, which is considered by some as impracticable. These unfortunate persons see every year, or almost every year, the fruit of their hard labour carried away, feed committed to the ground and every kind of grain and vegetables just risen, fences, every thing in fact disappears and is carried away by this River which overflows by the falls of rain, and the waters which are conducted into it to drain the Lands; great number of cattle have perished in those sudden

inundations, houses have been carried away, and a numerous family almost entirely perished. To remedy such evils, which will always prevent Saint Giles from prospering, (and observe that the more the lands are cleared the greater the danger will be) would it not be possible to deepen the channel of this River, a very extensive undertaking I admit, but absolutely necessary? The House, or, to speak more correctly, the Legislature might oblige every landholder to work a couple of weeks each year in the front of his land, at the same time granting a certain sum to help these poor people.

Tuesday, 13th January 1829.

Mr. Josiah King, of Saint Giles, Farmer, called in; and examined:

Have you had occasion to direct your attention to the matter of Internal Communications in any part of this District, and particularly to and in the Seigniorship of Saint Giles and the Townships beyond it?—I own property in the Seigniorship of Saint Giles, and I have frequently travelled it. I should recommend the present Road to be straightened in some parts.

What are the Roads and Bridges, and their state, in the country comprising the Seigniorship of Saint Giles and the Township of Leeds?—Craig's Road is the name of that in the Seigniorship of Saint Giles and Township of Leeds; That part of the Road in St. Giles is pretty good, but that in Leeds is very bad. There are some Bridges which are good.

What in your opinion would be the best course of the Roads; the fittest places for locating the Bridges—the inconveniences to which the Inhabitants of those countries are now subject? what would be the probable expense of the Bridges, and making and repairing the necessary Roads?—The present Road is in the most suitable direction, but, as I have before stated, would require to be somewhat straightened in some places, and a small expense would turn the Road where there are some hills that should be avoided. I should recommend a Road to be opened from Ireland to Shipton and from Shipton to Dudswell. The cheapest mode of opening the Roads, one rod or 16 feet wide, would be to give it out as for clearing of land by the acre, that once performed, I should suppose that the bridges and causeways required might be given out by contract to the lowest tender. There would be required two Bridges over the two Nicolet Ponds, one on each Road: on the Shipton Road there would be four small Bridges to be made. The Bridges over the Nicolet Ponds would cost, I should suppose about £200 each; and the four on the Shipton Road—one pretty large on Wolfe's River, would cost probably about 150 dollars, and the other three would not cost more than 100 dollars altogether. I cannot say what would be the expense of the causeways, as some of the land might be drained.

Be pleased to state your grounds and reasons for recommending these Roads, their relative importance and the effects which they would be likely to produce upon new establishments?—There are large Settlements labouring under the disadvantage of these Roads not being opened, namely: those of Stanstead, Eaton and Dudswell, and others on the Dudswell Road. The consequence would be that a number of the inhabitants of these places who have a great deal of produce, such as Potash, Butter, Cheese, Pork, Flour, Flax, Hay-seed, Timothy, Clover, &c. are obliged to take it to Portland, at a greater distance than they would have to come if the Roads I now recommend were opened. I should suppose that if the Dudswell Road were opened it would accommodate ten people to one on the Shipton Road. The Dudswell Road is 40 or 50 miles nearer for their people than the Shipton Road. I have travelled these Roads about four times a piece, on horseback, in waggons and sleighs, and on foot.

Mr. D. H. Andrews, of Saint Nicholas, having been called in, informed Your Committee that:—He has been acquainted with Craig's Road leading to the Eastern Townships for the space of five years, as his business often obliged him to travel it; that from Saint Nicholas to the Township of Leeds is twenty-eight miles, a very good Road; that from thence to Ireland, twenty miles, the Road is very rough, the inhabitants being very poor, they are not able to make the Road good enough to travel with carts:

Appendix
(P.P.)

carts: the Rivers are all bridged from St. Nicholas to Ireland. I think it would require about £300 to repair the Roads from Leeds to Ireland. From thence to Shipton is a distance of 30 miles, 28 of it is a very bad Road: there are two considerable Rivers—the first is called Wolfe River, 7 miles from Ireland. I think £75 would build a good bridge over it; then 7 miles further is Nicolet, which would cost £200 to build a good bridge over it, and in addition to this, I think, £1000 would make the Road passable, so that the inhabitants could bring their produce to Quebec Market. If what I have mentioned should be granted, it surely would make the Road passable, which would bring about 40,000 inhabitants to this market which now are all cut off, only what they can drive through alive. In the years 1827 and 1828, there were 3000 head of horned cattle drove through this Road, and about 2000 sheep; and if the Road should be made, it would settle the country. This 28 miles from Ireland to Shipton is as good a tract of Land as there is in Lower-Canada, and it would be a noble chance for emigrants; there are some fine farms on this Road, but the people were obliged to leave them on account of the road being so bad. Now, if there is money granted to make this Road, there ought to be some plan devised to lay it out better than there were before when there were money granted for the same Road; the Contractors, at least, saved one half of the money, for instance, the bridge that was built over the Nicolet River, it was given out by the job for the sum of £250, and the bridge was built for £125, so the contractors saved one half of the money; but, as I said before, it would cost £200 to build a proper bridge over the Nicolet River. Now, if there should be proper men appointed by authority to engage workmen, and to oversee them, then the country would have all the benefit of the money.

Mr. George Arnold, called in; and examined:

Have you had occasion to direct your attention to the matter of Internal Communications in any part of this District, and particularly to and in the Seigniory of Saint Giles and the Townships beyond it?—The business that directs my attention to the Seigniory of Saint Giles, is my having a property there.

What means have you had of becoming acquainted with the same?—By frequently travelling the Road.

What are the Roads and Bridges, and their state, in the part of the country comprising the Seigniory of Saint Giles and the Township of Leeds?—The Road is a good carriage Road, to my knowledge, for upwards of 40 miles above Point Levy, excepting the want of a bridge across the *Sault*. I have been as far as Leeds.

What in your opinion would be the best course of the roads: the fittest places for locating the Bridges—the inconveniences to which the inhabitants of those countries are now subject to? what would be the probable expense of the Bridges, and making and repairing the necessary Roads?—The Honorable John Caldwell and Mr. Joseph Bell are, in my humble opinion, the best qualified for pointing out the most convenient and proper place for building a bridge across the *Sault*, as their business calls them more so than any other persons to that particular place. The inconveniences for the want of a bridge across the *Sault* is felt by the inhabitants for some hundreds of miles, and more particularly when bringing down any kind of cattle which they have to cross the River Saint Lawrence to Carouge, at the risk of their lives, and that of their cattle, besides paying a high price for persons to cross them, and not unfrequently at certain seasons of the year, owing to the weather, are detained from a week to a fortnight.

Be pleased to state your grounds for recommending these Roads, their relative importance, and the effects which they would be likely to produce upon new Settlements?—The reason I should recommend the roads through the Townships and more particularly Craig's Road,—the road has been already made; and by the best information I can obtain, a small sum would make the necessary repairs, which would save the inhabitants from coming some hundreds of miles out of their way,—would enable them to sell their produce, say from 10 to 15 per cent lower.

Tuesday, 20th January 1829.

Robert Christie, Esq., Member for the County of Gaspé, having been called in, informed Your Committee: That it is the

wish of his constituents that a Road should be opened from the Indian Village at the head of the tide water in the River Ristigouche to Metis on the Saint Lawrence, by which the inhabitants of that County would have a direct communication over land with this Capital. That this would also serve as a Road of communication between this Province and New-Brunswick. The whole distance through may be about 90 miles. The sum of £1000 or £1200 would suffice to open a Road of 18 feet wide (with the necessary bridges) to Lake Matapedia, from whence to the said village travellers might descend in the summer by water, and on the ice in the winter. It would however be better if the Legislature determine upon an appropriation for the purpose to make an opening of from 12 to 18 feet wide the whole distance, adopting a line that may pass the head of the Lake. He has never been over this tract of country, but understands, from what he considers good authority, that the land is for the most part good and fit for agriculture. The sum of £1000 was voted and appropriated by an Act of the Legislature in 1817 (57th Geo. III. Cap. 13) for the purpose of opening a Road from the Bay of Chaleur to Rimouski via Metis, but this vote has not been carried into effect. He understands that Settlers would immediately locate themselves on the margin of Lake Matapedia, and on the Metis Portage, if a Road were opened thro' it. There is at the present moment, a Petition before a Committee of the Assembly (of which Committee he is Chairman) from the inhabitants of the Bay Chaleur, praying among other matters that this Road may be opened, and that the Revenue collected in the County be formed into a Fund for this purpose. The Committee have reported against the formation of the proposed Fund, and it is probable that they will not deem it necessary to report upon the expedience of the said Road, judging it more proper that this measure being one rather of general interest to the Province than of a local nature, should be discussed in this Committee, to which is referred that part of His Excellency's Speech which relates to Internal Communications. The expedience of the opening of the Road in question having been recognized by the Legislature, as per the Act referred to, he respectfully suggests the repeal of the appropriation made by it for the purpose, and that a larger amount be appropriated.

Wednesday, 21st January 1829.

Mr. Charles Kirouac, of the Rivière du Sud, having been called in, informed your Committee; That he has visited the lands in the rear of the present Settlement, and behind the Parish of St. Pierre du Sud; that in the rear of the said Settlements there was excellent land on which new settlements might be formed: That there were in the Parish of St. Pierre du Sud about 160 heads of families; that out of this number there were at least 49 who had only building lots: that this arose from the circumstance of there being no roads leading to the good lands. That if the Legislature were pleased to grant the sum of £400 for opening a Road through the rear of the settlements, (which might be easily done) the consequence would be, that a new Settlement would be formed, and that lands would be furnished for the superabundant population of the said Parish. That the length of the Road to be opened would be four leagues.

Friday, 23d January 1829.

Mr. Francis Armstrong Evans, having been called, delivered to Your Committee the following Paper:

The undersigned, F. A. Evans, Agent for some of the principle inhabitants and other residents in the Eastern Townships, humbly submits to the Committee for Internal Communications, the following information relative to the chief Roads which, it is believed, require public appropriations of money, and which the undersigned hath been charged to submit to the Honorable House of Assembly:

The leading Roads that are wanting in the Eastern Townships to lead to the chief markets of the Province, namely, Quebec, Montreal and Three-Rivers, whereby the inhabitants might have a route or outlet to bring their produce to market, and to receive their supplies from the several cities, as under existing circumstances none of the kind may be said to exist, as the present roads are

are nearly impassable a great portion of the year, and in some places from the small number of the inhabitants that at present reside on said Roads, they are not able to make the same or keep them in repair, particularly as the Road Laws are so defective that it is impossible to compel non-resident land owners to help to make or keep said Roads in repair, or do any thing to help the settlement of the country. The great leading roads for the accommodation of the Townships to market are these: a road from Stanstead through Hatley, Bolton, Stukely, and Granby, to Yamaska Mountain, about 50 miles, being the road to Montreal: a road from Sherbrooke to the outlet of Lake Magog to meet the above road to Montreal, 20 miles: the Craig's Road, from Shipton to Saint Giles, 51 miles: a road from the Township of Ireland to Eaton, 45 miles, and on to Hertford at the head of Connecticut River, 30 miles: a road from Melbourne to Yamaska Mountain to meet the road to Montreal, 30 miles. Also, some improvement of the road from Shipton through Kingsley, Simpson and Wendover, 35 miles, making in the whole about 300 miles of road, about 60 miles of which would be new road; allowing therefore an average of £60 per mile for the 60 miles of new road to be made, it would require the sum of £3,600, and £40 per mile for the 240 miles of road to be repaired, it would make £9,600, in the whole £13,200. This sum would open effectual leading roads through the Townships, and all settlements which would not join on said roads might easily have roads to lead on to these main roads; but these main roads having no particular or sectional views to the prejudice of other parts, all the Townships have an equal interest in their completion. To raise this sum, or refund it, if advanced from the Provincial Treasury, I believe an equal Land Tax on all lands would be the most equitable manner of refunding the same; say for this loan, one farthing an acre yearly: the tax for the loan to cease so soon as the amount advanced was repaid. However, I believe a permanent Land Tax desirable to keep the roads in repair, and to make such other roads afterwards as the inhabitants might need. I also believe were the roads above-mentioned opened, that real property would advance 200 per cent in three years. However, as it is possible this sum could not now be conveniently granted, the following roads are absolutely requisite to enable the people of the Townships to come to market, which are petitioned for:—

First.—The Craig's Road from the River Saint Francis to Saint Giles. Of this Road through the Township of Shipton and two miles into the Township of Tingwick, is partially made; but would, at the least, require £10 per mile to repair, which for 16 miles would amount to £160. From thence through Tingwick, Chester, Wolfstown and Ireland, the Road is about 10 feet wide, with many fallen trees, and is similar to the bottom of a stony brook or with deep mud, completely impassable for any carriage, and exceedingly dangerous to foot or horse passengers; this distance within the district of Three-Rivers is about 34 miles, at £60 per mile, which I believe is the lowest it can be made for, with power to the Commissioners to move the Road from side to side where necessary to avoid hills, &c. This would amount to the sum of £2040. There are on this Road one bridge over the S. E. Nicolet, over 150 feet long, and 17 bridges over brooks of more than 18 feet, (see Procès-Verbal of the G. Voyer) but the land through which the road runs is generally of an excellent quality. From the Three-Rivers district line in the Township of Ireland to Saint Giles, or to the River Bécancour, at the place known as the Palmer House, in the district of Quebec, is about 22 miles, and is partially made, but would require about £30 per mile to repair the same, which would amount to the sum of £660. These sums I think within bounds of reason, and what would be necessary to make and repair the said Craig's Road, being the general outlet of the Townships to Quebec.

Secondly.—The next road I would submit to the consideration of the Committee is the road from the Township of Stanstead to Montreal. The bad and almost impassable road begins at the head of Lake Massihippi in the Township of Hatley, from thence to the outlet of Lake Magog is about eleven miles, being mountainous, would require, according to the best estimation, from £80 to £100 per mile. From the outlet of Lake Magog round Bolton Mountain to the Township of Stukely is a bad and dangerous road, about 7 miles, and would require about £100 a mile, being their only route to Montreal. The whole distance from the head of Lake Massihippi to Stukely being about 18 miles, at, say, £90 per mile, amounts to £1620. The Road on through Stukely, Shefford and Granby, a distance of 30 miles, would require about £15 a mile to repair, and would amount to £450. This would open the road to Montreal from the Townships near the lines, together with the Townships through which the Road passes, and would be of immense value to the people.

Thirdly. The next Road of the greatest importance to the Townships along the Saint Francis River is the continuation of the Craig's Road as originally intended, from the River St. Francis through Melbourn, Bronipton-Gore, Ely, Roxton and Milton, to Yamaska Mountain, to intersect the Road to Montreal: this passes through a fine tract of country with scarcely any swamp, and extremely well adapted for settlement, and where many settlers are now settling or about to settle, and have built saw and grist mills in Ely and Milton. This Road, if made, would shorten the distance to Montreal from the St. Francis River and central Townships, say about Shipton; one half from what is at present necessary to be travelled. The distance of Road to be made is about twenty-eight or thirty miles from the St. Francis at Richmond to Yamaska Mountain, at about £60 per mile to make, would take (having several bridges over the head waters of the Yamaska River) £1800 at least, but it has been estimated at £2000.

The above three roads have been included in the petition for which the undersigned was agent, and therefore humbly and earnestly recommends them to the favourable consideration of the Committee. The Sums required would stand as follows:

For the Craig's Road within the District of Three-Rivers through Shipton and 2 miles into Tingwick,	£160
For the same through Tingwick, Chester, Wolfstown and to the Quebec District line in the Township of Ireland,	2040
For the same within the District of Quebec to the Palmer House,	660
Total for Craig's Road to the Saint Francis	£2860
For the Road from the head of Massihippi Lake to the Township of Stukely,	1620
For repairing the continuation of said Road through Stukely, Shefford and Granby,	450
For the Road from the St. Francis to Yamaska Mountain through Melbourn, &c.	2000
Included and petitioned for—Total	£6930

The above Roads would open effectual roads to the Cities of Montreal and Quebec, and pass through the centre of the Townships.

But some appropriation is still wanted to complete the Road to Three-Rivers down the Saint Francis through Kingsley, Simpson and Wendover, and to extend a branch of the St. Grégoire Road from the part it passes over the south-west branch of the Nicolet through the ninth and tenth ranges of Kingsley to intersect the Craig's Road at Danville School-House in Shipton, a distance of thirteen miles, which has been estimated at the sum of £450. This sum has been petitioned for, but was too late to be presented; the road is greatly wanted, the inhabitants having now to get to that point of the St. Grégoire road, 35 miles of a bad road to travel, which the making of this Road would cut short to 13 miles, from the centre of the Settlements in Shipton, Kingsley and Tingwick.

The repairing of the road down the Saint Francis through Kingsley, Simpson and Wendover, would, as above-mentioned, require an appropriation from the small number of inhabitants on said Road, and it being nearly impassable a great part of the year in many places, the distance is 35 miles, and would require about £15 per mile to repair, amounting to £525. This Road is almost the only Road that the inhabitants have to arrive at the Saint Lawrence down the Saint Francis, and which is chiefly travelled in going to Quebec, Montreal or Three-Rivers, and is much wanted by the people. There is however another miserable Road on the west side of the Saint Francis to Drummondville, but scarcely passable in the summer season. These several roads are greatly wanted by the Townships in order to go to market to Three-Rivers, Montreal and Quebec, and are also humbly recommended to the favourable consideration of the Committee for Internal Communications, and the undersigned will be happy to give any farther information that may be required.

Quebec, 23d Jany. 1829.

F. A. EVANS,

Agent for the Townships of Shipton, Melbourn, Kingsley, Stanstead, Ascot, Hatley, Brompton, Windfor, Durham, Tingwick, &c. &c. usually called the Eastern Townships.

Tuesday,

Appendix
(P.P.)

Tuesday, 27th January 1828.

Jacques D'Eligny, Esquire, one of the Knights representing the County of Warwick, called in; and examined:

Are you acquainted with the Township of Brandon, and the Roads leading to it, and what opportunities have you had of becoming acquainted with this part of the country?—I do not know the Township of Brandon from my own observations: I have never been there. I have resided at Berthier for many years, and the Township of Brandon is about six leagues from the Village of Berthier. I am acquainted with many persons who have lands there.

What are the means of communication between the old Settlements on the Saint Lawrence and the Township of Brandon?—The Road generally chosen in going to Brandon from Berthier, is by the *Côte du Saint Esprit*: those who have land there tell me that this is at present the most eligible road to the Township.

Is the communication sufficiently easy to enable the proprietors of lands in the Township of Brandon to go there and clear their lands?—There is now the Road by the *Côte du Saint Esprit* which is very difficult. If some improvement were made in it, the clearing of the land would be much more advanced. I have known several persons who had lands there and wished to go and settle on them, fell them on account of the want of roads to get to them.

What is the number of persons actually settled in the Township of Brandon, to the best of your knowledge?—I do not exactly recollect: There are not less than thirty families, and I believe there are more.

Are there any persons resident in Berthier who have lands in Brandon, and who would settle on them if the roads thither were better?—There are some who have already sold their lands in the old Settlements of Berthier, in order to go and settle in Brandon; and I know others who would settle there if the roads were better.

Has the land in Brandon the character of being good land?—According to my informants the good land lies in tracts, that is to say, there are good and bad lots; but there are some persons who have land there who consider them very good: The proof of their goodness is, that those who have sown on them have had an abundant harvest every year.

Have the persons settled in the Township the means of making the Roads they ask for?—Part of them have not the means.

What sum would it be necessary to grant them as an aid to enable them to make the said Road; and in what part of the Township ought the sum so granted to be expended?—The parties interested believe that the sum of £300 would be sufficient to establish a proper road. The most convenient place according to the wish of the Petitioners would be the *Concession du Saint Esprit*.

What would be the general advantages of this Road, supposing it should be established?—One advantage would be that the road to Montreal would be shortened by about six leagues.

Do the inhabitants settled at Brandon wish for the adoption of a measure of this nature?—The proof of this is, that I have in my hands a Petition which I was commissioned to present to the Legislature on their behalf. I was prevented from doing so, because it was sent too late for me to present it to the House, according to the Rules.

François Bélanger, Esquire, called in; and examined:

Are you acquainted with the Township of Brandon and the Roads leading to it, and what opportunities have you had of becoming acquainted with this part of the country?—I know the Township of Brandon, having visited it last year.

What are the means of communication between the old Settlements on the Saint Lawrence and the Township of Brandon?—The only Road which I know leading to the Township of Brandon is that by the *Concession du Saint Esprit*, behind the Village of Berthier.

Is the communication sufficiently easy to enable the proprietors of lands in the Township of Brandon to go there and clear their lands?—The present communication is a winter road, by which persons may pass on horseback in summer, but it is not sufficiently good to be passed by summer carriages.

What is the number of persons actually settled in the Township of Brandon, to the best of your knowledge?—I merely passed through Brandon; but I estimate the number of families settled there at about fifty.

Has the land in Brandon the character of being good land?—The land in Brandon is, generally speaking, very good: this was the account I received from several of its inhabitants.

Have the persons settled in the Townships the means of making the roads they ask for?—I know that they earnestly wish to have a road; but they complain that they are unable to make it without the assistance of the Legislature.

What sum would it be necessary to grant them as an aid to enable them to make the said Road; and in what part of the Township ought the sum so granted to be expended?—I cannot hazard an answer to this question.

What would be the general advantages of this Road, supposing it should be established?—They would facilitate the establishment on excellent land of a population already too numerous in the old settlements which lie in the neighbourhood of this Township, and this, comparatively speaking, at very little expense.

Do the inhabitants settled at Brandon wish for the adoption of a measure of this nature?—I know that the inhabitants of Brandon complain bitterly of the want of proper roads; and they told me that they were preparing to apply to the Legislature on the subject.

Wednesday, 28th January 1829.

Antoine Charles Taschereau, Esq. of Sainte Marie, Nouvelle Beauce, in the County of Dorchester, having been called in, informed your Committee:—That the Kennebec Road is laid out and very well opened and cleared of windfalls: That persons on horseback may pass through it very well, but it is impassable for summer carriages: That there are five bridges on it crossing all the considerable rivers, and that there has been expended on this road between £425 and £450—the road has been verbalized: That there are Settlements on it at intervals, and a great part of the Lots are granted on condition that the grantees shall keep the road in front of them in repair: That on some of these Lots large clearances have been made: That he thinks to make a carriage road of it, it would require about £800: that the Road is nine leagues in length from *St. Charles de la Belle Alliance* to the Lines: That out of the sum of £800 which was voted for this road, about £450 have been expended; the rest of the money still remains to be laid out: That there are steep hills on this road which might be avoided by winding round them: That the settlements on this Road are greatly kept back by the impossibility of travelling on it with wheel carriages, so that it is impossible to convey materials to it:—nearly one half the lands are granted.

Joseph Bouchette, Esquire, again called in, and examined:

What relation would a Road open from the old Settlements at Berthier to the Township of Brandon bear to the general Internal Communications of that section of country which lies between the Ottawa and Saint Maurice; and would a like road opened from the old Settlements to the Township of Caxton bear any and what relation to these Internal Communications?—Roads opened from the old settlements at Berthier to Brandon, and from the old settlements at Pointe du Lac and Gatineau into Caxton, may each average from 8 to 10 miles, and the distance from the Saint Maurice to Grenville by a new line of road which might be judiciously opened passing in the rear of seigniories and traversing the Townships of Kildare, Rawdon, Abercrombie, also a Gore of the Crown Lands in the rear of Argenteuil, and the Townships of Chatham and Grenville to the Basin, may be est-

estimated at about 124 miles through which a new line of communication might be opened presenting numerous advantages towards promoting the settlement of that section of country, and establishing thereby a new front and line of settlement which would shorten the communication from the Saint Maurice or Three-Rivers to the heart of the settlement on the Ottawa at Grenville by about 70 miles. Having thus given the distance of this great line of road, the proportion that the former two roads bear to it is about one sixteenth; which two roads will intersect the great main communication above mentioned, and would essentially facilitate the communications from the old Settlements and the uncultivated lands in the rear of them with the projected main road. With respect to that part of the road alluded to from Kildare to Grenville, I beg leave to refer to my printed Report on that section of country in 1824, minutely describing that line of road and its advantages.

Would you lay before the Committee either Copy of this Report which you may have in your possession, or an extract of that part to which you have referred above?—I have only one copy, which forms part of my new Work, and I am ready to give any extract thereof.

Thursday, 29th January 1829.

Joseph Levasseur Borgiu, Esquire, one of the Knights representing the County of Cornwallis, having been called in, informed Your Committee:—That he believes that the building of a bridge across the River of *Trois-Pistoles* would be of general utility, not to say that the bridge would be necessary: that he cannot exactly say how much the said bridge would cost, but he believes that an aid of £2000 or £1500 currency would be sufficient, if the inhabitants contributed part of their labour and furnished the timber. The length of the bridge, if erected at the present crossing place, would be about five arpents. That he is further of opinion that it is expedient to grant the sum of £400 or £500 currency to the inhabitants of *l'Isle Verte*, to aid them in constructing a bridge across the *Rivière Verte*. That this grant would meet the views of the inhabitants on this subject, and enable them to accomplish the object of the Petition forwarded by them at the commencement of the present Session, but too late to be presented to Your Honorable House. That he is also of opinion, it would be necessary to grant an aid of £1000 currency for repairing and ameliorating the road and the bridge on the road leading to Lake *Témiscouta*.

Saturday, 31st January 1829.

Mr. Alexis Poulin, of Saint François Nouvelle-Beauce, having been called in, informed Your Committee: That for nine years he had been in the habit of hunting in the fall on the Lands lying between Lake Megantic, Lake St. Francis, and the *Bras du Ouest*, and has run over it in various directions and places. That this part of the Country is generally level and the soil good, being composed for the greater part of loam (*terre grise*.) That the whole is well adapted for agriculture; and settlements might be formed there much more advantageously than on the banks of the River Chaudière: That the climate is mild; and but little snow falls on the whole of this tract. That the timber is lofty, and is generally composed of a mixture of Maple, Elm, Butternut, and other timber. That he believes if a Road was opened from the *Bras du Ouest* to the Saint Giles or (as it is otherwise called) the Craig's Road, these lands would be immediately taken. That the lands on the River Chaudière are difficult to clear, and the inhabitants only take them when they cannot do otherwise. That there are a great many heads of families in the Parish who have several sons to provide for, but these young men remain at home with their fathers because they are unable to procure good lands. That, to conclude, all the good land lies on the west side of the Chaudière, and behind the chain of mountains which borders it. That the road which it would be expedient to open merely as a winter road, from the west side of the *Bras* as far as Craig's Road, passing by the Head of Lake St. Francis, would be from eight or nine leagues in length, and he believes that a sum of £300 or £400 would be sufficient. The road would in this case pass through better land than if it were made to pass by the lower end of the Lake: the road would be two leagues shorter if it passed by the lower end of the Lake, but the land is not so good there.

Mr. Michel Boucher, of the Township of Tring, was called in; and the preceding information of *Mr. Alexis Poulin* having been read to him, he confirmed the same.

Wednesday, 4th February 1829.

François Xavier Larue, Esquire, one of the Knights representing the County of Hampshire, having been called in, informed Your Committee: That there are ninety-one lots conceded in the back concessions of the Seigniorie of Neuville, running North East and South West, and bounded on the North by the Seigniorie of *Bourg Louis*, the property of *Mr. Bernard Panet*. That these lots are already partly occupied by strangers, to whom they have been conceded; but, in November last, the Deputy Grand Voyer having, at the request of *Mr. Panet*, verbalized a road from the new free bridge over the River Jacques Cartier, which road crosses the said lands and runs as far as the said Seigniorie of *Bourg Louis* where it terminates, the said persons being poor; and finding themselves unable to perform the work imposed on them by the said Procès-Verbal, will be obliged to abandon these said lots and lose the labour they have already performed thereon. That for the encouragement of these new Concessions he thinks it would be right to grant an aid for making the road now verbalized, and another road commencing at the end of the Commissioners' Road, passing along the line between the Concessions of Sainte Marie and Saint Jean mentioned in the descriptive plan, and terminating at the said Seigniorie of *Bourg Louis*: That if these two Roads were once opened, many settlements would soon be formed in the Seigniorie of *Bourg Louis*. That he believes the sum of £200 would be sufficient for opening the said two roads:—the length of each, if carried as far as the Seigniorie of *Bourg Louis*, would be about 130 arpents.

William Hall, Esquire, of the Township of Broughton, in the County of Buckinghamshire, having been called in, informed Your Committee: That there is a road under a Procès-Verbal, from the River Chaudière through Broughton to Craig's Road in Leeds—the distance is 23 miles, and would considerably shorten this distance from that part of the country to Quebec; that road has been opened last summer in Broughton, but was not continued in Leeds. The lands upon that road are of an excellent quality. There are no settlers in Leeds to open this road: The sum required to make that road would be £300 at least, the distance being 14 miles; and £100 more to open a communication between Broughton and Tring, where there are some waste land of the Crown of good quality. The Commissioners for Internal Communications of the County of Dorchester opened a road in 1819 or 1820, from Craig's Road in Ireland to the district line of Three-Rivers, to meet the Township of Dudswell where there are 280 settlers; this road was not continued by the Commissioners for the District of Three-Rivers. Should this Road be opened it would be, in my opinion, the grand route of communication between the Townships east of the Lake Memphramog and Quebec, and would open a continued communication from Quebec to the States of New Hampshire and Vermont, and would pass through the Townships of Hereford, Clifton, New Port, Eaton, Westbury and Dudswell, all of which are settled, and there are settlers on each side of the road. The distance of that road which is not opened is about 36 miles, and the tract of country is very favourable for making a road, and there are several clearances on the road; and should the road be opened it would induce settlers to come thereon. The sum of money required to open the road would be about £1000.

Mr. Francis Armstrong Evans, of the Township of Shipton, and *Mr. Silus Horton Dickerson*, of Stanstead, having been called in, and that part of the preceding evidence of *Mr. Hall* relating to the Dudswell Road, having been read to them, they confirmed the same.

Thursday, 5th February 1829.

Mr. Andrew McCambridge, of the Parish of Charlesbourg, having been called in, informed Your Committee; That the Township of Stoneham has a population of about 93 souls: That the first of the present Settlers has now been about nine years

Appendix
(P.P.)

a constant resident; that it is not nearly so far advanced in cultivation as the other new Settlements about this City:—the retardment is entirely owing to the want of roads. That many settlers have been desirous of taking lots in it, but did not in consequence of the badness of the roads; indeed, the roads are so extremely bad that in summer it is impossible for a horse either to travel with the smallest load, or to walk through it without a load, otherwise than at the risk of his limbs. That in wet weather a man can scarcely walk in it, but at the risk of his life. That he lived with the Revd. P. Toosey, who about 33 years ago endeavoured to establish the said Township:—the richness of the soil encouraged Mr. Toosey to expend perhaps not less than £2000 or £3000 for its successful cultivation, but the want of roads ultimately ruined his project, nevertheless he believes that a good cart road can be made from Quebec to it for about £500. That the length of that Road from the old establishments to the Townships is about eight miles. That for making the Bridges on the Road would require about £100. That a good road to Stoneham would facilitate a communication on the South East and North West, and also with the sixth and last ranges of the Seignior of Beauport, known by the name of the Waterloo Settlement; and that such a road would facilitate the settlement of the country, and would also shorten the communication to Val-Cartier about five miles, and afford a means of living to a number of destitute persons which are now a burthen to the country, and the City will reap great advantages from this in consequence of the Fuel and Lumber which will come therefrom.

Monday, 16th February, 1829.

Alexander Carlisle Buchanan, Esquire, His Majesty's Resident Agent for Superintendance of Settlers and Emigrants in the Canadas, called in; and examined:

In what part of this Province would it be most advantageous to form new Settlements, was the Legislature to grant money for opening Roads to it?—There are many parts of this Province well adapted to the introduction of industrious Settlers, either Emigrants from the United Kingdom or Canadians, and I shall class them under four different heads or settlements:—First; I consider that extensive and convenient District laying between the Chaudière River and beginning at the Township of Tring, and embracing the Townships of Oulney, Adstock, Winslow, Stratford, Coleraine, Weedon, Wotten, Hampden, &c. comprising altogether, of cultivable land well timbered and watered by numerous lakes (St Francis) and streams, about half a million of acres, should first occupy the attention of the public for immediate settlement. My principal motive in favour of these lands is their proximity to the never failing market of Quebec as a vent for the redundant products of the farmer, and near access already by that excellent road along the Chaudière River. Combined to these advantages is another very powerful inducement, namely, the certainty of affording the Settlers a good title, from the lands being principally in the possession of the Crown; and here I will generally state to the Committee that I would not feel myself warranted in recommending the strange settler to invest his few pounds of hard earnings in locating in the majority of the conceded Townships, as from every information I can obtain, a good *bona fide* title is scarcely to be procured, and this evil demands some early remedy. As a farther and powerful inducement to immediately locate the before-mentioned tract of country, is that of establishing some barriers against the monopolizing grasp of the Americans who have already overrun the Eastern Townships, and who, I fear, are introducing an influence into that part of the Province much opposed to the settlement of British Emigrants, and which may endanger the security of our frontiers and the consequent loss to the Mother Country, at no distant period, of the most fertile portion of Lower-Canada. To the foregoing settlement I would add, under the same direction, the Townships of Cranbourne, Buckland, Watford, and the Crown Reserves in Frampton. Secondly; I would advise a small settlement to be formed on the unconceded portion of the Townships of Acton and Roxton with the Crown Reserves in some adjoining Townships, comprising, altogether, equal to eighty or one hundred thousand acres. I would also beg to recommend, under the same direction, the Township of Ely: the soil in this Township is of excellent quality, is well watered, and lays in the direct route from Sherbrooke to St. Hyacinthe and Yamaska Mountain; it has been long granted to non-residents (I understand Americans) and no improvement made, consequently its reversion to the Crown cannot admit of any difficulty. Thirdly; The importance of facilitating the intercourse by a new route

to Hull, on the Ottawa, seems to be very generally admitted, and as I had the honour some time ago of suggesting the same consideration to His Majesty's Government in London, and more recently to His Excellency the Governor in Chief, subsequent enquiries confirm my former impression, and I shall therefore beg to recommend public attention to settling that portion of country laying in the rear of the Seigniories and commencing at Maskinongé, including the Townships of Kilkenny, Rawdon, Wentworth, Abercrombie, &c. towards the Ottawa. I regret that the greater portion of these Townships are granted, and consequently expose the Settlers to the risk of doubtful title; but the unconceded portions, with the Crown Reserves, may be computed at one hundred and fifty thousand acres, and this I would recommend under one direction, together with the Townships of Harrington, Wentworth, Derry, Rippon, Portland, three fourths Wakefield, Marsham, all of which are surveyed and unconceded, and the soil considered superior to the lands next the Ottawa: these latter Townships range about twelve to fifteen miles from the Ottawa, and have generally good Shanty Roads leading to them, which with some trifling improvement might, for a few years to come, answer the ends of settlement until population thickens. The Township of Templeton was allotted by the late Governor in Chief for industrious families that worked on the Rideau Canal, but it is found too distant and the soil not congenial, and many of the families that took out locations have thrown them up and gone to the States; these circumstances arise principally from the impossibility of the emigrant finding out his intended lot until he had wasted much time and perhaps all his provisions. Fourthly; On the Ristigouche River and towards Lake Matepédic and towards the Madawaska, it would be most wise to form a good Settlement, combining as this tract does so many considerations,—the fisheries, the proposed Road from Nova-Scotia to Metis, the facility of access by the Bay of Chaleur, &c. and climate good. Under this direction I would also class Gaspé, where there is much excellent land unconceded and of easy access. The foregoing four situations or Settlements I consider the principal portions of this Province at present to take into consideration. No doubt the forming an establishment up the great River Saguenay country, either at Lake Saint John or on the Chicoutimi River, will ere long be considered an object of national importance, and would be productive of great advantage to the Province in general. I could enumerate many desirable situations for settlers in the Seigniories along the Saint Lawrence and some of its tributary streams, particularly the Nicolet and Saint Francis River, Yamaska and Richelieu, Chaudière, Batiscan, Saint Anne, &c., but as these Lands are all private property the owners will of course adopt what may best suit his plans. In relation to them I shall feel it my duty to render all the aid in my power to such proprietors either of Seigniories or Township Lands that may require it, in procuring them settlers, and which I have already noticed by advertizement in the Official Gazette of this City.

Do you know whether settlers are disposed to remain in this Province were some encouragement made by the Legislature, and what encouragement?—The majority of settlers that arrive at Quebec from the United Kingdom have no predetermined place to which they intended to direct their steps previous to arrival. A great portion of these from Ireland are from the Province of Ulster, and their feelings strongly attach them to prefer a British Colony, where they could still enjoy the blessings of our Constitution. The idea of Upper and Lower-Canada is measured by the name, many thinking that the term Lower implies a swampy, low, unhealthy situation, and *vice versa*, that Upper-Canada is high, mountainous and elevated situation; however, the fact is just the contrary; so much for the poor credulous Irishman's notion of Upper and Lower-Canada. The Irish and Scotch Emigrants are best adapted for this Province, and my wish is to see the Emigrants generally from every part of the United Kingdom amalgamated as much as possible with the native Canadians: I am not aware that they possess the least disposition to the contrary. The numerous instances of success attending Emigrants that have gone to the States being generally talked of in the United Kingdom, has naturally a tendency to bias their feelings towards that country, and the same reasons are now felt towards Upper-Canada, from the conclusive facts of rapid success that even pauper Emigrants have experienced there; a more striking proof of which is not to be found than the success that has attended about three thousand poor Irish that were removed to the Township of Cavan in 1816 and 1817 by His Majesty's Consul at New-York, and who received no aid whatever beyond their grant of Land. Emigration to Lower-Canada has never yet had a fair chance, or that support and protection that naturally leads to favourable results. The French language is certainly a drawback to the stranger on first arrival in this Province; hitherto few of the new and desirable part of the Emigrants find their way into the interior of the Province, and those that do

do are generally men that have loitered a year or two about Quebec as servants or labourers, and persons connected with rafting timber or shantys, and who are by no means a healthy class to form new settlements. In point of fact, the strange settlers on arrival at Quebec were perfectly adrift without a pilot to guide their steps or render any authorized disinterested advice, and in many cases they never had the opportunity afforded of putting their foot on shore. The ship runs to the ballast ground (distant on the south side of the river about two miles from the Cul-de-Sac) and the anchor is hardly let go when a number of steam-boat agents and sailor crimps flock on board: their object it is unnecessary to illustrate—*Lower Canada is represented a mere desert, sure starvation, &c.; the credulous stranger believes every word, and while the dialogue is going on, the hatches are opened, baggage hoisted out, and in a few hours the poor emigrant finds himself crammed on the deck of a steam-boat on his route to Montreal, expecting that on his arrival there, *all will be well*; when arrived a similar scene takes place with boatmen from Ogdensburgh, waggons from St. Johns, &c. &c., and without time to reflect, and bewildered with the novelty around, the poor fellow is hurried on step by step as long as his money lasts; when not unfrequently sickness ends his troubles, and if not after reaching perhaps Ogdensburgh or Kingston in a miserable batteau or Durham boat, and finding his resources nearly exhausted in trying to find verified *the disinterested advice received on the route, he struggles into the States truly disgusted and disappointed with his Canadian reception.* This is a true picture, it has occurred every year, and so long as it is permitted to exist, and aided by the *indifference*, and I may almost say the impossibility for the strangers finding even the way to obtain a location in Lower-Canada, without first expending more *time and money* than double the value, may we chiefly attribute to a great degree the trifling settlement of Emigrants from the United Kingdom hitherto in this Province, and not from any objection or predetermination to the contrary on their part.† The voluntary emigration to Quebec is *by no means that of paupers*; the original destination of a portion of them are generally for the back part of Pennsylvania, Ohio, &c., being the cheapest route, the greater number are industrious, loyal farming families, possessed of means which would, if properly directed, establish them in the country, but from the causes already alluded to, their hard earned gatherings are flitted away without their being permitted to render any lasting advantage to the Province or they themselves becoming good subjects; thus by a want of arrangements, and I fear, occasionally, *over zealous prejudices*, are thousands of valuable settlers forced over the Lines to enrich and augment the rapidly increasing power of our ambitious neighbours. It is worthy of note that 29,000 settlers arrived at Quebec in the years of 1827 and 1828, and I do not believe out of the whole number, *one hundred families have taken up lands in the Province.* This I should consider is of itself a sufficient proof that something is wrong, that some measure is wanted. As to encouragement to voluntary settlers with means, I know of none better than the opening of Roads, and to have the lands as may be allotted for settlement correctly surveyed in lots abutting each other, and to be recorded for the *free inspection* of Settlers and Emigrants on arrival at the office of His Majesty's Resident Agent for the Superintendance of Settlers in the Canadas, with the terms and conditions at which the Commissioner of the Crown Lands may fix for disposal, where also should be recorded all and every necessary information for the guidance of the stranger; also, an alphabetical list to be kept of the names of the Settlers, where from, and probable destination, which would be a most desirable clue to their friends and followers, for the purpose of ascertaining where they may be found, and the Resident Agent at Quebec to be authorized to put the Settlers in possession of their lots of land by the *most immediate, simple, cheap and easy method possible.* It would be necessary to have a few trusty men who knew the country to act as guides, and under the controul of the Resident Agent's Department, to conduct the Settlers on the arrival of a ship with Emigrants, to such Settlements as they may be destined, and at such Settlement it will be necessary to have a responsible location Agent acting in concert and

under the order of the Resident Agent's Office, and residing on the spot, and whose sole business shall be the care of the District allotted to his management, and who *should not be permitted to engage in land speculations or dealings of any sort, but confine himself to the receiving of Settlers and placing them on their lands*, seeing that such lands are regularly laid out, keep records of the whole, and transmit, monthly, a return thereof to the Resident's Office; the Location Agent to be provided with a dwelling-house and other suitable buildings, with twenty-five or thirty acres cleared and cropped in the first instance, and also provided with farming stock and implements; this farm to form a kind of Nursery, from which the Settlers afterwards may be supplied with various assistance, such as stock, seed, grain, &c. &c. A large barrack log-house to be attached to each settling agent's farm, as a place of shelter, in the first instance, to families arriving, and until they could fix up a shanty or log-hut. The satisfaction and benefit Emigrants would feel in finding a disinterested rallying point to resort to for advice and sympathy, is so obvious that I am forced to urge the consideration of the subject on the attention of Your Honorable Committee by every sense of public duty. As the foregoing arrangements will be attended with expense, it may be proper to illustrate this part of my answer by a little estimate. As the arrangement would naturally require more aid than the Resident Superintendent's Office at present could possibly render with advantage to the public, he would submit with all deference to the liberality of His Majesty's Government and the Provincial Parliament, for such consideration as they in their wisdom might think necessary on this head, without presuming any opinion, but merely as a guide to form some conclusion as to expense:

Say:—For Resident Agent's Department annually,	£500
A	
Settling Agent's Salary,	150
Allowance for Guides conducting Settlers,	100
Incidents for Stationery, Postage, &c.	50
	£800
B	
Outfit at the Settlement:	
500 Acres to be appropriated as a Farm—	
chopping and clearing 25 acres,	£100
House for Settlers' Agent, Barn, &c. &c. &c.	400
Farming Implements, Stock, &c.	150
A Barrack Log-house, competent to shelter 20	
or 30 Families, with two Stoves and an apart-	
ment for a School-room,	200
Grist Mill, and power to drive one saw,*	350
	£1200
Interest on that Sum at 5 per cent.	£60
Annual Expenses as per Statement, marked A.	800
	£860

Say Eight hundred and Sixty Pounds annually for a system competent to afford facilities to settle one thousand or more families of voluntary Settlers possessed of means, or four shillings each person, computing a family to consist of a man and his wife and three children on an average. Should a plurality of Settlements be set on foot, nearly a similar expense would be necessary to each. The Public Farm, with the consequent improvements which ought to take place, would be ample security for the outfit, and the surplus produce would more than pay the wear and tear of implements, &c. besides producing after the first year or two, something very considerable to cover many contingencies; and I propose that each voluntary settler should give gratuitously the first year, five days' labour, and the second year three days labour, to be applied to the general advantage of the Settlement, and in preparing lots for new Settlers, &c. &c. A Depot of Indian or oaten meal, fish, and potatoes, might be provided the first year or two; also feed grain, garden feeds, &c., and sold at prime cost. The foregoing suggestions refer to voluntary Emigrants and Settlers *possessing means to enable them with such facilities to take root, some difference would be required in the details of expense in locating pauper settlers, either Emigrants or of the Province; but the foundation of the present suggestion for voluntary settlers would prove a powerful collateral aid, and acting under the same administration much saving*

* This last season I have heard of steam boats meeting the ship off Orleans, and in fact enticing the passengers before their arrival at Quebec; a little collusion with the Captain easily gets the main topsail laid aback to deaden the ship's progress until the Emigrants and their baggage are secured; hence arisen, in addition to other strong reasons, the absolute necessity of some Legislative protection against such abuses as I had the honour to submit on a former occasion when given evidence in relation to the proposed Emigrant Hospital.

† The repeated delays and disappointments which emigrants have experienced, soon become the subject of remark among themselves, and no doubt is often communicated to their friends in the United Kingdom, to the great prejudice of settlement in the country.

* The expense connected with the mill would be paid by itself, or it could be let to a respectable settler at a fair rent.

Appendix
(P. P.)

saving of expense would naturally be the result, besides other important advantages.

Have the Emigrants any aversion to settle in Lower-Canada?—The answer to this question maybe inferred from that to the second question, and in addition, I am satisfied with all my intercourse with Emigrants for the past fifteen years, and which I am warranted in saying has been greater than any other person in North America, I know of no aversion, real or imaginary, that is entertained by Emigrants to settle in Lower-Canada.

What would be, in your opinion, the best means to assist Paupers, both Emigrants and of this Province?—On this subject I have already had the honour of offering my opinion to the Imperial Parliament, as also His Majesty's Government, but a more clear intimacy with what might be the details of the measures and acquiring a knowledge of many facts since my arrival latterly in the Province to undertake the important duties to which His Majesty's Government have been graciously pleased to select me to conduct. I may vary in application, but not much in principle from my former suggestions. Assuring that if facilities such as I have the honour to suggest in my third answer for the encouragement of voluntary Settlers is adopted, a very important foundation would be laid in aiding the settlement of paupers, and consequently a considerable saving of expense. I would advise those pauper establishments to be in the immediate vicinity of the others, or perhaps even better if scattered amongst them: the one would materially assist the other, and without going further into explanation, I shall proceed to the financial part of the subject:—

The original expense of affording facilities in Lower-Canada for the settlement annually of one thousand families and upwards, is computed at, according to my answer to the second question, yearly, £860. And the additional expense to establish at each Settlement 100 pauper families, would be thus:

Outfit for Pauper Establishment to settle annually 100 families:

C	2 Barrack Log-Houses, with 2 Stoves, &c.	£250
	A Public Farm of 500 acres—	
	Clearing, fencing, and cropping 10 acres of Land attached to Barrack, chiefly to raise vegetables for the use of the Settlers,	50
	Clearing and cropping one acre to each Pauper Family's lot, the produce of which ought to support them, in addition to the four month's provision, as per Statement D,	400
	Building a House for Location Steward, &c.	100
	Incidents,	100
		<hr/>
		£900

Annual Expense of Pauper Establishment :

Interest on £900 at 5 per cent,	£45
Conductors,	50
Transport from Quebec to Location,	100
Four days provisions,	6
One Location Steward and Issuer of Provisions, &c. &c.	100
100 Axes, 100 Spades, and 100 Tin Pans,	70
Doctor and Medicines,	100
Schoolmaster,	30
Four Months Provisions of Indian and Oat-meal, Fish, Potatoes, and Molasses. 1s. per day to each family,	600
Contingencies,	150
	<hr/>
	£1251

I have omitted allowing the Pauper Emigrants a stove, under the idea that materials for making a fire-place is to be procured in every part of the Province, and added to which the great abundance of fire-wood at the elbow of the Settler. But in the sum of £150 allowed for contingencies, the expense of a few common stoves might be borne.

With reference to the settlement of English paupers in this Province, many leading County Members of Parliament in England, and among them those who feel a lively interest for Canada, frequently spoke to me respecting their able-bodied labouring paupers coming out to the Canadas, and their disposition to place at the disposal of the proper authorities a reasonable sum to establish them if they were satisfied of proper arrangements for their

reception on arrival at Quebec. It never was contemplated to send out able-bodied labouring paupers unless with the concurrence of the authorities here, and satisfied that reasonable funds were provided for their location, and I am strongly of opinion if Your Honourable Committee should consider the principles which I have advanced in the suggestions I have now the honour to lay before you, as founded upon a rational prospect of success sufficient to warrant the expediency of at least going into a trial, but that every cooperation may be expected from His Majesty's Government and the Imperial Parliament, and it will prove highly satisfactory to the inhabitants of the United Kingdom who look towards these fine Provinces with feelings of affection and common interest, to find by a declaration of Your Honourable Committee that no objection or opposition is for a moment entertained on your part to the introduction of industrious settlers from the United Kingdom, and their amalgamation with the loyal Canadian population of this Province. The sum that it costs the English Parish now in sending a pauper family to the United States, (and which has been a good deal acted on for the last few years, perhaps to the extent of three hundred families annually) is about Thirty-five Pounds, each family consisting of man, wife and three children, inland transport in England not included.

Transport from a British Port to New-York or Philadelphia,	£20 0 0
Hospital money and other local charges on persons arriving at New-York or Philadelphia,*	3 18 9
Each family generally receive on arrival in the United States about	10 0 0
	<hr/>
	Sterling, £33 18 9

I am of opinion that the English Parishes would pay a higher rate to get their paupers settled in a British Province, as they would be sure of the protection of Government. English paupers in general make it out very poorly in the United States, they are badly received, and the little ready money they obtain on landing is very soon exhausted, and I am warranted in stating that the majority of these very paupers in the end find their way into Upper-Canada penniless; hence the policy and advantage that would accrue by their coming direct to Quebec, as I shall shew that a similar sum, judiciously expended, would insure their success in the Canadas, independent of the actual capital brought into the country. It may be here remarked, that the shipping interest is materially benefited by the passenger trade of this port. In 1827, I suppose the freight on Emigrants to Quebec, amounted at least to Thirty thousand Pounds, a sum much beyond that paid for freight of merchandize imported from the United Kingdoms, consequently every Emigrant that is sent to the United States is an actual loss to the British ship-owner of Two Pounds, besides materially affecting the Provinces, as I have already stated, from the Americans receiving the whole of such capital as he may bring or obtain on landing in the United States. It may not be unnecessary to explain what is generally implied by the term English pauper, (which bye-the-bye I shall ere long try and find some other name less humiliating, whereby we can designate that class of settler in future) from custom, and perhaps a laudable sympathy on the part of the authorities who direct the distribution of the poor rates. In England, nearly all the labouring population of the country are occasionally brought under the denomination of Parish Pauper: it is a general rule there, that an able-bodied labouring man requires a certain sum for the support of himself and family, and when his labour cannot yield him that support, he receives the difference from the Parish, consequently these Parish Paupers are the strong agricultural labourers of England, and the introduction of a portion of whom, from their superior method of agricultural labour, could not fail of proving of great benefit to the Provinces. I am of opinion that the funds for the settlement of able-bodied labouring paupers should be provided in general by the Parishes or other incorporated communities that would be benefited by their removal. For instance, if it was found expedient to remove, voluntarily, from Quebec twenty poor families, for whose labour there is no demand, and have them settled as already suggested, it would be found much more advantageous for the citizens to do so than support them, as is now the case by casual

* In the United States one dollar is payable by every person, hospital money, arriving in that country from foreign parts, in addition to which in many ports, particularly New-York and Philadelphia, other considerations are required by the State Authorities at New-York: Bonds must be given to free the State from being burthened by such persons as may arrive, or it may be commuted at 2½ dollars each. In Philadelphia, in addition to one dollar hospital money, 2½ is charged for the poor-house fund—in all, 3½ dollars.

sual and voluntary contribution, independent of the many collateral benefits to be expected. In Holland, the State have taken up the suppression of mendicity, and from a country a few years ago overrun with pauperism, the most beneficial change has taken place; and the system adopted, is that of locating the labouring poor on lands, and therefore, if in an old country where land is difficult to be got and dear, how much easier can a system for a similar purpose be adopted in Canada, and if once began and got into organization, how many important advantages might we not expect in return. The outlay compared to the important benefit to the province is truly trifling; every part of the community would in turn be benefited by the measure, as the new settlers would be found after the first year or two, contributing largely to the trade and revenue of the country. Thus, in recapitulation, it will appear that by an annual expenditure of £860 can satisfactory arrangements be made to facilitate the settlement of at least one thousand families with means annually, and for the additional outlay of £1251, can be accomplished with every prospect of success, the additional settlement of one hundred pauper families. It must be borne in mind, that if a general system of settling English parish paupers in addition to that of free emigrants with means should be adopted, that a more extensive machinery will naturally be required for Upper and Lower-Canada, and which must be left to the discretion of Government when the details are about being arranged. Whatever plans it may please the Legislature to adopt in aid of the important measures here referred to, Your Honourable Committee may rely on a faithful application of my humble exertions, considering myself as I do in the capacity of joint trustee for the settlers and the public, and being satisfied that in no way will my services be more acceptable to my King and Country than by using every exertion in my power to forward the interest of the poor industrious emigrant and settler, connected as it is with the general prosperity of the mother country and these fine provinces.

What are the terms upon which Settlers receive their grants of Land?—I understand since the appointment of a Commissioner to manage the Crown Lands, none have been granted unless by special authority from the Government: The lands are sold by auction at a periodical sale, the price is fixed by the Commissioner and approved of by the Governor. Persons not over six months in the country may purchase *any lot that they can find out vacant*, provided such land has been appraised by the Commissioner, and the price per acre approved of by the Governor.

Wednesday, 18th February 1829.

William Sax, Esquire, called in; and examined:

Are you acquainted with the Eastern Townships, and have you made surveys of them?—I am acquainted with them, and I have made surveys in the said Townships.

Is the Land in these Townships of good quality and fit for cultivation; and might settlements be easy formed on them?—Yes, the land is generally good, there are some mountainous spots in them, and some swampy ones, but the great part is good land; the soil is rich and fertile and the climate sufficiently favourable.

Could you give a Plan of the said Surveys?—Yes; I produce one which contains all the Eastern Townships on a moderate scale.

What is the extent of the Eastern Townships?—The Townships in the interior are in general each ten miles square; those which lie on the banks of the rivers or lakes are in general nine miles in front and twelve miles in depth. The whole of these Townships together contain about 5,500,000 acres.

Can you point out the roads which it would be expedient to make, in order to afford the means of access to Quebec or Montreal to the people of these Townships; and also to provide settlements for the superabundant population?—In my opinion, the first Road which it would be expedient to open, is that from Shipton to Quebec, nineteen miles and three quarters of which, that is to say, the distance from the River Saint Francis to a little beyond the rear line of Shipton, in Tingwick, are already well opened;—from this point there are about 28 miles of the old Craig's Road which are in a very bad state, as far as the line of separation between the districts of Quebec and Three Rivers.

From the point last mentioned to the Seignior of St. Giles, the road has already been opened by the Commissioners, but some improvements still remain to be made in order to render it passable for wheel-carriages from Shipton to St. Nicholas. Another road, which it would appear to me necessary to open in the direction of Montreal, would be from the River St. Francis in the Township of Melbourne to the Yamaska Mountain, a distance of about 42 miles. Another road beginning at the northern end of Lake Memphramagog at the outlet of the said Lake, and meeting the road last mentioned to the south of the Yamaska Mountain, a distance also of about 42 miles. Another commencing in the Township of Hatley near the outlet of Lake Tomafobi, and terminating at the outlet of Lake Memphramagog, at the point where the road last mentioned should commence: the distance about 11 or 12 miles. Another road commencing in the Townships of Eaton and Clifton, running to the northward and crossing the Townships of Westbury, Dudswell, Weedon, and Wolfestown, as far as the point of intersection of the old Craig's Road and the line of division between the districts of Quebec and Three-Rivers; a distance of about 50 or 60 miles: this road is commonly called the Dudswell Road. Another commencing at the lower end of Lake Megantic and running across the Townships of Gayhurst, Shenley and part of Tring, and there terminating, a distance of about 40 miles. This last Road would, as it appears to me, afford great facilities for opening new Settlements: this Road might be continued across the Townships of Broughton and Leeds, until it met the old Craig's Road, a distance of about 20 miles. Another Road which it appears to me would be necessary to open, would be one commencing at the mouth of the *Rivière du Loup*, where it falls into the *Rivière Chaudière*, to the rear of the lands which separate this Province from the State of the Maine; a distance of about 26 to 27 miles: This is commonly called the Kennebec Road. And (in order to form new settlements to the north-east of the River Chaudière) a road commencing at the said River in the Seignior of Saint Joseph and terminating at Lake Etchemin, a distance of about 17 or 18 miles. Another commencing at the River Etchemin, running towards the south-east, and terminating at the said Lake Etchemin, a distance of about 15 miles. It would be advisable to open another Road (in order to form new Settlements) commencing in the Township of Tring at the Roads already mentioned, and running towards the south-west until it met the Dudswell Road before mentioned, about Lake Nicolet, a distance of about 30 miles more or less, across part of the Township of Tring, and those of Coleraine and Garthby, and a small part of Weedon.

Saturday, 21st February 1829.

The Honorable William Bowman Felton, having been called in, gave the following information to Your Committee:—

In respect to the Roads leading from the Townships to the River Saint Lawrence, I shall shortly observe that in the present state of the Townships there are no other Roads that can be compared to the direct Road to the St. Lawrence in importance. It may be useful at some future time to open roads across the country, but at present the public cannot spare money enough to make the direct communications practicable.

The direct Road from Hatley to Montreal, passing across the outlet from Lake Memphramagog, is useful to Stanstead, Hatley, Barnston, and in some measure to a few other Townships lying to the south and east of Hatley; and that part of the Road which commences at the outlet may be considered useful to all the Townships above Shipton and the River Saint Francis; but the Road from Montreal ought to lead to Sherbrooke, otherwise there is no means of communication from the District of Saint Francis to Montreal, without making a circuit to the south through Stanstead, or following the River down to Sorel.

The Province should not be called upon to make any other Roads than those which are necessary to open the communication between the great body of the Townships and the River Saint Lawrence; and only so much of those as it is found impossible to make and keep up by the inhabitants. This limitation should be rigidly attended to, and it will be found that even under this qualification, the expense of making one practicable Road from the Saint Lawrence to any point in the Townships, will be much greater than any of the parties applying for roads choose to confess. A considerable part of the country which lies in the rear of the Seigniories, and which must be passed through to get to the Townships, is of a character to preclude the hope of any assistance in making Roads being derived from the inhabitants,

Appendix
(P. P.)

because the soil is so wet and inferior in quality, as not to afford the means of existence to Settlers without the previous expenditure of a large capital, or of a great deal of labour in draining and opening to the sun and wind.

If it is considered desirable to open the Townships to the Canadian population, the public must undertake to make a road through the swampy land that intervenes between the Seigniories and the Townships; if this is neglected or delayed, the Townships will fill up with people who come in from the opposite side of the Province, where the Roads are very practicable and numerous.

The most important communication with the Townships is that which runs along the Banks of the River Saint Francis—it is a matter of perfect indifference to the inhabitants of the district of St. Francis on which side of the River the road is made, provided there is *one good road*, that is to say, a road practicable for wheel-carriages. It is the universal opinion of all disinterested people that the west bank of the St. Francis affords the best ground and the shortest route from the centre of the Townships to the Saint Lawrence, and it is the route which is most convenient for the Canadian population who reside in the thick peopled Seigniories of La Baie, St. François, &c. The road on the west bank ought to be completed from the south line of Brompton through Melbourne and Durham down to Drummondville; from this latter place a Road should be perfected to Sorel and another to Three-Rivers. Any money expended on these routes will produce immediate benefit, both to the Townships and the Province at large; and whatever is laid out on them will be the means of bringing into utility the grants of public money that have been previously applied on these Roads. It is in vain to promise that these communications will be completed for a small sum of money—it will require at least Thirty-five pounds per mile for the whole distance from La Baie to Drummondville, and from DeGuir to Brompton to make a good and useful high road; but it will neither be necessary nor expedient to expend the whole of this money in one season; it will be more useful to apply a portion of it, say one half or one-third annually, until the Road is completed.

Another branch of the St. Francis Road which ought to be completed in order to derive any benefit for the outlay already made upon it at the public expense, is that which runs from St. Grégoire to Shipton. This Road equally requires a large sum of money to make it practicable for carriages.

The details of distances on both these routes can be obtained from witnesses who are before the Road Committee; but it may suffice for data to calculate the expense upon, to state that from DeGuir through Drummondville to the south line of Brompton the distance may be fifty-nine miles; from La Baie to Drummondville, fifteen miles; from St. Grégoire to Shipton, thirty-nine miles, of road which requires an outlay: the absolute distance between these points being something greater.

The Estimate will stand thus:

Road along the West Bank of the River St. Francis from DeGuir to Brompton south line—59 miles, at £35 per mile,	£2065	0	0
East Branch of the above Road leading to Three-Rivers, viz: from La Baie to Drummondville, 15 miles, at £35 per mile,	525	0	0
Road from St. Grégoire to Shipton, leading to Three-Rivers, 39 miles, at £35 per mile,	1365	0	0
	£3955	0	0

In conclusion, it must be repeated that until one good passable safe road be opened and completed, so as to connect the Townships with the rest of the Province, it is a waste of the public resources to expend any thing on remote cross roads which can only benefit individuals or partial settlements; and it is also equal necessary to notice that any expectation that may be entertained of making a good road through an impracticable country for a small outlay, will be illusory, and will end in disappointment.

Monday, 23d February, 1829.

Joseph Rémy Vallières de St. Real, Esquire, a Member of Your Honorable House, having been called in, informed Your Committee:—That he knows the Road leading from the Parish of St. Grégoire to the Township of Kingsey; that this Road is

open from the Parish of St. Grégoire as far as Long Point in the Township of Kingsey, but is badly kept up, and the rains which fell last summer have very much damaged it: that the lots on this Road being almost entirely in standing wood, trees are daily falling across the road, which obstruct it and make it difficult to pass. That to make this Road as useful as it might be made, it would be necessary to open it as far as the Township of Shipton, and to adopt means of causing it to be kept in repair: that £1000 would certainly be sufficient to put it in a good state from St. Grégoire to Shipton; and that the most sure way of providing for its being kept up, would be to grant the lands through which it passes on condition that the persons to whom they were granted should keep the road in repair. That this Road is extremely important; it would become the outlet from many populous and fertile Townships, and from an extensive tract of country at present uninhabited, but possessing a soil which invites cultivation, and which will without doubt shortly become a very interesting section of the Province. That the length of road to be opened, in order to carry this Road to the Township of Shipton, is four leagues or thereabouts, crossing the Township of Kingsey diagonally from the south-west branch of the Nicolet River to within two miles of the south-west angle of the said Township and the north-west of that of Shipton, on the River Saint Francis.

Thursday, 5th March 1829.

Mr. John Murray, of Cap Rouge, called in; and examined:

Are you a native of Scotland?—I am: I was born in Aberdeenshire, but I spent the greater part of my life in Ayrshire.

When did you arrive in this country?—I arrived in this country on the 3d October 1820.

What are the inconveniences to which Agricultural Emigrants are subject here? what are the advantages and disadvantages of the situation of the Emigrant, when compared with his previous situation in Europe? what from your experience is the best mode of surmounting the disadvantages to which he is exposed?—I conceive from my own experience the greatest inconvenience to which Emigrants wishing to settle here, on new lands, is the general want of roads of communication towards the new settlement, which they mean to settle. From my own experience, besides the disadvantages before mentioned, the Emigrant has others to contend with, principally arising from the state of his finances, but the situation of the Emigrant in this country, when compared with that in which he is in Europe, is certainly better; and especially with those of a superior class, who having surmounted those obstacles generally thrive better. The best mode of surmounting those obstacles in the Emigrant, is a persevering industry, with a due admixture of the practice of his own country with that of the country he has adopted. I consider that mode preferable to pursuing either the European or Canadian system by themselves.

What are the points wherein the Ayrshire system of culture differs from that which, according to your experience, is most successful in Canada?—The difference that I find arises principally from the different state of the climate and of the seasons. A farmer arriving in Canada and working altogether according to the custom of the country in which he was brought up, would almost surely fail. Owing to the shortness of the season here, his crop must be put under ground in a more expeditious manner than in Great Britain, whatever the expenses may be. And in harvest he must also alter his system, for he must not let his corn get so ripe before cutting it, as he would do there; otherwise, owing to the alternate rains and strong sun succeeding them, his grain is apt to fall from the stock, and of course occasion him great loss. Also, the farmer in Great Britain is accustomed to tie up his corn, immediately after cutting, into sheaves, but that does not answer in this country, as the principal drying in this country proceeds from the sun, whilst in Britain the winds are of more service in that way: I am therefore of opinion that the custom adopted in this country is preferable. As to Potatoes, I find no difference, excepting as to the difference of climate which I have before mentioned; they must be put in and taken out more expeditiously. As to Turnips the system varies considerably: In Britain we can sow with safety many times in June, whereas

whereas in this country we are not safe in sowing at any time, except between the 1st and 15th of July. I am speaking generally as far as my experience goes. The system applicable to Hay is nearly the same here as in Great Britain, with this exception, that I generally find it better to make the Hay in a more close manner; as by spreading it too much in the sun, the Hay is apt to bleach and get burnt.

What means has the Emigrant to raise the requisite capital to enable him to work on his own land, if he has one?—The general plan that I have known pursued by those, within 30 or 40 miles of Quebec, in order to raise the requisite capital, has been, in the summer time to engage in whatever work they could find in Quebec and its vicinity, and with the savings of the summer, go on their lands towards the fall of the year,—erect a temporary habitation, and there remain for the winter, cutting down the wood during winter to the extent of a few acres, burn it off in spring, plant a quantity of Potatoes, a few Oats and Peas, return again to Quebec, and work until the harvest time; when they return as before and work there for the winter; and live on the produce they have raised from their farm during the summer: This they may repeat for three or four years as they may be obliged to do. And in this way I know of many families who now are in ease and comfort, and who began with perhaps less than twenty shillings of their own: this applies to those within 30 or 40 miles of Quebec; I cannot speak with certainty of those at a regular distance, these are things which have fallen within my own personal observation. The Settlement to which I allude, is Fossambault, in which place I resided two years and a half, at the beginning of that Settlement. There was no road at that time, and the nearest distance they had to carry their provisions was about three miles.

Might not the effecting of Settlements by Emigrants with small means, be greatly facilitated by their underbrushing and girdling, or by underbrushing, felling and cutting up, and burning without logging the lands?—As to the first, it might be done by those who had no other means, and where the trees are large and thinly scattered; but still I think to clear it off is the best method, where it can be done. I would say the same of the second part.

How do you manage with stumps?—I have never seen any other method of extracting the stumps, than at first cutting off the small roots and leaving the stumps to decay. It has been suggested to me by one George Tomlinson, a miner, at Cap Rouge, that he would guarantee to show an apparatus, by means of which stumps might be eradicated with great facility, the whole apparatus consisting chiefly of a chain and levers; but that he had not sufficient means to purchase the chain, otherwise he would have it tried on my farm.

Do you think that an Emigrant to whom lands would be granted could effect a Settlement without public aid?—I conceive that an Emigrant could not effect it in any other way than I have already stated. The great want here is that of capital, and when a man is well at home, he never thinks of coming out here; of course the general mass of Emigrants coming here with the views of settling, are without capital, and are obliged to encounter all the difficulties above narrated, and many more; and whenever he gets an open farm, he is crossed in his endeavours to improve his farm.

What is the expense of the passage for Emigrants coming out to this country?—I would estimate the cost of the passage from Scotland to this country at about Six pounds per head, reckoning two persons under fourteen years of age as a passenger.

What would be your provisions for the passage?—I am not prepared to answer this question. As to the quantity, if I was crossing the Atlantic myself, I think I would take the following provisions:—two stone of Oatmeal, two bushels of Potatoes, six pounds of Butter, a stone of Beef, a pound of Tea, ten pounds of Sugar, half a gallon of Molasses, and a gallon of Spirits, and some other trifles that I do not think of. When I arrived at Quebec, I had with me my wife, and five children from the age of two to fourteen years. I was engaged in agricultural proceedings to the age of twenty-three, I then entered business as a Cotton Weaver and Manufacturer; in which business I continued till I left Scotland for this country. Upon my arrival here I was desirous of getting employment as an assistant in a commercial house, but having failed in this, I directed my attention to agriculture, and went to settle at Fossambault about six leagues from Quebec. I had one lot from Mr. D'Estimauville, upon these terms: I was to clear four acres in the common way, for which I was to receive ten dollars per acre, and to crop the land so cleared for

three successive years, the produce of which I was to have for my own use. I built a small dwelling-house, and for which I received at my departure forty dollars.

When you began in the forest; had you the means of working out for your neighbours at your spare time; and what wages did you get, and how were they paid?—I worked a great deal for others in clearing land, and I received for this ten dollars per acre. This clearing was made for Gentlemen in town having lands there. I may have been concerned in clearing twenty acres. When the clearing was partial I received six dollars per acre. These monies with the produce of the land subsisted my family and myself during that time. I met with some misfortunes, my house was burnt. I was more accustomed to society and wanted an open farm;—seeing an advertisement here that Mr. White was in want of a farmer, I agreed with him at the rate of Thirty Pounds per annum, he maintaining my family. Mr. White died during the first year of my employ, and I continued a second year with the trustees, receiving a better salary, amounting to fifty pounds, and my family partially maintained. The third year I took the farm with the stock upon it, at a lease of One hundred and twenty pounds per annum. On Mr. White's farm there are about eighty acres perfectly cleared, and about thirty or forty are partially cleared. I have taken the Jesuit's farm at Beauport, for twenty-one years, at the rate of One hundred and twenty-five pounds per annum, without stock, and to maintain all the buildings at my own expense. I have had this latter farm since the first of May last.

When you commenced your operations in the forest, had you any assistance in labour, and if so, what did you pay per day, exclusive of board?—I had no assistants.

How many days labour do you find that it requires to cut down and clear off one acre of land?—I cannot say how many days it takes to prepare an acre of land for the harrow.

Are you acquainted with any poor settler near you who went on wild land without possessing any capital; and state his proceedings as far as you are acquainted with them?—I know several, such as I have before related.

If any poor settler were to obtain land within two miles of your house, would you be able to employ him on the spare days, between the time of getting his seed into the ground and the harvest season; and what wages could you afford him besides his board?—I have employed men, and generally pay them two shillings with their victuals, or two shillings and ninepence without them, per day, in the harvest time: they were steady and able men, but I do not employ these generally having my hands by the season. I pay for a good ploughman Twenty-two pounds a year, and furnish him bed, board, lodging and washing. I pay to a man of general purposes of husbandry, six dollars the month for the year round: for a good servant girl, three dollars per month.

Saturday, 7th March 1829.

Mr. Ferdinand Murphy, of Val Cartier, having been called in; said:—I belong to the Province in the South of Ireland. I came to this country in October 1821, with my sister. The badness of the times, high rent of land, and low price of produce which I found were ruining me, and the excitement in the minds of different parts of the country, and the favourable reports I heard of Canada, induced my sister and myself to try our fortunes in this distant part of the hemisphere. We had, when we arrived here, twenty-one shillings. I staid in town about a fortnight without earning a shilling: I then went to Val-Cartier, quite in the bush, about three miles from the first settlement. I had taken a job for cutting down and chopping up five acres of land, at the rate of three pounds per arpent. I got an advance of provisions, clothing and other things I wanted, amounting to about half the whole sum for my undertaking. I completed my job previous to the spring, and cleared off the land after the snow was from the ground, and received the whole sum of Fifteen Pounds. I supported myself entirely with that during winter, and had a balance due me in the spring. On my arrival in the bush I built a Log Hut about 12 or 14 feet square, high enough for a man to stand in, with a hole for the smoke, and a floor of split logs smoothed, and left a place without any floor for the fire. There being no road for the said distance of three miles, I had to carry my provisions on

Appendix
(P. P.)

on my back, sometimes over head in snow. My provisions consisted principally in buiscuit, potatoes and pork, and sometimes I had tea and sugar. In the spring, as soon as the land was cleared, I planted about 22 bushels of potatoes, which gave me in the fall, twenty-three bushels for every one sown; it was one of the luckiest crops I had. Having no family to support when my crop was in the ground, and having fenced in the ground which I had planted, I went to different parts of the country amongst my friends for about two months: I was at no expense among them. In the fall I returned to gather my crop, and in that winter I took a job of £100 at St. Giles, which I accomplished with three men. I did not make much by that: I had not over £8 left to myself. In the spring I came to Quebec, and obtained from the Nuns of the Hôtel-Dieu, a lot of 262 acres of land in the Fief St. Ignace on the River Jacques Cartier: I went upon it at the end of next winter, chopped down about five acres upon it, which I cleared in the spring, and planted 80 bushels of potatoes, which gave me upwards of 600 bushels. I had also sown about one bushel of oats, which being eaten up by the squirrels, left me very little. I took another land from the Jesuit's Estates two years ago, consisting of about 90 acres. I have now about 56 acres of land cleared by myself and labourers which I employed when I had money to pay them. My crop this year is the worst I ever had, owing to the wetness of the spring which spoiled my barn. I planted 52 bushels of Potatoes, and had only 552: I sowed 11 bushels of oats, and expect to have 100 bushels. I also expect to have about 1000 bundles hay. My crop in 1827 was 946 bushels of Potatoes, the produce of 47 bushels: 100 bundles Oats, the produce of about 10 bushels; and 600 or 700 bundles Hay. Since I have begun, I had the following hired men: Two men for one month at six dollars, and fed during last year. In the preceding year I had a man and his wife for one month, the man at four dollars, and his wife at two dollars. Previously, I had not the means of paying labour. I am quite satisfied of this country. I love Ireland, but I will never go and live there, because the people are not unanimous. Out of the earnings from my farm I have bought furniture, and stock consisting of 7 head of cattle, and 1 horse, and expect to be able to buy two head of cattle in the spring, and to add to the little comforts of my house. The great difficulty for a new settler is the provisions for the first winter, suitable clothing, a good axe, and a grindstone among a few, to keep the axe in order, and Roads when they have any thing to bring to market: as to provisions for one's self, a man can carry them on his back, but when they have any thing to export, the want of a Road is a great grievance.

What would be the effect of a loan made by Government to new poor settlers to enable them to get over the difficulties of the first year?—If there was a settlement of not less than 8 or 10 families settled upon good lands, and they were determined to pay the loan, and of an industrious disposition, and maintain their health, a loan might be useful to them if it was not great, and they might refund it. Men who are not very wise, borrow money in hopes punctually to repay it, but find when the time comes that they cannot repay it.

What do you consider the most economical and most advantageous mode of feeding a new settler in this Province?—Provided Potatoes are not at too great a distance, for they are a very heavy article, and can be got at a cheap rate, they are very good. Many people speak of Potatoes and salt Fish as a cheap mode of feeding a working man: I can say confidently from my own experience, that the cheapest food for a working man are Potatoes, Pork and Peas Soup: the Pork is used principally for the purpose of giving a meat flavour to the vegetable; besides this food is much stronger than Potatoes and Fish. But I do not think that a man can live upon this alone for any stretch: he must have tea or gruel: it is cheaper, and is a change: milk would be better, but he is not yet able to buy or feed a Cow.

How long does it take an ordinary able-bodied Irishman to learn the use of the Axe?—From three to six months. It is with us as it is with trades; one man learns much sooner than another. I chopped as well at the end of three months as I do now, and I would not now turn my back in chopping to any American born with an Axe in his hand.

Jean Baptiste Noreau, of Val-Cartier, having been called in; said:—I have been settled at Val-Cartier five years this Autumn. I am settled in the fifth concession. I have forty arpents of land cleared, a house and barn, two horses, a cow and thirty fowls. I had no money nor household furniture when I first settled on my

land. I got my living by felling wood for wheels, and shingles; and by exchanging horses and other kinds of barter. If I had the means of sowing my land next spring, I should be well off for the remainder of my life. I have always put in seed from the first year I took my land. A good man can earn two shillings per day in summer, and one shilling and three-pence in winter. I have had labourers working for me for their food.

Charles Savard, of Val-Cartier, having been called in; said:—I have been three years at Val-Cartier. I am settled on a lot on the river. I have seven or eight arpents of cleared land, a small house and a barn. I had no money nor household furniture when I settled with my wife on the lot. I gained my livelihood as I could, very miserably. I worked for any one that would employ me: and sowed my land. The wages for a labourer at Val-Cartier, are from two shillings to two shillings and six pence per day.

William Brown, of Val-Cartier, Farmer, called in, and examined:

What are the inconveniences to which Agricultural Emigrants are subject here? what are the advantages and disadvantages of the situation of the Emigrant when compared with his previous situation in Europe? what from your experience is the best mode of surmounting the disadvantages to which he is exposed?—The greatest inconveniency to which the Emigrant is subject to, is the general want of Roads: With good Roads the Emigrant would be better off. For my own part I think I am as well off as I would be at home. Perseverance is the main object, and by that alone can the Emigrant thrive.

What course of agriculture have you found from your own experience, best adapted to this country?—As far as my experience goes, I find that green cropping is the most advantageous.

When you first arrived in this country did you obtain any land, and with what means did you begin upon it?—I got a farm on halves, from Mr. Wilson: it was partly cleared; I remained a year upon it. I then took a lot of ground from Mr. Neilson, at a rent of £5 per annum:—there were about 20 acres of land cleared upon it. I brought with me about £300 from Scotland, which I laid out in purchasing land. I have about 500 acres of land of my own at this time, of which about 130 are cleared. The expense of clearing the land fit to put in a crop, was from 10 to 12 dollars.

How many days labour do you find that it requires to cut down and clear off one acre of land?—I think that it takes, for one man to cut and cross cut an acre of land, about a week, and another week for piling, burning and clearing it off ready for seed.

Are you acquainted with any poor settler near you who went on wild land without possessing any capital; and state his proceedings as far as you are acquainted with them?—I know of many industrious men who began without means, and who, by working upon hire, during their spare days in the summer, and during winter, felling down, and in spring cropping it as fast as possible, and then returning to town till harvest time; and by these means procure a cow, and so on gradually, are now tolerably well off.

If any poor settler were to obtain land within two miles of your house, would you be able to employ him on the spare days, between the time of getting his feed into the ground and the harvest season; and what wages could you afford him besides his board?—During summer I could give employment to many hands, and especially during harvest; I could employ perhaps twenty hands. During the harvest and generally in summer, I give these men one shilling and three pence per day, besides their victuals, and for women, one shilling per day. I keep one servant man to whom I pay, besides his board, Nine pounds a year. I have a large family, consisting of myself and seven children, the oldest a man of 24 years of age, and the youngest 9 years old: of these, 4 are boys and 3 girls. With the aid of my family, and this servant, the whole business of the farm is carried on till the approach of the harvest, when I require extra hands.

What is the smallest sum with which an Emigrant can venture

ture upon a farm?—Many go upon farms without any means but their own industry.

How do they manage to live?—Just by working for other persons for a day or two, now and then, to procure a loaf of bread or a few bushels of potatoes. With the exception of two families I do not know of any who are not tolerably comfortable in our Settlement.

Thomas McMullan, of Val-Cartier, having been called in; said:—I was born in the North of Ireland, and came to Canada in 1821. I came to this country induced by reports that this country was a fine one for a labouring man, where he could easily earn his bread. I heard that Emigrants would do well, but I have not, however, found it so favourable as I expected. I had a wife and four children when I came to this country, it was in the fall; the oldest of my children is now 14 years of age, and the youngest three years:—they are now five in number. I had not a shilling when I came here. I sold a few Carpenters' Tools I had, to get food during my first week's stay here. I then occupied myself in sawing wood, in Town, at the rate of two shillings per cord, for about three weeks: I could only earn about two shillings a day at this work. I then engaged myself to clear land at Valcartier for Mr. Stuart: I was allowed £30 for clearing ten acres: I arrived in Valcartier in or about November: I have always staid there since. I cut down about four acres during that winter, and was paid for it at the above rate: I had nothing else to support my family with during that winter, except 10 or 12 days work which I procured from individuals at Valcartier, at the rate of one shilling and six pence per day. I went quite to the bush in the sixth Concession of Valcartier, where, immediately on my arrival, I cut logs, and made a small house, 12 feet by 14 feet, 5 feet high, which I covered with shingles, with a hole in the shingles at one end to let the smoke out: I floored it with logs, excepting at the end where we made the fire. I was about two miles and a half from the nearest settler: there was for this distance nothing but an Indian path. I carried my provisions on my back for this distance, sometimes up to the middle in snow: my provisions were potatoes and flour. I paid two shillings and six pence per minot, for potatoes, and about from ten to twelve shillings and six pence per quintal of flour. I bought potatoes for two years, except a few which I received in the summer following my arrival. I bought about one bushel and a half a week during that time: I had some pork, but no fish: We consumed about 5 lb. pork a week; it was sent out by the Gentlemen with whom I had contracted; and delivered as wanted: we consumed about two quintals of flour during the winter, some of it we made into cakes and some in loaves; we used the potatoes boiled with salt, and sometimes with pork; we made very little use of grog, except even by chance when we came in town: we had a little tea and sugar, sometimes once a week, on the Sabbath. In the spring I cleared off nearly all I had cut down, about 3 or 4 acres, and put in about five bushels of potatoes, but they were too late: I hewed them, and picked them up in the fall; I put in nothing else. During that spring I worked a good deal for my neighbours at one shilling and sixpence per day, which I received in provisions and goods brought from Town for me: I was then middling only. I supported my family entirely by this means. I did not get more than 16 or 18 bushels of potatoes from what I had put in the ground, which, although watery and otherwise not good, we consumed during the ensuing season. During the second winter I cut down about six acres of land, for which I was paid at the same rate: I got a good deal of employment this winter, I suppose 30 or 40 days labour at one shilling and sixpence: my wife could afford me no assistance: I had not a shilling of cash. In the spring I cleared off three more acres, and sowed about 10 bushels of potatoes and 2 bushels green oats in good time: I got a good deal of day labour at the same rate, and paid in the same way. In the fall I gathered 150 bushels potatoes; cut my oats with a scythe and put them into small stacks: I had no cattle to consume them and no road to carry them to market, so they rotted on the ground. During the third winter I cut down and branched about three acres of land for one McCartney, a settler at Val Cartier, at three dollars an acre; and worked for others. I found myself a little better off this third winter, but not a great deal. I had by this time finished the job I had undertaken. The second winter I applied to Mr. Bélanger, the Agent of the Nuns, who have a Seigniorie at Valcartier, and obtained a grant of 126 arpents: it is at the distance of about 30 arpents from my first clearing. The third spring I commenced clearing on my own land; cut down about 5 acres and cleared about three, alone. I planted about 10 or 12 bushels of Potatoes and got a return of 200. I was cutting and branching on my

own land during the whole winter. I got a pretty good barn about the 15th or 16th May: I removed on my own farm that same spring, and built a log hut larger than the first. My family and I were better found, but I had no money. I completed the clearing of four acres that summer, and next winter I employed myself cutting down and up, and occasionally got day labour. I have now about 16 acres of cleared land and five or six more cut down. I suppose I can clear about 4 acres a year. I got a Cow in the fifth year, it was given to me in part payment of work. My crop last year consisted of about 250 bushels of Potatoes, 30 bushels of Oats and 900 bundles of Hay. I am now getting a good deal better than I was. I never would have got a farm of my own in Ireland. I think I am better than I could expect to be in Ireland. I am not the least sorry that I came out, but was so at first. In the year before last I bought a second cow with the produce of my oats, which amounted to about ten dollars. I allowed her to run fallow in the bush, where she fattened: I have killed her. I suppose that in the beginning of April I shall have her eat, we began in November: I use the tallow for candles: I had the hide sold on the market for seven shillings and sixpence:

Owen Sullivan, of Valcartier, Farmer, having been called in; said:—I have 160 arpents of land in Valcartier, in the Seigniorie of St. Gabriel. My Father went to Newfoundland in 1802, and kept a dry good store there, and in the year 1811 came out to this country with his family. He brought some goods from Newfoundland, and kept a dry good store in Quebec. The year after his arrival, he took a lease of Mr. Desbarats' farm at the Little River St. Charles, which he kept for 10 years: the rent was £140 a year: nine years out of ten on halves. At the end of this lease he went to Valcartier on the River Jacques Cartier, in the Seigniorie of Fossambault, and there purchased about 500 acres of land. I went upon this farm with, upon an average, 4 or 5 men, and sometimes 5 or 16 men. The second year we had about 50 acres under culture, and obtained sixteen pounds ten shillings from the Agricultural Society, as a reward for our exertions in clearing new land. My father afterwards purchased another farm in Valcartier where I now reside. My father has now about 100 acres cleared upon his farm; and I have about the same. I keep two horses, a yoke of oxen, and three cows. I formerly kept six cows. My father has two horses, eight cows, and some other young stock.

What are the inconveniences to which Agricultural Emigrants are subject here? what are the advantages and disadvantages of the situation of the Emigrant when compared with his previous situation in Europe? what from your experience is the best mode of surmounting the disadvantages to which he is exposed?—The greatest inconveniency to which the Emigrant is subject is the want of good roads. The want of these prevents his bringing the produce of his farm to market.

What means have the poor Emigrants of cultivating their lands?—It is customary to collect their friends and neighbours in what is called a Bee, and chop down, and pile ready for burning, five or six acres; which they put under crop immediately after. This is customary in the new Settlements, and is done alternately with all the Settlers.

How many days labour do you find that it requires to cut down and clear off one acre of land?—It takes, for one man to cut down an acre of land, about eight days. It is difficult for one man to perfect the clearing; but by means of the Bees, which I have before mentioned, the settler is enabled to finish the clearing and put in his crop.

Are you acquainted with any poor settler near you who went on wild land without possessing any capital; and state his proceedings as far as you are acquainted with them?—I know of some men in our Settlement who began without any means, and who are now tolerably well off. They began by working upon hire for others for some months; and in the spring by means of what they had earned, they contrived to live, and chop down part of their lands, and cleared it after the fire had run over the chopping, by means of Bees.

If any poor settler were to obtain land within two miles of your house, would you be able to employ him on the spare days, between the time of getting his feed into the ground and the harvest season; and what wages could you afford him besides his board?—I pay to an able-bodied man for the year round, besides

Appendix

(P. P.)

besides his board, Thirteen pounds ten shillings a year; and during summer, when I employ men by the day, I give them one shilling and three pence a day, besides their diet. These are to men who understand the business of the place, such as chopping, and whatever is necessary for a new farm.

What do you think is the reasonable cost of clearing an acre of land?—I think that about 9 or 10 dollars is a fair price.

Would loans from the public to actual Settlers, at interest, to be paid in produce delivered to the Company's Agent, exported by the Company and sold on commission, be advantageous to them?—I think that it would answer well: my reason is, that the shortness of the season and the badness of the Roads, the uncertainty of the Quebec market, and the distance which settlers have to come from the new Settlements to this market, by means of such a loan, it would enable them to keep their produce and wait for a favorable opportunity to bring it to market and get a good price for the same: for example, I have known, last fall, that persons bringing their produce to market, owing to the bad state of the roads and weather, exposed their cattle and carriages to considerable difficulty and danger; besides their produce has sold then at a much lower rate than what they could get for it at this present time. And it may be well understood that the winter season in this country is not fit for any other purpose than bringing the produce to market, and it is the best time for that purpose. And as I think that from the middle of March to the end of April is the best time for cutting down timber, such a loan would give the settler leisure to remain on his farm, and enable him to chop down part of his land. I know several persons who have raised more hay or straw than what was necessary for the consumption of their cattle, whereas if they had means to purchase stock to consume the same, it would both improve their farms, and be of greater advantage to them, and also to their morals, for it is generally seen that those who frequently resort to market, contract habits of drunkenness, by causing them to stop at taverns on the way. And also carrying hay or straw for any distance above five leagues is only time lost by the farmer, whereas bringing a cow or a fat ox, pigs, or other cattle to market, is more beneficial to him, as he spends less time in selling it, and consequently exposed to less expense; besides there are other kinds of produce on a farm, such as turnips and small potatoes, &c. and which are of no use to the farmer unless he has a stock. And such a loan would enable him to surmount all those difficulties, especially so as strangers are generally short of credit. In the month of October a person having plenty of fodder, and having a little money, can come to the Quebec Market, and can purchase a good cow for from 10 to 12 dollars, and in the spring sell the same cow for from £8 to £10, which leaves the farmer the dung to improve his land, and a clear profit for his pains; whereas without these means the greater part of this produce would rot or be lost to him. The same applies to oxen: a yoke of oxen may be bought in the fall, at from £6 to £8, and if well fattened, may sell in the spring for from £20 to £25.

Elijah Henry, of Valcartier, Farmer, having been called in; said:—I come from Connecticut, and have been in the country above 30 years. I settled in Val Cartier 12 years ago, and was the first who went to that Settlement. I borrowed £100, and with that settled. I had two lots granted me, and money advanced by Mr. Stuart and Mr. Neilson to their value, which lots I afterwards sold to reimburse the money lent.

How many new farms have you opened?—If I had a few minutes to think I could tell. I have opened five new farms at Valcartier. On the River St. Francis I opened four new farms. In the United States, I opened one in Utica, Wethersfield, and one in Windsor. I am now 60 years of age; and I think it is time to shut up books and stop.

What made you change your farms so often?—When I was 24 years of age, my master who brought me up having made me a present of 100 dollars, with which I bought 50 acres of land I went upon, with my wife, and cleared 40 acres, lived 2½ years, and sold for 1000 dollars. I went to Utica and bought 366 acres of land for 1000 dollars and 40 crowns, but I bought it from a man who had no right to it, and they held a freehold court and turned me out, so that I lost my money, land and all. I then came to Canada. I bought 200 acres from Dr. Longmore for 600 dollars, payable in 6 years without interest. I paid for that farm 13 years ago: I cleared 60 acres upon it and

built a house and barn: I left it 12 years ago and came to Valcartier. I have since given this farm to my three boys. I gained by the sale of my first farm at Valcartier, 300 dollars. I then obtained a lot of land from the Commissioners of the Jesuits' Estates. On this last farm I chopped 20 acres, and cleared 16, and afterwards sold it to one Beattie for £45. Five years ago I bought a farm from Mr. Stuart, upon which I built a house and barn: I have cleared 56 acres now under culture.

Could not poor settlers obtain a crop much more easily by underbrushing and girdling or by chopping and cutting up without logging?—Chopping and clearing is the best way for a man to get his profit, the imperfect kind of clearing mentioned in the question does better in a hot country than in a cold one like this, you cannot expect a crop unless you let the sun in full. If a man girdles he must clear every year, and his land is never cleared, from the trees always falling. Half an acre well cleared off is better than two acres run over.

Do you make any Potash at Valcartier?—They could not make Potash except near the River, because the land is too light.

So it's true, as it is sometimes said, that the first crop clears the clearing?—It is generally thought so, and I myself have been more than paid by the first crop. Last year I cleared off 15½ acres of land: from this I had 128 bushels of potatoes, 200 bushels of turnips, and I had green oats on the rest of it. I have 11 head of cattle, and I have wintered them upon those oats, and they are in as good condition as any in the settlement.

How can a poor man manage to open a new farm?—He must work one half of the time for his meat, and the rest of the time for himself. When I began at Wethersfield I worked at framing and hewing, and got one dollar a day, when I got a little money together, I worked for myself. Since I have been at Valcartier the work I got was principally job work.

Are you acquainted with any poor settler near you who went on wild land without possessing any capital; and state his proceedings as far as you are acquainted with them?—I know people there who had nothing to bless themselves about four years ago, and now have cows, potatoes and butter which they bring to market at Quebec. They have also paid for their lands, but they bought them low, one paid £15, the other £12.

If any poor settler were to obtain land within two miles of your house, would you be able to employ him on the spare days, between the time of getting his seed into the ground, and the harvest season, and what wages could you afford him besides his board?—I would rather employ them the year round at £13 a year, for a good hand.

What is the smallest sum you think necessary for an emigrant to settle himself upon a waste lot?—An able bodied man ought to be able to clothe and meat himself with one half year's labour, for the whole year;—if a man could not do this a new country could never be settled.

Would it be of advantage, do you think, if the public advanced money to new settlers?—If the purse was open it would give too much indulgence to the settler: they would pick up their living for themselves, but if they had this to depend upon they would not work. I have practised being in debt sometimes, and do not find it particularly advantageous, time runs too fast when one has got interest to pay, it is like the canker-worm that eats up the principal.

What would you think of a plan whereby a company should advance to the actual Settlers monies at interest, to be paid in produce delivered to the Company's Agent, exported by the Company and sold by commission?—I have considered upon it properly to enable me to give a correct answer: to some it would be good, to others it would not; because some would take the advantage of this, and take the money without paying interest or principal: to good men, it would do good to the country, but there are so many counterfeiters it might leave the Company a loser.

Richard Ward, of Valcartier, Farmer, having been called in, said:—I come from the County of Wexford, in Ireland, and I arrived here in 1816. I brought with me my wife and two children: my passage cost me £15; I brought out a little money with me, and worked at Quebec for a year before I went to Valcartier on a farm belonging to Mr. Fletcher. Mr. Fletcher promised me one half of the farm on condition of going on with the

the settlement duties and clearing. I have cleared 30 acres. I took a farm at Valcartier from Mr. Campbell having seventy-five acres cleared, at Twelve pounds a year. I lived by my work when I first went to Valcartier : there were many little jobs then in the settlement. When I was in the forest I had an opportunity of working out for my neighbours at my spare time : I got three shillings and nine pence a day for my work. I could employ a poor settler on his spare days, paying him one shilling and three pence a day, besides his board. I could employ him during the first winter at his arrival, at about ten shillings a month. I know several who went upon wild land without possessing any capital, who worked for other people as well as for themselves, and in this way sustained themselves.

Patrick Scully, of Lake Beauport, Farmer, having been called in ; said :—I am from King's County, in Ireland, and have resided in this country for the last ten years. I have a wife and seven children ; three of them living with me ; my passage cost £3 10s. a head. Our allowance of provisions on our passage, for each person, was as follows : 1 cwt. of oatmeal, $\frac{1}{2}$ cwt. of flour, about 10 stone of potatoes and 25 lbs. of bacon. I arrived at Quebec upon the 17th May, and turned to work on the Cape at two shillings and sixpence per day. I worked there for nearly three years. I had with me about £25 or £26 ; one of my boys worked with me at the Cape, the others went to service. During this time I saved about £25 or £26 more, making in all about £50. Before leaving the Cape I took a lot of wild land belonging to Mr. Duchesnay, at Beauport, and began to improve upon it about 7th May, between which time and the 17th June, I cleared and cropped four acres.

How, by whom, and at what expense was your clearing effected ?—My own and my son's labour effected the clearing of it : I cannot say what the work was worth. I have now thirty five acres cleared. I have since cleared twenty-five acres on another farm.

How can a poor man effect a Settlement upon new lands ?—By industry, sticking to it late and early, and working late and early. He cannot work without provisions, and these he must get before he goes upon a farm.

How is he to get them ?—If he cannot borrow money from a friend, he must earn it ; and he cannot earn it and work upon his farm at the same time.

How long a time will he be in earning this money ; where and how can he earn it ?—He must either go to service of else go to labour every day until he gets sufficient. The smallest sum that a Settler can go upon a new farm with is £18 or £20.

If you were going upon a farm having these £18 or £20 in your pocket, in what articles would you invest it ?—In potatoes, flour, pork, and some peas.

Is not pork an expensive article of food, and why is it you have left out salt fish ?—I think peas soup better than salt fish, which makes you drink too much water. In a family of 4 or 5 a pound or a pound and a half is sufficient for the soup. I have one son, 25 years of age, one of 18, and my youngest is 14 ; I have three daughters, all married and settled.

What time did you go upon your farm ; and what time is best to go upon a farm ?—I went upon my farm on the 1st or 2d March, about 8 years ago : from the 1st March to the last day of June is the best time to go upon a bush farm.

Do you know many and what number of persons who came to this country with nothing at all, and are now doing well upon a bush farm ?—I do know many, and five upon our own settlement.

How did they manage it ?—They managed to get a few bushels of potatoes and a bag of flour from one of their neighbours, and are now, by their own hard industry, well off.

Do any of your Settlers sell their farms after they have made improvements and settled upon new ones ? Do they gain by this and how ?—Yes, there are I think they gain by this, for they sell their first farm and with it buy another, and are able to stock it better.

Are any in the habit of working in town and passing their winter at Lake Beauport ?—If there is nothing doing, they come in and work, but not until their crops are in ; they thus save house rent and feed for a great part of the year.

RAPPORTS DU COMITE SPECIAL

AUQUEL a été référée cette partie de la Harangue de Son Excellence l'Administrateur du Gouvernement, à l'ouverture de la Deuxième Session du Treizième Parlement Provincial du Bas-Canada, relativement aux Chemins et autres Communications Intérieures, et autres Références, avec pouvoir de faire Rapport de tems à autre.

PREMIER RAPPORT.

Premier
Rapport.
17 Déc. 1828.

VOTRE Comité étant persuadé, d'après les informations données par les personnes dont le témoignage se trouvera dans l'Appendice, et d'après les informations de quelqu'un des Membres du Comité, que l'ouverture du Chemin demandé par les Pétitionnaires de certains Townships de l'Est dans le Comté de Buckinghamshire, référée à ce Comité, est très-avantageuse à l'Agriculture en facilitant à de nombreuses familles un moyen d'établissements utiles pour elles et pour le public, a jugé à propos d'en faire le sujet d'un premier Rapport,

Votre Comité est d'opinion que l'état actuel des établissements déjà formés, tant sur le Chemin demandé que sur les deux rives de la Rivière Bécancour, les travaux privés de ces Cultivateurs, et leurs dépenses déjà faites et encourues pour ouvrir une communication nécessaire avec les anciens établissements du Fleuve St. Laurent, leur font un titre à l'assistance pécuniaire de la Législature, et assure à l'avenir l'entretien du Chemin désiré. Que de plus, la prolongation de ce Chemin, dans peu d'Années, depuis la Rivière Bécancour jusqu'au Chemin Craig, pourra être d'une utilité plus grande et plus générale encore.

Qu'enfin, mû par ces considérations, votre Comité est d'opinion qu'il est expédient et désirable que la Législature accorde une somme n'excédant pas quatre cent soixante-et-dix livres courant, pour ouvrir un Chemin entre le premier et le second rang du Township de Blandford, depuis la ligne de profondeur de la Seigneurie de Gentilly, à aller jusqu'à la Rivière Bécancour.

Le tout, néanmoins, humblement soumis.

F. BLANCHET,

Président.

17 Décembre, 1828.

SECOND RAPPORT.

Second
Rapport.
14 Janv. 1829.

VOTRE Comité a cru devoir s'occuper en premier lieu des Chemins qu'il serait nécessaire d'ouvrir en vue de faciliter de nouveaux établissements et des dépenses probables d'iceux.

Sur la Pétition présentée à votre Honorable Chambre le 23 Décembre dernier, et les procédés qui ont eu lieu par le Comité qui a déjà siégé sur cet objet, et qui se trouveront dans l'Appendice, votre Comité est d'opinion qu'il est expédient d'octroyer une somme n'excédant pas quatre cents livres courant, pour aider à ouvrir le Chemin décrit dans la dite Pétition; et que préalablement à l'application du dit argent, il sera convenable que le dit Chemin soit verbalisé suivant la Loi.

Votre Comité procédant de plus à prendre en considération l'ouverture d'un Chemin pour les Habitans du Township de Tring, et sur les informations reçues à ce sujet, est d'opinion qu'il est expédient d'octroyer une somme d'argent n'excédant pas cent soixante-dix livres courant, pour l'ouverture d'un Chemin comme continuation du Chemin déjà ouvert dans la Paroisse de Saint François de

la Nouvelle Beauce à l'ouest, et près de l'Eglise de Saint François à aller aux nouveaux établissements dans le dit Township; pourvu aussi que le dit Chemin soit verbalisé suivant la Loi avant d'être commencé.

Procédant de plus sur l'utilité de l'ouverture d'un Chemin depuis les établissements actuels dans le Township de Frampton, à aller à la ligne nord-ouest de Cranbourne, formant environ huit milles, sur lesquels se trouvent déjà plusieurs établissements, et après avoir examiné les informations et plans donnés au Comité par William Henderson, Ecuyer, votre Comité est d'opinion qu'il est expédient d'octroyer une somme d'argent n'excédant pas deux cent quarante livres courant pour l'ouverture du dit Chemin qui se trouve déjà verbalisé.

Votre Comité a ensuite procédé à prendre en considération la Pétition des Habitans du Township de Grenville et de la Petite Nation. Le sujet de cette Pétition paraît être de la plus grande importance et est intimement lié avec les communications générales de cette partie du Pays, et de plus il sera nécessaire que votre Comité obtienne des renseignements plus particuliers qu'ils n'ont actuellement dans leur possession concernant cet objet. Votre Comité prend des mesures pour obtenir ces renseignements, et aura l'honneur de les soumettre à la Chambre avec leur Rapport général sur les communications intérieures du Pays.

Le tout, néanmoins, humblement soumis.

F. BLANCHET,
Président.

14e. Janvier, 1829.

TROISIEME RAPPORT.

VOTRE Comité a cru devoir diriger son attention sur les Lois existantes des Chemins. Ces lois, dans l'opinion de votre Comité, son très-préjudiciables à la formation de nouveaux établissements, et ne sont point en harmonie avec la situation actuelle du Pays. Pour faire tracer une route à la distance de trente lieues, des sièges de juridiction, il en coûte vingt livres courant. Or, quels sont les Habitans d'un nouvel établissement capable de payer cette somme? Un autre défaut dans la loi, c'est que les Habitans sont obligés de payer les mêmes frais aux Grands Voyers, soit que les Procès Verbaux soient homologués ou non; de sorte que les Grands Voyers n'ont aucun intérêt dans l'homologation de leurs Procès Verbaux. Votre Comité croit donc, que la direction des Chemins devrait être laissée aux Habitans; mais ne croit pas que cela puisse se faire avant qu'il soit fait une nouvelle organisation des Comtés. C'est un objet extrêmement désirable, parceque la Législature ne serait plus obligée de faire des affectations pour l'ouverture de Chemins particuliers dans les Comtés, et que son attention se trouverait seulement dirigée sur les grandes routes.

Votre Comité a ensuite porté son attention sur les Chemins et Communications qu'il conviendrait d'ouvrir et de faire achever tant dans la vue de former de nouveaux établissements que pour faciliter les voyageurs. La nécessité de former de nouveaux établissements devient de plus en plus urgente, car il y a des paroisses, ou le tiers des chefs de familles ne vivent que sur des emplacements. Cette circonstance

Troisième
Rapport.
2 Fevr. 1829.

Appendice
(P.P.)Troisième
Rapport.
2 Févr. 1829.

circonstance est des plus alarmante parce qu'elle tend à introduire rapidement la pauvreté parmi la classe agricole.

Votre Comité regarde donc la formation de nouveaux Etablissements, sur de bonnes terres, comme le moyen le plus efficace et le moins dispendieux pour prévenir un mal aussi grave, mais outre la nécessité pressante qu'il y a de fournir des terres à la population surabondante de cette Province, (ce à quoi rien ne contribuerait plus que l'ouverture de Communication aux étendues immenses de terres incultes et fertiles dont nous sommes environné) il y a des considérations qui rendent en ce moment cette mesure d'une nécessité toute particulière ; le manque des moissons, dans la saison qui vient de s'écouler, a produit dans quelques parties de la Province une misère si extrême, qu'à moins d'une assistance publique on aurait à craindre les conséquences les plus funestes ; et l'on n'en peut faire une application plus avantageuse tant pour le Public en général que pour les malheureux, en faveur de qui l'on demande une aide pécuniaire, qu'en leur fournissant de l'emploi, de manière à ce qu'ils puissent s'occuper utilement pour eux-mêmes et pour l'avantage public en même tems.

Votre Comité prend donc la liberté de soumettre à la considération de votre Honorable Chambre la convenance d'ouvrir les Chemins suivans, dans la vue de former de nouveaux Etablissements, et les Dépenses probables qui pourroient en résulter :

Pour l'ouverture d'un Chemin de Métis à la Mission de Ristigouche, et faire les explorations nécessaires, outre la somme déjà votée, trois mille Louis.

Pour réparer le chemin de Témiscouata, et les ponts d'icelui, huit cents Louis.

Aussitôt qu'entre la Rivière Ouelle et Kamouraska, en arrière des anciens Etablissements, il aura été concédé pas moins de cent lots des dites terres à des Colons résidens, il sera loisible au Gouverneur, Lieutenant Gouverneur ou la Personne administrant le Gouvernement pour le tems d'alors, de faire faire un arpentage propre et convenable, pour tracer et faire ouvrir un chemin pour aller et venir de ces nouveaux Etablissements, et qu'il soit affecté à cet objet une somme n'excédant pas cinq cents Louis.

Aussitôt qu'en arrière des anciens Etablissements de l'Ilet, il aura été concédé pas moins de cent lots des dites terres à des Colons résidens, il sera loisible au Gouverneur, Lieutenant Gouverneur ou la Personne administrant le Gouvernement pour le tems d'alors, de faire faire un arpentage propre et convenable pour tracer et faire ouvrir un Chemin pour aller et venir de ces nouveaux Etablissements, et qu'il soit affecté à cet objet une somme n'excédant pas cinq cents Louis.

Aussitôt qu'en arrière du Bras de St. Nicolas, Comté de Devon, il aura été concédé pas moins de cent lots des dites terres à des Colons résidens, il sera loisible au Gouverneur, Lieutenant Gouverneur ou la Personne administrant le Gouvernement pour le tems d'alors, de faire faire un arpentage propre et convenable pour tracer et ouvrir un chemin pour aller et venir de ces nouveaux établissemens, et qu'il soit affecté à cet objet une somme n'excédant pas cinq cents Louis.

Aussitôt qu'en arrière des anciens Etablissements de la Rivière du Sud, il aura été concédé pas moins de cent lots des dites terres à des Colons résidens, il sera loisible au Gouverneur, Lieutenant Gouverneur ou la Personne administrant le Gouvernement pour le tems d'alors, de faire faire un arpentage propre et convenable pour tracer et faire ouvrir un Chemin pour aller et venir de ces nouveaux Etablissements, et qu'il soit affecté à cet objet une somme n'excédant pas cinq cents Louis.

Aussitôt qu'il aura été concédé pas moins de cent lots des terres de la Couronne situées entre le Township de Tring et le Lac St François, à des Colons résidens, il sera loisible au Gouverneur, Lieutenant Gouverneur ou la personne administrant le Gouvernement pour le tems d'alors, de faire faire un arpentage propre et convenable pour tracer et faire ouvrir un chemin pour aller et venir du Township de Tring au Chemin de Craig, et qu'il soit affecté à cet objet une somme n'excédant pas trois cents Louis.

Votre Comité a ensuite passé à l'examen d'autres Chemins qu'il conviendrait de faire finir.

Votre Comité recommande en sus de la somme déjà votée pour faire finir le Chemin de Kennebec, une somme n'excédant pas cinq cents Louis.

Une somme de seize cents Louis pour faire finir le Chemin de Craig, en sus de la somme de quatre cents Louis déjà affectée pour cet objet.

Une somme de seize cents Louis pour achever un chemin du Township de Hatley à la Montagne de Maska.

Une autre somme de seize cent soixante Louis pour achever le chemin de Melbourne à la Montagne de Maska.

Votre Comité n'a pu s'empêcher d'observer que sous les points de vue militaire, commerciale et agricole, il seroit très avantageux qu'il y eut un chemin d'ouvert depuis la Rivière Noire au point où aboutit l'ancien chemin des Forges, aujourd'hui abandonné ou en arrière des Townships de Caxton, de Brandon, Kildare et des Townships et Terres incultes qui suivent jusqu'à Granville, sur la Rivière des Outaouais, et depuis le dit Township jusqu'au Township de Hull au Sault de la Chaudière dans la même rivière.

Votre Comité recommande que pour ces objets, il soit affecté pour la présente année une somme n'excédant pas quatre mille Louis.

Et une autre somme de cinq cents Louis pour explorer le pays situé entre la Rivière St. Maurice et celle des Outaouais, tant dans la vue d'obtenir des renseignemens suffisans, pour tracer le dit chemin de la manière la plus avantageuse pour le Public, que pour connoître les productions naturelles et la qualité du sol et l'étendue du pays.

Pour l'ouverture d'un chemin des anciens Etablissements derrière Berthier à Brandon, trois cents Louis.

Le tout néanmoins humblement soumis.

F. BLANCHET,

Président.

2 Février 1829.

QUATRIEME RAPPOPT.

VOTRE Comité a continué ses recherches sur d'autres parties de la Province, qu'il conviendrait d'établir dans la vue de fournir des terres à proximité de la population surabondante de certaines paroisses dans les différens Districts. Le Lac Etchemin situé à la hauteur des terres au sud de Québec a été exploré et les terres qui entourent ce Lac sont d'une excellente qualité et appartiennent à la Couronne, les paroisses qui sont près de là sont surchargées de population. Votre Comité prend donc la liberté de recommander un Octroi d'une somme n'excédant pas trois cents Livres courant pour ouvrir un chemin pour y communiquer aussitôt qu'il y aura eu cent lots de terre concédés à des Colons résidens, par le Gouverneur, Lieutenant Gouverneur ou la Personne ayant l'Administration du Gouvernement de la Province pour le tems d'alors.

Votre Comité croit aussi qu'il seroit désirable de former des Etablissements dans les Townships de l'Est situés à l'Ouest de la Rivière Chaudière et le Lac St. François, ou un grand nombre de Canadiens pourroient s'établir. Votre Comité prend la liberté de recommander une somme de mille Louis pour ouvrir un chemin de Dudswell situé dans le District des Trois-Rivières, pour rencontrer un chemin déjà ouvert dans le District de Québec jusqu'au Township d'Ireland, et une somme de trois cents Louis pour faire un chemin de Broughton à Leeds, (ce chemin est déjà sous Procès Verbal.)

Votre Comité croit aussi qu'il seroit avantageux d'ouvrir une Communication entre la Rivière Chateaugay et Godmanchester, et de là à St Régis : votre Comité recommande une somme n'excédant pas quinze cents Livres courant.

Votre Comité ne saurait trop recommander l'ouverture de Chemins près de Québec dans la vue d'établir une communication facile avec la Rivière Jacques Cartier ; ces Etablissements près de la ville peuvent procurer un moyen de subsister à beaucoup de pauvres gens : votre Comité recommande une somme de deux cent cinquante Louis pour établir une communication de Val Cartier aux Lac St. Charles, ce qui raccourcirait le Chemin de cinq milles pour venir à Québec ; une autre somme de cinq cents Louis pour

Quatrième
Rapport.

11 Févr. 1829.

pour ouvrir une communication entre Stoneham et Tewkesbury et une autre somme de deux cens Louis pour ouvrir un chemin des anciens Etablissements à Neuville.

Le tout néanmoins humblement soumis.

F. BLANCHET,

Président.

11 Février 1829.

CINQUIEME RAPPORT.

Cinquième
Rapport.
5 Février.

Votre Comité a dirigé son attention sur le mauvais état des Chemins de sortie des Villes de Québec, Montréal et des Trois-Rivières, durant les faisons pluvieuses. Pour mettre ces Chemins dans un état durable il en coûteroit une trop forte somme pour les moyens de ceux qui, par la Loi, sont obligés de les faire. Car votre Comité ne voit que l'adoption du système de McAdam qui pourrait efficacement faire de bons chemins. Votre Comité ose recommander à votre honorable Chambre qu'il soit accordé une aide à chacune de ces villes pour faire enpierrés les chemins de sortie de ces villes.

Votre Comité croit aussi qu'il devrait y avoir un bon chemin de voiture depuis Shipton jusqu'au Fleuve, et recommande en conséquence une aide pour ouvrir un chemin du côté Est de la Rivière St. François jusqu'à St. Grégoire; aussi une aide pour le chemin de la Savanne de Longueuil à Chambly, et la grande route de communication entre la Province et les États-Unis, savoir, celle de La Prairie à St. Jean.

Le tout néanmoins humblement soumis.

F. BLANCHET.

Président.

24. Février 1829.

SIXIEME RAPPORT.

Sixième
Rapport.
10 Mars.

VOTRE Comité ayant pris en sa sérieuse considération les Instructions concernant la vente des Terres de la Couronne, est d'opinion qu'un semblable système ne devrait pas être adopté, eu égard à l'apreté du climat, la pauvreté des Colons et les difficultés qui accompagnent l'ouverture et le défrichement des Terres nouvelles.

Votre Comité s'est de plus procuré un Plan figuratif du Fleuve St. Laurent depuis Kingston, dans le Haut-Canada, jusqu'à l'Ance Sablon sur la Côte de Labrador, avec les Seigneuries, Townships, &c. dans la Province du Bas-Canada, et votre Comité a l'honneur de la présenter à votre Honorable Chambre comme faisant partie du présent Rapport.

Le tout néanmoins humblement soumis.

F. BLANCHET,

Président.

10e. Mars 1829.

ORDRE DE REFERENCE.

CHAMBRE D'ASSEMBLEE.

Samedi, 20e. Novembre 1828.

RESOLU, Que cette partie de la Harangue de Son Excellence l'Administrateur du Gouvernement à l'ouverture de la présente Session, qui a rapport aux Chemins et autres Communications Intérieures, soit référée à un Comité de cinq Membres, pour en faire rapport avec toute la diligence convenable, avec pouvoir d'envoyer querir personnes, papiers et records.

Ordonné, Que Mr. Blanchet, Mr. De St. Ours, Mr. Stuart, Mr. Bourdages et Mr. Proulx composent le dit Comité.

Attesté.

J. ANT. BOUTHILLIER,

Greff. Asst.

Lundi, 1er. Décembre 1828.

Ordonné, Que la Pétition de divers Habitans des Townships de l'Est, situés dans le Comté Buckinghamshire, soit référée au dit Comité.

Attesté.

J. ANT. BOUTHILLIER,

Greff. Asst.

Vendredi, 5 Décembre 1828.

Ordonné, Que Mr. Louis Lagucux soit ajouté au dit Comité.

Attesté.

J. ANT. BOUTHILLIER,

Greff. Asst.

Samedi, 13 Décembre 1828.

Ordonné, Que le dit Comité ait pouvoir de faire rapport de tems à autre.

Attesté.

J. ANT. BOUTHILLIER,

Greff. Asst.

Vendredi, 26 Décembre 1828.

Ordonné, Que la Pétition de divers Habitans du Township de Grenville et autres Townships, et de la Seigneurie de la Petite Nation, soit référée au dit Comité.

Attesté.

J. ANT. BOUTHILLIER,

Greff. Asst.

Lundi, 12 Janvier 1829.

Ordonné, Que Mr. Laterrière soit ajouté au dit Comité.

Attesté.

J. ANT. BOUTHILLIER,

Greff. Asst.

Mercredi, 4 Février 1829.

Ordonné, Que les Instructions à l'Honorable William Bowman Felton, relativement à la Vente et Octroi des Terres incultes de la Couronne, dont copie a été communiquée à cette Chambre (sur une Adresse) par Son Excellence l'Administrateur du Gouvernement, soient référées au dit Comité.

MINUTES DES TÊMOIGNAGES.

Jeudi, 11 Décembre, 1828.

FRANCOIS BLANCHET, Ecuier, au Fauteuil.

Jos. Bouchette
Ecuier.
11 Décembre.

Joseph Bouchette, Ecuier, Arpenteur Général a comparu et a été entendu :

CONNOISSEZ-vous les Townships de Stanfold, Bulstrode, Blandford et Maddington? Oui.

Le sol et la situation de ces Townships sont-ils favorables pour y faire des établissemens agricoles? Oui, en général.

Les Seigneuries qui aboutissent à ces Townships, contiennent-elles encore un nombre suffisant de Terres non concédées, pour subvenir aux demandes des jeunes Cultivateurs qui désirent s'établir sur des Terres dont-ils peuvent se dire propriétaires? Il y a encore quelques Terres à concéder dans les Seigneuries, mais je ne puis pas en dire le nombre.

Quelles sont les parties de ces Townships que les nouveaux Cultivateurs préfèrent, et dans quels endroits trouvent-on en plus grand nombre les établissemens qui ont déjà commencés? Ils préfèrent généralement les Lots qui se trouvent sur la Rivière Bécancour.

Quel est l'état de ces nouveaux établissemens; et pouvez-vous informer le Comité quel est le nombre de familles ou de personnes que l'on trouve déjà établis dans ces endroits? Il y a plusieurs établissemens dans Blandford, Maddington et Bulstrode, mais je ne puis dire, d'une manière précise, quel progrès ils y ont fait.

Les progrès de ces établissemens sont-ils retardés par le besoin d'un Chemin; et à combien de familles l'ouverture du Chemin mentionné dans la Pétition qui est référée à ce Comité, [La Pétition de divers Habitans des Townships de l'Est, situés dans le Comté de Buckinghamshire a été alors montrée au Témoin.] procureroit-il un accès plus facile de s'établir; et quels moyens de communication les familles établies dans ces Townships ont-elles avec les anciens établissemens? Le manque de Communication retard considérablement les établissemens de ces endroits.

Les personnes qui ont des Terres dans ces Townships, ont-elles travaillées à l'ouverture du Chemin quelles demandent, ou à quelque autre Chemin? Oui; et particulièrement les Habitans de Blandford; ils ont ouvert un bon Chemin d'hiver entre le premier et le deuxième rangs, où se trouve une étendue de terrain de soixante-six pieds de largeur, qui est spécialement réservée dans les Lettres Patentes de ce Township; d'après le Rapport de mon Député, qui a mesuré et divisé ce Township en 1821, l'endroit où passe le Chemin est très convenable, et offre des moyens faciles à 132 Habitans de s'établir sur ce Chemin, en donnant 100 Acres à chaque; je suis de plus informé, que l'on a déjà fait plusieurs établissemens sur ce Chemin.

Les Cultivateurs dans ces endroits ont-ils les moyens d'ouvrir et de parachever le dit Chemin? Je crois que cela est bien au delà de leurs moyens.

A quelle distance des établissemens des bords du Fleuve Saint Laurent, trouve-t-on les nouveaux établissemens sur la Rivière Bécancour; et ces établissemens n'ont-ils aucun moyen de communication que par la seule ligne où les Pétitionnaires demandent l'ouverture d'un Chemin? Dans ces endroits les établissemens sont plus nombreux sur la Rivière Bécancour qu'ailleurs, et de ces établissemens à ceux de Gentilly, la distance est depuis cinq à six lieues. Je ne connois aucun moyen par lequel on pourrait plus facilement effectuer un Communication, qu'en passant entre les premier et deuxième rangs de Blandford.

Savez-vous quelles sont les raisons qui portent les Pétitionnaires à désirer un Chemin entre les premier et deuxième rangs de Blandford, plutôt qu'ailleurs? C'est parce-qu'il serait plus avantageux dans cet endroit qu'ailleurs; et l'on pourrait le faire et l'entretenir plus facilement: 1o. Parceque l'on y a déjà commencé des établissemens, et 2o. Parceque les Lots des 1er et 2me rangs ont leurs fronts sur ce Chemin; ils sont aussi plus près l'un de l'autre, et qu'il s'y trouvera des maisons et du découvert de chaque côté du

Chemin; enfin, parceque les réserves de la Couronne et du Clergé sont éloignées de ce Chemin; ce qui est une circonstance de la plus grande importance.

Pouvez-vous dire combien il en coûteroit pour ouvrir et parachever ce Chemin; qu'elle est son étendue; à quel point du Fleuve Saint Laurent on devoit le commencer, et jusque où il devoit s'étendre? Je ne puis dire précisément jusqu'à quelle distance; je crois que c'est à environ cinq à six lieues. Cela coûteroit depuis £30 à £36 courant par mille; pourvu que les Deniers fussent employés avec économie.

Quelle somme, à peu près, a-t-on déjà employée sur le chemin en question? Je ne puis pas dire.

A part des avantages publics dont vous avez fait mention dans vos réponses, en résulteroit-il d'autres, par suite de l'ouverture de ce Chemin? Oui; à part de ceux dont je viens de faire mention, on n'a qu'à référer à la Carte de la Province pour se convaincre de l'utilité que procureroit la continuation d'un tel chemin jusqu'au chemin Craig, dont la distance, dans les limites du Township de Tingwick, n'excède pas six lieues. A partir de cet endroit, la communication entre les Townships de l'Est et Québec, peut être estimée à trente lieues par le Chemin Craig, et à environ vingt-neuf lieues par le chemin qui traverse Gentilly, dans lequel on comprend douze lieues de transport par terre, et le reste par le Fleuve Saint Laurent; ce qui faciliteroit considérablement le transport des Effets au moyen du fleuve et par les Barques à Vapeur; de plus, le Chemin demandé ouvrirait une communication et faciliteroit la formation de nombreux établissemens dans cette portion intéressante de la Province.

Mr. Charles Turgeon, a comparu et a été entendu;—

Connoissez-vous les Townships de Stanfold, Bulstrode, Blandford et de Maddington? Je connois peu les Townships de Bulstrode et de Stanfold; mais je connois assez bien ceux de Blandford et de Maddington.

M. Ch. Turgeon.

Le sol et la situation de ces Townships sont-ils favorables, pour y faire des établissemens agricoles? La Rivière Bécancour coule à travers ces Townships, c'est-à-dire: entre Stanfold et Bulstrode d'un côté, et entre Blandford et Maddington de l'autre. Cette rivière arrose une plaine spacieuse, dans laquelle se trouvent plusieurs autres Townships, à part de ceux dont je viens de faire mention; cette plaine est rendue fertile par plusieurs ruisseaux qui se déchargent dans la Rivière Bécancour; le sol en est riche, et pourroit fournir des établissemens à plus de 5000 habitans; il est également avantageux aux habitans, ainsi qu'à la Province.

Les Seigneuries qui aboutissent à ces Townships contiennent-elles encore un nombre suffisant de terres non-concédées, pour subvenir aux demandes des jeunes Cultivateurs qui désirent s'établir sur des terres dont-ils peuvent se dire Propriétaires? Je connois peu ces Seigneuries; mais à en juger par l'empressement que ces jeunes Cultivateurs témoignent, d'avoir des terres sur la Rivière Bécancour, cela me fait croire qu'il y a peu, ou presque point de terres non concédées dans ces Seigneuries.

Quelles sont les parties de ces Townships que les nouveaux Cultivateurs préfèrent, et dans quels endroits trouvent-on en plus grand nombre les établissemens que l'on a déjà commencés? La Rivière Bécancour qui, comme je viens de l'observer, sert de point central à ces Townships, paroît être choisie de préférence; et dans le fait, c'est là où l'on trouve que les établissemens sont les plus nombreux.

Quel est l'état de ces nouveaux établissemens; et pouvez-vous informer le Comité du nombre de familles ou de personnes, qui se trouvent déjà établies dans ces endroits? Les établissemens sur la Rivière Bécancour, sont dans un état assez avancé—Je ne puis dire précisément quel est le nombre de familles qui s'y trouvent établies: Je suis néanmoins persuadé que le nombre en est plus de cinquante.

Les progrès de ces établissemens sont-ils retardés par le manque d'un Chemin: et à combien de familles, l'ouverture du Chemin mentionné dans la Pétition qui est référée à ce Comité, (La Pétition de divers habitans des Townships de l'Est, situés dans le Comté de Buckinghamshire, a été alors montrée au Témoin) procureroit-il un accès plus facile de s'établir, et quels moyens de Communication les familles établies dans ces Townships ont-elles avec les anciens établissemens? La nécessité ou se trouvent les nouveaux habitans, de transporter sur leurs épaules tous les nombreux effets

effets dont-ils ont besoin pendant l'Été, à partir des Etablissements sur le Fleuve St. Laurent à aller à la Rivière Bécancour, est vivement sentis parmi eux, et les expose à de grandes privations ; ce qui est cause que plusieurs de ceux qui s'y sont établis, s'en trouvent dégoutés, et que cela en empêche plusieurs qui désireroient s'y établir. Mais si l'on ouvrait le Chemin demandé, je crois que cela faciliteroit, et procureroit les moyens d'y établir plus de cinq mille familles.

Les personnes qui ont des terres dans ces Townships ont-elles travaillées à l'ouverture du Chemin qu'elles demandent, ou à quelque autre Chemin ? Les Propriétaires dans Blandford ont déjà fait un très-bon Chemin d'Hyver dans la partie du Chemin demandé. D'autres personnes établies, plus bas vers la Rivière, en ont ouvert un autre qui y conduit entre Blandford et Maddington ; et il y a quelques années, des Marchands de Bois en ont ouvert un troisième, à la distance d'environ une lieue de celui dernièrement mentionné.

Les Cultivateurs dans ces endroits ont-ils les moyens d'ouvrir et parachever le dit Chemin ? Quand ils y mettroient tout leur travail et tous leurs moyens, ils sont incapables pour le moment, d'y ouvrir un Chemin d'Été.

A quelle distance des Etablissements des rives du Fleuve Saint-Laurent, trouve-t-on les nouveaux Etablissements sur la Rivière Bécancour ; et ces Etablissements n'ont-ils aucun moyen de communication, que par la seule ligne où les Pétitionnaires demandent l'ouverture d'un Chemin ? Les Etablissements sur la Rivière Bécancour sont à environ cinq lieues de ceux sur le Fleuve Saint-Laurent. J'ajouterai, à ce que j'ai dit dans ma réponse à la septième Question, que la Rivière Bécancour possède par elle-même, des moyens de communication par eau ; si ce n'est vers le milieu du Township de Maddington où elle se trouve pleine de rapides, et où les Portages sont maintenant impraticables. Mais à tout considérer, ce mode de communication est bien dangereux.

Savez-vous quelles sont les raisons qui portent les Pétitionnaires à demander un chemin entre les premier et deuxième rang de Townships de Blandford plutôt qu'ailleurs ? Entre autres raisons de préférence se trouvent celles-ci : Ce Chemin est plus avancé que ne l'est aucun autre, et le grand nombre de Lots concédés, et sur lesquelles il a été formé des Etablissements dans les premier et second rangs, donnent une assurance plus certaine que l'on pourvoira à son entretien. Le terrain qui étoit nécessaire et convenable, pour y faire le Chemin, a été réservé en cet endroit ; de plus ; il y a un chemin dans la Seigneurie de Gentilly, conduisant à ce Township déjà verbalisé, et que l'on est sur le point d'ouvrir.

Dans le cas on la Législature accorderoit une Aide pécuniaire pour ouvrir le Chemin en question, savez-vous quels moyens on pourroit à l'avenir pourvoir à son entretien, indiquez les moyens au Comité ? Je crois que les moyens en font indiqués dans ma réponse à la demande précédente ; c'est-à-dire : que l'on peut considérer comme assuré, le prompt Etablissement des deux rangs qui se trouvent séparés par le Chemin.

Pouvez-vous dire combien il en couteroit, pour ouvrir et parachever ce Chemin, quelle est son étendue, à quel point du fleuve Saint Laurent on devoit le commencer, et jusque où il devoit s'étendre ? Pour ouvrir et parachever ce Chemin, cela couteroit, à mon avis, environ £125 courant par lieue. Sa longueur est d'environ cinq lieues et demie, ce qui demanderoit une somme de £687 ; pourvu, toutefois, que cette somme fut placée entre les mains de personnes intègres et de capacité, et qui dirigeroient l'ouvrage avec l'économie convenable.

Quelle somme à peu-près, a-t-on déjà employée sur le Chemin en question ? Je ne puis pas en dire le montant.

A part des avantages publics dont vous avez parlé dans vos réponses précédentes, en résulteroit-il d'autres par suite de l'ouverture de ce Chemin ? Dans ma réponse à la deuxième question, j'ai parlé d'une plaine spacieuse, au centre de laquelle coulent les eaux de la Rivière Bécancour. Cette plaine offre de grandes étendues de terre propres pour y former des Etablissements qui seront avantageux, tant à ceux qui les commenceront, qu'à la Province en général ; si donc, on accordoit le Chemin demandé, à part des avantages qui en résulteroient aux individus à travers les terres desquels le Chemin doit passer, et aux Etablissements qui se trouvent sur la Rivière Bécancour, cela ouvrirait une communication directe avec les anciens Etablissements et cette belle et vaste étendue du pays dont je viens de parler. On pourroit dans peu continuer ce chemin aussi loin que le Chemin Craig,

ce qui formeroit alors une communication plus raccourcie et plus directe avec les Etablissements sur les rives du Fleuve Saint Laurent.

Y a-t-il des Places de Débarquement commodes et assurées pour les Barques à Vapeur et les autres Vaisseaux de la Rivière, sur le côté Sud du Fleuve Saint Laurent, proches de Gentilly ? Oui ; il y a dans la Paroisse de Saint Pierre les Becquets, voisine de celle de Gentilly, dans un endroit appelé Livard, une Place de Débarquement facile et assurée pour les Barques à Vapeur et les autres Vaisseaux de la Rivière.

Jean Langevin, Ecuyer, a comparu et a été entendu.

Connaissez-vous les Townships de Stanfeld, Bulstrode, Blandford et Maddington ?—Oui ; et particulièrement les Townships de Blandford et de Maddington.

Le sol et la situation de ces Townships sont-ils favorables pour y faire des établissements agricoles ?—Oui ; et sur ce sujet je prends la liberté de référer le Comité à la Pétition des Habitans de ces Townships, qui, no- toirement à cet égard, contient l'exacte vérité.

Les Seigneuries qui aboutissent à ces Townships, contiennent-elles encore un nombre suffisant de terres non-concédées, pour subvenir aux demandes des jeunes Cultivateurs qui désirent s'établir sur des terres dont ils peuvent se dire propriétaires ?—Non ; car il ne reste que peu de lots dans ces Seigneuries valant la peine d'être cultivées qui ne sont pas encore concédées.

Quelles sont les parties de ces Townships que les nouveaux Cultivateurs préfèrent, et dans quels endroits trouve-t-on en plus grand nombre les établissements que l'on a déjà commencés ?—Les nouveaux habitans qui cherchent des terres donnent la préférence en général à celles qui se trouvent sur les bords de la rivière Bécancour ; et dans le fait, c'est là où les nouveaux établissements augmentent le plus rapidement, et où ils se trouvent en plus grand nombre.

Quel est l'état de ces nouveaux établissements ; et pouvez-vous informer le Comité du nombre de familles ou de personnes qui se trouvent déjà établies dans ces endroits ?—Le premier établissement eut lieu en 1825, et se fit dans Blandford par deux familles des Paroisses voisines. En Juillet 1827 la population sur les bords de la Rivière Bécancour dans le Township en question, s'élevait à 100 personnes, et en Novembre dernier on y comptait 150 personnes, tous Agriculteurs.

Les progrès de ces établissements sont-ils retardés faute d'un Chemin ; et à combien de familles l'ouverture du Chemin mentionné dans la Pétition qui est référé à ce Comité, (*La Pétition de divers Habitans des Townships de l'Est situés dans le Comté de Buckinghamshire, a été alors montré au Témoin,*) procure-ait-il un accès plus facile de s'établir ; et quels moyens de communication les familles établies dans ces Townships ont-elles avec les anciens établissements ?—Si l'on ouvrait et parachevait un bon Chemin entre la Paroisse de Gentilly et la Rivière Bécancour, cela aurait l'effet d'établir rapidement le peu de lots qui restent encore non-concédées le long de ce Chemin, de même que ceux qui se trouvent de chaque côté de la rivière Bécancour, ainsi que de ses ruisseaux tributaires ; plusieurs lieues au-dessus et au-dessous du Chemin en question. Les terres arrosées par ces rivières, lorsqu'elles seraient complètement établies, pour- raient suffire à une population de plus de 20,000 âmes. Les familles qui sont maintenant établies dans ces endroits ne peuvent communiquer avec les Paroisses voisines qu'avec beaucoup de difficulté, et cela, principalement dans la saison de l'été ; à cette époque, pour se servir d'une expression vulgaire, tout le transport s'effectue "sur les épaules des gens."

Les personnes qui ont des terres dans ces Townships, ont-elles travaillées à l'ouverture du Chemin qu'elles demandent, ou à quelque autre Chemin ?—Oui ; elles ont fait un bon Chemin d'hiver qui est déjà bien fréquenté tant en hiver qu'en été ; d'autres propriétaires ont aussi commencé dans la ligne entre Blandford et Maddington un autre Chemin depuis la rivière Bécancour jusqu'à Gentilly ; ce Chemin est pareillement bien fréquenté.

Les Cultivateurs dans ces endroits ont-ils les moyens d'ouvrir et de parachever le dit Chemin ?—Cela est bien au-delà de leurs moyens.

A quelle distance des établissements des rives du fleuve Saint-Laurent trouve-t-on des nouveaux établissements sur la Rivière Bécancour, et ces établissements n'ont-ils aucun moyen de communication que par la seule ligne où les Pétitionnaires demandent l'ouverture d'un Chemin ?—La distance des nouveaux établissements sur la rivière Bécancour, et ceux qui sont dans le voisinage, à aller au fleuve Saint Laurent, est de cinq à cinq et demi ou six lieues. A part des Chemins dont j'ai parlé dans ma réponse à la septième question, il s'en trouve un autre dans Maddington, qui y a été pratiqué par les commerçans de bois ; ce qui procure une communication entre les établissements sur la rivière Bécancour et ceux qui sont dans la Paroisse du même nom. Il y a aussi une autre communication par eau au moyen de la Rivière Bécancour elle-même ; mais elle est très longue et dangereuse, et elle est fréquemment impraticable.

Savez-vous

Appendice
(P. P.)

Savez-vous quelles sont les raisons qui portent les Pétitionnaires à demander un Chemin entre le premier et le deuxième rang des Townships de Blandford, plutôt qu'ailleurs?—Ces raisons, à mon avis, sont comme suit : Il y a une réserve de soixante six pieds de terre de front pour ce Chemin dans les Lettres Patentes de Blandford : il se trouverait placé là dans le lieu le plus central. Tous les lots dans Gentilly sur la continuation de ce Chemin (qui a été verbalisé) sont pris, de même qu'un grand nombre dans Blandford. Il y a maintenant plusieurs lots aux deux extrémités de ce Chemin dans Blandford qui sont établis. Tous les lots dans Blandford qui se trouvent sur le rivière Bécancour, à l'exception des réserves pour le Clergé, sont pris de même ; de sorte que cela donne l'assurance que ce Chemin sera entretenu après qu'il aura été ouvert ; il n'y a point de lots de réserve sur ce Chemin. En dernier lieu, on y a fait plus de travaux que sur aucun des autres. Les deux autres Chemins ne se trouvent pas dans un lieu aussi central. Celui dans Maddington ne l'est pas du tout ; il fait beaucoup de détours, et passe à travers des terres qui n'ont pas été mesurées. L'autre Chemin dans la ligne entre Maddington et Blandford occupe un terrain qui n'a pas été réservée à cette fin ; la plus grande partie du terrain dans Maddington qui l'avoiisine n'est pas mesuré ; celui qui se trouve dans Blandford est entièrement composé de lots de réserves, ce qui fait que l'époque de leur établissement est très éloignée et très incertaine. Les établissements sur ce Chemin les plus voisins de la rivière Bécancour sont ceux de la troisième concession de Gentilly.

Dans le cas où la Législature accorderait une aide pécuniaire pour ouvrir le Chemin en question, savez-vous par quels moyens on pourrait à l'avenir pourvoir à son entretien ; indiquez ces moyens au Comité?—Les moyens sont certains, et sont indiqués dans ma réponse à la question précédente, car il ne peut y avoir aucun doute qu'un Chemin avec des établissements de chaque côté, sera bien entretenu.

Pouvez-vous dire combien il en coûterait pour ouvrir et parachever ce Chemin ; quelle est son étendue, à quel point du fleuve Saint-Laurent on devrait le commencer, et jusque où il devrait s'étendre?—Pour ouvrir et parachever ce Chemin, en le faisant partir de la rivière Bécancour pour arriver à l'entrée du bois de Gentilly, sur les lots de la deuxième concession, ce qui comprend une distance d'environ cinq lieues, cela coûterait environ £600 courant ; pourvu que l'ouvrage fut dirigée par des personnes intègres et de capacité, et que les deniers fussent employés avec la plus grande économie.

Quelle somme à peu près a-t-on déjà employée sur le chemin en question?—Environ £150.

A part des avantages publics dont vous avez parlé dans vos réponses précédentes, en résulterait-il d'autres par suite de l'ouverture de ce chemin?—Oui ; parceque ce Chemin sera utile non-seulement aux propriétaires des terres à travers desquelles il passera, mais il aura encore l'effet d'ouvrir une communication directe entre les anciens établissements et une grande étendue de pays propre à la culture, dont la rivière Bécancour forme le centre ; par cette rivière les divers établissements pourront communiquer entr'eux au moyen de canots en été, et par un beau chemin sur la glace en hiver, et cela depuis les chûtes dans le Township de Maddington en remontant la rivière vers le nord-est ; parceque l'on pourra à l'avenir continuer ce Chemin jusqu'au Chemin Craig, et il deviendra alors d'une utilité plus générale.

Trouve-t-on des places de débarquement commodes et assurées pour les Barques à Vapeur et autres vaisseaux de la rivière, au sud du fleuve Saint-Laurent, proche de Gentilly?—Oui ; dans un endroit appelé Liward, dans la Paroisse de Saint Pierre les Becquets, voisine de celle de Gentilly, il y a un lieu de débarquement sûr et commode pour les Barques à Vapeur et autres vaisseaux de la rivière.

C. Langevin et L. A. Langevin, Charles Langevin et Louis Abraham Lagueux, Ecuers, ayant été appelés, le témoignage précédent de Jean Langevin, Ecuier, leur ont été lu, et ils l'ont confirmé.

Lundi, 15 Décembre 1828.

W. Green, Ecuier. William Green, Ecuier, a comparu ; et lui ayant été demandé s'il voulait bien communiquer au Comité, les plans qu'il pouvait avoir en sa possession, et qui ont rapport aux parties du Canada qui n'ont pas été explorés, il a communiqué ceux qui suivent :—

15 Décembre.

1°. Une Carte de la Rivière St. Maurice, depuis le Lac Opigewan jusqu'à son embouchure, par Mr. Commeau, un Commerçant.

2°. Une Carte de la Rivière Montmorenci, depuis sa source jusqu'à la chute, tracée sur l'écorce de Bouleau, par Michel Tsioui, un des Chefs des Sauvages de Lorette.

3°. Une Carte du pays entre le Sagenay et la rivière St. Maurice, tracée sur l'écorce de bouleau, par Nicolas Vincent, premier Chef des Sauvages de Lorette.

4°. Une copie de cette dernière Carte sur papier.

5°. Une Carte tracée sur l'écorce de Bouleau des Rivières Jacques Cartier, Batiscan et Sainte Anne, par André Romain, un des Chefs des Sauvages de Lorette.

Mercredi, 17 Décembre, 1828.

Alexander Joseph Wolfe, écuyer, un des juges de paix du District de Québec, et capitaine dans la division de milice de St. Ambroise, a comparu et a informé votre Comité : Qu'il a servi dans le 60ième régiment, depuis le commencement jusqu'à la fin de la guerre dans la péninsule ; qu'il a aussi servi en Egypte et a été placé à la demie-soldé comme Enseign et Adjudant dans la 60e. régiment, en novembre 1824 ; et qu'il s'est aussitôt rendu au nouvel-établissement de Valcartier, où il a continué à faire sa résidence avec sa famille, sur des terres qu'il a achetées en cette endroit.—Qu'il a eu occasion de diriger son attention à la confection de nouveaux chemins ; et particulièrement en l'année 1826, lorsqu'il fut employé à surveiller l'ouverture du chemin depuis le Portage de Témiscouata, jusqu'à l'extrémité du lac du même nom ; ce qui comprend une étendue de 36 milles à travers les bois ; qu'il avait proportion moyenne, cinquante hommes sous ses ordres, tous canadiens ; leurs gages étaient de 2s par jour, qu'on leur payait comptant tous les samedis, ou plutôt s'ils le désiraient, en espèces ; ce qu'ils préféraient à l'argent de papier. Ils lui demandèrent 2s 6d par jour, mais leur ayant promis qu'ils seraient payés en espèces, ils consentirent de venir à 2s par jour.—Persuadé que cela serait le cas avant de commencer l'entreprise et lorsqu'il toucha les deniers au montant de £500 courant, il fit changer cette somme en piastres, demi-piastres, quart de piastres et en petite-monnaie. Il leur allouait 1 lb. de lard, 1 1/2 de biscuit, et 3 roquilles de pois par jour ; il aurait pu se procurer de la boisson, mais il craignait de les voir s'ennivrer, il préféra donc de leur donner des pois, dont il pouvaient faire une soupe nourrissante.—Au premier abord, ils refusèrent de venir à moins de 2s 6d par jour, mais il tint bon à 2s. et il réussit à avoir 10 hommes à 2s, avec lesquels il partit, dans l'espérance que d'autres le joindraient ; ce qui eut lieu, effectivement, car le lendemain, environ 40 les rejoignirent ; lorsqu'il se rendit sur les lieux il n'y trouva qu'un sentier, et dans toute la longueur du chemin, il n'y avait qu'un espace de 3 milles où l'on pouvait y passer que difficilement avec une charrette. En procédant à la confection du chemin, on abattait les arbres, on les coupait en longueurs, et on rangeait les billots à mesure que l'on avançait.—Il n'a pas employé le feu, dans une étendue d'environ deux milles, il a ouvert des fossés d'environ deux pieds de profondeur et autant de large ; on y a fait les pontages avec des pièces de cèdre, d'environ un pied en diamètre, que l'on a fendues en deux, les côté plat posé en dessous, et le revers a été couvert de terre et de gravois que l'on avait pris des fossés de chaque côté ; il y a environ un tiers du chemin que l'on a construit en pontages de cette manière ; on avait ci-devant fait ce chemin avec des pièces de sapin d'environ cinq pieds de long.—Il paraît que l'on avait anciennement ouvert ce chemin de la largeur de 6 ou 8 pieds, mais il avait repoussé des cérisiers d'une grande hauteur, qu'il fut obligé de couper ; dans quelques endroits ces cérisiers étaient si touffus qu'ils bouchaient et formaient une arche, sur le chemin.—Il trouva trois étendues de pays fort montagneuses où passait le chemin, et qui étaient remplies de rochers, afin d'éviter une de ces passes rocheuses, il ouvrit un nouveau chemin, ce qui a raccourci la distance de trois ou quatre acres ; il y avait une côte tellement à pic, qu'il fut obligé de la couper dans sa base en zig zag dans l'étendue d'environ 100 verges.—Ces portions montagneuses couvrent environ une étendue de 4 ou 5 milles ; et il fut dans la nécessité d'en enlever plusieurs gros rochers de pierre grise. Il était muni de poudre à canon, mais il ne s'en servait pas, parcequ'il crût qu'il serait plus avantageux et moins dispendieux, en fait de tems et d'argent, d'y entasser des morceaux de bois et d'y mettre le feu ; et lorsque les rochers étaient rouges il y faisait jeter de l'eau ; alors, avec de grosse masses on les cassait facilement, et on employaient les morceaux à remplir les cavités du chemin. Il employa trois mois à parachever ce chemin avec environ 50 hommes, quelques fois plus, quelques fois moins.—La somme entière placée à sa disposition pour faire ce chemin était de £550 courant ; il dépensa dans sa confection une somme de £500, laissant une balance de £50. Il fit plusieurs petits ponts ; mais il ne peut en dire le nombre. Il y a un pont d'une grande dimension sur la Rivière du Loup qui a coûté, à ce qu'on lui a rapporté, £1200, il a environ 300 verges de long, et il est bien détérioré. En voyant l'état délabré de ce pont à son retour, il employa un charpentier, ou un constructeur de moulins qui se trouvait sur les lieux, afin d'en faire la visite, dans la vue de s'assurer si les fonds qui lui restaient, étaient suffisants pour le réparer. Le rapport fut, qu'il fallait une somme beaucoup plus considérable à cette effet. Il employa un homme pour en ôter la neige durant l'hiver, et rendre le pont plus léger, afin de le faire durer plus longtemps, et l'empêcher d'être emporté par les glaces du printemps ;—Il paya pour cela, £4, 10, ce qu'il considère être une rémunération suffisante pour ces peines pendant l'hiver ; qu'il en a agi ainsi sous la sanction de Son Excellence le Gouverneur-en-chef—Ces deniers ont été payés à même les fonds restant entre ses mains, ainsi qu'il a déjà été fait mention. Qu'il lui fut alloué comme surveillant, 15s. courant par jour. Il n'y a eu aucun marché particulier à l'égard des provisions, il se procurait lui-même sa nourriture.

Le chemin est-il maintenant praticable pour y passer les voitures et les chevaux ? Le chemin était passable pour les voitures lorsque je laissai l'endroit, et nous fûmes suivis par des voitures et des chevaux : Je m'en servais pour répandre des gravois sur le chemin.—Dans l'hiver suivant, j'ai lu dans les papiers-nouvelles que quatre cens chevaux avec des sleighs, chargé de bled étaient venus par ce chemin, du Nouveau-Brunswick en Canada ; ce qui n'est jamais arrivé auparavant.

Avez-vous quelques raison de croire que ce chemin a été avantageux aux nouveaux cultivateurs en dedans de nos limites ; et qu'ils en ont été satisfaits ?

satisfaits ? Je n'ai aucun doute que ce chemin leur a été avantageux. J'ai en ma possession la copie d'une lettre du Lieutenant Colonel Fraser, (l'original en a été remis au Major Elliot) résident au Lac Temiscouata, par laquelle il paraît qu'il est très satisfait du chemin. Il y a un individu connu sous le nom du Capitaine Hébert, un des premiers marchands à Madawaska, qui transporte en Canada par ce chemin vingt ou trente voitures, qui s'en retournent chargées de marchandises du Canada à Madawaska, tous les ans ; et il m'a témoigné qu'il était très satisfait de mon entreprise ; il a aussi dit au Colonel Fraser que si les deniers en premier lieu avaient été aussi bien employés, on aurait pu faire un bon chemin.—Il est néanmoins nécessaire que l'on fasse des réparations à ce chemin chaque année vu qu'il n'y a pas d'habitans établi sur ce chemin pour l'entretenir en bon état. Dans l'espace de 24 milles il n'y a pas une seule habitation établie sur ce chemin ; et il est très à désirer qu'il y eut quelques établissemens, afin d'y secourir les voyageurs ; ainsi qu'à ceux qui transportent la malle d'Halifax.—Le Colonel Fraser m'écrivait en novembre dernier, de présenter une requête à la Chambre, pour un aide, afin de reparer les chemins, notamment à l'égard de ceux qui n'avaient pas encore été travaillés, et mentionnant que le chemin se détériorait, particulièrement le pont sur la Rivière du Loup.

A votre avis, quel est le meilleur moyen de confectionner les Chemins publics ? est-ce par contrat, ou par la surveillance de personnes convenables et expertes ?—On ne réussira jamais par le moyen des Contrats ; parce que les Commissaires s'y rendent eux mêmes que très-rarement, et il y envoient à leur place, des personnes qui n'y vont pas souvent ; de manière que les ouvrages sont mal-surveillés. En général les Commissaires font des marchés avec un Entrepreneur principal, lequel fait un marché avec de sous-entrepreneurs ; ceux-ci font l'ouvrage par le moyen de journaliers qu'ils emploient, ou d'autres sous-entrepreneurs qui, eux mêmes emploient des journaliers ; l'Entrepreneur principal obtient des Commissaires le prix le plus haut possible, et il paye le moins qu'il peut au sous-entrepreneur, qui, de son côté, fait le moins d'ouvrage qu'il peut ;—pourvu que le Chemin soit reçu, soit que l'ouvrage se trouve bon ou mauvais.—Il arrive souvent que l'on fait un Chemin de bonne apparence même avec les plus mauvais matériaux ; et même lorsqu'il se trouve passable, il n'est pas de durée, par l'insuffisance des travaux que l'on y a fait.—Il faut que l'Entrepreneur principal et les sous-Entrepreneurs tirent leurs profits de la somme qui a été allouée pour le Chemin ; le but principal de l'Entrepreneur en Chef, est que son Chemin soit reçu, et il ne se soucie guère de quelle manière il est fait.—Au lieu, que si l'on nommait une personne convenable, avec un traitement fixe, il serait de son devoir et de son intérêt, de veiller à ce que les travaux fussent faits d'une manière qui lui feroit honneur, et qui lui donneraient un titre à être employé à l'avenir.

Voulez-vous donner au Comité une copie de la lettre de Mr. Fraser au Major Elliot, à laquelle il est référé dans l'examen précédent. (Le témoin en a donné copie, laquelle a été lue comme suit :)

“ Entrée du Portage,

St. Patrice, 19^e. août 1826.

Monsieur,

J'ai l'honneur de vous faire savoir que M. Wolfe est arrivé au lac ; et je prends la liberté d'ajouter, que d'après les améliorations que j'ai remarquées personnellement en voyageant l'autre jour, ainsi que d'après l'opinion de tous ceux qui voyagent par le Portage, je conçois que, vu l'activité et les efforts de ce Monsieur, il n'est que juste de dire, qu'il a fait au delà de ce que l'on pouvait espérer en considérant surtout le peu de tems qu'il a employé, et le peu de moyens dont on l'avait pourvu ; ce qui, avec les sommes considérables qui ont ci-devant été employées sous la surveillance d'autres individus, ne peuvent pas m'empêcher d'exprimer qu'il les a grandement surpassés dans l'exécution du devoir dont il était chargé.

J'ai l'honneur d'être,

Monsieur,

Votre très-obéissant serviteur,

ALEX. FRASER.

Major Elliot.

Vendredi, 19 décembre 1828.

Bte. Taché. Jean Baptiste Taché, Ecuyer, Notaire Public, de Kamouraska, a été appelé et examiné :

ka, entre ces seigneuries et la rivière St. Jean, que ect e était généralement bon et très propre à l'agriculture. I qui a été exploité dernièrement par un arpenteur, qui l s'étend beaucoup plus en profondeur dans les terres qu voisines, est d'un sol très fertile, et au delà de ce fief le t vue, tant vers le sud que vers l'est et l'ouest, paraît être l giculture. Le manque de chemins est, dans mon opini cipales causes qui retardent le défrichement, non seul dont je viens de parler, mais encore de toutes les autres bout de la côte du sud.

Les lois du pays pour faire ouvrir les chemins sont-elle à l'avancement ou à la formation de nouveaux établis vous paraissent préjudiciables ou insuffisantes, quels ser d'y remédier ? Oui, assurément ; elles sont non seuleme à la formation de nouveaux établissemens, mais elles au nière sensible les progrès des établissemens déjà faits. Je considère les lois des chemins actuellement existantes judiciables à l'avancement du pays, en zutant que le coût baux pour l'ouverture des nouveaux chemins est énorm moyens des habitans, que cette dépense jointe aux trav l'ouverture des chemins, est un fardeau qui écrase les que même dans les terres défrichées, un procès-verbal fait trente lieues de Québec, (je prends Kamouraska pour ex pas moins de vingt livres et quelques shelings, y compris l et l'allouance faite à l'Inspecteur. J'ai l'honneur d'être,

Monsieur,

Votre très-obéissant serviteur,

ALEX. FRASER.

Major Elliot.

Vendredi, 19 décembre 1828.

J. Bte. Taché, Jean Baptiste Taché, Ecuyer, Notaire Public, de Kamouraska, a été appelé et examiné:

19 Décembre

Voulez-vous nous dire si le manque de chemin pour parvenir aux terres propres à la cultures et faire de nouveaux établissemens, retarde beaucoup dans toute la côte du sud les progrès de l'agriculture et l'établissement de cette partie du pays, et savez-vous si la qualité des terres dans les profondeurs y est bonne en général? J'ai entendu dire à plusieurs chasseurs qui ont parcouru les terres qui se trouvent derrière les seigneuries de Ste. Anne Lapocatière, Rivière Ouëlle, Fief St. Denis et Kamouras-

ka, entre ces seigneuries et la rivière St. Jean, que cet espace de terrain était généralement bon et très propre à l'agriculture. Le fief St. Denis qui a été exploité dernièrement par un arpenteur, qui l'a mesuré et qui s'étend beaucoup plus en profondeur dans les terres que les seigneuries voisines, est d'un sol très fertile, et au delà de ce fief le terrain à perte de vue, tant vers le sud que vers l'est et l'ouest, paraît être très propre à l'agriculture. Le manque de chemins est, dans mon opinion, une des principales causes qui retardent le défrichement, non seulement des terres dont je viens de parler, mais encore de toutes les autres terres en bois de bout de la côte du sud.

Les lois du pays pour faire ouvrir les chemins sont-elles préjudiciables à l'avancement ou à la formation de nouveaux établissemens, et si elles vous paraissent préjudiciables ou insuffisantes, quels seraient les moyens d'y remédier? Oui, assurément; elles sont non seulement préjudiciables à la formation de nouveaux établissemens, mais elles arrêtent d'une manière sensible les progrès des établissemens déjà faits. Je m'explique. Je considère les lois des chemins actuellement existantes comme très préjudiciables à l'avancement du pays, en tant que le coût des procès-verbaux pour l'ouverture des nouveaux chemins est énorme, en raison des moyens des habitans, que cette dépense jointe aux travaux à faire pour l'ouverture des chemins, est un fardeau qui écrase les jeunes habitans; que même dans les terres défrichées, un procès-verbal fait à la distance de trente lieues de Québec, (je prends Kamouraska pour exemple) ne coûte pas moins de vingt livres et quelques shélings, y compris les frais de greffe et l'allouance faite à l'Inspecteur. Que cela a lieu pour le moindre chemin qu'on veut faire tracer; que le pouvoir donné par la loi aux Grands-Voyers est beaucoup trop étendue; qu'il n'y a point de stabilité dans leurs jugemens; que ce qu'un Grand-Voyer fait aujourd'hui, son successeur le défait demain, et il est à ma connaissance qu'un chemin tracé dans une terre cultivée, par un Grand-Voyer, dans un espace de moins d'une demie-lieue, a été changé deux à trois ans après par son successeur; ce qui entraînait une vingtaine de propriétaires dans une dépense de plus de quarante louis à donner aux Grands-Voyers pour les deux procès-verbaux, outre la perte du tems employé à défaire et refaire les ponts et chemins. Je pense que le moyen de parer à tous ces inconvéniens serait ou de donner un salaire fixe au Grand-Voyer, et ne lui permettre de retirer aucun honoraire des habitans, ou de convertir l'office de Grand Voyer dans une office de record pour chaque comté; et que les chemins nouveaux fussent tracés à l'avenir par un comité de cinq habitans de chaque paroisse, nommé par une élection annuelle dans la manière dont on élit maintenant les Sous-Voyers, lesquels fixeraient les chemins demandés, en dresseraient procès-verbal, et le ferait passer au gardien du record qui serait autorisé à en délivrer copie à qui en demanderait.

Mr. Augustin Béalantyne, Député Arpenteur Provincial, étant appelé, a informé votre comité: Qu'il a été employé pour faire des arpentages dans les derrières des paroisses de Kamouraska et de la Rivière Ouëlle, jusqu'à la profondeur d'environ six lieues du fleuve; que le terrain y est planche, d'une bonne qualité, et pourrait faire de bons établissemens: on pourrait facilement ouvrir des communications pour aller rejoindre la rivière St. Jean dans cet endroit; que les terres des seigneuries voisines sont en grande partie concédées, excepté celles du fief St. Denis, où il y a encore des concessions à faire, mais pas en quantité suffisante pour la demande et le besoin des habitans. La grande difficulté pour ouvrir ou fournir de nouveaux établissemens, c'est le manque de chemins. Le système actuel de faire ouvrir des chemins est si dispendieux, qu'il est impossible à de nouveaux habitans d'en supporter les frais avec les rentes qu'ils sont obligés de payer pour leurs terres; qu'il croit qu'un moyen facile de former un nouvel établissement serait d'ouvrir une grande route à travers de bonnes terres, ce qui est impossible d'effectuer avec les lois des chemins existantes; qu'il croit qu'il conviendrait d'ouvrir dans la côte du sud des grandes routes à travers les terres à établir, à la distance de dix lieues, ou dans tous les endroits où il se trouvent des terres convenables pour faire des établissemens. D'après les renseignemens qu'il a eus, il croit que la branche principale de la rivière St. Jean se trouve distante du fleuve à l'Islet d'environ vingt lieues; que derrière la Rivière Ouëlle il ne croit pas qu'il y ait plus de quinze lieues.

Appendice
(P.P.)

Mr. A. Béalantyne.

Anthony Gilbert Douglas, écuyer, ci-devant capitaine dans le régiment Fencible Canadien de Sa Majesté, a été appelé et examiné:

A. G. Douglas, Ecr.

Avez-vous eu occasion, et en quelles circonstances, de vous mettre au fait des moyens pratiques que l'on employe pour ouvrir des chemins à travers les bois dans ce pays? Je travaille depuis six ans à faire des chemins dans les bois. Quand les arbres sont débités, les Canadiens ne se servant plus de bœufs perdent du tems à tasser. Les bœufs serviraient aussi à labourer les parties du chemin qui en sont susceptibles, ce qui détruirait les fardoches, et même des racines assez considérables.

Quel est le prix moyen de la dépense pour ouvrir des chemins à travers les terres; et quel est le système que l'on y adopte; y a-t-il quelques chemins dans les environs de votre résidence qui exigent des travaux ou qui devraient être ouverts, ou dont les réparations et l'ouverture seraient avantageux à la province?

Le prix moyen des travaux est difficile à fixer, vu la variété des circonstances. Je crois qu'on peut le porter de 80 à £130 la lieue. Dans les bois les chemins ne devraient avoir que 16 pieds de large, le vent y ferait moins de dégât; le découvert qu'on exige, souvent coûte plus qu'il n'est utile. Les savannes ne devraient jamais être pontées de grosses

Appendice
(P.P.)

pièces. Plusieurs lits de petits arbustes, alternativement couverts de lits de terres tirées des fossés, rempliraient mieux le but qu'on se propose. Le chemin de Saint-Grégoire a besoin d'une aide pour être entretenu. L'automne dernier, cette année entière ont été extrêmement pluvieux; les townships qu'il traverse (pour des causes qu'il serait trop long de détailler) ne sont que faiblement établis. On espère donc que le public viendra au secours du public. Une communication de 40 à cinquante arpens depuis l'extrémité de la route du Saint-Esprit dans la paroisse de Nicolet au chemin de Saint-Grégoire est ici recommandée. Quelques milles (douze m'at-on dit) ouverts dans le township d'Hertford, donneraient une communication avec Portland.

Détaillez particulièrement les avantages publics qui résulteraient par suite de l'ouverture des chemins en question ?

La rivière prend généralement plutôt à la Pointe aux Sables que devant les Trois-Rivières. Les habitans des townships auraient le choix des deux routes, Nicolet et la Baie. D'autres paroisses du côté du nord pourraient en tous temps aller trafiquer dans les townships. La communication avec Portland offre un grand avantage à toute la province. Les douze milles ouverts dans Hertford nous mettraient dans les beaux chemins de nos voisins. Le port de Portland ne gèle jamais. Les paquebots d'Angleterre y arriveraient aussitôt qu'à New-York, et se trouveraient plus près d'Halifax et du Nouveau-Brunswick. La distance de Portland aux Trois-Rivières n'excède pas 225 milles. Les dépêches du gouvernement, les marchands et les voyageurs arriveraient plutôt partout; sans compter l'avantage de nouvelles branches de commerce pour les townships, et les deux bords du Saint-Laurent.

Quelle serait la dépense probable ?

Ne connaissant ni le terrain d'Hertford ni même celui du bout de la paroisse de Nicolet, je demande de référer à ma seconde réponse.

A votre avis, quel est le mode le plus avantageux que l'on devrait suivre dans l'emploi des deniers à ces fins ? L'ouvrage devrait-il être donné par contrat, ou serait-il plus avantageux que le chemin fût ouvert sous la surveillance de quelques personnes de capacité que l'on emploierait et payerait à cette fin; détaillez amplement vos raisons quand aux avantages ou désavantages que présentent ces deux méthodes respectivement ?

Les commissaires, suivant la loi, offrent les contrats au rabais, mais ce rabais coûte souvent fort cher, car tout contracteur doit s'assurer de quarante par cent de profit, puisqu'il risque d'être ruiné par un procès lors de la réception de son chemin. Si le contracteur prend un long bout de chemin, il lui faudra des sous-contracteurs qui raisonneront comme lui. Voilà ce qui explique pourquoi les £58,000 votés pour les communications intérieures ont à peine produit un petit chemin dans toute la province. Le second moyen est donc préférable; mais il y a aussi un danger en cela. Il faudrait placer un homme convenable à la tête de ce nouveau département, avec injonction d'employer les officiers de milice dans les paroisses, et de bons habitans pour les aider et ils seraient payés, mais il lui fourniraient de bons et respectables travailleurs à la journée ou au mois en se nourrissant eux-mêmes, dans certains cas on pourrait leur allouer le transport de leurs provisions. Le chef de ce département ne devrait avoir aucun argent en main. Il tirerait sur le receveur-général, ou tout autre individu, aussi souvent que les travaux le requerraient, mais toujours sur les affidavits ou comptes assermentés des aides qu'il aurait employés.

L'honorable Louis René Chaussegros De Léry, membre du conseil législatif, a été appelé et examiné.

L'honorable
L. R. C. De
Léry.

Le chemin de Longueil à Chambly est-il une route très fréquentée et par qui?—Ce chemin est le débouché de plus de dix paroisses et des townships qui ont leur sortie par les montagnes de Rougemont de Maska et par conséquent est un des plus fréquentés.

Quelles portions en sont chemins de front, et quelles portions en sont chemins de route?—Ce chemin a quatre lieues $\frac{1}{2}$ de long et presque partout chemin de front; à l'exception de trois routes qui forment ensemble environ trois quarts de lieue.

Celles-ci pourraient-elles être empierrées par les personnes obligées à leur entretien, ou une aide publique est-elle absolument nécessaire pour rendre cette route bonne en tous temps de l'année?—Je ne pense pas que ces routes puissent être empierrées aux frais des habitans qui y sont assujettis sans une aide publique. Un chemin de barrière pourrait seul rendre ces routes bonnes dans tous les temps de l'année.

Les parties du chemin qui sont chemin de front pourraient-elles être empierrées par les personnes obligées à leur entretien ou une aide publique est elle absolument nécessaire pour rendre cette route bonne en tous temps de l'année?—Il y a dans cette partie (le chemin de front) deux savannes d'environ 40 arpens de longueur, qui, tous les printemps, sont lavées par les eaux et souvent dans l'été par celles des orages qui enlèvent la terre que l'on y met tous les fois qu'on en répare le chemin. Une aide publique, ou un chemin de barrière serait dans mon opinion le seul moyen de rendre tout ce chemin bon roulant.

Quelle étendue de chemin de route y a-t-il sur le chemin public entre la Côte des Neiges et l'Abord à Plouf, et combien d'intéressés sont chargés de son entretien.—Entre la Côte des Neiges et l'Abord à Plouf,

ce chemin est une continuation de quatre à cinq routes de 30 arpens chacune, réunies ensemble par une équerre d'environ 10 arpens formée par une partie du chemin de la Côte de Vertu dans Saint-Laurent. Je ne puis dire dans le moment combien d'intéressés y sont assujettis n'ayant pas par devant moi les procès verbaux qui les établissent; la part de chacun est cependant assez courte et je pense qu'avec une aide publique, l'on pourrait parvenir à les empierrer.

Quelle est l'étendue de chemin de front dans le même espace.—Six à huit arpens sur le chemin de front de Vertu, et la rue du village de Saint-Laurent qui est regardé comme chemin de front à la charge des habitans du dit village.

Quel serait le meilleur moyen de rendre les chemins de route en général meilleurs qu'ils ne le sont.—Le meilleur moyen de rendre les routes en général bonnes serait dans mon humble opinion d'abord de les élargir jusqu'à 30 pieds; ces routes n'étaient originaires que de vingt pieds, les fossés en ont mangé de 7 à 8 pieds, de sorte que dans ce moment il ne reste pour le roulage que 12 à 15 pieds. Après cet élargissement, il faudrait que la loi rendit obligatoire ce qui n'est maintenant qu'un choix des intéressés, c'est-à-dire, l'entretien des routes, et ce par un amendement au bill des chemins, qui permet aux intéressés de donner l'entretien de leurs routes respectives au rabais, à des entrepreneurs. Le sous-voyer alors n'a que l'entrepreneur à surveiller. Je dois observer que cet amendement à l'acte des chemins doit expirer le premier mai prochain.

Quelle est l'étendue de chemin de route et de chemin de front sur la voie publique dans l'Île de Montréal entre la cité et les traverses dans la paroisse du Sault aux Recollets? L'étendue du chemin entre la cité de Montréal et les traverses dans le Sault aux Recollets est à peu près la même que celle entre la même cité et l'Abord à Plouf, savoir, d'environ deux lieues et un quart, dont environ trente arpens soit en montant soit en descendant la Rivière des Prairies pour gagner les différentes traverses, sont chemins de front.

Quel nombre d'intéressés sont chargés de ces routes? Je ne puis donner avec précision le nombre d'intéressés obligés à ces routes, n'ayant pas les répartitions devant moi; mais à l'exception des parts de la route dans la paroisse de Montréal, appelées, je crois, Route de la Visitation, à laquelle les habitans du Sault aux Recollets sont assujettis, les parts dans les autres ne sont pas très fortes.

Quelles parties pourraient être empierrées aux frais des intéressés, et quel serait à peu près pour eux le montant de la dépense? Quelques parties ne peuvent-elles l'être que par une aide publique, et dans quelle étendue? Je n'ai aucune expérience dans la construction des chemins à a McAdam; ainsi je ne puis dire combien pourrait coûter l'empierrement de ce chemin qui est déjà trop pierreux. Il faudrait certainement une aide publique pour tout ce chemin.

Quelles parties de la route entre l'église de St. Martin et la Traverse pourraient être empierrées aux frais des intéressés, et quel serait à peu près pour eux le montant de la dépense.—Quelques parties ne peuvent-elles l'être que par une aide publique et dans quel étendue.—Je ne connais dans cette route aucune partie qui pourrait être empierrée aux frais des intéressés, encore moins combien cela pourrait coûter. Toute cette étendue devrait l'être par une aide publique ou par répartition d'argent sur toute la paroisse, ce qui ne plairait certainement pas à ses habitans.

Lundi, 22 Décembre, 1828.

Alexandre Joseph Wolff, Ecuyer, a comparu de nouveau, et a été entendu :

A. J. Wolff,
Ecuyer.

22 décembre.

Avez-vous en votre possession des Rapports ou Copies de Rapports des Comptes ou Copies de Comptes, que vous avez relativement au Chemin du Portage de Temiscouata, et s'il en est ainsi, voulez-vous bien en donner communication au Comité? J'ai envoyé mes Comptes au Major Elliot; J'en ai des Copies à ma résidence à Val-Cartier. Le document que je produis maintenant est le Rapport que je fis le 25 Août, 1826, à Son Excellence le Gouverneur en Chef, au sujet des travaux qui ont été faits au Chemin que j'avais à surveiller. Je produis au Comité les Lettres qui me furent adressées par le Colonel Frazer au sujet du Chemin en question.

(Le Témoin a produit ces documens, et ils ont été lus comme suit:)—

Rapport des Travaux qui ont été faits au Portage du Lac Temiscouata, depuis le 15 Juin jusqu'au 19 Août, 1826, sous la surveillance de A. J. Wolff, Lieutenant à demi-Solde au 60e Régiment, nommé par Son Excellence le Gouverneur en Chef, comme Commissaire pour les Travaux susdits:

Québec, 25 Aout, 1826.

Le 15e Juin.—Je fis partir un parti de Travailleurs du Fleuve Saint-Laurent pour se rendre à la Rivière Verte, sous les ordres d'un

d'un Assistant Inspecteur ; je le suivis le lendemain avec un autre parti, et à mon arrivée, je trouvai que la partie du Chemin conduisant au Pont avait besoin de nouveaux pontages et d'autres réparations. Je commençai les travaux dans cet endroit. Je fis mettre le Pont dans un état parfait, parcequ'il était très dangereux ; je me rendis alors avec une deuxième escouade au Pont sur le Ruisseau Morneau ; que l'on me dit être presque impraticable, vu qu'une femme (Madame Macdonald) avait failli s'y casser une jambe. Je trouvai qu'il était nécessaire d'y rebâtir le pont tout à fait à neuf ; après quoi, j'employai tout les travailleurs sur le Chemin entre ces deux Ponts, renouvelant et raccommodant tous les Pontages qui sont nombreux, ôtant et aplanissant des morceaux de rochers et les autres embarras, et je fis ouvrir le Chemin partout où cela était nécessaire. En me rendant de la maison de côté à la Rivière Verte, quoique ce Chemin soit considéré praticable pour des voitures à roues ; mais en y voyant le mauvais état des pontages qui sont par conséquent dangereux au public, et après y avoir employé les hommes à remettre les deux Ponts et le Chemin qui se trouve entr'eux, de manière à prévenir les accidens, j'employai les travailleurs à réparer les pontages sur cette partie du Chemin, vu qu'il avait été trouvé impraticable de transporter les provisions et les outils pour le parti des travailleurs. Je jugeai aussi qu'à partir du Pont de la Rivière du Loup, jusqu'à la Rivière Verte, le Chemin avait grand besoin d'être élargi, ce que je ne fis pas, néanmoins, pour les raisons suivantes :—Considérant les travaux qu'il y avait à faire sur tout le Portage, particulièrement depuis la Petite Fourche jusqu'au Lac, et la somme limitée qui avait été accordée, je continuai dans l'intention de parcourir le Chemin dans toute son étendue, et d'y faire faire les travaux les plus pressés ; et alors, à mon arrivée de constater la somme qui avait été dépensée, de manière qu'à mon retour je pus également répartir la balance ; autrement j'aurais pu être induit en erreur en dépensant une plus forte proportion des deniers sur une partie du Chemin plutôt que sur une autre.

Je retournai alors au Chemin qui est au-dessus du Ruisseau Morneau ; pendant une étendue d'environ un mille, il est de largeur suffisante, mais couvert de morceaux de rochers ; je les fis ôter ou briser, et j'en fis remplir les trous avec des pierres plus petites, du gravois du sable ou de la terre. De là à la Savanne des Roches, distance d'environ deux milles, le Chemin était bien embarrasé, et on l'ouvrit de la largeur de 24 à 30 pieds ; tous les pontages qui sont nombreux et qui se trouvent ici d'une étendue considérable, furent renouvelés ou raccommodés ; on y ouvrit des fossés et des saignées où cela était praticable.

Je fis tous mes efforts pour rendre le Chemin de la Savanne des Roches praticable pour des voitures à roues, en brisant les plus grosses pierres, nivelant la surface avec les fragmens, et couvrant presque tout le centre avec des gravois et du sable, et je puis dire que je réussis, car le Colonel Fraser arriva à la Rivière Saint-François deux ou trois jours après, avec une charette qui avait une charge de quatre quintaux. Je fis ouvrir le Chemin de la largeur d'environ vingt-cinq pieds.

De la Savanne des Roches au pont sur la Rivière Saint-François, distance d'environ un mille, le Chemin était rempli de grosses pierres, on en ôta plusieurs et on cassa les autres. Les cavités furent remplies avec des gravois et du sable, et le Chemin fut ouvert d'une largeur considérable. Je trouvai le Pont qui est sur cette Rivière très-dangereux ; il inclinait au sud par la foiblesse de la lambourde de ce côté ; je fis défaire le Pont, et y fis mettre une nouvelle lambourde et je fis couvrir le Pont en cèdre neuf.

De la Rivière St. François à la Grande Fourche, le Chemin au pied de la Montagne est très-marécageux, et tous les Pontages en furent renouvelés ou raccommodés, ainsi que les circonstances l'exigeoient ; on y fit des fossés et des saignées pour égoutter le Chemin ; en arrivant vers le commencement de la montée, on rencontra de gros morceaux de rochers, qui furent ôtés, malgré qu'il y eut quelques uns de grosseur considérable ; les cavités qu'ils occupaient furent remplies avec des gravois et des terres. Le Chemin qui se trouvait bouché par les broussailles fut ouvert jusqu'à la largeur de 24 à 30 pieds.

Au Ruisseau Salop les Pontages étaient si mauvais, qu'il fallut y placer des nouvelles lambourdes, le Chemin étant bien marécageux, on les renouvela, de même qu'un Pont en neuf sur le Ruisseau. De là à la Grande Fourche, environ 1½ milles, on ouvrit le Chemin de la même largeur que ci-devant, et on refit à neuf un Pontage d'une étendue considérable. Le Pont sur la Rivière fut aussi réparé. A partir de la Grande Fourche jusqu'au pied de cette Montagne, on fit des Pontages à neuf, on ouvrit des fossés et des saignées pour faire écouler les eaux de dessus le Chemin ; et comme toute partie paraissait être constamment couverte d'eau, on se servit de gravois et de terre pour en élever le centre, et par ce moyen faire refluer les eaux dans les fossés. Les morceaux de rochers furent enlevés, et cela pendant tout l'espace du

Chemin jusqu'à la Petite Fourche, on travailla aussi à l'élargir, vu qu'il était rempli d'embarras ;—on nettoya un grand nombre de fossés, et l'on fit des saignées par intervalles d'environ un quart de lieue. Les Pontages y furent renouvelés, et d'autres raccommodés. On couvrit à neuf le Pont de la Petite Fourche, en bois de cèdre.

Au delà de la Petite Fourche, le Chemin dans l'étendue d'une demie lieue est en Savanne ; conséquemment il fallut y faire divers fossés et saignées ; les Pontages furent aussi renouvelés et raccommodés. Comme ci-devant, le Chemin fut élargi jusqu'à environ 30 pieds. Je trouvai ici, même dans cette saison de l'année (très-avancée du mois de Juillet) tous les Pontages à flot ; on fit les mêmes opérations, ainsi que les circonstances l'exigeaient, jusqu'au pied de la Montagne Buard. On construisit un Pont neuf sur le Marais Sangue. J'eus occasion de remarquer l'utilité des fossés et des saignées, car le lendemain du jour que nous avions fini les travaux au Marais dont je viens de parler (en autant que les circonstances pouvaient le permettre) nous essayâmes une forte orage et deux heures après le Chemin était parfaitement asséché. Il devint nécessaire d'élargir considérablement le Chemin tout le long depuis la Petite Fourche jusqu'au pied de la Montagne, pour que le Soleil, vu que le terrain est en Savanne, ainsi que les fossés et les saignées pussent l'assécher ; aussi en y donnant un libre accès aux vents.

Depuis le bas de la Montagne Buard, pendant l'espace d'environ deux milles, le Chemin était rempli de morceaux de rochers ; il y en avait d'une telle grosseur, qu'il fut impossible de les enlever. Dans quelques occasions je me servi du feu, que je fis allumer sur les rochers, et lorsqu'ils étoient rouges, (les travailleurs en attendant élargissaient le Chemin) j'y faisais jeter de l'eau ; alors ils se cassoient plus facilement, et on aplaniissait ainsi le Chemin. Je trouvais que cette méthode était plus expéditive que d'y faire jouer les mines ; vu que l'on trouve du bois sec partout, et qu'il n'en résulte aucun délai ni perte de tems. Les morceaux servirent à remplir les lieux bas et marécageux, les Pontages furent renouvelés ou raccommodés, ainsi que les circonstances l'exigeaient, et le Chemin fut élargi comme ci-devant. J'évitai en parti, une descente très-à-pic et rocheuse en faisant dévier le Chemin tant soit peu au Sud ; cette partie était un peu basse, mais je la fis remplir avec du gravois et des terres encaissées par des pièces. En continuant je rencontrais quelques Pontages qui étoient inutiles, parcequ'il fallait égoutter le Chemin par des fossés et des saignées je les fis enlever. De là jusqu'à la Montagne des Roches on continua à élargir le Chemin, à enlever les grosses pierres, et les arbres abattus par le vent ; on renouvela quelques Pontages, et on en raccommoda d'autres.

La Montagne des Roches est regardée comme étant le plus mauvais endroit du Chemin du Portage, quant au mode de transport actuel ; car dans l'espace d'un mille il est rempli de morceaux de rochers de toutes les dimensions, et il s'en trouve d'une telle grosseur que l'on ne peut pas penser à les enlever ; mais je fis élever le Chemin au niveau de ces rochers, et j'en fis enlever et casser d'autres, autant que les circonstances le permirent ; les morceaux servirent à niveler les lieux bas. Cette partie du Chemin a été auparavant (et paraît avoir été constamment) inondée par les sources sortant des rochers ; je réussis à les détourner du Chemin par le moyen de saignées, et j'en changeai le cours. Les eaux de ces sources sont considérables, car je trouvai des Pontages d'une grande étendue entièrement à flot dans leurs eaux, quoiqu'ils en fussent éloignés d'environ une demie lieue.

Avant de tenter quelques améliorations à la Montagne des Roches, je fis couper un Chemin vers le S. S. Est de cette Montagne, afin de l'éviter, ce qui aurait en même temps raccourci le trajet d'environ 4 arpens ; mais cette nouvelle route n'a pas répondu à mon attente, et ne pourra être passable qu'aux gens de pied pour le présent, car l'extrémité en est trop à-pic ; mais je n'ai aucun doute qu'à une époque future, on pourra avec peu de frais en faire un Chemin bien préférable à l'ancien Chemin. Depuis la Montagne des roches à aller au Pont de la Rivière du Petite Lac le Chemin, à quelques exceptions près, est en savanne, et est naturellement couvert de pontages, qui furent réparés et les fossés nettoyés. On y fit aussi des Pontages additionnels, et on ouvrit le Chemin d'une largeur considérable. Le Pont sur cette Rivière fut couvert de cèdre neuf ; delà jusqu'à la Rivière Ha! Ha! je remarquai les mêmes incon vénients, (à l'exception que le Chemin n'a pas tant de savannes,) et on eut naturellement recours aux mêmes améliorations ; le Pont sur cette Rivière fut couvert à neuf, vu qu'il avait été incendié. La montée, aussitôt après que l'on a traversé le Pont, était très-à-pic (quoique courte) et l'on me dit très-dangereuse en hyver, je la fis améliorer autant qu'il est praticable pour le présent, en déviant en zig zag, et je suis d'opinion qu'on trouvera que c'est maintenant une montée et une descente très-faciles.

Depuis

Appendice
(P. P.)

Depuis la Rivière Hâ-Hâ jusqu'au Lac, ce Chemin fut ouvert selon que la nature du terrain le demandoit ; en plusieurs endroits il fallut ajouter de nouveaux pavés, faire de nouveaux fossés et décharges, et d'autres endroits demandèrent une réparation complète ; mais j'ai le chagrin d'avoir à dire que cet ouvrage ne fut fait qu'à la hâte et en partie, car la fenaison approchant, les travailleurs se rendirent chez eux, et je n'en pus garder que quelques-uns pour continuer l'ouvrage, sans préjudice pour l'intérêt public, et j'eus raison de me féliciter d'avoir antérieurement engagé une partie de travailleurs du Lac pour venir me trouver, afin d'accélérer l'ouvrage ; sans cela cette partie du chemin, distance d'environ une lieue, auroit été beaucoup moins améliorée.

Je crois devoir dire que, quoiqu'il ait été beaucoup fait à la Savanne des Roches, cette partie du Chemin demande encore de grandes améliorations pour la rendre praticable pour des voitures à roues. Quelques-uns des habitans du Portage m'ont rapporté que le Pont de la Rivière du Loup demandoit beaucoup de réparations, et que si elles n'étoient pas faites cet Automne, le Pont étoit exposé à être brisé le Printemps prochain.

D'après les feux qu'ont couru dans les bois du Portage, on doit s'attendre à ce que le Chemin sera bien embarrassé par la chute des arbres abattus par le vent ; le feu ayant pénétré avant dans la terre et conséquemment bien endommagé les racines ; et l'on doit aussi s'attendre à ce qu'il ait eu beaucoup de pavage de détruit.

(Signé A. J. WOLFF.

Supplément au Rapport (d'Août 1826), des travaux faits sur le Chemin du Portage, au Lac Temiscouata.

Le 18 Septembre, je repris les travaux à la Rivière Verte, et commençai par réparer les jetées qui avoient été beaucoup endommagées par les feux des bois, par nettoyer le Chemin des arbres que le vent y avoit renversés, et je fis d'autres améliorations que j'avois remis jusqu'après mon retour du lac, lorsque j'y allai dans l'Été, ce que je ne pus faire, parce que les gens m'avoient laissé à l'approche des Moissons.

La Lieue des Roches étant la plus mauvaise partie du Chemin, j'y appliquai particulièrement mon attention, et j'employai mes gens avec leurs voitures et leurs chevaux à transporter, pendant près de quinze jours, du sable et du gravier, qu'on ne pouvoit se procurer qu'à une distance considérable, et il en falloit un grand nombre de voyages pour couvrir le milieu du Chemin (disons trois pieds de large et un d'épais) dans toute la distance. J'élargis aussi le chemin, en ôtant et minant les roches, pour le rendre praticable aux voitures à roues, et je fis faire des canaux où les circonstances le permettoient.

De là je continuai les ouvrages, ôtant les embarras ou réparant les jetées et les ponts détruits ou endommagés par le feu, qui avoit causé de grands dommages dans toute la longueur du chemin. Je le débarrassai de tous les bois qu'y avoit jetés le vent, et quelques jours de pluie m'ayant donné occasion de remarquer les endroits où l'on pouvoit faire avec avantage des fossés et des canaux, j'en fis creuser.

A mon arrivée au Pont Ha ! Ha ! auquel endroit à aller jusqu'au Lac, le chemin n'avoit pas été fini dans l'Été, les gens m'ayant laissé avant que je m'y attendais, je fis réparer les fossés et les canaux et ôter d'autres embarras, autant que les circonstances me le permirent, car cette partie avoit besoin de beaucoup de réparations, et d'autant plus que les chauffées avoient été considérablement endommagées par le feu, et le chemin obstrué par un grand nombre d'arbres qui bouchoient les fossés et les canaux.

En approchant, et lorsque je fus arrivé au lac, je fus informé par tous les Voyageurs sans exception, que le chemin depuis le Pont de la Rivière du Loup jusqu'à la Rivière Verte étoit presque impraticable par la chute des arbres causée par le feu et les gros vents qui étoient venus ensuite, et par le mauvais état des Chauffées ; ce qui me porta, quoique sans autorité, à le faire nettoyer et à renouveler et réparer les Chauffées.

J'ai le plaisir de dire, d'après ma propre observation, que depuis que le Chemin est réparé, tous les Voyageurs qui ont passé par le Portage, préfèrent maintenant les voitures à roues aux menoirs, et qu'on se sert bien rarement de ces dernières, et cela par des gens qui étant rendus à leur destination, désirent s'en retourner sans charge :

On doit s'attendre à ce que les feux qui ont ravagé les bois et consumé le sol bien avant au dessous de sa surface, et qui ont conséquemment bien attaqué les racines, feront suivis de la chute de beaucoup d'arbres.

(Signé) A. J. WOLFF.

Etat actuel du Portage de Temiscouata, et méthode proposée pour l'améliorer,

QUEBEC, 10 Août 1828.

Après un examen attentif du pays de chaque côté du Chemin du Portage, pendant huit jours, et avoir traversé pendant ce temps un espace de cinquante à soixante milles à travers les bois, je suis d'opinion, vu la grande étendue de terrain marécageux et les hautes montagnes que nous avons passées pendant ce temps, qu'il serait bien mieux de continuer le chemin sur la ligne actuelle, que de lui donner une autre direction. Mais il faut me permettre d'ajouter en même temps, qu'après l'effeuillage on pourroit éviter nombre de mauvais pas, que je ne pus éviter probablement, que parce que je ne pouvois voir de tous côtés qu'à quelques verges de distance.

Prenant donc comme un point décidé, qu'il feroit mieux de continuer le Chemin actuel, je vais entreprendre de faire quelques remarques sur son état actuel, en y joignant les suggestions qui, je crois, pourroient rendre à son amélioration ; mais je considère qu'il n'est pas peu important de remarquer que, quoique le Portage soit maintenant dans un état dont on ne peut se former une idée, sans y avoir été, les Marchands de Madawaska y font passer leurs Marchandises, plutôt que de descendre par la Rivière St. Jean à Fredericton, dont ils ne peuvent faire le voyage en moins de dix jours, aller et venir, tandis qu'ils peuvent aller à Québec, dans le même ou en moindre temps, avec l'avantage d'avoir leurs Effets à bien meilleur marché.

L'Etablissement de Madawaska se compose maintenant, selon Mr. Ringuet, Curé du lieu, de cent quarante Familles, qui prises à un calcul moyen de cinq ou six personnes chacune, donneront une population de près de huit cents âmes ; je ne crois pas que cette estimation soit portée trop haut ; car ayant profité d'un Dimanche que j'étois là pour aller à l'Eglise, je la trouvai, quoiqu'elle soit d'une grandeur considérable, aussi remplie qu'elle pouvoit l'être.

A partir de la maison de Coté, sur le bord du St. Laurent à aller à la Rivière Verte, distance de neuf milles, le Chemin est passable pour des voitures portant environ quatre quintaux ; mais de là jusqu'à celle de Long, vingt sept milles, le seul mode de transport est de traîner sur des menoirs ou espèce de train, formé de deux pièces de bois allongées unies par trois traverses, avec quatre batons pour retenir la charge ; une extrémité de chacune des pièces est suspendue au harnais d'un Bœuf ou d'un Cheval, et les deux autres extrémités traînent sur la terre : sur cette machine avec laquelle on passe généralement tout le Portage, on transporte en deux jours, et un pour revenir, une charge de 2 à 2½ quintaux, pour la somme de 4 à 5 piastres. On se procure aisément des habitans pour entreprendre le voyage, mais ils font tout ce qu'ils peuvent pour en imposer aux Etrangers ; et ils me demandèrent 8 à 10 piastres chacun, quoique je n'en paya que 5, et que je les eue retenus sur la route.

La distance entre le Fleuve St. Laurent et la Rivière Verte, 9½ milles par le Chemin, mais pas plus de trois lieues françaises en ligne directe, appartient à la Seigneurie de la Rivière du Loup, et tous les Lots dans cet espace étant concédés, à l'exception de deux ou trois, les Censitaires sont obligés par la Loi d'ouvrir et de réparer le Chemin, chacun sur le front de son Lot, et le Chemin dans cette distance étant déjà praticable pour les voitures portant entre quatre et cinq quintaux, il paroît moins nécessaire de dépenser de l'argent en cet endroit, que sur les vingt-sept milles du Portage.

Il est bon cependant de remarquer, que depuis la Nouvelle-Ecossé jusqu'aux premières habitations de la Rivière Verte (cinq milles) le Chemin n'a jamais été ouvert plus que quelques pieds de large, et que maintenant les branches se croisent dans la plus grande partie de cet espace, ce qui à la vérité est le cas dans presque toute la longueur du Portage, excepté lorsqu'on arrive aux défrichemens, circonstance suffisante par elle seule pour l'empêcher d'être un bon Chemin.

Depuis la Rivière Verte à aller jusqu'à un peu au de là du 13e milles (3½) le chemin est couvert de fragmens de rocher, quelques

ques-uns d'une grosseur considérable, qui demanderoient à être emportés ou minés, et l'un et l'autre est facile; cet espace, aussi bien qu'entre le 14e et le 16e mille, porte bien peu de bois, et le peu qu'il y a est généralement du Pin et du Cèdre nain, qu'on pourroit couper, dans cette partie du Chemin, de manière à lui donner une largeur suffisante, (disons trente pieds) à très peu de frais.

En plusieurs endroits les Ponts sont faits de Pin et de Sapin mêlés, et j'ai remarqué, presque partout sans exception, que tandis que le Sapin étoit complètement pourri et réduit en pièces, le Cèdre étoit presque aussi entier que le jour qu'on l'avoit posé.

Il est nécessaire de dire que les parties pontées sont en plusieurs endroits tellement brisées, qu'il y a de quoi s'étonner qu'un cheval puisse y traîner une Charge; car bien qu'on ait ponté à neuf plusieurs endroits du Chemin, il n'y a pas plus de trois ou quatre ans, les Ponts ayant été faits de Sapin (tandis qu'il y avoit du Cèdre tout auprès) et par endroits de morceaux trop petits, ils ne pouvoient durer long-temps. La conséquence en a été qu'il y a en plusieurs endroits, espaces de 5 à 10 pieds de large, sans une seule pièce de bois; en d'autres endroits les morceaux sont éloignés et épars, de sorte qu'on ne peut s'empêcher d'admirer la sagacité et le soin des pauvres animaux à qui la pratique a appris à se tirer d'endroits aussi difficiles. Aussi je crois qu'il arrive rarement, qu'une charge passe le Portage, sans que le cheval s'embarque fréquemment, même dans les plus grandes sécheresses, de manière qu'il faut que le Conducteur le dételle souvent pour qu'il puisse s'en retirer, décharge le train, et arrange tout du mieux qu'il peut.

Quant à la Savanne des Roches, qui est pontée l'espace de 900 à 1000 verges, si l'on n'avoit en vue que de la réparer pour le mode de transport actuel, le moyen seroit de nettoyer les fossés et de mettre des morceaux de Cèdres à la place de ceux qui sont pourris. Mais comme les meilleurs Chemins construits de cette manière sont encore bien mauvais, le seul moyen pour en faire de bons seroit de relever le Pontage actuel et de le remplacer avec du Cèdre posé à plat sur la terre, d'en mettre un second rang ou la chose seroit nécessaire, et de couvrir le tout d'une couche de la bourbe ôtée des fossés, enfin d'ajouter un lit de gravier, dont l'on trouve une bonne qualité et en abondance dans presque toute la longueur du Portage. Il faudroit avoir soin en même temps de faire de larges et profondes fossés avec des égouts et une décharge suffisante pour emporter l'eau, s'il est possible; il faudroit aussi faire examiner souvent les égouts et les fossés pour voir à ce qu'ils soient débarrassés de toutes obstructions, ni laissés, comme c'a été le cas jusqu'à présent, jusqu'à ce qu'il croisse de gros arbres tout au milieu d'eux. Avec cette méthode, et un peu d'attention, je ne doute pas qu'il n'y a (si vraiment il y en a) peu de parties marécageuses du Portage, où l'on ne puisse faire un Chemin bon et solide; mais dans quelques années il faudroit remettre du gravier. Il faut admettre que ce plan demanderoit des frais considérables, mais si l'on considère de quelle importance est une bonne ligne de communication entre les Provinces, je ne puis m'empêcher de penser qu'elle seroit beaucoup plus avantageux de l'adopter que de faire les réparations temporaires que demande le plan maintenant suivi.

Entre le 14e et le 16e mille, où l'espace d'environ 2 milles, on rencontre un lit continu de roche solide, qui s'étend de chaque côté à une telle distance qu'il est impossible de l'éviter; il ne paroit pas y avoir d'autre moyen d'améliorer ce bout de Chemin, que d'élargir le Chemin actuel en comblant les interstices ou les inégalités de surface avec des morceaux de rocher, dont il y en a en abondance de tous côtés, et de mettre dessus un lit de pierre concassée à la grosseur d'environ un œuf, et de recouvrir ce lit d'une couche de gravier, partout où l'on pourra s'en procurer.

Depuis environ le 16e mille jusqu'à la Rivière St. François, le côté de la Montagne est en plusieurs endroits très-escarpé et couvert de roches, dont on pourroit ôter un grand nombre du Chemin, ou qu'on pourroit y casser.

Entre la Rivière St. François et le Lac, le Chemin se trouve coupé par 8 à 10 langues de roche qu'il faudroit miner; ces langues de roche ont de 15 à 20 pieds de longueur et une élévation d'environ 30 à 45 degrés, ce qui rendrait difficile le passage des voitures; un des pensionnaires à la Rivière Verte étant un mineur et désirant de l'emploi, il n'y aurait besoin que de lui donner des outils, &c. &c.

Il pourroit aussi être nécessaire de miner quelques-uns des fragmens de rochers maintenant dans le Chemin. Les endroits marécageux sont si nombreux entre le Rivière St. François et le Lac Temiscouata, qu'il est inutile de vouloir en parler en détail; il faut

donc que je renvoie à mon plan pour en voir la position et l'étendue, et je me bornerai à faire observer que je recommande à leur égard la même méthode que celle que j'ai recommandée pour la Savanne des Roches.

Les ponts élevés sur les divers cours d'eau qui traversent le chemin étant de largeur suffisante et en bon état, à l'exception de quelques gardes-fous et planches ou traverses, cet objet ne demanderait qu'une somme légère.

Les principales montagnes sont celles qui sont au commencement du portage, le new Caledonian Hill, celle située sur le bord orientale de la Rivière Verte, celle des deux côtés de la Rivière Saint-François, la Grande Fourche et les Montagnes Buard, qu'il faudroit escarper dans leur partie les plus roides, pour permettre aux voitures chargées de les monter facilement.

Ayant mesuré la distance en plusieurs endroits entre des arbres placés directement vis-à-vis les uns et les autres, et qui paroissent avoir de 20 à 30 ans, il parait évidemment que ce chemin n'a pas été ouvert pendant cet espace de temps à plus de 12 à 15 pieds de largeur, et comme la direction générale en est E. S. E., les rayons du soleil ne peuvent jamais aider à l'affêcher, si ce n'est pour peu de temps le matin, lorsqu'ils ont le moins de force; la conséquence en est que des endroits qui pourroient être affêchés en étant exposés seulement quelques heures au soleil et au vent, sont toujours humides.

C'est pourquoi je voudrais recommander comme un préliminaire à toute amélioration, de raser toutes les broussailles qui bordent toute la longueur du portage à la largeur d'environ 30 pieds, et de faire tous les efforts possibles pour chasser l'eau.

Et comme une grande portion passe sur un terrain graveleux et rocheux, il ne demanderait pas à avoir plus de 15 à 20 pieds de large; on pourroit donner plus de largeur dans les endroits qui ne peuvent être affêchés, de manière à permettre au soleil d'agir de toute sa force pour les tenir secs. Mais il faut admettre cependant que la largeur proposée ne garderait pas le chemin des chûtes d'arbres, à moins de donner au chemin au moins 60 pieds de largeur.

La dépense pour ouvrir 30 milles de chemin, en lui donnant 30 pieds de large, allouant 7 pieds pour la largeur du vieux chemin, à 12 piastres par acre, ne monterait pas à plus de £360.

J'ai mis l'étendue du chemin à ouvrir à 30 milles, ayant déduit de toute la distance 5 milles pour les défrichemens, et les 2½ milles qui restent pour les endroits où le chemin est brûlé.

Les travaux proposés comme devant être faits sur le chemin, étant d'une nature tout-à-fait différente de tous ceux auxquels j'ai jamais été employé, je n'oserais hasarder de donner mon opinion sur les dépenses probables qu'ils pourroient demander pour être faits; mais je croirais qu'il faudroit près de cent livres par mille, ou environ £4000, somme, que j'ai lieu de l'espérer, couvrirait toutes les dépenses, et ferait un bon chemin.

A partir de chez Long à aller jusqu'au Dégélé, 15 milles, il n'y a à passer qu'un cours d'eau de conséquence, appelé le Cabouot, éloigné d'un mille; ce cours d'eau est de 20 à 30 pieds de large, avec des rivages fermes, et étoit très peu profond à cette saison; mais on dit que l'automne et le printemps il grossit beaucoup par les eaux qui viennent des Montagnes. Maintenant on passe cette rivière sur un arbre jeté en travers; à environ un mille au dessus le long de ce cours d'eau, Long a un défrichement de quelques acres.

Le chemin seroit facile à ouvrir à partir de chez Long à aller au Dégélé; surtout en passant le long du sommet des Montagnes plates qui environnent le lac qui passe derrière, et à la vue de la maison de Hall. Si cette partie étoit ouverte, toute la ligne seroit praticable aux piétons jusqu'à la Petite Chûte de Madawaska, ayant été fait à nouveau de 12 à 14 pieds de large, à partir du Dégélé, passant le long du rivage droit de la rivière Madawaska, à aller jusqu'au confluent de cette rivière avec la rivière St. Jean, distance d'environ 30 milles.

Depuis le commencement de l'établissement de Madawaska jusqu'à l'Eglise, il n'y a pas de chemin, si ce n'est les parties détachées laissées entre voisin et voisin pour l'avantage commun, quoique la terre soit ouverte de chaque côté de la Rivière St. Jean, à l'exception de la réserve des Sauvages.

Signé,

ELIOT.

Br. Major, 68e. Rég.

Appendice
(P.P.)Lac Temiscouata,
19 Février, 1827.

Mon Cher Monsieur,

Il est si longtemps que je retarde à vous écrire, que je ne fais vraiment de quelle manière vous en faire mes excuses. Le Curé, les Capitaines Hébert et Bellefleur avaient promis, en passant, de m'envoyer par écrit, pour vous être transmises, leurs idées à l'égard des améliorations faites dans le Portage, sous vos ordres. Je ne puis vous dire rien de mieux, que de vous informer que 330 chevaux chargés, surtout de blé de Madawaska, ont passé dans le chemin depuis le 8 Janvier, avec au moins deux fois autant de monde, qui tous n'avaient qu'une voix pour louer ce que vous aviez fait, et pour vous souhaiter tout le succès possible à l'avenir.

Cette semaine j'ai eu le malheur d'apprendre que mon moulin à la Rivière des Caps, a été brûlé, soit par stupidité ou négligence. C'est le second moulin à farine que le feu m'a consumé depuis le 2 Novembre, 1826. Je serai de plus aises d'apprendre de vos nouvelles, et quand vous reviendrez l'été prochain dans ces quartiers sauvages.

Je suis avec un respect bien sincère,

Votre Très-Obt. Serviteur,

ALEX^r. FRASER.

J. A. WOLFF, Ecuyer.

Lac Temiscouata,
8 Novembre, 1828.

Mon Cher Monsieur,

Les plaintes se multiplient contre le chemin du Portage; les Ponts que vous n'avez pas réparés, sont dans l'état le plus impraticable.

Mr. Germáin Déchêne, de la Rivière des Caps, qui a contracté pour le transport de la Malle à Frédérickton, a fait une représentation à Mr. Stayner, D. M. P. G., à cet égard.

Je vous trouble, mon cher Monsieur, afin que vous pétitionniez pour avoir l'aide nécessaire.

Un Monsieur, (H. G. Deane, Ecuyer,) partit d'ici il y a deux jours pour s'en retourner aux Etats-Unis; il ne se rendit qu'à la Rivière St. François, pour voir, je suppose, la course de cette rivière; c'est pourquoi, je suppose, que jusqu'à ce que nos frontières soient marquées, le Gouvernement aura de la répugnance à déboursier de l'argent pour améliorer cette communication; cependant le portage est maintenant dans le plus mauvais état. Les fils de Mr. Dall ont trouvé le corps d'un pauvre homme, à environ un mille au dessous de leur maison, Lundi dernier; il était étendu sur le rivage, et les gens que j'appelois pour l'enquête, ont supposé qu'il était mort de froid et d'humidité, car il n'avait pas même assez de vêtements pour se garantir des rayons du soleil. Je m'attends à ce que les gens de Madawaska nous apprendront quelque chose de ce malheureux. Notre conjecture a été qu'il était un Irlandais, âgé d'environ 30 ans: il avait un peu de fil, 4 aiguilles, un dé et une mesure de tailleur dans sa poche, environ une livre de pain; un haillon indiquait qu'il était tailleur.

Avec toute l'estime qui vous est due;

Je suis, Mon Cher Monsieur;

Votre Très-Obeissant Serviteur,

ALEX^r. FRASER.

J. A. WOLFF, Ecuyer.

William Henderson, Ecuyer, est appelé et examiné :

Avez-vous eu occasion de tourner votre attention sur l'objet des communications intérieures dans ce district? Depuis l'année 1822, je me suis occupé activement à former un nouvel établissement dans la partie nord-est du township de Frampton, et dans la partie

de Standon qui l'avoisine. Cela m'a porté à donner une attention particulière au sujet de la facilitation de la communication intérieure des comtés de Dorchester et d'Hertford. Mon expérience courte est trop bornée, pour me mettre en état de former une idée correcte de ce sujet dans d'autres parties du district.

Avez-vous eu occasion de considérer cette matière, dans ses rapports et sa liaison avec la formation de nouveaux établissements? J'ai dernièrement tourné toute mon attention sur le sujet de la communication intérieure dans ses rapports et sa liaison avec la formation de nouveaux établissements. Les résultats de mon expérience et de mes recherches se trouvent recueillis dans un papier accompagné des tableaux et preuves nécessaires, que j'ai soumis à la Société des Arts et des Sciences. La table ci-annexée est un abrégé du tout, et elle montrera que dans l'espace de sept ans, qu'on peut établir sur des terres incultes 150 pauvres familles, moyennant une avance de £900 et moins, remboursable dans le cours de six années, et qu'il est très probable qu'il en résulterait au public, dans le cas où il ferait des entreprises semblables, un gain de £900 et davantage, sans compter la valeur des terres établies. On pourrait parvenir à ce but en fournissant aux nouveaux colons du travail sur les lieux, sans dépense pour le public, et sans qu'il soit besoin d'entreprendre aucun ouvrage public pour cela.

Quels sont, à votre avis, les chemins qu'il serait plus expédient de faire ouvrir maintenant? Avant de parler de nouveaux chemins, je prie de remarquer que l'amélioration du chemin Craig et du chemin de Kennebec, est un objet de la plus grande importance pour ce district; mais je suis d'avis qu'aucun chemin de traverse sur ces deux grands chemins ne saurait être d'un avantage permanent, tant qu'il n'y aura pas d'établissements sur chacun un suffisant nombre d'habitans pour les maintenir en état de réparation. Il faudrait taxer les lots inoccupés qui se trouveraient sur ces chemins, pour tenir en bon état leur part de chemins; les terres aux environs de ces grandes lignes de communication devant en retirer de l'avantage devraient aussi contribuer à la réparation des chemins, quoiqu'en moindre proportion. Un nouveau chemin depuis Saint François, sur la rivière Chaudière, jusqu'au Lac St. François et cotoyant le rivage méridional, delà suivant la rivière jusqu'à Sherbrooke, serait très avantageux, en ce qu'il favoriserait l'établissement d'une grande étendue de ce qu'on croit de bonne terre; et de plus en ce qu'il ouvrirait une communication directe entre Québec et la capitale du nouveau district. Cependant c'est avec une certaine hésitation que j'avance ceci, vu qu'on n'a pas beaucoup de connaissances sur le local de cette étendue de pays. La partie à l'est de la Chaudière, surtout dans les comtés de Dorchester et de Hertford, a été explorée d'une manière assez étendue, avec soin et en détail, jusqu'à la source des eaux qui tombe dans le St. Laurent. C'est pourquoi je puis donner des opinions plus décidées sur les chemins à ouvrir dans cette partie. Le plus important de tous est celui qui a déjà été tracé par Mr. Ware, (en 1825,) par l'ordre du gouvernement, et qui commence au No. 14, dans le 9e. rang de Frampton, et se termine à la rivière St. Jean, à l'endroit où cette rivière importante commence à être navigable. Pour mieux faire entendre ceci, j'ai annexé une petite esquisse du chemin proposé et du pays environnant. Quoiqu'elle soit exécutée grossièrement, elle sera trouvée assez correcte pour mettre le comité en état de se former une idée de l'importance du chemin proposé. Lorsque Mr. Ware traça ce chemin, il avait en vue de prendre la direction la plus droite, quoiqu'en passant dans le township de Standon, il traverse des terres qui ne sont pas cultivables. Pour cette raison j'ai tiré une ligne à partir de l'angle est de Frampton, près de la ligne entre ce township et Standon, du côté de Cranbourne, passant dans d'excellente terre jusqu'au lac Etchemin, qui offre pour un établissement, la meilleure situation, peut-être, qu'on puisse trouver dans aucune partie quelconque des terrains incultes de ce district. Pour cette raison je recommanderais une déviation de la ligne de Mr. Ware, à l'angle nord de Cranbourne, et de suivre celle que j'ai tracée jusqu'au lac Etchemin, où l'on pourrait arrêter le chemin pour le présent. La longueur totale du chemin que je propose ne serait que 14½ milles. Le second chemin que je proposerai, est à partir de la seigneurie St. Joseph, en traversant Cranbourne, entre le 7e. et le 8e. rang, jusqu'à ce qu'il tombe dans celui de Frampton, à 1½ mille au nord-ouest du dit lac; ce chemin aurait environ 12 milles de long. Et deux chemins de 9 à 10 chacun, l'un à partir des derniers établissemens de la Rivière du Sud, vers la source de la branche principale de cette rivière, et l'autre entre Kamouraska et la Rivière Ouëlle, vers les sources de la Rivière Ouëlle, pourvu toujours que ces derniers chemins puissent être (d'après les renseignemens de personnes mieux informées que je ne le suis) entrepris avec la pleine certitude, que leur ouverture fera suivie d'établissemens immédiats, comme je puis certifier que c'est le cas à l'égard de ceux de Cranbourne et de Frampton.

Ayez la bonté de donner les raisons qui vous font recommander l'ouverture de ces chemins, et de dire ce que vous pensez de leur impor-

William Hen-
derson, Ecr.

importance relative, quels sont les effets qu'ils doivent vraisemblablement produire sur les nouveaux établissemens, et la somme qu'ils pourraient coûter? Mes raisons pour recommander l'ouverture de Chemins aux dépens du public, à la Rivière Ouelle, à la Rivière du Sud, et pour aller au Lac Etchemin par Cranbourne et Frampton, sont:—En premier lieu, l'amélioration prompte et générale de la partie la plus précieuse du District de Québec, qui ne peut s'effectuer que par l'ouverture de nouveaux Chemins dans les diverses directions. Les anciennes Seigneuries sont devenues si peuplées qu'il y reste très peu de terre à concéder. On doit s'attendre à voir les naturels du pays se jeter aussitôt sur les terres incultes, au bout des Seigneuries, du moment que ces terres seront offertes au défrichement, et qu'on ouvrira des Chemins pour s'y rendre. On peut calculer et toute sûreté, qu'au moins 20 familles par années seront portées à s'établir sur chacun des Chemins que j'ai proposés; vu qu'un double avantage s'offre aux gens pauvres, comme presque tous les nouveaux colons le sont, savoir:—Un bon chemin pour se rendre à leur habitation, et de l'ouvrage sur ce chemin pour leur donner de quoi acheter des provisions, tant que leurs terres ne produisent rien. Les difficultés qu'on a éprouvées dans l'établissement des Chemins Craig et de Kennebec, ne se rencontreront pas dans ceux que j'ai proposés, car ils sont tous dans le voisinage immédiat des parties densément peuplées du district. En ouvrant ces Chemins et en faisant des établissemens sur les terres voisines, on établira, à dix milles en arrière des anciens établissemens, trois grands points, qui en s'étendant viendront à s'unir l'un à l'autre, et dans le cours de quelques années établiront toute l'étendue du pays qui joint immédiatement les Seigneuries, entre la Rivière Chaudière et la Rivière du Loup, tandis qu'en même temps ils formeront des avant-postes, prêts à pousser les établissemens dans l'immense et belle vallée arrosée par la Rivière St. Jean. Mais les avantages qu'on pourra en recueillir seront encore plus importants sous un point de vue politique. Cet objet lié à l'intérêt direct, et bien plus, peut être à la sûreté future non seulement de la Province mais même de toute l'Amérique Septentrionale. Les différens endroits où j'ai proposé de faire aller ces Chemins, sont à deux ou trois milles de la ligne réclamée par les Etats-unis. Si nos ambitieux voisins réussissent à obtenir cette ligne, il est tout-à-fait évident que l'occupation immédiate du pays situé entre eux et le St. Laurent par des Sujets Anglois, devient un objet de nécessité vitale, car il n'y a qu'une population dense de Sujets loyaux et courageux, qui pourra garder la lisière qui nous restera, contre les impiétés ultérieures, même en temps de paix. D'un autre côté, si la Grande-Bretagne réussit à retenir l'importante vallée de St. Jean, ce n'est que par une occupation immédiate, que nous pouvons en attendre l'annexion finale au Canada; et pour effectuer cela, nous devons faire d'avance des préparatifs, en ouvrant le plutôt possible une communication directe avec diverses parties de la Rivière St. Jean. Quoiqu'il en arrive donc, que le territoire en dispute nous reste ou qu'il nous soit ôté, il est évident que notre sûreté et notre bien-être futurs dépendent de l'établissement du territoire intermédiaire, aussitôt que possible. La dépense probable de ces Chemins doit dépendre, comme de raison, de la manière dont on les ouvrira; et les parties qui se trouvent dans le voisinage immédiat des Etablissemens actuels coûteront probablement moins, que celles qui en sont plus éloignées. Je recommanderais de faire les Chemins que j'ai proposés, de manière à permettre le passage de voitures, de dix pieds de large, en abattant un quart d'acre du bois de chaque côté; la dépense totale de quoi ne passerait pas 17s6 par arpent, ou £24 10s. par mille, à quoi il faut ajouter £5 10s. par mille pour les Ponts, et dépenses imprévues, en tout £30 par mille. Le coût des trois Chemins serait donc:—

De Frampton au Lac Etchemin, 14½ milles,	£435 0 0
St. Joseph au Lac Etchemin, 12 dito,	360 0 0
de la Rivière du Sud, 9 dito,	270 0 0
de la Rivière Ouelle, 9 dito,	270 0 0

Total £1335 0 0

Mais il serait non seulement inutile, mais même défavorable de dépenser la somme entière dans une seule année: car si les Chemins sont ouverts plus rapidement que les Etablissemens, ils seront sujets à se remplir de jeunes arbres et de mauvaises herbes. Je proposerais qu'en 1829 on ne fit de ces Chemins que de simples Sentiers ou Chemins d'Hiver, qui donnerait aux Colons la facilité de mieux choisir les Lots et en addition à cela environ deux cinquièmes du Chemin faits de la manière dont je l'ai proposé; cela demanderait la moitié de la somme affectée. En 1830, on pourrait en dépenser un autre quart, et le restant en 1831, et au bout de ce temps il y aurait sur le Chemin de Frampton au moins, et je crois fortement, sur les trois autres, assez de terres occupées pour maintenir le Chemin en réparation, selon

que la loi le requiert. C'est d'une manière toute particulière que je recommande le Chemin qui doit aller au Lac Etchemin. Les terres qui entourent cette belle nappe d'eau sont de la meilleure qualité; et ce Lac d'après sa situation centrale ne manquerait pas, lorsqu'il serait occupé, d'avoir l'effet de répandre de grands Etablissemens de tous côtés sur une vaste étendue de la plus excellente terre, qu'on ne peut approcher aussi facilement d'aucun autre point. Un Village qui serait établi sur ce Lac (profond et navigable) sur le Chemin qui conduit aux Etats-Unis et aux Provinces inférieures, posséderait de grands avantages qui ne le céderaient nullement à aucun autre du District.

Quel serait l'effet du déboursement de Capitaux Publics sur les classes pauvres des Paroisses de la Campagne; pourrait-on faire en sorte de fournir un fond au moyen duquel les classes pauvres pourraient à la fois acheter des Grains de semence dans le Printemps, sans qu'il fut besoin de faire un Prêt Public à cet effet? Le déboursement des petites Sommes que j'ai proposées pourraient être, pour autant, d'une importance infinie pour les Habitans pauvres des Paroisses avoisinantes. A Ste. Claire, qui avoisine Frampton, (je parle d'après mon observation et ma connaissance personnelle) il règne la plus grande détresse, par suite du manque partiel de la Moisson du Froment l'année dernière, et du manque totale de la même Moisson cette année; à peine y en a-t-il un sur vingt qui ait recueilli la semence; et je suis certain qu'il n'y a pas moins de 70 à 80 familles dans cette seule paroisse qui se trouveront dénuées de tout avant le Printemps, et conséquemment hors d'état de faire aucune semence, sans quelque assistance libérale. Je suis tout-à-fait d'opinion, que le meilleur moyen d'alléger la misère de ces personnes, serait de donner du travail sur les lieux à ceux qui sont dans le besoin. Le manque de marché pour les gros Produits empêche les Cultivateurs de cultiver en grand. L'ouverture de nouveaux Chemins leur promettra de nouveaux voisins, qui, nécessairement pour la première année au moins, seront obligés d'aller chez eux chercher leurs Provisions. Cela stimulera leurs efforts, tandis qu'une dotation indéfinie aura un effet tout contraire. Il n'y a pas de doute ce que j'ai proposé pour être dépensée en 1829, sur le Chemin de Frampton au Lac Etchemin, savoir £217 10s. ne put être aisément convertie en un fonds pour soulager les Habitans pauvres de la Paroisse Sainte Claire, et pour leur donner des Grains de semence. Je ne veux pas dire cependant que cette Somme suffirait pour aider tous les Gens de la Paroisse qui ont besoin d'assistance; mais si à cela l'on ajoute la Somme demandée par les Colons pour bâtir un Pont sur la Rivière Etchemin, dans le voisinage immédiat de Sainte Claire, ce sera suffisant. Il est à désirer, à cet égard, que quelque argent qui soit voté pour aider à l'érection de ce Pont, ce soit à la condition expresse qu'il ne sera payé aucun Péage, et qu'il soit bâti le Printemps et l'Été prochain, afin que les Habitans indigènes de Ste. Claire puissent être employés dans les mois de Février et de Mars à tirer le Bois nécessaire: en effet il faudrait ajouter cela comme une condition spéciale de l'Octroi. S'il est stipulé, comme mesure préliminaire, que le Pont sera homologué, afin de pourvoir légalement à son entretien à l'avenir, (chose que les Pétitionnaires seront bien sans y être forcés), la Saison prochaine va s'écouler, avant d'avoir passé par toutes les formalités requises en pareils cas; et le pauvre sera par là privé d'un avantage bien grand pour lui. Il ne pourrait être fait aucun ouvrage de conséquence, que le Chemin proposé, avant les semences; c'est pourquoi il faudra avancer la partie de la somme qui pourrait être accordée pour acheter de la semence; et pour calculer avec sûreté, il ne faut pas mettre plus d'un tiers, ou de la moitié tout au plus, de la somme affectée pour les Chemins ou pour le Pont, pour l'achat des Grains de semence, car les travailleurs doivent avoir des Provisions pour eux et leurs familles, pendant qu'ils travaillent comme on le propose.

Ayez la bonté de donner un détail pratique de la manière dont vous croyez que cela pourra s'effectuer? En répondant à ceci je ne parlerai que de l'argent proposé pour Frampton, dans la vue d'assister les plus pauvres habitans de Sainte Claire; et comme de raison, ce que je dirai pourra s'appliquer à toute autre Paroisse. Outre les Commissaires qu'il plaira à Son Excellence de nommer pour effectuer ces objets, il serait nécessaire de nommer quelque personne respectable, résidante près du lieu où les Chemins doivent être ouverts, &c., et s'il est possible intéressé à leurs progrès, pour surveiller l'ouvrage; et aussi le Curé de Sainte Claire pour distribuer la semence et recommander ceux qu'il croirait avoir le plus besoin d'emploi, comme moyen pour la payer. Les Commissaires résidans à Québec auraient à employer la moitié de l'argent à acheter du grain de semence, réservant le restant pour l'achat de provisions et le paiement des transports, en mettant une petite somme en réserve pour payer la personne chargée de surveiller les travaux, ce que le surintendant ne pourra pas faire à aucune

Appendice (P.P.)

aucune distance considérable. Ce dernier objet, le transport des provisions et du grain de semence, devrait être donné exclusivement aux plus pauvres des gens de Sainte Claire qui ont un cheval. On ne pourra acheter les provisions dans la Paroisse, conséquemment ce fera un objet pour le pauvre de les avoir sur le lieu, et les plus prodigues et les plus indifférens les acceptèrent avec plus

de plaisir que de l'argent même. Tout l'ouvrage se ferait comme de raison à tant par acre pour les Chemins, à tant par pont ou autre ouvrage, et quand l'ouvrage ferait fini un billet du surintendant mettrait le travailleur en état de régler avec le Curé pour les avances à lui faits, ou pour les provisions nécessaires pendant qu'il travaillerait.

Mardi, 23, décembre 1828.

F. Doyon.
23 décembre.

François Doyon, du Township de Tring à l'ouest de la Rivière Chaudière, derrière la paroisse St. François, étant appelé a informé votre Comité; Qu'il a résidé dans le Township depuis le mois de mars dernier; Qu'il a été ouvert un chemin à partir de la seconde concession de la seigneurie de St. François ou Vaudreuil, jusqu'au bras de l'ouest à peu près vis-à-vis sa demeure; que ce chemin peut-être considéré plutôt comme un chemin d'hiver qu'un chemin roulant; les arbres y ont été coupés et abattus à la largeur de vingt pieds environ toute la longueur du chemin, mais dans les tems de pluie le printemps et l'automne, il devient impassable, et même l'été; qu'il y a plusieurs habitans résidans dans le Township de Tring; que ce n'est que depuis peu qu'ils y sont établis; qu'ils n'ont pas les moyens de perfectionner le chemin en égard au travail; qu'ils auraient le bois de bout à abattre pour y arriver; que ce chemin traverse en partie la seigneurie De Léry, et que ce seigneur ne veut rien y faire parce qu'il n'y est pas obligé par la loi; que l'habitant sur la terre du quel passe ce chemin l'a bouché, de sorte qu'ils n'ont plus de sortie; que par les détours qu'il est obligé de faire, il a ruiné ses chevaux; pourquoi, il supplie en son nom et celui des personnes qui demeurent dans le dit Township, qu'il soit apporé un remède à ce mal, soit en légalisant le dit chemin, ou accordant une aide pécuniaire pour le faire faire; que le manque d'un chemin suffisant retarde beaucoup l'établissement de ce Township; plusieurs habitans désirent aller s'y établir, mais ils en sont détournés à cause des mauvais chemins.

A. Bolduc.

Augustin Bolduc, du même lieu, étant appelé, et le témoignage de François Doyon lui ayant été lu, il y a concouru; et dit de plus: qu'il ya treize habitans dans le Township de Tring, dont trois y résident actuellement; qu'il sont à deux lieues et trois quarts des anciens établissemens; que les terres ordinaires sont de trois arpens de front sur trente de profondeur; les terres sur lesquelles ils sont établis leur appartiennent, ils en ont des contrats de concession; ils payent les terres de 90 arpens £50; ils ne payent pas l'intérêt de cette somme au taux légal, ils payent 15s d'intérêt par année, pour les cinq premières années, et l'intérêt augmente de 15s tous les cinq ans, jusqu'à ce qu'il se monte à

Pintérêt légal. La rente est rachetable en tout tems, en remboursant le capital et ils se considèrent propriétaires incommutables des dites terres.

Jean Veilleux, cultivateur de St. François, Nouvelle Beauce, et propriétaire de terre dans le Township de Tring, étant appelé, et le témoignage de François Doyon lui ayant été lu, il y a concouru. J. Veilleux.

François Xavier Verrault, Ecuyer, Notaire Public, résidant à St. François, Nouvelle Beauce, ayant été appelé, et le témoignage de François Doyon lui étant lu, il y a concouru, et a dit de plus qu'il faudrait entre £300 à £350 pour faire le chemin mentionné; que les gens veulent l'entretenir, et qu'ils sont obligés par leur contrats de donner une journée de corvée par chaque terre sur ce chemin pendant cinq ans. F. X. Verrault.

Vendredi, 26 décembre 1828.

William Henderson, écuyer, est appelé de nouveau et interrogé:

Après l'ouverture de nouveaux chemins, quels moyens connaissez-vous pour les maintenir en bon état, et si vous en connaissez aucun, quels indiqueriez vous? Des concessionnaires qui ont concédé des terres sont tenus de réparer les chemins. Les chemins de Frampton et de St. Joseph au Lac Etchemin sont verbalisés, et cela est comme de raison un moyen de pourvoir pour leur réparation à l'avenir. Il faudrait prendre des mesures pour vendre les terres de la couronne, afin de mettre en opération l'acte d'homologation, quant à ce qui regarde les terres non concédées. A l'égard des chemins de la Rivière Ouelle et de la Rivière du Sud, comme ils passent partie sur les terres d'individus et partie sur les terres de la couronne; il faudrait comme condition à l'octroi, que tous deux seront homologués selon la loi, afin de pourvoir à ce qu'ils soient tenus en bon état après qu'ils auront été faits. W. Henderson, 26 décembre.

Y a-t-il quelques parties du pays où vous recommandez d'ouvrir des chemins, qu'il serait avantageux d'explorer dans cette vue, avant d'en venir à une détermination finale sur leur utilité, et aussi pour s'assurer à quoi monterait les dépenses pour ouvrir tels chemins? La partie des comtés de Dorchester et de Hertford, où j'ai particulièrement recommandé de faire passer les chemins, savoir : depuis Frampton sur l'Etchemin et depuis St. Joseph sur la Chaudière jusqu'au Lac Etchemin, a été, il n'y a pas plus d'une année ou deux, explorée avec soin et en détail, comme on peut le voir par le plan annexé à mon témoignage du 22 du courant, et le pays, par lequel passeront les chemins de la Rivière du Sud et de la Rivière Ouelle, est aussi suffisamment connu, pour rendre inutile toute exploration préparatoire, pour la petite distance à laquelle on se propose de conduire les chemins dans l'intérieur. Les rivières, savoir : la Rivière Etchemin, la Rivière du Sud, la Rivière Ouelle et aussi la Rivière du Loup, communiquent avec les eaux de la Rivière Saint-Jean par de courts portages, qui sont connus et fréquentés depuis les premiers temps de la colonisation du Canada. Les cartes publiées par Bellin, ingénieur dans la Marine Française, de même que celle de Mitchell, prouvent qu'on se servait de ces portages il y a près d'un siècle, et même de nos jours les sauvages du Nouveau Brunswick viennent à Québec par les mêmes routes. Mais c'est la seule partie du district, où il y ait un besoin particulier de chemins, que je sache autant que je puis le savoir, être suffisamment connue, par des recherches scientifiques, pour me permettre de recommander l'affectation immédiate d'argent public sur de nouveaux chemins, sans qu'il me paraisse nécessaire de faire une exploration préparatoire. Il me semble qu'en poussant de nouveaux établissemens, ou en ouvrant des chemins étendus de communication entre ceux qui existent actuellement, le premier point de départ est une connaissance suffisante de la géographie et de la géognosie du pays que l'on se propose d'exploiter; sans ces renseignemens préliminaires, il ne peut rien être fait d'assez général pour mériter l'intervention de la législature. On peut bien faire une application judicieuse à l'ouverture de nouveaux chemins pour une petite distance, à différens points des établissemens les plus avancés, dans des parties détachées du pays, telles que celles que j'ai recommandées. Mais on ne peut entreprendre de faire aucun grand chemin de communication entre ces établissemens isolés, avec la certitude que l'argent dépensé sera appliqué pour le plus grand avantage. Le peu de connaissances géographiques que nous avons du pays, nous les devons en grande partie au colonel Bouchette, Monsieur pour les talens professionnels et le zèle public duquel j'ai le plus grand respect. Sa belle carte du Bas-Canada fait beaucoup d'honneur à son pays natal, et j'oserais avancer que l'ouvrage qu'il a commencé sur la statistique du pays lui fera autant d'honneur. Je regrette infiniment avec plusieurs, que ses efforts patriotiques lui aient été si peu profitables : J'espère sincèrement que la législature saisira l'occasion qui se présente de le récompenser dignement de sa très belle carte, et en même temps d'assurer la publication de son ouvrage précieux sur la statistique, avec une édition nouvelle et correcte de son Atlas, qui est un objet bien à désirer pour le sujet en question. Mais les géographes les plus instruits ne peuvent guères faire autre chose que de compiler et d'arranger des cartes générales des matériaux et des renseignemens puisés sur les lieux par des explorateurs—si les travaux de ceux-ci sont défectueux, ou s'il se rencontre de grandes étendues de pays, où il n'y a pas eu d'exploration, les travaux de l'homme savant doivent nécessairement souffrir de circonstances qu'on ne peut guère surmonter. La carte du colonel Bouchette, publiée en 1815 est, quant aux renseignemens qu'il donne, extrêmement correcte, même jusqu'aux plus petits détails; mais il est à regretter que de grands espaces, dans les townships, et de plus grands encore dans les seigneuries, aient été laissés en blanc, faute de matière pour donner des renseignemens corrects;—et de plus plusieurs des premières explorations faites, ou pour parler plus correctement, qu'on dit avoir été faites dans les townships, ne méritent aucune confiance. Depuis que cet ouvrage a été donné au public, l'auteur infatigable a recueilli, tant par ses propres observations que par celles de son habile famille, et tirés d'autres sources, une masse de renseignemens qui rendaient une nouvelle édition incomparablement plus précieuse que celle compilée il y a près de 15 ans. Mais il reste encore même beaucoup à faire—il y a peu de nos nombreuses rivières qui aient été visitées, et plusieurs même n'ont pas été explorées, même quant à leur course générale; nous n'avons des renseignemens corrects sur la grandeur d'aucune, non plus que sur les obstructions qui y arrête la navigation. Une petite somme d'argent judicieusement appliquée par des personnes qui auraient à cœur d'obtenir le plus de renseignemens possibles au moindre prix, fourniraient toutes les notions générales dont on a besoin sur ce sujet intéressant. S'il m'était permis d'indiquer quelque mesure, qui n'entrerait pas d'une manière immédiate dans le sujet des questions qui me sont posées, je recommanderais de placer une petite somme à la disposition de la Société des Arts pour l'objet unique et exprès d'encourager l'arpentage pendant l'hiver, et pendant l'été l'exploration de quelques-unes de nos principales rivières. Il est tout probable que dans le cours de quelques années nous serions, par ces mesures, mis au fait du cours générale de toutes les principales rivières du pays, et moyennant le quart, peut-être, de ce qu'il en coûterait en le faisant de toute autre manière. Je suis certain que pendant la morte saison de l'hiver on trouverait plusieurs jeunes Messieurs entrepreneurs, et en tout qualifiés pour l'entreprise, et même des arpenteurs de profession, qui s'empresseraient de se faire connaître de cette manière, sans attendre d'autres rémunérations que leurs simples dépenses. S'ils étaient assistés par quelque ingénieurs ou officiers de marine, (dans une saison où leurs services ne seraient pas requis ailleurs) pour la partie astronomique, on pourrait faire beaucoup à peu de frais. On a surtout besoin d'explorations assez exactes, et de renseignemens statistiques à l'égard des rivières ci dessous mentionnées :

La Rivière Gatineau et trois ou quatre grands cours d'eau tributaires de la Rivière des Outaouais, dont nous ne connaissons absolument que l'existence.

La Rivière des Outaouais elle-même au dessus de la jonction de la Rivière Madawaska, jusqu'au Lac Temiscaming.

Les sources des Rivières de l'Assomption et Maskinongé.

La Rivière Saint-Maurice.

La Rivière Sainte-Anne.

La Rivière Jacques Cartier.

La Rivière Montmorenci.

La Rivière Ste. Anne du comté de Northumberland et la Rivière du Gouffre du côté du nord, et

La partie supérieure de la Rivière Yamaska.

La Rivière St. François, particulièrement jusqu'au lac St. François, et le lac lui-même qui n'est presque pas connu.

La Rivière Nicolet, qui est imparfaitement connue.

La Rivière Bécancour, à peine connue du tout.

Les Grandes Branches de la Rivière Chaudière, surtout la Rivière Beauvillage et le Bras du Sud, laquelle Rivière traverse une étendue de pays fertile, presque tout-à-fait inconnue à tous autres qu'aux sauvages.

La Rivière du Sud.

La Rivière Ouelle.

La Rivière du Loup; -

Et la dernière, mais non pas la moins importante, la magnifique Rivière St. Jean, et ses nombreuses branches et lacs.

On pourrait donner un encouragement semblable pour se procurer des rapports géologiques. Les documens précieux fournis dans cette branche par l'expédition du Saguenay, sont des preuves éclatantes qu'il y a dans le pays des hommes capables, sous tous les rapports, de donner au public tous les renseignemens dont on a besoin sur ce chapitre—si on leur donne des facilités pour exercer leurs talens, telles que celles que j'ai indiquées.

Les terres où passent ces chemins sont elles tenues en franc et commun soccage, ou en seigneurie?—Le chemin que j'ai recommandé depuis Frampton jusqu'au lac Etchmin, a été, comme je l'ai dit, tracé par l'ordre du gouvernement, dans la vue d'en faire une grande communication directe entre Québec et la Rivière St. Jean. Environ la moitié des terres qu'il traverse appartiennent à un ou deux grands propriétaires qui les ont obtenues depuis peu en tenure soccagère—le restant sont les terres non concédées de Cranbourne, et il ne passe nulle part sur les réserves ni de la couronne ni du clergé. Le chemin depuis St. Joseph jusqu'au lac Etchmin doit passer sur les terres non concédées de la couronne dans le township de Cranbourne, l'espace de 9 milles, le restant de son étendue proposé doit passer sur des terres appartenant à un particulier, dont la moitié est dans la seigneurie de St. Joseph. Le chemin à partir de la Rivière Ouelle passera sur une seigneurie la moitié de sa longueur, le restant sur des terres non concédées. Le chemin de la Rivière du Sud, partie par les fiefs Lepinay et Ste. Claire, et partie par les terres de la couronne dans le township d'Ashburton.

Serait-il raisonnable d'attendre que ces propriétaires voudraient contribuer aux frais de l'ouverture de ces chemins?—A cela je ne puis répondre que pour autant que j'y suis intéressé moi-même; que je n'épargne aucun effort possible pour ouvrir d'autres chemins que ceux proposés, lesquels absorberaient tous les moyens que je pourrais employer à cet objet, surtout lorsqu'on considère que l'affluence de colons qu'occasionnera l'ouverture des chemins proposés, demandera de fortes avances en provisions de bouche et autres pour les supporter pendant la première année. A cet égard, je puis aussi remarquer que depuis le commencement de notre établissement en 1823, nous avons ouvert ou fait ouvrir, à nos propres dépens, plus de 14 milles de bons chemins, dans un pays jusque là entièrement inconnu, et que nous n'avons pas eu un seul denier du public, soit de l'argent qui fut voté en 1816 pour les communications intérieures, soit de toute autre source que ce soit. Je puis ajouter que nous n'avons reçu support ni encouragement quelconque, dans notre difficile et coûteuse entreprise. Si j'osais prendre sur moi de répondre pour les autres individus sur les terres desquels peuvent passer les chemins proposés, il faudrait qu'ils firent tous les plus grands efforts pour ouvrir de nouveaux chemins et établir leurs terres, et qu'il serait impossible d'attendre d'eux aucune dépense additionnelle surtout si l'on considère que ces chemins vont être entrepris pour le bien public seulement, et sans aucune considération pour les intérêts des individus. Mais on peut attendre que toutes les facilités raisonnables seront données aux colons qui s'établiront sur ces chemins en autant qu'ils passeront sur les terres des particuliers, tant sous le rapport des conditions d'établissement que sous celui de l'assistance qui sera donnée aux colons pauvres.

Quel effet aurait sur les établissemens proposés sur ces chemins, l'opération de l'ordre récent pour la vente des terres de la couronne?—Si l'on donne une explication libérale aux arrangemens récents à l'égard de la vente des terres de la couronne, je suis d'opinion que le résultat en serait favorable à leur établissement. Si l'on met en vente de temps à autre des lots de pas moins de 1200 acres, dans les parties du pays où l'on en demandera, et où l'on aura voté de l'argent public pour l'ouverture de chemins après que les terres auront été achetées, je suis d'opinion qu'on trouverait des acheteurs respectables qui comme de raison seraient intéressés à l'établissement immédiat des terres ainsi acquises; mais

Appendice
(P.P.)

de la manière dont on a agi sur cet arrangement jusqu'à présent, on ne peut rien attendre de bon. Au contraire je conçois qu'il doit avoir l'effet d'éteindre toute entreprise en grand. Dans le nouveau système, comme dans celui qu'il a remplacé, il semble qu'il y a une condition *sine qua non*, qu'il ne sera vendu aucune terre à aucune personne en état de les améliorer ou de les payer. Des lots d'un et de deux cents acres ne peuvent convenir qu'à un cultivateur. L'expérience a démontré qu'on ne peut trouver de colons parmi les gens qui ont le moyen de vivre hors des bois; un nouvel habitant bien loin d'être en état de payer la terre qu'il exploite, ne peut pas même payer la plus petite rente annuelle pendant plusieurs années, et pour réussir à quelque chose il faut de plus lui fournir de l'assistance soit en provisions soit en ouvrage sur les lieux, pour la première année au moins. S'il faut que les terres se vendent (mesure dont la convenance est une question) ce doit être en grands lots dignes de l'attention des capitalistes. Je pense cependant que le plan le meilleur et le plus sage serait de concéder les terres gratuitement, à condition d'y faire certaines améliorations dans un temps donné. Il faut observer cependant qu'on ne saurait adopter aucun système, qui puisse toujours opérer avec succès dans toutes les parties d'une province aussi étendue que le Bas-Canada, et où il se rencontre de si grandes variétés de sol et de climat. La tenure soccagère répondrait, peut-être, aux vues du propriétaire dans les parties plus fertiles des districts supérieurs, mais les concessions en seigneurie peuvent seules convenir à cette partie de la province. Quant au système mesquin actuelle d'offrir en vente à nos habitans des lots de 100 acres de terre dans les townships, bien loin de débarrasser de quelques-unes des réserves les plus de valeur, éparées dans les établissemens les plus anciens dans les townships, au quart environ de ce qu'elles valent, je ne sais si cela peut-être regardé comme avantageux — au moins réussit-on sous ce rapport. Mais sous un autre point de vue, il ne faut pas être prophète pour prédire sa chute complète. Mais en autant que ses opérations se sont étendues, il est à ma connaissance que des terres qui valaient 10s. ont été mises en vente et vendues pour 2s., tandis qu'on ne pouvait en avoir à moins de 5s. d'autres terres situées aux environs, et qui ne valaient pas le quart de celles qui s'étaient vendues pour 2s., il en est arrivé comme de raison que les premières se sont vendues, mais pas un acre des autres. Le choix des lieux pour les ventes était aussi absurde que l'évaluation des terres. Au lieu d'exposer les terres en vente à Québec, à Montréal ou aux Trois-Rivières, où elles auraient pu attendre de la concurrence entre les enchérisseurs, on a choisi des endroits retirés, où quelquefois il ne se rendait pas une âme, tandis qu'en d'autres les terres s'adjugeaient au premier et unique enchérisseur qui se présentait. Dans ce district il ne s'en est pas vendu un seul acre à un cultivateur, malgré qu'on eût pris tous les moyens pour les forcer à devenir les seuls acquéreurs. Quant à l'intérêt qu'y a cette partie de la province, je pense, que le résultat final et unique que l'on peut attendre de ce nouvel arrangement, comme on l'appelle, sera de priver les habitans du pays et les classes pauvres d'émigrés des moyens d'obtenir aucune partie de nos vastes forêts à défricher pour pourvoir à sa subsistance; tandis que les sommes provenant des ventes qui se font et qui pourront se faire, ne couvriront les frais de ces mêmes ventes.

J. Bte. Fortin,
écuyer.

Jean Baptiste Fortin, écuyer, l'un des Chevaliers représentant le Comté de Devon, a été appelé et examiné:

Connaissez-vous les terres dans le Comté de Devon, leur proximité des rivières, et s'il y a des jeunes gens suffisamment pour les établir?—Je connais particulièrement toutes les terres qui sont concédées; elles sont presque généralement toutes susceptibles d'établissement, et il y a plus qu'il ne faut de jeunes gens pour les établir. Les terres sont en grande partie, et particulièrement le quatrième rang, appartenant presque généralement dans cette contrée aux habitans qui sont sur le fleuve, qui se trouvent obligés de ne pas les établir dans ce moment parce qu'il en tirent leur bois de chauffage, et celui pour l'usage des terres. En conservant ceci pour l'utilité de l'agriculture, c'est toujours dans la vue qu'à l'avenir elles serviront à l'établissement de leurs enfans, mais quant aux terrains qui joignent, ils sont séparés par une chaîne de montagnes, qui court presque depuis un bout à l'autre du Comté; les terrains qui joignent ces montagnes par derrière sont en certains endroits de très bonne terre, et de beaux bois, mais il y a de grandes parties, surtout sur les terrains qui joignent ces terres, qui sont bien montagneuses. Je n'ai pas une entière connaissance des terrains éloignés de ces montagnes. D'après l'information que j'ai pu en prendre, plus on s'éloigne dans la profondeur des terres, plus elles seraient avantageuses pour des établissemens, particulièrement en approchant de la Rivière Saint-Jean. Quant aux rivières, la rivière appelée Bras Saint-Nicolas, parcourt presque toutes les terres de ce Comté, excepté la partie sud-ouest de la Paroisse de Saint-Thomé. Cette rivière est considérable, mais je ne crois pas qu'il puisse jamais être susceptible d'amélioration pour pouvoir s'en servir avec des voitures d'eau, et la raison en est qu'elle se termine au Fleuve Saint-Laurent par une chute qui met un obstacle insurmontable. En conduisant son cours dans les profondeurs des terres, elle se trouve extrêmement rocheuse et pleine de rapides. Mais elle peut servir, et a déjà servi en plusieurs circonstances pour y faire descendre des bois par eau; c'est-à-dire, en billots. Il a déjà été descendu des bois qui ont été conduit par les eaux du Bras jusque près des moulins, mais je ne connais pas sa source. On peut faire la même chose par la Rivière du Sud, mais je ne la connais pas dans l'intérieur des terres. Les mêmes obstacles existent par rapport à cette rivière que par rapport au Bras Saint-Nicolas.

Pourriez-vous nous donner les noms de quelques personnes en ville qui

pourraient nous donner des renseignemens sur les terres de ce compte?—Je n'en connais pas d'autres que M. Bouchette, junior, qui a arpenté ces terres l'année dernière. Pour moi je tiens les connaissances que j'en ai de vieilles personnes dont la plupart sont mortes, qui avaient l'habitude d'y aller à la chasse; mais n'y en ayant plus, les jeunes gens d'à présent n'y vont pas.

N'y aurait-il pas moyen de nettoyer et de rendre susceptible de navigation avec des bateaux, les deux Rivières du Sud et du Bras Saint-Nicolas, et à quels frais?—Je crois que certaines parties du Bras Saint-Nicolas pourraient s'améliorer de manière à pouvoir y voguer en canots ou en bateaux, mais je crois qu'il s'y trouvera toujours des endroits insurmontables, comme la chute, où il se termine au fleuve.

Quel serait à votre avis l'endroit le plus convenable pour faire des établissemens de jeunes gens sur des terres non concédées de la couronne dans votre Comté, et quels seraient les chemins nécessaires pour les mettre en état de s'y rendre et combien coûterait ce chemin?—Je crois que la partie qui mérite le plus de considération est la partie qui avoisine la Rivière Saint-Jean. Il serait convenable que les établissemens fussent faits sur la rivière même, où il y aurait une étendue de terrain assez considérable pour mériter les frais d'un chemin pour s'y rendre. J'ai toujours entendu dire des vieillards que la distance du fleuve à l'Islet était de 20 à 25 lieues, mais à présent on prétend qu'il n'y a pas plus de 12 ou 15 lieues, mais ces vieillards ne veulent pas y croire; l'endroit le plus propice que je connaisse est dans la coupe des montagnes, qui se trouve vis-à-vis l'Église de l'Islet. Ces montagnes sont très aisées à traverser; se croissant entr'elles, elles laissent un espace entre eux assez commode pour y faire un bon chemin, en faisant un détour d'environ six arpens, et une fois ce détour la fait, on peut aller loin sans rencontrer d'obstacles semblables. Je ne connais pas dans la profondeur des terres les obstacles qui pourraient se rencontrer, mais anciennement, j'ai entendu dire aux chasseurs qu'il n'y avait pas d'obstacles insurmontables pour aller à la Rivière Saint-Jean. Je crois que pour le coût d'un semblable chemin, ce pourrait être généralement d'environ cent louis par mille.

Samedi 27 décembre 1828.

Jean Baptiste Bournival, du district des Trois-Rivières, a été appelé et examiné. J. Bte. Bournival.

Avez-vous eu aucun moyens et quels de connaître les nouveaux établissemens dans le township de Caxton, derrière la Pointe du Lac et Machiche, dans le district des Trois-Rivières?—J'ai eu occasion de connaître le township de Caxton, par les travaux que j'ai faits en différens lieux sur le dit township. J'ai aussi bien rodé sur ce township.

Quand ce township a-t-il été arpenté la première fois?—Quand le premier établissement a-t-il été commencé; quel est le nombre actuel d'habitans y résidans à présent?—Il y a trois ou quatre ans que le township a été arpenté. Il y a trois ans que le premier établissement a été commencé. Il y a sept ou huit personnes qui résident sur le dit township.

Quel était l'état des communications à ce township lorsque le premier établissement a été commencé?—Les premiers habitans ont-ils eu des obstacles à rencontrer à cet égard; les ont-ils surmonté tout-à-fait ou en partie; jusqu'à quel point et par quel moyens?—Il a fallu passer à travers des bois, bien difficilement, une lieue dans Saint-Joseph, jusqu'à une lieue dans le township; il n'y avait pas d'autres moyens que de porter (toute cette distance) les vivres et les fournitures sur le dos. Il y avait des côtes très hautes à monter et des savannes difficiles. Ces difficultés sont en quelques manières disparues; 1^o parce que les terres de Saint-Joseph ont été concédées depuis jusqu'à la ligne du dit township, et 2^o les ravines ont été pontées jusqu'au dit township; le chemin fait en partie, et en partie ébranché par les habitans de Saint-Joseph et ceux du township, et de là continué environ une lieue et quart par les propriétaires du dit township; un pont considérable ayant été fait sur la Rivière de Machiche par Sueton Grant, écuyer.

Y a-t-il des communications par eau, et quelles, entre ce township et la Rivière Saint-Laurent ou celle de Saint-Maurice; et quelle est la distance de ce township de chacune de ces rivières?—Il n'y a pas de communication à la Rivière Saint-Laurent, ni à la Rivière Saint-Maurice, la distance du chemin à faire pour gagner à la Rivière du Loup est d'environ une lieue et demie, et de là, il y a une communication très facile par eau jusqu'au Saint-Laurent. Il y a peut-être la même distance à faire pour atteindre la Rivière Saint-Maurice, mais c'est dans les parties éloignées du township, vers le 19^e. ou 20^e. rang, où il est à présumer qu'il ne se formera d'établissement de sitôt.

Les habitans de ce township auraient-ils une communication plus courte aux Trois-Rivières, par un chemin qui irait joindre le chemin des Forges? et s'il en est ainsi décrivez le particulièrement; la nature du pays à travers lequel ce chemin devrait passer, et les frais probables d'icelui?—Oui; il y aurait une communication plus courte pour les habitans des 7^e. et 8^e. rangs, et la distance du chemin neuf à faire ne serait pas plus d'une lieue pour atteindre le chemin des Forges, et pas plus de sept lieues et demie aux Trois-Rivières. Le pays est marécageux.

geux jusqu'au chemin des Forges; il coûterait environ cent louis, mais pour communiquer aux établissemens actuellement commencés, il coûterait davantage sans leur donner moyen de communiquer aux paroisses voisines ni à la navigation de la Rivière du Loup.

Qu'elle est l'étendue des défrichemens dans le dit township, le nombre de maisons, &c.; veuillez bien donner au comité aucune information statistique que vous pouvez avoir relativement au dit township?—Treize terres ouvertes et défrichées, six ou sept maisons et plusieurs granges.

Par quelle description d'habitans le dit township a-t-il premièrement été établi; quelle est sa population actuelle; quels sont leurs moyens pécuniaires?—Par quelles circonstances, ces moyens ont-ils été affectés avantageusement ou désavantageusement?—Principalement par des Canadiens; il n'y a que peu d'habitans à présent; l'année étant mauvaise, les habitans du haut de Saint-Joseph même, joignant le township, ont été obligés de quitter l'endroit (pour le présent,) aussi bien que la plupart de ceux du township.

En quelle quantité les terres dans ce township sont-elles distribuées?—Les lots sont de six arpens ou environ, par vingt arpens.

Lundi, 29 Décembre 1828.

M. David Grant, des Trois-Rivières, appelé et interrogé :

1. Avez-vous eu quelques moyens de connaître les nouveaux établissemens du Township de Caxton en arrière de la Pointe du Lac et Machiche, dans le district des Trois-Rivières, et quels sont-ils?—J'ai été plusieurs fois dans le township de Caxton, mais je ne puis dire que j'ai aucune connaissance particulière des établissemens ou de township.

2. Quand ce township a-t-il été arpenté pour la première fois? quel est le nombre actuelle des habitans?—Il fut arpenté en 1824, et il a commencé à s'établir en 1825, mais je ne connais rien sur le nombre actuel de ses habitans.

3. Quel était l'état des communications entre le township, au temps où commencèrent les établissemens? les nouveaux habitans avaient-ils beaucoup d'obstacles à surmonter sous ce rapport? les ont-ils surmontés en tout ou en partie, et par quels moyens et jusqu'à quel point?—On se rendait au township à travers les bois l'espace de 8 à 9 milles, par la partie supérieure de Machiche. Les obstacles étaient un grand nombre de ravines qui coupaient le chemin; on a en partie surmonté ces obstacles en faisant des ponts dans le fond des ravines, et en ouvrant un chemin qui pénètre dans le township à une distance considérable.

4. Y a-t-il, et quelle communication par eau entre le fleuve St. Laurent ou le St. Maurice; et quelle est la distance de ce township de ces deux rivières?—Je ne puis répondre à cette question d'après mes connaissances personnelles. La distance pour aller au St. Laurent peut-être de 18 milles ou environ.

5. Les habitans de ce township n'auraient-ils pas plus court à aller aux Trois-Rivières, par un chemin qui tomberait dans celui des forges, et s'il en est ainsi, décrivez ce chemin, surtout la partie du pays par laquelle ce chemin passerait, et ce qu'il pourrait coûter?—Je suis également incapable de répondre à cette question, mais il est à supposer que la communication en serait raccourcie, non pas avec l'établissement actuel, mais avec les rangs de derrière.

6. Quelle est l'étendue des défrichemens dans le dit township, le nombre de maisons, &c.? Ayez la bonté de faire part au comité de toutes les connaissances statistiques que vous pouvez avoir concernant le dit township?—Je ne puis dire, je ne connais pas assez le township pour en faire au comité aucun rapport particulier.

7. Par quelle sorte d'habitans le dit township a-t-il été d'abord établie? Quelle en est la population actuelle? Quels sont leurs moyens pécuniaires? Et par quelles circonstances ces moyens ont-ils été appliqués avantageusement ou désavantageusement?—Principalement par des officiers de milice et des miliciens.

8. En quelles quantités les terres de ce township sont-elles distribuées?—En pas moins de 100 acres aux colons, et de pas plus de 1200 acres aux officiers: Les capitaines en ont 800; les lieutenans et les enseignes 500 chacun.

Andrew Paterson, Ecuyer, appelé et interrogé.

Mêmes questions qu'au témoignage précédent.

Je montai au township de Caxton en septembre dernier pour y visiter ma terre et voir les améliorations qui y avait été faites.

Je crois qu'il y a quatre à cinq ans que ce township a été arpenté; aussitôt que l'arpentage en fut fait, les établissemens commencèrent; il y a environ douze familles résidentes, formant plus de trentes personnes.

Lorsque les établissemens commencèrent le seule voie pour parvenir au township était qu'à travers les bois, ce qui a considérablement retardé l'établissement du township. Sueton Grant, écuyer, l'agent, et quelques autres ont ouvert un chemin à travers les bois, mais comme les souches en sont pas encore arrachées, c'est une bien mauvaise route, et c'est avec difficulté qu'une voiture peut parvenir à l'établissement; je crois que ce chemin va à la première concession, et probablement jusqu'à la seconde.

On pourrait couper un chemin jusqu'à la Rivière du Loup ou le St. Maurice, ce qui mettrait les habitans en état de se rendre au St. Laurent en radeaux par l'une et l'autre de ces rivières. La Rivière Machiche passe à travers le township, mais elle n'est pas navigable même pour les petits bateaux. D'après le meilleur de mes connaissances, je crois que ce township est à peu près à distance égale de la Rivière du Loup et de celle de St. Maurice, c'est-à-dire environ 6 à 7 milles, mais les établissemens sont plus près de la dernière de ces rivières.

Le chemin le plus direct pour aller des Trois-Rivières au township, c'est de passer par les forges de St. Maurice, et une personne qui a fait ce trajet m'a assuré qu'il n'y avait pas plus de 16 à 17 milles. Je pense qu'on pourrait faire passer un chemin tout le long du front du township, montant jusqu'à la 4e ou 5e rangée et descendant au chemin des forges, qui est bon jusqu'aux Trois-Rivières, pour une charge de 800 livres. Il y a quelques années il fut voté une somme pour améliorer les communications dans le comté de St. Maurice; il n'en a été dépensé qu'une petite partie, et si le restant était appliqué il suffirait pour couvrir les dépenses du chemin proposé dans le township.

Je crois qu'il y a environ 200 acres défrichés maintenant, ou qui sont en train de l'être dans le township, et environ 14 maisons; la mauvaise moisson de l'année dernière et le mauvais état des chemins a empêché plusieurs colons de rester dans leur maisons, et en plusieurs endroits ils n'ont pas les moyens de tirer leurs moissons des défrichemens; les terres sont excellentes en plusieurs endroits, et seraient bientôt établies si des chemins étaient ouverts, les terres de la seigneurie de Machiche qui le bornent étant toutes concédées.

Je crois que ce township est principalement concédé à des personnes qui servirent dans la milice pendant la dernière guerre. Je ne puis dire exactement quelle est la population de ce township, car plusieurs de ceux qui ont des billets de location ne restent sur leurs terres qu'un court espace de temps dans l'année; la plus part des colons sont pauvres et ne peuvent payer pour avoir leurs patentes. Lorsque je fus au township plusieurs des colons vinrent me demander si je croyais que le gouvernement leur accorderait du délai; car s'il ne faisait pas cela, le mieux pour eux était d'abandonner leurs terres incontinent, plutôt que de courir le risque de perdre leurs peines, en les améliorant. En effet il y en avait parmi eux qui espéraient qu'en considération de leurs services dans la milice, le gouvernement leur donnerait les titres de leurs terres sans qu'ils fussent obligés de payer d'honoraire.

Les terres concédées sont je crois comme suit:—à L'Honble Mathew Bell, 1200 acres; Sueton Grant, comme agent pour le dit township, 1200 acres; Lieutenant Dame et Paterson, 500 acres chacun; Enseigne Grant, 500 acres, et environ 60 lots de 100 acres chacun à divers individus.

Mardi, 30 Décembre 1828.

L'Honble. Mathew Bell est appelé et interrogé.

(Questions 1, 2, 4, 5, 7.)

Je n'ai jamais été dans le township moi-même, mais ayant pris les terres qui m'étaient dues pour mes services comme officier de milice, j'ai pris des informations sur l'état des établissemens. J'ai rempli les conditions d'établissement, mais à grands frais par le manque de chemins, et je me propose de les faire établir aussitôt qu'il y aura des chemins pour me permettre d'y mettre du monde.

Ce township fut arpenté en 1824, et à ce que j'ai appris pour y concéder des terres aux miliciens qui avaient servi pendant la dernière guerre. M. Sueton Grant a été nommé agent, et je prendrai la liberté de renvoyer le comité à ce Monsieur, pour en recevoir des renseignemens ultérieures à l'égard de cette place.

Il n'y a aucune communication entre ce township et la rivière St. Maurice, et s'il y en avait elle tomberait bien au dessus de la grande chute et de rapides difficiles. J'ai oui dire qu'on pouvait établir facilement une communication avec la Rivière du Loup.

Je

écuyer.

L'Honble. M.
Bell.
30 décembre.

Appendice
(P.P.)

Je suis d'opinion que les premiers établissemens doivent nécessairement communiquer avec les Trois-Rivières par le chemin de Machiche qui va jusqu'au township ou bien près. Il est probable que l'extrémité orientale sera plus proche des Trois Rivières par un chemin qui traverserait les terres réservées pour les forges de St. Maurice, mais comme les chemins allant dans cette direction ont été abandonnés depuis plusieurs années, il faudrait les ouvrir de nouveau, je connais le terrain, du moins une partie, pour être montagneux et rempli de ravines profondes; et il y a deux grandes savannes qui ont été autrefois pontées avec des billots, et qui sont maintenant dans un très mauvais état.

Je crois que ce township a été réservé exclusivement pour les miliciens, et pour être établi par eux; et on espérait que leurs parens et connaissances des environs les aideraient à s'établir; et je ne doute pas que le manque de chemin est la seule cause qui a empêché que ce township ne soit maintenant peuplé de cultivateurs Canadiens. Plusieurs de ceux qui ont droit d'avoir des terres n'ont pas pris leurs billets de location, à cause de l'impossibilité d'aller sur les lieux.

Sutton Grant, Ecuyer, est appelé et examiné.

S. Grant, écr.

(Même questions que pour David Grant.)

Ayant été nommé agent pour surveiller l'établissement, j'ai eu occasion de connaître le township de Caxton.

L'arpentage commença en 1823 et fut achevé en 1824. Le nombre d'habitans résidans est maintenant très petit, et n'excède pas, je crois, deux familles.

Lorsque l'établissement commença en 1825, la communication se faisait et se fait encore par la concession de St. Joseph dans la paroisse de Machiche. Les nouveaux habitans eurent alors à rencontrer la difficulté d'ouvrir un chemin, à travers les bois, de plus d'une lieue dans cette concession, sur un pays très rude, entrecoupé de ravines très profondes. Les difficultés ont été surmontées depuis en partie, par les nouveaux colons (qui avaient concédé toutes les terres le long du chemin jusqu'au township) aidés par les habitans de Caxton; mais cette communication ne sera de sitôt d'un grand service pour les voitures chargées, à cause des côtés immenses et inaccessibles chaque côté des ravines qui coupent le chemin; et il n'y en a pas moins de six dans cette distance, et qu'on ne peut éviter par cette route.

Il n'y a aucune communication immédiate par eau entre ce township et la rivière St. Maurice et le St. Laurent. La distance horizontale entre le St. Laurent peut-être de six lieues, le St. Maurice est beaucoup plus près des derniers rangs sur les réserves de la couronne, mais je n'ai aucune idée de cette distance.

Je ne puis donner sur cette question aucune information fondée sur ma connaissance personnelle, mais des personnes qui connaissent bien le pays m'ont dit, que toute la distance du chemin qu'il faudrait depuis les 8e. et 9e. rangs (réserve du clergé) ne ferait guère plus d'une lieue, la plus grande partie à travers des savannes, pour aller jusqu'au chemin des forges. Par cette voie la communication serait bien, il est vrai, plus courte pour aller aux Trois-Rivières, mais ne le serait pas pour se rendre au St. Laurent par Machiche ou la Rivière du Loup. La dépense de ce chemin ne pourrait pas monter bien haut, et assurément, avec le temps, il serait bien utile aux nouveaux habitans; mais je pense humblement qu'il ne peut pas être de suite d'un très grand usage. Les nouveaux colons iront naturellement aux habitations voisines chercher du secours, et ils y recevront des provisions, etc. pour leur travail. Le chemin pour aller au Trois-Rivières par le chemin des forges, n'offrant dans une distance de 7 à 8 lieues, aucune maison ni établissement quelconque, si ce n'est celui des forges, ne pourra être utile que lorsque le township sera avancé, et aura un surplus de produits pour le marché.

La somme totale des terres concédées, sur lesquelles on a rempli les conditions d'établissement, est 4800 acres, et elles sont distribuées dans les sept premiers rangs; la somme totale des défrichemens sur les terres de 112 acres; la distance de chemin ouvert à travers le township d'environ une lieue et demi, et le nombre des maisons dix, mais il y en a qui ne sont presque que de simples cabanes. Le manque des moissons de l'année dernière a obligé les habitans du township et de la partie supérieure de St. Joseph, joignant Caxton, à aller passer l'hiver aux anciennes habitations. Lorsque l'établissement commença en 1825 et 1826, cent soixante et sept miliciens de la ci-devant milice incorporée firent application à moi, comme agent, pour avoir des terres dans ce township, mais un bien petit nombre sont venus demander des billets de location, car voyant que quelques officiers (qui ont droit à de grandes étendues de terre, et qui ne sont pas tenus à plus de conditions que les simples miliciens) avaient pris leurs terres sur le front du township, ils se trouvèrent nécessairement rejetés plus en arrière dans la forêt, et il perdirent courage faute de chemins pour se rendre à leurs lots, qui alors étaient éloignés de 3 à 5 lieues de tous chemins. Un chemin qui aurait traversé les cinq ou six premiers rangs jusqu'au réserves du clergé aurait obvié à cette difficulté. Presque toutes les terres de ces rangs, à en excepter peut-être la partie supérieure du premier et du second rang, sont propres à la culture. Le pays abonde en bois de toutes sortes, entre lesquelles se rencontre le pin, l'épinette et le chêne (chêne rouge). Il est arrosé par

un nombre de petites rivières, entre autres par une branche de la rivière Machiche, sur laquelle il y a beaucoup d'endroits propres à bâtir des moulins, outre un grand nombre de beaux lacs. Sur la rivière mentionnée en dernier lieu il a été dernièrement élevé un moulin à scie, à la distance de onze acres seulement de la ligne de front du township; mais à présent il n'est utile qu'à l'établissement adjacent, n'y ayant aucune possibilité de porter ses produits sur le marché. Pour expliquer plus clairement la situation de ce township à l'égard des paroisses voisines, je demande au comité qu'il me soit permis de dire, que les concessions de St. Joseph de Belle-Chase et Pique-dur, dans la paroisse de Machiche, courant en ligne parallèle l'une avec l'autre N. 45°. O. un nouveau chemin qui commencerait au chemin de St. Joseph, environ 2 milles au dessous de la ligne de front de Caxton, et qui courrait à angles droits avec celui de St. Joseph, couperait le chemin de Belle-Chase au sud à la distance de 40 acres, et continuant dans la même direction couperait celui de Pique-dur à la distance de 20 acres; et en le poussant encore 15 à 16 acres, on le ferait aboutir à la Rivière du Loup au dessous de la Chôte de l'Eturgeon, d'où la rivière est navigable pour les bateaux et radeaux jusqu'au Saint-Laurent. Cette voie offrirait une excellente communication entre le township (par le chemin de Pique-dur, au milieu d'un pays riche et densément peuplé, sans allonger la distance) et le Saint-Laurent à Machiche; mais ce qui est le plus important de tout une communication par eau aux marchés des Trois-Rivières et de Québec, pour les potasses et les bois, &c. Mais ce qui donnerait des facilités plus immédiates aux colons, et à l'établissement du township serait l'ouverture du chemin demandé à travers les premiers cinq ou six rangs, jusqu'au lot mis à part pour asseoir un village. L'aide demandée, si on donnait l'ouvrage en petits contrats, ou à la journée, sera suffisante, dans l'opinion de tous les colons, à la confection de ces améliorations, et allégerait en outre la détresse des habitans des dernières concessions; par le manque des moissons de l'année dernière.

Les colons sont la plupart Canadiens. Il est probable qu'il serait établi presque exclusivement par le surplus de la population des paroisses de Machiche, de la Rivière du Loup et de Maskinongé, où les seigneuries sont presque toutes concédées.

Les terres sont divisées en lots de 100 acres, et elles sont distribuées pour la plupart en lots de 100 à 500 acres.

Mercredi, 31 décembre 1828.

M. Louis Bernard, de la paroisse de la Pointe aux Trembles, ayant été appelé, a informé votre comité; que les pouvoirs donnés par la loi aux Grands Voyers étaient beaucoup trop grands, en autant qu'il était impossible d'amener des témoins contre eux; que par cela, un Grand Voyer pourrait tracer un chemin dans son cabinet, sans qu'il fut possible aux parties de pouvoir prouver le contraire. Que le pouvoir de tracer ou de changer les chemins devrait être laissé à la majorité des habitans des paroisses ou circuits; lesquels seraient convoqués en assemblée à cet effet, ou de par les parties nommer des personnes étrangères comme jurés, pour visiter les lieux et décider. Les frais auxquels sont assujettis les habitans du pays pour faire tracer des chemins sont très onéreux, et insupportables pour les habitans des nouveaux établissemens. Dans les cas de manque de formalités, les frais sont les mêmes; de sorte que les Grands Voyers n'ont aucun intérêt à éviter ces fautes; c'est plutôt un avantage pour eux: c'est l'opinion des habitans que je connais.

M. L. Bernard.

Vendredi, 2 janvier 1829.

Le Révérend *Messire Michel Dufresne*, a été appelé et examiné:

Rév. Messire Michel Dufresne.

Avez-vous eu occasion de fixer votre attention à l'objet des communications intérieures dans cette partie du district qui comprend la seigneurie de Saint-Giles et les townships au delà?—Je n'ai guère fixé mon attention sur ces objets, y ayant un chemin qui traverse St. Giles dans une direction à-peu-près nord-nord-ouest l'espace d'environ vingt et un milles; lequel chemin sert pour le besoin des gens de Saint-Giles, au sud-ouest de la rivière, pour Saint-Sylvestre au haut de Saint-Giles, pour les townships de Leeds, d'Inverness, de New-Ireland, d'Halifax, &c. Quoique Saint-Giles soit habité depuis environ soixante ans, il n'est établi que sur les bords de la Rivière Beauvillage, et ne prend presque aucun accroissement, soit à cause des savannes qui sont considérables, soit à cause des gelées fréquentes, soit à cause des inondations de cette même rivière qui causent de temps en temps des pertes très considérables aux habitans. Il y a quelques personnes établies de l'autre côté de la rivière (au nord-est) qui n'ont pas encore de chemin de roi, le Grand Voyer leur en ayant verbalisé un tout dernièrement; jusqu'à cette heure ces habitans au nord est de la rivière au nombre de huit environ, sont servi du chemin Craig, traversant la rivière à-peu-près vis-à-vis leurs habitations, excepté dans les grandes eaux.

Par quels moyens vous est venue cette connaissance?—Ayant été fort souvent à Saint-Giles et à Saint-Sylvestre, j'ai eu le moyen de prendre ces connaissances par moi-même. Je n'ai jamais été dans les townships de

de Leeds ni de Broughton qui avoisinent les paroisses que je dessers. Les connaissances que j'aurai de ces lieux ne seraient que par ouï-dire.

Quels sont les chemins et ponts actuels et leur état dans cette partie du pays qui comprend la seigneurie de Saint-Giles et le township de Leeds?—Il n'y a dans Saint-Giles et dans Leeds qu'un seul chemin, celui que je viens de nommer, et dans Saint-Sylvestre, (nouvelle paroisse érigée dernièrement aussi bien que Saint-Giles par une érection canonique,) il y a de plus le chemin Sainte-Marie qui rencontre *Craig's Road*, à la ligne seigneuriale qui sépare Saint-Giles ou Beauvillage de Leeds et forme un angle aigu avec cette route. La route Craig jusqu'à Leeds est ordinairement assez bonne, excepté les derniers quatre ou cinq milles qui sont mauvais, ce pays étant extrêmement montagneux et garni de roches, et dans les basses plaines de mollières. J'ai lieu de croire que cette même route dans Leeds est infiniment plus mauvaise par le rapport des voyageurs; le chemin Sainte-Marie est aussi assez mauvais, mais les habitans qui le bordent, étant très actifs, l'amélioreront dans bien peu de temps. Il est bon de remarquer que Saint-Sylvestre est un établissement tout nouveau, n'ayant pas plus de neuf ans d'existence et déjà il y a plus de 400 terres concédées et à-peu-près 200 habitée, par autant de familles Canadiennes et Irlandaises catholiques pour le très grand nombre. Les ponts sont au nombre de six, cinq dans Beauvillage et un dans Leeds, un sur la Rivière aux Pins, l'autre sur la Rivière à la Fourchette, un troisième sur un petit ruisseau dont je ne connais pas le nom, un quatrième sur la Rivière du Four et un cinquième sur la même rivière Chemin Sainte-Marie, et le sixième dans Leeds sur la rivière Bécancour. Ces ponts sont en bon état, excepté le troisième et le quatrième, que j'ai trouvés quelque fois impraticables, ayant été enlevés par le gonflement des eaux, et il fallait passer ces petites rivières à l'eau avec danger de verser à cause des cailloux.

Quelle devrait être, dans votre opinion, la direction des chemins, les places les plus convenables pour y bâtir des ponts, les inconvéniens auxquels les habitans de ces endroits sont à présent assujettis?—Quels seraient les frais probables des ponts et de la confection et réparation des chemins nécessaires?—Il est très difficile de donner la direction des chemins et la place des ponts à bâtir à cause des savannes, mollières, mauvais terrains qui pourraient se rencontrer dans les directions qui pourraient être données. Il y a déjà dans Saint-Sylvestre trois ou quatre chemins ébranchés et qui ne tarderont pas à être praticables par l'activité et le travail des gens, qui ne pensent pas même à demander la moindre aide à la législature. Deux ponts sur la rivière Beauvillage seraient à propos, un vers la chaussée du vieux moulin et un autre quelques lieux plus haut. Du reste j'ai procuré à Monseigneur Panet un plan très exact de la Seigneurie Beauvillage; je ne doute pas que S. G. ne se fit un véritable plaisir de le prêter pour le besoin du comité. Il est aussi très difficile de déterminer la dépense probable pour les différens objets mentionnés dans la question quatrième. Je crois cependant qu'avec £1000 ou £5000 bien employés, il se ferait beaucoup d'ouvrage. Mes paroissiens, pour le moment, n'éprouvent pas d'autres inconvéniens que ceux dont j'ai déjà parlé, tels que le gonflement de la rivière, les gelées, et les marécages qui se trouvent sur leurs terres, et c'est trop.

Veillez bien donner vos raisons et sur quoi vous appuyez pour recommander ces chemins, leur importance relative et les effets probables qu'ils pourront produire par rapport aux nouveaux établissemens?—Saint-Giles étant peuplé de pauvres gens, et les terres de ce lieu étant méprisées généralement, je ne vois pas quo pour le moment il fut nécessaire d'y faire de grandes dépenses; ces pauvres gens bien loin d'être capable d'exporter leurs grains et denrées, ont grand besoin d'importations de ces objets. Voici six ans que je les dessers, je puis dire avec vérité que je n'ai pas reçu 50 minots de grain de dîme chaque année. Quel commerce de pareils gens pourraient-ils faire? Et je crois qu'il s'écoulera encore bien des années avant qu'ils surabondent. Saint-Sylvestre avance à pas de géant; j'ai dit qu'il n'y a pas plus de neuf ans que cette partie de Beauvillage a commencé à être habitée, et je ne crains pas de dire qu'il y a déjà au moins autant d'ouvrage qu'à Saint-Giles. Peut-être qu'un petit don en faveur de Saint-Sylvestre redoublerait l'ardeur de ses habitans. Il faudrait bien choisir les personnes qui seraient dépositaires de ces argens, s'il en était donné, et il serait nécessaire de prendre le sentiment des intéressés afin d'employer ces sommes pour leur plus grand avantage. Avant de finir, j'oserais suggérer au comité une idée pour l'amélioration des habitans de Saint-Giles, mais que quelques personnes regardent comme impraticable. Ces infortunés voyent enlever chaque année ou presque chaque année le fruit de leurs sueurs et de leurs travaux, semences et levées de toute espèce de grains et de légumes, clôtures, tout disparaît et est emporté par cette rivière qui se grossit par les pluies et par les eaux qu'on y conduit pour dessécher les terres; quantité d'animaux ont péri dans ces inondations subites, des maisons ont été enlevées, et une famille nombreuse y a péri presque entièrement. Pour remédier à ces malheurs qui empêcheront toujours Saint-Giles de prospérer, (et remarquez que plus les terres se découvriront plus il y aura de danger) ne serait-il pas possible de creuser le lit de cette rivière, un ouvrage, j'en conviens, très dispendieux, mais absolument nécessaire?—La chambre ou si vous aimez mieux la législature pourrait obliger chaque propriétaire de travailler une couple de semaines par année dans la devanture de sa terre, en même temps qu'elle allouerait une certaine somme pour aider ces pauvres gens.

Mardi, 13 Janvier 1829.

Mr. Josiah King, de Saint Giles, Cultivateur, a comparu et a été interrogé :—

Avez-vous eu occasion de porter votre attention sur le sujet des Communications intérieures dans quelque partie du District, et surtout dans la Seigneurie de St. Giles et dans les Townships qui sont en arrière? Je possède du bien dans la Seigneurie de St. Giles, et j'y ai souvent voyagé. Je recommanderais de redresser le Chemin actuel en plusieurs endroits.

Quels sont les Chemins et les Ponts, et dans quel état sont-ils dans l'étendue de pays compris dans la Seigneurie de St. Giles et le Township de Leeds? On appelle le Chemin Craig celui qui passe dans la Seigneurie de St. Giles et le Township de Leeds; la partie de ce Chemin qui passe dans St. Giles est assez bonne, mais celle de Leeds très mauvaise. Il y a quelques Ponts qui sont bons.

Quelle serait à votre avis la meilleure direction pour les Chemins; les endroits les plus propres pour des Ponts; quels sont les inconvéniens auxquels les habitans de ces parties sont maintenant sujets? Combien en coûterait-il pour faire les Ponts et les Chemins nécessaires ou les réparer?—Le Chemin actuel est dans la direction la plus convenable, mais comme je l'ai dit plus haut, il aurait besoin d'être redressé en quelques endroits, et avec peu de frais on ferait faire au chemin un détour, où il se trouve quelques Côtes qu'il faudrait éviter. Je recommanderais d'ouvrir un Chemin d'Ireland à Shipton et de Shipton à Dudswell. Le moyen le moins dispendieux pour ouvrir les Chemins, une perche ou 16 pieds de large, ferait de les donner à faire par acre comme le défrichement, et cela fait, je crois qu'il faudrait donner les Ponts et Fossés à faire au rabais. Il faudrait deux Ponts sur les deux étangs du Nicolet, un sur chaque Chemin: sur le Chemin de Shipton il faudrait qu'il fut fait quatre petits Ponts. Les Ponts sur les étangs du Nicolet coûteraient, je suppose, environ £200 chacun; et les quatre du Chemin de Shipton, un d'une certaine grandeur sur la Rivière Wolfe, coûterait environ 150 Dollars, et les trois autres ne coûteraient ensemble guère plus de 100 Dollars. Je ne puis dire combien coûterait le Fossillage, car il y a des terrains qu'il faudrait affécher.

Ayez la bonté de donner les raisons qui vous portent à recommander ces Chemins, leur importance relative et quel effet ils devraient naturellement avoir sur les nouveaux Etablissemens? Il y a de grands Etablissemens qui souffrent du manque de ces Chemins, favoir: ceux de Stanstead, d'Eaton et de Dudswell, et d'autres sur le Chemin de Dudswell. La conséquence en ferait qu'un grand nombre d'Habitans de ces endroits, qui ont des Produits en quantité, tel que Potasse, Beurre, Fromage, Lard, Fleur, Lin, Graine de Foin, Mil, Trèfle, &c., sont obligés de les porter à Portland, à une plus grande distance qu'ils ne feraient, si les Chemins que je recommande étaient ouverts. Je suis porté à croire que si le Chemin de Dudswell était ouvert, dix Habitans du Chemin de Shipton sur un, en retireraient de l'avantage. Le Chemin de Dudswell est de 40 à 50 milles plus proche pour ces gens que le Chemin de Shipton. J'ai passé sur chacun de ces Chemins environ quatre fois, à cheval, en waggon et en traîneau, et à pied.

Mr. D. H. Andrews, de St. Nicolas, ayant comparu, a informé votre Comité: Il connaît le Chemin Craig qui conduit aux Townships de l'Est depuis cinq années, et il y a passé aussi souvent que ses affaires l'on demandé; depuis St. Nicolas jusqu'au Townships de Leeds, espace de 28 milles, le Chemin est bon; de là jusqu'à Ireland le Chemin est très rude, les habitans étant pauvres ne sont pas capables de faire le Chemin assez bon pour y voyager avec des voitures; depuis St. Nicolas jusqu'à Ireland toutes les rivières sont pontées. Je crois qu'il faudrait environ £300 pour réparer les Chemins depuis Leeds jusqu'à Ireland. De là jusqu'à Shipton, distance de 30 milles, il y en a 28 de très-mauvais Chemin. Il y a deux grandes rivières, la première appelée Rivière Wolfe, à 7 milles d'Ireland. Je crois qu'il suffirait de £75 pour y jeter un bon Pont. A sept milles plus loin on rencontre la Rivière Nicolet, pour y bâtir un Pont il faudrait £200, et en sus de cela je crois que £1000 suffiraient pour rendre le Chemin praticable, de manière à ce que les habitans pussent apporter leurs produits au Marché de Québec. Si l'on accordait ce que j'ai recommandé, il n'y a aucun doute que le Chemin serait rendu passable, ce qui amènerait à ce marché environ 40,000 habitans, qui n'y peuvent venir maintenant, qu'avec ce qu'ils peuvent amener vivant. En 1827 et 1828 on a fait passer par ce Chemin 3000 Bêtes à cornes et environ 2000 Moutons.

13 Janvier.

M. Andrews.

Appendice
(P.P.)

tons ; et l'amélioration du Chemin avancerait les Etablissements dans cette partie du pays. Les 28 milles entre Shipton et Ireland contiennent une étendue des meilleures terres du Bas-Canada, et ce serait un beau champ d'ouvert aux Emigrés ; il y a quelques belles fermes sur ce Chemin, mais les habitans ont été obligés de les abandonner, à cause du mauvais état où il se trouve. Maintenant si l'on accorde de l'argent pour améliorer ce Chemin, il faut imaginer un meilleur plan que celui qu'on a suivi ci-devant dans l'application des Deniers qui ont été votés pour le même Chemin ; les Contracteurs ont épargné pour le moins la moitié de l'argent ; par exemple le Pont qui a été bâti sur la Rivière Nicolet a été donné à l'entreprise pour la somme de £250, et le Pont a été fait pour £125, de sorte que les Contracteurs ont gagné la moitié de l'argent ; mais comme je l'ai dit plus haut, il faudrait £200 pour bâtir un Pont convenable sur la Rivière Nicolet. Mais si l'on autorisait des personnes convenables pour engager des Travailleurs et les surveiller, le pays profiterait de tout l'argent accordé pour cet objet.

Mr. Arnold.

Mr. George Arnold a comparu et a été interrogé.

(Mêmes Questions qu'à Mr. Dufresne.)

Ce qui m'a fait tourner mon attention sur la Seigneurie de St. Giles, c'est que j'y ai des terres.

En passant fréquemment sur le Chemin.

Autant que je le connais il y a un bon Chemin roulant, jusqu'à plus de 40 milles au dessus de la Pointe Levi ; il manque seulement un Pont sur le Saut. J'ai été jusqu'à Leeds.

L'Honorable John Caldwell et Mr. Joseph Bell font à mon humble avis les plus capables de marquer l'endroit le plus propre et le plus convenable pour bâtir un Pont sur le Saut, vu que leurs affaires les appellent plus particulièrement à cette place. Les habitans établis jusqu'à quelques centaines de milles sentent les inconvéniens de n'avoir pas un Pont sur le Saut, et surtout lorsqu'ils descendent des animaux vivans qu'ils sont obligés de faire traverser le Fleuve St. Laurent au Cap Rouge, au risque de leurs propres vies et de celles de leurs animaux, sans compter le grand prix qu'il leur faut payer pour cette traversée, et assez souvent, à certains temps de l'année, ils sont retenus depuis une semaine jusqu'à quinze jours.

La raison qui me fait recommander les Chemins à travers les Townships et surtout le Chemin Craig, c'est que ce Chemin a déjà été fait, et d'après les meilleurs renseignemens que j'ai pu me procurer, une légère somme suffirait pour les réparations, ce qui épargnerait aux habitans de se détourner de leur Chemin de plusieurs centaines de milles, et ils seraient en état de vendre leur produit de 10 à 15 par cent plus bas.

Mardi, 20 Janvier, 1829.

R. Christie,
écuyer.
20 janvier.

Robert Christie, Ecuyer, Membre pour le Comté de Gaspé, ayant comparu, a informé votre Comité :—Que c'est le désir de ses constituans qu'il soit ouvert un Chemin depuis le Village Sauvage au point de la haute marée sur la Rivière Ristigouche jusqu'à Mitis sur le St. Laurent, par lequel Chemin les habitans de ce Comté communiqueroient directement par terre avec la Capitale. Que ce Chemin servirait aussi de communication entre cette Province et le Nouveau Brunswick. Toute la distance pourrait être d'environ 90 milles. Il suffirait de la somme de £1000 à £1200 pour ouvrir un Chemin de 18 pieds de large, (avec les ponts nécessaires) jusqu'au Lac Matapédiac ; de là jusqu'au dit Village les voyageurs pourraient descendre par eau en été, et sur la glace en hiver. Il vaudrait mieux cependant que la Législature se déterminât à voter une somme pour ouvrir un Chemin de 12 à 18 pieds dans toute la distance, en prenant une ligne qui passerait à la tête du Lac. Il n'avait jamais été dans cette partie, mais il a appris de bonne autorité, à ce qu'il croit, que la terre y est presque partout excellente et propre à la culture. Il fut affecté en 1817 par acte de la Législature (57e Geo. 3, Chap. 13,) une somme de £1000 pour ouvrir un Chemin entre la Baie des Chaleurs et Rimouski par la voie de Mitis, mais ce vote n'a pas été mis à effet. Il apprenait qu'il s'établirait de suite des habitans sur les bords du Lac Matapédiac, et sur le Portage de Mitis, si on y ouvrait un Chemin. Il y a maintenant devant un Comité de l'Assemblée dont il est le Président, une Pétition des habitans de la Baie des Chaleurs, demandant entre autres choses l'ouverture de ce Chemin, et qu'il soit fait du revenu prélevé dans le comté un fond applicable à cet objet. Le Comité a fait rapport contre la formation de ce fond proposé,

et il est probable qu'il ne croira pas nécessaire de faire rapport sur l'utilité du dit Chemin, dans l'idée que cet objet étant plutôt une mesure d'intérêt général, il est plus à propos qu'il soit discuté dans ce Comité, auquel est renvoyée la partie de la harangue de Son Excellence relative aux communications intérieures. La Législature ayant, par l'acte ci-dessus mentionné reconnu la nécessité d'ouvrir le Chemin en question, il suggère humblement de révoquer l'allocation faite pour cet objet, et d'en faire une plus considérable.

Mercredi, 21 Janvier, 1829.

Mr. Charles Kirouac, de la Rivière du Sud, ayant été appelé, a informé votre Comité :—Qu'il a visité les terres au de là de la hauteur des établissemens vis-à-vis de la Paroisse de St. Pierre, Rivière du Sud ; qu'au de là de ces hauteurs il y avait d'excellentes terres sur les quelles on pourrait former de nouveaux établissemens. Qu'il y avait dans la Paroisse de St. Pierre environ 160 chefs de famille ; que de ce nombre, il y en avait au moins 49 qui n'avoient que des emplacements ; que cela provenait de ce qu'il n'y avait point de Chemins pour parvenir aux bonnes terres. Que si la Législature voulait accorder une somme de £400 pour l'ouverture d'un Chemin à travers la hauteur des terres, ce qui serait fort aisé, il se formerait de suite un nouvel établissement et cela procurerait des terres à la population surabondante de la dite Paroisse. Que la longueur du Chemin à ouvrir serait de quatre lieus.

M. Kirouac,
21 Janvier.

Vendredi, 23 Janvier, 1829.

Mr. Francis Armstrong Evans, ayant été appelé, remit à votre Comité le Papier suivant :—

Mr. Evans,
23 Janvier.

Le soussigné, F. A. Evans, Agent pour quelques-uns des principaux Habitans et autres Personnes résidantes dans les Townships de l'Est, soumet humblement au Comité pour les Communications intérieures, les renseignemens suivans à l'égard des principaux Chemins, qui selon lui demandent une dotation d'Argent public, et que le soussigné a été chargé de soumettre à l'Honorable Chambre d'Assemblée.

Les Townships de l'Est ont besoin pour aller aux principaux marchés de la province, savoir, Québec, Montréal et les Trois-Rivières ; des chemins de sortie pour porter les produits et se procurer les effets dont ils ont besoin des diverses villes ; et sous les circonstances actuelles on ne peut pas dire qu'ils aient des chemins de cette espèce, car les chemins actuels sont presque impraticables une grande partie de l'année ; en quelques endroits ils ne peuvent être faits ni réparés à cause du petit nombre d'habitans qui y résident maintenant, ce qui est dû principalement à la défectuosité des lois actuelles sur les chemins, qui ne donnent aucun moyen de forcer les propriétaires de terre non résidans à aider à faire et à entretenir les chemins, ni à rien de ce qui peut favoriser l'établissement du pays. Les grands chemins de sortie qui offrent aux Townships la commodité d'aller au marché sont les suivans : un chemin depuis Stanstead à travers Hatley, Bolton, Stukely et Granby, jusqu'à la Montagne d'Yamaska, environ 50 milles, c'est le chemin pour aller à Montréal ; un chemin depuis Sherbrooke jusqu'à la sortie du Lac Magog pour rencontrer le chemin ci-dessus pour Montréal, 20 milles ; le chemin Craig, de Shipton à Saint-Giles, 51 milles ; un chemin depuis le township d'Ireland jusqu'à Eaton, 45 milles, et allant jusqu'à Hereford jusqu'à la Rivière Connecticut, 30 milles ; un chemin depuis Melborne jusqu'à la Montagne d'Yamaska, pour tomber dans le chemin de Montréal, 30 milles. Il faudrait aussi quelques améliorations dans le chemin de Shipton, qui passe à travers Kingsley, Simpson et Wendover, 35 milles ; faisant en tout environ 300 milles de chemin, dont à peu près 60 milles seraient du chemin à neuf ; ainsi en allouant 60 louis par mille pour les 60 milles de chemin nouveau à faire, il faudrait la somme de £3,600, et £40 par mille pour les 240 milles à réparer, cela fera £9600, en tout £13,000. Cette somme ouvrirait de bons chemins à travers les townships, et tous les établissemens qui ne seraient pas sur le chemin pourraient aisément s'y rendre par des chemins de traverse ; mais ces grandes routes n'ayant aucun but sectionnaire ou de localité au préjudice d'autres parties, tous les townships sont intéressés à leur confection. Quant au moyen de lever cette somme, ou de la rembourser si elle était avancée par le trésor provincial, je crois que le mode le plus équitable serait d'imposer une taxe générale sur toutes les terres des townships ; disons pour cet emprunt un farthing par acre annuellement ; la taxe devant cesser aussitôt que le prêt sera remboursé. Cependant je crois qu'il est à désirer qu'il y ait une taxe permanente sur les fonds pour

pour la réparation des chemins, et pour faire les autres chemins dont les habitans pourront avoir besoin par la suite. Je crois aussi que là où les chemins seraient ouverts, la valeur de la propriété haufferait de 200 par cent en trois années. Cependant, comme il est possible que cette somme ne puisse être convenablement accordée, les chemins suivant sont absolument nécessaires aux habitans des Townships pour venir aux marchés, et ils les demandent.

1^o Le chemin Craig depuis la rivière Saint-François jusqu'à Saint-Giles. Ce chemin est fait en partie à travers le Township de Shipton et deux milles dans celui de Tingwick; mais il faudrait au moins £10 par mille pour le réparer, ce qui pour 16 milles monterait à £160. De là à passer par Tingwick, Chester, Wolfstown et Ireland, le chemin à environ 10 pieds de large; et il y est tombé beaucoup d'arbres, et il ressemble au lit d'un ruisseau rocheux et boueux; tout-à-fait impraticable pour les voitures, et extrêmement dangereux pour les voyageurs tant à pied qu'à cheval; cette distance dans le district des Trois-Rivières est d'environ 34 milles, à £60 par mille, ce qui je crois, est le plus bas prix auquel on puisse le faire faire, en donnant pouvoir aux commissaires de faire dévier le chemin de côté et d'autre lorsqu'il sera nécessaire pour éviter les côtes, etc. Cela monterait à la somme de £2040. Il y a sur ce chemin un pont sur la branche sud-est de la rivière Nicolet, de 150 pieds de long, et 17 ponts sur des ruisseaux de plus de 18 pieds, (voir le procès-verbal du Grand-Voyer,) mais le terrain sur lequel le chemin passe est d'une excellente qualité. Depuis la ligne du district des Trois Rivières dans le township d'Irlande, jusqu'à Saint-Giles, ou à la rivière Bécancour, à l'endroit appelé Palmer's House, dans le district de Québec, la distance est d'environ 22 milles, et le chemin est fait en partie, mais il faudrait environ £30 par mille pour le réparer, ce qui monterait à la somme de £660. Je crois ces sommes tout-à-fait raisonnables, et rien au-delà de ce qui serait nécessaire pour faire et réparer le dit chemin Craig, qui est la grande sortie des Townships pour venir à Québec.

2^o Le second chemin que je soumettrai à la considération du Comité, est celui à prendre au Township de Stanstead pour aller à Montréal. Ce chemin devient mauvais et presque impassable à la tête du Lac Massiwippi dans le Township d'Hatley, de là jusqu'à la sortie du Lac Magog, distance d'environ 11 milles, le terrain étant montagneux, demanderait d'après les meilleures estimations de £80 à £100 par mille. Depuis la sortie du Lac Magog jusqu'au Township de Stukeley, en faisant le tour de la montagne Bolton, le chemin est mauvais et dangereux. l'espace d'environ 7 milles, et demanderait environ £100 par mille; c'est leur seule route pour aller à Montréal. Toute la distance entre le haut du Lac Massiwippi et Stukely, faisant environ 18 milles, à supposons £90 par mille formerait £1620. La suite du chemin par Stukely, Shefford et Granby, distance de 30 milles, demanderait environ £15 par mille pour réparations, ce qui monterait à £450. Cela ouvrirait le chemin de Montréal jusqu'aux townships qui sont sur les lignes, et en même temps aux townships par lesquels le chemin passerait, et ferait d'une valeur incalculable pour le peuple.

3^o Le chemin suivant le plus important pour les townships le long de la rivière Saint-François, est la continuation du chemin Craig, selon le projet originaire, depuis la rivière Saint-François à travers Melborne, Brompton, Gore, Ely, Roxton et Milton, jusqu'à la montagne d'Yamaska, pour tomber dans le chemin qui va à Montréal: le terrain dans cette direction est une belle étendue de pays, n'offrant presque aucune savanne et tout-à-fait propre à recevoir des établissemens; déjà plusieurs colons s'y sont établis ou sont sur le point de s'y établir, et ont bâti des moulins à scies et à farine dans Ely et Milton. Ce chemin, s'il était fait, raccourcirait de moitié la distance qu'il faut parcourir maintenant pour aller de la rivière Saint-François et des townships du centre, Shipton par exemple, à Montréal. La longueur du chemin qu'il faudrait faire serait d'environ 28 à 30 milles, depuis le St.-François à Richmond jusqu'à la montagne d'Yamaska, à environ £60 par mille, ce qui ferait (y ayant plusieurs ponts aux sources de la rivière Yamaska) £1800 au moins, mais on a porté l'estimation à £2000.

Les trois chemins ci-dessus ont été inclus dans la pétition pour laquelle le soussigné a été nommé agent, c'est pourquoi il les recommande instamment à la considération favorable du Comité. Les sommes nécessaires seraient comme suit:

Pour le chemin Craig dans le District des Trois-Rivières par Shipton et deux milles dans Tingwick, £160 0 0
Pour le même par Tingwick, Chester, Wolfstown

et jusqu'à la ligne du District de Québec dans Ireland,	2040 0 0
Pour le même dans le District de Québec jusqu'à Palmer's House,	660 0 0
Total pour le chemin Craig jusqu'à la Rivière Saint-François,	£2860 0 0
Pour le chemin depuis la tête du Lac Massiwippi jusqu'à Stukely,	1620 0 0
Pour réparer la continuation du dit chemin par Stukely, Shefford et Granby,	450 0 0
Pour le chemin depuis la rivière Saint-François, jusqu'à la montagne d'Yamaska par Melborne, etc.,	2,000 0 0
Inclus et demandé; total,	£6930 0 0

Les chemins ci-dessus ouvriraient de bonnes communications aux villes de Québec et de Montréal, et passeraient au centre des Townships.

Mais il faut encore de l'argent pour compléter le chemin qui conduit de la rivière Saint-François aux Trois-Rivières par Kingsley, Simpson et Wendover, et pour étendre la branche du chemin de Saint-Grégoire, depuis l'endroit où il passe au-dessus de la branche sud-ouest de la rivière Nicolet, par le 9^e et le 10^e rang de Kingsley, pour couper le chemin de Craig à la maison d'école de Danville dans Shipton, distance de 13 milles, qui a été évaluée à £450. On a pétitionné pour cette somme, mais la pétition est venue trop tard; on a grand besoin de ce chemin, les habitans étant maintenant obligés de se rendre à ce point du chemin de Saint-Grégoire, (35 milles d'un mauvais chemin, distance que l'ouverture de ce chemin réduirait à 13 milles,) depuis le centre des établissemens de Shipton, de Kingsley et de Tingwick.

La réparation du chemin pour descendre de la rivière Saint-François par Kingsley, Simpson et Wendover, demanderait, selon qu'il en est fait mention ci-dessus, une allocation, vu le petit nombre d'habitans qui sont établis sur ce chemin, et étant presque impraticable une grande partie de l'année dans plusieurs endroits; la distance est de 35 milles, et demanderait environ £15 par mille pour les réparations, faisant £525. Ce chemin est presque le seul qu'ont les habitans pour parvenir au Saint-Laurent en descendant le long de la rivière Saint-François, et comme on y voyage beaucoup en allant à Québec, à Montréal et aux Trois-Rivières, les gens en ont le plus grand besoin. Il y a cependant un autre misérable chemin du côté occidental de la rivière Saint-François conduisant à Drummondville, mais à peine est-il passable en été. Les townships ont grandement besoin de ces chemins pour aller aux marchés de Québec, de Montréal et des Trois-Rivières, et le soussigné les recommande aussi très-humblement à la considération favorable du Comité pour les Communications Intérieures, et il donnera avec plaisir tous les renseignemens ultérieurs dont il aura besoin.

Québec, 23 Janvier 1829.

F. A. EVANS,

Agent pour les Townships de Shipton, de Stanstead, d'Ascot, d'Hatley, de Brompton, de Windsor, de Durham, de Tingwick, etc., communément appelés les Townships de l'Est.

Mardi, 27 Janvier 1829.

Jacques Déléigny, Ecuyer, un des Chevaliers représentant le Comté de Warwick, a été appelé, et examiné:

Connaissez-vous le Township de Brandon, et les communications qui y conduisent, et quels moyens avez-vous eu de connaître cet endroit?—Je ne connais pas le Township de Brandon par moi-même; je n'y ai jamais été. Je réside à Berthier depuis un nombre d'années, et le Township de Brandon est à environ six lieues du village de Berthier. Je connais beaucoup de personnes qui y ont des terres.

Quelles sont les facilités de communiquer depuis les anciens établissemens sur le Fleuve Saint-Laurent avec le Township de Brandon?—La route usitée à partir de Berthier est par la Côte du Saint-Esprit; les personnes qui y ont des terres là me disent que c'est la route la plus avantageuse pour y conduire à présent.

Appendice
(P. P.)

J. Déléigny.
écuyer.

27 Janvier.

Y-a-t-il

Appendice
(P.P.)

Y a-t-il des communications assez faciles pour permettre aux propriétaires de terres dans le Township de Brandon d'y aller et ouvrir ces terres ?—Il y a la communication qui existe par le Saint-Esprit, qui est très difficile. S'il y avait quelques améliorations de fait, le défrichement des terres serait beaucoup plus avancé. J'ai vu plusieurs personnes qui y avaient des terres et qui désiraient aller s'y établir, les vendre à défaut de communication pour y aller.

Quel est le nombre de personnes actuellement établies dans le Township de Brandon au meilleur de votre connaissance ?—Je ne m'en rappelle pas au juste. Il n'y a pas moins de trente familles, et je crois qu'il y en a davantage.

Y a-t-il des gens dans les anciens établissements de Berthier ayant des terres dans Brandon qui iraient les établir si les communications y étaient meilleures ?—Il y en a déjà qui ont vendu leurs terres dans les anciens établissements de Berthier pour aller s'y établir, et j'en connais d'autres qui iraient s'y établir si les communications étaient meilleures.

Les terres de Brandon ont-elles le caractère d'être de bonnes terres ?—Suivant ceux qui m'ont informé les bonnes terres sont par contrées, c'est-à-dire, qu'il y en a de bonnes et de mauvaises ; mais il y a des habitans qui ont des terres là qu'ils considèrent très bonnes : la preuve qu'elles sont très bonnes, c'est que ceux qui y ont semé ont récolté abondamment tous les ans.

Les personnes qui y sont établies ont-elles le moyen de faire les chemins demandés ?—Une partie n'en ont pas le moyen.

Quelle serait la somme nécessaire pour leur aider à faire cette communication, et dans quelle partie du township cette somme devrait-elle être employée.—Les intéressés croient qu'une somme de £300 serait suffisante pour établir un chemin convenable suivant le désir des pétitionnaires la place la plus convenable serait la concession du Saint-Esprit.

Quels seraient les avantages généraux de cette communication, une fois établie ?—L'avantage qu'il y aurait pour aller à Montréal serait de raccourcir le chemin d'environ six lieues.

Les habitans établis à Brandon désirent-ils une pareille mesure ?—La preuve de ceci est que j'ai entre les mains une requête que j'étais chargé de présenter de leur part à la Législature ; j'en ai été empêché par ce qu'elle m'a été remise trop tard pour que je puisse la présenter à la Chambre suivant ses règles.

F. Bélanger,
écuyer.

François Bélanger, Ecuyer, a été appelé et examiné :

Connaissez-vous le Township de Brandon, et les communications qui y conduisent, et quels moyens avez-vous eu de connaître cet endroit ?—Je connais le township de Brandon pour l'avoir visité l'automne dernier.

Quelles sont les facilités de communiquer depuis les anciens établissements sur le Fleuve Saint-Laurent avec le Township de Brandon ?—La seule route que je connais est par la concession du Saint-Esprit, derrière le village de Berthier.

Y a-t-il des communications assez faciles pour permettre aux propriétaires de terres dans le Township de Brandon d'y aller et ouvrir ces terres ?—La communication actuelle est un chemin d'hiver dont on peut se servir pour aller à cheval en été, mais elle n'est pas assez bonne pour y aller avec des voitures d'été.

Quelle est le nombre de personnes actuellement établies dans le Township de Brandon au meilleur de votre connaissance ?—Je n'ai fait que passer dans Brandon, mais j'estime le nombre de familles qui y sont établies à environ cinquante.

Y a-t-il des gens dans les anciens établissements de Berthier ayant des terres dans Brandon qui iraient les établir si les communications y étaient meilleures ?—Je n'en fais rien.

Les terres de Brandon ont-elles le caractère d'être de bonnes terres ?—Généralement parlant les terres de Brandon sont très bonnes : tel est le rapport que m'ont fait plusieurs de ses habitans.

Les personnes qui y sont établies ont-elles le moyen de faire les chemins demandés ?—Je fais qu'elles désirent beaucoup avoir un chemin, mais elles se plaignent qu'elles ne peuvent le faire sans l'assistance de la Législature.

Quelle serait la somme qui serait nécessaire pour leur aider à faire cette communication et dans quelle partie du township cette somme devrait-elle être employée ? Je ne saurais hasarder de réponse à cette question ?

Quels seraient les avantages généraux de cette communication une fois établie ? Ils faciliteraient l'établissement dans d'excellentes terres d'une population déjà trop nombreuse pour les anciens établissements qui avoisinent ce Township, à bien peu de frais comparativement parlant.

Les Habitans établis à Brandon désirent-ils une pareille mesure ? Je fais que les Habitans de Brandon se plaignent amèrement du défaut de communications convenables, et ils m'ont dit qu'ils se proposaient de faire application à la Législature à ce sujet.

Antoine Charles Taschereau, Ecuyer, de Ste. Marie Nouvelle Beauce, dans le Comté de Dorchester, ayant été appelé, a informé votre Comité : Que le chemin de Kennebec est tracé et ouvert très bien et nettoyé de bois jetés par le vent. Que les personnes à cheval peuvent y passer très bien, mais qu'il est impassable pour les voitures d'été. Qu'il y a cinq ponts sur toutes les Rivières fortes, et qu'il a été dépensé sur ce chemin entre £425 et £450 ; le chemin a été verbalisé : Qu'il y a des établissements de distance en distance, et une grande partie des terres sur ce chemin sont concédées à la charge d'entretenir le chemin de front : Qu'il y a beaucoup de défrichement fait sur quelques unes de ces terres : Qu'il pense que pour le mettre roulant, il faudrait environ £300 ; que le chemin a neuf lieues de long depuis St. Charles de la Belle Alliance jusqu'aux lignes ; sur la somme de £300 qui avait été votée pour ce chemin, il a été dépensé environ £450 ; le reste est encore à dépenser : Qu'il y a des fortes côtes sur ce chemin que l'on pourrait éviter par des détours, l'établissement sur ce chemin est grandement retardé par l'impossibilité d'y passer en voitures ; de sorte qu'il est impossible d'y transporter des matériaux ; il y a près de la moitié des concessions faites.

A. C. Taschereau, éc.

Joseph Bouchette, Ecuyer, est appelé de nouveau et interrogé :

J. Bouchette, éc.

Quelle proportion y aurait-il entre le chemin qui serait ouvert depuis les anciens établissements à Berthier jusqu'au Township de Brandon et les Communications générales de cette partie du pays situé entre l'Outaouais et le St. Maurice ; et quelle proportion y aurait-il entre un semblable chemin qui serait ouvert pareillement depuis les anciens établissements jusqu'au Township de Caxton et les Communications intérieures ? Des chemins qui seraient ouverts depuis les anciens établissements à Berthier jusqu'à Brandon, et depuis les anciens établissements de la Pointe du Lac et de Gatineau dans Caxton, pourraient avoir chacun 8 à 10 milles, et la distance du St. Maurice à Grenville par une nouvelle ligne de chemins, qu'on pourrait judicieusement ouvrir au bout de la profondeur des Seigneuries et qui traverseraient les townships de Kildare, Rawdon, Abercrombie, et les terres de la Couronne en arrière d'Argenteuil, et les townships de Chatham et de Grenville jusqu'au Bassin, pourrait être estimée à environ 124 milles, à travers lesquels on pourrait ouvrir une nouvelle ligne de communication qui présenterait de nombreux avantages pour l'avancement des établissements dans cette section du pays, et établirait un nouveau front d'établissement sur toute la ligne, et raccourcirait la communication entre le St. Maurice ou les Trois-Rivières et le cœur des établissements sur l'Outaouais à Grenville d'environ 70 milles. Ayant ainsi donné la distance de cette grande ligne de chemin, la proportion que les deux premiers chemins ont avec elle est d'environ un sixième ; lesquels deux chemins couperont la grande communication ci-dessus mentionnée, et faciliterait essentiellement les communications entre les anciens établissements et les terres incultes qui sont en arrière, avec le grand chemin proposé. Quant à cette partie du chemin en question entre Kildare et Grenville, je prends la liberté de renvoyer à mon rapport sur cette section du pays, imprimé en 1824, où se trouve une description détaillée de cette ligne de chemin et de ses avantages.

Voudriez-vous mettre devant le comité soit une copie de ce rapport que vous avez par devers vous, ou un extrait de la partie à laquelle vous faite allusion ci-haut ? Je n'en ai qu'une copie qui fait partie de mon nouvel ouvrage, et je suis prêt à en donner aucun extrait que l'on désirera.

Jeudi,

Jeudi, 29 Janvier 1829.

J. L. Borgia, Comté de Cornwallis, ayant été appelé, a informé votre Comité : Qu'il croit que la construction d'un Pont sur la Rivière des Trois Pistoles serait d'une utilité générale, pour ne pas dire que ce Pont serait nécessaire : qu'il ne peut dire au juste combien ce Pont coûterait, mais il croit qu'une aide de £2000 ou £1500 courant, pourrait suffire, si les Habitans y contribuaient de leurs travaux et fournissaient le bois. La longueur de ce pont, s'il était érigé au passage actuel serait environ de cinq arpens. Qu'il est d'opinion en outre qu'il est expédient d'octroyer aux Habitans de l'Île Verte la somme de £400 ou £500 courant, pour les aider à la construction d'un pont sur la Rivière Verte. Que cet octroi rencontrerait les vues des Habitans sur ce sujet, et le but de la requête qu'ils ont transmise au commencement de la présente Session, mais trop tard pour être présentée à votre Honorable Chambre. Qu'il est aussi d'opinion qu'il serait nécessaire d'octroyer une aide de £1000 courant, pour réparer et améliorer le chemin et les ponts du chemin qui conduit au Lac Témiscouata.

Mr. A. Poulin, de Saint François Nouvelle Beauce, ayant été appelé, a informé votre Comité : Qu'il était dans l'habitude de faire la chasse depuis neuf ans en automne dans cette partie du terrain qui se trouve entre le Lac Mégantic, le Lac St. François et le Bras du Ouest, et il l'a parcouru en différentes places. Toute cette partie du pays est planche en général et le sol y est bon, étant composé en plus forte partie de terre grise. Que le tout y est propre à l'Agriculture, et on y ferait des établissemens beaucoup plus avantageusement que sur les bords de la Rivière Chaudière : Que le climat y est doux, et il tombe peu de neige dans toute cette partie. Le bois est de haute futaye et se compose en général d'érables, ormes, noyers et autres bois. Qu'il croit que s'il était ouvert un chemin du Bras d'Ouest au chemin St. Giles ou autrement le chemin Craig, ces terres se prendraient immédiatement. Les terres sur le bord de la Rivière Chaudière sont difficiles à établir et les habitans n'en prennent que lorsqu'ils ne peuvent pas faire autrement. Qu'il y a un grand nombre de chefs de familles dans la paroisse qui ont plusieurs garçons à établir, mais ces jeunes gens restent chez leur père, faute de pouvoir se procurer des terres avantageuses. Qu'enfin toutes les bonnes terres se trouvent à l'Ouest de la Rivière Chaudière, au delà de la Chaîne de Montagnes qui la borde. Que le chemin qu'il conviendrait d'ouvrir, seulement comme chemin d'hiver, à partir à l'Ouest du Bras jusqu'au chemin Craig en le faisant passer par la tête du Lac St. François serait de huit à neuf lieues, et il croit qu'une somme de £300 à £400 serait suffisante. Le chemin passerait dans de meilleures terres dans cet endroit que si on le faisait passer par en bas du lac : le chemin aurait deux lieues de moins par en bas, mais les terres n'y sont pas aussi bonnes.

Mr. M. Bouchette, de Mr. Michel Boucher, du Township de Tring, a été appelé ; et l'information précédente de Mr. Alexis Poulin lui ayant été lue, il l'a confirmée.

Mercredi, 4 Février 1829.

F. X. Larue, Comté de Hampshire, ayant été appelé, a informé votre Comité : Qu'il y a quatre vingt onze terres concédées dans la profondeur de la Seigneurie de Neuville, courant nord-est et sud-ouest, et joignant au nord à la seigneurie de Bourg Louis, appartenant à Mr. Bernard Panet. Que ces terres sont déjà en partie occupées par des propriétaires étrangers, mais dans le mois de novembre dernier, le Député Grand Voyer ayant à la requête dudit Mr. Panet, verbalisé un chemin depuis le Pont neuf et gratuit sur la Rivière Jacques Cartier qui traverse leurs terres et va se terminer à la dite seigneurie du Bourg Louis, les dits propriétaires étant pauvres et ne se voyant pas en état de supporter les travaux que leur imposait le dit procès-verbal, ils seront obligés de déguerpir leurs dites terres et perdre les travaux qu'ils ont déjà fait sur icelles. Que pour l'encouragement de ces nouvelles concessions je crois qu'il conviendrait d'allouer une aide pour faire le chemin verbalisé et un second chemin qui partirait du bout de la route des Commissaires, et qui passerait dans la ligne d'entre les concessions Sainte Marie et Saint Jean mentionnées sur le plan figuratif, et irait se terminer à la dite seigneurie Bourg Louis. Que ces deux chemins étant une fois ouverts, ils se formeraient en bien peu de tems beaucoup d'établissements dans la dite seigneurie Bourg Louis. Qu'il croit que la somme de £200 serait suffisante pour l'ouverture des dits deux chemins : la longueur de chacun pour arriver à la dite seigneurie Bourg Louis serait d'environ 130 arpens.

W. Hall, Ecuyer, du Township de Broughton, dans le comté de Buckinghamshire, ayant été appelé informa le comité : Qu'il a été verbalisé un chemin depuis la Rivière Chaudière jusqu'au chemin Craig dans Leeds, en passant à travers Broughton. La distance est 23 milles, et raccourcirait considérablement la route pour aller de cette partie à Québec. Ce chemin a été ouvert dans Broughton l'été dernier, mais n'a pas été continué dans Leeds. Les terres qui bordent ce chemin sont d'une excellente qualité. Il n'y a pas d'habitans dans Leeds pour ouvrir ce chemin. Il faudrait au moins £300 pour ouvrir ce chemin, la distance étant de 14 milles, et £100 pour ouvrir la communication en-

tre Broughton et Tring, où il y a d'excellentes terres appartenant à la couronne. Les Commissaires pour les communications intérieures du Comté de Dorchester ouvrirent en 1819 et 1820, un chemin entre le chemin Craig dans Ireland et la ligne du district des Trois-Rivières, pour rencontrer le Township de Dudswell où il y a 280 habitans ; les Commissaires pour le district des Trois-Rivières n'ont pas continué le chemin. Si ce chemin était ouvert, il formerait, à mon avis, la grande voie de communication entre les Townships à l'est du Lac Memphramagog et Québec, et ouvrirait une communication suivie entre Québec et les Etats de New-Hampshire et de Vermont, et passerait dans les townships d'Hereford, Clifton, New-Port, Eaton, Westbury et Dudswell, qui tous sont établis, et il y a des habitans de chaque côté du chemin. La distance de ce chemin non encore ouverte est de 36 milles environ, et le terrain est très favorable pour l'ouverture d'un chemin. Il y a beaucoup de défrichemens sur le chemin, et s'il était ouvert cela porterait les gens à aller s'y fixer. Il faudrait pour ouvrir ce chemin environ £1000.

F. A. Evans et *S. H. Dickerson*, Francis Armstrong Evans, du Township de Shipton, et Mr. Silas Horton Dickerson, de Stanstead, ayant été appelés, et la partie du témoignage de M. Hall ci-dessus, qui a rapport au chemin de Dudswell, leur ayant été lue, ils l'ont corroborée.

Jeudi, 5 Février 1829.

A. McCambridge, de la paroisse de Charlesbourg, ayant été appelé, informa le comité : Que le township de Stoneham contient une population d'environ 93 âmes ; que les premiers habitans y sont établis depuis environ neuf ans ; qu'il n'est pas aussi avancé sous le rapport de la culture que les autres nouveaux établissemens aux environs de Québec ; le retard est dû entièrement au manque de chemins. Que nombre de colons auraient été disposés à y prendre des terres, mais que le mauvais état des chemins les en a empêchés. En effet les chemins sont si mauvais, que dans l'été un cheval ne saurait s'y rendre avec la moindre charge, ou s'il porte le moindre fardeau c'est au risque de se casser les jambes ; que dans le temps humide on n'y peut même passer à pied, sans mettre sa vie en danger. Qu'il vivait avec le Révérend M. Toosey, qui, il y a environ 33 ans, entreprit d'établir ce township : la richesse du sol porta M. Toosey à dépenser £2000 à £3000 pour l'établir, mais le manque de chemin fit échouer complètement son projet ; cependant il croit qu'on pourrait faire un bon chemin de voiture pour aller à Québec avec environ £500. Que la longueur de ce chemin à partir des anciens établissemens est d'environ 8 milles. Que pour faire les ponts nécessaires sur le chemin, il faudrait £100. Qu'un bon chemin à Stoneham faciliterait les communications au sud-est et au nord-est, de même qu'avec le sixième et dernier rang de la seigneurie de Beauport, connu sous le nom d'établissement de Waterloo ; et qu'un pareil chemin faciliterait l'établissement du pays, et raccourcirait aussi la communication à Valcartier d'environ 5 milles, et offrirait un moyen de subsistance à un grand nombre d'individus pauvres, qui sont maintenant à charge au pays, et la cité en retirerait de grands avantages par le bois de chauffage et de charpente qu'elle en tirerait.

A. McCambridge.

Lundi, 16 Février 1829.

A. C. Buchanan, Ecuyer, Agent résidant de sa Majesté pour la surintendance des colons et émigrés dans les Canadas, fut appelé et examiné :

Dans quelle partie de la province serait-il le plus avantageux de former des nouveaux établissemens, dans le cas où la législature accorderait de l'argent pour ouvrir des chemins ? Il y a beaucoup de parties dans la province bien propres à recevoir des colons industriels, soit émigrés du Royaume-Uni, soit Canadiens, et je vais les classer sous quatre différentes divisions : D'abord, je considère que l'attention publique devrait, dans la vue d'y former des établissemens immédiats, se diriger sur cette vaste étendue de terrain avantageux pour la culture, située entre la Rivière Chaudière et le township de Tring, comprenant les townships d'Oulney, d'Adstock, de Winslow, de Stratford, de Coleraine, de Weedon, de Wotten, de Hampden &c. et contenant ensemble environ un demi million d'acres de terre cultivable, bien boisée et bien arrosée par des rivières et lacs nombreux (St. François.) Ce qui me fait principalement pencher en faveur de cette partie, c'est la proximité du marché toujours sûr de Québec, où le cultivateur pourra porter le surplus de ses produits, et en second lieu la proximité de l'excellent chemin déjà ouvert le long de la Rivière Chaudière. Il faut ajouter à tout cela un autre avantage très précieux, savoir la certitude pour les colons d'avoir de bons titres, ces terres étant encore presque toutes en la possession de la couronne ; et à cette occasion, je dirai au comité que je ne pourrais pas recommander au colon étranger d'employer le peu d'épargnes, qu'il a amassées à grande peine, à son établissement dans la plupart des townships concédés, car d'après toutes les informations que j'ai recueillies à cet égard, on peut à peine se procurer un bon titre *bona fide*, et ce mal demande un remède immédiat. Une autre raison bien puissante d'établir immédiatement l'étendue de pays en question, c'est d'élever quelques barrières au monopole ambitieux des Américains qui ont déjà bouleversé les townships de l'est, et qui, je le crains, introduisent dans cette partie de

A. C. Buchanan, écrivain.Appendice
(P.P.)

Appendice
(P. P.)

de la province une influence tout-à-fait défavorable à l'établissement des émigrés anglais, et qui peut mettre en danger la sûreté de nos frontières, et faire perdre à la mère patrie à un temps qui ne serait pas éloigné, la portion la plus fertile du Bas-Canada. J'ajouterais à l'établissement précédent, sous la même direction, les townships de Crambourne, Buckland, Watford, et les Réserves de la Couronne dans Frampton. Secondement ; je conseillerais de former un petit établissement dans la partie non concédée des Townships d'Acton et Roxton, y compris les réserves de la couronne dans quelques townships adjacens, comprenant ensemble 50 à 100,000 acres de terre. Je recommanderais aussi, sous la même division, le township d'Ely : le sol de ce township est excellent, bien arrosé, et est situé sur la route directe de Sherbrooke à St. Hyacinthe et à la Montagne d'Yamaska. Il y a longtemps qu'il a été concédé à des personnes non-résidentes (à des américains à ce que je suis informé ;) il n'y a été fait aucune amélioration, par conséquent il n'y a pas de difficulté sur la réversion de ce township à la couronne. Troisièmement ; on paraît admettre partout l'importance de faciliter les communications par une nouvelle route, le long de l'Ottawa, et comme j'ai eu l'honneur, il n'y a pas longtemps, de le soumettre au gouvernement de sa Majesté à Londres, et plus récemment à son Excellence le gouverneur en chef, des recherches subséquentes ont confirmé mes premières idées : C'est pourquoi je demanderais qu'il me fût permis de recommander à l'attention publique l'établissement de la partie du pays située en arrière des seigneuries et commençant à Maskinongé, comprenant les townships de Kilkenny, Rawdon, Wentworth, Abercrombie, &c. en gagnant vers l'Ottawa. Je vois avec chagrin que la grande partie de ces townships est concédée, ce qui expose les colons à n'avoir que des titres incertains ; mais les portions non-concédées peuvent être supputées à 150,000 acres et je les recommanderais sous une même division avec les townships d'Harrington, Wentworth, Derry, Kippon, Portland, les trois quarts de Wakefield et de Marsham, qui tous sont arpentés et non-concédés, et dont le sol est considéré comme étant de meilleure qualité que les terres sur le littoral de l'Ottawa : Ces derniers townships sont à environ 15 milles de l'Ottawa, et il y a communément de très bons chemins de pied pour y conduire, et qui avec quelques légères réparations pourraient servir plusieurs années au besoins des nouveaux établissemens et jusqu'à ce qu'ils se fussent augmentés. Le ci-devant gouverneur en chef avait destiné le township de Templeton aux familles industrieuses qui ont travaillé au Canal de Rideau, mais il se trouve trop éloigné et le sol ne convient pas, et plusieurs familles qui avaient pris des locations y ont renoncé et se sont en allées dans les Etats-Unis ; cela est venu principalement de l'impossibilité où était chaque colon de trouver son lot particulier, sans perdre beaucoup de temps et dépenser toutes ses provisions. Quatrièmement, il serait sage et prudent de former un bon établissement sur la rivière Ristigouche et en gagnant le lac Matapédia et Madawaska, cette étendue de pays réunissant tant d'avantages la pêche, le chemin proposé depuis la Nouvelle Ecosse jusqu'à Metis, la facilité de la communication par la Baie des Chaleurs, &c. et la douceur du climat, sous cette division je classerais aussi Gaspé, où il se trouve beaucoup de bonnes terres et d'accès facile. Je considère les quatre situations ou établissemens ci-dessus comme les portions de la province qui méritent le plus d'attirer l'attention pour le présent. Il n'y a pas de doute que la formation d'un établissement dans le territoire immense du Saguenay, soit au lac St. Jean soit sur la rivière Chicoutimi, sera par la suite considérée comme un objet d'importance nationale, et il en résultera pour la province en général les plus grands avantages. Je pourrais citer nombre d'endroits avantageux pour des colons dans les seigneuries situées le long du St. Laurent et sur quelques-unes de ses rivières tributaires, surtout les rivières Nicolet et St. François, d'Yamaska, Richelieu, Chaudière, Bastiscan, Ste. Anne, &c. mais comme ces terres appartiennent à des individus, chacun adoptera les mesures qui conviendront le mieux à ses plans. A cet égard, je crois qu'il est de mon devoir de donner tous les secours en mon pouvoir aux propriétaires de terre, soit dans les seigneuries, soit dans les townships qui en auront besoin, en leur procurant des colons, et c'est ce dont j'ai déjà donné avis dans la Gazette Officielle de cette ville.

Savez-vous si les émigrés seraient disposés à rester en cette province dans le cas où la Législature leur donnerait quelque encouragement ?— La plupart des émigrés qui arrivent du Royaume-Uni à Québec n'ont aucune place particulière où ils se sont proposés d'avance d'aller se fixer. Une grande partie de ceux qui viennent d'Irlande sortent de la province d'Ulster, et leurs sentimens les disposent fortement à choisir une colonie britannique, où ils puissent jouir encore des avantages de notre constitution. Ils se font une idée du Bas et du Haut-Canada d'après le nom que porte chacune de ces provinces ; plusieurs que le terme Bas signifie une situation marécageuse, basse, insalubre, et *vice versa*, que le Haut-Canada est dans une situation élevée et montagneuse ; cependant c'est tout le contraire de la réalité ; autant en passant sur les notions qu'ont du Haut et du Bas-Canada les pauvres et crédules irlandais. Les émigrés d'Irlande et d'Ecosse sont les plus propres pour cette province, et je désire voir les émigrés généralement de toutes les parties du royaume s'amalgamer avec les naturels du pays : je ne sache pas qu'ils aient aucune disposition au contraire. On parle si fortement dans le Royaume-Uni des succès qu'ont rencontrés fréquemment les émigrés qui sont allés aux Etats-Unis, qu'il est tout naturel qu'ils aient été préjugés en faveur de ce pays, et qu'il en est de même à présent du Haut-Canada, vu les faits nombreux qui témoignent des succès rapides que des pauvres émigrés mêmes y ont rencontrés ; et l'on n'en saurait trouver une preuve plus frappante que le succès qui a suivi les efforts de 3,000 irlandais pauvres qui ont été transportés dans le Township de Cavan en 1816 et 1817 par le consul de Sa Majesté à New-

York, et qui ne reçurent d'autre secours que l'octroi de leurs terres. L'émigration au Bas-Canada n'a pas encore eu les avantages, le support et la protection qui produisent naturellement des résultats favorables. La langue française présente assurément un grand obstacle à l'étranger à sa première arrivée en cette province ; jusqu'à présent peu de nouveaux émigrés qu'il aurait été avantageux de retenir ont pu pénétrer dans l'intérieur de la province, et ceux qui le font sont des gens qui ont végété une année ou deux aux environs de Québec comme domestiques ou manœuvriers, et des personnes qui ont été employées sur les cages (radeaux), et qui sont bien loin d'avoir les dispositions nécessaires et avantageuses pour former un nouvel établissement. En réalité, les émigrés à leur arrivée à Québec se sont trouvés sans guide pour diriger leurs pas ou pour leur donner un bon conseil désintéressé, et souvent on ne leur a pas donné l'occasion de mettre pied à terre. Le vaisseau se rend à l'endroit où il dépose son lest (éloigné du côté du sud du fleuve, d'environ deux milles du Cul-de-Sac) et à peine l'ancre est jeté que plusieurs agens de bateaux-à-vapeur et de matelote prennent à bord tous les passagers ; il est inutile de faire connaître quel est leur objet. (*) On représente le Bas-Canada comme un désert, qui ne présente que la famine et la disette, etc. ; le crédule étranger ajoute foi à tout, et pendant que le dialogue continue les écoutes s'ouvrent, le bagage s'embarque, et en peu d'heures les pauvres émigrés se trouvent entassés sur le pont d'un vaisseau à vapeur en route pour Montréal, espérant qu'à son arrivée en cet endroit *tout ira bien* ; mais lorsqu'ils y sont arrivés ils se trouvent exposés à la même duperie de la part des bateliers d'Ogdensburg, des voituriers de Saint-Jean, etc. et sans avoir le temps de réfléchir et distrait par la nouveauté de la scène qui l'environne, les pauvres gens sont entraînés de poste en poste jusqu'à ce qu'il ait épuisé son petit pécule. Si la maladie, comme c'est souvent le cas, ne met pas fin à leurs embarras, et qu'ils parviennent à Ogdensburg ou à Kingaton dans un misérable bateau, se voyant au bout de leurs moyens pour avoir voulu vérifier les avis intéressés qu'ils ont reçus sur la route, ils se traînent dans les Etats vraiment découragés et désappointés par la réception qu'ils ont eue en Canada. Ce tableau n'est que trop vrai, c'est ce qui est arrivé tous les ans, et c'est ce qui arrivera toujours si l'on n'applique un remède aux abus, supportés par l'indifférence, et je puis presque dire par l'impossibilité qui existe pour les étrangers de trouver même les moyens de se fixer dans le Bas-Canada, sans commencer par perdre plus du double de temps et d'argent qu'il ne leur en faudrait pour acquérir des terres ; c'est à cela surtout qu'il faut attribuer le peu d'établissemens qui sont fait jusqu'ici en cette province par les émigrés du Royaume-Uni, et nullement à aucune objection ou prédétermination de leur part à cet égard. †) L'immigration volontaire qui se fait à Québec est bien loin d'être composée de gens pauvres ; une partie d'entre eux part dans la résolution d'aller s'établir dans les parties supérieures de la Pensylvanie et de l'Ohio, etc. comme étant la route qui coûte le moins ; le plus grand nombre sont des familles de cultivateurs industrieux et loyaux, et possédant, s'ils étaient bien appliqués, des moyens de s'établir dans le pays, mais par les causes dont je viens de parler, leurs dures épargnes s'évanouissent sans qu'ils puissent rendre aucun avantage permanent à la province, et sans qu'ils deviennent eux-mêmes de bons sujets ; c'est ainsi que faute d'arrangemens, et quelques fois, je crains, par des préjugés jaloux, des milliers de bons colons sont poussés hors des lignes pour aller enrichir et augmenter la puissance rapidement croissante de nos ambitieux voisins. Il est digne de remarquer qu'il est arrivé à Québec 29,000 émigrés dans les années 1827 et 1828, et je ne crois pas que sur tout ce nombre cent familles aient pris des terres dans la province. Je considérerais cela seul comme donnant une preuve évidente qu'il y a quelque chose de défectueux, et qu'il manque quelque mesure. Quant à encourager les émigrés avec des moyens pécuniaires, je n'en connais pas de meilleure que l'ouverture de chemins, et de faire arpenter exactement les terres destinées à l'établissement, en lots aboutissans les uns aux autres en déposant les arpentages pour l'inspection libre des émigrés et colons à leur arrivée au bureau de l'Agent résidant de sa Majesté pour la surintendance des colons dans les Canadas, aux termes et conditions auxquels le Commissaire des terres de la couronne pourra fixer ; où seraient aussi déposés tous les renseignemens nécessaires pour guider les étrangers ; une liste alphabétique des noms des colons devrait aussi y être tenue, mentionnant le lieu d'où ils sont venus et où ils sont allés, ce qui serait une chose bien avantageuse pour leurs amis et pour ceux qui voudraient les suivre, et donnerait un moyen de savoir où les trouver. L'Agent résidant à Québec devrait aussi être autorisé à mettre les colons en possession de leurs lots par la voie la plus immédiate, la plus simple, la moins coûteuse et la plus aisée possible. Il serait nécessaire d'avoir quelques hommes de confiance connaissant le pays pour servir de guides, et pour conduire, sous la direction de l'Agent résidant

(*) L'été dernier j'ai appris que les bateaux à vapeurs ont été à la rencontre d'un vaisseau jusqu'à l'Île d'Orléans, gagnant ainsi les passagers avant leur arrivée à Québec ; il ne s'agit que de s'entendre un peu avec le capitaine et bientôt la grande voile s'abat pour arrêter les progrès du vaisseau, jusqu'à ce qu'on se soit assuré des émigrés et de leur bagage ; de là est venu, outre quelques autres raisons bien fortes, l'absolue nécessité de prévenir par une loi les abus que j'ai eu l'honneur d'exposer dans une occasion précédente, en donnant mon témoignage relativement à l'Hôpital des Emigrés.

†) Les délais et désappointemens répétés qu'éprouvent les émigrés fait le sujet de leurs observations, et sans doute qu'il en est donné connaissance à leurs amis dans le Royaume-Uni, au grand préjudice de l'établissement du pays.

du département à l'arrivée d'un vaisseau chargé d'émigrés, aux établissemens auxquels il seront destinés, et à tels établissemens il serait nécessaire d'avoir un agent de location responsable, qui agirait de concert avec l'Agent résidant du bureau et sous sa direction résidant sur le lieu et dont la seule occupation serait de veiller sur le district qui serait mis sous sa surveillance, et à qui il ne serait pas permis de s'engager dans des spéculations sur les terres, et dans aucun trafic que ce soit, mais qui se bornerait à recevoir les colons et à les placer sur leurs terres; chargé de voir à ce que les terres soient régulièrement tracées, de tenir registre de toutes ses opérations, et d'en transmettre tous les mois le rapport, au bureau de l'Agent. Il faudrait pourvoir l'Agent de location d'une maison et autres bâtimens convenables, avec 25 à 30 acres de terre défrichés, avec la première semence, en y joignant les bestiaux et ustensiles d'Agriculture nécessaires. Cette terre serait une espèce de ferme nourcière, dont les colons pourraient tirer divers objets de nécessité, tels que bestiaux, semences, grains, &c. &c. Il faudrait joindre à la ferme de l'Agent d'établissement un grand bâtiment de bois pièces sur pièces, pour servir d'abri, à leur première arrivée, aux familles qui viendraient s'établir, jusqu'à ce qu'elles pussent se bâtir une petite Chaumière. La satisfaction et l'avantage qu'auraient les émigrés en trouvent un point de ralliement où ils trouveraient des avis désintéressés et de l'assistance, s'out si évidens, que je me sens forcé de solliciter la considération de votre Honorable Comité sur le sujet, par tout sentiment de devoir public. Comme le projet proposé occasionnerait des dépenses il est à propos d'éclaircir cette partie de ma réponse par une petite estimation. Comme cet arrangement demanderait naturellement plus d'assistance que le Bureau du Surintendant n'en peut rendre actuellement au public avec avantage, il soumettra cette estimation en toute déférence pour la libéralité du gouvernement de sa Majesté et du Parlement Provincial, qui y donneront telle considération que dans leur sagesse ils pourront trouver convenable, sans présumer nullement de son opinion, mais seulement pour aider à former une décision quant aux dépenses.

Ustensiles de ferme, bestiaux, &c.	150 0 0
Bâtiment de pièces sur pièces, pour mettre à l'abri 20 à 30 familles, avec deux poêles et un appartement pour l'Ecole,	200 0 0
Moulin à farine, avec force pour une scie,*	350 0 0
	£1200 0 0
Intérêt sur cette somme à 5 per cent,	£60 0 0
Dépenses annuelles par le compte marqué A	800 0 0
	£860 0 0

Disons £860 annuellement pour un système qui donnerait des facilités d'établissement à mille familles et plus de colons volontaires, ayant des moyens, ou 4s. chaque individu, supposant que chaque famille l'une avec l'autre soit composé du père et de la mère et de trois enfans.

La ferme publique, avec les améliorations qui devraient s'y faire, serait une ample sûreté pour l'avance qui serait faite, et surplus du produit payerait et au delà ce que souffriraient les ustensiles, &c. par l'usage, outre qu'au bout de la première ou de la seconde année, elle produirait de quoi subvenir à bien des dépenses incidentes; et je propose que chaque colon volontaire donne gratuitement la première année cinq journées de travail et trois la seconde, pour l'avantage général de l'établissement, et à préparer des lots pour de nouveaux colons, &c. &c. Pour les deux premières années, on pourrait former un dépôt de farine de blé d'inde ou d'avoine, de poisson, et de patates; aussi bien que de grains de semence, de graines de jardin &c. ce que l'on vendrait au prix courant. Les suggestions précédentes sont faites pour les émigrés et colons volontaires ayant les moyens avec telles facilités de se fixer; l'établissement de pauvres colons, soit émigrés soit de la province, occasionnerait quelque différence dans les dépenses. Mais la base de la suggestion actuelle pour les colons volontaires est de nature à les aider puissamment, et opérerait sous la même administration il en résulterait naturellement beaucoup d'épargnes, sans compter d'autres avantages de la première importance.

Les émigrés ont-ils quelque éloignement à s'établir dans le Bas-Canada? La réponse à cette question peut se déduire de celle à la seconde question; et j'ajouterai que d'après les rapports que j'ai eu avec les émigrés depuis quinze ans, et qui, je puis le dire, ont surpassé tout ce qu'en a pu avoir aucune autre personne dans l'Amérique du Nord, je ne

sache que les émigrés aient aucun éloignement, soit réel ou imaginaire, à s'établir dans le Bas-Canada.

Quels seraient, selon vous, les meilleurs moyens d'assister les pauvres colons, soit émigrés soit de la province? J'ai déjà eu l'honneur d'offrir, sur ce sujet, mon opinion au parlement impérial, de même qu'au gouvernement de sa Majesté, mais, ayant eu occasion, depuis mon arrivée en ce pays pour me charger des importans devoirs qu'il a plu au gouvernement de sa Majesté de me confier, de me mettre plus au fait des détails des mesures et de connaître plusieurs faits que j'ignorais, je puis varier un peu dans l'application, mais je ne dévierai guère du principe de mes premières suggestions. J'assure que si l'on donnait aux colons des facilités telles que j'ai eu l'honneur de suggérer dans ma troisième réponse, on poserait un fondement solide à l'établissement des pauvres colons, et l'on éviterait par conséquent une dépense considérable. Je recommanderais de mettre les établissemens des pauvres dans le voisinage des autres et peut-être serait-il mieux de les disposer au milieu d'eux: L'un assisterait beaucoup l'autre, et sans entrer dans aucune explication ultérieures, je vais entrer dans la partie financière du sujet:—

La dépense originaire pour faciliter l'établissement de mille familles et plus dans le Bas-Canada, est évaluée, d'après ma réponse à la seconde question, à £860 annuellement. Et la dépense additionnelle pour établir à chaque établissement 100 familles pauvres, serait comme suit:

Avances annuelles pour l'établissement de 100 familles pauvres:

2 Bâtimens de pièces sur pièces, avec 2 poêles, &c.	£250 0 0
Une ferme publique de 500 acres, défrichement, clôtures et culture de 10 acres de la terre attaché à la maison pour produire principalement des légumes pour les colons,	50 0 0
Pour défricher et cultiver un acre sur la terre de chaque famille pauvre, qui subsistera, avec les quatre mois d'approvisionnement, comme par le compte D,	400 0 0
Bâisse d'une maison pour le commis de location, &c.	100 0 0
Dépenses incidentes.	100 0 0
	£900 0 0

Dépenses annuelle de l'établissement des pauvres colons:

Intérêt sur £900 à 5 per cent,	£45 0 0
Guides,	50 0 0
Transport de Québec à la location,	100 0 0
Quatre jours de provisions,	6 0 0
Un commis de location et distribution des vivres, &c.	100 0 0
100 Haches, 100 pelles et 100 casseroles,	70 0 0
Médecin et médicamens,	100 0 0
Maître d'Ecole,	30 0 0
Quatre mois de provisions de farine de blé d'inde et d'avoine, poisson, patates, et melasse, 1s. par jour pour chaque famille,	600 0 0
Contingens,	150 0 0
	£1251 0 0

J'ai omis d'allouer un poêle pour les pauvres colons, dans l'idée qu'on trouve dans toutes les parties de la province les matériaux nécessaires pour faire un foyer &c. pour le feu, outre que le bois se trouve en quantité sous la main des colons. Mais l'allocation de £150 pour les contingens pourrait porter la dépense de quelques poêles communs.

Quand à l'établissement des pauvres anglais dans cette province, plusieurs des principaux membres de comité du parlement en Angleterre, et entre eux ceux qui s'intéressent le plus vivement pour le Canada, m'ont souvent parlé d'envoyer leurs pauvres forts et vigoureux, et de leurs dispositions à mettre une certaine somme à la disposition des autorités propres pour les y établir, s'ils voyaient des arrangemens satisfaisans pour leur réception à leur arrivée à Québec. On n'a jamais eu en contemplation d'envoyer des pauvres en état de travailler, à moins que les autorités provinciales n'y concourussent, et sans qu'on ne vît des fonds raisonnables destinés pour leur établissement; et je suis fermement persuadé que si Votre Honorable Comité considérait les principes que j'ai eu l'honneur d'avancer dans mes suggestions, comme promettant assez de succès pour au moins garantir la convenance de faire un essai, on peut s'attendre à toute co-opération possible de la part du gouvernement de sa Majesté et du parlement impérial; et ce serait le sujet d'une satisfaction bien vive pour les habitans du Royaume-Uni qui regardent ces belles provinces avec des sentimens d'affection et d'intérêt commun, que de voir pour une déclaration de Votre Honorable Comité, que vous n'avez la moindre objection à l'introduction de colons industriels du Royaume-Uni, et à leur amalgamation avec la population Canadienne loyale de cette province. La somme qu'il en coûte maintenant à la paroisse anglaise pour envoyer une famille pauvre aux Etats-Unis, (ce que l'on a fait sur un plan assez étendu depuis quelques années, ayant peut-être été envoyé 300 annuellement) monte à environ £30, chaque famille étant composée d'un homme, d'une femme et de trois enfans, le transport intérieur en Angleterre non compris:

Transport

* La dépense du moulin se payerait par le moulin même, ou on pourrait le donner à bail raisonnable à un colon respectable.

Appendice
(P. P.)

Transport d'un port britannique à New-York ou à Philadelphie,	£20 0 0
Argent d'hôpital et autres charges locales sur les personnes arrivant à New-York ou à Philadelphie, (*)	3 18 9
Chaque reçoit généralement en arrivant aux Etats-Unis, environ	10 0 0
Sterling,	£33 18 9

Je suis d'opinion que les paroisses payeraient d'avantage pour établir leurs pauvres dans une colonie britannique, où ils seraient assurés de la protection du gouvernement. En général les pauvres anglais réussissent peu dans les Etats-Unis ; ils y sont mal reçus, et le peu d'argent qu'ils reçoivent à leur débarquement est bientôt épuisé, et je suis fondé à dire que la plupart de ces pauvres finissent par se jeter dans le Haut-Canada, sans le sou ; de là la faîne politique et l'avantage qu'il y aurait à les faire transporter directement à Québec, car je vais montrer qu'une pareille somme, bien employée, assurerait leur succès dans les Canadas, sans parler des capitaux qui seraient apportés dans le pays. On peut remarquer ici que la marine marchande retire un grand avantage du transport des passagers à ce port. En 1827, je calcule que le frêt des émigrés à Québec n'a pas monté à moins de £30,000, somme qui surpasse de beaucoup celle qui a été payée pour le transport des marchandises importées du Royaume-Uni ; conséquemment chaque émigré qui est envoyé aux Etats-Unis est une perte réelle de £2 pour l'armateur anglais, outre que les provinces souffrent, comme je l'ai déjà dit, en ce que les américains reçoivent tout le capital qu'il peut recevoir ou obtenir en débarquant dans les Etats-Unis. Il ne fera peut-être pas inutile d'expliquer ce qu'on entend généralement par un pauvre anglais, terme que je ferai obligé d'employer avant que je puisse en trouver un moins humiliant pour désigner cette classe de colons, et qui vient sans doute de l'habitude et peut-être d'une sympathie louable de la part des autorités qui dirigent la distribution des aumônes. En Angleterre on classe ordinairement presque toute la population ouvrière du pays sous la dénomination de pauvres de la paroisse : c'est là une règle générale, qu'un ouvrier bien constitué à besoin d'une certaine somme pour vivre lui et sa famille, et lorsque son travail ne peut lui rapporter cette somme, il reçoit le déficit de la paroisse, conséquemment ces pauvres de paroisse sont les travailleurs agricoles d'Angleterre, et vu leur méthode supérieure de culture, l'introduction d'une partie d'entre eux ne manquerait pas d'être bien avantageuse à ces provinces. Je suis d'opinion qu'en général les paroisses ou autres corporations qui retireraient de l'avantage de leur éloignement, devraient subvenir aux frais nécessaires pour l'établissement de leurs pauvres. Par exemple, s'il fallait transporter, volontairement de Québec 20 pauvres familles, à qui on ne pourrait donner de l'emploi, et les établir comme je l'ai dit plus haut, il serait beaucoup plus avantageux pour les citoyens de le faire plutôt que de les supporter, comme c'est maintenant le cas, par des contributions casuelles et temporaires, sans compter nombre d'autres avantages qui en résulteraient. En Hollande, l'état a supprimé la mendicité, et les changements les plus heureux se sont opérés dans un pays qui il y a quelques années était surchargé de pauvres ; et le système qu'on a adopté, est celui d'établir sur des terres les ouvriers pauvres ; ainsi donc si l'on a réussi dans un vieux pays où l'on trouve difficilement des terres et où elles sont chères, avec combien plus de facilités peut-on adopter un semblable système dans le Canada, et s'il était une fois commencé et mis en opération, combien d'avantages importants en résulteraient-ils pas. Les avances à faire ne sont rien comparées aux résultats avantageux qui en seraient l'effet pour la province ; toutes les classes de la société retireraient par la suite de grands avantages de la mesure, car au bout de la première ou de la seconde année, les nouveaux colons contribueraient grandement au commerce et aux revenus du pays. Ainsi en recapitulant, il paraîtra qu'avec une dépense annuelle de £860 on peut faire des arrangements qui suffiront pour faciliter l'établissement d'au moins mille familles ayant des moyens, et qu'avec l'avance de £1251 on peut faire avec la plus grande apparence de succès l'établissement additionnel de cent pauvres familles. Il ne faut pas perdre de vue que si l'on adopte un système général pour l'établissement des pauvres de paroisse anglais, outre celui d'émigrés volontaires avec des moyens, la mesure demandera naturellement des détails plus étendus pour le Haut et le Bas-Canada, ce qu'il faudra laisser à la dif-

crétion du gouvernement lorsqu'il fera question d'en venir à l'arrangement des détails. Quelque plan qu'il puisse à la Législature d'adopter pour favoriser ces mesures importantes, votre Comité peut compter sur mes humbles efforts, considérant que je ne suis pas moins préparé à veiller au bien public qu'à celui des colons, et persuadé que je suis que je ne puis mieux mériter de mon roi et de mon pays qu'en faisant tout en moi pour avancer les intérêts de pauvres émigrés et colons industrieux, lié qu'est cet objet à la prospérité générale de la mère-patrie et de ces belles provinces.

Quelles sont les conditions auxquelles les colons reçoivent leur octroi de terre ?... J'apprends que depuis la nomination d'un commissaire chargé de la surintendance des terres de la couronne, il n'en a été concédé que sous l'autorité spéciale du gouvernement : les terres se vendent par encan par vente périodique, le prix est fixé par le commissaire et approuvé par le gouverneur. Des personnes qui ne sont que depuis six mois dans le pays peuvent acheter aucun lot qu'elles trouvent vacant, pourvu que telle terre ait été évaluée par le commissaire, et le prix par acre approuvé par le gouverneur.

Mercredi, 18 Février 1829.

William Sax, Ecuyer, est appelé et interrogé :

W. Sax,
écuyer.

Connaissez-vous les Townships de l'Est, et en avez-vous fait l'arpentage ?—Je les connais, et j'ai fait des arpentages dans les dits townships.

La terre est-elle dans ces townships de bonne qualité et propre à la culture ; et pourrait-on y former facilement des établissements ?—Oui, la terre y est généralement bonne, il s'y trouve quelques endroits montagneux, quelques endroits marécageux, mais la plus grande partie est de bonne terre ; le sol est riche et fertile et le climat y est assez favorable.

Pouvez-vous donner un plan des dits arpentages ?—Oui, j'en produis un qui renferme tous les townships de l'Est, sur une petite échelle.

Quelle est l'étendue des Townships de l'Est ?—Dans l'intérieur les townships sont ordinairement de 10 milles carrés chacun ; ceux qui sont sur les bords des rivières et des lacs ont en général 9 milles de front sur 12 milles de profondeur. Tous ces townships réunis contiennent environ 5,500,000 acres.

Pourriez-vous montrer les chemins qu'il serait expédient de faire, pour donner aux gens des townships accès à Québec et à Montréal ; et aussi pour procurer des terres à la population surabondante ?—A mon avis, le premier chemin qu'il serait expédient d'ouvrir est celui de Shipton à Québec, dont 19 $\frac{1}{2}$ milles, c'est-à-dire, la distance qu'il y a depuis le lac Saint-François jusqu'à un peu au-delà de la ligne de Shipton, dans Tingwick, sont déjà ouverts : à partir de ce point il y a environ 28 milles de l'ancien chemin Craig qui sont dans un très mauvais état, jusqu'à la ligne de séparation entre les districts de Québec et des Trois-Rivières. Depuis le point mentionné en dernier lieu à aller jusqu'à Saint-Giles, le chemin a déjà été ouvert par les commissaires, mais il reste encore à y faire quelques améliorations pour le rendre passable pour les voitures à roues entre Shipton et Saint-Nicolas. Un autre chemin qu'il me paraîtrait nécessaire d'ouvrir dans la direction de Montréal, serait un chemin qui partirait de la rivière Saint-François dans le township de Melborne et qui irait jusqu'à la montagne d'Yamaska, distance d'environ 42 milles. Un autre chemin à partir de l'extrémité septentrionale du lac Memphramagog à la sortie du dit lac, et qui rencontrerait le chemin mentionné en dernier lieu au sud de la montagne d'Yamaska, distance d'environ 42 milles. Un autre commençant dans le township d'Hatley près de la sortie du lac Tomafobi, et se terminant à la sortie du lac Memphramagog, au point où commencerait le chemin mentionné en dernier lieu, distance d'environ 11 à 12 milles. Un autre chemin commençant dans les townships d'Eaton et de Clifton, courant au nord et traversant les townships de Westbury, Dudswell, Weedon et Wolfeston, jusqu'à la pointe d'intersection de l'ancien chemin Craig et la ligne de séparation des districts de Québec et des Trois-Rivières, distance d'environ 50 à 60 milles ; ce chemin est ordinairement appelé le chemin de Dudswell. Un autre commençant à l'extrémité inférieure du lac Mégantic et courant à travers les townships de Gayhurst, Shenley et partie de Tring, et se terminant là, distance d'environ 40 milles.

(*) Dans les Etats-Unis chaque personne venant d'un pays étranger est obligée de payer un dollar, argent d'hôpital, outre cela dans plusieurs ports, comme New-York et Philadelphie, les autorités publiques de New-York exigent d'autres charges ; il faut donner caution que l'Etat ne sera pas chargé des personnes qui arrivent, cautionnement qu'on peut racheter en payant 2 $\frac{1}{2}$ dollars pour chaque personne. A Philadelphie outre le dollar d'hôpital, on en exige 2 $\frac{1}{2}$ pour le fond des pauvres, en tout 3 $\frac{1}{2}$ dollars.

milles. Ce chemin, à ce qu'il me paraît, offre de grandes facilités pour l'ouverture de nouveaux établissemens : il pourrait être continué à travers Broughton et Leeds, jusqu'à ce qu'il tombât dans le chemin Craig, distance d'environ 20 milles. Il me paraît aussi nécessaire d'ouvrir un autre chemin à partir de l'embouchure de la Rivière du Loup, à son confluent dans la Rivière Chaudière, à aller jusqu'en arrière des terres qui divisent cette Province d'avec l'Etat de Maine; distance d'environ 26 à 27 milles : c'est ce qu'on appelle ordinairement le chemin de Kennebec. Et (dans la vue de former des établissemens au nord-est de la Rivière Chaudière) un chemin à partir de la dite rivière dans la Seigneurie Saint-Joseph et aboutissant au lac Etchemin, distance d'environ 17 à 18 milles. Un autre commençant à la Rivière Etchemin, courant vers le sud-est, et aboutissant au lac Etchemin, distance d'environ 15 milles. Il serait à propos d'ouvrir un autre chemin (dans la vue de former de nouveaux établissemens) commençant dans le Township de Tring, aux chemins déjà mentionnés, et courant vers le sud-ouest jusqu'à ce qu'il rencontrât le chemin de Dudswell ci-devant mentionné, vers le lac Nicolet, distance d'environ 30 milles plus ou moins, partie à travers le township de Tring et ceux de Coleraine et Garthby, et une petite partie de Weedon.

SAMEDI, 21 Février 1829.

L'Honorable *William Bowman Felton*, ayant été appelé, donna au Comité les renseignements suivans :

Honorable
*William
Bowman Felton*,

A l'égard des Chemins conduisant des Townships au fleuve St. Laurent, je remarquerai en peu de mots, que dans l'état actuel des Townships il n'y a aucun Chemin qui soit d'une importance égale aux Chemins menant directement au St. Laurent. Il pourra être utile par la suite d'ouvrir des Chemins qui traverseront le pays, mais à présent le Public ne peut réserver assez d'argent pour rendre les Communications directes praticables.

Le Chemin direct entre Hatley et Montréal, traversant la sortie du Lac Memphramagog est utile à Stanstead, à Hatley, à Barnston, et jusqu'à un certain point à quelques autres Townships situés au Sud et à l'Est de Hatley; et la partie de ce Chemin qui commence à la sortie peut être considérée comme utile à tous les Townships au dessus de Shipton et de la Rivière St. François; mais le Chemin de Montréal devrait mener à Sherbrooke, autrement il n'y a aucune voie de communication entre le District de St. François et Montréal, sans faire un détour au Sud en passant par Stanstead, ou en suivant le cours de la Rivière jusqu'à Sorel.

On ne devrait pas demander à la Province de faire d'autres Chemins que ceux qui sont nécessaires pour ouvrir la communication entre le gros corps des Townships et le fleuve St. Laurent; et de ces Chemins autant seulement que les Habitans sont hors d'état de faire ou d'entretenir. On devrait s'en tenir strictement là, et l'on trouvera que même avec cette restriction, il en coûtera pour faire un seul Chemin praticable à partir du Saint Laurent à aller à un point donné dans les Townships, beaucoup plus que les gens qui demandent de l'aide pour des Chemins ne veulent l'avouer. Une grande partie du pays situé en arrière des Seigneuries, et où il faut passer pour arriver aux Townships, est de nature à faire désespérer de recevoir aucune assistance de la part des Habitans, parce que le sol est si humide et d'une qualité si inférieure, que des Colons n'y sauraient vivre sans commencer par y verser des Capitaux considérables, et y avoir long temps travaillé à l'égoutter et à l'exposer à l'action du soleil et du vent.

Si l'on considère comme une chose désirable d'ouvrir les Townships à la population canadienne, il faut que le Public se charge de faire un Chemin à travers l'étendue de terrain marécageux qui se trouve entre les Seigneuries et les Townships; si l'on néglige ou retarde cette mesure, les Townships vont se remplir de gens qui viendront du côté opposé de la Province, où les Chemins sont en grand nombre et praticables.

La communication la plus importante pour les Townships est celle qui suit les bords de la Rivière St. François; il est tout-à-fait indifférent pour les Habitans du District de St. François de quel côté de la rivière soit fait le chemin, pourvu qu'il y ait un bon chemin, c'est-à-dire un Chemin praticable pour les voitures à roues. C'est l'opinion générale de tous les gens désintéressés que le rivage occidental de la Rivière St. François présente le meilleur fond et la route la plus courte à partir du centre des Townships à aller au St. Laurent, et c'est la route la plus commode pour la population canadienne qui habitent les Seigneuries densément peuplées

de La Baie, de St. François, &c. Le Chemin du côté occidental devrait être achevé à partir de la ligne méridionale de Brompton à travers Melbourne et Durham à aller jusqu'à Drummondville; et il faudrait achever un Chemin depuis ce dernier endroit jusqu'à Sorel, et un autre jusqu'aux Trois-Rivières. L'argent qui sera dépensé sur ces Chemins procurera un bien immédiat aux Townships et à toute la Province en général; et ce qu'on y appliquera rendra utiles les sommes qu'on y a déjà dépensées. Il est inutile de promettre que ces communications pourront se faire pour une petite somme d'argent; il faudra au moins £35 par mille dans toute la distance entre la Baie et Drummondville, et entre De Guire et Brompton pour faire un grand Chemin utile et praticable. Mais il ne fera ni utile ni expédient de dépenser toute la somme dans une seule Saison; il sera plus utile d'en dépenser une partie annuellement, la moitié ou un tiers, jusqu'à la parfaite confection du Chemin.

Une autre branche du Chemin de St. François qui devrait être achevée pour en retirer quelque avantage de ce qu'il y a déjà été dépensé de l'argent public, est celle qui court de St. Grégoire à Shipton. Ce Chemin demande aussi une forte somme d'argent pour le rendre praticable pour les voitures.

On peut obtenir les détails des distances de ces deux routes des témoins qui sont devant le Comité des Chemins; mais il suffira, pour avoir des données pour calculer les dépenses, de dire que depuis De Guire, en passant par Drummondville, jusqu'à la ligne méridionale de Brompton, la distance peut être de 59 milles; de la Baie à Drummondville, 15 milles; de St. Grégoire à Shipton, 39 milles, de Chemin qui demande des avances: la distance absolue entre ces points étant quelque chose de plus.

L'Estimation serait comme suit :—

Chemin le long du Rivage occidental de la Rivière St. François, depuis De Guire jusqu'à la ligne méridionale de Brompton, 59 milles, à £35 par mille,	£2065 0 0
Branche orientale du dit Chemin, conduisant aux Trois-Rivières, savoir : de La Baie à Drummondville, 15 milles, à £35 par mille,	525 0 0
Chemin de St. Grégoire à Shipton, conduisant aux Trois-Rivières, 39 milles, à £35 par mille,	1365 0 0
	<hr/>
	£3955 0 0

Pour conclure, il faut répéter que jusqu'à ce qu'il soit ouvert et complété un bon chemin sûr et praticable, de manière à joindre les townships au reste de la province, c'est dissiper les ressources publiques que de dépenser de l'argent sur des chemins de traverse éloignés, qui ne peuvent être utiles qu'à des individus ou à des établissemens partiels. Il est également nécessaire de remarquer, qu'espérer faire un bon chemin à travers un pays impraticable pour une petite somme, c'est se faire illusion, et se préparer un désappointement certain.

Lundi 29 février 1829.

Joseph Rémi Vallières de Saint-Réal, écuyer, membre de votre honorable chambre, ayant été appelé, a informé votre comité :—

*Joseph Rémi
Vallières de
Saint-Réal,
écuyer.*

Qu'il connaît le chemin qui conduit de la paroisse de Saint-Grégoire au township de Kingsey; que ce chemin est ouvert depuis la paroisse de Saint-Grégoire, jusqu'à la Longue Pointe dans le township de Kingsey, mais qu'il est mal entretenu, et les pluies qui sont tombées l'été dernier l'ont considérablement endommagé; que les lots qui sont sur ce chemin étant presque tous en bois de bout, il tombe journellement sur le chemin des arbres, qui l'obstruent et en rendent le passage difficile. Que pour rendre ce chemin aussi utile qu'il pourrait l'être, il serait nécessaire de l'ouvrir jusqu'à Shipton, et d'adopter des moyens de le faire entretenir en bon état: Que £1000 suffiraient assurément pour le mettre en bon état depuis Saint-Grégoire jusqu'à Shipton; et que le plus sûr moyen pour le faire tenir en état de réparation, serait de concéder les terres à travers lesquelles il passe, à condition que les concessionnaires les maintinsent en bon état. Que ce chemin est d'une grande importance; il deviendrait la forte de plusieurs townships peuplés et fertiles, et d'une vaste étendue de pays maintenant inhabitée, mais ayant un sol qui invite à la culture, et qui promet de devenir sous peu une section très intéressante de cette

Appendice
(P.P.)

cette province. Que la longueur de chemin à ouvrir pour pousser ce chemin jusqu'au township de Shipton, est de 4 lieues ou environ, traversant diagonalement le township de Kingsley depuis la branche sud-ouest de la Rivière Nicolet, jusqu'à deux milles de l'angle sud-ouest du dit township, et au nord-ouest de celui de Shipton, sur la Rivière Saint-François.

Jeudi, 5 Mars 1829.

John Murray. Mr. John Murray, du Cap Rouge, a été appelée et interrogé :

Etes vous natif d'Ecosse ?—Oui ; je suis né en *Aberdeenshire*, mais j'ai passé la plus grande partie de ma vie en *Ayrshire*.

A qu'elle époque êtes vous venu en ce pays ?—Je suis arrivée dans ce pays le 3 Octobre 1820.

Quels sont les inconvénients auxquels se trouvent assujétis les émigrés, quels sont les avantages et les désavantages de la situation de l'émigré, comparés à la situation où il se trouvoit en Europe ; d'après votre expérience quel seroit le mode le plus préférable pour surmonter les désavantages aux quels il est exposé ?—D'après ma propre expérience, je conçois que les plus grands inconvénients que rencontrent les émigrés qui desirerent s'établir sur des terres nouvelles, est le manque général de chemins de communication pour conduire aux nouveaux établissemens où il desirerent s'établir. D'après ma propre expérience, en outre des désavantages ci-dessus mentionnés, l'émigré en a d'autres à rencontrer, provenant principalement de ses moyens pécuniaires ; mais la condition de l'émigré dans ce pays comparée à celle où il se trouve en Europe, est assurément meilleure, et principalement rapport à ceux d'une classe supérieure, qui, après avoir surmonté tous les obstacles en général, réussissent les mieux. Le meilleur mode que puisse adopter un émigré afin de surmonter ces obstacles, est par le moyen d'une industrie persévérante, avec un mélange convenable de la pratique de son propre pays avec celui du Pays qu'il a adopté. Je considère ce mode préférable à celui où l'adoption soit le système Européen ou Canadien exclusivement.

Quels sont les points où le système de culture pratiqué en *Ayrshire* diffère de celui, qui d'après votre expérience, réussit le mieux en Canada ?—La différence qui j'y trouve, vient principalement de la différence du climat et des saisons. Un cultivateur venant en Canada et que conduiroit les travaux entièrement d'après la coutume du Pays où il a été élevé, seroit presque assuré de se ruiner. Vu que la saison est courte ici, son grain doit être mis en terre d'une manière bien plus expéditive que dans la Grande-Bretagne, n'importe quelque soit la dépense. Et pendant la récolte il faut pareillement qu'il change de système ; car il ne faut pas qu'il laisse venir son bled de même que là à aussi grande maturité, avant de la couper ; autrement les pluies et les coups de soleil, qui se succèdent, sont cause que le grain tombe souvent de l'épi, et conséquemment il lui arrive du dommage. De même, dans la Grande Bretagne, le cultivateur est dans l'habitude de lier son grain en gerbes aussitôt après l'avoir coupé, mais cela ne convient pas dans ce Pays, car dans ce Pays c'est le soleil qui produit le plus grande assèchement, tandis qu'en Angleterre ce sont les vents qui procurent ce résultat. Je suis donc d'avis que la coutume qui est adoptée dans ce Pays est la plus préférable ; quant aux patates, je ne trouve aucune différence, excepté quant à celle du climat dont je viens de parler ; et il faut les planter et les arracher avec plus d'expédition. Quant aux navets, le système varie beaucoup. Dans la Grande Bretagne nous pouvons semer en toute sûreté, à plusieurs reprises dans le mois de Juin, mais dans ce pays nous ne pouvons semer difficilement en tout tems, excepté entre le premier et le quinze de Juillet. Je parle en général d'après ma propre expérience. Le système que l'on suit ici rapport au foin est à peu de chose près le même que dans la Grande Bretagne, avec cette exception, qu'en général je trouve qu'il est plus préférable de ne pas tant étendre le foin, car s'il est trop étendu au soleil, le foin est sujet à jaunir et devient brûlé.

Quels moyens possède un Emigré pour former un capital qui puisse le mettre en état de travailler sur sa propre terre, en supposant qu'il en ait une ?—Le plan général que j'ai vu suivre par des individus qui étoient à 30 ou 40 milles de Québec, afin de former le capital nécessaire, a été : de s'engager pendant l'Été à travailler à toutes espèces d'ouvrages qu'ils pouvaient trouver, soit dans Québec ou ses environs, et avec leurs épargnes de l'Été de se rendre sur leurs terres vers l'automne ; de s'y bâtir une habitation temporaire ; et d'y passer l'hiver, de s'occuper à y abattre quelques acres de bois pendant l'hiver, et de le faire brûler au printemps,

de s'y planter, force patates, un peu d'avoine et de pois, de revenir à Québec, et de travailler jusqu'au tems de la récolte ; alors de retourner comme auparavant et d'employer l'hiver à travailler, et d'y vivre sur le produit de leur ferme de l'été précédent. Ils peuvent faire ceci pendant trois ou quatre années, ou autant que cela est nécessaire. C'est en agissant de cette manière, qui je connois plusieurs familles qui sont maintenant à leur aise et qui vivent commodément, et qui ont commencé avec peut être moins de quatre piastres pour toute fortune ; ceci regarde ceux qui sont à 30 ou 40 milles de Québec. Je ne puis parler avec certitude de ceux qui sont en général plus éloignés. Ces faits se sont passés sous mes yeux. L'établissement dont je veux parler, est Faussembault, où j'ai résidé pendant deux ans et demie lors du commencement de cet établissement. Il n'y avoit pas de chemins, et l'endroit le plus voisin d'où il falloit porter des provisions étoit à la distance de trois milles.

Ne seroit ce pas un moyen de faciliter les établissemens, si les émigrés qui n'ont que peu de moyens ne faisoient que couper le petit bois, et écorcer les gros arbres, ou d'abattre, de couper débiter et de brûler le bois, sans arracher les fouches ?—Quant au première mode il pourroit être adopté par ceux qui n'ont pas d'autres moyens, et là où les arbres sont gros et clairs ; mais néanmoins je pense que la meilleure méthode est de nettoyer la terre, lorsque la chose est possible. Quant au deuxième mode, j'en dirais autant.

Comment vous y prenez-vous par rapport aux fouches ?—Je n'ai jamais vu d'autre moyen d'arracher les fouches, que de couper d'abord les petites racines, et de laisser pourrir les fouches. Il m'a été suggéré par un nommé George Tomlinson, un mineur au Cap Rouge, qu'il se faisoit fort de me montrer un appareil au moyen duquel on pourroit arracher des fouches avec beaucoup de facilité ; tout l'appareil devant consister principalement dans une chaîne avec des leviers ; mais qu'il n'avoit pas les moyens suffisants de se pourvoir d'une chaîne, car autrement il en auroit fait l'essai sur ma terre.

Pensez vous qu'un Emigré au quel on accorderoit des terres pourroit y effectuer un établissement sans une aide publique ?—Je pense qu'un Emigré ne pourroit pas faire un établissement sans adopter les moyens que je viens d'indiquer. Ici le grand besoin est d'avoir un capital, et lorsqu'un individu se trouve bien dans sa patrie, il ne songe jamais à venir ici ; comme de raison la grande masse des émigrés qui viennent ici n'ont point de capitaux, et sont obligés de rencontrer toutes les difficultés qui sont ci dessus détaillées, ainsi que beaucoup d'autres, et lorsqu'il a réussi à avoir une terre ouverte, il est entravé dans les efforts qu'il fait afin d'améliorer sa terre.

Quelles sont les dépenses du passage pour les émigrés qui viennent dans ce pays ?—J'estime le prix du passage pour venir de l'Ecosse dans ce pays, à environ six louis par tête, en comptant deux personnes audessous de quatorze ans, comme une passager.

Quelles provisions prendriez-vous pour le passage ? Je ne suis pas prêt à répondre à cette demande. Quant à la quantité, si je traversais l'Atlantique moi-même, je crois que je me munirais des provisions suivantes :—Vingt-huit livres de farine d'avoine, deux minots de patates, six livres de beurre, quatorze livres de bœuf, une livre de thé, dix livres de sucre, un demi-gallon de mélasse et un gallon d'esprit de rum, et quelques autres bagatelles qui ne me reviennent pas à la mémoire. Lorsque je suis arrivé à Québec, j'avais avec moi ma femme, et cinq enfans depuis l'âge de deux ans à quatorze ans. J'ai été employé à des occupations agricoles jusqu'à l'âge de vingt-trois ans, alors j'entrais dans une filature et fabrique de coton, ou j'ai continué jusqu'à ce que j'ai quitté l'Ecosse pour ce pays. A mon arrivée ici je desirais avoir un emploi comme assistant dans une maison de commerce, mais n'ayant pu y réussir je dirigeai mon attention vers l'agriculture, et j'allai m'établir à Faussembault, à environ six lieues de Québec. J'obtins un lot de M. D'Estimauville aux conditions suivantes : Je devois nettoyer quatre arpens de la manière ordinaire, pour lesquels je devois recevoir dix piastres par arpent, et d'ensemencer la terre ainsi faite pendant trois années consécutives, dont le produit devoit être à mon profit. Je construisit une petite maison, pour laquelle je reçut quarante piastres au moment de mon départ.

Lorsque vous avez commencé à travailler dans le bois, pouviez-vous travailler pour vos voisins à temps perdu ; quelles gages aviez-vous et comment vous étoient-elles payées ?—J'ai beaucoup travaillé à faire de la terre neuve pour les autres, et j'ai reçu pour cela dix piastres par arpent ; cette terre neuve étoit pour les Messieurs en ville qui avoient des terres dans cet endroit. Je puis avoir fait environ vingt arpens de terre neuve. Lorsque je ne nettoyai pas la terre au complet, je ne recevais que six piastres par arpent.

Ces

Ces argens avec le produit de ma terre m'ont fait subsister avec ma famille pendant tout le temps. Il m'est arrivé quelque malheur, ma maison fut incendiée. Comme j'avais été dans l'habitude de vivre plus en société, je désirais obtenir une terre toute faite : voyant une annonce que M. White avait besoin d'un fermier, je m'arrangeai avec lui, à raison de trente louis par année, en par lui soutenant ma famille. M. White vint à décéder la première année de mon temps de service, et je continuai une deuxième année avec les syndic, recevant un meilleur salaire, qui s'élevait à cinquante louis, et ma famille nourrie en partie. La troisième année je pris la ferme à Bail avec tout le bétail, à raison de cent vingt louis par année. Sur la ferme de M. White il y a environ quatre vingt arpens de terre entièrement faite, et environ trente ou quarante qui ne sont pas parachevés. J'ai pris la ferme des Jésuites à Beauport, pour vingt-neuf années, mais toute nue, et à la charge d'entretenir les bâties à mes dépens. J'ai cette ferme depuis le premier de mai dernier.

Lorsque vous-avez commencé à travailler dans la forêt, aviez-vous quelqu'un pour vous aider, et s'il en est ainsi, combien leur donniez-vous par jour, à part de leur nourriture?—Je n'ai eu personne avec moi.

Combien trouvez-vous qu'il faut de jours de travail pour abattre et nettoyer un arpent de terre?—Je ne puis pas dire combien il faut de journée de travail pour préparer un arpent de terre prêt à herfer.

Connaissez-vous quelque émigré pauvre proche de votre demeure, qui a pris une terre en bois de bout, sans posséder aucun capital; et détailler de quelle manière il s'est mis à l'œuvre, d'après ce que vous en connaissez?—J'en connais plusieurs, dont j'ai fait le récit ci-dessus.

Si quelque émigré pauvre obtenait des terres à deux milles de votre demeure, pourriez-vous lui donner de l'ouvrage à temps perdu, entre l'époque où il fait ses semences et celui de la récolte, et quelles gages seriez-vous en état de lui donner, à part de sa pension?—J'ai employé des hommes, et je leur ai ordinairement donné deux chelins par jour, avec leur nourriture, ou deux chelins et dix-huit sols par jour sans nourriture, pendant la récolte : c'était des hommes fiables et capables, mais je n'ai pas l'habitude d'en employer généralement, parce que j'ai des hommes à l'année. Je paye à un homme qui fait bien labourer vingt louis par année, et je lui donne son coucher, sa pension, son logement et son lavage. Je paye à un homme pour faire tous les travaux en général de la ferme six piastres par mois, pendant toute l'année; et pour une bonne servante, trois piastres par mois.

Samedi, 7 mars 1829.

M. Ferdinand
Murphy.

M. Ferdinand Murphy, de Valcartier, ayant comparu, a dit : Je suis d'une province dans le sud de l'Irlande. J'arrivai dans ce pays, en octobre 1821, accompagné de ma sœur. La disette des temps, les fortes rentes des terres, les bas prix des produits qui causaient ma ruine, le mécontentement des esprits dans les différentes parties du pays, et les rapports favorables qui me furent faits du Canada, m'engagèrent avec ma sœur de venir tenter fortune dans cette partie éloignée de l'hémisphère. À notre arrivée ici, nous possédions à nous deux vingt et un chelins. Je restai en ville pendant quinze jours, sans gagner un sol : J'allai alors à Valcartier, tout-à-fait dans le bois, à trois milles du premier établissement. J'avais fait l'entreprise de couper et d'abattre le bois sur cinq arpens de terre, à raison de trois louis par arpent. On m'avança des provisions, des vêtements et d'autres articles dont j'avais besoin, qui s'élevaient en tout à la moitié de la somme de l'entreprise. Je finis mon entreprise avant le printemps, et nettoyai la terre après que la neige eut disparu de dessus la terre, et je reçut la somme entière de quinze louis. Je subsistai entièrement sur cela pendant l'hiver, et il me revenait une balance au printemps. À mon arrivée dans le bois, je me bâtis une cabanne de pièces sur pièces d'environ 12 ou 14 pieds en carré, assez haute pour qu'un homme pût s'y tenir debout, avec une ouverture pour la fumée; le plancher était de pièces fendues aplaniées, et je ménageai un endroit pour y placer le foyer. Comme il n'y avait pas de chemin, dans cette distance de trois milles, j'étais obligé de porter mes provisions sur mon dos, quelques fois dans la neige par dessus la tête. Mes provisions se composaient principalement de biscuit, patates et lard, et quelques fois je me procurais du thé et du sucre. Arrivé au printemps, aussitôt la terre découverte, je semai environ 22 minots de patates, qui me donnèrent dans l'automne, vingt-trois minots pour chaque minot de semence; c'est une des meilleures récoltes que j'ai jamais eu. N'ayant point de famille à soutenir, pendant que mes patates étaient en terre, j'allai dans différentes parties du pays passer le temps parmi mes amis pendant environ deux mois; Je ne faisais aucune dépense parmi eux. Dans l'automne je revins faire ma récolte, et dans l'hiver je fis une entreprise de

£100 à Saint-Giles que j'accomplis avec trois hommes. Je ne fis pas grand profit, car il ne me resta que £8 quitte et net. Au printemps je revins à Québec, et j'obtins des religieuses de l'Hôtel-Dieu, un lot de 262 arpens de terre dans le fief Saint-Ignace sur la Rivière Jacques-Cartier : Je m'y rendis sur la fin de l'hiver suivant, j'y fis un abattis d'environ cinq arpens, que je nettoyai au printemps, et je semai 80 minots de patates, qui me rapportèrent plus de 600 minots. J'y avais aussi semé environ un minot d'avoine, qui fut en partie mangé par les écureuils, ce qui conséquemment me donna peu de chose. J'ai pris il y a deux ans, une autre terre dépendante des biens des Jésuites, qui a 90 arpens. J'ai à présent environ 56 arpens de terre que j'ai faite avec l'aide de journaliers que j'employais, lorsque j'avais de quoi les payer. Ma récolte cette année est la plus mauvaise que j'ai eu, rapport au printemps qui a été pluvieux et qui a gâté ma grange. J'ai semé 52 minots de patates, et je n'en ai récolté que 552. J'ai semé 11 minots d'avoine, et j'espère recueillir 100 minots. J'espère aussi avoir 1000 boîtes de foin. En 1827 ma récolte était de 946 minots de patates, le produit de 47 minots : 100 minots d'avoine, le produit d'environ 10 minots, et 600 ou 700 boîtes de foin. Depuis que j'ai commencé, j'ai eu des gens à gages comme suit : Deux hommes pour un mois à six piastres, et nourris pendant l'année dernière. Dans l'année précédente j'ai eu un homme et sa femme pendant un mois, l'homme à quatre piastres, et sa femme à deux piastres. Avant cela, je n'avais pas les moyens de payer des engagés. Je me plais tout-à-fait bien dans ce pays. J'aime l'Irlande, mais je n'irai jamais pour y demeurer, parce que le peuple n'y est pas unanime. Avec ce que j'ai gagné sur ma ferme, j'ai acheté des meubles, et des animaux; 7 bêtes à cornes et un cheval, et j'espère être en état au printemps prochain d'acheter encore deux bêtes à cornes, et d'ajouter quelque autre chose à mes petits besoins. La plus grande difficulté qu'un émigré rencontre, sont les provisions pour le premier hiver, des vêtements convenables, une bonne hache, et une meule à aiguiser pour l'usage de quelques individus, afin de conserver la hache en bon état, et des chemins lorsqu'ils ont quelque chose à apporter au marché; quant aux provisions pour lui-même, un homme peut les porter sur son dos; mais lorsqu'il y a quelque chose à transporter, le manque d'un chemin est une grande souffrance.

Quel serait l'effet d'un prêt que le gouvernement ferait à des nouveaux émigrés pauvres, afin de les mettre en état de surmonter les difficultés de la première année? S'il y avait un établissement de pas moins de 8 ou 10 familles sur de bonnes terres, qui seroient dans la ferme disposition de rembourser l'emprunt, avec des habitudes industrielles, et qui auraient soin de leur santé, un prêt pourrait leur être utile, si le montant n'en était pas trop considérable, et qu'ils pussent le rembourser. Des individus peu réfléchis empruntent de l'argent, dans l'espérance de le rembourser ponctuellement, mais lorsque le temps est expiré, ils se trouvent hors d'état de le rendre.

À votre avis quel est le mode le plus avantageux et le plus économique en fait de nourriture pour un nouvel émigré en cette province? Pourvu que les patates ne soient pas trop éloignées, car c'est un objet qui pèse beaucoup, et que l'on puisse les avoir à bon marché, c'est une bonne nourriture. Bien des personnes parlent de patates et de poisson salé comme un moyen économique pour nourrir un homme de travail : Je puis dire avec confiance, d'après ma propre expérience, que la nourriture la plus économique pour un homme de travail sont les patates, du lard et de la soupe aux pois; on se sert principalement du lard pour donner un gout de viande à la soupe, à part de cela cette nourriture est plus solide que les patates et le poisson. Mais, néanmoins, je ne crois pas qu'un homme puisse vivre longtemps même sur cela seulement; il faut qu'il ait du thé ou du gruau; cela revient à meilleur compte, et procure un changement. Le lait serait meilleur, mais l'émigré ne se trouvait pas encore assez en moyens pour acheter ou nourrir une vache.

Combien faut-il de temps à un Irlandais d'une constitution robuste pour apprendre à manier la hache?—Depuis trois à six mois. Il en est de cela parmi nous, comme il en est des métiers; tel individu est plus susceptible d'apprendre en moins de temps qu'un autre. Je buchais aussi bien au bout de trois mois, que je le fais à présent, et je ne craindrais pas de bucher avec aucun américain qui vient au monde, pour ainsi dire, la hache à la main.

Jean-Baptiste Noreau, de Valcartier, ayant été appelé, a dit :—

Je suis établi à Valcartier, il y aura cinq ans cet automne. Je suis établi dans la cinquième concession. J'ai quarante arpens de terre faite une maison, grange, deux chevaux, une vache et trente poules. Je n'avais ni argent, ni meubles lorsque je me suis établi sur ma terre. Je gagnais ma vie en vendant du bois pour faire des roues et du bardeau; et en changeant de chevaux et en trafiquant. Si j'avais les moyens d'ensemencer ma terre le printemps prochain, je serais à mon aise pour le reste de ma vie. J'ai toujours semé depuis la première année que j'ai pris ma terre. Un bon homme peut gagner deux chelins par jour en été et trente sous en hiver. J'ai eu des journaliers qui travaillaient pour leur nourriture.

J. B. Noreau.

Charles Savard, de Valcartier, ayant été appelé, a dit :—

J'ai été trois ans à Valcartier. Je suis établi sur un lot près de la rivière. J'ai sept ou huit arpens de terre faite, une petite maison et une grange.

Chs. Savard.

Appendice
(P.P.)

grange. Je n'avais ni argent ni meubles lorsque je me suis établi sur ce lot avec ma femme. Je gagnais ma vie comme je pouvais, bien misérablement. Je travaillais pour tous ceux qui voulaient m'employer, et je semais ma terre. Les gages d'un journalier à Valcartier, sont de deux chelins à deux chelins et demi par jour.

Wm. Brown, William Brown, de Valcartier, cultivateur, a comparu et a été interrogé :—

Quels sont les inconvénient auxquels les émigrés se trouvent assujettis dans ce pays ? quels sont les avantages et les désavantages de la condition de l'émigré, comparés avec la situation où il se trouvent en Europe ? quel est, suivant vous, le meilleur mode à adopter pour surmonter les désavantages auxquels ils se trouvent exposé ?—Le plus grand inconvénient auquel un émigré est assujetti, est le manque général de chemins ; avec de bons chemins l'émigré se trouverait plus à l'aise. Quant à moi, je crois que je suis au-si bien que je le serais dans mon lieu natal. La persévérance est le grand objet, et il n'y a que par ce moyen que l'émigré puisse réussir.

Quel est le système d'agriculture que d'après votre expérience, vous avez trouvé le mieux convenir au pays ?—D'autant que j'en puis juger par ma propre expérience, je crois que le système des récoltes vertes est le plus avantageux.

Lors de votre arrivée dans ce pays, avez-vous obtenu des terres, et quels moyens aviez-vous pour commencer à vous établir ?—J'obtins une ferme à moitié de Mr. Wilson : c'était en partie de la terre neuve ; j'y ai demeuré un an. Je pris alors un lot de Mr. Neilson, à raison de £5 de rente par année ; il y avait environ vingt arpens de terre faite dessus. J'avais apporté d'Ecosse environ £900, je les ai employés en acquisition de terres. J'ai présentement environ 500 arpens de terre qui m'appartiennent, sur lesquels il y a environ 130 de terre faite. Pour mettre la terre prêt à recevoir la semence, cela a coûté depuis dix à douze piastres.

Combien trouvez-vous qu'il faut de jours de travail pour abattre et nettoyer un arpent de terre ?—Je crois qu'un homme met environ une semaine pour abattre et débiter le bois sur un arpent de terre, et qu'il faut une autre semaine pour le mettre en tas, le brûler et le nettoyer, prêt à y recevoir la semence.

Connaissez vous quelque émigré pauvre près de votre demeure, qui a pris des terres en bois debout et qui n'avait aucuns moyens ; et dites de qu'elle manière il s'est mis à l'œuvre, d'après ce que vous en savez ?—Je connais plusieurs individus industrieux qui ont commencé sans avoir aucun moyens, et ils travaillaient à la journée ; et à tems perdu pendant l'été et pendant l'hiver, ils buchaient, au printemps ils semaient aussi vite que possible, et s'en revenaient travailler en ville jusqu'au moment de la récolte ; par ce moyen ils se procuraient une vache, et en continuant de même, il sont maintenant passablement bien.

Si quelque émigré pauvre obtenait des terres à deux milles de votre résidence, pourriez-vous lui donner de l'ouvrage à tems perdu, et quels tems où il ensemencier sa terre, et le tems de la récolte, et quels gages pourriez-vous lui donner à part de sa nourriture ?—Pendant l'été, je pourrais employer bien des bras, et principalement pendant la moisson ; je pourrais peut-être employer vingt personnes. Dans le tems de la récolte, et généralement pendant l'été je donne à ces gens trente sous par jour, sans compter leur nourriture, et aux femmes un chelin par jour. Je garde un engagé auquel je paye à part de sa pension neuf louis par année ; j'ai une forte famille, en m'y comprenant, avec sept enfans : le plus vieux desquels est un homme de vingt quatre ans, et le plus jeune a neuf ans ; de ceux-ci il y a quatre garçons et trois filles. A l'aide de ma famille et de mon engagé, tout l'ouvrage de la ferme se fait jusqu'à l'approche de la récolte, alors je prends de l'aide.

Qu'elle est la somme la plus modique avec laquelle un émigré puisse entreprendre de se mettre sur une terre ?—Il y en a beaucoup qui vont sur des terres, sans aucuns autres moyens que leur industrie.

Comment s'y prennent ils pour vivre ?—C'est en travaillant pour les autres pour une journée ou deux, de tems en tems, afin de se procurer un pain, ou quelques minots de patates. A l'exception de deux familles, je n'en connais aucune autre qu'il ne soit pas passablement à son aise dans notre établissement.

T. McMullan, Thomas McMullan, de Valcartier, ayant comparu, a dit :—
Je suis né dans le nord de l'Irlande, et je vins en Canada en 1821. Je vins dans ce pays d'après les rapports que ce pays-ci était superbe pour un homme de travail, et où il pouvait aisément gagner sa vie. J'entendis dire que les émigrés y fesaient bien, mais cependant je ne l'ai pas trouvé aussi favorable que je m'y attendais. A mon arrivée dans ce pays j'avais ma femme et quatre enfans ; c'était en automne ; l'aîné de

mes enfans à maintenant quatorze ans, et le plus jeune trois ans ; ils sont à présent au nombre de cinq. Je n'avais pas un chelin à moi lors de mon arrivée. Je vendis quelques outils de menuisier que j'avais pour me procurer de la nourriture pendant la première semaine de mon arrivée. Je m'employai alors à scier du bois en ville, à raison de deux chelins la corde, cela dura environ trois semaines, je ne pus gagner que deux chelins par jour à cet ouvrage. Je m'engageai alors pour faire de la terre neuve à Valcartier, pour Mr. Stuart ; on m'allouait £30 pour faire dix arpens. J'arrivai à Valcartier vers Novembre. J'y ai toujours resté depuis. J'abattis douze arpens pendant cet hiver là, et je fus payé sur le pied que je viens de mentionner. Je n'avais rien autre chose pour soutenir ma famille, excepté dix ou douze jours d'ouvrage, que je me procurai de quelques individus de Valcartier, à raison d'un chelin et demi par jour. Je me rendis au beau milieu du bois, dans la sixième concession de Valcartier, où aussitôt après mon arrivée je coupai des pièces et me fit une petite maison, de douze pieds sur quatorze, et de cinq pieds de hauteur ; je la couvrit en bardeaux, et pratiquai une ouverture à un bout pour y laisser passer la fumée, et je fis un plancher avec des pièces, laissant un endroit où nous allumions le feu. Je me trouvais à deux miles et demi du voisin le plus proche, et dans toute cette distance il n'y avait qu'un petit sentier, et je portais mes provisions sur mon dos par ce chemin, où j'avais quelques fois de la neige à mi-corps ; mes provisions consistait en patates et farine. Je payais un écu par minot pour les patates, et depuis dix à douze chelins et demie par quintal de farine. J'ai acheté des patates pendant deux ans, excepté quelque peu que je reçu dans l'été suivant mon arrivée. J'en achetais dans ce tems là, environ un minot et demie par semaine ; j'eus du lard, mais point de poisson ; nous dépensions environ cinq livres de lard par semaine ; c'était les messieurs avec lesquels j'avais contracté qui nous l'envoyaient, à sur et mesure que nous en avions besoin. Nous dépensâmes environ deux quintaux de farine durant l'hiver, nous en fîmes des galettes et du pain. Nous mangions les patates bouillies avec du sel, et quelques fois avec du lard ; nous faisons peu d'usage de grog (rum mêlé avec de l'eau) excepté dans l'occasion lorsque nous venions en ville ; nous avions un peu de thé et de sucre, peut-être une fois la semaine et le dimanche. Dans le printemps, je nettoyai presque tout l'abattis que j'avais fait, environ trois ou quatre arpens, et j'y semai environ cinq minots de patates, mais c'était trop tard ; je les piochai et les ramassai dans l'automne ; je n'y mis rien autre chose. Pendant ce printemps là, je travaillai beaucoup pour mes voisins, à raison d'un chelin et demi par jour, ce que je recevais en provisions et en effets que l'on m'apportait de la ville. J'étais alors dans de moyennes circonstances. Je faisais entièrement subsister ma famille par ce moyen. Je ne récoltai pas plus de seize ou dix-huit minots de patates de la semence que j'avais mise en terre, et quoi qu'elles étaient plaines d'eau, et autrement mauvaises, nous ne lassâmes pas que de nous nourrir avec pendant la saison suivante. Durant le deuxième hiver, j'abattis environ six arpens de terre, et je fus payé sur le même pied. J'eus beaucoup d'ouvrage pendant cet hiver là ; environ trente ou quarante jours autant que je crois, à raison d'un chelin et demi ; ma femme ne pouvait pas me donner d'aide. Je n'avais pas un seul chelin en argent. Dans le printemps je nettoyai encore trois arpens de terre, et je semai environ dix minots de patates et deux minots d'avoine verte, en bonne saison. J'eus beaucoup d'ouvrage à la journée, et je fus payé sur le même pied et de la même manière. Dans l'automne je ramassai 150 minots de patates ; je coupai mon avoine avec la faucille, et je le mis en petits faisceaux. Je n'avais pas d'animaux pour la faire manger, et point de chemin pour la porter au marché, de sorte qu'elle resta à pourrir sur le champ. Durant le troisième hiver, je coupai et j'abattis environ trois arpens de terre pour un nommé Macartney, un émigré à Valcartier, à trois piastres par arpent ; et je travaillai pour d'autres. Je me trouvai un peu plus à mon aise ce troisième hiver, mais pas beaucoup. A cette époque j'avais fini l'entreprise que j'avais commencée. Le deuxième hiver je m'adressai à M. Bélanger, l'agent des religieuses, qui possèdent une seigneurie à Valcartier, et j'en obtins une concession de 126 arpens ; elle est à la distance d'environ 50 arpens de mon premier abattis. Le troisième printemps je commençai à nettoyer ma propre terre ; j'abattis 5 arpens et j'en nettoyai trois, à moi seul. Je semai environ 10 ou 12 minots de patates, et j'en ramassai 200. Je m'occupai à bucher et abattre pendant tout l'hiver suivant. Je me bâtis une assez bonne grange vers le 15 ou le 16 de mai. Je me rendis sur ma nouvelle terre le même printemps, et je construisit une maison de pièces sur pièces plus grande que la première. Je me trouvai avec ma famille plus à l'aise, mais je n'avais pas d'argent. Je rachevai de nettoyer quatre arpens. Cet été là, et l'hiver suivant je m'occupai à abattre, et de tems à autre je travaillai à la journée. J'ai maintenant 16 arpens de terre faite, et cinq ou six autres qui sont abattus. Je crois que je puis faire quatre arpens de terre neuve par année. La cinquième année je me procurai une vache, qui me fut donnée pour partie du paiement de mon ouvrage. Ma récolte de l'année dernière consistait d'environ 250 minots de patates, 30 minots d'avoine et 900 bottes de foin. Je commence maintenant à me trouver beaucoup plus à mon aise que je l'étais. Je n'aurais jamais eu une terre ou ferme à moi en propre en Irlande. Je crois que je suis bien mieux ici que je ne le serais en Irlande. Je ne suis pas fâché du tout d'y être venu, quoique j'en eus quelque regret au premier abord. Dans l'avant dernière année je me suis procuré une deuxième vache, avec le produit de mon avoine, qui se montait à environ dix piastres. Je la laissai courir dans les bois ; où elle engraisa. Je l'ai tué. Je pense que vers le commencement d'avril, nous aurons fini de la manger ; nous avons commencé en novembre. Je me sert du suif pour faire de la chandelle, et j'ai fait vendre la peau sur le marché pour sept chelins et demi.

Owen Sullivan, de Valcartier, ayant comparu, a dit :—

Je possède 180 arpens de terre à Valcartier, dans la Seigneurie de Saint-Gabriel. Mon père fut demeurant à Terre-Neuve en 1802, et y établit un magasin de marchandises sèches ; et il revint dans ce pays en 1811, avec sa famille. Il apporta quelques effets de Terre-Neuve, et établit un semblable magasin à Québec. L'année d'après son arrivée, il prit à bail la ferme de Mr. Desbarats, à la Petite Rivière Saint-Charles, qu'il a gardé pendant dix ans ; le loyer était de £140 par année, et pendant neuf ans à moitié profit. A la fin de ce bail il fut à Valcartier, sur la Rivière Jacques Cartier, dans la Seigneurie de Faußembault, où il acheta 500 arpens de terre. Je me rendis sur cette terre ; j'avais ordinairement quatre ou cinq hommes avec moi, et quelques fois jusqu'à quinze et seize. La deuxième année, nous avions 50 arpens en culture, et nous obtinmes seize louis dix chelins de la Société d'Agriculture, pour nous récompenser des efforts que nous avons montrés en faisant de la terre neuve. Ensuite mon père acheta une autre terre à Valcartier, où je demeure maintenant. Mon père a maintenant environ 100 arpens de terre faite sur sa ferme, et j'en ai environ autant. Je garde deux chevaux, une paire de bœufs, et trois vaches. Je gardais auparavant six vaches. Mon père a deux chevaux, huit vaches, et quelques autres jeunes animaux.

Quel sont les inconvénients auxquels les émigrés se trouvent assujettis ici ? quels sont les avantages et les désavantages de la situation de l'émigré, comparés à la situation où il se trouvait auparavant en Europe ? d'après votre expérience quel est le meilleur mode pour surmonter les désavantages auxquels il se trouve exposé ?—Le plus grand inconvénient auquel un émigré se trouve exposé, est le manque de bons chemins. C'est le besoin, ou le manque de chemins qui l'empêche d'apporter les produits de sa ferme au marché.

Quels moyens possèdent les émigrés pauvres, pour pouvoir établir leurs terres ?—Ils sont dans l'habitude de rassembler leurs amis et voisins, et de former une espèce de corvée ; alors ils coupent et mettent en tas, prêt à brûler, cinq ou six arpens, qu'ils ensèmentent tout aussitôt. Cette coutume est assez ordinaire dans les nouveaux établissemens, et elle se pratique alternativement parmi tous les émigrés.

Combien trouvez-vous qu'il faut de journées de travail pour abattre et nettoyer un arpent de terre ?—Un homme met environ huit jours pour abattre un arpent de bois. Il est difficile pour un homme seul de pouvoir y mettre la dernière main, mais par le moyen des corvées, dont je viens de parler, l'émigré se trouve en état de parachever sa terre neuve, et d'y mettre sa semence.

Connaissez-vous quelque émigré pauvre proche de votre demeure, qui a pris des terres à bois, sans avoir aucuns moyens ; et expliquez de quelle manière il s'y est pris, d'après ce que vous en connaissez ?—Je connais quelques individus dans notre établissement, qui ont commencé sans aucuns moyens, et qui sont maintenant passablement bien. Ils ont commencé par travailler pour les autres pendant quelques mois ; et dans le printemps, au moyen de ce qu'ils avaient gagné, ils se sont soutenus, et ont abattus le bois sur leurs propres terres ; ils ont alors nettoyé leurs terres, après que le feu y eut passé, au moyen des corvées.

Si quelque émigré pauvre obtenait des terres dans l'étendue de deux milles de votre demeure, pourriez-vous l'employer à tems perdu, entre l'époque où il ensemence sa terre et le tems de la récolte ; et quels gages pourriez-vous lui donner à part de sa nourriture ?—Je paye à un bon homme pendant toute l'année, à part de sa nourriture, treize louis dix chelins par année ; et durant l'année lorsque j'emploie des hommes à la journée, je leur donne un chelin et demi par jour, nourriture à part. Mais c'est à des hommes qui entendent l'ouvrage de l'endroit, tel que de bucher et tout ce qui est nécessaire pour une nouvelle terre.

A votre avis, quel est le prix raisonnable pour faire un arpent de terre ?—Je crois que huit ou neuf piastres est un prix raisonnable.

Si l'on faisait un prêt de deniers publics à ceux qui ont commencé à s'établir, et pour lequel ils payeraient un intérêt, par le moyen des produits qu'ils livreraient à l'Agent de la Compagnie, et que cette dernière exporterait et vendrait à commission ; pensez-vous que cela leur serait avantageux ?—Je crois que cela réussirait bien ; et la raison en est que la belle saison est de courte

durée, les chemins sont mauvais, les marchés de Québec ne sont pas permanents ; l'éloignement où se trouvent ceux qui sont dans les nouveaux établissemens pour se rendre au marché est très considérable ; ce qui fait que par le moyen d'un tel prêt, cela les mettrait en état de réserver leurs produits afin de profiter d'une bonne occasion pour les apporter au marché, et les vendre à bon prix : par exemple, j'ai vu, l'automne dernier, des personnes apporter leurs produits au marché, et qui, rapport aux mauvais chemins et au mauvais tems ont exposés leur animaux et leurs voitures à beaucoup de difficultés et de dangers ; à part de cela, leurs produits se font alors vendus à bien plus bas prix qu'ils ne se vendraient maintenant. On doit savoir que dans ce pays la saison de l'hiver n'est bonne qu'à apporter ses produits au marché, et que c'est l'époque la plus favorable pour cet objet. Et comme je crois que le tems le plus favorable pour abattre le bois est depuis le milieu de Mars à la fin d'Avril, un semblable prêt lui donnerait le tems de rester sur sa terre et d'abattre le bois qui est nécessaire. Je connais plusieurs individus qui ont eus plus qu'il leur fallait de foin et de paille pour la consommation de leurs animaux, tandis que s'ils avaient eus les moyens d'acheter des animaux pour l'employer, cela aurait amélioré leurs fermes et leur aurait été d'un plus grand avantage, de même que rapport à leurs mœurs ; car l'on voit généralement que ceux qui fréquentent souvent les marchés, contractent des habitudes d'ivrognerie, en arrêtant aux auberges qui se rencontrent sur leur route. De même, si l'on charroye du foin ou de la paille à plus de cinq lieues, c'est autant de tems perdu pour le cultivateur ; au contraire en amenant une vache ou un bœuf gras, des cochons ou d'autres animaux au marché, cela lui est plus profitable, parce qu'il perd moins de tems à les vendre, et conséquemment il est exposé à moins de dépense ; en outre il y a d'autres espèces de produits sur une terre, tels que navets et petites patates, etc., et qui ne sont d'aucun usage au cultivateur à moins qu'il n'ait des animaux. Un semblable prêt le mettrait en état de surmonter toutes ces difficultés, d'autant plus que les étrangers sont en général dénués de moyens. Dans le mois d'Octobre une personne qui a beaucoup de fourrages, et qui a un peu d'argent, peut venir au marché de Québec, et peut acheter une bonne vache pour dix ou douze piastres, et au printemps peut revendre la même vache depuis £8 jusqu'à £10, ce qui laisse au fermier l'engrais pour améliorer sa terre, et un profit clair pour ses peines ; et s'il n'avait pas ces moyens, la plus grande partie de ce produit pourrait ou serait perdu pour lui. C'est la même chose rapport au gros bétail : on peut acheter une paire de bœufs l'automne depuis £6 jusqu'à £8, et s'ils sont bien engraisés, on peut les vendre au printemps depuis £20 à £25.

Elijab Heney, de Valcartier, cultivateur, ayant comparu a dit :—

Je viens du Connecticut, et je suis dans ce pays depuis 30 ans. Je suis établi à Valcartier depuis 12 ans, et je suis le premier qui a pris des terres dans cet établissement. J'empruntai £100, et avec cela je me suis établi. J'obtins deux lots en concession, et Mr. Stuart et Mr. Neilson m'avancèrent de l'argent jusqu'au montant de leur valeur ; j'ai ensuite vendu ces lots pour rembourser l'argent que j'avais emprunté.

Combien de nouvelles terres avez-vous ouvertes ?—Si j'avais quelques minutes de réflexion, je le pourrais dire. J'ai ouvert cinq nouvelles terres à Valcartier. Sur la Rivière Saint-François j'en ai ouvert quatre. Dans les Etats-Unis, j'en ai ouverte une à Utica, Wethersfield, et une dans Windsor. J'ai maintenant 60 ans, et je crois qu'il est grand tems de fermer les livres et d'arrêter.

Pourquoi avez-vous si souvent changé de terres ?—A l'âge de 24 ans, le maître qui m'avait élevé me fit présent de 100 piastres ; avec cette somme j'achetai 50 arpens de terre. Je m'y établis avec ma femme, et je fis 40 arpens de terre neuve ; j'y demeurai deux ans et demi, et je la revendis pour 1000 piastres. J'allai à Utica, et j'achetai 366 arpens de terre pour 1000 piastres et quarante écus ; mais je fis cette acquisition d'un individu qui n'y avait aucun droit, et ils me citèrent en cour, et me dépossédèrent ; de sorte que je perdis mon argent, terre et tout. Alors je vins en Canada. J'achetai 200 arpens du Docteur Longmore pour 600 piastres, payable en 6 ans, sans intérêt. J'ai payé cette ferme il y a treize ans. J'y ai fait 60 arpens de terre neuve, et m'y suis bâti une maison et une grange ; je l'ai laissée il y a 12 ans, et j'ai été à Valcartier. J'ai depuis donné cette ferme à mes trois garçons. J'ai gagné par la vente de ma première terre à Valcartier

Appendice
(P.P.)

cartier, 300 piaftres. J'ai obtenu ensuite un lot de terre des Commissaires des Biens des Jésuites. Sur cette dernière terre j'ai abattu 20 arpens, et j'en ai nettoyé 16, et je l'ai ensuite vendue à un nommé Beattie pour £45. Il y a cinq ans, j'ai acheté une ferme de Mr. Stuart, sur laquelle j'ai bâti une maison et une grange; j'ai maintenant 56 arpens de terre en culture.

Est-ce que les émigrés pauvres ne pourraient pas semer plus facilement en se contentant de couper le petits bois, ou en abattant et débitant le gros bois sans nettoyer le terrain entièrement?—Le meilleur moyen d'obtenir du profit est d'abattre et de nettoyer le terrain tout-à-fait; la manière imparfaite de faire la terre neuve dont il est fait mention dans cette question, convient mieux dans un pays chaud, que dans un pays froid comme celui-ci; vous ne pouvez pas vous attendre à une récolte à moins que le soleil ne porte à plein. Si on ne fait qu'écorcer, il faut nettoyer tous les ans, et la terre n'est jamais nette, parce que les arbres tombent à tout moment. Un demi arpent de terre bien nettoyée vaut mieux que deux arpens fait à la hâte.

Faites-vous de la potasse à Valcartier?—Il n'y a que proche de la rivière où l'on pourrait faire de la potasse, parce que la terre est trop légère ailleurs.

On a donc raison de dire quelques fois que la première récolte défraye la dépense du défrichement?—C'est là l'opinion générale, et j'ai moi-même été plus que payé par la première récolte. L'année dernière j'ai défriché 15½ arpens de terre: sur cela j'ai eu 128 minots de patates, 200 minots de navets, et j'avais de l'avoine verte sur le reste. J'ai onze bêtes à cornes, je les ai hiverné sur cette avoine, et ils sont en aussi bon état que l'on en peut trouver dans le canton.

Comment doit s'y prendre un pauvre homme pour ouvrir une nouvelle terre?—Il faut qu'il travaille la moitié du tems pour se procurer sa nourriture, et le reste du tems pour lui même. Lorsque je commençai à Wethersfield je travaillais à la charpente et à bucher, et je gagnais une piaftre par jour; lorsque j'avais amassé un peu d'argent, je travaillais pour moi même. Depuis que j'ai été à Valcartier, l'ouvrage que j'ai eu, a été principalement de l'ouvrage à l'entreprise.

Connaissez-vous quelque émigré pauvre, demeurant proche de vous, qui a pris des terres en bois de bout, et qui était sans moyens, et expliquez de quelle manière il s'y est pris, d'après ce que vous en connaissez?—Je connais des individus dans l'endroit qui, il y a quatre ans, n'avait rien au monde, et qui ont maintenant des vaches, des patates et du beurre qu'ils apportent au marché de Québec. Ils ont aussi acquittés leurs terres, mais ils les avaient eues à bas prix, l'un a payé £15, et l'autre £12.

Si quelque émigré pauvre obtenait des terres dans la distance de deux milles de votre demeure, pourriez-vous l'employer à tems perdu, entre l'époque où il ensemence sa terre, et le tems de la récolte, et quels gages pourriez-vous lui donner à part de sa nourriture?—Je préférerais l'employer pendant toute l'année à £13 par année; si c'était un bon homme de travail.

Qu'elle est la plus petite somme avec laquelle un émigré peut s'établir sur une nouvelle terre?—Un homme capable devrait être en état de pouvoir se vêtir et se nourrir pour toute l'année au moyen de six mois de travail; si un homme n'était pas en état de faire cela un pays nouveau ne pourrait jamais s'établir.

Si le public faisait une avance de deniers aux nouveaux émigrés, croyez-vous que cela serait avantageux?—Si la bourse était ouverte, cela offrirait trop d'indulgence à l'émigré; sans cela ils travailleraient pour vivre; mais s'ils pouvaient se reposer quand à cet objet, ils ne travailleraient plus. J'ai fait métier de m'endetter par fois, mais je trouve que cela n'est pas fort avantageux: le tems s'écoule trop vite lorsque l'on a des intérêts à payer; cela ressemble à la chenille qui dévore toute la substance.

Que penseriez-vous d'un projet au moyen duquel une compagnie ferait des avances à des émigrés qui seraient établis, en par eux payant l'intérêt par les produits qu'ils livreraient à l'Agent de la Compagnie, et que cette dernière exporterait pour être vendus à commission?—J'y ai réfléchi murement afin de pouvoir y donner une réponse juste: cela ferait du bien à quelques-uns, à d'autres cela ne ferait pas le cas; parce qu'il s'en trouverait qui pro-

fiteraient de l'occasion, et qui prendraient les deniers sans payer ni les intérêts ni le principal: rapport aux honnêtes gens, cela ferait du bien au pays, mais il y a tant d'aventuriers que la Compagnie pourrait bien y perdre.

Richard Ward, de Valcartier, cultivateur, a comparu et a dit:—

Je viens du Comté de Wexford, en Irlande, et je suis arrivé dans ce pays en 1816. J'y amenai ma femme et deux enfans. Mon passage me couta £15, J'avais apporté un peu d'argent, et je travaillai à Québec pendant une année avant d'aller à Valcartier sur une terre appartenant à Mr. Fletcher. Mr. Fletcher me promit moitié de cette terre à condition que je continuerais à payer les rentes, et que j'en ferais le défrichement. J'en ai défriché 30 arpens. Je pris une terre à Valcartier de Mr. Campbell, dont soixante et quinze arpens étaient défrichés, à raison de douze louis par année. Lorsque j'allai d'abord à Valcartier, je vivais au moyen de mon travail: il se trouvait alors plusieurs petites entreprises à faire dans le canton. Lorsque j'allai dans le bois pour la première fois je travaillais pour mes voisins à tems perdu: on me donnait trois chelins et dix-huit sous par jour pour mon travail. J'aurais pu employer un émigré pauvre à tems perdu en lui donnant trente sous par jour, sa nourriture à part. J'aurais pu l'employer durant le premier hiver, après son arrivée, à dix chelins par mois. J'en connais plusieurs qui ont pris des terres en bois de bout, et qui n'avaient aucun moyens; ils travaillaient pour les autres et pour eux-mêmes, et de cette manière ils se sont soutenus.

R. Ward.

Patrick Scully, du Lac Beauport, cultivateur, ayant comparu, a dit:—

P. Scully.

Je suis du Comté de la Reine, en Irlande, et je suis résident dans ce pays depuis dix ans. J'ai une femme et sept enfans; trois desquels demeurent avec moi; mon passage a couté £3 10s. par tête. Nos provisions pendant le passage pour chaque personne, était comme suit: 1 quintal de farine d'avoine, un demi quintal de farine, environ 140 livres de patates et 25 livres de lard fumé. J'arrivai à Québec le 17 Mai, et je me mis à travailler sur le Cap à un écu par jour. Je travaillai là pendant près de trois ans. J'avais à moi environ £25 ou £26; l'un de mes garçons travaillait sur le Cap avec moi, les autres se placèrent en service. Durant ce tems je ramassai encore £25 ou £26, fruit de mes épargnes; ce qui me faisait en tout environ £50. Avant de laisser les travaux du Cap, je pris une terre en bois debout de Mr. Duchesnay, à Beauport, et je commençai à y travailler vers le 7 Mai, et entre cette époque et le 17 Juin j'avais nettoyé et ensemencé quatre arpens.

Par quels moyens, avec quel aide, et aux dépens de qui avez-vous fait ce défrichement?—C'est par mon travail et celui de mon garçon que j'ai effectué ce défrichement. Je ne puis pas dire ce que valait ce travail. J'ai maintenant 30 arpens de défrichés. J'ai depuis ce tems défriché 25 arpens sur une autre terre.

Par quels moyens un pauvre homme peut-il s'établir sur une nouvelle terre?—Par l'industrie; en s'y appliquant sans relâche, et en travaillant matin et se couchant tard. Il ne peut pas travailler sans avoir des provisions, et il faut qu'il se les procure, avant qu'il s'établisse sur sa terre.

Comment doit-il faire pour se les procurer?—S'il ne peut pas trouver de l'argent à emprunter d'un ami, il faut qu'il le gagne; et il ne peut pas gagner cet argent, et travailler sur sa terre en même tems.

Combien de tems lui faut-il pour gagner cet argent; et où, et par quels moyens faut-il qu'il le gagne?—Il faut qu'il aille en service, ou qu'il travaille tous les jours, jusqu'à ce qu'il en ait suffisamment. La moindre somme avec laquelle un émigré peut s'établir sur une nouvelle terre est de £18 à £20.

Si vous vous trouviez dans le cas d'aller sur une terre, et que vous auriez ces £18 ou £20 dans votre bourse, à quoi les emploieriez-vous?—En patates, farine, lard et quelques pois.

Est-ce que le lard n'est pas un objet qui coute beaucoup, et pour quoi ne parlez-vous pas de poisson salé. Je crois que la soupe au pois est meilleur que le poisson salé, qui fait boire trop d'eau. Dans une famille de 4 ou 5, une livre ou une livre et demie suffit pour

pour une soupe. J'ai un garçon qui a 25 ans, un de 18, et mon plus jeune a 14. J'ai trois filles, elles sont toutes mariées et établies.

A quelle époque avez-vous été sur votre terre, et quel est le meilleur tems pour aller sur une terre ?—Je me suis rendu sur ma terre le 1er ou le 2 de Mars, il y a de cela huit ans: du 1er Mars ou dernier Juin, c'est à mon avis le meilleur tems pour aller sur une terre à bois.

Connaissez-vous plusieurs personnes, et combien qui sont venues dans ce pays avec rien au monde, et qui sont maintenant assez bien sur leurs terres ?—J'en connais plusieurs, et cinq d'entre eux sont dans notre établissement.

Comment s'y sont-ils pris ?—Ils se sont procurés d'un de leurs

voisins quelques minots de patates et une poche de farine, et maintenant par leur industrie ils sont assez bien.

Y a-t-il quelques-uns de vos émigrés qui ont vendus leurs terres après les avoir améliorés, et qui en ont établies de nouvelles; gagnent-ils par ce moyen, et comment ?—Oui, il s'en trouve. Je crois qu'ils gagnent par ce moyen, car ils vendent la première terre, et avec le prix ils en achètent une autre, qu'ils garnissent beaucoup mieux en bestiaux.

S'en trouve-t-il quelques-uns qui sont dans l'habitude de travailler en ville, et de passer l'hiver au Lac Beauport ?—S'il n'y a rien à faire ils viennent travailler, mais non pas avant que leur récolte soit finie; par ce moyen ils épargnent le loyer d'une maison, et se nourrissent pendant une grande partie de l'année.

Appendice
(P.P.)

Appendix (Q.) 20th Decr.

To the Honorable the Knights, Citizens and Burgesses of the Province of Lower Canada, in Provincial Parliament assembled.

THE Agricultural Society for the District of Montreal have again the honor of reporting to your Honorable House :

The grant by the Legislature in 1826, which received the Royal Assent, and was promulgated in August 1827, has been the means of calling forth the activity and industry of several of the most populous Counties in the District, to form Auxiliary Societies for the promotion of their agriculture. And that by the means afforded for general purposes, the District Society have been enabled to continue the general competitions, concentrated in Montreal.

To the grants hitherto so liberally bestowed, your Society can alone attribute the agricultural improvements which have taken place in this District, more particularly in the breed of horses, cattle and sheep.

The encouragement held out by this Society for retaining the first breed of horses in America, and by the importation of a very superior order of cattle into the District, now shews its efficiency ; the objects sought for are daily attaining. The Society would recommend a renewal of those importations occasionally to be made so as to establish in the country a thorough breed.

The suggestions which this Society in its former Reports has made, this Society sees no cause to recall, but on the contrary, from additional experience, begs leave to solicit a reference to those Reports by your Honorable House.

The Society for the District is confident that should your Honorable House see fit to grant a further sum upon the principal of the grant of 1826, it will afford an encouragement to the remaining Counties to follow the examples shown by those where auxiliaries have been established ; will enable those auxiliaries to follow up the system adopted by them for the encouragement of agricultural science, so much in arrear in this Province, and must thereby promote competition and industry amongst that particular and most useful class of the community.

Annexed the Society presents a Statement of its funds.

All which is most respectfully submitted. Montreal 5th Dec. 1828.

By order of the Committee, H. GRIFFIN, Sec. and Treas.

Statement of the appropriation of the Monies received for "General purposes" from the grant in 1826 to the Agricultural Society of this District.

Table with columns for date (1828), description (Jany. To paid premium on fat hogs, District Show; Mar. 13. To do. do. at District Cattle Show, viz. on draught Stallions; D54, saddle do. D48; on Bulls 36, fat oxen 24; on fat Sheep), and amount (£6 5 0; D174; 43 10 0; Carried over, £49 15 0).

Aux Honrables Chevaliers, Citoyens et Bourgeois de la Province du Bas-Canada, assemblés en Parlement Provincial.

LA Société d'Agriculture du District de Montréal a de nouveau l'honneur de faire rapport à votre Honorable Chambre :

Que le don de la Législature en 1826, après avoir reçu la Sanction Royale, et de suite sa promulgation en Août 1827, a procuré à l'activité et à l'industrie de plusieurs des Comtés les plus peuplés du District, l'avantage de former des Sociétés Auxiliaires pour l'avancement de leur Agriculture ; et au moyen des aides qui ont été accordés, la Société du District s'est trouvée en état de continuer les compétitions générales, et qui sont particulièrement propres au District de Montréal.

C'est au moyen de ces dons accordés jusqu'ici d'une manière aussi libérale, que votre société peut seul attribuer les améliorations qui ont eu lieu dans l'Agriculture de ce District, et plus particulièrement dans l'amélioration des races des Chevaux, du Bétail et des Moutons.

L'encouragement que la Société a offert, afin de conserver la meilleure race de Chevaux en Amérique, et l'importation qui a eu lieu dans le District d'un ordre supérieur de Bestiaux, démontre maintenant qu'elle en est l'efficacité, et que l'on parvient à atteindre de jour en jour les objets que l'on avait en vue. La Société recommande donc que l'on renouvelle les importations de tems en tems, de manière à établir dans ce pays une race parfaite.

La Société ne voit aucun motif de retracter les suggestions qu'elle a émises, et qui se trouve consigné dans ses premiers rapports ; au contraire, par un surcroît d'expérience, elle prend la liberté de solliciter votre Honorable Chambre, de vouloir bien avoir référence à ces rapports.

La Société pour le District est persuadée que dans le cas où votre Honorable Chambre trouverait convenable d'accorder une autre somme, d'après le principe du don de 1826 ; cela procurerait un encouragement aux autres Comtés, en les engageant de suivre les exemples de ceux des Comtés où il a été établi des Sociétés Auxiliaires ; que cela mettra ces Sociétés Auxiliaires en état de suivre le système qu'elle a adopté pour l'encouragement de la Science de l'Agriculture, qui est demeurée bien en arrière en cette Province ; et que par ce moyen cela augmentera l'émulation et l'activité parmi cette classe particulière, et qui est une des plus utiles à la société.

La Société soumet un état de ses fonds, lequel est ci-annexé.

Le tout soumis très-humblement.

Montréal, 5 Décembre 1828.

Par ordre du Comité. H. GRIFFIN, Sec. et Trés.

Etat de l'emploi des deniers reçus pour des objets généraux à même le don de 1826, par la Société d'Agriculture de ce District.

Table with columns for date (1825), description (Janv. Payé les prix pour des Cochons engraisés à l'exhibition de district; 13 Mars. Do. Do. Do. à l'exhibition du district pour les animaux, savoir: Pour des Etalons de trait, 54P. chevaux de selle 43P. 102; Pour les tauraux 36P.; Bœufs engraisés 24P. 60; Pour des moutons engraisés 12), and amount (£6 5 0; 174; 43 10 0; Piastres 174; 43 10 0; A Porté ci-contre, £49 15 0).

H. GRIFFIN, Trésorier.

To the Montreal District Agricultural Society : The President and Committee of the County of York Agricultural Society submit the following Report of their proceedings during the current year, to be laid before the Honorable the House of Assembly :—

THEY beg leave to intimate that this Society is in a most flourishing state, and bids fair to be productive of the most beneficial effects to the agriculture of the country. It now consists of about sixty members, chiefly practical farmers, besides those nominated by law, and other honorary members appointed by the Society in the neighbouring Parishes ; some Canadians have joined the Society and some have competed for premiums and obtained them, but more attended at our Exhibition as spectators than as competitors, deterred apparently by the idea that they had no chance of succeeding in a competition with the English, but this Society has offered them such encouragement, and have used such efforts to convince them of the true disposi-

A la Société d'Agriculture du District de Montréal : Le Président et le Comité de la Société Agricole du Comté de York, soumettent le Rapport suivant de leurs procédés pendant l'année courante, pour être mis devant l'Honorable Chambre d'Assemblée.

ILS prennent la liberté de représenter, que cette Société est dans l'état le plus florissant, et qu'elle annonce un résultat dont les effets seront des plus salutaires pour l'agriculture du Pays. Elle se trouve composée maintenant d'environ soixante membres ; principalement de Fermiers pratiques, sans compter ceux que la Loi a désignés, et d'autres membres honoraires nommés par la Société dans les Paroisses voisines. Quelques Canadiens se sont joints à la Société ; plusieurs d'entr'eux sont devenus Compétiteurs pour des Prix et les ont obtenus ; mais le plus grand nombre qui a assisté à nos Exhibitions s'y sont plutôt trouvés comme spectateurs que comme Compétiteurs, retenus, en apparence, par l'idée qu'ils ne pourraient pas avec succès en-

20th Decr.

tion of the Society that they begin to entertain a spirit of emulation, and will in a short time be as numerous and as active at our Shows as the most experienced English farmers, and thus the principal object of the establishment of Agricultural Societies in the Province be attained. They beg leave to intimate also that the present mode of placing monies in the hands of Auxiliary Societies for distribution, is by far the most popular plan yet adopted, and gives most general satisfaction. The stimulus which the distribution of premiums has created in every part of the county is very apparent by the unprecedented preparations which have been made this fall by the farmers to enter into a very extensive and spirited competition for the premiums that are expected to be offered the ensuing season, and it would certainly disappoint many a zealous agriculturist and blast the rising spirit of emulation within the county, were the monies granted heretofore, to be withheld for the future; but the Committee of this Society place implicit confidence in the judgment and liberality of the Legislature, and are therefore led to believe that the hopes they entertain of being enabled to continue the great work of improvement, are not unfounded; our numerous attended exhibition, the well contested competition for the premiums that were offered, and the very favourable impression which the distribution of them created in the minds of the competitors and spectators, convince us that every branch of farming economy has received an impulse which in a short time by proper measures will bring the agriculture of the country to great perfection.

We have distributed a large number of our Rules in French and English throughout the county, a copy of which we annex.

The following is a Statement of the application of the public funds received from your Society in behalf of the Legislature:

PREMIUMS awarded and paid at the Cattle Show on the 11th September 1828.

Capt. D. C. McLean received 1st premium for English Stud,		£3	0	0
Orlando Powers, 2d ditto ditto ditto,		1	0	0
Capt. John Clarke, 1st ditto Canadian do.		3	0	0
Louis Ludrier, 2d ditto ditto ditto		1	10	0
Wm. Powers, 1st ditto English Mare,		1	10	0

John Hutchins, 2d ditto ditto		0	10	0
Carried over,		£27	5	0

Appendice
(Q.)
20 Dec.

trer en concurrence avec les Anglais; mais l'encouragement que la Société leur a offert, et les efforts qu'elle a fait pour les convaincre des véritables intentions de la Société ont été tels, qu'ils commencent maintenant, à faire voir un esprit d'émulation, et l'on peut espérer que dans peu de tems, ils seront en aussi grand nombre, et tout aussi actifs à nos Exhibitions que le sont nos Fermiers Anglais les plus expérimentés. et c'est alors, l'on aura atteint l'objet principal de l'établissement des Sociétés Agricoles en cette Province. Ils prennent aussi la liberté de représenter que le mode actuel de placer les deniers entre les mains des Sociétés Auxiliaires pour en faire la distribution, est le plan populaire le plus préférable qui a été adopté jusqu'à présent; que cela cause une satisfaction générale. L'aiguillon, que la distribution des Prix a crée dans toutes les parties du Comté est très apparent, ainsi que le font voir les préparations sans exemple que les Fermiers ont faites cette Automne, dans la vue d'entrer en concurrence sur toutes espèces d'objets, avec la plus grande ardeur, pour les Prix qu'ils s'attendent voir offrir dans la saison prochaine; et plus d'un Agriculteur zélé serait trompé, et l'esprit naissant d'émulation dans le Comté anéanti, si les deniers qui ont été ci-devant accordés, étaient refusés à l'avenir; mais le Comité de cette Société repose une entière confiance dans la sagesse et la libéralité de la Législature, et il est conséquemment porté à croire, que les espérances qu'il a, d'être en état de continuer le grand œuvre de l'amélioration, ne sont pas mal fondées. Les nombreuses réunions lors de nos Exhibitions, l'ardeur de la concurrence pour les prix qui étaient offerts, et l'impression très favorable que faisait la distribution de ces prix sur les esprits des Compétiteurs et des Spectateurs, nous a convaincus que toutes les branches de l'économie agricole ont reçues une impulsion qui, avec les moyens convenables, portera en peu de tems l'agriculture à une grande perfection.

Nous avons distribué par tout le Comté un grand nombre de nos Réglemens en Français et en Anglais; Copies desquels sont annexés à ce rapport.

Ce qui suit est un état de l'emploi des Fonds publics reçus de votre Société de la part de la Législature:—

PRIX qui ont été accordés et payés à l'Exhibition des Animaux le 11 Septembre 1829.

RULES and REGULATIONS of the *County of York Agricultural Society.*

At a General Meeting of the Inhabitants of the County of York, held in St. Andrews on the 2d February 1826, Mr. John McMartin being called to the Chair, the purpose of the meeting was explained, and the following Resolutions were unanimously adopted, viz:—

Resolved, 1st. That the persons present form themselves into a Society, to be called the "County of York Agricultural Society," the object of which will be to improve the mode of Agriculture in the said County by every means in their power.

Resolved, 2d. That the officers of this Society shall be a President, two Vice-Presidents, a Treasurer and Secretary; and that a Committee of ten shall manage the business; all which officers shall be elected annually.

Resolved, 3d. That James Brown, Esquire, be President; Mr. John McMartin and Thomas Barron, Esquire, Vice-Presidents.

Edward Jones and Duncan McNaughton; Henry Chapman; Wm. Tennison; Jacob Schagel; Stephen Burwash; Thomas Cooke; John McEwett; Doctor A. Rice, were elected to form the Committee.

Mr. Guy Richards, Treasurer.
Mr. James Murray, Secretary.

Resolved, 4th. That the Committee draw up Rules for the better regulation of this Society.

Resolved, 5th. That those present immediately enter their names as members of this Society;—which Resolution was unanimously complied with.

(Signed) JAMES MURRAY, Secy.

On the 25th of March 1826, pursuant to public notice, a General Meeting took place, when the following regulations were unanimously adopted:—

1st. The object of this Society is to promote by its efforts and example, the science of Agriculture throughout the County, to give premiums in money or pieces of plate, agricultural publications or implements to the practical farmers who shall excel in the art of ploughing, cropping, raising stock of all kinds, in the dairy, planting of fruit trees, and the general improvement of farms, and home manufactures.

2d. There shall be a general meeting annually, on the 20th day of January, or day following, if it should fall on a Sunday, for the election of a President, two Vice Presidents, a Secretary and Treasurer, and ten

REGLES et REGLEMENS de la *Société Agricole du Comté d'York.*

A une assemblée générale des habitans du Comté d'York, tenue à St. André, le 2 Février, 1826, Mr. John McMartin ayant été prié d'occuper la Chair, on expliqua le but de l'assemblée, et l'on adopta unanimement les Résolutions suivantes, savoir :

Résolu, 1er.—Que les personnes présentes se forment en une Société qui aura pour nom "Société Agricole du Comté d'York," et dont l'objet sera d'améliorer la manière de cultiver le sol dans le dit Comté, en employant pour cela tous les moyens en son pouvoir.

Résolu, 2e.—Que cette Société aura pour officiers un Président, deux Vice Présidens, un Trésorier et un Secrétaire, que toutes affaires de la Société seront conduites par un Comité de dix de ses membres, et que tous les Officiers seront élus annuellement.

Résolu, 3e.—Que James Brown, Ecuyer, soit Président, et que Mr. John McMartin et Thomas Barron, Ecuyer, soient Vice Présidens.

Edward James et Duncan McNaughton, Henry Chapman, Wm. Tennison, Jacob Schagel, Stephen Burwash, Thomas Cooke, John McEwett, et le Docteur A. Rice, furent élus membres constitutifs du dit Comité.

Mr. Guy Richards, Trésorier,
Mr. James Murray, Secrétaire,

Résolu, 4e.—Que le Comité prépare des Réglémens pour le meilleur gouvernement de cette Société.

Résolu 5e.—Que les personnes présentes inscrivent immédiatement leur noms comme membres de cette Société. Cette Résolution fut aussitôt exécutée.

(Signé.) JAMES MURRAY, Sec.

Le 25 Mars, 1826, suivant avis public, il y eut une Assemblée Générale de la Société, à laquelle les réglémens suivans furent adoptés unanimement.

1er.—L'objet de cette Société, est de contribuer par ses efforts et par son exemple aux progrès de l'art de l'agriculture dans tout le Comté, et de donner à cet effet des prix en argent ou des pièces de vaisselle, des instrumens d'agriculture, ou des ouvrages qui traiteront de cet art, aux Cultivateurs de profession qui excellent dans l'art du labourage, celui de faire la Récolte, celui de cultiver toute espèce de Bétail, celui de la Laiterie, dans le plan des arbres fruitiers, et dans l'amélioration générale des fermes et des Manufactures Domestiques.

2e.—Il y aura tous les ans au vingtième jour de Janvier ou le jour suivant, si le premier se trouve un Dimanche, une assemblée générale pour l'élection d'un Président, de deux Vice-Présidens, d'un Secrétaire,

Appendice.
(Q.)
20 Dec.

Appendix (Q.)
20th Dec. Members for a Committee to superintend the general interests of the Society, and six of these with the President, or one of the Vice-Presidents, will be sufficient to proceed to business, call extraordinary meetings, &c.

3d. The Committee shall remain in office for one year, and one half of those comprising it, may be re-elected, but may retire after serving one year, then the Committee may elect others in their stead.

4th. The said Committee shall meet quarterly or oftener if required by the President.

5th. Any practical farmer or gentleman in the County, may become a member of the Society by paying the sum of five shillings annually. No expulsion can take place unless at a general meeting, when two-thirds of those present may expel any member for misconduct towards the Society.

6th. No person unless a practical Farmer within the County can partake of the benefit of premiums.

7th. All decisions to be made by a majority of members present, and the President to have the casting vote.

8th. The rules of competition to be similar to those adopted by the Highland Society of Scotland.

9th. The judges shall be named by the Committee from among the members, who shall determine in all cases.

10th. At the annual general meeting of this Society in January, the proceedings of the year shall be read over, a statement of the funds exhibited, the list of subscribers read over, and the annual subscription received, previous to the election of officers.

11th. No member entitled to vote on any subject, till the preceding article is complied with.

12th. That the general meeting in January shall serve for the first quarterly meeting. The second quarterly meeting will take place on the second Tuesday of March. The third on the second Tuesday of June. The fourth on the second Tuesday of September.

At a general meeting of the Inhabitants of the County of York, held on the 21st January 1828, the following additional Resolution was agreed to:

Resolved, That in order to extend the benefits to be derived from the Association, ten new members from the neighbouring parishes be added to the number of the Committee, and that twenty do constitute in future the number of the Committee, exclusive of the President, two Vice-Presidents, the Secretary and Treasurer.

JAMES BROWN, Junr. Sec'y.

d'un Trésorier, et d'un Comité Dix de membres pour surveiller les intérêts généraux de la Société, et Six de ces membres avec le Président, ou l'un des Vice-Présidents seront compétens à agir, à convoquer des Assemblées extraordinaires, &c.

3e.—Le Comité restera en office durant une année, et moitié des membres, dont il sera composé pourront être restés une année en fonction, et dans ce cas le Comité pourra élire de nouveaux membres pour les remplacer.

4e.—Ce Comité s'assemblera tous les trois mois ou plus souvent s'il est requis par le Président.

5e.—Tous Cultivateur de profession, ainsi que tous bourgeois du Comté aura droit de devenir membre de la Société, en payant annuellement la somme de cinq shelings. Nul membre ne sera exclus qu'à une assemblée générale; et à telle assemblée deux tiers des membres présens auront le pouvoir d'exclure aucun membre pour mauvaise conduite envers la Société.

6.—Nul autre que des Cultivateurs de profession, résidents dans le Comté, ne pourra prétendre aux prix qui seront accordés par la dite Société.

7e.—La décision de toute question se fera par la majorité des membres présens, et le président aura une voix prépondérante.

8e.—Les règles de compétition seront semblables à celles qui ont été adoptées par la Société des montagnards d'Ecosse.

9e.—Les juges seront nommés d'entre les membres par le Comité, et seront compétens à juger dans tous les cas.

10e.—A l'assemblée générale de cette Société qui aura lieu chaque année en Janvier, les procédés de l'année seront lus; on produira l'état des fonds, on lira la Liste des Souscripteurs et l'on recevra la souscription annuelle avant de procéder à l'élection des Officiers.

11e.—Nul membre n'aura droit de voter sur aucun sujet jusqu'à ce que l'on se soit conformé à l'article précédente.

12e.—L'assemblée générale qui aura lieu en Janvier, servira pour la première assemblée de quartier; la seconde assemblée de quartier aura lieu le second Mardi de Mars; la troisième le second Mardi de Juin, et la quatrième le second Mardi de Septembre.

A une Assemblée Générale des habitans du Comté d'York tenu le 21 Janvier, 1828, la résolution additionnelle qui suit à été adoptée.

Résolu.—Qu'afin d'étendre les avantages qui doivent résulter de cette association, il soit ajouté au Comité Dix nouveaux membres, qui seront des paroissés voisines, et qu'à l'avenir le Comité soit composé de vingt membres outre le Président, deux Vice Présidents, le Secrétaire et le Trésorier.

JAMES BROWN, Jun. Secrétaire.

HOUSE OF ASSEMBLY.

COMMITTEE ROOM.

Saturday, 27th December, 1828.

In Committee on the above order of reference.

PRESENT :—Messrs. Quesnel, Neilson, and Viger.

Mr. Neilson called to the Chair.

Read the Order of Reference.

Read the Petition.

Ordered, That William Finlay, Esquire, and William Walker, Esquire, do appear before the Committee on Tuesday next, at ten o'clock in the forenoon.

Adjourned till Tuesday next.

Tuesday, 30th December, 1828.

PRESENT :—Messrs. Leslie, Neilson and Cu villier.

Mr. Neilson in the Chair.

William Finlay, Esquire, called in, and being interrogated, stated :—

He is a Merchant in *Quebec*, and Chairman of the Board of Trade, and one of the Petitioners. There was a Gentleman sent to England in the year one thousand eight hundred and twenty seven, as an Agent for the Trade, by the Merchants of *Quebec* and *Montreal* : he sailed from *New York* in the sixteenth of January ship, arrived in England early in February of that year : he left London about the month of August, shortly after the close of the Session of Parliament : he called the attention of Ministers to the disadvantages which the wheat and grain of this country were placed in by the temporary Act allowing its importation on a certain fixed duty. There was an alteration of this temporary Act during the Session of one thousand eight hundred and twenty-seven. He thinks it was more favorable with regard to flour and meal only. At the Session of one thousand eight hundred and twenty eight, the law was made permanent on a scale of Duties, which he thinks more favorable than heretofore, chiefly on account of the permanency of the Law. At the Session of one thousand eight hundred and twenty-seven, there was an alteration of the Law regulating the admission of Lumber from the United States into Canada for exportation, which is generally thought more favorable than formerly. Salted Beef and Pork were also admitted at that Session, on paying a duty of twelve per cent., which was formerly prohibited.

Ashes

CHAMBRE D'ASSEMBLEE,

CHAMBRE DE COMITE.

Samedi, 27 Décembre 1828.

En Comité sur l'Ordre de Référence ci-dessus.

Présens : Messrs. Quesnel, Neilson et Viger.

Mr. Neilson appelé au Fauteuil.

Lu l'Ordre de Référence.

Lu la Pétition.

Ordonné, Que *William Finlay*, Ecuyer, et *William Walker*, Ecr. comparaissent devant ce Comité, Mardi prochain à dix heures du matin.

Ajourné à Mardi prochain.

Mardi, 30 Décembre 1828.

Présens : Messrs. Leslie, Neilson et Cu villier.

Mr. Neilson au Fauteuil.

William Finlay, Ecuyer, a été appelé et examiné.

Il est marchand à Québec, et Président du Bureau de Commerce, et un des Pétitionnaires. En mil huit cent vingt-sept, les marchands de Québec et de Montréal envoyèrent un Monsieur en Angleterre comme Agent pour le Commerce : il fit voile de New-York dans le paquebot du seize Janvier et arriva en Angleterre au commencement du mois de Février de cette même année. Il laissa Londres vers la mi-Août, peu de tems après la fin de la Session du Parlement. Il appela l'attention des Ministres sur les désavantages qu'éprouvaient le bled et les autres grains de ce pays, par l'Acte temporaire qui en permettait l'importation sous certains droits fixes. Il y eut un changement de fait à cet Acte temporaire dans la Session de mil huit cent vingt-sept. Il pense que cet Acte devint plus favorable quant à ce qui regarde seulement la farine de froment et les autres farines. Dans la Session de mil huit cent vingt-huit, on rendit la loi permanente, et d'après un tarif de droits qu'il croit plus favorable que ci-devant, principalement en raison de l'état permanent de la loi. Dans la Session de mil huit cent vingt-sept, il y eut un changement de la loi qui règle l'entrée des Bois qui viennent des Etats-Unis en Canada, pour en être exportés ; changement que l'on considère plus favorable que ci-devant. On permit aussi dans cette Session l'entrée du bœuf et lard salés en payant un droit de douze par cent ; ce qui auparavant était prohibé.

(R.R.)
9th Janr.

Aslies from the United States were also allowed to be entered into Great Britain as Canadian; any other alteration in that Session is of minor consideration. He has no proof that there was any change made in the intentions of the Home Government, in relation to the trade of Canada, subsequently to the arrival of the Agent in London. He has correspondence from the Agent which he will give in, and the Committee may have the perusal of the instructions. There was raised for the purposes of the Mission, a sum of upwards of one thousand pounds currency, at *Quebec* and *Montreal*, altogether amongst the Merchants. The expenses of the mission amounted to about eight hundred and fifty pounds,—eight hundred and sixteen of which were paid to the Agent. At *Quebec* there were about thirty subscribers who contributed about seven hundred pounds. At *Montreal* there was raised about three hundred and twelve pounds. The Agent has no further claim on the merchants. He has heard that the Agent brought with him an authority from Lord *Goderich*, for the Government to consent to a compensation from the Legislature. In that case the Agent understood that he would refund to the Merchants. The Petition of the Merchants now is to be refunded for their disbursements, which would be returned to each individual Subscriber. There was no Commercial Agent resident in London, immediately previous to Mr. *Felton's* appointment, in one thousand eight hundred and twenty seven. Mr. *Acheson* was at one time employed as Agent for the Merchants, in regard to the interests of the trade and the Province generally; he had no fixed salary; he sometimes received from one hundred to one hundred and fifty pounds from *Quebec*, and probably as much from *Montreal*; the money was paid by private contribution; he ceased to be Agent so far as *Quebec* is concerned, about the year one thousand eight hundred and seventeen, or one thousand eight hundred and eighteen. He is not aware that the Merchants have ever applied to be reimbursed for these payments. The Communications with Mr. *Acheson* were addressed to the Committee of Trade, and the Subscribers had access to them. He can assign no particular reason why application was not made to the Legislature for reimbursement of the advances to Mr. *Felton*, in the Session of one thousand eight hundred and twenty seven, probably they were uncertain whether the mission would be attended with any public advantage, and it is only on proof of public advantage that they think themselves authorized to prefer their claim.

Adjourned to the call of the Chair.

Wednesday, 7th January, 1829.

PRESENT :—Messrs. *Neilson*, *Leslie*, *Cuvillier* and *Quesnel*.

Mr. *Neilson* in the Chair.

William Finlay, Esquire, laid before your Committee the annexed correspondence referred to in his examination of the 30th ultimo.

(Copy.)

London, 12th March, 1827.

Sir,

Immediately on arriving in London on the 24th ult., I delivered my credentials at the Colonial Office, and was instantly placed in communication with the President of the Board of Trade; and I had the satisfaction to learn that an earlier arrival in this country would not have been attended with any advantage to the business of my mission. As the measures to be adopted for the regulation of the Foreign Corn Trade were under discussion, I applied myself immediately in making the necessary representations in the spirit of my instructions,

On permit pareillement l'entrée dans la Grande Bretagne des Potasses des Etats-Unis comme venant du Canada. Les autres changemens qui eurent lieu dans cette Session sont d'une importance mineure. Il n'a aucune preuve pour faire voir qu'il s'est opéré aucun changement dans les intentions du Gouvernement en Angleterre rapport au commerce du Canada subséquemment à l'arrivée de l'Agent à Londres. Il a en sa possession la correspondance de l'Agent qu'il produira, et le Comité peut en examiner les instructions. Pour défrayer les dépenses de cette Mission, à *Québec* et à *Montréal* on a formé une somme de plus de mille livres courant, et cela entièrement parmi les marchands. Les dépenses de la mission se sont élevées à environ huit cent cinquante louis. De cette somme huit cent seize louis ont été payés à l'Agent. A *Québec* il y a environ trente souscripteurs qui y ont contribué environ sept cents louis. A *Montréal* on a formé environ trois cent douze louis. L'Agent n'a aucune autre réclamation contre les marchands. Il a entendu dire que l'Agent avait apporté avec lui une autorité de Lord *Goderich* pour que le Gouvernement consentit à une compensation que pourrait faire la Législature. Dans ce cas l'Agent a compris qu'il ferait un remboursement aux marchands. La Pétition des marchands est maintenant à l'effet d'être remboursé de leurs avances, qui seraient remises à chaque souscripteur individuellement. Il n'y avait point d'Agent de Commerce résidant à Londres immédiatement avant la nomination de Mr. *Felton* en mil huit cent vingt-sept. Mr. *Acheson* fut une fois employé comme Agent pour les marchands relativement aux intérêts du commerce et de la Province en général: il n'avait aucun salaire fixe; il recevait quelquefois depuis cent à cent cinquante louis de *Québec*, et probablement autant de *Montréal*; l'argent était payé au moyen de souscriptions privées. Il a cessé d'être Agent, en autant que *Québec* y est intéressé, vers mil huit cent dix-sept ou mil huit cent dix-huit. Il n'a pas connaissance que les marchands aient jamais fait quelques démarches pour le remboursement de ces payemens. Les communications de Mr. *Acheson* étaient adressées au Bureau de Commerce et les souscripteurs y avait accès. Il ne peut assigner aucune raison particulière de ce que l'on ne s'est pas adressé à la Législature pour être remboursé des avances faites à Mr. *Felton* dans la Session de mil huit cent vingt-sept. Probablement que l'on était dans l'incertitude de savoir s'il résulterait quelque avantage public de cette mission, et que c'est sur la preuve de l'avantage public qui en est résulté qu'il se croient autorisés à faire leurs réclamations.

Le Comité s'ajourne à l'appel du Président.

MERCREDI, 7 Janvier 1829.

Présens : Messrs. *Neilson*, *Leslie*, *Cuvillier* et *Quesnel*.

Mr. *Neilson* au Fauteuil.

William Finlay, Ecuyer, met devant le Comité la correspondance ci-annexée, mentionnée dans son examen du 30 Décembre dernier.

(Copie.)

Londres, 12 Mars 1827.

Monsieur,

Immédiatement après mon arrivée à Londres, le 24 précédent, je remis mes Lettres de Crédit au Bureau Colonial, et j'entrai tout de suite en correspondance avec le Président du Bureau de Commerce; et j'eus la satisfaction d'apprendre que quand même je serais arrivé plutôt dans ce pays, l'objet de ma mission n'en aurait retiré aucun avantage. Les mesures à adopter pour régler le commerce des céréales étrangères étant sous discussion, je m'appliquai sur le champ à faire les représentations nécessaires, dans l'esprit de mes instructions,

D

structions, pressing the unlimited introduction of flour and grain, rather than the adoption of a maximum for grain alone. To this preference I was directed by the consideration that the *supposed* interests of Upper Canada required the protection for their flour. The result of the deliberation of Ministers on this subject is matter of so great notoriety that I do not trouble you with the details at present, observing only that the measures proposed have passed the Committee of the Commons with some modifications of the duty on barley and oats; and that in the opinion of competent judges the interests of the Canadas are sufficiently protected. As soon as the urgency of this particular subject permitted, I waited on the various gentlemen composing the Committee in town, and a meeting of a small number of these gentlemen was held at Mr. Robert Gillespie's. There was some discussion proceeding from a difference of opinion on the question of unrestricted introduction of Foreign Produce into the Provinces for the purpose of export. The indisposition of the President of the Board of Trade had prevented me from ascertaining his sentiments on the application of the general principle prior to the meeting, in the absence of this information, therefore, the gentlemen present appeared to waive the decision of this point. The protracted illness of Mr. Huskisson, has deferred to an uncertain period the consideration of the general subjects interesting to us; the delay arising from this unfortunate accident appearing to me to threaten the suspension of an intercourse with the United States during the approaching season, I addressed a memorial to the Board of Trade stating this apprehension, and entreating an immediate decision on the subject of the obstruction at the Provincial Ports of Entry to the importation of commodities allowed to be *Warehoused*. This point thus simply stated, detached from all other questions, and being in itself the effect of mere technical omission in the Act of the sixth George Fourth, chapter one hundred and fourteen, was immediately decided on by Mr. H. and the necessary Parliamentary measures will be adopted for the removal of the impediment. In the mean time in consequence of my urgent request, directions have been issued through the Treasury to the Commissioners of the Customs to apprise their officers in Canada of the intention of His Majesty's Government on this subject, and I have suggested that a copy of a communication should be forwarded to Lord Dalhousie through the Colonial Office, and which I shall endeavour to have sent out by the New York Packet of the sixteenth. The object of this arrangement is to obviate any difficulty that might arise in the interval, that must necessarily intervene between the opening of the navigation and the promulgation of the Act of Parliament.

I cannot venture to give any opinion as to the decisions to which Ministers may come respecting the other subjects committed to my charge. Great efforts are making by the shipping interests of the out ports for protection. On the very important point of West India Commerce I cannot flatter the Committee with the most distant hope of obtaining any pledge or guarantee as to the permanence of the system that may be adopted; as far as I can ascertain the disposition of Ministers, it appears at present quite favorable to the continuance of the present state of things.

The direct effects of the Warehousing system, (without any modification of the two Acts of the sixth George Fourth chapter one hundred and fourteen, and seventh George Fourth chapter forty, further than the proposed amendment to escape the Frontier Ports of Entry,) will be to introduce every description of American produce to the Warehousing Ports in Canada; the term *Warehouse* it will be observed, is applied by the one hundred and fifteenth Section of the sixth George Fourth, chapter one hundred and seven, to "any shed, yard, timber, pond, or other place," in which goods can kept, so that

insistant sur l'introduction illimitée de la fleur et du grain, plutôt que sur l'adoption d'un *maximum* pour le grain seulement: Ce qui m'a déterminé en cela, c'a été la considération que les intérêts supposés du Haut Canada demandaient quelque protection pour sa fleur. Le résultat des délibérations des Ministres sur le sujet est une chose si bien connue, que je ne vous troublerai d'aucun détail à cet égard pour le moment; je me bornerai à observer que les mesures proposées ont été passées dans le Comité des Communes, avec quelques modifications dans le droit sur l'orge et sur l'avoine, et que dans l'opinion de bons juges on y a assez consulté les intérêts des Canadas. Aussitôt que me le permit l'urgence de ce sujet particulier, je me rendis chez les divers Messieurs de la ville qui composent le Comité, et il se fit une assemblée peu nombreuse de ces Messieurs chez Mr. Robert Gillespie. Il y eut quelque discussion provenant de la différence d'opinion à l'égard de l'introduction libre du produit étranger dans la Province pour l'exportation. L'indisposition du Président du Bureau de Commerce m'avait empêché de voir quels étaient ses sentimens sur l'application du principe général, avant le tems de l'assemblée; c'est pourquoi par suite de cette absence, les Messieurs présents parurent abandonner la décision de ce point. La maladie prolongée de Mr. Huskisson a remis, à un tems incertain, la considération des sujets généraux intéressans pour nous; le délai résultant de cet accident malheureux me semblant menacer d'une suspension de commerce avec les Etats-Unis, durant la saison qui approche, j'adressai un mémorial au Bureau de Commerce, dans lequel j'énonçai cette appréhension, et où je le priai de donner une décision immédiate à l'égard de l'obstruction des ports d'entrée provinciaux à l'importation de commodités dont l'entrepôt est permis. Ce point ainsi mis tout simplement, détaché de toutes les autres questions, et étant en lui-même l'effet d'une simple omission technique, dans l'Acte 6, Geo. IV, chap. 114, fut immédiatement décidé par Mr. H. et l'on va adopter les mesures parlementaires nécessaires pour faire disparaître l'empêchement. Dans l'intervalle, les Commissaires de la Trésorerie ont, à ma vive sollicitation, donné des ordres aux Commissaires des Douanes, d'informer leurs Officiers en Canada de l'intention du Gouvernement de Sa Majesté sur ce sujet, et j'ai suggéré qu'on envoyât une copie de sa communication à Lord Dalhousie par le Canal du Bureau Colonial, et que je m'efforçerai de faire envoyer par le paquebot de New-York du 16. L'objet de cet arrangement est d'obvier à toute difficulté qui pourrait résulter dans l'intervalle qui doit nécessairement s'écouler entre l'ouverture de la navigation et la promulgation de l'Acte du Parlement.

Je ne puis hasarder aucune opinion sur les décisions auxquelles les Ministres pourront en venir, à l'égard des autres sujets commis à mes soins. La marine des ports de l'intérieur fait de grands efforts pour avoir de la protection. Sur le point très important du commerce des Indes Occidentales je ne puis flatter le Comité de l'espérance, même la plus éloignée, d'obtenir aucune garantie sur la permanence du système qui sera adopté. Autant que je puis juger des dispositions des Ministres, elles paraissent pour le moment tout à fait favorables à la continuation de l'état actuel des choses.

Les effets directs du système d'entrepôt (sans aucune modification des deux Actes 6e. Geo. 4, chap. 114, et 7e. Geo. 4, chap. 40, autre que l'amendement proposé pour éviter les ports d'entrée sur la frontière) seront d'introduire toutes espèces de produits Américains dans les ports d'entrepôt du Canada. Le terme d'entrepôt (*Warehouse*) il faut l'observer s'applique selon la 115e. section de la 6e. Geo. 4, chap. 107, à tous hangars, cours, étangs à bois et autres places, où l'on peut garder des marchandises, de sorte que toutes espèces de bois, mûts, chevaux, bestiaux vivans, &c. seront inclus dans

Appendice

Appendix
(R.R.)
9th Jan'y.

all kinds of Lumber, Masts, as well as horses, live stock, &c. will be included in its operation. Now as respects the West Indies, all commodities passing through the Warehouses in Canada free of duties, would on arrival in the West Indies, be subject at present to the duties imposed by the sixth George the Fourth chapter one hundred and fourteen, excepting flour, which by the seventh George the Fourth chapter forty, pays the diminished duty. As respects the United Kingdom, masts, timber, (not including deals nor staves,) and ashes will come, as was intended last year, under the character of British productions. Deals and staves will be shipped from the Warehouse as Foreign, and bear that character on importation. As Timber will not be exposed to the payment of duty on importation into the Province, the difficulty stated by the Committee respecting the construction given to the Table of Duties by Mr. Woodhouse, as to the measurement, as it affects *White Pine*, will not exist, unless when the article is imported for consumption, an operation which in itself would be objectionable in principle. Staves are similarly circumstanced. In adverting to the construction of Mr. Woodhouse, it may be well to notice that it does not correspond exactly with the intention of Mr. Hume, that gentleman conceiving that the duty on the "thousand feet of other kind of wood and lumber," imposed by the Act sixth George the Fourth, chapter one hundred and fourteen, was meant to be applied exactly in the same manner as it had heretofore been carried into effect, when it formed part of the Canada Trade Act. The foregoing observations apply to the existing Law, but I have already said that I cannot give an opinion as to the alteration to which present circumstances may give rise, neither as respects the details to be adopted, nor as to the principles on which they will be introduced. I purpose sending this to Quebec, under an official frank to Mr. Cochran, for which reason I shall address it to Mr. Finlay.

I am, Sir,

Your very devoted,

Humble Servant,

(Signed)

W. B. FELTON.

GEORGE AULDJO, Esquire, or
WM. FINLAY, Esquire,
Chairman of Board of Trade.

London, 4th April 1827.

Gentlemen,

I was yesterday favored with an interview with the President of the Board of Trade, and discussed at full length all the topics connected with the proposed improvements in the Commercial regulations of the Provinces with Great Britain and the Colonies.

In respect to the admission of Canadian grain and flour, Mr. Huskisson expresses himself very much gratified at succeeding in placing our trade in those articles on the advantageous footing contemplated by the original resolutions, and as the Corn Bill was read for the second time on Monday (2d) evening, it will probably pass without any essential variation. For your information I enclose an Extract from the Act as it now stands, being a clause containing a provision to which great importance is attached by the landed interest, but its object is merely to verify the character and ascertain the identity of the grain and flour shipped from the Colonies; it is only of interest to us as affording an additional reason for making Montreal a Custom's Port. By another Clause you will perceive that flour cannot be imported into Ireland. Mr. Huskisson concurs with Lord Bathurst in opinion, that to press the admission of American flour through the Canadas on lower duties than that article pays when imported in a foreign ship, although desirable as a means of increasing the export by the St. Lawrence, and of affording additional employment to British shipping, would be attended with some risk at present, by drawing into discussion the propriety of admitting Canadian flour. There

son opération. Maintenant, à l'égard des Indes Occidentales, toutes provisions passant par l'entrepôt en Canada franches de droits, seront, à leur arrivée dans les Indes Occidentales, sujettes pour le présent, aux droits imposés par la 6e. Geo. 4, chap. 114, en exceptant la fleur, qui par l'acte 7e, Geo. 4, chap. 40, paye les droits réduits. Quant au Royaume-Uni, les mâts, les bois (non compris les madriers et douves) et les cendres, entreront, comme on se le proposait l'année dernière, comme des produits anglais. Les madriers et douves seront embarqués de l'entrepôt, comme étrangers, et en porteront le caractère dans l'importation. Comme le bois ne sera pas exposé à payer de droit sur l'importation dans la Province, la difficulté présentée par le Comité à l'égard de l'interprétation donnée à la table des droits par Mr. Woodhouse sur le mesurage, en regard au *pin blanc*, n'existera plus, si ce n'est lorsque cet article sera importé pour la consommation, opération qui en elle-même serait en principe sujette à objection. Les douves se trouvent dans le même cas. En parlant de l'interprétation de Mr. Woodhouse, il serait bon de remarquer qu'elle ne correspond pas exactement avec l'intention de Mr. Hume, ce Monsieur concevant que le droit imposé sur les 1000 *pieds d'autres espèces de bois*, par la 6e. Geo. 4, chap. 114, était entendu s'appliquer exactement de la même manière qu'on l'avait pratiqué ci-devant, lorsque ce droit formait partie de l'Acte du commerce du Canada. Les observations précédentes s'appliquent à la loi existante, mais, comme je l'ai déjà dit, je ne puis donner d'opinion sur les changemens que les circonstances actuelles peuvent amener, ni sur les détails qu'on peut adopter, ni sur les principes sur lesquels ils seront introduits. Je me propose d'envoyer ceci à Mr. Cochran, sous une forme officielle, ce pourquoi je l'adresserai à Mr. Finlay.

Je suis Monsieur,

Votre très dévoué

Et très humble serviteur.

(Signé)

W. B. FELTON.

GEORGE AULDJO, Ecuyer, ou
WM. FINLAY, Ecuyer,
Président du Bureau de Commerce.

Londres, 4 Avril 1827.

Messieurs,

Hier, j'eus l'honneur d'avoir une entrevue avec le Président du Bureau de Commerce, et j'ai discuté au long tous les sujets liés au perfectionnement proposé des réglemens à l'égard du Commerce entre les Provinces avec la Grande-Bretagne et les Colonies.

Quant à l'admission des grains et de la fleur Canadienne, Mr. Huskisson s'est montré très satisfait du succès qu'il a eu de placer notre commerce en ces articles sur le pied avantageux contemplé dans les Résolutions originaires, et comme le Bill des Céréales fut lu Lundi soir (2e) il passera probablement sans aucune altération essentielle. Pour votre information je vous envoie ci-inclus un extrait de l'Acte, tel qu'il est maintenant; c'est une clause contenant une disposition à laquelle on attache une grande importance parmi la classe propriétaire, mais l'objet en est seulement de vérifier le caractère et de contester l'identité du grain et de la fleur embarqués pour les Colonies; elle ne nous intéresse qu'en ce qu'elle présente une raison additionnelle de rendre Montréal un Port de Douane. Vous verrez par une autre Clause que la fleur ne peut être importée en Irlande. Mr. Huskisson concourt dans l'opinion de Lord Bathurst, que quoi qu'il soit désirable de presser l'admission de la fleur Américaine par les Canadas, moyennant un droit plus bas que ne paye cet article lorsqu'elle est importée sur un fond étranger, comme moyen d'augmenter l'exportation par le Saint-Laurent et de donner un emploi additionnel à la marine anglaise, cette mesure se-

Appendix
(R.R.)
9 Jun'y.

Appendix (R.R.) is ground to hope that this arrangement may be adopted at some future period.

9th Jany.

After going through the details of the West India Trade, I pressed on Mr. Huskisson the great importance of affording some assurance that the present advantages shall be permanent; but on this subject the Ministry feel themselves precluded from making any positive declaration. Mr. Huskisson repeatedly stated that it is the intention of Government to afford every possible encouragement to the trade between the West Indies and the North American Provinces, and he considers the answer to the Ship-Owners' Committee as affording all the assurance that can be reasonably expected on the part of Government. In this light, indeed, it is viewed by the London Ship-Owners; but I should have been better pleased to have obtained a more specific pledge on this interesting point.

In respect to details, every facility is to be given to the free import of all American productions, and for this purpose the Ports of Montreal and Kingston will be declared free Warehousing Ports for imports by land or inland navigation, but limited as respects imports by sea, to British Vessels only. This is considered to be the only effectual means of preserving the navigation of the Saint Lawrence above Quebec to the English flag, and as it allows the productions of the British Dominions to be bonded at Montreal, at the same time it affords the required facility of shipping wheat and flour at that place for Great Britain without exposing the shipper to the necessity of proceeding to Quebec to make oath to the declaration of origin prescribed by the Corn Bill. To extend the benefits of the warehousing system to the utmost limits, permission will be given to enter all commodities at the Provincial Custom Houses on giving security for their deposit at one of the Free Warehousing Ports; and on offering similar security the articles may be removed from any of the Warehouses to other Warehousing Ports for the purpose of shipment for exportation. This arrangement will include Halifax. It is conceived that every description of American produce will thus find its way to the shipping Ports, excepting salt provisions, and in order to provide as far as practicable for this deficiency, without entrenching too much on other interests it is intended to allow fresh pork to be admitted free of duty. The pervading principle in these arrangements is the supply of the West Indies at the cheapest rate; attention to this consideration will explain to the Committee the reasons for losing sight of their recommendation to amend the scale of duties; at the same time it is open to the Local Legislature to impose any duties they may think proper on articles imported *for consumption* within the Colony. The Committee will observe that it is now a national question for the supply of the West Indies, and we have no right to tax the consumer there for our benefit; and if it be said, that our own commodities merit protection, the answer is, that this protection is afforded as well by levying the duties in the West Indies as in Canada, and with more equitable regard to the interests of the ultimate consumer.

Fresh fish, fresh beef, saw logs, firewood and horses and carriages of Travellers will also be exempted from duty.

In respect to the Lumber Trade with Great Britain, I have no reason to hope for any further favourable arrangement than the admission of the lumber and masts of the United States into the United Kingdom as British productions. The positive refusal given by the Board of Trade to the application of the Shipping Com-

rait pour le moment accompagnée de quelque risque en amenant sous discussion la convenance d'admettre la fleur Canadienne. Il y a lieu d'espérer que cet arrangement sera adopté à quelque époque future.

Après être entré dans tous les détails du commerce des Indes Occidentales, j'insistai, auprès de Mr. Huskisson, vu l'importance majeure de donner quelque assurance à l'égard de la permanence des avantages actuels, mais le ministère se sent empêché de faire aucune déclaration positive. Mr. Huskisson me répéta souvent que le Gouvernement avait intention de donner tout l'encouragement possible au Commerce entre les Indes Occidentales et les Provinces de l'Amérique Septentrionale, et il considère la réponse au Comité des armateurs, comme toute l'assurance qu'on peut raisonnablement attendre de la part du Gouvernement. C'est aussi sous le même jour que les armateurs de Londres l'envisagent, mais j'aurai préféré obtenir une garantie plus spécifique sur ce point intéressant.

A l'égard des détails, on doit donner toutes les facilités à l'importation libre de tous les produits Américains, et pour cette fin les ports de Kingston et de Montréal vont être déclarés ports d'entrepôt pour les importations par terre ou par navigation intérieure, mais en les limitant, à l'égard des importations par mer, aux seuls vaisseaux anglais. On considère cela comme le seul moyen efficace pour conserver la navigation du Saint-Laurent, au-dessus de Québec, au pavillon anglais, et comme il est permis de mettre en dépôt à Montréal les produits des possessions Britanniques, on donne en même tems la facilité d'embarquer à cette place pour la Grande-Bretagne, le blé et la fleur, sans obliger le chargeur d'aller à Québec prêter sur la déclaration concernant la production le serment prescrit par le Bill des Céréales. Dans la vue d'étendre les avantages du système d'emmagasinage, aux dernières limites, on donnera permission d'entrer toutes les commodités aux Douanes provinciales, en donnant caution qu'elles seront mises en dépôt à l'un des trois ports d'entrepôt; et en offrant un pareil cautionnement les articles pourront être transportés de tout magasin à d'autres ports d'entrepôt pour être embarquées pour l'exportation. Cet arrangement comprendra Halifax. On conçoit que toute sorte de produits américains se rendront ainsi aux ports d'embarquement, les provisions salées exceptées, et pour obvier, autant qu'il est praticable à ce défaut, sans nuire trop à d'autres intérêts, on a en vue d'admettre le lard frais franc de droit. Le principe qui servira de base à cet arrangement sera l'approvisionnement des Indes Occidentales, au plus bas prix: en faisant attention à cette considération, le Comité verra la raison pour quoi l'on n'a pas égard à la recommandation qu'il a faite de modifier l'échelle des droits; en même tems, il est libre à la Législature locale d'imposer tous les droits qu'elle croira convenable, pour les effets importés pour être consommés dans la Colonie. Le Comité observera que l'approvisionnement des Indes Occidentales est devenu une question nationale, et nous n'avons pas le droit d'y taxer le consommateur pour notre propre avantage, et si l'on dit que nos propres denrées méritent de la protection, on nous répondra que vous obtenez aussi bien cette protection par la levée de droit dans les Indes Occidentales qu'en Canada, et d'une manière plus équitable pour le consommateur.

Le poisson frais, le bœuf frais, bois à scier, bois de chauffage, chevaux et voitures de voyageurs seront aussi exempts de droits.

A l'égard du Commerce du bois de construction avec la Grande-Bretagne, je n'ai lieu d'espérer aucun arrangement plus favorable, que l'admission du bois et des mâts des Etats-Unis dans le Royaume-Uni, comme produits britanniques. On aurait dû prévoir le refus positif donné par le Bureau de Commerce à la

Appendice (R.R.)
9 Jany.

Appendix
(RR.)
9th Jan'y.

Committee for a reduction of duties, ought to have been anticipated, as it could not consistently have been acceded to, without a correspondent reduction in the duties of Baltic timber. I ventured to suggest to Mr. Huskisson that it would be very desirable to compel the payment of the duties on Canada timber, at the time of import, unless when warehoused for exportation, urging that when this was accomplished a fair opening would be afforded for the application of the same principle to the Baltic timber, and the result would be a decided advantage to the British merchant. It is unnecessary to detail the other arguments in favor of this suggestion; the result was that Mr. Huskisson would not make any further promise than that it should become a subject for deliberation; as it strikes at the principle of the Warehousing System, I could expect no more favourable answer than that it merits consideration.

The importation of East India silk goods by foreigners and by Inland navigation, and the import of French silks by inland navigation, will be repressed by the duties being raised to thirty per cent, and the import of cotton and woollen goods by a duty equal to that levied on similar articles in the United States.

To conclude, I have great satisfaction in stating, that His Majesty's Ministers express the utmost solicitude for the prosperity of the North American Colonies, and more particularly for the extension and security of the Commerce of the Saint Lawrence.

I shall keep you informed of the progress of the arrangements decided upon at this interview.

I have the honor to be,

Gentlemen

Your most obedient and most humble Servant,
(Signed) W. B. FELTON.

WILLIAM FINLAY, Esq.
Chairman Committee of Trade, Quebec, and
George Auldjo, Esq.
Chairman Committee of Trade, Montreal.

Extracts from the Corn Bill, read for the second time on Monday 2d April 1827.

"That no corn, grain, meal or flour shall be shipped from any port in the British possessions out of Europe, as being the produce of any such possession, until the owner, or proprietor, or shipper thereof shall have made and subscribed a declaration in writing, before the Collector or other Chief Officer of the Customs at the port of shipment, that such corn, grain, meal or flour was the produce of some British possession out of Europe to be named in such declaration; and before any corn, grain, meal or flour shall be entered at any port in the United Kingdom, as being the produce of any British possession out of Europe, the master of the ship importing the same, shall produce and deliver to the Collector or other chief Officer of the Customs of the port or place of importation, a copy of such declaration certified to be a true and accurate copy thereof, under the hand of the Collector or other chief Officer of the Customs at the port of shipment, before whom the same was made, and such master shall also make and subscribe before the Collector or chief Officer of Customs at the port or place of importation, a declaration in writing that the corn, grain, meal or flour on board such ship is the same that was mentioned and referred to in the declaration so produced by him, without any admixture or addition (under a penalty not yet inserted), provided, that the declaration aforesaid shall not be required in respect of any corn, grain, meal or flour which shall have been shipped within (time not inserted) next after the passing of this Act.

mande d'une réduction de droits faite par le Comité de Commerce, vu qu'on ne pouvait y accéder avec consistence, sans faire une réduction correspondante dans les droits sur les bois de la Baltique. Je hasardai de dire à Mr. Huskisson qu'il serait à désirer qu'on exige le payement des droits sur le bois du Canada, au tems de l'importation, à moins qu'il ne fut mis en entrepôt pour l'exportation, travaillant à faire voir que cela une fois effectué, il y aurait une belle occasion pour demander à appliquer le même principe au bois de la Baltique, et le résultat en serait un avantage décidé pour le marchand anglais. Il est inutile de détailler les autres raisons en faveur de cette suggestion. Le résultat fut que Mr. Huskisson ne voulait promettre autre chose qu'il amènerait le sujet sous délibération. Comme il touche au principe du système d'entrepôt, je ne pouvais attendre de réponse plus favorable que celle que la chose méritait d'être considérée.

L'importation des soies des Indes-Orientales sur fonds étrangers et par la navigation intérieure, et l'importation de soies françaises par la navigation intérieure sera réprimée en haussant les droits jusqu'à trente par cent; et l'importation des cotonnades et des lainages, par un droit égale à celui qui est levé dans les Etats-Unis sur des articles semblables.

Pour conclure, j'ai le plaisir bien grand de dire que les Ministres de Sa Majesté, montrent la plus grande sollicitude pour la prospérité des Colonies de l'Amérique Septentrionale, et plus particulièrement pour l'extension et la sûreté du commerce du Saint-Laurent.

J'aurai soin de vous informer du progrès des arrangements décidés dans cette entrevue.

J'ai l'honneur d'être,

Messieurs,

Votre très-humble et très-obéissant serviteur,
(Signé) W. B. FELTON,

WILLIAM FINLAY, Ecuyer, Président
du Comité de Commerce, à Québec, et
George Auldjo, Ecuyer, Président
du Comité de Commerce, à Montréal.

Extraits du Bill des Céréales, lu pour la 2e fois Lundi 2 Avril 1827.

"Qu'il ne sera embarqué d'aucun port dans les possessions Britanniques hors d'Europe, blé, grain, fleur ni farine de froment, comme étant le produit d'aucune telle possession, jusqu'à ce que le possesseur ou propriétaire ou l'embarqueur d'iceux, n'ait fait et signé une déclaration par écrit, devant le Collecteur ou autre Officier principal des Douanes, au port de l'embarquement, que les dits blé, grain, farine ou fleur est le produit de quelque possession Britannique hors d'Europe, laquelle sera nommée dans la dite déclaration; et avant qu'il soit entré du Bled, grain, fleur ou farine dans aucun port du Royaume-Uni comme étant le produit d'aucune possession Britannique hors d'Europe, le Maître du vaisseau qui les importera, produira, et remettra au Collecteur ou autre officier principal de la Douane du port ou place de l'importation, une copie de telle déclaration, certifiée comme une copie vraie et correcte d'icelle, sous le seing du Collecteur ou autre officier principal de la Douane au Port de l'embarquement, devant qui elle aura été faite, et tel maître fera et signera devant le Collecteur ou Officier principal de la Douane, au port ou place de l'importation, une déclaration par écrit, que le blé, grain, fleur ou farine, à bord de tel vaisseau, sont les mêmes que ceux mentionnés et marqués dans la déclaration ainsi par lui produite, sans aucun mélange ni addition (sous une pénalité non encore spécifiée.) Pourvu que la déclaration susdite ne sera pas exigée pour le blé, grain, fleur ou farine, qui auront été embarqués dans (tems non marqué) prochain, après la passation de cet Acte.

That, &c. not lawful to import from any parts beyond seas into the United Kingdom any malt, or to import any corn ground into Ireland or to import into Great Britain any corn ground except wheat meal, wheat flour and oatmeal, forfeited.

That the Isle of Man considered to be in the United Kingdom.

That the total quantities of corn grain, meal and flour paying duty and warehoused, shall be published once a month in the London Gazette. —N. B. The Schedule of Duties not printed with the Act.

London, 26th May, 1827.

Dear Sir,

I have the pleasure to acquaint you, that the discussion on the Corn Bill which took place last night in the House of Lords, terminated so favorably to the views of its supporters, that there appears to exist no doubt as to its being passed in its present shape. As you have been already informed of the particulars in the Bill which affect the Colonies, it is only necessary to inform you that no alteration has taken place in that respect. Mr. Huskisson has appointed next Monday for an interview with the Chairman of the Board of Customs on the subject of the arrangement that must be introduced for the regulation of our trade, into Parliament, and I hope that no further delay will arise to impede the accomplishment of the measures on which the Board of Trade has already decided, the subject of which has been communicated to you, and in which I have no reason to anticipate a change. I have been favored with assurances from the present Secretary for the Colonies, of his wish and anxiety to promote our commercial prosperity, and I have no reason to apprehend the smallest departure from the principles of protection to our intercourse with the West Indies which obtained previously to the late change of Administration. I shall not fail to keep you informed of every new occurrence, and I hope speedily to announce the introduction of the Bill to give effect to Mr. Huskisson's arrangements in our favor.

I am, dear Sir,

Your most obedient,

Humble Servant,

(Signed)

W. B. FELTON.

Wm. Finlay, Esquire.

London, 14th June, 1827.

Sir,

My last addressed to Mr. Finlay, will have excited expectations of advantages from the Corn Bill, that I fear are to be disappointed by the result of last night's debate on the rescission of an amendment proposed by the Duke of Wellington. The Ministers have expressed their determination to abandon the Bill in its amended shape, and although it may possibly be carried through the Lords, yet there is not the remotest expectation of the Commons concurring in the amendment, nor of their substituting a Bill in conformity with the view of the Lords; under these circumstances I can only express my hopes that reliance on the information contained in my last has not yet occasioned any inconvenience to the interests of my constituents. Although I have made earnest application to the Board of Trade, and the Colonial Department on this subject of our particular interests involved in the decision of this question, yet I am at present only authorized to say that His Majesty's Government is fully alive to the absolute necessity of a provision for continuing the Canada Corn Bill for a limited period, but time has not yet been afforded to allow of the determination to which they may come being decided on. Every effort will be made on the part of the Committee in town to produce attention to this subject.

“Qu'il, &c. ne sera permis d'importer d'aucune partie au delà des mers dans le Royaume-Uni, aucune drèche, ni d'importer des blés moulus en Irlande, ni d'importer dans la Grande-Bretagne aucun blé moulu, excepté de la farine de froment, de la fleur de froment et de la farine d'avoine; confiscation.

“Que l'île de Man est considérée comme étant dans le Royaume-Uni.

“Qu'on publiera tous les mois dans la Gazette de Londres, les quantités de blé, de grain, de farine et de fleur taxés, qui seront emmagasinés.—N. B. La Cédule des droits non imprimées avec l'Acte.

LONDRES, 26 Mai 1827.

Cher Monsieur,

J'ai le plaisir de vous informer que la discussion sur le Bill des Céréales, qui eut lieu hier au soir dans la Chambre des Lords, s'est terminée si favorablement aux vues de ses moteurs, qu'il ne paraît exister aucun doute sur sa passation sous sa forme actuelle. Comme vous avez déjà été informé des détails du Bill qui affectent les Colonies, je n'ai plus qu'à vous informer qu'il n'y a eu aucun changement à cet égard. Mr. Huskisson a fixé Lundi pour avoir une entrevue avec le Président du Bureau des Douanes, au sujet de l'arrangement qui doit être introduit dans le Parlement pour régler notre commerce, et j'espère qu'il ne surviendra aucun délai capable d'arrêter l'accomplissement des mesures sur lesquelles le Bureau de Commerce s'est déjà décidé, dont le sujet vous a déjà été communiqué, et dans lesquelles j'ai tout lieu d'espérer qu'il n'arrivera aucun changement. Le Secrétaire actuel des Colonies m'a assuré qu'il ne désirait rien plus que d'avancer notre commerce, et je n'ai aucune raison d'appréhender le moindre désistement des principes de protection, obtenue pour notre commerce avec les Indes Occidentales avant le dernier changement qui est survenu dans l'administration. Je ne manquerai pas de vous mander tout ce qui pourra arriver de nouveau, et j'espère pouvoir en peu vous annoncer l'introduction du Bill pour effectuer les arrangements de Mr. Huskisson en notre faveur.

Je suis, cher Monsieur,

Votre très humble

Et très obéissant serviteur.

(Signé)

W. B. FELTON,

Wm. FINLAY, Ecr.

LONDRES, 14 Juin 1827.

Cher Monsieur,

Ma dernière lettre à Mr. Finlay aura dû faire naître sur les avantages que promettait le Bill des Céréales, des espérances que je crains devoir être déçues, par le résultat des débats d'hier au soir, à l'égard d'un amendement proposé par le Duc de Wellington. Les Ministres ont déclaré qu'ils étaient déterminés à abandonner le Bill, tel qu'il est amendé, et quoiqu'il puisse être passé chez les Lords, il n'y a pas l'espoir le plus éloigné que les Communes concourent à l'amendement, ni même qu'elles lui substituent un Bill conforme aux vues des Lords. Sous ces circonstances, il ne me reste qu'à espérer que les informations contenues dans ma dernière lettre n'ait occasionné aucun inconvénient à ceux de mes constituans qui s'y seraient reposés. Malgré les plus vives instances de ma part auprès du Bureau de Commerce et du Département Colonial à l'égard de nos intérêts particuliers qu'embrasse la décision de cette question, tout ce que je suis autorisé à dire pour le moment, c'est que le gouvernement de Sa Majesté est convaincu de la nécessité absolue de quelque mesure pour continuer, pour un tems limité le Bill des Céréales du Canada, mais le tems n'a pas encore permis d'en venir à une détermination finale. Les membres du Comité qui sont en ville feront tous leurs efforts pour attirer l'attention sur ce sujet.

Appendix
(RR.)
9th Jany.

I enclose for your information the printed draught of the clause in the "Customs Bill," which regulate the commercial point connected with the Provinces. I was anxious to have abstained from sending this until it had passed through the Committee which it will do to night, and I entreat you not to *assume* that any arrangements contemplated in this Act will be ultimately adopted, because from the extraordinary changes that have recently taken place, it will be injudicious to trust to appearances. You will perhaps feel with me that giving publicity to the contents of this communication may under present circumstances be injurious to our interests.

I am, Sir,
Your most obedient,
Humble Servant,

George Auldjo, Esquire,
Montreal Board of Trade.

London, 19th June 1827.

Dear Sir,

I hasten to enclose you copies of the Resolutions proposed last evening in the Commons, by the Chancellor of the Exchequer, by which you will perceive it is intended to place the introduction of Canada Wheat on similar grounds as in the Corn Bill now before the Lords, with the variation of the measure being temporary instead of permanent, continuing only in operation until the first May one thousand eight hundred and twenty eight. Under the circumstances of allowing only the grain now in Bond, or that can be Bonded previous to the first July, to be brought in for consumption, it would appear that Canadian grain will be better situated than if the original Corn Bill had gone into operation. I trust the notification of the intention of Ministers will reach Quebec in season, to prevent any injurious effects from the late communications announcing the loss of the Corn Bill.

Mr. Huskisson's Customs' Bill will be reported to night, and will be passed in the course of the week, it will probably accompany the new Corn Bill to the Lords, so that all the great measures in which the Canadas are interested will be before the Legislature next week. There does not appear to be any anticipation of resistance to either of these Bills in the Lords.

The Resolution which proposes to admit Foreign grain limits the admission of that article to the quantity now in Bond or that may come in or before the first of July, on similar duties to those imposed by the late Corn Bill; the quantity in Bond is supposed to be about five hundred thousand quarters, (of wheat,) and this is the extent of the competition to which Canada grain will be exposed.

Copy of the 2nd Resolution.

Resolved, That any sort of grain, meal or flour, the produce of any British Possession in North America, or elsewhere out of Europe, now in Warehouse in the United Kingdom, or which may be entered at any port thereof, before the first May, one thousand eight hundred and twenty eight, shall be admissible for home consumption, upon payment of the following duties, viz:—

<i>Wheat</i> , for every Quarter,	£0 5 0
until the price of British Wheat made up and published according to Law, shall be sixty-seven shillings per quarter. Whenever such prices shall beat or above sixty-seven shillings per quarter, the duty shall be for every quarter,	0 0 6
<i>Barley</i> , for every Quarter,	0 2 6
until the price shall be 34s per quarter, then	0 0 6
<i>Oats</i> ,	0 0 6

Je vous envoie ci-inclus, pour votre information, le projet imprimé des clauses du "Bill des Douanes," qui règle le point commercial lié avec les Provinces. J'aurais voulu pouvoir me dispenser d'envoyer ceci jusqu'à ce qu'il eut passé dans le Comité; ce qu'il fera ce soir, et je vous prie de ne pas penser qu'aucun des arrangements contemplés dans cet Acte sera finalement adopté, car d'après les changemens extraordinaires qui ont eu lieu récemment, il serait imprudent de se fier aux apparences. Vous sentirez peut-être, avec moi que la publicité du contenu de cette lettre sous les circonstances présentes, pourrait nuire à nos intérêts.

Je suis, Monsieur,
Votre très humble
Et très obéissant serviteur.
(Signé) W. B. FELTON.

GEORGE AULDJO, Ecuier,
Bureau de Commerce de Montréal.

Londres, 19 Juin 1827.

Cher Monsieur,

Je me hâte de vous envoyer des Copies des résolutions proposées hier au soir chez les Communes par le Chancelier de l'Échiquier, par lesquelles vous verrez qu'on se propose de mettre l'introduction du froment du Canada, sur le même pied que dans le Bill des Céréales maintenant devant les lords, avec la différence que la mesure est temporaire au lieu d'être permanente, ne continuant d'être en opération que jusqu'au 1er mai 1828. Vu la permission qui est donnée de n'entrer pour la consommation que le grain maintenant en dépôt, ou qui pourra être mis en dépôt avant le 1er juillet, il paraîtrait que le grain du Canada sera mieux situé que si le Bill des Céréales, originaire, fut venu en opération. J'espère que la notification des ministres arrivera à Québec à tems pour prévenir les effets injurieux qui auraient pu résulter des communications recentes, qui annonçaient la perte du Bill des Céréales.

Le Bill des douanes de M. Huskisson va être rapporté ce soir et sera passé dans le cours de la semaine, Il accompagnera probablement chez les lords le nouveau Bill des Céréales, de sorte que toutes les grandes mesures qui intéressent les Canadas vont être devant la Législature la semaine prochaine. Il ne paraît pas qu'il doive survenir aucune opposition à l'un ni à l'autre de ces bills chez les lords.

La résolution qui propose d'admettre le grain étranger, limite l'admission de cet article à la quantité maintenant en dépôt ou qui pourra y être mise le ou avant le 1er juillet, moyennant des droits semblables à ceux imposés par le bill des céréales précédent, La quantité en dépôt est supposée être d'environ 560,000 quarters (de froment) et c'est là l'entendue de la concurrence à laquelle sera exposé le grain du Canada.

Copie de la 2e. Résolution.

Résolu, Qu'aucune sorte de grain, de farine, ou fleur, étant le produit d'aucune possession Britannique dans l'Amérique Septentrionale, ou ailleurs hors d'Europe, maintenant en magasin dans le Royaume-Uni, ou qui pourra entrer dans aucun port d'icelui avant le 1er jour de mai 1828, pourront être admis pour la consommation intérieure, en payant les droits suivans, savoir:

<i>Froment</i> pour chaque quarter	£0 5 0
jusqu'à ce que le prix du froment Britannique, arrangé et publié selon la loi, se vende 67s. le quarter, lorsque tel prix sera à ou au-dessus de 67s. le quarter, le droit, par chaque quarter sera de	0 0 6
<i>Orge</i> ,—pour chaque quarter,	0 2 6
jusqu'à ce que le prix soit de 34s. le qr. dans lequel cas,	0 0 6
<i>Avoine</i>	0 0 6

Appendice
(RR.)
9 Jany.

Appendix (R.R.) 9th Jan'y.	Oats, for every quarter, until the price shall be 25s per quar- ter, then	0 2 0	<i>Avoine</i> , par chaque quarter, jusqu'à ce que le prix soit de 25s. le qr. alors,	0 2 0	Appendice (R.R.) 9 Janv.
	<i>Rye, Pease and Beans</i> , for every quarter, until the price shall be 41s,	0 3 0	<i>Seigle, Pois et Fèves</i> , par chaque quarter, jusqu'à ce que le prix soit de 41s.	0 3 0	
	<i>Wheat Meal and Flour</i> , for every barrel being 196 lbs., a duty equal in amount to the duty payable on thir- ty eight and a half gallons Wheat.	0 0 6	<i>Farine</i> et <i>Fleur de Froment</i> , par chaque quart pesant 196 lbs., un droit égal en montant au droit payable sur tren- te-huit gallons et demi de froment.	0 0 6	
	<i>Oatmeal</i> , for every quantity of 181½ lbs., a duty equal in amount to the duty payable on a quarter of oats.	0 0 6	<i>Farine d'Avoine</i> , par chaque 181½ lbs. un droit égal en montant au droit payable sur un quarter d'avoine.	0 0 6	
	<i>Maize or Indian Corn, Buck Wheat, Bea or Big</i> , a duty equal in amount to the duty payable on a quarter of Bar- ley.		<i>Maïs ou Blé d'inde, Blé sarrasin, l'Orge</i> ap- pelée <i>Big</i> , un droit égale en mon- tant au droit payable sur un quar- ter d'orge.		

I am, dear Sir,

Your most obedient,

Humble Servant,

(Signed) W. B. FELTON.

Wm. Finlay, Esquire, Chairman,
Board of Trade, Quebec.

London, 22nd June, 1827.

Dear Sir,

We are somewhat relieved from the state of agitating suspense in which the defeat of the Corn Bill left us, by the introduction and passage through the Commons, of a temporary measure which as far as the Canada Trade in grain is concerned, professes to place us on exactly the same footing as the former Bill, with the simple difference of the present arrangement being temporary instead of permanent; to counterbalance this inconvenience, we shall have only to contend with the competition of the wheat now in Bond, or to be Bonded up to the first of July, which is estimated at six hundred thousand quarters, instead of the continued import allowed by the original measure. I cannot venture to give you any assurance of the present Bill passing the Lords, because I have been called upon to furnish explanations of the probable operation of the Act in introducing grain and flour from Canada, and I have reason to believe that great apprehension arising from the misconception of our powers of inundating this country with grain, prevails in the Lords. I enclose a copy of the Bill in the shape in which it will probably be passed this evening; at the same time I have the satisfaction of enclosing a copy of Mr. Huskisson's Customs' Bill, in which are incorporated the arrangements for the Trade of the Canadas. This Bill passed in the present form last night. I do not understand that much opposition is expected to it in the Lords, indeed we may rather anticipate support, because the principles it embodies are in some measure a departure from the rigidly liberal system, which has met its strongest resistance in the Upper House; at the same time I feel so little confidence at the present moment in any general rules of action in Parliament, that I must caution you not to rely too implicitly on the successful issue of these measures, until you hear of the actual completion of the Bill. My object in the present being, in the first place to relieve you from the suspense which ignorance of the intentions of Government must have entailed, and in the next place to demonstrate that His Majesty's present Ministers have redeemed their promise of protection and assistance to the Canadas, as far as depends on them, and to the full extent of our most sanguine expectations.

I am, dear Sir,

Your most obedient,

Humble Servant,

(Signed) W. B. FELTON.

George Auldjo, Esquire, Chairman,
Board of Trade, Montreal.

Remarks

Je suis cher monsieur,

vosre très-humble et très-

obéissant serviteur,

(Signé) W. B. FELTON.

Wm. Finlay, écuyer, président du
Bureau de commerce à Québec.

Londres, 22 Juin 1827.

Cher Monsieur,

Nous commençons à sortir de l'état d'agitation et d'incertitude dans le quel nous avait laissé la chute du bill des céréales, par l'introduction et la passation chez les communes d'une mesure temporaire, qui en autant que le commerce de grain du Canada y est intéressé, promet de nous placer sur le même pied que le bill précédent, avec la seule différence que l'arrangement actuel est temporaire, au lieu d'être permanent. Pour contrebalancer cet inconvénient nous n'aurons à entrer en concurrence qu'avec le froment maintenant en dépôt ou qui le sera d'ici au 1er juillet; (lequel on estime à 600,000 quarters,) au lieu de l'importation continuée que permettait la mesure originaire. Je ne puis hasarder de vous assurer que le Bill actuel passe chez les lords, par ce que l'on m'a demandé des explications sur l'opération probable de l'acte, en introduisant le grain et la fleur du Canada, et j'ai raison de croire qu'il règne chez les lords de grandes appréhensions, sur l'idée fausse que l'on y a conçue sur les moyens que nous avons d'inonder ce pays de grains. Je vous envoie ci-incluse une copie du bill, dans la forme dans laquelle il va probablement passé ce soir. En même tems j'ai la satisfaction de vous envoyer ci-incluse une copie du bill des Douanes de M. Huskisson, dans lequel sont incorporés les arrangements relatifs au commerce des Canadas. Ce bill passa dans cette forme hier au soir. Je ne sache qu'il doive rencontrer beaucoup d'opposition chez les lords; même nous devons attendre qu'il y sera supporté parce que les principes qu'il renferme sont en quelque sorte une aberration du système de libéralité entière, qui a rencontré la plus forte résistance dans la chambre haute, en même temps dans le moment actuel si peu de confiance dans aucune règle générale d'action en Parlement, que je dois vous mettre en garde contre une assurance trop implicite du succès de la mesure, jusqu'à ce que vous appréciiez la passation finale du bill. Mon objet, dans la présente, est d'abord de vous tirer de l'incertitude où doit vous avoir placé l'ignorance des intentions du gouvernement, et en second lieu pour vous faire voir que les ministres actuels de Sa Majesté ont rempli leur promesse, de protéger et d'assister les Canadas, autant qu'il dépend d'eux, et dans toute l'étendue de nos plus vives espérances.

Je suis, cher Monsieur,

vosre très-humble et très-

obéissant serviteur,

(Signé) W. B. FELTON.

George Auldjo, Ecuyer, Président du Bu-
reau du Commerce, Montréal.

Remarques

Appendix
(RR.)
9th Jan'y.

Remarks on some particulars in the present Customs' Bill :

It will be seen by the new table of duties, staves from America, and the Ionian Islands, (which now pay one third only of the duty payable on the Foreign staves,) are for the future to be deemed Foreign, and pay duty accordingly, viz : twenty three shillings per one hundred and twenty ; taking this in connection with the two clauses in another part of the Bill, one of which provides that staves shall be admitted *by land or inland navigation* duty free, and the other, that staves imported into the United Kingdom from Canada, shall be deemed British, it is evident that the freight of all the staves imported from America, must come to the British ship holder, and that the export of that article must be by the Saint Lawrence. Beef and Pork are no longer to be prohibited in the Colonies. This arrangement is consequent on the decision as to the admission of those articles into the United Kingdom, upon payment of a duty of twelve shillings per hundred weight, as the West Indies may be supplied through the Ports of the United Kingdom with Foreign Beef and Pork, there could be no legitimate reason for excluding the Canadian Merchant from engaging in a similar indulgence. The liability to the duty of twelve shillings per hundred weight is sufficient to give the Agricultural interest in the Province a fair protection, and the admission of Fresh Beef and Pork free of duties, places the interest engaged in curing and barrelling those articles for exportation on an equally favorable footing.

Wood articles imported into the West Indies from the Canadas pay only one fourth of the duties ; the object of this clause is to allow Albany deals and other articles exported through Quebec to meet American articles on favorable terms. The monopoly of the Home Market being preserved to Canada deals and sawed timber.

A.

Provided always, and be it further enacted, that the Commissioners of His Majesty's Customs shall as soon as may be after the passing of this Act, cause to be published in the *London Gazette*, an account of the total quantity of corn, grain, meal and flour distinguishing the produce of His Majesty's possessions out of Europe from the produce of Foreign Countries, which shall be in Warehouse on the first day of July one thousand eight hundred and twenty seven. And once in each succeeding calendar month, cause to be so published an account of all corn, grain, meal or flour, distinguishing the produce as aforesaid, which shall in the month next preceding have paid the duties established by this Act, together with an account of the total quantity of each sort of corn, grain, meal and flour respectively as aforesaid remaining in Warehouse at the end of each preceding calendar month.

London, 2nd July, 1827.

Gentlemen,

I have now the satisfaction of announcing the completion of my mission by the Prorogation of Parliament, which took place this day, and of the satisfactory arrangement of the principal points committed to my charge by the passing of the two Bills respecting the importation of corn and flour, and the regulation of the Customs. The latter Bill received the Royal Assent without any alteration in the form in which it was transmitted to you ; and the Corn Bill of which I hasten now to forward a copy, passed with the addition of an amendment as contained in the above copy of the clause introduced by the Lords. I expect to meet the gentlemen composing the Committee in town in a few days, when I shall prepare for them and your information, a few remarks on the anticipated operation of those Laws, which I shall previously submit to some competent authority for correction.

I have the honor to be,

&c. &c.

(Signed)

W. B. FELTON.

GEORGE AULDJO, Esquire, and
Wm. Finlay, Esquires,
Chairmen of the Board of Trade,
Quebec and Montreal.

Quebec,

Remarques sur quelques points particuliers du bill actuel des Douanes :

On verra par la nouvelle table de droits, que les douves d'Amérique et des Iles Ioniennes (qui payent maintenant un tiers seulement du droit payable sur les douves étrangères) seront à l'avenir considérées comme étrangères, et payeront le droit en conséquence, savoir, 23s par 120 ; considérant ceci avec les deux clauses qui se trouvent dans une autre partie du bill, dont l'une pourvoit à ce que les douves seront admises par terre ou par la navigation intérieure, franchises de droit, et l'autre que les douves importées du Canada dans le Royaume-Uni seront considérées comme étant Britanniques, il est évident que le frêt de toutes les douves importées d'Amérique doivent venir à l'Armateur Anglais, et que l'exportation de cet article doit se faire par le St. Laurent. Il n'y aura plus de prohibition dans les Colonies pour le bœuf et le lard. Cet arrangement découle de la décision quant à l'admission de ces articles dans le Royaume-Uni. Payant un droit de 12s. par quintal, c'est suffisant pour donner aux intérêts agricoles de la Province une protection avantageuse, et l'admission du bœuf et du lard frais, sans payer le droit, place ceux engagés à préparer et à embariller ces articles pour l'exportation sur un pied également favorable.

Les bois importés des Canadas dans les Indes Occidentales ne payent que le quart des droits. L'objet de cette clause est de permettre aux planches et autres articles exportés d'Albany par Québec, de rencontrer les articles Américains avec assez d'avantage. Le monopole du marché de l'Angleterre est conservé aux douves et bois sciés du Canada.

A.

Pourvu toujours, et qu'il soit de plus statué, que les Commissaires des Douanes de Sa Majesté feront aussitôt que faire se pourra après la passation de cet Acte, publier dans la *Gazette de Londres* un état de toute la quantité de blé, grain, farine et fleur (en distinguant les produits des possessions de Sa Majesté hors d'Europe des produits des pays étrangers,) qui sera en magasin le 1er. jour de Juillet 1827. Et feront ainsi publier, une fois par mois, un état de tout le blé, grain, farine et fleur (en distinguant les produits comme susdit) qui pourront, dans le mois qui aura précédé, avoir payé les droits établis par cet acte, avec ensemble un état de la quantité totale de chaque sorte de blé, grain, farine ou fleur respectivement comme susdit, restant dans les magasins à la fin de chaque mois de calendrier.

Londres, 2 Juillet 1827.

Messieurs,

J'ai maintenant le plaisir de vous annoncer la fin de ma mission par la prorogation du Parlement qui a eu lieu aujourd'hui, et l'arrangement satisfaisant des principaux points confiés à mes soins, par la passation des deux bills relatifs à l'importation du grain et de la fleur et au règlement des douanes. Le dernier bill a reçu l'assentiment royal sans altération, dans la même forme dans laquelle il vous a été transmis, et le bill des céréales dont je me hâte de vous faire parvenir une copie, a été passé avec l'addition d'un amendement, tel que contenu dans la copie ci-dessus de la clause introduite par les lords. J'espère rencontrer les messieurs du Comité qui sont en ville sous peu de jours, lorsque j'aurai préparé pour eux et pour votre information quelques remarques sur l'opération anticipée de ces lois, et que je soumettrai par avance à l'examen de quelque autorité compétente.

J'ai l'honneur d'être,

&c., &c., &c.

Wm. Finlay, Ecuyer,
Présidens des Bureaux de Commerce
de Québec et de Montréal.

Québec,

Appendice
(RR.)
9 Janv.

Quebec 13th September, 1827.

Québec, 13 Septembre 1827.

Appendix
(RR.)
9th Jany.

Gentlemen,

I beg leave to apprise the Committee of Trade of my return from London, which place I left about a fortnight after the termination of the late Session of Parliament. I enclose for the information of the Committee two Acts of Parliament, seventh and eighth George the Fourth, chapters fifty six and fifty seven, which embody the result of the representations made to His Majesty's Government on behalf of the Commerce of the Canadas; and I embrace the opportunity of presenting a few remarks in reference to your instructions, explanatory of the expected operation of the provisions contained in the Bills on the Trade of the Provinces, as well respecting the intercourse with the Mother Country, as with the West Indies.

First. The primary object to which my attention was called by the instructions prepared in Lower Canada, was the introduction of the grain and flour of the Provinces into the United Kingdom. It was strongly urged that motives of policy and justice ought to determine the Government to admit these articles free of all duties, at least that this indulgence might be expected under limitation as to the quantity to be introduced. To those who have watched the progress of the great measure of the Corn Bill, it will not be matter of surprize that the sanguine expectation entertained of a permanent and favorable arrangement were not realized, and on this subject it may suffice to observe that the present temporary measure taken in connection with the circumstances under which it was passed, ought to be received as indicating the favorable dispositions of His Majesty's Ministers; but must not be considered as making the extent of the indulgence they may be inclined to afford us hereafter; although that must necessarily be qualified by attention to the prejudices of a numerous portion of the community. It is to be hoped that the apprehension entertained of the introduction of foreign grain, and flour through the Canadas will be found groundless; but it must not be disguised that the deduction of any illicit practices of this description will inevitably ensure the disappointment of our hopes. As respects the details of this Bill, (seventh and eighth George the Fourth, chapter fifty seven,) they will be found to correspond as far as practicable with the recommendation of the Committee. The difficulties attending the certificate of origin being disposed of by the permission accorded to the *shipper* to sign the required declaration (clause six.)

Second. The expected encouragement of the Lumber Trade by the reduction of duties as proposed by the shipping interest, was dependant on the success of the representation of that body, the failure of their efforts in Parliament has suspended for the present any alteration in our favor; but I cannot but hope that a temperate and reasonable course will eventually produce some arrangement calculated to give us a more decided reference in the British Market. The Committee will not fail to perceive that the principle which pervades the present enactments, is to give the utmost possible facility to the carrying trade in the bulky commodities furnished by the neighbouring States: it is evident that the imposition of duties on imports under the name of protective duties, is quite incompatible with this freedom of commerce, and as the duties collected in the Province must add to the price of commodity, they virtually amount to a tax on the British Consumer, and tend to diminish the amount of freight and the consumption of the article in Great Britain. In providing for the extension of this trade the navigation of the Saint Lawrence above Quebec by Foreign shipping is most scrupulously guarded against.

The details of the Act (sixth and seventh George the Fourth, chapter fifty six,) connected with this subject, are contained in the thirty second and thirty third clauses, and partially as respects staves in the twenty first

Messieurs,

Je demande la liberté d'annoncer au Comité de Commerce mon retour de Londres, d'où je suis parti environ quinze jours après la clôture de la dernière session. J'envoie ci-inclus pour l'information du Comité deux actes du Parlement, 7 et 8 Geo. IV, chap. 56 et 57, qui renferment le résultat des représentations faites au gouvernement de Sa Majesté, de la part du corps mercantile des Canadas; et je profite de cette occasion pour présenter quelques remarques, par suite de vos instructions, pour expliquer l'opération que doivent avoir les dispositions contenues dans ces bills sur le commerce des Provinces, aussi bien que sur nos relations commerciales avec la mère-patrie et avec les Indes-Occidentales.

Premier :—Le premier objet sur lequel a été appelée mon attention par les instructions préparées dans le Bas-Canada, a été l'introduction du grain et de la farine des Provinces dans le Royaume-Uni. On maintenait fortement que des motifs de politique et de justice devaient déterminer le gouvernement à admettre ces articles sans payer aucun droit, au moins qu'on pouvait attendre cette indulgence pour une certaine quantité à laquelle l'introduction serait limitée. Ceux qui ont suivi les progrès de la grande mesure du Bill des Céréales verront sans surprize, que la vive espérance d'un arrangement favorable et permanent ne se soit pas réalisée, et à cet égard il suffira d'observer, que la mesure temporaire actuelle, considérée avec les circonstances sous lesquelles elle a été passée, doit être reçue comme une indice des dispositions favorables où sont les ministres de Sa Majesté; mais non pas comme la mesure de l'indulgence qu'ils sont disposés à nous donner ci-après; mais dans cela il faut faire entrer pour quelque chose les préjugés d'une portion considérable de la société. Il est à espérer qu'on verra l'illusion qu'il y a dans les craintes que l'on conçoit à l'égard de l'introduction du grain et de la fleur étrangère par les Canadas; mais il ne faut pas se cacher que la découverte de toutes pratiques illicites de cette nature frustrera inévitablement toutes nos espérances. A l'égard des détails de ce bill (7 et 8 Geo IV, chap 57) on verra qu'ils correspondent, autant qu'il est possible avec les recommandations du Comité. Les difficultés qui accompagnaient le certificat d'origine ont disparu par la permission accordée à l'*embarqueur* de signer la déclaration requise. (6e. clause.)

Deuxième :—L'encouragement qu'on attendait dans le commerce du bois par la réduction des droits, telle que proposée par les commercans, dépendait du succès de la représentation de ce corps. Leurs efforts ayant échoué en Parlement, cela suspend pour le moment toute altération en notre faveur; mais je ne puis m'empêcher d'espérer qu'avec de la modération et de la raison, on amènera quelque arrangement propre à nous donner une préférence décidée sur le marché d'*Angleterre*. Le Comité ne pourra s'empêcher de remarquer que le principe qui domine dans les dispositions actuelles, est de donner toutes les facilités possibles des grosses denrées qui viennent des états voisins: il est évident que l'imposition de droits sur les importations, sous le nom de droits *protectifs*, est tout-à-fait incompatible avec cette liberté de commerce; et comme les droits imposés dans la Province doivent augmenter le prix des denrées, ils équivaldraient virtuellement à une taxe sur le consommateur anglais, et tendraient à diminuer la quantité du frêt et la consommation de l'article dans la Grande-Bretagne. Tout en pourvoyant à étendre ce commerce, on a eu soin de prévenir la navigation du Saint-Laurent au-dessus de Québec par des vaisseaux étrangers.

Les détails de l'Acte (6 et 7 Geo. IV, chap. 56) liés à ce sujet se trouvent dans les 32e et 33e clauses, et en partie en ce qui regarde les douves dans la 21e clause. Il est pourvu que toute espèce de bois, excepté

9th Janv.

first clause. By these it is provided that every description of lumber excepting deals may be imported free of duty, and shall be considered as the produce of the Canadas, when exported from Canada to Great Britain or her possessions in America. The import of deals without duty can only take place in Bond; but with the view of providing for the supply of the West Indies, they will only be subject to one fourth the Foreign duties on importation into those Islands, being liable as at present to pay the Foreign duty on importation into Great Britain. It will be observed that in the view of encouraging the transit of a particular kind of staves through the Saint Lawrence, the twenty first clause imposes the heavy Foreign duty on American staves, which at present pay only one third of the ordinary duties.

Third, On this head the commerce in Pot and Pearl Ashes, the arrangement will be found to be in accordance with the reasoning of the Committee, though not absolutely according to their recommendation. The thirty third clause permits the import of ashes duty free, and the Act of one thousand eight hundred and twenty six already provides for their reception in Great Britain as Canadian produce.

Fourth, In respect to salt provisions, the Committee will observe, that as foreign Beef and Pork were intended to be allowed to enter into Great Britain upon payment of twelve shillings per hundred weight duty, there could be no reason for excluding the Canadas from a similar advantage: the twenty eighth clause consequently repeals the prohibition of the import of those articles, so that there they may now be introduced into Canada for warehousing for export to any Country, At the same time as the preparation of salted provisions may be advantageous to the Provinces, the import of fresh Beef and Pork is permitted by the thirty third clause.

The Committee's recommendation in respect to the duty on Whisky will be found embodied in the Table of new Duties in clause twenty nine.

As to imports through the United States, the Committee will perceive that the Table of Duties in clause twenty nine, imposes thirty per cent on foreign Silk Manufactures and twenty per Cent on foreign Cottons, and the twenty fifth, twenty sixth and twenty seventh clauses make sufficient provision for preventing the introduction of foreign commodities in the manner complained of; and the thirty fourth clause provides against a misconception which has prevailed in both Provinces in respect to the collection of *Provincial Duties* on some foreign productions.

The Committee will find that the concessions in favour of Upper Canada in respect to horses, &c. of travellers, cordwood, &c. are now extended to this Province by the provisions of the thirty third clause, which also includes raw hides and tallow as suggested by the Committee.

The thirty sixth clause contains the authority for entering commodities at the frontier Ports previous to being *warehoused* in Canada, and the thirty fifth provides for the erection of Montreal and Kingston into free Ports, limited in respect to communication by sea, to British vessels; the thirty seventh clause allows the removal of goods from Montreal to Quebec (being Ports in the same possession) the warehousing already permitting the removal of articles from *one Province to another*.

In respect to the anticipated difficulty from the construction given by Mr. Woodhouse on the Act sixth George the Fourth, chapter one hundred and fifteen, respecting the admeasurement of timber, it is evident that the change in principle renders any alteration unnecessary as regards Canada: and the construction is altogether favourable to us as regards the Duties to be levied on foreign deals in other Ports.

cepté les madriers, pourront être exportés sans payer de droits, et seront considérés comme produit des Canadas lorsqu'ils seront exportés du Canada dans la Grande-Bretagne ou dans ses possessions en Amérique. L'importation de madriers sans payer de droits ne pourra se faire que par entrepôt transit; mais dans la vue de pourvoir à l'approvisionnement des In des Occidentales, ils ne seront sujets qu'au quart des droits étrangers sur l'importation dans ces îles, étant sujets à présent à payer le droit étranger sur l'importation dans la Grande-Bretagne. On observera que dans la vue d'encourager le transit d'une espèce particulière de douves par le Saint Laurent, la 21e clause impose le fort droit étranger sur les douves américaines, qui à présent ne payent qu'un tiers des droits ordinaires.

Troisième :— Sous ce chapitre, le commerce en potasse et perlasse, on verra que l'arrangement est conforme au raisonnement du Comité, quoique différant un peu de ses recommandations. La 3e. clause permet l'importation des alkalis francs de droit, et l'acte de 1826 pourvoit déjà à leur réception dans la Grande-Bretagne, comme produit du Canada.

Quatrième :— A l'égard des provisions salées, le Comité observera que comme on se proposait d'admettre dans la Grande-Bretagne le bœuf et le lard étrangers, en payant un droit de 12s. par quintal, il n'y avait aucune raison pour priver les Canadas du même avantage; la 28e. clause conséquemment révoque la prohibition de l'importation de ces articles, de sorte que maintenant ils peuvent être introduits dans le Canada pour entrepôt transit pour être exportés dans aucun pays. En même tems comme la préparation des provisions salées peut être avantageuse aux provinces, la 33e. clause permet l'importation du bœuf et du lard frais.

On trouvera incorporée dans la table des nouveaux droits, dans la 29e. clause, la recommandation du Comité à l'égard du droit sur le whiskey.

Quant aux importations par les États-Unis, le Comité verra que la table des droits dans la clause 29e. impose 30 par cent sur les soieries de manufacture étrangères, et 20 par cent sur les cotons étrangers; et les 25e., 26. et 27e. clauses pourvoient suffisamment à prévenir l'introduction des denrées étrangers de la manière dont on se plaint, et la 34e. clause renferme des dispositions contre les abus qui ont existé dans les deux Provinces à l'égard de la perception de droits provinciaux sur quelques produits étrangers.

Le Comité trouvera que les concessions en faveur du Haut-Canada à l'égard des chevaux et des voyageurs, du bois de corde, etc., sont maintenant étendues à cette Province, par les dispositions de la 33e. clause, qui renferme aussi les peaux crues et le suif, selon que le Comité l'a suggéré.

La 36e. clause autorise l'entrée des denrées aux ports de la frontière, avant d'être mis en dépôt transit en Canada; la 35e. pourvoit à l'établissement de Kingston et de Montréal, comme ports libres, limités cependant, quant à la communication par mer, aux vaisseaux anglais, la 37e. clause permet le transport des marchandises de Montréal à Québec, (étant des ports situés dans la même possession,) les lois de dépôt permettant déjà le transport des effets d'une Province à l'autre.

A l'égard de la difficulté qu'on redoutait de la construction donnée par Mr. Woodhouse à la partie de l'Acte 6e. Geo. IV, chap. 115, relative au mesurage des bois, il est évident que le changement de principe rend inutile aucune altération à l'égard du Canada: et cette interprétation nous est tout-à-fait favorable à l'égard des droits qui doivent être prélevés sur les madriers étrangers à d'autres ports. J'ai

9th Jany.

I have now gone through the principal subjects recommended to my attention by the Committee, and I trust that the arrangements contained in these Acts will prove that none of their injunctions have been lost sight of, and if all the details suggested by the Committee have not been adopted, it must be attributed to the principles on which they were founded, being incompatible with the more extensive and comprehensive view which His Majesty's Ministers have taken of these subjects. I beg leave to assure the Committee that no effort has been spared to accomplish their wishes to the fullest extent; and every acknowledgment is due to the Gentlemen in London connected with the Province for their cordial support and the zeal they have evinced for the promotion of our interests.

In conclusion, I feel myself at liberty to repeat, that the indulgent reception and mature consideration of our representations by His Majesty's Ministers confirm the assurance of their earnest desire to promote the commercial prosperity and general welfare of these highly favoured Provinces.

I shall be happy to afford any further explanation that may be deemed necessary, as I shall at all times be ready to contribute to the extent of my ability to forward the views and the interests of the Commercial community of Lower Canada.

I have the honor to be,

Gentlemen,

Your very sincere and humble Servant,
(Signed) W. B. FELTON,

Wm. Finlay and Geo. Auldjo, Esq.
Chairmen of the Committee of Trade,
Quebec and Montreal.

Your Committee have examined on this Petition William Finlay, Esquire, Chairman of the Committee of Trade at Quebec, whose evidence is hereunto annexed. They have also had before them the Instructions given to the Agent sent to England by the Trade in one thousand eight hundred and twenty seven, and his Correspondence with the Quebec Committee, which last is also annexed to this Report.

It appears to your Committee that a few Merchants of Quebec and Montreal disbursed about eight hundred and fifty pounds for the expenses of this Mission.

The Journal of the House of the twenty second March one thousand eight hundred and twenty six, contains a Petition from the Merchants of Montreal for a Commercial Agent, which was reported against on the twenty third of March; and also a Message from the Governor for the appointment of an Agent, which was not acted upon on account of the lateness of the Session; and it does not appear to have been again taken up in the Session of one thousand eight hundred and twenty seven: The Agent sent by the Merchants seems to have been in some degree a substitute for the one proposed to be appointed by public authority.

Your Committee have no doubt but that the Merchants on sending this Agent to England, were actuated by a desire of promoting the interests of the Trade which is so intimately connected with the general interests of the Province. It appears, however, that the measures relating to the Corn Trade had been decided upon by Ministers before the arrival of the Agent, and that no very important alteration on the Bills before Parliament affecting the Trade took place during the Session, although the mission was no doubt useful in calling the attention of Ministers to various subjects favourable to the Trade, and which had already been urged in the Address of the House of the twenty third March one thousand eight hundred and twenty six.

J'ai maintenant passé par-dessus les principaux sujets recommandés à mon attention par le Comité, et j'espère que les arrangements contenus dans ces actes, prouveront que je n'ai perdu de vue aucune de ses injonctions; et si tous les détails suggérés par le Comité n'ont pas été adoptés, on doit l'attribuer aux principes sur lesquels ils étaient fondés et qui étaient incompatibles avec les points de vues plus vastes et plus étendus sous lesquels les ministres de Sa Majesté ont envisagé ces sujets. Je demande d'assurer le Comité qu'il n'a été épargné de ma part aucun effort pour remplir ses désirs dans toute leur étendue; et toute reconnaissance est due aux messieurs de Londres liés avec la Province pour le zèle et le support cordial qu'ils ont montrés pour l'avancement de nos intérêts.

En conclusion, je me sens en liberté de répéter que la réception indulgente et la même considération de nos représentations par les Ministres de Sa Majesté, confirment l'assurance qu'ils ont donnée de leur désir le plus ardent d'avancer la prospérité commerciale et le bien-être général de ces Provinces si favorisées.

Je me ferai un plaisir de donner toutes explications ultérieures qu'on pourra trouver nécessaires, de la même manière que je suis prêt de contribuer de tout ce qui est en moi aux intérêts du corps mercantile du Bas-Canada.

J'ai l'honneur d'être,

Messieurs,

Votre très-sincère et très-humble serviteur,
(Signé) W. B. FELTON,

WM FINLAY et GEO AULDJO, Ecuyers,
Présidens des Bureaux de
Commerce à Québec et Montréal.

Votre Comité a examiné à l'égard de cette Pétition William Finlay, Ecuyer, Président du Comité de Commerce à Québec, dont le témoignage est ci-annexé. Il a aussi eu par devers lui les instructions données à l'agent envoyé en Angleterre par le corps des commerçans en mil huit cent vingt sept, et sa correspondance avec le Comité de Québec, ce qui est aussi annexé à ce Rapport.

Il appert à votre Comité qu'un petit nombre de marchands de Québec et de Montréal ont déboursé huit cent cinquante livres pour payer les frais de cette mission.

Le Journal de la Chambre du vingt-deux Mars mil huit cent vingt-six contient une Pétition de la part des Marchands de Montréal, demandant un Agent mercantile, sur laquelle il fut fait un rapport défavorable le vingt-trois Mars; et aussi un message du Gouverneur pour la nomination d'un Agent, sur lequel il ne fut pas procédé, à cause que la session se trouvait trop avancée; et il ne paraît pas que le sujet ait été repris pendant la session de mil huit cent vingt-sept. L'agent qu'ont envoyé les marchands paraît avoir été une espèce de substitut de celui qu'on voulait faire nommer par l'autorité publique.

Votre Comité ne doute nullement que les marchands en envoyant cet agent en Angleterre, n'aient été mus par le désir d'avancer les intérêts du commerce, qui sont si intimement liés avec ceux de toute la province. Il paraît cependant que les ministres avaient décidé les mesures relatives aux céréales avant l'arrivée de l'agent, et qu'il ne s'est fait aucun arrangement essentiel pendant cette session aux bills qui étaient devant le parlement pour régler le commerce; mais la mission a fait beaucoup de bien, en ce qu'elle a appelé l'attention des ministres sur divers sujets utiles au commerce, et sur lesquels la Chambre avait déjà insisté dans son adresse du vingt-trois Mars mil huit cent vingt-six.

Appendix
(R.R.)
9th Jany.

Your Committee are persuaded, that while the interests of the Colony can be so seriously affected by public measures in England, and while there is no authorized Agent for the Province resident there, different interests in the Colony will be in some degree compelled to send Agents to England. All these interests will be more or less allied to the general interest; but your Committee are of opinion that it would be imprudent to give those particularly concerned to understand that there is a probability of the expenses being borne by the Country at large.

It is indeed of public notoriety that there are at this moment a number of persons, who, on grounds similar to the present Petition, might prefer claims to a reimbursement of the expenses of such Agents.

Your Committee upon the whole cannot recommend that the prayer of the Petitioners be granted.

Ordered, That the Chairman do leave the Chair and report.

All which is nevertheless humbly submitted.

J. NEILSON,
Chairman.

HOUSE OF ASSEMBLY,

Wednesday, 7th January 1829.

Appendix
(R.R.R.)
9th Jany.

RESOLVED, That the Petition of the Curate, Church Wardens and Elders of the Parish of St. Louis de Lotbinière, together with the Message of His Excellency the Administrator of the Government, received this day, and relating to the same object, be referred to a Committee of Five Members, to examine the same and to report thereon, from time to time, with power to send for persons, papers and records.

Ordered, That Mr. Bourdages, Mr. Laterrière, Mr. Vallières, Mr. Proulx and Mr. Borgia, do compose the said Committee.

Ordered, That the Petition of the Inhabitants of Saint Philippe, County of Huntingdon, presented to this House on the twelfth of December last, be referred to the said Committee.

Wm. B. LINDSAY,
Dy. Clk. H. of Ass'y.

HOUSE OF ASSEMBLY,

COMMITTEE ROOM,

Thursday, 8th January 1829.

In Committee on the Message of His Excellency the Administrator of the Government, and on the Petition from the Curate and others of the Parish of Saint Louis de Lotbinière, relating to the distress of the Inhabitants of the said Parish.

PRESENT:—Messrs. Bourdages, Borgia, Vallières, Proulx and Laterrière.

Mr. Bourdages called to the Chair.

Read the Order of Reference.

Read the Message and Petition referred to the Committee.

The Rev. J. B. Davelui appeared before your Committee, and gave the following information:—

I am Curate of the Parish of Saint Louis de Lotbinière

9 Jany.

Votre Comité est persuadé que tant que les intérêts de cette Colonie seront si fortement affectés par les mesures publiques d'Angleterre, et tant qu'il n'y aura pas résidant en ce pays un Agent autorisé pour la Province, différentes classes d'intéressés en cette Colonie seront en quelque sorte forcés d'envoyer des Agens en Angleterre. Mais votre Comité est d'opinion qu'il serait imprudent de donner à entendre à ces différentes classes qu'elles peuvent espérer que le pays entier se chargera des dépenses.

Il y a en effet, en ce moment, et cela est notoire, un grand nombre de personnes qui, avec tout autant de raison que les Pétitionnaires, pourraient mettre en avant des réclamations et demander le remboursement des frais encourus pour de tels Agens.

Le tout considéré, votre Comité ne peut recommander d'accéder à la demande des Pétitionnaires.

Ordonné, Que le Président laisse le Fauteuil et fasse rapport.

Le tout néanmoins humblement soumis.

J. NEILSON,
Président.

CHAMBRE D'ASSEMBLÉE,

Mercredi, 7 janvier 1829.

RESOLU, Que la pétition du curé, des marguilliers et notables de la paroisse de Saint-Louis de Lotbinière, ensemble le message de Son Excellence l'administrateur du gouvernement, reçu ce jour, relativement au même objet, soient référés à un comité de cinq membres pour les examiner et faire rapport sur iceux de temps à autre, avec pouvoir d'envoyer quérir personnes, papiers et records.

Ordonné, Que M. Bourdages, M. Laterrière, M. Vallières, M. Proulx et M. Borgia composent le dit Comité.

Ordonné, Que la pétition des habitans de Saint Philippe, comté de Huntingdon, présentée à cette chambre le douzième décembre dernier, soit référée au dit Comité.

J. ANT. BOUTHILLIER,

Greffr. Asst.

CHAMBRE D'ASSEMBLÉE,

CHAMBRE DE COMITÉ,

Jeudi, 8 janvier 1829.

En comité sur le message de Son Excellence l'administrateur du gouvernement, et la pétition du curé et autres de la paroisse de Saint-Louis de Lotbinière, relativement à la détresse des habitans de la dite paroisse.

PRESENS:—MM. Bourdages, Borgia, Vallières, Proulx et Laterrière.

M. Bourdages appelé au fauteuil.

Lu l'ordre de référence.

Lu le message et la pétition référés à ce comité.

Le Révd. Messire J. B. Davelui est comparu devant votre comité et l'a informé comme suit:—

Je suis curé de la paroisse de Saint-Louis de Lotbinière,

nière,

Appendix
(R. R. R.)

9th Jan'y.

de Lotbinière, and have resided there since the month of September one thousand eight hundred and twenty-two. I received annually as tithes (*dimes*) between five and six hundred minots of wheat on an average, and nearly the same quantity of oats, with about one hundred minots of pease, about twenty minots of barley, and fifteen or twenty minots of Indian corn. It is probable I shall not receive this year more than twenty five or thirty minots of wheat, and perhaps one hundred minots of oats. The Parish may contain about three hundred landholders who are farmers. From one thousand eight hundred and twenty-four to one thousand eight hundred and twenty-seven, the crops constantly diminished, and those of the present year appear to be the forerunner of a sort of famine, according to the oldest inhabitants, who confess they have never seen such alarming indications of distress among the greater part of the poorer class of farmers. I know no means by which these unfortunate families can procure assistance by their own endeavours. The number of landholders cultivating their lands who have not this year reaped sufficient grain for their subsistence, amounts to about eighty-three families forming five hundred and forty-six persons, who will have within themselves no means of subsistence before the beginning of July next. There are thirty-four heads of families, which families, forming in the whole two hundred and fifty-nine persons, have at this time no means of subsistence, and forty-nine families, forming in the whole two hundred and eighty-seven persons, of whom the greater part have not the means of subsistence for more than a month, some for two months, others for three months, and a very small number for four months, reckoning from the first of January to the first of July, as appears by the Statement now produced, (marked with the Letter A, and with the initials of the Charman of this Committee) and drawn up by Louis Legendre, Esquire. From the public examination this document has undergone, I believe it to be correct. From the statements made to me personally by several of these poor persons in the month of November last, the failure of the harvest of the present year, is the effect of the will of God, and does not arise from the fault of those by whom the lands were cultivated. In consequence of the letter from the Church Wardens and divers of the principal inhabitants of the Parish, dated the fourteenth of December one thousand eight hundred and twenty-eight, (the said letter marked B, and now produced) I gave notice from the pulpit on Sunday the twenty-first of December last, that a general meeting of the parishioners would be held on the same day after divine service, in the public room of the Parish, to deliberate on the means of relieving the distressed farmers, as well as and besides the ordinary poor. At this meeting, which was held according to the notice I had given, eight of the principal inhabitants were appointed to enquire into the state of those persons most in distress; and on the twenty-eighth of the said month, I called a meeting of the persons composing the *Fabrique*, at which it was resolved, that the said persons should address the Bishop of Quebec for the purpose of obtaining his permission to employ the amount of the Christmas offerings which were then about to be made to relieve such of the poor as had no property susceptible of cultivation, and the revenue of the *Fabrique* for the relief of the parishioners who were landholders suffering from the failure of the late harvest; and that afterwards the said members of the *Fabrique* should, by petition to the Legislature, solicit a loan of one thousand pounds currency, and this was unanimously agreed to, as appears, *Firstly*: By the permission of His Greatness the Lord Bishop of Quebec, written at the foot of the said petition presented to him, and now produced to the Committee (marked with

nière, et j'y réside depuis le mois de septembre mil huit cent vingt-deux. Je reçois en dîme de bled entre cinq à six cens minots annuellement, l'une portant l'autre, et je reçois presque autant en avoine, et environ cent minots de pois; aussi, environ vingt à trente minots d'orge, et quinze à vingt minots de bled sarazin. Il est probable que cette année je ne percevrai pas plus de vingt cinq à trente minots de bled, et peut-être cent minots d'avoine. La paroisse peut contenir trois cens propriétaires, cultivant des terres. Depuis mil huit cent vingt-quatre à mil huit cent vingt-sept, la récolte a toujours diminué, et celle de la présente année annonce une espèce de famine, au dire des plus anciens, qui confessent n'avoir jamais vu des apparences aussi alarmantes de misère pour la plupart des cultivateurs les plus indigens. Je ne connais aucun moyen à ces infortunées familles de se procurer par elles-mêmes aucuns soulagemens. Le nombre de propriétaires cultivant leurs terres, qui cette année n'ont point recueilli suffisamment de grains pour leur subsistance, est de quatre-vingt-trois familles, formant cinq cent quarante-six personnes, qui se trouvent sans moyens de subsister par elles-mêmes, jusqu'au commencement de juillet prochain. Il se trouvent trente-quatre chefs de familles formant deux cent cinquante-neuf personnes, qui n'ont de ce jour aucun moyens de subsistance, et quarante-neuf familles formant deux cent quatre vingt-sept personnes qui n'ont de moyen de subsister, la plus grande partie que pour un mois; quelques-uns pour deux mois; d'autres pour trois mois, et la plus petite partie que pour quatre mois, à compter du premier janvier jusqu'au premier juillet, ainsi qu'il appert par le tableau maintenant produit (sous la Cotte A. et paraphé par le président de ce comité) et dressé par Louis Legendre, écuyer; et d'après l'examen public qui en a été fait, je le crois correct. D'après l'exposition que plusieurs de ces indigens m'ont faite à moi-même dès le mois de novembre dernier, le manque de moissons de la présente année dépend de la volonté de Dieu, et n'est pas de la faute des cultivateurs. En conséquence de la lettre du quatorzième décembre mil huit cent vingt-huit, de la part des marguilliers et de divers notables de la paroisse, (la dite lettre cotté B. est maintenant produite) j'ai convoqué dimanche le vingt-et-un décembre dernier, au prône de la messe, pour être tenue à l'issue de la dite messe, une assemblée générale des paroissiens, dans la salle publique de la paroisse, afin de délibérer sur les moyens de soulager les cultivateurs en détresse, et en outre les pauvres. A cette assemblée tenue suivant l'avis que je venais d'en donner, huit des plus notables ont été nommés pour s'enquérir de l'état de la détresse des plus indigens; et le vingt-huit du dit mois, j'ai convoqué une assemblée des fabriciens, où il a été résolu que les dits fabriciens s'adresseraient à Monseigneur de Québec pour obtenir la permission d'employer le produit de la quête de l'Enfant-Jésus, qui devait se faire prochainement, pour le soutien des indigens sans propriétés susceptibles de culture, et le revenu de la fabrique pour secourir les paroissiens propriétaires qui sont en détresse par la mauvaise récolte; et qu'alors les dits fabriciens s'adresseraient à la législature pour solliciter un emprunt de mille livres courant; ce qui a été unanimement accordé, ainsi qu'il appert; Premièrement par la permission de sa grandeur Monseigneur l'évêque de Québec, au bas de la susdite requête à lui présentée, et à l'instant produite au comité (sous la cotte C. et paraphée par le président.); Secondement par acte des dits fabriciens assemblés, constituant pour leurs députés et procureurs, aux fins de présenter les dites pétitions, tant à Monseigneur l'évêque qu'à la législature, Messire J. B. Daveli, curé du lieu, Louis Legendre, T. N. Lemay, marguillier en charge d'alors, et David Toussignan, écuyers, copie duquel acte je transmettrai au comité d'ici à mardi prochain.

Appendice

with the letter C, and the initials of the Chairman.)
Secondly :—By the *acte* of the said members of the *Fabrique* at a meeting thereof, constituting as their attorneys and agents, for the purpose of presenting the said petitions, as well that to the Lord Bishop as that to the Legislature, the Reverend J. B. Davelui, Rector of the place, Louis Legendre, T. N. Lemay, acting Church Warden for the time, and David Toussignan, Esquires, a copy of which *acte* I shall transmit to the Committee between the present time and Tuesday next. I am willing, as being one of the above-mentioned agents, to become for my share security for the payment of such sum as the Legislature may advance for the purpose of preventing the evils, which I can assure the Committee must result from the misery and wretchedness to which so great a number of my parishioners are exposed; it would be desirable that a small sum should be promptly granted to relieve the wants under which a number of the poor are at this moment suffering. I have conjointly with the other agents before mentioned, made many efforts to obtain a loan of one thousand pounds in the City of Quebec for the said purposes, offering all the security that could be desired, but on every occasion we have experienced a formal refusal.

As Rector, and as first Church Warden, I am, with the other Church Wardens, prepared to sign any *acte* or obligation for the said Sum for the said purposes, to hypothecate the Property and revenue of the *Fabrique* as security for the payment of the said sum in six years, and this in consequence of the before mentioned permission from the Lord Bishop of Quebec. And in case any doubt should arise respecting the legality of such hypothecation of the revenues of the *Fabrique*, I am willing (so strong is my desire to bear my part in relieving my unfortunate and indigent parishioners) to become security for the payment of one-fourth of the said sum, provided the Legislature will give the securities an *hypothèque* on the property of those to whom any part of the said sum shall have been advanced. The yearly revenue of the *Fabrique* amounts to one hundred and twenty-five pounds currency in ordinary years. The general expense amounts to about twenty-five pounds in ordinary years. There are arrears now due to the *Fabrique* to the amount of about three hundred pounds.

Louis Legendre, Esquire, Landholder and Store-keeper in the Parish of Lotbinière, then appeared before your Committee, and gave the following information :—I have resided at Lotbinière for the last thirty-eight years. I am one of the elder Church Wardens of the *Fabrique*. The lands in Lotbinière generally bear a sufficient crop of grain,—they are of very fair quality and generally speaking well tilled. Since the year one thousand eight hundred and twenty-four, there have been many bad harvests, particularly that of one thousand eight hundred and twenty-seven; and that of one thousand eight hundred and twenty-eight completely failed. About eighty-three families, the number of persons composing which, is from five hundred and forty to five hundred and fifty, have not raised crops sufficient for the support of their families. About thirty-five of these families, consisting of two hundred and fifty-nine persons, are at this time without any means of subsistence, and of the other forty-nine families, consisting of two hundred and eighty-seven persons, there are fifteen families which have not sufficient provisions for five months, twelve which have not sufficient for four months, seventeen for three months, and four for two months, and is shewn in the statement I drew up now before the Committee, under the mark A, and which I certify to be correct and true. The hay crops were generally good, but the families above mentioned have not much land in meadow, and are

Je suis disposé, comme un des députés sus-mentionnés, à me porter pour ma part garant et caution pour sûreté du remboursement de telle somme, que la législature pourrait avancer pour prévenir les maux, que j'assure devoir résulter de l'état de misère auquel sont exposés un si grand nombre de mes paroissiens; il serait à désirer qu'une modique somme fut promptement accordée pour subvenir aux maux que souffre dès à présent un nombre d'indigens sus-mentionnés. J'ai conjointement avec les autres députés susdits, fait plusieurs tentatives dans la cité de Québec, pour pouvoir obtenir l'emprunt de mille louis pour les fins susdites, en offrant toutes sûretés à désirer, et nous avons éprouvé partout un refus formel.

Comme Curé de la Paroisse et premier Marguillier, je suis conjointement avec les autres Marguilliers, prêt à signer tous actes d'emprunt de la dite somme pour les fins susdites, à obliger et hypothéquer les biens et revenus de la fabrique pour garant du dit emprunt, remboursable en six ans; et ce d'après l'autorisation de Monseigneur de Québec ci-dessus citée; et dans le cas où il s'éleverait quelques difficultés sur la légalité d'affecter et hypothéquer les revenus de la fabrique, je consens, tant je désire participer au soulagement de ces infortunés indigens mes paroissiens, à me porter personnellement garant et caution pour un quart de la dite somme, pourvu que la Législature accorde aux garants et cautions une hypothèque sur les biens de ceux à qui telle partie de cette somme aura été avancée aux fins susdites. Le revenu annuel de la fabrique se monte à cent vingt-cinq livres courant, année commune. La dépense ordinaire est d'environ vingt-cinq louis, année commune. Il est dû des arrérages à la fabrique d'environ trois cents louis.

Louis Legendre, Ecuyer, Propriétaire et Marchand de la Paroisse de Lotbinière, a ensuite paru devant votre Comité, et a donné l'information suivante : Je réside à Lotbinière depuis trente-huit ans; je suis un ancien marguillier de la dite Fabrique. Les terres de Lotbinière produisent généralement assez de grains; elles sont d'une assez bonne qualité, et sont généralement bien cultivées. Depuis l'année mil huit cent vingt-quatre, il y a eu plusieurs récoltes mauvaises, particulièrement celle de mil huit cent vingt-sept, et celle de mil huit cent vingt-huit a manqué totalement. Environ quatrevingt-trois familles qui forment un nombre de cinq cent quarante à cinq cent cinquante personnes, n'ont pas suffisamment recueilli pour la subsistance de leurs familles. Environ trente-cinq de ces familles, composées de deux cent cinquante-neuf personnes, sont à présent sans aucuns moyens de subsistance, et des quarante-neuf autres familles, composées de deux cent quatrevingt-sept personnes, il y a quinze familles qui manquent de provisions pour cinq mois, douze qui en manquent pour quatre mois, dix-sept pour trois mois et quatre pour deux mois, ainsi qu'il est constaté par le tableau par moi dressé, produit sous la cote A. que je certifie correct et véritable. La récolte a été généralement bonne en foin, mais les familles en question n'ont pas beaucoup de prairies et manquent aussi de fourrage; la plus grande partie ont quelques pièces d'animaux, mais ils en ont tué et vendu le plus

9th Jan'y.

are in want of forage also. The greater number have some cattle, of which however they have killed or sold the greater part for their subsistence. The price of hay is from six to eight dollars. The parishioners alarmed at the state of real distress in which their fellow parishioners were, desired (by the Letter marked B, also before the Committee) that a general meeting might be held to consider the means of relieving the great number of families in such distress. The meeting unanimously resolved to appoint eight persons to make enquiries for the purpose of ascertaining the number of persons so suffering, and the Report of the said eight persons having been communicated to a meeting of the members of the *Fabrique* called for this purpose, it was unanimously resolved at the said meeting that the several Reports of those persons should be united in one statement, such as that filed; and after this a general meeting of the whole Parish was called and held on the first of January, to sign a petition to the Lord Bishop of Quebec, for the purpose of obtaining his authority for employing the Christmas offerings which were then about to be made, to the relief of indigent poor who had no land under cultivation, and also his authority for employing the yearly Revenue of the *Fabrique* for the relief of indigent landholders, whose grain crops had proved insufficient for the support of their families; and also for the purpose of signing a petition to the Legislature, praying for the loan of one thousand pounds currency to provide for the relief of the said distressed families, to be repaid out of the revenues of the *Fabrique*. I am ready to sign any *acte* binding me to the payment of one-fourth part of the said sum, provided the Legislature will give the joint securities for the payment thereof a privileged *hypothèque* on the property of those to whom the money shall have been advanced, and provided also that the yearly revenues of the *Fabrique* be given up to the said securities until the whole sum shall have been paid; notwithstanding any priority of the *hypothèque* which I might have on the property of the said debtors; and in case any doubts should arise concerning the legality of such hypothecation of the revenues of the *Fabrique* for the repayment of the said sum, I offer to sign as an individual, and in my own private name as such, for one-fourth, or even for the whole of the said sum, provided the Legislature will give me a privileged *hypothèque* on all the property of those to whom any part of the said sum may have been advanced. I know personally that every means has been taken, as well by several individuals as by Mr. Noël and myself, for the relief of the growing wretchedness of those families, by advancing them money to buy flour, vegetables, &c., and this on account of work to be afterwards performed; and these advances are now lost by the inability of those to whom they had been made, to perform work to the amount of the said advances. If a very moderate sum be not promptly advanced to a certain number of persons, they will be unable to bear the weight of their present wretchedness, and will be exposed to certain death. The *Fabrique* have now no money in their hands, but there are about three hundred pounds due as arrears. The yearly revenue of the *Fabrique* amounts in ordinary years to about one hundred and thirty pounds, and the expenses to about twenty-five or thirty pounds.

François Xavier Lemai, Farmer in the Parish of St. Louis de Lotbinière, acting Church Warden for the last year, and *David Noël Toussignan*, Farmer, Storekeeper, and Captain of Militia, appeared separately before Your Committee, and after having heard and comprehended the information above written, given by Mr. Legendre, and having read the same, they severally confirmed it; and severally and in their own names, offer

grand nombre pour leur subsistance. Le prix du foin est de six à huit piastres. Les Paroissiens alarmés de l'état réel de détresse où étaient leurs co-paroissiens, ont demandé par la lettre, cottée B., aussi produite, une assemblée générale pour aviser aux moyens de soulager un si grand nombre de familles en telle détresse. L'assemblée a unanimement résolu de nommer huit personnes pour faire une enquête pour constater le nombre des familles ainsi souffrantes, et le rapport des dites huit personnes ayant été communiqué à une assemblée de fabriciens pour ce convoquée, la dite assemblée a résolu unanimement que tous les différens rapports de ces personnes fussent réunis dans un seul tableau, tel que celui filé; et ensuite il a été convoqué et tenu une assemblée pour le premier Janvier pour toute la paroisse, pour souscrire une requête à Monseigneur l'Evêque de Québec, pour obtenir son autorisation à employer le produit de la quête de l'Enfant-Jésus, qui devait se faire prochainement, au soulagement des pauvres indigens qui n'avaient aucune culture de terre, et aussi son autorisation pour employer le revenu annuel de la *Fabrique* au soulagement des propriétaires indigens qui n'avaient point recueilli suffisamment de grains pour la subsistance de leurs familles, et aussi pour signer une requête à la Législature pour solliciter un emprunt de mille livres courant, pour subvenir au soulagement des susdites familles en détresse, à rembourser par le revenu de la *Fabrique*. Je suis prêt à souscrire tout acte qui m'obligerait pour un quart au remboursement de la dite somme, pourvu que la Législature donne aux garants conjoints du remboursement d'une hypothèque privilégiée sur les biens des personnes auxquelles il aurait été ainsi avancé, et aussi que le revenu annuel de la *Fabrique* leur fût abandonné jusqu'au parfait paiement, nonobstant la priorité des hypothèques que je pourrais avoir sur les biens des dits débiteurs, et dans le cas où il s'élèverait quelque difficulté sur la légalité d'affecter le revenu de la *Fabrique* pour remboursement de cette somme, je m'offre à souscrire comme individu en mon propre et privé nom, pour un quart et même pour le total de la dite somme, pourvu que la Législature me donne hypothèque privilégiée sur tous les biens de ceux à qui portion de cette somme pourrait être avancée. A ma connaissance, il a été pris tous les moyens possibles, tant par plusieurs individus que par Mr. Noël et moi, pour subvenir à la misère naissante des dites familles, en avances d'argent pour se procurer l'achat des farines, légumes, &c., et ce en avancement et en à compte des ouvrages qu'ils devaient leur faire, lesquelles avances se trouvent maintenant perdues par l'incapacité où se trouvent ceux à qui il a été ainsi avancé de pouvoir se nourrir pour effectuer telle part de leurs entreprises au montant de telles avances. Si une modique somme n'est promptement avancée un certain nombre de personnes sont incapables de soutenir la dureté de leur détresse actuelle, et sont exposées à une mort certaine. La *Fabrique* n'a maintenant aucun argent devant elle, mais il lui est dû environ trois cens louis d'arrérages. Les Revenus actuels de la *Fabrique*, année commune, sont d'environ cent trente louis, et ses dépenses annuelles d'environ vingt-cinq à trente louis.

Par devant le Comité sont comparus séparément *François-Xavier Lemai*, Cultivateur de la dite Paroisse de Saint-Louis de Lotbinière, Marguillier en charge l'année dernière, et *David Noël Toussignan*, Cultivateur, Marchand et Capitaine de Milice; lesquels après avoir entendu et compris toutes les informations ci-dessus données par Mr. Legendre, et lecture leur en ayant donnée, les ont séparément confirmées, et se

offer to submit to all the terms and obligations by and to which Mr. Lemai has offered to bind himself: The said François Xavier Lemai, declaring, however, that he made no advances last autumn to the distressed inhabitants, although he knows perfectly well that such advances were made.

Your Committee convinced of the reality of the evils to which the forty-nine families who have provisions for a few months only, are exposed, have taken into their serious consideration the deplorable condition of the thirty-five families who have not the present means of subsistence, and have thought it right immediately to make a first report of their proceedings, and to recommend to Your Honorable House the adoption of the most expeditious means of affording prompt and effectual relief to those thirty-five families, who since the first of January have experienced and still feel all the ills which arise from a total want of subsistence, by proposing an Address to His Excellency the Administrator, praying that he will be pleased immediately to advance to the Reverend Jean Bte. Davelui, Rector of the Parish of St. Louis de Lotbinière, and the Churchwardens of the said Parish, or to any one of them, on their security and responsibility, a sum not exceeding two hundred pounds, to be immediately applied to the relief of the thirty-five families so distressed as aforesaid, until such time as the House can provide and determine whether it is expedient to advance the remaining part of the sum of one thousand pounds prayed for in the Petition of the agents for the said Parish.

Ordered, That the Chairman do leave the Chair and report.

The whole humbly submitted.

Is. BOURDAGES,
Chairman.

soumettent séparément à toutes les offres et obligations offertes par Mr. Legendre, le dit François-Xavier Lemai, néanmoins déclarant n'avoir fait aucune avance l'automne dernier aux habitans en détresse, mais il a parfaite connaissance que telles avances ont eu lieu.

Votre Comité, convaincu de la réalité des maux auxquels sont exposées les quarante-neuf familles qui n'ont des alimens que pour quelques mois, a pris en sa sérieuse considération l'état déplorable des trente-cinq familles qui se trouvent maintenant sans aucuns moyens de subsistance, et a cru de son devoir de faire immédiatement le premier rapport de ses procédés, et de recommander à cette Honorable Chambre le moyen le plus expéditif de procurer promptement le secours efficace à ces trente-cinq familles, qui depuis le premier Janvier présent éprouvent tous les maux du manque total de subsistance, en proposant une Adresse à Son Excellence l'Administrateur, le suppliant de vouloir avancer immédiatement à Messire Davelui, Curé de la Paroisse de Saint Louis de Lotbinière, et aux Marguilliers de l'Œuvre et Fabrique d'icelle, ou à aucun d'eux, sous leur garantie et responsabilité, une somme n'excédant pas deux cens louis pour être immédiatement employée au soulagement des trente-cinq familles en telle détresse, en attendant que cette Chambre pourvoit et détermine s'il est expédient d'avancer la balance des mille livres courant demandées par la requête des députés de la paroisse.

Ordonné, Que le Président laisse la Chaire et fasse rapport.

Le tout humblement soumis.

Is. BOURDAGES,
Président.

Rev. Mr. Davelui, Priest and Curate of Lotbinière.

Messire Davelui, Prêtre et Curé de Lotbinière.

Sir,

The undersigned respectively request you after the Sermon on Sunday next, to call a General Meeting of the principal Inhabitants of this Parish, for the purpose of deliberating and consulting upon the measures which should be taken for the relief of the poor families of this Parish, who now, and unquestionably will be, until the ensuing harvest, in the most extreme indigence.

Lotbinière, 14th December 1828.

François Xavier Le May, Churchwarden,

Appendix
(R.R.R.)
9th Jany.

To the very Illustrious and very Reverend Bernard Claude Panet, Bishop of Quebec.

May it please your Lordship,

My Lord,

WE, the undersigned, the Priest and Rector of the Parish of St. Louis de Lotbinière, the Senior and Junior Churchwardens of the Œuvre and Fabrique of Lotbinière, and the principal Inhabitants of the said Parish, beg leave to tender to your Lordship our most respectful homage and to represent humbly, That the unfruitfulness of the late seasons, followed as it has been by the unproductiveness of the present, has caused your faithful Petitioners, the Inhabitants of the Parish of Lotbinière in general, and a great number of them more especially, to feel already the effects of the famine with which they must inevitably be visited. The oldest inhabitants declare that so great distress was never before felt in this Parish. Under these alarming circumstances, the Senior and Junior Churchwardens of the said Fabrique, at a Meeting held on Sunday last, (and at which their Rector presided) received and read the Certificate of eight of the principal Inhabitants of the place, who had been appointed at a meeting of the Parishioners held on the preceding Sunday to visit the indigent in person, each in the Concession in which he resided; and the persons so appointed made a faithful report in writing, shewing that the number of indigent families possessing land under cultivation is eighty three; and the number of individuals, including men, women and children five hundred and forty six. In consequence of this Report, my Lord, your Petitioners, hoping to receive your Lordship's express approbation, which they now respectfully solicit, have determined to present a Petition to the Provincial Parliament now sitting, for the purpose of obtaining a Loan of one thousand pounds currency, to be repaid in three years out of the funds of the Fabrique. The distressed Inhabitants receiving Loans are to give a mortgage on their Lands in favor of the Fabrique for the security of the sum lent; and the Loan asked from the Province is prayed for expressly privileged. The Fabrique of Lotbinière stand forward on this occasion and address your Lordship, out of gratitude for the liberality they have experienced on the part of the Parish, and more especially because the Parishioners of Lotbinière have been under the necessity, within the last few years of supporting the expense of building a Church, Sacristy, Rectory, and other appurtenances, the whole being of Stone and erected at great cost; and because the Churchwardens, with the permission of their late Bishop, Monseigneur Plessis, of happy memory, lent out the sum of three hundred pounds currency, one half only of which has been repaid, by reason of the non-occurrence of abundant harvests. The coffers of the Fabrique are empty, owing to the expense incurred in putting up an Altar piece of the value of three hundred pounds currency, executed by Mr. Thomas Baillargé, Sculptor, residing at Quebec. The whole truth being thus set forth, your Petitioners, my Lord, hope to receive your sanction on the subject of the Loan above spoken of, and while they await the honor of your Lordship's answer, will never cease to pray, &c.

Lotbinière 1st January 1829.

(On the back.)

In pursuance of the prayer of the petition within written, we consent that the Fabrique of the Parish of Lotbinière borrow the sum of One thousand pounds currency for the purpose of affording relief to such of the Parishioners as are in distress from the badness of the crops; on condition that a sufficient sum shall be reserved every year by the Fabrique, to meet the ordinary and annual expenses of the Church.

† BERN. CL. Bishop of Quebec,

(C.)

A sa grandeur Monseigneur l'Illustrissime et Révérendissime Bernard Claude Panet, Evêque de Québec.

Qu'il plaise à Votre Grandeur,

Monseigneur,

NOUS soussignés, Prêtre et Curé de la Paroisse de St. Louis de Lotbinière, nous les Marguilliers anciens et nouveaux de l'Œuvre et Fabrique de Lotbinière, avec les notables de la Paroisse, assurons Votre Grandeur de nos hommages les plus respectueux, et lui exposons humblement que la disette des années dernières, à laquelle vient se joindre la stérilité de la présente, a réduit vos fidèles et supplians, les paroissiens de Lotbinière en général, et en particulier un grand nombre d'entr'eux à sentir déjà les effets d'une famine, qui sera pour eux inévitable par la suite; d'après les plus anciens, jamais misère ne s'est déclarée telle en cette Paroisse. Dans ces circonstances alarmantes, les Marguilliers anciens et nouveaux de cette Fabrique, assemblés Dimanche dernier, sous la présidence de leur Curé, ont vu et lu les certificats de huit notables du lieu, chargés par les paroissiens assemblés, le Dimanche précédent, chargés de faire par eux mêmes la visite des indigens, chacun dans sa concession; et les notables ont rapporté, avec fidélité et par écrit, que le nombre des familles dans l'indigence, possédant des terres en culture, était quatre-vingt trois; comprenant, hommes, femmes et enfans, cinq cent quarante six individus. D'après le rapport, Monseigneur, vos requérans se sont écriés, sous l'espoir de l'approbation expresse de Votre Grandeur, qu'ils sollicitent respectueusement, à faire une pétition au Parlement Provincial actuellement assemblé, à l'effet d'obtenir un emprunt de mille Livres courant, à remettre, dans trois ans, sur les revenus de cette Fabrique; l'emprunteur en détresse hypothéquera sa terre, pour assurer aux Fabriciens son emprunt; et l'emprunt demandé à la Province est sollicité expressément privilégié. La Fabrique de Lotbinière se met en avant aux yeux de Votre Grandeur, et par reconnaissance pour les libéralités reçues de la part de la Paroisse, et surtout parce que les Paroissiens de Lotbinière ont été obligés, depuis peu d'années, de supporter les frais de bâtisses d'Eglise, Sacristie, Presbytère et autres dépendances, le tout en pierre et à gros frais; et parce que les Marguilliers ont prêté, avec la permission de feu Monseigneur Plessis, leur Evêque d'heureuse mémoire, la somme de trois cens Livres courant, dont moitié seulement est rentrée au coffre, et ce par faute de moisson abondante, les coffres de la Fabrique sont vuides, à raison de la position d'un retable de la valeur de trois cens livres courant, exécuté par le Sieur Thomas Baillargé, Sculpteur résident à Québec.

Lotbinière, 1er Janvier 1829.

(Au dos.)

En conséquence de la requête des autres parts, nous consentons que la Fabrique de la Paroisse de Lotbinière emprunte la somme de mille livres courant, pour secourir les paroissiens qui sont en détresse par la mauvaise récolte, à condition néanmoins qu'il restera chaque année à la dite Fabrique ce qui est nécessaire pour la dépense ordinaire et annuelle de l'Eglise.

† BERN. CL. Evêque de Quebec.

(D.)

ON the first of January one thousand eight hundred and twenty nine, the late and present Churchwardens being lawfully met in the Vestry, with the principal Inhabitants, pursuant to notice given after the Sermon, saw the proceedings from the twenty first of December to this day, and heard read the Petition addressed to His Lordship the Bishop of Quebec, and the Petition addressed to His Excellency the Administrator and to the two other branches of the Legislature, for a Loan, which Petitions were not only approved and signed by the Churchwardens, but also by the principal Inhabitants of the Parish. The Reverend the Curate was appointed, together with Messrs. Louis Legendre and David Toussignant, Esquires, and François Xavier Le May, Churchwarden, and consented to carry to Quebec the Petitions, to deliver the same according to the respective addresses. These presents being duly read, we have signed,

(Signed) Ls. Legendre, F. X. Le May, David Toussignant, J. B. Augé, Nicolas Leclerc, P. Beaudet, M. Pagé, Jos. Filteau, Amable Paré, J. B. Davelui, Priest and Curate;

EXTRACT of Deliberations from the Register of l'Œuvre et Fabrique of the Parish of Saint Louis de Lotbinière.

ON the twenty eighth day of December one thousand eight hundred and twenty eight, the late and present Churchwardens being lawfully met in the Vestry, pursuant to notice given after the Sermon, for the purpose of adopting measures to relieve the poor and the cultivators of this Parish in distress. unanimously resolved to apply, by Petition, to His Lordship, Bernard Claude Panet, Bishop of Quebec, and requested Mr. Daveluy, their Curate, to draw up the petition upon these deliberations; and further consented, upon being expressly authorized by His Lordship, to obtain a Loan of one thousand pounds from the Province, to mortgage the annual revenues of the Fabrique of Saint Louis de Lotbinière, and in consequence to make application to His Excellency the Administrator and the two other branches of the Legislature.

In witness whereof, have signed, with us, these presents first duly read.

(Signed.) Ls. Legendre, M. Pagé,
Frs. X Le May, Pierre Baudet,
Nicolas Leclerc, J. Bte. Augé.
J. B. Daveluy, Priest and Curate.

The six following Churchwardens declared they could not write, viz.:

HOUSE OF ASSEMBLY.

COMMITTEE ROOM.

Tuesday 9th December, 1828.

In Committee on the annexed Order of Reference.

PRESENT :—Messrs. Leslie, Heney, Cuvillier and Valois.

Mr. Leslie called to the Chair.
Read the Order of Reference.
Read the Petitions referred.

Mr. James Ellice Campbell, called in and examined :—

It is the intention of the Petitioners to macadamize that part of the Road from the Town limits to the landing place of the Horse Boat, and to make a solid foundation of pebbles on the remainder of the road, and gravel the same during the first year; and to macadamize one half of the road from the Horse Boat landing place to Longue Pointe during the second year, and the remainder during the third year. The macadamized part of the Road is to be twenty feet broad, rounded sufficiently to carry off the water, with drains on each side, and across when necessary. They are prepared to give security for the performance of the undertaking in the manner above specified, to whatever extent may be required. They will not break up more than from 100 to 150 feet of the road at a time, and that only one half of the breadth of the road, leaving the other half unencumbered, and free for carriages; and they will consent to give up the road to the public whenever the Revenue shall exceed twelve per cent., upon being reimbursed all expenses, or reduce the tolls.

Adjourned to the call of the Chair.

Saturday, 13th December 1828.

PRESENT :—Messrs. Cuvillier, Heney, Quesnel and Leslie.

Mr. Leslie in the Chair.

Ordered, That Henry Griffin, Esquire, Treasurer to the Trustees of the Lachine Turnpike Road, do lay before this Committee the accounts relating to the said Road.

Adjourned to the call of the Chair.

Saturday,

Quantum des Droits de Péage perçus à la Barrière sur le Chemin de La Chine, et l'emploi des Droits perçus depuis l'établissement de la dite Barrière.

Attesté.

J. ANT. BOUTHILLIER,
Greff. Asst.

Vendredi, 19 Décembre 1828.

Ordonné, Que la Pétition de divers Habitans de la Longue Pointe, Pointe aux Trembles et Rivière des Prairies soit référée au dit Comité.

Attesté.

Greff. Asst.

Lundi, 22 Décembre 1828.

Ordonné, Que la Pétition des Francs-Ténanciers des Paroisses de Lachenaye et de St. Henry de Mascouche, soit référée au dit Comité.

Attesté.

J. ANT. BOUTHILLIER,
Greff. Assst.

Mercredi, 24 Décembre 1828.

Ordonné, Que la Pétition de divers Habitans de Montréal et de ses environs, soit référée au dit Comité.

Attesté.

J. ANT. BOUTHILLIER,
Greff. Assst.

CHAMBRE D'ASSEMBLEE,

BUREAU DU COMITE'.

Mardi, 9 Décembre 1828.

En Comité sur l'Ordre de Renvoi ci-annexé.

PRESENS :—Messrs. Leslic, Heney, Cuvillier et Valois.

Mr. Leslic au Fautueil.
Lu l'Ordre de Renvoi.
Lu la Pétition renvoyée.

Mr. James Ellice Campbell appelé et examiné :—

Les Pétitionnaires ont intention de macadamiser la partie du chemin qui s'étend depuis les limites de la ville jusqu'à la place de débarquement du Bateau à manège, et de faire sur le restant du chemin des fondemens solides de petits cailloux, et de le couvrir de gravier pour la première année; et de macadamiser la moitié du chemin entre la place de débarquement du Bateau à manège et la Longue Pointe, dans la seconde année, et le restant dans la troisième. La partie macadamisée du chemin sera de vingt pieds de largeur, assez arrondie pour donner de l'égoût à l'eau, avec des fossés chaque côté, et en travers s'il en est besoin. Ils sont prêts à donner caution, pour le montant qu'on désirera, d'exécuter l'entreprise de la manière ci-haut spécifiée. Ils ne dérangeront pas plus de cent à cent cinquante pieds de chemin à la fois, et cela sur la moitié de la largeur du chemin seulement, laissant l'autre sans embarras et libre pour le passage des voitures; et ils consentent à abandonner au Public le chemin, aussitôt que les revenus excéderont douze par cent, remboursement fait de toutes leurs dépenses, ou à réduire le peage.

Le Comité l'ajourne à l'Appel du Président.

Samedi, 13 Décembre 1828.

PRESENS :—Messrs. Cuvillier, Heney, Quesnel et Leslic.

Mr. Leslic au Fautueil.

Ordonné, Que Henry Griffin, Ecuyer, Trésorier des syndics du chemin de Barrière de Lachine, mette devant ce Comité les Comptes relatifs au dit Chemin.

Le Comité l'ajourne à l'Appel du Président.

Saturday, 3rd January 1829.

PRESENT:—Messrs. Heney, Quesnel and Leslie.

Mr. Leslie in the Chair.

Henry Griffin, Esquire, called in and examined:—

I produce the accounts relating to the Lachine Turnpike Road, as requested by the Committee on the 13th ultimo.

[The said accounts are preserved among the files of the present Session.]

Q. 1. Were you Treasurer to the Trustees of the Lachine Turnpike, and since when?

A. Yes, since 1812.

Q. 2. By whom were you appointed?

A. By the Trustees.

Q. 3. Who were the Trustees?

A. The Honble. John Richardson, and I. W. Clarke, I. Tough, G. Garden, E. St. Dizier, J. M. Mondelêt, Esquires.

Q. 4. Were Mr. Richardson and Mr. Mondelêt, the only surviving Trustees at the period the Act expired in 1825?

A. Yes.

Q. 5. Were the tolls leased annually, and at public sale?

A. Yes, generally, but there may have been exceptions.

Q. 6. Was security taken for the due payment of the rents?

A. Yes.

Q. 7. To whom were the Tolls leased from the year 1812 to 1821, inclusively, and from 1823 to 1825, also inclusively?

A. To John McKercher, Thomas Barlow and Thomas Fingland.

Q. 8. Were the Lessees obliged to keep the Road in repair?

A. Sometimes.

Q. 9. Can you state the years in which the Lessees were to keep the road in repair.

A. Since 1820 inclusive.

Q. 10. Do you know what induced the Trustees to make a deduction in the rent for the years 1812, 1813, and 1814.

A. In consequence of the war, which reduced the receipts of the road, as there were comparatively few goods sent up, and the Lessee being obliged at his own expense to keep the road in repair, which was much worn by the transportation of Government stores.

Q. 11. Why is the sum of £209 9 1 deducted from the rent in 1821, as due by J. McKercher?

A. Because it was then due by him, but of which he paid in the following year £50.

Q. 12. He still owes, then, £159 9 1?

A. Yes.

Q. 13. Who were his securities?

A. There were two, but I only recollect Lenoir Rolland of the Tannery.

Q. 14. Have any legal proceedings been taken either against J. McKercher, or his securities, for the payment of the debt?

A. None.

Q. 15. There appears a sum of £168 17 11½ stated as due by Thomas Fingland in 1822, has the whole or any part been since paid?

A. The whole is still due.

Q. 16. Who were Thomas Fingland's securities?

A. I do not at present recollect.

Q. 17. Have any legal proceedings been taken against Thomas Fingland or his securities for the payment of the debt?

A. None.

Q. 18. Were the rates of toll reduced or augmented during the period you were Treasurer?

A. They were reduced in 1823, 1824 and 1825, one third.

Q. 19. Was there any allowance received from the City Funds in 1822, 1824 and 1825?

A. None, for three years; it was not applied for.

Q. 20. It appears by the account you have rendered that a balance of £253 17 9 has been in your hands since December 1825; have you ever been called upon by the Trustees, or any other person, to pay over that money?

A. No

Q.

Samedi, 3 Janvier 1829.

PRESENS:—Messrs. Heney, Quesnel et Leslie.

Mr. Leslie au Fauteuil.

Henry Griffin, Ecuyer, appelé et examiné :

Je produis les Comptes relatifs au Chemin de Barrière de La Chine, tel que l'a demandé le Comité le treize du mois dernier.

[Les dits Comptes sont conservés parmi les records de la présente Session.]

Q. 1. Avez-vous été Trésorier des Syndics du Chemin de Barrière de La Chine, et depuis quand?

R. Oui, depuis mil huit cent douze.

Q. 2. Qui vous a nommé?

R. Les Syndics.

Q. 3. Qui étaient les Syndics?

R. L'Honble. John Richardson et J. M. Clarke, I. Tough, G. Garden, E. St.-Dizier, J. M. Mondelêt, Ecuyers.

Q. 4. Mr. Richardson et Mr. Mondelêt n'étaient-ils pas les deux seuls Syndics survivans, lorsque l'Acte expira en mil huit cent vingt-cinq?

R. Oui.

Q. 5. Le péage était-il loué annuellement, et vendu au rabais?

R. Oui, généralement; mais il peut y avoir eu des exceptions.

Q. 6. Prenait-on des cautions pour le paiement fidèle du Loyer?

R. Oui.

Q. 7. A qui ont été loués les péages depuis l'année mil huit cent douze jusqu'à mil huit cent vingt-et-un inclusivement, et depuis mil huit cent vingt-trois jusqu'à mil huit cent vingt-cinq, inclusivement?

R. A John McKercher, Thomas Barlow et à Thomas Fingland.

Q. 8. Les amodiateurs étaient-ils obligés d'entretenir le chemin?

R. Quelquefois.

Q. 9. Pouvez-vous mentionner les années où les amodiateurs étaient tenus de réparer le chemin?

R. Ils l'ont été depuis mil huit cent vingt, inclusivement.

Q. 10. Savez-vous ce qui a induit les Syndics à faire une déduction dans le Loyer pendant les années mil huit cent douze, mil huit cent treize et mil huit cent quatorze?

R. Ce fut à cause de la guerre qui réduisit la recette du chemin, vu qu'il montait bien peu de marchandises, et l'Amodiateur ou Locataire étant obligé de réparer le chemin à ses propres frais; dans un tems où il était fort détérioré par le transport des provisions du Gouvernement.

Q. 11. Pourquoi déduit-on la somme de deux cent neuf livres neuf shelings et un denier sur le loyer de mil huit cent-vingt-et-un, tel que dû par J. McKercher?

R. Parce qu'il la devait alors, mais l'année suivante, il paya sur cet arrérage cinquante louis.

Q. 12. Il doit donc encore cent cinquante neuf livres neuf shelings-et-un denier?

R. Oui.

Q. 13. Qui étaient ses cautions?

R. Il y en avait deux, mais je ne me rappelle que Lenoir Rolland des Tanneries.

Q. 14. A-t-on recouru à quelques procédés légaux contre J. McKercher ou ses cautions, pour recouvrer cette dette?

R. Non.

Q. 15. Il paraît y avoir une somme de cent soixante huit livres dix-sept shelings-et-onze pence et demi au crédit de Thomas Fingland, en mil huit cent vingt-deux. Cette somme a-t-elle été depuis payée en tout ou en partie?

R. Le tout est encore dû.

Q. 16. Quelles sont les cautions de Thomas Fingland?

R. Je ne me rappelle pas pour le moment.

Q. 17. A-t-on exercé quelque recours legal et judiciaire pour le recouvrement de cette dette, soit contre Thomas Fingland, soit contre ses cautions?

R. Non.

Q. 18. Le taux du péage a-t-il été réduit ou augmenté, durant le tems que vous avez été Trésorier?

R. Il a été réduit d'un Tiers en mil huit cent vingt-trois, mil huit cent vingt-quatre et mil huit cent vingt-cinq.

Q. 19. N'a-t-il pas été donné quelque chose sur les fonds de la Cité en mil huit cent vingt-deux, mil huit cent vingt-quatre et mil huit cent vingt-cinq?

R. Il n'a rien été donné; on ne l'a pas demandé.

Q. 20. Il paraît par le Compte que vous avez rendu que depuis le mois de Décembre mil huit cent vingt-cinq, il est resté entre vos mains une balance de deux cent cinquante trois livres dix-sept shelings et neuf deniers. Les Syndics ou autres personnes ne vous ont-ils jamais demandé de rendre cet argent?

R. Non.

Q.

Appendice
(S.)
10 Jany.

Appendix
(S.)
10th Jany.

Q. 21. Have the Trustees a knowledge of the balance above mentioned being in your hands?

A. I believe not.

Adjourned to the call of the Chair.

Friday, 9th January, 1829.

PRESENT:—Messrs. Leslie, Cuvillier, Valois, Heney, and Quesnel.

Mr. Leslie in the Chair.

Your Committee have maturely considered the Petitions of the parties applying for permission to make a Turnpike Road between the Church of Longue Pointe and the City of Montreal, and also the Petitions in favor of and against the measure, and cannot perceive in the latter any sufficient reasons why permission prayed for should not be granted.

Your Committee therefore recommend that the prayer of the Petition of James Ellice Campell and Oliver Wait, be granted, on the condition of making the road in the manner described in the evidence of James Ellice Campbell, and subject to a reduction of toll when the Revenue of the road shall exceed twelve per cent; and also on the further condition that the said road be given up to the County of Montreal at any time, if so required, upon paying to the Petitioners the expenses incurred in making it.

Your Committee have also in consequence of the instruction of the 12th December last, "to enquire into the amount of the tolls collected at the Turnpike on the Lachine road, and into the manner in which the amount collected since the establishment of the said Turnpike has been employed," examined Henry Griffin, Esquire, the late Treasurer to the Trustees, and also the accounts submitted by him, and find that the tolls from the passing of the Act to 1825, amounted (including a sum of £425, received from the City of Montreal for keeping in repair a part of the road within the limits of the City,) to

Of which sum there was expended in making and keeping in repair the said road, £5215 1 4

As wages and salaries to Toll Gatherers, Overseers, and the Treasurer's percentage, 715 16 0

Interest on £1300, borrowed at different periods, 158 12 11
Incidental expenses, 53 11 2½
6143 1 5½

Leaving a sum of £582 4 9½ to be accounted for by the Trustees.

It appears that £253 17 9 of the above balance have been in the hands of the Treasurer to the Trustees, since the 31st December 1825, and that £328 7 0½ remains due by two persons who have been Lessees of the tolls, and against whom and their securities no legal proceedings have been instituted by the Trustees for the recovery of their respective debts.

Mr. Valois dissents from that part of the Report which recommends the granting the permission to make the road from Longue Pointe to Montreal.

Ordered, That the Chairman do leave the Chair and report.

The whole nevertheless humbly submitted.

J. LESLIE,
Chairman

Q. 21. Les Syndics savent-ils que la balance sus-mentionnée reste entre vos mains?

R. Je ne crois pas.

Le Comité Pajourne à l'Appel du Président.

Vendredi, 9 Janvier 1829.

PRÉSENTS:—Messrs. Leslie, Cuvillier, Valois, Heney et Quesnel.

Mr. Leslie au Fauteuil.

Votre Comité a mûrement considéré les Pétitions des parties qui demandent la permission de faire un chemin de Barrière entre l'Eglise de Longue Pointe et la Cité de Montréal, et aussi les Pétitions en faveur et en opposition à la mesure, et votre Comité quand à cette dernière Pétition ne voit aucune raison suffisante pour que la permission demandé ne soit pas accordée.

Votre comité en conséquence recommande que la demande de la Pétition de Jas. Ellice Campbell et Oliver Wait soit accordé, sous la condition de faire le chemin de la manière expliquée dans le témoignage de Jas. Ellice Campbell, et sujet à la réduction du péage dès que les Revenus du chemin excéderont douze pour cent; et aussi à cette condition ultérieure que le dit chemin soit cédé au Comté de Montréal, dans aucun tems à venir, si cela est demandé, en remboursant aux Pétitionnaires les dépenses qu'ont occasionné sa confection.

Votre Comité a aussi, en conséquence de l'Instruction du douzième de Décembre dernier qui lui enjoint "de s'enquérir du Quantum des Droits de Péage perçus à la Barrière sur le chemin de Lachine, et de l'emploi des dits Droits perçus depuis l'établissement de la dite Barrière," examiné Henry Griffin, Ecuyer, le ci-devant Trésorier des Syndics, et aussi les Comptes qu'il a produits, et Votre Comité trouve que depuis la passation de l'Acte en mil huit cent cinq jusqu'à mil huit cent vingt-cinq où il a cessé d'être en force, que les taux (y compris une somme de quatre cent vingt-cinq louis reçue de la Cité de Montréal pour entretenir la partie du chemin qui se trouve dans les limites de la Cité) se sont élevés à la somme de

De laquelle somme il a été dépensé pour la confection et l'entretien du dit Chemin, £5215 1 4

Comme gages et salaires aux percepteurs des taux, inspecteurs, et le droits pour cent de commission du Trésorier, 715 16 0

Intérêt sur £1300 empruntés à différents tems, 158 12 11
Dépenses incidentes, 53 11 2½
6143 1 5½

Laissant une somme de £582 4 9½ Pour laquelle les Syndics ont à rendre compte.

Il paraît que la somme de deux cent cinquante trois livres dix-sept shelings et neuf deniers de la balance ci-dessus se trouve entre les mains du Trésorier des Syndics depuis le trente-et-unième de Décembre mil huit cent vingt-cinq, et que la somme de trois cent vingt-huit livres sept shelings et un demi denier reste due par deux Individus auxquels les péages avaient été affermés, et contre lesquels de même que leurs cautions, les syndics n'ont adopté aucunes mesures judiciaires pour le recouvrement de leurs dettes respectives.

Mr. Valois n'a pas concouru dans cette partie du Rapport qui recommande que l'on accorde la demande de faire le chemin depuis la Longue Pointe jusqu'à Montréal.

Ordonné, Que le Président laisse le Fauteuil, et fasse rapport;

Le tout néanmoins humblement soumis.

J. LESLIE,
Président.

HOUSE OF ASSEMBLY,

Monday, 22nd December 1828.

RESOLVED, That the Petition of the Honorable Judge Bedard, be referred to a Committee of five Members, to examine the contents thereof, and to report thereon with all convenient speed, with power to send for persons, papers and records.

Ordered, That Mr. J. Neilson, Mr. Stuart, Mr. Viger, Mr. Heney and Mr. Borgia, do compose the said Committee.

Attest,

WM. B. LINDSAY,

D. C. H. of Assby.

HOUSE OF ASSEMBLY,

COMMITTEE ROOM,

Wednesday, 31st December 1828.

In Committee on the above order of reference.

PRESENT:—Messrs. Heney, Borgia and Neilson.

Mr. Neilson called to the Chair.

Read the Order of Reference.
Read the Petition Referred.

The Chairman submitted the four papers, marked A. B. C. D. which are annexed to this Report.

Ordered, That the Chairman do apply to the Secretary of the Province for copies of the different Commissions held at any time by Judge Bedard, as a Judge.

Ordered, That Elzear and Isidore Bedard, do appear before this Committee on Monday next, at ten o'clock in the forenoon.

Ordered, That Thomas A. Young, Esquire, Auditor General of Public Provincial Accounts, do appear before this Committee on Monday next, at ten o'clock in the forenoon.

Adjourned till Monday next, at ten o'clock, A. M.

Monday, 5th January 1829.

PRESENT:—Messrs. Heney, Borgia and Neilson.

Mr. Neilson in the Chair.

Thomas A. Young, Esquire, Auditor General of Public Accounts, called in and examined: Warrants were regularly issued for the full salary of Judge Bedard during the time that he was absent in 1827; as to 1828 he cannot say, they are not yet issued for the last half year. Judges Uniacke and Fletcher acted for him during his absence, under Commissions of Provincial Judge for the District of Three Rivers. These gentlemen received their usual salaries in full as Judges for their respective places; but no allowance from acting there instead of Judge Bedard. Mr. Justice Uniacke received his usual circuit allowance for going to Montreal to attend the Court there; he would have received the same if at Montreal, for coming to Three Rivers to attend the Superior Term in that District.

Elzear Bedard, Esquire, of Quebec, Advocate, called in and examined: He is a son of Judge Bedard; Judge Bedard was twice absent from Three Rivers on account of ill health, first in 1827, at Saratoga, in the United States, and afterwards at Kamouraska. In 1828, he was absent, under a leave, for three weeks only; that leave was not prolonged, but he was so ill as not to be able to return till after five months. He applied for an extension of leave of absence, but it was refused; he saw the letter from Mr. Secretary Cochran to that effect; it stated that if Judge Bedard's illness continued more than three weeks, the Governor would be compelled to make a permanent arrangement. Judge Fletcher had then a Commission instead of Judge Bedard at Three Rivers; he was informed that Judge Fletcher had agreed with Judge Bedard that he would remain till Judge Bedard's health would allow him to return, or till late in October; Judge Fletcher did in fact remain, and performed the duties till Judge Bedard returned about the end of that month. In 1827, he has been informed that Judge Uniacke was lodged and provided for at Judge Bedard's house, during the time he (Judge Uniacke) remained at Three Rivers. He does not think Judge Bedard made any allowance to Judge Fletcher, excepting perhaps paying for his Commission. The general state of Judge Bedard's health during the last two years has been very bad, and he believes it is made worse by the assiduity and labour of his office; he appeared to be much afflicted by the difficulties attending his leave of absence, and the revocation and renewal of his Commission.

Isidore Bedard, Law Student in Quebec, called in and examined:—He is a son of Judge Bedard. There are two of Judge Bedard's children whose education is not finished, namely, Isidore and Zoel. Zoel is the youngest; he is about seventeen years old; he is at present at School; he was formerly sent to school at Sorel. Isidore had his education at Nicolet, and his two other brothers at Quebec and Montreal. The general state of Judge Bedard's health has been bad for the last two years; the Doctors have said that he was afflicted with *Dyspepsia*, and he has had a swelling of the legs to his knowledge, for upwards of ten years, and he has been informed that it has returned annually in the spring and summer, more or less since he was in prison at Quebec in 1810 and 1811.

CHAMBRE D'ASSEMBLEE,

Lundi, 22 Décembre 1828.

RESOLU, Que la pétition de l'Honorable Juge Bedard soit référée à un Comité de cinq membres, pour en examiner le contenu et en faire rapport avec toute la diligence convenable, avec pouvoir d'envoyer querir personnes, papiers et records.

Ordonné, Que Mr. J. Neilson, Mr. Stuart, Mr. Viger, Mr. Heney et Mr. Borgia compose le dit Comité.

Attesté,

J. A. BOUTHILLIER,

Greffier Assst.

CHAMBRE D'ASSEMBLEE,

CHAMBRE DE COMITE,

Mercredi, 31 Décembre 1828.

En Comité sur l'ordre de référence ci-dessus.

PRESENS:—Messieurs Heney, Borgia et Neilson.

Mr. Neilson appelé au Fauteuil.

Lu l'ordre de référence.
Lu la pétition référée.

Le Président a produit les papiers suivant marqués A. B. C. et D. qui sont jointes à ce rapport.

Ordonné, Que le Président s'adresse au Secrétaire de la Province pour obtenir de lui copies des différentes Commissions que M. le Juge Bedard peut avoir eu en sa qualité de Juge.

Ordonné, Que Elzear Bedard et Isidore Bedard paroissent devant ce Comité Lundi prochain, à dix heures du matin.

Ordonné, Que Thomas A. Young, Ecuyer, Auditeur Général des Comptes Publics de la Province, paroisse devant ce Comité Lundi prochain, à dix heures du matin.

Ajourné à Lundi prochain, à dix heures du matin.

Lundi, 5 Janvier 1829.

PRESENS:—Messieurs Heney, Borgia et Neilson.

Mr. Neilson au fauteuil,

Thomas Ainslie Young, Ecuyer, Auditeur Général des Comptes Publics de la Province, a été appelé et examiné: Il a été régulièrement émané des Warrants pour les appointemens en entier du Juge Bedard pendant le tems qu'il a été absent en 1827. Quant à l'année 1828, il n'en peut rien dire, vu qu'ils n'ont pas encore émanés pour les derniers semestres. Les Juges Uniacke et Fletcher ont rempli ses devoirs durant son absence, et cela en vertu de commissions de Juge Provincial pour le District des Trois Rivières. Ces Messieurs ont reçu leurs appointemens accoutumés en entier comme Juges pour leurs droits respectifs; mais il ne leur a été fait aucune allowance par le gouvernement pour avoir tenu la place de Juge Bedard. M. le Juge Uniacke a reçu son allowance accoutumée de Cour de tournée pour avoir été tenir la Cour à Montréal; il eut reçu la même allowance si étant à Montréal il fut descendu aux Trois Rivières pour y siéger au Terme Supérieur de ce District.

Elzear Bedard, Ecuyer, Avocat de Québec, a été appelé et examiné: Il est un des fils du Juge Bedard; le Juge Bedard s'est absenté deux fois des Trois Rivières, rapport au mauvais état de sa santé; la première il a été en 1827, à Saratoga, dans les Etats Unis, et ensuite à Kamouraska. En 1828, il s'est absenté en vertu d'une permission qui ne lui accordoit seulement que trois semaines d'absence, ce terme ne fut pas prolongé; mais il étoit tellement malade, qu'il ne put être de retour que plus de cinq mois après. Il demanda que le terme d'absence fut prolongé, mais cela fut refusé. Il a vu la lettre de M. Cochran, le Secrétaire, à cet effet, elle portoit: que si la maladie de M. le Juge Bedard duroit plus de trois semaines, que le Gouverneur se trouveroit forcé de faire un arrangement permanent. Le Juge Fletcher avoit alors une Commission au lieu de Juge Bedard aux Trois Rivières. Il a été informé que le Juge Fletcher s'étoit entendu avec le Juge Bedard pour rester jusqu'à ce que la santé du Juge Bedard put lui permettre de revenir, ou jusqu'à la fin d'Octobre. Le Juge Fletcher est resté en effet et a rempli les devoirs jusqu'au retour du Juge Bedard, qui a eu lieu vers la fin de ce mois là. En 1827, il a été informé que le Juge Uniacke demeureroit, et étoit nourri dans la maison du Juge Bedard durant le tems qu'il (le Juge Uniacke) restoit aux Trois Rivières. Il ne pense pas que le Juge Bedard ait fait aucune allowance au Juge Fletcher, excepté peut être pour les honoraires de sa commission. La santé du Juge Bedard, pendant les deux dernières années, a été en général, très mauvaise, et il croit qu'elle est devenue pire par l'assiduité et le travail de sa charge; il paroissoit être très affligé des difficultés qui ont eu lieu lorsqu'il a fallu obtenir un congé d'absence, et lors de la révocation et du renouvellement de sa commission.

Isidore Bedard, de Québec, Etudiant en Droit, a été appelé et examiné: Il est un des fils du Juge Bedard. Le Juge Bedard a deux enfans, dont l'éducation n'est pas encore finie, savoir: Isidore et Zoel. Zoel est le plus jeune; il est âgé d'environ dixsept ans; il est maintenant aux écoles; il a été ci-devant placé dans une école à Sorel. Isidore a reçu son éducation à Nicolet, et ses deux autres frères à Québec et à Montréal. La santé du Juge Bedard depuis deux ans, a été généralement mauvaise. Les médecins ont dit qu'il étoit attaqué de la *Dyspepsie*; il a eu une enflure aux jambes; depuis plus de dix ans, à sa connoissance; et il a été informé que cela se renouvelloit les printems et l'été plus ou moins, depuis qu'il a été emprisonné à Québec en 1810 et 1811.

Appendix
(T.)
10th Jany.

Dominick Daly, Esquire, Provincial Secretary of this Province, called in and examined: Judges Uniacke and Fletcher took out no new Commissions for their respective situations in Montreal and St. Francis, when they were replaced by Judge Bedard as Provincial Judge of Three Rivers. The whole amount of fees on a Judge's Commission is £3 5s, viz:—10s. for the Attorney General, and 25s. to the Secretary. Judge Fletcher took up his Commission at Quebec on the 6th June last, and paid the fees. Judges Fletcher and Thompson stand now senior, by the date of their Commissions, to Judge Bedard. Judge Pyke's Commission issued last month; there is a reservation in his favor of his seniority according to his former Commissions.

The Secretary of the Province laid before the Committee, in conformity to its order of the 31st ultimo, three copies of Commissions appointing Pierre Bedard, Esquire, Provincial Judge of Three Rivers. They are marked E. F. G. and annexed to this Report.

Adjourned to the call of the Chair.

Saturday, 10th January 1829.

PRESENT:—Messrs. *Borgia*, *Neilson* and *Heney*.
Mr. *Neilson* in the Chair.

Your Committee after having taken the petition of Mr. Justice Bedard into consideration, are of opinion, that this gentleman does not formally announce a wish to retire from, and to give up the office of Judge, and that he prays only that the retired pension to be allowed him in case of his being obliged to resign his seat may be determined. That in 1823, a bill which afterwards became a Law, was passed by the House of Assembly, by which there was allowed to a Chief Justice of the District of Montreal and to a Puisné Judge of the same Court, who had long filled their respective offices, only one half their salaries, as a full compensation.

That since that time a more general bill was passed by the House of Assembly, establishing the *quantum* of retired allowances; under which bill the Judges throughout the whole Province were to receive a retired allowance proportioned to their age and length of service.

That the House, it is true, did not forbid itself the right of separately fixing the retired allowance of any particular Judge, according to the reasons and circumstances which should appear to make his case an exception to the general rule.

That your Committee, however, considering the bad state of the Petitioner's health, think it their duty to recommend that a retired allowance be granted him on his retiring from his seat.

Your Committee are convinced that much inconvenience has arisen from the necessity under which the Provincial Judge of Three Rivers has been placed, as he alleges, in cases of necessary absence from the seat of his Jurisdiction, of procuring at his own expense another Judge to fulfil his functions, and of procuring a Commission for such Judge also at his own expense, and from his having been himself obliged at his return to take out a new Commission.

Your Committee believe that the surest means of preventing the recurrence of this inconvenience would be to enact, that the Court for the District of Three Rivers should be erected, (like those of the two other great Districts,) into a Court of King's Bench, and that it should be lawful to and for all the Judges of the said three Districts to sit without distinction in cases of necessity in one or the other of the said Districts.

Ordered, That the Chairman leave the Chair and report.
The whole nevertheless humbly submitted.

J. NEILSON,
Chairman.

(A.)

Extracts taken from the Registers of the Court of King's Bench holding criminal jurisdiction for the District of Three Rivers, shewing the order of precedence of the Honorable Judges of the said Court and the Provincial Judge of the said District, from the year 1803 to the year 1828.

TERM

Dominick Daly, Ecuyer, Secrétaire de la Province, a été appelé et examiné: Les Juges Uniacke et Fletcher ont obtenu de nouvelles commissions pour leurs charges respectives à Montréal et à St. François, lorsqu'ils ont été remplacés par le Juge Bedard comme Juge Provincial pour le District des Trois Rivières. Le montant en entier des honoraires pour une commission de Juge est de £3 5s, savoir, 40s. pour le Procureur Général, et 25s. pour le Secrétaire. Le Juge Fletcher a pris sa commission à Québec le 6 Juin dernier, et en a payé les honoraires. Les Juges Fletcher et Thompson se trouvent maintenant d'après la date de leurs commission, plus ancien en date que le Juge Bedard. La commission du Juge Pyke est sortie dans le mois dernier; il y a une réserve en sa faveur de son droit d'ancienneté d'après ses commissions précédentes.

Le Secrétaire de la Province a produit devant le Comité, en conformité à son ordre du 31 du mois dernier, trois copies de commissions nommant Pierre Bedard, Ecuyer, Juge Provincial du District des Trois Rivières. Elles sont cotées E. F. et G. et sont jointes à ce rapport.

Ajourné à l'appel du Président.

Samedi, 10 Janvier 1829.

PRESENS:—Messieurs *Borgia*, *Neilson* et *Heney*.
Mr. *Neilson* au fauteuil.

Votre comité après avoir pris en considération la requête de M. le Juge Bedard, est d'avis, que ce monsieur ne témoigne pas formellement le désir de se retirer et d'abandonner sa situation de Juge, et qu'il ne demande qu'on lui fixe une pension de retraite que dans le cas où il se trouveroit obligé de laisser son siège.

Que la Chambre d'Assemblée a passé en 1823, un bill qui est devenu loi ensuite, et qui n'allouait à un ancien Juge en Chef du District de Montréal, et à un ancien Juge Puisné de la même cour, qu'une demie paye pour toute compensation.

Que depuis la Chambre d'Assemblée a passé un bill plus général, qui fixoit le taux de la pension, sur lequel les Juges de toute la Province devoient recevoir un pension proportionnée à leurs âges et à la durée de leurs services.

Que la Chambre, il est vrai, ne s'est pas par là interdit le droit de fixer isolement des pensions à tel ou tel Juge en particulier sur des raisons et dans les circonstances qui paroissent devoir faire exception à la règle générale.

Que votre comité cependant, vu l'état de maladie du pétitionnaire, croit devoir recommander qu'il lui soit allouée une pension, en par lui se retirant du siège.

Votre comité s'est convaincu qu'il y avoit de l'inconvénient à ce que le Juge Provincial des Trois Rivières, dans le cas d'absence nécessaire du siège de sa juridiction soit obligé, comme il l'allègue, de pourvoir à ses frais, à ce qu'un autre Juge remplisse ses fonctions, et de procurer une commission à tel Juge à ses frais, et qu'il soit de plus tenu de prendre lui même à son retour une commission nouvelle.

Votre comité croit que le moyen le plus facile de faire cesser cet inconvénient seroit de statuer que la Cour du District des Trois Rivières fut érigée comme celles des deux autres grand Districts, en Cour du Banc du Roi, et qu'il devint loisible à tous les Juges des dits trois Districts de siéger indistinctement dans l'un ou dans l'autre, dans les cas de nécessité.

Ordonné, Que le Président laisse la Chaire et fasse rapport.
Le tout néanmoins humblement soumis.

J. NEILSON,
Président.

(A.)

Extraits pris des Régîtres de la Cour du Banc du Roi de juridiction criminelle, pour le District des Trois Rivières, montrant l'ordre de préséance des Honorables Juges de la dite Cour, et Juge Provincial du dit District, depuis l'année 1803 à l'année 1828.

In the Plumitifs of the Terms of Murch 1819, January 1820 and March 1821, from which the precedents of the precedence of the Judges are taken, the names of the Judges are not placed at the commencement of the proceedings of each day: but the precedents of these terms are taken from notes written on the blank sheets at the end of the Plumitifs subsequent to the index of each Plumitif.

Dans les plumitifs des termes de Mars 1819, Janvier 1820 et Mars 1821, desquels les précédentes de la préséance des Juges sont pris, les noms des Juges ne sont pas placés au commencement des procédés de chaque jour mais les précédents de ces termes sont pris de notes écrites sur des feuilles blanches à la fin des plumitifs, subséquemment à l'Index de chaque plumitif.

CASTLE OF ST. LEWIS.
Quebec, 2nd March 1822.

CHATEAU SAINT-LOUIS.
Québec, 2 mars 1822.

(Circular)

GENTLEMEN,

His Excellency the Governor in Chief having had under consideration the statement of the different Judges, on the question of precedence lately raised in the Court of King's Bench at Three-Rivers, I am directed by His Excellency to inform you that he is of opinion that the Judges of the Courts of King's Bench for the Districts of Quebec and Montreal are entitled to precedence over the Provincial Judge of the District of Three-Rivers without any reference to the dates of their respective Commissions, therefore a Provincial Judge being appointed to be Judge of the Court of King's Bench for either the Districts of Quebec or Montreal, can only take precedence in the Court at Three-Rivers according to the date of his Commission as Judge of the King's Bench.

(Circulaire)

MESSEIERS,

Son Excellence le gouverneur en chef ayant eu sous sa considération l'exposé de différents juges sur la question de préséance, qui s'est élevée dernièrement dans la cour du banc du roi aux Trois-Rivières; il a été ordonné par Son Excellence le gouverneur en chef, de vous faire savoir que son avis est, que les juges des cours du banc du roi du district de Québec et de Montréal ont droit à la préséance sur le juge provincial du district des Trois-Rivières, sans avoir aucunement référence aux dates de leurs commissions respectives; et qu'ainsi un juge provincial qui est nommé juge de la cour du banc du roi, soit pour l'un ou l'autre des districts de Québec et de Montréal, ne peut seulement prendre la préséance dans la cour aux Trois-Rivières, que d'après la date de sa commission comme juge de la cour du banc du roi.

I have the honor to be,

Gentlemen,

Your most obedt. Servant.

(Signed) J. READY.

J'ai l'honneur d'être,

Messieurs,

Votre très obéissant serviteur.

District of }
THREE RIVERS. }

KING'S BENCH, 12th January 1822.

District des }
Trois-Rivieres. }

BANC DU ROI, 12 Janvier 1822.

Messrs. Justices Foucher and Kerr, consent that (without prejudice to the right of precedence in contest between them, the decision on which, as well upon the merit as upon the possession of rank, ought to be given by His Majesty or His Representative) their names be inscribed upon the Register in the following order: The said Justice Foucher maintaining that by the ancientness of his Commission as Judge of the Court of King's Bench for the District of Three Rivers, he has always had precedence over the Judges of Montreal and Quebec, whose Commissions are posterior to his, bearing date in the month of December one thousand eight hundred and two.

Messieurs les Juges Foucher et Kerr consentent que (sans préjudice aux droits de préséance en conteste entr'eux, dont la décision, tant sur le mérite que sur la possession de rang, doit être donné par Sa Majesté ou son Représentant) leurs noms soient inscrits sur le Régistre dans le rang suivant; le dit Juge Foucher, prétendant que par l'ancienneté de sa Commission, comme Juge de la Cour du Banc du Roi du District des Trois-Rivières, il a toujours eu préséance sur les Juges de Montréal et de Québec, dont les Commissions sont postérieures à la sienne en date du mois de Décembre mil huit cent deux.

Appendix (T.) 10th Jany.

Province of Lower Canada.

(Signed) GEORGE PROVOST.

Commission appointing Pierre Bedard, Esquire, to be Provincial Judge in and for the District of Three Rivers.

GEORGE the Third by the Grace of God of the United Kingdom of Great Britain and Ireland, King, Defender of the Faith, To our trusty and well beloved Pierre Bedard, Esquire, and to all others whom these Presents may concern— GREETING.

Fiat, Recorded in the office of enrollments at Quebec the 12th day of December, 1812, in the fourth Register of Letters Patent and Commissions, folio 40.—(Signed.) J. Taylor, Dep. Reg.

KNOW YE, that we have taken into our Royal consideration, the loyalty, integrity and ability of you the said Pierre Bedard, of our especial grace, certain knowledge and mere motion, have assigned, constituted and appointed, and by these presents do assign, constitute and appoint you the said Pierre Bedard, our Provincial Judge for the District of Three Rivers, in our Province of Lower Canada, and also one of our Judges of our Court of King's Bench to be holden in our said District of Three Rivers, in the room, stead and place of Louis Charles Foucher, appointed one of the Justices of His Majesty's Court of King's Bench for the District of Montreal, in the room, place and stead of Pierre Louis Panet, Esquire, deceased.—To have, hold, exercise and enjoy the said office and place unto you the said Pierre Bedard for and during our pleasure and your residence in our said Province of Lower Canada, together with all and singular the rights, profits, privileges and emoluments unto the said place and office belonging, with full power and authority to hold our Provincial Court of the said District of Three Rivers, at such times and places, and all Civil Pleas to hear and determine, where by law the same may be or ought to be done; and all and every the rights, duties and functions of our Provincial Judge of the District aforesaid, to exercise, perform and fulfil.

In testimony whereof, we have caused these our Letters to be made Patent, and the Great Seal of our said Province to be hereunto affixed.

Witness our trusty and well-beloved Sir George Prevost, Baronet, our Captain General and Governor in Chief, in and over the Provinces of Lower Canada, Upper Canada, Nova Scotia, New Brunswick and their several Dependencies, Vice Admiral of the same, Lieutenant General and Commander of all our Forces in the said Provinces, and in the Island of Newfoundland, Prince Edward, Cape Breton and Bermuda, &c. &c. &c. At our Castle of Saint Lewis, in our City of Quebec, in our said Province, the eleventh day of December, in the year of our Lord Christ, one thousand eight hundred and twelve, and of our reign the fifty third.

(Signed) Jno. TAYLOR, Dep. Secy.

(Signed) G. P.

I do hereby certify the foregoing to be a true copy of Entry as on Record in the Registrar's Office of the Records at Quebec, in the Fourth Register of Letters Patent and Commissions, folio 40.

Provincial Secretary's Office, Quebec, 31st December 1829.

D. DALY, Sec. and Reg.

Province du Bas-Canada.

(Signé) GEORGE PROVOST.

Commission nommant Pierre Bedard, Ecuyer, comme Juge Provincial pour le District des Trois-Rivières.

GEORGE Trois par la Grace de Dieu, Roi du Royaume Uni de la Grande Bretagne et d'Irlande, Défenseur de la Foi.

A notre Fidèle et bien-aimé Pierre Bédard, Ecuyer, et à tous ceux qui ces présentes peuvent intéresser... Salut :

Fiat Enregistré au Bureau du Secrétaire des Archives à Québec, le 12e jour de Décembre 1812, dans le Quatrième Régistre des Lettres Patentes et Commissions, folio 40.—(Signé.) J. Taylor, Dep. Sec.

SACHEZ que nous avons pris en notre considération Royale la loyauté, l'Intégrité et la capacité des vous le dit Pierre Bédard, et que de notre grace spéciale, science certaine et propre mouvement, nous vous avons commis, constitué et nommé, et par ces présentes vous commettons, constituons et nommons le dit Pierre Bedard, notre Juge Provincial pour le District des Trois-Rivières, dans notre Province du Bas-Canada, et aussi l'un de nos Juges de notre Cour du Banc du Roi siégeante dans notre District des Trois Rivières; au lieu et place de Louis Charles Foucher nommé l'un des Juges de la Cour du Banc du Roi de Sa Majesté pour le District de Montréal, en remplacement de Pierre Louis Panet, Ecuyer, décédé: Pour par vous le dit Pierre Bedard avoir, posséder, exercer et jouir du dit office et de la dite charge pour et durant notre bon plaisir et pendant votre résidence dans notre dite Province du Bas Canada: ensemble, avec tous et chacun les droits, profits, privilèges et emolumens qui appartiendront à la dite charge; avec plein pouvoir et autorité de tenir notre Cour Provinciale du dit District des Trois-Rivières, à tels tems et lieux, et d'entendre et de décider de toutes matières Civiles, dans tous les cas où la Loi le veut ainsi et permet de le faire; Et d'exercer, user et remplir tous les droits, devoirs et fonctions de notre Juge Provincial du District susdit.

En Foi de quoi nous avons fait rendre Patentes nos présentes Lettres, et y avons fait apposer le Grand Secan de notre dite Province du Bas Canada.

Témoin notre fidèle et bien-aimé Sir George Prevost, Baronet, notre Capitaine Général et Gouverneur en Chef dans nos dites Provinces du Bas-Canada, Haut-Canada, Nouvelle Ecosse, Nouveau-Brunswick et leur différentes dépendences, Vice-Amiral d'icelles, Lieutenant-Général et Commandant de toutes nos Forces dans les dites Provinces, et dans l'Isle de Terre-Neuve, du Prince Edouard, du Cap-Breton et de Bermude, &c. &c. &c. à notre Chateau Saint Louis, dans notre Cité de Québec, dans notre dite Province, le onzième jour de Décembre, dans l'année de notre Seigneur Jesus Christ, mil-huit cent douze, et dans la cinquante-troisième de notre Regne.

(Signé) Jno. TAYLOR, Dep. Sec.

(Signé) G. P.

Je certifie par le présent que ce qui précède est une vraie Copie de ce qui est enregistré dans le Bureau du Secrétaire des Archives, à Québec, au quatrième Régistre des Lettres Patentes et Commissions, folio 40.

HOUSE OF ASSEMBLY.

COMMITTEE ROOM.

Wednesday, 10th December 1828.

In Committee on the Petition from the City and Suburbs of *Quebec*, relating to Roads.

PRESENT :—All the Members.

Mr. *Blunchet* called to the Chair.

Read the Order of Reference.

The Committee have prepared a series of Questions, to be sent to divers Persons whose Answers will be found hereafter, which Questions are as follows :

Q. 1. Have you resided any and what length of time at *Quebec*?

2. What is the general State and Condition of the Roads in the Neighborhood of *Quebec*? Describe the same particularly.

3. What are the disadvantages arising from this State of the Roads?

4. What in your opinion is the best mode of improving these Roads?

5. Does it lie within the private means of the Proprietors of the Lands lying upon these Roads to make and keep them in good repair?

6. What is the usual number of Ships coming from Europe and the other British Colonies to the Port of *Quebec* annually, and what the annual augmentation of Population in the City and Port of *Quebec* arising from this cause?

7. From what parts or places are Provisions supplied to this transient Population?

8. Are you acquainted with any other matter or things which you think useful for the Committee to know with reference to the Petition before the Committee?

9. What is the average price of Land at four Miles from *Quebec*?

10. Could the preparations for macadamising by breaking Stones be carried on in Winter?

11.

CHAMBRE D'ASSEMBLEE,

Mercredi, 3 décembre 1828.

Résolu, Que la Pétition de la Cité et Comté de *Québec*, soit référée à un Comité de cinq membres, pour en examiner le contenu et en faire rapport avec toute la diligence convenable, avec pouvoir d'envoyer querir personnes, papiers et records.

Ordonné, Que M. *Stuart*, M. *Vallières*, M. *Louis Lagucux*, M. *Neilson* et M. *Clouet* composent le dit Comité.

Lundi, 29 décembre 1828.

Ordonné, Que M. *Lee* soit ajouté au dit Comité.

Samedi, 3 janvier 1829.

Ordonné, Qu'il soit une instruction au dit Comité de s'enquérir et faire rapport de l'état des autres Chemins principaux dans les mêmes limites, particulièrement le chemin de *Sainte-Claire*, le chemin au nord du Pont de *Scott* le long de la *Petite-Rivière*, la route de la *Misère* et le chemin du *Cap-Rouge*.

Attesté

J. ANT. BOUTHILLIER,
Greffr. Asst.

CHAMBRE D'ASSEMBLEE,

BUREAU DU COMITE,

Mercredi, 10 décembre 1828.

En Comité sur la pétition de la cité et des faubourgs de *Québec*, relative aux chemins.

PRESENS :—Tous les membres.

Mr. *Blunchet* appelé au fauteuil.

Lu l'ordre de renvoi.

Le Comité a préparé une série de Questions pour être envoyées aux diverses personnes, dont les Réponses se trouvent ci-après, lesquelles Questions sont comme suit :

Q. 1. Résidez-vous à *Québec* et depuis combien de tems?

2. Quel est généralement l'état et la condition des chemins dans le voisinage de *Québec*; Donnez-en une description détaillée?

3. Quels sont les désavantages qui résultent de cet état des chemins?

4. Quel est, selon vous, le meilleur mode d'amélioration pour ces chemins?

5. Est-il au pouvoir individuel des propriétaires des terres situées sur les dits chemins, de faire les dits chemins et de les tenir en bon état de réparation?

6. Quel est le nombre ordinaire de vaisseaux qui vient d'Europe et des autres colonies britanniques au port de *Québec* dans chaque année, et de combien cette circonstance peut-elle faire augmenter annuellement la population de la cité et du port de *Québec*?

7. De quelles parties ou places cette population passagère tire-t-elle ses provisions de bouche?

8. Connoissez-vous quelque autre chose qu'il soit utile pour le comité de savoir, à l'égard de la pétition renvoyée au comité?

9. Quel est le prix commun des terres à quatre milles de *Québec*?

10. Seroit-il possible d'y effectuer le système de *Macadam*, en cassant des pierres, pendant l'hiver?

11.

A

Appendix
(U.)
10th Jany.

11. Is there any considerable number of Persons in the City and Suburbs who might be advantageously employed in this way?

12. What is the number of destitute Paupers in the City and Suburbs of *Quebec*?

13. What is their State and Condition?

14. Are there any Public or other works going on during the Winter sufficient to supply an adequate Market of labour? For what number of destitute persons is such a Market required?

15. What would be the whole number of Persons who would be relieved by the Establishment of such an adequate Market?

16. What sum would be requisite to support those destitute persons during Winter?

17. What number of them would be employed during winter in breaking Stones for the purpose of Macadamising Roads?

18. What are the daily wages generally paid during winter for such work, and what daily wages would be requisite to support them?

19. What is the quantity of broken Stones requisite to macadamise a mile of Road?

20. What are the daily wages or prices usually paid to people employed in breaking Stones for the purpose of Macadamising?

Tuesday, 16th December 1828.

PRESENT:—All the Members.

Mr. *Stuart* called to the Chair.

Louis Flavien Dufresne, Esquire, appeared and answered to the Questions as follows; to the

1. I am a native of *Quebec*, and I have resided at *L'Ancienne Lorette* since the year one thousand eight hundred and twenty five.

2. Very bad and almost impracticable Spring and Autumn, in consequence of the heavy rains:—they have been impracticable the greatest part of last Summer.

3. The disadvantages are that the Country people cannot come to market with loads, that they are obliged to make three loads instead of one, the State of the Roads being such that they cannot carry above one third of an ordinary load, and that Agriculture suffers in general.

4. It would be to macadamise them; it would be the least expensive means, and the only one I know of to improve these Roads.

5. No.

6. Between five and six hundred, and that augments the transient population about four thousand.

7. From all the Parishes in the Neighborhood of *Quebec*.

8. I believe my answers comprise all I have to say on this subject.

9. About twenty Shillings an Acre in superficies for good Land.

Jacques Fluet, Farmer at *L'Ancienne Lorette*, appeared, and said, I was born at *L'Ancienne Lorette*, and Mr. *Dufresne's* answers are mine.

Jean Robitaille called in and examined—I am a native of *L'Ancienne Lorette*, and I reside there, cannot answer the sixth Question, but concur in all the others with the exception of the ninth, to which I answer that the Lands are worth about thirty Shillings per square Acre, for those that are the least valuable, and ten pounds for those that are the best. The Roads on the South side of the River *Saint Charles*, should be Macadamised in preference to that on the North side.

Jean Guillet Tourangeau, called in says: I was born in the Suburbs of *Saint Vallier*, and I reside there. I give the same answers as Mr. *Robitaille*, with the exception that I value the Land at thirty Shillings per square Acre.

John

11. Y a-t-il dans la ville et les faubourgs un nombre de personnes qu'on pourroit employer avantageusement de cette manière?

12. Quel est le nombre de personnes indigentes dans la ville et les faubourgs de *Québec*?

13. Quel est leur état et leur condition?

14. Y a-t-il pendant l'hiver assez de travaux publics ou autres pour les employer suffisamment? Combien de personnes pauvres auroient besoin de l'emploi?

15. Quel nombre de pauvres soulageroit l'établissement d'une pareil source de travail?

16. Quelle somme d'argent faudroit-il pour soutenir ces personnes indigentes, durant l'hiver?

17. Combien en pourroit-on employer durant l'hiver à casser des pierres pour les chemins?

18. Quels gages journaliers paye-t-on généralement pour un pareil ouvrage, et quel salaire faudroit-il leur payer par jour pour les faire vivre?

19. Quelle est la quantité de pierres cassées nécessaire pour macadamiser un mille de chemins?

20. Quel salaire ou prix paye-t-on par jour aux gens ainsi employés à casser des pierres pour macadamiser?

Mardi, 16 décembre 1828.

PRESENS:—Tous les membres.

M. *Stuart* appelé au fauteuil.

Louis Flavien Dufresne, écuyer, comparait et répond aux questions, comme suit:

1. Je suis natif de *Québec*, et j'ai résidé à *L'Ancienne-Lorette* depuis l'année mil huit cent vingt-cinq.

2. Très-mauvais et presque impraticables le printemps et l'automne, par suite de grosses pluies. Ils ont été impraticables la plus grande partie de l'été dernier.

3. Les désavantages qui en résultent sont, que les habitans de la campagne ne peuvent venir aux marchés avec des charges, qu'ils sont obligés de faire trois voyages au lieu d'un; l'état des chemins étant tel qu'ils ne peuvent mettre plus du tiers d'une charge ordinaire, et que l'agriculture en souffre généralement.

4. Ce seroit de les macadamiser; ce seroit le moyen le moins dispendieux et le seul qui je crois capable d'améliorer ces chemins.

5. Non.

6. Entre cinq et six cents, et cela augmente la population passagère d'environ quatre mille.

7. De toutes les paroisses aux environs de *Québec*.

8. Je crois que mes réponses comprennent tout ce que j'ai à dire sur ce sujet.

9. Environ vingt chelins l'acre de bonne terre en superficie.

Jacques Fluet, cultivateur, de *L'Ancienne-Lorette* comparait et dit: Je suis né à *L'Ancienne-Lorette*, et mes réponses sont les mêmes que celles de M. *Dufresne*.

Jean Robitaille, est appelé et examiné: Je suis natif de *L'Ancienne-Lorette*, et j'y réside; je ne puis répondre à la sixième question, et je concours dans les réponses données aux autres questions, à l'exception de celle faite à la neuvième question, à laquelle je réponds, que l'acre carré de la plus pauvre terre vaut trente chelins, et de la meilleure dix louis. Les chemins qui se trouvent au sud de la Rivière *Saint-Charles* devraient être macadamisés de préférence à ceux qui sont au nord d'icelle.

Jean Guillet Tourangeau, est appelé et dit: Je suis né dans le faubourg *Saint-Vallier*, et j'y réside. Je donne les mêmes réponses que M. *Robitaille*, à l'exception de celle où il fixe la valeur de la terre à trente chelins l'acre carré.

John

Appendice
(U.)
10 Jany.

Appendix
(U.)
10th Jany.

John Cady of Quebec, Keeper of a Livery Stable,—
answers to the

1. Question—I have resided seventeen years in Quebec.
2. They are in a very bad state; in the Summer season they are very bad and more particularly in the Spring and Autumn—in the Winter they are bad on account of Cradle Holes, (*Cahots*) and Slides; the soil of the Roads about Quebec, particularly the *Lorette* and *Saint Foi* Roads and part of that to *Beauport*, is generally dry: the rains cause them to become muddy to a great depth, making them almost impassable, so that at those times a Horse can only carry one third of his ordinary Load. I suppose that Horses cannot carry ordinary Loads on these Roads for more than three Months in the Summer season in common years.
3. This is answered by the preceding answer.
4. Macadamising them would be the surest mode.
5. I think not.
6. I cannot answer that Question.
7. From all the Parishes about *Quebec* to a great distance.
8. I think the Roads might be much improved in winter by taking the shafts from under the winter carriages.
9. I cannot say exactly.
10. Certainly.
11. There are a great many poor people who are now supported by Charity who might earn a living in this way.

Friday, 19th December 1828.

PRESENT:—All the Members.

Mr. *Stuart* in the Chair.

Joseph Jones, Esquire, of Beauport, called in and examined, answers to the

1. About forty years.
2. In general by no means good, several parts in the Spring and Autumn being almost impassable, owing in some degree to the soil in low ground being clay and high grounds springy, and by the general mode of filling up the Holes, which is done by throwing the liquid mud from the ditches in them.
3. An excessive wear and tear of Cattle Furniture and Carriages and also a loss of time.
4. To be Macadamised with Stone at least four or six Inches in thickness, and to be well drained by keeping the ditches clean on each side.
5. I do not think that the proprietors generally have the means of making their Roads, but when made they might keep them in repair.
6. Six to seven hundred, navigated by about seven thousand men, besides ten or twelve thousand Emigrants, being almost one hundred and twenty vessels per month, and an augmentation of two thousand five hundred strangers per month during six months.
7. Salt meat and fine Flour from the District of *Montreal*, coarse Flour from the Lower District of *Quebec*, Fresh Meat partly from the Butchers, the remainder fodder and vegetables from the Farmers of the surrounding Parishes.
8. The Bridges required should have strong cedar Beams covered with plank at least three or four inches thick, to be fourteen or sixteen feet wide, and wherever the ground is found springy, trenches should be cut across the road to draw off the water and securely covered.
9. This depends much upon the situation and quality of the Land, at the present depreciation of landed Property it may not be worth more than two to three pounds per Acre.
10. I am of opinion it could and on moderate Terms.
- 11.

John Cady, de Québec, qui garde des chevaux de Appendix
louage à la (U.)

1. Question—J'ai résidé dix-sept ans à *Québec*. 10 Jany.
2. Ils sont très-mauvais dans l'été, et surtout le printemps et l'automne, ils le sont l'hiver à cause des cahots et des pentes; le terrain des chemins aux environs de *Québec*, surtout de ceux de *Lorette*, de *Sainte-Foi* et d'une partie de celui de *Beauport*, est généralement humide: les pluies les rendent boueux, jusqu'à une grande profondeur, de sorte qu'ils deviennent impraticables et qu'alors un cheval n'y peut transporter que le tiers d'une charge ordinaire. Je crois qu'en année commune les chevaux ne peuvent porter sur ces chemins leurs charges ordinaires pendant plus de trois mois de l'été.
3. Répondue par ma réponse précédente.
4. Le moyen le plus sûr seroit de les macadamiser.
5. Je ne crois pas.
6. Je ne puis répondre à cette question.
7. De toutes les paroisses à une grande distance autour de *Québec*.
8. Je crois qu'on amélioreroit beaucoup les chemins en autant les menoires de dessous les voitures d'hiver.
9. C'est ce que je ne puis dire avec exactitude.
10. Sans aucun doute.
11. Il y a beaucoup de pauvres gens, soutenus par la charité publique, qui pourroient gagner leur vie de cette manière.

Vendredi, 19 décembre 1828:

PRESENS:—Tous les membres.

M. *Stuart* au fauteuil.

Joseph Jones, Ecuyer, de Beauport, est appelé et examiné, et répond comme suit:

1. Environ quarante ans.
2. En général ils ne sont nullement bons, et dans quelques parties ils sont, le printemps et l'automne, presque impraticables, ce qui est dû en partie à la nature du sol qui est d'argile, et à celle des hauteurs qui sont remplies de sources, et en même-tems à la coutume que l'on a généralement de remplir les trous avec la terre boueuse des fossés qui les bordent.
3. La ruine des voitures et des bestiaux, et une perte considérable de tems.
4. De les macadamiser avec des pierres, à l'épaisseur de quatre à six pouces au moins, et de les faire bien égouter en tenant les fossés nettoyés de chaque côté.
5. Je ne pense pas que le commun des propriétaires aient les moyens de faire leurs chemins, mais je pense qu'une fois faits ils pourroient les tenir en bon état.
6. Six à sept cents vaisseaux et environ sept mille hommes, outre dix à douze mille émigrés, ce qui fait environ cent vingt vaisseaux par mois et une augmentation de deux mille cinq cents étrangers par mois, pendant l'espace de six mois.
7. La viande salée et la farine fine du district de *Montreal*, la farine commune du district inférieur de *Québec*, la viande fraîche, partie des bouchers, et les autres provisions de bouche des cultivateurs des paroisses aux environs de *Québec*.
8. Les ponts nécessaires devoient avoir de fortes poutres de cèdre couvertes de madriers de trois ou quatre pouces au moins d'épaisseur sur quatorze à seize pieds de largeur, et partout où le sol est humide on devoit couper des fossés de travers, bien couverts pour tirer l'eau.
9. Cela dépend beaucoup de la situation, et de la qualité du sol: dans l'état de dépréciation ou en est aujourd'hui la propriété foncière, elle ne peut pas valoir plus de deux à trois livres l'acre.
10. Je suis d'opinion qu'on le pourroit et à bas prix.
- 11.

Appendix
(U.)
10th Jany.

11. Yes, there is no doubt but that there are a number of men and boys in and about the City and Suburbs, who would be glad of employment to break the Stones during Winter.

Thomas Stott, Esquire, called in and examined, answers :—

1. Seventeen years ; for the last six years, I have resided upon the *Saint Foi* Road, about a Mile and a half from *Quebec*.

2. The general state and condition of the Roads in the Neighborhood of *Quebec*, I consider to be very bad, and since my time growing worse every year from the circumstance of their being generally speaking formed of a soft clayey material, they are subject after rain to become full of ruts and holes, and frequently to such an extent as to obstruct and impede the progress of Horses and Carriages, and endanger the Property, and even the Lives of the Public.

3. The disadvantages arising from the State of the Roads are many and obvious, in as much as they render the transport of Provisions and Merchandise difficult and unsafe, retard the progress of travellers and tend generally to obstruct that free intercourse between the Inhabitants of the different parts of the Province with *Quebec*, and in case of illness requiring immediate medical aid the roads at particular Seasons are so bad, as sometimes to prevent its being procured in time.

4. I am decidedly of opinion that the mode adopted and found to answer so well in *England*, viz: the plan laid down by Mr. *McAdam*, is the best, and if properly put in execution will ultimately prove the least expensive.

5. I am unable to speak correctly of the private means of the Proprietors of Lands lying upon these Roads or their ability to make and keep the same in good repair, but whatever may be the means of these proprietors I think it would be extremely unfair to expect they would apply them exclusively in the making of roads, which the Public at large enjoy the advantage of, and are therefore upon every principle of equity and justice to furnish the means of making and repairing.

6. The number of Ships which arrived at *Quebec* during the present year was seven hundred and one, in the year one thousand eight hundred and twenty seven, there were upwards of six hundred.

The average proportion of men in each Ship exclusive of Passengers and Emigrants, I should conceive to be about fifteen, which would average for the last two years, nine thousand seven hundred and fifty annually.

7. At present, principally from the vicinity of *Quebec*, because from the badness of the Roads, farmers and others who have surplus Provisions at any distance are prevented bringing them to market, and particularly those at *Val Cartier*, and on *Craig's* Road, whence a large augmentation of the daily and weekly supply of Provisions might be procured.

8. I should state generally in answer to this Query, that in consequence of the State of the Roads, farmers and others residing at a distance from *Quebec*, are prevented bringing provisions to market, the result of which is that at some seasons of the year the *Quebec* market is badly supplied, the prices demanded for provisions are extravagantly high, and there is no inducement to Emigrants to settle on Waste Lands, that might otherwise be brought into cultivation with advantage, were it possible for them to transport produce to a good market. It is a fact of which the Committee cannot be ignorant, as it is established by the experience of every Country in *Europe*, that the formation of good Roads is one of the steps towards the improvement of a Country, and although in the first instance it may be attended with expense, still it is an expenditure which will ultimately, nay very shortly, be attended with the best consequences, and which it is particularly desirable in a new and improving Country, like that of *Lower Canada*, to commence as early as possible and to pursue

11. Oui, il y a dans la ville et les faubourgs nombre d'hommes et d'enfans qui seroient bien-aises d'être employés à casser des pierres durant l'hiver.

Appendice
(U.)
10 Jany.

Thomas Stott, Ecuyer, est appelé, examiné et répond :

1. Depuis dix-sept ans, et les six années dernières, j'ai résidé sur le chemin de *Sainte-Foi*, à environ un mille de *Quebec*.

2. Je trouve en général très-mauvais l'état et la condition des chemins aux environs de *Quebec*, et chaque année je les ai vus devenir de plus en plus mauvais, ce qui est dû à la qualité molle et argileuse du sol, qui, à la suite de la pluie, se remplit d'ornières et de trous, souvent au point d'obstruer et d'empêcher la marche des chevaux et des voitures, et de mettre en danger la propriété et même la vie des habitans.

3. Les désavantages qui résultent du mauvais état des chemins sont nombreux et manifestes ; c'est de rendre difficile et dangereux le transport des provisions et des marchandises, et de causer du retardement aux voyageurs, et généralement de tendre à gêner la facilité des communications entre la capitale et les habitans des différentes parties de la province ; en certaines saisons de l'année les chemins sont si mauvais, que, si l'on se trouve avoir besoin des secours d'un médecin dans un cas pressé, on ne peut souvent se le procurer à tems.

4. Je suis décidément d'opinion que la méthode adoptée en *Angleterre* et qui y a si bien réussi, savoir, celle qu'à inventée M. *Macadam*, est la meilleure et celle que l'on trouvera la moins dispendieuse à la fin, si on la met à exécution d'une manière convenable.

5. Je ne puis parler avec exactitude des moyens particuliers des propriétaires des terres situées sur ces chemins, ni de leur capacité à les faire ou à les tenir en bon état, mais quelques soient les moyens de ces propriétaires, je crois qu'il seroit extrêmement injuste d'attendre d'eux qu'ils appliquassent ces moyens à faire des chemins dont tout le public retire l'avantage, et que par conséquent, d'après les principes de l'équité et de la justice, doit fournir les moyens pour les faire et pour les réparer.

6. Le nombre de vaisseaux venus à *Quebec* cette année est de sept cent un, en mil huit cent vingt-sept il fut de plus de six cens. Je crois que le nombre moyen de l'équipage de chaque vaisseau, sans compter les passagers ni les émigrés, est composé d'environ quinze hommes, ce qui pour les deux années dernières donneroit un nombre moyen de neuf mille sept cent cinquante, par chaque année.

7. A présent des environs de *Quebec* principalement, parceque le mauvais état des chemins empêche les cultivateurs et autres, situés à une distance, d'apporter aux marchés le surplus de leurs provisions, entre autres surtout ceux de *Valcartier* et du chemin de *Craig*, d'où l'on pourroit tirer une grande quantité de provisions, tous les jours ou toutes les semaines.

8. Je répondrai généralement à cette question, que par suite du mauvais état des chemins les cultivateurs et autres éloignés de *Quebec* ne peuvent apporter aux marchés aucunes denrées, ce qui fait qu'en certaines saisons de l'année le marché de *Quebec* est mal pourvu, et qu'on y demande pour les provisions des prix exorbitans, et qu'il n'y a aucun encouragement pour les émigrés d'aller s'établir sur les terres incultes, qu'on pourroit cultiver avec avantage s'il étoit possible d'en porter les produits sur un bon marché. C'est un fait que le comité ne peut ignorer, puisqu'il est constaté par l'expérience de tous les pays européens, que la formation de bons chemins est le premier pas vers l'avancement d'un pays, et quoiqu'il en coûte beaucoup d'abord, c'est une dépense qui dans le tems et même assez promptement sera suivie des résultats les plus avantageux. Et dans un nouveau pays, en train d'amélioration comme est le *Bas-Canada*, il est particulièrement à désirer qu'on commence aussitôt que possible et qu'on poursuive cette entreprise avec toute la vigueur

Appendix
(U.)
10th Janv.

pursue with every possible exertion commensurate with its means. At certain seasons of the year, the high Public Roads are scarcely passable, as may be demonstrated by the fact, that frequently in the spring and fall of the year, the Post from *Montreal* to *Quebec*, takes upwards of seventy hours to perform a Journey of about one hundred and eighty miles, whereas the same distance is travelled by the Mail in *England*, at all seasons of the year in less than twenty four hours,—and as to the Roads in the vicinity of *Quebec* in the spring and fall of the year, they are so much out of order that the Mail Carriage takes three hours to travel the last eight miles, and a Cart with one Horse cannot transport more than three hundred weight and that only at the rate of about two miles per hour, whence it may be easily seen that the prices of Forage, Provisions and Merchandise, are considerably enhanced to the consumers without any corresponding advantage to the sellers.

9. I conceive the average price of Land within four miles from *Quebec* to be five or six pounds per Acre.

10. The preparation of macadamising by breaking Stones could be advantageously carried on in winter: I should think there are a very considerable number of persons in the City and Suburbs of *Quebec*, who might be advantageously employed in this way during the winter, by which means employment would be afforded to a numerous Class of Individuals who have heretofore been supported by the Public: besides I see no good reason why a numerous class of depredators who are constantly infesting the Jails of the Country, and frequently sentenced to hard labor, should not be thus advantageously employed; and to stimulate those culprits to exertion a certain portion of the proceeds of their labor might be allowed them for comforts.

Collin McCallum, Esquire, called in and examined, answers

1. I am twenty nine years of age, I was born at *Quebec*, where I have continued to reside; my Father before me, and I now, have an extensive Flour Mill, and Oil and Barley Mill at *Beauport*, about six miles from *Quebec*.

2. The Roads within the Neighbourhood of *Quebec*, with the exception of *Saint Lewis* Road are and always have been to my recollection very bad, and in wet weather and rainy seasons from the nature of the soil become almost impassable.

3. The disadvantages arising to any populous and rapidly increasing City such as *Quebec* now is and becoming daily, from bad roads within the neighbourhood from whence the chief supplies are derived, must be evident as tending to prevent at certain periods, more especially in the spring and fall, the bringing in those supplies to our markets so necessary as well for the Inhabitants as the numerous Emigrants daily arriving in the summer season—tending to discourage the manufactures already established as well as prevent the erection of others, for which the neighbourhood is by nature so well adapted, tending to discourage agriculture and ruinous to man and beast. These are but very few of the evils arising from bad roads.

4. The best mode of improving the Roads within the neighbourhood of *Quebec*, would in my opinion be by macadamising them in a proper manner, first by laying down a good bed or foundation of large flat stone (the refuse of building stone which can be had in large quantities at the *Beauport* Quarries, and covering the same with small stones and making ditches sufficient to carry off the water, especially on the Lower Roads.

5. I consider it generally speaking beyond the means of Proprietors of Lands lying on these Roads to make them good or sufficient, a great deal has already been done by them but from the inadequacy of their funds

rigueur que peuvent permettre ses moyens. En certains tems de l'année les grands chemins sont à peine praticables, comme on peut s'en convaincre, en observant que dans le printemps et l'automne la poste de *Montréal* à *Québec* prend fréquemment soixante-dix heures pour faire une route d'environ cent quatre-vingt milles, tandis que la malle en *Angleterre* et dans toutes les saisons, ne met pas vingt-quatre heures à parcourir la même distance de chemin. Quant aux chemins aux environs de *Québec* ils sont si mauvais l'automne et le printemps que les voitures de poste mettent trois heures à faire les huit derniers milles, et une voiture avec un seul cheval ne peut porter plus de trois cents pesant, et cela à la proportion de deux milles à l'heure, ou à peu près, d'où il s'en suit une augmentation considérable dans le prix du fourrage, des denrées et des marchandises, pour le consommateur, sans que le vendeur ne retire aucun avantage équivalent.

9. Je mets le prix commun de la terre à quatre milles de *Québec* à cinq ou six livres l'acre.

10. On pourroit avec avantage préparer pendant l'hiver les pierres nécessaires au macadamisage; j'ai lieu de penser qu'il y a dans la ville et les faubourgs un bien grand nombre de personnes qu'on pourroit occuper avantageusement de cette manière, durant l'hiver; un pareil emploi feroit vivre une classe nombreuse d'individus, qui jusqu'à présent ont été livrés à la charité publique. D'un autre côté je ne vois pas pourquoi on ne pourroit pas employer utilement à ce genre de travail cette foule de délinquans qui infestent constamment les prisons de ce pays et que l'on condamne si souvent aux travaux forcés. Pour les exciter au travail on pourroit leur accorder une certaine partie du produit de leur labour.

Collin McCallum, Ecuyer, est appelé, examiné et répond :

1. J'ai vingt-neuf ans, je suis né à *Québec*, et j'y ai toujours résidé; mon père avoit avant moi, et j'ai maintenant à *Beauport* à environ six milles de *Québec*, un moulin à farine considérable, et un moulin à huile et à orge.

2. Les chemins aux environs de *Québec* si l'on en excepte celui de *Saint-Louis* sont et ont toujours été à ma connoissance très-mauvais, et la nature du sol en est telle que dans tems humides et les saisons pluvieuses ils deviennent presque impraticables.

3. Il est aisé d'apercevoir les désavantages qui résultent de mauvais chemins dans le voisinage d'une ville qui comme *Québec* croit rapidement en population, et qui doit tirer de ses environs les articles nécessaires à ses besoins journaliers. Les mauvais chemins tendent, en certains tems, surtout l'automne et le printemps à empêcher à nos marchés le transport des provisions nécessaires aux habitans de cette ville et au grand nombre d'émigrés qui arrivent journellement pendant l'été; à décourager les manufactures déjà établies et à prévenir l'établissement de beaucoup d'autres, auxquelles le voisinage est si bien adapté par la nature; enfin à décourager l'agriculture et à causer une perte considérable de tems, et à exposer à des frais continuels; ce sont là quelques-uns des maux qui résultent du mauvais état des chemins.

4. La meilleure méthode à suivre, selon moi, pour améliorer les chemins dans le voisinage de *Québec*, seroit de les macadamiser d'une manière convenable, en posant d'abord un bon lit ou fondation de pierres plates et larges (les rebuts de la pierre à bâtir qu'on pourroit trouver en grande quantité aux carrières de *Beauport*), en couvrant celle-ci avec de petites pierres, et en faisant des fossés capables d'égoutter les chemins, surtout sur les endroits bas.

5. Je considère généralement parlant que cela est au-dessus des moyens des propriétaires des terres situées sur les dits chemins, et qu'ils ne peuvent les faire bon ou suffisans; ils ont déjà beaucoup fait, mais la modicité

10th Jany.

funds it is found out to be money thrown away and labour lost. I am of opinion that if the roads in question were once properly made there would arise no difficulty in keeping them in repair.

6. The number of Vessels coming from *Europe*, and the other British Colonies together with the number of Emigrants appears by the Harbour Master's Books as follows :—

Vessels.	Tons.	Passengers.
1817—306,	77112,	6730.
1818—368,	92936,	6562.
1819—630,	155518,	12907.
1820—576,	146175,	11239.
1821—418,	100646,	8050.
1822—586,	146188,	10468.
1823—542,	131412,	10258.
1824—603,	146581,	6575.
1825—762,	191614,	9007.
1826—694,	176792,	10731.
1827—603,	152764,	16862.
1828—701,	183255,	11697.
6769,	1704993,	123176.

of this number of men women and children, I conceive eight to ten thousand have taken up their abodes in *Quebec*.

7. The supplies of Provisions to the transient population I am of opinion are derived almost exclusively from the neighbouring Parishes.

Anthony Anderson, Esquire, of *La Canardière*, appeared, and answered :

1. I have been in this Country forty five years, out of which time I have resided twenty five years near the *Beauport* and *Charlesbourg* Roads.

2. The Roads in the Spring and Fall are so very bad that it is almost impossible to pass through them.

3. The disadvantages arising from the bad state of the Roads are many viz : Prevents the farmer from attending the Markets with produce, owing to the very great wear and tear of Cattle, Carts, Harnesses, &c.

4. The only mode of improving these roads is the well known system of macadamising.

5. No it does not lie in the power of the proprietors generally.

6. For these twelve years past, about the number of four to seven hundred Ships come to this Port, annually leaving an increase of population from six hundred to one thousand yearly—all of whom reside in and about the vicinity of *Quebec*.

7. From the neighbouring Parishes and Eastern Townships.

8. The present Road Act is insufficient in itself not providing by Law the necessary materials for repairing and keeping up of roads, but if once properly macadamised at Public expence, it is in the power of the Proprietors of Lands to maintain and keep up the same, by passing an Act compelling them to do so under the inspection of a person appointed for that effect.

9. The average price of Land, at four miles from *Quebec*, is worth at the rate of from fifteen to thirty pounds an Acre in the vicinity of *Charlesbourg* and *Beauport*, at which last place I reside ; as to the other parts about *Quebec*, the Gentlemen residing there are more competent to Judge than myself.

10. The preparations for macadamising by breaking Stones can be carried on in the winter to great advantage both to the poor and the public at large.

11. Numbers to whom it would be a source of relief.

Mr. *Anderson* also says, that all suits ought to be without costs before the Captain of Militia and two other

cité de leurs moyens a rendu inutiles leurs dépenses et leurs travaux. Je ne suis pas d'avis que si ces chemins étoient faits une fois, il n'y auroit aucune difficulté à les maintenir en bon état.

6. Ci-suit, d'après les livres du maître de port, le nombre de vaisseaux qui viennent d'*Europe* et des autres colonies britanniques, ainsi que le nombre des émigrés qui ont abordé dans le pays, savoir :—

Années.	Vaisseaux.	Tonneaux.	Passagers.
1817	306	77112	6790
1818	368	92936	8562
1819	630	155518	12907
1820	576	146175	11239
1821	418	100646	8050
1822	586	146188	10468
1823	542	131412	10258
1824	603	148581	6575
1825	762	191614	9097
1826	694	178792	10731
1827	603	152764	16862
1828	701	183255	11697
6789	1704993	123176	

De ce nombre d'hommes, de femmes et d'enfans, je conçois qu'il en est demeuré dix milles à *Quebec*

7. Je suis d'opinion que les provisions nécessaires à la population passagère se tirent presque exclusivement des paroisses des environs.

Anthony Anderson, écuyer, de la *Canardière*, comparait et répond :

1. Je demeure dans ce pays depuis quarante-cinq ans, sur lesquels j'ai résidé vingt-cinq ans près des chemins de *Beauport* et de *Charlesbourg*.

2. Les chemins sont si mauvais, l'automne et le printemps, qu'il est presque impossible d'y passer.

3. Les désavantages qui résultent du mauvais état des chemins sont en grand nombre, car cela empêche les cultivateurs de transporter leurs produits aux marchés, à cause des dommages auxquels sont exposés les bêtes de somme, les voitures, les harnois, &c. &c.

4. Le seul moyen d'amélioration convenable pour ces chemins, c'est d'adopter le système bien connu de *Macadam*.

5. Non, cela n'est pas au pouvoir du commun des propriétaires.

6. Pendant les douze années dernières il est venu à ce port entre quatre et sept cents vaisseaux, chaque année, ce qui pouvoit produire dans la population une augmentation annuelle de six cents à mille âmes, dont le tout réside dans la ville ou dans les environs de *Quebec*.

7. Des paroisses des environs et des Townships de l'Est.

8. L'acte présent des chemins est insuffisant en lui-même, en ce qu'il ne contient pas de disposition sur les matereaux à mettre en usage dans la réparation des chemins, mais s'ils étoient une fois macadamisés d'une manière convenable, aux frais du public, les propriétaires pourroient les tenir en bon état, si l'on passoit une loi pour les obliger à le faire, sous la surveillance d'une personne nommée à cet fin.

9. A quatre milles de *Quebec*, dans le voisinage de *Charlesbourg* et de *Beauport*, où je réside, le prix commun de la terre est de quinze à trente louis ; quant aux autres endroits aux environs de *Quebec* les Messieurs qui y demeurent sont plus à portée d'en juger que moi-même.

10. On peut péparer pendant l'hiver les pierres nécessaires au macadamisage, et cela tourneroit autant à l'avantage du public qu'à celui des pauvres qu'on emploieroit à cet ouvrage.

11. Ce seroit une source de soulagement pour un grand nombre d'entre eux.

M. *Anderson* dit aussi que toutes les poursuites pour les chemins doivent être faites sans aucuns frais, et portées

(U.)

10 Jany.

Appendix
(U.)
10th Jany.

other officers, and that the fines should not exceed ten shillings, which should be laid out upon Roads.

Charles Smith, Esquire, examined, answers :

1. I have resided in *Quebec* upwards of thirty years, and in the Neighbourhood of *Quebec*, on the Road leading to the Parish of *Charlesbourg*, upwards of twelve years.

2. The Roads in the neighbourhood of *Quebec* are generally in a very bad state, and so much so in the Spring and Fall of every year as to be nearly impassable.

3. The disadvantages arising from such a state of roads are obvious : they are injurious to the interests of the whole population of the Country, to the Agriculturist as well to the Inhabitant of the City : to the former they present an almost insurmountable obstacle to the constant, easy and ready conveyance of his produce to the City Markets, so essentially necessary to his Interests ; and to the latter, especially the poorer Inhabitants of the City, and evidently the most numerous, such a state of roads is greatly and manifestly prejudicial, inasmuch as the produce conveyed to Market, and of which they are the principal consumers, is there disposed of at a price evidently augmented in proportion to the risk and toil necessarily attendant upon the conveyance of it to Market by the Agriculturist in such a state of roads ; and again this augmentation of the price of produce is no real gain to the farmer altho' an evident loss to the consumer, for to the farmer it is by no means an adequate compensation for the additional wear and tear of Horses and Harnesses, &c. and risk and toil imposed upon him in the conveyance of his produce to Market in such a state of roads.

4. In my opinion the best and almost the only method of improving the roads so much travelled upon as those in the immediate neighbourhood of *Quebec*, is according to the well known plan of *Macadam*.

5. I am quite prepared to say, that is not within the private means of proprietors of the lands lying on these roads, to make them in good repair from the state in which those roads now are ; but I am of opinion that once these roads are made according to the plan of *Macadam*, they might be kept up at the private expence of the proprietors of land adjoining them, provided new Legislative enactments be made to enforce it.

6. For several years past the number of Ships coming from *Europe*, and from the other British Colonies, average from about five hundred and fifty to seven hundred, bringing with them an immense yearly increase of population to the *Canadas*, and of course in a partial degree increasing also the population of the port and city of *Quebec*. The annual augmentation at the Port and City, is very considerable, taking the average of the number of Ships at six hundred and allowing an average of fifteen men to each, nine thousand ; besides these there may be very safely counted ten thousand Emigrant, who although the majority of these make but a short stay at *Quebec*, must be fed whilst here, and who generally leave as a permanent augmentation of the population of the City seven hundred Souls.

7. The Markets of the City are supplied with provisions generally from the Country Parishes in the neighbourhood of *Quebec*, a great proportion of the supply of Cattle is derived from the Eastern Townships and from the *United States*.

8. It seems to me that the division of labour on the public highways or *chemins de front*, is unjustly onerous in a great many cases, and I would suggest that the labour on the roads should be imposed upon each proprietor in proportion to the total number of Acres of Land, possessed by each proprietor on the several roads, and not as at present according to the extent of front of each proprietor's land.

portées devant le Capitaine de Milice et deux autres Officiers, et que les amendes ne devroient pas excéder la somme de dix chelins, applicables aux chemins.

Charles Smith, écuyer, est examiné et répond :

1. J'ai résidé à *Québec* plus de trente ans, et dans le voisinage de *Québec*, sur le chemin qui conduit à la paroisse de *Charlesbourg*, depuis plus de douze.

2. Les chemins dans le voisinage de *Québec* sont généralement dans un très-mauvais état, et l'automne et le printemps ils le sont au point de devenir impraticables.

3. Les désavantages qui résultent d'un pareil état des chemins sont évidens : ils sont nuisibles aux intérêts de la population en entier, aux cultivateurs aussi bien qu'aux habitans de la ville ; aux premiers ils présentent des obstacles presque insurmontables à la facilité et à la promptitude des transports journaliers qu'il a à faire aux marchés de la ville ; ce qui est pour du premier intérêt : quant aux derniers, surtout les classes pauvres de la ville et qui toujours sont les plus nombreuses, un pareil état des chemins leur est grandement et évidemment préjudiciable, en autant que les produits portés aux marchés, dont ils sont les principaux consommateurs, y sont vendus, comme de raison, à un prix plus haut et proportionné aux risques et à la fatigue, auxquels le cultivateur est sujet en les transportant sur le marché par de pareils chemins : encore cette augmentation de prix n'est pas un vrai profit pour le cultivateur, et est une perte certaine pour le consommateur, car pour celui-là ce n'est pas du tout une compensation proportionnée pour les frais additionnels qu'il en coûte en bêtes de somme, en harnois, &c. et pour le risque et la fatigue auxquels il est sujet, dans le transport de ses produits au marché, par de tels chemins.

4. Dans mon opinion la meilleure et la seule méthode d'amélioration à suivre, pour des chemins aussi fréquentés que ceux qui sont dans le voisinage immédiat de *Québec*, c'est le plan bien connu de *Macadam*.

5. Je dis sans hésiter qu'il est hors des moyens des propriétaires des terres situées sur ces chemins de les mettre en bon état de réparation, d'après la condition où ils se trouvent aujourd'hui. Mais je suis d'opinion que s'ils étoient une fois faits sur le plan de *Macadam*, ils pourroient être réparés aux frais des propriétaires des terres qui y sont situés, pourvu qu'il fût passé une loi pour les y obliger.

6. Ces années dernières le nombre commun de vaisseaux venus d'*Europe* et des autres colonies britanniques, a été d'environ cinq cent cinquante à sept cents, amenant avec eux annuellement dans les *Canadas* une immense augmentation de population, et augmentant par conséquent jusqu'à un certain point la population du port et de la cité de *Québec*. L'augmentation annuelle du port et de la cité a du être très-considérable, si l'on prend pour nombre moyen celui de six cents vaisseaux, et pour nombre moyen des personnes celui de quinze, ou neuf mille ; on peut compter en outre, avec sûreté, dix mille émigrés qui pour la plupart, il est vrai, ne font qu'un court séjour à *Québec*, mais qui, pendant le temps qu'ils y demeurent, doivent y être nourris, et qui généralement nous laisse une augmentation permanente de sept cents âmes.

7. Ce sont les paroisses aux environs de *Québec* qui pourvoient généralement de denrées le marché de la cité ; on tire une grande partie de la viande des Townships de l'Est et des *Etats-Unis*.

8. Il me semble que la division du travail sur les grands chemins publics ou chemins de front est onéreuse ou injuste dans un grand nombre de cas, et je suggérerois d'imposer le travail pour les chemins, sur chaque propriétaire à proportion du nombre d'acres de terre que possède chaque propriétaire sur les différens chemins, et non comme c'est le cas présentement d'après l'étendue qu'a en front la terre de chaque propriétaire.

10th Jan'y.

9. From six to eight pounds per Acre.
10. Undoubtedly.
11. A great number would be happy to be so employed on very moderate terms.

William Holmes, M. D. examined, said: Mr. Chairman, nothing marks the stage of civilization of any Country more than the state of the Roads, the ancient Romans have left theirs as Imperishable monuments of their civilization, probably more lasting than modern ones; the present road law is totally insufficient to keep in repair the roads near *Quebec*, as all the Roads in the Country coming to a nucleus or point at *Quebec*, increase the wear and tear of the said Roads, to the heavy expense and labour of the Individuals living in the vicinity of *Quebec*. That in the Fall and Spring the Citizens of *Quebec* are little better than Prisoners of the King's Bench, obliged from the badness of the roads, to live within certain limits. In my professional avocations for nearly forty years frequently the carriage horses have sunk and lain down in the deep ruts of old *Lorette* and *Beauport* Roads, particularly in the fall and spring, and my opinion is were we to be visited by a well informed observant Foreigner, he from the state of our Roads would consider us as living in the darkest age of Barbarism. Let the Citizens of *Quebec*, in their slow march of Intellect attend to the first degrees of amelioration of their Roads, Turnpikes and Macadamising, leaving the higher degrees of tunnelling and rail ways to our Sister City or others possessing certain localities of situation or more commercial enterprise. So it is now full time that the trammels of rooted prejudices, old customs and usages should be broken through and experienced benefits substituted; our winter roads have and are now experiencing all the evils by the continuation of the prejudices in the structure of our winter carriages; in the *United States* and *Upper Canada*, there are no cahots from the adoption of proper carriages. In a civilized state there is no object or measure of political economy so essential to the public welfare as good roads. Nay they have a moral tendency by facilitating the intercourse of society and the attendance on divine public worship.

Jean Baptiste Larue, Road Surveyor examined, states:

1. I have resided at *Quebec* upwards of forty years.
2. The state of the Roads in the Neighbourhood of *Quebec* is in general very bad, being most commonly of a clayey and muddy soil, they are not firm, and the least rain spoils them, so that in rainy seasons they become almost impassable and sometimes dangerous. The quantity of large stones used to mend them, instead of doing so has made them worse.
3. The disadvantages resulting therefrom are the delays, fatigue and even danger to travellers, the destruction of carriages and harnesses. The discouragement of the Country people from bringing their commodities to Market, not being able frequently to bring more than half a load, and the inevitable consequence of a rise in the prices of these very commodities, and finally the delay occasioned to the public service.
4. There are two different means of improving these roads, first by repairing them thoroughly at the public expense, by Macadamising them, or by establishing Turnpikes, the Tolls of which would be applied to this purpose.
5. There might possibly be some proprietors upon these roads who would have the means of repairing them and upholding them by making great sacrifices, but

Appendice
(U.)

10 Jan'y.

9. De six à huit Louis l'acre.
10. Sans aucun doute.
11. Un grand nombre seraient bien aises d'être employés à des gages très modiques.

William Holmes, M. D. ayant été examiné, dit: M. le Président, il n'y a rien comme l'état des chemins pour marquer le degré de civilisation où en est rendu un pays; les anciens Romains ont laissé dans les leurs des monumens impérissables de leur civilisation, et qui probablement sont plus durables que ceux des modernes. Les lois maintenant en force sont tout-à-fait insuffisantes pour réparer les chemins aux environs de *Québec*, car tous les chemins du pays aboutissant à *Québec* comme à un centre augmente l'usage des dits chemins et les détériore, ce qui expose les habitans du voisinage de *Québec* à des frais considérables et à grand travail. L'automne et le printemps les citoyens de *Quebec* ne sont guère mieux situés que les prisonniers de la Cour du Banc du Roi, et sont obligés, vu le mauvais état des chemins de vivre resserrés en dedans de certains limites. Dans la pratique de ma profession, depuis près de quarante ans, j'ai vu souvent, surtout l'automne et le printemps, les voitures et les chevaux tomber et rester au fond des ornières dans les chemins de l'*Ancienne Lorette* et de *Beauport*, et je crois que si un étranger éclairé et observateur les visitaient, il jugerait que nous vivions encore dans un état de vraie barbarie. Que les citoyens de *Québec*, dans la marche tardive de leur intelligence appliquent à leurs chemins les premiers degrés d'amélioration, les chemins de barrière et le macadamisage, laissant les chemins souterrains (tunnel) et les chemins de fer à leur sœur cité et aux autres qui possèdent certaines localités plus favorables et plus d'esprit mercantile. Ainsi il est grandement temps d'abattre les entraves de préjugés gothiques, et que d'anciens usages et de vieilles coutumes fassent place aux améliorations d'une expérience éclairée. Nos chemins d'hiver font éprouver tous les inconvéniens de l'ancienne manière dont nos voitures d'hiver sont construites. Dans les Etats-Unis et dans le Haut-Canada, on a adopté des voitures d'hiver convenable, et l'on n'y rencontre pas de cahots. Dans l'état civilisé, il n'est objet ni mesure d'économie politique aussi essentiels au bien être public, que de bons chemins. Bien plus, ils sont avantageux aux bonnes mœurs, en facilitant le commerce de la société et la fréquentation du service divin.

Jean Baptiste Larue, Inspecteur des Chemins, est examiné et répond:

1. Je réside à *Québec* depuis quarante ans et plus.
2. L'état des chemins dans le voisinage de *Québec* est en général très mauvais, étant généralement sur un sol glaiseux, vaseux et fangeux; ils n'ont nulle solidité, et la moindre pluie les détériore de manière que dans les saisons pluvieuses ils deviennent presque impraticables et quelquefois même dangereux. La quantité de grosses pierres qu'on y a employé, loin de les améliorer, n'a fait que les rendre encore pires.
3. Les désavantages qui en résultent, sont les retards, fatigues, et même dangers pour les voyageurs, la destruction des voitures et harnois, le découragement des habitans des campagnes d'apporter leurs denrées aux marchés de la ville, ne pouvant porter bien souvent qu'à demi charge; et la conséquence inévitable de la hausse dans les prix de ces mêmes denrées; enfin le retard dans le service public.
4. Deux seuls moyens d'améliorer ces chemins se présentent; l'un de les réparer de fond en comble aux dépens du public en les pierrotant ou macadamisant, ou d'y établir des barrières dont le produit serait appliqué à leur entretien.
5. Il se pourrait bien qu'il y eut quelques propriétaires de terres sur ces chemins en état de les réparer et de les maintenir en faisant de grands sacrifices pécuniaires.

Appendix
(U.)
10th Jany.

Appendice
(U.)
10 Jany

but besides the injustice of requiring this from them exclusively, I have reason to believe the Public would not much benefit by it. In my opinion all the work done upon Roads should be after some determinate plan.

6. The average number of Vessels arriving annually at the Port of *Quebec*, is about six hundred and fifty, and that of their Crews at about twelve thousand, to which must be added the number of Emigrants which these Vessels bring, which may be about six or seven thousand, so that the increase of the population of *Quebec*, during the navigable season, is two thousand at least.

7. The places from which the greatest supply of provisions is derived for this transient population, are the Parishes on the South side of the River such as *Point Levi, Saint Henri, la Nouvelle Beauce, Saint Nicholas, Saint Antoine* and *l'Île d'Orléans*, excepting however Butchers' meat of which a great quantity is supplied by the Butchers at *Quebec*.

8. I beg to be permitted in answer to this Question to refer the Committee to some general reflexions which I shall take the liberty of submitting hereafter.

9. It would be difficult to answer this, the price of Lands varying according to the nature of the soil: I should however be inclined to think that the average price of land, at four miles from *Quebec*, would be from four to five pounds on Acre.

10. In my opinion the winter would be the most suitable time for making the preparations necessary for so considerable an undertaking as that contemplated.

11. Yes; a great number of persons might be found who would be very glad to have work during the winter, and who would work at a cheaper rate than in summer.

12. The quantity of broken stones required to Macadamise a mile of roads, would be about fifty thousand Bushels.

13. Referred to the following reflexions respectfully submitted:—The bad state of the roads in the neighbourhood of *Quebec*, is not only owing to the quality of the soil, but to several other causes which contribute thereto. And among others the chief causes are the immense number of carriages which are constantly on the Roads; the thinness of the wheels of those carriages which make deep ruts when they are heavily laden or the ground soft: these carriages being only drawn by one single horse; and the bad practice which the conductors of them have of allowing their horses to go as they think proper, so that they naturally follow the track of those which preceded them on all occasions: When the depth of the ruts compel the drivers to go into another track which in time becomes also impassable—and from one day to another become in the worst possible state. I find that in *England* the introduction of broad wheels is much encouraged, and that upon several Turnpike roads a fine is imposed upon every driver who follows the track of his predecessor. But in general in *Europe*, the greatest number of carriages are upon four wheels or are drawn by two, three or four horses. I am induced to believe that the winter would be the best season for making the necessary preparations for the intended work. In that season the stone which may be required can be drawn from the quarries, be taken to the places where they are intended to be used by the horses or carriages of the parties interested, in which are included the Inhabitants of the neighbouring parishes, such as *St. Foy, the two Lorettes, Charlesbourg and Beauport, &c.* from each of whom a *corvée* of two days might be exacted with their carriages and who would all prefer these occasional *corvées* to the obligation of the payment of Toll at the Gates, and this assistance would lessen the expence by about thirty per cent, and would not interfere with the Agricultural labours—The stones being all broken upon the spot, the work might begin early in the spring, and I dare say the expense would not exceed four hundred to four hundred and fifty pounsp

aires, mais outre l'injustice qu'il y aurait peut-être à l'exiger d'eux exclusivement, j'ai tout lieu de croire que le public n'y gagnerait pas beaucoup. A mon opinion, tout l'ouvrage doit être uniforme.

6. On peut prendre pour terme moyen des vaisseaux qui fréquentent annuellement le Port de Québec, 650, et porte à-peu-près à 12,000 le nombre des hommes dont leurs équipages sont composés, à quoi il faut ajouter le nombre des émigrans que ces vaisseaux amènent, se montant à 6 ou 7000, de sorte qu'on peut estimer l'augmentation annuelle de la population de *Québec*, durant le cours de la navigation, à 2000 au moins.

7. Les parties ou places qui contribuent le plus à fournir les provisions nécessaires à cette population passagère, sont les paroisses du sud du fleuve, telles que *la Pointe Lévi, St. Henri, la Nouvelle Beauce, St. Nicholas, St. Antoine* et *l'Île d'Orléans*; si l'on en excepte pourtant la viande de boucherie dont une grande partie est fournie par les bouchers de *Québec*.

8. Je demanderai qu'il me soit permis de référer pour ma réponse à cette question, à quelques réflexions générales que je prendrai la liberté de soumettre au bas de ces réponses.

9. Il meserait difficile de répondre à ceci, le prix des terres variant suivant la nature du sol; je serai pourtant porté à croire que le prix moyen des terres à quatre milles de *Québec*, n'excederait pas de 4 à 5 l'arpent.

10. A mon opinion, l'hiver serait la saison la plus propice pour faire les préparatifs nécessaires à des travaux aussi considérables que ceux en contemplation.

11. Oui; Non seulement on pourrait trouver dans les fauxbourgs de *Québec*, grand nombre de personnes qui se trouveraient bien heureux d'avoir de l'ouvrage durant l'hiver, mais encore qui le feraient à meilleur marché que dans l'été.

12. La quantité de pierres cassées requise pour macadamiser ou pierrotter un mille de chemin, peut se monter à 50,000 minots.

13. Référée aux réflexions suivantes, soumises respectueusement:—

Le mauvais état des chemins dans le voisinage de *Québec* n'est pas seulement dû à la qualité du sol; plusieurs autres causes y contribuent pour beaucoup. Parmi ces dernières, les principales sont le nombre énorme de voitures qui y passent et repassent continuellement; la tenuité des roues de ces voitures, qui pour peu que la terre soit tendre et que la charge soit forte, font des ornières profondes, l'atelage de ces voitures ne consistant qu'en un seul cheval; enfin la mauvaise habitude que les conducteurs de ces voitures ont de laisser aller leurs chevaux comme ils veulent; de manière que ces animaux suivant naturellement la trace de ceux qui les ont précédé, ne la quitte plus que lorsque la profondeur des ornières force enfin ceux qui les guident d'en tracer une autre, laquelle étant pareillement suivie, se trouve bientôt pareillement impassable et d'un jour à l'autre, tel chemin soigneusement réparé la veille est le lendemain dans le plus mauvais état possible. J'apprends qu'en Angleterre on encourage le plus que l'on peut l'introduction des roues larges, et que sur bien des chemins à barrières on impose un amende à tout conducteur de voiture qui suit la piste de celui qui le précède. Mais en général, en Europe le plus grand nombre de voitures portent sur quatre roues ou sont attelées de deux, trois, ou quatre chevaux avec timon. Tout me porte à croire que l'hiver serait la saison la plus favorable pour faire les préparatifs nécessaires aux travaux en vue. Dans cette saison on peut par le moyen des mines tirer des carrières les pierres dont on a besoin; les faire transporter sur les lieux où elles doivent être employées par les chevaux et voitures des intéressés, dans lesquels sont compris les Habitants des Paroisses voisines, telles que *St. Foy, les deux Lorettes, Charlesbourg, Beauport, &c.* de chacun desquels on pourrait exiger deux journées de corvées avec leurs attelages, et que tous préféreraient cette corvée passagère à l'obligation du paiement de péage aux barrières.

Appendix
(U.)
10th Jany.

pounds per mile, including the slabs which it might be necessary to use in muddy places as the ground work for laying on the stone—As to the amount of wages allowed to the breakers of stone, it cannot be fixed as they are paid two to three coppers a bushel according to the quality of the stone.

Edward Burroughs, Esquire, examined, says :

1. I have resided within the City and Banlieu of *Quebec*, for the last seventeen years.

2. The state and general condition of the Roads in the neighbourhood of *Quebec* are bad. The nature of the soil is such being generally of a clayey surface that when left exposed to the operation of the rains and subject to the effects of the frost, the clay soon becomes soft and readily yields under the pressure of the animal and carriage, and speedily becomes a soft deep mud, and sometimes of a texture extremely difficult to pass through and particularly so in the larger thorough fares in the vicinity of *Quebec*.

3. The disadvantages arising from the present state of the Roads are the total impossibility there exists in communicating with either vehicle of burden or pleasure between the Country in the vicinity of *Quebec*, and the City of *Quebec*, during the Spring and Autumn, and also during the entire rainy part of the summer months: the consequent inconvenience to all and the great expense attending the bringing to the Markets of *Quebec*, the bulky products of the soil and especially the produce and manufacture of the Farmer and Country Mechanic; operate in a great measure a prohibition to the use of such Articles in the City of *Quebec*, during the seasons above alluded to.

4. I think the best means of ameliorating the Roads will be to Macadamise them effectively.

5. I do not think that the proprietor of lands lying immediately upon the roads within ten or fifteen miles of *Quebec*, is able to support the expense necessary to put the Roads in a proper state of repair. But I am of opinion that if the Roads were once properly macadamised and some legislative provisions made to meet the subject, the entire population of the Parishes through which these Roads may pass taken collectively will be able to keep them in perfect order.

6. I am not so well qualified to answer this question as many gentlemen of this City who are more immediately engaged in commercial pursuits.

7. The same answer as the last.

8. From the constant application of my time to the discharge of my duties as one of the joint Prothonotaries of the Court of King's Bench for the District of *Quebec*, I have not given my attention sufficiently to the subject in Question to hazard any specific answer to so general a question as the present.

9. I cannot say.

10. Certainly and at a much cheaper rate than in the summer season.

11. I think there are a great number of persons in the City and Suburbs of *Quebec*, who may be advantageously employed in breaking stone during the winter season for macadamising the Roads in this vicinity.

Peter Patterson, Esquire, examined, says :—

1. About twenty five years.

2. In rainy weather extremely bad, almost impassable in many places.

3. It prevents a communication between different parts of the Country, it prevents the farmers from bringing in their produce to Market, and it prevents the materials that are wanted for building in the Cities and Towns from being brought in only at a great expence.

4. If the people are able to repair the Roads that lead

et cette assistance diminuerait d'au moins 30 pour cent la dépense, et n'interfererait pas avec les travaux de l'agriculture; les pierres étant toutes cassées sur les lieux, les travaux pourraient se commencer dès le printemps, et j'ose croire que dès lors la dépense n'excéderait pas £100 ou £150 par mille y compris les croutes qu'il serait nécessaire d'employer dans les endroits vasseux pour consolider le fond du pierrotage.

Quant au montant des gages alloués aux casseurs de pierre, il ne peut être fixée, attendu qu'ils sont payés à raison de 2 sols à 3 sols par minot, suivant la qualité de la pierre.

Edward Burroughs, écuyer, étant examiné, dit :

1. Je réside depuis dix-sept ans dans la cité et le banlieue de *Québec*.

2. Dans le voisinage de *Quebec* les chemins sont généralement dans un très mauvais état. La nature argileuse du sol fait que lorsqu'il est exposé à l'action de la pluie et sujet aux effets de la gelée, il perd promptement sa solidité, obéit facilement à la pression des animaux et des voitures, et se convertie en peu de temps en un borbier profond, et quelquefois d'une telle consistance qu'il est extrêmement difficile de s'en retirer, et cela surtout dans les grandes routes aux environs de *Québec*.

3. Les désavantages qui résultent de l'état actuel des chemins, sont l'entière impossibilité qu'il y a de communiquer, soit en voiture de charge, soit en voiture de luxe, entre les campagnes aux environs de *Québec* et la cité elle même, pendant l'automne et le printemps, aussi bien que durant les mois pluvieux de l'été; les inconvénients qui s'en suivent pour tous, et les frais considérables qui accompagnent le transport des gros produits du sol au marché de *Québec*, et surtout des produits et des articles fabriqués par les cultivateurs et les artisans de la campagne; enfin la prohibition qu'ils mettent en grande partie à l'usage de ces articles, dans la cité de *Québec* pendant les saisons dont il a été parlé.

4. Je crois que le meilleur moyen pour améliorer ces chemins, serait de les bien macadamiser.

5. Je ne crois pas que les propriétaires des terres situées sur les chemins, à dix et quinze milles de *Québec*, soient en état de faire les dépenses nécessaires pour mettre les chemins en bon état de réparation. Mais je suis d'opinion que si les chemins étaient une fois macadamisés d'une manière convenable, et que si l'on faisait quelque affectation législative à cette fin, la population entière des paroisses où passent ces chemins, pourrait, prise collectivement, les entretenir en bon état.

6. Je ne suis pas en état de répondre à cette question, comme plusieurs Messieurs de cette ville qui sont engagés dans les affaires de négoce.

7. La même réponse que la dernière.

8. L'application continue que j'ai donnée à l'exercice de mes devoirs, comme un des Prothonotaires de la Cour du Banc du Roi pour le District de *Québec*, ne m'ayant pas permis de donner une attention suffisante au sujet en question, je n'ose faire aucune réponse circonstanciée à une question aussi générale que la présente.

9. Je ne saurais dire.

10. Certainement, et à beaucoup meilleur marché que pendant l'été.

11. Je crois qu'il y a un grand nombre de personnes dans la cité et les faubourgs de *Québec*, qu'on pourrait employer avec avantage pendant l'hiver, à casser de la pierre pour macadamiser les chemins dans ces environs.

Peter Patterson, écuyer, étant examiné, dit :

1. Depuis environ vingt-cinq ans.

2. Extrêmement mauvais dans les temps pluvieux, et presque impraticables en quelques endroits.

3. Cela empêche la communication entre les différentes parties du pays le transport des produits du cultivateur aux marchés, et fait que les matériaux nécessaires pour bâtir dans les villes n'y peuvent être transportés qu'à grands frais.

4. Si les gens sont capables de réparer les chemins qui

Appendice
(U.)
10 Jany.

Appendix
(U.)
10th Jan'y.

lead to the Cities and Towns which many I believe are not, it is a very unjust tax upon them to keep these roads in repair.

5. Between six and seven hundred.

6. I am but little acquainted with this subject, I should suppose that about two thirds of the supplies of Provisions and Cattle come from the Townships and by way of the Townships.

Mr. Joseph Gagné, of St. Rock's, Suburbs answers :

1. I have resided in the Suburbs of St. Roc, for the last thirty years.

2. Very bad, muddy, soft and often impassable and even dangerous.

3. The result is that travelling is impeded and that the horses cannot draw more than half a load, employing double the time that would be required if the roads were good—I have a farm at Gros Pin, and I have often been prevented from going thither by the badness of the Roads.

4. I think the best means would be to macadamise them, by putting slabs in the parts that are swampy under the stones. The Roads should not be above twenty feet wide between the ditches—where they are wider they cannot be drained properly.

5. That is not possible ; it would be the ruin of the farmers, and the farms hardly produce sufficient to keep the Roads in repair.

6. No answer.

7. All the Parishes near Quebec.

8. If the Roads were good the commodities would be cheaper, and the bad state of the Roads at certain times of the year increases the price of commodities without the farmer benefitting thereby, for the wear and tear of carriages and harnesses, and the time lost absorbs more than the additional price obtained.

9. I cannot say.

Mr. J. B. Denis, appeared, and said :

1. I have resided at the Gros Pin, for the last fifteen years.

2. I have been six years and am still Sous Voyer, the Roads are always bad whenever it rains, especially at La Canardière and Charlesbourg—As Sous Voyer, I have had an opportunity of perceiving that there has been a great deal of negligence, and that it is impossible to have the ditches made.

3. Travelling becomes difficult and costly, frequently the carriages are broken.

4. It would be first to keep the ditches in proper repair, and then to raise them in the middle and to have them covered with broken stone.

5. Certainly not, they could only assist.

6. No answer.

7. All the Parishes near Quebec.

8. There are Inhabitants as far as Lake Duchesnay, who are bound to keep up their share of these Roads,—the expense of coming to Town is very high for them.

9. I cannot say.

Jean Baptiste Renaud, Captain of Militia, examined, answered :

1. I have resided at Charlesbourg, for the last thirty five years.

2. Very bad—I think this is owing in a great measure to a defect of the Law, which does not give the power of compelling the proprietors to cover them with stone, the only effectual means of improving them.

3. That greatly augments the price of commodities, because it is only those who are provided with proper carriages who can come at all times.

4. To have them covered with broken stone after the ditches are properly made and the ground prepared to receive them.

qui conduisent aux villes, et je crois qu'un grand nombre ne le sont pas, c'est leur imposer une taxe et une charge bien injuste que de les obliger à entretenir ces chemins.

5. Entre six à sept cents.

6. C'est ce que je connais guère ; je suis pourtant porté à croire que deux tiers des denrées et des bestiaux viennent des Townships, et par la voie des Townships.

M. Joseph Gagné du faubourg St. Roch, répond :

1. Je réside dans le faubourg St. Roch depuis trente ans.

2. Ils sont bien mauvais, boueux, moux, souvent impraticables, et même périlleux.

3. Le résultat en est qu'on n'y peut voyager, et que les chevaux n'y peuvent trainer plus qu'une demi charge, et emploient le double du temps qu'il faudrait si les chemins étaient bons. J'ai une terre au Gros-Pin, et les mauvais chemins m'ont souvent empêché d'y aller.

4. Je crois que le meilleur moyen serait de les macadamiser, en ayant le soin de mettre des dosses (croutes) sous les pierres dans les endroits marécageux. Les chemins ne devraient pas avoir plus de vingt pieds de largeur entre les fossés—où ils sont plus larges il est impossible de les égouter d'une manière suffisante.

5. Cela n'est pas possible ; ce serait la ruine des cultivateurs, et les terres produisent à peine ce qu'il faudrait pour entretenir les chemins en bon état.

6. Point de réponse.

7. De toutes les paroisses aux environs de Québec.

8. Si les chemins étaient bons les commodités de la vie seraient à meilleur marché, et en certaines saisons de l'année le mauvais état des chemins fait hausser le prix des commodités, sans que le cultivateur en retire aucun gain, car ce qu'il use et brise de haras et de voitures, sans compter la perte de temps, absorbe plus que le prix qu'il obtient au surplus.

9. Je ne saurais dire.

M. J. B. Denis, comparut et dit :

1. Je réside au Gros-Pin, depuis quinze ans.

2. J'ai été sous-voyer six ans, et je le suis encore. Les chemins deviennent mauvais toutes les fois qu'il pleut, surtout ceux de la Canardière et de Charlesbourg. Comme sous-voyer, j'ai eu occasion de m'apercevoir qu'il y avait beaucoup de négligence, et qu'il est impossible de faire faire les fossés.

3. Il devient difficile et coûteux de voyager, et souvent les voitures se brisent.

4. Il faudrait commencer par bien entretenir les fossés, élever les chemins du milieu et les couvrir de pierres cassées.

5. Assurément non ; ils ne pourraient qu'aider.

6. Point de réponse.

7. De toutes les paroisses aux environs de Québec.

8. Il y a des habitants jusu'au Lac Duchesnay, et ils sont obligés de contribuer leur part à la réparation de ces chemins. Il leur en coûte beaucoup pour se rendre à la ville.

9. Je ne saurais dire.

Jean-Baptiste Renaud, Capitaine de Milice, étant examiné, répondit :

1. Je réside à Charlesbourg depuis trente-cinq ans.

2. Ils sont très-mauvais. Je crois que cela est dû en grande partie aux défauts de la loi, qui ne donne pas le pouvoir de forcer les propriétaires à les couvrir de pierres, ce qui est le seul moyen de les améliorer.

3. Cela augmente de beaucoup le prix des commodités de la vie ; car il n'y a que ceux qui sont pourvus des voitures convenables, qui puissent venir en tous temps.

4. Ce seroit de les couvrir de pierres cassées, après avoir fait de bons fossés et bien préparé la terre à recevoir ces pierres.

Appendice
(U.)
10 Janv.

Appendix
(U.)
10th Jany.

5. They have not the means of making them, they could only keep them in repair after they have been made as they ought to be.

6. No answer.

7. From all the Parishes near *Québec*.

8. One of the causes which prevents the Roads being kept in repair arises in a great measure from the enormous expense which is incurred at the Prothonotaries' office, when it is found necessary to prosecute those who neglect or refuse to perform their duty upon these Roads, the *Sous Voyer* being unwilling to expose them to this heavy expense.

9. I cannot say.

William Sheppard, Esquire, appeared and answered :

1. I have resided the last sixteen years in the parish of *Quebec*.

2. The state and condition of the Roads in the neighbourhood of *Quebec* are in general bad ; particularly in such parts of them as lead through land of a clayey nature : such as on the *Ste. Foi* Road as far as the Church : the greater part of the Road leading to *Ancienne Lorette* on both sides of the River *St. Charles*, from *Scott's Bridge* to the high land in *St. Ambroise*, from *Dorchester Bridge* towards *Charlesbourg* about four Miles ; on the *Beauport* Road, as far as *McCallum's Mills*, and on such part of *Sillery* Road, as far as Mr. *McNider's*, which has not been substantially made by the proprietors, &c. The conditions of the existing Laws are supposed to be fulfilled, in occasionally filling up the deepest ruts with any materials nearest hand, such as soft earth, weeds, chips, turf and other such substances totally unfit for the purpose.

3. The disadvantages principally are that in the Spring and Autumn and in rainy seasons such as the last, the Roads get into a state nearly impassable : causing the Markets at such times to be ill supplied, consequently dearer than they otherwise would be. This must naturally act in a manner detrimental to commerce, causing supplies of provisions to the transient population visiting this Port, to be more costly than they would be were the roads in a constantly passable condition.

4. The Roads would best be rendered permanently good and fit for constant travel, by forming them on the principle recommended by *Macadam* : they should be laid dry and flat in the breadth of the road, and coated to the thickness of eight or ten inches of hard stone broken small, the pieces not over six ounces in weight.

5. It does not lie within the means of the adjoining proprietors generally to form the roads on that system, it being too expensive, but they probably might be required to contribute a portion of personal and cart labour according to the extent of their property on the road. The proprietors are supposed to be equal to the subsequent repairs of the roads after being properly formed : the repairs should be made with similar small stones, and not with other unfit materials.

6. The number of ships annually arriving at this Port may be estimated at an average of six hundred : the augmentation of population in the City and Port from this cause will be about nine thousand : there is also a transient increase of population occasioned by the arrival of Timber at this Market, to the extent of about five thousand men. These remain on an average each a month in *Quebec*.

7. The transient population is principally supplied with provisions from the neighboring Parishes, and by the settlements on the south shore of the *St. Lawrence*, some supplies of Beef come from the Eastern Townships.

8. Good Roads would advance the Interests of the agriculturist, and improve the value of Land in the District of *Quebec*, north of the *St. Lawrence*.

9.

5. Ils n'ont pas les moyens de les faire, seulement ils pourraient les entretenir après qu'ils auraient été faits, comme ils doivent l'être.

6. Point de réponse.

7. De toutes les paroisses aux environs de *Québec*.

8. Une des causes qui empêchent les chemins d'être bien entretenus sont, en grande partie les frais énormes qu'il faut payer au Greffe, lorsqu'il est nécessaire de poursuivre ceux qui refusent de remplir leurs devoirs sur les chemins ; les *Sous-voyers* ne veulent pas les exposer à payer de si grands frais.

9. Je ne saurais dire.

William Sheppard, écuyer, comparut et répondit :

1. Je réside dans la paroisse de *Québec* depuis seize ans.

2. Les chemins aux environs de *Québec* sont généralement mauvais, surtout dans les endroits où ils passent par un sol argileux, telle est la partie du chemin de *Ste.-Foi* à aller jusqu'à l'église, et la plus grande partie du chemin qui conduit à *l'Ancienne-Lorette*, chaque côté de la rivière *St.-Charles* ; depuis le Pont *Scott* jusqu'aux terres hautes dans *St.-Ambroise* ; depuis le Pont *Dorchester* jusqu'à *Charlebourg*, dans une distance de quatre milles ; sur le chemin de *Beauport* jusqu'aux moulins de *McCallum*, et le chemin de *Sillery* à aller jusque chez M. *McNider*, lequel n'a pas été solidement fait par les propriétaires, &c. On croit remplir les conditions des lois existantes, en comblant les plus grands trous avec les matériaux les plus à la main, comme de la terre molle, des branches, des copeaux, du gazon et telles autres substances aussi peu propres à cet objet.

3. Les principaux désavantages sont que le printemps et l'automne et dans les saisons pluvieuses, telles que la dernière, les chemins deviennent presque impraticable, ce qui empêche les marchés d'être bien pourvus pendant ces temps, et fait conséquemment hausser les prix bien plus qu'il n'en seroit sous d'autres circonstances. Tout naturellement cela doit être nuisible au commerce, en obligeant la population passagère qui visite ce port à payer les provisions plus cher qu'elle les payerait si les chemins étaient toujours praticables.

4. Le meilleur moyen de rendre les chemins bons et durables, capables de résister à un charriage continu, seroit de les faire sur le plan de *Macadam* ; il faudroit les assécher et les applaquer au milieu, et les couvrir d'une couche de pierres cassées de huit à dix pouces d'épaisseur ; chaque morceau de pierre ne devant pas peser plus de six onces.

5. Il est hors des moyens du commun des propriétaires de faire les chemins sur le plan de *Macadam*, étant beaucoup trop coûteux, mais on pourrait, peut-être, les obliger à contribuer au travail manuel et au charriage, à proportion de l'étendue de leurs terres sur les chemins. Il est à supposer que les propriétaires devront travailler également aux réparations subséquentes, lorsque les chemins auront été une fois faits d'une manière convenable. Les réparations devront être faites avec des petites pierres semblables, et non pas avec d'autres matériaux nullement convenables.

6. On peut estimer à six cents le nombre moyen des vaisseaux qui viennent annuellement à ce port ; et l'augmentation de population que cela opère dans la cité et au port peut être de neuf mille : il y a aussi une autre source d'accroissement pour la population passagère, c'est l'arrivée des bois de commerce, qui amène environ cinq mille hommes, et on peut calculer à un mois le temps que chacun d'eux demeure à *Québec*.

7. La population passagère tire la plus grande partie de ses provisions des paroisses aux environs de *Québec*, et des établissemens au sud du *St.-Laurent* ; il vient aussi de la viande des *Townships de l'Est*.

8. Les bons chemins avanceraient les intérêts des cultivateurs, et augmenteraient la valeur des terres dans le district de *Québec* au nord du *St.-Laurent*.

9.

Appendice
(U.)

Appendix
(U.)
10th Jan'y.

Appendice
(U.)
10 Janv.

9. The average price of Land at the distance of four miles from *Quebec* is about ten pounds per arpent.

10. The preparatory step of breaking stones for macadamising could very well be carried on in the winter season.

11. There is a considerable number of persons in *Quebec*, who have constant employment only in the summer among the shipping and lumber: these might with advantage be employed in breaking stones in winter: they would then earn a subsistence for themselves and families during winter; a great part of these would otherwise be a burden on the City.

Louis Montizambert, Esquire, called in and examined, states:

1. I have resided at *Quebec* many years.

2. The Roads in the neighbourhood of *Quebec* are generally bad, and particularly so during the wet seasons: The *Ste. Foi* road, of which I can speak more particularly, because I pass part of the Summer and Autumn at a farm on that Road, at the distance of about two miles and a half from Town, and travel over it at least twice every day, is during the Spring and Autumn, and in wet weather in Summer, almost impassable owing to the very deep ruts of which there is an almost uninterrupted succession throughout; indeed at times last Summer I did not on that account think it safe to pass it at night.

3. The disadvantages arising from such a state of the Roads are all that are incident to a want of easy communication.

4. In my opinion the best and only mode of improving these roads is by making them on the system recommended by Mr. *Macadam*.

5. In my opinion the expense of putting these roads in a proper state of repair is beyond the means of most of the proprietors of land lying along the same.

6. I cannot tell what number of ships resort to this Port annually, but I know they amount to several hundreds, and that the augmentation of the transient population arising from that cause is considerable.

7. The *Quebec* Markets are supplied during the Summer months from different parts of the District both by land and by water conveyance. I have nothing to add with reference to the subject before the Committee.

John Davidson, Esquire, examined, answered:

1. Many years.

2. During the Spring and Autumn, and also after a continuance of wet weather in the Summer months, the *St. Foi* and *Beauport* Roads are so bad as to render it barely possible to travel over them with ordinary loads.

3. An increased expense to the farmers in the vicinity especially.

4. By adopting the system recommended by Mr. *Macadam*.

5. Not generally; the probable expense being from twenty five to thirty pounds per arpent.

6. The Journals of the Commons House of Assembly, must furnish more correct information than I can pretend to offer. The number of Vessels this year has exceeded seven hundred.

7. The Markets are well supplied during the Summer months from all parts of the District by Land and by water conveyance.

8. I have nothing to offer.

John George Irvine, Esquire, examined, said:

1. I am a native of *Quebec* and have resided in that City, upwards of twenty three years.

2. The general state and condition of the roads in the neighbourhood of *Quebec*, are extremely bad, and in wet seasons dangerous, and in the Spring and Fall of the year almost impassable: the Road with which

9. Le prix commun de la terre à quatre milles de *Québec* est d'environ de dix louis l'arpent.

10. La mesure préparatoire au macadamisage, le cassement des pierres, pourrait fort bien s'exécuter en hiver.

11. Il y a dans *Québec* un grand nombre de personnes qui ne trouvent de l'emploi que pendant l'été, auprès des vaisseaux et pour le commerce des bois. On pourrait avantageusement employer ces personnes pendant l'hiver, à casser des pierres; elles gagnerait par la de quoi subsister avec leurs familles, pendant l'hiver, et sans cela la plupart seraient un fardeau pour la cité.

Louis Montizambert, écuyer, appelé et examiné, dit:

1. Je réside à *Québec* depuis plusieurs années.

2. Les chemins des environs de *Québec* sont généralement mauvais, et cela surtout pendant les saisons pluvieuses. Le chemin de *Ste.-Foi* dont je puis parler plus particulièrement, parceque je passe une partie de l'été et de l'automne sur une terre que j'ai sur ce chemin à environ deux milles et demi de la ville, et que j'y passe pour le moins deux fois le jour, est presque impraticable le printemps, l'automne et pendant les temps pluvieux de l'été, à cause du grand nombre d'ornières profondes qui se suivent presque sans interruption tout le long du chemin; aussi en certains temps, l'automne dernier, je n'ai pas cru prudent d'y passer de nuit.

3. Les désavantages qui résultent de cet état des chemins sont tous ceux qui naissent du manque de facilités dans les communications.

4. Dans mon opinion le meilleur et le seul moyen d'améliorer ces chemins, est de les faire sur le plan recommandé par M. *Macadam*.

5. Dans mon opinion les frais nécessaires pour mettre ces chemins en bon état, sont au-delà des moyens de la plupart des propriétaires de terre sur ces chemins.

6. Je ne puis dire combien de vaisseaux abordent à ce port chaque année, mais je sais que le nombre en est de plusieurs centaines, et qu'il en résulte une augmentation considérable dans la population passagère.

7. Les marchés de *Québec* sont approvisionnés pendant les mois d'été par les différentes parties du district, tant par le transport de terre que par eau. Je n'ai rien à ajouter à l'égard du sujet qui est devant le Comité.

John Davidson, examiné, répond:

1. Depuis plusieurs années.

2. Pendant le printemps et l'automne et aussi dans l'été après quelques jours de pluie, les chemins de *Ste.-Foi* et de *Beauport* sont assez mauvais pour empêcher d'y passer avec une charge ordinaire.

3. Un surcroi de dépenses pour les cultivateurs du voisinage surtout.

4. Ce seroit d'adopter le système recommandé par M. *Macadam*.

5. Pas généralement; la dépense probable étant de vingt-cinq à trente louis par arpent.

6. Les Journaux de la Chambre d'Assemblée doivent fournir des renseignements plus corrects que ceux que je prétendrais offrir. Le nombre de vaisseaux cette année a excédé sept cents.

7. Les marchés sont bien approvisionnés pendant l'été de toutes les parties du district, tant par le transport de terre que par eau.

8. Je n'ai rien à dire.

John George Irvine, Ecuyer, étant examiné, dit:

1. Je suis natif de *Québec*, et j'y ai résidé plus de vingt-trois ans.

2. Les chemins aux environs de *Québec* sont généralement très-mauvais, dans les temps pluvieux dangereux, et dans le printemps et l'automne presque impraticables. Le chemin que je connois le mieux est celui

Appendix
(U.)
10th Jan'y.

I am more particularly acquainted is that of *St. Foi*; and that part of it especially which lies between the end of *St. John's* Suburbs, and the Church of the said Parish, is at all times bad, with little exception; the nature of the soil is such that the least rain causes it to be cut up, and the manner in which the repairs are so ineffectually attempted by the proprietors and occupiers of property along the road, tend in my opinion more to injure than to improve them, the materials used for such repairs being generally weeds, rubbish, and chips and sometimes broken bottles, and covered with earth in such a manner that upon the least rain, the Road in many parts actually becomes a mire and impassable—very large stones are sometimes laid into the holes, which do not at all answer the desired end, but add much to the danger of the traveller.

3. As nothing tends more towards the rapid improvement of any Country, particularly of those depending chiefly on their agricultural and commercial interests, than a ready communication from the principal Towns to the interior by good Roads, so by an increase and a double ratio, bad roads retard, and in fact prevent due progress in improvements of all kinds, and the disadvantages arising from the general state of the roads around *Quebec*, are almost innumerable. The Markets during a wet season are inadequately supplied, particularly at those times when the population of the City is much increased by the Crews of vessels trading to this Port, and the number of Emigrants who arrive at *Quebec*—for, at such times the Farmer cannot venture to travel in such roads with a tolerable load without risking his personal safety, as well as almost certain destruction to his carts, horses and harnesses: during several periods last season, the state of the *St. Foi* road was such that no pleasure carriage could possibly pass that way, and the road never having been properly formed and made, all attempts at repairs as practised, prove ineffectual.

4. The best mode of improving the Roads in question would in my opinion be to apply the mode so successfully adopted and now universally practised throughout *Great Britain*, known by the term "*Macadamizing*" and I beg for a full detail of that system to refer to a Treatise on the subject which I had the honor to lay before the Honorable Chairman of this Committee.

5. In my opinion it most certainly does not lie within the private means of the Proprietors generally of the Lands lying upon these Roads, to make and keep them in good repairs under the existing law; but the road if once made in a proper and complete manner at the public expense, the proprietors might I think be obliged to keep them in repair. At the time the Farmer is most wanted to attend his farm, he is called away to repair his Road, which he could not possibly undertake to perform in an adequate manner without the greatest sacrifice of his time and agricultural labours, and the farmer who resides within a few miles of the Town upon the principal great Roads has much more labour to perform than those who live at a greater distance, as the Road is constantly cut up within nine or ten miles of the Town from the passing of carts from all adjacent parts of the Country whenever possible to travel, which throw a double duty and expense upon those residing near the Town.

6. The average number of vessels arrived at *Quebec* for the eight years from one thousand eight hundred and nineteen, to one thousand, eight hundred and twenty six inclusive, was six hundred and twenty two, measuring, one hundred and fifty one thousand and twelve tons, and having six thousand, eight hundred and seventy eight men, and to this transient population may be added about fifteen thousand Emigrants annually.

7.

celui de *St. Foi*, et la partie située entre le faubourg *St.-Jean* et l'église de *St. Foi*, est en tout temps mauvaise, à très-peu d'exception; la nature du sol est telle que la moindre pluie les brisent; et la manière défectueuse dont les propriétaires et ceux qui demeurent le long du chemin, font les réparations, est plus propre, selon moi, à les détériorer qu'à les améliorer; les matériaux employés à ces réparations étant généralement des mauvaises herbes, des ordures, des copeaux et quelquefois des bouteilles cassées; on couvre cela de terre, et il arrive qu'à la moindre pluie, le chemin en beaucoup d'endroits, devient un vrai borbier impraticable. On jette quelquefois dans les ornières des grosses pierres, qui bien loin de remplir l'objet désiré, ne peut que rendre le passage plus dangereux.

3. Comme rien n'avance plus rapidement les améliorations d'un pays, surtout de ceux qui attendent presque tout de leur agriculture et de leur commerce, qu'une communication facile des principales villes à l'intérieur par le moyen de bons chemins, de même en raison inverse et contraire, les mauvais chemins retardent du double et de fait empêche le cours naturel des améliorations de toutes espèces, ainsi on ne saurait presque calculer les désavantages qui résultent du mauvais état des chemins. Dans les saisons pluvieuses les marchés sont insuffisamment approvisionnés, et cela surtout dans les temps où la population de la ville est beaucoup augmentée par les équipages des vaisseaux qui commercent à ce port, et le nombre des émigrés qui arrivent à *Québec*, car dans ces temps le cultivateur n'ose se hasarder à voyager sur de pareils chemins, avec une charge ordinaire, sans s'exposer lui-même, et sans risques de ruiner ses voitures, ses chevaux et ses harnois: en certaines parties de l'été dernier, le chemin de *St. Foi* était dans un tel état, qu'aucune voiture de luxe n'y pouvoit passer, et les chemins n'ayant jamais été faits et formés d'une manière convenable, tous les efforts que l'on fait pour les réparer se trouvent inefficaces.

4. Le meilleur moyen pour améliorer les chemins en question, serait dans mon opinion d'y appliquer le système si heureusement adopté et maintenant en usage dans toute la *Grande-Bretagne*, je veux dire le système connu sous le nom de "*macadamisage*," et pour les détails de ce système, je prends la liberté de renvoyer à un traité sur le sujet, que j'ai eu l'honneur de mettre devant l'Honorable Président de ce Comité.

5. Dans mon opinion il n'est très-certainement pas dans les moyens privés du commun des propriétaires de terre le long de ces chemins, de les faire ni de les entretenir en bon état, sous les lois existantes, mais si les chemins étaient une fois faits d'une manière convenable et parfaite, aux dépens du public, je crois qu'on pourroit obliger les propriétaires de les entretenir en bon état. Dans le temps que le cultivateur est le plus impérieusement appelé à sa terre, on l'arrache pour aller travailler à son chemin, qu'il ne pourrait assurément pas séparer d'une manière convenable sans faire le sacrifice le plus coûteux de son temps et de ses travaux champêtres, et le cultivateur qui réside à quelques milles de la ville sur les principaux grands chemins, a beaucoup plus à faire que ceux qui vivent à une plus grande distance, vu que le chemin est constamment brisé, à neuf ou dix milles de la ville, par le charriage continu de toutes les parties adjacentes du pays, dans tous les temps où il est possible de voyager, ce qui impose un double fardeau et des frais plus considérables sur ceux qui résident près de la ville.

6. Le nombre moyen de vaisseaux qui sont venus à *Québec*, pendant les huit années qui ont commencé en l'année mil huit cent dix-neuf, à venir jusqu'à l'année mil huit cent vingt-six, inclusivement, fut de six cent vingt-deux, mesurant cent cinquante-un mille et douze tonneaux, et ayant six mille huit cent soixante et huit hommes, et à cette population passagère on peut ajouter environ quinze mille émigrés, par chaque année.

7.

Appendice
(U.)
10 Jan'y.

Appendix
(U.)
10th Janv.

Appendice
(U.)
10 Janv.

7. The chief supplies of Provisions towards the maintenance of this transient population are derived from the Country Parishes around *Quebec*.

8. I have nothing further to add to the foregoing answers :

Answers to three additional questions put since the foregoing.

1. There can be no doubt that where stones can be had of proper quality that they may be broken up during winter for the purpose of making and repairing the Roads under Mr. *Macadam's* system; here I would beg leave to remark to the Committee, that as far as my observation has gone to the stones used for that purpose around *Quebec*, they have in no case been broken sufficiently so as readily to unite when laid upon the Road. The stones used in *Great Britain*, are all of hard grey stone and granite, none to weigh more than six ounces or such as would pass through an inch mash.

2. Judging from the number of pauper's children as well as adults, who are to be seen going round the streets, I think a large number of persons might be found in the City and Suburbs, who might be advantageously employed in this way during winter; along the Roads throughout *Great Britain*, persons of all ages from seven years and upwards are to be seen so employed.

3. I am not sufficiently acquainted with the value of Lands to answer this Question with correctness, but sales of arable Lands about the distance stated have I believe been made at from seven to ten pounds an Acre—the wretched state of the *Ste. Foi* road tends greatly to depreciate the value of landed property in that vicinity.

John William Woolsey Esquire, examined, answered :

1. Upwards of sixty years.
2. In wet weather very bad, spring and fall almost impassable; it is to be attributed to the nature of the soil.
3. It retards travelling and impedes the transporting of Country produce, it also materially injures the cattle, harnesses and carriages.

4. The improvement of these Roads would require a coating of broken stone, not less than eight inches in depth and eighteen feet broad on the centre of the Road.

5. It is not within the private means of Proprietors to make the Roads, but they might keep them in repair after they are macadamised.

6. From the year one thousand seven hundred and sixty four until one thousand seven hundred and eighty six, the number of ships entered at the Custom House was on an average about sixty six vessels annually; since that period they have gradually increased to about six hundred for a few years past; in the year one thousand, seven hundred and eighty four, there only arrived thirty two vessels. I cannot say what is the annual augmentation of the population from this cause.

7. This Province does not furnish sufficient provisions for the present population, the deficiency is supplied from the neighbouring states.

8. In repairing the Roads, the construction of Bridges should be attended to over the drains crossing the high ways; they should embrace the whole breadth of the same, to be constructed of stone or cedar, covered from end to end with the same material applied on the Roads. The Proprietors of Land within four miles of *Quebec*, under the present Road Act are very much oppressed from the number of carriages daily cutting up the Roads, which does not affect those who are at a greater distance from the City.

7. Les provisions nécessaires à la subsistance de cette population passagère, se tirent en très-grande partie des paroisses aux environs de *Québec*.

8. Je n'ai rien à ajouter d'avantage aux réponses précédentes.

Réponses à trois Questions additionnelles posées depuis les précédentes :

1. Il n'y a aucun doute que là où l'on peut se procurer des pierres d'une bonne qualité, on ne pût les casser pendant l'hiver, pour faire et réparer les chemins d'après le système de *Macadam*. Ici je demanderais de faire remarquer au Comité, qu'en autant que j'ai eu occasion d'observer les pierres dont on fait usage pour cet objet aux environs de *Québec*, elles n'ont en aucun endroit été cassées assez menues pour s'incorporer, après qu'elles étaient mises sur le chemin. Les pierres dont on fait usage en *Angleterre* sont toutes d'une pierre grise extrêmement dure et de granite, et dont aucune ne pèse plus de six onces, et est assez menue pour passer à travers une maille d'un pouce.

2. A juger d'après le nombre d'enfants et d'adultes pauvres, qu'on voit errer dans nos rues, je crois qu'on pourroit trouver un grand nombre de personnes dans la ville et dans les faubourgs de *Québec*, à employer avantageusement de cette manière pendant l'hiver; en *Angleterre* on voit ainsi employées le long des chemins des personnes de tout âge depuis sept ans et au-dessus.

3. Je ne suis pas assez au fait de la valeur des terres, pour répondre à cette question avec exactitude, mais, dans la distance mentionnée, les terres arables se sont vendues, je crois, depuis sept jusqu'à dix louis l'acre. Le mauvais état des chemins de *Ste. Foi* tend fortement à diminuer la valeur de leur propriété foncière, dans ce voisinage.

John William Woolsey, écuyer, étant examiné, répondit :

1. Depuis plus de soixante ans.
2. Dans les temps pluvieux très mauvais, le printemps et l'automne presque impraticables; cela est dû à la nature du sol.
3. Cela retarde les voyageurs, et empêche le transport des productions de la campagne, et nuit aussi considérablement aux bêtes de somme, aux harnois et aux voitures.

4. L'amélioration de ces chemins demanderait une couche de pierres cassées, de pas moins de huit pouces d'épaisseur et de dix-neuf pieds de largeur, sur le milieu du chemin.

5. Le commun des propriétaires ne sont pas dans les moyens de faire ces chemins, mais ils pourraient les entretenir, s'ils étaient une fois macadamisés.

6. Depuis l'année mil sept cent soixante-quatre, jusqu'à celle de mil sept cent quatrevingt-huit, le nombre de vaisseaux entrés à la Douane fut, terme moyen, d'environ soixante-six annuellement; depuis ce temps il a augmenté graduellement jusqu'à environ six cents, depuis ces années dernières; dans l'année mil sept cent quatrevingt-quatre, il ne vint que trente vaisseaux. Je ne puis dire quelle est de cette source l'augmentation annuelle de la population.

7. Cette province ne fournit pas assez de provisions pour la population présente—ce qui en manque sort des états voisins.

8. Dans la réparation des chemins, les ponts devraient être assez large pour couvrir les égouts qui traversent les grands chemins, et s'étendre dans toute la largeur du chemin; être faits de pierre ou de cèdre, et couverts d'un bout à l'autre des mêmes matériaux dont le sont les chemins. Sous la loi actuelle des chemins les propriétaires de terre à quatre milles de *Québec* sont accablés par la fréquence des charriages qui brisent leurs chemins; inconvenient que n'éprouvent pas ceux qui sont à une plus grande distance de la ville.

Appendix
(U.)
10th Jany.

9. The average price of Land may be estimated at twenty pounds per superficial Acre, if by forced sale, but it materially depends on the quality of the Land and Buildings, also the distance from the Town.

10. Yes; the stones used for repairing Roads at *La Canardière*, were broken in the winter at the *Beauport* Quarries.

11. Assuredly—when the stones were broken for the *Canardière* Road, men, women and children come out to *Beauport* to be employed.

William Phillips, Esquire, examined, answered :

1. I have resided in *Quebec*, twenty five years, and upwards.

2. The general state and condition of the Roads in the neighbourhood of *Quebec* is very bad, particularly in the Spring and Fall of the year; owing to the effect produced by the frost on a deep clayey soil, the Roads become nearly impassable, and accidents frequently occur, by overturning of carriages in the deep ruts formed by the great concourse of carts coming to Market with provisions, fuel, hay, &c. and returning. After heavy rain in Summer they are equally bad, so that we have seldom the advantage of travelling over them with safety and comfort.

3. Short supplies to our Markets, high price of provisions in consequence, and great injury to the Farmer in the destruction of his carriages and ruin of his cattle, loss of time, &c. &c.

4. Levelling those portions of the Roads that have lime stone for a foundation such as *Beauport* Road, levelling also those portions of the Roads leading to *Ste. Foi* Church, and *Ancienne Lorette*, having a sandy soil for a bed, the expense of which would be very trifling—the remainder of these great Roads, as well as the Roads leading to *St. Ambroise*, *Indian Lorette*, *Charlesbourg* and *Canardière* having clayey soils for a foundation, would require to be macadamised in the most efficacious manner and with the best materials which are to be found generally in the neighbourhood of the Roads in Question.

5. I do not think it lies within the private means of twenty out of the whole proprietors of the land lying upon these Roads to make them effectually, but every Proprietor can and may be made to keep them in good repair afterwards.

6. From seven to eight hundred ships annually; the augmentation of population in consequence during the Summer months may be fairly estimated at from twenty one to twenty four thousand persons, including Seamen, Emigrants and Raftsmen.

7. Provisions for this transient population are chiefly supplied by the Parishes adjacent to *Quebec*, namely *Ste. Foi*, *Lorette*, *Charlesbourg*, *Beauport* and the Parishes beyond them communicating with the City through these great Roads.—Our Markets are also supplied from the Parishes on the other side of the *St. Lawrence*.

8. I know of nothing more useful for the advancement of the Country, the comfort of its Inhabitants, cheap markets and the benefit of all strangers who resort to *Quebec* during summer, than good and efficient Roads, practicable at all times during the season that wheel carriages are in use.

9. Yes, the breaking of stones preparatory to macadamising could be carried on during the winter months, with as much facility and at a cheaper rate than during any other season.

10. Yes there are a number of Emigrants, *Canadian* labourers, even mechanics out of employment, and a number of boys, in the City and Suburbs of *Quebec*, who might be advantageously employed in breaking stone, and would thereby be enabled to earn an honest livelihood.

11. I am not sufficiently acquainted with the value of Land to answer this Question.

Charles

Appendice
(U.)
10 Jany.

9. Le prix commun de la terre peut être estimé à vingt-cinq louis l'acre en superficie, si c'est par vente forcée; mais il en dépend beaucoup de la qualité de la terre et des édifices, aussi bien que de la distance où elle est de la ville.

10. Oui, les pierres employées à la réparation du chemin à la *Canardière*, furent cassées pendant l'hiver aux carrières de *Beauport*.

11. Assurément—lorsque les pierres du chemin de la *Canardière* furent préparées, hommes, femmes et enfans se rendirent à *Beauport* pour avoir de l'emploi.

William Phillips, écuyer, étant examiné, répondit :

1, J'ai résidé à *Québec* vingt-cinq ans et plus.

2. Les chemins aux environs de *Québec* sont généralement très mauvais, surtout le printemps et l'automne, par suite de l'action de la gelée sur un sol profond d'argile; les chemins deviennent alors presque impraticables, et il y arrive des accidens fréquens, par les voitures qui versent dans les ornières formées par le grand concours de voitures qui viennent aux marchés avec des provisions, du bois, du foin, &c. et qui s'en retournent. Dans l'été, la pluie les rend aussi mauvais, de sorte que nous avons rarement l'avantage d'y voyager avec sûreté et aisance.

3. Un approvisionnement insuffisant dans nos marchés, la cherté des provisions, et de grands dommages au cultivateur par la ruine de ses voitures et de ses bêtes, par la perte de temps, &c.

4. Il faudrait niveler les endroits de ces chemins qui ont un fondement de pierre chaux, comme dans le chemin de *Beauport*, et niveler aussi les parties des chemins qui mènent à l'église de *Ste. Foi* et à l'*Ancienne Lorette*, où le sol est sablonneux, et y mettre une couche qui ne coûterait que peu de chose. Le restant de les grands chemins aussi bien que ceux qui conduisent à *St. Ambroise*, à la *Jeune Lorette*, à *Charlesbourg* et à la *Canardière* ayant pour fondemens un sol profond d'argile, demanderait à être macadamisé de la manière la plus soigneuse et avec les meilleurs matériaux, qu'on trouve généralement aux environs des chemins en question.

5. Je ne voit pas qu'il soit dans les moyens de vingt propriétaires, entre tous ceux qui ont des terres le long de ces chemins, de les faire d'une manière convenable, mais après, chaque propriétaire devraient les entretenir en bon état, et y être obligé.

6. Entre sept et huit cents vaisseaux annuellement. On peut estimer de vingt-un à vingt-quatre mille personnes, y compris les matelots, les émigrés, et les hommes de cages (radeaux,) l'augmentation que cette cause produit dans la population pendant les mois d'été.

7. Cette population passagère reçoit la plus grande partie de ses provisions des paroisses aux environs de *Québec*, savoir, *St. Foi*, *Lorette*, *Charlesbourg*, *Beauport*, et des paroisses au-delà de celles-ci, et qui se rendant à la ville par les grands chemins des marchés sont aussi pourvues par les paroisses de l'autre côté du *St. Laurent*.

8. Je ne connais rien de plus utile pour l'avancement du pays, à la commodité de ses habitans, de plus propre à maintenir les bas prix dans les marchés et de plus avantageux aux étrangers qui visitent *Québec* pendant l'été, que de bons chemins, praticables durant toute la saison, où l'on fait usage des voitures à roues.

9. Oui; le cassement des pierres nécessaires au macadamisage pourrait se faire pendant l'hiver avec beaucoup plus de facilité et à plus bas prix que pendant toute autre saison.

10. Oui; il y a dans la cité et dans les faubourgs de *Québec*, un grand nombre d'émigrés, de journaliers *Canadiens*, d'enfans et même d'ouvriers, qu'on pourrait employer avantageusement à casser des pierres, et qui par là gagneraient une honnête subsistance.

11. Je ne connais pas assez la valeur des terres pour répondre à cette question.

Charles

Appendix
(U.)

10th Jan'y.

Charles Gray Stewart, Esquire, examined, answered:1. Thirty eight years and upwards in the Town of *Québec* and *Banlieue*.2. The state of the Roads in the neighbourhood of *Québec*, is generally very bad particularly in the Spring and Fall of the year—I reside on the *Ste. Foi* Road, and it was often with difficulty I could get into Town with a carriage, especially after a heavy fall of rain.

3. The disadvantages are many, say the wear and tear, the loss of time to the farmer taking his produce to market, and injury to the public by the smaller quantity taken than otherwise would have been the case had the Road been good.

4. Macadamising as in *Europe*.5. Very few of the Proprietors in the Parish of *Ste. Foi*, have the means of making the Road in the first instance, many might assist, and I believe when once made in an efficient manner that the Proprietors would afterwards keep up the same in repair in front of their respective properties.

6. The number may be taken from seven hundred to seven hundred and fifty annually, and navigated by nine thousand men at least, together with many thousands of emigrants that arrive in the shipping.

7. From the parishes at some distance and in the neighbourhood of *Québec*.*William Torrance*, Esq., examined, answered:1. I have resided in the city of *Québec* upwards of eighteen years.2. The general state of the roads in the neighbourhood of *Québec* is extremely bad, particularly spring and fall, in consequence of the want of substance or metal, being principally of a soft or clay soil, and it is my opinion that the only effectual means to establish good Roads would be to macadamise, which when once effectually done would be easily maintained by the Inhabitants residing on such Roads. The means to effect this object would be considerable and consequently too great a burden for the occupiers of lands through which such Roads pass.

3. Indifferently supplied Markets particularly Spring and Fall, much to the disadvantage of the Farmer, at seasons when provisions are most in request in consequence of the greater number of vessels being in Port. The Farmer through excessive bad Roads both Spring and Fall, when he could obtain something like a reasonable price for his commodity cannot come to Market in consequence.

4. Macadamizing the only effectual method.

5. To make the Roads is not within the means of proprietors on the Roads, but when once made would be easily kept good by them.

6. The number of vessels arriving at the Port of *Québec*, annually may be averaged at about six hundred and the population for the time being, is augmented by seamen to about six thousand, and Emigrants to about ten thousand, most of whom remain in *Québec*, but for a short period.7. From the vicinity of *Québec* principally.*Narcisse Duchesnay*, Esquire, examined, answered:1. I was born, and have always lived in *Québec*.2. The Roads are bad and almost impracticable in the Fall and Spring, more particularly from *Québec* to *Beauport*.

3. Because the Country people meet with much more difficulty in bringing their commodities to Market, and spend more time than would be required if the Roads were good.

4. The best manner of improving these Roads would be to follow the system of Mr. *McAdam*, that is by giving them a coat of broken stone.

5.

Charles Gray Stewart, écuyer, étant examiné, répondit:1. Depuis plus de trente huit ans dans la ville et dans la banlieue de *Québec*.2. Dans le voisinage de *Québec* les chemins sont généralement dans un très mauvais état, surtout le printemps et l'automne. Je réside sur le chemin de *Ste. Foi*, et c'a été souvent avec difficulté que j'ai pu me rendre à la ville dans une voiture, surtout après une forte pluie.

3. Les désavantages sont nombreux; par exemple, la ruine des voitures, des chevaux, &c.; la perte de temps que cela occasionne au cultivateur qui mènent ses produits au marché, et le dommage qui en résulte au public par la moindre quantité qui y est amenée, ce qui n'aurait pas lieu si les chemins étaient bons.

4. Ce serait de les macadamiser comme en *Europe*.5. Dans la paroisse de *Ste. Foi*, il se trouve très peu de propriétaires en état de les faire d'abord; un grand nombre pourraient contribuer, et je crois que s'ils étaient une fois faits d'une manière suffisante, les propriétaires pourraient les entretenir en front de leurs propriétés respectives.

6. On peut en calculer le nombre entre sept cents et sept cent cinquante annuellement, dont les équipages se composent de neuf mille hommes au moins, sans compter plusieurs milliers d'émigrés qui arrivent sur ces vaisseaux.

7. Des paroisses aux environs et à quelques milles de *Québec*.*William Torrance*, écuyer, étant examiné, répondit:1. J'ai résidé dans la cité de *Québec* plus de dix-huit ans.2. Les chemins aux environs de *Québec* sont en général dans un très mauvais état, surtout l'automne et le printemps, à cause du manque de solidité, le sol étant principalement d'une nature molle et argileuse; et je suis d'opinion que le seul moyen de faire de bons chemins, serait de les macadamiser; et lorsqu'une fois ils auraient été faits convenablement, ils seraient aisément entretenus par les habitans qui résident le long de pareils chemins. Les frais nécessaires pour atteindre cet objet seraient considérables et par conséquent trop forts pour pouvoir être portés par les possesseurs des terres, à travers lesquelles passent ces chemins.

3. Des marchés mal pourvus, surtout le printemps et l'automne; beaucoup d'inconvéniens pour le cultivateur, et dans des saisons où il y a le plus grand besoin de provisions, par le grand nombre de vaisseaux qui sont dans le port. Le cultivateur ne peut venir au marché dans le temps où il aurait un prix raisonnable pour ses produits, à cause du mauvais état des chemins, dans l'automne et dans le printemps.

4. Le macadamisage est la meilleure méthode.

5. Il est hors des moyens des propriétaires, le long des chemins, de les faire, mais s'ils étaient une fois faits, ils pourraient les entretenir facilement.

6. On peut mettre à six cents le nombre moyen des vaisseaux qui viennent annuellement à *Québec*, et la population en est pour lors augmentée par les matelots d'environ six mille et par les émigrés d'environ dix mille, dont la plupart restent à *Québec*, mais pour peu de temps.7. Des environs de *Québec* principalement.*Narcisse Duchesnay*, écuyer, est examiné et répond:1. Je suis né et j'ai toujours vécu à *Québec*.2. Les chemins sont mauvais et presque impraticables le printemps et l'automne, et plus particulièrement pour aller de *Québec* à *Beauport*.

3. Il en résulte que les habitans de la campagne rencontrent beaucoup plus de difficultés à apporter leurs denrées au marché, et perdent beaucoup plus de temps qu'ils ne feraient si les chemins étaient bons.

4. La meilleure manière d'améliorer ces chemins serait de suivre le système de M. *Macadam*, c'est-à-dire, de les couvrir d'un lit de pierres cassées.

5.

E

10th Jany.

5. No, it is impossible for them.
 6. I do not know exactly.
 7. From the neighbourhood of *Quebec*, in a great measure.
 8. No.
 9. A good Farm of two Arpens in front by twenty in depth, may be worth, without any buildings, about three hundred pounds currency.
 10. Yes.
 11. Yes, a great number.

Michel Sauvageau, Esquire, examined, answered:

1. For the last twenty years, I have resided in the *Banlieue* of *Quebec*, on the Road leading to *Ancienne Lorette*.

2. The state of the Roads in general in the neighbourhood of *Quebec* is extremely bad, Fall and Spring, it is only a part of the Summer that they are tolerably good if the Summers are dry, for last Summer the Roads were bad all the time.

3. The disadvantages resulting from this state of the Roads, is the encrease of the price of commodities on the *Quebec* Markets, the travelling in the Parishes in the neighbourhood of the Town rendered difficult, the ruin of the Horses and Carts of the Country people.

4. The best means in my opinion of improving these Roads and keeping them always in good repair, would be the establishment of Turnpikes.

5. Some of the proprietors of lands in the neighbourhood of *Quebec*, have the means of making and keeping their Roads in good order, but the generality have not.

6. The number of vessels arriving annually from *Europe*, and the British Colonies at the Port of *Quebec*, is from six to seven hundred, and the encrease of population whilst they remain at *Quebec*, may be from six to seven thousand.

7. The Parishes in the neighbourhood of *Quebec*, generally supply the greatest quantity of Provisions that is required for this transient population.

8. I know of no better means for the improvement of the Roads near *Quebec*, than that which I have already mentioned.

9. The average price of Lands within four miles of *Quebec*, is from ten to twelve pounds per arpent.

Q. In which of the *Beauport*, *Charlesbourg*, *Ste. Foi* or *Lorette* Roads is to be found the greatest number of carriages?

A. I believe in that of *Beauport*.

Q. What is the average number of carriages to be found daily upon each of these Roads?

A. *Beauport* about seventy carriages, *Charlesbourg* fifty, the *Little River* Road which communicates with the two *Lorettes*, from the place where these two Roads join the *Little River* Road to *Quebec*, I think there may be about eighty.—That of *L'Ancienne Lorette* on the South side of the *Little River* about thirty that on the North side about sixty,—that of *Ste. Foi* fifty.

G. A. *Eliot*, Esquire, called in and examined, answered:

1. I have lived at and in the immediate neighbourhood of *Quebec*, for the last six years.

2. With the exception of about two and a half miles between the *Lewis Gate* and *Spencer Wood*, the Roads in the immediate vicinity of *Quebec*, are as bad as it is well possible to conceive, and strangers who visit the Town generally remark that it is a great reflexion upon the Inhabitants of this Country, that their Roads are so extremely bad, but more particularly those forming the approaches to the capital, for which there appears to be no excuse. Having resided the two last Summers on the *Ste. Foi* Road, at the distance of about two and

5. Non, cela est impossible pour eux.
 6. Je ne peut pas dire exactement.
 7. De le voisinage de *Québec* principalement.

8. Non.

9. Une bonne terre de deux arpens de front sur vingt de profondeur, sans bâtimens, peut valoir environ trois cents livres courant.

10. Oui.

11. Oui, un grand nombre.

Michel Sauvageau, écuyer, étant examiné répondit:

1. Je réside depuis vingt ans, dans la *Banlieue* de *Québec*, sur le chemin qui conduit à l'*Ancienne-Lorette*.

2. En général les chemins aux environs de *Québec* sont dans un très-mauvais état, le printemps et l'automne. Ce n'est que pour une partie de l'été qu'ils sont passablement bons, encore faut-il que l'été soit sec, car l'été dernier les chemins ont toujours été mauvais.

3. Les désavantages qui résultent du mauvais état des chemins, sont l'augmentation dans le prix des commodités de la vie sur les marchés, la difficulté de voyager dans les paroisses à la proximité de la ville, la ruine des chevaux et des voitures des gens de la campagne.

4. Le meilleur moyen selon moi, pour améliorer ces chemins et les avoir toujours en bon état, serait d'y mettre des barrières.

5. Quelques-uns des propriétaires de terre dans le voisinage de *Québec* ont les moyens de faire de bons chemins et de les entretenir, mais la généralité ne les ont pas.

6. Le nombre de vaisseaux qui viennent au port de *Québec* d'*Europe* et des colonies britanniques est de six à sept cents, et l'augmentation de la population, durant tout le temps qu'ils restent à *Québec* peut être de six à sept mille.

7. Ce sont les paroisses à la proximité de *Québec* qui approvisionnent en très-grande partie cette population passagère.

8. Je ne connais aucun meilleur moyen d'améliorer les chemins aux environs de *Québec* que celui que j'ai déjà mentionné.

9. Le prix commun de la terre à quatre milles de *Québec*, est de dix à douze louis l'arpent.

Q. Quel est celui des chemins de *Beauport*, de *Charlesbourg*, de *Sainte-Foi* et de *Lorette*, qui est le plus fréquenté?

R. Je crois que c'est celui de *Beauport*.

Q. Quel est le nombre moyen de voitures passant journellement sur chacun de ces chemins?

R. *Beauport*, environ soixante-dix; *Charlesbourg*, cinquante; la *Petite-Rivière*, dans le chemin qui communique avec les deux *Lorettes*, à l'endroit où les deux chemins joignent celui qui mène à *Québec*, je crois qu'il peut y en avoir autour de quatre-vingt. Celui de l'*Ancienne-Lorette* au sud de la *Petite-Rivière*, environ trente; celui au nord d'environ soixante; celui de *Ste.-Foi*, cinquante.

G. A. *Eliot*, écuyer, appelé et examiné, répondit:

1. Je réside à *Québec* et dans les environs depuis six ans.

2. A l'exception d'environ deux milles et demi, entre la porte *St.-Louis* et le bois de *Spencer*, les chemins aux environs de *Québec* sont aussi mauvais qu'on peut le concevoir, et les étrangers qui visitent cette ville, remarquent généralement que c'est un grand reproche à faire aux habitans de ce pays, que leurs chemins sont extrêmement mauvais, et surtout ceux qui forment les avenues de la capitale, pour lesquels il ne paraît y avoir d'excuse.

Ayant demeuré, les deux dernières étés sur le chemin de *Ste.-Foi*, à la distance d'environ deux milles et demie

Appendix
(U.)
10th Janv.

a half miles from the *St. John's Gate*, and having been obliged to pass and repass to and from *Quebec*, at least once every day; I am better qualified to describe that portion of it, than that of any of the other approaches to the Town. Leaving my residence (at *Lee's Farm*) for Town, the first mile is so extremely bad, that in a light *American Waggon* with a strong Horse, I can scarcely ever venture to trot; and it consequently takes me about twenty five minutes to get to Mr. *Stewart's Farm House*, at the end of the Cross Road leading to the *Marchmont Gate*, the remainder of the *Ste. Foi Road*, to the commencement of the *St. John's Suburbs*, being much in the same state as that already described, and about an equal distance I almost invariably go by the Cross Road, which having been a little improved this Summer enables me to go something quicker, and I find no difficulty in getting from the *Marchmont*, to the *Louis Gate* in ten minutes, which being about half the distance between my residence and Town is thus accomplished in one third of the time which it takes to get over the other half. Such a difference existing on so short a distance, the consequences to the Farmer who has to convey his produce, ten, fifteen or even twenty miles over such Roads, are every evident, he can only bring about half a load into the Market, and is detained for hours on the Road which ought to be devoted to the cultivation of his land: an evil of great magnitude in this Country, where the season for working the land is so very short, and the natural consequence is that the Markets are not so abundantly supplied as they might be, and the consumer has to pay in proportion: The abuse of Horses, wear and tear of vehicles, &c. &c. are no trifling addition to the loss of time.

3. Answered in No. 2.

4 & 5. The advantages of forming Roads by *McAdam's system* in preference to any other are too evident to require comment, and the necessity of the work on the present occasion being also evident, the only question which arises is from whence the funds should be obtained to carry so desirable an object into operation. Having rented a small Farm on the *Ste. Foi Road* the last two Summers, the experience I have acquired on the subject convinces me, that it is a very great tax upon the occupiers of the land to keep the Road in even a passable state, as they are at present required by the Law; and also that it is not within the means of the proprietors of the land to make the Road as it ought to be for the convenience of the public. Should the Provincial Parliament not see fit to grant the request contained in the Petition now before them, the desired object might still be attained by their granting an aid in the shape of a Loan from the public Funds; with the necessary permission to Turnpike all the approaches to the Town, with the usual privileges of demanding a small Toll on each for the purpose of paying the Interest as well as redeeming the principal, and indeed this appears to be by far the most equitable method, as by so doing every one would then pay in proportion to the use they made of the Roads, instead of either calling on those at a distance to pay for the formation of Roads they never use, or requiring the occupiers of the Land to bestow more labour upon them than they can possibly afford.

6. The average number of Ships which arrive annually in the Port of *Quebec*, from *Europe*, &c. &c. is about six hundred and fifty, which being navigated by (11 Souls) eleven Souls each, amounting to seven thousand, one hundred and fifty may be said to require about ten weeks each, or one million, eighty eight thousand Rations of Provisions; In addition to these persons there is an average arrival of from twelve to thirteen thousand Emigrants, ten thousand of whom may be said to require not more than four days provisions each for their stay in Port, and Passage to *Montreal*, fifteen hundred more remain in and about *Quebec*,

de la *Porte St.-Jean*, et ayant été obligé d'aller à *Québec*, et d'en revenir au moins une fois par jour, je suis plus à portée de parler de cette partie, que d'aucun autre chemin aux environs de *Québec*.

Après avoir laissé le lieu de ma résidence (à la terre de *Lee*) pour se rendre à *Québec*, le premier mille est si mauvais que dans un léger *waggon* américain traîné par un fort cheval, je n'ose pas même trotter; et je mets environ vingt-cinq minutes à me rendre à la ferme de M. *Stewart*, au chemin de travers qui conduit à la *Porte Marchmont*. Le restant du chemin de *Ste.-Foi* jusqu'au commencement du faubourg *St.-Jean* est à peu près dans le même état que la partie que je viens de décrire, et dans une distance à peu près égale. Je vais presque toujours par le chemin de traverse, qui ayant été un peu amélioré l'été dernier, me permet d'aller un peu plus vite, et je me rends aisément de *Marchmont* à la *Porte St.-Louis* en dix minutes, ce qui formant à peu près la moitié de la distance entre l'endroit de ma résidence et la ville, ne prend que le tiers du temps qu'il faut pour passer l'autre moitié. Une si grande différence sur une si petite distance, fait voir de quelle importance devient la chose pour le cultivateur qui est obligé de transporter ses produits dix, quinze et vingt milles sur de pareils chemins; il ne peut guère apporter au marché plus d'une demi-charge, et consume sur le chemin des heures qui devraient être consacrées à la culture de sa terre. Cela est un mal des plus sérieux dans ce pays, où la saison pour travailler à la terre est si courte; la conséquence en est que les marchés ne sont pas aussi abondamment pourvus qu'ils le seraient, et le consommateur paye à proportion. En outre, ce n'est pas peu de chose à ajouter à la perte du temps, la fatigue des chevaux, la ruine des voitures, &c. &c. &c.

3. Répondu dans la réponse No. 2.

4 et 5. Il n'est besoin d'aucun commentaire pour démontrer les avantages qu'il y a à faire les chemins d'après le système de *Macadam*, ils sont trop évidens; et la nécessité de l'ouvrage, dans le cas présent, étant aussi évidente, la seule question qui résoudra c'est de décider, de quelle source on tirera les fonds nécessaires pour mettre cet objet désirable à exécution.

Ayant loué une petite terre sur le chemin de *Ste.-Foi*, l'expérience m'a appris, les deux étés derniers, que c'est une taxe onéreuse sur les possesseurs de terre, que d'entretenir les chemins dans un état passable, selon que la loi le requiert à présent, et aussi qu'il est au-delà des moyens des propriétaires de terre de faire le chemin, comme il le faudrait pour la commodité du public.

Si le Parlement Provincial ne juge pas à propos d'accorder la demande contenue dans la pétition maintenant devant lui, on pourrait encore attendre l'objet désiré, en accordant, sous forme de prêt, une aide au fonds des chemins publics, avec la permission nécessaire de mettre des barrières dans tous les grands chemins aux approches de la ville, avec le privilège ordinaire de demander un léger péage sur chacun, pour payer l'intérêt et rembourser le principal. En vérité ceci paraît être la méthode la plus équitable; car de cette manière chacun payerait à proportion de l'usage qu'il ferait du chemin, au lieu de faire payer pour la confection des chemins des gens éloignées qui n'y passent jamais, et d'obliger les possesseurs de terre de travailler aux chemins plus qu'ils ne peuvent véritablement.

6. Le nombre moyen des vaisseaux qui viennent annuellement au port de *Québec* est de six cent-cinquante, dont les équipages étant de onze personnes, formant un total de sept mille cent cinquante, qui peuvent demander durant environ dix semaines, un million quatrevingt-huit mille rations de provisions: en addition à ces gens, il arrive entre douze à treize mille émigrés dont dix mille au moins demandent des provisions pour quatre jours, qu'il demeurent dans le port et pour leur passage à *Montréal*; quinze cents de ces personnes restent à *Québec* ou dans les environs pendant à peu près quatre mois, et alors montent en haut avant que

Appendice

bec, for about four months, and then go up the Country before the setting in of the winter; and the remaining thousand may be considered as a permanent addition to the population; the number of persons therefore to be added to the population of *Quebec*, may be said to be about three thousand as per statement.

Ships.	Persons.	Days.	Rations.
650	11	70	500,500
	10,000	4	40,000
	1,500	122	183,000
	1,000	365	365,000
Total			1,088,500

$$\frac{1,088,500}{365} = \text{Persons. } 3,000 \text{ nearly.}$$

7. Provisions, Fuel, &c. &c. are brought in from all parts of the Country.

8. Since writing the above, I have been informed from every good authority, that the settlers in the new Township of *Guelph* are so well convinced of the advantages of having good roads, that they twelve hundred and fifty in number) have prepared a Petition to be submitted at the next Session of the Legislature, in *Upper Canada*, praying for the Establishment of Turnpikes in their neighbourhood.

9. Certainly.

10. I have no doubt but there are, and it would materially relieve the charitable funds to find them employment.

11. I cannot say.

Louis Massue, Esquire, examined, answered to the question:

12. I find it very difficult to ascertain the number of destitute paupers in this City and Suburbs; from the information I have been able to obtain I should reckon them at about one hundred and fifty men and women and one hundred children—by destitute I understand persons reduced to the necessity of having recourse to public charity for support.

13. Their state and condition most miserable.

14. I should calculate the sum requisite to support them and the children during winter, allowing four months at four hundred and twelve pounds ten shillings, on the very limited scale of half a pound of Beef, and one pound of Bread a day for an adult, and half the quantity for a child, with the small allowance of one cord of fire Wood for each adult, calculating the Beef, at two pence the pound, the Bread at same price and the Firewood at fifteen shillings the Cord.

15. I do not know any public or private works going on this winter sufficient to supply an adequate Market for labour.

16. A Market for labour would be required I should suppose for at least three hundred persons thought to be now destitute of employment, though not more than half may be in a state of mendicity.

17. The whole number of persons relieved by such an adequate Market, I should reckon in the above estimate at six hundred; supposing one third to be married and each family to have on an average two children.

18. About three hundred persons of the foregoing number I think would be able to work at the breaking of stones for the purpose of macadamising the roads. The daily wages paid this winter for such a work I understand to average about one shilling and three pence, which I do not think sufficient to support them, one shilling and eight pence, being considered extremely low.

J. Charlton Fisher, Esquire, examined, answered to the

12. Question. It is impossible to come to a perfect

que l'hiver se déclare; et l'on peut regarder les mille qui restent comme une addition perpétuelle à la population. Ainsi le nombre de personnes ajoutées à la population peut être mis à trois mille ou environ—Voyez le tableau ci-dessus:—

Vaisseaux.	Personnes.	Jours.	Rations.
650	11	70	500500
	10000	4	40000
	1500	122	183000
	1000	365	365000
total			£1,088,500

$$\frac{1088500}{365} = \text{Personnes. } 3000 \text{ près.}$$

7. Les provisions, le bois, &c., sont apportées de toutes les parties du pays.

8. Depuis que j'ai écrit ce qui précède, j'ai été informé de bonne autorité, que les colons du nouveau Township de *Guelph* sont si fortement convaincus des avantages d'avoir de bons chemins qu'ils ont (au nombre de douze cent cinquante) dressé une pétition, pour être soumise à la prochaine session de la législature du *Haut-Canada*, demandant qu'il soit établi des chemins de barrières dans leur voisinage.

9. Assurément.

10. Je ne doute pas qu'il n'y en ait un grand nombre, et que cela soulagerait fortement les fonds charitables.

11. Je ne saurais dire.

Louis Massue, écuyer, étant examiné répond à la question:

12. Je trouve qu'il est bien difficile de connaître le nombre des indigens de cette ville et des faubourgs; d'après les renseignements que j'ai pu me procurer, j'en mettrai le nombre à cent-cinquante hommes et femmes et cent enfans. Par indigens, je veux dire des personnes qui n'ont aucun autre moyen de subsistance que la charité publique.

13. Ils sont dans l'état et la condition la plus misérable.

14. Je calcule à quatre cent-douze louis et dix chelins, la somme nécessaire pour les supporter eux et les enfans, durant l'hiver, en accordant quatre mois, sur le plan très-limité d'une demi-livre de bœuf et une livre de pain par jour pour un adulte, et de la moitié pour un enfant, avec la quantité modique d'une corde de bois de chauffage pour chaque adulte, en supposant le bœuf à deux deniers la livre, le pain au même prix et le bois à quinze chelins la corde.

15. Je ne sache pas qu'il y ait aucun ouvrage public ou privé, capable de fournir, cet hiver, autant d'ouvrage qu'il en faudrait.

16. Je crois qu'il faudrait de l'ouvrage pour au moins trois cents personnes, qui sont sans emploi, quoiqu'il n'y en ait pourtant guère plus de la moitié qui soient réduits à la mendicité.

17. Je suppose qu'un pareil emploi soulagerait au moins six cents personnes, en parlant du calcul ci-dessus, et en supposant le tiers de mariés et donnant à chaque famille le nombre moyen de deux enfans chacune.

18. Je pense que du nombre de personnes ci-dessus trois cents seraient capables de travailler à casser des pierres pour macadamiser les chemins. J'apprends que cet hiver les gages communes, pour semblable ouvrage, sont d'un scheling et trois deniers, ce que je crois n'être pas suffisant pour faire vivre; un scheling et huit deniers étant considérés extrêmement bas prix.

J. Charlton Fisher, écuyer, étant examiné, répond à la question:

12. Il est impossible d'en venir à une conclusion tout-à-fait

Appendice
(U.)
10 Jany.

Appendix
(U.)
10th Jany.

Appendice
(U.)
10 Jany.

fectly accurate conclusion as to the number of destitute paupers. The opinion of practical men differs on this point, because it is not easy to establish, who ought in a charitable and economical view to be termed paupers. By the terms used in the question, I understand, merely persons whom age, infirmity or moderate habits, have rendered incapable of earning subsistence. Very few persons indeed if able and willing to work, are or ought to be destitute in this Country; although improvidence, during the working season, too frequently brings on want during the winter. Distress then, is the consequence of the difficulty of procuring work, owing to the interruption of the Summer labor by the inclemency of the season.—A family where there is one able bodied person employed ought not in my opinion to be considered destitute.

I think the number of really destitute paupers, such as neither in winter or in summer have any other reliance than on individual charity and alms giving, to be about three hundred.—At the Soup Kitchen lately established after one week's operation about two hundred persons exclusive in many instances of women and children, have applied for relief as destitute paupers; of persons, who cannot procure work, but who are able and willing to labor, the number may be about two hundred. The safest returns on both these points can however be easily obtained from the respective clergy and ministers of the various denominations. The work committee of the Quebec charitable Institution has only employed paupers during the last ten days, and sixty more are now at work, breaking stones for the purpose of macadamising. They earn one shilling and four pence a day, and I understand are content and thankful. Many more will doubtless apply as the system becomes generally known. There are some Theorists who underrate the pauperism of Quebec, but in answer to the first question of this Committee, I think five hundred is nearly the number of the destitute poor during the winter months. In the summer the pauperism is diminished as the work is more plentiful. There are at present about sixty sailors in the Lower Town, left here in consequence of the late shipwrecks, but these will be taken care of by the liberality of the Lower Town Merchants.

13. The habitually poor or destitute are in a dreadful state of necessity, aggravated by the inclemency of the winter. Indeed it is difficult to imagine how they struggle through it. The charity of individuals, never tired in this country, is their only reliance. By this they are enabled to beg on; further than this they neither hope for, nor ever obtain. The temporarily destitute, by whom I mean the able-bodied who cannot obtain work, are still in a worse condition. Seeking for work which cannot be met with, repenting their past improvidence, and witnessing as may be supposed, with the most acute feelings, the misery and abandonment of their wretched families. In another view, these unhappy persons are in a state of torpidity, existing without energy or utility, as long as the season shall condemn them to be inactive. In a national view, their labour is lost to the advantage of the community; and therefore, it would be the duty of a statesman to rescue them from want, and turn their physical force to useful purposes. The only public works I know of at the present season, may be said to be the winter employment of labourers under the Board of Ordnance in Quebec, working in the new fortifications.

The Ordnance Department has lately, from motives of charity, reduced the rate of wages, with the intention, as a certain sum is only allowed for their expenditure, of affording relief to a greater number of individuals by employing them.

The consequence, however, I fear will fall heavily on those who have families depending upon them; although the intention was doubtless the best. I know of no other works than ship building, which is confined to persons peculiarly qualified.

The

tout-à-fait exacte sur le nombre des indigens. L'opinion des hommes pratiques diffère sur ce point, parcequ'il n'est pas aisé d'établir, qui l'on peut appeler pauvres, sous un point de vue charitable et économique. D'après le terme employés dans la question, je n'entend simplement que les personnes que l'âge, les infirmités et la misère ont rendues incapables de gagner leur vie. A la vérité, dans ce pays, parmi les personnes qui peuvent et veulent travailler, il y en a ou doit y en avoir bien peu dans l'indigence; quoique l'imprévoyance, pendant la saison du travail, amène trop souvent le besoin pendant l'hiver. La misère vient donc de la difficulté à trouver de l'ouvrage, par suite de l'interruption que cause dans les travaux l'inclemence de la saison. Dans mon opinion on ne doit pas considérer comme indigente la famille où il y a une personne vigoureuse et capable de travailler.

Je pense que le nombre des personnes réellement indigentes, telles que celles qui, soit en hiver soit en été, n'ont à recourir qu'à l'aumône ou à la charité individuelle, est d'environ trois cents. A la cuisine de la soupe récemment établie, après une semaine d'opération, il ne s'est présenté, les femmes et les enfans exceptés en plusieurs cas, qu'environ deux cents indigens, pour avoir du secours. Il peut y avoir environ deux cents personnes qui peuvent et veulent travailler, mais qui ne trouve point d'ouvrage. Le meilleur moyen pour avoir des retours exacts, sur ces deux points, c'est de s'adresser au clergé et aux ministres des diverses dénominations religieuses. Le comité du travail de l'institution charitable de Québec, n'emploie les pauvres que depuis dix jours, et il y en a encore soixante à l'ouvrage, cassant des pierres pour macadamiser les chemins. Ils gagnent un chelin et quatre deniers par jour, et j'ai appris qu'ils étaient satisfaits et reconnaissans. A mesure que le système deviendra plus connu, il en viendra sans doute un plus grand nombre. Il se trouve quelque théoristes qui mettent le nombre des pauvres moindre qu'il n'est véritablement, mais en réponse à la première question de ce comité, je crois que cinq cents est le nombre des indigens pendant l'hiver. L'été l'ouvrage diminue le nombre des pauvres. Il y a maintenant dans la basse ville environ soixante matelots, qui y sont restés par suite des derniers naufrages, mais ils seront soutenus par la libéralité des marchands de la basse ville.

13. Les pauvres d'habitude ou indigens sont dans un affreux état de misère, augmentée encore par l'inclemence de l'hiver. En vérité il est difficile d'imaginer comment ils le passent. La charité constante des habitans de ce pays est leur unique support. Cela les fait mendier, et ils n'obtiennent et n'espèrent rien au-delà. Les pauvres, qui ne le sont qu'en certain temps, je veux dire les gens capables de travailler, mais qui ne peuvent trouver de l'ouvrage, sont encore dans une situation plus déplorable; cherchant de l'emploi et n'en pouvant trouver; se repentant de leur imprévoyance passée; et envisageant avec les regrets les plus poignans, comme on peut le supposer, la misère et l'abandon de leurs misérables familles. Sous une autre point de vue, leurs malheureuses personnes tombent dans un état de torpeur, qui leur ôte toute énergie et toute utilité; tant que la saison les condamnera à l'inactivité. Sous le point de vue national leur travail est perdu pour la société; et pour cette raison ce serait un acte digne d'un homme d'état que de les retirer de la misère, et de diriger leurs forces physiques à des fins utiles. Les seuls travaux publics que je sache en marche cet hiver, sont ceux du bureau de l'artillerie, qui emploie des journaliers aux nouvelles fortifications.

Le département de l'artillerie a dernièrement, par des motifs de charité, réduit le taux des gages, dans la vue de donner du soulagement à un plus grand nombre d'individus, vu qu'il n'est accordé qu'une certaine somme pour ces dépenses. Cependant la conséquence en sera, je crains, onéreuse à ceux qui ont des familles à supporter; quoique l'intention ait été bonne assurément. Je ne sache qu'il y ait d'autres ouvrages, si ce n'est la bâtisse des vaisseaux, à laquelle ne sont employés que certaines personnes particulièrement quali-
fices. F On

Appendix
(U.)
10th Jany.

The making of *metling* and the levelling *cahots*, might employ a number of persons during the winter, but the best and most profitable labor in which the pauper can be employed during this season seems to be breaking stones for Macadamization. I call it the best for them, because experience has shewn that there is scarcely any other practical method of employing them: and most profitable, because, after paying the workmen one shilling and four pence a-day, the advantage to the country from the improvement of our Roads by their labour is too obvious for me to dwell upon here. It may not be improper to mention on the subject of breaking stones, that there would be a considerable profit in using the refuse stone of *Cap Rouge* in preference to the black stone of *Cape Diamond*, or rather of the *Côte d'Abram*. The expence would be much greater on account of the distance and the hardness of the stone, but the advantage to the Roads would be incalculable.

14. In answer to the fourteenth Question, it is evident that the market for labor is only required for the number of persons *able* to work, but destitute of employment. I have already estimated these at about two hundred; upon whom, however, may depend as heads of families perhaps three hundred more. I have stated above, that though poor I cannot consider a family destitute which has an adult able to earn money by work, supposing it can be supplied to him; other destitute persons depend on the charity of this Metropolis in some shape or other.

15. This question has been previously answered; the whole number of persons relieved would be the aggregate of the actual laborers who perform the required work, and of their families who are benefitted thereby.

Such relief would, indeed, be a noble effort of humanity; and, if afforded by Legislative aid, a splendid proof of judgment and benevolence.

16. The whole number able to work, as I have already mentioned, could not I think be more charitably and more advantageously employed than in breaking stones for the improvement of the Roads in spring.

Boys, as I have understood, could be very usefully employed in this work, as their stature gives them facilities in this kind of labour, and their attention is more easily riveted to it.

17. The daily wages generally paid to laborers this winter is one shilling and three pence per day. I am informed a man can earn by breaking stones, and the Work Committee of the new Charitable Institution pay, one shilling and four pence,

The Ordnance have reduced their rate to one Shilling and three pence for the purpose of employing more persons during the winter. I do not know what work they exact, but I suppose mining and breaking stones are the principal. As to what is absolutely necessary to support an individual from any purely charitable fund. I do not think that tenpence a-day would suffice.

I mean for absolute necessities of life, not including the refreshment of drink in this cold season, and the usual wear and tear of clothing in laborious employment. I regret that my inexperience, never having turned my attention to these subjects before this winter, does not permit me to offer any thing more worthy of the attention of this Committee than the foregoing remarks, on which I have not had the advantage of consulting persons better qualified to pronounce.

A. C. Buchanan, Esquire, examined, answered to the

12th Question. The number of destitute paupers in the City of *Quebec* and Suburbs, and who are not able to work or render any material aid towards their support, I compute at about sixty or seventy families, each averaging five persons will give you three hundred and fifty-five souls; but to these I must add a considerable number able to work and who are not quite

On peut employer pendant l'hiver un nombre de personnes à casser des pierres et à abattre les cahots, mais le meilleur travail et celui auquel on pourrait employer les pauvres avec plus d'avantage pendant cette saison, serait la préparation des pierres pour le macadamisage. Je dis le meilleur travail, parceque l'expérience nous a montré qu'il n'y a presque aucune autre méthode praticable de les employer; j'ajoute avec plus d'avantage, parce qu'après avoir payé les ouvriers un chelin et quatre deniers par jour, l'avantage qui résulterait au pays de l'amélioration de nos chemins par leur travail, est trop évident pour que j'appuie là-dessus. Il peut être à propos de mentionner, tandis que nous en sommes sur le sujet du casement des pierres, qu'il y aurait un profit considérable à faire usage des rebuts de la pierre du *Cap Rouge*, en préférence à la pierre noire du *Cap aux Diamans* et de la *Côte d'Abram*. La dépense en serait beaucoup plus considérable, à cause de la distance et de la dureté de la pierre, mais l'avantage qui en retireraient les chemins serait incalculable.

14. En réponse à la quatorzième question, il est évident qu'il n'y a besoin d'emploi qu'autant qu'il y a de personnes capables de travailler, mais qui ne peuvent trouver de l'ouvrage; j'en ai déjà estimé le nombre à deux cents, dont cependant comme chefs de famille, peuvent dépendre trois cents autres. J'ai dit plus haut que quoique pauvre, je ne pouvais considérer comme indigente la famille qui avait un adulte capable de gagner de l'argent par son travail en supposant qu'il ait de l'ouvrage. Les autres pauvres ou indigents dépendent de la charité de cette métropole, d'une manière ou d'une autre.

15. J'ai déjà répondu à cette question; le nombre total des personnes soulagées serait celui de tous les journaliers actuels, qui font l'ouvrage requis, et de leurs familles qui en retirent l'avantage. Un pareil soulagement serait à la vérité un noble effort d'humanité; et s'il venait d'une disposition législative, serait une preuve éclatante de sagesse et de bienveillance.

16. Le nombre entier en état de travailler, comme je l'ai déjà dit, ne pourrait être plus charitablement ni plus avantageusement employé qu'à casser des pierres, pour l'amélioration des chemins, au printemps. J'ai appris qu'on pouvait utilement employer les enfans à ce travail; vu que leur stature leur donne de la facilité dans ce genre de travail, et qu'ils y appliquent plus aisément leur attention.

17. Les gages payés communément, cet hiver, aux journaliers, sont un cheling et trois deniers par jour. J'apprends qu'un homme peut gagner à casser des pierres, et le comité du travail de la nouvelle institution charitable paye un cheling et quatre deniers. L'artillerie a réduit ses prix à trente sous, dans la vue d'employer plus de monde pendant l'hiver. Je ne sais à quels ouvrages on les emploie, mais je suppose que c'est principalement à miner et à casser des pierres. Quant à ce qui est absolument nécessaire pour supporter un individu d'un fond purement charitable, je ne crois pas que vingt sous par jour suffirait. Je veux dire pour les nécessités absolue de la vie, non compris aucune boisson rafraîchissante, dans cette froide saison, et pour l'usage ordinaire des vêtemens dans un emploi laborieux. Je regrette que mon inexpérience, n'ayant jamais, avant cet hiver, tourné mon attention vers de pareilles matières, ne me permette pas d'offrir à ce Comité quelque chose de plus digne de son attention, que les remarques qui précèdent, à l'égard desquelles je n'ai pas eu l'avantage de consulter des personnes mieux qualifiées pour prononcer.

A. C. Buchanan, écuyer étant examiné, répondit à la

12e. Question.—Je calcule le nombre de pauvres ou indigens, dans la cité et les faubourgs de *Québec*, incapables de travailler et de rien faire pour leur subsistance, à environ soixante ou soixante-dix familles, consistant, nombre moyen, de cinq personnes, ce qui donnera trois cent-cinquante âmes. Mais à ce nombre je dois en ajouter beaucoup d'autres, qui sont capables de

quite destitute of the means of support, and among them are many heads of families now employed at casual and reduced wages, the whole of whom I compute at about one hundred and fifty families of five persons each, say seven hundred and fifty souls, and making an aggregate pauper population of eleven hundred and five, who are *whole and part* dependant for support during the present winter, and in the whole I think the male population capable of work will amount to two hundred persons at least.

13. As to the condition of the paupers in the city and Suburbs of *Quebec*, I am prepared to say that it is by no means so bad as might reasonably be expected, considering that there is no House of Industry or other Asylum for afflicted poor, and added to which has been the indiscriminate plan of giving alms in the City of *Quebec* without investigation, which has brought on it a great load of idleness and imposition, and in the peculiar situation of *Quebec*, requiring so large a supply of hands during the summer, and which have generally fallen short of the demand. The average price of labour in the City of *Quebec* for the last three years in the summer months has been from three to five shillings per day, and for artizans five to seven shillings and six pence, and difficult to be obtained at those rates.

The influx of settlers the last two years, and the total absence of all facilities for their settlement in the country must naturally tend to encrease the number of unemployed poor, in winter particularly, as it is always the most indolent class of emigrants that loiter about the place of landing; however, you will find considerable distress in the habitations of many of those transient poor who are crammed together in lodgings and generally wretchedly provided. I find that there is a very large proportion of widows among the destitute poor Canadians and transient, and there are some male paupers incapacitated from working for want of a sufficiency of warm clothing at this inclement season, and I have remarked many impotent and deformed poor.

14. For the support of the totally destitute poor, including House Rent and Fuel, I compute six hundred pounds, and those requiring partial assistance, seven hundred;—in all, thirteen hundred pounds, judiciously expended, ought in my opinion to support the pauper population of the City and Suburbs of *Quebec*, until the beginning of May.

15. Not any.

16. In point of fact, the laborers employed at the Cape, under the Engineer Department, render very little service, but are kept more with the view of aiding the poor at this season of the year. The Government Works going on will give employment during the winter, at reduced wages, to one hundred and sixty-five laborers and one hundred and thirty artizans; besides many horses drawing stones, and many private individuals employ a vast number of persons, particularly Mr. *Saxton Campbell*; but as this is in the ordinary business of the country, I do not take it into material calculation, and no doubt some of these so employed with large families find it very difficult to support themselves during the present winter from the unusual high price of bread.

17. I am of opinion that every able bodied labouring pauper, sufficiently clothed to stand the cold, might be advantageously employed in breaking stones for Macadamizing the Roads in and about *Quebec*, during the present winter. At present the *Quebec Charitable Institution*, lately formed, give employment to about fifty heads of families, breaking stones, and hopes are entertained that some mode of employing women and children to assist in their support, may ere long present itself, if the funds will permit.

de travailler et qui ne sont pas tout-à-fait sans moyens de subsistance, et de ce nombre sont plusieurs chefs de famille maintenant employés à des gages casuelles et réduites; pouvant former en tout environ cent-cinquante familles de cinq personnes chacune, ce qui fait sept cent-cinquante âmes, et formant une population de pauvres de onze cent-cinq, qu'en tout ou en partie ont besoin de support, durant le présent hiver, et je crois que sur le tout la population mâle capable de travailler se monte à deux cents personnes pour le moins.

13. Quant à la condition des pauvres en cette ville et dans les faubourgs, je suis prêt à dire, qu'elle n'est pas aussi mauvaise qu'on pourrait raisonnablement s'y attendre, en considérant qu'il n'y a pas de maison d'industrie, ni autre asile pour les pauvres affligés, à quoi l'on a ajouté le plan de donner indistinctement et sans examen l'aumône, dans la cité de *Quebec*, ce qui l'a chargée d'un grand nombre de fainéans et d'imposteurs; et surtout si l'on jette les yeux sur la situation de *Quebec*, qui requiert pendant l'été un si grand nombre de bras, qui généralement ne sont pas en demande. Le prix commun du travail dans la cité de *Quebec*, pendant les trois années dernières, durant les mois d'été a varié depuis trois jusqu'à cinq chelings par jour; et pour les artisans depuis cinq chelings jusqu'à sept et demi, et il était même difficile de se les procurer à ce prix.

L'émigration des deux années dernières, et l'absence totale de toutes facilités pour leur établissement dans le pays, doivent nécessairement tendre à augmenter le nombre des pauvres sans emploi, durant l'hiver, surtout vu que c'est toujours la classe la plus indolente d'émigrés, qui errent sur la place de débarquement; cependant vous trouverez beaucoup de misère dans les habitations d'un grand nombre de ces pauvres passagers, qui sont entassés les uns sur les autres dans leurs appartemens, et qui généralement sont très-misérablement pourvus. Je trouve qu'il y a une bonne proportion de veuves, parmi les indigens Canadiens et passagers et il y a quelques hommes incapables de travailler faute de bons vêtemens, dans cette dure saison, et j'ai remarqué beaucoup de pauvres impotens et difformes.

14. Je calcule qu'il faudrait six cents louis pour supporter les indigens, y compris le loyer et le chauffage, et sept cents louis pour ceux qui ne demandent qu'une assistance partielle; faisant en tout treize cents louis, qui s'ils étaient judicieusement appliqués devraient suffire selon moi pour supporter la population pauvre de la cité et des faubourgs de *Quebec*, jusqu'au commencement de mai.

15. Aucun.

16. En point de fait les journaliers maintenant occupés sur le Cap, par le Département du Génie, rendent très-peu de services, mais sont plutôt employés dans la vue de secourir les pauvres, pendant cette saison. Les travaux du Gouvernement en marche donneront de l'emploi, durant l'hiver, à des gages réduites, à cent-trente-cinq journaliers et à cent-trente artisans, outre plusieurs chevaux, qui charrient de la pierre; et plusieurs individus privés emploient un grand nombre de personnes, surtout M. *Saxton Campbell*, mais comme cela est dans le cours ordinaire des affaires du pays, je n'en ferai une des bases principales de mes calculs, et quelques-unes de ces personnes chargées de fortes familles, trouvent très-difficile de les supporter pendant cet hiver, à cause de la cherté extraordinaire du pain.

17. Je suis d'opinion que tout pauvre capable de travailler et assez vêtu pour résister au froid pourrait être avantageusement employé à casser des pierres pour le macadamisage des chemins dans *Quebec* et les environs, pendant l'hiver; à présent l'Institution Charitable dernièrement formée donne de l'emploi à environ cinquante chefs de familles à casser des pierres, et si les fonds le permettent on espère avoir en peu un moyen d'occuper les femmes et les enfans pour assister les pères.

Appendix
(U.)
10th Jany.

18. Laborers are now paid at the public works, one shilling and three-pence per day, and artizans three shillings and sixpence. Those persons breaking stones under the direction of the Charitable Institution, get so much per bushel, equal to from one shilling to one shilling and six-pence per day. The rate of wages, I believe, generally paid at this season for the ordinary work of the country, is from two shillings to two shillings and six-pence per day. A single man ought to support himself (even at the present high price of bread) at one shilling per day, but a man with a wife, and averaging three children, if dependant on his earnings, will require one shilling and six-pence per day, and then every exertion must be used by the wife and children to pick up firewood about the Timber Coves when the weather will permit.

Thomas Lee, Esquire, Member of this House, for the Lower-Town of *Quebec*, appeared, and answered to the questions as follows :

1. I was born, and have always resided in *Quebec*, and for the last twenty-five years I have been proprietor of lands in its neighbourhood.

2. The state and condition of the Roads in the neighbourhood of *Quebec* is extremely bad, and impracticable in the Autumn and Spring. Even after heavy rain in the Summer, the Roads in the neighbourhood of *Quebec* are almost impassable. The law respecting roads in the neighbourhood of *Quebec* is oppressive, and cannot be executed unless the Farmer is constantly on the Road with his hoe and shovel to repair it.

3. The advantages are that if we had good Roads, that the country people who come to market from a distance of three leagues in the neighbourhood of *Quebec* with their commodities, instead of spending three or four hours as they do in coming to market, would perform it in an hour's time without ruining their horses, and they would spare their vehicles and harness, the expense of which is very considerable annually. I have made a calculation, that in the distance of three leagues during the time we had bad roads, of the time it took the country people to come to market, and of that which they would take if we had good Roads macadamized, as were the ten acres which I had done with some fellow-citizens upon a part of this Road, in order to give the country people a palpable proof of the advantages of artificial Roads, and it is a calculation that a number of experienced and intelligent Farmers have also made and found correct.

I attribute almost entirely to the want of artificial Roads the poverty of a great number of our farmers in the neighbourhood of *Quebec*, and to the want of good Roads and of the communication at a certain distance from *Quebec*, is owing the slowness of the settlement of lands of the neighbourhood of *Quebec*. But in order to render the advantage of artificial roads and of internal communications more striking, I shall take the liberty of submitting to the Committee a Report of *Mr. Gallatin*, which I shall file, in which will be seen the importance which the Government of the United States have attached for a long time back to the improvement of Roads, and particularly in those States which are our neighbours.

MR. GALLATIN'S REPORT—1808.

TURNPIKE OR ARTIFICIAL ROADS.

A great number of artificial Roads have been completed in the Eastern and Middle States, at an expense varying from less than 1000 to 14,000 dollars a mile.

Fifty-six Turnpike Companies have been incorporated since 1803, in the State of *Connecticut* alone ; and the Roads undertaken by those Companies are all of that description. Thirty-nine of those Roads extending together 770 miles are completed. No particular account

18. Aux travaux publics on paie maintenant les journaliers trente sous par jour, et les artisans trois chelins et demi. Les gens qui cassent des pierres sous la direction de l'Institution Charitable ont tant par minot, ce qui équivaut à la somme d'un chelin à un chelin et demi par jour. Je crois que le taux général des gages, pour les travaux ordinaires de ce pays est de deux chelins à deux chelins et demi par jour. Il faut qu'un homme vive avec un chelin par jour, malgré la cherté présente du pain, mais l'homme qui a une femme et le nombre commun de trois enfans qui dépendent sur ce qu'il gagne, aura besoin d'un chelin et demi par jour, et dans ce cas la femme et les enfans, quand le temps le permettra, devront faire tous leurs efforts pour ramasser du bois de chauffage au Foulon, &c.

Thomas Lee, Ecuyer, membre de cette Chambre pour la Basse-Ville de *Québec*, comparu et répondit aux questions, comme suit :

1. Je suis né et ai toujours résidé à *Québec*, depuis vingt-cinq ans, et j'ai été propriétaire de terre dans les environs de cette ville.

2. Aux environs de *Québec* les chemins sont dans le plus mauvais état, et impraticables le printemps et l'automne—même à la suite des grosses pluies de l'été, les chemins, aux environs de *Québec*, sont presque impraticables. La loi des chemins aux environs de *Québec* est oppressive, et ne peut être mise à exécution, à moins que le cultivateur ne soit constamment avec sa bêche et sa pioche à réparer les chemins.

3. Les avantages en sont, que si nous avions de bons chemins, les gens de la campagne qui viennent au marché d'une distance de trois lieues aux environs de *Québec*, avec leurs denrées, au lieu de mettre trois à quatre heures, comme il le font, à venir au marché, s'y rendraient dans une heure de temps, sans ruiner leurs chevaux, et ils ménageraient leurs voitures et leurs harnais, dont les frais annuels sont très considérables. J'ai fait un calcul, du temps que dans la distance de trois lieues, pendant que nous avons de mauvais chemins, les cultivateurs mettaient à venir au marché, et de celui qu'ils auraient sauvé, si nous avions de bons chemins macadamisés, comme les dix acres que j'ai faits avec quelques-uns de mes concitoyens sur une partie de chemin, afin de donner aux gens de la campagne une idée et une preuve sensible de l'avantage de chemins artificiels, et c'est un calcul que nombre de cultivateurs expérimentés et intelligens ont fait eux-mêmes et ont trouvé correct.

J'attribue presque entièrement au manque de chemins artificiels la grande pauvreté d'un grand nombre de nos cultivateurs, dans le voisinage de *Québec*, et au manque de bons chemins et de communications faciles, à une certaine distance de *Québec*, est due la lenteur avec laquelle se font les établissemens dans le voisinage de *Québec*. Mais pour rendre plus frappant l'avantage de chemins artificiels et des communications intérieures, je prendrait la liberté de soumettre au comité un rapport de *M. Gallatin*, que je produirai, dans lequel on verra l'importance que le gouvernement des Etats-Unis a mis, il y a déjà long-temps, à l'amélioration des chemins, et surtout dans ceux des Etats qui nous avoisinent.

RAPPORT DE M. GALLATIN—1808.

CHEMINS DE BARRIERES ET ARTIFICIELS.

On a confectionné un grand nombre de chemins artificiels dans les Etats de l'est et du milieu, et qui ont coûté au moins de 1,000 à 14,000 dollars le mille.

Il a été incorporé, depuis 1803, dans l'état de *Connecticut* seul, 56 compagnies de Barrières, et tous les chemins entrepris par ces compagnies sont de cette espèce. Trente de ces chemins, formant ensemble 770 milles, sont parachevés.

Appendice

On

Appendix
(U.)
10th J. ny.

count has been received of the Roads in the other Eastern States, but it is known that besides some of a similar description with those of the State of *Connecticut*, several of a more expensive kind have been completed, particularly in *Massachusetts*. A greater capital has been vested on Turnpike Roads in the State of *New York* than in any other. In less than seven years sixty-seven Companies have been incorporated with a nominal capital of near five millions of dollars, for the purpose of making more than three thousand miles of artificial roads; and twenty-one other Companies have also been incorporated, with a capital of four hundred thousand dollars, for the purpose of erecting twenty-one Toll Bridges.

More detailed information has been obtained respecting roads in *New Jersey*, *Pennsylvania* and *Maryland*.

In *New Jersey* a new Turnpike Road has lately been completed from *Trenton* to *Brunswick*. The distance is twenty-five miles, the greatest angle of ascent three degrees, and the Road is nearly in a straight line, the only considerable obstructions being the Sand Hills through which it is necessary to dig at the depth of thirty feet, in order not to exceed the angle of ascent. The Road is thirty-six feet wide, fifteen of which are covered with about six inches of gravel. A few wooden bridges with stone abutments and piers have been erected across the intervening streams,

In *Pennsylvania*, artificial roads of the most substantial kind have been completed or are proceeding from *Philadelphia* in sundry directions. In *Maryland*, Roads, extending from *Baltimore* in various directions, have lately been undertaken by several Companies and are rapidly proceeding. South of the *Potomac* few artificial Roads have been undertaken.

From *Alexandria* one is now progressing in a north-westwardly direction towards *Middleburg*. Another has lately been commenced from *Richmond* to *Ross' Coal Mine*. But the only one which, so far as any accounts have been received, is completed, extends twelve miles from *Manchester* opposite to *Richmond* in a westwardly direction to the coal mines of *Falling Creek*. The greatest progress made in the improvement of Roads in the northern parts of the Union, must be principally ascribed to a more compact population, which renders those improvements more necessary, and at the same time supplies with greater facility the means of effecting them. The same difference is perceptible in the number of Bridges erected in the several States. In the Eastern States, and particularly *Massachusetts*, wooden bridges, uniting boldness to elegance, and having no defect but the want of durability, have been erected over the broadest and deepest rivers. In the lower counties of *Pennsylvania*, stone bridges are generally found across all the small streams.

Both in that State and at some distance westwardly, bridges with stone piers and abutments, and a wooden superstructure, are common over wide rivers.

The want of bridges south of *Pennsylvania*, even on the Union Post Road, is sensibly felt. One lately thrown across the *Potomac*, three miles above the City of *Washington*, and which without any intervening piers, is wholly suspended to iron chains extending from bank to bank, deserves notice on account of the boldness of its construction and of its comparative cheapness.

The general principles of improved Roads seem to be:—1st. The reduction of hills by diminishing the angle of ascent, which ought not to exceed, whenever practicable, three degrees and a half, and under no circumstances five degrees. 2ndly. A sufficient convexity in the bed of the Road, together with ditches and drains, all which are intended to prevent the injury caused by standing water or freshets. 3rdly. An artificial bed of pounded stones or ground, sufficiently substantial to support the weight of the carriages in general use on the Road, either for the conveyance of persons or for the transportation of merchandize. On

On n'a reçue aucun rapport particulier des chemins des autres Etats de l'est, mais il est connu qu'outre quelques-uns de la même espèce que ceux de l'état de *Connecticut*, il en a été fait plusieurs d'une espèce plus couteuse, et en particulier dans le *Massachusetts*. Il a été dépensé, dans l'état de *New York*, aux chemins de Barrières, un capital plus considérable que dans aucun autre état. En moins de sept années il a été incorporé 67 compagnies, avec un capital nominal de près de cinq millions de dollars, dans la vue de faire plus de 3,000 milles de chemins artificiels; et il a été aussi incorporé 21 autres compagnies, avec un capital de 400,000 dollars dans la vue d'ériger 21 ponts de péage.

Il a été reçue des renseignements plus détaillés, à l'égard des chemins de *New Jersey*, de *Pennsylvanie* et de *Maryland*.

Dans le *New Jersey*, il a été dernièrement ouvert un chemin entre *Trenton* et le *Nouveau Brunswick*: la distance est de 25 milles, l'angle d'élévation est de 3 degrés, et le chemin est presque en ligne droite, la seule obstruction considérable étant aux *Côtes de Sable*, à travers lesquelles il est nécessaire de creuser jusqu'à 30 pieds de profondeur, pour ne pas excéder l'angle d'élévation. Le chemin a 36 pieds de large, dont 15 sont couverts d'environ 6 pouces de gravier. Sur les courans d'eau qui se sont rencontrés, on a érigé quelques ponts de bois avec des culées et des piliers de pierre.

Dans la *Pennsylvanie* on a fait ou l'on travaille à faire dans diverses directions, à partir de *Philadelphie*, des chemins artificiels de l'espèce la plus durable. Dans le *Maryland*, plusieurs compagnies ont entrepris dernièrement de faire partir de *Baltimore*, dans diverses directions, des chemins qui avancent rapidement vers leurs confection. Au sud du *Potomac* on a entrepris peu de chemins artificiels.

Il s'en fait un maintenant pour aller d'*Alexandrie* à *Middlebury*, dans une direction nord-ouest, on en a fait dernièrement un autre depuis *Richmond* jusqu'à la mine de charbon de *Ross*. Mais le seul, dont on ait reçu quelques rapports à l'égard de sa confection, s'étend à 12 milles de *Manchester*, vis-à-vis *Richmond*, dans une direction ouest, jusqu'aux mines de charbon de *Falling-Creek*. Les grands progrès qui ont été faits dans l'amélioration des chemins, dans les parties Septentrionales de l'*Union*, doivent être principalement attribués à la densité de la population, qui rend ces améliorations plus nécessaires, et en même temps pourvoit plus facilement aux dépenses que cela demande. La même différence se fait appercevoir dans le nombre de ponts bâtis, dans les différens Etats. Dans les Etats de l'est et surtout dans le *Massachusetts*, on a jeté sur les rivières les plus grandes des ponts de bois, qui réunissent la hardiesse à l'élégance, et dont le seul défaut est celui de la durabilité. Dans les comtés inférieurs de *Pennsylvanie*, on rencontre généralement des ponts de pierre sur tous les petits courans d'eau. Dans cet Etat et un peu vers l'ouest, il n'est pas rare de rencontrer des ponts avec des piliers et des culées de pierre, et une structure en bois sur le dessus, sur les rivières les plus larges.

On sent vivement le manque de ponts au sud de la *Pennsylvanie*, même au chemin de *Union Port*. Celui dernièrement jeté sur la rivière *Potomac*, trois milles au dessus de la cité de *Washington*, et qui sans le moyen d'aucun pilier, n'est suspendu d'un rivage à l'autre que sur des chaînes de fer, mérite l'attention, à cause de la hardiesse de sa construction et du peu qu'il a comparative-ment coûté.

Les principes généraux de l'amélioration des chemins paraissent être, 1^o. L'abaissement des hauteurs pour diminuer l'angle d'élévation, qui partout où cela est praticable, ne doit pas excéder 3 degrés et demi, et jamais 5 degrés. 2^o. Une convexité suffisante dans le lit du chemin, avec des fossés et des égoûts, tout cela pour prévenir le dommage causé par le séjour de l'eau. 3^o. Un lit artificiel de pierres cassées ou de terre, d'une consistance suffisante, pour supporter le poids des voitures généralement en usage dans le chemin, soit pour le transport des voyageurs soit pour celui des marchandises. Appendix
(U)
10th Jan'y.

On the last point it appears, from the facts already stated, or scattered in the communications received on the subject:—1st. That the stones ought to be similar in quality and reduced to the same size, which should not exceed three inches in diameter. 2nd. That the preferable qualities of stone rank in the following order:—Hard black stone, granite flint, or quartz, blue limestone, white ditto. 3rd. That the stratum may be either of pounded stone, ten or twelve inches thick, with two inches of gravel spread over the stones, or entirely of gravel eighteen inches thick. 4th. That when the materials are equally convenient, the expense of these three modes will not materially differ, but that the rate of expense depends principally on the number of hills and bridges, distance of materials, breadth of the Road and price of labour; and 5th, That the general adoption of broad wheels, for the transportation of heavy loads, is necessary to the full enjoyment of the advantages expected from the most substantial artificial Roads. On the degree of convexity and on the proper shape to be given to the natural bed of the Road under the artificial stratum, a diversity of opinions seem to prevail.

4. The best means of improving the Roads is that recommended by *Macadam*.

5. No; because I believe they are generally too poor to make these artificial Roads, which would not cost less, upon an average, than from ten to twelve pounds an acre.

6. About six hundred; and as to the increase of the population arising from this cause, I cannot speak correctly.

7. The parishes in the neighbourhood.

8. I believe that artificial Roads alone, owing to the clayey nature of the soil in the neighbourhood of *Quebec*, can improve the communications.

9. About ten pounds.

10. Yes.

11. Yes.

12. I believe it is considerable.

13. Very bad.

14. I believe that different sorts of work might be procured, but I do not know for what number.

15. A great number.

16. I believe that from fifteen hundred to two thousand pounds, well laid out, would be sufficient.

17. That would depend upon the extent of the Road that might be intended to be made. *Mr. Sinclair* and *Mr. Larue*, Road Inspectors, could give information on that subject.

18. I cannot answer this Question, because the short distance of the Road which I had made, was with stones already broken.

19. No answer.

20. I do not know, because I have used stones already broken.

Robert D'Estimauville, Esquire, examined, said:

Mr. Larue, Inspector of the Roads and Streets of the City and Banlieue of *Quebec*, having communicated to me the answers which he made to the said Committee, to the Questions submitted to him, which are found to be the same as those addressed to me, and not being capable of adding any thing to the most part of these answers, I shall take the liberty of using them as mine upon the same subject, and I shall here bind myself but to those questions submitted to me and not comprised in those of the said *Mr. Larue*, and authorized by the eighth question as well as by the following ones, to which I shall answer to the best of my opinion. I set out on the supposition, that the final result and end is to produce the greatest possible good to the public, at the same time that it will become an assistance to the greatest imaginable number of indigent persons of this City; consequently I shall believe myself justified in entering into these views of public utility and benevolence, by laying before the Committee the means which

Sur le dernier point il paraît d'après les faits déjà avancés, ou épars dans les communications reçues sur le sujet. 1°. Que les pierres doivent être de la même qualité et réduites au même diamètre qui ne doit pas excéder trois pouces. 2°. Que les pierres, sous le rapport de la préférence, sont rangées dans l'ordre suivant: pierre noire et dure de granit ou de quartz, pierre à chaux bleue, même blanche. 3°. Que le lit peut être également de pierres cassées de 12 pouces ou de dix pouces avec 2 pouces de gravier répandu dessus, ou tout de gravier de 18 pouces d'épaisseur. 4°. Que lorsque les matériaux conviendront également, la dépense de ces trois méthodes ne diffère pas de beaucoup, mais que les frais dépendent principalement du nombre de côtes et de ponts, de la distance des matériaux, de la largeur du chemin et du coût de la main d'œuvre; et 5°. Que l'adoption générale de roues larges, pour le transport de charges pesantes, est nécessaire pour pouvoir jouir de tous les avantages qu'on attend des chemins artificiels les plus solides. Il paraît y avoir diversité d'opinion sur le degré de convexité et sur la forme convenable à donner au lit naturel du chemin sous la couche artificielle.

4. Le meilleur moyen d'améliorer les chemins est d'adopter le plan recommandé par *M. Macadam*.

5. Non; parce que je crois qu'ils sont généralement trop pauvres pour faire des chemins artificiels, qui, terme moyen, ne coûteraient pas moins de dix à douze louis l'acre.

6. Environ six cents, mais je ne puis parler correctement, de l'augmentation commune qui, par cette cause, peut arriver dans la population.

7. Des paroisses des environs.

8. Je crois qu'il n'y a que des chemins artificiels qui, vu la nature argileuse du sol dans le voisinage de *Québec*, peuvent améliorer les communications.

9. Environ dix louis.

10. Oui.

11. Oui.

12. Je crois que le nombre en est considérable.

13. Très-mauvais.

14. Je crois qu'on pourrait procurer différentes sortes d'ouvrages, mais je ne puis dire pour quel nombre.

15. Un grand nombre.

16. Je crois que quinze cents à deux mille louis bien dépensés, suffiraient à cet objet.

17. Cela dépendrait de l'étendu du chemin qu'on voudrait faire, *M. Sinclair* et *M. Larue*, Inspecteur des chemins, pourraient donner des renseignements là-dessus.

18. Je ne puis répondre à cette question, car la petite distance de chemin que j'ai faite, l'a été avec des pierres déjà cassées.

19. Point de réponse.

20. Je ne sais pas, parce que j'employa des pierres déjà cassées.

Robert D'Estimauville, Ecuyer, examinée, dit:

Le Sieur *Larue*, Inspecteur des Chemins et Rues de la Cité et Banlieu de *Québec*, ayant bien voulu me communiquer les Réponses qu'il a faites au même Comité, aux Questions à lui soumises qui se trouvent les mêmes que celles à moi adressées, et ne pouvant rien ajouter à la plus grande partie de ces réponses, je prendrai la liberté d'y référer pour les miennes sur les mêmes sujets et je ne m'attacherai ici qu'à ces questions à moi soumises non comprises dans celles du dit *Sr. Larue* et, autorisé par la 8e question ainsi que par les suivantes, je vais tâcher d'y répondre de mon mieux.

Je pars de la supposition que, en dernier résultat, le but est de produire le plus grand bien possible au public, en même temps que de venir à l'assistance du plus grand nombre possible d'indigents de cette Cité. En conséquence je croirai entrer dans ces vues d'utilité publique et de bienfaisance en mettant sous les yeux du Comité les moyens que mon

Appendice
(U)
10 Jan'y.

Appendix
(U.)

10th Jany.

which my experience teaches me to believe proper to accomplish this double end ; therefore I answer to the

9th Question—that not only these preparations &c. cannot only, but even ought to be made in winter. It is a particularly dead season for the poor laborers and tradesmen, and it would be rendering them the most essential service by placing in them, even by their work, the power to procure their subsistence and that of their families ; and I would take upon me to say, that the number of individuals to whom such a service is nearly indispensable, does not amount to less than eleven or twelve hundred, comprising children from the age of from twelve to thirteen years old.

Now these children may break stones as well as grown men, and even old men, not infirm, at least six bushels per day, which experience proves, and which makes, at the rate of three half-pence per bushel, a profit of nine-pence, with which they may purchase a portion of soup and some other necessities of life.

As the miners can explode the quarries in winter and in summer, the breakers of stones may be constantly employed. To encourage and to draw them to this work, I think it would be right to cause to be erected near the quarry from which the stones would be drawn, one or two sheds sufficient to contain a thousand persons, in order to shelter them from the wind and snow, the materials of which might be sold at the end of the season, or better even serve upon the roads as hereafter specified. It would be necessary also to furnish them with the first hammer, cautioning them to take care of it as no other would be given.

11. The state of this class of individuals, which is not confined to mendicants, but which contains industrious citizens, who with the reduction of salaries, and the want of work in the short season of employment, is deplorable ; not having been able to gain sufficient during the summer for their maintenance, (the season for laying up for the support of winter,) they are obliged if they find credit, to contract debts which they ought to pay from the profits of the following season, and thus their misery perpetuates, and continually increases until at last they are reduced to beggary, a trade which they then make their children practice at an early age, and which quickly leads them to all the vices. We find then that however moderate may be the profits arising from the work in question, it must be of the greatest utility, even were it but to prevent them from running into debt, or at least to diminish the amount of the debts they would have to pay from the gain of the following summer ; but certainly the greatest good resulting from this employment of children, would be to obviate the necessity in which sometimes parents send them to beg for a morsel of bread to give them.

I have already said, that the number of individuals in need of succour during the winter, does not amount to less than from eleven to twelve hundred ; it is then actually the time to shew the means of employing them usefully to the public and to themselves :—

1st. One party of miners, consisting of two miners and one workman, can explode a cubic fathom of stones per day.

2d. A cubic fathom of stones when broken, produces one hundred and seventy bushels of small stones fit for macadamizing.

3. One breaker, being able to produce six bushels per day, it will need then about twenty-four to break in pieces one cubical fathom, or one hundred and seventy bushels.

4. Fifty thousand bushels are necessary for macadamizing one mile of road, and nine miles may be taken for the smallest number in the Banlieue, which it will be necessary to submit to this operation, so that there

mon expérience me porte à croire propre à remplir ce double but. En conséquence je répondrai à la

9e Question : Que non seulement ces préparations, etc., peuvent non seulement, mais même, doivent être faite, en hiver. C'est une saison particulièrement morte pour la plupart des pauvres journaliers et manœuvres, et on ne peut par conséquent que leur rendre le service le plus essentiel en les mettant à même, par leur travail, de pourvoir à leur subsistance et à celle de leur famille, et j'ose dire que le nombre des individus auxquels un tel secours est presque indispensable, ne se monte pas à moins de 11 à 1200 y compris des enfans de l'âge de douze ou treize ans. Or ces enfans peuvent casser, comme des hommes faits et même des vieillards non caducs, au moins six minots par jour, ce que l'expérience prouve, ce qui fait, à raison de trois sols par minot un profit de dix-neuf sols, avec lesquels ils pourront acheter une portion de soupe et quelques autres nécessité de la vie. Comme le mineur peut exploiter la carrière dans l'hiver comme dans l'été, les casseurs de pierres en pourront être constamment pourvus.

Pour les encourager et les attirer à ce travail, je crois qu'il serait convenable de faire ériger aussi proche de la carrière d'où les pierres seraient tirées un ou deux hangards suffisans pour contenir mille personnes, afin de les mettre à l'abri du vent et de la neige, dont les matériaux pourraient être vendus à la fin de la saison, ou mieux, servir sur les chemins même comme dit ci-après. Il faudrait pareillement leur fournir le premier marteau en les prevenant que c'est à eux à en avoir soin parce que l'on ne leur en donnerait plus.

11. L'état de cette classe d'individus, qui ne se borne pas aux mendiants, mais qui contient des citoyens industrieux qui, vu la réduction des salaires et le manque d'ouvrage dans la courte saison des travaux, est en général déplorable. N'ayant pu gagner suffisamment dans l'été pour leur maintien dans la saison et pour mettre suffisamment de côté pour leur entretien d'hiver, ils sont obligés, s'ils trouvent du crédit, de contracter des dettes qu'ils doivent payer sur leurs profits de la saison suivante, et ainsi leur misère se perpétue et va toujours en croissant jusqu'à ce qu'enfin ils sont réduits à la mendicité, métier qu'ils font alors pratiquer de bonne heure par leurs enfans et qui conduit bientôt à tous les vices. On sent donc que tout modique que puisse être le profit résultant du travail en question, il doit leur être de la plus grande utilité, quand ce ne serait que pour les empêcher de s'endetter ou au moins de diminuer le montant des dettes qu'ils auront à payer sur leurs gains de l'été suivant. Mais certainement le plus grand bien résultant de cet emploi des enfans, serait d'obvier à la nécessité où sont quelque fois les parens de les envoyer quêter pour avoir un morceau de pain à leur donner.

J'ai dit plus haut que le nombre d'individus ayans besoin de secours durant l'hiver, ne se montait pas à moins de 11 à 1200, il est dont à propos actuellement d'indiquer les moyens de les employer utilement pour le public et pour eux-mêmes.

1°. Un jeu de mine consistant en deux mineurs et un manœuvre peut exploiter une toise cube de pierres par jour.

2°. Une toise cube de pierre produit, cassée, 170 minots de pierrotage propre à la macadamisation.

3°. Un casseur pouvant produire 6 minots par jour, il en faudra donc à peu près 24 pour débiter une toise cube ou 170 minots.

4°. Cinquante mille minots sont nécessaires pour la macadamisation d'un mille de chemin, et on peut porter à 9 le moindre nombre de milles dans la banlieue qu'il sera nécessaire de soumettre à telle operation,

Appendice
(U.)

10 Jany.

Appendix
(U.)
10th Jany.

there will be then a need of four hundred and fifty thousand bushels of broken stones for the whole, produced from two thousand six hundred and forty-seven cubical fathoms of stones from the quarry, and from two thousand six hundred and forty seven days mining, which will produce constant work for sixty-three thousand six hundred and twenty-eight days labour to the breakers, which by estimating the months at twenty-four days, two thousand six hundred and forty seven days, or finally, which will furnish an assistance, however light it may be, to nine hundred indigent persons, during three consecutive months.

It has been said above, that one set of miners could furnish daily employment to twenty-four breakers, which would require nearly forty parties of bars men or miners for the nine hundred; so great a number, however, would be subject to inconveniences and even to accidents, being assembled in a single quarry in a circumscribed space, there could be scarcely employed to advantage and without danger more than about twenty at the most, which would furnish constant employment only to five hundred breakers at the outside; but it would be easy to do away with this difficulty by setting the miners to work five or six weeks in advance. I have not yet spoken of the cartage as well of stones not broken to the place of work, as of those along the roads, for the reason that I should believe that it is but too just that those who will receive the greatest profit from the proposed works will be the proprietors of lands in the Banlieue, and the inhabitants of parishes who daily frequent the markets of *Quebec*, by taxing the first with six days statute labour, by and with harness per acre in the front upon the Roads of the said Banlieue, or by purchasing themselves off at the rate of five shillings per day, and the second, namely the inhabitants, proprietors and occupiers of land of the Parishes of *Ste. Foi*, the two *Lorettes*, *Charlesburgh* and *Beauport*, as far as two leagues in depth, beginning from the exterior line of the Banlieue, to two days of the like statute work for each three acres in front upon the said lands; well understood that whoever shall not have lands of three acres may unite themselves to furnish the said statute work.

By recapitulating it will be seen that the expence of these preparations will amount as follows, viz. :—

1. Forty parties, each composed of two miners and one workman, the first at the rate of 2s. 6d. for workmanship, 1s. 6d. for the daily reparation of their bars and for powder, and the latter 2s. per day, £20, and three months of twenty four days each	£480 0 0
2. 450,000 bushels broken stones, at three half pence per bushel	2812 0 0
3. To which must be added for the waste and rough timber for the construction of sheds, the purchase of hammers, the necessary salaries and casualties	1000 0 0
	<hr/>
	£4292 0 0

Observe, that these timbers and carpenters' wood could be usefully employed upon the roads.

Which sum of £4300 divided by nine, the number of miles presumed, gives per mile £470, for the expence of preparations, but if the cartage be paid then it will be necessary to add one-third. The employment of these small stones for the preparation of the Roads in the course of the summer would make it amount in all per mile to £525 or £530. In this manner, with a sum of less

opération, de sorte qu'il sera donc besoin de 450,000 minots de pierres cassées pour le tout, produit de 2,647 toises cubes de pierres de la carrière et de 2,647 journées de jeux de mine, qui produiront de l'ouvrage constant pour 63,628 journées de travail aux casseurs, ou, en estimant les mois à 24 jours, 2,647 mois, où entia qui fourniront une assistance, quelque légère qu'elle soit, à 900 indigens pendant trois mois consécutifs.

Il a été dit ci-dessus, qu'un jeu de mines pouvait fournir journellement de l'emploi à 24 casseurs, ce qui requerrait près de 40 jeux de barres ou mines pour les 900; un aussi grand nombre cependant serait sujet à des inconvénients et même à des accidents, étant rassemblés sur une seule carrière et dans un petit espace de terrain. On ne peut guère en employer avantageusement et sans danger qu'une vingtaine tout au plus, ce qui ne fournirait de constant emploi qu'à 500 casseurs tout au plus; mais il serait aisé de lever cette difficulté en mettant les mineurs cinq ou six semaines d'avance à l'ouvrage.

Je n'ai pas encore parlé du charroyage tant des pierres non cassées au lieu du travail que de celles cassées le long des chemins, par la raison que je croirais qu'il n'est que trop juste que ceux qui tireront le plus grand profit des travaux qu'on se propose, savoir: les propriétaires de terres dans la banlieue et les habitans des paroisses qui fréquentent journellement le marché de *Quebec*, en taxant les premiers à six journées de corvée par et avec harnois par arpent de front sur les chemins de la dite banlieue ou en s'en rachetant moyennant 5 chelins par chaque jour, et les seconds, nommément les habitans propriétaires et occupans de terres dans les paroisses de *Sainte-Foi*, les deux *Lorettes*, *Charlesbourg* et *Beauport*, à deux lieues de profondeur, à partir de la ligne extérieure de la banlieue, à deux journées de pareille corvée par chaque trois arpens de front de dites terres. Bien entendu que ceux qui n'auront pas de terres de trois arpens, pourront se réunir pour fournir la dite corvée.

En récapitulant on verra que les frais de ces préparations se monteront comme suit, savoir :

1. Quarante jeux de barres de mine, chacun composé de deux mineurs et d'un manœuvre, les premiers à raison de 2s. 6d pour la main d'œuvre, 1s. 6d pour la réparation journalière de leurs barres et pour poudre; et le dernier 2s par jour, en tout par jeu 10s par jour chaque, pour les quarante £20 et pour les 3 mois de 24 jours chaque, ci	£480 0 0
2. 450,000 minots de pierres cassées à 3 sols par minot, ci	2,812 0 0
3. To which must be added for the croutes and rough timber, pour la construction des hangards, l'achat des marteaux, les salaires nécessaires et les casuels, ci,	1000 0 0
	<hr/>
	£4,292 0 0

Remarquez que ces croutes et ce bois de charpente seront utilement employés aux chemins.

Laquelle somme de £4,300 divisée par 9, nombre de milles présumés donne par mille £470 de frais de préparation, mais s'il fallait payer pour le charroyage, alors il serait nécessaire d'y ajouter un tiers. L'emploi de ce pierrotage pour la confection des chemins dans le cours de l'été, ferait monter le coût du mille à £525 ou £530.

De

Appendice
(U.)
10 Jany.

Appendix
(U.)
10th Jany.

less than £5000, there would be accomplished a double public object, in the complete reparation of the Roads of the Banlieue, and giving subsistence to nine hundred breakers, and then to miners composing at least one hundred other individuals. Behold, then, one thousand of the eleven or twelve hundred already provided for, and I have no doubt but that the Public Road Chest would employ another hundred, so that there would remain but few to provide for. In these calculations, founded upon experience, all has been carried to the highest, and I doubt not that this sum of £5000 might be reduced to £4500.

But to that end it would be necessary that the conducting of this work should be confided to a single person of skill and experience, for the inconveniences have been too often felt by the number of pretended directors, more or less tempted to employ their ideal theories in lieu of following the more certain route of experience. If, then, I were here permitted to offer my opinion, I would propose le *Sr. Larue* to be the only conductor of the work, leaving to him the choice of his Asssitants; he is a man of the most integral honesty, he is accustomed to undertake great jobs, he has a consummate practice, the love of his trade, and all the intelligence necessary; and I am sure that all the members of the Committee over whom I have the honor to preside will allow him in this respect the same justice that I do, and will say that all the works that *Mr. Larue* has conducted alone have always been better done, and at from 25 to 30 per cent. cheaper than those conducted by others or given to enterprize: but above all let there be no acting Commissioners, let their functions be limited to assuring and judging the accounts and to authorize the payments required. If there be a gratification allowed to the conductor of these works (which is just), let it not be by the day or the month or upon the footing of a per centage upon the expences, but a sum at once fixed to which may be added the perspective of an extraordinary gratification from the sum that shall be found to have been saved after the completion of the works at a fixed time.

Mr. Larue having already a public salary and less occupation in winter, it truly appears he will be content with a less gratification than any other.

Tuesday, 23d December, 1828.

PRESENT.—All the Members.

A. C. *Buchanan*, Esq. again called in: the following questions were submitted, and his answers taken down at the time.

Q. 1. What is the amount of the funds at the disposal of the Pauper Committee, and from what source derived?

A. At present the total amount of the Subscriptions have not been laid before the Committee. The Treasurer will be able to speak with more certainty upon this subject. The funds are derived from voluntary public contribution.

Q. What is the present price of brown bread, beef and mutton at *Quebec*?

A. Brown Bread, 1s. 2d. for a 6lb. loaf.

Beef, 2d. to 2½d. per lb.

Mutton, from 5s. to 7s. a carcase of 30 to 40 lbs.

Q. 3. You have stated that 1s. a day is sufficient to support a single man, and 1s. 6d. sufficient to support a man, wife and family of three children; would you state to the Committee the premises upon which these conclusions rest?

De cette manière avec une somme de moins de £5,000 on aurait rempli le double objet public de la réparation complète des chemins de la banlieue, et donné la subsistance d'abord à 900 casseurs et ensuite aux mineurs, composans au moins 100 autres individus. Voilà donc 1,000 sur les 11 à 1200 déjà pourvus et je n'ai pas de doute que la caisse des chemins n'en puisse employer encore une centaine, de sorte qu'il n'en restera plus guères à pourvoir. Dans ces calculs fondés sur l'expérience, tout a été porté au plus haut, et je ne doute nullement que cette somme de £5,000 pourrait se réduire à £4,500.

Mais pour cela il faudrait que la conduite de tout l'ouvrage fut confiée à une seule personne entendue et d'expérience, car on n'a que trop souvent éprouvé les inconvéniens du nombre de prétendus directeurs plus ou moins tentés d'essayer leurs idées théoriques, au lieu de suivre la marche plus sûre de l'expérience. Si donc il m'était permis d'offrir ici mon opinion, je proposerai le *Sieur Larue* pour être ce seul conducteur de l'ouvrage en lui laissant le choix de ses assistans. C'est un homme de la probité la plus intègre, il est accoutumé à conduire de grands chantiers, il a une pratique consommée, l'amour de son métier et toute l'intelligence nécessaire; et je suis sur que tous les Membres du Comité auquel j'ai l'honneur de présider lui rendront à cet égard la même justice que moi, et diront que tous les ouvrages que *M. Larue* a conduit seul ont toujours été mieux faits et à vingt-cinq ou trente par cent meilleur marché que ceux conduits par d'autres ou donnés à l'entreprise: mais surtout point de commissaires agissans; que leurs fonctions se bornent à assurer et auditer les comptes et à autoriser les payemens requis.

Si on alloue une gratification au conducteur ou aux conducteurs de ces ouvrages, (ce qui est juste,) que ce ne soit ni au jour, ni au mois, ou sur le pied d'un pourcentage sur les dépenses, mais une somme une fois fixée, à laquelle on pourra ajouter la perspective d'une gratification extraordinaire sur la somme qui se trouvera avoir été épargné après la completion des travaux à une époque fixée. *M. Larue* ayant déjà un salaire public et moins d'occupations dans l'hiver se contentera vraisemblablement d'une gratification moindre que tout autre.

A. As to the single man, I presume he would get his board and lodging for about a dollar a week; the man with the family would require three to four dollars per month for house rent, and as to food, two pounds of beef with herrings occasionally, and two pounds of bread with potatoes, oatmeal or peas should be an ample allowance.

I make no allowance for fuel, as I understand that it is got at the Coves for the mere carrying of it away.

Q. 4. Are the arrangements made by the Pauper Committee of a nature to admit of the employment of children in the breaking of stone, and is the operation performed under shed or other cover?

A. At present there are no arrangements for children being employed, it being confined to adults, and the work performed in the open air.

It is not thought it would be expedient to expose children to the inclemency of the weather at this season, and hopes are entertained by the Committee that some plan ere long will present itself under the auspices of the ladies of *Quebec*, in connection with the Institution, for giving employment to poor females and children, and for which purpose the Committee have voted twenty-five pounds to the Ladies.

Q. 5. Are the paupers generally sufficiently well clad to admit of their working in the open air?

A. Those that have come under my observation have

Appendice
(U.)
10 Jany.

Appendix
(U)
10th Jan'y.

have generally been better clad than you would expect people of that class to be, and where I have remarked a want of proper clothing, you could trace it to great indolence and intemperance.

Q. Is there not established a soup kitchen as subsidiary to the objects which the Committee have in view?

A. There is but one opinion on this point, the general disposition of the public, and the want of apparent knowledge of conducting an establishment of that kind with economy, will I fear oblige the Committee to abandon that part of their plan, and substitute in its stead an issue of the raw materials, such as beef, potatoes, bread, oatmeal and fish.

Louis Massue, Esquire again examined, answered to the Questions that were submitted this day to Mr. *Buchanan* :

1st. I understand that the amount will be near six hundred pounds, arising from public voluntary contribution.

4. The present arrangements will not admit of the employment of children in the breaking of stone, owing to their not being generally sufficiently clothed to work in the open air.

5. Paupers are not generally sufficiently well clothed to work in the open air in very cold or stormy days, especially as the breaking of stones does not give sufficient exercise to the body to withstand the cold.

8. There is; but I do not think it will answer the purpose for which it was intended.

Mr. *Antoine Parent*, examined, answered to the questions which were submitted this day.

1. The amount of the Funds at the disposal of the Committee is about six hundred pounds, derived from voluntary public contribution.

2. Brown Bread 1s. 2d. for a 6 lb. Loaf—Beef, 2d. to 2½d per lb.—Mutton from 5s. to 7s. a carcase of 30 to 40 lbs. weight.

3. There are about seventy men employed at this moment, but no children. They work in the open air.

4. That is the mischief, the greatest number is not sufficiently clad to work in the open air.

A letter was received from *Jeffery Hale*, Esquire, of which the following is a Copy :

Quebec, 26th December 1828.

Sir,

I have received your letter of the 17th instant, inclosing the Questions which you were requested by the Committee to whom is referred the Petition from the inhabitants of *Quebec*, relating to Roads, to transmit me; and feel it right, in the first place to state in apology for the tardiness with which I acknowledge its receipt, that the delay of my reply has been occasioned by an expectation of information from which satisfactory answers might be framed. I have not succeeded in procuring this, and can only therefore beg you to convey to the Committee an expression of my regret, that, during an interrupted residence in *Québec*, of only a few months out of the last seventeen years, I have not acquired a knowledge of the number or condition or resources of the Poor, sufficiently complete to enable me to answer these Queries, with safe or serviceable precision. The only certain information which I have it in my power to impart is that of those who are now receiving gratuitous relief in the shape of food from the *Quebec* Charitable Institution, for the suppression of street-begging, and the supply of work to the Poor. The number of male and female adults may be stated at 280 and children at 550: and the number of those employed in breaking stones for roads at 81.

I have the honor to be

Sir,

Your very Obedt. Hble. Servant,

JEFFERY HALE.

E. Glackemeyer Esqr.
&c. &c. &c.

Saturday, 10th January 1829.

PRESENT:—Messrs. *Neilson*, *Clouet* and *Lee*.

Mr. *Lee* in the Chair, in the absence of Mr. *Stuart*.

John Neilson, Esquire, a Member of your Committee, examined:—He states that he is personally acquainted with the truth of the allegations in the Petition which he hands in, delivered to him by the interested in the Roads therein mentioned. That the *Ste.-Claire* Road is a great thoroughfare, and that the Road north of the *Little River* leading to *Lorette* is frequently very bad, as also some part of the *Carouge* Road, although much has been done there, by the Military Government and the proprietors, to introduce the *Macadam* system.

REPORT.

Your Committee have taken the Petitions, referred and the Evidence into consideration, and are fully persuaded of the almost impassable state of these Roads in the Spring and Fall, the great burthen that their present imperfect state of repair throws upon the proprietors to make them fit for the travel, and that it would be of public utility that a sufficient example should be given of an ameliorated system of Road making

Samedi, 10 Janvier 1829.

PRESENS:—MM. *Neilson*, *Clouet* et M. *Lee*.

M. *Lee* au fauteuil, en l'absence de M. *Stuart*.

John Neilson, écuyer, membre de votre comité, examiné et dit: Qu'il a une connaissance personnelle de la vérité des allégués de la pétition qu'il tient à la main et qui lui a été donnée par les personnes intéressées dans le chemin y mentionné. Que le chemin de *Ste.-Claire* est bien passant, et que le chemin au nord de la *Petite-Rivière*, qui conduit à *Lorette* est ordinairement bien mauvais, aussi bien que quelques parties du chemin du *Carouge*, quoique le gouvernement militaire y ait fait beaucoup travailler et que conjointement avec les propriétaires il ait essayé d'y introduire le système de *Macadam*.

RAPPORT.

Votre Comité a pris en considération les pétitions qui lui ont été renvoyées et les témoignages qu'il a reçus, et est pleinement persuadé de l'état presque impraticable de ces chemins, dans l'automne et le printemps, et voit le pesant fardeau qu'on imposerait aux propriétaires en les obligeant d'améliorer leurs chemins dans l'état de détérioration où ils sont actuellement, et que l'utilité publique demanderait qu'en donnât

making in this Country, with a view to encourage its more general adoption.

On these grounds your Committee recommend that a Grant to aid the Proprietors in putting the Roads near the City into a state of repair, should be made along with any Grants for the purposes of Roads which may be made.

Ordered, That the Chairman do leave the Chair and report.

The whole nevertheless humbly submitted.

THOMAS LEE,
Chairman.

donnât un exemple suffisant d'amélioration pour encourager dans le pays l'adoption générale d'un système efficace.

D'après ces considérations votre comité recommande de faire une affectation de deniers pour aider les propriétaires à améliorer les chemins aux environs de la ville, lorsqu'on votera quelque somme d'argent pour les chemins.

Ordonné, Que le Président laisse le fauteuil et fasse rapport.

Le tout néanmoins est humblement soumis.

THOMAS LEE,
Président.

REPORT

OF THE COMMISSIONERS FOR

EXPLORING THE SAGUENAY.

To the Honorable the COMMONS of LOWER-CANADA in Provincial Parliament assembled :

THE undersigned Commissioners, appointed in pursuance of an Act of the Sixth Year of His present Majesty, chap. 34, intituled an "Act to appropriate a certain sum of money therein mentioned for exploring the tract of country to the north of the River and Gulf of St. Lawrence, commonly called the King's Posts, and the lands adjacent thereto," have the honor, in obedience to the provisions of the same, to lay before the two Houses of the Provincial Legislature the following Report of their Proceedings.

Soon after the appointment of the undersigned as such Commissioners, a plan for the effecting the survey of this tract of country was submitted to His Excellency the Earl of Dalhousie, Governor in Chief of this Province, which received his Excellency's approbation.

In conformity with this plan, three canoes of the requisite dimensions were hired from Mr. Lampson, the Lessee of the King's Posts, at a stated rate per month, and he engaged also to furnish the canoes men and provisions as well for them as for the whole party. This consisted of one of the undersigned Commissioners, of three Surveyors, viz. Joseph Bouchette, Jun., Esq. Deputy Surveyor General, Mr. Hamel and Mr. Proulx, sworn Surveyors, and of the following Gentlemen, who volunteered for the service:—B. P. Wagner, Esq. of Quebec, Mr. Baddeley, of the Royal Engineers. Mr. Nixon and Mr. Goldie of the 66th Regiment, Mr. Bowen and Mr. Davis.

On the 22d July last, Mr. Bouchette, accompanied by Lieutenant Goldie and Mr. Davis, who volunteered to act as his Assistants, proceeded from Quebec to Three Rivers, and in pursuance of the aforesaid plan, and of the instructions given according to it, ascended the River St. Maurice to the mouth of the River La-Tuque, a distance of fifty leagues, entered the river La-Tuque, and ascended it to its sources, and crossing over the head waters of the Batiscan, entered into the waters in their neighbourhood which empty themselves into Lake St. John, at a point about four leagues above the Post of Metabitchuan, the old Jesuit Establishment upon that Lake.

The remainder of the party left Quebec in a schooner on the sixth of August, arrived at Tadoussac on the ninth; the following day ascended the Saguenay with a party of canoe men, and a boat accompanying the two Canoes attached to this portion of the party, and arrived at Chicoutimi on the fourteenth day of August.

Mr. Proulx was here detached with a small canoe and two men, with instructions to explore the lands lying upon Ha-Ha Bay, and between it and Chicoutimi, and having completed this survey he was directed to cross the River Saguenay at Chicoutimi, and penetrate into the interior on the opposite side by the River des Terres Rompues, and ascertain as far as time and circumstances would permit the nature and extent of the cultivable ground, which there was reason to believe existed in that direction, and having done so, to return by the Saguenay to Tadoussac, obtaining as much information as he could, and to proceed from the latter place with all convenient diligence to Quebec.

This was performed by Mr. Proulx, and the result of his labours will be found in his Journal and Map which accompany this Report.

Of the two canoes thus left at the disposal of the party, one having on board Mr. Baddeley and Mr. Hamel, left Chicoutimi on the seventeenth day of August, and arriving at Lake St. John on the following twenty-second, immediately turned to the right and commenced, pursuant to instructions, the exploring of that portion of the Lake which lies between the mouth of the Koushpigan and that of the Assuapmousoin.

The second canoe, with a small canoe in attendance, upon arriving at Lake St. John on the 22d day of August, proceeded forthwith to the Post of Metabitchuan in the expectation of there meeting and receiving intelligence of the party which had left Three Rivers on the twenty-third of July.

Upon their arrival at Metabitchuan, however, no intelligence was received of that party, but they were soon relieved from their anxiety upon this score, as they were about leaving the Post of Metabitchuan, by the arrival of the Three Rivers party on the 23rd of August. These gentlemen had been delayed by the height of waters occasioned by almost continued rains, and had further to encounter the delays incident to passing through a route altogether new and not without its dangers.

Mr. Bouchette was here directed, after surveying the Lake between the mouth of the Koushpigan and the mouth of the Assuapmousoin on the south-western side of Lake St. John, to explore the country lying on the south-west side of Lake Tsinogomi and Tsinogomishish, and upon

the waters generally of the communication between Chicoutimi and Lake St. John in that direction, and having arrived at Chicoutimi to proceed from that place to Tadoussac by the Saguenay, obtaining such information as was in his power in descending the river to Tadoussac, and to proceed with all convenient diligence from the latter place to Quebec.

The result of the labours of Mr. Bouchette will be seen in the plan accompanying the present Report.

He states that want of provisions and the advanced state of the season prevented him from exploring the country to the south-west of Lake Tsinogomi and Lake Tsinogomishish.

His Journal has not yet been received.

After leaving Metabitchuan on the twenty-fourth of August, that portion of the party which last arrived at Lake St. John from Chicoutimi, rejoined the Canoe having on board Mr. Baddeley and Mr. Hamel at the mouth of the river Koucuatim, which these gentlemen had reached in the progress of their exploring survey, and here Mr. Nixon took the place of Mr. Baddeley in this canoe, and Mr. Hamel was instructed, after completing his survey upon Lake St. John, to explore the Peninsula lying between Lake Tsinogomi and Tsinogomishish on the one side, and the grand outlet to Lake St. John on the other, on his way down to Chicoutimi, and upon arriving at the latter place, to proceed to Tadoussac, obtaining any additional information in his power, and to proceed from Tadoussac with all convenient diligence to Quebec.

The Plan and Journal of Mr. Hamel accompanies this Report.

The undersigned Commissioners beg leave to lay before your Honorable House, a Plan by Mr. Nixon, containing a delineation of the River Assuapmousoin to its source, as also of the waters connecting the remote Post of Shippeshay with the Saguenay, opposite Chicoutimi the sources of the information from which Mr. Nixon has prepared Plans of these portions of the country hitherto known only to Indian Traders, or to Savages, are entitled to the fullest credit. They beg also to subjoin to the Report, certain extracts from Mr. Nixon's Journal, which have relation to the immediate objects of the Mission.

There remaining no further necessity for the presence of a Commissioner, the gentleman who accompanied the party in this capacity, left them at the mouth of the River Koucuatim, and returned with a light canoe to Tadoussac, and thence proceeded to Quebec.

The remaining gentlemen of the party, to wit: Mr. Wagner, Mr. Baddeley, Mr. Goldie and Mr. Bowen, continued their route round the Lake, examining its shores and banks, to the Post of Metabitchuan, and thence to Chicoutimi: Mr. Wagner here joined Mr. Proulx's canoe, with a view of continuing the enquiries respecting the quality of the timber, and the facilities or difficulties of its exportation, to which his attention had been more particularly turned, and of which his long experience enabled him so well to judge.

Mr. Baddeley, Mr. Bowen and Mr. Goldie, having proceeded from Chicoutimi, to St. Paul's Bay, the latter of these gentlemen returned to Quebec.

Mr. Baddeley accompanied by Mr. Bowen, remained at St. Paul's Bay, to continue the mineralogical inquiries to which his attention had in the progress of the expedition been more particularly devoted.

The undersigned Commissioners beg leave to lay before your Honorable House, the highly valuable proofs of his zeal and industry in the Geognostical survey.

For themselves, they beg leave to say that the results of this exploring survey have been more satisfactory than they could have anticipated, and although much yet remains undone, from the smallness of the means at their disposal, yet, that enough appears from the accompanying plans and documents, to demonstrate that this tract of territory could afford habitation and subsistence to vast numbers of men, and thereby add greatly to the military strength of these Provinces, and be conducive to the general interests of the Empire, whereof we have the honor and happiness to form a part.

All which is nevertheless most humbly submitted.

Quebec, 26th December 1828.

(Signed) ANDREW STUART,
DAVID STUART.

GEOGNOSTICAL SECTION through a part of the SAGUENAY COUNTRY;

Including a few Topographical and Agricultural Observations;

By Lieut. F. H. BADDELEY, Royal Engineers.

THE materials for forming this geognostical essay were procured while attached to an Exploring Party, which left Quebec in the summer of 1828, on a journey through the Saguenay Country, to collect information as to its capabilities for settlement.

Upon a perusal, it will be found to require much indulgence, partly on account of the inexperience and limited information of the writer, on the subject in general, and partly owing to the short period allotted for observation. This indulgence, it is hoped, will be readily granted by the reader, when he is informed, that it has been written without assistance, and by a person, as he will soon ascertain, totally unpractised in bookmaking.

As this is considered by the writer merely as a sort of appendix to the more important and comprehensive reports of Ensign Nixon, 66th Regt., Messrs. Bouchette, Hamel and Davis, he has omitted as superfluous, most of the distances and courses, &c., retaining only the latitudes of those places where he had reason to think his observations were correctly made for determining them, and referring the reader for the relative position of places, to the accompanying plan.

Without further preamble, he will now proceed with the description of the rocks which were met with in the route, in the order they came under observation, trusting that it may afford the experienced geologist the means of fixing their geological position,—an attempt he has seldom presumed to make himself, and where made, it is with the diffidence and hesitation compatible with his want of experience and knowledge on the subject.

The rocks on the Island of Orleans, wherever we have seen them, are composed of alternating strata of clay slate and grey wacke. At Patrick's Hole, which was reached about 10 A. M. of the 6th of August, these rocks appear alternating with each other, in very distinct strata, the dip of which, when not vertical, is either to the east or west, at an angle of from 60° to 85° . Here the grey wacke predominates, and rising beyond the thin strata of clay slate, owing to the greater resistance the former opposes to the action of weathering, forms on the shore natural low stone walls, parallel to each other. It is probable that a good building material may be procured at this place.

As the term wacke has been applied very loosely to rocks of very different characters, we will here describe the mineral contents, &c. of the one to which we have applied this name:—

Its prevailing colour in the neighbourhood of Quebec, of which it is a characteristic rock, is greenish grey. It possesses a mechanical and granular structure, being composed of rounded grains of quartz, thickly distributed through a base of indurated clay; these are sometimes large enough to render the term pudding stone applicable to it. Small white crystals of felspar and small angular pieces of clay slate are occasionally seen in it. It is almost always characterised by a great degree of solidity and infriability, and could never be mistaken for one of the latest sandstones. The grey wacke of Cape Rouge is an excellent building stone, and has been much employed in the scarps of the new fortifications at Quebec. Although the predominating rock, grey wacke, is comparatively rare among the *debris* or shingle, on the shore, owing to its power of resisting the disintegrating action of the atmosphere, while clay slate, for a contrary reason, covers the shore in angular fragments.

These two rocks continue without interruption, as far to the westward as the Telegraph, from the neighbourhood of which Messrs. Nixon and Bowen brought specimens of the latter, much discolored by the red oxide of iron, and containing small rounded nuclei or nests of magnetic iron. These gentlemen report the soil over which they passed, to be sandy and much neglected, a description that will apply to most of that we saw on this island. A few yards beyond high water mark, the rocks suddenly emerge, and form a bank about fifty feet high, running parallel to the river. Having walked about a mile to the eastward of Patrick's Hole, along the shore, no important geological change was observed.

At river La Fleur, off which, adverse winds obliged us to anchor, the same rocks were observed; we here learnt, however, that limestone is found in the adjoining parishes of St. François, to the eastward, and St. Laurent to the westward, at the latter of which places lime is burnt for the supply of the island. We here made a small excursion inland, for about two miles, on a N. W. course, without observing any thing more remarkable than an isolated ridge of grey wacke, suddenly cropping out and dipping to the S. E.* at an angle of from 50° to 60° . Upon our return, we took the Sun's Meridian Altitude, and found the latitude to be $46^{\circ} 53' 40''$.

* This is the prevailing dip on the northern shore of the St. Lawrence; it is frequently reversed on the southern.

Leaving river La Fleur, we came to anchor again off La Grosse Isle, on which we passed the night. This island we were informed belongs to the Ursulines, and is about three quarters of a league long, by about 550 feet wide, but being almost entirely a bare rock, one farm only, of about 90 acres, is under culture upon it. Having reached this place very late at night, and quitting it very early in the morning, our geognostical observations were necessarily very scanty. The rock we believe is grey wacke. It is covered with a grey lichen, and bears the appearance externally of a solidity it does not possess, at least in the places examined, as it readily broke under the hammer, into tabular pieces, with oxidated surfaces. The obscurity of the weather and time at the period of observation, together with the absence of the specimens collected, which were left behind, will not allow us to describe with confidence. The outline of the island is craggy and irregular.

Passing to the southward of the island, in descending the St. Lawrence, several islands, viz: Marguerite, Cochon, &c. &c., some of them mere isolated rocks, were observed on the left hand, and which have the appearance of being also of grey wacke.

We lay off the mouth of the Saguenay on the morning of the 9th of August, at a conjectured distance of from 9 to 12 miles. The highest point of land on the western side of the entrance into the Saguenay at this distance, subtended an angle of $1^{\circ} 12' 44''$. No approximate height could be expected from calculating with such imperfect data; they were employed, however, and by one calculation, in which 12 miles was assumed as the base, the height was found to be 919 feet; by another, in which the base was $10\frac{1}{2}$ miles, 805 feet were obtained: the former agrees nearly with the result of an observation less liable to prove erroneous which was taken subsequently at the post of Tadousac.

Upon landing at this place (Tadousac) we proceeded immediately to examine a few of the geognostical characters of the country. The only place of residence here is erected on a bank of sandy alluvium, elevated about 50 feet above the river, and forming a flat terrace at the base of the mountain which suddenly emerges at a short distance behind. The rock of which these mountains are composed is granite, either of a red or a grey color, depending upon that of the felspar. It contains very little mica, but sufficient to make it a genuine granite, a rock as will be seen of rare occurrence among those about to be described. It crops out in cuboidal masses, and possesses sometimes the probably fallacious appearance of being stratified. At the foot of this granite, a small stream drains a tolerably deep section of the before mentioned alluvium, which is crowded with water washed fragments of primary rocks. On the shore were seen small deposits of magnetic iron. Here bases were measured, and the requisite angles taken for determining the height of the most elevated land on either side the mouth of the Saguenay, which was found to be 912 feet on the western side, and 588 feet on that to the eastward. These results are approximations only, as the observations from whence they are derived, were not taken with the utmost precision.

Leaving the harbor of Tadousac and proceeding to the eastward round the clayey precipice of Pointe-aux-Vaches, which is the most southern portion of the alluvial plateau before described, we reached a small bay, at the bottom of which the Moulin Baude rivulet enters the St. Lawrence, at the distance of about three miles from the Post. It is here that the bed of white marble is situated, which has already excited much attention. We visited this place late in the evening, and could only spare ten minutes to its examination. It lays in close contact with sienitic gneiss, a rock composed of white felspar, gray quartz and black hornblende; the latter of which minerals it is, that by its arrangement in parallel seams and layers, makes the term gneiss more applicable to it than granite; these seams and layers indeed are sometimes so thick, and always so continuous, as to merit the name of alternating "hornblende schists" of Maculloch, if an aggregate, in other places of the neighbourhood, of so intrusive a character, and on that account agreeing better with one of his "overlying" rocks, can be admitted among that class. The fracture of the rock is effected more readily in the direction of these seams than elsewhere, and the surface thus exposed has a black pseudo metallic brilliancy, resembling some micaceous schists, for which at the first sight it might be mistaken, but the easy fusibility before the blow-pipe, into a black shining globule, of that mineral which sometimes resembles black mica, is a sufficient distinction.

But to return to the marble: At its junction with the gneiss, it is much entangled with it, and it is stained in many places of a greenish color. Conformable to the accompanying strata it dips to the S. W. at a high angle, and crops out in yellowish white water-washed masses on the shore, at the bottom of a precipitous cliff, where alone we saw it. None of the specimens examined could be considered of excellent quality, as they were much stained and bastardised by what was supposed to be either hornblende or epidote; besides they are of a laminar, and not of that granular, structure which bestows on the white Italian marbles their greatest value, by causing them to work freely in any direction. We had no leisure to ascertain the quantity in which this marble occurs, but this

this deficiency of information is fully supplied by the following anonymous communication, which there is reason to think generally correct :—

“TADOUSAC, Sept. 14, 1826.

“We walked this morning along the beach to Moulin Baude, about four miles below this Post, to see the bed of marble there. Pointe Rouge, forming the south-east promontory of the harbour of Tadousac, is chiefly composed of a very hard-grained red granite. The granite alternates for a few paces with, and is then followed as far as Pointe-aux-Vaches, by several varieties of primitive rocks, principally gneiss, &c. until they are there met by a bed of clay, apparently one hundred and fifty feet thick above the level of the river, and cut down nearly perpendicularly by the beating of the waters for a distance of about two hundred yards, which is the whole breadth of the bed. This clay is of the same character as that at Pointe aux-Bouleaux. (*) The primitive rocks of the same description which were found laying against the clay, almost immediately succeed it, and the action of the water discloses to the passenger that fantastic and beautiful intermixture of layers of different colours, so common between Malbay and the Saguenay. The shore is then indented, and a bed of gneiss, stretching out into the St. Lawrence, has been cut off by the water and forms a little island; opposite to it is a bay, and in the dry sand thrown up, the wild oats grow so profusely that they almost appear to be sown by man. A larger bay a little farther on is what is called Moulin Baude; it is about one hundred and fifty or two hundred yards deep; and at its bottom is the bed of marble. This bed is nearly vertical, rising within view to the top of the bank, which is here scantily wooded and about one hundred and fifty feet high, ascending at an angle of about 70°. The direction of the bed is nearly N. (NW ?); the breadth along its whole exposure varies from six to eight or nine feet, disappearing under ground without diminution. In some parts it is interlaced by the adjacent strata, (gneiss), but it is generally pure and solid. A small stream falling down the bank has intersected it, and disengaged a large block or two which have been exposed to the water and frost; they do not appear to have been much affected by this exposure; indeed they have resisted it exceedingly well. Supplies of many thousand tons might be obtained at a trifling expense. As a statuary marble it will be very valuable, for it is generally speaking of a pure white colour, although to the depth of a few inches from the adjacent strata it is often tinged green, and in a few parts of the mass there is a red tinge (†). This muddy bay is dry at low water, affords a protected harbour, and admits at high water vessels drawing six or eight feet. A vessel of the former draught might indeed touch the bed itself with its keel. The entrance from the St. Lawrence is not difficult. It is not more than forty-eight hours' sail from Quebec with a light fair wind. Large sound blocks of the marble of fifteen or twenty feet in length by four or five feet wide, might I think be obtained: these would be fine ornaments as columns, &c. to buildings. As the marble does not take a fine polish, it would not be so much in request for chimney-pieces, &c. It well deserves to be worked. The discovery of marble at this place is not a very new one. Charlevoix, who anchored here in 1720, in the Chameau, a French King's-ship, landed at the small stream at the bottom of the bay, and it is probably in allusion to this very bed, which he could not have failed to see, that he says, in speaking of the place, ‘tout ce pays est plein de marble.’ (‡) The marble in question was long ago known to the North West Company.”

It is a curious fact, that this marble was bought for gypsum; the purchaser, as we are informed, on the most respectable authority, ground it up for cement, and found it to answer very well. If so, he must first have expelled its carbonic acid by means of a powerful heat, for there is no doubt whatever of its being a very pure carbonate of lime, and its association with granite and gneiss places it among the primary marbles. That gypsum has ever been found among primary rocks, so as to indicate its primary origin, is doubted by some geologists. It bears a strong resemblance to alabaster, and probably on that account was mistaken for gypsum.

On the subject of this mistake the following extract of a letter, addressed by us to the Editor of the Quebec Mercury, is given;—

“Two kinds of alabaster only are known,—that formed on the floors of caverns by calcareous depositions from the roof, called stalagmites, and some varieties of gypsum or sulphate of lime. The former it cannot be, and one of the latter it is not for the following reasons:—All the varieties of gypsum except the anhydrous may be scratched by the nail, which this cannot be. None of them effervesce in acid, which this not only does but forms a clear solution in. The gypsums fall to powder with heat—the mineral in question burns to lime. It is therefore a carbonate and not a sulphate of lime.

(*) “The clay at Pointe aux Bouleaux and Pointe aux Vaches, the two outermost tongues of the banks of the Saguenay at its mouth, occurs in immense beds, of which that at the first place is about thirty or forty feet in thickness above ground, and that at the last place probably two hundred feet: both together extending in superficies apparently ten or twelve miles. It is extremely fine in its texture, contains a good deal of lime and some iron. It has the property of crumbling when water is thrown upon it, as unslaked lime does, and might by being merely spread out and exposed to the falls of rain, answer as an excellent manure for a soil having an excess of acid, such as that of swamps, &c.”
Samuel Neilson, Esq.

(†) As a statuary marble it is totally unfit; whiteness alone is not sufficient; it should also possess granular structure. Those marbles are best for that purpose which, like the Carrara marble, resemble the finest white sugar.

(‡) A remarkable instance of exaggeration if he alluded only to the bed in question; but it is probable that, deceived by the whitened surfaces of almost all the rocks in this place, he mistook that for marble which was only the rock it was associated with.

“The translucency of this marble is remarkable, which joined to its colour (in favourable specimens a dazzling white, sometimes slightly shaded with pink) renders it to all external appearance well calculated for ornamental purposes, particularly for the manufacture of vases, lamps, &c.. If its abundance will allow of its being employed as a building stone, the ease with which it may be worked, its solidity and whiteness, would render it at once an economical, a durable and a handsome building material. Some have indulged the hope that it might be made an article of export; but admitting that it is in sufficient abundance, which we doubt, white marbles of a far superior character are found in many parts of Scotland, a full account of which may be found in some papers communicated by Dr. Macculloch to the Geological Society of London, and entered in the 2nd and 3rd Vols. of its Transactions. We here insert an extract from one of these papers which will be found to afford some interesting information respecting the Grecian, Italian and Scottish marbles.

“Few substances in the catalogue of those with which economical mineralogy is concerned, have excited more interest than statuary marble, from its rarity, its beauty and its indispensable necessity in the art of sculpture. It has at different times formed an object of anxious research in this country, and premiums have been held out for it by the Society of Arts. It has consequently been found in various parts of Scotland, as well as in Ireland, but no native specimens have yet been introduced into the arts. As the causes which have impeded their introduction have hitherto been such as may be considered adventitious, being of a commercial nature, and not founded on any experience of their physical defects, it has been hoped that they might by perseverance and time be removed, and that the statuary marbles of this country might at some future day supersede the necessity of importing this article. It will not therefore be a misplaced enquiry to examine the several properties of those marbles which have at different times held a place in the estimation of artists, and to compare them with our own specimens, more particularly with that of Sky, now under review, the most abundant and certainly the most specious of all those which have yet been found in Britain. The enquiry is the more necessary, as the several circumstances in which white marbles differ, do not appear to have been generally attended to, and as an undue value seems in some instances to have been fixed on our own in popular estimation, although not in that of sculptors themselves.

“The value of this substance in those distant periods when the arts of Greece flourished, occasioned an industrious research after a material in which the sublime ideas of its artists could be embodied. . . . Accordingly many quarries have been wrought in ancient times, of which little has descended to us but the names, and a few of the works which were executed from their produce. These marbles were of various qualities, and examples of them are still to be seen in ancient statues, although with regard to many of them a species of evidence often little better than conjectural, has guided sculptors and mineralogists in their attempts to determine the quarries from whence they were derived. Among these, the quarries of Paros afforded a marble, (the often quoted lychnites of Pliny) in which it is asserted that the celebrated Venus was wrought, as well as some others to which we have not access. But there are many specimens of sculpture in the British Museum which seem to have been executed in this stone, or in one at least of analogous character.

“Of the nature of the Parian Marble we are enabled to speak positively, since some blocks of it have been quarried during the last few years, and are now to be found in the shops of the sculptors of this city. The grain of this marble is large and glistening, while at the same time its texture is loose and soft, and its colour of a yellowish and watery white. It possesses considerable translucency on the edges, a quality which, however desirable in statuary marble when of a fine grain, from the softness which it gives to the outline, only increases the disagreeable aspect of the Parian by the angular reflections of light which takes place on the pellucid edge and surface from the innumerable faces of the small plates. It is certain indeed that the Greek sculptors abandoned the marble of Paros after the quarries of Luna and Carrara were discovered, the superior fineness and whiteness of these marbles, which at present cause them to excel any with the places of which we are now acquainted, rendering them also at least equal to the best of those ancient ones of which the native places are now unknown.

“Independently of the injurious effects which the large grain of Parian marble produces on the transparent surface of sculptured works, and the false lights which it thus introduces into the contour, it interferes materially with the requisite correctness of drawing in the lesser works, and is thus inapplicable to the details of small sculptures in relief. It is, nevertheless, susceptible of a good polish, a quality, however, of little value in the eyes of the statuary, and one which in this variety only serves to render the defects of its texture more apparent. . . . It is also said to have been deficient in size, since it was so intersected by fissures as to be incapable of yielding blocks of more than five feet in length. I may add that, in the present state of the public habits with regard to white marbles, there is no demand for modern works executed in Parian marble. Its celebrity is consigned to the metaphors of poets.

“The quarries of Luna produce a compact white marble, susceptible of a high polish, and capable of being wrought with the most minute accuracy. Hence it is preferable for the finer operations of bas-relief either to the Parian, of which the aspect interferes with the delicacy of finish and of surface required in these works, or to the Pentelic, which was subject to accidents from veins of mica and of serpentine

Appendix

14th Jan'y.

tine; or to that of Carrara, in which dark veins are of frequent occurrence. It was accordingly preferred by the ancients, and among many other works, the Apollo (Belvidere) is said to have been executed in Luna marble. We have no other knowledge of the marbles of Hymettus and of Arabia than their names.

“Of all the marbles employed in the works of the ancients, and of which many specimens have descended to our days, that of Carrara is almost the only one which is at present held in estimation, or is now accessible to modern sculptors. This marble is of a very fine grain and compact texture; it is also susceptible of a high polish when required, and is consequently applicable to every species of sculpture, except when, as is too often the case, dark veins intrude and spoil the beauty of the work. Notwithstanding the general apparent uniformity of its texture, it offers different varieties of aspect. It is always of a fine granular fracture, yet this fracture is sometimes combined with a slight tendency to the flat splintery, in which case the stone is harder and more translucent than when it is purely granular. When merely granular, it is sometimes dry and crumbly, precisely as if it had been exposed to a high heat; it then loses much of its transparency, and is called woolly by sculptors. Its transparency is various, and in some cases nearly equal to that of alabaster, (granular gypsum.)

“The last of the ancient marbles which I shall describe, is that of Pentelicus of which the quarries are probably still to be found in the vicinity of Athens, although they have not been investigated by modern travellers. This marble is of a loose texture, and moderate sized grain, coarser than that of Carrara but finer than that of Paros; in colour it is exceedingly imperfect, being tinged with grey, brown and yellow, and mottled with transparent parts, which give it the appearance of having been stained with oil. But its most formidable defect is its laminated structure, and the quantity of mica with which it is contaminated; to this we are to attribute the corrosion and almost entire ruin of so many of the specimens, the action of the weather dissolving those parts of the stone where the mica is most abundant, and cutting deep fissures through many parts of the work. It is peculiarly unfortunate, that the two most admirable specimens which are calculated to excite in the minds of artists a mixed feeling of wonder and despair, the horse's head, and the Theseus, should be those which have suffered most. Had they been fortunately executed in the more uniform and durable stone of Carrara, these works might still have been preserved to us in all their original perfection of drawing and surface. Even the hammer of the Turk would have rebounded with little injury from the marbles of this texture, while the micaceous stone of Pentelicus, splitting in the direction of its laminae, has permitted the complete mutilation of many valuable sculptures.

“We have no geological information with regard to the relation of these stones. The great resemblance of the Pentelic to that of Glen Tilt, in aspect and composition, renders it probable, that like this, it lies in mica slate, forming beds parallel to, and interstratified with, that rock: that the others have similar relations to the primary rocks, we should have concluded on general geological principles, had we not already seen that the white marble of Sky, which has given rise to this discussion, belongs to the secondary strata.

“We have now to examine the white marbles which have been discovered in our own islands, for the purpose of comparing their relative properties, and the value which they are likely to possess in sculpture. I am unfortunately unable to give any account of those found in Ireland, neither having seen their places, nor being possessed of any specimens.

“That which has been found at Cape Wrath, in Scotland, is of a grain much larger than even the Parian, and is consequently useless for the purpose of sculpture; and this indeed is by much the most common character of the Scottish specimens. Those of Blairgowrie, of Glenavon and of Balahulish, are all equally characterized by this large sparry texture, and are all equally unfit for sculpture, however applicable to the purposes of architecture. The marble of Iona has been long since exhausted, and consequently requires no particular notice: however, valuable from the purity of its colour and compactness of its texture, yet the uncertainty of its splintery fracture before the chisel, (that tool without which no spirited work was ever finished) combined with its great hardness, would probably have rendered it useless in the arts even if it were still to be procured.

“In a paper on Assynt, I have already described the white marble of that district; it is of a very close texture, and although it contains no earth but lime, is of unusual specific gravity and hardness. It is incapable of being polished, a circumstance, it is true, of no consequence in Statuary, since the polish only gives a false light to the surface, and is not admitted of in modern sculpture; but it labours under the concomitant disadvantage of want of transparency, producing nearly the same dead effect and dry outline as is seen in a plaster cast, a fault in itself sufficient to prevent it from even being adopted as a good material in the arts: its extreme hardness also renders it very expensive to work.

“The marble of Sky, the more immediate object of this discussion, is of a pure white colour, and appears sufficiently extensive and continuous to be capable of yielding large blocks. The purity of its colour is seldom contaminated, its fracture is granular and splintery, and its texture fine, less fine than that of Iona, but more so than that of Assynt; its compactness, hardness and gravity are greater than those of the marble of Carrara, which it in fact resembles in little else than colour. It is apparently well fitted for all the purposes of sculpture, as it can be wrought in any direction, and has sufficient transparen-

cy, while at the same time it assumes even a better polish than is required for statuary. With these good qualities, however, is combined an uncertainty arising from its unequal hardness. While some parts of the stone are nearly as easy to work as that of Carrara, many other specimens turn out so hard as to add a charge of near 50 per cent to the cost of working: this appears to arise from the influence of the syenitic and trap veins which traverse it, as I have before mentioned, but which, however, produce no change in its chemical composition, nor any other effect than that of induration. This addition of price to the current charge of working is sufficient in the harder specimens to counterbalance in a great degree the superior cheapness of the material, and the advantages derived from lower freight, duty and insurance. Such are the difficulties which oppose the introduction of the most perfect marble which has yet been found in Britain, difficulties which, slight as they are, ought, together with the prevalence of established habits, and of a commercial nature, to check the extravagant hopes which have been entertained in this country, of superseding by its own produce, the importation of foreign statuary marble. But it will not be rendering justice to the marble of Sky if I do not add, that it possesses a property not found in that of Carrara, and one of considerable importance, at least in small sculptures. This is, that compactness of texture by which it resists the bruise which so often takes place in marble, at the point where the chisel stops, an effect known to sculptors, by the technical term *stunning*, and of which the result is a disagreeable opaque white mark, generally in the very place where the deepest shade is wanted.”

It is hoped that the foregoing digression will be excused, as it affords information not generally before the public, by which the means of estimating the white marbles of Canada are readily obtained; as well those whose localities are already ascertained as others that will eventually be so.

The rocks on both sides of the Saguenay, as high up as La Boule, (a mountain which stretches out into the river from the north eastern side, in a remarkable manner) are probably granitic, and form a continuation of the same series met with in the more immediate neighbourhood of Tadousac. They have sometimes the appearance of being stratified and of dipping to the S. E. at an angle which is nearly vertical. These rocks rise with almost perpendicular scarps to a considerable height, and their summits are barren, and in some places totally bare, in which latter case, the whitened surface of the rock, owing to the incipient decomposition of its felspar, resembles that of some limestones; they are often also of a smoked or blackened appearance: nearly à *fleur d'eau*, a red ferruginous band characterises these rocks: Their outline is rounded and mamillary, a character they lose as the river is ascended.

It was in the La Boule that we observed for the first time those singular masses of trap, sometimes under the form of veins or dykes, sometimes under the form of interfering and unconformable beds or strata, but most frequently as isolated patches both rounded and angular, the whole so deserving the attention of the geologist. As these trap appearances are characteristic of almost all the rocks we saw, it is necessary to describe the mineral contents of that aggregate to which we have applied this term, particularly as without such a description it is almost unintelligible, owing to the loose and indefinite manner in which it has been used. This term, wherever it may appear in this essay, is meant to imply any rock in which hornblende predominates, without any regard or reference to those theoretical notions which it has been often used to convey. It here more particularly means an aggregate composed of black crystalline hornblende, small grey crystals (or rather scales composed of an assemblage of crystals) of felspar and a little unelastic mica or talc: in short, a substance similar to what has been before described as associated with the white marble at Moulin Baude, but essentially differing from it in the manner in which it occurs. It much resembles also a compound that is found on the Montreal Mountain, to which a volcanic origin has been ascribed. The granite with the trap here associated was of a greyish color. In it we in one place observed nodules of magnetic iron, exhibiting a very iridescent surface resembling some ores of copper, for one of which it was at first mistaken. This ore is very strongly magnetic, apparently as much so as malleable iron. Contrary to the hornblende compound in the gneiss at Moulin Baude, it is not easy to procure a fragment of this trap shewing the two rocks in contact, as upon being struck they separate immediately and it is then perceived that the trap has externally that smooth even surface which a mould bestows on the substance cast in it, shewing generally no appearance of entanglement or conglomeration at the places of contact. On the weathered surface of the trap the felspar is often brown and prominent. This trap is often very magnetic.

The granite of La Boule, for such we call the rock though apparently stratified, is composed of grey quartz, reddish felspar and small points of brown mica. A little above the line of junction of the river and the rock and on its south-eastern side, a thick dyke of trap traverses it nearly horizontally and at right angles to the stratification. It appears to rise out of the water at the western extremity of La Boule, and, with a slight inclination, ascends towards the eastern.

We will now describe more particularly the appearances of these dykes, veins, &c.: they rise at all angles through the accompanying strata; they are frequently parallel to each other, and even to the planes of stratification; they generally either terminate suddenly in the rock at one or both extremities; in the latter case they answer the description of contemporaneous veins; these extremities are either pointed or forked.

The accompanying plate, (fig. 1.) will afford a better idea of what it is intended to describe.

Isolated quarter moonshaped pieces and patches, varying from the size of the hand to that of the body are more common. (see plate, fig. 2.)

It is worthy of observation that the small quarter-crescent shaped pieces occur together by twos and threes in a parallel order, and that the trap, of whatever shape, generally has angular corners, and terminations. Channels and hollows are sometimes seen in the face of the rock, which are owing to the removal of the trap formerly occupying these vacancies.

It is not, however, merely as veins, beds, and distinct concretions that this trap is observed; it occurs, particularly in the higher parts of the Saguenay, in mountain masses bearing little appearance of stratification; sometimes in masses in which its stratification will scarcely admit of a doubt, and sometimes it is rendered so evident by alternating with other stratified rocks, that no uncertainty can exist on the subject.

The La Boule, by projecting so much into the river, occasions, when the tide is falling, a strong current and counter eddy. Not being able to surmount this current, the boat dropped into the eddy, and running along the base of the mountain on its southeastern side, turned into a small cove, where the height of La Boule was found by an observation to exceed two hundred feet, but by how much could not be ascertained in consequence of the contracted nature of the ground we were upon. The rocks on the northeastern side of the Saguenay, in the bay below La Boule, appeared to have a stratification directed east and west, with a high dip to the north, but this geological feature here was, as it was found to be in many places elsewhere, often of a doubtful character, owing to the contradictory appearances which some of the supposed planes of stratification assumed, and which to reconcile would have demanded more time in their investigation than could be afforded. In recording the stratification of those places where these contradictory appearances were observed, care has been taken to give the predominating bearing only. The evidence which arises from consulting alternating strata is, in the Saguenay, often inadmissible, as the trap sometimes assumes an appearance of stratification which is probably fallacious.

While seated on an accumulation of boulders covering the shore of this bay, rocks of a remarkable sterility were seen on the opposite side of the river, associated with others of comparative fertility, the former possessing an appearance of stratification in which the latter were deficient. The known infertility and constant stratification of gneiss, renders it probable that it is here associated with trap, a rock generally unstratified and of a more fertile character. A question here occurs, Is gneiss more infertile than granite? and if so, why is it the case? the only difference between them being in the arrangement of the same minerals of which they are both composed. Is it that the foliated character of the gneiss renders that rock more easily disintegrated and reduced to a state of sand, by which the soil of a country where it predominates is impoverished? The fresh water procured in this bay was strongly impregnated by iron.

Availing ourselves of the tide to pass La Boule, we ascended the Saguenay. In Passepierre Bay, the rocks were observed in the northeastern side of the river to have a bearing north and south, and at Baie St. Etienne a little higher up on the south-western side, they were seen, contrary to their general habits, to retire from the shore and to leave a few acres of clay alluvium, on which wild grass is cut annually. Between Pointe St. Etienne and L'Ance aux Foins (another more extensive alluvial deposit higher up) the rocks are particularly worthy of observation for the numerous dykes and contorted veins of trap by which they are traversed. These rocks are stratified, and dip at a high angle to the south. In some places here the trap dykes, which exactly resemble those we have described in their mineral contents, structure, and generally intrusive or interfering character, have the appearance of alternating in strata with syenite. The opposite shore of the river offers the same appearances, but not having landed there nothing more can be said of them.

In the precipitous cliffs on the north-eastern shore of the Saguenay, in the direction of St. Marguerite's river, these dykes are very conspicuous, and from their blackness bear some resemblance to upright beds of coal. It is noticed here, as it is elsewhere, that where trap most abounds there is always a more dense growth of timber, and this character is sufficiently striking in many places on the shores of the river, as the syenite with which the trap is usually associated, affords often, by its extreme barrenness, a strong contrast. On one of the islands of St. Louis was observed a rock composed of quartz, felspar, and mica, a genuine granite in composition, but in evidently stratified masses, the bearing of which was north and south, with a high dip to the westward.

On ascending the river at Point Comfort Bay, the rocks were of syenite, in which a little quartz was perceptible; externally they had a greenish colour, owing it is believed to the presence of epidote which very wet weather had rendered more distinct and lively than usual. These rocks possessed a very distinct appearance of stratification to the north and north-east, and dipped to the east and south-east; other contradictory planes were however seen. Many of the rocks in this bay possess a porous exterior.

At nine o'clock of the 12th August the temperature in the shade was found to be 71° Far. and in salt or very brackish water 65°. With the conjectured distance of five hundred and fifty feet as a base, and nearly 45°

as an elevation, a height of five hundred and thirty feet was obtained for a mountain on the north-eastern shore. On the opposite or south-western side the summit of a mountain, in a supposed base of two miles, subtended an angle with the horizon of 7° 27' 54", which gives thirteen hundred and sixty feet for its perpendicular height, a result as we think much too considerable, although the land appears to rise from the mouth of the Saguenay as high up as Baie la Trinité, where it is conceived to be highest. The precipitous and indented shores of this river afford few convenient situations for measuring a base upon, in order to insure, by a calculation from true data, the accuracy of this sort of information.

Having landed a little above la Baie des Cascades, a syenite composed of reddish felspar and a black hornblende was found, and a short distance beyond, the same rock characterized by those remarkable imbedded pieces of trap occurs; they have here either the form of a snake or of angular fragments of an irregular figure; contorted dykes of the same substance were also seen. About this place the river was measured by Mr. Proulx, one of the Surveyors, and found to be about fifty chains. The trap in this instance contained no mica; in other respects it was exactly similar to that before described. One of the specimens of syenite procured here, appeared to be principally composed of light brownish compact felspar; its fracture was flatly conchoidal in the large, but uneven and scaly in the small, with a few small glimmering points, arising from the reflection of light from the polished surfaces of minute crystals of common felspar; however, upon submitting it to the blowpipe, it was found to be infusible, but the heat it had been exposed to disclosed its really granular structure, which induced us to suppose it to be an exceedingly intimate aggregate of quartz, felspar, and hornblende, the leading mineral in excess. This has been mentioned merely to hint at the difficulty which sometimes attends an examination into the mineral constituents of rocks.

Having again put on shore in a very convenient bay, opposite Baie la Trinité, syenitic rocks were met with, or mixtures of felspar, hornblende, and very rarely quartz; the felspar was white, grey, red, yellow and greenish; the hornblende always black. These rocks, as elsewhere on the shores of the Saguenay, were in some places much stained by iron, and Mr. Proulx collected a specimen on the north side of the river, in latitude, as he ascertained by observation, 48° 24', which was not only much discoloured, but the rock from whence it was taken affected the needle to the amount of 1° 3". We could perceive magnetism very distinctly in the specimen in question, but it is a very common character here, and was found to exist in many of the specimens brought home, particularly in the trap and some of the syenites abounding in hornblende, to the presence of which mineral it could generally be traced. The rocks had here a dip to the south at a high angle. The fall of the tide was ascertained to be twenty-one feet.

We left the bay about one o'clock, p. m. to avail ourselves of the tide, and coasted along the north-eastern shore all night. In the morning of the 13th of August we landed in a bay on the left shore, called Ance aux Femmes, directly opposite to Haffa Bay. Here we found a rock containing more quartz than usual, and passing into a syenitic granite, the felspar in which is flesh-coloured. This rock was observed to have the same porous exterior as before-mentioned, nor was this character confined to the surface, as a specimen brought from the place exhibits this character of porosity both internally and externally in so perfect a manner as to afford an excellent sample of a millstone; its quantity cannot be stated, but the writer believes it to be abundant. It should be generally known that good millstones are often found among syenitic rocks.

Several rocks in front of the bottom of this bay which by the rising of the tide are converted into islets, were examined. The first met with was syenitic gneiss, having a bearing nearly north and south, and dipping to the west at a high but variable angle. It sometimes loses its character of gneiss and maintains those only of syenite; the usual imbedded masses of trap are present under all the appearances before described, and one additional. Some of the snake-shaped imbedded pieces (See Plate, fig. 3.) were broken through the middle apparently, and the fragments separated from each other, like the well-known shifts in veins, but no corresponding fracture in the rock was seen.

Almost all the rocks examined in this place were of the same description, differing only in their dip which was sometimes reversed. It was here, however, that we observed for the first time regular and conformable strata of the same aggregate as that found imbedded in the syenite, and to which, from its interfering character in other places, we are unable to offer any other name than the general one of trap, using this term here as elsewhere, without the implication of any theory to designate certain aggregates in which hornblende predominates. Water-worn fragments of compact shell limestone were here seen, the color of which was grey and fracture flatly conchoidal and sharp-edged.

Leaving these rocks, others to the southeastward in the same bay were visited; they bore a great general resemblance to the first in all their features; the trap was, however, seen here to interfere with the syenite in broad dykes, and the former was occasionally traversed by veins of felspar; these veins were observed in some instances to form a connecting link between the syenite above and the same rock below, so that it is not possible to say if the vein has been filled from above or beneath; (See plate, fig. 4.) These veins were frequently observed in other places.

The next rock to the last-mentioned was composed of flesh-coloured felspar,

Appendix
(V.)
14th Jany.

light brown quartz, and black points of mica, and in which no imbedded trap was seen. To this, trap, apparently stratified succeeded, and then a syenitic rock holding imbedded large patches of trap, (as represented in the plate, fig. 5.)

Further to the south, a specimen of trap was procured from a wide dyke, the hornblende in which had a remarkably shining semi-metallic lustre; it contains no mica, and is not magnetic. Still further, an immense fragment of rock having fallen, one of its surfaces was observed to be covered with broad laminae of a beautiful felspar of a very pearly lustre, a light green mineral, supposed to be the green carbonate of copper, was associated with it in small quantity. The latitude of Ance-aux-Femmes was made 48° 22' 26."

As observations for latitude were necessary to check our courses they were taken at noon whenever the weather would permit; at the commencement of the journey it was extremely unfavourable. Being the only individual possessed of a sextant among those who visited Lake St. John, our observations have the best claim to be considered accurate.

The predominating rock between Ance-aux-Femmes and Cap à l'Est, about six miles higher up the river, appears to be (for it was not touched) the same trap, but syenite was also seen as usual with imbedded patches of the former. Having crossed the Saguenay opposite to Cap à l'Est, we entered a small bay to which was given the name of Bear's Cove: here granite, gneiss and syenite were seen, but no trap. Coasting up the river on the same side, it was seen frequently again under all the forms before-mentioned. Sometimes the trap, rising in black channeled precipices entirely bare of vegetation, exhibited appearances in which a very distant resemblance to architectural regularity might be traced. Sometimes a part of the rock having broken away from below, black escutcheon-shaped masses were left projecting and frightfully pendant over the fragile canoe paddling beneath near the base of the rock: the latter appearance, however, is more characteristic of the opposite shore. No columnar structure was seen, but in many other places in the Saguenay as well as here, the rocks had a tendency to break into prismatic or cuboidal fragments. We believe the trap is in this place associated with syenitic gneiss, with which or syenite it appears sometimes to alternate. On ascending still further, and within a few miles of Chicoutimi, a whitish looking rock was observed, apparently in horizontal strata; passing at some distance nothing more was ascertained respecting it. To this succeeds an alluvial deposit of a rich marly clay, which continues on the right bank as far as the Post. On the left bank of the river the rocks continue without interruption, and without any geological change, as was ascertained subsequently.

Before we leave the Saguenay a few more observations upon its rock formations, which were entered in our journal while descending the river on our way home, will be here introduced, together with some additional information which Mr. Proulx's politeness has placed at our disposal.

La Baie des Foins, situated on the left bank of the Saguenay, a little below the Post, is a natural meadow of several acres extent, laying at the base of the mountains which here retire for a short distance from the river. The soil is a clayey alluvium, and, as the name of the place indicates, wild hay grows upon it which is annually cut. At Long Point, a little below Rocky Point, specimens of syenite and syenitic gneiss were procured. Imbedded trap was again seen here.

Having encamped a little above Cap à l'Est, on the western side of the river, and somewhere near our former encampment at Bear's Cove, the rocks were again found to be syenitic, and traversed occasionally by veins of red felspar and quartz; sometimes the two were intermixed. Large dykes of trap occur here, and rounded water-worn fragments of limestone. In a bay, distinguished by four semi-isolated mountains, three of which are of a conical form and situated on the left shore a few miles below Cap à l'Est, the rocks were observed to be the same, and the patches of trap very distinct. The surface of the syenite was yellowish brown, and slightly porous, as if baked, and this appearance was observed in many places, both in the Saguenay and afterwards in the St. Lawrence. The three semi-isolated mountains above-mentioned are the more remarkable, because in general both sides of the Saguenay are characterized by a continuous chain of mountains whose longitudinal outline is only slightly undulated, while their precipitous sides are always towards the river, to which the chain is usually parallel.*

* It will not fail to be observed, that this slightly undulated outline, which is characteristic of both sides of the Saguenay, is at variance with the general direction of the mountain chains in this country, and particularly with those in its neighbourhood. There is great reason to believe that at least one wide valley, running nearly parallel to the St. Lawrence, exists in rear of St. Paul's and Malbay. On ascending the Saguenay we saw no sections of vallies, nor any considerable breaks in its lofty and precipitous banks, until the bay was reached. Upon referring to the accompanying map it will be perceived that this bay has a direction about parallel to the St. Lawrence; it is probably, therefore, the outlet on the Saguenay to the valley alluded to. The general course of the mountain chains in this country is, as has been before observed, north-east and south-west, that is, the same as the vallies of the St. Lawrence. The valley of the Saguenay is from the north of west, and nearly at right angles to it; it is therefore a cross valley. That the rocks on either side of this valley were once united there appears very little reason to doubt, but water must have had very little to do with separating them, at least in the first instance. From the slightly undulated character of the sectional outline of this valley, it would seem to have been once filled by a continuous chain which has been severed longitudinally by some violent catastrophe, the nature of which can only be surmised. It is probable, however, that an earthquake has effected this disjunction; the nature of the rocks, the recorded proofs of the violence of earthquakes on the northern shore in former times, and above all their frequent occurrence at the present day, though no longer of an alarming character, are circumstances which favour this opinion. A great wave would not have acted longitudinally but transversely, or in the direction of least resistance. The magnificent streams which enter this noble river had little effect in forming it, and the operation of tides and maritime currents, though more effectual, can have been only partial and secondary.

Between this place and Le Petit Saguenay, on the opposite shore, such a geognostical uniformity prevails as to render the collecting of specimens superfluous; indeed the same remark is so far applicable to the whole of the country we traversed, that a dozen well chosen fragments of rock, with the necessary observations upon them, would convey to the geologist almost as much information as he would acquire by going over the same ground himself. Let it not for an instant be conceived, that our observations are believed to be the necessary ones; the writer knows them to be altogether insufficient to convey any thing more than a very general idea of the geognosy of the country.

In a small stream, a short distance below Le Petit Saguenay, the rocks were observed to be intersected in a remarkable manner by veins of quartz and felspar, sometimes alone, at others united together forming an aggregate. Frequently these veins were divided exactly in the centre by a seam of trap; they have the same bearing generally as the stratified rock they traverse, namely north-east and south west, but they are often much contorted without losing ultimately this character. The trap is seen alternating in thick strata also. The predominating rock here is syenitic gneiss. A deception arises sometimes from a source which is not suspected when attempting to distinguish, as is generally easy, by the external surface of rocks, between the trap and syenite; the syenitic rocks have usually a whitened exterior, but sometimes, though rarely, it is as black as that of the trap, in which case a fragment must be detached before the rock can be known. This sort of deception was experienced between this place and Le Petit Saguenay, and it should intimate the propriety of never naming a rock in general, until at least its fractured surface has been seen; decided trap was however often met with in this interval, either in stratified masses, or intruding among other rocks.

In passing between the St. Louis Islands and the south shore, we were obliged to take refuge from the breakers, which threatened to swamp our canoe, by climbing up a projecting mass of greyish granite, on which the night was passed. The mica of this granite was replaced as usual by hornblende, it was therefore syenitic; the former mineral being in all the rocks of the Saguenay country we have seen, very rare and almost entirely confined to some specimens of the trap, in which it occurs in small quantity and minute scales, and this indeed appears to be rather talc than mica, as it is unelastic. We only remember to have seen very distinct scales of mica twice; in both cases they were isolated hexagonal crystals, and one of them occurred in a vein of graphic granite composed of beautiful large flesh-coloured crystals of felspar and large rounded or rather oval shaped nodules of quartz, traversing the last-mentioned rock. Our observations of the geognosy of the Saguenay river terminated here.

From an inspection of Mr. Proulx's notes, and an examination of the accompanying specimens, the following additional information has been obtained.

The rocks in the neighbourhood of Ha-Ha Bay are counterparts of those already described in the Saguenay, and the same were seen at Point au Fort, Cap à l'Ouest, Petite Pointe, Cap St. Charles, L'Ance François and Baie St. Jean. They are rocks in which felspar and hornblende are always present, in a greater or less proportion, forming syenites and syenitic traps, according as the former or the latter mineral predominates. No instance of the hornblende predominating was seen, except in the black aggregate that has been described, where it not only predominates but in which the felspar is very subordinate. In this aggregate the felspar is always grey and scaly, and bears a great resemblance to quartz, for which it might easily be mistaken, but its fusibility before the blow pipe into a white blebby glass is a sufficient distinction. As might be supposed, when in association with syenite, the trap usually exhibits a striking contrast as to colour, to which the weathered surface of the former rock answers as a sort of foil. No difficulty would be felt in assigning to this rock a place among the "hornblende schists" of McCulloch, were it not for its unstratified appearance in some places, and particularly for its intrusive and interfering character in others; the latter indeed seems to point out the "overlying class" of the same author as its proper position. When quartz enters, as it does rarely among the constituents of syenite, either syenitic granite or syenitic gneiss is produced: it is the latter, when by the arrangement of its hornblende in parallel seams, that peculiar foliated structure which characterises gneiss is the result.

Neither from Mr. Proulx's nor our own observations are we able to state with certainty the prevailing dip of the strata on the shores of the Saguenay, but it lies between the east and the west round by the south. We have before alluded to the difficulty of always determining the stratification, a difficulty which is common to many stratified rocks, but particularly to the masses under consideration which, from their felspar-those structure and association with trap dykes, often sufficiently continuous to resemble strata, present flat even surfaces, and other superficial and linear appearances, by which the hasty or inexperienced examiner may be frequently deceived.

Water-worn pieces of limestone, among the earliest of the secondary class, were noticed in Ha-Ha Bay, and a singular trough-shaped mass, composed almost entirely of a grey carbonate of lime, appears to have been taken from a trap rock situated in the first cove on entering the bay from the north; the length of the trough is about two inches and breadth three quarters of an inch; the sides are indurated, and of a dark brown ferruginous colour, bearing the aspect of having been in contact with trap. This trough is half filled with calcareous spar, the exterior of which is covered with a smooth yellowish silky film, as if water-washed. Professor Cleaveland has the following passage, in his second volume of his System of Mineralogy and Geology, 2nd edit.:—"Real lava

lava does without doubt sometimes resemble basalt, green stone and other trap rocks, but it may be considered as a universal fact that although calcareous spar is often found in green stone and basalt, it is never imbedded in those lavas which have actually flowed on the surface of the earth.*

Several soils collected by Mr. Proulx in different parts of the Saguenay, principally in the neighbourhood of Ha-Ha Bay, having been examined, were found to be as is shewn by the following table:—

No. 1.	Ha-Ha Bay	} A mixture of clay sand and lime, (marly clay)	} Excellent.
2.	Ditto		
3.	Ditto	ditto	ditto.
4.	Ditto	ditto (without lime)	Good.
5.	Ditto	ditto ditto	ditto.
6.	Near Riviere l'Islet	} ditto and lime	} Excellent.
7.	Between Rivers Chicoutimi & Dumoulin		
8.	Ditto	ditto	ditto.
9.	Ditto	ditto, with vegetable matter	ditto.
10.	Ditto	ditto, sand, clay and iron	Bad.
11.	Place not mentioned.	} ditto	} Light but tolerably good.
12.	Ditto		
13.	Ditto	} ditto, sand, iron, a little clay and vegetable matter	} Indifferent.
14.	Ditto		
15.	Ditto	ditto ditto	ditto.
16.	Ditto	ditto ditto	ditto.
17.	Ditto	ditto ditto	ditto.

The rocks at the Post of Chicoutimi, like most of those we have described, are syenitic; the chapel stands upon a syenitic granite, passing sometimes into syenitic gneiss; this rock is traversed in a remarkable manner by veins of felspar and trap. The trap, however, is generally seen in broad bands forking into the adjoining rock, which is either syenitic granite, or syenite having its felspar greatly in excess. Weather acts more readily upon the trap than upon the granite, and in consequence many of the veins or dykes are partially empty near the surface. The same was observed in other places. To this cause are probably owing the numerous bays in the Saguenay, as trap rocks were more generally found where they occur, while syenitic granite and syenitic gneiss occupy its capes and headlands.† A few imbedded nodules of magnetic iron were observed in the rock. Sometimes the quartz is absent when it loses the term of granite, and maintains that alone of syenite, in which the felspar is red and the hornblende greenish black. There is on the shore below the residence at the Post a curiously contorted vein of trap which descends the rocky bank, (as represented in plate, fig. 6.)

Detached pieces of felspar of a very crystalline aspect and of a dark purplish grey colour were frequently seen upon the shore; the faces of the laminae possessed a highly polished vitreous and striated surface. They have much resemblance to a felspar rock subsequently found to occupy a large proportion of the shore of Lake St. John, as also to specimens of felspar brought from the coast of Labrador, where they were observed to be associated with columnar and amorphous basalt. One fragment of a siliceous limestone was also found. It appears that about twenty years ago lime was made at the Post, and the site of the kiln is shewn where specimens of a half-burnt limestone appeared. It is a very good compact shell limestone of a grey colour. Some of the burnt pieces were white, had a splintery fracture, and resembled chert or hornstone. If there be a natural deposit of limestone in the neighbourhood it could neither be heard of nor found; that in question might have been brought for the occasion from Malbay or St. Paul's Bay where limestone abounds.

It has been before mentioned, that a considerable alluvial deposit occurs here. It consists of fine marly clay, which in wet weather is so considerably plastic and adhesive, as to be traversed with difficulty on foot, when covered by no vegetable deposit. Its essential characters are the following: colour, light french gray—structure, earthy, compact—fracture uneven. In water it falls to pieces rapidly and in acid it effervesces slightly. The undermost beds which are not exposed to moisture, assume the appearance of rocks stratified horizontally, and it is probably this formation which we observed, when within a few miles of the Post.

Upon crossing the Saguenay, opposite the Post, syenite and a rock composed of an intimate mixture of hornblende and felspar, the former in excess, were seen; the latter contained a few scales of mica and points of quartz: it was compact, magnetic, and more resembled basalt than any rock we had previously seen. The syenite was composed of flesh coloured felspar and green hornblende. A few imbedded patches of trap were also seen. From the falls of Chicoutimi, a light coloured syenite was brought, composed of light red felspar and black shining crystals of

hornblende. Mr. Nixon returned from a stroll up the river, on its right bank, with specimens of trap, traversed by veins of felspar, and a gneiss, in which hornblende was more abundant than either the quartz or the felspar, and to which the term hornblende gneiss may be affixed: an aggregate of this description was rarely met with. The mean of two observations for latitude, gave 48. 24'. 9".

Leaving the Post of Chicoutimi, and its polite and gentlemanly resident, Mr. Andrews, on our route to lake St. John, a portage of nearly a league in length, was made to the Chicoutimi river, the same syenitic rocks as those seen near the chapel, which are covered with a thin layer of the marly clay of the neighbourhood, surmounted by the usual vegetable deposit; a good soil, but too near the rock to be very productive. The same soil, to appearance, and always accompanied by the same rock, at a greater or less depth, continues as far as the portage de l'Enfant, after which it becomes sandy and indifferent: some good positions for settlement may be expected in this interval. Although the rocks in many places are known to be near the surface, they were seldom seen, the land on either side the Chicoutimi river thus far being very little elevated. At the portage de l'Islet, however, they are much exposed to view, and consist of syenite, in which the felspar is as before flesh coloured, and very predominating. This rock has very little soil upon it, and the whole of the portage is a barren waste. Before reaching the portage de l'Islet, the banks begin to assume a more elevated character and they continue to increase in height as far as lake Kenwagomi, on the southern shores of which lake, and that of Kenwagomichiche, they have attained an extreme height of from three hundred to four hundred feet. The next portage to that of l'Islet is still more rocky, and on that account has obtained the name of portage des Roches: On a rounded mass of syenite in the middle of this portage, an observation for latitude was taken, which gave 48. 14. 31.

At the north eastern extremity of the portage des Roches, lake Kenwagomi commences. No opportunity occurred of examining any of the rocks upon this lake until we had advanced about two miles beyond Sandy Point, when a projecting point of rock afforded more specimens of syenite. A short distance beyond, a fine grained aggregate was met with, composed of gray quartz and gray felspar, slightly freckled by hornblende, of a greenish colour, the felspar being distinguished from the quartz, by the brilliant reflection of light from the polished faces of its minute crystals. Further on rocks were met with in which felspar of a flesh-red, dark grey and greenish colour was in great excess; hornblende was also present, but in a very subordinate degree, chiefly in patches. The felspar was here in beautiful distinct crystals projecting from the rock, under its usual rhomboidal form; these were easily detached, and their laminar structure readily exhibited by the slightest percussion. Magnetic iron was found in some parts of the rock, which strongly affected the compass: much of the hornblende was also magnetic. In one of the rocks here, a mineral was found, which possessed the following characters: colour, a dark greenish brown—opaque—structure indistinctly laminar before the application of heat; occasionally the laminar structure is more distinct, and it then resembles mica.—When pounded in the mortar, small foursided scales are seen, having a semi-metallic lustre. In its aggregated state, its lustre is glimmering and semi-metallic. It is slightly magnetic before the application of heat; when exposed to that of a candle, it expands, opens like a fan and exfoliates, after which it is easily pressed by the fingers into small flexible but unelastic scales of a bright golden colour. The same thing occurred, by submitting it to the exterior flame of the blowpipe, in which it also decrepitates and is difficult to be retained in the forceps. One of the golden coloured scales in the interior flame of the blowpipe fused into a shining black and highly magnetic globule. With borax it forms a transparent glass coloured by iron. The color subsides on cooling.

The rocks in this place have little appearance of stratification; judging from the little which does appear, the bearing is north and south, and dip nearly vertical. The latitude was here found to be 48° - 16' 22" and the approximate variation of the compass was also taken at the same time, viz: sixteen and a half degrees. Being very near the rocks at the time of the observation it was suspected that their magnetic character might affect it, but upon reversing the sights of the instrument upon the same right line, the slightest difference only was observed, which might have arisen from a small degree of inaccuracy in the compass.

Beyond this place a mass of rocks of a very blackened and singular aspect was observed on the northern shore of the lake; and crossing over from the southern, a distance of about two thousand feet, we found these rocks to be almost entirely composed of yellow brown and greenish coloured felspar. In the solid scarp of one of these rocks, resembling that of a martello tower, it was easy, on a near approach, to perceive, notwithstanding its weathered surface, the pearly but subdued lustre of the felspar, and the fibrous aspect which the edges of the laminae presented at the surface of the rock. The stratification of this rock in this place was not very apparent, but a little higher up on the same side it was observed to have a bearing to the north and dip at a high angle to the west.

The imbedded pieces of trap so common on the Saguenay, are again seen here. The land on both sides of Lake Kenwagomi is elevated, but much more on the southern than on the northern. Its course, upwards from Portage des Roches, is at first to the southward of west, but its main course is to the northward of that point. Its length, numerous rocky capes and bays, and its precipitous shores, cause it to resemble the Saguenay, but its mountains are neither so high nor so barren.

About four miles above Sandy Point, a name which has been given to

* By the latter part of this sentence, which is somewhat obscure, we understand those lavas which have been positively ascertained to have flowed, because many geologists assume an igneous origin for all or most of the trap rocks.

† To this cause also may be attributed the unusual fact, that almost the narrowest portion of the Saguenay is at its entrance, where the rocks are more siliceous and less amphibolic.

Appendix
(V.)
14th Juny

to a low bank of sandy alluvium, stretching out into the lake from the northern shore, there is a dry green bay which appears to enter deep into the north shore and to be free from mountains and rocky precipices for some distance. It is the only place we observed between Portage de l'Enfant and that of Kenwangomi, where land fit for farming might be expected to occur in any considerable quantity.

The portage Kenwangomi is generally supposed to separate the waters flowing into Lake St. John (and subsequently into the Saguenay through Lake Kenwangomishish, La Rivière des Aulnets and La Belle Rivière) from those which pass more directly through the Chicoutimi into the Saguenay; but it is said that this is not, strictly speaking, the case, because a small stream falls from Lake Kenwangomishish into Lake Kenwangomi. Although unusual, this is not a physical impossibility, without indeed, as has been asserted, the waters of the latter are higher than those of the former. This portage is about eighteen hundred paces in length, the first half of which is sandy and the other a mixture of sand and clay. On the latter ash was observed for the first time, and it was frequently seen with elm and other woods, which indicate a good soil (though never in abundance) in our descent from this place to Lake St. John.

Shortly after embarking on Lake Kenwangomishish we touched at an angle of a rocky islet and found an aggregate composed of felspar, quartz and hornblende, a syenitic granite. The coast of this lake is generally to the north of west. Its shores are low, interspersed with elm and ash and fit for cultivation, particularly the northern side. On Lake Kenwangomi the prevailing timber was white birch, and neither ash nor elm was seen. Although the immediate shore of Lake Kenwangomishish on its southern side is low, on retiring back from it the lands become ultimately as elevated as those on the northern shore of Lake Kenwangomi, of which they are probably a continuation.

The river of Alders, the outlet from Lake Kenwangomishish, flows through an alluvium composed of layers and mixtures of sand and clay. The course of this river is exceedingly tortuous, a circumstance often characteristic of these alluvial deposits, and being narrow it is much obstructed by fallen trees, and the entanglement and intertwining of the branches of alder, with which both banks are covered, rendering portages sometimes necessary where there is plenty of water and little current. The portage des Aulnets, however, is occasioned by the river tumbling over the rocks, which re-appear in this place. They are composed of flesh-coloured felspar, green hornblende, and a few scales of black mica, forming a beautiful syenite. The felspar on the surface of the rock was, as is usual, observed to be in an incipient state of decomposition. The soil examined in crossing the portages in descending the river of Alders was tolerably good. It consists, beneath the usual layer of vegetable matter which characterizes these woodlands, of clay and sand mixed, or in alternate layers, the latter frequently in excess on the surface. In some places the land is hilly, but few rocks are seen. At the north-eastern extremity of the Portage of Alders, a natural section affording the opportunity, a more particular examination of the soil was made and registered as follows:—1st. Decayed and decaying vegetation; 2nd. A layer of sand one foot six inches in thickness; 3rd. Clay from ten to twenty feet in depth, the whole resting on a rock composed almost entirely of grey felspar, in which were observed patches of hornblende. At this place the river of Alders forks in with La Belle Rivière, passing over a picturesque fall occasioned by the felspathic rock before mentioned; the former river is only indeed a branch of the latter, which is observed to widen immediately after this junction from an average breadth of twenty to that of fifty feet.

On descending La Belle Rivière, the land was found to improve considerably in appearance, the same alluvial soil continued, but forming flat and low shores, unaccompanied by hills. Indicative of this improvement, ash, elm and poplar became more common. While on this subject, it may be observed, that although the presence of timber of a certain description may indicate good soil, its absence does not necessarily imply the reverse; for on this excursion, we met with several places in which the soil was decidedly good, without finding it, and wherever found, it was always in subordinate quantity. On the marly shore of the Saguenay, in the neighbourhood of Chicoutimi, we saw none, and yet a better soil could scarcely be met with. To produce a growth of fine timber, something more is requisite than good soil; the land must be opened to warmth, light and air; it must be disencumbered of that heavy mass of decayed and decaying vegetation, with which our forest lands are loaded. If apparently under all these disadvantages, some lands produce good timber, it is only an exception, and no sufficient argument against what has been advanced, particularly as such exceptions are probably owing to one or more of the favouring circumstances being in operation. It should also be remembered, that good soils have a tendency of themselves, by encouraging a rank and dense vegetation of weeds and underwood, to check the growth of fine timber. To judge of the quality of land by the growth of timber upon it merely, is to be guided by the effect, and to lose sight entirely of the cause; a practice, the inconvenience of which, if generally adopted, would soon be felt in every department of science.

As the shores of lake St. John are approached, the soil gradually becomes sandy, until at Kouispigan, as the mouth of La Belle Rivière is called, it becomes one sheet of fine bright sand.

Leaving Kouispigan, we proceeded on lake St. John, to the northward, in the direction of La Grande Décharge, and touching at two small rocky islets on our way, collected specimens of a rock composed almost exclusively of a highly crystalline felspar, of a dark bluish grey

colour, but in which a little hornblende was present. This rock was observed forming black isolated masses, both on the shore and in the water, on this side of the lake. Having encamped on one of these, at the entrance of La Grande Décharge, we had more leisure to consult the characters of this rock, which are as follows: it possesses no sign of stratification; its surface is remarkably black, particularly when moistened, and often almost semi-metallic; it is frequently flat and tabular; many portions of it attract the needle, although the eye can detect no magnetic iron; its structure is compactly crystalline, in some cases pass into compact, but there are always to be seen some shining, often splendid faces of the laminae, of which it is composed, and they are frequently striated. In many respects it bears a great resemblance to Labrador felspar, but its iridescence is wanting; it is occasionally traversed by veins of red felspar, and rarely small portions of its surface were covered with a brownish red powder, probably an oxide of iron. One of the veins traversing this rock, exhibited a curious phenomenon; the substance of the vein itself, composed of felspar and hornblende, was not magnetic—the sides of the vein composed of the felspathic rock we have described, were strongly so; and Mr. Hamel further ascertained, that the south side of the vein attracted the north pole of the compass, and the north side the south pole. To remove the chances of error, the experiment was repeatedly tried, with success, both by applying the compass to the sides of the vein, and detached fragments to the compass. The vein was about three inches thick, and had a N. W. bearing. When the compass was laid on the centre of the vein, the local attraction was observed in one place, to be equal to ninety degrees; in some parts of the same rock it was still more, even to a complete reversal of the needle: At a subsequent period, the place was again visited by Mr. Hamel in company with Mr. Nixon, and these observations confirmed. Upon our return home, the specimens which had been examined, were re-examined, and found to possess a feeble magnetism, but no polarity. The islet upon which the foregoing observations were made, forms one of a cluster at the mouth of la Grande Décharge, to which the name of Dalhousie was given; none of them appear to be more than twenty feet above the water.

On leaving this place a northerly course was again taken until, reaching a fine sandy shore, we landed for the purpose of measuring a base preparatory to a survey of the lake about to be commenced by Mr. Hamel. These sandy shores are very characteristic of the lake, and add very much in our opinion to its beauty, though nothing to its fertility. Where no rock appears, fine shining yellow sand is substituted, and where they appear together, the former rises through the latter assuming that isolated appearance which has been mentioned. This sandy girdle is not confined to the margin of the lake, but passes a short distance into the interior, bestowing upon the land forming the borders of the lake, an infertility of aspect which vanishes upon passing these sandy limits. The greater portion of this sand is yellowish white, but a dark reddish brown variety was often seen deposited upon it in continuous ridges at different but parallel levels. On examining this sand it was found to be composed principally of magnetic iron and precious garnet. It is an analagous compound to the emery of commerce, and if reduced to a greater degree of fineness, might be employed for the same purposes. The rocks here were found to be the same as at the last place; they have externally often the aspect of old lead, and when broken the faces of the laminae possess a lustre which is at the same time almost splendid and semi-metallic. Upon commencing operations, Mr. Hamel found between twenty and thirty degrees of local attraction, but in one spot, free from it, he determined the magnetic variation to be $16^{\circ} . 40' W.$ On these rocks *tripe de roche* is found in some abundance; it is of a deep copper brown colour, and agrees well with the drawings of it to be seen in the appendix to Franklin's quarto edition of his first Journey to the Arctic Sea. When we first saw them they were mistaken for representations of some of the native copper ores which he met with among the copper mountains. To the taste it has the flavour of mushroom, and although meagre it is not unpalatable. The sandy beach here is enclosed by two rocky points, forming a bay about fifteen or sixteen hundred feet wide, the water in which shoals very gradually. A sand bank about fifteen feet high encloses this bay on the land side, beyond which there is a sandy swamp; and this is descriptive of much of the lake on this side.

On leaving this bay and proceeding again to the north, we doubled the rocky point, which was found to be composed of the same felspar before met with, as was also another we rounded soon after, situated at the entrance of an inlet up which we ascended mistaking it for the Koucouachime river, and where we found a very good soil consisting of a yellowish loam, about one foot six in thickness, resting on plastic clay. As the term loam, like that of marl, is often used without conveying any very distinct idea of what is meant, either to the person who uses it or to the person to whom it is addressed, we will here explain, that wherever it has been used in this report, it has relations to mixtures of clay and sand (the former in excess) generally coloured by iron, but containing no lime; in short an earth of which bricks are made. To avoid misconception, however, the term has not been often introduced. Mere deposits of clay are often called marls, by which an erroneous idea of a country may be conveyed; it should not be forgotten that the presence of carbonate of lime is necessary to constitute a marl or marly clay, which is known by its effervescence in acid; such a soil is of the best quality, whereas clays are proportionably infertile as they approach to a state of purity.

Returning to the mouth of the inlet, our northerly course was resumed, and several hundred yards of a coast, composed of rocky points, jutting out into the lake, and enclosing fine sandy beaches between them, were examined. This, as has been before said, is the character of the lake here. The remarkable uniformity and simplicity of the rocks, hitherto

met with, are worthy of notice. We could only make the following observations which differ from what has been described—viz: kidneys of the rock, coated with the brownish red powder we have before mentioned, were seen imbedded in the rock itself; they were at first mistaken for pieces of magnetic iron—and a bed or broad vein of compact felspar, of a light yellowish green colour, was seen traversing the rock; contrasting strongly with its dark associate. It differed from those minerals which it most resembles, by yielding to the knife and fusing before the blowpipe, into a white blebby glass, like the rest of the felspars. The surface which had been exposed to the atmosphere, was decomposed, carious and of a reddish or yellowish white colour. An observation for latitude was here taken, and gave $48^{\circ} - 37' - 59''$.

On leaving the mouth of the Koucouathime river, which is situated about one mile to the north of the place of our last observation, a fine sandy shore marking the interval, our course was north 70° west to the northernmost point of Koucouathime Bay, where the shores begin to be swampy; but sandy beaches were still occasionally observed, with partial deposits upon them of the same admixture of garnets and magnetic iron before mentioned. Putting on shore in one place we observed low parallel ridges of this sand several inches in width and depth, giving a character to the spot. Embarking again the same course was followed, and the shores became lower and more swampy as we advanced, indeed there appears to be very little difference of level between the lake and the land. In this portion of the former, and from one to two miles from the shore, you are surprised to find no more than three feet of water. This extreme shallowness is common to the lake (the depth of which in no part of it bears any proportion to its extent) and is the cause of the sea-like turbulence its surface assumes after the least wind, occasioning a violent ground swell and lofty breakers, to which, at a distance from the shore the hardiest *voyageur* is frequently unwilling to expose himself. Upon placing the hand in the water on these occasions it felt very decidedly tepid. This shallowness and unusual temperature, by occasioning a more rapid evaporation, may account for a fact which it might otherwise be difficult to do, viz: six tolerably large rivers and several smaller ones fall into lake St. John, while only one of moderate dimensions runs out of it.

Continuing a northerly course the mouth of the Peribonea river was reached, where the latitude was found to be $48^{\circ} - 42' - 37''$, and this was the greatest that was made on the lake.

In about three hours after leaving the Peribonea river we reached a bay, at the bottom of which we encamped, and found a considerable deposit of a very fine admixture of clay, siliceous and lime (an excellent marl) underlying the sand. Finding deep water close to the shore, and a current setting from the northward out of an angle in the bay, it was conjectured that the river Mistassiny lay in that direction, which proved to be the case, and another observation of the sun's meridian altitude having been taken at its mouth, gave for latitude $48^{\circ} - 38' - 55''$.

Ascending the Mistassiny a short distance, the land though sandy appeared to improve, but neither here nor in any part of the lake, nor in the whole of the country we traversed was very good timber, remarkable for its abundance, perceived. Reasons have already been advanced for not considering the absence of fine timber as any proof of a bad soil.

On leaving the Mistassiny we proceeded to the Assuapmousoin on a southerly course. On crossing the mouth of this river we encountered a violent tempest; there was however no danger being near the shore and in shallow water. Upon the tempest abating we landed and encamped. Here we again fell in with rocks which had entirely deserted us since we left the bay to the southward of the Koucouathime river; they are of a different formation, and consist of clay-slate and fetid limestone in conformable strata. The clay-slate which was first met with is composed of an indurated schistose clay, exceedingly fissile, and assuming many of the characters of roofing slate. It occurs on the shores of the lake, and dips beneath its waters to the N. N. W. at an angle of 25° . The laminae of the clay-slate are parallel to the planes of stratification, which is probably the cause of the extreme fissility of the rocks in that direction; but perpendicular to these planes, or nearly so, are others which serve to perplex the examiner when wishing to ascertain the bearing of the stratification of this rock; however their want of continuity and particularly the conformable position of the clay-slate with regard to the limestone, remove the difficulty. The surface of the rock is strewed with its weathered fragments, which exhibit no other change from the rock itself than that weather has rendered its fissile character more apparent; these fragments when slightly struck on their edges break into smooth rectangular slates. Solid slates five feet long, one foot wide, and one or two inches in thickness are seen; fragments of this description are very sonorous when struck.

After traversing this clay-slate for about one quarter of a mile, the fetid limestone before-mentioned was met with underlying the other conformable strata. Much of this limestone contains fossil organic remains, chiefly corallites and encrinites; products were also seen, and a singular fossil similar to a variety found in Drummond's Island, Lake Huron, of which there is a drawing in the sixth volume of the Geological Transactions, plate 30, fig. 5, from which that in question appears to differ chiefly by having the disks of which it is composed obliquely set on, whereas in the figure alluded to they have a rectangular position. That from lake St. John also tapers more than the other. The cross fracture exhibits a structure which is partly compact and partly laminar; the former appears to prevail towards the periphery, and to be composed of chalcedony or of a carbonate of lime passing into chalcedony; the latter occurs towards the centre, which is a calc-spar.

Between the two there is also perceived a tendency to the formation of agate, chalcedonic rings and curves being distinctly visible. Sometimes the centre has nothing of the crystalline aspect whatever, but shews a rounded spot of a reddish-brown and opaque substance, apparently of the nature of the imbedding rock, which is a dull fetid limestone of a dark colour, and full of fossil remains. Close to the one here drawn, but at the back of the specimen, there is a producta. This character of becoming siliceous is common, but in a much greater degree, to the fossils from Drummond's Island, Lake Huron, with the species of which those found on Lake St. John appear to correspond. The fossils however of the former are not only more siliceous, but the limestone itself in which they are embedded has been in some places metamorphosed into a chert or hornstone.

For the accompanying very accurate drawing of this fossil, we are indebted to Lieut. Dittus, 66th Regt., ample justice to which has been done by the engraver, Mr. Smilie.

This limestone appeared to be separated from the clay-slate above it by a thin black shaly calcareous stratum, full of short undulations and rounded concavities occasioned by corresponding projections and spherical knobs in the limestone. These knobs or balls could sometimes be detached, and were found to be composed of a very compact dark grey limestone, having a glimmering lustre arising from the reflection of light from a few crystalline points, and a *water-worn* aspect. In these no vestige of organic remains could be perceived, although a slightly fetid odour indicated their presence originally. The stratum of limestone in which they were imbedded appeared equally free from organic remains, but was of a more earthy texture. The thin black shaly stratum is itself a limestone, as its free effervescence in acid declares, but it appears to contain much clay and to be passing into clay-slate. The position of these balls we conceive is corroborative of the inferior level of the limestone with regard to its planes of stratification.

It is with much hesitation that we have ventured to state our opinion that secondary limestone here underlies clay-slate, because we know that such a position, if not altogether new, is at least of very rare occurrence. But as our province is to describe and not to theorize, we should have advanced still more improbable suppositions if, after the same unprejudiced research, there had been cause in our opinion to entertain them. The knowledge of natural history is very little likely to be extended if her votaries restrict themselves in their reports to what the existing knowledge on the subject may render probable. Having taken the trouble to examine, if an opinion be advanced (with humility proportioned to the degree of information) which is strongly opposed to experience, no censure is justly due though it prove erroneous. Some beautiful specimens of encrinital marble of a fawn colour are found here which would polish well and prove highly ornamental.

The limestone continued in visible strata for above one hundred and fifty feet, after which it appeared only in angular fragments for about a mile and a half further, when it again was seen in regular strata, forming a projecting point in the lake, the intermediate portion of the shore being characterized by a numerous collection of boulders consisting of granite, trap, mica-slate and angular fragments of clay-slate. Having seen no mica-slate before while in the Saguenay country, we may have mistaken trap for it, the pseudo-metallic lustre of which, as we have before said, causing it often to resemble that rock. Two or three semi-rounded masses of the felspathic rock near La Grande Discharge were also seen.

The stratification at the above-mentioned point is obscure, but it appears to dip gently to the east. Much of the limestone had a very conglomerated aspect, or at least it appeared to be made up in a confused manner of pieces of itself, though no distinct imbedded fragments were seen. It contains imperfect fossil remains of corallines and orthocera.

Proceeding beyond this point the shore became gradually crowded to excess with fragments of various rocks principally of limestone. Rocks under the form of boulders were also very common, and as before, angular pieces of clay-slate. The number of these boulders, generally about the size of the head, rendered our walk over them painful in the extreme, the beef-skin mocassin being by no means a sufficient protection in these cases to the foot unaccustomed to wear it.

Embarking and crossing over to a cliff about thirty feet in height, called Pointe Blue, it was found to be composed of the same fetid limestone in distinct horizontal strata. Organic remains are found in this rock, but they are generally indistinct. Embarking again for the south-eastward, the limestone was observed to continue on the shore, and at another point resembling Pointe Blue it forms a similar precipice on the lake. A little beyond this we put on shore, and found the same limestone forming a low beach. A cedar was measured here the girth of which was twelve feet, it was however by no means characteristic of the place, although the soil appeared to be much improved since meeting with the limestone and clay-slate, a circumstance that was to be expected. At the bottom of a bay beyond this place the same horizontal limestone forms the shores and bed of the Little or Outchouanitch river which, as a rapid here falls into Lake St. John.

Running once more to the south-eastward we encamped on a bare limestone point opposite L'Isle des Couleuvres. Some of the *voyageurs* had the greatest disinclination to visit this island on account of the number of snakes which were reported to exist there, and many wonderful stories of their forming festoons, knots, and lying together like a string of

Appendix
(V.)
14th Jany.

of sausages, were told; but after traversing the whole island one shrivelled skin only was seen. Pears too (probably under the guardianship of the snakes) were said to be abundant with equal foundation. The shores to the northwestward were abundantly strewn with many fragments of corallites, among which we recognized caryophylliæ, chain coral, madrepores, retepores, millepores, and particularly that corallite so much resembling a bee's hive, and called favosite. The varieties of caryophylliæ resembled those to be seen in the sixth volume of the Geological Transactions. Some of the madrepores might easily be mistaken for the fossil eye-teeth of some animals, but their internal radiated structure distinguishes them. (turbiniolæ?) All these fossils have been probably washed up from the bottom of the lake, the island being apparently a mere sand bank. There is another island near it which, judging from descriptions is probably composed of clay-slate.

On leaving the former island we stretched across to the main, and entering a bay reached the mouth of the Ouitchouan, where another deposit of clay-slate was noticed. This slate differs from the other in the following particulars:—the strata are horizontal or nearly so; it is not observed to be here associated with any other rock: its weathered surface is white, whereas that of the other is black. It effervesces in acid very slightly, and contains slight traces of organic remains, neither of which characters was observed in the other; it is in greater abundance and more easily quarried.

A person unacquainted with the deceptive appearances which rocks sometimes assume, would without hesitation pronounce this rock to be horizontally stratified, and in our judgment he would be correct; but there are other surfaces which have a parallel arrangement among themselves, and which might easily be mistaken for planes of stratification, particularly as their position is vertical and one which agrees better with the high dip the clay-slates so generally exhibit. However upon a closer examination of these planes they are found to suffer constant interruption and not to be continuous. The horizontality of the strata being here assumed as the fact, of which we entertain no doubt, the laminæ of the clay-slate are as before parallel to the surfaces of stratification. This rock is divided often, owing to these counterseams, into cuboidal masses and longitudinal frustra of pyramids, the latter sometimes resembling the blade of a stiletto. Whether you strike the rock on the edges of its laminæ or across the surface, a fracture in the direction of these laminæ is effected, accompanied of course in the latter case by the cross fracture. Above and in immediate contact with the clay-slate, is a remarkably fine bed of compact marly clay, to which cause the slight effervescence of the former is probably owing. Fragments of clay-slate are abundant on the shore in this place, and those of any other rock are rare. The latitude of the Ouitchouan river at its mouth was determined to be 48°-24' 35".

Between the Ouitchouan and the Post of Metabetchouan we observed the same formation to continue for a considerable distance, beyond which we again came upon the limestone, possessing the same characters as before, but dipping to the northward at an angle of 45°. This appears to be a further corroboration of our opinion, and to infer the additional conjecture that the two rocks alternate with each other, otherwise the limestone must suffer a violent contortion to appear in the interval, between the two deposits of clay-slate, in horizontal strata at nearly the same water level, as has been described.

This alternation with fetid limestone suits the habits of the shales far better than those of the clay-slates to which they sometimes bear a striking, and to the eye an indistinguishable, resemblance, a fact which is remarkably exemplified in the present instance if this rock should prove to be a shale, which, after consulting its mineralogical characters, we are strongly of opinion it is not, although it cannot be concealed that the case appears a doubtful one. That the reader may be better able to form his own opinion on this point we here introduce those characters:—Colour, brownish black—opaque—structure really schistose, but apparently compact—cross fracture, uneven, somewhat conchoidal—hardness about the same as clay-slate—color of powder and streak, reddish—odour slightly bituminous when struck—specific gravity 2.4. In water its surface is covered with minute bubbles, but it neither falls to pieces in it nor derives additional weight even after a long immersion. A specimen from the last-mentioned place effervesces very slightly in acid, a character which is supposed to be owing to the proximity of the marly clay. Before the blowpipe it fuses readily into a globule of glass, having a dirty green or brown colour. Experiments alone can determine whether this rock is calculated to answer the purpose of a roofing slate; this must depend upon its possessing a requisite degree of fissility, and upon its power of resisting the action of the atmosphere: our opinion upon both these points is favourable, but it is only derived from a hasty view of the quarry. With regard to our geological dilemma, without wasting more time in the attempt to reconcile apparent contradictions, which a more intimate acquaintance with the *locale* would probably clear away, we will continue to relate facts. The limestone at the last-mentioned place forms a bluff precipice on the shore of the lake, and contains corallites, encrinurites and productæ. The encrinurites were as before in a fawn-coloured variety, well calculated for an ornamental marble; some of it has the conglomerated aspect before described.

Pursuing our route, we reached the post of Metabetschuan, which we found by observation to be in latitude 48°-23'-11". Like the Post of Tadousac, that of Metabetschuan is situated on an alluvial bank, though differing in the materials which compose it. It is here a soil in which clay predominates, but contains sufficient sand to give it fertility. Boulders of the rocks of the neighbourhood, and among them water-worn fragments of the secondary limestone we have just described with their imbedded fossils, are frequent. The fossils are generally of the

same class as those found on the Manitouline chain of islands in Lake Huron, and have been mentioned. The most remarkable of the fossil remains we saw, was a trilobite (*entomolithes paradoxus* of Linnæus.) (See plate.) It is believed to be one of the largest that has ever been seen, and is deserving of notice, belonging as it does to a class of animals with which naturalists are totally unacquainted, and of which Parkinson says, "We must content ourselves, I believe, with allowing that no animal resembling it is known." It is supposed to be a species of crab. A drawing of the same animal, though not precisely of the same variety, may be seen forming the frontispiece to the 3d edition of Bakewell's "Introduction to Geology." Although the trilobite is very characteristic of the limestone in the Lower Province, it is the small species; no other gigantic specimen has been noticed; Dr. Bigsby, however met with it on Lake Huron. Some sections of the pigmy trilobite (if such an expression may be allowed) from Beauport and Montmorenci, bear a strong resemblance in form to moths. We have in our possession an organic remain from the latter place, which appears to represent a trilobite inserted in the siphuncular cavity of a small orthoceratite. If this conjecture be correct, it is worthy of attention, because it agrees with the known habits of the crustaceous tribe of animals which seek their food by entering into shellfish. Univalves have been brought up to Quebec from the Gulf of St. Lawrence, in which when partly mutilated, may be seen small crabs that have probably perished in an ineffectual attempt to retreat. A suitable punishment that should await all murderous intruders who steal upon the privacy of others, whether their object be to destroy life or to kill time.

The accompanying copper-plate impression is by Mr. Smillie, from another accurate drawing with which we were favoured by Lieut. Ditmus. In both cases the engraver had also the advantage of consulting the specimens.

This trilobite is upon very schistose limestone, of a dark grey color internally, and yellowish white weathered surface. The fragment in which it was found is angular and detached; it had been used as a stepping stone to one of the outhouses at the Post, and probably had been brought by the ice to this shore from a place on the lake about three miles to the westward, where we found a limestone very similar to it, having a variable dip to the northward of from 10° to 45°, and underlying a very schistose black limestone containing the impressions of small terebratulæ, and giving out a very fetid odour when struck. Although schistose in the large, this latter rock was very compact in the small, and would probably afford beautiful black slabs of marble. The schistose character, together with its black color, might occasion it to be mistaken for clay-slate, particularly as we have before described that rock as holding a similar position with regard to the limestone; but that position itself, the violent effervescence of the rock in acid, its imbedded organic remains and fetid odour, remove all doubt on the subject. The fawn coloured limestone was again observed here; it appears to be in considerable abundance. A large angular mass of white laminar marble was seen upon the shore; the rock itself must be near but probably at the bottom of the lake, from whence the mass in question has been thrown up.

From the Post of Mitabetschuan, conceived to be the most southerly point of the lake or nearly so, the River Peribonea, about its most northerly point, bore north—La Grande Descharge, N.E., and nearest point to the eastward, E.

We ascended the Metabetschuan River a short distance as far as some rapids; the right bank or that to the eastward, was found to be composed of a mixture of clay and sand, forming an alluvial ridge from fifty to eighty feet high. The western side of the river is low. Wheat, barley, oats, kitchen stuff of various kinds, cucumbers and melons, grow here to perfection; neither soil nor climate can therefore be bad. Having broken the thermometers in the early stage of our journey, all our reports are deficient in thermometrical observations. Judging from our feelings and the agricultural facts above mentioned, there appears to be no difference between the climate on Lake St. John and that at Quebec. Mountains bound the view to southward of the Post, and at no great distance among these, we heard that a large deposit of a mineral, which from the description given of it, must be steatite or soapstone, is found. It probably marks the primary character of the mountains in which it occurs; near them the junction of the primary and secondary rocks may be expected to take place. We did not see it, for the clay-slate, although usually a primary rock, is here, by its alternation with fetid limestone, evidently of the transition or secondary class.

After crossing a turbulent sea, we arrived once more on our way back, at the mouth of La Belle Rivière, having completed the circuit of Lake St. John.

Before we take leave of this lake, we will here introduce a few remarks upon the general fertility of the land in its neighbourhood, which have occurred to us as explanatory of the cause of it.

*When first the reports of the House of Assembly respecting the Saguenay Country came under our observation, we were at a loss to account for this fertility. We imagined Lake St. John and the surrounding country

* With regard to these reports, it is only justice to say, that after having attentively examined them, we think they are as creditable to the individuals who collected them as they are to the persons from whom they were obtained. We have, generally speaking, found them to be correct, and it will be seen that the latest reports rather confirm than afford any new information respecting the fertility of the soil and its capabilities for settling. Both Mr. Tasche's and Mr. Panet's plans also, considering they are mere sketches, are very faithful.

to be, as it really is, a large basin, of which the lake is the lowest portion, with rivers running into it from all points of the compass save one, and bearing with them the drainage of the lands they traversed. Supposing these lands to be composed almost entirely of rocks of the most infertile characters, such as granite and gneiss or aggregates in which silex abounds, they could not be looked to as the sources of the fertility in question. In this dilemma the action of a violent deluge was had recourse to, which by bringing soils from distant quarters, had accumulated here the materials of future fertilization. With this impression we visited the country. It was found to be composed, instead of granite and gneiss, for the most part of rocks which, however infertile some of them may be as such, are made up of minerals almost exclusively, the decomposition of which furnishes the best soils; such are syenite and trap rocks. On casting our eyes over the fine alluvial soils which characterize the country about Lake St. John and Chicoutimi, they exhibited no indication of the action of a violent deluge; on the contrary, they were found to be composed of the finest particles, which could only have been deposited in quiet waters.

On visiting Lake St. John, we found a rock forming a large portion of the shores and of its neighbourhood, the decomposition of which forms the finest clays. A little farther on the same lake, clay-slate and limestone are found to occupy a still larger portion, the former rock almost always associated with fertile soils furnished by its desintegration, while the latter, with few exceptions, need only be named as forming a portion of any country, to convey at once the fertility of that portion.

Examine the limestone: you find it the depository of the exuviae of animals, tenants only of the ocean which now form a part of almost every one of its generally horizontal strata. The inference is obvious:—they and the limestone have been deposited here together, when Lake St. John and the surrounding country were covered by the sea; and it is almost equally obvious to us, that the fine clays and marls, in which this country abounds, are the washings of the decomposing rocks, which being first suspended in the water as an impalpable powder, afterwards subsides at the bases and on the gently sloping sides of the rocks from whence they are derived.

Mr. Nixon, upon his return, kindly furnished the following specimens of Rocks and Earths, with the information as to where they were procured:

ROCKS.

- No. 1.—Of felspar alone, similar to all the rocks from the Grand Décharge to Koucouathime river.—From the second rapid on the Peribonea river this specimen was taken, and Mr. Nixon describes the same rock as extending from the foot of the first rapid to the foot of the third fall, forming rocky banks on both sides; what soil there is in the distance is sandy. This rock was traversed by a vein of granite, the felspar in which was in large crystals and greatly predominating.
- 2.—A detached mass of magnetic iron near No. 1.
- 3.—Like No. 1.—From the great falls on the Peribonea.
- 4.—This is an equable mixture of hornblende and felspar, the latter having a glandular arrangement in the former bearing some resemblance to porphyry. In naming rocks composed of hornblende and felspar, we have invariably in this report called those traps in which the former mineral predominates, while the term syenite has been restricted to those in which the felspar is the most abundant mineral. In the present instance therefore in which there is no predominancy of either, both terms are equally applicable, but we have chosen that of trap because the felspar in it, by its resemblance to quartz, bestows upon the specimen in question a character of coincidence with the trap we have described, which character is wanting in the syenites.—From David River.
- 5.—A mixture of hornblende and felspar, the former predominating—consequently a trap—from the falls of the River Ouitchouan, two hundred and thirty-six feet high, according to Mr. Bouchette.
- 6.—Similar to No. 1.—From La Petite Decharge—a vein of white felspar traverses this rock.

EARTHS.

- No. 1.—A mixture of sand, clay, vegetable matter and iron.—The sand in excess—indifferent soil—River Peribonea.
- 2.—The same as No. 1.—with little or no iron—R. Peribonea.
- 3.—A loam or brick earth—good soil—Lake Nohaduito—taken from under the vegetable matter.
- 4.—Sandy bad soil laying beneath No. 3, a foot deep and resting on No. 5.
- 5.—A good marly clay—same thickness as No. 4, and resting on No. 6.
- 6.—An excellent marly clay.
- 7.—A fine dark vegetable mould, twenty paces from the edge of a rivulet running into Lake Nixon.
- 8.—Mixture of clay and sand—tolerable soil—do.
- 9.—Sand, clay, vegetable earth and iron—light and sandy—do.
- 10.—Ditto ditto ditto—River Baddeley.
- 11.—Sand and vegetable earth—poor soil—ditto.

Upon reaching Tadousac, on our return home, its latitude was made, $48^{\circ} . 6' 38''$ —and immediately afterwards we entered the St. Lawrence, on our way to St. Paul's Bay, passing Pointe-aux-Bouleaux, of which some account was given in the early pages of this report. Between Pointe aux Bouleaux and Echaufaud des Basques, nearly isolated masses of what was considered to be granite, were seen; they are shaped like a dome or rounded hay-cock, but generally the outline of the mountains on the coast, did not differ materially from that of the Saguenay; the former are not however so precipitous. Having landed at Echaufaud-des-Basques, the predominating rock was found to be syenitic granite, in which trap was observed, forming dykes or veins. A vein composed of red felspar, quartz, hornblende and magnetic iron, traverses this rock. Flesh red crystals of felspar, and white masses of quartz, forming large distinct concretions, were seen under the same circumstances. From a detached mass of syenitic granite, large kidneys of a fine black hornblende were taken, and also a beautiful specimen of light blue felspar having the lustre of satin.

The surface of the rock here, was observed to have the same baked and porous aspect as before described. This appearance is not in all cases confined to the surface. A specimen brought from Ance-aux-Femmes, in the Saguenay, has been already described, as possessing the character of porosity, both internally and externally, in so perfect a manner, as to be a fair sample of a mill-stone.

It would prove a mere repetition to be as circumstantial in our description of the rocks, on the north shore of the St. Lawrence, between Tadousac and Mal-Baie, as we have been between the former place and Chicoutimi.—We will therefore confine ourselves to a few remarks which will embrace those striking or important differences observed.

Though trap was occasionally seen, forming dykes, veins and imbedded pieces in the predominating rock (a syenite, syenitic granite, or syenitic gneiss,) no rocky masses of it, whether stratified or unstratified were perceived. It is not meant to assert, however, that they may not be found, but only to imply, that they are by no means so common as in the Saguenay river, particularly in that portion of it between Chicoutimi, and La Buole, from the last of which places, towards the mouth of the Saguenay, the rocks become more quartzose and less amphibolic or hornblendic, and pass from trap and syenite into syenitic gneiss and granite. To this latter cause may be attributed the comparative narrowness of the river at its entrance.

As Mal-Baie is approached, the rocks are observed to be crowded with veins of trap, felspar, quartz and granite, to an excess. These veins are generally parallel to each other, frequently contorted to a degree that is scarcely credible. In some places they are absolutely countless, and being composed of different coloured minerals, as white quartz, black hornblende, red felspar, &c., they bestow on the rock at once a singular and beautiful appearance, to which an artist alone could do justice, as it is totally beyond the power of description to convey.

It is worthy of observation, that the granite veins which have been described as traversing the rocks, both in the St. Lawrence and Saguenay rivers, were found to be composed, whenever examined, of large flesh coloured crystals of felspar, large pieces of grey or white quartz and mica in hexagonal plates, about the size of a farthing, the whole forming a variety of graphic granite, differing widely in appearance from those fine grained granites, which have been described as occurring in apparently stratified masses in the Saguenay and elsewhere, and among the constituents of which it is often difficult to say whether mica or hornblende is to be ranked, or whether they are not both of them present, the small black specks disseminated through the aggregate, resembling either of those minerals. The plates of mica in these veins, were "few and far between:" the rarity of this mineral in the rocks under description has been before alluded to.

A number of recent shells principally echini or sea-eggs are found upon the rocks, and sometimes at an elevation, to occasion a false inference to be drawn as to the height of the spring tides. These are probably brought by birds, as the elevated position they occupy, is far beyond the reach of any tide in the St. Lawrence.

On entering Mal Baie, a rock was observed, forming a long precipitous scarp, which has the appearance of being horizontally stratified. It is of a greyish colour. This we afterwards found to be a limestone and is the same that Dr. Bigsby describes as a calcareous conglomerate full of organic remains, and having gneiss and mica slate abutting against it.

Partaking of the well known hospitality of Mr. and Mrs. McNicol for one day, we had leisure to examine some of the rocks in this place, which are particularly interesting, as it is here that the primary and secondary formations occur together. On the shore near the house we observed black fetid limestone, and we believe gneiss, but this spot was not particularly examined. Crossing a bridge over the Mal Baie river, we proceeded across an alluvial ridge, towards Dr. Fraser's house on the eastern side of this bay. Pursuing our walk on the shore, and down the river, we first came again on the black fetid limestone observed on the other side of the bay. Then examining a block which had fallen from the precipice above (the same noticed on entering the bay) it was found to consist of an indurated limestone of a greyish colour and

Appendix
(V.)
14th Jany.

and the conjecture before entertained respecting its horizontal stratification was confirmed. It forms a perpendicular scarp, perhaps one hundred and fifty feet high. Beyond the black fetid limestone, micaceous schist was met with, for the first time, containing veins of quartz, sometimes of a slight rosy hue, and common garnets. We saw none of the beautiful foliated garnet, which is known to occur in this rock. The dip of the mica slate is gently to the west. Continuing our walk, we came upon a rock, which appeared to consist of stratified masses of pure quartz; after which we met with syenitic gneiss. All the baser edges of these rocks, from the black limestone downwards, crop out on the shore, in conformable strata, the dip of which is to the westward. Between the horizontal limestone, which lays over the baser edges of these rocks, and the black limestone, a sort of calcareous sandstone is observed, of a light green colour possessing the compactness of fine grained grey wacke. We do not remember to which of the two rocks it is conformable, but believe it is to the uppermost; its effervescence in acid is slight.

Mal-bay and its neighbourhood have long been remarkable for the frequency of earthquakes; it was not probable therefore that we should omit to make enquiries respecting them, connected as they are with the subject under examination. Through the politeness of Mr. and Mrs. McNicol the following information was obtained. Shocks are most frequent in January and February; their direction appears to be north-west; the duration of the movement is about one minute, and notice of the coming motion is generally given by a noise like a chimney on fire, sometimes accompanied by two distinct blows. The weather is sometimes sultry, previously at others, cold; in the former case, the weather becomes cold after the shock, and in the latter, mild: in short, it is always accompanied by a change of weather. They occur about nine or ten times a year, and are more generally observed in the night than in the day. When they happen in foggy weather it clears up subsequently. About thirty-six years ago shocks were much more violent. Dr. Fraser of Malbay, to whom this account was shown, agrees generally with it, but thinks the number of shocks annually underrated.

Mal-Bay or, Murray Bay, as the inhabitants prefer calling it, enters deep into the north shore, and the greater proportion becomes dry at low water. The land which encloses the bay is rather elevated and rocky, but between it and the high water-mark on the western side, there is a flat or gently undulated alluvial soil. The character of most of this is sandy, but that on which Mr. McNicol's farm is situated is of a superior description, composed of clay, sand, and probably lime derived from its vicinity to limestone. We were informed that the general character of the soil improves on advancing into the interior, and that a broad fertile valley similar to the one which accompanies the St. Paul's Bay River, and with which it is connected by a cross valley, also accompanies the Mal-Bay River in rear of the settlement. Walking through the fields at the back of Mr. McNicol's house, we observed several small cone-shaped hillocks from fifteen to twenty feet high composed of alluvial soil, which from their form and isolated appearance were supposed to be in some way connected with the cause of the earthquakes.

Availing ourselves of the high tide we left this bay, but were detained a few hours at its westernmost point by the roughness of the river. This interval was occupied in examining the limestone rock of which the point consists. Like that on the eastern side of the bay it is one of the oldest of the secondary class, and contains numerous organic remains, principally orthoceratites. The weathering of the rock exhibits many longitudinal sections of these fossil multilocular univalves, giving them something the appearance of fish-bones for which they have been mistaken. It is well known to those who interest themselves on the subject, that the fossil corallines of the *genus huronia*, of which there are some beautifully correct drawing among the plates to the sixth volume of the Geological Transactions, bear a remarkable resemblance to vertebrae, so much so as to have deceived professional men, of these however we saw none. Some of this limestone is of a very siliceous character and appears to pass into sandstone; some again is conglomerated, and holds imbedded rounded fragments of white quartz; in this the fossil organic remains appear most to abound. In the upper portion of this limestone there is a small cavern into which you may descend for a few yards. The sides and roof are in many places coated with a white incrustation, having none of the crystalline aspect of stalactite, but softer and more resembling analogous appearances on the roofs of old brick or stone arches. This cavern descends very rapidly, but we were soon arrested by its narrowing suddenly to a mere crack, through which however the boy who accompanied us said he had passed, and found that the cavern on the other side becomes more spacious, but his fears would not allow him to investigate further. This part of the passage might be excavated at a trifling expence, which might be fully repaid by the extent, beauty and singularity of appearance which these caverns often present. Dr. Fraser has been spoken to on the subject, from whom more information is shortly expected.

The shore between Murray Bay and St. Paul's Bay is by no means so precipitous as that between the former place and the mouth of the Saguenay, although it gradually retires back into lofty hills, over which, on account of the crowded state of the canoe, Messrs. Bowen and Goldie passed. They describe the road as one continued succession of abrupt rise and fall. Some rocks, the surfaces of which are white, were observed forming much of the shore, but as we did not touch them, it remains doubtful whether they were felspathic or limestone. Beyond these, a black rock, traversed by veins of white calcareous spar, was seen; probably the transition limestone of some authors, and the same as that observed at Murray Bay.

On passing Les-Lboulemens, we looked in vain for the cause of that part of the country being so called; Isle aux Coudres also, which Charlevoix represents as having been detached from the main by a violent earthquake, exhibits no other character, on passing, to indicate such a catastrophe, than a whirlpool between it and the main, which at low water becomes dangerous for boats, and causes by the risk they run of being thrown by it on the limestone rocks to the right of the entrance into St. Paul's Bay: appearances indicating some event of the kind are said to be seen, however, in many places on the shore between Port au Persil and St. Paul's Bay, such as the roots and trunks, &c. of prostrate trees, being covered with soil and loose masses of rock.

The limestone mentioned last is of an excellent description; it occurs in dark compact strata, dipping to the westward at an angle of about 45°. It has all the appearance of being an excellent building material, in great abundance and easily quarried.

At the entrance into St. Paul's Bay, the mountains which form the back ground have a very picturesque appearance, rising in cone-shaped peaks and in alpine ranges; they are, however, not very elevated.

It is not perhaps generally known that there exists highly respectable evidence of a volcanic eruption having happened somewhere in the interior in the rear of St. Paul's Bay. No one we think will feel disposed to doubt the fact after perusing the following account of it with which, through the politeness of Mr. Gagnon and Mr. Chaperon, we have been furnished. It is the former gentleman who writes:—

“Au défaut du journal que se trouve écarté, daignez recevoir ce que suit :

“Samedi, 6 Oct. 1791, à la Baie St. Paul, et autre lieu circonvoisin, vers les sept heures et quart du soir, se fit sentir un fort tremblement de terre: toute la nuit fut troublée par de petits repetés, et entre par un tremblement courant dans l'est. Les quarante et un jours suivans tremblèrent, depuis deux coups jusqu'à cinq par jour. Le Lundi 8 Oct. fut d'un bon tiers moins fort que le premier (du 5) les autres furent que des petits, ou brouissemens; le tems toujours obscur. Avant la nuit du 26 au 27, je n'avais pas encore remarqué d'éruption de fumée épaisse, par fois ondoyante de flamme; la température à 7¼ heures du soir était à 11° au dessous de zero du thermometre de Reaumur (plus 7¼ of Fahr.) et le lendemain au matin à 6¼ heures la chaleur se trouve montée à 21° (plus 79¼ of Fahr.) Deux montagnes près de ma demeure ouest-quarante quelques degres-nord laissent un passage à la vue entre elles pour laisser voir loin. C'est par cette passe que je vis une continuelle eruption, mêlée de fumée et de flamme, qui jetoit fort sur l'horizon; d'autres fois se tourmentaient entre elles comme trop gênées dans leur issue. J'ai remarqué plusieurs fois que cette éruption est presque toujours suivie de tremblement pour le même jour; et quand il manque il s'ensuit un jour obscur et jaune. Quand le tremblement arrive, on peut prédire qu'il va être d'autant plus proche que cette agitation de boucanne force pour sortir. Quelques personnes auxquelles j'avais montré ces préparations du tremblement m'ont prevenu à leur tour que dans un moment la terre va trembler, et l'effet le confirma. Enfin cette nuit du 26 au 27 forma un grand spectacle d'admiration, toute l'atmosphère fut en feu, et agitée; la face souffrait de la chaleur, le tems étant fort calme; l'éruption fut continue toute la nuit avec des flammes. L'approche certaine du tremblement se connait quand par la passe entre les deux montagnes, on voit un nuage, ou boucanne, arrêté, ou agité, et qu'à droit et à gauche l'horizon est parfaitement clair.”

This description, as far as it extends, agrees so well with the known phenomena of active volcanoes, that little doubt can be entertained of the flame seen by Mr. Gagnon proceeding from any other source than that of an eruption. Mr. Andrew Stuart was aware of the existence of a similar well founded report when he gave us discretionary authority, upon discharging our canoe, to proceed in search of the volcano, provided after having ascertained particulars, there should exist in our judgment any probability of finding it. We were decided to give up the attempt by the following circumstances:—

1. It might lay at a greater distance than could be reached at so late a period in the season, (12th September.)
2. The known fertility of volcanic countries would, in the interval of thirty seven years of inactivity, have caused those parts once ravaged by its eruption, to be covered by a deep and dense mass of both living and dead vegetable matter, concealing all the rocks, and obliterating all the traces of a crater, by which only an extinct or long inactive volcano could be recognized.
3. We were anxious to examine an extensive deposit of magnetic iron which lay up the river in a different direction.

Upon an examination of the greater portion of the rocks we have attempted to describe, a Vulcanist or follower of Hutton, would we think suspect that the country of which they are characteristic had been the theatre of volcanic activity in very ancient times, and upon finding his conjectures supported by the inferential evidence which these local earthquakes afford, and that of the more direct and positive description contained in Mr. Gagnon's communication, his doubts on the subject would entirely vanish. For ourselves, being neither Neptunian nor Vulcanist, we leave these interesting but often vague enquiries to those who are better qualified to indulge in them, being satisfied

* They are not felt on the southern shore of the St. Lawrence nor at St. Joachim, to the westward, nor Tadoussac to the eastward.

with the more humble, though not less useful task of describing facts.

Although it is believed that no one but Mr. Gagnon himself saw the flames &c., many were witnesses to the comparative violence of the earthquakes of 1791. The first is accounted for by saying that there were few settlers at St. Paul's Bay at the time, and fewer whose habits or education would lead them to take notice of a phenomenon which among the vulgar might be supposed to be merely a fire in the woods, had they seen it.

A fall of ashes covering the snow is also within the remembrance of many, but of this interesting fact we have no further particulars. Earthquakes at St. Paul's Bay do not appear to be so frequent nor so sensibly felt as at Malbay.

Three or four leagues up the St. Paul's Bay river, or la Rivière du Gouffre as it is called, there is at the distance of from one hundred yards to two miles from its banks, an extensive deposit of magnetic iron * of which we are able to afford some information from actual inspection.

The river itself is not easily ascended being full of rapids, but the goodness of a road on its right bank renders this inconvenience lighter. Over the road, composed of a sandy alluvium, we proceeded and entered a beautiful valley through which this river circuitously takes its course. The sandy nature of the soil at the mouth of this river opposes little resistance to the action of the current, which when strongest steals upon the shore contiguous, leaving a proportionable space dry on the opposite side, and in this way one proprietor of lands finds himself possessed of the property of his neighbour. When property in this place becomes more valuable, and this natural encroachment more aggravated, it will probably become a subject of litigation. Mr. Chaperon of St. Paul's Bay will soon have to remove two store-houses which the current threatens to undermine.

On advancing, the river retires from the road to the right, and while the former preserves, as is obvious, the lowest level of the valley, the latter pursues a more direct course over a sandy bank. As we passed this bank and cast our eyes on the valley below, we were reminded of the vale of Clwyd in North Wales. It is however neither so wide nor so long. The mountains on each side are tolerably elevated and of course rocky, but the valley is gently undulated land of a fine quality, being a mixture of clay, sand and probably carbonate of lime which abounds in the neighbourhood. This valley continues for about six or seven leagues, and is perhaps half a league wide. The road (an excellent one) extends about five and a half leagues up this valley, beyond which a pathway leads to the remotest settlements. There is a cross-valley on the left bank of the river which is said to communicate with the valley of the Malbay river.

The parish of St. Urbain is situated towards the upper end of the valley, and it was here that we stopped to examine the deposit of iron. One bed lays westward of Vincent Tremblay's house on the summit of the hill, and about two miles from the river. Having crossed the valley a distance of about a mile, we came to the foot of the hill which rises at an angle of from 100 to 150. Here we found large detached masses of this ore, and ascending the hill for about another mile we reached the summit. When we arrived at this place it was found to be characterized by the total absence of trees, and looked like a piece of cleared land of about three or four acres in extent. Near the centre of this, and where the ground began to fall, the ore was seen cropping out of the ground, in one black metallic mass of considerable size. We traced it without excavation for about sixty yards in length, and perhaps three in width, here and there covered by moss or a few shrubs only. The rock with which the ore is associated is a pale syenite; in it the felspar is very predominating, the weathering of which gives a cream colour to the rock externally. That we saw was not solid but in loose angular rotten pieces, and this we found to be the case upon subsequently probing to ascertain the comparative abundance, of the ore as appears from the following satisfactory account of some work Vincent Tremblay had been instructed to perform during our absence on an excursion to the northward.

No. 1.—Excavated a hole on the north side of the visible iron ore and at about two perches distance, where the same ore was found about two feet below the soil consisting of rotten rock.

2.—A second hole was formed on the south side of the visible ore, and about ninety feet distant, here the same ore was again found at the depth of one foot six inches of the same soil.

3.—About six yards farther to the south of the last, and at the depth of two feet and a half of rotten rock the same ore was found.

4.—North west of the visible ore and about ninety feet distant the same ore was found at the depth of two feet of the same soil.

From this it appears that there is here a considerable supply almost at the surface; indeed we suspect that the whole of the cleared patch be-

* This deposit was known in the time of Charlevoix; for according to that author a miner was engaged by Mr. Talon, the intendant to explore these mines, who reported favourably of them. This man is said to have observed wherever he worked, traces of the earthquake of 1663. We saw nothing of this kind. Previous to our visit to the place, the Surveyor General had brought to Quebec specimens of the ore and information as to its being abundant.

fore mentioned is occasioned by its immediate presence. We were informed that several places in the neighbourhood were equally abundant in ore, and when about to descend the La Gouffre on our return to St. Paul's Bay, Mr. Bowen discovered a deposit of this mineral which appeared abundant; it is situated in the left bank, about a mile below Vincent Tremblay's house, and about two hundred feet from the waters' edge. Having left instructions with Vincent Tremblay to investigate further, we lately received from him the following information accompanied by specimens.

No. 5.—“Ces deux morceaux ont été pris sur les terres de Damase Fortin et de Vincent Tremblay, fils, environ douze arpens plus au nord que la mine que vous avez vue et environ quinze arpens plus près de la rivière du Gouffre. Il se trouve un cap continu du même métal et il est parallèle à l'horizon. Il se trouve environ un pied en terre à l'endroit où je l'ai examiné, mais comme c'est dans un endroit où le terrain est pendant, il doit se trouver à une plus grande profondeur à mesure que l'on avance.

6.—“Ce morceau a été pris au nord-est de la rivière du Gouffre, environ dix arpens au dessus de l'endroit où vous êtes embarqué pour la descendre, et à un arpent de la dite rivière. C'est un cap coupé perpendiculairement de la hauteur d'environ vingt pieds sur une largeur d'environ quarante.

7.—“Ces quatre morceaux ont été pris sur la terre d'Augustin Tremblay au nord est de la rivière du Gouffre vis-à-vis l'endroit où vous êtes embarqué pour la descendre et environ six arpens de la dite rivière. Il sort de la côte un cap de même métal dont j'ai découvert environ trois perches.

8.—“Ces morceaux ont été pris sur la terre d'Antoine Pagé à environ quinze arpens de la rivière du Gouffre, et environ une lieue plus sud que celle que vous avez vue. Il s'en trouve un cap plein.

9.—“Ces morceaux ont été pris entre Moïse Tremblay et Elie Fortin, environ huit arpens plus nord que celle que vous avez vue, et vingt-sept arpens plus près de la rivière du Gouffre. J'ai découvert de ce métal sur environ un demi-arpent carré, mais je crois qu'il y en a un plus grand étendu.”

Before any observations are made upon the foregoing ores, we will here introduce an account of our journey northwards adverted to. The object of this journey was twofold; to see a little more of the interior, and to examine another deposit of magnetic iron. In the first part of our journey we met with tolerable land, although by leaving the valley to our right and ascending the hills we got among the rocks and an inferior soil. These rocks are universally felspathic, and of a cream-coloured external surface. After proceeding about two leagues we came to the rounded brow of a hill which afforded us a beautiful view of a part of the chain of mountains which we had seen on entering the bay, and in which the St. Paul's Bay river has its source. The summits of these mountains were rounded, perfectly bare, whitened and precipitous. We were informed by our guide that after crossing these mountains a wide fertile plain is reached, through which the Malbay river takes its course; he was in the constant habit of crossing this plain with Indian hunters, with whom he was associated. Continuing our route a little further we came to the flat surface of a rock several yards of which were totally bare and whitened. All we had before seen in our route were so covered up with vegetation, presenting only an angle to the eye, that it was not easy to decide with certainty whether they were in place or not, but here no doubt could exist on the subject. It was one of those tabular masses so common in felspathic rocks, composed of brown felspar, quartz and hornblende; the quartz was very distinct on the weathered surface, from which it projected in grey grains, owing to the greater resistance it opposes to the action of the atmosphere.

Distinct concretions of a very laminar hornblende, possessing polar magnetism, were observed in this rock.

We reached our encampment for the night at the foot of the chain, having passed over in the course of the day much tolerably good land, well watered by small brooks and streams issuing from lakes, along the side of one of which we passed. Rising early in the morning we commenced the ascent of the chain, and on the summit of the lowest part of its ridge, we saw projecting from the side of the mountain iron ore similar to that before seen at St. Urbain, but of a purer quality, though not by any means in such abundance. It here occurs in a visible patch about one foot wide and perhaps three feet long. As it is in solid rock it would not be easily extracted if found upon excavation to form a continuous bed or vein. The rock in which this ore is imbedded is as before a pale syenite, in which the felspar only is very distinct. It is worthy of remark that the extensive deposit of iron ore at Marmora, Upper Canada is, according to Dr. Bigsby, in the immediate neighbourhood, though not in contact with a pale syenite. The metallic blackness of this ore contrasts strongly with the whitened surface of the rock in which it is imbedded.

Knowing that the forests in this country are extremely liable to spontaneous or accidental ignition, the whitened exterior of these rocks is often naturally enough attributed to that cause, particularly as was the case here, where other less questionable traces of fire appear; but weather, acting upon the alkali, which the felspar in these rocks contains, causes an incipient decomposition to take place on their surfaces, by which an imperfect

Appendix
(V.)
14th Jany

imperfect kaolin or porcelain clay is formed, and hence arises this whitened aspect. Fire would certainly assist this decomposition, but from the quantity of iron in these rocks their surfaces would we think be rather reddened than whitened by it. Other deposits of iron ore in these mountains were heard of, but they were not visited, satisfied of its abundance in places more conveniently situated. It may be stated, however, that a Canadian of the name of Baptiste Bridet, gave us on our return to St. Urbain, the following information. Between the pass of the mountains and Lake Bicene, about a league asunder, he observed at short intervals great quantities of iron ore jutting out of the rock; also between Lake Bicene and a place called Le Grand Bris, about ten acres further, he saw the same appearance. Being questioned as to its abundance more particularly, he said that it occurs in veins from six inches to two feet wide and in rounded blotches from six to eight feet thick. The highest mountain in that part of the chain where we were, commands a most beautiful and extensive view of the surrounding country.

We will now give the mineralogical characters of that deposit of ore which we first met with at St. Urbain; after doing which, only a few further remarks on the others will be necessary, as they differ from each other principally by being more or less mixed with impurities. They are almost all of them remarkable for the want of the magnetic character, although possessing the metallic blackness, structure, and other points of agreement with the magnetic oxide of iron to which species they undoubtedly belong.

MINERALOGICAL CHARACTERS OF SPECIMENS.

- Nos. 1 to 4.—Colour, iron black, but break into fragments, the surfaces of which are much tarnished by rust; no particular structure could be observed; some parts were indistinctly laminated, but the general mass appears to be compact granular. The fracture when not effected in the direction of a rusty seam is uneven. They cannot be scratched by the knife, but are easily broken, and do not give fire under the hammer; their powder is quite black; specific gravity about 4.5. Some portion of the ore from this deposit had a vitrified and porous aspect on the surface like cast iron. They are not magnetic before the application of heat. Before the blow-pipe they do not alter in any other respect than by becoming magnetic. With borax they fuse into a glass of either a yellow or very light muddy green colour; upon cooling the colour subsides or nearly so. These ores were associated with a mixture of mica, carbonate of lime or iron, and what was conceived to be epidote.
- 5.—These specimens have a very good appearance, and are more free from foreign substances than some of the others; one of them, however, has coccolite of a yellowish brown colour, disseminated throughout it. Their specific gravity varies from 4. to 4.5.
- 6.—This is the same description of ore as that found by Mr. Bowen, and comes nearly from the same place; it is not quite so good an ore as either of the preceding, being more mixed up with foreign substances, particularly epidote, by which its specific gravity is reduced to 4.
- 7.—These four specimens differ much among themselves, and do not bear the aspect of having been taken from the same place; one of them has a crystalline structure, and appears to be composed of octohedral grains, while another is earthy and possesses less of the metallic aspect.
- 8.—Magnetic with polarity; an excellent ore.
- 9.—This is a very good specimen of bog ore, and valuable if abundant. It probably occurs in greater quantity than has been yet ascertained, as generally where there is a large deposit of rock ore (as the magnetic oxide of iron is called) occupying elevated situations, there is also a deposit of bog ore beneath in the low swampy lands, the latter originating with the former.

It does not appear easy to account for the want of the magnetic character in these ores before they have been exposed to heat. Cleaveland says, that "according to the observations of Werner and Gibbs, this oxide of iron is not magnetic while remaining at a considerable depth below the surface of the earth, but soon acquires this property after exposure to air and light." We must seek other causes to account for the magnetic deficiency in the present instance, as the specimens in question were taken from the surface and possess no more magnetism at the present moment than they did at first. It may be owing to one or more of the following causes; the presence of oxygen above 30 per cent, of sulphur above 40, of carbon, of phosphorus, of arsenic, of manganese and of antimony; of these sulphur, phosphorus, arsenic, manganese and antimony injure the ore, by either rendering it difficultly fusible or its cast-iron brittle, often both. Carbon, on the contrary, improves the quality of the cast-iron, renders the ore more easily fusible and diminishes the consumption of fuel. We cannot say to which of these, or if to any of them is owing the magnetic deficiency, we can only

observe that before the blowpipe no fumes of sulphur, arsenic nor of antimony were perceived. From sixty to seventy per cent. of castiron may be expected from the magnetic ores, and from thirty to forty from the bog ore.

The vicinity of limestone as a flux bestows additional value on these deposits. It is probable that the limestone that was seen at the entrance into St. Paul's Bay may extend thus far. We saw two or three varieties of an excellent description near a small kiln in front of the chapel at St. Urbain, which were said to have been taken from the bank on the opposite or left side of the river; some contained organic remains, while others had more the aspect of a compact marble, and were free from them. We were informed that limestone was also to be seen on the summit of the hill opposite the chapel, where indeed it was ultimately found, but our guide took us first to several felspathose rocks deceived by their whitened surfaces.

Wishing to ascertain the capabilities of the river we descended it in an old wooden canoe. This river may be considered as one continued rapid, though of moderate violence; the only obstacles in which to its free navigation arise from an accumulation of boulders in several parts of its channel, over which it is difficult to pass without striking. This we did repeatedly, and once or twice were nearly swamped, but more owing to the unskilfulness of our guide than from any other cause; however the inconvenience of a good ducking would have been the only penalty had the canoe actually filled, for the river is in most places shallow. If there were any sufficient object to warrant the expence, such as the establishment by Government of an iron foundry, there is no doubt that the river might be rendered navigable for batteaux by removing only such of the boulders as are most in the way of the channel; for we believe that no rock in place offers any obstacle. To drown these boulders would not be easy, and would occasion a great loss of excellent land, without expensive banks were formed to retain the waters. This river is very circuitous in its course, surprisingly so, considering the rapidity of its current; it owes this character to the alluvial bed it traverses. By it the river is rendered perhaps one-third longer than the road, between St. Urbain's and the bay, so that whatever capabilities might be given to the river, it is probable that all materials for the supply of an establishment, such as we have named above, would be transported over land from the bay, while the articles manufactured would be sent down by the river. Such is the practice at Mr. Bell's well conducted establishment on the St. Maurice river, up which the returning boats always poll empty. With numerous stoppages we were only five hours descending.

The height of the banks on either side the river varies from one foot to fifty. Rock in place was observed forming the bank in a few places. It was said to be limestone. Our examination of all parts of this river was necessarily hurried, for the expectation we were in every moment of being upset, as we moved rapidly down the stream, would not allow us to improve to the utmost the short period we had to observe at each turn of it. Near the entrance into the bay from the river one small limestone* rock was observed lifting its head above water in mid-channel.

Previously to leaving the bay on our journey into the interior, we had been hospitably received at the house of Mr. Chaperon, and on our return his reception of us was even if possible warmer. But the fear of abusing his civility was an additional motive to depart, which we did the night of our return. Failing in our attempt, however, to reach Quebec by water, on account of contrary winds, we proceeded overland through the *Capes*, which afforded us the opportunity of seeing a country unexpectedly well calculated for settlement, the existence of which a person would have some difficulty in believing who had only seen that barren section of it exposed on the northern shore of the St. Lawrence, between Cape Tourment and St. Paul's Bay. It has already attracted some attention and in our opinion deserves much more; for, independently of its own capabilities, it is connected by an uninterrupted broad band of cultivable land, with Quebec on one side and St. Paul's Bay, Malbay and the still broader tracts behind them on the other. A bounty has lately been offered to induce individuals to settle on this land, and a road has been opened, at the expence of the Colonial Government, connecting St. Joachim with St. Paul's Bay. Over this road we passed, and found a good log hut built or building, with a few acres cleared around it, at every league or thereabout. The land through which the road runs is always tolerably good, in many places excellent, and it is intersected frequently by small rivers and streams, favouring its drainage, the want of which many portions of the road attest, particularly towards St. Joachim.

This road possesses two excellent characters; it is remarkably straight and remarkably level; for, excepting at the two extremities of it, St. Paul's Bay and St. Joachim, at the former where it passes over limestone, and at the latter granite, we do not remember any other rise of any consequence. The first part of the road is over the same alluvial deposit, through which the river du Gouffre passes, and which continues in one level plain to the foot of the limestone ridge. On ascending this the soil becomes more sandy, but it soon after improves and is then a mixture of clay, sand and iron, to the latter of which it owes the yellow or red colour it sometimes possesses. The road is excellent for a distance of four leagues; it then becomes very boggy and in some places

* Specimens of a white granular limestone have been brought to Quebec from St. Paul's Bay, containing threads and seams of a very argentiferous galena. If some of this galena be powdered and dissolved in nitric acid, a bright copper-wire inserted in the solution will after some time be coated with a thick muddy deposit. If this be collected and exposed on charcoal to the blowpipe a bead of pure silver will be obtained.

places quite impassable for carts. It is only, in such places, by sinking up to the knees in a stinking mass of mud, loaded with carburetted hydrogen, that the pedestrian is able to proceed. This character, which continues more or less to the foot of Cape Tourment, is owing to the retentive nature of the soil, and its nearly horizontal position. In a short time the money which has been expended on the road will have been uselessly employed without an additional sum be advanced, to prevent it from being completely broken up.

There was nothing remarkable in the quality of the timber which consisted principally of white birch until we reached the ridge separating St. Joachim from the Cape lands, where we met with some of the finest description that had been seen during the whole journey, among which were some well-grown elms. The granite of Cape Tourment is known to be the depository of large pieces of brown mica, which are dug out the size of the foot from crevices in the rock; some of it is exceedingly contorted. The rarity of mica in most of the rocks described in this essay renders this deposit the more deserving of attention.

Having closed our geognostical observations at the foot of Cape Tourment, we will now introduce a short recapitulation by way of summary which will include some remarks on the geological position of the rocks we have described. The rocks seen on our journey were the following:—

- Nos. 1.—Granite.
- 2.—Micaceous Schist, (Mica Slate.)
- 3.—Quartz rock.
- 4.—Primary limestone?
- 5.—Syenites—including syenitic granite and syenitic gneiss.
- 6.—Trap rocks—or aggregates, in which hornblende predominates
- 7.—Felspar rock—(sui generis.)
- 8.—Magnetic iron.
- 9.—Clay-slate.
- 10.—Grey wacke.
- 11.—Sandstone.
- 12.—Secondary limestone—including the transition of some authors

Of all the granitic rocks we met with, perhaps that of Cape Tourment is the only one, free from an admixture of hornblende; for although we collected some specimens elsewhere, which appeared to be so, it might very well have been present, without our being able to detect it, on account of the smallness of the grain of those specimens, and the resemblance of the hornblende to mica, which latter circumstance may indeed have occasioned one mineral to have been mistaken for the other. We cannot positively assert that the granite of Cape Tourment is free from hornblende, but we think so.

Micaceous schist was met with only at Mal-bay, where it has been already described as dipping to the west, having black fetid limestone above it, and quartz rock and syenitic gneiss below. It is here that the three classes of rocks (admitting the transition to be one) are seen together, and the geologist derives from their inspection assistance in his subsequent researches in the neighbourhood. Micaceous schist being in all cases a primary rock, the syenitic gneiss below it, must also be primary, which it appears necessary to establish, because the same rock was not found elsewhere, to be associated with a similar proof of its superior antiquity; rocks in which hornblende and felspar abound, being common to the "overlying class" of Maculloch, with which many of the rocks in the Saguenay and elsewhere, have other points of agreement besides mere mineralogical identity.

The syenites and traps are the only rocks met with from the mouth of the Saguenay to the falls on La Belle Rivière, and they are likewise most characteristic of the north shore of the St. Lawrence, from Tadouac to Cape Tourment. Mr. Nixon met with syenite on David's River, a branch of the Peribonea, and with trap at the falls of Ouitchouan. A pale syenite is the predominating rock in rear of St. Paul's Bay; with this no trap is associated, and it is the deposite of extensive beds of magnetic iron, all of which is in favor of its primary character; it possesses no traces of stratification.

Quartz rock was seen only at Mal-bay, underlying micaceous schist, and between it and syenitic gneiss.

Primary limestone? associated with syenite gneiss and trap, occurs at Moulin à Baude. A loose mass of a similar description was found on the shore of lake St. John, near and to the westward of the Post of Mitabitschuan: it was angular and of an untravelled aspect.

The felspar rock (sui generis) alluded to, is one, many of those characters resemble those of Labrador felspar from which it differs principally by its want of iridescence. It forms the north eastern shore of Lake St. John, and its islands from the mouth of La Grande Décharge, to within a mile of the Koucouthime river, and was met with by Mr. Nixon in La Petite Décharge; also uninterruptedly forming a rocky bank from the foot of the first rapid in the Peribonea river, to the great falls on the same. We can say nothing of its rock associations, as they were not seen. It will probably fall under the general term syenite, although hornblende is a very rare ingredient in it.

Magnetic iron occurs in such extensive beds in rear of St. Paul's Bay,

as to entitle it to be considered as a rock. It was met with in abundance in no other place.

Clay-slate, in association with grey wacke, was met with on the Island of Orleans. Both are well known to be very abundant in Lower-Canada, particularly in the neighbourhood of Quebec, and from thence towards the mouth of the St. Lawrence, but they are principally confined to the southern side of the river. Clay-slate was also met with on Lake St. John, for we still persist in calling by that name the rock we met with there, apparently alternating with fetid limestone.

Sandstone was met with only at Mal-bay, underlying horizontal limestone. The position of this sandstone answers to that of the old red sandstone, which, if it be, it is another instance among many of the absurdity of affixing such a name to a rock, which in the present instance is of a light greenish colour.

Secondary limestones, among which, for convenience, we include, after the example of Maculloch, the transition class, were found at Mal-bay, St. Paul's Bay and Lake St. John. The fetid limestone which overlies micaceous schist at St. Paul's Bay, we have conjectured to be a transition rock. On Lake St. John, secondary limestone of the carboniferous order, forms, with clay-slate, the southwest portion of the shore of the lake, from Pointe Blue to within three miles of the Post of Metabitschuan.*

It has been before said, that no appearance of the operation of a violent deluge was observed; on the contrary all the soils, in many places very deep, consisting of clays, marly clays and sand, were generally composed of the finest particles, without the trace of a boulder or even a pebble. The surface of the land was so far free from them, that we do not remember to have seen one that was waterworn, and evidently a travelled fragment, the position of which did not point directly to the route by which it came. It must not be omitted to mention, however, that with the exception of the several portages, our observations were confined to the shores of the rivers and lakes, which were met with in the Saguenay Country.

With the exception of those entering among the constituents of the rocks we met with, minerals were rarely seen. We did expect particularly to have found some of the numerous family of zeolites, tenants as usual of amigdoloidal trap; but neither of these nor of that rock, were any traces perceived; the pores of the vesicular syenites that were occasionally observed, being entirely empty. The following are the names of the few minerals we met with.

Calcareous Spar—Principally in the fetid limestone on lake St. John, and more particularly filling original cavities in its fossil organic remains.—The only instance of its being associated with trap, was the one stated while describing the rocks on the Saguenay.

Epidote? (earthy)—Apparently entering into the composition of some of the syenites in the Saguenay. Also associated in some abundance with magnetic iron in St. Paul's Bay.

Augite? probably enters into the composition of some of the traps, but it is not easy to distinguish it from hornblende.

Coccolite—Disseminated through magnetic iron, in rear of St. Paul's Bay.

Garnet (common)—Forming distinct nodules in micaceous schist at Mal-Bay; the beautiful foliated variety of precious garnet, known to occur here, was not seen.

Magnetic Iron—In extensive beds in rear of St. Paul's Bay. Also forming veins and small distinct concretions in the syenites, and disseminated in small grains through some of the traps of the country we traversed.

Green Carbonate of Copper?—In small traces among some of the syenites we met with.

It must be obvious to those instructed on the subject, that an individual rapidly traversing a country, will acquire a knowledge of its geognostical features more readily than he can hope to obtain of its mineralogy, because rocks, unlike minerals, occupy large spaces, and a specimen struck from one place is characteristic of many others; but minerals, with the exception of those which enter among the constituents of rocks, are very partially deposited, and either chance favors the hasty tourist, or they must be very abundant in the places he seeks them, if many be met with.

Passing

* Sir Alexander McKenzie states that the narrowest part of Lake Winipic is not more than two miles broad, at which place the west side is faced with rocks of nearly horizontal limestone about thirty feet high, while the east side is more elevated, and is composed of a dark grey granite. Immediately afterwards, he observes, that all the great lakes of the country are to be found between these extensive ranges of granite and limestone. Keating appears to think it probable, that the excavation of this lake was occasioned by the easier decomposition of the strata at the junction of the two formations. It is certainly deserving of attention that the Lakes, Slave, Bear, Athabasca, Winipic, Superior, Huron, Ontario, St. John and Mississinny, have large deposits of secondary limestone on their shores, whilst some portion of these lakes is either granitic, syenitic or trapose. The limestone of Lake St. John must be either isolated or connected with the same formation at St. Paul's or Murray Bay. A considerable degree of probability is given to the latter conjecture, by the existence of a fine level country at the back of these settlements.

Appendix
(V.)
14th Jany.

Passing Cap Pillard, near St. Joachim, Mr. Nixon observed a vein of a green and white substance from three to six inches in thickness traversing the rock. Upon landing, specimens were procured, which being examined subsequently, were found to be mixtures of carbonate of lime, under the form of calcareous spar, and a variety of fluato of lime, denominated chlorophane, the characters of which are given below. The rock it was associated with, has not been examined.

Colour.—A lively light green.

Translucency.—Deeply translucent on the edges.

Structure.—Laminar, sometimes indistinctly so, approaching compact; intimately associated with calcareous spar.

Lustre.—Dull, or none.

Hardness.—About that of fluor.

Powder.—Whitish green, and rough.

Specific Gravity.—3.0.

Effect in Acid.—Throws out a few bubbles, owing probably to the calcareous spar it is associated with; when sulphuric acid is poured upon it, in a state of powder, it gives out white fumes which corrode glass.

Phosphorescence.—Placed on a heated poker it phosphoresces in a dark room with a beautiful green and purple colour. In boiling water it emits a palish light. This phosphorescence was observed after the mineral had been exposed to acid.

Effect of the Blowpipe.—When exposed to its exterior flame it does not decrepitate, but phosphoresces with a beautiful blue colour, like the interior flame of the blowpipe, and becomes white. When exposed to the interior flame it forms a white dull enamel.

EXTRACTS from the Journal of an Exploring Voyage from Quebec to Lake St. John, around the said Lake and thence back to Quebec, kept by Mr. Nixon, 66th Regt. containing such parts of the said Journal as relate to the quality of the soil, the capability of settlements and other objects immediately connected with the Mission, whereof Mr. Nixon formed a part.

AT Tadousac, a chapel, the clerks' house, forge and two stores, together with six huts or barns, form the post, six adults generally reside there; I saw a very fine English bull, two cows, the same number of calves, seven sheep and one horse; for their winter food, hay is brought from La Petite Rivière et Grande Rivière Bergeronne, the former three and the latter three and a half leagues from Tadousac: from Mr. Wagner's account, the former produces a most valuable supply of excellent wild hay for the post, and is capable of producing much more than is at present made; very little is obtained from the latter place, and both are difficult of access. In the harbour of Tadousac, there is a stream of excellent water.

On the left bank of the river Saguenay is a large projecting rock, called La Boule, three miles distant, as is reported, from Tadousac. The banks on each side of this part of the river, are amazingly steep, falling almost perpendicular into the river.

One of the clerks of the post gave me the following information: "The navigation of the river Ste. Marguerite is very rough, accessible only by small canoes, the land on each side covered by various species of timber, which becomes hard wood the higher it is ascended. Ash and a little maple make their appearance now and then. There are occasional patches of good land, running up the distance of twenty miles, interrupted by mountains. The course of the river is the same as that of the Saguenay. The depth of these patches of good land are from three to five acres. The nearest place of cultivable lands is at the *Déscente des femmes*, eleven leagues from river Ste. Marguerite, the extent is about sixty acres upon the river, running back on an ascent of land for two miles. He has not examined the land, but judges from the appearance of the wood. There is a small stream apparently not navigable for canoes. About two or three leagues above this point, the next good land appears continuing up to Checoutimi, it extends back, from what he heard, a good distance. The first good land on the south shore of the Saguenay, after leaving Tadousac, is the river St. John, distance nine leagues, good ground for about one mile square and is equally divided by the river: after this, Trinity Bay, where he conjectures the quantity of good land to be the same as at the last mentioned place. This is twelve leagues from Tadousac, five leagues further up the river, brings you to the commencement of the Ha Ha bay, where the good ground is interrupted occasionally by mountains, running down to the shore: the next piece is within three or four miles of Checoutimi, running back beyond the reach of the eye, and there is also an extensive meadow. The Port of Tadousac is always open, vessels have come in during the month of March, and found it perfectly clear of floating ice; last year the Saguenay was frozen only as far down as the river Ste. Marguerite, as he was informed by the servants of the post at Checoutimi, who came down there the latter end of March. He, himself was at the little Saguenay, a league higher up than the Ste. Marguerite, about the 13th of April last, when there was no ice lower down than that river."

Nearly opposite La Boule, the banks of the Saguenay assume the appearance of a ruined castle, the timber destroyed by fire. On the left side of La Boule is a deep gully, apparently dividing it from the main land.

At the back of our encampment, was a most remarkable perpendicular high rock, running nearly N. E. and S. W. and is a continuation of La Boule, composed of granite and gneiss, with horriblende schist, interstratified. Mr. Baddely, on the shore there, knocked off a specimen of magnetic iron ore from a detached rock. There is sufficient vegetable earth round this encampment, to raise grass for pasture or meadow, to supply Tadousac. Mr. Brownson has sown a small patch of timothy at that post, which has succeeded.

Pointe Passe Pierre is one league distant on the same side of the river of our resting place of last night. At the Bay des Petites isles de Passe Pierre, is a cabin, on the main land, this is the first fishing place of the King's Posts: where is likewise a small river unfit for canoes from the rapids, it is very narrow, being only from 100 to 150 feet wide.

There is a great difference between the waters that run close to the shore, and those of the centre, the former being comparatively tranquil when there is a great swell in mid channel. We arrived in the bay of St. Etienne, distant four leagues from Tadousac, at twelve, where there is a small river running into it, a good harbour and anchorage. The harbour is much larger than that of Tadousac, and is protected from all winds, except the east and N. E.; round this bay, is a small tract of alluvial land, white birch and poplar appear but on the west side of the bay.

The King's Post company have a fishery in Ste. Marguerite's river, in which five or six hundred salmon are caught in a good season: they have a hut and hungard there. In the *Anse au foin* is a small river and plotch of good land. The Ste. Marguerite's river is navigable for canoes, the distance of 20 or 30 miles, it is about an acre broad on an average, and at its mouth about two. It is one of the principal hunting seats of the Indians. The first of the St. Lewis' islands we reached, was covered with fir, poplar, white birch and some spruce, these islands are six leagues from Tadousac. We honored two prominent points on the right bank of the river opposite the St. Lewis' islands, with the names of Victoria and George, and one nearest the smallest of the islands Cape Andrew.

Point Comfort Bay is exactly opposite St. John's, having on its right Point Comfort; it has a sandy beach, a water fall on the right, the timber round it principally red pine.

Ste. Marguerite river, in point of size, is the largest that flows into the Saguenay, next to it St. John's, and then follows La Trinité, resembling the little Saguenay, which ranks next in order. The little Saguenay runs further into the interior, branching off towards Mal-Bay, and is much frequented by the Indians as a hunting ground.

In Half-way Bay, exactly opposite Trinity Bay, on the left, is a fine water-fall of fresh water. In the Bay des descente des Femmes, Mr. Wagner went over the heights and discovered a considerable quantity of red pine, sufficient to indicate, that in different parts of the neighbourhood, timber of that description was to be found of value; he met likewise with some patches of hard wood, such as are found on good lands, the small quantity of low land appeared fit to answer agricultural purposes. Past Cap à l'Est, at half past three, and then came in sight of the Bay de Ha Ha, which certainly is the most magnificent bay I ever saw, running from Cap à l'Est, into the shore of the bay, three leagues. After doubling Cap à l'Est, we stretched across to the southern shore of the Saguenay, and put up for the night in Bear's Cove.

About 6, A. M. reached Rocky Bay, from the great number of rocks that shew themselves above the water, and arrived at Checoutimi at two.

Checoutimi is the chief post of the Company, it being the depot of the interior, there is a small chapel, built by the Jesuits, one hundred and two years ago. The ground about it is very excellent, having the appearance of being composed of great abundance of rich marl, mixed with excellent soil and sand. Mr. Andrews, the clerk of the post, who has resided here six years, has two good patches of potatoes, looking remarkably well, and a bed of cucumbers—last year he cultivated melons in the open air. Every thing that grows in Montreal will here.

He

He informs me that were he to settle on a farm in the Saguenay, he would rather do so exactly opposite to the Post on the northern shore or else a quarter of a mile above on the southern. On a question being put by Mr. Wagner he replied, that were a man employed alone on the care of the garden, no garden round Montreal could equal it in produce. In May, in spring tides, the water rises here sixteen feet.

Aug. 19.—Left Chicoutimi and embarked at eleven. The river as far as Lake Kenwangomi or Tzinogomishish is called the Chicoutimi, and in which are seven portages; the timber bordering it consisting of red and white spruce, poplar and black birch. Between the portages of Chicoutimi and Maie, and between Maie and Attim the country is flat and well timbered, and appears well adapted for cultivation; timber, white and black birch, poplar, pine and spruce. On digging in the Portage des Chiens (Attim) the general face of the soil was found for a depth of five inches of vegetable mould upon a stratum of about the same depth of sand; and in another place a sand mixed with loam apparently of a more fertile nature. I dug up the ground in three different places in the Portage de l'Enfant; it appeared to be of a very fertile quality, consisting of a rich black loam intermixed with a dark sand. The country, as far as the eye could reach, seemed highly favourable for settling; no hill to be seen; the timber of the same description as already mentioned. Between the Portage de l'Islet and Portage des Roches the land is very fine; at the end of the last portage, we launched into Lake Kenwangomi (Long Lake.) This lake abounds in beautiful scenery, in fine bays, and is well timbered; there are three islands covered with small willows, they would make excellent meadows when cleared. One of our party shot a fine white rabbit at Pointe aux Sables, with red eyes, small transparent ears, and remarkably small head.

Aug. 21.—At the end of the lake, which is about six leagues in length, we entered thro' a narrow and short channel, Lake Weque; this channel is in general perfectly dry, forming a portage between the two; at the end of it is the Portage de Kenwangomi, or Weque Caputtigan, at least a mile long, particularly well timbered; to it Mr. Wagner gave the name of Isle de Formosa, or Bell's Isle, it is the height of land between Lakes Kenwangomi and Kenwangomishish, the former emptying itself into the River Saguenay by the Chicoutimi; the latter by the River des Aunes into Lake St. John. On digging in several places we found about four inches of vegetable mould on a bed of rich marl and clay. At the end of this portage is Lake Kenwangomishish (the lesser Long Lake), half way over which on our left we entered Lake Kasuskikeomi (the lake of clear water) called by the Canadians Lac Vert, it appeared to be long: the point of junction between the two is called Apelogramah.

The whole of the land in Lake Kenwangomishish near the water is covered with ash and elm; from this lake we entered Rivière des Aunes or Pashi Kasinanishchi-zebe (the Alder river); at the commencement of which the rushes and flags are very fine, from eight to twelve feet long. The land appeared good but low; from the river we fell into one called La Belle Rivière, which flows into the lake. The view as you enter the lake is splendid, and not seeing the opposite shore adds to the effect. We coasted the shore of the lake for four leagues to the Post at the mouth of the River Metabitsuan, Lat. $48^{\circ} 23' 12''$, (the place where the course of the water ends), leaving on our left the small river Knushpygish, where is a small ascent and a grove of maple, where the sugar for the post is made.

Aug. 23.—Formerly the Jesuits had three hundred acres of land cleared, of which there is now only from ten to fifteen at the utmost under cultivation, the rest is fast returning into its original state. In the garden are now growing cabbages, carrots, peas, French and kidney beans, onions, potatoes, pumpkins, indian corn, cucumbers, wheat and barley, together with beet-roots and turnips. Two plum trees were pointed out as those planted by the Jesuits, as likewise some garden currant trees. The residents at this post are the clerk, Mr. Murdoch, two men, a woman and three children, the live-stock a bull, cow and heifer; four buildings, dwelling house, hangard, bakehouse and stable, form the post.

Jacob Duchesne stated, "that the climate here is much superior to that of Chicoutimi, perhaps a difference of twenty days in general; he has lived here four summers and three winters; every autumn the tops of the potatoes are frosted from twenty to twenty-five days earlier at Chicoutimi than at this post. It is now twelve days since the barley was cut, it was sown about the third of May, the wheat between the seventh and tenth. He was engaged in farming operations till the age of sixteen at Malbay. He further stated that they can sow ten days earlier here than at Malbay."

Aug. 24.—During our progress to overtake Messrs, Baddeley and Hamel this day, Jacob Duchesne continued his information. "That he himself has not visited the Peninsula, but the Indians say that it is in general a level fine country, as you get towards the end of the Lake Kenwangomi, and at the foot of the rapids there are some mountains which are not very high. The year before last the old chief Thomas, who was deprived of his rank by the Company for some offence in trading, going in the latter end of December from Lake St. John to Chicoutimi with his family, stopped at the Bay of Cushkouia on Kenwangomi, the ice not having taken lower down, and their not being sufficient snow to walk on snow shoes. He went from that place to Chicoutimi with his two sons, and returned to the Bay of Cushkouia, each of them carrying a sack of

flour, and performed the journey as he was informed, going and returning, in five days, and said it was easy travelling. The present chief, Simeon, is a very great traveller: he will leave the mouth of the Grande Decharge in the morning on snow shoes, travelling on the ice, and reach Chicoutimi at four o'clock in the evening of the same day. The usual route is by La Belle Rivière and the Lakes; it takes them three of the short winter days. Another winter route is the following: to strike off across the island about three quarters of a league from the mouth of La Belle Rivière and come out at the Point du Sable (Opowoka), which is about five leagues of country quite level and very well wooded. Besides the main Decharge of Lake Kenwangomi, there is another commencing a short distance from the Pointe aux Sables and emptying itself into the Grande Decharge more than half way down its course. He has been informed by Mr. Verrault that before reaching the Grande Decharge it passes under a mountain and re-appears on the opposite side. This stream is navigable for canoes in the spring but not in the summer. On entering the bay of Cushkouia, at the distance of ten or fifteen arpents, you reach a small lake, the water of which, after a course of five leagues, empties into Lake Kenwangomishish at the upper part of that lake near the Portage. Last winter two Indians, Simeon and Nicholas were hunting the caribou and beaver in the Presqu'isle, on their return told him they had been down as low as Cushkouia, had met with no lakes but many small streams. Last winter he went a days' march from the Post taking a S. E. course, crossing Knushpygish, travelling a distance of eight or ten leagues and returned the next day; the country was level, the timber consisted of birch, ash and maple, the country beyond it resembling other parts in the neighbourhood of the Post Lake St. John, which have the appearance of mountains at a distance, but when upon them are gentle swells of land, table land, and valleys with different exposures. There is a sugary, one and a half league from the Post on its right, which can produce seven cwt. of excellent sugar on an average annually."

The whole shore of Lake St. John (Kouquatigommi, the low shallow lake) as far as Kouquatimzebi (the dog owl river) Lat. $48^{\circ} 37' 59''$ is a sandy beach of the depth of from half an acre to two acres. I ascended a considerably high sandy hill this morning, and from it had a good view of the country in the interior which improved in appearance; this opinion has been backed by the accounts of Messrs. Hamel and Baddeley.

Aug. 26.—Mr. Baddeley having, at the request of Mr. Stuart, joined Mr. Wagner's party, Mr. Hamel and myself, after wishing them all a bon voyage, at half past ten, A. M. ascended the river Kouacatim, the timber on each side of which was poplar, white birch, ash, spruce and elm; after overcoming several impediments from fallen trees, we succeeded in getting up half a league, when Mr. Hamel thought it useless to ascend any further, we each landed on separate banks and went into the bush about a mile, found the soil sandy. My party came to a swamp, crossed over it, and reached a large rock the boundary of our walk, the timber consisted of white spruce, fir and poplar. On my return to the canoe I found Mr. Hamel had met with the same description of ground: the land on each side of this river, as far as we ascended and could see, appeared flat. On the land from Kouacatim to the mouth of the Peribonea river (the curious river) the timber is in general black spruce, a few poplars, cypress, white birch and pine; the land itself low and swampy, from the waters in spring overflowing the sand banks and remaining in the hollows and becoming stagnant.

Aug. 27.—John Young, one of our voyageurs, has been eighteen months in the employ of the Post at Chicoutimi: this spring, in company with another man, he went to the bay de Ha ha, (signifying prospect opening) and penetrated the woods for about a league and found the ground good; he tells me there are three rivers which fall into the bay at nearly the same spot, also opposite to the post of Chicoutimi there is an old road of about nine miles long, there are no hills, but there is a swamp for about half a league, after which the ground is good; the timber white birch, cedar and spruce.

Aug. 29.—Arrived at half past twelve at the mouth of Musk Rat river, and at half past three the River Peribonea, lat. $48^{\circ} 42' 37''$. We ascended it one-and-twenty miles, during which we had to traverse three portages, of the last two miles the Lake Noh-oui-loo was formed; in general the soil proved to be good. On the right bank of the lake we ascended Rum River, the timber white birch, red and white spruce, and a few pine, the banks low and covered with franc foin in great abundance.

Sept. 7.—Opposite the mouth of Musk Rat river we entered one to the north-west to which we gave the name of David in honor of Mr. David Stuart, one of the Commissioners, and followed the course of it for eight miles and a half, where we were stopped by rapids and a portage. After coasting the shore of the lake, from the mouth of the River Peribonea for about seven miles we entered the River Mistassini, lat. $48^{\circ} 38' 55''$, having on our right a large cluster of islands to which I gave the name of my very excellent and real friend, Thomas Leigh Goldie. We ascended the Mistassini for nine miles; it is beautiful in its width, islands and woods, but wretchedly bad in its soil, being all sand on both sides, and its waters extremely shallow.

Sept. 10.—We crossed over to the Isle aux Couleuvres, Manitou-Ministuki (the Evil Spirit's island) with a bottle for the purpose of preserving one of the snakes, but after a minute search did not even see the

Appendix
(V.)
14th Jany

generally shed in spring. There is another island not far from this called Grosse Isle, and between the two a high yellow sand bank with a solitary tree or two on it. If there are snakes on Manitou-Ministuki, the only reason I can give for not meeting with any is that the sun having nearly reached the horizon they had crept into their holes for the night.

Sept. 11.—Our progress this day was not great, reaching only the mouth of the River Ouiguatshouan, (Do you see the Falls there?) as I wished to take a sketch of the falls, having observed them on the opposite side of the Lake, and from Mr. Hamel having taken three different intersections on them. After a great deal of difficulty and fatigue, ascending and descending hills of no inconsiderable height, we reached their foot, unfortunately on the wrong side to see them from the commencement of their fall. However, we soon forgot our fatigues in admiring the beauty of these falls, which rival Montmorency in height and surpass it far by the distribution of its water over the pending rocks in its descent. The fall is about a mile from the mouth of the river, during which distance no smooth water is to be met with, being one continued rapid; I am told higher up than the great fall at the commencement of the portage there is another nearly one hundred feet high.

Sept. 13.—The fishing season for white fish commences at the mouth of the Ouiguatshouan, about 15th October; last year in one day they caught 300, and in the whole season 1700 and upwards; they were preserved by freezing and subsisted the people of the post and Indians till spring; each fish on an average weighing from one and a half to two pounds. The season for the awenanish is from the 15th May to about the 20th, or latter end of June, they are chiefly taken with the hook, and weigh from two to three pounds.

I obtained the following information from Mr. Murdoch, Clerk at the Post:—

“I do not think that more than ten sail can ride in safety in the harbour of Tadousac; at low water a ship can be brought close in shore, for it descends at once. At spring tides the bank is quite dry, the water rises at the highest eighteen feet in spring and fall tides, but commonly twelve in the summer. In the P'Ance à Catharine there is a distance of three quarters of a league, formed by the point or Battures aux Allouettes and the point of the Saguenay; this forms St. Catharine's Cove, and in it from two to thirty fathom water. Thirty sail can ride in safety from the westerly winds; one-third of the tide out there runs in a pretty tolerable swell with a south-east wind. The reef of rocks that project from Point au Bouleau runs about two miles out and forms a kind of half-moon open to the eastward. In spring-tides these rocks are entirely covered, but there is always a surf about them; at the end of these rocks there is a small sandy island never covered by water, this and the rocks are called Pointe et Battures aux Allouettes. Ships of the line can sail up as far as Rocky Point, which is four leagues from Chicoutimi; at low water they can beat up, although the wind may be contrary, having the flood in their favour, but there are only two places of anchorage for them, between St. Catharine and Rocky Point and St. John's Bay and St. Marguerite; the former six, the latter five leagues from Tadousac. There are many harbours for schooners from sixty to eighty tons, and they can carry their fastenings ashore should they not find anchorage. Vessels of eighty tons can sail up at high water and anchor close to the Big Rock at Chicoutimi; they must tide it up from Pointe aux Roches, owing to the rapids and shoals of that part of the river. The harbour for vessels at Chicoutimi is to the westward of the Big Rock, opposite to the landing place; they can drop their anchors and haul the vessels dry ashore. From St. Marguerite upwards the current of the flood is hardly sensible in high waters in spring and fall. The tide runs up to the foot of the falls of Terres Rompues which is about two leagues further than Chicoutimi; it rises about fifteen feet. The Big Rock is at least twelve feet high, and I have seen the waters three feet above it. I reckon the distance from the House at Chicoutimi to the Post of Lake St. John, canoe route, from twenty-three to twenty-five leagues, and consider the land very good between these two places, excepting the west side of Lake Kenwangomi, which is uneven and rocky; the prevalent timber, fir, spruce, poplar, elm, a good deal of ash, a small quantity of red pine, and scarcely any white—white birch abounding most; a considerable quantity of black or canoe birch, and some scattered maples and cedar are to be met with all along; scarcely any cypress until you arrive at Koushpigan (a place which is ascended). The fish abounding between Chicoutimi and Koushpigan are, red trout, watouche or chub-pike, carp and doré, the two last to be found only as far as the falls of La Belle Rivière: the red trout only to be met with in Lake Kenwangomi and the Portage de l'Islet, and a few in Lakes Weque and Kenwangomish,—chub and carp are in great abundance in the two latter lakes. By report I have heard that there are smelts in Lac Vert, but I have never seen any myself. I think a vessel of sixty tons can sail in Lake Kenwangomi, having every reason to suppose the water to be very deep in the centre and west side of it. Lake St. John is navigable for a flat-bottom built vessel of from thirty to fifty tons. The fish most abounding are, pike, carp, doré, white-fish, awenanish, chub, and a fish called la munie, resembling the eel in colour, the dog-fish in shape, and cod-fish in the head, but much flatter, the average length two feet and a half; the Indians are very fond of it boiled, but the white people make no use of it except the liver, which is considered a delicacy; it is also used for bait during the winter season. I consider the awenanish the best fresh water fish I have ever met with. Lake St. John is much exposed to the north-west and south-west winds, when a heavy swell runs to the opposite bank. I have seen the lake in the fall of the year in such a

state that there would be considerable danger in crossing, indeed almost impossible to do it on account of the broken swells. Under the lee of the land there is no sea for some distance off, according to the point from whence the wind blows; I have seen it one sheet of foam.

“There is a difference in the climate of from fifteen to twenty days between Chicoutimi and Post Lake St. John. I left Chicoutimi last fall about the 23d September, where the potatoe stocks were all frost-bitten, as also all the cabbages and onions, and arrived at Post Lake St. John on the 25th found my potatoes still in blossom; they remained so until about the 12th October, when I dug them up. I conceive this great difference is owing to the low situation of the ground, and the vicinity to salt water at Chicoutimi. Every thing will grow here (Lake St. John) that does in the neighbourhood of Quebec, and even melons; as for the latter I had them, but the worms destroyed the young plants. The ice of the lake is not passable in safety before 10th of January; the first appearance of its forming on the lake is about the 10th November, and begins to form all over about the beginning of January; but in consequence of the prevalent winds is not passable at that time; the first frost last year was on the 17th of October. The lake is navigable all round but not in the centre, about latter end of April, and all over by the 8th or 12th of May. The ground will be in a state of cultivation before the lake is clear; and free from frost at least one foot deep by the first of May, at which period peas were put in the ground this last season. I sowed ten gallons, and gathered better than ten bushels; owing to the wetness of the season about one-third of the crop was lost; they were fit to be taken up on the 1st Sept. The women in cleaning peas for soup collected not quite half a pint of wheat, which as an experiment I sowed about 7th May, cut it down on 8th September, and found it produced a good half Winchester bushel. Mr. Wagner took at hazard two of the ears of wheat, and counted the grains on one 41, on the other 40. The stocks grew about four feet high. On the third or fourth of May I sowed half a bushel of barley, which produced on being reaped, &c. on the 5th of August between five and six bushels. A pint of Indian corn sown on the 10th of May has given me at least ten gallons, a great quantity has been destroyed by worms: all the grain was sowed without manure. I commenced planting my potatoes on the 10th and finished on the 13th May about eight bushels which I have as yet not dug up. Last year about the same time, not quite the same quantity in heaps returned three hundred bushels; in heaps there is not so much seed required as in ridges, this year the potatoes are in ridges; the year itself has been very unfavourable for crops in general.

“The Seigniorie of Port-neuf and Milles Vaches Bay are excellent lands; hay can be cut in the latter for at least one thousand head of cattle, it would be very advantageous to settlers as fodder for their cattle at their first commencing to clear the bush: the land in fact is cleared naturally all around the bay, the timber of a good growth, white pine and spruce. The country on the east side of the bay is level for a considerable distance, at least for nine leagues, and there is a stream of water in the bottom of the bay that will admit of building a mill of six saws and also a grist mill; the bay is very accessible to small craft. Port-neuf Post has an excellent harbour, but it is only to be entered at high water by small craft; the soil is as good as that of Milles Vaches, but it is on higher ground and the timber inferior. The two seigniories are contiguous, and form together six leagues in front by four in depth. There is a river running close by the house forming the harbour, and it is sheltered to the southward by a high bank of sand which is not covered at high water.

Sept. 14.—At the mouth of the Petite Decharge (Cushpetunish) Mr. Hamel struck across the island, whilst John Young and I went down the side of the rapids on the rocks to what we imagine the meeting of the two discharges which join at a very short distance from the mouth of the Petite Decharge; they there form a small lake, the size of Weque at the west end of Lake Kenwangomi. On our return to the canoe, we took a straight course through the bush, found it rocky in almost every part; the timber, pine, epinette, cedar, very small, and some white birch. The island is small, being about the size of the others lying in the mouths of the two discharges, the distance between the extreme points of which is about four miles. All the islands of this part of the lake are rocky, the timber on them is of a mixed description. In fact, the division between the two discharges is a collection of small islands; the whole group occupies a space of about five miles in length; they were honored by Messrs. Baddeley and Hamel in being called the Dalhousie islands.

Sept. 15.—On our return to Chicoutimi we entered a lake on the left of Kenwangomishish, to which Mr. Hamel did me the honor of giving it my name; the country round it level and soil good; timber, fir, black birch, a few white, and some spruce, elm and ash. Entered Prisoners Bay on our left, in Lake Kenwangomi, at half-past three, ascended River Baddeley seven miles, terminating in Lake Young. White black and grey birch, fir and alder on the different shores was the prevalent timber.

During this evening (Sept. 16), I employed myself in taking down the following information of John Young respecting the produce and climate of Chicoutimi:—

Mr. Nicholas Andrews, Clerk of the Post of Chicoutimi, in the early part of May last year, as soon as the frost was out of the ground, planted eleven bushels of potatoes; were dug up the latter end of October

and produced 127 barrels; a great quantity had been destroyed by the pigs getting into the garden. I am told in Mr. M'Leod's time, which is about seven years ago, they tried Indian corn, oats and turnips, and succeeded; cucumbers grow very well. This spring I sowed in the garden, which came to maturity, red-beet, onions, carrots, radishes and cucumbers. It always freezes ten or twelve days sooner at Chicoutimi than at Lake St. John. Last fall, when I started from Chicoutimi in the middle of September for Assuapmousoin, the potatoes were all frost-bitten. I went past the post of Lake St. John, five days after, those there were as green as in the month of June. I account the difference of climate to be in consequence of the proximity of Chicoutimi to the salt water. At Chicoutimi, three or four days after the frost is out of the ground, about the 5th or 6th of May, it will be fit for cultivation, the ground about is excellent for a farm; at the latter end of October the frost regularly sets in. There is no great difference between the seasons of Chicoutimi and Quebec; the Saguenay is frozen down to St. Marguerite, this is in general safe, except opposite to the hay-ground a league and a half from the house: it is dangerous in consequence of the rapids, and a person ought to be cautious in crossing the ice owing to the seal holes. I consider the land between Chicoutimi and Post Lake St. John to be very good, except that on Lake Kenwagomi, which is rocky; spruce, white birch, white and some red pine and fir in that lake until we reach Les Aunes, where there is elm, ash, spruce, fir, and some pine here and there; the best ground I conceive to be on La Belle Rivière.

"In Lake St. John the River Perebonea as far as we ascended is good land for settlement. I have made several trips to the Post of Assuapmousoin, where the land is low and swampy: for the first fifteen leagues there is some middling ground, but from thence to the Post it is mountainous; the river is one rapid, white with foam.

"This spring the Saguenay up to Chicoutimi was navigable on the 18th April, it was counted a late season; the navigation is closed about Christmas, according as the high tides answer."

Sept. 18.—After leaving Sable Point we turned on our left into the River Pastagoutsie, leading us into a series of very beautiful lakes, one of considerable extent, to which I gave Mr. Hamel's name; we pursued our course till we came to the rapids six miles from Lake Kenwagomi, the timber much the same; one river was so blocked up by rushes we could not penetrate far with our large canoe.

This season of the year there is not enough water to float so large a canoe as ours, it was with great difficulty we passed the rapids. I would recommend in all expeditions of this sort a small one to be taken in addition to the larger as easier of portage, as also rendering the facility of research greater.

The soil on the land was good but rocky and in detached masses. Previous to leaving Kenwagomi we passed a considerable outlet from the lake which I am told leads by rivers and lakes to St. Paul's Bay.

Sept. 20.—Started from the Post of Chicoutimi at half past one, and arrived at a place where two rivers meet in sheets of foam at four; here the difficulties of ascending the river with the canoe, or of taking it over the mountain which is exceedingly steep, induced us to consult together and send the canoe back to the Post with the greater part of the provisions and two of the men, whilst Mr. Hamel, Nastash, (the Indian guide), Gill, Young and myself should strike into the woods towards the little river, which runs from Lake Kenwagomi into the Décharge. We ascended the mountain, saw a fine flat of considerable extent; fir, very little, white spruce and white birch and poplar formed the timber, there was fine land on each side of us for colonization as we ascended in the canoe. The rapids as far as this are magnificent, impassable for canoes of any size shape or sort.

Sept. 21.—At ten A. M. we reached the summit of a hill four hundred feet above the level of the water, from whence we perceived a fall, the sound of it we had heard for some time in descending. We first reached six succeeding falls, each on an average ten feet high, at the highest of them the rock is so perpendicular that any person can walk without receiving much damage. From these we ascended to the great falls which are about 240 feet, made a sketch of them. In spring when the waters are high they must be magnificent indeed. The name of the river is Pastagoutsie.

I believe confidently that these falls being heard at a very great distance in spring, their being very near the Saguenay, together with all the Indians affirming there are no great falls in that river but a succession of great rapids, are what gave rise to the famed falls of the Saguenay which every one has heard of but no one seen. The ground over which we passed is rocky, but where soil is it is a fine mould: the timber black and grey birch and a few white pine, epinette, fine cedars, white spruce, and in one place passed through a considerable sized sugary of small maple. Continued our route along the course of the Pastagoutsie till one, when being satisfied with the soil we directed our course towards Beau Portage, passed over a good extent of plain, the soil was tried three times, once in mixed timber, the second time in spruce, and the third in fir ground, and found them all good for cultivation, the spruce ground will require draining. About a quarter of a mile from our present encampment there is an extensive grove of white birch of a very large growth; there the ground was tried and found sandy. Passed over this day fourteen brooks of excellent water.

As yet I have not seen any timber that would prevent a good working axe-man from clearing and preparing it in piles his six or seven acres per month. In speaking to Nastash about the falls of the Saguenay, she said there were none, but only a succession of very great rapids, and that she had never heard any Indian speak of them: she is upwards of fifty. She tells me there are on the same river falls higher than those we saw yesterday, that the Indian name for the lake to which I have given Mr. Hamel's name is Assinigaashtets (a rock that is there) but the whole river from Lake Kenwagomi to its junction with the Saguenay keeps the same name; there are six portages, two very long ones, one of them longer than the other, the other four short. On the left bank of the river are long slants and no hills, where we reached on the 18th was the height of lands, from whence the rapids commence, and are interrupted. At the rate of a white man's travelling it would take six days to walk from Lake Kenwagomi along side of the river to where it falls into the Saguenay.

We tried the soil in a mixed bush, found it sand mixed with yellow earth; an hour after came to an extensive swamp which we passed over and returned to the Post of Chicoutimi at two, passing over during the day fifteen brooks.

Sept. 23.—This evening Mr. Corneau gave me a plan of the country between Chicoutimi and his post at Shippashaw. I have been very minute in taking down his information of the country which I marked on the plan. He likewise gave me the names of several lakes and rivers not put down in the map Mr. Verrault left at the Post Lake St. John for Mr. Stuart.

The house at the Post of Chicoutimi was built in the years 1794 and 1795. At the distance of 170 feet from the banks is a rock 11 feet high, and the tide rises five feet above it: to leap upon it was a favourite amusement of the people of the post a few years ago, this encroachment of the river has been made in these forty years.

(Signed) W. NIXON,

Ensign, 66th regt.

14th Jany

To ANDREW STUART and DAVID STUART, Esquires, Commissioners for exploring the lands in the neighbourhood of the Saguenay, Lake St. John, &c.

Gentlemen,

Having had the honor of being employed as Surveyor, under your orders in the Saguenay Expedition, I hasten to lay before you a Report of the manner in which my time was employed in the several visits and surveys made by me in pursuance of my instructions, on the right bank of Lake St. John and on its tributary streams and outlets, as well as on the Peninsula, formed by the outlet of the Lake on the one side, and by the river Chicoutimi, the Lakes La Belle Rivière and the river Kuspahigan on the other.

I venture to hope that you will forgive the ill-arranged expressions and quotations which will be unfortunately but too frequent in the course of my Journal.—I shall however use my utmost endeavours to make my Report as intelligible as possible, and to recompense your attention by authentic facts, which will, I hope, be confirmed by my two honorable fellow travellers, Messrs. Baddely and Nixon, for whose praise my pen would be too feeble, and I shall therefore abstain from entering into the detail of the pains they took to render themselves of service to the expedition, even by the most minute researches, as will be seen by their Report. Hoping that you will grant me the indulgence I desire, I take the liberty of subscribing myself,

Gentlemen,

Your most devoted, &c.

J. HAMEL, Surveyor.

SAGUENAY EXPEDITION,

LAKE ST. JOHN, &c. &c.

Journal kept by Mr. Joseph Hamel.

WEDNESDAY 6th August 1829.—Having caused our baggage to be carried yesterday evening on board the schooner La Clairisse, capt. Aug. Dechene, of the River Ouelle, of fifty-three tons burthen, and having received orders to be ready to embark early this morning, I was on the wharf at half past five, and found Mr. Baddely waiting there. Messrs. Stuart, Wagner and Bowen arrived very soon afterwards, and then Mr. Nixon, upon whose arrival we went immediately on board, and weighed anchor at three quarters past seven A. M. We found on board five Voyageurs and two canoes, destined for the expedition; the persons composing which were as follows:

Andrew Stuart, Esquire, Commissioner; T. H. Baddely, Esquire, Lieut. R. E.; Mr. W. Nixon, Lieutenant 66th Regt. Benedict Paul Wagner, Esquire; Mr. Edward Bowen and myself.

Voyageurs.

Guillaume Gill,
Grégoire Laneuville,
Alexis Boisvert,
Noel Paquet,
Joseph Beland.

The wind being east, we had to beat down the river, as long as the tide served us, and reached the old ship yard at St. Patrick's Hole, on the Island of Orleans, three leagues below Quebec, where we went on shore at $\frac{1}{4}$ past 11 A. M. Provisions were brought on shore and we dined at 2 o'clock under a shed in the yard, which is now abandoned. At 4 o'clock, P. M. we received orders to embark, which we did, at a $\frac{1}{4}$ past four, the wind continuing foul. At 5 o'clock our schooner was hailed by a boat; the captain immediately rounded to, and the boat coming up, we recognized Mr. Proulx, one of the Surveyors attached to the expedition, whom we had left at Quebec in the morning. At 7 o'clock, as the wind increased, and the schooner was without ballast being opposite the church of St. Jean, on the Island of Orleans, it was considered advisable to bear away for the harbour of the river Laffeur, a mile and a half higher up, where we went ashore about nine o'clock, and lodged at the house of the widow P. Pouliot.

Thursday, 7th August.—The wind in the same quarter, and blowing as fresh as it did yesterday; being in consequence unable to proceed, I piloted Messrs. Baddely and Nixon across the fields, on the property of Lachance and Blouin, in search of minerals and vegetables. We went as far as the wood, a distance of about two miles, we then returned, having met with some success in both our pursuits, and arrived at our

quarters at half past eleven, A. M. At noon, Mr. Baddely and myself took the sun's meridian altitude, at the door of the house (the widow Pouliot's) in which we were lodging, and found the latitude to be $46^{\circ} 53' 40''$ north.—About 4 o'clock, the wind having abated, and the tide beginning to ebb, we went on board and beat down the river as far as the harbour of La Grose Isle, where we went ashore about nine o'clock, P. M. and slept comfortably enough.

Friday, 8th August.—We set sail about 5, A. M. with a fair wind, and came to an anchor a mile and a half to the south west of the Saguenay, about three miles from the shore, where we were obliged to remain for the night.

Saturday, 9th August.—Set sail early in the morning for the harbour of Tadousac, with a very light breeze from the west, and that afterwards failing, we were carried by the currents near to Isle Rouge, where we were obliged to come to anchor in seven fathoms water, and at about twelve miles from the land. A ten A. M. set sail again with a fine breeze from the west, which carried us in two hours to Tadousac, where we arrived too late to take the sun's meridian altitude. Mr. Brownson, the storekeeper there, came alongside before we went ashore, and received us very politely on our arrival at the post. I began immediately to make a plan of the post and harbour of Tadousac, and did not finish my work until after sunset.

Sunday, 10th August.—Busied the whole afternoon in receiving the provisions destined for the canoe No. 2, which being unable to carry the whole, we were obliged to put part on board the boat which was to carry the party attached to the expedition as far as Chicoutimi. At one o'clock the party embarked in the boat commanded by Mr. Brownson, and very much encumbered with baggage; the wind hanging to the eastward, we set sail as soon as we entered the Saguenay, but unfortunately it failed us, when we were about three miles and a half from the mouth of the river, which prevented us from doubling the Cape de la Boule, on the left bank of the Saguenay opposite to which the current is very strong. Our two canoes however succeeded in doubling it, and the men encamped a very short distance beyond it, whilst we were compelled to encamp most uncomfortably in a bay below it, where, as we had only a small axe and green wood, we passed a very bad night, the rain falling abundantly, with the wind at north east.

Monday, 11th August.—The people in the canoes having been uneasy as to what had happened to us, came to us about nine o'clock, and Mr. Proulx went on board one of them. We left our camp without regret at ten A. M. The tide beginning to flow with a light wind from the east. After sailing the whole day we encamped about twenty miles from the mouth of the Saguenay, in a bay, to which we afterwards gave the name of the Bay of Comfort, having found there dry wood enough to keep up a good fire during the whole night.

Tuesday,

Tuesday, 12th August.—The wind was west; we embarked at nine o'clock, and proceeded against both wind and tide; we went ashore at noon, for the purpose of taking a meridian altitude.—At three quarters past twelve we re-embarked, and at two P M we entered a bay on the left bank, opposite Trinity river, which we called Halfway Bay; i. e. thirty-six miles from Tadousac, according to the estimate of the Voyageurs, which distance ought, however, to be reduced at least one fifth, if not one fourth.—Mr. Baddeley and myself were busied in taking different observations until eleven P M we then re-embarked and continued our voyage; and during that tide we reached La Descente de la femme; a distance of about sixteen miles above Half-way Bay.

Wednesday, 13th August.—Before we embarked, Mr. Baddeley and myself took the sun's meridian altitude, and found the latitude to be $48^{\circ} 22' 29''$ north.—At half past three, we doubled the cape on the east; at a quarter past five, the tide having been ebbing for nearly an hour and the current being very strong against us, we entered a bay, (Bear's Cove) on the right bank of the Saguenay, in order to encamp there. At half past seven P M. Mr. Proulx came up with the two canoes. At nine o'clock, while Mr. Baddeley and myself were engaged in making different observations, the sky became clouded, and there fell a violent shower, followed by a steady rain, which continued during the whole night. About eleven we were informed that a little canoe belonging to Mr. Brownson, in which were a barrel of rum and the stand of Mr. Proulx's Theodolite had gone adrift. The other two canoes were sent in search of it but without success.

Thursday, 14th August.—We left this place at half past five A M. and rowed till a quarter past seven, when we set our sail, having a light fair wind:—We took to our oars again about eleven o'clock, and went ashore towards one o'clock P M about one and a half miles below Chicoutimi, intending to proceed thither on foot, being all wet through by the constant rain which had fallen this day.—We arrived there at two P M. and were very well received by Mr. Andrews, the clerk of the Post, to whom in every respect the highest praise is due for the attention the Expedition received from him: every individual attached to which, would be wanting in gratitude if he failed to testify it publicly. An hour after our arrival, the canoe which had gone adrift the preceding night, was brought to the Post by Guillaume Gill and two other Voyageurs, who said they had found it about six miles above the place from which it had gone adrift, and upon the opposite shore; it had been carried off by the flood tide; which affords a striking proof of the strength of the tide, eleven miles below Chicoutimi. Mr. Baddeley and myself passed the evening in watching for the passage of several stars, but we were as unlucky as we had been the three preceding nights; as the sky became covered with clouds before the time of the stars passing.

Friday, 15th August.—I was busied in preparing the provisions and baggage for starting on the following day for lake St. John, by the river Chicoutimi, &c., according to the arrangement which Mr. Stuart had then first made, that I should go with Mr. Baddeley in the canoe No. 2, which Mr. B. was to command; and that we should proceed immediately to lake St. Jean, and that, commencing our operations on the right bank of the lake, we should explore the whole of that part of the lake between the grand outlet and the river Assuapmousoin, which place the Deputy Surveyor General was expected to reach: but that if by chance he should not be there on our arrival, we should proceed onwards, until we met him. Mr. Stuart was to proceed up to lake St. John, in the small canoe with Mr. Brownson; Mr. Proulx was to explore Ha ha Bay; and Messrs. Wagner, Nixon and Bowen, in one of the large canoes, were to explore the peninsula formed by the grand outlet, the river Chicoutimi, the lakes, &c. Took the sun's meridian altitude to-day, and determined the latitude of Chicoutimi to be $48^{\circ} 24' 37''$ north.

Saturday, 16th August.—We caused twelve loads to be carried over the portage of Chicoutimi, which is two miles long; and received our instructions in writing; but could not start in consequence of the rain which fell in the morning.

(Copy of the Instructions:—)

“Instructions to Mr. Baddeley and Mr. Hamel:

“You are requested to proceed to lake St. John, entering that lake by La Belle Rivière, and in the first instance to make an exploring survey of the country, lying between the grand outlet of that lake and the river Assuapmousoin.

“If the Deputy Surveyor General should not then have reached that river, you are requested to continue your exploring survey until you shall meet that gentleman with his party. Your return will be either by the grand outlet or lake, or by the Belle Rivière, as you think best. Another party being employed to survey the peninsula lying between the Belle Rivière and the lake on the one side and the grand outlet on the other, all the objects of the mission will be attained without your descending the latter stream. You are furnished with a letter from the sub-lessee of the Posts to the clerks in charge, which will entitle you to any assistance that you may require from them.

(Signed) A. STUART, Comr.”

“Chicoutimi, 16th August 1828.

Sunday, 17th August.—One part of our baggage having already passed, we considered ourselves as on our journey, and made no scruple of causing the rest to be carried over, and in setting out. We left Chicoutimi therefore, at noon, Messrs. Nixon and Bowen accompanied us as far as the place of embarkation; we embarked about half past one, with three Voyageurs, Guillaume Gill, John Young and Alexis Boivert. At half past four, in passing the Portage des Caiens, we met two Canadians, two Indians and a squaw, coming from Assuapmousoin. At half past five we found ourselves at the end of the Portage de l'Enfant, where we encamped, on account of the difficulty we should have experienced in finding a fit place for encamping, if we had proceeded farther. The soil at the Portage is blue clay, either pure or mixed with sand; and the timber is red pine and cypress, white birch, spruce, sapins, &c. with a few white pines. On the shore of that part of the river, which we ascended to-day, the principal timber is spruce and white birch; the land appears unbroken, and the soil, though light, susceptible of cultivation.

Monday, 18th August.—It rained the whole night. We left our camp at eight A M. and after having been out in many showers, we were compelled to encamp at one o'clock below the Beau Portage, in consequence of the rain, and for fear of spoiling our provisions.—The principal timber as far up as this place, is sapin, white spruce, white birch, aspen, with a few white pines and black birches. The soil appears sandy. It rained during the whole remaining part of the day.

Tuesday, 19th August.—The rain continued the whole night, and the wind was north east. About ten o'clock the wind changed to the west. At noon we were at the Portage des Roches, where we found the latitude to be $48^{\circ} 14' 38''$. While at dinner there came on a violent thunder shower, which prevented our starting again before three quarters past three, P M. The showers being frequent, we could not get farther than the Sandy Point, on the north side of lake Tshinuagamitoh. As far as the Portage de l'Islet, the land appears very fit for cultivation; but from this Portage as far as lake Tshinuagamitsh, it is broken and rocky.

Wednesday, 20th August.—We embarked at a quarter past seven; Mr. Baddeley and myself went ashore at half past eight, on the north shore of the lake, to collect specimens of the rocks; at a quarter past ten we were opposite the mouth of the river Upikubatsch; here we found felspar, mixed with magnetic iron; we took the sun's meridian altitude, which here gave the latitude $48^{\circ} 16' 25''$. At 4 o'clock we reached the end of the lake, that is to say, the height of land. Our Voyageurs made two trips across the Portage of Tshinuagamitsh, and we encamped on the side of lake Tshinuagamitsh, leaving one load for each man to be brought across the Portage in the morning. The timber on the shores of the lake Tshinuagamitsh is white birch, cypress and red pine of middling quality, sapin and spruce; and the soil is clay mixed with sand. There is some ash and white spruce upon the banks of the lake where we encamped: the wind was, during the whole day, north west.

Thursday, 21st August.—We embarked about nine A M. and at eleven found ourselves among the rushes of Alder river. We dined at the Portage des Aunais, which is about twenty-five chains in length. We re-embarked immediately afterwards; but as this river is narrow and winding, and the alders grow in several places across the channel, Mr. Baddeley and myself were obliged to go ashore, in order to follow the course of the river on foot, under the pilotage of Gill, by a path which is but badly cleared. We stopped to encamp near the Belle Rivière, where our canoe did not arrive till seven o'clock. There is very fine flat land along the whole of this river, the soil very good and the wood, elm, ash, alder, &c., all of which are trees found only on good land.

Friday, 22d August.—The wind was south west, at half past five, Mr. Baddeley and myself commenced our journey on foot, and at six o'clock reached La Belle Rivière; we embarked at three quarters past six, and went ashore at the Portage de la Belle Rivière, which is eighteen chains long. From this Portage downwards the river takes the name of Kuspahigan. The current of the Belle Rivière is very equable as far as the falls, but is much stronger from the Portage to lake St. John. The land on the right bank of the river is of a superior quality from the River des Aunais to the lake. There are beautiful points of land all along the Belle Rivière, covered with elm and ash. The highest part of the bank is not above thirty feet, and upon this part are found aspen, spruce, sapins, some pine and white birch; and on each side of the river Kuspahigan, the land (which is a loam) is wooded in part with elm, ash and fir. We reached lake St. John at noon, and dined there; we continued our journey afterwards for the grand outlet, but could not reach it, and were obliged to encamp upon one of the very numerous islands between the two outlets, which we called Dalhousie Islands. These islands are mere rocks and unsusceptible of cultivation. The abundance of the magnetic iron of which these rocks are (in part) composed, renders the needle useless in their neighbourhood; and among the specimens which Mr. Baddeley collected on the island where we encamped, I found some which possessed polarity.

Saturday, 23d August.—The wind being west we embarked at half past eight o'clock, and reached the north side of the grand outlet at half past nine. This was the point at which we were to begin our operations, we

Appendix
(V.)
14th Jany.

we were to begin our operations, we remained there the whole day, and the following night, in order to take astronomical observations. I was further busied during the day in Trigonometrical observations.

Sunday, 24th August.—We commenced our journey about eleven o'clock, and at about one and a half miles from the point of departure, we found a brook which we at first took for a river; but having followed its course upwards for about a mile and a half, we were convinced that it was really a very small brook, and that during the height of the waters, the lake reached that point: We therefore returned. The right bank of this brook is covered with aspin, sapin, ash and brushwood, and the land very fit for hay; but the left bank, which is about ten feet above the water, is sandy, with a tendency to be swampy. From the point of departure to this brook, the bank of the lake, which is from six to ten feet above the water, is sand, and behind this there is a swamp of about half a mile in depth, but which cannot be crossed because it is covered with water; however, the high woods of spruce, &c. may be seen behind it. We continued our journey and encamped at three quarters of a mile from the river Cocuathimi; up to which place the banks of the lake continue the same.

Monday, 25th August.—The wind being west, and the lake too rough, we were unable to continue our journey. In consequence of this I set off with Gill for the purpose of reconnoitering the ground, and very soon afterwards arrived at the mouth of the river Cocuathimi. I then sent Gill back, to inform Mr. Baddeley of this circumstance, in order, that if it were possible he might proceed forwards, but instead of the canoe, Mr. Baddeley and Mr. Nixon, (which last had been of Mr. Stuart's party) came to me; and the latter gentleman informed me that Mr. Stuart with the other gentlemen belonging to the expedition were proceeding to make a tour of the lake. We therefore returned to our camp, and were obliged to remain there during the rest of the day. Neither Mr. Baddeley nor myself had expected this change of determination on the part of Mr. Stuart; for that gentleman wishing Mr. Baddeley to visit the country behind St. Paul's Bay, thought it advisable to put Mr. Nixon in his place; and the news of this was like a thunder stroke to me, seeing that we agreed so well together; Nevertheless, when I became acquainted with Mr. Nixon, I had no reason to complain.

Tuesday, 26th August. We began our journey, every one in the canoe, to which he was appointed, as follows:—

Mr. Stuart returning to Quebec, in Mr. Brownson's canoe, with three Voyageurs Messrs. Baddeley, Wagner, Bowen and Goldie, (the latter from Mr. Bouchette's party) in two canoes with six Voyageurs, to make the tour of the lake, then returning by way of Chicoutimi, will proceed to Malbaie and afterwards visit and examine the supposed volcano at St. Paul's Bay, except Mr. Wagner, who will join Mr. Proulx, and entering by the river St. John, will return by the river Malbaie. In my canoe, Mr. Nixon will take the place of Mr. Baddeley with four Voyageurs. We are to explore this part of the lake, as far as the mouth of the river Assuapmousoin, ascending all the rivers which we may find on our way; and afterwards to visit the peninsula formed by the grand outlet on the one side, and the river Shikutimish, or Chicoutimi, the lakes Tshinuagamitsh, Tshinuagamitshish, the river des Aunais, La Belle Rivière and the river Kuspahigan, on the other. We parted at the mouth of the river Cocuathimi, giving each other a parting cheer, and were not to meet again till we arrived at Quebec. We ascended this river to the distance of about a mile and a half from its mouth, and then finding it too narrow and too much obstructed for us to proceed further, I proposed returning. But previous to this, Mr. Nixon and I went with two men, and one of us on each side the river, to reconnoitre the land, which we found sandy, covered with spruce, sapins and aspin, and but ill adapted to cultivation. By the evening we had proceeded as far as Adder Point, (La Pointe aux Coulevres) a distance of about eleven miles from the grand outlet, following the sinuosities of the lake. At this place we encamped.

Wednesday, 27th August.—I was necessarily busied in making certain plans, until noon; I then began to measure a base line across the brushwood, in order to ascertain the width of the lake.

Thursday, 28th August.—It rained till near ten o'clock. I continued my base line during the remainder of the day. The swamp continues along the lake shore, as far as this place. The wind changed to the east during a heavy shower, which fell this evening, and continued in that quarter during part of the night.

Friday, 29th August.—The wind was west, and the weather very cloudy; we arrived at one of the branches of the river Peribauka, at half past one P.M., and after having dined, we hid part of our provisions and took with us only a sufficient quantity to serve us while we ascended a river, (Musk-Rat River) which, judging from its width and depth, did not appear likely to lead us far, and which, we believe to be the river Peribaudraiché, as laid down in Panet's chart. We came into the river Peribauka about three o'clock P.M., having been obliged to disembark several times, in order to lighten the canoe, and enable it to pass through the rushes, which abound in this branch:—no better land can be found than that on each side of this branch, it lies low and is wood-
ed with mixture of elm, ash and alder, and if once drained, would make

admirable meadow land. We ascended the Peribauka about four miles and a half, and encamped on the left bank. The land all along as far as this is clay mixed with sand, very well adapted for cultivation, and the timber is spruce, aspens, white and black birch, with here and there a white pine, all lofty, but of a moderate thickness, the pines excepted.

Saturday, 30th August.—The wind west this morning. We continued our journey, and passed three portages in the course of the day. The last was accomplished with much difficulty, as we had to pass over steep rocks. The soil remains as before described, as far as the beginning of the first portage, but from the first to the fourth portage, where we encamped, there are rocky points of about fifty feet high; the timber is chiefly spruce, white birch, with a small number of elm and ash. The wind varied from east to west, during the whole day, and in the evening was east.

Sunday, 31st August.—The wind was west during the whole day and the weather very fine. We caused our own linen and that of the men, to be washed.

Monday, 1st September.—We continued to ascend the river, and at the end of the portage we discovered a beautiful lake, studded with islands, to which we gave the name of N-dhaouiloo, the indian name of Andrew Stuart, Esquire, commissioner, given him by the Hurons as one of their Honorary Chiefs. Before we reached the end of this lake, we entered a pretty river about three perches wide at its mouth, which we ascended about a mile; we were then obliged to return, on account of its want of width, and the obstructions we found in it; Gill, one of the Voyageurs, gave it the name of Kuna, on account of the colour of its waters. The land on each side of the lake and of this river is very good, and the timber principally red and white spruce, white birch and sapin, with here and there a pine. Arrived at the head of the lake, which is about four miles long, we found a pretty fall, of which a sketch was taken by Mr. Nixon, while I was employed in passing the portage, (which is about 25 chains long) with Gill and Boisvert. Perceiving nothing but rapids at the end of the portage, I thought it better to go no further, as well because we were short of provisions, as because we supposed ourselves to be in the river Peribaudraiche, which must be very inferior in width, &c. to the river Peribauka. The soil and timber appeared to continue the same; it is level and good only below the first portages, and along the shore of the lake. We returned and encamped below the first portage, the wind being east with an appearance of rain.

Tuesday, 2d September.—We arrived at the place where we had concealed our provisions at noon, all of us wet through; it having rained the whole morning, with the wind at west. The rain continued the whole afternoon.

Wednesday, 3d September.—As John Young was very unwell, and had eaten nothing for several days, Mr. Nixon and myself determined to carry him to the post of Métabetchuan. In consequence of this, Mr. Nixon started for that post, with Gill and Boisvert. I remained with Terreau, and employed myself in drawing plans, &c. during the four days they were absent.

Thursday, 4th September.—The rain fell so violently during the whole of this day, the wind being east, that even my tent afforded me no shelter.

Friday, 5th September.—It rained till eleven o'clock, at which hour the wind changed to the west.

Saturday, 6th Sept.—Wind south west. Weather fine. In the afternoon, feeling more and more anxious about my canoe, I crossed the wood and the swamp with Terreau, and reached the borders of the lake, but could see nothing of it. While crossing the swamp I observed that if it was drained it would produce hay, for there is abundance of franc foin there. About eight in the evening I heard the report of a gun at a great distance, it struck me that it was the canoe, which was unable to find the entrance of the river. I was not mistaken; and caused a gun to be fired, which as well as three other shots we fired afterwards were not heard by them. The canoes arrived about a quarter past nine, and Mr. Nixon brought me a private letter from Mr. Stuart with some refreshments. He informed me that Mr. Bouchette had made the tour of the lake, and was returning.

Sunday, 7th September.—We embarked at half past seven, P.M., and returning by the lake visited that part of the river Peribauka, between the little branch and the mouth of the river, a distance of about three and a half miles. We went to reconnoitre a bay on the right bank of the river, and opposite the entrance of the little branch, where we found a fine river, which according to the information I have received respecting it is the river Peribaudraiche, to which we gave the name of David River, in memory of David Stuart, Esquire, one of the commissioners. This river is about ten chains wide at its mouth, and runs to the westward. We ascended it as far as the first portage, a distance of about nine miles and a half from its mouth. The land on each side is generally low, and though light (that is sand mixed with clay) is tolerably

ably susceptible of cultivation: the timber consists of white birch, spruce, pine, sapin, with a little elm, ash and willow. I passed the portage, which is about six chains long, and as far as I could see the timber appeared to be the same. We therefore determined upon returning, and encamped on the spot where Mr. Baddeley's party had encamped on the 26th August, which we knew by an inscription, conceived in these terms, "Exploring Expedition encamped here in the night of 26th Aug. 1828, God Save the King. lat. $48^{\circ} 42' 37''$."—The wind was west the whole day, and about 4 o'clock it became much colder.

Monday, 8th September.—The wind was north west, and in the morning, there was much appearance of rain.—At half past eight we embarked just as it began to rain gently. At three quarters past nine, the rain having considerably increased, we entered a small river, to which we afterwards gave the name of Boisvert, where we went ashore. After dinner we ascended this river about half a mile, and were obliged to return, on account of its becoming too narrow and too much obstructed. Aspin, white spruce and white birch form the principal part of the timber, and the soil consists of a mixture of clay and sand.

Tuesday, 9th September.—We embarked at a quarter past six, after walking in the water about a mile through the lake, to lighten the canoe and entered among the islets of Mistassini, from which place to the river, we were under the necessity of hauling the canoe along and walking in the water during the greater part of the time. At half past one we entered the Mistassini, a magnificent river, if we regard its breadth, which, at this place is about a mile and a half; but as regards the soil on each side, it is mere sand, and the timber, spruce, cypress and white birch with a few elms, close to the banks. We ascended it about ten miles, and observing no change, determined to return, in the humble conviction that it had not been misnamed in certain maps where it is called La Rivière de Sable. We encamped at the place where we had hidden part of our provisions, when we entered the river.

Wednesday, 10th September.—We left our camp on the sand islands or Islands of Mistassini, and by breakfast time reached the place where Mr. Baddeley had slept on the 27th August last, which we knew from a note conceived in these terms, "Exploring party encamped here on the 27th August. All well. Meridian altitude of a star double angle $99^{\circ} 37'$ index error $+ 22''$."

We gave this Point the name of Baddeley's Post Office, and left it at half past ten. Soon afterwards we entered the mouth of the river Assuapmouison, passing between many small islands covered with brushwood, and about noon we went on shore on the right bank of this river, a little above the island which lies farthest up the river. The whole of the land from the river Mistassini to the river Assuapmouison is sandy, and the timber chiefly spruce, sapin and white birch with some pine and aspin here and there. We dined at this place, and as the object of our mission was fulfilled as far as regarded the exploring of this part of the lake, we set out on our way to the post of Mitabetchuan. At a quarter past two we went ashore at Blue Point, where we expected to find certain fruit, as cherries, plums, raspberries, &c. but we found nothing but the trees. We saw here the ruins of the chimney of the house belonging to the old post at which Mr. Tasché carried on the fur trade during twenty years. We re-embarked about three o'clock, and proceeded as far as the Pointe aux Pins, where we encamped in order to visit the Isle aux Coulevres, which we effected the same day, but saw no adders, probably because it was too late. The wind was west during the whole day.

Thursday, 11th September.—The wind was so strong from the west that we could not proceed on our journey before one o'clock, P. M. At four o'clock we arrived at the mouth of the river Wiatshuan, and as Mr. Nixon was very anxious to take a view of the falls on that river, which is about a mile from its mouth, we stopped here and immediately started with Terreau, one of our men, who had come down this river with Mr. Bouchette, and pretended to be acquainted with the falls. But instead of conducting us by the portage road, which would have led us within about fifteen chains of the falls, he led us along the bank of the river, and it was necessary for us to summon up fresh courage in order to get there, across a number of such hills and valleys as are commonly found in the neighbourhood of rivers whose banks are not less than from two to three hundred feet high. Nevertheless, when we arrived there we were amply paid for the fatigue we had undergone in reaching them by the magnificence of those falls which do not yield to those of Montmorency, near Quebec, in point of height, and surpass them in the manner in which the waters are precipitated among the broken rocks; as may be seen by the view taken of it by Mr. Nixon, whose talent in this art is of no common kind, and who will not fail to give a correct resemblance of it. We returned to our canoe at six o'clock, and found our tent pitched, for our Voyageurs perceiving that the wind increased, and supposing that we should return late, thought it right to be ready before hand, although we had told them we intended proceeding farther, and going as far as the post. So we passed the night there. The wind was strong from the north west. The timber along the portage as far as the falls is of a superior quality, to what it is at any place I have visited up to this time; being a mixture of cedar, black birch, maple, spruce, pine, &c. and the soil where I examined, it was very fit for cultivation.

Friday, 12th September.—At a quarter past six we embarked with a strong breeze from the north west, which prevented our making the

traverse at the ordinary place, and compelled us to follow the shore as far as the post of Metabetchuan, where we arrived at three quarters past ten, and found there Mr. Alexander Murdoch, clerk of the post, a most respectable gentleman, by whom we were most hospitably received.

Saturday, 13th September.—As we were obliged to bake and get our linen washed, we could not leave this post until after dinner; when starting we were saluted by several shots, which we returned in the same style. The wind was south west the whole day, and the weather cloudy. About eight o'clock we reached Kuspahigan, where we encamped.

Sunday, 14th September.—We explored that part of the lake between Kuspahigan and the right bank of the grand outlet, and found that all along the borders of the lake in this part, the land is sandy:—But at a short distance back the soil is good, as we ascertained by entering a small river about a mile and a half to the north of Kuspahigan, which we ascended from fifteen to twenty chains, before we found the channel too much obstructed. The smaller outlet is five miles from Kuspahigan, and the side of the island between the two outlets next to the lake is about a mile and a half; that next the smaller outlet half a mile, and the side next the grand outlet, two miles. We returned and slept at our camp at Kuspahigan, where we had left our baggage. The wind was south west the whole day. Gill was troubled with a pain in his loins, which makes him unable even to steer the canoe, and we have therefore only three men left whom we cannot divide, so as to cross the peninsula, and send back the canoe; in consequence of this we shall be obliged to proceed to Chicoutimi.

Monday, 15th September.—We embarked at forty minutes after seven. Our provisions and baggage forming two loads at the portages. We got within a short distance of the portage of Tshinuagamitsh, where we encamped. In crossing the alder lands, I went a considerable distance into the wood, and found the land level and good.

Tuesday, 16th September.—In the morning we visited a small lake on the north side of Tshinuagamitshish, and connected with that lake by a small channel of about three chains in length, and about one chain in width, to which I gave the name of Lake Nixon. There is deep black land covered with alder all around this lake, and upon the banks, (which are about twenty-five feet above the water) to the distance of at least a mile, as I know, by having gone that far myself, the land there is unbroken and level, and the soil an excellent loam; the timber is sapin, black birch, spruce and some white birch; I saw only one pine. Nos. XXII. and XXIII. of Mr. Nixon's collections are specimens of the soil. The lake is thirty-six chains long, lying south west and north east, and about ten chains wide. We embarked at a quarter past ten, with the intention of proceeding, but from the information I had received from different sources, that the two lakes were connected by a channel to the northward of the portage of Tshinuagamitsh, we were induced to enter a channel of two chains wide, and after proceeding about twenty-five chains, came into a basin twelve chains wide and twenty long, at the end of which we found a small channel one chain wide, choked with alders, and having a strong resemblance to the Rivière des Aunais. We went up it about twelve chains, and were obliged to return in consequence of the quantity of alders. Mr. Nixon and I ascended the right bank which is about fifty feet high, by climbing over the rocks; it appeared to us that we were on a rocky point which did not extend to any great distance, and the small quantity of soil we found there was of the same quality as the specimens before spoken of. The timber, as far as our sight could reach, consisted of a mixture of spruce, sapin and black birch, all lofty. The general course of this river is east, which strongly supports the supposition that the two lakes are connected. We descended the river and at noon reached the portage; we passed the portage, which is about a mile and one fifth long, and dined, we started again at three o'clock, with the intention of visiting whatever might be worthy attention, on the north side of lake Tshinuagamitsh. The soil all the way along the portage, is blue clay mixed with sand, and is of an excellent quality; the timber is white spruce, black and white birch, sapin and red pine. By the evening we found ourselves within two miles and a half of the little river of the bay of Coushkaia, or at the supposed junction of the two lakes, and encamped there.

Wednesday, 17th September.—We ascended this river, the course of which is as far as we went west south-west, about four miles and a half, making seven miles from its mouth, and being prevented by the alders, which obstructed the channel from proceeding further, we went to reconnoitre the country, and at a distance of about half a mile, Mr. Nixon discovered a small lake of which this river forms the outlet. To this lake he gave the name of Lake Young; it may be about thirty chains long and seven wide. All the land we crossed to arrive at the lake, is rocky, and the small quantity of soil found there is a black earth. Along the whole of the river there is a mixture of red and white spruce, with some pine, white birch and sapin, and the soil is formed of the same mixture of clay and sand. The wind was west the whole day, and increased in the evening. We encamped on the sandy point where Mr. Bouchette's party had encamped on the 11th Sept.

Thursday, 18th September.—We embarked about six o'clock, and about sixty chains from the sandy point we entered the outlet of the lake called Pastagoutsy; and Mr. Nixon gave the name of Lake Hamel,

Appendix
(V.)
14th Jany.

to the chain of lakes which is found in the neighbourhood of lake Tshinuagamitsh. We descended this river as far as the foot of the first rapid, a distance of about six miles from its mouth, where the waters failing us we turned back. The timber on each side is all along white birch, spruce, pine, sapin, &c., and the land good but stony. At eleven o'clock we arrived at the east end of lake Tshinuagamitsh i. e. at the Portage des Roches, and continued our journey :—At sunset we reached the post of Chicoutimi.

Friday, 19th September.—I brought down my books, while the men were preparing for our visit to the peninsula, the want of a guide for which I felt more sensibly than ever, and being unable to find an Indian, who was ever so little acquainted with the localities, I was under the necessity of engaging a Squaw, of the name of Nastash, who pretended to be acquainted with it. The wind was west the whole day.

Saturday, 20th September.—Our guide having retarded our departure, we were unable to start until after dinner. We began our journey in the canoe, for the purpose of ascending the Saguenay, as far as the mouth of the river Pastagoutsy. But when we were opposite the river des Terres Rompues, we found it impossible to pass the rapids, and it was determined to send the canoe back with Boisvert and Terreau, and that we should proceed by land. All the land on the right bank of the Saguenay as far as the Terres Rompues, is composed of blue clay, as it is in the neighbourhood of the post of Chicoutimi. The wind was east.

Sunday, 21st September.—After two hours travelling, we reached the river Pastagoutsy, a few chains from its junction with the Saguenay. We found a fall on this part of near 249 feet high, of which Mr. Nixon took a sketch. We directed our course to the southward, i. e. keeping the river Pastagoutsy on our right (our guide declaring that she knew nothing of the country to the north of this river) and travelled during the rest of the day over a very level country, wooded as follows—viz : 1stly. A mixture of spruce, sapins and black birch, with some maple and white birch—soil, a grey loam ; 2ndly. spruce land—soil, a cold loam ; 3dly. a mixture of spruce, sapin and black and white birch—soil, loam ; 4thly. white birch—soil, loam mixed with coarse sand. We crossed several rivulets which run into the Saguenay. The wind was east, and the heat excessive.

Monday, 22d September.—We divided the party, Young and our guide accompanying Mr. Nixon ; I, on my part, started with Gill, and we directed our course for Chicoutimi, where I arrived at half past five. P. M. and found Mr. Nixon who had just come in as tired as myself. I found no difference in the timber or soil this day ; the land continuing always very level. In the course of the day I crossed sixteen brooks, all running into the Saguenay. The wind was west and the weather very hot. In the evening I determined the variation of the needle, by observations on the Polar Star : and found it $17^{\circ} 12''$ west.

Tuesday, 23d September.—My instructions having been fully complied with, as far as it was possible for me to do so without a guide, and during the time allowed for my stay here ; there remained nothing for me but to return to Quebec with all diligence ; and I therefore ordered the men to make all haste in washing their own linen and ours, so as to be able to start the following day. The wind was east.

Wednesday, 24th September.—It rained till near eleven o'clock, with the wind at east, and we left Chicoutimi after dinner, and before we encamped, reached Bear's Cove, where we slept.

Thursday, 25th September.—We set off at four o'clock, A. M., but the wind becoming too strong at sun-rise, we were obliged to land to the south of Cape à l'Est. We re-embarked about nine o'clock, but at half past ten, having both wind and tide against us, we were compelled again to go ashore. We re-embarked at three o'clock, the wind

being east, and did not land again till eight o'clock, by which time we had reached Half-Way Bay.

Friday, 26th September.—The weather was calm and it rained, however, we embarked about six o'clock, and went as far as the bay des Roches, though not without danger, the wind blowing strongly from the west. At half past twelve being anxious to reach Tadousac, we embarked, although the wind had not decreased, and the tide was still flowing, and after having run the greatest risk of going to the bottom in doubling the headlands, we arrived at Tadousac, where we met Mr. Andrews, the clerk of the post at Chicoutimi, who had been detained by the wind.

Saturday, 27th September.—A heavy gale from the north west, prevented our starting before five o'clock, P. M. we got as far as Duck River, where we slept.

Sunday, 28th September.—The weather was fine, and we reached the Malbaie River in the evening.

Monday, 29th September.—We continued our voyage with calm weather, and by night reached Green Bay, half a league to the westward of St. Paul's Bay.

Tuesday, 30th September.—We were unable to embark before half past six, on account of the length of the battures, which are mere mud at low water ; and at eight o'clock the wind became too strong, and compelled us to go ashore opposite the church of La Petite Rivière, where we passed the day. Here we found Captain Bayfield, with whom we past a part of the afternoon.

Wednesday, 1st October.—The wind having gone down a little, we got under way about seven o'clock, and although we were compelled by the wind to go ashore in the course of the morning, we managed to pass Les Caps, and arrived at the battures of St. Joachim at Sunset. But as it was then low water, we were obliged to wait 'til eight o'clock before we could enter the River Blondaine, which we had to leave immediately afterwards, to get into the St. Lawrence, between St. Joachim and St. Aune.

Thursday, 2d. October.—The wind was east, and the rain fell abundantly, till noon, when the wind changed. Notwithstanding this we got under way at eight o'clock, without paying any regard to the wind or tide, and continued our voyage until towards two P. M. when we were obliged to go ashore at Montmorency, to put fresh gum on our canoe. We re-embarked immediately afterwards, and at last arrived at Quebec, all safe and sound, about four o'clock. Not meeting either Mr. Lampson or his clerk, I left the canoe under charge of Gill, who was to deliver the baggage.

In this Journal I have taken care to set down no part of what was told me during the course of my travel, but have been satisfied with relating what I have really seen, and speaking of the places I have visited and passed through, referring to the Appendix which I shall give in with my Map for the more particular description of places, &c. I hope therefore that you will be pleased to accept it, as well as the profound respect of him who has the honor of subscribing himself,

Gentlemen,

Your very humble

And very obedient servant,

J. HAMEL, Surveyor.

Quebec, 8th November, 1828.

APPENDIX OR SUPPLEMENT to the Journal kept by JOSEPH HAMEL, Surveyor of the Saguenay Expedition, &c. &c. &c.

AS there would be some difficulty in finding in my Journal at the first the description of any particular place, and having besides, in making up my Journal, paid attention only to the recording of facts, and not even mentioning the latitude of the different places through which we passed (having kept separate notes of these things) I thought right to attach thereto the present Appendix, which will shew at once as a Supplement to my Journal, and as an explanation of my plan.

The Appendix will comprise the description of places, their vulgar names in French, their signification in the language of the Mountaineers, &c. The latitude as far as I have been able to ascertain it, and the longitude, by reckoning : the quality of the soil and timber, with some remarks on the advantage to be expected from the settlement of this part of Lower-Canada, which yields in this respect to no other place now settled, which I have visited up to the present time.

Tadousac

Tadoussac is situated on the river St. Lawrence, on the east side of the mouth of the Saguenay. There is a harbour here, which could not hold above five or six vessels, and even these would be under the necessity of carrying anchors ashore. The Company holding the King's Posts have a post here for carrying on their trade with the Indians, comprehending nine buildings, employed as stores, shops, &c. besides the Post House, which is 60 feet by 20, and a chapel of 25 feet by 20. A Missionary comes here every year, and passes some time. The highest tides rise 21 feet at this place. Longitude west from Greenwich, $69^{\circ} 19'$, and latitude $48^{\circ} 6' 44''$.

St. Catherine, Within the mouth of the Saguenay, and on the south-west shore, would hold 50 vessels, which would be sheltered from all winds except the west.

La Boule, is a remarkable rock, both on account of its height and of its shape; the ebb tide is very strong opposite to it. It is 3 miles from the mouth of the Saguenay, on the north-east side.

River St. Margaret, lies on the north-east side of the Saguenay, and about 16 miles from the mouth of that river. It is the largest river running into the Saguenay, between Tadoussac and Chicoutimi.

St. Lewis' Islands, are three in number, and all rocks; the one which lies nearest the mouth of the Saguenay, is the largest, and is about half a mile in length; it lies on the south-west side of the river. The south east end to which in passing by, we gave the name of "Old Way's Point" is about thirteen and a half miles from the mouth of the river. The two others which are much smaller, are on the north-east side, and near the shore.

St. John's River.—St. John's River lies on the south-west side of the Saguenay. It is said there is good anchorage here for all sorts of vessels. On its banks and near its mouth, there is about a square mile of cultivable land. Longitude $69^{\circ} 42'$, and latitude $48^{\circ} 13' 15''$.

Trinity River.—This river is on the south-west side of the Saguenay, and owes its name to three large headlands on the shore of the Saguenay, and on the north side of the place where it joins that river. It is in a deep bay, where there is a salmon fishery. It is about half-way between Tadoussac and Chicoutimi; for this reason the bay, which lies opposite to it, and was before called Le Ruisseau de la Trinité, was called by the Expedition, Half-Way Bay.

La Descente des Femmes, is a bay on the north-east side of the Saguenay, at the head of which is a small rivulet. It lies about 42 miles from Tadoussac, and owes its name to a melancholy adventure of some Indians, who were reduced to the last extremity by hunger, while employed in hunting, and finding themselves in this necessity, sent their squaws in search of assistance: the squaws came out of the woods at this place. The tide rises here about 17 feet. Longitude $70^{\circ} 11'$, latitude $48^{\circ} 22' 9''$.

Ha-Hi-Bay, is on the left side of the Saguenay, in ascending, and so perfect is its resemblance to the main channel of the river, that many travellers have been misled by it. Opinions differ with respect to the origin of its name, for which reason I shall say nothing of it. It runs about nine miles inland, and is as wide as the Saguenay.

Chicoutimi.—This is the Factory of the King's Posts' Company, and the only trading post on the Saguenay. It lies about 58 miles from Tadoussac, on the left bank, and at the junction of the river Chicoutimi with the Saguenay. There are four buildings at this post, reckoning the church or chapel. A Missionary comes every year in the months of June and July, and passes some time here, as at Tadoussac. He remains at the two places together, about six weeks. The soil here is blue clay, and tho' there are some rocks here and there very fit for cultivation. Nothing is now grown there but potatoes and vegetables for the use of the house only and they fetch hay for the cattle from a place nine miles below Chicoutimi, on the left bank of the Saguenay. The tide rises here 16 feet perpendicular, at spring tides. We came as far as this place in the schooner, and there is no doubt but square-rigged vessels might come here. Longitude $70^{\circ} 34'$. Latitude $48^{\circ} 24' 37''$. Variation of the Compass $17^{\circ} 12'$ west.

Presq'île.—The Peninsula formed by the grand outlet on one side, and by the river Chicoutimi, the lakes Kenuagomi, Kenuagomishish, the Alder River, La Belle Rivière, the Kushpahigan and part of lake St. John, on the others, lies between $70^{\circ} 34'$ and $71^{\circ} 29'$ west longitude from Greenwich, and $48^{\circ} 14' 33''$ and $48^{\circ} 34'$ north latitude. The soil, which is a loam, is in general well adapted for a settlement. The timber is red pine, cypress, white birch, sapin, white spruce, black birch, &c., all of moderate size, except the pines, which are scattered here and there, and are very large, but generally appearing of bad quality. The land, when you have once ascended the bank, is level; and if a settlement were formed here, beginning at Chicoutimi, which should always be the central point, a road might, by degrees, be opened, communicating with lake St. John, and this would be so much the more easy, from the circumstance of there being but one river to cross, and which (except during floods) may be forded. The Peninsula contains

about 245,000 acres, and would consequently hold 2450 inhabitants, allowing 100 acres to each. The climate is at least as mild as that of the neighbourhood of Quebec, but the spring is about 15 days later than at the post at the River Metabetchuan, on lake St. John.

River Chicoutimi.—The River Chicoutimi is one of the outlets of lake Kenuagomi, and after running about $7\frac{1}{2}$ miles in a south-west course, falls into the Saguenay near the post of Chicoutimi, about 58 miles from the mouth of the latter river. There are seven portages on this river, between Chicoutimi and lake Kenuagomi. The banks on each side of this river are not above 30 feet in height. But at a distance of about 10 chains from the first, there is a second bank of about the same height. The timber and soil are the same as in the peninsula.

Portage of Chicoutimi or Shekutimish Caputagan.—This portage, which is two miles in length, and on the left bank of the Chicoutimi, is very level, with the exception of a gully, formed by a small rivulet, near its south-west end.

Portage de la Poussiere, Meia Caputagan, lies 62 chains from the portage of Chicoutimi, and is nine chains in length.

Portage de l'Enfant, Washkow Caputagan lies 33 chains from the portage de la Poussiere, and is 7 chains in length. It owes its name to an accident which occurred about 50 years since to an Indian, who in passing this portage left a young child in his canoe, which was carried off by the current and passed over a very considerable fall without upsetting, to the great surprise of the father and of all who have seen the place.

Ile au Sepulchre, lies about 4 miles from the portage de l'Enfant, and derives its name from having been the burying place of two persons who had been drowned.

Beau Portage, Milow Caputagan, is six hundred and nineteen chains from the portage de l'Enfant, and thirteen chains long.

Portage de l'Islet, Ministouki Caputagan, is ninety chains from the Beau Portage, and 33 chains in length. It is so called, from an Islet in the middle, which is longer than the portage. A canoe may come down these rapids.

Portage des Roches, Assini Caputagan, is one hundred and forty-eight chains from the portage de l'Islet, and when the waters are high is about twenty chains long, but much shorter when they are low.

Lake Kenuagomi.—A lake about 23 and a quarter miles long, and about half a mile wide. Its banks on the south are in some places rocky cliffs, but rise much more gradually on the north side, with the exception of two or three rocky headlands. At the west end of this lake, there is another called Wiqui, of a round form, and about 12 chains in diameter, communicating by a canal, from 12 to 15 feet wide and 3 chains long.

The River Pastagoutzy is another outlet of Lake Kenuagomi, by which it discharges its waters into the Saguenay, about 11 miles to the north-west of Chicoutimi. It is said that it passes under a mountain in its course, but I have not seen it.

Cushcouia Bay.—In this Bay there is a very pretty river, which we called Baddeley's River, which is supposed to connect the two lakes, Kenuagomi and Kenuagomishish, a fact, which if true, can only be ascertained in winter, as the river is choaked with alders.

Portage Kenuagomi, or Insula Formosa or Belle Isle, is 96 chains in length, and lies on the height of land which separates lake Wiqui and Kenuagomishish.

Lake Kenuagomishish or Little Lake, is about 6 miles long, and from 12 to 30 wide; its banks are about the same as those of lake Kenuagomi, on the north side. At the entry of this lake is the River Baddeley, or supposed communication between the lakes, and thirty chains further on the same side lies Lake Nixon, 36 chains long and 10 wide; the banks on all sides of which do not exceed 25 feet in height, and the land of superior quality, being all strong land.

Rivieres des Aunais, or Pashitaounishish.—The River des Aunais is the outlet of lake Kenuagomishish, by which it discharges itself into La Belle Rivière; and although it is called nine miles long, if followed in its windings, it is in reality only 3 miles in a straight line; it is about 1 chain wide. There is but one canoe portage upon this river, which is 25 chains long, and lies about a mile from lake Kenuagomishish, and from thence to the Belle Rivière, there is a path which is preferred by those who have no duty to perform in the canoes, on account of the river being much obstructed by alders, and that canoes pass through it with difficulty.

River Kuspagan, (a place which is ascended).—The River Kuspagan

Appendix
(V.)
14th July

gan begins at the place where the river des Aunais meets it, and goes as far as lake St. John. Below the point of junction it takes the name of La Belle Rivière. Its length, if its windings are followed, is about seven miles and three quarters, and it is about 2 chains wide. About half-way, in going to the lake, there is a portage of about 18 chains long. It is the most difficult, and gives the hardest work to the carriers, of all the portages between Chicoutimi and lake St. John.

Lake St. John, or Peagwagomi (Flat Lake.)—Lake St. John is 57 and a half miles from Chicoutimi, and between 71° 29' and 72° 9' west longitude, and 48° 23' and 48° 32' 37" north latitude; it is about thirty miles long, by twenty or thereabouts in width, and ninety miles in circumference. Eight rivers, nearly all of the first class fall into this lake, viz.: the Peribonea, the Mistassini, the Ashuapmousoin, the Ouigouatshouan, the Ouigouatshgamish, the Metabetschuan, the Kuspygish and the Kuspaigan. With the least wind from the north-west, the waves run prodigiously high, which renders the canoe navigation very dangerous here. The waters also rise very rapidly in time of rain, and fall almost as suddenly, particularly when the wind is north-west. There are two outlets, by which this lake discharges itself, but correctly speaking, they should be reckoned as one, since they are united, about 2 miles from the lake, and then take the name of the River Saguenay; besides the group of islands opposite the outlets, and which we called Dalhousie Islands, there are two others on the south side of the lake, Adder Island, (Manitouministuck, which means in the indian language, the Island of Evil Spirits) and Big Island. It is said that there are great numbers of adders on the former. They lie about 2 miles from the main land.

Peribonea, (singular river.)—This river may be said to be the most beautiful, and that which offers the most advantageous site for a settlement of all the rivers in this part of the country. Its banks are level and wooded, with a mixture of aspin, white birch, red and white spruce, sapins and scattered red and white pine, with cypress. But in my humble opinion, no conclusion ought to be drawn from the timber, for we find equally in all parts of the country, aspin, white birch and pine (timber found generally on poor land) growing upon clay, rock and sand, in the same manner as we find aspen growing in abundance upon lands lately burnt and not under cultivation, in the district of Quebec. I am strongly induced to believe, that this is one of the original causes in the present instance. The higher we go up this river the better the land becomes, and had it not been for the unlucky accident recorded in my Journal, I should have ascended it as far as the eastern mountains, which are said to be about 90 miles from its mouth. But if we suppose the extent of the cultivable land on this river, to be only 75 miles, and that two ranges of concessions were established on each side, there would be room enough for near two thousand inhabitants, allowing 100 acres to each. The mouth of this river is on the northernmost point of lake St. John, viz.: in latitude 48° 42' 47", and its course is from the east north-east; it is about 45 chains wide, and the current is moderate, as far as the falls, which are about nine miles from its mouth. These falls are three in number, and above them is the lake D'ahaouiloo, about 4 miles long and one wide. There are many islands at the entrance of this lake, and beautiful points of flat land on the south-east side. A pretty little river, called Rum River, empties itself into the lake, on the north-west side. Variation 16° 40' west.

David River, runs from the north and empties its water into the Peribonea, 3 miles and 1/2 from the lake, on the right bank, and appears to be navigable for canoes, for a great distance. It continues about 10 chains wide, as far as the first portage, which is about nine miles and a half from its mouth.

River Kocontimi.—This is the only river between the grand outlet and the Peribonea, and of very little consequence, being much obstructed—which makes it very difficult if not impossible to ascend. Variation 16° 40' west.

Musk-Rat River, is a branch of the Peribonea, which comes out miles below south of the main branch, and is the same I have marked in my plan, as Le Petit Bras. It was called Musk-Rat River, on account of the abundance of these animals in it.

River Mistassini, deserves in many respects the name given it by several geographers, of Sand River, since for nine miles, which I went up it, not only the banks of the river are of sand, but the sand banks in several places cross the channel. It is about three miles wide at its mouth, including a group of islands, between which there are a number of channels, which might lead a traveller, who did not know the country, into error; but on the north of these islands as above them, the channel is not less than a mile and a half in width. The sands which are brought down by this river, render the lake so shoal, that there are scarcely three feet of water, at a distance of three miles from the shore opposite to its mouth; the latitude of which is 48° 40'.

Asuapmousoin or Asuap, (The Indians' Ambush,) is a river of the first magnitude, which falls into lake St. John, and is about a mile wide. The Company of the King's Posts have a trading post on it about 15 leagues from its mouth; it is one continued rapid, all the way from the post to its mouth. On the left side of its entrance there are several islands covered with brush.

River Ouiaatshuan.—This river runs from the west, and is in latitude 48° 27' north, and longitude 71° 58' west. About a mile from its mouth there is a beautiful fall, which may be seen from the opposite side of the lake.

River Metabetschuan.—The River Metabetschuan is in latitude 48° 23' 12", and is the only place where the Company of the King's Posts have a post for carrying on the Indian trade. The Jesuits had formerly an establishment here, with a certain quantity of cultivated land, but no traces of this settlement are now to be found.

As the object of the Expedition and of the Surveyors, was in particular to ascertain whether this part of Lower Canada was fit for the formation of settlements, I shall not finish without remarking to the friends of agriculture, that the Peninsula which extends from the post of Chicoutimi, as far as lake St. John, and both sides of the river Peribonea, which I have explored, deserve that settlements should be made upon them, as well on account of the quality of the soil, as the mildness of the climate, which is superior to that of the neighbourhood of Quebec; and by commencing at Chicoutimi, which should always be the central point of communication and trade between the proposed settlements and Quebec, roads would soon be opened as far as lake St. John, which would facilitate the communication with the settlements, to be afterwards formed on the river Peribonea and at other places on the lake, of which I have made no mention, as not considering them within my province.

And now, although fully convinced of the imperfection which will be found in the account of different places, &c., I have attempted to give in this Appendix, I shall nevertheless close it, begging at the same time your permission to subscribe myself with the most profound respect,

Gentlemen,

Your very devoted, and

Very obedient servant,

(Signed) J. HAMEL, Surveyor.

JOURNAL

Of the St. MAURICE EXPLORING PARTY, one of the Expeditions fitted out under Commissioners appointed by Government to carry into execution an Act of the Provincial Legislature of Lower-Canada.

RECEIVED through the Surveyor General instructions from the Commissioners, Andrew Stuart and David Stuart, Esquires, appointed by Government to carry into execution an Act of the Provincial Legislature of this Province, bearing date 21st July last, to proceed to Lake St. John, by traversing the Country from the St. Maurice River, to explore a certain portion thereof, and return by the Saguenay to Quebec.

Having accordingly made preparations for that service, I embarked on board the steam-boat, Chambly, on Monday the 21st July, at half after 7 o'clock, P. M., where I was joined by Mr. Gouldie of the 66th Regt., and by Mr. Davies, who volunteered to partake of the toil, privations and hardships that might be expected would attend so adventurous an expedition.

Tuesday, 22d. Landed at Three-Rivers on the following morning at half after 9 o'clock. Called on Mr. Bayden, the Agent of Mr. Lampson, in the service of the King's Posts Company, who directed me to the canoe that had been provided for the expedition, and made agreeably to the directions of the Commissioners.

Considering the tract of Country the St. Maurice Expedition were about to traverse, the numerous rivers, small streams, to be ascended or descended, and the many carrying places or portages likely to be crossed, besides the uncertainty with regard to the position of or distance to Lake St. John, and hence the uncertainty of the time required to effect the traverse across the country, rendered it highly incumbent upon me to take such a canoe as would be sufficient for the transport of a party consisting of not less than eight individuals, with the stores necessary for supplying them for a period of not less than one month, while at the same time not so large as to become a source of delay in the portages.

The one therefore now furnished, although of judicious dimensions to answer the latter object, I conceived nevertheless inadequate to bear the party and provisions together, and consequently an additional canoe of inferior size was provided for the Expedition.

The next step to be pursued and that of considerable moment towards prosecuting the service, was the expediency of obtaining from the Indians of the Algonquin and Tête de Boule nations, hunting along the St. Maurice River and its tributary streams, information respecting the most eligible route to Lake St. John. Several Indian families were assembled at the passage a short distance out of town, from various parts of the country, to receive the annual Government presents, whither I proceeded with Messrs. Gouldie and Davies, and accompanied by Mr. Bayden. Owing to many of the natives being in a state of inebriety or were in a profound sleep, I was precluded for the present obtaining the information I sought for. Meanwhile, one Bte. Crête, a Clerk in the service of the Company, who appeared intimately acquainted with the St. Maurice, as far as Obiguan, said he knew not of any communication or route to Lake St. John, other than by the River Kesikau, which falls into the St. Maurice above Mont au Chêne, which is situated about 300 miles above Three-Rivers, the head of that river being connected by portages and lakes with the River Assuapmousoin, which falls into Lake St. John.

This route, although probably a very good and recommendable one, I conceived must however carry me some hundred miles to the north of Lake St. John, which would in a manner defeat the object of ascertaining the nature of the land between the north shore of the St. Lawrence and Lake St. John, in the Saguenay country. I therefore sought some hunters along the streams that discharge themselves into the St. Maurice, about the posts of La Tuque, and was accordingly referred to one Bastonais, a hunter on the river which bears his name, and recommended as well acquainted with all that part of the country through which lies the extensive hunting grounds that belong to him and his family.

He clearly described and delineated in the usual Indian manner, on a piece of bark, the route by the Bastonais River, by carrying places and lakes, to the waters which empty into Lake St. John. The only difficulty to be apprehended would be the necessity of clearing the portages for a large canoe which are otherwise calculated for the small Indian canoe of 2½ fathoms generally.

Satisfied of this route, being far the most preferable than by Mont-au-chêne for various reasons, I did not hesitate to decide in its favour. The dark clouds to the SW portending some approaching storms we immediately returned to town.

Wednesday, 23d. This day, the additional canoe intended for the Expedition, was procured from the Indians at the passage or ferry, and the son of the Indian, Bastonais, a young lad, was engaged as a guide through his fathers hunting grounds, and finally matters put in a state of readiness to proceed the next morning, should the weather permit.

Thursday the 24th. At half after 9 o'clock, A. M. the St. Maurice Expedition set out from Three-Rivers, the largest canoe containing the bowman Vivier, the helmsman Jean Villeneuve, Jereau, middle paddle, and the guide, young Bastonais, Mr. Davies and myself, and the greater part of the stores, &c. The small canoe contained a bowman, Décôteau, and Jean Bigot, helmsman, with Mr. Gouldie and the remaining part of the baggage, &c.

Stopped at the passage which is about a mile up the river St. Maurice for a sketch of the route which the young guide's father had prepared for him, after which we continued our course up the St. Maurice, keeping in with the shore to avoid the force of the current—passed a few settlements of the Seigniorship of Cap de la Magdaleine.

The land, more particularly on the west bank, partakes greatly of a sandy soil clothed with white pine, spruce and white birch. Occasionally, a few spots of rich foilage diversify the sameness that pervades the banks of the river. At one of these, by the side of a small stream descending from the hills that here gently slope to the river, we stopped for dinner, after which we pushed from shore, and the voyageurs struck up their characteristic song.

Observed no material change of soil or timber. The banks rise more boldly and to a considerable height on approaching the Forges situated on the south-west bank about 9 miles above Three-Rivers. There we landed, while the voyageurs conveyed the canoes up the rapid round to Pointe à la Hache.

This extensive and valuable establishment of the Forges, the property of the Honble. Matthew Bell, Esq., is calculated by its situation, locality, and the great iron works carried on here, of becoming a place of much importance.

Joined the canoes at the point, where I directed the camp to be made, which was effected, notwithstanding the confusion arising at a first encampment.

Tuesday, 25th. It rained a great shower during the night, which only ceased this morning.

The River above Pointe à la Hache being rapid, and considered intricate for deep laden canoes, we determined on walking to the falls of Gabell, a distance of about six miles.

Excepting a few rising grounds the road lies over a tolerably level tract. The land varies much in its quality; where the sandy loamy soil prevails it is timbered with pine, fir, alpin, spruce and white birch; where that is of a clayey nature, the maple, beech, balswood, and yellow or black birch is generally interspersed. In one

Appendix
(V.)
14th Jany.

one place I noticed a white spruce or tamarack swamp, a description of bog shaking earth, in which are generally found the ores used at the Forges.

Reached the foot of the falls of La Gabelle, during a heavy shower, to which discomfort may be added the almost intolerable annoyance of the sandflies and musquitoes. Shortly after our arrival, the voyageurs and canoes arrived as the weather cleared up, who in a few minutes made a cheerful fire to dry our drenched clothes.

The falls of La Gabelle, which are about 25 feet elevation, descend through a partial contraction of the river, possessing little of the picturesque, although interesting to geologists, as besides the limestone abounding here, it is said quantity of sandstone and other minerals are to be found in its vicinity.

The land about the falls is of arable quality, containing however much gravel intermixed with the loam beneath the vegetable mould.

The provisions, baggage and canoes being carried over the portage, which is about 1550 yards, we embarked into the canoes at the upper landing, and proceeded on to the falls of the Grais, which are about half a league above La Gabelle, where we encamped at mid portage. The Grais, which can be considered but a mere cascade, are separated into several channels by a few islands clothed with a rich foliage, and present a pleasing effect from the lower end of the carrying place. The land exhibits very favourable appearances for settlement to considerable extent.

Saturday, 26th. Effected the transport of the stores and canoes, &c. over the portage, which is about 1030 yards long, and lays through a good quality of land, the soil of which is a dark rich loam with a bed of white clay beneath, the timber thereon is mixed, being cedar, black or yellow birch, balsam, fir, maple and white pine.

Leaving the Grais, the land improves, and the banks of the river present on either side by the rich verdure of the foilage, particularly on approaching Pidgeon Island, which partakes of the alluvial, an excellent tract of country; the elm, basswood, beech and birch, are intermixed with the spruce, balsam, pine and cedar.

Made Pointe Chevalier, about a league and a half above the Grais, and crossed a carrying place on the west bank, of 150 yards, while the voyageurs poled the canoes up the strong rapid and current that runs by the Pointe. Thence proceeded up the Basin Shawenegan, until coming opposite to the narrow pass or chafin which forms the channel of the St. Maurice, we had a partial view of the stupendous fall of Shawenegan, a sketch of which I drew upon the spot, although an imperfect one, yet may convey some idea of the grandeur of the subject it offers to the naturalist or geologist. Landed at the head of the bay, where I directed the encampment to be made.

Few falls or places indicate the marks of some extraordinary catastrophe or convulsion of nature as the Shawenegan: for that its present channel is the effect of some former event or fracture in the vertical strata, may appear pretty certain. If we consider that above the falls the general course of the St. Maurice is from the east towards the upper landing, that the distance between this and the lower landing is but 341 yards, forming thereby a peninsula composed of calcareous strata, with a thick surface of clay and loam, that could I believe have been easily penetrated, and it is equally surprising that the river should thence suddenly bend its course towards the south-east, which, divided into two channels, precipitates itself near 150 feet perpendicular, and rushes with terrific violence against the face of the cliff below, which is opposite the principal fall or channel below, which it unites with the interior one, and thus so great a body of water forces its way through a narrow passage not more than thirty yards wide. I do not doubt however but in the course of time the small peninsula will form an additional island, and that the St. Maurice will pour down its waters near the mouth of the Shawenegan River. But art would effect a canal at a trifling expense in comparison with the advantages to be derived therefrom in the event of an extensive settlement being made upon the St. Maurice.

Made an excursion up the Shawenegan River, by some called Manigouito, the foot of a rapid. The land on either side of this river is of an excellent quality. The timber on it is of the mixed kind, as maple, beech, fir, pine, black birch, &c.

Sunday, 27th. Observed equal altitudes and azimuths of the sun, from which I deduced the latitude $46^{\circ} 30'$, and the variation of the compass 10° west. At half after 2 o'clock, P.M. effected the transport of the baggage, stores, canoes, &c. across the Portage, which lies over the peninsula, ascending first sharply to the summit of the hill, then descending immediately to the landing, where we embarked. The river is here interspersed with several islands clothed with rich foliage, among which we discover the elm, the birch and the maple. The banks slope gently to the river, and present eligible seats for settlement; the soil is generally loam with clay bottom, timbered with spruce, fir, cedar, birch and pine, occasionally some elm. Landed at Snake Point, from whence we discovered the Portage des Hêtres, distance near four miles, which we reached, and encamped at half after 5 o'clock, P.M.

Monday, 28th. The Hêtres can be considered more a rapid than cascade, which are frequently shot down with large canoes by expert bowmen, who must be well acquainted with the course of the channel, which the voyageurs term *fil d'eau*. This place lies about $6\frac{1}{2}$ miles N. E. of Shawenegan, which latter is about 7 leagues N. W. of the mouth of the St. Maurice.

Surveyed the Portage, which is 616 yards to the upper landing, partly over some indifferent land somewhat stoney and timbered with beech, fir, maple, pine and hemlock, some birch and cedar. The men effected the carriage of the luggage, &c. by half after 9 o'clock, A. M., at which time we left the Hêtres. The river then keeps its general north-easterly course running down with great swiftness, which compelled us to keep close in with the shore. Its banks assume a bolder aspect, the right is much broken, and the soil is light sandy loam, generally timbered with spruce, pine, birch, some cedar and balsam.

Reached the Rapid du Rocher, at which place we got out of the canoes which were poled up the rapid, and we walked about 100 yards and re-embarked into the canoes after experiencing a heavy shower which fell in torrents upon us. From thence we reached the falls of La Grande Mère, about two leagues above the Hêtres. Nature, without giving to this fall the sublimity or the height of the Shawenegan, has collected a pleasing continuation of objects to reward the traveller for his pains of crossing portages and venturing in rapids, &c. Two islands occasion three separate falls in the whole width of the river, which is here about 15 chains broad, each varying from the other. The eastern fall and the most considerable for the body of water which falls a perpendicular pitch of about thirty feet, lies between the eastern shore and the large island which is covered with the evergreen, spruce and fir, and is a pretty curtain fall.

The centre fall is the most insignificant of the three, and falls down an inclined plane receding about 20° from the vertical, which together with the western fall or cataract is undermining the second and small island, which is a large mass of rock whose summit is partly grown with spruce, fir and white birch.

Paced the portage which is on the western bank, lying E.N.E. and 330 yards over a middling description of land timbered with spruce, fir, white birch and pine.

Dined for the first time on a description of fish, called by the voyageurs *chahatoosee*, a fish peculiar to this part of the river.

The canoes being loaded we proceeded on. The river keeps its general north-easterly course. Passed a river on the right bank which rises from three lakes in the interior, and notwithstanding the strong current against us we reached the Petites Pilles, about $2\frac{1}{2}$ miles above the Grande Mère. Encamped at 5 o'clock, and sent two men back in the small canoe to the last portage for the sponge, a very useful and indispensable article for bailing, which had been carelessly forgotten by them.

The Petites Pilles, which should be more properly called the Petites Filles, can be considered but a rapid, however too dangerous and difficult to be descended by canoes, although some voyageurs have ventured down at great risk, successfully.

The land I observed preserves the same features as below the Forges—a sandy light soil, as likewise the prevailing quality of timber on the banks of the river, as birch, fir, spruce, and white pine. This night I observed the meridian altitude of the moon, and the transit of several circumpolar stars, the latitude therefrom and the variation of the compass 10° - $15'$ west. At about 8 o'clock the men returned with the sponge.

Tuesday

Tuesday the 29th. Surveyed the portage which lies on the west bank of the river, and is 264 yards long. Thence proceeded in the canoes, passed a cluster of 5 islands which could afford excellent pasture if cleared. Came opposite to the mouth of the considerable river on the right bank, which connects by 11 lakes and as many carrying places with River Croche, and thence to La Tuque, from whence the St. Maurice bends its course W.N.W. to the carrying place of the Groses Pilles, which is about $4\frac{1}{2}$ miles above the Petites Pilles.

The land here becomes quite rugged and broken, the soil sandy and unfit for the purposes of agriculture, producing only, particularly on the east bank, but a stunted growth of birch and fir.

The stream runs with considerable swiftness, and round the points amounts nearly to a rapid. The Groses Pilles are but a cascade of 15 or 20 feet in height, yet a carrying place is unavoidably necessary to be made of 32 yards, from which looking up the river a new scene opens at once to the view; the right bank rises into high perpendicular cliffs of 250 to 300 feet, one in particular much resembling Cape Diamond. The rock of which the cliff is composed is chiefly primeval granite, dipping about 45° N. E. A few shrubbery grow in the crevices of the rock, while its summit is thinly clothed with fir, spruce and small white birch.

Stopped at noon for a meridional altitude of the sun, which however becoming overcast with clouds, I was deprived of an observation.

Passed L'Isle aux Fraises, which is a fine island near half a mile long. The river here, which is about 15 or 18 chains broad, keeps a general N.N.W. course, the land on either bank assuming in every respect a mountainous aspect, offering no fitness for agricultural purposes or for settlement, at least on the confines of the St. Maurice and for several miles in the interior, as may be occasionally discovered from the river.

The current runs down with surprising swiftness, and required the effort of the party to reach a meadow on the right bank, for encampment, below Birch island.

Wednesday, 30th. Came to the River Metinac, which is a fine stream discharging itself on the eastern bank of the St. Maurice, about eleven miles above the Grandes Pilles, from whence the general course is N. N. W.

This river communicates by portages and lakes with La Tuque. The St. Maurice there bends its course W.N.W. to the Island and Rivières des Cinqs, about ten miles above, opposite the lower Matawin Island, where there is a route by 5 lakes and 4 portages to the great Lake Matawin, which is the source of the river of that name, twenty chains below the mouth of which we encamped.

The banks of the river with few exceptions are broken and mountainous and unfit for settlement, and the only descriptions of timber to be seen are the white birch, spruce, tamarack and small red pine, some cedar and hemlock. In many places the shores are iron bound, and the stream very rapid. In one place called the rapid Manigouse we got out of the canoes to enable the voyageurs to reach the head of the rapid.

Thursday, 31st. Set out this morning at half-past 8 o'clock. Above the upper Matawin Island, which is about $\frac{1}{4}$ of a mile, and very good land, a small stream called the Cat in Algonquin, meaning Pole Cat, enters on the western bank. The land is still mountainous on both sides of the river, and in every way unfavourable to any prospect of future settlement.

Passed Caribou mountain, which rises near 200 feet, shewing the face of an abrupt granite cliff, by the foot of which runs a very swift current. About three miles above which is Bird Mountain on the same side of the river, its eastern bank. L'oiseau, as it is called, is nearly 250 feet high, the rocks of which the cliff is composed recede about 40° from the vertical towards the N. E.

About half a mile above this mountain, I ascertained by meridional altitude of the sun, the latitude $47^{\circ} 1'-0''$. The general course from the lower Matawin Island to Bird Mountain is north, in a distance of about 10 miles. From thence the general course to L'Isle au Noix is about N. by W. 6 miles, where we encamped. The land on this Island is of good quality contrasting with the banks of the River which discover, particularly on the western side, nought but hills and barren cliffs of granite. The spruce,

fir, white birch, and pine, are the prevailing timber to be seen on the hills.

Friday, 1st Aug. Left the island early this morning and came to the River Batiscan, which discharges itself on the eastern bank. It communicates with the great River Batiscan by 5 portages and 4 lakes, from which it derives its name. The first lake is of magnitude, and only about one league from the St. Maurice. The land on the western bank opposite the mouth of the Batiscan is particularly bold and abrupt and rises into prominent capes about 200 feet elevation.

From thence we reached the River au Rat, a broad stream on the west bank, between which and the little Rat River an alluvial flat formed by those rivers at the foot of the high mountains, is situated a trading Post of the Hudson's Bay Company. It consists of a store, two dwelling-houses and a very good garden, which furnishes the Post with the necessary vegetables. A dwelling-house is building for the resident agent.

On leaving the Post we were assailed by a great storm of hail, from which we had no means of being sheltered, as we were ascending along the foot of a sand bank of about 70 feet elevation, while the east side of the river continues still mountainous. About a mile above the Post the hills rise to 300 feet, discovering frequent cliffs which dip generally to the N. E. From thence we reached Thunder Point during a heavy shower, which continued throughout the night accompanied by lightning, the loud peals of thunder re-echoing in the mountains with astonishing effect. There we encamped at half after five o'clock.

Saturday 2d. A considerable rapid runs down at the Point which we ascended, and passing several cliffs that rise 200 to 300 feet perpendicular, we made an island called La Pêche, where the Indians and people of the Post of La Tuque frequently resort to for fishing, and abundance of white fish, doré, carp, bass, pike and eels are taken here annually. From this island we reached the mouth of the Bastonais River at 2 o'clock notwithstanding the heavy rain that had been falling since we departed from Thunder Point. The mouth of the Bastonais is about 10 miles above L'Isle au Noix on the east bank of the St. Maurice, whose general course thereto is about N.N.E. The land about it is of a better description, although the opposite banks of the River are still hilly and uncultivable.

Finding it necessary to proceed to the Trading Post of La Tuque, that I might if possible obtain some corroborative information on the propriety of ascending the Bastonais River, I left the depot of stores and the small canoe with two hands at the Bastonais, and taking the remaining hands in the large one we continued up the St. Maurice. It acquired after leaving the islands considerable breadth; its banks, although hilly, are not so broken and rugged as that which characterises them below the Bastonais. From a distance of near 4 miles could be discovered the conical hill of La Tuque, from which it derives its name. Reaching the lower landing of the carrying place at the foot of the cataract, and then walked the portage which lies over a very sandy soil producing abundance of blue-berries, and a growth of red pine, spruce and cypress.

We were very hospitably received by the resident clerk, a young Canadian. Being quite unacquainted with the country he could give us no additional information besides what I already possessed, and there was no person at the Post who could supply his deficiency.

Sunday, 3d. Prepared for equal altitudes of the sun and azimuths, which I effected with much trouble, owing to the annoyance of the sandflies and mosquitoes, which are more plentiful here than other parts of the country, occasioned perhaps by the extensive low ground and marshes that are about the Post, and the extensive meadows among the islands a short distance therefrom. In spring the waters rise to an extraordinary height, as roots of trees have been found in the top branches of large trees, in the meadows and near the Post. The conical hill of La Tuque separates the Post from the Falls, which are about 50 feet. It is principally composed of granite rock, containing quartz, mica and felspar.

The Post La Tuque, which is in $47^{\circ} 18' 32''$ north latitude by observation, and longitude $73^{\circ} 0' 0''$ west by account, variation of the compass $11^{\circ} -0' 0''$ west, is a place of trade for the King's Post Company and the Hudson Bay Company, who have respectively an establishment here which consequently excites a spirit of opposition, injurious perhaps to one or other of the parties, and is ultimately so to the natives by its consequences. The King's

Appendix
(V.)
14th Jany.

Post Company Establishment consists of a store, hangard and two dwelling-houses. The Hudson Bay, of a dwelling-house only, which is however the best building at the Post.

The St. Maurice above the Post is about half a mile broad, and whence can be discovered the River Croche, Vermillion and the North Bastonais Rivers. At the mouth of the latter some very fine doré and pike were taken, and afford an ample supply to the Post. The land in the distance preserves the same mountainous character as below La Tuque, and appears in every respect unfit for settlement.

The winter sets in about the end of October, and the snow disappears and the river is free of ice about the end of May. But the heat of summer is about the same as in Quebec, and the winter is exceedingly cold. The Post of La Tuque, on a general course with the St. Maurice, lies astronomically N.N.W. of Three Rivers, and about 100 miles therefrom as the river winds—agreeably to the following recapitulation of distances disposed in the following Table :

THREE-RIVERS.

9	Forges.														
4½	5½	To Gabelle Portage 550 yards.													
16	7	1½	Grais do 1034 do												
21½	12½	7	5½	Shawenegan 554 yds.											
28½	19½	14	12½	7	Hêtres 616 do										
34½	25½	20	18½	13	6	Grande Mère 336 yds.									
37½	28½	23	21½	16	9	3	Petites Pilles 200 yds.								
42	33	27½	26	20½	13½	7½	4½	Grandes Pilles 32 yds.							
53	44	38½	37	31½	24½	18½	15½	11	Rivière Metinac.						
63½	54½	49	47½	42	35	29	26	21½	10½	Portage des Cinqs & Island.					
73½	64½	59	57	52	45	39	36	31½	20½	10	L'Oiseau or Bird Mountain.				
79½	70½	65	63	58	51	45	42	37½	26½	16	6	Isle au Noix.			
86	77	71½	69½	64½	57½	51½	48½	44	33	22½	12½	6½	Post of Rivière au Rat.		
95½	86½	81	79	74	67	61	58	53½	42½	32½	22	16	9½	Rivière Bastonais.	
100	91	85½	83½	78½	71½	65½	62½	58	47	36½	26½	19½	15½	1½	Post of La Tuque.

Monday, 4th. Left the Post of La Tuque and paced the carrying place, which is 1474 yards to the lower landing, and thence reached the mouth of the Bastonais River in time for a meridional altitude of the Sun, latitude deduced therefrom, 47°-14'-30."

At one o'clock, P.M. left the banks of the River St. Maurice and ascended the Bastonais River. Its width varies from 20 to 25 yards, and lays its course through an alluvial tract of good land, the extent of which is limited by the adjacent hills, which intercept the course of the river and occasion a fall of near 130 feet. Came to the carrying place on the left bank, about 30 chains N N.E. of the mouth of the River, (which I shall call Portage No. 1,) which I found to be 325 yards long to the upper landing above the fall, which is formed of three separate cascades. It would admirably answer for a mill seat.

Having got into the canoes we continued our course generally N. N. easterly, the stream very winding and running down with swift current for about 1½ mile, the banks of the river discovering a favorable appearance of its fitness for settlement, although only to an inconsiderable distance from its banks as the mountains follow the general direction of the river. It then suddenly shapes its course S. S. easterly and enters a small lake, in passing which we experienced a heavy storm of hail and rain. The land about this lake is low excepting on the south side, where it rises at a short distance therefrom. The prevailing timber I have hitherto observed, is red spruce, fir, birch, red pine and some maple.

Reached the foot of the long portage, and encamped at 5 o'clock.

Tuesday, 5th. Sent off the men early before breakfast to perform one trip with about two packs each of the stores and luggage to the upper landing, and it was near noon when they returned for the canoes.

Paced the Portage, which I found to be near four miles long, lying through uneven land, in many parts swampy or hilly poor land. The former are very wet and sometimes rocky, timbered principally with spruce, fir, birch and cedar. The hills are timbered with fir, birch, pine, and some maple. The soil is generally sandy or light loam. The upper landing lies on the borders of a small lake about ½ a mile long and a ¼ broad. The land of the same aspect as that on the portage.

It was six o'clock by the time the transport of the stores and canoes was effected. Notwithstanding which I felt desirous of pushing on farther if possible, and we therefore got into the canoes and proceeded across the small lake, from whence by a narrow channel we entered into the great Lake Wagagamacke as the fun was sinking behind the distant hills. The scene it exhibited was truly splendid, and was rendered the more impressive as we paddled over the unruffled surface of this beautiful sheet of water, and the hills echoing the characteristic song of the voyageurs. The occasional shrill cry of the Loon with which this lake abounds enhanced the peculiar interest and wildness of the scene.

The lake appears of very irregular figure, and a part of it extends to the southward. Our course lay to the E. S. E. Its bays are so deep that only passing through is insufficient to form a correct idea of its size. However it can fairly be estimated at a league wide. The landscape is diversified by four or five islands, which all laid to the northward of our course. The land to the S. W. appeared hilly, and in the parts rising gradually from the borders, the timber to be chiefly spruce, pine and birch.

At 8 o'clock we made several islands, which lie at the head of the Lake at the mouth of the Bastonais River, which we ascended to the foot of the rapid and the 3d carrying place, the lake being about 11 miles long.

We encamped by the help of torches, and it was a late hour of the night when we turned in to rest. Observed altitudes of the Pole Star, lat. 47°-6'-8"

Wednesday the 6th. Fine weather. Early this morning, the stores and canoes were transported to the upper end of the portage, which I found to be 270 yards, lying on a general course E. S. E. over very rocky poor land, timbered with spruce, white birch, cedar, and balswood. The River follows on the right side of the Portage, on which is a cascade of 20 feet perpendicular fall. Embarked in the canoes and continued up the river on a general course easterly to the 4th Portage. The land on its banks low and of a scanty soil, some hills appearing in the back ground. The timber is chiefly tamarack, white birch and pine, some cedar and red spruce.

The 4th Portage is 100 yards long, and we resumed again the Bastonais River which is very winding and narrow, directing its general course about E by N.

Effected another small carrying place to avoid a stiff rapid, not however impassable for light canoes. The land although still low is of a better description, and is susceptible of being cultivated.

Entered the Lake called Petit Wagagamacke, and from its outlet shaped our course E. N. E. to the 6th portage. It is surrounded by gentle swells of land chiefly timbered with fir, spruce and pine; the soil of a sandy nature. Its greatest length is about a league and a half and its breadth two miles. The Portage proving very long and rough it became impossible to effect the transport of all the stores, and which was accordingly deferred until the following day, and we therefore encamped on the borders of the Wagagamacke

Thursday the 7th. Set out at 7 o'clock, A. M. and surveyed the Portage, which is one mile and one-third long, traversing a broken rugged tract of land timbered with balsam, pine, poplar, fir and spruce, and a small lake surrounded by the same description of land, the outlet of which falls into the Little Wagagamacke.

From this Lake we came to the seventh carrying place, which is 135 yds, and reaches the borders of Long Lake, which is nearly 3½ miles in length, and in some places about ½ of a mile broad. The land on its borders is hilly and of a sandy and rocky nature clothed with white birch, spruce, fir, and small pine. It lies about N. E. & S. W. and at the head of it is the 8th Portage, 1150 yards long. This Portage leads along the elevation that borders on an extensive tamarack swamp to the southward, to a small pond and the last waters of the Bastonais River. This small pond, the bottom of which is a deep bog, and is surrounded by

by an immense white spruce swamp, affords a subject for geological speculation. Here are to be found a quantity of large rounded water-worn rocks near the outlet, that are heaped together on the borders of the lake, and that cover the land for a few yards back of it; there is no inlet that could warrant these rocks, which are of granite, with veins of quartz and felspar, to have been washed down by a torrent, many of which are covered with a thick moss. It would, however seem to me that the only way for accounting for their presence is, that the whole of this extensive level tract, which now forms the great swamp, was at a period not very remote covered by water. Here I obtained an altitude of the sun, which gave me the latitude $47^{\circ} - 17' - 7''$. Having crossed this pond, which abounds with a large description of leeches, we effected the 9th Portage, which is 730 yards, to another small pond of the same nature as the last, being the first waters of the River Bastican. The 10th Portage is thence crossed, which is 550 yds. through a deep swamp of white spruce and fir, to another lake of near $\frac{3}{4}$ of a mile in length, the land about which is still low and marshy.

Crossed this Lake to the 11th Portage, where we encamped at 7 seven o'clock.

Friday, 8th. It rained during the whole night accompanied with much thunder and lightning. By 8 o'clock the canoes and stores were carried over the portage, which I found to be 530 yards long. The land rising from the tamarack swamp in which we had encamped, and descending afterwards to a marsh in which meandered a small rivulet, and in which the canoes were launched, This falls into another leech pond, at the head of which is the 12th Portage. The land still preserves the character of a general spruce swamp, chiefly of the worse sort of this description of land, being timbered with white spruce and tamarack,

The 12th Portage is 1030 yds. long, traversing the same nature of land to the last lake on the west side of the Bastican, which is reached by the 13th Portage about 800 yards over level land, timbered with spruce, birch and fir.

The River Bastican, which here the guide informed us is only the north west branch thereof, is about one chain or 22 yards wide. Its banks are low, the soil of which is principally white sand, producing abundance of huckle-berries. The prevalent timber is tamarack, fir and birch, and some pine. The general course from the Inferior Wagagamacke at the Portage, to the Bastican by the route, is about north-east 11 miles.

Descended the Bastican on a general course south-east for half a league, and landed at the 15th Portage on the north-east bank. The stream flows with a gentle current, and observed a few hills on the south-west shore, at about a mile in the interior, to which this low swampy land appeared to extend. Encamped at this Portage at 6 o'clock P. M. This night we got partridges for our supper, Mr. Gouldie having killed a few, and some of them within a short distance of the camp.

Observed altitudes of the Pole Star; latitude therefrom $47^{\circ} - 19' - 30''$ and variation $11^{\circ} - 45'$ west.

Saturday, 9th. The voyageurs having made one trip with part of the things before breakfast across the portage, found it necessary to clear away with axes for the passage of the large canoe, which occasioned much delay. The carrying place is about nine furlongs in length and lies over a rough tract of land, rising from a wet tamarack swamp up a steep mountain, where we descend to the same level of the former swamp to the borders of another leech pond, lying about N. & S. $\frac{1}{2}$ a mile long. It was noon by the time the effects were carried across this Portage. The rocks I observed thereon were altogether granite and gneiss; the soil is generally sandy or a light loam, on which is a thin vegetable mould.

Crossed the small lake, which is not over 6 chains, to the 15th Portage, the bottom of it is muddy, and is so very shallow that it required several trips to effect the passage of the things, or have grounded, it being ineffectual to use the paddle, which could find no bottom in the bog at several feet depth. The 15th Portage is about 130 yards long to a lake, whose features vary essentially with the last mud lake or pond, yet so very near together. The bottom of this is gravelly and its waters are clear, and are above the level of the last pond, into which a small stream runs from the lake, the outlet being just by the Portage, which effected we joined Mr. Davies, who had preceded us and reached the 16th Portage at the head of the lake. Its figure is much like a bird in its flight, the land about which assumes a bolder character although of no

better fitness for purposes of culture. The soil is sandy, and the hill or borders where we enjoyed our frugal repast is covered with blue-berries, which proved an additional luxury after the cold pancakes which were served us for desert.

Crossed the 16th carrying place, which is 1100 yards, and lies through middling good land for a certain distance, the sand being intermixed with loam beneath a thick bed of vegetable mould; the timber is spruce, some black birch, cedar, fir and balsam. On approaching a small lake wherein we launched the canoes, at the end of the Portage the land becomes again wet and swampy, timbered with spruce and fir. Descending steeply to the border of the lake about which the land is generally low and grown with spruce and fir.

This lake being crossed we effected the 17th Portage, which is 290 yards, and dividing the waters flowing respectively into the N. E. branch and N. W. branch of the Bastican, and consists of an extensive swamp to the borders of a lake, the first waters of the N. E. branch of the Bastican, which is about a mile long.

The land about this lake is low, at the head of which is the 18th Portage, which is but 150 yards to the borders of Lake Edward; a fine rapid stream follows the portage and falls with a cascade of 15 feet into Lake Edward, offering a propitious site for a mill seat. Here we encamped at half-past 7 o'clock, somewhat late for the preparations that were rendered necessary to be made against the approaching rain, which had been falling, although slightly, at various times in the course of the day.

Sunday, 10th. It rained the whole of the day, so that we could not venture to proceed on.

Monday, 11th. The weather clearing up, by 9 o'clock A. M. we set out from the 18th Portage at quarter after 10 o'clock. At about a mile therefrom the lake acquires greater dimensions extending E. S. easterly. Our course lay however through a narrow channel formed by the S. W. end of the Great Island and the main land, and keeping along the north west borders of the lake we came to a considerable expansion of it, in which lies another island of great extent, to the north-west of which we passed between it and the N. W. borders, where we steer for Dinner Point, a distance of about nine miles by our course from the last portage. The land thus far rises gradually from the lake into gentle swells, timbered with fir, spruce, white birch and pine. The soil appears a mixed loam, and I believe some parts of this portion of Lake Edward would be susceptible of improvement.

Lake Edward, which derives its name from an Indian hunter of Bastican, may be said to form two lakes, owing to a large Island which extends nearly the whole length of it, and which in some places is about three leagues broad. The greater sheet of water, by the account of the guide, is *that which we passed on the north-west passage*. The south-east is used by hunters coming from Bastican.

Having dined at the Point, where by the recent marks on the trees and encampments, around which were scattered bear skulls and fish bones, several canoes with Indian families had rested for a hunting season—we continued our progress on the Lake which keeps a more direct course. The land appears more prominent and its shores in many places rocky and barren. The wind being fairly abaft a sail was set to each canoe, which pushed them on at the rate of six miles an hour, which ceased as we reached the N. E. end of the Great Island, having previously passed several pretty Islands that form a pleasing landscape with the neighbouring hills.

Having passed the island and doubled the Presqu'isle, the Lake contracts to a quarter of a mile and the land becomes more mountainous and broken, rising in many places from an iron bound shore into cliffs of granite; the timber on these mountains being fir, tamarack, and small white birch. At the head of the Lake, which is about nine miles from Dinner Point, a stream of about 18 yards wide enters the Lake, which we ascended for about a mile, a gentle current through an alluvial soil, which extends to the foot of some high hills of the same cast and aspect as the last mentioned, and came to a pretty lake, surrounded by mountains of no favourable appearance for settlement. Having crossed it to the Portage No. 19, we encamped at 7 o'clock.

Tuesday, 12th. The voyageurs very early effected one trip with the luggage over the Portage, and on their return cut away several trees that would interfere with the carriage of the canoes.

The

Appendix
(V.)
14th Jany.

This carrying place, which is 500 yards, leads to a lake whose waters flow eastward into the N. E. branch of the Bastican. The land about it is mountainous and rocky.

The 20th Portage, 400 yards, passes over a mountain, from which we descend to an insignificant stream forming the N. E. branch of the Bastican, which is ascended for about 170 yards to the 21st Portage.

The general course from the N. W. to the N. E. branch by my route is about E. N. E. 30 miles. The latter which runs S. S. westerly lies very nearly on a level with the former, as the difference is not sensible without the assistance or help of the Barometer. The 21st Portage which is but 140 yards terminates at a small lake lying in about the same locality as the leech Ponds, to which it is very similar, the land about it being low and swampy.

Passing this pond, the 22d or rocky Portage is thence crossed, which at about half-way is intersected by a rapid stream which is crossed, the whole length of the portage being 530 yards to the landing and river running to the south-west. Here I found by observation the latitude to be $47^{\circ}.29'.45''$.

At a short distance from the Portage we enter upon a small lake, which contracts for about half a mile, then expands again on approaching the 23d Portage, from whence the lake increases again in its dimensions in an easterly direction, but our course laid northward. From the 20th Portage the general character of the land is an extensive and tamarack swamp, and with some pains we could find a dry landing at the 23d Portage.

We now left the last waters of the Bastican, and traversed on this portage a tolerably level tract of land which is chiefly covered with a spruce swamp and reaches the borders of another leech pond and the first waters of the North Bastonais River, which empties itself about half a league above the Post of La Tuque, and has been hereinbefore mentioned.

The Portage proving long, being about $1\frac{1}{2}$ mile in length, and finding it impossible to encamp in the swamp which is a description of shaking earth or bog, the transport of a portion of the stores was deferred for the following day, and we crossed the pond to the 24th Portage, which lies at the outlet that runs rapidly to the northward. Effected this Portage, which is 375 yards, and encamped by the side of a stream which descends from the hills and falls into the lake at the Portage.

The land passed over this day is totally unfit for settlement, possessing the extremes of low level land and abrupt steep hills or acclivities. The rock of which they are composed is principally granite, dipping at an angle of 45° . towards the N. E., possessing however no regular stratification; quartz and mica are discovered, also hornblende, with the in the fragments that are detached from the summits of the hills. The prevalent timber observed is the spruce, fir, white birch, some cedar and pine.

Observed azimuths and altitudes of the Polar Star and Pointers; hence the latitude $47^{\circ}.32'.0''$ —variation 12° . west.

Wednesday, 13th. A slight rain fell this morning; sent the men however for the remaining part of the stores and the large canoe at the 23d Portage, and on their return proceeded forward on the Lake, which is about a mile and a half long. At the northern extremity of it we descended a small stream for about one mile, very shallow and stony, to the 25th Portage, which is only about 150 yards, through low swampy land, to Crooked Lake, which absolutely requires a guide to find the landing of the Portage. The land about this lake is in every respect low and swampy, timbered chiefly with tamarack and fir. The 26th Portage lies in a small harbor or bay, from whence flows the outlet to the next Lake, and is like the last 150 yards across to the Lake, which is crossed to the 27th Portage.

Leaving this Lake, which lies about east and west, and is surrounded by a low level land, the Portage lays over a similar country, and descends a considerable hill to the River Bastonais, which is the first sensible step of difference of level with the Table land that appears to exist extending from Long Lake on the 8th portage to the 27th, which latter is 800 yards in length.

Embarked in the canoes and descended the River, which runs about a northern general course. The land on its borders is timbered with red spruce and balsam, and is of a better description than I have met with since my departure from the St. Maurice. At about a league below the Portage we passed a small lake, where I observed the white spruce intermixed with the red, ren-

dering the land of an inferior quality; $4\frac{1}{2}$ miles below which a portage of 48 yards is necessary to be made. The river from the lake improves considerably, being about $1\frac{1}{2}$ to 2 chains broad in places; the banks are generally low although in a few parts bold and rocky. The predominant timber is red spruce, which is a favourable indication of the nature of the soil.

This short carrying place, and the 28th from the St. Maurice, is on the eastern bank, and avoids a cascade of 15 feet. The nature of the rock to be found here is granite, which dips 60° . SW. At half a mile below this portage we came to the head of a rapid, and having landed on the west bank, the canoes were shot down to the foot thereof, where we embarked and proceeded on. The current runs down very swift to another rapid or rather cascade, at which the lateness of the hour obliged us to encamp on the Portage which is on the west bank.

Since the 26th Portage the country has assumed a mountainous aspect, rising to considerable height, some of which discovers the abrupt faces of the cliffs at the intermediate and foot of the last rapid. The rock which is granite and forming the western bank of the river is nearly vertical, receding only about 10° . therefrom. This bank rises to about 50 feet, the summit of which is covered with moss, while the opposite bank is an extensive horizontal plane that stretches to the foot of the mountain that approaches the cascade of the 29th Portage. At this place the River contracts into a narrow channel forming by pending cliffs which rise about 50 feet perpendicular. The opposite banks are in every respect different from each other; the eastern bank is of irregular configuration, dipping about 45° . S. E., while the western a little below the chasm is flat to the foot of a high hill, following parallel with the river, at the foot of which runs the Portage 300 yards to the foot or base of the fall.

The Bastonais river does not appear to have formed its present bed, as I observed no trace of water-worn subjects above the level of it in noticing the appearance and state of the stratum, which appears generally to have been convulsed into its actual position by some evident catastrophe, and the fracture formed thereby opened the channel of the river; for above the 28th Portage, where the mountains are still at a distance and the country a horizontal plain to the N. W. the river takes a sudden direction towards them and leaves the plain to follow its broken course thro' the mountains. A very remarkable circumstance I noticed is, that several hills unconnected with any adjacent chain rise out of the great plain generally in conical shapes, and are seen at considerable distance.

Thursday, 14th. At an early hour the canoes and stores, &c. were transported below the Portage at the landing at the foot of the fall, which is above 15 feet. Reached a rapid, down which the canoes were shot unloaded, and we effected a small Portage, No. 30, of 70 yards, laying through a swamp of red spruce and tamarack. From hence the river slopes its course S. S. W. between the hills, and we shot a few rapids to the head of a considerable fall and the 31st Portage, 300 yards long. Reached several places where the banks are formed of abrupt faces of the cliff that characterise the nature of the hills and mountains which appear to follow with the general course of the river, which recede on approaching the fall. There the river contracts to a narrow channel and falls in a cascade of about 50 feet, which is divided by two islands into small channels that increase the rushing noise of the torrent as it foams with splendid effect over the rocks. The islands are covered with moss and the stunted fir tree, while the surrounding country is generally wooded with the tall red spruce, diversified by the smooth water-worn surface of the rocks in the vicinity of the fall, whose whiteness contrasts with the dark shade of the fir tree, giving an interesting effect to the scene, as we had not witnessed a similar one since leaving the St. Maurice.

Dined this day upon doré and carp, which were taken at the foot of the fall in very little time. After which we pushed on to Lake Kajoualwang, a mile below the Portage Doré.

Observed a considerable island in the distance, upon which I directed my course N. N. W. At about 3 miles came opposite to an opening on the eastern border discovering a fine sheet of water bathing the foot of the hills. Having reached the island, to which the average width of the Lake is about one mile, and preserves the same to a contraction of the Lake to half a mile. The land on the borders of the Lake possesses much of the same features as that which characterises Lake Edward. The hills do not rise to any considerable height, and are timbered with spruce fir, white birch and pine. Following the contraction of the Lake for about 2 miles, observing an improvement in the appearance of the land and soil which is barren, and possessing a more level surface.

The

The Lake expands to about 2 miles broad, forming a large bay on the west, out of which runs the Bastonias River, which penetrates the country, and discharges itself into the St. Maurice River. The guide, who has frequently descended or ascended this stream, says that the distance is not more than 20 leagues between the Lake and the St. Maurice, and that the ascent therefrom or La Tuque may be effected in eight days, and the descent in five days, there being but five portages in that interval of distance.

Our course now lay about north to the head of the Lake, passing a large island of nearly a mile long. The average width of this portion of the lake is about $1\frac{1}{2}$ mile. This country is bolder in its general aspect, and some part of it I believe would be susceptible of improvement and settlement. At the head of the Lake we encamped, where I trigonometrically ascertained the exact distance of several points, the island, and a blue mountain in the distance lying at the southern extremity of the lake and forming part of the elevations about Portage Doré, from whence by our course on the Lake it is about $11\frac{1}{2}$ miles, which makes the length of Lake Kajoualwang about $10\frac{1}{2}$ miles. It had rained the greatest part of the time we were on the Lake, accompanied with a strong southerly wind, which increased as the former ceased on our approach to the head of the Lake, causing considerable surf that washed upon the sandy beach by which our encampment was placed. The atmosphere becoming clear of clouds, I obtained the latitude from the transit of several circumpolar stars over the meridian, $47^{\circ} 48' 30''$.

Friday the 15th. It rained from midnight 'till about ten o'clock this morning, when we started. Ascending now the waters of the Bastonais we passed a small lake surrounded by hills of unfavourable aspect, timbered with tamarack and white birch, to the 32d Portage, which is near half a league long, and laying in a direction nearly north and south. The land it traverses in that distance is alternately swamp and mountain. In the first instance on leaving the lake we travelled over tolerably level land but rocky, to the foot of a high mountain, which we ascended, and then descended over a very rough path and windings of the portage, many of which had to be removed by felling the larger trees to enable the voyageurs to get the canoe across, thus reaching the base of the mountain, and a swamp of the worst description being a white spruce or tamarack swamp, which leads to the last lake of the waters of the Bastonais River or St. Maurice. In this swamp we were obliged to encamp, as a continued heavy rain rendered it impossible to proceed.

Saturday, 16th. At an early hour, with a prospect of a continuance of fair weather, we got under way, and observed a difference in features that distinguishes the eastern from the western borders of the lake, the former being mountainous and timbered with fir, pine, spruce and white birch; the western is quite an extensive spruce swamp, unfit for cultivation.

Came to the 33d Portage, 1130 yards, which leads across a brûlé, and generally through some very poor sandy and rocky land to Lake Quaquagamacksis and the first waters that flow into Lake St. John, being those of the Ouatichouan River, which falls therein at the S. W. corner.

The general course of my route from the Batiscan to this division of the waters is nearly north, and is a distance from about 33 miles. The land about Lake Quaquagamacksis, is in every respect wild and desolate, as the fire has destroyed the timber which is now succeeded by a growth of aspen, poplar, small fir and white birch. The soil is very rocky and sandy.

The height of land is hardly perceptible, yet there is a gradual descent of about half a mile in the portage, and a small brook running northward into Lake Quaquagamacksis, wherein the canoes were again launched, and we embarked upon the waters flowing into Lake St. John.

Having passed a rocky island, the Lake thence contracts for about half a mile; it then expands, and we reached a small but rapid and winding stream. The land has become now quite low and assumed the character of swamp and marsh, which surrounds this portion of the Lake. Descended the River, and passing to the head of two small lakes or ponds which lay in the extensive swamps that pervade this tract, we reached the 34th Portage, which is but 60 yards to similar ponds, which connect by a small stream to a lake of about one mile long, about which the land acquires more boldness in its features; from whence the River is descended to the 35th Portage.

This carrying place lays through a tamarack swamp, and is 530 yards to the lower landing at the foot of the rapids, which were shot down by Messrs Gouldie & Davis—thence we reached at a short distance therefrom the entrance of the River into a Lake.

Coming in upon the west side of the lake, where for some extent the land is alluvial, we were unable to view its dimensions until we had reached about the centre of it, where a very pleasing landscape was presented to the eye in the variety of the objects that it combined.

Kept a watchful eye for the outlet of the Lake, as it appeared by the sketch which the young guide's father furnished him with, that it was to be found on the eastern side thereof, and having passed four islands, two of which are about three-quarters of a mile long, we accordingly entered a deep bay, in which I expected laid the continuation of the Ouatichouan River; but no outlet could be found there, and we proceeded on farther up the lake. It is near a mile broad, and the land on its borders rises abruptly, timbered with fir, spruce and white birch.

Passed Green Point, so called for its contrasting its light green shade with the dark hue of the adjacent hills, possessing together the same description of timber, and came to the Presqu'Isle, about 4 miles from the inlet, opposite to which I noticed on the western shore a bay and some flat land having much the appearance of a river coming in on that side, and therefore continued on to the northward of the island and another Presqu'Isle, which is only connected to the main shore by a narrow neck of land. I then directed my course north across the lake towards a small bay, and not finding the river I wanted, I coasted the eastern shore, observing at this end of the lake a favourable appearance in the land, and its susceptibility for settlement, it being a well timbered tract with ash, fir, spruce, pine, and balsam, and thus came to a considerable stream entering with a gentle current and mixing its red tinged waters with those of the Lake.

Not finding the outlet on this side of the Lake, it occurred to me that it might probably be where I conceived there was the appearance of a stream opposite the Presqu'Isle, to which we immediately crossed, and did find the desired outlet accordingly.

The Ouatichouan is here about two and a half chains wide, and runs with a swift current which brought us to the head of a rapid. It was however too late to venture down or go in search of the carrying place, we therefore encamped on the north bank which is high and steep.

Sunday, 17th. Having thus found the Indian's sketch erroneous, and the guide's information or knowledge not extending thus far north, I felt no little degree of apprehension at the western course this river was taking in a manner direct to the St. Maurice, and did not then wonder but it might prove the River Croche or some other tributary waters of the former; yet I determined upon descending this stream for some miles, and consider afterwards what step I should take to reach Lake St. John, as our provisions were now considerably reduced, and had sustained much damage by the frequent rains since leaving Three Rivers.

Under these circumstances we continued the descent of the River, the voyageurs shooting the rapids and ourselves walking on the banks to the foot thereof, which proved a longer portage to us than we had anticipated, as the men could not find any fit landing place to await and take us in. Having however at last joined the canoes, we embarked and shot a continued rapid to a small lake, from whence the river flows taking a south-west course. In a state of doubt we made the Mountain Portage and the 36th, at which the large canoe was upset just above a cascade by the timidity of the novice, and was near losing my theodolite and other instruments.

On leaving the landing a high rocky mountain is ascended, the foot of which is bathed by the river which falls in a succession of cascades. From the summit of the hill could be discovered in a S. westerly direction, an extensive low country, much like a sea by its great distance. I conceived it no doubt to be the general gradual descent of the country towards the bed of the St. Maurice, and I regretted exceedingly not having had a mountain barometer to have ascertained our elevation from that flat country.

Descended from the mountain into an old tamarack swamp to

Appendix
(V.)
14th Juny

a dead water stream, where the portage, which is 1 mile and 3 furlongs, terminates, and whose general course is about N. W. Obtained no hopes that the river would alter its course—proving the waters of Lake St. John, which to our great joy occurred, for this dead water stream, apparently the effect of the unusual rains, brought us to the River, which shapes its course to the north, and forming a considerable Island with that stream. Descended the River, which now traverses an extensive alluvial tract of country, which is susceptible of agricultural improvements. The rushes grow to a considerable height, some of which were pulled and brought up black earth of a clayey nature with its roots.

There are a few mountains which we observed on approaching the great Lake, which we reached at about $2\frac{1}{2}$ miles below the portage of the mountain. The lake at the entrance of the river, and which is half a league broad, lays in a course N. 30° E. which we followed, taking the centre of the Lake. The land on its borders is bold and mountainous, timbered with fir, pine and spruce, and white birch; in several places the shores are steep and rocky, and its aspect unfavourable for settlements, altho' the vallies might be found good.

Passing opposite the entrance of a stream on the eastern border, I proceeded to examine whether it might be the outlet of the Lake, but proving an inlet or feeder thereto, coming from the E. N. E. I bore from thence on the north end of the island, between which and the main land is a bar of alders. Seeing no channel, and desirous of taking a few trigonometrical points and intersections of remarkable objects, we encamped at the head of the Lake near a sandy shore, which afforded me an ample base.

Monday, 18th. It rained the greater part of the day, which time was occupied by the voyageurs in making paddles, many of them having been destroyed and broken in the frequent rapids that had been lately descended. The rain ceasing by 5 o'clock P. M. I desired the canoes to be launched, and we set out with renewed hopes of reaching the outlet before camping time. Having passed the small bar of alders which choke up the passage between the island and the shore, and veering northward round Pointe à l'Aviron we beheld a continuation of Commissioners' Lake. The landscape it exhibited before us discovered in the boldness and grandeur of the objects, it combined the masterly touch of the great designer, Nature.

The shores rise craggy and steep and to considerable elevation, above which tower two considerable capes of about 350 to 400 feet high on the eastern borders. Having reached the foot of the southern cape and landed on the rocks, we ascended the abrupt face thereof, and crossed over with much difficulty to the northern cape, the woods having many years past been burnt on their summits, leaving the rocks to discover their barren nature and nakedness of the vegetable mould, they may like some of the adjacent hills have been deposited, and through which that destructive element has not ragged.

From the cape could be discovered for 20 or 30 miles to the westward a hilly broken and mountainous country, shewing in a few places the white summits of similar hills as that viewed therefrom, contrasting with the universal character of the country which is wooded with fir, spruce, tamarack and pine. A stream of some magnitude appeared to enter south-westerly with an alluvial flat at its entrance, thence ascending amidst the breaks of the hills which form its bed. Looking northward up the Lake, which is diversified by several islands, I noticed a large bay to the north-eastward, in which I supposed might be the outlet, yet on beholding the great body of water that still lay to the northward, I decided on proceeding on the Lake, and we accordingly descended the capes to the canoes and went on.

Passed the islands which are rocky, but well timbered with birch, fir, and spruce. The wind was blowing quite a northerly gale, which chilled the air to such a degree that we were glad to get under the lee of Sandy Point, where we encamped and made a blazing fire which restored our wonted vigour, having effected about seven miles since the last encampment, notwithstanding the length of time we had tarried at the capes.

Tuesday, 19th. Completed a set of 10 triangles of particular objects before breakfast.

Left Sandy Point at 9 o'clock—passed several barren craggy hills exhibiting a wild and wretched aspect of country, particularly on the eastern side, as the opposite has not been ravaged by fire, and the rocks are clothed with fir, spruce, birch, which a thin vegetable mould affords the growth. Reached the

Blueberry Hills, which are a succession of similar barren capes as the two described below Sandy Point, but possessing yet greater height and a peculiar wildness of aspect, as they are distinguished by several perpendicular cliffs which face the lake; they are destitute of trees, and the brow of the hills at the foot of the cliffs are covered with blue-berries of a very large description and size, which circumstance has occasioned the name of the Blueberry Hills given to them.

Being desirous and anxious of obtaining from the summit of one of these hills a view if possible of the country lying between them and Lake St. John, we kept in with the base of the hills seeking a landing, as the shore is iron bound and dangerous; having effected a landing, Mr. Gouldie and Mr. Davies taking various directions, I made directly to the foot of the cliff, which I climbed by the small twigs and firs growing in the crevices of the rocks for nearly 100 feet, when finding no possible means of continuing the ascent as the cliff became more abrupt, and owing to the nearly vertical position of the strata, which only recede 15 or 20 degrees therefrom, which frequently causes part of the strata which are granite and gneiss, to be more easily loosened from the rock, large blocks of which are already fallen at the base, I descended to the canoes where I was shortly joined by the other parties, who could discover no appearance of a lake, but a general character of broken and rugged country which I had partly observed from my position on the cliff, together with a considerable river entering on the west side of the lake between the mountains that form its bed. Having resumed our course we reached a deep bay, in which enters a considerable stream, which circumstance almost foiled my hopes of finding the outlet of the lake in this part. Having landed on a barren rock or island, I observed the sun's meridian altitude—lat $48^{\circ}-17'$ and thence proceeded to the head of the lake, which I found to be near seven leagues long, its average breadth from La Pointe à l'Aviron about a mile.

Finding no outlet, I determined to return to Hail Bay, the first large bay I had observed from the cape. In passing by the blueberry hills we experienced a sudden storm of hail and rain, accompanied by a heavy gale from the north, which rendered our situation truly perilous, being along a lee shore and tossed by a high surf, that pushed the canoes forward at a surprising rate. Reached Hail Bay, which proved to be the entrance of the Ouiatchouan River. Here we were assailed by a storm of hail and rain, the hailstones being of an extraordinary size. We immediately came to the head of a small cascade, where we effected a portage and the 37th from the St. Maurice River, 440 yards in length, and half a mile below which the 38th Portage on the south-east bank, of 223 yards, was crossed, from whence we reached a small lake, which opens upon Bouchette Lake, where we encamped at half-past 7 o'clock, on the sandy beach, on the approach of an impending storm that was collecting to the southward.

The general direction from Hail Bay to Lake Bouchette lays about E. N. E. $2\frac{1}{2}$ miles through broken and hilly land, the difference of level between that lake and Lake Commissioners being between 50 and 60 feet.

Wednesday, 20th. Set out early this fine morning, and from this lake, which is about 4 miles long, and about which the land rises into of country, but discovering a very sandy light soil, we entered upon Lake Ouiatchouan, of about $1\frac{3}{4}$ mile long and 1 mile broad.

In the search of the outlet we made the tour of the island that lies at the end of it, and where the land appears of a better quality than has hitherto been observed. It preserves this character in descending the Ouiatchouan River, which runs with a very swift current to the head of a rapid which occasions the 39th Portage, of 550 yards, on the western bank. Here the elm, black birch, pine, fir and spruce, are found intermixed and growing on an argillaceous loam beneath a rich vegetable mould. Leaving this portage the river acquires considerable magnitude, being about 60 yards wide, and the land offers great susceptibility for settlement; the timber growing on its banks is ash, black birch, elm, spruce, fir and balsam, and some white pine. The general course of the river is about N.N.W. and we thus reach the 40th Portage, below a few small rapids, which we shot down, and a small stream that rises on the right in a small lake which is seen from the river. The 40th portage is on the eastern bank, of 660 yards in length, a furlong below which is a rapid which is divided into two channels by an island. The river then takes a northerly course and runs down with great swiftness, frequently interrupted

rupted by rapids which were generally shot down by the voyageurs; on which occasions they would exhibit such dexterity and adroitness in the management of the canoe as always excited my astonishment. On arriving at a rapid, Vivier, the bowman of my canoe, would generally land and examine the state of the rapid before venturing down; if his decision was for landing, a portage was effected, if for shooting the rapids, I could rely upon his experience which had undergone many trials in the service of Captain Franklin, in his last expedition for a north-west passage, and his being mentioned in the works of that celebrated traveller and navigator. The motions of the helmsman are entirely regulated by those of the bowman, who watches the course of the water, or as it is called "fil d'eau." On coming to high surges, (bouillons,) the paddles are suspended, and the canoe in its passage frequently takes in a sea; when the channel is to be regained the bow and helmsman draw with their paddles on the same side, which is termed "rembarrer."

A peculiar display of native coolness and dexterity was exhibited by the guide in the descent of a rapid; the facility, and at the same time the degree of indifference accompanied with a knowing smile with which he managed the paddle at the helm was truly characteristic, added to the wildness of the surrounding objects, his flowing black hair playing in the wind, and the general stillness and silence of the remaining hands, who anxiously watched the countenances of the two active characters in the scene, truly excited a degree of interest that cannot be described.

Effected the 41st Portage on the eastern bank, of 440 yards in length, where the river is divided into two channels by a large island. Thence we came to the Portage of the island (42) where a small carrying place of twenty yards is crossed upon the island, upon which an abundance of berries of various descriptions are found, wild currants and blue berries, &c.

The land now ceases to offer that favourable appearance for settlement, it being in many places rocky and hilly, and in others of a low swampy nature, the prevalent timber being spruce, tamarack, fir, and some white birch. At about half a mile below this last portage we came to the Great Fall, where a carrying place is crossed on the western bank, of 600 yards, to the lower landing and basin. The rocks are all granite and of irregular inclination, and the land is very poor and rocky, producing chiefly but the tamarack and fir. Having launched the canoes below the fall, which I estimate about 50 feet in height, we left the 43d portage, and about 3 furlongs below it came to the 44th portage on the S. eastern bank. On leaving the landing a high mountain is ascended, from which a similar one is observed on the opposite side of the river, from which we descend to the river which runs thence still very rapid. The portage proving three-quarters of a mile long and traversing a very rocky, rugged country, in which we frequently lost the path but little beaten, we were obliged to encamp at a late hour on very contrary ground, being upon rounded rocks for the greater proportion, and postponed the carriage of the canoes across the portage until the morrow.

Notwithstanding the numerous rapids and portages passed to day we performed about 18 miles of distance down the river, which has fallen about 250 feet under the level of Lake Ouat-chouan. The rapids follow each other in quick succession, rendering the navigation of the River for canoes almost impracticable in ascending it, as many rapids can be shot descending. At one period I had hopes of the land improving in its quality or continuing like to that it presents from the lake to the 41st portage, but it has proved otherwise, as since the 42d Portage the shores have exhibited the most unpropitious aspect for settlement or the pursuits of agriculture. Obtained the latitude $48^{\circ} - 22'$, by meridional and azimuth observation of the pole star. The variation increased to $14\frac{1}{2}^{\circ}$ west.

Thursday, 21st. Our provisions were now so reduced that but a piece of pork remained, and some damaged flour for a few meals more, the grease was nearly expended, and of the spirits there remained but a pint or so, which was reserved for our arrival at Lake St. John, which was now more seriously and anxiously sought for under those urgent and pressing circumstances. But I felt in some manner languine that we could not be then many miles from the goal of our utmost hopes, by the latitude observation I had obtained, as I was impressed with the idea that Charlevoix had placed Lake St. John in about the latitude of $48^{\circ} - 30'$. Therefore our difference of latitude being but 8 geographical miles I entertained hopes of reaching the lake this day, which I expressed to the party. We accordingly by break of day effected the transport of the remaining luggage, and embarked in the canoes at the foot of the rapids, where the river is interspersed with

several islands, and came to the 45th Portage on the northern bank, which avoids a considerable rapid, but which was however shot by the canoes without loading, manned each by the bow and helmsman. The portage, which is half a mile long, lays partly at the foot and partly over high hills, to which the general direction of the river from the 43d portage is about east, and from whence the direction is north to some rapids which were shot down to the Long Rapids of the falls, so called by a small stream following from the summit down the abrupt face of the hills which form the banks of the river.

Before reaching the foot of the rapids our large canoe took in, passing the surge (bouillon) about 12 buckets of water which nearly filled it. The small canoe which followed us, owing to the timidity of the helmsman, not taking the proper course of the water, besides taking in much of the surge struck upon a rock, but fortunately reached the shore at the foot of the rapid before going down. Mr. Gouldie shewed on this occasion a great deal of sang-froid, being himself in the canoe, which was drawn on shore and emptied to be repaired at the next portage, which we reached about a mile below the rapids.

On examining the canoe, besides the bark being split in the bow one of the braces was found broken which required immediate repair. In the mean time four voyageurs, the guide and ourselves set out to cross the portage, the former having considerable advance upon us.

On reaching the summit of the hill, to our infinite and inexpressible joy we beheld a prospect of Lake St. John, yet could distinguish no immediate objects, but as it were much like a sea in the distance, or a cloud resting on the horizon; our imaginations supplied the conclusion. In descending, the gradual inclination of the land for some distance it assumes quite a different character, being timbered with black birch, spruce, pine and some maple. The clay makes its appearance upon the surface, which is irrigated by several streams which intersect the path that here appears well beaten and daily frequented. Having descended about 250 feet into the alluvial land at the foot of the hills, the soil is found of an excellent quality, being what is frequently called *terre grise*, obtaining a growth of maple, fir, ash, pine, spruce, and some cedar.

Passed a large stream, three quarters of a mile beyond which we came to a superior growth of cedar on the borders of Lake St. John, and at half-past six o'clock, P. M. viewed with a peculiar delight the expansive sheet of water that offers this beautiful Lake. All was calm at the moment save but the breeze that rippled upon the surface of the lake. The islands in the distance and the boundless view beyond them enhanced the interest and admiration it excited and displayed, as it were a new atmosphere before us, after having been confined by the limited sphere of rivers, swamps, hills, ponds, and inferior lakes.

Made choice of an encampment beneath the pending cedars on the sandy beach or alluvion of the lake, and on this occasion having divided the remaining store of spirits between the men and ourselves, the health of King George with cheers was drunk, for the success attending thus far the first expedition fitted out under the auspices of the Provincial Legislature to explore this vast but little known portion of Lower-Canada.

Friday, 22d. As both canoes required indispensable repair to enable us to proceed with safety on the Lake in search of the Trading Post, after they should have been brought from the upper end of the portage which proved $2\frac{1}{2}$ miles long, and is the 46th from the St. Maurice, and at the same time being desirous of obtaining the latitude and variation at the mouth of the Ouat-chouan by a set of solar azimuths as the day was very favourable, I decided on remaining at this camp for the day and start for the Post on the following morning. From a set of observations and equal altitudes of the sun and a mean with azimuths of the pole star, meridian altitudes of the moon and Venus, I found the latitude of the entrance of the Ouat-chouan at our encampment to be $48^{\circ} - 30' - 15''$, and the variation of the compass $15^{\circ} - 40'$ west.

Taking a retrospective view of the country that I had traversed from the St. Maurice to Lake St. John, I find it intersected by rivers and their innumerable tributaries rising more generally in the lakes, and the immense swamps which cover this section of the Province. The essential feature of the land is its unfitness for cultivation, being composed for the most part of a light sandy soil, or partaking of a rocky nature. It is frequently broken by chains of hills but of no continuity. The cliffs, which in many places dis-

Appendix
(V.)
14th Jan.

cover their barren nature are principally composed of granite of irregular stratification. The hills disappear at the height of land between different waters where the common feature is an extensive spruce or tamarack swamp, frequently rocky or of a shaking boggy nature. The prevalent timber to be met with is spruce, tamarack, fir, white birch, pine, and some cedar.

Around some of the large lakes some arable land is to be found, but so uncomestable that it must ever remain waste and uncultivated. Indeed, upon the whole, this portion of country appears to me to be yet in the primitive stage of its formation, which I believe could be easily traced by a geologist, and therefore ages may perfect a tract which now is absolutely unfit for cultivation.

RECAPITULATION of the Portages and the distance travelled from the St. Maurice to Lake St. John:—

The distance performed on the route in the 46 Portages or carrying places, taking their lengths collectively, is about 24 miles, which was generally tripled to effect the transport of the luggage, stores and canoes.

The following table will exhibit the total distance, as well as relative distances of remarkable places on the route:

TABLE OF DISTANCES.

Entrance of the Bastonais River																		
9	Grand Wagagamacke.																	
21	12	Portage 3d.

Saturday, 23d. Set out at an early hour this morning for the Trading Post, at the mouth of the Metabetsuan, and a breeze blowing from the southwest we suspended the use of the paddles and raised a sail which brought us to Pointe a la Traverse, thence shaping our course with the borders of the Lake S. E. & by S., passed Pointe au Bouleau and reached Pointe au Raisin, from whence we espied with peculiar sensation the habitation of the Post on the eastern bank of the Metabetsuan. A voyageur song and the firing of a fowling piece brought the inhabitants of the Post to the shore, who echoed the latter on perceiving us approach.

At the landing we were received by Mr. Andrew Stuart, one of the Commissioners, who with Mr. Wagner, Mr. Nixon and Mr. Bowen had only preceded our arrival the day before, forming one of the expeditions which ascended the Saguenay. After the reciprocal greeting on the occasion, I learnt that the St. Maurice party having been despaired of reaching the Lake, the service assigned me of ascending the Assouapmousin and exploring the S. and S. westerly borders of Lake St. John, had been committed to be performed by Mr. Hamel's party, then on the Lake in the vicinity of the Grande Décharge. Our happy arrival restored the original design with the additional instructions from Mr. Stuart, that I should explore the country lying south-east of Belle Riviere, &c., &c. and bounded on the one side by the mouth of that river, and on the other by the Chicoutimi country, instead of the Peninsula which had been previously proposed.

A plentiful repast, consisting of the vegetables raised at the Post by the industry of Mr. Murdoch, the Clerk of the Trading Establishment for the King's Post Company, and the luxuries brought by the other party, perfectly restored our famished appetites to their natural tone having lived for the past fortnight upon sour flour and grease—occasionally pease soup.

Sunday, 24th. At 10 o'clock, the Commissioner and the party left the Post to make the tour of the Lake. It being necessary to have a certain quantity of flour baked into bread for the more ready use in exploring, which could not be effected but at an hour too late to set out, I took with me two men in the large canoe, being the only one remaining, as Mr. Stuart found it expedient to reduce my party of voyageurs of one man (Tereau) and the guide. Mr. Gouldie finding it necessary to reach Québec at an earlier period than was likely to be the case in remaining of my party, had attached himself to Mr. Baddely, which circumstance deprived us of our military and agreeable companion. I ascended the Metabetsuan, which a little above its entrance expands into a large basin spreading to the foot of the rapids, where we landed, from which I made an excursion on the left or eastern bank to the summit of the hills which overlook the Post, and are about 3 miles from it. The land I found of a middling good quality, being for the chief part of red loam intermixed with very small gravel and clay at no considerable depth beneath the black vegetable mould. The prevalent timber there, is spruce, black and yellow birch, basswood, fir, pine, poplar and some maple.

Having travelled about 2 miles, and not finding the carrying place as I expected, I returned to the Post, where Mr. Davies had remained to class the specimens collected in the interior country.

The establishment of the post consists of a dwelling-house for the resident clerk, a store, bake-house and stable or barn, with a spacious garden, yielding abundance of vegetables, particularly potatoes for the use of the inhabitants of the Post. It is situated upon the same site where the Jesuits in the 16th century had an establishment, and there remains yet the furrows made by the plough on the lands adjoining to the garden, which at that period were entirely cleared, but are now covered with a growth of spruce, aspin, fir, birch and pine, some part thereof producing Timothy hay. The apple and plum trees, which to the knowledge of many persons who have seen them at the Post, have grown wild and disappeared. The Metabetsuan, which means "the place where the course of the waters end," is a fine broad stream, deep at its entrance into the basin at the foot of the rapid; on its shores at the post are to be found a variety of marine shells and other organic remains, many valuable specimens of which have been collected by Mr. Davies and Mr. Baddely, the latter an officer of the Engineers, who volunteered in our expedition in pursuit of his favourite science, Geology. This night passed in observation of the circumpolar stars obtained me on a mean of several previous observations of the sun's altitude, the lat. 48°-27', and variation of the compass 15°-30' at the Post.

Monday, 25th. Having taken the quantity of provisions that would be required to ascend the River Assouapmousin and effect the exploring of certain portions of the borders of the Lake, we left the Post at 10 o'clock. Proceeding on foot along the south borders of the Lake, I took the following courses and distances to operate as a safe to obtain intersections of the conspicuous headlands on the north-east side of the Lake and Pointe Bleu and the islands on the western side, at the same time to acquire more accurate information of the soil and timber.

Beginning at the western point of the mouth of the Metabetsuan

A strong gale from the N. W., accompanied with hail and rain, obliged us to encamp on the beach at 3 o'clock.

Tuesday, 26th. Made an excursion into the interior, shaping my course about S. S. Easterly, and traversed over an excellent quality of land, for about half a mile from the Lake, the soil being of a rich clay loam, commonly called *terre grise*, which extends to the foot of a rising ground, upon which the soil is of a lighter loam, and at about half a league I reached the higher elevations, where the country becomes wooded with spruce, fir, tamarack and white birch. The first description of land I met with above-mentioned is timbered with black birch, ash, fir, balsam, pine, elm, basswood and some maple; that upon the rising ground possessed less of black birch, ash, fir, maple or elm. Having returned to the camp and finding the gale much abated, which caused a very high swell on the Lake, I resumed the exploring of its borders in the manner commenced from Metabetshuan.

Having come opposite Grosse Isle, which is a mile and a half across from Pointe à la Traverse, I visited the island, which is about 2½ miles in circumference; the land upon it is of good quality, timbered with spruce, elm, pine, and ash. From it I trigonometrically ascertained the distance of Petite Isle, Pointe Bleue and the Sand Bank. Mr. Davies, in pacing the circuit of the Island, met with blocks of granite. Petite Isle lies north-west near two miles distance from Grosse Isle, which time did not allow me to visit, as it was a matter of considerable expediency to ascend the Afsouapmoussoin, with Mr. Verrault, who had passed me in the morning on his way thither with laden canoes for the Trading Post on Afsouapmoussoin Lake, and who was to expect me at the mouth of that river—so favourable an opportunity of acquiring much local information for the good of the service. The position and names of the carrying places, &c. I thought should be availed of.

Before leaving the Island, I observed the sun's meridian altitude, lat. 48° 32'-26"; and noticed a chain of hills which range from Metabetshuan with the southern borders of the Lake and intersect the Ouatichouan River, causing the beautiful and splendid falls of Ouatichouan, which are 236 feet perpendicular height, which has given the river the name of Ouatichouan, in the Cree language meaning, "Do you see the falls," then a carrying place must be crossed. The hills on leaving the river continue their western direction for some distance, then appear to shape their course N. westerly. They are covered with spruce, fir and pine, and are about 6 or 700 feet elevation.

Having thus completed the admeasurement of the bafe and explored the south borders of the lake, we left the Ouatichouan river, which has a small island at its entrance, and proceeded to explore along the western borders of the Lake. The cedery that has been before mentioned has no very great extent; on leaving which the timber assumes a very different character, being principally fir, spruce, white birch, pine and aspen, indicating a much lighter soil than prevails on the south side.

Passed the Ouatichouanish, about which there appears to be an extensive tract of level good land at its entrance. It is about three miles and a quarter from the Ouatichouan, leaving which the lake becomes indented with numerous bays, and the shore is in many parts rocky, the land rising above horizontal strata of calcareous rocks, timbered chiefly with spruce, poplar and white birch, and some red and white pine. Reached

Appendix
(V.)
14th Jany.

Reached Pointe Bleue about $6\frac{1}{2}$ miles N. by E. from Ouatshouan. It is a point of rock covered with moss, and a small growth of cedar, from which the lake borders run W. N. westerly, describing a very wide bay, the land around which appears of good quality, being timbered with ash, fir, balsam, spruce and cedar, and is level to a considerable extent. Having extricated ourselves from amongst the intricate channels, by numerous small alder islands that lay in the bay, we shaped our course N. N. W. for the mouth of the Assouapmoussoin which we reached at 8 o'clock, and encamped on the eastern bank, near Mr. Verrault's encampment.

Thursday 26th.—Made a depot of such provisions and baggage as could be dispensed with, and prepared for ascending the Assouapmoussoin. The land at the entrance of the river is of an excellent quality, and is chiefly of an alluvial nature, the alluvion being deposited over a surface of clay and marl, which is at a considerable depth beneath it. There are two islands at the mouth, one in particular is not less than half a league in length, the timber growing thereupon, is elm, ash, fir and alders. The width of the river is not less than $\frac{1}{2}$ of a mile at its mouth, and above the large island is near half a mile.

In ascending the river, I observed the land on the western branch, is of a better description than its eastern. It is generally alluvial, exhibiting beneath a vegetable mould, an argillaceous loam, called *Terre grise*, resting on a stratum of white clay, under which is occasionally observed a bed of blue soft marl, dipping below the surface of the water. The timber principally consists of elm, ash, cedar, fir, balsam, red spruce, white and red pine, yellow birch, some poplar and white birch. Although on the eastern bank, this under strata of earth and soil prevail more or less, yet the proportion of sand is greatly intermixed with the loam, and the timber consists of tamarack, white birch, spruce, fir, balsam, aspen and pine, cypress, and a red or Norway pine, is commonly observed on both banks. At $1\frac{1}{2}$ league, and above another considerable island, the river becomes very shallow, and the current runs down with much swiftness, and alters its course from N. 30 W. to S. 25 W., to a cluster of three islands of the same character, as the one already described. From thence the river takes a general N. N. W. course, and becomes rapid, and here the paddles are laid aside and resort to the poles, resuming the paddles at a short distance below a small portage over the rocks on the eastern bank, and at 5 miles above the cluster of islands.

This first portage is 130 yards in length, and lays over the rocks of the river during the summer, but in spring passes into the woods. About three fourths of a mile above this portage is the Portage du Saumon, on the western bank which is 1200 yards, leading partly through the woods and partly on the beach.

The Assouapmoussoin falls here two distinct cascades, the uppermost is however more a perpendicular fall of about 15 feet, affording in the basin below it a propitious site for a mill; it thence directs its course S. easterly, and falls over the broken rocks, and divides into two channels nearly at the foot of the portage, by a small rocky island.

In the basin or bay at the upper landing is a well timbered island of half a mile long. From the portage we reached the River au Saumon, which runs S. westerly into the interior country, which ceases to be cultivable at about 6 or 7 leagues from its mouth, as the land becomes swampy and covered with extensive plains, producing but the white spruce, and is the fit country for the hunting of the deer or caribou.

There being an appearance of an approaching storm, we encamped on the island opposite the mouth of the river, at 5 o'clock, P. M., shortly after which the wind blew with such force as to drift the water on the river, and rise several trees by the roots, which we heard fall in every direction. This sudden gust was followed by torrents of rain, which ceased late in the evening.

Friday 29th.—Left the island early this morning. The average width of the river is somewhat over a quarter of a mile, and runs down with a swift current. Its banks still offer an excellent quality of land, and the greatest susceptibility of settlement. The soil is principally argillaceous loam over strata of white clay; the marl is frequently observed but at considerable depth beneath the latter. The timber is a fine growth of elm, ash, spruce, red pine; in several places, however, especially on the eastern bank, the loam contains much sand although the under strata of soil is the same. The principal timber is spruce, fir, white birch, aspen and cypress.

The general course of the river from the Portage du Saumon, to the third carrying place, is N. 7° east, about 7 miles; then E. N. E. about one mile to an island, then N. N. W. $2\frac{1}{2}$ miles to Portage à l'Ours. At the third portage the land begins to assume a more sandy character, the poplar, white birch, pine and tamarack is the timber most prevalent on the banks of the river, and becomes still inferior on approaching the Portage à l'Ours. This portage lies on the east side of the falls, which are at least fifty feet perpendicular height, and have a fine effect in ascending the river. Its length is nearly a mile and a quarter, and leads through a growth of cypress, small red pine and fir,

produced on a sandy poor soil, while the clay is at a considerable depth below this surface.

From the upper landing it is half a league to the Petit Portage à l'Ours which is 350 yards across a narrow tongue of land. Here the river describes a crescent falling over the rocks, in a very picturesque manner. The sand banks are seen on both sides of the river between those portages, affording but a very poor idea of the country. From this portage, it is three fourths of a mile to Pemouka rapids and carrying place of the south bank, as the general course of the river is east and west. This portage is 660 yards over the rocks, which in spring are covered by the river, in which case the carrying place is made on the north bank.

From the upper landing we crossed the river, and ascended to the portage of Pemouka, or "last pine," so called, from its being opposite the last pine that is to be seen through the interior country. It is $\frac{1}{2}$ of a mile in length, and leads through a white spruce or tamarack swamp. It being a late hour, we encamped at the upper landing under the cypress trees on the borders of the river.

This night I obtained altitudes of the moon and several circumpolar Stars, latitude therefrom $49^{\circ} 0' 30''$, and the variation of the compass only $9^{\circ} 8'$, so extraordinary a diminution must be attributed to the rocks which must be impregnated with magnetic iron ore, although upon application of several specimens, I could perceive no sensible attraction.

Saturday 30th.—Having ascended the river Assouapmoussoin thus far, a distance of upwards of 30 miles, I found, that in passing the portage à l'Ours, I had exceeded the region of good or cultivable land, as since that portage I had observed the general character of the soil to be sandy, which became still inferior at this last portage, the country being only fit for hunting the caribou and the moose.

Mr. Verrault, who kept company with us, and is perfectly acquainted with all this country, informed me, that the present aspect of the land might extend to the foot of the Grandes Rapides, about 3 leagues higher; but there the land becomes quite uncultivable, being traversed by a range of rocky mountains, that produced but the fir and spruce trees. That this range was a continuation of the hills which intersect the Ouatshouan, and thereby encompass about an extensive valley of level land, lying between them, and the lake borders with the Assouapmoussoin, as a point. It was therefore unnecessary to continue the ascent of the river, or to bestow any more time in a fruitless search for good land, beyond the portage of Pemouka, and we therefore parted with Mr. Verrault, and descended the river to return to the lake.

Passing at the river au Saumon, we raised the net that had been set at the entrance of the river, and found one pike, a few carp and doré, all of a fine description. Reached our depot, at the mouth of the Assouapmoussoin, at 6 o'clock, P. M., and found by the inscribed remarks on a piece of cedar, that Mr. Baddeley and party had visited our depot, the 27th inst. the day of our departure up the river.

Sunday 31st.—After a very stormy night, during which the lightning was extremely vivid, the morning proved favorable, and having taken a series of angles at the mouth of the Assouapmoussoin (which means "the place where the elk is laid wait for") of various prominent and essential objects around me; viz: the highlands which stretch to the westward of the falls of Ouatshouan, the hills which lie back of Metabetsouan, Pointe Bleue, &c. we embarked into the canoe and proceeded on towards Mistassini River, "The large Rock."

Following N. westerly, the borders of the lake which appear low and level, timbered with spruce, fir, birch and pine; we reached at 3 miles from the Assouapmoussoin, the sand shoals at the entrance of the Mistassini, which appear to extend to a considerable distance into the lake, and with much difficulty we made the N. eastern point of the river, which is 3 miles across from the south point.

Having the advantage of an extensive base upon the shoal, I determined several distances up the Mistassini river, near two leagues, and across lake St. John, the Metabetsouan and Ouatshouan hills, Pointe Bleue. The land in that space on the Mistassini, offers a favorable aspect for settlement, although from Mr. Verrault's information, it would appear there are large tracts of uncultivable ground between the Assouapmoussoin and the Mistassini, yet, from the proximity of these rivers, and the general aspect of the country, in ascending the former, I am inclined to suppose there are nevertheless considerable portions of land between them susceptible of cultivation.

Leaving the Mistassini, whose breadth averages near $\frac{1}{2}$ a mile, we were much delayed by the necessity of dragging the canoe over the shoals, which set out $\frac{1}{4}$ a league from shore, which induces me to apprehend, that lake St. John is generally shallow, which the Indian name of the lake Peakugami, (Lac Plat) appears to convey. Being clear of the shoals, we kept a north-west course for Periboka (curious river). I observed the character of the country to differ essentially with the

the south and western shores, being very low and flat, and the timber to consist of white spruce, white birch, aspen, cypress, red and white pine, descriptions of timber indicative of a very sandy light soil. We discover with facility the land on the opposite or southern borders of the lake, while from thence it is quite impossible to discover this immense level tract which stretches to the foot of a considerable chain of hills, and without a doubt, is a continuation of the hills, which cross at the Grands Rapides on the Assuapmousoin, which thereby sets bounds to the great valley of lake St. John, in that direction.

At about 10½ miles from Mistassini, we landed and encamped about a mile and a half to the westward of the river Periboka, on the beach. The night proved favorable for an observation, and I accordingly found the latitude of our camp to be $48^{\circ} 51' 30''$, the variation of the compass $16^{\circ} 30'$ west.

Monday, 1st of September.

Having discerned on the opposite borders, the falls of Ouatshouan appearing just as a white speck among the hills, I admeasured a base of ¼ of a mile, and determined exactly the height and distance of the fall bearing S. $16^{\circ} 30'$ west, 26½ miles, height of the hills 720 feet, and the falls 236 feet perpendicular height. I also ascertained the width across the lake, pretty near the post of Metabetsuan, of a prominent elevation, being 32 miles distance, which elevation I know to be about 3 miles from the lake borders, making the width of the lake near the post, about 29 miles, which pretty nearly agrees with the difference of latitude in statute miles.

Having penetrated a short distance inland, I first ascended a small rising ground, which lays parallel with the borders, and there descended into a bog or spruce swamp, below the level of the surface of the lake, which description of land appears to have considerable extent. Left the camp at half after 9 o'clock. Passed the mouth of the Periboka, which appears near ¼ of a mile wide, and obtained a view of the great valley which extends about 10 miles northward, to mountains which stretch about south-easterly. My course was directed upon St. David's Point, 9½ miles, in which distance I observed the borders of the lake to be generally low, and the soil of a sandy nature; the timber to be cypress, fir, spruce, aspen and pine. The lake here is likewise very shallow, the shoals extending some distance from shore, called the shoals of Periboka.

From St. David's to St. Andrew's Point, we kept in with the shore, which is very low, and appears to be of a sandy and swampy nature, the timber is cypress, white and red pine of a good description, fir, spruce, white birch, aspen. From St. Andrew's Point we steered across the bay, to the banks of sand which can be observed from the post, of a clear weather, S. $75^{\circ} E.$ 4½ miles. Here a small stream called Comeathizu, enters the lake, The falls of Ouatshouan being easily distinguished, bearing S. $54^{\circ} W.$ I ascertained the distance trigonometrically, to be about 26 miles. The land round the bay is very low, and of a sandy description, and of the same character as about Periboka.

Leaving the sand banks, we passed a few islands or barren rocks strongly impregnated with magnetic iron ore, perceived by the attractive effect the fragments possessed on the needle. Thence shaped our course about E. S. E. we made between the numerous islands that lie at the entrance of the Grande Décharge. The wind was blowing tolerable fresh from the north-west, which caused a heavy swell, while under cover of the islands, it was not sensibly felt, but having passed a cluster of them, possessing but little wood upon them; we became exposed to the sea, which ran so high as to oblige us to put into a small bay, where we encamped on the beach. Here I detached fragments from the rock, forming the point of the bay, very strongly impregnated with magnetic iron ore, having a negative or repulsive effect upon the needle; several specimens were collected by Mr. Davies.

Explored the shore southward to the Petite Décharge, which is about ½ a mile from the bay; here I found a specimen of marine shell, which no doubt had been brought by the spring ice from the south borders, where only between the Metabetsuan and Pointe à la Traverse, organic remains are to be found on the lake. The aspect of the land is more favorable, the soil consists of a yellow loam, intermixed with small gravel; the timber thereon is spruce, white and black birch, cedar, balsam, some red and white pine.

Tuesday 2nd.—The wind although much abated, still was blowing fresh, accompanied with rain, when we left our camp. The islands were so impregnated with iron, that I found it almost impossible to set a course, however, having passed to the south of them we reached the main shore, which we kept in with, as the swell was high. At considerable risk, by reason of the Kuspahigan shoals, which extend far into the lake, we were landed at the mouth of the Belle Rivière or Kuspahigan, "a place which is ascended." The voyageurs then pushed off into the lake, leaving us on the shore, as I felt desirous of examining the nature of the land more closely, and ascertain as near as possible the distance from Kuspahigan to the post. The course and distance are as follows:

S. $75^{\circ} W.$ 40m.—Red pine, cypress, some elm.

S. $65^{\circ} W.$ 40m.—Ash, elm, birch, spruce and red pine.
S. $60^{\circ} W.$ 80m.—Ash, elm, birch, spruce and red pine.
S. $55^{\circ} W.$ 75m.—Spruce, ash, poplar and white birch.
S. $53^{\circ} W.$ 45m.—Ditto ditto, alluvial land.
S. $54^{\circ} W.$ 100m.—Ash, elm, spruce, aspen and cedar.
S. $30^{\circ} W.$ 15m.—To the small river Kuspahiganish, "where is a small " ascent."

The voyageurs who had been tossed by the swell from the Kuspahigan, now bore directly to this river, which placed the canoe under cover of the gale. A temporary encampment was effected to dry ourselves, after which Mr. Davies and myself set out for the post, and walked along shore, having previously engaged the voyageurs to reach the post as soon as the storm was abated. Took the following courses, and paced the distances:

N. $86^{\circ} W.$ 25 chains—White birch, poplar, cedar, alluvial.
S. $72^{\circ} W.$ 75 " Elm, spruce, white birch, cedar.
S. $85^{\circ} W.$ 55 " A high bank of clay, a surface of loam, spruce, black birch and balsam.
N. $40^{\circ} W.$ 35 " Pine, birch, poplar, spruce, good land.
S. $75^{\circ} W.$ 60 " Black birch, fir, pine and poplar, clay bank, surface loam.
N. $75^{\circ} W.$ 15 " Ditto ditto ditto.
N. $25^{\circ} W.$ 25 " Land of good quality, much marl beneath the clay.
S. $70^{\circ} W.$ 140 " Pine, poplar, birch, 5 feet yellow loam above the clay, which is of a soft white nature.
N. $45^{\circ} W.$ 20 " To the post of Metabetsuan, which we reached at 6 o'clock, and learnt that Messrs. Baddeley and Goldie had left the post the day preceding, at about 3 o'clock. The weather having continued stormy, we could not expect the voyageurs to reach the post this day.

Wednesday 3d.—The voyageurs reached the post at 10 o'clock, A. M. It being again found necessary to bake more flour into bread for the party, in the mean time I took with me 3 hands with the canoe, with a view of ascending to the carrying place, on the west bank of the Metabetsuan, and exploring some part of the country in that direction. Having landed at the portage on the south side of the basin, the transport of the canoe was with difficulty effected for ¼ of a mile, where it became impossible to proceed with it, it was then left, and I continued across the portage. For about ½ a league it is tolerably level, thence rises from a small stream which I found strongly impregnated with carbon of iron and sulphur.

The country then becomes more broken, the land, notwithstanding, is of good quality; passed occasionally at the base of a perpendicular cliff in traversing a rich ash and spruce swamp, alders and cedars intermixed; its soil consisting in a dark loam of an argillaceous nature. Having descended a hill at about 4 miles from the landing, to the small stream running north, we encamped at 7 o'clock, the night portending rain.

Thursday 4th.—Proceeded, notwithstanding the incessant rain, on the portage, and at about one mile, reached the upper landing of the Metabetsuan; in this distance the land is of a very sandy light description, clothed with poplar, fir, balsam and generally little susceptible for settlement. The Metabetsuan, where I intersected it is but a narrow stream, very shallow and rapid, offering on its borders, land of no favorable appearance.

Effected our return to the post by five o'clock, where Mr. Nixon, who was attached to Mr. Hamel's party had arrived with a sick man, from the north side of the lake. The rain still continued to fall in torrents, and affording but an unfavorable prospect for the morrow.

Friday 4th.—Made a demand upon Mr. Murdoch, the clerk of the post, for a certain quantity of provisions, that I might be enabled to explore the country lying S. E. of the Belle Rivière to the Chicoutimi country. The rain which had fallen since morning, only ceased about 2 o'clock, when preparations were made to leave the post. Set out at 4 o'clock, Mr. Nixon in company with us on his return to his party, and landed at the Kuspahigan at about 6 o'clock, and encamped on the eastern bank at the mouth of the river. Wind from the S. W.; a prospect of fair weather.

Saturday 5th.—Clear morning—observed Pointe Bleue, bearing N. $49\frac{1}{2}^{\circ}$ west—Grosse Isle N. $48^{\circ} 30'$ W.—Pointe à la Traverse N. $55\frac{1}{2}^{\circ}$ W.—the hills of Ouatshouan, in the vicinity of the falls N. $65^{\circ} W.$ Pointe au Rain N. $79^{\circ} W.$ —a particular mountain in the northern chain, bearing N. $33^{\circ} E.$

Having taken such provisions as would be required for a few days, we ascended the Kuspahiganish, for about seven miles, presenting in its alluvial banks a soil composed of clayey loam. In such places as they rise to any elevation, the clay lies beneath a bed of lighter loam and the vegetable mould. The general quality of the land is of an excellent description, timbered with elm, ash, black birch, basswood, maple and fir. On the high banks, the principal timber is pine, spruce, fir, white birch, cedar and balsam. The white and red pine are of a good quality. Having

Appendix
(V.)
14th Jan.

Having encountered much delay by the rapidity of the current, and the many obstructions occasioned by large trees that had fallen across the river, which obliged the necessity of cutting a passage through them, we could only ascend about 7 miles, where the river becomes very narrow, and the navigation completely obstructed by the fallen trees; we encamped on the eastern bank.

Sunday 6th.—Penetrated about two miles interior, traversing a much intersected and broken country, not however of a rocky nature, the soil being a rich yellow loam or clay, at a few feet depth. The most prevalent timber on this elevated tract, which is at least 150 feet above the bed of the Kushpahiganish, is black and yellow birch, spruce mable, fir, ash, elm and a good discription of red and white pine. This land, though difficult to cultivate, is well calculated for pasture ground.

Having returned to the camp, near which is a pine of about 12 feet circumference, united in the same root with a very large spruce, we embarked into the canoe to return to the mouth of the river, which had fallen near 18 inches during the night, rendering it again necessary to cut a new passage through the fallen trees on the river. Observed that this river is but little frequented by the hunters, as I met with no marks on the trees of any description, and noticed by the many tracts of the beaver and otter, that they have been but little visited or molested by the Indian hunters.

Reached the mouth of the river at 4 o'clock, and left it again at 5 o'clock for the Kushpahigan, which we entered at $\frac{1}{2}$ past 6 o'clock, r. m., it blowing a strong southwesterly gale, accompanied with rain. Encamped on the north east bank.

The following table exhibits the respective distances of remarkable places on the borders of lake St. John, determined partly by trigonometrical process, admeasurement and estimation.

TABLE OF DISTANCES.

Mouth of the Kuspahigan, or Belle Rivière.

5	Kuspahiganish.											
10 $\frac{1}{2}$	5 $\frac{1}{2}$	Post of Metabetsuhan.										
20	15	9 $\frac{1}{2}$	Pointe à la Traverse.									
25	20	14 $\frac{1}{2}$	5	Falls of Ouiatchouan.								
33	28	22 $\frac{1}{2}$	13	8	Pointe Bleue.							
41	36	30 $\frac{1}{2}$	21	16	8	Mouth of Assuapmoussoin.						
47	42	36 $\frac{1}{2}$	27	22	14	6	Mistassini.					
61	56	50 $\frac{1}{2}$	41	36	28	20	14	Periboka.				
78	73	67 $\frac{1}{2}$	58	43	45	27	31	17	River Coucouathimi.			
83	78	69 $\frac{1}{2}$	63	48	50	32	36	22	5	Grande Décharge.		
88	83	74 $\frac{1}{2}$	68	53	55	37	41	27	10	5	Petite Décharge.	
99	94	85 $\frac{1}{2}$	79	64	66	48	55	38	21	16	11	Mouth of Kuspahigan or Belle Ri- vière.

Before I take leave of lake St. John, I would offer some general observations on the characteristic features of the circumjacent country, its locality and advantages.

Lake St. John is situated in an immense valley, being the reservoir or basin of the numerous large rivers and streams which discharge themselves into it, many of which rise in the high lands that separate the Hudson's Bay territory from Lower Canada, depositing in their progress from the mountains that form this great valley, the materials for improving and fertilizing the soil. The lake is nearly circular, its greatest breadth is 30 miles from Metabetsuhan to Periboka, and its least about 18 miles from St. David's Point to Pointe Bleue, and covers in superficies about 510 statute square miles.

The extent of cultivable ground on the south side of the lake, between its borders and the mountains, which intersect the Metabetsuhan and Ouiatchouan, at an average distance of 5 miles from the lake, may amount to about 80,000 or 100,000 superficial acres. This tract is composed of an excellent quality of soil, being generally a dark rich loam, frequently argillaceous, and occasionally with intervals of a sandy nature, and is commonly covered with a fine vegetable mould. The timber chiefly clothing this land is black and yellow birch, ash, fir, bass, cedar, spruce, red and white pine, and the maple, which affords a sufficient quantity of sugar for the use of the inhabitants at the Trading Post.

These mountains continue ranging westward from the falls of Ouiatchouan, for about 8 or 10 miles thence, shape their course N. westward towards the Assuapmoussoin, which they traverse at the Grands Rapides,

leaving thereby a valley, of which the west side of the lake and the western bank of the Assuapmoussoin is a front, containing a superficies of about 200 to 250,000 superficial acres. So large an extent will most probably partake of a variety of soils, good and bad; but in assuming the front on the west of the lake, and the land on the western bank of the Assuapmoussoin as a criterion, there will be found a great portion of the land in the valley susceptible of culture and settlement. This description may extend to the lands on the immediate banks of the Mistassini; thence eastward the country extending from the northern borders of lake St. John to the mountains which stretching south easterly from the Grands Rapides on the Assuapmoussoin, form part of the great valley of lake St. John, is remarkably low, which is its principal feature. Perhaps along the Periboka, some good arable land may be found, but exclusively to that, it appears of a sandy light soil, timbered principally with spruce, fir, red and white pine, white birch, aspen and tamarack,

Lake St. John is too shallow for the navigation of schooners, at least for a considerable distance from the borders, which can be approached only by flat bottom boats, or the bark canoes by reason of the many shoals which set out from the borders, particularly about the entrance of the rivers. The lake abounds with many descriptions of fish, as the doré, the carp and the bass; trout, white fish, cels, pike, and a peculiar fish called wenanish. Great quantities of fish are now taken at the mouth of the Ouiatchouan, which appears the most propitious place for setting the nets, and where the fish is found most abundant of any other part of the lake. It is then salted and put into barrels for the use of the Traders.

To form a correct idea of the climate, requires the experience of a few years. The temperature, however, for the time I remained at the lake, I found equal to that of Quebec, possessing a clear and cloudless sky, and a fine and salubrious atmosphere. I found the nights in traversing the country much colder than at lake St. John.

The lake is frozen about the middle of November, and is clear of ice by the end of May; the interval of vegetation is therefore short, but is proportionably more rapid, as a small quantity of wheat which had been sown at the post, was fast approaching to a state of maturity; potatoes had been for a considerable time in flowers, and were eaten during our stay.

Monday, 7th September 1828.

Rain this morning. Left the mouth of the Kushpahigan, and ascending the river, whose general course for about half a league is nearly south, observed an alluvial flat on both sides of the river, which extends to some distance back from its banks, to a rising ground which appears to keep a parallel direction with the river; the soil on the flat is much of a clay nature, occasionally exhibiting a surface of rich loam or vegetable mould, the timber principally growing on this alluvion, is elm, ash, fir, black and yellow birch, alders, spruce and pine. This tract bears the indications of being overflowed in spring, to the foot of this small elevation, which gradually approaches the river, above the second mile where the course of the Kushpahigan or Belle Rivière, is about south-east and by east, to the portage or carrying place, about six miles from its mouth.

In these last four miles, the stream becomes swift, running deep, with great rapidity; the banks are occasionally bold, and the land still excellent in various places, the quality of the soil being generally strata of white and blue clay, beneath a surface of rich loam, commonly red, having more or less depth above the latter; the prevailing timber is elm, spruce, black, white and yellow birch, ash, poplar, pine and balsam, some cedar and alders. At the lower landing of the portage of Belle Rivière, the river contracts to about ten yards, presenting in the rushing waters that precipitate themselves over the rocks, together with the wildness of the surrounding scenery, as the cliffs that impend over the basin and river rise to upwards of 75 feet perpendicular height, a very interesting and picturesque cascade. Here is afforded a site well calculated for mills and other works of that nature.

The portage is upon the northern bank, and is one quarter of a mile long, leading first over a very high hill, where the land is again level to the upper landing at the head of another fall of about twenty feet high, making the difference of elevation together, of between fifty and sixty feet.

Here the land is of good quality, composed of a dark argillaceous loam, beneath a rich vegetable mould; the varieties of timber are red spruce, ash, balsam, black and white birch, cedar, elm, red and white pine. This description of land forms the leading feature of the country, along the banks of the Belle Rivière, to the Rivière des Aulnais, about two and three fourths of a mile above the portage, the general course therefrom is south east. Here the Belle Rivière forms a large basin in the centre of which is an island of excellent land. The river enters at the south-east end, with a cascade of ten feet, falling through a narrow contraction of the river, not exceeding two or three yards at most. Next to this on the north-east side of the basin, enters the River des Aulnais, with a gentle current, called in the Indian or Cree languages, "Peshikaouinamishushih" of alders; here we encamped at half after four o'clock, it having rained during the greater part of the day.

Tuesday

Tuesday, 8th.—The voyageurs finding it indispensably necessary to repair the canoe, which would take some time to effect, Mr. Davies and myself proceeded up the Belle Rivière on foot. Exploring the eastern bank, for about three miles, I found the land more broken and hilly, rising in some places near one hundred feet above the bed of the river, whose general course is from the basin about S. S. W., and is not less than 30 yards wide. In the vicinity of the small streams that flow into the main river, I observed some valuable beds of blue soft marl, and frequently much clay forming the sides or slopes of the hills; from the summit of one of these, I observed at about six miles distance, bearing south, a range of hills stretching eastward, and apparently a continuation of those intersecting the Kuspahiganish. The intervening land is broken, and generally clothed with spruce, pine, balsam, birch, that which borders the river is ash, elm, fir, balsam.

Having found the character of the land, so far of arable quality, we returned to the camp, with the intention of ascending the river some considerable distance in the canoe, but in examining the state and quantity of our provisions, I found that Mr. Murdoch, the clerk of the post, had only furnished me with about half the quantum I had requested in my statement. Thus curtailed, I conceived it highly imprudent to venture another day up the Belle Rivière, while there remained yet near 50 miles of distance to be performed, to reach Chicoutimi.

Set out from the camp at 9 o'clock, P. M., and commenced ascending the Rivière des Aulnais, River of Alders, very justly so called, as the alders were grown so thick on the banks and entangled across the passage of the river, which is extremely winding, that with the utmost difficulty, we performed about a mile, and encamped on the northern bank, precisely where the Assuapmousoin party had encamped on the 21st August.

The land forming the banks of this small stream, is of an alluvial nature; the soil being generally clayey loam, timbered with elm, ash, spruce, some pine and fir; at about a quarter of a mile distance, on the south bank is observed an eminence which follows the general direction of the river, which is south easterly. While the voyageurs were busy in encamping, I followed a path, which at about 30 chains led me back to the encampment at the basin, having thereby discovered the portage of the alders, I determined on walking the continuation of it on the following day.

Wednesday, 10th.—The voyageurs having got fairly under way up the river, which still appears obstructed by alders, I walked the portage with Mr. Davies, and took the following courses and remarks:

Course of the Portage des Aulnais.

- S. 25' E., 4 chains—Met a brook running S., land rising on the left, soil, loam and clay.
- S. 4 " Another brook, timber, ash, spruce, birch, fir and pine.
- S. 5° W 12 " Brook coming from between the hills on the left of which runs the portage.
- S. 10 W. 5 " Met a brook, land of a wet swampy nature, spruce, balsam, pine and tamarack.
- S. 0° 2' 22 " Met a brook, clay bottom, a spruce and tamarack swamp, occasionally ash and cedar.
- S. 15° E. 12 " Do. do. good land, but requires considerable draining, land rising.
- S. 35 E. 20 " Still proceeding along the foot of the hills of no considerable elevation, observed similar elevations to follow on the opposite bank of the river. The soil is a black earth or clay beneath the mould; which is of considerable thickness, spruce, fir and tamarack, some black birch and ash.
- S. 40 E. 11 " A high hill on the left, the land in that direction is of unfavourable quality, being generally composed of a sandy loam, which is timbered with spruce, white birch and pine.
- S. 35 E. 20 " Still wet swampy land, yet of good quality, is timbered with spruce, ash, alders, balsam and black birch.
- S. 45 E. 10 " To the basin at the foot of a fall on the river where a carrying place is made, the land in the vicinity of the fall is somewhat rocky, but the soil is generally good, being of an argillaceous red loam; ash, elm, fir, spruce, alders and pine.
- E. 3 chains—Rocky land.
- S. 45 E. 10 " Spruce, birch, pine.
- S. 55 E. 10 " To the falls of the Aulnais of about 12 feet. The river falls over a granite rock, inclining 75° N. W., the timber about this spot is spruce, balsam, poplar, some ash, white birch and pine.

- S. 75 E. 4 " Rocky land, spruce and fir.
- E. 4 " Ascent of a rock, granite, gniess.
- S. 2 " To the upper landing upon the bare surface of the rocks.

This portage having been effected by the voyageurs, and there being an end of the alders, we embarked into the canoe. The land I observed in our progress, to be a rich alluvial soil, timbered with elm, ash, spruce, fir and some pine and black birch; and as the river acquires greater width, we occasionally behold the aspect of the mountains, in a southern direction. Having ascended the river for about two and a half miles, where the Rivière des Aulnais is about two chains broad, we entered upon lake Tsiamagomishish.

Continued on for about one and a half mile, the lake thus far not exceeding ten chains in width, and the surrounding country being very horizontal and level, the soil of a sandy character, and offering but the aspect of tamarack and white birch and pine. Observed a narrow channel on the south shore, which led us to Lac Vert, Kasushikéomi; the "lake of clear water," and a name very well applied, as its waters are truly so clear, as that the bottom of the lake, which is clay, can be discovered at the depth of several fathoms, possessing at the same time a green tinge, that has given it the french name, the waters contrasting most singularly with those of Lake Tsiamagomishish, which are of a whitish color, nor possessing any degree of transparency.

Lac Vert is about a half a league in length, and about half a mile broad, exhibiting on its borders a boldness of scenery peculiarly attractive. A succession of high mountains range from the west along the south borders of the lake, leaving but a very narrow strip of cultivable ground between it and the foot of the mountains which are clothed with spruce, fir and pine. On the north side there is but a narrow tongue of land, which divides Lac Vert from Tsiamagomishish, on which is some tolerably good red pine, some white pine, spruce and white birch; the west end of the lake is low and level, for some considerable distance, the land is of good quality, and is well timbered with spruce, birch, cedar and fir, some pine. From thence is afforded a view of Lac Vert, and its surrounding scenery.

In passing the channel between the two lakes, I noticed a piece of bark folded, and set in a particular direction on a pole, on which was delineated by some indian hunter, the course that they had taken up some particular river, and which had most probably been left there as an information for some other indian hunters, who were about to join them. This is a mode of rendezvous used by the Abenakis and Algonquin nations, who very likely had visited this place, and were now returning towards their own grounds, as appeared by the direction of the rivers.

Proceeding up Lake Tsiamagomishish, about a mile beyond Lac Vert, in which distance the breadth varies from 8 to 12 chains, being quite indented with bays; and the land on its borders of a low swampy nature, being much of a sandy soil, and clothed with spruce, tamarack, fir and cedar, we followed a narrow channel which brought us to a small lake on the northern border about three quarters of a mile long, by 8 or 10 chains broad, which in its circumjacent land is likewise low, rising, however, gently on the north side towards a few hills in that direction. Near the entrance of this channel is a singular bluff of granite, nearly isolated in the lake, united to the main land, by a similar description of low swampy ground, as characterises the land about the lake. It is further contrasted with the adjacent country, as it is almost destitute of trees, the present growth being but a dwarf description of white birch, spruce and aspen; the appearance of the rock is much like that which composes the chain of mountains which continue eastward from Lake Vert towards Lake Tsiamagomi; having considerable level space between them and the borders of Tsiamagomishish.

Not knowing where the portage of Tsiamagomi was to be found, we continued up the lake to a small stream, which like the river of alders was so crowded with them, that it was out of all probability, the portage laid this direction, yet it afforded an opportunity of examining the land about this part of the lake, which is of a far better quality, and is timbered with ash, red spruce, fir, pine and alders. We therefore returned to a deep bay I had observed in our progress, wherein we found the landing of the Tsiamagomi portage, where we encamped at 7 o'clock, 9½ miles from the lower end of the lake.

Thursday 11th—Observed the latitude by meridional altitude of the Pole Star, 48° 1'. The canoe having been carried across the portage at an early hour, we were enabled to proceed at 9 o'clock, and I made the following remarks of the courses, timber and soil. Beginning good land, soil an argillaceous loam, timbered with spruce, ash, pine, elm, poplar, black and yellow birch and fir.

- N:70 E. 4 chains—Top of hill, yellow birch, spruce and pine.
- S. 45 E. 30 " Summit of rise, white birch, balsam, poplar and pine.

Appendix
(V.)

14th Jany.	S. 35 E. 6 "	Red and white pine, poplar and birch, sandy loam.
	S. 30 E. 12 "	Gradual descent, sand, timber the same as before mentioned.
	S. 35 E. 20 "	Light sandy coarse loam, white birch, aspen and pine.
	S. 30 E. 12 "	Descent, better soil, black birch, spruce, pine, fir and aspen.
	S. 40 E. 6 "	To the landing on the borders of lake Ouisqui, a small lake of about $\frac{1}{2}$ a mile in length, by $\frac{1}{2}$ in breadth. This lake forms the head waters of the Chicoutimi river, and offers in the distance the view of the lofty hills of Tsiamagomi.

Having passed the narrow communication between the lake, we came upon the beautiful lake of Tsiamagomi (Long Lake) and beheld the succession of lofty hills, which rise immediately from its borders, on the south side, contrasting with the lesser elevation of its northern border

Progressed about 2 $\frac{1}{2}$ miles—course S. 40 E. the lake expanding from $\frac{1}{2}$ to $\frac{3}{4}$ of a mile wide. The southern borders rising into hills of about 300 feet height, timbered with spruce, white birch and aspen, the land so rocky, and the cliffs appearing in many places, that this side of the lake is quite uncultivable. The northern side, although not as mountainous, presents, for upwards of $\frac{1}{2}$ a league, an iron bound coast, frequently rising in perpendicular cliffs of granite, whose base is bathed by the waters of the lake. Their summits are clothed with cypress and a stunted description of pine, sometimes called Norway pine.

Having come to the foot of a perpendicular cliff, rising about 100 feet above the level of the lake, and pending as it were over the canoe, we beheld another section of Tsiamagomi, discovering the chain of mountains in the distance, and exhibiting the features of the lake.

From this point or cliff the lake lies S. 62 E., and averages near a mile in width. Entered a small bay at noon, about 5 miles therefrom, on the northern side, and obtained a meridional altitude of the Sun, latitude 48° 1'. Here fragments of a rock were taken, strongly impregnated with magnetic iron ore, and much black sand washed upon the beach. The land on this side is more level, but it is quite of a sandy character, timbered with spruce, poplar, red pine and white birch. Crossed over on the opposite shore, and entering a large bay, came to the mouth of the river Upikubatch, which descends a succession of rapids to its entrance; leaving therefore the canoe there, I proceeded on foot for about a mile up the river along the north-east bank, climbing in many places the abrupt and broken banks. The south side is bounded by a succession of hills of a rocky nature, which appear to stretch for some distance back from the river, and following a general direction with it.

Opposite to the mouth of this river, is a large island or presqu'isle, of near $\frac{1}{2}$ a league in length, of an alluvial formation, and covered with alders, this I should believe overflows in spring. There are likewise three small islands between it and the shore, of the same description.

For the same reasons that I could not explore the Belle Rivière, I was prevented ascending the Upikubatch, which, however, from the aspect of the country, was far from repaying the attempt with any satisfactory result. Having left the mouth of that river, which is surrounded by rocky mountains, we passed several high cliffs, rising upwards of 300 feet high, which leave at their base a small strip of level land that reaches the border of the lake. But the hills strike again the lake, opposite a considerable stream, which flows into the lake, on the northern side, which I ascended for about a mile.

The land on this river singularly contrasted with that of the Upikubatch, as this river flowing into the lake with a gentle current, lays through a wide march, which is bordered on either side by a low spruce swamp. The red tinge of the water would indicate its traversing for a considerable distance in the interior a similar tract of country.

From thence we reached Pointe au Sable, at 6 o'clock, where we encamped beneath a large pine tree, which, during the night sheltered us in a great manner from a gale, which blew with surprising force from the north-west. Little can be said of lake Tsiamagomi, in an agricultural point of view, although much of the sublime and beautiful scenery it presents, the linked succession of craggy hills, which border the south side of Tsiamagomi, thinly clothed with spruce, white birch, and stunted red pine, remove all possibility and means of settlement on that side. On the north shore the land for about six miles from lake Ouisqui is likewise unfit for culture, as it rises into cliffs, whose summits are wooded with small red pine spruce and aspen, from thence to the river on the north side, the land although of a sandy character, may, in some parts be susceptible of improvement. It then becomes of a rocky hilly nature. What it is in the interior, can best be described by persons who have explored it.

Pointe au Sable is a Presqu'isle of alluvial land, formed at the entrance

of a river, which enters the lake on the north side. Opposite to it on the south side of the lake, a small stream falls into the lake, from between the high mountains, which, form its bed and the cascade at its entrance, affords a well calculated site for a mill and similar establishments, while Pointe au Sable would be an excellent situation for a village, by its advantageous position on the lake.

Friday 12th.—Although the skies portended rain, yet the wind had abated, and we left the point at 9 o'clock, A. M. Our course laid down the centre of lake Tsiamagomi, from Pointe au Sable, south, 68 E., which preserves still the same feature as has been described. Keeping a straight forward course, we reached the depth of the lake, which is surrounded by high rocky hills, some of which discover barren cliffs, rising about 200 feet elevation. From hence can be observed the features that distinguish the country on the borders of Tsiamagomi, for a distance of nearly 20 miles, being about the length of the lake.

Not having found the outlet of the lake, we coasted along the northern borders towards a considerable bay, that had been noticed on that side in our way to the head of the lake, opposite to which, on the south shore, a river called Upika, enters very rapidly from between the high mountains that form its bed. And having doubled a high rocky point which overlooks a partial continuation of the lake, we perceived a gentle current flowing north-eastward, which brought us to the mouth of the Chicoutimi river, which signified, "further out it is still deep," and then almost immediately to the head of the Portage des Roches. The length of lake Tsiamagomi being about 19 miles from lake Ouisqui to Portage des Roches, and its average breadth near a mile.

The Portage des Roches is about 200 yards long, leading over the rocks, which, in spring, are covered by the river. Here the Chicoutimi falls about 15 feet to the lower landing, at the basin, which is surrounded by high mountains.

Leaving the basin, which is near three quarters of a mile in length, we thence descended the Chicoutimi river, which runs down with considerable swiftness, for about one and a half mile. The river is embanked by high rocky hills, rising to about 200 feet elevation. Then the mountains terminate, resting about the region of Tsiamagomi. The land on the banks then becomes level, and appears to improve, being timbered with spruce, fir, pine, a few elms and cedar, occasionally on the left when the fire has burnt up the vegetable mould, it discovers a rocky barren soil.

The Portage of l'Islet is then reached, being $3\frac{1}{2}$ miles below the Portage des Roches, on a general course N. E. therefrom.

The general course of the portage de l'Islet, is about S. 75 E. 20 chs. to the lower landing, lying through a good quality of land, its soil being a rich dark loam, timbered with black birch, spruce, pine, ash.

The river is divided into two channels, by a large island, the south-west channel is broken by cascades and rapids, while the north eastern is but a long rapid, which is frequently shot down with canoes.

From the foot of this portage, we reached the Beau Portage two miles below it, in which distance, the river is, on average, about four chains wide. Its right bank in the first instance is high and rocky, while its left obtains a good quality of soil, being timbered with elm, ash, spruce, birch and pine. On approaching the Beau Portage which lies on the right bank, the land acquires a light character of soil, being a coarse yellow loam, possessing a great proportion of sand; it is timbered with spruce, white birch, pine and some elm.

Having effected this Portage, which is about 250 yards long, lying thro' but a very tolerable description of land, being chiefly a sandy loam timbered with white birch, red pine, poplar, and spruce, and which avoids the cascades, that are about 20 feet total elevation; we continued the descent of the Chicoutimi, for $7\frac{1}{2}$ miles to the Portage de l'Enfant; its banks exhibiting in this distance much improvement in the soil and timber, the former is generally an argillaceous loam and the latter spruce, elm, ash, fir, pine, black and white birch and some cedar. The river which varies from 4 to 6 chains width is occasionally interspersed with well timbered islands, and are most commonly alluvial. The general course of the river between Beau Portage and the Portage de l'Enfant, is about N. N. W. At one particular bend we came by a canoe, containing an Indian family; their astonishment at beholding a canoe of strangers, was singularly expressed by a smile or rather a silent laugh, for which peculiarity the Montagnais nation is distinguished by the Indian name Papinashuah, signifying laughers or sneerers. I attempted to address them a few words which they did not appear to understand, and we continued our course of the Chicoutimi River.

The Portage de l'Enfant about 200 yards long, is so called from the circumstance of a canoe, containing an infant, having loosened from its moorings, negligently secured at the portage, having descended without the least harm happening to the infant, the falls of l'Enfant, which are between 40 and 50 feet elevation, taking the cascades collectively.

The path lies over tolerably good land, its soil being a yellow loam, timbered with spruce, ash, cedar, poplar, elm and pine.

From the lower landing, it is but 20 chains across the basin, at the foot of the falls to the Portage du Chien, on the right bank of the river. This portage, which is also about 200 yards in length, leads over a very good description of ground, and avoids a cascade of about 15 feet in height. It is timbered with cedar, fir, birch, red spruce, white and red pine.

Having embarked in the canoe, we shot part of the rapids. Observed in our progress down the river, that the land preserves that character of fitness for settlement, which it has more or less exhibited from the Portage de l'Islet, and likewise a few streams which discharge themselves on either bank of the river.

Reached the landing at the portage, which is vulgarly called Ka-Ka, 1½ mile, at the head of a high fall, on the edge of which is a small island that divides the fall into parts.

It being too late to pass this portage, we encamped at the landing, having performed this day, about 21 miles, and effected five portages.

Saturday 13th.—Penetrated about two miles south-eastward over very level ground, and observed the excellent description of its soil, being a clayey red loam, occasionally intermixed with small gravel beneath a rich vegetable mould, a fine growth of mixed timber woods this tract, such as ash, elm, fir, yellow and black birch, balsam, spruce, some bass, maple and cedar. This level tract appears to have great extent eastward and south-eastward.

Having returned to the party, who had already effected the transport of the few stores that remained and the canoe, we left the foot of the falls, which are about 45 feet high, and descended to the portage of Chicoutimi, above the falls; where the river contracts to less than 25 yards, while opposite the portage the river is about 5 or 6 chains broad. This portage is about a mile below Ka-Ka; the land in that distance is of excellent description, the timber being elm, ash, pine, fir and some white birch.

Course of the Portage Chicoutimi,

Beginning ascent.

I now beheld from an eminence, which overlooks the harbour of Chicoutimi, the noble stream of the Saguenay, flowing in majestic silence towards its confluence with the St. Lawrence. Although not possessing here the bold features of Tsiamagomi; still the great breadth of the river, added to the striking scenery, the group of buildings in the foregrounds, and the small solitary chapel on the adjacent eminence, was a combination of objects that amply repaid us for the privation we have suffered in traversing about 500 miles of country, crossing 64 portages, and making our lives repeatedly, in the unavoidable descent of many bad rapids, to reach this arm of the sea.

Descended to the post, and were received at the house by Mr. Barnston, as Mr. Andrews, the resident clerk of the post, was absent at Quebec. Learnt that Mr. Wagner and Mr. Proulx the surveyor, had left the post only a few hours before our arrival, on their way to ascend the river St. Jean, which falls into the Saguenay, and cross the country to St. Pauls or Mal Bay. Employed the remaining part of the day in effecting the following recapitulation of distances, from the mouth of Kushpahigan or Belle Rivière, to the post of Chicoutimi, being exclusive of the length of the minor portages, which amount together to two miles.

TABLE OF DISTANCES.
Mouth of Kushpahigan or Belle Rivière.

6 Portage of Belle Rivière, 500 yards.												
8½	2½	Mouth of Rivière des Aulnais.										
10½	4½	2	Falls of Rivière des Aulnais and Portage, 700 yards.									
16½	10½	9	6	Head of Lake Tsiamagomishish or Port. Tsiamagomi.								
17½	11½	9	7	1	Lake Ouiqui ½ a mile, Tsiamagomi.							
37½	31½	28½	26½	20½	19½	Portage des Roches, 200 yards.						
40½	34½	33	30	24	23	3½	Portage de l'Islet, 440 yards.					
42½	36½	34	32	26	25	5½	2	Beau Portage, 250 yards.				
50½	44½	41½	39½	33½	32½	13	3½	9½	Portage de l'Enfant, 200 yds.			
50½	44½	41½	39½	33½	32½	13½	3½	9½	Portage du Chien, 210 yds.			
52½	46½	43½	41½	35½	34½	15	11½	9½	2 1½	Portage Ka Ka, 200 yds.		
53½	47½	44½	42½	36½	35½	16	12½	10½	3 2½	Portage of Chicoutimi.		
55½	49½	46½	44½	38½	37½	18½	14½	12½	5½	5 3½	2½	Chicoutimi.

Making a Total distance of 55½ miles from Lake St. John to Chicoutimi.

Sunday 14th.—The day proving favorable for observation, I accordingly prepared for a set of equal altitudes and azimuths, to ascertain the latitude and variation.

The forenoon observations being taken, I visited the chapel with Mr. Davies and the voyageurs. It stands on a rising ground on the point which projects into the basin at the foot of the falls of Chicoutimi; its length is about 25 feet at most, by 15 wide. The altar, which is plain, and the pictures or engravings, which hang around the interior of the chapel evidently bear the hand of time. The tombstone, with the inscription at great length of the death of Father Cocar in the last century, was broken in several places, and the words of the inscription, which is in Latin and so ill connected, that with much difficulty it can be understood.

A Catholic Missionary visits the Chicoutimi twice a-year, and teaches the natives the first principles of the religion, of which the Jesuits have framed a catechism in the Cree language, which is circulated amongst them.

The King's Posts' Company Establishment, situated at the eastern extremity of the peninsula at the confluence of the Chicoutimi River and the Saguenay, consists of a commodious dwelling-house for the resident clerk or agent, which is situated on a rising ground commanding a view of the Saguenay and the harbor;—a store, judiciously placed near the landing—a bake-house, stables and barn—several pieces of tilled ground, and a garden furnish the Post with various vegetables, potatoes principally, as also some luxuries for the table.

The land about Chicoutimi is principally comprised of a clay soil, containing rather an insufficient proportion of loam or sand to render it generally very good; yet that soil is easily corrected when the materials for manure are at hand.

Having obtained a meridional observation and completed the afternoon altitudes and azimuths, I found the latitude of Chicoutimi to be 48°-25'-5", and the mean variation by these instruments 20°-15' west: so great a difference with the variation observed at Lake St. John can only be attributed to local causes, as some very attractive mineral in the rocky hills lie back of the post. These observations were corroborated by altitudes of the Pole Star and other circumpolar stars.

Monday, 15th. Penetrated about 5 miles in a direction from Cape St. François below the Post, in a course S. S. easterly, towards La Baie des Has; traversed in that section an excellent tract of land composed of an argillaceous loam beneath a rich vegetable mould, affording a growth of mixed timber, namely, ash, fir, black birch, balsam, poplar, white birch, pine, some maple and balswood.

Passed a small lake and crossed several brooks which spread fertility in their course, and discovering in the ravines or gullies which they form, an indurated stratum of blue clay and occasionally some white soft marl, the brooks containing in their beds a quantity of small gravel.

There is much similarity in the general surface and character of this tract and that which I explored at the Portage Ka-Ka, and prevailing along the banks of the Chicoutimi River. On

Appendix

14th Jany

Appendix
(V.)
14th Jan.

On my return towards the Post I observed a large stream on the south side of the Saguenay, which I ascended to the foot of a fall, where a mill has been erected by the North West Company where they held the King's Posts.

The causeway, which is 100 yards from the landing to the mill, is yet tolerably good, but the mill is going fast into ruin; the aqueduct which leads from the head of the fall to the over-shot is quite unfit for use as well as other parts of the works which are intended to drive two single saws; the frame with some repair might yet answer for a few years longer. Having taken a hasty sketch of the falls, and as night was fast approaching, I returned to the Saguenay and reached the Post at 8 o'clock P. M. more than usually fatigued with the toils of this day.

Tuesday, 16th. Being desirous of acquiring a knowledge of the nature and character of the land along the Saguenay and its course and size to the Rivière des Terres Rompues, I ascended on foot along the south shore and part along the north shore of the Saguenay, taking its general course, which is about W. and by N. to the River des Terres Rompues, and near two leagues above the Post of Chicoutimi, preserving an average breadth of half a mile.

The northern bank is formed of craggy broken hills, commonly clothed with spruce, small red pine and white birch, leaving however in some places a strip of level clay land between them and the borders of the river. The south shore exhibits an horizontal surface and land of an excellent quality, discovering a clay loamy soil timbered with spruce, black birch, pine, fir, cedar, ash and elm. The interior country on both sides of the Saguenay appears well irrigated by the numerous small streams which I crossed, generally tinged with the colour of the route they have traversed.

At the River des Marais the Saguenay ceases to be navigable, as thence taking about a south-west direction it becomes broken by rapids and full of rocks; the high tides rise to 7 feet, and at the Portage des Terres Rompues, about half a mile above the confluence of that River with the Saguenay, the tides are very little perceptible; two miles above this portage the river which is much indented with bays, falls of rapids, and the land on its banks issuing into rocky hills, there contracts to about 10 chains wide, but it was impossible to ascertain that fact or to explore beyond a river which I conceived is the River des Terres Rompues, (broken land) which enters on the N. W. bank with a succession of falls and cascades. I should have been glad to have seen the falls of the Saguenay, which are frequently heard at the Post, but which none have yet visited.

Returned to the Portage which I explored for about a mile through a very good description of land; its soil however for the greater part is clay and occasional intervals of rich loam, the timber is mixed, being ash, spruce, fir, cedar, maple, bass, some very good white and red pine.

Having come to the borders of a high bank of clay, upwards of 150 feet above the bed of the small River des Marais which runs at its foot, I beheld a succession of similar clay hills for a considerable distance, whose snowy whiteness contrasts with peculiar effect with the spruce, fir and pine, that crowd their summit, and resemble lava thrown by some eruption, which I believe has been the original creation of them.

Returned to the Post at 8 o'clock.

Wednesday, 17th. Having examined the Falls of Chicoutimi, which are about 40 or 50 feet in height, rushing thro' a contracted channel over the rocks that interrupt its rapid course to the basin which forms part of the harbor of Chicoutimi, I proceeded to take soundings of the harbor at the full ebb of the tide, and found that however safe it might be in respect to wind and moorings, it could not answer for ships of considerable draught unless they ground at low water, for vessels cannot reach the basin of the Chicoutimi River that draw more than 14 fathom, on account of the narrow channel between the shoals that set out from Pointe aux Trembles and the Chicoutimi Point on which I have sounded from 1 to 14 fathom, while in the channel there are at most but two fathoms sand and clay bottom. Outside of the shoal, which extends about 300 yards into the stream of the Saguenay, vessels can anchor in 3, 4 & 5 fathoms near Cape St. Francois, which I suppose is the extent of the harbor about a mile below the Post. Vessels are exposed to a very strong current at the ebb tide, which would require their being moored to the shores besides the anchor.

From the Cape to make the Post the course is W. and by N., and when abreast of Pointe-aux-Trembles to enter the small chan-

nel, S. W. & by S. $\frac{1}{2}$ W bearing upon Chapel Point, approaching within a few yards of the shore.

The tide rises between 16 and 18 feet perpendicular in four and a half hours of flood; the harbor and this part of the Saguenay is frozen over about the 1st or 5th December, until about the 10th or 15th of May. Chicoutimi, by its central point between Lake St. John and the St. Lawrence, its harbor and its locality with extensive adjacent and cultivable lands, is likely to become the market for the trade of all this section of country.

It was 5 o'clock P. M. when we bade farewell to the hospitable inmates at the Post, and proceeded down the River for Tadoussac.

Having reached the River au Moulin, about 2 miles below the Post, the Saguenay shapes its course about N. E. by N. $\frac{1}{2}$ N. near 3 miles, acquiring considerable width, which is about half a mile at the confluence of this small river. Its N. W. bank, assumes a bold hilly aspect, while the south-east bank is generally more horizontal and appears to offer some very good land.

In a north-east direction is seen a chain of prominent mountains of no inconsiderable elevation, stretching from the north-west, then bending its general direction with the course of the Saguenay.

Passed River Caribou entering from between the hills on the north-west side appearing to be a large stream, which I supposed might have been explored by Mr. Proulx; I therefore proceeded on to Pointe de L'Ifier, from whence observing a light on the opposite side of the River bearing E. and by N. we made directly towards it as night was fast approaching; the moonshine with its resplendent lustre on the broad expanse of the Saguenay, the scene has been seldom equalled wherein a variety of objects combined to excite the admiration and interest of the Canadian in his native country, and to behold them without regretting that they had not been earlier known and appreciated.

In this train of reflection we made the landing at the meadows, from whence numerous voices greeted the approach of their brother voyageurs.

Few imagine the comforts of a wigwam which we now entered, by the hospitality of one Jerome L'Onge, who with his family a Montagnais native and their children formed the amount of their domestic circle round the fire, which lighted with peculiar effect on the countenances now collected around it.

This Jerome L'Onge, a Canadian, of the Parish of the Eboulements, and who has spent the greater part of his life either in the service of the N. W. Company or in that of the King's Posts' Company, related to us much of his travels through the Indian country.

Having been stationed for many years at Lake Mistassini trading with the natives, he says that the extent of the Lake is but very superficially known, for it took him three days to cross the narrowest part of it from island to island that range in that particular part of it; the distance between them and the main shore he supposed not less than 30 miles, the lake being therefore about 90 miles wide in that place. The Indians usually take the whole of the summer season, part of the spring and fall to reach its mouth from the head of the Mistassini. The least that can be supposed of the magnitude of this immense Lake is that its dimensions are not much inferior to Lake Superior.

The Rupert River which flows from it is considerably larger than the Saguenay, and which he has descended to within a day's journey of St. James' Bay; the distance between Mistassini and the Bay he supposes about 50 or 60 leagues.

He also travelled from the Post of Aisouapmousoin generally a N.N.E. course to Lake Mistassini, performing that route in about 3 weeks, averaging 4 leagues a-day, and supposes the Lake to lie immediately north of the Seven Islands and the St. Lawrence, traversing in his course thro' that interior country several lakes larger than Lake St. John, and says that there is a far greater proportion of water than land, while the latter is perfectly uncultivable, being composed of masses of rocks, cliffs and extensive clear swamps of a shaking boggy nature, wherein for miles together nothing but a few tamarack trees can be seen; this is the land of the deer and moose—they live on the moss of the hills and traverse these vast plain in herds.

The Indians who hunt this wretched country, which nevertheless abounds with peltries of various kinds, have greatly diminished in numbers to what they were in the time that the North-West Company

Company held the King's Posts, and more particularly of late years that strong spirits have been introduced among them, on which occasion this miserable people revel until they become literally dead, and many of them actually die. When hunger assails a Montagnais family, it is customary that whenever one of its members has fallen a victim to want he is buried on the spot by the others, who immediately afterwards remove their camp to another place, and so on until the last remains, when he abandons the place altogether and rushes heedless thro' the woods till he drops himself the last victim of hunger.

The smallpock brought along with the apparel and blankets given to them in exchange for their furs, has frequently carried off 50 to 100 souls of a day. There are now only about 50 to 60 families who trade at the Posts of the Company, while they might without these destructive causes have numbered at least 500.

The mode by which the Hudson's Bay Company carry on the transport of their goods to Mistassini is generally in barges conducted by regularly disciplined men who are for the most part half bred: the barges are drawn across the portages on rollers. Cedar bark canoes are used to follow up small rivers to go in search of the Indians for their furs, as birch bark for canoes cannot be found in that country.

Thursday, 18th. Employed this day in exploring the north and south banks of the Saguenay, and taking interfections of Pointe-aux-Roches, Pointe ——— and other Points in the river, for trigonometrical purposes. Intersected on the north shore those several streams whose beds are chiefly clay; the principal streams are called La Loutre and Rivière aux Outardes. Observed a good deal of magnetic attraction from the hills, fragments of which have discovered some iron ore.

Our camp laid in the extensive meadows, which are annually mowed for the use of the Post, the land is chiefly a clay soil, but on approaching the hills it is covered with a rich vegetable mould—the hills are rocky and unfit for settlement.

On the opposite bank of the river which is over a mile across, the Rivière des Vases or Tomisticobish discharges itself; at its entrance a dangerous shoal and reef of rocks project into the stream which is covered at flood tide; some fine specimens of red marble were found here.

Friday, 19th. Left the meadows at 9 o'clock and proceeded down the Saguenay, whose banks now rise into barren cliffs and hills, thinly clothed with birch, fir, spruce and some stunted red pine and cypress.

Having passed Rivière ——— which falls into the Saguenay on the north shore, we made Pointe aux Roches, bearing S. 55 E. 7½ m. from Point de L'Islet; and thence Ruisseau Peltier, which descends rapidly between the craggy high hills that form its bed. From it, situate in the depth of St. James's Bay, the course lies south to Cape à L'Est, about 18 miles below the Post of Chicoutimi, Pointe à Roches bearing N. W. ½ W. 5½ miles where we landed, that I might take some trigonometrical points and interfections of the Bay des Has!

The Bay of Ha! Ha! or Baie des Has, is about 7½ miles deep, bearing up the bay S. 75 W., in which course lies those blue hills of Tsiamagomi, distant 28 or 30 miles, rising above the intervening flat country that characterises the land about the Bay.

The name of Ha! Ha! is supposed to have been given to this bay by the French when they first ascended the Saguenay, from the circumstance of their having entered the bay mistaking it for a continuation of the Saguenay, but finding their error on reaching the depth of it, expressed those ha! ha's! which it has retained, and then retraced their course to Cap à L'Est, where the Saguenay is contracted to about 48 chains across to Cap au L'Ouest or West Cape, appearing much more as a broad river entering on that side of the Saguenay than the Saguenay itself. The Baie des Has evidently appears to have been formed by nature as the principal seat of commerce and trade of all this portion of country or territory: 1st. For the extensive tract of level land that lies about it, and extending to Lake Tsiamagomi and Chicoutimi, as has been before mentioned. 2dly. For the harbor it affords for the largest vessels of the line which can sail directly into the Bay with nearly the same wind that they ascended the Saguenay, and anchor in the second bay which it appears to form in manner of a basin, which I presume would be a fit site for a mart of trade; and 3dly. The facility that is afforded of opening a road

to Chicoutimi or direct to the head of Tsiamagomi—indeed, the easy practicability with which a water communication could be effected between it and that lake to remove the intricate and circuitous route of the Chicoutimi River, the difference of level not exceeding 250 feet, in a distance of 4½ to 5 leagues through the level tract that lies between these places. It is protected by Cap à L'Est and the prominent hills that form its entrance, while the former rising to about 500 feet height commands a view of about 12 miles down the River, and guards with West Cape the entrance into the upper part of the Saguenay.

Following the base of the cape, which in some places presents the abrupt face of the cliff, and at others the broken masses of granite rock that are from time to time crumbling or detaching themselves from the summit heaped irregularly together, in the interstices of which a few dwarf spruce and white birch have found a vegetable mould to produce them; we reached a small rapid stream and bay on the north shore of the Saguenay called L'Ance et Ruisseau des Femmes, and encamped at half after six o'clock. About 8 o'clock a strong breeze sprung up from the south-east, and during the night rose to a gale causing a heavy sea on the River.

Saturday, 20th. The wind blew too strong, and it was quite impossible to venture on the agitated waters of the Saguenay with our frail bark canoe.

The River is here about half a league broad, and its shores are formed of high abrupt rocky hills; near the Ruisseau des Femmes they rise in conical shapes to near 400 to 500 feet elevation, thinly clothed with the stunted spruce, white birch and red pine.

Sunday, 21st. The sea appeared to have considerably diminished as the wind had abated; we therefore ventured out of the bay, but the swell proved still too great to proceed, on doubling the first Point, which obliged us to return to our encampment.

At 9 o'clock we made a more successive attempt, and although tossed by the swell we got fairly under way, following along the base of the cliffs which form the iron bound shore of the north side of the Saguenay, which is embanked by a succession of rocky barren hills, exhibiting fractures that I believe are seldom equalled for their boldness and the effect they produce on the mind, creating a constant apprehension of danger, even during a calm of the river, as it has sometimes happened that a gust of wind rushing from the summits of the hills, has stripped to pieces the top-gallant fail of schooners, and have frequently placed the boats which ply between Tadoussac and Chicoutimi into imminent danger.

Therefore it was with peculiar sensation the eye caught at every small bay or stream that could afford a safe landing, several of which we passed to the Ruisseau La Trinité, 14 miles from Cap à L'Est, which can afford very safe landing for boats and canoes.

From this stream it is about 5 miles to L'Ance et Rivière la Trinité on the south shore, which appears to afford safe harbor for boats and sloops and to possess some cultivable ground in the depth of it, the hills sloping more gradually to its margin, while at its entrance Cap La Trinité rises to an elevation of not less than 800 feet; part of it is cut perpendicularly with the surface of the Saguenay.

We then came to L'Ance St. Jean, which is likewise on the south shore, about 6½ miles below the Trinité, which appears a spacious and good harbour for sloops.

The gradual swell of country that surrounds the harbour gives a favourable aspect to the land, and I believe that some thousand acres might be found susceptible of cultivation.

On the northern side of the Saguenay several small streams descend the abrupt faces of the hills, but affording no recess or harbor for boats exposed to adverse winds.

The Petit Saguenay is likewise on the south shore about 4 miles below L'Ance St. Jean, and offers a convenient harbor for boats.

The general course from the Ruisseau de la Trinité to the Point aux Ecrits or Petit Saguenay, is S. 35. E. 15 miles. From this place the aspect of the hills, altho' still abrupt and barren, are not so elevated. Here and in several other parts of the north shore I perceived

Appendix
(V.)
14th Jan'y

perceived a great magnetic attraction on the needle, and therefore conceived the rocks which comprise the hills are either strongly impregnated with iron ore, or possess of their nature that attractive influence on the needle.

Having passed two small rocky islands nearer in with the north shore, we came to L'Isle St. Louis, which is an elevated mass of granite rock thinly wooded with fir, spruce, white birch and poplar; it is about 60 chains long and $\frac{1}{2}$ a mile wide; close in with the south-east end of it, are also two small rocky islands. The Saguenay is here about $\frac{1}{2}$ mile wide affords a safe harbor under shelter of the hill, and vessels may be moored in perfect security near L'Isle St. Louis.

We thence made the entrance of the River Ste. Marguerite on the north side of the Saguenay. It was low water, and I observed a reef of rocks stretching across it; at high water schooners might find it a very safe harbor here, and within the bay to the mouth of the river, which appears to be a considerable stream.

As we were unable to find any fresh water for encamping without going far into the depth of the bay, which is an extensive salt marsh, we proceeded on favored by the perfect calmness of the river and a fine moon light, which was however frequently concealed by the boldness of the hills and cliffs which still continue to form the leading features of the Saguenay, whose width on leaving the bay of St. Marguerite contracts to less than a mile. Having descended for about two miles without any change of scenery, we chanced to come by a small brook rippling down the face of the cliff; at which we filled with fresh water the spare vessels we had in the event of being obliged to pass the night in the canoe; but having discovered a less steep part of the bank we attempted a landing, which was effected with much trouble. The canoe and baggage were carried about 25 feet up the bank to clear the flood tide; a fire was then lighted of the wood that the previous flood had left on the banks, and after listening awhile to the hobgoblin stories of the men whom the chillness of the night had collected around it, we sought a resting place among the rocks.

Monday, 22d. We were awakened at 2 o'clock A. M. by the noise and confusion which caused the rising tide, obliging the men to remove the luggage and to find higher births. By break of day, while the tide was at a convenient height for launching the canoe, we set out from our miserable encampment. Having passed the Ruisseau des Groses Roches which enters the Saguenay on the N. E. bank, where I observed a lesser elevation of the land, the river bends its course south, passing Riviere St. Etienne, which discharges itself on the west side about a mile below the latter. Thence the Saguenay shapes its last course S. E. by E. to its confluence with the St. Lawrence. The banks are in many places cut perpendicular with the surface of the river, whose width averages near a mile. Passed La Baie St. Catherine on the north side, which but for the anchorage would appear to form a harbor for vessels, which would be sheltered from every wind by the hills that surround it.

We then reached the mouth of the Saguenay which is about 60 or 70 chains broad, and which possesses some very striking and bold features. Having then doubled the Point of L'Islet, we entered the harbour and landed at Tadoussac at 8 o'clock A. M.

This establishment is the most extensive of the King's Posts, consisting of 13 buildings, including a chapel. The residence of the agent of the Company is a neat one story building of commodious size, having a very tolerable garden, which part of it producing with other cultivated spots about the place, the vegetables for the inhabitants of the Post. The chapel is of about similar dimensions as that of Chicoutimi; its red roof and spire with the surrounding buildings, the range of small field pieces on the edge of the plain which extends to the foot of the mountains that rise to considerable height, in many places discovering the naked rocks or exhibiting the destructive effects of the fire that has thinned the woods which clothed their summits, leaving occasionally the tall pine clipped of its branches soaring above the dwarf growth of spruce and birch that has succeeded to the loftier timber. The beautiful growth of fir trees rising in as many cones upon the terrace, which I believe was once the seat of the fortifications of the French, situated on the west side of the creek which runs down from the hills, whose craggy summits contrast with peculiar effect with the firs below them, combine to form a very pleasing scenery from the River in coming up harbor or doubling the point of L'Islet from the Saguenay.

Observed the latitude of Tadoussac to be $48^{\circ} - 5' - 54''$ and the variation of the compass $16^{\circ} - 23' - 45''$ west. Its harbour is

formed by the peninsula or L'Islet, which separates it from the Saguenay on the south-west and the main shore on the north-east, about a third of a mile across and near half a mile in depth at low water, which rises twenty-one feet perpendicular in $\frac{1}{2}$ hours tide; the beach, on which there are extensive salmon fisheries, extends out a considerable distance, materially contracting the dimensions of the harbor: It is however secure and under shelter by the surrounding hills of most winds generally prevalent in the St. Lawrence, except the southerly gales which may affect vessels at flood tide, as the small White Island and Batture-aux-Allouettes are then covered, and which shelter them at ebb tide.

The entrance of the channel to the harbor of Tadoussac or to the Saguenay is intricate at the ebbing tide, and for vessels descending the St. Lawrence, which must come almost abreast of the light-house on Green Island, bearing S. E. from the harbor, and then pass to the north of White Island at the extremity of the Shoal aux-Allouettes and clear at the same time the shoal which sets out some distance from the north-east point of the harbor; it is far less intricate for vessels coming up from below. A light-house placed upon Red Island bearing _____ miles would very essentially facilitate the entrance into the harbor of Tadoussac, which at the same time would indicate the course to make the north channel of the St. Lawrence. The harbor is open for vessels and free of ice from May until the middle of December.

At the Post I had occasion to see several of the natives of both sexes of the Montagnais nation who inhabit the immense tract of country lying from the St. Lawrence northward to the Hudson's Bay territory. The dress of the females is singularly varied for the colours they bestow upon it: it usually consists of a loose piece of blue clothed trimmed with scarlet, which they use for the lower garments, and a mantle of printed calico; their hair is rolled up on each side of the head and twisted round with red tape or ribbon, which latter they are very partial to, a conical shaped cap of red, blue, green and white cloth, is generally wore, from beneath which a long queue of hair also twisted round with red tape, hangs down her back. They smoke and drink spirits like the men, whose ordinary dress is very slothful, consisting generally of some old blue cloak or frock, or a calico shirt and linen trowsers. The Montagnais or Mountaineer Nation—(Cree Language—"laughers or sneerers,") are generally a harmless people. They have no fixed habitation, but wander on the limits assigned among themselves as hunting grounds. They live by hunting and fishing, which not unfrequently failing, particularly of late years, is one of the causes together with an inordinate use of spiritous liquors and the occasional introduction of the small-pock, which has considerably reduced their numbers.

They have a repugnance for cultivating the earth, depending on other resources for subsistence, and have no tradition among them other than a faint recollection of the order of the Jesuits, who taught them the first principles of religious worship.

The native fastnesses of the Saguenay country in a military point of view, render it impregnable by a foreign enemy, by reason of its vast impenetrable barrier of mountains, lakes, rivers and swamps that lie between it and the St. Lawrence. Its key is undoubtedly Tadoussac. A strong fortification on the peninsula commands both the harbour and the entrance to the Saguenay,

RECAPITULATION and TABLE of Distances from Chicoutimi to Tadoussac, and of remarkable places on the Saguenay River:

TABLE OF DISTANCES.

Chicoutimi.

Tues-

Tuesday, 23d. Left Tadoussac at 10 o'clock for Quebec. In crossing from L'Islet, the mouth of the Saguenay, we were exposed to the surf, called by the mariners "Rangs de marrées ou clapotage," that causes the strong current of the river meeting the rising tide of the St. Lawrence. It was blowing fresh from the south-west and not without much exertion and skillful management of the canoe we effected the doubling of Pointe-aux-Allouettes, and then landed at Pointe aux Bouleaux, about two miles above Tadoussac. There I observed an excellent tract of land extending to the foot of the hills, and from the Baie des Allouettes to the Riviere aux Canards, which we passed after the wind had a little abated, then the shores became bold, rising into a steep rocky mountain. Reached a fisherman's hut on the rocky point of La Baie des Echaffauds or Basques, where we encamped at six o'clock.

The Baie des Echaffauds is about a mile deep and surrounded by hills. At its entrance are two rocky Islands, the largest thinly timbered with fir and white birch.

Wednesday, 24th. Set out at 9 o'clock with a thick fog, rendering it necessary to keep close in with the shore, which is an iron-bound coast, and with much trouble we cleared the Shoals of La Baie des Rochers. The sky cleared up with a strong south-westerly wind which obliged us to put into a fisherman's hut on the west side of Woman's Port; a considerable shoal and reef of rocks renders its entrance dangerous at low tide; a small stream enters into it from between the mountains which form the character of the coast.

Passed the Riviere Noir, the eastern limits of Murray Bay, and then reached Port au Parsley at about half after four o'clock, when the wind rising too strong to enable us to double the Point, obliged us to await more favourable weather.

Thursday, 25th. We could not leave Port au Parsley before noon as the wind still continued fresh. Reached the Parish of Mal-Baie at half after 7 o'clock P. M.; the night was dark and observed much lightning to the southward.

Friday, 26th. The rain prevented our proceeding before 9 o'clock, at which time we left Mal Baie, and at 2 o'clock passed the beautiful settlements of the Eboulemens, whose verdant fields

crowning the summits of the sloping hills, which rise amphitheatrically from the St. Lawrence, obtain a pleasing effect in the traveller.

The wind about 4 o'clock rising strong from the north-west, we kept in for St. Paul's Bay; not being able to reach the village owing to the flat and sand shoal that covers the bay at low water, we bore upon the west point, which we reached at half after six o'clock, and encamped on the side of the road.

Saturday, 27. Set out at a quarter to 8 o'clock A. M.; fine weather, but still a strong S.W. gale, which obliged us to put in at the Seigniorship of La Petit Riviere, at 10 o'clock. I set out on foot to pass the capes, but stopping at a small settlement and the last of the Seigniorship, occupied by the fishermen who overlook their extensive eel fisheries, I was advised not to make the attempt as the approaching flood tide would shortly overtake me. Mr. Davies and the voyageurs could not venture out until 6 o'clock when they made this place; where we encamped on the shore.

Sunday, 28th. Started at 6 o'clock, passed the Capes Maillard and L'Tourment; we reached the first settlement of St. Joachim where I purchased provisions for the men, as we had now exhausted the stores that had been furnished us at Chicoutimi.

A favorable breeze blowing from the N.E. enabled us to reach the settlements on the Island of Orleans opposite Château Richer, where we encamped at 5 o'clock.

Monday, 29. Left the Island at 7 o'clock and landed at Hunt's wharf, Quebec, at about 11 o'clock: the St. Maurice expedition having performed from the 21st August a route of nearly 800 miles circuit, and with the exception of 90 miles circumnavigated in a bark canoe, the space containing a superficies of 12,190 square miles.

Given under my hand at Quebec,
this 24th day of December 1828.

Depy. Sur. Genl.

JOURNAL

Of the Exploration of the Saguenay, and other parts of the Crown Lands on the North side of the River Saint Lawrence.

HAVING received orders from Andrew Stuart, Esquire, one of the Commissioners, in person, to be in Quebec on the first day of the month of August, in order to accompany this Expedition; I left my house, at St. Mary, Nouvelle Beauce, on the 31st July, 1828, and proceeded to Quebec, where I remained until the 6th day of August, waiting for the schooner, which was to carry us to Tadoussac.

6th August.—We left Quebec, and reached the port of Tadoussac on the ninth, at half past twelve. Here we caused our provisions to be landed from the schooner; and on the 10th left Tadoussac on our way to the post of Chicoutimi, which is about twenty leagues from the mouth of the Saguenay. The same day we reached the place called La Boule, where we met so strong a current with the ebb tide, that we were unable to double the point of La Boule, with the boat, and were compelled to enter the bay, and encamp there.

11th.—I left the boat and went on board a canoe; this evening we encamped on a small rock about a mile and a half above the Coquet Islands, and on the north bank of the Saguenay. From the mouth of the river (Saguenay) to this place, the banks are formed of high and steep rocks, which are almost all of a round shape.

12th.—I went into a little bay about three miles above St. John's bay, but on the opposite side of the river, where I was obliged to land, on account of the wind, which was west, and too strong for the canoes, and was detained until 3 P. M. At noon I made an observation at this

place, for ascertaining the latitude, and found it to be $48^{\circ} 14' 2''$ north. The variation appeared to me to be 18° west; but I am of opinion, that it is increased by beds of magnetic stone, which are found in the rocks here, and of which I have gathered specimens, weighing from $\frac{1}{2}$ to $\frac{3}{4}$ of a pound, possessing the power of drawing the magnetic needle aside, from $1\frac{1}{2}$ to 2 degrees, after it had settled itself to the north point. At 3 o'clock the wind having gone down a little, I again embarked and proceeded as far as a bay opposite that called Trinity Bay: here I found the gentlemen who were proceeding in the boat, and who were detained by the ebb tide. The tide rises here 21 feet perpendicular. At half past eleven we re-embarked and continued under way during the remainder of the night.

13th.—By ten A. M. I had got as far as Sandy Bay, where I was detained by the west wind till two P. M. The latitude of this place is $48^{\circ} 19' 9''$ north. At two P. M. the wind having abated considerably, I went on again, and reached the small bay above West Cape. There I found the gentlemen of the party who went in the boat, and encamped with them.

14th.—We reached the post of Chicoutimi, all at the same time.

15th.—Andrew Stuart, Esquire, one of the Commissioners, took counsel concerning the most expedient and fitting measures to be adopted by the Expedition.

16th

Appendix
(V.)
14th. Jan.

16th.—I received my instructions from the said Andrew Stuart, Esquire, dated the same day, at 2 P. M. : and in pursuance thereof started with 2 voyageurs only, at 3 P. M., to explore Ha Ha Bay, the country round the said bay, and that in the neighbourhood of Chicoutimi, according to the tenor of my instructions. On the same day I reached Les Prairies, about nine miles from the post of Chicoutimi, where I remained till the following morning, and employed the men in sewing together a few yards of canvas, to make ourselves a sort of tent during our travels.

17th.—I proceeded to West Cape, at which point I entered Ha Ha Bay, following the north shore, which is bordered by high and barren rocks, continuing for about five and a half miles; after which they run in a northerly direction, and by so doing give a greater width to the bay, to the extent of about a mile on the north side. A bay is thus formed of about 2 miles wide at its mouth, and running one mile inland, which would afford complete shelter for a great number of vessels of any size. The anchorage is very good, and varies in depth from 15 to 35 fathoms. This bay forms a harbour wherein vessels would be sheltered from all winds.

18th.—I explored the land on the north side of the said bay, proceeding about 2 miles into the interior. The bank is cut and divided by small rocks, (which however do not extend far inland) as well as by small hills, succeeded by very fine vallies. The principal timber is cedar, spruce, alder, white birch, ash, &c. The soil consists of a layer of vegetable earth, about two inches deep, lying on a bed of the marl (Marne) marked No. 4. On the small hill the soil is sandy, and the timber red and yellow pine, (of considerable size, and apparently of good quality), spruce, sapin, white birch, &c. Two large riviulets running from the north, fall into the head of this bay, on the right bank of which (the bay) there are many limestone rocks of different shapes and sizes, and detached from each other. In the middle of the bay is a small rock which forms a small promontory, on the north side.

19th.—I explored the country on the west side of the said bay, north of the river Vasigamenké, and south of the first rivulet, on the north side thereof, to the distance of about four miles inland, at the end of which distance I crossed the country to the southward, as far as the said river Vasigamenké, (a distance of about 2 miles) and then descended to the bay following the valley of the last named river.

This part of the territory is intersected by a small chain of rocks to the distance of about $\frac{1}{4}$ of a mile; the rock then disappears and the good land begins, being level for about two thirds of a mile, after which the surface is irregular, being frequently intersected by gullies of moderate depth, the greater part of which form the channel of small rivulets, running into the river Vasigamenké. In other places the land is intersected by vallies of considerable extent, in which there are found layers of vegetable mould, from 7 to 8 inches thick, lying on a bed of the clay, marked No. 11. The timber is *liane*, ash, cedar, spruce, black birch, alder, &c. On the banks and high grounds, there is a considerable quantity of good red pine, of middling size; the soil is almost entirely white and red sand, and whenever it happens that the tops of these ridges are of considerable extent, cedars of large growth are found in the centre of them, in great abundance, mixed with alders. The soil consists of a layer of black earth, resting on the clay marked No. 10. The river Vasigamenké is about four chains and a half in width, at a mean; it is very rapid, and runs over a bed of gravel. The quantity of water it brings down is considerable, and it has changed its bed in many places between its mouth, and a distance of about three miles up it. There are banks raised in the middle of it, which are from six to nine chains wide, and frequently a quarter of a mile long.

20th.—I explored the country between the river Vasigamenké and that of Wissuscoué, setting out from the bay aforesaid, and following the Vasigamenké. There is here a fine valley, extending about a mile in depth. The timber is *liane*, ash, cedar, spruce, sapin, alder, &c., and the soil a vegetable mould, from 11 to 12 inches in depth, resting on a bed of the clay marked No. 12. After this the land rises gradually, the timber being spruce, cedar, sapin, alder, &c., of a very small growth. The soil is a layer of vegetable mould, from 9 to 10 inches in thickness, resting on the clay marked No. 13. At two miles and a half there is a steep hill to be ascended, on which the timber is red and yellow pine of a considerable size; the soil is sandyish, and lies over a grey earth, of which No. 14 is a specimen. At three miles and a half we entered a fine valley, the timber in which is *liane*, cedar, sapin, spruce, alder, &c. The soil is a layer of black mould, three or four inches in thickness, resting on a fat clay. At five miles, is the beginning of a piece of spruce land, covered with timber of very small growth, mixed with alder. The soil, a layer of black mould, resting on one of white sandy earth. At six miles, mixed timber and the land very good; being here I crossed the country to the southeast, in order to approach the river Wissuscoué, about two and a half miles, and then descended to the bay before mentioned, following the course of the last named river, and keeping a certain distance from it. I found here the same variety in the soil and timber which I found in going up near the other river. In the night between the 20th and 21st, being encamped at the mouth of the river Vasigamenké, I drew a Meridian line by observation on the Polar Star and the Great Bear, and found the variation of the magnetic needle of my Instrument (which was at Quebec, by observation in July last, $13^{\circ} 30'$) to be here $17\frac{1}{2}^{\circ}$ west, making the difference of variation at this place and at Quebec, $3\frac{1}{2}^{\circ}$.

21st.—I crossed over to the south side of the said Bay. In this part there is a small Islet, six chains in length, and three in depth, which is nothing else than a small rock, on which grows some cypress, lying about half a mile from the mainland, and dry at low water. The river Wissuscoué, which is about the same size as that of Vasigamenké, and runs from the south west, falls into this bay, at its most southern point. I ascended this river, following the south side, between four and five miles. The banks are rather high, but when these are once ascended, the land becomes generally level, and consists in great part of a bed of vegetable mould, lying on clay. The timber is for the most part *liane*, white birch, cedar, spruce, sapin and alder. There is a fine mill seat on this river, about two miles from its mouth. Returning to the bay, I determined its width, which I found to be $2\frac{1}{2}$ miles, on a line running magnetically north.

22d.—I explored the land on the south of the said bay. For about half a mile, the land is level, and the soil a bed of vegetable mould, from eight to nine inches in depth, resting on what I believe to be marl, and have marked No. 27. The principal timber is cedar, *liane* of considerable size, mixed with alder. The land there rises very gradually. At a mile and a half there is a considerable hill to be ascended, which is very steep. After this the land is intersected by deep gullies. The timber is spruce, sapin, yellow pine, white birch, cedar, &c., of considerable size, and the soil a layer of yellow clay, four or five inches in depth, resting on the red sand marked No. 21. The same sort of land extends nearly two and a half miles. After this is met a chain of high and barren rocks, over which I prolonged my journey, between four and five miles, hoping that the rocks would disappear. But on the contrary, they appear to rise constantly higher and higher. Returned to the shore of the bay, I went down it as far as the nearest cove to this place, on the east shore, visiting and examining in my course all the rocks on the said shore.

23d.—I ascended towards the south about three miles, and found nothing but barren rocks. After proceeding the three miles, I met a chain of rocks, which is the continuation of that which runs along the shore of the river Saguenay: I then saw that to proceed farther would be to lose my time and trouble; and I therefore determined to turn back, and embarked for the purpose of proceeding more to the eastward, or towards the entrance of the bay aforesaid. About two miles to the eastward, I found a large rivulet running into the bay, where I went ashore and found a small valley, containing about 40 or 50 acres, after which the chain of rocks is again continued. Thence I descended as far as the cove, west of Pointe au Fort, where I encamped, and afterwards proceeded to explore the said Pointe au Fort. I found the land next the bank covered with small rocks, which rise in steps, afterwards the rise becomes more sudden. The timber is chiefly white birch, and the soil composed of red and white sand. This sort of land continues for about half a mile, when the chain of rocks is again met with. All along the south shore of the bay from Pointe au Fort as far as the river Vasigamenké, there are shoals, which, at low water are uncovered, and vary in width from five to fifteen acres. Upon these we found a great quantity of beach grass.

24th.—I explored the cove on the east of Pointe au Fort, which contains about 400 acres of land, which might be cultivated, and the soil of which is very tolerable; the chain of rocks bounds this piece of land in the rear. Opposite to this cove is a shoal which is dry for about two-thirds of a mile at low water. After this I ascended the river Saguenay, following the south shore, to about six miles above West Cape, where I found the land bearing some indications of fertility. Having disembarked, I explored this part of the country, going about three miles back from the river, and found the land tolerably level, and the soil tolerably good, although intersected near the bank of the river, by small rocks, which, however, do not extend far. The timber is white and black birch, sapin, cedar, spruce, &c.

25th.—I explored the flat point, where I found on the east side, eight or nine acres in width of land, covered with water, at the time of the spring tides, and very marshy. Behind these marshes, as well as on the other parts of the point, the land is covered with timber, consisting of red and white spruce, white birch, cedar, alder, &c. The soil is a layer of black mould, eight or nine inches deep, resting on a bed of sandy clay, marked No. 45. While exploring this point, I met the Ruisseau l'Islette, on the east side of which there is a small rock rising in the river Saguenay, and running inland towards the south, for about half a mile. It then disappears at the commencement of a valley, in which there is much coarse hay, with alder, cedar, *liane*, &c., the soil, a layer of black mould, four or five inches deep, resting on a bed of vegetable earth, of which No. 46 is a specimen. At two miles and a quarter the land begins to rise gradually: at two miles and a half, it again becomes level, and the timber is red pine, white birch, sapin, spruce and cedar; the soil, a layer of yellow clay, resting on a bed of grey earth, both mixed with sand. The same sort of land continues for the distance of five miles, where it becomes intersected with small hollows.

26th and 27th.—I explored the land between the Mill River and the river Chicoutimi, ascending (at a certain distance from the first named river) to the distance of about ten miles. On leaving the river Saguenay the land rises gradually, for about a mile and a half. It then becomes level

level; at one and a half miles, the soil is a layer of vegetable mould from four to five inches deep, resting on the fat earth, marked No. 47. At four miles, it is a layer of black mould, on a bed of fat earth, marked No. 48. The timber varies into white birch, black birch, sapin, spruce, ash, cedar, alder, &c., there are also a few pines here and there. At five and a half miles, there are a few scattered small rocks, which continue to be seen to the distance of about seven miles from the starting point. They then disappear. The soil between these small rocks is a layer of vegetable mould, resting on the fat sandy earth, No. 49. At eight and a half miles, the soil is a layer of black mould, from seven to eight inches deep, resting on the fat earth marked No. 52; the wood is sapin, mixed, and the land and timber continues the same, to the distance of ten miles from the Saguenay, at which distance I began to cross the country towards the Chicoutimi, and being within a certain distance of it, I began to descend towards the Saguenay, and found the ground frequently crossed by deep hollows, but the soil constantly good, being generally a rich fat earth, slightly mixed with sand. The timber is various, and nearly the same as that near the Mill River.

28th.—I explored the Peninsula formed by the river Saguenay and Chicoutimi, to the distance of about three miles; and here I was not able to find any extent of country very fit for cultivation; except, that along the shore of the Saguenay, there are small vallies of very good land, and also small patches of the same kind on the Chicoutimi. But the interior is nothing but high rocks, and brown and red sand, very stony.

29th and 30th.—I explored the country to the north of the Saguenay and opposite to the post of Chicoutimi, to the distance of fourteen or fifteen miles inland.

This part of the country is bounded in front by the capes St. François and St. Charles, which stretch inland from the Saguenay, for about the third part of a mile. The soil then becomes very sandy, and of very middling quality; but about a mile further, the land is mostly flat, and the timber, aspen, *liane*, cedar, ash, some white birch, alder, &c., with these, there are service trees, (pinbinat) choke cherries and abundance of coarse hay, which in some places would even be worth mowing. The same soil (which is a layer of black mould, resting on fat earth) extends to the distance of fifteen miles from the river, except that about the seventh mile, there are some rocks, extending about half a mile in depth, but which do not rise more than ten feet above the surface of the ground in their neighbourhood. Being at the distance of fifteen miles from the river, or thereabouts, I climbed the trunk of a tree, and as far as I could see the land appeared to be the same.

31st.—I remained at Chicoutimi to get some bread baked, and repair my canoe.

1st. September.—I set off to explore the River Des-Terres-Rompues, which runs into the outlet of lake St. John, about eight miles above the post of Chicoutimi, or two miles above the point where the river Saguenay loses its name, and takes that of "The outlet." It is also the highest point on the river, to which the tide reaches. The outlet is not more than 15 to 16 chains wide, and the water rushes down this narrow channel, with extraordinary rapidity. At this place the portage Picau-chasca, which is six miles long, and runs to the north and north-west, commences; along this portage, the wood is sapin, mixed with alder. The soil, a layer of vegetable mould, over fat earth and clay.

Having arrived at the end of this portage or at the River Des-Terres-Rompues, which is about six chains wide, I encamped, and sent my men to fetch the rest of the baggage.

2d.—I was detained by a heavy rain, which fell the whole day.

3rd.—I began to re-ascend the said river, which runs for the most part towards the north, the banks are low and the land very good on each side. At one mile is the second portage, where there is a small fall of about six feet high. The river is divided into three branches, by two small islands, and a little lower down is another. At this place the river is twelve chains wide. A quarter of a mile farther is the third portage, where there is a fall of about twenty feet high, and above which the river resumes its ordinary width. At a quarter of a mile beyond this last, is a small rivulet running from the west about 80 links wide. At three miles is the fourth portage, where there is a strong rapid.

One mile farther is the fifth portage, a small fall about five feet high. The river then approaches the north-east. At six miles the sixth portage at a small island, with two others on each side of it, and another a little lower down. The river continues to approach the north-east. One mile and a quarter farther, the seventh portage; here there is a fall of twelve feet, the river is divided into two parts, by a small island. Below this fall, on the east side, is a deep cove, in which lie two small islands: here the banks of the river begin to rise.

I continued to ascend this river, to the distance of 2½ miles above the seventh portage, and there I encamped.

4th.—I explored the country on each side the said river, beginning on the west side. The land rises gradually after leaving the river for

the distance of half a mile. It then becomes level for about four miles, after this it again begins to rise gradually, and continues to do so to the distance of five miles from the starting point, where it becomes again level. The principal timber is white birch with some sapin. The soil is very sandy and of middling quality. I then explored the east side, where I found a great deal of grey pine, mixed with other kinds of soft wood. The land (after ascending the bank of the river) is level. The soil is sand, and offering no promise of great fertility. I continued my course eastward, from four to five miles, without finding any change either in the wood or in the soil.

5th.—I continued to ascend the said river, which begins to approach the north. At half a mile, the banks begin to be lower, and the land becomes very good on each side. At one mile and a half, a small island. At two miles, the beginning of strong rapids. One mile up these rapids is the twelfth portage, where there is a fall of twenty feet high, and at which the river is divided into six parts, by five small islands, and is about eighteen chains wide, immediately above the falls. After passing the portage the river winds very much, for the distance of three miles, at the end of which is the portage Hachoutagané, leading to the Grey Pine River, and which is about four miles long. The soil along it is very sandy. At the beginning of this portage, there is a steep hill to be ascended, which runs towards the north-west. The triangle formed by the Saguenay, the river des Terres Rompues, and the St. Marguerite, appeared to me to be generally level, except near the St. Marguerite, where there are some mountains of middling height.

The Grey Pine River is a chain and a half wide, and in places very rapid; the banks are low, and the soil on each side sandy but very level.

6th.—I began to ascend the Grey Pine River, which appears to me to be nearly parallel to the River Des-Terres-Rompues.

At three miles and a quarter, there is a fine little cove on the left, and a few chains higher up, another on the right. One mile from this is the fourteenth portage, which is two miles long, and runs towards the north-east, leading to lake Patispiscametché, which is altogether irregular, and round which are first seen small and very low rocks, extending but a small distance from the banks. Having passed these, the land becomes level and sandy. Having reached the sixteenth portage, I encamped.

7th.—I passed into two small lakes, and then into lake Wiscouamatché, which is about three miles long, and varies very much in width, on account of the bays on each side, which are more or less deep. In the first of these bays on the south side, there is a small island. The lake varies in depth, according to its width. On the north-east the mountains begin rising to a certain height, and having their summits nearly of a round figure. On the north-west and west, the land also rises more gradually, and without rocks. I passed by a small portage out of this lake into that of Mascouiané, which is a mile and a half wide, and about four long, and very deep, abounding with excellent fish. There are several islands in this lake, on the east side, on which side the mountains rise to an extraordinary height. I ascended these mountains, and thence saw the mountains which separate the waters of the Saguenay, from those of the St. Lawrence; on the west side as far as the eye could reach, there was no mountains to be seen. The land appears to rise gradually. The eastern point of the lake is in latitude 49° 16' 3" north. From this lake I passed by a portage, leading to another small one; and from this last, by another portage to the river Kaoissa, which is a chain and a half wide, running from the east, and going afterwards towards the north. The water of this river, which is very rapid, runs into lake St. John; the river is bounded on each side, by high rocks. Here I began to return to Chicoutimi, and encamped at night on lake Mascouiané.

8th.—I continued descending, and reached the post of Chicoutimi, on the ninth, at half past seven in the evening:—my baggage being wet through by the heavy rains, which fell during my descent.

10th.—I passed the day at Chicoutimi, in order to get my baggage dried, and to get some information from Pierre Laloutré, an Indian, living in this part of the country. He told me that the river Kaoissa, takes its rise from lake Wiscouamatché, and that the waters of this lake run into lake St. John. That the river St. Marguerite is very rapid; but that the salmon go up it, to the distance of about twenty leagues, and that at this point, there are falls which prevent their penetrating farther.

That the sources of this river lie in a chain of high mountains, and very close to those of the river Des-Terres-Rompues.

That these mountains are full of lakes.

That on the south side of the St. Marguerite there was a small chain of mountains.

During my journey to the river Des-Terres-Rompues, a swelling appeared on the right hand of Jean Belan, one of my men, and upon his arrival at Chicoutimi, he was obliged to apply politics to it, after which it came to a head on the morning of the eleventh. It was there that Mr. Wagner, (whom I found at Chicoutimi, waiting for my return from the

Appendix

14th. Jan.

Appendix
(V.)
14th Jany.

Terres Rompues, in order to accompany me during the rest of my expedition) told me, that it would be dangerous for this man to continue to perform the necessary work, and that if he did so, he might be in danger of losing his hand.

11th.—I went down the river to the place called Les-Prairies, accompanied by Mr. Wagner, and helped my other man, Gregoire Donnevill, to paddle the canoe. Having reached Les-Prairies, I ascertained the extent of land occupied by them, which I found to be about fifteen or sixteen hundred acres. The soil, a layer of vegetable mould, from twelve to fifteen inches deep, resting on clay. There is very little timber, and at least 20,000 bundles of hay may be made every year in these meadows. On the north of the Prairies, is the prolongation of Cape St. Francois, extending to some depth, behind which rock the surface of the land varies greatly, being sometimes high and sometimes low. On the high grounds the soil is very dry and sandy; and in the small vallies it is a layer of black mould, resting on fat earth; and this same quality of soil appears to extend very far to the northward: but on the north-east, the mountains appear to be but at a little distance. After this exploration, we returned to Chicoutimi.

12th.—Joseph Belan was not in a state to assist the other men with the paddle, and my own hands were too much blistered with yesterday's work, for me to be able to handle the paddle to-day.

13th.—My hands were a little better, so that I continued to assist my other man, and we set off on our journey downwards, following the north bank of the Saguenay, and we reached that part of Pelletier's bay called le Portage; here the river is two miles wide, and here we encamped.

14th.—In the western part of this bay there are two small islands, and on the north east side is the mouth of the river Pelletier, eighty links wide. I ascended by the portage before mentioned, as far as the lake Benoit, which is of considerable extent, and very irregular. It is surrounded by mountains, which, however, rise to no great height. From this lake, going upwards towards the Batard River, the country appears to be mountainous, though the mountains are separated by small vallies, the soil of which is susceptible of cultivation; these vallies are too small to be worth the attention of settlers. I then proceeded as far as East Cape, of which I took the latitude, and found it $48^{\circ} 21' 4''$ north. I took also various angles, in order that I might be able to make the map of the river Saguenay, as correct as possible. From this place I proceeded to the river called Belle Fleur, which falls into the Saguenay, on the south side, and is one chain wide. At its mouth is a small valley, of very good cultivable ground, containing fifteen or sixteen acres—behind this are the rocks which rise in steps. Here I encamped,

15th.—I continued to descend the Saguenay, keeping along the south shore. The rocks along this shore rise continually higher and higher, and become also more barren. About six miles below the river Belle Fleur, there is a fine bay called "The Anchoring ground," affording shelter from the west and south-west winds. The depth of water varies from twenty-five to forty fathoms; the bottom seems to be sand. Opposite the bay is a small valley of cultivable ground, lying between two high rocks. From this place I proceeded to Trinity Bay, which extends a mile and a half inland, being about a mile wide at its mouth, and one quarter at its head. It is bounded on the west side by very high rocks; on the east side, the rocks are not so high. This bay is a safe harbour in all winds, and the anchorage is very good; the depth of water varies from ten to thirty fathoms. A small rivulet about two chains wide falls into the head of this bay; it winds along a valley, which extends to the south-west.

16th.—I descended to St. John's Bay, six miles from point to point. Entering this bay I determined its extent. It is near 2 miles wide at its mouth. In the western part there is a small island; it extends two miles inland. Its width at the head is very little less than a mile. In the western part of the head of this bay, the anchorage is very good, and

it affords good shelter from the westerly winds, there are also several batteries, on which six or seven hundred bundles of hay might be cut. A river which is from two to three chains wide falls into the east side of this bay: this river is very rapid, and runs in a rocky channel, winding through a valley of about a mile wide, lying between two rocky banks, which are nearly parallel to each other. The soil in this valley is very good. After having examined this bay and determined its extent, I began to ascend the river. The men were obliged to walk in the water, in order to force the canoe along. Mr. Wagner and myself went up on foot close to the banks of the river, and continued for the distance of about three miles, when we encamped.

17th.—Seeing that it would be very difficult to get the canoe up this river, on account of its rapidity—and observing that its general course was south-west, which would carry us far away from the mouth of the Malbaie river, I determined to return and descend by the Saguenay. This bay, and along the banks of the small river just mentioned, there may be a sufficient quantity of good land for about fifty settlers. Having arrived at the mouth of this river, I continued to descend the Saguenay, and there arose a strong west wind, which detained us in the eastern part of St. John's Bay, till half past three, P. M. We then proceeded as far as the Little Saguenay, where we encamped. This harbour is well sheltered from all winds, but the anchorage is very dangerous, on account of the large stones which are scattered here and there. In the western part of the bay, are two small islands; and a small river which runs between two high rocks, falls into the bottom of the bay.

18th.—We started at six in the morning, and reached Tadousac at two P. M., where we remained till the following morning, to pay the boat, which Mr. Moreau, the clerk of the post of Tadousac procured for our voyage as far as Malbaie.

Latitude of Tadousac, $48^{\circ} 7' 56''$.

19th.—We started in the afternoon, and went as far as the Baie-aux-foin, where we encamped, for the purpose of examining Pointe aux Bouleaux and Pointe aux Alouettes, the soil on both of which is very good, and the superficial extent about three thousand acres.

20th.—We set off at nine, P. M. and went as far as Port-au-Persil, when we arrived at ten, P. M. and there we lodged.

21st.—The west wind blew so hard, that we were compelled to remain here all day.

22nd.—It continued to blow so hard, that we decided on crossing from this place to Malbaie, by land, along a small path (which is but very little used) across the mountains: and for this purpose, we took each man his baggage on his shoulders, and in this manner proceeded as far as the first house of Cape à l'Angle: here we engaged a carriage to convey us to the house of Michel Chaperon, at Malbaie, where we took up our quarters.

23rd.—We engaged a boatman named Thomas Simard, to carry us to Quebec, and set off immediately. At seven, P. M., we were off the Isle aux Coudres, and went ashore there, while the tide was running out. We started again at eleven P. M., and at two in the morning were forced by the west wind, to enter a small river, by which we were prevented from proceeding further. Here we were detained the whole day.

25th.—We started at two, A. M., and reached Quebec at eight o'clock in the evening of the same day.

26th.—I made the report of my department, at Mr. Lampson's Office, and proceeded to my residence at St. Mary's, Nouvelle Beauce.

J. P. PROULX, S. S.

MINUTES OF EVIDENCE

&c. &c. &c.

HOUSE OF ASSEMBLY,

Monday, 19th Jany. 1828.

RESOLVED, That the Report of the Commissioners appointed in pursuance of an Act of the sixth year of His Majesty's Reign, intituled, "An Act to appropriate a certain Sum of Money therein mentioned, for exploring the tract of country to the north of the River and Gulph of St. Lawrence, commonly called the "King's Posts, and the Lands adjacent thereto," be referred to a Committee of Five Members, to examine the same and report thereon with all convenient speed with power to send for persons, papers and records.

Ordered, That Mr. *Stuart*, Mr. *Laterrière* Mr. *Bourdages*, Mr. *Neilson*, and Mr. *L. Lagucux*, do compose the said Committee.

Attest.

W. B. LINDSAY,
Depy. Clk. Ho. of Ass'y.

HOUSE OF ASSEMBLY,

COMMITTEE ROOM,

Thursday, 20th Jany. 1828.

In Committee on the above Order of Reference.

PRESENT: Messrs. *Laterrière*, *Stuart* and *Bourdages*.

Mr. *Stuart* called to the Chair.

Read the Order of Reference.

Read the Report referred, and examined the Journals, Plans, and other Documents accompanying the same.

Mr. *Charles Herménégilde Gaurvreau*, of Mal-Bay, Notary Public, called in, and examined:

Q. Have you any knowledge of the Country about the River Saguenay, the River Saguenay itself and the country lying between the River Saguenay and the St. Lawrence?

A. I have visited the Saguenay the year before last, and now hand in to the Committee a true Copy of the Journal kept by me on my journey; the same is as follows:—

From Tadoussac to La Boule,—distance about 2 leagues,—the land high, rocky, barren, and the banks nearly perpendicular.

A good harbour sheltered from the north-west, on the NE. side of the Saguenay; and a good harbour for boats on the SW. side, at the place called "Ance a la Barque."

At a distance of 3 leagues or thereabouts from Tadoussac, at the place called "Passe Pierre," a good harbor for schooners sheltered from the NW. and SW., and a good fishing station. There are also nearly opposite to this last place to the SW. some small islands.

From La Boule on the NE. to St. Stephen's Cove on the SW. a distance of about 2 leagues, a good harbour, sheltered from the NW.; and opposite to the Cove lies "Big Rock Cove"—a good harbor for vessels, &c.

On the same side lies "Ottapemiuche" Cove, a good harbor for boats; and at a small distance "Hay Cove," a good harbor for boats.

Opposite "Hay Cove" on the SW. is the River St. Margaret, about 6 leagues from Tadoussac, safe harbor against all winds: cultivable land towards the NE. and NW., but offering the greater advantages towards the NE; navigable for canoes about 20

leagues; there are 3 or 4 portages of little consequence. It is even possible to reach Portneuf on the River St. Lawrence by this route.

A short distance from the River St. Margaret is St. Louis' Island, about 7 leagues from Tadoussac—good harbors at each end. This island may be about one league long, and its width about a quarter of a league. There is nothing further remarkable about it. One league higher on the NE. is the Little Saguenay—a fishing station and a good harbor—at the distance of half a league on the SW. is "Cocquert," (so called in honor of the Missionary whose tombstone, &c. are still in the church at Chicoutimi,) or Bartholomew Island—a good harbor.

Opposite on the NW. is the Point called "Des Ecureuils"—a landing place for canoes.

A little higher up on the SW. is St. John's Cove, which may be about a league and a quarter in depth, having a small island at its entrance; a fishing station. Vessels lying here are sheltered from all winds. About 16 or 18 miles in the interior there are considerable tracts of maple land, and the land appears very fit for cultivation and sufficiently level.

On the same side, at a distance of 2 leagues from St. John's Cove, is the "Trinity," an excellent harbor. The cliffs are apparently between fifteen and sixteen hundred feet high, and more than perpendicular, for they hang over the surface of the water.

A little higher up lies the Cove du ——— about which there is nothing remarkable except that it is a very good harbour. Opposite the "Trinity" on the SW. is "Paddle Cove," a good harbour. A league higher up on the same side is "Little Paddle Cove," at a distance of about a league from the first; a good harbour for canoes.

At a distance of half a league higher upon the same side is "French Point," a good harbour for boats, &c. sheltered from the NW.

Three quarters of a league or one league higher up on the same side, is the "Descente des Femmes;" a good harbor for vessels, &c.

Two leagues above the "Descente des Femmes" on the same side, is "East Cape," and about a league higher up "Peltier's Cove," good harbor for vessels—the land in part cultivable.

One league and a half higher up "The Great Point," a good harbor.

A league and a half higher up on the same side, "Rocky Point," a good harbor for canoes.

Half a league higher up on the same side are the "Prairies," consisting of cultivable land, abounding in hay—a good harbor at high water.

Half a league higher up on the same side is "Otter River," and half a league higher up, the "River ———;" (the name of this river has been forgotten, or perhaps none has ever been given to it;) up which vessels may proceed about 20 or 25 arpents.

Half a league higher up, "Caribou River," a good harbor.

Half a league higher up, "Cape St. Francois", a good harbor.

Three quarters of a league higher, "Cape St. Joseph", and at about the same distance the Rapids—land cultivable, and good harbors.

N.B. From opposite the "Trinity" in ascending the River as far as the Rapids and higher the land appears sufficiently level.

Going

Appendix
(V.)
14th. Jan.

Going down the Rapids between and opposite Cape St. Joseph and St. François, on the SW. side is the River Chicoutimi; near which are erected on a point of land on the NW. of the said River, a large house, inhabited by the Clerk of this Post, a store, bakehouse, barn, itables and other buildings; and 7 or 8 arpents higher up on the banks of the said River, are a chapel and burial ground.

The direction of this River is nearly north-west as far upwards as Lake St. John. There are eleven Portages, the most considerable of which is about $\frac{3}{4}$ of a league or a league, beginning immediately at the Post House at Chicoutimi. The views round Chicoutimi are sufficiently pleasing. The lands from Chicoutimi to Lake St. John, and even farther, are cultivable according to the information given by the Clerks of the Posts and other old voyageurs. The length of Lake St. John is about 12 or 13 leagues, and its width nearly the same; there are in this Lake several small islands. Starting from the mouth of this River, at the distance of a quarter of a league down the Saguenay, is the "Musk Rat River," a good harbor for vessels, &c. Half a league lower down is the "Mill River," a good harbor. The land susceptible of cultivation as far down as Ha! Ha! Bay, as well on the banks of the River as at a great distance inland. From this Bay for a distance of 4 leagues down the River towards "Eagle Cape," there are good harbors. The point of this Cape runs in a direction nearly NE. Ha! Ha! Bay may run about 4 or 5 leagues inland from its entrance, and may be about a league wide. At the head of the Bay is a small river. The cultivable land running to the north-west as far as Lake St. John, a distance of about 25 or 30 leagues—a good fishing station and a good harbor. On the top of the banks the land is level and well timbered, and the soil strong and good nearly as far as the eye can reach. Four leagues below this are the "Pictures," so called because the surface of the rocks are smooth, and at a distance have the appearance of pictures. From this place to St. John's Cove are several small harbors—there is only one which is a very good one; but nothing otherwise remarkable.

The part of the River lying between St. John and Tadoussac has been already spoken of in the account of the ascent of the Saguenay.

The undersigned penetrated into the interior of the country on both sides of the Saguenay; in one instance above the River St. Margaret, as far as Chicoutimi, a distance of about 20 or 25 miles, and his opinion is, that there are the means of forming considerable settlements with little trouble, the land being generally good and capable of becoming fertile,

The whole nevertheless humbly submitted to the readers of these remarks by him, who has the honour to subscribe himself,

Their very humble and
very obedient Servant,

CHARLES H. GAUVREAU,
N. P.

Malbaie, 23d Sept. 1828.

(No. 2.)

Mr. Edward Bowen, of Quebec, Student at Law, having been called in, stated:—

I was of the party which explored the Saguenay and Lake St. John last summer, and returned by St. Paul's Bay in company with Mr. Baddeley, of the Royal Engineers. Our information respecting the nature of the country and quality of the soil between the old settlements upon the St. Lawrence and the Chicoutimi on the other, is necessarily very small, and is to be found in Mr. Baddeley's report to the three branches of the Legislature, accompanying the report of the Commissioners for exploring the Saguenay. The persons who could give the Committee the best information upon this point are a few men residing in the neighbourhood of St. Paul's Bay, who have been in the habit of going out with the indians to assist them in carrying out the provisions necessary for their support during the hunting season, and returning at the end of that period for the peltry. In order to prevent mistakes the best plan would be, to procure their names from Vincent Tremblay, an old and respectable inhabitant of the village of St. Urbain, in the rear of St. Paul's Bay. I would particularly recommend the examination of the man who acted as our guide from St. Urbain to the Pafs des Monts, who was procured for us by Mr. Vincent Tremblay; he has

been employed as a carrier by the indians for some years, and has traversed the country in the rear of St. Paul's Bay, in all directions, as far as the sources of the Jacques Cartier.

(No. 3.)

Mr. Thomas McNicol, of Quebec, was examined as follows:

I am a native of Malbay, and my family have always resided there. I have resided for some time at Quebec, but have now fixed my residence at Malbay.

Q. Have you ever visited the country lying between Malbay and the Saguenay?

A. I have never gone quite to the Saguenay; I have been as far as the Petit Saguenay, distant from the Saguenay itself about eight miles; I cannot speak with any certainty as to the exact distance.

Q. When did you visit this country; what number of days were you employed in the excursion; how did you provide yourself in provisions; what number of men did you take with you; how many miles did you march per day; what was the whole distance you went; what were the streams and mountains you met with; what was the extent of level ground you passed; how is this country generally timbered; is it susceptible or not of cultivation; is there any and what number of inhabitants at Malbay who would be desirous of settling; what was the depth of snow compared with the depth of snow at Malbay.

A. In the month of December last; I was about ten days absent; I took my provisions of pork and flour from Malbay; there were ten indians, Mr. Brownson and myself on the party; not more than three or four miles a day going, but on returning five or six miles. The distance may be eight or nine leagues. There are a good many mountains in this tract of country, but it is generally level. The height of ground in the rear of Malbay, taking your departure from the River Malbay, is about four leagues from the River St. Lawrence. At this point you reach a valley of gentle declivity intersected by many small streams having many lakes; which valley varies from a league to a quarter of a league in breadth, and extends as far as the Saguenay. The timber is rather small; there are a good many burns, and the timber looks like young timber: it consists of some birch, but principally of pine, spruce and the balsam tree. Having visited the country in the winter only, it is difficult for me to speak with any certainty as to its susceptibility of culture or not. If the lands on the Saguenay were granted, settlers, I dare say, would be found at Malbay, and on the north shore generally. The snow was of the same depth as at Malbay, and the climate appeared to be the same.

Q. Could you give the names of any farmers or hunters of the north shore who would be able to give the Committee any information respecting the country lying between the Saint Lawrence and the Saguenay generally?

A. Thomas Simard, now of Malbay, who has passed the best part of his life at the King's Posts.

(No. 4.)

Lieut. F. H. Baddeley, Royal Engineers, having been called in, stated as follows:

In my geognostical report on the Saguenay country will be found all the information I have to offer on the subject of the nature and quality of the lands in rear of St. Paul's Bay, which, with the exception of the settled portions of that part of the country, is merely confined to hearsay evidence, and is as follows:

That after passing the chain of mountains which runs at the back of St. Paul's Bay, at the distance of from fifteen to twenty miles, a fine level tract of cultivable land is met with, which it takes two days to traverse. Through the centre of this tract the Malbay River takes its course. Similar information was received of the country on reaching Murray Bay.

From Mr. Vincent Tremblay, of the Parish of St. Antoine, information will be obtained of the names of the persons best qualified to give information.

(No. 5.)

(No. 5.)

Mr. Thomas Simard, called in and examined:

He states, I am a native of Malbay. I have passed the last 19 years in the northern Posts. I have been well acquainted with that part lying between Malbay and the Saguenay. During the last 3 or 4 years I have been there often. I hunt martins, and fish for trout at this place. The land is mountainous for about 3 leagues from the River St. Lawrence; it then becomes more level and intersected by hollows, particularly as far as the little Saguenay River, which is at a distance of 8 or 9 leagues from Malbay and one league from the Saguenay. There is a tract of cultivable land, the soil of which is yellow clay, sufficient for a settlement of about 100 families; the land is there very good; the timber is black and white birch, maple, fapin, spruce, mixed with other kinds. I know many farmers who wish to settle on new lands, but they would prefer beginning on St. John's Bay, and on the western part of the Saguenay above Chicoutimi. The climate is better than that of Malbay. The spring is earlier, and the land is much better.

(No. 6.)

Marc Pascal de Salles Latrriere, Esquire, a Member of your Committee, laid before the Committee an Extract of a Journal kept by him, on a visit to the Saguenay and its environs, in 1827. The same is as follows:

"White Birch Point ("La Pointe-aux-Bouleaux") which lies on the S. west side of the Saguenay, forms an irregular square of about $\frac{1}{2}$ of league in front by the depth of about one league, at the end of which depth it is bounded by mountains of the most desolate barrenness. The little Duck River which rises in the neighbouring mountains, bounds it on another side. The interior of this Point is marshy, and the timber which covers it, is, with the exception of the borders, nothing but small grey spruce. From the seignory of Mount Murray as far as this Point, (that is to say, from the Black River) the banks of the river, and the interior, as far as the eye can reach, offer nothing but rocky mountains, without any vegetation whatever. Leaving this place, I passed Tadousac, and proceeded as far as the "Bergeronnes." I ascended one of the rivers which bears this name, for the distance of a league and a half, and found nothing worthy of remark, except some prairies, which might perhaps produce altogether, from 7 to 8 thousand bundles of hay. The cultivable land on the banks of this river may extend from 4 to 10 arpents from the water, and is bounded by rocky mountains, whose only ornament is moss, and a few tufts of juniper. I explored the banks and the interior from the Point "Des Grandes Bergeronnes," as far as that of "Bon Désir," 3 leagues below it. The bank, which is at most 100 feet high, on account of its gradual ascent offers a rich vegetable border, and might induce a superficial observer to form a favorable opinion, of the whole tract lying between the river and the mountains, which bound it in the rear at the distance of 4 or 5 leagues. But I have passed this border; and after having proceeded 10 or 12 arpents into the interior, found myself in the middle of an immense swamp, covered with moss to the depth of three feet, and bordered on its edges by small black spruce. The information I received respecting the rest of this land on this side, as far as Port-Neuf, agree with this description of the "Bergeronnes." I returned to Tadousac, which is the principal depot of the Northern Posts. There is nothing here which could attract the eye of an agriculturist. In ascending the Saguenay as far as Chicoutimi, I made the following remarks: The general course in ascending the Saguenay is west: in some of its windings north-west. The first remarkable point on entering the river is a large mountain called "La Boule," (The Ball) on account of its shape, the gigantic base of which straitens the river at this place. The banks, which are from 15 to 18 hundred feet high, equally abrupt, and of primitive granite, enclose this twin brother of the St. Lawrence, whose mean breadth is not less than a league. The tide rises here 18 feet perpendicular: the lowest waters never leave dry the foot of those ramparts, built by the eternal architect, where the depth is so great that there is no anchorage. On the south-west side is St. Stephen's cove, which appeared to me about half a league wide from one point to the other: This cove is three leagues from Tadousac. The lessee of the posts has established a salmon fishery here. About 20 families might find means of subsistence in the neighbourhood of the cove. The sun-shine glistens on the surface of the rocks which surround it. For three leagues higher up the same abrupt banks continue; at this distance we entered a small bay, formed by the river St. Marguerite. This river is deeply buried in the mountains: it is 2 arpents wide at its mouth: it is navigable for bark canoes for a great distance; but I am informed that the land on its banks is not cultivable, being too closely enveloped by abrupt mountains. There is but a small space of cultivable land on the north side of the bay, part of which crumbles down upon the beach, and forms long battures of sand, on which the fishermen stretch their salmon nets. On the south-west of the Saguenay, half a league above St. Marguerite's River is St. Lewis Island, a large mountain of an oblong shape, on which there

is no other vegetation than a few shrubs growing in the crevices, and a little moss. It may be about half a league in length. I was told that this was the first anchoring ground above Tadousac; half a league to the north-west lies another rock, of an oval shape, surrounded by the waters of the Saguenay, and on which there is not a single tree. Three leagues from the river St. Marguerite, and consequently nine from Tadousac, is St. John's Bay, on the south-west, which may be about a league and a half wide at its entrance. The land here appears susceptible of some cultivation: the environs of this bay produce hay. There may, on its banks, be about a league in depth of cultivable land, (the slope of which is sufficiently gradual) lying between the bay and the highest part of the mountains. The soil consists in great part of blue and grey marl: a league higher up, is the cape called "the Trinity," on account of three small hollows. It is at least 18 hundred feet in height. Its summit juts considerably over its base. I doubt whether any traveller has passed under its dome, without feeling the littleness of man in comparison with these masses, the equilibrium of which is maintained by a power which forcibly awakens the idea of a Divinity!. Between this cape and another on the south side, is a pretty little bay; into which runs a river, one arpent in width, where the proprietor of the posts has established a fishery, but where the lands have not sufficient depth to induce the agriculturist to settle. From Trinity Cape to Ha Ha Bay, the banks preserve nearly the same altitude and the same barren aspect. The country near this bay, (which is 19 leagues from the mouth of the Saguenay,) begins at least to be more level, and offers an uninterrupted tract of land susceptible of cultivation, and capable of supporting a numerous population. The highest land in the neighbourhood of this bay is not more than 150 feet above the river, and the slope is almost imperceptible. The soil is blue and grey marl. The timber is maple, black birch, ash, elm, poplar, pine, spruce, &c. The outlines of this bay form a basin, two leagues in width, and bordered by prairies of considerable extent. The river which runs into it is navigable for canoes for a great distance. The country in the neighbourhood of this bay is all composed of cultivable land, particularly towards Chicoutimi, which is separated from this bay, only by a tongue of land 5 leagues in width. At this place the Saguenay makes a bend to the north, and resumes its ordinary course after passing the point which shuts in the entrance of Ha Ha Bay on the west. The traveller who is unacquainted with this bend, enters this bay, while he thinks he is proceeding up the river, and it is from the expression of surprise Ha-Ha, called forth by this change of course, that the name of Ha-Ha Bay is derived. As soon as the point is doubled, you are only 7 leagues from Chicoutimi, which is the second post kept up by the lessee of the Crown, and where the Reverend Father, the Jesuit Labrosse built a chapel in 1727, which is still in good order. The north shore of the Saguenay, from "East Cape," presents nothing but a barren and rocky country. The land becomes level, and of the best quality, from "Rocky point," three leagues below Chicoutimi, as far as the Point of Broken Lands, about two leagues higher up. The lands in the rear are level, for the distance of 6 leagues. From the point "Des-Terres-Rompues," as far as lake St. John, a distance of 25 leagues, I am told the land is level, and of the best quality. From Rocky Point, as far as the Pointe "Des-Terres-Rompues:" there are five leagues of beach between this place, bordered by considerable prairies, where the inhabitants of Chicoutimi cut their hay. The Caribou River empties itself here: it is one league below Chicoutimi. It is one arpent wide, and preserves this width for a quarter of a mile up. There is also the River à Valin, half a league below the Caribou River. There are falls half a league from its mouth which would facilitate the erection of mills.—Speaking of mills all the old timber on this bank was destroyed by fire, 50 years ago: the new vegetable colony has not yet attained its growth. In the said distance of 5 leagues, there is also the "River aux Outardes," the banks of which are prairies to the depth of 15 arpents. The whole of the south shore in descending from Chicoutimi, 5 leagues to the great "Burnt Point," presents a tract of good and level land. In this distance there are three pretty little rivers. The river de l'Islette, the Mill River and the Musk-Rat River, and lastly the river Chicoutimi, which is one arpent wide, and by which the canoes belonging to the post ascend to lake St. John. I do not know what the number of Indians was in the time of the Jesuits, but is now very trifling. There are not more than ten families on what is considered as the Chicoutimi Territory; the same number on lake St. John, and its neighbourhood, and about 15 on lake Chamachouan, which is 50 leagues to the westward of lake St. John, and which is the last post depending on the Saguenay. This Mission undertaken by the Jesuits, could have had no other object than the propagation of the Christian faith among the Indians, for if it had been part of the plan of the French Government to form a settlement here, we should find other traces than the ruins of a house, and an old chapel which has since been kept up by the Indians. In order to reach the post of Chicoutimi, 27 leagues of difficult navigation must be accomplished, the only advantage possessed by this post, appeared to me to be its situation at the junction of the two rivers. Ha-Ha Bay appeared to me the natural port for vessels arriving from beyond sea, and I am of opinion that it will hereafter become the great mart on this river. The Saguenay is frozen in winter, from Chicoutimi as far as the St. Louis Islands. The most common wind here is the north-west; which sometimes blows with frightful violence; it is the best wind for coming down the river. To ascend it, a north-east wind is wanted. It is said that other winds are imperceptible here. The land is fit for tilling at Chicoutimi in the month of May. The fall frosts are felt here earlier than at Quebec. I have eaten strawberries there on the 17th of June. I thought the vegetation more forward than at Les

Appendix

Appendix
(V.)
14th. Jan.

Eboulemens. Vegetables of all kinds flourish here. The greatest obstacle to the settlement of this place is the separation of the social tie ; for as soon as the navigation is closed, there is no further communication with the remainder of the world. The distance from Chicoutimi to Malbaie is reckoned at 4 days journey in winter, which is equal to 25 to 30 leagues. The immediate settlement of the Saguenay can be undertaken only by a Government or by individuals of colossal fortunes ; without considerable advances, such persons, as those by whom new settlements are generally formed, could not plant themselves here, notwithstanding the advantages which the territory offers."

(No. 7.)

Nicolas Vincent, (Tsawahouhi) Head Chief of the Christian Indians, settled at Lorette, being called in, stated :

The hunting grounds of my ancestors are in the forks of of the River St. Anne.

I have ascended the south-west branches of St. Anne and Jacques Cartier, to their sources.

I never ascended the Batiscan to its source, I passed from the S. W. branch of the St. Anne, to the N. E. branch of the Batiscan, and came out at the St. Lawrence.

I never was in the St. Maurice nor the River Champlain.

I know a part of the River Montmorency.

I never ascended higher the forks of the river, further than at a distance of about 10 leagues.

I have hunted beyond Lac des Neiges, sources of the Montmorency.

I have ascended the river Malbaie, about 10 leagues opposite the Rivière des Neiges.

The distance from the source of Jacques Cartier to Roche Platte, is about 10 leagues, and this last place is about 2 leagues from Valcartier.

The distance of the sources of the St. Anne, from the St. Lawrence must be at least 15 leagues ; its course, for about 8 leagues from the St. Lawrence, is about N. E. and S. W. : opposite the great bay in Deschambault it is not more than 4 leagues distant from the St. Lawrence, here it runs a distance of 3 leagues between N. and S. W. to the forks, thence from 2½ leagues to 3 leagues more to the S. W. to the forks, thence almost due north to the first lake, a distance of 2 leagues, thence through the lakes to its source, about 4 leagues N. W.

Into the last lakes which I saw, enters a river which runs from between N. and N. W., I have never been to the source of this river, but I have gone round it.

There are several falls in the St. Anne, I cannot tell the number of them.

The country is very mountainous.

I think there is cultivable ground from the St. Ann's, for a distance of about 10 leagues.

The timber is not very good, except some points along the river, where there are some elms.

I should think the land were susceptible of cultivation, (not in a straight line, but following the sinuosities of the river) for about 7 or 8 leagues.

Above the Roche Platte, on the Jacques Cartier, to the forks of that river, a distance of 6 or 7 leagues, there are several rapids, which cannot be descended in a canoe, there are two falls of about 30 or 40 feet height ; above the forks there are many falls, I cannot state the number, because we cannot descend the river there.

The wood above the forks is small epinette, bouleau, aunages ; there is even no pine ; on this side of the fourche there are from four to twelve arpents of well timbered lands, along the banks of the Jacques Cartier. Beyond this strip of land are rocky mountains.

I cannot state exactly the distance I descended the Batiscan ; there must be at least twenty leagues, but put down 15.

The good lands upon the Batiscan, extends farther than any of the other two rivers ; they must extend at least ten leagues, in a straight line from the St. Lawrence. When I spoke of the good lands of the St. Ann's, extending 10 leagues, I meant 10 leagues, according to the course of the river.

I have hunted a little on the south side of the St. Lawrence. I have been at the source of the Becancour or Black Lake. I have also passed

round the extremities of River Duchêne. I have crossed 3 of the streams which enter into that river, and form its main stream.

It was in the spring of the year that I went to London, (1824.) I went from our village to Pointe Levy, and from thence upon my hunting expedition to the Black Lake. I passed through St. Giles, about the middle of the parish, I passed over the 1st of the streams, which empties into the Becancour, it is 5 or 6 feet wide here, afterwards becomes as wide as this room, and afterwards as wide as this house. I followed this little stream to the forks, a distance of about 2 leagues, the time seems long, there are so many turnings in the river. I ascended here the south eastern branch, a distance of 2½ leagues to its sources, consisting of springs, not of a lake ; here I crossed over a distance of about a league, and came to another branch of the Becancour, I ascended this branch about 2 or 3 leagues ; the distance from this, which is the greatest source of the Black Lake, is about 4 leagues.

I have hunted also at Chateauguay ; I have hunted also behind the settlements of Kamouraska and in that direction.

It would take me several days to make plans of this river.

Upon being asked what he thinks to be a reasonable compensation for his trouble, he said he could not say, he would leave that entirely to the Committee.

The hunting grounds of Paul's ancestors, are at Lake St. Vincent ; of André Romain, on the river St. Ann ; Kaska's ancestors are also on the river St. Ann ; but below Paul, the ancestors of Louis, at Tantara, between the river Jaques Cartier and St. Ann ; Seewée's at Lake Caché, between the Montmorency and Jacques Cartier River ; Zacharié's ancestors lake St. Joseph. There were families occupying the hunting grounds, between the St. Ann and St. Maurice, but they are now all extinct.

Thursday, 12th February 1829.

PRESENT :—Messrs. Stuart, I aterriere and Neilson.

Mr. Stuart in the Chair.

Your Committee have examined the Report of the Commissioners appointed under the Act of the sixth year of His present Majesty's reign, intituled, "An Act to appropriate a certain sum of money for exploring the tract of country to the north of the river and gulph of St. Lawrence, commonly called the King's Posts, and the land adjacent thereto;" also the journals, plans and other documents which accompany the said Report, and the information given to them by several persons whom they have called before Your Committee, and whose examination they have the honor to report herewith.

It appears from these that the River Saguenay is navigable for vessels of any size, for a distance of about twenty-two or twenty-three leagues to Ha-Ha Bay, which is a good harbour, and that from thence for a distance of five or six leagues to Chicoutimi, this river is navigable at high water for vessels of large dimensions. Between the harbour of Tadousac and that of Chicoutimi, several harbours are found.

From Chicoutimi to Lake St. John the distance by admeasurement, is sixty-seven miles, sixty-eight chains.

The waters on the western side of the Peninsula, lying between Lake Tsinogomi and the grand outlet of Lake St. John, are generally navigable for batteaux, and all might be rendered so.

The following are the carrying places and distances on the route :

Names of Portage.	Length of Portage.		Water communication.

The

The grand outlet of Lake St. John, on the eastern side of the Peninsula, is a rapid stream navigable only for canoes, and even in these dangerous to all but the most experienced canoemen.

Upon the north eastern shore of the Saguenay, there seems to be but little land susceptible of culture, till within a short distance from Chicoutimi.

What extent of ground, susceptible of culture, there may be between the old settlements in the rear of Murray Bay, and St. Paul's Bay upon the St. Lawrence on the one side, and Ha-Ha Bay and the Saguenay and Tadousac on the other, does not appear.

Between Chicoutimi and the country immediately in its rear on the one side, and Ha-Ha Bay and the waters emptying into it on the other, it appears there is found 300,000 acres of cultivable land.

Proceeding from Chicoutimi to Lake St. John, by the western route it seems probable that the country is not susceptible of culture to the westward of the river Chicoutimi, as far as the lower extremity of Lake Tsinogomi. From Lake Tsinogomi to Lake St. John, there is, according to the report of traders and indians, a deep tract of level and fertile country.

Your Committee however cannot speak with certainty upon this part of the country, as the Surveyor charged with exploring it, was prevented by accidental circumstances from accomplishing the object.

The Peninsula lying between Tsinogomi and the grand outlet of Lake St. John, is said to contain two hundred and fifty thousand acres of level and fertile land.

On the south-west side of Lake St. John, the mountains approach near to the Lake, and beyond them the whole country lying to the westward, until the river St. Maurice is reached, is altogether unsusceptible of culture, with the exception of a few patches too inconsiderable to be particularised.

The north eastermost side of Lake St. John, contains much good land. The following is a Table of the distances to which the rivers on this side of the Lake were ascended.

	Chains.	Links.	Miles	Chains.
River Peribonea,	1700	00	21	20
Musk-rat River,	170	00	2	10
River David,	769	00	8	49
Rum River,	123	00	1	43
River Mistassini,	720	00	9	00
Koucciaticn River,	40	00	0	40
River Baddeley,	560	00	7	00
River Pastagoutin,	480	00	6	00
Saguenay from Chicoutimi to Terres } Rompues,	484	00	6	4

This tract probably extends with some interruption, as far down as the meadow lands nearly opposite to Chicoutimi—the country was here penetrated from the north of the river des Terres Rompues, for a distance

of about sixteen leagues, and the land found to be of superior quality, the gentlemen charged with this portion of the exploring survey reports that the cultivable soil probably extends much further.

The following is a table of latitudes as taken by Lieutenant Baddeley of the Royal Engineers, with an artificial horizon :

Rivière La Fleur,	46. 53" 40'
Chicoutimi,	48 24 9
Portage des Roches,	48 14 31
About half-way over Lake Tsinogomi,	48 16 22
Where two parties met on Lake St. John,	48 37 59
Peribonea River,	48 42 37
Mistassini River,	48 38 55
Ouiatshouan River,	48 24 35
Metabitshuan River,	48 23 12
Tadousac,	48 6 39

The climate of Chicoutimi, and lower down the Saguenay, seems to be much like that at Quebec, whilst it would appear, that about Lake St. John, the climate is as mild as that of Montreal, perhaps milder.

The monies placed at the disposal of the Commissioners did not admit of their obtaining all the information, which it would be desirable to have.—To complete our knowledge of the country, it would be requisite :—

1. To explore in every direction the country lying in the rear of Murray Bay, and St. Paul's Bay on the St. Lawrence on the one side, and Ha-Ha Bay, the Saguenay and Tadousac on the other.

2. To explore the country lying between Chicoutimi and Lake St. John, upon the south-west side of the river Chicoutimi, Lake Tsinogomi, &c.

3. To explore the old route from Charlesbourg to the Saguenay, which strikes the Saguenay half way between Tadousac and Ha-Ha Bay.

4. To explore the country, likely to afford the most direct communication from Quebec to the old establishment of the Jesuits upon lake St. John, a distance of about 100 miles.

Enough, however, has been done to establish that there is a vast extent of cultivable land about Lake St. John and the Saguenay, and the waters connecting them, upon which it would be desirable to effect settlements.

It will be for the House in its wisdom to determine whether it may not be expedient to vote an additional sum of money for the obtaining of the required information.

Ordered, That the Chairman do leave the Chair and report.

All which is nevertheless humbly submitted.

A. STUART, Chairman.

RAPPORT

DES COMMISSAIRES NOMMÉS

POUR EXPLORER LE SAGUENAY.

Aux Honorables COMMUNES du BAS-CANADA, assemblées en Parlement Provincial :

LES Soussignés nommés Commissaires en vertu de l'Acte passé dans la sixième Année de sa présente Majesté, chapitre 34, intitulé, "Acte pour affecter une certaine Somme d'Argent y mentionnée, à la visite et examen de l'étendue de terre au Nord du Fleuve et du Golfe Saint Laurent, communément appelée Postes du Roi, et des terres adjacentes," en obéissance aux dispositions dudit Acte, ont l'honneur de mettre devant les deux Chambres de la Législature Provinciale le Rapport suivant de leurs procédés.

Peu de temps après la nomination des soussignés comme Commissaires, il fut soumis à Son Excellence le Comte de Dalhousie, Gouverneur en Chef de cette Province, un plan qui avoit pour objet l'examen de cette étendue de Pays et ce Plan reçut l'approbation de Son Excellence.

En conformité de ce Plan, on loua de Mr. Lampson, le Bailleur des Postes du Roi, trois canots de dimensions convenables, pour un prix fixe au mois : Mr. Lampson entreprit aussi de fournir les hommes pour les canots et les vivres, tant pour ces individus que pour tout le parti. Le parti é ait composé de l'un des Commissaires soussignés, de trois Arpenteur savoir : Joseph Bouchette, fils, Ecuyer, Député Arpenteur Général, Mr. Hamel, Mr. Proulx, Arpenteurs jurés, et des Messieurs suivans qui s'offrirent comme volontaires pour cette expédition : B. P. Wagner, Ecuyer, de Québec, Mr. Baddeley, du Corps Royal du Génie, Mr. Nixon et Mr. Goldie du 66^e regiment, Mr. Bowen et Mr. Davies.

Le 22 Juillet dernier, Mr. Bouchette, accompagné du Lieutenant Goldie et de Mr. Davies, qui s'étoit offert pour agir comme son assistant, prit son départ de Québec pour les Trois-Rivières, et conformément aux arrangemens et aux instructions qui avoient été données en conséquence, remonta la Rivière St. Maurice, jusqu'à l'entrée de la Rivière La Tuque, distance de cinquante lieues, entra dans la Rivière La Tuque et la remonta jusqu'à ses sources, et traversant les eaux supérieures du Batiscan, entra dans les eaux qui sont dans son voisinage et qui se déchargent dans le Lac St. Jean, et arriva à un endroit qui se trouve à environ quatre lieues au dessus du Poste de Métabitchouan, l'ancien établissement des Jésuites sur ce Lac.

Le reste de l'expédition partit de Québec le six d'Août dans une goëlette, et arriva le neuf à Tadousac ; le jour suivant elle remonta le Saguenay avec un parti d'hommes de canots, et une chaloupe accompagnant les deux canots qui étoient attachés à cette partie de l'expédition, et arriva à Chicoutimi le quatorze d'Août.

On fit partir Mr. Proulx dans un petit canot avec deux hommes, avec instruction de faire l'examen des terres qui sont situées sur la Baie des Ha! Ha! entre cette Baie et Chicoutimi, et après avoir fini cet examen, il lui étoit recommandé de traverser la Rivière du Saguenay et Chicoutimi, et de pénétrer dans l'intérieur du côté opposé à la Rivière des Terres Rompues, et de s'assurer, autant que le tems et les circonstances pourroient le lui permettre, de l'étendue des terres propres à la culture qui, selon qu'on étoit porté à le croire, pourroient se trouver dans cette direction ; et après ce devoir rempli de revenir par le Saguenay à Tadousac, de prendre toutes les renseignemens qui seroient en son pouvoir, et de laisser ce dernier endroit et de se rendre à Québec avec toute la diligence possible.

Cela fut exécuté par Mr. Proulx, et l'on trouva le résultat de ses travaux dans son Journal et le Plan qui accompagne ce Rapport.

Du nombre des canots qui étoient restés à la disposition de l'Expédition, un de ceux où étoient Mr. Baddeley et Mr. Hamel, laissa Chicoutimi le sept d'Août, et étant arrivé au Lac St. Jean le vingt-deux, prit aussitôt à droite, et d'après les instructions il commença à faire la visite et l'examen de cette partie du Lac, qui se trouve entre l'embouchure du Koushigan et celui de l'Assuapmousoin.

Le deuxième canot, avec un petit canot qui le suivoit, en arrivant au Lac St. Jean le vingt deuxième jour d'Août se mit en route pour le Poste de Métabitchouan dans l'espérance d'y reconstruire ou de recevoir des nouvelles du parti qui avoit laissé les Trois-Rivières le vingt cinquième jour de Juillet.

A leur arrivée à Métabitchouan ils ne reçurent néanmoins aucune nouvelle du parti ; mais leurs craintes furent bientôt dissipées à cet égard par l'arrivée du parti des Trois-Rivières, au moment où ils alloient laisser le Poste de Métabitchouan, le vingt-trois d'Août. Ces messieurs avoient été retardés par la hauteur des eaux, provenant des pluies presque continuelles, et ils avoient aussi éprouvé les délais que l'on rencontre ordinairement dans des chemins presque inconnus et qui ne sont pas sans dangers.

Ici il fut ordonné à Mr. Bouchette, après qu'il auroit visité le Lac entre l'embouchure du Koushigan et l'embouchure du Lac Assuap-

mousoin sur le côté sud-ouest du Lac St. Jean, de faire la visite du pays qui est du côté sud-ouest du Lac Tsinogomi et Tsinogomishish, et des rivières en général qui se rencontrent sur la communication entre Chicoutimi et le Lac St. Jean dans cette direction, et après son arrivée à Chicoutimi de se rendre de cet endroit à Tadousac par le Saguenay ; prenant tous les renseignemens qu'il seroit en son pouvoir, en descendant la Rivière jusqu'à Tadousac, et arrivé jusqu'à ce dernier lieu de se rendre en toute diligence à Québec.

On peut voir quel a été le résultat des travaux de Mr. Bouchette par le Plan qui accompagne le présent rapport.

Il rapporte que le manque de vivres, et l'état avancé de la saison ne lui ont pas permis de visiter le pays au sud-ouest du Lac Tsinogomi et du Lac Tsinogomishish.

Son Journal n'est pas encore reçu.

Après avoir laissé Métabitchouan le vingt quatrième d'Août, ceux du parti qui étoient arrivés les derniers au Lac St. Jean depuis Chicoutimi, rejoignirent le canot qui avoit à bord Mr. Baddeley et M. Hamel, à l'embouchure de la Rivière Koucuatim, jusqu'à laquelle rivière ces messieurs s'étoient rendus dans le cours de leur examen du pays. Ici Mr. Nixon prit la place de Mr. Baddeley dans le canot, et il fut donné ordre à Mr. Hamel, après qu'il auroit complété sa visite sur le Lac St. Jean, d'examiner la péninsule qui est entre le Lac Tsinogomi et Tsinogomishish d'un côté, et la grande décharge jusqu'au Lac St. Jean de l'autre côté, en descendant à Chicoutimi ; et lors de son arrivée à ce dernier lieu de se rendre à Tadousac, en prenant toutes les informations qui seroient en son pouvoir, et de partir de Tadousac et de se rendre en toute diligence à Québec.

Le Plan et le Journal de Mr. Hamel accompagnent ce Rapport.

Les Commissaires soussignés prennent aussi la liberté de mettre devant Votre Honorable Chambre un Plan de Mr. Nixon, qui est une esquisse de la Rivière Assuapmousoin jusqu'à sa source, et aussi des rivières qui réunissent l'extrémité du Poste de Shippigan avec le Saguenay vis-à-vis Chicoutimi. Les renseignemens que Mr. Nixon s'est procurés, et d'après lesquels il a dressé des cartes de ces endroits du Pays, qui jusqu'ici n'étoient connus que des Marchands de Traite, ou des sauvages, lui méritent les plus-grands éloges. Ils demandent aussi qu'il leur soit permis de joindre à ce rapport, quelques extraits du Journal de Mr. Nixon, qui ont rapport aux objets particuliers de la mission.

Comme la présence du Commissaire n'étoit plus nécessaire, le monsieur qui accompagnait le parti, en capacité, de Commissaire les laissa à l'embouchure de la Rivière Koucuatim, et se rendit dans un canot allége à Tadousac, et de là à Québec.

Les autres messieurs, savoir : Mr. Wagner, Mr. Baddeley, Mr. Goldie et Mr. Bowen, continuèrent leur route autour du Lac, examinant ses rives et rivages, jusqu'au Poste de Métabitchouan, et de là jusqu'à Chicoutimi. Ici Mr. Wagner rejoignit le canot de Mr. Proulx, dans la vue de s'enquérir des qualités des bois et des facilités ou des difficultés quant à son exportation ; c'est sur ce sujet qu'il a le plus dirigé son attention, et c'est ce que sa longue expérience l'a mis très en état de pouvoir faire.

Messieurs Baddeley, Bowen, et Goldie, s'étant rendus de Chicoutimi à la Baie St. Paul, le dernier de ces messieurs est revenu à Québec.

Mr. Baddeley, accompagné de Mr. Bowen, est resté à la Baie St. Paul, pour continuer les recherches minéralogiques auxquelles il avoit plus particulièrement dirigé son attention dans le cours de l'expédition.

Les Commissaires soussignés prennent la liberté de soumettre à Votre Honorable Chambre les marques précieuses de son zèle et de son industrie dans cette exploration géognostique.

Quant à eux-mêmes, ils pensent que les résultats de cette visite d'exploration ont été plus satisfaisans qu'ils n'avoient lieu de l'anticiper, et que quoiqu'il en reste encore beaucoup dans un état imparfait, vu la modicité des moyens placés à leur disposition, néanmoins les Plans et Documents qui accompagnent ce Rapport démontrent d'une manière suffisante, que cette étendue de Pays peut fournir des habitations et de la nourriture à un grand nombre d'hommes, et par là augmenter considérablement la force militaire de ces Provinces, et contribuer aux intérêts généraux de l'Empire, auquel nous avons la gloire et le bonheur d'appartenir.

Le tout néanmoins humblement soumis.

Québec, 26 décembre 1828.

(Signé) ANDREW STUART.
DAVID STUART.

Appendice
(V.)
14 Janvr.

PARTIE GEOGNOSTIQUE d'une exploration du TERRITOIRE DU SAGUENAY;

Comprenant quelques observations sur la Topographie et l'Agriculture ;

Par le lieutenant F. H. BADDELEY, du génie.

Appendice
(V.)
14 janvier.

LES matériaux qui ont servi et donné lieu à cet essai géognostique ont été recueillis par l'auteur, qui était attaché à la commission d'exploration, partie de Québec dans l'été de 1828, pour aller explorer les territoires du Saguenay, dans la vue de rassembler des renseignements sur les avantages et les facilités qu'ils offraient à leur établissement.

Le lecteur verra que cet ouvrage demande beaucoup d'indulgence, tant à cause du peu d'expérience et de lumières que possédait l'auteur sur le sujet en général, qu'à cause du peu de temps qu'il a pu donner à l'observation. On accordera cette indulgence d'autant plus volontiers, que cet ouvrage a été fait sans l'assistance de personne, et sort, comme on s'en convaincra bientôt, d'une plume accoutumée le moins du monde à écrire des livres.

Comme l'auteur ne regarde ceci que comme une espèce d'appendice aux rapports plus importants et plus étendus de l'enseigne Nixon, 36^e régiment, de MM. Bouchette, Hamel et Davis, il a cru devoir omettre, comme superflus, la plupart des distances, des courses, &c. et n'a retenu que les latitudes des lieux, où il a eu raison de croire que ses observations étaient correctes à cet égard, et renvoie le lecteur à la carte de M. Hamel, pour la position relative des lieux.

Sans autre préambule il va procéder à la description des rochers qu'il a rencontrés dans sa route, et dans l'ordre qu'il les a observés, espérant qu'elle suffira au géologue expérimenté pour en déterminer la position géologique, ce qu'il n'a osé faire lui-même que bien rarement ; et dans les cas où il l'a fait, c'a toujours été avec la défiance et l'hésitation que lui donnaient son manque d'expérience et de connaissance sur le sujet.

Les rochers de l'Île d'Orléans, partout où nous en avons vus, sont composés alternativement d'un lit d'argille schisteuse et de grauwacke. Au Trou Saint-Patrice, où nous arrivâmes vers 10 heures, A. M., le 10 d'août, ils paraissent montrer alternativement des couches bien distinctes, qui, quand elles ne sont pas dans une position verticale, forment, soit à l'occident, soit à l'orient un angle de 60° à 85°. Ici le grauwacke prédomine et s'élevant au dessus des couches minces d'argille schisteuse, à cause de la plus grande résistance que celle-là oppose à l'action de l'air et du temps, forme sur le rivage des murs naturels, peu élevés, parallèles les uns aux autres. Il est probable qu'on peut tirer de là de bonne pierre à bâtir.

Comme on a quelquefois appliqué le mot de Wacke assez incorrectement à des pierres de caractères bien distincts, nous allons décrire la composition minéralogique, &c. de celle à laquelle nous avons appliqué ce terme.

La couleur qui y domine dans le voisinage de Québec, où ce minéral est devenu caractéristique, est un gris verdâtre. La structure est mécanique et granulaire, étant composé de grains de quartz arrondis, distribués abondamment dans une base d'argille durcie ; ils sont quelquefois assez gros, pour qu'on puisse l'appeler poudingue. On y aperçoit souvent de petits cristaux blancs de feldspath et de petits morceaux angulaires d'argille schisteuse. Ce qui le caractérise presque toujours, c'est un degré considérable de solidité et d'infriabilité, et il est impossible de le confondre avec des grès de formation plus moderne. Le grauwacke du Cap Rouge est une excellente pierre à bâtir, et l'on en a fait un grand usage dans les escarpes des fortifications de Québec. Quoique pierre prédominante, le grauwacke se rencontre rarement, en comparaison des autres, dans les débris épars sur le rivage, ce qui vient sans doute de la forte résistance qu'il présente à l'action de l'atmosphère pour le détacher, tandis que l'argille schisteuse, par une raison contraire, couvre les rivages de ses fragments angulaires.

Ces deux rochers s'étendent sans interruption jusqu'à l'ouest du télégraphe, des environs duquel, MM. Nixon et Bowen ont emporté des échantillons du dernier, très décolorés par l'oxide rouge de fer et contenant quelques noyaux de fer magnétique. Ces Messieurs rapportent que le sol sur lequel ils avaient passé était sablonneux et abandonné, description qui peut s'appliquer à presque toutes les parties de l'île que nous avons vues. A quelques verges au delà du point de haute marée les rochers s'élevaient à pic et forment une côte d'environ cinquante pieds de haut, parallèle au fleuve. Nous avons parcouru le rivage environ un mille à l'est du Trou Saint-Patrice, sans y observer aucun changement géologique d'importance.

A la Rivière Lafleur, à la hauteur de laquelle les vents contraires nous obligèrent de jeter l'ancre, nous avons observé les mêmes rochers. Ici cependant nous avons appris qu'on trouve de la pierre calcaire dans les paroisses voisines, à Saint-François du côté de l'est et à Saint-Laurent

* C'est le plongement le plus commun sur le rivage nord du Saint-Laurent ; il est souvent renversé du côté sud.

du côté de l'ouest, et à cette dernière place on en cultive pour l'usage de l'île. Ici nous fîmes dans l'île une petite incursion d'environ deux milles, dans une direction N. O., sans observer autre chose de plus remarquable qu'une pointe de grauwacke, coupé à pic, dans une position S. O. et formant un angle de 50° à 60°. A notre retour nous fîmes une observation solaire dont le résultat nous apprit que nous étions à la latitude de 46° 53' 40."

Ayant laissé la Rivière Lafleur, nous fûmes encore obligés de mouiller à la hauteur de l'île aux Oies, où nous passâmes la nuit. Nous apprîmes que cette île appartenait aux Urselines, et a environ trois quarts de lieue de longueur sur environ 550 pieds de largeur ; mais comme ce n'est presque qu'un rocher stérile, il n'y a en culture qu'une ferme d'environ 90 acres. Étant arrivés à cet endroit à une heure avancée de la nuit, et l'ayant laissé de bon matin, nous n'avons pu faire que bien peu d'observations géognostiques. Nous pensons que le rocher est de grauwacke, dont la position forme un angle élevé vers le N. O. ; il est couvert d'un lichen gris, et à l'extérieur il a l'apparence d'une solidité qu'il ne possède pas, au moins dans les lieux où nous l'avons examiné, car sous le marteau il se réduit aisément en lames, dont la surface est oxidée.

L'obscurité du temps, lors de nos observations, et la manque des échantillons recueillis, que nous avons laissés derrière nous, ne nous permettent pas d'en donner la description avec confiance. La surface de l'île est raboteuse et irrégulière.

En passant au sud de cette île, en descendant le fleuve, on aperçoit à gauche plusieurs îlots, savoir l'île Marguerite, l'île au Cochon, &c., &c. dont quelques-unes sont des rocs isolés, et qui ont l'apparence d'être aussi de Grauwacke.

Le 9 d'août au matin nous étions à la hauteur de l'embouchure du Saguenay, à la distance de 9 à 12 milles, selon que nous l'avons conjecturé. La plus haute pointe de terre sur le côté occidental de l'entrée du Saguenay gisait à cette distance, sous l'angle de 10. 12' 44." On ne saurait s'attendre à aucune hauteur approximative d'après des données aussi imparfaites ; cependant on procéda d'après elles, et un des calculs, dans lequel l'on avait pris pour base 12 milles, nous donna une hauteur de 919 pieds ; un autre dont la base était 10½ milles, nous offrit une hauteur de 805 pieds ; le premier de ces calculs s'accorde, à peu de chose près, avec le résultat d'une observation plus correcte, que nous fîmes subéquemment au poste de Tadousac.

En débarquant à cet endroit (Tadousac) nous nous mêmes incontinent à examiner quelques-uns des caractères géognostiques du pays. La seule place de résidence en cet endroit est élevée sur un banc de sable formé par alluvion, à 50 pieds au dessus de la surface de l'eau, et présentant une plateforme aux pieds des montagnes qui s'élèvent à pic à une petite distance en arrière. Les rochers dont sont composés ces montagnes sont de granit, tantôt gris, tantôt rouge, selon la couleur du feldspath, rocher que l'on rencontrera bien rarement parmi ceux que nous allons décrire ; il contient bien peu de mica, mais assez pour en faire du véritable granit. Il sort en masses cuboïdes et a la moitié du temps l'apparence probablement trompeuse de stratification. Au pied de ce granit se trouve un petit ruisseau qui reçoit ses eaux d'une coulée assez profonde dans les terres alluviales dont nous avons parlé plus haut, et qui est assez rempli de cailloux, fragments des rochers primitifs. Sur le rivage on aperçoit de petits dépôts de fer magnétique. Nous mesurâmes les bases de ces montagnes, et primes les angles nécessaires pour déterminer la hauteur des terres les plus élevées, de l'un et de l'autre côté de l'embouchure du Saguenay, et nous trouvâmes qu'elle était de 912 pieds sur la rive occidentale, et de 588 pieds sur la rive orientale. Ce ne sont que des résultats approximatifs, car ils sont la suite d'observations, qui ne furent pas prises avec la plus exacte précision. Les lignes de la base furent mesurées au pas et pouvaient dévier d'un à trois pieds du niveau horizontal.

Laissant le havre de Tadousac et avançant vers l'orient en faisant le tour du précipice argilleux de la Pointe aux Vaches, qui est la partie la plus méridionale du plateau alluvial décrit plus haut, nous tombâmes dans une petite baie, au fond de laquelle se jette dans le fleuve, le ruisseau du Moulin Baude, distance d'environ 3 milles du poste. C'est ici qu'est situé le lit du marbre blanc, qui a déjà tant excité l'attention. Il était tard lorsque nous visitâmes ce lieu et nous ne pûmes donner que dix minutes à l'examiner. Il repose en contact immédiat avec du Gneiss Syénitique, rocher composé de feldspath blanc, de quartz gris et d'amphibole noire ; c'est ce dernier minéral qui par la disposition de ses feuilles et couches parallèles, le fait appeler Gneiss, qui lui est plus applicable qu'au granit ; à la vérité ces feuilles et ces couches sont quelquefois si épaisses et toujours si continues qu'elles en méritent le nom "d'Amphibole Schisteuse alternante" de Maculloch, si l'on peut ranger dans cette classe une aggrégation, qui en d'autres endroits dans le voisinage, possède un caractère aussi intrusif et qui pour cette raison irait mieux avec les roches trappéennes. La fracture se fait plus facilement sur les

seus des couches qu'autrement, et dans cette exposition la surface offre l'apparence d'un faux éclat métallique noir, ressemblant à quelque schiste micacé, avec lequel on peut le confondre au premier coup d'œil, mais la facilité avec laquelle il fond au chalumeau en petites globules noires et brillantes de ce minéral qui a quelque ressemblance au mica noir, le distingue suffisamment.

Mais pour revenir au marbre : à sa jonction avec le Gneiss il est emmelé avec lui et est en plusieurs endroits coloré d'une teinte verdâtre, et il se conforme aux couches qui l'accompagnent, et incline vers le S. O., formant un angle élevé, et projette le long de la grève, en masses d'un blanc jaunâtre, usées par les eaux, au pied d'un rocher escarpé, le seul endroit où nous en avons vu. On ne peut considérer comme de qualité excellente aucun des échantillons que nous avons examinés, vu qu'ils étaient tachetés et détériorés, par ce que nous avons supposé être ou de l'Amphibole ou de l'Epidote ; outre cela il est disposé en lames et non pas en grains, comme le sont les marbres d'Italie, ce qui leur donne du prix, en ce qu'ils se taillent aisément en tout sens. Nous n'osons pas le tenter de nous assurer en quelle quantité se rencontre ce marbre, mais cette lacune se trouvera pleinement remplie par l'écrit anonyme qui suit ; et qu'il y a toute raison de croire correct :

“ TADOUSAC, 14 Septembre 1826.

“ Nous avons marché ce matin le long du rivage jusqu'au Moulin-Baude, à environ quatre milles au dessous de ce Poste, pour voir le banc de Marbre qui s'y trouve. La Pointe Rouge qui forme le promontoire S. E. du Havre de Tadousac est composée en grande partie de granit rouge et granuleux, très serré. Le granit est entre-coupé, dans l'espace de quelques pas, par des bancs de rochers primitifs de plusieurs espèces, et en est succédé jusqu'à la Pointe aux Vaches ; parmi ces rochers on remarque surtout le Gneiss &c., et là ils rencontrent un lit d'argile, qui paraît s'élever 150 pieds au dessus du fleuve, et qui est coupé presque perpendiculairement par le battement des eaux, dans un espace d'environ 200 verges, qui forment toute la largeur du lit. Cette argille a le même caractère que celle de la Pointe aux Bouleaux : *) Les rochers primitifs de la même espèce que l'on trouve adossés à l'argile, lui succèdent presque immédiatement, et l'action de l'eau présente au voyageur ce mélange bizarre mais magnifique de couches de différentes couleurs, spectacle qui s'offre si souvent à la vue entre la Malbaie et le Saguenay. Le rivage est alors irrégulièrement coupé et un lit de Gneiss, s'avancant dans le Saint Laurent, a été séparé par l'eau et forme un îlot, vis à vis lequel se trouve une baie, sur les atterrissement de laquelle il croit des avoines sauvages en si grande profusion qu'on les croirait semées par la main de l'homme. Un peu plus loin on rencontre une baie plus considérable que l'on appelle le Moulin-Baude ; elle a environ 150 à 200 verges de profondeur ; et c'est au fond de cette baie que repose le banc de marbre. Ce banc est dans une position presque verticale, s'élevant à la vue jusqu'au haut du rivage, qui est en cet endroit clairement boisé et d'environ 150 pieds de haut, et formant un angle d'environ 700. La direction des couches est presque N. (N. O.) ; dans toute la partie exposée la largeur varie depuis six jusqu'à huit ou neuf pieds, et se cache sous terre sans diminution. En quelques endroits il se mêle avec les lits adjacents, (de gneiss) mais généralement il est pur et solide. Un petit ruisseau qui descend du rocher l'a coupé, et en a détaché un ou deux gros blocs, qui ont été exposés à l'action de l'eau et de la gelée, dont ils ne paraissent pas avoir beaucoup souffert ; ils y ont même extrêmement bien résisté. On pourrait à peu de frais en tirer des milliers de tonneaux.

“ (†) Il sera très précieux comme marbre statuaire, car, généralement parlant, il est d'un blanc bien pur, quoiqu'à quelques pouces des lits adjacents, il ait souvent une teinte de vert, et qu'il y ait une teinte rouge dans quelques parties de la masse. Cette baie boueuse assèche à basse marée, offre un abri et admet à haute mer les vaisseaux tirant de 6 à 10 pieds d'eau : à la vérité le vaisseau qui tirerait 10 pieds pourrait toucher le fond avec sa quille. L'entrée, à venir du Saint Laurent, n'est pas difficile. Elle n'est pas à plus de 48 heures de marche de Québec, avec un léger bon vent. On pourrait tirer, je pense, des blocs parfaits de ce marbre de 15 à 20 pieds de long sur 4 ou 5 pieds de large, qui pourraient servir à l'ornement des édifices, en colonnes &c. &c. Comme ce marbre n'est pas susceptible d'un poli bien fin, on ne le rechercherait pas autant pour les chambranles de cheminées &c. Il mérite bien d'être exploité.” La découverte de marbre en cet endroit n'est pas bien nouvelle. Charlevoix en 1726 mouilla en cet endroit dans le Chameau, vaisseau de la marine royale française, mit pied à terre au petit ruisseau qui se décharge au fond de la baie, et il fait probablement allusion à ce banc même, qu'il ne put s'empêcher de voir, lorsqu'il dit, “ tout ce pays est plein de marbre. (†) Le marbre en question est connu depuis longtemps de la Compagnie du Nord-Ouest.”

C'est un fait curieux qu'on a acheté ce marbre pour du Gypse ; nous tenons de l'autorité la plus respectable, que l'acheteur le broya pour en faire du siment, et il réussit très bien. Si c'est le cas il a dû en faire d'a-

* L'argille de la Pointe aux Bouleaux et de la Pointe aux Vaches, les deux langues de terre les plus avancées sur les rivages du Saguenay à son embouchure, se trouve en bancs immenses, dont celui du premier endroit a environ 30 à 40 pieds d'épaisseur au dessus de terre, et celui du second endroit a peut-être 200 pieds d'épaisseur ; tous deux s'étendent ensemble, à ce qu'il paroît, 10 à 12 milles en superficie. La texture en est extrêmement déliée, et elle contient beaucoup de chaux et un peu de fer. Elle a la propriété de se diviser à l'eau, comme le fait la chaux vive, et par la simple exposition à la pluie ; elle pourrait servir comme un excellent engrais pour les terres où il y a surabondance d'acide, telles que les terrains marécageux, &c. &c. (Samuel Neilson, écrivain.)

(†) Il n'est pas du tout convenable comme marbre Statuaire, auquel il ne suffit pas seulement de la blancheur, mais de plus qu'il soit de structure granulaire. Les meilleurs, pour cet objet, sont ceux qui comme le marbre de Carrara, ressemblent au sucre blanc le plus raffiné.

(‡) Exemple remarquable d'exagération s'il ne voulait parler que du banc en question ; mais il est probable que trompé par la surface blanchie de presque tous les rochers de ces endroits, il prit pour du marbre tout le rocher auquel le banc de marbre se trouve réuni.

bord dégager, à grand feu, l'acide carbonique qu'il contient ; car il n'y a aucun doute qu'il ne soit un carbonate de chaux très pur, et son association avec le granite et le gneiss le range parmi les marbres primitifs. Qu'il ait jamais été trouvé du gypse parmi les roches primitives, de manière à en indiquer l'origine primitive, c'est ce dont quelques géologues ont douté. Il a une grande ressemblance avec l'albâtre, et c'est probablement ce qui l'a fait prendre pour du gypse. Au sujet de cette méprise nous donnons la lettre suivante que nous avons adressée à l'Éditeur du *Quebec Mercury* :—

“ On ne connaît que deux sortes d'Albâtre ; celui qui se forme au fond des cavernes par des dépôts calcaires qui découlent du toit, appelés stalagmites, et quelques variétés de gypse ou de sulfate de chaux. Ce ne peut pas être le premier, et ce n'est pas un des derniers ; en voici les raisons : Toutes les espèces de gypse peuvent se rayer avec l'ongle, excepté la variété anhydre qui ne le peut pas. Aucun d'eux ne fait effervescence avec les acides, car celui-ci non seulement fait effervescence mais encore il s'y réduit en une solution claire. Les gypses se réduisent en poudre à la chaleur— le minéral en question se réduit en chaux. C'est par conséquent un carbonate et non pas un sulfate de chaux.

“ Ce marbre a une translucidité remarquable, qui jointe à sa couleur (dans les échantillons avantagés,) est d'une blancheur éclatante, adoucie par une couleur de rose tendre, lui donne une apparence externe très propre à quelques objets d'ornement, surtout à faire des vases, des lampes &c. &c. S'il est en assez grande quantité pour permettre de l'employer comme pierre à bâtir, la facilité avec laquelle on pourra le travailler, sa solidité et sa blancheur le rendront un des matériaux les plus riches, les plus économiques et les plus durables. Quelques-uns se sont flattés qu'on pourrait en faire un article d'exportation ; mais en admettant qu'il soit en assez grande abondance, ce dont nous doutons, on trouve en plusieurs parties de l'Ecosse des marbres blancs d'une qualité bien supérieure, sur lesquels on pourra trouver un rapport détaillé, dans quelques mémoires qu'a présentés le Dr. Macculloch à la Société Géologique de Londres, et qui ont été insérés dans le 2e et 3e volume de ses Transactions. Nous insérons ici un extrait d'un de ces mémoires où l'on trouvera des renseignements intéressants sur les marbres de Grèce, d'Italie et d'Ecosse.

“ Dans le catalogue des substances qui concernent la minéralogie économique, il en est peu qui aient excité plus d'intérêt que le marbre statuaire, à cause de sa rareté, de sa beauté et de sa nécessité indispensable dans l'art de la sculpture. Il a été en différents temps dans ce pays l'objet des plus vives recherches, et la Société des Arts a offert des récompenses à qui en découvrirait. En conséquence on en a trouvé en différentes parties d'Ecosse, aussi bien qu'en Irlande, mais on en a encore introduit aucun échantillon dans les Arts. Les causes qui ont empêché cette introduction jusqu'ici peuvent être considérées comme purement accidentelles, étant d'une nature commerciale et nullement fondées sur l'expérience de leurs défauts physiques ; on a espéré que le temps et la persévérance les feraient disparaître, et que dans la suite les marbres statuaire de ce pays pourraient remplacer ceux qu'on se trouvait obligé de faire venir de l'étranger. Ce ne serait donc pas une recherche hors de propos d'examiner les diverses propriétés des marbres qui en différents temps ont eu la préférence de la part des Artistes, et de les comparer avec nos échantillons, plus particulièrement avec celui de Sky, maintenant sous examen, le plus abondant et assurément celui qui promet davantage parmi tous ceux qu'on ait encore trouvés dans la Grande Bretagne. Cet examen est d'autant plus nécessaire, que les diverses circonstances sous lesquelles diffèrent les marbres blancs, ne paraissent pas avoir généralement attiré l'attention, et qu'en quelques occasions le peu propre marbres d'une dépréciation injuste.

“ Dans ces temps éloignés où les Arts fleurissaient dans la Grèce, la valeur de cette substance où l'artiste fixait ses sublimes idées, fit faire des recherches industrielles ; en conséquence on a ouvert dans l'ancien temps nombre de carrières, dont il ne nous reste guère que les noms ; et il ne nous est parvenu que peu des ouvrages qui en sont sortis. Ces marbres étaient de diverses qualités, et l'on en voit encore des échantillons dans les anciennes statues, quoiqu'à l'égard de plusieurs d'entre elles les artistes et les minéralogistes, dans les tentatives qu'ils ont faites pour déterminer de quelles carrières elles sortaient, n'aient eut pour guide qu'une espèce de préjugé, qui souvent ne vaut guère mieux qu'une simple conjecture. De ce nombre, les carrières de Paros fournissaient un marbre, (le *lychnites* souvent cité de Plin) dans lequel on a taillé la célèbre Venus, de même que beaucoup d'autres dont l'accès nous est fermé. Mais il y a dans le Musée Britannique plusieurs échantillons, qui paraissent avoir été travaillés dans ce marbre, ou dans une espèce au moins de caractère analogue.

“ Nous pouvons parler avec certitude du marbre de Paros, puisque ces années dernières l'on en a apporté quelques blocs, que l'on peut voir aujourd'hui dans les ateliers des sculpteurs de cette ville. Le grain en est gros et peu éclatant, tandis qu'en même temps la texture en est lâche et molle, et la couleur d'un blanc jaunâtre et *aqueux*. Il possède sur les bords une translucidité considérable, qualité bien désirable il est vrai, dans le marbre statuaire d'un grain fin, à cause de la mollesse qu'elle donne aux contours, mais qui augmente l'aspect désagréable du marbre de Paros, à cause de la réflexion angulaire de la lumière qui est produite sur le bord et sur la surface transparente des faces sans nombre des petites feuilles. Aussi est-il certain que les sculpteurs grecs abandonnèrent le marbre de Paros, aussitôt après la découverte des carrières de Luna et de Carrara ; la finesse et la blancheur supérieures de ces marbres, qui aujourd'hui les font préférer à tout autre dont nous connaissons la situation, les mettent aussi sur le pied d'égalité, pour le moins, avec les meilleurs de l'antiquité, desquels nous ignorons les localités. [Indépendamment

Appendice
(V.)
14 janvier.

“Indépendamment du mauvais effet que produit le gros grain du marbre de Paros sur la surface transparente des ouvrages sculptés, et du faux jour qu'il introduit ainsi dans le contour, il nuit beaucoup à la correction nécessaire du dessin dans les petits ouvrages, et il ne peut par là répondre aux détails des petites sculptures en relief. Il est néanmoins susceptible d'un beau poli, qualité cependant de peu de valeur aux yeux du statuaire, et qui ne sert qu'à faire ressortir d'avantage les défauts de texture de cette espèce.
On dit aussi qu'il ne se trouve pas en assez grandes masses, vu que ses fréquentes fissures l'empêche d'offrir des blocs de plus de cinq pieds de longueur. Je dois ajouter que l'état actuel des goûts, à l'égard des marbres blancs, ne demande plus que les ouvrages modernes soient exécutés en marbre de Paros. Sa célébrité est reléguée dans les métaphores des poètes.

“Les carrières de Luna produisent un marbre blanc compacte, susceptible d'un parfait poli, et capable de se prêter à l'expression des moindres détails. Par là il est préférable, pour les opérations plus délicates du bas-relief, et au marbre de Paros, dont l'aspect nuit à la délicatesse du fini et de la surface nécessaires dans ces ouvrages; et aussi au marbre Pentelique, que les veines de mica et de serpentine qu'il contient rendent sujet à des accidents, et même à celui de Carrara, dans lequel il se rencontre des veines sombres en plusieurs endroits. Il fut en conséquence préféré des anciens, et entre autres ouvrages, l'Apollon de Belvédère a, dit-on, été exécuté en marbre de Luna. Nous ne connaissons que de noms les marbres d'Hymettus et d'Arabie.

“De tous les marbres que les anciens ont employés dans leurs ouvrages, et dont plusieurs échantillons nous sont parvenus, celui de Carrara est presque le seul qui soit en estime aujourd'hui, ou qui soit accessible aux sculpteurs modernes. Ce marbre est d'un grain bien fin et d'une texture compacte; il est aussi susceptible d'un beau poli, lorsqu'il en est besoin, et peut par conséquent servir à toute espèce de sculpture, excepté, comme cela arrive fréquemment, lorsque des veines sombres viennent gâter la beauté de l'ouvrage. Malgré l'apparence générale d'uniformité de sa texture, il offre différentes variétés d'aspect. La cassure est toujours à petits grains; cependant cette cassure se trouve quelquefois avoir une tendance vers la cassure en aiguillettes plates, dans lequel cas la roche est plus dure et plus transparente que dans l'état purement granuleux. Lorsqu'elle est purement granuleuse elle est quelquefois sèche et *miéreuse*, comme si elle avait été exposée à une forte chaleur; le marbre perd dans ce cas beaucoup de sa transparence et les sculpteurs l'appellent *laineux*. La transparence en varie, et quelquefois elle égale celle de l'Albâtre, (Gypse granuleux.)

“Le dernier des marbres anciens que je vais décrire est celui de Pentelicus, dont on trouverait probablement encore les carrières dans le voisinage d'Athènes, quoique les voyageurs modernes ne les aient pas cherchées. La texture en est lâche et le grain d'une grosseur moyenne, plus gros que celui de Carrara, mais plus fin que celui de Paros; il est bien inférieur du côté de la couleur, ayant des teintes de gris, de brun et de jaune, et étant bigarré de points transparents, ce qui lui donne l'apparence d'avoir été huilé. Mais son défaut le plus à craindre est sa structure lamineuse, et la quantité de mica dont il est contaminé; c'est à cela qu'on doit attribuer la corrosion et la destruction presque entière d'un si grand nombre des échantillons, l'action du temps dissolvant les parties de la pierre où le mica abonde davantage, et creusant de profondes fissures dans plusieurs parties de l'ouvrage. Il est surtout à regretter que les deux échantillons les plus dignes d'admiration, et qui sont les plus propres à inspirer aux artistes un sentiment d'admiration mêlé de désespoir, la tête du cheval et le Thésée, soient de tous, ceux qui ont le plus souffert. S'ils eussent été heureusement travaillés en marbre de Carrara, espèce plus uniforme et plus durable, ces ouvrages nous seraient parvenus dans toute leur perfection originale de contour et de surface. Les marbres de cette texture auraient même, sans en souffrir beaucoup, fait rebondir le marteau des Turcs; au contraire la roche micacée du mont Pentelique, se réduisant en éclats dans la direction de ses lames, a permis la mutilation complète de nombre de sculptures de grand prix.

“Nous n'avons aucun renseignement géologique à l'égard des rapports de ces roches avec d'autres. La grande ressemblance qui existe entre le marbre Pentelique et celui de *Glen Tilt*, sous le rapport de l'aspect et de la composition, ferait penser que, comme celui-ci, il repose dans du mica-schiste, formant des lits parallèles à ce rocher et interstratifiés avec lui. D'après les principes généraux de la géologie, nous aurions été portés à conclure que les autres avaient des rapports semblables avec les rochers primaires, si nous n'avions pas déjà vu que le marbre blanc de Sky qui a donné lieu à cette discussion, appartient aux couches secondaires.

“Nous avons maintenant à examiner les marbres blancs qui ont été découverts dans nos propres îles, afin d'en comparer les propriétés relatives et le prix qu'ils doivent avoir. Je suis malheureusement hors d'état de parler de ceux qu'on a découverts en Irlande, n'en ayant pas vu le gisement, et n'en possédant aucun échantillon.

“Celui qu'on a trouvé au Cap Wrath, en Ecosse, a le grain beaucoup plus gros que le marbre de Paros même, et ne peut par conséquent servir aux ouvrages de sculpture; et c'est à la vérité le caractère presque général des échantillons d'Ecosse. Ceux de Blairgowrie, de Glenavon et de Balahulish, sont tous également caractérisés par la même texture grossière et *spacieuse*, et tous également incapables de servir à la sculpture, quoiqu'on puisse fort bien les employer à l'architecture. Il y a longtemps que le marbre d'Iona est épuisé, et par conséquent ne demande pas une mention bien particulière: de quelque prix qu'il fût par la pureté de

en aiguillettes sous le ciseau, (outil sans lequel on ne sectionner ni donner de la vie à aucun ouvrage,) réunie à sa dureté, l'aurait probablement rendu inutile aux arts, si même il n'en avait encore en trouver.

“Dans un mémoire sur l'Assynt, j'ai déjà décrit le marbre district; il est d'une texture bien serrée, et quoiqu'il ne contienne tre terrain que de la chaux, il est d'une dureté et d'une gravité extraordinaire: Il n'est pas susceptible de poli, circonstance il est vrai, d'aucune conséquence pour le statuaire, puisque la que donner une fausse lumière à la surface, et qu'il n'est pas la sculpture moderne, mais il souffre d'un désavantage qui manque de transparence, ce qui produit l'effet léthargique et le l'on remarque dans le plâtre coulé, défaut qui suffit seul pour à jamais l'entrée dans l'atelier de l'artiste: son extrême dureté aussi le travail dispendieux.

“Le marbre de Sky, qui fait le principal objet de cette description, est d'une couleur d'un blanc pur, et paraît assez étendu et susceptible pour se tirer en blocs considérables. La pureté de sa couleur est ment contaminée, la cassure en est granuleuse et aiguillée, et fine, moins peut-être que celle du marbre d'Iona, mais plus fine que celle du marbre d'Assynt; la compacité, la dureté et la gravité sont grandes que celles du marbre de Carrara, auquel en effet il ne diffère que par la couleur. Il paraît être bien propre à toute la sculpture, vu qu'il peut se tailler en tout sens, et qu'il a assez de pureté, en même temps qu'il est susceptible de plus de polissage que demande le statuaire, mais à toutes les bonnes qualités il réunit une ténacité qui provient de sa dureté inégale. Il se trouve des roches aussi faciles à travailler que le marbre de Carrara, et d'autres échantillons sont si durs, que le travail en coûte près de 50 par cent de plus; cela semble venir de la présence des veines syénitiques et traçantes qui le traversent, comme je l'ai déjà remarqué, mais qui ne produisent qu'une altération dans sa composition chimique, et n'ont d'autre effet que de l'induration. Cette augmentation dans le prix ordinaire du marbre suffit, dans les échantillons durs, pour contrebalancer en grande partie le plus bas prix de la matière première, et les avantages qui résultent de la pureté, d'un droit et d'une assurance moins considérable. Les difficultés qui s'opposent à l'introduction du marbre le plus pur ont été encore trouvées dans la Grande-Bretagne; et ces difficultés, si elles sont, doivent, réunies à la force des habitudes de la routine commerciale, diminuer l'espérance extravagante entretenue en ce pays de remplacer, par son propre produit, l'usage du marbre statuaire étranger. Mais ce ne serait pas rendre justice au marbre de Sky, que de ne pas ajouter qu'il possède une propriété qui ne se trouve pas dans celui de Carrara; et cette propriété est d'une importance, au moins dans les petits ouvrages de sculpture; elle consiste dans la compacité de sa texture, qui le fait résister à la meule, et arrive si souvent à l'endroit où arrête le ciseau, effet que l'on connaît sous le nom technique d'*étourdissement*, et dont le résultat est une tache blanche opaque désagréable, le plus souvent à l'endroit où l'ombre est la plus forte.”

Il est à espérer qu'on excusera la digression précédente, et qu'on ne s'apercevra pas qu'elle jette sur le sujet des lumières qu'on ne trouve pas partout, et qui mettent en état de priser la valeur des marbres de Canada, de ceux dont on connaît déjà et de ceux dont on ne connaît pas les localités.

Les rochers des deux côtés du Sagenay, à monter la *Boule*, (montagne qui s'avance dans le fleuve; d'une manière remarquable, du côté nord-est,) sont probablement de granite et font partie de la même série que l'on rencontre dans le voisinage immédiat de Tadoussac. Ils ont quelquefois l'apparence d'être d'un granite et de plonger vers le S. E. à un angle presque vertical, et s'élèvent à une hauteur considérable en falaises presque perpendiculaires et les sommets en sont stériles, en quelques endroits entiers dans lequel cas la surface blanchie du rocher, dont la blancheur est le résultat de la décomposition commencée du felspath qu'il renferme, à celle de quelque pierre calcaire; ils paraissent aussi avoir une couleur enfumée ou noirâtre: presque à fleur d'eau, une gaineuse rouge caractérise ces rochers: leur apparence est remarquable, caractères qu'ils perdent à mesure qu'on monte la rivière.

Ce fut sur la *Boule* que nous observâmes pour la première fois des masses singulières de trapp, qui quelquefois se montrent sous la forme de veines ou *dykes*, quelquefois sous la forme de lits composés et irréguliers; mais le plus souvent en morceaux disjoints et anguleux, et le tout mérite l'attention du géologue. Les aspects trappéens caractérisent presque tous les rochers qui se trouvent dans ce pays, et il est nécessaire de définir la composition minérale de laquelle nous avons appliqué ce terme, à cause surtout qu'il n'y a eu d'une pareille description, il serait presque impossible d'avoir une idée correcte, vu l'application libre et indéfinie que l'on a donnée à ce terme; et toutes les fois qu'on le rencontre dans un essai, il est employé pour signifier toute roche dans laquelle se trouve l'Amphibole, sans égard pour les idées théoriques, que l'on a fait porter. Ce terme signifie ici particulièrement un composé d'Amphibole noire cristalline, de petits cristaux de mica et d'écaillé composé d'un assemblage de cristaux de felspath, de mica non élastique ou talc; enfin une substance semblable à celle que l'on a décrite plus haut comme étant associée avec le marbre de Baude; mais qui en diffère ici dans la forme sous laquelle elle se présente. Elle ressemble aussi beaucoup à un composé d'Amphibole et de mica.

D'après les principes généraux de la géologie, nous aurions été portés à conclure que les autres avaient des rapports semblables avec les rochers primaires, si nous n'avions pas déjà vu que le marbre blanc de Sky qui a donné lieu à cette discussion, appartient aux couches secondaires.

“Nous avons maintenant à examiner les marbres blancs qui ont été découverts dans nos propres îles, afin d'en comparer les propriétés relatives et le prix qu'ils doivent avoir. Je suis malheureusement hors d'état de parler de ceux qu'on a découverts en Irlande, n'en ayant pas vu le gisement, et n'en possédant aucun échantillon.

“Celui qu'on a trouvé au Cap Wrath, en Ecosse, a le grain beaucoup plus gros que le marbre de Paros même, et ne peut par conséquent servir aux ouvrages de sculpture; et c'est à la vérité le caractère presque général des échantillons d'Ecosse. Ceux de Blairgowrie, de Glenavon et de Balahulish, sont tous également caractérisés par la même texture grossière et *spacieuse*, et tous également incapables de servir à la sculpture, quoiqu'on puisse fort bien les employer à l'architecture. Il y a longtemps que le marbre d'Iona est épuisé, et par conséquent ne demande pas une mention bien particulière: de quelque prix qu'il fût par la pureté de sa couleur et la compacité de sa texture, l'incertitude de sa fracture

en aiguillettes sous le ciseau, (outil sans lequel on ne peut perfectionner ni donner de la vie à aucun ouvrage,) réunie à son extrême dureté, l'aurait probablement rendu inutile aux arts, si même l'on pouvait encore en trouver.

“Dans un mémoire sur l'Assynt, j'ai déjà décrit le marbre blanc de ce district; il est d'une texture bien serrée, et quoiqu'il ne contienne d'autre terrain que de la chaux, il est d'une dureté et d'une gravité spécifique extraordinaire: Il n'est pas susceptible de poli, circonstance qui n'est, il est vrai, d'aucune conséquence pour le statuaire, puisque le poli ne fait que donner une fausse lumière à la surface, et qu'il n'est pas reçu dans la sculpture moderne, mais il souffre du désavantage qui accompagne le manque de transparence, ce qui produit l'effet léthargique et le contour que l'on remarque dans le plâtre coulé, défaut qui suffit seul pour lui interdire à jamais l'entrée dans l'atelier de l'artiste: son extrême dureté en rend aussi le travail dispendieux.

“Le marbre de Sky, qui fait le principal objet de cette discussion, est d'une couleur d'un blanc pur, et paraît assez étendu et assez continu pour se tirer en blocs considérables. La pureté de sa couleur est rarement contaminée, la cassure en est granuleuse et aiguillée, et la texture fine, moins peccant que celle du marbre d'Iona, mais plus fine que celle du marbre d'Assynt; la compacité, la dureté et la gravité en sont plus grandes que celles du marbre de Carrara, auquel en effet il ne ressemble guère que par la couleur. Il paraît être bien propre à tous les objets de la sculpture, vu qu'il peut se tailler en tout sens, et qu'il a assez de transparence, en même temps qu'il est susceptible de plus de poli que ne le demande le statuaire, mais à toutes les bonnes qualités il réunit une incertitude qui provient de sa dureté inégale. Il se trouve des parties de la roche aussi faciles à travailler que le marbre de Carrara, et d'autres échantillons sont si durs, que le travail en coûte près de 50 par cent davantage: cela semble venir de la présence des veines syénitiques et trappéennes qui le traversent, comme je l'ai déjà remarqué, mais qui ne produisent aucune altération dans sa composition chimique, et n'ont d'autre effet que celui de l'induration. Cette augmentation dans le prix ordinaire du travail suffit, dans les échantillons durs, pour contrebalancer en grande partie le plus bas prix de la matière première, et les avantages qui résultent d'un fret, d'un droit et d'une assurance moins considérable. Telles sont les difficultés qui s'opposent à l'introduction du marbre le plus parfait qu'on ait encore trouvé dans la Grande-Bretagne; et ces difficultés toutes légères qu'elles soient, doivent, réunies à la force des habitudes établies et de la routine commerciale, diminuer l'espérance extravagante qu'on a entretenue en ce pays de remplacer, par son propre produit, l'importation du marbre statuaire étranger. Mais ce ne serait pas rendre justice au marbre de Sky, que de ne pas ajouter qu'il possède une propriété qu'on ne trouve pas dans celui de Carrara; et cette propriété est d'une grande importance, au moins dans les petits ouvrages de sculpture; je veux parler de la compacité de sa texture, qui le fait résister à la meurtrissure qui arrive si souvent à l'endroit où arrête le ciseau, effet que les sculpteurs connaissent sous le nom technique de *déourdissement*, et dont le résultat est une tache blanche opaque désagréable, le plus souvent à l'endroit où il faut l'ombre la plus forte.”

Il est à espérer qu'on excusera la digression précédente, en considération de ce qu'elle jette sur le sujet des lumières qu'on ne rencontre pas partout, et qui mettent en état de priser la valeur des marbres blancs du Canada, de ceux dont on connaît déjà et de ceux dont on peut venir à connaître les localités.

Les rochers des deux côtés du Sagenay, à monter jusqu'à *La Boule*, (montagne qui s'avance dans le fleuve; d'une manière remarquable, du côté nord est,) sont probablement de granite et forment la continuation de la même série que l'on rencontre dans le voisinage plus immédiat de Tadoussac. Ils ont quelquefois l'apparence d'être stratifiés et de plonger vers le S. E. à un angle presque vertical. Ces rochers s'élèvent à une hauteur considérable en falaises presque perpendiculaires et les sommets en sont stériles, en quelques endroits entièrement nus, dans lequel cas la surface blanchie du rocher, dont la blancheur est causée par la décomposition commencée du feldspath qu'il renferme, ressemble à celle de quelque pierre calcaire; ils paraissent aussi souvent d'une couleur enfumée ou noirâtre: presque à fleur d'eau, une barre ferrugineuse rouge caractérise ces rochers: leur apparence est ronde et mamelonnée, caractères qu'ils perdent à mesure qu'on monte la rivière.

Ce fut sur la Boule que nous observâmes pour la première fois ces masses singulières de trapp, qui quelquefois se montrent sous la forme de veines ou *dykes*, quelquefois sous la forme de lits ou couches interposées et irrégulières; mais le plus souvent en morceaux isolés, arrondis et anguleux, et le tout mérite l'attention du géologue. Comme ces aspects trappéens caractérisent presque tous les rochers que nous avons vus, il est nécessaire de décrire la composition minérale de cet aggrégat, auquel nous avons appliqué ce terme, à cause surtout que, sans l'aide d'une pareille description, il serait presque impossible de s'en former une idée correcte, vu l'application libre et indéfinie que les géologues ont donnée à ce terme; et toutes les fois qu'on le rencontrera dans cet essai, il est employé pour signifier toute roche dans laquelle prédomine l'Amphibole, sans égard pour les idées théoriques, que souvent on lui a fait comporter. Ce terme signifie ici particulièrement un aggrégat composé d'Amphibole noire cristalline, de petits cristaux gris, ou plutôt d'écaillé composé d'un assemblage de cristaux, de feldspath, d'un peu de mica non élastique ou talc; enfin une substance semblable à celle que l'on a décrite plus haut comme étant associée avec le marbre blanc du Moulin Baude; mais qui en diffère ici dans la forme sous laquelle on la trouve. Elle ressemble aussi beaucoup à un composé qu'on rencontre sur la montagne

tagne de Montréal, et à laquelle l'on a donné une origine volcanique. Le granite auquel était ici associé le trapp, était d'une couleur grisâtre, et nous y avons observé, dans un endroit, des nodules de fer magnétique, à surface très iridescente, ressemblant à du minéral de cuivre, et pour lequel on l'a d'abord pris. Ce minéral est très fortement magnétique et aussi fortement en apparence que le fer malléable. Il n'est pas facile, (comme il l'est au contraire à l'égard du composé amphibolique qui se trouve dans le Gneiss du Moulin Baude) de se procurer un échantillon de ce trapp—qui montre les deux roches en contact, vu que la percussion les sépare, et l'on aperçoit alors sur le fragment trappéen, une surface lisse et unie, semblable à celle que donne le moule à la substance qu'on y a coulée, sans qu'il y ait généralement aux endroits en contact aucune apparence d'entrelacement ou de conglomération. A la surface qui a subi l'action du temps le feldspath de la roche trappéenne est brun et saillant. Ce trapp est souvent très magnétique.

Le granite de la Boule, car ainsi l'on appelle ce rocher quoiqu'il ait l'apparence de stratification, est composé de quartz gris, de feldspath rougeâtre et de petits points de mica brun. Un peu au dessus de la ligne de jonction de la rivière et du rocher, et sur le côté du midi, il est traversé d'un filon trappéen (*dyke*) presque horizontal et formant un angle droit avec la stratification. Il paraît sortir de l'eau à l'extrémité occidentale de la Boule, et il monte, à une légère inclinaison vers le côté occidental.

Nous allons maintenant décrire plus particulièrement les allures de ces filons, veines, &c. : ils sont droits, ou ondoyans ou tortueux ; ils s'élèvent à tous angles à travers les couches accompagnantes ; ils sont souvent parallèles les uns aux autres, et même aux faces de la stratification. Généralement ils se terminent tout-à-coup dans le roc, soit à la queue soit à la tête, auquel cas ils répondent à la description de veines contemporaines : ces extrémités sont ou en pointes ou en fourches. Le diagramme suivant donnera une meilleure idée de ce qu'on veut décrire. (voyez la planche.)

On aperçoit plus communément des quartz isolés, en forme de lenc et par taches, qui varient depuis la grandeur de la main jusqu'à celle du corps, comme on le voit par la figure.

Il mérite d'être remarqué que les morceaux en forme de quart décroissant sont par deux et par trois en ordre parallèle, et que le trapp de quelques formes qu'il soit, à ses coins et ses terminaisons anguleuses. On voit quelquefois sur la face du rocher des canaux et des cavités, qui viennent du déplacement du trapp, qui occupait précédemment ces vuides.

Cependant on ne rencontre pas cette substance en veines, en lits et en concrétions distinctes seulement ; on la rencontre surtout dans les endroits plus élevés du Saguenay, en montagnes qui n'ont que peu l'apparence de stratification, et quelquefois en masses de la stratification desquelles on ne peut guère douter, et comme il alterne quelquefois avec d'autres rocs stratifiés, elle devient si évidente qu'il ne peut rester aucune incertitude à cet égard.

La Boule, s'avancant si loin dans la rivière, y occasionne, au reflux des eaux, un fort courant et un remous. Ne pouvant surmonter ce courant, la chaloupe s'engagea dans le remous et courant le long de la base de la montagne du côté sud-est, entra dans une petite anse, où l'on trouva par une observation que la hauteur de la Boule excédait 200 pieds, mais de combien, c'est ce que l'espace resserré où nous étions ne nous a pas permis de constater. La stratification des rochers du côté nord-est du Saguenay, dans la baie au dessus de la Boule, nous a paru être dans une direction est et ouest, et plonge vers le nord à un angle élevé, mais comme on l'a trouvé en plusieurs autres endroits, les caractères géologiques sont souvent douteux, à cause des apparences contradictoires que prennent souvent les faces supposées de stratification, et pour les réconcilier il aurait fallu donner à l'observation plus de tems que nous le pouvions. En parlant de la stratification des endroits où nous avons observés ces apparences contradictoires, on a eu soin de ne donner que les positions les plus communes. Les preuves qui résultent de l'examen des couches alternantes dans le Saguenay sont souvent inadmissibles, car le trapp prend souvent l'apparence, probablement trompeuse, de stratification.

Etant assis sur un amas de cailloux qui couvre le rivage de cette baie, nous aperçûmes, de l'autre côté du rivage, des rochers d'une aridité remarquable, associés à d'autres d'une fertilité comparative ; les premiers ont une apparence de stratification que n'ont pas ces derniers. La stérilité et la stratification constante du gneiss rendent probable qu'il est ici associé au trapp, roche qui n'est pas généralement stratifiée et qui est d'un caractère plus fertile. Il se présente ici une question : le gneiss est-il plus stérile que le granit ? et s'il en est ainsi, quelle en est la cause ? (la seule différence entre eux se trouvent dans l'arrangement des mêmes minéraux dont ils se composent.) Cela vient-il de ce que le caractère feuilleté du gneiss le fait désaggréger plus facilement et le réduit à un état de sable, qui appauvrit le sol d'un pays où il se rencontre en abondance ? L'eau douce qu'on se procura dans cette baie était fortement empreignée de fer.

Profitant du flux de la mer pour passer la Boule, nous montâmes le Saguenay. Dans la baie Passepierre nous observâmes les rochers de la rive nord pour prendre la hauteur N. et S., et à la baie St. Etienne, un peu plus haut, sur la rive sud-ouest, on les vit, contre leur habitude générale, s'éloigner du rivage et laisser quelques acres de marne alluviale où l'on coupe tous les ans des foins sauvages. Entre la Pointe St. Etienne, et l'Anse aux Foins, (autre dépôt alluvial plus étendu, et situé plus haut,) les rochers méritent surtout d'être observés, à cause

des filons et des veines tortueuses de trapp dont ils sont traversés. Ces rochers sont stratifiés, et plongent vers le sud à un angle élevé. En quelques parties de cet endroit les filons trappéens qui ressemblent exactement à ceux que nous avons décrits dans leur composition minéralogique, leur structure et dans le caractère d'intrusion ou d'interposition, ont l'apparence d'alterner par strata avec le syénite. Le rivage opposé offre les mêmes apparences, mais n'y ayant pas atterré, c'est tout ce que nous en pouvons dire.

Dans les falaises escarpées sur le rivage nord-est du Saguenay, dans la direction de la rivière Ste. Marguerite, ces filons sont très apparens et leur couleur noire leur donne quelque ressemblance à des lits de charbon placés debout. On remarque ici, comme on le voit ailleurs, que là où le trapp abonde le terrain est plus épaissement boisé, et ce caractère est assez frappant en plusieurs endroits des rivages de la rivière, car le syénite auquel le trapp est associé ordinairement présente un contraste frappant par son extrême aridité. Sur une des îles St. Louis nous observâmes un rocher composé de quartz, de feldspath et de mica, vrai granite sous le rapport de la composition, mais évidemment en masses stratifiées, dont la position était N. et S., et qui plongent vers l'ouest, sous un angle élevé.

En montant la rivière, à la pointe de la Baie Comfort, les rochers étoient de syénite, où l'on entrevoit un peu de quartz ; à l'extérieur ils étoient d'une couleur verdâtre, ce qui étoit dû, à ce que l'on a cru, à la présence de l'Epidote, qu'un temps très humide avait rendus plus distinct et plus brillant que de coutume. Ces rochers ont une apparence bien distincte de stratification vers le N. et N. E. et plongent vers l'Est et le Sud-Est ; nous avons vu cependant d'autres faces contraires. Plusieurs des rochers de la baie ont un extérieur poreux.

Le 12 d'Août à neuf heures, la température se trouva être, à l'ombre, à 7° de Fahrenheit, et dans l'eau salée ou très saumâtre 65°. En prenant pour base la distance supposée de 550 pieds, et 44° comme élévation, nous obtinmes la hauteur de 530 pieds, pour une montagne située sur la rive nord-est. Sur la rive opposée, ou sud-ouest, le sommet d'une montagne, en prenant pour base la distance de deux milles étoit sous un angle de 7° 27' 54", ce qui donne 1360 pieds de hauteur perpendiculaire, résultat que nous croyons beaucoup trop considérable, quoique le terrain paraisse s'élever depuis l'embouchure du Saguenay jusqu'à la Baie de la Trinité, où on le suppose à son plus haut point d'élévation. Les rivages de cette rivière, par leurs falaises et leurs inégalités offrent peu d'endroits convenables pour y mesurer une base, afin d'assurer, en calculant d'après des données certaines, l'exactitude de cette espèce de renseignements.

Ayant pris terre un peu au dessus de la baie des Cascades, nous trouvâmes un syénite composé de feldspath rougeâtre et d'un peu d'Amphibole noire, et à une petite distance au delà, on rencontre la même roche caractérisée par ces morceaux remarquables de trapp implantés ; il sont ici soit sous la forme de serpens, soit sous celle de fragmens anguleux de forme irrégulière ; nous vîmes aussi des filons tortueux de la même substance. Vers cet endroit M. Proulx un des arpenteurs, mesura la rivière et il trouva qu'elle avoit environ 50 chaines. Dans ce dernier cas le trapp ne contenait pas de mica ; sous d'autres rapports il ressemblait parfaitement à celui que nous avons décrit plus haut. Un des échantillons de syénite que nous nous procurâmes ici, parut être composé principalement de feldspath compact d'un brun clair, sa fracture est à concoides plate, en grand, mais inégale et écaillée en petit, où l'on voit quelques petits points tramblotans, causés par la réflexion de la lumière des surfaces polies des petits cristaux de feldspath commun ; cependant en le soumettant au chalumeau, on trouva qu'il étoit infusible, mais la chaleur à laquelle il avoit été exposé, découvrit sa vraie structure granuleuse, ce qui nous porta à le regarder comme un aggrégat bien adhérent de quartz, de feldspath et d'amphibole, avec une surabondance du minéral principale. Nous avons mentionné cette circonstance simplement pour toucher à une difficulté qui accompagne souvent l'examen des minéraux qui entrent dans la composition des roches.

Ayant de nouveau atterré dans une baie très commode, vis-à-vis la baie de la Trinité, nous rencontrâmes des rochers de Syénite, ou des compositions de feldspath, d'amphibole et très rarement de quartz ; le feldspath étoit blanc, gris, rouge, jaune et verdâtre, l'Amphibole toujours noire. Ces roches, comme ailleurs en quelques endroits du rivage du Saguenay, étoient fortement tachetées de fer ; et M. Proulx recueillit, sur le côté nord de la rivière, à la latitude 48° 14', comme il le constata par observations, un échantillon qui non seulement étoit beaucoup décoloré, mais le rocher dont il venoit, faisoit varier l'aiguille jusqu'à 1° 30'. Nous pouvions apercevoir facilement le magnétisme dans l'échantillon, en question, mais c'est un caractère bien commun en ces endroits, et on l'a trouvé dans plusieurs des échantillons que nous avons emportés avec nous surtout dans le trapp et dans quelques syénites qui abondent dans l'Amphibole, et c'est généralement à la présence de ce minéral qu'est dû son existence. Les rochers en ce lieu plongent vers le Sud, à un angle élevé. On constata que la mer y baissait jusqu'à 21 pieds.

Nous laissâmes la baie vers 11 heures P. M., pour profiter de la marée et nous cotoyâmes, toute la nuit, le rivage Nord-Est. Le 13 d'Août au matin, nous débarquâmes sur la rive gauche, dans une baie, appelée l'Anse aux Femmes, et vis-à-vis la baie des Ha-Ha. Nous rencontrâmes ici un rocher qui contenait plus de quartz que d'ordinaire et qui faisoit un granite syénitique de transition, dans lequel le feldspath est couleur de chair. On observa que cette roche avoit à l'extérieur la même por-

Appendice
(V.)
14 Janvr.

sité dont nous avons parlé plus haut ; et ce caractère ne se borne pas à la surface, car l'échantillon que nous avons apporté de cet endroit offre le même caractère de porosité, aussi bien dans l'intérieur qu'à l'extérieur, et cela d'une manière assez parfaite pour donner un bon échantillon de pierre de mélange ; on ne peut rien assurer sur la quantité, mais l'auteur croit qu'il y en a en abondance. On doit faire savoir à tout le monde qu'on trouve quelquefois de bonnes pierres à moulage, dans les rochers de syénite.

Nous examinâmes plusieurs rochers en front de la profondeur de la baie, et qui à haute marée forment autant d'ilots. Le premier que nous rencontrâmes était de gneiss syénitique, dans une direction presque N. et S. et plonge vers l'Ouest, à un angle élevé, mais variable. Quelquefois il perd son caractère de Gneiss et ne conserve que le caractère Syénitique, les masses ordinaires de trapp implantées se présentent sous toutes les apparences déjà décrites, avec l'addition d'une autre : quelques-uns des morceaux implantés sous la forme de serpens avaient l'apparence d'être cassés par le milieu, et les fragmens paraissent avoir été séparés l'un de l'autre, tels que les déplacements bien connus qui se trouvent dans les veines, mais on ne découvrit dans le roc aucune cassure correspondante. (voyez planche.)

Presque toutes les roches que nous avons examinées en ce lieu étaient de la même nature, et ne différaient que dans leur pente, qui quelquefois était renversée. Ce fut ici cependant que nous observâmes, pour la première fois, des strata réguliers et conformes du même aggrégat que celui qu'on a trouvé implanté dans le Syénite, et que son caractère intrusif en d'autres endroits ne nous permet pas de désigner sous un autre nom que sous le terme générique de trapp, dont nous nous servons, comme ailleurs, sans suivre aucune théorie, pour désigner certains aggrégats ou l'Amphibole abondante. Nous vîmes ici des fragmens roulés de calcaire coquillier compacte, qui était de couleur grise et dont la cassure était concave plate et à bords aigus.

Nous laissâmes ces rochers pour en aller examiner d'autres sur le côté Sud-Est. Ceux-ci ressemblaient aux premiers dans toutes leurs traits généraux ; et cependant le trapp s'introduit dans le syénite en larges filons et lui-même est traversé çà et là de veines de feldspath ; nous observâmes que ces veines, en certains cas, formaient une espèce de lien entre le syénite au-dessus et le même au-dessous, de sorte qu'il est impossible de dire si la veine a été remplie par dessus ou par dessous ; nous avons rencontré fréquemment de ces veines en d'autres endroits. (voyez la—)

Les rochers suivans jusqu'au dernier, étaient composés de Feldspath couleur de chair, de quartz brun clair et de points noirs de mica, et nous n'y vîmes aucune implantation de trapp. Après succèdent du trapp stratifié en apparence, et ensuite du syénite qui renfermait de grandes implantations de trapp, telles que représentées dans la.....

Plus au sud, on se procura un échantillon de trapp d'un large filon, dans lequel l'Amphibole avait un éclat demi-métallique remarquable ; il ne contient aucun mica et n'est pas magnétique. Nous observâmes encore plus loin un gros quartier de rocher qui s'était détaché ; une de ses surfaces était couverte de larges feuilles d'un beau Feldspath d'un éclat bien ressemblant à celui des perles, et il se trouvait associé à un minéral verd, mais en petite quantité, et qu'on a supposé être du carbonate de cuivre. La latitude de l'Anse aux Femmes fut trouvée de 48° 22' 26."

Comme il était nécessaire pour régler nos courses de faire des observations sur la latitude, et nous les prenions à midi toutes les fois que le temps nous le permettait ; car c'eût été bien défavorable au commencement du jour. Étant le seul, de tous ceux qui visitaient le Saguenay, qui eût un sextant, on peut considérer nos observations comme ayant les meilleurs titres à l'exactitude.

Le roc prédominant entre l'Anse aux Femmes et le Cap-à-l'Est, à sept milles environ en montant la rivière, paraît être, (car nous n'y avons pas touché,) du même trapp ; mais on y vit comme ailleurs du Syénite où sont implantés des taches de trapp. Ayant traversé le Saguenay vis-à-vis le Cap à l'Est, nous entrâmes dans une petite baie, à laquelle on a donné le nom de l'Anse à l'Ours. Ici nous vîmes du granite, du gneiss et du Syénite, mais pas de trapp. Cotoyant le rivage en montant du même côté nous le rencontrâmes encore fréquemment sous les mêmes formes dont nous avons parlé ci-haut. Quelques fois le trapp s'élevant en herges noires creusées, entièrement aride, offrait au loin les apparences d'une architecture régulière. Quelquefois une partie du rocher s'étant échappée du bas, a laissé de grosses masses noires, en forme d'écusson, qui s'avancent et semblent menacer le fragile canot qui pagaie au pied du rocher : cette dernière apparence cependant est plus caractéristique de l'autre côté du rivage. Nous ne vîmes aucune structure colonnaire, mais en beaucoup d'autres endroits du Saguenay, aussi bien qu'ici, les rochers avaient une disposition à se casser en fragmens prismatiques et cuboïdes. Nous croyons que le trapp est ici associé avec du gneiss syénitique, et il paraît quelquefois alterner. En montant encore un peu plus haut et à quelques milles de Chicoutimi, nous observâmes un roc qui paraissait blanc et disposé en strata horizontaux ; ayant passé auprès nous ne constatâmes rien d'avantage à son égard. Après cela vient un terrain de transport composé d'une marne argileuse riche, et qui sur la rive droite s'étend jusqu'au Poste. Sur la rive gauche les rochers continuent sans interruption et sans aucun changement géologique, comme on s'en assura subséquemment.

Avant de laisser le Saguenay nous allons introduire ici sur les forma-

tions de ses rochers, quelques observations, que nous avons entrées dans notre Journal en descendant la rivière à notre retour, et en même temps quelques renseignemens additionnels que Mr. Proulx a eu la politesse de mettre à notre disposition.

La baie des Foins, située sur la rive gauche du Saguenay, un peu au dessous du Poste, est une prairie naturelle de plusieurs acres d'étendue, gisant à la base des montagnes, qui en cet endroit s'éloignent un peu de la rivière. Le sol est une alluvion d'argile, et comme le nom de la place l'indique, il y croît du foin sauvage qu'on coupe tous les ans. A la Longue Pointe, un peu au dessous de la Pointe des Roches, nous nous procurâmes des échantillons de Syénite et de Gneiss Syénitique. Nous vîmes encore en cet endroit du trapp implanté.

Ayant campé un peu au dessus du Cap à l'Est, du côté Ouest de la rivière et vers notre premier campement à l'Anse à l'Ours, nous trouvâmes encore que les rochers y étaient syénitiques et traversés çà et là par des veines de feldspath rouge et de quartz ; quelquefois les deux étaient mêlés ensemble. On rencontre ici de puissans filons de trapp et des fragmens roulés de calcaire. Dans une baie distinguée par quatre montagnes demi-isolées, dont trois sont en forme de cônes, et situées sur le rivage gauche à quelques milles au dessous du Cap à l'Est, nous observâmes que les rochers y étaient les mêmes et les taches de trapp très distinctes. La surface du Syénite était d'un brun jaunâtre et légèrement poreuse, comme s'il avait été pétri, et la même apparence a été observée en plusieurs endroits du Saguenay et depuis dans le St. Laurent. Les trois montagnes demi-isolées, ci-dessus mentionnées, sont d'autant plus remarquables, qu'en général les deux côtés du Saguenay sont caractérisés par une chaîne non-interrompue de montagnes dont la ligne longitudinale est légèrement ondulée, tandis que leur coupe escarpée est toujours du côté de la rivière, à laquelle la chaîne est ordinairement parallèle. Entré cette place et le Petit Saguenay, sur la rive opposée, il règne une telle uniformité géologique, qu'il serait superflu de recueillir des échantillons ; en effet la même remarque est si bien applicable à tout le pays que nous avons traversé, qu'une douzaine de fragmens de roche bien choisis, accompagnés des observations nécessaires, donneraient au géologue autant de renseignemens qu'il en recueillerait en se rendant lui-même sur les lieux. Qu'on ne conçoive pas cependant que nous regardions nos observations comme telles ; l'auteur ne les croit capables que de donner une idée bien générale de la géognosie du pays.

Dans un petit ruisseau au-dessous du Petit Saguenay, nous trouvâmes que les rochers étaient entrecoupés d'une manière remarquable par des veines de quartz et de feldspath, quelque fois solitaires, d'autres fois unis ensemble et formant un aggrégat. Souvent ces veines étaient divisées exactement dans le centre par une suture de trapp ; elles ont généralement la même direction que le roc stratifié qu'elles traversent, savoir N. E. et S. O., mais elles sont souvent tortueuses sans perdre finalement beaucoup de ce caractère. On voit aussi le trapp alterner en strata épais. La roche prédominante ici est le Gneiss Syénitique. Quelquefois la déception sort d'une source qu'on ne soupçonne pas, lorsque l'on essaie de distinguer, comme c'est souvent facile, par la surface extérieure des rochers, le trapp d'avec le syénite ; les rochers syénitiques ont ordinairement un extérieur blanchi, mais qui quelquefois, quoique rarement, est aussi noir que le trapp, dans le quel cas il faut pour le connaître détacher un morceau du rocher. On a eu un exemple de cette méprise entre cette place et le Petit Saguenay, et cela intimerait qu'il ne faudrait jamais en général nommer une roche, sans qu'on ait vu au moins la cassure. Cependant nous rencontrâmes souvent dans cet espace du trapp parfait, tant en masses stratifiées qu'en filons interposés.

En passant entre les îles Saint-Louis et le rivage sud, nous fûmes obligés pour nous mettre à l'abri des brisans qui menaçaient d'engloutir notre canot, de monter sur une masse avancée de granite, sur laquelle nous passâmes la nuit. Le mica de ce granite, étant comme d'ordinaire remplacé par de l'amphibole, était par conséquent syénitique, le premier minéral étant très-rare dans tous les rochers des territoires du Saguenay que nous avons vus ; et ne se trouvant guère que dans quelques échantillons de trapp, où il est en petite quantité et en lamies tenues, et même cela paraît être plutôt du talc que du mica, à cause de son inélasticité. Nous ne nous rappelons n'avoir vu que deux fois du mica distinctement feuilleté ; et dans les deux cas, c'étaient des cristaux hexogones isolés, et à la vérité cela paraît être plutôt du talc que du mica, et dans l'un de ces cas il se rencontrait dans une veine de granite graphique, composé de beaux et grands cristaux de feldspath couleur de chair et de gros rognons de quartz arrondis ou plutôt oval, et qui traverse la roche mentionnée en dernier lieu. Ici se terminent nos observations sur la géognosie du Saguenay.

Nous avons obtenu les renseignemens additionnels qui suivent de l'inspection des notes de M. Proulx et de l'examen des échantillons que les accompagnent.

Les rochers du voisinage de la Baie Ha-Ha, sont la contre-partie de ceux du Saguenay dont nous avons déjà donné la description, et l'on a vu les mêmes à la Pointe-au-Fort, au Cap à l'Ouest, à la Petite Pointe, au Cap Saint Charles, à l'Anse Saint François et à la Baie Saint Jean. Ce sont des roches dans lesquelles se rencontrent toujours le feldspath et l'amphibole, en plus grande ou en moindre proportion, formant des syénites et des trapps syénitiques, selon que prédomine l'un ou l'autre de ces deux minéraux. On n'a vu en aucun cas prédominer l'Amphibole, excepté l'aggrégat noir que nous avons décrit, et dans lequel il ne fait pas seulement que prédominer, mais dans lequel encore le feldspath est bien

bien subordonné. Dans cet aggrégat le felspath est toujours gris et aiguillé et ressemble beaucoup au quartz, avec lequel on pourrait aisément le confondre, mais ce qui le distingue suffisamment c'est sa fusibilité en verre blanc bulbeux, devant le chalumeau. Le trapp, comme on pourrait le supposer lorsqu'il est associé au syénite, présente ordinairement par sa couleur un contraste frappant, que fait ressortir la surface du premier blanchie par le temps. Il n'y aurait pas de difficulté à ranger cette roche au nombre des "schistes amphiboliques" de M. McCulloch, si ce n'était de son apparence de stratification en quelques endroits, et surtout de son caractère d'intrusion et d'interposition en d'autres cas. Ce dernier caractère à la vérité semblerait lui assigner sa place dans la classe des roches "superposées" du même auteur. Lorsque le quartz entre, comme il le fait rarement, au nombre des parties constituantes du syénite, il en résulte dans ce cas soit du granite syénitique soit du gneiss syénitique; c'est ce dernier lorsque la disposition de son amphibole en feuilles parallèles produit cette structure particulière feuilletée qui caractérise le gneiss.

Ni les observations de M. Proulx, ni les nôtres propres, ne peuvent nous mettre en état de dire avec certitude qu'elle est l'inclinaison la plus commune des strata sur les rivages du Saguenay, mais nous croyons qu'ils plongent vers le sud. Ce qui suit est une table qui montre l'inclinaison des rochers en quelques endroits:—

Endroits.	Inclinaison des couches.	Observé.
Baie au-dessous de la Boule au N. E. du Saguenay,	Angle élevé vers le N.	par l'auteur;
Au dessous de la Baie Passepierre,		"
Entre la Pointe St. Etienne et l'Anse aux Foins,	Do. S.	"
L'une des Iles St. Louis,	Do. O.	"
Pointe de la Baie Comfort,	Do. S. & S. O.	"
Baie la Trinité,	Do. S.	"
Anse aux Femmes,	Do. O.	"
Dans le premier anse à l'entrée de la Baie Ha-Ha, au S. O. du Cap à l'Est,	Do. S.	M. Proulx.
Rivage sud de la Baie Ha-Ha,	Do. N.	"
A un demi-mille à l'est de la Pointe aux Roches,	Do. N.	"
Dans un petit Anse au Cap à l'Ouest,	Do. E.	"
Petite Pointe,	Do. N. E.	"
Cap St. Charles, environ 25° S.	S.	"
Côté ouest de la Baie St. Jean,	Angle élevé N. E.	"

Nous avons parlé ci-dessus de la difficulté de déterminer dans tous les cas la stratification; difficulté que présente beaucoup de rochers stratifiés, et surtout les masses sous considération, qui par leur structure felspathique et leur association à des filons de trapp, souvent assez continus pour ressembler à des strata, présentent des surfaces plates et unies et d'autres apparences superficielles et linéaires, qui peuvent tromper souvent l'observateur trop prompt ou inexpérimenté.

Nous avons remarqué dans la baie Ha-Ha des morceaux de calcaires roulés, des plus anciens de la classe secondaire, et une masse singulière en forme d'auge, composée presque entièrement de carbonate de chaux, laquelle paraît avoir été détachée d'un rocher de trapp situé dans le premier anse en entrant dans la baie par le nord; cet auge est long d'environ deux pouces et large de trois quarts de pouce; les côtés sont durcis et d'une couleur ferrugineuse d'un brun noir, qui fait voir qu'il a été en contact avec du trapp; cet auge est à demi rempli de spath calcaire, dont l'extérieur est couvert d'une membrane soyeuse d'ocre et jaune, comme s'il avait été roulé. Le Professeur Cleveland donne le passage suivant dans son 2d Vol. de son système de Minéralogie et de Géologie, 2e. Edition.—"La vraie lave ressemble quelquefois, sans aucun doute, à du basalte à une pierre basalte verte et à d'autres roches trappéennes, mais on peut regarder comme un fait universel, que quoique l'on trouve fréquemment du spath calcaire dans des pierres vertes et dans du basalte, il n'est jamais implanté dans ces laves qui ont vraiment coulé sur la surface de la terre." (*)

Après les avoir examinés, nous avons trouvé que plusieurs terrains recueillis par M. Bowen en différentes parties du Saguenay, principalement dans le voisinage de la baie Ha-Ha, étaient composés comme on le voit par la table suivante:—

Echantillons.	Endroits.	Descriptions du sol.	Qualités.
No. 1.	Baie Ha-Ha,	Mélange d'argile, de sable et de chaux, argile marneuse,	excellente.
2.	Dito	ditto	ditto.
3.	Dito	ditto	ditto.
4.	Dito	ditto, marne,	bonne.
5.	Dito	ditto	ditto.
6.	Près la Rivière l'Ilet,	ditto et chaux,	excellente.

(*) Par la dernière partie de cette phrase, qui est un peu obscure, nous comprenons les laves dont on a positivement constaté le coulement, car plusieurs géologues donnent une origine ignée à tous ou presque tous les trapps.

7.	Entre les Rivières Chicoutimi et Du-moulin,	ditto marne,	bonne.
8.	Dito	ditto	ditto.
9.	Dito	ditto et végétaux	ditto.
10.	Dito	ditto sable, argile et substance ferrugineuse,	mauvaise.
11.	(Non mentionné)	ditto, légère mais assez bonne.	
12.	Dito	ditto argile et sable (marne)	bonne.
13.	Dito	{ ditto, sable, fer et un peu d'argile } { et de substance végétale, }	ordinaire.
14.	Dito	ditto, argile et sable (marne)	bonne.
15.	Dito	ditto	ditto.
16.	Dito	ditto	ditto.
17.	Dito	ditto	ditto.

Les rochers au Poste Chicoutimi sont, comme la plupart de ceux que nous avons décrits, de granite syénitique, qui quelquefois passe au gneiss syénitique; la Chapelle est bâtie sur un roc de granite syénitique; ce roc est traversé d'une manière remarquable par des veines de felspath et de trapp. Le trapp cependant se voit généralement en larges bandes, qui s'enfoncent dans le roc voisin, qui est ou du granite syénitique ou du syénite, dans lequel abonde le felspath. Le temps agit plus aisément sur le trapp que sur le granite, c'est pourquoi plusieurs des veines ou filons sont vides en partie près de la surface. On a observé la même chose en d'autres endroits. C'est à cela probablement que sont dues les baies nombreuses qui se trouvent dans le Saguenay, car l'on en a rencontré plus généralement dans les endroits où l'on trouve du trapp, tandis que le granite syénitique et le gneiss syénitique occupent les Caps et les hauteurs. Nous avons observé dans le roc quelques noyaux de fer magnétique. Quelquefois le quartz est absent, le rocher perd alors le terme de granite et conserve celui de syénite seul, dans lequel le felspath est rouge et l'amphibole d'un noir verdâtre. Il y a sur le rivage au dessous de la résidence du poste, une veine de trapp curieusement tortueuse, qui descend dans le roc; elle est représentée dans le diagramme.

L'on a vu fréquemment sur le rivage des morceaux détachés de felspath d'un aspect très cristallin et d'un gris pourpre foncé; les côtés des lames avient une surface extrêmement polie, nitreuse et striée. Ils ont beaucoup de ressemblance avec une roche de felspath qu'on a trouvée subseqüemment au Lac Saint Jean et qui y occupe une grande partie du rivage, et aussi à des échantillons de felspath apporté des Côtes de Labrador, où on les a vus associés au basalte colonnaire. Nous avons aussi trouvé un fragment de calcaire siliceux. Il paraît qu'il y a une vingtaine d'années on faisait de la chaux au Poste, et l'on montre la place du fourneau, où l'on aperçoit encore des morceaux de pierre calcaire à demi-brûlés. C'est un excellent calcaire compact et écailleux de couleur grise—quelques-uns des morceaux brûlés étaient blancs, leur fracture était aiguillée et ressemblait à de la corne. Si cette pierre venait de quelque dépôt calcaire du voisinage, on n'a pu ni le découvrir ni en rien savoir; mais celle en question aurait pu être apportée pour l'occasion de la Malbaie ou de la baie Saint Paul, où la pierre calcaire abonde.

Il a été mentionné plus haut qu'on rencontre ici un dépôt alluvial considérable. Il est composé d'une argile marneuse fine; qui dans les temps humides est si molle et si gluante, qu'il est difficile d'y marcher, lorsqu'elle n'est pas couverte de quelque dépôt végétal. Les caractères essentiels sont, pour la couleur, gris francs tendre; pour sa structure, terreuse et compacte; pour sa cassure, inégale. Elle se délite rapidement dans l'eau et dans l'acide elle fait une légère effervescence. Les lits de dessous qui ne sont pas exposés à l'humidité, prennent l'apparence de rochers stratifiés horizontalement, et c'est probablement cette formation que nous avons observée à quelques milles du Poste.

En traversant le Saguenay vis à-vis du Poste nous vîmes du syénite et une roche composée d'un mélange bien intime d'amphibole et de felspath, mais dans lequel surabondait le premier; le dernier contenait quelques feuilletés de mica et des points de quartz; cette roche était compacte, magnétique et plus ressemblante au basalte qu'aucune de celles que nous avions vues précédemment. Le syénite était composé de felspath couleur de chair et d'amphibole gris; nous vîmes aussi quelques taches de trapp implanté. Nous avons emporté des chûtes de Chicoutimi un syénite légèrement coloré, composé de felspath d'un rouge tendre, et de cristaux d'amphibole noir étincelans. Mr. Nixon a apporté d'une excursion dans le haut de la rivière, sur le rivage à droite, des échantillons de trapp traversé par des veines de felspath, et un gneiss, dans lequel l'amphibole se trouvait en plus grande abondance que le quartz ou le felspath, et auquel on peut donner le nom de gneiss amphibolique; on a rarement rencontré un échantillon de cette espèce. Pour résultat de deux observations sur la latitude nous eûmes 48° 24' 9."

Laisant le Poste de Chicoutimi et le Monsieur poli et obligeant qui y réside (Mr. Andrews) nous continuâmes notre route vers le Lac St. Jean. Nous fîmes pour arriver à la rivière Chicoutimi un portage de près d'une lieue, sur les mêmes rochers de syénite que nous avions vus près de la Chapelle, et qui sont couverts d'une couche mince de l'argile marneuse du voisinage; surmontée des dépôts végétaux ordinaires; c'est un bon sol, mais trop près du roc pour être bien productif. Le même sol en apparence et toujours accompagné du même rocher, à une profondeur plus ou moins grande, s'étend jusqu'au portage de l'Enfant, après quoi il devient sablonneux et bien ordinaire; on peut s'attendre à trouver

Appendice

14 janvier.

trouver dans cet intervalle quelques bons postes d'établissement. Quoiqu'on sache que les rochers sont en plusieurs endroits voisins de la surface, nous ne les avons vus que rarement, le terrain de l'un et l'autre côté de la rivière, n'ayant jusque là que bien peu d'élévation. Au portage de l'Îlet cependant, ils sont fort exposés à la vue, et consistent en syénite, dans lequel le feldspath est comme ci-devant de couleur de chair, et y est prédominant. Il y a très peu de sol sur ce rocher, et tout le portage est un désert stérile. Avant d'arriver au portage de l'Îlet, les rivages commencent à prendre un caractère plus élevé, et continuent de s'élever jusqu'au lac Kenwangomi, sur le rivage sud duquel, ainsi que sur celui du lac Kenwangomichiche, ils atteignent la hauteur extrême de 3 à 400 pieds. Le portage qui suit celui de l'Îlet est encore plus rocheux, et pour cette raison il a reçu le nom de Portage des Roches. Sur une masse de syénite arrondie, qui se trouve au milieu de ce portage, nous fîmes une observation qui nous donna la latitude de $48^{\circ} 14' 31''$.

A l'extrémité nord-est du portage des Roches commence le lac Kenwangomi. Il ne se présenta aucune occasion d'examiner les rochers de ce lac, jusqu'à ce que nous eûmes avancé environ deux milles au de là de la Pointe au Sable; où une pointe de roche saillante nous offrit de nouveaux échantillons de syénite. Un peu au de là nous rencontrâmes un aggrégat à grains fins, composé de quartz gris et de feldspath gris, avec de légères taches d'amphibole verdâtre, le feldspath étant seul distingué du quartz par la réflexion de la lumière sur les faces polies de ses cristaux. Nous avons rencontré plus loin des rochers dans lesquels se trouvaient en excès du feldspath d'un gris foncé couleur de chair et grisâtre; il y avait aussi de l'amphibole, mais dans une proportion bien subordonnée, et par taches principalement. Le feldspath se montre ici en beaux cristaux distincts qui saillaient du rocher, sous sa forme rhomboïde ordinaire; ils se détachaient facilement, et la moindre percussion faisait voir sa structure laminaire. Il fut trouvé en quelques parties du roc du fer magnétique qui affectait puissamment la boussole: il y avait aussi beaucoup d'amphibole magnétique. Dans un de ces derniers rochers on trouva un minéral qui avait les caractères suivans; couleur, brun foncé grisâtre, opaque; structure indistinctement feuilletée avant l'application de la chaleur; quelquefois sa structure feuilletée est plus distincte et il ressemble alors à du mica-pilé dans le mortier il laisse voir de petites écailles carrées, ayant un éclat demi-métallique. Dans son état d'aggrégation son éclat est tremblottant et demi-métallique. Il est légèrement magnétique, avant l'application du feu; exposé à la chaleur de la chandelle il se dilate, s'ouvre comme un éventail et s'éfolie, après quoi il se presse aisément entre les doigts en petites feuilles flexibles, mais sans élasticité, et ayant l'éclat et la couleur de l'or. On a eu les mêmes résultats en le soumettant à la flamme extérieure du chalumeau, dans lequel il se délite aussi, et il est difficile de le retenir dans le forceps. Une des feuilles de couleur d'or, se résout, dans l'intérieur de la flamme du chalumeau, en une globule noire brillante et très-magnétique. Avec le borax il forme un verre transparent coloré de fer. La couleur disparaît à mesure qu'il refroidit.

En cet endroit les Roches ont très-peu l'apparence de stratification; à en juger par le peu que nous en avons vu, la direction est nord et sud, et le plongement presque vertical. Nous trouvâmes ici que la latitude étoit de $48^{\circ} 15' 22''$, et nous prîmes en même temps par approximation la variation du compas, savoir: seize degrés et demi—Étant bien près des rochers lors de notre observation, nous craignons que leur caractère magnétique n'ait affecté la boussole, mais en renversant les vues de l'instrument sur la même ligne, nous n'aperçûmes qu'une très légère différence, qui pouvait venir d'une petite inexactitude dans la boussole.

Au delà de cet endroit, sur le rivage nord du Lac, nous avons observé une masse de roche d'un aspect noir et singulier; et ayant traversé du sud à la distance d'environ deux cent mille pieds, nous trouvâmes que ces rochers étoient presque entièrement composés de feldspath jaune brun et de couleur grisâtre. Dans l'escarpement solide de l'un de ces rochers, ressemblant à celui d'une tour de Martello, on apercevait facilement, en s'approchant, malgré sa surface soumise à l'action de l'air, l'éclat perlé mais atténué du feldspath et l'aspect fibreux que présentent les bords des lamines à la surface du roc. La stratification du roc en cet endroit n'étoit pas bien apparente, mais un peu plus haut du même côté nous observâmes qu'il se dirigeait au nord et plongeait vers l'ouest à un angle élevé. Nous voyons encore ici les morceaux de trapp implantés, si commun dans le Saguenay.

Des deux côtés du lac Kenwangomi la côte est élevée, mais plus au sud qu'au nord. Depuis le Portage des Roches sa direction est d'abord au sud de l'ouest, mais sa direction principale est au nord de ce point là. Le nombre de ses longs Caps de roche, ses Baies et ses Rivages escarpés, le font ressembler au Saguenay, mais ses montagnes ne sont ni aussi hautes ni aussi arides.

A environ quatre milles au-dessus de la Pointe au Sable, nom qui a été donné à un banc de sable de transport, qui s'avance dans le lac au rivage du nord, il y a une baie verte sèche qui entre bien avant dans le rivage nord, et qui jusqu'à certaine distance paraît n'être bordée d'aucune Montagne ni d'escarpement rocheux. C'est le seul endroit entre le portage de l'Enfant et celui de Kenwangomi, où l'on pourrait espérer de rencontrer une quantité considérable de terre propre à la culture.

On suppose généralement que le portage de Kenwangomi sépare les eaux qui tombent dans le lac Saint Jean, (et subséquemment dans le Saguenay,) par le lac Kenwangomichiche, la rivière des Aunes et la

Belle Rivière, de celle qui passent plus directement dans le Saguenay, par la Rivière Chicoutimi; mais on dit que tel n'est pas strictement le cas, parce qu'il tombe du lac Kenwangomichiche dans le lac Kenwangomi un petit cours d'eau. Quoique contre l'ordinaire il n'y a point d'impossibilité physique à cela, à moins à la vérité, que, comme on l'a dit, les eaux de ce dernier ne soient pas plus hautes que celles du premier. Ce portage est d'environ 1800 pas de longueur, dont la première moitié est sablonneuse et l'autre un mélange de sable et d'argile. Sur cette dernière partie nous avons, pour la première fois, observé du Frêne, et nous en avons vu souvent avec de l'Orme et d'autres bois qui indiquent une bonne terre, (mais jamais en abondance) en nous rendant de cet endroit au lac Saint Jean.

Peu de temps après nous être embarqués sur le lac Kenwangomichiche, nous touchâmes à l'angle d'un îlot rocheux, et nous y trouvâmes un aggrégat de feldspath, de quartz et d'amphibole, granite syénitique. La course du lac est généralement vers le nord de l'ouest. Les rivages en sont parsemés d'Orme, de Frêne et de bois de construction, particulièrement au nord. Sur le lac Kenwangomi le bois prédominant est le Bouleau, et l'on n'y voit ni Frêne ni Orme. La rive sud du lac Kenwangomichiche est basse, mais un peu en arrière les terres s'élèvent et deviennent à la fin aussi élevées que celles du nord du lac Kenwangomi, dont elles sont probablement une continuation.

La rivière des Aunes, la décharge du lac Kenwangomichiche, coule au milieu d'une alluvion composée de lis et de mélanges de sable et d'argile. Le cours de cette rivière est extrêmement tortueux, circonstance qui caractérise souvent ces dépôts de transport, et étant étroite elle est fortement obstruée par des arbres tombés, et l'entrelacement des aunes dont ses deux rives sont couvertes oblige quelquefois de faire le portage dans des endroits où il y a beaucoup d'eau et peu de courant. Cependant le portage des Aunes vient de ce que la rivière tombe sur les rochers qui reparaissent en cet endroit. Ils se composent de feldspath couleur de chair, d'amphibole verte, et de quelques écailles de mica noir, ce qui forme un beau syénite. Nous observâmes que selon l'ordinaire le feldspath étoit à la surface du rocher dans le premier état de décomposition. Ayant examiné le sol en passant les portages, nous trouvâmes la terre assez bonne en descendant la rivière des Aunes. Après la couche ordinaire de matière végétale qui caractérise ces terres à bois, elle est composée d'un mélange d'argile et de sable, qui quelquefois alternent, le sable se rencontrant en surabondance à la surface. En quelques endroits le terrain est montueux, mais on n'y aperçoit aucun rocher. A l'extrémité nord-est du portage des Aunes, nous trouvâmes une coupe naturelle qui nous donna l'occasion d'en examiner le sol d'une manière plus particulière, et que nous avons décrite comme suit:—
1^o. Végétaux décomposés ou en décomposition. 2^o. Une couche de sable d'un pied six pouces d'épaisseur. 3^o. Argile, de dix à vingt pieds de profondeur; le tout reposant sur un roc composé presque entièrement de feldspath gris, dans lequel nous observâmes des taches d'amphibole. En cet endroit la Rivière des Aunes fait une fourche avec la Belle Rivière, qui fait une chute pittoresque, occasionnée par le rocher de feldspath dont on vient de parler; la première rivière n'est à la vérité qu'une branche de la dernière, qu'on voit s'élargir au confluent des deux rivières, dans la proportion de vingt pieds à cinquante.

En descendant la Belle-Rivière, nous trouvâmes que la terre s'amélioroit considérablement en apparence; c'étoit le même terrain de transport, mais il formoit une côte plate et basse sans aucune montuosité. Le Frêne, l'Orme et le Peuplier deviennent plus communs et sont les signes de cette amélioration. Tandis que nous sommes sur ce sujet, on peut observer que, quoique la présence de bois d'une certaine qualité puisse indiquer un bon sol, son absence n'est pas nécessairement le signe du contraire; car pendant cette excursion, nous avons rencontré plusieurs endroits où le sol étoit décidément bon, sans trouver de ces bois, et partout où nous en avons rencontré, ç'a toujours été en petite quantité. Sur les rivages marneux du Saguenay, près de Chicoutimi, nous n'en n'avons pas vu, et cependant on auroit peine à trouver un meilleur sol. Il faut quelque chose de plus qu'un bon sol pour produire de bon bois; la terre doit être exposée à la chaleur, à la lumière et à l'air; elle doit être déchargée de cette masse de végétaux décomposés ou en décomposition, dont nos forêts sont chargées. Si en apparence malgré tous ces désavantages quelques terres produisent de bons bois, ce n'est là qu'une exception, et n'est pas un argument suffisant pour détruire ce que nous avons avancé, surtout par ce que ces exceptions sont dues probablement à l'opération de l'une ou à plus d'une des circonstances favorables. On doit aussi se rappeler que les bonnes terres, par cela même qu'elles sont riches, favorisent la crue dense et intermédiaire de graines et de bois faucillon, qui nuisent à la végétation du bois de haute futaie. Juger de la qualité de la terre par la crue du bois seulement, c'est se guider sur l'effet et perdre entièrement de vue la cause, pratique dont l'inconvénient se feroit bientôt sentir dans toutes les branches des sciences, si elle venoit à être généralement adoptée.

A mesure que l'on approche des bords du Lac Saint Jean le sol devient peu à peu sablonneux, jusqu'à ce qu'il devienne, à Kouispigan, (c'est ainsi qu'on appelle l'embouchure de la Belle Rivière,) une couche de sable brillant.

Laissant Kouispigan, nous avançâmes dans le lac vers le nord dans la direction de la Grande Décharge, et ayant touché à deux petits îlots rocheux, qui se rencontrèrent sur notre route, nous y recueillîmes des échantillons d'une roche composée presque entièrement de feldspath cristallin, d'un gris bleu foncé, mais où il se trouvoit un peu d'amphibole.

bole. Nous observâmes que cette roche formoit, sur ce côté du lac, des masses noires isolées tant sur le rivage que dans l'eau. Ayant campé sur un de ces rochers, à l'entrée de la Grande Décharge, nous eûmes une meilleure occasion de consulter les caractères de cette roche ; ils sont comme suit : elle ne possède aucune marque de stratification ; sa surface est remarquablement noire lorsqu'elle est humide, et souvent d'un aspect presque demi-métallique ; elle est souvent aplatie et tabuliforme ; plusieurs de ses parties attirent l'aiguille, quoique l'œil n'y puisse découvrir aucune partie de fer magnétique ; sa structure est compactement cristalline, et passant quelquefois à l'état de compacité parfaite, mais il y a toujours quelques faces brillantes, souvent éclatantes des lamines dont elle est composée, et celles-ci sont fréquemment striées. Sous beaucoup de rapport cette roche a beaucoup d'analogie avec le feldspath de Labrador, mais elle n'a pas son iridescence ; elle est quelquefois traversée par des veines de feldspath rouge, et de petites portions rares de sa surface sont couvertes d'une poudre d'un rouge foncé, qui est probablement de l'Oxide de fer. Une des veines qui traversoit le rocher offroit un phénomène curieux ; la substance de la veine elle-même composée de feldspath et d'amphibole n'étoit pas magnétique—les bords de la veine composé du feldspath que nous avons décrit étoient fortement ; et Mr. Hamel a constaté de plus que le côté sud de la veine attiroit le pôle nord de la boussole, et le côté nord le pôle sud. Pour ôter tout lieu à l'erreur l'expérience fut répétée à plusieurs reprises et toujours avec le même résultat, en appliquant la boussole aux bords de la veine, et des fragmens détachés à la boussole. La veine avoit environ trois pouces d'épaisseur et se dirigeoit vers le N. O. Lorsque la boussole fut placée au centre de la veine, nous observâmes que l'attraction locale étoit, dans un certain endroit, égale à 90 degrés ; en quelques parties du même rocher elle approchoit encore plus d'un renversement complet de l'aiguille. Subséquentement Mr. Hamel et Mr. Nixon visitèrent de nouveau ce même endroit, et confirmèrent les mêmes observations. A notre retour les échantillons que nous avions examinés le furent de nouveau, et l'on trouva qu'ils possédoient un faible magnétisme, mais aucune polarité. L'Îlot sur lequel furent faites les observations précédentes fait partie d'un groupe, situé à l'embouchure de la Grande Décharge, auquel on a donné le nom de Dalhousie ; aucun de ces Îlots ne paroît sortir plus de vingt pieds hors de l'eau.

Nous partîmes de cet endroit en suivant encore une direction nord, jusqu'à ce que nous fumes parvenus à un rivage couvert d'un beau sable, où nous attérâmes pour prendre une base préparatoire, pour servir à l'arpentage du Lac, que Mr. Hamel alloit commencer. Les rivages sablonneux sont une marque caractéristique du Lac et, selon nous, ajoutent beaucoup à sa beauté, mais peu à sa fertilité. Oû il ne paroît aucun rocher, on voit un beau sable jaune brillant, mais où il s'élève quelques rochers du milieu des sables, ils ont l'apparence solitaire dont nous avons parlé. Cette ceinture de sable ne se borne pas aux bords du lac, mais elle s'étend dans l'intérieur à une petite distance, et donne au terrain qui borde le lac l'apparence d'une stérilité, qui s'évanouit lorsqu'on a passé ces limites sablonneux. La plus grande partie de ce sable est d'un blanc jaunâtre, mais nous y avons souvent vu déposée une variété d'un brun foncé rougeâtre, disposée en ondes continuées de niveaux différens mais parallèles. En examinant ce sable, on trouva qu'il étoit composé principalement de fer magnétique et de grenat précieux. C'est un composé bien analogue à l'émeri du Commerce, et si on le réduisoit au même degré de ténuité, il pourroit servir aux mêmes usages. Nous avons trouvé que les Rochers en cet endroit étoient semblables à ceux que nous avons rencontrés à la dernière place ; ils ont à l'extérieur l'aspect de vieux plomb, et les faces de la cassure des lamines possèdent un éclat qui est à la fois presque resplendissant et demi-métallique. En commençant ses opérations Mr. Hamel trouva entre vingt à trente degrés d'attraction locale, mais dans un endroit où elle n'existoit pas, il déterminâ la variation magnétique à 16° 40' O. On trouve sur ces rochers de la tripe de roche en assez grande abondance ; elle est d'un brun cuivre foncé et correspond bien avec le dessin qu'on voit dans l'Appendice du premier Voyage de Franklin à la Mer Arctique, Edition 4to. Lorsque nous en vîmes pour la première fois, nous la primes pour des échantillons de quelques-uns des minerais de cuivre, qu'il rencontra dans les Montagnes de Cuivre. Au goût elle a la saveur du champignon, et quoique maigre, il n'est pas désagréable au palais. Le rivage de sable est ici renfermé entre deux pointes de roche qui forment une baie d'environ quinze ou seize cents pieds de large, dans laquelle l'eau diminue graduellement. Un banc de sable d'environ quinze pieds de haut ferme cette baie du côté de terre, en arrière de laquelle il y a un marécage sablonneux, et c'est là une description qui convient à une grande partie du lac de ce côté.

En laissant cette baie et nous dirigeant encore vers le nord, nous doublâmes la pointe de roche que nous trouvâmes être composée du même feldspath que nous avions déjà rencontré auparavant, aussi bien qu'une autre pointe que nous détournâmes bientôt après, et qui est située à l'entrée d'une petite rivière, dans laquelle nous montâmes, la prenant pour la rivière Koucouatimi, où nous trouvâmes un bon sol, composé d'une marne jaunâtre, d'environ 18 pouces d'épaisseur et qui repose sur de l'argile plastique. Comme le terme de marne est souvent employé sans comporter une idée bien distincte de ce que pense, soit la personne qui en fait usage, soit celle à qui on l'adresse, nous allons expliquer que toutes les fois qu'on l'a employé dans ce rapport, il signifioit des mélanges d'argile et de sable (la première en surabondance) généralement colorés par l'oxide de fer, mais ne contenant pas de chaux ; en un mot de la terre dont on fait la brique. Cependant pour éviter toute méprise, nous n'avons fait de ce terme qu'un emploi bien rare, de simples dépôts d'argile sont souvent appelés marne,

ce qui peut donner une très-fausse idée d'un pays. Il ne faut pas oublier qu'il faut la présence du Carbonate de chaux pour constituer la marne ou l'argile marneuse, qu'on connoît à l'effervescence qu'elle fait avec l'acide : c'est la meilleure qualité de terre, tandis que l'argile est d'autant moins fertile qu'elle approche davantage de l'état de pureté.

Revenant à l'embouchure de la Rivière, nous reprîmes notre course vers le nord, et nous en examinâmes plusieurs centaines de verges d'une côte formée de pointes de roche qui avancoient dans le Lac et qui renfermoient des bancs de sable fin. C'est, comme nous l'avons déjà dit, un de ses caractères distinctifs de cette partie du lac. L'uniformité et la simplicité des rochers, rencontrés jusqu'ici, sont dignes de remarque. Nous n'avons pu faire que les observations suivantes, différentes de celles que nous avons déjà données, savoir : nous avons vu implantés dans le roc même, des rognons de la roche couverts d'une poudre d'un rouge brunâtre, que nous avons déjà mentionnée ; et nous les avons pris d'abord pour des morceaux de fer magnétique ; et nous avons vu une couche ou une large veine de feldspath compact d'un verd jaune tendre, traverser le rocher et faire un contraste frappant avec son sombre associé. Il différoit des minerais auxquels il ressemble le plus en ce qu'il obéit au couteau, et fond au chalumeau en vésicules blanches de verre, comme tous les autres feldspath. La surface qui avoit été exposée à l'atmosphère étoit décomposée, cariée et d'un blanc rougeâtre ou jaunâtre. Nous fîmes ici une observation sur la latitude et nous la trouvâmes de 48° 37' 59".

En laissant l'embouchure de la rivière Koucouatimi, située à environ un mille au nord du point de notre dernière observation, le beau sable du rivage marquant l'intervalle, notre course se dirigea N. 70 O. vers la pointe la plus au nord de la baie Koucouatimi, où les rivages commencent à devenir marécageux, mais on aperçoit encore en quelques endroits des bancs de sable couverts par parties de dépôts du même mélange de grenat et de fer magnétique dont on a parlé plus haut. Ayant débarqué sur un endroit du rivage, nous observâmes des sillons parallèles de ce sable de plusieurs pouces d'épaisseur et de largeur, et qui forme une marque caractéristique du lieu. Etant rembarqués nous suivîmes la même course, et à mesure que nous avançons les rivages devenaient de plus en plus bas et marécageux, si bien qu'il ne paroissoit y avoir aucune différence entre le niveau du Lac et celui de la terre. Dans cette partie du lac et à un et deux milles du rivage vous êtes surpris de ne pas trouver plus de trois pieds d'eau. Ce défaut extrême de profondeur est commun à tout le lac, dont la profondeur n'est en aucune partie proportionnée à son étendue, et est la cause du mouvement houleux qui a lieu à sa surface, après le moindre vent, et qui y occasionne une houle violente et qui fait voir des brisans, auxquels à une distance de terre le plus intrépide voyageur n'oseroit s'exposer. En mettant la main dans l'eau, en ces occasions, elle étoit d'une ténuité très-marquée. Ce peu de profondeur et cette température extraordinaire occasionnant une évaporation plus rapide, peut rendre raison d'un fait qu'il seroit difficile d'expliquer d'une autre manière : il tombe dans le lac six rivières assez considérables et plusieurs autres plus petites, tandis qu'il n'en sort qu'une d'une grandeur assez modique.

Continuant de diriger notre course vers le nord, nous atteignîmes l'embouchure de la rivière Peribouka, que nous trouvâmes être à la latitude 48° 42' 37", et ce fut la plus haute qui fut prise sur ce lac.

Après environ trois heures de marche de la rivière Peribouka, nous tombâmes dans une baie, au fond de laquelle nous campâmes ; nous y trouvâmes sous le sable un dépôt considérable d'un mélange très fin d'argile, de silice, et de chaux, (marne d'une excellente qualité.) Trouvant grande eau près du rivage et un courant qui venait de l'est d'un angle de la baie, l'on conjectura que la rivière Mistassini étoit dans cette direction, ce qui effectivement se trouva être le cas, et ayant fait à son embouchure une autre observation de la hauteur du soleil au méridien, elle nous donna la latitude 48° 38' 55".

Ayant monté la rivière Mistassini à une petite distance, le sol quoique sablonneux paroissoit se bonnifier, mais nous n'observâmes ni ici ni dans aucune autre partie du lac, non plus que dans tout le pays que nous avons traversé, aucune quantité remarquable de beau bois, nous avons déjà donné les raisons pour lesquelles on ne doit pas considérer l'absence de beau bois, comme une preuve d'un mauvais sol.

En laissant la Mistassini nous avançâmes dans une direction sud-est jusqu'à la rivière Assuapmoussin. En traversant l'embouchure de cette rivière nous éprouvâmes une violente tempête ; il n'y avoit cependant aucun danger, car nous étions près du rivage et à petite eau. Après que la tempête se fut apaisée nous primes terre et campâmes. Dans cet endroit nous retrouvâmes encore les Rochers qui s'étoient entièrement cachés à notre vue, du moment où nous avions laissé la baie au sud de la rivière Koucouatimi ; ils sont d'une formation différente et consistent en un schiste argileux et en un calcaire fétide en lits réguliers. Le schiste argileux que nous rencontrâmes le premier est composé d'un argile schisteux durci très-fisseux et qui prend plusieurs des caractères de l'ardoise à couvrir. Cette roche se trouve sur le rivage du lac et plonge sous l'eau vers le N. N. O. à un angle de 25°. Les lamines du schiste argileux sont parallèles aux faces de la stratification, ce qui est probablement la cause de l'extrême fissilité du rocher dans cette direction ; mais il y en a d'autres qui sont perpendiculaires, ou qui le sont presque, ce qui jette dans un grand embarras l'observateur qui veut constater la direction de sa stratification ; cependant le manque de

Appendice
(V.)
14 janvier.

continuité et particulièrement la position régulière du schiste argileux par rapport à la pierre calcaire, font disparaître toute difficulté. La surface du rocher est couverte de ses fragmens qui, quoique ayant subi l'action du temps, ne décèle aucune altération, si ce n'est que leur caractère fissile n'en est devenu que plus apparent, ces fragmens à la moindre percussion sur les bords se divisant en petites ardoises rectangulaires. On voit des morceaux solides de cinq pieds de long, un de large, sur un ou deux pouces d'épaisseur; les fragmens de cette roche sont très sonore à la percussion.

Après avoir traversé ce schiste argileux l'espace d'un quart de mille, le calcaire, ci-devant mentionné, se rencontre sous le schiste en lits réguliers. Cette pierre renferme beaucoup de restes fossiles organiques, surtout des corallites et des crinées; nous vîmes aussi des productions et un fossile singulier, semblable à une sorte qu'on a trouvée dans l'île Drummond, Lac Huron, et dont il y a un dessin dans le 6e. Vol. des "Geological Transactions," planche 30, figure 5; celui en question ne paraît en différer qu'en ce que les disques dont il est composé sont disposés obliquement, et que dans la figure, à laquelle on fait allusion, ils sont dans une position rectangulaire.

Le dessin suivant correct de ce fossile, que nous devons au Lieut. Ditus, 66e. Régiment, est de grandeur naturelle. (Voyez planche.)

Le calcaire paraissait être séparé du schiste, en dessus, par un entre-lit de calcaire noir feuilleté, rempli de petites ondulations et de cavités arrondies, occasionnées par des protuberances correspondantes et des loupes sphériques qui se trouvent dans le calcaire. On peut quelquefois détacher ces loupes, et elles sont composées d'un calcaire compact d'un gris foncé, ayant un éclat tremblotant, qui vient de la réflexion de la lumière de quelques points cristallins, et un aspect roulé. Nous ne pûmes découvrir dans ces noyaux aucun vestige de restes organiques, quoiqu'une odeur légèrement fétide indiquât qu'il y en eût originairement. Le banc de calcaire sur lequel ils étaient implantés paraissait également ne contenir de restes organiques, mais il eût d'une texture plus terreuse. L'entre-lit noir est lui-même un calcaire, comme le décèle son effervescence facile dans l'acide, mais il paraît renfermer beaucoup d'aigle et passer en schiste argileux. La position de ces boules fortifie la conjecture que le niveau du calcaire est inférieur à l'égard de ses faces de stratification.

Ce n'est qu'avec beaucoup d'hésitation que nous avons hasardé d'avancer que du calcaire secondaire expose ici sous du schiste argileux, parce que nous connaissons qu'une pareille position, si elle n'est tout-à-fait nouvelle, se rencontre au moins très-rarement; mais comme il ne nous appartient pas de théoriser, mais de décrire, nous aurions avancé des suppositions encore plus improbables, si, après des recherches aussi peu préjugées, il y eût eu lieu, dans notre avis, à les entretenir. La connaissance de l'Histoire Naturelle n'est pas vraisemblablement destinée à faire de grands progrès, si ceux qui s'y dévouent se restreignent dans leurs rapports, à ce que les connaissances actuelles sur le sujet peuvent rendre probable. Ayant pris la peine d'examiner, si l'on avance, avec une humilité proportionnée au degré d'information, une opinion fortement opposée à l'expérience, on ne doit pas en justice être en butte à la censure, en cas d'erreur. On trouve ici quelques beaux échantillons de marbre encainte couleur de faon qui se polirait très bien et deviendrait très propre aux articles d'ornement.

Le calcaire continue en bancs visibles, l'espace d'environ cent cinquante pieds, après quoi il ne paraît qu'un fragmens angulaires, l'espace d'environ un mille et demi, et après on le voit encore en bancs réguliers, formant une pointe saillante dans le lac; la partie intermédiaire du rivage est caractérisée par des cailloux consistans en granite, en trapp, en micaschiste et de fragmens angulaires de schiste argileux. N'ayant pas vu auparavant de micaschiste dans le pays du Saguenay, nous pouvons l'avoir pris pour du trapp, dont l'éclat pseudo-métallique, comme nous l'avons déjà dit, le fait souvent ressembler à cette roche. Nous avons aussi vu en cet endroit deux ou trois masses demi-arrondies de la roche feldspathique des environs de la Grande Décharge.

La stratification, à la pointe ci-haut mentionnée, n'est pas bien marquée, mais elle paraît plonger à pente douce vers l'est. Il se trouvait beaucoup de calcaire avec un aspect congloméré, au moins paraissait-il d'une formation confuse dans sa substance même, quoique nous ne vîmes aucun fragment implanté. Il contient des restes fossiles imparfaits de corallines et d'orthocératites.

Ayant doublé cette pointe nous trouvâmes qu'il s'accumulait graduellement sur le rivage des fragmens de roches diverses, surtout de calcaire. Il y avait aussi beaucoup de roches roulées, et comme auparavant des morceaux anguleux de micaschiste. La quantité de ces fragmens roulés, généralement de la grosseur de la tête, rendait notre marche extrêmement pénible, les souliers de peau de bœuf n'offrant nullement une protection suffisante aux pieds qui n'étaient pas accoutumés à les porter.

Étant embarqués, nous traversâmes à un roc escarpé d'environ trente pieds de haut, appelé la Pointe Bleue, que nous trouvâmes composé du même calcaire fétide, en bancs horizontaux distincts. On remarque dans cette roche des restes organiques, mais ils sont généralement indistincts. Embarquant de nouveau pour traverser au sud-est, nous observâmes que le même calcaire continuait sur le rivage, et à une autre pointe res-

semblante à la Pointe Bleue, il forme sur le lac un précipice semblable. Nous arrivâmes un peu au delà, et nous rencontrâmes le même calcaire formant un rivage bas. Il fut ici rencontré un Cèdre qui avait douze pieds de tour; ce bois cependant ne formait pas une marque caractéristique de cet endroit, mais le sol paraît s'être amélioré de beaucoup depuis que nous avons rencontré du calcaire et du schiste argileux, circonstance à laquelle on devait s'attendre. Au fond d'une baie, située au de là de cette place, le même calcaire horizontal formait les rivages et le lit de la petite rivière Ouichouanitch, qui en cet endroit se précipite dans le lac St. Jean.

Traversant de nouveau au sud-est, nous campâmes sur une pointe nue de roche calcaire, vis-à-vis l'île des Couleuvres. Quelques uns des Voyageurs avaient le plus grand éloignement à visiter cet île, à cause du nombre de serpens qu'on rapportait y exister et racontaient à cet égard des contes merveilleux; ils se mettaient, disait-on, en forme de festons et de nœuds et se tenaient attachés les uns aux autres comme un bout de saucisse; mais après avoir traversé l'île dans toute sa largeur, nous n'avons trouvé qu'une peau desséchée. C'est sur le même fondement qu'on avait dit qu'il y avait des poires en abondance, qui probablement étaient sous la garde des couleuvres. Le rivage du côté du nord-ouest était jonché de fragmens de corallites, parmi lesquelles nous reconnûmes des caryophyllies, des coraux maillés, des madrepores, des réépores, des millipores et particulièrement cette espèce de corallites si fort ressemblante à une ruche d'abeilles et appelée favorites. Les variétés de caryophyllies ressemblaient à celles qu'on peut voir dans le sixième Volume des "Geological Transactions." Quelques-uns des madrepores pourraient être aisément confondus avec des cellères fossiles de quelque animal, mais leur structure interne radiée les distingue. Tous ces fossiles ont probablement été jetés du fond du lac. L'île n'étant en apparence qu'un simple banc de calcaire. Près de cette île, il y en a une autre, qui à en juger par la description qu'on en donne, est probablement composée de schiste argileux.

En laissant la première de ces îles, nous gagnâmes la terre ferme, et entrant dans une baie, nous arrivâmes à la rivière Ouichouan, où nous remarquâmes un autre dépôt de schiste argileux. Ce schiste diffère de l'autre dans les détails suivans: les couches sont horizontales, ou à peu près; on ne voit pas qu'il soit ici associé à aucune autre roche: sa surface exposée à l'air est blanche, tandis que celle de l'autre est noire. Il fait une très légère effervescence dans l'acide, et contient de légères traces de restes organiques, caractères qui, ni l'un ni l'autre, n'ont été observés dans le premier; il est en plus grande abondance et plus régulièrement disposé.

Les personnes inaccoutumées aux apparences trompeuses que les rochers prennent quelquefois, prononceraient sans hésiter que ce rocher est stratifié horizontalement, et dans notre jugement elles auraient raison, mais il y a d'autres surfaces qui sont dans une disposition parallèle entre elles et qu'on pourrait aisément prendre pour des faces de stratification, particulièrement par cela que leur position est verticale, que correspond mieux à la pente élevée que montre généralement le schiste argileux. Cependant un examen plus particulier de ces faces a fait voir qu'elles ne sont pas continues et qu'elles subissent une interruption constante. Prenant ici l'horizontalité des couches comme un fait, sur lequel nous n'avons aucun doute, les lamines du schiste argileux sont, comme précédemment, parallèles aux surfaces de la stratification. En conséquence de ces contre couches, le rocher est souvent divisé en masses cubiques et en pointes pyramidales, ces derniers ressemblant quelquefois à la lame d'un stilet. Que vous frappiez le rocher sur les bords de ses lamines ou en travers de la surface, il s'opère une fracture dans la direction de ces lamines, accompagnée, comme de raison, dans le dernier cas, d'une fracture transversale.

Au dessus du schiste argileux et en contact immédiat avec lui, il y a un lit remarquablement beau d'argile marneuse compacte, à laquelle est probablement due la légère effervescence du premier. Il y a sur le rivage en cet endroit une grande quantité de fragmens de schiste argileux, et il est rare d'en trouver d'autres roches. La latitude de la rivière Ouichouan, à son embouchure, a été déterminée à 48° 24' 35".

Entre l'Ouichouan et le poste de Metabitchouan, nous observâmes que la même formation continuait jusqu'à une distance considérable, au bout de laquelle nous rencontrâmes de nouveau du calcaire, possédant les mêmes caractères que plus haut, mais plongeant vers le nord à un angle de 45°. Cette circonstance semble venir à l'appui de notre opinion et porte à inférer la conjecture additionnelle, que les deux roches alternent l'une avec l'autre, autrement le calcaire doit subir une contortion violente pour paraître, dans l'intervalle entre les deux dépôts de schiste argileux, en couches horizontales, à presque au même niveau de l'eau, selon qu'on l'a décrit.

Cette alternation avec du calcaire fétide, convient mieux aux habitudes des shales qu'à celles des schistes argileux, avec le quels ils ont quelquefois une ressemblance frappante mais indistinguable à l'œil, fait dont ce rocher offre un exemple remarquable, s'il se trouve être un shales ce que nous croyons fortement qu'il n'est pas, après avoir consulté ses caractères minéralogiques; on ne peut se cacher cependant que ce ne soit un cas douteux. Pour mettre le lecteur en état de mieux former son opinion, nous allons introduire ici ces caractères: couleur, noir brunâtre, opaque; structure, réellement schisteuse, mais compacte en apparence; cassure transversale, inégale, un peu concavoïde; même dureté à peu près que le schiste argileux; couleur de la poudre

et rayé, rougeâtre; odeur légèrement bitumineuse à la percussion; gravité spécifique 2.4; dans l'eau sa surface se couvre de bulbes tenues, mais il ne s'y délite pas, ni acquiert un poids additionnel, même après une immersion prolongée. Un échantillon de l'endroit mentionné en dernier lieu fait dans l'acide une légère effervescence, caractère que nous supposons être dû à la proximité de l'argile marneuse. Devant le chalumeau il fond aisément en une globe de verre de couleur d'un vert sale ou brun. Il n'y a que l'expérience seule qui puisse déterminer si cette roche est propre à servir d'ardoise à couvrir; cela dépend du degré de fissilité qu'il possède, et du pouvoir qu'il a de résister à l'action de l'Atmosphère: notre opinion est favorable sur ces deux points, mais il n'est fondé que sur un coup d'œil rapide sur la carrière. Quant à notre dilemme géologique, sans perdre plus de temps à essayer de reconcilier des contradictions apparentes, qu'une connaissance plus approfondie des localités ferait probablement disparaître, nous allons continuer à rapporter des faits. A l'endroit mentionné en dernier lieu le calcaire formé sur le rivage du lac un rude précipice et contient des corallites, des encrinures et des productions à polypiers. Les encrinures comme ci-devant étaient d'une variété de couleur de façon très propre à servir de marbre d'ornemens; il y en a quelques-unes qui ont l'aspect congloméré ci-dessus décrit.

Poursuivant notre route, nous atteignîmes le poste de Metabitsshuam, que nous trouvâmes être, par une observation, à la latitude 48° 23'. 12". Comme celui de Tadousac le poste de Metabitsshuam est situé sur un banc d'alluvion, quoiqu'il en diffère sous le rapport des matières qui le composent. C'est ici un sol où l'argile prédomine, mais qui contient assez de sable pour lui donner de la fertilité. On y rencontre fréquemment des morceaux des roches des environs et parmi eux des fragmens roulés du calcaire secondaire que nous venons de décrire, avec leurs fossiles implantés. Ces fossiles sont généralement de la même classe que ceux qui ont été trouvés dans la chaîne des Îles Manitouline, dans le lac Huron, et que nous avons mentionnés. Le plus remarquable des restes fossiles que nous vîmes était une trilobite (entomolites paradoxus de Linné.) On le croit être le plus grand qu'on ait jamais vu et mérite d'attirer l'attention, en ce qu'il appartient à une classe d'animaux, que les naturalistes ne connaissent pas du tout et dont Parkinson dit, " nous devons nous contenter, je crois, d'avouer qu'on ne connaît aucun animal qui lui ressemble." Voyez la planche, pour le dessin de ce fossile à sa grandeur naturelle, dont nous sommes redevable au Lieut. Ditmus du 66e. régiment.

Cette trilobite est sur du calcaire très schisteux d'un gris foncé à l'intérieur. Le fragment dans lequel nous l'avons trouvée est anguleux et détaché; on s'en était servi comme d'une pierre à degré pour un des bâtimens du poste; c'était probablement la glace qui l'avait transporté sur ce rivage d'un endroit du lac, situé à environ trois milles à l'ouest, où nous avons trouvé du calcaire très semblable à celui-là, plongeant variablement vers le nord depuis 10° jusqu'à 45, et qui reposait sous un calcaire noir très schisteux, contenant les impressions de petites térébralutes, qui répandent une odeur très fétide, lorsqu'on frappe dessus. Quoique schisteux en grand, cette roche était très compacte en petit, et fournirait probablement de belles pièces de marbre noir. Son caractère schisteux, réuni à sa couleur noire, pourrait le faire prendre pour du schiste argileux, surtout parce que, comme nous l'avons déjà décrit, cette roche tient la même position par rapport au calcaire; mais cette position elle-même; l'effervescence violente de cette roche dans l'acide, ses restes organiques implantés et son odeur fétide, font disparaître tout doute à cet égard. Nous avons observé de nouveau en cet endroit le calcaire de couleur de faon: il paraît exister en assez grande abondance. Nous vîmes sur le rivage une grande masse de marbre blanc laminaire; le rocher lui-même ne doit pas être éloigné, mais il est probablement au fond du lac, d'où la masse en question a été poussée.

Du poste de Metabitsshuam qu'on considère comme le point du lac le plus méridional, ou à peu près, la rivière Péribouka, à sa pointe la plus septentrionale, restait au nord, la Grande Décharge au N. E. et au point le plus proche de l'est.

Nous montâmes la rivière Metabitsshuam jusqu'à une petite distance, et jusqu'à des rapides; le rivage à droite ou à l'est se trouva être composé d'un mélange d'argile et de sable, qui formait une côte alluviale de 50 à 60 pieds de haut. Le rivage occidental de la rivière est bas. Le froment, l'orge, les avoines, les légumes de diverses espèces, les courcoubres, les melons, viennent ici à perfection; c'est une marque que ni le sol ni le climat ne peut être mauvais. Ayant cassé notre thermomètre dès les premiers jours de notre exploration, tous nos rapports manquent du côté des observations thermométriques. A en juger d'après ce que nous sentions, et les faits agricoles dont il est fait mention ci-dessus, il ne paraît y avoir aucune différence entre le climat du lac St. Jean et celui de Québec. Du côté sud du poste la vue est bornée par des montagnes, et il nous a été dit qu'à une distance peu considérable dans ces montagnes il y a un dépôt considérable d'un minéral, qui d'après la description qui en a été donnée doit être de la stéatite ou savon naturel. Elle marque probablement le caractère primitif des montagnes où elle se rencontre; près d'elle on peut s'attendre à voir la jonction des roches primitives et des secondaires. Nous n'avons pas vue le schiste argileux, qui quoique ordinairement de formation primitive, est ici, d'après son alternation avec du calcaire fétide, évidemment de la classe secondaire.

Après avoir traversé une mer turbulente nous nous trouvâmes de retour à l'embouchure de la Belle Rivière, ayant complété le tour du lac St. Jean.

Avant de prendre congé de ce lac, nous introduirons ici sur la fertilité générale du sol dans ses environs, quelques remarques, qui nous ont paru en expliquer la cause.

Lorsque d'abord nous vinmes à observer les rapports de la Chambre d'Assemblée à l'égard du territoire du Saguenay, nous ne savions comment nous rendre raison de cette fertilité. Nous imaginâmes que le lac St. Jean et le pays environnant formaient, comme c'est en effet le cas, un vaste bassin, dont le lac est la partie la plus basse, avec des rivières qui s'y jettent dans tous les points de la boussole, une exceptée, et emportent avec elles des alluvions des terres qu'elles traversent. Supposons que ces terrains ne soient tous composés que de roches de la nature la plus stérile, tels que le granit et le gneiss ou des aggrégats où abonde le silex, ils ne pourraient pas être regardés comme les sources de la fertilité en question. Dans ce dilemme on a eu recours à l'agence d'un déluge violent, qui en transportant des terres des parties éloignées avait accumulé ici les matériaux d'une fertilité à venir; ce fut sous cette impression que nous visitâmes ce pays. Mais au lieu de granit et de gneiss, nous l'avons trouvé composé pour la plus grande partie de rochers qui, quelque infertile que puissent être en eux-mêmes quelques-uns d'entre eux, sont formés de minéraux, dont la décomposition forme presque exclusivement le meilleur des sols; tels sont le syénite et le trapp. En promenant nos regards sur les beaux sols alluviaux qui caractérisent le pays aux environs du lac St. Jean et de Chicoutimi, nous n'aperçûmes aucune vestige de l'action d'un déluge violent; loin de cela ils étaient composés de particules des plus déliées, qui n'avaient pu être déposées qu'en eau tranquille.

En visitant le lac St. Jean nous trouvâmes un rocher qui formait une grande partie du rivage et des environs, et dont la décomposition faisait les plus belles argiles. En avançant un peu plus avant sur le même lac, on trouve que l'argile schisteuse et le calcaire en occupent encore une plus grande portion; le premier presque toujours associé à des sols fertiles formés par sa désintégration; et il suffit de nommer l'autre comme formant partie d'un pays, pour emporter à la fois l'idée de fertilité.

Examinez le calcaire; vous trouvez qu'il est le dépôt de dépouilles d'animaux marins, qui forment maintenant partie de presque tous ses lits horizontaux. La conclusion naturelle à en tirer, c'est qu'eux et le calcaire ont été déposés ensemble, lorsque le lac St. Jean et le pays adjacent étaient couverts par la mer; et il nous paraît également évident, que les argiles et les marnes fines qui abondent dans ce pays, sont les lavures des rochers qui se décomposent, lesquelles étant d'abord suspendues dans l'eau sous la forme d'une poussière impalpable, se déposent par la suite aux bases et sur les pentes douces des rochers dont elles sortent.

A l'égard des Rapports de la Chambre d'Assemblée, auxquels nous avons fait allusion plus haut, nous ne faisons que rendre justice en disant, qu'après les avoir examinés attentivement, nous croyons qu'ils font autant d'honneur aux individus qui les ont recueillis qu'aux personnes qui les ont fournis. Généralement parlant nous les avons trouvés corrects, et l'on verra que les derniers rapports les confirment plutôt qu'ils ajoutent aucuns renseignements nouveaux à l'égard de la fertilité du sol et de la facilité qu'il offre à la culture. Les plans de Mr. Taché et de Mr. Panet, considérant qu'ils ne sont que de simples appels, sont aussi assez corrects.

Mr. Nixon, à son retour, a eu la bonté de nous fournir les échantillons suivans de roches et de terres, avec des explications sur les lieux où il les a recueillis:

ROCHERS.

- No. 1 De feldspath seul, semblable à tous les rochers entre la Grande Décharge, et la Rivière Koucouatimi. Cette échantillon vient du second rapide de la rivière Péribouka, et Mr. Nixon décrit la même roche comme s'étendant depuis le pied du premier rapide jusqu'au pied de la troisième chute, et formant des deux côtés des rivages de roches; le sol qui se trouve dans cette distance est sablonneux. Cette roche est traversée par une veine de granite, dans lequel le feldspath prédominait fortement en gros cristaux.
2. Masse détachée de fer magnétique—près du No. 1.
3. Semblable au No. 1—de la Grande Chute de Péribouka.
4. C'est un mélange, à proportion égale, d'amphibole et de feldspath; ce dernier ayant dans le premier un arrangement glanduleux, et ayant quelque ressemblance avec du Porphyri. En nommant des rochers composés d'amphibole et de feldspath, nous avons toujours, dans ce rapport, désigné sous le nom de trapp les rochers dans lesquelles le premier minéral prédominait, tandis que nous avons restreint le mot de syénite à celles où prédomine le feldspath. Mais dans le cas présent, où ni l'un ni l'autre l'emporte, les deux termes sont également applicables; mais nous avons choisi celui de trapp, parce que le feldspath, qu'il contient, par sa ressemblance avec le quartz, donne à l'échantillon en question un caractère d'analogie avec le trapp que nous avons décrit, caractère qui ne se trouve pas dans le syénite—de la Rivière David.
5. Mélange d'amphibole et de feldspath; le premier en prédominance, conséquemment du trapp, de la chute de la rivière Ouitchouan, de 236 pieds de haut, selon Mr. Bouchette.
6. Pareil au No. 1.—De la Petite Décharge: une veine de feldspath blanc traverse cette roche.

TERRES

TERRES.

- No: 1. Mélange de sable, d'argile, de matière végétale et de fer ; le sable en excès ; Rivière Péribouka.
2. Pareil au No. 1...avec un peu moins ou aucune partie de fer. R. Peribouka.
3. Marne ou terre à brique—bon sol— Lac Nohadouite—pris sous la matière végétale.
4. Mauvais sol sablonneux, se posant sous le No. 3, à un pied sous la surface, et assis sur le No. 5.
5. Bonne argile marneuse—même épaisseur que le No. 4 et se posant sur le No. 6.
6. Argile marneuse excellente.
7. Beau terreau végétal noir, à vingt pas des bords d'un ruisseau qui se décharge dans le lac Nixon.
8. Mélange de sable et d'argile, terre ps-sable—lac Nixon.
9. Sable, argile, terre végétale et fer, léger et sablonneux—lac Nixon.
10. do do do do —Rivière Baddeley.
11. Sable et terreau végétal—Sol pauvre do.

Appendice
(V.)

14 janvier.

A notre retour à Tadousac nous trouvâmes que sa latitude était de $49^{\circ} . 6' . 38''$, et aussitôt après nous embarquâmes dans le St. Laurent pour venir à la baie St. Paul, en passant devant la Pointe aux Bouleaux, dont il a été parlé au commencement de ce rapport. De la Pointe aux Bouleaux et l'Échaffaud des Basques à la Baie des Roches, nous vîmes des masses presque isolées, que nous avons considérées être du granite : elles sont en forme de dôme ou de côtes de coq arrondi, mais généralement le profil des montagnes de la côte ne diffère pas essentiellement de celui des montagnes du Saguenay ; les premières ne sont pas cependant si escarpées. Ayant débarqué à l'Échaffaud des Basques la roche prédominante se trouva être du granite syénitique, où l'on voit le trapp sous la forme de filons ou de veines. Le rocher est traversé d'une veine composée de feldspath rouge, de quartz, d'amphibole et de fer magnétique. L'on vit dans la même disposition des cristaux de feldspath couleur de chair et des masses blanches de quartz, formant de grosses concrétions distinctes. Nous détachâmes d'une masse séparée de granite syénitique de gros rognons de bel amphibole noire ; et aussi un bel échantillon de feldspath de bleu clair, ayant le lustre du satin.

Nous observâmes que la surface des rochers avait ici le même aspect pétri et poreux que nous avons ci-devant décrit. Nous avons déjà décrit un échantillon apporté de l'Anse aux Femmes, dans le Saguenay, comme possédant le caractère de porosité, et à l'extérieur et à l'intérieur, d'une manière si parfaite qu'il pourrait servir comme un excellent échantillon du pierre à moulages.

Nous ne ferions que répéter s'il nous fallait décrire, avec autant de détails, les rochers du rivage nord du St. Laurent, entre Tadousac et la Malbaie, que nous l'avons fait à l'égard des rochers qui se trouvent entre cette dernière place et Chicoutimi. Nous nous bornerons donc à quelques remarques sur les différences les plus frappantes et les plus importantes que nous avons observées.

Quoiqu'on voie occasionnellement le trapp former des filons, des veines et des morceaux implantés dans la roche prédominante, (syénite, granite, granite syénitique ou gneiss syénitique.) nous n'en avons aperçu aucune masse rocheuse, soit stratifiée, soit non stratifiée. Nous ne voulons pas dire cependant qu'on ne puisse en trouver, mais faire entendre qu'on n'en voit pas aussi communément que dans le Saguenay ; surtout dans la partie entre Chicoutimi et la Boule, depuis laquelle dernière place, en gagnant vers l'embouchure du Saguenay, les rochers deviennent plus quartzueux et moins amphibolique ou hornblendique, et passent du trapp et du syénite au gneiss syénitique et au granite syénitique. C'est à cela qu'on peut attribuer le peu de largeur de la rivière à son embouchure.

A mesure qu'on approche de la Malbaie on voit les rochers se couvrir de veines de trapp, de feldspath, de quartz et de granite. Ces veines, généralement parallèles les unes aux autres, sont souvent tortueuses à un point presque incroyable. Dans quelques endroits elles sont absolument innumérables, et étant composées de minéraux de différentes couleurs, tels que le quartz blanc, l'amphibole noire, le feldspath rouge, &c. elles donnent à ces rochers une apparence singulière et belle toute à la fois, qu'un artiste seul pourrait reproduire avec justesse ; la chose étant tout à fait hors de toute description.

Il est digne de remarque que les veines de granite qui ont été décrites, comme traversant les rochers, tant sur le St. Laurent que sur le Saguenay, se sont trouvées composées, partout où elles ont été examinées, de gros cristaux couleur de chair, de gros morceaux de quartz gris ou blanc et de mica en lames hexagones de la grandeur d'environ un fanning, le tout formant une variété de granite graphique qui diffère considérablement en apparence de ces granites à grains fins, qui ont été décrits comme étant disposés en masses stratifiées en apparence, tant dans le Saguenay qu'en d'autres endroits, et parmi les ingrédients desquels il est difficile souvent de dire si le mica ou l'amphibole doit être rangé, ou s'ils n'y sont pas présents tous deux, les petites taches noires disséminées dans l'aggrégat ressemblant à l'un et à l'autre de ces minéraux. Les lames de mica étaient "rares et" dans ces veines. On a déjà fait allusion à la rareté de ce minéral dans les rochers que l'on décrit maintenant.

On trouve sur ces rochers un bon nombre d'écaillés récentes, surtout d'échinites ou oursins de mer, et quelquefois à une si haute élévation qu'on serait induit à faire une fausse conclusion sur la hauteur des marées de printemps. Elles y ont été probablement apportées par les oiseaux, vu que la position élevée qu'elles occupent, est hors de l'atteinte de toute marée quelconque du Saint Laurent.

En entrant dans la Malbaie, on observe un roc qui forme une longue falaise, qui a l'apparence d'être stratifiée horizontalement ; Il est d'une couleur grisâtre. Nous trouvâmes ensuite que c'est du calcaire, et de la même espèce que Dr. Bigsby décrit comme un conglomérat calcaire, plein de restes organiques et auquel est adossé du gneiss et du mica-schiste.

Profitant durant tout un jour de l'hospitalité bien connue de Mr. et de Mad. McNicol, nous eûmes le loisir d'examiner quelques-uns des rochers de l'endroit, qui offrent le plus grand intérêt, en ce que les formations primitives et secondaires se rencontrent ici ensemble. Sur le rivage près de la maison, nous observâmes du calcaire noir fétide et du gneiss, à ce que nous croyons, mais nous n'en examinâmes pas le lieu bien particulièrement. Passant un Pont qui est sur la rivière de la Malbaie, nous traversâmes un banc d'alluvion, vers la maison du Dr. Fraser, sur le côté est de la baie. Poursuivant notre marche sur le rivage et en descendant la rivière nous tombâmes encore d'abord sur le calcaire noir fétide que nous avions observé de l'autre côté de la baie. Examinant alors un bloc qui était tombé du précipice, dont nous avons parlé en entrant dans la baie, nous trouvâmes qu'il consistait en un calcaire durci de couleur grisâtre, et fut confirmée alors en la conjecture que nous avions faite à l'égard de sa stratification horizontale. Il forme un escarpement perpendiculaire, haut, peut-être, de 150 pieds. Derrière le calcaire noir fétide nous avons rencontré pour la première fois du mica-schiste, contenant des veines de quartz, quelquefois d'une teinte de rose pâle, et des grenats communs. Nous ne vîmes pas du beau grenat feuilleté, qu'on sait se rencontrer dans cette roche. Le mica-schiste plonge à pente légère vers l'Ouest. Continuant notre marche, nous arrivâmes à des rochers qui nous parurent consister en des masses de quartz pur, après-quoi nous rencontrâmes du gneiss syénitique. Tous les bords de ces roches depuis le calcaire jusqu'en bas avancent sur le rivage en strata réguliers qui plongent vers l'ouest. Entre le calcaire horizontal qui repose sur les bords inférieurs de ces roches et du calcaire noir, nous observâmes une espèce de grès calcaire d'un verd léger, possédant la compacité de grauwacke à grains fins. Nous ne nous rappelons pas à laquelle des deux roches il se conforme, mais nous croyons que c'est avec celle de dessus ; il fait une légère effervescence dans l'acide.

La Malbaie et ses environs sont remarquables depuis bien longtemps par la fréquence de leurs tremblements de terre ; on ne pouvait donc pas supposer que nous omettrions de faire à cet égard des recherches, vu leurs liaisons avec le sujet que nous examinons. Nous devons à la politesse de Mr. et de Mad. McNicol les renseignements suivans : Les secousses sont plus fréquentes dans les mois de Janvier et de Février ; leur direction paraît être nord-ouest : la durée du tremblement est d'environ une minute, et il est ordinairement précédé par un bruit semblable à celui d'une cheminée en feu, et quelquefois accompagné de deux chocs distincts. Quelquefois avant que le coup se fasse sentir le temps est étouffant, d'autres fois il est froid ; dans le premier cas le temps se refroidit après le choc, et dans le dernier cas il se radoucit, en un mot il est toujours accompagné d'un changement de température. Les tremblements arrivent environ neuf ou dix fois l'année, et plus fréquemment la nuit que le jour. Lorsqu'ils ont lieu dans un temps de brouillard, l'air s'éclaircit après. Les secousses étaient beaucoup plus violentes il y a environ trente-six ans. Le Dr. Fraser, de la Malbaie, à qui nous avons montré ce rapport, le confirme généralement ; il croit seulement qu'on a mis les tremblements annuels à un trop petit nombre.

La Malbaie ou Murray-Baie, comme les habitans préfèrent l'appeler, entre avant dans le rivage du nord, et la plus grande partie assèche à la basse marée. La terre qui environne cette baie est un peu élevée et rocheuse, mais entre elle et le point de haute marée, du côté de l'ouest, il y a un sol uni d'alluvion qui a une montée douce. Le caractère de la plus grande partie, c'est d'être sablonneux, mais l'endroit où se trouve la terre de Mr. McNicol est d'une qualité supérieure, et composé d'argile, de sable et probablement de chaux, provenant du voisinage du calcaire. Nous fûmes informés que le caractère général du sol s'améliore à mesure que l'on avance dans les terres, et qu'une large et fertile vallée, semblable à celle qui borde la rivière de la baie St. Paul, avec laquelle elle est jointe par une vallée transversale, accompagne aussi la rivière de la Malbaie, en arrière des établissemens. Ayant avancé dans les champs derrière la maison de Mr. McNicol, nous observâmes plusieurs petites collines en forme de cônes, hautes de quinze à vingt pieds, composée de terrain de transport, qui d'après leur forme et leur apparence isolée nous supposâmes avoir quelque rapport avec la cause des tremblements de terre.

Profitant de la haute marée nous laissâmes cette baie, mais nous fûmes retenus à la pointe la plus à l'ouest par l'agitation du soufre. Nous passâmes ce temps à examiner le calcaire qui compose cette pointe. Comme celui du côté est de la baie c'est un des calcaires secondaires les plus anciens et renferme nombre de restes organiques principalement des orthocératites. La surface exposée de cette roche présente plusieurs sections longitudinales de ces fossiles mutilaculaires univalves, qui leur donnent l'apparence d'arêtes de poissons, avec lesquelles on les a confondues. Il est bien connu à ceux qui s'intéressent au sujet que les fossiles

siles corallines du genre des huronies, dont il y a quelques beaux des-
sins corrects, parmi les planches du sixième Volume des "Geological
Transactions," ressemblent d'une manière remarquable à des ver-
tebres, et au point même que des hommes de la science y ont été
trompés ; cependant nous n'en vîmes pas de cette dernière espèce. Une
partie de ce calcaire a un caractère très siliceux et paraît passer au grès ;
il y a aussi de congloméré et qui tient implantés des fragmens de quartz
blanc arrondis. Dans la partie la plus élevée de ce calcaire il y a une
petite caverne, dans laquelle on peut descendre quelques verges. Le
toit et les parois sont en plusieurs endroits enduits d'une incrustation
blanche, qui n'a nullement l'aspect de stalactite, mais qui est d'une
nature plus molle et ressemblant davantage aux apparences analogues
que l'on voit sur les toits de vieilles briques ou de voûtes de pierres.
Cette caverne a une descente très rapide, mais nous fûmes tout-à-coup
arrêtés, la caverne ne devenant plus qu'une simple crevasse, à travers
laquelle cependant le petit garçon qui nous accompagnait nous dit
avoir passé, nous informant que de l'autre côté elle devient plus spa-
cieuse, mais que la crainte l'avait empêché de pénétrer plus avant. On
pourrait à très petits frais élargir le passage en cet endroit, travail qui
serait bien compensé par l'étendue, la beauté et l'apparence singulière
qu'offrent fréquemment ces cavernes. Nous en avons parlé au Dr.
Fraser, dont nous attendons sous peu quelques renseignemens ultérieurs.

La côte entre la Baie Murray et la Baie St. Paul est bien moins es-
carpée qu'entre cette première place et l'embouchure du Saguenay, quoi-
qu'elle se retire graduellement en arrière en hauteurs élevées, sur les-
quelles, à cause de la charge du canot, passèrent MM. Bowen et Gol-
die. Ils décrivent le chemin comme étant une succession non interrom-
pue de montées et de descentes roides ; nous observâmes quelques ro-
chers, à surfaces blanches, formant une grande partie du rivage, mais
comme nous n'y avons pas débarqué, il reste à constater s'ils sont fels-
pathiques ou calcaires. Au delà nous vîmes une roche noire, traversée
par des veines de spath blanc calcaire ; c'est probablement le calcaire de
transition de quelques auteurs, et le même que nous avons observé à
Murray Bay.

En passant les Eboulemens nous regardâmes vainement pour trouver
la cause qui fait ainsi appeler cette partie du pays. L'île aux Coudres
aussi, que Charlevoix donne pour avoir été détachée de la terre ferme
par un violent tremblement de terre, ne découvre en passant aucun
vestige d'une pareille catastrophe, si ce n'est un tournant d'eau entre
elle et la terre ferme, lequel à basse marée devient dangereux pour les
chaloupes et les canots, par le risque d'être par lui jetés sur les rochers
calcaires qui sont à la droite de l'entrée de la Baie St. Paul : les appa-
rences qui indiqueraient quelque chose de la sorte sont, dit-on, cependant
visibles en beaucoup d'endroits du rivage entre le Port au Persil et la
Baie St. Paul, telles que des racines et des troncs d'arbres &c. renver-
sés et couverts de terre, et des masses éparses de roche.

Le calcaire dont nous avons parlé en dernier lieu est d'une excellente
qualité ; il est disposé en bancs noirs compacts, qui plongent vers l'ou-
est à un angle d'environ 45°. Il paraît être une excellente pierre à
bâtir, en grande abondance et aisée à exploiter.

En entrant dans la Baie St. Paul les montagnes qui composent les
terres des derrières ont une apparence très pittoresque : elles s'élèvent
en cimes coniques et en rangées alpines sans être cependant très
élevées.

Il n'est peut-être pas connu à tout le monde qu'il y a des témoi-
gnages très respectables qui vont à prouver qu'il y a eu une éruption
volcanique dans l'intérieur des terres de la Baie St. Paul. Personne ne
pourra plus douter de ce fait, après qu'il aura lu le rapport suivant,
que nous tenons de la politesse de Mr. Gagnon et de Mr. Chaperon.
C'est le premier de ces Messieurs qui écrit.—

" Au défaut du journal qui se trouve écarté, daignez recevoir ce
qui suit :

" Samedi, 6 oct. 1791, à la Baie St. Paul, et autres lieux circonvoisins,
vers les sept heures et un quart du soir, se fit sentir un fort tremblement
de terre : toute la nuit fut troublée par de petits répétés, et entre autres
par un trémoussement courant dans l'est. Les quarante-et-un jours sui-
vans tremblèrent, depuis deux coups jusqu'à cinq par jour. Le lundi 8 oct.
fut d'un bon tiers moins fort que le premier (du 5) les autres ne furent
que des petits, ou brouissemens ; le temps toujours obscur. Avant la
nuit du 26 au 27, je n'avais pas encore remarqué d'éruption de fumée
épaisse, par fois ondoyante de flamme ; la température à 7½ heures du
soir était à 11°. au dessous de zéro du thermomètre de Reaumur (plus
7½ de Fahr.) et le lendemain au matin à 6½ heures la chaleur se trouve
montée à 21°. (plus 79¼ de Fahr.) Deux montagnes près de ma de-
meure, ouest quarante quelques degrés nord, laissent un passage à la vue
entre elles pour laisser voir loin. C'est par cette passe que je vis une
continue éruption, mêlée de fumée et de flamme, qui jetait fort sur
l'horizon ; d'autres fois se tourmentaient entre elles comme trop gênées
dans leur issue. J'ai remarqué plusieurs fois que cette éruption est
presque toujours suivie de tremblement pour le même jour ; et quand il
manque il s'ensuit un jour obscur et jaune. Quand le tremblement
arrive, on peut dire qu'il va être d'autant plus proche que cette agita-
tion de boucanne force pour sortir. Quelques personnes auxquelles
j'avais montré ces préparations du tremblement m'ont prévenu à leur

tour que dans un moment la terre va trembler, et l'effet le confirma.
Enfin cette nuit du 26 au 27 forma un grand spectacle d'admiration ;
toute l'atmosphère fut en feu et agitée ; la face souffrait de la chaleur,
le temps étant fort calme ; l'éruption fut continue toute la nuit avec
des flammes. L'approche certaine du tremblement se connaît quand
par la passe entre les deux montagnes, on voit un nuage, ou boucanne,
arrêté, ou agité, et qu'à droite et à gauche l'horizon est parfaitement
clair."

Pour aussi loin que s'étend cette description, elle s'accorde si bien
avec les phénomènes connus de volcans actifs qu'on ne peut guère dou-
ter que la flamme aperçue par Mr. Gagnon ne vint d'une autre cause
que de celle d'une éruption.

Mr. Andrew Stuart n'ignorait pas l'existence de ce rapport bien fon-
dé, lorsqu'en déchargeant notre canot, il nous donna pleine liberté d'al-
ler à la recherche du volcan, pourvu qu'après avoir constaté l'existence
de certaines particularités, qui dans notre jugement nous donneraient
l'espérance de le trouver. Les circonstances suivantes nous firent dé-
sister de notre tentative.

1°. Il pouvait être à une si grande distance qu'on ne pourrait l'at-
teindre à une période si avancée de la saison—12 septembre.

2°. La fertilité reconnue des pays volcaniques aurait pu, dans un
intervalle de trente-sept années d'inactivité, couvrir ces parties une fois
ravagées par ses éruptions, d'une masse épaisse et dense de matière vé-
gétale morte et vive, qui cacherait tous les rochers, et effacerait toutes
les traces d'un cratère, par lesquelles seules on peut reconnaître un vol-
can depuis longtems éteint et inactif.

3°. Nous désirerions fortement examiner un vaste dépôt de fer mag-
nétique qui se trouve dans le haut de la rivière, dans une direction diffé-
rente.

Après l'examen de la plus grande partie des rochers que nous avons
essayé de décrire, un Volcaniste ou un disciple de Hutton, supposerait,
croyons-nous, que le pays qu'ils caractérisent a été dans des temps
reculés, le théâtre de l'activité d'un foyer volcanique, et en voyant venir
à l'appui de ses conjectures les témoignages collatéraux que donnent ces
tremblemens de terre locaux, et celui d'une nature plus directe et plus
positive contenus dans l'écrit de Mr. Gagnon, tous ses doutes sur le sujet
ne manqueraient pas de disparaître. Pour nous, n'étant ni Neptunien,
ni Volcaniste, nous laissons ces recherches intéressantes, mais souvent
vagues, à ceux qui ont plus de droit de s'y livrer, étant satisfait de la
tâche plus humble, quoique non moins utile, de décrire des faits.

Quoiqu'on croie que personne autre que Mr. Gagnon ne vit la flam-
me, &c. il y eut nombre de témoins de la violence extraordinaire des
tremblemens de terre en mil sept cent quatre-vingt-onze. On donne
raison de cette première circonstance, en disant qu'il y avait dans ce
temps très peu d'habitans à la Baie St. Paul, et encore moins dont les
habitudes et l'éducation pussent les porter à faire attention à un phéno-
mène que, dans le cas où il l'aurait vu, le vulgaire aurait supposé être un
simple feu dans les bois.

Il est aussi dans la mémoire de plusieurs qu'une chute de cendre cou-
vrit une fois la neige, mais nous ne sommes en possession d'autres dé-
tails ultérieurs sur ce fait intéressant. Les tremblemens de terre ne pa-
raissent pas maintenant être aussi fréquens ni aussi fortement sentis à la
Baie St. Paul qu'à la Malbaie.

A trois ou quatre lieues dans la rivière de la Baie St. Paul, ou rivière
du Gouffre, comme on l'appelle, il y a, à la distance de cent verges à
deux milles de son rivage, un dépôt étendu de fer magnétique, (*) dont
nous sommes en état de parler d'après un examen et une inspection en
personne. La montée de la rivière est très difficile, à cause de ses
nombreux rapides, mais cet inconvénient est rendu plus léger par la
bonté d'un chemin sur sa rive droite. Ce chemin formé d'une alluvion
de sable nous conduisit à une belle vallée à travers laquelle serpente la
rivière. La nature sablonneuse du sol à l'embouchure de cette rivière
offre peu de résistance à l'action du courant, qui dans les grandes eaux
envahit sur le rivage contigu un certain espace de terrain en en abon-
donnant autant de l'autre côté, ce qui fait qu'un propriétaire de terre se
trouve en possession de la propriété de son voisin. Lorsque la proprié-
té sera devenue de plus grande valeur en ces endroits et ces anticipations
plus considérables, ce deviendra peut-être une source de procès. Mr.
Chaperon, de la Baie St. Paul aura bientôt à changer de place deux
maisons à deux étages que le courant menace de miner.

A mesure qu'on avance, la rivière s'éloigne du chemin à droite et
tandisque la première tient, comme on doit s'y attendre, le niveau le

(*) Dès le temps de Charlevoix on savait qu'il y avait du minéral de
fer en arrière de la Baie St. Paul : car selon cet auteur, Mr. l'Intendant
Talon engagea pour explorer ces mines un mineur qui en fit un rapport
favorable. On dit que cet homme avait remarqué, partout il avait travail-
lé, des traces du tremblement de 1663. Nous n'avons rien vu de la sorte.
Antérieurement à notre visite à cette place, l'Arpenteur Général avait ap-
porté à Québec des échantillons de minéral et des renseignemens sur son
abondance.

Appendice
(V.)
14 janvier.

plus bas de la vallée, le dernier poursuit une course plus directe sur le banc de sable. En passant sur ce banc et en jetant les yeux sur la vallée au dessous, nous nous rappelâmes le valon de Clwyd dans la Galle Septentrionale, qui n'est cependant ni aussi large ni aussi long. Les montagnes de chaque côté sont assez élevées et sont comme de raison de roche, mais la vallée est un terrain légèrement ondulé et d'une bonne qualité, étant un mélange d'argile, de sable et probablement de carbonate de chaux, qui abonde dans les environs. Cette vallée s'étend six ou sept lieues et a peut-être une demi-lieue de large. Le chemin, qui est excellent, monte dans cette vallée jusqu'à environ cinq lieues et demi, au delà de laquelle distance un sentier conduit aux derniers établissemens. Il y a sur la gauche de la rivière une vallée transversale qui communique, dit-on, avec celle de la rivière de la Malbaie.

La paroisse de St. Aubain est située vers l'extrémité supérieure de la vallée, et ce fut en cet endroit que nous nous arrêâmes pour examiner le dépôt de fer. Une couche repose à l'ouest de la maison de Laurent Tremblay, sur le haut de la colline et à environ deux milles de la rivière. Ayant traversé la vallée la distance d'environ un mille, nous arrivâmes au pied de la hauteur qui s'élève à un angle de 10° à 15° .

En cet endroit nous trouvâmes de grosses masses détachées de ce minéral, et montant la colline encore environ un mille, nous atteignîmes le sommet. Arrivés là nous trouvâmes que l'endroit était caractérisé par l'absence totale d'arbres, et paraissait comme une pièce de terre rasée, d'environ trois à quatre acres en étendue. Près du centre de cette place et où le terrain commence à baisser on voit le minéral sortir de terre en une masse métallique noire de grandeur considérable. Nous la suivîmes sans creuser l'espace d'environ soixante verges en longueur et peut-être trois en largeur; elle était couverte çà et là de mousse et de quelques arbustes seulement.

La roche à laquelle le minéral est associé est un syénite pâle; le feldspath y surabonde, et sa surface exposée donne à l'extérieur du rocher une couleur de crème. Celui que nous vîmes n'était pas solide, mais en morceaux anguleux, pourris et lâchement liés, et nous trouvâmes que tel était le cas en sondant pour constater l'abondance du minéral, comme cela appert par le rapport sa isfaisant qui suit de quelques travaux que Vincent Tremblay avait été chargé de faire pendant notre absence dans une excursion au nord.

- No. 1. Creusé un trou du côté nord du minéral de fer visible et à environ deux perches de distance où fut trouvé le même minéral à environ deux pieds au dessous du terrain, composé de roche pourrie.
2. Creusé un second trou du côté sud du minéral, à la distance d'environ quatre-vingt-dix pieds: trouvé encore le même minéral, à la profondeur d'un pied six pouces dans le même terrain.
3. A environ six verges au sud du No. 2^o. à la profondeur de deux pieds et demi, dans le même roc, fut trouvé le même minéral.
4. Au nord-ouest du minéral visible et à la distance d'environ 90 pieds fut trouvé le même minéral à la profondeur de deux pieds dans le même terrain.

D'après cela il appert qu'il y a une quantité considérable de fer, presqu'à la surface; en vérité, nous supposons que la nudité de tout l'espace de ce terrain ci dessus mentionné, est due à la présence immédiate de ce minéral. L'on nous dit que plusieurs endroits des environs abondaient pareillement en minéral, et comme nous étions sur le point de descendre la rivière du Gouffre, pour revenir à la Malbaie, Mr. Bowen découvrit un dépôt de ce minéral, qui lui parut abondant: il est situé sur la rive gauche à environ un mille au dessous de la maison de Vincent Tremblay et à environ deux cents pieds du bord de l'eau. Ayant chargé Vincent Tremblay de faire de nouvelles recherches, nous avons reçu dernièrement les renseignemens suivans, accompagnés des échantillons.

- No. 5. " Ces deux morceaux ont été pris sur les terres de Damase Fortin et de Vincent Tremblay, fils, environ douze arpens plus au nord que la mine que vous avez vue, et environ quinze arpens plus près de la rivière du Gouffre. Il se trouve un cap continu du même métal et il est parallèle à l'horizon. Il se trouve environ un pied en terre à l'endroit où je l'ai examiné, mais comme c'est dans un endroit où le terrain est pendant, il doit se trouver à une plus grande profondeur à mesure que l'on avance.
6. Ce morceau a été pris au nord est de la rivière du Gouffre, environ dix arpens au dessus de l'endroit où vous êtes embarqué pour la descendre, et à un quart de la dite rivière. C'est un cap coupé perpendiculairement de la hauteur d'environ vingt pieds sur une largeur d'environ quarante.
7. Ces quatre morceaux ont été pris sur la terre d'Augustin Tremblay au nord-est de la rivière du Gouffre vis-à-vis l'endroit où vous êtes embarqué pour la descendre, et environ six arpens de la dite rivière. Il sort de la côte un cap de même métal dont j'ai découvert environ trois perches.
8. Ces morceaux ont été pris sur la terre d'Antoine Pagé à environ quinze arpens de la rivière du Gouffre, et environ une lieue plus sud que celle que vous avez vue. Il s'en trouve un cap plein.
9. Ces morceaux ont été pris entre Moïse Tremblay et Elie Fortin, environ huit arpens plus près de la rivière du Gouffre.

J'ai découvert de ce métal sur environ un demi-arpent carré, mais je crois qu'il y en a un plus grand étendu.

Avant de faire aucune observation sur les minerais ci-dessus, nous allons introduire ici un rapport de notre excursion au nord, dont nous avons parlé plus haut. L'objet de ce voyage était double:—de voir un peu plus de l'intérieur et d'examiner un autre dépôt de fer magnétique. Quant au premier objet de notre course, nous avons rencontré de la terre passable, quoiqu'en laissant la vallée et en montant les hauteurs nous tombâmes sur un terrain rocheux et sur un sol inférieur. Ces rochers sont généralement de feldspath et ont une surface extérieure couleur de crème. Après avoir marché deux lieues nous arrivâmes à la cime arrondie d'une colline qui nous présenta une belle veine d'une partie de la chaîne de montagnes, que nous avions vue en entrant dans la baie et dans laquelle la Rivière de la Baie St. Paul prend sa source. Les sommets de ces montagnes sont arrondis, tout-à-fait nus, blanchis et escarpés, nous fumes informés par notre guide que de l'autre côté de ces montagnes il y a une vaste plaine fertile, dans laquelle passe la rivière de la Malbaie; il était dans l'habitude de traverser cette plaine avec des Chasseurs Sauvages, avec qui il était associé. Poursuivant notre route un peu plus avant nous arrivâmes sur le plateau d'un rocher dont plusieurs verges étaient entièrement nues et blanchies. Tout ce que nous avions rencontrés sur notre route étaient couverts d'une si riche végétation, ne présentant à l'œil qu'un angle unique, qu'il n'était pas aisé de décider avec certitude, s'ils étaient en places ou non, mais ici il ne pouvait y avoir de doute sur le sujet. C'était une de ces masses tabuliformes, si fréquentes parmi les rochers feldspathiques, composés de feldspath brun, de quartz et d'amphibole; le quartz seul était bien distinct sur la surface exposée dont il saillissait en grains gris; à cause de plus forte résistance qu'il présente à l'action de l'atmosphère.

Nous trouvâmes dans cette roche des morceaux d'une variété lamelleuse de fer magnétique, et ayant de la polarité; il ressemblait à de l'amphibole, pour lequel on l'a d'abord pris. Nous arrivâmes au pied de la chaîne, où nous campâmes pour passer la nuit, après avoir traversée dans le cours de la journée beaucoup d'assez bonne terre bien arrosée par de petites rivières et cours d'eau qui sortent des lacs, le long de l'un desquels nous avions voyagé. Nous levant de bon matin, nous commençâmes à gravir la chaîne et sur le sommet de la partie la plus basse de sa rangée, nous vîmes saillir du flanc de la montagne, du minéral de fer semblable à celui que nous avons vu précédemment à St. Aubain, mais d'une qualité plus pure, quoiqu'en moindre abondance. Il se rencontre ici en taches visibles d'environ un pied de large et peut-être de trois de long. Comme il est dans le roc solide, il ne serait pas facile de l'extraire, si après avoir creusé on le trouvait former un lit ou filon continu. Le rocher dans lequel ce minéral est implanté est comme ci devant un syénite pâle, dans lequel le feldspath seul est bien distinct. Il est digne de remarque que le dépôt considérable de ce minéral de fer à Marmora dans le Haut-Canada est, selon le Dr. Bigsby, dans le voisinage immédiat de syénite pâle, quoique non en contact avec lui. La noirceur métallique du minéral contraste fortement avec la surface blanchie du rocher dans lequel il est intercalé.

Connaissant que les forêts de ce pays sont bien sujettes à des conflagrations spontanées ou accidentelles on attribue souvent assez naturellement à cette cause la blancheur de ces rochers à l'extérieur, particulièrement ici où il y a d'autres traces de feu moins douteuses: mais l'air agissant sur l'alkali que contient le feldspath qui entre dans la composition de ces rochers, produit un commencement de décomposition sur les surfaces, qui forme une espèce de kaolin et d'argile-porcelaine, et de là vient cet aspect blanchi. Le feu, il est vrai, pourrait bien aider à cette décomposition, mais vu la quantité de fer qui se trouve dans ces rochers, leurs surfaces en seraient plutôt rougies que blanchies. On nous parla d'autres dépôts de fer dans ces montagnes, mais nous ne les visitâmes pas, satisfaits de son abondance dans des endroits plus convenablement situés. Nous pouvons dire cependant qu'à notre retour à St. Aubain, un Canadien nommé Baptiste Bridet, nous donna les renseignemens suivans: Entre la passe des montagnes et le lac Bicène, environ une lieue au delà, il avait observé à petits intervalles de grandes quantités de minéral de fer qui forjaient des rochers: Il avait vu la même apparence entre le lac Bicène et un endroit appelé le Grand Bris, environ dix acres plus avant. Questionné plus particulièrement sur la quantité, il dit que le minéral était en veines de six pouces à deux pieds de large et en blocs ronds de six à huit pieds d'épais. La plus haute montagne de la partie de la chaîne où nous étions, commande la vue la plus belle et la plus étendue du pays environnant.

Nous allons maintenant donner les caractères minéralogiques du premier dépôt minéral que nous avons rencontré à St. Aubain; après quoi il sera nécessaire de faire quelques remarques sur les autres, en ce qu'ils diffèrent les uns des autres principalement sous le rapport de leur plus grande ou moindre pureté.

Presque tous sont remarquables par le manque de caractère magnétique, quoiqu'ils aient la noirceur et la structure métallique, et quelques autres points d'analogie avec l'oxide magnétique de fer, espèce à laquelle ils appartiennent assurément.

CARACTERES MINERALOGIQUES DES ECHANTILLONS.

Nos. 1 à 4. Couleur, noir de fer, mais cassés en fragmens, dont les surfaces sont bien ternies par la rouille ; on n'a pu y découvrir aucune structure particulière ; quelques parties étaient indistinctement lamellées, mais la grande masse paraît être granuleuse compacte. La structure, quand elle ne s'opère pas dans la direction d'une fissure rouillée, est inégale. Ils ne peuvent être raclés avec un couteau, mais ils se cassent aisément et ne font pas de feu sous le marteau ; leur poudre est tout-à-fait noire ; leur gravité spécifique est environ 4. 5. Quelques parties du minéral de ce dépôt ont un aspect vitriné et poreux sur la surface, comme le fer fondu. Ils ne sont pas magnétiques avant l'application du feu. Devant le chalumeau ils n'éprouvent d'autre altération que celle de devenir magnétique. Avec le borax ils se résolvent en une fusion cristalline de couleur soit jaune soit d'un verd brun très léger : en refroidissant la couleur s'évanouit ou à peu de chose près.

Ces minerais étaient associés à un mélange de mica, de carbonate de chaux ou de fer et de ce qu'on a supposé être un Epidote terreux.

5. Ces échantillons ont la meilleure apparence ; sont plus libres de substances étrangères que quelques-uns des autres ; l'un d'eux cependant a de la coccolithe d'un brun jaunâtre, disséminée dans sa substance. Leur gravité spécifique varie depuis 4 jusqu'à 4. 5.

6 C'est de la même espèce que celui trouvé par Mr. Bowen et il vient presque du même endroit ; ce n'est pas un aussi bon minéral qu'aucun des précédens, étant plus mêlé de substances étrangères, surtout d'Epidote, par lesquelles sa gravité est réduite à 4.

7. Ces quatre échantillons diffèrent beaucoup entre eux et ne dénotent pas par leur apparence, qu'ils ont été pris dans la même place ; l'un d'eux a une structure cristalline et paraît être composé de grains octoédriques, tandis qu'un autre est terreux et possède moins de l'aspect métallique.

8. Magnétique avec polarité et minéral excellent.

9. C'est une excellente espèce de minéral des marais et il serait précieux s'il était abondant. Il se trouve probablement en plus grande abondance qu'on n'a pu le découvrir jusqu'à présent, car généralement où il y a un vaste dépôt de roche minérale (tel qu'on appelle l'Oxide magnétique de fer) dans des situations élevées, il se trouve aussi un dépôt de mine des marais au dessous dans les terrains inférieurs humides ; ce dernier venant du premier.

10 et 11. Comme ces minerais ne sont pas abondans, nous ne croyons pas nécessaire d'en rien dire.

Il n'est pas aisé de dire pourquoi ces minerais manquent de magnétisme avant d'avoir subi l'action de la chaleur. Cleaveland dit, que " d'après les observations de Werner et de Gibbs, cet oxide de fer n'est pas magnétique tant qu'il reste à une profondeur considérable au dessous de la surface de la terre, mais qu'il acquiert bientôt cette propriété après avoir été exposé à l'air et à la lumière." Nous devons chercher d'autres causes pour rendre raison de l'absence du magnétisme dans le cas présent, vu que les échantillons en question ont été pris à la surface et n'ont pas à ce moment plus de magnétisme qu'ils n'en avaient d'abord. Cela peut être dû à une ou plusieurs des causes suivantes : — la présence de l'oxygène au dessus de la proportion de 30 par cent, de soufre au dessus de 40, de charbon, de phosphore, d'arsenic, de manganèse et d'antimoine ; de ce nombre le soufre, le phosphore, l'arsenic, la manganèse et l'antimoine détériorent le minéral, soit en le rendant difficilement fusible, soit en rendant la fonte cassante, produisant souvent les deux effets ; le carbone au contraire améliore la qualité de la fonte, facilite la fusion du minéral et épargne la consommation du chauffage. Nous ne pouvons dire à laquelle de ces substances, ni même si l'on peut attribuer à quelqu'une d'elle le manque de magnétisme, nous ne pouvons qu'observer que devant le chalumeau on ne voit aucune flamme de soufre, ni d'arsenic ni d'antimoine. On peut attendre que les minerais magnétiques donneront soixante à soixante et dix par cent et la mine de marais entre 30 à 40.

Le voisinage du calcaire, comme castine, donne une valeur additionnelle à ces dépôts. Il est probable que le calcaire que l'on voit à l'entrée de la baie St. Paul s'étend jusque là. Nous en avons vu deux ou trois variétés d'une excellente espèce près d'un petit fourneau, au devant de l'Eglise de St. Aubain, qu'on nous dit venir du rivage opposé ou gauche de la rivière ; une partie contenait des restes organiques, tandis que d'autre avait plutôt l'aspect d'un marbre compacte, et n'en contenait aucun. Nous apprîmes aussi qu'on voyait du calcaire sur le haut de la côte vis-à-vis l'église, où l'on en trouva à la fin, mais notre guide nous conduisit d'abord à divers roches felspathiques, étant trompés par leurs surfaces blanchies.

Désirant constater la navigabilité de la rivière, nous la descendîmes dans un vieux canot de bois. On peut considérer cette rivière comme un rapide non interrompu, quoique d'une violence modérée. Le seul obstacle à sa navigation vient de l'accumulation de cailloux dans plusieurs parties de son canal, sur lesquels il est difficile de passer sans toucher. C'est ce qui nous arriva plusieurs fois, et une ou deux fois nous fîmes sur le point de chavirer ; mais cela vint plutôt de la mala-

dresse de notre pilote que d'aucune autre cause ; au reste nous en aurions été quittes pour une bonne cale, dans le cas où le canot aurait viré, car la rivière est basse presque partout. S'il survenait un objet suffisant pour en permettre les frais, tel que l'établissement d'une Fonderie de Fer par le Gouvernement, il n'y a pas de doute que la rivière ne pût être rendue navigable pour les bateaux, en enlevant seulement les cailloux qui se trouvent le plus dans la voie du canal, car nous ne croyons pas qu'il y ait aucun rocher solide qui offre de l'obstacle. Il ne serait pas aisé de couvrir ces cailloux et cela en outre occasionnerait la perte d'une grande quantité d'excellente terre, et il faudrait faire à grands frais des chaussées pour retenir les eaux. Cette rivière a un cours très tortueux, et d'une manière surprenante si l'on considère la rapidité de son courant ; cela vient du lit d'alluvion qu'elle traverse. Cela fait que la rivière entre St. Aubain et la Baie St. Paul, n'est peut-être pas d'un tiers plus large que le chemin, de sorte que quelque capacité que l'on pourrait donner à la rivière, il est probable que tous les matériaux nécessaires à un établissement comme celui dont nous avons parlé plus haut, seraient transportés par terre, tandis que les produits manufacturés descendraient par la rivière. Telle est la pratique que l'on suit à l'établissement bien conduit de Mr. Bell, sur la rivière St. Maurice, où les bateaux font toujours leur retour sans charge. Bien que nous fîmes plusieurs pauses, nous ne fîmes que cinq heures à descendre.

La hauteur du rivage de chaque côté de cette rivière varie depuis un pied jusqu'à cinquante. Nous ne vîmes qu'en peu d'endroits le rivage formé par des rochers en place. On nous dit que c'était du calcaire. Nous fîmes nécessairement à la hâte l'examen de cette rivière, car la crainte où nous étions à tout moment de chavirer en descendant dans le courant rapide de la rivière, ne nous permettait pas de tirer le meilleur parti possible du peu de temps qui nous était donné, à chaque détour que nous faisons. Près de l'entrée d'une baie nous observâmes un petit roc de calcaire (*) qui sortait la tête hors de l'eau, au milieu du canal.

Avant de partir de la baie pour notre excursion dans l'intérieur, nous avons été reçu avec hospitalité chez Mr. Chaperon, et à notre retour nous éprouvâmes de sa part un accueil encore plus cordial, s'il est possible. Mais la crainte d'abuser de sa civilité fut un motif de plus pour prendre congé de lui, ce que nous fîmes la nuit même qui suivit notre retour. N'ayant pu cependant réussir à revenir à Québec par eau, à cause du vent contraire, nous fîmes route par terre à travers les Caps, ce qui nous donna l'occasion de voir un pays que nous fîmes surpris de trouver propre à être établi, et à l'existence duquel aurait peine à croire une personne qui n'aurait vu que la partie aride qui est exposée sur le rivage nord du Fleuve St. Laurent, entre le Cap Tourmente et la Baie St. Paul. Il a déjà attiré quelque attention, et à notre avis il en mérite bien d'avantage ; car indépendamment de ses propres qualités, il est joint par une bande vaste et non interrompue de terre cultivable, d'un côté avec Québec, et de l'autre avec la Baie St. Paul, la Malbaie, et en profondeur à une étendue encore plus considérable de terre. On a dernièrement offert une récompense pour porter des individus à s'y établir, et il a été ouvert aux dépens du Gouvernement colonial un chemin pour communiquer de la Baie St. Paul avec St. Joachim. Nous passâmes sur ce chemin, et à chaque lieue ou environ nous rencontrâmes une petite maison bâtie pièce sur pièce, où qui était en chantier, avec quelques acres de terre de défrichés. Le sol sur lequel passe le chemin est toujours assez bon, et il est coupé par nombre de petites rivières et ruisseaux, ce qui favorise l'égout, dont le manque se fait sentir dans plusieurs parties du chemin, surtout vers St. Joachim.

Ce chemin possède deux caractères excellens ; il est d'un droit et d'un niveau remarquables ; car, si l'on en excepte les deux extrémités à la Baie St. Paul et à St. Joachim, auquel dernier endroit il passe sur du calcaire et à l'autre sur du granite, nous ne nous rappelons pas avoir vu une seule élévation d'importance. La première partie du chemin passe sur le même dépôt alluvial que traverse la rivière du Gouffre, et qui s'étend de niveau jusqu'au pied du banc de calcaire. En montant sur ce banc le sol devient plus sablonneux, mais il s'améliore bientôt, et est alors un mélange d'argile, de sable et de fer, au dernier desquels il doit la couleur jaune ou rouge qu'il prend quelquefois. Le chemin est excellent l'espace de quatre lieues ; il devient alors très marécageux, et en quelques endroits tout-à-fait impraticable pour des voitures. Dans ces endroits, ce n'est qu'en enfonçant jusqu'aux genoux dans une terre grasse, chargée d'hydrogène carbonné, que le piéton peut marcher. Ce caractère qui continue plus ou moins jusqu'au pied du Cap Tourmente est dû à la nature molle du sol et à sa position presque horizontale. En peu de temps l'argent qui a été dépensé sur ce chemin, se trouvera avoir été une dépense inutile, si l'on n'avance une somme additionnelle pour empêcher le chemin de se briser tout-à-fait.

Nous ne vîmes rien de remarquable dans la qualité des bois qui consistaient principalement en bouleau, jusqu'à ce que nous eumes atteint la Côte qui sépare St. Joachim des terres des Caps, où nous rencontrâmes quelques-unes des plus belles espèces que nous eussions vues dans

(†) On a apporté à Québec de la baie St. Paul des échantillons d'un calcaire blanc granuleux qui contient des filets et des fissures de galène très-argentueuse ; si l'on fait dissoudre de la poudre de cette Galène dans de l'acide nitrique, et qu'on y plonge un petit fil de laiton, il se couvrira en peu de temps d'un dépôt blanc. Si on le rassemble et qu'on l'expose sur le charbon à l'action du chalumeau, on en obtiendra un globe d'argent pur.

14 janvier.

tout le cours de notre tournée, entre autres quelques Ormes d'un belle venue. Le granite du Cap Tourmente est connu pour être le dépositaire de grands morceaux de mica brun, qui sortent des crevasses du rocher en morceaux de la grosseur du pied; il y en a qui est extrêmement tortuë. La rareté du mica dans la plupart des rochers décrits dans cet essai ne rend ce dépôt que plus digne d'attention,

Ayant clos nos observations géognostiques au pied du Cap Tourmente, nous allons maintenant introduire une courte récapitulation, en forme de sommaire, et qui renfermera quelques remarques sur la position géologique des rochers que nous avons décrits. Les roches que nous avons vues dans notre voyage sont :

- No. 1. Granite.
2. Schiste micacé ou micaschiste.
3. Quartz.
4. Calcaire primitif.
5. Syénites—comprenant le Granite syénitique et le Gneiss syénitique.
6. Trapp—aggrégat dans lequel prédomine l'Amphibole.
7. Felspath—(sui generis.)
8. Fer magnétique.
9. Schiste argileux.
10. Grawacke ou Wacke grise.
11. Grès.
12. Calcaire secondaire—renfermant la transition de quelques autres.

De tous les granites que nous avons vus, celui du Cap Tourmente est peut-être le seul qui n'ait aucun mélange d'amphibole; car quoique nous ayons recueilli ailleurs quelques échantillons qui nous parurent être ainsi, il pouvait bien être présent sans que nousussions l'y découvrir, à cause de la ténuité des grains de ces échantillons et la ressemblance de l'amphibole avec le mica, et cette dernière circonstance peut nous avoir fait prendre un minéral pour l'autre. Nous ne pouvons avancer positivement que le granite du Cap Tourmente ne renferme pas d'amphibole, mais nous le croyons ainsi.

Nous n'avons rencontré du micaschiste qu'à la Malbaie, et on l'a déjà décrit comme plongeant vers l'ouest, ayant en dessus du calcaire fétide noir et en dessous du quartz et du Gneiss syénitique. C'est ici que l'on voit ensemble les trois classes de roches, en admettant que celle de transition en est une, et le Géologue tire dans leur inspection un auxiliaire pour ses recherches subséquentes dans les environs. Le micaschiste étant dans tous les cas une roche primitive, le gneiss syénitique qui se trouve au dessous de lui doit aussi être primitif, ce qu'il est nécessaire d'établir, car nulle part ailleurs on n'a trouvé cette roche associée avec une preuve semblable de sa haute antiquité; les roches dans lesquelles abondaient l'amphibole et le felspath étant les mêmes que "la classe supérieure" (overlying class) de Maculloch, avec laquelle plusieurs des rochers du Saguenay et d'autres parts n'avaient d'autres points d'analogie, que sa simple identité minéralogique.

Les syénites et les trapps sont les seules roches que l'on rencontre entre l'embouchure du Saguenay et la chute de la Belle Rivière, et ils caractérisent de plus le rivage nord du St. Laurent entre Tadoussac et le Cap Tourmente. Mr. Nixon a trouvé du syénite sur la rivière David, branche du Peribouka, et du trapp à la chute de Ouitchouan. Un syénite pâle est la roche prédominante dans les derrières de la Baie St. Paul; aucun trapp ne lui est associé et il est le dépositaire de couches considérables de fer magnétique, et tout cela témoigne en faveur de son caractère primitif; on n'y voit aucune trace de stratification.

Nous n'avons vu qu'à la Malbaie du quartz reposant sous du micaschiste et entre lui et le gneiss syénitique.

On trouve au Moulin à Baude du calcaire primitif, associé à du gneiss et à du trapp. On a rencontré une masse de la même espèce sur les rivages du Lac St. Jean près et à l'ouest du Poste de Mitabetschuan; elle était anguleuse et d'un aspect impraticable.

Le felspath (sui generis) auquel nous avons fait allusion, a plusieurs des caractères de l'hyperstène (amphibole de Labrador) et du felspath de Labrador, mais il diffère du premier en ce qu'il est d'une gravité spécifique moindre de 2.7; et du dernier par son manque d'iridescence. Il forme le rivage nord-est du Lac St. Jean et ses Iles depuis l'embouchure de la Grande Décharge jusqu'à un mille en deçà de la rivière Koucouathimi, et Mr. Nixon en a rencontré dans la Petite Décharge formant aussi en cet endroit sans interruption un rivage de roche, à prendre au pied du premier rapide de la rivière Péribouka, jusqu'à la chute de la même rivière. Nous ne pouvons rien dire de ses associations, n'en ayant rien vu. Il tombera probablement sous le terme générale de syénite, quoique l'amphibole y entre pour peu de chose.

Le fer magnétique se rencontre, dans les derrières de la Baie St. Paul en lits assez considérables, pour mériter d'être considéré comme un rocher. On ne l'a rencontré en abondance en nul autre endroit.

On a trouvé dans l'Ile d'Orléans du schiste argileux associé à du Grau-

wacke. Il est bien connu qu'il abonde dans le Bas-Canada, surtout aux environs de Québec, et de là jusqu'à l'embouchure du St. Laurent, mais il se borne principalement au côté sud du fleuve. On a aussi rencontré du schiste argileux sur le lac St. Jean, car nous persistons à appeler de ce nom la roche que nous y avons trouvée, alternant avec le calcaire fétide.

On a trouvé du Grès à la Malbaie reposant sous du calcaire horizontal. La position de ce grès répond à celle de l'ancien grès rouge, qui s'il est le même, donne entre plusieurs un nouvel exemple de l'absurdité qu'il y a de donner un pareil nom à une roche qui dans le cas présent est d'un verdâtre léger.

Nous avons trouvé à la Malbaie, à la Baie St. Paul et sur le lac St. Jean, du calcaire secondaire, avec lequel, pour la commodité, nous avons introduit, d'après l'exemple de Maculloch, la classe de transition. Le calcaire fétide qui repose sur le micaschiste à la baie St. Paul, a été par nous supposé être une roche de transition. Sur le lac St. Jean le calcaire secondaire de l'époque carbonifère forme, avec le schiste argileux, la partie sud-ouest du rivage du lac, à prendre à la Pointe Bleue, à aller jusqu'à trois milles en deçà du poste de Metabetschuan.

Il a été dit précédemment qu'il n'y avait aucune apparence de l'opération d'un déluge violent; au contraire tous les terrains, dans des endroits très profonds, consistant en argiles, en argiles marnées et en sable, étaient composés des particules les plus déliées, sans aucune trace de cailloux ni même de gravier. La surface de la terre en était si libre que nous ne nous rappelons pas d'avoir vu un seul fragment roulé et qui fut évidemment de transport, dont la position ne montrât pas clairement le lieu d'où il venait. Nous ne devons pas oublier cependant de mentionner qu'à l'exception des divers portages nos observations se sont bornées aux rivages des rivières et des lacs, que nous avons rencontrés dans le Saguenay.

Nous n'avons vu que rarement des minéraux, à l'exception de ceux qui entrent dans la composition des roches que nous avons rencontrées. Nous nous attendions surtout à en trouver quelques-uns de la famille nombreuse des Zéolites, logées comme de coutume dans le trapp amygdaloïde; mais nous ne découvrimes aucune trace ni des unes ni de l'autre; les pores des syénites vésiculaires que nous avons observés occasionnellement étant entièrement vides. Les principaux minéraux que nous avons rencontrés sont du :—

Spath calcaire.—Surtout dans le calcaire fétide sur le lac St. Jean, et remplissant plus particulièrement les cavités originaires de ses restes fossiles organiques. Le seul cas où il a été trouvé associé avec du trapp a été déjà mentionné.

Spath-fluor. (Chlorophane).—Formant une veine dans une roche inconnue, (probablement de la classe des syénites,) près de la Pointe aux Pillards dans le St. Laurent.

Epidote. (Terreux).—Entrant en apparence dans la composition de quelques-uns des syénites du Saguenay. Associé aussi en quelque abondance avec du fer magnétique, dans les derrières de la Baie St. Paul.

Coccolithe.—Dissiminée dans du fer magnétique, en arrière de la Baie St. Paul.

Grenat. (Commun).—Formant des nodules distinctes dans du micaschiste, à la Malbaie; nous n'avons pas vu la belle variété feuilletée de grenat précieux, qu'on sait se trouver en cet endroit.

Fer magnétique.—En lits étendus en arrière de la Baie St. Paul. Formant aussi des veines et de petites concrétions distinctes dans les syénites et disséminé en petits grains dans quelques-uns des trapps du pays que nous avons traversé.

Carbonate verd de Cuivre.—En petits filets dans quelques-uns des syénites que nous avons rencontrés.

Il doit être évident, aux personnes de la Science, qu'un individu qui traverse rapidement un pays, acquerra la connoissance de ses traits géognostiques plus aisément qu'il ne peut espérer d'obtenir celle de sa minéralogie, parce que les rochers, différant des minéraux, occupent de grands espaces, et un échantillon détaché d'un endroit donne le caractère d'un grand nombre d'autres; mais les minéraux à l'exception de ceux qui entrent dans la composition des rochers, sont en dépôts partiels, et il faut pour les rencontrer ou que le visiteur, s'il est en visite pressée, y soit conduit par un hasard heureux, ou qu'ils soient très abondans dans les lieux où il les cherche.

En passant le Cap Pillard près de St. Joachim, Mr. Nixon observa une veine d'une substance verte et blanche, de trois à six pouces d'épaisseur, qui traversait le rocher. Ayant débarqué il détacha des échantillons, qui étant examinés subséquentement se trouvèrent être des mélanges de carbonate de Chaux, sous la forme de spath-calcaire, et une variété de calcaire fluat, appelé Chlorophane, dont les caractères sont donnés ci-dessous.

Couleur.—Verd léger vif.

Transparence

Transparence.—Forte transparence sur les bords.

Structure.—Lamelleuse, quelquefois indistinctement, approchant de la compacte : intimement associé à du felspath calcaire.

Lustre....Sombre, ou nul.

Dureté...A peu près celle du fluor.

Poudre....Vert blanc et rude.

Gravité spécifique...3. 0.

Effet dans l'Acide...Fait élever quelques bulbes, venant probablement du Spath calcaire auquel il est associé ; lorsqu'on jette sur

sa poudre de l'Acide sulphurique, il produit une vapeur blanche qui corrode le verre.

Phosphorescence...Placé sur une plaque de fer chauffé il donne une phosphorescence, (dans une chambre noire) d'un beau verd et de couleur pourpre. Dans l'eau bouillante, il produit une lueur pâle. Cette phosphorescence fut observée après que le minéral eût été exposé à l'action de l'Acide.

Effet du Chalumeau...Exposé à sa flamme extérieure, il ne décrépité pas, mais donne une phosphorescence d'un beau bleu, semblable à la flamme intérieure du chalumeau, et devient blanc : Exposé à cette flamme intérieure il forme une écaille d'un blanc sombre.

Appendice
(V.)
14 janvier.

EXTRAITS du Journal d'un Voyage d'Exploration depuis Québec jusqu'au Lac St. Jean, autour du dit Lac et de là à Québec, tenu par M. Nixon, 66e. Régiment, contenant les parties du dit Journal, relatives à la qualité du Sol, aux facilités qu'il y a d'y former des Etablissements et à d'autres objets qui ont un rapport immédiat avec la Mission, dont Mr. Nixon faisait partie.

A Tadousac, une chapelle, la maison du Commis, une boutique de Forgeron, deux Magasins et six Cabanes ou Graages, voilà en quoi consiste le poste où l'on laisse ordinairement six hommes ; j'y rencontrai un beau taureau de race anglaise, deux vaches, autant de vaux, sept moutons et un cheval ; on tire leur fourrage d'hiver de la Petite Rivière et de la Grande Rivière Bergeronne, la première à trois et la dernière à trois lieues et demi de Tadousac. Mr. Wagner rapporte que le premier endroit produit et fournit au poste d'excellent foin sauvage, et est susceptible d'en rapporter beaucoup plus qu'à présent ; on en obtient peu du dernier endroit, et tous deux sont d'accès difficile. Dans le port de Tadousac, il y a un ruisseau d'eau excellente.

Sur la rive gauche du Saguenay saillit un gros rocher appelé la Boule, et qui, selon le rapport, est à trois milles de Tadousac. Dans cet endroit du fleuve, l'un et l'autre rivage présentent un précipice effrayant, coupé presque perpendiculairement au fleuve.

Un des Commis des Postes me donna les renseignements suivans :—
" La navigation de la Rivière Ste. Marguerite est bien rude ; elle n'est accessible qu'aux petits canots. De chaque côté de cette rivière, la terre est couverte de bois de différentes espèces, et qui deviendront à mesure qu'il monte. On voit par ci par là du Frêne et quelques petites Erables. En montant jusqu'à la distance de vingt milles, on rencontre par endroit des morceaux de bonne terre, entrecoupés par des montagnes. Le cours de cette rivière est le même que celui du Saguenay. Ces morceaux de bonne terre sont de trois à cinq aunes de largeur. L'endroit suivant de terre arable est à la descente des Femmes, à onze lieues de la Rivière Ste. Marguerite, la largeur en est d'environ soixante acres, sur la rivière, et s'étend en arrière sur une montée, l'espace de deux milles. Il n'a pas examiné la terre, mais il en a jugé par l'apparence du bois. Il y a une petite rivière, qui ne lui a pas paru navigable pour des canots. A environ deux ou trois milles au dessus de cette pointe, la prochaine bonne terre que l'on trouve paraît s'étendre, sans interruption, jusqu'à Chicoutimi, et nous avons entendu dire qu'elle s'étendait en arrière, à une distance considérable. La première bonne terre que l'on rencontre du côté méridional du Saguenay, après qu'on a laissé Tadousac, est sur la rivière St. Jean, éloignée de neuf lieues ; il y a en cet endroit environ un mille carré de bonne terre, que la rivière divise en deux parties : vient ensuite la Baie de la Trinité, où il suppose que la quantité de bonne terre est la même qu'à l'endroit en dernier lieu mentionné. Ceci est à douze lieues de Tadousac, et cinq lieues plus haut la rivière vous mène dans la baie des Ha-ha, où la bonne terre est entrecoupée, en quelques endroits, par des montagnes qui descendent jusqu'au rivage. L'endroit suivant est à trois ou quatre milles de Chicoutimi, et s'étend en profondeur à perte de vue, et il y a aussi en ce lieu une vaste prairie. Le port de Tadousac est constamment ouvert ; des vaisseaux y sont entrés dans le mois de Mars, et l'on trouva libre de glace flottante. L'année dernière le Saguenay n'a pris que jusqu'à la rivière Ste. Marguerite, selon qu'il l'a appris des gens qu'on avait laissés au poste de Chicoutimi, qui y étaient descendus vers la fin de Mars. Il était lui-même au Petit Saguenay vers le 13 Avril dernier, et alors il n'y avait pas de glace plus bas que cette rivière."

Presque vis-à-vis la Boule les rivages du Saguenay prennent l'apparence d'un château en ruines ; le feu y a détruit le bois. A la gauche de la Boule, il y a une gorge profonde qui semble la séparer de la terre ferme.

11 Aout.—En arrière de notre camp notre attention fut attirée par un Roc escarpé, courant dans une direction N. E. et S. O., étant une continuation de la Boule, et composé de Granit et de Gneiss, entremêlés de couches de schiste amphibolique. En cet endroit Mr. Baddely détacha un morceau de fer oxidisé, d'un fragment de rocher. Dans les environs de l'endroit où nous étions campés, il y a assez de terrain végétal pour le pâturage ou pour donner du fourrage à Tadousac. Mr. Brownson a semé à ce poste un petit morceau de mil qui a fort bien réussi.

La Pointe Passe-Pierre est à une lieue de distance de la rivière, sur les bords de laquelle nous avons campé la nuit dernière. A la baie des Petites Iles de Passe-Pierre, il y a du côté de la terre ferme une cabane, et c'est le premier endroit de pêche des Postes du Roi. Il y a aussi une petite rivière, où les canots ne peuvent naviguer, à cause des rapides : elle est très étroite, et n'a qu'environ 150 pieds de large.

Il y a une grande différence entre les eaux qui coulent près du rivage et celles du milieu ; les premières sont comparativement tranquilles, lorsqu'il y a une grande houle dans le milieu du canal. A midi nous arrivâmes à la baie St. Etienne, éloignée de trois lieues de Tadousac ; une petite rivière vient s'y décharger, et il y a un bon havre et un excellent mouillage. Le havre est beaucoup plus grand que celui de Tadousac, et est à l'abri de tous les vents, à l'exception de celui de l'Est et du Nord-Est ; les bords de cette baie sont composés de terres de transport ; le bouleau et le peuplier ne paraissent que sur le côté occidental de la baie.

La Compagnie des Postes du Roi a une pêche à la rivière Ste. Marguerite, où dans une bonne saison l'on prend cinq ou six cents Saumons : elle a en cet endroit une cabane et un hangar. Dans l'Anse au Foin, il y a une petite rivière et de la bonne terre. La rivière Ste. Marguerite est navigable pour les canots, à la distance de 20 à 30 milles, elle a communément un acre de largeur, et environ deux à son embouchure. C'est un des meilleurs endroits de chasse pour les Sauvages. La première des Iles St. Louis où nous arrivâmes est couverte de Sapin, de Peuplier, de Bouleau, entremêlés de quelques Pruches. Ces Iles sont à six lieues de Tadousac. Nous honorâmes des noms de Victoria et de George, deux longues pointes, qui s'avancent de la rive gauche du fleuve, vis-à-vis des Iles St. Louis, et une autre près de la plus petite des Iles de celui de Cap Andrew.

La Baie de la Pointe Comfort est tout vis-à-vis St. Jean, ayant à droite la Pointe Comfort ; le rivage en est sablonneux, elle a une châte à droite, et le bois qui la borde est presque tout du Pin rouge.

Sous le rapport de la grandeur, la rivière Ste. Marguerite est la plus grande qui tombe dans le Saguenay, la rivière St. Jean vient ensuite puis

Appendice
(V.)
14 Janvr.

puis suit la Trinité, fort ressemblante au Petit Saguenay, qui se range après elle. Le Petit Saguenay pénètre plus avant dans l'intérieur, prenant des branches jusque vers la Malbaie, et les Sauvages la fréquentent beaucoup comme endroit de chasse.

Dans la baie Half-Way, vis-à-vis la baie de Trinité, à gauche, se précipite une belle chute d'eau douce. Dans la baie de la Descente des Femmes, Mr. Wagner monta sur les hauteurs et découvrit une quantité considérable de Pin rouge, ce qui est un signe suffisant pour marquer que dans les différentes parties des environs, on pouvait trouver de ce bois précieux ; il rencontra aussi quelques touffes de bois franc, tel qu'on en trouve sur les bonnes terres ; le peu qu'il y avait de terres basses paraissent propres à la culture. Nous doublâmes le Cap à l'Est, à trois heures et demi, et nous nous trouvâmes à la vue de la baie des Ha-ha, qui est sans contredit la baie la plus magnifique que j'aie jamais vue ; partant du Cap à l'Est, elle s'avance trois lieues dans les terres. Après avoir doublé le Cap à l'Est, nous traversâmes de l'autre côté du Saguenay, et nous campâmes pour la nuit dans l'Anse aux Ours.

Vers 6 heures A. M. nous arrivâmes à la Baie des Rochers, ainsi appelée par le grand nombre de rochers qui se montrent au dessus de l'eau, et nous mîmes pied à terre à Chicoutimi vers 2 heures.

Chicoutimi est le principal Poste de la Compagnie, étant le dépôt de l'intérieur ; il s'y trouve une petite Chapelle bâtie par les Jésuites, il y a cent deux ans. Le terrain qui l'environne est excellent, ayant l'apparence d'être composé d'une marne riche, mêlé d'un bon sable. Mr. Andrews, le Commis du Poste, qui y reste depuis six ans, a deux bons quarrés de patates, de la plus belle apparence, et une couche de coucombres—l'année dernière il cultiva des melons en plein air. Tout ce qui croît à Montréal croît ici. Il nous informe que s'il était pour s'établir sur une terre dans le Saguenay, il se fixerait de préférence tout vis-à-vis du Poste du côté du nord, ou au sud à un quart de mille au-dessus. Sur une question à cet effet il répondit, que si un homme s'occupait uniquement du jardinage, il n'y a pas autour de Montréal un seul jardin qui égalerait le produit qu'on pourrait avoir en cet endroit. Dans le mois de Mai, dans les grandes mers du printemps, l'eau monte ici seize pieds.

19 Août.—Nous laissons Chicoutimi et embarquâmes à onze heures. La rivière à aller jusqu'au Lac Kenwangomi ou Tzinogomi est appelée Chicoutimi ; il y a sept portages ; le bois qui la borde consiste en épinette rouge et blanche, en peuplier et en merisier noir. Entre les portages de Chicoutimi et Maie, et entre Maie et Attim, le pays est plat et bien boisé, et paraît bien propre à la culture ; on y voit du Bouleau, du Merisier, du Peuplier, du Pin et de l'Épinette. En fouillant la terre au Portage des Chiens (Attim) la surface générale se trouve être de quatre à cinq pouces de sol végétal, sur un lit de sable d'à peu près la même épaisseur, et en d'autres endroits un sable mêlé de marne, en apparence d'une nature plus fertile. Je creusai en trois différens endroits au Portage de l'Enfant, et le sol m'y sembla d'une qualité bien fertile, composé d'une riche marne noire entremêlée d'un sable noir. Le pays, pour aussi loin que s'étendait la vue sembla très favorable à l'établissement ; on n'y voit pas une côte ; le bois de la même qualité qu'on vient de mentionner. Entre le Portage de l'Îlet et le Portage des Roches la terre est très belle ; au bout du dernier portage nous nous lançâmes dans le lac Kenwangomi, (Lac Long.) Ce lac offre mille points de vue charmans ; renferme nombre de belles baies et est bien boisé ; il y a trois îles couvertes de petits saules ; elles feraient d'excellentes prairies, si elles étaient défrichées. Un de nos gens tua à la pointe aux Sables un beau Lapin blanc, ayant les yeux rouges, de petites oreilles transparentes et la tête remarquablement petite.

21 Août. Au bout du lac, qui a environ six lieues de longueur, nous entrâmes par un canal court et étroit dans le lac Weque ; ce passage est généralement à sec, et forme un portage entre les deux lacs. Au bout de ce lac se trouve le portage de Kenwangomi, ou Weque Caputtigan, ayant au moins un mille de long, et tout-à-fait bien boisé ; Mr. Wagner lui donna le nom de l'Île Formosa, ou Belle Île ; c'est la hauteur de terre située entre les lacs Kenwangomi et Kenwangomichiche, le premier se déchargeant dans le Saguenay par la rivière Chicoutimi ; le second dans le lac St. Jean, par la rivière des Aunes. En creusant en différens endroits nous trouvâmes environ quatre pouces de sol végétal sur un lit riche de marne et d'argile. Au bout de ce portage se trouve le lac Kenwangomichiche (Lac moins long,) vers le milieu duquel nous entrâmes, à notre gauche, dans le lac Kasuskikeomi (lac d'eau claire,) appelée par les Canadiens Lac Vert ; il nous parut long : le point de jonction entre les deux lacs s'appelle Apolegoma.

Tout le terrain qui borde le lac Kenwangomichiche est couvert de Frêne et d'Orme ; en sortant de ce lac nous entrâmes dans la rivière des Aunes, ou Pashe-kasuinanishchi-zebe ; à l'embouchure de laquelle il y a de fort beaux joncs de huit à douze pieds de long. La terre parut bonne mais basse. De cette rivière nous tombâmes dans une autre qu'on appelle la Belle Rivière, qui se décharge dans le lac. L'entrée du lac offre une perspective des plus magnifiques, dont l'effet est encore augmenté en ce qu'on ne voit pas la rive opposée. Nous côtoyâmes le rivage du lac l'espace de quatre lieues, jusqu'au poste à l'embouchure de la rivière Metabitshuan, lat. 48° 23' 12", (endroit où finit le cours de l'eau) laissant à notre gauche la petite rivière Koushygish, où il y a une petite colline et un bocage d'Erable, où l'on fait le sucre nécessaire pour le Poste.

23 Août. Autrefois les Jésuites avoient en cet endroit trois cents acres de terre en culture, et il y en a maintenant tout au plus dix à quinze acres ; le reste retourne rapidement à son premier état. Il pousse maintenant dans le jardin des choux, des carottes, des pois, des fèves, des oignons, des patates, des citrouilles, du blé d'inde, des concombres, du froment, de l'orge, avec des betteraves et des navets. On nous montra deux pruniers plantés par les Jésuites, aussi bien que quelques gadelliers. Les personnes résidentes à ce poste sont, le commis, Mr. Murdoch, deux hommes, une femme et trois enfans, qui ont pour tout bétail, un taureau, une vache et une génisse ; quatre bâtimens, une maison, un hangar, une boulangerie et une étable, formant le poste.

Jacob Duchesne nous dit, que le climat était bien meilleur ici qu'à Chicoutimi, y ayant en général une différence de vingt jours ; il a passé ici trois hivers et trois étés ; chaque automne les têtes des patates sont gelées à Chicoutimi vingt à vingt-cinq jours plutôt qu'à ce Poste. Il y a maintenant douze jours que l'orge a été coupée, elle fut semée vers le trois de Mai ; le blé vers le 7 et le 10. Il avait travaillé aux travaux de l'agriculture jusqu'à l'âge de 16 ans, à la Malbaie.

24 Août.—Pendant que nous marchions pour rejoindre MM. Baddeley et Hamel, ce jour-là, Jacob Duchesne continua à nous faire part de ses observations. Il n'avait pas visité lui-même la Péninsule, mais les Sauvages disent que c'est généralement un pays uni, comme celui que l'on rencontre vers l'extrémité du lac Kenwangomi, et au pied du rapide, il y a quelques montagnes qui ne sont pas bien élevées. L'avant dernière année le vieux chef Thomas, qui avait été privé de son rang par la Compagnie pour quelque offense en fait de commerce, descendant vers la fin de Décembre du lac St. Jean à Chicoutimi, avec sa famille, s'arrêta à la baie Cushkouia sur le lac Kenwangomi, la glace n'ayant pas pris plus bas, et n'y ayant pas assez de neige pour aller à la raquette. Il se rendit de cette place à Chicoutimi avec ses deux fils, et retourna à la baie Cushkouia, chacun d'eux portant un sac de farine, et ils firent le voyage allant et venant, comme il en avait été informé, en cinq jours, et ils voyagèrent aisément. Le chef actuel Siméon est un grand marcheur : il peut partir le matin à la raquette de l'embouchure de la Grande Décharge, et se rendre sur la glace, à Chicoutimi, à 4 heures de l'après-midi du même jour. La route ordinaire se fait par la Belle Rivière et les Lacs, et prend trois jours ordinaires d'hiver. Une autre route d'hiver, est de traverser l'Île, à environ trois quarts de lieues de l'embouchure de la Belle Rivière, et d'aboutir à la pointe au Sable (Opowoka) faisant environ cinq lieues de pays tout-à-fait uni et bien boisé. Outre la principale décharge du lac Kenwangomi, il y en a une autre qui commence à une petite distance de la Pointe aux Sables et qui se décharge dans la grande à plus de la moitié de sa source. Il a été informé par Mr. Verrault qu'avant de se jeter dans la Grande Décharge, elle passe sous une montagne, et reparait à l'autre côté. Cette branche est navigable pour les canots, mais seulement le printemps. En entrant dans la baie Cushkouia, à la distance de dix à quinze arpens, nous tombâmes dans un petit lac, dont les eaux, après une course de cinq lieues, se jettent dans le lac Kenwangomishish, dans la partie supérieure de ce lac près du portage. L'hiver dernier deux Sauvages, Siméon et Nicolas, au retour de la chasse au Caribou et au Castor dans la Presqu'île, lui dirent qu'ils étaient descendus jusqu'à Cushkouia, et qu'ils n'avaient rencontré aucun lac, mais beaucoup de petites rivières. L'hiver dernier il avait été à une journée de marche du Poste, en marchant vers le S. E., traversant le Kuoshyish, ayant parcouru une distance de huit à dix lieues, et était revenu le même jour : le pays était uni ; les bois étaient le Merisier, le Frêne et l'Erable ; le pays au de là ressemblant aux autres parties aux environs du poste du lac St. Jean, qui ont l'apparence de montagnes lointaines, mais qui à l'approche offrent des collines et plateaux de terre, entrecoupées de belles vallées. Il y a à une lieue et demi, à la droite du poste, une sucrerie qui produit d'ordinaire sept cents livres de bon sucre.

Tout le rivage du lac St. Jean (Pca-Guawgomi) ce qui veut dire un lac dont le lit est peu profond) jusqu'à Koucouatimzelu (la rivière au Hibou), lat. 48° 37' 56", est un banc de sable d'un demi-acre à deux acres de large. J'ai monté ce matin une côte de sable très haute, et étant dessus j'ai eu une bonne vue de l'intérieur du pays, qui paraissait avoir une meilleure apparence ; cette opinion a été appuyée par les relations de MM. Hamel et Baddeley.

26 Août.—Mr. Baddeley ayant, à la demande de Mr. Stuart, joint le parti de Mr. Wagner, Mr. Hamel et moi après leur avoir souhaité à tous un bon voyage, montâmes à dix heures et demi la rivière Koucouatimi, dont les deux côtés étaient couverts de peuplier, de bouleau, de frêne, d'épinette et d'orme. Après avoir surmonté beaucoup d'embarras causés par des arbres tombés, nous réussîmes à faire une demi-lieue, et Mr. Hamel croyant inutile d'aller plus avant, nous primes terre chacun de notre côté, et nous pénétrâmes dans le bois environ un mille, ne trouvant partout qu'un sol sablonneux. Mes gens arrivés à un marécage, le traversèrent, et atteignirent une grosse roche, qui fut la borne de notre excursion ; le bois consistait en épinette blanche, sapin et peuplier. A mon retour au canot, je trouvai que Mr. Hamel avait rencontré la même espèce de terre : le terrain des deux côtés de la rivière, autant que nous avons avancé et pu voir, nous a paru uni. Depuis Koucouatim jusqu'à l'embouchure de la rivière Peribonea (la rivière curieuse) le bois est en général l'épinette noire, quelques peupliers, bouleaux, pins et cyprès ; le terrain est bas et marécageux, en ce que les eaux de source coulent sur les bancs de sable et restent stagnantes dans les trous.

27 Aout.—John Young, un de nos voyageurs, a été dix huit mois au service du poste de Chicoutimi : ce printemps il a été, de compagnie avec un autre homme, à la baie des Ha Ha (ce qui veut dire perspective s'ouvrant) et nous avons pénétré dans les bois environ une lieue, et nous avons trouvé un bon sol. Il me dit qu'il y avait trois rivières qui se jetaient dans la baie presque au même endroit ; que vis-à-vis le poste de Chicoutimi il y a un vieux chemin d'environ neuf milles de long ; il n'y a pas de hauteurs, mais il y a un marécage d'environ une demi lieue, après quoi le terrain est bon ; le bois, le bouleau, le cèdre et l'épinette.

29 Aout.—Nous arrivâmes à midi et demi à l'embouchure de la rivière au Rat Musqué et à trois heures et demi à la rivière Peribonea, lat. 40° 42' 37". Nous la remontâmes l'espace de vingt milles, ayant eu à traverser trois portages ; le lac Noh-oui-loo formait les deux derniers milles : en général nous rencontrâmes un bon sol. Sur la rive droite du lac, nous montâmes la rivière au Rum ; le bois, bouleau, épinette rouge et blanche et quelques pins ; les rivages bas et couverts de franc foin, en grande abondance.

7 Sept.—Vis-à-vis l'embouchure de la rivière au Rat Musqué, nous entrâmes dans une autre, au nord-ouest, à laquelle nous donnâmes le nom de David, en l'honneur de Mr. David Stuart, un des commissaires, et nous en suivîmes le cours l'espace de huit milles et demi, au bout desquels nous fumes arrêtés par des rapides et un portage. Après avoir cotoyé les rivages du lac depuis l'embouchure de la rivière Peribonea, l'espace d'environ sept milles, nous entrâmes dans la rivière Mistassini, lat. 48° 38' 55", ayant à notre droite un groupe d'Iles, auquel je donnai le nom de mon vrai et excellent ami, Thomas Leigh Goldie. Nous montâmes le Mistassini l'espace de neuf milles. Cette rivière est belle par sa largeur, ses Iles et ses bois, mais le sol en est très mauvais, étant de sable de chaque côté, et elle a très peu de profondeur.

10 Sept. Nous traversâmes à l'Île aux Couleuvres Manitou-Ministuki, (l'Île du Mauvais Esprit) avec une bouteille pour conserver un des serpens, mais après les recherches les plus minutieuses nous ne trouvâmes pas même une peau, que ces animaux jettent tous les printemps. Non loin de celle-ci est une autre île appelée la Grosse Ile, et entre elles deux s'élève un banc de sable sur lequel se rencontrent deux ou trois arbres solitaires. S'il y a des serpens sur l'Île Manitou-Ministuki, la seule raison que je puisse donner pour n'en avoir pas vu un seul, c'est que le soleil étant presque sur l'horizon, ils s'étaient enfoncés dans leurs trous pour la nuit.

11 Sept. Nous ne fîmes pas grand chemin ce jour-là, n'ayant fait que nous rendre à l'embouchure de la rivière Ouiguatshouan, vu que je désirais crayonner la chute, l'ayant vue de l'autre côté du lac, et Mr. Hamel ayant pris sur elle différentes intersections. Après beaucoup de fatigue et de difficulté, en montant et descendant des côtes d'une hauteur peu considérable, nous arrivâmes au pied de la chute, mais malheureusement du mauvais côté pour la voir du point le plus élevé. Cependant nous eumes bientôt oublié nos fatigues en admirant la beauté de cette chute, qui rivalise celle de Montmorency en hauteur et qui la surpasse de beaucoup par la distribution des ses eaux sur les rochers suspendus dans sa descente. La chute est à environ un mille de l'embouchure de la rivière, dans laquelle distance on ne rencontre pas d'eau tranquille, c'est un rapide continu ; j'ai appris que plus haut que la Grande Chute au commencement du Portage, il y en a une autre de près de cent pieds de haut.

13 Sept. La pêche du poisson blanc commence à l'embouchure du Ouiguatshouan, vers le quinze Octobre ; l'année dernière il en fut pris 300 dans un seul jour, et dans toute la saison plus de 1700. On les fit geler et ils servirent à nourrir les gens du poste et les sauvages jusqu'au printemps suivant ; chaque poisson pesant sur le tout de 1½ à 2 livres. La saison pour l'Avenanish commence vers le quinze mai et va jusque vers le vingt ou la fin de Juin. On le prend ordinairement à l'hameçon, et le poids en est de deux à trois livres.

J'obtins les renseignements suivans de Mr. Murdoch, commis au Poste :

“ Je ne crois pas qu'il puisse naviguer plus de dix vaisseaux en sûreté dans le havre de Tadousac ; à basse marée on peut amener un vaisseau tout prêt du rivage, car il est coupé à pic. Aux mers du printemps le rivage est à sec, le plus haut que montent les marées du printemps et de l'automne est 18 pieds, et en été elles montent communément 12 pieds. Dans l'Anse à Catherine, il y a une distance de trois quarts de lieue, formée par la pointe ou batture aux Allouettes et la pointe du Saguenay ; c'est ce qui forme l'anse Ste. Catherine, et il y a en cet endroit trente brasses d'eau. Il peut y entrer en sûreté trente vaisseaux du vent d'ouest ; le flux de la mer poussé par un vent d'est y cause une houle assez forte. La batture de roche qui s'avance de la pointe au Bouleau, environ deux mille, forme une espèce de demi-lune, ouverte du côté de l'est. Dans les mois du printemps ces rochers sont entièrement couverts, mais l'eau y est toujours agitée ; au bout de ces rochers il y a une petite Ile de sable que l'eau ne couvre jamais, cette Ile et les rochers forment ce qu'on appelle la Pointe et Batture aux Allouettes. Les vaisseaux de ligne peuvent naviguer jusqu'à la Pointe de roche, qui est à quatre lieues de Chicoutimi. A basses eaux ils peuvent monter,

même contre le vent, avec le flux de la mer ; mais il n'y a pour eux que deux endroits de mouillage entre la Pointe Ste. Catherine et la Pointe de Roches, et la Baie St. Jean et la Baie Ste. Marguerite, le premier à six, et l'autre à cinq lieues de Tadousac. Il y a des hayes en grand nombre pour les goëlettes de soixante à quatre-vingts tonneaux, et si l'ancrage n'est pas bon, elles peuvent amarrer à terre. Les vaisseaux de 80 tonneaux peuvent à haute marée monter jusqu'à Chicoutimi et jeter l'ancre près de la Grosse Roche ; à prendre de la pointe aux Roches il faudra, à cause des rapides et des basses qui se trouvent dans cette partie de la rivière, qu'ils profitent de la haute marée. Le havre de Chicoutimi est à l'ouest de la Grosse Roche, vis-à-vis la place de débarquement ; ils peuvent lâcher l'ancre et tirer le vaisseau à sec. Au dessus de la baie Ste. Marguerite le courant de la marée se fait à peine sentir dans les grandes mers du printemps et de l'automne. La mer monte jusqu'au pied de la chute des Terres-Rompues, qui est environ deux lieues au dessus de Chicoutimi, elle monte environ quinze pieds. La Grosse Roche est au moins de douze pieds de haut, et j'y ai vu l'eau à trois pieds au dessus. Je calcule la distance entre le poste de Chicoutimi et le poste dit lac St. Jean, par eau en canot, de vingt-trois à vingt-cinq lieues, et je considère la terre comme excellente entre ces deux places, excepté le côté ouest du lac Kenwangomi, qui est inégal et rocheux. Les bois qui y dominent sont, le sapin, l'épinette, le peuplier, l'orme et beaucoup de frêne, un peu de pin rouge, et presque pas de blanc. Le bouleau est celui qui s'y trouve en plus grande abondance ; on rencontre tout le long une grande quantité de bouleau noir ou à canot, et quelques érables et cèdres épars ça et là ; il n'y a presque pas de cyprès, si ce n'est lorsque vous arrivez à Koushigan, place où le sol s'élève. Les poissons les plus abondans entre Chicoutimi et Koushigan sont, la truite rouge, le watouche ou le brochet, la carpe et le doré, les deux derniers ne se trouvent que jusqu'à la chute de la Belle Rivière, la truite rouge dans le lac Kenwangomi et au Portage de l'Ilet, et en petit nombre dans le lac Wèque et le lac Kenwangomi ; le brochet et la carpe sont en grande abondance dans les deux derniers lacs. J'ai entendu dire qu'il y avait des éparlans dans le Lac Vert, mais je n'en ai jamais vu. Je crois qu'un vaisseau de soixante tonneaux peut naviguer dans le lac Kenwangomi, ayant tout lieu de supposer qu'il y a grande eau dans le milieu et le côté ouest. Le lac St. Jean est navigable pour un vaisseau plat de trente à soixante tonneaux. Les poissons qui y abondent sont, le brochet, la carpe, le doré, le poisson blanc, l'avenanish, le chabot, et un poisson appelé la munie, ressemblant en couleur à l'anguille, au chien de mer par la forme, à la morue par la tête, mais beaucoup plus plat, de la longueur moyenne de deux pieds et demi ; les sauvages l'aiment beaucoup bouillie, mais les blancs ne s'en nourrissent pas du tout, excepté du foie, qu'ils regardent comme un morceau friand ; on s'en sert aussi pour appâter pendant l'été. Je considère l'avenanish comme le meilleur poisson d'eau douce que j'aie jamais vu. Le lac St. Jean est très exposé aux vents du nord-ouest et du sud-ouest, qui poussent une violente houle sur le côté opposé. J'ai vu le lac, l'automne, dans cet état, et il y aurait eu un grand danger à le traverser, même de l'impossibilité vu le brisement des vagues. A l'abri du vent il n'y a pas de mers à une certaine distance, selon le point d'où donne le vent ; mais j'ai vu le lac ne présenter qu'une nappe d'écume.

“ Entre Chicoutimi et le poste du lac St. Jean, il y a une différence de 20 jours dans le climat. Je partis de Chicoutimi, l'automne dernier, vers le vingt-trois Septembre, et déjà les patates, les choux et les onions y étaient frappés de la gelée ; et étant arrivé au poste du lac St. Jean, je trouvais mes patates encore tout en fleurs : elles restèrent ainsi jusqu'au douze Octobre, que je les arrachai. Je crois que cette différence vient de la situation basse du terrain, et du voisinage de l'eau salée, à Chicoutimi. Tout ce qui pousse aux environs de Québec, vient ici, (au lac St. Jean,) même les melons ; j'en avais de ces derniers, mais les vers ont détruit les jeunes plantes. On ne peut passer en sûreté sur la glace du Lac St. Jean avant le dix Janvier : elle commence à se former sur le lac vers le dix Novembre, et à le couvrir entièrement vers le commencement de Janvier ; mais elle n'est pas praticable dans le même temps à cause des vents qui règnent alors. L'année dernière nous avons eu la première gelée le dix-sept octobre. Le lac est navigable tout au tour, mais pas au milieu, vers la fin d'Avril, et partout vers le huit au douze Mai. La terre sera en état de culture avant que le lac soit débarrassé, et dégelée à un pied au moins vers le premier Mai, jour auquel j'ai semé des pois ce printemps. J'en avais semé dix gallons, et j'en ai récolté plus de dix minots ; l'humidité de la saison a fait perdre environ le tiers de la moisson ; ils étaient prêts à être moissonnés le premier Septembre. La femme en nettoyant les pois pour la soupe, a amassé un demi-setier de froment, que, par forme d'expérience, j'ai semé le sept Mai ; je l'ai coupé le huit Septembre et il m'a donné un bon demi-minot de Winchester. Mr. Wagner prit au hasard deux épis de ce blé, et trouva que l'un avait quarante et un et l'autre quarante six grains. La paille avait poussé environ à la hauteur de quatre pieds. Le trois ou quatre de Mai j'ai semé un demi-minot d'orge, qui ayant été récolté, &c. le cinq Aout, a rapporté entre cinq à six minots. Une chopine de blé d'Inde semé le dix Mai, m'en a rendu au moins dix gallons ; une grande quantité avait été détruite par les vers : tous ces grains semés sans engrais. Je commençai à semer mes patates le dix et je finis le treize Mai, huit minots que je n'ai pas encore arrachés. L'année dernière la même quantité en tas m'a rapporté trois cents minots, il ne faut pas tant de semence qu'en rangs ; cette année c'est en rangs ; l'année a été très défavorable pour les moissons en général.

Appendice
(V.)
14 Janvr.

“ La Seigneurie de Port-Neuf et celle de la Baie des Mille Vaches sont de terres excellentes ; dans la dernière on peut recueillir du foin pour au moins mille têtes de bétail, ce serait une bonne ressource pour des colons dans les commencemens de leur établissement, pour la nourriture de leurs bestiaux : la nature a presque tenu la terre en état de défrichement tout le long de la Baie, le bois est de bonne pousse, pin blanc et épinette. Du côté Est de la Baie le pays est plat jusqu'à une distance considérable, neuf lieues au moins, et il y a au fond de la Baie un ruisseau qui pourrait faire marcher un Moulin de six Scies et un Moulin à farine ; la Baie est très abordable pour de petits bâtimens.— Port-Neuf a un harre excellent, mais il n'y a que les petits vaisseaux qui puissent y entrer à haute mer seulement. Le sol y est aussi bon qu'à Mille Vaches, mais il est plus élevé, et le bois en est d'une qualité inférieure. Les deux Seigneuries sont contiguës et forment ensemble un front de six lieues sur quatre de profondeur. Il passe près de la maison une rivière qui forme le havre, protégé au Sud par un haut banc de sable, qui ne se couvre pas à haute mer.

14 Septembre.—A l'embouchure de la Petite Décharge, (Cushpetunish.) Mr. Hamel traversa sur l'île, tandis que John Young et moi nous descendîmes à côté du Rapide sur les rochers, jusqu'au lieu que nous nous imaginions être le confluent des deux décharges, qui se joignent à une petite distance de l'embouchure de la Petite Décharge ; là elles forment un petit Lac, de la grandeur du Lac Wéque à l'extrémité Ouest du Lac Kenwangomi. A notre retour au canot, nous nous enfonçâmes en ligne droite dans les buissons, et nous y trouvâmes des roches presque partout ; les bois sont, le pin, l'épinette, le cèdre (très petit,) et quelques bouleaux. L'île est petite, étant à peu près de la grandeur des autres qui se trouvent à l'embouchure des deux décharges, y ayant environ quatre milles de distance entre les deux extrémités. Toutes les îles de cette partie du lac sont rocheuses, et le bois y est mêlé. En vérité l'espace qui sépare les deux Décharges n'est qu'une réunion d'îlots ; tout le groupe occupe un espace d'environ cinq milles de long. Messrs. Baddeley et Hamel les honorèrent du nom d'îles de Dalhousie.

15 Septembre. A notre retour à Chicoutimi, nous entrâmes dans un lac situé à gauche de Kenwangomishish, que Mr. Hamel me fit l'honneur d'appeler de mon nom ; le pays des environs est plat et le sol bon ; bois, sapin, bouleau noir, quelques blancs, et quelques épinettes, orme et frêne. Nous entrâmes dans la baie des Prisonniers à notre gauche, dans le lac Kenwangomi, à trois heures et demi ; nous remontâmes la rivière Baddeley l'espace de sept milles ; cette rivière sort du Lac Young. Les bois les plus communs sur les différens rivages sont, le bouleau blanc, noir et gris, le sapin et l'aune.

16 Septembre. J'employai la nuit de ce jour à recevoir de John Young les renseignemens suivans, sur les productions et le climat de Chicoutimi :

“ Mr. Nicolas Andrews, commis au Poste de Chicoutimi, planta au commencement de Mai de l'année dernière, aussitôt après les dégels, onze minots de Patates ; elles furent arrachées à la fin d'Octobre, et en produisirent cent vingt-sept quarts, malgré que les Cochons en eussent détruit une grande quantité. On m'a dit que du temps de Mr. McLeod, il y a environ sept ans, on es-aya avec succès le Blé d'Inde, l'Avoine et les Navets ; les Concombres viennent très bien. Ce printemps je semai dans le jardin des bettes-raves, des oignons, des carottes, des raves et des concombres ; et tous sont venus à maturité. Il gèle toujours dix ou douze jours plutôt à Chicoutimi qu'au Lac St. Jean. L'automne dernier, lorsque je partis de Chicoutimi, vers la mi-Septembre pour me rendre à Assuapmousoin, les têtes de patates étaient toutes gelées. Cinq jours après je passai au Poste du Lac St. Jean, et elles y étaient aussi vertes que dans le mois de Juin. Je regarde la différence du climat comme venant de la proximité de l'eau salée à Chicoutimi. A Chicoutimi, trois ou quatre jours après que la gelée a laissé la terre, vers le cinq ou le six de Mai, on peut se mettre aux travaux de la culture ; la terre qui est à l'entour est excellente pour la culture. Les gelées deviennent régulières vers la fin d'Octobre. Il n'y a pas grande différence entre le climat de Québec et celui de Chicoutimi. Le Saguenay prend jusqu'à Ste. Marguerite ; le pont est généralement bon, excepté vis-à-vis les terres à foin à une lieue et demi de la maison : il est dangereux à cause des rapides, et en passant sur la glace, il faut prendre garde aux trous des Loups-Marins. Je considère comme excellent tout l'espace de terrain entre Chicoutimi et le Poste du lac St. Jean, excepté celui du lac Kenwangomi qui est rocheux ; sur ce lac on trouve de l'Épinette, du Bouleau blanc, quelques Pins rouges et blancs et quelques Sapins, jusqu'à ce qu'on arrive aux Aunes, où l'on rencontre de l'Orme, du Frêne, de l'Épinette, du Sapin et quelques Pins épars ça et là ; mais je crois que le meilleur terrain est sur la Belle Rivière.

“ Jusqu'où nous avons remonté la Rivière Perebonca, dans le Lac St. Jean, nous avons trouvé de bonne terre pour la culture. J'ai fait plusieurs voyages au Poste d'Assuapmousoin ; la terre y est basse et marécageuse ; dans les quinze premières lieues il y a quelques terres moyennés, mais de là jusqu'au Poste le pays est montagneux ; la rivière est un rapide continu, tout blanchi d'écume.

“ Ce printemps le Saguenay a été navigable jusqu'à Chicoutimi le dix-huit Avril ; et l'on considérerait cela comme une saison tardive. La navigation se ferme vers Noël, selon le temps que donnent les hautes mers.”

18 Septembre. Après avoir laissé la Pointe au Sable, nous tournâmes à notre gauche pour entrer dans la Rivière Pastagousie, qui nous conduisit dans une suite des plus beaux lacs, dont l'un d'une grandeur considérable, auquel je donnai le nom de Mr. Hamel. Nous poursuivîmes notre route jusqu'aux rapides, à six milles du lac Ken-

wangomi, le bois est à peu près le même. Nous rencontrâmes une rivière si obstruée de joncs que nous ne pûmes pénétrer bien avant avec notre grand canot.

A cette Saison il n'y a pas assez d'eau pour faire flotter un aussi grand canot que le nôtre, et ce fut avec beaucoup de difficulté que nous pasâmes les rapides. Pour des expéditions de cette sorte, je recommanderais de prendre, outre le grand, un plus petit canot, ce qui rendra les Portages plus faciles à passer et les recherches plus aisées à faire.

Le sol était bon, mais rocheux, mais en morceaux détachés. Avant de partir de Kenwangomi, nous passâmes une décharge considérable partant du lac qui, m'a-t-on dit, conduit par des rivières et des lacs à la Baie St. Paul.

20 Septembre. Nous partîmes du Poste de Chicoutimi à une heure et demi, et nous arrivâmes à un endroit où deux rivières se réunissent en bouillonnant ; la difficulté de monter la rivière en canot, ou de le porter par dessus une montagne extrêmement escarpée nous obligea de nous consulter ensemble et à renvoyer au Poste la plus grande partie de nos provisions et deux de nos hommes, tandis que Mr. Hamel, Natash, (le guide sauvage,) Gill, Young et moi entrerions dans le bois dans la direction de la petite rivière, qui sort du lac Kenwangomi et tombe dans la décharge. Nous gravâmes la montagne, vîmes un plateau d'une étendue considérable ; du sapin très petit, de l'épinette blanche, du bouleau blanc et du peuplier composaient le bois ; comme nous montions en canot nous vîmes de chaque côté de nous de bonne terre pour le défrichement. Jusque là les rapides sont magnifiques et impraticables pour les canots, de quelque grandeur que ce soit.

21 Septembre. A dix heures A. M. nous atteignîmes au sommet d'une hauteur à quatre cents pieds au dessus du niveau de l'eau, et de là nous vîmes une Chûte dont il y avait quelque temps que nous entendions le bruit. Nous rencontrâmes ensuite six chûtes successives ayant l'une avec l'autre dix pieds de hauteur ; la plus haute d'entre elle est coupée si perpendiculairement, qu'on peut passer dessous sans être incommodé. De là nous montâmes à la Grande Chûte qui a environ deux cents quarante pieds de haut, et nous en fîmes le dessin. Dans les eaux hautes du printemps, elle doit être réellement magnifique. La rivière s'appelle Pastagoutsi :

Je crois véritablement que ces chûtes se faisant entendre au loin dans le printemps, étant proches du Saguenay, et les Sauvages assurant qu'il n'y avait pas de grandes chûtes dans la rivière, mais seulement une suite de grands rapides, ont donné lieu à la renommée des fameuses chûtes du Saguenay que tout le monde avait entendues, mais que personne n'avait vues. Le terrain sur lequel nous passâmes est rocheux, mais où il y a du sol c'est un terrain bien fin : le bois, bouleau noir et gris et quelques pins, épinettes, beaux cèdres, épinettes blanches, et dans un endroit nous passâmes dans une grande Sucrerie de petites érables. Nous continuâmes à suivre le cours du Pastagoutsi jusqu'à une heure, et alors étant satisfaits de ce que nous avions vu du sol, nous prîmes la direction du Beau Portage, nous passâmes sur une plaine d'une bonne étendue ; nous essayâmes le sol en trois différens endroits, une fois dans le bois mêlé, une autre dans une épinettière, et la troisième fois dans une sapinière, et partout nous trouvâmes un sol bon pour la culture, mais le terrain des épinettières avait besoin d'être asséché. A environ un quart de mille du lieu où nous avions campé, il y a un grand bocage de bouleaux blancs d'une très haute pousse ; le terrain y étant soudé se trouva être sablonneux. Nous passâmes ce jour là quatorze ruisseaux d'une eau excellente.

Jusqu'à présent je n'ai encore rencontré aucun bois, qui pût empêcher un bon bucheur d'en abattre et d'en mettre en tas six ou sept acres par mois. Parlant à Natash des Chûtes du Saguenay, elle dit qu'il n'y en avait aucune, mais seulement une suite de très grands rapides, et qu'elle n'avait jamais entendu aucun Sauvage en parler ; elle est âgée de plus de 50 ans. Elle me dit qu'il y a sur la même rivière des Chûtes plus hautes que celles que nous vîmes bien ; que le nom sauvage du lac, auquel j'ai donné le nom de Mr. Hamel est Assinigaashlets (un rocher qui est là,) mais toute la rivière, depuis le Lac Kenwangomi jusqu'à sa jonction avec le Saguenay, garde le même nom ; il y a six portages, deux très longs, l'un d'eux plus long que l'autre, les quatre autres plus courts. Sur la rive gauche de la rivière il y a de longues pointes et pas de côtes ; où nous arrivâmes le dix-huit était la hauteur des terres, d'où les rapides commencent et continuent sans interruption. Sur le pied de la marche d'un blanc, il faudrait six jours pour aller au lac Kenwangomi en suivant la rivière, jusqu'à l'endroit où elle se décharge dans le Saguenay.

Nous essayâmes le terrain dans une buissonnière mêlée, et nous trouvâmes du sable mêlé d'une terre jaune ; une heure après nous arrivâmes à un marécage étendu que nous passâmes, et nous fûmes de retour au Poste de Chicoutimi à deux heures, ayant passé pendant le jour quinze ruisseaux.

23 Septembre. Ce soir Mr. Corneau me donna un plan du pays entre Chicoutimi et son Poste à Shippashaw. Je n'ai rien oublié des renseignemens qu'il donna, et je les ai marqués sur le plan. Il me donna aussi les noms de divers lacs et Rivières, qui ne sont pas sur la Carte que Mr. Perrault laissa au Poste du Lac St. Jean, pour Mr. Stuart.

La maison du Poste de Chicoutimi fut bâtie en 1794 et 1795. A la distance de 170 pieds du rivage est une roche de 11 pieds de haut, et la mer monte 5 pieds au dessus ; c'était, il y a quelques années, un amusement favori des gens du Poste, de sauter dessus ; la rivière a fait cet empiétement depuis les quarante années dernières.

Escrivaire, 65e. Rég.

A ANDREW STUART et DAVID STUART, Ecuyers, Commissaires pour l'exploration des Terres du Saguenay, Lac St. Jean, &c. &c.

Appendice
(V.)
14 janvier.

Messieurs,

AYANT eu l'honneur d'être employé comme Arpenteur sous vos ordres, dans l'expédition du Saguenay je m'empresse de vous faire rapport de l'emploi de mon tems dans les visites et opérations que j'ai faites suivant mes instructions de la partie droite du Lac St. Jean, des Rivières tributaires, des Décharges et de la Presqu'île formée par la décharge du Lac d'un côté et par la Rivière Chicoutimi, les Lacs, la Belle Rivière et la rivière Kuspahigan de l'autre.

J'ose me flatter que vous voudrez bien me pardonner les expressions et citations mal digerées qui ne seront malheureusement que trop communes dans le cours de mon Journal. Néanmoins je m'efforcerai à vous rendre mon Rapport aussi intelligible que possible, et à vous indemniser par des faits authentiques, lesquels seront j'espère corroborés par mes deux Honorables Compagnons de Voyage, M. M. Baddeley et Nixon, pour l'éloge des quels, ma plume étant trop stérile, je m'abstiendrai de détailler les peines qu'ils se sont données pour se rendre utile à l'expédition, même dans les recherches les plus minutieuses, comme vous pourrez voir par leur rapport. Espérant que vous voudrez bien m'accorder l'indulgence désirée, je prends la liberté de me souscrire ;

Messieurs,

Votre très dévoué, &c.

J. HAMEL, Arpt.

EXPEDITION DU SAGUENAY

Lac St. Jean, &c. &c.

Journal tenu par Joseph Hamel, Arpenteur.

MERCREDI 6 Août 1828. Ayant fait embarquer notre butin hier au soir à bord de la goëlette La Clarisse, commandée par Augt. Dechêne de la Rivière Ouell, du port de cinquante-trois tonneaux, et ayant reçu ordre de me rendre de bon matin pour embarquer, je me rendis sur le quai à cinq heures et demi et y trouvai Mr. Baddeley qui attendait. Bientôt après Messrs. Stuart, Wagner et Bowen arrivèrent, puis enfin Mr. Nixon ; et aussitôt après, nous embarquâmes, et l'ancre fut levée à sept heures et trois quarts A. M. Nous trouvâmes à bord cinq Voyageurs et deux canots destinés pour l'expédition : elle était composée comme suit :

Andrew Stuart, Ecuyer, Commissaire, F. H. Baddeley, Ecuyer, Lieut. R. E. Mr. Henry Nixon, Lieut. 66e. Régt. Benedict Paul Wagner, Ecuyer, Mr. Ed. Bowen et moi.

Voyageurs.

Guillaume Gill,
Grégoire Laneuville,
Alexis Boisvert,
Noël Paquet,
Joseph Béland.

Le vent étant de l'est, il nous fallut louvoyer tout ce qui nous restait de marée, et nous parvîmes à l'ancien chantier du Trou St. Patrice (Patrick's Hole) à trois lieues au bas de Québec, sur l'île d'Orléans, où nous débarquâmes à onze heures et un quart A. M. Des provisions furent débarquées et nous dinâmes à deux heures sous le hangard du chantier, qui est maintenant abandonné. A quatre heures P. M. nous reçûmes ordre d'embarquer et à quatre heures et un quart nous le fîmes, toujours vent contraire ; à cinq heures notre goëlette fut hélée par une chaloupe, aussitôt le capitaine amena dans le vent, puis la chaloupe approchant, nous reconnûmes que c'était Mr. Proulx, l'un des Arpenteurs de l'expédition que nous avions laissé à Québec le matin, à 7 heures. Comme la goëlette n'était qu'à demi lestée, le vent augmentant, et étant vis-à-vis de l'église de St. Jean Ile d'Orléans, il fut jugé convenable de relâcher au havre de la Rivière Lafleur, un mille et demi plus haut, où nous débarquâmes vers neuf heures et logeâmes chez la veuve P. Pouliot.

Jeudi 7 Août. Le vent est du même côté et aussi fort qu'hier, en conséquence ne pouvant partir, je pilotai après déjeuner Messrs. Baddeley, Nixon et Bowen à travers les champs sur les terres des nommés Lachance et Blouin en recherche de minéraux et végétaux ; nous nous rendîmes jusqu'au bois, distance d'environ deux milles, puis nous retournâmes avec quelques succès de part et d'autre et arrivâmes au logis à onze heures et demie A. M. A midi Mr. Baddeley et moi prîmes la hauteur méridienne du Soleil à la porte de notre logis, i. e. chez la veuve Pouliot, et trouvâmes que la latitude était 46° . 53'. 40'', nord. Vers

quatre heures le vent ayant diminué et la marée commençant à basser, on embarqua, et toujours en louvoyant nous parvîmes au havre de la Grosse Ile, où nous débarquâmes vers neuf heures P. M. et y couchâmes assez à notre aise.

Vendredi 8 Août. Nous mîmes à la voile vers cinq heures A. M. avec un vent favorable et vîmes jeter l'ancre à un mille et demi au sud-ouest du Saguenay et à environ trois milles de terre, où il nous fallut passer la nuit.

Samedi 9 Août. Mis à la voile de grand matin pour entrer dans le havre de Tadousac, avec un très petit vent d'ouest, lequel ayant manqué, nous fîmes transportés par les courants près de l'île Rouge, où il fallut mouiller à sept brasses d'eau, et à environ douze milles de terre. A dix heures A. M. remis à la voile avec un joli vent d'ouest qui nous transporta dans deux heures à Tadousac ou nous arrivâmes trop tard pour prendre la hauteur méridienne du soleil. Mr. Brownson, Garde-Côte, vint à notre bord avant notre débarquement et rendus au poste il nous reçut assez poliment. Je commençai aussitôt à lever le plan du Poste et du havre de Tadousac et ne finis cette opération qu'après le coucher du Soleil.

Dimanche 10 Août. Occupé toute la matinée à recevoir les provisions destinées pour le Canot no. 2, lequel ne pouvant porter autant, on fut contraint d'en mettre une partie dans la chaloupe destinée à mener le parti formant l'expédition à Chicoutimi. A une heure le parti embarqua dans la chaloupe commandée par Mr. Brownson, et très encombrée de butin, le vent dépendant de l'est, nous mîmes à la voile en entrant dans le Saguenay, mais malheureusement il nous manqua à trois milles et demi de son embouchure, ce qui nous empêcha de doubler le cap de la Boule sur la rive gauche du Saguenay et vis-à-vis duquel les courants sont très forts ; nos deux canots néanmoins le doublèrent et furent camper à une très petite distance de là, tandis que nous fûmes contraints de camper misérablement dans l'anse au-dessous, où n'ayant qu'une petite hache et du bois vert, nous passâmes une très mauvaise nuit, la pluie tombant du nord-est en abondance.

Lundi 11 Août. Les canots étant inquiets de notre sort, vinrent nous trouver vers neuf heures et Mr. Proulx s'embarqua dans l'un d'eux. Nous laissâmes sans regret notre camp à dix heures a. m., la mer commençant à monter avec un petit vent d'est ; après avoir été à la voile toute la journée, nous vîmes camper à environ vingt milles de l'embouchure du Saguenay, dans une baie qui fut nommée par la suite Bay of Comfort, y ayant trouvé assez de bois sec pour nous faire entretenir un bon feu toute la nuit.

Mardi 12 Août. Le vent était à l'ouest, nous embarquâmes à neuf heures contre le vent et la marée, et débarquâmes à midi pour prendre

Appendice
(V.)
14 janvr.

une altitude méridienne, mais il était trop tard. A midi trois quarts, nous rembarquâmes et à deux heures p. m. nous entrâmes dans une baie sur la rive gauche, vis-à-vis la rivière de la Trinité, qui fut nommée après Half-Way Bay, i. e. à trente six miles de Tadousac suivant le calcul des Voyageurs, mais qui devrait être réduit d'au moins 15; si non 14. Mr. Baddeley et moi nous nous occupâmes jusqu'à onze p. m. à prendre diverses observations, puis embarquâmes pour faire route, et avons de cette marée gagné la Descente de la Femme, distante d'environ seize milles au dessus de Halfway bay.

Mercredi 13 Août. Avant d'embarquer Mr. Baddeley et moi nous primes la hauteur méridienne du soleil et trouvâmes que la latitude était $48^{\circ} 22' 9''$ nord. A trois heures et demi doublé le cap à l'est. A cinq heures et un quart la mer ayant déjà baissée près d'une heure et le courant étant très fort contre nous, nous entrâmes dans une Baie (Bear's Cove), sur la rive droite du Saguenay pour y camper. A sept heures et demi p. m. Mr. Proulx arriva avec les deux canots; à neuf heures comme nous étions occupé Mr. Baddeley et moi à faire diverses observations le temps se couvrit et bientôt après il tomba une forte orage qui fut suivie de pluie régulière, qui dura toute la nuit. Vers onze heures nous fumes informés qu'un petit canot appartenant à Mr. Brownson, et dans lequel il y avait un baril de Rum avec les pieds de boussole de Mr. Proulx était parti en dérive. Les deux autres canots furent envoyés à la recherche de celui-là sans succès.

Jeudi 14 Août. Nous partimes d'ici à cinq heures et demi a. m. à la rame et à sept heures un quart mîmes à la voile avec un petit vent favorable, remîmes à la rame vers onze heures, débarquâmes vers une heure p. m. à environ un mille et demi au bas de Chicoutimi pour nous y rendre à pied, étant tous mouillés par la pluie régulière d'aujourd'hui. Nous y arrivâmes enfin à deux heures p. m. et fumes très bien accueillis par Mr. Andrews, Commis du Poste, lequel mérite à tous égards les plus hautes louanges pour l'attention qu'il a portée à l'expédition, et ce serait manquer de reconnaissance par chacun de nous en particulier de ne pas le lui témoigner publiquement. Une heure après notre arrivée, le canot qui s'était échappé dans la nuit précédente fut ramené au poste par Guillaume Gill et deux autres voyageurs, qui dirent l'avoir trouvé à environ six milles au dessus d'où il était parti et sur la rive opposée; il était parti du montant, ce qui donne une forte indice du pouvoir de la marée à onze milles du bas de Chicoutimi! Mr. Baddeley et moi passâmes la veillée à épier le passage de plusieurs étoiles, mais ne fumes pas plus heureux cette nuit que les trois précédentes, en raison que l'atmosphère se couvrait de nuages avant leur passage.

Vendredi 15 Août. Je fus occupé à faire préparer les provisions et bagage pour partir le lendemain pour le lac St. Jean, par la rivière Chicoutimi &c, suivant l'arrangement que Mr. Stuart venait de faire; que je partirais dans le canot No. 2 avec Mr. Baddeley qui en aurait le commandement; que nous nous rendrions immédiatement au Lac St. Jean, et que commençant nos opérations du côté droit du lac, nous explorerions toute cette partie du lac entre la Grande Décharge et la rivière Assuapmousoin, où doit se rendre le Député Arpenteur Général; mais si par hasard il n'y fut pas encore parvenu, nous continuerons jusqu'à sa rencontre. Mr. Stuart devait monter au lac St. Jean, dans un petit canot avec Mr. Brownson; Mr. Proulx devait explorer la baie des Ha-Ha et Messrs Wagner, Nixon et Brown dans un grand canot explo-reraient la Presqu'île formée par la Grande Décharge, la Rivière Chicoutimi, les Lacs, &c. &c. Pris aujourd'hui la hauteur méridienne du soleil et trouva que la latitude de Chicoutimi était de $48^{\circ} 24' 37''$ Nord.

Samedi 16 Août. Nous fimes passer dix pièces dans le Portage de Chicoutimi long de deux milles, et reçumes nos instructions par écrit, mais nous ne pumes partir en conséquence de la pluie qui tomba dans la matinée.

COPIE DES INSTRUCTIONS.

Instructions to Mr. Baddeley and Mr. Hamel.

You are requested to proceed to lake St. John, entering that lake by the Belle Rivière, and in the first instance to make an exploring Survey of the country lying between the Grand Outlet of that lake and the river Assuapmousoin.

If the Deputy Surveyor General should not then have reached that river, you are requested to continue your exploring survey until you shall meet that Gentleman with his party. Your return will be either by the Grand Outlet or by the Belle Rivière as you think best. Another party being employed to survey the Peninsula lying between the Belle Rivière and the Lakes on the one side and the Grand Outlet on the other, all the objects of the mission will be attained without your descending the latter stream. You are furnished with a letter from the sub-lessee of the Posts to the Clerks in charge, which will entitle you to any assistance that you may require from them.

Chicoutimi 16th Aug. 1828.

(Signed) A. STUART,

Commr

Dimanche 17 Août. Une partie de notre bagage ayant été passée hier, nous nous considérâmes comme en route et nous eumes aucun scrupule de faire passer le reste et partir. Nous laissâmes donc Chicoutimi à midi et Messrs. Nixon et Bowen vinrent nous accompagner jusqu'à notre embarquement. Nous embarquâmes vers une heure et demie avec trois voyageurs, Guillaume Gill, John Young et Alexis Boisvert. A quatre heures et demie en passant le portage des Chiens, nous rencontrâmes deux Canadiens, deux Sauvages et une Sauvagesse venant d'Assuapmousoin, à cinq heures et demie nous étions au bout du portage de l'Enfant où nous campâmes en conséquence de la difficulté que nous aurions éprouvée à trouver plus loin une place pour camper. La terre dans le portage de Chicoutimi est ou glaise bleue pure ou mêlée de sable et les bois sont pins rouges et cyprès, bouleaux, épinettes, sapins, &c. quelques pins blancs. Dans la partie de la rivière que nous avons montée aujourd'hui, les bois dominans sont épinettes et bouleaux, le terrain paroît uni et le sol, quoique léger sur les bords, cultivable.

Lundi 18 Août. Il plut toute la nuit; nous laissâmes notre camp à huit heures avant midi, et après avoir essuyé plusieurs orages, nous fumes contraints de camper à une heure au bas du heau Portage en conséquence de la pluie et craignant de gater nos provisions. Les bois dominans sont jusqu'ici sapins, épinettes blanches, bouleaux, trembles, quelques pins blancs et mérisiers. Le terrain paroît sablonneux; il plut tout le reste de la journée.

Mardi 19 Août. La pluie continua toute la nuit et le vent était nord-est. Vers dix heures le vent changea à l'ouest; à midi on était sur le Portage des Roches, où on trouva que la latitude était de $48^{\circ} 14' 38''$. En dinant il nous survint une orage et du tonnerre qui nous empêcha de partir avant trois heures et trois quarts p. m. Les orages étant fréquentes nous ne pumes aller plus loin qu'à la Pointe au Sable du côté nord du lac Tshinuagamitsh, jusqu'au portage de l'Ilet. Le terrain paroît très uni et propre à la culture, mais depuis ce portage jusqu'au lac Tshinuagamitsh il est inégal et rocailleux.

Mercredi 20 Août. Nous embarquâmes à sept heures et un quart; à huit heures et demie Mr. Baddeley et moi débarquâmes au côté nord du lac pour prendre des échantillons des rochers. A dix heures un quart nous étions vis-à-vis l'embouchure de la rivière Upikubatsh; ici on a trouvé du Felspar mêlé de fer magnétique; nous primes la hauteur méridienne du soleil qui donna ici pour latitude $48^{\circ} 16' 25''$. Nous arrivâmes à quatre heures au bout du lac, c'est-à-dire à la hauteur des terres. Nos voyageurs firent deux voyages dans le portage Tshinuagamitsh et nous campâmes sur le bord du lac Tshinuagamitsh, laissant un voyage à faire dans le portage pour le lendemain. Les bois sur les bords du lac Tshinuagamitsh sont bouleaux, cyprès et pins rouges de moyenne qualité, sapins, épinettes, et le terrain est de glaise mêlé de sable. Il y a sur les bords du lac Tshinuagamitsh ou nous sommes campés, des frênes et de l'épinette blanche. Le vent fut au nord-ouest toute la journée.

Jeudi 21 Août. Nous embarquâmes vers neuf heures a. m. A onze heures, entrâmes dans les joncs de la rivière des Annaies, nous dinâmes au portage des Annaies d'environ vingt cinq chaînes de long, puis rembarquâmes aussitôt; mais comme cette rivière est très étroite et sinueuse, et que les aunes la croissent en endroits, nous fumes contraints de débarquer Mr. Baddeley et moi, guidés par Gill, pour suivre le long de la rivière dans un sentier mal frayé. Nous arrêtâmes pour camper près de la Belle Rivière ou notre canot n'arriva qu'à sept heures. Il y a de beaux fonds tout le long de cette rivière, dont la terre est très bonne; les bois sont ormes, frênes auziers, aunes &c. tous bois propres à la bonne terre.

Vendredi 22 Août. Le vent était au sud-ouest; à cinq heures et demie, Mr. Baddeley et moi nous mîmes en route à pied et à six heures arrivâmes à la Belle Rivière; nous rembarquâmes à six heures trois quarts, et à sept heures et demie débarquâmes au portage de la Belle Rivière long de dix-huit chaînes; de ce portage, en descendant, la rivière prend le nom de Kuspahigan. Les courans de la Belle Rivière sont très réguliers jusqu'à la chute, mais ils sont beaucoup plus forts depuis le portage jusqu'au lac St. Jean. Le terrain est d'une qualité supérieure du côté droit des Rivières, depuis la rivière des Annaies jusqu'au lac. Il y a tout le long de la Belle Rivière de belles pointes couvertes d'ormes, frênes. La plus haute écore n'a pas plus de trente pieds de hauteur et dessus on y trouve des trembles, épinettes, sapins, quelques pins et bouleaux, et de chaque côté de la rivière Kuspahigan le terrain qui est de terre à grain (Loam) est bas et boisé en partie d'ormes, frênes et brossailles. Nous arrivâmes au lac St. Jean à midi, et nous y dinâmes. Nous fimes route ensuite pour la Grande Décharge, mais nous ne pumes y parvenir et fumes contraints de camper sur une des Iles, dont il y en a un grand nombre entre les deux Décharges, et les quelles nous nommâmes Dalhousie Islands. Ces Iles sont toutes de roc et incultivables. L'abondance de fer magnétique dont ces rocs sont composés rend la boussole inutile dans les environs; et parmi les échantillons que Mr. Baddeley prit sur l'Ile où nous campâmes, j'en découvris qui avaient une vertu polaire.

Samedi 23 Août. Le vent étant à l'ouest, nous embarquâmes à huit heures et demie et nous nous rendîmes à la rive nord de la Grande Décharge, à neuf heures et demie. Comme c'était ici où nous devions commencer nos opérations, nous y demeurâmes toute la journée et la nuit,

nuit, afin d'y prendre des observations astronomiques; je m'occupai de plus durant la journée à opérer trigonométriquement.

Dimanche 24 Aout. Nous nous mîmes en route vers onze heures, et à environ un mille et demi de notre point de départ nous trouvâmes un ruisseau que nous prîmes d'abord pour une rivière, mais l'ayant remonté pour environ un demi mille, nous reconnûmes que c'était vraiment un très petit ruisseau et que dans la crue des eaux le lac s'élevait jusqu'ici. En conséquence nous retournâmes; le côté droit de ce ruisseau est boisé de trembles, sapins, frênes et brossailles, et la terre est très propre au foin, mais le côté gauche dont les écores sont d'environ dix pieds de haut est sablonneux, et tient à la Savanne. Depuis le départ jusqu'à ce ruisseau, l'écore du lac haute de six à dix pieds est de sable, et derrière il y a une Savanne profonde d'environ un demi mille, mais qu'on ne peut traverser, parce qu'elle est inondée. Pourtant on découvre du grand bois d'épinette, &c. derrière. Nous continuâmes notre route et vinmes camper à trois quarts de mille de la Rivière Cocuathimi, et jusqu'ici la Savanne et les Ecores sont les mêmes.

Lundi 25 Aout. Le vent à l'ouest, et le lac étant trop agité, nous ne pûmes faire route. En conséquence je partis avec Gill pour reconnaître le terrain, et bientôt j'arrivai à l'embouchure de la Rivière Cocuathimi; alors je renvoyai Gill pour en informer Mr. Baddeley, afin que s'il était possible, il fit route, mais au lieu de voir arriver le canot, je vis venir à moi Mr. Baddeley et Mr. Nixon du parti de Mr. Stuart qui m'informèrent que ce dernier, avec les autres Messieurs de l'expédition étaient en route pour faire le tour du lac. En conséquence nous revînmes à notre camp, et il nous fallut y passer le reste du jour; nous ne nous attendions pas ni Mr. Baddeley ni moi au changement projeté par Mr. Stuart. Car ce Monsieur désirant que Mr. Baddeley fut visiter le terrain derrière la baie St. Paul, il jugea à propos de lui substituer Mr. Nixon, et cette nouvelle fut un coup de foudre pour moi, vu que nous sympathions si bien d'humeur; mais pourtant je n'eus pas raison de me plaindre après avoir connu Mr. Nixon.

Mardi 26 Aout. Nous mîmes en route chacun dans nos canots, comme suit: Mr. Stuart s'en retournant à Québec dans le canot de Mr. Brownson et trois Voyageurs. Messrs. Baddeley, Wagner, Bowen et Goldie, ce dernier du parti de Mr. Bouchette, en deux canots avec six Voyageurs, pour faire le tour du lac, puis retournant par Chicoutimi se rendront à la Malbaie et iront reconnaître le prétendu Volcan de la Baie St. Paul; excepté Mr. Wagner qui joindra Mr. Proulx et entrant par la rivière St. Jean, sortiront par la Rivière Malbaie. Dans mon canot Mr. Nixon remplace Mr. Baddeley avec quatre voyageurs; nous explorerons cette partie du lac jusqu'à l'embouchure de la rivière Assuapmoussoin, remontant toutes les rivières qui se rencontreront sur notre route, et ensuite nous visiterons la Presqu'île, formée par la Grande Décharge d'un côté et par la rivière Shikutimish ou Chicoutimi, les lacs Tshinuagamitsh, Tshinuagamitshish, la rivière des Aunaies, la Belle Rivière et la rivière Kuspahigan de l'autre. Nous nous laissâmes à l'embouchure de la rivière Cocuathimi, se donnant un cri d'adieux, et ne devant point nous rencontrer qu'à Québec. Nous remontâmes cette rivière jusqu'à environ un mille et demi de son embouchure ou là trouvant trop étroite et trop embarrasée pour aller plus loin, je pris parti de retourner. Mais auparavant, nous fumes Mr. Nixon et moi chacun d'un côté de la rivière avec deux hommes reconnaître le terrain, que nous trouvâmes sablonneux, couvert d'épinettes, sapins et trembles, et très peu propre à la culture. Nous nous rendîmes ce soir à la Pointe aux Couleuvres, distante de la Grande Décharge en suivant les sinués du lac d'environ onze milles, où nous campâmes.

Mercredi 27 Aout. Il me fut nécessaire de faire certaines protractions jusqu'à midi, ensuite je commençai le chainage d'une base à travers des brossailles, afin de m'assurer de la largeur du lac.

Jeu 28 Aout. Il plut jusqu'après dix heures. Je continuai ma base tout le reste du jour. La savanne continue toujours le long du lac jusqu'ici; le vent se mit à l'Est durant un orage qui eut lieu vers le soir, et il continua de ce côté une partie de la nuit.

Vendredi 29 Aout. Le vent fut à l'ouest et le temps très couvert; nous arrivâmes à l'un des bras de la rivière Peribouka à une demi heure après midi, et après avoir diné nous laissâmes une partie de nos provisions en cache, n'en prenant qu'une quantité suffisante pour monter une rivière (Musk Rat River) qui par sa largeur et sa profondeur ne devant pas nous mener loin et que nous croyons être la rivière Periboudraiche comme représentée sur la Carte de Panet. Nous joignîmes la rivière Peribouka vers trois heures après midi, ayant été contraint de débarquer à plusieurs reprises pour alléger le canot et le faire passer à travers les joncs qui abondent dans ce bras. On ne peut trouver de meilleure terre que celle de chaque côté de ce bras; elle est basse et complantée d'ormes, frênes et aunes, et une fois égoutée feraient des prairies superbes. Nous remontâmes dans le Pribouka environ quatre milles et demi et campâmes sur la rive gauche. Le terrain tout le long jusqu'ici est glaise mêlée de sable et très propre à la culture, et les bois sont épinettes, trembles, bouleaux, merisiers et pins blancs çà et là tous grands, mais d'une moyenne grosseur, (les pins exceptés.)

Samedi 30 Aout. Le vent à l'ouest ce matin, nous continuâmes notre route et fîmes trois portages dans la journée, le dernier avec beaucoup de

difficultés étant obligés de le faire sur des rochers escarpés. Le terrain est semblable jusqu'au pied du premier portage, mais du premier au quatrième portage où nous avons campé, il y a des Caps de roc d'environ cinquante pieds de haut. Les bois sont en général épinettes, bouleaux, quelques ormes et frênes. Le vent fut tantôt à l'est et tantôt à l'ouest toute la journée et le soir il était à l'est.

Dimanche 31 Aout. Le vent fut à l'ouest toute la journée et il fit beau temps. Nous fîmes laver notre linge et celui des hommes.

Lundi 1er Septembre. Nous continuâmes à remonter la rivière, et au bout du portage nous découvrimmes un joli lac parsemé d'Iles que nous nommâmes N-dha-ouiloo, surnom qu'Andrew Stuart Ecuyer, Commissaire tient de la Tribut Huronne, en sa qualité de Chef honoraire. Avant d'arriver au bout de ce lac sur la rive droite, nous entrâmes dans une jolie rivière large de trois perches à son embouchure, que nous remontâmes environ un mille, nous fumes contraints de retourner à cet endroit en conséquence de son peu de largeur, et qu'elle est embarrasée; elle fut nommée Rum par Gill, l'un de nos voyageurs, en raison de la couleur de son eau. Le terrain de chaque côté du lac et dans cette rivière est très bon, et le bois est en général épinettes rouges et blanches, bouleaux, sapins et pins, çà et là; rendu au bont du lac long d'environ quatre milles, nous trouvâmes une jolie chute dont Mr. Nixon prit la perspective, tandis que je passai le portage long d'environ vingt-cinq chaînes avec Gill et Boisvert, au bout duquel n'apercevant que rapides, je pensai ne devoir aller plus loin, tant parce que nous étions court de provisions que parce que nous pensions être dans la rivière Periboudraiche, laquelle devait être bien inférieure en largeur, &c. à la Rivière Peribouka. Le terrain et le bois m'ont paru semblables, i. e. aussi uni et bon qu'au bas des premiers portages et le long du lac. On vint camper au dessus des deux premiers portages, le vent étant à l'est et apparence de pluie.

Mardi 2 Septembre. Nous arrivâmes au lieu où nous avions laissé nos provisions en cache, à midi, tous mouillés, car il avait plu fort, toute la matinée, le vent venant de l'ouest. La pluie continua toute l'après midi.

Mercredi 3 Septembre. Comme John Young est très malade et n'a rien mangé depuis plusieurs jours, nous résolûmes, Mr. Nixon et moi de le mener au Poste de Métabetchuan; en conséquence Mr. Nixon partit de bon matin avec Gill et Boisvert pour ce poste. Je restai avec Terreau et m'occupai à protracter, &c. durant les quatre jours qu'il fut absent.

Jeu 4 Septembre. Il fit une pluie si terrible toute la journée le vent venant de l'est, que je n'en étais pas même à l'abri dans ma Tente.

Vendredi 5 Septembre. Il plut jusqu'à onze heures; époque où le vent changea à l'ouest.

Samedi 6 Septembre. Vent sud-ouest, beau temps, dans l'après-midi, comme je devenais de plus en plus inquiet de mon canot, je traversai avec Terreau le bois et la Savanne et me rendis près du lac, mais je ne pus le découvrir. Je remarquai en traversant la Savanne que si elle était égoutée, elle produirait du foin; car le franc foin y abonde. Vers huit heures après midi entendis un coup de fusil très éloigné, je pensai alors que c'était mon canot qui ne pouvait trouver l'embouchure de la rivière, je ne me trompai pas et je fis immédiatement tirer un coup de fusil, lequel ainsi que trois autres que je fis tirer en réponses aux leurs, ne fut point entendu par eux. Il arriva enfin à neuf heures un quart, et Mr. Nixon m'apporta une lettre privée de Mr. Stuart, avec quelques rafraichissemens. Il m'apprit que Mr. Bouchette avait fait le tour du lac et qu'il s'en retournait.

Dimanche 7 Septembre. Nous embarquâmes à sept heures et demie A. M. et passant par le lac nous visitâmes cette partie de la Rivière Peribouka qui est depuis le petit bras jusqu'à son embouchure, distance d'environ trois milles et un quart. Nous fumes visiter une Baie sur la rive droite de la rivière et vis-à-vis l'entrée dans le petit bras et nous y trouvâmes une jolie rivière, laquelle d'après les informations que j'en ai eues est la rivière Periboudraiche que nous nommâmes alors David River en mémoire de David Stuart, Ecuyer, l'un des Commissaires. Elle est d'environ dix chaînes de large à son embouchure et vient de l'est; nous la remontâmes jusqu'au premier portage, distance d'environ neuf milles et demi de son embouchure. Le terrain de chaque côté est généralement bas et quoique léger i. e. sable mêlé de glaise, il est passablement cultivable, les bois sont bouleaux, épinettes, pins, sapins, quelques ormes, frênes et saules. Je passai le portage long de six chaînes et aussi loin que je pus découvrir le bois me parut semblable, en conséquence nous résolûmes de retourner et vinmes camper où le parti de Mr. Baddeley avait campé le vingt six Aout, que nous reconnûmes par une inscription conçue en ces termes, "Exploring expedition encamped here on the night of 26th August 1828. God save the King. Lat. 48° 42' 37". Le vent fut à l'ouest toute la journée et vers quatre heures il se refroidit beaucoup.

Lundi 8 Septembre. Le vent était au nord-ouest et il y avait le matin grande apparence de pluie; à huit heures et demie nous embarquâmes comme il commençait à pleuvoir légèrement; à neuf heures et trois quarts

Appendice
(V.)
14 janvr.

quart la pluie ayant augmenté considérablement, nous entrâmes dans une petite rivière que nous nommâmes ensuite Boisvert, et où nous débarquâmes; dans l'après diner, nous avançâmes dans cette rivière environ un demi mille, et fumes contraints de retourner, parce qu'elle devenait trop étroite et trop embarrassée. Le tremble, l'épinette blanche et le bouleau sont les bois dominant, et le sol est un mélange de sable et glaise.

Mardi 9 Septembre. Nous embarquâmes à six heures et un quart après avoir marché près d'un mille à l'eau dans le lac pour alléger le canot, et nous entrâmes dans les Iles de Mistassini, d'où pour parvenir à la rivière, il nous fallut faire traîner le canot et marcher à l'eau, la plupart du temps. A une heure et demie, nous entrâmes dans la rivière Mistassini superbe par sa largeur, qui est d'au moins un mille et demi à cet endroit; mais quand au sol de chaque côté, il n'est que de sable, et les bois sont épinettes, cyprès et bouleaux, quelques ormes sur les bords; nous la remontâmes environ dix milles et n'apercevant aucun changement, nous prîmes la résolution de retourner, dans l'humble persuasion qu'elle n'était pas nommée à tort dans certaines Cartes La Rivière de Sable. Nous vinmes camper au lieu où nous avions laissé une partie de nos provisions en cache en entrant dans la rivière.

Mercredi 10 Septembre. A six heures et demie nous laissâmes notre camp des Iles de Sable ou Mistassini et vinmes déjeuner où Mr. Baddeley avait couché le vingt-sept d'Aout dernier, que nous reconnûmes par une Etiquette conçue en ces termes.

"Exploring party encamped here on the 27th August 1828—
"all well; Meridian alt. of a star Double angle 99° 37', index
"error + 22".

nous nommâmes cette Pointe Baddeley's Post Office, et nous la laissâmes à dix heures et demi. Bientôt après, nous entrâmes dans l'embouchure de la rivière Assuapmoussouin à travers de petites Iles couvertes de brossailles, et vers midi nous débarquâmes sur la rive droite de cette rivière un peu au dessous de l'île la plus avancée dans la rivière; tout le terrain depuis la Rivière Mistassini jusqu'à la Rivière Assuapmoussouin est sablonneux, et les bois sont en général épinettes, sapins, bouleaux, quelques trembles et pins çà et là. Nous dinâmes à cet endroit et comme le but de notre mission se trouvait rempli, pour ce qui regarde l'Exploration de cette partie du Lac, nous nous mîmes en route pour le Poste de Metabetchuan. A deux heures et un quart nous débarquâmes à la Pointe Bleue, sur laquelle on s'attendait de trouver des fruits de Cerises, Prunes, Framboises, &c. mais nous n'en trouvâmes que les arbres; nous trouvâmes les décombres de la cheminée de la maison de l'ancien Poste où Mr. Taché fit commerce des pelleteries durant vingt-deux années. Nous rembarquâmes vers trois heures et vinmes camper à la Pointe aux Pins, afin d'aller visiter l'île aux Couleurs; ce que nous effectuâmes le même jour, mais n'en rencontrâmes aucunes, probablement parce qu'il était trop tard. Le vent fut à l'ouest toute la journée.

Jeudi 11 Septembre. Le vent fut si fort de l'Ouest que nous ne pûmes faire route avant une heure de l'après midi et nous arrivâmes à 4 heures à l'embouchure de la rivière Ouiatshuan, et comme Mr. Nixon désirait fortement prendre la vue de la Chûte de cette Rivière, qui est à environ un mille de son embouchure, nous arrêtas ici, et partîmes immédiatement avec Terreau, l'un de nos hommes qui était sorti par cette rivière avec Mr. Bouchette et qui prétendait connaître la Chûte. Mais au lieu de nous mener par le chemin du Portage, par lequel on pouvait se rendre à environ quinze chaînes d'icelle, il nous achemina le long de la rivière, et il nous fallut nous armer d'un nouveau courage, pour y parvenir à travers nombre de vallées et collines, communes aux approches de rivières dont les écores ne sont pas moins de deux ou trois cents pieds de haut. Néanmoins en y arrivant nous fumes dédommagés des fatigues que nous venions d'éprouver par la magnificence de cette Chûte, qui ne le cède en rien par sa hauteur à celle de Montmorency, près de Québec, mais qui la surpasse par la distribution de ses eaux à travers des rochers escarpés, comme on pourra voir par la vue qu'en prit Mr. Nixon, dont les capacités sont très rares en cet art, et qui ne manquera pas de donner une copie fidèle. Nous nous rendîmes à notre canot à 6 heures, et trouvâmes notre tente élevée, car nos voyageurs s'apercevaient que le vent augmentait, et s'imaginant que nous reviendrions tard, avaient cru se préparer par avance, quoique nous leur eussions dit que nous pensions faire route et nous rendre au Poste. Alors nous y passâmes la nuit; le vent fut fort au Nord-Ouest. Le bois le long du Portage jusqu'à la Chûte est d'une qualité supérieure à toute place que j'aie visité jusqu'ici, étant un mélange de Cèdres, Merisiers, Erables, Epinettes, Pins, &c. et le terrain où je l'ai sondé était très propre à la culture.

Vendredi 12 Septembre. A six heures et un quart nous embarquâmes avec un fort vent de Nord-Ouest qui nous empêcha de faire la traversée au lieu ordinaire et nous contraignit à voguer le long de la côte jusqu'au Poste de Metabetchuan où nous arrivâmes à dix heures et trois quarts, et y trouvâmes Mr. Alexander Murdoch, Commis du Poste, gentilhomme très respectable et qui nous reçut très hospitalement.

Samedi 13 Septembre. Comme il nous avait été nécessaire de faire cuire du pain et faire laver notre linge nous ne pûmes partir de ce Poste que dans l'après diner, et en partant nous eûmes une salutation de plusieurs coups de fusil que nous retournâmes de la même manière. Le

vent fut au Sud Ouest toute la journée et le temps couvert. Nous nous rendîmes à Kuspahigan vers huit heures et y campâmes.

Dimanche 14 Septembre. Nous explorâmes cette partie du Lac depuis Kuspahigan jusqu'à la rive droite de la Grande Décharge, et reconnûmes que tout le long du Lac dans cette partie, le terrain est de sable, mais à très peu de distance on y trouve de la terre franche, comme nous pûmes le reconnaître en entrant dans une petite rivière à un mille et demi au nord de Kuspahigan, que nous remontâmes de quinze à vingt chaînes avant de la trouver trop embarrassée. La Petite Décharge est à cinq milles de Kuspahigan, et l'île entre les deux Décharges a du côté du Lac environ un mille et demi, du côté de la Petite Décharge un demi mille, et du côté de la Grande Décharge deux milles. Nous revînmes coucher à notre camp de Kuspahigan où nous y avions laissé notre bagage. Le vent fut au sud ouest toute la journée. Comme Gill a une douleur aiguë dans les reins qui le rend même incapable de gouverner le Canot, il ne nous reste que trois hommes que l'on ne peut partager pour traverser la Presqu'île et renvoyer le canot, conséquemment il faudra nous rendre à Chicoutimi.

Lundi 15 Septembre. Nous embarquâmes à sept heures 40 minutes nos provisions et bagage formant deux voyages dans les Portages. Nous nous rendîmes près du Portage Tshinuagamish où nous campâmes, en traversant les Aunais par terre, je m'éloignai dans le bois et reconnu que le terrain était uni et bon.

Mardi 16 Septembre. Le matin nous fumes visiter un petit Lac du côté nord du Lac Tshinuagamish et qui le joint par un petit canal de trois chaînes de long sur une chaîne de large, auquel je donnai le nom de Lake Nixon. Il y a des fonds de terre noire couverts d'Aunes tout à l'entour du Lac et sur les écores hautes d'environ vingt-cinq pieds, jusqu'à la distance d'au moins un mille que je visitai; on y trouve un terrain uni, le sol est de terre à grain superbe (Loam) et les bois sont sapins, mérisiers, épinettes, quelques bouleaux, et je n'y vis qu'un pin. On pourra voir un échantillon du terrain au nos. XXII et XXIII des collections de Mr. Nixon. Le lac a trente six chaînes de long sur une ligne sud-ouest et nord-est et dix chaînes de large. A dix heures et un quart nous embarquâmes pour faire route, mais d'après les informations que j'avais eues par divers canaux que les deux Lacs étaient joints par un Déroit du côté nord du Portage Tshinuagamish, nous entrâmes dans un Canal de deux chaînes de large et au bout de vingt-cinq chaînes nous entrâmes dans un bassin large de douze chaînes sur vingt chaînes de long à l'extrémité duquel nous trouvâmes une petite rivière large d'une chaîne embarrassée d'Aunes, laquelle ressemble beaucoup à la rivière des Aunais; nous montâmes environ douze chaînes dedans et fumes contraints de retourner en conséquence des aunes. Nous montâmes Mr. Nixon et moi à travers des rochers sur les écores droites, hautes d'environ 50 pieds, et il nous apparut que nous étions sur un cap de roches qui ne se continuait pas loin, et le peu de terre que nous y trouvâmes était de la même qualité que dans les échantillons ci-dessus cités. Les bois aussi loin que nous pûmes découvrir, étaient un mélange d'épinette, sapins et mérisiers, tous d'une haute taille. Le cour général de cette rivière est Est, ce qui corrobore fortement le rapport de la jonction des deux Lacs; nous descendîmes et arrivâmes au Portage à midi, nous passâmes ce Portage long de 1 1/5 mile et dinâmes, puis repartîmes de là à 3 heures, dans l'intention de visiter tout ce qu'il y avait de remarquable du côté nord du Lac Tshinuagamish. Le terrain tout le long de ce Portage est composé de glaise bleue mêlée de sable, d'une très bonne qualité, et les bois sont épinettes blanches, mérisiers, bouleaux, sapins et pins rouges. Nous nous rendîmes le soir à environ deux milles et demi dans la Petite Rivière de la baie Coughkouia ou dans la prétendue jonction des deux Lacs et y campâmes.

Mercredi 17 Septembre. Nous remontâmes cette rivière sur une course ouest sud-ouest, environ 4 1/2 milles, ce qui fait 7 milles de son embouchure, et ne pouvant aller plus loin par les aunes qui l'embarassent, nous fumes reconnaître le terrain, et à environ un demi mille, Mr. Nixon découvrit un petit lac dont cette rivière forme la décharge, lequel il nomma Lake Young, et qui peut avoir 7 chaînes sur 30. Tout le terrain que nous traversâmes pour y parvenir est rocailleux, et le peu de terre qu'on y trouve est terre noire. Tout le long de cette rivière, le terrain est complanté d'épinettes rouges et blanches, quelques pins, bouleaux et sapins, et la terre est de même mélange de glaise et sable. Le vent fut de l'ouest toute la journée, et augmenta le soir: nous campâmes à la pointe de Sable, où le parti de Mr. Bouchette avait couché le 11 Septembre.

Jeudi 18 Septembre. Nous embarquâmes vers 6 heures et à 60 chaînes de la pointe de sable, nous entrâmes dans la décharge du lac, laquelle se nomme Pastagoutsi, et à la chaîne de lacs qui se rencontre près du lac Tshinuagamish, Mr. Nixon donna le nom de Lake Hamel. Nous descendîmes cette rivière jusqu'au pied du premier rapide, distante d'environ 6 milles de son embouchure, où l'eau nous ayant manqué nous rebroussâmes chemin. Le bois tout le long de chaque côté, est bouleaux, épinettes, pins, sapins, &c., et la terre est bonne, mais rocailleuse. Nous arrivâmes au bout est du lac Tshinuagamish à 11 heures, i. e., au portage de roches, et continuâmes notre route, puis arrivâmes en fin au poste de Chicoutimi au soleil couchant.

Vendredi 19 Septembre. J'amena mes livres tandis que les hommes se préparaient au départ pour la visite de la Presqu'île, pour la quelle je sentis plus que jamais le besoin d'un guide, et ne pouvant trouver de sauvage qui connût tant soit peu le local, je fus contraint d'engager une vieille femme du nom de Nastash, qui prétendait s'y connoître. Le vent fut à l'ouest toute la journée.

Samedi

Samedi 20 Septembre. Notre pilote ayant retardé notre départ, nous ne pûmes l'effectuer que dans l'après-dîner—nous partîmes en canot pour remonter le Saguenay, jusqu'à l'embouchure de la rivière Pastagoutsy; mais lorsque nous fûmes vis-à-vis la rivière des Terres Rompues, les rapides devinrent impossibles à franchir, et il fut résolu de prendre pour quelques jours des provisions, et de renvoyer le canot au poste par Boivert et Terreau, afin de voyager par terre. Toute la rive droite du Saguenay jusqu'aux Terres Rompues, est de glaise bleue, comme aux environs du poste de Chicoutimi. Le vent fut à l'est.

Dimanche 21 Septembre. Après deux heures de marche, nous parvîmes à la rivière Pastagoutsy, à quelques chaînes de son confluent avec le Saguenay: nous trouvâmes une chute à cet endroit de la rivière, haute d'environ 240 pieds, dont Mr. Nixon prit la vue. Nous dirigeâmes notre course vers le sud, i. e., tenant la rivière Pastagoutsy à droite, notre guide déclarant ne rien connaître au nord de cette rivière, et voyageâmes toute la journée sur un terrain très plane, complanté comme suit:—1o. Mélange d'épinettes, sapins, mérisiers, quelques érables et bouleaux terre à grain grise. 2o. Epinettière, terre à grain fraîche. 3o. Mélange d'épinettes, sapins, mérisiers et bouleaux, terre à grain. 4o. Bouleaux, terre à grain, mélange de gros sable: nous croisâmes plusieurs ruisseaux qui se déchargent dans le Saguenay. Le vent fut à l'est, et la chaleur excessive.

Lundi 22 Septembre. Nous séparâmes le parti de manière que Mr. Nixon prit Young et la pilote, et je partis de mon côté avec Gill dirigeant notre course vers Chicoutimi, où j'arrivai vers 5½ heures, p. m., et y trouvai Mr. Nixon qui venait d'arriver, aussi fatigué que moi. Je ne trouvai ce jour aucune différence dans le bois et sol, le terrain étant toujours très plane. Je croisai, en ce jour, 16 ruisseaux qui vont tous au Saguenay. Le vent fut à l'ouest, et le tems très chaud. Je pris le soir, la variation du compas, par l'étoile Polaire, que je trouvai de 17° 12" ouest.

Mardi 23 Septembre. Mes instructions étant remplies autant que faire se pouvait sans guide, et durant le tems que je devais passer dans ces contrées, il ne me restait plus qu'à hâter mon retour à Québec, et en conséquence j'ordonnai aux hommes de faire toute diligence pour laver leur linge et le notre, afin de partir le lendemain. Le vent fut à l'est.

Mercredi 24 Septembre. Il plut jusque vers onze heures du vent d'est, et nous laissâmes le poste de Chicoutimi dans l'après-dîner, puis nous vinmes coucher à Bear's Cove.

Jedi 25 Septembre. Nous partîmes à 4 heures A. M., mais le vent forçant trop au lever du Soleil, il nous fallut mettre à terre au sud du Cap à l'est. Vers 9 heures, nous nous rembarquâmes, mais à 10½ heures le vent et la marée étant contre nous, il nous fallut mettre à terre de nouveau. Nous rembarquâmes à 3 heures, le vent étant à l'est, et ne débarquâmes qu'à 8 heures dans Half Way Bay.

Vendredi 26 Septembre. Le tems était calme et il pleuvait, néanmoins, nous nous embarquâmes vers 6 heures, et nous rendîmes à la Baie des Roches non sans danger, le vent soufflant fort de l'ouest. A midi et demi, comme nous désirerions nous rendre à Tadousac, nous embarquâmes, quoique le vent n'eût pas diminué et la mer montante encore; et après avoir couru les plus grands dangers de couler à fond en doublant les pointes, nous arrivâmes, enfin, à Tadousac, où nous rencontrâmes Mr. Andrews, commis du poste de Chicoutimi, qui était détenu par le vent.

Samedi 27 Septembre. Le gros vent de nord-ouest nous empêcha de partir avant 5 heures P. M., et nous vinmes coucher à la rivière aux Canards.

Dimanche 28 Septembre. Le tems fut calme, et nous nous rendîmes le soir à la rivière Malbaie.

Lundi 29 Septembre. Nous continuâmes notre route avec un tems calme, et vinmes coucher dans la Baie Verte, à une demie lieue à l'ouest de la rivière de la Baie St. Paul.

Mardi 30 Septembre. Nous ne pûmes nous embarquer avant 6½ heures, par la longueur des battures qui sont de glaise à mer basse, et à 8 heures le vent soufflant trop fort du ouest, nous fûmes contraints de mettre à terre vis-à-vis l'église de la Petite Rivière, où nous passâmes la journée; nous y trouvâmes le Capitaine Bayfield, avec le quel nous passâmes une partie de l'après-dîner.

Mercredi, 1er Octobre. Le vent ayant diminué, nous nous mîmes en route vers 7 heures, et quoique nous fûmes contraint de mettre à terre dans la matinée par le gros vent, nous parvîmes à passer les caps, et arrivâmes sur les battures de St. Joachim au soleil couchant; mais comme la mer était basse, il nous fallut attendre jusqu'à 8 heures pour entrer dans la rivière Blondaine, d'où il nous fallut sortir, immédiatement pour gagner la grande rivière entre St. Joachim et St. Anne.

Jedi 2 Octobre. Le vent fut à l'est, et la pluie abondante, jusques vers midi, où le vent changea; néanmoins nous embarquâmes vers 8 heures et sans égard ni au vent ni à la marée, nous continuâmes notre route, jusqu'à vers 2 heures P. M., qu'il nous fallut débarquer au Montmorency pour gommer le canot; nous rembarquâmes immédiatement après, et

arrivâmes enfin à Québec vers 4 heures, tous sains et saufs. N'ayant pu rencontrer ni Mr. Lampson ni son commis, je laissai mon canot à la charge de Gill, pour délivrer le bagage.

Dans le Journal ci-dessus, j'ai pris garde de ne rien mentionner des informations que j'ai reçues durant mon voyage, mais me suis contenté à rapporter ce que j'ai réellement visité, et par où j'ai passé, référant à l'appendice que je filerai avec mon plan, pour la désignation particulière des lieux, &c. Ainsi, j'ose me flatter que vous voudrez bien l'accueillir avec, aussi, les plus profonds respects de celui qui à l'honneur de se souscrire,

Messieurs,

Votre très humble et très

Obeissant Serviteur,

J. HAMEL, Arp. tr.

Québec, 8 Novembre, 1828.

APPENDICE OU SUPPLEMENT au Rapport de JOSEPH HAMEL, Arpenteur dans l'expédition du Saguenay, &c. &c. &c.

COMME il serait difficile de trouver dans mon Journal du premier coup d'œil l'endroit où se trouverait la désignation d'un lieu, et de plus ne m'étant attaché en journalisant qu'aux faits, ne mentionnant pas même la latitude des différens endroits que j'ai parcouru, (ayant tenu des notes à part) j'ai crû devoir joindre le présent Appendice, qui servira de Supplement à mon Journal et d'explication à mon plan.

Il comprendra la désignation des lieux, leurs noms vulgaires en français, leurs significations en langue montagnaise, etc. Autant que j'ai pu me le procurer, la latitude par observation et la longitude par à compte, la qualité du sol et des bois, avec quelques réflexions sur les avantages de coloniser une partie du Bas-Canada, qui ne le cède en rien à aucune autre place déjà établie, que j'ai visité jusqu'à présent.

Tadousac—Est situé sur le fleuve St. Laurent, et à l'est de l'embouchure du Saguenay. Il y a un havre qui ne peut contenir plus de six vaisseaux, encore qui seraient obligés de porter des ancres à terre. La compagnie des Postes du Roi y ont un poste de traite avec les sauvages, comprenant neuf bâtimens, pour magasins, hangars, etc. outre la maison du poste, de 60 pieds sur 20 et une chapelle de 25 pieds sur 20. Un missionnaire vient tous les ans y passer quelques tems. Les plus grandes marées s'élevent à cet endroit 21 pieds. Longitude ouest de Greenwich 69° 13' et latitude 48° 6' 44".

Ste. Catherine, dans l'embouchure du Saguenay, et du côté sud-ouest, environ 50 vaisseaux peuvent y être en sûreté de tous vents, excepté de celui du ouest.

La Boule est un rocher remarquable par sa hauteur et par sa forme et les courants du baissant son très forts vis-à-vis, elle est à trois milles de l'embouchure du Saguenay et du côté nord-est.

Rivière Ste. Marguerite. Elle est située du côté nord-est du Saguenay, et à environ seize milles de l'embouchure du Saguenay. C'est la plus grande rivière qui s'y décharge depuis Tadousac jusqu'à Chicoutimi.

Isles St. Louis. Elles sont au nombre de trois et toutes de roc, mais la première que l'on trouve en remontant le Saguenay est la plus grande et a environ un demi mille de long et est du côté sud-ouest du Saguenay, le bout sud-est qui fut nommé en passant *old ways point* est à environ 13½ milles de l'embouchure du Saguenay: Les deux autres bien plus petites, sont du côté nord-est et près de terre.

Rivière St. Jean. La Rivière St. Jean est située du côté sud-ouest du Saguenay, il y a un bon mouillage dit-on pour toutes sortes de vaisseaux, il y a sur ses bords et à son embouchure environ un mille carré de terre cultivable, longitude 69° 42' et latitude 48° 13' 15".

Rivière de la Trinité. Cette rivière du côté sud-ouest du Saguenay doit son nom à trois gros caps sur les bords du Saguenay, et au nord-ouest de son confluent. Elle est dans une baie très profonde, où on y fait la pêche au saumon. Elle est environ à mi-chemin de Tadousac à Chicoutimi, c'est pourquoi la baie du côté opposé et qui était auparavant nommé le ruisseau de la Trinité, fut nommé par l'expédition, *Half-way-Bay*.

La Descente des Femmes, c'est une baie du côté nord-est du Saguenay au fond de laquelle il y a un petit ruisseau, elle est à environ 42 milles de Tadousac et elle doit son nom à une aventure mélancolique de plusieurs sauvages,

Appendice

14 Janvier.

Appendice
(V.)
14 janvr.

sauvages qui se trouvant réduits à la dernière famine en parcourant les bois pour faire la chasse, les quels se voyant ainsi réduits, envoyèrent leurs femmes pour chercher du secours, et c'est ici où elles sortirent. La marée s'élève ici 17 pieds, et la longitude $70^{\circ} 11'$ et la latitude $48^{\circ} 22' 09''$.

Baie des Ah! Ah! Elle est à gauche en montant le Saguenay et si bien ressemblante au maître bras du Saguenay que plusieurs voyageurs s'y sont mépris—il y a des divisions sur l'origine de son nom, c'est pourquoi je n'en dirai rien; elle a environ 9 milles de profondeur et est aussi large que le Saguenay.

Chicoutimi.—C'est l'entrepôt de la Compagnie des postes du Roi et le seul poste de commerce sur la rivière Saguenay; il est à environ 58 milles de Tadousac, il est situé sur la rive gauche et au confluent de la rivière Chicoutimi avec le Saguenay; il y a à ce poste quatre batisses comprises l'église ou chapelle, un missionnaire y vient tous les ans passer comme à Tadousac quelques temps, c'est dans les mois de juin et juillet, et il demeure dans les deux places environ six semaines. Le sol est ici de glaise bleue et quoiqu'il y ait des rochers, ça et là, il est très propre à la culture, on y fait que des patates et légumes, pour l'usage de la maison seulement, et on va chercher le foin pour les bestiaux à neuf milles au bas de Chicoutimi, sur la rive gauche du Saguenay. La marée s'élève ici 16 pieds au-dessus dans les hautes marées. On y vient en goëlette, et il n'y a pas de doute qu'on pourrait y venir avec des vaisseaux quinqués; longitude $70^{\circ} 34'$, latitude $48^{\circ} 24' 37''$ variation du compas $17^{\circ} 12'$ ouest.

Presqu'île.—La Presqu'île formée par la grande décharge d'un côté et par la rivière Chicoutimi, les lacs Kenuagomi, Kenuagomishish, la rivière des Annaïs, La Belle Rivière. Le Kushpagan et une partie du lac St. Jean, et de l'autre, est entre les $70^{\circ} 34'$ et $71^{\circ} 27'$ de longitude ouest de Greenwich et entre les $48^{\circ} 14' 38''$ et les $48^{\circ} 34'$ de latitude nord.—Le sol qui est de terre à grain, en général est très propre à la colonisation, les bois sont pin rouges, cyprès, bouleaux, sapins, épinettes blanches, mérisiers, trembles, etc. tous d'une taille moyenne, excepté les pins que l'on trouve çà et là qui sont très grands, mais en général annonçant être d'une mauvaise qualité. Le terrain, une fois sur les écores, est planche et étant établi, en commençant par Chicoutimi, qui devrait toujours être le rendez-vous principal, on pourrait par degré ouvrir un chemin qui communiquerait avec le lac St. Jean, lequel serait autant plus facile, qu'il n'y a qu'une rivière de conséquence à traverser la Pastagoutsi, encore que l'on peu passer à gué, excepté dans la crue des eaux; elle contient environ 245,000 acres en superficie, et conséquemment pourrait contenir 2450 habitans à 100 acres chacun. Le climat est au moins aussi tempéré que celui des environs de Québec, mais environ 15 jours plus tardif qu'au poste du lac St. Jean, rivière Métachuan,

Rivière Chicoutimi.—La rivière Chicoutimi est une des décharges du lac Kenuagomi et après une course au nord nord-est de $17\frac{1}{2}$ milles elle se jette dans le Saguenay près du poste Chicoutimi, à environ 58 milles de l'embouchure de ce dernier. Il y a sept portages dans cette rivière entre Chicoutimi et le Lac Kenuagomi. Les écores de chaque côté de cette rivière n'excèdent pas 30 pieds, mais à environ dix chaînes au-dessus on trouve un second écore d'environ la même hauteur. Les bois et sol sont les mêmes que dans la Presqu'île.

Portage Chicoutimi, ou Skecutimish Caputagan.—Ce portage long de deux milles est sur la rive gauche de la rivière Chicoutimi et est très planche, à l'exception d'une vallée causé par un petit ruisseau près de l'extrémité sud-ouest.

Portage de la Poussière, Meia Caputagan. Il est à 62 chaînes du Portage Chicoutimi, et a 9 chaînes de long.

Portage de L'enfant, Washkow Caputagan. Est à 33 chaînes du Portage de la Poussière et a sept chaînes de long, il tire son nom à un accident qui arriva, il y a environ 50 ans, à un sauvage qui en passant ce portage avait laissé un jeune enfant dans son canot, le quel fut entraîné par le courant dans une chute très forte et la mata sans chavirer, au grand étonnement du père et de tous ceux qui ont vu cette chute.

Ile au Sépulchre. Elle est à environ quatre milles du portage de l'enfant, et tire son nom de deux noyés qui y furent enterrés.

Beau Portage, Milow Caputagan. Il est à six cents dix-neuf chaînes du Portage de l'Enfant et a treize chaînes de long.

Portage de l'Islet, Ministouki Caputagan. Il est à quatre vingt dix-neuf chaînes du Beau Portage et a trente trois chaînes de long; il doit son nom à une Ile qui se trouve dans le milieu et qui est plus longue que le portage; on peut sauter ce portage.

Portage des Roches, Assini Caputagan. Il est à cent quarante huit chaînes du portage de l'Islet, et a vingt chaînes de long dans la crue des eaux, mais dans les basses eaux, il est beaucoup plus court.

Lac Kenuagomi, Lac Long. D'environ vingt trois milles et un quart sur environ un demi mille de large. Ses écores du côté sud, sont en partie

des caps de roches, mais du côté nord, elles sont beaucoup plus douces à l'exception de deux ou trois caps de roches. Au bout ouest de ce lac on en trouve un autre du nom *Wiqui*, de forme circulaire et d'environ douze chaînes de diamètre et communique avec le premier par un canal de douze à quinze pieds de large sur trois chaînes de long.

Rivière Pastagoutsi. Est une seconde décharge du lac Kenuagomi et se décharge dans le Saguenay à environ onze milles du nord-ouest de Chicoutimi; on dit que dans sa course elle passe sous une montagne, mais je ne l'ai point vu.

Baie de Cushcouia. Dans cette baie il y a une jolie rivière nommée Baddeley, laquelle est supposée former la jonction de deux lacs Kenuagomi et Kenuagomishish, mais dont on ne pourrait s'assurer qu'en hiver vu qu'elle est embarrassé d'aunes.

Portage Kenuagomi, ou Insula Formosa ou Belle Ile. Il est long de quatre vingt seize chaînes, est à la hauteur des terres et sépare les lacs Wiqui et Kenuagomishish.

Lac Kenuagomishish, ou Petit Lac Long. Il a environ six milles de long sur douze à trente chaînes de large, ses écores sont environ les mêmes que celle du lac Kenuagomi, du côté nord; en entrant dans ce lac on trouve la rivière Baddeley ou la prétendue jonction des lacs, et à trente chaînes du même côté, on y trouve le lac Nixon de trente six chaînes de long sur dix chaînes de large, dont les écores d'alentour n'excèdent pas vingt cinq pieds de haut et le sol sur icelles est d'une qualité supérieure et tout de terre grasse.

Rivières des Annaïs ou Pashikanuninashish.—La rivière des Annaïs est la décharge du lac Kenuagomishish et se décharge dans la Belle Rivière: et quoiqu'on la compte de neuf milles en suivant ses sinuosités, elle n'a réellement que trois milles en ligne droite, et elle a environ une chaîne de large; il n'y a qu'un portage de canot dans cette rivière, le quel a vingt cinq chaînes de long; il est à environ un mille du lac Kenuagomishish, et de là à gagner la Belle Rivière, il y a un sentier, que ceux qui n'ont rien à faire dans les canots préfèrent prendre en raison de ce que la rivière est très embarrassée d'aunes et que les canots ne peuvent y passer qu'avec difficulté.

Rivière Kushpagan (une place où on monte). La rivière Kushpagan commence au confluent de la rivière des Annaïs et va jusqu'au Lac St. Jean; de ce même confluent, elle prend le nom de Belle Rivière, sa longueur en suivant ses sinuosités est d'environ sept milles trois quarts sur une à deux chaînes de large; à environ mi-chemin à aller au lac, il y a un portage de dix-huit chaînes de long, c'est le plus difficile ou le plus dur pour les porteurs dans toute la Traversée de Chicoutimi au Lac St. Jean.

Lac St. Jean ou Peauggomi (Lac Plat). Le lac St. Jean est à cinquante-sept milles et demi de Chicoutimi, et il est entre les $71^{\circ} 29'$ de longitude ouest de Greenwich et entre les $72^{\circ} 9'$ et les $48^{\circ} 23'$ et les $48^{\circ} 42' 37''$ de latitude nord, il a environ trente milles sur vingt, et quatre vingt dix milles de circonférence, huit rivières, presque toute de la première classe se jettent dans ce lac, savoir; Peribaunca, Mistassini, Assuapmousin, Oéguatshouan, Oüiguatshganish, Metabetshouan, Kuspygish et Kuspagan; au moindre vent du nord-ouest les vagues s'élèvent à une hauteur prodigieuse, ce qui rend alors la navigation en canot très dangereuse, les eaux en tems de pluie croissent aussi très rapidement, mais diminuent pres-qu'aussi vite surtout du vent nord-ouest. Il y a deux canaux qui déchargent ce lac, mais à proprement parler il n'y en aurait qu'un, car ils se réunissent en un, à environ deux milles du lac, et alors ils prennent le nom de Rivière Saguenay, à l'exception de la groupe d'îles, qu'il y a vis-à-vis les décharges et que l'on nomma *Dalhousie Islands*, il y en a deux autres du côté sud du lac, l'île au couleuvres, (Mani'ou, Ministuck en langue sauvage, où il y a aux mauvais esprits.) et la Grosse Ile: On prétend que sur la première on y trouve des couleuvres en grande quantité, elles sont à environ deux milles de la terre ferme.

Peribaunca.—La Rivière Curieuse. On peut appeler cette rivière la plus belle et la plus propre à la colonisation qu'il y ait dans ces contrées, elle offre un terrain planche composé de terre grasse et complantée de trembles, bouleaux, épinettes rouges et blanches, sapins, pins rouges et blancs épars, cyprès. mais suivant mon humble opinion on ne doit rien conclure d'après ces bois, car on trouve également dans toutes les parties du pays des trembles, des bouleaux et des pins, (bois qui sont ordinairement les indices de mauvaises terres) sur la glaise et sur les rochers et les sables. Ainsi comme, généralement dans le District de Québec, le tremble pousse en abondance dans les terres nouvellement brûlées et non cultivées. Je suis fort porté à croire que c'est une des premières cause de cet incident. Plus on remonte cette rivière, plus on trouve les terres avantageuses et sans le malheureux accident cité dans mon journal, je l'aurais remonté jusqu'aux montagnes de l'est que l'on dit être à environ 90 milles de son embouchure, mais en supposant qu'il n'y aurait que 75 milles de cultivable sur cette rivière, et qu'on établirait deux rangées de concessions de chaque côté, on pourrait y loger près de deux mille habitans à 100 acres chacun, l'embouchure de cette rivière est dans la plus grande latitude, nord du Lac St. Jean, c'est à savoir $48^{\circ} 42' 37'$ et elle vient de l'est nord-est, elle a environ quarante chaînes de large et les courants sont réguliers jusqu'aux chutes que l'on rencontre

rencontre à environ neuf milles de l'embouchure, elles sont au nombre de trois et au dessus d'icelles on tombe dans le Lac Nahaoui-loo, long d'environ quatre milles sur un mille, de large, il y a plusieurs îles à son entrée et des pointes superbes du côté sud est; une jolie petite rivière nommée Rum River se décharge dans ce lac du côté nord-ouest; var. 16° 40' ouest.

David River.—Elle vient du nord, et se décharge dans la Peribonea à trois milles et un quart du lac, est sur la rive droite, et paraît navigable aux canots à une grande distance, jusqu'au premier portage qui est à environ neuf milles et demi de son embouchure.

Rivière Cocuathimi.—Elle est la seule entre la grande décharge et la Peribonea, et de très petite conséquence, car elle est très embarrassée, ce qui la rend difficile ou même impossible à remonter; var. 16° 40' ouest.

Rivière Rat-musqué, (Musk-Rat River). C'est une branche du Peribonea qui est à environ milles au sud du maître Bras et que j'ai désigné dans mon journal sous le nom de Petit Bras; lequel forme une île dont le côté sur la Rivière Peribonea est de trois milles et un quart, elle fut nommée Rat musqué, en conséquence de ces animaux qui y abondent.

Rivière Mistassini.—La Rivière Mistassini mérite à tous égards le nom que plusieurs géographes lui ont donné, c'est à savoir, la Rivière des Sables; car dans les neuf milles que j'ai remonté, non seulement les îles sont de sable, mais la rivière se trouve en plusieurs endroits croisée par des bancs de sable. Elle a trois milles de large à son embouchure comprenant une groupe d'îles à travers les quelles sortent divers canaux qui peuvent induire le voyageur étranger en erreur, mais au nord de ces îles ainsi qu'au dessus d'icelles le canal n'a pas moins d'un mille et demi de large, les sables que charroyent cette rivière rendent le lac si plat qu'il y a à peine trois pieds d'eau à trois milles au large de son embouchure, dont la latitude est de 48° 40'.

Assuapmoussin ou Assuap, (Le Guet de L'original). C'est une rivière de la première grandeur qui se décharge dans le lac St. Jean, elle a environ un mille de large. La Compagnie des Postes du Roi, y a un poste de traite à environ quinze lieues de son embouchure, elle n'est qu'un rapide continué depuis ce poste jusqu'au lac; il y a quelques îles couvertes de brossailles dans son embouchure sur la rive gauche.

Rivière Ouatshuan.—Elle vient du ouest et est dans les 48° 27' de latitude, nord et dans les 71° 58' de longitude; il y a environ un mille de son embouchure une chute superbe que l'on peut voir du côté opposé du lac.

Rivière Metabetschuan.—La Rivière Metabetschuan est dans les 48° 28' 12" de latitude, c'est la seule place où la Compagnie des Postes du Roi ont un poste de traite avec les sauvages; les jésuites y avaient autrefois un établissement avec une certaine quantité de terre en culture, mais aujourd'hui on ne trouve aucunes vestiges de cet établissement.

Comme le but de l'expédition et celui des arpenteurs en particulier était de s'assurer si cette partie du Bas-Canada était propre à la colonisation; je ne terminerai point sans faire remarquer aux amis de l'agriculture que la Presqu'île, qui s'étend depuis le Poste de Chicoutimi jusqu'au Lac St. Jean, et les deux côtés de la Rivière Peribonea que j'ai exploré, méritent à tous égards d'être établie, tant pour la qualité du sol que pour

la température qui l'emporte sur celle des environs de Québec, et en commençant à établir à Chicoutimi, qui devrait toujours être l'entrepôt entre Québec et la Nouvelle Colonie, on verrait bientôt des chemins ouverts jusqu'au Lac St. Jean, lesquels faciliteraient la communication entre les établissements qui viendraient de suite sur la Rivière Péribonea et autres places sur le lac dont je n'ai point fait rapport comme n'étant pas de mon ressort.

Ainsi quoique je sois très persuadé que je n'ai rempli que très imparfaitement les désignations, etc.—que j'ai prétendu donner dans le présent Appendice,—Je terminerai cependant en vous priant de me permettre que je me souscrive avec le plus profond respect,

Messieurs,

votre très dévoué et

très obéissant serviteur,

J. HAMEL, Arpt.

JOURNAL du PARTI EXPLORATEUR de la RIVIERE ST. MAURICE, formant une des expéditions envoyées sous la direction des Commissaires nommés par le Gouvernement, pour mettre à exécution un Acte de la Législature Provinciale du Bas-Canada.

RECUES par le Canal de l'Arpenteur-Général des instructions de la part des Commissaires Andrew Stuart et David Stuart, Ecuyers, nommés par le Gouvernement pour mettre à exécution un acte de la Législature Provinciale, en date du 21 Juillet dernier, pour aller au Lac St. Jean, en traversant le pays qui s'étend depuis la rivière St. Maurice, pour en explorer une partie, et revenir à Québec par le Saguenay.

Ayant eu conséquence faits des préparatifs pour ce service, je m'embarquai à bord du Chambly, bateau-à-vapeur, le Lundi 21 Juillet, à 7 1/2 heures P. M. et j'y rencontrai M. Goldie du 66e Régiment, et M. Davies, qui avaient bien voulu partager les travaux les fatigues et les incommodités qu'on pouvait attendre d'une expédition aussi aventureuse.

Mardi 22. Débarqué aux Trois-Rivières le lendemain matin à 9 1/2 heures. Je me rendis chez M. Bayden, agent de M. Lampson, au service de la Compagnie des Postes du Roi; il me conduisit au canot qui avait été préparé pour l'expédition, et fait d'après les ordres des Commissaires.

Considérant l'étendue de pays que l'expédition du St. Maurice était pour traverser, les rivières et ruisseaux nombreux qu'il lui fallait monter et descendre, et le grand nombre de portages qu'il lui fallait faire, outre l'incertitude où l'on était sur la distance et la position du Lac St. Jean, et de là l'incertitude sur le temps que l'on prendrait à traverser ce territoire, tout cela m'obligeait à prendre un canot capable de transporter un parti de huit personnes au moins, avec les provisions nécessaires pour les nourrir pendant au moins l'es-

pace d'un mois, mais qui ne fut pas en même temps trop grand pour causer des délais dans les portages.

C'est pourquoi, je fus bien d'avis que celui qu'on avait préparé était de dimensions suffisantes pour répondre au dernier objet, mais ne crus pas qu'il put suffire à porter les gens et les provisions en même temps, et en conséquence on se procura d'un canot plus petit.

Le second pas à faire, et il était essentiel à l'exécution du service qu'on avait entrepris, c'était d'obtenir des sauvages des nations des Algonquins et des Têtes-de-Boule, qui font la chasse le long du St. Maurice et de ses rivières tributaires, les renseignements nécessaires sur la meilleure route à prendre pour aller au Lac St. Jean. Il avait assemblé au passage, un peu en dehors de la ville, plusieurs familles sauvages, de diverses parties du pays, et qui étaient venus pour recevoir du Gouvernement leurs présents annuels, et je fus leur parler avec MM. Goldie et Davies, M. Bayden nous accompagnant. Plusieurs de ces gens étant alors dans un état ou d'ivresse ou de sommeil profond, je ne pus pour cette fois recevoir les renseignements que je cherchais. Cependant un nommé J. Bte. Cerète, commis au service de la compagnie, qui paraissait bien connaître le St. Maurice, nous dit qu'il ne connaissait d'autre communication au route avec le Lac St. Jean, que par la rivière Késikan, qui tombe dans le St. Maurice au dessus du Mont au Chêne, qui est environ 300 milles au-dessus des Trois-Rivières, la source de cette rivière étant jointe par des portages et des Lacs avec la Rivière Assuapmoussin, qui se décharge dans le Lac St. Jean.

Cette

Appendice
(V.)

14 Janvr.

Cette route, bien que probablement la meilleure et la plus recommandable, parut cependant me porter quelques centaines de milles au nord du lac St. Jean, ce qui en une manière nous empêcherait de constater la nature du terrain entre le rivage nord du St. Laurent et le lac St. Jean, dans le territoire du Saguenay. C'est pourquoi je cherchai quelques chasseurs des rivières qui se déchargent dans le St. Maurice, aux environs des postes de la Tuque, et l'en m'adressa à un nommé Bastonnais, chasseur d'une rivière qui porte son nom, et qui me fut recommandé comme connaissant parfaitement toutes les parties du pays, où se trouvent les immenses terrains de chasse, appartenant à lui et à sa famille.

Il décrivit clairement et traça à la manière des sauvages sur une feuille de bouleau la route pour aller par la rivière Bastonnais, par des portages et des lacs, jusqu'aux eaux qui se déchargent dans le lac St. Jean. La seule difficulté à craindre eut été la nécessité de débarrasser les portages pour faire passer un grand canot dans ces endroits qui ne sont propres qu'à recevoir de petits canots sauvages de 2½ brasses généralement.

Trouvant pour plusieurs raisons, cette route préférable à celle du Mont au Chêne, je n'hésitai pas un moment à me décider pour elle. Le sud-ouest étant chargé de gros nuages qui présageaient l'orage, nous retournâmes immédiatement à la ville.

Mercrèdi 23.—Ce jour là nous eûmes le canot additionnel des sauvages tentés au passage, et nous engageâmes un des gargons de Bastonnais, pour nous servir de guide à travers les terrains de chasse de son père, et tout fut préparé pour notre départ, le lendemain matin, si le temps le permettait.

Jeudi 24.—A 9½ heures A. M. l'expédition du St. Maurice partit des Trois-Rivières, le plus grand canot portant Vivier, timonier, Jean Villeueuve, avironnier, Jersau, avironnier du milieu, et le guide, le jeune Bastonnais, Mr. Davies et moi, et la plus grande partie des provisions. Dans le petit canot étaient Décotéau, timonier, et Jean Biyot, avironnier, avec Mr. Goldie et le restant du bagage, &c., &c.

Nous arrêtâmes au passage, qui est à environ 1 mille en montant la rivière St. Maurice, pour un plan de la route que le père de notre jeune guide avait dressé pour lui, après quoi nous poursuivîmes notre jeune route dans le St. Maurice, en cotayant le rivage pour éviter la force du courant—nous passâmes quelques établissements dans la seigneurie du Cap de la Magdeleine.

Le terrain, surtout du côté de l'ouest, approche beaucoup d'un sol sablonneux, couvert de pin blanc, d'épinette et de bouleau blanc. Par endroits, quelques touffes d'un riche feuillage vient diversifier l'aspect monotone qui règne sur les rivages de la rivière. Ce fut sous l'une d'elles, sur le bord d'un petit ruisseau qui descend des hauteurs dont la pente douce forme le rivage, que nous nous arrêtâmes pour dîner; après nous poussâmes à l'eau, et les voyageurs entonnèrent leurs chansons caractéristiques.

Nous n'observâmes aucun changement marqué dans le sol ni dans le bois. Les rivages en approchant des Forges s'élèvent plus fièrement et à une hauteur considérable; les Forges sont sur la rive ouest, à environ 9 milles au dessus des Trois-Rivières. Nous débarquâmes en cet endroit, tandis que les voyageurs transportèrent les canots au haut du rapide autour de la Pointe à la Hache.

Cet établissement considérable et de valeur, appartenant à l'Église. Mathew Bell, écr. est calculé par sa situation, sa localité, et les grands travaux en fer qui s'y font, à devenir une place de beaucoup d'importance.

Nous joignîmes les canots à la Pointe, où j'ordonnai de camper, ce qui fut fait, malgré la confusion qui accompagne toujours un premier campement.

Vendredi 25.—Il fit toute la nuit une grande pluie, qui ne cessa que le matin.

La rivière étant rapide au dessus de la Pointe à la Hache, et difficile à naviguer pour des canots fortement chargés, nous nous décidâmes à marcher jusqu'à la chute Gabelle, distance d'environ 6 milles.

A l'exception de quelques hauteurs, le chemin passe sur un terrain assez uni. La terre varie beaucoup dans sa qualité; où le sol de marne et de sable domine elle est couverte de pin, de tremble, de sapin, d'épinette et de bouleau; où il est argileux, d'érable, de hêtre, *basswood*, parsemés généralement de bouleau noir et jaune. Dans un endroit je remarquai une épinette blanche dans un endroit marécageux, espèce de terre mouvante, où l'on trouve ordinairement le minéral dont on se sert aux forges.

Nous arrivâmes au pied de la chute de la Gabelle, pendant une forte pluie, à l'incommodité de laquelle il faut joindre l'importunité presque intolérable des brûlots et des maringouins. Par après comme le temps s'éclaircissait, arrivèrent les voyageurs avec les canots, et en peu de minutes fut fait un feu réjouissant, qui fit sécher nos hardes.

La chute de la Gabelle, qui a environ 25 pieds de haut, se précipite par un endroit resserré de la rivière, qui quoiqu'il n'ait rien de bien pittoresque, est très intéressant pour le géologue, car outre le calcaire qui abonde en cet endroit, on dit qu'on trouve dans les environs beaucoup de grès et autres minéraux.

Le terrain aux environs de la chute est un sol arable, contenant cependant beaucoup de gravier mêlé avec la marne qui repose sous la couche végétale.

Les provisions, le bagage et les canots ayant été transportés au dessus du portage, qui est d'environ 1550 verges, nous entrâmes dans les canots à l'embarquement supérieur, et nous avançâmes vers la chute de Grais, qui est environ à ½ lieu au dessus de celle de la Gabelle, où nous campâmes à mi-portage. La chute de Grais, qu'on peut considérer comme une simple cascade, est séparée en plusieurs canaux formés par des îlots ornés d'un riche feuillage, et offre un point de vue agréable du bas du Portage. Le terrain offre des apparences très favorables pour des établissements en grand.

Samedi, 26.—Nous achevâmes le transport des provisions et des canots, &c. &c., au dessus du portage, qui a environ 1030 verges de long, et passe sur un terrain d'une bonne qualité, dont le sol est une marne noire riche, reposant sur un lit de claie blanche; bois mêlé, cèdre, bouleau noir et blanc, baume, sapin, érable et pin blanc.

En laissant le Grais, le sol s'améliore, et les rives de la rivière présen-

tent de chaque côté un riche feuillage, surtout en approchant de l'Isle aux Tourtres, qui est d'une espèce de terrain alluvial et très fertile: l'orme, le basswood, le hêtre, et le bouleau y sont mêlés avec l'épinette, le baume, le pin et le cèdre.

Nous doublâmes la Pointe Chevalier, environ 1½ lieue au dessus du Grais, et passâmes, sur le côté ouest, un portage de 150 verges, tandis que nos voyageurs tiraient les canots à la cordelle contre le rapide et le courant qui règne vis-à-vis la Pointe. Delà nous avançâmes jusqu'au bassin de Shawenagan, jusqu'à ce que venant vis-à-vis le passage étroit qui forme le canal du St. Maurice, nous eûmes en partie la vue de la chute prodigieuse de Shawenagan, dont je fis l'esquisse sur le lieu; et cette esquisse, tout imparfaite qu'elle soit, peut donner une idée de la grandeur du sujet quelle offre au naturaliste et géologue. Nous mimâmes pied à terre en entrant dans la baie, où j'ordonnai de camper.

Peu de chûtes ou de plaçes portent des marques aussi extraordinaires d'une catastrophe ou convulsion de la nature, que Shawenagan; car il paraît évident que son lit actuel a été creusé par quelque fracture antérieure dans le sol, dont la position est verticale. Si nous considérons qu'au dessus de la chute le St. Maurice cours ordinairement de l'est vers le débarquement supérieur, que la distance entre celui-ci et le débarquement inférieur n'est que de 341 verges, formant ainsi une péninsule composée de lits calcaires couverts d'une couche épaisse d'argile et de marne, que l'eau aurait pu, selon moi, creuser aisément, il est surprenant que la rivière détourne tout-à-coup son cours vers le sud-est; et se divisant en deux canaux elle se précipite d'une hauteur de 150 pieds en ligne perpendiculaire, et se lance avec furie contre le rocher inférieure qu'elle déchire, et cette énorme masse d'eau force son passage à travers un canal qui n'a pas plus de 30 verges de large. Je ne doute pas cependant que la petite péninsule ne forme avec le temps une nouvelle île, et que le St. Maurice précipitera ses eaux près de l'embouchure de la rivière Shawenagan. Mais l'art pourrait percer un canal à peu de frais, si l'on considère les avantages qui pourraient en résulter, dans le cas où il se ferait de grands établissements sur le St. Maurice. Nous fîmes une excursion dans le haut de la rivière Shawenagan, appelé par d'autres Manigouito, (le pied d'un rapide.) Le terrain qui borde les deux côtés de la rivière est excellent. Le bois y est mêlé, savoir, érable, hêtre, sapin, pin, bouleau noir, &c. &c.

Dimanche 27.—Nous observâmes la hauteur et l'azimuthe du Soleil, d'où je déduisis la latitude 46° 30', et la variation du compas 10° ouest. A 2½ heures P. M. nous transportâmes le bagage, les provisions, les canots etc. au delà du portage, qui traverse la péninsule, lequel présente d'abord une montée escarpée, jusqu'au haut de la côte, et descend ensuite jusqu'à la place d'embarquement, où nous primes les canots. La rivière, en cet endroit, est parsemée d'îles ornées d'un riche feuillage, et boisées d'épinette, de sapin, de cèdre, de bouleau et de pin, avec quelques ormes par si par là. Nous débarquâmes à la Pointe au Serpent, d'où nous découvrirent le Portage des Hêtres, (distance de près de 4 milles,) où étant arrivés nous campâmes, à 5½ heures P. M.

Lundi, 28.—On peut regarder les Hêtres plutôt comme un rapide que comme une cascade, que les habiles pilotes saute fréquemment dans de grands canots; mais ils doivent bien connaître le cours du canal, que les voyageurs appellent le fil de l'eau. Cet endroit est à environ 6½ milles au N. E. de Shawenagan, qui est à environ 7 lieux N. W. de l'embouchure du St. Maurice.

Nous explorâmes le portage, qui a environ 616 verges à aller jusqu'au débarquement supérieur, et qui passe en partie sur un terrain d'une qualité bien ordinaire un peu rocheux et boisé de hêtre, de sapin, d'érable, de pin et de quelques bouleaux et cèdres. Les hommes achevèrent le transport du bagage, &c. à 9½ heures A. M., temps auquel nous laissâmes les Hêtres. La rivière prend alors son cours ordinaire vers le Nord-Est, et la rapidité de ses eaux nous força de tenir la terre. Les rivages deviennent plus élevés, la rive droite est bien boisée, et le sol est une marne légère et sablonneuse, généralement boisé d'épinette, de pin, de bouleau, d'un peu de cèdre et de baume.

Arrivés au rapide du rocher nous sortîmes des canots qui furent tirés à la cordelle jusqu'au haut du rapide; nous fîmes à pied environ 100 verges, et nous débarquâmes dans les canots, après avoir essayé un violent orage de pluie, qui tomba sur nous en torrents. Après cela nous arrivâmes à la chute de la Grand'Mère, qui est à environ 2 lieux au-dessus des Hêtres. La nature, quoiqu'elle n'ait pas donné à cette chute la grandeur ni la hauteur de celle de Shawenagan, y a rassemblé une suite d'objets agréables qui dédommage pleinement le voyageur des peines et des dangers qu'il rencontre dans les portages, dans les rapides, etc. Deux îles placées dans la largeur de la rivière d'une chute en font trois, et chacune différente l'une de l'autre; la rivière a en cet endroit 15 chaînes de large. La chute de l'est et la plus considérable des trois par la masse d'eau qui se précipite perpendiculairement d'une hauteur d'environ 30 pieds, est entre la rive est et la grande île, qui est couverte de la verdure éternelle de l'épinette et du sapin, et présente une belle nappe d'eau.

La chute du milieu est la moins remarquable des trois, et tombe dans un plan incliné, qui s'éloigne d'environ 20° du plan vertical; cette chute et celle de l'ouest mient en dessous la seconde et petite île, qui est une grosse masse de roc dont le sommet est couvert en partie d'épinette, de sapin, de bouleau blanc et de pin.

Nous passâmes le portage qui est sur la rive Ouest, située E. N. E. et 330 verges sur un terrain de qualité moyenne boisé d'épinette, de sapin, de bouleau blanc et de pin.

Nous dinâmes pour la première fois sur une espèce de poisson particulière à cette partie de la rivière, et que les voyageurs appellent *Whahatoosec*.

Les canots ayant été chargés nous continuâmes notre route. La rivière conserve son cours ordinaire nord-est. Nous passâmes une rivière qui se décharge à droite, et qui sort de trois Lacs dans l'intérieure, et malgré la force du courant contre lequel nous montions, nous arrivâmes au Petites Pilles, à environ 2½ milles au-dessus des chûtes de la Grand'Mère. Nous campâmes à 5 heures, et nous renvoyâmes deux hommes dans le petit canot au dernier portage chercher l'éponge, article très utile et indispensable, qu'ils avaient négligemment oublié.

Les Petites Pilles, qu'on devrait plutôt appeler les Petites Filles, peuvent être

être regardées plutôt comme un rapide, trop dangereux cependant et trop difficile à descendre en canot, quoique quelques voyageurs aient couru, et avec succès, le risque de le sauter.

Le terrain que j'observai présente les mêmes caractères qu'en bas des Forges, un sol léger et sablonneux, de même que la qualité dominante des bois qui se trouvent sur les rivages de la rivière, comme le bouleau, le sapin, l'épinette, et le pin blanc. Dans la soirée du même jour j'observai la hauteur de la lune au méridien, et le transit de diverses étoiles autour du pôle; la latitude qui en était le résultat et la variation du compas, 10° 15' Ouest. Vers 8 heures les hommes furent de retour avec l'éponge.

Mardi 29. Nous mesurâmes le portage du rivage Ouest, et il a 264 verges de long. De là nous embarquâmes dans les canots, et passâmes un groupe d'îles, (au nombre de cinq,) qui pourraient faire d'excellens pâturages, si elles étaient défrichées. Nous arrivâmes à l'embouchure d'une rivière considérable, sur la rive droite; cette rivière communique avec 11 lacs et par autant de portages avec La Tuque, d'où le St. Maurice détourne son cours à l'O. N. O. jusqu'au portage des Grosses Pilles, à environ 4½ milles au-dessus des Petites Pilles.

Le terrain devient ici inégal et brisé, le sol sablonneux et nullement propre à la culture, ne produisant, surtout sur la rive de l'est, que du bouleau et du sapin d'une chétive venue.

Le courant est bien fort, et en faisant le tour de la pointe, il devient presque un rapide. Les Grosses Pilles ne sont qu'une cascade de 15 à 20 pieds de haut; cependant il faut faire de toute nécessité un portage de 32 verges, au bout duquel la rivière présente subitement à l'œil une scène toute nouvelle; le rivage droit s'élève en falaises perpendiculaires de 250 à 300 pieds de haut, dont l'une en particulier ressemble fort au Cap aux Diamants. Le roc se compose principalement de granit primitif, plongeant environ 45° N. E. Il croît dans les crevasses du rocher quelques buissons, tandis que le sommet est épaisément boisé de sapin, d'épinette et de petit bouleau blanc.

Nous nous arrêtâmes à midi pour prendre la hauteur du soleil, qui venait à se couvrir de nuages, m'empêcha de faire une observation.

Nous passâmes l'Isle aux Fraises, qui est une jolie île de près d'un demi mille de long. La rivière ayant en cet endroit 15 à 18 chaînes de largeur, court généralement N. N. O.; la terre offre des deux côtés un aspect montagneux sous les tous rapports, et ne présente aucune avantage pour le défrichement ni pour la culture, au moins dans le voisinage du St. Maurice et à plusieurs milles dans l'intérieur, comme on le découvre par intervalle de la rivière même.

Le courant est d'une rapidité surprenante, et il fallut tous les efforts du parti, pour arriver à une prairie sur la rive droite, au-dessous de l'Isle au Bouleau, pour y asseoir notre camp.

Mercredi 30. Nous arrivâmes à la rivière Metinac, joli cours d'eau qui se décharge du côté est de la rivière St. Maurice, à environ 11 milles au-dessus des Grandes Pilles, d'où le cours est généralement N. N. O.

Cette rivière communique par des portages et des lacs avec La Tuque. Le St. Maurice en cet endroit tourne son cours vers le O. S. O. à aller jusqu'à la Rivière et l'Isle des Cinq, environ 10 milles au-dessus, vis-à-vis l'Isle inférieure de Matawin, où on prend une route pour se rendre par 5 lacs et 4 portages au Grand lac Matawin, qui est la source de la rivière de ce nom, 20 chaînes au-dessous de l'embouchure de laquelle nous campâmes.

A peu d'exceptions près des rivages de la rivière sont irréguliers et montagneux et peu propre à la culture. Les seules espèces de bois qu'on y voit sont le bouleau blanc, l'épinette, le tamarack, et le pin rouge, et quelques cèdres. En plusieurs endroits les rivages sont arides et le courant extrêmement rapide. A un endroit appelé le rapide Manigousse nous fûmes obligés de débarquer du canot pour mettre les voyageurs en état de monter le rapide.

Jeudi 31. Nous nous mîmes en route ce jour-là à 5½ heures du matin. Au-dessus de l'Isle supérieure de Matawin, située à environ ¼ de mille, et qui est d'une excellente terre, un ruisseau appelé le Chat en Algonquin entre le rivage Ouest. La terre est encore montagneuse de quelque côté, et n'offre aucun avantage au défrichement pour l'avenir.

Nous passâmes la montagne au Caribou, qui s'élève à la hauteur de près de 200 pieds, et présente une face rude de granit, au pied duquel règne un courant très rapide. Environ 3 milles au-dessus se trouve la montagne à l'Oiseau du même côté de la rivière, sur la rive est. L'Oiseau, comme les gens l'appellent, a près de 250 pieds de haut, et le roc dont la pente est formée s'éloigne de 40° du plan vertical, vers le N. E.

A environ un demi mille au-dessus de cette montagne, je constatai par la hauteur du soleil au méridien, la latitude 47°. Le cours ordinaire de la rivière depuis l'Isle inférieure de Matawin jusqu'à la montagne à l'Oiseau, est nord dans une distance d'environ 10 milles. De là jusqu'à l'Isle aux Noix, distance de 6 milles, elle tourne vers le N. O. Ce fut l'endroit où nous campâmes. Le terrain de cette Ile est d'une excellente qualité, ce qui fait un grand contraste avec les deux côtés de la rivière, qui surtout sur la rive Ouest, n'offre que des côtes et des falaises arides de granit. L'épinette, le sapin, le bouleau blanc, et le pin sont les bois dominans sur ces côtes.

Vendredi 1er août.—Nous laissâmes l'Isle le matin de bonne heure et nous arrivâmes à la rivière Batiscan, qui se décharge du côté ouest. Elle communique avec la grande rivière Batiscan par 5 portages et 4 lacs, d'où elle tire son nom. Le premier lac est d'une grandeur considérable, et n'est qu'à environ une lieue de la rivière Saint-Maurice. Sur la rive opposée à l'embouchure de la rivière Batiscan, la côte devient particulièrement haute et escarpée et s'élève en caps saillans de 200 pieds de haut environ.

Dès nous arrivâmes à la Rivière au Rat, large cours d'eau sur la rive ouest, entre laquelle et la petite Rivière au Rat se trouve un plateau alluvial formé par ces rivières au pied des hautes montagnes; en cet endroit la compagnie de la Baie d'Hudson tient un poste de commerce, qui consiste en un magasin, deux maisons et un très bon jardin, qui fournit au poste tous les légumes nécessaires. La maison est un bâtiment pour l'agent résidant.

En laissant le poste nous fûmes assaillis par un fort orage de grêle, contre lequel nous ne pouvions nous procurer aucun abri, vu que nous montions le long d'un banc de sable d'environ 70 pieds d'élévation, tandis que le rivage est continué d'être montagneux. Environ un mille au-dessus du poste la

côte s'élève à 300 pieds, laissant voir de nombreuses falaises qui plongent généralement au nord-est. Après cela nous atteignîmes la pointe au Tonnière, pendant une forte pluie, accompagnée de tonnerre, et qui dura toute la nuit, les coups de tonnerre étant répétés par les montagnes avec un effet surprenant. Ce fut là que nous campâmes, à 5½ heures.

Samedi 2 août.—Il y a vis-à-vis de la pointe un rapide considérable que nous montâmes, et passant plusieurs falaises qui s'élèvent de 200 à 300 pieds perpendiculaires, nous doublâmes une Ile appelée La Pêche, où les sauvages et les gens du poste de La Tuque, se rendent fréquemment pour pêcher, et on y prend annuellement une grande quantité de poisson blanc, de doré, de carpe, d'achigan, de brochet et d'anguilles. Après cette Ile nous atteignîmes l'embouchure de la rivière du Bastonais à 2 heures, malgré la pluie qui était tombée en abondance depuis notre départ de la pointe au Tonnière. L'embouchure du Bastonais est à environ 10 milles au-dessus de l'Isle aux Noix, sur la rive est du Saint-Maurice, qui en cet endroit court généralement du nord au nord-est. La terre aux environs devient meilleure, quoique la côte opposée continue d'être montagneuse et incultivable.

Trouvant qu'il était nécessaire d'avancer jusqu'au poste de trafic de La Tuque, afin de pouvoir, s'il était possible, obtenir quelques nouveaux renseignements sur l'avantage qu'il y avait à monter la rivière Bastonais, je laissai les provisions et le petit canot avec deux hommes à l'embouchure du Bastonais, et prenant le restant des gens dans le grand canot nous continuâmes à monter le Saint-Maurice, qui au-dessus de l'Isle, devient d'une largeur considérable; et ses rivages quoique encore montagneux, ne sont pas aussi irréguliers ni aussi montagneux qu'au-dessus de la rivière Bastonais. A la distance de 4 milles on découvrit le sommet conique de La Tuque, qui tire de là son nom. Arrivé au débarquement inférieur du portage au pied de la cataracte, nous traversâmes le portage qui passe sur un terrain sablonneux qui produit beaucoup de bluets, et est boisé de pin rouge, d'épinette et de cyprès.

Nous fûmes reçus avec hospitalité par le commis résident, qui est un jeune Canadien. Ne connaissant nullement le pays, il ne put nous donner aucun renseignement additionnel à ceux que je possédais déjà, et il n'y avait personne au poste pour remédier à ce défaut.

Dimanche 3.—Je me préparai à prendre hauteur, ce que je fis avec beaucoup de difficulté, à cause des marquois et des brulots qui me tourmentaient, et qui sont en cet endroit en plus grande quantité qu'en aucune autre partie du pays, ce qui provient sans doute de l'étendue des terrains bas et marécageux que sont aux environs du poste, et aux vastes prairies qui sont dans les lacs situées à peu de distance de là. Dans les printemps les eaux montent à une hauteur extraordinaire, car on a trouvé des racines d'arbre au haut de grands arbres, dans les prairies et auprès du poste. La colline conique de La Tuque sépare le poste de la chute, qui a environ 50 pieds de haut. Le roc se compose principalement de granit, contenant du quartz, du mica et du felspath.

Le poste de la Tuque est au 47° 18' 32" de latitude nord par observation, et 73. 0 0 longitude ouest par rapport, variation du compas 11° 0 0 ouest; c'est un poste de trafic pour la compagnie des postes du roi et pour la compagnie de la Baie d'Hudson, qui ont chacune un établissement en cet endroit, ce qui naturellement excite un esprit d'opposition, injurieux peut-être aux deux parties, et finalement pour être les naturels. L'établissement des postes du roi consiste en un magasin, un hangar et deux maisons; celui de la Baie d'Hudson, en une maison seulement, qui est cependant le meilleur bâtiment du poste.

Au-dessous du poste le Saint-Maurice a environ un demi mille de large, et de là on découvre la rivière Croche, la rivière Vermillon et la rivière Bastonais du nord. On prend à l'embouchure de la dernière rivière de beaux dorés et achigans, qui sont une bonne source d'approvisionnement pour le poste. Le terrain conserve au loin le même caractère montagneux qu'il a au-dessus de La Tuque, et est sous tous les rapports nullement propre à la culture.

L'hiver commence vers la fin d'octobre, et la neige disparaît et la rivière est libre de glace vers la fin de mai. Mais la température de l'été est à-peu-près la même qu'à Québec, et l'hiver est extrêmement froid. Le poste de La Tuque, en se réglant sur le cours général du Saint-Maurice, est astronomiquement N. N. O. avec les Trois Rivières et en est à 100 milles en suivant le cours de la rivière—d'après la récapitulation des distances arrangées dans la table qui suit:

TROIS-RIVIERES.

9	Forges.														
4½	5½	Portage de Gabelle 550 verges.													
16	7	1½	Grais do 103½ do.												
21½	12½	7	5½	Shawenagan 55½ verges											
28½	19½	14	12½	7	Hêtres 616 do.										
34½	25½	20	18½	13	6	Grande Mère 335 verges.									
37½	26½	23	21½	16	9	3	Petites Pilles 200 verges.								
42	33	27½	26	20½	13½	7½	4½	Grande Pilles 32 verges.							
53	44	38½	37	31½	24½	18½	15½	11	Rivière Metinac.						
63½	54½	49	47½	42	35	29	26	21½	10½	Portages des Cinq et Ile.					
73½	64½	59	57	52	45	39	36	31½	20½	10	L'Oiseau ou Bird Mountain.

Appendice
(V.)
14 janvr.

Lundi 4.—Nous partîmes du poste de la Tuque, et traversâmes le portage qui a 1474 verges jusqu'à l'embarquement inférieur, et de là nous atteignîmes l'embouchure de la rivière Bastonais, à temps pour prendre la hauteur du soleil au méridien, d'où je déduisis la latitude $47^{\circ} 14' 30''$

A une heure P. M. nous nous éloignâmes des rivages du Saint-Maurice, et nous montâmes la rivière Bastonais. La largeur en varie de 20 à 25 verges, et trace son cours à travers une étendue de terre alluviale excellente, bornée par les hauteurs adjacentes, qui coupent la rivière dans son cours et forment une chute de près de 130 pieds de haut. Nous arrivâmes au portage sur la rive gauche, à environ 30 chaînes N. N. E. de l'embouchure de la rivière. Ce portage que j'appellerai no. 1, se trouva être de 325 verges, à aller jusqu'à l'embarquement supérieur au haut de la chute, qui est formée de trois cascades séparées. L'endroit serait tout-à-fait propre à un moulin.

Entrés dans les canots nous poursuivîmes notre route généralement N. N. E., le cours de la rivière étant bien tortueux et descendant avec une grande rapidité l'espace d'environ $1\frac{1}{2}$ mille. Les rivages nous parurent bien propres à y asseoir des établissemens, quoique pourtant jusqu'à peu de distance du rivage, car les montagnes suivent le cours général de la rivière. Alors tout-à-coup elle se détourne au S. S. E. et entre dans un petit lac, sur lequel nous essayâmes une furieuse tempête de pluie et de grêle. Autour de ce lac la terre est basse, excepté du côté du sud, où elle s'élève à une petite distance de l'eau. Le bois dominant, que j'ai observé jusqu'ici, est l'épinette rouge, le sapin, le bouleau, le pin rouge et quelques érables.

Nous atteignîmes le pied du grand portage et nous campâmes à 5 heures.

Mardi 5.—Nous envoyâmes de bonne heure, avant déjeuner, les hommes chargés chacun de deux paquets de provisions et du bagage à l'embarquement supérieur, et il était midi lorsqu'ils revinrent chercher les canots.

Nous passâmes le portage que je trouvai avoir près de 4 milles de long; il passe sur un terrain inégal, en plusieurs endroits marécageux et montagneux. Le premier est très sec et quelquefois rocheux, et boisé principalement d'épinette, de sapin, de bouleau et de cèdre. Les côtes sont couvertes de sapin, de bouleau, de pin et de quelques érables. Le sol est généralement une terre sablonneuse et légère. L'embarquement supérieur est situé sur un petit lac d'environ $\frac{1}{2}$ mille de long et $\frac{1}{4}$ mille de large. La terre offre la même apparence que celle du portage.

Il était six heures lorsque le transport du bagage et des canots fut achevé. Malgré je désirais avancer un peu davantage, s'il était possible, c'est pourquoi nous embarquâmes dans les canots et nous traversâmes le petit lac, d'où nous entrâmes par un canal resserré dans le grand lac Wagagamacke, comme le soleil se caclait derrière les hauteurs lointaines. La scène qu'il offrit à nos regards était vraiment magnifique, et celle-ci n'en fut rendu que plus impressionnée par le sillon de nos légers canots sur la surface polie de son cristal limpide, et par les chansons caractéristiques des voyageurs que répétaient les échos du rivage. Les cris perçans du Huard, dont ce lac abonde, venaient encore ajouter de temps en temps à la douce sensation de cette scène du désert.

Le lac paraît être d'une forme très irrégulière, et il s'en étend une partie vers le sud. Nous dirigions notre course E. S. E. Les baies ou sont si profondes, qu'il ne suffit pas d'y passer pour se former une idée de leur grandeur. On peut cependant en estimer la largeur à une lieue. La perspective y est diversifiée par quatre ou cinq îles, qui toutes étaient situées au nord de notre course. Au S. O. la terre nous parut montueuse, et dans les parties qui s'élevaient graduellement des bords du rivage, le bois nous parut être principalement de l'épinette, du pin et du bouleau.

A 8 heures nous doublâmes plusieurs îles qui sont situées à la tête du lac à l'embouchure de la rivière Bastonais, que nous montâmes jusqu'au rapide et au 3e. portage, le lac ayant environ 11 milles de long.

Nous campâmes à la lumière des torches, et il était une heure avancée dans la nuit, lorsque nous nous abandonnâmes au repos. Nous observâmes la hauteur de l'étoile polaire, latitude $47^{\circ} 6' 8''$.

Mercredi 6.—Beau temps. De bonne heure ce jour là, les canots et le bagage furent transportés au haut du portage, que je trouvai avoir 270 verges; il passe, dans une direction générale E. S. E., sur un terrain pauvre et rocheux, boisé d'épinette, de bouleau blanc, de cèdre et de *basswood*. La rivière suit le portage, du côté droit; il y a une cascade perpendiculaire d'environ 20 pieds de haut. Nous embarquâmes dans les canots et poursuivîmes notre course en montant la rivière, dans la direction générale de l'est, et nous arrivâmes au 4e. portage. Les rivages sont bas et d'un maigre terrain; il paraît quelques côtes dans les derrières. Le bois est principalement le tamarack, le bouleau et le pin blanc, quelques cèdres et épinettes rouges.

Le 4e. portage à 100 verges de long, et nous reprîmes de nouveau la rivière Bastonais qui est très tortueuse et étroite, courant généralement de l'est au nord.

Nous fîmes un autre petit portage pour éviter un rapide roide, qui n'est cependant pas impraticable pour de petits canots. La terre quoique encore basse est de meilleure qualité et est susceptible de culture.

Nous entrâmes dans le lac appelé le Petit Wagagamacke, et depuis son issue jusqu'au 6e. portage nous marchâmes dans la direction E. N. E. Il est environné de petites collines couvertes principalement de sapin, d'épinette et de pin; le sol est sablonneux. Il a environ $1\frac{1}{2}$ lieue dans sa plus grande longueur et 2 milles de largeur. Le portage se trouva être bien long et bien rude, c'est pourquoi il fut impossible de transporter tout le bagage, dont le transport fut remis au lendemain, pour ce qui restait, et nous campâmes sur les bords du lac de Wagagamacke.

Jeudi 7.—Nous partîmes à 7 heures A. M. et mesurâmes le portage qui a $1\frac{1}{2}$ mille de long traversant un terrain rompu et inégal, boisé de baume, de pin, de peuplier, de sapin et d'épinette et un petit lac environné de la même espèce de terre; ce lac se décharge de le petit Wagagamacke.

Après avoir passé ce lac, nous arrivâmes au 7e. portage, qui a 135 verges de long, et qui atteint les bords du Long Lac, qui a environ $3\frac{1}{2}$ de longueur, et en quelques endroits environ $\frac{1}{4}$ mille de largeur. Les rivages sont mon-

teux, rocheux, et le terrain en est sablonneux, et ils sont couverts de bouleau blanc, d'épinette, de sapin et de petit pin. Il s'étend N. E. et S. O., et à son extrémité se trouve le 8e. portage qui a 1150 verges de long. Ce portage conduit le long de l'élévation qui borde un marais étendu du côté du sud, jusqu'à un petit étang, qui est les dernières eaux de la rivière Bastonais. Ce petit étang dont le fond est une fondrière profonde, et qui est environné d'une immense savanne d'épinette blanche, donne matière aux spéculations des géologues. On y trouve en quantité près de la décharge de gros cailloux roulés, entassés les uns sur les autres sur les bords du lac, et qui couvre la terre à plusieurs verges de distance en arrière. Il n'y a sur la surface du sol aucun vestige, d'où l'on puisse conclure que ces cailloux; qui sont de granit avec des veines de quartz et de feldspath, et dont plusieurs sont couverts d'une mousse épaisse, ont été entraînés en cet endroit par un torrent. Il me paraît cependant que le seul moyen de rendre compte de la présence de ces roches, serait de supposer qu'à une époque peu reculée l'eau couvrait toute cette étendue de terre basse, qui forme maintenant le grand marécage. Je pris ici la hauteur du soleil, qui me donna la latitude $47^{\circ} 17' 7''$. Ayant traversé l'étang qui abonde en une espèce de grandes sangsues, nous fîmes le 9e. portage qui a 730 verges, et qui aboutit à un autre étang de la nature du précédent, et qui est la première eau de la rivière Batiscaan. Nous traversâmes alors le 10e. portage, qui a 550 verges, à travers une épaisse savanne d'épinette et de sapin, et qui mène à un autre lac de près de $\frac{3}{4}$ de mille de long, autour duquel la terre est encore basse et marécageuse.

Nous traversâmes ce lac jusqu'au 11e. portage, où nous campâmes à 7 heures.

Vendredi 8.—Il fit durant la nuit une pluie continue, accompagnée d'éclairs et de tonnerre. A 8 heures les canots et le bagage étaient de l'autre côté du portage, que je trouvai avoir 530 verges de long. La terre s'élève après la savanne où nous avions campé, et s'abaisse ensuite jusqu'à un marais ou cirque un petit ruisseau, où nous lançâmes les canots. Ce ruisseau aboutit à un autre étang rempli de sangsues, au bout duquel setrouve le 12e. portage. La terre conserve encore le caractère d'une savanne d'épinette, et généralement de la pire espèce de cette sorte de terre, n'étant boisée que d'épinette blanche et de tamarack.

Le 12e. portage a 1030 verges de long, traversant un terrain de la même nature, jusqu'au dernier lac à l'ouest de la rivière Batiscaan, auquel l'on arrive par le 13e. portage d'environ 800 verges sur un terrain uni, boisé d'épinette, de bouleau et de sapin.

La rivière Bastonais que notre guide nous dit en être ici que la branche nord-ouest, a environ une chaîne ou 22 verges de large. Les rivages en sont bas, et le sol est principalement un sable blanc, qui produit en abondance des raisins de bois. Le bois dominant est le tamarack, le sapin, le bouleau et quelques pins. Le cours général de la route depuis le portage du Wagagamacke supérieur, jusqu'à la rivière Batiscaan, est environ nord-est, et de 11 milles.

Nous descendîmes le Batiscaan dans une direction S. E., l'espace d'une demi-lieue, et nous débarquâmes au 14e. portage sur le rivage nord-est. Le courant de la rivière est doux, et nous observâmes quelques hauteurs sur le rivage sud-ouest, à environ un mille dans l'intérieur, jusqu'où paraissait s'étendre cette terre basse et marécageuse. Nous campâmes à ce portage à 6 heures P. M. Le soir de ce jour là nous eûmes des perdrix pour le souper, M. Goldie en ayant tué quelques-unes à une petite distance du camp.

Nous observâmes la hauteur de l'étoile polaire; latitude en déduite $47^{\circ} 19' 30''$ et variation $11^{\circ} 45'$ ouest.

Samedi 9.—Les voyageurs ayant transporté une partie des effets de l'autre côté du portage avant déjeuner, il fut trouvé nécessaire de nettoyer à la hache un passage pour le grand canot, ce qui occasionna beaucoup de retardement. Le portage est d'environ 9 stades de long et passe sur un terrain rude et inégal, qui d'abord marais enfoncé devient une montagne escarpée, d'où l'on descend à une marais semblable à l'autre, qui s'étend jusqu'au bord d'un autre étang à sangsues, courant environ N. et S. et ayant $\frac{1}{2}$ mille de long. Les rochers que j'y observais étaient entièrement de granit et de gneiss; le sol est généralement une terre sablonneuse et légère, recouverte d'une couche légère de sol végétal.

Nous traversâmes le petit lac qui n'a pas plus de 6 chaînes, jusqu'au 15e. portage; le fond en est boueux et a si peu de profondeur, qu'il fallût s'y prendre à plusieurs reprises pour transporter les effets de l'autre côté, l'air n'étant d'aucun usage et ne pouvant atteindre le fond de la vase qui a plusieurs pieds de profondeur. Le 15e. portage a environ 130 verges de longueur jusqu'à un lac, qui est d'un caractère bien différent, quoique bien près du précédent. Le fond en est graveleux et l'eau claire; il est au dessus du dernier étang dans lequel il décharge un petit ruisseau. Le portage fait, nous rejoignîmes M. Davies, qui avait pris le devant, et était rendu au 16e. portage au bord du lac. La figure en ressemble fort à celle d'un oiseau au vol; la terre qui l'environne prend un caractère plus grand, sans en être pourtant plus propre aux fins de l'agriculture. Le sol est sablonneux, et la côte ou la rive où nous primes notre frugal repas est couverte de bluets, ce qui fut pour nous une douceur additionnelle, après l'oulette froide qui nous fut servi pour le dessert.

Nous traversâmes le 16e. portage, qui à environ 1100 verges de long, et passe sur une terre de moyenne qualité dans une certaine distance, le sable étant mêlé de marne sous un lit épais de sol végétal; le bois est épinette, un peu de bouleau blanc, de cèdre, de sapin et de baume. En approchant d'un petit lac où nous lançâmes nos canots, au bout du portage, la terre devient encore humide et marécageuse; boisée d'épinette et de sapin. Nous arrivâmes par une descente rapide au bord du lac, au tour duquel la terre est généralement basse et couverte d'épinette et de sapin.

Ce lac traversé, nous passâmes le 17e. portage, qui a 290 verges; il divise les eaux qui coulent dans les deux branches N. E. et N. O. de la rivière Batiscaan, et consiste en un marécage étendue qui va jusqu'au bords du lac, premières eaux de la branche N. E. du Batiscaan; ce lac a environ un mille de long.

La terre est basse aux environs de ce lac, et à son extrémité se trouve le 18e. portage, qui n'a que 150 verges de long et aboutit aux bords du lac Edouard; un joli cours d'eau rapide suit le portage et tombe dans le lac par une

une cascade de 15 pieds, en présentant un site avantageux pour un moulin. Nous campâmes en cet endroit à 7½ heures, ce qui était un peu tard pour les préparatifs que nous avions à faire contre la pluie qui approchait et qui avait tombé légèrement, en différens temps du jour.

Dimanche 10.—Il plut tout le jour, si bien que nous ne nous hasardâmes pas à poursuivre notre route.

Lundi 11.—Le temps s'éclaircissant vers 9 heures A. M., nous partîmes du 18e. portage à 10½ heures. A environ un mille de là le lac s'agrandit en s'étendant vers l'E. S. Est. Nous passâmes cependant dans un canal étroit formé par la pointe N. O. de la grande Ile et la terre ferme, et cotoyant les bords N. O. du lac, nous arrivâmes à un endroit où il s'élargit considérablement et où il y a une autre Ile d'une grande étendue, au nord ouest de laquelle nous passâmes, entre elle et le rivage nord ouest, d'où nous fîmes route pour la Pointe au Diner, distance d'environ 9 milles du dernier portage, par la course que nous avions suivie. En cet endroit la terre s'élève graduellement en jolies collines, boisées de sapin, d'épinette, de bouleau blanc et de pin. Le sol m'a paru être d'une terre grasse mêlée, et je crois que quelques parties du lac Edouard seraient susceptibles d'amélioration.

Le lac Edouard, qui tire son nom d'un chasseur sauvage de Batiscan, peut être regardé comme formé de deux lacs, en ce qu'une grande Ile s'étend presque d'une extrémité à l'autre, et en quelques endroits elle a presque trois lieues de large. La plus grande nappe d'eau est, selon le rapport du guide, celle que nous avons passée dans le passage du nord-ouest. Le passage du sud-est est fréquenté par les chasseurs qui viennent de Batiscan.

Ayant dîné à la Pointe, où des marques récentes sur les arbres et des vestiges de campement, autour duquel étaient épars des crânes d'ours et arêtes de poissons, faisaient voir que plusieurs familles sauvages y étaient demeurées pour une saison de chasse—nous continuâmes nos progrès sur le lac, qui tient un cours plus droit. La terre paraît plus élevée, et les rivages sont en plusieurs endroits rocheux et arides. Comme il soufflait alors un joli vent en poupe nous mîmes une voile à chacun de nos canots, qui furent poussés au pied de six milles à l'heure. Le vent nous laissa comme nous arrivions à la pointe N. E. de la Grande Ile, après que nous eûmes passé plusieurs petites Iles qui forment un joli point de vue avec les collines d'alentour.

Au delà de l'Ile et doublé la Presqu'île, le lac se contracte à ½ de mille et le terrain devient plus montagneux et plus inégal, et s'élève en plusieurs endroits en falaises de granit; le bois qui croît sur ces montagnes est du sapin, du tamarack et des petits bouleaux blancs. Au bout du lac, à environ 9 milles de la Pointe à Diner, il entre dans le lac une rivière d'environ 18 verges de largeur, que nous montâmes l'espace d'un mille; c'est un cours d'eau tranquille qui traverse un terrain de transport, qui s'étend jusqu'aux pieds de quelques hauteurs, de la même espèce de terrain et de la même apparence que celui mentionné en dernier lieu, et nous tombâmes dans un joli lac, environné de montagnes, qui n'ont aucune apparence favorable pour des établissemens. L'ayant traversé jusqu'au portage no. 19, nous campâmes à 7 heures.

Mardi 12.—De grand matin les voyageurs passèrent le portage avec tout le bagage, et en revenant abattirent plusieurs arbres qui auraient nui au transport des canots.

Ce portage, qui a 500 verges, conduit à un lac dont les eaux coulent à l'est dans la branche N. E. de la rivière Batiscan. La terre aux environs est montagneuse et rocheuse.

Le 20e portage passe sur une montagne, de laquelle nous descendîmes à une petite rivière, formant la branche N. E. de la rivière Batiscan qu'on monta environ 170 verges du 21e portage.

La direction générale de notre route entre la branche N. O. et la branche N. E. est à peu-près E. N. E., et à 30 milles. La dernière qui coule S. S. Ouest est presque de niveau avec la première, vu qu'il faut l'aide d'un baromètre pour s'apercevoir de la différence. Le 21e. portage qui a environ 140 verges se termine à un petit lac qui est à peu-près dans la même localité que les étangs à sangsues, auxquels il ressemble beaucoup, le terrain qui l'environne étant bas et marécageux.

Après cet étang nous passâmes le 22e. portage, ou le portage rocheux, qui à mi-distance est coupé par un ruisseau rapide qu'il faut passer; toute la longueur du portage étant de 530 verges jusqu'à l'embarquement, sur la rivière qui court au sud-ouest. En cet endroit je constatai, par observation, la latitude 47° . 29' 45".

A une petite distance du portage nous entrâmes dans un petit lac, qui resserré dans la distance d'environ 1 mille, s'élargit de nouveau en approchant du 23e. portage, d'où le lac s'accroît encore en dimensions dans une direction est, mais nous dirigeons notre course vers le nord. Depuis le 20e portage le caractère général du sol est d'être une vaste savanne de tamarack, et ce fut avec peine que nous pûmes trouver un endroit sec au 23e portage.

Nous laissâmes alors les dernières eaux de la rivière Batiscan, et nous traversâmes dans ce portage un terrain assez uni couvert en grande partie d'une savanne d'épinette et qui aboutie aux bords d'un autre étang à sangsues, qui est les premières eaux de la rivière Bastonais du nord, qui se décharge environ une demi lieue au-dessus du poste La Tuque, et dont on a déjà fait mention.

Le portage se trouvant long, ayant environ 1½ mille de longueur, et trouvant impossible de camper dans la savanne, qui est une espèce de terre montante ou de marécage, nous remîmes au lendemain le transport d'une partie des provisions, et nous traversâmes l'étang jusqu'au 24e portage, qui est à la décharge qui se dirige avec rapidité vers le nord. Ayant passé ce portage, qui a 375 verges, nous campâmes sur le bord d'un ruisseau qui descend des hauteurs et tombe dans le lac au portage.

L'espace de terrain que nous parcourâmes ce jour-là n'est nullement propre à faire des établissemens présentant les deux extrêmes, terrains tantôt bas et uni, tantôt élevé et escarpé. Les rochers qui forment ces hauteurs sont principalement de granit, plongeant à un angle de 45° vers le N. E. n'ayant d'ailleurs aucune stratification régulière, on découvre du quartz et du mica, de même que de d'hornblende, dans les fragmens qui sont détachés du haut des rochers. Le bois que nous y avons observé en plus grande quantité, est l'épinette, le sapin, le bouleau blanc, un peu de cèdre et de pin.

Nous observâmes les azimuths et la hauteur de l'Etoile Polaire d'où nous déduisîmes la latitude 47° . 32' 0" ; variation 12° . Ouest.

Mercredi, 13.—Il tomba le matin une pluie légère; cependant nous envoyâmes les gens chercher le restant des provisions et le grand canot au 23e. portage, et à leur retour nous avançâmes sur le lac, qui a environ 1½ milles de long—à son extrémité nord nous descendîmes l'espace d'environ 1 mille une petite rivière à fond bas et rocheux, jusqu'au 25e. portage, qui n'a qu'environ 150 verges, à travers un terrain bas et marécageux. Ce portage aboutit au Lac Croche, et il faut absolument un guide pour trouver l'embarquement du portage—le sol aux environs de ce lac est sous tous les rapports bas et marécageux, boisé principalement de tamarack et de sapin. Le 26e. portage est dans un petit havre ou baie, d'où coule la rivière jusqu'au prochain lac; ce portage a comme l'autre 150 verges jusqu'au lac, qu'il faut traverser pour arriver au 27e. portage.

En laissant ce lac qui s'étend de l'Est vers l'Ouest et qui est environné d'un terrain bas et uni, le portage passe sur un sol de la même espèce, et descend une côte considérable pour arriver à la rivière Bastonais, ce qui fait le premier degré sensible dans le niveau avec l'étendue de terrain plat qui paraît exister depuis le long lac sur le 8e. portage, jusqu'au 27e. portage qui a 800 verges de largeur.

Nous embarquâmes dans les canots et descendîmes la rivière qui court généralement vers le nord. Les bords en sont couverts d'épinette rouge et de beaume, et présente le meilleur sol que j'aie rencontré depuis mon départ du St. Maurice. A environ une lieue au-dessous du portage nous passâmes un petit lac, où j'observais que l'épinette blanche se mêlait avec la rouge, ce qui marque que la terre y est d'une qualité inférieure; 4½ milles au-dessous de ce lac il faut faire un portage. A partir du lac, la rivière s'agrandit considérablement, et est par endroits de 1½ à 2 chaines; généralement les bords sont bas, quoique rocheux et élevés par endroits. Le bois dominant est l'épinette rouge, ce qui est un signe favorable à l'égard de la nature du sol.

Ce petit portage, le 28me depuis le St. Maurice, est sur la rive est, et évalue une cascade de 15 pieds. L'espèce des rochers qu'on trouve en cet endroit, est le granit, plongeant 60 deg. S. O. A un demi mille au-dessous de ce portage nous arrivâmes à la tête d'un rapide, et ayant débarqué sur la rive ouest, nous lançâmes les canots jusqu'aux pieds de ce rapide, où nous embarquâmes de nouveau et continuâmes notre route. Le courant descend rapidement jusqu'à un autre rapide ou plutôt cascade où l'heure avancé nous obligea de camper sur le portage qui est sur le rivage Ouest.

Depuis le 28me portage le pays a pris une aspect montagneux, s'élevant à une hauteur considérable, et se monte en falaises dans l'intermédiaire et aux pieds du dernier rapide. Le roc qui est de granit et qui forme le rivage Ouest de la rivière est presque vertical, ne s'éloignant de cette coupe que d'environ 10°. le rivage s'élève à environ 50 pieds, et le sommet en est couvert de mousse, tandis que le rivage opposé forme un plan horizontal qui s'étend jusqu'aux pieds de la montagne qui s'approche de la cascade du 29e. portage. En cet endroit la rivière se resserre dans un canal étroit formé par des falaises menaçantes qui s'élèvent à environ 50 pieds perpendiculaires. Les deux rivages diffèrent l'un de l'autre sous tous les rapports; celui de l'Est est d'une configuration irrégulière, plongeant environ 45° S. E. tandis que celui de l'Ouest, un peu au dessous du précipice, est plat jusqu'aux pieds d'une hauteur considérable, qui va de parallèle avec la rivière, et aux pieds de laquelle court le portage, qui a 300 verges jusqu'aux pieds ou à la base de la chute.

La rivière Bastonais ne paraît pas avoir formé son lit actuel, car je ne vis aucune trace de roches roulées au dessus de son niveau, en examinant l'apparence et l'état des rochers qui généralement paraît avoir été réduit dans sa position actuel par quelque catastrophe évidente, et la fracture qui en aura été la suite aura ouvert un canal à la rivière; car au dessus du 28e. portage où les montagnes sont encore à une distance et où le pays forme un plan horizontal au nord-ouest, la rivière prend une direction subite de leur côté, et laisse la plaine pour suivre son cours à travers ces montagnes. Une circonstance très remarquable qui me frappa, c'est que plusieurs côtes qui ne tiennent nullement à aucune chaîne adjacente, s'élèvent au milieu de la grande plaine, généralement en forme de cônes, et sont visibles à une grande distance.

Judi, 14.—De grand matin les canots et les provisions furent transportés au bas du portage, à l'embarquement, au pied de la chute, qui a 15 pieds de haut. Nous arrivâmes à un rapide au bas duquel les canots furent envoyés déchargés et nous fîmes un petit portage, (No. 30.) de 70 verges, qui passe à travers une savanne d'épinette rouge et de tamarack. Depuis cet endroit la rivière circule S. S. O. entre les hauteurs, et nous sautâmes plusieurs rapides, jusqu'à la tête d'une chute considérable, et au 31e. portage, de 300 verges de long. Nous atteignîmes plusieurs endroits où les rivages sont formés de falaises escarpées, qui caractérisent la nature des hauteurs et des montagnes qui paraissent suivre le cours général de la rivière et qui s'éloignent en approchant de la chute. En cette endroit la rivière se resserre en un canal étroit et forme une cascade d'environ 50 pieds, qui est divisée en petit canaux par deux îles, qui augmente le fracas du torrent, qui bouillonne avec un effet magnifique en se précipitant sur les rochers. Les îles sont couvertes de mousse et de petits sapins, tandis que le pays environnant est généralement boisé de la haute épinette rouge, diversifié par la surface unie et roulée des rochers dans le voisinage de la chute, dont la blancheur contraste avec la couleur sombre du sapin, ce qui donne à cette scène intéressante un effet, que nous n'avions pas senti, depuis que nous avions laissé le St. Maurice.

Nous dînâmes ce jour-là sur le doré et la carpe qu'on avait pris dans un moment au pied de la chute. Après cela nous poussâmes jusqu'au lac Kajoualwang, un mille au dessous du Portage Doré.

Nous aperçûmes à une distance, une île considérable, sur laquelle je me dirigeai, N. N. O. Après avoir fait 3 milles, nous arrivâmes à une ouverture dans le rivage est, qui nous découvrit une belle nappe d'eau baignant le pied de la côte. Nous arrivâmes à l'île jusqu'à laquelle la largeur moyenne du lac est d'environ un mille, et qui est ainsi jusqu'à la contraction du lac à un demi mille. Sur les bords de ce lac, la terre conserve beaucoup des caractères du lac Edouard. Les côtes ne s'élèvent pas à une hauteur bien considérable et sont couvertes d'épinette, de sapin, de bouleau blanc et de pin. Nous suivîmes le resserrement du lac, l'espace de 2 milles environ, et nous observâmes que l'apparence du terrain s'améliorait; le sol est stérile et est plus plat. Le lac s'étend jusqu'à 2 milles de large environ, formant à l'Ouest une large baie, d'où sort la rivière Bastonais, qui pénètre dans le pays et se décharge dans le St. Maurice. Le guide qui a fréquemment monté et des

endu cette rivière, dit qu'il n'y a pas plus de 20 lieus entre le lac et le St. Maurice, et qu'on peut en monter, ou de La Tuque, en huit jours, et faire la descente en 5 jours, n'y ayant dans toute cette distance que cinq portages.

Nous courions alors vers le nord, à la tête du lac, en passant une grande île de près d'un mille de long. La largeur moyenne de cette partie du lac est d'environ 1½ mille. L'aspect général de ce pays est plus grand, et il y en a quelques parties que je crois susceptibles d'amélioration et d'être établies. Nous campâmes à la tête du lac, où je constatai trigonométriquement la distance exacte de divers points, l'île et une montagne bleue dans le lointain, située à l'extrémité sud du lac et faisant partie des hauteurs aux environs du Portage Doré, d'où par notre course sur le lac elle est éloignée d'environ 11½ milles, ce qui met la longueur du lac Kajoualwang d'environ 10½ milles. Il plut la plus grande partie du temps que nous fîmes sur le lac, avec un gros vent du sud, qui venant à s'augmenter comme la pluie cessait à notre approche de la tête du lac, poussait avec violence les lames contre le rivage sablonneux, sur le bord duquel nous campâmes. L'atmosphère se débarrassant des nuages, j'obtins du transit de plusieurs étoiles circo-polaires au dessus du méridien, la latitude $47^{\circ} 48' 30''$.

Vendredi 15.—Il plut depuis minuit jusqu'à dix heures du matin, heure à laquelle nous partîmes. Montant alors les eaux de la rivière Bastonais nous passâmes un petit lac environné de hauteurs d'un aspect défavorable, boisées de tamarack et de bouleau blanc, jusqu'au 32e. portage, qui a près d'une demi lieue de long, et courant dans une direction presque nord et sud. Le terrain qu'il traverse dans cette distance est tour-à-tour marécageux et montagneux. Dans le premier cas, en laissant le lac, nous passâmes sur un terrain assez uni mais rocheux, jusqu'au pied d'une haute montagne, que nous gravâmes et descendîmes dans un sentier bien rude et bien tortueux, qu'il fallu souvent élargir en abattant les plus gros arbres, pour permettre aux voyageurs d'y passer avec les canots. Ce fut ainsi que nous parvîmes à la base de la montagne, et à passer une savanne plantée de la plus mauvaise espèce de bois, d'épinette blanche et de tamarack, et qui mène au dernier lac des eaux de la rivière Bastonais ou du St. Maurice. Une pluie forte et continue nous empêchant de poursuivre notre route, nous fûmes obligés de camper au milieu de cette savanne.

Samedi, 16.—De grand matin nous nous mîmes en marche avec la perspective d'une continuation de beau temps.

Nous observâmes sur les deux rivages du lac des traits caractéristiques tout-à-fait différents; celui de l'est est montagneux et couvert de sapin, d'épinette de pin et de bouleau blanc; celui de l'ouest est une savanne immense d'épinette, et incultivable.

Nous arrivâmes au 33e. portage, (1130 verges) qui conduit, à travers un brûlé et généralement un terrain très pauvre et rocheux, au lac Quaquagamacksis, et aux premières eaux qui tombent dans le lac St. Jean, celles de la rivière Ouatichouan, qui y tombe aussi dans le coin S. O.

La direction général de ma route depuis la rivière Batiscau jusqu'à la division des eaux, fut presque nord, et forme une distance d'environ 33 milles. Aux environs du lac Quaquagamacksis la terre est sous tous les rapports un désert aride et désolé, le feu y ayant brûlé le bois, qui est maintenant remplacé pour une pousse de tremble, de peuplier, de petits sapins et bouleaux blancs. Le sol est bien rocheux et sablonneux.

On s'aperçoit à peine que le terrain s'élève, il y a cependant une montée graduelle d'environ un demi-mille dans le portage, et un petit ruisseau qui se jette en venant du nord dans Quaquagamacksis, où nous lancâmes de nouveau les canots, et nous embarquâmes sur les eaux qui coulent dans le lac St. Jean.

Après qu'on a passé une île de roche, le lac se resserre l'espace d'environ un demi mille; il s'élargit ensuite, et nous tombâmes dans un petit canal rapide et tortueux. La terre est maintenant devenue toute-à-fait base et prend le caractère d'une savanne, environnant cette partie du lac. Nous descendîmes la rivière, et passant à l'extrémité de deux petits lacs ou étangs, situés dans la savanne étendue, qui couvre cette portion des pays, nous atteignîmes le 34e. portage, qui n'a que 60 verges, ju-qu'à d'autres étangs, semblables aux premiers, et qui conduisent par un petit canal à un lac d'environ un mille de long, aux environs duquel la terre prend un caractère plus hardi; de là on monte la rivière jusqu'au 35e. portage.

Ce portage passe à travers une savanne de tamarack, et a 530 verges jusqu'à l'embarquement aux pieds du rapide, que sautèrent M. M. Gouldie et Davies; ensuite nous arrivâmes, à une petite distance de là, l'entrée de la rivière dans un lac.

Entrant par le côté ouest du lac, où la terre est alluviale dans une certaine étendue, nous fûmes en état d'en voir les dimensions, jusqu'à ce que nous fûmes arrivés vers le milieu, où la réunion d'une variété d'objets présentait le point de vue le plus agréable.

Nous dirigeâmes toute notre attention à chercher la décharge du lac, qui d'après le plan que son père avait donné à notre jeune guide, devait se trouver du côté est. Ayant passé quatre îles, dont deux avaient environ trois quarts de mille de long, nous entrâmes en conséquence dans une baie profonde, où je supposais qu'était la continuation de la rivière Ouatichouan; mais nous ne pûmes trouver d'issue en cet endroit, et nous avançâmes vers le haut du lac. Il a presque un mille de large, et les rivages en sont escarpés, et couverts de sapin, d'épinette et de bouleau blanc.

Nous passâmes la Pointe Verte ainsi appelée pour le contraste que sa verdure légère fait avec la couleur sombre des côtes adjacentes, étant toutes couvertes de la même espèce de bois, et nous arrivâmes à la Presque-Ile, situé à environ 4 milles de l'entrée, vis-à-vis laquelle je remarquai sur le rivage Ouest une baie et quelques terres plates, présentant l'apparence d'une rivière qui viendrait de ce côté. C'est pourquoi nous continuâmes notre route au nord de l'île et d'une autre Presque-Ile, qui ne tient au rivage que par une étroite langue de terre. Je traversais alors le lac au nord vers une petite baie, et ne trouvant pas la rivière que je cherchais, je côtoyai le rivage Est, observant que la terre prenait une apparence favorable à l'extrémité de ce lac, et paraissait susceptible de culture. C'était une étendue de terrain bien boisé de frêne, de sapin, d'épinette, de pin et de beaume; et nous arrivâmes ensuite à un canal considérable qui mêle à celle du lac ses eaux rougeâtres et légèrement rapides.

Ne trouvant pas la décharge de ce côté du lac, il me vint à l'esprit quelle pouvait-être où j'avais vu l'apparence d'une issue, vis-à-vis la Presque-Ile;

nous y traversâmes immédiatement, sans y trouver pourtant l'issue désirée.

L'Ouatichouan a en cette endroit environ deux chaînes et demi de large et coule avec un fort courant qui nous poussa à la tête d'un rapide. Il était trop tard pour hasarder de le sauter ou même pour chercher un portage, et nous campâmes sur le rivage du nord, qui est haut et escarpé.

Dimanche, 17.—Ayant ainsi trouvé que le plan du sauvage était incorrect et la connaissance de notre guide ne s'étendant pas aussi loin vers le nord, je fus fortement porté à croire au cours Ouest que prenait cette rivière et d'une manière presque directe avec le St. Maurice quelle pouvait-être la rivière Croche ou quelques cours d'eau tributaire de la première; malgré cela je me déterminai à la descendre quelques milles, sauf à considérer ensuite quelle voie nous adopterions pour parvenir au lac St. Jean, car nos provisions commençaient à baisser considérablement, et avaient enduré beaucoup de dommage des pluies fréquentes que nous avions essayées, depuis notre départ des Trois-Rivières.

Sous ces circonstances nous continuâmes à descendre la rivière, les voyageurs sautant les rapides et nous marchant sur le rivage jusqu'à leurs pieds, ce qui nous fit faire un portage plus long que nous l'avions cru, les hommes ne trouvant pas de place d'embarquement pour nous recevoir. A la fin cependant ayant rejoint les canots, nous embarquâmes et sautâmes un rapide continue jusqu'à un petit lac, d'où la rivière coule au sud-ouest. Dans l'incertitude où nous étions, nous fîmes le portage de la montagne et le 36e., où le grand canot chavira justement au haut d'une cascade par la timidité d'un novice, et je fus sur le point de perdre ma théodolite et autres instruments.

En laissant le portage nous gravâmes une haute montagne de roche, dont le pied est battu par la rivière qui tombe de cascade en cascade. Du haut de la montagne l'œil découvrit au sud-ouest une plaine immense, ressemblant à une mer par son grand éloignement. Je suppose que ce ne peut-être autre chose que la pente générale du pays vers le lit de la rivière St. Maurice, et je regretait beaucoup de n'avoir pas un baromètre de montagne, qui m'aurait mis en état de constater l'élévation où nous étions au dessus du niveau du plat pays.

Après être descendus de la montagne nous nous trouvâmes dans une savanne de tamarack, jusqu'à un cours d'eau dormante, où se termine le portage, qui a 1 mille et 3 perches de long, et dont la direction générale est environ N. O. Rien ne nous faisait espérer que la rivière changerait son cours — se trouvant être des eaux du lac St. Jean, ce qui arriva à notre grand plaisir, car ce cours d'eau dormante, formé en apparence par les pluies inaccoutumées, nous conduisit à la rivière, qui court vers le nord et qui avec ce cours d'eau forme une île considérable. Nous descendîmes la rivière, qui parcourt en cet endroit une grande étendue de terrain d'alluvion, qui est susceptible des améliorations de l'agriculture. Il croit ici des joncs d'une hauteur considérable, dont les racines en les arrachant enlèvent une terre noire d'une nature argileuse.

Il y a quelques montagnes que nous remarquâmes en approchant du grand lac, que nous atteignîmes à environ 2½ milles au dessous du portage de la montagne. Le lac à l'embouchure de la rivière est environ d'une demi-lieue de large et court dans une direction N. 3° E., que nous suivîmes, en prenant le milieu du lac. La terre sur ses rivages est haute et montagneuse, boisée de sapin, de pin, d'épinette et de bouleau blanc; en plusieurs endroits les rivages sont escarpés et rocheux, et l'aspect en est défavorable à la culture, quoique les vallées puissent-être bien bonnes pour cette objet.

Passant vis-à-vis l'entrée d'une rivière sur le côté est, je fus examiner si ce n'était pas la décharge du lac, mais je trouva que c'était un cours d'eau tributaire du lac, venant de l'E. N. E., je portai de là à la pointe nord de l'île, entre laquelle et la terre ferme il y a une annaye qui bouche le passage. Ne voyant pas de canal, et désirant prendre quelques points et intersections trigonométriques des objets remarquables, nous campâmes à la tête du lac près d'un banc de sable, qui me fournit une ample base.

Lundi, 18.—Il plut la plus grande partie du jour, et les voyageurs employèrent ce temps à faire des avirons, dont plusieurs avaient été brisés dans les nombreux rapides que nous avions descendus depuis peu. La pluie cessant vers cinq heures de l'après-midi, je demandai à mettre les canots à l'eau, et nous fûmes avec un nouvel espoir à la recherche d'une issue avant de camper. Ayant passé l'annaye qui bouche le passage entre l'île et le rivage et virant au nord autour de la Pointe à l'Aviron nous vîmes la continuation du lac des Commissaires. Le passage qu'il présenta à la vue découvrait dans la grandeur et la magnificence des objets la main toute puissante de la nature.

Les rivages sont sourcilieux et escarpés et s'élèvent à une hauteur considérable, et ils sont dominés par deux caps énormes d'environ 350 à 400 pieds de haut, situés sur le rivage oriental. Ayant atteint le pied du cap le plus au sud et étant débarqué sur le rocher, nous le gravâmes, et nous traversâmes avec beaucoup de difficulté au cap du nord. Le bois ayant brûlé, il y a plusieurs années sur leurs sommets, il a laissé à découvert l'aridité et la nudité à de la couche végétale qui les recouvre.

Du haut du cap nous découvriâmes à 20 à 30 milles à l'ouest un pays brisé et montagneux, montrant en quelques endroits les sommets blancs de hauteurs semblables à celle d'où on les apercevaient, faisant contraste avec le restant du pays qui est boisé de sapin, d'épinette, de tamarack et de pin. Une rivière d'une bonne grandeur, parait entrer au sud-ouest, ayant un plateau alluvial à son entrée, et delà montant dans les coulées qui lui servent de lit. En jetant les yeux vers le haut du lac, qui est parsemé de plusieurs îles, je remarquai une grande baie au nord-est, dans laquelle je supposai que pouvait-être l'issue; cependant en voyant le grand corps d'eau qui s'étendait au nord, je me décidai à continuer ma route sur le lac, et en conséquence nous descendîmes les caps et nous embarquâmes dans nos canots.

Nous passâmes les îles qui sont rocheuses, mais bien boisées de bouleau, de sapin, et d'épinette. Il soufflait un gros vent du nord, qui refroidit l'air à un tel point que nous fîmes bien aises de nous trouver à l'abri de la Pointe de Sable, où nous campâmes et fîmes un grand feu qui rétablit nos forces abattues, après avoir fait sept milles depuis notre dernier campement, malgré le temps considérable que nous avions passé aux Caps.

Mardi, 19.—Nous nous occupâmes avant le déjeuner à prendre 10 triangles de divers objets.

Nous

Nous partîmes de la Pointe de Sable à 9 heures, nous passâmes plusieurs hauteurs arides et brisées, montrant un pays d'un aspect sauvage, surtout du côté oriental, le rivage opposé n'ayant pas été ravagé par le feu, et les rochers sont couverts de sapin, d'épinette, de bouleau etc. à la végétation desquels fournit une légère couche végétale. Nous atteignîmes les côtes aux bluets, qui sont une succession de caps arides, semblables à ceux situés au dessous de la Pointe de Sable, mais encore plus élevées et d'un aspect plus sauvage encore, par plusieurs falaises escarpées qui font face au lac; il n'y croît aucun arbre, et le sommet des hauteurs qui sont au pied des rochers sont couvertes d'une sorte de bluets d'une grosseur remarquable, ce qui leur a fait donner le nom de Côtes aux Bluets.

Désirant fortement avoir du haut d'une de ces montagnes, s'il était possible, la vue du pays qui s'étend entre elles et le lac St. Jean, nous cotoyâmes le rivage, cherchant un endroit propre au débarquement, car il est en cet endroit d'un accès difficile et dangereux. Ayant trouvé un débarquement, M. Gouldie et M. Davies prirent des chemins différents, et je me rendis en ligne droite au pied de la falaise, que je gravis en partie à l'aide des arbrisseaux et des sapins qui poussent dans les crevasses des rochers, jusqu'à la hauteur d'environ 100 pieds, où ne trouvant plus aucun moyen de monter davantage, le rocher devenant plus escarpé et la position des lits étant presque verticale, ne s'en éloignant que de 15 à 20 degrés. Cela fait que les lits qui sont de granité et de gneiss sont plus aisément séparés du rocher, dont on voit déjà à la base des blocs d'un volume considérable. Je descendis au canot, où les autres partis me rejoignirent bientôt: ils n'avaient pu découvrir aucune apparence de lac, mais l'aspect général du pays était une rudesse, que j'avais découverte en partie de la position où j'avais atteint sur le rocher; on apercevait aussi une rivière entrant du côté occidentale du lac entre les montagnes qui lui prêtent un lit. Ayant repris notre route, nous tombâmes dans une grande baie dans laquelle entre une rivière considérable, ce qui m'ôta presque toute espérance de trouver la décharge du lac de ce côté là. Ayant pris terre sur un roche ou île aride j'observai la hauteur du soleil au méridien, — lat. 48° 17', et delà nous nous rendîmes au haut du lac, que je trouvai avoir près de 7 lieues de long, la largeur commune depuis la Pointe à l'Aviron étant d'environ 1 mille.

Ne trouvant pas d'issue, je me déterminai à retourner à la Baie à la Grêle, la première grande baie que j'avais observé du cap. En passant par les montagnes aux Bluets nous essayâmes un orage de grêle et de pluie, accompagné d'un gros vent du nord, ce qui rendit notre position vraiment périlleuse, étant le long d'un rivage où donnait le vent et balottés par une forte houle qui poussait le canot avec une vitesse surprenante. Nous atteignîmes la Baie à la Grêle, qui se trouva être l'entrée de la rivière Oniatouan. Nous y fûmes assaillis par un orage de grêle et de pluie, les grains de grêle étant d'une grosseur extraordinaire. Nous arrivâmes en peu de temps au haut d'une petite cascade, où nous fîmes un portage (le 37e. depuis le St. Maurice) de 400 verges de longueur, à un demi-mille au bas duquel sur le rivage sud-est se rencontre le 38e. portage, de 223 verges, après-quoi nous tombâmes dans un petit lac qui s'ouvre sur le lac Bouchette, où nous campâmes à 7½ heures sur un banc de sable, à la veille d'une tempête qui se préparait vers le sud.

La direction générale entre la Baie à la Grêle et le lac Bouchette est environ E. N. E.—2½ milles d'un terrain brisé et montagneux; la différence de niveau entre ce lac et celui des Commissaires étant de 50 à 60 pieds.

Mercredi 20. Nous partîmes de grand matin, dans un beau temps, et après avoir passé ce lac, qui a environ 4 milles de long et autour duquel la terre s'élève considérablement et laisse voir un sol sablonneux très léger, nous entrâmes dans le lac Oniatouan, d'environ 1½ de long et 1 mille de large.

En cherchant la décharge nous fîmes le tour de l'île qui est situé à l'extrémité du lac; la terre y paraît d'une meilleure qualité que celle que nous avions vu jusqu'alors. Elle conserve le même caractère en descendant la rivière Oniatouan, qui descend avec grande rapidité, qui fait faire le 39e. portage, de 550 verges, sur le rivage Occidental. En cet endroit l'orme, le bouleau noir, le pin, le sapin et l'épinette se trouvent mêlés et poussent sur une marne argileuse recouverte d'une riche couche végétale. En laissant ce portage la rivière acquiert une grandeur considérable, prenant une largeur d'environ 60 verges, et la terre est tout à fait propre à recevoir des établissements; les bords en sont boisés de frêne, de bouleau noir, d'orme, d'épinette, de sapin et de baume et de quelques pins blancs. Le cours général de la rivière est environ N. N. O., et nous atteignîmes dans cette ligne le 40e. portage, au-dessous de quelques petits rapides que nous sautâmes, et d'une petite rivière qui s'élève à droite jusqu'à un petit lac, qu'on aperçoit de la rivière. Le 40e. portage est sur le rivage Est et de 660 verges de long, et à une stade au-dessous est un rapide qui est divisé en deux canaux par une île. La rivière prend alors une direction nord et descend avec une grande rapidité, souvent interrompue par des rapides que les voyageurs sautèrent presque tous. Ils montraient dans ces occasions, à conduire leurs canots, une habileté et une dextérité qui m'étonnaient toujours. En arrivant au rapide, Vivier, pilote de mon canot, débarquait généralement et examinait l'état du rapide avant d'en tenter la descente. S'il était d'avis de débarquer on faisait un portage; s'il était d'avis de sauter je pouvais me fier à son expérience, qui avait été mise à nombre d'épreuves, pendant qu'il était au service du Capit. Franklin, dans sa dernière expédition pour chercher un passage au nord; ce célèbre voyageur et navigateur fait souvent mention de lui dans ses ouvrages. Les mouvements des rameurs sont entièrement réglés par ceux du pilote, qui dirige son attention à suivre le cours de l'eau, ou comme on l'appelle "le Fil de l'Eau." Quand ils tombent dans les bouillons, on lève les avirons, et le canot dans son passage prend souvent une lame; lorsqu'il faut regagner le chenal, le pilote et les rameurs (ou avironneurs) tirent du même côté, ce qu'ils appellent "rembarrer."

Le guide montrait d'une manière frappante dans la descente d'un rapide, un sang-froid et une dextérité naturels; la facilité, et en même temps ce degré d'indifférence, accompagnée d'un certain souris d'assurance, avec la quelle il maniait son aviron, tout cela était vraiment caractéristique. Ajoutons à cela l'aspect sauvage des objets environnants; sa longue chevelure noire flottant au gré du vent, et l'immobilité et le silence général des restant du gens, qui ont les yeux attachés sur la contenance des deux acteurs agissant de la scène, cet ensemble inspirait un degré d'intérêt qu'on ne peut décrire.

Nous fîmes le 41e. portage sur le rivage oriental; il a 440 verges de long, et la rivière y est divisée en deux canaux par une grande île. De là nous arrivâmes au portage de l'île (42) où l'on fait un petit portage de 20 verges en traversant l'île, qui abonde en diverses espèces de petits fruits, tels que groseilles sauvages, bluets, &c., &c.

La terre cesse alors de présenter cette apparence favorable à la culture, étant en plusieurs endroits rocheuse et montagneuse, et en d'autres marécageuse; le bois dominant est l'épinette, le tamarack, le sapin et quelques bouleaux blancs. A environ un demi-mille au dessous de ce portage nous arrivâmes à la Grande Chûte, où l'on traverse, sur la rive occidentale, un portage de 600 verges, pour arriver à l'embarquement inférieur et au bassin. Les rochers sont tous granitiques et d'inclinaison irrégulière, la terre pauvre et rocheuse et ne produisant presque que du sapin et du tamarack. Ayant lancé les canots en bas de la chute que je suppose de 50 pieds de haut, nous partîmes du 43e. portage et à environ 3 stades au dessous se trouve le 44e. portage, sur le rivage S. E. En laissant la place de débarquement on monte une haute montagne, d'où l'on en aperçoit une toute semblable sur le rivage opposé, et l'on descend à la rivière qui est encore très rapide. Le portage se trouva avoir trois-quarts de mille de long et il traverse un terrain bien inégal et bien rocheux, dans lequel nous perdîmes souvent le sentier légèrement battu. Nous fûmes obligés de camper tard sur un terrain tout-à-fait différent, sur des rochers arrondis en grande partie, et nous remîmes le transport des canots à travers le portage jusqu'au lendemain.

Malgré le nombre des rapides et des portages que nous passâmes ce jour là, nous descendîmes encore 18 milles dans la rivière, qui tombe à cette distance environ 250 pieds au dessous du niveau du lac Oniatouan. Les rapides succèdent l'un à l'autre de bien près, ce qui rend la navigation de la rivière, en la descendant, presque impraticable, vu qu'il y a un grand nombre de rapides qu'on ne peut sauter. J'avais une fois espéré que la terre deviendrait meilleure ou qu'elle continuerait d'être ce qu'elle est entre le lac et le 41e. portage, mais il en a été autrement, car depuis le 42e. portage les rivages ont montré les apparences les plus défavorables à l'établissement et aux objets de l'agriculture. Nous obtîmes la latitude 48° 22", par observation de l'étoile polaire. La variation avait augmenté au 14½° ouest.

Jeudi 21.—Nous étions alors si courts de provisions qu'il ne nous restait plus qu'un morceau de lard, et un peu de fleur endommagée pour quelques repas seulement; notre graisse était presque toute consommée, et il ne restait plus qu'une chopine ou environ de liqueur spiritueuse, que nous réservâmes pour notre arrivée au lac Saint-Jean, que des circonstances aussi pressantes nous faisaient chercher avec le plus grand empressement. Mais la latitude que j'avais obtenue me persuadait vivement que nous n'étions plus qu'à quelques milles du point désiré, étant sous l'impression que Charlevoix avait mis le lac Saint-Jean vers 48° 30" de latitude. C'est pourquoi n'y ayant plus que 8 milles géographiques de distance, j'espérais arriver au lac ce jour là, et je le dis au parti. Ainsi donc dès le point du jour nous transportâmes le restant du bagage, et nous embarquâmes dans les canots au pied du rapide, où la rivière est parsemée d'un nombre d'îles, et nous arrivâmes au 45e. portage sur le rivage septentrional, pour éviter un grand rapide, que sautèrent cependant les canots déchargés et conduit par le pilote et par les rameurs. Le portage qu'a un demi mille de long, passe en partie sur des hauteurs partie à leurs pieds, jusqu'aux quelles la direction générale de la rivière depuis le 43e. portage est environ est, et d'où elle est nord jusqu'à quelques rapides que nous sautâmes jusqu'au long rapide de la chute ainsi appelé d'un ruisseau, qui se précipite du haut des rochers escarpés qui forment les rivages de la rivière.

Avant d'arriver au pied du rapide notre grand canot embarqua, en passant le bouillon, environ 12 seaux d'eau, qui l'emplirent presque. Le petit canot qui nous suivait, outre qu'il prit beaucoup d'eau dans le bouillon, frappa aussi sur une roche, par la maladresse du pilote, qui ne prit pas le bon cours de l'eau; mais heureusement il arriva au pied du rapide avant d'enfoncer. M. Gouldie montra, dans cette occasion, un grand sang-froid, étant lui-même dans le canot, qui fut tiré au rivage et vidé pour être réparé au prochain portage, que nous atteignîmes à environ un mille au dessous du rapide.

En examinant le canot, on trouva, outre l'écorce qui était fendue dans le devant, qu'une des courbes était cassée, ce qui demandait une réparation immédiate. Pendant ce temps là, quatre des voyageurs, le guide et nous-mêmes, nous nous mîmes à traverser le portage, les premiers ayant pris beaucoup d'avance sur nous.

En arrivant au haut de la montagne nous aperçûmes, à notre très grande joie, le lac Saint-Jean, sans pouvoir cependant distinguer aucun objet immédiat, mais c'était comme une mer lointaine, ou un nuage fixé à l'horizon; notre imagination tira la conclusion. En descendant, l'inclinaison graduelle de la terre, dans une certaine distance, lui donne un caractère tout différent, et elle est boisée de bouleau noir, d'épinette, de pin et de quelques érables. L'argile se montre à la surface, qui est arrosée par plusieurs ruisseaux qui coupent le sentier qui paraît ici bien battu et être journellement fréquenté. Après qu'on est descendu environ 250 pieds sur un terrain de transport au pied des hauteurs, on trouve un sol d'une qualité excellente, étant ce qu'on appelle ordinairement terre grise, qui produit de l'érable, du sapin, du frêne, du pin, de l'épinette et un peu de cèdre.

Nous passâmes une rivière assez considérable, à trois quarts de mille au delà de laquelle nous rencontrâmes un bocage superbe de cèdre, bordant le rivage du lac Saint-Jean, et à 6½ heures, P. M. nous vîmes, avec délectation toute particulière se déployer la nappe étendue d'eau que présente ce beau lac. Les îles lointaines et la vue qui se perdait au delà augmentaient l'intérêt et notre admiration comme si c'eût été un nouvel atmosphère qui se fut ouvert devant nous, après avoir été bornés à la sphère limitée de rivières, de savannes, de montagnes, d'étangs et de petits lacs.

Nous choisîmes un site pour camper sous les cèdres, qui ombragent le rivage sablonneux ou alluvial du lac, et en cette occasion ayant divisé ce qui restait de liqueur spiritueuse entre les gens et nous-mêmes, nous bûmes avec applaudissement la santé du roi George, pour le succès qui accompagnait ainsi la première expédition envoyée sous les auspices de la législature coloniale, pour explorer cette portion vaste, mais peu connue du Bas-Canada.

Vendredi 22.—Comme nos deux canots demandaient indispensablement quelques réparations, pour nous mettre en état d'avancer sur le lac, avec sûreté, à la recherche du poste de trafic; après qu'ils avaient été apportés de l'extrémité supérieure du portage, qui se trouva de 2½ milles de long, et qui est le 46e. depuis la rivière Saint-Maurice, et désirant en même temps obtenir la latitude et la variation, à l'embouchure de la rivière Oniatouan, par

14 janvier.

par un nombre d'azimuts solaires, vu que le jour était très favorable à cela, je me décidai à rester à ce campement pour toute cette journée, et de ne partir pour le poste que le lendemain matin. D'après plusieurs observations et les hauteurs égales du soleil et un milieu avec les azimuts de l'étoile polaire, et la hauteur de la lune et de Venus au méridien, que la latitude de l'embouchure de la rivière Ouatchouan, à notre campement, était de 48° 30' 15" Nord et la variation du compas 15° 40' Ouest.

En rejetant la vue en arrière sur le territoire que j'avais traversé entre le Saint-Maurice et le lac Saint-Jean, je le trouve entrecoupé de rivières et de leurs tributaires sans nombre, qui aboutissent généralement à des lacs, et les immenses marais ou savanes qui couvrent cette section du pays. Le trait essentiel de la terre c'est son état défavorable à la culture, n'étant presque composé que d'un sol léger et sablonneux, ou rocheux. Il s'y rencontre grand nombre de chaînes de montagnes sans continuité. Les rochers escarpés, qui en plusieurs endroits laissent à découvert leur aridité naturelle, ne sont généralement composés que de granite d'unestratification irrégulière. Les montagnes disparaissent aux hauteurs entre les différentes eaux, où le caractère commun est d'être une savanne immense d'épinette ou de tamarack, souvent rocheuse ou d'un terrain tremblant et marécageux. Le bois qui y domine est l'épinette, le tamarack, le sapin, le bouleau blanc, le pin et un peu de cèdre.

On trouve autour de quelques grands lacs un peu de terre cultivable, mais de si difficile accès qu'elle est destinée à être toujours inculte et déserte. A la vérité, dans l'ensemble cette partie du pays me paraît être encore au premier degré de sa formation, dont un Géologue, je crois pourrait aisément suivre les traces, et il peut arriver que le temps perfectionne des terrains qui sont maintenant nullement propres à la culture.

Récapitulation des portages et des distances traversés depuis le St. Maurice jusqu'au lac St. Jean.

La distance que nous avons parcourue dans cette route par les 46 portages, en prenant toutes leurs longueurs réunies, est d'environ 24 milles, et le transport du bagage, des provisions et des canots à ordinairement triplé le chemin.

La Table suivante montrera toute la distance, aussi bien que les distances respectives des points remarquables qui se rencontrent sur la route.

TABLE DE DISTANCES.

Samedi 23.—Nous partîmes de bonne heure ce jour là pour le poste du commerce à l'entrée de la rivière Metabetschuan, et un bon vent du sud-ouest nous permit de suspendre l'usage des avirons et de monter une voile qui nous mena à la Pointe à la Traverse, de là cotoyant le rivage du lac, S. E. et S., nous passâmes la Pointe au Bouleau et arrivâmes à la Pointe au Raisin, d'où nous eûmes le plaisir particulier d'apercevoir l'habitation du Post sur le rivage oriental du Metabetschuan. Une chanson de Voyageur et la décharge d'un fusil amenèrent sur le rivage les habitants, qui à notre approche répondirent à notre décharge.

A notre débarquement nous fûmes reçus par M. Andrew Stuart, un des Commissaires, qui avec M. Wagner, M. Nixon et M. Bowen n'avait précédé notre arrivée que la veille; ils formaient une des expéditions qui monta le Saguenay. Après les compliments et félicitations réciproques convenables à l'occasion, j'appris que comme on avait désespéré que le parti du St. Maurice put parvenir au lac, on avait chargé le service qui m'était assigné de monter l'Assouapmousoin et d'explorer les bords S. et S. O. du lac St. Jean, au parti de M. Hamel, alors sur le lac aux environs de la Grande Décharge. Notre heureuse arrivée fit revivre le projet original, avec les instructions additionnelles de la part de M. Stuart, savoir que j'explorerais le pays qui s'étend au sud-est de la Belle Rivière, &c. &c. borné d'un côté par l'embouchure de cette rivière, et de l'autre par le territoire de Chicoutimi, au lieu de la Péninsule qui avait été auparavant proposée.

Un repas abondant, composé de légumes cultivés par l'industrie de Mr. Murdoch, commis au au poste de commerce pour la Compagnie des postes du Roi, et les douceurs apportées par l'autre parti et rappela nos appétits affamés à leur ton naturel, n'ayant vécu, depuis les derniers quinze jours, que sur de la farine sure et de la graisse—quelquefois sur de la soupe aux pois.

Dimanche, 24. A 10 heures, le Commissaire et le parti laissèrent le poste pour aller faire le tour du lac. Etant nécessaire d'avoir une certaine quantité de farine mise en pain pour la commodité du parti pendant l'exploration, ce qu'on ne pouvait faire que pour une heure trop avancée pour partir, je pris avec moi deux hommes dans le grand canot, étant le seul qui restait, M. Stuart ayant trouvé expédient de réduire mon parti de voyageurs d'un homme (Terreau) et du guide. M. Goullie étant dans la nécessité de retourner à Québec, plus à bonne heure qu'il ne l'aurait pu en toute vraisemblance en restant de mon parti, il s'attacha à M. Baddeley, ce qui nous priva de notre aimable compagnon militaire. Je montai le Metabetschuan, qui un peu au-dessus de son embouchure s'étend en un large bassin qui va jusqu'aux pieds des rapides, où nous débarquâmes et d'où je fis une excursion à gauche ou sur le rivage oriental jusqu'au sommet des montagnes qui commandent le poste et qui en sont à environ 3 milles. J'y trouvai la terre d'une qualité médiocre, étant en grande partie composée d'une marne rouge mêlée de petit gravier et de claie, à une petite profondeur au dessous du sol végétal. Le bois dominant en cet endroit est l'épinette, le bouleau noir et blanc, le basswood, le sapin, le pin, le peuplier et quelques érables.

Avant voyagé environ 2 milles, et ne trouvant pas le portage comme je m'y attendais, je retournai au poste, où M. Davies était demeuré pour classer les échantillons qu'on avait recueillis dans l'intérieur du pays.

L'établissement du poste consiste en une maison pour le commis résident, un magasin, une boulangerie et une étable ou grange, avec un jardin spacieux, qui produit des légumes en abondance, surtout des patates pour l'usage des habitants du poste. Il est sur le même site où les Jésuites avaient un établissement dans le 16e. siècle, et on remarque encore les raies de charrue sur les terrains aux environs du jardin, qui étaient alors en état de culture et qui sont maintenant couverts d'une pousse d'épinette, de tremble, de sapin, de bouleau et de pin, et dont une partie produit du mil. Les pommiers et les pruniers qui à la connaissance de plusieurs ont été vus au poste, sont devenus sauvages et sont disparus. Le Metabetschuan, qui signifie "un endroit où finit le cours de l'eau," est une belle grande rivière, profonde à son entrée dans le bassin au pied du rapide; sur ses rivages près du poste on trouve une variété de coquillages de mer et autres restes organiques dont M.M. Davies et Baddeley ont recueilli plusieurs beaux échantillons; ce dernier est un officier du génie, qui a offert ses services pour suivre l'expédition la vue de faire des recherches dans la géologie, qui est sa science favorite. Cette nuit se passa à faire des observations sur les étoiles polaires, par le moyen desquelles et avec le secours d'observations solaires prises précédemment, j'obtins la latitude 48° 27', et la variation du compas 15° 30', au poste.

Lundi, 25.—Ayant pris la quantité de provisions nécessaires pour monter la rivière Assouapmousoin et explorer certaines parties des bords du lac, nous partîmes du poste à 10 heures. Suivant à pied le rivage au sud, je pris les distances et les directions suivantes pour servir de base pour obtenir les intersections des hauteurs les plus apparentes du côté nord-est du lac, et de la Pointe Bleue et des Iles du côté occidental, et en même temps pour avoir des renseignements plus exacts sur la qualité du sol et du bois.

A commencer au point occidental de l'embouchure de la rivière Metabetschuan.

Un gros vent du N. O. accompagné de grêle et de pluie, nous obligea de camper sur le rivage à 3 heures.

Mardi, 26. Nous fîmes une excursion dans l'intérieur, dirigeant notre course S. S. Est, et nous traversâmes un sol d'une excellente qualité, à aller jusqu'à environ un mille du lac, le terrain se composant d'argile marneuse riche, appelée communément terre grise, qui s'étend jusqu'au pied d'une hauteur, sur laquelle la terre est d'une marne plus légère; et à environ une demie lieue j'atteignis la plus haute élévation, où le pays devient boisé d'épinette, de sapin, de tamarack et de bouleau blanc. La première qualité de terre que j'ai rencontrée et que je viens de mentionner est boisée de bouleau noir, de frêne, de baume, de pin, d'orme, de basswood, et d'érable, mais en petite quantité; la seconde, sur l'élévation, à moins de bouleau noir, de frêne, de sapin, d'érable et d'orme. Ayant retourné aux camp et le vent s'étant bien modéré, mais y ayant encore une forte houle sur le lac, je me remis à explorer ses bords comme je l'avais commencé depuis le Metabetschuan.

pieds de hauteur perpendiculaire; de-là vient le nom d'Ouitchouan, qui signifie en langue créenne, "vois-tu la chute"; il faut faire en cet endroit un portage. Les hauteurs en laissant la rivière continuent leur direction occidentale pour une certaine distance; après quoi elles paraissent courir du Nord-Ouest. Elles sont couvertes d'épinette, de sapin et de pin, et ont environ 6 à 700 pieds d'élévation.

Appendice
(V.)
14 janvier

Avant ainsi achevé le relèvement de la base et exploré les bords Sud du lac, nous partîmes de la rivière Ouitchouan, à l'entrée de laquelle se trouve une petite Ile, et nous avançâmes pour explorer les bords occidentaux du lac. La cèdrière dont il a été fait mention plus haut n'est pas d'une grande étendue, et après qu'on l'a laissée le bois prend un caractère bien différent, n'étant principalement composé que de sapin, d'épinette, de bouleau blanc, de pin et de tremble, indiquant un sol beaucoup plus léger que celui qui domine du côté du sud.

Nous passâmes la rivière Ouitchouanish, aux environs de laquelle il paraît y avoir une grande étendue de terrain uni et de bonne terre. Cette rivière est à environ 3½ milles de l'Ouitchouan; après qu'on l'a laissée le lac se confond avec ses nombreuses baies, et le rivage est pierreux en plusieurs endroits, la terre s'y élevant en bancs horizontaux de calcaire, couvert principalement d'épinette, de peuplier, de bouleau blanc et de pin rouge et blanc en petite quantité.

Nous atteignîmes la Pointe Bleue, à environ 6½ milles nord quart est d'Ouitchouan. C'est une pointe de rocher couverte de mousse, et d'une pousse de petits cèdres, d'où les bords du lac courent ouest nord-ouest, décrivant une très grande baie, autour de laquelle il paraît y avoir de bonne terre, étant boisée de frêne, de sapin, de beaume, d'épinette et de cèdre, et unie dans une grande étendue. Nous étant tirés des canaux difficiles, formés par une multitude de petites Iles couvertes d'aulnes situées dans la baie, nous dirigeâmes notre course N. N. O. pour arriver à l'embouchure de la rivière Assouapmousoin que nous atteignîmes à 8 heures, et nous campâmes sur la rive orientale, près du camp de M. Verrault.

Jeudi 28.—Nous fîmes un dépôt des provisions et du bagage dont nous pouvions nous dispenser, et nous nous préparâmes à monter la rivière Assouapmousoin. A l'entrée de la rivière la terre est d'une très bonne qualité, et est principalement composé de terrain de transport, déposé sur un lit de claie et de marne, à une profondeur considérable au dessous. Il y a à l'embouchure deux Iles, dont l'une en particulier n'a pas moins d'une demie lieue de long, et le bois qui y pousse est orme, frêne, sapin et aulnes. La largeur de la rivière n'est pas moins de ¾ de mille à son embouchure, et au dessus de la grande Ile elle a près d'un demi mille.

En montant la rivière, je remarquai que la terre située sur la branche occidentale est meilleure que celle de la branche orientale. C'est généralement un terrain de transport, montrant dessous une couche végétale une marne argileuse, appelée terre grise, reposant sur un lit de claie blanche, sous laquelle l'on trouve quelquefois un lit de marne bleue et molle, qui plonge dessous la surface de l'eau. Le bois consiste principalement d'orme, de frêne, de cèdre, de sapin, de beaume, d'épinette rouge, de pin blanc et rouge, de bouleau jaune, et de peupliers et de bouleaux blancs en petit nombre. Quoique sur le rivage oriental, cette couche inférieure de terre existe plus ou moins, néanmoins la proportion de sable mêlée avec la marne est plus considérable, et le bois consiste de tamarack, de bouleau blanc, d'épinette, de sapin, de beaume, de tremble et de pin; on remarque communément sur l'un et l'autre rivage du cyprès et un pin rouge, ou pin de Norvège. A 1½ lieue et au dessus d'une autre grande Ile, la rivière devient peu profonde, et le courant descend avec beaucoup de vitesse, et change sa course de N. 30 O. à S. 25 O., jusqu'à un groupe de trois Iles du même caractère que celle déjà décrite. De là la rivière court généralement N. N. O., et devient très rapide. Ici l'on laisse les avirons et l'on prend les perches; un peu au dessous d'un petit portage nous reprîmes les avirons; ce portage passe sur les rochers du rivage oriental, et est à 5 milles au dessus du groupe d'Iles.

Ce premier Portage a 130 verges de long, et pendant l'été passe sur les rochers de la rivière, mais dans le printemps par le bois. A environ trois quarts de mille au dessus de ce Portage est le Portage du Saumon, sur le rivage occidental, ayant 1200 verges, et passant partie par le bois, partie sur le rivage.

La Rivière Assouapmousoin offre en cet endroit deux cascades différentes, dont la supérieure est cependant une chute plus perpendiculaire de 15 pieds, et présentant dans le bassin situé au pied un site avantageux pour un moulin; de là elle dirige sa course au sud-est, et tombe sur les rochers-brisés, et se divise en deux canaux, presque au pied du Portage, par un petit rocher.

Dans le bassin ou baie, au débarquement supérieur, se trouve une Ile bien boisée d'un demi mille de long. Après le Portage nous tombâmes dans la rivière au Saumon, qui court S. O. dans l'intérieur du pays, qui cesse d'être susceptible de culture à environ 6 à 7 milles de son embouchure, où la terre devient savanneuse et couverte de plaines immenses, qui ne produisent que de l'épinette blanche, et est un pays propre à la chasse du Caribou.

Le temps menaçant l'orage, nous campâmes sur l'Ile vis-à-vis l'embouchure de la rivière, à 5 heures P. M., et aussitôt le vent se mit à souffler d'une force assez violente pour repousser le courant de la rivière et pour arracher des arbres, que nous entendions tomber de tout côtés. Ce tourbillon soudain fut suivi par des torrens de pluie, qui ne cessèrent que tard dans la nuit.

Vendredi 29.—Nous laissâmes l'Ile de bonne heure ce jour là. La largeur commune de la rivière est d'un peu plus d'un quart de mille, et le cours en est très rapide. Les rivages offrent encore une excellente qualité de terre et très susceptible de culture. Le sol est principalement une glaise argileuse, sur un lit de claie blanche; on y aperçoit souvent de la marne, mais à une profondeur considérable au dessus de cette dernière. Le bois est orme, frêne, épinette, pin rouge, et de la plus belle crue; en plusieurs endroits cependant, surtout sur la rive orientale, la glaise renferme beaucoup de sable, quoique les couches inférieures soient de la même espèce. Le bois dominant est l'épinette, le sapin, le bouleau blanc, le tremble, et le cyprès.

Le cours ordinaire de la rivière depuis le Portage du Saumon jusqu'au au troisième Portage, est Nord 7° Est, cela fait une distance de 7 milles environ; ensuite E. N. E. environ un mille jusqu'à une Ile, alors N. N. O. 2½ milles jusqu'au Portage à l'Ours. Au troisième Portage le sol présente un caractère plus sablonneux; le peuplier, le bouleau blanc, le pin, et le tamarack sont les espèces de bois les plus communes sur les rivages; et

Arrivé vis-à-vis la Grosse Ile, qui est à un mille et demi en traversant de la Pointe à la Traverse, je visitai l'Ile, qui a environ 2½ milles de circonférence; la terre y est de bonne qualité, boisée d'épinette, d'orme, de pin et de frêne. De ce point je constatai trigonométriquement la distance de la Petite Ile, de la Pointe Bleue et du Banc de Sable. M. Davies en faisant le tour de l'Ile trouva des blocs de granit. La Petite Ile est à près de deux milles de distance à l'ouest de la Grosse Ile; mais je n'eus pas le temps d'y aller, étant essentielle de monter la rivière Assouapmousoin, avec M. Verrault, qui m'avait devancé le matin allant avec des canots chargés au poste de trafic sur le lac Assouapmousoin; et qui devait m'attendre à l'embouchure de cette rivière, c'était là une occasion bien favorable pour acquérir beaucoup de renseignements locaux pour l'avantage du service auquel j'étais employé, la position et les noms des portages, etc. Je crus que je devais en profiter.

Avant de laisser l'Ile, j'observai la hauteur du soleil au méridien, lat. 48. 26°; et je remarquai une chaîne de montagnes, qui court depuis le M3tabetsuan en suivant les bords méridionaux du lac et coupe la rivière Ouitchouan, causant la belle et superbe chute d'Ouitchouan, qui a 236

Appendice

14 janvr.

et le sol se détériore encore, comme on approche du Portage à l'Ours. Ce Portage est à l'Est de la chute, qui a au moins 50 pieds perpendiculaires, et a un très bel effet. Il a environ 1½ mille de long, et passe à travers une forêt de cyprès, de petits pins blancs et de Sapins, que produit un sol sablonneux, à une grande profondeur audessous duquel se trouve l'argile.

Du débarquement supérieur il y a ¾ lieu au Petit Portage à l'Ours, qu'a 350 verges de long, et traverse une étroite langue de terre. En cet endroit la rivière décrit un croissant en tombant sur les rochers d'une manière bien pittoresque. Entre ces deux Portages, on ne voit des deux côtés de la rivière que des rivages de sable, ce qui donne une bien pauvre idée du pays. De ce Portage il y a ¾ de mille à aller aux rapides de Pemouka et au Portage du rivage sud; le cours ordinaire de la rivière étant Est et Ouest. Ce portage a 600 verges par dessus les rochers, qui dans le printemps sont couverts par les eaux, dans lequel cas l'on fait le Portage sur le rivage du Nord.

Nous traversâmes la rivière à l'embarquement supérieur, et nous montâmes au Portage de Pemouka, ou "dernier pin" ainsi appelé parcequ'il est vis-à-vis le dernier pin que l'on voit dans l'intérieur du pays. Il a ¾ de mille de long, et passe par une savanne d'épinette blanche et de tamarack. Comme il était tard, nous campâmes à l'embarquement supérieur sous les cyprès qui bordent la rivière.

Cette nuit j'obtins la hauteur de la lune et de plusieurs étoiles circumpolaires, d'où je déduis la latitude 49° 0' 30" et la variation du compas 9° S seulement, diminution extraordinaire qu'il faut attribuer aux rochers, qui doivent être imprégnés de fer magnétique, quoiqu'en faisant l'application de plusieurs échantillons, je ne pusse appercevoir aucune attraction sensible.

Samedi 30.—Ayant monté jusqu'à la rivière Assouapmoussouin, ce qui faisait une distance de plus de 30 milles, je trouvai qu'en passant le Portage à l'Ours, j'avais été au-delà de la région de la bonne terre et propre à la culture, ayant, après avoir passé ce Portage, rencontré un sol dont le caractère général était d'être sablonneux, et qui à ce dernier Portage devenait encore inférieur, le pays n'étant propre qu'à la chasse du caribou et du rat.

Mr. Verrault qui voyagea de compagnie avec nous et qui connaît parfaitement bien le pays, m'informa, que l'aspect actuel du sol pouvait s'étendre jusqu'au pied des Grandes Rapides, environ 3 lieues plus haut, mais là la terre devient tout-à-fait incultivable, étant traversée par une chaîne de montagne de roche, qui ne produisent que du sapinage et de l'épinette. Quo cette chaîne est une continuation des montagnes qui coupent la rivière Oniatshouan, et par là entourent une vallée étendue située entre elles, et le lac aboutit à la rivière Assouapmoussouin, comme un Point. Il était par conséquent inutile de monter la rivière davantage, ou à perdre vainement le temps à chercher de la bonne terre, au-delà du Portage de Pemouka. c'est pourquoi nous nous séparâmes de Mr. Verrault, et descendîmes la rivière pour retourner au lac.

Passant à la rivière au Saumon, nous levâmes le filet qui avait été tendu à l'entrée de la rivière, et nous y trouvâmes un brochet, quelques carpes et un doré, tous d'une bonne grosseur. Nous arrivâmes à notre dépôt, à l'embouchure de la rivière Assouapmoussouin à 6 heures P. M. et nous vîmes par des remarques inscrites sur un morceau de cèdre que Mr. Baddeley et son parti l'avaient visité le 27 courant, le jour même de notre départ du haut de la rivière.

Dimanche 31.—Après une nuit bien orageuse, accompagnée d'éclairs, il fit beau le matin, et après avoir pris une série d'angles à l'embouchure de la rivière Assouapmoussouin (mot qui signifie "guette l'élan qui est ici") de divers objets marqua et remarquables, qui se trouvaient autour de moi; savoir: les montagnes qui s'étendent à l'Ouest de la chute Onitshouan, celles qui sont en arrière de la rivière Metabetshouan, la Pointe Bleue, &c., nous embarquâmes dans le canot et marchâmes vers la rivière Mistassini, "la Grosse Roche."

Suivant N. O. les bords du lac qui paraissent bas et de niveau, boisés d'épinette, de sapin, de bouleau et de pin, nous atteignîmes, à 3 milles de l'Assouapmoussouin, les battures de sable qui sont à l'entrée de Mistassini, et qui paraissent s'étendre à une distance considérable dans le lac, et ce fut avec peine que nous doublâmes la pointe N. E. de la rivière, qui a 3 milles de traverse à partir de la pointe méridionale.

Ayant l'avantage d'avoir une base étendue sur les bas fonds, je déterminai plusieurs distances dans le haut de la rivière Mistassini, à près de deux lieux, et à travers le lac St. Jean, les montagnes de Metabetshouan et d'Onitshouan, la Pointe Bleue. Le terrain le long de la rivière Mistassini, offre dans cet espace un aspect favorable aux établissements, quoique, d'après les renseignements reçus de Mr. Verrault, il paraîtrait y avoir de grandes étendues de terre incultivable, entre la rivière Assouapmoussouin et la rivière Mistassini. Malgré cela, vu la proximité de ces deux rivières, et l'aspect général du pays, en montant la première, je suis porté à croire qu'il y a de grandes portions de terre entre elles susceptibles de culture.

En partant de la rivière Mistassini, dont la largeur ordinaire est de près d'un demi-mille, nous éprouvâmes beaucoup de retardement, en étant obligés de traîner le canot sur les bas fonds qui s'étendent à ½ lieu du rivage: ce qui me porta à supposer que le lac St. Jean est généralement bas, ce que semble comporter le sens du nom sauvage de ce lac; Peakugami (Lac Plat.) Après avoir passé les bas fonds, nous nous dirigeâmes vers le nord-ouest pour arriver à la rivière Peribouka (rivière curieuse.) Je remarquai que le caractère du pays différerait essentiellement des rivages sud et ouest, étant bien bas et plat, et que le bois consistait en épinette blanche, bouleau blanc, tremble, cyprès, pin rouge et blanc, espèces de bois qui dénotent un sol léger et sablonneux.

On découvre avec facilité la terre sur les bords qui sont vis-à-vis, c'est-à-dire au sud, tandis que de là il est possible d'apercevoir l'immense étendue de terrain qui va jusqu'au pied d'une chaîne de montagnes considérables et sans doute c'est la continuation des montagnes qui traversent la rivière Assouapmoussouin aux grandes rapides et qui par là bornent la grande vallée du lac St. Jean de ce côté là.

A environ 10½ milles de Mistassini, nous débarquâmes, et campâmes à un mille et demi environ à l'ouest de la rivière Peribouka, sur le rivage. Cette nuit fut très favorable pour faire des observations, et en conséquence je trouvai la latitude de notre camp que était, 48° 51' 30"; la variation du compas était de 16° 30' ouest.

Lundi 1er septembre.—Ayant aperçu sur le bord opposé la chute d'Onitshouan, qui a justement l'apparence d'une tâche blanche au milieu des montagnes, je supposai une base d'un quart de mille, et je déterminai exactement la hauteur et la distance de la chute gisement S. 16° 30' ouest, 26½ milles, hauteur de la montagne 720 pieds, et celle de la chute 236 pieds perpendiculaires. Je constatai aussi la largeur du lac, bien près du poste de Metabetshouan, d'une élévation bien saillante, étant 32 milles de distance, laquelle élévation je savais être à 8 milles des bords du lac, ce qui donnerait au lac près du poste la largeur de 29 milles, ce qui s'accorderait d'assez près avec la différence de latitude en milles légaux—(statute miles.)

Ayant fait une petite excursion dans l'intérieur, je montai d'abord sur une petite élévation qui est parallèle aux rivages, et de là je descendis dans une savanne d'épinette, qui est au dessous du niveau du lac, et cette espèce de terrain paraît être d'une grande étendue. Nous partîmes du camp à 9½ heures. Nous traversâmes l'embouchure de la rivière Peribouka, qui paraît avoir ¾ mille de large, et nous eûmes la vue de la grande vallée, qui s'étend environ dix milles au nord, jusqu'à des montagnes qui courent vers le sud-est. Je dirigeai ma course sur la pointe Saint-David, à 9½ milles de là, et à cette distance je remarquai que les bords du lac sont généralement bas, et le sol d'une nature sablonneuse; le bois est le cyprès, le sapin, l'épinette, le tremble et le pin. Le lac est aussi en cet endroit peu profond, et les bas fonds courent à une distance du rivage, on les appelle bas fonds de Peribouka.

Depuis la pointe Saint-David jusqu'à la pointe Saint-André, nous côtoyâmes le rivage, qui est très bas, et qui paraît être d'une nature sablonneuse et marécageuse; le bois est le cyprès, pin rouge et blanc d'une bonne qualité, sapin, épinette, bouleau blanc et tremble. A la pointe Saint-André nous traversâmes le lac aux bancs de sable qu'on peut appercevoir de cet endroit, si le temps est serein, S. 75 E. 4½ milles, qu'il entre dans le lac un petit ruisseau appelé Comethieu. On en aperçoit aisément la chute d'Onitshouan, gisant S. 54°. Je constatai trigonométriquement que la distance en était 26 milles. La terre autour de la baie est bien basse, et d'une espèce sablonneuse, et du même caractère qu'à Peribouka.

En partant des bancs de sable, nous passâmes quelques îles et rochers arides, fortement imprégnés de fer magnétique, comme on le voyait par l'attraction que l'aiguille aimantée avait pour les fragmens de ces rochers. De là dirigeant notre course environ E. S. E., nous passâmes au milieu des nombreuses îles, qui sont à l'entrée de la grande décharge. Il soufflait un vent assez frais du nord-ouest, qui causait une forte houle, qu'on ne sentait pas beaucoup à l'abri des îles, mais lorsque nous eûmes passé un groupe de ces îles, qui n'étaient que clairement boisées, nous nous trouvâmes exposés aux vagues, qui étaient si hautes que nous fûmes obligés de mettre dans une petite baie, où nous campâmes sur le rivage. En cet endroit, je détachai quelques fragmens des rochers qui formaient la pointe de la baie; ils étaient fortement imprégnés de fer magnétique, et avait un effet double d'attraction et de répulsion sur l'aiguille aimantée; M. Davies en recueillit plusieurs échantillons.

Nous explorâmes la rive méridionale de la petite décharge, qui est à environ un demi mille de la baie; ici je trouvai un échantillon de coquillage de mer, qui sûrement y avait été transporté par les glaces du printemps des bords méridionaux, le seul endroit du lac, entre la rivière Metabetshouan et la pointe à La Traverse, où l'on trouve des restes organiques. La terre y offre un aspect plus favorable, le sol est formé d'une glaise jaune, mêlée de petit gravier; le bois est l'épinette, le bouleau blanc et noir, le cèdre, le baume, le pin rouge et blanc, mais en petit nombre.

Mardi 2.—Le vent quoique abattu de beaucoup, soufflait encore une brise fraîche accompagnée de pluie, lorsque nous laissâmes notre camp. Les îles étaient tellement imprégnées de fer, que je me trouvais dans l'impossibilité de régler une direction pour notre course; cependant ayant passé au sud de ces îles, nous gagnâmes la terre ferme, que nous longeâmes, à cause de la force de la houle. Ce ne fut pas sans un grand danger, à cause des basses de Kushpahigan, qui courent au loin dans le lac, que nous débarquâmes à l'embouchure de la Belle Rivière ou Kushpahigan "endroit où on monte." Les voyageurs poussèrent alors dans le lac, en nous laissant sur le rivage, car je désirais examiner de plus près la nature du terrain, et je constatai d'aussi près que possible la distance de Kushpahigan au poste. La direction et la distance sont comme suit:

- S. 75 O. 40m.—Pin rouge, cyprès, quelques ormes.
- S. 65 O. 40m.—Frêne, orme, bouleau, épinette et pin rouge.
- S. 60 O. 80m.—Frêne, orme, bouleau, épinette et pin rouge.
- S. 55 O. 75m.—Épinette, frêne, peuplier et bouleau blanc.
- S. 53 O. 45m.—do de terrain de transport.
- S. 54 O. 100m.—Frêne, orme, épinette, tremble et cèdre.
- S. 30 O. 15m.—A la petite rivière Kushpahiganish, "où il y a une petite montée."

Les voyageurs qui avaient été ballottés par la houle de la rivière Kushpahigan, poussèrent alors directement à cette rivière, ce qui leur permit de mettre le canot à l'abri de l'orage. Nous campâmes temporairement pour nous faire sécher, après quoi M. Davies et moi nous nous mîmes en chemin pour nous rendre au poste, en suivant le rivage, ayant averti d'abord les voyageurs de gagner le poste aussitôt que la tempête serait apaisée. Nous primes les directions et les distances suivantes:

- N. 86 O. 25 chaînes.—Bouleau blanc, peuplier, cèdre, alluvion.
- S. 72 O. 75 " Orme, épinette, bouleau blanc, cèdre.
- S. 85 O. 55 " Rivages élevés de claie, surface de glaise, épinette, bouleau noir et baume.
- N. 40 O. 35 " Pin, bouleau, peuplier, épinette, bonne terre.
- S. 75 O. 60 " Bouleau noir, sapin, pin et peuplier, rivage de claie, surface de glaise.
- N. 75 O. 15 " Do do do.
- N. 25 O. 25 " Bonne terre, beaucoup de marne au dessous de la claie.
- S. 70 O. 140 " Pin, peuplier, bouleau, 5 pieds de glaise jaune au dessus de la claie, qui est molle et blanche.

N. 45 O. 20. " Au poste de Metabetshouan, où nous arrivâmes à 6 heures, et où nous apprîmes que M. Baddeley et Goldie avaient laissé le poste la veille, vers 3 heures. Le temps ayant continué à être orageux, nous ne pouvions pas nous attendre à ce que les voyageurs arrivassent ce jour là.

Mercredi.—

Mercredi 3.—Les voyageurs arrivèrent au poste à 10 heures A. M. Il fallut faire encore du pain, et pendant ce temps là je pris avec moi trois hommes dans le canot, pour monter jusqu'au portage, sur le rivage occidentale du Metabetshouan et pour explorer quelques parties du pays dans cette direction. Étant débarqué dans le bassin du côté du sud, on fit avec difficulté le portage du canot dans la distance d'un quart de mille, après quoi il fut impossible d'avancer avec le canot, que nous laissâmes derrière, pour continuer à traverser le portage. Il est assez uni dans l'espace d'une demi-lieue, après quoi il s'élève aussitôt qu'on a passé une petite rivière, que je trouvai fortement imprégnée de carbonate de fer et de soufre.

Le pays alors devient plus inégal, sans pourtant que la terre en soit moins bonne; je passai de temps en temps au pied d'une falaise perpendiculaire en traversant une riche savanne de frêne et d'épinette, d'aune et de cèdre entremêlés; le sol étant une terre noire argileuse. Ayant descendu une montagne à environ 4 milles du débarquement, jusqu'à la petite rivière qui court au nord, nous campâmes à 7 heures, la nuit menaçant d'être pluvieuse.

Jeudi 4.—Nous continuâmes le portage, malgré la pluie continue, et après avoir fait environ un mille, nous atteignîmes l'embarquement supérieur de la rivière Metabetshouan; à cette distance le sol est d'une espèce légère et sablonneuse, couvert de peuplier, de sapin, de baume et généralement peu avantageux pour y former des établissements. La rivière Metabetshouan, à l'endroit où je la traversai, n'est qu'un ruisseau peu profond et très rapide, ne présentant sur ses bords que des terres peu avantageuses.

Nous fumes de retour vers cinq heures au poste, où était arrivé avec un homme malade, M. Nixon qui était attaché au parti de M. Hamel, qui avait été dans la parti septentrionale du lac. La pluie continua à tomber en torrens, et ne laissait pas espérer grande chose pour le lendemain.

Vendredi 5.—Je demandai à M. Murdoch, le commis du poste, une certaine quantité de provisions, pour que je fusse en état d'explorer la partie du pays au S. E. de la Belle Rivière, jusqu'au territoire de Chicoutimi. La pluie qui était tombée depuis le matin, ne cessa que vers 2 heures, et nous nous préparâmes à laisser le poste. Nous partîmes à 4 heures, M. Nixon avec nous allant rejoindre son parti, et nous débarquâmes à Kuspahigan vers 6 heures, et nous campâmes sur le rivage est de l'embouchure de la rivière. Le vent soufflait du S. O., apparence de beau temps.

Samedi 5.—Matin seréin—nous observâmes la Pointe Bleue, gisant N. 43½ ouest—Grosse Ile N. 48° 30' O.—Pointe à la Traverse N. 55½ O. Montagne d'Ouatchouan, aux environs de la chute N. 65°.—Pointe au Raisin N. 79° O.—Une montagne particulière dans la chaîne du nord, gisant N. 33° E.

Ayant pris des provisions pour quelques jours nous montâmes le Kuspahiganish l'espace d'environ sept milles; cette rivière présente dans ses rivages alluviaux un composé de glaise claiuse. Dans les endroits où ils s'élèvent à une certaine élévation, la glaise se trouve sous un lit de glaise plus légère et sous le sol végétal. Le terrain est généralement d'une quantité excellente, boisé d'orme, de frêne, de bouleau noir, de basswood, d'érable et de sapin. Sur les endroits élevés du rivage, les principales espèces de bois sont le pin, l'épinette, le sapin, le bouleau blanc, le cèdre et le baume. Le pin blanc et rouge est d'une bonne quantité.

Ayant été bien retardés par la rapidité du courant, et par l'obstruction causée par de grands arbres qui étaient tombés en travers de la rivière; nous fumes obligés de couper un passage, et nous ne pumes faire que 7 milles, à laquelle distance la rivière devient très étroite, et la navigation tout-à-fait arrêtée par des arbres tombés. Nous campâmes sur le rivage orientale.

Dimanche 6.—Je pénétrai environ deux milles dans l'intérieur, et rencontrai un terrain bien entre coupé et inégal, pas cependant d'une nature rocheuse, le sol étant une riche claiie ou terre jaune, de quelques pieds de profondeur. Le bois le plus commun sur cette élévation, qui est au moins 150 pieds au dessus du lit du Kuspahiganish est le bouleau blanc et jaune, l'épinette, l'érable, le sapin, le frêne, l'orme et une bonne espèce de pin blanc et rouge. Ce terrain quoique défavorable à la culture ferait d'excellens pâturages.

De retour au camp, nous remarquâmes tout auprès un pin d'environ 12 pieds de circonférence, uni par la racine à une très grande épinette. Nous remarquâmes dans le canot pour retourner à l'embouchure de la rivière, qui dans la nuit avait baissée de près de 18 pouces, ce qui nous mis encore dans la nécessité de nous couper un nouveau passage à travers les arbres tombés dans la rivière. Nous remarquâmes que cette rivière est bien peu fréquentée par les chasseurs, car je ne remarquai aucune marque quelconque sur les arbres, et je vis par nombre de sentiers de castor et de loutres, qu'ils ne sont pas beaucoup visités ni troublés par les chasseurs sauvages.

Nous arrivâmes à l'embouchure de la rivière à 4 heures, et en partîmes à 5 pour nous rendre à Kuspahigan, où nous arrivâmes à 6½ heures, P. M., il faisait un gros vent du sud, accompagné de pluie. Nous campâmes sur le rivage du nord-est.

La table suivante montre les distances respectives des endroits remarquables sur les bords du lac St. Jean, constaté partie par des observations trigonométriques, partie par mesurages et estimations.

TABLE DE DISTANCES.

Embouchure du Kuspahigan ou Belle Rivière.												
5	Kuspahiganish.											
10½	5½	Poste de Metabetshouan.										
20	15	9½	Pointe à la Traverse.									
25	20	14½	5	Chûte de Ouatchouan.								
33	28	22½	13	8	Pointe Bleue.							
41	36	30½	21	16	8	Embouchure de Assouapmoussouin.						
47	42	36½	27	22	14	6	Mistassini.					
61	56	50½	41	36	28	20	14	Peribouka.				
78	7	67½	58	43	45	27	31	17	Rivière Coucouathimi.			
83	78	69½	63	48	50	32	36	22	5	Grande Décharge.		
88	83	74½	68	53	55	37	41	27	10	5	Petite Décharge.	
99	94	85½	79	64	66	48	55	38	21	16	11	Embouchure de Kuspahigan ou Belle Rivière.

Avant de finir avec le lac St. Jean, je prendrai la liberté de présenter quelques observations générales sur les traits caractéristiques du pays environnant, de sa localité et de ses avantages.

Le lac St. Jean est situé dans une immense vallée, et est le réservoir de grand nombre de grandes rivières et ruisseaux qui s'y déchargent, et dont plusieurs prennent leurs sources dans les hauteurs qui séparent le territoire de la Baie d'Hudson du Bas-Canada, déposant en descendant des montagnes qui forment cette grande vallée, les matériaux propres à améliorer et fertiliser le sol. Le lac est presque circulaire, la plus grande largeur est de 30 milles, depuis Metabetshouan jusqu'à Peribouka, et sa moindre largeur est d'environ 18 milles, depuis la Pointe St. David jusqu'à la Pointe Bleue, et il couvre en superficie environ 510 milles carrés.

L'étendue de terre cultivable du côté du sud du lac, entre les bords du lac et les montagnes, qui traversent les rivières Metabetshouan et Ouatchouan, à la distance commune de 5 milles du lac, peut-être d'environ 80,000 ou 100,000 acres en superficie. Cette étendue de terre est composé d'une excellente qualité de terrain, étant généralement une riche terre noire, souvent argileuse, ayant quelques intervalles sablonneux, et est ordinairement couverte d'une belle couche végétale. Les principales espèces de bois qui couvrent ce terrain sont le bouleau noir et jaune, le frêne, le sapin, le bass, le cèdre, l'épinette, le pin rouge et blanc, et l'érable, qui fournit une quantité suffisante de sucre pour l'usage des habitants du poste de commerce.

Ces montagnes continuent à courir vers l'occident depuis la chute d'Ouatchouan, l'espace d'environ 8 à 10 milles, de là elles prennent une direction nord-ouest vers la rivière Assouapmoussouin, qu'elles traversent aux Grand Rapides, laissant par là une vallée dont le côté occidental du lac et le rivage occidental de la rivière Assouapmoussouin forment le front; cette vallée forme une superficie d'environ 200 à 250,000 acres. Une si grande étendue renferme probablement une variété de sols bons et mauvais. Mais en en jugeant d'après les bords occidentaux du lac, et le terrain du rivage occidental de la rivière Assouapmoussouin, il doit y avoir dans cette vallée une grande étendue de terre susceptible d'être cultivée et établie. On peut mettre sur la même ligne les terres qui bordent la rivière Mistassini; de là à l'est depuis les bords septentrionaux du lac St. Jean jusqu'aux montagnes qui courent au sud-est depuis les Grandes Rapides de la rivière Assouapmoussouin, forment une partie de la grande vallée du lac St. Jean, le pays est bien bas, et c'en est le caractère principal. On trouverait, peut-être, le long de la rivière Peribouka, de la terre propre à la culture, mais, à cela près, le sol paraît être léger et sablonneux, et boisé généralement d'épinette, de sapin, de pin rouge et blanc, de bouleau blanc, de tremble et de tamarack.

Le lac St. Jean n'est pas assez profond pour la navigation des goélettes, au moins à une distance considérable des rivages qu'on ne peut aborder qu'en bateaux plats ou en canots d'écorce, à cause des bas fonds nombreux qui s'étendent des rivages dans le lac, surtout à l'entrée des rivières. Le lac abonde en plusieurs sortes de poissons, tels que le doré, la carpe, et l'achigan; la truite, le poisson blanc, l'anguille, le brochet, et un poisson particulier appelé *wenashish*. On prend maintenant une grande quantité de poisson à l'embouchure de la rivière Ouatchouan, qui paraît être l'endroit le plus propice pour tendre des filets, et où le poisson se trouve en plus grande abondance qu'en aucune autre partie dulac. On le sale et embarille pour le commerce.

Pour se former une idée du climat, il faudrait une expérience de quelques années. Cependant, dans le temps que je suis resté au lac, j'y ai trouvé la température égale à celle de Québec, avec un ciel clair et sans nuages, et un atmosphère plaisante et salubre. En traversant le pays je trouvai les nuits beaucoup plus froides qu'au lac St. Jean.

Le lac gèle vers la mi-novembre, et est libre de glace vers la fin de mai; l'intervalle réservé à la végétation est ainsi bien courte, mais elle est très rapide, car une petite quantité de froment qu'on avait semé au poste approchait rapidement à la maturité; il y avait long-temps que les patates étaient en fleur, et nous en mangâmes pendant notre séjour au lac.

Lundi, 7 Septembre 1829.

Il plut ce matin là. Nous partîmes de l'embouchure de la rivière Kuspahigan, pour la monter; le cours général, dans l'espace d'environ une demi-lieue, en est presque sud; nous remarquâmes des deux côté de la rivière un plateau alluvial, qui s'étend à certaine distance des rivages, jusqu'à une élévation qui paraît conserver une direction parallèle avec la rivière; le sol du plateau est d'une nature bien argileuse, à la surface du quel perce par endroit une terre grasse très riche, ou de sol végétal; les principales espèces de bois qui poussent sur ce terrain de transport sont l'orme, le frêne, le sapin, le bouleau noir et blanc, l'aune, l'épinette et le pin. Cette étendue de terrain porte les traces d'une inondation du printemps, jusqu'au pied de cette petite élévation, qui approche graduellement de la rivière, au dessus du second mille où le cours du Kuspahigan ou Belle-Rivière est environ sud-est quart d'est, jusqu'au portage, à environ six milles de son embouchure.

Dans ces derniers quatre milles, le courant devient rapide et profond; les rivages sont par endroits très élevés, et la terre est encore excellente en plusieurs endroits, la qualité du sol étant généralement des lits de claiie blanche et bleue, sous une couche d'une glaise riche, communément rouge, avec plus ou moins d'épaisseur au dessus de la dernière; le bois le plus commun est l'orme, l'épinette, le bouleau noir, jaune et blanc, le frêne, le peuplier, le pin et le baume, quelques cèdres et aulnes. Au débarquement inférieur du portage de la Belle-Rivière, la rivière se contracte à environ dix verges, présentant une cascade très intéressante et pittoresque dont les eaux mugissantes se précipitent sur les rochers, et dont l'effet est relevé par l'aspect sauvage du pays environnant, où des rochers perpendiculaire de 75 pieds paraissent suspendus sur le bassin de la rivière. Ce lieu offre un site très propre à des moulins ou autres ouvrages de cette nature.

Le portage est sur le rivage occidental, et a un quart de mille de long, passant d'abord sur une haute élévation, où le terrain est encore uni jusqu'à l'embarquement au dessus d'une autre chute d'environ vingt pieds de haut, faisant ensemble la différence d'élévation, d'entre 50 à 60 pieds.

En cet endroit la terre est de bonne qualité, étant un composé d'une glaise noire argileuse, sous une riche couche végétale; les différentes espèces de bois sont l'épinette rouge, le frêne, le baume, le bouleau noir et blanc, le cèdre, l'orme, le pin rouge et blanc. Cette espèce de terre forme le principal trait du pays, le long des rivages de la Belle-Rivière, jusqu'à la rivière des Aulnaies, environ 2½ milles au dessus du portage, où la rivière se met à courir vers le sud-est. En cet endroit la Belle-Rivière forme un large bassin, au milieu duquel se trouve une Ile d'une excellente terre. La rivière y entre à l'extrémité du sud-est, en formant une cascade de 10 pieds qui,

(V.)
14 janvier.

qui se précipite par une contraction de la rivière qui a au plus deux ou trois verges de large. Ensuite du côté du nord-est du bassin entre la rivière des Aulnais, en formant un petit courant, appelé dans le langage sauvage ou Créenne "Peshikaonnamishushibi" "des Aulnes." Ce fut en cet endroit où nous campâmes, après une pluie qui avait duré presque toute la journée.

Mardi 8.—Les voyageurs trouvant qu'il était absolument nécessaire de réparer le canot, pourquoil leur fallait quelque temps, M. Davies et moi nous montâmes à la Belle-Rivière. En explorant le rivage oriental, dans la distance d'environ trois milles, je rencontrai un terrain inégal et montueux, élevé en quelques endroits près de 100 pieds au dessus du lit de la rivière, dont le cours général depuis le bassin est environ sud-sud-ouest, et qui n'a pas plus de 30 verges de largeur. Dans les environs des petites rivières qui se déchargent dans la rivière principale, je remarquai quelques bon lits de marne bleue molle, et souvent une grande quantité de claie formant les côtés ou les pentes des terrains élevés; ce fut du sommet d'une de ces hauteurs que j'observai, à une distance d'environ 6 milles, et nous restant au sud, une rangée de montagnes courant à l'est, et paraissant être une continuation de celles qui coupent la rivière Kuspahiganish. L'étendue de pays située dans cet espace est d'un terrain inégal, et généralement boisé d'épinette, de pin, de baume, de bouleau; sur les bords de la rivière on rencontre le frêne, l'orme, le sapin et le baume.

Ayant trouvé que jusque là le terrain était d'une qualité arable, nous retournâmes au camp, dans l'intention de monter la rivière à quelque distance considérable dans le canot, mais en examinant l'état et la quantité de nos provisions, je trouvai que M. Murdoch, le commis du poste, ne m'avait fourni que la moitié de ce que je lui en avais demandé dans mon mémoire. Ainsi réduit, je crus qu'il aurait été pour nous de la dernière imprudence de hazarder encore une journée pour monter dans la Belle-Rivière, tandis que nous avions près de 50 milles à faire pour nous rendre à Chicoutimi.

Nous partîmes du camp à 3 heures P. M. et nous commençâmes à monter la rivière des Aulnais, ainsi justement appelée à cause des aulnais épais qui croissent sur les rivages et qui en se croisant embarrassent le passage de la rivière, qui est extrêmement tortueux; de sorte que ce fut avec la plus grande difficulté, que nous fîmes un mille, au bout duquel nous campâmes sur le rivage septentrional, à l'endroit même où avait campé le parti de l'Assonapmoussin, le 21 d'août.

Les rivages de cette petite rivière sont formés d'un terrain de transport; le sol est généralement d'une nature argileuse, boisé d'orme, de frêne, d'épinette, de quelques pins et sapins; à environ un quart de mille de distance, on aperçoit sur le rivage méridional une éminence qui suit le cours général de la rivière, qui est sud-est. Pendant que les voyageurs s'occupaient à dresser le camp, je me mis à suivre un sentier, qui au bout d'environ 30 chaînes me conduisit au campement du bassin. Ayant ainsi découvert le portage des aulnes, je me déterminai à le continuer à pied le jour suivant.

Mercredi 9.—Les voyageurs s'étant embarqués facilement pour monter la rivière, qui paraît encore obstruée par des aulnes, je fis le portage à pied avec M. Davies, et nous tinmes les routes et fîmes les remarques suivantes:

Cours du portage des Aulnais.

- S. 25' E. 4 chaînes—Nous rencontrâmes un ruisseau courant S., la terre élevée à gauche, glaise et claie.
- S. " " 4 " Autre ruisseau; bois, frêne, épinette, bouleau, sapin et pin.
- S. 5° O. 12 " Ruisseau sortant d'entre les montagnes à la gauche desquelles passe le portage.
- S. 10 O. 5 " Rencontrâmes un ruisseau, terre de nature humide et savanneuse, épinette, baume, pin et tamarack.
- S. 0° 2' 22 O. " Rencontrâmes un ruisseau, foud de claie, savanne d'épinette et de tamarack, quelques frênes et cèdres.
- S. 15° E. 12 " Do. do. bonne terre, mais demandant beaucoup d'assèchement, le terrain s'élevant.
- S. 25 E. 20 " Continuâmes aux pieds des hauteurs qui sont d'une élévation peu considérable, remarquâmes de semblables élévations suivant le rivage opposé de la rivière. Le sol est une terre noire ou claie au-dessous de la couche végétale, qui est d'une épaisseur considérable, épinette, sapin et tamarack, quelques bouleaux et pins blanc.
- S. 40 E. 20 " Haute montagne à gauche, la terre dans cette direction de qualité défavorable, composée généralement d'une glaise sablonneuse, boisée d'épinette, de bouleau et de pin blanc.
- S. 35 E. 20 " Encore terre humide et savanneuse, cependant de bonne qualité, boisée d'épinette, de frêne, d'aulnes, de baume et de bouleau noir.
- S. 45 E. 10 " Jusqu'au bassin au pied de la chute où l'on fait un portage, dans le voisinage de la chute le terrain un peu rocheux, mais le sol généralement bon, étant une terre rouge argileuse; frêne, orme, sapin, épinette, aulnes et pin.
- E. 3 " Terre rocheuse.
- S. 45 E. 10 " Epiuette, bouleau, pin.
- S. 55 E. 10 " Chute des aulnais d'environ 12 pieds. La rivière tombe sur un rocher de granit, inclinaison 75° N. O.; bois aux environs du lieu, épinette, baume, peuplier, quelques frênes, bouleau et pin blanc.
- S. 75 E. 4 " Terre rocheuse, épinette et sapin.
- E. 4 " Gravimes un rocher, granit, gneiss.
- S. 2 " Jusqu'à l'embarquement supérieur sur la surface aride du rocher.

Les voyageurs ayant fait ce portage, et n'y ayant plus d'aulnes, nous embarquâmes dans le canot. La terre que je remarquai, chemin faisant, était un riche terrain de transport, boisé d'orme, de frêne, d'épinette, de sapin et de quelques pins et bouleaux noirs, et la rivière devenant plus large, nous aperçûmes par intervalles une chaîne de montagnes courant vers le sud. Ayant monté la rivière l'espace d'environ de 2½ milles où la rivière des Aulnais à environ deux chaînes de large, nous entrâmes dans le lac Tsiamagomishish.

Nous continuâmes à avancer l'espace d'environ un mille et demie, le lac n'ayant jusque là pas plus de dix chaînes de large, et le pays environnant étant tout-à-fait plat et uni, le sol d'une nature sablonneuse, et n'offrant que la vue du tamarack, du bouleau et du pin blanc. Nous remarquâmes du côté du sud, un petit canal qui nous conduisit au lac Vert, Kaskukikéomi, "le lac limpide," nom bien appliqué, car les eaux en sont si claires, qu'à la profondeur de plusieurs brasses, on découvre le fond du lac, qui est de claie, ayant en même temps une teinte verte, qui lui a fait donner son nom français; les eaux faisant un contraste très singulier avec celles du lac Tsiamagomishish, qui sont d'une couleur blanchâtre, et n'ont aucune transparence.

Le lac Vert a environ un demi-lieue de long, et environ un demi-mille de large, s'étalant sur ses bords un point de vue d'une grandeur attrayante et singulière. Une suite de hautes montagnes borde le rivage méridional du lac, ne laissant qu'une lisière très étroite de terre cultivable, entre le lac et le pied des montagnes, qui est boisée d'épinettes, de sapin et de pin. Du côté du nord, il n'y a qu'une petite langue de terre, qui divise le lac Vert du lac Tsiamagomishish, où il y a d'assez bon pin rouge, quelques pins blancs, de l'épinette et du bouleau blanc; l'extrémité occidentale du lac est basse et unie, à une distance considérable, la terre est de bonne qualité, et est bien boisée d'épinette, de bouleau, de cèdre, de sapin, et de quelques pins. De là on a la vue du lac Vert, et des points de vue qui l'environnent.

En passant dans le canal entre les deux lacs, je remarquai un morceau d'écorce de bouleau attaché dans une direction particulière au bout d'une perche, et sur lequel avait été tracé par quelques chasseurs sauvages, la course qu'ils avaient suivie en montant une certaine rivière, et qui avait été laissé la sans doute pour l'information d'autres chasseurs sauvages, qui devaient les rejoindre. C'est un signe de rendez-vous usité parmi les nations des Abénaquis et des Algonquins, qui vraisemblablement avaient visité ces lieux, et s'en retournaient à leurs propres endroits, comme cela paraissait par la direction des rivières.

Ayant monté le lac Tsiamagomishish l'espace d'environ un mille au delà du lac Vert, à laquelle distance la largeur varie depuis 8 jusqu'à 12 chaînes, le rivage étant formé d'une succession de baies et le terrain d'un sol bas et marécageux, d'une nature bien sablonneuse et boisé d'épinette, de tamarack, de sapin et de cèdre, nous suivîmes un canal étroit qui nous conduisit à un petit lac, du côté du nord, et d'environ trois quarts de mille de long, sur 8 à 10 chaînes de large, aux environs duquel la terre est basse et marécageuse, mais s'élevant légèrement du côté du nord vers quelques hauteurs dans cette direction. Près de l'entrée de ce canal est un roc singulier de granit, presque isolé dans le lac, uni à la terre ferme par une langue de terre de la même espèce de terrain savanneux, qui caractérise celui qui environne le lac. Il fait aussi contraste avec le pays adjacent, et il est presque dépouillé d'arbres, la pousse actuelle n'étant qu'une espèce main de bouleau blanc, d'épinette et de tremble; l'apparence du roc ressemble beaucoup à celle de la chaîne de montagnes, qui continue à l'est depuis le lac Vert vers le lac Tsiamagomi, y ayant un espace considérable de terrain uni entre ces montagnes et les bords du lac Tsiamagomishish.

Ne sachant où trouver le portage de Tsiamagomi, nous continuâmes à monter dans le lac jusqu'à une petite rivière, qui comme celle des Aulnais est si remplie d'aulnes, qu'il était hors de toute probabilité que le portage passât dans cette direction; cependant cela nous donna occasion d'examiner la terre de cette partie du lac, qu'est d'une bien meilleure qualité, et qui est boisée de frêne, d'épinette rouge, de sapin, de pin et d'aulnes. Nous retournâmes donc à une baie profonde que j'avais remarquée dans notre route, et où nous trouvâmes l'embarquement du portage Tsiamagomi, où nous campâmes à 7 heures, à 3½ milles de l'extrémité inférieure du lac.

Jedi 11.—J'observai la latitude par la hauteur de l'étoile polaire au méridien, 48° 1". Le canot ayant été transporté de l'autre côté du portage de très bonne heure, nous fûmes en état de faire route à 9 heures, et je fis les remarques suivantes sur les routes, le bois et le sol. Le commencement est de la bonne terre, glaise argileuse, boisée d'épinette, de frêne, de pin, d'orme, de peuplier de bouleau noir et jaune et de sapin.

- N. 70 E. 4 chaînes.—Sommet de montagne, bouleau jaune, épinette et pin.
- S. 45 E. 30 " Sommet d'élévation, bouleau blanc, baume, peuplier et pin.
- S. 35 E. 6 " Pin rouge et blanc, peuplier et bouleau, glaise sablonneuse.
- S. 30 E. 12 " Descente graduelle, sable, bois semblable à celui ci-dessus mentionné.
- S. 35 E. 20 " Glaise légère mêlée de gravier, bouleau blanc, tremble et pin.
- S. 30 E. 12 " Descente, meilleur sol, bouleau noir, épinette, pin, sapin et tremble.
- S. 40 E. 6 " Jusqu'au débarquement sur les bords du lac Ouhiqui, petit lac d'environ un demi-mille de longueur, sur un demi-mille de largeur. Ce lac forme la source des eaux de la rivière Chicoutimi, et présente dans la distance la vue des hautes montagnes de Tsiamagomi.

Ayant passé le canal étroit qui communique entre le lac, nous tombâmes sur le beau lac de Tsiamagomi (lac long) et nous aperçûmes la succession des hautes montagnes qui s'élèvent tout-à-coup de ses bords, du côté du sud, contrastant les hauteurs moins considérables de ses rivages septentrionaux.

Nous

Nous avançâmes environ 2½ milles—course S. 40 E. Le lac est d'un demi-mille à ¾ de mille. Les bords méridionaux s'élèvent en hauteurs d'environ 300 pieds de haut, boisées d'épinette, de bouleau blanc et de tremble; la terre est si rocheuse et des rochers sortent en falaises en tant endroits, que ce côté du lac est presque incultivable. Le côté du nord, quoique moins montagneux, présente, dans l'espace de plus d'une demi-lieue, un rivage ferré, s'élevant en plusieurs endroits en falaises de granit, dont la base est baignée par les eaux du lac. Le sommet en est couvert de cyprès et d'une espèce de pin nain, quelquefois appelé pin de Norvège.

Arrivés au pied d'un rocher perpendiculaire, élevé environ 100 pieds au dessus du niveau du lac, et qui paraissait suspendu au dessus du canot, nous aperçûmes une autre partie du Tsiagomi, offrant à la vue la chaîne de montagnes à la distance, et montrant les traits du lac.

A partir de ce point ou rocher, le lac git S. 62 E. et à mesure moyenne, près d'un mille de largeur. A midi nous entrâmes dans une petite baie, à environ 5 mille de là, du côté du nord, et nous obtînmes la hauteur du soleil, au méridien, latitude 48° 1'. Nous recueillîmes ici quelques fragments d'un rocher, fortement imprégné de fer magnétique, et beaucoup de sable noir répandu sur le rivage. De ce côté la terre est plus unie, mais tout-à-fait sablonneuse et boisée d'épinette, de peuplier, de pin rouge et de bouleau blanc. Nous traversâmes de l'autre côté, et entrant dans une grande baie nous arrivâmes à l'embouchure de la rivière Upikubatch, qui n'est qu'une succession de rapides jusqu'à son entrée; c'est pourquoi laissant là le canot, je montai à pied l'espace d'environ un mille le long du rivage du nord-est, en gravissant en plusieurs endroits les rochers escarpés et brisés qui forment le rivage. Le côté du sud est couvert d'une succession de hauteurs rocheuses qui paraissent s'étendre en arrière à quelque distance de la rivière, et qui en suivent le cours ordinaire.

Par la même raison que je ne pus explorer la Belle Rivière, je ne pus monter la rivière Upikubatch, qui cependant, d'après l'aspect du pays, ne promettait d'une pareille entreprise aucun résultat satisfaisant. Ayant laissé l'embouchure de cette rivière, qui est environnée de montagnes de roches, nous passâmes plusieurs falaises élevées à plus de 300 pieds, laissant à leur base une petite lisière de terre unie qui va jusqu'au bord du lac. Mais vis-à-vis une rivière assez considérable, les hauteurs touchent encore au lac; cette rivière entre dans le lac du côté du nord, et je la montai environ un mille.

Le terrain qui borde cette rivière contraste singulièrement avec celui de la rivière Upikubatch, car cette première entre dans le lac avec un léger courant, après avoir coulé sur un large lit, bordé de chaque côté par une savanne basse d'épinette. La teinte rouge de l'eau indiquerait qu'elle traverse, dans un espace considérable dans l'intérieur une étendue de pays de la même espèce.

De là nous arrivâmes à la Pointe au Sable, à 6 heures, où nous campâmes sous un gros pin, qui pendant la nuit nous mit à l'abri d'un orage, qui soufflait du nord-ouest avec une violence surprenante. Il n'y a que peu de chose à dire du lac Tsiagomi sous le rapport de l'agriculture, quoiqu'il y ait beaucoup à dire de la beauté et de la sublimité des points de vue qu'il présente. La succession non interrompue de rochers brisés qui bordent le rivage méridional de ce lac, et qui ne sont que clairement boisés d'épinette, de bouleau blanc et d'un pin rouge nain, ôte toute possibilité et tout moyen de former des établissements de ce côté du lac. Sur le rivage du nord, dans l'espace d'environ 6 milles du lac Ouhqui, la terre est aussi nullement susceptible de culture, parce qu'elle s'élève en falaises, dont le sommet est couvert de petits pins rouges, d'épinette et de tremble; de là jusqu'à la rivière du côté du nord, la terre quoique sablonneuse, peut être en quelques endroits susceptible d'amélioration. Après cela prend un caractère rocheux et montagneux. Les personnes qui l'ont explorée peuvent mieux dire, ce qu'elle est dans l'intérieur.

La Pointe au Sable est une Presque-Ile de terrain de transport, formée à l'entrée d'une rivière, qui entre dans le lac du côté du nord. Vis-à-vis de cette rivière, du côté du sud du lac, il y tombe une petite rivière d'entre les montagnes, qui en forment le lit, et la cascade qui se trouve à son entrée dans le lac présente un site bien avantageux pour un moulin et autres établissements de cette nature, tandis que la pointe au Sable serait une belle situation pour un village, par sa position avantageuse sur le lac.

Vendredi 12. Quoique le temps menaçât pluie, le vent cependant s'était abattu, et nous laissâmes la pointe à 9 heures A. M. Nous dirigeâmes notre course au centre du lac Tsiagomi, S. 68 E. et nous continuâmes à remarquer les mêmes traits que ceux que nous venons de décrire plus haut. Continuant à avancer en ligne droite, nous atteignîmes la profondeur du lac, qui est environné par des rochers élevés, dont quelques-uns découvrent des falaises arides d'environ 200 pieds d'élévation. De là on peut observer les traits caractéristiques du pays sur les bords du lac Tsiagomi, dans la distance de près de 20 milles, ce qui est environ la longueur du lac.

N'ayant pas trouvé l'issue du lac, nous cotoyâmes le rivage septentrional vers une grande baie, que nous avions remarquée de ce côté, en montant à la tête du lac, vis-à-vis laquelle, du côté du sud, une rivière appelée Upika, entre avec une grande rapidité d'entre les montagnes élevées qui en forment le lit. Ayant doublé une pointe de roche élevée qui coupe la vue d'une partie du lac, nous aperçûmes un léger courant coulant au nord-est, qui nous conduisit à l'embouchure de la rivière Chicoutimi, mot qui signifie, "en avant c'est encore profond," et presque immédiatement à la tête du portage des Roches. La longueur du lac Tsiagomi est d'environ 19 milles, depuis le lac Ouhqui jusqu'au portage des Roches, et la largeur commune en est de près d'un mille.

Le portage des roches a environ 200 verges de long, passant sur les rochers qui dans le printemps se couvrent d'eau. En cet endroit la rivière Chicoutimi tombe d'environ 15 pieds à aller à l'embarquement inférieur, au bassin, qui est environné par de hautes montagnes.

Après avoir laissé le bassin qui a environ trois quarts de mille de longueur, nous descendîmes la rivière Chicoutimi, qui coule avec rapidité considérable l'espace d'environ 1½ mille. La rivière est bordée de rochers d'environ 200 pieds d'élévation. Là se terminent les montagnes, s'arrêtant vers la région de la rivière Tsiagomi. La terre sur les rivages s'aplanit et paraît s'améliorer, étant boisée d'épinette, de sapin, de pin, de quelques ormes et cèdres; quelquefois à gauche dans les endroits où le feu a consumé le sol végétal, le roc a été laissé à nu.

On arrive ensuite au portage de l'Ile, à 3½ milles au-dessous du portage des Roches, d'où l'on s'y rend en suivant une direction générale N. E.

La direction générale du portage de l'Ile, est d'environ S. 75 E. 20 chaînes jusqu'à l'embarquement inférieur, en passant sur un terrain d'une bonne qualité, le sol étant d'une terre noire très riche, boisée de bouleau noir, d'épinette, de pin et de frêne.

La rivière est divisée en deux canaux, par une grande Ile; le canal du sud est rempli de cascades et de rapides, tandis que celui du nord-est n'est qu'un rapide continu, qu'on saute souvent avec les canots.

Après avoir laissé le pied de ce portage, nous atteignîmes le Beau Portage, situé à deux milles au-dessous, à laquelle distance, la rivière a, largeur commune, environ quatre chaînes. D'abord le rivage droit est élevé et rocheux, tandis que le gauche possède un sol d'une bonne qualité, boisé d'orme, de frêne, d'épinette, de bouleau et de pin. En approchant du Beau Portage qui passe sur le rivage droit, la terre acquiert un sol d'un caractère léger, étant un terrain jaune grossier, mêlé d'une grande proportion de sable; il est boisé d'épinette, de bouleau blanc, de pin et quelques ormes.

Après avoir passé ce portage, qui a environ 250 verges de long, passant sur une espèce de terre de moyenne qualité, composée principalement d'une glaise sablonneuse, boisée de bouleau blanc, de pin rouge, de peuplier et d'épinette, et qui évite les cascades, qui ont environ 20 pieds d'élévation en total, nous continuâmes à descendre la rivière Chicoutimi, l'espace de 7½ milles, jusqu'au portage de l'Enfant; les rivages montrent à cette distance une grande amélioration dans le terrain et dans le bois, le premier étant communément une glaise argileuse, et le dernier de l'épinette, de l'orme, du frêne, du sapin, du pin, du bouleau noir et blanc et quelques cèdres. La rivière qui varie depuis 4 jusqu'à 6 chaînes de largeur est parsemée, en quelques endroits, d'Iles bien boisées, et qui sont pour la plupart alluviales. Le cours général de la rivière entre le Beau Portage et le Portage de l'Enfant, est environ N. N. O. A un certain détour nous rencontrâmes un canot, contenant une famille sauvage; ils exprimèrent leur étonnement, en voyant un canot d'étrangers par un sourire ou rire silencieux, particulier aux Montagnais, d'où on leur a appliqué l'épithète sauvage de Papinashuahrieux ou ricaneurs. J'essayai de leur adresser quelques paroles qu'ils ne parurent pas comprendre, et nous continuâmes notre route.

Le Portage de l'Enfant, d'environ 200 verges de long, ainsi appelé de ce qu'un canot, où était un enfant, s'étant détaché de son amarrage, où il avait été négligemment attaché, descendit, sans qu'il arrivât le moindre accident à l'enfant la chute de l'Enfant, qui a entre 40 à 50 pieds d'élévation, y compris les cascades.

Le sentier passe sur une assez bonne terre, le sol étant une glaise jaune boisée d'épinette, de frêne, de cèdre, de peuplier, d'orme et de pin.

De l'embarquement inférieure, il n'y a que 20 chaînes en traversant le bassin au pied de la chute à aller au portage du Chien, sur le rivage droit de la rivière. Ce portage, qui a aussi environ 200 verges de longueur, passe sur une bonne espèce de terre, et évite une cascade d'environ 15 pieds de hauteur. Il est boisé de cèdre, de sapin, de bouleau, d'épinette rouge, de pin blanc et rouge.

Etant embarqués dans le canot nous sautâmes une partie des rapides. Nous remarquâmes en descendant la rivière, que la terre conserve ce caractère propre à la culture, qui se montre plus ou moins depuis le portage de l'Ile, et aussi quelques petites rivières qui se déchargent de l'un et de l'autre côté de la rivière principale.

Nous atteignîmes l'embarquement du portage, vulgairement appelé Ka-Ka, de 1½ mille, au haut d'une chute élevée, sur le bord de laquelle est une petite Ile qui sépare la chute en deux.

Comme il était trop tard pour passer ce portage, nous campâmes à l'embarquement, ayant fait ce jour là environ 21 milles, et passé cinq portages.

Samedi, 13.—Nous pénétrâmes environ 2 milles au sud-est sur un terrain très uni, et nous observâmes l'excellente qualité du sol, étant une glaise argileuse rouge, mêlée par endroit d'un petit gravier sous une riche couche végétale une belle pousse de bois mêlé couvre cet espèce, tel que frêne, orme, sapin, bouleau jaune et noir, baume, épinette, *basswood*, érable et cèdre en petit nombre. Cette étendue de terre basse paraît être considérable en courant vers le sud et sud-est.

Ayant rejoint le parti, qui avait déjà fait le transport du peu d'effets qui nous restait et du canot, nous partîmes du pied de la chute qui a environ 45 pieds de haut, et nous descendîmes jusqu'au portage de Chicoutimi, au dessus de la chute, où la rivière se contracte en moins de 25 verges, tandis que vis-à-vis du portage la rivière a environ 5 à 6 chaînes de large. Ce portage est à environ un mille au-dessous de celui de Ka-Ka; la terre dans cet intervalle est d'une excellente qualité, le bois étant orme, frêne, pin, sapin et quelques bouleaux blancs.

Course du portage de Chicoutimi.

L'élévation Commencent.

En cet endroit nous contemplâmes du haut d'une éminence qui commande le havre de Chicoutimi, le noble cours du Saguenay, qui coule avec un silence majestueux vers son confluent avec le St. Laurent. Quoiqu'il ne possédât pas ici les traits hardis de la rivière Tsiamagomi, néanmoins la largeur de la rivière, jointe à la scène frappante qu'offre le groupe de bâtiments élevés sur le bord de l'eau, et la petite chapelle solitaire érigée sur l'éminence adjacente, tout cela réuni présentait un assemblage d'objets, qui nous récompensa amplement pour les privations que nous avions éprouvées, en parcourant une étendue de pays d'environ 500 milles, en traversant 64 portages, et en risquant nos jours en plusieurs occasions, dans la descente inévitable de plusieurs mauvais rapides, pour parvenir à ce bras de la mer.

Nous descendîmes au poste, et nous fûmes reçus à la maison de M. Barnston, M. Andrews, commis résidant au poste étant absent, en voyage à Québec. Nous apprîmes que M. Wagner et M. Proulx, l'arpenteur, n'étaient partis du poste que quelques heures avant notre arrivée, pour aller monter la rivière St. Jean, qui tombe dans le Saguenay, et traverse le pays jusqu'à St. Paul et à la Malbaie. Nous employâmes le restant du jour à faire la recapitulation des distances qui suit, à prendre à l'embouchure de la rivière Kushpahiganou Belle-Rivière, à aller jusqu'au poste de Chicoutimi, non compris la longueur des moindres portages, formant ensemble la longueur de deux milles.

TABLE DE DISTANCES.

Embouchure de la Rivière Kushpahiganou Belle Rivière.

6 Portage de la Belle Rivière, 500 verges.											
8 $\frac{1}{2}$	2 $\frac{3}{4}$	Embouchure de la Rivière des Aulnais.									
10 $\frac{3}{4}$	4 $\frac{1}{4}$	2	Chûtes des Rivières des Aulnais et Portage, 700 verges.								
16 $\frac{3}{4}$	10 $\frac{3}{4}$	8	6	Haut du Lac Tsiamagomishish ou Port Tsiamagomi.							
17 $\frac{3}{4}$	11 $\frac{3}{4}$	9	7	1	Lac Oniqui $\frac{1}{2}$ mille, Tsiamagomi.						
37 $\frac{3}{4}$	31 $\frac{1}{4}$	28 $\frac{1}{2}$	26 $\frac{1}{2}$	20 $\frac{1}{2}$	19 $\frac{1}{2}$	Portage des Roches, 200 verges.					
40 $\frac{3}{4}$	34 $\frac{3}{4}$	33	30	24	23	3 $\frac{1}{2}$	Portage de l'Islet, 440 verges.				
42 $\frac{3}{4}$	36 $\frac{3}{4}$	34	32	26	25	5 $\frac{1}{2}$	2	Beau Portage, 250 verges.			
50 $\frac{1}{4}$	44 $\frac{1}{4}$	41 $\frac{1}{4}$	39 $\frac{1}{4}$	33 $\frac{1}{4}$	32 $\frac{1}{4}$	13	3 $\frac{1}{4}$	9 $\frac{1}{4}$	Portage de l'Enfant, 200 verges.		
50 $\frac{1}{2}$	44 $\frac{1}{2}$	41 $\frac{1}{2}$	39 $\frac{1}{2}$	33 $\frac{1}{2}$	32 $\frac{1}{2}$	13 $\frac{1}{2}$	3 $\frac{1}{2}$	9 $\frac{1}{2}$	4 $\frac{1}{2}$	Portage du Chien, 210 verges.	
52 $\frac{1}{4}$	46 $\frac{1}{4}$	43 $\frac{1}{4}$	41 $\frac{1}{4}$	35 $\frac{1}{4}$	34 $\frac{1}{4}$	15	11 $\frac{1}{4}$	9 $\frac{1}{4}$	21 $\frac{1}{4}$	Portage Ka Ka, 200 verges.	
53 $\frac{1}{4}$	47 $\frac{1}{4}$	44 $\frac{1}{4}$	42 $\frac{1}{4}$	36 $\frac{1}{4}$	35 $\frac{1}{4}$	16	12 $\frac{1}{4}$	10 $\frac{1}{4}$	32 $\frac{1}{4}$	1	Portage de Chicoutimi.
55 $\frac{1}{2}$	49 $\frac{1}{2}$	46 $\frac{1}{2}$	44 $\frac{1}{2}$	38 $\frac{1}{2}$	37 $\frac{1}{2}$	18 $\frac{1}{2}$	14 $\frac{1}{2}$	12 $\frac{1}{2}$	53 $\frac{1}{2}$	2 $\frac{1}{2}$	Chicoutimi.

Faisant en tout une distance de 55 $\frac{1}{2}$ milles depuis le lac St. Jean jusqu'à Chicoutimi.

Dimanche 14.—Ce jour étant favorable pour faire des observations, je fis mes préparatifs pour prendre une suite de hauteurs et d'azimuths, propres à donner la latitude et la variation.

Les observations du matin étant prises, je visitai la chapelle avec M. Davies et les voyageurs. Elle est située sur une élévation sur la pointe qui projette dans le bassin au pied de la chute de Chicoutimi; la longueur en est de 25 pieds au plus, sur 15 de large. L'autel qui est uni, et les peintures et gravures qui sont suspendues dans l'intérieur de la chapelle portent évidemment les traces du temps. L'apierre sépulcrale avec l'épithape en long du père Cocar, mort dans le siècle dernier a été cassée en plusieurs endroits, et c'est avec peine qu'on peut comprendre l'inscription qui est en latin et mal disposée.

Un missionnaire catholique visite Chicoutimi deux fois l'année, et enseigne aux naturels les premiers principes de la religion, dont les jésuites avaient composé en langue Créenné un catéchisme qui circule parmi eux.

L'établissement de la Compagnie des Postes du Roi, situé à l'extrémité orientale de la péninsule, au confluent de la rivière Chicoutimi et du Saguenay, consiste en une maison commode pour le commis ou agent résidant, laquelle est bâtie sur une colline qui commande la vue sur le Saguenay et le havre; un magasin, judicieusement placé près de l'endroit du débarquement; une boulangerie, étables et granges; plusieurs pièces de terre en culture et un jardin pourvoient le poste de plusieurs sortes de légumes, de patates surtout, et même de quelques douceurs pour la table.

Le sol aux environs de Chicoutimi est principalement de claie, ne contenant pas assez de terre grasse pour le rendre généralement assez bon; cependant on peut améliorer ce sol très facilement lorsqu'on a de l'engrais à la main,

Ayant pris une observation au méridien et complété les hauteurs et les azimuths de l'après-midi, je trouvai que Chicoutimi était au 48° 25' 5" de latitude, et la variation moyenne par ces instrumens 20° 15' ouest; une si grande différence avec la variation observée au Lac St. Jean ne peut-être attribuée qu'à des causes locales, vu qu'il y a quelque minéral bien attractif dans les rochers en arrière du poste. Ces observations furent corroborées par les hauteurs de l'étoile polaire et des circonfolaires

Lundi 15.—Nous pénétrâmes environ 5 milles dans une direction S.S. Est, à partir du Cap St. François, au dessous du poste, à aller vers la baie des

Has! Nous traversâmes dans cette partie une étendue de terre excellente composée d'une glaise argileuse, sous une riche couche végétale, couverte d'une pousse de bois mêlé, tel que frêne, sapin, bouleau noir, baume, peuplier, bouleau blanc, pin, quelques érables et *basswood*.

Nous passâmes un petit lac et traversâmes plusieurs ruisseaux qui répandent la fertilité sur leur passage, et qui découvrent dans les ravines qu'ils creusent, un lit de la claie bleue durcie et par endroits d'une espèce de marne blanche; ces ruisseaux ont leurs lits formés en partie d'un petit gravier.

Il y a beaucoup de ressemblance dans la surface et le caractère de cette étendue de terrain et celui que j'ai exploré au portage Ka Ka, et qui se rencontre généralement sur les rivages de la rivière Chicoutimi.

Dans mon retour au poste, je remarquai du côté méridionale du Saguenay une rivière, que je montai jusqu'aux pieds d'une chute, où la compagnie du nord-ouest a érigé un moulin, pendant qu'elle avait les Postes du Roi. La chaussée, qui est à 100 verges du débarquement est encore assez bonne, mais le moulin tombe en ruine; la dalle qui prend au haut de la chute est tout-à-fait insuffisante, aussi bien que les autres parties de l'ouvrage, qui sont destinées à faire marcher deux scies; la charpente, en y faisant quelques réparations pourraient encore servir plusieurs années. Ayant pris à la hâte un esquisse de la chute, comme la nuit approchait rapidement, je retournai au Saguenay, et j'arrivai au poste à 8 heures P. M. fatigué plus que jamais de la fatigue du jour.

Mardi, 16.—Désirant connaître la nature et le caractère du terrain le long du Saguenay, aussi bien que le cours et la grandeur de cette rivière jusqu'à la rivière des Terres Rompues, je montai à pied le long du rivage méridionale et partie le long du rivages septentrional du Saguenay, qui garde sa direction générale, qui est d'environ ouest-quart-nord-ouest, jusqu'à la rivière des Terres Rompues, et près de deux lieues au dessus de Chicoutimi, ayant, largeur commune, un demi-mille.

Le rivage du nord est formé de hauteurs brisées et montueuses, ordinairement boisées d'épinette, de petit pin rouge et bouleau blanc, laissant cependant par endroit une lisière de claie unie entre elles et les bords de la rivière. Le rivage méridional présente une surface horizontale et un terrain d'une excellente qualité, et découvre un sol de claie glaiseuse, boisé d'épinette, de bouleau noir, de pin, de sapin, de cèdre, de frêne et d'orme. L'intérieur du pays du Saguenay paraît bien arrosé des deux côtés par un nombre considérable de ruisseaux que je traversai, et qui ont généralement la teinte du terrain qu'ils ont traversé.

Le Saguenay n'est navigable que jusqu'à la rivière des Marais, où il commence à couir vers le sud-ouest et devient obstrué par des rapides et des rochers. La mer y monte 7 pieds, et au portage des Terres Rompues, environ 1 mille au dessus du confluent de cette rivière avec le Saguenay, le flux de la mer est très imperceptible. Deux milles au dessous de ce portage, le Saguenay présente des baies nombreuses rempli de rapides et bordé de rivages élevés et rocheux, et il se contracte en une largeur d'environ 10 chaines, mais c'est ce qu'il ne fut pas possible de constater, non plus que d'explorer au delà d'une rivière que je crus être la rivière des Terres Rompues, qui entre du côté du nord-ouest, avec une succession de chûtes et de cascades. J'aurais été bien aise de voir les chûtes du Saguenay, dont on entend souvent parler au poste, mais que personne n'a encore visitées.

Nous retournâmes au portage que j'explorai l'espace d'environ 1 mille, en traversant un terrain d'une très bonne espèce, cependant, le sol en est, dans la plus grande partie, de claie et par endroits d'une glaise riche; le bois est mêlé, étant frêne, épinette, sapin, cèdre, érable, *basswood*, et quelques pins rouge et blanc.

Arrivés au bords d'une côte formée de claie, à plus de 150 pieds au dessus du lit de la petite rivière des Marais qui coule à ses pieds, j'aperçus une succession de hauteurs semblables de claie s'étendant à une distance considérable, et dont la blancheur contraste d'une manière singulière avec la couleur de l'épinette, du sapin et du pin, qui en couronnent le sommet; ressemblant à la lave jetée par quelque éruption, et je crois qu'elles ont été formée de cette manière.

Nous fûmes de retour au poste à 8 heures.

Mercredi, 17.—Ayant examiné la chute de Chicoutimi, qui a 40 à 50 pieds de hauteur, se précipitant à travers un canal étroit sur les rochers qui interrompent son cours rapide, jusqu'au bassin qui forme partie du havre de Chicoutimi, je me mis à faire des sondes dans le havre, à basse marée, et je trouvai que, quelque sûr qu'il fût sous le rapport des vents et du mouillage, il ne pouvait répondre aux vaisseaux d'un port considérable, sans qu'ils touchent à basse mer, car les vaisseaux qui tirent plus de 1 $\frac{1}{2}$ brasse d'eau ne peuvent parvenir jusqu'au bassin de la Rivière Chicoutimi, à cause de l'étroit canal qui reste entre les battures qui s'étendent de la Pointe aux Trembles et de la Pointe Chicoutimi, où je trouvai entre 1 brasse et 1 $\frac{1}{2}$ brasse, tandis que dans le canal il y a au plus deux brasses d'eau, sur un fond de sable et de claie. De l'autre côté des battures, qui avancent environ 300 verges dans le Saguenay, les vaisseaux peuvent mouiller à 3, 4 et 5 brasses d'eau, près du Cap St. François, ce qui est, je crois, l'étendue du havre, environ 1 mille au dessous du poste. Les vaisseaux sont exposés à un courant extrêmement fort au reflux de la mer, ce qui exigerait, qu'outre leur ancres ils fussent amarrés à terre.

A partir du cap pour se rendre au poste la direction à suivre est ouest et quart nord-ouest, et quand on est par le travers de la Pointe aux Trembles on entre dans le petit chenal, S. O. et sud quart sud-ouest, en portant sur la Pointe de la Chapelle, approchant à quelques verges du rivage.

La mer monte entre 16 à 18 pieds perpendiculairement en quatre heures et demi de flux; le havre et cette partie du Saguenay gèle entre le 1er et le 5 décembre, et la débâcle a lieu entre le 10 et le 15 de mai. Vu sa centralité entre le lac St. Jean et le St. Laurent, Chicoutimi est le havre du Saguenay, et sa localité offrant une grande étendue de terre cultivable aux environs, rendra probablement cet endroit le marché pour le commerce de toute cette partie du pays.

Il était 5 heures P. M. lorsque nous fîmes nos adieux aux habitans hospitaliers du poste, et partîmes pour descendre à Tadoussac.

Lorqu'on

Lorsqu'on est à la Rivière au Moulin, environ 2 milles au-dessous du poste, le Saguenay commence à courir à peu près nord-est quart de nord $\frac{1}{2}$ N., l'espace de près de 3 milles, acquérant une largeur considérable, qui est d'environ un demi-mille au confluent de cette petite rivière. Le rivage du N. O. prend un aspect montueux, tandis que le rivage du sud-est est généralement plus horizontal et paraît présenter quelques endroits de bonne terre.

On aperçoit dans le nord-est une chaîne de montagnes d'une hauteur assez considérable, courant du nord-ouest, et là pliant leur direction générale à celle du Saguenay.

Nous passâmes la Rivière au Caribou, qui sort d'entre les hauteurs du côté du nord-ouest et paraît être une grande rivière, que je supposai avoir pu être explorée par M. Proulx. C'est pourquoi je me rendis à la Pointe de l'Islet, d'où apercevant une lumière du côté opposé de la rivière, nous restant est quart nord-est, nous nous dirigeâmes vers cet endroit, car la nuit approchait rapidement. Une lune resplendissante communiquait son éclat argentin à la vaste surface du Saguenay, et donnait une apparence magique à une multitude d'objets réunis pour exciter l'admiration et l'intérêt du Canadien envers son pays natal. Une pareille scène ne se présente jamais pour une première fois sans faire regretter qu'elle ait été jusque là inconnue et inappréciée.

Tout en faisant ces réflexions nous arrivâmes aux prairies, où un grand nombre de voix salua l'arrivée de confrères voyageurs.

Peu de personnes peuvent imaginer les commodités d'un wigwam tel que celui où nous entrâmes, par l'hospitalité d'un nommé Jérôme L'Onge; sa famille, un sauvage Montagnais et leurs enfans composaient tout leur cercle domestique assis alors autour du feu, dont la lumière produisait un effet singulier sur les figures qui l'environnaient.

Ce Jérôme L'Onge est un Canadien de la paroisse des Eboulemens, et a passé la plus grande partie de sa vie soit au service de la compagnie du Nord-Ouest, soit à celui de la compagnie des Postes du Roi; et il nous en conta beaucoup de ses voyages à travers le pays sauvage.

Ayant été stationné pendant plusieurs années au lac Mistassini pour faire le trafic avec les sauvages, il dit que l'étendue du lac est bien peu connue, car il mit trois jours à le traverser dans l'endroit le plus étroit, allant d'île en île, qui sont dans cette partie particulière du lac. Il suppose que la distance entre elles et la terre ferme n'est pas moindre de 30 milles, ce qui donnerait au lac dans cette partie environ 90 milles de largeur. Les sauvages mettent ordinairement tout l'été, une partie du printemps et de l'automne, pour se rendre du haut du lac Mistassini à son extrémité inférieure. Ce qu'on peut dire de moins de la grandeur de ce lac immense, c'est de supposer qu'en dimensions il ne le cède pas de beaucoup au Lac Supérieur.

La rivière Rupert qui y prend sa source est bien plus considérable que le Saguenay; il l'a descendu jusqu'à une journée de marche de la Baie St. James; il suppose que la distance entre la Baie et le lac Mistassini est d'environ 50 à 60 lieues.

Il a aussi fait le voyage entre le poste d'Assouapmoussouin, et le lac Mistassini, en marchant généralement dans une direction N. N. E. Ce voyage se fait en trois semaines ou environ, en mettant 4 lieues à la journée. Il suppose que le lac reste par le nord des Sept Îles et du St. Laurent, et on traverse dans l'intérieur de ce pays plusieurs lacs plus grands que le lac St. Jean, et il dit qu'il y a beaucoup plus d'eau que de terre, et cette dernière tout-à-fait hors d'état d'être soumise à la culture, n'étant formée que de masses de rochers, de falaises, et de marécages immenses, sans arbres et offrant un pays tremblant, où dans des milles de distance on ne rencontre que quelques tamaracks: c'est le domaine de l'origan et du caribou; ils se nourrissent de la mousse qui croît sur les rochers et traversent en bandes ces vastes plaines.

Les sauvages qui chassent dans ce misérable pays, qui cependant abonde en pelleteries de différentes espèces, ont beaucoup diminué en nombre, depuis le temps où la compagnie du Nord-Ouest tenait les Postes du Roi, et surtout depuis peu, qu'on a introduit parmi eux des liqueurs fortes, dont ils font un usage si immodéré, que plusieurs en meurent. Lorsque la famine attaque une famille de Montagnais, c'est l'usage parmi eux que, lorsqu'il en tombe quelqu'un victime de la faim, on l'enterre sur le lieu, et les autres transportent immédiatement le camp à un autre endroit, et ainsi de suite jusqu'au dernier survivant, qui abandonne entièrement l'endroit et s'enfonce à l'aventure dans les bois jusqu'à ce qu'il succombe lui-même sous les rigueurs de la faim.

La petite vérole, apportée avec les effets et les hardes qu'on leur donne en échange pour leurs pelleteries, a souvent enlevé 50 à 100 personnes dans un jour. Il n'y a présentement qu'environ 50 à 60 familles qui font le commerce aux postes de la compagnie, tandis que sans ces causes destructives on aurait pu en compter au moins 500.

La compagnie de la Baie d'Hudson emploie ordinairement, pour transporter ses marchandises à Mistassini, des berges qui conduisent des hommes régulièrement formés à cela, et qui pour la plupart sont metifs: dans les portages ces berges sont traînées sur des rouleaux. On se sert de canots de cèdre pour aller dans les petites rivières à la recherche des sauvages pour leurs pelleteries, car on ne peut trouver dans ce pays d'écorce de bouleau pour en faire des canots.

Jeudi 18.—Nous employâmes ce jour à explorer les deux rives du Saguenay, et à prendre des intersections de la Pointe aux Roches, de la pointe ———— et d'autres pointes dans la rivière pour des fins trigonométriques. Nous passâmes du côté du nord plusieurs rivières à fonds de claie principalement, dont les plus remarquables s'appellent la Loutre et Rivière aux Outardes. On remarqua que les hauteurs faisaient une assez forte attraction magnétique; et des fragmens qu'on en emporta, ont laissé voir un peu de minéral de fer.

Nous avons campé dans les prairies étendues, qui sont fauchées tous les ans pour l'usage du poste; elle présentent un sol de claie, qui cependant en approchant des hauteurs est couvert d'une riche couche végétale—les hauteurs sont rocheuses et nullement propres à la culture.

Du côté opposé de la rivière, qui a en cet endroit un mille de large, se

décharge la rivière des Vases ou Tomisticobish; à son embouchure s'avance une batture et un rescif dangereux qui se couvre à haute mer; nous trouvâmes ici quelques beaux échantillons de marbre rouge.

Vendredi 19. Nous partîmes des prairies à 9 heures et nous continuâmes à descendre le Saguenay, dont les rivages s'élèvent en ces endroits en falaises arides et en rochers clairement boisés de bouleau, de sapin, d'épinette et de quelques cyprès et pins nains.

Ayant passé la rivière ———— qui se décharge dans le Saguenay, du côté du nord, nous doublâmes la pointe aux Roches, restant S. 55 E. 7 $\frac{1}{2}$ m. à la pointe de l'Islet; et ensuite le ruisseau Peltier, qui se précipite entre les rochers escarpés qui forment son lit. A partir de ce ruisseau, qui est situé au fond de la baie Saint-Jacques, on fait route au sud jusqu'au cap à l'est, à environ 18 milles de Chicoutimi, la Pointe aux Roches nous restant au N. O. $\frac{1}{4}$ O. 5 $\frac{1}{2}$ m. Nous débarquâmes en cet endroit, afin que je pusse prendre quelques intersections et points trigonométriques de la baie des Has.

La baie de Ha! Ha! ou baie des Has! a 7 $\frac{1}{2}$ milles environ de profondeur nous restant au S. 75 O. dans laquelle direction se trouvent les hauteurs bleues de Tsiamagomi, éloignées de 28 à 30 milles, et qui s'élèvent au dessus du pays plat, qui caractérise le terrain aux environs de la baie.

On suppose que le nom de Ha! Ha! à été donné à cette baie par les français, lorsqu'ils montèrent le Saguenay pour la première fois, parce qu'ils entrèrent dans cette baie, la prenant pour la continuation du Saguenay; mais voyant leur erreur en arrivant au fond de la baie, ils prononcèrent à plusieurs reprises le mot Ha! Ha! qui est resté à la baie. De là ils dirigèrent leurs courses sur le Cap à l'est, où le Saguenay se resserre dans l'espace d'environ 48 chaînes, ayant de l'autre côté le Cap à l'ouest, ce qui donne à cet endroit l'apparence d'une grande rivière qui se déchargerait de ce côté, plutôt que celle du Saguenay lui-même. La baie des Has paraît évidemment avoir été formée par la nature comme le siège principal du commerce de toute cette partie du pays ou de territoire: 1^o A cause de la grande étendue de pays plat qui l'environne, et qui court jusqu'au lac Tsiamagomi et jusqu'à Chicoutimi, comme il a déjà été observé. 2^o Par le havre qu'elle offre pour les vaisseaux de ligne de la première classe, qui peuvent entrer directement dans la baie, avec presque le même vent qu'il leur faut pour monter le Saguenay, et mouiller dans la seconde baie, qui paraît avoir été formée tout exprès pour servir de darse, et qui selon moi serait une place très propre pour une foire de commerce. 3^o Enfin, par la facilité qu'il y a à ouvrir un chemin jusqu'à Chicoutimi, ou directement jusqu'au haut du lac Tsiamagomi, et encore par la facilité qu'il y aurait à établir une communication par eau entre cette baie et le lac, pour éviter la route tortueuse et difficile de la rivière Chicoutimi, la différence du niveau n'excedant pas 250 pieds, dans une distance de 4 $\frac{1}{2}$ à 5 lieues, par le pays plat qui sépare ses deux points. La baie est protégée par le Cap à l'est, et les hauteurs dominantes qui en forment l'entrée, tandis que le premier s'élevant jusqu'à la hauteur de 500 pieds commande la vue jusqu'à la distance de 12 milles dans le bas de la rivière, et garde avec le Cap à l'ouest l'entrée dans la partie supérieure du Saguenay.

Suivant la base du Cap, qui en quelques endroits présente une face escarpée et en d'autres des masses brisées de granite, qui de temps en temps se détachent du sommet et s'amoncellent irrégulièrement, dans les interstices desquelles quelques épinettes et bouleaux nains ont trouvé assez de sol végétal pour prendre racine; nous arrivâmes au ruisseau rapide et à une baie, sur le rivage septentrional du Saguenay, appelés l'Ance et le Ruisseau des Femmes, et nous campâmes à 6 $\frac{1}{2}$ heures. Vers 8 heures il s'éleva un gros vent du sud-est, qui pendant la nuit produisit une tempête et une forte houle sur la rivière.

Samedi 20.—Il faisait un vent si fort, qu'il était impossible de s'exposer aux eaux agitées du Saguenay, dans notre frêle canot d'écorce.

Le Saguenay a ici environ une demi-lieue de large, et les rivages en sont formés de rochers élevés et escarpés; près du Ruisseau des Femmes ils s'élèvent en forme de cônes jusqu'à la hauteur de 400 à 500 pieds, clairement boisés d'épinette, de bouleau blanc et de pin rouge d'une espèce rabougrie.

Dimanche 21.—Le vent ayant diminué, la mer paraissait s'être calmée considérablement; c'est pourquoi nous nous hasardâmes à sortir de la baie, mais la houle se trouva extrêmement forte, lorsque nous doublâmes la première pointe, ce qui nous obligea de retourner à notre camp.

A 9 heures nous fîmes une tentative plus heureuse, et quoique la mer nous balotta fortement, nous avançâmes facilement, en suivant la base des falaises, qui forment le rivage ferré du côté nord du Saguenay, formé par une chaîne de rochers arides, qui montrent des fractures d'un aspect qu'on rencontre rarement, selon moi, joint à l'effet qu'elles produisent sur l'esprit par la crainte d'un danger constant qu'elles inspirent, même lorsque le calme règne; car il est arrivé quelque fois qu'un revolin de vent se précipitant des hauteurs a mis en pièces le perroquet de quelques vaisseaux, et souvent mis les petits vaisseaux qui naviguent entre Tadousac et Chicoutimi, en danger imminent.

C'est pourquoi nous éprouvions une sensation toute particulière, à chaque fois que l'œil surprenant une petite baie ou un courant d'eau qui pouvait offrir une bonne place de débarquement; et nous en passâmes plusieurs jusqu'au ruisseau de La Trinité, 14 milles du Cap à l'Est, qui présente un emplacement sûr pour les chaloupes et les canots.

A partir de ce ruisseau, il y a environ 5 milles à aller à l'Anse et Rivière La Trinité sur la rive méridionale, où il paraît y avoir un havre sûr pour les chaloupes et goélettes et un peu de terre cultivable dans les profondeurs; les hauteurs baissant graduellement jusqu'aux bords de la rivière, tandis qu'à l'entrée le Cap La Trinité s'élève à une hauteur non moindre de 800 pieds; une partie est coupée perpendiculairement à la surface du Saguenay.

Nous tombâmes ensuite dans l'Anse Saint-Jean, qui est pareillement sur la rive méridionale, à environ 6 $\frac{1}{2}$ milles au dessous de la rivière La Trinité; et il paraît y avoir un havre sûr et spacieux pour des goélettes.

L'acclivité graduelle du pays qui environne ce havre donne un aspect favorable à la terre, et je crois qu'on pourrait y trouver quelques milliers d'acres de terre susceptible de culture.

Appendice
(V.)

14 janvr.

Du côté septentrional du Saguenay, plusieurs ruisseaux se précipitent du haut des rochers, sans présenter aucun abri ni havre aux bateaux battus des vents contraires.

Le Petit Saguenay se trouve aussi sur la rive méridionale, à environ 4 milles au dessous de l'Anse Saint-Jean, et offre un havre très commode pour des bateaux.

La course générale du ruisseau de La Trinité jusqu'à la Pointe aux Ecrits ou Petit Saguenay, est S. 35 E. 15 milles. A partir de ce point les hauteurs, quoique encore arides et escarpées, ne paraissent pas aussi élevées. Ici de même qu'en plusieurs parties du rivage septentrional du Saguenay, je remarquai une grande attraction magnétique sur l'aiguille, d'où je conclus que les rochers qui constituaient les rochers étaient fortement imprégnés de fer magnétique, ou qu'ils possédaient de leur nature cette influence attractive sur l'aiguille.

Ayant passé deux petites îles de roche qui longent le rivage septentrional, nous arrivâmes à l'île Saint-Louis, qui est une masse élevée de granite, clairement boisé de sapin, d'épinette, de bouleau blanc et de peuplier; elle a environ 60 chaînes de long et un demi-mille de large; tout près de son extrémité sud-ouest se trouvent deux autres petites îles de roche. Le Saguenay a ici environ 1½ mille de large et offre un mouillage sûr à l'abri des hauteurs, et les vaisseaux peuvent jeter l'ancre en toute sûreté près de l'île Saint-Louis.

Nous passâmes ensuite l'embouchure de la rivière Sainte-Marguerite, du côté du nord du Saguenay. La mer était basse, et je remarquai un rescif rocheux qui la traverse. A mer haute les goélettes pourraient trouver en cet endroit un havre sûr, de même que dans la baie jusqu'à l'embouchure de la rivière, qui paraît être un cours d'eau assez considérable.

Comme nous ne pouvions trouver d'eau douce pour camper sans remonter la rivière bien haut dans la baie, qui est une vaste marais salin, nous continuâmes à la faveur du calme parfait de la rivière, et de la lumière de la lune, que nous perdions cependant de vue assez souvent derrière les rochers élevés et escarpés qui forment encore en cet endroit les traits principaux du Saguenay, dont la largeur en laissant la baie Sainte-Marguerite se ressère à moins d'un mille. Après être descendus environ deux milles sans avoir changé de point de vue, nous eûmes la chance d'arriver à un petit ruisseau qui se précipitait sur le flanc du rocher, ou nous emplîmes d'eau douce les vaisseaux vides que nous avions, dans la crainte ou nous étions d'être obligés de passer la nuit dans le canot, mais ayant aperçu un endroit moins escarpé, nous tentâmes débarquement, ce que nous fîmes avec beaucoup de peine. Le canot et le bagage furent montés à environ 25 pieds de haut sur le rivage, pour éviter la haute mer. Alors on fit du feu avec le bois que la marée précédente avait jeté sur le rivage, et après avoir prêté pendant quelque temps l'oreille aux récits merveilleux des voyageurs, que la froidure de la nuit avait réunis autour du feu, nous cherchâmes parmi les rochers une place pour reposer.

Lundi 22.—Nous fumes réveillés à deux heures par le bruit et la confusion causés par le reflux de la mer, qui obligea les gens de changer le bagage de place et de le placer plus haut. Au point du jour, lorsque la mer fut assez haute pour nous permettre de mettre le canot à l'eau, nous quittâmes notre misérable campement. Après qu'on a passé le Ruisseau des Grosses Roches qui entre dans le Saguenay du côté N. E., où je remarquai une moindre élévation dans les terres, la rivière tourne son cours au sud, et reçoit la rivière St. Etienne, qui se décharge du côté occidental, environ 1 mille au-dessus de la dernière. De là le Saguenay court S. E. quart d'est, jusqu'à son confluent avec le St. Laurent. En plusieurs endroits les rivages sont coupés à pic, et sont, largeurs communes, d'environ 1 mille de large. Nous passâmes du côté nord, la baie St. Catherine, qui, si ce n'était du mouillage, paraîtrait former un havre pour les vaisseaux, qui seraient protégés de tous côtés par les hauteurs qui l'environnent.

Ensuite nous atteignîmes l'embouchure du Saguenay qui est de 60 à 70 chaînes de large, et remarquable par des traits frappants et hardis. Ayant alors doublé la Pointe de l'Îlet, nous entrâmes dans le havre et débarquâmes à Tadousac à 8 heures P. M.

Cet établissement est le plus considérable des Postes du Roi, étant composé de 13 bâtimens, y compris une chapelle. La résidence de l'agent de la compagnie est un joli bâtiment d'un étage et d'une grandeur commode, avec un assez bon jardin, dont une partie produit avec d'autres endroits aux environs les légumes que consomment les gens du poste. La chapelle est à peu près des mêmes dimensions que celle de Chicoutimi. Son toit rouge et son clocher, joints aux bâtimens environnans, la rangée de petites pièces de campagne sur le bord de la plaine s'étendant jusqu'au pied des montagnes qui s'élèvent à une hauteur considérable, laissant à découvert en plusieurs endroits les rochers nus ou montrant les ravages destructeurs du feu, qui a teint les bois dont leurs sommets sont couverts, laissent par endroits le pin élevé dépouillé de ses branches dominant sur les érucées d'épinettes et de bouleaux qui lui ont succédé; la belle venue de sapins qui s'élèvent en autant de cônes au-dessus de la terrasse, qui, je crois, fut une fois le siège des fortifications des français, située à l'ouest du ruisseau qui se précipite du haut des montagnes, dont les sommets sourcilieux font un contraste d'un effet tout particulier avec les sapins qui sont à leurs pieds; tout cela réuni ensemble forme un point de vue des plus agréables, lorsqu'on monte dans le havre, ou qu'on double la pointe de l'Îlet en descendant du Saguenay.

Nous trouvâmes que Tadousac était par la latitude 48° 5' 54", et que la variation du compas était de 16° 23' 45" ouest. Son havre est formé par la péninsule ou l'Îlet, qui le sépare du Saguenay au sud-ouest et de la terre ferme au nord-est; il a environ un tiers de mille en travers et près d'un demi-mille en profondeur à basse-marée. Le rivage, sur lequel de grandes pêches à saumon, s'étendent à une distance considérable, se ressère grandement les dimensions du havre. Celui-ci est néanmoins très sûr et protégé par les montagnes environnantes de la plupart des vents qui règnent dans le St. Laurent, excepté les vents du sud qui peuvent battre les vaisseaux à haute marée, car alors l'île Blanche et la Batture-aux-Allouettes qui les protégeraient à basse marée, sont couvertes d'eau.

A basse marée, l'entrée du canal jusqu'au havre de Tadousac est difficile, et pour les vaisseaux qui descendent le St. Laurent, qui doivent courir presque en droite ligne sur le plâtre de l'île Verte, portant au S. E. du havre, et passer ensuite au nord de l'île Blanche à l'extrémité de la Batture-aux-Allouettes, en évitant en même temps la batture qui court à quelque distance de la pointe nord-est du havre; elle est beaucoup moins difficile

pour les vaisseaux qui montent d'en bas. Un phare qui serait placé sur l'île Rouge rendrait beaucoup plus facile l'entrée du havre de Tadousac, en même temps qu'il servirait à indiquer la route à tenir pour passer dans le chenal nord du St. Laurent. Le havre est ouvert aux vaisseaux et libre de glace, depuis le mois de mai, jusqu'à la mi-septembre.

Au poste j'eus occasion de voir plusieurs des naturels de la nation Montagnaise des deux sexes; cette nation habite l'immense étendue de pays située entre le St. Laurent et le territoire de la baie d'Hudson. L'habillement des femmes est singulièrement bigarré de diverses couleurs: il consiste ordinairement en un morceau de drap bleu bordé de drap écarlate, dont elles font ordinairement leurs vêtements de dessous, et en un manteau d'indienne peinte; elles jettent leurs cheveux de chaque côté de la tête et en font une tresse attachée avec du ruban ou du galon rouge; elles ont une prédilection particulière pour ce dernière article. Elles portent généralement une capuche de forme conique, de drap rouge, bleu, vert ou blanc, d'où pend une longue queue de cheveux aussi attachée de tavelle rouge. Elles fument et boivent des liqueurs fortes comme les hommes, dont l'habillement est généralement très négligé, et composé ordinairement de quelque vieille redingote ou capote bleue, ou d'une chemise d'indien et de culottes de toile. Les Montagnais, ou nation Montagnaise, (en langue sauvage, "rieurs ou moqueurs,") sont généralement un peuple doux et humain. Ils n'ont pas d'habitation fixe, et ils errent dans les limites qui leur sont assignés pour la chasse. Ils vivent de la chasse et de pêche, qui venant souvent à manquer, surtout dans ces dernières années, sont une des causes qui, jointe à l'usage immodéré des liqueurs fortes et à la petite vérole qui s'introduit quelquefois parmi eux, réduit considérablement leur nombre.

Ils ont de l'éloignement à cultiver la terre, attendant leur subsistance d'autres sources; et ils n'ont parmi eux d'autres tradition qu'un léger souvenir de l'ordre des jésuites, qui leur enseignèrent les premiers principes du culte religieux.

La nature a fortifié le territoire du Saguenay, sous le rapport militaire, et le rend imprenable par un ennemi étranger; ses montagnes, ses lacs, ses rivières et les marais qui sont situés entre lui et le St. Laurent forment une vaste barrière impénétrable. La clef de ce pays est sans contredit Tadousac. Une bonne forteresse bâtie sur la péninsule commanderait le port et l'entrée du Saguenay.

RECAPITULATION et TABLEAU des distances depuis Chicoutimi jusqu'à Tadousac; et des endroits remarquables sur le Saguenay:

Mardi 23.—Nous partîmes de Tadousac, à 10 heures, pour nous rendre à Québec. En traversant, de l'Îlet, l'embouchure du Saguenay, nous fumes exposés à la houle, appelée par les marins "Rangs de marées ou clapotage," causée par la rencontre du courant de la rivière et du flux de la mer. Il soufflait fort du sud-ouest et ce ne fut qu'avec les plus grands efforts et la manœuvre la plus adroite que nous réussîmes à doubler la Pointe-aux-Allouettes, après quoi nous débarquâmes à la Pointe-aux-Bouleaux, environ deux milles au-dessous de Tadousac. Je remarquai en cet endroit une étendue de terre excellente allant jusqu'aux pieds des hauteurs, située entre la baie des Allouettes et la Rivière aux Canards, et que nous passâmes après que le vent se fut un peu calmé. Ensuite les rivages s'élèvent en falaises rocheuses d'une hauteur considérable: Nous atteignîmes une cabane de pêcheurs sur la pointe rocheuse de la baie des Echafauds aux Basques, où nous campâmes à 6 heures.

La baie des Echafauds a environ un mille de profondeur et est environnée par des hauteurs. A son entrée se trouvent deux îles de roche, dont la plus grande est clairement boisée de sapin et de bouleau blanc.

Mercredi 24.—Nous partîmes à 9 heures au milieu d'un épais brouillard, qui nous fit tenir les bords du rivage, qui est une côte ferrée, et ce fut avec beaucoup de difficulté que nous passâmes les battures de la baie des Rochers. Le ciel s'éclaircit avec un grès vent du sud-ouest, qui nous obligea de débarquer à une cabane de pêcheurs du côté ouest du Port à la Femme; une batture considérable et un rescif de rochers en rendent l'entrée très difficile à basse mer; il s'y jette une petite rivière qui se précipite du haut des montagnes qui forment le caractère de la côte.

Nous passâmes la Rivière Noire, qui forme les bornes de la Baie Murray à l'est, ensuite nous atteignîmes le port au Persil, vers quatre heures et demi, et le vent venant à s'élever il nous fut impossible de doubler la pointe, et il nous fallut attendre le beau temps.

Jeudi 25.—Nous ne pûmes laisser le port au Persil avant midi, à cause du vent qui soufflait encore fort. A 7 heures du soir nous arrivâmes à la paroisse de la Malbaie. La nuit était bien sombre, et nous remarquâmes beaucoup d'éclairs dans le sud.

Vendredi

Vendredi 26 — La pluie nous empêcha de nous mettre en marche avant 9 heures, temps auquel nous laissâmes la Malbaie, et à 2 heures nous passâmes devant les beaux établissemens des Eboulemens dont les champs verdoyans couronnent les sommets des hauteurs taillées en amphithéâtre, et présentent un point de vue agréable aux voyageurs.

Vers 4 heures le vent venant à souffler fort du nord-ouest nous entrâmes dans la Baie St. Paul ; mais nous ne pûmes nous rendre au village à cause de la batture de sable qui couvre la baie à marée basse, nous nous dirigeâmes sur la pointe ouest, que nous atteignîmes à 6½ heures, et nous campâmes sur le bord du chemin.

Samedi 27. — Nous partîmes à 8 heures A. M. ; il faisait un beau temps mais encore un gros vent du S. O., ce qui nous obligea de relâcher à la seigneurie de la Petite Rivière, à 10 heures. Je partis à pied pour passer les caps, mais ayant arrêté à un petit établissement, et le dernier de la seigneurie, occupé par des pêcheurs qui gardent de grandes pêcheries à l'anguille, les gens me conseillèrent de ne pas tenter cette marche, parceque la marée qui allait monter, m'aurait atteint en peu de temps.

M. Davies et les voyageurs ne purent partir avant 6 heures, pour se rendre en cet endroit, où nous campâmes sur le rivage.

Dimanche 28. — Nous partîmes à 6 heures, et passâmes le Cap Maillard et le Cap Tourmente ; nous atteignîmes ensuite les premiers établissemens de St. Joachim, où j'achetai des provisions pour notre monde, celle que nous avions prises à Chicoutimi étant épuisées.

Un vent frais et favorable de N. E. nous mit en état d'atteindre les établissemens de l'Île d'Orléans, vis-à-vis du Chateau-Richer, où nous campâmes à 5 heures.

Lundi, 29. — Nous partîmes de l'Île d'Orléans à 7 heures et nous débarquâmes au quai de Hunt, à Québec, vers 11 heures : l'expédition du St. Maurice ayant parcouru, depuis le 21 d'août, un circuit de près de 800 milles, et en en exceptant 90 milles seulement faits en canot d'écorce, cette distance formant une superficie de 12,190 milles carrés.

Donné sous mon seing à Québec,

le 24e. jour de décembre, 1828.

JOS. BOUCHETTE, le jeune,

Député-Arp.—Général.

(vraie copie.)

JOURNAL de l'Exploration du Saguenay et autres parties des Terres de la Couronne, situées au Nord du Fleuve St. Laurent.

AYANT reçu ordre d'Andrew Stuart, Ecuyer, un des Commissaires, de vive voix, de me trouver en la Ville de Québec, le premier jour de mois d'août, afin de partir pour cette expédition ; en conséquence le treute et un de juillet 1828 ; je suis parti de chez moi, de Sainte Marie Nouvelle-Beauce, et je me suis rendu en ville, là où j'ai resté jusqu'au sixième jour du dit mois d'août en attendant une goëlette pour descendre à Tadousac.

6me. jour d'août. — Nous sommes parties de la ville de Québec et nous nous sommes rendus au dit Poste de Tadousac le neuf à midi et demi, là où nous avons fait débarquer les provisions de la dite goëlette, et le 10me. jour nous sommes parties pour monter dans la Rivière Saguenay jusqu'au Poste Chicoutimi, qui est à environ vingt cinq lieues de l'embouchure du Saguenay. Ce même jour nous ne nous sommes rendus qu'à l'endroit appelé la Boule, là où nous avons rencontré le courant si fort avec la mer baissante, que nos rameurs n'ont pas pu doubler la pointe de la dite Boule avec la chaloupe, alors nous avons été obligés de rentrer dans l'Anse et y camper.

11me. jour. — J'ai débarqué de la chaloupe et j'ai rembarqué dans un canot, nous avons été camper sur un petit rocher, qui est à environ un mille et demi au-dessus des Îles Coquette, et sur la rive Nord du dit Saguenay depuis l'embouchure de cette dite rivière à venir ici, elle est bordée par des rochers qui sont très hauts et escarpés et qui sont presque tous de figure ronde.

12me. jour. — Je me suis rendu dans une petite anse qui est à environ trois milles au dessus de l'Ance St. Jean, mais du côté opposé, là où j'ai été obligé de mettre à terre par rapport que le vent d'ouest était trop fort pour les canots, et là j'ai été retenu jusqu'à trois heures après midi. Alors le midi j'ai observé la latitude, que j'ai trouvé être de 48 degrés 14 minutes et 2 secondes nord. La variation m'a paru être de 18 degrés ouest, mais je crois qu'elle est augmentée par des couches de pierre magnétique qu'il y a dans les rochers desquelles j'ai extrait des petits morceaux pesant environ une demi ou trois quarts de livre, et qui faisaient mouvoir l'aiguille aimantée d'un degré et demi à deux degrés après qu'elle était fixée à son point nord. A trois heures le vent étant un peu plus faible, je me suis rembarqué et ai continué jusqu'à une anse, qui est vis-à-vis de l'Anse appelée Trinité et du côté opposée, là où j'ai trouvé des Messieurs qui montaient en chaloupe, et qui étaient retenus par la mer baissante, laquelle s'abaisse et s'élève de vingt et un pieds verticalement. A 11 heures et demi nous sommes rembarqués, et nous avons continué le reste de la nuit.

13me. jour. — A 10 heures du matin j'étais rendu à l'Ance au Sable, là j'ai été retenu par le vent d'ouest jusqu'à deux heures de l'après-midi, la latitude de cette place est de 48 degrés 19 minutes et 9 secondes nord. A deux heures le vent étant bien abaissé, j'ai continué et je me suis rendu à la petite anse qui est au dessus du Cap à l'ouest, là où j'ai trouvé les Messieurs du parti qui montent dans la dite Chaloupe, et j'ai campé avec eux.

14me. jour. — Nous nous sommes rendus au dit Poste de Chicoutimi tous ensemble.

15me. jour. — Andrew Stuart, l'un des Commissaires a consulté sur les moyens les plus expédiens et les plus convenables pour cette dite expédition.

16me. jour. — J'ai reçu des Instructions de mon dit Seigneur Andrew Stuart, en date du même jour et à deux heures après midi, en conséquence je suis parti à 3 heures, accompagné de deux voyageurs seulement pour aller explorer la Baie des Ah ! Ah !, le pays adjacé à la dite Baie est aussi celui adjacé à Chicoutimi tel que mentionné dans mes instructions.

Le même jour je me suis rendu aux Prairies, distance du dit Poste Chicoutimi d'environ 9 milles là où j'ai resté jusqu'au lendemain pour faire coudre quelque verges de toile ensemble afin de me faire une espèce de tente pour mon voyage.

17me. jour. — Je me suis rendu au Cap à l'Ouest, à l'entré de la dite baie, où étant, j'ai commencé à entrer dans la dite baie, en suivant la rive septentrionale ; laquelle est bordée par des forts rochers qui sont tous arides et qui se prolongent jusqu'à environ cinq milles et demi ; au bout desquels ils se dirigent vers le nord, et leur direction donne un élargissement à la dite baie d'environ un mille de profondeur vers le nord, et qui forme une Anse, qui à environ deux milles de large à son entrée, sur un mille de profondeur, laquelle offre une très bonne sûreté pour nombre de vaisseaux, de quel grosseur qu'ils soient, le mouillage est très bon, et varie en profondeur depuis 15 à 35 brasses. Cette Anse est un port où les vaisseaux seront à l'abri de tous les vents.

18me. jour. — J'ai exploré le terrain au nord, de la dite Ance, jusqu'à environ deux milles en profondeur ; la rive est entrecoupée par des petits rochers, mais qui ne s'étendent pas bien loin en profondeur, et aussi par des petits côtes, à la suite desquels il y a de très beaux vallons. Les espèces de bois dominantes dans les vallons, sont du cèdre, épinette, aunaie, bouleau, frêne, &c. La qualité du sol est un lit de terre végétale, de deux à trois pouces d'épais qui repose sur un fond de marne, marqué No. 4, sur les petits côtes, le terrain est sablonneux, et les espèces de bois sont, du pin, rouge et jaune, (d'une cru assez considérable et qui paraissent très bons) de l'épinette, sapin, bouleau, &c. Deux gros ruisseaux qui viennent du nord, tombent dans le front de cette dite Anse, et sur la rive de laquelle il y a beaucoup de pierre à chaud, qui sont de différentes figures et grosseurs étant détachées les une des autres. Au milieu de cette Anse, il y a un petit rocher qui forme un petit promoteur et ce dans la partie nord.

19me. jour. — J'ai exploré le terrain qui est à l'ouest de la dite Baie, au nord de la Rivière Vasigamenke et au sud du premier ruisseau, qui se trouve au nord d'elle, jusqu'à la profondeur d'environ quatre milles, au bout desquels j'ai traversé vers le sud, jusqu'à la dite rivière, Vasigamenke, distance d'environ 2 milles, et ensuite j'ai descendu, à la dite Baie en suivant les vallons de cette dite rivière.

Cette partie de territoire est coupée sur la rive de la dite Baie par un moyen rocher, jusqu'à la distance d'un quart de mille, ensuite il disparaît ; le bon terrain commence et est horizontal environ deux tiers de milles, après cela sa surface est inégale, elle est souvent interrompue par des moyennés cavités dans la plus part desquelles passent des petits courants qui coulent à la dite Rivière Vasigamenke et d'autre fois par des valons d'une assez grande étendue, dans lesquels on y trouve un lit de terre végétale, de sept à huit pouces d'épais qui repose sur un front de glaise marqué No. 11 ; les espèces de bois sont du liard, frêne, cèdre, épinette, mérisier, aunaie, &c. sur les bords des élévations, il y a une assez grande quantité de bon pin rouge d'une cru moyenne, le sol est presque tout du sable blanc et rouge, et lorsque les sommets de ces élévations est peu étendu, vers le centre on y trouve des cèdres d'une cru considérable et en abondance, avec lesquels il y a des aunaies, le sol est un lit de terre noir qui repose sur un fond de glaise, marqué No. 10. La Rivière Vasigamenke à environ quatre chaines et demi de large dans sa moyenne largeur, elle est très rapide et coule sur un lit de glaise, le volume d'eau qu'elle entraîne, est assez considérable et depuis son embouchure à monter jusqu'à environ trois milles dans la dite rivière, elle a changé son cours en plusieurs places, il y a des grèves à présent dans le milieu d'elle, qui ont six à neuf chaines de large et soutient sur un quart de mille de longueur.

20me. jour. — J'ai exploré le terrain entre la Rivière Vasigamenke et celle de Wissouscoué ; partant de la dite baie, en suivant la dite rivière Vasigamenke, il y a un joli vallon qui s'étend environ un mille en profondeur, les espèces de bois sont du liard, frêne, cèdre, épinette, sapin, aunaie, &c. et le sol est un lit de terre végétale de 11 à 12 pouces d'épais, qui repose sur un fond de glaise marqué No. 12, ensuite le terrain relevé graduellement, les espèces de bois sont de l'épinette, cèdre, sapin, aunaie, &c. d'une cru très petite, le sol est un lit de terre végétale de 9 à 10 pouces d'épais qui repose sur un sol de glaise marqué No. 13 ; à 2 milles et demi une forte côte à monter sur laquelle il y a du pin rouge et jaune d'une cru assez considérable, et le terrain est sablonneux, le front est une terre grise marqué No. 14 ; à 3 milles et demi, commence un très beau vallon, les espèces de bois sont du liard, cèdre, sapin, épinette, aunaie, &c. le sol est un lit de terre noir, de trois à quatre pouces d'épais, qui repose sur un de grasse ; à 5 milles commence l'épinette d'une cru très petite, mêlée d'aunaies, le sol est un lit de terre noire qui repose sur un front de blanche sablonneuse.

A 6 milles, c'est du bois mêlé, et le terrain est très bon, ici j'ai traversé vers le sud-est, pour approcher la Rivière Wissouscoué, environ deux milles, et ensuite j'ai descendu à la dite baie en suivant cette dernière rivière, à une certaine distance, et j'ai trouvé à peu près la même variété dans le bois et dans le sol que j'ai trouvé en montant vers l'autre.

Dans la nuit du 20 au vingt-et-un, étant campé à l'embouchure de la Rivière Vasigamenke, j'ai érigé un méridien par l'étoile polaire et la grande ourse, et j'ai trouvé la variation de 17 degrés et un quart ouest, suivant l'aiguille aimantée de ma boussole que j'ai observé, en juillet dernier, au méridien de Québec, et qui avait alors 13 degrés et 30 minute de variation ouest, la différence de variation d'ici à Québec, est trois degrés et trois quarts.

21me. jour. — J'ai traversé du côté sud de la dite baie, et dans cette partie il y a une petite île de 6 chaines de longueur sur 3 de largeur, et qui n'est rien autre chose qu'un petit rocher sur lequel il y a des cyprès et qui est éloignée de

Appendice
(V.)

14 Janvr.

La terre ferme environ un demi mille, qui assèche à mer basse. Dans la partie la plus méridionale, de la dite baie, se perd la Rivière Wissusecoué qui est à peu près de même largeur que celle de Vasigamenke, laquelle vient du sud-ouest et que j'ai remonté par le côté sud, jusqu'à environ quatre ou cinq mille, ces écores sont un peu élevés, mais une fois cette côte montée, le terrain est généralement plat, et est en plus grande partie un lit de terre végétale qui repose sur un front de glaise, les espèces de bois dominantes sont du liard, bouleau, cèdre, épinette, sapin et aulnaies; dans cette dite rivière à environ deux milles de son embouchure, il y a une belle place de moulin.

Revenu à la dite baie, j'ai constaté sa largeur, que j'ai trouvée être de deux milles et demi, et sur une ligne courante nord magnétique.

22^{me} jour—J'ai exploré le terrain au sud de la dite baie, il y a environ un demi mille de terrain horizontal, qui est un lit de végétale de 8 à neuf pouces d'épais, qui repose sur un front que je crois être de la marne, et que j'ai marqué No. 27, les espèces de bois dominantes sont du cèdre, liard d'une crue considérable et qui sont mêlés d'aulnaies; ensuite le terrain relève très doucement; à un mille et demi, il y a une forte côte à monter, qui est très escarpée, après cela le terrain est entrecoupé par des fortes cavées, les espèces de bois sont de l'épinette, sapin, pin jaune, bouleau, cèdre, &c. d'une crue assez considérable, le sol est un lit de terre jaune de 4 à 5 pouces d'épais, qui repose sur un front de sable rouge marqué No. 21, ce même terrain continue jusqu'à environ 2 milles et demi; ensuite commence la chaîne des rochers qui sont très hauts et arides, sur lesquels j'ai prolongé mes pas environ 4 ou 5 milles, espérant qu'ils disparaîtraient, mais au contraire ils paraissent toujours s'élever de plus en plus. Revenu à la rive de la dite baie, j'ai descendu jusqu'à la première anse à l'est d'ici, en explorant les petits rochers qui sont sur la dite rive.

23^{me} jour—J'ai monté vers le sud jusqu'à environ trois milles et je n'ai trouvé rien autre chose que des rochers très arides; rendu au bout de ces trois milles, j'ai reconnu que cette chaîne de rocher est la continuation de celle qui borde la rivière Saguenay, et alors j'ai vu, que c'était temps perdu de continuer ainsi mon exploration, de manière que je me suis décidé à retrograder sur mes pas, et je me suis embarqué pour aller plus à l'est ou vers l'entrée de la dite baie; à environ deux milles à l'est d'ici j'ai trouvé un gros ruisseau, qui se perd dans la dite baie, là où j'ai débarqué et j'ai trouvé un petit vallon, de 40 ou 50 acres en superficie, à la suite duquel la même chaîne de rocher recommence, de là j'ai continué à descendre jusqu'à l'anse ouest de la pointe au Fort; là où j'ai campé, et ensuite j'ai été explorer la dite pointe du Fort, sur laquelle j'ai trouvé le terrain qui borde la rive, entrecoupée par des petits rochers qui s'élèvent par degrés et ensuite l'élévation devient plus roide, l'espèce de bois dominante est du bouleau, le sol est du sable blanc et rouge, ce terrain se prolonge environ un demi mille, ensuite est la chaîne de rocher tout le long de la rive méridionale de la dite baie, depuis la dite pointe au Fort à aller à la rivière Vasigamenke, il y a des battures qui assèchent à mer basse qui varient en profondeur depuis 5 à 15 acres, sur lesquelles il y a beaucoup de foin de grève.

24^e jour—J'ai exploré l'anse qui est à l'est de la dite Pointe au Fort qui contient environ 400 acres de terre en superficie qui peut être cultivée et d'un sol bien médiocre; ensuite la chaîne de rocher borde ce terrain; en arrière où vis-à-vis de cette anse il y a une batture qui assèche à mer basse environ deux tiers de mille.

Après cela j'ai remonté la rivière Saguenay en suivant la rive sud jusqu'à environ six milles au-dessus du cap au ouest, là où j'ai trouvé que le terrain promettait quelque fertilité, étant débarqué j'ai été explorer cette partie jusqu'à environ trois milles en profondeur et j'ai trouvé un terrain assez plat et le sol passablement bon quoiqu'entrecoupé sur la rive par des petits rochers, mais ils ne s'étendent pas bien loin, les espèces de bois sont du bouleau, merisier, sapin, cèdre, épinette &c.

25^e jour—J'ai exploré la Pointe basse sur laquelle j'ai trouvé dans la partie est qu'il y avait huit ou neuf acres de profondeur que le terrain était submergé par les grandes-mers, et qu'il était très marécageux; ensuite de ces marais et dans l'autre partie il y a du grand bois qui est de l'épinette rouge et blanche, bouleau, cèdre, aulnes &c. le sol est un lit de terre noir de 8 à 9 pouces d'épais qui repose sur un fond de grasse sablonneuse marqué n^o 45, et en explorant cette dite pointe je me suis rendu au ruisseau l'Hetle, du côté est duquel il y a un petit rocher qui commence à la dite rivière Saguenay et va en profondeur vers le sud environ un demi mille, ensuite il disparaît et commence un vallon dans lequel il y a beaucoup de grand bois, des aulnaies, cèdre, liard &c. le sol est un lit de terre noir de 4 à 5 pouces d'épais qui repose sur un végétal marqué n^o 46; à 2 milles et un quart le terrain commence à relever graduellement; à 2 milles et demi, il devient planche, il y a du pin rouge, bouleau, sapin, épinette, cèdre, le sol est un lit de terre jaune qui repose sur de la grise, toutes deux sablonneux, le même terrain se prolonge ainsi jusqu'à la distance de 5 milles et ensuite il est entrecoupé par des petites cavées.

26 et 27^e jour—J'ai exploré le terrain entre la rivière du Moulin et celle Chicoutimy, en montant une certaine distance de celle du moulin jusqu'à la distance d'environ 10 milles, partant de la rive du Saguenay le terrain relève graduellement environ un demi mille, ensuite il est horizontal à un mille et demi, le sol est un lit de terre végétal de 4 à 5 pouces d'épais qui repose sur un fond de grasse marqué n^o 47, à 4 milles c'est un lit de terre noire qui repose sur un fond de grasse marqué n^o 48, les espèces de bois varient en bouleau, merisier, sapin, épinette, frêne, cèdre, aulnaies &c. il y a aussi quelques pins çà et là, à 5 milles et demi il y a quelques petits rochers çà et là, et ils continuent jusqu'à la distance d'environ 7 milles; ensuite ils disparaissent, le sol, entre ces petits rochers est un lit de terre végétale qui repose sur un fond de grasse sablonneuse marquée n^o 49, à 8 milles et demi le sol est un lit de terre noir de 7 à 8 pouces d'épais qui repose sur un fond de grasse marqué n^o 52, le bois est du sapinage mêlé et qui continue jusqu'à la distance d'environ 10 milles, là où j'ai commencé à traverser vers la rivière Chicoutimy; étant rendu à une certaine distance de cette dite rivière, j'ai descendu vers le Saguenay, et j'ai trouvé le terrain souvent coupé par des fortes cavées, mais il est toujours d'une bonne qualité, c'est généralement un fond de terre grasse sablonneuse, les espèces de bois varient à peu près tel que dans le voisinage de la rivière du Moulin.

28^e jour—J'ai exploré la partie est de la Presqu'île formée par les rivières Saguenay et Chicoutimy jusqu'à la distance d'environ trois milles, et dans cette partie je n'ai pas trouvé une étendue de terre bien propre à être cultivée, excepté le long du Saguenay il y a des petits vallons de très bonne terre

et aussi quelques pièces sur le Chicoutimy, mais l'intérieur n'est rien autre chose que de forts rochers et du sable brun et rouge qui est très pierreux.

29 et 30^e jour—J'ai exploré le terrain au nord du Saguenay et vis-à-vis du dit poste Chicoutimy jusqu'à la profondeur d'environ 14 ou 15 milles.

Cette partie est bordée en front par les caps St. François et St. Charles, lesquels s'étendent à peu près un tiers de mille de la rive du Saguenay, ensuite c'est un sol très sablonneux et d'une qualité médiocre jusqu'à la distance d'environ un mille, après cela le terrain est généralement plat, les espèces de bois sont du tremble, liard, cèdre, frêne, quelques bouleaux, aulnaies &c. avec ces espèces de bois, il y a du pinbina, des serises-à-grappes et une quantité abondante de grand foin, qui mériterait même d'être fauché en quelques endroits, cette même qualité de sol (qui est un lit de terre noire mêlée de végétal de 7 à 8 pouces d'épais qui repose sur un fond de grasse) s'étend jusqu'à la profondeur des dits 15 milles sans interruption excepté que dans le septième mille il se trouve des rochers qui s'étendent environ un demi mille en profondeur; mais qui ne s'élèvent pas plus de dix pieds au-dessus de la surface du terrain qui les avoisinent, étant rendu au bout des dits 15 milles ou environ, j'ai monté sur le tronc d'un arbre, et autant que j'ai pu voir le terrain, m'a paru toujours être le même.

31^e jour—J'ai resté au dit poste Chicoutimy pour faire cuir du pain et réparer mon canot.

1^{er} jour de septembre.—Je suis parti pour aller explorer la rivière des Terres Rompues, qui se perd dans la décharge du lac Saint-Jean à environ 8 milles au-dessus du dit poste Chicoutimy ou à 2 milles au-dessus où la rivière Saguenay perd ce nom et prend celui de décharge, c'est aussi là où les eaux cessent d'avoir flux et reflux.

La décharge n'a pas plus de 15 à 16 chaînes de large, et l'eau se précipite dans ce petit canal avec une rapidité extraordinaire, à cet endroit on prend le portage Ricouchesca, qui a 6 milles de long, lequel se dirige, vers le nord et vers le nord-ouest, le long duquel les espèces de bois sont du sapinage mêlé d'aulnaies, le sol est un lit de terre végétal, qui repose sur un fond de grasse et de glaise.

Revenu au bout du dit portage, où à la rivière des Terres Rompues qui a environ 6 chaînes de large, j'ai campé, et j'ai renvoyé mes hommes chercher le reste du bagage.

2^e jour—J'ai été retenu par une pluie abondante qui a duré toute la journée.

3^e jour.—J'ai commencé à remonter la dite rivière qui se dirige généralement vers le nord, ses écores sont basses et le terrain est très bon de chaque côté. A un mille du 2^e portage, il y a une petite chute d'environ six pieds de hauteur, la rivière se trouve divisée en trois parties par deux petites îles, et un peu plus bas une autre petite, ici la rivière à 12 chaînes de large. A un quart de mille du troisième portage; il y a une chute d'environ 20 pieds de hauteur et au dessus la rivière reprend sa largeur ordinaire.

A un quart de mille au dessus de ce dernier, une petite rivière qui vient du ouest, de 80 mailles de large à 3 milles, le quatrième portage il y a un fort rapide.

A un mille au dessus le cinquième portage, une petite chute de cinq pieds de hauteur. Ensuite la rivière va dans le nord-est, à 4 milles le sixième portage sur une petite île, et de chaque côté d'elle, deux autres, et aussi un peu plus bas il y en a une autre. La rivière continue toujours vers le nord-est.

A un mille et un quart du septième portage, il y a une chute de 12 pieds, la rivière est divisée en deux parties par une petite île, en bas de cette chute du côté est, il y a une forte anse dans laquelle il y a deux petites îles, ici les écores de la rivière commencent à s'élever.

J'ai continué à remonter la dite rivière jusqu'à la distance d'environ deux milles et demi au dessus du septième portage, et là j'ai campé.

4^e jour.—J'ai exploré le pays de chaque côté de la dite rivière en commençant par le côté ouest. Le terrain relève graduellement partant de la dite rivière jusqu'à la distance d'un demi-mille, ensuite il est horizontal, l'espace d'environ quatre milles, au bout desquels il recommence à relever graduellement et continue ainsi jusqu'à 5 milles, là où il devient encore horizontal, les espèces de bois dominants, sont du bouleau et quelques sapins, le sol est très sablonneux et d'une qualité médiocre, ensuite j'ai été exploré le côté est, là où j'ai trouvé beaucoup de pin gris mêlé avec d'autre sapinette, le terrain est très plat; une fois la côte de la rivière montée, le sol est très sablonneux et ne promet pas une grande fertilité, j'ai continué à monter vers l'est environ quatre ou cinq milles sans trouver de changement, ni dans le bois, ni dans le sol.

5^e jour.—J'ai continué à remonter la dite rivière qui commence à se diriger vers le nord, à un demi-mille ses écores commencent à s'abaisser, et le terrain devient très bon de chaque côté, à un mille et demi, une petite île, à 2 milles commencent des forts rapides, à un mille dans ces rapides le 12^e portage, il y a une chute de 20 pieds de hauteur dans laquelle la rivière est divisée en six parties, par cinq petites îles, et elle a environ 18 chaînes de largeur sur le haut de cette dite chute. Ensuite de ce portage la rivière serpente beaucoup, l'espace de trois milles, au bout desquels est le portage Hachoutasgane qui conduit à la Rivière aux Pins gris, lequel à quatre milles de long, là où le sol est très sablonneux, au commencement de ce portage il y a une forte côte à monter, et il se dirige vers le nord-ouest; le triangle formé par le Saguenay, Les Terres Rompues et Sainte-Marguerite, m'a paru être généralement plat, excepté auprès de la Sainte-Marguerite il y a des montagnes de moyenne hauteur.

La Rivière aux Pins gris a une chaîne et demi de largeur et est un rapide par place, ces écores sont bas et le sol est sablonneux de chaque côté, mais très plat.

6^e jour.—J'ai commencé à remonter la Rivière aux Pins gris qui me paraît à peu près parallèle aux Terres Rompues.

A trois milles et-un-quart, une petite baie à gauche, et à quelques chaînes plus haut, une autre à droite. A un mille d'ici, le quatorzième portage de 2 milles de long et se dirige vers le nord-est, et conduit au Lac Kutipiscas-metche, lequel est tout irrégulier, autour duquel on commence à trouver des petits rochers qui sont très bas et ne s'étendent pas loin de la rive. A la suite desquels, c'est un terrain plat et sablonneux.

Rendu au 16e. portage, j'ai campé.

7e. jour.—J'ai passé dans deux petits lacs, et ensuite dans le lac Wisconsin-matche, qui a environ trois-milles de long et varie beaucoup en largeur par des baies, qui sont plus ou moins profondes, dans la première baie du côté sud, il y a une petite Ile. Ce lac varie aussi beaucoup en profondeur suivant sa largeur; du côté nord-est de ce lac, les montagnes commencent à s'élever d'une certaine hauteur, et leurs sommets sont presque de figure ronde; du côté nord-ouest le terrain s'élève aussi, mais d'une manière régulière et graduelle, et il n'y a pas de rocher; de ce lac j'ai fait un petit portage et j'ai rentré dans celui de Mascouiane, qui a un mille et-demi de large sur quatre de long et qui est très profond, abondant en excellent poisson, dans lequel il y a trois petites Iles, du côté est duquel les montagnes s'élèvent d'une hauteur extraordinaire sur lesquels j'ai monté, et j'ai vu les montagnes qui séparent les eaux du Saguenay d'avec le Saint-Laurent, et du côté ouest, autant que l'on peut voir, on n'en découvre aucune.

Le terrain paraît s'élever graduellement, la pointe est de ce lac, est dans latitude de $49^{\circ} 16' 3''$ nord.

De ce lac j'ai fait le portage qui conduit à un autre petit lac, et de ce dernier j'ai fait un portage qui conduit à la Rivière Kawissa, qui a une chaîne et-demi de large, vient de l'est et va au nord, les eaux de laquelle coulent au Lac Saint-Jean, et est très rapide; cette rivière est bordée de chaque côté par des forts rochers.

Ici j'ai commencé à rétrogarder sur mes pas pour m'en retourner à Chicoutimi, et j'ai été campé au Lac Mascouiane.

8e. jour.—J'ai continué à descendre et me suis rendu au dit poste Chicoutimi, le 9e. jour à sept heures et-demi du soir, et mon bagage était très mouillé par les pluies abondantes que j'ai reçues en descendant.

10e. jour.—J'ai passé la journée à Chicoutimi pour faire sécher mon bagage et prendre des informations de Pierre Laloutre, un sauvage qui habite ces terres.

Il m'a dit que la rivière Kawissa allait se prendre dans le Lac Hicitamatche, et que les eaux de ce lac coulaient au Lac Saint-Jean. Que la rivière Sainte-Marguerite était très rapide, mais que le saumon montaient dedans jusqu'à la distance d'environ vingt lieux, et que là, il y avait des chûtes qui l'empêchaient de pénétrer plus loin.

Que les sources de cette rivière étaient dans les chaînes de grosses montagnes et bien près de celles des Terres Rompues.

Que ces montagnes étaient remplies de lacs.

Que du côté sud de la Sainte-Marguerite, il y avait une petite chaîne de montagnes. Durant mon voyage aux Terres Rompues, il est survenu une enflure à la main droite de Joseph Belant, (un de mes deux hommes) qui étant rendu à Chicoutimi, a été obligé d'appliquer des cataplasmes dessus, et elle a aboutie, le 11e. jour au matin; alors M. Wagner que j'ai trouvé au dit poste Chicoutimi, attendant après mon retour des Terres Rompues pour m'accompagner dans le reste de mon expédition, m'a dit qu'il était dangereux pour cet homme de continuer les travaux nécessaires pour le voyage, et que c'était même l'exposer à perdre la main.

11e. jour.—J'ai descendu à l'endroit appelé Les Prairies, accompagné de M. Wagner, et j'ai aidé à Grégoire Donneville, mon autre homme, à nager le canot; étant rendu aux dites Prairies, j'ai constaté l'étendue du terrain de ces prairies que j'ai trouvé être d'environ 15 ou 16 cens acres en superficie, le sol est un lit de terre végétal de 12 à 15 pouces d'épais qui repose sur un fond de glaise, il n'y a que très peu de bois, et on peut faire au moins 20 milles bottes de foin par an, dans ces dites prairies; au nord de ces prairies est la continuation du Cap-François, qui s'étend environ un quart de mille en profondeur, à la suite duquel rocher, la surface du terrain varie beaucoup, elle est tantôt élevée, tantôt basse; sur les élévations, le sol est très sablonneux et sec, et dans les petits vallons, c'est un lit de terre noire qui repose sur de la glaise, et cette même qualité de terrain paraît s'étendre bien loin vers le nord.

Mais vers le nord-est il paraît y avoir des montagnes à peu de distance.

Après cette exploration, nous avons retourné à Chicoutimi.

12e. jour.—Joseph Belant n'était pas en état de pouvoir aider à l'autre homme à nager le canot, et moi, ayant les mains trop enflées d'avoir aidé hier, pour ne pas pouvoir recommencer aujourd'hui.

13e. jour.—Mes mains étaient un peu mieux, alors j'ai continué à aider à mon autre homme, et nous sommes partis pour descendre, en suivant la rive septentrionale du Saguenay, et nous nous sommes rendus dans l'anse Pelletier, à l'endroit appelé le Portage, ici la rivière a 2 milles de large, là nous avons campé.

14e. jour.—Dans la partie ouest de cette anse, il y a deux petites Iles, et dans celle nord-est, tombe la rivière Pelletier, de 80 mailles de large, et j'ai monté par le dit Portage jusqu'au Lac Benoit, qui est d'une assez grande étendue, et qui est très irrégulier et entouré de montagnes, qui néanmoins ne s'élèvent pas bien haute; depuis ce lac à monter vers la Rivière aux Outardes, le terrain paraît très montagneux dans l'intérieur, quoiqu'ici les montagnes sont interrompues par des petits vallons, dans lesquels le sol est cultivable, mais il ne sont pas d'assez grandes étendus pour mériter d'être établis.—Ensuite je me suis rendu au Cap à l'Est, là où j'ai observé la latitude, que j'ai trouvé être de $48^{\circ} 21' 4''$ nord, et j'ai pris aussi diffé-

rents angles sur plusieurs pointes afin d'avoir les relevées de la dite rivière Saguenay aussi correctement que possible, de là je me suis rendu à la rivière appelée Belle Fleur, qui se perd dans le Saguenay du côté sud, et qui à une chaîne de largeur; à son embouchure il y a un petit vallon de très bonne terre cultivable, qui contient environ 15 ou 16 acres en superficie, à la suite duquel sont des rochers qui s'élèvent par degrés.

Ici j'ai campé.

15e. jour.—J'ai continué à descendre la rivière Saguenay en suivant la rive méridionale; les rochers le long de cette dite rive s'élèvent de plus en plus et deviennent aussi plus arides; à environ six milles en bas de la rivière Belle Fleur, il y a une belle anse appelée le Mouillage, elle offre une bonne sûreté contre les vents de ouest et sud-ouest. La profondeur de l'eau, varie depuis 25 à 40 brasses, le fond paraît être du sable; au vis-à-vis de cette anse, il y a un petit vallon de terre cultivable, et qui est entre deux gros rochers, de là je me suis rendu à l'anse appelée Trinité, laquelle à un mille et-demi de profondeur sur un de largeur à son entrée, et un quart au fond; elle est bordée du côté ouest par des forts rochers, et par le côté est ils sont moins haut; cette anse est un port très assuré contre tous les vents, et le mouillage est très bon, et varie en profondeur depuis 10 à 30 brasses, au fond de laquelle tombe une petite rivière de 2 chaînes de largeur qui serpente dans un petit vallon, et qui se dirige vers le sud-ouest.

16e. jour.—J'ai descendu à l'anse Saint-Jean, distance d'environ 6 milles, d'une pointe à l'autre; rentré dans cette anse j'ai constaté son étendue qui est de près de 2 milles de largeur, à son entrée; dans la partie ouest, il y a une petite Ile, sa profondeur est de 2 milles, sa largeur au fond est d'un petit peu plus d'un mille; dans la partie ouest du fond, il y a un très bon mouillage et assuré contre le vent de ouest, il y a aussi des battures sur lesquelles on peut faire au moins 6 à 7 milles bottes de foin, et dans celle est tombe une rivière qui varie en largeur, depuis deux à trois chaînes, qui est très rapide et coule sur un lit de pierre, laquelle serpente dans un vallon qui se trouve entre deux rochers, qui a environ un mille et-un-quart de front; ces deux rochers sont à-peu-près parallèle l'un à l'autre, le sol est très bon dans ce vallon, après avoir constaté et examiné la dite anse, j'ai commencé à remonter la dite rivière, les hommes ont été obligés de se mettre à l'eau, pour monter le canot, M. Wagner et moi, nous avons montés par terre sur le bord des écorces de la dite rivière, et nous avons continués aussi jusqu'à la distance d'environ trois milles, et là nous avons campés.

17e. jour.—Voyant que cette rivière était très difficile à monter en canot, vu sa rapidité et que son cours général était sud-ouest, qui m'éloignait beaucoup de l'embouchure de la Malbaie, alors je me suis décidé à rétrogarder sur mes pas et à descendre par le Saguenay.

Dans cette anse et le long de cette petite rivière, il peut y avoir du bon terrain pour une petite colonie d'environ 50 habitants.

Descendu à l'embouchure de cette dite rivière, j'ai continué à descendre le Saguenay, et il s'est élevé un fort vent de ouest qui nous a retenus dans la partie est de la dite anse Saint-Jean, jusqu'à trois heures et-demie après midi, et ensuite nous nous sommes rendus au Petit Saguenay, là où nous avons campé.—Ce port est très sûr contre tous les vents, mais le mouillage est très dangereux par la quantité de grosses pierres qui sont ça et là; dans la partie ouest de cette anse, il y a deux petites Iles, et dans le fond tombe une petite rivière qui coule entre deux forts rochers.

18e. jour.—Nous sommes parties à cinq heures du matin, et nous nous sommes rendus à Tadousac à 2 heures après midi, là où nous avons restés jusqu'au lendemain, pour faire radouer une chaloupe que M. Moreau, le commis du dit poste Tadousac, nous a procuré pour monter jusqu'à la Malbaie.

Latitude de Tadousac, $48^{\circ} 7' 56''$.

1 Nous sommes partis après midi, et nous nous sommes rendus à l'Anse au Foin, là où nous avons campés, pour explorer la Pointe-au-Allouettes et celle aux Bouleaux, qui sont toutes deux de très bon terrain et contiennent à peu près 3 milles acres de terre en superficie.

20e. jour.—Nous sommes partis à neuf heures du matin, et nous nous sommes rendus au Port aux Persils à 10 heures du soir, et là nous avons pris logement.

21e. jour.—Le vent de ouest a soufflé si fort que nous avons été obligés de rester là tout le jour.

22e. jour.—Il continuait avec autant de force, alors nous nous sommes décidés à faire le trajet par terre d'ici à la Malbaie, par un petit sentier qui est très peu pratiqué, qui passe à travers les montagnes, et pour cette fin, nous avons pris chacun notre bagage sur nos épaules et nous avons continués ainsi jusqu'aux premières maisons du Cap à l'Eglise, là nous avons pris une voiture pour nous faire mener à la Malbaie, chez M. Michel Chaperon, là nous avons pris logement.

23e. jour.—Nous avons engagé un chaloupier appelé Thomas Simard, pour nous rendre à Québec, et nous sommes partis immédiatement; à sept heures du soir, nous étions à l'Île au Coudre, là où nous avons mis à terre pour le temps de la marée baissante, et nous sommes repartis à onze heures du soir, et à 2 heures du matin, nous avons été obligés de rentrer dans la petite rivière par un fort vent de ouest, ne nous permettant pas d'aller plus loin.

Lequel nous a retenus à cette place toute la journée.

25e. jour.—Nous sommes repartis à 2 heures du matin, et nous nous sommes rendus à Québec le même jour, à huit heures du soir.

26e. jour.—J'ai fait le rapport de mon département à l'office de M. Lampon, et je me suis rendu chez moi à Sainte-Marie Nouvelle-Beauce.—

MINUTES DES TEMOIGNAGES,

&c. &c. &c.

CHAMBRE D'ASSEMBLEE.

Lundi, 19e janvier 1829.

RESOLU, Que le rapport des commissaires nommés sous l'autorité d'un acte de la sixième année du règne de Sa Majesté, intitulé "Acte pour affecter une certaine somme d'argent y mentionnée, à la visite et examen de l'étendue des terres au nord du fleuve et du golfe St. Laurent, communément appelé Postes du Roi, et des terres adjacentes," soit référé à un comité de cinq membres, pour l'examiner et en faire rapport avec toute la diligence convenable, avec pouvoir d'envoyer quérir, personnes papiers et records.

Ordoané, Que M. Stuart, M. Laterrière, M. Bourdages, M. Neilson, et M. Louis Lagueux composent le dit comité.

Attesté,

J. A. BOUTHILLIER,

Greffr. Assist.

CHAMBRE D'ASSEMBLEE.

CHAMBRE DE COMITE'.

Jeudi, 20 janvier 1829.

En comité sur l'ordre de référence ci-dessus.

PRESENS :—Messrs. Laterrière, Stuart et Bourdages.

M. Stuart appelé au fauteuil.

Lu l'ordre de référence.

Lu le rapport référé, et examiné les journaux, plans et autres documents qui l'accompagnent.

REMARQUES—Sur la Rivière Signy, partant de Taddousac à Chicoutimie et plus haut, par le sous-signé, en 1827.

De Taddousac à la Boule, distance environ 2 lieues—N.B. terres hautes, rocheuses, arides et presque perpendiculaires.

Bon havre pour le N. O. par le côté N. E. au Sagnay, et bon havre pour les chaloupes, par le côté S. O. au lieu nommé l'Ance à la Banque.

A 3 lieues ou environ de distance de Taddousac au lieu appelé la Passe Pierre; bon havre pour les gozelletes pour le N. O. et le S. O. et bonne place de pêche; il y a aussi presque vis-à-vis cette dernière place au S. O. des petites îles.

De la Boule par le N. E. à l'Ance St. Etienne par le S. O. à environ 2 lieues de distance, bon havre pour le N. O. et vis-à-vis cette ance se trouve l'Ance à la Grosse Roche, bon havre pour les bâtimens, &c.

Du même côté se trouve l'Ance, "Ottapermuche," bon havre pour les chaloupes, et à quelque peu de distance l'Ance aux foins, bon havre pour les chaloupes.

Vis-à-vis l'Ance aux Foins par le S. O. se trouve la Rivière Ste. Marguerite à environ 6 lieues de Taddousac, bon havre pour tous les vents, terre cultivable; gagnant le N. E. et le N. O. mais plus avantageusement dans le N. E., navigable en canots environ 20 lieues; il y a trois ou quatre portages de peu de conséquence, et même on y rejoint Port Neuf, situé sur le fleuve St. Laurent.

A peu de distance de la Rivière Ste. Marguerite se trouve l'île St. Louis, à environ 7 lieues de Taddousac, bon havre aux deux extrémités, cette île peut avoir environ une lieue de longueur sur environ un quart de lieue dans sa plus grande largeur, elle n'a d'ailleurs rien de remarquable. A une lieue plus haut de distance par le N. E. se trouve le Petit Sagnay, place de pêche et bon havre; à $\frac{1}{2}$ lieu de distance par le S. O. est l'île Cocard, (Cocquert, so called in honor of the Missionary whose tomb stone, &c. are still in the church of Chicoutimi), ou Isle Berthelemy, bon havre.

Vis-à-vis par le N. O. est la Pointe des Ecrits, dite (Ecurcuis,) débarquement des canots,

Par le Sud-Ouest un peut plus haut, l'Ance St. Jean, qui peut avoir environ une lieue et un quart de profondeur, avec une petite île à l'entrée, place de pêche, les bâtimens y sont à l'abri de tous vents, pénétrant dans l'intérieur environ 16 à 18 milles ont y trouve des érablières de conséquence, et le terrain paraît très propre à la culture et assez planche.

Par le même côté à la distance de deux lieues de l'Ance St. Jean, se trouve

la Trinité au excellent Harbour; les caps à la vue paraissent avoir entre 15 à 1600 pieds de hauteur et plus que perpendiculaires, car ils déplombent au delà de la surface de l'eau.

Un peu plus haut l'Ance du Rude, qui n'a rien de remarquable, si ce n'est un très bon havre. Vis-à-vis la Trinité au S. O. est l'Ance à l'Aviron, bon havre; une lieue plus haut du même côté est la Petite Ance à l'Aviron, à la distance d'environ une lieue de la première, bon havre pour les canots.

A la distance d'une demie lieue plus haut, par le même côté, se trouve la Pointe aux Français, bon havre pour les chaloupes, &c. pour le N. O.

A $\frac{1}{2}$ ou 1 lieue de cette dernière place sur le même côté, se trouve la Descente des Femmes, bon havre pour les bâtimens, &c.

2 lieues de distance ou environ de la Descente des Femmes en remontant du même côté, se trouve le Cap à l'Est, et environ 1 lieue plus haut l'Ance à Peltier, bons havres pour les bâtimens, partie terres cultivables.

1 lieue plus haut du même côté—"La Grande Pointe," bon havre.

A $1\frac{1}{2}$ lieue plus haut, même côté, La Pointe aux Roches, bon havre pour les canots.

A $\frac{1}{2}$ lieue plus haut même côté, sont les Prairies, terres cultivables, abondantes en foin, et bon havre à haute mer.

A $\frac{1}{2}$ lieue plus haut, même côté, la Rivière à la Loutré, et $\frac{1}{2}$ lieu plus haut, la Rivière _____, (le nom de cette rivière a été oublié, ou n'a pas été donné) les bâtimens peuvent y entrer environ 20 à 25 arpents.

A $\frac{1}{2}$ lieue plus haut, la Rivière aux Cariboux, bon havre.

A $\frac{1}{2}$ lieue plus haut le Cap St. François, bon havre.

A $\frac{1}{2}$ lieue plus haut le Cap St. Joseph, et à peu près à la même distance, sont les rapides, terres bien cultivables et bon havres.

N. B.—"Depuis vis-à-vis la Trinité, remontant jusqu'aux rapides et plus haut, le terrain paraît assez planche."

Descendant des Rapides entre et vis-à-vis les deux caps St. Joseph et St. François, se trouve par le côté du Sud-Ouest la Rivière Chicoutimi, au près de laquelle sont construits sur une pointe du côté Nord-Ouest de la dite Rivière, une grande maison, demeure du commis de ce poste, un magasin, boulangerie, grange, étables et autres bâtimens, et plus haut à environ sept à huit arpents de long de la dite Rivière, une chapelle et un cimetière. Cette rivière monte dans une direction presque nord-ouest jusqu'au Lac St. Jean; il y a onze portages, dont le plus long a environ $\frac{1}{2}$ ou 1 lieue; partant directement de la maison du Poste de Chicoutimi, la perspective à Chicoutimi, est assez agréable, les terres depuis Chicoutimi; jusqu'au Lac St. Jean et au delà sont cultivables, et même au delà d'après l'information des commis des postes et d'autres anciens voyageurs.

Le Lac St. Jean a environ douze ou treize lieues de longueur et quelque chose près aussi large, il y a dans ce lac quelques petites îles, et partant de l'embouchure de cette rivière, descendant le Sagnay, à la distance d'un quart de lieue est la Rivière aux Rats-musqués, bon havre pour bâtimens, &c. $\frac{1}{2}$ lieue plus bas "Rivière du Moulin" bon havre, terre cultivable jusqu'à la Baie des Ha, Ha, tant en front qu'en profondeur; à une grande distance et de cette baie, à quatre lieues plus bas gagnant le Cap à l'Est il y a de bons havres, la pointe de ce Cap court dans une direction presque Nord-Est. La Baie des Ha, Ha, peut avoir environ 4 à 5 lieues de profondeur depuis son embouchure et une lieue de largeur; il y a dans le fond une petite rivière, terre cultivable, courant Nord-Ouest jusqu'au Lac St. Jean, distance d'environ vingt-cinq à trente lieues, bonne place de pêche et bon havre; dessus le somét des côtes on voit un terrain planche presque à perdre de vue, et bien boisé, et de bonne terre forte.

A 4 lieues plus bas sont les Tableaux, ainsi nommés parce que les pierres sont unies et représentent de loin des Tableaux, et delà à l'Ance St. Jean, il y a plusieurs petits havres, (qu'un, mais très bon,) mais rien de remarquable d'ailleurs.

Depuis l'Ance St. Jean à Taddousac, cette partie a été donné ci-dessus en montant le Sagnay.

Le sousigné a pénétré dans l'intérieur des terres des deux côtés du Sagnay, une fois au dessus de la Rivière St. Marguerite jusqu'à Chicoutimi, à la distance d'environ vingt à vingt cinq milles, et son opinion est qu'il y a de quoi y faire des établissemens considérables, avec peu de troubles, la terre y étant généralement bonne et susceptible à devenir fertile. Le tout humblement soumis aux lecteurs de ces remarques par celui qui a l'honneur de se souscrire.

Le très humble et très

obéissant serviteur

CHS. H. GAUVREAU, N. P.

Malbaie, 23 Septembre 1828.

(No. 2.)

M. Edward Bowen, étudiant en droit, a comparu, et a dit :—

J'étais du nombre de ceux qui ont fait l'exploration du Saguenay et du Lac Saint-Jean, l'été dernier, et je suis revenu par la Baie Saint-Paul, en compagnie avec M. Baddeley, du corps du génie. Les renseignements que nous avons pu nous procurer, rapport à l'état du pays et à la qualité du sol entre les anciens établissemens sur le fleuve Saint-Laurent et Chicoutimi, sont nécessairement en très petit nombre; ils se trouvent consignés dans le rapport

rapport de M. Baddeley, aux trois branches de la législature, et qui accompagne le rapport des commissaires au sujet de l'exploration du Saguenay. Le comité pourrait se procurer les meilleurs renseignements sur ce sujet par l'entremise de quelques individus résidens dans les environs de la Baie Saint-Paul, et qui ont été dans l'habitude d'accompagner les sauvages pour leur aider à transporter les vivres qui leur sont nécessaires pendant la saison de la chasse, et qui retournent à la fin de la chasse pour en apporter les pelleteries. Pour ne pas faire de méprises, le mieux serait de se procurer leurs noms de Vincent Tremblay; c'est un vieillard respectable qui demeure au village Saint-Urbain, derrière la Baie Saint-Paul. Je recommanderais d'une manière particulière que l'on interroge l'individu qui nous servit de guide depuis Saint-Urbain jusqu'à la Passe des Monts; c'est M. Vincent Tremblay qui nous le fit avoir. Il a été employé par les sauvages pour porter leurs paquets pendant quelques années, et il a traversé le pays dans les profondeurs de la Baie Saint-Paul, en tous sens, jusqu'aux sources de la rivière Jacques Cartier.

(No. 3.)

M. Thomas McNicol, de Québec, a été entendu comme suit :

Je suis natif de la Malbaie, et ma famille y a toujours fait sa résidence. Je demeure à Québec depuis quelques temps, mais mon domicile fixe est à la Malbaie.

Avez-vous en aucun temps visité le pays entre la Malbaie et le Saguenay ?

Je ne me suis jamais rendu jusqu'au Saguenay; j'ai été au Petit Saguenay, éloigné du Saguenay d'environ huit milles; je ne puis parler avec certitude de l'exactitude de la distance.

A quelle époque avez-vous été dans cet endroit; combien de jours y avez-vous employé; quel est le nombre d'hommes qui vous accompagnaient; combien de milles avez-vous fait par jour; qu'elle est la distance entière que vous-avez parcourue; quels sont les ruisseaux et les montagnes que vous-avez rencontrés; quelle est l'étendue de pays plane que vous-avez parcourue; comment ce pays est-il boisé, est-il susceptible de culture ou non; y a-t-il quelques habitans de la Malbaie, qui désireraient s'y établir, et qu'elle était la hauteur de la neige comparée à celle qu'il y avait dans la Malbaie ?

Dans le mois de décembre dernier, mon absence fut de d'environ jours; je pris mes vivres, consistant en lard et farine, de la Malbaie. Le parti était composé de dix sauvages, M. Brownson et moi, nous fîmes trois à quatre milles par jour en allant, mais en revenant nous fîmes cinq à six milles. La distance peut-être d'environ huit à neuf lieues. Il y a beaucoup de montagnes dans cette étendue de pays, mais en général c'est un pays uni. La hauteur des terres dans les profondeurs de la Malbaie, en partant de la Rivière Malbaie, est à environ à quatre lieues du fleuve Saint-Laurent. Arrivé à cet endroit vous trouvez une vallée en pente douce, coupé par plusieurs ruisseaux et où il y a plusieurs lacs; cette vallée a depuis une lieue jusqu'à un quart de lieue de largeur, et elle s'étend jusqu'au Saguenay. Le bois est de peu de hauteur; il y en a beaucoup de brûlés, et le bois à l'apparence d'être du jeune bois; il s'y trouve quelque peu de bouleau, mais la grande partie consiste en pins, pruche et épinette. Comme c'était en hiver, il me serait difficile de dire avec tant soi peu de certitude, si le sol est susceptible de culture ou non. Si les terres sur le Saguenay étaient concédées, je crois que l'on trouverait, tant à la Malbaie que dans la Côte du Nord, des personnes qui s'y établiraient. La neige était de la même hauteur qu'à la Malbaie, et le climat m'a paru être le même.

Pourriez-vous nommer quelques cultivateurs ou chasseurs de la Côte du Nord qui seraient en état de donner au comité quelques renseignements, relativement à l'étendue du pays qui se trouve entre le fleuve Saint-Laurent et le Saguenay ?

Thomas Simard, demeurant actuellement à la Malbaie; il a passé la plus grande partie de sa vie aux postes du roi :—

(No. 4.)

Le lieutenant F. H. Baddeley, du corps royal du génie, a comparu, et a été entendu comme suit :

On trouvera dans mon rapport géognostique du pays du Saguenay, tous les renseignements que je puis donner au sujet de l'espèce et de la qualité des terres dans la profondeur de la baie St. Paul; ce qui, à l'exception de quelques unes des portions établies de cette partie du pays, se borne à des oui-dire, et est comme suit :—

Après avoir passé quinze ou vingt milles la chaîne de Montagnes qui se trouve dans la profondeur de la baie St. Paul, on rencontre une étendue du pays propre à la culture, et on employe deux jours à la parcourir. C'est à travers le centre de cette étendue que la rivière de la Mal-Baie serpente. On a reçu les mêmes renseignements rapport à ce pays, en se rendant à Murray Bay.

On obtiendra de M. Vincent Tremblay, de la paroisse St. Antoine, les noms de ceux qui sont les plus capables de donner des renseignements.

(No. 5.)

M. Thomas Simard, a comparu et a été entendu :

Il dit : Je suis natif de la Mal-Baie. J'ai passé les treize dernières années dans les postes du nord. Je connais très-bien la partie du pays qui est entre la Mal Baie et le Saguenay. Pendant les trois ou quatre dernières années, j'y ai été fort souvent. Je fais la chasse à la martre, et je pêche à la truite

dans cet endroit. Le terrain y est montagneux dans la distance d'environ trois lieues du fleuve Saint-Laurent; il devient alors plus uni et se trouve entrecoupé par des cavités, principalement jusqu'à la rivière du Petit Saguenay, qui est à la distance de 8 ou 9 lieues de la Mal Baie, et à une lieue du Saguenay. Il s'y trouve une étendue de terrain propre à la culture; le sol est de marne jaune, et pourrait suffire à y établir 100 familles; la terre est bien bonne dans cet endroit; on y trouve du bouleau blanc et noir, de l'ébène, du sapin, et de la pruche, mêlés avec d'autres bois. Je connais plusieurs habitans qui désirent s'établir sur de nouvelles terres; mais ils préféreraient de commencer sur la Baie de St. Jean, et sur la partie ouest du Saguenay au-dessus de Chicoutimi. Le climat y est meilleur que celui de la Mal Baie. Le printemps s'y déclare plus à bonne heure, et les terres y sont supérieures.

(No. 6.)

En réponse aux questions qui m'ont été faites par le comité, je vais soumettre l'extrait d'un journal que j'ai tenu en visitant le Saguenay et ses environs en Juin 1827.

EXTRAIT.

“ La Pointe aux Bouleaux, qui est au sud-ouest du Saguenay forme un carré irrégulier d'environ $\frac{1}{2}$ de lieue de front sur une de profondeur, où s'élevaient en bornage des Montagnes de la plus désolante aridité. La Petite Rivière aux Canards, qui descend des Montagnes voisines, la borne d'un autre côté; l'intérieur de cette pointe est marécageux, et les arbres dont elle est couverte, exceptés sur ses bords, que de petites épinettes grises. De la Seigneurie de Mount Murray, à cette Pointe, c'est-à-dire depuis la rivière Noire, les bords du fleuve, et aussi loin que l'on peut découvrir dans l'intérieur, ne présentent que des Montagnes de pierre, sans aucune végétation. De là, j'ai passé Tadousac, et me suis rendu jusqu'aux Bergeronnes.—J'ai monté une des rivières qui porte ce nom jusqu'à une lieue et demi, et n'y ai vu de remarquable que des prairies dont le produit en tout pourroit être de 7 à 8 milles bottes de foin. Les terres cultivables au bord de cette rivière peuvent avoir depuis 4 à 10 arpens de profondeur et sont bornées par des montagnes de roches, qui ne portent pour tout ornement que de la mousse et quelques touffes de *genévriers*; j'ai visité le rivage et l'intérieur depuis la pointe des grandes Bergeronnes jusqu'à celle de *Bon Désir*, 3 lieues plus bas. La rive tout au plus de 100 pieds d'élévation, en raison d'une douce déclivité, présente une riche bordure végétale, et peut induire l'observateur superficiel à se former une opinion favorable de tout le terrain qui se trouve entre les montagnes qui la borne à la distance de 4 à 5 lieues par derrière; mais j'ai franchi cette bordure, et après avoir pénétré à dix ou douze arpents dans l'intérieur, je me suis trouvé dans une savanne immense, couverte d'une mousse de 3 pieds d'épaisseur et bordée à ses extrémités de petites épinettes noires.—Les informations que l'on m'a donné sur le reste de cette côte jusqu'à Port Neuf correspond avec cette description. Des *Bergeronnes*, je suis revenu à Tadousac, qui est le dépôt principal des Postes du Nord. Il n'y a rien là qui puisse fixer l'œil de l'agriculteur. J'ai fait les remarques suivantes en montant le Saguenay jusqu'à Chicoutimi. Le Saguenay monte généralement ouest; quelques unes de ses sinuosités nord-ouest. Le premier point remarquable en y entrant est une grosse montagne, nommée La Boule, en raison de sa forme, dont la table gigantesque rétrécit en cet endroit la rivière. Les bords de 15 à 18 cents pieds de haut, également escarpés, et de granit primitif, enclavent ce frère jumeau du Saint-Laurent, qui dans sa largeur moyenne n'a point moins d'une lieue. La mer y monte 18 pieds perpendiculaire, les plus basses eaux ne laissent jamais le pied des ramparts de l'architecte éternel, où le fond est à une si grande profondeur, qu'il n'y a point de mouillage. Au sud-ouest est l'Anse Saint-Etienne, qui m'a paru ouvrir d'une demi-lieue d'une pointe à l'autre. Elle est à 3 lieues de Tadousac. Le ferris des postes y fait tendre une pêche à saumon. Les environs de cette anse pourraient faire subsister une vingtaine de familles. Le soleil brille sur la surface des rochers qui l'environnent. Même rivage escarpé jusqu'à trois lieues plus haut, où au nord-est nous sommes entrés dans une petite baie, formée par la rivière Sainte-Marguerite. Cette rivière est profondément enclavée dans des montagnes, elle a deux arpens de large à son embouchure, elle est navigable pour des canots d'écorce à une grande distance, mais j'ai été informé que la terre sur ses bords, n'est point cultivable, étant trop resserrée par des montagnes escarpées. Il n'y a qu'un petit espace au nord de la baie de terre cultivable, dont une partie qui s'écroule sur le rivage, laisse de longues battures de sable où les pêcheurs tendent leurs filets à saumon. Au sud-ouest du Saguenay, à $\frac{1}{2}$ lieue plus haut que la rivière Sainte-Marguerite, est l'Île Saint-Louis, qui est une grosse montagne oblongue, sur laquelle il n'y a de végétation que quelques arbrissant dans les crevasses, et un peu de mousse. Elle peut avoir une demi-lieue de long. On m'a dit que c'était le 1er mouillage de Tadousac, à une demi-lieue au nord-est se trouve un autre rocher de forme ovale, environné des eaux du Saguenay, sur lequel il n'y a point un seul arbre. A trois lieues de la rivière Sainte-Marguerite et conséquemment à neuf de Tadousac est la Baie Saint-Jean au sud-ouest, qui peut avoir une lieue et demi d'ouverture, la terre y paraît susceptible de quelque culture; les environs de cette baie produisent du foin. Il peut y avoir de ses bords à la plus grande hauteur des montagnes, sur une pente assez douce, une lieue de terre cultivable en profondeur; le sol consiste en grande partie de marne bleue et grise. A une lieue plus haut se trouve un cap appelé La Trinité, en raison de trois coupes diminutives. Il a au moins 18 cents pieds de haut. Son sommet débordé de beaucoup sa base. Je doute qu'aucun voyageur soit passé sous son dôme, sans penser combien est petit l'homme comparé à ces masses dont l'équilibre tient à un pouce qui réveille sensiblement l'idée de la divinité! Entre ce cap et un autre au sud, se trouve une jolie petite baie dont sort une rivière d'un arpent de large, où le propriétaire des postes entreprend une autre pêche, mais où les terres n'ont point assez de profondeur pour induire l'agriculteur à se fixer. Du cap de la Trinité à la Baie des Ha! Ha! les rives conservent à peu près la même hauteur et leur aspect de stérilité. Les environs de cette baie qui est à 19 lieues de l'entrée du Saguenay, commencent enfin à s'aplanir et présentent une continuité de terre susceptible de culture et de porter une nombreuse population. Les terres les plus hautes aux environs de cette baie n'excèdent point 150 pieds au dessus de la rivière, et la déclivité en est presque insensible. Le sol est de marne bleue et grise. Les bois sont l'ébène, le merisier, le frêne, l'orme, le peuplier, le pin, l'épinette, &c. Les contours de cette baie forment un bassin de deux lieues de large sur trois de profondeur au moins; et sont bordés de prairies considérables. La rivière qui s'y décharge peut porter

Appendice
(V.)

14 Janvr.

porter des canots à une assez grande distance. Les environs sont tous de terre cultivable, particulièrement dans la direction de Chicoutimi, qui n'est séparé de cette baie que par une langue de terre de 5 lieues de large. Le Saguenay en cette endroit fait un détour au nord, et reprend son cours ordinaire de la pointe, qui ferme au ouest, l'entrée de la Baie des Ha! Ha! Le voyageur étranger à ce détour, s'engage dans la baie lorsqu'il croit monter la rivière, et c'est de l'expression de surprise, ha! ha! qu'excite ce changement de route qu'origine le nom de la Baie des Ha! Ha! Aussitôt la pointe doublée, vous n'êtes plus qu'à sept lieues de Chicoutimi, où est le second poste qu'entretenait le fermier de la couronne, et où le révérend Père Jésuite Labrosse, à bâti une chapelle en 1727, que l'on voit encore en bon ordre. La rive nord du Saguenay n'offre depuis le Cap à l'Est, la longueur de 4 lieues, qu'un pays stérile et rocheux. Les terres deviennent planche et sont de la meilleure qualité depuis la Pointe aux Roches, trois lieues plus bas que Chicoutimi, jusqu'à la pointe des Terres Rompues, environ 2 lieues au-dessus. Les terres par derrière sont planches jusqu'à dix lieues. Depuis la pointe des Terres Rompues jusqu'au Lac Saint-Jean, distance de 25 lieues, on m'a dit que la terre était planche et de la meilleure qualité. Depuis la Pointe aux Roches jusqu'à la Pointe des Terres Rompues, cette rive de cinq lieues, est bordée de prairies considérables où les habitans de Chicoutimi font leurs foins. La Rivière aux Caribous s'y décharge, elle est à une lieue plus bas que Chicoutimi. Elle est d'un arpent de large et garde cette largeur un quart de lieue en montant dans les terres. Aussi la Rivière à Valin, $\frac{1}{2}$ lieue au dessous de celle aux Caribous. Il y a des chûtes à $\frac{1}{2}$ lieue de son embouchure qui faciliteraient l'érection de moulins, (à propos de moulins), tous les bois d'origine antique sur cette rive, ont passé au feu il y a 50 ans; la nouvelle colonie végétale y est encore dans son adolescence. Il y a encore dans cet espace de 5 lieues, la Rivière aux Outardes, dont les bords sont en prairies jusqu'à la profondeur de 15 arpens. Tout le côté sud, depuis Chicoutimi, en descendant 5 lieues jusqu'à la Grande Pointe Brûlée, présente de bonne terre blanche. Il y a dans cet espace trois belles petites rivières—la Rivière de l'Islette, la Rivière au Moulin, la Rivière aux Rats Musqués, enfin la Rivière de Chicoutimi, qui est d'un arpent de large, et par laquelle montent les canots du poste jusqu'au Lac Saint-Jean. Je ne sais pas quel était le nombre des sauvages au temps des Jésuites, mais à présent c'est bien peu de chose. Il n'y a plus que dix familles sur ce qui est considéré le territoire de Chicoutimi; le même nombre au Lac Saint-Jean, et environ 15 au Lac Chamachouin, qui est à 50 lieues du Lac Saint-Jean, au ouest, qui est le dernier poste dépendant du Saguenay. Cette mission des Jésuites ne pouvait avoir d'autre but que la propagation de la foi chrétienne chez les sauvages; car s'il eût été dans le plan du gouvernement Français d'y former une colonie, on y verrait d'autre vestiges qu'une mesure et une vieille chapelle entretenue depuis par les sauvages. Pour parvenir au poste de Chicoutimi, il y a sept lieues d'une navigation difficile, son seul avantage est d'être au confluent de deux rivières. La Baie des Ha! Ha! m'a paru l'arrivée naturelle pour les vaisseaux d'outre-mer, et je crois que par la suite, elle deviendra l'entrepôt de cette rivière. Le Saguenay gèle l'hiver depuis Chicoutimi jusqu'aux Iles Saint-Louis. Le vent le plus fréquent dans cette région est le nord-ouest; il y souffle quelquefois d'une manière épouvantable, c'est le vent convenable pour descendre. L'on monte de nord-est. Les autres vents y sont, dit-on, insensibles. La terre devient cultivable à Chicoutimi au commencement de mai. Les gèles d'automne s'y font sentir plus à bonne heure qu'à Québec. J'y ait mangé des fraises le 17 juin. J'ai trouvé la végétation plus avancé qu'aux Ehoulemens. Les légumes de toutes espèces y prospèrent. La plus grande difficulté à la colonisation de ces lieux là, est suivant moi, l'éloignement de la chaîne sociale; car aussitôt la navigation fermée, plus de communication avec le reste du monde. La distance de La Malbaie à Chicoutimi est compté par 4 jours de marche en hiver, et cela équivaut à 25 à 30 lieues. La colonisation immédiate du Saguenay ne peut être que l'entreprise d'un gouvernement ou d'individus à fortunes colossales; sans des avances considérables, les individus tels que le sont ceux qui commencent de nouveaux établissemens, ne pourraient point s'y greffer, malgré les avantages que présentent son territoire.

J'ai l'honneur d'être, Monsieur,

Votre très humble et obéissant serviteur

M. DE SALES LATERRIERE.

Andrew Stuart, écuyer. }
&c. &c. &c. }

(No. 7.)

Nicolas Vincent, (Tsawahouhi) grand chef des sauvages chrétiens, établis à Lorette, ayant comparu, il a dit :—

Les terres de chasse de mes ancêtres sont aux fourches de la Rivière Sainte-Anne.

J'ai remonté les branches sud-ouest des Rivières Sainte-Anne et de Jacques Cartier jusqu'à leurs sources.

Je n'ai pas monté jusqu'à la source de la rivière de Batiscan; j'ai passé depuis la branche S. O. de Sainte-Anne, jusqu'à la branche N. E. de Batiscan, et suis revenu par le fleuve Saint-Laurent.

Je n'ai jamais été à la Rivière Saint-Maurice, ni à celle de Champlain.

Je connais une partie de la Rivière Montmorency.

Je n'ai jamais remonté les fourches de la rivière, au delà de la distance de dix lieues.

J'ai fait la chasse au delà du Lac des Neiges, qui est une des sources de Montmorency.

J'ai remonté la Rivière Malbaie environ dix lieues, vis-à-vis le Lac des Neiges.

La source de la Rivière Jacques Cartier est à dix lieues de distance de la Roche Platte, et delà à Valcartier il y a environ deux lieues.

Des sources de la rivière Sainte-Anne au fleuve Saint-Laurent, il doit y avoir au moins 15 lieues; pendant près de huit lieues, à partir du fleuve

Saint-Laurent, elle cours vers le N. E. et S. O., vis-à-vis la grande anse dans Deschambault, elle n'est pas éloignée plus de quatre lieues du fleuve Saint-Laurent; dans cet endroit pendant près de trois lieues, elle court entre le N. et le S. O. jusqu'aux fourches; de là depuis 2 $\frac{1}{2}$ lieues à 3 lieues plus au S. O. jusqu'aux fourches, ensuite presque tout-à-fait au nord, au premier lac pendant 2 lieues, delà à travers les lacs, jusqu'à sa source au N. O. pendant près de 4 lieues.

Dans les derniers lacs que j'ai vus, il entre une rivière qui court entre le N. et le N. O.; je n'ai jamais été jusqu'à la source de cette rivière, mais j'en ai fait le tour.

Il y a plusieurs chûtes dans la Rivière Saint-Jean, mais je n'en puis dire le nombre.

Le pays est bien montagneux.

Je crois qu'à partir de la Rivière Sainte-Anne, on trouve de la terre propre à la culture, pendant une espace d'environ dix lieues.

Le bois n'y est pas bien bon, à l'exception de quelques pointes de long de la rivière, où il se trouve quelques ormes.

Je crois que la terre serait propre à la culture, (non pas en ligne droite, mais en suivant les sinuosités de la rivière) pour environ 7 ou 8 lieues.

Au dessus de la Roche Platte, sur la Rivière Jacques Cartier, jusqu'aux fourches de cette rivière, distance de 6 ou 7 lieues, il y a plusieurs rapides, que l'on ne peut pas descendre en canot; il y a deux chûtes d'environ 30 ou 40 pieds de hauteur; au dessus des fourches il y a plusieurs chûtes, je ne puis pas en dire le nombre, parce que l'on ne peut pas descendre la rivière dans cet endroit.

Au dessus des Fourches, le bois consiste en petite épinette, bouleau et aunages; il n'y a même point de pins; de ce côté-ci de la Fourche, le long de la Rivière Jacques Cartier, il y a depuis dix à douze arpens de terre bien boisée. Au delà de cette étendue, ce sont les montagnes rocheuses.

Je ne puis pas dire au juste la distance que j'ai parcourue en descendant la Rivière Batiscan; il doit y avoir au moins vingt lieues, mais mettez quinze lieues.

Les bonnes terres sur la Rivière Batiscan, s'étendent plus loin que celles sur les autres rivières; elles doivent s'étendre jusqu'à 10 lieues au moins, en droite ligne, du fleuve Saint-Laurent. Quand j'ai dit que les bonnes terres de la Rivière Sainte-Anne s'étendaient jusqu'à 10 lieues, j'ai voulu dire 10 lieues suivant le cours de la rivière.

J'ai chassé un peu au sud du fleuve Saint-Laurent. J'ai été à la source de la Rivière Bécancour ou Lac Noir. J'ai aussi fait le tour de l'extrémité de la Rivière Duchêne. J'ai traversé trois des branches qui entrent dans cette rivière et qui en forment la branche principale.

Dans le printemps que j'ai été à Londres, (en 1824) que j'ai laissé notre village, et que je me suis rendu à la Pointe Lévi, et de là j'ai été faire ma chasse au Lac Noir. J'ai passé par Saint-Giles, vers le milieu de la paroisse; j'ai traversé la première petite rivière qui se décharge dans la Rivière Bécancour; elle a dans cet endroit cinq ou six pieds de large, ensuite elle s'élargit de la grandeur de cet appartement, et ensuite de la grandeur de cette maison. Je suivis cette petite rivière jusqu'aux Fourches, distance d'environ 2 lieues; le temps me parut long, car la rivière fait un grand nombre de détours. Je remontai ici la branche sud-ouest, pendant 2 $\frac{1}{2}$ lieues vers ses sources, formées par de petits ruisseaux, et non par un lac. Ici je fis une traverse d'environ une lieue, et j'arrivai à une autre branche de la Rivière Bécancour; je remontai cette branche, environ 2 ou 3 lieues; la distance de cette branche qui est la plus grande source du Lac Noir, est d'environ 4 lieues.

J'ai aussi fait la chasse à Chateauguay, j'ai chassé aussi derrière les établissemens de Kamouraska, et dans cette direction.

Il me faudrait plusieurs jours pour préparer des plans de cette rivière.

Lui ayant été demandé, qu'elle compensation raisonnable il exigeait pour ses peines; il a répondu qu'il n'en pouvait rien dire, qu'il s'en rapportait au comité.

Les terres de chasse des ancêtres de Paul, sont au Lac Saint-Vincent; celles d'André Romain, sur la rivière Sainte-Anne; celles des ancêtres de Kaska sont aussi sur cette rivière; mais plus bas que Paul; les ancêtres de Louis, à Tautary entre les Rivières Jacques Cartier et Sainte-Anne; celles de Sewée au Lac Caché, entre la Rivière Montmorency et celle de Jacques Cartier; les ancêtres de Zacharie au Lac Saint-Joseph. Il y avait des familles qui occupaient les pays de chasse, entre les Rivières Sainte-Anne et Saint-Maurice, mais elle sont maintenant toutes éteintes.

CHAMBRE D'ASSEMBLÉE

BUREAU DU COMITÉ

Jeudi, 12 février 1829.

En comité sur le rapport des Commissaires Explorateurs du territoire du Saguenay.

PRESENS.—MM. Stuart, Laterrière et Neilson.

M. Stuart appelé au fauteuil.

Votre comité a examiné le rapport d'un acte de la sixième année de sa présente Majesté, chap. 36 intitulé "acte pour affecter une certaine somme d'argent y mentionnée à la visite et examen de l'étendue de terre au nord du fleuve et du golfe Saint-Laurent, communément appelées Postes du Roi, et des terres adjacentes."—Et aussi les journaux, plans et autres documents

documents qui accompagnent le dit rapport, et les renseignemens qu'il a reçu de diverses personnes qu'il a fait venir devant lui, et dont il a l'honneur de apporter les témoignages, à la suite de ce rapport.

Il paraît d'après tous les renseignemens que votre comité a pu se procurer, que la Rivière Saguenay est navigable, pour les vaisseaux de toutes grandeurs, dans la distance d'environ vingt-deux à trente-trois lieues, jusqu'à la Baie Ha Ha, qui est un havre excellent; et depuis cet endroit, à la distance de cinq à six lieues, jusqu'à Chicoutimi; cette rivière, dans les eaux hautes, est navigable pour de gros vaisseaux. Entre le havre de Tadousac et celui de Chicoutimi on rencontre plusieurs havres.

La distance, entre Chicoutimi et le lac Saint-Jean, est par le mesurage de soixante-sept milles—68 chaînes.

Les eaux du côté ouest de la péninsule située entre le lac Tsinogomi et la grande décharge du lac Saint-Jean, sont généralement navigables pour les bateaux et elles pourraient toutes le devenir.

Ci-suivent les places du portage, et leurs distance sur la route :

Noms des portages.	Longueur des portages.		Communication par eau.	
	Chaînes.	Mailles.	Chaînes.	Mailles.
Chicoutimi - - - - -	160	00	92	00
Maie - - - - -	10	00	62	00
Attim - - - - -	9	00	33	00
Washrou - - - - -	7	00	619	00
Melon - - - - -	13	00	99	00
Ministake - - - - -	33	00	148	00
Assini - - - - -	20	00	1863	00
Wèque - - - - -	96	00	476	00
Pashicoulash - - - - -	25	40	459	00
Melowzélée - - - - -	18	00		
Depuis le portage de La Belle Rivière jusqu'à l'entrée } du lac Saint-Jean.			264	00
Depuis Kushpigan jusqu'au poste.			821	60
Distance de portage par terre			391	40
Do par eau			5036	60
			5428	00

67 milles, 68 chaînes, 00 mailles.

La grande décharge du lac Saint-Jean au côté est de la Péninsule est extrêmement rapide et n'est navigable que pour les canots, et encore faut-il, pour éviter le danger, les canotiers les plus experts.

Sur le rivage nord-est du Saguenay, il paraît n'y avoir que bien peu de terre susceptible de culture, excepté aux environs de Chicoutimi.

On ne peut constater l'étendu de terre susceptible de culture qu'il peut y avoir, d'un côté, entre les anciens établissemens en arrière de la Malbaie et de la Baie Saint-Paul, sur le Saint-Laurent; et de l'autre à la Baie Ha Ha, sur le Saguenay et à Tadousac.

Il paraît qu'on trouve un nombres d'acres de terre arable entre Chicoutimi et le territoire immédiatement en arrière, d'un côté; de l'autre dans la baie Ha Ha et sur les rivières qui s'y déchargent.

En allant de Chicoutimi au lac Saint-Jean par le côté ouest, il paraît probable que le pays n'est pas susceptible de culture, à l'ouest de la rivière Chicoutimi et du poste sur le lac Tsinogomi; depuis le lac Tsinogomi jusqu'au lac Saint-Jean il y a, au rapport des trafiquiers et des sauvages, une profonde étendu de terre et un pays fertile.

Votre comité cependant ne peut parler avec certitude de cette partie du pays, vu que l'arpenteur chargé de l'explorer en a été empêché par des circonstances accidentelles.

On rapporte que la Péninsule située entre le lac Tsinogomi et la grande décharge du lac Saint-Jean, contient deux plaines de terre fertile.

Du côté sud-ouest du lac Saint-Jean, les montagnes s'approche de ses rivages, et derrière tout le territoire qui s'étend à l'ouest jusqu'à la rivière Saint-Maurice, est tout-à-fait insusceptible de culture, à l'exception de quelques endroits trop peu considérables pour mériter d'être particularisés.

Presque toute l'étendue de pays au nord-est du lac Saint-Jean contient beaucoup de bonne terre. Ce qui suit est une table des distances dans lesquelles on a monté les rivières de ce côté du lac.

Noms des rivières.	Chaînes.	Mailles.	Milles.	Chaînes.
Rivière Peribonea,	1700	00	21	20
Do au Rat-Musqué;	170	00	2	10
Do David,	769	00	8	49
Do au Rum,	123	00	1	43
Do Mistassini,	720	00	9	00
Do Roucciattem,	40	00	0	40
Do Baddely,	560	00	7	00
Do Pastagoutin,	480	00	6	00
Du Saguenay, (de Chicoutimi,) aux Terres } Rompues,	484	00	6	4

Cette étendue de terre descend probablement, à quelques exceptions près, jusqu'aux Terres à Prairies, situées, près vis-à-vis de Chicoutimi, mais un peu plus bas.

On a pénétré dans cette partie jusqu'à la distance d'environ seize lieues du nord de la rivière des Terres Rompues; et l'on a trouvé que la terre y était d'une qualité supérieure; le Monsieur chargé de cette partie de l'exploration rapporte qu'il est probable que la terre arable s'étend encore bien plus avant.

Ce qui suit est une table de latitude prise par le lieutenant Baddely des ingénieurs royaux, avec un horizon artificiel.

Rivière Lafleur,	46° 53' 40"
Chicoutimi,	48, 24, 9
Portage des Roches,	48, 14, 31
Vers la moitié du lac à Rennagommin,	48, 16, 22
Où les deux partis rencontrèrent le lac Saint-Jean,	48, 37, 22
Rivière Perebora,	48, 42, 37
Rivière Mistassini,	48, 38, 55
Rivière Ouiguatshouru,	48, 24, 35
Rivière Metabitschuan,	48, 23, 12
Tadousac,	48, 6, 39

A Chicoutimi et plus bas dans le Saguenay le climat paraît être bien semblable à celui de Québec, tandis qu'il semblerait que dans les environs du lac Saint-Jean, le climat est aussi doux que celui de Montréal et peut-être davantage.

L'argent mis à la disposition des commissaires ne leur a pas permis d'obtenir toutes les informations qui seraient à désirer d'avoir.

Pour compléter la connaissance que nous avons de ce territoire il faudrait :—

1°.—Explorer dans toutes les directions le pays situé en arrière de La Malbaie et de La Baie Saint-Paul sur le Saint-Laurent, d'un côté; et de l'autre entre La Baie Ha Ha et le Saguenay jusqu'à Tadousac.

2°.—Explorer le pays situé entre Chicoutimi et le Lac Saint-Jean, du côté sud-ouest de Chicoutimi, du Lac Tsinogomi, &c., &c.

3°.—Explorer la vieille route depuis Charlesbourg jusqu'au Saguenay, laquelle aboutit au Saguenay à mi-distance entre Tadousac et la Baie Ha Ha &c., &c.

4°.—Explorer le pays qui doit vraisemblablement offrir la communication la plus directe, par terre, entre Québec et les anciens établissemens des Jésuites sur le Lac Saint-Jean, distance d'environ cent milles.

Cependant il en a été fait assez pour établir qu'il y a dans les environs du Lac Saint-Jean, sur le Saguenay et sur les autres rivières qui s'y déchargent, une vaste étendue de terre cultivable sur laquelle il serait désirable de former des établissemens.

Ce sera à la Chambre de déterminer, dans sa sagesse, s'il est ou non, expédient de voter une somme d'argent additionnelle, pour obtenir ces renseignements.

Ordonné, que le président laisse le fauteuil et fasse rapport.

Le tout néanmoins humblement soumis.

Québec, 11 février 1829.

HOUSE OF ASSEMBLY,

Saturday, 20th December 1828.

RESOLVED, That the Petition from divers Inhabitants of the County of Cornwallis, be referred to a Committee of five Members, to examine the contents thereof, and report thereon with all convenient speed, with power to send for persons, papers and records.

ORDERED, That Mr. Borgia, Mr. Blanchet, Mr. Larue, Mr. Vallières and Mr. Fortin do compose the said Committee.

Attest,

WM. B. LINDSAY,
D. C. House of Assbly.

Wednesday, 7th January 1829.

ORDERED, That the said Committee have leave to report on the fourteenth January instant.

Attest,

WM. B. LINDSAY,
D. C. House of Assbly.

HOUSE OF ASSEMBLY,

COMMITTEE ROOM,

Monday, 22nd December 1828.

In Committee on the preceding order of reference.

PRESENT:—Messrs. Vallières, Blanchet, Fortin, Larue and Borgia.

Mr. Borgia called to the Chair.

Read the order of reference.

Read the Petition referred.

Jean Baptiste Taché, Esquire, of Kamouraska, appeared before the Committee and gave the following information :

There was held at Kamouraska, in the Presbytery, on the 28th December 1826, a general meeting of the Inhabitants of the County, at which meeting it was unanimously resolved, That it was necessary that a College be built in the County. A Committee was afterwards named, and a sub-cription opened to carry the same into effect. The intention was that the College would belong to the whole County, and this intention was clearly manifested. Kamouraska is the most central place of the County, (with respect to the population) to build a College. Mr. Pascal Taché, Seigneur of the place, offered a lot of land large enough for the purpose, his offer was accepted; it is the intention of the Parish that the Clergy of the County have a share in the direction of the said College. The Committee had several sittings, moved several Resolutions, and corresponded by letters with His Lordship Mr. Panet, Catholic Bishop of Quebec; those letters and resolutions were inserted in the Register of the said Committee; I have them in my possession, as Secretary of the same, and I produce them before the Committee, subscribed by the Chairman and myself, and also marked with the initials of his and my name. I produce also the original letters hereinbefore mentioned, marked A. B. C. D. some of which are addressed to Pascal Taché, Esquire, others to Mr. Varin, Rector of the place, and some to Amable Dionne, Esquire, Chairman of the said Committee. I believe that a sum of fifteen to seventeen hundred pounds would be sufficient to erect the said College; the monies actually in hands for its erection consist of the subscription which amounts to six hundred and thirty pounds currency, a copy of which I produce. I have not the least doubt that were the College built, there would be more subscribers. I believe that the College would require an annual aid of two hundred pounds during ten years, but I am of opinion that if fifteen hundred pounds were employed to purchase estates, those estates would after that period produce a sufficient sum annually to support and pay the expenses of the College. I add, that it is the intention of several Inhabitants to make over immovable properties to the said College, if it is incorporated. The reason of the inhabitants not executing the several resolutions passed in the Committee are; 1^o. The want of Incorporation; 2^o. The uncertainty of being able to procure a pecuniary aid from the Legislature; 3^o. The opposition they found in the Rector of St. Anne, who has built on his own private property and assured every where that His Lordship the Catholic Bishop approved of this Establishment, and would furnish it with Professors; 4^o. The refusal from His Lordship to approve of this College, and to furnish it with Professors, unless it had rents from real estate attached to it, as well for the salary of the Professors, as for the keeping of the building in repair; and finally, unless they renounced their design of addressing themselves to the Legislature for a pecuniary aid. The Parish of Kamouraska is one of the most healthy, best situated and most frequented places of the Country. The means the inhabitants of the County had projected to bear the surplus of the charges, and more particularly those to be incurred for the salary of the Professors, either

CHAMBRE D'ASSEMBLÉE,

Samedi, 20 Décembre 1828.

RESOLU, Que la Pétition de divers habitans du Comté de Cornwallis soit référée à un Comité de cinq Membres, pour en examiner le contenu et en faire rapport avec toute la diligence convenable, avec pouvoir d'envoyer querir personnes, papiers et records.

ORDONNE, Que Mr. Borgia, Mr. Blanchet, Mr. Larue, Mr. Vallières et Mr. Fortin composent le dit Comité.

Attesté.

J. ANT. BOUTHILLIER,
Greffr. Asst.

Mercredi, 7 Janvier 1829.

ORDONNE, Que le dit Comité ait la permission de faire rapport le quatorzième de Janvier courant.

Attesté.

J. ANT. BOUTHILLIER,
Greffr. Asst.

CHAMBRE D'ASSEMBLÉE,

CHAMBRE DE COMITÉ,

Lundi, 22 Décembre 1828.

En Comité sur l'ordre de référence ci-dessus.

PRESENS:—MM. Vallières, Blanchet, Fortin, Larue et Borgia.

Mr. Borgia appelé au fauteuil.

Lu l'ordre de référence.

Lu la pétition référée.

Mr. Jean-Baptiste Taché, écuyer, Notaire à Kamouraska, dans le Comté de Cornwallis, a comparu par devant le Comité, et l'a informé comme suit :

Il y eut à Kamouraska, dans le presbytère, le 28 de Décembre 1826, une assemblée générale des habitans du dit comté, dans laquelle il fut unanimement résolu qu'il était nécessaire et urgent de bâtir un Collège dans le dit Comté. Un Comité fut ensuite nommé, et une souscription ouverte à cette fin. L'intention était que ce collège servit à tout le comté, et cette intention fut clairement manifestée. Kamouraska est le lieu le plus central du comté (sous le rapport de la population) pour y ériger un collège. Il a été offert aux habitans du dit comté par Mr. Pascal Taché, écuyer, seigneur du lieu, un terrain suffisant à cette fin, et cette offre a été acceptée. C'est l'intention des habitans que le clergé du comté participe à la régie du dit collège. Le comité a siégé à diverses reprises, a pris plusieurs délibérations, et a correspondu par lettres avec Monseigneur Panet, Evêque Catholique de Québec: ces lettres et ces délibérations ont été insérées dans le registre du dit comité, que j'ai, comme secrétaire d'icelui, en ma possession et que je produis pardevant ce Comité, paraphé par moi-même et par Mr. le président, ainsi que les originaux de lettres ci-dessus mentionnés et coteés A. B. C. D. adressés tant au dit Sieur Pascal Taché, écuyer, qu'à Mr. Varin, curé du lieu, et à Amable Dionne, écuyer, président du dit comité. Je pense qu'une somme de quinze à dix-sept cens livres courant suffirait pour l'érection du collège projeté: les moyens pécuniaires actuellement pourvus pour la fin de son érection consistent dans la dite souscription, qui s'élève à la somme de six cent trente livres courant, dont je produis une copie; et je ne doute nullement qu'il n'y aurait d'autres souscriptions et contributions, si le collège se bâtissait. Je crois que durant dix années, ce collège aurait besoin d'une aide annuelle de deux cens livres courant, mais je suis d'opinion que si l'on faisait actuellement l'emploi d'une somme de quinze cens livres courant, en acquisitions d'héritages, ces héritages produiraient, après cette période, un revenu suffisant pour défrayer la dépense de ce collège, et j'ajoute que c'est l'intention de plusieurs habitans de donner des immeubles au collège, s'il est incorporé. La cause qui a empêché les habitans du comté de mettre à effet les diverses délibérations du dit comité sont "1^o le défaut d'incorporation; 2^o l'incertitude de pouvoir se procurer une aide pécuniaire de la Législature; 3^o l'opposition qu'ils ont éprouvée de la part de Mr. le Curé de Sainte-Anne, qui a élevé une bâtisse sur son propre fonds, et l'assurance qu'il a donnée partout que Monseigneur l'Evêque Catholique de Québec approuvait cet établissement, et y fournirait des professeurs; 4^o le refus de la part de Monseigneur d'approuver le dit collège et d'y fournir des professeurs, à moins qu'il n'y eût des revenus de fonds attachés à ce collège, tant pour le salaire des professeurs que pour l'entretien de l'édifice, et enfin que les habitans renoncassent au projet de s'adresser à la Législature pour demander une aide pécuniaire." La Paroisse de Kamouraska est un des lieux du comté les plus salubres, les mieux situés, et les plus fréquentés; les moyens projetés par les habitans du comté pour défrayer le surplus de la dépense et particulièrement celle à être encourue pour les gages des

persons in Holy Orders or Secular, were, besides those I have already mentioned, the scholars board, and the revenue of the estates which certain individuals offered to make over unto the said College, supposing that His Lordship should refuse to furnish the College with Professors. In this College will be taught the English, French and Latin Languages, the Classics, the Belles Letters, Rhetoric, Philosophy and Mathematics.

Wednesday, 24th December 1828.

PRESENT :—Messrs. Borgia, Fortin, Larue and Blanchet.

Mr. Borgia in the Chair.

Mr. *Pierre Pelletier*, a native of Saint Anne de la Pérade, in the County of Cornwallis, Merchant at Quebec, appeared before the Committee, and informed them as follows :—

It would be expedient that a College be erected in the said County. In my opinion the Rivière du Loup would be the most central place ; but as one that will be finished in the course of next summer, has just been erected at the said Parish of St. Anne, I believe that were the College in question built, the two would hurt each other. I believe that it would be expedient to defer for one or two years the erection of the said College, so as to see what encouragement the house at St. Anne would receive, and the progress it would make. I cannot take upon myself to assure that one College would be the ruin of the other, but I believe that one would be sufficient ; the Parish of St. Anne is at the extremity, west of the County. I believe that the Inhabitants of the Parishes of St. Roch, St. Jean, l'Islet and Cap St. Ignace, would send by each Parish about ten boarders, and the Parish of St. Anne would send about twenty five day scholars. I am of opinion that the said College would educate from two hundred to two hundred and fifty scholars, at the same time I believe that the Rector of St. Anne, Messire Painchaud, gave unto the Committee of the Inhabitants of St. Anne, the lot of land on which the said College was erected by subscriptions from St. Anne and several other places, but more particularly from St. Anne. I do not know whether they have a charter permitting to hold in Mortmain the lot of land on which the said College was built, but I know that it was the first measure to be taken. I cannot say how much the College cost, but I know that the inhabitants of St. Anne, among others, furnished the materials. I am informed that one Richard is the undertaker of the building for the sum of five hundred pounds currency, of which he has already received more than the three fourths ; that the sum paid to Richard and that paid to different persons for the purchase of materials is with the amount of subscriptions and not with borrowed money. I believe that the board of each scholar will be the same as that of any other College. The distance between the two Churches of St. Anne and Kamouraska is from six and a half to seven leagues.

Jean Baptiste Taché, Esquire, appeared again before the Committee, and gave the following information :

The Rector of St. Anne, Mr. Painchaud, made two different proposals to the Committee of the County, to unite with their inhabitants for the establishment of the said College : The first of those proposals upon condition that the College should be built at St. Anne, and the second that it should be built on whatever spot His Lordship the Bishop would be pleased to choose. The conditions put to those proposals did not appear to the Committee as having met the general interest of the inhabitants of the County, and on that account were not accepted ; those proposals were also in writing, but were not entered in the Register of the Committee of the County. Having in my possession a copy of one addressed to the Rector of Kamouraska, Mr. Varin, dated the nineteenth of March one thousand eight hundred and twenty seven, marked with the letter E. and the original of the other dated the sixth of April one thousand eight hundred and twenty seven, marked F. delivered by Mr. Painchaud in person to the Committee, I produce the same before this Committee.

Friday, 9th January 1829.

PRESENT :—Messrs. Borgia, Vallières, Fortin and Larue.

Mr. Borgia in the Chair.

Messire *Pierre Viau*, Priest, Rector of Rivière Ouelle in the County of Cornwallis, and Vicar General of the Diocese of Quebec, appeared before the Committee, and gave the following information :

The Inhabitants of St. Anne, La Rivière Ouelle and Kamouraska, held a meeting at Kamouraska in December One thousand eight hundred and twenty six, to consider the necessary measures for the erection of a College in the County of Cornwallis ; the first meeting at which alone I attended, was composed of inhabitants of Kamouraska alone. The Seigneur of Rivière Ouelle, the late Pierre Casgrain, Esquire, attended also, and the Rector of St. Anne, Mr. Painchaud, arrived towards the latter end. A Committee of the whole County was appointed ; there might have been at this meeting other inhabitants from other parts of the County without my seeing them. With respect to extent the most central

professeurs soit ecclésiastiques, soit laïques, sont, outre ceux que j'ai assignés, les pensions des écoliers et le revenu des héritages que certains individus ont fait l'offre de donner au collège, supposé même que Monseigneur l'Evêque refusât des professeurs ecclésiastiques. Il sera en seigné dans ce collège les langues latine, anglaise et française, les humanités, belles-lettres, la rhétorique, la philosophie et les mathématiques.

Mercredi, 24 Décembre 1828.

PRESENS :—MM. Borgia, Fortin, Larue et Blanchet.

Mr. Borgia au fauteuil.

Mr. *Pierre Pelletier*, natif de Sainte-Anne de la Pociatière, dans le Comté de Cornwallis, marchand à Québec, a comparu pardevant ce Comité, et l'a informé comme suit :

Je crois qu'il serait expédient qu'il fût érigé un collège dans le dit comté. Dans mon opinion le lieu le plus central serait la Rivière du Loup ; mais comme il vient d'être bâti au dit lieu de Sainte-Anne une maison destinée à cette fin, laquelle sera parachevée dans le cours de l'été prochain, je crois que si le collège en question était bâti, l'un et l'autre se préjudiceraient. Je crois qu'il serait convenable de différer à une ou deux années l'érection du collège projeté, afin de voir les progrès que pourra faire la maison de Sainte-Anne, et l'encouragement qu'elle recevra. Je n'ose prendre sur moi d'assurer que l'une de ces maisons ferait tomber l'autre, mais je crois qu'une serait suffisante. La dite paroisse de Sainte-Anne est à l'extrémité ouest du dit comté. Je crois que les habitans des Paroisses de Saint-Roch, Saint Jean, l'Islet et du Cap Saint-Ignace pourront envoyer par chaque paroisse à la dite maison de Sainte-Anne dix écoliers pensionnaires tout ensemble, et que ceux de Sainte-Anne pourront y envoyer vingt-cinq à trente écoliers externes. Je suis d'opinion que la dite maison pourra instruire deux cens à deux cens cinquante écoliers dans le même tems. Je crois que Mr. Painchaud, Curé de Sainte-Anne, a donné au comité des habitans de Sainte Anne le terrain sur lequel la dite maison a été érigée par souscriptions, tant de Sainte-Anne que d'ailleurs, mais particulièrement de Sainte-Anne. Je ne sais pas si cette maison a été amortie, mais je sais que ça été une des premières mesures à prendre. Je ne sais pas combien cette maison a coûté, mais je sais que les matériaux ont été fournis par les habitans de Sainte-Anne entr'autres. Je suis informé qu'un nommé Richard a fait l'entreprise de la dite bâtisse, moyennant la récompense de cinq cens livres courant, dont il a déjà touché au-delà des trois quarts ; que la somme payée au dit Richard et celle payée à diverses personnes pour l'achat de matériaux, est du produit des souscriptions et non d'emprunt. Je crois que la pension de chaque écolier dans la dite maison sera la même que dans les autres collèges. La distance entre les églises de Sainte-Anne et de Kamouraska est de six lieues et demie à sept lieues environ.

Jean-Baptiste Taché, écuyer, a comparu de nouveau pardevant ce Comité, et l'a informé comme suit :

Mr. le Curé de Sainte-Anne, Mr. Painchaud, a fait à deux reprises au Comité du comté des propositions de se réunir à ses habitans, pour l'établissement du dit collège : la première de ces propositions portait pour condition, que le collège serait bâti à Sainte-Anne, et la deuxième portait pour condition qu'il serait bâti dans l'endroit qu'il plairait à Monseigneur l'Evêque de fixer, mais les conditions mises à ces propositions n'ont point paru au Comité rencontrer l'intérêt général des habitans du comté, et elles ont en conséquences été refusées. Ces offres étaient par écrit, mais n'ont pas été entrées dans le registre du comité du comté. Ayant en ma possession copie de l'une, adressée à Mr. le Curé de Kamouraska, Mr. Varin, en date du 19 mars 1827, cotée E., et l'original de l'autre en date du 6 d'Avril 1827, cotée F., délivrée par Mr. Painchaud en personne au comité, je les produis pardevant ce Comité.

Vendredi, 9 Janvier 1829.

PRESENS :—MM. Borgia, Vallières, Fortin et Larue.

Mr. Borgia au fauteuil.

Messire *Pierre Viau*, Prêtre, Curé de la Rivière Ouelle, dans le Comté de Cornwallis, et Vicar Général du Diocèse de Québec, a comparu pardevant ce Comité, et a répondu comme suit :

Les habitans de Sainte-Anne, de la Rivière Ouelle et de Kamouraska s'assemblèrent à Kamouraska en Décembre mil huit cent vingt-six, aux fins de prendre des mesures pour parvenir à l'érection d'un collège dans le comté de Cornwallis ; à la première assemblée, à laquelle seule j'assistai, il n'y avait que des habitans de Kamouraska ; le Seigneur de la Rivière Ouelle, feu Pierre Casgrain, écuyer, s'y trouva, et Mr. le Curé de Sainte-Anne, Mr. Painchaud, arriva vers la fin. Il fut organisé un Comité de tout le Comté. Il pourrait avoir assisté à cette assemblée des habitans des autres parties du comté, sans que je les y eusse vus. En point d'étendue le lieu le plus central du comté pour un collège, est

14th Jany.

place of the County for a College, is Green Island or Trois Pistoles; but I cannot say whether Kamouraska with respect to the general population of the County is not the most central place. I believe that the census would be the means of determining for the present the most central place. As I attended no other meeting of the Committee, I cannot say what was the projected mode of organizing the said College, nor what would be the cost of building it, nor what are the pecuniary means, but I believe those last are but small. I do not believe that this College once erected could support itself, the scholars' board not being sufficient to meet the expenses. I cannot say what would be the necessary endowment to keep up the College, but I believe that a College under the control of persons in Holy Orders would require a much less sum for the endowment than would one under the control of secular persons; and I also believe that a College erected by a Rector or a Bishop would cost much less than one built by a corporation. The projected College was not built because the conditions required by His Lordship the Bishop of Quebec were not fulfilled by the Committee of the County. I believe that one might find in other parts of the County places as healthy and as well calculated for a College as Kamouraska; but there is not a more healthy, nor a more advantageous situation than the spot on which the College of St. Anne is built. Kamouraska is a place more frequented by strangers, however, I do not believe that places frequented by strangers are the best calculated for Colleges. I have had no correspondence whatever with any person on the subject. Saint Anne's was built by the Rector, Messire Painchaud, out of his savings, by the contributions and labour of his Parishioners, and with the assistance of Mr. Painchaud's friends. I am of opinion that two such establishments erected in the same time, six leagues and a half distant from each other, would hurt each other, and that one of the two would cause the ruin of the other, and that one alone could with difficulty support itself for a certain time. I believe that the inhabitants of the Parishes of St. Roch, St. Jean, l'Islet and Cap St. Ignace, would prefer sending their children to be educated at St. Anne, and I am certain that the inhabitants of the Rivière Ouelle would send theirs, and I have not the least doubt but that the inhabitants of Kamouraska and the Inferior Parishes would do the same. I do not know the means that the Rector of St. Anne or the inhabitants of the place may have to support the College, but I know that the Bishop of Quebec is disposed to contribute to it, as soon as it lays in his power. I would not sanction a College unless it were entirely under the control of the Bishop. The College of St. Anne has not yet to my knowledge been incorporated by the Legislature, nor has it a charter permitting them to hold the same in mortmain.

Remi Puize, Esquire, Notary, of the Parish of St. Anne de la Pocatière, in the County of Cornwallis, appeared before the Committee, and after having heard a lecture of the answers given by the Rector of Rivière Ouelle, confirmed the said answers, with the exception of those parts of them distinguished in the margin by three perpendicular lines which are drawn.

Messire *Charles François Painchaud*, Priest, Curate of the Parish of St. Anne de la Pocatière, in the County of Cornwallis, appeared before the Committee; and being interrogated, answered as follows:

I recollect that in December One thousand eight hundred and twenty six, it was a question in Kamouraska to erect a College in the said County; there was held in the Hall of the Presbytery a meeting composed of the greatest part, as I believe, of inhabitants of the place. I was at this meeting towards the latter end of it. I was informed that there was a committee appointed, composed of several inhabitants of different parishes of the County, and that the persons in Holy Orders, Curates and Vicars belonging to the different parishes of the said County were members. Kamouraska with respect to extent is not the most central place of the County, and with respect to the general population of the County I am ignorant of the most central place. The most suitable place for a College is St. Anne de la Pocatière, because there is not in the County a healthier place, nor one which offers near a Church a solitude so full of advantages and charms. I cannot say whether the inhabitants of Kamouraska have a lot of ground to build a College; it appeared to me at the meeting which I mentioned, that their intention was to give unto the Catholic Bishop the control over the projected College; but afterwards from what I heard myself, I am led to believe that the intention of some of the Petitioners is not to put the said College under the control of the Bishop. I do not know under whose control they intend putting it. I have a knowledge that the inhabitants of Kamouraska addressed themselves to His Lordship the Bishop to obtain his approbation of their building a College under the control of persons in Holy Orders. I believe that the Register now exhibited unto me supposed to contain the proceedings of the Committee of the County, for the purpose of erecting a College, is the Register, because *Pascal Taché*, Esquire, Seigneur of Kamouraska, was present at the meeting, because I know his signature, and that the signature "*Pascal Taché*," President, at the top, and the signature "*Pascal Taché*," President, at the bottom of the third page, the signature of "*Pascal Taché*," at the bottom of the fourth page of the said Register, are all three of his hand writing. Because *Amable Dionne*, Esquire, Merchant, was afterwards Chairman of the said Committee; I know also his hand writing, and the signature "*A. Dionne*" at the bottom of the fourteenth page, and the signature "*A. Dionne*, P." at the bottom of the twenty sixth page of the said Register are of his hand writing. Because, lastly, *Jean Baptiste Taché*, Esquire, Notary, at Kamouraska, was Secretary to the said Committee, that I know his hand writing, and that the signature "*J. B. Taché, Senr.*"

à l'Île Verte ou les Trois-Pistoles, mais je ne puis dire si Kamouraska, eu égard à la population générale du comté, est le lieu le plus central. Je crois que le recensement est un moyen de déterminer le lieu le plus central à cette fin, quant à présent. Comme je n'ai assisté à aucune autre assemblée du comté, je ne puis dire quel était le mode projeté d'organisation du collège, ni combien pourrait coûter l'érection du collège projeté, ni quels sont les moyens pécuniaires; mais je crois ceux-ci modiques. Je ne crois pas que ce collège une fois érigé put se soutenir par lui-même, les pensions des élèves ne pouvant suffire aux dépenses. Je ne puis dire quel serait le montant de la dotation nécessaire à soutenir ce collège, mais je crois qu'un collège régi par des ecclésiastiques exigerait une dotation bien moins considérable, que ne l'exigerait un collège régi par des Laïques. Je crois aussi qu'un collège érigé par un curé ou un évêque coûterait bien moins qu'un collège bâti par une corporation.

Le collège projeté n'a pas été bâti, parce que les conditions opposées par Monseigneur l'évêque, n'ont pas été accomplies par le comté du comté. Je crois que l'on peut trouver dans le comté des lieux aussi salubres, aussi bien situés que l'est celui de Kamouraska; mais il n'y a pas de site plus avantageux ni plus salubre que celui où est bâtie la maison ou le collège de Sainte Anne: Kamouraska est un lieu plus fréquenté par l'étranger; cependant je ne crois pas que le lieu le plus fréquenté soit le lieu le plus désirable pour une maison d'éducation. Je n'ai eu aucune correspondance avec aucune personne sur le sujet. La maison de Sainte-Anne a été bâtie par M. le curé Painchaud, de ses épargnes, par les contributions et par les travaux de ses paroissiens et par les secours des amis de M. Painchaud. Je suis d'opinion que deux semblables établissements érigés en même temps à six lieues et demie de distance, l'un de l'autre, se préjudicieraient, et que l'un de ces établissements ferait tomber l'autre; qu'un seul pourra même pendant un certain temps se soutenir assez difficilement. Je crois que les habitans des paroisses de Saint-Roch, de Saint-Jean, de l'Islet et du Cap Saint-Ignace préféreront à envoyer comme élèves leurs enfans à la maison ou collège de Sainte-Anne; je suis certain que les habitans de la Rivière Ouelle y enverront les leurs, et je ne doute pas que les habitans de Kamouraska et des paroisses au-dessous n'en fassent autant.

Je ne connais pas les moyens que peuvent avoir M. le curé de Sainte-Anne ni les habitans du lieu pour soutenir ce collège; mais je sais que l'évêque de Québec est disposé à y contribuer, aussitôt qu'il le pourra. Je ne voudrais pas d'un collège qui ne serait pas entièrement sous la direction de l'évêque. Le collège de Sainte-Anne n'a pas été à ma connaissance érigé en corporation ou communauté par la législature; il n'y a pas encore de lettres d'amortissement.

Rémi Puize, écuyer, notaire, de la paroisse de Saint-Anne de la Pocatière, dans le comté de Cornwallis, a comparu par devant le comté et a, après lecture à lui faite des réponses données par M. le curé de la Rivière Ouelle, confirmé les dites réponses, si l'on en excepte les parties d'icelles distinguées en marges par les trois lignes perpendiculaires qui y sont tracées.

Messire *Charles François Painchaud*, prêtre, curé de la paroisse de Sainte-Anne de la Pocatière, dans le comté de Cornwallis, a aussi comparu par devant ce comté, et a répondu comme suit: J'ai connaissance qu'il fut, en décembre mil huit cent-vingt-six, question à Kamouraska d'ériger un collège dans le dit comté. Il fut tenu dans la salle du presbytère une assemblée composée, à ce que je crois, en plus grande partie d'habitans du lieu; je me trouvai à cette assemblée à sa fin; j'y fus informé qu'il avait été nommé un comité composé de divers habitans des diverses paroisses du comté, et que les ecclésiastiques, curés et vicaires des dites paroisses en étaient membres. Kamouraska relativement à l'étendu du comté n'en est pas le lieu le plus central, et sous le rapport de la population générale du comté, j'ignore que c'est le lieu le plus central. Le lieu le plus convenable pour un collège est Saint-Anne de la Pocatière, parce qu'il n'y a pas dans le comté un lieu plus salubre, ni qui offre une solitude aussi près d'une église, réunissant autant d'avantages et d'agrémens. Je ne sais pas si les habitans de Kamouraska ont un terrain pour y bâtir un collège. Il me parut à l'assemblée dont j'ai fait mention, que leur intention était de donner à l'évêque catholique de Québec la surintendance du collège projeté, mais depuis, d'après ce que j'ai oui moi-même, je suis porté à croire que l'intention de quelques-uns des présens supplians n'est pas de soumettre au dit sieur Evêque, cette surintendance; je ne sais sous la surintendance de qui ceux-ci entendent la soumettre.

J'ai connaissance que les habitans de Kamouraska se sont adressés en mil huit cent vingt-sept au dit sieur Evêque, pour obtenir son approbation aux fins de bâtir dans leur paroisse un collège ecclésiastique. Je crois que le régime à moi maintenant exhibé, supposé contenir les procédés du comté au dit comté au sujet du dit collège, en est le régime, parce que *Pascal Taché*, père, écuyer, Seigneur de Kamouraska était président de la dite première assemblée, parce que je connais sa signature, et que la signature *Pascal Taché*, président, vers le haut, la signature *Pascal Taché*, président, au bas de la troisième page, et la signature *Pascal Taché*, au bas de la quatrième page du dit régime, sont sa signature; Parce que *Amable Dionne*, écuyer, marchand, a été ensuite président du dit comté; que je connais aussi sa signature, et que la signature *A. Dionne*, à la fin de la quatorzième page, et la signature *A. Dionne* à la fin de la vingtième page du dit régime, est sa signature. Parce qu'enfin *Jean Baptiste Taché*, écuyer, notaire à Kamouraska, a été secrétaire du dit comté; que je connais sa signature, et que la signature *J. B. Taché*, secrétaire, au milieu de la vingt-cinquième page, et la signature *J. B. Taché*, secrétaire, au milieu de la vingt-sixième page, est sa signature. Je ne me suis jamais considéré comme membre de ce comté, quoi-

in the middle of the twenty fifth page, and the signature "J. Taché, Secretary," in the middle of the twenty sixth page are of his own hand writing. I never considered myself a member of the Committee, although I was told that I was a member, and although I might have received a copy of the circular entered in the third page of the Register, but I do not recollect having received it.

Saturday, 10th January 1829.

PRESENT :—Messrs. Borgia, Vallières, Fortin and Larue.

Mr. Borgia in the Chair.

The Curate of St. Anne, again appeared before the Committee, and being further interrogated, continued to answer as follows :

The letters laid before the Committee marked with the letters A. B. C. D. and now exhibited to me signed † Bernard, Evêque de Québec, are of the hand writing and signature of His Lordship Mr. Panet, Bishop of Québec. I cannot say how much the projected College would cost, not knowing upon what plan it is intended to be built. I do not know what are the pecuniary means that the Petitioners may have to complete the building ; I do not believe that the College could without any other revenue than the scholars board meet its own expenses. I believe that the College under the control of persons in Holy Orders would require to support itself on endowments of at least two hundred pounds per annum, together with the monies arising from the scholars board ; but I believe that three times the same sum and the scholars board would not be sufficient were it under the control of Secular persons. A College built under the direction of the Clergy would cost much less than a College built under the direction of Secular persons, because persons in Holy Orders offer their services gratuitously, and fulfill them with much more economy than secular persons could. The reason why the intended College was not built, was the refusal of His Lordship Mr. Panet to approve of it. The salary and wages of a schoolmaster or professor in a College that would teach the Elements of the English and French Language, Arithmetic and Book keeping, would amount to, were he to reside out of the College, and a secular person, at least ninety pounds currency per annum ; were he a person in Holy Orders not more than thirty six pounds currency, his board included amounting to twenty pounds currency. The salary of a Principal who would be at the same time Professor of Philosophy, would amount to about fifty pounds currency. That of six Professors of the Latin, English and French Tongues, of the Classics and of Rhetoric, would amount to thirty six pounds currency each, if they were persons in Holy Orders. I entertained a correspondence with His Lordship the Bishop and with Mr. Amable Dionne, Chairman of the said Committee of Kamouraska, relative to the projected College ; the correspondence I entertained with His Lordship, was for the purpose of determining the place where the College would be erected, and this correspondence took place in the winter of One thousand eight hundred and twenty seven. I entertained also a correspondence in March one thousand eight hundred and twenty seven, with the Rector of Kamouraska, Messire Jacques Varin, Archpriest, and Vice President of the said Committee. The paper writing of the nineteenth March one thousand eight hundred and twenty seven, produced before the Committee and marked with the letter E. and now exhibited to me, is a copy of my letter to the said Messire Varin. The correspondence which I entertained with the Chairman, Mr. Amable Dionne, took place in March one thousand eight hundred and twenty seven, and consisted of two or three letters, which I wrote him to request him to hold a meeting of the Committee to receive proposals that I had to make them. Mr. Dionne answered my two first letters in an evasive manner, and to the third made answer that the Committee met the first Thursday of each month, and that I might if I thought proper attend on the following Thursday which was the sixth of August ; I accordingly did so : I put in the hands of the Chairman of the Committee while sitting, the paper writing dated the sixth of April one thousand eight hundred and twenty seven, endorsed, "Tenders made by Messire Painchaud," which paper is now produced before the Committee, and exhibited to me marked with the letter F. His Lordship the Bishop having approved of the establishment of a College at St. Anne, as appears by his letters to my address, viz : the first dated the twenty fourth of January one thousand eight hundred and twenty seven, marked with the letter H. the second dated the eighth of March one thousand eight hundred and twenty seven, marked with letter I. and the third dated the sixth of April one thousand eight hundred and twenty seven, marked with the letter K. which said letters I have produced before the Committee, subscribed by the Chairman and marked with the initials of his name, having approved of the plan on which this College was to be established, I had made every necessary bargain for the building of it, but considering the persevering opposition of the Parishes of La Rivière Ouelle and Kamouraska, I resolved to abandon the enterprize in favor of whatever Parish His Lordship might approve of. It is with this intention that I attended the meeting of the sixth of April one thousand eight hundred and twenty seven ; having there communicated the said letters to the Committee, and by that clearly shewn to them the truth of the approbation in my favor. I gave as I before mentioned the paper written marked with the letter F. I added that moreover, what is continued in the paper writing marked F. I offered verbally to the Committee fifty pounds currency to help the building of the College in question. I then received no answer from the Committee who adjourned to the seventeenth of April of the same month

qu'on m'ait dit que j'en fus membre, et quoiqu'il ait pu se faire que j'ai reçu copie de la circulaire entrée en la troisième page du dit registre, mais que je ne me ressouviens pas d'avoir reçue.

Samedi, 10 janvier 1829.

PRESENS :—Messrs. Borgia, Vallières, Fortin et Larue.

M. Borgia au fauteuil.

M. le curé de Sainte-Anne a comparu de nouveau par devant le comité et a continué d'informer le comité, ainsi qu'il suit :

Les quatre lettres produites pardevant ce Comité cotées A. B. C. D. et à moi maintenant exhibées, signées † Bern. Cte. Evêque de Québec, sont de l'écriture et la signature de Monseigneur Panet, Evêque de Québec. Je ne puis dire combien coûterait le collège projeté, n'en connaissant point le plan. Je ne connais pas les moyens pécuniaires que peuvent avoir les supplians pour parvenir à la bâtisse en question. Je ne crois pas que ce collège put, sans autres fonds que le produit des pensions se soutenir par lui même. Je crois que ce collège régi par des ecclésiastiques aurait, pour se soutenir, besoin d'une dotation, dont le revenu annuel ne serait pas moindre que deux cens livres courant, en sus du produit des pensions ; mais je crois que le triple de la même somme, en sus des pensions, suffirait à peine s'il était régi par des laïques. Un collège bâti sous la direction du clergé coûterait beaucoup moins qu'un collège bâti sous la direction des laïques, vu que les ecclésiastiques se prêtent gratuitement à ces œuvres, et le font avec plus d'économie que les laïques ne le peuvent faire. La raison pour laquelle le collège projeté n'a pas été bâti, est le refus d'approbation de Monseigneur Panet. Les gages des maîtres et professeurs dans un collège qui comprendrait une école élémentaire en langues anglaise et française, l'arithmétique et la tenue des livres monteraient pour le maître, s'il demeurerait hors du collège, et s'il était laïque, à pas moins de quatre-vingt-dix livres courant par an, et s'il était ecclésiastique à pas plus de trente-six livres courant, y comprise sa pension estimée à vingt livres courant. Les gages du principal ecclésiastique, qui serait en même tems professeur de philosophie, monteraient à cinquante livres courant environ. Ceux de six professeurs de grammaires en langues latine, anglaise et française, d'humanités et de rhétorique monteraient à la somme de trente-six livres courant chacun, au plus, s'ils étaient ecclésiastiques. J'ai eu avec Monseigneur l'Evêque et avec Mr. Amable Dionne, président du dit comité de Kamouraska, des correspondances relatives au collège projeté. La correspondance que j'ai eue avec Monseigneur avait pour but de déterminer la place où le collège serait érigé, et cette correspondance a eu lieu dans l'hiver mil huit cent vingt-sept. J'en ai eu aussi en mars mil huit cent vingt-sept avec Mr. le curé de Kamouraska, Mr. Jacques Varin, archiprêtre et vice-président du dit comité. L'écrit en date du 19 Mars 1827, produit pardevant le comité et coté E. à moi maintenant exhibé est une copie de ma lettre au dit Sieur Varin. Les correspondances que j'ai eues avec le dit président Mr. Amable Dionne ont eu lieu en Mars mil huit cent vingt-sept, et consistaient en deux ou trois lettres que je lui ai écrites, le priant de vouloir assembler le dit comité pour recevoir des propositions que j'avais à lui faire. Mr. Dionne a répondu d'une manière évasive aux deux premières lettres, et à la troisième, il m'a répondu que le comité s'assemblerait le premier jeudi de chaque mois, il m'était libre d'y assister, savoir, le jeudi sixième Avril suivant, ce que j'ai fait. J'ai déposé dans les mains du dit président du comité siégeant, l'écrit en date du sixième Avril mil huit cent vingt-sept, intitulé, *Propositions faites par Mr. Painchaud*, produit pardevant ce Comité, à moi maintenant exhibé et coté F.

Monseigneur l'Evêque ayant approuvé l'établissement d'un collège à Sainte-Anne, comme il appert par ses lettres à mon adresse, savoir, la première en date du vingt-quatrième jour de Janvier mil huit cent vingt-sept, coté H ; une autre en date du huitième jour de Mars mil huit cent vingt-sept, cotée I ; et la troisième en date du sixième jour d'Avril mil huit cent vingt-sept, cotée K : les dites lettres par moi produites pardevant ce Comité, marquées par le président de ses lettres initiales et par lui paraphées, et ayant approuvé le plan du dit établissement ou collège ; j'avais contracté les marchés nécessaires à l'effet de bâtir le dit collège, mais considérant l'opposition persévérante des paroisses de la Rivière Ouelle et de Kamouraska, je pris la résolution d'abandonner l'entreprise en faveur de celle de ces deux paroisses qui obtiendrait l'approbation de Monseigneur l'Evêque. C'est dans cette vue que je m'étais rendu au Comité le dit sixième Avril mil huit cent vingt-sept. Là, après avoir communiqué au dit comité les dites lettres, et avoir par là même fait reconnaître et avouer la vérité de l'approbation en ma faveur, je déposai, comme il est dit ci-dessus le dit écrit coté F. ; j'ajoute, qu'outre ce qui est contenu dans le dit écrit coté F. j'offris verbalement au dit comité la somme de cinquante livres courant pour aider à bâtir le collège en question. Je ne reçus alors aucune réponse du comité, qui s'ajourna au dix-septième Avril même mois, pour me donner sa réponse. Je n'ai reçu depuis aucune autre réponse que la lettre du dit Sieur Varin à mon adresse en date du dix-neuvième jour de Mai mil huit cent vingt-sept, que je produis pardevant ce comité, la dite lettre cotée G., et par le président paraphée. Comprenant par la dite lettre qu'il était inutile de penser à faire accepter au dit comité mes propositions, je me décidai de suite à bâtir, mais sur un plan un peu plus étendu que celui ap-

14 Jany.

Appendix
(W.)
14th Jany.

to give me an answer ; I received no other answer than the letter from Messire Varin addressed to me, dated the nineteenth of May one thousand eight hundred and twenty seven, which letter I produce before the Committee marked with the letter G. subscribed by the Chairman and marked with the initials of his name. Understanding from that letter that it was useless for me to think of succeeding in persuading the Committee to accept of my proposals, I determined immediately to build, but on a more extensive plan than that approved of by the Bishop, that is to say, adding twenty feet to the length, and one story to the height of the College. I built this College, and it will be opened unto youth in the middle of June next ; I built it at my own expense with the help of the inhabitants of the Parish of St. Anne, of those of St. Roch, and of several friends of Education, as well in Quebec as in other places. I gave to this College :

1°. A lot of ground consisting of one acre in front, upon three in depth, and continuing upon one half acre in front upon thirteen in depth; on that part of the lot of ground first described is build the College.

2°. A lot of ground of fifty six acres in front, by three ranges in depth in the Township of Ixworth.

3°. A lot of ground situate before the Presbytery of one acre in front by thirteen in depth.

4°. A lot of ground situate in the first range of the said Parish of St. Anne, of one half acre in front by seven in depth.

5°. A lot of ground situate in the third range of the Seigniorie of St. Anne, of one acre in front by forty two in depth.

6°. A lot of ground in the said Township of one acre and a half in front by twenty eight in depth.

7°. A lot of ground adjoining that of the Church of one acre square, together with a house of fifty feet in front, a barn, stable and other appurtenances thereon erected.

8°. A lot of ground lying in the Seigniorie of St. Roch of ten acres in front by thirty eight or forty two in depth.

This College when built will cost two thousand four hundred pounds currency or thereabouts, there having already been laid out on it sixteen hundred pounds, four hundred pounds of which said sum remain unpaid. I believe that the probable expense for twenty boarders, which are all that I expect to have for several years, will amount to from five to six hundred pounds currency yearly, including the Schoolmasters, Professors and servants wages, and the other necessary expenses of the College. Twenty boarders would pay four hundred pounds currency yearly, and as to the remaining two hundred pounds less, I expect to make them up with the help of friends of education, one quarter of the revenue of the Corporation, (Fabrique) the revenue of the above mentioned estates, the amount of the day scholars schooling and my own private savings. I do not believe that two Colleges in the same county could support themselves before twenty years. I believe that the one during the same space of time would cause the ruin of the other in fixing the epoch at twenty years : I do not mean to say that they could not afterwards support themselves. In the beginning of March one thousand eight hundred and twenty seven, J. B. Taché, Esquire, going up to Quebec, told me, that the inhabitants of Kamouraska had obtained the approbation of His Lordship the Bishop to build a College at Kamouraska, I answered that I had also obtained his approbation to build one at Saint Anne, and offered him to make an exchange of Letters, and also to call at my house on his return to look over those I had received from His Lordship, and see the plan he had approved ; he called at my house as he was going down, and saw the three above mentioned letters and the plan. I had then read from the pulpit (*au prone*), during Divine Service which he attended, the letter from His Lordship the Bishop, dated the eighth of March one thousand eight hundred and twenty-seven, by which His Lordship declared that he did not approve of the erection of a College at Kamouraska. The said J. B. Taché, Esquire, admitted that the approbation that I had was sufficient. The College of Saint Anne is under the immediate control of the Catholic Bishop of Quebec.

Mr. Pierre Canac dit Marquis, Merchant at Saint André, in the County of Cornwallis, also appeared before the Committee, and answered as follows :

When in one thousand eight hundred and twenty-six and one thousand eight hundred and twenty-seven it was a question to erect a College in said County, the intention of the said Committee was that the College would be for the general benefit of the County, and that it would be built at Kamouraska ; but as it pleased His Lordship the Catholic Bishop to name St. Anne as the most suitable place for a College, the Committee discontinued their proceedings. I am informed that the greatest part of the inhabitants of the County are satisfied with His Lordship's choice, and even several of the Members of the Committee are of the same opinion. In referring to the last Census, I believe that the most central place of the County (with respect to the population) is Kakona. I know of no pecuniary means for establishing the projected College, unless it be the subscription of one thousand eight hundred and twenty-seven, amounting to six hundred and thirty pounds Currency, which would not be the same on account of the College erected at Saint Anne, and moreover because several neighbouring parishes would not contribute to it. I believe that one College erected in a County could with difficulty for several years support itself, owing to the narrowness of the means which the inhabitants have to educate their children. The reason why the Resolutions of the Committee were not put into execution, is, because His Lordship the Bishop refused his approbation to the erection

prouvé par l'évêque, c'est-à-dire, ajoutant vingt pieds sur la longueur, et un étage sur la hauteur. J'ai bâti ce collège, qui sera ouvert à la jeunesse vers le mois de juin prochain. Je l'ai bâti à mes propres frais, à l'aide des habitans de la Paroisse de Sainte-Anne, de celle de Saint-Roch, et de plusieurs amis de l'éducation, tant à Québec qu'ailleurs.

Appendice
(W.)
14 Jany.

J'ai donné pour ce collège :

1°. Un lopin de terre qui consiste en un arpent de front sur trois de profondeur continué sur un demi arpent de front sur treize arpens environ de profondeur ; et sur la partie du dit lopin premièrement désignée est bâti le collège.

2°. Un lopin de terre de cinquante six arpens de front environ, sur trois rangs dans le township d'Ixworth.

3°. Un demi arpent de terre de front devant le presbytere sur environ treize arpens de profondeur.

4°. Un demi-arpent de terre de front sur sept de profondeur environ, dans le premier rang de la dite paroisse de Sainte-Anne.

5°. Un arpent de terre de front sur quarante-deux de profondeur environ, dans le troisième rang de la seigneurie de Sainte-Anne.

6°. Un arpent et demi de terre de front sur vingt-huit arpens de profondeur, dans le dit township.

7°. Un emplacement avoisinant le terrain de l'église, d'un arpent carré, avec une maison de soixante pieds de front dessus construite, avec grange, étable et autres dépendances.

8°. Dix arpens de terre de front sur trente-huit ou quarante-deux de profondeur, dans la Seigneurie de Saint-Roch.

Le coût de cette bâtisse parachevée, évalué en argent montera à la somme de deux mille quatre cents livres courant environ. Il monte maintenant à celle de seize cents livres courant, et de cette somme, il reste à payer la somme de quatre cents livres courant environ. Je crois que la dépense probable pour vingt pensionnaires, qui est le nombre seul sur lequel je compte pendant plusieurs années, montera à entre cinq et six cents livres courant par année y compris l'entretien du dit collège, les gages des maîtres, professeurs, serviteurs et autres dépenses nécessaires. Vingt pensionnaires payeront la somme de quatre cents livres courant par an, et la différence de deux cents livres courant au moins annuellement : j'entends la couvrir par mes épargnes, par l'aide des amis de l'éducation, le quart du revenu de la fabrique, le revenu des héritages ci-dessus mentionnés et la récompense que chaque écolier payera pour son école.

Je ne crois pas que deux collèges dans le comté puissent se soutenir par eux-mêmes avant vingt ans. Je crois que l'un ferait sous la même période, tomber l'autre. En fixant l'époque de vingt années, je ne prétends pas dire qu'ils puissent se soutenir ensuite par eux-mêmes.

Je rencontrai à Sainte-Anne dans les premiers jours de Mars mil huit cent vingt-sept, Mr. J. B. Taché, écuyer, allant à Québec. Il me dit que les habitans de Kamouraska avaient obtenu de Monseigneur l'Evêque son approbation pour bâtir un collège à Kamouraska. Je lui dis que j'avais aussi obtenu l'approbation de Sa Grandeur pour en bâtir un à Sainte-Anne. Je lui offris d'échanger nos lettres, et de venir chez moi à son retour voir celles que j'avais reçues de Sa Grandeur, et le plan par elle approuvé. Il entra chez moi en descendant ; je lui communiquai les trois lettres ci-dessus mentionnées et le plan. J'avais alors lu au prône de la Messe à laquelle il venait d'assister, la lettre de Monseigneur l'Evêque en date du huitième Mars mil huit cent vingt-sept, par laquelle il déclarait qu'il n'avait pas approuvé l'érection d'un collège à Kamouraska. Le dit Sieur Jean-Baptiste Taché convint que l'approbation que j'avais, était suffisante. Le collège de Sainte-Anne est sous la surintendance immédiate de l'Evêque Catholique de Québec.

Mr. Pierre Canac dit Marquis, Ecuyer, Marchand à Sainte-André, dans le Comté de Cornwallis, a aussi comparu pardevant ce Comité, et a répondu comme suit :

Lorsqu'il fut en les années mil huit cent vint-six et vingt-sept, question de l'érection d'un collège dans le dit comté, l'intention du comité était que le collège serait pour l'utilité générale du comté, et qu'il serait bâti à Kamouraska ; mais comme il a plu à Monseigneur l'Evêque de fixer à Sainte-Anne la place du dit collège, le comité a discontinué ses projets. Je suis informé que la généralité des habitans du dit comté et une partie des membres du dit comité sont maintenant satisfaits de la fixation de la place à Sainte-Anne. En référant au dernier recensement je crois que le lieu le plus central du comté, eu égard à la population, serait Kakona. Je ne connais aucuns moyens pécuniaires pour parvenir à l'établissement du collège projeté, que la souscription de mil huit cent vingt-sept, montant à la somme de six cent trente livres courant ; le montant ne serait pas maintenant le même à cause de l'érection du collège de Sainte-Anne, et en outre parce que plusieurs habitans des paroisses voisines n'y contribueraient point. Je crois qu'un seul collège érigé dans le comté aurait pendant plusieurs années peine à se soutenir par lui-même, vu le peu de moyens qu'ont les habitans pour subvenir aux frais de l'éducation de leurs enfans. La cause qui a empêché de mettre à effet les délibérations du dit comité vient de ce que Monseigneur l'Evêque, a refusé son approbation à l'érection d'un collège à Kamouraska, et qu'il a désapprouvé la résolution du comité de s'adresser à la

Appendix
(W.)
14th Jany.

of a College at Kamouraska, and would not adhere to the Resolution passed by the Committee to address themselves to the Legislature to obtain a pecuniary aid. I know of no other means of bearing the charges of a College at Kamouraska, than the board of the scholars, whose number would be but small. The intention of the Committee was to teach in the projected College, the English, French and Latin Languages, Arithmetic and the higher branches of Science; it was also their intention that the Clergy would have, together with secular persons of the County, the control over the said projected College; but now I believe that the intention of the Petitioners is to put the College entirely under the control of secular persons, notwithstanding the majority are of a different opinion. I am also of opinion that had the present Petition been presented to the inhabitants for the purpose of getting signatures to it, the majority would have refused, and provided the means of presenting a contrary one. I was, on the sixth of April one thousand eight hundred and twenty-seven, present at a meeting of the Committee of the County of which I was then a Member, when Mr. Painchaud made unto them his proposals contained in the paper writing marked with the letter F, now shewn unto me. The further consideration of his proposals was postponed to the seventeenth of April then instant; and on the seventeenth of April the Committee did not meet. I received no notice to attend, and since the sixth of April one thousand eight hundred and twenty seven the Committee have not met. From conversations that I have had lately with several inhabitants of Kamouraska, Saint André and Rivière du Loup, I believe that they would be satisfied if they had an aid to establish Elementary Schools.

Tuesday, 13th January 1829.

PRESENT:—Messrs. Borgia, Fortin, Larue and Blanchet.

Mr. Borgia in the Chair.

François Blanchet, Esquire, Member of Parliament for the County of Hertford, and one of the Members of Your Committee, gave the following information:

I am Seigneur of the Fief Saint Denis, situate in the Parish of Rivière Ouelle, in the County of Cornwallis. The population of Kamouraska is considerable; its inhabitants wish to build a College; the Seigneur of Kamouraska is disposed to give it an Estate of high value. I would myself give several lots of Land for the same purpose. The Petitioners pray that the Legislature be pleased to erect a Community or Corporation composed of the Seigneur, the Rector, the donors of Estates for that purpose, and of five or seven notables of the said Parish, and be also pleased to authorize the said Community or Corporation to purchase real property, a capital of which the annual Revenue would not exceed one thousand Pounds currency, under the condition that all His Majesty's subjects be indistinctly admitted as pupils in the said College, and that they be taught Reading, the English, French, Latin and Greek Languages, and also Mathematics.

Your Committee afterwards sent for the Journal of the House of Assembly for one thousand eight hundred and twenty-six, for the purpose of seeing the number of Parishes and the amount of Population in the County of Cornwallis; all which are to be found in the said Journal as follows:

Kamouraska,	-	-	4964
Rivière Ouelle,	-	-	3440

Wednesday, 14th January 1829.

PRESENT:—Messrs. Borgia, Fortin, Larue and Blanchet.

Mr. Borgia in the Chair.

Your Committee after having taken into their serious consideration the papers produced before the Committee, and particularly the Register of the Committee of the County; the letters from His Lordship Mr. Panet, Catholic Bishop of Quebec; the proposals made to the said Committee of the said County by Messire Painchaud, Rector of Saint Anne; the letter from the Arch Priest and Rector of Kamouraska, Messire Jacques

Appendice
(W.)
14 Jany.

législature afin d'en obtenir une aide. Je ne connais aucun moyen de défrayer la dépense d'un collège à Kamouraska, que la pension des écoliers, qui seront en petit nombre. L'intention du comité était d'enseigner dans le collège projeté les grammaires latine, anglaise et française, l'arithmétique et les hautes sciences; c'était aussi son intention que le clergé eût en commun avec des laïques du comté la surintendance du collège projeté, mais je crois que l'intention de plusieurs des supplians est maintenant de placer la surintendance du dit collège dans les mains de laïques, et que la majorité est néanmoins d'opinion contraire. Je suis en outre d'opinion que la généralité des habitans du dit comté aurait, si la présente requête leur eût été présentée, refusé de la signer, et que cette même généralité aurait peut-être présenté une requête contraire.

J'étais le sixième Avril mil huit cent vingt-sept présent au comité du dit comté, dont j'étais alors membre lorsque Mr. le curé Pinchaud lui fit les propositions contenues en l'écrit cotté F. à moi maintenant exhibé.

La considération en fut remise au dix-septième Avril alors présent, et le dix-septième Avril le comité ne siégea pas. Je n'ai pas reçu avis de m'y trouver, et le comité n'a pas siégé depuis le sixième Avril mil huit cent vingt-sept. D'après des conversations que j'ai dernièrement eues avec divers habitans de Kamouraska, Saint-André et la Rivière du Loup, je crois qu'ils seraient satisfaits, s'ils avaient une aide pour parvenir à avoir des écoles élémentaires.

Mardi, 13 Janvier 1829.

PRÉSENS:—MM. Borgia, Fortin, Larue et Blanchet.

Mr. Borgia au fauteuil.

Mr. François Blanchet, écuyer, l'un des Représentans du Comté de Hertford, et Membre de votre Comité l'a informé comme suit:—

Je suis seigneur du fief de Saint-Denis, sis et situé dans la Paroisse de la Rivière Ouelle dans le Comté de Cornwallis. La population de Kamouraska est considérable, ses habitans désirent y bâtir une maison d'éducation. Le seigneur de Kamouraska est disposé à donner une terre de haut prix, et je donnerais moi-même plusieurs terres pour cette fin. Les supplians désireraient qu'il plût à la législature d'ériger une communauté ou corporation composée du seigneur, du curé du lieu, des donateurs d'héritages destinés à cette fin, et de cinq ou sept notables de la dite paroisse, et d'autoriser en outre la dite communauté ou corporation à acquérir en immeubles un capital dont le revenu annuel n'excéderait pas la somme de mille livres courant, à condition que tous les sujets de Sa Majesté seraient indistinctement admis comme élèves à cette maison, et qu'ils y seraient instruits dans la lecture, l'écriture, les grammaires grecque, latine, anglaise et française, et dans les élémens des mathématiques.

Votre Comité a ensuite envoyé querir le Journal de l'Assemblée pour l'année mil huit cent vingt-six, par rapport au nombre des paroisses et à la population du Comté de Cornwallis, lesquelles y sont porté ainsi qu'il suit:

Kamouraska,	-	-	-	4964
Rivière Ouelle,	-	-	-	3440

(W)
14th Jany.

Varin, the Evidence given before this Committee, and the Journal of Your Honorable House for the year one thousand eight hundred and twenty-six, relating to the number of Parishes and the Population of the County of Cornwallis, are of opinion that the Parish of Kamouraska, with respect to population, is the most central place in the County for the erection of a College, because the said Parish with those of La Rivière Ouelle and Saint Anne contain together, not only a population equal to that of all the other parts of the said County, but even one that exceeds it. The total population of the County amounts to twenty-thousand and twelve persons, of which the Parishes of Kamouraska, La Rivière Ouelle and Saint Anne form together ten thousand nine hundred and sixty nine persons, so that the population of the other parts amount only to ten thousand and forty-three persons.

Your Committee are also of opinion, that as a College has been erected at Sainte Anne, approved of by His Lordship the Bishop of Quebec, Mr. Panet, under his control and under the control of his successors, to recommend to your Honorable House to be pleased to pass a Law, or a Bill erecting a corporation of the inhabitants of Kamouraska, composed of the Seigneur, the Rector of the place, the Donors of Estates to the said House of Education, and a certain number of Freeholders, *Notables* of the said Parish, the *Notables* to be elected by the said Seigneur, Rector and Donors, authorizing the said community or corporation to purchase immoveable property not exceeding one thousand pounds currency, annual revenue; authorizing also to rent a House of Education at Kamouraska, provided that all the subjects of His Majesty be indistinctly admitted as pupils, and that they be taught Reading, Writing, the English, French, Latin and Greek Grammar, and Mathematics.

Your Committee are of opinion that such a House of Education would be sufficient for the present, as the establishment of another College in the said County might be prejudicial to the College of Saint Anne.

Your Committee respectfully recommend unto your Honorable House to grant unto the Petitioners an aid for that purpose.

Your Committee also respectfully recommend unto your Honorable House, that in case they should not deem expedient to grant unto the Petitioners an aid for that purpose, to be pleased nevertheless to pass the said Law or Bill incorporating the said inhabitants of Kamouraska as herein above mentioned, and for the ends herein above mentioned.

The whole nevertheless humbly submitted.

JOSEPH LEVASSEUR BORGIA,
Chairman.

Copy of the Register referred to in the Evidence of Jean Baptiste Taché, Esquire.

At a meeting of the Inhabitants of the County of Cornwallis, held in the *Presbytère* of Kamouraska, on Thursday the 28th December 1826, for the purpose of considering the expediency of erecting a College in the said County, the following Resolutions were adopted.—

Pascal Taché, Senior, Esquire, Seigneur of Kamouraska, called to the Chair.

1st. *Resolved*, That considering the population and extent of the County of Cornwallis, and its distance from the places of public education, it is necessary that a College for the instruction of youth should be erected in the said County.

2nd. *Resolved*, That a voluntary subscription be immediately opened in each of the Parishes in the said County, and that subscriptions be received either in money or materials, to be employed in the purchase of the site, and in the erection of the said College.

3rd. *Resolved*, That an humble address be presented to the three branches of the Provincial Parliament during its next Session, praying an aid for the purposes above mentioned.

4th. *Resolved*, That a Committee be appointed consisting of nine Lay Members, besides the Curates and Priests residing in the said County, (who shall be *ex-officio* Members of the said Committee) for the purpose of carrying the above resolutions into effect, with power to add to the said Committee such number of Members as they shall judge expedient, and also to make such rules as they shall deem necessary for their better government and for that of the said College.

5th. *Resolved*, That Messrs. the Curates and other Priests resident in the said County.

Remi Puize, Esquire,	} of St. Anne Lapocatière.
Mr. Vincent Dubé,	
Pierre Casgrain, Esquire,	} of Rivière Ouelle.
F. Letellier de St. Juste, Esqr.	
Pierre Garon, Esquire,	

Amable Dionne, Esquire,	} of Kamouraska.
Jean Baptiste Taché, Esquire,	
Thomas Casault, Esquire,	
Joseph Déguise, Esquire,	
Mr. Michel Lebel,	
Pierre Canac dit Marquis, Esquire, of St. Andre.	} of Rivière du Loup.
Mr. Edouard Chamberland,	

devant ce comité, et le journal de votre Honorable Chambre d'Assemblée pour l'année mil huit cent vingt-six, relativement au nombre des paroisses et à la population du comté de Cornwallis, est d'opinion, que la paroisse de Kamouraska est, quant à la population du dit comté, le lieu le plus central pour y ériger une maison d'éducation, parce que la dite paroisse et celles de la Rivière Ouelle et de Sainte-Anne contiennent ensemble non-seulement une population égale à celles de toutes les autres parties du dit comté, mais qu'elles contiennent même une population qui excède celle de toutes les autres parties de ce comté, vu que sa population totale monte à vingt mille douze personnes; que la population des dites paroisses de Kamouraska, de la Rivière Ouelle et de Sainte-Anne monte ensemble à dix mille neuf cent soixante et neuf personnes, et que celle de toutes les autres parties du comté monte seulement tout ensemble à dix mille quarante trois personnes.

Votre comité est aussi d'opinion, vu l'érection et la bâtisse faite à Sainte-Anne du collège projeté, sous l'approbation du Sieur seigneur évêque catholique de Québec, sous sa direction et sous la direction de ses successeurs évêques, de recommander, et recommande à votre honorable chambre d'assemblée de vouloir passer un projet de loi ou bill, créant et érigeant les habitants de la dite paroisse de Kamouraska en une communauté ou corporation composée du seigneur, du curé du lieu, des donateurs d'héritages destinés aux fins de l'éducation dans le dit comté, et d'un certain nombre de propriétaires notables de la dite paroisse éligibles par les seigneurs, curés et donateurs, d'autoriser la dite communauté ou corporation à acquérir en immeubles un capital dont le revenu annuel n'excédera pas la somme de mille livres courant; d'autoriser icelle à ériger au dit Kamouraska une maison d'éducation, à condition d'y admettre indistinctement comme élèves, tous les sujets de Sa Majesté, et qu'ils y soient instruits dans la lecture, l'écriture, les grammaires grecques, latine, anglaise, françaises et dans les éléments des mathématiques.

Votre comité est d'opinion qu'une semblable maison d'éducation sera suffisante pour le présent, vu que l'établissement d'un autre collège dans le dit comté pourrait préjudicier au collège projeté de Sainte-Anne.

Votre comité prend la respectueuse liberté de recommander à votre honorable assemblée de vouloir accorder aux supplians une aide à ces fins.

Votre comité prend enfin la respectueuse liberté de recommander à votre honorable assemblée, dans le cas où elle ne jugerait pas expédient d'octroyer à ses supplians telle aide à ces fins, de vouloir néanmoins passer le dit projet de loi ou bill, incorporant les dits habitants de Kamouraska ainsi que ci-dessus, aux fins et aux effets susdits.

Le tout néanmoins humblement soumis.

JOSEPH LEVASSEUR BORGIA,
Président.

Copie du régltre auquel réfère le témoignage de Jean Baptiste Taché, écuyer.

A une assemblée des habitans du comté de Cornwallis, qui a eu lieu dans le presbytère de Kamouraska, jeudi, le 28 décembre 1826, à l'effet de considérer s'il est expédient d'ériger un collège dans le dit comté, les résolutions suivantes ont été adoptées.

Pascal Taché, écuyer, père, seigneur de Kamouraska appelé à la chaire.

1^o *Résolu*, Qu'en égard à la population et à l'étendue du comté de Cornwallis et à la distance où il se trouve des places d'éducation publiques, il est nécessaire et urgent de bâtir un collège dans le dit comté pour l'instruction de la jeunesse.

2^o *Résolu*, Qu'il soit ouvert immédiatement dans toutes les paroisses du dit comté une souscription volontaire, soit en argent ou en matériaux pour être employés à l'achat d'un terrain et à la bâtisse du dit collège.

3^o *Résolu*, Qu'il soit présenté une humble adresse aux trois branches du parlement provincial, à sa prochaine session, demandant une aide pour les fins susdites.

4^o *Résolu*, Qu'il soit nommé un comité de dix-neuf membres laïques, outre les Messieurs, curés et prêtres résidans dans le dit comté, qui seront *ex-officio* membres du comité, pour mettre à effet les résolutions susdites, avec pouvoir d'y ajouter tel nombre de membres qu'il croira convenable; et aussi de faire telles règles qu'il jugera nécessaire pour son meilleur gouvernement et celui du collège.

5^o *Résolu*, Que MM. les curés et autres prêtres résidans dans le dit comté.

Rémi Puize, écuyer,	} de Sainte-Anne Lapocatière.

Appendix (W.) 14th Jany.

Mr. Benjamin Dionne, of Kakona. Louis Bertrand, Esquire, of Green Island. Joseph Ouellet, Esquire, Jean Bte. Rioux, Esquire. Pierre Gauvreau, Esquire, Mr. Jacques Hugues, Mr. Daniel McKinnan, of Matane, do compose the said Committee.

6th. Resolved, That the said Committee do meet in the Presbytere of Kamouraska, on Wednesday the tenth of January next, at ten in the forenoon, for the purpose of carrying the foregoing resolutions into effect; and that notice thereof be given to the absent Members of the said Committee by the Chairman of this Meeting.

7th. Resolved, That the foregoing Resolutions be communicated to His Lordship the Catholic Bishop of Quebec, with a request that he will be pleased to receive the same favorably and lay them before His Excellency the Governor in Chief for his approbation.

Presbytere of Kamouraska, 25th Decr. 1826.

PASCAL TACHE', Chairman of the Meeting.

Kamouraska, 1st January 1827.

Gentlemen,

I transmit you a copy of the Resolutions passed at a Meeting held in the Presbytere of Kamouraska, on Thursday the 29th ultimo, for the purpose of considering the expediency of erecting a College in the said County. You will perceive by those Resolutions, that you are named Members of the Committee appointed for carrying the said Resolutions into effect; and that the Committee are to meet for this purpose in the Presbytere of Kamouraska, on Wednesday the 10th instant at ten o'clock in the morning.

I am,

Gentlemen,

Your most obedient servant,

PASCAL TACHE', Chairman.

To Messrs.

Kamouraska, 2nd January 1827.

My Lord,

I have the honor of transmitting you a copy of the Resolutions passed at a Meeting held in the Presbytere of Kamouraska, on the 28th of last month, for the purpose of considering the expediency of establishing a College in this County.—I have taken the liberty of subjoining to the said Resolutions a Statement of the Population of the County, for the purpose of affording to your Greatness the means of judging of the reasons by which the deliberations of the meeting were influenced.—By your favorable reception of the said Resolutions, and by laying a copy thereof and of the Statement of the Population, before His Excellency the Governor in Chief, you will confer a particular obligation on one, who is with the most profound respect.

My Lord,

Your Greatness'

Very humble and obedient servant,

PASCAL TACHE'.

To the Lord Catholic Bishop of Quebec.

Presbytere of Kamouraska, 10th January 1827, 10 A. M.

The Committee appointed at the Meeting of the Inhabitants of the County, held on the 28th December last, for the purpose of carrying into effect the Resolutions passed at the said Meeting, met this day, at 10 A. M. in the Presbytere of Kamouraska.

PRESENT:—The Revd. Jacques Varin, Arch Priest, and Curate of Kamouraska.

The Revd. Mr. Leclaire, Priest and Curate of St. André.

The Revd. Mr. Hamel, Vicar of Kamouraska.

A. Dionne, Esquire,

T. Casault,

J. B. Taché,

J. Deguise,

Mr. Michel Lebel

P. Canac dit Marquis, Esquire, of St. André.

Appendice (W.) 14. Jany.

M. Benjamin Dionne, de Kakona. Louis Bertrand, écuyer, de l'Île Verte. Joseph Ouellet, écuyer, Jean Bte. Rioux, écuyer, Pierre Gauvreau, écuyer, M. Jacques Hugues et M. Daniel McKinnan, de Matane, composent le dit comité.

6° Résolu, Que le dit comité s'assemblera au presbytere de Kamouraska, mercredi le dix janvier prochain, à dix heures du matin, pour mettre à effet les résolutions ci-dessus, et que notice en soit donnée par le président de cette assemblée aux membres absents du dit comité.

7° Résolu, Que les susdites résolutions soient communiquées à Sa Grandeur Monseigneur l'Evêque Catholique de Québec, le priant de vouloir bien les accueillir favorablement et les soumettre à Son Excellence le gouverneur en chef pour son approbation.

Presbytere de Kamouraska, 28 décembre 1826.

PASCAL TACHE', Président de l'assemblée.

Kamouraska, 1er janvier 1827.

Messieurs,

Je vous transmet copie des résolutions d'une assemblée qui a eu lieu dans le presbytere de Kamouraska, jeudi le 29 du mois dernier, à l'effet de considérer s'il est expédient d'ériger un collège dans ce comté. Vous verrez par ces résolutions, que vous êtes nommés membres du comité établi pour mettre ces résolutions à effet, et que le comité doit s'assembler à cette fin mercredi le dix du courant à dix heures du matin dans le presbytere de Kamouraska.

Je suis,

Monsieur,

Votre obéissant serviteur,

PASCAL TACHE',

Président.

A Messieurs.

Kamouraska, 2 janvier 1827.

Monseigneur,

J'ai l'honneur de vous transmettre copie des résolutions d'une assemblée qui a eu lieu dans le presbytere de Kamouraska le 28 du mois dernier, à l'effet de déterminer s'il est nécessaire d'avoir un collège dans ce comté. J'ai pris la liberté de joindre à ces résolutions copie de l'état de la population du comté, afin de donner à votre grandeur une idée des raisons qui ont guidé les délibérations de l'assemblée. En accueillant favorablement cette communication et mettant devant Son Excellence le gouverneur en chef une copie de ces résolutions et du tableau de la population, vous obligerez d'une manière particulière celui qui est avec le plus profond respect.

Monseigneur,

De Votre Grandeur,

Le très humble et obéissant serviteur,

PASCAL TACHE'.

A Monseigneur, l'évêque catholique de Québec.

Presbytere de Kamouraska, 10 janvier 1827, 10 h. A. M.

Le comité nommé par l'assemblée des habitans de ce comté, le 28 décembre dernier, à l'effet de mettre à exécution les résolutions de la dite assemblée, s'est assemblé ce jour, dans le presbytere de Kamouraska à dix heures du matin.

PRESENS:—Messire Jacques Varin, Archiprêtre et curé de Kamouraska.

“ Leclaire, prêtre et curé de Saint-André.

“ Hamel, vicaire de Kamouraska.

A. Dionne, écuyer,

T. Casault, écuyer,

J. B. Taché, écuyer,

J. Deguise, écuyer,

Monsieur Michel Lebel,

P. Canac dit Marquis, écuyer, Saint-André.

Appendice
(W.)
14 Janv.

Pascal Taché, Esquire, Chairman of the Meeting held on the 28th December last, delivered to the Committee the minutes of the proceedings of the Meeting at which he presided.

After which the following Resolutions were adopted.

1st. *Resolved*, That it is expedient to appoint a Chairman and two Deputy Chairmen, a Secretary and Assistant Secretary, and a Treasurer of this Committee.

2nd. *Resolved*, That Amable Dionne, Esquire, be Chairman.

The Revd Jacques Varin,
Revd. Pierre Flavien Leclerc, } Deputy Chairmen.
Jean Baptiste Taché, Esquire, Secretary.
The Revd. Hubert Hamel, Assistant Secretary ;
Pierre Canac dit Marquis, Esquire, Treasurer.

Rules adopted by the Committee for the conduct of their business :

1st. *Resolved*, That this Committee do meet in the Presbytere of Kamouraska, on the first Thursday in every Month, at 10 o'clock in the forenoon, whenever the same shall not be a Holiday.

2nd. *Resolved*, That whenever such Thursday shall be a Holiday the Committee shall meet on the following day at the same hour as above mentioned.

3rd. *Resolved*, That nine Members present, the Chairman, Deputy Chairmen, Secretary, Assistant Secretary and Treasurer being included, shall form a Quorum of this Committee, competent to proceed to the despatch of business.

4th. *Resolved*, That the Rule fixing the Quorum shall be considered permanent, and shall not be changed except by a majority of at least two thirds of the Members of this Committee.

5th. *Resolved*, That on the appearance of a Quorum the Chairman, or in his absence the Senior of the Deputy Chairmen present at the meeting, shall take the Chair, and the Members shall be called to order.

6th. *Resolved*, That the Chairman or Deputy Chairman occupying the Chair, shall cause order and decorum to be observed, and shall decide all questions of order, subject to an appeal to the Members of the Committee.

7th. *Resolved*, That the Chairman, or the Deputy Chairman in the Chair shall not take part in the debates, and shall not vote in any case except when the Committee shall be equally divided.

8th. *Resolved*, That the Deputy Chairmen when not in the Chair, the Secretary, Assistant Secretary and Treasurer shall be on all occasions capable of voting on the questions debated in this Committee.

9th. *Resolved*, That whenever the Chairman or the Deputy Chairman in the Chair, shall be required to explain a point of order or of practice, he is to cite the rule applicable to the case, without argument or comment.

10th. *Resolved*, That when two or more Members shall rise at the same time, the Chairman or Deputy Chairman in the Chair, shall name the member who is to speak first ; but the other or others may appeal to the Committee if dissatisfied with his decision, by putting the question, " who rose first ? "

11th. *Resolved*, That every Member shall, before speaking, rise up uncovered, and address himself to the Chairman, or to the Deputy Chairman in the Chair.

12th. *Resolved*, That every Member present, when the question is put for a division of the Committee, shall vote for or against the same.

13th. *Resolved*, That any Member called to order shall sit down, unless he be permitted to explain ; and if he appeals to the Committee, the case shall be decided without debate.

14th. *Resolved*, That all propositions shall be made to the Chairman or Deputy Chairman, by motion in writing ; and shall not be received unless seconded ; of which motions every Member present shall have a right to take communication, and to require that the same be read by the Chairman or Deputy Chairman in the Chair, previously to their being voted on.

15th. Mr. Taché moved to resolve, seconded by Mr. Casault, That any Member of this Committee who shall be absent from more than three of the fixed meetings of this Committee consecutively, without permission, or valid excuse, shall be excluded from the said Committee, and his place filled by another member, taken from the same Parish as the Member who shall have been excluded.

The Reverend Mr. Leclerc moved as an amendment, seconded by the Reverend Mr. Varin, that after the words " any Member of this Committee," there be added the words, " Gentlemen in holy orders excepted."

The Committee divided on the motion of amendment :

For the motion 3
Against it 10.

So it passed in the negative.

The question being then put on the main motion ; the Committee divided :

For the motion 10
Against it 3.

Pascal Taché, écuyer, président de l'assemblée du 28 décembre dernier, a délivré au comité les minutes des procédés de l'assemblée qu'il a présidé.

Après quoi, les résolutions suivantes ont été adoptées :

1^o *Résolu*, Qu'il est expédient de nommer un président et deux vices-présidents, un secrétaire, un assistant secrétaire et un trésorier à ce comité.

2^o *Résolu*, Qu'Amable Dionne, écuyer, soit président,
" Messire Jacques Varin, } vices-présidents.
" Messire Pierre Flavien Leclerc, }
" Jean Bte Taché, écuyer, secrétaire,
" Messire Hubert Hamel, assistant secrétaire,
" Pierre Canac dit Marquis, écuyer, trésorier.

Règles adoptées par le comité pour la conduite des affaires.

1^o *Résolu*, Que ce comité s'assemblera dans le presbytère de Kamouraska, le premier jeudi de chaque mois à dix heures du matin, lorsque ce jour ne sera point un jour de fête.

2^o *Résolu*, Que lorsque le jeudi se trouvera être un jour de fête la séance de chaque mois aura lieu le jour suivant à la même heure que ci-dessus fixée.

3^o *Résolu*, Que neuf membres présents, le président, vices-présidents, le secrétaire, assistant secrétaire et trésorier compris, formeront le Quorum de ce comité, compétent pour procéder à l'expédition des affaires.

4^o *Résolu*, Que la règle qui forme le Quorum de ce comité sera considérée comme permanente et ne pourra être changée que par la majorité au moins de deux tiers des membres de ce comité.

5^o *Résolu*, Que sur l'apparence d'un Quorum le président ou en son absence le plus ancien des vices-présidents présent à l'assemblée, prendra la chaire et les membres seront appelés à l'ordre.

6^o *Résolu*, Que le président ou vice-président à la chaire fera observer l'ordre et le decorum et décidera toutes questions d'ordre, sauf appel aux membres de ce comité.

7^o *Résolu*, Que le président ou vice-président à la chaire ne prendra aucune part aux débats ni ne votera en aucun cas, excepté lorsque le comité sera également divisé.

8^o *Résolu*, Que les vices-présidents non à la chaire, le secrétaire, assistant secrétaire et trésorier seront en tout temps habiles à voter, sur toutes les questions agitées devant ce comité.

9^o *Résolu*, Que quand le président ou vice-président à la chaire sera requis d'expliquer un point d'ordre ou de pratique, il doit citer la règle applicable au cas, sans argument ni commentaire.

10^o *Résolu*, Que quand deux ou plusieurs membres se leveront en même temps, le président ou vice-président à la chaire nommera le membre qui parlera le premier, mais l'autre ou les autres pourront en appeler au comité s'ils ne sont pas contents de la décision, en mettant la question " qui s'est levé le premier ? "

11^o *Résolu*, Que chaque membre avant que de parler se levera découvert et s'adressera au président ou vice-président à la chaire.

12^o *Résolu*, Que tout membre présent, quand on pose une question pour une division du comité doit voter pour ou contre.

13^o *Résolu*, Qu'un membre appelé à l'ordre doit s'asseoir, à moins qu'il ne lui soit permis de s'expliquer, et s'il appelle au comité, le cas sera décidé sans débats.

14^o *Résolu*, Que toutes propositions seront faites au président ou vice-président par motions écrites, et ne seront reçues que lorsqu'elles auront été secondées, desquelles motions tous membres présents auront droit d'avoir communication et d'en requérir la lecture du président ou vice-président à la chaire, avant qu'il soit voté sur icelles.

15^o M. Taché a proposé de résoudre, secondé par M. Casault, qu'aucun membre qui s'absentera plus de trois fois de suite des séances fixes de ce comité sans permission ou excuses valables, sera exclus de ce comité, et remplacé par un autre qui sera pris dans la paroisse de celui qui aura été expulsé.

Messire Leclerc a proposé en amendement, secondé par Messire Varin, qu'après les mots qui s'absentera il soit ajouté " les Messieurs du clergé excepté."

Le comité s'est divisé sur la motion d'amendement :

Pour 3
Contre 10.

Ainsi elle a passé dans la négative.

La question étant alors mise sur la motion principale ; le comité s'est divisé :

Pour 10
Contre 3.

Appendix
(W.)

14th Jany.

So it was carried in the affirmative, and

Resolved, Accordingly.

16th. *Resolved*, That the Secretary, or, in his absence, the Assistant Secretary, shall keep a Journal of the proceedings of this Committee; and that at the opening of each sitting that part of the Journal which contains the proceedings at the preceding sitting, shall be read and compared with the original motions; and to this journal every Member shall at all times have access, without, however, its being in the power of any Member to take the same out of the possession of the Secretary who shall be responsible for it to the Committee.

17th. *Resolved*, That whenever the Committee shall divide, the names shall be taken, if three Members shall require it.

18th. *Resolved*, That a motion to adjourn shall always be in order, and shall be decided before any other motion.

19th. *Resolved*, That this Committee may, when the case requires it, increase the number of its sittings, and prolong the same for as long a time as may be necessary.

On motion of Mr. Taché, seconded by Mr. Benjamin Dionne,

Resolved, That considering the population and extent of the County of Cornwallis, and its distance from the places of public education, it is urgently necessary that a College for the education of youth, should be erected in the most convenient place within the said County.

Resolved, That considering its present population, the healthiness of the place, and its convenient distance with respect to the future formation of a judicious subdivision of places of education when the population shall require it, the Parish of Kamouraska is the most convenient place for the erection of the said College.

Mr. Michel Lebel, one of the Members of the Committee, laid before them an offer on the part of his brother Mr. Antoine Lebel, conceived in these terms:

To Amable Dionne, Esquire, Chairman of the Committee for the erection of a College in the County of Cornwallis:

Sir,

If the College which it is intended to erect in this County should be built on the piece of ground lying on the north side of the Church of this Parish, I bind myself to make a donation to the Fabrique, of an extent of ground equal to that of the ground occupied by the College on the South side of the burial ground, and to give up the enjoyment of such ground to the Fabrique as soon as it shall be required for the enlargement of the burial ground.

Kamouraska, 10th January 1827.

(Signed) ANTOINE LEBEL.

Mr. Taché, another Member of this Committee, laid before the Chairman, an offer made by Doctor Horsman, conceived in these terms:

In case a College should be erected, as it is intended, at Kamouraska, I bind myself to give for the support of the said College, a piece of ground lying in the first range of Concessions in the Seigniorie of Kamouraska, containing about seven arpents, and bounded as follows: on the South by the King's highway; on the North partly by Pascal Taché, Esquire, and partly by the River Saint Lawrence; on the one side of the North East, partly by Pascal Taché, Esquire, and partly by Pierre Racine; and on the South West by François Lebel, on condition that I shall continue to enjoy the said property until the said College shall be erected and in operation, and that it shall remain the property of the said College for ever, without being conveyed in any manner whatever; and that if the said College should hereafter cease to exist as a place for the education of youth, the said property shall revert to me *en propre*, or to my successors; reserving to myself the cart-road across the said property, as a means of access to certain other property belonging to me, and nothing more.

Kamouraska, 10th January 1827.

(Signed) THOS. HORSEMAN.

On motion of Mr. Taché, seconded by Mr. Casault,

Resolved, That the offers made by Messrs. Horsman and Lebel, be entered in the Journal of this Committee.

Resolved, That the piece of ground belonging to the Fabrique of Kamouraska, and lying on the North side of the Church, would be the most convenient site for the erection of the said College.

Resolved, That it be proposed to the Landholders of the Parish and Seigniorie of Kamouraska, at a General Meeting called together in the usual legal form, to exchange the piece of ground lying on the north side of the Church of Kamouraska, and considered as the most convenient site for the said College, for that offered by Mr. Antoine Lebel.

Resolved, That an humble address be presented to His Greatness the Lord Catholic Bishop of Quebec, praying him to be pleased to approve the exchange above mentioned, as well as the intended establishment, to which he shall be humbly prayed to grant his protection.

Resolved, That Mr. Chairman, the Reverend Mr. Varin, Mr. Casault, Mr. Deguise, Mr. Marquis, the Reverend Mr. Hamel, the Reverend Mr. Leclerc, and Mr. Taché, do prepare the said address.

Resolved, That an estimate of the probable amount of the necessary expenses of erecting the said College, be laid before this Committee at the next sitting thereof.

Ainsi elle a passé dans l'affirmative.

Résolu, en conséquence.

16^o *Résolu*, Que le secrétaire ou à son absence l'assistant secrétaire tiendra un journal des procédés de ce comité, et à l'ouverture de chaque séance la partie du journal qui contiendra les procédés de la séance précédente sera lue et comparée avec les motions originales, auquel journal chaque membre du comité aura accès en aucun temps sans toutefois pouvoir en déposséder le secrétaire ou assistant secrétaire qui en seront responsables à ce comité.

17^o *Résolu*, Que dans les divisions du comité les noms seront pris si trois membres l'exigent.

18^o *Résolu*, Qu'une motion d'ajournement sera toujours d'ordre, et décidée avant toutes autres motions.

19^o *Résolu*, Que ce comité pourra quand le cas le requerra augmenter le nombre de ses séances, et les prolonger aussi long-temps qu'il le deviendra nécessaire.

Sur motion de M. Taché, secondé par M. Benjamin Dionne.

Résolu, Qu'en égard à la population et à l'étendue du comté de Cornwallis et à la distance où il se trouve des places d'éducation publique, il est nécessaire et urgent de bâtir un collège dans l'endroit le plus convenable de ce comté pour l'éducation de la jeunesse.

Résolu, Qu'en égard à la population actuelle, à la salubrité de l'endroit, à la distance convenable pour former par la suite une subdivision judicieuse des places d'éducation lorsque la population le requerra, la paroisse de Kamouraska est le lieu le plus convenable pour ériger ce collège.

M. Michel Lebel, un des membres de ce comité, a présenté une offre de la part de son frère M. Antoine Lebel, conçue en ces termes:

" A Amable Dionne, écuyer, président du comité pour l'érection d'un collège dans le comté de Cornwallis.

Monsieur,

" Si le collège que l'on se propose d'ériger dans ce comté est bâti sur le terrain qui se trouve au nord de l'église de cette paroisse, je m'oblige de faire un don à la fabrique d'une pareille étendue de terrain au sud du cimetière que le collège pourra occuper au nord de l'église, et d'abandonner la jouissance de ce terrain à la fabrique aussitôt qu'elle en aura besoin pour l'agrandissement du cimetière.

Kamouraska, 10 janvier 1827.

(Signé) " ANTOINE LEBEL "

M. Taché, un autre membre de ce comité, a mis devant le président une offre de Monsieur le Docteur Horsman, conçue en ces termes:

" Dans le cas qu'un collège serait érigé à Kamouraska, tel que proposé, je m'oblige de donner pour le soutien du dit collège, un terrain situé au premier rang des concessions de la seigneurie de Kamouraska, contenant environ sept arpens en superficie, qui borne comme suit: par le sud au chemin du roi, au nord, partie à Paschal Taché, écuyer, et l'autre partie au Fleuve Saint-Laurent, d'un côté au nord-est, partie au dit Pascal Taché, écuyer, et l'autre partie à Pierre Racine, et au sud-ouest à François Lebel, à la condition que je jouirai du dit terrain jusqu'à ce que le dit collège soit érigé et en opération et qu'il demeure comme fond du dit collège à perpétuité, sans qu'il soit transféré d'aucune autre manière quelconque, et que si le dit collège vient à cesser d'exister pour l'éducation de la jeunesse, que le dit terrain me reviendra en propre ou à mes successeurs, avec réserve d'un chemin de charrette convenable sur le dit terrain qui m'appartient; et rien de plus.

" Kamouraska, 10 janvier 1827.

(Signé) " THOS. HORSMAN "

Sur motion de M. Taché, secondé par M. Casault.

Résolu, Que les offres de MM. Horsman et Lebel soient couchées sur le journal de ce comité.

Résolu, Que le terrain de la Fabrique de Kamouraska, qui se trouve au nord de l'église serait le site le plus convenable pour ériger le dit collège.

Résolu, Qu'il soit proposé aux tenanciers de la paroisse et seigneurie de Kamouraska, dans une assemblée générale convoquée suivant les formes usitées et légales, d'échanger le terrain offert par M. Antoine Lebel pour celui qui se trouve au nord de l'église de Kamouraska, considéré comme le plus convenable pour ériger le dit collège.

Résolu, Qu'une humble adresse soit présentée à Sa Grandeur Monseigneur l'Evêque Catholique de Québec, le priant de vouloir bien approuver l'échange ci dessus mentionnée, ainsi que l'établissement proposé, auquel il sera prié humblement d'accorder sa protection.

Résolu, Que Monsieur le président, Messire Varin, M. Casault, M. Deguise, M. Marquis, Messire Hamel, Messire Leclerc et M. Taché préparent la dite adresse.

Résolu, Qu'il soit mis devant ce comité à sa prochaine séance une estimation des dépenses probables nécessaire pour l'érection du dit collège.

Appendice
(W.)

14 Jany.

Appendix
(W.)
14th Jany.

Resolved, That on the receipt of the answer of His Greatness the Lord Catholic Bishop, the Chairman shall call a special meeting of this Committee, for the purpose of communicating the same to them.

On motion of Mr. Casault, seconded by Mr. Marquis,

Resolved, That the execution of the third Resolution passed at the Meeting of the 28th December last, "That an aid should be prayed from the three branches of the Provincial Parliament, for erecting the said College," be suspended until the return of the subscriptions be made to the Committee.

Resolved, That the subscription which was to be opened for defraying the necessary expenses of purchasing the site of, and erecting the said College, be suspended until the answer of His Greatness the Lord Catholic Bishop of Quebec, to the address which is to be presented to him from this Committee, shall have been received.

Resolved, That the rules and resolutions of this Committee passed this day, be communicated to the Members absent from this meeting, by the Chairman of this Committee.

Resolved, That the thanks of this Committee be given to François Blanchet, of Quebec, Esquire, for the peculiar interest he has manifested to the inhabitants of this County, for the establishment of a College for their use; and also to Doctor Horseman and Mr. Antoine Lebel, for the donations they offer to make in aid of the establishment of the said College.

Resolved, That this Committee do adjourn.

A. DIONNE.

Presbytère of Kamouraska, 1st February 1827.

Mr. Chairman laid before the Committee a letter from His Lordship the Catholic Bishop of Quebec, conceived in these terms:

(A.)

Sir,

It is impossible not to praise the zeal shown by the most distinguished inhabitants (both Ecclesiastics and otherwise,) of the County of Cornwallis, for the establishment, in a central situation within the said County, of a College in which young persons may receive instruction in the higher branches of science. This is indeed a thing much to be desired for so extended a tract of country and so numerous a population; but the establishment of a College is not the work of a day. Not only large and spacious buildings, but a permanent revenue for their maintenance, and for paying the salaries of the Professors, are absolutely required; and it is not by occasional pecuniary aids which it would be necessary to solicit from time to time, that these expenses could be met.

As regards myself, in the place I occupy, it would be impossible for me to provide Ecclesiastics, as masters in a College, unless their maintenance was to be provided for, out of a revenue arising from property attached to the College, and not out of a precarious income, which would deprive the superior Ecclesiastics of all authority and superintendence over establishments of this nature. I think, then, that before proceeding to build a College, such as I understand it, it would be right to begin by establishing, in the principal parishes of the County, good Elementary Schools. I shall not however fail to lay before His Excellency the Governor in Chief, the Resolutions passed at the Meeting of the 28th December last, as well as the statement of the population of the County.

I have the honor to be, with much consideration,

Sir,

Your very humble and very obedient servant,

+ BERN. CL., Bishop of Quebec.

Quebec, 8th January 1827,
Pascal Taché, Esquire.

On motion of Mr. Taché, seconded by Mr. Deguise,

Ordered, That the said Letter be now taken into consideration.

Mr. Taché moved to resolve, seconded by Mr. Deguise, That a circular letter be addressed by the Chairman of this Committee to Messieurs the Rectors and Churchwardens of the several Parishes in this County, in which no School has been established, inviting them to take advantage of the Act of the fourth year of His Majesty's Reign, Chapter 31, and to establish Schools in their respective Parishes.

On this motion the Committee divided:

For the motion 4

Against it 7

So it passed in the negative,

And the names having been demanded, they were taken as follows:

For the motion:

Messrs Casault, Deguise, Chamberland and Taché.

Against it:

Messrs Varin, Curate of Kamouraska, Bourgette, ditto of Trois-Pistoles, Leclerc, ditto of Saint-André, Gosselin, Vicar of Rivière Ouelle, Hamel, ditto of Kamouraska, B. Dionne et Marquis.

After which the Chairman laid before the meeting the draught of the address to His Greatness the Lord Catholic Bishop of Quebec, ordered at the last meeting, which was unanimously adopted, in the following terms:

Appendice
(W.)
14 Jany.

Résolu, Que sur la reception de la réponse de Sa Grandeur Monseigneur l'Evêque catholique, le président convoquera une assemblée spéciale de ce comité pour lui en donner communication.

Sur motion de M. Casault, secondé par M. Marquis.

Résolu, Que l'exécution de la 3e. résolution de l'assemblée du 28 décembre dernier, tendante à demander une aide aux trois branches du parlement provincial pour ériger le dit collège soit suspendue jusqu'à ce que le retour des souscriptions soit fait à ce comité.

Résolu, Que la souscription qui devait être ouverte pour subvenir aux dépenses nécessaires pour l'achat d'un terrain et la bâtisse du dit collège soit suspendue jusqu'à la reception de la réponse de Sa Grandeur Monseigneur l'Evêque catholique de Québec, à la requête qui doit lui être présentée par ce comité.

Résolu, Que les règles et résolutions de ce Comité, passées ce jour soient communiquées par le Président de ce Comité aux membres absens de cette Assemblée.

Résolu, Que les remerciemens de ce Comité soient faits à François Blanchet, écuyer, de Québec, pour l'intérêt particulier qu'il a manifesté aux habitans de ce comté pour l'établissement d'un collège à leur usage, et aussi à Messieurs le Docteur Horsmann et Antoine Lebel pour les dons qu'ils offrent de faire pour l'établissement du dit collège.

Résolu, Que ce Comité s'ajourne.

A. DIONNE.

Presbytère de Kamouraska, 1er Février 1827.

Mr. le Président a mis devant le Comité une lettre de Sa Grandeur Monseigneur l'Evêque Catholique de Québec, conçue en ces termes:

(A.)

Monsieur,

On ne peut que louer le zèle que les personnes les plus notables, tant ecclésiastiques que laïques du comté de Cornwallis, montrent pour avoir dans un endroit central du comté, un collège pour y enseigner aux jeunes gens les hautes sciences. Ce serait bien une chose à désirer pour une si grande étendue de pays, et une si nombreuse population. Mais les collèges ne se sont pas établis d'un seul coup. Il faut non-seulement des édifices longs et spacieux; mais encore des revenus assurés pour leur entretien, et les salaires des professeurs. Ce ne sont pas quelques secours pécuniaires, qu'on se verrait obligé de solliciter de tems à autre, qui pourraient y suffire.

Pour moi, dans la place que j'occupe, je ne pourrais fournir des ecclésiastiques pour enseigner dans un collège, qu'autant qu'ils pourraient y être soutenus par les revenus de fonds attachés à ce collège, et non, par des revenus précaires, qui ôteraient aux supérieurs ecclésiastiques toute autorité et surveillance sur ces sortes d'établissements. Je pense donc, qu'avant d'en venir à la bâtisse d'un collège, tel que je l'entends, il faut commencer par établir dans les principales paroisses du comté de bonnes écoles élémentaires. Cependant, je ne manquerai pas de mettre sous les yeux de Son Excellence le Gouverneur en Chef les résolutions des Messieurs de l'Assemblée du 28 Décembre dernier, ainsi que l'état de la population du Comté.

J'ai l'honneur d'être avec beaucoup de considération,

Monsieur,

Votre très-humble et très-obéissant serviteur,

+ BERN. CL., Evêque de Québec.

Québec, 8 Janvier 1827.
Pascal Taché, écuyer.

Sur motion de Mr. Taché, secondé par Mr. Deguise, ordonné que la dite lettre soit maintenant prise en considération.

Mr. Taché, secondé par Mr. De Guise, a proposé de résoudre, Qu'une lettre circulaire soit adressée par le Président de ce Comité à Messieurs les Curés et Marguilliers des différentes Paroisses de ce Comté où il n'y a point d'écoles établies, les invitant à faire usage de l'Acte de la 4e année du règne de Sa Majesté, chapitre 31, pour établir des Ecoles dans leurs paroisses respectives.

Sur cette proposition le Comité s'est divisé:

pour la motion 4

Contre 7

Ainsi elle a passé dans la négative,

Et les noms ayant été demandés, ils ont été pris comme suit:

Pour la motion:

Messieurs Casault, De Guise, Chamberland et Taché;

Contre:

Messieurs Varin, Curé de Kamouraska, Bourgette ditto Trois-Pistoles, Leclair ditto Saint-André, Gosselin, Vicaire, Rivière Ouelle, Hamel ditto Kamouraska, B. Dionne et Marquis.

Après quoi, Mr. le Président a soumis au Comité le projet d'adresse ordonné par la dernière Assemblée de ce Comité, à Sa Grandeur Monseigneur l'Evêque Catholique de Québec, lequel a été adopté unanimement dans les termes suivans:

Appendix
(W.)

14th Jany.

To His Greatness the very Illustrious and very Reverend Bernard Claude, Lord Bishop of Quebec.

The humble Petition of the Committee appointed, on the 28th December last, at a meeting of the inhabitants of the County of Cornwallis, held in the Presbytere of Kamouraska, for the purpose of carrying into effect the Resolution of the said meeting, tending to effect the erection of a College in the said County, humbly representeth to Your Greatness ;

That considering it necessary before opening a subscription for the erection of the said College, to fix upon the place where it should be built, and to obtain the consent and protection of Your Greatness for the formation of the said establishment, the said Committee, at a meeting thereof on the 10th of last month, considering the present population, the healthiness of the place, and its convenient distance, with respect to the future formation of a judicious subdivision of places of public education when the population shall require it, fixed on the Parish of Kamouraska as the most convenient place for the erection of the said College.

That the piece of ground belonging to the Fabrique of the said Parish, lying on the north side of the Church, being considered the most convenient spot for the site of the said establishment, application was made (at a general meeting of the Landholders of the said Parish, called together according to the legal forms,) to obtain the said piece of ground in exchange for a like extent of ground on the south side of the burial ground, offered by Mr. Antoine Lebel, at which meeting the said exchange was unanimously agreed to, as appears by the record (*Acte*) of the deliberations of the said meeting hereunto annexed.

That the necessity of education is so forcibly and so generally felt throughout this County, and that the zeal manifested by the inhabitants for the promotion of the means of obtaining it is such, that the said Committee have every reason to believe that a stone building of two stories, eighty feet long by forty feet wide, might be built with the greatest readiness, by voluntary subscriptions in the said County, without any need of assistance from other quarters.

That some Landholders have already set the example of offering to make donations of land for the support of the said College, which example the Committee have every reason to believe will be followed by much more considerable offers for the same purpose, if Your Greatness will condescend to grant your protection to this establishment.

That the said Committee, emboldened by the extraordinary zeal Your Greatness has at all times manifested in promoting, by every means in your power, the progress of education, address themselves with confidence to Your Greatness, and pray that you will be pleased to approve the exchange of the ground above mentioned, which would take away the greatest obstacle which the Committee have now to overcome in the erection of the said College.

That under the protection of Your Greatness, the Committee have no doubt that the said College may hereafter be maintained, as well by the endowments which it may receive from individuals as by the sums paid by the scholars, and be productive of that good to the inhabitants of the County which Your Greatness has shown yourself at all times so anxious to promote.

That if the erection of the said College should meet the approbation of Your Greatness, the County will in a short time see with satisfaction the commencement of an establishment, wherein a great number of young persons, attracted at once by the liberal protection which it will please Your Greatness to afford them, and by the reputation of the place, will come to imbibe the principles of that mild religion and that pure education, for the progress of which Your Greatness is so sincerely anxious.

Kamouraska, 1st February 1827.

On motion of Mr. Casault, seconded by Mr. Marquis, the Committee adjourned.

A. DIONNE, Chairman.

Presbytere of Kamouraska, 1st March 1827.

Mr. Chairman laid before the Committee a Letter from His Lordship the Catholic Bishop of Quebec, conceived in these terms :

(B.)

Sir,

I have received your Petition of the 1st February in the present year, together with that of the principal inhabitants and the Church Wardens of the Parish of Kamouraska, dated the same day, (accompanied by an *acte de délibération*, on the part of the said Church Wardens, dated the 14th January last,) asking my approbation of the erection of a College in the said Parish on a piece of ground belonging to the Fabrique, and lying on the north side of the Church, which ground is to be compensated by another piece of like extent on the south side of the Burial Ground, given to the Fabrique by Mr. Antoine Lebel.

In answer to the said Petitions and *acte de délibération* on the part of the Committee of Messrs. the Curate and principal inhabitants of the Parish and of the meeting of the Church Wardens, I will confess to you that I am unable sufficiently to praise the zeal of the inhabitants of the said Parish for the advancement of the sciences ; and that I look on the Parish of Kamouraska as the most central place within the County of

A Sa Grandeur Monseigneur l'Illustrissime et Révérendissime Bernard Claude, Evêque de Québec.

L'humble requête du Comité nommé le 28 Décembre dernier par une assemblée des habitans du comté de Cornwallis dans le presbytère de Kamouraska, aux fins de mettre à effet les résolutions de la dite assemblée tendantes à faire ériger un collège dans ce Comté, représente humblement à votre Grandeur ;

Que considérant qu'avant d'ouvrir une souscription pour l'érection du dit collège, il était préalablement nécessaire de fixer l'endroit où il devrait être érigé et obtenir le consentement et la protection de votre Grandeur pour former cet établissement, le dit comité dans sa séance du 10 du mois dernier aurait, eu égard à la population actuelle, à la salubrité de l'endroit, à la distance convenable pour former par la suite une subdivision judicieuse des places d'éducation publique lorsque la population le requerra, fixé la paroisse de Kamouraska comme le lieu le plus convenable pour ériger un collège.

Que cette partie du terrain de la fabrique de cette paroisse située au nord de l'Eglise étant considérée comme la place la plus convenable pour le site de cet établissement, application aurait été faite dans une assemblée générale des tenanciers de cette paroisse, convoquée suivant les formes légales, pour obtenir ce terrain en échange pour une pareille étendue de terre, que le Sieur Antoine Lebel offre au sud du Cimetière, laquelle assemblée aurait unanimement consenti à cet échange comme appert par le record (*acte*) des délibérations de la dite assemblée ci-joint.

Que le besoin d'éducation est si fortement et si généralement senti dans ce comté, et le zèle que ses habitans manifestent pour en promouvoir les moyens est tel, que le dit comité a tout lieu de croire qu'un édifice en pierre à deux étages, de quatrevingt pieds de longueur sur 40 de large, pourrait être fait avec la plus grande promptitude par souscription volontaire dans ce comté, sans avoir besoin d'aucune assistance étrangère.

Que des propriétaires de fonds ont déjà donné l'exemple d'offres de faire des donations de bien-fonds pour le soutien du dit collège, lequel exemple le dit comité a tout lieu de croire, sera suivi d'offres beaucoup plus considérables pour les mêmes fins, si votre grandeur daigne accorder sa protection à cet établissement.

Que le dit comité enhardi par le zèle extraordinaire que votre grandeur a de tout temps manifesté pour promouvoir par tous les moyens en son pouvoir le bien de l'éducation, s'adresse avec confiance à votre grandeur pour la prier de vouloir bien approuver l'échange du terrain ci-dessus mentionné, ce qui leverait le plus grand obstacle que le dit comité a maintenant à rencontrer pour la bâtisse du dit collège.

Qu'avec la protection de votre grandeur le dit comité n'a aucun doute, que le dit collège pourra par la suite des temps se soutenir tant par les donations qu'il recevra des particuliers que par les pensions, et faire ce bien aux habitans du comté que votre grandeur s'est montré de tout temps si désireux de leur procurer.

Que si l'érection du dit collège peut rencontrer l'approbation de votre grandeur, l'on verra avec satisfaction naître en peu de temps, un établissement ou grand nombre d'enfans attirés tout à la fois par la protection libérale que votre grandeur voudra bien lui accorder et par la renommée du lieu, viendront de toute part pour y puiser les principes de cette religion douce et de cette éducation pure dont votre grandeur désire sincèrement les progrès.

Kamouraska, 1er février 1827.

Sur motion de M. Casault, secondé par M. Marquis, ce comité s'est ajourné.

A. DIONNE, président.

Presbytere de Kamouraska, 1er mars 1827.

M. le président a mis devant le comité une lettre de sa grandeur Monseigneur l'Evêque de Québec, conçue en ces termes :

(B.)

Monsieur,

J'ai reçu votre requête du 1er février de la présente année avec celle des notables et marguilliers de la paroisse de Kamouraska de même date, accompagnées d'un acte de délibération des dits marguilliers en date du 14 janvier dernier, demandant mon approbation pour l'établissement d'un collège dans la dite paroisse sur un terrain de la fabrique au nord de l'Eglise, lequel terrain serait remplacé par un terrain donné à la fabrique au sud du cimetière, de la même grandeur par le Sieur Antoine Lebel.

Pour réponse aux dites requêtes et actes de délibération du comité de Messrs. le curé et notables de la dite paroisse et à l'assemblée des marguilliers, je vous avouerai que je ne puis assez louer le zèle des Messieurs de cette paroisse pour l'avancement des sciences ; que je regarde la paroisse de Kamouraska comme le lieu le plus central du comté de Cornwallis pour l'établissement d'un collège, mais en même temps que je ne

Appendice
(W.)

14 Jany.

Appendix
(W.)

14th Jany.

Cornwallis for the establishment of a College; but that at the same time I cannot consent to the said Petitions and *acte de délibération* for the following reasons:

1st. Because the Fabrique as a *main morte*, cannot accept a donation of the ground offered as a compensation for that which is to be given up for the erection of a College thereon.

2nd. Because the piece of ground proposed to be ceded by the Fabrique on the north side of the Church where the inhabitants of the place are in the habit of meeting on Sundays, and even on other days of the week before Service, is not a place in which that retirement and silence so necessary to young persons engaged in the study of the sciences, can be expected.

3rd. Because the persons who propose to make the said donations in favour of this establishment, might be placed under such circumstances as would make it impossible for them to execute their intentions; and further because they could not do so without exposing themselves to the risk of nullity in these donations for the same reasons as those stated, with regard to the ground given to the Fabrique in exchange for that given as a site for the said College.

4th. Because the Bishop cannot authorise the erection of a College, as prayed for, which is in possession of no certain funds and revenue sufficient for the maintenance of the building, and for paying the salaries of the Professors whom he might send to it; and because all that could be obtained for this purpose from the Legislature would be some precarious assistance.

It would then be necessary in order to succeed in the establishment of a College, to commence (as was done at Nicolet and St. Hyacinthe,) by erecting a building which should be sufficiently spacious for the accommodation of a great number of scholars, to be educated in the first branches of useful knowledge, as reading, writing, the elements of the French and English languages, (and even the first Rudiments of the Latin; for those who were willing to devote themselves to it,) Arithmetic, &c.; that afterwards, after considerable progress should be made in these studies, well disposed persons should make donations for this purpose, either in landed property or annuities, not to the Fabrique, which by the Act of the Provincial Legislature, George IV, chapter 31, of the 9th March 1824, can only accept a certain extent of Land or a certain sum for the support of an Elementary School, but to other persons who might preserve them for this purpose, until the Royal Letters Patent of Incorporation could be obtained, as was done for the College at Nicolet. In this case I would not refuse (nor would as I think the Bishops who will succeed me,) not only to approve of the said building as a College, and to provide Professors to teach the Sciences therein; but to contribute part of my savings to its support.

I beg you to communicate this answer to the Gentlemen composing the Kamouraska Committee, and to the Church Wardens,

I am very sincerely,

Sir,

Your very humble and very obedient servant,

+ BERN. CL., Bishop of Quebec.

Quebec, 8th February 1827.

Mr. VARIN, Arch-Priest. }

On motion of Mr. Casault, seconded by Mr. Marquis,

1st. *Resolved*, That the said Letter be entered in the Journal of this Committee.

Mr. Casault, a Member of this Committee, makes an offer on the part of Pascal Taché, Esquire, in aid of the establishment of the said College, of a piece of ground lying at Kamouraska, about 12 arpents to the South West of the Church, one arpent in front by two arpents and a half in depth, having its front on the King's highway, and bounded in the rear by the property of Jean Baptiste Martin, on one side, to the South West, by that of Jean Baptiste Martin, and on the other to the North East, by that of the said Pascal Taché, Esquire.

On motion of Mr. Casault, seconded by Mr. Taché,

2nd. *Resolved*, That the said offer be accepted by this Committee; that it be entered in the Journal; and that the thanks of the Committee be given to the said Pascal Taché, Esquire, for his said offer.

3rd. *Resolved*, That the piece of ground offered this day by Pascal Taché, Esquire, as the site of the said College, is the most fit and convenient place for that purpose; and be it resolved, as the opinion of this Committee, that instead of erecting the said College on the piece of ground belonging to the Fabrique of Kamouraska, and lying on the North side of the Church, as resolved by a rule of this Committee at the sitting of the 10th January last, the said College be erected on the piece of ground offered by Pascal Taché, Esquire, as being the most convenient place for the site thereof; and that the Chairman of this Committee, do pray his Lordship the Lord Bishop of Quebec to approve this Resolution.

4th. *Resolved*, That the Chairman of this Committee do address a letter to His Greatness the Lord Bishop of Quebec, informing him that this Committee have received with the most lively gratitude the plan traced by him for the formation of this establishment, in his letter addressed to Mr. Varin, and dated the 8th February last; as well as the offer he was pleased to make, of contributing hereafter a part of his savings for its support; and that the Committee are about to adopt the most speedy means of carrying his plan into execution.

puis appointer les dites requêtes et délibération pour les raisons suivantes:

1er. Parce que la fabrique, comme main morte ne peut recevoir la donation du terrain offert en dédommagement de celui qu'elle céderait pour la bâtisse d'un collège:

2e. Que le terrain proposé par la fabrique au nord de l'église, où se rassemblent les habitans du lieu avant les offices des dimanches ou même de la semaine, n'est pas un lieu propre au recueillement et au silence qu'exigent les jeunes gens occupés à l'étude des sciences:

3e. Que les personnes qui se proposent de faire en faveur de cet établissement des donations, peuvent se trouver dans des circonstances à ne pouvoir pas exécuter leurs résolutions, et que d'ailleurs elles ne peuvent le faire sans s'exposer à ce que ces donations ne deviennent nulles, pour la même raison que le terrain donné à la fabrique en remplacement de celui qu'elle cède pour la bâtisse d'un collège.

4e. Que l'évêque ne peut autoriser la bâtisse d'un collège tel que demandé, qui n'aurait pas des fonds ou revenus assurés et suffisants pour l'entretien de l'édifice et le salaire des professeurs qu'il y enverrait; Que ce qu'on pourrait obtenir de la législature pour cet objet ne serait que quelques secours précaires.

Il serait donc nécessaire pour parvenir à l'établissement d'un collège, qu'on commençât d'abord, comme il a été fait pour Nicolet et Saint-Hyacinthe, par bâtir un édifice qui serait assez spacieux pour contenir un grand nombre d'écoliers, qui y seraient instruits dans les premières connaissances utiles, comme la lecture, l'écriture, les principes de la langue française et anglaise, même les premiers élémens de la langue latine à ceux qui voudraient s'y donner, l'Arithmétique, &c.; Qu'ensuite, après des progrès dans ces sortes d'études, des personnes bien disposées fissent des dons soit en bien fonds ou rentes pour cet objet, non pas à la fabrique qui ne peut recevoir qu'un certain terrain et une certaine somme pour le soutien d'une école élémentaire, suivant l'acte de la législature provinciale (George IV, chapitre 31,) du 9 mars 1824, mais à d'autres personnes qui pourraient les conserver pour cette fin, jusqu'à ce qu'on peut obtenir des patentes royales pour une corporation, comme il a été fait pour le collège de Nicolet.

Dans ce cas, je ne refuserais point, ni, je pense, mes successeurs évêques, non seulement d'approuver cet édifice comme collège et d'y fournir des professeurs pour y enseigner les sciences; Je vous prie de communiquer cette réponse aux Messieurs de ce comité de Kamouraska et aux marguilliers.

Je suis bien sincèrement,

Monsieur,

Votre très humble et très obéissant serviteur,

+ BERN. CL. évêque de Québec.

Québec, 8 février 1827.

Mr. VARIN, archiprêtre.

Sur motion de Monsieur Casault, secondé par Monsieur Marquis,
1^o *Résolu*, Que la dite lettre soit entrée sur le journal de ce comité.

Monsieur Casault, un des membres de ce comité, fait une offre de la part de Pascal Taché, écuyer, en aide de l'établissement du dit collège, d'un terrain situé à Kamouraska, à environ douze arpents au sud-ouest de l'église, contenant un arpent de front sur deux arpents et demie de profondeur, prenant son front au chemin du roi, et se terminant à Jean Bte. Martin, joignant d'un côté au sud-ouest à Jean Bte. Martin, et de l'autre au nord-est au dit Pascal Taché, écuyer.

Sur motion de Monsieur Casault, secondé par Monsieur Taché,

2^o *Résolu*, Que la dite offre soit acceptée par ce comité, qu'elle soit entrée sur le journal d'icelui, et que les remerciemens de ce comité soient faits au dit Pascal Taché, écuyer, pour la dite offre.

3^o *Résolu*, Que le terrain offert ce jour par Pascal Taché, écr. pour l'érection du dit collège, est l'endroit le plus propre et le plus convenable pour l'établissement d'icelui, et qu'il soit résolu comme l'opinion de ce comité, qu'au lieu de bâtir le dit collège sur le terrain de la fabrique de Kamouraska qui se trouve au nord de l'église tel que résolu par une règle de ce comité dans sa séance du dix janvier dernier, le dit collège soit érigé sur le terrain offert par le dit Pascal Taché, écuyer, comme l'endroit le plus convenable, et que le président de ce comité prie sa grandeur Monseigneur l'évêque de Québec de bien vouloir approuver cette délibération.

4^o *Résolu*, Qu'une lettre soit adressée par le président de ce comité à sa Grandeur Monseigneur l'évêque de Québec, lui exprimant que ce comité accepte avec la plus vive reconnaissance le plan qu'il a tracé pour la formation de cet établissement dans sa lettre du 8 février dernier adressée à Messire Varin, de même que les offres qu'il fait de contribuer par la suite de ses épargnes pour son soutien, et que ce comité va prendre les moyens les plus prompts pour mettre son plan à exécution.

On this Resolution the Committee divided :
For the Resolution 6
Against it 2

So it was carried in the affirmative.

5th. *Resolved*, That a subscription be immediately opened under the direction of the Members of this Committee in the several Parishes, within the County of Cornwallis, for the purpose of providing the sums of money and the materials necessary for the erection of the said College.

On motion of Mr. Deguise, seconded by Mr. Taché.

6th. *Resolved*, That a Special Committee of three Members do address the Fabrique of Kamouraska, representing the urgent necessity of establishing an Elementary School in the said Parish, and praying them to be pleased to contribute to the establishment thereof, as and in the manner provided by the Provincial Statute of the 4th George IV, intituled, "An Act to facilitate the establishment and endowment of Elementary Schools in the Parishes of this Province."

On motion of Mr. Casault, seconded by Mr. Taché,
The Committee adjourned.

J. B. TACHE',
Secretary.

The following is the answer of His Lordship the Catholic Bishop of Quebec, to the Letter addressed to him, in conformity to the 4th Resolution herein before recorded :—

(C.)

Sir,

Since the 8th of February last, when I addressed to Mr. Varin, my answer to his Letter, and to the Petition of the principal Inhabitants and Church Wardens of Kamouraska, on the subject of the erection of a College in the Parish, I have not been made acquainted that the Committee had abandoned their Resolutions, which I myself transmitted on their part to His Excellency the Governor in Chief, in order to obtain assistance of the Legislature, for the accomplishment of this object. It is, moreover, only after the expiration of a month that fresh proposals are made by the Committee : I cannot now accept them.

I have the honor to be, with much consideration,

Sir,

Your very humble and obedient servant,

+ BERN. CL., Bishop of Quebec.

Quebec, 10th March 1827,
AMABLE DIONNE, Esquire. }

(A true Copy.)

J. B. TACHE',
Secretary.

(D.)

Sir,

I have transmitted to Mr. Dionne, Chairman of the Kamouraska Committee, my answer to his Letter, which he has no doubt communicated to you, and which may likewise serve as an answer to yours of the 2nd instant. I certainly approved the plan submitted to me by Mr. Painchaud, of a School house which might hereafter be converted into a College, if funds can be obtained for its support. I did not promise him, as you state, £500 at the end of three years, at which time our College at Nicolet, which is to be commenced this spring, will not perhaps be completely finished. But I did promise to contribute something hereafter out of my savings, in case this School House should become a College, as I did, with respect to Kamouraska. It is certainly not expedient that there should be a College, properly so called, every six leagues ; but it is expedient that there should be, in every Parish, School Houses sufficiently spacious to hold all the children in the Parish, who are willing to take advantage of them.

I am very sincerely,

Sir,

Your very humble and obedient servant,

+ BERN. CL., Bishop of Quebec.

Quebec, 20th March 1827,
M. VARIN, Arch Priest. }

(E.)

The Reverend Mr. Varin, Arch-Priest and Curate of Kamouraska :

Sir,

Do not be angry that I venture to fulfil with regard to you, a duty which politeness and the duties of social and religious intercourse equally impose on me, by informing you officially by the present Letter, that Monseigneur the Bishop of Quebec, has determined to make choice of the Parish of Ste. Anne, for the establishment of the intended College in this County, as appears by the Letters and approbation of His Greatness, which we are ready to communicate to you, if you desire it.

Sur cette résolution le comité s'est divisée :

Pour 6
Contre 2

Ainsi elle a passé dans l'affirmative.

5^e *Résolu*, Qu'une souscription soit immédiatement ouverte pour être présentée par les membres de ce comité aux habitans des différentes paroisses du comté de Cornwallis, afin de pourvoir aux sommes d'argent et aux matériaux nécessaires pour l'établissement du dit collège.

Sur motion de M. Deguise, secondé par M. Taché.

6^e *Résolu*, Qu'un comité spécial de trois membres s'adresse à la Fabrique de Kamouraska, aux fins de lui représenter la nécessité urgente qu'il soit établi une école élémentaire dans la dite paroisse de Kamouraska et de la prier de vouloir bien contribuer à l'établissement d'icelle tel et ainsi qu'il est pourvu par le statut provincial de la 4e. année George IV, intitulé "Acte pour faciliter l'établissement et dotation d'écoles élémentaires dans les paroisses de cette province."

Sur motion de M. Casault, secondé par M. Taché, ce comité s'est ajourné.

J. B. TACHE',
Secrétaire.

Suit la réponse de sa grandeur Monseigneur l'évêque catholique de Québec à la lettre qui lui a été adressée en conformité à la 4e. résolution ci-dessus.

(C.)

Monsieur,

Depuis le 9 février dernier, que j'ai adressé à M. Varin ma réponse à sa lettre et à la requête des notables et marguilliers de Kamouraska au sujet de la bâtisse d'un collège dans cette paroisse, je n'ai pas connaissance que le comité se soit désisté de sa résolution, que j'ai moi-même transmise de sa part à Son Excellence le gouverneur en chef, pour obtenir des secours de la législature pour cet objet. D'ailleurs ce n'est qu'au bout d'un mois, que le comité fait de nouvelles propositions. Je ne puis les accepter présentement.

J'ai l'honneur d'être avec considération,

Monsieur,

Votre très humble et très obéissant serviteur,

† BERN. CL. évêque de Québec.

Quebec, 10 mars 1827.

AMABLE DIONNE, écuyer.

(Vrai copie)

J. B. TACHE',
Secrétaire.

(D.)

Monsieur,

J'ai donné à M. Dionne, président du comité de Kamouraska, ma réponse à sa lettre qu'il doit vous avoir communiquée, et qui peut en même temps servir de réponse à la votre du 2 courant. J'ai approuvé à la vérité le plan que M. Painchaud m'a présenté pour une maison d'école, qui pourrait par la suite des temps devenir un collège, s'il y a des fonds pour le soutenir. Je ne lui ai pas promis, comme vous l'avancez £500 au bout de trois ans, ou notre collège de Nicolet qui doit se commencer ce printemps ne sera peut-être pas entièrement achevé. Mais j'ai promis d'y contribuer par la suite de mes épargnes, si cette maison venait à faire un collège, comme je l'ai fait pour Kamouraska. Il n'est pas à propos à la vérité qu'il y ait des collèges proprement dits de six lieues en six lieues ; mais il convient qu'il y ait dans chaque paroisse des maisons d'école assez spacieuses pour contenir tous les enfans de la paroisse qui voudraient en profiter.

Je suis bien sincèrement,

Monsieur,

Votre très humble et obéissant serviteur,

† BERN. CL. évêque de Québec.

Quebec, 20 mars 1827.

M. VARIN, archiprêtre.

(E.)

Messire Varin, archiprêtre et curé de Kamouraska.

Monsieur,

Trouvez-bon que j'ose remplir à votre égard un devoir que l'honnêteté et les convenances sociales et religieuses m'imposent également. C'est de vous informer officiellement par la présente, que Monseigneur l'évêque de Québec s'est décidé à choisir la paroisse de Sainte-Anne pour l'établissement du collège projeté dans ce comté, comme en font foi les lettres et approbation de sa grandeur, dont nous vous offrons communication, si vous la désirez.

Appendice

Appendice
(W.)
14 Jany.

We have in consequence, appointed a Committee of 13 Members, for conducting the necessary measures for this purpose; and the said Committee, among other resolutions, have passed one by which the Parishes within the County, and especially those of Kamouraska and La Rivière Ouelle, are fraternally invited to unite with ours, if they think it agreeable, of which it would be difficult for us to entertain a doubt after the proofs of zeal they have given on this occasion.

The tenor of the said Resolution is, firstly, That every person in holy orders resident in the said Parishes, shall be of right a Member of the Committee; and, secondly, That each Parish shall be allowed to choose from among those who have contributed most considerably to the College, two or three Members who shall have deliberative voices at all general meetings of the said Committee, provided their individual contributions exceed the sum of £25 Currency.

I confess to you, that I have reason to be afraid you will take this Letter in a different spirit from that in which I write it; or that you will at least look upon it as too precipitate; and on the other hand I should be afraid of exposing myself to reproaches of another kind by a longer delay. In this state of perplexity, I am re-assured, only by the consciousness of the purity and sincerity of my intentions for which you are too just not to give me credit; and of which it was my wish to give you a fresh proof by taking upon myself the duty of making a communication, which would have fallen within the Province of our Secretary, had it not been for the distinguished consideration

with which I have the honor to be,

Your faithful and obliged servant,

(Signed,) CHS. FR. PAINCHAUD,
Chairman.

Ste. Anne, 19th March 1827.

P. S.—The Committee beg you will have the goodness to communicate this Letter to Your Committee, if you do not think it will make them angry.

Please to acknowledge the receipt of this.

The County Committee, say in answer, that they cannot unite with the Ste. Anne's Committee, because the College which it is proposed to build in that Parish, would not be in a central situation.

J. B. TACHE, Secretary.

(F.)

I the undersigned, Curate of the Parish of Ste. Anne de la Pocatière, from the considerations which I have just stated, and with the view to the production of greater good, offer cordially to desist from my endeavours for the establishment of a College for the County of Cornwallis, at Ste. Anne, in favour of which ever of the two Parishes of Kamouraska or La Rivière Ouelle, may obtain the approbation of the Bishop of Quebec, for the establishment of an Ecclesiastical College in the place of that which it was proposed to establish at Ste. Anne; and that on the following conditions:

1st. That the Parish which shall obtain such approbation shall accept and fulfil all the contracts made by us up to the present time; shall make arrangements with our contractors, and especially with François Richard, in such manner that the said F. Richard and other contractors shall release us from our engagements to them.

2nd. That the said Parish shall reimburse to us the pecuniary advances, made by us up to this time, with relation to the said College, receiving in return the materials now on the spot, and those for which agreements have been already closed; without however including the lime, stone for the mason's work, and the shingles which we shall keep.

3rd. That if the above conditions be accepted, the said Parish shall back such acceptance, by giving security to the amount of £200; which being done, I bind myself to favour the said establishment as much as it shall be in my power. Of which proposals I have signed a duplicate, with a view to leave the field once more open as far as may be, to the Parishes above mentioned, and to destroy if possible the spirit of division which this project appears to have fomented among us.

If my proposals meet only with a refusal or an evasive answer, I desire that I may be informed of, it in a proper manner, within eight days from this time.

Kamouraska, 6th April 1827.

CHS. FR. PAINCHAUD.

The Committee have resolved that the conditions annexed to the offer made by Mr. Painchaud, have placed it beyond their power to accept it.

J. B. TACHE, Secretary.

(G.)

The Reverend Mr. Painchaud, &c.

Dear Sir,

The pleasure of writing to you has engaged me to undertake to inform you of our Special Meeting on the 17th instant. Having unfortunately

En conséquence nous avons formé un comité de 13 membres pour la direction des opérations à ce nécessaires, et le dit comité, entr'autres résolutions, vient d'en passer une par laquelle les paroisses du comté, premièrement et surtout celles de Kamouraska et de la Rivière Ouelle, sont fraternellement invitées à se joindre à la nôtre, si elles l'ont pour agréable, comme il nous serait difficile d'en douter après les preuves de zèle qu'elles ont manifestées à cette occasion.

L'esprit de cette résolution est que 1^o chaque ecclésiastiques des dites paroisses soit de droit membre du comité, et 2^o qu'il soit offert à chaque paroisse de se nommer parmi ses plus haut contribuables au collège, deux ou trois membres qui auront voix délibérative à toutes les assemblées générales du dit comté, pourvu que leurs contribution individuelle excède la somme de £25 courant.

Je vous avoue que j'ai lieu de craindre que vous ne preniez la présente dans un autre esprit que celui dans lequel je l'écris, ou que tout au moins vous ne la regarderez comme trop précipitée, et d'un autre côté je craindrais en retardant d'avantage de m'exposer à des reproches d'une autre espèce. La seule considération qui me rassure dans cette perplexité est la pureté et la sincérité de mes intentions, auxquelles vous êtes trop juste pour ne pas rendre justice et dont je voudrais vous donner une nouvelle preuve en me chargeant moi-même d'une adresse qui serait du ressort de notre secrétaire, si ce n'était la considération distingué,

Avec laquelle j'ai l'honneur d'être votre fidèle et obligé serviteur,

(Signé) CHS. FR. PAINCHAUD,

Président.

Sainte-Anne, 19 mars 1827.

P. S. Le comité vous prie d'avoir la bonté de communiquer cette lettre à votre comité si vous croyez qu'il ne s'en fâche pas.

S'il vous plaît m'accuser la reception de la présente.

Le comité du comté a fait réponse qu'il ne pouvait se joindre au comité de Sainte-Anne, parce que le collège qu'on se proposait de bâtir dans cette paroisse ne serait point dans un endroit central.

J. B. TACHE, secrétaire.

(F.)

Je, soussigné, prêtre, curé de Sainte-Anne de la Pocatière, d'après les considérations que je viens d'exposer, et dans la vue du plus grand bien, offre cordialement de me désister de l'entreprise d'un collège à Sainte-Anne pour le comté de Cornwallis, en faveur de celle des deux paroisses de Kamouraska ou de la Rivière Ouelle qui, vu les offres que je leur fais aujourd'hui, obtiendra de Monseigneur de Québec, l'approbation pour l'établissement d'un collège ecclésiastique à la place de celui de Sainte-Anne, et ce aux conditions suivantes:

1^o Que la paroisse qui aura obtenu cette approbation, acceptera et tiendra les marchés que nous avons conclus jusqu'à cette heure, s'arrangera avec nos entrepreneurs, et notamment avec Frs. Richard, de manière que le dit Frs. Richard et autres entrepreneurs, nous déchargent de nos engagements à leur égard.

2^o Quelle (la dite paroisse) nous remboursera nos avances pécuniaires faites jusqu'à ce jour pour le dit collège, recevant en retour les matériaux actuellement sur les lieux, et ceux pour lesquels des marchés sont déjà conclus, sans y comprendre toutefois la chaux, la pierre pour la maçonnerie, ni le bardeau que nous garderons.

3^o Qu'en acceptant les conditions susdites, la dite paroisse en appuiera l'acceptation d'ici au 20 courant, d'un cautionnement de £200, au moyen de quoi je m'engage à favoriser le dit établissement autant qu'il sera en mon pouvoir. Desquelles propositions j'ai signé un Dupliquat, afin de laisser encore une fois le champ libre, autant que possible, aux paroisses susdites, et détruire, s'il est possible l'esprit de division que ce projet semble avoir soufflé parmi nous.

Si mes offres ne sont accueillies que d'un refus ou d'une réponse évasive, je désire en être informé d'une manière convenable d'ici à huit jours.

Kamouraska, 6 avril 1827.

(Signé)

CHS. FR. PAINCHAUD.

Le comité a résolu que les conditions mises à l'offre de M. Painchaud le mettait hors d'état d'accepter sa proposition.

J. B. TACHE, secrétaire.

(G.)

Messire Painchaud, prêtre, &c.

Mon cher Monsieur,

Le plaisir de vous écrire m'a engagé à me charger de vous donner connaissance de notre assemblée spéciale du 17 du présent; malheureusement

Appendix
(W.)
14th Jany.

failed in getting a *quorum*, we have decided nothing on the subject of your late applications; I believe, however, that the answer would have been in the negative: I do not know what may be resolved at the next meeting. We have signed a Petition to His Majesty the King of England, the object of which is to obtain some of the Crown Land in our neighbourhood, for the endowment of a College at Kamouraska, or at least in the County of Cornwallis: what will be its success; *Deus scit*.

Believe me very sincerely,

Sir,

Your humble and devoted servant and friend.

VARIN, Priest.

Kamouraska, 19th May 1827.

(H.)

Sir,

Mr. Saillant has communicated to me the plan of the building which you propose to erect in your Parish, as a good beginning and as a step towards the establishment of a College, which may hereafter become more considerable. He has also shown me the regulations which are to be established therein, for the studies and conduct of the young persons who may be received there. I cannot refrain from praising the whole, although the place is distant some leagues from the central point for such an establishment, this circumstance ought to form no obstacle. I shall always be inclined to favour the Parish in which such a building has been commenced, whenever it may be unnecessary to have recourse to the Legislature for this purpose. I have no doubt that my successors will act on the same principles. It would be doing an injustice to a Parish which has shown so much zeal for the general welfare of the County, not to give it the preference for such an establishment, which it should be hereafter inclined to maintain.

As to engaging the other Parishes to contribute, or contributing myself, this is what I cannot now do; since I have addressed them a circular Letter exhorting them to assist in building the College at Nicolet, which has been a long while established, and for the completion of which assistance is still necessary.

I am very sincerely,

Sir,

Your very obedient and very humble servant,

† BERN. CL., Bishop of Quebec.

Quebec, 24th January 1827. }
M. PAINCHAUD. }

(I.)

Sir,

The Gentlemen of Kamouraska have not received my approbation for the erection of a College in their Parish. I certainly said that the Parish appeared to me the most central in the County, but formally disapproved the place in which they wished to build it; and, moreover, they have given me no assurance that they had funds for its support; trusting to the bounty of the Legislature. This is now useless, for the Parliament was prorogued yesterday without having even made any allowance for Schools, to which they had before granted assistance. I am surprised to learn that Messrs. Viau and Casgrain have engaged to assist the Gentlemen of Kamouraska: Mr. Viau who wrote to me a few days ago does not mention it.

I will maintain in your behalf what I have stated to you, and shall do so the more, since it appears by what you say, that you have already made contracts and acquired property for this purpose, which the other Parishes have not done: Since then they have not been so ready to come forward as yours, they ought not to prevent your proceeding with what you have undertaken, from which the youth of their Parishes might derive benefit.

I am far from approving the indiscreet oaths your two couples have taken. They would do much better by making up their quarrel.

I am very sincerely,

Sir,

Your very humble and obedient servant,

† BERN. CL., Bishop of Quebec.

Quebec, 8th March 1827. }
M. PAINCHAUD. }

(K.)

ment le *Quorum* manquant, nous n'avons rien décidé de relatif à vos applications dernières: je crois pourtant que la réponse eut été négative. Je ne sais ce qui sera résolu à la prochaine assemblée. Nous avons signé une requête à Sa Majesté le roi d'Angleterre tendante à obtenir des terres de la couronne, qui nous avoisinent, pour doter un collège à Kamouraska, ou au moins dans le comté de Cornwallis; quel en sera le succès? *Deus scit*.

Croyez-moi bien sincèrement,

Monsieur,

Votre humble, dévoué serviteur et ami,

VARIN, prêtre.

Kamouraska, 19 mai 1829.

(H.)

Monsieur,

M. Saillant m'a communiqué le plan de l'édifice que vous vous proposez de bâtir dans votre paroisse, comme un bon commencement et à un acheminement à un collège plus considérable par la suite des temps. Il m'a aussi fait voir les réglemens qui doivent y être établis tant pour les études, que pour la conduite des jeunes gens qui y seront reçus. Je ne puis que louer le tout. Quoiqu'il y ait une différence de quelques lieues du point central pour l'établissement, cela ne doit pas y mettre d'obstacle. Je serai toujours porté à préférer la paroisse, où on aura commencé une telle bâtisse, dès qu'on ne sera pas obligé d'avoir recours à la législature pour cet effet. Je ne doute pas que mes successeurs n'en agissent de même: Ce serait faire une injustice à une paroisse qui aurait montré tant de zèle pour le bien général du comté, que de ne pas lui donner la préférence pour cet établissement, qu'elle sera disposée à soutenir par la suite.

Quant à engager les autres paroisses, ou à y contribuer moi-même, c'est ce que je ne puis faire pour le présent; puisque je les exhorte par une circulaire à aider à bâtir le collège de Nicolet établi depuis longtemps, et qui a besoin de secours pour le faire.

Je suis bien sincèrement,

Monsieur,

Votre très humble et très obéissant serviteur,

† BERN. CL. évêque de Québec.

Quebec, 24 janvier 1827.
M. PAINCHAUD.

(I.)

Monsieur,

Les Messieurs de Kamouraska n'ont pas de moi une approbation pour la bâtisse d'un collège dans leur paroisse. J'ai bien dit que cette paroisse me paraissait la plus centrale du comté; mais j'ai formellement désapprouvé la place, où ils voulaient le bâtir; et de plus ils ne m'ont pas donné d'assurance de fonds qu'ils avaient pour le soutenir, se fiant sur les dons de la législature. Mais c'est inutilement, car elle a été prorogée hier sans avoir fait même quelque allouance pour les écoles auxquelles elle accordait auparavant des secours.

Je suis surpris d'apprendre de vous que Messrs. Viau et Casgrain se soient engagés à contribuer aux Messrs. de Kamouraska. M. Viau qui m'a écrit ces jours-ci ne m'en parle pas.

Je soutiendrai à votre égard ce que je vous ai avancé, encore d'avantage, puisqu'il paraît, suivant ce que vous me dites, que vous avez déjà contracté des marchés, et fait des acquisitions pour cet objet: ce que les autres n'ont pas fait. Puisqu'elles n'ont pas été aussi en avant que la vôtre, elles ne devraient pas vous empêcher de continuer votre entreprise, dont elles pourront tirer avantage pour leurs jeunes gens.

Je suis bien éloigné d'approuver les sermens indiscrets que vos deux couples ont faits. Ils feraient bien mieux de se reconcilier.

Je suis bien sincèrement,

Monsieur,

Votre très humble et obéissant serviteur,

BERN. CL. évêque de Québec.

Quebec, 8 mars 1827.
M. PAINCHAUD.

(K.)

Appendice

(K.)

Sir,

Appendix
(W.)

14 Jany.

The desire I feel of seeing a College established in that remote and populous part of the Province of Lower-Canada, the South shore of the St. Lawrence, caused me to approve the plan of a building intended hereafter, to become a College, which you laid before me. It was just also, that as you were the first to come forward, as you had contracted for the erection of this building and had procured a suitable piece of ground, and its appurtenances, that I should not refuse you my approbation of your project. I wish you, therefore, success in all the undertakings you have spoken of to me. I do not doubt that in that case the said building will hereafter become a College, where the young persons of the County and of the neighbouring Counties may receive instruction in all those branches of learning which are taught in the other Colleges in this Province.

I must tell you freely that I do not quite approve the wager you have made with the person from St. Jean, Port-Joli, and particularly of the notarial instrument. If this person with whom you have thought proper to make the wager, is a man of honor, his word ought to have satisfied you.

I am very sincerely,

Sir,

Your very humble and obedient servant,

† BERN. CL., Bishop of Quebec.

Quebec, 6 April 1827,
The Revd. Mr. PAINCHAUD. }

(K.)

Monsieur,

Appendice
(W.)

14 Jany.

Le désir que j'ai de voir un collège établi dans cette partie éloignée et peuplée de la province du Bas-Canada, (la grande côte du Sud) m'a fait approuver le plan de bâtisse que vous m'avez présenté pour un collège à venir. Il était aussi juste qu'étant venu le premier en avant, qu'ayant contracté pour faire cette bâtisse et procuré un terrain convenable avec ses accompagnemens, je ne vous refusasse point mon approbation pour cet objet. Je souhaite donc que vous puissiez réussir dans tout ce que vous m'avez avancé. Je ne doute pas alors que cette bâtisse ne devienne par la suite un collège, où les jeunes gens de ce comté et des voisins pourront recevoir toutes les instructions qu'on donne dans les autres collèges de la province.

Je vous dirai bien que je n'approuve pas tout-à fait la gageure que vous avez faite avec cette personne de Saint-Jean Port-Jolie, et surtout par acte devant notaire. Si cette personne avec qui vous avez jugé convenable de la faire, est une personne d'honneur, sa parole devait vous suffire.

Je suis bien sincèrement,

Monsieur,

Votre très humble et obéissant serviteur,

† BERN. Cl. évêque de Québec.

Québec, 6 avril 1827.
MESSIRE PAINCHAUD.

Appendix

17th Jany.

COPY of INSTRUCTIONS to the Commissioner for the sale and management of Crown Lands in the Province of Lower-Canada.

WHEREAS, His Majesty, by a Commission bearing date the 13th day of November 1826, did nominate and appoint you, the said *William Bowman Felton*, to the office and trust of Commissioner for the sale and management of Crown Lands in the Province of Lower-Canada, and did strictly enjoin you to follow such orders and directions as you might from time to time receive from the Commissioners of His Majesty's Treasury, or from any one of His Majesty's Principal Secretaries of State, or from the Governor or Officer administering the Government of the Province of Lower-Canada, for the time being. Now, We, the Commissioners of His Majesty's Treasury, do hereby enjoin and require you to govern yourself in the execution of the duties of your said office, by the following Instructions:

That you do forthwith repair to Canada, and report your arrival to the Governor, or Officer administering the Government, and lay before him His Majesty's Commission appointing you to the said Office, and these Our Instructions for the guidance of your conduct in the execution of the duties thereof.

That you do, immediately upon your arrival, enter into security to the satisfaction of the Governor, or Officer administering the Government, yourself in £5000, and two sureties in £2500 each, that you will direct and faithfully perform the duties of your said office, and duly account for and pay over all monies which may come to your hands in the execution thereof.

That as soon as possible, after your arrival, you do proceed to ascertain the nature and particulars of all the Crown Property within the said Province, under the following heads:

Waste Lands in those Districts of the Colony which have not heretofore been surveyed or laid out.

Waste Lands in those Districts of the Colony which have been surveyed and laid out, but no part of which has been granted.

Ungranted Lands and Crown Reserve in those Districts where grants have been made.

Lands which may have been granted in perpetuity upon payment of Quit or other rents.

Lands and Reserve which have been granted upon leases for series of years upon reserved rents or otherwise.

That

COPIE des INSTRUCTIONS au Commissaire préposé pour la vente et la régie des Terres de la Couronne dans la Province du Bas-Canada.

VU que par une commission en date du 13 novembre 1826, Sa Majesté vous a nommé et commissionné le dit *William Bowman Felton*, à l'office et la charge de commissaire pour la vente et la régie des terres de la couronne dans la Province du Bas-Canada, et qu'il vous est enjoint strictement de suivre les ordres et directions que vous pouvez recevoir de tems à autre de la part des commissaires de la trésorerie de Sa Majesté, ou d'aucuns des principaux Secrétaires d'Etat de Sa Majesté, ou du Gouverneur ou de l'Officier ayant l'administration du Gouvernement de la Province du Bas-Canada, pour le tems d'alors: Maintenant, nous les commissaires de la Trésorerie de Sa Majesté, vous enjoignons et vous requérons par les présentes de vous conformer dans l'exécution des devoirs de votre dite charges, aux instructions qui suivent:

Vous devez vous rendre incontinent en Canada; et vous informerez le Gouverneur, ou l'Officier ayant l'administration du Gouvernement de votre arrivée, et vous lui ferez voir la commission de Sa Majesté, qui vous nomme à la charge susdite, ainsi que nos présentes instructions, qui doivent diriger votre conduite dans l'exécution des devoirs d'icelle charge.

Aussitôt après votre arrivée, vous donnerez caution à la satisfaction du gouverneur ou de l'officier ayant l'administration du gouvernement, vous même au montant de £5000, et deux cautions au montant de £2500, chaque, à l'effet d'acquitter, et remplir fidèlement les devoirs de votre charge susdite, et de rendre dûment compte et payer tous les deniers qui pourront venir entre vos mains dans l'exécution d'icelle.

Aussitôt que possible, après votre arrivée, vous procéderez à vous enquerir de la nature et des détails des biens de la couronne dans la dite province, qui se trouvent être des descriptions suivantes:

Terres en friche dans les districts de la Colonie, qui n'ont pas encore été mesurées ou divisées.

Terres en friche de la couronne dans les districts de la Colonie, qui ont été mesurées et divisées, mais dont aucune partie n'a été concédée.

Terres non-concédées et réserves de la couronne dans les districts où il a été fait des octrois.

Terres qui ont été octroyées à perpétuité à la charge de rentes foncières ou autres rentes.

Terres et réserves qui ont été octroyées en vertu de baux pour plusieurs années, à la charge de rentes de réserves ou autrement.

E

Vous

Appendice
(X.)

17 Jany.

Appendix
(X.)
17th Jany.

That you do make an Annual Report of the progress you may have made in ascertaining these particulars, to us, or to the Commissioners of the Treasury for the time being, and also to the Governor or Officer administering the Government of the Province of Lower-Canada.

That no Lands or other Crown Reserve arising from Lands within the Province of Lower-Canada, be hereafter disposed of or granted; except upon the following conditions:—

By actual sale, or, in case of poor Settlers, by grants subject to Quit rents in the manner hereinafter directed.

That you do, from time to time, and at least once in every year, submit to the Governor, or Officer administering the Government, a Report of the total quantity of each description of Crown Property, within each District of the Reserve, so far as you may then have ascertained the same, together with your opinion of the quality of each description of Property which it may be expedient to offer for sale within the then ensuing year, and the upset price per acre at which you would recommend the several descriptions of property to be offered, obtaining previously a certificate from the Surveyor General of Woods and Forests within the Province, that the Land proposed to be offered by you does not contain any considerable quantity of valuable Timber fit for His Majesty's Navy or for any other purpose, it being the intention that no grant of the lands upon which such timber may be growing should be made until the timber is cleared.

That if the Governor, or Officer administering the Government, should be pleased to sanction the sale of the whole, or any part of the land recommended by you, to be sold at the upset price recommended by you, or at any other price which he may name, you will proceed to the sale in the following manner:—

You will give Public Notice in the Quebec Gazette, and in such other Newspaper as may be circulating in the Province, as well as in any other manner that circumstances will admit of, of the time and place appointed for sale of the Lands in each district, and of the upset price at which the lots are proposed to be offered, that the lots will be sold to the highest bidder, and if no offer should be made at the upset price, that the lands will be reserved for future sale in a similar manner by auction.

That no lot should contain more than 1200 estimated acres. You will also state in the notices of the conditions of the sale, that the purchase money is to be paid by four instalments, the first instalment at the time of the sale, and the second, third and fourth instalments at intervals of a year.

That if the instalments are not regularly paid, the deposit will be forfeited, and the lands again referred to sale.

In case Purchasers of Land at any sale not exceeding 200 acres, being unable to advance the Purchase Money by instalments as proposed, you may permit the Purchaser to occupy the same upon a Quit Rent, equal to five per cent upon the amount of the purchase money, one year's Quit Rent to be paid at the time of sale, in advance, and to be paid annually in advance, afterwards; upon the failure of regular payment the lands to be again referred to auction, and sold; the Quit Rent upon Lands so purchased in this manner to be subject to redemption upon payment of twenty years purchase, and parties to be permitted to redeem the same by any number of instalments not exceeding four, upon the payment of not less, at any one time, than five years amount of Quit Rent, the same proportion of the Quit Rent to cease. In case, however, the parties should fail regularly to pay the remainder of the Quit Rent, the same to be deducted from the instalment paid, and the land to be resold by auction whenever the instalment may be absorbed by the accruing payment of the remainder of the Quit Rents.

That Public Notice should be given in each District in every year, stating the names of the persons in each District who may be in arrear, either for the instalments of their purchase, or for Quit Rents, and that if the arrears are not paid up before the commencement of the sales in that district for the following years.

That the Lands, in respect of which the Instalments or Quit Rents may be due, will be the first lot to be exposed to auction at the ensuing sales, and if any surplus of the produce of the sale of each lot should remain after satisfying the Crown for the sum due, the same will be paid to the original purchasers of the land who made default in payment.

That no land be granted at any other time than at the current sales, in each district, except upon application from poor settlers who may not have been in the Colony more than six months preceding the last annual sale.

That Settlers so circumstanced may be permitted to purchase Land, not exceeding two hundred acres each, at the price at which

Vous ferez un rapport annuel des renseignements que vous aurez obtenus à l'égard de ces détails soit à nous, ou aux commissaires de la trésorerie pour le tems d'alors, ainsi qu'au gouverneur, ou à l'officier ayant l'administration du gouvernement de la Province du Bas-Canada.

Il ne sera à l'avenir disposé ou concédé des terres, ou autres réserves de la couronne parmi les terres qui se trouvent dans la Province du Bas-Canada, excepté aux conditions suivantes:

Par vente effective, ou dans le cas d'émigrés qui seraient indigènes par concession, sujet à des rentes foncières en la manière ci-après réglée.

De tems à autre, et au moins une fois chaque année, vous soumettrez au gouverneur, ou à l'officier ayant l'administration du gouvernement, un rapport de la quantité totale de chaque description des biens de la couronne, compris dans chaque district de la réserve, en autant qu'il vous aura été possible de le faire, avec votre opinion sur la qualité de chaque description de terre qu'il serait convenable d'offrir en vente dans le cours de l'année, et le prix d'estimation par acre auquel vous recommandez que l'on devrait mettre chaque acre à l'enchère, en obtenant au préalable, un certificat de l'inspecteur général des bois et forêts dans la province, que les terres que vous proposez de mettre en vente, ne contiennent pas des bois en grand nombre propre pour la marine de Sa Majesté ou pour d'autres fins; l'intention étant que les terres sur lesquelles ces bois croissent, ne devront être concédées qu'après que les bois en auront été ôtés.

S'il plaît au gouverneur ou à l'officier ayant l'administration du gouvernement de sanctionner la vente en entier, ou en partie des terres dont vous aurez ainsi recommandé la vente, et au prix d'estimation que vous aurez fixé, alors vous procéderez à la vente en la forme suivante:—

Vous donnerez avis public dans la Gazette de Québec, et dans tel autre papier-nouvelle qui sera en circulation dans la province de même que par telle autre manière que les circonstances pourront le permettre, du tems et du lieu qui seront fixés pour la vente des terres dans chaque district, et du prix d'estimation auquel on propose de mettre les lots à l'enchère; que les lots seront vendus au plus haut enchérisseur, et que s'il n'est pas fait d'offres au prix de l'estimation, que les terres seront réservées pour une nouvelle vente dans la même manière par encan.

Aucun lot ne devra contenir plus de 1200 acres par estimation. Vous ferez aussi mention dans les avis des conditions de la vente, que le prix d'achat devra être payé en quatre payemens, le premier payement lors de la vente, et les deuxième, troisième et quatrième payemens par intervalles d'une année.

Que si les payemens ne sont pas fait régulièrement, la somme déposée sera perdue, et les terres remises en vente de nouveau.

Dans le cas où un acquéreur achèterait une étendue de terre, n'excédant pas 200 acres, et qu'il se trouverait hors d'état de payer le prix d'achat aux termes proposés, vous pouvez permettre à l'acquéreur de l'occuper en payant une rente foncière, qui sera égale à cinq pour cent du montant du prix d'achat, dont une année de la rente foncière devra être payée d'avance lors de la vente et ensuite annuellement et d'avance; si l'on néglige de faire ces payemens aux termes fixés, les terres seront de nouveau mises à l'encan, et vendues; les rentes foncières sur les terres qui auront été achetées de cette manière, seront rachetables en payant vingt années de rachât et il sera libre aux parties de faire de ce rachât par payemens, dont le nombre n'excédera pas quatre, en acquittant dans un seul payement, pas moins de quatre années de la rente foncière, laquelle diminuera d'autant. Dans le cas cependant, que les parties ne payeraient pas le résidu de la rente foncière, elle sera déduite du montant du prix d'achat qui a été payé et la terre sera revendu à l'encan, lorsque ce qui a été ainsi payé pour prix d'achat se trouvera absorbé par les arrérages du restant de la rente foncière.

Avis public devra être donné dans chaque district, tous les ans, des noms des personnes dans chaque district qui doivent des arrérages, soit à l'égard des payemens sur le prix d'achat, ou pour des rentes foncières; et que si les arrérages ne sont pas payés avant le commencement des ventes pour ce district pour l'année qui suivra.

Les terres à l'égard desquelles il est du des portions du prix d'achat ou des rentes foncières seront les premiers lots mis à l'enchère lors des prochaines ventes; et que s'il se trouve un excédant du produit de la vente de chaque lot, après que la couronne aura été remboursée de ce qui lui est dû, cet excédant sera payé aux acquéreurs originaires des terres qui étaient en défaut.

Qu'il ne sera concédé des terres à aucune autre époque, qu'à celles des ventes ordinaires dans chaque district, excepté que ce ne soit sur la demande d'émigrés pauvres qui ne se trouvaient pas dans la Colonie dans les six mois avant la dernière vente annuelle.

Il sera permis aux émigrés qui se trouveront dans ces circonstances, d'acheter des étendues de terres n'excédant pas deux cens acres

17th Jany.

which it may have been offered at the last annual sale, and not purchased, and may pay for the same or by Quit Rent, computed at five per cent on the sale price, and thenceforth these persons shall be considered as entitled to all the privileges, and be subject to the same obligations as they would have been subject to, if they had purchased the land at the last sale.

In cases of Settlers who shall be desirous of obtaining grants of Land in distinct Districts, not surveyed, or in Districts, in which no unredeemable grant shall have been made, you will, under the authority of the Governor, at any time within a period of seven years from the date hereof, grant permission of occupancy to any such Settlers for lots of land not exceeding two hundred acres, upon consideration that they shall pay a Quit Rent for the same equal to five per cent upon the estimated value of the land, at the time such occupancy shall be granted; and the persons to whom claim of occupation may be made shall have liberty to redeem such Quit Rent at any time before the expiration of the seven years, upon the payment of twenty years purchase of the amount, and at any time after the termination of the seven years, upon the payment of any arrears of Quit Rent which may be then due, and twenty years purchase of the annual amount of the rent.

That no patent shall be granted until the whole of the purchase money shall have been paid, nor any transfer of the property made, except in case of death, until the whole of the arrears of the Instalments, or Quit Rent, shall have been paid.

That the Purchase Money for all Lands as well as the Quit Rents shall be paid to you, or to such person as you may appoint, at the time and places to be named in the condition of the sale. You will also apply to all persons holding Lands from the Crown in perpetuity upon the payment of Quit Rents, as well as to all persons holding Lands upon lease for a term of years for the payment of the arrears which may be due from them respectively, and you will at any time within seven years from the date hereof sell to the proprietor at twenty years purchase, any lands held in free and common socage (but to no other person whatever) any Quit Rent which may be payable by them respectively, provided that all arrears up to the end of the year preceding the time of purchase be previously paid.

If these Quit Rents are not purchased by the Proprietor within the period of seven years from the date hereof, further Instructions will be given in regard to the sale by public auction or otherwise, as may then be deemed expedient.

With respect to the Lands upon lease for terms of years you are desired on no account to sell the same by public auction, if the rent is not more than two years in arrear, until the termination of the lease; but if the rent is more than two years in arrear, and if according to the terms of the lease the same is void, in consequence of the non-payment of the rent, you are at liberty to submit to the Governor, or officer administering the Government, that any such lots should be sold. If, however, previously to the sale the rent is paid up, you will withdraw the same from the sale, and you will at any time sell to the Lessee of such lands as may be held under lease, at such price as the Governor or Officer administering the Government may upon your recommendation approve of the land so held, all arrears of rent being in every case paid up to the end of the year preceding the sale, but in no case at less than twenty years purchase of the rent.

You will on the 1st January and 1st July in every year, render a complete account of all your sales, within the preceding half year, to the Auditor of Provincial Accounts, specifying the conditions upon which each lot is sold, and you will at the same period render a complete Cash Account of the money received and expended by you within the same period, carrying forward to each account any balance which may remain in your hands at the date of the preceding Account, and you will on the 1st January, 1st April, 1st July and 1st October, in each year, pay over to the Receiver General of the Province, any sum which may on those days respectively, be in your hands over and above the sum of £500, which you are permitted to retain for future contingent expenses.

You will not charge the salary and remuneration to which you are entitled under your Commission in your accounts, but you will receive the same annually, by warrant of the Governor, out of the Treasure which you may have paid into the hands of the Receiver of the Province, in the preceding year.

You are authorized to incur and defray such contingent expenses for Authorities, Clerks, Treasurer and Receiver of Rents, Office

acres chaque, pour le prix auquel elles auront été mises à l'enchère lors de la dernière vente, et qui ne se trouveront pas vendues; en payant le prix d'achat, ou une rente foncière, laquelle sera fixée à cinq pour cent sur le prix de vente; et à l'avenir ces personnes devront être considérées comme ayant droit à tous les privilèges, et Sujettes à toutes les obligations auxquelles elles auraient été assujettis, si elles avaient achetées ces terres lors de la dernière vente.

Dans le cas où des émigrés désireraient obtenir des concessions de terres dans des districts séparés, qui ne sont pas arpentées, ou dans des districts dans lesquels il ne se trouve pas de concessions, sujettes à rachat, vous pouvez, avec l'autorité du gouverneur, pendant l'espace de sept années à compter de cette date, donner des permissions à aucuns tels émigrés d'occuper des lots de terres n'excédant pas deux cens acres, à condition qu'il payeront pour icelles une rente foncière égale à cinq pour cent sur l'estimation de la valeur de la terre, à l'époque où la permission sera donnée; et les personnes auxquelles cette permission sera accordée pourront racheter cette rente foncière en aucun tems avant l'expiration de sept années, en payant vingt années de rachat, et de même en aucun tems après l'expiration de cette année en payant tous les arrrages de la rente foncière qui peuvent se trouver dus alors, et vingt années de rachat du montant annuel de la rente.

Qu'il ne sera cordé aucune patente jusqu'à ce que le prix d'achat en entier aité payé, et qu'il ne sera accordé aucun transport, excepté dans le cas de décès, jusqu'à ce que tous les arrrages des portions du prix d'achat ou de la rente foncière aient été payés.

Que les deniers de la vente des terres, de même que ceux des rentes foncières, seront versés entre vos mains, où à telle personne que vous autorisez, aux teins et lieux qui seront nommés dans les conditions de la vente. Vous vous adresserez à tous ceux qui tiennent des terres de la courone à perpétuité, à la charge de rentes foncières, de même qu'à tous ceux qui tiennent des terres en vente de baux pour une suite d'années, à l'égard des arrrages qu'ils peuvent devoir respectivement, et dans aucun tems, d'ici à sept années de la date des présentes, vous pourrez vendre au propriétaire moyennant un rachât de vingt années de la rente foncière, qui peut avoir à payer, aucunes terres tenues en franc et commun socage, mais à nulle autre personne quelconque pourvu que tous les arrrages qui se trouvaient dus à la fin de l'année qui précède le tems de la vente, aient été payés.

Si ces rentes foncières ne se trouvent pas payées par le propriétaire dans l'espace de sept années à compter de cette date, il sera donné des instructions ultérieures à l'égard de la vente par encan public ou autrement, tel qu'il sera alors jugé être le plus convenable.

Quant aux terres données à bail pour une suite d'années, il vous est recommandé de ne pas les faire vendre par encan public, s'il n'y a pas plus de deux années d'arrrages, avant que le bail soit expiré mais si les arrrages excèdent deux années, et si aux termes du bail le bail se trouve annullé en conséquence du défaut de paiement de la rente, il vous sera libre de soumettre au gouverneur, ou à l'officier ayant l'administration du gouvernement, la convenance qu'il y aurait de vendre les lots en question. Si néanmoins on acquitte la rente avant le moment de la vente, vous ne la mettrez pas à l'enchère, et vous pourrez en aucun tems la vendre aux bailleurs de ces terrains qui sont tenus à bail, à tel prix que le gouverneur, ou l'officier ayant l'administration du gouvernement, pourra approuver d'après votre recommandation; tous les arrrages de la rente ayant été payés au préalable jusqu'à la fin de l'année qui aura précédée la vente; mais la vente n'aura lieu en aucun cas à moins de vingt années de rachât de la rente.

Le 1er janvier et le 1er juillet de chaque année, vous rendrez à l'auditeur des comptes provinciaux, un compte exact de toutes les ventes que vous aurez faites dans le semestre précédent, spécifiant les conditions auxquelles chaque lot a été vendu, et au même période vous rendrez un compte exact des deniers reçus et dépensés pendant le même période, en portant en compte la balance qui pourra s'être trouvée entre vos mains à la date du compte précédent; et le 1er janvier, le 1er avril, le 1er juillet et le 1er octobre de chaque année, vous verserez entre les mains du receveur général de la province, toutes les sommes de deniers qui pourront se trouver entre vos mains à pareils jours respectivement, et qui n'excéderont la somme de cinq cents livres, laquelle somme vous pourrez retenir entre vos mains pour les dépenses contingentes futures.

Vous ne porterez pas dans vos comptes les appointemens et la rémunération auxquels vous avez droit en vertu de votre commission; mais il vous seront payés annuellement par warrant du gouverneur, sur les denier que vous aurez payés entre les mains du receveur de la province dans l'année précédente.

Vous êtes autorisé à payer et à défrayer telles dépenses contingentes pour des commis, un trésorier et receveur des rentes, pour loyer

CEDULE des COMPTES concernant la RECETTE et la DEPENSE PUBLIQUES de la Province du BAS-CANADA pour l'année expirée le 5 Janvier 1829.

- No. 1. Compte des Revenus Ordinaires et des Ressources extraordinaires formant la Recette Publique.
2. Ditto du Revenu Casuel et Territorial.
3. Ditto de deniers perçus en vertu des Actes Provinciaux. 45e, Geo. III, chap. 12, et 2e. Geo. IV., chap. 7, et 51e. Geo. III, chap. 12, et des frais encourus pour encourager et améliorer la Navigation du Fleuve Saint Laurent.
4. Ditto de Droits perçus à Chateauguay en vertu de l'Acte Provincial, 48e. Geo. III. chap. 19, pour l'Amélioration de la Navigation intérieure du Fleuve Saint Laurent.
5. Tableau de détail de Payemens et Déductions faites sur le Revenu pour frais de Perception, Rabais, Remise de Droits. &c.
6. Précis de Payemens faits en vertu de Warrants accordés par Son Excellence le Comte de Dalhousie, G. C. B. Capitaine Général et Gouverneur en Chef, et par Son Excellence Sir James Kempt, G. C. B. Lieutenant Général et Administrateur du Gouvernement, sur John Hale, Ecuyer, Receveur Général, à compte de la Dépense Civile du Bas-Canada.

7. Compte du Revenu net de la Province du Bas-Canada, et de la Dépense de la Province.
8. Tableau des Fonds à la disposition du Parlement Provincial du Bas-Canada, et des diverses appropriations d'iceux.
9. Compte des Appropriations de la Législature du Bas-Canada, et des Dépenses d'icelles.
10. Précis des Warrants accordés par Son Excellence le Comte de Dalhousie, G. C. B. Capitaine Général et Gouverneur en Chef, et par Son Excellence Sir James Kempt, G. C. B. Lieutenant Général et Administrateur du Gouvernement, pendant l'année 1828, pour la Dépense Civile du Bas-Canada, et pour services des années précédentes.

Québec 26 Janvier 1829.

JOS. CARY,

Insp. Génl. Comptes Pub. Prov.

(No. 1.)

COMPTE des REVENUS ORDINAIRES et des RESSOURCES EXTRAORDINAIRES formant la RECETTE PUBLIQUE de la Province du BAS-CANADA, pour l'année expirée le 5 Janvier 1829.

Numéros.	CHAPITRES DE RECETTE.	Arrérages de la recette, étant la proportion per centum deduite par le collecteur à Québec du revenu de 1826, à présent remis par lui.			Montant non prélevé sur cautionnements payables le ou avant le 1er. Mai prochain.	Recette actuelle du Revenu par les différens Collecteurs.	Payemens pris sur la Recette en faisant la Collection.		Montant de la Recette payée entre les mains du Receveur Général.	Payemens faits ou à être faits par le Receveur Général comme frais de Perception Remise de Droits, &c.			Revenu net pour le Bas-Canada pour l'année finie le 5 Janvier 1829, y compris le montant dû sur les obligations.	Différence entre le Revenu net de cette année, y compris la proportion pour le Haut-Canada, et celui de l'année dernière.		REMARQUES.
		Recette totale ; arrérages inclus.	Commission, Appointemens, et Incidens.	Rabais et Remise de Droits.			Frais de Perception.	Remboursemens et Remise de Droits.		Proportion pour le Haut-Canada.	Augmentation	Diminution.				
		£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.		
1	Revenu Casuel et Territorial,	0 0 0	7830 2 5	0 0 0	7830 2 5	0 0 0	0 0 0	7830 2 5	500 16 7	0 0 0	0 0 0	7309 5 10	4391 17 0½	0 0 0	Les quintes et Lods et Ventés payés cette année ont été considérable, et il a aussi été payés deux années d'arrérages du bail des Forges de St. Maurice. La diminution apparente vient de ce qu'il y eut cinq trimestre dans les comptes de l'année dernière. Même cause, et les importations de tabac par la voie de St. Jean moindre que l'année dernière. Il a été payée cette année quelques amendes arriérées. Plus de vin importé cette année. Diminution causée en partie par un trimestre pris sur cette année, et par la moindre importation d'articles sujets aux droits imposés par cet acte, cette année. L'importation de marchandises sèches plus considérable cette année. Une diminution apparente à cause que 5 trimestres du revenu ont été compris l'année dernière. La perception en vertu de cet acte a été bien moindre cette année que l'année dernière, mais le Collecteur n'a pas retenu le tout pour salaires &c. Différence causée par un trimestre pris sur cette année. Même cause.

Assessment on Public Buildings, by 36th Geo. III. cap. 9,	330	0 0
	<hr/>	<hr/>
	£2910	0 0

Appendix
(Z.)
28th Jany.

Explanation on the new Items in the foregoing Estimate.

1st. Allowance to the Keeper of the Civil Secretary's Offices, in lieu of apartments formerly allotted to him, £25 0 0.

This allowance was included in the Treasury Warrant of last year, and it was considered just and necessary, in consequence of the individual being removed from the quarters occupied by him in the house formerly Rented for the Civil Secretary's Offices.

2d. Allowance for translating Public Documents into French, £50 0 0.

This charge was rendered necessary, in consequence of the Office of French Translator to Government being abolished.

3d. Messenger in the Provincial Secretary's Office, £30 0 0.

This is represented as absolutely necessary, by the Provincial Secretary, as well for the proper care of the Office, lighting fires &c. as from the constant intercourse between that and the other Public Offices.

4th. Rent of the Building used for the Civil Offices of Government, £495.

This charge is included in the Treasury Warrant of last year, but is attended with very little additional expense to the Public.

It became necessary to give up the apartments formerly occupied by the Executive Council, and the Auditor and Inspector General of Public Accounts, for the greater accommodation of the Legislature, and the hire of a house for those Departments, would have been attended with considerable expense. This is rendered unnecessary by the new arrangement, and the Rent formerly paid for the Civil Secretary's Offices, and for the Surveyor General's, is also saved, besides the very great convenience which both the Public and the different Departments of Government derive in having all the Public Offices established under the same roof.

5th. Allowance for the Keeper of that Building, £40

This is no addition to the expense, being the same allowance formerly made to the Messenger of the Executive Council Office, for care of additional apartments, &c.

6th. Contingent Expenses attending the care of the Building, £25.

7th. For purchase of Fuel for the respective Offices in the same, £50.

Necessary Charges.

8th. Salary of the Coroner at Three Rivers, £50.

The present Coroner's memorial to His Excellency the Administrator of the Government, praying for a Salary, is hereunto annexed, and as the Coroners of the other Districts receive Salaries of £100 each, Mr. *Lafrénaye* is considered as having a fair and equitable claim to a Salary, corresponding with the duties of his office. He is accordingly inserted in the Estimate, and recommended for a Salary of £50 per annum.

9th. Salary of the Chairman of the Quarter Sessions at Gaspé, £225.

A necessary charge, as there is no Court for the Administration of Criminal Justice there, except the Quarter Sessions of the Peace, and the Justices of the Peace could not meet in Quarter Sessions, in consequence of the want of a competent person to take the lead as Chairman, and guide them in their proceedings—the appointment has been submitted to the consideration of His Majesty's Government.

10th. Salary to the Keeper of the Goal and Court Hall at *Percé* (*Gaspé*), £54.

A necessary expense arising from the Establishment of a Gaol and Court Hall, and authorized by the Provincial Act, 48th Geo. III. cap. 35.

11th. Pension to *Thos. Amyot*, as Provincial Secretary, £400.

This is the same amount as was allowed for Salary, and now estimated for as a Pension, in conformity with His Majesty's Warrant, under Royal Sign Manual, dated 28th Jany. 1828.

Appendix

28th Jany.

Copy.

Downing Street, 4th Oct. 1827.

My Lord,

Having referred to the Lords Commissioners of His Majesty's Treasury, your Lordship's Dispatch of 21st April last, stating, that you had been induced to take a loan for a short period, of a large house for the use of the different Departments of Government at *Quebec*. I have the honor to transmit to you, in reply, the copy of a communication which has been received from the Treasury, authorizing the expense attendant upon the arrangements, but it appears to their Lordships that the expense is of that description which should be submitted to and provided for by the Legislature.

I have the honor to be,

My Lords,

Your Lordship's

Obedient humble servant,

(Signed) W. HUSKISSON,

Lieutenant General The Earl of *Dalhousie*.

A true Copy.

C. YORKE, Secy.

Province of *Lower Canada* }
District of *Quebec*. }

To His Excellency Sir *James Kempt*, Knight, Grand Cross of the Most Honorable Military Order of the Bath, Commander in Chief of His Majesty's Forces, and Administrator of the Province of *Lower Canada*.

May it please your Excellency,

Your Memorialist, *Charles Lafrenaye*, of the Town of *Three Rivers*, has the honor most respectfully to represent to Your Excellency,

That he holds the situation of Coroner for the District of *Three Rivers*, and by virtue of his Commission had to perform all the functions by law assigned to that Office, in the same manner as the Coroners for the District of *Quebec* and *Montreal* are thereunto bound.

That the Coroner for the District of *Quebec* and *Montreal* have a fixed annual Salary, whereas none is appointed for the Coroner for the District of *Three Rivers*, but that your Memorialist esteeming it just that a Salary should be granted to the Coroner for the District of *Three Rivers*, as well as to those for the other Districts, prays your Excellency would be pleased to take into consideration the justice of your Petitioner's claim, and to cause a fixed annual Salary for the Coroner for the District of *Three Rivers* to be allowed.

Quebec, 15th December 1822.

C. LAFRENAYE.

Copy.

No. 18.

Downing Street, 20th February 1828.

My Lord,

The House of Assembly of *Lower Canada*, having uniformly refused to vote the Salary of the Provincial Secretary, on the ground of his non residence, and as Mr. *Amyot* was appointed so far back as 1807, he was entitled by his Patent, to execute the office by Deputy, I deemed it advisable to recommend to the Lords Commissioners of the Treasury, to grant Mr. *Amyot* a Pension of £400 per annum, chargeable upon the Provincial appropriated Revenue of the Crown, upon his resignation of the office, and Mr. *Amyot* having consented to this arrangement, it will be the means of removing what has long been a source of dissatisfaction in the Colony, without occasioning any additional expense, as his successor is not to receive any Salary, his Emoluments being limited to the Fees of the Office. I therefore transmit to your Lordship, a Warrant under the Royal Sign Manual, countersigned by the Lords of the Treasury, granting to Mr. *Amyot*, for his life, a Pension of £400 Sterling, out of the Revenues of the Province, subject to the appropriation of the Crown, and I am to desire, that you will cause Letters Patent to be passed under the Seal of the Province accordingly.

I am further to acquaint your Lordship, that His Majesty has been pleased to nominate Mr. *D. Daly* as Mr. *Amyot's* successor.

I have the honor to be be,

My Lord,

Your Lordship's most obedient

Humble servant,

(Signed) W. HUSKISSON.

Lt. General The Earl of *Dalhousie*.

C. YORKE, Secy.

George

Appendix
(Z.)
28th Jan'y.

George R.

Whereas Our late Royal Father King *George* the Third, by Warrant under his Royal Signet, and Sign Manual, bearing date the 24th day of March 1807, did authorize and require Letters Patent to be passed under the Seal of the Province of *Lower Canada* in *America*, constituting and appointing *Thomas Amyot*, Esquire, Secretary and Registrar of the Records of and in the said Province, to have, hold, exercise and enjoy the said Offices and places, by himself or his sufficient Deputy or Deputies, to be by him appointed, and such Letters Patent were forthwith, and in due form passed under the Seal of the said Province accordingly:—And whereas it has been represented unto Us, that it would be expedient that the said Office of Secretary and Registrar of the Records of and in Our said Province, should henceforward be executed by an Officer resident in *Lower Canada* aforesaid, and performing the duties of such offices in person; and to the intent that effect may be given to such purpose, it has been proposed, that the said *Thos. Amyot* should surrender the Patent under which he holds the said Office, and should relinquish all claim thereto, and to the Salaries, Fees and Emoluments thereof. NOW KNOW YE, that in consideration of such surrender and relinquishment as aforesaid, We do hereby authorize and require you to cause Letters Patent to be passed under the Seal of Our said Province of *Lower Canada*, granting unto the said *Thomas Amyot*, for and during the term of his natural life, a yearly Pension of Four hundred pounds, sterling money of *Great Britain*, to be paid and payable to him or his Assigns, out of all or any of Our Revenues arising within Our said Province, and subject to Our appropriation, the first payment to be computed from the day of the date of the surrender of the Patent granting to him the said Office, up to the 1st day of May or the 1st day of November, which may next happen after the surrender thereof, and the future payments to be made half yearly, on the 1st day of May and the 1st day of November in each year—And for so doing, this shall be your Warrant.

Given at Our Court of St. *James's* this 28th day of January 1828—In the Eighth year of Our Reign.

By His Majesty's Command.

To Our Right Trusty and Right well beloved Cousin,
George Earl of Dalhousie, Our Captain General and Governor in Chief, in and over our Provinces of *Upper and Lower Canada*, or to Our Lieutenant Governor or Commander in Chief of Our Province of *Lower Canada*, for the time being.

Signed { *HENRY GOULBURN,*
MOUNT CHARLES,
ELIOT.

	£2910	0	0

Appendice
(Z.)

28 Janvr.

Explications sur les nouveaux articles contenus dans l'Estimation précédente.

1er. Alloué au Gardien du Bureau du Secrétaire Civil, au lieu des appartemens qui lui étaient précédemment accordés. £25 0 0.

Cette allocation était incluse dans le warrant du trésor de l'année dernière, et elle fut jugée juste et nécessaire, l'individu ne pouvant plus avoir l'usage des appartemens par lui occupés dans la Chambre ci-devant louée pour le Bureau du Secrétaire Civil.

2. Alloué pour la traduction des Comptes Publics en français, £50 0 0.

L'abolition de l'Office de Traducteur Français pour le Gouvernement a rendu cet article nécessaire.

3. Messenger dans le Bureau du Secrétaire Provincial, £30 0 0.

Le Secrétaire Provincial a représenté cela comme étant absolument nécessaire, tant pour le soin du Bureau, &c. que pour les communications constantes entre ce Bureau et les autres Bureaux Publics.

4. Loyer du bâtiment employé pour les Bureaux Civils du Gouvernement, £495.

Cet article est inclus dans le warrant du trésor de l'année dernière, mais il en résulte au public qu'une légère dépense additionnelle.

Pour donner plus de commodité à la Législature, il a fallu abandonner les appartemens occupés par le Conseil Exécutif et par l'Auditeur et l'Inspecteur Général des Comptes Publics, et le loyer d'une maison pour ces départemens aurait occasionné une dépense considérable. Cet arrangement a prévenu cela, en épargnant en même temps le loyer ci-devant payé pour les Bureaux du Secrétaire Civil et pour l'Arpenteur Général, outre la grande commodité qui est résulté au public et aux divers départemens du gouvernement d'avoir tous les Bureaux Publics sous un même toit.

5. Alloué au Gardien de ce bâtiment, £40.

Ceci ne fait aucune augmentation à la dépense causée par l'allocation accordée précédemment aux messagers du Bureau du Conseil Exécutif, pour garder les appartemens additionnels, &c.

6. Dépenses casuelles pour la garde de ce bâtiment, £25.

7. Pour chauffage pour les divers Bureaux dans le même, £50.

Articles nécessaires.

8. Salaire du Coroner aux Trois-Rivières, £50.

Le mémorial du Coroner actuel à Son Excellence l'Administrateur du Gouvernement, demandant un salaire, est ci-joint, et comme les Coroners des autres districts reçoivent des salaires de £100 chacun, M. Lafrenaye, peut en justice et en équité réclamer un salaire, équivalent aux devoirs de sa charge. C'est pourquoi il est entré dans l'évaluation, avec recommandation pour un salaire de £50.

9. Salaire du Président des Sessions de trimestre, à Gaspé, £225.

Article nécessaire, vu qu'il n'y a pas de Cour pour l'Administration de la Justice Criminelle, outre que les sessions de trimestre, et les juges de paix ne pourraient pas s'assembler en sessions de trimestre, si l'n'y avait pas une personne compétente pour présider, et les guider dans leurs procédés—la communication a été soumise à la considération du Gouvernement de Sa Majesté.

10. Salaire du Geolier et du Gardien de la Cour à Percé, (Gaspé.) £54.

Dépense rendue nécessaire par l'établissement d'une Prison et d'une Cour, et autorisée par l'Acte Provincial, 48e. Geo. III. Chap. 35.

11. Pension de Thos. Amyot, comme Secrétaire Provincial, £400.

C'est la même somme que celle qui était alloué pour l'appointement et entrée maintenant dans l'estimation, sous la forme de pension, en conformité du warrant de Sa Majesté, donné sous le Seing Royal, en date du 28 Janvier 1828.

Appendice

Copie.

Downing Street, 4 Octobre 1827.

Milord,

Ayant renvoyé aux Lords Commissaires de la Trésorerie de Sa Majesté, la dépêche de votre Seigneurie, du 21 Avril dernier, portant que vous aviez été induit à louer pour un court espace de temps, une grande maison pour l'usage des différens Départemens du Gouvernement à Québec; J'ai l'honneur de vous transmettre en réponse, copie d'une communication qui a été reçue de la Trésorerie, autorisant la dépense à résulter de ces arrangemens, mais il paraît à leurs Seigneuries que la dépense est d'une espèce à demander à être soumise à la Législature et payé par une allocation de sa part.

J'ai l'honneur d'être,

Milord

de votre Seigneurie

l'obéissant serviteur,

(signé) W. HUSKISSON.

Au Lieutenant-Général le Comte de *Dalhousie*.(vraie copie.)
C. YORKE, Secrétaire.Province du *Bas-Canada*, }
District de *Québec*.

A Son Excellence Sir *James Kempt*, Chevalier Grand-Croix du Très-Honorable Ordre Militaire du Bain, Commandant en Chef des Troupes de Sa Majesté, et Administrateur de la Province du *Bas-Canada*, &c. &c. &c.

Qu'il plaise a Votre Excellence,

Votre mémorialiste *Charles Lafrenaye*, de la Ville des Trois-Rivières, à l'honneur de représenter très-respectueusement à votre Excellence :

Qu'il tient la situation de Coronaire pour le District des Trois-Rivières, et se trouve soumis à toutes les assiduités et devoirs qui lui sont imposés par la loi en vertu de sa commission, de la même manière que les Coronaires des Districts de Québec et de Montréal.

Que les Coronaires des Districts de Québec et de Montréal ont un salaire annuel et fixe, tandis qu'il n'y en a aucun pour le District des Trois-Rivières; mais que votre mémorialiste croyant qu'il est juste qu'un salaire soit accordé au Coronaire du District des Trois-Rivières, ainsi que dans les autres Districts, ose supplier votre Excellence de prendre en considération la justice de la demande de votre mémorialiste, et de faire fixer et allouer un salaire annuel au Coronaire pour le District des Trois-Rivières; et votre mémorialiste ne cessera de prier pour la conservation de votre Excellence.

C. LAFRENAYE.

Québec, le 15 Décembre 1828.

Copie.

No. 18.

Downing Street, 20 Février 1828.

Milord,

La Chambre d'Assemblée du Bas-Canada, ayant constamment refusé le salaire du Secrétaire Provincial, a raison de sa non-résidence; et Mr. *Amyot* ayant été nommé dès 1807, il était autorisé par sa patente à exécuter l'office de député, j'ai cru devoir recommander aux Lords Commissaires de la Trésorerie, d'accorder à Mr. *Amyot* une pension de £400 par an, payable sur les revenus provinciaux de la couronne affectés, sur la résignation de son office; et Mr. *Amyot* ayant acquiescé à cet arrangement, ce sera un moyen de faire disparaître ce qui a été longtemps une source de mécontentement dans cette colonie, sans occasionner aucune dépense additionnelle. Son successeur ne doit recevoir aucuns appointemens, ses émolumens devant être limités aux honoraires de l'office. C'est pourquoi je transmets à votre Seigneurie un *warrant*, sous le seing royal, contresigné par les Lords de la Trésorerie, accordant à Mr. *Amyot* pour la vie, une pension de £400 sterling, sur les revenus de la Province, sujette à l'approbation de la couronne, et je dois vous dire que je désire que vous fassiez passer en conséquence des lettres patentes sous le sceau de la province.

J'ai de plus à informer votre Seigneurie qu'il a plu à Sa Majesté de nommer Mr. *D. Daly*, comme le successeur de Mr. *Amyot*.

J'ai l'honneur d'être,

Milord

le très-obéissant serviteur de votre Seigneurie,

(signé) W. HUSKISSON.

Lt.-Général le Comte de *Dalhousie*.(vraie copie.)
C. YORKE, Secrétaire.

Thomas Amyot, Ecuyer, £400; en remettant sa Patente de Secrétaire et Régistrare des Archives, dans le Bas-Canada.

George R.

Appendice
(Z)
28 Janvier

Attendu que feu notre Père Royal, le Roi George Trois, par warrant sous Son seing et sceau royal, en date du 24^e jour de Mars 1807, autorisa et ordonna de passer des Lettres Patentes sous le sceau de la Province du Bas Canada, en Amérique, constituant et nommant Thomas Amyot, Ecuyer, Secrétaire et Régistrare des archives de et dans la dite Province, pour avoir, tenir, exercer les dits offices et places et en jouir, par lui ou par député ou députés capables, à être par lui nommés et que telles Lettres Patentes furent en conséquence de suite et en due forme passées sous le sceau de la dite Province: Et attendu qu'il nous a été représenté, qu'il serait expédient que l'office de Secrétaire et Régistrare des Archives de et dans notre dite Province, fut à l'avenir rempli par un officier résidant dans le Bas-Canada susdit, et exécuter en personne les devoirs de tels offices et dans la vue qu'effet soit donné à telle fin, il a été proposé que le dit Thomas Amyot remette la Patente, en vertu de laquelle il tient le dit office, et abandonne toute prétension à icelui, et aux salaires, honoraires et émolumens y attachés: MAINTENANT SACHE'S, qu'en considération de telle remise et abandon comme susdit, Nous vous autorisons et ordonnons par le présent de faire passer sous le sceau de notre dite Province du Bas-Canada des Lettres Patentes, octroyant au dit Thomas Amyot, pour et durant le terme de sa vie naturelle, une pension annuelle de quatre cens livres, argent Sterling de la Grande-Bretagne, à être payées et payables à lui ou à son procureur, sur tous et aucun de nos revenus prélevés dans notre dite Province, et sujets à être affectés par nous, le premier paiement à être compté du jour de la date de la remise de la Patente, lui octroyant le dit office, jusqu'au 1^{er} jour de Mai ou 1^{er} jour de Novembre; qui pourra arriver à la remise d'icelle, et les payemens à venir à être faits semi-annuellement, le 1^{er} jour de Mai et le 1^{er} jour de Novembre de chaque année. Et pour ce faire, le présent sera votre Warrant.

Donné à notre Cour de St. James, le 28^e jour de Janvier 1828; Dans la huitième année de Notre Règne.

Par l'ordre de Sa Majesté.

A Notre très fidèle et Bien-amié Cousin George,
Comte Dalhousie, notre Capitaine Général et
Gouverneur en Chef, dans et sur nos Provinces
du Haut-Canada et du Bas-Canada, et à notre
Lieutenant Gouverneur ou Commandant de
notre Province du Bas-Canada, pour le temps
d'alors.

Signé

HENRY GOULBURN,
MOUNT CHARLES,
ELIOT.
