Correction. In the letter from London, G. B., published in last week's Chronicle, our correspondent referred to the Sun Life Office. The Company thus mentioned is the Sun Life of England, and not its Canadian namesake.

The Silver Question Dead. It is impossible for Canadians to avoid a feeling of lively interest in each recurring battle for the presidency of the United States. It is, therefore, cheering to note that even the most ardent supporters of Colonel William J. Bryan incline to the opinion that the silver question will be unheard of in the presidential campaign of 1900. Public opinion, as expressed by the Bryanite organs, points to the trust issue and imperialism as being the issues upon which the national contest will hinge.

Our Toronto correspondent, in this Toronto in week's letter, comments at some length the Van. upon the very laudable efforts of the instrance fraternity of the Queen City to establish an Insurance Institute. That an association for the purposes outlined by him would be of incalculable advantage to all who are engaged in the business or profession of insurance in any one or all of its branches cannot be questioned, and Montreal insurance men cannot do better than pay a graceful compliment to their Toronto brethren by following in their footsteps. No greater encouragement could be given to the embryo managers and actuaries than the prize essay system adopted by the Canadian Bankers' Association. Some future young contributor to the Toronto or Montreal Insurance Institute may, in a thoughtful essay, solve many a knotty problem now puzzling the brains of his seniors in office and field. Let us hope for the success of the proposed Canadian Insurance Institute.

To Our Readers. We take pride and pleasure in directing the attention of our readers to the mass of information now presented by The Chronicle upon matters of interest to bankers, insurance managers, stockbrokers and all dealers in investment securities, bonds, bank shares, industrial and mining stocks. If a few inaccuracies are accessionally

mining stocks. If a few inaccuracies are occasionally found in the tables, they are attributable to the changes being of necessity numerous, and made on the eve of going to press, and we shall be glad to have same pointed out by interested subscribers. In this week's issue, we commence publishing an additional table, giving much information about mining stocks, their market value, etc., etc., which for filing purposes must be of use to all who are watching the development of our mineral resources.

Health.
An Essay.
"Though health may be enjoyed without gratitude, it cannot be sported with without loss, or regained by courage."

We all admit that the enjoyment of health is the first of earthly blessings, and that without it all others may be lavished in vain; and yet it has been quaintly asked, "Who is he that values health at the rate it is worth?" Health is that which makes your meat and drink both savoury and pleasant. Health is that which makes your bed easy and your sleep refreshing. Health is that which makes exercise a sport, and walking abroad the enjoyment of your liberty. But, walking abroad in the city of Montreal is not enjoyment, at present. With the disappearance of the snow, all the dead vegetable and animal matter, all the winter's filth, is being disclosed, undergoing rapid decomposition. Soon the warm springtime will generate remittant fevers and all the maladies arising from the deadly miasma of a dirty city. There is infection floating in the air. This brief essay is dedicated to the Board of Health.

Re the congested condition of the electric Congestion. cars running through the principal thoroughfares of large cities, we cheerfully give space to the following suggestion. For the purpose of ensuring an improved service without changing the present practice of carrying an unlimited number of passengers, closer attention should be given to the stowing of the human cargo. The distribution by the company among their conductors of copies of Kenyon on Stowage might enable them to display more of the skill of the stevedore in loading their cars, and enable them to find room for some of the passengers now left standing at street corners. Of course, more cars is another remedy.

As a fearless, independent and outspoken exponent of what many people Boomerang. think but lack the courage to say, the New York "Evening Post" has a large number of in fluential and admiring subscribers. As a result of the stout fight it has made against the obnoxious baggage regulation, said to have been framed through the influence of some New York shopkeepers, several of the latter are said to have withdrawn their advertise ments from the columns of the "Post." But this me thod of fighting has proved a perfect boomerang. Resenting such scurvy treatment of their champion, the "Post's" admirers are flooding that paper with applications for the names of the offending tradesmen. and promises to close accounts and withdraw all custom from those who have been interfering with their much vaunted American freedom by using the Customs to make shopping in London and Paris troublesome if not expensive. The independence of a good journal engaged in the work of encouraging thinking upon any subject will always be appreciated by its subscribers, and cannot be curbed by such means as those adopted by the enemies of the "Evening Post."

The changes made in the sugar duties The Sugar by the Tariff, as revised in 1898, appear to have been designed to increase the revenue without appreciably adding to the cost to consumers, and a clause was inserted with the avowed object of encouraging the importation of sugars from the British colonies in the West Indies, who were suffering severely from the competition of those European countries, which, in order to develop the best sugar industry, grant a subsidy to these enterprises, by which they are enabled to place sugar for export on the market at a very low figure. The sugar which Canadian refiners had been chiefly using was raw beet sugar, 88 per cent. grade, upon which the duty was 50 cents per 100 pounds. The duty was fixed at 40 cents per 100 lbs. on 75 per cent. sugar, and 1 1-2 cents more for each degree over that for each 100 lbs. On the bulk of the sugar imported, which grades at 88 per cent., the duty for the first 75 degrees is 40 cents, and 1 1.2 cents for each of the 13 degrees. The total

duty on this 88 per cent. sugar was thus made 59 1-2 cents instead of 50 cents. Sugar from the West Indies enjoys a preferential allowance of 25 per cent. On the refined product which tests at 99 1-2 degrees, the duty was raised from \$1 per 100 lbs. to \$1.24 1-2 cents. On yellow and soft sugars the increase was from one-twelvth of a cent per pound, and on granulated 24 1-2 cents, an increase of about 1-4 of a cent on sugars of the higher grade, and about 9 cents per 100 lbs. on cheaper grades of refined. The British Government is considering a proposal to impose an import duty on sugar entering the East Indies to "countervail" or set off the allowance made by European countries on their exports of beet root sugar.

The Ice-Bound
"Gaspesia."

Somewhat to the Southward of Cape
North there is an indentation of the "Gaspesia." Cape Breton coast, known as Meat Cove, and the latest news of the ice-bound steamship, "Gaspesia" reports her as being 45 miles northeast of the cove. It is now approaching three months since the "Gaspesia" left Chaleur Bay, and her crew and passengers are probably by this time convinced that the ice in the Gulf of St. Lawrence forms an impenetrable barrier to mid-winter navigation of our northern waters by ordinary steamers. Of course, there are lubberly landsmen who could have assured those responsible for the effort to find a winter port at Paspebiac, that the venture would prove expensive Only those who have assisted to and dangerous. drag an ice-boat across the Strait of Northumberland from Cape Traverse to Cape Tormentine can judge of what the passengers and crew of the "Gaspesia" must have suffered, exposed day by day to the blinding glare from a sheet of ice of such extent that its limits cannot be seen from the masthead of a ship.

Without knowing aught of the action of marine underwriters in regard to the cargo of this vessel, we venture to hope they will, in future, discourage innocent and ignorant passengers from incurring such risks. Those who promote similar schemes only succeed in bringing undeserved discredit upon the northern ports of the Dominion.

The Threatened The increase of business and popu-Currency Famine lation in the United States is again arousing a demand for an increase of circulation. In a recent issue we directed attention to the expressions of public opinion in New York and elsewhere throughout the Union as favoring the adoption of some system of note circulation closely allied to that of Canada. A late number of "The Review" contains an article pointing out that the currency system of the States is the creation of its Government; that it was established solely for the advantage of the Government, and in most of its features it was established against the protests of the business men of the nation. Under these circumstances, it is only reasonable to demand that the Government shall do everything possible to make the currency system practicable and convenient. The "Review" adds:-

"If the Government were to increase the note circulation it could do so in only two ways. One would be to increase the public debt by issuing more promissory notes; it has not authority for this, and there is no justification in the condition of the national finances, and the experience of the last six years is quite enough to deter the Government from assuming responsibility for any more credit circulation. Or it might issue notes secured by a deposit of gold. Secretary Carlisle was opposed to doing this because it increased the amount of notes against which gold had to be held. But it is as broad as it is long; if there were more certificates out there was more gold in; the relation of the reserve and the legal tender notes was not disturbed, and as long as the legal tender notes could be used over and over for taking gold out of the Treasury it made little difference whether the notes redeemable in gold were increased. It mattered little how many buckets were attached to the endless chain so long as the chain was endless and kept moving around.

But the banks cannot increase the note circulation; that is, they cannot profitably do so, and it is absurd to expect them to do business at a loss. To put out \$90 in notes they must buy a \$100 bond drawing a low interest and already commanding a substantial premium. They are finding this unprofitable and are selling their bonds and using the funds so released. Under these circumstances it is not unreasonable to ask the Government to respond to the demand for notes by issuing them against deposits of gold. The currency system is its own, designed exclusively for its own benefit, and the business community is excusable for asking that it be made to work with as little inconvenience as possible."

It is evident that the circulation is declining because of the refusal of the Government to permit banks to issue notes unless a certain portion of their capital is invested in bonds of the Government. It is equally evident to those familiar with the Canadian Bank Act that, if the United States Government would, as "The Review" suggests "take its hand off the throat of bank circulation," the financial institutions would quickly provide the country with a safe and abundant supply of currency.

Public tion of Rock Island, Illinois, are doSentiment. ing good work in circulating, free of charge, the following excellent article from the "Daily Union," of that city. A proper public sentiment upon the subject of incendiarism is sadly lacking, even in Canada, and we cheerfully assist in an effort to stifle the apparent prejudice against insurance companies too frequently displayed by spectators at fires, and by jurymen and those who should know better when insurance claims are under review in courts of law. The "Daily Union" says:—

It is very clear that the premium-payers at large have been too lax in tolerating fraudulent fires. The

public has been too slow to realize that every burden placed on the fire insurance companies comes back on those who pay the premiums, and that, too, with agents' commissions and other expenses added. For many reasons, whether well founded or not, there exists a public prejudice against insurance companies which shields incendiarism, and very materially increases our premium rates.

The "Daily States," of New Orleans, hits this nail on the head as follows:—

We have heard intelligent merchants remark, while watching the progress of a fire, "Well, another fellow selling out to the insurance companies." This has long been an appropriate remark to make at a fire, but it is fallacious all the same. The "fellow" didn't sell out to the insurance companies, but to the community; and when premium-payers are called upon to pay these losses we find where the burden falls.

As an illustration of perverted public sentiment on this question of the fire waste and incendiarism, a prominent newspaper at Omaha cites the following incident from the coroner's records in that city:

A few years ago a stock of goods in this city was partially destroyed by fire, and the body of one Bornstein was found in the ruins. The coroner's jury returned a verdict that this man came to his death by fire and an explosion while he was in the store for incendiary purposes, at the instigation of one of the firm owning the stock.

Now, bear in mind, the instigator of this crime was not brought to trial. Public sentiment was in favor of permitting the firm to collect its insurance money, and to shield this man from prosecution. The claim was settle by the insurance companies, and the Omaha property owners paid the bill.

Fires are the insurance companies stock in trade; and if the public is willing to see this waste continue, and cover these criminal peculations in their premium accounts, no doubt the companies must continue to pay these fraud claims, and charge it up to the property-owners in the insurance rates. Then, too, the resulting fire sales of damaged merchandise is no small menace to mercantile interests.

We believe that it is high time for the propertyowners to exert themselves, in an organized way, to suppress fraudulent fires, and to establish a rigid public sentiment against this incendiary evil, which, putting it mildly, is responsible for more than half our fire waste.

The March of has invented an apparatus whereby the Science. interior of the human stomach can be photographed comes to us with a sort of shock. What next? It is claimed that the pictures thus taken are capable of enlargement, and, consequently, can be studied at the leisure of the possessors. As a means of obtaining penetrating and comprehensive information, a complete knowledge and reproduction of a Dutch or English interior, this invention may occasionally serve a useful purpose. Yet we tremble to think upon some of its many uses. Possibly life assurance companies will now require, in addition to the mass of information furnished by the medical examiner regarding an applicant for a policy, a cabinet sized picture of the musculo-membranous reservoir, or cavity, specially designed for the reception of food. The consequences are not pleasant to contemplate. If the required photograph should happen to be taken when the digestive powers of one's stomach have been overtaxed at a Christmas dinner, or when the innumerable follicles in its internal or mucous coat are unable to secrete gastric juice because of even temporary indulgence in that which a successful plebiscitum might have prevented the importation of; if, we repeat, the picture should be "took" at such a time, an ordinarily healthy male may find himself rejected by even the most liberal of companies, and he may have to endure the additional mortification of having a chart of his stomach displayed to his friends by some unfeeling life agent. We confess to a wish to see the march of science arrested. The savants have gone far enough.

The only good use to which this German invention can be put, if it can be made as handy and come atable as a bottle of Winslow's soothing syrup, is when wanted to ascertain what is the matter with the crying baby's 'ittle tummy, and to locate the whereabouts of any missing articles not intended to be swallowed by the healthiest of infants.

There would seem to be no sound reason That Bridge why Englishmen should so much annoyance at their Government for buying bridges, or anything else for that matter, from the United States. However, the commotion caused by the great advertising given to some American iron works may result in a desirable change being effected in the bridge-building industry as hitherto conducted in the older country. It will be remembered that, in response to an order from the British War Office, the Pencoyd Iron Works built and shipped a bridge of seven spans, each 150 feet long, to be thrown across the Atbara river in the Soudan. The bridge was completed in five weeks, and the Philadelphia "Record" calculates that "not since the Israelites crossed the Red sea has there been any such rapid constructive work for getting across the water in Egypt."

The British builders surprised at such speedy work charged their Government with giving some advantage to the Americans in the way of earlier knowledge of the specifications of the work required. But it is claimed that the expedition with which the order was filled is entirely due to the American fashion of having sections of anything required in their line always ready for delivery.

Another American Exchange says :-

"Our locomotive builders have just received their third order from England within a few weeks. An American bridge company, which was the lowest bidder a year ago for a bridge in Holland, has just secured the contract for a bridge in the Soudan, partly because its bid was nearly 40 per cent. less than the bids of Englishmen, and partly because it could do in six weeks what Englishmen demanded as many months for. This difference in time tells the story. The English bridge builders have had less training from experience than ours. They have had no competion worth speaking of and they have not developed."

Fires and

Considerable amusement was created at the presentation of the Telephone Girl in this city by a comedian representing

a German electrician, owing to his frequent assertion that he wished to "fix the fires." Yet there is a very close connection between the wires he was in search of and the conflagrations they sometimes cause, and always assist to prolong. Of the recent serious fire in Craig street, by which the insurance companies suffered another heavy loss, the "Gazette" says:—

"In getting to their work the firemen were hampered considerably by the telegraphic and telephonic wires, which had to be cut wholesale; and when they did get to work their efforts seemed to produce but little effect so fierce a hold the fire obtained, while at least a couple of lengths of bursting hose did not tend to aid them in their work."

Of the possible cause of the fire, the same paper remarks:—

"The engine and boiler rooms, on the ground flat, were in total darkness all the time, which showed the fire did not ignite there, and it is probable a defective electric wire was the real cause."

Surely, it is high time that steps should be taken in the direction of burying some part of the dangerous network of wires and levelling the forest of poles which, at present, render the work of the firemen so in-ffective and dangerous, in addition to disfiguring the principal thoroughfares of the metropolis of Canada. It would be quite justifiable were the fire insurance companies to unite in charging additional rates on buildings rendered almost unapproachable for firemen and their apparatus by reason of a cordon of electric, telephonic and telegraphic wires.

Al.other Surprising
Insurance Law.

The constant reader of United
States insurance news cannot
well refrain from wonderment at
the apparent delight with which the legislative bodies
of the different States enact laws whereby the insurance

the apparent delight with which the legislative bodies of the different States enact laws whereby the insurance companies are continually harassed, and the agent's lot made to resemble that of the policeman in the Pirates of Penzance. Last week we chronicled the extraordinary condition of insurance matters in Arkansas, where the Attorney-General has filed suits against no less than sixty-three companies hitherto doing business in that State. The law under which the suits in question were brought is said to be one of the most sweeping and far-reaching measures of the kind ever enacted. But the Arkansas companies had scarcely recovered from such a sharp and sudden shock before another State appears in the arena with an enactment concerning which the New York "Journal of Commerce" feels constrained to say:-

"The legislative antics of the Populists in the West appear to have been outdone this year by New Hampshire, where a law affecting insurance has been enacted which provides as follows:

"Any person or persons who feel aggrieved by any ra'es charged by any fire insurance company doing business in the State may complain to the insurance Commissioner, who shall hear the parties, and if it appear to him that the rates charged are excessive, he shall fix a reasonable rate, and the rate so fixed shall be binding upon all such companies doing tusiness in the State. If any such insurance company refuses to insure property at the rates fixed by the insurance Commissioner, it shall be fined two hundred dollars for each offence.'

While the Insurance Commissioner of New Hampshire is in good repute, he is not sufficiently familiar with insurance to fix equitable rates on all kinds of property, and, even if he were, such sweeping authorty should not be vested by the State in any individual. The insurance companies direct their underwriting operations according to the results of their individual experiences. Some companies refuse certain classes of risks which are sought for by others, and there are few if any companies writing all kinds of hazards in New Hampshire requiring insurance. Another feature of importance is the moral hazard, which the law entirely ignores. Carefully managed companies do not wish to issue their policies to notorious firebugs, and yet the statute above quoted would seem to allow them no discretion, and this condition of affairs is in a State where the valued policy law is in force.'

The Journal, in the article from which we quote, characterizes this law as "a disgrace to the intelligence of the State," and, as an argument for its repeal, points to the possibility of the Insurance Commissioner forcing a dwelling mutual insurance company to write planing mills for suspicious parties at a nominal price, and thus driving every honest company out of New Hampshire.

Altogether, the framers of many of the insurance laws in the United States seem to have only one object in view: to harass, worry and hamper the companies to such an extent that legitimate underwriting in America will soon become a lost art, and insurance as a business disappear.

Workmen's Compensation Act.

In discussing, last week, the marked increase in the number of accidents, The Chronicle called attention to some new forms of peril now adding to the yearly waste of human life. We also referred to the opinion expressed by a leading London insurance journal that the Workmen's Compensation Act has increased the recorded casualties of all kinds coming under its operation, and that the compensation assigned specifically by the collective wisdom of the nation has, stimulated claims in a most remarkable manner.

Now we have another opinion added to those already expressed upon this important matter. The chairman of the Ocean Accident Company, at a late meeting thereof, indulged in some caustic comments upon the figures and deductions of the British Government in connection with the passage of the Workmen's Compensation Act. The chairman is reported as saying:—

"How deceptive the figures adduced appear even to those in authority, may be gathered from a consideration of the speech of Mr. Chamberlain, who, I may say, was a godfather to the Act. His information as to the prospects of the claims arose from official reports received by the Home Office, which, as I stated at the last annual meeting, and we have since

demonstrated by experience, were absolutely unreliable and deceptive. The Act is barely seven months' old, and I am able to say from actual experience instead of hypothetical deductions based on theory or reports that already in eight of the most important trades we have exceeded Mr. Chamberlain's yearty maximum in actual claim payments without any allowance for expenses or any provision for the unexpired risks to arise during five months yet to come. If the returns of the factory inspectors had been accurate, his estimate might possibly not have been very far wrong, but we knew well that in these returns a minority of accidents have in fact hitherto been reported.

"A consideration of the returns from factories and workshops for the past three years alone form material for comparison, which are most interesting. They are as follows:—

	Fatal Cases.	No	n-Fatal Cases.
1896	 490		32,961
1897	 513		39.816
1898	 575		EC 995

"This last year—1898—requires careful examination, as the first half of the year preceded the operation of the workmen's compensation, whilst the latter half provides the only experience gained since the operation of that Act."

It is perhaps, too early to pass final judgment upon an Act having for its object the alleviation of human misery and the decrease of suffering among the hardworking poor. But, in the course of another six months, the critics of Mr. Chamberlain will be able those correctly to guage the effects of the Workmen's Compensation Act, and to predict its future results from the experience of a year—a period affording a somewhat fairer test than the seven months upon which the chairman of the Ocean Accident bases his denunciation of the "hypothetical deductions" built up from the reports collected by the Home Office. It is certain that the figures furnished by the Ocean Accident will be given serious consideration by others than maurance men.

The British Fire The thirteenth publication of this
Prevention useful body consists of a capital illustrated description of the Testing
Station recently fitted up by the B. F. P. Committee, who thus explain their aims and purposes:—

The purpose of the tests undertaken by the British Fire Prevention Committee is to obtain reliable data as to the exact fire resistance of the various materials, systems of construction, or appliances, used in building practice. Such data have not as yet been available, owing to the fact that nearly all investigations in this direction have been carried out by individual makers, or inventors with specific commercial objects in view. The few official tests hitherto made in the United States and on the Continent have unfortunately been in minor importance only, inasmuch as they were mostly organized to meet some special circumstance, such as the specification of work in a parti-

cular building or the framing of building regulations.

The series now undertaken by the Committee not only fulfils a want long felt by the professional man, but gives "fire-proofing" trades, too, an opportunity to obtain authenticated records as to the character of their work.

The present tests are of an entirely independent character, arranged on scientific lines, but with full consideration for the practical purpose in view. Absolute reliability is assured, records being mostly taken automatically and by photography, while the temperatures are carefully regulated by the application of gas.

All reports on tests solely state the bare facts and occurrences, with tables, diagrams and illustrations, and on no account include expressions of opinion, nor should any phrase be read as a comparison or criticism.

The general arrangement and direction of the tests is in the hands of the Executive, and in accordance with certain principles laid down after careful study and experiment.

The actual tests are attended by the members of the Council and the members of the Committee in rotation, care being taken that the attendance is always thoroughly representative of the technical professions primarily interested in the specific object under investigation.

As to the Testing Station, it comprises two houses standing in their own grounds near Regent's Park, and backing on the Regent's Canal.

The principal building is used for Committee Rooms and laboratory purposes, whilst the gardens are utilised for the principal or "full-size" tests.

With regard to the financial aspect of the station, the establishment expenses are being met by a special subscription. As far as the funds of the Committee permit, investigations with ordinary (i.e., not patented) forms of construction are undertaken from time to time and duly reported on. Official tests with patented materials, makers' systems, etc., etc., are subject to a scale of charges so figured as to only just cover the actual cost. The Testing Station is also open to members for such private research work or tests as they may desire to undertake, at nominal charges for loan of plant and instruments.

The services of the members participating in the management of the station, conducting or attending tests, are given entirely gratuitously.

IMPROVEMENTS ON THE ST. LAWRENCE ROUTE.

(Our Neighbours' Opinion of our Advantages.)

Whatever may be said, thought or done in connection with the proposed schemes for improving our shipping facilities, we have good reason to be grateful to the gentlemen who have opened some hitherto half closed eyes to the value of the splendid privileges possessed by the people of Montreal. That the equip-

ping of our port with all the most modern facilities for economical and expeditious handling of grain and other freight is likely to result in our acquiring much new trade, is clearly shown by the N. Y. "Commercial Bulletin, of the 8th inst. In the course of an article impressing upon Governor Roosevelt the necessity of deepening the Erie Canal, the "Bulletin" thus refers to Canadian canals and the suggested improvements of what is referred to as the St. Lawrence route:

A short time ago it was announced that a number of Americans were interested in the construction of a large grain elevator at Montreal. Much criticism of these gentlemen was indulged in by certain American papers, says the Providence "Journal." They were participating in a scheme, it was charged, which would take many cargoes of grain annually from the Amer-Had this been a clear ican routes to the seaboard. statement of the whole story of the Montreal enterprise, the matter would not merit serious attention, but it is highly important to bear in mind that by another summer Canada will have a fourteen-foot waterway all the way from Lake Ontario to Montreal. She already has the Welland Canal, of the same depth, to connect Lake Erie with Lake Ontario, and with the completion of the improvements along the St. Lawrence her facilities for moving grain from the ports of Lake Michigan and Lake Superior to tidewater will far surpass those of the United States. The Americans will have no advantage over the Canadians in this respect except by rail routes. But there is no question as to the comparative cheapness of water transportation.

With the improvements on the St. Lawrence route, the Montreal shippers will be able to attract new lots of grain to that city. The cost of moving it will be much less than it would be to move it to the Erie Basin at New York. American railroads must expect the Canadians to capture much new trade, and the people of New York may infer that their seven foot Erie Canal will not be able to compete with the Canadian route except at a rate unfavorable to their own It seems to be plain, therefore, that the Erie Canal, unless soon deepened, must suffer much more seriously from the Canadian competition than it has ever yet had to from the low price for shipments by rail. But, of course, the Duluth and Northwest trade can never be handled economically by railroads in the United States. Thus the products of the spring wheat belt must always seek a water outlet from the lakes. If the Erie Canal does not accomodate this traffic, it must gradually go to the Canada route. In examining the canal frauds of New York Governor Roosevelt ought to think of this. His work will not be done when he punishes corrupt contractors and State officials. New York will lose much canal traffic if the Erie route is not soon improved or if the American deep waterway from the lakes is not built."

If our magnificent chances, as thus outlined by our neighbours, are not soon seized upon, we have good reason to be ashamed of ourselves. No better reason could be found to illustrate the wisdom of keeping the port of Montreal as free and open as possible, than this admission from a leading New York paper that Americans will soon be unable to compete with the Canadian route "except at a rate unfavourable to their own interests." Let us at once make the most of the advantages we possess.

IS A CANADIAN MINT NEEDED?

The extensive production of the precious metals by the mines of Canada has given rise to an opinion that it is desirable to establish a Mint in Canada for the manufacture of gold and silver bullion into coins. The Annual Report of the Executive Council of the Canadian Bankers' Association for 1897 contained a clause which reads: "The Montreal Board of Trade having sought the opinion of the General Managers of banks in Montreal respecting the wisdom of establishing a Mint in this country, your President, as their spokesman, ventured to use the name of the Association in pronouncing the scheme inexpedient, unnecessary, and undeserving of support at the present time, for economical reasons amongst others." The President, Mr. F. Wolferstan Thomas, General Manager of the Molsons' Bank, in his valuable address at the Bankers' Association meeting in October, 1897, devoted some attention to this question. His judgment was that the time had not come for so large an undertaking in view of its expensive nature and the profit accruing to Canada from our utilising the English Mint. In 1896, for instance, there was \$140,000 worth of coins received in Canada from the English Mint en which the profit to Canada was \$69,484 over and above the value of silver sent for coinage and all charges for minting and transportation. On \$10,000 worth of copper coins the profit was \$7,123. On the coining of gold there is no profit. At the same meeting a resolution, moved by Mr. Coulson, General Manager of the Bank of Toronto was adopted, requesting the Government to forward free of expense a supply of silver coins to the banks in British Columbia to replace American silver which was largely used in that Province. At the annual meeting of the same association in October, 1898, the President, Mr. D. R. Wilkie, General Manager of the Imperial Bank, said that the increasing annual production of gold in Canada "has brought changed conditions" in regard to the Mint question. He asked, "Are we not throwing away our opportunities and under-rating our impertance in sending our banks and our miners to the States to exchange their gold dust for coin of a foreign realm? He affirmed that, "An immense volume of trade is being, and will be lost to Canada through returning Yukon miners being forced to take their On these grounds 'clean up' to a foreign mint." Mr. Wilkie favoured a Mint being established at Vancouver or Victoria, but he gave no data as to the cost of establishing and maintaining such an enterprise.

A short discussion took place in the Senate last year in which the chief advocate of a Mint for Canada used the same arguments. With such an establishment it was affirmed that the outflow of gold dust to a foreign country would be stopped by its being coined in this country. If it were the case that the gold produced in the Yukon and the silver of other districts were being carried out of this country without any such trade being created as there would be if these

metals were coined in Canada, then a Canadian Mint would be indeed most desirable. But we submit that those who used this argument confused a Mint with a smelter, by which the miner's gold dust and ore could be turned into bullion or ingots. It was also overlooked that the miners do not carry individually their gold dust or silver ore to American mints, but convert them into cash through the medium of the banks established in mining districts, or by other local agencies. It is impracticable for a Yukon miner to carry his product, his "clean up," across the border to an American city. Why should he try to do so when the Bank of Commerce and the Bank of British North America are on hand at Dawson City ready to convert his product into a cash equivalent? In the mining districts of British Columbia some other banks are also ready to arrange for the local disposal of local products. While, therefore, more smelting facilities may be needed, there is nothing in the present situation, so far as the conversion of gold dust and of ores into cash at points close to the mines is concerned, which has any direct bearing upon the question of establishing a Mint. What individual miners need is a ready market for their produce which is now provided, and what the buyers of gold dust or producers of silver ores need are facilities for converting such products into bullion as economically as possible, for which a national Mint is not necessary. as a Mint is an establishment for making coins out of bullion, not for converting raw ores or gold dust into bullion. The word Mint is a contraction of the latin word Moneta, a surname of the goddess Juno, in whose temple at Rome money was coined. Having shewn that a Mint is not needed for the economic convenience of those engaged in the production of the precious metals, we now proceed to enquire whether it is needed for the public convenience as a source of supply of the necessary coins required in the commercial transactions of the people of Canada? The gold and silver held by the Government, the banks and the public in Canada amounts to about 27 millions of dollars. As the great bulk of the gold held is kept as a reserve, it is not subject to such abrasion as to require renewal. English sovereigns when withdrawn as "light weight" fall below the standard on an average about one fortieth their value. They have to be in active use a long time to be so reduced. As a matter of fact there is no renewal required of the gold coins held in Canada. But supposing one per cent. had to be renewed each year. A Mint on a small scale can turn out 9,720 gold coins in a day, or \$47,340 worth. Now, one per cent. of the entire gold coins in Canada amounts to not more than \$180,000; to be liberal we will call it \$200,000. Two mint presses would, therefore, be able to coin this amount in about four days and a half, or, say, one week. So that in those few days all the work could be done which would be required to renew all the gold coins in Canada needing renewal every year. The process would use up about \$3.500 to \$4,000 worth of gold. Suppose the entire supply of gold coins required in Canada were to be made in a Canadian Mint, and the present stock shipped away, the work could be done by two presses in one year, after which the machinery would be useless every year for all but one week in each year. The same may be said of silver coins, as all the new silver called for in Canada yearly could be made in a small Mint in a week or ten days, and in one year the entire stock, after the presses were set up, could be replaced by silver coins made in this country.

The production of gold this year will be probably over \$10,000,000, of which not more than one-thirtieth of one per cent, would be needed to keep up the supply of gold coins required for commercial use, even were a Mint established. If we allow for one per cent, being so utilised, we should have \$9,900,000 of the year's gold production left in excess of currency requirements. Yet those who consider a Can lian Mint to be needed base their advocacy upon the enormous gold production of the country when 99 per cent., or more, of it could not be utilised for minting purposes. It may be urged that the excess if coined could be exported to Great Britain. done the large expenses of converting nearly ten millions of dollars worth of bullion into gold coins for export would be practically wasted, as there is no profit in mining gold. As, too, Canada can import all the gold coins she needs from Great Britain at a less cost than they could be made here, and distributed to the banks and the Treasury at Ottawa, the expenses of a Mint, so far as its gold coinage went, would be incurred without any equivalent consideration. It must also be considered that Canadian gold coins when exported would not be as marketable as bullion either in Great Britain or the United States. A Mint to absorb the gold production of Canada is, therefore, not required, as it could not utilize more than a small fraction of the gold produced in this country for minting purposes. Is there any probability of some millions of dollars worth of gold coins being added to the currency of this country? If those coins were of British denominations, sovereigns and half sovereigns, they would be no more popular than those made in the old land, that is, they would not be current at all, but would be passed into banks and brokers' offices at once on receipt, to be exchanged for Canadian currency, as gold coins now universally are. But some have urged that gold coins be made for \$5, \$10 and \$20. These would be used more than British coms no doubt, but they would lessen the note issues of the banks to whatever extent they were circulated, or that of Dominion notes, so we do not regard it as likely that the Government and the banks would be enthusiastic in supporting a movement to substitute a new coinage to displace their note issues. Neither do we regard it as at all probable that the public would prefer coins to the very convenient currency now in use, certainly not to such an extent as to absorb what gold ceins would have to be made by a Mint to keep the staff employed all the year round. As the case of Australia has been cited as an example of a Colonial Mint, it may be remarked that the English sovereign

has always been the unit of value in that country, not the dollar, and there never has been there such a distribution of paper currency in the place of gold as that which has so long prevailed in Canada. A Mint was necessary in Australia because the currency was chiefly in coins for which the native material was superabundant. Australia also is too distant from England to be relying upon the mother country for supplies of the chief currency in use. Australian sovereigns are not liked in England, they are so light coloured as to That the people of Canada often excite suspicion. are amply satisfied with their present currency is apparent; they have shown their implicit confidence in our paper issues time and time again, knowing as they do that those issues are based upon and redeemable in gold.

The non-necessity or desirability of a Canadian Mint is demonstrated by, first, the impossibility of using more than a very small fraction of our gold production by such an establishment; second, the impossibility of keeping a Mint in operation more than a small part of the year; third, the extreme improbability of the demand for gold or silver coins so enlarging as to give employment to minting machinery for more than a brief period yearly; fourth, the facilities now enjoyed by miners for converting their output into cash, or into a form marketable for cash; and, fifth, the facilities available for securing all the supplies of gold which are needed in Canada promptly and at a small cost for freight and insurance, and, in the case of silver, of obtaining such supplies not only without expense but on terms to yield a considerable profit. For these reasons we submit that there is no need for a national Mint to be established in Canada.

The Condemnation of McNall.—In a circular to Kansas agents President Browne of the Connecticut Fire explains the motive actuating the company in resisting the late Supt. McNall. Among other things, President Browne truly says: "The universal condemnation of the methods of the superintendent by the insurance press was not due in a single instance to mercenary motives or personal friendship for this company, but to an innate sense of the claims of decency and justice."—The "Daily States."

Hypnotists Wanted.—The newest thing in life insurance is hypnotism. Mrs. Lettie Ludwig, of Chicago, charges one Sarah Cutter, a solicitor for life insurance, with so putting her under a hypnotic spell that she took out a policy on the tontine system and handed over her gold watch and chain to the uncanny agent as security for the first premium. Mrs. Ludwig avers that when the Cutter woman asked to buy insurance she declined, but the solicitor fixed her with a glittering eve. and under its basilisk glare she had to weaken. The court reserved its decision. The company is not named in the proceedings, but the efficacy of hypnotism in the proceedings but the efficacy of hypnotism in the proceeding of business will no doubt be recognized by all the fighting companies.—"Standard."

THE DEMAND FOR SMALL BILLS.

In several recent issues of THE CHRONICLE, we have remarked upon the signs pointing to another currency famine in the United States. That the situation continues to excite apprehension among those who recall the trouble occasioned during the last scarcity of currency is very evident. Under the above heading, the Washington correspondent of the "Journal of Commerce" of the 10th inst. says:—

The pressure for notes of small denominations does not grow less acute with the lapse of time, and some of the Treasury officials are beginning to look forward with a certain degree of apprehension to the conditions which may arise this autumn. The supply of small notes and the margin of paper of any kind in the Treasury which can be converted into small notes was never so small as at the present time. The figures for Saturday last showed resources of \$14,240,-402 in United States notes, \$795.577 in Sherman Treasury notes, and \$3,813,119 in free silver. latter item, however, includes all the silver certificates in the Treasury cash at the sub-treasuries. Some of these certificates are in such a condition as to require redemption and others are needed for incidental payments. The fund of less than \$20,000,000 represented by the above items is the entire working balance of the Treasury in paper. Treasurer Roberts has made repeated offers to the New York banks and those of other parts of the country to convert large United States notes into small denominations for the convenience of their patrons. Thus far the banks have shown little disposition to respond. them declare that they need such large notes and currency certificates as they have for payment over the counter either to customers desiring large notes or in settlements between the banks. The demand for currency of all denominations is such that the banks appear reluctant to convert large notes into small ones in spite of the general demand for the latter class.

Some plan for providing a bank-note issue of a more elastic character than the present bond-secured circulation, with the object of releasing the legal tenders for meeting the demand for small notes, will be presented to the Republican caucus committee which meets at Atlantic City on April 17, and in view of existing conditions seems likely to receive serious consideration.

AMERICAN FIRE INSURANCE CO.

The above Company has now been doing business in Canada some two or three months, under the management of Mr. James Boomer, who also controls the Manchester Fire.

The American Fire, according to its last report, has \$1,245,758 of assets, a net surplus of \$368,728, while its cash capital is \$400,000. Mr. Boomer, who has been managing the Manchester with such success for a number of years, will no doubt obtain equally satisfactory results for the new Company.

THE FIRE UNDERWRITERS ASSOCIATION.

The quarterly meeting of the above Association was held in this city, on Wednesday and Thursday of this week.

Among those present from the West were:—Mr. P. H. Sims, President, and Messrs. J. B. Laidlaw, H. M. Blackburn, James Boomer, J. G. Thompson, Alfred Wright and Peter A. McCallum.

MONTREAL FIRES.

Messrs. Garth & Co.'s Metal Works, 6th April, 1899. The loss on contents amounts to \$30,390, insured as follows: \$5,100 each in Royal, Liverpool & London & Globe, Imperial, Sun, Lancashire, Norwich Union, and Scottish Union and National.

The loss on building will be nearly total. Insured for \$4,150 each in Liverpool & London & Globe, Norwich Union and Scottish Union and National.

Notes and Ntems.

NOT IN IT.—"La Presse," of Montreal, in its report of the fall of the Benoît building, states that Ex-Mayor Wilson-Smith was in the building when it collapsed, and that he narrowly escaped death. However, like the man who fell from the balloon, Mr. Wilson-Smith was "not in it."

ADVANCING HOTEL RATES.—One outcome of the Windsor Hotel fire is a proposed advance in hotel rates in New York. It is held that current rates are much too low. The physical hazard is not only exceptional, but in case of fire the efforts of the fire department are very properly first directed toward the saving of life and not of property.

RATE-CUTTING FORBIDDEN.—New York brokers who are taking advantage of prevailing conditions in South Carolina since the passage of the anti-compact law to cut rates are likely to be checkmated by the new provisions of the New York Insurance Exchange, which provides that members shall not cut local rates in any section.

Oregon's Agency Law.—Oregon's resident agency law provides that companies desiring more than one agent in cities and towns of less than 40,000 inhabitants, must pay \$100 quarterly for each additional agent. Portland is the only city excepted under this law.

A CHANGE OF BASE.—The State Life of Indianapolis and the Security Mutual Life of Binghamton, N. Y., both assessment companies, have applied for admission to Minnesota as legal reserve companies, having changed their plan of doing business.

No Trespassing on his Territory.—Charles W. Sexton, of Minneapolis, has brought suit against the Manhattan Fire, of New York, for \$10,000 damages for alleged breach of contract. The complainant states that he was appointed general agent of a certain territory, but that in violation of the contract the company appointed other agents and allowed them to invade his field.

THE AFTERMATH.—The records of the war and navy departments from the beginning of the war with Spain up to March 1 show that in the navy 18 men were killed, and 56 died of disease. The statistics of casualties in the army show 329 men killed in action in the army, 125 died of wounds received in action, and there were 5,277 deaths from disease.

An Unauthorized Tax.—E. P. Robers, deputy insurance commissioner of Alabama, has issued a circular stating that he finds no authority for requiring a State to pay an internal revenue tax, and, as certificates to insurance companies and agents were issued by the State, no revenue stamps will be required. The internal revenue commissioner recently ruled that stamps should be attached to certificates.

RECENT LEGAL DECISIONS.

DISCOVERED ASSETS OF A DEFUNCT BANK.—In the year 1847 a debtor of the Royal Bank of Liverpool became bankrupt, and the bank proved for its debt. Dividends were paid from time to time to the bank, and to the debtor's other creditors. In 1867 an order was made, under which the bank went into voluntary liquidation under the supervision of the court, and in 1887, when it was considered that all the available assets of the bank had been collected, an order was made dissolving the bank. A considerable time after this, a further asset of the debtor's estate was discovered, which realized some £6,500, and the question arose, what was to be done with about £4,000, the Lank's share. The existing creditors, other than the bank who had not been paid in full, moved in the County Court, where the proceedings were pending, that the bank's proof of claim be expunged, claiming in effect the bank's £4,000 as divisible among themselves. The Treasury opposed the motion, claiming to be entitled in right of the crown, to be substituted in the place of the bank, on the ground that the bank's interest passed to the crown as bona vacantia. County Court made an order expunging the bank's proof, holding that the bank was in 1887 the subject of annihilation, and could after that neither sue not be sued, nor possess any property, nor have any claim in respect of property, and accordingly found against the claim of the bank. On an appeal to the High Court, this finding was reversed by Justices Wright and Darling, who held that the crown was entitled to the final dividend, to which the bank would have been entitled, if in existence, as bona vacantia. In the judgment read by Mr. Justice Wright for the court, the following remarks are made: The authorities for the proposition, that on the dissolution of a corporation aggregate, debts due to or from it are extinguished. are by no means clear or satisfactory.

It might be reasonable to enact that in analogy to the immemorial law of executors and administrators, and the Statute of 31 Edw., 3 St. 1, C. 11, on the dissolution of a corporation aggregate, all its rights, including its rights of action on executed contracts, such as those evidenced by bank notes or bonds, or on claims in debt, devolve upon the crown, subject to payment of the corporation's own debts. It would in the present state of the authorities be judicial legislation to declare the crown entitled to maintain actions in such cases, except where it can allege a trust. Such a declaration may have to be made, or advisedly refused, in the case of some of the rapidly increasing number of companies which are being dissolved under the company's Acts. But in the present case it is not necessary to decide the question. Even if it be the law that a debt due to a corporation aggregate is extenguished by the dissolution of the corporation, it does not follow that the crown's claim fails in this case. 68 L. J. Q. B. 198.

DIRECTOR'S LIABILITY FOR PROSPECTUS.—A person applied for and obtained debentures in a company in England, relying on a prospectus and covering letter, which he subsequently found contained misrepresentations. As the debentures proved to be comparatively worthless, he instituted proceedings against two of the directors. In this action it has been decided by Mr. Justice Byrne that, where a director knows that a prospectus is being issued inviting persons to take debentures, and abstains from asking to see it until after an action has been brought on account of the misrepresentations, it is too late then for him to give "reasonable public notice," under the English Directors' Liability Act, that it was issued without his knowledge or consent. 68 L. J. Ch. 181.

Malicious Prosecution by a Corporation.—An action for malicious prosecution will lie, against a limited company or corporation. This v.as the decision of Mr. Justice Darling, in an action brought in England by one Cornford, to recover damages for malicious prosecution against the Carlton Bank, Limited, in respect of a charge brought against the plaintiff, of criminally conspiring with her husband and another to defraud the bank. The case had been heard before the borough magistrates at Hastings, Sussex, and was dismissed. 68 L. J. Q. B. 196.

PERSONALS.

MR. THOS. E. KENNY, Ex-M.P., the energetic President of the Merchants' Bank of Halifax, is on a visit to the metropolis.

Mr. E. S. CLOUSTON, General Manager of the Bank of Montreal, is reported to be homeward bound from his holiday-making in the Mediterranean.

Mr. B. F. Pearson, of Halifax, is in Montreal and we regret to learn is confined to the Windsor Hotel by a severe cold.

Mr. J. E. Gaudet, of Quebec, has resigned his position as Manager of the People's Bank of Halifax in that city, and is about to proceed to New York, where he will be attached to the firm of Messrs. Lounsbery & Co., the well-known stock brokers. Mr. Gaudet enjoys the confidence and respect of a large circle of friends, and leaves for his new field of labour 'mid a shower of good wishes, carrying with him the highest testimonials from his banking associates.

Mr. Joseph Henderson, Inspector of the Bank of Toronto, is staying in Montreal during the absence of Mr. How, who, in company with Mrs. How, is enjoying a holiday in the South.

Mr. D. M. Stewart has resigned from the service of the Canadian Bank of Commerce in Montreal, to join that of the Merchants Bank of Halifax. It is stated he will occupy the position of secretary to Mr. Pease, General Manager of the enterprising Halifax institution, several of whose leading officials were recruited from the bank Mr. Stewart is now leaving. Much as the Canadian Bank of Commerce may regret the losses they incur by being regarded as a good training school in the routine work of the banking profession, the promotion offered to members of their staff by other banks is highly complimentary to the Commerce system.

Mr. F. STANCLIFFE, Managing Director of the British Empire Mutual Life, arrived in Montreal on Wednesday, after four months stay in England. Mr. Stancliffe confirms the opinions expressed in London insurance journals, and to which reference has been made in The Chronicle, that the rates to cover Employers' Liability in connection with the much discussed Workmen's Compensation Act will have to be remodelled. Mr. Stancliffe incidentally remarked upon the disgraceful state of the streets of Montreal, and added that the public health is the first consideration in London and other cities, and ought to be in the metropolis of Canada.

Obituary

MRS. W. TATLEY.

Mrs. Tatley, who has been in poor health for some time past, died on Saturday last. The sincere sympathy of his confreres in insurance circles in Canada will be extended to Mr. Tatley, whose energy and application to business has contributed so largely to the success of the Royal Insurance Company for the number of years during which he was the manager of that Company. The Chronicle joins in the many expressions of regret at the sad bereavement Mr. Tatley has now to suffer.

TORONTO LETTER.

The Insurance Institute of Toronto takes Shape.— Some Reflections Thereupon.—The Discharge of the Hunter Case.—The Langmuir Manufacturing Company Fire.

Dear Editor:—As an outcome of the appointment of a Library Committee, whose preliminary meeting I referred to in THE CHRONICLE of 17th March, sufficient interest has been aroused to bring together lately a very well-attended and fairly representative

meeting of the employees and others interested in the Fire, Life and other Insurance business. This meeting was convened by special invitation of Mr. Laidlaw, Manager of the Norwich Union, to discuss the forming of an Institute, and the response made to it must have been gratifying to that gentleman, especially as he is taking a very active interest in the establishing of this Insurance Institute. It is the intention to follow very largely the plans and methods of the Insurance Institutes as now existing in England. Modifications to suit the business and social circumstances of this democratic country have, of course, to be considered, but the general scope and work of the British like-institutes will be followed. A committee with power to add to its numbers was entrusted with the task of drawing up a Constitution, Rules and By-laws, and to take special steps to have all employees of the different offices interviewed, and, if possible, their cooperation secured in the building up of the proposed Institute. Mr. W. H. Hall, of the American Surety Co., was unanimously elected Secretary of the meeting ard Committee. The Committee held its initial meeting at Mr. Hall's office last week, and a division was made of the necessary work required to be done in the pioneering way. It was felt that nothing short of an energetic and thorough canvass of the Insurance officials and their staff in all branches of insurance work would be satisfactory. The more because an institution of the kind proposed would require to have the support of as many members as possible to insure its efficient working and give some chance of attaining its objects. Chiefest among these would be the encouragement of the junior employees to better inform themselves generally, and each of them severally, with special reference to such branch, or division of Insurance, as he may be specially interested in. The Library for reference and reading matter would supply its part, and the occasional meetings for the reading of papers prepared by members, with open debate on the subject matter thereof, would supply further educational needs, all tending to the increase of desirable and requisite knowledge. The social advantages accruing, though subsidiary in importance. should nevertheless be of great value and help. The friendly intermingling of the coming men of the Insurance world in their earlier career, whereby they would come to know and understand one another, would be no small advantage. I understand that several of the older Managers of our Companies, both Fire and Life, have expressed their intention to give encouragement as far as possible to place an institute of this kind on a durable foundation. This is an important feature, because the favor of the seniors will impress and influence the juniors to take hold and support the Institute. Unless everything be done in a whole-hearted and thorough way, and the insurance community, especially the young men, act as a unit in the matter, the pioneers of the movement will feel their efforts to be only half successful.

I see the Courts have just dismissed the charge against Mr. Thomas Hunter, the Toronto Agent of the London Assurance Company, of illegally and fraudulently placing business with Insurance Companies in the United States, and, of course, unlicensed by the Dominion of Canada. Considerable attention was given to this case in the public press some weeks ago. The friends of Mr. Hunter will reioice in this full discharge from an unpleasant position. It is worthy of note, and must certainly be very pleasing to Mr. Hunter to remember, that the management of his Company, the London Assurance Corporation, and

also the Phenix of Brooklyn stood by him during his difficulties. It is just possible that some revulsion of public feeling may favorably affect Mr. Hunter's business relations, and in this way recompense him for much annoyance.

The Langmuir Manufacturing Company's fire, last week in this city, will I understand result in a heavy percentage of loss to the Companies interested. But why should I mention this trifle! The Garth fire on Craig street, your city, is so much more important and costly in comparison. You have a metropolitan way with you in Montreal—a large way—even in fire

Yours, Ariel.

Toronto, 10th April, 1899.

LONDON LETTER.

28th March, 1899.

FINANCIAL.

The most popular occurence on the London Stock Exchange during the past week was the announcement that Manifesto had won the Grand National Steeplechase. The horse is the property of J. G. Bultell, one of the most generally liked members of the "House."

English Jews are not taking much interest in the Jewish Colonial Trust, Ltd., a financial undertaking, which hopes to translate the growing Zionist aspirations into a practical reality. One or two of our section of the scattered Hebrew race are on the Board of Directors, but none are on the Council of the Trust.

The period just before Easter is invariably a time when whatever suspicious prospectuses there are to come along get shot out in the hope that the gullibility of the investor, has been heightened by the series of fairly good flotations that have come before. Perhaps also there is a belief in a sort of brain softening always preceding annual holidays. A very large number of the prospectuses issued lately will not bear anything like a close scrutiny, and the originators are plainly written down as possessors of most colossal cheek.

The brothers Andrews—Solomon and Emile—want to sell their omnibus business for \$1,125,000. There is only a minor firm, very far behind the London General Omnibus and the Road Car Companies, and the profits of such firms must tend to decrease with the increased competition of the several electrical underground lines that are burrowing under London in all directions.

The Chillagoe Railway and Mines of Queensland has met with but scant success in offering \$2,000,000 in "6 per cent." Debentures to the British public, and rightly so. The property is a dark horse, and quite undeveloped, and if it should pay a trifle, that will go into the pockets of the vendors, who have taken the whole of the Ordinary Shares. These are fair examples of what is always popular with a certain class of promoters.

The annals of railway finance contain a good many sad stories, but there are few more depressing (for its shareholders, anyway) than that of the Great Central, which line after a most unhappy career has recently

made an entry into the metropolis. Its financial position, largely owing to the fact that it has had to raise money at any cost for the metropolitan extension, is in a very battered condition. Its dividends from the days before the extension policy was inaugurated, and when it was only a Sheffield line have been steadily decreasing most of the time. The dividend on ordinary stock has worked down to about three-quarters of one per cent., which is the average for the four years ending with 1898. It now with the latest addition owns 450 miles of line. Sir Edward Watkin was for a long time identified with this line as with others.

The death of George Pain, who until he retired fourteen years ago, was known on 'Change as the "King of the Railway Market," recalls the old days of colossal dealing between 1860 and 1885. The late Arthur Lobb, the "King of Consols," was just such another enormous dealer. Where men now deal in tens of thousands at the most, then these dead giants used to think only in big fractions of a million at a time.

INSURANCE.

The British Workman's and General Assurance Company is going in for expansion. Over a hundred new agents have been appointed in the last fortnight. This is an industrial office which got into troubled waters a couple of years ago, but now after considerable re-organization seems to have successfully righted itself.

Of the 3.585 fires reported to the fire brigade last year in London, 380 were occasioned through some mishap with lamps which were supplied with low-flash petroleum. The number increases every year, as also do the number of fatalities. The number of deaths owing to low-flash oil explosions in 1889 were 55; in 1898 they were 98. These facts give force to the agitation which seeks the legal enactment of a statute forbidding the sale of oil with a lower flashing point than 100 degrees.

The list of overdue ships is still causing heartburn amongst the underwriters. It is phenomenally crowded. A whole fleet of a dozen ships which sailed in December are rated at a very high prices, and it is feared they will all have suffered considerably in the gales of the end of January.

In 1898, the Atlas Assurance Company issued 570 new policies for about one and a half million dollars in its life department. This is not a particularly big haul for such a corporatian. Its expense ratio is on the decrease, however, and it does not lack other signs of a full and vigorous life. One of the premiums received by it was the exceptional sum of \$13,325. Last year was a bad one for fire departments, but the Atlas has turned the corner in a highly creditable manner. The losses were 60 1-2 per cent. of the fire premiums, but, all the same, the 24 per cent, dividend is maintained.

Sir Thomas Sutherland who has just been re-elected a director of the Marine and General Assurance Society is the same Sir Thomas who is chairman of the Peninsular and Oriental Company. He is now seventy fve years old, and in his younger days used to represent the P. and O. in China. He was decorated C.C.M.G. in Jubilee year.

STOCK EXCHANGE NOTES.

Wednesday, p.m., 12th April, 1899.

The local market for securities has hardly been an active one during the week, the volume of business has fallen off decidedly, though there has been no notable weakening in prices. Money has been very firm, and brokers have had to decline orders through their inability to carry stocks. In the face of the general monetary situation, it is somewhat remarkable that values have been so well maintained, and, if the financial ease of a few weeks ago were with us to-day, it is certain there would be an ebullition of bullish sentiment which would carry prices much higher. Call rates are much lower in New York, the last loan yesterday having been made at 2 per cent., and to-day at 4 per cent. This pronounced change is largely due to the making of sterling loans, but it is doubtful if permanent ease can be secured while the financing of so many large industrial enterprises continues.

One or two local banks were offering money to-day, which is a sign that the pressure is relaxing, and doubtless before the end of the month there will be no difficulty in borrowing.

* * *

Canadian Pacific Railway gross earnings keep up well, and for the first week of the present month they show an increase over the same period last year of \$73,000.

The stock closed to-day at practically the same figure, at which it stood a week ago, viz., 86 3-4. It is inexplicable in the face of the heavy advances made in almost all other stocks that this security should show no improvement.

A week ago we reported a record price for Montreal Street Railway at 327, but to-day the stock sold up to 329 1-2, which is the highest point yet touched. This stock is irrepressible, and it is quite within the range of possibilities that it will sell up to 350 before the year closes if the earnings continue to increase as they have done during the past six months. The regular quarterly dividend of 2 1-2 per cent. has been declared, payable on 1st May to holders of record on 14th inst.

Toronto Railway shows a net decline of about 1 point during the week, the closing sales to-day being at 120 3-8, while Twin City remains unchanged at 69 3-4. The earnings of the latter road for the last 10 days of March show an increase in earnings of \$10.826.55, or at the rate of \$1,000 per day.

Good buying is taking place in this stock, and an advance must result shortly in view of the earnings.

A half yearly dividend at the rate of 6 p.c. per annum has been declared by the Richelieu & Ontario Navigation Company, payable on 2nd May to holders of record on 15th April. The usual spring crop of rumours that the Company is to have opposition on the Toronto route has once more appeared, but these bave been contradicted from headquarters.

The stock sold to-day at 113 1-4, a decline of 3-4 of a point from a week ago.

Gas and Royal Electric too are off about a point, and have both been neglected during the week. No sales of the former were made to-day.

The People's Heat and Light Company made an experimental shipment of 50 tons of coke to Havana, Cuba, a short time ago, and the result was so satisfactory that an order for 450 tons was placed with the Company immediately, and it is altogether likely that 500 tons per month will be contracted for permanently. It is only a question of a little time till the demand for the Company's coke will require the addition of some more ovens, and if a very important contract which is now being negotiated is closed (and the prospects are bright), the Company will at once be placed in a flourishing position.

Call money in Montreal	 5	p.c.
Call money in London	 2	p.c.
Call money in New York	 	p.c.
Bank of England rate	 3	D.C.
Consols	 . 110 3-8	D.C.
Demand sterling	 0 5.8	D.C.
60 days' sight sterling	 9 1-8	D.C.

MINING MATTERS.

Shipments from the mines of the Rossland camp, for the week ending 8th April were as follows:—

Le Roi.											2,376	5	tons.
War Ea	gle										46	8	**
Iron Ma	ask										1	8	"
											-	_	

2,862

Ore shipments from the War Eagle will now be steadily increased, but the workings will have to be cleared of the accumulations of the past three months before heavy shipments can be resumed. There are now about 425 men employed at the mine, and rapid sinking at the rate of 20 to 25 feet a day is to be undertaken at once. The stock is slightly lower than it was a week ago, and closed to-day at 358.

It is the intention of the management of the Republic mine to sink the new three compartment shaft to a depth of 1,000 feet, cross cutting to the ledge at each 200 feet. The mill is at present turning out \$1,000 net profits per day on a capacity of 30 to 35 tons, but it is intended soon to crush 100 tons per day.

Republic stock sold to-day at 361, and an advance is predicted as soon as the stock is listed, which will be in the course of a week or so.

The 100,000 shares of stock offered by the Smuggler Company, at 6c. for the purpose of providing additional capital has been subscribed, and development work is to be proceeded with on two of the company's three new claims.

A large block of Montreal-London stock which has been thrown on the market is responsible for the decline of 5c, per share in this security.

As the holding referred to has now been liquidated, an advance should soon take place. Investors who purchase this stock at present prices and hold for a few months will reap handsome profits.

The main shaft on the Olive mine is now down 252 feet, and the vein at the bottom is four feet wide, and shows stronger than ever. The 10 stamp mill is now in operation for 24 hours each day, and the ore crushed is reported to average \$37 per ton.

Shareholders in the Athabaska Gold Mining Company have been requested to send in their stock to be exchanged for shares in the new English Company, The Athabaska Mines (Ltd.). The exchange is on the basis of 63c to old shareholders.

The Golden Star Company has declared a third dividend of 1c. per share payable on 15th inst.

During the development of the property, Mr. Lewis A. Hall, of New York advanced \$85,000 for that purpose, on condition that he be repaid from the first earnings of the property. The equipment of the mine is substantial in every way, and there is power enough for 30 stamps. The management believes that by adding ten stamps and a chlorination plant to treat the cencentrates, the mine could produce double its present output at a much less average price per ton.

To properly carry on the work of the mine and operate the mill to its full capacity considerable more development work will be necessary. To provide ample funds it is proposed to increase the capital stock from \$1,000,000 to \$1,200,000. Of the increase 100,000 shares will be used to pay Mr. Hall, he having agreed to take stock at 85 cents per share for the whole amount due him. The chlorination plant will cost only \$8,000, which will leave the company free from debt, with an increased capacity for production and an abundance of capital for all purposes.

A special meeting of the stockholders probably will be called to vote on the proposition.

Golden Star shares have declined to about 55c. in view of the proposed increase in the capital, but for a stock which has been paying at the rate of 12 per cent. per annum for the past 3 months, they should be cheap.

The shareholders of the Iron Colt mine have provided \$250,000 for developing the lower levels of the property. At present there is over 1,500 feet of work done.

The Van Anda Company has placed on the market \$75,000 worth of debentures. They are first mortgage debentures, bearing 6 per cent. interest, and are repayable in three years. The security is the plant, etc. The idea is to raise the money to start the smelter running.

The new Montreal Mining Exchange commenced business on Monday last. In procuring some quotations from the Stock Exchange, a mistake was made of 10 points in War Eagle with the result that the Mining Exchange figures for this stock were somewhat high, but this trifling matter was corrected at the next session, after the discrepancy had been discovered.

It is proposed to form a second Mining Exchange in Toronto with a capital of \$20,000, seats to be 200 in number, and the price to be fixed at \$100 each. This new movement is inaugurated because of the indisposition of some of the parties who are behind it to pay \$700 for seats on the present Mining Exchange, the price at which they are now held.

Too MILD.—In the following lampooning, sarcastic pasquinade, the New York journal, "Insurance," suggests to a Kentucky judge that, when passing sentence upon the members of an insurance board found guilty of "fixing rates," the punishment, as in the comic opera, the "Mikado," should be made to fit the crime:

In charging the Grand Jury one day last week the Judge of the Kenton County (Ky.) Court bore down heavily upon the insurance men and companies, say-

ing, in part:-

There is an insurance combination in this county indictments were returned by the last Grand Jury. It is the duty of the Grand Jury to examine into this matter, and if satisfied from the evidence that an illegal combination exists under this statute, then it is your duty to find indictments, and I hope when the trial juries come to dispose of this matter that they go further and inflict iail sentences as well as fines. hope and believe the next Legislature of Kentucky will make the commission of these acts a felony, in order that the doors of the penitentiary may be opened to receive the men who are guilty of these combinations.'

A very judicial mind and temper are here exhibited. But why did His Honour stop with recommending that the offence be made a "felony?" There are a good many felonies, and imprisonment for a term of years might not prove an effectual deterrent. Now, if he had urged the enactment of a law declaring that any person proven to be a member of a board or other instrumentality for fixing rates of fire insurance should be deemed guilty of high treason, and upon conviction thereof should be hanged by the neck until deadwell, that would be something like.

THE GOVERNMENT AS A BUYER.—The influence of the Government upon the markets is wholly bad. It is always in the direction of the cheapest article, and its insistence upon a low price, together with its limited means of ascertaining quality, constitutes the most favorable conditions imaginable for the debasement of goods and the substitution of imitations and counterfeits and adulterations. Add to this that its methods of payment are not those of the trade, that its processes involve long delay in payments, and that it usually treats the persons with whom it does business as if they were suspicious characters, and you have conditions that account for the frequent refusal of large and irreproachable houses to do business with the Government. This of course increases materially the chances that the Government will fall into the hands of unscrupulous contractors, who, if they are going to be suspected, will take good care not to be suspected without cause, or without advantage to themselves.

The Government buys only upon bids; it reserves the right to reject all bids, which means that it will only accept a very low bid. A manufacturer or jobher knows that it is idle for him to bid unless he makes a very low figure; he also knows that in most cases the goods he offers will be inspected by army officers and not by men habituated to the handling of the goods. What he knows is that he must fix a low price; what he thinks is that he can deliver goods that are not up to the Government standard or his own sample, and the truth is that he has got to do something very close to this in order, in the first place, to get the award. and in the second place to come out whole.-United States "Review."

Cirst Class Opening for Ship Building and other Industries.

NEW WESTMINSTER, B.C. ELIGIBLE SITES.

The Corporation of New West:ninster offers for lease eligible sites on about Sixty Acres of land, the property of the City.

The land is level, within the City Limits, and has a frontage on the Fraser River.

Long leases. Very easy terms. Exemption from taxation. Address,

F. R. GLOVER, City Clerk.

Tenders for Debentures.

The Council of the Town of Cobourg are prepared to receive Tenders for the purchase of Debeatures of the Town au thorized to be issued by the Act of 1888, Ontario, Chapter 39, amounting in the whole to the sum of \$144,000, hearing interest at the rate of 4 per cent. per annum, payable half-yearly, and maturing in from 15 to 35 years.

Sealed Tenders marked "Tender for Debentures," addressed to E. C. S. Huycke, Esq., Mayor of Cobourg, will be received until 8 p.m. of Monday, the 1st of May next.

For further information, address Alexander Poe, Esq., Treas-

The Council do not bind themselves to accept the highest or any tender.

Certificate of Superintendent of State of New York Insurance Department.

naid)

I. LOUIS F. PAYN, Superintendent of Insurance of the State of New York, do hereby certify that the NEW YORK LIFE INSURANCE COMPANY, of the City of New York, in the State of New York, is duly authorized to transact the business of Life Insurance in this State.

I FURTHER CERTIFY that, in accordance with the provisions of Section Eighty-four of the Insurance Law of the State of New York, I have caused the policy obligations of the said company, outstanding on the 31st day of December, 1898, to be valued as per the Combined Experience Table of Mortality, at FOUR PER CENT. interest, and I certify the same to be \$175,710,249.

I FURTHER CERTIFY that the admitted assets are-\$215,944,811

The general liabilities \$2,358,383. The Net Policy Reserve as calculated by this Department, \$175,710,249, making the Total Lia. bilities per State laws, \$178,068,632

The Additional Policy Reserve voluntarily set aside by the Company, \$2,838,626

The Surplus Reserve Funds voluntarily set aside by the Company. \$26,414,234

Other Funds for all Other Contingencies, \$8,623,319

1N WITNESS WHEREOF, I have hereunto subscribed my name, and caused my official seal to be affixed at the City of Albany, the day and year above written.

LOUIS F. PAYN, Superintendent of Insurance.

The Company is prepared to treat with gentlemen of influence for appointments as District Representatives. Some valuable positions now vacant will be conferred on suitable applicants. For particulars apply to any of the following Branch Offices:
