World's Fair, Congress agrees to an amendment to the bill, postponing the fair till 1893.—March 26.

Wyoming admission to Union as a State opposed by Democrats.—March 11.

## Alden's Manifold Cyclopaedia.

America and Artemis are the beginning and ending of the second volume of Alden's Manifold Cyclopaedia, which, even better than the first, fulfils the promises of the publisher's prospectus. It is a really handsome volume of 640 pages, half Morocco binding, large type, profusely illustrated, and yet sold for the price of 85 cents; cloth binding only 60 cents—postpaid. Large discounts even from these prices are allowed to early subscribers, the price being gradually advanced as the work progresses; particulars sent on request.

The Manifold Cyclopaedia is, in many ways, unlike any other Cyclopaedia. It undertakes to present a survey of the entire circle of knowledge, whether of WORDS or of THINGS, thus combining the characteristics of a Cyclopaedia and a Dictionary, including in its vocabulary every word which has any claim to a place in the English language. Its form of publication is as unique as its plan—the "Ideal Edition" its publisher calls it, and the popular verdict seems to sustain his claim. It certainly is delightfully convenient. It will not be strange if this proves to be the great popular cyclopaedia. It certainly is worthy of examination by all searchers after knowledge. The publisher sends a specimen volume on receipt of price, to be returned if not wanted. JOHN B. ALDEN, Publisher, New York, Chicago, or Atlanta.

# READY, RAPID & RELIABLE FIRE ESCAPE.

The Best, Safest and Quickest Means of Emptying School and other Dormitories in Case of Fire.

The accompanying cut exhibits the essential features of the contrivance, which may be adapted either to the interior or to the exterior of a building, but preferably to the latter, so as to create no draught for flame or smoke. *C c* represent the floor, or, as in the present diagram, platforms, which may assume the form of an ornamental balcony. These platforms are secured to the walls by suitable brackets *e e*. Two vertical shafts *f* pass through the

floors or staging from the root to the ground; *g g* are circular openings which alternate from one side to the other at each succeeding landing. The landing to be placed before a window at every story.

The shaft to the left of *f*, and which is secured to the next platform above not shown in the figure), is firmly clasped, not with the hands, but with the legs and arms, and the person slides down the shaft to the next landing below, regulating with ease, by the pressure of his limbs, the rapidity of the descent.

Inventor and Patentee,  
 Rev. ARTHUR JONES,
