VOL. XIX. No. 6. SINGLE COPY MONTREAL, FRIDAY, FEBRUARY 10, 1899. ANNUAL SUBSCRIPTION - \$2.00

We have been requested by Mr. George Hague to correct a mis-statement in Correction. the press to the effect that he had resigned his position in the Merchants' Bank of Canada. This is not correct. He has been relieved of a large amount of the responsibility of administration, but still retains his title and supervisory position until the completion of his term of engagement, which will be in June, 1902.

Of Interest to In our reports of legal decisions, else-Bankers and where in this issue, will be found one

Clients. of much interest to bankers who have been in the habit of permitting a customer to sign cheques by means of a rubber stamp bearing a facsimile of his signature. The reasoning of the editors of the American Law Review, in their challenging of the decision of the Supreme Court of Pennsylvania, is most clear and cogent. However, the decision of the judges will serve a good purpose, if it leads to an absolute refusal on the part of bankers to accept cheques unless manually signed by the depositor or his attorney.

The judgment of the United States Circuit Court, regarding "intentional injuries" and an accident policy, will interest insurance men and accident policyholders.

Montreal School It would be a deplorable outcome of the present petitioning by the Protes-Taxes. tant and Catholic School Boards, if some indiscreet action of the Government should lessen the educational facilities of Roman Catholics or Protestants in city or province. As both parties claim they require more money for the purpose of education, surely it would be better for the joint meeting suggested to abandon all idea of upsetting the existing system of dividing the taxes paid by corporations, and to unite in requesting that such aid as may be found necessary be granted by the Government to Protestants and Catholics alike. Such a step would, we venture to think, be regarded favorably by the community at large.

It is most desirable to remove the question as far as possible from the political arena.

The United States have furnished Another Insurance the world with some strange stories of crime in connection with in-

surance: but novelists of the realistic school will find in some recent events in the old world material enough to harrow up the feelings of the most intense lover of sensation. Even in Canada, we have been made familiar with "strange disappearances," followed by efforts to collect insurance on the missing men. But it is reserved for Paris, as usual, to furnish the insurance companies with a case to chat about and ponder upon with the purpose of finding some solution of a shocking occurrence. It seems that one Henri Martin, a writer of scientific articles on suicide, was found in his room

"Staring full ghastly, like a strangled man."

As a matter of fact, Henri was hanging from a cord. dead. His heirs are claiming insurance amounting to some \$6,000, and they plead that the journalist's death was accidental, he having strangled himself when experimenting in the interests of science. If Henri Martin was merely trying to secure the sum of the sensations of death by hanging, in order to faithfully portray his feelings, it seems a pity he was so thorough in preparing for the dangerous experiment. The story is a remarkable one, and in the interests of the insurance companies is to be told in court.

Reep Watch It is to be hoped that the merchants most and Ward, interested in the future of the metropolis of Canada will interest themselves in watching the progress of the discussion at Quebec of the new eity charter, and especially in the matter of proposed changes in the present system of taxation. In suggesting the formation of a committee for this purpose in our issue of December 16th, we said:--

"It is with such important questions that the proposed joint committee of citizens and aldermen would have to grapple when finally revising the new Charter, and it is more than likely that the members of such a committee would find that very few changes in the present system of taxation in Montreal are requis-The abolition of any unfair and indefensible ite. exemptions, a slight increase if found necessary to the growing needs of a greater Montreal in the present rates, and the administration of civic affairs in a business-like way by competent, well-paid commissioners, will raise Montreal to the proud position of a model city, and cause her praises to be sung in many a community now having good reason to reproach the Canadian metropolitan city with neglecting the golden opportunities at her very gates."

Vaccination Late London papers report great Its Importance growth in the movement having for its object the withdrawal of the so-Shown called conscience clause inserted in the British vaccination act. There has been no uncertain sound in the expression of public opinion, and, as knowledge of the risk of permitting the conscientious objectors to evade vaccination is now disseminated among the masses, pressure is being brought to bear upon the Government. The City Press states that several :netropolitan boards of guardians have passed resolutions calling upon the Government to take steps to release themselves from the grave responsibility assumed by their foolish concession to the fads of a few noisy agitators. The same paper adds :--

"Possibly the clause will remain in force for a while, but it is very certain that before more than two or three years have passed we shall see the repeal of what ought never to have been placed on the Statute book. It remains to be seen whether the Government are wise enough to admit their mistake at once, or whether they will wait until the folly of the clause has been made apparent in a manner that even the agitators will be compelled to appreciate."

While dwelling upon this subject of vaccination, we take occasion to note that at a recent meeting of the Liverpool (Eng.) Health Committee, the medical officer of that eity pointed to two exceptional circumstances justifying an order under the Vaccination Act authorizing the vestry to keep open the vaccination stations. The first was that Liverpool had always been one of the best vaccinated communities in the country, to which was due the remarkable immunity of the people from small-pox. The second exceptional circumstance was that Liverpool communicated with every quarter of the globe, and the

possible introduction of the dread disease from any foreign port rendered the protection of the population by vaccination of vital importance. The Liverpool Health Officer expressed a belief that the freedom of that city from any serious ravages by smallpox is the outcome of the carefully organized system of maintaining vaccination stations to which the people had become accustomed, and the doctor further expressed the opinion that these stations were superior to any system of domiciliary vaccination. At the same meeting, another speaker said that if the experience of Gloucester, where an outbreak of small-pox cost that city of 31,000 inhabitants \$75,000 were duplicated in Liverpool, it would cost something like \$1,500,000.

The doctrine of Cobden and Bright evidently does not extend to free trade in small-pox, against which, in Liverpool as elsewhere, no means of protection should ever be neglected.

"This sort of forensic apology may hood-City versus wink provincial audiences, but it will be Country. seen through as soon as it is subjected to the test of intelligent discussion."

The London "Times," by the above vain and thoughtless comment on a recent speech by Mr. Asquith, has provoked an outburst of indignation from the press of provincial towns. The offensive paragraph indicated what one paper is pleased to call the "supreme and silly contempt" of the typical Londoner for the "Provincial," and asks "wherein, we wonder, is evidenced all this vast mental superiority of the Mighty Intelligences of Printing House Square over, say, the presiding spirits of the "Manchester Guardian," the "Birmingham Post," the "Scotsman," the "Glasgow Herald," and at least half a dozen other journals of England and Scotland ?"

With the object of correcting this ill-concealed contempt of the citizens of London for anything outside its limits, "The Outlook" has started a series of articles designed to show the people of the metropolis of Great Britain that, outside of its limits, there may be found much of the wealth, industry, and intelli-The first of these articles for gence of the nation. the correction of the vanity of Londoners deals with Belfast, to which the attention of the intelligent world was directed in the middle of last month, by the launching of the Oceanic-"the finest achievement, to date, of marine architecture." "The Outlook" says: "There, in an Irish town, one may see commercial enterprise carried to the point of intrepidity, quick to give to the advances of science industrial application, and singularly free from that slavish clinging to "use and wont," which more than anything else is handicapping British industry in competition with its foreign rivals."

Altogether, "The Times" seems to have been foolish in claiming a superiority of intelligence for the undoubted commercial centre of the British Empire, and the great paper deserves the rough handling of

FEBRUARY 10, 1899

its critics. We would not like to claim for Montreal that the axis of the earth sticks out visibly through its centre. Such a contention would raise a storm of protest from Halifax to Vancouver, and, to return to the subject of our text, Canadian politicians have sometimes found it more difficult to "hoodwink provincial audiences" than to cajole and entrap by promises the free and independent electors of our cities.

The Bridgewater It is apparent from the printed re-Conflagration. port of Mr. C. E. L. Jarvis, fire insurance adjuster, regarding the conflagration at Bridgewater, Nova Scotia, on the 12th ultimo, that the people of that enterprising but unincorporated town intend to benefit by the fiery ordeal through which they have passed. After the burning of the town, several public meetings were held in support of the following measures:-(1) the incorporation of the town; (2) the expropriation of land in the burnt district on the river side; (3) the introduction of water works; and (4) restrictions as to construction of buildings in the business part of Bridgewater. All of these measures augur well for the future of this pretty and interesting Nova Scotian town, and we are glad to note the people requested Mr. Jarvis to give them advice from an insurance standpoint regarding buildings and waterworks. In estimating the loss, the report states same at \$245,-000, with insurances, when adjusted, amounting to \$102,470, divided as follows:-Atlac

In a brief but excellent account of the fire, Mr. Jarvis directs attention to the somewhat singular coincidence that St. John, N.B.; St. John's, Newfoundland; Windsor, N.S.; and now Bridgewater, were all destroyed by fire with the wind blowing from the north-west. We venture to point to one inaccuracy in this capital report to the insurance companies—the town of Lunenburg is not twenty miles from Bridgewater. If the mounted messenger who made the midnight ride to Lunenburg for aid rode more than thirteen miles, he must have chosen a most circuitous route.

Branch Banking.

In connection with the gold standard bill reported at Washington by the Re-

publican members of the House Committee on Coinage, a very interesting report has been presented by Governor Stone, of Pennsylvania. It contains a compilation of facts and figures regarding branch banking in other countries which have long been known to what are called "students of the banking problem," but have not hitherto been presented in such a compact and convenient shape.

When discussing the section of the bill providing for branch banking, Gov. Stone makes the following interesting summary of existing conditions in this country and abroad:

"In its failure to authorize branch banks the United States stands, thus far, practically alone among commercial nations. Branch banks, or branch offices of established banks, are authorized by law in Argentina, Austria-Hungary, Belgium, Bolivia, Brazil, Canada, Chili, China, Colombia, Costa Rica, Denmark, Ecuador, Egypt, France, Germany, Great Britain, Greece, Guatemala, Hayti, India, Japan, Mexico, Netherlands, Newfoundland, Nicaragua, Paraguay, Persia, Peru, Portugal, Roumania, Russia, Salvador, Sweden, Switzerland, Turkey, Uruguay and Venezuela. It may be interesting to note the extent to which this privilege of branch banking is carried on in other countries. For instance:—

"In England and Wales 90 banks have 3,446 branches and agencies.

"In Scotland 11 banks have 1,154 branches and agencies.

"In Ireland 9 banks have 580 branches and agencies.

"In Isle of Man 3 banks have 17 branches and agencies.

"Canada, with 38 banks, has some 500 branch Lanks.

"The Reichs Bank of Germany has 240 branches. The Bank of France had, in 1896, 94 branches and 34 agencies.

In another part of his excellent report, Governor Stone says of the system of branch banking:---

"One of the great benefits arising from the authorization of branch banks would be the transfer in an effective manner of loanable capital from points where it is abundant to points where it is scarce. It has been said of this system: 'It counteracts the local dearth and relieves the local glut, facilitating and guiding the flow of circulating capital to those parts of the country in which it is most needed and can be best employed. By mingling many markets into what is practically a single one, it puts all borrowers on the same footing, enabling them, on the sole condition of being worthy of credit, to obtain credit on equal terms.'" The Scavenging Referring again to the intention of Contract. Referring again to the intention of Council to make a retrograde movement by reverting to the contract system of providing for the city scavenging, we reiterate opinions al-

ready expressed thereon in this paper. In the year 1893, the city decided that it could do its own scavenging at a less cost, and in a far more satisfactory manner, than it had been done under the contract system. The citizens remember the constant complaints which were made concerning the unsatisfactory way in which the work was previously executed. After its transfer to the city, and up to quite a recent period, the work was decidedly carried out more satisfactorily than previously, but chaos seems to reign in 1898. The scavenging should never have been placed under the control of the Health department, and as a matter of fact, at the beginning of 1898 it was taken away from it, and put under the Road department, to which it properly belongs. The Health Committee, however, made strenuous efforts to regain control, and succeeded, and not only succeeded in getting the control, but in displaying its utter inability to carry out the work properly.

Is it possible to advance any plea which more clearly demonstrates the necessity for placing the administration of the city under Commissioners than the proposed action of the City Council and Health department? For, we regret to say that the former body has approved of the recommendation of the latter to go back to the contract system. Just imagine a body of business men expending within a few years \$145,000 for the acquisition of stables, workshops, incinerators, horses and other requisites in connection with the scavenging of the city, and now, like a lot of children, coming forward and saying: This little play has lasted long enough-we are tired of itwe will go back again to the former game. Of course, the expenditure, or practically the throwing away of \$145,000, is a mere bagatelle to a city like Montreal, and a contractor can do this work much cheaper than if executed under our control. At least, the recent action of the aldermen implies this. This question might well be asked-By what magic can a contractor do better than a competent civic official? But why should we lose time in discussing this matter any further. We think it must be apparent to all business men that the city can do its own scavenging cheaper and in a more satisfactory manner than any contractor; that the health of the city is too important to be played with, and the city's hands should not be tied in a matter which so largely affects the welfare of the citizens.

An Instructive Under the regulations of the Royal **Historical** Society of Canada, it is the duty of **Sketch**. the president of each section to prepose an address for the annual meeting. As president of the section embracing all the branches included under the title "Geological and Biological Sciences."

Mr. T. J. W. Burgess, M.B., selected a subject relating to the science to which most of his life's work has been dedicated, and the paper thus prepared and read at the Society's meeting in May last, "A Historical Sketch of our Canadian Institutions for the Insane," has just been published, and forms a most instructive and interesting pamphlet. The application of the healing art to mental diseases is a study of the utmost importance to scientists, social economists, actuaries, and all who are interested in the welfare of the human race; and Canadians owe a debt of gratitude to the author of this more than sketch of the development of our institutions for the insane.

To New Brunswick belongs the honour of having been the first of the old British North America provinces to make special provision for its insane, and the description of the earliest asylum, as of those of the other provinces, is very complete. One of the surprising pages in this pamphlet is the well-grounded complaint of Dr. Bodington, of British Columbia, of "a practice too much in vogue in Great Britain, of shipping off to the colonies weak-minded young persons who are unmanageable at home, and unable to make a career for themselves, or earn a livelihood there. 'He has continued his wild and reckless conduct, and has now been shipped off to the colonies." is a phrase made use of in the 'Journal of Mental Science,' in the description of a case of the kind now in question."

The doctor very properly regards weak-minded young men of the type known as "Monson's victims," as typical examples of the most undesirable class of immigrants it is possible to conceive. We recommend this excellent sketch by an excellent and painstaking member of the Royal Society of Canada to scientific men, actuaries, and all who, sympathizing with suffering, desire to know something of the provision made in Canada for the insane, "the wards of the State."

The Greatest Men almost universally prefer their nacity. tive country before every other, on ac-

count of what they consider to be its singular beauty or superior natural advantages. But the people of the United States in addition to this love of country are almost universally filled with a strong belief in the destiny of the great continent to which they belong, and a recent illustration of what at least one citizen of New York thinks of the future of that undeniably great city was given at the annual banquet of Group Eight of the New York State Bankers' Association, on Friday last, at the Manhattan Hotel. Lieutenant-Governor Woodruff, in responding to the toast "The State of New York" said:—

"Great as our financial prosperity has been in the past, great as it is in the present, it is but a shadow to the substance compared with what it will be in a few years to come when the vast improvements already planned have been carried into effect, when the great extent of water front of this immense city shall have been developed, when the bridges over the two rivers and the tunnels under them, now projected, shall have been constructed, when the vacant places shall have been filled with a busy, industrious population, then in truth will it be said that in no spot upon the globe can there be found a more prosperous people than in the city of New York, and no where in the world will there exist a more important financial centre than New York, destined to be the foremost city numerically and commercially, as well as financially, in the world."

As a bright forecast of the destiny of New York, as a post prandial peroration, as a pleasant dream of the future of a big city, the speech of Lieut.-Governor Woodruff was peculiarly happy. At the same time, we hesitate to believe that London is destined to lose her numerical, commercial and financial position "in a few years to come." So much depends upon how this eloquent New Yorker defines "few." The little son of a minister was, once upon a time, promised by his father a few apples as a reward for weeding the rectory garden. Upon the completion of the work, the boy was handed three apples. He put in a claim for five more, telling his father that, when preaching about Noah and the Ark, he had stated from the pulpit that a few, namely eight, persons were saved from the flood.

Perhaps Lieut.-Governor Woodruff's few covers a longer period than eight years. We have, of course, Shakespearian authority for interpreting *few* as a small number:

"There's few or none do know me."

Although we take pleasure in noting the prosperity and expansion of New York, we cannot yet believe it is so soon destined to be "the foremost city in the world."

The Proposed A levy of any kind made upon cap-Tax on ital for the support of a government Mortgages. is unwise; but the proposal to impose a tax upon mortgages is certainly foolish. Money seeking investment is sensitive to an extreme degree, and to lay a burden upon same is to choke the source of supply, or to divert its course in some other direction. If there is aught about which no conflict of opinion would seem possible, it is the wisdom of permitting money to have a perfectly free circulation. To levy a tax upon mortgages would certainly cause British and other investors to hesitate about making future loans on such security in the province of Quebec, and local lenders of money would certainly exact from the borrowers a rate of interest sufficiently high to cover the tax, and also the risk of any increased burden of the same nature.

We look to our legislators to prevent such senseless interference with the employment of money (by the free circulation of which the wealth of individuals and states is increased) as the imposition of a tax upon mortgages. Taxation in ist rather than real estate pay for the maintenance of law and order, the support of schools, the lighting and cleaning of streets, and all the costs incidental to keeping the civic house in order, are calculated to make him button up his pockets and leave the country. The land cannot vanish, but money can, and will, whenever its profitable employment is threatened. Strange to say, there are many who do not hesitate to defend any plan of taxation having for its object the bleeding of capitalists, and the crippling of business enterprise.

Yet the proposals to tax capital are frequently as stupid, senseless, and unjustifiable as the action recorded of a resident in a rough locality in England who, seeing a visitor approach, said to his mate "Bill, 'ere's a stranger comin', 'eave 'arf a brick at 'im." If, upon the arrival of capital seeking investment, we assume an unfriendly attitude, and attempt to make the holders of money contribute too largely to the support of the Government, the individual or corporation concerned surely cannot be blamed for resenting such treatment, even to the extent of departing with their capital to some less rapacious community.

NORTHERN LIFE ASSURANCE CO. OF CANADA.

The above company commenced business in April, 1897, and closed its books, for the purpose of ascertaining the extent and quality of the business transacted, on December 31st, 1898.

By the figures published in this issue of THE CHRONICLE, it will be seen that the Northern Life secured new business during the year 1898 amounting to some \$666,000. The premium income was \$30,298, and the interest income \$6,741. The total assets of the company amount to \$206,846, and the figures of insurance in force show \$879,950.

As yet, this young company has had no experience of death claims, and, by economical management, and careful selection of lives, those entrusted with its management will continue on what has proved, hitherto, a fairly prosperous career, and ensure the success of the Northern Life.

PROVIDENT SAVINGS LIFE ASSURANCE SOCIETY.

The 24th Annual Statement of the Provident Savings Life Assurance Society shows a large increase in the volume of business, and a most satisfactory increase in Assets, Surplus, Premium Income, Reserve, and all those features calculated to please policyholders and delight the executive officers of the Society.

The income for the year, inclusive of rents and interest, closely approached 2 3-4 millions, and the total disbursements amounted to \$2,528,000. The new assurance written during the year exceeded thirty millions, making the total assurance of the Society now in force over \$92,000,000. The total assets of the Society as at January 1st were \$2,850,000, and the total liabilities \$2,156,000, the ratio of assets to liabilities being 132 1-2 per cent.

An interesting tabulated statement of the gains of the Provident Savings for 1898 shows the following increases:—

Assets														.22	per	cent.
Surplus														.61	per	cent.
New Bus	in	ess	ŝ.,				,				,			.20	per	cent.
Premium	1	nce	or	ne	e.		5						0	1-2	per	cent.
Reserve fo	or	P	ol	ic	y.	h	0	le	le	r		.2	1	6-10	per	cent.

THE LONDON MUTUAL FIRE INSURANCE CO.

The 30th Annual Report of the above Company is regarded as a satisfactory one, and the result of the business transacted must be gratifying to the directors and policyholders of this old established corporation.

The capital account for 1808 shows an increase over the preceding twelve months of nearly \$15,000, and the increase of the business of the year exhibits a profit exceeding \$26,000. When compared with a few of the years immediately preceding, the statement under review presents features warranting the expressed confidence of the directorate in obtaining a favorable verdict upon the exhibited figures from the members of the company. In proof of the energy of the agents of the London Mutual, it is stated that, during the year just closed, 17,558 policies were written.

The president, Captain T. E. Robson, occupied the chair, and, at the close of the meeting, he and his colleagues were unanimously re-elected. It is pleasing to record that the services of the manager, Mr. D. C. Macdonald, who, for a period of nearly forty years has been labouring to advance the company to its present position, were made the subject of laudatory comment.

THE HARTFORD FIRE INSURANCE COMPANY.

The 89th Annual Statement of the assets and liabilities of the Hartford Fire Insurance Company is well calculated to satisfy the most critical policy-holders in this Institution. Its age and solidity does not seem to prevent its continued growth in all those essentials which combine to mark a progressive company. A comparison of the business transacted during 1898 with that of the year preceding shows an increase of some \$365,000 in the total assets of the Hartford, which now amount to \$11,183,650.90.

The Reserve for re-insurance has been increased by the addition thereto of \$145,000, this item of the assets being now in the near neighbourhood of five millions of dollars. For unsettled claims the company has set aside \$520,000; the Net Surplus is approaching 4 1-2 millions; and the surplus to policyholders now amounts to no less a sum than \$5,708,- 910. Such results must be most gratifying to Mr. George L. Chase, the President of the Company, and testifies to the ability of Mr. Royce, the Secretary, and his associates on the staff of the Hartford Fire Insurance Company.

The figures representing the Canadian branch of the business are not yet to hand, but we have reason to believe that Messrs. G. Ross Robertson & Sons, the Montreal agents, are quite satisfied with the result of their year's work for this old company.

CENTRAL CANADA LOAN AND SAVINGS' COMPANY OF ONTARIO.

When the President of a company is able to assure fellow shareholders, whose interests have been committed to his care and control, that the balance sheet submitted to them is "without exception the best statement in the history of the company," it must be a source of extreme gratification to him. That the satisfaction of presenting such a report should fall to the lot of the Hon. George A. Cox, as president of the Central Canada Loan and Savings Company, is not surprising. In the conduct of the business affairs of corporations, his energy, wisdom and extensive experience is most valuable, and with the support of such colleagues as those figuring on the directorate of the Central Canada, the success of the Company, however pleasing to the shareholders, is not a cause for wonderment.

The net profits for the year amounted to \$96,-The payment of four quarterly dividends ab-000. sorbed \$75,000. Of the balance, \$15,000 was transferred to the Reserve Fund, leaving \$6,000 to be placed to the credit of a Contingent Fund, which thus shows very little change from last year's figures. The Reserve Fund of the Company now amounts to \$360,-000. The Dominion, Provincial, Municipal, Railway, and other bonds and stocks held by the Central Canada exceed 2 3-4 millions of dollars, the entire assets Scrutiny of the of the Company being \$5,902,000. statement would seem to show that, even if with other investors, the directors experience some difficulty in finding profitable employment for their funds, the securities obtained have been selected with excellent judgment. Possibly, no small measure of the success which has attended the operations of this Company during the year under review has been owing to the increased powers obtained from parliament during its last session.

In reply to the question of a shareholder as to the possibility of the Central Canada joining in any of the rumoured amalgamations of loan companies, the President stated that the improved earning power had made the directors "well-satisfied" with the "present condition and future prospects" of the Central Canada Loan and Savings Company of Ontario.

Altogether, the fifteenth annual meeting of this highly successful corporation must have been a very pleasing one to Mr. E. R. Wood, the managing di-

FEBRUARY 10, 1899

rector, and all those associated with him in the business affairs of the Central Canada. With the result of the year's work enabling the directors to pay shareholders 6 per cent. for the year, to add \$15,000 to Reserve Fund, and to show an unimpaired Contingent Account, every one interested ought to be pleased, and it must add to the general satisfaction to know that the Hon. George A. Cox, President, is able to report that the loans are well margined, the securities under market value, the mortgage loans on real estate well secured, and all losses provided for.

AGE AND POVERTY.

"Theoretically Perfect, but Practically Impossible."

(Concluded.)

Past experience has warned him that a man must have regard to two grave risks when he is reckoning up what he can afford to pay in the way of insurances -sickness and want of work. The economic man who is chalked up as a thrift diagram by Royal Commissions enjoys perfect health and uninterrupted work, and he has always a few sixpences a week left over for prudential investment. But Mr. Smith knows better. He knows that a single friendly society like the Manchester Unity pays away nearly £14,-000 every week for sick benefit, and that the Hearts of Oak, out of a membership of 220,000, had 66,000 sick members on its books in the course of a twelvemonth. And every week of sickness spells debt for household necessaries and arrears for society contributions, which are the same thing as debt. He knows also, by bitter experience, that at times of trade depression, season fluctuations, and hard winters, week after week may go by without work. And at such times debt and arrears pile up terribly, in spite of the out-of-work pay from the union, which does not cover more than half the household expenditure; and they are a dead weight on a man for months after work has begun again. It is no good shutting his eyes to the risks or shouldering liabilities which would drag him down when bad times came. Mr. Smith has never been able to bring himself to the Lancashire and Yorkshire idea of adding to his income by the work of his wife, nor does he mean to save money by sending his children to work at eleven. Also he sees that the men around him who are getting on in life find it increasingly hard to get work, and that some of them are unable to keep up their contributions in consequence. Would it be wise or fair to his family, he asks himself, to risk the loss of thirty years' savings ? When he joins the grey-haired brigade, he is likely to fare like the rest in the matter of work, and what can be expect with half as much arrears again dragging at his heels but to be pulled down at last. He concludes that he cannot afford to lock up any spare money he has over in good times, as the chances are that the lean years will have to be fed on it. Old age must therefore take thought for itself. If there is any money in the bank or the cooperative or building society when the time comes, so much the better. If not, well, it can't be helped. His wages are paid by the week, and don't include annuities, and what is the use of stretching them out as though they did? Is John Smith right or wrong? And supposing him to be wrong, is there any reasonable likelihood of convincing him of his error, and inducing him to lock his money up and run the risk of debt and lapses? Mrs. Smith, who has a right to be consulted on such a matter, will certainly tell you that they must think first of the children and the home, and how to keep free of debt.

One more question. Supposing he decided to put by the equivalent of the annuity premium in a 3 per cent. savings bank—or \pounds I IIS. 6d. a year—or even half the sum, would it not under all the circumstances be a far more prudent investment, even if the worst came to the worst, and the savings had all to be drawn out before sixty-five?—(Insurance Record, London, Eng.)

THE NORTH AMERICAN LIFE ASSURANCE CO.

On a later page of this issue, we present a full report of the annual meeting of the above company. The business transacted during 1898 was progressive enough to afford grounds for the satisfaction expressed therewith at the meeting, and all the increases shown are in items in which advance means development in business and financial strength. The following tabulated statement will serve better than the comments of a reviewer to indicate what progress has been made by the North American Life in business and resources. The company stands in a good position, and its record compares quite favorably with that of other companies:—

Premiums (Not)	1897.	1898.
Premiums (Net)	582,431	649,750
Interest and Rents	117,119	132,483
Total Income	699,550	782,233
Payments to Policy-holders	271,477	228,985
Expenses and Dividends.	182,890	204,288

Total amount in force	18,915,878	4,002,300 20,595,708
(T)		20,000,100

The Report will be found highly interesting reading, being filled with signs of the progress and prosperity of the company. That much of the success of the North American Life is owing to the energy and good judgment of the managing director, Mr. William McCabe, we fully believe, and, supported as he is by a President, Vice-Presidents, and directors who command the confidence of the community, there is no reason why the present year should not show still further improvement in the financial statement of the business entrusted to his management.

The interests of the North American Life in Montreal are zealously promoted by the joint agents, Dr. Ault and Mr. T. G. McConkey.

RECENT LEGAL DECISIONS.

SIGNING BANK CHEQUES WITH A RUBBER STAMP.-A depositor in a Pennsylvania bank had a fac-simile of his signature made, so that it could be affixed to cheques by means of a rubber stamp, and with this stamp he was accustomed to sign cheques. It was his custom to keep the stamp in a compartment of his safe. He locked the compartment, put the key in a drawer of the safe behind some papers, locked the drawer, and placed the key in another drawer which was unlocked. The safe containing these drawers was then locked, and the key of the safe was put in a box in another safe. Notwithstanding these precautions, his office boy succeeded in finding the keys, and unlocking the various safes and drawers secured the stamp, with which he proceeded to sign cheques in the name of his employer. The bank paid the cheques innocently, and the question arose whether the bank or the depositor should bear the loss. Following the ordinary rule with regard to the responsibility of a bank which pays a cheque the signature on which is manually forged, the Supreme Court of Pennsylvania held that the bank must bear the loss. The editors of the American Law Review who note this case remark that the decision is clearly wrong. The analogy to the forgery of a sign manual ought not to apply. Perfect imitations of such signatures can rarely be made, and there is safety and propriety in the rule, that a bank should, at its peril, know the signatures of its customers. But where the customer by the use of a rubber stamp signature puts it within the power of another person, by getting possession of it, to make a perfect imitation of his signature, which the bank cannot detect,-he ought to be held bound at his peril to prevent any unauthorized person from getting possession of the implement. The reason why the Pennsylvania decision is wrong becomes absolutely clear when it is considered that the bank could, by no means within its power, detect the forgery; while the customer, by means within his power, could prevent it. These means were twofold. First, not to use a stamp, with which to sign his cheques; or secondly, using it, so to guard it that no unauthorized person could get hold of it. The moral is, that a prudent banker will, in every case, require the cheques of his depositor to be manually signed by the depositor, or by his authorized attorney-in-fact. 33 Amer. Law Review 138.

MORTGAGE COVERING A POLICY OF INSURANCE.— In the year 1869, to secure a loan of £350, one Joseph Charter and his wife gave to the mortgagee, Job Watson, a mortgage, with the usual proviso for redemption, which covered certain lands, and also covered a policy of insurance in the Royal for £100 on the life of the mortgagor, Charter. The mortgage covered as well all bonuses, benefits and advantages to be recovered by virtue of the policy, and all the estate and the interest therein of the mortgagor. In 1872, the mortgage becoming in arrear, the mortgagee entered into possession of the lands; and in 1876, when the mortgagor ceased paying the insurance premiums, the mortgagee paid them, and kept the policy on foot at his own expense, down to the year 1897, when the mortgagor died. Notwithstanding the fact that the land covered by the mortgage had become vested in the mortgagee by virtue of the Statute of Limitations, the widow and the heir-at-law of the deceased mortgagor commenced an action for the purpose of recovering the insurance moneys. They took the position that there is no Statute of Limitations applicable to a mortgage of a policy of Jusurance.

purpose of recovering the insurance moneys. They took the position that there is no Statute of Limitations applicable to a mortgage of a policy of usurance, and that they were entitled to redeem it after a lapse of upwards of twenty years. It was admitted that the point was a new one, and that there was no judicial authority upon it. Mr. Justice Kekewich, who heard the case, came to the conclusion that where real property and a policy of insurance have been included in the same mortgage to secure the payment of one indivisible amount, and all subject to one and the same proviso for redemption, and the mortgagee has been in possession of the land for a sufficient length of time without giving any acknowledgement of the title of the mortgagor, so that the right of the mortgagor to redeem the land has become barred by the Real Property Limitation Act, the right to redeem the policy of insurance will also be barred. The policy and the land are together the security for the same debt, and if the mortgagor or his representatives cannot have back the land alone, they cannot have back the policy. 68 L. J. Chy. 1.

ACCIDENT INSURANCE.—The Circuit Court of the United States has held that an exception in an accident insurance policy, of "intentional injuries inflicted by the insured, or any other person," does not include death from being shot by an insane person. A lunatic has no capacity to form an intention to inflict such an injury, or to understand the nature and guilt of his act. 88 Fed. Rep. 241.

THE LIFE-TABLE FOR OLDHAM .- The last few years have been marked by a new departure in the vital statistics of large urban districts, in the shape of local life-tables. The first of these to appear was, we believe, that of Dr. Tatham for Manchester, followed by that of Dr. Newsholme for Brighton, Dr. Chalmers for Glasgow, Dr. Mumby for Portsmouth, Dr. Hayward for Haydock, Lancashire, and now we have before us Dr. Tattersall's life-table for Oldham. All these life-tables deal with the vital statistics for the years 1881-90 of the above communities. The Oldham life-table, like the Brighton life-table, on which it has been modelled, is constructed by what is known as the graphic method, the other life-tables mentioned above by analytical methods-that for Haydock having been constructed by an ingenious curtailed method. In adopting the graphic method, the medical officers of Brighton and Oldham have followed the example of the majority of actuaries, who look more favourably on the graphic than on the analytical method, and adopt it in the majority of their calculations. For the somewhat uncertain data which are embodied in the census and death returns, the graphic method

presents great advantages besides its simplicity and elegance. It is well-known that the ages, both of the living and the dead, tend to be returned in round numbers at decennial periods, for example 20, 30, 40, and 50. A curve of the population shows hillocks at nearly every decennial interval. The graphic method enables these hillocks to be smoothed out, and thus gives a truer result than the original figures. A table is given by Dr. Tattersall which compares the main results of his with preceding life-tables. For males the expectation of life at birth is 34.7 years in Manchester, 35.2 in Glasgow, 36.9 in Oldham, and 43.6 in Brighton. At the age of 20 years the male expectation of life is 34.6 years in Manchester, 35.7 in Oldham, 36.9 in Glasgow, and 40.5 in Brighton. In Oldham the expectation of life is generally better than in Manchester up to the age of 60, beyond which point it falls slightly below it. Oldham is slightly better than Glasgow during the first five years of life; beyond that point the Glasgow conditions are more favourable to life than those of Oldham. Brighton, as might be expected, shows more favourable conditions throughout the whole of life .- British Medical Journal.

THE MANITOBA HOTEL FIRE.

If, as generally reported, the proprietors of the fine hotel recently burned carried no insurance, the good fortune of the companies is quite like a ray of sunshine after a tempest of wind and rain.

PERSONALS.

MR. R. H. CARNEY, the well-known insurance agent of Sault Ste. Marie, has been visiting the metropolis on business.

MR. E. ROGER OWEN, Fire Manager, Commercial Union, London Eng., is at present in New York, on business, and is expected in Montreal in a few days.

MR. E. L. PEASE, manager of the Merchants' Bank of Halifax, at Montreal, returned from Havana a few days ago, after making arrangements for opening a branch of the bank in that city. In an interview with this active and enterprising banker, we found nothing so interesting as his tribute to the energy and practical wisdom of the new occupants of Cuba. Realizing that the removal of the pavements of Havana for the purposes of pipe-laying may be dangerous to the health of the inhabitants, the Americans are actually centemplating the building of a new city. Mr. Pease has returned in the best of health, and seems sanguine regarding the future of Cuba.

STOCK EXCHANGE NOTES.

Wednesday, p.m., 8th February, 1809. Irregularity has again been a marked feature of the trading on the Stock Exchange during the week. The market has been a hesitating one, as if in doubt which way to go, but yesterday it became a trifle soft, and opened considerably weaker this morning. At the close, however, it recovered somewhat, and will, in all

probability, react temporarily at least to higher figures The disturbance in the Phillipine Islands is again. responsible in a large measure for the weakness, but the arrival in New York of large batches of American securities from London, which will now have to be carried in the former place, aggravated the situation, and led to the belief that there might, in consequence, be some tightening of money. Up to the time of writing, however, this has not resulted, and, as the selling movement in London appears to be over, there would seem to be little ground for fear from this quarter. As the tremendous outburst of speculation which has just been witnessed has apparently spent itself for the time being, it is not improbable that prices may gradually recede to a somewhat lower level, but we do not think any marked or violent decline need be looked for, while the general feeling continues so buoyant and hopeful. Many persons who rarely enter the market must have been taking a turn during the past month or so, and having made their profits and retired, it is only natural that with the removal of this special support, some recession in values might result. There has been no such violent advance in Canadian securities, however, as has been the case with Americans, and there is, therefore, much less cause for a decline here than in New York. Money continues to be easy, and the Bank of England rate was reduced on Thursday last from 3 1-2 to 3 per cent. The street rate in London is now 1 7-8 per cent., and in Berlin 3 3-4 per cent., a reduction at the latter centre of about 1-2 per cent. from a week ago.

* * *

The directors of the Canadian Pacific Railway declared a dividend of 2 per cent. on the common stock at their meeting on Monday last, payable on 1st April next.

The balance to be added to "Surplus Earnings Account" is \$1,051,708 as against \$897,088 in 1897.

The stock has had the usual fluctuations during the week, but after the publication of the results of the year's business it advanced 3-4 per cent. in London to 89 3-4. This gain has been lost in the general weakness, however, and to-day's close was 89.

In Montreal the stock sold up to 86 3-4 yesterday, but fell off to-day to 85 7-8, closing at 86.

Advices from London are to the effect that Berlin is quietly absorbing blocks of the stock which were thrown over during the financial stringency in December, and, that if the bull movement should continue, some advance may be looked for. There is a much better demand for the preferred stock than has been witnessed for some time, and over £80,000 of it has recently gone into investment.

. . .

There has been little change in the quotations for Montreal Street Railway during the week, and the stock closed to-day with 293 bid. The earnings of the road for January amounted to \$125,460, being an increase of \$15,320 over January, 1898. The statement of earnings for the first four months of the company's fiscal year, as compared with the former year, is as follows :---

October Novembet December January	1898. \$133,619.63 125,356.36 127,780.42 1899. 125,459.96	1897. \$116,293.09 110,930.24 113,128.91 1898. 110,140.83
Increase	\$512,216.37 \$61,723.30	\$450,493.07

Toronto Railway declined from 114 3-8 a week ago to 112 3-4 to-day, but recovered at the close to 113 $\frac{1}{2}$. The earnings for January were \$95,690 against \$86,-562 for the corresponding month in 1898, being a gain of \$9,127. If this increase is continued, the company should be able to pay an enhanced dividend, or bonus, before the close of the year.

. . .

Twin City Rapid Transit has been active, but has had a fairly steady decline from 70 a week ago to 63 to-day, with a slight rally at the close to 64 1-2. As the price of this stock here will be regulated by New York, it is liekly to be subject to heavy fluctuations, and will on this account doubtless become a favorite with traders.

The earnings for the fourth week of January show an increase of \$6,000. The net earnings for 1898 were \$378,000, being equal to 2 1-2 per cent. on the common stock.

* * *

Richelieu and Ontario sold off 1 1-2 points to 106, but should recover, and sell much higher ere long. The annual meeting takes place on 14th inst., when a particularly good statement is looked for.

. . .

A little flurry in Duluth, South Shore & Atlantic occurred during the week on the strength of increased earnings, and the report that the company would obtain an entrance into Winnipeg.

The preferred stock sold up to 11 1-2, and the common to 4 1-2. The earnings for the 3rd week of January show an increase of \$8,500.

MINING MATTERS.

War Eagle touched its highest point to-day, when it sold up to 352 1-2. It reacted, however, and at the close was offered at 350 with 348 bid. The new hoisting machinery was expected to be in readiness for operation by 4th inst., and if cars can be procured shipments at the rate of 250 tons per day will be undertaken at once.

. . .

Quite an advance has taken place in the value of Cariboo McKinney shares, the rise equalling 17 points since Saturday last, when the stock sold at 152. The value of the output from the company's property, last year, was \$155,800.

* * *

The Gooderham-Blackstock syndicate has organized a departmental store company with headquarters at Rossland, and are seeking a location for the same.

They wish to acquire a corner lot, having a 90 foot frontage, for which \$40,000 is asked.

* *

The Rossland Air Supply Company is being formed for the purpose of supplying compressed air on the Taylor Hydraulic principle to the mines. The Company is required by its charter to secure the subscription of \$200,000 of capital within the next six months.

* * *

Rossland Miner :- "The next 18 months should witness an immense increase in the capacity of the smelters of Southern and Southwestern British Columbia. The ore reduction works already constructed in West Kootenay alone have a capacity of more than 1,000 tons daily, but within the next year and a half it is safe to say that this will be more than quadrupled. The output of the mines of the Rossland camp is steadily increasing, and the elapse of a few months should see three or four more big properties added to the shipping list. Then there is the Ymir camp, which is coming to the front at an astonishing rate. The opening up of the Lardeau-Duncan, White Grouse and Revelstoke districts will be accomplished before another year, and the ore tonnage from these sources will then be large. East Kootenay will also have smelters within the time mentioned. The copper deposits in the north end of the district will necessitate the construction of smelters at either Golden or Windermere, while the large galena bodies near Fort Steele and Movie will require lead smelters within easy reach. But the greatest increase will be found in the Boundary Creek country. The vast deposits of copper-gold ore there are being extensively developed, and an enormous ore tonnage is already available. The completion of the railway is the only thing necessary to cause the establishment of a string of smelters from Cascade City to Greenwood. By this time next year we predict that several thousand tons of ore will be treated daily at different points along the Kettle River Valley.'

* * *

The Montreal-London Company have secured the property adjoining the Dufferin mine, and the indications are that it will prove to be equally as good as the latter. The first clean up at the Dufferin has been eminently satisfactory, and this mine alone will shortly produce sufficient gold to admit of the payment of a handsome dividend on the whole capital of the Montreal-London Company. The stock is one of the best purchases on the market to-day at 75.

. . .

Negotiations for the purchase of the Jumbo by the Senator Cox syndicate are still pending, and the report of the engineer has now been sent in. The stock is somewhat weaker, being offered at 42c with no bids.

Crows' Nest Past Coal Company is now selling at \$55, having advanced \$10 per share in two days.

. . .

The daily production of ore from the Le Roi is 200 tons at present, but shipments will be doubled as soon as some necessary work, which is being done in the shaft, is finished.

The Trustees of the property have been restrained by an order of the United States Circuit Court from handing over the assets of the company to the British America Corporation. The plaintiff in the case sets forth that the sale was illegal, and alleges that the Le Roi mine is worth \$6,000,000, and that the smelter and other realty in Stevens County are worth \$250,-000. He says that the British America Corporation "fraudulently" proposes to dispose of the mine to a newly formed London Company for £1,000,000, and to account to the defendant corporation for only \$3,-000,000 of the purchase price.

* * *

Mr. R. Rogers, of the Bullion Mining Company in the Lake of the Woods district is in Montreal, and has about completed the sale of a number of claims in which his Company is interested. A further block of treasury stock of the Bullion Company has been disposed of to Montreal capitalists, the proceeds of which will be used for developing the Bullion mine, which adjoins the famous Mikado. The Montreal-London Company has a large interest in the Bullion.

Mikado shares of $\pounds 1$ each are worth $\pounds 3$, but none can be purchased.

Thursday p.m.

At a meeting of the Directors of the Montreal-London Co. held this afternoon, a dividend at the rate of one cent. per share for the three months ending 31st March, was declared payable to shareholders, on 1st April. This is at the rate of 162-3 p.c. per annum on the capital of the Company. The first gold brick from the Dufferin mine has just come to hand, and the first shipment of ore from the Slocan Sovereign has been made, the results of which are very satisfactory.

Application will be made to the Montreal Stock Exchange for an official quotation for the stock tomorrow.

merican Life North

The Annual Meeting of this Company was held in the Company's building, Toronto, on Thuisday, February 2nd, 1899, when Mr. John L. Blaikie was appointed Chairman, and Mr. William McCabe, Secretary.

The Directors submitted a statement of the Company's affairs for the year ended 31st December, 1898, showing continued and marked proofs of the great progress and solid prosperity of the Company in every branch of its business.

Policies were issued for \$4,002,300, exceed ng by \$146,376 the issues of any previous year.

The payments to policyholders amounted to \$228,985.39

Interest on the Company's investments was well paid, which fact indicates the excellent character of the Company's securities, and also the improved financial condition of the country.

The interest receipts were more than sufficient to pay the losses of the year under the Company's policies. The cash premium receipts amounted to \$649,750.63, and made

with the cash interest receipts, etc , an income of \$785.130.81, making the very handsome increase over the income of last year of \$85,580.32.

The Assets now amount to \$3,137,828.61, and were increased during the year by the large put-by from the cash income of \$343,-111.74

The Reserve Fund was, strengthened by the addition of \$341,027, and now amounts to the relatively large sum of \$2,586,947.

Payments made under the Company's investment policies, etc., during the year compared favorably with those made by the best managed and most successful life companies,

The apportionment of surplus to the investment policies which matured in 1898 was approved as recommended by the Company's consulting actuary, whose report is submitted. The Company's books were closed as heretofore, on the last day of

the year, and the fall reports to the Government, with a detailed list of the mortgage and other securities held by the Company, were duly mailed to the Superintendent of Insurance for the Dominion.

The Auditor made a complete monthly audit of the Company's books, and at the close of the year verified the cash on hand and in banks, and examined each mortgage and all other securities held by the Company.

A thorough examination of the Company's assets, liabilities and affairs was also made at the close of the year by expert examiners,

representing U.S. Insurance Departmentz, The Company owns debentures amounting to \$610,816.58, of which \$61,551,37 are deposited with the Dominion Government and the rest in the Safe Deposit vaults of the Trusts Corporation of Ontario.

The Auditor's report, together with the financial statement and balance sheet of the Company, are submitted. The Company's Bu lding, which, with the improvement and additions, cost such a moderate sum, has proved a most satisfactory investment, and the rentals on the portions not needed at present for the Company's use are such as to give the Company ample accommodation at a very low cost. The services of the Company's staff of officers and agents continue

to merit the highest commendation. WM. MCCABE, J. L. BLAIKIE, Managing Director.

WILLIAM MCCABE, Managing Director. I have examined the Books, Documents and Youchers representing the foregoing Statement and Balance Sheet, and also each of the Securities for the properties in the latter, and certify to their correctness. TORONTO, January 24th, 1898. JAMES CARLYLE, M.D., Auditor

\$3,137,828 61

Some of the leading features of the year's business, as mentioned by

mitted shows financial strength, productive as ets, solid growth, and large relative surplus, which is the supreme point to policy holders, as it is from this source alone that satisfactory returns can be made to them

(2) The new business for the year exceeded that of any previous year.

(3) Another marked feature of this Company is the relatively large amount of its net surplus to liabilities, when contrasted with that of its leading competitors. The President showed that this ratio

was one of the best tests by which to judge of the relative merits of the different Companies.

Cash in Banks
Cash at Head Office.....

(Reserve on last three items, included

Interest due \$10,059,15, and accrued \$23,415.65.... Rent due, \$2,205,13, and accrued \$1,020.92

(4) The following marked increases were made during the year :--

	Per Cent.
In Premium Income	11.56
In Interest Income	13.11
In Insurance in force	13.15
In Assets	10.01
In Net Surplus	10.73

\$3,137,828 61

FEBRUARY IO, 1899

The President stated that gentlemen representing the United States Insurance Departments had been in the city during part of last month, and had made a thorough and most searching investigation into the affairs of the Company, with a view to its admission to do business in their respective States, and that these experts were extremely well satisfied with the soundness of the Company, and expressed themselves as gratified with every seject of its affairs. The Hon. Mr. Allan, in seconding the adoption of the report, called

special attention to the excellent character of the investments of the Company ; of those over 37 per cent, are in first-class mortgage securi-ties, hearly 20 per cent, in debeniures, nearly 14 per cent, in stocks and bonds, loans on policies about 61% per cent., the balance consist-

ing of each in Lanks, interest accrued, etc. He also called special attention to the fact that, although the assets had increased very largely, the outstanding and accrued interest had been very materially decreased, which is a proof of the excellent char-acter of the investments of the Company, and the promptness with which the interest thereon has been paid.

James Thorburn, M_1B_1 , Medical Director, presented a full and in-teresting report of the mortality experience of the Company from its organization, which showed that great care had been exercised in the selection of the Company's business.

The Consulting Activity reported that he had made an independent examination of the affairs of the Company as at December 31, 1898, having examined the books, accounts, and balance sheet, also a de tailed copy of the annual report to the Insurance Department, and

stated that he was very much gratified with the result of such e-amination, also with the thorough system of the work of every department throughout the office. He commended the Company for closing its books promptly at the end of the year, as had been its custom from organization, and stated that, notwithslanding the large amount paid to policy-holders during the year, another substantial gain had been made in the net surplus, now amounting to \$474,029.08, or if made up on the same basis as that generally used, viz , by adding the difference between the cost and market value of debentures, etc., owned by the Company, such surplus would be \$522,664.83. He referred to the great difficulty which had been experienced of late years in securing satisfactory investments, and pointed out the great decline in the rate of interest which gilt edge securities yielded. In view of this, he stated that the settlements of the Company's Investment Policies should be highly satisfactory to the holders thereof, as they compare favourably with those of the leading and best managed Companies on this continent.

A special vote of thanks was unanimously tendered to the Com-pany's Provincial Managers, Inspectors and Agency Staffs for their splendid work of the past year, during which the largest business ever done by the Company had been secured, largely exceeding that of any other Home Company at the same age in its history.

After the usual vote of thanks had been passed, the election of Directors took place, whereupon the newly elected Board met, and Mr. John L. Blaikie was unanimously re-elected President, and the Honourable G. W. Allan and Sir Frank Smith Vice-Presidents.

London Mutual Fire

The Thirty Ninth Atnusl Meeting of the London Mutual Fire Insurance Company was held in the Company's offices, London, Ont., on and inst, with the Fresident, Capt. T. E. Robson, in the chair, Mr. D. C. Macdonald setting as secretary, and the following members in Machanales :- Argus Cample II, of Appin, vice president; Cameron Machanalo, jun, Gilbert Kreh, St. Thomas; R. McEwen, Byron; James W. Campson, Strathroy: Sheriff Brown, St. Thomas; John Geary and Robert Hoston, eity; David Weisniller, Toronto, and Lachlin Leitch, London, inspectors of the Company; C.C. Hodgins, Lucan; Joseph II. Marshall, London Township: J. C. Judd, etty; James Whalen, Biddulph; Angur McKay, Stayner; W. E. Stanley, Lucan; Alford Burwell, ety; John M. McEvoy, John Overell, D. Mackenzie, Arthur Burwell, Thomas Woolley, A. T. Flatt and Finlay Marshall. eity. After the advection of the Minister the advector processing Marshall, city. After the adoption of the Minutes, the various reports were read, showing that 1898 had been a record breaker.

Policies, - The total number of policies written during the year was 17,558. Of these 15,287 cover farm and dwelling property, and 2,271 are on general business. The total amount written was \$19,-279.236.

Expenses .- Notwithstanding the immense business done, the total expenses only show a percentage of about 28 per cent., a rate far below the estimate.

Losses .- The amount paid for losses occurring during the year was \$113,867 57 and for losses that had occurred, but not been adjusted in the preceding year, \$6,924.60, a total of \$119,792.17. As compared with 1897, the losses have fallen off by \$14,096.27. This your directors account for in a very marked degree in having a closer inspection of risks and writing off all that did not appear to come up to a proper standard, and, although there is very much yet to be done in this direction, your heard intend to follow up the path they have laid out until success is attained

On the subject of losses your board refer you to the report of the fire inspectors appended hereto, giving the cause and origin of all fires as nearly as could be ascertained. This report will be found very in-This report will be found very interesting, compiled as it is by gentlemen who have given all their time and attention to the subject, and who have had opportunities possessed by few to those ughly understand the question. Your board would only touch on one matter in reference to the cause of rural fires, and by which you suffer great loss. This is the use of steam threshing engines. This would not be specially noticed but for the fact that a engines. remedy can be had at a very little expense to save you from heavy loss. By the aid of a jack, with rope transmitter, the engine can be placed at such a distance from your buildings and at such a direction as may be desired, with almost absolute safety from accidents by fire. The only objections made are from the threshers themselves, who, simply to save themselves trouble, make a plea that it is inconvenient to carry the jack ; if the farming community, who are the parties really interested, would insist on the use of these jacks or transmitters, then they would speedily some into use, for it must be borne in mind that at time of threshing the outbuildings are filled with the season's crop, and in the event of loss the insured himself has only a small protection.

Legislation. - Your directors have from year to year in conjunction with other companies endeavored in the interest of all honest insurers to have the very must isfactory insurance laws chang d, but without success so far. The law of contract, so far as insurance companies are success so far. concerned, has been entirely ignored by those in Parliamentary authority, and the result is that honest insurers are obliged to pay dishonest

claims. A quasi promise of relief was made by the Government before the general election, and the sincerity of such promise will be tested at the coming session of the Legislature to have an act passed, so plainly worded that those who ran may read and thoroughly recognize the position they occupy. The yearly fire waste of the country is required as a statistic, and this can be obtained by a law r quiring the registration of fires in the same manner, and at no more expense than the law now requiring the registration of births, marriages and deaths—a marshal or fire inspector to be attached to the Insurance Department at Toronto, to make the office useful, and a change in the statutory conditions. Were these suggestions adopted, the cost of insurance, in the opinion of your board, would be materially reduced, and a great saving in law expenses would naturally follow.

The agents of the company, as a rule, have done well, and deserve your thanks.

They are Mr. Sheriff These directors now retire by rotation. Brown, Messrs. Geary and Robson, and are all eligible for re-election.

INSPECTOR'S REPORT.

The Fire Inspector's Report, read by Mr. Lachlin Leitch, was as follows :--

LONDON, January 1st, 1899.

To the President and Board of Directors of the London Mutual Fire Insurance Company of Canada :

GENTLEMEN :- Your inspectors beg leave to report that during the past year they have inspected and reported on 594 claims against the company. Twenty three of the claims, amounting to \$4,280.35, were rejected by the board, leaving 571 adjusted (after deductions made in them) at \$124,585.15 up to the 31st of December, 1898. The actual amount which occurred in the year was \$117,578.03.

" Of the amount passed we find ;-

	of the harden process of the line i		
81	From unknown causes	36,207	55
131	From defective chimneys, pipes, furnaces and stoves	27,793	49
134	From lightning to buildings and contents	21,858	19
97	From lightning to animals in the fields	2,042	40
22		9,968	42
29		8,152	62
9			00
22		4,529	39
2		1.506	00
24		963	96
2		911	00
2	From railway engines	725	02
4		668	87
2	From tramps	600	00
1	From hot air fan	501	81
2	From smoke houses	285	00
1	From burglars	2.3	56
1	From burning wood pile	200	00
2	From pipe smoking		
2	From gas jets		75
1	From gas stove		12
_			_
571		\$124,585	15

Of the above losses 52 were on general business amounting ot \$19,555.49.

We get back from re insurance \$18, and returned by one of the Melancthon firebugs, \$287. Unknown causes head the list with a heavy increase, which is

much to be regretted, as many of them are of a suspicious nature. Defective chimneys and pipes show another decline this year, and a still greater reduction ought to be the case if the assured would ex-amine chimneys, flues and pipes carefully before se ting up their stoves.

Lighting was heavier, nearly as many buildings suffering as in 1896, our worst year.

Fires from lanterns and lamps are hardly one fourth as heavy as last year, and they might still be reduced with careful handling. Lanterns and lamps are the farmers main light, and they should make them responsible for as small a damage as possible. Incendiary causes have declined, and so have fires from tramps.

We have had some heavy losses from steam threshers.

Our losses on the general branch have decreased, although our business has greatly increased, and on the whole has left us a very handsome surplus.

All of which is respectfully submitted. (Signed.) Lachlin Leitch and D. Weismiller, Inspectors.

London, 29th January, 1-99.

On motion of Capt. Robson, seconded by Mr. Angus Campbell, the reports were adopted.

GENERAL BUSINESS.

Mr. Dan Mackenzie expressod his gratification at the splendid showing made, which he said was the result of careful management. The officials must have done their work well. He moved a vote of thanks to the manager for his long and faithful services.

Mr. Angus Campbell seconded, and the motion was unanimously adopted.

In acknowledging the kindness, Mr. Macdonald said he well re-membered the time, forty years ago, when the County of Middlesexnow the London-Mutual Fire Insurance Company was organized in this city, m unly because a farmer in London township had suffered a heavy loss by fire. In looking over the original list of subscribers recently, Mr. Macdonald found that they had all passed away. The speaker had served as an agent of the company for a few years before he was appointed manager, and the fact of his having occupied the position since made him the oldest active insurance manager to day. He hoped to work in the interests of the London Mutual as long as he lived.

Sheriff Brown, St. Thomas; John Geary and Capt. Robson were re-elected to the Board of Directors.

A vote of thanks was passed to the agents, on behalf of whom Mr. Roche, of St. Thomas, replied.

At a subsequent meeting of the Board of Directors, Capt. Robson and Mr. Angus Campbell were re elected president and vice president respectively.

Northern Life Assurance Company OF CANADA.

1808 a Successful Year.

Beginning Business in April, 1897, it Closed its Books December 31st, 1898.

With total assets \$206,546.20.

An increase over last year of over 4I per cent. With an interest income of \$6,741.07

An increase over last year of 59 per cent. With a premium income of \$30,298.78.

An increase over last year of 159 per cent. With new business for the year of \$665, 95 .00.

An increase over last year of 85 per cent. With new policies issued for the year \$571

An increase over last year of 99 per cent. With amount of insurance in force \$879,950.00.

An increase over last year of 148 per cent.

May I ask if this Company has any intention of joining any The President in moving the adoption of the Report said :mations. May I ask if this Company has any intention of joining any movement of that kind "" The President :--" No such intention whatever. When I say this I do not wish to convey the slightest disapproval of what is being done by other Companies along that line: upon the contrary. I very heartily approve of the action that is being taken, but the change of policy adopted by this Company in 1892, to which I have already referred in my remarks, has r-suited in changing cur business from that of a purely Real Estate Mortgage Loan Company into an additional and profitable line of business that has resulted so satisfactorily that we find ourselves to day with a better earning power than we have ever had before, and with immediately avail-able assets of a high character in excess of our total liabilities to the public. This makes us self-reliant, and well satisfied with our present condition Gentlemen, - In presenting for your approval the Fifteenth Annual Bal-ance Sheet. I have the satisfaction of being able to tell you that it is without exception the best statement in the history of the Company, and that the results of the business for the year under review have been of a very satisfactory character. Some years ago, in view of the constantly increasing competition and the difficulty in procuring good real estate morigage loans at an adequate rate of interest, your Directory, as has been explained on previous occasions, ob-tained wider powers of investment, and have since then directed their attention to, made loans upon, and argely invested in Government, Musi-cipal, School District, Raiiway, and other bends, debentures and stocks of high-class character, with the result that at the close of hast year our investments in and loans upon securities of this kind amounted to over \$4,000,000. factory character. This makes us service and rough the service of the \$4,000,000. 4.000,000. It is true that the average rate of interest earned on securities of this na-ture is low, but the business has been very active, the Company buying bonds and other securities in large amounts, and reselling to various classes of investors throughout the country. The profits thus realized on sales, added to the rate carned on the securities, have together much a very hand The following gentlemen were elected as Directors for the ensuing year : Hox, GEO. A. Cox, Senator, Toronto. some retarn. RICHARD HALL, of Messrs, Richard Hall & Son, Peterborough, FRED G. Cox, Managing Director Imperial Life Assurance Co., Toronto. F. C. TAYLOR, Mayor, Lindsay. J. W. THE INVENTION OF PRINTING has always been recognized by educated men as a subject of importance: there is no mechanical art, nor are there any of the fine arts about whose early history so many books have been written. The subject is as mysterious as it is inviting. There is an unusual degree of obscurity about the origin of the first printed books and the lives and works of the early printers. There are records and traditions which cannot be reconciled of at least three distinct inventions of printing. Its early history is entangled with a controversy about rival inventors which has lasted for more than three centuries, and is not yet fully determined. In the management of this controversy, a subject intrinsically attractive has been made repulsive. The history of the invention of printing has been written to please national pride. German authors assert the claims of Gutenburg, and discredit traditions about Coster. Dutch authors insist on the priority of Coster, and charge Gutenburg with stealing the invention. Partisans on each side say that their opponents have perverted the records and suppressed the truth. The quarrel has spread. English and French authors, who had no national prejudices to gratify, and who should have considered the question without passion, have wrangled over the subject with all the bitterness of Germans or Hollanders. In this, as in other quarrels, there are amusing features, but to the general reader the controversy seems unfortunate and is certainly wearisome. It is a greater misfortune that all the early chronicles of printing were written in a dead language. Wolf's collection of Typographic Monuments, which includes nearly every paper of value written before 1740, is in Latin; the valuable books of Meerman, Maittaire and Schoepflin are also in Latin.

To the general reader these are sealed books: to the student, who seeks exact knowledge of the methods of the first printers, they are tiresome books. Written for the information of librarians rather than of printers, it is but proper that these books should devote the largest space to a review of the controversy or to a description of early editions; but it is strange that they should so imperfectly describe the construction and appearance of early types.

THE GREAT-WEST LIFE

the First Canadian Company to put up a Four per cent. Reserve, is now one of only four Canadian Companies showing a surplus to policy-holders on this stringent basis.
