FOR INTERNAL AND EXTERNAL USE.

PARSONS' PURGATIVE PILLS

FOR INTERNAL AND EXTERNAL USE.

CHICKEN CHOLERA.

It is a well-known fact that most of the

cases of this disease are caused by the use of

poisonous food, and that the only way to

prevent it is to use a reliable and safe

remedy. The undersigned has the honor to

announce that he has now on hand a large

assortment of the above-named pills, and

will sell them at a low price, and on easy

terms. For further particulars apply to

J. A. VANWART, Fredericton, May 1, 1886.

NOTICE.

Agriculture

Milk Changes during Churning.

The alimentary value of milk

cream, buttermilk and skimmed milk

is a question of much interest to dairy-

men and farmers, who should know

precisely the value of the refuse of the dairy.

Milk is a complete food; that is, it

contains every necessary alimentary

elementary in the right proportion to

sustain life; the protein and the sugar

and the fat which make up the carbo-

hydrates, and the mineral matters

which are needed to supply the

growth of bone and tissue and to

sustain the force and heat of the vital

functions. It will supply all the

necessaries of a young and growing

animal, and consequently will main-

tain a mature one in full health and

strength. Moreover, as all its solid

substance is contained in solution it is

easy digestible. It is, therefore, a

perfectly nutritious and healthful

food. An average sample of good

milk consists of 87 per cent of water,

3 per cent of fat or butter, 2 per

cent of casein or cheesy matter, 4

per cent of sugar and 1 per cent of

mineral matter.

This valuable product seems to

have been designed for the use of

man and beast as well as for a food

for calves, for the fact that it contains

the substance of the milk for a calf may

be quickly fattened upon new milk,

and is not at all necessary for a

young or growing animal, which re-

quires simple and bone rather than

the milk and made into butter, and

the skimmed milk left may be used

FARM NOTES.

Keep insecticides and scythes out

of the reach of the children.

Use diligence, integrity and proper

improvement in time to make farming

pay.

Provide fresh water for the stock.

If ever fresh, pure water is needed it

is needed now.

A good cow is a valuable machine;

the more food she properly digests the

more profit.

Don't give more attention to your

colts and calves than you do to your

boys and girls.

Do not keep more live stock on your

farm than you can keep well. Sell

when you can get a fair price, and do

not store for rate and speculators. The

more comfortable you keep your ani-

mals the more they will thrive.

In order to produce the "bunch"

of crops that is so common in the West

markets, the plants are given plenty

of room in which to grow, so that the

suckers or side branches will start

simultaneously with the central shoot

and the result is a "bunch."

The appearance of apple in the

great hop yards of central New York

renders a poor crop for 1886 almost

certain. Such a condition of affairs

would materially lessen the quality of

choice hops harvested and enhance the

value of 1885 hops.

A new use has been discovered for

potatoes. They can be converted into

a substance resembling colloidal in

peeling them, and after soaking in

water, impregnated with eight parts

Miscellaneous.

KISSES.

There's a great deal of bliss in a lingering kiss,

And a great deal of bliss in a lingering kiss,

There are lots of fun in a stolen kiss.

If you're clever about the capture.

The quiet kiss in a kiss that's quick,

Is to put it where it belongs;

To see that it goes below the neck,

And knocks at the gate of sleep.

A kiss that is cold may be for the old,

Or pass with a near relation.

But one like that is a work—a flat—

Of supererogation.

If you're going to kiss, be sure of this—

That the girl has got some heart in her;

I wouldn't give a darn for the fall of a barn

Of kisses without a partner.

The point of this rhyme is to take your time:

Kiss slowly, and do it neatly;

If you do the thing right, and are halfway

bright,

You can win her sweet heart completely.

"My son," said a man of doubtful morals,

Putting his hand on the head of a young

urchin, "I believe you've got hold of

you."

"I believe so, too," the urchin replied.

"You say he called you a liar?"

"Yes, an ungodly liar."

"And you didn't tell him so?"

"No, how could I? My grand-

father died of heart disease, and it would

do me to get excited."

Physician (with his eye to patient's chest):

"There is a curious swelling over the region

of the heart, sir, which must be reduced at

once." Patient (cautiously): "What 'swell-

ing" is my pocket-book, doctor; please don't

reduce it too much."

THE USE OF HONEY.

The Bee-keeper's Magazine quotes

the following relative to the medicinal

value of honey: "Honey disturbs the

formation of fungoid growths, and has

therefore been of great use as a pre-

ventive in the treatment of scabies. Work-

ed up into an ointment with flour, it

is the best remedy for boils. Used

internally, honey cannot be too highly

praised; it is by its use, in the case of

colic and catarrh, quinsy in its early

stages, diphtheria in the embryo stage

is destroyed by it, and the bacteria as

well as fungoid growths. For dis-

ease of the palate, throat and breath-

ing organs, pure flower honey, especially

strained honey, has proved itself to

be infallibly of use, especially when

used continuously and with a corre-

sponding diet. It is a most valuable

remedy in the case of a cold, and

is a valuable home remedy for a

stomach complaint. Every family

should have a glass of pure honey in

the house in order to use, after catch-

ing cold, to be able to use some. Many

a valuable home remedy for a

stomach complaint. Every family

should have a glass of pure honey in

the house in order to use, after catch-

ing cold, to be able to use some. Many

THE MOSE.

The life history of the moth is much

like that of the butterfly, except that

most of them either build cocoons or

burrow in the ground, while passing

through the pupa stage. Their co-

coons are not so hard as those of the

moth, and they are not so hard as
