JOHN T. P. KNIGHT,

VOL. XIX. No. 37. MONTREAL, FRIDAY. SEPTEMBER 15, 1899. SINGLE COPY - - .10 Annual Subscription - \$2.00

Any reader of THE CHRONICLE having copies bearing date 20th January and 24th February last, will greatly oblige by notifying

THE PUBLISHER.

Ville Marie Although no report of the condition of **Bank**. this institution can be expected from the liquidators until they are able to ascertain the value of its assets, particularly the bills discounted at the head office and branches of the bank, enough is known to justify THE CHRONICLE'S statement in a former issue that there is too much reason for grave misgivings and uncasiness among the depositors. The settlements being effected with several customers and the rumoured worthlessness of much of the paper held as current loans renders the outlook gloomy in the extreme.

A Cheorful Chap. An undertaker doing business in one of the West India islands is responsible for the following attractive advertisement

of his wares: "Funeral Agency.—Just arrived, by "Taymouth Castle,' from Toronto, Canada, a large shipment of coffins and caskets, all of which will be sold at prices to meet the times, as times are bad, work scarce, and depression general. Why live and be miserable when you can be comfortably buried ? I shall reduce my charges for hearses and carriages to the new cemetery."

If these Toronto coffins and the dangerous philosophism of this merry but mercenary undertaker are to serve as an incitement to suicide, the insurance companies will have to deal with this cheerful chap. Since our last issue, Dreyfus has been "Remeticiem.", sacrificed to preserve peace, at least for the present, in France. The clever writer of "Our Note Book," in the London "Illustrated News," when all the world was waiting for the verdict which has shocked the European press into denouncing it as a gross and appalling prostitution of justice, characterized the proceedings at Rennes as "a rancorous fanaticism which makes law a mockery and sweet religion a rhapsody of words."

The New York "Herald" applies the following quotation to some of those who deposed for the prosecution:

"Forgiveness to the injured does belong,

But they ne'er pardon who have done the wrong."

But the advocacy of a boycotting of the Paris Exhibition as a rebuke to a few fanatics is puerile and absurd. Why should commercial France, a great and industrious nation, suffer for the sins of those who have sacrificed Dreyfus as an offering to modern diplomacy.

Classifying Consemption. The American papers report a case which points to the opening of \mathcal{A} war against consumption as a communicable disease. A physician in Detroit having failed to report his attendance upon a patient suffering from tuberculosis, he was fined \$50 and costs for neglecting to comply with the regulations of the board of health in that city. It is stated that the doctor intends to legally question the right of the health officers to classify consumption with small-pox, scarlet fever and other diseases, the outbreak of any new case of which has to be reported to the health authorities.

As a means of making known to the people that consumptives should be separated so far as possible from healthy people, the action of the Detroit officials is a move in the right direction. Our Mountain ing made to lessen the mortality from

consumption, the Canadian "Gazette" remarks that the Dominion is performing her part in the crusade by opening the sanitorium for consumptives at St. Agathe "high up in the Laurentian Mounttains." The sanitorium is described as having "been established by the doctors of Montreal as an experiment in the new fresh air treatment of tuberculosis."

What is the Appearance? Endless fun is being poked at the London (Eng.) "Star" for the following paragraph:

"Whilst riding in Holloway yesterday afternoon, a cyclist, whose name is unknown, collided with a 'bus and was picked up unconscious. He died at the Great Northern Hospital early this morning, without regaining consciousness. He had the appearance of an insurance agent."

The "Scottish Critic" says that "after a protracted existence, with ample facilities for study," he is still ignorant of the special features which distinguish an insurance agent from an ordinary human being. Perhaps the Star man was not judging by external appearance, but came to his conclusion by reasoning that only one well acquainted with risks would try the experiment of tilting at a London omnibus.

London's Some idea of the size of the great city of **Fire** London may be gathered from a recent **Brigade.** report on the London County Council Fire Brigade. The expense of its sustenance last year was \$1,385,000. But this amount is not surprising when we read that the fire-fighting of the force covers an area of 117 square miles containing a population of 5,000,000. The city is supplied with 24,000 hydrants, of which number 15,700 have been placed in the streets during the last ten years. The decadence of Great Britain

"mother of a mighty race."

is not yet visible in the heart of the Empire-

The Heavy Fire Less.	The total fire and Canada, a York "Comm	as compiled l	by the New
703,700. Th	ne losses by mo		
	1897.	1898	1899.
January	. \$12,049,700	\$ 9,472,500	\$10,718,000
February	8,676,750	12,629,300	18,469,000
March		7,645,200	11,493,000
April	10,833,000	8,211,000	9,213,000
May		11,072,200	9,091,900
June		9,206,900	6.714.850
July		8.929.750	11,426,400
August		7.793.500	9,703,700
Totals	\$71,021,700	\$74,960,350	\$86,829,850

The heavy increase for August, 1800, over the cor-

responding months of the two preceding years, and the fact that the record for eight months shows an increased loss of nearly twelve millions of dollars, is most discouraging to underwriters, and, when added to the impending demoralization in rates, renders the outlook for insurance interests most gloomy.

President Whiting of the Orient Insurance Company is reported as saying "the course of events is unmistakably tending toward demoralization;" and of the desire on the part of certain companies to lessen competition, and the efforts of the authorities to break up all associations, he remarks:

"From appearances, the time is near when companies will be restrained from using established rates at which all can write, and must depend upon their agents, with the aid and assistance of their specials, to see that adequate figures are obtained and correct forms of policy adopted. From States where for several years there has been no profit, many companies will retire, and in such there must not be any concessions made."

"The experience of the present year indicates that too many concessions have been made already, and unless there is a cessation of fires rates must be advanced."

Altogether, the prospects of profit from the fire business of 1899 are anything but encouraging.

They Object to In the course of some editorial com-ment upon the proceedings at the rebeing Bored. cent convention of the American Bankers' Association, the "Bankers' Magazine" draws attention to a subject which may well receive the earnest consideration of some Canadian organizations now in the habit of holding annual meetings for the purpose of receiving papers and addresses. The "Bankers' Magazine" claims that it is "a waste of valuable time to permit the reading of long and cedious papers" before a convention when every substantial purpose would be fulfilled by presenting them in the published proceedings. At the close of some excellent advice to delegates at similar conventions of bankers, scientific men, political economists, engineers, doctors, etc., we find the following: "With a view to keeping up the interest in the conventions, the Council should exercise the greatest care in eliminating from the programme whatever is calculated to make the proceedings wearisome. People can be bored at home without undergoing the expense and discomfort of long journeys."

It is evident that academic discussion of scholarly papers must be avoided if the interest in the annual conventions of bankers and others is to be maintained. Upon such occasions the speaker who can present his subject in a lively and amusing manner will command bigger audiences than the learned reader of a dry address. The practical business can be safely entrusted to an executive, and the bulk of the papers had better be presented, as suggested by this critic of the American Bankers' Association, "in the published proceedings." d

The Canadian Forests. The United States Consul-General at Montreal, in a recent report to his government on the forests of Canada, es-

timates the timber area of the Dominion at 1,250,000 square miles. The proportion varies from nearly 75 per cent- in British Columbia to 40 per cent. in Manitoba, and 30 per cent, in the North West Territories. The growth of new wood is said not to be equal to the amount cut. Some of the best cedar areas are on the north shore of New Brunswick, but the rich pine forests of the Maritime Provinces have been impoverished, although a quantity of good spruce is left in Nova Scotia. The total exports of wood and its manufactures from the Dominion amount to over \$35.-000,000 per annum.

In connection with the recent sale of crown lands in New Brunswick, a St. John paper says that Canadian spruce makes the best fibre for pulp, and that the result of this will be that the manufacture of deals will cease altogether and the timber will be converted into the more valuable pulp.

British Columbia possesses the largest compact timber resources in the world, and the coast is heavily wooded as far as Alaska.

Among the most interesting papers read Liability Insurance. at the meetings of Insurance Commissioners at Detroit, last week, was one contributed by Captain Masters, of the London Guarantee and Accident Company. This gentleman is very popular with the profession. He is said to have been "enthusiastically received," and the hall was filled during his address. Captain Masters has a blunt, sailor-like way of putting things, as the following extract from his paper shows. We do not know if the American lawyers deserve the charges brought against them by the outspoken United States manager of the London Guarantee. If they do not, it must be settled between the gallant captain and those he has attacked. But there is a very bold charge against the legal fraternity embodied in the following extract from Captain Masters' address. He said:-

"Notices of accident and claims on the average pay roll have doubled within the past ten years. There are two explanations for this: First-Every accident of every description is notified to the insuring company to-day, whereas in 1890 only those accidents were sent where the results would seem to be serious or claims likely to be expected. Second-To-day every workman in the land knows of liability insurance, and probably knows whether his employer carries a policy or not. Trades unions are important factors in the working world, have their attorneys and make a business of backing up any members who have suffered injury or accident while at work. The damage suit lawyer searches the newspapers for accident notices and immediately hies himself to the home of the injured or to the hospital where some workingman has been carried, and quickly, if he can reach the bedside and the man is not unconscious, has signed a contract empowering him as attorney to settle and look after the injured man's interests in any way, the attorney to be paid a fee of 25 to 50 per cent. of the amount recovered."

Trams Across the Sea. Some members of the Glasgow Corporation recently visited Dublin to in-

spect the working of the electric tramway system of the latter city. During the visit of the Scotchmen, a singular accident happened, and in consequence of this and a minor mishap in Cork, the Freeman's Journal says, "it is impossible to ignore the danger of the overhead system of electric traction," while another paper, "The Finance Union," points out "the great danger attending the introduction of electricity as a motive power for tram-cars."

The accident is reported to have been caused by a man named Manners, who, wishing to leave the car, was told by the conductor, who was collecting fares, to ring the bell. It is then stated that, by mistake, Manners pulled the trolley rope, with the result that the electrically-charged over-head wires snapped and fell among the passengers, three of whom received severe electric shocks, for which they were treated in hospital.

The story is a strange one, and sufficient to alarm all patrons of tramcars. That the overhead wires are not regarded favorably in cities across the sea may be gathered from the following comments in the "Freeman's Journal:"—

"The moral, of course, is that no cost must be spared by the rich and prosperous company to secure the passengers against this imminent peril. Even on the most sordid grounds it is bad policy on the part of the company to sacrifice the public safety to the hope of big dividends. Juries are not likely to deal leniently with such a policy. Nor are the public likely to expose themselves to the danger when they come to realize its character. Everyone is afraid of lightning, though the actual danger is not great. But the travcller outside the tramcar has lightning without the warning thunder a yard from his head all the time. A hitch occurs and the lightning strikes. This is a matter which the citizens expect the Corporation to deal with promptly and effectively."

A claim for salvage lodged by the fire **A Singular** brigade of Sydney, Australia, against the owners of a steamship which caught fire while moored to a wharf in Sydney harbour, has resulted in an extremely important decision being rendered by the Vice-Admiralty Court of New South Wales. The New York "Commercial Bulletin" thus reports the case:

"On October 19 last, the steamship "Buteshire" caught fire while lying alongside Dalgety & Co.'s wharf in Sydney harbor. The assistance of the Sydney fire brigade was invoked, and ultimately the flames were extinguished, the work being one of considerable difficulty in consequence of the absence of floating engines. Later on the Sydney fire brigade's board made a claim against the owners of the "Buteshire" for salvage. The facts were not disputed, but it was contended on behalf of the owners that the ship, being moored to the wharf, must practically be considered as forming part of it, and that, as there might be a danger of the fire spreading from the ship to the wharf and adjacent buildings, it being a densely populated neighborhood, the fire brigade's board were under obligations to extinguish the fire as part of their ordinary duties.

"The Judge of the New South Wales Vice Admiralty Court, in which the case was heard, in the course of a lengthy decision, said that a ship moored to a wharf in Sydney harbor was as much afloat as if she were in mid-channel, and could not be held to be within the boundaries of the city of Sydney, which extended only to high water mark on the foreshores. As the fire was confined to the ship, the fire brigade's board were entitled to salvage. The judgment signifies that a fire on board ship at any of the wharves cannot be extinguished by the Sydney fire brigade board without being followed by a claim for salvage. The amount of salvage has not been determined, and it is possible that an appeal may be made to the Judi cial Committee of the House of Lords."

Such an extremely important decision in connection with fires on board ships in port will be interesting to others than vessel owners, if only for the definition of what, in Australia, constitutes the boundaries of a city.

The Gold Standard. Bankers' Association, it was made clearly apparent to the politicians of the United States that, whatever may be the platform of the Democratic party at the next Presidential election, the silver plank will have to be omitted, if the support of the bankers is desired. The following resolution was voted upon by the assembly and unanimously adopted:

"The bankers of the United States most earnestly recommend that the Congress of the United States at its next session enact a law to more firmly and unequivocally establish the gold standard in this country by providing that the gold dollar, which under the existing law is the unit of value, shall be the standard and measure of all values in the United States; that all the obligations of the Government, and all paper money, including circulating notes of national banks, shall be redeemed in gold coin, and that the legal tender notes of the United States, when paid into the Treasury, shall not be reissued except upon the deposit of an equivalent amount of gold coin."

There is no uncertain ring to this resolution, and the commercial prosperity of the United States is hardly likely to be jeopardized by any further serious advocacy of the silver heresy if the business men of the country have any belief in the sagacity of their bankers.

Bevenue from Beer in Britain. The statements recently issued by the leading breweries of Britain are not calculated to cheer the advocates of prohibition for that country. The sales of Allsop, Limited, in the past year were the largest in the history of the company. The profits amounted to \$1,525,000, an increase of \$84,-000 over the preceding year. The satisfaction of the shareholders with this result was shown by a vote of \$10,000 as additional remuneration to the directors. Guinness and Company, Limited, at their annual meeting also reported sales having reached the highest figures yet arrived at in the history of this remarkable firm of brewers. The chairman, Sir Reginald Guinness, whose brother was raised to the peerage some years ago with the title of Lord Iveagh, declared the net profits of the company for last year as \$4,060,000, and the shareholders received dividends of 19 per cent. for the year. The titled directors not only regard the increasing consumption of their beer as disclosing "a very satisfactory state of affairs," but they mention as a matter of interest to the shareholders that the directors have decided to exhibit models of certain portions of the brewery, drawn to scale, at the Paris Exhibition of 1900.

These facts and figures staring us in the face warrant the statement that the only community in which prohibition can be successfully enforced is a community in which nobody wants to drink liquor. Instead of vain efforts to destroy the British thirst for the productions of Guinness, Allsop *et al*, zealous temperance reformers cannot do better than unite to see that what the Englishman drinks is always pure and wholesome, and that the place where he drinks it is a well-managed and attractive place.

`How much of this extraordinary consumption of the ale and stout brewed in Britain can be credited to her colonies, we are not told. But so far as this country is concerned, Principal Grant stated just previous to the taking of the plebiscite that "intemperance is a decaying vice, and Canada a remarkably sober community."

The Severity of Banking Competition. In the same number of the American Bankers' Magazine the recent bank flurry in Mont-

real is made the subject of an article pointing to the impossibility of organizing any system of banking or any protective laws which will absolutely assure the public against the dangers of bank suspension and failure. But we note with natural satisfaction that the article is thoroughly in accord with the views already expressed in THE CHRONICLE. Upon the everincreasing competition between our financial institutions, the following observations are made: "Where branch banking is a feature, as it is in the Dominion, the fewer and stronger the banks are, the greater the safety with which business can be carried on. The main cause of the recent bank troubles in Montreal appears to have been that some of the weaker banks in the system found the competition too severe for them * * * * The principle of branch banking, however, involves a competition in which sooner or later all the weaker institutions are compelled to succumb, and there will remain only such a number of strong banks as with their branches can find a reasonable profit within the field to be occupied." After a reference to the practice of some Canadian banks of seeking investments in the United States as an indication that the Dominion is "in some degree overbank

1

1-

..

d

e s

t

t

ed," the writer of the article under review remarks : "the banks that carry on this business need to be very strong in resources and the capabilities of their managers."

At the close of an article which affords Canadians a very good opportunity to ascertain what others think of our financial mechanism, the following tribute must prove pleasing to the many admirers of our present Bank Act: "The defects in the Canadian banking system are so few and its excellencies so great that it will be comparatively easy for Parliament to bring it as near perfection, by some slight amendments, as any human institution can be made." Even the most vain of the framers of the Act under which our banks are chartered to do business can hardly wish for higher praise than this.

NEWFOUNDLAND, THE COMING NEW PROVINCE OF CANADA.

"Newfoundland is certain, before long, to become part of the new great North American Confederation, called the Dominion of Canada." This prophecy appears in a work published in 1872 by Sir Edward Creasy, M.A., on "The Imperial and Colonial Constitutions of the Britannic Empire." Although twenty-seven years have elapsed since that eminent writer issued his prediction. Newfoundland still remains politically unattached to the Dominion. Movements, however, of this kind are not to be measured by the same standard of time as those affecting personal interests. The union of all the Provinces of Canada was discussed over a hundred years before any practical steps were taken to weld them together as a Confederation. Prince Edward Island did not join the Dominion until 1873, six years after the other Provinces had been amalgamated. We do not then regard the delay in regard to Newfoundland becoming part of the Dominion as in the least degree indicative of this event being indefinitely postponed, for, though its approach is made by steps that are not very pronounced, we are satisfied that the prospects of Newfoundland entering Confederation are much brighter to-day than they ever were in the past. If the map is examined which shows the Maritime Provinces, the Gulf of St. Lawrence, and Newfoundland, it will be seen that the waters which divide the Island from Canada are more like a large lake than a Gulf, or an arm of the sea, and the shores of that lake on the west are the shores of Newfoundland which, at Cape Breton and the Straits of Belle Isle, run almost within hailing distance of the shores of Canada. Geographically, Newfoundland is so placed that she practically forms part of the territorial area of the Dominion, even more so than Ireland does that of the United iKingdom. So closely allied are Canada and Newfoundland by their geographical relations that it is quite common for official returns issued in the States to treat the Island as part of the Canadian system. Even the returns of insolvencies usually in-

clude those of Newfoundland with those of Canada, and the foreign trade of the Island is included in official statements with those of the Dominion. Two difficulties have been raised in the way of the incorporation of this most ancient of British colonies with the most important aggregation of them in one political organism. It has been urged that the debt of Newfoundland is so excessive that it would be imprudent for Canada to assume it. The gross debt of the Island is about fifteen millions of dollars. This, however, needs explanation. This debt includes all obligations of a municipal nature, the city debt of the capital, St. Johns, being included in it. If to the debt of Canada there were added the several debts of all the municipalities, the gross total would show a much larger debt per head of population than the debt of Newfoundland. The population of the Island is 202,-000. For this number of people a debt of 15 millions is \$74 per head. There are a number of cities in Canada whose net debt ranges from \$30 to 60 per head, and besides this the people share in the national debt obligation which is about \$50 per head. Then there are the debts of counties' and townships, so that, were all the public debts massed together for which the people of Canada are nominally liable, as all the debts of Newfoundland are massed into one total, it would be manifest that the debt per head of that Island is very materially less than the debt per head, calculated on the same basis, of the Dominion of Canada. In considering such a question as the taking over of a new Province, and assuming its debt, the first question to be asked is, whether the revenue of the new Province will pay the interest on the debt and provide a sinking fund for its ultimate extinction? In Newfoundland the ordinary revenue is sufficient to pay for the ordinary public services, and to meet all interest charges and sinking fund. The annual interest payable is from \$580,000 to \$600,000. The revenue, as per last return, was \$1,587,200, and the ordinary expenditures, including debt charges, \$1,583,000. The new Province would, therefore, come into Confederation in a condition of perfect solvency, and would bring with it such resources as would completely outbalance whatever debt would have to be assumed, or guaranteed, by the Dominion. Within the last few months a flood of light has been thrown upon the undeveloped resources of Newfoundland which reveal their being a probable source of great wealth in the near future. Such is the judgment of men like Sir William Van Horne, and of prominent capitalists who are about establishing very extensive iron works at Cape Breton, for which they will draw supplies from Newfoundland. Besides mineral development, there is every likelihood of the pulp industry becoming quite extensive in the Island, as the supplies of spruce are large, water supply is ample, fuel is cheap, and the English market is convenient for deliveries. The annual trade, which is now estimated at \$20,000,000. will in the near future be considerably enlarged, and the Island will be enriched by a variety of industries,

instead of being, as it has been for three centuries, almost wholly dependent upon its fisheries. Another difficulty, of which much has been made by those who wish to retard the expansion of Canada, is the French Shore question. This, like the boundary fixed by the Ashburton Treaty, is one of the inflictions caused by the ignorance of European statesmen as to the conditions existing on this side the Atlantic- Newfoundland was regarded in the sixteenth century as a sort of stepping stone to the North Western passage, and little heed was paid to it, the Stuarts acually discouraging the colonisation of the Island. Partly owing to their characteristic folly, there was a considerable settlement of French who claimed the Island where they had conquered nearly all the English stations After a period of war a Treaty was signed in 1713 giving Great Britain exclusive sovereignty, but reserv ing to the French certain fishing rights on part of the coast. Those rights have led to aggressions; to interferences with the Islanders; and to attempts to secure part of the soil of Newfoundland. Providence seems to have disapproved of the policy of the French, for the fishing in the waters where they have rights has fallen away until nearly worthless. The danger of any serious conflict with the French over their fishery rights on the coast of Newfoundland is now regarded as unworthy of serious attention. As a reason against Newfoundland entering Confederation, the French shore difficulty is regarded as entirely obsolete. There is also every probability of an arrangement being made for the entire relinquishment of its fishery rights by France which have so diminished in value as to be no longer worth the cost of maintenance. This historic source of irritation being re moved, there remains only the objection based on an entire misunderstanding as to the debt of Newfoundland, and the supposed addition it would make to the burthen of the Dominion. The new Province comes as no beggar, no suppliant for favours beyond those granted to other Provinces when they entered Confederation; but Newfoundland stands at our gate rich in natural resources, with financial capacities fully equal to her own needs, and possessing a commerce which would apprecially expand the trade of this country. To the Island the union with Canada would mean deliverance from restrictions, political, and mercantile, and financial, which hamper its progress and retard its development. Confederation would give new life, new powers, new hopes, new energies to the Islanders, and the Dominion in welcoming Newfoundland as a new Province would have its national pride and strength expanded by the consciousness that Canada comprised all the North American colonies of the Britannic Empire. We entertain sanguine anticipations that the Island which became a British Colony in the reign of Queen Eliza beth, will continue to adorn the British Crown when re-set as one of the jewels of the diadem made up of the Provinces of this Dominion.

UNLIMITED LIPTON.

The martyrdom of Captain Dreyfus and the obstinacy of President Kruger have, for the past few weeks, occupied the attention of newspaper reporters almost exclusively. But the challenger for the America Cup, Sir Thomas Lipton, is now having his innings, and it seems likely to last until the Shamrock's owner returns to Europe. However, even those who take no interest in yachting, who cannot define what is displacement, and are quite indifferent as to the length of the Shamrock's overhang, can extract amusement for their leisure hours from reading the descriptions of the yacht and her owner.

We are told that "the most remarkable thing about Sir Thomas is the lavishness of his expenditure in his efforts to "lift" the Cup." Perhaps, it is for this display of unlimited means that the reporter then says: "Sir Thomas Lipton is rapidly becoming the most popular Briton that ever reached these shores." Knowing how strong will be the desire of yachtsmen everywhere to know that the baronet is a real Irishman. we are informed that "he has the most delicious touch of brogue that ever made music." His modesty in declining to "tell how much the Shamrock cost" is rebuked by the reporter's declaration that she represents \$350,000, and that the total outlay on Sir Thomas's efforts to capture the cup will be \$1,000,000. His steam yacht "Erin" was built for "an Italian Count" two or three years ago, and Sir Thomas bought her for "a mere song, \$350,000" At least. the reporter says that Sir Thomas says so.

The steward of this craft was trained "in the Tuilleries under the third Napoleon," and his *chef de cuisine* is "the famous Joseph," of whose previous existence we are ashamed to confess our complete ignorance. Then the American reporter expresses surprise that Sir Thomas does not exhibit signs of haughtiness. Here it is:

"It might be supposed that a man of the great wealth of Sir Thomas might seek to hold himself aloof. As a matter of fact he is the most gracious, most genuinely hospitable and considerate stranger that ever came to these shores."

It is almost time for these enterprising reporters to suggest his nomination for the Presidency of the United States. One of them gravely assures us that "Sir Thomas smiled quietly, while a wreath of blue smoke from his cigar curled skyward." We are glad the baronet "smiled quietly" instead of indulging in a loud guffaw at the questions of his numerous interviewers.

It is all very droll. But such is modern journalism, and even if these little details of the daily life and doings of this "most popular Briton" fail to interest yachtsmen, they serve as a foretaste of the adulation awaiting Admiral Dewey, and they also make a splendid advertisement for that great company, Lipton, Limited.

To the newspaper reader who objects to having so much of the space in his favorite journal taken up SEPTEMBER 15, 1899 INSURANCE & I

with the approaching yacht race, the brevity of a Southern editor will be refreshing. This laconic gentleman disposes of Sir Thomas and his yacht in one concise sentence. He says:

"Whether the Shamrock wins the American cup or not, she is recognized as a daisy."

MONEY VERSUS RISKS.

" Slow we counted them—run for run,— Loud we boasted the cut for one, And treasured the si-gle bye." Songs of HARROW,

Much interest is being manifested by lovers of the old English game of Cricket in a match to be played to morrow afternoon, on McGill grounds, between the representatives of the banks and insurance companies. The sporting editor of THE CHRONICLE will report the result of this important Cricket fixture in our next issue.

BANK NOTES.

The following changes and appointments have been announced by the Canadian Bank of Commerce:— Mr. A. H. Ireland, Chief Inspector, will assume the title of Superintendent of Branches- Mr. H. B. Walker, retires from the service of the bank to become Treasurer of the Canada Life Assurance Company. Mr. John Aird, Assistant Manager at Toronto, to be Manager at Winnipeg. Mr. M. Morris, Assistant Inspector, to be Assistant Manager at Toronto Branch. Mr. V. C. Brown, to be Assistant Inspector.

CARTER-CRUME COMPANY PREFERENCE STOCK.

In 1882, when the business of the Carter-Crume Company was commenced, but few merchants in either the United States or Canada used a duplicating system for checking their sales. Since that time, how ever, so useful have duplicating sales books become that they are practically indispensable, and are almost universally used by merchants in America. The Carter-Crume Company is the largest maker of these books in the world, and amongst its 25,000 regular customers are the gigantic mercantile establishments of R. H. Macy & Co., Siegel, Cooper & Co., and Arnold, Constable & Co., of New York; Marshall, Field & Co., The Fair, and Mandel Bros., of Chicago; Jor dan, Marsh & Co., of Boston, and Gimbel Bros., of Fhiladelphia. The Carter-Crume Company supplies almost 90 per cent. of all duplicating, and the patents and processes are in use in factories in England, Germany and Australia.

The prospectus shows the profits of the Company to be over \$150,000 per annum, and the patents, of which there are more than fifty, are vouched for by legal opinion. These facts, together with the firmly established character of the business and the prominent names on the directorate, evidence the valuable character of the stock now offered for subscription as a seven per cent. investment. The subscription books open at the offices of Messrs. A. E. Ames & Co., Toronto and Cleveland, on Wednesday Sapt. 30th, at 10 a.m., and close at 4 o'clock the same day.

Obituar<u>p</u>

The intelligence of the death of Mr. John Doull, President of the Bank of Nova Scotia, at the age of 77, has just been received from Halifax, where this highly respected gentleman resided. To Mr. W. M. Doull of Montreal, eldest son of the deceased, and the other members of his family much sympathy will be extended by their many friends.

Mr. John Doull was recognized by all Nova Scotians as one of the best citizens of Halifax, and was known far and wide for his kindliness and amiability.

PERSONALS.

Mr. C. R. Hosmer was a passenger by the "Oceanic" on her maiden voyage, and arrived in Montreal on Wednesday night.

Mr. J. K. Macdonald, Managing Director, Confederation Life Association, purposes starting next week for the Pacific Coast in the interests of his Company-

Mr. E. L. Pease, General Manager of the Merchants Bank of Halifax, accompanied by Mrs. Pease, arrived at New York on Wednesday, making the journey from England in the new steamship "Oceanic."

Mr. Archibald C. Kains, who succeeds Mr. Walker in the management of the Chicago business of the Canadian Bank of Commerce, was not permitted to leave the Canadian metropolis without receiving a mark of the respect and affection entertained for him by the Manager and staff of the Montreal branch. On Monday afternoon he was presented with a signet ring, and Mr. Crombie on behalf of the subscribers to the testimonial when making the presentation wished the recipient happiness and success in his new position, and made a very pleasing allusion to the years of faithful service rendered by Mr. Kains to the bank. Mr. Crombie also stated that many friends outside the institution joined in the good wishes to which he (Mr. Crombie) was asked to give expression.

RECENT LEGAL DECISIONS.

WHEN INSURANCE MONEYS CLAIMED BY RIVAL PARTIES.—Under several life insurance policies, issued by the Confederation Life Association, the moneys were payable to the assured, his executors, administrators or assigns. The assured resided in Manitoba, and died there, and upon his death, his executors in Manitoba claimed the moneys, and threatened

them. The widow, who resided in Quebec, also claimer the benefit of the policies, and brought an action in Quebec against the Association. The Company's head office being in Ontario, they launched an application in Toronto, for leave to pay the moneys into Court, and that the rival claimants might be required to fight the matter out between themselves. An order having been made by the Master, allowing notice to be served upon the two claimants in Manitoba and Quebec respectively, the widow appealed, claiming

that the Association could not have relief, when the adverse claimants were in a foreign jurisdiction. It has been held by Chief Justice Meredith, who heard the appeal, that there was jurisdiction to allow service upon the parties out of Ontario, and that the Association was entitled to the benefit of the Ontario provision, passed for the relief of parties of whom the same debt is claimed adversely by two rival claimants; but he would not say what should be done on the return of the application, if the claimants should not appear and submit to the jurisdiction of the Ontario Courts. In re Confederation Life Association and Cordingly, 19 C. L. T., 304.

CONSTRUCTION OF FIRE INSURANCE POLICY.—A condition in a policy of insurance against fire, issued by the Atlas Assurance Company, m. Nova Scotta, provided that the assured "was to deliver within fifteen days after the fire, in writing, as particular an account of the loss, as the Latare of the case permitted." Upon an appeal from the Supreme Court of that Province to the Supreme Court of Call ida, the following rules were laid down:—

Compliance with the condition requiring delivery of particulars, is a condition precedent to an action on the policy.

When a person, not an officer of the insurance company, is appointed to investigate the loss, and to report thereon to the company, he is not an agent of the company, and has no authority to waive compliance with such condition. Even if he has such authority, he cannot, after the fifteen days have expired, extend the time, without express authority from the company.

A compliance with the condition cannot, in any case, be waived, unless such waiver is clearly expressed in writing, signed by the company's manager in Montreal, as required by another condition on the policy.—Brownell vs. Atlas Assurance Company, 29 S. C. R., 537.

TORONTO LETTER.

The Meeting of the C.F.U.A. in Quebec.—A Change in Dwelling House Rates to be Discussed.—The C. F.U. A. has fully justified its inception.—A Great Outery against the Management of the Toronto Fire Brigade.—An investigation announced.—The Toronto Board not thinking of increasing rates.

Dear Editor .- On the 19th inst., the Annual Meeting of the Canadian Fire Underwriters Association will be held in Quebec. The Agenda to be submitted to the meeting, seemingly, is rather meagre, and its items few, in comparison with former like lists. This may be taken as a favourable sign, as suggesting that work of the Association in previous years has been well and fully accomplished, needing only, as it were, annual revision, and a little judicious oiling of such parts of its mechanism as show symptoms of heating. That the general objects of the Association have been attained, and its usefulness to fire insurance interests as well as to the insuring public proven, must be admitted. They are self-evident. Since the foundation of the Association, some sixteen years ago, many changes have come about in the fire insurance busi-

Looking ahead one can descry other fast ness. changing conditions in the insurance field, from nontariff competition and otherwise, that need care, and the mature judgment of the wiser guides and men of influence in the C- F. U. A. to meet successfully and with that judicious adaptation of Association interests to circumstances that is requisite. One item in the Agenda "Dwelling Rates," and "the revision of same with a view to reduction," is again brought up for discussion. Evidently some Company or Companies are so plethoric in regard to premiums from Dwelling House insurance that they feel in need of a little Banting to subdue their richness, and reduce their fullness in this direction. It is just possible that that small margin of profit which the insurance statisticians tell us is shown in estimating the aggregate results of the fire insurance business for a series of past years in Canada, is derived largely, if not wholly, from this same dwelling-house business. If my conjecture be reasonable, it would be well that any reduction of these rates, as proposed (and which, by the way, the public are not asking for), should be very seriously considered before adoption: "Leave well alone" is sound advice.

Since my last letter to you, a fire occurred one afternoon in Toronto, which from the way it was handled by the Fire Brigade has called forth a great deal of criticism of an adverse, even of an hostile nature, towards that body, and especially towards Chief Graham. Apparently the management of this fire was unfortunate and much loss entailed upon the Companies interested comparatively speaking. Considering all the favorable external circumstances attending the fire, this should not have been. Moreover, the Mayor happened to be on the ground, and witnessed the scene. The Chief's defence, in part, in this case is that the life of a young woman was at stake; she being cut off by the fire in an upper story from which eventually she had to jump, and some neglect at the instant for this reason may have in the excitement allowed the fire to gain headway. There was no ladder supplied the Bay street station longer than 20 feet, and the Chief had been denied sometime ago by the City the ladder he had asked for. It would seem that a crisis of some sort has been reached in Fire Brigade management. The Mayor is evidently, "down" on Chief Graham, and I suppose ultimately a change of head will take place. Whatever the shortcomings of the Chief may be, it is at least certain that he has not that whole freedom in the choice of, or in the renewal or advancement of his subordinates, that a responsible Head should have. There is dictation and influence from certain quarters, that, presented in the guise of suggestions, comes to the Chief with the force of authoritative orders, and by so much the Chief's powers and judgment are dominated, it may be for, it may be against, the interests of all concerned, but, however, it is all wrong in principle. There is to be an investigation by the Fire Light Committee is to the management of the Fire Brigade, and to them may be left the merits or demerits of the case. It is very difficult to reach a true understanding of things, owing to the evident importation of municipal politics into the question, and which obscures the vision of many.

A prominent feature in connection with this matter is somewhat amusing to one reading between the lines as it were, and as a chirographic expert recognizing the "fine Roman hand" of some member, seemingly of the Toronto Board of Underwriters, in many of the inspired articles of the "Daily Press" on the above subject. Such soothsaying never was, Sup-

posing, such swelling with importance as if holding in hand the Great Whip of the Toronto Underwriters. to wit, the imposition of an increased rate of premium. It is the common talk that someone is doing all this: The Mayor is loaded up and sundry others of the Fathers, and the grand chimax of all their pronouncements is that if the City does not turn out the unfortunate Chief, then the Underwriters will advance rates; indeed it is alleged that at the meeting of the Board on 11th instant, this increase of rates will be discussed! It is abominable, that the Toronto Board should, even in seeming, be used as an implement to further the ends of cliques of any kind. The fact is, the Underwriters contemplate no such thing as an advance in Toronto rates. For several months past that body through its officials has been busy burying the last vestige of that most objectionable impost known as the conflagration extra of 25c. per cent., and otherwise lowering or adjusting City rates at considerable expenditure of time and money, in revision and inspections. Consequently, not for one moment would any attention or consideration be given to a proposition to advance rates because the Chief was alleged to be inefficient. If there is one thing more certain than another in this connection, it is that the Toronto Board have nothing whatever to do with the efficiency or non-efficiency of the individual members of the Brigade, their only concern is that the Brigade, as a whole, render the best possible service in their place, and maintain that efficiency of fire protection in this city, on the assumption of which, the present rates of fire insurance have been based.

A meeting of the General Committee of the proposed Insurance Institute has been called for the 12th instant, for the passing of By-laws, etc. You will remember that the formation of an Insurance Library in connection with this Institute was mooted last spring.

Yours, Toronto, 9th September, 1899.

LONDON LETTER.

31st August, 1800.

Ariel.

FINANCE.

That every boom is followed by a slump is a truism of finance, and that national prosperity runs in cycles is also an accepted truth of political economy. The annual bankruptcy statement issued by Sir Courtenay Boyle, the permanent under-secretary at the Board of Trade—a gentleman who receives his \$9,000 per annum for superintending the collection and tabulation of commercial statistics—provides an illustration of the latter truth.

* * *

In 1890 the total losses to creditors here was 41.14 million dollars. Gradually the figures climbed up until in 1893 they reached over 60 millions. Then came a decline of about five millions per annum until in 1897 the total was only 37.1-2 millions. In 1808 it had risen to 42.1-2 millions, which looks as though the pendulum were about to swing back.

* *

In 1803 we were in the middle of the deepest industrial and commercial depression of recent times. From 1850 to 1875 Great Britain enjoyed a run of good trade and national well-being that was almost cloudless. Then came a terrible drop. Things gradually worked back to better conditions, and after another fall of less intensity about 1886, there was a movement up until 1803.

In January, 1893, there were to per cent. of the mechanics in this country out of work. There were barely 3 per cent. this January. Both last year and this year have been very prosperous from the point of view of work and wages, the present year even more than last. Here, there seem to be a lack of correspondence between the bankruptcy totals, and the evident national prosperity, However, one finds that last year's increase in bankruptcy, etc., is due mainly to failures in purely financial and speculative enterprises, and included the strange case of Mr. Hooley. It seems most probable that the electricity of an impending industrial storm would affect the least solid commercial institution first. Coming events cast their shadows before, and it can be wellargued that last year's swelling of bankruptcy losses foreshadows another general industrial crisis either in 1900 or 1901.

Forebodings of the kind do not trouble the people who are trust building. The English Sewing Cotton Company ends its first year's trading with a net profit of \$000,115, and the architects of the numerous combines that are now being negotiated or planned are fired with enthusiasm to go and do likewise.

* * *

The lino combine has been sanctioned by the shareholders of the amalgamating companies. The capital is to be five millions. The velvet dyers finding that their own sectional association is powerless to aid them in the chase for missing profits are proposing to unite with the velvet makers and merchants, and also with the allied portions of the velveteen and fustian industries.

There is a little party of promoters in the City whose ventures have proved uniformly unfortunate. The gentlemen are Sir John Willoughby and Messrs. Partridge and Jarvis. Rhodesia has been the location of the concerns which have been sold to the public by this interesting trio, and the shareholders are at last getting angry. The pretty pieces of paper they hold are hardly sufficient return for the hard cash they have parted with, and there is a move on foot to produce the projection of more light upon these flotations. There is some good stuff in South African mines, but it is not in the keeping of the W. P. J. aggregation-

* * *

The declaration of a dividend of 20 per cent, upon the paid-up capital of Drury Lane Theatre provokes a reference to the extremely good present yield of theatrical and music-hall investments. The theatrical years do not all correspond, but taking some of the later declarations they pan out as follows: In size of dividend, the Empire Varieties stands first with 50 per cent.; Drury Lane, as above, pays 20 per cent.; the Palace Varieties, 20 per cent.; Tivoli music-hall, 15 per cent.; Allambra, 16 per cent.; Gaiety theatre, 15 per cent., and then we reach down to ten, seven and five per cents.

* * *

The most profitable net yield of all is that of the Gaiety theatre, the birth-place of The Runaway Girl. The five dollar fully paid shares are selling at slightly over eight dollars, making the net return about 13-14 per cent. The Alhambra yields a net to per cent, at present prices, and Drury Lane nearly 9-1-2 per cent. The nominal capital of the Gaiety is barely \$300,000, whilst Drury Lane's is \$620,000.

Probably, however, very few securities are so variable in their profitableness as stage holdings. The Empire paid 66 per cent. in 1893, and 26 2-3 per cent. in 1895. The Gaiety paid nothing in 1894 and 25 per cent. in 1896. The Alhambra after a series of dividends from 34 per cent. to 46 per cent., ulso paid nothing in 1894. The Drury Lane Company is only in its second year, having come into being upon the death of Sir Augustus Harris "Druriolanos."

Notwithstanding these variations, the risks seem very light when compared with the usual high dividend rate.

INSURANCE.

The sudden death of Sir Edmund Lacon will fall very heavily upon the insurance offices. He had had a policy in the Royal since 1889 for \$175,000, and there are also several others. He was only fifty-eight-He retired from the army (lieutenancy, 23rd Foot) in 1865, and had since occupied himself with banking duties in connection with his Norfolk and Suffolk Bank. He had been married twice. Owning an excellently fitted yacht, he was spending the holidays cruising in northern seas, and died after dinner, off Iceland.

There have been few more melancholy failures in the insurance world of recent years than that of the National Unity Assurance Company. Apparently the founders of that woe-begone flotation have given up all hope of making anything out of it. The "works" are closed down, and the staff scattered perhaps enjoying its holidays in hunting for its missing salaries.

* * *

In its stead, there arises the City Assurance Company, which, whilst not having such a broad spreading title as its predecessor yet dwells in an atmosphere of wealth. William Whyte Bain of the National Unity, and earlier still of the British Workmen's, has been appointed manager. Bain's perseverance is commendable, but he will have to develop things considerably before he can make out a shewing for the City Assurance Company as an investment.

The new-business hunger is as plain a mark of modern times as the empire-hunger. It is indicative of the straits to which some of the contingency offices are reduced, when you find one of them offering for \$1.25 per annum to insure the humble, necessary barber against loss from claims arising out of damage done by him to the skins of his customers.

The rain has come at last, after a period of local drought, unequalled in recent years, and thus ends the merry little innings that forest fires and crop conflagrations have had. Fire offices and others with interest in agricultural districts can now draw a line, and add up the figures for farm losses during the summer of 1809.

The Cambridge Master Builders' Insurance Company, Limited, has the honor of being the first concern of an insurance kind to complete a year's trading under the Workmen's Compensation Act, and to publish the report of it. Results:—Premiums (wholly local), \$3,000; profit, after allowing \$500 for unset tled claims, \$1,610; dividend and bonus, each of 10 per cent.; reserve, \$500; and carried forward, \$685.

STOCK EXCHANGE NOTES.

Wednesday, p.m., September 13th, 1899.

The values of stocks on the whole again show a decline this week as compared with last, and this is particularly the case with the traction issues. The Transvaal trouble has been to a large extent removed from among the influences which have affected the market adversely, and the money question is now the chief bear factor in the situation.

There has been no special stringency in money locally, but in New York rates during the past few days have been ranging between 6 and 9 per cent., which, of course, has produced a liquidating movement, and this has acted sympathetically to depress prices here.

The influx of funds from outside centers where rates are lower, which will certainly follow this state of affairs will possibly within a few days, cause matters to right themselves, but there seems no doubt that the great industrial activity which is prevailing, and the increase in value of almost all kinds of raw material, will have the effect of giving us a period of higher rates for time money than has ruled for some months past. As long as call loans can be made on the basis of about 5 per cent., the brokers and public will be satisfied, and *p*rices will be maintained, but if higher rates than this should rule, there is almost certain to be a fall in values with a subsidence of speculative activity.

There is not much change in rates in London or on the Continent, but the tendency is towards greater case.

* * *

Canadian Pacific is now selling ex-dividend, and the price as compared with a week ago shows a decline of 1-2 per cent., the close to-day being at 94 1-2. The value of this stock has been very well maintained considering the fall which has taken place in shares of prominent railways in the United States.

The transactions during the week amounted to 1,965 shares. The increase in earnings for the first week in September amounted to \$61,000.

Montreal Street Railway closed this afternoon at 318, being a decline of 5 points from a week ago. The transactions during the week involved 639 shares, and the earnings for the week ending 9th inst, showed an increase of \$798.90 as follows:—

Inc

	THC.
Sunday\$4.596.84	*\$ 23.41
Monday 5,880.75	135.91
Tuesday 4,824.35	*159.75
Wednesday 4,668.49	401.16
Thursday 4,645.82	*142.91
Friday 4.592.68	181-21
Saturday 5,180.84	406.69
* Decrease.	

Toronto Railway shows a loss of 3-4 per cent. on the week's trading, closing to-day at 116. The number of shares which changed hands was 1,269, and the earnings for the week ending 9th inst. showed a decrease of \$1,248.19, as follows:—

												Inc.
Sunday										. :	\$3.049.72	\$128.22
Monday		,				,		,			9.147.95	108.38
Tuesday									•		7.899.80	*353.58
Wednesday						,			•		8.763.88	*569.73
Thursday.											8.369.99	*1,046.50
Friday												58.58
Saturday	,			,					•		6.113.59	326.44
* Decrea	-											

* Decrease.

The decrease, which is the first shown this year, is accounted for by the fact that the weather was bad during the days on which the traffic to the exhibition would have been heaviest.

* * *

Twin City stock has shown a decided weakness, having fallen gradually from 67 a week ago, to 62 3.4 to-day on sales of 315 shares. There is no special cause for this as the earnings continue to be highly satisfactory, but the softness is probably due to the action of other stocks of a similar nature, notably Brooklyn Rapid Transit, which has fallen 9 points during the last seven days. The stringency of money of course has had its effect on this stock, as it is not as readily loaned on in New York as many of the others.

* * *

Royal Electric has had an important movement during the week, having advanced from 184 to $192\frac{1}{2}$. a gain of 8 1-2 per cent. The reason for this is that a meeting of the shareholders is to be held on 26th inst., to take into consideration a proposition to increase the capital stock by 50 per cent., or \$750,000. The idea is to allot this stock to present holders in the proportion of one share of new stock for every two shares of old stock held. If this course is decided upon the stock after the new allotment is issued will stand holders at about 161, giving them about 5 per cent. on their investment. This, of course, on the presumption that the old rate of dividend will be continued.

Trading has been quite active during the week, the number of shares dealt in having been 5,410-

. . .

The last sales of Montreal Gas were at 205, a decline of 3 points over the previous week. The closing prices to-day were, sellers 206, buyers 204 1-2. The number of shares traded in was only 184.

. .

Richelieu is one of the few stocks in which an advance is to be recorded, closing to-day with sales at 113 1-2, an advance of 1 per cent. over a week ago. It is rumored that a rise may be looked for very shortly.

. . .

Halifax Railway is offered at 110, but could be bought for less, and Dominion Cotton is also lower than a week ago, the last transactions having been at 105.

Heat and Light is weaker, having sold during the week as low as 24 with offerings on 11th inst. at 22.

This latter figure was bid to-day, but did not draw out any stock. It could probably be bought in the neighborhood of 23 or 24, however. The outlook for the Company is encouraging, and many improvements have been made during the past few months in the way of reducing expenses.

. . .

Dominion Coal is somewhat weaker, in sympathy with the Boston market, where the stock sold during the week as low as 50 3.8. Another advance is predicted for this stock before the end of October.

. . .

Call money in Montreal	5 p.c.
Call money in London	2 p.c.
Call money in New York (Last loan)	4 p.c.
Bank of England rate 3	1-2 p.c.
Consols	1-8 p.c.
Demand sterling	1-2 p.c.
60 days' sight sterling	3.4 p.c.

MINING MATTERS.

The listed mining stocks show little change from a week ago with the exception of War Eagle, which has suffered a loss of 17 points.

The closing prices as compared with last week, and sales for the week were as follows:----

		ago.	To-day.	Sales.
War Eagle	 	363	346	36.000
Payne	 	126	127	18.000
Montreal-London	 	57	56	11.000
Republic	 	124	122	15.950

The ore shipments in the War Eagle are increasing, while development is being carried on in all parts of the mine. The main shaft is nearing the 800 foot level, and over 300 men are now constantly employed.

The recent fall in the value of the shares is due to the announcement of the details regarding the issue of Centre Star stock. The terms at first proposed were not looked upon with favor and have since been altered somewhat.

War Eagle shareholders were to receive share for share of Centre Star stock at \$1.50 per share, and the latter Company, it was announced, would pay 9 per cent. per annum in dividends to commence with, beginning with January next. This would work out as follows:—1 share War Eagle at say \$3:50, plus 1 share Centre Star at \$1.50—\$5.00. The return on this would be War Eagle 18 per cent. per annum, Centre Star 9 per cent. per annum, total 27 per cent., giving 5.40 per cent. upon the investment, not at all an attractive return for mining stocks.

It is now proposed that Centre Star shall pay 12 per cent. or possibly 18 per cent. per annum. The latter figure seems hardly likely at present for a mine which has just commenced to produce, and besides as the capital is \$3,500,000 (twice that of War Eagle), it would require twice the profits which War Eagle now distributes. On the basis of 12 per cent for Centre Star the return would be exactly 6 per cent. upon the two stocks or 8 per cent. upon Centre Star alone. This looks better but even yet does not seem overburdened with attractiveness for the outside public, when it is considered that the Centre Star dividends are to be deferred for three or four months, and that to acquire the rights the expensive War Eagle stock has to be purchased. To those who are already holders of War Eagle at lower figures there may be desirable features about it, but there will be no great tush on the part of the public to buy War Eagle stock for the purpose of acquiring rights to obtain Centre Star.

As regards War Eagle itself shareholders have been patiently waiting for exactly one year for an increase in the dividend, and it is now stated that it is not the intention to give this until a large reserve fund is built up. This latter, of course, is very desirable, but as we intimated last week, the Company must be earning in net profits at the rate of 75 per cent. per annum, and it does not seem reasonable that the shareholders should receive only 18 per cent.

If the reserve fund is built up at the rate of say \$500,000 per annum or 30 per cent. upon the capital, this should be all that is necessary, and would ensure the payment of dividends for nearly a year against a strike, which is probably the only serious contingency to be feared.

If the dividend were increased by gradual stages, say, first to 2 cents per month, then to 2 1-2 and 3, this would be regarded by shareholders as satisfactory, but it is not to be expected that the stock will maintain its present high price indefinitely on the present rate of dividend when other stocks equally as good can be had to yield nearly twice the return.

The "Republic Miner" declares on excellent authority that the ore from the Republic Mine yields \$300 a ton in gold - It states that every level in the mine has shown richer and richer ore, and the values that will be met at the 600 foot workings can only be speculated upon.

The Slocan stocks are looking better owing to the probable early settlement of the labor troubles, and an advance in Payne should be in order very soon.

Golden Star has risen from 43 to 46 during the week principally on the report of the Ontario Government expert, and the rumor that the dividend of 1 1-2 cents per share will be paid on 1st October. The expert referred to states that there is no indication that the mine has a lower value than formerly but that it will continue to yield good returns, and the average assay of 177 samples, taking rich and poor ore together, give an average of \$10.70 per ton.

. . .

Regular dividends are expected to be commenced by Van Anda in six months time. It is reported that a New York syndicate have made an offer for the controlling interest of the Company, at about 12cts. per share. The assays of ore from a vein recently located give over \$2,000 per ton. Rambler-Cariboo has been strong and sold up to 49 cents to-day, an advance of 8 points during the week. Reports received from the property are to the effect that the ore body on the 350 foot level gives as rich values as that found in the levels nearer the surface.

The mining outlook has been improved by a report which comes from the Slocan that at last the end of the labor trouble is in view. A caucus of the Slocan mine owners was held in Sandon on Saturday week, and while no definite move was taken, the question was virtually settled, and it only awaits the combined action of the mine managers to arrive at a settlement of the difficulty that has caused the inaction in mining circles for three months past. The decision arrived at in the caucus was to resume operations at once with the wage scale at \$3-50 for miners and \$3 for muckers for the eight-hour shift. This is the old scale, but the mine managers will refuse to recognize the union, and non-union men will be given the preference.

The crosscut on the 327-foot level of the Old Ironsides, in Greenwood camp, has encountered the ledge. This is about 100 feet deeper than any other depth yet secured in the Boundary country. Heretofore all the drifting and crosscutting have been on the 100 and 200-foot levels, most of the work being done on the latter.

Big Three has again lost a few points during the week, and is now selling at about 21c. The strike on the Mascot is of course very important, but neither of the other properties have yet found ore in paying quantities, and Mascot will have a big contract to earn even a moderate dividend on the capital of \$3,500,000. Big Three Company was organized in October, 1896, and up to the present time about 3,000 feet of drift ing, tunnelling, etc., has been done on the three properties.

The further development of the Dufferin mine at the 300 foot level continues to reveal ore of high value. The new stamps are being tried this week, and by the end of the month the full battery of 60 stamps will be ready to crush.

REGISTRAR OF STOCK THE NATIONAL TRUST CO., TORONTO

COUNSEL-MESSRS. BLAKE, LASH & CASSELS, TORONTO. BANKERS—THE CANADIAN BANK OF COMMERCE.

The Carter-Crume Company, Limited, has been formed for the purpose of acquiring and carrying on, in the United States and Canada, the business of manufacturing DUPLICATING AND TRIPLICATING MERCHANTS SALES' BOOKS and AUTOGRAPHIC REGISTERS and supplies therefor, heretofore conducted by the Carter Crume Co., of Niagara Falls, N. Y., and Toronto, Ont. It is intended to continue the business under the existing staff management, and the present General Manager agrees to remain in charge at the same remuneration he has been receiving in the past, which remuneration is allowed for in the statement of profits certified by the accountants. Following is an extract from a letter from the General Manager, Mr. S. J. Moore :-

" The business now carried on by the Carter Crume Co. was commenced in Toronto, Ontario, in 1882, and at Niagara Falls, N.Y. "The business now carried on by the Carter-Crume Co. was commenced in Toronto, Ontario, in 1882, and at Niagara Falls, N.Y. in 1884, and factories utilizing the same patents and processes have since been established and very successfully operated in London, England ; Herlin, Germany, and Melbourne, Australia, in which, however, the Carter Crume Company retains no interest. In addition to these a lactory is operated at Oaklands, Cal., by a company which pays a minimum annual royalty of \$6,000 to the Carter-Crume Company for the privi-lege of supplying territory west of and including Denver, Col. The business has grown steadily from its c mmencem.nt until the Company now supplies nearly **90 per Cont**. of all the duplicating and triplicating sales' books used in the United States, and has on its books over 25,000 regular customers. On August 1st, 1899, there were on hand orders for **81X MULLION** books. "The letters patent of the Company protect the must valuable books manufactured by it, and, also, important features in the machinery used in the factories. While these patents are of great value, the prosperity of the company is also due largely to the fact that it has reduced the cost of production to a minimum, and that the product, owing to modern commercial necessities, is a stap'e article,"

Following is a letter from Mark W. Dewey, Patent Attorney, of Syracuse. N.Y., countersigned by Arthur Stem, Counsel, of Cincinnati, O. : SYRACUSE, September 1st, 1899.

ROBERT KILGOUR, Esq , President, Toronto.

DEAR SIR, -- We are familiar with the patents owned and controlled by the Carter-Crume Company. They are of three classes. Class one includes those issued for improvements in machinery, and they cover some radical and important inventions, the most important of which are covered by patents having over nine years to run.

Class two embraces patents upon check books of a primary character. The most important of these is U. S. Patent No. 406,845. This patent coversbroadly and fully the style of check book known as the "Continuus." It is dated July 9th, 1859, and will expire July 9th, 1906. It is a patent which has been respected by the public, there not having been a known case of infringement in more than eight years. We believe it to be a valid parent, and that the manufacture and sale of similar books in the United States can be restrained thereander.

Class three includes numerous patents taken out as improvements upon the primary ones. Some of these have over ten years to run, others have over fifteen years to run, and still other inventions of this class are the subject of applications upon which patents have not yet been issued.

ARTHUR STEM, Counsel.

The proceeds of this issue will be availed of to acquire all the property of the vendors used in their manufacturing business, including the real estate, premises, the fixed plant and michinery; also the good will of the business and the manufacturing assets of every sort (including accounts receivable and bills receivable), trade-marks, and patents, the business being taken over as of October 1st, 1899. Messrs. Clarkson & Cross, Chartered Accountants, Toronto, have examined the books of the Company, and write as follows :-

ACCOUNTANTS' STATEMENT.

Toronto, August 28, 1899.

MARK W. DEWEY, Attorney.

Messrs. A. E. Ames & Co., Toronto :

Gentlemen .- We have examined the books and accounts of the Sales' Book and Autographic Register business of the Carter-Crume Company, of Niagara Falis, N.Y., and Toronto, Ont., for a period of five years from August 1st, 1894, to July 31st, 1899, and beg to inform you that after charging against the profits all operating expenses, including remuneration of officials, we find the annual profits have been as follows :---

Year	ending	31st July,	1895	\$109,538 14 108,663 87
			1896	
••	••	••	1897	126,830 27
••	•	••	1898	141,637 69
	••		1899	151,819 51

Total for five years..... \$638,489 48

All expenditures in connection with the maintenance and repairs of the property have been charged against the profits, and we are of the opinion that a proper amount has been annually written off for depreciation, and that the works have been kept in good condition. The losses from bad debts have averaged less than one-half of one per cent. during the past five years.

Yours truly,

CLARKSON & CROSS.

PREFERRED STOCK.

The Preferred Stock now offered is entitled to Preferential Cumulative Dividends of 7 per cent. per annum, accruing from October 1st, 1899. The amount required to pay 7 per cent. on the Preference Stock being only \$52,500, it is considered that such dividends are amply assured, and it is provided that, if in any one year dividends amo inting to 7 per cent. are not paid on such stock, the deficiency shall be a charge upon the net earnings of the Company and shall be paid subsequently, before any dividend shall be paid upon or set apart for the Common Stock. In case of liquidation or dissolution of the Company the holders of Preferred stock shall have prior right on the assets of the Company before any amounts shall be payable to holders of the Common Stock.

Dividends will be payable quarterly on the first days of January, April, July and October.

The Charter of the Company will provide that after payment of 7 per cent, in dividends on the Preference Stock, and before the payment of any dividend wha ever upon the Common Stock, the sum of \$25,000 shall be annually transferred to a **RESERVE ACCOUNT** in the Books of the Company (to be used in the basiness of the Company), the better to secure to the Preferred Shareholders payment of the dividends on their preferred shares, and such annual transfers shall be continued until the amount of said account reaches \$250,000, at which sum it is to be maintained, and if it is at any time drawn upon it is to be in like manner restored and maintained.

Application will be made in due course to have the stock of the Company listed upon the Toronto Stock Exchange.

SUBSCRIPTION BOOKS will be opened at the Toronto and Cleveland offices of the undersigned on WEDNESDAY morning, the 20th of September next, at 10 o'clock, and close at 4 o'clock the same day. The Directors reserve the right to allot only such subscriptions and for such amounts as they may approve, giving preference, however, as far as possible, to subscriptions for small amounts.

\$550,000. 5,500 Shares of \$100 each, at par

Payable in full on October 1st, 1899.

Subscription Forms may be had on application.

A. E. AMES & CO. 10 King Street West, Toronto, Ont. Cuyahoga Bldg., Cleveland, Ohio.

BUSINESS.

KEEPING UP APPEARANCES.—First Depositor—'I don't like that new bank cashier. His appearance is against him." Second Depositor—"Not as much as his disappearance would be."

THE GOOD OLD TIMES.—The first number of the Baltimore American—then called the Maryland Journal and Baltimore Advertiser—was issued on the 20th August, 1773. On its hundred and twenty-sixth anniversary its fac simile was printed and presented as a souvenir to each subscriber. As a striking evidence of how much faster news now travels than in those days "the freshest advices" from England were dated June 19 and from New York August 12.

A COMPLICATED CASE .- An interesting question of insurance law has arisen out of a fire which occurred in April last on Dover street in Boston. The de struction was so great as to demand extensive repairs to the damaged buildings. These repairs the insurance companies interested in the loss are willing to make, to the extent of putting the injured structures in as good condition as they were before the fire. It seems, however, that an obstacle to this course exists in the present building laws applicable to Boston, under which no reconstruction is permitted which will not necessarily make the buildings better than they were when burned. Such reconstruction will, of course, be more expensive than mere restoration. This increased cost, according to the views of the insured, was a risk assumed by the companies; while

the companies, on the other hand, insist that the limit of their obligation is to make good, but in no wise improve the insured property. The Boston "Herald" says that in the present aspect of the controversy an appeal to the courts is probable.

DEBENTURE SALE.

Tenders addressed to the undersigned, marked "Tender," will be received up to and including the **3rd October. 1899.** for the following issues of Town of Pembroke Debentures, viz. :

\$12,000 Sewerage Debentures, 4%, payable in thirty annual instalments from 15th September, 1899; and

\$5,000 High School Debentures, 4%, payable in twenty annual instalments from 7th November, 1899.

THE MOLSONS BANK. 88th DIVIDEND.

The Sharehold rs of The Molsons Bank are hereby notified that a Dividend of FOUR PER CENT. and a Bonus of ONE PER CENT, upon the capital stock has been declared for the current half year, and that the same will be payable at the office of the bank, in Montreal, and at the Branches, on and after the

SECOND DAY OF OCTOBER NEXT.

The transfer books will be closed from the 25th September to 30th September, both days inclusive.

THE ANNUAL GENERAL MEETING

of the shareholders of the Bank will be held at its banking house, in this city, on MONDAY, the 9th of OCTOBER next, at three o'clock in the afternoon.

A by-law will be submitted to the meeting increasing the Capital Stock, by the sum of \$1,000,000, divided into 20,000 shares of \$50 each, and providing for the allotment of the increased stock pro-rata amongst the share-holders desirous of accepting same, and the shareholders will be asked to pass the said by-law.

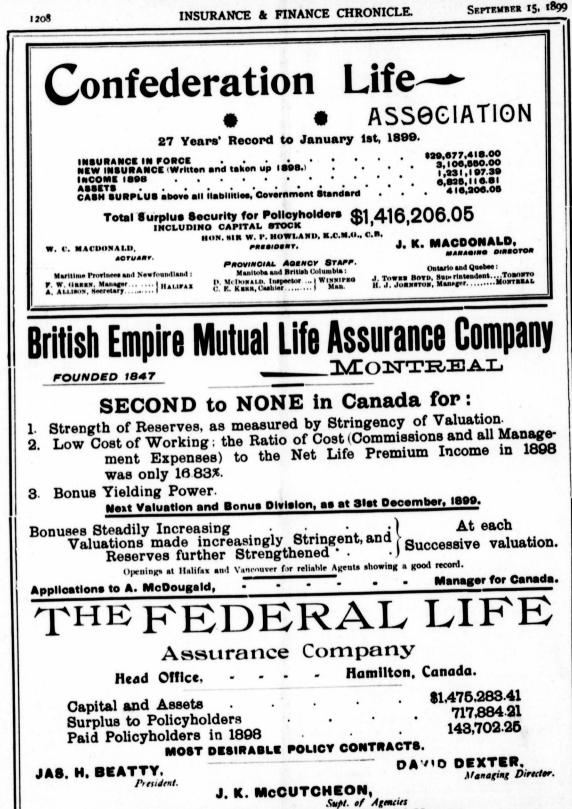

It is intended at present to allot only 10,000 of said shares after the certificate of the Treasury Board has been obtained.

By order of the board.

F. WOLFERSTAN THOMAS.

General Manager.

MONTREAL, 25 Aug., 1899.
