Ceylon, or the ports on the Malabar coast, by the natives, were there put on board the ships which arrived from the Arabian Gulf. At Borenes they were landed, and carried by camels 250 miles to the banks of the Nile. They were there again embarked, and conveyed down the river to Alexandria, whence they were despatched to different markets. The addition to the price of goods by such a multiplicity of operations must have been considerable; more especially as the price charged on each operation was fixed by monopolists, subject to no competition or control. Pliny says that the cost of the Arabian and Indian products brought to Rome when he flourished (A.D. 70) was increased a hundred-fold by the expenses of transit (*Hist. Nat. lib. vi. c. 23*); but there can be little or no doubt that this is to be regarded as a rhetorical exaggeration. There are good grounds for thinking that the less bulky goods of Eastern products, such as silk, spices, balsams, precious stones &c., which were those principally made use of at Rome, might, supposing there were no political obstacles in the way, be conveyed from most parts of India to the ports on the Malabar coast by way of Egypt, at a decidedly cheaper rate than they could be conveyed to them by the Cape of Good Hope.

But at the period when the latter route to India began to be frequented, Syria, Egypt &c. were occupied by Turks and Mamelukes—barbarians who despised commerce and navigation, and were at the same time, extremely jealous of strangers, especially of Christians or infidels. The price of the commodities obtained through the intervention of such persons was necessarily very much enhanced; a discovery of the route by the Cape of Good Hope, was, consequently, of the most importance; for, by putting an end to the monopoly enjoyed by the Turks and Mamelukes, it introduced, for the first time, something like competition into the Indian trade, and enabled the western parts of Europe to obtain supplies of Indian products for about  $\frac{1}{3}$  of what they previously cost. Mr. Mun, in a tract published in 1621, estimates the quantity of Indian commodities imported into Europe, and their value when bought in Aleppo and in India, as follows:

Cost of Indian Commodities consumed in Europe when bought in Aleppo (or Alexandria).

6,000,000 pepper cost, with charges &c. at Aleppo	6,000,000
2s. per lb.	12,000,000
450,000 cloves, at 4s. 6d.	1,800,000
150,000 maces, at 4s. 6d.	600,000
400,000 nutmegs, at 2s. 6d.	800,000
350,000 indigo, at 1s. 2d.	350,000
1,000,000 Persian raw silk, at 12s.	12,000,000

But the same quantities of the same commodities cost, when bought in the East Indies, according to Mr. Mun, as follows:—

6,000,000 pepper, at 2d. per lb.	3,000,000
450,000 cloves, at 9d.	405,000
150,000 maces, at 9d.	135,000
400,000 nutmegs, at 4d.	1,600,000
350,000 indigo, at 1s. 2d.	350,000
1,000,000 raw silk, at 8s.	8,000,000

Which being deducted from the former balance of 953,542l. 13s. 4d. And supposing the statements made by Mr. Mun are correct, that allowance is made for the difference of the freight from Aleppo and India, the above would indicate the saving which might be effected by the route by the Cape of Good Hope on the purchase of the above-mentioned commodities. (*A Discourse of Trade from England to the Indies*, by T. M., original edition, p. 10)

tract, which is very scarce, is reprinted in Purchas's *Pilgrims*.)

In the same publication (p. 37) Mr. Mun informs us that, from the beginning of the Company's trade to July 1620, they had sent 79 ships to India; of which 34 had come home safely and richly laden, 4 had been worn out by long service in India, 2 had been lost in encreening, 6 had been lost by the perils of the sea, and 12 had been captured by the Dutch. Mr. M. in further states that the exports to India since the formation of the Company had amounted to 840,370*l.*; that the produce brought from India had cost 336,288*l.*, and had produced here the enormous sum of 1,914,600*l.*; that the quarrels with the Dutch had occasioned a loss of 84,088*l.*; and that the stock of the Company, in ships, goods in India &c. amounted to 400,000*l.*

The hostility of the Dutch, to which Mr. Mun has here alluded, was long a very formidable obstacle to the Company's success. The Dutch early endeavoured to obtain the exclusive possession of the spice trade, and were not at all scrupulous as to the means by which they attempted to effect this their favourite object. The English, on their part, naturally exerted themselves to obtain a share of so valuable a commerce; and as neither party was disposed to abandon its views and pretensions, the most violent animosities grew up between them. In this state of things it would be ridiculous to suppose that unjustifiable acts were not committed by the one party as well as the other; though the worst act of the English appears venial when compared with the conduct of the Dutch in the massacre at Amboyna in 1622. While, however, the Dutch Company was vigorously supported by the Government at home, the English Company met with no efficient assistance from the feeble and vacillating policy of James and Charles. The Dutch either despised their remonstrances, or defeated them by an apparent compliance; so that no real reparation was obtained for the outrages they had committed. During the civil war Indian affairs were necessarily lost sight of; and the Dutch continued, until the ascendancy of the republican party had been established, to reign triumphant in the East, where the English commerce was nearly annihilated.

But notwithstanding their depressed condition, the Company's servants in India laid the foundation, during the period in question, of the settlements at Madras and in Bengal. Permission to build Fort St. George was obtained from the native authorities in 1640. In 1658 Madras was used to the station of a presidency. In 1645 the Company began to establish factories in Bengal, the principal of which was at Hooghly. These, for a lengthened period, subordinate to the presidency at Madras.

Sooner, however, had the civil wars terminated than the arms and councils of Cromwell reversed the situation of our affairs in India. The treaty which broke out between the Long Parliament and the Dutch in 1652 was eminently injurious to the latter. In the treaty of peace, concluded in 1654, it was stipulated that indemnification should be made by the Dutch for the losses and injuries sustained by the English merchants and factors in India. The 27th article bears, 'that the States-General of the United Provinces shall take care that justice be done upon those who were partakers or accomplices in the massacre of the English at Amboyna, as the revenue of England is pleased to term that fact, and any of them be living.' A commission was at the same time appointed, conformably to the 28th article of the treaty, to enquire into the

reciprocal claims which the subjects of the contracting parties had upon each other for losses sustained in India, Brazil &c.; and, upon their decision, the Dutch paid the sum of 85,000*l.* to the East India Company, and 3,615*l.* to the heirs or executors of the sufferers at Amboyna. (*Bruce's Annals*, vol. 1. p. 489.)

The charter under which the East India Company prosecuted their exclusive trade to India, being merely a grant from the Crown, and not ratified by any Act of Parliament, was understood by the merchants to be at an end when Charles I. was deposed. They were confirmed in this view of the matter from the circumstance of Charles having himself granted, in 1635, a charter to Sir William Courten and others, authorising them to trade with those parts of India with which the Company had not established any regular intercourse. The reasons alleged in justification of this measure, by the Crown, were, that the East India Company had neglected to establish fortified factories, or seats of trade, to which the King's subjects could resort with safety; that they had consulted their own interests only, without any regard to the King's revenue; and in general that they had broken the condition on which their charter and exclusive privileges had been granted to them. (*Rym. Fadera*, vol. xx. p. 146.)

Courten's association, for the foundation of which such satisfactory reasons had been assigned, continued to trade with India during the remainder of Charles's reign; and no sooner had the arms of the Commonwealth forced the Dutch to desist from their depredations, and to make reparation for the injuries they had inflicted on the English in India, than private adventurers engaged in great numbers in the Indian trade, and carried it on with a zeal, economy, and success that monopoly can never expect to rival. It is stated in a little work, entitled *Britannia Langvens*, published in 1680, the author of which has evidently been a well-informed and intelligent person, that during the years 1653, 1654, 1655, and 1656, when the trade to India was open, the private traders imported East India commodities in such large quantities, and sold them at such reduced prices, that they not only fully supplied the British markets, but had even come into successful competition with the Dutch in the market of Amsterdam, and very much sunk the actions (shares) of the Dutch East India Company. (P. 132.) This circumstance naturally excited the greatest apprehensions on the part of the Dutch Company; for, besides the danger that they now ran of being deprived, by the active competition of the English merchants, of a considerable part of the trade which they had previously enjoyed, they could hardly expect that, if the trade were thrown open in England, the monopoly would be allowed to continue in Holland. A striking proof of what is now stated is to be found in a letter in the third volume of Thurlow's *State Papers*, dated at the Hague, January 15, 1654, where it is said that 'the merchants of Amsterdam have advice that the Lord Protector intends to dissolve the East India Company at London, and to declare the navigation and commerce of the East Indies free and open; which doth cause great jealousy at Amsterdam, as a thing that will very much prejudice the East India Company in Holland.'

Feeling that it was impossible to contend with the private adventurers under a system of fair competition, the moment the treaty with the Dutch had been concluded the Company began to solicit a renewal of their charter; but in this they were not only opposed by the free traders, but by a part of themselves. To understand how this happened,

it may be proper to mention that Courten's association, the origin of which has been already noticed, had begun, in 1648, to found a colony in Assada, an island near Madagascar. The Company, alarmed at this project, applied to the council of state to prevent its being carried into effect; and the council, without entering on the question of either party's rights, recommended them to form a union, which was accordingly effected in 1649. But the union was, for a considerable time, rather nominal than real; and when the Dutch war had been put an end to, most of those holders of the Company's stock who had belonged to Courten's association joined in petitioning the council of state that the trade might in future be carried on, not by a joint stock, but by a regulated Company; so that each individual engaging in it might be allowed to employ his own stock, servants, and shipping in whatever way he might conceive most for his own advantage. (*Petition of Adventurers*, for his own advantage. (*Petition of Adventurers*, November 17, 1656; Bruce's *Annals*, vol. i. p. 518.)

This proposal was obviously most reasonable. The Company had always founded their claim to a monopoly of the trade on the alleged ground of its being necessary to maintain forts, factories, and ships of war in India; and that as this was not done by Government, it could only be done by a Company. But, by forming the traders with India into a regulated Company, they might have been subjected to whatever rules were considered most advisable; and such special duties might have been laid on the commodities they exported and imported as would have sufficed to defray the public expenses required for carrying on the trade, at the same time that the incalculable advantages of free competition would have been secured; each individual trader being left at liberty to conduct his enterprises, subject only to a few general regulations, in his own way and for his own advantage. [COMPANIES.]

But notwithstanding the efforts of the petitioners, and the success that was clearly proved to have attended the operations of the private traders, the Company succeeded in obtaining a renewal of their charter from Cromwell in 1657. Charles II. confirmed this charter in 1661, and at the same time conferred on them, the power of making peace or war with any power or people *not of the Christian religion*; of establishing fortification, garrisons, and colonies; of expediting ammunition and stores to their settlements duty free; of seizing and sending to England such British without their leave; and of exercising civil and criminal jurisdiction in their settlements, according to the laws of England. Still, however, as this charter was not fully confirmed by any Act of Parliament, it did not prevent traders, or interlopers as they were termed, from appearing within the limits of the Company's territories. The energy of private commerce, which, to use the words of Mr. Orme, 'sees its drift with eagles' eyes,' formed associations at the risk of trying the consequence at law, being safe at the outset and during the voyage, since the Company were not authorised to stop or seize the ships of those who thus attempted to come into competition with them. Hence their monopoly was by no means complete; and it was not till after the Revolution, and when a free system of government had been established at home, that, by a singular contradiction, the authority of Parliament was interposed to enable the Company wholly to engross the trade with this source.

In addition to the losses arising from this source, the Company's trade suffered severely, during the reign of Charles II., from the hostilities that were then waged with the Dutch, and from the con-

fusion and disorders caused by contests among the native princes; but in 1668 the Company obtained a very valuable acquisition in the island of Bombay, which Charles II. acquired this island as a part of the marriage portion of his wife, Catharine of Portugal; and it was now made over to the Company, on condition of their not selling or alienating it to any persons whatever, except such as were subjects of the British crown. They were allowed to legislate for their new possession; but it was enjoined that their laws should be consonant to reason, and 'as near as might be' agreeable to the practice of England. They were authorised to maintain their dominion by force of arms; and the natives of Bombay were declared to have the same liberties as natural-born subjects. The Company's western presidency was soon after transferred from Surat to Bombay.

In 1664 the French East India Company was formed, and 10 years afterwards they laid the foundation of their settlement at Pondicherry.

But the reign of Charles II. is chiefly memorable in the Company's annals from its being the era of the commencement of the tea trade. The first notice of tea in the Company's records is found in a despatch, addressed to their agent at Bantam, dated January 24, 1667-8, in which he is desired to send home 100 lbs. of tea, 'the best he can get' (Bruce's *Annals*, vol. ii. p. 210.) Such was the late and feeble beginning of the tea trade—a branch of commerce that has long been of vast importance to the British nation, and without which it would long since have ceased to exist, at least a mercantile body.

In 1677 the Company obtained a fresh renewal of their charter; receiving at the same time an indemnity for all past misuse of their privileges and authority to establish a mint at Bombay.

During the greater part of the reigns of Charles II. and James II. the Company's affairs at home were principally managed by the celebrated Josiah Child, the ablest commercial writer of the time; and in India by his brother, Sir John Child; in 1681 Sir Josiah published an apology for the Company, under the signature of *Edgewood*. The Treatise wherein is demonstrated that the India Trade is the most National of all British Trades; in which, besides endeavouring to vindicate the Company from the objections that had been made against it, he gives an account of its state at the time. From this account it appears that the Company consisted of 553 partners; that they employed in the trade between England and India from 35 to 36 ships, of from 775 to 100 tons; and from port to port in India (p. 23); that customs duties upon the trade amounted to 60,000*l.* a-year; and that the value of the Company's goods, in lead, tin, cloth, and stuffs, and other articles of the production and manufacture of the island, amounted to about 60,000*l.* or 70,000*l.* a-year. Sir Josiah seems to have been struck, as he might, by the inconsiderable amount of the trade, and he therefore dwells on the advantages of it, and he is indirectly productive in enabling the Company to obtain supplies of raw silk, pepper &c. at a lower price than they would otherwise have had. But this, though true, proved nothing in favour of the Company; it being an admitted fact that articles were furnished at a still lower price by interlopers or private traders.

Sir Josiah Child was one of the first who proposed the formation of a territorial empire in India. But the expedition fitted out in 1686, in consequence of accomplishing this purpose, proved unsuccessful; and the Company were glad to accept of the terms offered by the Mogul.

were not bought by British goods, but by gold and silver, the exportation of which had caused the general impoverishment of the kingdom! The merchants and others interested in the India trade could not, as had previously happened to them in the controversy with respect to the exportation of bullion, meet these statements without attacking the principles on which they rested, and maintaining, in opposition to them, that it was for the advantage of every people to buy the products they wanted in the cheapest market. This just and sound principle was, in consequence, enforced in several petitions presented to Parliament by the importers of Indian goods; and it was also enforced in several able publications that appeared at the time. But these arguments, how unanswerable soever they may now appear, had then but little influence; and in 1701 an Act was passed, prohibiting the importation of Indian manufactured goods for home consumption.

For some years after the re-establishment of the Company, it continued to prosecute its efforts to consolidate and extend its commerce. But the unsettled state of the Mogul empire, coupled with the determination of the Company to establish factories in every convenient situation, exposed their affairs to perpetual vicissitudes. In 1715 it was resolved to send an embassy to Delhi, to solicit from Furucksur, an unworthy descendant of Aurengzebe, an extension and confirmation of the Company's territory and privileges. Address, accident, and the proper application of presents conspired to insure the success of the embassy. The grants or patents solicited by the Company were issued in 1717. They were in all 34. The substance of the privileges they conferred was, that English vessels wrecked on the coasts of the empire should be exempt from plunder; that the annual payment of a stipulated sum to the Government of Surat should free the English trade at that port from all duties and exactions; that those villages contiguous to Madras formerly granted and afterwards refused by the Government of Arcot should be restored to the Company; that the island of Diu, near the port of Masulipatam, should belong to the Company, paying for it a fixed rent; that in Bengal, all persons, whether European or native, indebted or accountable to the Company, should be delivered up to the presidency on demand; that goods of export or import, belonging to the English, might, under a *dustuck* or passport from the president of Calcutta, be conveyed duty free through the Bengal provinces; and that the English should be at liberty to purchase the lordship of 37 towns contiguous to Calcutta, and in fact commanding both banks of the river for 10 miles south of that city. (Grant's *Sketch of the History of the East India Company*, p. 128.)

The important privileges thus granted were long regarded as constituting the great charter of the English in India. Some of them, however, were not fully conceded, but were withheld or modified by the influence of the emperor's lieutenants, or soubahdars.

In 1717 the Company found themselves in danger from a new competitor. In the course of that year some ships appeared in India, fitted out by private adventurers from Ostend. Their success encouraged others to engage in the same line, and in 1722 the adventurers were formed into a Company under a charter from his Imperial Majesty. The Dutch and English Companies, who had so long been hostile to each other, at once laid aside their animosities, and joined heartily in an attempt to crush their new competitors. Remonstrances being found ineffectual,

force was resorted to; and the vessels of Ostend Company were captured, under the frivolous pretences, in the open seas and on coasts of Brazil. The British and Dutch Governments abetted the selfish spirit of hostility played by their respective Companies; and the Emperor was, in the end, glad to purchase the support of Great Britain and Holland to the Pacific Sanction, by the sacrifice of the Company of Ostend.

Though the Company's trade had increased, it was still inconsiderable; and it is very difficult, indeed, when one examines the accounts, to have from time to time been published of the Company's mercantile affairs, to imagine how the idea ever came to be entertained that their commerce was of any considerable, much less important, importance. At an average of the years ending with 1734, the total value of British manufactures and other products annually exported to India amounted to only 92,410, 12s. The average value of the Bullion annually exported during the same period amounted to 518,102, 11s.; making the total annual average exports 617,513, 3s. 10d.—a truly pitiful sum when we consider the wealth, population, and industry, of the countries between which the Company's commerce was carried on, and affording by its smallness a strong presumptive proof of the effect of the monopoly in preventing the growth of the trade.

In 1730, though there were 3 years still unexpired of the Company's charter, a vigorous effort was made by the merchants of London, Bristol, and Liverpool to prevent its renewal. It has been said that the gains of the Company had then been exactly known, would not have excited any very envious feelings on the part of the merchants; but, being concealed, they were exaggerated; and the boasts of the Company as to the importance of their trade contributed to spread the belief that their profits were enormous, and consequently stimulated the exertions of their opponents. Supposing, however, that the real state of the case had been known, there was not enough to justify the utmost exertions on the part of the merchants; for the limited profits made by the Company, notwithstanding their monopoly, were entirely owing to the misconduct of the agents, which they had vainly endeavoured to restrain, and to the waste inseparable from unwieldy establishments.

The merchants on this occasion followed the example that had been set by the petitioners for free trade in 1656. They offered, in the first place, to advance the 3,200,000, lent by the Company to the public, on more favourable terms; and in the second place, they proposed that the subscribers to this loan should be formed into a regulated Company, for opening the trade, under the most favourable circumstances, to all countries of their countrymen.

It was not intended that the Company should trade upon a joint stock, and in their own capacity, but that every individual who proposed should trade in the way of private adventurer. The Company were to have the duty of erecting and maintaining the forts and establishments abroad; and for this, and for other attending what was called the enlargement and preservation of the trade, it was proposed they should receive a duty of 1 per cent. upon exports to India, and of 5 per cent. upon imports from it. For ensuring obedience to and other regulations, it was to be enacted that no one should trade to India without licence from the Company; and it was proposed that all

with 3 years' notice, should be granted as the duration of their peculiar privilege.

'It appears from this,' says Mr. Mill, 'that the end which was proposed to be answered by incorporating such a Company was the preservation and erection of the forts, buildings, and other fixed establishments required for the trade of India. This Company promised to supply that demand which has always been held forth as peculiar to the India trade, as the grand exigency which, distinguishing the traffic with India from all other branches of trade, rendered monopoly advantageous in that peculiar case, how much severer it might be injurious in others. While it provided for this real or pretended want, it left the trade open to all the advantages of private enterprise, private vigilance, private skill, and private economy—the virtues by which individuals thrive and nations prosper; and it gave the proposed Company an interest in the careful discharge of its duty by making its profits increase in exact proportion with the increase of the trade, and, of course, with the facilities and accommodation by which the trade was promoted.

'Three petitions were presented to the House of Commons in behalf of the proposed Company, by the merchants of London, Bristol, and Liverpool. It was urged that the proposed Company would, through the competition of which it would be productive, cause a great extension of the trade; that it would produce a larger exportation of our own produce and manufactures in India, and reduce the price of all Indian commodities to the people at home; that new channels of traffic would be opened in Asia and America as well as in Europe; that the duties of customs and excise would be increased; and that the waste and extravagance caused by the monopoly would be entirely avoided.' (Mill's *India*, vol. iii. p. 37.)

But these arguments did not prevail. The Company magnified the importance of their trade, and contended that it would be unwise to risk advantages already realised for the sake of those that were prospective and contingent. They alleged that, if the trade to India were thrown open, the price of goods in India would be so much lowered by the competition of different traders, that their price in England so much diminished, that the freedom of the trade would certainly end in the ruin of all who had been foolish enough to venture in it. To enlarge on the fallacy of these statements would be worse than superfluous. It is obvious that nothing whatever could have been risked, and that a great deal would have been gained, by opening the trade in the way that was proposed. And if it were really true that the trade to India ought to be subjected to a monopoly, the traders by their competition should ruin each other, it would follow that the trade to Africa—and not that only, but every branch of the foreign and home trade of the empire should be surrendered to exclusive Companies. Such as the Company's arguments were, they were satisfactory to Parliament. They, however, consented to reduce the interest on the debt due to the public from 5 to 4 per cent., and authorized a sum of 200,000*l.* for the public service.

On these conditions it was agreed to extend the exclusive privileges to Lady-day 1766, with the customary addition of 3 years' notice.

About 15 years from this period the Company's affairs went on without any very prominent changes. But notwithstanding the increased importation of tea, the consumption of which now rapidly extended, their trade continued to be comparatively insignificant. At an average of 3 years ending with 1741, the value of the

British goods and products of all sorts, exported by the Company to India and China, amounted to only 157,944*l.* 4*s.* 7*d.* a-year! During the 7 years ending with 1748 they amounted to only 188,176*l.* 16*s.* 4*d.* When it is borne in mind that these exports included the military stores of all sorts forwarded to the Company's settlements in India and at St. Helena, the amount of which was at all times very considerable, it does appear exceedingly doubtful whether the Company really exported, during the entire period from 1730 to 1748, 150,000*l.* worth of British produce as a legitimate mercantile adventure! Their trade, such as it was, was entirely carried on by shipments of bullion; and even its annual average export, during the 7 years ending with 1748, only amounted to 548,711*l.* 19*s.* 2*d.* It would seem, indeed, that the Company had derived no perceptible advantage from the important concessions obtained from the Mogul emperor in 1717. But the true conclusion is, not that these concessions were of little value, but that the denegating influence of monopoly had so paralysed the Company, that they were unable to turn them to account; and that, though without competitors, and with opulent kingdoms for their customers, their commerce was hardly greater than that carried on by some single merchants.

In 1732 the Company were obliged to reduce their dividend from 8 to 7 per cent., at which rate it continued till 1744.

The opposition the Company had experienced from the merchants when the question as to the renewal of their charter was agitated in 1730 made them very desirous to obtain the next renewal in as quiet a manner as possible. They therefore proposed, in 1743, when 23 years of their charter were yet unexpired, to lend 1,000,000*l.* to Government, at 3 per cent., provided their exclusive privileges were extended to 1780, with the usual notice; and, as none were expecting such an application, or prepared to oppose it, the consent of Government was obtained without difficulty.

But the period was now come when the mercantile character of the East India Company—if, indeed, it could with propriety be at any time said to belong to them—was to be eclipsed by their achievements as a military power, and the magnitude of their conquests. For about two centuries after the European powers began their intercourse with India, the Mogul princes were regarded as amongst the most opulent and powerful of monarchs. Though of a foreign lineage—being descended from the famous Tamerlane, or Timur Beg, who overran India in 1400—and of a different religion from the great body of their subjects, their dominion was firmly established in every part of their extensive empire. The administration of the different provinces was committed to officers, denominated soubahdars, or nabobs, intrusted with powers, in their respective governments, similar to those enjoyed by the Roman prætors. So long as the emperors retained any considerable portion of the vigour and bravery of their hardy ancestors, the different parts of the government were held in duo subordination, and the soubahdars yielded a ready obedience to the orders from Delhi. But the emperors were gradually debauched by the apparently prosperous condition of their affairs. Instead of being educated in the council or the camp, the heirs of almost unbounded power were brought up in the slothful luxury of the seraglio; ignorant of public affairs; benumbed by indolence; depraved by the flattery of women, of eunuchs, and of slaves; their minds contracted with their enjoyments; their inclinations were vitiated by their habits; and

their government grew as vicious, as corrupt, and as worthless as themselves. When the famous Kouli Khan, the usurper of the Persian throne, invaded India, the effeminate successor of Tamerlane and Aurengzebe was too unprepared to oppose, and too dastardly to think of avenging, the attack. This was the signal for the dismemberment of the monarchy. No sooner had the invader withdrawn than the soubahdars either openly threw off their allegiance to the emperor, or paid only a species of nominal or mock deference to his orders. The independence of the soubahdars was very soon followed by wars amongst themselves; and, being well aware of the superiority of European troops and tactics, they anxiously courted the alliance and support of the French and English East India Companies. These bodies, having espoused different sides, according as their interests or prejudices dictated, began very soon to turn the quarrels of the soubahdars to their own account. Instead of being contented, as hitherto, with the possession of factories and trading towns, they aspired to the dominion of provinces; and the struggle soon came to be, not which of the native princes should prevail, but whether the English or the French should become the umpires of India.

But these transactions are altogether foreign to the subject of this work; nor could any intelligible account of them be given without entering into lengthened statements. We shall only, therefore, observe that the affairs of the French were ably conducted by La Bourdonnais, Duplex, and Lally; officers of distinguished merit, and not less celebrated for their great actions than for the base ingratitude of which they were the victims. But though victory seemed at first to incline to the French and their allies, the English affairs were effectually retrieved by the extraordinary talents and address of a single individual. Colonel (afterwards Lord) Clive was equally brave, cautious, and enterprising; not scrupulous in the use of means; fertile in expedients; endowed with wonderful sagacity and resolution; and capable of turning even the most apparently adverse circumstances to advantage. Having succeeded in humbling the French power in the vicinity of Madras, Clive landed at Calcutta in 1757, in order to chastise the soubahdar, Surajah ul Dowlah, who had a short while before attacked the English factory at that place, and inhumanly shut up 146 Englishmen in a prison, where, owing to the excessive heat and want of water, 123 perished in a single night. Clive had only 700 European troops and 1,400 Sepoys with him when he landed; but with these, and 570 sailors furnished by the fleet, he did not hesitate to attack the immense army commanded by the soubahdar, and totally defeated him in the famous battle of Plassey. This victory threw the whole provinces of Bengal, Bahar, and Orissa into our hands, and they were finally confirmed to us by the treaty negotiated in 1765.

Opinion has been long divided as to the policy of our military operations in India; and it has been strenuously contended that we should never have extended our conquests beyond the limits of Bengal. The Legislature seems to have taken this view of the matter; the House of Commons having resolved, in 1782, 'that to pursue schemes of conquest and extent of dominion in India are measures repugnant to the wish, the honour, and the policy of this nation.' But others have argued, and apparently on pretty good grounds, that, having gone thus far, we were compelled to advance. The native powers, trembling at the incursions of British dominion, endeavoured, when too late, to make head against the growing evil. In this view they entered into combinations and wars against

the English; and the latter having been uniformly victorious, their empire necessarily went on increasing, till all the native powers have been swallowed up in its vast extent.

The magnitude of the acquisitions made by Lord Clive powerfully excited the attention of the British public. Their value was prodigiously exaggerated; and it was generally admitted that the Company had no legal claim to enjoy, during the whole period of their charter, all the advantages resulting from conquests to which the fleets and armies of the state had largely contributed. In 1767 the subject was taken up by the House of Commons; and a committee was appointed to investigate the whole circumstances of the case, and to calculate the entire expenditure incurred by the public on the Company's account. During the agitation of this matter the right of the Company to the new conquests was totally denied by several members. In the end, however, the question was compromised by the Company agreeing to pay 400,000*l.* a-year for 2 years; and in 1769 this agreement, including the yearly payment, was further extended for 5 years more. The Company at the same time increased their dividend, which had been fixed by the former agreement at 10, to 12½ per cent.

But the Company's anticipations of increased revenue proved entirely visionary. The rapidity of their conquests in India, the distance of the controlling authority at home, and the abuse in the Government of the native princes, to whom the Company had succeeded, conspired to foster a strong spirit of speculation among their servants. Abuses of every sort were multiplied to a frightful extent. The English, having obtained, or rather enforced, an exemption from those heavy trade duties to which the native traders were subject, engrossed the whole internal trade of the country. They even went so far as to decide what quantity of goods each manufacturer should deliver, and what he should receive for them. It is due to the directors to say that they exerted themselves to repress these abuses; but their resolutions were neither carried into effect by their servants in India, nor sanctioned by the proprietors at home; so that the abuses, instead of being repressed, went on acquiring fresh strength and violence. The resources of the country were rapidly impaired; and while many of the Company's servants returned to Europe with immense fortunes, the Company itself was involved in debt and difficulties; and so far from being able to pay the stipulated sum of 400,000*l.* a-year to Government, was compelled to apply in 1772 to the Treasury for a loan!

In this crisis of their affairs Government interposed, and a considerable change was made in the constitution of the Company. The dividend was restricted to 6 per cent. till the sum of 1,400,000*l.* advanced to them by the public, should be paid. It was further enacted that the court of directors should be elected for 4 years, 6 members annually, but none to hold their seats for more than 4 years at a time; that no person was to sit at the courts of proprietors who had not possessed his stock for 12 months; and that the amount of stock required to qualify for a seat should be increased from 500*l.* to 1,000*l.* The jurisdiction of the Mayor's Court at Calcutta was confined to small mercantile cases; and in lieu of it, a new court was appointed, consisting of a chief justice and 3 principal judges appointed by the Crown. A superiority was also given to Bengal over the other presidencies. Mr. Warren Hastings being named in the Act as governor-general of India. The governor-general could

gillars, and judges were prohibited from having any concern whatever in trade; and no person residing in the Company's settlements was allowed to take more than 12 per cent. per annum for money. Though strenuously opposed, these measures were carried by a large majority.

At this period (1773) the total number of proprietors of East India stock, with their qualifications as they stood in the Company's book, were as follows:—

	Proprietors	Stock		
		£	s.	d.
Englishmen, possessing 1,000 <i>l.</i> stock and upwards	487	1,018,536	19	11

Notwithstanding the vast extension of the Company's territories, their trade continued to be apparently insignificant. During the 3 years ending with 1773 the value of the entire exports of British produce and manufactures, including military stores, sent out by the Company to India and China, amounted to 1,469,411*l.*, being at the rate of 489,803*l.* a-year; the annual exports of bullion during the same period being only 84,933*l.* During the same 3 years 23 ships sailed annually to India. The truth, indeed, seems to be, that, for the increased consumption of tea in Great Britain, the Company would have entirely ceased to carry on any branch of trade with the East, had the monopoly would have excluded us effectually from the markets of India and China if the trade had reverted to its ancient channels, had the route by the Cape of Good Hope been relinquished.

In 1781 the exclusive privileges of the Company were extended to 1791, with 3 years' notice; the dividend on the Company's stock was fixed at 4 per cent.; three fourths of their surplus revenues, after paying the dividend and the sum of 400,000*l.* payable to Government, was to be applied to the public service, and the remaining fourth to the Company's own use.

In 1780 the value of British produce and manufactures exported by the Company to India and China amounted to only 386,152*l.*; the bullion exported during the same year was 15,014*l.* The value of the exports during the same year was 12,648,616*l.*; showing that the East India Company formed only one thirty-second part of the foreign trade of the empire.

The administration of Mr. Hastings was one of the most unwise, unwise, and unwise. The state of the country, instead of being improved, became worse; so much so, that in a few minutes by Marquis Cornwallis, dated November 18, 1789, it is distinctly stated 'that the third part of the Company's territory is now a prey for wild beasts.' Some abuses in the conduct of their servants were, indeed, rectified; but, notwithstanding, the net revenue of Bengal, Orissa, and the Cis, which in 1772 had amounted to 2,285,766*l.*, declined in 1785 to 2,072,963*l.* The exhaustion of the country, and the expenses incurred in the war with Hyder Ally and France, rendered the Company in fresh difficulties; and unable to meet them, they were obliged in 1784 to present a petition to Parliament, setting forth their inability to pay the stipulated sum of 400,000*l.* a-year to the public, and praying to be relieved from that payment and to be supported with a sum of 900,000*l.*

All parties seemed now to be convinced that some further changes in the constitution of the Company had become indispensable. In this crisis Mr. Fox brought forward his famous India Bill, the grand object of which was to abolish the courts of directors and proprietors, and to vest the government of India in the hands of seven commissioners appointed by Parliament. The coalition between Lord North and Mr. Fox having rendered the ministry exceedingly unpopular, advantage was taken of the circumstance to raise an extraordinary clamour against the bill. The East India Company stigmatised it as an invasion of their chartered rights; though it is obvious that, from their inability to carry into effect the stipulations under which those rights were conceded to them, they necessarily reverted to the public; and it was as open to Parliament to legislate upon them as upon any other question. The political opponents of the Government represented the proposal for vesting the nomination of commissioners in the Legislature as a daring invasion of the prerogative of the Crown, and an insidious attempt of the minister to render himself all-powerful by adding the patronage of India to that already in his possession. The bill was, however, carried through the House of Commons; but, in consequence of the ferment it had excited, and the avowed opposition of his Majesty, it was thrown out in the House of Lords. This event proved fatal to the Coalition ministry. A new one was formed, with Mr. Pitt at its head; and Parliament being soon after dissolved, the new minister acquired a decisive majority in both Houses. When thus secure of Parliamentary support, Mr. Pitt brought forward his India Bill, which was successfully carried through all its stages. By this bill a Board of Control was erected, consisting of six members of the privy council, who were to check, superintend, and control all acts, operations, and concerns which in anywise relate to the civil or military government or revenues of the territories and possessions of the East India Company. All communications to or from India, touching any of the above matters, were to be submitted to this Board; the directors being ordered to yield obedience to its commands, and to alter or amend all instructions sent to India as directed by it. A secret committee of three directors was formed, with which the Board of Control might transact any business it did not choose to submit to the court of directors. Persons returning from India were to be obliged, under very severe penalties, to declare the amount of their fortunes; and a tribunal was appointed for the trial of all individuals accused of misconduct in India, consisting of a judge from each of the Courts of King's Bench, Common Pleas, and Exchequer; 5 members of the House of Lords, and 7 members of the House of Commons; the last being chosen by lot at the commencement of each session. The superintendance of all commercial matters continued, as formerly, in the hands of the directors.

During the administration of Marquis Cornwallis, who succeeded Mr. Hastings, Tipoo Saib, the son of Hyder Ally, was stripped of nearly half his dominions; the Company's territorial revenue was, in consequence, greatly increased; at the same time that the permanent settlement was carried into effect in Bengal, and other important changes accomplished. Opinion has been long divided as to the influence of these changes. On the whole, however, we are inclined to think that they have been decidedly advantageous. Lord Cornwallis was, beyond all question, a sincere friend to the people of India, and laboured earn-

estly, if not always successfully, to promote their interests, which he well knew were identified with those of the British nation.

During the 3 years ending with 1793 the value of the Company's exports of British produce and manufactures fluctuated from 928,783*l.* to 1,031,262*l.* But this increase is wholly to be ascribed to the reduction of the duty on tea in 1784, and the vast increase that consequently took place in its consumption. [T.E.] Had the consumption of tea continued stationary, there appear no grounds for thinking that the Company's exports in 1793 would have been greater than in 1780, unless an increase had taken place in the quantity of military stores exported.

In 1793 the Company's charter was prolonged till March 1, 1814. In the Act for this purpose a species of provision was made for opening the trade to India to private individuals. All his Majesty's subjects residing in any part of his European dominions were allowed to export to India any article of the produce or manufacture of the British dominions, except military stores, arms, munition, masts, spars, cordage, pitch, tar, and copper; and the Company's civil servants in India, and the free merchants resident there, were allowed to ship, on their own account and risk, all kinds of Indian goods, except calicoes, dimities, muslins, and other piece goods. But neither the merchants in England, nor the Company's servants or merchants in India, were allowed to export or import except in Company's ships. And in order to insure such conveyance, it was enacted that the Company should annually appropriate 3,000 tons of shipping for the use of private traders; it being stipulated that they were to pay, in time of peace 5*l.* outwards, and 15*l.* homewards, for every ton occupied by them in the Company's ships; and that this freight might be raised in time of war with the approbation of the Board of Control.

It might have been, and indeed most probably was, foreseen that very few British merchants or manufacturers would be inclined to avail themselves of the privilege of sending out goods in the Company's ships, or of engaging in a trade fettered on all sides by the jealousy of powerful monopolists, and where consequently their superior judgment and economy would have availed almost nothing. As far, therefore, as they were concerned, the relaxation was more apparent than real, and did not produce any useful results. (In a letter to the East India Company, dated March 21, 1812, Lord Melville says: 'It will not be denied that the facilities granted by that Act [the Act of 1793] have not been satisfactory, at least to the merchants either of this country or of India. They have been the source of constant dispute, and they have even entailed a heavy expense upon the Company, without affording to the public any adequate benefit from such a sacrifice.' *Papers published by East India Company, 1813, p. 84.*) It was, however, made use of to a considerable extent by private merchants in India, and also by the Company's servants returning from India, and some of whom invested a part, and some the whole of their fortune in produce fit for the European markets.

The financial difficulties of the East India Company led to the revolution which took place in its government in 1784. But notwithstanding the superintendence of the Board of Control, its finances have continued nearly in the same unprosperous state as before. We have been favoured from time to time with the most dazzling accounts of revenue that was to be immediately derived from India; and numberless Acts of Parliament

have been passed for the appropriation of surpluses that never had any existence except in the imagination of their framers. The proceeding that took place at the renewal of the charter in 1793 affords a striking example of this. Lord Cornwallis had then concluded the war with Tippoo Saib, which had stripped him of half his dominions; the perpetual settlement, from which so many benefits were expected to be derived, had been adopted in Bengal; and the Company's receipts had been increased, in consequence of accessions to their territory, and subsidies from native princes &c., to upwards of eight millions sterling a-year, which it was calculated would afford a future annual surplus, after every deduction of charge had been deducted, of 1,240,000*l.* Mr. Dundas (afterwards Lord Melville), then President of the Board of Control, availed himself of these favourable appearances to give the most flattering representation of the Company's affairs. There could, he said, be no question as to the permanent and regular increase of the Company's surplus revenue; he assured the House that the estimates had been framed with the greatest care; that the Company's possessions were in a state of prosperity till then unknown in India; that abuses which had formerly insinuated themselves into some departments of the Government had been rooted out; and that the period was at length arrived when India was to pour her golden treasures into the lap of England! Parliament participated in these brilliant anticipations, and in the Act prolonging the charter it was enacted: 1. That 500,000*l.* a-year of the surplus revenue should be set aside for reducing the Company's debt in India to 2,000,000*l.*; 2. That 500,000*l.* a-year should be paid into the exchequer, to be appropriated for the public service as Parliament should think fit to order; 3. When the India debt should be reduced to 2,000,000*l.*, and the bond debt to 1,500,000*l.*, one sixth part of the surplus was to be applied to augment the dividends, and the other five sixths were to be paid into the Bank, in the name of the Commissioners of the National Debt, to be accumulated as a *guarantee fund*, until it amounted to 12,000,000*l.*; and when it reached that sum, the dividends upon it were to be applied to make up the dividends on the capital stock of the Company to 10 per cent., if at any time the funds appropriated to that purpose should prove deficient &c.

Not one of these anticipations was realized. Instead of being diminished, the Company's debt began immediately to increase. In 1795 the Government were authorised to add to the amount of the floating debt. In 1796 a new device to reduce the money was fallen upon. Mr. Dundas represented that as all competition had been destroyed in consequence of the war, the Company's commerce had been greatly increased, and that their mercantile capital had become insufficient for the extension of their transactions. In consequence of this representation, leave was given to the Company to issue two millions to their capital stock by one million of new shares; but as these shares sold at a rate of 17*l.* each, they produced 3,400,000*l.* In 1797 the Company issued additional bonds to the extent of 1,417,000*l.*; and notwithstanding all this, Mr. Dundas stated in the House of Commons, March 13, 1799, that there had been a deficit of 1,319,000*l.* the previous year of 1,319,000*l.*

During the administration of the Marquis Wellesley, which began in 1797-8 and terminated in 1805-6, the British empire in India was augmented by the conquest of Seringapatam and the whole territories of Tippoo Saib, the conquest of large tracts by the Mahratta chiefs, the conquest

of Delhi, the ancient seat of the various other important revenue, which had in 1787, was increased to 17,672,000*l.*, leaving the following year 1,000,000*l.*, while the same; and there continued excess of expenditure charges, and a consequence of 1811-12.

Notwithstanding the their territories, the them continued to be ing the 5 years ending India by the Company amount of individual

Delhi, the ancient seat of the Mogul empire, and various other important acquisitions; so that the revenue, which had amounted to 8,059,000*l.* in 1757, was increased to 15,403,000*l.* in 1805. But the expenses of government, and the interest of the debt, increased in a still greater proportion than the revenue, having amounted in 1805 to 17,672,000*l.*, leaving a deficit of 2,269,000*l.* In the following year the revenue fell off nearly 1,000,000*l.*, while the expenses continued nearly the same; and there was, at an average, a continued excess of expenditure, including commercial charges, and a contraction of fresh debt, down to 1811-12.

Notwithstanding the vast additions made to their territories, the Company's commerce with them continued to be very inconsiderable. During the 5 years ending with 1811, the exports to India by the Company, exclusive of those made on account of individuals in their ships, were as follows:—

	Year	£
1807	1810	1,010,815
1808	1811	1,035,516
1809		866,133

The exports by the private trade, and the *private* trade, that is, the commanders and officers of the Company's ships, during the above-mentioned years, were about as large. During the 5 years ending with 1807-8 the annual average imports to India by British private traders, only amounted to 305,496*l.* (*Papers*, published by the East India Company in 1813, 4to. p. 56.)

The Company's exports included the value of military stores sent from Great Britain to India. The ships employed in the trade to *India* and *China* during the same 5 years varied from 33, and their burden from 36,671 to 45,342 tons.

For some years before the termination of the Company's charter in 1813, the conviction had been gaining ground among all classes that the trade to the East was capable of being very greatly extended; and that it was solely owing to the want of enterprise and competition, occasioned by being subjected to a monopoly, that it was confined within such narrow limits. Very great efforts were, consequently, made by the manufacturing and commercial interests to have the monopoly set aside, and the trade to the East thrown open to all. The Company vigorously resisted these proposals, and had interest enough to procure a provision of the privilege of carrying on an exclusive trade to China to April 10, 1831, with 3 years' extension; the Government of India being continued in their hands for the same period. Fortunately, however, the trade to India was opened, under certain conditions, to the public. The principal conditions were, that private individuals might trade, directly only, with the presidencies of Calcutta, Madras, and Bombay, and the province of Penang; that the vessels fitted out by them should not be under 350 tons burden; and that they should abstain, unless permitted by the Board of Control, from engaging in carrying trade of India, or in the trade between India and China. And yet, despite these arrangements, such is the energy of individual enterprise as compared with monopoly, that the private traders gained an almost immediate ascendancy over the East India Company, and in a short time more than *trebled* our trade with

be accounted for by the demand of European residents, the number of whom does not materially vary; and it appears to have been much the greatest in articles calculated for the general use of the natives. That of the cotton manufactures of this country alone is stated, since the first opening of the trade, to have been augmented from *four to five-fold* [it is now (1868) augmented many hundreds of times]. The value of the merchandises exported from Great Britain to India, which amounted in 1814 to 870,177*l.*, amounted in 1819 to 3,052,741*l.* [this is the amount of the Company's exports only, and the sum is not quite accurate. *Post*]; and although the market appears then to have been so far overstocked as to occasion a diminution of nearly  $\frac{1}{2}$  in the exports of the following year, that diminution appears to have taken place more in the articles intended for the consumption of Europeans than of natives; and the trade is now stated to be committed by the best informed persons to be reviving. When the amount of population, and the extent of the country over which the consumption of these articles is spread, are considered, it is obvious that any facility which can, consistently with the political interests and security of the Company's dominions, be given to the private trader for the distribution of his exports, by increasing the number of ports at which he may have the option of touching in pursuit of a market, cannot fail to promote a more ready and extensive demand.

Besides the restraints imposed by the Act of 1813 on the proceedings of the free traders (these restraints were a good deal modified by the 3 Geo. IV. c. 89, passed in pursuance of the recommendation of the committee quoted above), they frequently experienced very great loss and inconvenience from the commercial speculations of the East India Company. The latter had commercial residents, with large establishments of servants, some of them intended for coercive purposes, stationed in all the considerable towns; and the Marquis Wellesley has stated 'that the intimation of a wish from the Company's resident is always received as a command by the native manufacturers and producers.' The truth is, that it was not in the nature of things that the Company's purchases could be fairly made: the natives could not deal with their servants as they would have dealt with private individuals; and it would be absurd to suppose that agents authorised to buy on account of government, and to draw on the public treasury for the means of payment, should generally evince the prudence and discretion of individuals directly responsible in their own private fortunes for their transactions. The interference of such persons would, under any circumstances, have rendered the East India trade peculiarly hazardous. But their influence in this respect was materially aggravated by the irregularity of their appearances. No individual, not belonging to the court of directors, could foresee whether the Company's agents would be in the market at all; or, if there, to what extent they would either purchase or sell. So capricious were their proceedings, that in some years they laid out 700,000*l.* on indigo, while in others they did not lay out a single shilling; and so with other things. A fluctuating demand of this sort necessarily occasioned great and sudden variations of price, and was injurious alike to the producers and the private merchants.

And besides being injurious to the private trader, and to the public generally, both in India and England, this trade was of no advantage to the East India Company. How, indeed, could

Report of the committee of the House of Commons on the foreign trade of the country, printed in 1821, it is stated that 'the greatly increased consumption of British goods in the East since the commencement of the free trade cannot

it be otherwise? A Company that maintained armies and retailed tea, that carried a sword in one hand and a ledger in the other, was a contradiction; and, had she traded with success, would have been a prodigy. It was impossible for her to pay that attention to details which is indispensable to the carrying on of commerce with advantage. She may have gained something by the monopoly of the tea trade, though even that is questionable; but it is admitted on all hands that she lost heavily by her trade to India. When, therefore, the question as to the renewal of the charter came to be discussed in 1832 and 1833, the Company had no reasonable objection to urge against their being deprived of the privilege of trading. And the Act 3 & 4 Wm. IV. c. 85, for continuing the charter till 1854, terminated the Company's commercial character, by enacting that the Company's trade to China was to cease on April 22, 1854, and that the Company was, as soon as possible after that date, to dispose of their stocks on hand and close their commercial business; and the wonderful increase that has since taken place in the trade with the East is the best proof of the sagacity and soundness of the opinions of those by whose efforts the incubus of monopoly was removed.

From this period down to 1858, when the Company was, as a governing body, finally abolished, its functions were wholly political, and the directors were, in truth, little more than a council to assist and advise the President of the Board of Control. During the period now alluded to (from 1834 to 1858) some most important events have taken place in India. The British Empire has been increased by the acquisition in 1845 of the territory of Scinde, at the mouths of the Indus; in 1849 of the extensive and fertile country of the Punjab (Five Rivers), in N.W. India, between the Sutlej and the Indus; and in 1852 of Pegu and Martaban in Burmah. Being occupied by comparatively brave and hardy races, the subjugation of Scinde and the Punjab was not effected without much difficulty, and after the occurrence of several well-fought battles.

The period referred to is also distinguished by the ill-advised invasion of Afghanistan in 1839. This unprovoked aggression led to the greatest reverse that has ever happened to the English in India. But the disastrous retreat from Cabul having been avenged, and the prestige of our arms restored, we finally withdrew from the country in 1842. And it is to be hoped that we may never again, unless from the most urgent necessity, attempt to extend our empire in that quarter beyond its present limits.

A conviction had been for a lengthened period gaining ground, that the Company's intervention in the Government of India had become inexpedient, and that it should be directly administered by the Crown. In 1853 a step was taken in this direction by the Act 16 & 17 Vict. c. 95, which reduced the number of directors from 24 to 18, part of which were to be nominated by the Crown, and made other changes. It is not easy to say how long this modified system might have gone on, had it not been for the outbreak of the gigantic mutiny of 1857. It would be foreign to our object to introduce details with respect to the origin of this insurrection, its progress and suppression. These are known to all our readers. Here it is sufficient to mention that the incipient prejudice against the Company having been strengthened, though without much reason, by the disasters in India, advantage was taken of their occurrence to introduce a bill into Parliament for transferring its government from the Company to the Crown,

which soon after (August 2, 1858) became the Act 21 & 22 Vict. c. 106. Thus has terminated, after a prolonged existence of about 238 years, the East India Company, the most celebrated joint-stock association of which history has preserved any account. (It still exists in name for some routine matters; but it is probable that this phantom, *magni nominis umbra*, will speedily disappear.) Its commercial had long been sunk in its military and political character. It had subjugated one of the most extensive empires in the world. And though its policy has been in many respects of a very questionable description, it is entitled to the high praise of having vigorously exerted itself to restrain abuses on the part of its servants, to protect the vast population within its dominion, and provide for their well-being.

The government of India is now vested under the 21 & 22 Vict. c. 106, in a Secretary of State, assisted by a council of 15 members: 8 of the latter were nominated by her Majesty, and 7 by the East India Company. On vacancies taking place among the former, their successors are to be nominated by the Crown; and vacancies among the Company's nominees are to be filled up by election by the council. Members hold these situations during good behaviour, receive a salary of 1,200*l.* a-year, and a retiring pension of 500*l.* a-year. The majority of the council are to consist of persons who have either served or resided in India for 10 years. They are not allowed to sit in Parliament.

## II. EAST INDIES (STATE OF SOCIETY IN GROWING DEMAND FOR ENGLISH GOODS, TRADE, COLONISATION, ETC.).

1. *Distinction of Castes in India.* *Inconspicuous of the Representations as to the Indalities have unalterably attached to ancient Customs and Practices.*—We have taken occasion, in the preceding sketch of the history of the East India Company, repeatedly to notice the small extent of the trade carried on by its agency. It was contended, however, that this was to be ascribed, not to the deadening influence of monopoly, but to the peculiar state of the people of India. A notion has long been prevalent in this quarter of the world, that the Hindoos are a race unsusceptible of change or improvement of any sort; that every man brought up to the profession of his father, and can engage in none else; and that, owing to the simplicity and unalterableness of their habits, they never can be consumers, at least to any considerable extent, of foreign commodities. 'What is now in India has always been there, and is likely still to continue.' (Robertson's *Disquisition*, p. 202.) The Hindoos of this country are said to be the same as the Hindoos of the East of Alexander the Great. The description of the latter given by Arrian has been quoted as applying to their actual situation. It is affirmed that they have neither improved nor retrograded, and are referred to India as to a country in which institutions and manners that prevailed 2,000 years ago may still be found in their purity! The President de Goguet says it distinctly, in his learned and invaluable work *the Origin of Laws, Arts, and Sciences*, that 'every trade is confined to a particular caste, and can be exercised only by those whose parents possessed it.' (*Origin of Laws* &c. Eng. trans. iii. p. 24.) Dr. Robertson says that 'the situation every Hindoo is unalterably fixed; his destiny is irrevocable; and the walk of life is marked out for which he must never deviate.' (*Disquisition on India*, p. 199.) The same opinions are maintained by later authorities. Dr. Tennant says that

whole Indian community is divided into 4 great classes; and each class is stationed between certain walls of separation, which are impassable by the purest virtue and most conspicuous merit.' (Quoted by Mr. Rickards, p. 6.) This unalterable destiny of individuals has been repeatedly assumed in the despatches and official papers put forth by the East India Company, and has been referred to on all occasions by them and their servants as a proof that the depressed and miserable condition of the natives is not owing to misgovernment, or to the weight of the burdens laid upon them; and that it is in vain to think of materially improving their condition, or of making them acquainted with new arts, or giving them new habits, so long as the institution of castes, and the prejudices to which it has given rise, preserve their ascendancy unimpaird.

But notwithstanding the universal currency which the opinions now referred to have obtained, and the high authority by which they are supported, they are, in all the most essential respects, entirely without foundation! The books and notes of the Hindoos themselves, and the minute and careful observations that have recently been made on Indian society, have shown that the influence ascribed to the institution of castes by the ancients, and by the more early modern travellers, has been prodigiously exaggerated. In the first part of his work on India, Mr. Rickards established, partly by references to the authoritative books of the Hindoos, and partly by his own observations, and those of Mr. Colebrooke, Dr. Schlegel, and other high authorities, that the vast majority of the Hindoo population may, and in fact do, engage in all sorts of employments. It has been further shown that there is nothing in the structure of Indian society to oppose any serious obstacle to the introduction of new arts, or spread of improvement; and that the causes of the poverty and misery of the people must be sought for in other circumstances than the institution of castes, and the nature of Hindoo religion.

The early division of the population into the 4 classes of priests (Brahmins), soldiers (Chattras), husbandmen and artificers (Vaisyas), and the Sudras (Sutras), was maintained only for a very short period. The Hindoo traditions record that the intermixture of these classes took place at a very remote epoch; and the mixed brood arising were divided into a vast variety of tribes, or castes, to whom, speaking generally, employments are forbidden.

The employments,' says Mr. Rickards, 'allowed to these mixed and impure castes may be divided into every description of handicraft and agriculture for which the wants of human society created a demand. Though many seem to derive their names from their ordinary trade or occupation, and some have duties assigned them which are odious and disgusting for any others to perform, yet from the direct necessity, yet no employment, generally speaking, is forbidden to the mixed and impure tribes, excepting three of the most important duties of the sacerdotal class; viz. the recitation of the Vedas, officiating at a sacrifice, and presenting from a pure-handed giver; these three are exclusively Bra'minical.'

Mr. Colebrooke, who is acknowledged on all occasions to be one of the very highest authorities as respects Indian affairs, has a paper in the volume of the *Asiatic Researches*, on the subject of castes. In this paper Mr. Colebrooke states that the *Jatimala*, a Hindoo work, enumerates forty-two mixed classes springing from the intermixture of a man of interior class with a

woman of a superior class, or in the *inverse* order of the classes. Now, if we add to these the number that must have sprung from intermixture in the *direct* order of the classes, and the hosts further arising from the continued intermixture of the mixed tribes amongst themselves, we shall not certainly be disposed to dissent from Mr. Colebrooke's conclusion, 'that the subdivisions of these classes have further multiplied distinctions to an *endless variety*.'

Mr. Colebrooke has given the following distinct and accurate account of the professions and employments of the several classes at the present day. It forms a curious commentary on the 'irrevocable destiny' of Dr. Robertson, and the 'impassable walls' of Dr. Tennant.

'A *Brahman*, unable to subsist by his duties, may live by the duty of a soldier; if he cannot get a subsistence by either of these employments, he may apply to tillage and attendance on cattle, or gain a competence by traffic, avoiding certain commodities. A *Chattrya* in distress may subsist by all these means; but he must not have recourse to the highest functions. In seasons of distress a further latitude is given. The practice of medicine and other learned professions, painting and other arts, work for wages, menial service, alms, and usury, are among the modes of subsistence allowed both to the *Brahman* and *Chattrya*. A *Vaisya*, unable to subsist by his own duties, may descend to the servile acts of a *Sudra*; and a *Sudra*, not finding employment by waiting on men of the higher classes, may subsist by handicrafts; principally following those mechanical operations, as joinery and masonry, and practical arts, as painting and writing, by which he may serve men of superior classes; and although a man of a lower class is in general restricted from the acts of a higher class, the *Sudra* is expressly permitted to become a trader or a husbandman.

'Besides the particular occupation assigned to each of the mixed classes, they have the alternative of following the profession which regularly belongs to the class from which they derive their origin on the mother's side: those at least have such an option who are born in the direct order of the classes. *The mixed classes are also permitted to subsist by any of the duties of a Sudra; that is, by menial service, by handicrafts, by commerce, and agriculture.* Hence it appears THAT ALMOST EVERY OCCUPATION, THOUGH REGULARLY IT BE THE PROFESSION OF A PARTICULAR CLASS, IS OPEN TO MOST OTHER CLASSES; and that the limitations, far from being rigorous, do in fact reserve only the peculiar profession of the *Brahman*, which consists in teaching the *Veda*, and officiating at religious ceremonies.'

'We have thus,' says Mr. Rickards, by whom this passage has been quoted, 'the highest existing authority for rejecting the doctrine of the whole Hindoo community "being divided into four castes," and of their peculiar prerogatives being guarded inviolate by "impassable walls of separation." It is also clear that the intermixture of castes had taken place, to an indefinite extent, at the time when the *Dherma Sastra* was composed, which Sir William Jones computes to be about 880 years B.C.; for the mixed classes are specified in this work, and it also refers in many places to past times, and to events which a course of time only could have brought about. The origin of the intermixture is therefore lost in the remotest and obscurest antiquity; and having been carried on through a long course of ages, a heterogeneous mass is everywhere presented to us, in these latter times, without a single example, in any particular state, or kingdom, or separate portion

of the Hindoo community, of that quadruple division of castes which has been so confidently insisted upon.

'I have myself seen carpenters of five or six different castes, and as many different bricklayers, employed on the same building. The same diversity of castes may be observed among the craftsmen in dockyards, and all other great works; and those who have resided for any time in the principal commercial cities of India must be sensible that every increasing demand for labour, in all its different branches and varieties of old and new arts, has been speedily and effectually supplied, in spite of the tremendous institution of castes, which we are taught to believe forms so impassable an obstruction to the advancement of Indian industry.'

2. *Growing Demand for English Goods.*—It is difficult to suppose that the directors of the East India Company should not have been early aware of the fallacy of the opinions as to the fixedness of Indian habits. So far, however, as we know, they did not, in this instance, evince any acquaintance with the discoveries of their servants. On the contrary, in all the discussions that took place with respect to the opening of the trade in 1814, the Company invariably contended that no increase of trade to India could be expected. In a letter of the chairman and deputy chairman to the Right Honourable Robert Dundas, dated January 13, 1809, it is stated that 'the small demand for foreign commodities in India (results from the nature of the Indian people, their climate and their usages. The articles of first necessity their own country furnishes more abundantly and more cheaply than it is possible for Europe to supply them. The labour of the great body of the common people only enables them to subsist on rice, and to wear a slight covering of cotton cloth; they, therefore, can purchase none of the superfluities we offer them. The comparatively few in better circumstances, restricted, like the rest, by numerous religions and civil customs, of which all are remarkably tenacious, find few of our commodities to their taste; and their climate, so dissimilar to ours, renders many of them unsuitable to their use; so that a commerce between them and us cannot proceed far upon the principle of supplying mutual wants. Hence, except woollens, in a very limited degree, for mantles in the cold season, and metals, on a scale also very limited, to be worked up by their own artisans for the few utensils they need, hardly any of our staple commodities find a vent among the Indians; the other exports which Europe sends to India being chiefly consumed by the European population there, and some of the descendants of the early Portuguese settlers; all of whom, taken collectively, form but a small body in view to any question of national commerce.' (*Papers published by authority of the East India Company, 1813, p. 21.*)

The volume from which we have made this extract contains a variety of passages to the same effect. So confident, indeed, were the Company that they had carried the trade to India to the utmost extent of which it was capable, that it was expressly stated, in resolutions passed in a general court held at the India House on January 26, 1813, 'that no large or sudden addition can be made to the amount of British exports to India or China; that the Company had suffered a loss in attempting to extend this branch of their trade; that the warehouses at home were glutted with Indian commodities for which there was no demand; and that to open the outports to the trade would be no other than 'a ruinous transfer of it

into new channels, to the destruction of immense and costly establishments, and the beggary of many thousands of industrious individuals.'

Luckily, however, these representations were unable to prevent the opening of the trade, and the result has sufficiently demonstrated their fallacy. The enterprise and exertion of individuals have vastly increased our exports to India—that very country which the Company had so confidently pronounced was, and would necessarily continue to be, incapable of affording any additional outlet for our peculiar products!

The commercial accounts for 1812 and 1813 were unfortunately destroyed by the fire at the Custom-house. The trade to India was opened on April 10, 1814; and in that year the declared value of the products exported from Great Britain to the countries eastward of the Cape of Good Hope, excepting China, by the East India Company, was 826,558*l.*, and by the private traders 1,048,132*l.* In 1817 the Company's exports had declined to 638,382*l.*, while those of the private traders had increased to 2,750,333*l.*; and in 1829 the former had sunk to only 488,601*l.*, while the latter had increased to 3,979,972*l.*, being more than double the total exports to India, as well by the Company as by private traders, in 1814! Since then the market has continued progressively to increase. At an average of the 6 years ending with 1849, the declared value of the exports of British goods amounted to no less than 6,315,688*l.* a-year; the declared value of those exported in 1849 being 6,803,274*l.* In 1854, previously to the late outbreak, the exports to India had reached the sum of 10,025,969*l.*

The Company stated, and no doubt truly, that they lost a very large sum in attempting to extend the demand for British woollens in India and China, which, notwithstanding, continued very limited. But in their efforts to force the sale of woollens, they seem to have entirely forgotten that we had attained to great excellence in the manufacture of cotton stuffs, the article principally made use of as clothing in Hindoostan; and that, notwithstanding the cheapness of labour in India, the advantage we derived from our superior machinery might enable us to offer our stuffs to the natives at a lower price than they could afford to manufacture them for. No sooner, however, had the trade been opened to private adventurers than this channel of enterprise was explored; and the result has been, that, instead of bringing cottons from India to England, the former has become one of the best and most extensive markets for the cottons of the latter. We regret, indeed, whether, in the whole history of commerce, another equally striking example can be produced of the powerful influence of competition in opening new and almost boundless fields for successful prosecution of commercial enterprise.

In 1814, the first year of the free trade in the exports of cotton amounted to 817,000 yards of which only about 170,000 yards, valued at 17,778*l.*, were exported by the Company. The progress of the trade has since been such that in 1866 we exported to India 541,699,474 yards of cotton stuffs, and 19,849,406 lbs. twist and ex. hosiery, lace, and small wares, the aggregate declared value of the whole being 12,773,000*l.*

The demand for several other articles of manufactures has increased with great rapidity. Notwithstanding all that has been said as to the immutability of Hindoo habits, the fact is, as we have denied that a taste for European productions and customs is rapidly spreading itself over India, and the fair presumption is, that it will continue to gain ground according as education is

diffused, and as the natives become better acquainted with our language, arts, and habits. The authenticity of Dr. Heber's statements cannot be called in question; and there are many passages in different parts of his Journal that might be quoted in corroboration of what has now been stated. Our limits, however, will only permit of our making a very few extracts.

'Nor have the religious prejudices and the unchangeableness of the Hindoo habits been less exaggerated. Some of the best informed of their nation, with whom I have conversed, assure me that half their most remarkable customs of civil and domestic life are borrowed from their Mohammedan conquerors; and at present there is an ob-*lish in everything*, which has already led to very remarkable changes, and will, probably, to still more important. The wealthy natives now all affect to have their houses decorated with Corinthian pillars, and filled with English furniture; they drive the best horses and the most dashing carriages in Calcutta: many of them speak English fluently, and are tolerably read in English literature; and the children of one of our friends I saw one day dressed in jackets and trowsers, with round hats, shoes, and stockings. In the Bengalee newspapers, of which there are two or three, I observed that Whiggism; and one of their leading men declared a great dinner, not long since, in honour of the Spanish revolution: among the lower orders the same feeling shows itself more beneficially in a growing neglect of caste.' (Vol. ii. p. 306.)

'To say that the Hindoos or Mussulmans are deficient in any essential feature of a civilised people is an assertion which I can scarcely suppose to be made by any who have lived with them: their manners are at least as pleasing and courteous as those in the corresponding stations of life among ourselves; their houses are larger, and, according to their wants and climate, to the full as convenient as ours; their architecture is at least as elegant; nor is it true that in the mechanic arts they are inferior to the general run of European nations. Where they fall short of us (which is chiefly in agricultural implements, and the mechanics of common life), they are not, so far as I have understood of Italy and the south of France, surpassed in any degree by the people of those countries. Their goldsmiths and weavers produce beautiful fabrics as our own; and it is so far from true that they are obstinately wedded to their old patterns, that they show an anxiety to imitate our models, and do imitate them very successfully. The ships built by native artists at Bombay are notoriously as good as any which sail in London or Liverpool. The carriages and coaches which they supply at Calcutta are as handsome, though not as durable, as those of Longwood. In the little town of Monghyr, 300 miles from Calcutta, I had pistols, double-barrelled guns, and different pieces of cabinet-work brought down by boat for sale, which in outward form (for I saw no finer, nobody but perhaps Mr. ——— could detect to be of Hindoo origin; and at Delhi, the shop of a wealthy native jeweller, I found beads, ear-rings, snuff-boxes &c. of the latest modes (so far as I am a judge), and ornamented with French devices and mottoes.' (Vol. ii. p. 306.)

'The Bishop Heber penetrated into the interior of India, he found the same taste as in Calcutta, European articles and for luxuries, prevalent everywhere among the natives. Of Benares he writes as follows:—

'I treated further into it, were the large, lofty, and handsome dwelling-houses, the beauty and apparent richness of the goods exposed in the bazaars, and the evident hum of business. Benares as well as a very holy city. It is the great mart where the shawls of the north, the diamonds of the provinces centre; and it has very considerable silk, cotton, and the woollen manufactures of its own; while English hardware, swords, shields, and spears, from Lucknow and Monghyr, and those European luxuries and elegancies which are daily becoming more popular in India, circulate from hence through Bundelcund, Gornackpoor, Nepal, and other tracts which are removed from the main artery of the Ganges.' (Vol. i. p. 289.)

'Proceeding still farther into the interior of the country, and when at Nusseerabad, distant 1,051 miles from Calcutta, the Bishop continues his Journal in the same strain; viz:—

'European articles are, at Nusseerabad [near Ajmeer, in the heart of the Rajpoot country], kept as might be expected, very dear; the shops are they had in their list all the usual items of a Calcutta warehouse. English cotton cloths, both white and printed, are to be met with commonly in wear among the people of the country, and may, I learned to my surprise, be bought best and cheapest, as well as all kinds of hardware, crockery, celebrated mart in Marwar, on the edge of the desert, several days' journey west of the where, till very lately, no European was known to have penetrated.' (Vol. ii. p. 36.)

As to the character of the Hindoos, their capacity, and even anxious desire, for improvement, the Bishop's testimony is equally clear and important, the reader's attention is requested to the following statements:—

'In the schools which have been lately established in this part of the empire, of which there are at present 9 established by the Church Missionary Societies, some very unexpected facts have occurred. As all direct attempts to convert the children are disclaimed, the parents send them without scruple. But it is no less strange than true, that there is no objection made to the use of the Old and New Testament as a class-book; that so long as the teachers do not urge them to be baptised, or to curse their country's gods, they readily consent to everything else; and not only Mussulmans, but Brahmins, stand by with perfect coolness, and listen sometimes with apparent interest and pleasure, while the scholars, by the road side, are reading the stories of the creation and of Jesus Christ.' (Vol. ii. p. 290.)

'Hearing all I had heard of the prejudices of the Hindoos and Mussulmans, I certainly did not at all expect to find that the common people would, not only without objection, but with the greatest thankfulness, send their children to schools on Bell's system; and they seem to be fully sensible of the advantages conferred by writing, arithmetic, and above all by a knowledge of English. There are now in Calcutta, and the surrounding villages, 20 boys' schools, containing 60 to 120 each; and 23 girls', each of 25 or 30.' (Vol. ii. p. 300.)

'In the same holy city [Benares] I visited another college, founded lately by a wealthy Hindoo banker, and intrusted by him to the management of the Church Missionary Society,

but what surprised me still more, as I pene-

in which, besides a grammatical knowledge of the Hindoostanee language, as well as Persian and Arabic, the senior boys could pass a good examination in English grammar, in Hume's History of England, Joyce's Scientific Dialogues, the use of the globes, and the principal facts and moral precepts of the Gospel; most of them writing beautifully in the Persian, and very tolerably in the English character, and excelling most boys I have met with in the accuracy and readiness of their arithmetic.' (Vol. ii. p. 388.)

'The different nations which I have seen in India (for it is a great mistake to suppose that all India is peopled by a single race, or that there is not as great a disparity between the inhabitants of Guzerat, Bengal, the Dooab, and the Deccan, both in language, manners, and physiognomy, as between any four nations in Europe) have, of course, in a greater or less degree, the vices which must be expected to attend on arbitrary government, a demoralising and absurd religion, and (in all the independent states, and in some of the districts which are partially subject to the British) a laxity of law, and an almost universal prevalence of intestino feuds and habits of plunder. The general character, however, has much which is extremely pleasing to me: they are brave, courteous, intelligent, and most eager after knowledge and improvement, with a remarkable talent for the sciences of geometry, astronomy &c., as well as for the arts of painting and sculpture. In all these points they have had great difficulties to struggle with, both from the want of models, instruments, and elementary instruction; the indisposition, or rather the horror entertained, till lately, by many among their European masters, for giving them instruction of any kind; and now from the real difficulty which exists of translating works of science into languages which have no corresponding terms.' (Vol. ii. p. 409.)

Even if our space permitted, it would be unnecessary to add to these extracts. The facts and circumstances now mentioned must, we think, satisfy every one that there is nothing in the nature of Indian society, in the institution of castes as at present existing, or in the habits and customs of the natives, to hinder them from advancing in the career of civilisation, commerce, and wealth. 'It may safely be asserted,' says Mr. Hamilton, 'that with so vast an extent of fertile soil, peopled by so many millions of tractable and industrious inhabitants, Hindostan is capable of supplying the whole world with any species of tropical merchandise; the production, in fact, being only limited by the demand.'

3. *Trade with India.*—We had occasion to advert, in former editions of this work, on the difficulties under which the trade with India then laboured in consequence of the duties on sugar, rum, and other Indian products being very much higher than those laid on the same articles when imported from the colonies in the West Indies. It is needless, however, to enlarge on the manifest inexpediency of such policy, or to enter into any lengthened arguments to prove that Governments are bound to treat all who are subject to their authority with the same equal and impartial justice. The discriminating duties now referred to have been all abolished, and the products of India and of our other dependencies come into the home market on the same equal terms. The beneficial influence of this wise and liberal policy has been strikingly evinced in the increased imports of sugar, cotton, indigo, rice, wool &c., from India. These imports have been so very great, that despite the vast increase in the shipments of cotton stuffs and yarn, iron, machinery,

woollens, and other articles of British produce in India, the value of the imports from that country has exceeded the value of the exports to that continent; and hence the heavy drain of bullion from the East. This drain, no doubt, has almost always existed; but the late extraordinary excess of the imports over the exports has proportionally increased its magnitude.

Indigo grows luxuriantly from the 15th to the 30th degree of lat.; but in India the best is produced in Bengal and Bahar, between 22° and 27° N., and long. 84° and 90° E.; where else the product is inferior. The produce of all the Bengal provinces is estimated at about 60,000,000 lbs., produced about 1,250,000 acres of cultivated land by planters, at an average, farming about 2,500 lbs. each. The prime coat of the article to the East has been estimated at 1,700,000 lbs.; the gross on which, including risk and charges to the East of exportation, amounts to 40 per cent. The export by sea of indigo from British India, however, fallen in value from 2,093,474 lbs. in 1810 to 1,860,141 lb. in 1865. The production of indigo in India is confined to Bengal, and the produce, though large, is of inferior quality.

Opium has been, for many years past, an important article of great and rapidly increasing export to China, the Malay Islands, and elsewhere. The exports, chiefly to China, were valued in 1865 at 11,122,746 lb. This vast importation into China is not being balanced by any corresponding exportation of ordinary merchandise is the cause of the large exports of bullion from it to India. The poppy may be said to take the place in India of agriculture that the vine and olive occupy in that of Southern Europe. Its growth within the British territories has been confined chiefly to the Benares districts, and the province of Malwah, where it is extensively cultivated, and yields a large revenue to Government.

The principal export of cotton was formerly to China; but the export to Great Britain has become very considerable, having amounted to 84,101,961 lbs. in 1848, and to no fewer than 614,578,384 lbs. in 1866. This importation amounts to nearly one half in quantity, and nearly a third in value, of our whole annual consumption of cotton wool!

Notwithstanding the vast, and all but unlimited capacities of British India for the production of sugar, its total export in 1838 amounted to more than two-thirds of the exports of that article from the Mauritius! This miserable result is wholly, or almost wholly, ascribable to the inferior quality of East Indian sugars, and to the very rude and imperfect methods which they were prepared. No doubt it was also, ascribable to the circumstance of the Indian sugars having been burdened, previous to 1836, with a duty of 8s. per cwt. over and above the duty charged on West Indian sugars. But in the course of that year Bengal sugars were put on the same footing, in respect of duties, as those of the West Indian colonies; and in a few years a great improvement has been effected in the manufacture of East Indian sugars, the quality of which are now about equal to the best of those from Jamaica and Demerara. In 1865 the imports from the British East Indies amounted to 342,760 cwt.

The abolition of the discriminating duties in favour of Bengal sugars, being founded on justice and equity, it has since been extended to the other British India, and to Ceylon. Nothing, as already observed, could be more unjust or inconsistent with sound principle than to

### EAST INDIA COMPANY

4,000,000 by the Levant, and 4,000,000 through the Russian frontier. And though it is generally believed by later authorities that this estimate was beyond the mark, still there is no manner of doubt that the drain of bullion to the East was then, and for several years before and after, of the most formidable dimensions. Gradually, however, it began to diminish, partly in consequence of the decrease in the supplies of bullion from America subsequently to 1808, and partly, and we believe principally, from the great and sudden increase in the exports of cottons and other manufactured goods to India which followed the opening of the trade in 1813. Such, indeed, was the influence of these and other concurring causes, that in 1832 and 1833 the export of bullion from England to India had not merely ceased, but the tide had actually begun to set in the opposite direction. This abnormal state of things did not continue for any very lengthened period. For a

few years there was no very decided movement of bullion either from Europe to the East, or from the East to Europe. But this approach to an equilibrium has wholly passed away. The drain of bullion from Europe to the East has again set in with renewed force, and is become deeper and broader than at any former period; and its continued influx, there is no general rise of prices nor anything to show that India is becoming saturated with the precious metals, or even with silver. On the contrary, the supply appears to be this apparently bottomless abyss be not of itself sufficient to swallow up the largest portion, if not the whole, of the late extraordinary additions to the supply of bullion.

#### INDIAN RAILWAYS AND TELEGRAPHS.

The following gives the statistics of Indian Railways and Telegraphs:—

Length of Railways open for Traffic, and the various Traffic Operations, in each Presidency or Province of British India, in each of the Years ended June 30, 1863, 1864, 1865, and 1866.

though there are such quantities continually coming into it, and none going out.' (On the Government of Hindostan, p. 16.)

The comparative security that was lately enjoyed by the natives in most parts of India may have done something to lessen this habit; but one so widely diffused and so deeply rooted cannot be easily or speedily modified: and though the illegal exactions of their rulers were curbed and partially put down in the countries directly under the Company's government, there was in Oude and many other parts of India, previously to the late insurrection, a great deal of disorder, oppression, and robbery. Since that unfortunate outbreak, insecurity and disorders of all sorts have immeasurably increased, and have proportionally stimulated the practice of hoarding. The rebellion raging in China has had similar effects; and we have been assured by those who, from experience and observation, are well qualified to form an opinion on such a subject, that it may be moderately estimated that in India and China, during the half-dozen years ending with 1857, a sum of not less than 100,000,000 sterling has been consigned to the earth.

The circumstances thus briefly noticed may be considered as the leading causes of the all but perennial drain of bullion to the East. Other circumstances, already adverted to, depending on the secular state of the trade between England and Europe generally and the East, have since 1848 largely increased the export of the precious metals from India. But the further details connected with this part of the subject are reserved for the article **PRECIOUS METALS.**

Account of the Imports and Exports of Treasure into and from India during each of the 32 Years ending with 1855-6.

Year	Imports	Exports	Excess of Imports

Excess of Exports			7,098,500

great influx of late years has been due to the general increase of exports from India, and in particular for the years 1862-6, in consequence of payments for cotton. The total import of opium into the presidencies of Bengal, Madras, and Bombay, including British Burmah, for the ten years 1857 to 1865-66, is 176,424,430*l.*, being an average of 17,642,443*l.* per annum.

Considerable obstacles are thrown in the way of Europeans establishing themselves in India, and particularly of acquiring or holding land. This policy was pursued by various considerations; partly by a

wish to prevent the extrusion of the natives from the soil, which it was supposed would be eagerly bought up by Europeans, and partly by the fear lest the latter, when scattered over the country, and released from any effectual control, should offend the prejudices of the natives and get embroiled with them. Now, however, it seems to be the general opinion of those best acquainted with India, that but little danger is to be apprehended from these circumstances; that the few Europeans established in it as indigo planters &c. have contributed very materially to its improvement; and that the increase and diffusion of the English population, and their permanent settlements in the country, are at once the most likely means of spreading a knowledge of our arts and sciences, and of widening and strengthening the foundations of our ascendancy. It is obvious, indeed, that the duration of our power in India must depend on a very uncertain tenure unless we take root, as it were, in the soil, and a considerable portion of the population be attached to us by the ties of kindred, and of common interests and sympathies. In this respect we should imitate the Athenian policy. In a former edition of this work we observed that, looking at the density of population in India, the low rate of wages, the nature of the climate, and other similar circumstances, it seemed very doubtful whether it would ever be the resort of any considerable number of English settlers, at least of such a number as would be sufficient, within any reasonable period, to form anything like a powerful native English interest; and we have now to state that these anticipations have been more than realised, and that though the restraints on the settlement of Englishmen in India have been practically at an end since 1834, there may, no doubt, though we see little reason to anticipate such a result, be a greater emigration to India in time to come; and to whatever extent it may be carried, it promises to be highly advantageous. 'We need not, I imagine,' said Lord William Bentinck, 'use any laboured argument to prove that it would be infinitely advantageous for India to borrow largely in arts and knowledge from England. The Legislature has expressly declared the truth: its acknowledgment has been implied in the daily acts and professions of Government, and in all the efforts of Governments and societies for the education of the people. Nor will it, I conceive, be doubted that the diffusion of useful knowledge, and its application to the arts and business of life, must be comparatively tardy unless we add to prevent the example of Europeans, mingling familiarly with the natives in the course of their profession, and practically demonstrating, by daily recurring evidence, the nature and the value of the principles we desire to inculcate, and of the plans we seek to have adopted. It seems to be almost equally plain, that, independently of their influencing the native community in this way, various and important national advantages will result from there being a considerable body of our countrymen and their descendants settled in the country. To question it, is to deny the superiority which has gained us the dominion of India; it is to doubt whether national character has any effect on national wealth, strength, and good government; it is to shut our eyes to all the perils and difficulties of our situation; it is to hold as nothing community of language, sentiment, and interest between the government and the governed; it is to disregard the evidence afforded by every corner of the globe in which the British flag is hoisted; it is to tell our merchants and manufac-

turers that the habits of a people go for nothing in creating a market; and that enterprise, skill, and capital, and the credit which creates capital, are of no avail in the production of commodities.

In order to facilitate the development of agriculture and the employment of British capital in India, Lord Canning (being Governor-General) issued a series of ordinances in October 1861 for the sale of waste lands, and the redemption of the land tax—the object being to effect the sale of waste lands in perpetuity, discharged from all prospective demand on account of land revenue, and 'permission to redeem the existing sum equal in value to the revenue redeemed.'

III. EAST INDIES, EXTENT, POPULATION, MILITARY FORCE, REVENUE, ETC.

1. Extent, Population, &c. of British Dominions in Hindostan.

Abstract of Area and Population of India, distinguishing British, Native, and Foreign Native States, according to latest Returns. (Issued from India Office, May 1868.)

	Area in Square Miles	Population
British India.		
Under the Governor-General of India in Council	46,454	5,619,955
Lieutenant-Governor of Bengal	199,915	37,505,699

Chief Commissioner of Outer Provinces	22,456	6,508,281
Total under British administration	114,718	9,104,511
Native States	917,292	113,585,769
In Bengal - West Provinces	117,451	4,152,927
Punjab	8,458	2,291,400
Central India	103,412	7,151,538
Madras	185,610	14,622,587
Bombay	116,125	12,880,224
Total of Native States	66,004	6,804,625
Foreign Native States	596,790	47,309,159
Under French Government	188	205,847
Portuguese Government	1,066	315,262
Total of Foreign Native States	1,254	517,109
Total Area and Population of India	1,215,335	192,012,137

The principal native states are Hyderabad, the Nizam's dominions, Nepal, Seindia, Holkar, Mysore, Rajpootana, Cashmere, Guzerat, Travancore, &c. These states are, for the most part, surrounded by British territories, and generally administered in accordance with the advice of British agents appointed to reside at their respective courts. It may be thought that their entire absorption into the British dominions would be desirable; but though this would most likely be beneficial in the end, it could not fail to occasion much discontent. The annexation of Oude by Lord Dalhousie, notwithstanding its government was of the worst possible description, is believed to have been a prominent cause of the late rebellions, and it is right to add that the annexation policy of that distinguished statesman, which was looked on with so much favour, is now repudiated by the most eminent authorities both in this country and India.

In 1805, according to the official returns, the total number of British-born subjects in Hindostan was 31,000. Of these, 22,000 were in the army as officers and privates; the civil officers of Government and mariners who resided in India were about 2,000; the officers and mariners who resided in India under covenant, about 5,000; the officers and practitioners in the courts of justice, 300; the remaining 1,700 consisting of adventurers who had smuggled themselves out in various capacities. Since the date above mentioned no detailed reports have been published; but there is no reason to believe that down to the outbreak of 1857 the total number of British subjects in Hindostan exceeded 45,000 or 50,000, if we remove the removal of the restrictions on their settlement having, as already seen, added very few to the previous number. Now (1868), however, they are estimated at about 100,000.

The army required for the protection of these extensive provinces, and for the retaining them under due subordination, has been, with the exception of that of Russia, probably the largest standing army in the world. In 1796 it amounted to 55,000; in 1864, 1865, and 1866 it consisted of the following effective force, in British, native, and contingent native troops:—

Return of the Actual Strength of Her Majesty's Forces (Royal and Local Troops) in British India, May 1, 1864, on April 1, 1865, and on March 1, 1866.

N.B.—Including the Civil Force not under the Orders of the Commander-in-Chief.

The contingent troops of the Native States commanded by British officers, and available, under treaties, to the British Government, may be estimated at about 25,000 men, chiefly furnished by the Nizam, Seindia, Mysore, and the Guicowar. Each presidency has its separate army, commanded-in-chief, staff &c.; but the commander-in-chief of the Supreme Government has a general authority over the armies of all the presidencies. Among the native troops, called *Sepoys*, the infantry consists chiefly of Hindoos, and the cavalry fauty consists chiefly of high-caste men, but in the Madras and Bombay armies men of all castes and denominations were enlisted. The troops are not

raised by any forced levy or conscription; and service in India is quite voluntary, and has become so popular that each regiment has had a number of supernumeraries ready to take the place of such soldiers as die or leave. The men here well paid, clothed, and fed. Corporal punishment of natives is not allowed, imprisonment being the Indian as in the French army, the engine by which discipline is kept up. The mutiny in 1857 the native army has considerably reduced and reorganised, and native artillery has been abolished. The regular army in India is now entirely European.

before the Parliamentary committees, in 1832 and 1833, as to the real state of the Indian army, and the degree of dependence to be placed on it; but none could have anticipated the entire, or all but the entire, defection of the Bengal native army, and the bloodshed and calamities by which it was followed. If we wish to retain possession of this country, we must in future depend less on the native, and more on the European force distributed over its surface.

Two systems are open to us, on either of which we may attempt permanently to establish our power in India, viz.: 1st. By maintaining the laws and customs, and outwardly respecting the religions and other prejudices, of the natives; and 2nd. By vigorously labouring to subvert all these, and to effect a moral and religious revolution by, in as far as possible, Anglicising the country. We have hitherto acted on the first of these plans; and though its results have not certainly been of the most satisfactory description, it is the safest and most economical, the most in accordance with the tolerant spirit of the age, and it might, in the course of centuries, if our ascendancy were so far prolonged, lead to nearly the same results as the second. The latter, however, provided it were skillfully conducted, and that we were prepared to maintain a force in India adequate to suppress any disturbance that might take place, particularly at the outset of the plan, would accomplish its object in a much shorter period, and would probably be, in the end, the best for all parties, and more especially for the natives.

*Advantage of India to England.*—The popular opinions in regard to the vast advantages derived from England from the government of India are as numerous as can well be imagined. It is doubtful, indeed, whether its advantages compensate for its disadvantages. India never has been, and never can be, a field for the resort of ordinary emigrants. It has, it is true, furnished an outlet for considerable numbers of well-educated young men of the middle classes, but the fortunes of those who return to spend the evening of their life in England are far short of compensating for the outlay on themselves and on those who think that the legitimate trade we carry on with India (we say legitimate, for a considerable portion of our trade with India is carried on in violation of the laws of England) is greater than it would have been had India continued subject to its native rulers; neither is it any means improbable that the large public debt of India will, in the end, have to be partially provided for by this country.

high destiny and glory of providing for the generation and well-being of 190 or 200 millions of human beings; but we have yet to learn whether this be not an undertaking that is greatly beyond our means, and whether, in attempting to elevate a debased and enervated race (supposing that we really make such an attempt) 12,000 miles from our shores, we may not be sapping the foundations of our own power and greatness.

Nothing during the outbreak of 1857 has been more extraordinary than the fact of its having failed to bring forward a single native chief of talent. In every contest the inferiority even of the best drilled sepoy, when brought face to face with Europeans, has been most striking. No superiority of numbers gave them a chance of success. They continue to be precisely what they were at Plassey and Assaye.

*2. Revenue and Expenditure of British India.*—The far greater part of the revenue of India is at present, and has always been, derived from the soil. The land has been held by its immediate cultivators generally in small portions, and have been under the obligation of making an annual payment to Government of a certain portion of the produce of their farms, which might be increased or diminished at the pleasure of the sovereign, and which has, in almost all cases, more than a bare subsistence. Under the Mohammedan government, the gross produce of the soil was divided into equal or nearly equal shares between the ryots, or cultivators, and the Government. We regret we are not able to say that the British Government has made any material deductions from this enormous assessment. Its oppressiveness, with the impossibility of assessing it on anything like a fair and sound principle, have done far more than anything else to prevent our ascendancy in India, and the comparative tranquillity and good order we have introduced, from having the beneficial effects that might have been anticipated. The cultivators throughout Hindostan are proverbially poor; and till the amount of the assessment to which they are subject be effectually reduced, and they are secured from the interference of the revenue officers, they cannot be otherwise than wretched. They are commonly obliged to borrow money, to buy their seed and carry on their operations, at a high interest, on a species of mortgage over the ensuing crop. Their only object is to get subsistence—to be able to exist in the same obscure poverty as their forefathers. If they succeed in this, they are satisfied. Mr. Colebrooke, whose authority on all that relates to India is so deservedly high, mentions that the

Calculations of the books for 1865-66 have been taken as the basis of these figures: differences will appear on a comparison with the books for 1866-67, in which the amounts were posted from separate debt statements, and not from the books, the books for 1865-66 not being ready.

Even such accounts of the financial state of our Eastern empire may be at variance with the exaggerated ideas entertained respecting it by a large proportion of the people of England; and as by foreigners, it will excite no surprise in the mind of anyone who has ever reflected on the subject. It is due indeed to the directors to state, that while in power, though they occasionally acted on erroneous principles, they always exerted themselves to enforce economy in every branch of their expenditure, and to impose and collect their revenues in the best and cheapest manner. But though they succeeded in repressing many abuses, it would be idle to suppose that they should

ever have succeeded in entirely rooting them out. How can it be imagined that strangers sent to India, conscious that they are armed with all the strength of government, placed under no real responsibility, exempted from the salutary influence of public opinion, fearing no effectual exposure through the medium of the press, and anxious only to accumulate a fortune, should not occasionally abuse their authority? or that they should manage the complicated and difficult affairs of a vast empire, inhabited by a race of people of whose language, manners, and habits they are almost wholly ignorant, with that prudence, economy, and vigilance, without which it were idle to expect that any great surplus revenue should ever be realised?

**EBONY** (Ger. ebenholz; Dutch, ebbenout; Fr. ébène; Ital. ebano; Russ. ebenowoderowo; Lat. ebenus). A species of wood brought especially from the West and East Indies. It is exceedingly hard and heavy, of great durability, susceptible of a very fine polish, and on that account used in mosaic and other inlaid work. There are many species of ebony. The best is that which is jet black, free from veins and rind, very compact, astringent, and of an acrid, pungent taste. This species (denominated by botanists *Diospyros Ebenus*) is found principally in Madagascar, the Mauritius, and Ceylon. The centre of the tree is said to be valuable. In 1866 only of the tree is said to be valuable. In 1866 we imported 1,922 tons of ebony, principally from the West coast of Africa, Ceylon &c. Besides the black, there are red, green, and yellow varieties; but the latter are not so much esteemed as the former. Cabinet-makers are in the habit of substituting pear-tree and other woods dyed black for genuine ebony: these, however, want its polish and lustre, though they hold glue better. The price of ebony varied in the year 1866 from 8l. 13s. 6d. to 9l. 12s. 6d. the ton. The duty, 1s. per ton, was repealed from March 26, 1866.

**EEL** (*Anguilla marmorata* of Linnaeus). A fish, the appearance of which is too well known to require any description. It is a native of almost all the waters of Europe, frequenting not only rivers, but stagnant pools. Eels are in many places extremely abundant, particularly in Holland and England. Several ponds are appropriated in England to the raising of eels, and considerable numbers are taken in the Thames and other rivers. But a large portion of the eels used in England are furnished by Holland. Indeed, very few except Dutch eels are ever seen in London; and even Hampton and Richmond are principally supplied by them. The trade is carried on by Dutch traders, who employ in it several small vessels, by means of which the market is regularly and amply provided for. A cargo of eels is supposed to average from 15,000 to 20,000 lbs. weight, and was charged down to 1853, when it was repealed,

with a duty of 13l. 13s. In 1866, 13,710 cwt. of eels were imported from Holland, valued at 43,187l.

**EGGS** (Fr. œufs; Lat. ova). Eggs differ in size, colour, taste &c. according to the different species of birds that lay them. The eggs of poultry are those most commonly used as food, and form an article of very considerable importance, a commercial point of view. The eggs of plovers, which are esteemed a great delicacy, are also extensively used in London during a part of the season, and make, indeed, a perpetually recurring dish at fashionable dinners. Vast quantities of the eggs of poultry are brought from the country to London and other large towns, besides being very largely imported from the Continent. At this moment the trade in eggs forms no inconsiderable branch of our trade with France, and affords constant employment to a number of small vessels.

In 1854 the duty on eggs was fixed at 8d. per cubic foot (about 200) on those brought from a foreign country, and at 4d. per ditto on those brought from a British possession. This duty, which produced 24,721l. in 1858, was repealed that year.

In 1866 we imported no fewer than 438,878 cwt. of eggs, almost entirely from France, Belgium, Spain, but especially France, which furnished by far the largest portion of the entire supply. The eggs were valued at 1,105,653l. They are reckoned by the great hundred of 120.

Plovers' eggs are found in most parts of England, but especially in the fens. Considerable supplies are also derived from Holland. Eggs are reckoned at 40 cubic feet to the ton.

**EJOO.** [GOMUT.]

**ELEMI** (Fr. résine élémi; Ger. oelbaumharz; Span. gomma de limon). A concrete, resinous substance, the botanical source of which is undetermined; procured originally from the Levant, and now supplied chiefly from Manilla. It is the most part in pharmacy. It is a soft, resinous mass, becoming harder and more resinous by age, of a yellowish-white colour, and a rather fragrant, fennel-like odour, almost entirely soluble in rectified spirit. (*British Pharmacopœia of the Medical Council, 1867.*)

**ELEPHANTS' TEEETH.** Under 20 lbs. weight they are called serivellas. In Bengal and Andras they are reckoned at 16 cwt. to the bulk, 50 cubic feet in cases; Bombay 18 cwt. bundles, 20 cwt. loose. (Stevens *On Stone* [Ivory].)

**ELM** (*Ulmus*). A tree common in Britain, said to have been introduced to this country by the Crusaders. The tree does best in low and moist soils. It attains to a great age and lives to a great age: its trunk is soft and crooked, and it is of slow growth. The

of the heart-wood of elm is generally darker than that of oak, and of a redder brown. The sap-wood is of a yellowish or brownish white, with pores inclined to red. It is in general porous, and cross-grained, sometimes coarse-grained, and has no larger septa. It has a peculiar odour. It twists and warps much in drying, and shrinks very much both in length and breadth. It is difficult to work, but is not liable to split, and bears the driving of bolts and nails better than any other timber. In Scotland, chairs and other articles of household furniture are frequently made of elm wood; but in England, where the wood is inferior, it is chiefly used in the manufacture of collars, casks, packing cases, pumps, pipes &c. It is appropriated to these purposes from its great durability in water, which also occasions its extensive use as piles and planking for wet foundations. The naives of wheels are frequently made of elm; those of the heavy waggons and drays of London are made of oak, which supports a heavier weight, but does not hold the spokes so firmly. Elm is said to bear transplanting better than any other large tree. (Tredgold's Principles of Carpentry, pp. 201-203 &c.)

**ELSINEUR or HELSINGOR.** A town of Zealand, on the Sound, about 22 miles north of Copenhagen, lat. 56° 2' 17" N., long. 12° 38' 2" E. Population 8,442 in 1861. Adjacent to Elsinour is the castle of Cronborg, which commands the

entrance to the Baltic by the Sound. All merchant ships passing to and from the Baltic were obliged, previously to 1857, to salute Cronborg Castle by hoisting their colours when abreast of the same; and no merchant ship was allowed to pass the Sound without clearing out at Elsinour, and paying toll, according to the provisions in the treaties to that effect negotiated with Denmark by the different European powers. The first treaty with England having reference to this subject is dated in 1450. The Sound duties had their origin in an agreement between the King of Denmark on the one part, and the Hanse Towns on the other, by which the former undertook to construct light-houses, landmarks &c. along the Kattegat, and the latter to pay duty for the same. The duties have since been varied at different periods; but being a serious obstruction to navigation, and much objected to, they were finally repealed in 1857, on compensation being made to Denmark according to the subjoined treaty. The accompanying plan of the Sound is taken from the Admiralty Chart, compiled by Danish authorities.

*Navigation of the Baltic.*—This is exhibited in the following account of the number of ships that passed (going and returning) the Sound at different periods, previous to the repeal of the dues, from 1777 to 1856, specifying the countries to which they belonged:—

Countries	1777	1780	1785	1790	1811	1816	1820	1825	1830	1835	1840	1851	1856

the statements in this table for the years 1777 to 1780 are taken from the valuable work entitled *Voyage de Deux Français au Nord de l'Europe* (i. 369); the other years are taken from the reports sent by the British consul at Elsinour, and other sources. We have seen no two returns of shipping that pass the Sound which quite differ, though the differences are not very material. The British consul first began to send returns of shipping in 1831.

The Oder, Vistula, and other great rivers which empty into the Baltic, and the many large cities which are built on or near its shores, have made it the theatre of a very extensive commerce. In respect of importance was much increased by the introduction of Petersburg, the trade of which is of great extent and value. Raw products, such as iron, copper, tin, lead, flax, hemp, and flax, linseed, bristles, wool &c., constitute the principal articles of export from the Baltic ports; and the principal articles of import, such as salt, coal &c. being among the principal articles of import. The leading ports, setting out from the Sound, are Copenhagen, Lübeck, Wismar, Danzig, Swinemünde, Dantzic (which, next to Stettin, is the principal European port for the export of wheat), Königsberg, Memel, Riga,

Petersburg, and Stockholm. The United Kingdom has by far the largest portion of the foreign trade of the Baltic. This is evident from the fact of the British ships passing the Sound greatly exceeding those of any other country. In 1857 we imported from the Baltic about 1,580,000 qrs. wheat, 980,000 do. barley, and 1,260,000 do. oats; and in 1856, 14,876,500 cwt. of wheat, 4,314,722 cwt. of barley, and 6,172,870 cwt. of oats, exclusive of very large quantities of tallow, hemp and flax, timber, linseed, bristles &c.

The harbour as well as the railway bedding or patent slip, which were finished in the autumn of 1863, were (says Mr. Hudson, the United States' Consul at Elsinour) 'of the greatest benefit to the town and its shipping. The harbour contains about 200,000 square feet, with a depth of 18 feet. The docks are 1,740 feet in length, with plenty of good wharfage. The depth at the mouth of the harbour is 18 feet, with a breadth of 128 feet. The patent slip is an inclined plane of 692 feet in length, being 265 feet above and 427 feet under the water, and a stationary engine raises the vessel on the bedding. Vessels of 1,000 tons burden are raised with the greatest facility, and 2 good-sized vessels can occupy the bedding at the same time. It is well worthy the attention of masters and owners

of vessels. Repairs are generally done with despatch. (For new Danish laws as to measurement of vessels, see COPENHAGEN.)

**Pilotage &c.**—When ships come into Elsinour roads, or lie wind-bound near the Lappen, water-men come on board to enquire if the master will be carried ashore to clear; and in rough weather it is always best to make use of their services, their boats being generally very safe. The Danish authorities have published a table of rates, being the highest charge that can be made by the boatmen upon such occasions; but captains may bargain with them for as much less as they please. Most ships passing the Sound take on board pilots, the signal for one being a flag at the fore-topmast-head. Those bound for the Baltic take a pilot at Elsinour, who either carries the ship to Copenhagen, or Dragoe, a small town on the south-east extremity of the Island of Amack, where she is clear of the grounds. Those leaving the Baltic

take a pilot from Dragoe, who carries the ship to Elsinour. Sometimes, when the wind is fresh from the E. and S.E., it is impossible for a ship bound for Copenhagen or the Baltic to double the point of Cronborg; and in that case an Elsinour pilot is sometimes employed to moor the ship in the channel towards Kull Point on the Swedish shore, in lat. 56° 18' 3" N., long. 12° 26' E. But this does not often happen, as the Danish Government employ steam tugs; for the special purpose of bringing ships, in adverse weather, round Cronborg Point. The pilots are regularly licensed, so that, by employing them, the captain's responsibility is at an end. Their charges are fixed by authority, and depend on the ship's draught of water. We subjoin a copy of the tariff applicable to pilots taken on board at Elsinour to carry ships to Dragoe, Copenhagen, or Kull Point, with the sums both in silver and in Rigsbank paper dollars.

Pilotage from April 1 to September 30.

N.B.—When a pilot is taken on board at Dragoe to carry a ship to Elsinour, the charge is the same as that given under the first head of the above column. (*Archives du Commerce*, tome iii. p. 145.)

The *Moneys, Weights, and Measures* of Elsinour are the same as those of Copenhagen (which see), except that the rixdollar is divided into 1 ort instead of 6 mares; thus, 24 skillings make 1 ort, and 4 Orts 1 rixdollar.

**Treaty for Abolition of Sound Dues agreed to at Copenhagen, on March 14, 1857, by the following Powers:**—The Queen of the United Kingdom of Great Britain and Ireland, the Emperor of Austria, the King of the Belgians, the Emperor of the French, the King of Hanover, the Grand Duke of Mecklenburg-Schwerin, the King of Oldenburg, the King of the Netherlands, the King of Prussia, the Emperor of Russia, the King of Sweden and Norway, and the Senates of the Free Hanseatic Cities of Lübeck, Bremen, and Ham-

burg, on the one part; and the King of Denmark, on the other part.

I. The King of Denmark engages to the Queen of the United Kingdom of Great Britain and Ireland &c.—

1. Not to levy any duty of customs, tonnage, lights, lighthouses, beacons, or any other dues whatever, either in regard to vessels or cargo upon ships sailing from the North Sea to the Baltic, or vice versa, on passing through the Belts or the Sound, whether they simply pass the Danish waters or whether they anchor or lie-to therein. No vessel whatsoever, whether by casualty or by commercial operation, shall henceforward be subjected, under any pretext, to any detention or impediment whatever in the passage of the Sound or of the Belts; but the King of Denmark expressly reserves to himself the right of regulating, by special arrangements, the mode of visiting or detention, the treatment, the regard to duties and customs, of vessels belonging

to Powers which are not Parties to the Treaty.

2. Not to levy any duty of departure, or may eneur or depart with cargo on board, or have not performed therein, nor upon that to which such vessel has been liable on account of the Sound and the Belts, the stipulations of the Treaty, it is well understood to be so abolished, and he levied either in the Danish ports, shall by any augmentation of port and customs duties, introduction, for the navigation or customs, or otherwise.

II. The King of Denmark engages to the above-mentioned Powers—

1. To preserve at all the lights and buoys, and to facilitate navigation at the Belts, and

2. To take into consideration the utility or expediency of the position of the former buoys, beacons, and the number thereof; and any kind upon foreign

3. To superintend, and to regulate, the pilotage, the employment of pilots, and the option of carrying on board, and it is understood that

moderate; that the same for Danish vessels, and that the charge of those vessels on

4. To permit, with the individuals, Danish vessels to station in the Sound and on the Belts, and in the towing of vessels, and in their

To extend to a ship or may hereafter be towed by the Elbe with those lines of commerce, and foreign goods

taric; amadou, natural animals of all kinds; slates and silver in bars and coins (bitumen) asphaltic; various brooms and rags; article 'brushes'; spermaceti, animal, heat, barley, and other the use of apparatus; float-works; as floats for fishing; terra sigillata; bricks; pounded

to Powers which are not parties to the present Treaty.

2. Not to levy upon such of the said vessels as may enter or depart from Danish ports, whether with cargo or in ballast, and whether they have or have not performed any operation of commerce therein, nor upon their cargoes, any tax whatever to which such vessels or their cargoes would have been liable on account of the passage through the Sound and the Belts, and which is abolished by the stipulations of the preceding paragraph; and it is well understood that the taxes which shall be so abolished, and which consequently shall not be levied either in the Sound and the Belts or in Danish ports, shall never be reimposed indirectly by any augmentation, for that purpose, of the port and customs dues now existing, nor by the introduction, for that purpose, of fresh dues of navigation or customs; nor in any other manner whatever.

II. The King of Denmark engages, moreover, to the above-mentioned high contracting parties—

1. To preserve and maintain in the best state all the lights and lighthouses actually existing either at the entrance or in the approaches to his ports, harbours, roads, and rivers or canals, or along his coasts, as well as the buoys, beacons, and sea-marks actually existing, and serving to facilitate navigation in the Kattegat, the Sound, and the Belts.

2. To take into most serious consideration, as heretofore, in the general interest of navigation, the utility or expediency either of changing the position or the form of such lights, lighthouses, buoys, beacons, and sea-marks, or of increasing the number thereof; the whole without charge of any kind upon foreign vessels.

3. To superintend, as heretofore, the service of pilotage, the employment of which, in the Kattegat, the Sound, and the Belts, shall at all times be at the option of captains and masters of vessels. It is understood that the charges for pilotage shall be moderate; that the rate thereof shall be the same for Danish vessels and for foreign vessels; and that the charge for pilotage shall be exacted from those vessels only which shall have voluntarily employed pilots.

4. To permit, without any restriction, any private individuals, Danes or foreigners, to establish and to station in the Sound and in the Belts, and on the same conditions, whatever nation they may belong to, tugs serving exclusively to the towing of vessels which may desire to employ them.

5. To extend to all the roads or canals which now or may hereafter connect the North Sea and the Elbe with the Baltic, the exemption of dues which is at present accorded, on some of these lines of communication, to the national foreign goods enumerated in the following

article: amadou, not prepared; yellow amber; animals of all kinds; antimony; live trees and shrubs; slates and slate-pencils; slate for roofing; silver in bars and for remelting; arsenic; asphaltum (bitumen Judaicum or glutinosum bituminosum); asafetida; valonia; berries or seeds of juniper; brooms and rubbers (unless comprised under the article 'brushes'); bamboo, Indian reeds, and other rough reeds not manufactured; spermaceti, and oil of spermaceti; grain; wheat, barley, oats, maize, rye, wheat, vetches; or the use of apothecaries; dye-woods; wood of all kinds; feat-wood, wood to be used instead of floats for fishing nets; bole, white and red terra sigillata; borax, crude or refined; bricks; pounded brick, or brick powder;

bronze or bell-metal; brushwood (*buisson*); bulbs or roots of flowers; cadmium; calamine; camphor; cantharides; floor-stones (*carreaux*); maps and charts; castoreum; ashes; potash, soda, and other kinds of ashes; wooden hoops; hemp, dressed or undressed; charcoal; teasles; wheelwright's work (*charronnage*); lime; rags; cement of all kinds; wax; ish glass; shells; corals; cordage; ox and cow horns (or horns of black cattle) as well as horn-tips; cotton; copper; rose-copper (Garkupfer, not forged or prepared by rollers) and copper in sheets for coining; waste of grain; grits as forage for cattle; bran, straw, chaff, and other waste of grain; elephant's teeth or ivory; teeth of the walrus (the sea-horse or sea-cow); law or business documents; staves, or stave wood; tortoise-shell; patterns of no value; sealboards for binders, shoemakers, furbishers, as well as split twigs; meerschmaum; packages, old or used; casks, cases, trunks, chests, bags or sacks, and old wicker flasks, empty; emery; tin, raw, unwrought, and rasped tin (*étain râpé*); whalebone, whalefins, whalebone not split; flour or meal made of grain which is free from transit duty; feldspar, not pulverised; pig-iron, raw; bar-iron of all kinds (hoop-iron, however, is liable to duty); beans; figures and statues in plaster; flowers and flower-plants; flores cassia (cassia huds); hay; dung and artificial manure; also, for example, patent manures, *noir animal* &c. (Chile saltpetre, sulphated ammoniac, and similar goods are not exempt, notwithstanding they may be intended for manure. Plaster in powder is, however, exempt from transit duty when certified as intended to be used only for manure); rough ice (natural); acorns; globes; tar and tar-water; seeds, hemp, flax, colza, and other seeds of all kinds, as well as seeds for the use of apothecaries, as, for example, fennel-seed (caraway and aniseed are liable to duty); clothes and baggage of travellers, household furniture, and implements which have been used, if they are transported in consequence of a change of residence; clothes or garments, which have been worn, transported, according to the judgment of the officers of customs, as travellers' baggage, without its being necessary for the owner to accompany them; fresh pot-herbs, as well as whortleberries or bilberries, strawberries, raspberries, gooseberries, red or spotted whortleberries (*airelles rouges ou punctues*), green gooseberries, hips, fresh grapes, horse-radish, and onions; coal of all kinds, as well as coke and cinders; oil of hemp; oysters; reed for thatching; wool of all kinds; milk; brass, unwrought (not forged and not prepared by rollers); blubber, liver &c. for making train-oil; bacon; lentils; lees of wine in a dry state (sediment of wine); cork; flax, dressed or undressed; printed books with the prints which belong to them, bound or unbound; malt; manganese; manna; medals; metals, unwrought (bronze and other alloys of metals similar to brass), not forged, and not prepared by rollers; black lead; ore, not melted, of all kinds; minerals, and objects of natural history, such as earths, stones, and ores, plants and fruits, shells, insects, birds, and other animals, stuffed or preserved in spirit of wine for cabinets of natural history or scientific collections; models of all kinds; coin of all kinds; moss for packing and stuffing, and *coton silvestre*; music, manuscript or printed; musk; mother-of-pearl, rough or in shells; mats, used; galls; objects of art, such as statues, busts, bas-reliefs; opium; gold in bars, and for remelting; peeled, shelled, or hulled barley, and groats made of grain which is free from transit duty; bones; osiers, peeled or unpeeled; rope-maker's work, including hemp-webs and fishing-

is intended as a hostile demonstration. But an embargo for the prevention of intercourse with others rarely answers: that stoppage of trade which it is intended to effect is in general as injurious to those by whom the embargo is enacted as to those against whom it is levelled.

**EMERALD** (Fr. *émeraude*; Ger. *smaragd*; Ital. *smeraldo*; Lat. *smaragdus*; Span. *esmeralda*; Pers. *paheh*; Arab. *zamarud*). A precious stone in high estimation. It is distinguished from all other gems by its peculiar *emerald green* lustre, varying in intensity from the palest possible tinge to a full and deep colour, than which, as Pliny has truly stated, nothing can be more beautiful and pleasing; 'nullius coloris aspectus jucundior est.' It emulates, he continues, if it do not surpass, the verdure of the spring; and the eye, satiated by the dazzling glare of the more brilliant gems, or wearied by intense application, is refreshed and strengthened by the quiet, enlivening green of the emerald. In Pliny's time the best came from Scythia. Those met with in modern times do not often exceed the size of a walnut. Some of a much larger size, and perfect, have been found, but they are extremely rare. Nero used one as an eye-glass in surveying the combats of the gladiators. Hitherto it has always been found crystallised. Specific gravity from 2.6 to 2.7. (Plin. *Hist. Nat.* lib. xxxvii. c. 5; Thomson's *Chemistry*.)

The green of the emerald is said to be derived from organic substances.

The emerald is found at Muzo in New Granada, near Santa Fé de Bogotá, in a bituminous limestone rock. The mines were let at a rent of 8,000¢ per annum, but the speculation does not seem to have prospered. It is also found in mica slate at Henschel, in Salzburg, in Siberia, and in the Burmese empire near Ava. But the emerald has been known from the remotest ages. It is rarely found perfect. Lately it has enormously increased in value. Mr. Emanuel says that perfect emeralds of deep rich grass green are now worth from 20l. to 100l. per carat. The size of the emerald does not increase its value in the same ratio that it does that of the diamond and ruby. It may be said that there are many very fine emeralds in European and Asiatic treasuries, those which belong to the Russian, Saxon, and Papal crowns being singularly large and beautiful. In the British treasury there is an emerald weighing 100 carats, and the Duke of Devonshire has one of 100 carats in weight. (Emanuel *On Diamonds* &c.)

**EMERY** (Fr. *émeril*, *émeri*; Ger. *smirgel*; Ital. *smerglio*, *smeregio*; Span. *esmeril*; Russ. *smirka*; Lat. *smiris*). A mineral brought to us from Naxos, Smyrna &c. It occurs also in many, Italy, and Spain. It is always in masses, and mixed with other minerals. Its colour is intermediate between greyish black and grey. Specific gravity about 4. Lustre vitreous and adamantine. Emery is extensively used in the polishing of hard bodies. Its powder is obtained by trituration. (Thomson's *Chemistry*.)

A part of the emery that is at present used in this country comes from Asia Minor. In 1847 an English geologist discovered a deposit of emery in the vicinity of Smyrna, and the supplies from that source are very extensive. The quantity, however, derived from Asia Minor varies greatly from year to year. Thus for the five years ending with 1851 the imports into the United Kingdom from that source have been 6,502, 33,964, 27,610, 3,150, and 1,000 cwts. The price of emery is about 9s.

There is also a really a coarse variety of corundum.

It is found in Cornwall, and latterly it is said to have been discovered in large quantities in California.

When Mediterranean wheat is freighted at 1s. per quarter, emery stone is rated at 4s. 8d. per ton of 20 cwt.

**ENGROSSING.** 'The buying up of corn and other dead victuals, with intent to sell them again.' (Blackstone, book iv. c. 42.) We have shown, in another article, how absurd it is to suppose that this practice should have any injurious influence [COIN LAWS]. But, for a long time, most scarcities that occurred were either entirely ascribed to the influence of engrossers and forestallers [FORESTALLING] or, at least, were supposed to be materially aggravated by their proceedings. In consequence, however, of the prevalence of more just and enlarged views upon such subjects, the statutes that had been made for the suppression and punishment of engrossing, forestalling &c. were repealed in 1772. But notwithstanding this repeal, engrossing continues to be an indictable offence, punishable at common law by fine and imprisonment; though it is not at all likely, were an attempt made, that any jury would now be found ignorant or prejudiced enough to convict any one on such a charge.

**ENTRY, BILL OF.** [IMPORTATION.]

**ERMINE** (Ger. *hermelin*; Fr. *hermine*, *ermine*; Russ. *gornostai*). A species of weasel (*Mustela candida*, Linn.) abundant in all cold countries, particularly Russia, Norway, Lapland &c., and producing a most valuable species of fur. In summer the ermine is of a brown colour, and is called the *stoat*. It is in winter only that the fur has that beautiful snowy whiteness and consistence so much admired. [FURS.]

**ESPARTO.** A species of rush—the *Stipa tenacissima* of botanists. It is found in the southern provinces of Spain, and is particularly abundant on all the sterile, uncultivated, and mountainous districts of Valencia and Murcia. Beekmann (*History of Inventions*, vol. ii. p. 288, Eng. ed.) supposes, apparently with good reason, that the *Stipa tenacissima* is the plant described by Pliny under the name of *Sparta*, who ascribes its application to useful purposes to the Carthaginians. (*Hist. Nat.* lib. xix. c. 2.) It is still used for the same purposes as in antiquity, being manufactured into cordage, shoes, matting, baskets, nets, mattresses, sacks &c. Cables made of esparto are said to be excellent: being light, they float on the surface of the water, and are not, therefore, so liable as hempen cables to be cut or injured by a foul bottom. They are exclusively made use of in the Spanish navy. Esparto is largely consumed in the manufacture of *alpergates*. These are light shoes worn by the Valencian peasantry, having platted soles made either of esparto or hemp, but principally of the former. They are extremely cheap and commodious in hot climates; and besides being in extensive demand at home, used to be exported in immense quantities to both Indies: but since the emancipation of Spanish America this trade has greatly fallen off. The Spanish peasantry have attained to wonderful dexterity in the manufacture of esparto. 'After having soaked the rush in water, the women and children, without either wheel or spindle, contrive to twist two threads at the same time. This they do by rubbing them between the palms of their hands, in the same manner as a shoemaker forms a thread upon his knees, with this difference, that one motion gives the twist to each thread, and at the same time unites them. To keep the threads asunder, the thumb of the right hand is interposed between them; and when that is wanted for other

## ESTRICH

purposes, the left thumb supplies its place. Two threads being thus twisted into one of the bigness of a large crow-quill, 46 yards are sold for little more than 3*l.*, the materials being worth about 1/2 part of the price. (Townsend's *Travels in Spain*, vol. iii. p. 177—see also p. 129; Fischer's *Picture of Valencia*, Eng. ed. p. 92, and p. 57 &c.)

But despite the falling off in the exports of esparto shoes to America, this branch of industry esparto shoes to America, this branch of industry has materially advanced of late years. Many thousands of women and young persons are said to be constantly employed in the country between Alicante and Almeria in the production of mats, and other light articles, exclusive of great numbers of men engaged in the manufacture of cables and cordage of all sorts. Esparto matting has come into very extensive demand, and the various articles made from the rush, *esparto labrado*, form a considerable item in the exports of Spain. About 20,000 tons are annually shipped from Aguilas, near Carthagena, besides considerable quantities from the latter, Alicante, and Valencia [ALICANT]. They are mostly sent to Marseilles; but partly also to other ports of Spain, and to England and other countries. Machinery has been successfully introduced into the various branches of the manufacture, and the demand for its produce is said to be rapidly extending. We imported in 1866, 70,041 tons of esparto and other vegetable fibre for making paper. (*Annales du Commerce Extérieur*, 1858; *Parl. Papers*; &c.)

ESTRICH or ESTRIDGE (Fr. duvet d'aunetruche; Ital. penna matta di strozzo; Span. plumazo de avestruz; Lat. struthionum pluma molliores). The fine soft down which lies immediately under the feathers of the heaver in the finest is used as a substitute for beaver in the manufacture of hats, and the coarser or stronger sort is employed in the fabrication of a stuff which resembles fine woollen cloth. Estridge is brought from the Levant, Italy, and other parts of the Mediterranean.

EUPHORBIVM (Ger. euphorbengummi; Lat. euphorbium; Fr. euphorbe; Arab. akal-naizab). This is a kind of resin, obtained from Northern Africa, the Cape of Good Hope, the Canary Islands and Western Africa, and also from Egypt and the East. It is exceedingly acrid, producing a sense of insupportable heat in the mouth and throat. At one time it was used in medicine, both externally and internally, but in consequence of its violent action its use is now discontinued. Its chief employment is for veterinary purposes.

EXCHANGE. In Commerce, this term is generally used to designate that species of mercantile transactions by which the debts of individuals residing at a distance from their creditors are cancelled without the transmission of money.

Among cities or countries having any considerable intercourse together, the debts mutually due by each other approach, for the most part, near to an equality. There are at all times, for example, a considerable number of persons in London indebted to Hamburg; but speaking generally, there are about an equal number of persons in London to whom Hamburg is indebted. And hence, when A of London has a payment to make to B of Hamburg, he does not remit an equivalent sum of money to the latter, but he goes into the market and buys a bill upon Hamburg; that is, he buys an order from C of London addressed to his debtor D of Hamburg, requesting him to pay the amount to A or his order. A, having endorsed this bill or order, sends it to B, who receives payment from his neighbour D.

The convenience of all parties is consulted by a transaction of this sort. The debts due by A to B, and by D to C, are extinguished without the intervention of any money. A of London pays C of ditto, and D of Hamburg pays B of ditto. The debtor in one place is substituted for the debtor in another; and a postage or two, and the stamp for the bill, form the whole expenses. All risk of loss is obviated.

A bill of exchange may, therefore, be defined to be an order addressed to some person residing at a distance, directing him to pay a certain sum to the person in whose favour the bill is drawn, or his order. In mercantile phraseology, the person who draws a bill is termed the *drawer*; the person in whose favour it is drawn, the *remitter*; the person on whom it is drawn, the *drawee*; and after he has accepted, the *acceptor*. Those persons into whose hands the bill may have passed previously to its being paid are termed their writing their names on the back, termed the *indorsers*; and the person in whose possession the bill is at any given period is termed the *holder* or *possessor*.

The negotiation of inland bills of exchange, or of those drawn in one part of Great Britain and Ireland on another, is entirely in the hands of bankers, and is conducted in the manner already explained. [BANKING.] Bills drawn by foreign merchants of one country upon another are termed *foreign bills of exchange*, and it is to their negotiation that the following remarks principally apply.

1. *Par of Exchange.*—The *par* of the currency of any two countries means, among merchants, the equivalency of a certain amount of the one in the currency of the other. Thus, according to the mint regulations of Great Britain and France, 1*l.* sterling is equal to 25 francs, which is said to be the *par* between London and Paris. And the exchange between the two countries is said to be at *par* when the two are negotiated on this footing; that is, for example, when a bill for 100*l.* drawn in London is payable, when a bill for 2520 fr. in Paris, and conversely. When London buys a bill on Paris for more than 25 francs, the exchange is said to be in favour of London and against Paris; and when, on the other hand, 1*l.* in London will not buy a bill on Paris for 25 fr. 20 cent., the exchange is against London and in favour of Paris.

The foregoing statements explain what is usually meant by the *par* of exchange, or the exact determination, or the ascertaining the precise equivalency of a certain amount of the currency of one country in the currency of another, is exceedingly difficult. If the standard, one be gold and that of another silver, they must necessarily vary with every variation in the relative values of these metals. This is not all; even where two countries use the same metal for a standard, its value may be different in the one, and in estimating the relative value of exchange between them this difference must be taken into account. In illustration, we may take the case of France and Mexico, which both use silver for a standard; but silver is largely produced in Mexico, is always of a higher value than in France, and is extensively imported into the latter; and taking the cost of this silver at 2 or 3 per cent, it is plain that the exchange would be really at *par* when it appears to be 2 or 3 per cent, against Mexico. But the precious metals, even in contiguous countries, is always exposed to fluctuations in value.

issue or withdrawal of paper, from circumstances affecting the balance of payments &c., as shown above. It is obvious, therefore, that it is all but impossible to say, by merely looking at the mint prices of bullion in each, what is the par of exchange between them. And, luckily, this is not necessary. The importation and exportation of bullion is the real test of the exchange. If bullion is stationary, neither flowing into nor out of a country; its exchanges may be truly said to be at par; and, on the other hand, if there be an efflux of bullion from a country, it is a proof that the exchange is against it, and conversely if there be an influx of bullion into a country.

11. *Circumstances which determine the Course of Exchange.*—The exchange is affected, or made to diverge from par, by two classes of circumstances: first, by any discrepancy between the actual weight or fineness of the coins, or of the bullion for which the substitutes used in their place will exchange, and their weight or fineness as fixed by the mint regulations; and, secondly, by any sudden increase or diminution of the bills drawn in one country upon another.

It is but seldom that the coins of any country correspond exactly with their mint standard; and when they diverge from it, an allowance corresponding to the difference between the actual value of the coins and their mint value must be made in determining the real par. Thus, if, while the standard in weight and purity, those of France were either 10 per cent. worse or debased below the standard of her mint, the exchange, it is obvious, would be at real par when it was nominally 10 per cent. against Paris, or when a bill payable in London for 100*l.* was worth in Paris 277*fr.*

In estimating the real course of exchange between any two or more places, it is necessary to attend carefully to this circumstance: that is, to examine whether their coins are all of the standard weight and fineness, and if not, how much they differ from it. The coins circulating in a country are either pure or debased as to have sunk considerably below their mint standard, or when paper money is at real par only when it is against the country to the extent to which its coins are depreciated. When this circumstance is taken into account, it will be found that during the latter years of the war, the exchange was apparently very much against this country in our favour. The depression of the paper currency in which bills

fluctuations in the actual course of exchange, arising from circumstances affecting the currency of either of two countries together, are nominal only: such as are the result of circumstances affecting their relative value in the actual course of exchange, and the other commodities of precisely the same value. Their debts and credits will be equal, and the real exchange will be at par. The exchange drawn by the one will be exactly equal to that drawn by the other, and their claims will be adjusted without recourse to the transfer of bullion or any other commodity. But it very rarely happens that the exchange is due by any two countries to the same side or the other; and this

balance must affect the exchange. If the debts due by London to Paris exceeded those due by Paris to London, the competition in the London market for bills, on Paris would, because of the comparatively great amount of payments our merchants had to make in Paris, be greater than the competition in Paris for bills on London; and, consequently, the real exchange would be in favour of Paris and against London.

The cost of conveying bullion from one country to another forms the limit within which the rise and fall of the real exchange between them must be confined. If 1 per cent. sufficed to cover the expense and risk attending the transmission of money from London to Paris, it would be indifferent to a London merchant whether he paid 1 per cent. premium for a bill of exchange on Paris, or remitted money direct to that city. If the premium were less than 1 per cent., it would clearly be his interest to make his payments by bills in preference to remittances; and that it could not exceed 1 per cent. is obvious; and that it one would prefer remitting money to buying a bill at a greater premium than sufficed to cover the expense of a money remittance. If, owing to the breaking out of hostilities between the two countries, or to any other cause, the cost of remitting money from London to Paris were increased, the fluctuations of the real exchange between them might also be increased; for the limits within which such fluctuations may range correspond in all cases with the cost of making remittances in cash.

Fluctuations in the nominal exchange, that is, in the value of the currencies of countries trading together, have no effect on foreign trade. When the currency is depreciated, the premium which the exporter of commodities derives from the sale of the bill drawn on his correspondent abroad is only equivalent to the increase in the price of the goods exported, occasioned by this depreciation. But when the premium on a foreign bill is a consequence, not of a fall in the value of money, but of a deficiency in the supply of bills, there is no rise of prices; and in these circumstances the unfavourable exchange operates as a stimulus to exportation. As soon as the real exchange diverges from par, the mere inspection of a price-current is no longer sufficient to regulate the operations of the merchant. If it be unfavourable, the premium which the exporter will receive on the sale of his bill must be included in the estimate of the profit he is likely to derive from the transaction. The greater that premium, the less will be the difference of prices necessary to induce him to export. And hence an unfavourable real exchange has an effect exactly the same with what would be produced by granting a bounty on exportation equal to the premium on foreign bills.

But for the same reason that an unfavourable real exchange increases exportation, it proportionally diminishes importation. When the exchange is really unfavourable, the price of commodities imported from abroad must be so much higher, exclusive of expenses, the ordinary profit of the importer must pay for a foreign bill if he remit one to his correspondent, or for the discount, added to his correspondent, his correspondent draw upon him. A less quantity of foreign goods will, therefore, suit the market when the real exchange is unfavourable; and fewer payments having to be made abroad, the competition for foreign bills will be diminished, and the real exchange will be proportionally

EXCHANGE

594

In the same way it is easy to see favourable. In the same way it is easy to see that a favourable real exchange must operate as a duty on exportation, and as a bounty on importation.

It is thus that fluctuations in the real exchange have a necessary tendency to correct themselves. They can never, for any considerable period, exceed the expense of transmitting bullion from the debtor to the creditor country. But the exchange cannot continue either permanently favourable or unfavourable to this extent. When favourable or unfavourable it corrects itself by restricting exportation and facilitating importation; and when unfavourable, it produces the same effect by giving an unusual stimulus to exportation, and throwing obstacles in the way of importation. The true *par* forms the centre of these oscillations; and although the thousand circumstances which are daily and hourly affecting the state of debt and credit prevent the ordinary course of exchange from being almost ever precisely at *par*, its fluctuations, whether on the one side or the other, are confined within certain limits, and have a constant tendency to disappear.

This natural tendency which the exchange has to correct itself is powerfully assisted by the operations of the bill-merchants.

England, for example, might owe a large excess of debt to Amsterdam; yet, as the aggregate amount of the debts due by a commercial country is generally balanced by the deficiency of bills on which it has to receive, the deficiency probably be Amsterdam in London would most probably be compensated by a proportional redundancy of those on some other place. Now, it is the business of the merchants who deal in bills, in the same way as of those who deal in bullion or any other commodity, to buy them where they are cheapest, and to sell them where they are dearest. They would, therefore, buy up the bills drawn by other countries on Amsterdam, and dispose of them in London; and by so doing, would prevent any great fall in the price of bills on Amsterdam in those countries in which the supply exceeded the demand, and any great rise in Great Britain and those countries in which the supply happened to be deficient. In the trade between Italy and this country, the bills drawn on Great Britain amount almost invariably to a greater sum than those drawn on Italy. The bill-merchants, however, by buying up the excess of the Italian bills on London, and selling them in Holland and the other countries indebted to England, prevent the real exchange from ever becoming very much depressed.

III. *Negotiation of Bills of Exchange.*—Bills of exchange may be made payable on demand (the invariable term of payment in the case of checks), or at sight, at a certain specified time after sight or after date, or at usance, which is the usual term allowed by the custom or law of the place where the bill is payable. In most countries, though not in all, a few days are allowed for payment beyond the term when the bill becomes due. These are denominated *days of grace*, and vary in different parts. In Great Britain and Ireland, 3 days' grace are allowed on all bills except those payable on demand, which must be paid as soon as presented. The following is a statement of the usance and days of grace, if any, for bills drawn upon some of the principal commercial cities:—

[m | d, m | s; m | d, d | s, d | a, respectively denote months after date, months after sight, days after date, days after sight, days after acceptance.]

	London on	Usance	Days of grace
Amsterdam	1 mtd.	0	0
Rotterdam	1 mtd.	0	0
Antwerp	1 mtd.	12	12
Hamburg	13 dls.	10	10

New York			

\* In France, days of grace were suppressed by the Code de Commerce, art. 125. In America, bills payable at sight, or on demand, or at less than 7 days after sight or date, are not allowed any days of grace; but drafts on Petersburg, bills after date are allowed 10 days' grace; but drafts only 3 days' grace.

In the dating of bills, the New Style is used in every country in Europe, with the exception of Russia.

The Stamps on Bills of Exchange and Promissory Notes have been fixed by the 17 & 18 Vict. c. 83; 23 Vict. c. 15; 23 & 24 Vict. c. 111; 24 & 25 Vict. c. 21; and 27 & 28 Vict. c. 56, as follows, viz. :—

	Duty
Inland bill of exchange or promissory note, for the payment to the bearer, or to order, at any time, otherwise than on demand, of any sum of money:—	£ 4 s
Not exceeding £ 20 and not exceeding 2s	10 s
Exceeding 20 " " " " " "	20 s
10 " " " " " "	7 s
50 " " " " " "	20 s

10000 " " " " " "	2000 s
20000 " " " " " "	3000 s
50000 " " " " " "	4000 s
100000 " " " " " "	5000 s
4,000 and for every 1,000-l. and part of 1,000-l. thereby made payable	1000 s
Foreign bill of exchange drawn out of, and payable out of, the United Kingdom, but indorsed or negotiated within the United Kingdom, the same duty as on a foreign bill drawn within the United Kingdom, and payable out of the United Kingdom:—	£ 2 s
Foreign bill of exchange for the payment of money exceeding £ 25, drawn out of the United Kingdom, and payable or indorsed or negotiated within the United Kingdom. For every bill or part of 1000-l. of the money thereby made payable	1000 s

In London bills of exchange are sold by brokers, who go round to the merchants and discover whether they are sellers of bills. A few of the brokers influence, after ascertaining the state of

five supply and demand for bills, suggest a price at which the greater part of the transactions of the day are settled, with such deviations as particular bills, from their being in very high or low credit, may be subject to. The price fixed by the List; but the first houses generally negotiate their bills on  $\frac{1}{2}$ , 1, 1 $\frac{1}{2}$ , and 2 per cent. better terms than those unpaid. In London and other great commercial cities, a class of middlemen speculate largely on the rise and fall of the exchange; paying bills when they expect a rise, and selling them when a fall is anticipated.

It is usual, in drawing foreign bills of exchange, to draw them in sets or duplicates, lest the first should be lost or miscarry. When bills are drawn in sets, each must contain a condition that it shall be payable only while the others remain unpaid; thus, the first is payable only, 'second being unpaid'; the second, 'first and third being unpaid'; and the third, 'first and third unpaid.'

The stat. 17 & 18 Vict. c. 83 directs that the duties in respect of bills of exchange drawn out of the United Kingdom shall be denoted by proper adhesive stamps, to be obtained from Commissioners of Inland Revenue, and applied to the same. (Sec. 3.)

The holder of a bill drawn out of the United Kingdom shall affix the proper adhesive stamp to the same before negotiating it, under a penalty of 50*l.* (Sec. 5.)

Persons drawing a bill purporting to be one of a set, and not drawing the whole number of the set, shall forfeit 100*l.*; and persons receiving such bills shall not be entitled to recover on the same. (Sec. 6.)

Foreign promissory notes for payment of money within the United Kingdom are to pay the same as Inland Bills of Exchange (23 & 24 Vict. c. 11). Inland promissory notes exceeding 4,000*l.* are the same duty as Inland Bills (23 & 24 Vict. 11).

No one acquainted with the fundamental rules of arithmetic can have any difficulty whatever in ascertaining how much a sum of money in one country is worth in another, according to the state of the exchange at the time. The common arithmetical books abound in examples of such comparisons. But in conducting the business of exchange, a direct remittance is not always preferred. A merchant in London, for example, means to discharge a debt due by him in Paris, it is his business to ascertain not only the state of the exchange between London and Paris, and the amount of the sum which he must pay in London, but also the state of the exchange between London and Hamburg, Hamburg and Paris, &c.; for it may happen that it may be more advantageous for him to buy a bill on Hamburg, Amsterdam, or Lisbon, and to direct his agent to invest the proceeds in a bill on Paris, rather than remit directly to the latter. This is termed the Arbitration of Exchange. An example or two will show the principle on which it is conducted.

If the exchange between London and Amsterdam be 35*s.* Flemish (old coinage) per pound sterling, and between Paris and Amsterdam 1*s.* 6*d.* per franc, then, in order to ascertain the most advantageous remittance to Paris, a direct or indirect remittance to Paris will be the value of the franc in English money. If the remittance were made through Holland, it will obviously be the preferable

mode of remitting. This is determined by stating as 35*s.* Flemish (the Amsterdam currency in a pound sterling); 1*s.* 6*d.* Flemish (Amsterdam currency in a franc); 1*l.*: 10*d.* the proportional or arbitrated value of the franc. Hence, if the English Paris, were remitted by Amsterdam, it would require 10*d.* to discharge a debt of a franc, or 17*d.* to the exchange between London and Paris were at 2*l.*, it would be indifferent to the English merchant whether he remitted directly to Paris, or indirectly *via* Amsterdam; but if the exchange between London and Paris were *above* 2*l.*, then a direct remittance would be preferable; while, if, on the other hand, the direct exchange were less than 2*l.*, the indirect remittance ought as plainly to be preferred.

'Suppose,' to borrow an example from Kelly (*Universal Cambist*, vol. ii. p. 137), 'the exchange of London and Lisbon to be at 68*d.* per milree, and that of Lisbon on Madrid 500 rees per dollar, the arbitrated price between London and Madrid is 34*d.* sterling per dollar; for, as 1,000 rees = 500 rees = 34*d.* But if the direct exchange of London on Madrid be 35*d.* sterling per dollar, London must pay 35*d.* for every dollar; whereas, by remitting through Lisbon, he will pay only 34*d.*; it is therefore for the interest of London to remit indirectly to Madrid through Lisbon. On the other hand, if London draws directly on Madrid, he will receive 35*d.* sterling per dollar; whereas, by remitting through Lisbon, he would receive only 34*d.*; it is therefore the interest of London to draw direct on Madrid. Hence the following rules:—

1. Where the certain price is given, draw through the place which produces the lowest arbitrated price, and remit through that which produces the highest.

2. Where the uncertain price is given, draw through that place which produces the highest arbitrated price, and remit through that which produces the lowest.

In compound arbitration, or when more than 3 places are concerned, then, in order to find how much a remittance passing through them all will amount to in the last place, or, which is the same thing, to find the arbitrated price between the first and the last, we have only to repeat the different statements in the same manner as in the foregoing examples.

Thus, if the exchange between London and Amsterdam be 35*s.* Flemish for 1*l.* sterling; between Amsterdam and Lisbon 42*d.* Flemish for 1 old crusade; and between Lisbon and Paris 480 rees for 3 francs: what is the arbitrated price between London and Paris?

In the first place, as 35*s.* Flemish : 1*l.* :: 42*d.* Flemish : 2*s.* sterling = 1 old crusade.

Second, as 1 old crusade = 400 rees : 2*s.* sterling :: 480 rees : 2*s.* 48*d.* sterling = 3 francs.

Third, as 2*s.* 48*d.* sterling : 3 francs :: 1*l.* sterling : 25 francs, the arbitrated price of the pound sterling between London and Paris.

This operation may be abridged as follows:—

1 <i>l.</i> sterling	=	35 <i>s.</i> Flemish.
35 shillings Flem.	=	1 old crusade.
1 old crusade	=	400 rees.
480 rees	=	3 francs.
Hence	$\frac{35 \times 400 \times 3}{480 \times 3}$	= 25 francs.

This abridged operation evidently consists in arranging the terms so that those which would form the divisors in continued statements in the Rule of Three are multiplied together for a com-

mon divisor, and the other terms for a common dividend. The ordinary arithmetical books abound with examples of such operations.

The following account of the manner in which a very large transaction was actually conducted by indirect remittances will sufficiently illustrate the principles we have been endeavouring to explain.

In 1801 Spain was bound to pay to France a large subsidy; and, in order to do this, three distinct methods presented themselves:—

1. To send dollars to Paris by land.
2. To remit bills of exchange directly to Paris.
3. To authorise Paris to draw directly on Spain.

The first of these methods was tried, but it was found too slow and expensive; and the second and third plans were considered likely to turn the exchange against Spain. The following method, by the indirect or circular exchange, was therefore adopted.

A merchant, or *banquier*, at Paris, was appointed to manage the operation, which he thus conducted:—He chose London, Amsterdam, Hamburg, Cadiz, Madrid, and Paris as the principal mingles on which the operation was to turn, and he engaged correspondents in each of these cities to support the circulation. Madrid and Cadiz were the places in Spain whence remittances were to be made; and dollars were, of course, to be sent to where they bore the highest price, for which bills were to be procured on Paris, or on any other places that might be deemed more advantageous.

The principle being thus established, it only re-

It is easy from this table to calculate the value of any of the above coins, taking silver at 5s. 2d., 5s. 6d., per oz., or any other price, and thence to deduce the par of exchange at such rates. The values of the coins in the Table of Coins [COINS] are estimated on the hypothesis that silver is worth 5s. 2d. per oz.

LAW OF BILLS OF EXCHANGE.

The chief legal privileges appertaining to bills are, first, that though only a simple contract, yet they are always presumed to have been originally given for a good and valuable consideration; and, secondly, they are assignable to a third person not named in the bill or party to the contract, so as to vest in the assignee a right of action in his own name; which right of action no release by the drawer to the acceptor, nor set-off or cross demand due from the former to the latter, can affect.

All persons, whether merchants or not, being legally qualified to contract, may be parties to a bill. But no action can be supported against a person incapable of binding himself, on a bill drawn, indorsed, or accepted by such incapacitated person: at the same time the bill is good against all other competent parties thereto.

Bills may be drawn, accepted, or indorsed by the party's agent or attorney verbally authorised for the purpose. When a person has such authority, he must either write the name of his princi-

pal, or state in writing that he draws &c. as agent; thus: 'per procurator, for A. B.'

Where one of several partners accepts a bill drawn on the firm, for himself and partners, or in his own name only, such acceptance binds the partnership if it concern the trade. But the acceptance of one of several partners on behalf of himself and partners will not bind the others, if it concern the acceptor only in a separate and distinct interest, and the holder of the bill, at the time he becomes so, was aware of that circumstance. If, however, he be a bona fide holder for a sufficient consideration, and had no such knowledge at the time he first became possessed of the bill, no subsequently acquired knowledge of the misconduct of the partner in giving such security will prevent him from recovering on such bill against all the partners.

Although no precise form of words is required to constitute a bill of exchange or promissory note, yet it is necessary that it should be payable at certain events, and not depend on any contingency; that it be made for the payment of money and not for payment of money and performance of some other act, as the delivery of a horse, or the like.

If, however, the event on which the payment is to depend must inevitably happen, it is of no importance how long the payment may be in suspense; so a bill is negotiable and valid if it is payable 6 weeks after the death of the drawee.

Acceptance of a bill is necessary to give it effect, and to vest in the holder a right of action against the drawer.

An acceptance may be qualified, or absolute. An absolute acceptance is one in which the drawer is bound to pay the bill according to its tenor, and is not to be qualified by the drawer. A qualified acceptance is one in which the drawer is not bound to pay the bill according to its tenor, but is to be qualified by the drawer. An acceptance is not binding on the drawer unless it is absolute, or qualified by the drawer.

An acceptance may be qualified, or absolute. An absolute acceptance is one in which the drawer is bound to pay the bill according to its tenor, and is not to be qualified by the drawer. A qualified acceptance is one in which the drawer is not bound to pay the bill according to its tenor, but is to be qualified by the drawer.

father, or payable to an infant when he shall become of age.

Any material alteration of a bill after it has been drawn, accepted, or indorsed, such as the date, sum, or time of payment, will invalidate it; but the mere correction of a mistake, as by inserting the words 'or order,' will have no such effect.

The negotiability of a bill depends on the insertion of sufficient operative words of transfer: such as by making it payable to A or order, or to A or bearer, or to bearer generally.

Although a bill is presumed to have been originally drawn upon a good and valuable consideration, yet in certain cases a want of sufficient consideration may be insisted on in defence to an action on a bill. Certain considerations have been made illegal by statute; as for signing a bankrupt's certificate, for money won at gaming, or for money lent on a usurious contract. But with respect to gambling transactions is good in the hands of a bona fide holder; and by 58 Geo. III, c. 93 a bill or note in the hands of an innocent holder, although originally founded on a usurious contract, is not

In general, if a bill is fair and legal in its origin, a subsequent illegal contract or consideration on the indorsement thereof will not invalidate it in the hands of a bona fide holder.

A bill cannot be given in evidence in a court of justice unless it be duly stamped, not only with a stamp of the proper value, but also of the proper denomination.

**Acceptance of a bill.**—An acceptance is an engagement to pay a bill according to the tenor of the acceptance, which may be either *absolute* or *qualified*. An *absolute* acceptance is an engagement to pay a bill according to its request, which is done by the drawee writing 'Accepted' on the bill, and subscribing his name, or writing 'Accepted' only; or merely subscribing his name at the bottom or across the bill. A *qualified* acceptance is when a bill is accepted conditionally; as when goods conveyed to the drawee are sold, which does not bind the acceptor till the contingency has happened.

An acceptance may be also partial; as to pay 1/4 instead of 1/2, or to pay at a different time or place from that required by the bill. But in all cases of a conditional or partial acceptance, the acceptor should, if he mean to resort to the other parties to the bill in default of payment, give notice to them of such partial or conditional acceptance.

In all cases of presenting a bill for acceptance, it is necessary to present the bill at the house of the drawee lives, or where it is made payable. By 1 & 2 Geo. IV, c. 78 all bills accepted at a banker's or other place are to be deemed payable at a banker's only, and not otherwise; or elsewhere, it is a qualified acceptance, and the acceptor is not liable to pay the bill, except in default of payment when such payment has been first demanded at the banker's. The drawee is entitled to keep the bill 24 hours after presented for acceptance. The acceptance on inland bill must be *in writing on the face of the bill*, or if there be more parts than one, on one of the parts: nothing short of this constitutes an acceptance.

When a bill is made payable at sight, or at a certain time after sight, it must, in either case, in order to fix the time when it is to be paid, be presented for acceptance; and the date of the ac-

ceptance should appear thus: 'Accepted, 10th September, 1868.'

Due diligence is the only thing to be considered in presenting any description of bill for acceptance; and such diligence is a question depending on the situation of the parties, the distance at which they live, and the facility of communication between them.

When the drawee refuses to accept, any third party, after protesting, may accept for the honour of the bill generally, or for the drawee, or for the indorser; in which case the acceptance is called an acceptance *supra protest*.

The drawers and indorsers are discharged from liability, unless due notice of non-acceptance when presented for acceptance, or non-payment at the time the bill becomes due, is given. These notices must be given with all due diligence to all the parties to whom the holder means to resort for payment. Generally, in both foreign and inland bills, notice is given next day to the immediate indorser, and such indorser is allowed a day, when he should give fresh notice to the parties who are liable to him.

Notice may be sent by the post, however near the residence of the parties may be to each other; and though the letter containing such notice should miscarry, yet it will be sufficient; but the letter containing the notice should be delivered at the General Post Office, or at a receiving-house appointed by that office, or at a receiving-house notice to one of several parties is held to be notice to all; and if one of several drawers be also the acceptor, it is not necessary to give notice to the other drawers.

Upon the non-acceptance or non-payment of a bill, the holder, or a public notary for him, should protest it; that is, draw up a notice of the refusal to accept or pay the bill, and the declaration of the holder against sustaining loss thereby. In inland bills need not be protested; in practice they are usually only noted for non-acceptance; but this, without the protest, is wholly futile, and adds nothing whatever to the evidence of the holder, while it entails a useless expense on those liable to pay.

**Indorsement of bills.**—An indorsement is the act by which the holder of a negotiable instrument transfers his right to another person, termed the indorsee. It is usually made on the back of a bill, and must be in writing; but the law has not prescribed any set form of words as necessary to the indorsement, and in general the mere signature of the indorser is sufficient.

All bills payable to order or to bearer for 12 months and upwards are negotiable by indorsement; and the transfer of them for a good consideration, before they are payable, gives a right of action against all the precedent parties on the bill, if the bills in themselves are valid; but a transfer after they are due will only place the holder in the situation of the person from whom he takes them.

Bills may be transferred either by delivery only, or by indorsement and delivery: bills payable to order are transferred by the latter mode only; but bills payable to bearer may be transferred by either mode. On a transfer by delivery, the person making it ceases to be a party to the bill; but on a transfer by indorsement, he is to all intents and purposes chargeable as a new drawer.

A bill originally transferable as a new drawer, by restrictive words; for the payee or indorsee, having the absolute property in the bill, may, by express words, restrict its currency by indorsing it 'Payable to A B only,' or 'to A B for his use,' or any other words clearly demonstrating his intention to make a restrictive and limited indorse-

ment. Such special indorsement precludes the person in whose favour it is made from making a further transfer, so as to give a right of action against the special indorser, or any of the preceding parties to the bill.

In taking bills to account or discount, it is important well to examine all special indorsements. Lord Tenterden decided that a person who discounts a bill indorsed 'Pay to A B or order for my use,' discounts it subject to the risk of having to pay the money to the special indorser, who so limited the application for my use; thus a party may be liable to pay the amount of the bill twice over, unless he previously ascertains that the payment has been made conformably to the import of the indorsement.

After the payment of part, a bill may be indorsed over for the residue.

**Presentment for Payment.**—The holder of a bill must be careful to present it for payment at the time when due, or the drawer and indorsers will be exonerated from their liability; even the bankruptcy, insolvency, or death of the acceptor will not excuse a neglect to make presentment to the assignee or executor; nor will the insufficiency of a bill in any respect constitute an excuse for non-presentment: the presentment should be made at a reasonable time of the day when the bill is due; and if by the known custom of any trade or place bills are payable only within particular hours, a presentment must be within those hours. If a bill has a qualified acceptance, the presentment should be at the place mentioned in such qualified acceptance, or all the parties will be discharged from their obligations.

If a bill fall due on Sunday, Good Friday, Christmas Day, or any public fast or thanksgiving day, the presentment must be on the day preceding these holidays. By 7 & 8 Geo. III. c. 15, if a bill or note be payable on the day preceding these holidays, notice of the dishonour may be given the day following the holiday; and if Christmas Day fall on Monday, notice may be given on Tuesday.

Bills, however, payable at usance, or at a certain time after date or sight, or after demand, ought not to be presented for payment precisely at the expiration of the time mentioned in the bill, but at the expiration of the *days of grace*. These but are not allowed in some countries: they also vary where they are allowed, and should always be computed according to the usage of the place where the bill is due. (See head III. of this article: *Negotiation of Bills of Exchange*.) At Hamburg, the day on which the bill falls due makes one of the days of grace, but nowhere else.

On bills payable on demand, or when no time of payment is expressed, no days of grace are allowed; but they are payable instantly on presentment. On bank post bills no days of grace are claimed; but on bills payable at sight the usual days of grace are allowed from the date of the acceptance.

Payment of a bill should be made only to the holder; and it may be refused unless the bill be produced and delivered up. On payment a receipt should be written on the back; and when a part is paid, the same should be acknowledged upon the bill, or the party paying may be liable to pay the amount a second time to a *bonâ fide* indorser.

**Promissory Notes and Checks.**—The chief distinction between promissory notes and bills of exchange is, that the former are a direct engagement by the drawer to pay them according to their tenor, without the intervention of a third party

as a drawee or acceptor. Promissory notes may be drawn payable on demand to a person named therein, or to order, or to bearer generally. They are assignable and indorsable; and in all respects so nearly assimilated to bills by 3 & 4 Anne c. 9, that the laws which have been stated as bearing upon the latter may be generally understood as applicable to the former. In *Elliott v. Bury*, it has been decided, in case an instrument is drawn so equivocally as to render it uncertain whether it be a bill of exchange or promissory note, the holder may treat it as either against the drawer.

Promissory notes, bills, drafts, or undertakings in writing, being made negotiable or transferable, for a less sum than 20s., are void, and persons uttering such are subject to a penalty not exceeding 20l., recoverable before a justice of peace.

The issue of a demand for a less sum than 5l. by the bearer on demand for a less sum than 5l. by the Bank of England, or any licensed English banker, is prohibited. By 26 & 27 Vict. c. 105, the parts of 17 Geo. III. c. 30 which restrain the negotiation of bills of exchange and promissory notes for a less sum than 5l., and the schedules C. & D. of 8 & 9 Vict. c. 38, enacting similar restraints in Scotland, are repealed.

A *check or draft* is as negotiable as a bill of exchange, and vests in the assignee the same right of action against the assignor.

Checks are of two sorts: that is, they may be either on plain or on stamped paper. The distinction was introduced by the 16 & 17 Vict. c. 11. The peculiar conditions and limitations which plain checks must be drawn, and the privileges enjoyed by those on stamped paper, are briefly stated in the art. CHECKS, to which the reader is referred.

Any person drawing, accepting, or paying a bill or promissory note not duly stamped is liable to a penalty of 50l.; and a penalty of 50s. is imposed on parties sending or receiving unstamped checks or drafts at a greater distance than ten miles in a direct line from the place where they are issued.

It used to be of especial importance to bankers and others taking bills and notes, that they should only be aware of the responsibility of the acceptor and other parties to such bills and notes, but they should have some knowledge of those whom they received them; for, if the instrument turned out to have been lost or fraudulently obtained, they might be deprived of their money on an action by the owner to recover possession. Lord Tenterden decided, 'if a person take a bill or any other kind of security under circumstances which ought to excite suspicion in the mind of any reasonable man acquainted with the facts of the case, and which ought to put him on guard to make the necessary enquiries, and he do not, then he loses the right of maintenance of the instrument against the possession of the instrument against the owner.' (Guidhall, Oct. 25, 1823.) It has since been decided, in *contravention of the doctrine*, that the claim of the *bonâ fide* holder of a bill or note that has been lost or stolen is invalidated by the want of the suspicious enquiries referred to by Lord Tenterden, on gross negligence; and that to defeat the claim it must be shown that he took the instrument *malâ fide*. (*Chitty On Bills*, 9th ed. 1829.) This is an important, and, as we think, a just decision. It facilitates the negotiation, and clears up and gives precision to the law.

Before concluding this article on bills of exchange, it may not be improper to introduce two cautions with regard to acceptances.

commutation pay  
loss of bills.

accommodation paper, and proceedings in case of the loss of bills.

1. A man should not put his name as acceptor to a bill of exchange without well considering whether he has the means of paying the same when due, as otherwise he may be liable not only to the costs of the action against himself, but also to the costs of the action against the other parties to the bill. The shrewd tradesman is generally anxious to get the acceptance of his debtor at a short date, well knowing that it not only fixes the amount of the debt, but it is more speedily recoverable by legal procedure than a book debt.

2. Traders who wish to support their respectability, and desire to succeed in business, should be cautious in resorting to what is called the system of cross-accommodation acceptances: it is seldom ends well, and usually excites suspicion expedient often adopted by the parties; it being an expedient often adopted by swindlers to defraud the public. Independent of the expense in stamps and discounts, and frequently in noting, such accommodation is sufficient to deter from the practice. Suppose, for instance, A and B mutually accommodate each other to the amount of 1,000*l.* the acceptances being in the hands of third persons: both A and B are liable to such third persons to the extent of 2,000*l.* each; and should A by any unforeseen occurrence be suddenly rendered unable to meet his acceptances, the holders of the whole, as well the acceptances of A as the acceptances of B, will resort to B for payment; and it may so happen that although B could have provided for his own share of the accommodation paper, he may be unable to provide for the whole, and may thus become insolvent.

3. In case of the loss of a bill, the 9 & 10 Wm. III. c. 17 provides that if any inland bill be lost or missing within the time limited for its payment, the drawer shall, on sufficient security given to the holder, if such bill be found again, give another bill of the same tenor with the first.

EXCISE-QUER BILLS. [FUND.]

EXCISE. The name given to the duties or taxes laid on certain articles produced and consumed at home; but, exclusive of these, the duties on licenses and post-horses are also placed under the management of the excise, and are frequently included in the excise duties. The excise of one sort or other has existed in all modern, and perhaps also in all ancient times. It was introduced into Rome by Augustus, who imposed a duty of 1 per cent. (*centesima* or *residualium*) on all articles, whether great or small in public markets or by auction. The duty was extremely moderate, a duty of this sort has since fallen from the difficulties in the way of assessment, its interference with the dealings of individuals, and the abuses to which it must give rise. On occasion clamour and discontent; and so long time became so very prevalent, that the emperor was obliged to declare that the main-tenance of the army, for the support of which this tax was appropriated, depended on its being continued. (*Tacit. Annal.*, lib. i. sec. 78.) In consequence it underwent various changes. It was sufficiently well established that it was due only to Rome, and perhaps to some few other great towns. In the smaller towns it would not indeed have sufficed to support the cost of its collection. It therefore had to be levied in a good deal in common with the other town duties charged on commodities in Paris and other great continental

cities. But the defective mode of its assessment must have made it infinitely more troublesome and onerous. (*Gibbon, Decline and Fall*, i. 211, ed. 1838; *Dureau de la Malle, Economie Politique des Romains*, ii. 45.)

Excise duties had been from an early period established in Holland, and the large revenue which they afforded pointed them out to the leaders of the popular party in the great civil war as the most likely means by which they could raise funds to carry on the great contest in which they had embarked. They were consequently introduced by a parliamentary ordinance in which being then laid on the makers and vendors of ale, beer, cider, and perry. The royalists soon after followed the example of the republicans, both sides declaring that the excise should be continued no longer than the termination of the war. But it was found too productive a source of revenue to be again relinquished; and when the nation had been accustomed to it for a few years, the Parliament declared in 1649 that the 'impost of excise was the most easy and indifferent levy that could be laid upon the people.' And it is worthy of remark that the regulations embodied in Cromwell's Excise Act of 1657, authorising officers to make searches, and directing the giving of notices &c., are very similar to those now in force.

The same reasons that made the excise be continued down to the Restoration secured its existence subsequently to that epoch. A portion of its produce was at the same time assigned in perpetuity to the Crown, in compensation for relinquishing the hereditary revenues arising from wardships and other feudal prerogatives which were then abolished. And, notwithstanding Mr. Justice Blackstone says that 'from its first original to the present time its very name has been odious to the people of England' (*Commentaries*, gain ground, and is at this moment progressively to various important articles, and furnishes a large share of the public revenue of the kingdom.

It is probable that the prejudice to which Blackstone alludes did not originate so much in any dislike to the duties themselves as in the peculiar circumstances connected with their imposition. Originally they were let in farm, which is a most unpopular proceeding; and down to a recent period there was hardly a single duty of the assessment of which was not made the subject of numerous lengthened, obscure, and contradictory statutes, so that it was hardly possible for any trader, however desirous to comply with the law, to avoid getting into serious scrapes. The duties being frequently also carried to an oppressive extent, smuggling was practised; and when a party was prosecuted, whether for an intentional or unintentional infraction of the law, or for attempting to defraud the revenue, the case might be laid before judges (without the intervention of a jury) in whose decision the inter- had little confidence. No wonder, therefore, that the excise should have been unpopular. But the obnoxious practice of letting the duties to farmers has been long abandoned, and of late years the laws and regulations connected with their assessment have been much simplified. In this respect, indeed, nothing should be omitted to render the rules for assessing the duties brief, calculated to the comprehension of every one, and the details and processes as little as possible with- supposing their assessment to be sufficiently simplified, and that they are of a reasonable amount, but little objection can be made to the duties because of the summary jurisdiction exer-

cised by the commissioners and justices. On the contrary, this practice has some material advantages. When parties are prosecuted in the Court of Exchequer for offences against the revenue, their case is, of course, submitted to a jury. But in this court, as in others, delays frequently take place, and the expenses are always very considerable; whereas in cases of summary jurisdiction, or those adjudged by the commissioners and justices, there is little or no delay, and little or no

expense. And considering that all parties who fancy themselves aggrieved by the decision of the commissioners are entitled (1 Viet. c. 20 s. 26) to appeal at a very trifling cost to a baron of exchequer, who rejudges the case, while those who suppose themselves aggrieved by the decision of the justices may appeal to the quarter-sessions (7 & 8 Geo. IV. c. 53 s. 82), there really appears to be more to approve than to object to in the summary jurisdiction.

Quantities of the several Articles subject to Duties of Excise, Charged with Duty; Exported; and Retained for Home Consumption in the United Kingdom, in each of the Years (ended March 31) 1863, 1864, and 1865, with the Nett Amount of Revenue received for each Article.

Sugar, home made - cwt.	110	—	1,063	—	—	—	140	—	1,063

The excise duties formerly imposed on salt, leather, candles, beer, glass, hops, paper, and other less important articles, have been repealed. On the other hand, an excise duty on chicory, equal to the customs duty on coffee, has been imposed. And we doubt whether there be one of the existing duties which can be fairly objected to on principle, or for its injuriously interfering with the manufacture, or being too high. Whatever may have been the case formerly, the excise is now fully entitled to the eulogium passed upon it by Arthur Young:—'Excises are by much the fairest, most equal, and least burdensome of all taxes. They are paid voluntarily. Not a shilling is contributed but in proportion to the free consumption. The Dutch, who have been deservedly esteemed the wisest nation in Europe in all matters of taxation, have been enabled to preserve their industry under burdens of which we have no experience, and scarcely any conception, principally by their having adopted this mode of taxation.' (*Political Arithmetic*, part ii. p. 46.)

The excise duty on sugar was imposed, by the Act 3 & 4 Viet. c. 57, on all sugar raised in the United Kingdom, whether from beet-root, potatoes, or other materials. It is the same as the duty on British colonial sugar. Probably, however, the better policy would be to prohibit the home production of such articles, inasmuch as it is sure to facilitate smuggling and adulteration.

The laws with respect to the general management of the excise were consolidated by the 7 & 8 Geo. IV. c. 5, from which the following particulars are selected:—

**Commissioners.**—Four commissioners were to constitute a board, but the Boards of Excise, and Stamps and Taxes, were consolidated by the 12 & 13 Viet. c. 1. They are to be subject, in all things relating to their peculiar duty, to the orders of the Treasury. They may appoint collectors and other subordinate officers, and give them such salaries and allowances as the Treasury shall direct; but they are not allowed to increase the number of inferior officers without the permis-

sion and approval of the Treasury. No member of the House of Commons can be a commissioner of excise.

**Officers of Excise.**—Until this year (1865) no officer of excise was to vote or interfere at any election of a member of Parliament under pain of forfeiting 500*l.* and being rendered incapable of ever holding any office or place of trust under her Majesty; but by 31 & 32 Viet. c. 73, the disabilities of revenue officers to vote at such elections are removed.

No person holding any office of excise is to hold in any sort of goods subject to the excise laws.

Any person bribing or offering to bribe any officer of excise shall forfeit 500*l.*; and every officer accepting such bribe, or doing, committing, or permitting any act or thing whereby any of the provisions of the excise laws may be evaded or broken, shall forfeit 500*l.* and be declared incapable of ever after serving her Majesty in any capacity whatever. But if any of the parties to such illegal transactions shall inform against the other before any proceedings thereupon shall have been instituted, he shall be indemnified against the penalties and disabilities imposed for such offences.

**Duties and Powers of Officers.**—It is the duty of any officer to enter any building or place, used for carrying on any trade subject to the excise, either by night or by day (but by night, in the presence of a constable or police officer), to inspect the same &c.; and upon application of a constable or police officer making oath that he has cause to suspect that goods forfeited under the Excise Acts are deposited in any private house or place, the commissioners of excise, or one justice of the peace, may grant a warrant to the officer to enter such house or place (if in the night in the presence of a constable) to search for and seize such goods.

**Specimen Books** may be left by the officer at the premises of persons subject to the excise, and anyone who shall remove or deface such books shall be liable to a penalty of 200*l.*

Removing Goods to avoid duty.—Goods fraudulently removed or secreted in order to avoid the duty to be forfeited; and every person assisting in such removal shall forfeit and lose treble the value of such goods, or 100*l.*, at the discretion of the commissioners.

Obstructing Officers.—All persons who shall oppose, molest &c. any officer of excise in the execution of his duty shall respectively, for every such offence, forfeit 200*l.*

Officers violently resisted in making any seizure may oppose force to force; and in the event of their wounding, maiming, or killing any person when so opposed, they shall be admitted to defend, and may lead the general issue.

Justices, mayors, bailiffs, constables &c. are required to assist excise officers; and any constable who, on notice and request, declines going with an excise officer, is to forfeit 20*l.* for every such offence.

Claimants of Goods seized.—No claim shall be entered for goods seized except in the real names of the proprietors of such goods. Claimants are bound with two sureties in a penalty of 100*l.* to pay the expenses of claim; and in default thereof, the goods are to be condemned.

Proceedings in Courts of Law.—All penalties under the excise laws may be sued for and recovered in the Courts of Exchequer at Westminster, Edinburgh, or Dublin respectively, according as the offence may have taken place in England, Scotland, or Ireland; provided that the proceedings in the courts commence within 3 years after the commission of the offence.

Information for the recovery of penalties against the excise laws in London may be heard and adjudged by any three or more of the commissioners of inland revenue; and in other places such informations may be exhibited before one or more, to be heard and adjudged by any two or more, justices of the peace. The 28 & 29 Vict. c. 96 s. 25 gives right of appeal where the penalty exceeds 50*l.*

Mitigation of Penalties.—Justices are authorised, if they see cause, except when there is a special provision to the contrary, to mitigate any penalty incurred for any offence committed against the excise laws to one fourth part thereof; and the commissioners of excise, when they see cause, may mitigate or entirely remit such penalty.

Distribution of Penalties.—Down to 1868 all penalties and forfeitures incurred under the Excise Acts were distributed, half to her Majesty, and the other to the officer or person who should discover, or sue for the penalty. But by 31 & 32 Vict. c. 41 such penalties are, after October 1, 1868, to be paid to her Majesty, and rewards are to be paid, in respect of charges of collection, out of Supplies voted by Parliament. (Secs. 1 & 2.) On proof of any officer acting collusively in making a seizure, the commissioners may direct his share to be forfeited.

Oaths and Affirmations.—Persons wilfully taking or making any false oath or affirmation as to any matter connected with the excise laws shall, upon being convicted of such offence, suffer the pains and penalties incident to wilful and corrupt perjury; and those procuring or suborning such persons to swear or affirm falsely shall, upon conviction, be liable to the pains and penalties incident to subornation of perjury.

Actions against Excise Officers.—No writ, summons, or process shall be sued out or served upon, nor shall any action be brought, raised, or prosecuted against, any officer of excise, for any thing done under any of the excise laws, until after the expiration of 1 calendar month next after notice in writing has been delivered to such officer, specifying the cause of such action, and the name and place of abode of the person in whose name it is to be brought. No action shall lie against any excise officer for any thing done under the excise laws unless it be brought within 3 months after the cause of action shall have arisen. If judgment be given against the plaintiff, and in favour of the defendant, the latter shall, in every such action, have treble costs awarded.

Forging Certificates &c.—By the 41 Geo. III. c. 91 it is enacted that if any one shall forge, counterfeit, or knowingly give any forged certificate required to be granted by any officer of excise, he shall be guilty of felony, and being convicted, shall be transported for 7 years.

All individuals carrying on any business subjected to the control of the excise must take out licenses, renewable chiefly on July 5 or October 10, annually. [LICENSES.]

All such individuals are also obliged to make entries of every building, place, vessel, or utensil, as the case may be, in the name of the real owner, with the officer of excise in whose survey such building, place &c. shall be situated. Individuals found employed in unlicensed excise manufactories are severally liable in a penalty of 30*l.* for the first offence; and in the event of any such offender refusing or neglecting to pay such penalty, he is to be committed to the house of correction or labour, till the fine of 30*l.* has been paid, or the term of 3 months has expired; and if found guilty of a second offence, the fine is to be 60*l.*; and in the event of its not being paid, the imprisonment is to be for 6 months. (7 & 8 Geo. IV. c. 53 s. 33.)

Permits are usually necessary for the removal of exciseable commodities. [PERMITS.]

EXPECTATION, of life. [INSURANCE.]

EXPORTATION. In Commerce, the act of sending or carrying commodities from one country to another. [IMPORTATION AND EXPORTATION.]

EXPORTS. The articles exported or sent beyond seas. [IMPORTS AND EXPORTS.]

F

FACTOR. An agent employed by some one individual or individuals to transact business on their account. He is not generally residing in the same place as his principal, but in a foreign country. He is authorised, by letter of attorney or otherwise, to receive, and sell goods and merchandise, to receive, and transact all sorts of business on account of employers, under such limitations and conditions as the latter may choose to impose. A

very large proportion of the foreign trade of this and most other countries is now carried on by means of factors or agents.

Factors and brokers are in some respects nearly identical, but in others they are radically different. 'A factor,' said Mr. Justice Holroyd, 'differs materially from a broker. The former is a person to whom goods are sent or consigned; and he has not only the possession, but, in consequence of its being usual to advance money upon them, has

also a special property in them, and a general lien upon them. When, therefore, he sells in his own name, it is within the scope of his authority; and it may be right, therefore, that the principal should be bound by the consequences of such sale. But he is bound by the consequences of such sale. But the case of a broker is different: he has not the possession of the goods, and so the vendor cannot be deceived by the circumstance; and besides, the person employing a person to sell goods as a broker does not authorise him to sell in his own name. If, therefore, he sells in his own name, he acts beyond the scope of his authority, and his principal is not bound.

A factor is usually paid by a per-centage or commission on the goods he sells or buys. If he act under what is called a *del credere* commission—that is, if he guarantee the price of the goods sold on account of his principal—he receives an additional per-centage to indemnify him for this additional responsibility. In cases of this sort the factor stands in the vendee's place, and must answer to the principal for the value of the goods sold; but where the factor undertakes no responsibility, and intimates that he acts only on account of another, it is clearly established that he is not liable in the event of the vendee's failing.

The sound maxim that the principal is responsible for the acts of his agent prevails universally in the courts of law and equity. In order to bind the principal, it is necessary only that third parties should deal bona fide with the agent, and that the conduct of the latter should be conformable to the common usage and mode of dealing. Thus, a factor may sell goods upon credit, that being in the ordinary course of conducting mercantile affairs; but a stock broker, though acting bona fide, and with a view to the benefit of his principal, cannot sell stock upon credit unless he have special instructions to that effect; that being contrary to the usual course of business.

A sale by a factor creates a contract between the owner and buyer; and this rule holds even in cases where the factor acts upon a *del credere* commission. Hence, if a factor sell goods, and the owner give notice to the buyer to pay the price to him and not to the factor, the buyer will not be justified in afterwards paying the factor, and the owner may bring his action against the buyer for the price unless the factor has a lien thereon; but if such notice be given, a payment to the individual selling is quite sufficient.

If a factor buy goods on account of his principal, where he is accustomed so to do, the contract of the factor binds the principal to a performance of the bargain, and the principal is the person to be sued for non-performance. But it is ruled that if a factor enter into a charterparty of a vessel with his principal's goods, in which case the principal and lading become liable, and not the factor. Where a factor who is authorised to sell goods in his own name makes the buyer debtor to himself, then, though he be not answerable to the principal for the debt if the money be not paid, yet he has a right to receive it if it be paid, and his receipt is a sufficient discharge: the factor may, in such a case, enforce the payment by alleging that the principal cannot defend himself by alleging that the principal was indebted to him in more than the amount.

'Where a factor,' said Lord Mansfield, 'dealing for a principal, but concealing that principal, delivers goods in his own name, the person contracting with him has a right to consider him, to all intents and purposes, as the principal; and though the real principal may appear, and bring an action on that contract against the purchaser

of the goods, yet that purchaser may set off against the claim he may have against the factor in answer to the demand of the principal.'

Merchants employing the same factor run the joint risk of his actions, although they are remitted to each other: thus, if different merchants remit to a factor different bales of goods, and the factor sell them as a single lot to an individual who is to pay one moiety of the price down and the other at 6 months' end; if the buyer fail before the second payment, each merchant must bear a proportional share of the loss, and be content to accept his dividend of the money advanced. (Beaves, *Lex Merc.*)

A factor employed without his knowledge in negotiating an illegal or fraudulent transaction has an action against his principal. On this ground it was decided that a merchant who had consigned counterfeit jewels to his factor, representing them to be genuine, should make compensation to the factor for the injury done to him by being concerned in such a transaction, as well as to the persons to whom the jewels had been sold.

The office of a factor or agent being one of very great trust and responsibility, those who undertake it are bound, both legally and morally, to conduct themselves with the utmost fidelity and circumspection. A factor should take the greatest care of his principal's goods in his hands: he should be punctual in advising him as to his transactions on his behalf, in sales, purchases, freights, and more particularly bills of exchange; he should deviate as seldom as possible from the strictness never from the spirit and tenor, of the orders he receives as to the sale of commodities: in the execution of a commission for purchasing goods he should endeavour to conform as closely as practicable to his instructions as to the quality and kind of goods: if he give more for them than is authorised, they may be thrown on his hands but he is bound to buy them for as much less as he possibly can. After the goods are bought he must dispose of them according to order. If he send them to a different place from that to which he was directed, they will be at his risk, unless the principal, on getting advice of the transaction, consent to acknowledge it.

'Whoever,' says Dr. Paley, 'undertakes another man's business makes it his own; that is, he promises to employ upon it the same care, attention and diligence that he would do if it were his own; for he knows that the business was committed to him with that expectation. And he promises nothing more than this. Therefore, an agent is not obliged to wait, enquire, solicit, or study about the country, toil, or study, whilst there remains a possibility of benefiting his employer. He exerts as much activity, and uses such care as the value of the business in his judgment deserves—that is, as he would have thought fit to exert if the same interest of his own had been at stake—he has discharged his duty, although he should afterwards turn out that by more care and longer perseverance he might have increased the business with greater advantage.' (Paley's *Moral and Political Philosophy*, c. 12.)

There seems to be a good deal of fact in the statement. It is necessary to distinguish between those who, in executing a commission, are engaged in their services for the particular occasion, and those without hire, and those who undertake a regular course of business, making a regular charge of their trouble. If the former bestow on their ordinary degree of care and attention, which is the generality of mankind bestow on similar occasions, their own, it is all, perhaps, that can be expected

but the latter will not execute their duty with that care and attention which their own private concern would prompt them to; and their neglect is their own fault. It is not the business of the law to punish a man for his own fault. It is not the business of the law to punish a man for his own fault. It is not the business of the law to punish a man for his own fault.

A factor who sells goods for his principal, and is ordered to sell at a certain price, and if he purchases at a higher price, and then sells at a lower price, he is liable for the difference, unless he can show that he acted in good faith. It is not the business of the law to punish a man for his own fault. It is not the business of the law to punish a man for his own fault. It is not the business of the law to punish a man for his own fault.

but the latter will be justly censurable if they do not execute their engagements on account of others with that care and diligence which a 'provident and attentive father of a family' uses in his own private concerns. It is their duty to exert themselves proportionally to the exigency of the affair in hand; and neither to do anything, how minute soever, by which their employers may sustain damage, nor omit anything, however inconsiderable, which the nature of the act requires. Perhaps the best general rule on the subject is, to suppose a factor or agent bound to exert that degree of care and vigilance which may be reasonably expected of him by others. At all events it is clear he is not to be regulated by his own notions of the value of the business. A man may neglect business of his own, or not think it worth attending to; but he is not, therefore, to be excused for neglecting any similar business he has undertaken to transact for others. (There are some very good observations on this subject in Sir William Jones's *Essay on Bailments*, 2nd ed. p. 75 and *passim*.)

A factor who sells a commodity under the price he is ordered may be obliged to make good the difference, unless the commodity be of a perishable nature and not in a condition longer to be kept; and if he purchase goods for another at a fixed rate, and their price having afterwards risen, he fraudulently takes them to himself, and sends them somewhere else, in order to secure an advantage, he will be found, by the custom of merchants, liable in damages to his principal.

An agent employed to sell is not allowed to be the purchaser, at least not unless he make known that he intends to be such and furnish his employer with all the knowledge he himself possesses, or unless the court, perceiving that the principal would lose by a resale, think fit on that point to uphold the transaction. So neither can an agent employed to purchase be himself the purchaser, unless there was a plain understanding between him and the principal. And if an agent is employed to purchase, purchase for himself, he will be considered a trustee for his principal. (See *Smith On Mercantile Law*, p. 144.)

If a factor, in conformity with a merchant's order, buy with his money, or on his credit, a commodity he is directed to purchase, and, without the advice of the transaction, sells it again at profit, appropriating that profit to himself, the merchant may recover it from him, and have him arrested for fraud.

A factor buy, conformably to his instructions, goods of which he is robbed, or which suffer some considerable injury, he is discharged, and the loss on the principal. But if the goods be stolen from the factor, he will not be so easily discharged; the fact of their having been abstracted by violence, and not by violence, raises a strong presumption that he had not taken that reasonable care of them which was incumbent upon him. If, however, he can prove that the goods were lodged in a place of security, and that he had not been guilty of positive negligence, nor exercised less care towards them than towards his own property, he will not be held responsible even for a theft committed by his servants. (*Jones On Bailments*, p. 76; *Chitty On Commercial Law*, vol. iii, c. 12.)

A factor, having money in his hands belonging to his principal, neglect to insure a ship and according to order, he must, in the event of a miscarriage, make good the damage; and he may make any composition with the insurers after the event, without orders to that effect, he is answerable for the whole insurance. A principal at

the end of a very long letter directed his agent thus: 'Observe, the premium on this value is also to be insured;' but the agent, not noticing this sentence, neglected to insure the premium, and being sued, was held liable for the omission.

If goods are remitted to a factor, and he make a false entry of them at the Custom-house, or land them without entry, and they are in consequence seized or forfeited, he is bound to make good the damage to his principal; but if the factor make his entry according to invoice or letters of advice, and, these proving erroneous, the goods are seized, he is discharged.

It is now a settled point that a factor has a lien on goods consigned to him, not only for incidental charges, but as an item of mutual account for the balance due to him so long as he remains in possession. If he be surety in a bond for his principal, he has a lien on the goods sold by him on account of such principal, to the amount of the sum he is bound for.

It being the general rule of law 'that property does not change while in transitu,' or in the hands of a carrier, a consignment made before the bankruptcy of a consignee, but not arriving till after, remains the property of the consignee, except, indeed, where the delivery is made by the order and upon the account of the consignee, and is a complete alienation from the consignee. In the case, therefore, of a consignment to a factor, the property remains the consignee's, and passes into the hands of his assignees. When a factor has a lien on goods, he has a right to the price, though received after the bankruptcy.

Where general or unlimited orders are given to a factor, he is left to buy and sell on the best conditions he can; and if detriment arise to a principal from the proceedings of a factor acting under such authority, he has no redress, unless he can show that he acted fraudulently or with gross negligence.

A factor or broker acting against the interest of his principal cannot even receive his commission. If he pay money on account of his principal without being authorised, he cannot recover it back.

An agent cannot delegate his rights to another so as to bind the principal, unless expressly authorised to nominate a sub-agent.

(For further information as to the general powers and liabilities of factors and agents, see *Beawes, Lex Mercatoria*, art. 'Factors,' 'Super-cargoes' &c.; *Chitty's Commercial Law*, vol. iii, c. 3; *Woolrych On Commercial Law*, pp. 317-329; *Smith's Mercantile Law*, pp. 109, 169; &c.)

[BROKERS.]

Under the law with respect to the transactions of factors or agents on third parties that prevailed down to the Act 6 Geo. IV. c. 94, it was held that a factor, as such, had no authority to pledge, but only to sell, the goods of his principal; and it was repeatedly decided that a principal might recover back goods on which a bonâ fide advance of money had been made by a third party, without his being bound to repay such advance, and notwithstanding this third party was wholly ignorant that the individual pledging the goods held them as a mere factor or agent. It used also to be held that bonâ fide purchasers of goods from factors or agents not vested with the power of sale might be made liable to pay the price of the goods a second time to the real owner.

The extreme hardship and injurious influence of such regulations are obvious. It is the business of a principal to satisfy himself as to the conduct and character of the factor or agent he employs; and if he make a false estimate of them, it is more

equitable, surely, that he should be the sufferer than those who have no means of knowing any thing of the matter. The injustice of the law in question, and the injury it did to the commerce of the country, had frequently excited attention, and were very ably set forth by the late Lord Liverpool in his speech in the House of Lords on moving the second reading of the bill referred to.

Those of their Lordships who were acquainted with commercial transactions would know that money was frequently advanced on goods without its being possible for the person advancing the money to have any further acquaintance with the transactions than that the factor was in actual possession of the goods. It then became a question, putting fraud out of view, if the factor became a bankrupt, or in any other way failed to execute his engagements, whether the loss should fall on the principal who had consigned these goods, or on the *pledgee* who had advanced money on them. It had been of late held that if the factor were intrusted only to dispose of the property, the loss must fall on the pledgee. He meant to contend that this was contrary to equity, and contrary to analogy—that it was disapproved of by high authority, and was contrary to the law in every country of the world, except this, and the United States of America, which had drawn their law from this country. It was contrary to equity, he thought, that the pledgee, who had advanced his money without any fraud, but on the *bonâ fide* possession of the goods, should suffer. He had placed no confidence, but the principal who had appointed the factor had placed confidence. He could limit him in his operations as he pleased—he could give him any kind of instructions—he might qualify his power—he was bound to take precautions before placing confidence; and he was in all respects more liable to suffer from his faults than the pledgee. The latter knew nothing of the power of the factor; he saw only the goods, and advanced his money on what was a sufficient security for repayment. On every principle of natural equity, therefore, the loss ought to fall, not on the *pledgee*, but on the principal. He knew that this view was connected with one very important question—that of possession and title; but it was not possible for transactions to go on unless the possession was admitted as the title to the goods. If this were an indifferent question, or a question involving only a few cases, he would not have called on their Lordships to legislate on this subject; but all the commercial interests of the country were connected with it. And he might say he believed that two thirds of the whole commerce of the country was carried on by consigning goods to a factor, and leaving it to his discretion to dispose of them to the greatest advantage, sending them to market when he pleased, and raising money on them when he could not send them to market. Bills of exchange, Exchequer bills, and money bills of every description were subject to this rule. If a person consigned Exchequer bills to a second person, and he parted with them, the third party who obtained them was held to have a right to them. Commercial proceedings were of as much importance as money proceedings, and he could not see why they should not receive the same security. It might be asked, perhaps, when this was felt to be so great an evil, why it was not altered before; but it seemed to be one of those things which had grown up gradually, and which did much mischief before they became extensively known. The first decision, he believed, which established the law as it now stood was delivered in 1742; and he knew that Lord Chief Justice Gibbs had said he could

not explain the origin of that decision. He supposed it might have been dictated by some fraud. That decision, the Lord Chief Justice maintained, was at variance with the best interests of commerce, and had grown out of circumstances he could not explain. From the time of the first decision, the decisions had not been numerous, till of late years. He did not doubt but the judge had decided according to the law as it was established by these precedents; but in doing that, they had expressed their regret that these precedents had been established. [Here his Lordship read an extract from opinions delivered by the late Lord Chief Justice Ellenborough, and a late Judge, Mr. Le Blanc, expressing their regret, in deciding cases according to these precedents, that they had been established.] He inferred from these opinions that these Judges, though they had felt themselves obliged to decide in this way, supposed that the law was contrary to the general analogy of our laws and to the principles of justice. He then came to the last consideration—the law of this country being in this respect different from the law of all other countries except the law of the United States of America. In all other countries the law was recognised to be what he wished to establish it by the bill before their Lordships. When there was no evidence of fraud, it was held that the man advancing money on goods held by a factor should not suffer for his faults, but that the person who confided in the factor must be the sufferer. This was also the law in Scotland. He had understood, too, that the evils of the law were felt in America, and that means had been taken for bringing it before the Congress, with a view to assimilate the law of America to the law of other countries. If the question were examined by the principles of equity, by analogy with other cases, or by the practice of other countries, it would be found that the reasons were strong in favour of the bill. It was of great importance in commercial transactions that our law should be like the law of other countries. It was not the same with the laws relative to real property—to our land law, if he might so call it; but when the bill was founded on equity and analogy, he thought it was an additional reason in its favour that it assimilated our commercial law to the commercial law of other countries. He did not know if he had made himself understood, or if he had sufficiently explained the object of the bill; but the measure was founded in justice, and he hoped to have their Lordships' consent to it. The noble Earl concluded by moving the second reading of the bill.

Nothing can be clearer or more satisfactory than the principle laid down by Lord Liverpool in the above extract from his speech: but Act 6 Geo. IV. c. 94, which his Lordship introduced, did not fully carry out his views: for while it confirms *bonâ fide* sales, made in the ordinary course of business, in cases in which the purchaser had notice that the seller was merely an agent, it does not confirm *bonâ fide* advances made on goods, or on documents of title to goods, under the same circumstances. To obviate this discrepancy to get rid of the litigation to which certain equities in the 6 Geo. IV. c. 94 had given rise to facilitate commerce, the following statute, Viet. c. 39, was passed in 1842.

*Bonâ fide Advances to Persons intrusted with Possession of Goods or Documents of Title known to be Agents, protected.*—From and after the passing of this Act, any agent intrusted with the possession of goods, or of the documents of title to goods, shall be deemed and taken to be the owner of such goods and documents so far

give validity of pledge, if person with whom, advance of such goods, the or contract such contract and good signs other persons the person charged notice that the contract or agreement, see, 1.)

*Bonâ fide* 1. Where any such lien, or security of the delivery of other goods or negotiable securities, delivering up the and available here a previous advance agreement made and agreement, if person with whom be deemed to be a of an advance with of this Act, and shall allments and purposes if the consideration. *Bonâ fide* present an always that the lien mentioned contract or documents deposited the value at the time of the purchase which, or the negotiable securities, and exchanged. (S. 1.)

*But the Statute to be* transactions *bonâ fide*.— Nothing herein contained to give validity to advances, and exchanges, and without notice of such contracts or agreements, to make the same respect thereof against merchandise; and no shall be construed to extend to any agent intrusted from any express agreement from the owner; but with notice of such contracts or agreements, and for any purpose, such contracts shall be binding on persons interested in such goods, or on documents of title to goods, under the meaning of the Term 'Docket' of lading, India warehouse keeper's certificate of delivery of goods, or in the ordinary course of business, or in respect of possession or control of goods, or in respect of delivery, the possessor of such goods, or who receives goods thereon, and taken to be the owner, for the meaning of this Act, as aforesaid, and possession of title, whether do

give validity to any contract or agreement by way of pledge, lien, or security bona fide made by any person with such agent, as well for any original loan, advance, or payment made upon the security of such goods or documents as also for any further contract or agreement in respect thereof; and such contract or agreement shall be binding upon the owner of such goods, and all other persons interested therein, notwithstanding that the person with whom such contract or agreement is made is only an agent, (Sec. 1.)

**Bona fide Deposits in Exchange protected.**—Where any such contract or agreement for pledge, lien, or security shall be made in consideration of the delivery or transfer to such agent of any other goods or merchandise, or document of title, or negotiable security, upon which the person so delivering up the same had at the time a valid and available lien and security for or in respect of a previous advance by virtue of some contract or agreement made with such agent, such contract or agreement, if bona fide on the part of the person with whom the same may be made, shall be deemed to be a contract made in consideration of an advance within the true intent and meaning of this Act, and shall be as valid and effectual, to all intents and purposes, and to the same extent, as if the consideration for the same had been a bona fide present advance of money; provided always that the lien acquired under such last-mentioned contract or agreement upon the goods or documents deposited in exchange shall not extend to the value at the time of the goods and merchandise which, or the documents of title to which, the negotiable security which shall be delivered up and exchanged. (Sec. 2.)

**But the Statute to be construed to protect only transactions bona fide.**—This Act, and every matter herein contained, shall be deemed and construed to give validity to such contracts and agreements only, and to protect only such loans, advances, and exchanges, as shall be made bona fide, and without notice that the agent making such contracts or agreements as aforesaid has not respect thereof against the owner of such goods or merchandise; and nothing herein contained shall be construed to extend to or protect any lien or charge for or in respect of any antecedent debt due from any agent to any person with or to whom such lien or pledge shall be given, nor to give any agent intrusted as aforesaid in this Act, authority from any express orders or authority conferred upon the owner; but that, for the purpose of the intent of protecting all such bona fide advances, and exchanges as aforesaid (though without notice of such agent not being the agent's authority), and to no further or other purpose, such contract or agreement as aforesaid shall be binding on the owner and all persons interested in such goods. (Sec. 3.)

**Meaning of the Term 'Document of Title' &c.**—The words "document of title," as used in this Act, shall be construed to include any bill of lading, India warrant, dock warrant, receipt, receipt for goods, warehouse receipt, or order for the delivery of goods, or any other document in the ordinary course of business as proof of possession or control of goods, or authorising the possessor thereof to deliver, or to receive goods thereby represented, shall be deemed and taken to be a document of title within the meaning of this Act; and any agent or person, who, at the time of the making of any contract or agreement, and possessed of any such document of title, whether derived immediately

from the owner of such goods or obtained by the possession of such agent's having been intrusted with the possession of the goods or of any other document of title thereto, shall be deemed and taken to have been intrusted with the possession of the goods represented by such document of title as aforesaid, and all contracts pledging or giving a lien upon such document of title as aforesaid shall be deemed and taken to be respectively pledges of and liens upon the goods to which the same relates; and such agent shall be deemed to be possessed of such goods or documents, whether the same shall be in his actual custody or shall be held by any other person subject to his control or on his behalf; and where any loan or advance shall be bona fide made to any agent intrusted with the possession of any such goods or documents of title as aforesaid, on the faith of any contract or agreement in writing to consign, deposit, transfer, or deliver such goods or documents of title as aforesaid, and such goods or documents of title shall actually be received by the person making such loan or advance, without notice that such agent was not authorised to make such pledge or security, every such loan or advance shall be deemed and taken to be a loan or advance on the security of such goods or documents of title within the meaning of this Act, though such goods or documents of title shall not actually be received by the person making such loan or advance till the period subsequent thereto; and any contract or agreement, whether made direct with such agent as aforesaid, or with any clerk or other person on his behalf, shall be deemed a contract or agreement with such agent; and any payment made, whether by money or bills of exchange, or other negotiable security, shall be deemed and taken to be an advance within the meaning of this Act; and an agent in possession of any such goods or documents of title as aforesaid for the purposes of this Act, to have been intrusted therewith by the owner thereof, unless the contrary can be shown in evidence. (Sec. 4.)

**Agent's Civil Responsibility not to be diminished.**—Nothing herein contained shall lessen, vary, alter, or affect the civil responsibility of an agent for any breach of duty or contract, or non-fulfilment of his orders or authority in respect of any such contract, agreement, lien, or pledge as aforesaid. (Sec. 5.)

**Agent making Consignments contrary to Instruction of Principal, guilty of Misdemeanor.**—If any agent intrusted as aforesaid shall, contrary to or without the authority of his principal in that behalf, make any consignment, deposit, transfer, or delivery of any goods or documents of title so intrusted to him as aforesaid, as and by way of a pledge, lien, or security; or shall, contrary to or without such authority, for his own benefit and in violation of good faith, accept any advance on the deposit, transfer, or agreement to consign, or deliver such goods or documents of title as aforesaid; every such agent shall be deemed guilty of a misdemeanor, and being convicted thereof, shall be sentenced to transportation for any term not exceeding 14 years nor less than 7 years, or to suffer such other punishment by fine or imprisonment, or by both, as the court shall award: and every clerk or other person who shall knowingly and wilfully act and assist in making any such consignment, deposit, transfer, or delivery, or in accepting or procuring such advance as aforesaid, shall be deemed guilty of a misdemeanor, and being convicted thereof, shall be liable, at the discretion of the court, to any of the punishments which the court shall

FACTOR

606

award, as hereinbefore last mentioned: provided nevertheless that no such agent shall be liable to nevertheless prosecution for consigning, depositing, transferring, or delivering any such goods or documents of title, in case the same shall not be made a security for or subject to the payment of any greater sum of money than the amount which at the time of such consignment, deposit, transfer, or delivery was justly due and owing to such agent from his principal, together with the amount of any bills of exchange drawn by or on account of such principal, and accepted by such agent: provided also that the conviction of any such agent shall not be received in evidence in any action at law or suit in equity against him, and no agent intrusted as aforesaid shall be liable to be convicted by any evidence in respect of any act done by him, if he shall, at any time previously to his being indicted for such offence, have disclosed such act, on oath, in consequence of any compulsory process of any court of law or equity in any action, suit, or proceeding which shall have been bona fide instituted by any party aggrieved, or if he shall have disclosed the same in any examination or deposition before any commissioner of bankrupt. (Sec. 6.)

**Right of Owner to redeem &c.**—Nothing herein contained shall prevent such owner as aforesaid from having the right to redeem such goods or documents of title pledged as aforesaid, at any time before such goods shall have been sold, or repayment of the amount of the lien thereon, or restoration of the securities in respect of which such lien may exist, and upon payment or satisfaction to such agent, if by him required, of any sum of money for or in respect of which such agent would by law be entitled to retain the same goods or documents, or any of them, by way of lien as against such owner, or to prevent the said owner from recovering of and from such person with whom any such goods or documents may have been pledged, or who shall have any such lien thereon as aforesaid, any balance or sum of money remaining in his hands as the produce of the sale of such goods, after deducting the amount of the lien of such person under such contract or agreement: provided always, that in case of the bankruptcy of any such agent, the owner of the goods which shall have been so redeemed by such owner shall, in respect of the sum paid by him on account of such agent for such redemption, be held to have paid such sum for the use of such agent to have his bankruptcy, or in case the goods shall not be so redeemed, the owner shall be deemed a creditor of such agent for the value of the goods so redeemed at the time of the pledge, and shall, if he shall think fit, be entitled in either of such cases to prove for or set off the sum so paid, or the value of such goods, as the case may be. (Sec. 7.)

Clause 8 refers to the interpretation of the Act. In order further to enforce honesty on the part of agents and other like persons, the statute 24 & 25 Vict. c. 96 enacts that under certain circumstances they shall be guilty of misdemeanor, and punishable with penal servitude. When any person intrusted as a banker, merchant, broker, attorney, or other agent, with any money or security for its payment, with a direction in writing to apply, pay, or deliver it, or any part of it, or its proceeds, for any purpose or to any person specified in such direction, in violation of good faith, and contrary to the terms of such direction, converts it to the use and benefit of himself or any person other than the person so intrusting him. Whenever any person intrusted as a banker, broker, attorney, or other agent, with any chattel, valuable security, or any power of attorney for the sale and transfer

of any share or interest in any public stock or fund (British or foreign), or in any stock or fund of any body corporate, company, or society, or of any safe custody, or for any special purpose, without any authority to sell, negotiate, transfer, or pledge, in violation of good faith, and contrary to the object or purpose for which it was intrusted to him, sells, negotiates, transfers, pledges, or in any manner converts it or its proceeds to his own use or benefit, or the use or benefit of any person other than the person by whom he was so intrusted, (Trustees and mortgagees are excepted, and the parties specified are not restrained from disposing of securities.) So again in cases where the agent transfers &c. part of the estate. So with the fraudulent use of powers of attorney. So with the pledge of goods intrusted to a factor or agent for the advance of money or valuable security on contract to consign or deliver. Clerks assisting factors are punishable in the same manner. But the remedy of the principal is against the factor, and not against the innocent or bona fide purchaser.

A principal is not criminally responsible for the act of his agent, except he expressly commanded it.

For the revocation of an agent's power to commit his principal to third parties, see *Bankrupt Law*, p. 153.

**FACTORAGE or COMMISSION.** The allowance given to factors by the merchants and manufacturers &c. who employ them: it is a percentage on the goods they purchase, or sell on account of their principals; and varies in different countries, and as it refers to different articles. It is customary for factors, as observed in the preceding article, to insure the debts due to those for whom they sell for an additional, or *del credere*, commission, generally averaging from 1 1/2 to 2 per cent. Factorage or commission is also frequently charged at a certain rate per cask, or other measure, or weight, especially when the factor is only employed to receive or deliver: this rate is usually fixed by special agreement between the merchant and factor.

**FACTORY.** In Commerce, a place where merchants and factors reside, to negotiate business themselves and their correspondents on commission. These establishments, of great importance in the past history of commerce, have a practical existence at present. In modern times the word factory is used as an abbreviation for manufactory. For a short account of Factory Acts, see *MANUFACTURES*.

**FAIRS AND MARKETS.** These institutions are very closely allied. A fair, as the term is generally understood, is only a greater or smaller market recurring at more distant intervals, and are appropriated to the sale of one or more kinds of goods, the hiring of servants or labourers; but fairs are, in most cases, attended by a great concourse of people, for whose amusement exhibitions are got up.

**1. Origin of Fairs.**—Institutions of this kind are peculiarly serviceable in the earlier stages of society, and in rude and inland countries, where the number of shops, and the commodities which are then either comparatively limited, or but little frequented by dealers; so that the advantage of all that fairs should afford, and merchants induced to attend. For this purpose various privileges have been annexed to fairs, and numerous facilities afforded for the disposal of property in them. To a greater degree of solemnity, they were originally, both in the ancient and modern world, associated with religious festivals. In modern times, indeed, they are still held on the same

the or frant of the saint to whom the church is dedicated; and till the practice was prohibited, it was customary, in England, to hold them in church-wards, for the growth of towns, and the opportunity afforded for the disposal and purchase of all produce at the weekly or monthly markets. In them, the utility of fairs, in this respect, at least, has very much diminished; they are, however, much of their ancient splendour; and, in some places, a good number might be advantageously suppressed.

Fairs are far otherwise in inland countries, where the facilities for carrying on commercial transactions are comparatively circumscribed, and where the utmost importance that certain places and specified periods should be attached to the bringing together of commodities for the promotion of commerce, but also for the mitigation of national antipathies, and diffusing a taste for the products, arts, and customs of various countries.

**Abolition of English Fairs.**—No fair can be held without grant from the Crown, or a prerogative which supposes such grant. And before

a patent is granted, it is usual to have a writ of *ad quod dampnum* executed and returned, that it may not be issued to the prejudice of a similar establishment already existing. The grant usually contains a clause that it shall not be to the hurt of another fair or market; but this clause, if omitted, will be implied in law; for if the franchise occasion damage either to the king or a subject, in a person whose ancient title is prejudiced, and it is not to be revoked, it will be implied to be repeated the letters patent is the King's name to power to hold a fair or market in a particular place, the lieges can resort to no other, even though it be inconvenient; but if no place be appointed, the grantees may keep the fair or market where they please, or rather where they can most conveniently.

**3. Times of holding Fairs and Markets.**—These are either determined by the letters patent appointing the fair or market, or by usage. The statute 2 Edw. III. c. 15 enacts that the duration of the fair shall be declared at its commencement, and that it shall not be continued beyond the specified time. By statute 5 Edw. III. c. 5 any merchant selling goods after the stipulated time is to forfeit double the value of the goods sold.

Principal French Fairs.—Among these may be specified the fairs of St. Germain's, Lyons, Rheims, Chartres, Rouen, Bordeaux, Troyes, and Bayonne; but they are much fallen off.

The most important of the modern French fairs is that of Beaucuire, on the right bank of the Rhone, opposite to Tarascon, 14 miles E. of Nismes. It is very favourably situated for an entrepôt, being exclusive of the command of internal navigation afforded by the Rhone, connected by canals with the sea and the Canal du Midi. The fair, which commences on the 22nd and finishes on the 10th of July, was formerly the greatest in Europe; and, though a good deal fallen off, it is still attended by a vast concourse of people, not from France only, but also from Switzerland, Germany, Italy, Spain, and the Levant.

Almost every sort of article, whether of convenience or luxury, which can be met with in the town. It is said the number of visitors still amounts to from 50,000 to 60,000, and the amount of business done 50,000,000 fr.; but we have little doubt that these estimates are very greatly exaggerated, and the first would be nearer the mark were it reduced to 50,000 or 60,000. All bills due at this fair are presented on the 27th, and protested on the 28th. A tribunal instituted for the purpose of expediting and immediately settling all disputes growing out of transactions that take place at the fair. A military force attends to preserve order, and the prefect of the department, who is always present, entertains the principal merchants and strangers. (*Geographical Dictionary*, art. 'Beaucuire,' and the authorities there cited to.)

German Fairs.—The principal German, or European, fairs, are those of Frankfort-on-Main, Frankfort-on-the-Oder, and Leipsic. These fairs are generally very great, and are abundantly supplied with the cotton stuffs, silks, and hardware of England; the silks and velvets of France; the printed cottons of India and Austria; the raw, manufactured, and dyed wools of Germany; the furs of the North; Turkey carpets; Cachemere shawls &c. &c. There are also to be found merchants of all nations, who are negotiating with those of Spain for the purchase of furs, and the Georgians supplying themselves with the manufactures of the West Indies, and the jewellers of Paris.

Every year, a vast number of people, from every part of the world, labouring with interest, and to extend and strengthen the trade, bind together the great family of

The fairs at Frankfort-on-the-Maine should begin, the first on Easter Tuesday, and the second on the Monday nearest to September 8. Their duration is limited to 3 weeks, but they usually begin from 8 to 15 days before their legal commencement. Accounts before their legal commencement are kept in rixdollars; or 22½ batzen. The rixdollar = 3s. 11d., so that the par of exchange is 141 batzen per £ sterling. The foot = 11.27 English inches.

The fairs at Frankfort-on-the-Oder are 3 in number; viz. *Reminiscere*, in February or March; *St. Margaret*, in July; and *St. Martin*, in November. They ought, strictly speaking, to terminate in 8 days, but they usually extend to 15. The Prussian Government gives every facility to those who attend these fairs. Accounts are kept in Prussian money, that is, in rixdollars of 2s. 11d. = 12.356 English inches.

The fairs of Leipsic are still more celebrated than those of either Frankfort. They are held thrice a year—on January 1, at Easter, and at Michaelmas. The first is the least important. The Easter and Michaelmas fairs are famous, particularly the former, for the vast number of new publications usually offered for sale. They are attended by all the principal booksellers of Germany, and by many from the adjoining countries, who adjust their accounts, learn the state of the trade in all parts of the world, and endeavour to form new connections. Most German publishers of Germany what London is to that of Great Britain. As many as 5,000 new publications have been in a single Leipsic catalogue! They are also great markets for Saxon woollens and other goods, British calicoes, French silks, and, in fact, for most descriptions of produce. The fairs ought to close in 8 days, but they usually continue for about 3 weeks.

No days of grace are allowed. The holder of a bill must demand payment on the day it becomes due; and, if not paid, he must have it protested on that very day, and returned by the first opportunity. If he neglect any of these regulations, he loses all right of recourse upon the drawer and indorsers. Money of account at Leipsic same as at Frankfort-on-the-Maine, 100 lbs. Leipsic = 103 lbs. avoirdupois. The foot = 11.11 English inches. (*Kelly's Cambist*; *Manuel de Nelkenbrecher*; *Bowring's Report on the Prussian Commercial Union*, pp. 255-269, &c.)

Dr. Baring gives, in his *Travels in Hungary* (pp. 201-223), an interesting account of the fairs held at Debreczin and Pesth. The latter has been

the fairs at Frankfort-on-the-Maine should begin, the first on Easter Tuesday, and the second on the Monday nearest to September 8. Their duration is limited to 3 weeks, but they usually begin from 8 to 15 days before their legal commencement. Accounts before their legal commencement are kept in rixdollars; or 22½ batzen. The rixdollar = 3s. 11d., so that the par of exchange is 141 batzen per £ sterling. The foot = 11.27 English inches.

The fairs at Frankfort-on-the-Oder are 3 in number; viz. *Reminiscere*, in February or March; *St. Margaret*, in July; and *St. Martin*, in November. They ought, strictly speaking, to terminate in 8 days, but they usually extend to 15. The Prussian Government gives every facility to those who attend these fairs. Accounts are kept in Prussian money, that is, in rixdollars of 2s. 11d. = 12.356 English inches.

The fairs of Leipsic are still more celebrated than those of either Frankfort. They are held thrice a year—on January 1, at Easter, and at Michaelmas. The first is the least important. The Easter and Michaelmas fairs are famous, particularly the former, for the vast number of new publications usually offered for sale. They are attended by all the principal booksellers of Germany, and by many from the adjoining countries, who adjust their accounts, learn the state of the trade in all parts of the world, and endeavour to form new connections. Most German publishers of Germany what London is to that of Great Britain. As many as 5,000 new publications have been in a single Leipsic catalogue! They are also great markets for Saxon woollens and other goods, British calicoes, French silks, and, in fact, for most descriptions of produce. The fairs ought to close in 8 days, but they usually continue for about 3 weeks.

No days of grace are allowed. The holder of a bill must demand payment on the day it becomes due; and, if not paid, he must have it protested on that very day, and returned by the first opportunity. If he neglect any of these regulations, he loses all right of recourse upon the drawer and indorsers. Money of account at Leipsic same as at Frankfort-on-the-Maine, 100 lbs. Leipsic = 103 lbs. avoirdupois. The foot = 11.11 English inches. (*Kelly's Cambist*; *Manuel de Nelkenbrecher*; *Bowring's Report on the Prussian Commercial Union*, pp. 255-269, &c.)

Dr. Baring gives, in his *Travels in Hungary* (pp. 201-223), an interesting account of the fairs held at Debreczin and Pesth. The latter has been

Rt

visited by M. Blanqui in 1841, and by Mr. Spencer in 1850. The latter says (but statements of this sort are very apt to be exaggerated) that it was attended by from 80,000 to 100,000 people, who had journeyed hither from all parts of European Turkey for the purpose of disposing of their wool, hides, raw cotton, leeches, and other products of the country, and of purchasing in return the manufactures of the West. The show of the latter is very extensive. Sheds are erected in the village by Government, which serve as warehouses for the merchants, and every house is converted into a haw for the reception of strangers. But by the greater number of the latter have, notwithstanding, to encamp with their animals, horses &c. on the surrounding plain. Blanqui speaks in high terms of commendation of the good order that prevailed, in the absence of anything like police among the motley population at the fair. (Blanqui, *Voyage en Bulgarie*, p. 252; Spencer's *Travels in European Turkey*, ii. 346; &c.)

This great fair, which lasts 15 days (Blanqui) is held, like the other fairs, in autumn, immediately after harvest. But though it be largely frequented by German, Swiss, Italian, and Greek merchants, who purchase a great amount of business, it is very little, if at all, known in England. This is the more surprising, seeing that we have consuls at Adrianople and other places not very distant from the seat of the fair; and it might have been supposed that these functionaries would have been anxious to send home the most ample details with respect to this and other fairs in their respective countries, describing the products which might be sent advantageously bought and sold at these fairs, the rates by which they might be most profitably reached, and so forth. But if such reports were published; and hence, probably, the fact of the business of these fairs being mostly in the hands of foreigners.

**Eastern Fairs.**—The most important fair in the Eastern world is that held at Mecca during the month of pilgrims in the month of Dhalhagja, and to be frequented by many thousands of individuals of all ranks and orders, brought together from the remotest corners of the Mohammedan world; and though the numbers attending it declined of late years, the concourse is still great. [CARAVAN.]

Delwar, in Hindostan, in lat. 29° 57' N., long. E. 117 miles north-east from Delhi, is famous for its being one of the principal places of pilgrimage, and the greatest fair in India. The town, which is inconsiderable, is situated on the banks of the Ganges, at the point where that sacred river issues from the mountains. The pilgrimages and fair are held together at the vernal equinox, and Europeans, nowise addicted to the religion, who have been repeatedly present on various occasions, estimate that from 200,000 to 300,000 strangers are then assembled in the town and vicinity. But every twelfth year is reckoned as a jubilee; and then it is supposed that from 1,500,000, and even 2,000,000 pilgrims and dealers are congregated together from all parts of India and countries to the north, which happened to be a twelfth year, and a very auspicious moment for bathing in the Ganges was announced to the impatient devotees, who were so tremendous that no fewer than 430 persons were either trampled to death under foot, or perished in the river! The foreigners resorting to the fair for commercial purposes only, consist of natives of Nepal, the Punjab, and the Afghans, Usbeck Tartars &c. and they bring with them numbers of horses, cattle, and camels;

Persian dried fruits, shawls, drugs &c.: the returns are made in cotton piece goods, indigo, sugar, &c. The merchants never mention the price of their goods, but conduct the bargain by touching the different joints of their fingers, to hinder the bystanders gaining any information. During the Maharratta sway, a kind of poll-tax and duties on cattle were levied; but all is now free, without impost or molestation of any sort. Owing, also, to the precautions adopted by the British Government, the most perfect order is preserved—much to the surprise and satisfaction of the natives; for, antequally ended in disorder and bloodshed, the fairs were now information, and the excellent account of Hurdwar in Hamilton's *Gazetteer*.)

The fairs of Portobello, Vera Cruz, and Acapulco, once so famous, are now totally deserted; that of the Havannah is also much fallen off.

**FATHOM.** A measure of length, 6 feet, chiefly used for measuring the length of cordage, and the depth of water and mines.

**FEATHERS, BED-FEATHERS** (Fr. plumes, plumes à lit; Ger. federn, bettfedern; Dutch, bedveern, pluimen; Ital. piume; Span. plumas) make a considerable article of commerce; particularly those of the ostrich, goose, heron, swan, peacock, and other poultry. The feathers of the ostrich have been held in the highest estimation from antiquity downwards, and have furnished favourite decorations for the fans and headresses of ladies, the helmets of warriors, and the most splendid processions. Many parts of Great Britain supply feathers for beds, and an inferior sort is brought from Ireland. Eider down, the finest variety of its class, is imported from the north of Europe; the ducks that supply it being inhabitants of Greenland, Iceland, and Norway. The eider duck breeds in the islands on the west of Scotland, but not in sufficient numbers to form a profitable branch of trade to the inhabitants. Hudson's Bay furnishes very fine feathers, especially for quills. The down of the swan is brought from Dantzic, as well as large quantities of superior feathers.

The duty on feathers was repealed in 1845. In 1866 the following quantities were imported; viz.

Feathers for beds	-	-	cwt. 12,470
Ostrich white	-	-	do. 11,877
black	-	-	" 27,000
Other sorts, unenumerated	-	-	" 51,499

**FIDDLES, or VIOLINS** (Ger. violinen, geigen; Dutch, violen; Fr. violons; Ital. violini; Span. violines; Russ. skripizii). Musical instruments, too well known to need any particular description. The finest-toned violins are those made in Italy; they are usually called Cremonas, from the name of the town where they were formerly manufactured in the highest perfection; 100 guineas and more have not unfrequently been given for a first-rate Cremona violin.

**FIGS** (Ger. feigen; Dutch, vygen; Fr. figues; Ital. fichi; Span. higos; Lat. fic, carica; Arab. teen). The fruit of the fig tree (*Ficus carica*), a native of Asia, but early introduced into Europe. It flourishes in Turkey, Greece, France, Spain, Italy, and Northern Africa, and even sometimes ripens its fruit in the open air in this country. Figs, when ripe, are for the most part dried in ovens to preserve them, and then packed very closely in the small chests and baskets in which we import them. The best come from Turkey; those of Kalamata, in the Morea, are said to be the most luscious. (Thomson's *Dispensatory*.)

Dried figs form a very considerable article of commerce in Provence, Italy, and Spain; besides

FLAX (Ger. *flaels*; Dutch, *vlasch*; Fr. *lin*; Ital. and Span. *lino*; Russ. *len*, *lon*; Pol. *len*; Lat. *linum*). An important plant (*Linum usitatissimum*) cultivated from the earliest ages in Great Britain and many other countries; its fibres being manufactured into thread, and its seed crushed for oil. But in general we have been in the habit of importing a large proportion of our supplies. The premiums given by the Legislature to force the cultivation of flax had little effect; the fact being, as Mr. London has stated, that its culture is found to be, on the whole, less profitable than that of corn. When allowed to ripen its seed, it is one of the most severe crops.

Probably, however, the case may be different in Ireland, the soil and climate of which appear to be better suited than those of Britain to the growth of flax. There, at all events, its cultivation has been rapidly extended within the last 20 years. This is evinced by the fact that while the land under flax in Ireland in 1817 amounted to only 58,312 acres, it had increased in 1851 to 140,356 acres, to 301,693 acres in 1864, and on an average of the 3 years 1865-1867 it amounted to 256,015 acres. This extension has been owing, in some measure, to the exertions of a society for promoting the growth of flax, and it remains to be seen whether it be really an advantage.

Russia supplies by far the largest portion of the flax imported into this country, the principal sorts being Petersburg, Narva, Riga, Revel, Pernau, Liebau, Memel, and Oberland. Petersburg and Narva flax are nearly of the same quality, the latter being but little inferior to the former. Both sorts come to us in bundles of 12, 9, and 6 heads. The Riga flax seems to deserve the preference of any imported from the Baltic. It is the growth of the provinces of Marienburg, Druania, Thiesenhausen, and Lithuania.

The best Marienburg is called simply Marienburg (M), or Marienburg clean; the second quality, cut (GM); and the third, *risten drayband* (RD): of the three other provinces, the first quality bears the name of *rakitzer*—as *Druania rakitzer* (DR), *Thiesenhausen rakitzer* (TR), and *Lithuania rakitzer* (LR). The cut flax of these three provinces is the second quality; and to the third quality belong the *badstub* and *badstub cut* (B and BG), the *paternoster* (PN), and *hufs three band* (HD). *Badstub* and *paternoster* are the refuse of the *rakitzer* flax, and the *three band* again the refuse of the former sorts, and consequently very ordinary. The Revel and Pernau consist of *Marienburg cut*, *risten*, *hufs three band*, and *three band*. The Liebau and Memel growths are distinguished by the denomination of *four and three band*. These two sorts, as well as the Oberland flax, come from Königsberg, Elbing &c., and are little esteemed in the British markets.

Flanders or Dutch flax is well dressed, and of the finest quality.

Flax is extensively cultivated in Egypt. In late years, some of the Italian ports, which used to be supplied from Russia, have been fully supplied on lower terms from Alexandria.

The *Phormium tenax*, or New Zealand flax, has been said to exceed every other species in strength of fibre and whiteness; qualities which, if it really possess them in the degree stated, must make it peculiarly well fitted for being made into canvas and cordage. In point of fact, however, there is a great diversity of opinion as to its real merits, and it fetches at present (1868) but a low price. In 1831 and 1832 the imports of New Zealand flax amounted respectively to 15,725 and 13,667 cwts.; but they fell off in 1835 to 7,312 cwts., and since then only trifling quantities have been imported. It is alleged that this is a consequence of the imperfect preparation of the flax, which has hitherto been entirely entrusted to the native women; but without presuming to say whether the defects with which it is charged be inherent in the flax itself, or depend on its preparation, it is abundantly certain that, unless it be furnished of a superior quality, it will not suit our markets.

When flax is brought to the principal British ports whence it is shipped, it is classified according to its qualities, and made up in bundles by inspectors (*brackers*) appointed by Government to see the assortment of that and all other mercantile goods. These functionaries are said to perform their duty with inaudible impartiality and exactness. A ticket is attached to every bundle of assorted flax containing the names of the inspector and of the sort of flax, and the period when it was selected or inspected. [HEMP.] Good flax should be of a fine bright colour, well separated from the codilla, or coarser portion of the plant; and long, fine, and strong fibre. In purchasing flax it is usual to employ agents wholly devoted to this peculiar business.

Account of the Quantities and Values of the Flax and Tow, and Codilla of Flax, Imported into the United Kingdom in 1866, specifying the Countries from which they were brought, and the Quantities and Values brought from each.

Whence Imported	Flax dressed		Flax undressed		Flax or Codilla
	cwts.	Value	cwts.	Value	
Russia	26,105	92,124	1,006,791	2,780,515	212,615
Prussia	2,235	8,119	48,381	151,953	3,403
Hamburg	1,490	5,287	—	—	6,672
Holland	3,341	6,312	59,087	257,490	8,006
Belgium	4,209	19,995	108,823	435,292	25,538
France	—	—	14,911	59,981	5,204
Other Parts	87	313	3,951	19,466	1,151
Total	35,467	132,173	1,212,921	5,362,250	279,807

In 1866 the price of dressed flax varied from 4*l.* 15*s.* to 3*l.* 10*s.* 7*d.*, that of undressed from 4*l.* to 2*l.* 13*s.* The Russian being 2*l.* 15*s.* 4*d.*, that of codilla and tow was from 2*l.* 12*s.* 3*d.* to 2*l.* 9*s.* 7*d.*

The duty on flax, which previously to 1845 was only 1*d.* per cwt., was repealed in the course of that year. For an account of the exports of flax and hemp from Russia, see PETERSBURG.

FLAX-SEED or LINSEED (Fr. lin. graine de lin; Ger. leinsaat; Dutch, lynzaad; Ital. lin seme; Span. linaza; Port. linhaca; Polish, siemiec; Ruse, semja lenjanoc; Lat. lin semen). The seed of flax. It contains a great deal of oil, which it yields by expression; and is cultivated either that it may be used in sowing,

FOOCHOW

or sent to the crushing mills to be converted into oil.

As the quality of the crop depends much on the seed employed, a good deal of care is requisite in selecting the best. Generally speaking, it should be chosen of a bright, brownish colour, oily to the feel, heavy, and quite fresh. Dutch seed is in the highest estimation for sowing; it not only ripens sooner than any other that is imported, but produces larger crops, and of the quality that best suits our principal manufactures. American seed as from Dutch seed, British flax-seed is not so large times used instead of Dutch; but the risk of the crop misgiving is so much greater, 'that those only who are ignorant of the consequences, or who are compelled from necessity, are chargeable *Encyclopedia of Agriculture.*' (London's principally imported from India, but considerable quantities are also brought from Russia and Italy.

Account of the Quantities and Values of Flax and Linseed Imported into the United Kingdom in 1866, specifying the Countries from which they were chiefly brought, and the Quantities and Values brought from each.

Whence Imported	Quantities	Value

The price of these seeds varied in 1866 from 7s. 6d. to 3l. 9s. 9d. per quarter.  
 The duty of 1d. per quarter formerly imposed on flax-seed and linseed was repealed in 1866.

LOTSAM, JETSAM, and LAGAN. In order to constitute a legal wreck, the goods must come ashore. If they continue at sea, the law distinguishes them by the foregoing uncoth and barbarous appellations: *fotsam* is when the goods continue swimming on the surface of the waves; *lotsam* is when they are sunk under the surface of the water; and *lagan* is when they are sunk, but not to a cork or buoy to be found again. (Black-Book i. c. 8.) Foreign liquors, brought or sent into Great Britain or Ireland as dutiable goods, are to pay the same duties as dutiable goods, and are to be treated as such. (Black-Book i. c. 8.)

OCR (Ger. feines mehl, semmelmehl; Dutch, Fr. fleur de farine; Ital. fiore; Span. harina). The meal of wheat corn, finely ground and sifted. There are three qualities of flour, viz. *firsts*, *seconds*, and *thirds*, of which the first is the purest. [CORN LAWS AND CORN]

FOOCHOW. This port, one of the principal Treaty ports, is the capital of the province of Chekiang, and is situated in lat. 26° 02' 24" N. long. 119° 25' 0" E. The sea on the east of the province is that known as the Formosa Channel. The province is mountainous, but there is access to the interior by the two great rivers, the Min

which drains the Bohoa region, and the Fu-kien. The advantages of the port as a place from which black teas could be most conveniently shipped were recognised as early as 1830, and it was included among the four open ports of the Treaty of Nankin in 1842. It lies 34 miles from the mouth of the Min, and its population is estimated at 600,000, the walls being more than 8 miles in circuit.

The navigation of the estuary of the Min is intricate and dangerous, the guide to the transit being the prominent landmark called Sharp Island Peak. At about 8 miles from the mouth the stream contracts to a channel not more than half a mile in width, at the passes of Kin-pai and Minguan. Above these passes is the anchorage for foreign vessels at Lo-sing Island, called also Purgoda Island. Vessels are held to have entered the port after they have passed Kin-pai, and the ship-anchors, Kushan, and the river between the Bridge and Tien-how Island. The shallowness of the river above Pagoda Island, about 10 miles from Foochow, precludes the passage of any but very light craft. There is also an artificial bar, constructed in 1841, with a view to preventing the access of British ships of war to the city.

Foochow is 185 miles from Amoy, 335 from Swatow, and 510 miles from Hong-kong, and communications by steamer are maintained between these ports. It is distant 410 miles from Shanghai. The local weights are different from those employed elsewhere, being one third less. Thus the

Foochow catty is nearly equal to the lb. avoirdupois. The payments are reckoned in Sycee, cent dollars being 13.2 per cent. discount, clean Mexican dollars being 12 per cent. Pilots conduct vessels from the can 12 per cent. from White Dogs to Sharp mouth, at 3 dols. from White Dogs to Sharp Peak per foot of draught, and 1.50 dols. thence to Pagoda anchorage. There is a dock at the latter spot, 300 feet long, 95 broad, and 22 deep. Rates, 1 Mexican dollar per registered ton for first three days, 16 cents for succeeding days. The dock is owned and managed by Europeans.

The chief exports of Foochow are of tea, of which 17,839,567 dols. in value were exported in 1866, 19,717,882 dols. in value in 1865; the quantities exported in the following periods were:—

Year	Quantity	Value
1861-2	-	56,000,000
1862	-	52,000,000
1863-4	-	61,000,000
1864-5	-	65,000,000
1865-6	-	65,000,000

Two thirds of this quantity reached the United Kingdom, the remainder Australia, the United States &c. The qualities are Congou, Souehong, and to the United States Oolong. Another important article of export is timber.

The Customs regulations, with the exception of those declaring the limits of the port, are the same as those of Amoy, and the authorities for the foregoing statements the same as have been consulted for that article.

**FOOT.** A measure of length consisting of 12 inches. [**WEIGHTS AND MEASURES.**]

**FOREIGN-GOING SHIPS.** [**SHIPS; SHIPPING.**]

**FORESTALLING.** The buying or contracting for any cattle, provision, or merchandise on its way to the market, or dissuading persons from buying their goods there, or persuading them to raise the price, or spreading any false rumour with intent to enhance the value of any article. In the remoter periods of our history several statutes were passed prohibiting forestalling under severe penalties; but as more enlarged views upon such subjects began to prevail, their impolicy became obvious, and they were consequently repealed in 1772. (*Wealth of Nations*, book iv. chap. 5.)

[**ENROSSING.**]  
**FRANKINCENSE.** [**ROSIN.**]  
**FRAUDULENT PREFERENCE.** [**BANKRUPTCY; INSOLVENCY AND BANKRUPTCY.**]

**FREIGHT.** The sum paid by the merchant or other person hiring a ship, or part of a ship, for the use of such ship or part during a specified voyage or for a specified time.

The freight is most commonly fixed by the charterparty [**CHARTERPARTY**] or bill of lading [**BILL OF LADING**]; but in the absence of any formal stipulations on the subject, it would be due according to the custom or usage of trade.

In the case of a charterparty, if the stipulated payment be a gross sum for an entire ship, or an entire part of a ship, for the whole voyage, the gross sum will be payable although the merchant has not fully laden the ship; and if a certain sum be stipulated for every ton, or other portion of the ship's capacity, for the whole voyage, the payment must be according to the number of tons, &c. which the ship is proved capable of containing, without regard to the quantity actually put on board by the merchant. On the other hand, if the merchant have stipulated to pay a certain sum per cask or bale of goods, the payment must be, in the first place, according to the number of casks and bales shipped and delivered; and if he have further covenanted to furnish a complete lading, or a specific number of casks or bales, and failed to do so, he must make good

the loss which the owners have sustained by his failure.

If an entire ship be hired, and the burden thereof be expressed in the charterparty, and the merchant bind himself to pay a certain sum for every cask or bale of goods which he shall load on board, but does not bind himself to furnish a complete lading, the owners can only demand payment for the quantity of goods actually shipped. But if the merchant agree to load a full and complete cargo, though the ship be described as of less burden than she really is, the merchant must load a full cargo, according to the real burden of the ship, and he will be liable for freight according to what ought to be loaded.

The delivery of goods at the place of destination is in general necessary to entitle the owner to freight; but with respect to living animals, whether men or cattle, which may frequently die during the voyage without any fault or neglect of the persons belonging to the ship, it is ruled that if there be no express agreement whether the freight is to be paid for the lading or for the transporting them, freight shall be paid as well for the dead as for the living: if the agreement be to pay freight for the lading, then death certainly cannot deprive the owners of the freight; but if the agreement be to pay freight for transporting them, then no freight is due for those that die on the voyage, because as to them the contract is not performed. These distinctions have been made in the civil law, and have been adopted into the modern systems of maritime law.

Freight is most frequently contracted to be paid either by the whole voyage, or by the month, or other time. In the former case the owners take upon themselves the chance of the voyage being long or short: but in the latter the risk of the duration falls upon the merchant; and if no time be fixed for the commencement of the computation, it will begin from the day on which the ship breaks ground and commences her voyage, and will continue during the whole course of the voyage, and during all unavoidable delays not occasioned by the act or neglect of the owners or master, or by such circumstances as occasion a suspension of the contract for a particular period. Thus, the freight will be payable for the time consumed in necessary repairs during a voyage, provided it do not appear that the ship was insufficient at the outset, or that there was any improper delay in repairing her.

In the absence of an express contract to the contrary, the entire freight is not earned until the whole cargo be ready for delivery, or has been delivered to the consignee according to the contract for its conveyance.

If a consignee receive goods in pursuance of the usual bill of lading, by which it is expressed that he is to pay the freight, he, by such receipt, makes himself debtor for the freight, and may be sued for it; but a person who is only an agent for the consignee, and who is known to be acting in that character, does not make himself personally answerable for the freight by receiving the goods, although he enters them in his own name at the Custom House.

In some cases freight is to be paid, or rather an equivalent recompense made to the owners, although the goods have not been delivered at the place of destination, and though the contract for conveyance be not strictly performed. Thus, if part of the cargo be thrown overboard for the necessary preservation of the ship and the remainder of the goods, and the ship afterwards reach the place of destination, the value of this part is to be

answered to the owner, and the value of the repairs, the owner is to charge the price of detentions to charge the world have been thicker.

When goods the merchant is liable for the fault or neglect of the merchant if he is not to accept the goods from the amount of the other hand, if there is a principle of demurrage itself, with in the confinement of the perils of the sea, the merchant must bear the master and their contract or against such an amount regulated by the part of delivery, the instance less than the shipmer; and occasioned by the the owners of the contract.

Different opinions, Yalin, Pothier, and maritime law, with allowing the merchant freight in the event of This question has in this country. Tenterden, 'intention doubtful, is the right at the port of practice, I have been never claimed in the ping, part iii. c. 7.)

Freight being the chance of goods or passage of a total loss; and held, that 'in case the merchant may abandon.' (Abbott, the merchant has made by it.

It often happens to a party to sail from the first—as, and from L certain sum to be paid of the duration with a contract, if the ship sail in a day the goods of the board to be brought in her return freight, although the of the voyage to the homeward voyages for the proportion of this sort, 'there and the ship be cargo, no freight is of the whole profit of the parties

answered to the merchant by way of general average, and the value of the freight thereof allowed to the owner. So, if the master be compelled by necessity to sell a part of the cargo for victuals or repairs, the owners must pay to the merchant the price which the goods would have fetched at the place of destination, and therefore are allowed to charge the merchant with the money that would have been due if they had been conveyed thither.

When goods are deteriorated during a voyage, the merchant is entitled to a compensation, provided the deterioration has proceeded from the fault or neglect of the master or mariners; and of course he is not answerable for the freight, unless he accept the goods, except by way of deduction from the amount of the compensation. On the other hand, if the deterioration has proceeded from a principle of decay naturally inherent in the commodity itself, whether active in every situation, or in the confinement and closeness of a ship, or from the perils of the sea, or the act of God, the merchant must bear the loss and pay the freight; for the master and owners are in no fault, nor does their contract contain any insurance or warranty against such an event. In our West India trade, the freight of sugar and molasses is usually regulated by the weight of the casks at the port of delivery here, which, in fact, is in every instance less than the weight at the time of the shipment; and, therefore, the loss of freight occasioned by the leakage necessarily falls upon the owners of the ship by the nature of the contract.

Different opinions have been entertained by Yalin, Pothier, and other great authorities as to maritime law, with respect to the expediency of allowing the merchant to abandon his goods for freight in the event of their being damaged. This question has not been judicially decided in this country. 'The only point,' says Lord Tenterden, 'intended to be proposed by me as doubtful, is the right to abandon for freight alone at the port of destination; and in point of practice, I have been informed that this right is never claimed in this country.' (*Law of Shipping*, part iii. c. 7.)

Freight being the return made for the conveyance of goods or passengers to a particular destination, no claim arises for its payment in the event of a total loss; and it is laid down by Lord Mansfield, that 'in case of a total loss with salvage, the merchant may either take the part saved or abandon.' (Abbott, part iii. c. 7.) But after the merchant has made his election, he must abide by it.

It often happens that a ship is hired by a charterparty to sail from one port to another, and thence back to the first—as, for example, from London to Leghorn, and from Leghorn back to London—at a certain sum to be paid for every month or other period of the duration of the employment. Upon such a contract, if the whole be one entire voyage, and the ship sail in safety to Leghorn, and there deliver the goods of the merchant and take others aboard to be brought to London, but happen to lose, in her return thither, nothing is due for freight, although the merchant has had the benefit of the voyage to Leghorn; but, if the outward and homeward voyages be distinct, freight will be due for the proportion of the time employed in the outward voyage. 'If,' said Lord Mansfield, in a case of this sort, 'there be one entire voyage out and back and the ship be cast away on the homeward voyage, no freight is due; no wages are due, because the whole profit is lost; and by express agreement the parties may make the outward and

homeward voyage one. Nothing is more common than two voyages: wherever there are two voyages and one is performed, and the ship is lost on the homeward voyage, freight is due for the first.' (K. B. Trin. Term, 16 Geo. III.)

It frequently happens that the master or owner fails to complete his contract, either by not delivering the whole goods to the consignee or owner, or by delivering them at a place short of their original destination: in these cases if the owner or consignee of the goods derive any benefit from their conveyance, he is liable to the payment of freight according to the proportion of the voyage performed, or *pro ratâ itineris peracti*: and though contracts of this nature be frequently entire and indivisible, and the master or owner of the ship cannot, from their nature, sue thereon, and recover a rateable freight, or *pro ratâ itineris*, yet he may do so upon a fresh implied contract, for as much as he deserves to have, unless there be an express clause in the original charterparty or contract to the contrary. A fresh implied contract is inferred from the owner's or consignee's acceptance of the goods. Many difficulties have, indeed, arisen in deciding as to what shall amount to an acceptance: it is not, however, necessary actually to receive the goods; acceptance may be made by the express or implied directions, and with the consent, of the owner or consignee of the goods, but not otherwise.

It sometimes happens that the owner of the ship, who is originally entitled to the freight, sells or otherwise disposes of his interest in the ship: where a chartered ship is sold before the voyage, the vendee, and not the vendor or party to whom he afterwards assigns the charterparty, is entitled to the freight. But where a ship has been sold during the voyage, the owner, with whom a covenant to pay freight has been made, is entitled to the freight, and not the vendee. A mortgagee who does not take possession is not entitled to the freight.

The time and manner of paying freight are frequently regulated by express stipulations in a charterparty, or other written contract; and when that is the case, they must be respected: but if there be no express stipulation contrary to or inconsistent with the right of lien, the goods remain as a security till the freight is paid; for the master is not bound to deliver them, or any part of them, without payment of the freight and other charges in respect thereof. But the master cannot detain the cargo on board the vessel till these payments be made, as the merchant would, in that case, have no opportunity of examining the condition of the goods. In England, the practice is, when the master is doubtful of payment, to send such goods as are not required to be landed at any particular wharf, to a public wharf, ordering the wharfinger not to part with them till the freight and other charges are paid. No right of lien for freight can exist unless the freight be earned; if the freighter or a stranger prevent the freight from becoming due, the ship owner or master's remedy is by action of damages.

(For further information and details with respect to this subject, see the art. CHARTERPARTY in this Dictionary; Abbott (Lord Tenterden) *On the Law of Shipping*, part iii. c. 7; Chitty's *Commercial Law*, vol. iii. c. 9; Smith's *Mercantile Law*, 7th ed. p. 295; Molloy *de Jure Maritimo*, book ii. c. 4; &c.)

FRUIT (Ger. obst, fruchte; Dutch, ooft; Fr. fruit; Ital. frutta, frutte; Span. fruta; Russ. owooschtsch; Lat. fructum). This appellation is bestowed by commercial men upon those species

of fruit, such as oranges, lemons, almonds, raisins, currants, apples &c., which constitute articles of importation from foreign countries.

**FULLERS' EARTH** (Ger. walkereder; Dutch, vollard; Fr. terre à foulon; Ital. terra da purgatori; Span. tierra de batan; Russ. schiffernain; Lat. terra fullonum). A species of clay, of a greenish white, greenish grey, olive and oil green, blue, and sometimes spotted colour. It is usually opaque, very soft, and feels greasy. It is used by fullers to take grease out of cloth before they apply the soap. The best is found at Reigate in Surrey. The remarkable deterative property on woollen cloth depends on the alumina, which should be at least one fifth of the whole, but not much more than one fourth, lest it become too tenacious. The use of fullers' earth has greatly declined, though even at present about 12,000 tons of the substance are annually raised at Reigate. Malcolm, in his *Survey of Surrey*, published in 1809, says that he took considerable pains in endeavouring to ascertain the consumption of fullers' earth, and that he found it to be about 6,300 tons a-year for the entire kingdom, of which about 4,000 tons were furnished by Surrey.

The name given to the public funded debt due by Government.

The practice of borrowing money in order to defray a part of the war expenditure began, in this country, in the reign of William III. In the infancy of the practice it was customary to borrow upon the security of some tax, or portion of a tax, set apart as a fund for discharging the principal and interest of the sum borrowed. This discharge was, however, very rarely effected. The public exigencies still continuing, the loans were, in most cases, either continued, or the taxes were again mortgaged for fresh ones. At length the practice of borrowing for a fixed period, or, as it is commonly termed, upon *terminable* annuities, was almost entirely abandoned, and most loans were made upon *interminable* annuities, or until such time as it might be convenient for Government to pay off the principal.

In the beginning of the funding system, the term fund meant the taxes or funds appropriated to the discharge of the principal and interest of loans; those who held Government securities, and sold them to others, selling, of course, a corresponding claim upon some fund. But after the debt began to grow large, and the practice of borrowing upon interminable annuities had been introduced, the meaning attached to the term fund was gradually changed, and instead of signifying the security upon which loans were advanced, it has for a long time signified the principal of the loans themselves.

Owing partly, perhaps, to the scarcity of disposable capital at the time, but far more to the supposed insecurity of the Revolutionary establishment, the rate of interest paid by Government in the early part of the funding system was comparatively high; but as the country became richer, and the confidence of the public in the stability of Government was increased, ministers were enabled to take measures for reducing the interest, first in 1716, and again in 1749.

During the reigns of William III. and Anne the interest stipulated for loans was very various; but in the reign of George II. a different practice was adopted. Instead of varying the interest upon the loan according to the state of interest in the market at the time, the rate of interest was generally fixed at *three or three and a half per cent.*; the necessary variation being made in the principal funded. Thus, suppose Government

were anxious to borrow, that they preferred borrowing in a 3 per cent. stock, and that they could not negotiate a loan for less than 4 per cent.; they effected their object by giving the lender, in return for every 100*l.* advanced, 150*l.* of 3 per cent. stock; that is, they bound the country to pay him or his assignees 1*l.* 10*s.* a-year in all time to come, or otherwise to extinguish the debt by a payment of 150*l.* In consequence of the prevalence of this practice, the principal of the debt now existing amounts to nearly *two fifths* more than the sum actually advanced by the lenders.

Some advantages are, however, derivable, or supposed to be derivable, from this system. It renders the management of the debt, and its transfer, more simple and commodious than it would have been, had it consisted of a great number of funds, bearing different rates of interest; and it is contended that the greater field for speculation afforded to the dealers in stocks bearing a low rate of interest has enabled Government to borrow, by funding additional capitals, for a considerably less payment on account of interest than would have been necessary had no such increase of capital been made.

But in point of fact, these advantages are inconsiderable, while the disadvantages inseparable from the practice of funding a large amount of stock at a low rate of interest are great and lasting. During war, especially if any considerable portion of its expenditure be defrayed by means of loans, the rate of interest uniformly rises, and is usually much higher than during peace. If, therefore, loans were funded in stocks bearing a rate of interest equivalent to the rate when they happen to be contracted for, the charge on their account might be reduced soon after the return of peace, according to the fall in the rate of interest; whereas, when loans are funded in stocks bearing a low rate of interest, it becomes impossible to take advantage of the fall in interest at the return of peace, and the country burdened with the expense of the injury we sustain by overlooking this plain principle.

It is not easy to exaggerate the injury we sustain by overlooking this plain principle. In 1815, to specify only one of many similar instances, Government bargained for a loan of 36,000,000*l.* it being stipulated that every subscriber of 100*l.* should be entitled to 17*l.* 3 per cent. stock, or 10*l.* 4 per cent. stock, making the interest on the loan 5*l.* 12*s.* 4*d.* per cent. The great improvement of this transaction is obvious. If interest of 5*l.* 15*s.* to 6*l.* per cent. had been paid for the loan, it might have been obtained without funding additional capital; and had that been done, should have been able, within 4 or 5 years, to reduce the charge on account of the loan to 3 or 3½ per cent.; but, owing to the way in which the contract was made, we have not had, and do not have, any means of reducing the charge on account of this loan, so long as the market rate of interest is above 3 per cent. by paying 17*l.* for every 100*l.* originally advanced, exclusive of the 10*l.* of 4 per cent. stock! As already stated, is only one instance out of many of the same sort. We believe, indeed, that it is within the mark when we affirm that this erroneous method of funding, the result of which is at present paying from 6,000,000*l.* to 7,000,000*l.* a-year on account of the public debt more than would have had to pay, had the same been borrowed and funded without any increase of capital. (For a further and full discussion

subject, see the 3rd edition of the *Treatise on Taxation and the Funding System*, by the author of this work, pp. 469-470.)

That this improvident system should have been so extensively acted on by our finance ministers during the American and French wars is the more surprising, seeing that experience had already demonstrated the advantages of funding limited capitals at a comparatively high rate of interest. Although during the reigns of William III. and Anne loans were mostly contracted at a very high rate of interest, no attempt was made to disguise this fact by assigning to the parties large amounts of stock bearing a low rate of interest. The stock created was the exact amount of the loans, the interest on it being increased according to the supposed insecurity of the Government, the scarcity of floating capital &c. Now, mark the consequences of this. So early as 1716 Sir Robert Walpole, availing himself of the greater facility with which money was procured after the Treaty of Utrecht, and of the greater stability of the Government, was able, by offering to pay off the creditors, to reduce the charge on account of the debt thus created from 1,598,602*l.* to 1,274,146*l.*, being a saving of

324,456*l.*, or about one fifth of the entire charge. In 1727 a further saving of about 340,000*l.* a-year was effected by reducing the interest on the greater portion of the debt from 5 to 4 per cent.; and in 1749, during the administration of Mr. Pelham, the interest was again reduced from 4 to 3 per cent.—a measure which produced a fresh saving of 565,000*l.* a-year.

Happily the practice of funding in a 5 per cent. stock was not entirely abandoned during the late war. In 1822 the total British and Irish 5 per cent. stock amounted to about 150,000,000*l.*; and, by offering to pay it off, a reduction of interest was then effected to the extent of about 1,200,000*l.* a-year. And since that period further savings have been effected by the reduction of the interest on the 4 and 4½ per cent. stock. But, unfortunately, by far the greatest proportion of the debt created during the late war, and that with the American colonies, was funded in the 3 per cent.; and, as already stated, the charge on that portion has in consequence been hitherto, and will, most probably, continue to be, for an indefinite period, unsusceptible of diminution.

We subjoin

The following account (No. III.) exhibits the progress of the national debt of Great Britain from the Revolution to the present time:—

III.—Account of the Principal and Annual Charge of the Public Debt at different Periods since the Revolution.\*

	Principal Funded and Unfunded	Interest and Management
Debt previously in the Revolution in 1690	£ 661,163	£ 39,855
Excess of debt contracted during the reign of William III, above debt paid off	14,109,962	1,173,169
Debt at the accession of Queen Anne in 1702	14,771,125	1,213,324
Debt contracted during the reign of Anne in 1702, above debt paid off	33,408,233	1,847,811
Debt at the accession of George I. in 1714	36,179,160	3,063,135
Debt contracted during the reign of George I.	16,318,163	—
Debt at the accession of George II. in 1727	52,543,923	2,360,934
Debt contracted between the accession of George II. and the Peace of Paris in 1763, 3 years after the accession of George II, above debt paid off	80,192,126	2,671,799
Debt in 1763	132,716,049	5,032,733
Debt paid off from 1763 to 1775	5,823,258	329,211
Debt at commencement of American war in 1775	126,892,811	4,703,549
Debt contracted during the American war after conclusion of American war in 1783	118,624,241	4,961,222
Debt paid from 1786 to 1793	215,466,854	6,664,541
Debt at commencement of French war in 1793	3,803,431	232,362
Debt contracted during French war in 1793	273,663,421	9,452,179
Debt at the consolidation of the English and Irish Exchequers at the commencement of 1817	591,507,711	21,880,689
Excess of debt cancelled over debt contracted from 171 to March 31, 1862	839,382,115	31,591,227
Debt on March 31, 1862, and charge thereon during preceding year	38,611,907	5,425,226
Debt on March 31, 1862, and charge thereon during preceding year	800,770,238	36,166,701
Excess of debt cancelled over debt contracted from March 31, 1861 to March 31, 1867	23,472,131	—
Debt on March 31, 1867, and charge thereon during preceding year	777,197,801	26,117,622

\* The earlier portion of this account has been taken chiefly from an elaborate paper compiled by Mr. Chisholm, formerly of the Exchequer, showing the progress of the debt since 1691. (Par. Papers, No. 143, Sept. 1, 1857.)  
† Interest on debt reduced.  
‡ In 1801, 5,000,000 of the unredeemed public debt was cancelled, and a terminable annuity substituted. The capitalized value of the annuity should therefore be added to the principal in the first column.

IV.—Account showing the Total Amount of the Unredeemed Funded Public Debt of the United Kingdom, and the Annual Charge thereon, in the following Years.

Year ending	Capital of Unredeemed Funded Debt	Annual Charge thereon
Feb. 1, 1817	£ 796,200,191	£ 29,812,014
Jan. 5, 1818	776,749,403	29,310,151
1819	781,080,481	29,789,628
1820	781,133,222	29,872,206
1830	771,023,532	28,285,900

\* To March 31.

The above statement (No. III.) shows that a reduction of 61,884,311, was effected in the principal of the national debt, and of 5,414,305, in the annual charge on account thereof, between February 1817, and March 31, 1868. The diminution has been brought about, despite the loans effected during the interval, partly by the application of surplus revenue to buy up stock, but more by the reduction of the interest on the 4 and 5 per cent. stocks existing in 1817, and by that paid on the unfunded debt. The total annual saving by the reduction of interest on the funded debt between 1822, when the first, and 1844, when the last reduction was made (that of the 3½ per cent. annuities, mentioned in former impressions of this work), has been 3,051,800; and, considerable as this is, it would have been three times as great but for the pernicious practice, previously pointed out, of funding large nominal capitals.

We subjoin a brief notice of the different unredeemed funds or stocks constituting the public debt, as they stood on March 31, 1868.

I. FUNDS BEARING INTEREST AT TWO AND A HALF PER CENT.

New Annuities at 2½ per cent.—This is a stock created in 1853, under the 16 & 17 Vict. c. 23. Previously to the passing of this Act, the existing stock of the once famous, or rather, perhaps, infamous South Sea Company, amounted to 3,662,784. For many years previously the Company had been entirely divested of its commercial character, and the duty of the directors was restricted to the transfer of the Company's stock from one purchaser to another, and the payment of the dividends upon it, both of which operations were performed at the South Sea House, and not at the Bank. But in 1853, when the price of stocks was unusually high, it was proposed to create a new 2½ per cent. stock; and in this view the proprietors of the South Sea Stock were offered for every 100l. of it subscribed into the new 2½ per cent. stock, 110l. of the latter, with a guarantee against the interest being reduced for

Agreements for the sale of stock are generally made at the Stock Exchange, which is frequented by a set of middlemen, called *jobbers*, whose business is to accommodate the buyers and sellers of stock with the exact sums they want. A jobber is generally possessed of considerable property in the funds, and he declares a price at which he will either sell or buy. Thus, he declares he is ready to buy 3 per cent. consols at 93½, or to sell at 93½; so that, in this way, a person willing to buy or sell any sum, however small, has never any difficulty in finding an individual with whom to deal. The jobber's profit is generally ¼ per cent., for which he transacts both a sale and a purchase. He frequently confines himself entirely to this sort of business, and engages in no other description of stock speculation.

We borrow the following details from Dr. Hamilton's valuable work on the National Debt:—

'A bargain for the sale of stock being agreed on, is carried into execution at the Transfer Office, at the Bank. For this purpose the seller makes out a note in writing, which contains the name and designation of the seller and purchaser, and the sum and description of the stock to be transferred. He delivers this to the proper clerk, and then fills up a receipt, a printed form of which, with blanks, is obtained at the office. (The letters of the alphabet are placed round the room, and the seller must apply to the clerk who has his station under the initial of his name. In all the offices there are supervising clerks, who join in witnessing the transfer.) The clerk in the mean time examines the seller's accounts, and if he find him possessed of the stock proposed to be sold, he makes out the transfer. This is signed in the books by the seller, who delivers the receipt to the clerk; and upon the purchaser's signing his acceptance in the book, the clerk signs the receipt as witness. It is then delivered to the purchaser upon payment of the money, and thus the business is completed.

'This business is generally transacted by brokers, who derive their authority from their employers by powers of attorney. Forms of these are obtained at the respective offices. Some authorise the broker to sell, others to accept a purchase, and others to receive the dividends. Some comprehend all these objects, and the two last are generally united. Powers of attorney authorising to sell must be deposited in the proper office for examination one day before selling; a stockholder acting personally, after granting a letter of attorney, revokes it by implication.

'The person in whose name the stock is invested when the books are shut, previous to the payment of the dividends, receives the dividend for the half year preceding; and, therefore, a purchaser during the currency of the half year has the benefit of the interest on stock he buys, from the last term of payment to the day of transfer. The price of stock, therefore, rises gradually, *ceteris paribus*, from term to term; and when the dividend is paid, it undergoes a fall equal thereto. Thus, the 3 per cent. consols should be higher than the 3 per cent. reduced by ¼ per cent. from April 6 to July 5, and from October 10 to January 5; and should be as much lower from January 5 to March 5, and from July 5 to October 10; and this is nearly the case. Accidental circumstances may occasion a slight deviation.

'The dividends on the different stocks being payable at different terms, it is in the power of the stockholders to invest their property

in such a manner as to draw their income quarterly.

'The business of speculating in the stocks is founded on the variation of the price of stock, which it probably tends in some measure to support. It consists in buying or selling stock according to the views entertained, by those who engage in this business, of the probability of the value rising or falling.

'This business is partly conducted by persons who have property in the funds; but a practice also prevails, among those who have no such property, of contracting for the sale of stock on a future day at a price agreed on. For example, A may agree to sell B 10,000*l.* of 3 per cent. stock, to be transferred in 20 days, for 6,000*l.* A has, in fact, no such stock; but if the price, on the day appointed for the transfer, be only 58, he may purchase as much as will enable him to fulfil his bargain for 5,800*l.*, and thus gain 200*l.* by the transaction: on the other hand, if the price of that stock should rise to 62, he will lose 200*l.* The business is generally settled without any actual purchase of stock, or transfer; A paying to B or receiving from him the difference between the price of stock on the day of settlement, and the price agreed on.

'This practice, which amounts to nothing else than a wager concerning the price of stock, is not sanctioned by law; yet it is carried on to a great extent: and as neither party can be compelled by law to implement these bargains, their sense of honour, and the disgrace attending a breach of contract, are the principles by which the business is supported. In the language of the Stock Exchange, the buyer is called a *Bull*, and the seller a *Bear*, and the person who refuses to pay his loss is called a *Lame Duck*; and the names of these defaulters are exhibited in the Stock Exchange, where they dare not appear afterwards.

'These bargains are usually made for certain days fixed by a committee of the Stock Exchange, called *settling days*, of which there are about 8 in the year; viz. one in each of the months of January, February, April, May, July, August, October, November; and they are always on Tuesday, Wednesday, Thursday, or Friday, being the days on which the commissioners for the reduction of the national debt make purchases. The settling days in January and July are always the first days of the opening of the Bank books for public transfer, and these days are notified at the Bank when the consols are shut to prepare for the dividend. The price at which stock is sold to be transferred on the next settling day is called the price on account. Sometimes, instead of closing the account on the settling day, the stock is carried on to a future day, on such terms as the parties agree on. This is called a *continuation*.

'All the business, however, which is done in the stocks for time is not of a gambling nature. In a place of so extensive commerce as London, opulent merchants, who possess property in the funds, and are unwilling to part with it, have frequently occasion to raise money for a short time. Their resource in this case is to sell the money, and buy for account; and although the money raised in this manner costs more than the legal interest, it affords an important accommodation, and it may be rendered strictly permanent and recoverable.' (Third ed. pp. 314-317.)

It would be foreign to the object of this work to enter upon any examination of the advantages and disadvantages of the funding system, which we have elsewhere discussed at considerable length.

FUNDS

(Treatise on Duration, pp. 420-441, 3rd ed.) Perhaps, on the whole, the latter preponderate, though it is not to be denied that the former are very considerable. The purchase of funded property affords a ready method of investment; and neither the Bank of England nor any of the London private banks allows interest upon deposits, it is plain that, had it not been for the facilities given by the funds, individuals unable to employ their savings in some branch of business would, down to a late period, have derived no immediate advantage from them, unless they resorted to the hazardous expedient of lending upon private credit. But since the establishment of joint-stock banks in the metropolis, which allow interest on deposits, the advantage of the funds as a means of commodious investment is not real; for it may be doubted whether the banks in question, or even the Scotch banks, which have been long in the habit of allowing interest on deposits, could do so, or whether, in fact, they could be conducted at all, without the aid of the funds.

The subjoined account of the number of dividend warrants issued in the quarters ending with October 10, 1851, and January 5, 1852, and for the first dividend day of 1855, are very important documents. The large number (over 90,000 in 1855) of holders of sums not producing above 5l. of quarterly dividend is principally to be ascribed to the circumstances already mentioned as peculiar to the banking system of the metropolis; and there can be little doubt that their number would be materially diminished, did the Bank of England and the private banks allow a reasonable rate of interest on deposits. It is evident from these accounts that the number of persons having a direct interest in the funds is much greater than they represent. The dividends upon the funded property belonging to the Equitable and other insurance companies, the different banking companies &c. are paid upon single warrants, as if they were due to so many private individuals; whereas they are, really, paid to these individuals by because they act as factors or trustees for a vast number more. It is consequently quite absurd to pretend, as is sometimes done, that any interference with funded property would affect only the 200,000 or 270,000 individuals out of a population of 30,000,000. Any attack upon the funds would really be destructive, not merely of the interests of those to whom dividend warrants are issued, but of all who depend upon them; it would destroy our whole system of insurance and banking, and overspread the country with bankruptcy. Not only, therefore, is every proposal for an invasion of the property of the fundholders based on injustice and robbery, but it would,

were it acted upon, be little less ruinous to the community than to the peculiar class intended to be plundered.

The following table has been calculated, in order to show in which of the public funds money may be invested so as to yield the greatest interest. It gives the prices, differing by 1 per cent., from 50 to 93 for 3 per cents. &c. at which they all must be to yield the same interest; so that, supposing the 3 per cents. to be at 80, a sum invested in them, or in the 3½ per cents., will yield the same interest, provided the latter be at 93; if the 3½ per cents. be below this sum, it will of course be more advantageous, in so far at least as interest is concerned, to invest in them than in the 3 per cents.; while, if they be above 93, it will be less advantageous.

To get the true value of the different funds at any particular period, in order to compare them accurately together, it is necessary to deduct from each the amount of interest accruing upon it from the payment of the last dividend.

IX.—Table showing the Prices of the different Funds must be at to produce an equal Interest, and also the annual Interest produced by 100l. sterling invested at any of those Prices.

† Dividends payable April 5.

**Foreign Funds.**—Exclusive of the funded and unfunded debt due by the British Government, and by India and the various colonies, more than 19-20ths of which is held by British subjects, our countrymen are also large creditors of foreign states. With the exception of Spain, the interest on the debts of most European states is paid with great regularity; and their funds form a great may, on the whole, be reckoned, at least so long as peace is preserved, a pretty secure investment. Our countrymen are also large creditors of the new South American States, and of the United States of North America. Owing, however, to the anarchy in which the former have been almost constantly involved, and the consequent want of power, and probably also of inclination, on the part of their rulers, to make any adequate provision for the payment of their debts, a large arrear of interest has, in most instances, been allowed to accumulate, with but little prospect of its being speedily reduced.

The public debt of the United States, which amounted, at the close of the last war with this

country, to 158,713,049 dollars, was entirely paid off in 1835. This proceeding, so honourable to the United States, naturally tended to raise the character of American securities in the English market, and enabled the Government to contract the loans required to carry on the late war with Mexico on very favourable terms. The debt of the Union existing on November 17, 1857, amounted to 25,165,155 dolrs.; but it has since been enormously increased by the expenditure on account of the civil war 1861-1865, and amounted on June 30, 1865, to 558,873,546l.

But in addition to the debt of the Union, the majority of the States, and several also of the principal cities, have contracted peculiar debts of a less or greater amount. In most cases these were incurred to promote the execution of some public undertaking, such as the construction of canals or railways, the excavation of docks, the erection of buildings, the establishment of banks or insurance companies, and so forth. West-

XI.—An Account of the Debts of the different States in January 1858, and Total Amount of Debts at different times from 1852 to 1867.

FUNDS

Some of the debts so contracted have been advantageously laid out; but a large portion borrowed in 1835, and other periods of wild excitement, were contracted on very disadvantageous terms, and expended on projects some of which have turned out extremely ill. This, however, was the affair of the States themselves, and did not afford so much as the shadow of an excuse for the conduct of those States which have declined to provide for the payment of their debts. It was not, indeed, to be wondered at that in the distress into which the Union was thrown by the crash of 1837, and the depression following thereon, some of the States should have been compelled to suspend payment of their debts; but a necessity of this sort could be temporary only. The indebted States are all rich, and eminently flourishing and prosperous communities, and it might have been expected that they would have made every effort to resume payment in full of their debts at the earliest possible moment. But this, we are sorry to say, has not been the case with some of them, as will be seen from the following statement, obligingly furnished to us for our last edition by a gentleman connected with the United States, and extremely well versed in these matters:—

The following States of the Union failed to pay the interest on the whole or a part of their debts during the period of depression which followed 1837, viz. Michigan, Pennsylvania, Indiana, Illinois, Maryland, Arkansas, Mississippi, Louisiana, Florida, and Texas. Of these, Pennsylvania has resumed payment of interest, and has funded the arrears thereof, which had accrued during the suspension, in stock bearing interest from the date when the respective dividends became due. The interest on this stock was 6 per cent.; but after it had remained unpaid for 5 years, the State, notwithstanding her wealth, was mean enough to oblige the holders to accept in exchange 5 per cent. stock, with the payment of the overdue interest at 5 instead of 6 per cent.; while she at the same time laid a direct tax of 5 per cent. on the dividends payable on her debt, including the portion held by foreigners. Maryland has also resumed payment of interest in full, and has paid off the dividends which had accumulated during the period of suspension, with interest upon them from their maturity; but, like Pennsylvania, she laid a tax of 5 per cent. on all her debt, including that belonging to foreigners. The debt of Louisiana consisted of two parts, one comparatively small (about 100,000 dollars), which was the direct debt of the State, and which has always been punctually paid for; the other much larger (about 2,000,000 dollars), arising from the loan of the State to various banks as security for their engagements, and which became a charge on the State in consequence of the inability of the banks to provide for the claims upon them. The State did not make any provision for this portion of debt from her treasury; but the banks which suspended payments have, at a shorter or longer interval, themselves funded their bonds guaranteed by the State; and there are not at present any overdue portions outstanding for which the credit of Michigan has repudiated the greater part of her debt, viz. the portion sold to the Bank of the United States, excepting a small proportion of the amount, for which she admits her liability. She has sold certain public works, receiving the proceeds in payment to the extent to which she

has acknowledged her liability, and has thus greatly reduced the amount outstanding, and has provided for the payment of interest on the latter, excepting the repudiated portion. The State of Indiana has a small proportion of her debt guaranteed by the Bank of Indiana, the interest on which has been regularly paid. The other, and much the larger portion, has been disposed of, after several years of suspension, in the following manner: one half of the principal has been funded in a new stock, bearing 5 per cent. interest, of which, however, only 4 per cent. being funded in a deferred stock. One half of the arrears of interest was also funded in the 2½ per cent. stock. For the other half of the principal and interest the State has declined to make any provision from its funds. But as the Wabash and Erie Canal, one of the works for which the debt was contracted, was in an unfinished state, the bondholders were offered the option of advancing the sum required for its completion, and receiving the net income of the canal and the produce of the sale of certain public lands granted to aid in its construction, towards the payment, first, of their advances, and then of the half of the principal and interest of their State bonds not provided for by the State. A considerable part of the bondholders having acted upon this proposal by contributing the necessary sum, the canal has been completed. Its revenue, and the produce of the land sales, will be applied, first, to the repayment of the advances, then to the payment of the interest and principal of the bonds of the subscribers, and lastly, if there should be any eventual surplus, to the payment of the bonds held by non-subscribers. It is hoped that the bonds of the subscribing bondholders may in time be provided for by the canal and sales of land; but the prospect of benefit to the non-subscribers from this arrangement is remote and uncertain. Illinois has confined her provision for her debt to imposing a permanent tax of 25 cents in the 100 dols. on all property in the State, and enacting that the produce of this tax, whatever it may amount to, shall be applied towards paying the interest on the bonds, applying it first towards the payment of the oldest due coupons, and then to those of more recent date in succession. The largest amount produced by this tax has only sufficed to pay about 14 per cent. per annum on the principal of the bonds. It is hoped that from the rapid increase of the wealth of the State, the tax will equally improve in productiveness, and that it may eventually equal the interest of the bonds, which is at the rate of 6 per cent. But until that shall be the case, the amount of the debt must increase every year by the difference between a year's interest and the produce of the tax for the year, which becomes an addition to the very large amount of interest now overdue. And as no provision is made for paying, either now or hereafter, the interest accruing on this very large and increasing arrear, the bondholders must, under the most favourable working of the law, be eventually considerable losers. Arkansas has not made any provision from the State funds towards her debt; but as the State bonds were issued to provide capital for a bank, its assets are liable for the payment of the bonds.

The debt of Mississippi was contracted to furnish capital for the Union Bank and the Planters' Bank. She has repudiated the bonds issued for the benefit of the former, amounting to 5,000,000 dollars, and has made no provision either for those or for 2,000,000 dollars issued to

FUR TRADE

of the first, as it also comprises furs which through habit and fashion have now become articles of necessity. I should here enumerate all those different skins commonly called *hating furs*. But the demand for these has, owing to the introduction of silk and straw hats, greatly fallen off, though it is still considerable. The furs used for hat making were beaver, musquash, otter, nutria, hare, and rabbit; but each of these may be subdivided into 20 different sorts or classes.

\*Nutria, or nutria, is comparatively a new article. It began first to be imported in large quantities about 1810, from the Spanish possessions in South America. [NUTRIA.] The skin is used for different purposes, being either dressed as a peltry, or cut (storn) as a hating fur; and if well manufactured and prepared, it bears some resemblance to beaver fur, and is used for similar purposes.

3. Under the 3rd and last class I should bring all those furs which, though continually sold, and used in immense quantities, must still be considered mere articles of fashion, as their value varies according to the whims and fancies of different nations. There are, however, exceptions among these; and since they are always used, though their price is much influenced by changes of fashion.

This class comprises an endless variety of furs, as under it may be brought the skins of most animals in existence; almost all of them appearing occasionally in the trade.

\*Furs being entirely the produce of nature, which can neither be cultivated nor increased, their value is not influenced by fashion alone, but depends materially on the larger or smaller supplies received. The weather has great influence on the quality and quantity of furs imported from all quarters of the globe; and this circumstance renders the fur trade more difficult, perhaps, and precarious than any other. The quality, and consequently the price, of many furs will differ every year. It would be completely impossible to state the value of the different articles of furs, the trade being the most fluctuating imaginable. I have often seen the same article rise and fall 100, 200, and 300 per cent. in the course of a twelvemonth; nay, in several instances, in the space of 1 month only.

Among the furs which always rank very high (though, like all the rest, they change in value) may be specified the Siberian sable, and the black and silver fox. These articles are at all times comparatively very scarce, and command high prices.

The chief supplies of peltries are received from Russia (particularly the Asiatic part of that empire) and from North America. But many other countries produce very beautiful and useful furs; and though we are most indebted to Asia and America, Europe furnishes a very considerable quantity. Africa and Australia are of little importance to the fur trade, as, from their situation, they furnish but few articles, and consume still less. From the former we draw leopard and tiger skins (the most beautiful of that species), while the only production of the latter is the kangaroo; this, however, is never used as a fur, being chiefly consumed by leather dressers and tanners for the sake of its pelt.

Besides numerous private traders, there are several fur companies of very old standing, who in various countries do a great amount of business. Among these, the Hudson's Bay Company (London) deserves to be mentioned first, not only from the extent of their business, but because it is one of the oldest chartered companies in England.

The American Fur Company (in New York) stands next. They chiefly traded to London,

(For accurate information on the debts of various communities, see *Fenn On Funds*, by Nash, 1867.)  
**FURS.** In Commerce, the skins of different animals, covered, for the most part, with thick fine hair, the inner side being converted by a peculiar process into a sort of leather. Furs, previously to their undergoing this process, are denominated *peltry*.  
*Beaver fur* was formerly in very extensive use in the hat manufacture; but the introduction of silk and other hats has all but entirely superseded its employment in this way, and its value, though now much scarcer than formerly, has, in consequence, fallen off very considerably. The fur of the middle-aged or young animal, called *cut beaver*, is most esteemed. It is the finest, most glossy, and takes the best dye. *Fitch*, or the fur of the fitch or polecat, is principally imported from Germany; it is soft and warm, but the unpleasant smell which adheres to it depresses its value.  
*Marten and mink* (a diminutive species of otter) are principally imported from the United States and Canada. The fur of the musquash or muskrat (a diminutive species of beaver) is imported in vast quantities from our possessions in North America, which also supply us with considerable quantities of other skins. Nutria skins are principally brought from Buenos Ayres. The more valuable furs, as ermine, sable &c., come principally from Russia.

**FUR TRADE.** We are indebted for the following details with respect to the fur trade to one of the most extensive and intelligent fur merchants in London:—

Though practically engaged in the fur trade, I shall be able to say little with regard to it already known to you; but were I to write on this subject, I should divide the trade into 2, or 3 classes.

1. The 1st class would comprise articles of necessity; among which I should principally number an immense variety of lamb skins, varying so far from each other in size, quality, colour, value, that to most persons they would appear to produce of so many different species of animals. These lamb skins are produced in all parts of the globe, and are everywhere consumed; but in particular, an essential part of the dress of thousands among the lower classes in Poland, East Prussia, Hungary, Bohemia, Saxony. In Russia and other cold climates the skins of various other animals may be considered as articles of actual necessity.

The 2nd class would in a measure form part

FUR TRADE

630

whither they send the produce of the United States and other parts of North America.

The third company is the Russo-American (in Moscow). They traded to the Russian possessions on the western coast of North America, whence they drew their supplies, which were chiefly consumed in Russia, and sent to China.

The fourth and last company of any consequence is the Danish Greenland Company (in Copenhagen): they do but a very limited business; exposing their goods for sale once a-year in Copenhagen.

The principal consumption of the furs which I should bring under the head of the 3rd class is in China, Turkey, and Russia, and among the more civilised countries of Europe, particularly in England. Germany consumes a considerable quantity. The consumption of America is comparatively little. In Africa none but the Egyptians wear fur. In Australia none is consumed.

Most of the companies sell their goods by public sale, and the principal fur fairs are held at Kiachta (on the borders of China); Nijni Novgorod, between Moscow and Casan, in Russia; and twice a year at Leipsic. [FAIRS.]

It is a remarkable feature of the fur trade, that almost every country or town which produces and exports furs, imports the most disagreeable of some other place, frequently the most distant. It is but seldom that an article is consumed in the country where it is produced, though that country may consume furs to a very great extent.

The following details with respect to the North American fur trade may not be uninteresting:—

This trade was first practised by the French settlers at Quebec and Montreal, and consisted then, as now, in bartering fire-arms, ammunition, cloth, spirits, and other articles in demand among the Indians, for beaver and other skins. In 1670 Charles II. established the exclusive privilege of trading with the Indians in and about the vast inlet known by the name of Hudson's Bay. The company founded establishments at Forts Churchill and Albany, Nelson River, and other places on the west coast of the bay. But the trade there was carried on, though said to be a profitable one, was of very limited extent; and their conduct on various occasions shows how thoroughly they were possessed with that spirit of jealousy which prevails in some degree in all knots and societies of men endowed with peculiar privileges. (European Settlements, vol. ii. p. 268.) Burke has, in the same place, expressed his astonishment that the trade has not been thrown open. But as the trade has never been confirmed by any company's charter, all British subjects are lawfully entitled to trade with those regions; though from the difficulties attached to it, and the undisturbed hostility which private traders have experienced from the agents of the company, the latter have been allowed to monopolise it with but little opposition. In 1783-4 the principal traders engaged in the fur trade of Canada formed themselves into an association known by the name of the North-West Company, having their chief establishment at Montreal. This new company prosecuted the trade with great enterprise and very considerable success. The course of their proceedings in their adventurous undertakings, has been minutely described by Mr. Mackenzie, one of the agents of the company, in his *Voyage from Montreal through the Continent of America*. This gentleman informs us that some of those engaged in this trade are employed at the astonishing distance of upwards of 4,000 miles north-

west of Montreal. A very numerous caravan, if we may so call it, sets out every year for *Le Grand Portage*, on Lake Superior, where they meet those who have wintered in the remote establishments, from whom they receive the furs collected in the course of the season, and whom they, at the same time, furnish with fresh supplies of the various articles required in the trade. Fort Chepeywan, on the Lake of the Hills, in Long 110° 26' W., used to be one of the most distant stations of the servants of the North-West Company; but many of the Indians who traded with the fort came from districts contiguous to, and sometimes even beyond, the Rocky Mountains.

The competition and success of the North-West Company seem to have roused the dormant energies of the Hudson's Bay Company. The conflicting interests and pretensions of the two associations were naturally productive of much jealousy and ill will. Under the auspices of the late Earl of Selkirk, who was for a considerable period at the head of the Hudson's Bay Company, a colony was projected and founded on the Red River, which runs into Lake Winnipeg. The North-West Company regarded this establishment as an encroachment upon their peculiar rights; and the animosities thence arising led to the most violent proceedings on the part of the servants of both companies. At length, however, the more moderate individuals of each party began to perceive that their interests were not materially different; and the rival companies, wearied and impoverished by their dissensions, ultimately united under the name of the *Hudson's Bay Fur Company*, which at present engrosses most of the fur trade of British America. By 31 & 32 Vict. c. 115 (1868) her Majesty is enabled to accept a surrender, upon terms, of the lands, privileges, and rights of the Hudson's Bay Company, and to admit the same into the Dominion of Canada.

The *North American Fur Company*, the leading directors of which reside in the city of New York, have long enjoyed the principal part of the fur trade of the great lakes and the Upper Mississippi. But with the exception of the musk rat, most of the fur-clad animals are exterminated in the vicinity of the lakes. The skins of racoons are of little value, and the beaver is now scarce on the side of the Rocky Mountains.

The following is an account of the various kinds of furs, and pelts imported into the United Kingdom in 1866:—

	Number	Value
Beaver	9,770	1,200,000
Beaver	191,915	850,000
Cooney	841,251	1,500,000
Deer, undressed	24,418	1,500,000
dressed	11,679	200,000

Wolf	2,450,229	1,500,000
Unenumerated furs		

The total computed real value was 1,674,018. In only 979,132.

The furs from nearly all important furs, by whom China is one of the Russo-American carrying a considerable trade to them in America to Kiachta for tea and other FUSTIAN (Fr. fustaine; Ital. Fustina; Rus. fustina; Pers. staff, wealed or feature of this fabric, 3,000,426 e-barrel, were 298,756.

FUSTIC (Ger. hout; Fr. bois jaun Brésil; Sp. palo of a species of munging in most parts States, and the West and handsome tree most other dye-wool interest, is hard sively used as an in low, and is largely

GALAZ or GAL on the left bank of the fluence of the Sereth lat. 45° 25' N., long. dry, though in these much improved. Pop 75,000 to 80,000. The carried on by Greek last few years, various ers have formed establish a considerable distance best position for becoming present, however, it of Moldavia; Ibrailla further inland, being the commercial importance the Danube, dates only in 1829. Previous the Principalities lat sive restrictions, and land. But all articles be freely exported ing moderate duties; also for the most part. The probability, i cz, the Alexandria, Sythian Nile,' will some a first-rate empire haria and Wallachia has been of signal ed that they may r the paralysing influence gular intercourse by been Vienna and Gal Sea, with Constant already done a great bo more, to introduce into the vast and ferti rks traversed by the of its course. The c as a commercial h

The furs from our North American colonies are nearly all imported by the Hudson's Bay Company, by whom they are sold at public sales.

China is one of the best markets for furs. The Russo-American Fur Company were in the habit of carrying a considerable quantity of the furs taken by them in Kamtschatka and what was Russian America to Kiangta, where they were exchanged for tea and other Chinese products.

**FUSTIAN** (Ger. barehent; Dutch, fustein; Fr. fustaine; Ital. fustagno, frustagno; Span. fustan; Rus. bumason; Pol. barchan). A kind of cotton stuff, weaved or ribbed on one side. The manufacture of this fabric is traceable to the middle ages. 3,000,126 yards of fustians &c., plain and coloured, were exported in 1866, valued at 208,757.

**FUSTIC** (Ger. gelbbolz, fustiek; Dutch, geelboom; Fr. bois jaune de Brésil; Ital. legno giallo de Brasile; Sp. palo del Brasilamarillo). The wood of a species of mulberry (*Morus tinctoria*), growing in most parts of South America, in the United States, and the West India Islands. It is a large and handsome tree; and the timber, though, like most other dye-woods, brittle, and at least easily splintered, is hard and strong. It is very extensively used as an ingredient in the dyeing of yellow, and is largely imported for that purpose. Of

5,933 tons of fustic imported into Great Britain in 1866, 926 tons were brought from Mexico, 1,421 ditto from the British West Indies, 526 ditto from Cuba, 277 ditto from the United States, and 612 ditto from Brazil. Fustic from Cuba or the United States fetches full 30 per cent, more in the London market than that of Jamaica or Venezuela. In 1866 the price of the former varied from 7*l.* 18*s.* 1*d.* to 7*l.* 15*s.* 8*d.* per ton, while the latter varied from 5*l.* 9*s.* 10*d.* to 4*l.* 17*s.* 3*d.* per ton. The consumption amounts to about 6,000 tons a-year. The duty on fustic was abolished in 1845.

Zante, or young fustic, is really a species of sumach (*Rhus cotinus*, Linn.), and is quite distinct from the *Morus tinctoria*, or old fustic; the latter being a large American tree, while the former is a small European shrub. It grows in Italy and the south of France, but is principally exported from the Ionian Islands and Patras in the Morea. It imparts a beautiful bright yellow dye to cottons &c., which, when properly mordanted are used, is very permanent. It is conveniently stowed amongst a cargo of dry goods, as it may be cut into pieces of any length without injury. Only a small quantity of this species of sumach is imported. Its price fluctuates considerably.

G

**GALACZ or GALATZ.** A town of Moldavia, on the left bank of the Danube, between the confluence of the Sereth and Pruth with that river, lat. 45° 23' N., long. 28° E. It is ill built and dirty, though in these respects it has latterly been much improved. Pop. supposed to amount to from 50,000 to 80,000. The trade of the town is chiefly carried on by Greek merchants; but, within the last few years, various English and other foreigners have formed establishments in it. Though at a considerable distance inland, Galacz is in the best position for becoming the port of the Danube. At present, however, it is little more than the port of Moldavia; Ibraila or Braihlow, about 12 miles farther inland, being the port of Wallachia. The commercial importance of these ports, and indeed the Danube, dates only from the Treaty of Adrianople in 1829. Previously to that epoch the trade of the Principalities laboured under the most oppressive restrictions, and was principally carried on by native produce may be freely exported either by sea or land, on paying moderate duties; and the duties on imports also, for the most part, comparatively moderate. The probability, indeed, seems to be that Galacz, 'the Alexandria,' as it has been called, 'of Scythian Nile,' will at no very distant period become a first-rate emporium. The resending of Wallachia and Wallachia from Turkish misgovernment has been of signal advantage, and it is to be hoped that they may never again be subjected to a paralysing influence. The establishment of regular intercourse by means of steam packets between Vienna and Galacz, and thence, by the Black Sea, with Constantinople and Trebizond, has already done a great deal, and will every day do more, to introduce a spirit of improvement into the vast and fertile, but long-neglected, provinces traversed by the Danube in the lower part of its course. The capacities of this great as a commercial highway are certainly

unequaled by those of any other European stream, and their full development would be of immeasurable advantage, not merely to the countries on its banks, but to all commercial nations.

**Exports and Imports.**—Moldavia and Wallachia are very productive provinces, being fruitful both of corn and cattle. The high prices of corn in France, Italy, and England, in 1846 and 1847, gave an extraordinary stimulus to the export trade of Galacz and Ibraila. The exports of wheat from both ports in 1847 amounted to no fewer than 570,578 quarters, worth on board ship 875,603*l.*; the exports of Indian corn during the same year were 337,720 quarters, worth 1,172,150*l.*; and among the other exports were about 320,000 quarters of barley, and 42,000 cwt. of tallow, with a variety of inferior articles. The total value above year amounted to the very large sum of 2,368,472*l.*, of which about two thirds were from Ibraila.

The quality of the wheat, which is partly hard and partly soft, was, a few years ago, very inferior, being generally damp, and having an earthy smell from its being kept in pits dug in the ground. Latterly, however, it has been much improved; and the finer samples now fetch, in Marseilles, Genoa, and Leghorn, within from 3 to 4 per cent, of the price of Odessa wheat. In 1852 we imported 86,140 quarters of Wallachian and Moldavian wheat, with no fewer than 626,714 do. Indian corn. In later years the quantity is considerably diminished. In 1866 the imports of wheat were 141,181 cwt., and of Indian corn 604,503 cwt. Both provinces fatten large herds of cattle, particularly the Austrian states. Tallow may be had in large quantities, its annual produce in Wallachia only being estimated at about 3,000,000 okes, or 8,500,000 lbs. Until within these few years the

GALACZ.

632

tallow shipped at Galacz was burdened with a heavy export duty, which checked its sale, and consequently, also, its growth. This duty, after having been 3 per cent., was abolished in 1861, and renewed on all exports and imports at 5 per cent. in 1861. The quality of the Danubian tallow is excellent. Among the other articles of export are wool, timber, hides and skins, lard, butter, bristles, bones, jerked beef, linseed, barilla, yellow-berries, coarse cheese &c. Timber of the finest quality may be had in any quantity; but as it can only be advantageously exported in large ships, which cannot when laden make their way over the bar, the trade in it has hitherto been confined within comparatively narrow limits. One, however, would be disposed to think that this difficulty might be obviated by sending down the timber in rafts, and loading outside the bar.

Notwithstanding the recent period at which the navigation of the Danube has been opened, and the barbarous state of the countries in the lower part of its course, the value of the exports from Galacz and Ibraila at present (1868) probably exceeds 1,800,000*l.* a-year, of which from 750,000*l.* to 800,000*l.* may be from the former. But, considerable as this is, it is nothing to what it certainly would be were civilisation to make any considerable progress in the countries traversed by the Danube after it leaves the Austrian dominions, and still more were the river to become, as it naturally is, the principal channel for the conveyance of products to and from Hungary and Transylvania.

The great articles of import are manufactured cotton goods, and cotton twist, principally from England, the demand for which is rapidly increasing; with sugar, coffee, and other colonial products; olives and olive oil, iron and steel, hardware &c.

**Entrance to Galacz.**—Of the three principal mouths of the river, the Soulina (middle) mouth, in lat. 45° 10' 30" N., long. 29° 41' 20" E., is the only one accessible by vessels of considerable burden. The depth of water on the bar, at its entrance,  $\frac{1}{2}$  mile from the shore, varies from 10 to 13 and 14 feet, according to the season of the year and the direction of the wind. When the latter blows from the E., it is opposed by the current of water flowing from the W., so that the bar is rapidly increased by the river; and when, on the contrary, the current and the wind coincide, the mud is carried out into the sea, and the depth of water on the bar is progressively augmented. The assistance of a powerful dredging machine, or machine fitted to stir up the mud, or other deposit forming the bar during the prevalence of westerly winds, would be of great importance; and it is believed that with its agency the channel might be very materially deepened. The Great complaints were made of the state of the navigation of the Danube during 1853. It appears to have been occasioned partly by difficulties arising out of the disputes between Russia and Turkey, and partly by the prevalence of easterly winds. But it would be easy, by erecting a lighthouse to mark the entrance to the river, and employing a dredging machine to the navigation, to obviate the physical obstructions to the navigation. From the bar to Galacz and Ibraila there is nowhere less than 18 feet water, and in many places from 60 to 70 feet. Vessels of 300 tons lie close to the quays at Galacz. The shores at the mouth of the river being low, and bordered with reeds and shoals, vessels intending to enter the river generally make the small rocky islet of

Phidonsi or Serpent Isle, in lat. 45° 15' 15" N., long. 30° 10' 30" E., whence the Soulina mouth bears W. by S., distant 23 miles. This island was famous in antiquity for its temple in honour of Achilles, to whom it was sacred. It was called *Leuce*, or the White Island, from the myriads of sea-fowl by which it was usually covered. The notion of its being infested with serpents, is singular, however, seeing that it is now annually passed by numbers of European ships, that it should not have been visited by any traveller. It may be expected to contain some remains of antiquity. (Clarke's *Travels in Russia, Turkey* &c. 8vo. ed. vol. ii. p. 391-101.)

According to Mr. Cunningham, the first objects seen, on nearing the shore, are the masts of vessels in the river, and the houses in the town of Soulina, which, however, are very low. Soulina, though only a port of transit, has become, since the navigation of the Danube has been opened, one of the principal shipping ports in the Black Sea. In 1866, 148 vessels, of 58,604 tons, entered the port. Haasmeister says that there is a wooden tower on the south shore at the entrance to the river; but though the contrary has been often affirmed, and its position given in Arrow-mill's map, there is certainly no lighthouse. Lights are generally stationed without the bar, into which large ships discharge a part of their cargoes; and pilots may generally be obtained from them or other vessels. As the current is sometimes very strong and difficult to stem, a proper establishment of steam tugs at the mouth of the river would be a great advantage. An E. S. E. wind carries a vessel from Soulina to Galacz through all the different reaches of the river; but otherwise the navigation is difficult, and towing is in parts necessary.

Frost usually sets in on the Danube in December, and continues till March. Freight in the ports of the Danube are always from 20 to 25 per cent. higher than in Odessa; premiums of insurance, the contrary, are not higher than at the latter port, except on such vessels as, on account of their size, are obliged to discharge outside the bar.

**Money, Weights, and Measures.**—These are mostly the same as at CONSTANTINOPLE. Accounts are kept in piastres and paras. 1 piastre = 40 paras.

**Galacz.**—Ducat blanc = 44 pia. Silver ruble = 15 pia. Spanish dollar = 19 pia. 32 paras. Turkish yermelik, old coinage = 19 pia. 32 paras. Turkish yermelik, new coinage = 17 pia. 15 paras. Austrian zwanzigers = 3 pia. 5 paras. It is to be observed that when exchanges are so high it is requisite to remit in specie, any of these coins may go to a premium, according as it suits better than others for the remittance; and when there is want of bills to remit to Austria, the ducat blanc = 44 pia. 20 paras.

**Ibraila** has two rates of currency; the one for charges, which is the same as in Galacz, and the other for the purchase of merchandise, as follows:—Ducat blanc = 32 pia.; Spanish dollar = 14 pia.; Turkish yermelik, old coinage = 14 pia.; Turkish yermelik, new coinage = 12 pia. 28 paras. zwanziger = 2 pia. 12 paras. Note.—The same in Galacz, any of these coins may go to a premium.

**Galacz and Ibraila.**—All duties are paid in places, in the course of the Treasury, as follows: Ducat blanc = 31½ pia.; silver ruble = 10 pia.; Spanish dollar = 14 pia.; Turkish yermelik, old coinage = 14 pia.; zwanziger = 24 pia. 11 pia.; ducat blanc weighs 1 Turkish drachm.

**Exchanges.**—Bills can generally be sold on

following places, and the rates in 1865 were as noted:—

**Rates of Exchange.**

Place	Galaciz	Plas.	Par.
Berlin and Leipzig	11	11	= 1 dollar
London	96	20	= 1 lb.
Marseilles	3	21	= 1 franc
Genoa	3	20	= 1 lira
Amsterdam	8	2	= 1 florin
Hamburg	7	7	= 1 marc banco
Vienna	8	6	= 1 florin

The Galaciz plastre has 40 paras.

**Weights.**—Galaciz and Ibrailla. 400 drachms = 1 cke. 41 ckes = 1 cantar.

**Measures.**—Galaciz and Ibrailla. 20 banniza = 1 kilo. The kilo of Galaciz to that of Ibrailla is as 113 to 232, or 2 Ibrailla kilos = 3 Galaciz nearly.

**Correspondence of Weights and Measures of Galaciz with those of Foreign Places.**

100 ckes	=	1 cwt. English
25 "	=	100 kilograms
41 "	=	100 fund of Vienna
100 "	=	1 pud of Russia
100 kilos of Galaciz	=	145 imperial qrs.
100 "	=	435 hectolitres
100 "	=	425 stajo of Venice
100 "	=	600 sacks of Leghorn
100 cks of lime	=	280 cwtwerts of Odessa
55 "	=	1 imperial qr.
115 "	=	1 hectolitre
1 kilo of Ibrailla	=	1 cwtwert
1 kilo of Ibrailla	=	24 imperial qrs.

Note.—These measures generally measure out somewhat less.

**Charges on Shipping &c. in Galaciz and Ibrailla.**

**Port Charges.**—In Galaciz anchorage is 30 pia., and a guardian for 5 days' observation 5 pia. per day. In Ibrailla anchorage is 17½ pia., and guardian for 5 days' observation 5 pia. per day.

**Quarantine.**—Vessels generally remain in quarantine during their stay, as little or no advantage is gained by taking pratique.

Vessels wishing to take pratique may obtain it in 14 to 21 days, according to the state of health in Turkey, by taking a Health Office guard on board; or the captain alone may take pratique, and, when the health of the people is good in Constantinople and along the Danube, quarantine lasts only seven days.

The following quantities of grain were shipped during 1874 from Galaciz and Ibrailla:—

Articles	Galaciz	Ibrailla
Wheat	419,100	335,500
"	428,000	219,500
"	59,500	11,000
"	37,800	186,500
"	4,300	1,400
"	2,470	7,500
Total	932,170	795,100

100 Galaciz kilos = 143 qrs., 1,404,503 qrs.  
100 Ibrailla kilos = 232 qrs., 1,882,912 qrs.  
3,287,415 qrs. Besides, 8,100 kilos of millet  
8,400 kilos of rape seed were exported from

There is a continuous increase in the production of petroleum, lumber, wool, and rocksalt from the ports.

Next is the estimate given by Mr. Malmros, United States consul at Galaciz, of the value of articles produced in this district:—

Wheat	per acre	51 Galaciz plastes
Wheat	per wadra (12 qrs.)	12 "
Moldavian	per oca	73 "
"	per oca	46 to 56 silver rubles
"	per oca	Galaciz plastes
"	"	5 "
"	per pair	25 "
"	per wadra	110 "
"	each	12 "
"	each	35 "
"	"	158 "
"	"	568 "
"	"	552 "

**Freights at Galaciz.**—These vary very much. In June 1864 they were as low as 7s. 6d. to 8s. per quarter from Galaciz and Ibrailla to England, and from 6s. 6d. to 6s. from Soullina. In the course of the year they rose to 10s. 6d. from Galaciz and Ibrailla, and to 8s. 3d. from Soullina. In general freights may be taken to be 8s. 6d. per quarter from Galaciz to England, 50 florins per last from Galaciz to Holland, 450 francs per charge from Galaciz to Marseilles.

**Duties.**—An ad valorem duty of 5 per cent. is levied on all articles, except provisions, imported into, or exported from, the Principalities of Moldavia and Wallachia. Government reserves to itself the power of prohibiting the exportation of any article, but it has to give a month's previous notice of any such prohibition.

Galaciz is a free port; that is, a port at which all commodities may be landed, warehoused, re-exported and consumed in the town, free of duty. Quarantine regulations are strictly enforced, unless performed previously to entering the river.

Ismail and Reni, ports of the Russian province of Bessarabia, are situated on the Danube, and are both, but especially Ismail, a good deal nearer its mouth than Galaciz; but they are much less considerable in point of commercial importance. Having little importation, their trade is confined almost entirely to the exportation of corn, and even in this respect they are very inferior to Galaciz and Ibrailla. They are subject to the Russian duties and regulations.

We have gleaned these particulars from a variety of works, but principally from the valuable Report by Mr. Cunningham, printed at Galaciz in 1841; the work of Hagemeister, printed at Commerce of the Black Sea, Eng. trans. pp. 83-95 Sea, p. 193 &c.; M. Malmros' Report to the Black and Mr. Vice-Consul Dupuis' Report on the Trade of Soullina and Toulcha for 1866.

**Pro formâ Invoice of Wheat purchased in Galaciz, and put free on board.**

When the grain is shipped direct from the warehouse of the seller, without being transported to the warehouse of the buyer, then the charges will be less by the cartage and portage passed for that purpose.

When the season is advanced and the streets in bad order, the charges of embarking will be something more.

We may avail ourselves of this opportunity to state that there has been an equal, or even greater, increase in the exports from Bulgaria, independently of those that come down the

Danube to Ibraila. About 1837 the entire exports of wheat from Varna and the other Bulgarian ports between the Gulf of Bourghas and Kustengts did not certainly exceed 200,000 quarters, and in 1847 they amounted to 896,000 quarters. And it is necessary to bear in mind that this is exclusive of the exports, which are very considerable, from Toultscha, a port of Bulgaria, on the Danube, about 40 miles W. of the entrance to the Sulina mouth. Those of Kustengts in 1861 were 502,298 qrs. of wheat and other corn.

Number and Tonnage of Vessels of various Nations Cleared from the Mouth of the Danube, including those loaded in the Harbour of Soulina, in the Year 1863.

The port of Varna is situated on the W. coast of the Black Sea, at the bottom of a rather small bay, about 3 miles N.W. of Cape Galata, the latter being in lat. 43° 10' N., long. 27° 58' E. Its importance has much increased since its

connection by railway with Rustchuk on the Danube. The ordinary anchorage is to the S.W. of the town, in 7 or 8 fathoms, bottom sand and ooze. It is open to all winds between E. and S.E. Vessels load and unload by means of lighters, it being dangerous to approach within less than 1/4 mile of the shore.

Between Varna and Soulina is the port of Kustengts, which, now that the railway connecting the Danube and the Black Sea via Tchernavoda has been opened, will must draw much of the trade of Galacz.

Both hard and soft wheat are shipped from Varna, the value of the former being from 30 to 40 per cent. greater than that of the latter. A duty is charged on wheat when exported; and being a fixed duty of about 2s. 8d. per quarter, it is high when prices are low, and low when they are high.

Mouths of the Danube.—There is a great discrepancy in the statements of ancient authors as to the number of channels by which the Danube poured its waters into the Euxine. (Cellarius *Notitia Orbis Antiqui*, lib. ii. c. 8.) A similar discrepancy exists at this moment; some authorities affirming that it has 4, others 5, and others 6 or 7 mouths. But, as stated above, there are only 3 of any considerable magnitude, viz. the Kilia mouth on the north, and successively the Soulina mouth, and the Edrillis mouth. But, besides these, there are other channels of inferior importance, of which two, at least, are still more to the south than the Edrillis mouth. In antiquity the most southerly channel was the deepest, and best suited for the purposes of navigation, and was thence called *Sacrum*. (Cellarius *supra*.)

It is not, however, to be wondered at, that in the course of so many ages, very great changes should have taken place in the channels of the river. It seems probable that the *Ostium Sacrum*, or southerly channel of the ancients, may have run between now Rassein, which communicates with the Euxine at Kara Kerman, formerly *Istropolis*, and the Iano at Kara Kerman, formerly *Istropolis*, and the point still more to the south. At any rate, there certainly was a channel in the middle of the river pointed out (D'Anville, *Abrigi de la Geographie Ancienne*, tom. i. p. 307); and as it is a goodly more to the south than the Edrillis mouth, which the *Ostium Sacrum* has been commonly identified, it would seem to have the best claim to the distinction of being synonymous with the latter. This channel is, in fact, still partially open, and it is stated that the Austrian Government has seriously entertained a project of making it navigable. There can be no doubt if this could be effected, it would be of much importance to the trade with Hungary and the countries on the upper part of the river, materially shortening the river navigation, facilitating the transit of ships and goods to the Black Sea; but the marshy nature of the ground is said to oppose formidable obstacles to the construction of a canal.

Navigation of the Danube.—Steam navigation on the Danube in 1830, which the undertaking has gone on prospering much so, that the communication between Vienna and Constantinople (partly by steamer and partly by railway) is now well maintained. The Austrian Steam Company, which was the first in the world to have extended their scheme by starting a line between Vienna and Linz, and a Bavarian line between Vienna and Linz, commenced in 1838 running vessels between Ratisbon and Linz.

Steam boats ply on the Danube as long as the river is free from ice (usually from March

to November) to Basensch, once reaching Galacz proceeding by may be reached.

The journey ending stopping. The fare is not about 15/2; so

miles above Ratisbon, near Bamberg, at

the actual c

to November): Vienna to Pesth, daily; Pesth to Basensch, once a week; thence to Rusechuk; reaching Galatz on the fourth day from Pesth, or preceding by railway to Varua. Constantinople may be reached in about the same time.

The journey from Vienna to Constantinople, including stoppages, is performed in less than 5 days, about 15L.; second place, 156 florins.

The navigation of the Danube by steamers is unfortunately interrupted for about 50 miles, between Drobnova and Gladova, by rocks and rapids, the lowest and most considerable of which is a sort of cataract, called the 'Irongate,' about 3 miles below the Hungarian frontier. It is worthy of remark that the most illustrious of the Roman emperors, Trajan, alive to all the advantages to be derived from the easy navigation of the Danube, had with equal industry and sagacity formed a road, or towing-path, along the river's edge, for facilitating the operation of towing, of which the remains are still extant, with an inscription commemorative of the completion of the works. It has been proposed to overcome the difficulties in the way of the navigation by renovating the old Roman road, and deepening the channel contiguous to it. But it rarely happens that attempts to improve the navigation in the bed of a river, under anything like similar circumstances, are even tolerably successful. The better way, undoubtedly, would be, were it practicable, to construct a lateral canal, or rather a canal from the mouth of the Bereska to Palamka, which would not only avoid the rapids, but also shorten the navigation by getting rid of the bend of the river by Orsova. But the difficulties in the way of such an undertaking, from the nature of the ground, are said to be insuperable; and it is, therefore, probable that the distance of 50 miles along the rapids will continue, if not always, at least for some considerable time, à portage. The inconveniences, however, of this break in the navigation has been diminished, as far as possible, by the construction of an admirable carriage road, of great expense, by the Hungarian Diet, from Mohora to Orsova. In the extent of excavations at the neck, and terraces of masonry, upon which is carried, it is not inferior as a specimen of engineering to the finest roads over the Alps. Several steamers have been transported down these rapids at the season of floods; small barges are sent at all times; and little boats, laden with wax and wool, are towed up by men and oxen. The passengers and goods conveyed by the steamers are transferred from Moldova in row-boats to Gladova, below the Irongate, where they embark on another steamer. (*Geog. Dict.*, art. *Berischa*.)

*Berischa*.—A railroad is completed from Brunn, capital of Moravia, to Vienna; another railroad crosses from the Danube at Linz, north to Budweis, in Bohemia, where it reaches the banks of the Danube; and through it communicates with the Danube; but, as already explained, the railway connection now connecting the Danube and the Adriatic Sea will probably transfer the major portion of the trade of Galatz to Kustengr.

*Canal of the Danube and the Rhine*.—The projected canal to unite the Danube and the Rhine, the favourite scheme of Charlemagne, was undertaken by the Bavarian Government, and was completed and opened in 1846. It runs from Bamberg, by Erlangen and Nuremberg, to Neumark, joining the Danube at Kellheim, some miles above Hatisbou. The distance between Bamberg and Neumark is about 100 miles, but the actual extent of canal is less,

the communication being in part effected by the Regnitz, a tributary of the Main, and the Altmühl, a tributary of the Danube. There is now, consequently, an internal communication by water throughout all the vast country stretching from the shores of the Netherlands to the Black Sea; so that produce shipped at Rotterdam or at Galatz may be conveyed from the one to the other in the same vessel.

**GALANGAL** (Ger. galgant; Dutch and Fr. galanga; Russ. kalgant; Lat. galanga; Arab. kustulk; Chinese, liang king). The root of the *Moranta galanga*, brought from China (where it grows in Shansi, Fuhkien, and Kaucha) and the East Indies, in pieces about 1 inch long, and the kind (*Greater Galangal*), an inch or more in length, hardly  $\frac{1}{2}$  an inch thick. A larger root of the same thickness, is inferior. It has an aromatic smell, extremely hot, and an unpleasant, bitterish, cine and cookery, especially curries. Worth about 16s. 6d. per picul. It should be chosen full and plump, of a bright colour, very firm and sound; 12 cwt. are allowed to a ton. (Lewis's *Mat. Med.*; Milburn's *Orient. Com.*)

**GALBANUM** (Fr. galbanum; Ger. mutterharz; Ital. galbano; Lat. galbanum; Arab. bazrud). A species of gum resin obtained from an unknown plant imported from Africa, especially the Cape of Good Hope, and from Syria and Persia. It is brought to this country from the Levant and India in cases or chests containing from 100 to 300 lbs. each. Galbanum usually appears in the form of masses composed of irregular whitish, reddish, or yellowish tears about the size of a pea, more or less translucent, and generally mixed with pieces of stalk, seeds, or other foreign matters. It is purified by straining.

According to Ludewig, a gum resin described as *Persian galbanum* is received in Russia by the way of Astracan or Orenburg, and is the kind used in that country. It comes enclosed in skins, and is in masses of a reddish brown colour with whitish streaks. It has a strong, disagreeable odour, and an acrid, bitter taste.

Galbanum is used in medicine. (*British Pharmacopoeia of the Medical Council*, 1867; Wood and Bache, *United States Dispensatory*.)

**GALLIPOLI**. A sea-port town of South Italy (Naples), prov. Lecce, on the east shore of the Gulf of Tarento, on a rocky islet at the west extremity of a narrow peninsula, to which it is joined by a bridge; lat. 40° 3' N., long. 17° 58' E. It is fortified, has a castle, and is well built. Pop. 9,208 in 1861. It is the principal port of the Mediterranean for the shipment of olive oil, and has, in consequence, a considerable trade.

It is indebted for this distinction, partly to its being situated in a country where oil is produced in the greatest abundance, but more, perhaps, to the circumstance of the cisterns, cut in the limestone rock on which the town is built, being peculiarly well fitted for the preservation of the oil. They do not differ much in appearance from a common water tank. They are usually under the exception of a circular hole, into which the oil is poured, and through which it is again drawn up. It will keep in these cisterns for an indefinite period, and is materially improved, not only in clearness, but also in flavour. When the oil is to be shipped, it is drawn off from the cisterns into *uteri* or skins, which are carried on men's backs to the shore, where the casks, being filled, are conveyed in lighters to the ships. [*OLIVE OIL.*] Of 23,690 tuns olive oil imported into the United Kingdom in 1866, 13,952 tuns

were from Naples and Sicily, and principally from this port.

Gallipoli has no harbour, but a bay or roadstead N.E. of the town. The latter has from 10 to 12 fathoms water; but it shoals towards shore, and vessels of considerable burden should not come within less than a musket shot of the land. Those that come nearest to the shore moor with their heads to the N.W. with 2 cables out a-head and 2 a-stern in from 16 to 20 feet water. The blind rock at their entrance, about 500 yards N.N.E. from the fort. It has only about from 5 to 7 feet water; and as it is not marked by any buoy, pilots should be employed by foreigners. A tunny fishery is carried on inside the bay, but the nets are easily avoided. Winds from the N. and N.W. throw in a heavy sea.

About ½ mile W. from the town is the low, flat island of St. Andrea. It is said in Norie's *Sailing Directions for the Mediterranean*, that there is a lighthouse on this island; but, though a lighthouse on it would be of great service to ships making on their way to the port, and though it be laid down in some of the charts of this sea, the truth is that none such really exists, nor is there even a tower on the island! There are some lesser islands between St. Andrea and the mainland. There is deep water between the former and the nearest islands, but not between the latter and the town. A dangerous shoal lies about ½ mile S. of St. Andrea.

**Monies, Weights, and Measures.**—Those of Naples, excepting the measure of oil, which in Naples is measured in vats of 11 salme, 1 stajo, and 28 pignatti of Gallipoli. The salmas of Naples and Gallipoli are the same, each weighing 163½ rotoli of clear oil. The difference is in the subdivision: viz.—

1 Salma of Naples	= 16 Staja, or 320 Pignatti.
1 Salma of Gallipoli	= 10 Staja, or 320 ditto.
1 Stajo of Naples	= 20 Pignatti.
1 Stajo of Gallipoli	= 32 Pignatti.
72 S. of Gallipoli	= 1 Imp. ton.

The quarantine regulations are the same as those of Naples; but as Gallipoli has no lazaretto, vessels laden with susceptible goods proceed to Brindisi to discharge and perform quarantine, Brindisi having the only lazaretto in the province of Terra di Otranto.

**General Remarks.**—Masters of vessels loading oil at Gallipoli are obliged to attend at the measurement of the oil, and inspect its quality. They receive for their attendance from the shipper, free of all charges on board, 2 staja, or 2 per cent. (Gallipoli measure), of oil for every 100 salme their vessel loads.

**Bills of Lading** for a cargo of oil are merely signed by the master with his name, without any sort of clause. He, consequently, affirms for the quantity and quality of the oil and casks. All bills of lading are made out in Italian.

In shipments for St. Petersburg, the number, tare, and gross and nett weight of each cask are endorsed on the bill of lading, which is signed by the master and shipper on both sides.

Besides the bills of lading, the master signs receipts in quadruplicate, specifying that a sufficient quantity of wood has been supplied to the stowers for the stowage of his cargo, and that he has received a certain number of empty casks for the purpose of transferring the oil to them, should any leakage take place during the voyage.

Another receipt is signed by the master stating that he has received the custom-house caskets, proving the duty to have been paid on his cargo. The caskets are of service should the vessel put into any other Italian port.

The **Port Charges**, of a public nature, are fixed by the tariff for the kingdom. But there are several port charges of a private nature, such as pilotage, mooring, unmooring, discharging of ballast, and watermen's or Interpreter's attendance. These are only paid by foreign vessels, and for the Neapolitan traders require no pilot, and their own vessels, and discharge their ballast, and speak the language of the place, do not require an interpreter, and merely have a person to assist them in getting their clearances from the different offices, whom they pay by private arrangements. The charges for British vessels are—

Pilotage, entering	du. 4	gr. 0
"    clearing	"    4	"    0
Mooring and unmooring	"    16	"    0
Interpreter's attendance	"    18	"    0
Discharging of ballast, for every ton	"    0	"    0

N.B.—Vessels of all nations pay the same charges.

**Supplies and Prices of Provisions.**—Gallipoli is not a favourable place for obtaining supplies of fresh provisions, and is without any salt provisions, except salted cod, herrings, pilchards, and anchovies.

Bread (rather bad)	4	grs.	3 per cent.

is sent must be ordered, and is inferior. Vessels generally provide this article at Naples, where it is good and cheap.

Vegetables are not abundant at all seasons. Water. The supply for shipping is copious and excellent, and is conveniently put on board. (*Geographical Dictionary*, art. 'Gallipoli,' with the authorities there referred to; and valuable private information.)

**GALLON.** A measure of capacity, both for dry and liquid articles, containing 4 quarts. 5 Geo. IV. c. 74, 'the Imperial gallon shall be the standard measure of capacity, and shall contain 10 lbs. avoirdupois weight of distilled water weighed in air at the temperature of 62° Fahrenheit's thermometer, the barometer being at 30 inches, or 277.274 cubic inches; and all other measures of capacity to be used, as well as wine, beer, ale, spirits, and all sorts of liquors, shall be derived, computed, and ascertained from such gallon; and all measures shall be taken in parts, or multiples, or certain proportions of said Imperial standard gallon.' The old English gallon, wine measure, contained 231 cubic inches, and the old English gallon, ale measure, contained 282 cubic inches. Hence the Imperial gallon is about ¼ larger than the old wine gallon, and about ¼ less than the old ale gallon. By the 6 Geo. IV. c. 58 s. 6 it is enacted that from and after January 6, 1826, whenever any gallon measure mentioned in any Act of Parliament relative to excise, it shall be taken and deemed to be the Imperial standard measure. [WINE AND MEASURES.]

GAS COMPANIES

Russ. granatnoi kamen; Span. granadas). There are several varieties of this gem, of which those used in jewellery are the carbuncle, the cinnamon stone, the almandine, and the pyrope or Bohemian garnet. The chemical composition of the Bohemian is silica and alumina, with protoxide of iron, the latter in considerable quantity.

The term carbuncle is applied to garnets when they are cut en cabochon, i. e. not in facets, but with a flat or hollow base, and a smooth convex top.

The Syrian or Oriental garnet (so called from Syrian, the capital of Pegu) is brought from India, Penn. Ceylon, and Brazil. The pyrope is found in Bohemia and Saxony. Good carbuncles, large, free from spots, and pure, are worth as much as 500 each. Bohemian garnets are worth much more in Austria than elsewhere, a zecklace of beads on diamonds, &c. 2nd edition.)

GAS COMPANIES. The term usually applied to designate the companies or associations established in most large towns for lighting the streets and houses with gas.

Every one must have remarked that most species of coal, when ignited, give out large quantities of gas, which burns with much brilliancy, yielding a great quantity of light as well as of heat. Dr. Clayton seems to have been the first who attempted, about 1736, to apply this gas to the purposes of artificial illumination; but his experiments were upon a very small scale, and more than half a century afterwards, at length, however, Mr. Murdoch, of Soho, instituted a series of judicious experiments on the extraction of gas from coal; and, by his ingenuity and sagacity, succeeded in establishing one of the most capital improvements ever made in the arts. Mr. Murdoch found that the gas might be collected in reservoirs, and conveyed by pipes to a great distance from the furnace where it was generated; and that it afforded, by its slow combustion, when allowed to escape through small orifices, a beau-

tiful and steady light. This great discovery, which places Mr. Murdoch in the first rank among the benefactors of mankind, was first brought into practice at Redruth, in Cornwall. In 1802 it was applied to light Mr. Murdoch's manufactory at Soho; in 1805 it was adopted by Messrs. Phillips and Lee, of Manchester, in the lighting of their great cotton mill; and is now employed in the lighting of the streets, theatres, and other public buildings, factories &c. of all the considerable and most of the small towns of the empire, and also in most considerable towns of the continent and America, Australia &c.

Gas light is indebted, for its rapid diffusion, not more to its peculiar softness, clearness, and unvarying intensity, than to its comparative cheapness. According to Dr. Thomson (*Encyc. Brit.*, 'Gas Lights'), if we value the quantity of light given by 1 lb. of tallow in candles at 1s., an equal quantity of light from coal gas will not cost more than 23d., being less than a fourth part of the cost of the former.

Oil and other substances have been used in furnishing gas for the purpose of illumination, but none of them has answered so well as coal. Most of the oil gas establishments have been abandoned, and the carrying of gas works on a large scale, into houses &c., are very expensive, and require a large outlay of capital. Hence most of the gas stock companies, in the different towns are supplied by joint-ventures. Many of them have turned out to be very profitable concerns.

The subjoined table contains a statement of the most important particulars connected with the principal gas companies, obtained under Parliamentary authority in 1866. It shows the rates per cubic feet charged for gas by the principal gas companies in the United Kingdom in 1865, with the amount of their capital at that date, the rate per cent. of dividend payable on the capital, and the price of coal per ton used by the companies. (Extracted from *Parl. Paper No. 486*, Sess. 1866.)

**GELATINE.** The name Gelatine is used to include gluten, derived from the skin, tendons, and bones of adult animals, and chordin, which is obtained from the cartilages and bones of young animals. Gelatine is used in various degrees of purity, for alimentary purposes, and in the arts. The manufacture of gelatine is all but universal,

though the best and purest is stated to come from France. It is used in photography and stationery, and for sizing paper. Isinglass, glue, and size are various forms of gelatine. [ISINGLASS.] The imports of gelatine in 1866 were 186 cwt., worth 781l.; and exports 27 cwt., of the value of 113l.

NOA. A maritim of the famous re province of the king the extensive g the light-house g. 89° 54' 24" I. Geneva is one In general th narrow; but some erately wide, and ic buildings, and the period of her being ground, in the appearance of

GENEVA (Dutch, genever; Fr. genévre; Ger. gaud, genever; Ital. acqua di ginopro; Lat. juniper aqua; Span. agua de enebro). A spirit obtained by distillation from grain, rectified with the addition of juniper berries. The latter give to the spirit that peculiar flavour by which it is distinguished, and are also said to render it diuretic. Geneva is a corruption of *genèvre*, the French term for the juniper berry.

By far the best geneva is made in Holland, where its manufacture is carried on to a very great extent. The distilleries of Schiedam have long been famous, and are at present in a very prosperous condition. Schiedam geneva is made solely of spirit obtained from rye and barley, flavoured with juniper berries. It becomes milder, and acquires, as it gets old, an oily flavour disliked by the Hollanders; hence nearly the whole of the 'Schiedam' is exported, and principally to the East Indies. The entire annual produce of the distillery in Holland has been estimated at 2,000,000 ankers, or 20,500,000 wine gallons, of which about two-thirds are exported. (Cloet, *Description Géographique des Pays Bas*, p. 32.)

In nothing, perhaps, has the destructive effect of heavy taxation been so strongly exhibited as in the trade of geneva. It appears from the *Parl. Paper No. 248*, Sess. 1826, that during the ten years ending with 1786, when the duty on geneva was about 10s. per wine gallon, the average annual consumption in Great Britain amounted to about 1,232 gallons. But in 1786 Mr. Pitt reduced the duties to 5s. per gallon; and the effect of this wise and politic measure was such, that in the next decennial period the average imports for home consumption amounted to 444,891 gallons. From 1796 to 1806 the duties fluctuated from 7s. 6d. to 14s.; and as the taste for geneva had been formed, and as the duties on other spirits had been increased in about the same proportion, the consumption went on increasing, having been, at an average of the 10 years, as high as 724,351 gallons near. This was the maximum of consumption.

Mr. Vansittart soon after began his inauspicious career, and immediately raised the duty from 14s. to 20s. 8d., the consequence of this increase being, that in the 10 years ending with 1816 the average consumption amounted to only 272,898 gallons. Since then the duties continued stationary down to 1846 at 22s. 10d. the Imperial gallon on an article which might have been bought in bond for 3s. 6d. or 4s. 6d. The duties on rum and British spirits having been afterwards materially reduced, the consumption of geneva went on progressively diminishing, till it amounted, as appears from the subjoined official statement, in 1813, to no more than 13,913 gallons; being only *one fifty-third* part of what it amounted to during the 10 years ending with 1806. The estimated value in bond for all the geneva imported in 1865 was 1s. 8½d. per gallon.

To make any lengthened commentary on such statements would be useless. Our policy, if we may apply this term to so revolting a display of short-sighted rapacity, had no other effect than to lessen the public revenue and enjoyment of the people, to injure our trade with Holland, and to foster and promote the ruinous and destructive practice of smuggling. The exorbitant duties on geneva, brandy, and tobacco led to the formation of the coast guard and the preventive water guard, costing together for many years about 360,000l. per annum; and yet, notwithstanding this outlay, and notwithstanding the innumerable penalties and punishments to which he is exposed, the trade of the smuggler was not put down, but continued, on the contrary, in a peculiarly flourishing condition.

At length, in 1846, Sir Robert Peel did for geneva what he did for brandy, that is, he reduced the duty from 22s. 10d. to 15s. per gallon. In 1860 a uniform customs duty of 10s. 5d. was laid on Foreign spirits, so as to equal in amount the exise duty on British spirits; this wise measure has had the best effect, as will be seen from the subjoined table.

The regulations as to the importation &c. of geneva are similar to those affecting BRANDY.

GENOA. A maritime city of Italy, once the site of the famous republic of that name, now a province of the kingdom of Italy, at the bottom of the extensive gulf to which it gives its name, the light-house being in lat. 44° 24' 18" N. long. 8° 54' 24" E. Population, in 1862, 110,000. Genoa is one of the finest cities of Italy. In general the streets are inconceivably narrow; but some of the principal ones are very broad, and consist almost entirely of public buildings, and private palaces erected during the period of her prosperity. Being built on a rising ground, in the form of an amphitheatre, the appearance of the town from the sea

is most magnificent, and justifies the epithet given to her of *la Superba*.

Port.—The harbour is semicircular, the diameter being about 1,000 fathoms. It is artificial, being formed by 2 gigantic moles having opposite directions. That on the east side, called the old mole (*molo vecchio*), projects from the centre of the city W. by S. It is about 260 fathoms in length, and has a battery near its middle. The new mole (*molo nuovo*), on the opposite side of the port, adjoins the southern extremity of the suburb of St. Pietro d'Arena, projecting about 210 fathoms from the shore in an E.S.E. direction. The heads of the moles bear from each other N.E. by E., and S.W. by W.

of the most wholesome  
GINGELLY OIL. [  
GINGER (Ger. ing  
gingelée; Ital. zenze  
re; Russ. imbir; Lat.  
Zingiber), Nat. Orde  
Zingiberaceae, a native of the East  
Indies, which was early carried to  
the West Indies. After  
being selected, scraped,  
and with great care. The  
inferior roots,  
after being washed  
in water before being  
dried. Preserved gin  
is made of the green roots, or the  
young and full of  
juice, when peeling them in  
water, and then  
putting them into a thin syrup,  
and into the jars in which  
they are preserved, a  
syrup poured over them,  
and a sweet, aromatic odour,  
is given. It is  
exported in bags, each  
of which  
brings the high  
price, and better flavo  
redness, and better flavo  
ness of goodness in be  
comes, or the being  
soft, and firmness; th  
is soft, or very friab  
le. The best pres  
erved; it should be c  
are, rejecting that v  
is strong. (*British*  
consumption of ginger  
is 100 cwt. a-year. The  
duties on the high dutie  
were 10s. per cwt. fr  
down to 1842. The  
duties on foreign  
ginger were 6d. per cwt.  
In 1850 the duties  
were 2s. 6d. per cwt. of raw  
ginger, and 1s. 6d. per cwt.  
of the year 18  
of the West  
Indies, and this  
produce was

right of in the taxing of glass in this country; the duties on it having been carried to a most convenient extent, and imposed in the most judicious manner. After successive augmentations, the duties were raised in 1813 to the amount of 108.5 per cent. on flint and plate glass! And the consequence was, that despite the increase of wealth and population in the interim, the consumption of both these sorts of glass was less than it had been in 1791, when the duty was only 32s. 2d. per cwt. The progress of the manufacture and the duties since 1813 is exhibited in the subsequent tables, the influence of the various modifications of the latter on production being too obvious to require being pointed out.

We do not know whether it was possible to have assessed without opening a still wider door than that which existed; but they not only augmented the price of a most indispensable article, and that in no inconsiderable degree, but they further prevented the operations of the manufacturers, by preventing them from making experiments, and improvements, and introducing new processes, in respect the duties were especially injurious. We are any one acquainted with the facts entertained by the Commissioners of Excise, to doubt that 'no tax can combine in expressing their views at variance with all sound principles of justice, than this duty on glass.'

Had it been impossible otherwise to get rid of the duties, they might have been advantageously commuted for an increase of the house duty. The greater cheapness of glass would have more than compensated to most householders for the increase of the house tax, at the same time that the manufacture would have been increased and improved.

But any commutation of this sort was rendered unnecessary. The imposition of the income tax having supplied Sir Robert Peel of the means of effecting those great financial reforms which will ever distinguish his administration, the duties were repealed from April 5, 1815, the beneficial influence of this liberal and judicious measure is obvious in the improved quality, descriptions of glass in the market; and there can be no doubt that its advantages will become still more and more obvious from the facilities it gives for the introduction of improvements, and consequently for ameliorating the fabric as well as reducing the cost of one of the most useful and admirable of the products of art and industry.

A most remarkable fall in price has been effected in the article. Previous to the repeal of the duty, in 1805 it had fallen to 27.8s.; while ordinary sheet glass, worth 1s. 2d. per foot in 1841, can now (1865) be got for 2s.

The annexed tables show the state of the manufacture previously to the abolition of the duty:—

I.—Prices of Plate Glass in Great Britain from 1760 to 1865.

In 1819 the make, which under a high rate of duty was 3,000 feet per week, sold at 20s. to 25s. per foot, has in 1835, duty free, increased to 140,000 feet, sold at 2s. and upwards per foot—thus showing that a reduction in price of 90 per cent. (or say 20s. to 2s.) has opened the door to an increased production amounting to nearly 5,000 per cent.

**Stained or Painted Glass.**—The art of enamelling or staining glass was no doubt known to the ancients. Its application, however, to window lights commenced in the middle ages. The windows of St. Denis were filled with coloured glass in the twelfth century, and the art of making figures and heraldic devices in this material was general in the fourteenth century. Many specimens of this medieval art exist, as for instance the windows in York Minster. The revival of this art is an event of the last few years; for the painted glass of the last century, though often spirited in design, does not produce the effect of the leaved window, in which the several parts vary in solidity as well as colour.

Stained glass is extensively manufactured in Birmingham, and is largely employed in places of worship, in public buildings, and even in private houses.

**Exports and Imports of Glass.**—In 1866, 47,671 square feet of rough plate glass exported; 557,161 square feet of polished glass, chiefly to the United States; 91,400 feet of looking glass, chiefly to Australia; 2,000 cwts. of window and German sheet glass; 747,130 cwts. of coloured glass; 747,130 cwts. of bottles, the largest customer being the Government; 20,456 cwts. of ornamented flint glass; 7,000 cwts. of plain flint bottles; 1,667 cwts. of chandeliers. The declared value of these articles of British manufacture was £1,100,000, to which aggregate common glass contributed 378,395s.

In the same year 272,392 cwts. of sheet window glass, 31,576 cwts. of cut and pressed glass, 28,972 cwts. of plain flint glass, 34,667 cwts. of plate glass, and 16,800 cwts. of silvered glass, besides 16,800 cwts. of bottles, and 19,103 cwts. of annealing glass, were imported. The declared value of these imports was £13,202, the principal part coming from Belgium. There is an enormous importation of wine bottles from France, which is likely to increase greatly in the future. Mr. Chance gives the following

relation to those firms...  
Wagon, works  
Lancashire  
...  
The following is an  
glass for the 12 years

Year	Flint	Plate

1860	18,904	..
1861	16,304	..
1862	13,704	..

It will thus be seen, that the quantity of glass retained for home use has increased in every year since 1813, and that the last is almost double that which preceded this year. The increase took place in 1817, when the duty on foreign glass was reduced from 4s. 10s. to 3s. per cwt. On those of 1856, LOVES (Ger. handsches; Span. guantes; R. guantes; Well-known for covering the hands, but frequently also the leather used in shoes, is not properly appreciated by a peculiar species of wash, and other processes, but particularly for the manufacture of superior quality, in which the gloves are made of Worcester and Woodstock and Leominster are the best to obtain any trustworthiness produced. Glove machinery; but this is not the case, as it is a requisite, as it is in the case of Limerick used for the manufacture of a sort of ladies' gloves. Large quantities of Nottingham and Lewisham are imported. The prohibition of leather gloves had the effect of checking improvement in the manufacture of gloves at once inferior to those of the same time till 1825, when the duty on gloves was also reduced, and many manufactures, and many predicions of the manufacturers in other instances, experienced had not been material. The wholesome competition now felt throughout the country is admitted on all hands to be the cause of improvement in the

**GLOVES**

relation to those firms which manufacture a large proportion of the glass produced in the kingdom:—

Wages, partly cash consumed	£ 210,000
Wages, partly in kind	165,000

1866	91,772	2,819	41,179	1,256	74,650	2,239
1867	107,007	3,211	47,171	1,447	87,427	2,613
			65,083	2,057	125,132	3,763

It will thus be seen, that though the exports of glass are liable to frequent fluctuations in quantity, the value of the two items have very considerably increased, and that the last is almost stationary. In the year which precede this table, however, a considerable increase took place in the exports of window glass. On the other hand, the imports of foreign glass were sixfold in 1865 more than those of 1856.

**GLOVES** (Ger. handschuhe; Fr. gants; Ital. guanti; Span. guantes; Russ. rukawizii, perstnitsy; Portug. luvas). Well-known articles of dress for covering the hands, usually made of leather, but frequently also of cotton, wool, silk, or other materials.

The leather used in the manufacture of gloves is not, properly speaking, tanned, but is prepared by a peculiar process that renders it soft and pliable. Some sorts of leather gloves admit of being washed, and others not. Woodstock is the most celebrated for the manufacture of leather gloves, and is particularly the former, are of superior quality, in which a great number of the best makers are employed, as well as men, are employed, and Leicester and Woodstock, London, Yeovil, and Limerick are the principal seats of the glove manufacture. It is, however, difficult to obtain any trustworthy accounts of the machinery; but this is done only to the work by rendering the stitches more equidistant, as it is not cheaper than the ordinary Limerick used to be famous for the manufacture of a sort of ladies' gloves, called 'Limerick.' Large quantities of cotton gloves are manufactured at Nottingham and Leicester.

**Repeal of Prohibition of Importation of Leather Gloves and Mitts.**—The prohibition, under the severest penalties, of the importation of leather gloves and mitts had the effect, by preventing competition and emulation with the native manufacturers, of checking improvement, and of rendering the quality of the goods at once inferior in quality and inferior in price. This system was, however, continued till 1825, when the prohibition was repealed, and gloves were allowed to be imported from any country, though high duties were imposed. This measure was vehemently opposed, and many predictions were made of the ruin of the manufacture; but in this respect the experience has shown that the prohibition had not been materially benefited by the repeal.

The wholesome competition of foreign manufacturers now felt themselves exposed, made them exert all their efforts to improve the quality of their goods, and to admit on all hands that there had been a great improvement in the manufacture of leather gloves and mitts.

The repeal of the prohibition of the importation of leather gloves and mitts had the effect, by preventing competition and emulation with the native manufacturers, of checking improvement, and of rendering the quality of the goods at once inferior in quality and inferior in price. This system was, however, continued till 1825, when the prohibition was repealed, and gloves were allowed to be imported from any country, though high duties were imposed. This measure was vehemently opposed, and many predictions were made of the ruin of the manufacture; but in this respect the experience has shown that the prohibition had not been materially benefited by the repeal.

The wholesome competition of foreign manufacturers now felt themselves exposed, made them exert all their efforts to improve the quality of their goods, and to admit on all hands that there had been a great improvement in the manufacture of leather gloves and mitts.

**GOLD**

during the dozen years after the trade was opened than in the previous half century. Since the repeal of the import duties our importation of foreign leather gloves has greatly increased, being nearly four times as great as that returned fifteen years ago. In 1866, as will appear from the annexed statement, we imported 10,619,220 pairs of leather gloves, the average value per pair being 2s. 3d. The import is chiefly from France, important. On the other hand 680,664 pairs of leather gloves of British make were exported, the average value being somewhat less than that of the imported articles.

*Leather Gloves Imported into and Exported from the United Kingdom in 1866.*

Of cotton gloves we exported 315,180 pairs in 1866, chiefly to the United States. The French glove manufacture, one of the most important branches of industry in that country, includes 224 different sizes of gloves. The chief seats are Paris, Grenoble, Milhan, Niort, Vendome, Chantonnay, Lunéville, and St. Julien. The best are made in Paris.

English makers have not successfully competed with France, and even Germany is now beginning to send us large quantities of leather gloves. In the articles of cotton and Lisle gloves Germany sends three-fourths of those now (1868) sold in England, and for export has nearly the whole custom of the United States (formerly buying this class of glove in Nottingham and Leicester).

Free trade has enabled us to buy and sell foreign merchandise here, but at the same time has almost extinguished a great part of this industry with us. Mr. Mundella, of Nottingham, attributes much of this to the fact that in Saxony and Prussia the operatives are so much better educated, and also very sober and industrious.

**GOLD** (Ger. gold; Dutch, goud; Dan. and Swed. guld; Fr. or; Ital. and Span. oro; Portug. ouro; Russ. soloto; Pol. zloto; Arab. tibr and zehab; Saus. swarna; Malay, mas); the most precious of all the metals (Malay, mas), been known from the earliest antiquity. It is of an orange-red or reddish-yellow colour, and has no perceptible taste or smell. Its lustre is considerable, yielding only to that of platinum, steel, silver, and mercury. It is rather softer than silver. Its specific gravity is 19.3. No other substance is equal to it in ductility and malleability. It may be beaten out into leaves so thin, that 1 grain of gold will cover 56½ square inches. These leaves are only 1/250,000 inch thick. But the gold leaf with which silver wire is covered has only 1/100 of that thickness. An ounce of gold upon silver

GOMUTI

is capable of being extended more than 1,300 miles in length. Its tenacity is considerable, though in this respect it yields to iron, copper, platinum, and silver. From the experiments of Seckingen, it appears that a gold wire 0.078 inch in diameter is capable of supporting a weight of 150.07 lbs. avoirdupois without breaking. It melts at 320° of Wedgwood's pyrometer. When melted, it assumes a bright bluish green colour. It expands in the act of fusion, and consequently contracts while becoming solid more than most metals, a circumstance which renders it less proper for casting in moulds. (Thomson's *Chemistry*.)

A considerable quantity of leaf gold is imported into Great Britain. In 1865 upwards of 12,000,000 leaves were thus imported, valued at 27,500*l*. For the quantities of gold produced, and the places where it is produced, see *PRECIOUS METALS*. GOMUTI or E.100. A species of palm (*Arenga saccharifera*), growing abundantly in Singapore and Penang, and in the Indian Archipelago.

A valuable fibrous product is obtained from this palm, resembling *black horse-hair*: it is found between the trunk and branches, at the insertion of the latter, in a matted form, interspersed with long, hard, woody twigs of the same colour. When freed from the latter, it is manufactured by the natives into cordage. Its fibres are stronger and more durable, but less pliant, than those of the cocoa nut, or coir [Coir], and are, therefore, fitter for cables and standing rigging, but less fit for running rigging. The native shipping of the Eastern Islands of all kinds are chiefly equipped with cordage of the gomuti, and the largest European shipping in the Indies use cables of it. It undergoes no preparation but that of spinning and twisting; no material similar to our tar and pitch, indispensable to the preservation of hempen cordage, being necessary with a substance that, in a remarkable degree, possesses the quality of resisting alternations of heat and moisture. The going nuts of Amboyna and the other Spice Islands is the best. That of Java has a coarse, ligneous fibre. Gomuti is generally sold in twisted shreds or yarns, often as low as 1 dollar per picul, and seldom more than 2. Were European ingenuity applied to the improvement of this material, there seems little doubt that it might be rendered more extensively useful. (Crawford's *East. Archip.* vol. iii. p. 425; Balfour's *Cyclopaedia of Southern India*.)

GOOD HOPE, CAPE OF. [CAPE TOWN.]

GOTTENBURG, or, more properly, GOTHABORG, on the south-west coast of Sweden, at the head of a fiord near the Kattegat, which receives the river Götha, lat. 57° 42' 4" N., long. 11° 57' 45" E. Population in 1863, 41,585. Vessels do not come close to the city, but lie in the river or harbour at a short distance from the shore, goods being conveyed from and to them by lighters that navigate the canals by which the lower part of the town is intersected. The depth of water in the port is 17 feet, and there is no tide, bar, or shallow. A vessel entering the Götha must take a pilot on board, whose duty it is to meet her ½ league west of Wingo Beacon. After Stockholm, Gotteburg has the most extensive commerce of any town in Sweden. Iron and steel, the former in excellent, but the latter inferior to that made in England, form the principal articles of export. They are brought from the rich mines of Wermeland, distant about 200 miles; being conveyed partly by the Lake Weener, partly by the river hetta Canal [CANALS], and partly by the river Götha. The exports of iron in 1847 amounted in all to 27,447 tons. The original cost of iron is supposed to be increased about 5 per cent. by

the expense of its conveyance to Gotteburg; and the shipping charges, inclusive of the export duty, are about 10 per cent. additional. The next great article of export is timber, particularly deal, which are also furnished by Wermeland. The opening of the Götha Canal, by which Gotteburg communicates with a large portion of the interior of Sweden, has exercised a powerful and beneficial influence over her commerce. The Railway between Stockholm and Gotteburg, now (1858) complete, will still further promote the prosperity of the latter. She carries on an extensive trade with England, and English is generally understood. Steamers run once a week between Gotteburg and Hull, and between London and Gotteburg once a fortnight, for 8 months of the year; but in winter the intercourse with England is kept up by the tedious route of Lübeck and Hamburg.

*Herring Fishery*.—Gotteburg used, at no distant period, to be one of the principal seats of herring fishery. In 1801 the export was 73,000 barrels. In 1808 and 1809 fish were very scarce, and in 1812 they entirely disappeared, and have not hitherto returned: so that Gotteburg, instead of exporting, at present imports considerable quantities of herrings.

The following is an account of the vessels which arrived at and left Gotteburg in the five years ending with 1866. Sweden has an extensive carrying trade:—

Year	Arrivals				
	British		Foreign		Total
	Ships	Tons	ships	Tons	
1862	266	65,819	1,719	200,483	1,885
1863	267	70,955	1,879	209,917	2,146
1864	248	69,207	1,740	255,752	2,088
1865	251	72,028	1,616	279,569	2,067
1866	281	99,290	1,736	288,987	2,017
1862	255	61,578	1,566	195,700	1,821
1863	272	71,687	1,573	200,881	1,845
1864	217	69,113	1,478	256,472	1,695
1865	261	75,659	1,402	299,455	1,663
1866	281	99,590	1,571	282,888	1,652

The principal imports into Gotteburg are coffee, cotton, herrings, sugar &c. Its exports are iron, timber, deals, and oats; more than half the deals and nearly all the oats going to Britain.

11 centner or 100 Swedish lbs. = 95 lb. avoirdupois  
1 tun = 4 bushels.  
12 <sup>1</sup>/<sub>16</sub> cubic feet = 8 bushels.

The following is an approximate estimate of the total value of the imports into Gotteburg for the five years 1862 to 1866, viz.:

Year	In British Ships	In Foreign Ships
1862	£ 415,000	£ 1,065,000
1863	£ 479,000	£ 1,161,000
1864	£ 513,000	£ 1,288,000
1865	£ 753,000	£ 1,924,000
1866	£ 809,500	£ 1,814,000

In 1864 the merchant marine was valued at 11,223 aynlastes burden.

Approximate Estimate of the Exports from Gotteburg for the Five Years 1862 to 1866

Year	In British Ships	In Foreign Ships
1862	£ 513,800	£ 833,000
1863	£ 425,850	£ 831,450
1864	£ 417,000	£ 835,500
1865	£ 457,500	£ 927,000
1866	£ 589,500	£ 927,000

Wool	18,220,770	9,218,200	3,331,658	2,467,318	2,819,012
Wine	1,209,030	15,974,046	15,835,012	29,690,937	17,117,839
Iron		1,016,317	2,426,721	1,721,911	2,128,111

Iron.—The total shipments of iron from Gotteburg during the under-mentioned five years have been as follows, viz.:

Year	Tons
1862	41,350
1863	41,360
1864	38,130
1865	38,130
1866	55,350

Of this iron, the greatest part was exported to the United Kingdom and the United States.

Wool.—Exclusive of other sorts, the exports of plain, deals, and battens from Gotteburg in 1866 were to the following countries, viz.:

To England and British Colonies	Cubic ft.
France	6,965,790
Belgium	5,712,000
Spain	206,380
Germany	131,570
Denmark	95,270
Other countries	157,960
Total	10,535,950

Custom-house Regulations and Port Charges.

When a vessel enters port, no person is allowed to board her, unless she has a vessel till she be in custody of the officers who, having inspected the manifest and cargo, send them to the Custom-house. An officer is appointed to superintend the unloading of the cargo. The public charges of all goods on a Swedish ship and on a foreign ship not exceeding mixed cargoes at Gotteburg, would be the same as on a Swedish ship.

Bonding System.—Goods may be bonded for a length of time, on paying 2 per cent. for the first 2 years, and 1 per cent. thereafter.

Insurance, Credit &c.—The usual rate of commission is 2 per cent. Goods are commonly sold for raw sugar at 9 months, with 3 months' discount to the seller; other goods at 3, 4, and 6 months.

Public Establishments.—There are no public or private establishments at Gotteburg for the inspection of goods; but the national bank has two offices, which advance limited sums of money on the security of goods, and in discounting bills. Some of the English insurance companies have agents here, who do a good deal of business.

Weights, Measures &c.—These may be had here in any quantity and cheap: beef 1 1/2 d. per lb., mutton 2 d. per lb., and butter 6 d. per lb.

Weights, Measures &c. same as at Copenhagen.

On this article, we have made use of the works in the North of Europe, vol. iv. p. 10; Mr. Consul Engstrom's Report, &c.

DAYS OF. [EXCHANGE.]

Germany, Fr. raisins; Ital. grapes; Spain, abas, racimos; Lat. uvæ. A limited quantity of raisins is produced from the vine.

One of the great facilities afforded by the communication between countries and steam navigation, the import of especially grapes, has greatly increased.

132 bushels of grapes were imported into the Kingdom, chiefly from Spain and

Portugal. The highest priced were those of Spain, valued on an average at 22s. 5d. per bushel.

There is no duty on fresh grapes. The grapes grown in Great Britain in the open air are much smaller, and by no means so luscious as those of foreign countries; but those raised in hothouses are quite equal, if not superior, to the latter. Grapes are imported not only in their natural state, but dried and preserved, in which latter state they are denominated RAISINS.

GRINDSTONES. Flat circular stones of different diameters and thickness, mounted on spindles or axles, and made to revolve with different degrees of velocity, employed to polish steel articles, to give an edge to cutting instruments &c. Grindstones not in constant use are commonly turned by which handles; but at Sheffield and other places where polished articles and cutlery are extensively manufactured, large numbers of grindstones, being mounted in buildings appropriated to that purpose, called grind or blade mills, are turned by straps, acting on their axles, the moving power being either water or steam. The stone best suited to form grindstones is what is called sharp-grit; it being chosen finer or coarser according to the purposes for which they are destined. The principal grindstone quarry in England is at Gatshead Fell, in the county of Durham, where they are produced in vast numbers, not only for home use, but for exportation to all parts of the world. But those principally in use at Sheffield are mostly quarried at Wickersley, in Yorkshire.

They are classed in eight different sizes called feet, according to their dimensions, as in the following table:—

Denominations	Diameter	Thickness	No. in a Chaldron
1 foot	in.	in.	
2 feet	10	2	36
3 feet	14	2 1/2	27
4 feet	20	4	18
5 feet	28	5	9
6 feet	35	6	5
7 feet	42	6	3
8 feet	50	8	1 1/2

A grindstone foot is 8 inches: the size is found by adding the diameter and thickness together. Thus, a stone 56 inches diameter by 8 thick, making together 64 inches, is an 8-foot stone, of 8 inches each foot.

Besides the above sizes, grindstones are made when ordered, of any intermediate dimensions: many are made much larger than any of the above sizes; some as large as 76 inches diameter, and 14 or 15 inches thick, which are a great weight, a cubic foot weighing 1 cwt. 1 qr. 14 lbs. (Rees's Cyclopaedia; Bailey's Survey of Durham, p. 43.)

Grinding is an unhealthy and dangerous employment. For some purposes the stones are made to revolve with an extreme degree of velocity, which makes them occasionally fly in pieces. But the greatest annoyance to which the grinder is exposed is from his inhaling the minute particles of stone, and of iron and steel, that are always flying about, particularly in the process termed dry grinding. Contrivances have been suggested for obviating this serious inconvenience;

but whether it be owing to their unsuitableness, or to the carelessness of the workmen, none of them has succeeded in practice. (*Treatise on Iron and Steel*, Lardner's *Cyclopaedia*, p. 293.)

GUAIAIACUM or LIGNUM VITÆ (Fr. gayac, bois saint; Ger. pockhalm; Ital. guajaco; Lat. guaiacum, lignum vitæ; Span. guayaco). The wood of a tree, a native of Jamaica, Hayti, and the warmer parts of America.

It is a dark-looking evergreen, growing to from 40 to 50 feet in height, and from 14 to 18 inches in diameter. The bark is hard, smooth, and brittle: the wood is externally yellowish, and internally of a blackish brown colour. Lignum vitæ is the weightiest timber being 1.333. It is acuminated, its specific gravity being 1.333. It can exceedingly hard, and difficult to work. It can hardly be split, but breaks into pieces like a stone, or crystallised metal. It is full of a resinous juice or crystallised metal. It is full of a resinous juice (*guaiac*), which prevents oil or water from working into it, and renders it proof against decay. Its weight and hardness make it the very best timber for stampers and mallets; and it is admirably adapted for the sheaves or pulleys of blocks, and for friction rollers or castors. It is extensively used by turners.

The *guaiac*, or gum, spontaneously exudes from the tree, and concretes in very pure tears. It is imported in casks or mats; the former containing from 1 to 4 cwt., the latter generally less than 1 cwt. each. Its colour differs considerably, being partly brownish, partly reddish, and partly greenish; and it always becomes green when left in the open air. It has a pleasant balsamic smell, but has scarcely any taste, although when swallowed it excites a burning sensation in the throat. When heated, it melts, diffusing at the same time a pretty strong, fragrant odour. Its specific gravity is 1.229. (*Veget. Sub., Lib. of Entert. Knowledge*; Thomson's *Chemistry*; &c.)

GUANO or HUANO (the Peruvian term for manure). A substance used as a manure, found on certain small islands off the coast of Peru and Bolivia, and on parts of the shore of the mainland. It is friable, and easily reduced to powder; its colour varies from a dull red to a dirty white, and it has a strong smell, and a fat, unctuous feel. Humboldt was either the first, or one of the first, by whom this important substance was brought to Europe; but it was described at a much earlier date by Ulloa (*Voyage au Perou*, i. 481), and has been used as a manure by the Peruvians from the age of the Incas downwards. Very different opinions have been entertained as to its nature and origin, but there is no longer any doubt that, as Ulloa stated, it consists of the excrements of the sea-birds which are found in prodigious swarms all along the Peruvian and Bolivian shores. The localities where the deposit is principally met with being within a rainless region, it is accumulated with a rapidity of which we have no idea. Guano is of very different qualities: some authorities give the preference to the whitish varieties, which are believed to be more recent, while others prefer the red. According to Klaproth, a quantity of guano represented by 100 contained—urate of ammonia 16 parts, phosphate of lime 12½ do., silica 4 do., lime 10 do., oxalate of lime 12½ do., and water, do., common salt ½ do., sand 28 do.; but its organic and combustible matter, 28½ do.; but its composition is found to differ very materially. The best is that which contains the greatest proportion of ammonia.

There can, however, be no doubt that guano is a most efficient manure, and that about 2½ cwt. per acre of average guano mixed with about two-thirds the usual quantity of farm-manure (which is required to keep the soil in a state of fertility) will produce, when applied to land that is well drained, nearly double the ordinary quantity of potatoes. In turnip husbandry, splendid crops are produced by the agency of guano only: in this case from 4 to 5 cwt. per acre should be applied. It has also a powerful influence in improving crops of corn and the pasture following. The effect of guano is very materially increased by its being covered up to a considerable depth as soon as it is laid on the ground, and top-dressing is certainly the most advantageous way in which it can be applied. (*Practical Farming*.) It is, in fact, the most valuable of manures; and under such circumstances it becomes of importance to learn the probable value of the deposit, and the price at which it is imported and sold in Europe.

Unfortunately, our information on both points is less complete than might be expected. After it commenced to be largely exported to this and other foreign countries, an apprehension was felt in Peru that the guano began to gain ground in no very long time he wholly exhausted along the coast of Peru, and the department of Arequipa, in which guano is extensively used as a manure, Government has been called upon to avert this catastrophe by prohibiting its export; and we are, nevertheless, well convinced that

We are, nevertheless, well convinced that apprehension is in great measure unfounded. The present (1868) guano is principally obtained from the Chincha Islands, opposite to Pisco, in the Peru, in about lat. 13° 25' S., and long. 81° W., and the Lobos Islands, opposite to Pavaillon de Pica, Iquique, and other parts of the coast of Upper and Lower Peru. The estimates of the guano in these deposits differ very much, and on the whole, we have no difficulty in concluding that the estimates contained in the paper on this subject published at Lima are the most to be depended on (they are published in papers on Guano, pp. 100, 101, before Parliament in 1852); and the following results, viz.:—The coast of Peru, 7,921,407 tons, those of the Chincha Islands, 18,250,000 do., and those of the Lobos Islands, 853,086 do., making in all 27,024,493 do. supposing that under a liberal system of exportation were to amount to 400,000 or 500,000 tons, here is a supply that would last in the present state of the world for nearly 70, and in the other parts of the world for 100 years. But it is stated in the paper that the coast deposits are greatly exceeded by the above estimate; and that were the adjacent rocks and islands produced from 6° to 23° S. lat., many more tons certainly be met with; and hence we conclude that for practical purposes guano may be said to be all but exhausted.

The islands except by those who inhabit them, it would, but for the Government, cost nothing save the expense of putting it on board and the freight to the Governments of Peru and Bolivia, so little aware of the value of the guano, their duty to their constituents that they sold in 1839 to private

*Gum Senegal* is the produce of another species of acacia, called in Egypt 'Tullach' or 'Tulch.' It is found in many parts of Africa and Asia. In the Egyptian dependencies, the Tullach grows abundantly *Estat* of the Nile, in the provinces of Semnar and Taka.

The entire produce of this species of gum, which may be estimated at 30,000 cantars of 100 lbs., is sent in bags manufactured from bark, via the Nile and the Red Sea, to Cairo, where it is bought for the European markets at an average price of 18s. per cantar. When pure, gum senegal is of a dark reddish colour, opaque, and is found adhering to the branches of the trees, from which it exudes in hard globules, from  $\frac{1}{2}$  an inch to 3 inches in diameter.

Gum senegal, as will be inferred from its value, is much inferior in quality to gum arabic.

Gum senegal is imported from the west coast of Africa, especially from two kinds of acacia, called in the native language *vercek* and *nebel*. This substance is imported, chiefly by the French, in large masses, and generally of a darker colour than true gum arabic. There is generally a slight bitterness in this kind of gum. Its chief use is in the arts, and it is frequently substituted for gum arabic.

Gum of quality inferior to the above is imported from India, Australia, and the Cape; but all these kinds, although it appears always obtained from various species of acacia, contain a certain principle, called *bassorin*, which does not dissolve fully in water, or form a homogeneous solution.

At an average of the 3 years ending with 1812, the gum arabic entered for consumption amounted to 18,176 cwt. a-year. Previously to 1812, the duty on gum arabic from a British possession was 6s. per cwt., and from other parts 2s.; but the duty on it and all other gums was re-vised at 6s. per cwt. without regard to origin. In 1812 it was further reduced to 1s. per cwt., and was finally repealed in 1845. Of 50,112 cwt. of gum arabic imported in 1866, Egypt supplied 425 cwt., 4,939 from 'Austrian territories,' and the remainder in small quantities from several localities. That from Turkey bore the highest price, that of Australia the lowest.

In 1866, 3,639 cwt. of gum senegal were imported, the value being a little above 5l. per cwt., the best gum arabic was worth 7l. 9s. 2d.

Account of Imports in 1866 of such of the Principal Gums as are known in Commerce.

Gums	Cwts.	Gums	Cwts.

The quantities of these are re-exported, to value in 1866 of 374,783l.

*Resins*, for the most part, exude spontaneously from trees, though they are often obtained from artificial wounds, and are not uncommonly, at least in the East, combined with volatile oil, from which they are separated by distillation. They are solid bodies, naturally brittle; have a certain degree of transparency, and a colour most commonly yellow. Their taste is more or less bitter, and not unlike that of volatile oils; but they are not so smelly, unless they happen to contain some foreign body. They are all heavier than water, their specific gravity varying from 1.0182

to 1.1862. They differ from gums in being insoluble in water, whether cold or hot; while they are, with a few exceptions, soluble in alcohol, especially when assisted by heat. When heated, they melt; and if the heat be increased, they take fire, burning with a strong yellow flame, and emitting a vast quantity of smoke. Common rosin furnishes a very perfect example of a resin, and it is from this substance that the whole genus have derived their name. Rosin is, indeed, frequently denominated resin. The principal resins are ANISE, COPAL, ELEM, LARDANUM, LAC, MASTIC, ROSIN, SANDARACH, TACAMAHAC, &c. (Thomson's *Chemistry*.)

*III. Gum-resins*, a class of vegetable substances consisting of gum and resin. They differ from resins in this—that they never exude spontaneously from the plant, being obtained either by bruising the parts containing them, and expressing the juice, which is always in a state of emulsion, generally white, but sometimes of a different colour, or by making incisions in the plant, from which the juice flows. The juice, being exposed to the action of the sun, is condensed and inspissated till it forms the gum-resin of commerce. Gum-resins are usually opaque, or, at least, their transparency is inferior to that of resins. They are always solid, and most commonly brittle, and have sometimes a fatty appearance. When heated, they do not melt as resins do, neither are they so combustible. Heat, however, commonly softens them, and causes them to swell. They burn with a flame. They have almost always a strong smell, which, in several instances, is alliaceous. Their taste, also, is often acrid, and always much stronger than that of resins. They are usually heavier than resins. They are partially soluble in water, but the solution is always opaque, and usually milky. Alcohol partially dissolves them, the solution being transparent.

The most common gum-resins are ALOES, AMMONIA, EPHORBIUM, GALBANUM, GAMBAGE, MYRRH, OLIVANUM, SAGAPENUM, SCAMMONY, &c. (London's *Encyc. of Agriculture*; Thomson's *Chemistry*; *British Pharmacopæia*, 1867.)

**GUNNY** (Hind. tat; Ben. guni). A strong, coarse sackcloth manufactured in Bengal for making into bags, sacks, and packing generally, answering at once the two purposes for which canvas and bast are used in Europe. The material from which this article is manufactured is the fibre of two plants of the genus *Corchorus*; viz. *Corchorus olitorius* and *Corchorus capsularis* (Bengali, *pat*); both, but particularly the first, extensively cultivated throughout Lower Bengal. Besides a large domestic consumption of gunny, the whole rice, paddy, wheat, pulses, sugar, and saltpetre of the country, as well as the pepper, coffee, and other foreign produce exported from Calcutta, are packed in bags or sacks made of this article. There is also a large exportation of manufactured bags, each commonly capable of containing 2 maunds, or about 160 lbs. weight, to other parts of India, North America, Singapore, Pegu &c.

Each gunny bag weighs on an average 2 lbs. Pieces of gunny cloth are usually 30 yards long, and weigh about 6 lbs. each. (*Annual of Scientific Discovery*, 1862.)

In 1866, gunnies and gunny bags valued at 102,858l. were exported from British India. Of these, by far the largest amount was exported from the presidency of Bengal. [JUTE.]

**GUNPOWDER** (Ger. pulver, schiesspulver; Dutch, buskruid; Dan. krudt, pulver; Swed. krut; Fr. poudre; Ital. polvere; Span. and Port. polvora; Russ. poroch; Pol. proch; Lat. pulvis pyrius). This well-known inflammable powder

is composed of nitre, sulphur, and charcoal, reduced to powder, and mixed intimately with each other. The proportions of the ingredients vary very considerably; but good gunpowder may be composed of the following: viz. 76 parts of nitre, 15 of charcoal, and 10 of sulphur. These ingredients are first reduced to a fine powder separately, then mixed intimately, and formed into a thick paste with water. After this has dried a little, it is placed upon a kind of sieve full of holes, through which it is forced. By this process it is divided into grains, the size of which depends upon the size of the holes through which they have been squeezed. The powder, when dry, is put into barrels, which are made to turn round on their axis. By this motion the grains of gunpowder rub against each other, their asperities are worn off, and their surfaces are made smooth. The powder is then said to be glazed. (Thomson's *Chemistry*.)

Dr. Thomson has the following remarks with respect to the introduction of gunpowder into warlike operations: 'The discoverer of this compound, and the person who first thought of applying it to the purposes of war, are unknown. It is certain, however, that it was used in the fourteenth century. From certain archives quoted by Wiegand, it appears that cannons were employed in Germany before the year 1372. No traces of it can be found in any European author previously to the thirteenth century, but it seems to have been known to the Chinese long before that period. There is reason to believe that cannons were used in the battle of Cressy, which was fought in 1346. They seem even to have been used three years earlier, at the siege of Algesiras; but before this time they must have been known in Germany, as there is a piece of ordnance at Amberg, on which is inscribed the year 1303. Roger Bacon, who died in 1292, knew the properties of gunpowder; but it does not follow that he was acquainted with its application to fire-arms.' (Thomson's *Chemistry*.) The proportions of the several constituents of gunpowder vary considerably in different countries. For further particulars as to the introduction of CANNON, see that article.

The manufacture, keeping, carriage, and sale of gunpowder are regulated by several statutes. By the Gunpowder Act of 1860, 23 & 24 Vict. c. 139 (amended by 24 & 25 Vict. c. 130, and 25 & 26 Vict. c. 98), it is enacted that no person shall use mills or other engines for making gunpowder, or manufacturing the same in any way, except in mills and other places lawfully used at the time of passing the Act, or in places licensed by justices of the peace in manner therein mentioned, under pain of forfeiting the gunpowder and 2s. a lb. It is further enacted that no more than 50 lbs. of sporting and Government powder, or materials to be made into gunpowder, or 60 lbs. of any inferior powder, shall be made at any one time under a single pair of mill-stones, or rollers or runners, on pain of forfeiting all above such quantities of 50 or 60 lbs., and 2s. for every lb.; nor shall more than 50 cwt. be dried in any one stove or place at any one time, under forfeiture of all above that quantity and 2s. for every lb. thereof. Powder mills erected on Crown lands are exempted from the above regulations so far as relates to the making of fine fowling powder.

No dealer is to keep more than 200 lbs. of powder, nor any person not a dealer more than 50 lbs., in the cities of London or Westminster, or within 3 miles of either of them, or within any other city,

borough, or market town, or 1 mile thereof, or within 2 miles of the queen's palaces or manor-houses, or ½ mile of any parish church, on pain of forfeiture, and 2s. per lb.; except in licensed mills, or to the amount of 300 lbs. for the use of collieries, within 200 yards of them.

Not more than 30 barrels are to be carried by any land carriage, unless in a van specially constructed, and then 40 lbs.; or unless such carriage form part of a railway train, and then 80 lbs.; nor more than 500 barrels by water, unless going by sea or coastwise: each barrel not to contain more than 100 lbs.

All vessels, unless belonging to the Navy, coming into the Thames, are to put on shore, at or below Blackwall, all the gunpowder they have on board exceeding 25 lbs. Vessels outward bound are not to receive on board more than 25 lbs. of gunpowder previously to their arrival at Blackwall. The Conservators of the river Thames have authority to appoint searchers to inspect ships and search for gunpowder. All the gunpowder found above 25 lbs., and the barrels containing it, and 2s. for every lb. above that quantity, are forfeited. Any person obstructing an officer searching for concealed gunpowder is liable to a penalty of 10l. The places of deposit for gunpowder are regulated by the 54 Geo. III. c. 159.

The importation of gunpowder, arms &c. may at any time be prohibited by proclamation or by order in council (16 & 17 Vict. c. 107 s. 43).

Gunpowder is of considerable importance in a commercial point of view. This will be evident from the following

*Account of the Gunpowder Exported in 1866, specifying the Countries to which it was sent, and the Quantity and Value of that sent to each.*

Countries	Quantities	Value

GYPSUM or SULPHATE OF LIME is found in various parts of the Continent, in Derbyshire and Nottinghamshire, and in Nova Scotia, where it is largely exported. When reduced to powder, and formed into a paste with water, termed *plaster of Paris*, and is much used for forming casts &c. It is also used for floors, and has been advantageously employed as a manure.

H

**HABERDASHERY AND MILLINERY.** Although in one sense closely allied, inasmuch as the haberdasher supplies the milliner with the simple materials to assist in making up her goods, the millinery trade being almost entirely in the hands of females, and wholly confined to making up ladies' caps and bonnets, there is at the present day (1868) no other affinity between these branches of trade. A haberdasher is a person who deals in all subsidiary articles required by the milliner, dress-maker, or tailor, such as pins, needles, buttons, tapes, threads, cottons, sewing silks &c.—in fact, in everything required by them to make up or put together all descriptions of clothing; and haberdasher of the present day keeps and sells the similar indispensable articles required by milliners, bootmakers, shoemakers, staymakers, and manufacturers.

About 300 years ago (temp. Queen Elizabeth) an association appears to have existed between the Mercers and Haberdashers' Companies of London; but this was discontinued about that time, the mercers confining themselves to the sale of silks and velvets, which were the chief articles of their trade, and they gradually resigned the sale of all less important wares. The haberdashers dealt in hats, millinery, small articles of jewellery, pins (a creative commodity), and a thousand other things which still belong to the trade. (Knight's *London*.) It is certain that the Haberdashery trade about 50 years ago was much more limited in extent than it is at the present time; but it may be remembered that the opening of the trade in 1788, which has been followed by a large number being given to the production of fancy goods in Prussia, Germany, and France (which included new classes under the designation of haberdashery, although not, strictly speaking, entitled to that appellation), has very largely promoted the branch of trade which now flourishes under that name.

*Report of the Haberdashery and Millinery Exported from the United Kingdom in 1857 and 1866, specifying the Countries to which they were sent and the Value of the Articles sent*

	1857	1866

OF LIME IS  
ment, in Derby  
Nova Scotia, wh  
reduced to a  
e with water,  
d is much use  
also used for  
gously employ

There is doubtless a mistake in the number of haberdashers (including hosiers) returned in 1861 at 6,453 persons. That may apply to small dealers carrying on business as haberdashers and hosiers; but it is certain that the great bulk of the dashers, although not carrying on business under that designation.

Little faith, we fear, can be placed in the accuracy of the above customs return for 1857 and 1866 for haberdashery and millinery exported. It is well known that while on the one hand goods shipped to foreign countries, for the sake of saving trouble, are described by the general term haberdashery, on the other a large amount of goods shipped from Birmingham, Sheffield &c. are described as hardware, although consisting of pins, needles, buttons, hooks and eyes &c. as well as other metal articles which are comprised and haberdashery.

We are indebted for this article to R. Slater, Esq., of Fore Street.

**HACKNEY CARRIAGES.** Carriages stationed in the streets or other public places, and bound to carry such persons as require their services, for certain rates of hire according to the distances travelled. They have generally been licensed by authority, and subjected to certain regulations, intended to prevent strangers and others using them from fraud and imposition. It may be doubted, however, whether these regulations public would not be as well accommodated, at least in all large towns, by throwing the business open, and trusting to competition to rectify abuses. As respects London, nothing can be said in favour of its hackney coach establishment, which is, in truth, a disgrace to the city. Speaking generally, the carriages are dirty, disagreeable vehicles, the horses worn out, and the drivers ill-clothed and uncivil; forming a striking contrast to the elegance and commodiousness of the private carriages of the servants.

Hackney coaches were first established in London in 1625. They were then stationed not in the streets, but at the principal inns. In the reign of Charles II, their number was considerable. Commissioners for licensing and superintending hackney coaches were established by the Act 9 Anne c. 23; and successive Acts have been passed, specifying the number of coaches that might be licensed, the duties payable to Government, and the conditions under which licenses were to be granted. But we cannot say that these Acts reflect any credit on their authors; and the last (16 & 17 Vict. c. 33) is, perhaps, the most objectionable of any. To say that all hackney carriages shall charge alike, without regard to their style or fitting up, is to offer a premium on inferiority. If this were their object, these Acts have been eminently successful; but in every other respect they have been complete failures, and the sooner they are repealed the better. Immense numbers of cabriolets are annually licensed in the metropolis.

*Hackney Carriage Regulations, Fares &c. for Metropolitan Police District and City of London.*  
—Fares for hackney carriages are according to

distance or time, at the option of the hirer, expressed at the commencement of the hiring; if not otherwise expressed, the fare to be paid according to distance. (16 & 17 Vict. c. 33, schedule A.)

No driver is compellable to hire his carriage for a fare according to time, at any time after 8 in the evening, and before 6 in the morning.

Agreement with driver to pay more than legal fare not binding, and sum paid beyond the fare may be recovered. (1 & 2 Wm. IV. c. 22 s. 43.)

Driver not to charge more than the sum agreed on for driving a distance, although such distance be exceeded by the driver. (Sec. 44.)

If proprietor or driver agree beforehand to take for any job any sum less than the proper fare; penalty for exacting or demanding more than the sum agreed on, 40s. (Sec. 45.)

Driver may demand a reasonable sum as a deposit, from persons hiring and requiring him to wait, over and above the fare to which driver is entitled for driving thither. Penalty 40s. if driver refuse to wait, or go away before expiration of time for which deposit shall be sufficient compensation; or if driver shall refuse to account for such deposit. (Sec. 47.)

Hirer refusing to pay the fare, or for any damage and compensation for loss of time, may be committed to prison. (Sec. 41.)

The number of persons to be carried by any hackney carriage shall be distinctly marked on such carriage, as the Commissioner of Police shall direct; and the driver shall, if required by the hirer, carry by such carriage the number of persons marked thereon, or any less number. (16 & 17 Vict. c. 33 s. 9.)

When carriage is drawn by 2 horses,  $\frac{1}{4}$  above the fares hereinafter mentioned is to be paid. (Schedule A.)

Two children under 10 to be counted as 1 adult, whether the hiring be by distance or time.

*Fares by Distance, within a radius of 4 miles from Charing Cross.*—If hired when standing on a stand, for any distance not exceeding 1 mile, 1s. (30 & 31 Vict. c. 134 s. 26.)

Above the number of 3 persons carried, 6d. extra for each person.

And for any distance exceeding 1 mile, for every mile, and for any part of a mile not completed, at the rate of 6d.

Above the number of 2 persons carried, 6d. extra for each person for the whole hiring.

When not standing on a stand, for each mile and for any part of a mile not completed, at the rate of 6d. (16 & 17 Vict. c. 127 s. 13, and c. 33.)

Above the number of 2 persons carried, 6d. extra for each person for the whole hiring.

One shilling for every mile, or part of a mile, beyond 4 miles (radius) from Charing Cross, if carriage discharged beyond such 4 miles.

No driver shall demand or receive any sum by way of back fare for the return of the carriage from the place at which discharged. (16 & 17 Vict. c. 33 s. 4.)

When the driver, to be paid according to distance, shall be required by the hirer to stop for 15 minutes, or for any longer time, the driver may demand and receive a further sum (above the fare calculated according to distance) of 6d. for every 15 minutes completed that he shall have been so stopped. (Sec. 4.)

*Fares by Time.*—One hour, or part of an hour, 2s. (Schedule A.)

For every 15 minutes, or less, beyond 1 hour, 6d. (Cap. 127 s. 15.)

Each person above 2, the whole hiring, 6d. extra. (Sec. 14.)

No driver shall demand or receive any sum by

way of back fare for the return of the carriage from the place at which discharged. (Sec. 4.)

If the driver is required to drive more than 4 miles an hour, for every mile or part of a mile above 4 miles, 6d. extra. (Cap. 33 s. 7.)

*Luggage.*—A reasonable quantity of luggage is to be carried in or upon the carriage without any additional charge, except as provided in next paragraph. (Cap. 33 s. 10.)

When more than 2 persons are carried in any hackney carriage, with more luggage than can be carried inside the carriage, a sum of 2d. for every package carried outside the carriage is to be paid. (Schedule A.)

*General Regulations, Misconduct &c.*—Hackney carriage standing in the street, unless actually hired, to be deemed plying for hire; and the driver is obliged to go with any person desirous of hiring such carriage; and on hearing complaint, driver must produce evidence of having been actually hired at the time. (1 & 2 Wm. IV. c. 22 s. 33.)

The driver is to drive at not less than 6 miles an hour, unless in cases of unavoidable delay, when required by the hirer to drive slower. (16 & 17 Vict. c. 33 s. 17.)

The driver shall (unless he have a reasonable excuse, to be allowed by the justice) drive to any place within the Metropolitan police district, City of London, to which he may be required by the hirer, not exceeding 6 miles from the place where hired. (Sec. 17.)

The driver shall (unless he have a reasonable excuse, as above) drive for any time not exceeding 1 hour from the time when hired. (Sec. 17.)

The proprietor of every hackney carriage shall keep distinctly painted or marked both on the side and outside of such carriage, as the Commissioner of Police shall direct, a table of fares, which may be legally demanded; and the driver shall have with him at all times, when plying for hire, a book of fares, in such form as shall be directed by the Commissioner, and produce the same when required for the information of any person hiring or intending to hire such carriage. (Sec. 17.)

In cases of disputes as to the fare according to distance, any table or book signed by the Commissioner of Police shall, on proof of such signature, be conclusive evidence of all the details therein stated to have been measured by the authority. (Sec. 6.)

In case of any dispute between the hirer and driver of a hackney carriage, the hirer may require the driver to drive to the nearest Metropolitan police court or justice room, where the complaint may be determined by the sitting magistrate without summons; or if no police court or justice room be open at the time, then to the nearest police station, where the complaint may be entered, and tried by the magistrate at the next sitting. (Sec. 18.)

Every driver of a hackney carriage shall, when hired, deliver to the hirer a card on which shall be printed the number of the Stamp Office certificate on such carriage, or such other words as may be directed by the Commissioner of Police may direct.

Penalty of 40s., or 1 month's imprisonment, for each offence against any of the above provisions. (Secs. 17, 19.)

All property left in any hackney carriage shall be deposited by the driver at the nearest station within 24 hours, if not sooner claimed by the owner; such property to be returned to the person who shall prove to the Commissioner that the same belonged to him, on payment of the expenses incurred, and of such reasonable sum as the Commissioner shall award. (Sec. 11.)

Driver not wearing his metal ticket conspicuously on his breast at all times during his employment, or refusing to produce such ticket for inspection, or refusing to permit any person to note the writing thereon, or wearing ticket with writing not distinctly legible, to forfeit 40s. (6 & 7 Vict. c. 86 s. 17.)

Every person using or wearing a ticket without having a license in force relating to such ticket, or wearing a ticket resembling the tickets issued by the Commissioner of Police, to forfeit 5l.: such ticket may be seized by any constable or person employed for the purpose by the Commissioner of Police. (Sec. 18.)

Driver allowing another person to act as driver in his place, also any person acting as driver without consent of proprietor of the carriage, to forfeit 40s. (Sec. 27.)

Person acting unlawfully as driver may be taken into custody by a constable, and charged before a magistrate.

Driver of hackney carriage permit or suffer any person to ride or be carried in, upon, or about such carriage, without express consent of person hiring the same; penalty 20s. (1 & 2 Wm. IV. c. 22 s. 50.)

Driver guilty of wanton or furious driving, or using hurt or damage by carelessness or wilful misbehaviour; or drunk during his employment, making use of insulting or abusive language or gesture, or any misbehaviour, to forfeit 3l., or to be imprisoned for 2 months with or without hard labour, at discretion of justice; and in case of such injury or damage, justice may order compensation, not exceeding 10l., to be paid by the proprietor, to be recovered by him from the driver, by whose fault such sum shall have been paid. (Sec. 28.)

Driver of hackney carriage shall stand or ply his carriage, or suffer same to stand across any street, common passage, or alley; or shall feed the horses in any street, road, or common passage, or shall hold or deliver with his hand; or shall refuse to give way, if he conveniently can to any other carriage, or shall obstruct or hinder the driver of any other hackney carriage in taking down any person; or shall wrongfully or in a forcible or clandestine manner, take the fare from any other proprietor or driver: to forfeit 20s. (Sec. 51.)

Any driver of a hackney carriage who shall hire elsewhere than at some standing or appointed for that purpose, or who by loitering or any wilful misbehaviour shall cause any obstruction in or upon any public street, road, or common passage, shall for every such offence forfeit the sum of 40s. (6 & 7 Vict. c. 86 s. 38.)

Driver of hackney carriage leaving it unattended in any street or road, or at any place of resort, whether hired or not: penalty 40s.; and if the carriage be driven such carriage to a place of safety. (1 & 2 Wm. IV. c. 22 s. 55.)

**HUMAN HAIR** (Ger. haare, menschen-haar; Fr. cheveux; Ital. capelli umani; Lat. capilli). Human hair is a very considerable article in commerce, especially since the mode of perriques (and chignons) has become so general. Hair of the growth of the northern parts of Europe, as England &c., is valued much beyond the more southern ones, as Italy, Spain, &c. and neither too coarse nor too slender, rendering it less susceptible of the curl, and disposing it rather to frizzle; the length should be about 25 inches; the curls short of this the less value it bears, &c.

In 1866, 18,500 lbs. of human hair were imported into the United Kingdom, at an average value of 8s. per lb.

**HAIR OF BEASTS** (Ger. haare, hulbaare; Dutch, haire; Fr. poil; Ital. and Span. pelo; Lat. pelles). The hair of horses is extensively used in the manufacture of chairs, sofas, saddles &c.; while the hair or wool of beavers, hares, rabbits &c. is much employed in the manufacture of hats &c. [WOOL.] In 1866 we imported 386,392 lbs. of camel's hair, worth 10,500l.; and we exported 475,926 yards of hair cloth, worth 43,427l.

**HAIR-POWDER** (Ger. puder; Fr. poudre à poudrer; Ital. polvero di cipri; Span. polvos de peluca) is used as an ornament for the hair, and generally made from starch pulverised, and sometimes perfumed. A tax of 1l. 3s. 6d. a-year is levied upon all persons who wear hair-powder. Different statutes prohibit the mixing of hair-powder with starch or alabaster, and hair-powder makers are prohibited having alabaster in their custody. **HAKODADI** or **HAKODATE**, the most northerly of the Japanese treaty ports, is situated in the island of Yeso, lat. 41° 47' 8" N., long. 140° 45' 34" E. It is an excellent harbour, having good anchorage in black mud, in about 5 to 6 fathoms water, and had been frequented by whalers before the opening of the Japanese islands to European and American commerce in 1858. The population is reckoned at about 10,000. The chief exports are hides and deer horns, biche de mer and tow, &c. Alecock does not speak very highly of the capacities of Hakodadi.

In 1866, 51 vessels arrived at Hakodadi, of which 20 were British; and 51 cleared, of which 22 were British. The duties and port charges paid the same year were 3,512l. The chief exports were seaweed, silk, and fish; the imports, cottons, woollens, and sugar. (Consul Gower's Report for 1866.)

*Value of Exports from and Imports into Hakodadi in 1865 and 1866.*

	Exports	Imports
1865	107,756	51,861
1866	121,644	7,213

**HALIFAX**. The capital of Nova Scotia, on the south-east coast of that province, lat. 44° 36' N., long. 63° 28' W. It is situated on a peninsula on the west side of Chebucto Bay, and has one of the finest harbours in America. Population in 1861, 25,026. The town is irregularly built, and most of the houses are of wood. The Government-house is one of the most splendid edifices in North America. Halifax was founded in 1749. Nova Scotia now forms one of the provinces of the Confederacy or Dominion of Canada.

**Port.**—The best mark in sailing for Halifax is Sambre light-house, on a small island off the cape to the harbour, in lat. 44° 30', long. 63° 32'. The light, which is fixed, is 210 feet above the level of the sea; and a detachment of artillery, with two 24-pounders, is upon duty at the light-house, firing at regular intervals during the continuance of the dense fogs with which this part of the coast is very much infested. (Coulier, *Tables des principales Positions Géographiques*, p. 78.) The course into the harbour for large ships after passing Sambre Macnab's Island on the east. On a spit projecting from the latter a light-house has recently been constructed; and when this is seen, ships may run in without fear. The harbour is defended by several strong forts. Ships usually anchor abreast of the town, where the harbour is rather more

than 1 mile in width. After gradually narrowing to about  $\frac{1}{4}$  that width, it suddenly expands into a noble sheet of water, called Bedford Basin, completely land-locked, with deep water throughout, and capable of accommodating the whole navy of Great Britain. The harbour is accessible at all times, and is rarely impeded by ice. There is an extensive royal dockyard at Halifax, which during war is an important naval station, being particularly well calculated for the shelter, repair, and outfit of the fleets cruising on the American coast and in the West Indies. Mr. McGregor has severely, and we believe justly, censured the project for the removal of the dockyard from Halifax to Bermuda.

*Trade &c. of Halifax and Nova Scotia.*—Halifax is the seat of a considerable fishery; but the British colonists seem to be, for what reason it is not easy to say, less enterprising and successful fishers than the New Englanders. The principal trade of the town and province is with the West Indies, Great Britain, and the United States. To the former they export dried and pickled fish, lumber, conls, cattle, flour, butter, oats, potatoes &c. They export the same articles to the southern ports of the United States, and gypsum to the eastern ports of New England. To Great Britain they send timber, deals; whale, cod, and seal oil; furs &c. The principal exports of timber are from Pictou on the St. Lawrence. The imports consist principally of colonial produce from the West Indies; all sorts of manufactured goods from Great Britain; and of flour, lumber &c. from the United States, principally for exportation to the West Indies.

In 1826 a company was formed for making a canal across the country from Halifax to the basin of Minas, which unites with the bottom of the Bay of Fundy. The navigation is formed, for the most part, by Shubenacadie lake and river.

The Legislature gave 15,000*l.* to this undertaking. The excavated part of the canal is 60 feet wide at top, 36 feet at bottom, and admits vessels drawing 8 feet water. It seems very questionable whether this canal will be profitable to the shareholders, but it is of very considerable service to the trade of Halifax. The extent of the Nova Scotia Railway in working order in 1865 was 99 miles.

There are 2 private banking companies at Halifax. Accounts are kept in pounds, shillings, and pence, the same as in England, and the weights and measures are also the same.

About 120 large square-rigged vessels, and also the same number of large schooners, with several smaller craft, belong to Halifax.

The steam ships conveying the mails to British North America ply between this port and Boston in the United States and Liverpool. At present (Sept. 1868) five steamship companies ply steamers from the latter, so that 2 start on Tuesday and Wednesday, and 1 each Thursday, Friday, and Saturday; the ports of destination being New York and Boston, Halifax, Quebec, and Montreal. The fare to Halifax or Boston from Liverpool, including provisions and steward's fee (but excluding wines and liquors), is  $\text{£}18\text{l.}$  to  $\text{£}26\text{l.}$  first class. On arriving at Halifax passengers are conveyed across the Peninsula to Pictou, whence they are carried by steamer to Quebec and Montreal. A steam intercepter is also kept up in summer with Boston. In 1865 the value of the total imports into Nova Scotia was 14,381,662 dollars, or 2,876,332*l.*, of which 11,530,495 dollars represent the imports into Halifax. [COLONIES; PAINTS, COLONIES.]

During 1865, 6,851 ships, if the aggregate burden of 929,929 tons, entered the ports of the colony (principally Halifax) from all countries, 149 of which were from the United Kingdom.

Account of the Quantities and Values of the Principal Articles Exported from the United Kingdom to Nova Scotia, and principally to Halifax, in the Year 1865 and 1866.

and all sorts of German manufactured goods, Rhinish wines &c. Most sorts of Baltic articles, such as grain, flax, iron, pitch and tar, wax &c., may generally be bought as cheap at Hamburg, allowing for difference of freight, as in the ports whence they were originally brought. The total annual value of the import and export trade of the port (including that of Altona, the merchants of which conduct their business on the Hamburg exchange) carried on by sea may be estimated at 50,000,000, sterling, or upwards; and as the largest portion by far of this immense trade is in our hands, it will be necessary that we should be a little fuller than ordinary in our details in regard to this great emporium.

Hamburg was visited by a most destructive fire in May 1812; but, notwithstanding the heavy losses that were in consequence incurred, and the paralysis it occasioned in trade and industry, the shock was less severe than might have been anticipated. The system of mutual insurance having been generally adopted, the proprietors of houses and other property were subjected to a tax, to defray the interest of a loan of 31,000,000 mares banco raised to indemnify the sufferers, and to enable them to rebuild their houses. All traces of the devastation have thus long ago disappeared; and here, as in most other places exposed to a similar calamity, it has led to a great improvement of the town, which is now better built and more commodiously laid out than formerly. On January 1, 1866, the public debt of Hamburg was 4,023,980*l.*; the revenue and expenditure chiefly derived from customs, excise, and stamps, averaged about 600,000*l.* for the three years 1862-4.

*Navigation of the Elbe, Pilotage &c.*—The mouth of the Elbe is encumbered with sand-banks. The channel leading to Cuxhaven is bounded on the north by the Vogel Sands and North Grounds, and on the south by the Schaarhorn Sands and Newwerk Island. On the latter there are 2 light-houses and 2 beacons, and on the Schaarhorn is another beacon. The lighthouses on Newwerk Island are about 700 yards apart; the most southerly, which is also the most elevated, being in lat. 53° 54' 57" N., long. 8° 29' 40" E. It is 128 feet high, being twice the height of the other. The channel is, in some places, hardly  $\frac{1}{2}$  of a mile wide. The outer red buoy in the middle of the channel at its mouth bears from Heligoland S.E. by S., distant nearly 20 miles. But the best mark in entering the Elbe is the floating light, or signal ship, moored 2 miles N.W. by N. of the red buoy, in 11 fathoms at low water. This vessel never leaves her station unless compelled by ice in winter. By night she exhibits a lantern light, 38 feet above deck, and in foggy weather rings a bell every quarter of an hour. A second signal ship is stationed  $\frac{1}{2}$  miles S.E. by E. from the first, at the westernmost point of a sand-bank dividing the fair way of the river. She is rigged like a galliot, to distinguish her by day from the first signal ship; and during night she exhibits two lights, one 18 feet above the other. The distance from the outer red buoy to Cuxhaven is about 16 miles; thence to Glückstadt the course is east, 28 miles; from the latter to Stade the course is south-easterly, 9 miles; and then easterly to Hamburg, 18 miles. The channel throughout is marked with black and white buoys, which are numbered and specified in the charts. The black ones are to be left, in passing up the river, on the starboard or right-hand side, and the white on the larboard side.

All vessels coming from sea into the Elbe, which measure above 60 commerce lasts at 6,000 lbs.

HAMBURG. One of the Hanse Towns, but since July 1, 1867, joined to the States of the German Confederation, on the north bank of the river Elbe, about 70 miles from its mouth, lat. 53° 31' N., long. 9° 58' 37" E. Population Dec. 3, 1867, including the suburbs of St. Nikolai and St. Paul, but excluding the territory about the city, 223,763. Hamburg is the most commercial city of Germany, and the principal city of the Continent. She owes this distinction principally to her situation. The Elbe, which may be navigated by lighters as far as the city in Bohemia, renders her the entrepôt of a large extent of country. Advantage, too, has been taken of her natural facilities that extend still farther to the westward; a water communication has been established, by means of the Spreewitz, by artificial cuts and sluices, between the Elbe and the Oder, and between the latter and the Baltic; so that a considerable part of the produce of Silesia destined for foreign markets, and even that of Poland, are conveyed to Hamburg. [CANALS.] There is also a communication by means of the Steknitz Canal with the Baltic, and consequently with Lübeck and Rostock. But the great lines of railway which connect Hamburg with Berlin, Leipsic, Lübeck, and all the interior of Germany, and which have greatly extended her connections, and are of even more importance than her water communication, are the Elbe and canal navigation. Vessels of 14 feet water come up to the town at all seasons, and vessels drawing 18 feet may come up with the spring tides. The largest vessels sometimes load from and unload into the port at Cuxhaven, Glückstadt, and Bremerhaven. The trade of Hamburg embraces every part of Germany either sells to or buys from the same. The imports consist principally of wool, stuffs, and yarn; wool, woollen, and cotton goods; coffee, sugar, silk and silk goods; hides, iron, and hardware, machinery, wine, brandy, rum, dyeswoods, tea, pepper, &c. Large quantities of coal are imported from the United Kingdom. Being brought from distant places, there is a great variety of the grain found at Hamburg, but a great portion of the wheat is inferior. Some of the barley is very good, and fit for malting. The feed of various qualities. With the exception of coal, the exports consist of the same as the imports. Hamburg not being a colonial port, but of distribution. In the export produce, British manufactured goods, such as iron, steel, tin, and copper, are included, also, wool, leather, tallow, butter, salted fish, wooden clocks and toys, linens,

# HAMBURG

663

their introduction, besides its other effects, has, of course, reduced the various duties charged by weight in this city, and the other countries referred to, in the proportion now stated.

The English equivalents of the Hamburg measures and weights will be found in the subjoined table.

## Measures.

Hamburg.	British.
10 feet in length square	= 91-021 feet in length
1 cubic	= 88-100 feet square
100 aln (of cloth)	= 87-115 feet cubic
100 barrels (last of corn)	= 62-681 tons
100 quarters (vierte) of liquid	= 18-901 imperial quarters
1 commercial last of 6,000 lbs.	= 3 tons burden
1 schip last of 4,000 lbs.	= 2 tons burden
1 corn last	= 1½ imperial quarters
1 coal last of 12 tons	= 2 tons avoirdupois

## Weights.

10 new lbs. or 1 centner	= 110-252 avoirdupois
10 marks (last weight)	= 62-655 lbs. troy

**Long Measure.**—The Hamburg foot, divided into 12 inches, of 8 parts each = 0-28657 metres  
17-766 Parisian lines = 11-289 Eng. inches.

10 Hamburg feet = 91-021 English feet
10 " " = 28-657 French metres
10 " " = 91-507 Prussian or Rhenish feet
10 " " = 30-661 Vienna feet

The Hamburg ell (short ell) = 2 Hamburg feet.  
114 metres = 254-072 Paris lines. 100 Hamburg ells = 62-681 Eng. yards.

The Prussian ell (or long ell) most commonly used in Hamburg in measurement of piece goods = 685 Eng. inches.

**Liquid Measure.**—1 fuder = 6 aums, 1½ aum = 4 eimers or cimers; 1 anker = 5 viertels; 1 viertel = 2 stübchen; 1 stübchen = 2 kannens; 1 kannen = 4 quarters of Oessel; 1 eimer = 4 viertels; 1 eimer = 1½ aums, or 6 ankers, or 30 viertels, or 60 quarters or bottles.  
1 stübchen contains 266 Hamburg cubic inches = 3-62 litres.

Hamburg 1 aum = 119-39 English imperial gallons.
" " = 72-118 French litres.
" " = 62-343 Prussian quarters.
" " = 511-88 Vienna mass.

A full beer barrel contains 48 stübchen, or 144 quarters; the small barrel only 32 stübchen, or 96 quarters.

A wine barrel contains 30 stübchen, or 120 quarters.

A whole and fish oil barrel contains 32 stübchen, or 128 quarters; 2 whole oil barrels = 1 aum.

**Measure.**—Corn is now (1867) sold by the last and the last is supposed to contain in

1 lb. avoird.	1 M. lb.	1 lb. avoird.
1-3,400	1-3,400	5,000
1-3,400	1-3,400	5,000
1-3,400	1-3,400	5,920

Wool, raw cotton, silk, flax, yarn and manufactured goods are taken at 11 imperial quarters, 31 hectolitres, 57 Prussian schefel, 16½ Russian chetverts.

A barrel contains (when the 1,453 Hamburg inches of head or heaped measure is used) 488 cubic inches.

A Hamburg ship last, or last of commerce, contains 6,000 pounds, or 3 tons (not 4,000 lbs., as is generally stated).

The exports of grain from Hamburg consist of the harvests from Hamburg and the Elbe, but more, perhaps, of the produce of other countries. In our customs accounts, the corn &c. from the Hanseatic Towns is aggregated, but those from Hamburg are stated to full ¼ or ½ of the whole.

An important trade in German linens from the former American possessions has since been brought to Hamburg, and is heavier than that of the latter.

quence of the competition of England, who, by means of her superior machinery, is able not only to spin, but to produce cloth cheaper than any other country. On the other hand, however, the import of linen yarns from England is being progressively augmented.

**Lastage and Custom House Charges.**—British and other foreign vessels pay the same as Hamburg vessels. For clearing in and clearing out, no separate charges are made; visiting the port is considered as one voyage, and the charges on vessels are paid as follows:—

For vessels arrived seaward with cargoes according to measurement for every commerce—last of 6,000 lbs. 8s. courant (40s. = 1 thaler courant).

It is difficult to determine the exact ratio of a last to a ton, but it may be taken at about 3 or 2½ to 1. But in Hamburg all vessels are measured by the harbour-master; and it is upon his report that the lastage is calculated.

The following deductions are allowed:—

1. Only ½ the duty is paid for vessels arriving seaward, the cargoes of which consist exclusively of cement, cement stone, tiles, guano, herrings, bricks, salt, slates, stones, or other articles taken in as ballast.

2. Entirely free from duty are all vessels arrived seaward, the cargoes of which consist exclusively of coal and cinders, in case they leave in ballast, as well as all vessels arriving in ballast, if they also leave in ballast.

There are no duties upon the river navigation. For all vessels laden with coals, wood, or turf, no lastage is paid, provided they do not take return cargoes.

**Half Lastage.**—Vessels arriving in ballast and departing with a cargo pay ½ the above lastage, according to their destination.

**N.B.**—Exclusive of the above dues, which are all remarkably moderate, vessels coming to the port of Hamburg are obliged to pay certain dues to Hanover, called Stade or Brunshausen dues. (See post.)

**Duties.**—The import and export duty was before the year 1824 1½ per cent. (courant for banco, or 1½ on 125) on goods imported and exported by sea, and ½ per cent. (courant for banco) for such as were received and transported by land or river conveyance; but for some years these duties have been greatly reduced, and are now only ½ per cent. on imports. The greater part of the imports are, however, entirely free even of these low duties, as is evident from the following statements:—

All export duties are abolished. (December 31, 1856.)

According to the latest customs regulations, of December 31, 1862, the articles passing duty free are:—

1. Wool, raw cotton, silk, flax, yarn and manufactured goods of flax, hemp, rags, old ropes, used linen cloth, and empty bags.
2. Corn, potatoes, and rape seed.
3. Unmanufactured copper and brass, copper ore, rough spelter and old zinc, nickel and nickel ore, cobalt and cobalt ore, bell metal, and old metal vessels &c. for smelting.
4. Bullion and coin, unworked gold and silver, waste derived from the precious metals, gold dust, silver ore and ore containing silver, precious stones not set, pearls, and jewels.
5. Printed books, music, maps &c.
6. Oil cakes, bark, bones, offal of various kinds, guano, and blood manure.
7. Coals, cinders, turf, timber, staves, and wood for burning, chalk and lime stone, slates, cement and cement stone.
8. Live animals, with the exception of oysters

and leeches, game and poultry, fresh fruit, and various agricultural productions.

9. Passenger luggage, dowries and heritages; but in part under certain conditions and restrictions.

**Goods in Transit.**—The rate of customs duty upon foreign goods imported into Hamburg (with the exception of certain duty-free articles) continues at  $\frac{1}{4}$  per cent. currency on banco *ad valorem*; but a modification of the former regulations touching the declaration of goods *in transitu* has lately been made, according to which not only Hamburg citizens, but foreigners, are enabled to declare goods *in transitu* upon payment of a fee of 25 mares courant on the transaction, and depositing or giving security to the Government for 1,000 mares banco.

The levy of duties in Hamburg is conducted in the simplest manner, and on the most liberal footing. No vexatious forms check the free intercourse or the free course of trade; the entry for duty is merely a declaration of the current value at the time; transitu articles remaining in warehouse for exportation require a mere declaration to that effect by a burgher or citizen.

In levying duties, no advantage is claimed by Hamburg for vessels bearing her own flag; goods by all vessels, from whatever quarter of the world, paying the same duties. Though she now carries the Federal flag, she, like the other Hanse Towns, remains a free port outside the Customs frontier until she signifies a wish to be admitted to it. But for this privilege she is obliged to pay an annual sum, called an *aversum*, equivalent to the customs duties that would otherwise have been levied within its territory. It amounted to 710,160 dollars, or 106,530*l*.

The low rates of duty in Hamburg is a proof of her anxious desire to encourage trade with all nations; and the more so when we consider the great expense she is put to in keeping up buoys along the Lower Elbe, and other necessary charges for navigating that river; expenses which considerably exceed the total sum received for duties. The total amount of customs duties received in 1867 at Hamburg was 578,175 mares courant, or  $2\frac{1}{2}$  per mille *ad valorem*.

**Custom House Regulations.**—On a vessel's arrival at Hamburg the broker reports her to the Custom House, gives his guarantee for payment of the duties, delivers her papers, and the vessel is allowed to unload. On clearing, a manifest of the outward cargo, together with the consul's certificate of the regularity of the ship's papers, must be produced at the Custom House by the broker, who obtains in return a clearance certificate, authorising the vessel to go to sea.

**Credit, Brokerage &c.**—Almost all goods are sold for ready money, with an allowance of 1 per cent. for discount. Sometimes, but not frequently, sales are made at 2 or 3 months' credit, and in such cases a higher price is obtained than for cash.

Brokers are positively forbidden to act as merchants or factors. They are licensed, and must conform to the established regulations.

**Brokerage** is paid wholly by the seller, and amounts to—

\* Five sixths per cent. on cotton, cotton-twist, cocoa, cochineal, copper, hides, indigo, manufactured goods, nankeens, sugar, and tea.

\* One per cent. on anatto, camphire, cinnamon, cardamoms,\* cassia,\* cloves,\* drugs not denominated,\* deer skins, dyewoods,\* ginger,\* jalap,\* mace,\* nutmegs,\* pepper, pimento, potashes, Peruvian bark, quercitron bark, rice,\* saltpetre, sarsaparilla,\* shellac,\* tamarinds,\* tobacco in

leaves\* and tobacco stems,\* of the growth of the United States of America, whale oil,\* vanilbes,\*

\* N. B.—Tobacco stems\* of all other origins, cigars, and other manufactured tobacco, pay 2 per cent.; all other leaf and roll tobacco\*  $\frac{1}{2}$  per cent.

\*  $\frac{1}{4}$  per cent. on wine, brandy, rum, and arrack, if sold in parcels amounting to 3,000 mares banco and upwards.

\* 2 per cent. on ditto, for sales of and under 3,000 mares banco.

\* In auction the selling broker is entitled to  $\frac{1}{4}$  per cent. and the purchasing broker to 2 per cent., without regard to the amount.

All articles marked (\*) pay the brokerage before mentioned, if the quantity sold amounts to 600 mares banco, or higher; for smaller lots of less than 600 mares banco, and down to 150 mares banco, the brokerage is paid, with the addition of  $\frac{1}{2}$ , and under 150 mares banco the double is allowed. All other merchandise pays  $\frac{1}{4}$  per cent., at least for sales not exceeding 150 mares banco.

It is, however, to be observed, that all augmentations, in proportion to the amount sold, are understood to be applicable to sales by private contract only, and not to those by auction; and even not to such private sales where a broker has made the purchase of a larger quantity of goods above the said amount of 600 mares banco, and has afterwards divided it into smaller lots.

**Conditions of Sale.**—Coffee is sold per pound in schill. banco; discount, 1 per cent.; good weight is  $\frac{1}{2}$  per cent. Tare is as follows: viz. on casks, real weight; on bags of 130 lbs. or less, 3 lbs.; above 130 lbs. and not above 180 lbs., 3 lbs.; above 180 lbs. and not exceeding 200 lbs., 4 lbs. On Mocha bales of about 300 lbs., 14 lbs.; if 600 lbs., 50 lbs. On Bourbon single bales, 2 lbs.; double, 4 lbs.

Cotton is sold per lb. in schill. banco; discount, 1 per cent.; good weight, 1 per cent.; tare of bales, West Indian and North American,  $\frac{1}{2}$  per cent.; on square bales, 6 per cent.; on Bombay and Surat bales, 8 per cent.; on Bourbon bales and Manilla serons, 6 per cent.; on Caracas and Guiana small serons, 10 per cent.

East India piece goods are sold per piece, mares banco; discount, 1 per cent.

Flour is sold per 100 lbs. in mares currency; certain agio; discount, 1 per cent.; good weight, 4 per cent.; tare, 20 lbs. per barrel.

Fustic is sold per 100 lbs. in mares currency; agio, 20 per cent.; discount, 1 per cent.; weight, 1 per cent.; and frequently an allowance in weight is made, if the wood is not very soft.

Indigo is sold per lb.; discount, 1 per cent.; weight,  $\frac{1}{2}$  per cent.; tare, if in serons upward of 120 lbs., 22 lbs.; in  $\frac{1}{2}$  serons less than 120 lbs.; in chests, real tare.

Logwood is sold like fustic. Pepper is sold per lb. in schill. banco; discount, 1 per cent.; good weight,  $\frac{1}{2}$  per cent.; tare, single bales of 300 lbs., 3 lbs.; in double bales, 6 lbs.

Quercitron bark is sold per 100 lbs. in mares currency; agio, 20 per cent.; discount, 2 per cent.; good weight, 1 per cent. To determine the value of the American tare is reduced to Hamburg weight.

Rice is sold per 100 lbs. in mares banco; discount, 1 per cent.; good weight, 1 per cent.; real; and super tare for tices, 4 lbs. for 100 lbs., 2 lbs.

Rum is sold per 50 quarts in six doll. currency; agio uncertain.

Sugar, raw and clayed, is sold per lb. in mares currency; discount, 1 per cent., and sometimes

cent; Brazil or Havannah chest, good weight, 3 per cent.; real tare; super-tare, 10 lbs. for Brazil, and 5 lbs. for Havannah sugar, per chest. Muscovado in casks, good weight, 1 per cent.; tare, if the casks weigh upwards of 1,000 lbs., 18 per cent.; if less, 20 per cent. Clayed sugars, good weight, 1 per cent.; tare, 16 per cent. East India sugars, in bags, good weight, 3 per cent.; tare for white, 4 to 5 lbs.; for brown, 6 to 7 lbs.

Tea, per lb. in schill.; discount, 1 per cent.; good weight, 1 per cent. Tare of bohea, in chests of 400 lbs., 70 lbs.; of 150 to 180 lbs., 45 lbs. All black tea, 28 lbs. tare; green, 24 lbs.

Tobacco.—Leaf tobacco is sold per lb. in schill. banco, *agio* uncertain; discount, 1½ per cent.; good weight, 1 per cent.; tare per cask, 80 lbs. Brazil leaf in serons; tare, 5 per cent. In rolls; canister, in baskets of about 100 lbs.; good weight, 1 lb. per basket; tare, 14 lbs. if the basket is packed in linen, and 12 lbs. if without linen. Porto Rico rolls, good weight, 1 per cent.; no tare, as the rolls are weighed by themselves. Brazil rolls, in serons of 400 to 600 lbs., are sold per lb., in schillings banco; good weight, 3 per cent.; tare, 8 lbs. per seron. Tobacco stems per 100 lbs.; *agio*, uncertain; discount, 1½ per cent.; good weight, 1 per cent.; tare, if in casks, real weight; if packed up with cords, 2 to 4 per cent. according to the thickness of the rope. With tobacco in rolls, only the number of packages containing roll tobacco, and the nett weight, without mentioning the number of rolls, should appear in the bill of lading.

Glass (window) is sold per chest, in mares; other glass ware per piece, doz., or 100, in schillings or mares currency, with uncertain *agio*; discount, per cent.

Hans' wool is sold per 2 lbs. in mares; discount, per cent.

Hare skins (German, grey) are sold per 100 skins in rixdall. banco; Russian, grey, per 104 skins, in rixdall. banco; white, in mares currency, *agio* uncertain; discount, 1 per cent.

Iron is sold per 100 lbs.; discount, 1 per cent. Copper is sold per 100 lbs. in schill. banco; discount, 1 per cent.

The exchange business done at Hamburg is very great; for, besides the business of the place, a great number of the merchants in the inland towns have bills negotiated there.

The usual charge for commission is, on sales 2 per cent., and 1 per cent. for *del credere*, if such a guarantee be required; on purchases, 2 per cent. For particular agreements, the rates sometimes differ considerably from the above.

*Citizenship*.—Foreigners cannot establish themselves as merchants, or carry on any business in their own names, at Hamburg, without becoming citizens; and to be manufacturers, they must also obtain the guild or corporation peculiar to the trade they mean to follow. A foreigner has only to become a burgher, pay certain fees, which he does not, in all, exceed 100 rixdall, and he then becomes, in the eye of the law, a citizen, and enjoys all the rights and privileges of a native.

*Insurance*.—All sorts of insurances are effected at Hamburg. A municipal regulation compels the insurance of all houses within the city, the amount according to the number of fires and the amount of loss. Marine insurance is principally effected by joint-stock companies, of which there are several; their competition has reduced the premiums to the lowest level, and the business is understood to be profitable. The high rate on policies of insurance in this country has led to the insuring of a good many English

ships at Hamburg. The value of the property assured at Hamburg against sea risks in 1866 was 668,358,300 marcs banco, of which 543,898,900 were insured by companies, and 124,659,400 by private insurers. Life insurance is not prosecuted in Germany to any considerable extent; but some of the English companies have agents here, who are said not to be very scrupulous.

*Bankruptcy*.—Considering the vast number of merchants and tradespeople at Hamburg, bankruptcy is not, in general, of frequent occurrence. Much of the business transacted at Hamburg being on commission and for account of houses abroad, the failure of foreign merchants is a prevalent source of bankruptcy. Another source of bankruptcy is losses on goods imported or exported on speculation, and occasionally losses in the funds, in which a good deal of gambling goes on here. Expensive living is not nearly so prevalent a source of bankruptcy here as in London.

The law of Hamburg makes three classes of bankrupts—the unfortunate, the careless, and the fraudulent. The first class consists of those whose books show that misfortune alone has occasioned the bankruptcy; that the party has all along lived within his probable income, and can account to his assignees completely for all his losses. Who class (which contains but few in number) is considered entirely free from his debts, and is not subject to be called upon hereafter. The second class (which contains those termed 'careless' bankrupts, or those entered into speculations exceeding their means, who have gone on for a considerable time after they found their affairs in arrear, who have lived beyond their income, and so forth. They are liable to be confined in prison for a period of 3 or 6 months; and provided they have not paid a dividend of 40 per cent., may be called upon for payment of their debt after 5 years from their discharge. If a claim of the bankrupt is obliged to pay whatever sum he is able for the benefit of his creditors. He must swear that he cannot pay anything, or not above a certain sum, without depriving himself and his family of necessaries. Every 5 years the claim may be repeated. All careless bankrupts are disabled from holding offices of honour. The third class contains the 'fraudulent' bankrupts, who are liable to be imprisoned, according to the extent of their frauds, for a limited period, or even for life, besides being rendered incapable of holding any office whatever. Should a bankrupt abscond, he is called upon by public advertisement to appear by a certain day, in default of which he is adjudged a fraudulent bankrupt, and his name is posted up on a black board on the Exchange.

I. SHIPPING AND NAVIGATION.

The obstructions and dangers that attach to the navigation of the Elbe have long been a subject of anxious consideration to the Senate and people of Hamburg. Hitherto, however, but little has been done to effect any material improvement; and the difficulties to be overcome are so very great, and the expense that would have to be incurred so very heavy, that it is not, perhaps, very likely that anything on a great scale will be speedily attempted. A plan for deepening the channel of the river and forming a new harbour at Cuxhaven, to be accomplished at an estimated expense of 640,000*l.*, was proposed by Mr. Rendell, C.E., in 1854; but the death of that gentleman, and the

all but universal belief that the expense would really exceed twice or three times the estimated sum, have hitherto prevented any steps being taken in the matter. No doubt it is one of vital importance not merely to Hamburg, but to all Germany, and, in some measure, to the commercial world. In his Reports of February 1867 and May 15, 1868, Mr. Consul-General Ward holds out hope that the evils so long complained of will soon be corrected through the instrumentality of the Rivers Commission.

The *Quarantine Regulations* that were formerly enforced at Hamburg were not a little oppressive, but we are glad to have to state that they were repealed in 1856, and that a new and comparatively liberal code has been enacted in their stead. The latter directs that no vessels save those from the Black Sea, Turkey, and certain specified portions of the Mediterranean, or from ports declared by the Senate to be suspected, are to be subjected to quarantine at Cuxhaven; and these, except under very suspicious circumstances, are to be immediately set free. The old charges have also been abolished, and those adopted in their stead are extremely moderate.

The following information is extracted from Consul-General Ward's very instructive Reports for 1866 and 1867:—

The number of sea-going ships, whether sailing vessels or steamers, which arrived at the port of Hamburg, from all parts of the world, in the year 1866, was 5,185; their total burden 590,007 commercial lasts; and the total number of their crews 61,194 men; while in 1867, 5,055 ships arrived, of a total burden of 636,037 commercial lasts, and with crews in all 63,858 men.

In the five previous years the number of arrivals was:—

Year	Ships Arrived	Burden in Commercial Lasts of 3 Tons	No. of Crews
1861	5,219	441,075	51,840
1862	5,083	433,371	51,211
1863	5,515	481,216	55,125
1864	5,012	465,909	50,616
1865	5,186	543,735	56,105
Average of the five years -	5,208	475,011	55,066

The number of ships of every description which sailed from the port in the year 1866 was 5,210, of which 3,254 were laden, and 1,956 in ballast; and their total burden was 592,250 commercial lasts; while in 1867 the departures were 5,071 ships of 637,583 commercial lasts burden, and with 63,892 men for crews.

II. TRADE AND COMMERCE.

*Imports in 1866.*—The extent of the import trade in 1866 cannot yet be ascertained from official authority. Judging from the amount of Customs revenue levied upon imports at the rate of 4 per cent. ad valorem (except such imports as are duty free), the total imports would be rather less in 1866 than in the previous year, the Customs having yielded 771,657 marcs courant in 1865, and 740,691 marcs courant (46,200l. sterling) in 1866. On the other hand, the excise duties on articles of consumption yielded 141,190 marcs courant more in 1866 than in the previous year, and it would be premature to infer from this falling off of the Customs duties a general diminution of the trade of the port.

Account of the Quantities and Values of the Principal Articles of Domestic Produce Exported from the United Kingdom to the Hanse Towns (about 4-5ths being for Hamburg) in each of the 3 Years ending with 1866.

Articles	Quantities			Declared Real Value

*Imports in 1865, 1866, and 1867.*—Adverting to the general trade of the year 1865, for which the official statistics have been published, it appears that the imports into Hamburg were greater in quantity than those of any former

years on record, but that their value was less than that of the imports in the year, owing to the fluctuations in prices of heavy articles. The following is the statement:—

In the five previous years the number of arrivals was:—

The number of ships of every description which sailed from the port in the year 1866 was 5,210, of which 3,254 were laden, and 1,956 in ballast; and their total burden was 592,250 commercial lasts; while in 1867 the departures were 5,071 ships of 637,583 commercial lasts burden, and with 63,892 men for crews.

II. TRADE AND COMMERCE.

*Imports in 1866.*—The extent of the import trade in 1866 cannot yet be ascertained from official authority. Judging from the amount of Customs revenue levied upon imports at the rate of 4 per cent. ad valorem (except such imports as are duty free), the total imports would be rather less in 1866 than in the previous year, the Customs having yielded 771,657 marcs courant in 1865, and 740,691 marcs courant (46,200l. sterling) in 1866. On the other hand, the excise duties on articles of consumption yielded 141,190 marcs courant more in 1866 than in the previous year, and it would be premature to infer from this falling off of the Customs duties a general diminution of the trade of the port.

Account of the Quantities and Values of the Principal Articles of Domestic Produce Exported from the United Kingdom to the Hanse Towns (about 4-5ths being for Hamburg) in each of the 3 Years ending with 1866.

January 1, 1866, there were in the aggregate 81,403 commercial vessels in the port of Hamburg is an important port of the United States. Thus the number of emigrants in 1866 was 11,300 in 1865 29,077 in 1864 34,681 in 1863

prices of commodities, immediately fell back to their ordinary level.

But severe as the crisis of 1857 was at the moment, its effect has been most salutary. It has put an end, at least for a while, to the wild speculation and overtrading that are inconsistent with all sound commercial pursuits; and it is to be hoped that the Government and people of the town will exert themselves to prevent a revival of so ruinous a system, by subjecting those whose bankruptcies may be traced to recklessness, either in overtrading or in expenditure, to the severest penalties.

The effects of the English financial crisis of 1866 were felt on the German exchanges throughout 1867, especially as the monetary condition during the latter half of 1867 was not satisfactory.

We have derived the materials for this article from various sources, but principally from the communications of eminent merchants, and the able and elaborate Reports of her Majesty's late and present consul at Hamburg.

It will be useful as well as interesting to record the leading articles in which the trade of Hamburg has increased during the last 20 or 25 years, as well as those of which the importation has fallen off within the same period. These particulars will be found in the following comparative table:—

Articles Imported	Average of Years 1841 to 1845	Year 1865
Coffee	618,044	985,079
Tea	11,165	25,255
Sugar, raw	621,549	447,265
" refined	177,418	78,551
Molasses	57,617	100,057
Rice	165,358	261,052

The principal trade between the United Kingdom and Hamburg is carried on through Hull, a communication being maintained between the two cities by lines of steamers that sail twice a week. She is connected in the same way with London, Liverpool, Newcastle, and other ports, which is partly carried on by steamers and partly by sailing ships, is also extensive. The same may be said of her trade with Havre and the principal continental ports. She has, further, some trade with India,

China, and the Eastern Archipelago. [ZOLLVEREIN.]

**HANKOW.** [BACON AND HAMS.] This is the most important among the river ports in China opened by the Treaty of Tientsing. The Chinese reckon it among the five chief commercial cities of the empire. It commands the most extensive river communication in the world. Its latitude is 30° 32' 51" N., longitude 114° 19' 55" E. Its distance from Shanghai is 582 geographical miles. It is nearly in the centre of China, at the junction of the Han and Yangtze. It was first visited by Lord Elgin on November 7, 1858. In 1861 a site for a British settlement was selected, with 800 yards frontage to the river, by 400 to 500 yards in depth.

Hankow, with two other cities in its immediate neighbourhood, is estimated to contain 1,000,000 inhabitants, of which 600,000 belong to Hankow itself. The depth of the river at the mouth of the Han, according to the Chinese Pilot, is 11 fathoms in December, and much more in July. In the summer of 1866 the river was 50 feet above its depth in the following winter.

The export trade of Hankow consists chiefly in tea, silk, wood, oil, tobacco, and vegetable tallow, and amounted in value to 13,452,814 taels in 1864, and 12,685,231 taels in 1865. Of this amount more than half is represented by tea. Much of this tea has been transhipped at Shanghai, but some has been loaded at Hankow for London direct.

Exports of Tea from Hankow.

Year	Total	To England direct
1861	29,539,705 lbs.	6,407,077
1862	35,886,114	10,549,975
1865	36,166,190	10,912,350

The imports are chiefly cotton piece goods, woollens, silks, opium, copper cash, and sugar. They amounted in 1864 and 1865 to 10,862,216 and 11,007,300 taels respectively. The importance of Hankow as a market for cottons and woollens is rapidly increasing, especially for the latter. The importation of copper cash is required for the teas in the interior.

The navigation of the Yangtze is difficult and somewhat dangerous. So many losses occurred in 1866, that the rates of insurance on sailing vessels rose to an almost prohibitive amount, i. e. from 1 to 2½ per cent. The regulations for conducting British trade on the Yangtze river are given in Williams's Chinese Commercial Guide.

The trade with Hankow, according to Messrs. Mayers, Denys, and King (Treaty Ports of China and Japan), is seriously hindered by the practice of affording long credits to the native buyers of imports. (Consul Medhurst's Report, 1866, dated April 18, 1867.)

Three foreign banks have agencies at Hankow. HANSEATIC LEAGUE. An association of the principal cities in the north of Germany, Prussia &c. for the better carrying on of commerce, and for their mutual safety and defence. This confederacy, so celebrated in the early history of modern Europe, contributed in no ordinary degree to introduce the blessings of civilisation and good government into the North. The extension and protection of commerce was, however, its main object; and hence a short account of it may not be deemed misplaced in a work of this description.

Origin and Progress of the Hanseatic League. —Hamburg, founded by Charlemagne in the ninth, and Lübeck, founded about the middle of the twelfth century, were the earliest members of the League. The distance between them not

being very considerable, and being alike interested in the repression of those disorders to which most parts of Europe, and particularly the coast of the Baltic, were a prey in the twelfth, thirteenth, and fourteenth centuries, they early formed an intimate political union, partly in the view of maintaining a safe intercourse by land with each other, and partly for the protection of navigation from the attacks of the pirates, with which every sea was at that time infested. There is no very distinct evidence as to the period when this alliance was consummated; some ascribe its origin to the year 1169, others to the year 1200, and others to the year 1241. But the most probable opinion seems to be that it would grow up by slow degrees, and be perfected according as the advantage derivable from it became more obvious. Such was the origin of the Hanseatic League, so called from the old Teutonic word *hansa*, signifying an association or confederacy.

Adam of Bremen, who flourished in the eleventh century, is the earliest writer who has given any information with respect to the commerce of the countries lying round the Baltic; and from the errors in it which he has fallen in describing the northern and eastern shores of that sea, it is evident they had been very little frequented, and not at all known, in his time. But from the beginning of the twelfth century the progress of commerce and navigation in the North was exceedingly rapid. The countries which stretch along the bottom of the Baltic, from Holstein to Russia, and which had been occupied by barbarous tribes of Slavonic origin, were then subjugated by the kings of Denmark, the dukes of Saxony, and other princes. The greater part of the inhabitants being exterminated, their place was filled by German colonists, who founded the towns of Stralsund, Rostock, Wismar &c. Prussia and Poland were afterwards subjugated by the Christian princes and the Knights of the Teutonic Order. So that, in a comparatively short period, the foundations of civilisation and the arts were laid in countries whose barbarism had ever remained impervious to the Roman power.

The cities that were established along the coast of the Baltic, and even in the interior of the countries bordering upon it, eagerly joined the Hanseatic confederation. They were indebted to the merchants of Lübeck for supplies of the commodities produced in more civilised countries, and they looked up to them for protection against the barbarians by whom they were surrounded. The progress of the League was in consequence singularly rapid. Previously to the end of the thirteenth century it embraced every considerable city in all those vast countries extending from Livonia to Holland, and was a match for the most powerful monarchs.

The Hanseatic confederacy was at its highest degree of power and splendour during the fourteenth and fifteenth centuries. It then comprised from 60 to 80 cities, which were distributed into 4 classes or circles. Lübeck was at the head of the first circle, and had under it Hamburg, Bremen, Rostock, Wismar &c. Cologne was at the head of the second circle, with 29 towns under it. Brunswick was at the head of the third circle, consisting of 13 towns. Dantzic was at the head of the fourth circle, having under it 8 towns in its vicinity, besides several that were more remote. The supreme authority of the League was vested in the deputies of the different towns assembled in congress. In it they discussed all their measures; decided upon the sum that each city should contribute to the common fund, and upon the questions that arose between the confederacy and

other powers, as well as those that frequently arose between the different members of the confederacy. The place for the meeting of congress was not fixed, but it was most frequently held at Lübeck, which was considered as the capital of the League, and there its archives were kept. Sometimes, however, congresses were held at Hamburg, Cologne, and other towns. They met once every 3 years, or oftener if occasion required. The letters of convocation specified the principal subjects which would most probably be brought under discussion. Any one might be chosen for a deputy; and the congress consisted not of merchants only, but also of clergymen, lawyers, artists &c. When the deliberations were concluded, the decrees were formally communicated to the magistrates of the cities at the head of each circle, by whom they were subsequently communicated to those below them, and the most vigorous measures were adopted for carrying them into effect. One of the burghmasters of Lübeck presided at the meetings of congress; and during the recess the magistrates of that city had the sole, or at all events the principal, direction of the affairs of the League.

Besides the towns already mentioned, there were others that were denominated confederated cities, or allies. The latter neither contributed to the common fund of the League, nor sent deputies to congress; even the members were not all on the same footing in respect to privileges; and the internal commotions by which it was frequently agitated, partly originating in this cause and partly in the discordant interests and conflicting pretensions of the different cities, materially impaired the power of the confederacy. But in spite of these disadvantages, the League succeeded for a lengthened period, not only in controlling its own refractory members, but in making itself respected and dreaded by others. It produced able generals and admirals, skilful politicians, and some of the most enterprising, successful, and wealthy merchants of modern times.

As the power of the confederated cities was increased and consolidated, they became more ambitious. Instead of limiting their efforts to the mere advancement of commerce and their own protection, they endeavoured to acquire the monopoly of the trade of the North, and to exercise the same sort of dominion over the Baltic that the Venetians exercised over the Adriatic. For this purpose they succeeded in obtaining, partly in return for loans of money and partly by force, various privileges and immunities from the Northern sovereigns, which secured to them almost the whole foreign commerce of Scandinavia, Denmark, Prussia, Poland, Russia &c. They exclusively carried on the herring fishery of the Sound at the same time that they endeavoured to obstruct and hinder the navigation of foreign vessels in the Baltic. It should, however, be observed that the immunities they enjoyed were mostly inapplicable to the security of their commerce, in consequence of the barbarism that then prevailed, and notwithstanding their attempts at monopoly there cannot be the shadow of a doubt that the progress of civilisation in the North was prodigiously accelerated by the influence and ascendancy of the Hanseatic cities. They not only have broken out again had their power been thrown before civilisation was fully established, they accustomed the inhabitants to the principle and set before them the example, of good government and subordination; they introduced to them conveniences and enjoyments unknown to their ancestors or despised by them, and they

them with a taste for literature and science; they did for the people round the Baltic, what the Phœnicians had done in remoter ages for those round the Mediterranean, and deserve, equally with them, to be placed in the first rank amongst the benefactors of mankind.

'In order,' as has been justly observed, 'to accomplish their purpose of rendering the Baltic and industrious pursuits, it was necessary to instruct men, still barbarous, in the rudiments of industry, and to familiarise them in the principles of civilisation. These great principles were laid by the confederation, and at the close of the fifteenth century the Baltic and the neighbouring seas had, by its means, become frequented routes of communication between the North and the South. The people of the former were enabled to follow the progress of the latter in knowledge and industry. The forests of Sweden, Poland &c. gave place to corn, hemp, and flax; the mines were wrought, and in return the produce and manufactures of the South were imported. Towns and villages were erected in Scandinavia, where and the wolf were exchanged for woollens, linens, and silks; learning was introduced; and printing was hardly invented before it was practised in Denmark, Sweden &c.' (Cateau, *Tableau de la Mer Baltique*, tom. ii. p. 175.)

The kings of Denmark, Sweden, and Norway were frequently engaged in hostilities with the Hanse Towns. They regarded, and it must be admitted not without pretty good reason, the privileges acquired by the League, in their kingdoms, as so many usurpations. But their efforts to abolish these privileges served, for more than two centuries, only to augment and extend them.

'On the part of the League there were union, concord, and money; whereas the half-ruined Scandinavian monarchies were full of dissensions, factions, and troubles; revolution was immediately followed by revolution, and feudal anarchy was at its height. There was another circumstance, not less important, in favour of the Hanseatic cities. The popular governments established amongst them possessed the respect and confidence of the inhabitants, and were able to direct the public energies for the good of the state. The astonishing prosperity of the confederated cities was not wholly the effect of commerce. To the undisciplined armies of the princes of the continent to their lords—the cities opposed, by the inferior nobles, whose services they manly rewarded, citizens accustomed to danger, resolved to defend their liberties and property. Their military operations were combined and directed by a council composed of men of talents and experience, devoted to their country, responsible to their fellow-citizens, and deserving their confidence. It was chiefly, however, their marine forces that the cities derived. They employed their ships indifferently for war or commerce, so that their naval armaments were fitted out at comparatively small expence. Exclusive, too, of these favourable circumstances, the fortifications of the principal cities were looked upon as impregnable; and as commerce supplied them abundantly with provisions, it need not excite our admiration that Lübeck alone was able to carry on war with the surrounding monarchs, and to maintain them with honour and advantage; and that the League should long have enjoyed a decided preponderance in the North.'

(*L'Art de vérifier les Dates*, 3me partie, tom. viii. p. 201.)

As already explained, the extirpation of piracy was one of the objects which had originally led to the formation of the League, and which it never ceased to prosecute. Owing, however, to the countenance openly given by many princes and nobles to those engaged in this infamous profession, it was not possible wholly to root it out. But the vigorous efforts of the League to abate the nuisance, though not entirely successful, served to render the navigation of the North Sea and the Baltic comparatively secure, and were of signal advantage to commerce. Nor was this the only mode in which the power of the confederacy was directly employed to promote the common interests of mankind. Their exertions to protect shipwrecked mariners from the atrocities to which they had been subject, and to procure the restitution of shipwrecked property to its legitimate owners, though, most probably, like their exertions to repress piracy, a consequence of selfish considerations, were in no ordinary degree meritorious, and contributed not less to the advancement of civilisation than to the security of navigation.

A series of resolutions were unanimously agreed to by the merchants frequenting the port of Wisby, one of the principal emporiums of the League, in 1287, providing for the restoration of shipwrecked property to its original owners, and threatening to eject from the *consodalitate mercatorum* any city that did not act conformably to the regulations laid down.

*Factories belonging to the League.*—In order to facilitate and extend their commercial transactions, the League established various factories in foreign countries, the principal of which were at Novogorod in Russia, London, Bruges in the Netherlands, and Bergen in Norway.

Novogorod, situated at the confluence of the Volkof with the Imler Lake, was, for a lengthened period, the most renowned emporium in the north-eastern parts of Europe. In the beginning of the eleventh century the inhabitants obtained considerable privileges which laid the foundation of their liberty and prosperity. Their sovereigns were at first subordinate to the grand dukes or czars of Russia; but as the city and the contiguous territory increased in population and wealth, they gradually usurped an almost absolute independence. The power of these sovereigns over their subjects seems, at the same time, to have been exceedingly limited; and, in effect, Novogorod ought rather to be considered as a republic under the jurisdiction of an elective magistrate than as a state subject to a regular line of hereditary monarchs possessed of extensive prerogatives. During the 12th, 13th, and 14th centuries, Novogorod formed the grand entrepôt between the countries to the east of Poland and the Hanseatic cities. Its fairs were frequented by an immense concourse of people from all the surrounding countries, as well as by numbers of merchants from the Hanse Towns, who engrossed the greater part of its foreign commerce, and who furnished its markets with the manufactures and products of distant countries. Novogorod is said to have contained, during its most flourishing period, of 400,000 souls. This, however, is most probably an exaggeration. But its dominions were then so great and well established, and the city itself so impregnable, as to give rise to a proverb, Who can resist the Gods and great Novogorod? 'Quis

contra Deos et magnam Novogordiam? (Coxe's *Travels in the North of Europe*, vol. ii. p. 80.)

But its power and prosperity were far from being so firmly established as its eulogists, and those who had only visited its fairs, appear to have supposed. In the latter part of the 15th century, Ivan Vassilievitch, czar of Russia, having secured his dominions against the inroads of the Tartars, and extended his empire by the conquest of some of the neighbouring principalities, asserted his right to the principality of Novogorod, and supported the his pretensions by a formidable army. Had the his inhabitants been animated by the spirit of unanimity and patriotism, they might have defied his efforts; but their dissensions facilitated their conquest; and rendered them an easy prey. Having entered the city at the head of his troops, Ivan received from the citizens the charter of their liberties, which they either wanted courage or inclination to defend, and carried off an enormous sort of superstitious veneration as the palladium of the city. But notwithstanding the despotism to which Novogorod was subject during the reigns of Ivan and his successors, it continued for a considerable period to be the largest as well as a most commercial city in the Russian empire. The famous Richard Chancellour, who passed through Novogorod in 1554, in his way from the court of the czar, says, that 'next unto Moscow, the city of Novogorod is reputed the chiefest of Russia; for although it be in majesty inferior to it, yet in greatness it is beyond it. It is the chiefest and greatest mart town of all Muscovy; and albeit the emperor's seat is not there, but at Moscow, yet the commodiousness of the river falling into the Gulf of Finland, whereby it is well frequented by merchants, makes it more famous than Moscow itself.'

But the scourge of the destroyer soon after fell on this celebrated city. Ivan IV., having discovered, in 1570, a correspondence between some of the principal citizens and the King of Poland relative to a surrender of the city into his hands, punished them in the most inhuman manner. The slaughter by which the bloodthirsty barbarian sought to satisfy his revenge was alike extensive and indiscriminating. The crime of 25,000 or 30,000, a pretext for the massacre from this dreadful Novogorod never recovered from this dreadful blow. It still, however, continued to be a place of considerable trade, until the foundation of Petersburg, which immediately became the seat of that commerce which formerly had centred at Novogorod. The degradation of this ill-fated city is now complete. It is at present an insupportable place, with a population of about 8,000 or 9,000, and is remarkable only for its history and antiquities.

The merchants of the Hanse Towns, or Hansards, as they were then commonly termed, were established in London at a very early period, and their factory here was of considerable magnitude and importance. They enjoyed various privileges and immunities; they were permitted to govern themselves by their own laws and regulations; the custody of one of the gates of the city (Lishopsgate) was committed to their care; and the duties on various sorts of imported commodities were considerably reduced in their favour. These were necessarily excited the ill-will and animosity of the English merchants. The Hansards were every now and then accused of acting with bad faith; of introducing commodities of their own that were really the produce of others, in order to enable them to evade the duties with which they ought to have been charged; of

capriciously extending the list of towns belonging to the association; and obstructing the commerce of the English in the Baltic. Efforts were continually making to bring these disputes to a termination; but as they really grew out of the privilege granted to and claimed by the Hansards, this was found to be impossible. The latter were expanded to many indignities; and their factory, which was situated in Thames Street, was not infrequently attacked. The League exerted themselves vigorously in defence of their privileges; and having declared war against England, they succeeded in excluding our vessels from the Baltic, and acted with such energy that Edward IV. was glad to come to an accommodation with them, on terms which were anything but honourable to the English. In the treaty for this purpose, negotiated in 1474, the privileges of the merchants of the Hanse Towns were renewed, and the king assigned to them, in absolute property, a large space of ground, with the buildings upon it, in Thames Street, denominated the Steel Yard, whence the Hanse merchants have been commonly denominated the Association of the Steel Yard; and the property of their establishments at Boston and Lynn was also secured to them; the king engaged to allow no stranger to participate in their privileges; one of the articles bore that the Hansards should be no longer subject to the merchants of the English Admiralty Court, but that a particular tribunal should be formed for the speedy settlement of all disputes that might arise between them and the English; and it was further agreed that the particular privileges awarded to the Hanse merchants should be preserved, as often as the latter judged proper in the sea-port towns of England, and such Englishmen as infringed upon them should be punished. In return for these concessions, the English acquired the liberty of freely trading in the Baltic and especially in the port of Dantzic and Prussia. In 1498, all direct commerce with the Netherlands being suspended, the trade fell into the hands of the Hanse merchants, whose commerce was in consequence very greatly extended. But, according as the spirit of commercial enterprise awakened in the nation, and as the result of the prosecution of foreign wars came to be better known, the privileges of the Hanse merchants became more and more noxious. They were in consequence considerably modified in the reigns of Henry VII. and Henry VIII., and were at length wholly abolished in 1597. (Anderson's *Hist. Com.* anno 1474 & 1597.)

The different individuals belonging to the factory in London, as well as those belonging to other factories of the League, lived together in common table, and were enjoined to observe the strictest celibacy. The direction of the League in London was intrusted to an alderman, six assessors, and 9 councillors. The latter were selected from the cities forming the different classes into which the League was divided. The business of the functionaries was to devise means for extending and securing the privileges and commerce of the association; to watch over the operations of the merchants; and to adjust any disputes that might arise amongst the members of the confederation between them and the English. The League endeavoured at all times to promote, as far as possible, the employment of their own ships in the pursuit of this object, they went so far as to forbid the importation of English merchandise into the confederated cities except by their vessels. But a regulation of this sort could not be carried into full effect, and was enforced according as circumstances were favourable

verse to the pretensions of the League. Its very existence was, however, an insult to the English nation; and the irritation produced by the occasional attempts to act upon it contributed materially to the subversion of the privileges the Hanseatic merchants had acquired amongst us.

By means of their factory at Bergen, and of the privileges which had been either granted to or usurped by them, the League enjoyed for a lengthened period the monopoly of the commerce of Norway.

But the principal factory of the League was at Bruges in the Netherlands. Bruges became, at a very early period, one of the first commercial cities of Europe, and the centre of the most extensive trade carried on to the north of Italy. The art of navigation in the thirteenth and fourteenth centuries was so imperfect, that a voyage from Italy to the Baltic and back again could not be performed in a single season; and hence, for the Hanseatic merchants determined on establishing a magazine or storehouse of their respective products in some intermediate situation. Bruges, which it seems to have owed as much to the favour of the Government of the Low Countries, as to the convenience of its situation. In consequence of this preference, Bruges speedily rose to the very highest rank among commercial cities, and became a place of vast wealth. It was at once a staple for English wool, for the woollen and linen manufactures of the Netherlands, for the flax, hemp and flax, pitch and tar, tallow, corn, ashes &c. of the North; and for the spices and commodities, as well as their domestic manufactures imported by the Italian merchants. Bruges were the best frequented ports in Europe. Ludovico Guicciardini mentions, in his *Description of the Low Countries*, that in the year 1318 no fewer than 5 Venetian galleasses, of very considerable burden, arrived at Bruges in order to dispose of their cargoes at the fairs of the Hanseatic merchants; they disposed of their great rivers into the heart of Germany. The regular intercourse opened between the nations in the north and south made them sensible of their mutual wants, and afforded a wonderful stimulus to the spirit of industry. This was particularly the case with respect to the Netherlands. Manufactures of wool had been established in that country as early as the age of Charlemagne; and the resort of the merchants to their markets, and the great addition that was thus opened for their manufactures, made them be carried on with a vigour and success that had been hitherto unknown. Circumstances, combined with the free spirit of the League, and the moderation of the Government, so greatly promoted every elegant and useful art, that the Netherlands early became a civilized, best cultivated, richest, and most populous country of Europe.

*The Hanseatic League.*—From the fifteenth century the power of the League, though still very formidable, began to decline. This was not owing to any misconduct of its leaders, but to the progress of the improvement which it had done so much to promote, and the superiority enjoyed by the League over the anarchy, confusion, and disorder that prevailed throughout the king-

doms of the North, as from the good government and order that distinguished the towns. But a distinction of this sort could not be permanent. The civilisation which had been at first confined to the cities, gradually spread from them, as from so many centres, over the contiguous country. Feudal anarchy was every where superseded by a system of subordination; arts and industry were diffused and cultivated; and the authority of Government was at length firmly established. This change not only rendered the princes over whom the League had so frequently triumphed superior to it in power, but the inhabitants of the countries amongst which the confederated cities were scattered, having learned to entertain a just sense of the advantages derivable from commerce and navigation, could not brook the superiority of the association, or bear to see its members in possession of immunities of which they were deprived; and in addition to these circumstances, which must speedily have occasioned the dissolution of the League, the interests of the different cities of which it consisted became daily more and more opposed to each other. Lübeck, Hamburg, Bremen, and the towns in their vicinity, were latterly the only ones that had any interest in its maintenance. The cities in Zealand and Holland joined it, chiefly because they would otherwise have been excluded from the commerce of the Baltic; and those of Prussia, Poland, and Russia did the same, because, had they not belonged to it, they would have been shut out from all intercourse with strangers. When, however, the Zealands and Hollanders became sufficiently powerful to vindicate their right to the free navigation of the Baltic by force of arms, no sooner had the ships of the Dutch, the English, and the Prussian Hanse towns than these nations also embraced the first opportunity of withdrawing from it. The fall of this great confederacy was really, therefore, a consequence of the improved state of society, and of the development of the commercial spirit in the different nations of Europe. It was most serviceable so long as those for whom its merchants acted as factors and carriers were too barbarous, too much occupied with other matters, or destitute of the necessary capital and skill, to act in these capacities for themselves. When they were in a situation to do this, the functions of the Hanseatic merchants ceased as a matter of course; their confederacy fell to pieces; and at the middle of the 17th century the cities of Lübeck, Hamburg, and Bremen were all that continued to acknowledge the authority of the League. To this day they preserve the shadow of its power; having been acknowledged in the act for the establishment of the Germanic Confederation, signed at Vienna June 8, 1815, as free Hanseatic cities. But their enforced embodiment since 1866 in the North German Confederation, and association with the other Germanic States in the Zollverein, will cause even this shadow to lessen very rapidly. (From an article in No. 13 of the *Foreign Quarterly Review*, contributed by the author of this work. See also Mallet, *La Ligue Hanseatique*; Lappenberg's *Urkundliche Geschichte des Hanseatischen Statthaltes zu London*; and *Report for 1867* of Mr. Consul-General Ward of Hamburg.)

**HARBOUR, HAVEN, or PORT.** A piece of water communicating with the sea, or with a navigable river or lake, having depth sufficient to float ships of considerable burden, where there is convenient anchorage, and where ships may lie,

load, and unload, screened from the winds, and without the reach of the tide.

**Qualities of a good Harbour.**—There is every variety in the form and quality of harbours. They are either natural or artificial; but, however formed, a good harbour should have sufficient depth of water to admit the largest ships at all times of the tide; it should be easy of access, without having too wide an entrance; the bottom should be clean and good; and ships should be able to lie close alongside quays or piers, that the expense and inconvenience of landing and unloading by means of lighters may be avoided. Ships lying in a harbour that is land-locked, and surrounded by high grounds or buildings, are at once without the reach of storms, tides, and currents, and may in most cases be easily protected from hostile attacks. Bar harbours are those that have bars or banks at their entrances, and do not, therefore, admit of the ingress or egress of large ships except at high water. These are most commonly river harbours; the sand and mud brought down by the stream, and driven back by the waves, naturally forming a bar or bank at their mouths.

**Best British Harbours.**—Good harbours are of essential importance to a maritime nation, and immense sums have been expended in all countries in their improvement and formation. Portsmouth, Milford Haven, and the Covo of Cork are the finest harbours in the British Islands, being surpassed by very few, if any, in the world. Of these, Portsmouth is entitled to the pre-eminence. This admirable harbour is about as wide at its mouth as the Thames at Westminster Bridge, expanding within into a noble basin, almost sufficient to contain the whole navy of Great Britain. Its entrance is unobstructed by any bar or shallow; and it has, throughout, water adequate to float the largest men of war at the lowest tides. The anchorage ground is excellent, and it is entirely free from sunken rocks, sand-banks, or any similar obstructions. The western side of the harbour is formed by the island of Portsea; and on its south-western extremity, at the entrance to the harbour, are situated the town of Portsmouth, and its large and important suburb Portsoken. Here are docks and other establishments for the building, repair, and outfit of ships of war, constructed upon a very large scale, and furnished with every convenience. The fortifications protecting this great naval dépôt are superior, both as respects strength and extent, to any other in the kingdom. 'Thus,' to use the words of Dr. Campbell, 'it appears that Portsmouth derives from nature all the prerogatives the most fertile wits and most intelligent judges could devise or desire; and that these have been well seconded by art, without consideration of expense, which, in national improvements, is little to be regarded. Add to all this the striking excellence of its situation, which is such as if Providence had expressly determined it for that use to which we see it applied—the bridling the power of France, and if I may so speak, the peculiar residence of Neptune.' (*Survey of Great Britain*, vol. i. p. 370.)

Portsmouth harbour has the additional and important advantage of opening into the celebrated road of Spithead, between the Hampshire coast and the Isle of Wight, forming a safe and convenient retreat for the largest fleets.

Milford Haven deeply indents the southern part of Pembrokeshire. It is of great extent, and has many subordinate bays, creeks, and roads. The water is deep, and the anchorage ground ex-

cellent; and being completely land-locked, ships lie as safely as if they were in dock.

Cork harbour has a striking resemblance to that of Portsmouth, but is of larger extent: it has, like it, a narrow entrance, leading into a capacious basin, affording a secure asylum for any number of ships.

Plymouth, which, after Portsmouth, is the principal naval dépôt of England, has an admirable double harbour. The roadstead in Plymouth Sound has within the present century been much improved by the construction, at a vast expense, of a stupendous breakwater, more than 1,500 yards in length. This artificial bulwark protects the ships lying inside from the effects of the heavy swell thrown into the Sound by southerly and south-easterly winds.

London stands at the head of the river ports of Great Britain. Considering the shortness of the course of the Thames, there is, probably, no river that is navigable for large ships to so great a distance from sea, or whose mouth is less obstructed by banks. London is mainly indebted for her unrivalled magnitude to her favourable situation on this noble river, which not only gives her all the advantages of an excellent port, accessible at all times to the largest ships, but renders her the emporium of the extensive, rich, and populous country comprised in the basin of the Thames.

The Mersey, now the first commercial river in the empire, is more incommoded by banks than the Thames, and is in all respects inferior, as a channel of navigation, to the latter, still it gives to Liverpool very great advantages; and the channels being well buoyed and marked, the largest ships have little difficulty in reaching the port. The principal channels are laid down in the map of Liverpool and its environs attached to the article DOCKS in this work.

Bristol and Hull are both river ports. Owing to the extraordinary rise of the tide in the Bristol Channel, the former is accessible to the largest ships. The Humber is a good deal impeded by banks, but it also is navigable as far as Hull by large vessels. The Tyne admits vessels of very considerable burden as far as Newcastle, at the mouth of the Wear, is the principal ship-building port in the United Kingdom, and has, after Liverpool and London, the greatest amount of shipping.

The shallowness of the Clyde from Glasgow up to Glasgow has been a serious drawback on the commercial progress of the latter. Large sums have been expended in attempts to correct the course and to deepen the bed of the river, and they have been so far successful that vessels drawing 19 and even 20 feet have come up to Glasgow, which is one of the principal commercial ports in the empire. Now (1868) vessels drawing 19 feet water can reach the Breadalwater, those drawing 17 feet are considered as traders.

Generally speaking, the harbours in the empire, both of Great Britain and Ireland, with the exception of the Thames, very inferior to those on their south and west coasts. The harbours on the shores of Sussex, Kent, &c., that once admitted large ships, are now completely choked up by sand. Great sums have been expended upon the ports of Yarmouth, Boston, Sunderland, Leith, Dundee, &c. &c. Dublin harbour being naturally obstructed by a bar, a new harbour has been formed, at a great expense, at Kingstown, out the bar, in deep water.

## HARBOUR

The construction of piers and harbours in Great Britain and Ireland has been much facilitated by the provisions of the Piers and Harbours Act, 24 & 25 Vict. c. 45, by which the promotion of these shipping conveniences is permitted to private enterprise under certain conditions, analogous to those which are imposed on railway works. The rates to be levied on the use of such piers and harbours are certified or permitted by the Board of Trade, who are also the authority to whom remonstrance is to be addressed in case exorbitant, or capricious. The rates in question must be advertised in some district newspaper in two consecutive weeks during the months of October and November, and once at least during each of these weeks. The Act contains many clauses saving existing rights, and several local and supplementary Acts have been passed since the date of the general legislation on the subject. For an account of the shipping belonging to the different ports of Great Britain and Ireland, the reader is referred to the article STRIPS in this work. The charges on account of docks, pilotage &c. are specified under these articles.

**Foreign Harbours and Ports.**—The reader will find the principal foreign commercial harbours described in this work at considerable length under their respective titles. The principal French ports for the accommodation of men of war are Brest, Toulon, and Cherbourg. The coast has been very greatly improved by the construction of a gigantic breakwater, and the excavation of immense basins. Besides Cadiz, Genoa and Carthagena, Cronstadt is the principal rendezvous of the Russian navy, Landnaaburg of that of Sweden, and the Helder of that of Holland.

**Law of England as to Harbours.**—The anchorage &c. of ships was regulated by several Acts; but most of these regulations have been repealed, modified, or re-enacted by the 51 Geo. III. c. 159, and by the General Pier and Harbour Act 1861, and Amendment Act. These, which have been altered by 25 & 26 Vict. c. 69, substitute the Board of Trade generally for the Admiralty in the administration of piers and harbours.

This Act (54 Geo. III. c. 159) authorises the Admiralty to provide for the moorings of his Majesty's ships, and prohibits any private ship from fastening thereto. It further authorises the Admiralty to prohibit the *breaming* of any ship or vessel at any place or places on shore they may think fit, and to point out the places where private ships shall deposit the gunpowder they may have on board exceeding 5 lbs. (Sec. 6.) It prohibits the use of any fire on board any ship or vessel, that is being *breamed* in any port, harbour, or anchorage, between the hours of 11 in the evening and 4 in the morning, from October 1 to March 31, inclusive; and between the hours of 11 in the evening and 4 in the morning from April 1 to October 30, inclusive; and it prohibits the use of any pitch, tar, tallow &c. within 250 yards of any of his Majesty's ships or vessels in his Majesty's dock-yards. By another section, the use of guns shot, and the firing of any gun, are prohibited under a penalty of 10s. for every gun kept shot, and 10s. for every gun discharged. (Sec. 9.) The sweeping of the moorings, within the distance of 100 yards of any of his Majesty's ships of war, or of any of his Majesty's ships, is prohibited under a penalty of 10s. for every offence. (Sec. 10.) The stowing and unloading of ballast are also

## HARDWARE

675

regulated by this statute; but for the provisions with respect to it see BALLAST.

**HARDWARE** (Ger. kurze waaren; Dutch, yzerkramery; Dan. Iesenkramvarer; Swed. Järnkram; Fr. clinquallerie, quincaillerie; Ital. harraria; Russ. mjelotzchnoe towarii) includes every kind of goods manufactured from metals, of all descriptions. Birmingham and Sheffield are the principal seats of the British hardware manufactures; and from these, immense quantities of knives, razors, scissors, gilt and plated ware, fire-arms &c. are supplied, as well for exportation to most parts of the world as for home consumption.

The hardware manufacture is one of the most important carried on in Great Britain; and from the abundance of iron, tin, and copper ores in this country, is provided the supply of coal be continuous and abundant, likely to remain an important object of British industry. The late Mr. Stevenson, in his elaborate and excellent article on the statistics of England, in the *Edinburgh Encyclopedia*, published in 1815, estimated the value of all the articles made of iron at 200,000,000, and the persons employed in the trade of all the articles made of brass and copper at 3,000,000, and the persons employed at 50,000; and he further estimated the value of steel, plated, and hardware articles, including toys, at 4,000,000, and the persons employed at 70,000. So that, assuming these estimates to be nearly correct, the total value of the goods produced from different sorts of metals in England and Wales in 1815 must have amounted to the sum of 17,000,000, and the persons employed to 320,000.

There is reason to believe that this estimate, in so far at least as respects the value of the manufacture, was at the time decidedly too high, but at this moment it is most probably within the mark. There has been a very extraordinary augmentation of the quantity of bar and pig iron produced within the last 50 years; and the rapid increase of Birmingham and Sheffield, as well as of the smaller seats of the hardware manufacture, shows that it has been increased in a corresponding proportion. We have been assured, by those well acquainted with most other hardware manufactures of England, that the value cannot now (1868) be reckoned at less than 30,000,000, a year, affording *direct* employment, in the various departments of the trade, for at least 350,000 persons.

**Fall of Prices.**—Owing partly to the reduced cost of iron, but incomparably more to improvements in manufacturing, a very extraordinary fall has taken place in the price of most hardware articles during the last 30 or 40 years. In some articles the fall exceeds 80 per cent.; and there are but few in which it does not exceed 30 per cent. In consequence, the poorest individuals are now able to supply themselves with an infinite variety of beginning and useful articles, which, at the commencement of this century, were either unknown or were too dear to be purchased by any but the richer classes; and those who reflect on the importance of the prevalence of habits of cleanliness and neatness will readily agree with us in thinking that the substitution of the common household articles that are now every where to be met with, for the wooden and horn articles

used by our ancestors, has been in no ordinary degree advantageous. But it is not in this respect only that the cheapness and improvement of hardware are essential. Many of the most

powerful and indispensable tools and instruments used by the labourer come under this description, and every one is aware how important it is that they should be at once cheap and efficient.

Account of the Real Values of the Various Descriptions of Iron, Brass and Copper, Hardware and Cutlery &c., the Produce and Manufactures of the United Kingdom, Exported during each of the 5 Years ending with 1866.

For further particulars on the character and extent of the hardware manufacture, see the excellent series of essays in the *Birmingham and Midland Hardware District*.

**HARPOONER.** The man who throws the harpoon in fishing for whales. By 35 Geo. III. c. 92 s. 34, no harpooner, line manager, or boat steerer, belonging to any ship or vessel fitted out for the Greenland or Southern whale fisheries, shall be privileged from being impressed so long as he shall belong to, and be employed on board, any ship or vessel whatever in the fisheries aforesaid.

This privilege has lost its significance, as impression is practically obsolete.

**HATS** (Ger. hütte; Dutch, hoeden; Fr. chapeaux; Ital. cappelli; Span. sombreros; Russ. schlopfi). Coverings for the head in very general use in Great Britain and many other countries, and known to every body. They are made of very various forms and sorts of material. They may, however, be divided into two great classes, viz. those felted or made of fur, wool, silk &c., and those made of straw; the former being principally worn by men, and the latter by women.

**1. HATS (FELTED, FUR, SILK &c.).** We possess little information as to the importance of hats, as a distinct branch of manufacture, anterior to the reign of Elizabeth.

Felted hats are stated to have been worn by the Saxons, but the earliest notice we find of 'beaver' hats is in an inventory of the effects of Sir John Falstolf in 1459. Phi's Stubbs, in his *Anatomic of Abuses*, published in 1587, mentions, amongst other varieties, 'beaver hats of 20, 30, and 40 shillings price being fetched from beyond the seas.' In subsequent reigns, and particularly during the Commonwealth, the manufacture of both beaver and felted hats must have arrived at some importance; and not only the quality, but the shape of the hat, began to possess an influence in denoting the religious or political bias of the wearer—a characteristic of this article of dress which obtains even at the present day. An interesting account of hats as worn at different periods of our history is given in the *Archæologia*, and the details of the manufacture, as it is now carried on, are given in a work called *Days in*

*the Factories* (by Mr. George Dodd), published in 1843.

Charles VII. of France wore a hat on his entry into Rouen in 1449, which is believed to have been among the first manufactured in that kingdom. (*Encyclopædie*, art. 'Chapeaux.')

The following details with respect to the export of hats manufactured, their value &c., furnished by a high practical authority, present to the trade as it existed in 1843:—

**1. Stuff Hats.**—This term is applied by trade only to the best description of hats, of those brought to the highest perfection in London. Since the introduction of 'waterproofing,' it is found unnecessary to use so valuable a material as beaver in the foundation or frame of the best hats. Instead of it, fine seasoned hair of English coney wool, red Virginia wool, carroted coney wool, and a small quantity of Saxony lambs' wool, are employed with advantage.

The covering, i.e. the 'napping,' of the qualities is a mixture of check beaver wool and brown stags beaver, or seasoned beaver, commonly called *woolms*. Inferior stuffs are mixed with mixtures of stage beaver, nutria, hare's, and musquash.

Of late years hats have been much reduced in weight. This is principally owing to the method of 'waterproofing,' which is effected by the bodies of the hats prior to their being napped. The elastic properties of the gums employed for this purpose, when dissolved in pure spirits of wine, give a body to the stuffs which allow a good deal of their weight to be dispensed with.

Not 20 years previous to 1843, 96 ounces were worked up into 1 dozen ordinary stuffs for gentlemen. In 1843 from 33 to 34 ounces were required to complete the same quantity. We may remark that the heavy duty on foreign spirits of wine was very injurious to the manufacture, as it caused the employment of inferior solvents, as naphtha and gas spirit, to injure the gums.

The manufacture of the best hats employed in London nearly 1,000 makers and finishers, besides giving employment to nearly 3,000 in Gloucestershire and Derbyshire, in bodying and ruffing. The gross returns amount to about £40,000.

2. *Plated Hats*.—Next to fine hats are those designated 'plated,' so called from the *plate*, or nappling, being of a distinct and superior nature to the foundation or body. The latter is generally formed of Kent, Spanish, or Shropshire wool; while the former consists of a mixture of fine beaver, hares' wool, musquash, nutria, and English back wool. From the cheapness of coal and the purity of the water in Lancashire, Cheshire, and Staffordshire, the whole of the plating trade is centred by them. The men employed in the 3 counties, including apprentices, do not exceed 2,000. The total returns amounted in 1843 to about 1,080,000*l.*, inclusive of bonnets and children's fancy beaver hats.

3. *Felt Hats and Cordies* are the coarsest species, being made wholly of Kent, Shropshire, and Italian wools. Cordies are distinguished by a fine covering of camel or goat hair. A very large trade was some time carried on in these articles; but since the introduction of caps, and the manufacture of superior plates, the returns have sunk from 2,000,000*l.* to scarcely 150,000*l.* in 1843! Atherton, Bingley, Bristol, and Newcastle-under-Lyme are the principal places where they are

4. *Silk Hats*, made from silk, plush, or shag, manufactured in Coventry, Banbury, and Spitalbaton, formed in 1843 a very important branch of the hat trade. Many thousand dozen were exported to Italy, Gibraltar, the Cape, Sydney, and Van Diemen's Land. Little progress was made in this article for the first quarter of a century after its introduction, in consequence of the hard appearance of the cone and willow framework necessarily used; but now that beaver hat bodies have been used, as well as those of lawn and muslin, this difficulty has been overcome, and silk hats are as soft an outline, and as great a variety of shapes, as beaver hats. London alone produced in 1843 150,000 dozen silk hats annually; and the city manufactured in Manchester, Liverpool, Birmingham, and Glasgow was estimated in 1843 to have made 250,000 dozen more, making a total of 400,000 dozen. The workmen were distributed from beaver hatters; and owing to the competition of labourers, the trade advanced in a ratio of 50 per cent. This branch gave employment to 8,000 men.

5. *Low quality silk hats* were more extensively worn; and public taste set strongly in favour of a new and showy kind of silk hat, introduced from France at a duty of 30 per cent. This

which reduced the consumption of both plated hats, probably arose, so far as respects the lower sorts of silk hats, from motives of economy induced by the state of the country, and the higher qualities chiefly from the influence of fashion. But though there was no reason to suppose that this change would be permanent, it was extensively used in the finer branches of the trade, especially in the preparation of hats for the manufacture, but has been found inapplicable to the manufacture of caps, which, in some processes, requires a great amount of mental dexterity. Particular attention is celebrated for particular branches of the trade, especially from special reasons respecting the health, or lowness of wages; but the introduction of competition has of late had a tendency to

disperse it in a few localities rather than to concentrate it. Hitherto the trade has not been exposed to foreign competition in the home market, it has been of late years seriously

checked by the Brazilian and West Indian markets.

Few beaver or ruffed hats meet the English manufacturer in the markets referred to, but chiefly hats of silk or felted hares' wool, of styles not adapted to our taste, though suited to that of Europe and South America.

English hats, though to a limited extent and in an unfinished state, have been exported to the Continent. The hats chiefly exported to the colonies are silk, plated, and stuff hats, generally of a light description. Wool felts, which before the Emancipation Act were largely exported, have materially decreased, the article termed 'negro felts' being almost extinct.

This trade employs a great amount of labour, ment to not less than 30,000 persons. In the Lancashire district, the first and second manufacturing processes were chiefly carried on in the houses of the workmen. The labour of women and children was very largely employed in the trade generally, but less in the actual manufacture than in the preparation of the material: the proportions may be in both departments, men 50 per cent., women 25 per cent., and children 25 per cent.; and their earnings, on a yearly average, were, men 25*s.*, women 7*s.*, and boys 5*s.* per week. The depression in the finer branches of the manufacture has undoubtedly affected the earnings of the manufacture engaged in them, as a less amount of the workmen labour is required in the production of low silk hats than beavers, and the increased quantity produced in the lower descriptions has not furnished an amount of employment equivalent to the decrease in the higher branch. Combinations on the part of the workmen have occasionally arisen, sometimes from questions affecting wages and disputes arising out of the existence of trade unions, but not to any considerable extent from attempts to introduce machinery.

No data exist on which to form any certain estimate of the value of the different branches of the manufacture or of its aggregate amount; but it is estimated, on good grounds, that on *plated goods*, the cost of the raw material varies from 25 to 40 per cent., the labour and manufacturing expenses from 75 to 60 per cent.; on stuff hats, materials 40 to 50 per cent., labour &c. 60 to 50 per cent.; on silk hats, materials 50 per cent., labour &c. 50 per cent. The proportions in value are estimated as follows, viz.:—Plated hats, 1,200,000*l.*; stuff do., 800,000*l.*; silk do., 900,000*l.*; wool felts, 100,000*l.*; making, in 1843, in all 3,000,000*l.*

The duty on hats, which was formerly 10*s.* 6*d.* each, was reduced in 1842 to 2*s.* 6*d.* on fur and wool hats, and to 3*s.* 6*d.* on silk. In 1836, on fur and dozen hats were exported, of the real or declared value of 148,282*l.*; but in 1841 the real or declared amount to 22,522 dozen, of the value of 81,583*l.* The falling off has been principally in the exports to the West Indies and Brazil.

*Hat Manufacture and Trade in 1866*.—A very extraordinary change has taken place in the state of the hat trade since 1843. This will be evident from the following details, which have been supplied to us by the highest practical authorities:—

*Stuff Hats*.—For this branch of the manufacture there is now a very limited demand. It employs not more than 20 men, and these very irregularly.

*Silk Hats*.—In this branch there are not so many hats manufactured as in 1859, but the greatest change which has taken place is the removal of a large portion of the trade from the provinces to London. The number now employed in silk hat making in the metropolis may be about 1,800 men and 1,000 females, whilst in the provinces they do not exceed 800 men and 500

ge Dodd), published  
ore hat on his part  
which is believed  
manufactured in  
rt. 'Chapeaux'  
men's Land. Little  
for the first quarter  
of a century after its  
introduction, in consequence  
of the hard appearance  
of the cone and willow  
framework necessarily  
used; but now that  
beaver hat bodies  
have been used, as well  
as those of lawn and  
muslin, this difficulty  
has been overcome, and  
silk hats are as soft an  
outline, and as great a  
variety of shapes, as  
beaver hats. London  
alone produced in 1843  
150,000 dozen silk hats  
annually; and the city  
manufactured in Manchester,  
Liverpool, Birmingham,  
and Glasgow was estimated  
in 1843 to have made  
250,000 dozen more,  
making a total of 400,000  
dozen. The workmen were  
distributed from beaver  
hatters; and owing to the  
competition of labourers,  
the trade advanced in a  
ratio of 50 per cent. This  
branch gave employment  
to 8,000 men.

5. *Low quality silk hats*  
were more extensively  
worn; and public taste  
set strongly in favour  
of a new and showy  
kind of silk hat,  
introduced from France  
at a duty of 30 per cent.  
This which reduced the  
consumption of both  
plated hats, probably  
arose, so far as respects  
the lower sorts of silk  
hats, from motives of  
economy induced by the  
state of the country,  
and the higher qualities  
chiefly from the influence  
of fashion. But though  
there was no reason to  
suppose that this change  
would be permanent,  
it was extensively used  
in the finer branches  
of the trade, especially  
in the preparation of  
hats for the manufacture,  
but has been found  
inapplicable to the  
manufacture of caps,  
which, in some processes,  
requires a great amount  
of mental dexterity.  
Particular attention is  
celebrated for particular  
branches of the trade,  
especially from special  
reasons respecting the  
health, or lowness of  
wages; but the introduction  
of competition has of  
late had a tendency to  
disperse it in a few  
localities rather than to  
concentrate it. Hitherto  
the trade has not been  
exposed to foreign  
competition in the home  
market, it has been of  
late years seriously  
checked by the Brazilian  
and West Indian markets.

women. The quantity manufactured is estimated to amount to about 450,000 dozens annually, of the value of about 1,800,000*l.* The wages of the men in London are said to be from 3*l.* to 4*l.* per week, and in the country from 2*l.* to 3*l.* per week.

**Plated Hats and Cordies.**—This branch is now said to be wholly extinct.

**Felt Hats.**—It is in this branch that the greatest alteration has taken place. Since 1859 machinery has been introduced, and hats of this class can now be produced with an improved appearance and at less cost. Throughout the country, and particularly in the provinces, felt hats have superseded the use of cloth caps, and the latter trade is in consequence much depressed. The manufacture is confined to the provinces, and gives employment to about 3,500 men and boys, and 2,000 women and girls, the former earning from 20*s.* to 40*s.*, and the latter from 8*s.* to 14*s.* per week. The quantity manufactured may be about 700,000 dozens, of the value of about 1,000,000*l.* per annum.

It is seen above that in 1843 the yearly value of the hat manufacture was estimated at about 3,000,000*l.*, employing in its different departments about 30,000 persons throughout the United Kingdom; and though the most expensive description of hats has been superseded, the trade has been much extended; the reduction which has taken place in prices has led to a great increase in the quantities consumed and exported. The exports, which in 1866 (ex. straw hats) amounted to 148,004 dozen, worth 32,336*l.*, were chiefly to our colonies in Australia, North America, and the West Indies; on the other hand, we imported, chiefly from France, 203,689 felt hats, worth 62,611*l.*

Labour, profit, and interest on capital form perhaps  $\frac{2}{3}$  of the yearly returns. Machinery is used to a greater extent, though the manufacture is almost entirely conducted by manual labour. Wages vary from 8*s.* to 16*s.* weekly for women, and from 2*s.* to 30*s.* for men.

**Straw Hats.**—It is most probable that the idea of *plaiting straws* was first suggested by the making of baskets of osiers and willow, alluded to by Virgil, in his *Pastorals*, as one of the pursuits of the agricultural population of Italy. We are ignorant of the period when the manufacture of straw plait first became of importance in that country: but it appears from Coryat's *Cruelties*, published in 1611, that 'the most delicate strawen hats' were worn by both men and women in many places of Piedmont, 'many of them having at least an hundred seams.' It is evident, therefore, that the art of straw plaiting must have arrived at great perfection upwards of two centuries since; but it does not appear to have been followed in England for more than 70 or 80 years previous to 1868, as it is within the remembrance of some of the old inhabitants of the straw districts, now alive, that the habits and daughters of the farmers used to plait wives and daughters their own bonnets, before straw-straw for making them a manufacture. In plaiting became established as a manufacture. In fact, the custom among the women of England of wearing bonnets is comparatively modern: it is scarcely 100 years since *hoods and pinnars* were generally worn, and it was only the ladies of quality who wore small hats. (*Malcolm's Manners and Customs*.)

In the edition of this work published in 1844 we stated that during the ten years ending with 1843 the manufacture of British straw hats and bonnets had increased perhaps  $\frac{2}{3}$ , and of straw plait about  $\frac{1}{2}$ , compared with the former decennial period. In our edition of 1859 it was confidently

affirmed, on the authority of persons conversant with the trade, that it had increased not less than threefold. It was estimated in 1843 that every score (20 yards) of plait consumed a pound of straw; that every plaiter made 15 yards per diem; that in Hertford, Bedford, and Bucks, the principal seats of the trade, there were at an average 10,000 scores brought to market every day, to make which 13,500 women and children were employed. In Essex and Suffolk the daily produce was estimated at 2,000 scores, to make which 3,000 persons were employed, and about 4,000 persons more must have been employed in converting those quantities into bonnets. In other places where the manufacture was carried on in England, it was supposed there were in 1833, about 30,000 persons engaged in it, while in 1843 there could not be less than from 40,000 to 50,000 persons, including 1,500 sewers in London. In 1859, such had been the improvement as well as the increase of the manufacture, that the average production of each straw-plaiter was estimated at 20 yards per diem from the same weight of straw in Hertfordshire, Bedfordshire, and Buck, and that the plaiting produced exceeded 25,000 scores, giving employment to an equal number of women and children. During some periods of the year, when out-door work was scarce, men and boys were found among the producers. In Essex and Suffolk the produce had been more stationary; perhaps 3,000 persons were employed, producing about 2,500 to 3,000 scores daily. The range of the earnings of plaiters continued about the same (from 3*d.* to 3*s.* 6*d.* per score, or from 1*s.* 6*d.* to 10*s.* per week), but the average was higher than in the former period, the children earning 2*s.*, and grown persons 5*s.* to 6*s.* Sewers in country districts earned from 6*s.* to 10*s.* and averaged about 10*s.*, while the same class in London received from 6*s.* to 40*s.*, and averaged about 11*s.* or 12*s.* Taking into account the various new kinds of plaiting and trimming introduced from Switzerland, it was computed that the number employed in making straw and plait hats and bonnets amounted to 160,000 or 180,000, including the London sewers. The annual value of the trade in all its branches was roughly estimated at between 3,000,000*l.* and 4,000,000*l.*, sterling, a greater portion forming the wages of labour.

The improvement and extension of the trade were ascribed to various causes. For several years the practice had arisen of bleaching the straw, and this was instead of bleaching the results. Formerly with the most beneficial results. Formerly anxiety was occasioned lest the straw should become discoloured, and be otherwise affected by the weather before long; this anxiety was now wholly removed by the success of dyeing, while the plaiters succeeded in constant employment. *Brown* was at first introduced, and subsequently *grey*, both of which are now in demand to a great extent both by men and women. Down to 1852 the men's and boys' hats made of *Brazilian grass* had an improving bough of the trade, but this sensibly declined, owing to the preference for straw hats. Indeed, so fashionable have straw hats become, particularly in London, that dyed straw has been introduced, that it interfered greatly with the silk hat trade, superseding the Brazilian grass hats. In 1858, so rapidly did the fashion spread to the male portion of the population in London, that it was described as almost universal. Another most important cause of improvement in the trade was the reduction which had taken place in the duty on importation of the

and plait. The duty on hats, an import was, trade both in hats 1 owing to the hit. The duties ha potation of hats most ceased. T in price, that it the straw used notwithstanding plait itself is 20 years since, and since compared. and plait. Instead of 5s. 8d. per hat, and 8s. 6d. per lb. for plait, the duty was reduced to 2s. 6d. per lb. on hats, and 2s. per lb. on plait, and a great impetus was, in consequence, given to the trade both in plaiting and hats, boys' and children's hats being admitted, which formerly, owing to the high duty, were virtually prohibited. These duties have since been abolished. The importation of hats from Leghorn has, however, almost ceased. Tuscan plait has become so reduced in price, that it is no longer necessary to import the straw used for making the plait. Indeed, notwithstanding the diminution in price, Tuscan plait itself is no longer prized as it was a few years since, and the consumption has much declined compared with former years.

Since our last account of this trade was written, the varieties of patterns in straw-plaiting have considerably increased, which with the use of horse-hair (plaited by machinery), woven into light fancy trimmings, gives a distinctive feature to the trade compared with any previous epoch. The use of horse-hair braid has never been superceded since its introduction, about 26 years ago; it has rather gradually increased. In 1858 cotton (in imitation of crinoline and clip plaiting) had been very extensively used by itself, and in combination with straw plait, adding another new feature to the trade. Other woven trimmings of this manufacture have also been introduced in imitation of pillow lace or blond, worked with horse-hair, and afterwards embroidered with straw, &c.

Luton was long the chief seat of the manufacture. There is a tradition that the unfortunate Mary Queen of Scotland, when travelling through the duchy of Lorraine, invited some of the straw-makers there to introduce the art into Scotland. It was not, however, very successful; and it is said that shortly after the accession of James VI. to the throne of England, he encouraged them to move to Luton, where the trade has since maintained itself. In 1843 there were nearly 100 persons connected with the manufacture in its great branches established in that town. Straw-plaiting in Orisney has entirely ceased.

At this time (1866) some material changes have taken place in the manufacture. In the Bedfordshire District (Beds, Herts, and Bucks), the increasing demand for straw hats, which for a series of years had been a cottage employment, has led to the opening of factories and workshops in various parts of the country, in which the plait is sewn up into hats &c., and many who were formerly plaiters are now employed as sewers. The importation of straw from Switzerland, Belgium, and Saxony has largely increased (mostly of the single straw hat make). These are chiefly worked up at Luton, and an advance has taken place in wages of about 7 per cent. Men's and boys' hats, or Brazilian hats, are now almost superceded by the introduction of a much cheaper article, the 'Swiss hat.' A material improvement in manufacture and finish, particularly in straw hats, has taken place during the last two years, giving employment to greater numbers of persons. Machines for blocking or pressing by steam and hydraulic power have been introduced, and it is to be a great improvement upon the old mode of manual labour, a superior and uniform quality being obtained by these processes. The Commercial Treaty with France has also opened new markets for our production, while the shipments to Australia and New Zealand are very increasing, giving employment to great numbers of hat-makers.

In 1866 the imports of straw and other plaiting were 318,652 lbs., valued at 154,508*l.*, besides 718 cwt. of straw or grass for plaiting, worth 5,744*l.* Again, the exports of straw hats and bonnets were 116,382 dozen, valued at 167,264*l.*; on the other hand we imported 300,008 lbs. of straw hats or bonnets, chiefly French, of the value of 1,179,580*l.*

*Italian Manufacture.*—In 1865 the Tuscan plait and hat trade was considered in a prosperous condition. Plaits of different kinds were in good demand for the several continental and New York markets, and hats of different kinds were freely ordered for some continental markets. The return of peace and revival of trade in the United States of America caused a great improvement in the demand for plait. Neither the abolition of duties in England, nor the almost abolition of them in France, seems to have caused any material extension of business in these goods, as Tuscan straw hats and bonnets enter into consumption more as an article of fashion than of necessity, and are ruled by the prevailing taste of the moment, without so much regard to price. The abolition of duties, however, permits the introduction of much cheaper goods, which must lead to a gradually increasing business. The price of Tuscan straws has continued to vary during late years, according to the success of the crops. The price per English lb. (1865) ready for plaiting ranged from 1*s.* 6*d.* to 2*s.* 4*d.* For some years Tuscan straw has ceased to be sent to the English market, particularly since the abolition of duties on manufactured goods. Signor Mariotti, in his pamphlet on the Tuscan Straw Manufacture in 1858, referred to the introduction of men's hats made in imitation of the Panama hats, but the demand was short-lived. The manufacture of hats and plaits in Tuscany has improved during the last seven years, principally in the dressing and shaping them. Machinery of a new construction has been introduced, which has led to larger quantities being finished off than could be done solely by hand. In plaits, delicate colours and some improved designs have been secured to the manufacture. The annual value of the straw trade in Tuscany in 1865 amounted to about 800,000*l.* sterling, but a large per centage of this increase is to be attributed to a considerable advance in the cost price of goods. Since the revolution of 1859, which consolidated the States of Italy, there has been a pretty fair consumption of Tuscan straw goods in various parts of the kingdom, while on the other hand there was a considerable falling off of trade with North America during the civil war in that country. Men's hats at 2*d.* and 8*d.* each have ceased to be made in Tuscany since the American civil war, as they were almost exclusively sent to the United States; but hats at these prices, made in the mountainous district of Bologna, have, since the return of peace, been shipped to America. The straw for these hats is taken from the wheat fields. There are no statistics published in regard to the labouring population of Tuscany, but we, on good authority, think there must be between 70,000 and 80,000 hands employed in the straw industry in one way and another. A portion of this number is not constantly employed in the manufacture. Wages fluctuate considerably in the making of plaits, hats, and trimmings, according to the demands of trade. In 1865 wages, mostly of women and children, were at a high point; plait makers earning from 4*d.* to 1*s.* 6*d.* per day, hat makers from 6*d.* to 1*s.* 8*d.* (the average of the latter may be about 10*d.*), and trimming makers from 6*d.* to 1*s.* per day. Men and boys are, however, employed in assorting straw by machinery, and otherwise preparing it for the

manufacture. They earn from 9d. to 1s. 8d. per diem; they are also employed in bleaching, pressing, and finishing hats; their earnings are from 10d. to 2s. 6d. per day; the bulk from 1s. 6d. to 2s., and for overtime (which often lasts 5 or 6 months) they receive one-third extra. Since 1859 the fashion for women and girls to wear hats in preference to bonnets has been constantly extending, and has conferred an immense advantage on the Tuscan straw industry, both as regards plait and hats; and owing to the general demand in Europe, America, and Australia, prices have continued to advance since 1862. Tuscan plaits had almost ceased to be used for bonnets, a preference having set in for other kinds of plaits of lighter texture. The demand for hats and plaits for men's and boys' wear is more restricted and precarious. The total value of plaits and hats exported from Tuscany since 1855 (say for nine years) may probably amount to from 3,500,000l. to 4,000,000l. sterling, but the export of raw straw since that date has ceased. These exports are estimated to be made from Italy; the inland trade in these goods will no doubt amount to about 1,000,000l. more.

It is stated in Signor Mariotti's pamphlet, that as far back as 1311 the art of straw plaiting was known in Tuscany; certain kinds of foreign straws were then also imported; in 1737 there was a duty levied upon them, which, however, was repealed by Leopold I. It is shown by a tomb-stone existing in the church of St. Miniato, at Signa, that Domenico Michelacci, a native of Bologna, carrying on business there in the commencement of the eighteenth century, was the first to establish with England the export trade in Leghorn hats. In 1718 this same man raised the first fine straw used in Tuscany. In 1757 and the following year an annual export business in hats commenced, and reached from 15,000l. to 25,000l. sterling. The first hats for ladies (afterwards so largely imported into England) were made only in 1813, of the number of 40 rows. In 1818 the hands employed were estimated at from 50,000 to 60,000, earning from 1s. to 1s. 9d. per day. In 1822 the exportation to America began; and although an increase of hands was the result, the earnings rose from 1s. 4d. to 5s. per day. In 1826-7 the trade in ladies' Leghorn hats reached its climax, and soon after that the Tuscan plait in 11 straws was introduced.

*Swiss and other Manufactures.*—The Swiss straw trade has greatly developed itself during the last 30 years: the returns in some of the most favourable seasons cannot have been less than from 200,000l. to 300,000l. Wohlen (in the Canton d'Argovie) is the central seat for loom and all kinds of fancy trimmings; but within the last 10 years white horse-hair braid (of which the largest manufactory is at Kriens, near Lucerne) has been in great demand. In the Fribourg Canton there is also an interesting straw trade carried on the principal districts being *Bulle* and *Chatel St. Denis*; but being a similar kind of straw to the Belgian and English, the importations into this country are trifling, although a large amount of business is done with Paris and America.

Chip hats and plaiting are also produced at Modena, or rather Carpi, in its vicinity. Though commonly called *paille de riz*, it is simply the wood of the willow cut into strips for the purpose of being plaited, and is of a most beautiful white. These 'chip flats' are chiefly sent to Paris, where they are dressed in a peculiar manner, and shipped to all parts of the world. Some are shipped to England in their natural state, to be stored and sewn into white bonnets, and some also are dyed

black and other colours. The art, it is said, was first introduced by Signor Corston in 1803, and has been of great advantage to the small locality where it is carried on; but the returns, it is believed, cannot exceed from 15,000l. to 30,000l. per annum.

Panama hats have also been imported into England. They are made of a species of bleached grass grown in Central America, nearly quite white, of great tenacity, and very serviceable. They make a capital summer wear for men and boys. Those imported have, however, been mostly re-exported for Australia and the Continent. We subjoin—

*An Account of the Weight and Value of the Straw Hats and Plaiting Imported in 1866, specifying the Countries whence they came, and the Quantities and Values of those brought from each.*

*French Manufacture.*—The chief seats of the French manufacture of hats are Paris, Lyons, Bordeaux, Tarascon, Aix, and Nimes, and the exports of these articles are said to fully equal half of all that are made. The value of the hats exported from France in the year 1864 exceeded 10,000,000 francs. These goods were principally to the United Kingdom, Brazil, the Argentine Confederation. The average of French felt hats was 6s. in 1866, in which 189,888 French hats were imported into the United Kingdom. A few were imported from Belgium and Germany.

The importation of straw hats and bonnets into France has enormously increased of late years. In 1857 only 24,953 lbs. of these articles were imported from that country, and 134,789 lbs. of plaiting. The value of these imports in 1866 was nearly 1,133,000l. sterling. As no duty is levied on straw hats and plaiting, it is not possible to determine how much of the imports are for home consumption.

(We are indebted for this article on Hats to Mr. Robert Slater, of Fore Street, London.)

**HAVANNAH** or **HAVAN**. On the north-west coast of the noble island of Cuba, of which it is the capital, the Morro castle being according to the boldt, in lat. 23° 8' 15" N., long. 82° 22' 30" W. The population of the city and suburbs was estimated in 1861 at 201,500. In 1827 the resident population amounted to 94,029; of these, 5,215 free coloured, 15,347 free whites, 1,010 coloured slaves, and 22,830 blacks. The port of Havannah is the finest in the Indies, or perhaps in the world. The water is pure, but the water is deep, without obstruction of any sort, and within a few miles of the bay, capable of

Since this period th  
been as follows:—

But it might be difficult, perhaps, to show what good consequences would result from such a change. It is at all events clear that the commerce of the world and the comforts of all civilised nations would be seriously impaired; and it is by no means clear that the condition of the blacks would be sensibly, or at all, improved.

Besides slaves, the planters employ free labourers, of an Indian mixed breed, who work for moderate wages. Though the want of labourers has been severely felt since the slave trade was condemned, the importation of Chinese coolies has supplied this want to some extent. The yearly wages and keep of the Chinese field labourers are stated to be 236 dols., while those of the free negro are 300 dols., and those of the slave 210 dols. These, however, are little engaged in the fields, but in other branches of labour, and particularly in bringing sugar from the interior to the shipping ports.

The articles principally exported from Cuba are, sugar of the finest quality, coffee, copper ore, tobacco, bees' wax, honey, molasses &c. Of these, the first is decidedly the most important. The following statements show the astonishing increase that has taken place in the exportation of this staple article:—

*Account of the Exportation of Sugar from Havannah at various Periods from 1786 to 1867.*

Period	Boxes	Hds.	Total
From 1786-1790	68,330	boxes at 400 lbs. =	27,332,000
1800-1810	117,498	"	47,019,200
1810-1820	207,696	"	83,078,400
1820-1825	256,584	"	102,633,600
In 1830	293,732	"	117,492,800
1840	410,144	"	164,057,600
1845	467,535	"	187,014,000
1850	716,405	"	286,562,000
1855	965,677	"	386,270,800
1860	872,292	"	348,916,800
1864	1,146,575	"	458,630,000
1867	1,158,290	"	463,316,000

\* besides 16,806 hamsheads.  
† beside 19,000 hamsheads.

But the Havannah has long ceased to be, as it formerly was, the only port in the island for the exportation of sugar. The exports from Matanzas now usually amount to about a third part of those from the Havannah; and there is also a considerable export from Cardenas, Trinidad, St. Jago de Cuba, Cienfuegos, and other ports. In 1867 the entire exports from the island were reckoned at 1,449,162 boxes and 19,084 hds., of which 1,158,290 boxes and 19,084 hds. were shipped from the Havannah. Now if we add to the official export from Cuba, equal to 530,669 tons, as we may safely do, 10 per cent. for the quantities exported without entry or payment of duty, the real export may be estimated at 583,736 tons. The consumption of the island may amount to 25,000 tons; making the total production 608,736 tons. And vast as this quantity is, it might be infinitely increased, could supplies of labour be definitely procured; but it is doubtful, supposing easily procured, whether it would be maintained at its present level. Havannah, Guines, Matanzas, Cardenas, and all the fine sugar-growing country between them, are linked together by different lines of railway, and there are several other lines in the island.

*Account of the Sugar Exported from Cuba in each of the 5 Years ending with 1858, and in 1867.*

Year	Boxes	Tons	Hds.	Tons	Total Tons
1854	1,258,959	255,402	180,034	116,722	552,124
1855	1,305,929	247,745	208,732	128,830	576,635
1856	1,111,243	211,763	257,705	116,822	588,585
1857	1,021,941	194,661	253,267	156,398	541,669
1858	1,184,875	225,125	243,739	150,510	576,635
1867	1,119,162	—	413,487	—	530,669

The total productions of the sugar plantations of Cuba shipped in 1867 were sent from the following ports:—

Port	Boxes	Hds.	Molasses
Havannah	1,158,290	19,084	12,000
Matanzas	212,105	69,532	7,411
Cardenas	57,491	44,563	2,758
Sancti Spiritus	275	79,537	2,028
Trinidad	264	12,189	1,127
Remedios	—	15,469	318
Sancti Spiritus	830	11,519	2,566
Nuevitas	6,940	28,910	17,721
St. Jago	3,576	71,334	7,286
Cienfuegos	—	—	—
Total	1,449,162	413,487	297,733

In 1867 the average price of clayed sugar No. 12 to 15 was 73 reals or 11. 2s. sterling per cent. free on board without freight; brown and yellow Nos. 12 to 20, 70 reals; and white, 81 to 100 reals.

Next to sugar, coffee was formerly the most valuable vegetable production of Cuba. Its cultivation increased for a while with unprecedented rapidity. In 1800 there were but 80 plantations in the island; in 1817 there were 779; and in 1827 there were no fewer than 2,067, of at least three acres each! In 1800 the exportation from Havannah was 1,250,000 lbs.; in 1809 it amounted to 8,000,000 lbs.; from 1815 to 1820 it averaged annually 18,186,200 lbs.; and in 1827 it amounted to 35,837,175 lbs.! The exports from the other ports increased with equal rapidity; they amounted in 1827 to 14,202,406 lbs.; making the total exportation for that year 50,039,581 lbs. But the destruction of the coffee plantations in the western part of Cuba by the hurricane of 1825, and the low prices of coffee, or rather, perhaps, the greater attention paid to the culture of sugar, not only checked the further increase of the plantations, but caused many of them to be abandoned. The exports of coffee from Cuba in 1867 amounted to 12,787,300 lbs. In 1864, 1,320,000 lbs. were exported from Havannah; while in 1867 only 344,848 lbs. were shipped.

# HAVANNAH

Tobacco differs much in quality, but the cigars of Cuba are esteemed the finest in the world. This important plant were monopolised by Government; but since 1821 this monopoly has been wholly relinquished, there being no longer any restrictions either on the growth or sale of the article. The cultivator pays a duty, which, however, is to a great extent evaded, which, however, is upon his crop. In consequence of the freedom thus given to the business, the culture

and exportation of tobacco are both rapidly extending. In 1867 there were exported from Havannah alone 7,716,802 lbs. of tobacco, and wax, and honey are also largely produced, and form important articles of trade.

The number of vessels which entered Havannah in foreign ports in 1867 was 1,816, of 693,912 including steamers, of which 353, of 156,768 were British. Freights to Cowes or Queens-land from 20s. to 50s. communication with the United States is kept up daily by American steamers from Boston, New York, Baltimore, Philadelphia, and New Orleans. The Spanish mail steamers run regularly, and the British and French lines once, twice, and three times a week, between Havannah and Europe. Copper mines near Santiago and in other parts of the island, after having been abandoned for a century, have been reopened, and are producing principally by Englishmen, though the produce has fallen off considerably. The most valuable products of the island are copper and iron. It is mostly sent to England to be smelted. In 1866, 11,254 tons were imported into this country, and 1,254 tons were exported to Cuba. The exports to Cuba consist chiefly of corn, and grain of all sorts, with provisions,

principally from the United States, cotton goods from the latter and England; wines from Spain and France; silks from the Hanse Towns and England; hardware and metals, and rice, from England; silks from France and Spain; gold and silver from Mexico; spices, fruits, dye-stuffs, lumber, haberdashery &c.

The admission of slave-grown sugar to our markets has considerably promoted our trade with Cuba. The United States, however, engross the largest share of the trade of the island—a consequence in part of their proximity, but more of their supplying her with large quantities of flour, provisions, lumber &c., and of their being principally indebted to her for their imports of sugar.

**Moneys.**—One dollar = 8 reals plate = 20 reals vellon. 1 doubloon = 17 dollars. The merchants reckon 44 dols. = 100l. of 1 dol. = 4s. 6d. very nearly. There is an export duty of 1 1/2 per cent. on gold, and 2 1/2 per cent. on silver.

**Banks.**—In 1867 there were, besides a Savings Bank and a Private Bank, 2 regular Banking Estab-

Manufacture  
Cuba.

from landing under any pretence whatever; and so rigorously is this order enforced, that such persons, though acting as seamen, are, on their arrival, taken out of the vessel in which they have come, and are kept in custody until her departure, when they are compelled to proceed again on board and closed under license, and no foreigner is ex- cepted unless naturalised in the form prescribed by law. In every commercial town a certain num- ber only is allowed, corresponding to the popu- lation and trade of the place. In the great cities, the business of merchant is often combined with that of planter; and sometimes, also, the import- ing merchant keeps a shop or store, where he sells his goods by retail. The foreign merchants are generally regarded as transient visitors; and though as a class they are not considered wealthy, they are almost all in the full enjoyment of credit. The mercantile capital, as well as the proprietary wealth of the island, may be said to be concentrated in the hands of the Creoles. When the emigrants from the Peninsula make fortunes in the island, they seldom think of returning to Europe.

**Customs Duties in 1818, 1850, and 1867.**—The tariff of Cuba, like that of Spain, is exceedingly complex, being divided into a great many classes, and embracing a vast number of articles, many of which are of very trifling importance. All, or almost all, the articles of import are valued in the tariff of 1818 at certain fixed rates, upon which the duties are charged at so much per cent. Hence, the fixed or tariff prices exceed the real prices of the goods, the duties are proportionally increased, and conversely when the tariff prices are under the real prices. The duties vary from 10 to 25 per cent. on goods by foreign vessels from foreign ports, 10 to 15 per cent. on Spanish produce from Spanish vessels, 10 to 15 per cent. on Spanish produce from Spain by foreign ships, and 10 to 15 per cent. on Spanish produce from Spain by foreign ships. A balance duty of 1 per cent. is added to all but the principal exception to the above rule is in the case of flour, which pays a fixed duty of 10 cents per barrel per Spanish ship, 15 cents per barrel per foreign ship from Spain, 20 cents per barrel per Spanish ship from other parts, and 25 cents per barrel per foreign ship from other parts.

Spain been able to supply Cuba with flour cheaper than other countries, this high discrimi- nating duty in favour of Spanish flour would have been comparatively little importance. But such was the case. Cuba derives 90 per cent of her supply of flour from the United States, principally from New Orleans; so that the discriminating duty against flour is almost oppressive and impolitic that can be remedied. We are surprised it is submitted to. Axes, shafts, rollers, sugar-bowls, crowns, and other such articles for sugar plantations; also mares, stallions, and asses, are ex- cepted from duty. The Gas Company &c, which pays only 10 per cent. on imports, is also excepted from duty. Spain a note of the duties on the principal exports, according to the tariff of 1818.

But a new or supplementary tariff, issued in 1850, provides as follows, viz. :—  
Art. 1 augments the duties upon all articles of foreign importation at 1 1/2 per cent.  
Art. 2 increases 1/2 the impost upon national im- ports.

Art. 3 increases the export duty upon each box of sugar 50 cents, which makes now 87 1/2 cents per box.

Art. 4 increases 25 cents upon each quintal of leaf tobacco imported.

Art. 5 increases 25 cents upon every 1,000 cigars, making 75 cents per 1,000 export duty.

Art. 6, Spanish flour to pay 1/2 additional to the duty now paid.

Art. 7. This extraordinary exaction will con- tinue in force 2 years.

Goods in deposit, withdrawn for consumption, will be subject to the same duties, at and after the period above designated.

For the better comprehension of dealers, and to facilitate the tax upon national commerce, the im- dues, as equivalent to the 1/2 additional, and upon Spanish flour 25 per cent. per bbl.

The usual 1 per cent. upon the total of the cus- tom duties is still retained.

A revised tariff for Cuba came into operation on July 1, 1867; but it is so deficient, that the Custom-house officials cannot themselves under- stand it. Disputes are constantly arising as to the classification of goods, and the commission appointed to settle these matters has already been obliged to issue a supplement, which exceeds in length the original tariff, and does not remedy the evils complained of. Perhaps the Spanish Revolution still (October 1868) in progress may lead to improved tariffs both at home and in her colonies. A revised scale of navigation and port dues, for shipping entering and clearing at any of the ports of Cuba, came into operation on July 1, 1867. The charges are as follow :—

	Foreign	Spanish
1. Ships entering laden, and clearing with cargo, per ton discharged	4 700	2 700
2. Ships entering laden, and clearing in ballast, per ton measurement	4 600	2 600
3. Ships entering in ballast, and clear- ing laden, per ton burden	0	2 0
4. Ships entering with cargo of coals, for each ton	1 0	1 0
Ships laden with coal alone, but in less proportion to their measure- ment, for every ton not occupied	5 0	7 210
Ships laden with coal and other merchandise, for every ton occu- pied by coals	2 700	1 460
5. Laden with medicinal honey, per ton burden	4 700	2 700
6. Entering and clearing with native produce only	1 0	0 740
For every ton of cargo	1 0	2 0
7. Entering and clearing in ballast, per ton burden	0 100	0 100
8. Steamers making periodical voyages to the island, not exporting more than 6 tons of cargo, and carrying correspondents	0 100	0 100
9. Such steamers carrying more than 6 tons of cargo, for every ton	0 100	0 100
10. Spanish postal steamers	3 400	1 250
under the heads 9, 10, and 11, will be charged according to the port they come from, and that they carry, excluding tonnage occupied by coals and inclinations.	—	1 250

**Customs Regulations.**—Every ship-master is bound to have on his arrival, ready for delivery to the boarding officers of the revenue, a manifest, containing a detailed statement of his cargo and ship stores, and in the act of handing it over has to write thereon an oath that he has no other cargo

ES.

The following is a st

from the port, and about  $\frac{3}{4}$  mile S.S.E. from Cape la Hève. They are separated by the sand-bank called L'Eclat, between which and the bank called *Les Hautes de la Rade* is the north-west passage to the port. The Hoc, or southern passage, lies between the last-mentioned bank and that of Amfard. In the great road there is from 6 to  $7\frac{1}{2}$  fathoms water at ebb, and in the little from 3 to  $3\frac{1}{2}$ . Large ships always lie in the former.

The Chamber of Commerce of Havre have published the following information and instructions for the use of vessels frequenting the port:—

Five buoys have been moored in the shallows Bayou, under the designation of the Banc de l'Eclat, and Hautes de la Rade.

These buoys are similar in form, but of different colours, viz.: the first to the northward is white; the second, white with a black top; the third is black; the fourth is black with a white top; the fifth is red.

Vessels must always come to anchor at a distance of at least five cables' length outside the line of these buoys, which they may not pass without danger before one hour and a half prior to high water, or four hours after ebb; and they must at all times pass at a distance of five cables' length from the black as well as from the red buoy, both of which are moored on the shallowest parts of these banks. Nevertheless ships may at all hours of the tide frequent the north-western passage, comprised between Cape la Hève and the two northernmost buoys.

All vessels using the north-western passage, and bound into the inner roadstead (Petit Rade), must steer for the white buoy, the farthest north, and after leaving it a little distance on the star-board hand should then stand towards the second white buoy, taking care never to come so close to the shore as altogether to lose sight of the lantern of the north-western lighthouse on Cape la Hève. When the light of the north-western pier-head bears by compass S.E., and the lighthouses on the Hoc bear by compass N.N.E., the ship may be brought to an anchor.

Besides the five buoys herein described, one of lesser dimensions has been moored on the shallows of the inner roadstead, at about five cables' length W.N.W. of the north-west pier-head. Vessels of light draught of water coming to an anchor in that part of the road should give this buoy an anchorage of at least one cable's length.

Most part of the goods imported into Havre are destined for the internal consumption of France. The coasting trade has increased very largely of late years, as is proved by the great increase of French wines, soaps, and other produce imported from Paris from Havre, instead of being sent to the capital by land. The coasting vessels transfer their cargoes partly to steamers and partly to large barges, called *chalands*, which are towed by teams as far as Rouen, and thence by horses to Paris. The foreign trade of the port is also very extensive. Lines of sailing packets are established between Havre and New York, New Orleans &c. regular intercourse by means of steam packets keeps up with London, Southampton, and other ports.

There belonged to the port, on December 31, 1866, 24,308 merchant vessels, of the aggregate burthen of 114,045 tons.

The *Monies, Weights, and Measures of Havre* are the same as those of the rest of France. MONIES; COINS; and WEIGHTS AND MEASURES.

The following is a statement of the number,

tonnage, and crews of the vessels that entered and cleared at Havre in 1867:—

	No.	Tons	Crews
French vessels entered	918	522,050	17,501
cleared	795	287,061	15,736
British vessels entered	1,287	402,131	21,825
cleared	1,278	397,582	21,651
All other foreign vessels entered	609	267,552	9,312
cleared	661	258,959	8,792
Coasting vessels entered	2,984	211,928	17,971
cleared	3,131	277,829	19,172

**Harbour Rules.**—1. It is forbidden to have fire, or lighted candle, or to smoke, on board ships in the harbour.

Bitter complaints are made against this rule. All cooking has to be done on shore, and small sailing vessels, arriving saturated with water, and with the clothes of the crew wet, have no place to dry in. The consequence is that the men quit their vessels, and betake themselves to low drinking shops, to the great demoralisation of the crews, and the profit of a vile set of crimps. (Mr. Consul Bernal's Report.)

2. Vessels coming into and lying in the docks must have the lower and top yards topped up, jibbooms and martingales rigged in, and anchors taken in. The wharf alongside the vessel must be swept every evening.

3. No gunpowder (whatever may be the quantity) is allowed to remain on board, and must be deposited in the gunpowder warehouse.

4. All foreign sailors found away from their ships after 10 o'clock at night from April 1 to October 1, and after 9 o'clock from October 1 to April 1, shall be conveyed to prison and fined. Sailors are forbidden to wear sheathing knives ashore.

5. The manifest of the cargo, signed by the captain, must be exhibited to and signed by the custom-house officers before being taken ashore. The vessel must be reported at the custom-house within 24 hours after arrival.

6. Tobacco, snuff, cigars loose or in boxes, belonging to the captain, officers, and mariners, to be declared as exactly as possible. All the tobacco, snuff, and cigars, declared or not declared, to be exhibited to the custom-house officers when they come and make the visit on board. After such exhibition, if any quantity of tobacco and cigars be found on board, it shall be seized, the captain shall be condemned to pay a fine which may be as high as 500 francs, and the ship shall be confiscated.

The following table shows the average rates of freight during 1866:—

Place	Steamers		Sailing Vessels	
	Frs.	per cent.	Frs.	per ton.
London	20	and 15	11	per ton.
Liverpool	20 to 25	„ 15	15	„
Hamburg	62	„ 25	35	„
Rotterdam	10 to 25	„ 15	„	„
Martinique and Guadeloupe	..	..	20 to 25	and 10 per cent.
Réunion and Mauritius	..	..	35 to 40	do. (cubic metre).
Havre	..	..	40 to 50	per ton.
New York	50 to 125	and 10	10 to 25	„
Brazil	..	..	45 & 10 per cent.	(cubic metre).
Buenos Ayres	..	..	45	„
Pacific	..	..	52	„

VIII.—Account of the Quantities and Computed Values of the Principal and other Articles Imported from France into the United Kingdom in each of the 4 Years ending with 1866. 693

Table with columns: Articles, Quantities (1863, 1864, 1865, 1866), and Computed Real Value (1863, 1864, 1865, 1866). Rows include various goods like animals, wool, cotton, and manufactures.

between France and British India. The principal articles imported from these countries are... [BORDEAUX]

Table with columns: Value, and rows for Specifics Imported and Specifics Exported.

Of these imports, the largest items are cotton, wool, timber, and coffee. Many articles, however, though of less aggregate value, represent a great increase of trade, as for instance clothing, leather, refined sugar, and various agricultural products. It is possible that

at no distant date the beet-root sugars of France and Germany will compete successfully with the cane sugars of the tropics.

In the distribution of these imports and exports, the commercial relations of France and Great Britain are the most important. In 1864 one-fifth of the imports were obtained from, and one-third of the exports transmitted to, the United Kingdom. Belgium, Switzerland, the Zollverein, and Italy follow in order according to the magnitude of their imports into France. Italy, Switzerland, Spain, and the Zollverein take exports in order. In all these cases the exports and imports severally exceed 250,000,000 francs, i.e. in round numbers 10,000,000*l.* sterling. The commerce of France is only second to that of England, its total exports and imports in 1864 amounting to 348,517,611*l.*, while those of the United Kingdom in the same year amounted to 487,571,786*l.*

**Weights and Measures.**—The French system, which has been extended into Belgium, Switzerland, and Italy, is called metrical because founded on the mètre, a measure of length equal to the estimated ten millionth part of the terrestrial meridian from the North Pole to the Equator. [WEIGHTS AND MEASURES.]

It is possible that the system which prevailed before 1795 may still linger in remote parts of France, but the metrical system in all its combinations and subdivisions was made the only legal measure during the reign of Louis-Philippe, and it is believed that at the present time the older system is all but extinct.

The par of exchange between Great Britain and France is 1*l.*=25-30 francs. (For full particulars as to rates of exchange between France and other countries, and as to processes by which the reduction of exchanges can be effected, see Tate's *Modern Cambist*.)

The French laws and regulations respecting bills of exchange are rather stricter than those which prevail in the United Kingdom. There are no days of grace allowed either as part of the term or as claimable in delay of legal proceedings. If a bill be not duly accepted or paid, protest of default must be made within twenty-four hours of presentation. If the acceptor becomes bankrupt, protest may be made, and legal proceedings commenced against drawer and endorsers before the term expires during which the bill has to run. The holder of a bill, payable at or after sight, drawn by any foreign place on France or the reverse, must present the bill for payment or acceptance within specified periods after the date of the bill (these periods, called *délais*, varying with the distance) under penalty of losing all claim upon endorser or drawer, if it can be proved that the bill would have been honoured at presentation. Usance 30 days.

In the year 1864, 13,025 kilomètrés (upwards of 8,000 miles) of railway were worked in France, the average receipts being 42,380 francs, or near 1,700*l.* per kilomètre, or about 2,610*l.* per mile.

The completion of railroads, and other improved means of intercourse, have, no doubt, contributed to develop the resources of the country and her great powers of production. Nothing, indeed, but the adoption of a reasonable law of succession, and of a thoroughly liberal commercial system, is wanted to elevate France to a very high, if not to the highest, place among manufacturing and commercial nations; and considering the way in which her energies have been weighed down by oppressive duties and restrictions, her recent industrial progress is quite marvellous.

**HAWKERS AND PEDLARS.** It is not very easy to distinguish between hawkers and pedlars.

Both are a sort of itinerant retail dealers, who carry about their wares from place to place; but the former are supposed to carry on business on a larger scale than the latter. They are subject to the same regulations.

**Regulations as to Hawkers and Pedlars.**—The Legislature has always looked with suspicion upon itinerant dealers, and has attempted, by obliging them to take out licenses and placing them under a sort of *surveillance*, to lessen their numbers, and to hinder them from engaging in dishonest practices. But the resident dealer has so many advantages on his side, that these precautions seem to be in a great measure superfluous. It should also be recollected that before shops were generally established in villages and remote districts, hawkers and pedlars rendered material services to country people; and even now the competition which they excite is certainly advantageous.

By the 50 Geo. III. c. 41 (which placed the management of hawkers' license duties under the Commissioners of Hackney Coaches), hawkers and pedlars paid an annual license duty of 4*l.*; and if they travelled with a horse, ass, or other beast, bearing or drawing burden, they were subject to an additional duty of 4*l.* for each beast so employed. The granting of licenses, and management of the duties, were, by 1 & 2 Wm. IV. c. 22, placed under the control of the Commissioners of Stamps. By the 24 & 25 Vict. c. 21 the duties were reduced; and by the 27 & 28 Vict. c. 18 excise duties were substituted, and fixed at 2*l.* per annum each for pedlars on foot, and 4*l.* for those with a horse or other beast drawing burden. By 25 & 26 Vict. c. 22 and 29, and 30 Vict. c. 64, half-yearly licenses are sanctioned.

Hawkers and pedlars, unless householders or residents in the place, are not allowed to sell by auction to the highest bidder: penalty 50*l.*—half to the informer, the other half to the Crown. But nothing in the Act extends to hinder any person from selling, or exposing to sale, any sort of goods in any public market or fair; or to hinder a hawker or pedlar from selling in a hired room where he is not a resident, provided such sale is not by auction.

Every hawker, before he is licensed, must produce a certificate of good character and reputation, signed by the clergyman and two reputable inhabitants of the place where he usually resides.

Every hawker must have inscribed, in Roman capitals, on the most conspicuous part of every pack, box, trunk, case, cart, or other vehicle, in which he shall carry his wares, and on every room and shop in which he shall trade, and likewise on every hand-bill which he shall distribute the words "LICENSED HAWKER." Penalty in default, 10*l.* Unlicensed persons wrongfully using this designation forfeit 10*l.*

Hawkers dealing in smuggled goods, or in goods fraudulently or dishonestly procured, are punishable by forfeiture of license, and incapacity to obtain one in future, besides being liable to all the other penalties, forfeitures &c. applicable to such illegal dealing.

By statute 6 Geo. IV. c. 80 it is enacted that any person or persons hawking, selling, or exposing to sale any spirits on the streets, highways, &c., or in any boat or other vessel on the water, or any place other than those allowed in this Act, shall forfeit such spirits and 100*l.* for every offence. Any person may detain a hawker with spirits, and give notice to a peace officer to call the offender before a justice.

Hawkers trading without license are liable to a penalty of 10*l.* So also if they refuse to show the license on the demand of any person to whom the

offer goods for sale, or on the demand of any justice, mayor, constable or other peace officer, or any of the customs or excise. By 5 Geo. IV. c. 53 hawkers trading without a license are punishable as vagrants.

To forge or counterfeit a hawker's license incurs a penalty of 300*l.* To lend or hire a hawker's license subjects lender and borrower to 40*l.* each, and the license becomes forfeited. But the servant of a licensed hawker may travel with the license of his master.

Hawkers trading without a license are liable to be seized and detained by any person who may give notice to a constable, in order to their being carried before a justice of peace. Constables refusing to assist in the execution of the Act are liable to a penalty of 10*l.*

Nothing in the Act extends to prohibit persons from selling fish, fruit, or victuals; nor to hinder the maker of any home manufacture from exposing his goods to sale in any market or fair; in every city, borough, town corporate, and market town; nor any tinker, cooper, glazier, plumber, harness-maker, or other person from going about and carrying the materials necessary to their business.

A single act of selling, as a parcel of handkerchiefs to a particular person, is not sufficient to constitute a hawker within the meaning of the statute. (*Hex v. Little*, B. 613.)

By the 52 Geo. III. c. 108 no person, being a trader in any goods, wares, or manufactures of Great Britain, and selling the same by wholesale, shall be deemed a hawker; and all such persons, or their agents, selling by wholesale only, shall go from house to house, to any of their customers who sell again by wholesale or retail, without being subject to any of the penalties contained in any Act touching hawkers, pedlars, and petty chapmen.

No person committed under these Acts for non-payment of penalties can be detained in custody for a longer period than 3 months.

Hawkers exposing their goods to sale in a market-town must do it in the market-place.

Persons hawking tea without a license are liable to a penalty under 50 Geo. III. c. 41; and even though they had a license, they would be liable to a penalty for selling tea in an unentered place. (*Chitty's edition of Burn's Justice*, vol. ii. p. 1113.)

The hawking of tobacco or snuff is prohibited by the 3 & 4 Vict. c. 18 s. 12.

Any person duly licensed to trade as a hawker and pedlar may set up any lawful trade in any place where he is resident, though he have not served any apprenticeship to the same; and if prosecuted, he may plead the general issue and have double costs. (*Chitty's edition of Burn's Justice*, vol. ii. pp. 1102-1124.)

The hawkers' and pedlars' duty produced in 1867-8, 44,746*l.* gross revenue, paid by 17,779 persons; the charges of collection are, however, heavy.

HAY (Ger. *heu*; Dutch, *hovi*; Fr. *foin*; Ital. *fieno*; Span. *heno*; Lat. *foenum*). Any kind of grass, cut and dried for the food of cattle. The best in Middlesex is said to be better understood in England.

The great object is to preserve the green colour of the grass as much as possible, and to have it juicy, fresh, and free from all sorts of

impurities.

The sale of hay within the bills of mortality, and 30 miles of the cities of London and Westminster, is regulated by the Act 36 Geo. III. c. 28; 4 & 5 Wm. IV. c. 21; and 19 & 20 Vict. c. 104. The first enacts that all hay shall be sold by the load of 36 trusses, each truss weighing 56

lbs., except new hay, which is to weigh 60 lbs. till September 4, and afterwards 56 lbs. only; so that till September 4 a load of hay weighs exactly 1 ton, but thereafter only 18 cwt. The clerk of the market is bound to keep a regular book for the inspection of the public, specifying the names of the seller, the buyer, the salesman, and the price of each load. Salesmen and factors are prohibited from dealing on their own account.

At the instance of the Veterinary Department of the Council Office, an order in council was issued during the cattle plague, forbidding the landing of hay from Holland without a license. Such licenses are still (1868) called for.

There are 3 public markets in the metropolis for the sale of hay and straw—Whitechapel, Smithfield, and the Haymarket in the vicinity of the Regent's Park. The latter used formerly to be held in the street called the Haymarket.

Straw is sold by the load of 36 trusses, of 36 lbs. each, making in all 11 cwt. 64 lbs.

It is affirmed, we know not with what foundation, that considerable frauds are perpetrated in the sale of hay and straw.

HEMP (Ger. *hanf*; Dutch, *hennip*, *keunip*; Dan. *hamp*; Swed. *hampa*; Fr. *chanvre*; Ital. *cannope*; Span. *canamo*; Russ. *konopli*, *konopel*; Pol. *konope*). A valuable plant (the *Cannabis sativa* of Linnaeus), supposed to be a native of India, but long since naturalised and extensively cultivated in Italy and many countries of Europe, particularly Russia and Poland, where it forms an article of primary commercial importance. It is also cultivated in different parts of America, though not in such quantities as to supersede its importation. It is stronger and coarser in the fibre than flax; but its uses, culture, and management are pretty much the same. When grown pulled green, it is a very exhausting crop; but when ground, it is considered as a cleaner of the deemed profitable; so that, notwithstanding the encouragement it has received from Government, and the excellent quality of English hemp, it is but little grown, except in some few districts of Suffolk and Lincolnshire. The quantity raised in Ireland is also inconsiderable. (*Loudon's Encyclopaedia of Agriculture*.)

Exceedingly good *huckaback* is made from hemp, for towels and common table cloths. Low-priced hempen cloths are a general wear for husbandmen, servants, and labouring manufacturers; the better sorts for working farmers and tradesmen in the country; and the finer ones,  $\frac{7}{8}$  wide, are preferred by some gentlemen for strength and warmth. They possess this advantage over Irish and other linens—that their colour improves in wearing, while that of linen deteriorates. But the great consumption of hemp is in the manufacture of sailcloth and cordage, for which purposes it is peculiarly fitted by the strength of its fibre. English hemp, when properly prepared, is said to be stronger than that of every other country, Russia not excepted, and would, therefore, make the best cordage. It is, however, but little used in that way, or in the making of sailcloth; being principally made into cloth for the uses already stated.

Hemp has been cultivated in Bengal from the remotest antiquity, but not, as in Europe, for the purpose of being manufactured into cloth and cordage. In the Hindoo economy it serves as a substitute for malt; a favourite intoxicating liquor, called *bang*, being produced from it. This also is the use to which it is applied in Egypt. (*Milburn's Oriental Commerce*; &c.)

The price of hemp fluctuated very much during

the war. In consequence of difficulties in the way of its importation, it stood at a very high level from 1808 to 1814. This was the principal circumstance that originally brought iron cables into use, and the extent to which they are now introduced has contributed materially to diminish the consumption and importation of hemp. (Tooke *On High and Low Prices*, 2nd edition, p. 345.)

We borrow the following particulars, with respect to the hemp trade of Petersburg, from the work of Mr. Borrison on the commerce of that city:—

Hemp forms a very important article of export from St. Petersburg, and deserves particular notice. It is assorted, according to its quality, into *clean hemp*, or firsts; *out-shot hemp*, or seconds; *half-clean hemp*, or thirds; and *hemp codilla*.

Of the first 3 sorts there are annually exported about 2,000,000 poods, the greatest part in English and American bottoms. It is brought to Petersburg, from the interior beyond Moscow, by water; and its quality depends very much on the country in which it is produced. That brought from Karatshev is the best; next to this, that produced in Belev; hemp from Gshatsk is considered inferior to the latter.

As soon as the hemp is brought down in the spring, or in the course of the summer, it is selected and made up in bundles; both operations being performed by sworn selectors (*brackers*) and binders appointed by Government for this purpose; and it is a well-known fact that this is done with great impartiality and exactness.

A bundle of clean hemp weighs from 55 to 65 poods; ditto out-shot, 48 to 55 ditto; ditto half-clean, 40 to 45 ditto. (1 pood=36 lbs. avoirdupois.)

Binding of hemp is paid for at the rate of 2 roubles 50 copecks for *clean*, 2 roubles for *out-shot*, and 1 rouble 60 copecks for *half-clean*, per bundle;  $\frac{1}{2}$  is paid by the seller, and the other  $\frac{1}{2}$  by the purchaser, and is charged accordingly by their agents.

The expense of selecting hemp is 50 copecks per bercovitz (or 10 poods), and is the same for every sort. To every bundle of assorted hemp is attached a ticket with the names of the selector, binder, and owner, and the date and year. Every bundle has also affixed to it a piece of lead, stamped on one side with the name of the selector, and on the other with the sort of hemp, and the time when it was selected. The external marks of good hemp are, its being of an equal green colour and free from spills; but its good quality is proved by the strength of the fibre, which should be fine, thin, and long. The first sort should be quite clean and free from spills; the *out-shot* is less so; and the *half-clean* contains a still greater portion of spills, and is moreover of mixed qualities and colours.

As a perfect knowledge of the qualities of hemp

*Account of the Quantities and Values of Hemp, Jute, and Jute Yarn Imported into the United Kingdom in the Four Years 1863-66.*

Year	Hemp		Jute, Raw		Jute Yarn	
	Quantities	Value	Quantities	Value	Quantities	Value
	cwts.	£	cwts.	£	lbs.	£
1863	1,039,862	1,915,743	1,225,333	1,325,996	1,011,464	1,251
1864	1,035,763	1,768,702	2,041,537	2,192,478	1,885,517	58,19
1865	1,065,703	1,711,482	2,108,942	1,771,994	1,958,010	45,19
1866	1,001,298	1,720,521	1,625,903	1,176,111	2,065,161	46,21

From 50 to 75 per cent. of the imports of hemp are of Russian origin. Of the total quantity of hemp (2,737,578 poods, worth 8,049,146 silver roubles) exported from Russia in 1863, 1,462,530

and flax can only be acquired by experience and attention, agents usually employ men constantly occupied in this business, by which means they are sure of getting goods of the best quality, and have the best chance of giving satisfaction to their principals; because, although the hemp is selected by sworn selectors, yet, owing to the quantity of business and the speed with which it must be executed &c., there are often great differences in the same sorts. The charges are in this way somewhat increased; but this is trifling in comparison of the advantage gained. The part separated or picked out in cleaning hemp is called *hemp-codilla*; it is generally made up in small bundles of 1 pood, which are again, when shipped, bound together in large bundles, each consisting of about 30 small ones.

Particular care must be taken to ship hemp and flax in fine dry weather: if it get wet, it heats, and is totally spoiled. For this reason every vessel taking in hemp or flax is furnished with mats to prevent its getting damp. Hemp, being light and bulky, is, when stowed, forced into the hold by means of winches, which renders the operation of loading rather slow.

It may be taken as a general rule that the prices of hemp are highest in the months of May, June, July, and the early part of August; the demand for this article being then greatest, and the exportation to North America being principally effected at this season. Again, the prices of hemp are lowest in the month of September; the reason of which is, that the less opulent hemp-merchants return at the end of this month to their own country in order to make new purchases for the ensuing year, and, rather than be detained, sell the remainder of their stock some roubles below the market price. This causes a general decline; although an unusual demand for the article happening at the same time, or political events or rumours, occasionally produce a contrary effect. Two large warehouses called *umbares* are built in Petersburg; for the special purpose of housing hemp, where the greatest order is observed.

HEMP, ITALIAN.—Hemp from Italy is said to be the finest, strongest, and most durable in existence. It is of very white colour—so white that it has been mistaken for East India sunn fibre, but when tanned it is the best material for fishing purposes. At Chatham the nets of various qualities of hemp gave a superiority of one-fourth to Italian hemp over Russian. There is more difficulty in manufacturing this hemp than in other kinds, but the product is so excellent as to compensate for the increased cost. (*Journal Soc. Arts*, December 1860.)

In 1866, 11,621 cwts. of dressed, and 149,572 cwts. of rough hemp, and 11,658 cwts. of tow or codilla of hemp, were imported into England from Italy, and both kinds of goods fetched a higher price than Russian produce.

poods, valued at 4,387,588 silver roubles, were sent to Great Britain. The second source of supply after Russia is Italy, and particularly Venetia. Sixty poods of hemp and 40 poods of codilla

made a list at Petersburg; 63 poods make an English ton.  
Hemp fetches a higher price than that of Petersburg. It is divided into 3 sorts: viz. rehu, rhine or clean, out-shot, and pass or half-clean. The following are the prices of hemp &c., &c. quoted in the London markets:—

	per ton	£	s.	d.
Hemp, St. Petersburg clean		36	10	3
Do. do. do.		36	0	0
Half clean		36	0	0
Rhine		40	0	0
Pass		43	0	0
East Indian, Nann		22	0	0
Do. do. do.		12	0	0
Do. do. do.		25	0	0
Do. do. do.		20	0	0
Do. do. do.		19	0	0
Do. do. do.		53	0	0
Do. do. do.		47	0	0
Do. do. do.		37	0	0
Do. do. do.		55	0	0

We subjoin a statement of the various charges on the exportation of hemp from Petersburg, and on its importation into this country:—

Class Hemp.—1 bundle=63 poods=1 ton.

	rou.	cop.
Port Tax, 60 cop. per hectovite		22
Wharf duty, 10 per cent.		2
Quarantine duty, 1 per cent.		0
Custom-house charges, 4 per cent.		2
Insurance, 20, and shipping, 50 rou. per bundle		1
Brokerage, 10 cop. per hectovite		3
Do. do. do.		3
Light and attendance to Cronstadt, 8 rou. per bundle		4
Insurance, 10 rou. per bundle, 3 charged		1
Brokerage, 60 cop. per ton		0
		60
		45

Brokerage, 1/2 per cent.  
Commission and extra charges, 3 per cent.  
Stamps on drafts, 1/2 per cent.  
Brokerage, 1/2 per cent.

Charges of Importation per Ton, taking the price at 40L per Ton.

	£	s.	d.
Insurance, 10, and policy	0	10	6
Wharf duty, 10 per cent.	2	12	6

		210	5

In the above calculation no allowance is made for damage, which, if care be taken to select a good vessel and an early season, does not amount to much. The estimates are nearly the lowest rates of charge. The insurance, indeed, is sometimes as low as 12s. 6d. per cent., and policy, that, however, is only in the very earliest part of the season: it rises to 5l. per cent. in the autumn.

Half clean Hemp.—1 bundle=63 poods=1 ton.		49

HEMP, MANILLA.—The leaves of several kinds of plantain (*Musa*) yield a strong fibre, susceptible of various economical uses, and of great importance in tropical countries. Of these, the most valuable is the *Musa textilis*, known by the local name of Abaca, a shrub or tree which grows abundantly in the interior to about the 20th degree of north latitude. The inhabitants of the Philippine Islands are said to pay their tribute, and supply themselves with every necessary of life, from the sale of such or Manilla hemp. In 1864, 516,745 piculs (about 620,000 cwts., valued at 2,673,745 dols. net 544,100L), were exported from these islands. The Manilla hemp is procured from both wild and cultivated trees, the former being considered

HERRINGS

private property. The plant is cut down when about a year and a half old, just before it flowers, the strength of the fibre being said to be inferior after the fructification of the plant. The brot is in fact the petioles of the leaves. The outer fibres are hardest and strongest, are called *bandula* by the natives, and are used for cordage. The inner layer of the fibres is called *topis*, which are used for delicate fabrics. According to many authorities, Manilla rope is superior in strength and endurance to that constructed from hemp. The fruit of the *Musa textilis*, unlike that of other fibre is of great and increasing importance.

HEMP-SEED (Fr. chenevis, chenevi; Ger. hanfsaat; Ital. cannupecchia; Lat. semen canu-hinum; Russ. konopljanoe semja). The seed of hemp. The best hemp-seed is that which is used either as seed, or for crushing, for oil, or as food for fowls. Previously to 1832 it was loaded with a duty of 2l. per quarter, which was then reduced to 1s. per ditto, and in 1845 was wholly repealed.

In 1866 we imported 11,083 quarters of hemp-seed, of which Holland supplied 5,696 quarters. It was valued at 40s. per quarter. Our exports during the same year amounted to only 47 quarters.

HERRINGS AND HERRING FISHERY. The herring (*Clupea harengus* of Linnaeus) is a fish too well known to require any description. It is everywhere in high esteem, both when fresh and when salted.

Herrings are found from the highest northern latitudes yet known, as low as the northern coasts of France. They are met with in vast shoals on the coast of America as low as Carolina. In Chesapeake Bay is an annual inundation of these fish, which cover the shore in such quantities as to become a nuisance. We find them again in the seas of Kamtschatka, and probably they reach Japan. The great winter rendezvous of the herring is within the Arctic Circle: there they continue for many months, in order to recruit themselves after the fatigue of spawning; the seas within that space swarming with insect food in a far greater degree than those of our warmer latitudes. This mighty army begins to put itself in motion in spring. They begin to appear off the Shetland Isles in April and May. These are only the forerunners of the grand shoal, which comes in June; and their appearance is marked by certain signs, such as the numbers of birds, like gannets and others, which follow to prey on them; but when the main body approaches, its breadth and depth are such as to alter the appearance of the very ocean. It is divided into distinct columns of 5 or 6 miles in length, and 3 or 4 in breadth; and they drive the water before them, with a kind of rippling. Sometimes they sink for the space of 10 or 15 minutes, and then rise again to the surface; and in fine weather reflect a variety of splendid colours, like a field of the most precious gems.

The first check this army meets in its march southward is from the Shetland Isles, which divide it into two parts: one wing takes to the east, the other to the western shores of Great Britain, and fill every bay and creek with their numbers: the former proceed towards Yarmouth, the great and ancient mart of herrings; and then pass through the British Channel, and after that in a manner disappear. Those which take towards the west, after offering themselves to the Hebrides, where the great stationary fishery is, proceed to the north of Ireland, where they

meet with a second interruption, and are obliged to make a second division; the one takes to the western side, and is scarcely perceived, being soon lost in the immensity of the Atlantic; but the other, that passes into the Irish Sea, rejoins and feeds the inhabitants of most of the coasts that border on it. These brigades, as we may call them, which are thus separated from the greater columns, are often capricious in their motions, and do not show an invariable attachment to their haunts.

'This instinct of migration was given to the herrings that they might deposit their spawn in warmer seas, that would mature and vivify it more assuredly than those of the frozen zone. It is not from defect of food that they set themselves in motion; for they come to us full of fat, and on their return are almost universally observed to be lean and miserable. What their food is near the Pole, we are not yet informed; but in our seas they feed much on the *Oniseus marinus*, a crustaceous insect, and sometimes on their own fry.

'They are full of roe in the end of June, and continue in perfection till the beginning of winter, when they deposit their spawn. The young herrings begin to approach the shores in July and August, and are then from  $\frac{1}{2}$  an inch to 2 inches long. Though we have no particular authority for it, yet, as very few young herrings are found in our seas during winter, it seems most certain that they must return to their parental haunts beneath the ice. Some of the old herrings continue on our coast the whole year.' (Pennant's *British Zoology*.)

The herring was unknown to the ancients, being rarely, if ever, found within the Mediterranean. The Dutch are said to have engaged in the fishery in 1164. The invention of pickling or salting herrings is ascribed to one Beukels, or Beukelson, of Biervliet, near Sluys, who died in 1397. The Emperor Charles V. visited his grave, and ordered a magnificent tomb to be erected to his memory. Since this early period the Dutch have uniformly maintained their ascendancy in the herring fishery; but, owing to the Reformation and the relaxed observance of Lent in Catholic countries, the demand for herrings upon the Continent is now far less than in the fourteenth and fifteenth centuries.

*Herrings, Dutch.*—In 1863 the number of vessels engaged in the fishery was 86; the exportation 35,089 tons, of which 21,000 were sent to Germany, 5,000 to Belgium, 3,891 to Hanover, Bremen &c., 709 to Sweden and Norway, and 2,219 to the United States. But of this amount 16,699 tons were imported chiefly from Great Britain. The fresh herring trade secured 38,500,000 fish, the average price being 18s. *Ad. per 1,000.* (*Annales du Commerce Extérieur*.)

*Herrings, Norwegian.*—The Acting Consul-General at Christiania, in his Report for 1866 on Fisheries, stated that the Norwegian herring fishery, though engaging less capital, employs more hands than the cod fishery; the population actually engaged being estimated at 60,000. He gives the average annual export of spring herrings at 300,000, and of summer herrings at 200,000 barrels; Russia, Sweden, and Prussia being the chief consumers. In Norway the telegraph is most usefully employed to give notice to the fishermen of the movements of the shoals.

*Importance of the Herring Fishery.* *Progress of it in Great Britain.*—There is, perhaps, no branch of industry the importance of which has been so much over-rated as that of the herring fishery. For more than two centuries, company after com-

pany has been formed for its prosecution, fishing villages have been built, piers constructed, boards and regulations established, and vast sums expended in bounties; and yet the fishery never got into a healthy state till it was left to its own resources. The false estimates that have been long current with respect to the extent and value of the Dutch herring fishery contributed more, perhaps, than any thing else to the formation of exaggerated notions of the importance of this business. That the Hollanders prosecuted it to a greater extent, and with far greater success, than any other people, is, indeed, most true. There is not, however, the shadow of a ground for believing that they ever employed, as has often been stated, about 450,000 individuals in the fishery and the employments immediately subservient to it. We question whether they ever employed so many as 50,000. At the time when the Dutch carried on the fishery to the greatest extent, the entire population of the Seven United Provinces did not certainly exceed 2,400,000; and deducting a half for women, and from a half to two-thirds of the remaining 1,200,000 for boys and old men, it would follow, according to the statement in question, that every able-bodied man in Holland must have been engaged in the herring fishery! It is astonishing how such ridiculously exaggerated accounts ever obtained any circulation, and still more so that they should have been referred to and quoted without, apparently, any doubt being ever entertained of their authenticity down to our own times! They seem to have been first set forth in a treatise ascribed to Sir Walter Raleigh; and, what is singular, they were admitted by De Witt in his excellent work, *The True Interest of Holland*. They have been implicitly adopted by Sir John Barrow in the article 'Fisheries' in the *Encyclopædia Britannica*. Had they been sifted ever so little, their absurdity would have been obvious, and we should have saved many hundreds of thousands of pounds that have been thrown away in attempting to rival that which never existed.

It would be impossible, within the limits to which this article must be confined, to give a detailed account of the various attempts that have been made at different periods to encourage and bolster up the herring fishery. In 1743, in pursuance of a recommendation in his Majesty's speech at the opening of Parliament, and of report of a committee of the House of Commons, 500,000*l.* was subscribed for carrying on the fisheries: under a corporation called 'The Society of the Free British Fishery.' The Prince of Wales was chosen governor of the Society, which was patronised by men of the first rank and fortune in the state. But this Society did not trust entirely to its own efforts for success. Its duties were remitted upon the salt used in the fisheries; and besides this reasonable encouragement, a high tonnage bounty was granted on every buss fitted out for the deep sea fishery. In consequence, many vessels were sent out, as Adam Smith has truly stated, not to catch herrings but to catch the bounty; and to such an extent was this abuse carried, that in 1759, when the tonnage bounty was 50*s.*, the almost incredible sum of 159*l.* 7*s.* 6*d.* was paid as bounty upon 200 barrels of merchantable herrings that were produced. (*Wealth of Nations*, p. 231.) Despite this encouragement, such were the waste and mismanagement of the Company's affairs that it was speedily destroyed. Smith says that in 1794 hardly a vestige remained of its having ever been in existence.

But notwithstanding this ill success, a

held out

company was formed, for nearly the same objects, in 1766, of which George III. was patron. It has had nearly the same fate. For a season or two, busses were fitted out by the Society; but if every herring caught had carried a ducent to his mouth, the expense of its capture would scarcely have been repaid. The bubble ended by the Society for Fishing in the Deep Sea becoming a kind of building society, for purchasing ground in situations where curers and fishermen find it convenient to settle, and selling or letting it in small lots to them, at such advance of price as yields something better than fishing profits. (See an excellent article on the *Herring Fishery* in the 11th Number of the *Quarterly Journal of Agriculture*.)

In 1808 a fresh attempt was made for the improvement and extension of the fishery. The Act 48 Geo. III. established a distinct set of commissioners for the superintendance of all matters connected with the fishery, and authorised them to appoint a sufficient number of fishery officers, to be stationed at the different ports, whose duty it is to see that the various regulations with respect to the gutting, packing &c. of the herrings, and the branding of the barrels, are duly carried into effect. In 1809 a bounty of 3*l.* per ton was

granted on all vessels employed in the deep sea herring fishery, of above 60 tons burden, but payable only on 100 tons; and in 1820 a bounty of 20*s.* per ton, which, under certain specified circumstances, might be increased to 50*s.*, was granted on all vessels of from 15 to 60 tons fitted out for the shore herring fishery; and, exclusively of these bounties on the tonnage, a bounty of 2*s.* per barrel was allowed on all herrings cured gutted during the 6 years ending April 5, 1815, and a bounty of 2*s. 8d.* per barrel on their exportation, whether cured gutted or ungutted. During the 11 years ending April 5, 1826, the bounty on herrings cured gutted was 4*s.* per barrel.

It is stated in the article already referred to, that the cost of a barrel of cured herrings is about 16*s.*, one half going to the fisherman for the green fish, the other half to the curer for barrel, salt, and labour. The bounty of 4*s.* per barrel was, therefore, equal to half the value of the herrings as sold by the fisherman, and to one-fourth of their value as sold by the curer! In consequence of this forced system, the fishery was rapidly increased. The following statement, extracted from the *Reports of the Commissioners of the Fishery Board*, shows the progress the fishery has made since 1809:—

Account of the Total Quantity of White Herrings Cured, Branded, and Exported, in so far as the same have been granted under the copiosity of the Officers of the Fishery, during the undimentioned Years, ending till 1844 on April 5; since then till 1852, on January 5; and thereafter on December 31; distinguishing each Year, and the Herrings cured Gutted, from those cured Ungutted.

Year	Total Quantity of Herrings Cured			Total Quantity of Herrings Branded	Total Quantity of Herrings Exported

On looking at this table, it is seen that the fishery made no progress under the new system till 1815, when the bounty was raised to 4*s.* This is a sufficient proof of the factitious and unnatural state of the business. Its extension, under the circumstances in question, instead of affording any proof of its being in a really natural condition, was distinctly the reverse. Individuals without capital, who obtained the bounty sufficient to enable them to acquire boats, and salt &c. on the credit of the bounty, entered the trade. The market was commonly glutted with fish, and yet the bounty held out by the bounty caused it to

be still further overloaded. Great injury was consequently done to those fish curers who possessed capital; and even the fishermen were injured by the system. Most of the boats employed in the fishery never touch the water but during 6 weeks, from the middle or end of July to the middle of September. They are owned and sailed, not by regular fishermen following that vocation only, but by tradesmen, small farmers, farm-servants, and other landsmen, who may have sufficient skill to manage a boat at that season, but who do not follow the sea except for the 6 weeks of the herring fishery, when they go upon a kind of gambling speculation,

of earning a twelvemonth's income by 6 weeks' work.' (*Quarterly Journal*, No. 11, p. 653.)

It has been often said, in vindication of the bounty system, that by extending the fishery it extended an important nursery for seamen; but the preceding statement shows that such has not been its effect. On the contrary, it has tended to depress the condition of the genuine fisherman by bringing a host of interlopers into the field; and it has also been prejudicial to the little farmers and tradesmen by withdrawing their attention from their peculiar business, that they may embark in what has hitherto been little less than a sort of lottery adventure.

These consequences and the increasing amount of the sum paid for bounties at length induced the Government to adopt a different system. By an Act passed in 1825, the bounty of 2s. 3d. on exported herrings was made to cease in 1826, and 1s. was annually deducted from the bounty of 4s. per barrel paid on gutted herrings, till it ceased in 1830. And the foregoing table shows conclusively that those who contended that the best way to promote the fishery was to let it alone, were in the right; the quantity of herrings cured and the quantity exported having been both nearly doubled since the cessation of the bounties. The fishery is now for the first time placed on a secure foundation; the supply is proportioned to the real demand; while the genuine fishermen, and those curers who have capital of their own, are no longer injured by the competition of landsmen and others allured to the business by factitious encouragement and trading on capital furnished by Government.

The repeal of the salt laws, and of the duty on salt, which preceded the repeal of the bounty, was of signal service to the fishery. It is true that salt used in the fisheries was exempted from the duty; but in order to prevent the revenue from being defrauded, so many regulations were enacted, and the difficulties and penalties to which the fishermen were in consequence subjected were so very great, that some of them chose rather to pay the duty upon the salt they made use of than to undertake compliance with the regulations.

It is to be regretted that when Government repealed the bounty, it did not also abolish the 'Fishery Board,' and the officers and regulations it had appointed and enacted. So long as the bounty existed, it was quite proper that those who claimed it should be subjected to such regulations as Government chose to enforce; but since it has been repealed, we see no reason why the fishery should not be made perfectly free, and every one allowed to prepare his herrings as he thinks best. It is said, indeed, that were there no inspection of the fish, frauds of all sorts would be practised; that the barrels would be ill made, and of a deficient size; that the fish would not be properly packed; that the bottom and middle of the barrels would be filled with bad ones, and a few good ones only placed at the top; that there would not be a sufficiency of pickle &c. But it is obvious that the reasons alleged in vindication of the official inspection kept up in the herring fishery might be alleged in vindication of a similar inspection in almost every other branch of industry. It is, in point of fact, utterly useless. It is an attempt, on the part of Government, to do that for their subjects which they can do better for themselves. Supposing the official inspection were put an end to, the merchants and others who buy herrings of the curers would themselves inspect the barrels; and while any attempt at fraud by the curers would thus be effectually obviated, they would be left at liberty

to prepare their herrings in any way that they pleased, without being compelled, as at present, to follow only one system, or to prepare fish in the same way for the tables of the poor as for those of the rich. So far, indeed, is it from being true that the inspection system tends to put down trickery, that there is much reason to think that its effect is directly the reverse. The surveillance exercised by the officers is anything but strict; and the official brand is often affixed to barrels which, were it not for the undeserved confidence that is too frequently placed in it by the unwary, would lie in what has hitherto been rather a security against the detection of fraud than against its existence.

The grand object of the herring fishery 'Board' has been to enforce such a system of curing as would bring British herrings to a level with those of the Dutch. In this, however, they have completely failed; Dutch herrings generally fetching double the price of British herrings in every market of Europe. Neither is this to be wondered at. The consumers of Dutch herrings are the inhabitants of the Netherlands and of the German towns, who use them rather as a luxury than as an article of food, and who do not grudge the price that is necessary to have them in the finest order. The consumers of British herrings, on the other hand, are the poor of Ireland and Scotland. Cheapness is the prime requisite in the estimation of such persons; and nothing can be more entirely absurd than that a public Board should endeavour to force the fish curers to adopt such a system in the preparation of herrings as must infallibly raise their price beyond the means of those by whom they are bought. Why should not the taste of the consumers be consulted as much in this as in anything else? It would not be more ridiculous to attempt to have all cheese made of the same richness and flavour as Stilton than it is to attempt to bring up all herrings to the standard of the Dutch.

We do, therefore, hope that an end may be put to this system, and that our legislators and patriots will cease to torment themselves with schemes for the improvement of the fisheries. The very best thing they can do for them is to let them alone. It is not a business that requires any sort of adventitious encouragement. Every obstacle to the easy introduction of fish into London and other places should certainly be removed, but all direct interference with the fishery is sure to be in the last degree pernicious.

The commissioners appointed in 1863 to enquire into the deep-sea fisheries of Great Britain—Lord Hobart, and Messrs. Caird and Huxley—in the course of their exceedingly valuable and elaborate Report, concur in the view given in the text as to the inexpediency of continuing the present branding system. Most English curers are decidedly adverse to it; and though the foreign merchants are divided in opinion, the more intelligent are against the practice. As the Report very conclusively says, p. 78, 'The maintainers of the system say that if the British Government will not go on inspecting and guaranteeing the herrings, the Königsberg and Stettin merchants will get some one else to do it for them. And why not? What has the English Government to do with protecting herring merchants against the chicanery of their correspondents in the interior, when it allows merchants of every other description to take their own risks?' About half the barrels cured are branded.

Numerous Acts have been passed with a view to regulating the British white herring fishery from 48 Geo. III. c. 110 onwards.

This fishery is regulated chiefly by the provisions of 23 & 24 Vict. c. 92.

The close time of the Scotch fisheries is from January 1 to August 31 between Ardnamurchan on the north and the Mull of Galloway westwards, altered by 28 & 29 Vict. c. 22 to February 1 and May 31, or between Ardnamurchan on the south and Cape Wrath on the north, between January 1 and May 20, under the penalties of forfeiture and fine not exceeding 20*l*. The commissioners are intrusted with powers to manage and protect fisheries, and may prohibit trawl, beam, and drag nets. These orders were approved by the Treasury, and published. Fishing boats, sails, buoys, and principal floats must be marked and numbered; names of owners must be painted on boats in letters 2 inches long. The Fishery Board, in their Report of June 1, 1867, advocate the removal of the prohibitions against the use of the seine, or baring trawl net.

Of the 304,801 barrels of herrings exported from the United Kingdom in 1866, 176,731 went to Prussia, 58,256 to Hanover, 26,099 to Denmark, 13,534 to Tuscany. The exportation of herrings to the West Indies, which had of late years rapidly declined, in consequence, no doubt, of the emancipation of the slaves, has now wholly ceased.

The 24 & 25 Vict. c. 72 has the following sections, viz. :—

Sec. 1. Imposing penalties for selling herrings or herring fry during the close time 5*l*. to 20*l*., with forfeiture of nets, boats, and other instruments.

Sec. 3. Imposing penalties on defacing marks or numbers on boats, sails, &c., 2*l*. to 10*l*.

Sec. 5. Permitting sprat fishing within a certain part of the Firth of Forth.

Sec. 6. Declaring the import of 23 & 24 Vict. c. 92 s. 13 to apply to all nets other than usual drift nets, having meshes of the legal size of one inch from knot to knot.

Sec. 7. Empowering constables to exercise the functions created under this Act, when acting by authority of the sheriff. Penalties on resistance, fine not exceeding 50*l*., or imprisonment not exceeding 60 days.

**HIDES** (Ger. *häute*; Dutch, *huiden*; Fr. *peaux*; Ital. *cuoja*; Span. *pellejos, pieles*; Russ. *kosli*) signify generally the skins of beasts: but the term is more particularly applied to those of large cattle, such as bullocks, cows, horses &c. Hides are raw or green—that is, in the state in which they are taken off the carcass, or dressed with salt, alum, and salt-petre, to prevent them from putrefying; or they are cured or tanned. The hides of South America are in the highest repute, and vast quantities of them are annually imported. The customs duty formerly imposed on hides when imported was repealed by Sir Robert Peel in 1845, and, as was to be expected, the imports have since been very largely increased. The subjoined table shows the sources whence hides are principally brought, and the supplies furnished by each:—

Account of the Various Descriptions of Hides Imported into the United Kingdom in 1866, specifying the Countries whence they were Imported, the Quantities brought from each, and their Values.

N.B.—The importation of infected or diseased hides, skins, hoofs, horns &c. may be prohibited by Order in Council.

Dry hides imported from the north-east of Europe bear the highest price, while the best wet hides are imported from South America and Australia. In 1866 the average price of the former per cwt. was 4*l*. 9*s*., of the latter 2*l*. 8*s*., the best dressed leather is that from France, averaging 1*s*. 8*d*., 6*s*. 6*d*., and 1*s*. per lb. under each of the heads of the foregoing table. Russian dressed leather was worth in the same year 2*s*. 7*d*. per lb.

For the eight years ending with 1866 the imports of hides and leather from the British West Indies have become unimportant, while those from Australia and British India have greatly increased both in quantity and significance. There is but little variation in the annual imports of raw hides from year to year, though the quantity of those imported into the United Kingdom has

considerably increased within the period referred to above.

In 1866 we exported 671,077 hides, mostly foreign, of the value of 722,890*l*.; and in 1867 we imported 975,168, valued at 3,104,246*l*.

**HOGSHEAD.** A measure of capacity, containing 52½ imperial gallons. A hogshead is equal to a pipe. [WEIGHTS AND MEASURES.]

**HOLIDAYS** are understood to be those days, exclusive of Sundays, on which no regular public business is transacted at particular public offices. They are either fixed or variable. The *variable holidays* are, Ash Wednesday, Good Friday, Easter Monday and Tuesday, Holy Thursday, Whit Monday and Tuesday.

No holidays are kept by the Bank of England, the Customs, and the Inland Revenue Department, except Christmas Day, Good Friday, the Queen's birthday, and such days as may be appointed by proclamation for the purpose of a general fast, or by warrant of the authorities.

Kong is precisely similar to that described under the head of CASTOR.

It would appear from the Statistical Abstract that the value of the imports into the United Kingdom from Hong-Kong has fallen from

2,881,929*l.* in 1861, to 183,373*l.* in 1867. Annexed are statements exhibiting the extent of the direct trade between this dependency and the mother country during the three years ending with 1866.

Account showing the Quantities and Values of the Imports into the United Kingdom from Hong-Kong in 1861-66.

HOPS (Ger. hopfen; Dutch. hoppe; Fr. houblon; Ital. luppoli, brassicandoli; Span. oblon; Russ. chmud; Lat. humulus lupulus). The hop is a perennial rooted plant, of which there are several varieties. It has an annual twining stem, which, when supported on poles or trees, will reach the height of from 12 to 20 feet or more. It is a native of Britain, and most parts of Europe.

When the hop was first used for preserving and improving beer, or cultivated for that purpose, is not known [ALE]; but its culture was introduced into this country from Flanders in the reign of Henry VIII. Hops are first mentioned in the Statute Book in 1552, in an Act 5 & 6 Edward VI. c. 6; and it would appear from an Act passed in 1608 (1 Jas. I. c. 18) that hops were at that time extensively cultivated in England. Walter Blithe, in his *Improver Improved*, published in 1649 (3rd ed. 1655, p. 240), has a chapter upon improvement by plantations of hops, in which there is this striking passage. He observes that 'hops were then grown to be a national commodity; but that it was not many years since the famous city of London petitioned the Parliament of England against two nuisances; and these were, Newcastle coals, in regard to their stench and smell; and hops, in regard they would spoil the taste of drink, and endanger the people: and had the Parliament been no wiser than they, we had been in a measure pined, and in a great measure starved; which is just answerable to the principles of those men who cry down all devices, or ingenious discoveries, as projects, and thereby stifle all such improvement.'

After the hops have been picked and dried, the brightest and finest are put into pockets or fir-bagging, and the brown into coarse or heavy bagging. The former are chiefly used in the brewing of fine ales, and the latter by the porter brewers. A pocket of hops, if they be good in quality, well cured and tight trodden, will weigh about 1½ cwt.; and a bag of hops will, under the same conditions, weigh about 2½ cwt. If the weight of either exceeds or falls much short of this medium, there is reason to suspect that the hops are of an inferior quality, or have been badly manufactured. The brighter the colour of hops, the greater is the estimation in which they are held. Farnham hops are reckoned best. The expense of forming hop plantations is very great, amounting in some instances to from 70*l.* to 100*l.* an acre; and the produce is very uncertain, the crop being frequently insufficient to defray the expenses of cultivation.

In 1861 the hop duty was reduced from 2*d.* per lb., and 5 per cent., to 1½*d.* In the year 1863 the duty was wholly repealed.

The following is a statement of the imports of foreign hops for the ten years ending with 1866:—

Years	cwts.	Years	cwts.
1857	18,711	1862	153,791
1858	13,000	1863	147,281
1859	2,220	1864	38,656
1860	6,918	1865	82,489
1861	149,176	1866	85,687

The price varied considerably: for instance, they were sold at 2*l.* 5*s.* per cwt. in 1853, and at 10*l.* 14*s.* 2*d.* in 1860. Generally they are worth

about 5*l.* 5*s.* The chief supply of foreign hops is from Belgium, Hamburg, and France.

A planter or grower knowingly putting hops of different qualities or values into the same bag or package forfeits 20*l.*; and any person mixing with hops any drug, or other thing, to change or alter the colour or scent, shall forfeit 5*l.* per cwt. on all the hops so changed or altered. The malicious cutting or destroying of hop plantations may be punished by transportation beyond seas for life, or any term not less than 7 years, or by imprisonment and hard labour in a common gaol for any term not exceeding 7 years. (Loudon's *Encyc. of Agriculture*; Stevenson's *Surrey*; Burn's *Justice*; &c.)

The duty on hops of the growth of Great Britain produced, in 1862, 215,800*l.* The land under hops in England amounted in 1867 to 64,273 acres, of which there were in Kent 40,762, in Sussex 9,989, in Hereford 5,335, in Hampshire 2,992, &c.

In 1866 we exported 22,864 cwt. British, and 13,224 cwt. of foreign hops, chiefly to the United States and Australia.

HORN (Dutch, hoorn; Fr. corne; Ger. horn; Lat. cornu). A substance too well known to require any description. Horns are of very considerable importance in the arts, being applied to a great variety of useful purposes. They are very extensively used in the manufacture of handles for knives, and in that of spoons, combs, lanterns, snuff-horns &c. When divided into thin plates, horns are tolerably transparent, and were formerly used instead of glass in windows. Glue is sometimes made out of the refuse of horn. We annually import considerable quantities. In 1866 the imports of foreign horn amounted to 3,761 tons, and the exports to 1,050 tons.

HORSE (Ger. pferd; Dutch, paard; Dan. hest; Swed. hast; Fr. cheval; Ital. cavallo; Span. caballo; Russ. loschad; Pol. kon; Lat. equus; Gr. ἵππος). A domestic quadruped of the highest utility, being by far the most valuable acquisition made by man among the lower animals.

There is a great variety of horses in Britain; the frequent introduction of foreign breeds, and their judicious mixture, having greatly improved

*An Account of the Number of Horses in Great Britain Charged with Assessed Duties in each of the Years ended April 5, 1858 and 1866, and the Amount of Duty.*

Total	522,000	355,255 11 9	631,071	424,531 8 0

The duty on race horses was transferred from the assessed taxes to the excise by 19 & 20 Vict. c. 82.

*Exemptions.*—Besides the above account of the horses charged with duty, an account is published of the numbers exempted from the duty. This account is not, however, to be relied on; inasmuch as very many of those whose horses are not liable to the duties never think of making any returns. By not attending to this circumstance, we inadvertently, in a former edition of this work, under-rated the number of horses engaged in certain departments of industry.

*Influence of Railroads on Horses.*—The statements now made show the dependence that ought to have been placed on the estimates that were put forth by some of the promoters of railroads and steam carriages. These gentlemen

the native stocks. Our race horses are the fleetest in the world; our carriage and cavalry horses as amongst the handsomest and most active of those employed for these purposes; and our heavy draught horses are the most powerful, beautiful, and docile of any of the large breeds.

*Number and Value of Horses in Great Britain.*—The number of horses used in Great Britain for different purposes is very great, although less so, perhaps, than has been generally supposed. Mr. Middleton (*Survey of Middlesex*, 2nd ed. p. 630) estimated the total number of horses in England and Wales employed in husbandry at 1,200,000, and those employed for other purposes at 600,000. Dr. Colquhoun, contrary to his usual practice, reduces this estimate to 1,500,000 for Great Britain; and in this instance we are inclined to think his guess is pretty near the mark. In 1814, when the horses employed in husbandry were taxed, the numbers of the various descriptions of horses in England and Wales which paid duty amounted to 1,204,307; but this account did not include stage-coach, mail-coach, and hackney-coach horses, nor did it include those used in posting. Poor persons keeping only one horse were also exempted from the duty, as were all horses employed in the regular regiments of cavalry and artillery, and in the volunteer cavalry. In Mr. Middleton's estimate, already referred to, he estimated the number of post-chaise, mail-stage, and hackney-coach horses at 100,000; and from the enquiries we have made, we are satisfied that if we estimate the number of such horses in Great Britain at the like sum, we shall be decidedly beyond the mark.

On the whole, therefore, it may be fairly estimated that there are in Great Britain from 1,300,000 to 1,400,000 horses employed for various purposes of pleasure and utility. They may probably be worth at an average from 10*l.* to 12*l.* making their total value from 13,000,000*l.* to 16,800,000*l.* sterling, exclusive of the young horses.

The duties begin to be charged as soon as horses are used for drawing or riding, and as previously.

*An Account of the Number of Horses in Great Britain Charged with Assessed Duties in each of the Years ended April 5, 1858 and 1866, and the Amount of Duty.*

	1858		1866	
	Number of Horses	Amount of Duty £ s. d.	Number of Horses	Amount of Duty £ s. d.
Horses exceeding 15 hands, used for riding and drawing carriages, chargeable with duty	159,126	167,082 6 0	188,763	198,801 3 0

were pleased to tell us that by superseding employment of horses in public conveyances, in the regular carriage of goods, the full scope of their projects would in the end enable 1,000,000 horses to be dispensed with; and that, as 8 horses consumed as much food as 8 men, subsistence for 8,000,000 human beings would be provided. To dwell upon the absurdity of such a statement would be worse than useless; nor should we be thought of noticing it, but that it found its way into a report of a committee of the House of Commons. It is sufficient to observe that stage and mail coaches, and public waggon-vans &c. that have been superseded by steam carriages are not supposed to have displaced more than from 130,000 to 140,000 horses; the notion that 1 horse consumes as much as 8 men, at least if we suppose the men to

reasonably  
notice.

reasonably well fed, is too ridiculous to deserve notice.

The duties at present (1866) imposed on horses are respectively the excise of 3*l.* 17*s.* on race horses, and assessed taxes of 1*l.* 1*s.* and 10*s.* 6*d.* on other horses. The rules for discriminating between the horses liable to the duty of 21*s.* and those liable to the smaller duty of 10*s.* 6*d.* are embodied in the Act 16 & 17 Vict. c. 90. It also contains a lengthened statement of the exemptions from the duty. The latter comprise all horses kept *bonâ fide* for husbandry purposes; but such horses may be ridden, free of duty, to and from any place to which a burden shall have been carried or brought back, or to procure medical assistance. Cavalry horses in Her Majesty's service are also exempted from duty, as are the horses kept by field officers, adjutants, and surgeons serving in militia regiments. Brood mares, while kept for the sole purpose of breeding, are exempted from all duty.

The facility with which horses may be stolen has led to the enactment of several regulations with respect to their sale &c. The property of a horse cannot be conveyed away without the express consent of the owner. Hence a *bonâ fide* purchaser gains no property in a horse that has been stolen unless it be bought in a fair or an open market. It is directed that the keeper of every fair or market shall appoint a certain open place for the sale of horses, and one or more persons to take toll there, and keep the place from 10 in the forenoon till sunset. The owner's property in the horse stolen is not altered by sale in a legal fair unless it be openly ridden, led, walked, or kept standing for one hour at least, and led. Sellers of horses in fairs or markets must be known to the toll-takers, or to some other credible person known to them, who declares his knowledge of them, and enters the same in a book kept by the toll-taker for the purpose. Without these formalities the sale is void. The price of a horse stolen may, notwithstanding its legal sale, be redeemed on payment or tender of the price any time within 6 months of the time of the theft. (*Burn's Justice of the Peace*, Chitty's ed., vol. iii. p. 264.)

In 1866 we imported 1,646 horses, of the value of 36,312*l.*; and exported 4,069, valued at 167,384*l.* In 1864, 12,945 horses were brought into the Metropolitan Cattle Market; in 1865, 13,724; and in 1866, 14,947.

In order to obviate the facility afforded by means of slaughtering houses for the disposal of stolen horses, it was enacted in 1786 (26 Geo. III. c. 71) that all persons keeping places for slaughtering horses, geldings, sheep, hogs, or other cattle not killed for butcher's meat shall obtain a license from the quarter sessions, first from the minister and two substantial householders, a certificate of their fitness to be entrusted with the management and carrying on of such business. Persons slaughtering horses or cattle without license are guilty of felony, and may be whipped and imprisoned, or transported. Persons are bound to affix over the door or gate of the place where their business is carried on, in legible characters, the words 'Licensed for slaughtering Horses, pursuant to an Act passed in

HUNDRED WEIGHT

705

the 26th Year of his Majesty King George III.' The parishioners entitled to meet in vestry are authorised to choose annually, or oftener, inspectors, whose duty it is to take an account and description &c. of every living horse &c. that may be brought to such slaughtering houses to be killed, and of every dead horse that may be brought to be flayed. Persons bringing cattle are to be asked an account of themselves, and if it be not deemed satisfactory, they may be carried before a justice. This Act does not extend to curriers, fellmongers, tanners, or persons whose trade or business is the use of or curing of skins of any kind for the purposes of using or curing their hides in their respective businesses; but these, or any other persons who shall knowingly or wilfully kill any sound or useful horse &c., shall for every such offence forfeit not more than 20*l.*, and not less than 10*l.* This Act has been amended by 7 & 8 Vict. c. 87, 12 & 13 Vict. c. 92 s. 7, and 25 & 26 Vict. c. 102.

The stealing of horses and other cattle was formerly a capital crime, punishable by death; but now to steal the carcase or skin, is to be punished, at the discretion of the court, by penal servitude for any term not exceeding 14 years, nor less than 3 years, or by imprisonment for any term not exceeding 2 years; 24 & 25 Vict. c. 96 ss. 10 & 11.

*French Trade in Horses.*—The horses of France are not, speaking generally, nearly so handsome, fleet, or powerful as those of England. Latterly, however, the French have been making great efforts to improve the breed of horses, and in this view, been making large importations from England and other countries. At an average of 5 years ending with 1827, the excess of horses imported into France above those exported amounted to about 13,000 a-year. (*Bulletin des Sciences Géographiques*, tom. xix. p. 5.) The imports from England have, in some late years, amounted to nearly 2,000 horses. In 1866 they were 1,182.

By 29 Vict. c. 36 the licenses to let horses for hire are altered thus:—

1 horse or 1 carriage	-	-	5
Not exceeding 3 horses or 2 carriages	-	-	10
4 " 3 "	-	-	15
5 " 4 "	-	-	20
6 " 5 "	-	-	25

but beyond these numbers the rates are not altered. HORSE DEALERS. Persons whose business it is to buy and sell horses.

Every person carrying on the business of a horse dealer is required to keep a book, in which he shall enter an account of the number of horses kept by him for sale and for use, specifying the duties to which the same are respectively liable. This book is to be open at all reasonable times to the inspection of the officers, and a true copy of the same is to be delivered quarterly to the assessor or assessors of the parish in which the party resides. Penalty for non-compliance 50*l.* (43 Geo. III. c. 161.) Horse dealers are assessed, if they carry on their business in the metropolis, 27*l.* 10*s.*; and if elsewhere 13*l.* 15*s.*

In the year ended April 5, 1866 there were in the metropolis 59 horse-dealers, in England 968, and in Scotland 102, making a total of 1,129.

HUNDRED WEIGHT. A weight of 112 lbs. avoirdupois, generally written cwt.

## I

ICE. The sale of ice and snow preserved in the caverns of Vesuvius and on the more elevated parts of Ætna has long been a considerable branch of trade in Naples, Catania, and the adjoining towns; but it was reserved for the Americans to carry the trade in ice to an extent which could not previously have been anticipated. The extreme heat of the summer in the Central and Southern States occasions a natural demand for ice, which the extreme cold of the winter in the New England States gives the means of supplying. The fresh water lakes adjoining Boston and other large towns being deeply frozen in winter, large ice-houses are filled with the ice taken from them, which is retailed in summer at a low price.

This practice had not, however, been long established when it occurred to some ingenious speculators to attempt to realise a profit by shipping ice to the southern parts of the Union and the West Indies; and the speculation having succeeded, the trade was subsequently extended to the Spanish Main and South America, and more recently to Europe, India, and China! The business has, in fact, become of the first importance; numerous companies and a very large amount of tonnage being now engaged in the ice trade from Boston. And owing to the greater skill and economy with which the business is at present conducted, the ice which used to cost 6 cents per lb. in New Orleans and the Havanna, may now be had for 1 cent; and there has been a like fall in its price in India and other more distant places. An immense warehouse has been constructed at Calcutta for the reception of the ice brought by the ships, whence it is supplied in the quantities required for the public accommodation. This singular fabric has triple walls, five distinct roofs, encloses about three-fourths of an acre, and is fitted to hold upwards of 30,000 tons of ice! Our readers do not require to be told that in some years London has been a considerable market for American ice. This, however, is only a casual occurrence, depending principally on the circumstance of an unusually hot summer having followed an unusually mild winter, which, on the one hand, occasions a large demand for ice, while, on the other, it lessens or annihilates the home supply. And the same may be said generally in regard to the demand of other European countries. The ice shipped from America is principally obtained from Fresh Pond, Spy Pond, and Wenham Lake, in an elevated position, about 18 miles from Boston, to which it is conveyed by railway; but it is also obtained from various other ponds and lakes. It is kept stored up in large warehouses adjoining the lakes till it is required for shipment. The holds of the ships used for the conveyance of ice have a space between the planking of the ship and the ice boxed in and usually filled with sawdust or some other substance regarded as a non-conductor of heat. Formerly the ice was packed with straw and hay, in boxes of thin lumber made air-tight; but this mode of packing is now comparatively little used. The ice is beautifully transparent and free from air-cells, and is usually cut into blocks about a foot thick. In 1854 no fewer than 136,540 tons were shipped from Boston, and about 20,000 tons

from New York; but in 1866 the total exports from Boston had fallen to 124,751 tons, while in 1865 they reached 131,275 tons. The home consumption of New York has been estimated at from 260,000 to 270,000 tons! [Boston.]

Owing to the mildness of our winters we have sometimes little or no frost, and when it is most severe, ice in this country rarely exceeds 2 or 3 inches in thickness, and is usually, also, a good deal stained with impurities. In 1866, also, a good deal of ice were imported into the United Kingdom, of which 62,374 came from Norway.

**IMPORTATION AND EXPORTATION.** The bringing of commodities from and sending them to other countries. A very large portion of the revenue of Great Britain being derived from customs duties, or from duties on commodities imported from abroad, and drawbacks being given on a few articles exported (at present, 1868, on refined sugar and tobacco only), the business of importation and exportation is subjected to various regulations which must be carefully observed by those who would avoid incurring penalties, and subjecting their property to confiscation. The regulations referred to are embodied chiefly in the Customs Consolidation Act, 16 & 17 Vict. c. 107, which came into operation on August 20, 1857. We subjoin an abstract of such portions of this and subsequent statutes (18 & 19 Vict. c. 96, 23 & 24 Vict. c. 22, 25 & 26 Vict. c. 63, 30 & 31 Vict. c. 82) as relate to importation, exportation &c.

**CUSTOMS CONSOLIDATION ACT OF 1853,** 16 & 17 VICT. c. 107.

The first 8 clauses of the Act relate to the appointment of Officers of Customs, and need not be here referred to.

Clauses 9 to 14 relate to the appointment of Ports, Quays, Warehouses, Suffrance Wharves, Landing and Boarding Stations.

Clauses 15 to 17 relate to the Licensing of Agents for the transacting of business relating to the Entry and Clearance of Ships, Goods, and Barges, and of Lightermen for the Carriage of Goods to and from importing and exporting ships.

Clauses 18 to 28 relate to the Collection, Management, and Custody of Duties of Customs, and the Payment of Drawbacks and Allowances.

**AS TO DISPUTES AND CONTROVERSIES BETWEEN THE IMPORTER OF GOODS AND THE OFFICERS OF CUSTOMS AS TO THE DUTY ON SUCH GOODS.**

*In case of Dispute, Importer to deposit the Duty demanded.*—If any dispute shall arise as to the proper rate of duty payable in respect of any goods imported into the United Kingdom, and admissible for home consumption, the importer or consignee, or his agent, shall deposit in the hands of the collector of the customs at the port of importation the amount of duty demanded by the collector; and such deposit shall be deemed to be the proper duty payable in respect of such goods unless an action or suit shall be brought or commenced by the importer of such goods within 3 months from the time of making such deposit, in one of her Majesty's courts of law at Westminster, Dublin, or Edinburgh, against

such collector whether a payable up such deposits goods by collector shall be delivered

Power to remit or consideration of the which such dispute

such collector, for the purpose of ascertaining whether any and what amount of duty is due and payable upon such goods; and, upon payment of such deposit, and passing a proper entry for such goods by the importer, consignee, or agent, such collector shall thereupon cease the said goods to be delivered in virtue of such entry. (Sec. 29.)

**Deposits to be carried to Consolidated Fund.**—Where such deposit shall have been made as aforesaid, the same shall be paid by the said collector to the Receiver-General of Customs, to be by him carried to the Consolidated Fund of the United Kingdom; and in case no action shall be brought within the time hereinbefore limited for that purpose, such deposit shall be retained and applied to the use of her Majesty, in the same manner as if the same had been originally paid and received as the duty due and payable on such goods; and in case such action shall be so brought, and it shall thereupon be determined by due course of law that the duty so demanded and deposited was not the proper duty due and payable upon such goods, but that a less duty was payable thereon, then the difference between the sum so deposited and the duty so found to be due, or the whole sum so deposited, as the case may require, shall forthwith be returned to such importer, with interest thereon after the rate of 5 per cent. per annum for the period during which the sum so paid or returned shall have been so deposited; and such payment shall be accepted by such importer in satisfaction of all claims in respect of the importation of such goods and the duty payable thereon, and of all or any damages and expenses incident thereto, except costs of suit, as next hereinafter provided; that is to say, provided always that the party to such action or suit in whose favour a verdict shall be given shall be entitled to his costs of suit as between party and party against the other party to such action or suit—such costs to be taxed by the proper officer of the court in which such action shall be brought in the usual way; and if such verdict shall be given against the plaintiff in such action or suit, the costs so taxed as aforesaid shall be recoverable and recovered against the plaintiff in the same manner as damages and costs in an ordinary action or suit in such court are recoverable by law; but if such verdict shall be given against the collector as defendant in such suit, the costs so taxed as aforesaid shall be paid by the Commissioners of Customs out of any moneys arising from the duties of customs. (Sec. 30.)

**As to COMPLAINTS AND DISPUTES BETWEEN MERCHANTS AND OTHERS AND THE OFFICERS OF CUSTOMS, THE PUBLIC INVESTIGATION THEREOF, AND ENQUIRIES TOUCHING MATTERS RELATING TO THE CUSTOMS, AND THE CONDUCT OF OFFICERS OR OTHERS CONCERNED THEREIN.**

**Disputes and Enquiries in London.**—If in the port of London any dispute arise between any masters or owners of ships, merchants, importers, consignees, shippers, or exporters of goods, or their agents, and any officer of customs, with reference to the seizure or detention of any ship or goods, or to any apparently accidental omission, inadvertence, or non-compliance with the laws or regulations relating to the customs, it shall be lawful for the Commissioners to dispose of or determine such dispute in such manner as they may seem just. (Sec. 31.) N.B.—The licensed agents mentioned in the Act have ceased to exist.

**Power to remit or mitigate Penalties.**—If upon consideration of the facts and circumstances out of which such dispute shall have arisen, the Com-

missioners of Customs shall be of opinion that any penalty or forfeiture has been incurred by any such master, owner, merchant, importer, consignee, shipper, exporter, or agent, the said Commissioners may, in case they shall be of opinion that the penalty ought to be remitted, remit and forego the same accordingly, or in case they shall be of opinion that a mitigated penalty should be imposed and enforced, mitigate any such penalty or forfeiture to such amount as they may deem a sufficient satisfaction for the breach of law or regulation complained of. (Sec. 32.)

**Appeal to open Court.**—In case any such master, owner, merchant, importer, shipper, exporter, or agent shall feel himself aggrieved by the determination of the Commissioners of Customs in any of the cases aforesaid, or have any ground of complaint against any officer of Customs in respect of anything done or omitted to be done by such officer in or about the execution of his duty, the party so feeling himself aggrieved shall, upon an application in writing to the Commissioners of Customs, which application shall state the substance of his complaint, or the reasons of his dissatisfaction with such determination, be entitled to have the facts and circumstances of such complaint or determination enquired into by one of the said Commissioners, in the manner following. (Sec. 33.)

**Commissioner to conduct public Enquiry.**—Upon receipt of such application as aforesaid the Commissioners of Customs shall depute one of such Commissioners to enquire into the subject matter of such application, for which purpose a suitable apartment shall be provided, to which the parties complaining and the parties complained against, and their agents and witnesses, and all other persons interested or desirous of attending, shall have free access; and the Commissioner so deputed shall receive the statement of the complainant or his agent or attorney, and hear any reasons which he or they may advance in support of his complaint, and the said Commissioner shall take or cause to be taken any evidence on oath which the said complainant may offer and adduce in support of his complaint, and write down or cause to be written down and report the substance of such evidence in a narrative form, and his opinion thereon and on the arguments, if any, adduced on the hearing of the case, for the information of the said Commissioners; and in like manner the Commissioner so deputed as aforesaid shall take and write down or cause to be taken down and written, and report for the information of the said Commissioners of Customs, any evidence which may be offered in support of such determination of the Commissioners, or in case of a complaint against an officer such exculpatory evidence as the officer complained against may offer or adduce; and the course of proceeding with respect to the taking of such evidence and the conduct of such enquiry shall be in as close conformity as the nature of such enquiry will admit with the practices adopted before justices on enquiries had before such justices. (Sec. 34.)

**Commissioners to prosecute or decide.**—The Commissioners of Customs, upon the evidence so reported to them, shall either determine to prosecute, if they deem it a proper case for prosecution, or decide the case upon such evidence, and make their order thereon accordingly, which order shall be communicated by a Commissioner in open court either on the same day or a future day to be appointed at the hearing for that purpose; and every order of the Commissioners of Customs, made upon consideration of the facts, circumstances, and evidence so reported by the Commis-

IMPORTATION AND EXPORTATION

time, or for any of the purposes of this or any Act relating to the customs, it shall become necessary to determine the precise time at which an importation of any goods shall be deemed to have had effect, such time shall be deemed to be the time at which the ship importing such goods had actually come within the limits of the port at which such ship shall in due course be reported and such goods be discharged; and if any question arise upon the arrival of any ship in respect of any cargo, or allowance upon such ship, exclusive of the time at which the report of such ship has been or ought to have been made. (Sec. 42.)

**Importation Direct.**—No goods shall be deemed to be imported from any particular place unless they be imported direct from such place, and shall have been there laden on board the importing ship, or the same shall have been actually landed at such place. (Sec. 43.)

**Prohibitions and Restrictions.**—If any goods enumerated or described in the following table of prohibitions and restrictions as 'goods absolutely prohibited to be imported' shall be imported or brought into the United Kingdom, or if any goods enumerated or described in such table as 'goods prohibited to be imported except in transit,' and subject to such regulations and restrictions as the Commissioners of the Treasury may direct, and duly reported as goods in transit accordingly, shall be imported into the United Kingdom, except in transit, in accordance with such regulations and restrictions, and so reported as aforesaid, or if any goods enumerated or described in such table as 'goods subject to certain restrictions on importation' shall be imported or brought into the United Kingdom contrary to the prohibitions or restrictions contained in such table in respect thereof, then and in every such case such goods shall be forfeited, and shall be destroyed or otherwise disposed of as the Commissioners of Customs may direct. (Sec. 44.)

A TABLE OF PROHIBITIONS AND RESTRICTIONS INWARDS.

*Goods absolutely prohibited to be imported.*

Books wherein the copyright shall be first subsisting, first composed or written or printed in the United Kingdom, and printed or reprinted in any other country, as to which the proprietor of such copyright or his agent shall have given to the Commissioners of Customs a notice that such copyright exists, such notice also stating when such copyright will expire.

Gold, viz.—false money or counterfeit sterling.

Coin, silver, of the realm, or any money purporting to be such, not being of the established standard in weight or fineness.

Extracts, essences, or other concentrations of wine, chicory, tea, or tobacco, or any admixture of the same.

Indecent or obscene prints, paintings, books, cards, lithographic or other engravings, or any other indecent or obscene articles.

Swiss work.

Tobacco stalks stripped from the leaf, whether manufactured or not.

Tobacco stalk flour.

Articles of foreign manufacture and any packages of such articles bearing any names, brands, marks being or purporting to be the names, initials, or marks of manufacturers resident in the United Kingdom.

Stamps and watches of any metal impressed with any mark or stamp, appearing to be or to

represent any legal British assay, mark, or stamp, or purporting by any mark or appearance to be of the manufacture of the United Kingdom.

*Goods prohibited to be imported, except subject to the Restrictions on Importation herein contained.*

Infected cattle, sheep, or other animals, and hides, skins, horns, hoofs, or any other part of cattle or other animals, which Her Majesty may, by order in council, prohibit in order to prevent any contagious distemper.

Silk, manufactures of silk, being the manufactures of Europe, unless into the ports of London, Liverpool, Hull, Southampton, Leith, or Dublin, or ports appointed by the Commissioners of Customs, or into the ports of Dover or Folkestone direct from Calais or Boulogne, and unless in ships of 50 tons burden or upwards.

Spirits (not being perfumed or medicinal spirits), unless in ships of 50 tons burden at least, and in each of such casks capable of containing liquids, size or content of 20 gallons at the least, and the duty reported, or in glass bottles or stone bottles packed in cases, each of which shall contain not less than 2 gallons of spirits, and being really reported.

Tobacco, cigars, and snuff, unless in whole and complete packages, containing not less than 80 lbs. nett of such tobacco, cigars, and snuff. (18 & 19 Vict. c. 96 s. 2.)

Tobacco, snuff, cigars, cigarillos, or cigarettes of any kind, or from any country or place whatever, unless in ships of not less than 120 tons burden, and imported into such ports only as are or may be approved of by the Commissioners of Customs.

Arms &c. may be prohibited.—The importation of arms, ammunition, gunpowder, or any other goods may be prohibited by proclamation or order in council. (16 & 17 Vict. c. 107 s. 45.)

*Printed Lists of prohibited Books to be exposed at Custom Houses.*—The Commissioners of Customs shall cause to be made, and to be publicly exposed at the several ports in the United Kingdom and in Her Majesty's possessions abroad, printed lists of all books wherein the copyright shall be subsisting, and as to which the proprietor of such copyright, or his agent, shall have given notice in writing to the said Commissioners that such copyright exists, stating in such notice when such copyright expires. (Sec. 46.)

*Ship to come quickly to Place of unloading, and bring-to at the Stations for boarding Officers.*—If any ship coming into the United Kingdom or into the Channel Islands shall not come as quickly to the proper place of mooring or unloading as the nature of the port will admit, without touching at any other place, and in proceeding to such proper place shall not bring-to at the stations appointed by the Commissioners of Customs for the boarding of ships by the officers of the Customs, or if after arrival at such place such ship shall remove from such place, except directly to some other proper place of mooring or unloading, and with the knowledge of the proper officer of the Customs, or if the master of any ship on board of which any officer is stationed neglect or refuse to provide every such officer with sufficient room under the deck in some part of the fore-castle or steerage for his bed or hammock, the master of such vessel shall forfeit the sum of 20l. (Sec. 47.)

*Officers to board Ships &c.*—The proper officers of the Customs may board any ship arriving at

Here state the Particulars according to the above Headings.				
Number	Numbers	Number of Packages, with the best Description of the Goods the Importer is able to give		
Here state the Particulars according to the above Headings.				

I, the importer (or agent to the importer) of the goods above-mentioned, do hereby declare that I have not (if importer), or that to the best of my knowledge he has not (if agent), received sufficient invoice, bill of lading, or other advice from whence the quality, quantity, or value of the goods above-mentioned can be ascertained. Dated the \_\_\_\_\_ day of \_\_\_\_\_ 18\_\_\_\_.

(Signed) \_\_\_\_\_ Importer or his Agent.  
(Signed) \_\_\_\_\_ Collector. § 61.

**Warrant for Landing.**—Such entry being delivered to the collector or comptroller, and signed by him, shall be the warrant for provisionally landing such goods to be examined by such importer in the presence of the proper officers; and the importer shall within 3 days, or such further time as may be allowed by the Commissioners of Customs after the landing thereof, and before the same shall be delivered, make full and perfect entry thereof by endorsing upon such bill of lading such particulars of such goods as are required on making perfect entry of goods, whether for payment of duty, or for warehousing, or for delivery free of duty, as the case may be; and to such indorsement he shall affix the date thereof, together with his signature and place of abode; and such indorsement, when signed by the collector or comptroller, shall be taken as the perfect entry for such goods. (Sec. 62.)

**Goods entered by Bill of Sight not to be delivered when Duty is paid or deposited.**—Where any entry for the landing and examination of goods for delivery on payment of duty shall be made by bill of sight, such goods shall not be delivered until perfect entry thereof have been made and the duties due thereon paid, unless the importer or his agent shall have deposited with the proper officer of the customs a sum of money sufficient in amount to cover the duties payable thereon; and if the sum deposited on a bill of sight shall not be equal in amount to the duties payable upon all the goods contained in any package landed or examined thereby, no such goods shall be delivered until a perfect entry or indorsement is or are made, and the duties paid or deposited for the whole of the goods contained in such package. (Sec. 63.)

**Goods to be taken to Queen's Warehouse in default of perfect Entry within Three Days &c.**—If perfect entry of any goods landed by bill of sight as aforesaid be not made within three days, or such further time as may be allowed by the Commissioners of Customs, after the landing thereof, such goods shall be taken to the Queen's warehouse by the officers of the customs; and if the importer shall not within three days after such landing make perfect entry of such goods, and pay the duties thereon

or on such parts as can be entered for home use together with the charges of removal and of warehouse rent, such goods shall be sold for the payment of such duties and charges (or for exportation if they be such as cannot be entered for home use, or shall not be worth the duties), and the overplus, if any, after payment of such duties and charges, or the charges if sold for exportation, shall be paid to the importer or proprietor thereof: provided always, that when entry be at any time made as and for a full and perfect entry for any goods provisionally landed by bill of sight or deposited in the Queen's warehouse as aforesaid, if such entry shall not be made in manner herein required for the due landing of the goods, the same shall be deemed to be goods landed without entry, and shall be forfeited. (Sec. 64.)

**AS TO THE ENTRY OF GOODS RE-IMPORTED INTO THE UNITED KINGDOM AS FOREIGN OR BY BILL OF STORE.**

**Re-importation of British Goods.**—All British goods brought back into the United Kingdom, being of such a kind and description as, if foreign, would be liable to any duty of customs on importation, shall be deemed to be foreign, and liable to the same duties, rules, regulations, and restrictions as foreign goods of the like kind or description; but if the same shall be brought back within 5 years from the time of the exportation thereof, and it shall be proved to the satisfaction of the Commissioners of Customs that they are British goods returned, the same may be entered by bill of store containing such particulars and in such manner and form as the said commissioners may direct: provided always, that all corn, grain, meal, and flour brought into the United Kingdom shall be deemed and taken to be foreign goods, and all goods brought into the United Kingdom for which any drawback of excise or customs shall have been received on exportation shall be deemed and treated as foreign unless admitted to entry by special permission of the Commissioners of Customs, and on repayment of such drawback. And all foreign goods on re-importation into the United Kingdom, whether they shall have paid duty on their first importation or not, shall be liable to the same

proceeds in like manner: provided always, that for this purpose, if the importing ship and goods be liable to the performance of quarantine, the time for entry and landing of such goods shall be computed from the time at which such ship and goods shall have been released from quarantine: provided always, that if 48 hours or any earlier period after the report of any ship is specified in the bills of lading for the discharge of her cargo or any part thereof, and the importer, owner, or consignee of such goods or his agent shall neglect to enter and land the same within such 48 hours at any port or place approved by the Commissioners of Customs, the master or owner of such ship may immediately, on the expiration of such 48 hours, enter and land such goods.

(Sec. 74.)

*If Goods remain on board importing Ship beyond 14 Days such Ship may be detained for Expenses.*

Whenever any goods shall remain on board any importing ship beyond the period of 14 days after the arrival of such ship, or beyond such further period as the Commissioners of Customs may allow, such ship shall be detained by the proper officer of customs until all expenses of watching or guarding such goods beyond such 14 days, or such further time, if any allowed as aforesaid, not exceeding *vs.* per diem, and of removing the goods, or any of them, to the Queen's warehouse, in case the officers shall so remove them, be paid.

(Sec. 75.)

*As to GOODS UPON WHICH ANY ABATEMENT FOR DAMAGE ON THE VOYAGE OR BY WRECK MAY BE CLAIMED.*

*Abatement of Duty on Damaged Goods.*—No claim for any abatement of duty in respect of any goods imported into the United Kingdom shall be allowed on account of damage unless such claim shall be made on the first examination thereof, and in such form and manner as the Commissioners of Customs shall direct, nor unless it shall be proved to the satisfaction of the Commissioners of Customs or their officers that such damage was sustained after such goods had been shipped in the importing ship and before the landing thereof in the United Kingdom: and all goods dross, jetsam, flotsam, and wreck brought or coming into the United Kingdom, and all droits of Admiralty sold in the United Kingdom, shall at all times be subject to the same duties as goods of the like kind on importation into the same part of the United Kingdom are subject to, unless it shall be shown to the satisfaction of the Commissioners of Customs that such goods are the growth, produce, or manufacture of any country or place by virtue whereof the same may be entitled to be admitted at less than the foreign duty, or duty free, or that the same, if liable to duty, are entitled to an abatement in respect of such damage; and the damage sustained by such goods, whether so imported or dross, jetsam, flotsam, or wreck as aforesaid, shall be assessed by the officers of the customs, if competent thereto; but if not, or if the Commissioners of Customs or the collector or comptroller of the port into which the same shall be imported or brought as aforesaid shall entertain any doubt as to the amount of such damage, they may call upon two indifferent merchants to examine the goods and certify to what extent in their judgment the same are lessened in value by such damage, whereupon the officers of the customs may make an abatement not exceeding  $\frac{1}{3}$  of the duty originally chargeable thereon; but no allowance shall be made for damage on spirits, wine, grain, meal and flour, sugar, cocoa, tea, coffee,

pepper, tobacco, currants, raisins, wine, and figs. (Sec. 76.)

*AS TO THE PRODUCTION OF CERTIFICATES OF ORIGIN IN RESPECT OF GOODS CLAIMING ANY BENEFIT THEREBY ON IMPORTATION.*

*Goods from Possessions Abroad.*—No goods shall be entered as being of or from any British possessions abroad (if any benefit attach to such distinction) except the territories subject to the Government of the presidencies of Bengal, Madras, and Bombay respectively, unless the master of the ship importing the same shall have delivered to the collector or comptroller a certificate, under the hand of the proper officer of the place where such goods were taken on board, of the due clearance of such ship from thence, containing an account of such goods. (Sec. 77.)

*Treasury may require Certificates of Production.*—The Commissioners of the Treasury may by order under their hands declare that a certificate of production shall be required upon the exportation of any goods from any British possession abroad or other place, or upon the importation of such goods into the United Kingdom, and frame such regulations respecting such certificates and goods as they may think fit; and if any goods in respect of which such certificates are required be imported without such certificate, they shall be deemed to be foreign goods and liable to any duty attaching to them as such; and such orders of the Treasury shall be published in the London and Dublin Gazettes 3 times at least within 3 months from the date thereof respectively. (Sec. 78.)

*Certificate of Sugar from Limits of East India Company's Charter.*—Before any sugar shall be entered as being the produce of any British possession within the limits of the East India Company's charter, the master of the ship importing the same shall, so long as any benefit attach to such distinction, deliver to the collector or comptroller a certificate under the hand and seal of the proper officer at the place where such sugar was taken on board, testifying that a declaration in writing, the contents of which he believed to be true, had been made and signed before him by the shipper of such sugar, that the same was really and bona fide the produce of the British possession. (Sec. 80.)

*East India Sugar warehoused at the Cape of Good Hope.*—If any sugar, the produce of any British possession within the limits of the East India Company's charter, so long as any benefit attaches to such distinction, shall have been imported into the Cape of Good Hope from the place of its production, accompanied by such a certificate of origin as would be sufficient for its admission into the United Kingdom at the rate of duty payable upon such sugar if imported direct from the place of its production, and shall have been warehoused at the Cape of Good Hope under the regulations there in force for the warehousing of goods, and shall have been exported from such warehouse, accompanied by a certificate from the proper officer of customs at the Cape of Good Hope, setting forth the particulars of the importation, and of the warehousing and of the exportation of the same, and also setting forth the substance of the certificate of origin before mentioned, and if, on the arrival in the United Kingdom of the ship importing such sugar, the master of such ship shall deliver to the collector or comptroller at the port of importation such certificate from the officer of the customs at the Cape of Good Hope, such sugar shall be admitted at such port of importation in the United Kingdom at

house shall neglect to stow the goods warehoused therein so that easy access may be had to every package and parcel thereof, he shall for every such neglect forfeit the sum of 5*l*. (Sec. 91.)

**Warehousekeeper neglecting to produce Goods deposited, to forfeit 5*l*.**—If the occupier of any warehouse shall not produce to any officer of customs on his request any goods deposited in such warehouse which shall not have been duly cleared and delivered therefrom, such occupier shall for every such neglect forfeit the sum of 5*l*. in respect of every package or parcel not so produced, besides the duties due thereon. (Sec. 92.)

**Goods not duly warehoused, or fraudulently concealed, or removed, forfeited.**—If any goods entered to be warehoused shall not be duly warehoused in pursuance of such entry, or being duly warehoused shall be fraudulently concealed in or removed from the warehouse, or abstracted from any package, or transferred from one package to another or otherwise, for the purpose of illegal removal or concealment, they shall be forfeited. (Sec. 93.)

**Importer or Proprietor of warehoused Goods clandestinely gaining Access thereto to forfeit 100*l*.**—If the importer or proprietor of any goods warehoused, or any person in his employ, shall clandestinely open the warehouse, or, except in the presence of the proper officer of customs acting in the execution of his duty, gain access to the goods, such importer or proprietor shall for every such offence forfeit the sum of 100*l*. (Sec. 94.)

**Duty on Goods taken out of Warehouse without Entry to be paid by Warehousekeeper &c.**—If any goods shall be taken out of any warehouse without due entry of the same with the proper officer of customs, the occupier of such warehouse shall forthwith pay the duties due upon such goods; and every person so taking out any goods without payment of duty, or who shall aid, assist, or be concerned therein, and every person who shall wilfully destroy or embezzle any goods duly warehoused, shall be deemed guilty of a misdemeanor, and shall, upon conviction, suffer the punishment by law inflicted in cases of misdemeanor; but if such person shall be an officer of customs or excise not acting in the due execution of his duty, and shall be prosecuted to conviction by the importer, consignee, or proprietor of such goods, no duty shall be payable for or in respect of such goods, and the damage occasioned by such waste, spoil, or embezzlement shall, with the sanction of the Commissioners of the Treasury, be repaid or made good to such importer, consignee, or proprietor by the Commissioners of Customs. (Sec. 95.)

**Goods damaged by Fire, Importer not entitled to Compensation.**—No compensation shall be made by the Commissioners of Customs to any importer, proprietor, or consignee of any goods by reason of any damage occasioned thereto in the warehouse by fire or other inevitable accident. (Sec. 96.)

**Commissioners may remit Duties on warehoused Goods lost or destroyed.**—If any goods warehoused entered to be warehoused, or entered to be delivered from the warehouse, shall be lost or destroyed by unavoidable accident, either on shipment or in landing, or in receiving into the warehouse, or in the warehouse, the Commissioners of Customs may remit or return the duties due thereon. (Sec. 97.)

TO THE REMOVAL OF WAREHOUSED GOODS.

**Goods may be removed from one Port to another.**—Any goods warehoused at any port in the United Kingdom may be removed, by sea or by land carriage to any other port in which the

like kind of goods may be warehoused on importation, to be rewarehoused at such other port, and again as often as may be required at any other such port, to be there rewarehoused, or with the permission of the proper officer of customs from any warehouse in any port to any other warehouse in the same port, under such regulations and with such security as the Commissioners of Customs may direct on the delivery to the proper officer, by the person requiring such removal, of a request note, stating the particulars of the goods required to be removed, the name of the port, or of the warehouse, if in the same port, to which the same are intended to be removed, and with such other information and in such manner and form as the Commissioners of Customs or the proper officer may direct or require. (Sec. 98.)

**Officers at Port of Removal to transmit Account of Goods to Officers at Port of Destination.**—On the delivery of any goods for removal, an account, containing the particulars thereof, shall be transmitted by the proper officers of the port of removal to the proper officers of the port or place of destination, and the person requiring the removal thereof shall enter into bond, with one sufficient surety, in a sum equal at least to the duty chargeable on such goods, for the due arrival and rewarehousing thereof at the port or place of destination within such time as the Commissioners of Customs may direct, such bond to be taken by the collector, comptroller, or other proper officer, either of the port or place of removal, or the port or place of destination, as shall best suit the residence or convenience of the parties interested in such removal; and if such bond shall have been given at the intended port or place of destination, a certificate thereof, under the hand of the collector or comptroller, or other proper officer of such port, shall at the time of the entering of such goods be produced to the collector, comptroller, or other proper officer of the port of removal; and such bond shall not be discharged unless such goods shall have been produced to the proper officer, and duly rewarehoused at the port of destination, within the time allowed for such removal, or shall have been otherwise accounted for to the satisfaction of the Commissioners of Customs, nor until the full duties due upon any deficiency of such goods not so accounted for shall have been paid; but any remover may enter into general bond, with such sureties, in such amount, and under such conditions, as the Commissioners of Customs may approve, for the removal from time to time of any goods from one warehouse to another, and for the due arrival and rewarehousing of the same at the place of destination within such time or times as the said Commissioners may direct. (Sec. 99.)

**Goods, on Arrival at Port of Destination, to be subject to same Regulations as Goods on first Importation.**—Upon the arrival of such goods at the port or place of destination, the same shall be entered and warehoused in the same manner, and under and subject to the same laws, rules, and regulations, so far as the same are or can be made applicable, as are required on the entry and warehousing of goods on the first importation thereof. (Sec. 100.)

**On Arrival of Goods at Port of Destination, they may be entered for Exportation or for Home Use, on Payment of Duties.**—If upon the arrival of goods so removed as aforesaid at the port of destination the parties shall be desirous forthwith to export the same, or to pay duty thereon for home use, without actually lodging the same in the warehouse for which they have been entered and examined to be rewarehoused, the officers of customs

at such port may, after all the formalities of entering and examining such goods for re-warehousing have been duly performed, permit the same to be entered and shipped for exportation, or to be entered and delivered for home use, upon payment of the duties due thereon, as if such goods had been actually lodged in such warehouse; and all goods so exported, or for which the duties have been so paid, shall be deemed to have been duly cleared from the warehouse. (Sec. 101.)

*Warehoused Goods, if not cleared for Home Use or Exportation within 5 Years, must be re-warehoused.*—All warehoused goods shall be cleared either for home use or exportation at the expiration of 5 years from the day on which the same were so warehoused, or within such further period and in such cases as the Commissioners of the Treasury shall direct, unless the owner or proprietor of such goods shall be desirous of re-warehousing the same, in which case the same shall be examined by the proper officers, and the duties due upon any deficiency or difference between the quantity ascertained on landing and the quantity found to exist on such examination, together with the necessary expense attendant thereon, shall, subject to such allowances as are by law permitted in respect thereof, be paid down, and the quantity so found shall be re-warehoused in the name of the then owner or proprietor thereof in the same manner as on first importation. (Sec. 103.)

*Goods in Warehouse not cleared or re-warehoused, or Duties paid on Deficiencies, after 5 Years to be sold.*—If any warehoused goods shall not be duly cleared, exported, or re-warehoused, and the duties ascertained to be due on the deficiencies as aforesaid shall not be paid down at the expiration of 5 years from the previous entry and warehousing thereof, or within such further period as shall be directed as aforesaid, the same, if worth the duty due thereon, shall, after 1 month's notice to the warehousekeeper, with all convenient speed be sold either for home use or exportation, with or without the consent of the warehousekeeper, and the proceeds thereof shall be applied to the payment of the duties, warehouse rent, and charges, and the surplus, if any, shall be paid to the owner or proprietor of such goods, if known; but if such owner or proprietor cannot be found, such surplus shall be carried to the Crown's account, to abide the claim of such owner or proprietor on his appearing and making good his claim thereto; and if such goods shall not be worth the duty, then the same, after such 1 month's notice as aforesaid, may be exported or destroyed, with or without the concurrence of the owner thereof, or the proprietor of the warehouse in which the same were so warehoused, as the Commissioners of Customs shall see fit; and the duties due upon any deficiency thereof not allowed by law shall be forthwith paid by the proprietor of the warehouse. (Sec. 104.)

*Goods in Warehouse may be sorted, repacked &c.*—With the sanction of the Commissioners of Customs, and after such notice given by the respective importers or proprietors, and at such times and under such regulations and restrictions as the Commissioners of Customs shall from time to time require and direct, it shall be lawful in the warehouse to sort, separate, pack, and repack any goods, and to make such alterations therein as may be necessary for the preservation, sale, shipment, or disposal thereof; provided that such goods be repacked in the packages in which they were imported, or in such other packages as the Commissioners shall permit (not being less in any case, if the goods be to be exported or to be re-

moved to another warehouse, than is required by law on the importation of such goods); and also to draw off any wine or any spirits into reputed quart or pint bottles for exportation only; and to draw off and mix brandy with any wine, not exceeding the proportion of 10 gallons of brandy to 100 gallons of wine; and also to fill up any casks of wine or spirits from any other casks of the same respectively secured in the same warehouse; and also to rack off any wine from the lees, and mix any wines of the same sort, crasing from the cask all import brands, unless the whole of the wine so mixed be of the same brand; and also to take such samples of goods as may be allowed by the Commissioners of Customs, with or without entry, and with or without payment of duty, except as the same may eventually become payable as on a deficiency of the original quantity; and the duty on the surplus, if any, of such goods as may be delivered for home use shall be immediately paid, and such surplus shall thereupon be delivered for home use accordingly; and after such goods have been so separated and repacked in proper or approved packages, the Commissioners of Customs may, at the request of the importer or proprietor of such goods, cause or permit any refuse, damage, or surplus goods occasioned by such separation or repacking, or, at the like request, any goods which may not be worth the duty, to be destroyed, and may remit the duty payable thereon. (Sec. 105.)

*Foreign Import or Duty-paid Packages not to be used in repacking.*—No foreign packages or materials whatsoever shall be used in the repacking of any goods in the warehouse, except such shall have been used in the importation of warehoused goods, unless the full duties thereon shall have been first paid. (Sec. 106.)

*Goods in Warehouse may be taken out, under certain Regulations.*—The Commissioners of Customs may permit any goods to be taken out of the warehouse without payment of duty, for such purposes and in such quantities, and under such regulations and restrictions, and with such security by bond for the due return thereof or the payment of the duties due thereon, as they may direct or require. (Sec. 107.)

AS TO THE ENTRY OF WAREHOUSED GOODS FOR HOME CONSUMPTION AND EXPORTATION AND THE DELIVERY THEREOF.

*Entry for Exportation.*—No warehoused goods shall be taken or delivered from the warehouse except upon due entry, and under the care of proper officers, for exportation, or upon due entry and payment of the full duties payable thereon for home use, except goods delivered into charge of the searchers to be shipped as stores in such quantities as the collector or comptroller shall allow, subject to the directions of the Commissioners of Customs, and under such regulations as they may see fit to make. (Sec. 108.)

*Persons entering warehoused Goods for Home Use to deliver Bill of Entry, and pay down Duty.*—Upon the entry of any goods to be cleared from the warehouse for home use, the person entering such goods shall deliver a bill of entry, and duplicates thereof, in like manner and form, containing the same particulars as are before required in the entry of goods to be delivered for home use, the landing thereof, as far as the same may be applicable, and shall at the same time pay down the proper officer of customs the full duties payable thereon, not being less in amount than according to the account of the quantity taken from the landing waiter or other proper officer on the first entry and landing thereof, except as may

following goods; viz., tobacco, wine, spirits, figs, currants, raisins, and sugar, the duties whereon, when cleared from the warehouse for home use, shall be charged upon the quantity of such goods ascertained by weight, measure, or strength, at the time of actual delivery thereof, unless there is reasonable ground to suppose that any portion of the deficiency or difference between the weight, measure, or strength ascertained on landing and first examination of any such last-mentioned goods is that ascertained at the time of actual delivery has been caused by illegal or improper means, in which case the proper officer of customs shall make such allowance only for loss as he may consider fairly to have arisen from natural evaporation or other legitimate cause. (Sec. 110.)

**Value of Goods to be estimated by Officers at the Market Price.**—When any deficiency occurs in goods chargeable to pay duty according to the value thereof, the value thereof shall be estimated as nearly as conveniently may be by the officers of customs according to the market price of the like kind of goods. (Sec. 111.)

**Deficiencies in Goods entered for Exportation not to be charged with Duty unless fraudulent.**—No duty shall be charged in respect of any deficiency in goods entered and cleared from the warehouse for exportation unless the officers of customs have reasonable ground to suppose that

such deficiency or any part thereof has arisen from illegal abstraction. (Sec. 112.)

**AS TO THE EXPORTATION AND ENTRY OF GOODS, AND THE CLEARANCE OF SHIPS FROM THE UNITED KINGDOM TO PARTS BEYOND SEAS.**

**Warehoused Goods not to be exported in Ships of less than 50 Tons Burden, except to Guernsey or Jersey.**—No person shall export any warehoused goods, nor enter any such goods for exportation from the United Kingdom to parts beyond the seas, in any ship of less burden than 50 tons, except to the islands of Guernsey and Jersey in ships not being of less than 40 tons burden, regularly trading to those islands. (Sec. 117.)

**Master to deliver Certificate of Clearance of last Voyage, and to make Entry Outwards.**—The master of every ship in which any goods are to be exported from the United Kingdom to parts beyond seas, or his agent, shall, before any goods be taken on board, deliver to the collector or comptroller a certificate from the proper officer of the due clearance inwards or coastwise of such ship of her last voyage, and shall also deliver therewith an entry outwards of such ship, verified by his signature, in the following form or to the same effect, and containing the several particulars indicated or required thereby:—

ENTRY OUTWARDS.

Port of (Name of Port of Exportation):				
Ship's Name		Tonnage	Master's Name	Port of Destination
If British, Name of Port of her Registry	If Foreign, Name of Country to which she belongs			

Place at (Name of Station or Place in Port)

Date of Entry  
If Ship shall be commenced her lading in any place, Name of such Port

(Signed) \_\_\_\_\_ Master or Agent.

and if such ship shall have commenced her lading at some other port, the master shall deliver to the collector the clearance of such goods from such other port; and if any goods be taken on board any ship at any port before she shall have been cleared outwards at such port (unless a stiffening order, when necessary, shall be issued by the proper officer to lade any heavy goods for exportation on board such ship), the master shall be liable to the sum of 100*l*. (Sec. 118.)

**Goods not to be shipped except on proper Days and Places, nor until Entry and Clearance.**—No goods shall be shipped, put off, or water-borne to be shipped for exportation, from any port or place in the United Kingdom, except on days not being Sundays or holidays, nor from any place except a legal quay, wharf, or other place duly appointed for such purpose, nor without the presence or authority of the proper officer of customs, before due entry outwards of such ship, and the entry of such goods, nor before such goods shall have been duly cleared for shipment; and it shall be lawful for the searcher to open all packages, and fully to examine all goods shipped or put off for shipment at any place in the United Kingdom. (Sec. 119.)

TO THE ENTRY AND CLEARANCE OF GOODS FOR EXPORTATION.

**Entry Outwards, Bond for due shipping and Clearance shall be given.**—Before any warehoused

goods, British-wrought plate, goods subject to duties of customs, or entitled to any drawback of customs, on exportation, or exportable only under particular rules, regulations, or restrictions, shall be permitted to be exported, the exporter or his agent shall deliver to the collector or comptroller a bond note or account of such goods, and give security by bond in double the amount of duty payable by law upon the importation of such goods, with one sufficient surety, that such goods shall be duly shipped and exported, and shall be landed at the place for which they are entered outwards, or otherwise accounted for to the satisfaction of the Commissioners of Customs; and such bond note, when certified by the proper officer, shall be the export entry for such goods. (Sec. 120.)

**Exporter to deliver Shipping Bill.**—Before any such goods shall be shipped or water-borne to be shipped for exportation, the exporter or his agent shall deliver to the searcher or other proper officer a SHIPPING BILL of such goods in the form following or to that effect, and containing the particulars indicated therein or required thereby. (Sec. 121.)

**Inland Revenue Drawback.**—No drawback of excise shall be allowed upon any goods cleared for exportation, unless the person intending to claim such drawback shall have given due notice to the officer of excise, and shall have produced to the searcher, at the time of clearing such goods, a proper document under the hand of the officer of excise

than is required by law (such goods) and also spirits into reputed casks only; and to fill up any casks with any wine, not exceeding one gallon of brandy in any cask, and one gallon of brandy in any other cask, and to mix the whole of the wine so mixed with or without entry, and also to take any duty, except as aforesaid, to be paid on any quantity; and the duty on such goods as may be so imported shall be immediately paid, and a receipt thereon be delivered for the same, and after such goods have been packed in proper or approved casks, the Commissioners of Customs shall not refuse to admit any refuse, damaged, or lost by such separation of goods, any goods which are to be destroyed, and the same shall be destroyed thereon. (Sec. 105.)

**Duty-paid Packages**—No foreign packages shall be used in the warehouse, except such as are used in the importation of warehoused goods, and the full duties thereon shall be paid. (Sec. 106.)

may be taken out, under the authority of the Commissioners of Customs, to be taken out of the warehouse, for such purpose, and may appear expedient, and under such regulations as may be made, with such security by bond as may be required, and the payment of the duties they may direct or require.

OF WAREHOUSED GOODS, AND EXPORTATION THEREOF.

**Warehoused Goods.**—No warehoused goods shall be delivered from the warehouse, and under the care of the collector, or upon due entry for exportation, or upon due entry for full duties payable thereon, except goods delivered into the warehouse, and such goods shall be shipped as stores, and under the care of the collector or comptroller, to the directions of the Commissioners of Customs, and under such regulations as may be made. (Sec. 109.)

**Warehoused Goods for Exportation.**—Before any goods to be cleared for exportation, the person entering the same shall deliver a bill of entry, and a receipt thereon, in like manner and form, and containing the particulars as are before required, and the same shall be delivered for home use, and as far as the same may be required, at the same time pay down the full duties of customs, the full duties being less in amount than the duties on the quantity taken out, or other proper officer on the same, and the receipt thereon, except as to

Shipping Bill for { 1. War-housed or Drawback goods, 2. Foreign Goods not for Drawback, 3. Goods exported under some particular Rule, Regulation, or Restriction. (State as above described the Class to which the goods to be exported belong.)

containing the description of such goods; and if such goods be found to correspond with the particulars of the goods contained in such document, and be duly shipped and exported, the searcher shall, if required, certify such shipment upon such document, and shall transmit the same to the officer of excise. (Sec. 122.)

**Goods not entitled to Drawback if of less Value than claimed.**—No drawback shall be allowed upon the exportation of any goods entered for drawback or as stores which shall be of less value than the amount of the drawback claimed; and all such goods so entered shall be forfeited, and the person who caused such goods to be entered shall forfeit the sum of 200*l.*, or treble the amount of drawback claimed in such case, at the election of the Commissioners of Customs. (Sec. 123.)

**No Drawback on Tobacco not properly manufactured &c.**—No drawback shall be allowed on any tobacco not wholly manufactured from to-

bacco on which the duty on importation shall have been paid, nor on any tobacco mixed with dirt, rubbish, or other substance; and every person who shall enter or ship, or cause to be entered or shipped, any tobacco contrary hereto, shall, over and above all other penalties which he may thereby incur, forfeit treble the amount of the drawback sought to be obtained or 200*l.*, at the election of the Commissioners of Customs, and all such tobacco shall be forfeited. (Sec. 124.)

**Shipping Bill for Free Goods &c. to be delivered to Searcher.**—Before any goods in respect of which no bond is required shall be shipped or warehoused to be shipped for exportation, the exporter or his agent shall deliver to the searcher a shipping bill thereof, with such duplicates as may be required by him, in the following form or to the effect, and containing the several particulars indicated in or required thereby:—

**Shipping Bill signed by Searcher to be the Clearance for the Goods.**—The shipping bill or bills, when filled up, and signed by the exporter or his agent, or the consignee of the ship, as the case may be, in such manner as the proper officer may require, and countersigned by the searcher, shall be the clearance for all the goods enumerated therein; and if any of such goods shall consist of tea, opium, or tobacco, the exporter or his agent shall furnish to the searcher an account thereof, containing the number and description of the packages, and the respective quantities contained therein, which, when certified by the searcher, shall accompany the ship; and have the same force and effect as the cocket in use prior to the passing of this Act; and if the exporter or his agent shall require a similar certificate in respect of any other goods shipped for exportation, the searcher shall, on its being presented to him for that purpose, certify the same in like manner: provided always, that if any such certificate be required to be in any particular form for goods destined for the Zollverein or any other foreign state, or under the name of cocket, such certificate may be so prepared and denominated. (Sec. 126.)

**Licensed Lighterman to carry Goods.**—If any goods cleared for drawback or from the warehouse shall be carried or water-borne to be put on board any ship for exportation by any person not at the time duly licensed and authorised to act as a licensed lighterman, either in the port of London or any other port at which lightermen are required to be so licensed, or by any person not being in the employ of such lighterman at the time duly authorised to act as such, every such person shall, on every such offence forfeit the sum of 20*l.* (Sec. 127.)

**Warehoused Goods shipped for Exportation without Authority forfeited.**—If any goods taken from the warehouse for removal or for exportation shall be removed or shipped except with the authority under the care of the proper officer of customs, in such manner, by such persons, within such time, and by such roads or ways as such officer shall permit or direct, such goods shall be forfeited. (Sec. 128.)

**Drawback may be remitted on Warehoused Goods or destroyed in Removal or Shipment.**—If any goods duly entered for delivery from the warehouse for removal or exportation shall be lost or destroyed by unavoidable accident, either in the warehouse or from the shipping therefrom, the Commissioners of Customs may remit the drawback due thereon. (Sec. 129.)

**THE ISSUE OF DEBENTURES FOR AND THE MODE OF DRAWBACK ON GOODS EXPORTED.**

**Computing and passing Debenture.**—For the purpose of computing and paying any drawback claimed on any goods duly entered, shipped, or exported, a debenture shall in due time after the goods are shipped, be prepared by the collector or comptroller, certifying in the first instance the entry of such goods; and so soon as the same shall have been duly exported, and a notice containing the particulars of the goods shall have been delivered by the exporter to the searcher, the

shipment and exportation thereof shall be certified to the collector or comptroller upon such debenture by the searcher, and the debenture shall thereupon be computed and passed with all convenient despatch. (Sec. 130.)

**Declaration as to Exportation and Right to Drawback.**—The person entitled to any drawback on any goods duly exported, or his agent duly authorised by him for that purpose, shall make and subscribe a declaration upon the debenture that the goods mentioned therein have been actually exported, and have not been reloaded, and are not intended to be reloaded, in any part of the United Kingdom, and that such person at the time of entry and shipping was and continued to be entitled to the drawback thereon; and the name of such person shall be stated in the debenture, which shall then be delivered to such person or his agent; and the receipt of such person on the debenture, countersigned by the holder of such debenture, if the same shall have been transferred in the mean time, shall be the discharge for such drawback when paid. (Sec. 131.)

**Payment within Two Years.**—No debenture for any drawback allowed upon the exportation of any goods shall be paid after the expiration of 2 years from the date of the shipment of such goods (Sec. 132.)

**Warehouse or Debenture Goods not exported &c. or reloaded &c., without Entry, forfeited.**—If any goods which have been cleared to be exported for any drawback shall not be duly exported to parts beyond the seas, or shall be unshipped or reloaded in any part of the United Kingdom (such goods not being duly reloaded or discharged as short-shipped under the care of the proper officers), or shall be carried to any of the Channel Islands (not having been duly entered, cleared, and shipped to be exported or carried directly to such islands), the same shall be forfeited, together with any ship, boat, or craft which may have been used in so unshipping, reloading, landing, or carrying such goods from the ship in which the same were shipped for exportation; the master of such ship, and any person by whom or by whose orders or means such goods shall have been so unshipped, reloaded, landed, or carried, or who shall aid, assist, or be concerned therein, shall forfeit a sum equal to treble the value of such goods, or a penalty of 100*l.*, at the election of the Commissioners of Customs. (Sec. 133.)

**Drawbacks of Duties on Wine allowed for Officers in the Navy.**—A drawback of the whole of the duties of customs shall be allowed for wine intended for the consumption of officers of her Majesty's navy on board such of her Majesty's ships in actual service as they shall serve in, not exceeding the quantities of wine in any one year for the use of such officers hereinafter respectively mentioned, viz.—

	Galls.
For every Admiral	1,260
Vice-Admiral	1,050
Rear-Admiral	840
Captain of the 1st and 2nd rate	630
Captain of the 3rd, 4th, and 5th rate	420
Captain of an inferior rate	210
Lieutenant and other Commanding Officer, and for Marine Officer, Master, Purser, and Surgeon	105

unless such wine be taken from the warehouse without payment of duty under such regulations as the Commissioners of Customs may direct: Provided always, that in either case such wine be shipped at ports approved of by the said commissioners. (Sec. 134.)

**Persons entering such Wine for Drawback to declare Name and Rank of Officer claiming the**

*same.*—The person entering such wine, and claiming the drawback for the same, shall state in the entry and declare on the debenture the name of the officer for whose use such wine is intended, and of the ship in which he serves; and such wine shall be delivered into the charge of the officers of the customs at the port of shipment, to be shipped under their care; and the commanding officer for the time being of such ship, having certified upon the debenture the receipt of such wine into his charge, and the proper officer of the customs having certified to the shipment on the debenture, the same shall be computed and passed, and be delivered to the person entitled to receive the same. (Sec. 135.)

*Officers leaving the Service &c., Wine permitted to be transferred to others.*—If any such officer shall leave the service, or be removed to another ship, the officers of the customs may permit the transfer of any such wine from one officer to another, as part of his proportion, whether on board the same ship or another, or the transshipment from one ship to another for the same officer, or the relanding and warehousing for future re-shipment; and the officers of customs at any port may receive back the duties for any such wine, and deliver the same for home use; but if any of such wine be not laden on board the ship for which the same was intended, or be unladen from such ship without permission of the proper officers of customs, the same shall be forfeited. (Sec. 136.)

*Pursers of Ships of War may Ship Tobacco for the Use of Crew free of Duty, on giving Bond.*—The purser of any of her Majesty's ships of war in actual service may enter and ship, at any port approved by the Commissioners of Customs, in the proportions hereinafter mentioned, any tobacco there warehoused in his name, or transferred into his name for the use of the ship in which he shall serve, provided such purser shall deliver to the collector or comptroller of such port a certificate from the captain of such ship, stating the name of the purser, and the number of men belonging to the ship, and also give bond, with one sufficient surety, in treble the duties payable on the tobacco, that no part thereof shall be relanded without leave of the officers of customs. (Sec. 137.)

*Purser removed from one Ship to another may tranship Tobacco, with Permission of Collector.*—If any purser be removed from one ship to another, the collector or comptroller of any port may permit the transshipment of the remains of any such tobacco for the use of such other ship, upon due entry of such tobacco by such purser, setting forth the time when and the port at which such tobacco was first shipped; and if any such ship shall be paid off, the collector or comptroller of the port may permit the remains of any such tobacco to be landed, and to be entered by the purser of such ship, either for payment of duties, or to be warehoused for the term of 6 months, for the supply of some other such ship, in like manner as any tobacco may be warehoused and supplied at any such port, or for payment of all duties within such 6 months; and all tobacco warehoused for the purpose of so supplying ships of war shall be subject to the provisions of any Act in force relating to the warehousing of tobacco generally, as far as the same are applicable, and are not expressly altered by any of the provisions herein particularly made. (Sec. 138.)

*Limiting the Quantity of Tobacco.*—No greater quantity of such tobacco shall be allowed to any

ship of war than 2 lbs. by the lunar month for each of the crew of such ship, nor shall any greater quantity be shipped at any one time than sufficient to serve the crew of such ship for 6 months after such rate of allowance; and the collector or comptroller of the port at or from which any such tobacco shall be supplied to any such ship, or landed from any such ship, or transferred from one such ship to another, shall transmit a particular account thereof to the Commissioners of Customs, in order that a general account may be kept of all the quantities supplied to and consumed on board each of such ships under the allowances before granted. (Sec. 139.)

#### AS TO THE SHIPPING OF STORES FOR THE USE OF FOREIGN-BOUND VESSELS.

*Victualling Bill for Stores.*—The master of every ship of the burden of 50 tons or upwards departing from any port in the United Kingdom upon a voyage to parts beyond the seas, the duration of which out and home shall not be less than 40 days, shall, upon due application made by him, and upon such terms and conditions as the Commissioners of Customs may direct, receive from the searcher an order for the shipment of such stores as may be required and allowed by the collector or comptroller for the use of such ship, with reference to the number of the crew and passengers on board, and the probable duration of the voyage on which she is about to depart; and the demands for such stores shall be made in such form and manner as such collector or comptroller shall require, and shall be signed by the master or owner of the vessel; and after such stores are duly shipped, the master or his agent shall make out an account of the stores shipped, together with any other stores already on board, and the same, when presented to the searcher, signed by him, and countersigned by the collector or comptroller, shall be the VICTUALLING BILL; and no stores shall be shipped for the use of any ship, nor any articles taken on board any ship be deemed to be stores, except such as shall be borne upon the victualling bill. (Sec. 140.)

#### AS TO THE CLEARANCE OF SHIPS OUTWARD.

*If Inward Cargo reported for Exportation, Copy of Report thereof to be delivered to the Searcher.*—If there be on board any ship any goods, or part of the inward cargo reported for exportation in the same ship, the master shall, before clearance outwards of such ship from any port in the United Kingdom, deliver to the searcher a copy of the report inwards of such ship, certified by the collector or comptroller; and if such copy be found to correspond with the goods so remaining on board, the searcher shall sign the same, to be filed with the certificate or cockets, if any, and victualling bill of the ship. (Sec. 141.)

*Before Clearance Master to deliver Content.*—Before any ship shall be cleared outwards from the United Kingdom with any goods shipped or intended to be shipped on board the same, the master shall deliver a content of such ship to the searcher, in the form or to the effect following, and containing the several particulars therein required, as far as the same can be known by him, and shall make and subscribe the declaration the foot thereof, in the presence of the collector or comptroller, and shall answer such questions as shall be demanded of him concerning the cargo, and the intended voyage, by such collector or comptroller:—

Dated \_\_\_\_\_  
I do declare that the above Content is a true account of all goods shipped or intended to be shipped on board the above-named ship, and correct in all other particulars. (Signed) \_\_\_\_\_ Master.

Signed and declared, this \_\_\_\_\_ day of \_\_\_\_\_ before me,  
(Signed) \_\_\_\_\_ Collector or Comptroller.

and before clearance the certificates, if any, shall be delivered to the searcher, who shall compare the shipping bills with the content and certificates, if any, and file such certificates, copy of report inwards, if any, of goods reported for exportation in such ship, and the victualling bill, with a label attached and sealed thereto, in the form or to the effect following:—

(To be filled in.)  
Number of Certificates (Number in Figures).  
Ship (Name of Ship).  
Master (Name of Master).  
(Date of Clearance) \_\_\_\_\_ Searcher.  
(Sig.) \_\_\_\_\_ Collector or Comptroller.

such label, when filled up and signed by the searcher and the collector, shall, as to the goods comprised therein, be the clearance and authority for the departure of the ship. (Sec. 142.)

**Goods on board to correspond with Content.**—Any goods liable to duty on importation, or taken from the warehouse to be exported, or entitled to drawback on exportation, or exported under bond, which are enumerated in the content of any ship, shall not be duly shipped before the departure of such ship, or shall not be duly certified by the proper officer as short-shipped, such goods shall be forfeited; or if any such goods shall be taken on board such ship, not being enumerated in such content, the master of such ship shall forfeit the sum of 5*l.* in respect of every package of such goods; and if any goods duly shipped on board such ship shall be unshipped, or landed at any other place than that for which they shall have been cleared, unless otherwise accounted for to the satisfaction of the Commissioners of Customs, the master of such ship shall forfeit a sum equal to treble the value of the goods so landed. (16 & 17 Vict. c. 82 s. 12.)

**Goods shipped contrary to Provisions forfeited.**—If any goods shall be shipped, put off, or waterborne to be shipped, without being duly cleared, or otherwise contrary to the provisions of this Act, the same shall be liable to forfeiture. (16 & 17 Vict. c. 107 & 144.)

**Ships leaving in Ballast.**—Before any ship shall depart in ballast from the United Kingdom for parts beyond the seas, not having any goods on board except stores from the warehouse borne upon the victualling bill of such ship, nor any goods reported inwards for exportation in such ship, the collector or comptroller shall clear such ship in ballast by notifying such clearance and the date thereof on the victualling bill, and deliver the same to the master of such ship as the clearance thereof; and the master of such ship shall answer to the collector or comptroller such questions touching her departure and destination as shall be demanded of him; and ships having only passengers with their baggage on board, and ships laden only with chalk or slate, shall be deemed to be in ballast; and if any such ship, whether laden or in ballast, shall depart without being so cleared, if she have any such stores on board, the master shall forfeit and pay the sum of 100*l.* (Sec. 146.)

AS TO THE BOARDING OF SHIPS AFTER CLEARANCE OUTWARDS.

**Officers may board any Ship after Clearance.**—Any officers of customs may go on board any ship after clearance outwards within the limits of any port in the United Kingdom, or within 4 leagues of the coast thereof, and may demand the ship's clearance; and if there be any goods on board in respect of which certificates are required, not contained in such certificates, or any stores not endorsed on the victualling bill, such goods or stores shall be forfeited; and if any goods contained in such certificates be not on board, the master shall forfeit the sum of 20*l.* for every package or parcel of goods contained in such certificates, and not on board. (Sec. 146.)

**If Officers put Seals upon Stores, and such Seals be broken, Master to forfeit 20*l.***—If any officer of customs shall place any lock, mark, or seal upon any goods taken from the warehouse without payment of duty as stores on board any

ship or vessel departing from any port in the United Kingdom, and such lock, mark, or seal be wilfully opened, altered, or broken, or if any such stores be secretly conveyed away, either while such ship or vessel remains at her first port of departure, or at any other port or place in the United Kingdom, or on her passage from one such port or place to another, before the final departure of such ship or vessel on her foreign voyage, the master shall forfeit the sum of 20*l*. (Sec. 147.)

**Ships not bringing-to at Stations, Penalty 20*l*.**—If any ship departing from any port in the United Kingdom shall not bring-to at such stations as shall be appointed by the Commissioners of Customs for the landing of officers from such ships, or for further examination previous to such departure, the master of such ship shall forfeit the sum of 20*l*. (Sec. 148.)

**Time of Exportation and Departure defined.**—The time at which any goods shall be shipped on board any export ship shall be deemed to be the time of exportation of such goods, and the time of the last clearance of any ship shall be deemed to be the time of departure of such ship. (Sec. 149.)

**Goods Prohibited by Proclamation.**—The following goods may, by proclamation or order in council, be prohibited either to be exported or carried coastwise: arms, ammunition, and gunpowder, military and naval stores, and any articles which her Majesty shall judge capable of being converted into or made useful in increasing the quantity of military or naval stores, provisions, or any sort of victual which may be used as food by man; and if any goods so prohibited shall be exported from the United Kingdom or carried coastwise, or be water-borne to be so exported or carried, they shall be forfeited. (Sec. 150.)

(Then follow the clauses in regard to the COASTING TRADE, COLONIAL TRADE, and SMUGGLING.)

The following provisions are contained in the Customs Tariff Amendment Act, 23 Vict. c. 22, as to importation and exportation:—

Sec. 16. There shall be charged, irrespective of any duties of customs or other rates or charges payable by law, upon the importation of all goods into Great Britain and Ireland, except corn, grain, and flour, and timber and wood goods, and goods in transit exported under bond, and goods imported for exportation in the same ship, provided they be so reported, the respective rates and charges following, that is to say:

Goods in packages and parcels, per package or parcel or other unit of entry	s. d.
Goods in bulk by weight or measure or number, for each unit of entry	0 1
Animals per head, or other unit of entry	0 1
And there shall be charged upon every customs bill of lading on the exportation of any goods from Great Britain and Ireland	1 6

Sec. 18. It shall be lawful for the Lords of the Treasury, or the Commissioners of Customs, to fix or adjust the number or quantity of goods which shall constitute the unit of entry chargeable with the rate of 1*l*., having regard to the value of the goods, and from time to time to alter and vary the same as they may see fit, so that the said rate of 1*l*. shall exceed as little as may be in their judgment 5*s*. for every 100*l*. sterling upon the lowest ordinary value of the article to which such charge attaches.

By the 19th section the rates are to be paid by adhesive stamps. The penalty on importing free goods without giving true particulars is by Sec. 20 fixed at 40*s*.. The bill of lading, which is defined in Sec. 21, is to be deemed the entry outwards of free goods, but must not include more than one consignment. Neglect in fulfilling all the conditions specified in this section involves a penalty of

5*l*. and treble stamp duty. 'Customs bills of lading' must be delivered within 24 hours after the final clearance, except under certain circumstances, of which notification must be given within 24 hours; but the specification of the goods contained must be delivered six days after such notice under a penalty of 40*s*..

Exporters shipping without Customs bills of lading are liable (sec. 25) to a penalty of 20*l*..

The master or owner of any ship in which goods are shipped for exportation must deliver a manifest duly attested by declaration. Penalty 20*l*..

Customs bills of lading &c. required to be used as evidence in courts of law are liable to fees of inspection—1*s*. for each inspection, and 2*d*. 6*d*. for each 1,080 words of a certified copy.

No customs bill of lading shall be valid without a stamp of the value of 1*s*. 6*d*., nor any other bill of lading be valid without the stamp of 6*d*., thereon, already imposed by law. Penalty 40*s*..

The Commissioners of Customs, agreeably to the powers given them to that effect by the foregoing statute and others, have appointed the under-mentioned places, within the several ports of the United Kingdom, at which vessels coming into or departing out of such ports shall bring-to, for the boarding or landing of customs' officers.

The following clause in the Act 16 & 17 Vict. c. 107 has reference to this matter:—If any ship coming into the United Kingdom or into the Channel Islands shall not come as quickly up to the proper place of mooring or unloading as the nature of the port will admit, without touching at any other place, and in proceeding to such proper place shall not bring-to at the stations appointed by the Commissioners of Customs for the boarding of ships by the officers of customs, or after arrival at such place such ship shall remove from such place, except directly to some other proper place of mooring or unloading, and with the knowledge of the proper officer of the customs, or if the master of any ship on board of which any officer is stationed neglect or refuse to provide every such officer sufficient room under the deck in some part of the fore-castle or steerage for his bed or hammock, the master of such vessel shall forfeit the sum of 20*l*. (Sec. 47.)

ENGLAND.

Ports.	Stations for bringing to.
LONDON	Gravesend Reach, below the Custom-house
ANNESTOWN	On the bar, or a little above the junction of the rivers Ribblesdale and Yarrow.
ABERDEEN	A little to the westward of the town, in the river Donay.

BRETAGNE	Opposite the town, at Fryar's Head.
AMSTERDAM	Within the harbour.
CONWAY	In the road-head opposite the town.
HOLBURN	In the harbour.
BERWICK	At the entrance of the harbour, near the head.
THORNTON	Skern and watch house, Applinon.
THORNTON	Hull Hole.
SPALDING	Clayhole.
BIRDWATER	Between Botwell Point, on the coast of Bristol Channel, and Black Rock, about a mile within the mouth of the river Taw.
MILFORD	At the entrance of the harbour.
INTIPPOC	The outer buoy, distant about 500 yards from the head of the harbour.
CAERDIF	Fill and Kingroad.
BERTRIG	Perrith Head, a little to the eastward of the mouth of the river Taff.
CARDIFF	At Pwllcam, a little inside the bar or harbour mouth.
CARDOBAN	Fisher's Cross.
CARLISLE	In the bay off the town, opposite the Tower, and at Abernethy.
CARRARVON	At the entrance of the harbour, by the Rock.
EMMETHLY	In the harbour.
BERMOUTH	At the entrance of the river Wyre.
CHASTON	Dowpool, 6 miles from Holyhead.
CHERTON	Colt street, off Nones Stone, near the mouth of the river.
COVENTRY	Road-head of Coes, extending from the west about 2 1/2 miles.
COVES (EAST)	

Partial list of ports and locations on the right margin of the page, including entries like 'DUBLIN', 'GLASGOW', 'LONDON', 'BIRMINGHAM', etc., partially cut off.

*Stations for bringing to.*

**Between the mouth of the harbour and Sand-  
gate Point.**

- At the mouth of the harbour and Sandgate Point, in the Docks, in open roadstead.
- The outer harbour.
- At the Passage Way, Ramoth.
- In the harbour, off Kilm Quay and watch-house.
- Burgan Roads, just at the entrance of the river Hel.
- Between the mouth of Faversham Creek and the horse man in the East Quay.
- At the mouth of Milton Creek in the Swale.
- In the harbour.
- In the harbour.
- Near the Custom-house, not far from the entrance of the harbour.
- Nhapiques Point and Millers Road Bay in the Hamlet of Beachley.
- At the wharf, near the entrance of the harbour.
- Hull Roads.
- Roadstead south of town.
- In the harbour, between the Guard and Milton Ferry.
- Hull Roads, between the east end of the classical and the entrance to the Humber Dock to the westward.
- In the harbour, between the Quait and Walton Ferry.

*In their respective bays.*

- Gleason Dock, on the river Lune.
- Pite Coude, near the Isle of Walnes.
- At the entrance of the respective docks.
- Entrance to the harbour.
- Opposite the Jetty, near the entrance of the harbour.
- The basin within the pier or cobb of Lyme Regis.
- Nottingham Point, intermediate space between Common Strait Quay, where the estuary narrows into a river, about 3 miles below the town, or as near as circumstances permit within the point.
- Barrow Hills, opposite Blackwater River, Maiden.
- Leigh Mole, or Leigh Swatch, which channel is formed by the spit of a sand called North End, leading from the east end of Coney Island, and nearly opposite to a windmill, called the Hamlet Mill, situated upon the Cliff, about 3 miles to the westward of Southend, and about 2 miles from Leigh.
- The harbour.
- In the haven, opposite the town of Milford.
- Opposite the watch-house, at the entrance of the River Tyne.
- In the stream, between the piers and the tide surveyor's watch-house.
- At the watch-house, 1 mile from the Custom-house.
- Hawker's Cove, within the harbour.
- Gwasar Lake.
- St Michael's Mount Roads.
- Within the line of the Breakwater, viz. the Sound, Catvraze, and Harroaze.

III.—An Account of the Value of the Imports into, and of the Exports from, the United Kingdom during each of the undermentioned Years from 1798 to 1857, both inclusive, calculated at the Official Rates of Valuation, and distinguishing the Amount of the Produce and Manufactures of the United Kingdom Exported from the Value of the Foreign and Colonial Merchandise Exported; exhibiting also the Real or Declared Value of the Produce and Manufactures of the United Kingdom annually Exported therefrom for the same Period and for 1857.

Table with columns: Year, Value of Imports into the United Kingdom, Value of Exports from the United Kingdom (Produce and Manufactures of United Kingdom, Foreign and Colonial Merchandise, Total Exports), and Value of Produce and Manufactures of United Kingdom Exported.

N.B.—The account of the declared or real value of the exports was first taken in 1798, having been introduced by the Convoy Act of that year. \* The official or fictitious value is not now introduced into the accounts published by Government.

IV.—Account of the Computed Real Values of the Principal Articles Imported into the United Kingdom in each of the 3 Years ending with 1867.

Table with columns: Articles, 1865, 1866, 1867, and then a second set of columns for Articles, 1863, 1866, 1857.

Vertical text on the right margin listing various commodities such as Wool, Hops, Raisins, and other goods.

Computed Real Values of Principal Imports into the United Kingdom &c.—continued.

Articles	1865	1866	1867	Articles	1865	1866	1867
Sisal, rope	529,745	1,307,486	1,597,889	Melasses	446,163	579,553	2,907,710

\* Including the Ionian Islands, ceded to Greece June 1, 1861.

been going on in other countries; so that while we send more goods to the foreigner, we get back more of his in return. Instead of being an evidence of decline, increased facilities of production and increased cheapness are the most characteristic and least equivocal marks of commercial prosperity.

*Causes of the Magnitude of British Commerce.*—The immediate cause of the rapid increase and vast magnitude of the commerce of Great Britain is doubtless to be found in the extraordinary

improvement, and consequent extension of manufactures since 1770. The cotton manufacture may be said to have grown up during an intervening period. It must also be borne in mind that the effect of an improvement in the production of any article in considerable demand is not confined to that particular article, but extends itself to others. Those who produce it accordingly to the old plan are undersold unless they make the same or similar improvements; and the improved article, by coming into competition

others for which energy into the market to put both a preserve his own the stupendous growth, Arkansas, but we should their inventions were was limited ingated a powerful industry. The Wellwood, government in all nations whose factories had been possession, and an engrave seals, the air, every thing man did. And apparatus to wear a metal connection have extended among by the invention steam-engine.

The immense capital place since has been at once a demand trade and effect on the individual capital centers on the only in preserving trade. It enables they by larger quantities; and, on the decided superiority capital is scarce, and importance with the manufacturer an increase in works in the best business on such proper distribution are among different history of Great Britain, and thus it is estimated by means of the improvement of the of living since the has been partly the off improvement of the of commerce. Had ingenuity would be accommodations ingenuity would be and routine have u Happily, however the circumstances being with every c ing them, till, in become all but ill of the human p with previous ac constant increase of and for new invention at one period as a continued advancement in one age, been The fact of Queen of silk stockings w by contemporary the part of this centu the sooner his circ without them. extension of the cotton manufactory during the last century, but it also has been a source of improvement in considerable departments of the article, but the produce it secures is not so great as the means; and the competition

others for which it may be substituted, infuses new energy into their producers, and impels every one to put forth all his powers, that he may either preserve his old or acquire new advantages. The cotton manufacture may be said to be the result of the stupendous inventions and discoveries of Hargreaves, Arkwright, Crompton, and a few others; but we should greatly underrate the importance of their inventions if we supposed that their influence was limited to this single department. They imparted a powerful stimulus to every branch of industry. Their success, and that of Watt and Wedgwood, gave that confidence to genius so essential in all great undertakings. After machines had been invented for spinning and weaving cottons whose fineness emulates the web of the gossamer, and steam-engines had been made to engrave seals, and to lift a ship like a baulk in the air, every thing seemed possible—*nil arduum erant*. And the unceasing efforts of new agents to wealth and distinction, and the intimate connection of the various arts and sciences, have extended and perpetuated the impulse given by the invention of the spinning-frame and the steam-engine.

The immense accumulation of capital that has taken place since the close of the American war has been at once a cause and a consequence of our increased trade and manufactures. Those who reflect on the advantages which an increase of capital confers on its possessors can have no difficulty in perceiving how it operates to extend trade. It enables them to buy cheaper, because they buy larger quantities of goods, and pay ready money; and, on the other hand, it gives them a decided superiority in foreign markets, where capital is scarce, and credit an object of primary importance with the native dealers. To the manufacturer an increase of capital is of equal importance by giving him the means of constructing works in the best manner, and of carrying on his business on such a scale as to admit of the most proper distribution of whatever has to be done among different individuals. These effects have been strikingly evinced in the commercial history of Great Britain during the last half-century; and thus it is that capital, originally accumulated by means of trade, gives it, in its turn, nourishment, vigour, and enlarged growth. The improvement that has taken place in the mode of living since the beginning of this century has been partly the effect, and partly the cause, of the improvement of manufactures and the extension of commerce. Had we been contented with the accommodations as our ancestors, exertion and ingenuity would long since have been at an end, and routine have usurped the place of invention. Happily, however, the desires of man vary in the circumstances under which he is placed, and every extension of the means of living become all but insupportable. This endlessness of the human mind, its inability to rest satisfied with previous acquisitions, combined with the constant increase of population, renders the world a scene of new inventions and discoveries as in one period as at another, and provides for the continued advancement of society. What is a day in the life of Queen Elizabeth having worn the same dress as contemporary historians; while, in the latter part of this century, no gentleman, howsoever severe his circumstances, could go to a dinner without them. The lower classes are continually pressing upon the middle, and these, in their turn, upon the higher; so that invention is

racked, as well to vary the modes of enjoyment, as to increase the amount of wealth. That this competition should be in all respects advantageous is not to be supposed. Emulation in show, though carried to excess, and has certainly been ruinous to many individuals, obliged sometimes, perhaps, by their situation, or seduced by example, to incur expenses beyond their means. But the emulation in England, is, after all, confined within tolerably narrow limits; while the beneficial influence resulting from the general diffusion of improved accommodations adds to the science, industry, wealth, and enjoyments of the whole community.

We are also inclined to think that the increase of taxation during the late war contributed to the improvement of manufactures and the extension of trade. The gradually increasing pressure of the public burdens stimulated the industrious efforts to preserve their place in society, and I should have in vain attempted to excite by any less powerful means. Had taxation been very oppressive, it would not have had this effect; but, or despair, though it was at the same time sufficiently heavy to render a considerable increase of exertion and parsimony necessary to prevent it, or, at all events, from diminishing the rate at which they were previously accumulating. To the world, the fear of falling superadded an additional and powerful stimulus; and the two together produced results that could not have been produced by the unassisted operation of either. No evidence has been or probably can be produced to show that the capital of the country would have been materially greater than it is, had the tranquillity of Europe been maintained uninterrupted from 1793 to the present moment.

We do not state these circumstances to extenuate the evils of war or of oppressive taxation, but merely to show the real influence of taxation on industry when gradually augmented and kept within reasonable bounds. Under such circumstances it has the same influence over a nation that an increase of his family or of his unavoidable expenses has over a private individual.

But after every fair allowance has been made for the influence of the causes above stated, and for the influence of a similar description, still it is abundantly certain that a liberal system of government, affording full scope for the expansion and cultivation of every mental and bodily power, and securing all the advantages of superior talent and address to their possessors, is the grand sine qua non of commercial and manufacturing prosperity. Where oppression and tyranny prevail, the inhabitants, though surrounded by all the means of civilization and wealth, are invariably poor and miserable. In respect of soil, climate, and situation, Spain is perhaps superior, or at all events but a little inferior, to Great Britain; and yet, what a miserable contrast does the former present when compared with the latter! The despotism and intolerance of her rulers, and the want of good order and tranquillity, have almost extinguished every germ of improvement in the Peninsula, and sunk the inhabitants to the level of the Turks and Moors. It remains to be seen whether the revolution now (October 1868) in progress may not be a prelude to happier times for that country. Let us hope it may. Had a political system similar

to that of Spain been established in England, we should have been equally depressed. Our superiority in science, arts, and arms, though promoted by subsidiary means, is, at bottom, the result of freedom and security—freedom to engage in every employment, and to pursue our own interest in our own way, coupled with an intimate conviction, derived from the nature of our institutions and their opposition to everything like arbitrary power, that acquisitions, when made, may be securely enjoyed or disposed of. These form the grand sources of our wealth and power. There have only been two countries—Holland and the United States—which have in these respects been placed under nearly the same circumstances as England; and, notwithstanding they inhabit a morass defended only by artificial mounds from being deluged by the ocean, the Dutch have long been, and still continue to be, the most prosperous and opulent people of the Continent; while the Americans, whose situation is more favourable, are advancing in the career of improvement with a rapidity hitherto unknown. In Great Britain we have been exempted, for a lengthened period, from foreign aggression and intestine commotion; the pernicious influence of the feudal system has long been at an end; the same equal burdens have been laid on all classes; we have enjoyed the advantage of liberal institutions without any material alloy of popular licentiousness or violence; our intercourse with foreign nations, though subjected to various restraints, has been comparatively free; full scope has been given to the competition of the home producers; the highest offices have been open to deserving individuals; and, on the whole, the natural order of things has been less disturbed amongst us by artificial restraints than in most other countries. But without security, no degree of freedom would have been of material importance. Happily, however, every man has felt satisfied, not only of the temporary, but of the permanent tranquillity of the country, and of the stability of its institutions. The plans and combinations of capitalists have not been affected by misgivings as to what might take place in future. Moneyed fortunes have not been amassed in preference to others because they might be more easily sent abroad in periods of confusion and disorder; but all individuals have unhesitatingly engaged, whenever an opportunity offered, in undertakings of which a remote posterity was alone to reap the benefit. No one can look at the immense sums expended upon the permanent improvement of the land, on docks, warehouses, canals &c., or reflect for a moment on the settlements of property in the funds, and the extent of our system of life insurance, without being deeply impressed with the vast importance of that confidence which the public have placed in the security of property and the good faith of government. Had this confidence been imperfect, industry and invention would have been paralysed, and much of that capital which feeds and clothes the industrious classes would never have existed. The preservation of this security entire, both in fact and in opinion, is essential to the public welfare. If it be in anywise impaired, the colossal fabric of our prosperity will crumble into dust; and the commerce of London, Liverpool, and Glasgow, like that of Tyre, Carthage, and Palmyra, will at no very remote period be famous only in history. (From the *Treatise on Commerce*, contributed by the author of this work to the Society for the Diffusion of Useful Knowledge.)

*Supposed Danger to our Trade from Foreign Competition.*—A great many statements have been circulated of late years respecting the rapid pro-

gress of manufactures in foreign countries, and many sinister auguries have at the same time been indulged in as to the decay of the manufactures and trade of this country. But though all branches of industry, and especially those dependent on foreign supply and demand, are necessarily exposed to vicissitudes which it is impossible to estimate a priori, or even to foresee, still we think there are no good grounds on which to anticipate that we are at all likely, within any reasonable period, to be outstripped by others in the career of industry. We have, it is true, something to fear from the spread of combinations and agitation at home; but, supposing domestic security and tranquillity to be preserved, we have little or nothing to fear from foreign competition. Our exports to France, Germany, and Italy have increased rapidly within the last 20 years; and but for restrictions, which, however, are ten times more injurious to themselves than to those with whom they deal, our exports to Spain and other parts of the Continent would have been vastly increased. But it is impossible that these restrictions should be maintained for any very lengthened period. Their days are numbered, and they cannot be many. In the present state of Europe, and with the intimate intercourse that subsists among its different states, we may safely affirm that monopoly, and its necessary consequences, scarcity and high prices, cannot have a very lengthened existence.

We have occasionally seen statements in which some stress has been laid in regard to the progress of the cotton and other manufactures of the United States and elsewhere; and we need no doubt that at some future period the United States will be a great manufacturing country. It is every means and every facility for eventually distinguishing itself in that career; but a result of this sort can only be slowly brought about, as population increases, and as the preponderating advantages now on the side of the ruder species of industry are diminished. Supposing it to have arrived at the destined goal, there are no grounds for supposing that the consequences will be injurious to us. On the contrary, there is every reason to think, seeing the rapid increase of population and wealth in all parts of the world, that there will be 'ample and verge enough' for the fullest display of manufacturing capacities of every people. In the mean time, and for a long while to come, Americans will export few cotton goods except those coarse fabrics the value of which consists of that of the raw material. It is, in fact, an absurdity to suppose that a country like the United States, where labour is comparatively scarce, and profits and wages comparatively low, should be able to come into anything like successful competition with a country like England in the production of any description of article requiring either a good deal of skill or of labour in their manufacture.

*Establishment of Free Trade.*—In the editions of this work we showed that much had been done, much remained to be done, to carry out to its full extent the liberal enlightened system of commercial policy which we had entered. We also endeavoured to show that the necessary changes might be made in our corn laws and other restrictive regulations without seriously imperilling the interests of agriculture, or of any other great department of industry. We confess, however, that we did not anticipate that the triumph of philosophy would sound sense over sophistry and selfishness

at hand. But *novus sacrorum nascitur ordo*. The scarcity in Ireland in 1845-46, coupled with the disinterestedness, the patriotism, and the ability of Sir Robert Peel, made an end of the *coercion laws*; and with them fell the whole system of protection in this country. A few shreds and patches of the fabric may be found here and there for a longer or a shorter period, but all men of sense saw that the idol had been thrown down without the smallest hope of its ever being again resuscitated, and that free commercial principles were everywhere destined to gain the ascendancy.

One thing only was wanted in 1846 to hasten the downfall of the whole system—the experimental and practical success of the new; and that has been afforded in the most ample manner. It would be difficult to exaggerate the advance that has been made in commerce and in most sorts of industry, and the improvement in the condition of society that has taken place since that period. A considerable portion of this advance is no doubt due to the discovery of the Californian and Australian gold-fields. But that was an incident which might have been turned to an equally good account by France, Spain, or any other country. And if it has been peculiarly advantageous to us and to the Americans, it is because our Transatlantic rivals and ourselves were in a situation to profit by it; because our free and untrammelled energies were ready to be directed towards any channel, how remote soever, which held out the promise of an adequate reward.

The moral influence of the new state of things is no less powerful and important than its economical influence. The extension of commerce will do more than anything else to diffuse the blessings of civilisation, to bind together the universal society of nations by sharpening, and at the same time gratifying, their mutual wants and desires, and to maintain undisturbed that tranquillity so indispensable to its full development.

**IMPRESSMENT.** The forcible taking away of seamen from their ordinary employment, and compelling them to serve, against their will, in Her Majesty's ships.

*Regulations as to Impressment.*—This practice is not expressly sanctioned by any Act of Parliament; but it is so indirectly by the numerous statutes that have been passed, granting exemptions from it. According to Lord Mansfield, it is a power founded upon immemorial usage, and is understood to make a part of the common law. All seafaring men are liable to impressment unless specially protected by custom or statute. Seamen executing particular services for Government not unfrequently get protections from the Admiralty, Navy Board &c. Some are exempted by local custom, and *ferry-men* are every where privileged from impressment. The statutory exemptions are numerous.

*Every ship in the coal trade* has the following persons protected, viz. 2 able seamen (such as the master shall nominate) for every ship of 100 tons and upwards; and any officer who presumes to press any of the above shall forfeit to the master or owner of such vessel 10*l.* for every man impressed; and such officer shall be incapable of holding any place, office, or employment in any of Her Majesty's ships of war. (6 & 7 Wm. III. c. 19.) In order that these men shall be protected, it is necessary for the master to have them before they are impressed: this is to be done by going before the mayor or other chief magistrate of the place, who is to give the master

a certificate, in which are contained the names of the particular men whom he thus nominates; and this certificate will be their protection.

2. *No parish apprentice* shall be compelled or permitted to enter into the Royal Navy till he arrives at the age of 18 years. (2 & 3 Anno c. 6 s. 4.)

3. Persons voluntarily binding themselves apprentices to sea service shall not be impressed for 3 years from the date of their indentures; but no persons above 18 years of age shall have any exemption or protection from her Majesty's service if they have been at sea before they became apprentices. (2 & 3 Anno c. 6 s. 15; 4 Anno c. 19 s. 17; and 13 Geo. II. c. 17 s. 2.)

4. *Persons employed in the Fisheries.*—The Act 50 Geo. III. c. 108 grants the following exemptions from impressment, viz.:

1. *Masters of fishing vessels* or boats, who, either themselves or their owners, have, or within 6 months before applying for a protection shall have had, 1 apprentice or more under 16 years of age, bound for 5 years, and employed in the business of fishing.

2. All such apprentices, not exceeding eight to every master or owner of any fishing vessel of 50 tons or upwards; not exceeding seven to every vessel or boat of 35 tons and under 50; not exceeding six to every vessel of 30 tons and under 35 tons; and not exceeding four to every vessel or boat under 30 tons burden during the time of their apprenticeship, and till the age of 20 years; they continuing, for the time, in the business of fishing only.

3. *One mariner*, besides the master and apprentices, to every fishing vessel of 10 tons or upwards, employed on the sea-coast, during his continuance in such service.

4. *Any landsman* above the age of 18, entering and employed on board such vessel, from 2 years from his first going to sea; and to the end of the voyage then engaged in, if he so long continue in such service.

An affidavit sworn before a justice of the peace, containing the tonnage of such fishing vessel or boat, the port or place to which she belongs, the name and description of every such mariner and landsman respectively, and the time of such landsman's first going to sea, is to be transmitted to the Admiralty, who, upon finding the facts correctly stated, grant a separate protection to every individual. In case, however, of an actual invasion of these kingdoms or imminent danger thereof, such protected persons may be impressed; but except upon such an emergency, any officer or officers impressing such protected persons shall respectively forfeit 20*l.* to the party impressed if not an apprentice, or to his master if he be an apprentice. (Secs. 2, 3, 4.)

5. *General Exemptions.*—All persons 55 years of age and upwards, and under 18 years. Every person being a foreigner, who shall serve in any merchant ship, or other trading vessel, or privateer, belonging to a subject of the Crown of Great Britain; and all persons, of what age soever, who shall use the sea, shall be protected for 2 years, to be computed from the time of their first using it. (13 Geo. II. c. 17.)

6. *Harpooners*, line managers, or boat steersers, engaged in the Southern whale fishery, are also protected. (26 Geo. III. c. 50.)

7. *Mariners employed in the herring fishery* are exempted while actually employed. (48 Geo. III. c. 110.)

*Policy of Impressment.*—This practice, so subversive of every principle of justice, is vindicated on the alleged ground of its being absolutely necessary to the manning of the fleet; and if this allegation were really well founded, it would be quite sufficient for its justification. But it may be doubted whether such was ever really the case, and, at all events, it is no longer so.

I. The difficulty formerly experienced in manning the fleet at the breaking out of a war resulted from the sudden demand for a great number of sailors. This, however, has been more an artificial than a real difficulty, and was occasioned by the peace establishment being arranged on too low a scale. Had it been kept up at from a third to a half of the force usually required during war, and made to consist wholly, or almost wholly, of thorough-bred seamen, it would have been an easy matter, by taking on board the usual complement of landsmen and marines, to have put the fleet on a war footing without resorting to impressment, or injuring the merchant service by offering high bounties to the men that entered the navy. It was not necessity, but an ill-judged spirit of parsimony, and the adoption of an improper system, that made impressment necessary in bygone times. But the secure asylum afforded to such of our seamen as choose to resort to the ships of the United States must now, were there nothing else to be considered, make an end of impressment in time to come.

II. Apart from these considerations, the change which the introduction of steam has effected in navigation has made the adoption of a new system alike easy and indispensable. Thorough-bred seamen, or those expert alike in the handling of sails and the manœuvring of ships, are no longer necessary to anything like the same extent as formerly. Ships are now navigated from the engine-room, and a small part only of the crews need to be expert seamen. What are now mainly required in ships of war are crews thoroughly trained to the management of guns and the sword exercise; and these important qualifications may be attained in the highest perfection by those who can neither go aloft, nor distinguish one rope from another. All that they require are sea-legs, or such a degree of familiarity with the sea that they may be able to keep their footing, and perform their peculiar duties on board, without being annoyed by sickness or otherwise inconvenienced.

And hence the true plan is to keep the sailing ships on the peace establishment always fully manned with thorough-bred seamen, and to train a large proportion, if not the whole, of the army to the sea as well as to the land service. The marines are equally serviceable at sea and on shore, and why not add largely to their numbers? In this view large bodies of troops might be kept in garrisons or in barracks in seaport towns, who, being embarked occasionally in ships of war, instructed in the art of gunnery and the duty of marines, and accustomed to a seafaring life, would not fail to become a most valuable and efficient description of force.

It may be worth while, perhaps, to mention that a plan similar to that now referred to appears to have been adopted by Augustus and his successors at the great naval stations of Ravenna and Misenum. (Gibbon's *Decline and Fall*, cap. iv.) And, however this precedent may apply, there can be no doubt that the course suggested above may be followed with equal facility and advantage. Supposing we had a sea-going militia of 50,000 men—that is, 50,000

men having the use of sea-legs and familiar with the practice of gunnery on board ship, and with the ordinary parts of a seaman's duty—we should be able, by withdrawing a part, say a half, of the thorough-bred seamen employed in sailing ships, and distributing them among those propelled by steam, to send to sea the most powerful fleets at the shortest notice and with the least difficulty. The duty of a soldier should no longer be restricted to service on land—he should be a sort of amphibious animal, and be made to exhibit his courage and daring on sea or on shore as circumstances may require. If we adopt a system of this sort, we shall do the most which, perhaps, can be done to strengthen our means of defence, and to render our coasts secure against invasion.

For further details and statements in regard to this matter we beg to refer to the very able paper of W. S. Lindsay, Esq., formerly M.P. for Sunderland, *On the Manning of the Navy*, (Papers printed by Command, Sess. 1859.) The subject is discussed in it by one who is equally at home in all that respects its theory and practice.

The practice of impressment will probably be abandoned, should such occasions hereafter arise as would justify it on such public grounds as were heretofore alleged. The establishment indeed, of the Naval Reserve, is in effect the surrender of the system.

**INDEMNITY.** Is where one person secures another from responsibility against any particular event: thus a policy of insurance is a contract of indemnity against any particular loss. Where one person also becomes bail for another, a bond of indemnity is frequently executed; and when a bond or bill of exchange has been lost or mislaid, the acceptor or obligee would not act prudently in paying it without being secured by bond of indemnity.

**INDIA-RUBBER.** [CAOUTCHOUC.]

**INDIGO** (Fr. indigo; Ger. indigo; Sansc. Arab. neel; Malay, taroom). The drug which yields the beautiful blue dye known by that name. It is obtained by the maceration in water of certain tropical plants; but the indigo of commerce is almost entirely obtained from leguminous plants of the genus *Indigofera*; that cultivated in India being the *Indigofera tinctoria*, and that in America the *Indigofera anil*. The Indian plant has pinnate leaves and a slender ligneous stem; and it successfully cultivated, rises to the height of 6 and even 6 feet.

It appears pretty certain that the culture of indigo plant, and the preparation of the drug, has been practised in India from a very remote epoch. It has been questioned, indeed, whether the *dicum* mentioned by Pliny (*Hist. Nat. lib. x. c. 6*) was indigo, but, as it would seem, without any good reason. Pliny states that it was brought from India; that when diluted it produced an admirable mixture of blue and purple colour ('diluendo misturam purpure cœruleque mirabilis reddi'); and he gives tests by which the genuine drug might be discriminated with sufficient precision. It is true that Pliny is egregiously taken as to the mode in which the drug is produced; but there are many examples modern as well as ancient times to prove the possession of an article brought from a distant country implies no accurate knowledge of its nature, the processes followed in its manufacture. Pliny ( *Hist. of Inventions*, vol. iv. art. 'Indigo' ) and Dr. Bancroft (*Permanent Colours*, vol. i. 241-252) have each investigated this subject with great learning and sagacity, and agree in the conclusion that the *indicum* of Pliny was

and not, as has been supposed, a drug prepared from the *isatis* or woad. At all events, there can be no question that indigo was imported into modern Europe, by way of Alexar 'ria, previously to the discovery of the route to India by the Cape of Good Hope. When first introduced, it was customary to mix a little of it with woad to heighten and improve the colour of the latter; but by degrees the quantity of indigo was increased, and woad was at last entirely superseded. It is worth while, however, to remark that indigo did not make its way into general use without encountering much opposition. The powers of woad prevailed on several governments to prohibit the use of indigo: In Germany an Imperial edict was published in 1654, prohibiting the use of indigo, or 'devil's dye,' and directing great care to be taken to prevent its clandestine importation, 'because,' says the edict, 'the trade in woad is lessened, dyed articles injured, and money carried out of the country!' The magistrates of Nuremberg went further, and compelled the dyers of that city to take an oath once a year not to use indigo, which practice was continued down to a late period. In 1698, upon an urgent representation of the States of Languedoc, at the solicitation of the woad growers, the use of indigo was prohibited in that province; and it was not till 1737 that the dyers of France were left at liberty to dye with such articles, and in such a way, as they pleased. (Beckmann, vol. iv. p. 12.) Let not those who may happen to throw their eyes over this paragraph smile at the ignorance of their ancestors. *Mutato nomine, de te fabula narratur.* How much opposition is made in most countries at this moment to the introduction of many important articles, for no better reasons than were alleged in the sixteenth century against the importation of indigo!

Indigo is produced in Bengal, and the other provinces subject to the presidency of that name, from the 20th to the 30th degree of north latitude; in the province of Tinnevely, under the Madras government; in Java; in Luconia, the principal of the Philippine Islands; and in Guatemala, and the Caraccas, in Central America. Bengal is, however, the great mart for indigo, and the quantity produced in the other places is comparatively inconsiderable.

It was of opinion that the culture of indigo had been introduced into America by the Spaniards, but this is undoubtedly an error. Several species of *indigofera* belong to the New World; and the Spaniards used it as a substitute for indigo, very soon after the conquest. (Humboldt, *Essai Politique sur la Nouvelle Espagne*, t. iii. p. 34, 2nd ed.)

For the first 20 years after the English became masters of Bengal, the culture and manufacture of indigo, now of such importance, were unknown to the British industry, and the exports were but trifling. The European markets were supplied principally from America. It was, however, the attention of the English to be directed to this business; and though the processes pursued by them be nearly the same as those followed by the natives, their greater intelligence, and capital give them immense advantages. In their hands, the growth and preparation of indigo became, and continued down to the period of the cotton famine, the most important employment, at least in a commercial point of view, except the cultivation and export of opium, which could be freely carried on in the East (the culture and preparation of opium being a monopoly). The indigo made by the natives supplies the internal demand; but a

portion of that which is raised by them, with all that is raised by Europeans, is exported.

In the Delta of the Ganges, where the best and largest quantity of indigo is produced, the plant lasts only for a single season, being destroyed by the periodical inundation; but in the dry central and western provinces, one or two *ratoon* crops are obtained; and owing to this circumstance, the latter are enabled to furnish a large supply of seed to the former.

During the 9 years which preceded the opening of the trade with India, in 1814, the annual average produce of indigo in Bengal for exportation was nearly 6,600,000 lbs.; but after the ports were opened, the indigo produced for exportation increased more than a half, the exports during the 16 years ending with 1829-30 being above 7,500,000 lbs. a-year. The following statement shows the rate of this increase, taking the average produce of each 4 years:—

Year	lbs.	Year	lbs.
1811	7,010,000	1822	8,000,000
1812		1823	
1813		1824	
1814		1825	
1815	6,700,000	1826	9,000,000
1816		1827	
1817		1828	
1818		1829	

In the years 1862-3 and 1863-4, the exports of indigo from India, and the destination of the supplies, were as follow:—

	1862-3		1863-4	
	Quantity	Value	Quantity	Value
	lbs.	£	lbs.	£
United Kingdom	8,337,133	1,627,083	6,935,958	1,318,818
America	134,061	26,949	169,034	32,302
Arabian and Persian Gulf	345,037	53,345	418,099	60,210
France	1,921,180	371,396	1,239,269	246,191
Germany	85,080	15,503	42,210	8,321
Russia	293,229	51,738	330,331	61,660
Other places	9,377	815	9,151	928
Total	11,521,880	2,126,870	9,172,615	1,756,158

The value of the exports in 1860 was 1,861,501l.

It deserves to be remarked, that since the opening of the trade, Indian capitalists have betaken themselves to the manufacture of indigo on the European method, and that at present a considerable part of the whole annual produce is prepared by them.

The culture of indigo is very precarious, not only in so far as respects the growth of the plant from year to year, but also as regards the quantity and quality of the drug which the same amount of plant will afford even in the same season. Thus the produce of 1825-26 was 41,000 chests, while that of 1826-27 was but 25,000 chests; and in 1842 the produce was only 79,000 maunds, while that of the following year was no less than 172,249 maunds! The price of indigo in India increased for a while in a far greater ratio than the quantity. In 1813-14 the real value of that exported from Calcutta was 1,461,000l.; but in 1827-28, although the quantity had increased but 20 per cent., the value rose to 2,920,000l., or was about doubled. There was no corresponding rise in the price in Europe, but, on the contrary, a decline; and this circumstance is to be accounted for by the restraints that were then placed on the investment of capital in the production of colonial articles suited to the European market, the consequent difficulty of making remittances from India, and an unnatural flow of capital to the only great article of Indian produce and export that was supposed capable of bearing its application.

The consumption of indigo has not increased in this country during the 10 years ending with 1867.

This stationary demand, notwithstanding the fall in the price of the drug and the increase of population, is principally to be ascribed to the decreasing use of blue cloth, in the dyeing; of which it is principally made use of. Its consumption in France is about as great as in Britain. Besides the exports to Great Britain, France, Germany, and the United States, a good deal of Bengal indigo is exported to the ports on the Persian Gulf, whence it finds its way to southern Russia. It is singular that it is not used by the Chinese, with whom blue is a favourite colour. We sub-join

*An Account of the Imports and Exports of Indigo into and from the United Kingdom in each of the 7 Years ending with 1867.*

	1861	1862	1863	1864	1865	1866	1867
Imports - cwt.	83,109	69,589	85,593	76,214	66,506	71,250	71,995
Exports - "	67,135	39,808	51,063	57,664	66,517	35,640	62,692
Remains for home consumption -	15,974	29,781	34,530	18,550	-	35,610	9,303

Average for the seven years, 14,956 cwt., or 1,675,072 lbs. a-year.

Of 71,995 cwt. indigo imported into Great Britain in 1867, 53,961 cwt. were from India, 499 ditto from United States, 10,381 ditto from Central America, and 1,338 from New Granada. The duty to which it was formerly subject was repealed in 1845.

The indigo of Bengal is divided into two classes called, in commercial language, *Bengal and Oude*; the first being the produce of the southern provinces of Bengal and Bahar, and the last that of the northern provinces and of Benares. The first is, in point of quality, much superior to the other. This arose at one time, in a considerable degree, from the practice which prevailed in the northern provinces of the European planter purchasing the wet fecula from the ryot or native manufacturer, and completing the processes of curing and drying the drug. This is at present in a great measure discontinued; and the Oude indigo has, in consequence, considerably improved in quality. Its inferiority is probably more the result of soil and climate than of any difference in the skill with which the manufacture is conducted. The production of indigo in Bengal and Oude is supposed to have amounted at an average of the 10 years ending with 1851 to 121,900 maunds (of 82 lbs. each) a-year.

In addition to the indigo raised in Bengal, a considerable quantity is now raised in Madras; the value of the exports from the latter in the 5 years 1861-5 having amounted to an average of 281,000l. a-year. The indigo of Madras is not so good as that of Bengal, and brings a much less price. Indigo is also exported from Java, the Philippine Islands, Central America, and other places. In 1854 the exports from Batavia amounted to 1,077,848 lbs.; in 1863 they were 904,200 lbs. In 1864 the exports from Manilla were estimated at about 308,864 lbs. According to Humboldt, 1,800,000 lbs. indigo were exported from Guatemala in 1825; but if so, which is, perhaps, doubtful, its production must have fallen off greatly in the interval. In 1866 our imports of indigo from the whole of Central America, inc. Honduras, amounted to 6,040 cwts., or 672,480 lbs. Indigo is produced in some of the West India islands, but in small quantities.

Good indigo is known by its lightness or small specific gravity, indicating the absence of earthy impurities; by the mass not readily parting with its colouring matter when tested by drawing a streak with it over a white surface; but above

all, by the purity of the colour itself. The first quality, estimated by this last test, is called, in commercial language, *fine blue*; then follow *fine purple, purple and violet, violet, strong copper, and ordinary copper*. These distinctions refer to Bengal indigo only, the Oude being distinguished merely into *fine and ordinary*. The indigo of Madras, which is superior to that of Manilla, is about equal to ordinary Bengal indigo. The indigo of Java is superior to these.

For further information as to indigo, see Colebrooke's *Husbandry of Bengal*, p. 154; Millburn's *Orient Com.*; Wilkinson's *Commerce of Bengal*; Wilson's *Review of do.*; evidence of Gillian MacLaine, Esq., before East India Committee, 1830-31; *Parl. Papers*, &c.

The fixed capital required in the manufacture of indigo consists of a few vats of common masonry for steeping the plant, and precipitating the colouring matter; a boiling and drying house, and a dwelling house for the planter. These, in a factory of ten pair of vats, capable of producing at an average, 12,500 lbs. of indigo, worth the spot about 2,500l., will not cost above 1,000 sterling. The buildings and machinery necessary to produce an equal value in sugar and rum would probably cost about 4,000l. This, therefore, without any reference to municipal regulations, affords a ready answer to the question which has been frequently put, why the British planters in India have seldom engaged in the manufacture of sugar.

INK (Dutch, *ink*; Fr. *encre*; Ger. *ink*; Ital. *inchostro*; Lat. *atramentum*; Russ. *чёрная*; Span. *tinta*; Swed. *blak*).

Every liquor or preparation used for writing printing is distinguished by the name of Common practice ink, which is only black and blue. Of black ink there are three principal kinds: 1. Indian ink; 2. Printers' ink; and 3. Writing ink. The Indian ink is used in China for writing with a brush, and for painting upon the soft paper of Chinese manufacture. It is ascertained as well from experiment as from information, the cakes of this ink are made of lampblack and size or animal glue, with the addition of fumes or other substances not essential to quality as an ink. The fine soot from the flame of a lamp or candle received by holding a sheet of paper over it, mixed with clean size from sheep-skin parchment or glove-leather not dyed, will form an ink equal to that imported. Good printing ink is a black paint, smooth, and uniform in composition, of a firm black colour, and possessing a singular aptitude to adhere to paper though impregnated with moisture.

Common ink for writing is made by adding an infusion or decoction of the nut-gall to sulphuric iron, dissolved in water. A very fine black ink is thrown down, the speedy subsidence of which is prevented by the addition of a quantity of gum Arabic. Lampblack is the common material to give the black colour, of which 16 ounces are sufficient for 16 ounces of the vermilion is a good red. They are ground together on a stone with a muller, in the same manner as oil paints. Among the amusing experiments of the art of chemistry, the exhibition of synthetic inks holds a distinguished place. In these the writing is invisible until some substance gives it opacity. These inks have been proposed as the instruments of secret correspondence, but they are of little use in this respect, as the properties change by a few days rest on the paper; most of them have more or less of a tinge when thoroughly dry; and many of them resist the test of heating the paper.

**INKLE.** A sort of broad linen tape, principally manufactured at Manchester and some other towns in Lancashire.

**INSOLVENCY AND BANKRUPTCY.** A bankrupt is, in a general sense, a person who is unable to pay his collective debts.

A creditor is a person who trusts another with his property, and who thereupon puts himself in a position which is, as contrasted with the debtor, naturally and comparatively defenceless. To sustain and protect him, the law, in all civilised communities, lends its power to constrain the debtor into the fulfilment of his contract.

The law takes cognizance of contracts in such a sense as to consider all persons who have incurred obligations of any kind as liable to the penalties which municipal regulations visit on insolvency, whether that insolvency be incapacity to pay, or unwillingness to fulfill contracts. What it strictly and primarily does, is to take away the control which the debtor would otherwise have over his own property. It vests the debtor's property either in a public officer who is empowered to seize it, and make compensation from it; or in judicial persons, who are entrusted with the duty of collecting and distributing it; or in the creditors themselves.

But it compels the creditor to prove his debt, partly in the interest of the debtor, who might otherwise become liable to false, fraudulent, or exaggerated claims, partly in the interest of other creditors, who, if the bankrupt's or debtor's estate be insufficient to fully satisfy all claims, might be deprived of their quota by fictitious or extravagant demands.

The strictness of the early Roman law of bankruptcy has already been commented on.

The English general law was early modified in the case of traders. In the reign of Edward I. the trader was allowed to pledge his land, in particular forms, known as *statute merchant* and *statute staple*, and could be arrested if the pledge be insufficient to discharge the debt.

The first statute of bankruptcy is that of 34 Henry VIII. c. 4, and the principle of this early law was that of securing and dividing the bankrupt's assets.

The statute of Henry VIII. was materially altered by the Act of 13 Eliz. c. 7, which defines the persons who may be made bankrupts, and the provisions of this statute were further enlarged by 1 Jas. I. c. 15, and 21 Jas. I. c. 19.

By the statute of 10 Anne c. 15, when an attempt was made to distinguish between the honest but unfortunate bankrupt, and the dishonest and fraudulent debtor, and by 6 Geo. IV. c. 16, the provisions of bankruptcy were defined, persons liable to become bankrupt were distinguished, and the court administering this part of mercantile law was remodelled.

From 1831 the lord chancellor or lord keeper exercised the jurisdiction; but then an Act was passed vesting a chief judge, three other judges, commissioners, and thirty official assignees, in the administration of the law.

The chief judge and his colleagues formed a court of review, with a final appeal in a limited number of cases to the chancellor.

The Consolidation Act of 1849, repealing nearly all the then existing statutes, abolished the jurisdiction of the chancellor, and vested it in the Court of Bankruptcy. This Act also provided for the formation of voluntary arrangements or compositions, either with or without the intervention of the court.

**Insolvency.**—The Act of 1849, like other Acts

preceding it in order of time, defined with exactness who were the persons liable to bankruptcy, and what were the precise acts which constituted bankruptcy.

There was a radical difference between the bankruptcy law and that of insolvents. The bankrupt, unless convicted of fraud, was secured not only from arrest, but in the possession of property acquired after his bankruptcy, while the insolvent was never discharged from his liability until every creditor had been discharged in full, though he was secured from arrest.

**Legislation of 1861.**—The Act of 1861 introduced several fundamental changes into the law of bankruptcy—changes which have, unfortunately but beyond all dispute, so favoured debtors as to give the most powerful stimulant to recklessness in trading, fraud, and dishonesty. The distinction between traders and non-traders is done away, and this perhaps is only reasonable; but all debtors are now enabled to obtain a complete discharge of debts and liabilities by giving up their property if they have any, and by going through the form of it if they have none.

The following is a brief account of the more important provisions of the Act, which is lengthy, containing 230 sections.

1. The jurisdiction of the Court of Bankruptcy includes that of the Court for the Relief of Insolvent Debtors.

3-7. Extension of the jurisdiction of county courts in matters of bankruptcy.

19-27. Supersede the functions of the Insolvent Debtors' Court.

37-41. Fees and stamps. These are simplified.

45-47. General orders. These are to be framed by the lord chancellor with two of the commissioners, and must be laid before Parliament.

69. Abolishes the distinction between traders and non-traders.

70-75. Acts of bankruptcy, and rules to be observed before adjudication.

76-85. Acts of bankruptcy by non-payment of judgment debtor summons.

86-107. Petitions for adjudication of bankruptcy and proceedings thereon. The first clause gives power to a debtor to petition an adjudication of bankruptcy against himself, without any previous declaration of insolvency. The 89th determines the amount of creditors' debts which shall justify a petition. The 97th defines the character of debts for the purpose of petition. The 98th and 99th describe the proceedings of a petitioner in forma pauperis. The 100th decrees that gaolers shall make a return of prisoners for debt. The 101st, that the registrar shall inspect prisoners with a view to making prisoners for debt bankrupts, by order of adjudication. The 106th and 107th deal with the cases of lunatic debtors.

108-115. Proceedings after adjudication. The official assignee is to take possession of the bankrupt's assets. The creditors shall meet, give proof of debts, resolve (110) if the major part in value agree, to take no further proceedings in bankruptcy, and if on further notice a majority of three-fourths in value accede, shall be empowered to suspend the bankruptcy and administer the estate at their own discretion.

116-139. Choice of creditors' assignee, by majority in value of creditors, with the powers and duties of his office.

140-143. Proceedings at the last examination.

144-156. Proof of debts.

157-172. Proceedings in the discharge of the bankrupt.

become so apparent that we cannot doubt that at an early period the law will undergo farther revision.

**Bankruptcy in Scotland.**—The legal process by which an insolvent is declared bankrupt in Scotland is called a *sequestration*, and is derived in its general outline from the *cessio honorum* of the civil code. The debtor may apply, by means of this process, for liberation from prison, and for protection against the arrest of his person. His liberation will depend upon his conduct, which, if marked by fraud, extravagance, or concealment of his property, will disentitle him to relief. If his prayer is granted, his estate is handed over to a trustee, in order to be divided among his creditors. But this process does not free him from his liabilities. Further, the debtor may bring about a sequestration of his estates, and obtain liberation from prison, and protection from arrest, and ultimately a discharge of his debts. To sue out this sequestration he requires the concurrence of a creditor to the extent of 50*l.*, or of two whose united debts amount to 70*l.*, or of three to the extent of 100*l.* In the process of a sequestration there is no difficulty in obtaining personal protection until the first meeting of his creditors, unless some creditor makes out a *prima facie* case of fraud against him. If he has been imprisoned, there is rather more difficulty in obtaining liberation. In any case protection from arrest or liberation from prison are refused in case of fraud or gross negligence. The sequestration may be annulled, and its advantages withheld from the debtor, within forty days after it is awarded; three months in case the debtor's creditors reside for the most part in England or Scotland, provided cause be shown.

The 'sequestration' of the Scotch law supplies three official powers: the trustee, who manages the estate, and is liable to the creditors in case of negligence or misconduct, being also entitled to adequate remuneration for the discharge of his office; three commissioners, who form a council to the trustee, and are elected from the creditors; and the court, which may be the Court of Session or the Sheriffs' Court, as may be chosen.

The process of a sequestration may be interrupted by a deed of arrangement, which can be entered into by a majority (four-fifths in value) of the creditors who have vouched their debts. In the space of two months a deed is prepared, which, if it be signed by the above-named four-fifths in number and value, will be confirmed as binding on all the creditors.

Again, when the process of sequestration has been carried further, a composition may be offered. If nine-tenths of the creditors in number and value agree at the first meeting, it is proposed anew at a second meeting of creditors, when an equal number of those present must agree to the completion of it. If the offer of composition be made at the second meeting of creditors, four-fifths of the creditors may carry it. But in case any offer of composition be re-

jected by the creditors, the court will not entertain the first offer from the bankrupt unless nine-tenths of his creditors signify their assent in writing. Should the court be satisfied, it makes an order of discharge, and frees the insolvent of his debts. As the bankrupt gives a bond for the satisfaction of the composition, he is reinstated in his estates.

If the debtor does not obtain his discharge by means of a composition, and the sequestration completed, he is entitled to petition the court for his discharge. To effect this he must obtain a certificate as to his conduct from the trustee. The certificate must be followed by the consent of the creditors to his petition. If the whole court can immediately petition the court. If he delays for six months, he needs the assent of four-fifths only. At the expiration of twelve months two-thirds are sufficient, of eighteen months a majority, at two years no consent at all is required. The court has power to suspend, postpone, or refuse the discharge, or to annex any conditions to which may be deemed expedient. Though the English Bankruptcy Bills (3) at present (18) under consideration of Parliament may probably be abandoned, on account of the impending dissolution, it may be well to state that Lord Cairns, their promoter, has in view the return to some extent of the distinction between trader and non-trader, and the separation of business connected with bankruptcy from that of insolvency. On the other hand, the Commercial Committee, in their Report of March 21, 1865, favoured the assimilation of the English to the Scotch law of bankruptcy. [BANKRUPTCY.]

**INSURANCE.** A contract of indemnity, which one party engages, for a stipulated sum, to insure another against a risk to which he is exposed. The party who takes upon him the risk is called the *Insurer, Assurer, or Underwriter*; and the party protected by the insurance is called the *Insured, or Assured*; the sum paid is called the *Premium*; and the instrument containing the contract is called the *Policy*.

#### I. INSURANCE (GENERAL PRINCIPLES)

It is the duty of Government to assist, by means in its power, the efforts of individuals to protect their property. Losses do not arise from accidental circumstances, but are frequently occasioned by the crimes and misdeeds of individuals; and there are no means so effectual for their prevention, when they arise from the source, as the establishment of a vigilant force of police, and of such an administration of justice as may be calculated to afford those who are injured a ready and cheap method of obtaining every practicable redress, and, as far as possible, of insuring the punishment of culprits. But

It is found, by the c

in spite of all that may be done by Government, and of the utmost vigilance on the part of individuals, property must always be exposed to a variety of casualties from fire, shipwreck, and other unforeseen disasters; and hence the importance of enquiring how such unavoidable losses, when they do occur, may be rendered least injurious.

The loss of a ship, or the conflagration of a cotton mill, is a calamity that would press heavily upon the richest individual. But were it distributed among several individuals, each would feel it proportionally less; and provided the number of those among whom it was distributed were very considerable, it would hardly occasion any sensible inconvenience to any one in particular. Hence the advantage of combining to lessen the injury arising from the accidental destruction of property; and it is the diffusion of the risk of loss over a wide surface, and its valuation, that forms the employment of those engaged in insurance.

Though it is impossible to trace the circumstances which occasion those events that are on that account termed accidental, they are, notwithstanding, found to obey certain laws. The number of births, marriages, and deaths; the proportions of male to female, and of legitimate to illegitimate births; the ships cast away; the houses burnt; and a vast variety of other apparently accidental events; are yet, when our experience embraces a sufficiently wide field, found to be nearly equal in equal periods of time; and it is easy, from observations made upon them, to estimate the sum which an individual should pay, either to guarantee his property from risk, or to secure a certain sum for his heirs at his death.

It must, however, be carefully observed that no confidence can be placed in such estimates unless they are deduced from a very wide induction. Suppose, for example, it happens that during the present year one house is accidentally burnt, in a town containing 1,000 houses; this would afford very little ground for presuming that the average probability of fire in that town was 1 to 1,000. For it might be found that not a single house had been burnt during the previous 10 years, or that 10 were burnt during each of these years. But supposing it were ascertained that, at an average of 10 years, 1 house had been annually burnt, the presumption that 1 to 1,000 was the real ratio of the probability of fire would be very much strengthened; and if it were found to obtain for 20 or 30 years together, it might be held, for all practical purposes at least, as indicating the precise degree of probability.

Besides its being necessary, in order to obtain the true measure of the probability of any event, that the series of events, of which it is one, should be observed for a rather lengthened period, it is necessary also that the events should be numerous, and of pretty frequent occurrence. Suppose it were found, by observing the births and deaths of 100,000 individuals taken indiscriminately from among the whole population, that the mean duration of human life was 40 years; we should have very slender grounds for concluding that this ratio would hold in the case of the next 10, 20, or 30 individuals that are born. Such a number is so small as hardly to admit of the operation of what is called the law of average. When a large number of lives is taken, those that exceed the medium term are balanced by those that fall short of it; but when the number is small, there is comparatively little room for the principle of compensation, and the result cannot, therefore, be depended upon.

It is found, by the experience of all countries

in which censuses of the population have been taken with considerable accuracy, that the number of male children born is to that of female children in the proportion nearly of 22 to 21. But unless the observations be made on a very large scale, this result will not be obtained. If we look at particular families, they sometimes consist wholly of boys, and sometimes wholly of girls; and it is not possible that the boys can be to the girls of a single family in the ratio of 22 to 21. But when, instead of confining our observations to particular families, or even parishes, we extend them so as to embrace a population of 500,000, these discrepancies disappear, and we find that there is invariably a small excess in the number of males born over the females.

The false inferences that have been drawn from the doctrine of chances have uniformly, almost, proceeded from generalising too rapidly, or from deducing a rate of probability from such a number of instances as do not give a fair average. But when the instances on which we found our conclusions are sufficiently numerous, it is seen that the most anomalous events, such as suicides, deaths by accidents, the number of letters put into the post-office without any address &c., form pretty regular series, and consequently admit of being estimated a priori.

The business of insurance is founded upon the principles thus briefly stated. Suppose it has been remarked that of forty ships, of the ordinary degree of seaworthiness, employed in a given trade, 1 is annually cast away, the probability of loss will plainly be equal to one-fortieth. And if an individual wish to insure a ship, or the cargo on board a ship, engaged in this trade, he ought to pay a premium equal to  $\frac{1}{40}$  of the sum he insures, exclusive of such an additional sum as may be required to indemnify the insurer for his trouble, and to leave him a fair profit. If the premium exceed this sum, the insurer is overpaid; and if it fall below it, he is underpaid.

Insurances are effected sometimes by societies, and sometimes by individuals, the risk being in either case diffused amongst a number of persons. Companies formed for carrying on the business have generally a large subscribed capital, or such a number of proprietors as enables them to raise, without difficulty, whatever sums may at any time be required to make good losses. Societies of this sort do not limit their risks to small sums; that is, they do not often refuse to insure a large sum upon a ship, a house, a life &c. The magnitude of their capitals affords them the means of easily defraying a heavy loss; and their premiums being proportioned to their risks, their profit is, at an average, independent of such contingencies.

Individuals, it is plain, could not act in this way unless they were possessed of very large capitals; and besides, the taking of large risks would render the business so hazardous, that few would be disposed to engage in it. Instead, therefore, of insuring a large sum, as 20,000*l.*, upon a single ship, a private underwriter or insurer may not, probably, in ordinary cases, take a greater risk than 200*l.* or 500*l.*; so that, though his engagements may, when added together, amount to 20,000*l.*, they will be diffused over from 40 to 100 ships; and supposing 1 or 2 ships to be lost, the loss would not impair his capital, and would only lessen his profits. Hence it is, that while one transaction only may be required in getting a ship insured by a company, 10 or 20 separate transactions may be required in getting the same thing done at Lloyd's, or by private individuals. When conducted in this cautious manner, the business of

insurance is as safe a line of speculation as any in which individuals can engage.

To establish a policy of insurance on a fair foundation, or in such a way that the premiums paid by the insured shall exactly balance the risks incurred by the insurers, and the various necessary expenses to which they are put, including, of course, their profit, it is necessary, as previously remarked, that the experience of the risks should be pretty extensive. It is not, however, at all necessary that either party should enquire into the circumstances that lead to those events that are most commonly made the subject of insurance. Such a research would, indeed, be entirely fruitless; we are, and must necessarily continue to be, wholly ignorant of the causes of their occurrence.

It appears, from the accounts given by Mr. Scoresby, in his valuable work on the *Arctic Regions*, that of 386 ships which sailed from the various ports of Great Britain for the Northern whale fishery during the 4 years ending with 1817, 8 were lost (vol. ii. p. 131)—being at the rate of about 1 ship out of every 73 of those employed. Now, supposing this to be about the average loss, it follows that the premium required to insure against it should be 1*l.* 7*s.* 4*d.* per cent., exclusive, as already observed, of the expenses and profits of the insurer. Both the insurer and the insured would gain by entering into a transaction founded on this fair principle. When the operations of the insurer are extensive, and his risks spread over a considerable number of ships, his profit does not depend upon chance, but is as steady, and may be as fairly calculated upon, as that of a manufacturer or a merchant; while, on the other hand, the individuals who have insured their property have exempted it from any chance of loss, and placed it, as it were, in a state of absolute security.

It is easy, from the brief statement now made, to perceive the immense advantage resulting to navigation and commerce from the practice of marine insurance. Without the aid that it affords, comparatively few individuals would be found disposed to expose their property to the risk of long and hazardous voyages; but by its means insecurity is changed for security, and the capital of the merchant, whose ships are dispersed over every sea, and exposed to all the perils of the ocean, is as secure as that of the agriculturist. He can combine his measures and arrange his plans as if they could no longer be affected by accident. The chances of shipwreck, or of loss by unforeseen occurrences, enter not into his calculations. He has purchased an exemption from the effects of such casualties, and applies himself to the prosecution of his business with that confidence and energy which nothing but a feeling of security can inspire. 'Les chances de la navigation entravaient le commerce. Le système des assurances a paru; il a consulté les saisons; il a porté ses regards sur la mer; il a interrogé ce terrible élément; il en a jugé l'inconstance; il en a senti les orages; il a épia la politique; il a reconnu les ports et les côtes des deux mondes; il a tout soumis à des calculs savans, à des théories approximatives; et il a dit au commerçant habile, au navigateur intrépide: Certes, il y a des désastres sur lesquels l'humanité ne peut que gémir; mais quant à votre fortune, allez, franchissez les mers, déployez votre activité et votre industrie; je me charge de vos risques. Alors, Messieurs, s'il est permis de le dire, les quatre parties du monde se sont rapprochées.' (*Code de Commerce, Exposé des Motifs*, liv. ii.)

Besides insuring against the perils of the sea,

and losses arising from accidents caused by the operation of natural causes, it is common to insure against enemies, pirates, thieves, and even the fraud, or, as it is technically termed, *barratry*, of the master. The risk arising from these sources of casualty being extremely fluctuating and various, it is not easy to estimate it with any considerable degree of accuracy; and nothing more than a rough average can, in most cases, be looked for. In time of war, the fluctuations in the rates of insurance are particularly great; and the intelligence that an enemy's squadron, or even a single privateer, is cruising in the course which the ships bound to or returning from any given port usually follow, causes an instantaneous rise in the premium. The appointment of convoys for the protection of trade during war necessarily tends, by lessening the chances of capture, to lessen the premium on insurance. Still, however, the risk in such periods is, in most cases, very considerable; and as it is liable to change very suddenly, great caution is required on the part of the underwriters.

Provision may also be made, by means of insurance, against loss by fire, and almost all casualties to which property on land is subject.

But, notwithstanding what has now been stated, it must be admitted that the advantages derivable from the practice of insuring against losses by sea and land are not altogether unmixed with evil. The security which it affords tends to relax the vigilant attention to the protection of property which the fear of its loss is sure otherwise to excite. This, however, is not its worst effect. The records of our courts, and the experience of all who are largely engaged in the business of insurance, too clearly prove that ships have been repeatedly sunk, and houses burned, in order to defraud the insurers. Despite the temptation of inattention and fraud which is thus afforded, there can be no doubt that, on the whole, the practice is, in a public as well as private point of view, decidedly beneficial. The frauds that are occasionally committed raise in some degree the rate of insurance; still it is exceedingly moderate; and it is most probable that the precautions adopted by the insurance offices for the prevention of fire, especially in great towns, where it is most destructive, outweigh the chance of increased conflagration arising from the general tendency to carelessness and crime.

The business of life insurance has been carried to a far greater extent in Great Britain than in any other country, and has been productive of the most beneficial effects. Life insurance is of various kinds. Individuals without any near connections, and possessing only a moderate fortune, are sometimes desirous, or are sometimes driven, from the necessity of their situation, to insure annually to encroach on their capitals. They should the life of such persons be extended beyond the ordinary term of existence, they might be totally unprovided for in old age; and to prevent themselves against this contingency, they purchase an insurance company the whole or a part of their capital, on condition of its guaranteeing them, as long as they live, a certain annuity proportioned partly, of course, to the amount of the sum paid, and partly to their age when they commence the annuity.

But though sometimes serviceable to individuals, it may be questioned whether insurances of this sort are, in a public point of view, really advantageous. So far as their influence extends, an obvious tendency is to weaken the principle of accumulation; to stimulate individuals to consume their capitals during their own life, with

thinking of successors. In general, it is lessively run which most families and strong security prevalent. In this selfish and adventurous opening of Government, or in the sale of an association can be accumulated. Luckily, however, referred to is but that which has a professional personages, such as laeral officers, clerks, with their lives, a either not possesser of their capital at the moment of providing for the comfortable support of their families or lawyer, perhaps, 1000, or 2, and suppose that he his individual attainments in life, he may n will provide for the ac his death. But w which will be the case the many except and suppose that he we his family would be against such a life insurance is if the individual possessed moderate; and it is most probable that the precautions adopted by the insurance offices for the prevention of fire, especially in great towns, where it is most destructive, outweigh the chance of increased conflagration arising from the general tendency to carelessness and crime.

Life insurance is of various kinds. Individuals without any near connections, and possessing only a moderate fortune, are sometimes desirous, or are sometimes driven, from the necessity of their situation, to insure annually to encroach on their capitals. They should the life of such persons be extended beyond the ordinary term of existence, they might be totally unprovided for in old age; and to prevent themselves against this contingency, they purchase an insurance company the whole or a part of their capital, on condition of its guaranteeing them, as long as they live, a certain annuity proportioned partly, of course, to the amount of the sum paid, and partly to their age when they commence the annuity.

But though sometimes serviceable to individuals, it may be questioned whether insurances of this sort are, in a public point of view, really advantageous. So far as their influence extends, an obvious tendency is to weaken the principle of accumulation; to stimulate individuals to consume their capitals during their own life, with

thinking of successors. In general, it is lessively run which most families and strong security prevalent. In this selfish and adventurous opening of Government, or in the sale of an association can be accumulated. Luckily, however, referred to is but that which has a professional personages, such as laeral officers, clerks, with their lives, a either not possesser of their capital at the moment of providing for the comfortable support of their families or lawyer, perhaps, 1000, or 2, and suppose that he his individual attainments in life, he may n will provide for the ac his death. But w which will be the case the many except and suppose that he we his family would be against such a life insurance is if the individual possessed moderate; and it is most probable that the precautions adopted by the insurance offices for the prevention of fire, especially in great towns, where it is most destructive, outweigh the chance of increased conflagration arising from the general tendency to carelessness and crime.

The business of life insurance has been carried to a far greater extent in Great Britain than in any other country, and has been productive of the most beneficial effects. Life insurance is of various kinds. Individuals without any near connections, and possessing only a moderate fortune, are sometimes desirous, or are sometimes driven, from the necessity of their situation, to insure annually to encroach on their capitals. They should the life of such persons be extended beyond the ordinary term of existence, they might be totally unprovided for in old age; and to prevent themselves against this contingency, they purchase an insurance company the whole or a part of their capital, on condition of its guaranteeing them, as long as they live, a certain annuity proportioned partly, of course, to the amount of the sum paid, and partly to their age when they commence the annuity.

But though sometimes serviceable to individuals, it may be questioned whether insurances of this sort are, in a public point of view, really advantageous. So far as their influence extends, an obvious tendency is to weaken the principle of accumulation; to stimulate individuals to consume their capitals during their own life, with

thinking or caring about the interest of their successors. Were such a practice to become general, it would be productive of the most extensively ruinous consequences. The interest which most men take in the welfare of their families and friends affords, indeed, a pretty strong security against its becoming injuriously prevalent. Yet there can be little doubt that this selfish practice may be strengthened by adventitious means; such, for example, as the opening of Government loans in the shape of life annuities, or in the still more objectionable form of mortgaged bonds. But when no extrinsic stimulus of this sort is given to it, there do not seem to be any very good grounds for thinking that the sale of annuities by private individuals or associations can materially weaken the principle of accumulation.

Lately, however, the species of insurance now referred to is but inconsiderable compared with that which has accumulated for its object. All professional persons, or those living on salaries or wages, such as lawyers, physicians, military and naval officers, clerks in public or private offices &c. whose incomes must, of course, terminate with their lives, and a host of others, who are either not possessed of capital or cannot dispose of their capital at pleasure, must naturally be desirous of providing, so far as they may be able, for the comfortable subsistence of their families in the event of their death. Take, for example, a physician or lawyer, without fortune, but making perhaps 1,000, or 2,000*l.* a-year by his business; and suppose that he marries and has a family: if this individual attain to the average duration of human life he may accumulate such a fortune as will provide for the adequate support of his family to his death. But who can presume to say that this will be the case?—that he will not be one of the many exceptions to the general rule?—that he will not be hurried into an untimely grave, his family would necessarily be destitute. Life insurance is intended chiefly to provide, in the event of the death of an individual possessed of an income terminating at his death, agree to pay a certain sum annually to an insurance office; and this office binds itself to pay to his family, at his death, a sum equivalent to the deduction of the expenses of management and the profits of the insurers, to what these annual contributions, accumulated at compound interest, would amount to, supposing the insured to reach the common and average term of human life. Though he were to die the day after the insurance has been effected, his family would be amply provided for as it is likely they would if his accumulations were his life of the ordinary duration. In all cases, indeed, in which the insured die before attaining to an average term, his gain is obvious; but even in those cases in which their lives are prolonged beyond the ordinary term, they are not losers—they then pay for a security which they must otherwise have been without. During the whole of their lives, from the time when they effect their insurance down to the time when they arrive at the average duration of human life, they are protected against the risk of dying without leaving behind them a sufficient provision for their families which they pay after having passed this term is nothing more than a fair compensation for the security they previously enjoyed. Of those who insure their houses against fire, a very small portion only have occasion to claim an indemnity for losses actually sustained; but the security of a security against loss in the event of fire is a sufficient motive to induce every

prudent individual to insure his property. The case of life insurance is in no respect different. When established on a proper footing, the extra sums which those pay whose lives exceed the estimated duration is but the value of the previous security.

In order so to adjust the terms of an insurance that the party insuring may neither pay too much nor too little, it is necessary that the probability of his life failing in each subsequent year should be determined with as much accuracy as possible.

To ascertain this probability, various observations have been made in different countries and periods, showing, out of a given number of persons complete each subsequent year and how many die in it, till the whole be extinct. The result of such observations, when collected and arranged in a tabular form, are called Tables of Mortality; and being entitled, of course, to more or less confidence according to the number and species of lives observed; the period when, and the care with which, these tables were made &c. But, supposing the observations to be formed with sufficient accuracy, the expectation of life at any age, or its mean duration after such age, may be readily learned from them; and hence, also, the value of an annuity, or an assurance on a life of any age. Thus, Mr. Milne, of the Sun Life Office, and which is believed to represent the average law of mortality in England with very considerable accuracy, out of 10,000 persons born together, 4,000 complete their 56th year; and it further appears that the number of such persons who die in their 60th year is 124; so that the probability that a life now 56 years of age will terminate in the 10th year hence is  $\frac{124}{4,000}$ . But reckoning interest at 4 percent, it appears [INTEREST AND ANNUITIES] that the present value of 100*l.* to be received 10 years hence is 67*556l.*; consequently, if its receipt be made to depend upon the probability that a life now 56 years of age will fail in the 66th year, its present value will be reduced by that contingency to  $\frac{124 \times 67.556}{4,000} = 2.094*l.*$ , or 2*l.* 1*s.* 10*d.* The present value of 100*l.* receivable upon the life of a party now 56 years of age terminating in the 57th or any subsequent year of his life, up to its extreme limit (which, according to the Carlisle Table, is the 105th year), being calculated in this way, the sum of the whole will be the present value of 100*l.* receivable whenever the life may fail, that is, of 100*l.* insured upon it, supposing no additions were made to it for the profits and expenses of the insurers.

More compendious processes are resorted to for calculating tables of insurances at all ages, but the above statement sufficiently illustrates the principle on which they all depend. In practice, a life insurance is seldom made by the payment of a single sum when it is effected, but almost always by the payment of an annual premium during its continuance, the first being paid down at the commencement of the insurance. (For the method of calculating these annual premiums, see *POST, INTEREST AND ANNUITIES.*) If the Table of Mortality adopted by the insurers fairly represent the law of mortality prevailing among the insured, it follows that when a party insured does not attain to the average age according to the table, the insurers will either lose by him or realise less than their ordinary profit; and when, on the other hand, the life of an insured party is prolonged beyond the tabular average, the profits of the insurers are proportionally increased. But if their business be so extensive as to enable the

law of average fully to apply, what they lose by premature death will be balanced by the payments received from those whose lives are prolonged beyond the mean duration of life for the ages at which they were respectively insured; so that the profits of the society will be wholly independent of chance.

The relief from anxiety afforded by life insurance very frequently contributes to prolong the life of the insured, at the same time that it materially augments the comfort and well-being of those dependent on him. It has also an obvious tendency to strengthen habits of accumulation. An individual who has insured a sum on his life would forfeit all the advantages of the insurance were he not to continue regularly to make his annual payments. It is not, therefore, optional with him to save a sum from his ordinary expenditure adequate for this purpose—he is compelled, under a heavy penalty, to do so; and having thus been led to contract a habit of saving to a certain extent, it is most probable that the habit will acquire additional strength, and that he will either insure an additional sum or privately accumulate.

The practice of marine insurance, no doubt from the extraordinary hazard to which property at sea is exposed, seems to have long preceded insurances against fire and upon lives. We are ignorant of the precise period when it began to be introduced, but it appears most probable that it dates from the end of the fourteenth or the beginning of the fifteenth century. It has, however, been contended by Loccenius (*De Jure Maritimo*, lib. ii. c. 1), Puffendorf (*Droit de la Nature et des Gens*, lib. v. c. 9), and others, that the practice of marine insurance is of much higher antiquity, and that traces of it may be found in the history of the Punic wars. Livy mentions that during the second of these contests the contractors employed by the Romans to transport ammunition and provisions to Spain stipulated that Government should indemnify them against such losses as might be occasioned by the enemy or by tempests in the course of the voyage. ('Impetratum fuit, ut quæ navibus imponerentur ad exercitum Hispaniensem deferenda, ab hostium tempestatisque vi, publico periculo essent.' *Hist.* lib. xxiii. c. 49.) Malynes (*Lex Mercatoria*, 3rd edition, p. 105), founding on a passage in Suetonius, ascribes the first introduction of insurance to the emperor Claudius, who, in a period of scarcity at Rome, to encourage the importation of corn, took upon himself all the loss or damage it might sustain in the voyage thither by storms and tempests. ('Negotiatoribus certa lucra proposuit, suscepto in se damno, si cui quid per tempestates accidisset, et naves mercatorum causâ fabricantibus magna commoda constituit.' c. 18.) It is curious to observe that this stipulation gave occasion to the commission of acts of fraud similar to those so frequent in modern times. Shipwrecks were pretended to have happened that never took place; old, shattered vessels, freighted with articles of little value, were purposely sunk, and the crew saved in boats; large sums being then demanded as a recompense for the loss. Some years after, the fraud was discovered, and some of the contractors were prosecuted and punished. (Lib. xxv. c. 3.) But none of these passages, nor a similar one in Cicero's letters (*Ad Fam.* lib. ii. c. 17), warrant the inferences that Loccenius, Malynes, and others have attempted to draw from them. Insurance is a contract between two parties; one of whom, on receiving a certain premium (*pretium periculi*), agrees to take upon himself the risk of any loss that may happen to the property of the other. In ancient no less than in modern times, every one

I must have been desirous to be exonerated from the chance of loss arising from the exposure of property to the perils of the sea. But though, in the cases referred to, the carriers were exempted from this chance, they were not exempted by contract *propter aversionem periculi*, or by an insurance, but by their employers taking the risk upon themselves; and it is abundantly obvious that the object of the latter in doing this was not to profit, like an insurer, by dealing in risks, but to induce individuals the more readily to undertake the performance of an urgent public duty.

But with the exception of the instances now mentioned, nothing bearing the remotest resemblance to an insurance is to be met with till a comparatively recent period. If we might rely on a passage in one of the Flemish chronicles quoted by the learned M. Pardessus (see his excellent work, *Collection des Loix Maritimes*, tom. i. p. 356), we should be warranted in concluding that insurances had been effected at Bruges early as the end of the thirteenth century; the chronicler states that in 1311 the Earl of Flanders consented, on a requisition from the inhabitants, to establish a chamber of insurance at Bruges. M. Pardessus is not, however, inclined to think that this statement should be regarded as decisive. It is evident, from the manner in which the subject is mentioned, that the chronicler was not a contemporary; and no trace can be found either in the archives of Bruges, or in any authentic publication, of anything like the circumstances alluded to. The earliest extant Flemish law of insurance is dated in 1537, and none of the maritime codes of the North so much as allude to this interesting subject.

Beckmann seems to have thought that the practice of insurance originated in Italy in the latter part of the fifteenth or the early part of the sixteenth century. (*Hist. of Invent.* vol. i. 'Insurance.')

But the learned Spanish antiquary Don Antonio de Capmany, has given, in his valuable publication on the history and commerce of Barcelona (*Memorias Historicas sobre la Mar y c. de Barcelona*, tomo ii. p. 883), an ordinance relative to insurance, issued by the magistracy of that city in 1495, whereas the earliest Italian law on the subject is nearly a century later, and dated in 1523. It is, however, exceedingly likely, had insurance been as early practised in Italy as in Catalonia, that the former should have been so much behind the latter in subjecting the practice should have escaped, as is the all mention by any previous Italian writer, therefore agree entirely in Capmany's opinion, that, until some authentic evidence to the contrary be produced, Barcelona should be regarded as the birthplace of this most useful and beneficial application of the doctrine of chances. (Tom. i. p. 237.)

A knowledge of the principles and practice of insurance was early brought into England, according to Malynes (*Lex Mercat.* p. 165), the first practised amongst us by the Lombards, who were established in London from a very remote epoch. It is probable it was introduced soon about the beginning of the sixteenth century; it is mentioned in the statute 48 Eliz. c. 1, which its utility is very clearly set forth, and it had been an *immemorial usage* among merchants both English and foreign, when they made great adventure, to procure insurance to be on the ships or goods adventured. From this it may reasonably be supposed that insurance had been in use in England for at least a century previous. It appears from the same statute that

originally been usual to refer all disputes that arose with respect to insurances to the decision of 'grave and discreet' merchants appointed by the Lord Mayor. But abuses having grown out of this practice, the statute authorised the Lord Chancellor to appoint a commission for the trial of insurance cases; and in the reign of Charles II. the powers of the commissioners were enlarged. But this court soon after fell into disuse; and, what is singular, no trace can now be discovered of any of its proceedings. (Marshall *On Insurance*, Prelim. Disc. p. 26.)

Few questions as to insurance seem to have come before the courts at Westminster till after the middle of last century. The decisions of Lord Mansfield may, indeed, be said to have fixed and in a considerable degree formed, the law upon this subject. His judgments were not bottomed on narrow views, or on the municipal regulations of England, but on those great principles of public justice and convenience which had been sanctioned and approved by universal experience. His deep and extensive information was acquired by consulting the most intelligent merchants, and the works of distinguished foreign jurists; and by carefully studying the famous French Ordinance of 1681, the most admirably digested body of maritime law of which any country has ever had to boast. Hence the comprehensiveness and excellence of his decisions, and the respect they have justly commanded in all countries. (Emérigon's famous *Traité des Assurances*, tome ii. p. 67.) In his hands the law of insurance became, in a far greater degree than any other department of English law, a branch of that national or public law of which Cicero has said, "Non erit alia lex Romæ, alia Athenis, alia nunc, alia posthac, sed et omnes gentes et omni tempore una lex et sempiterna, et immutabilis continebit, imperisque erit communis quasi magister et imperator omnium Deus." (Præm. lib. iii. de Republicâ.)

Insurance against fire and upon lives is of much later origin than insurance against the perils of the sea. The former, however, has been known and carried on amongst us, to some extent at least, for nearly a century and a half. The Equitable Society, for insurance upon lives, was established by charter of Queen Anne in 1706; the Royal Exchange and London Assurance Companies began to make insurances upon lives in the reign of George I.; and the Equitable Society was established in 1762. But the advantages of life insurance, and the principles on which the business should be conducted, were not very ill understood; and the practice can only be said to have obtained any firm footing amongst us till the Equitable Society, by adopting the judicious suggestions of Dr. Price, began its career of prosperity about 1775. Notwithstanding the example of England, life insurance has made comparatively little progress on the Continent. It was, indeed, expressly forbidden by the French Ordinance of 1681 (liv. tit. 6, art. 10); by the regulations as to insurance issued at Amsterdam in 1612 (art. 24); and it is doubtful whether the practice be not inconsistent with the 334th art. of the *Code de Commerce*, though it be now extensively carried on in France. But we are inclined to think that we want of security, more than any positive regulations, has been the principal cause of the slow progress of life insurance on the Continent. Whatever disadvantages our large public debt may be productive of, it is not to be doubted that the facilities it has afforded for making investments, and the punctuality with which the

national engagements have been fulfilled, have been the principal causes of the extraordinary extent to which the business of life and even fire insurance has been carried in this country.

## II. INSURANCE (MARINE).

There are few persons who are not acquainted in some degree with fire and life insurances. The security which they afford to individuals and families is a luxury which nobody in tolerably comfortable circumstances is willing to be without. Hence the great increase, in our days, of companies professing to afford this security; and hence the knowledge, on the part of the public generally, of the nature and principles of the engagements into which these companies enter. But marine insurance is a subject which is of more immediate interest only to merchants, ship-owners, and underwriters; unless, indeed, we should refer to that small portion of the community who have occasion to transport themselves beyond seas with capital and effects for purposes of colonisation, or to fill some official situation. Hence the comparative indifference on the part of the public as to this subject. The general principles, however, of all insurance are the same; and in treating of marine insurance, it will be necessary to notice little beyond such topics as are peculiar to that branch of the business.

*Individual Insurers or Underwriters.*—The first circumstance that cannot fail to strike the general enquirer into the practice of marine insurance in this country is that, while all fire and life insurances are made at the risk of companies, a large proportion of marine insurances is made at the risk of individuals; that risk, however, being split up so as to include in the guarantee a large number of persons. [UNDERWRITING.]

*Prohibition of Companies.*—Till 1824, all firms and companies, with the exception of the two chartered companies, the Royal Exchange and London, were prohibited by law from taking marine insurances. Towards the latter end of that year the prohibition was removed, and the business of marine insurance was placed on the same legal footing as other descriptions of business. While the restriction lasted, the two chartered companies did so little business that marine insurance might in fact be said to be wholly in the hands of individuals. These companies were so much higher in their premiums, and so much more exclusive in the risks they were willing to undertake, than their individual competitors, that merchants and ship-owners were obliged to resort to individual underwriters. And it was only when the repeal of this absurd restriction was proposed, that the companies showed, by defending it, that they set any value upon their privilege. The underwriters at Lloyd's joined them in this opposition; and pamphlets were written, and speeches made, to demonstrate how much merchants and ship-owners would suffer, were the law to allow them the free use of their discretion in insuring their property, and how much more conducive to their interests it was that they should deal with Lloyd's rather than companies.

*Formation of Companies.*—There are at present (1868) 20 marine insurance companies in London. These number among their proprietors or shareholders some of the most eminent merchants and ship-owners of the city of London, who have united for the double purpose of providing security for their property, and ascertaining whether the insurance business might not be

made to yield a fair return to the capital employed in it. Several similar companies have also been formed since 1824 in different parts of the kingdom.

**Mode of conducting Business.**—We shall now give an account of the existing arrangements for conducting the business of marine insurance, as well by individuals as the companies in London.

**Lloyd's.**—The individual underwriters meet in subscription-rooms at Lloyd's, and under the name of underwriters are included the joint-stock companies. The joint affairs of the subscribers are managed by a committee chosen by the subscribers, the insurance companies being included in the list, as they in fact must depend upon the office entirely for their information. Agents (who are commonly styled Lloyd's agents) are appointed in all the principal ports of the world, who forward regularly to Lloyd's accounts of the departures from and arrivals at their ports, as well as of losses and other casualties; and, in general, all such information as may be supposed of importance towards guiding the judgments of the underwriters. These accounts are regularly filed, and are accessible to all the subscribers. The principal arrivals and losses are, besides, posted in two books, placed in two conspicuous parts of the room; and also in another book, which is placed in an adjoining room, for the use of the public at large.

The rooms are open from 10 o'clock in the morning till 5 o'clock in the afternoon, but the most considerable part of the business is transacted between 1 and 4. A slip showing the particulars of the insurance required is in the first place submitted to the underwriter, and is initialed by him in accepting the risk, and when the policy is presented for subscription he compares it with the slip which he has already initialed. Though the initial to the slip is not legally binding, no underwriter would refuse to recognise his liability if the loss occurred between the initialing of the slip and the signing of the policy. The form of the policy is subjoined to this article.

The premium is not always paid to the underwriter in ready money, but is passed to account. Nor does the underwriter debit the account of the person to whom he subscribes a policy with the whole amount of the premium, but with the premium less 5 per cent. Whenever losses occur which more than absorb the premiums on any one account, the underwriter is called upon to pay the balance. But should the underwriter's account be what is called good, that is, should the premiums exceed the claims, he sends round, during the spring and summer, to collect from his various debtors either the balance of his last year's account, or money on account, according to his judgment; but, upon what he receives, he makes an allowance of 12 per cent. An underwriter, if prudent, therefore, before he consents to receive, will not only look to the goodness of his account, but to the probability of its continuing so.

**Insurance Brokers.**—The larger part of the insurances at Lloyd's is effected by brokers. Some merchants, however, transact their own insurance business. But the majority give their orders for insurance to others, who undertake it for them, and are responsible for its proper management. These latter persons are called insurance brokers, and some of them manage the business of a number of principals. To them likewise are transmitted the orders for insurance from the outports and manufacturing towns. They charge the whole premium to their principals, and their profit consists in 5 per cent. upon the premium, 12 per cent. upon the money that they pay to the under-

writers, and 3 per cent. that they deduct from the claims which they recover from the underwriters. It is proper to remark that this is the established or regular profit; but competition has occasioned numerous deviations from it by the brokers, many of whom consent to divide the profit with the principals who employ them. The insurance brokers are not unfrequently underwriters also; and as some insurances are considered far more lucrative than others to underwriters, and as the brokers have particular facilities, in some respects, of judging of the goodness of their own risks, so likewise have they an inducement to play into one another's hands and they do so accordingly. [BROKERS.]

**Clubs.**—Besides the individual underwriters and companies above noticed, there are clubs or associations formed by ship-owners, who agree each entering his ships for a certain amount, to divide among themselves one another's losses. These clubs are institutions of long standing, but, since the alteration of the law in 1805, appear to be on the decline. As a rule, they insure ships only. Their formation originates in a twofold reason: 1, that the underwriters charged premiums more than commensurate with the risk; and, 2, that they did not afford adequate protection. To avoid the first of these two evils, instead of paying a fixed premium, they pay among themselves the actual losses of their several members as they occur, and to avoid the second, they lay down certain principles of settlement in accordance with the views of indemnity. Each member of one of these clubs gives his power of attorney to a selected manager, and this manager issues a policy for each ship, which policy is subscribed by him as attorney for all the members, the premium inserted in the policy being understood to be nominal. These clubs are open to the head objections that apply to individual underwriters for the members are not collectively, but individually, liable to those of their number who happen to sustain a loss; and the delay of settlement is such, that more than 12 months have been known to elapse before the payment of a loss has been obtained from all the members.

**Rate of Premium.**—Little need be said of the circumstances that influence the rate of premium demanded by the insurers. It must be self-evident that premiums will vary according to the seasons, the quality of the vessel, the known character of the captain, the nature of the commodity, and the state of our political relations. All these, of course, are matters upon which individual must exercise his own discretion, partly from general experience and partly from particular information; exaggeration of risk, consequent exorbitancy of premium for a length of time, being out of the question. So many individual underwriters, in addition to the companies, are in competition with another, and where the merchants have means at hand of effecting their insurances abroad. The premium, which in a small community is generally arranged by consent of insurance offices and clubs on the spot, at Lloyd's is fixed in the general market. In fact, Lloyd's is an open market for insurance. We have already taken notice of the intelligence of which Lloyd's is the focus. In addition to this, there is a description register book for shipping maintained by the principal merchants, ship-owners, and underwriters. This book professes to give an account of the tonnage, build, age, repairs, and quality of almost all the vessels that frequent our ports; and, although exceedingly defective

liability; but when it is considered that the proof of unseaworthiness is thrown upon the defendant, and that the leaning of the courts is almost always in favour of the insured, it will be easy to suppose that no respectable insurers would ever plead unseaworthiness unless they could make out a case of more than ordinary strength and clearness. The degree of uneasiness felt by merchants and ship-owners at their liability to be involved in loss by cases of unseaworthiness may be guessed from the fact that although the Indemnity Assurance Company at one time precluded themselves from pleading unseaworthiness by a special clause in the policy, not only did they obtain no additional premium in consequence thereof, but they did not even obtain a preference over other companies and individuals at the same premium. At least, this fact must either be admitted as a proof of the absence of uneasiness on this head, or of that inveteracy of habit which seems to lead the great bulk of mankind always, if possible, to continue undeviatingly in those courses to which they are accustomed, even where the benefits to be derived from a deviation are undeniable.

6. *Protraction of the Voyage.*—All loss arising from unusual protraction of the voyage. Thus, if a ship meet with an accident in the Baltic, and the repairs detain the vessel till the close of the season, when the passage home is rendered impracticable by the ice till the opening of the ensuing season, no payment is made to the merchant in mitigation of his loss from interest of money, loss of market (if the market fail), or deterioration in the quality of his goods (unless arising from actual sea damage); nor to the ship-owner, in mitigation of his loss from the extra wages and maintenance of his crew. In most foreign countries the ship-owner is remunerated by the insurers for the wages and maintenance of his crew while his ship is detained in consequence of any loss for the making good of which they are liable.

7. *Liability for doing Damage to other Vessels.*—All loss to which the ship-owner is liable when his vessel does damage to others. According to our laws, the owner of every ship not in charge of a pilot, that does damage, by negligence of the master and crew, to any description of craft or vessel, is liable to make good the same to the extent of the value of his own ship and freight; for beyond this he is not liable. The common policy in use among the underwriters at Lloyd's does not protect the shipowner from this loss. But there is now a collision clause in many of the companies' policies. The clubs or associations, too, before mentioned almost universally take this risk. Indeed, this is one of the purposes which gave rise to their formation. Even they, however, limit their liability to the amount of the policy; so that if a ship insured with them were to run down another, and to sink herself in the collision, the owner would only receive the value of his own vessel from the club, and still be liable to the owner of the other vessel. A custom has gained ground, both among the underwriters at Lloyd's and the Insurance Companies, to admit their liability by a clause in their policies for  $\frac{2}{3}$  of the loss which the owner of the vessel insured with them may sustain from damage done by his vessel to those of others. If such a case as the one just supposed should occur, the insured would receive by virtue of this clause the value of his own vessel and  $\frac{2}{3}$  of the loss to be made good by him to the owner of the other vessel.

8. *Average Clause.*—The next description of loss of which we shall treat, against which the

insured are not protected, is described in the following clause of the policy: 'Corn, fish, salt, seed, flour, and fruit are warranted free from average, unless general, or the ship be stranded; sugar, tobacco, hemp, flax, hides, and skins are warranted free from average under 5 per cent., unless general, or the ship be stranded; and all other goods, also the ship and freight, are warranted free from average under 3 per cent., unless general, or the ship be stranded.'

The language employed in this clause, being technical, requires explanation to render it intelligible to the general reader. Average is a name applied to certain descriptions of loss, to which the merchant and ship-owner are liable. There are two kinds of average, general and particular.

*General Average* comprehends all loss arising out of a voluntary sacrifice of a part of either vessel or cargo, made by the captain for the benefit of the whole. Thus, if a captain throw part of his cargo overboard, cut from an anchor and cable, or cut away his masts; the loss sustained, being voluntarily submitted to for the benefit of the whole, is distributed over the value of the whole ship and cargo, and is called 'general average.'

*Particular Average* comprehends all loss occasioned to ship, freight, and cargo, which is not so serious a nature as to debar them from reaching their port of destination, and when the damage to the ship is not so extensive as to render it unworthy of repair. Losses where the goods are saved, but in such a state as to be unfit to forward to their port of destination, and where the ship is rendered unfit to repair, are called 'particular or salvage loss.' The leading distinction between particular average and salvage loss is that, in the first, the property insured remains the property of the assured—the damage sustained, or part thereof, as the case may be, and as will be hereafter explained, being made good by the insurer; and in the second, the property insured is abandoned to the insurer, and the value insured claimed from him, retaining the property so abandoned, or value.

*Particular Average on Goods.*—A few examples illustrative of the method of stating a claim for particular average will best explain the nature of this description of loss, and will at the same time show the reader what the practical distinction is between particular average and salvage loss.

The property insured we shall suppose to be a *ton of hemp*, the cost of which at Petersburg is 30*l.*, for which sum it is insured from Petersburg to London, and that the duty, freight, and charges to which the merchant is subject on landing at London are 10*l.* We shall then suppose that the hemp, on its arrival at London, is damaged as not to be worth more than half its value; it would have fetched had it been sound. The insurer would then be called upon to make good to the insured 15*l.*, or 50 per cent. upon the value of the hemp, and the merchant would be insured. But it does not follow that this sum of 15*l.* would indemnify the merchant for the loss sustained, that it would not more than indemnify him for the loss sustained.

INSURANCE

If the hemp would have fetched in a sound state	£	s.	d.
Less duty, freight, and charges	90	0	0
But in its damaged state is only worth	10	0	0
Less duty, freight, and charges	10	0	0
The merchant's loss by the damage is	80	0	0
Where he recovers from the insurer 15%. Upon the principle of a gross loss he would receive 30%.	£10	0	0

If the hemp would have fetched in a sound state	£	s.	d.
Less duty, freight, and charges	90	0	0
But in its damaged state is only worth	10	0	0
Less duty, freight, and charges	10	0	0
The merchant's loss by the damage is	80	0	0
And he recovers from the insurer 15%. Upon the principle of a gross loss he would receive 30%.	£15	0	0

It will be observed that the merchant's loss by the damage of his goods varies with the state of the market. It may also be observed, that in general the merchant will not receive from the insurer the whole amount of the loss that he sustains. Whenever his market is a profitable one (and that it must usually be so will be obvious to everybody)—whenever, indeed, his market is not a decidedly losing one, his policy does not afford him a complete protection.

The argument in favour of this mode of settling claims for particular average—and it should be observed that the subject has been discussed, and the principle acknowledged, in the courts of law—is that the insurer's liability is to be guided by the amount upon which he has received a premium or consideration; that he is not to be affected by the rise or fall of markets; but that the gross market price of the sound and the gross market price of the damaged goods, are to be the test by which the rate of damage upon the amount insured is to be adjusted; the insurer being liable, besides, for all the extra charges arising out of the damage.

In the first case stated, the merchant's loss by damage is 25% upon 100, or 62½ per cent.; in the second, 10% upon 100, or 100 per cent.; in the third, 15% upon 200, or 75 per cent. If the duty, freight, and charges were diminished in proportion to the diminished value of the goods, the loss in each case would be 50 per cent. upon the nett price, or 50 per cent. upon the gross price. As far as the duty is concerned, Government, upon some articles, reduces it in proportion to the diminution of the value of the goods; and if the freight were allowed in a similar manner, the merchant would always be indemnified for his loss by the insurer.

As the practice with regard to freight in this country admits of no such arrangement; freight being paid according to the quantity delivered. To make the principle upon which claims for particular average are adjusted, and its bearing, all clearer, we shall illustrate it by a few more cases. Suppose two packages to be insured at cost—one a cask of rice and a cask of sugar—each weighing 100 cwt.; the cost of each at the port of export delivery, both articles free from duty, to arrive at a market where no more than half the price is realised; assuming that both packages are damaged 50 per cent.—the rice by loss of weight, the sugar by loss of weight—the state-

ment will be as follows:—

100 cwt. of rice, had it arrived sound, would have produced	£	s.	d.
Less freight on 10 cwt. at 10s. per cwt.	15	0	0
Being damaged, did only produce	5	0	0
Less freight on 10 cwt. at 10s. per cwt.	7	10	0
Merchant's loss	5	0	0
	£7	10	0

100 cwt. of sugar, if sound, would have produced	£	s.	d.
Less freight on 10 cwt. at 10s. per cwt.	15	0	0
Being damaged, did only weigh 50 cwt.	5	0	0
Less freight on 50 cwt. at 10s. per cwt.	7	10	0
Merchant's loss	2	10	0
	£5	0	0

In each case the merchant is entitled to recover from his insurer 50, or 50 per cent., upon 100, the sum insured, which, although an indemnity to him for his loss on the sugar, is far from being so contrivance as to shap; his contract with the ship-owner for freight as to reduce the freight in proportion to the depreciation in the value of the protected. The ship-owner might on his side protect himself by insurance from loss by reduction of quality, as he now does from loss by reduction of quantity. But we have already more than once adverted to the difficulty of breaking in upon established practices. The merchants go on from year to year complaining of the losses to which they are subjected from this awkward contrivance, while no steps are taken to improve it. To show that the principle is equitable as between the merchant and his insurer, we subjoin one more statement, where the damage is taken at 100 per cent.

10 cwt. of rice, if sound, would have produced	£	s.	d.
Less freight on 10 cwt. at 10s. per cwt.	15	0	0
Being totally spoiled did produce nothing.	0	0	0
The merchant being still liable for the freight	0	0	0
Making his loss	15	0	0
He recovers 10% only from the insurer.	£1	5	0

10 cwt. of sugar, if sound, would have produced	£	s.	d.
Less freight on 10 cwt. at 10s. per cwt.	15	0	0
The barrel being washed out produces nothing.	0	0	0
The merchant, however, not being liable to pay freight	0	0	0
His loss is only	15	0	0
Which he recovers from the insurer.	£10	0	0
It will be observed that in each case the insurer pays 10% of the full sum upon which he receives the premium.			

When whole cargoes, or parcels of goods of considerable value, are insured, the clause in the policy which protects the insurer from particular average under a certain percentage is often particularly set aside. Thus, if a cargo of 600 hogsheds of sugar, valued at 10,000l., were damaged to the extent of 460l., the merchant, supposing the protecting clause to remain in force, would recover nothing from the insurer, the loss not amounting to 5 per cent. The additional written clause, by which it is the practice to modify the printed clause, is as follows: 'Particular average, payable upon each 10 hds. sugar, 10 casks and 50 bags of coffee, and 10 bags cotton, following numbers, and of indigo, bag of wool or silk, the same as if separately insured.' Such clauses may be, and are, introduced ad libitum by mutual consent of insurer and insured, the premium or consideration being arranged accordingly.

The protecting clause is considered, on the other hand, by the insurers, exceedingly unsatisfactory in some respects; and they, as occasion requires, insist upon additional protection. Thus, saltpetre, hides, cocoa, and tin plates are generally warranted free from particular average, unless the ship be stranded; and upon tobacco, it is customary for the insurers to make themselves liable only to such part of the particular average as exceeds 5 per cent., throwing 5 per cent. upon the merchant.

**Particular Average on Freight.**—The clause, as far as it affects 'freight,' calls for no particular comment. Particular average upon freight can only arise, according to prevailing practice, from loss of weight; and whenever the loss of weight amounts to 3 per cent. or upwards, the ship-owner is entitled to recover from his insurer. The ship-owner, upon the arrival of the ship at its port of destination, is entitled to hold the goods as security until the freight is paid. If the owner of the goods should prove insolvent, and the goods

should be entirely spoiled by sea damage during the voyage, and the ship-owner thus lose his freight, he has no claim upon the insurer; because, although his collateral security is destroyed by a peril of the sea, his right to receive freight remains unimpaired, and it is against the loss of impairing of this right that the insurer protects him.

**Particular Average on Ships.**—Particular average upon ships is a subject somewhat more beset with difficulties. There is scarcely a ship which makes a voyage of any length, that does not sustain some damage. The clause in the policy warranting the ship free from particular average under 3 per cent., unless stranded, protects the insurer from the constant recurrence of petty claims; but in addition to this, it is the practice to class the damage that a ship sustains in the prosecution of her voyage under two heads: ordinary damage, or wear and tear; and extraordinary damage, or particular average. The splitting of sails, the breaking of anchors and cables, the upsetting of windlasses, are losses that come under the first head. The carrying away of masts and bulwarks, damage to the copper sheathing and hull from striking on rocks, come under the second.

When a ship sustains damage, if she be on her first voyage, the whole expense of the repairs is made good by the insurers; but if she be not on her first voyage, it is the established custom that the insurer pays no more than  $\frac{1}{3}$  of the repairs, the owner of the vessel having, as it is thought, an equivalent for the  $\frac{2}{3}$  which falls upon him, in the substitution of new work for old. Where the nature of the damage is such as to require that the copper should be stripped off the ship's bottom, the insurer pays the difference between the price of the old and the new copper on the weight of the old copper stripped off; the excess in weight of the new over the old copper is paid for by the ship-owner; and the labour of stripping and replacing the copper is paid for on the principle already mentioned. In any general rule of this kind it must be obvious that the ship-owner will sometimes gain and sometimes lose by an accident. As soon as the ship-owner, or his captain, learns that his vessel has met with an accident, or as soon after as possible, he summons regular surveyors to examine his vessel and report all defects, discriminating between those defects that have arisen from perils of the sea, and those from wear and tear. The first only are made good by the insurer, together with all charges, such as surveyors' fees, dock dues &c., caused by the necessity of undergoing repair. It has been already observed that when a ship is obliged in the progress of her voyage to put into port for the purpose of repair, although the owner of the ship be subjected to great expense for the wages and maintenance of his crew during the detention, he can recover no part of this expense from the insurer; the doctrine being, that the owner of the ship is bound to navigate his vessel, and that the insurer does not undertake to guarantee that the voyage shall be completed within any specific time. Such is the doctrine, at least, in this country, and the practice is founded upon it; but in all other countries the doctrine and practice are the reverse. For in them allowance is made to the ship-owner for the wages and maintenance of the crew during the whole period that the ship is under repair. Where a vessel sustains damage and undergoes repair in the progress of her voyage, and is subsequently lost, the insurer is liable both for the particular average and a total loss. Or the owner of the ship may, if he please, insure the amount expended in repair; and then, in the event of

subsequent loss, the insurer is liable for the total loss only; but in the event of subsequent safe arrival, the average is augmented by the charge of insurance.

The operation of the clause warranting the ship free from average under 3 per cent., unless general, or the ship be stranded, may now be clearly seen. If a ship be insured and valued at 10,000*l.*, and the repairs of the vessel do not, after all the deductions above referred to, amount to 3 per cent., there is no claim upon the insurer unless the vessel shall have been stranded. [AVENAGE.]

**Stranding.**—The term stranded is not well chosen, admitting of more than one construction, and the clause of which it forms a part is imperfectly conceived. And in settlements of accounts when differences arise, the parties who discuss them are more apt to strive for that interpretation of terms and clauses which is favourable to their interests than for that which is best adapted for general purposes. It is commonly understood that merely striking the ground and coming up is not a stranding; it being necessary, in order to fall within that term, that the ship should remain on the ground or rock, as it may happen, and that efforts should be made to float her. Striking on an anchor and leaking dangerously is not a stranding. We shall only adduce two illustrations, for the purpose of showing how adapted this clause is as a means to an end. Cases and other such articles are warranted free from particular average unless the ship be stranded, because the insurers, considering these articles to be peculiarly susceptible of damage, will not consent to take that risk except on some extraordinary occasion. A ship laden with corn makes a very stormy passage from the Baltic to London, and damages the whole of her cargo. Upon the arrival off our coast she is stranded, but got off without straining or sustaining any damage. The insurer is held to be liable for the damage to the corn, under the clause of the policy. On another occasion, after a very favourable passage to our coast, a ship strikes upon a shoal, but is not stranded, sustaining, however, so much damage that she arrives at London with 6 feet water over her hold, and her cargo almost wholly spoiled. The insurer is held not to be liable under the clause of the policy.

**General Average.**—The insurer is bound to make good all general average without exception, however trifling the amount. General average is treated as though altogether unconnected with particular average; and damage to the goods amounting to 3 per cent. is not payable by the insurer, although there may be also a general average, and the general and particular averages together may amount to more than 3 or 5 per cent. General average is a charge which must be paid by the merchant and ship-owner, even if the ship be insured; although, when insured, he transfers it, in virtue of his insurance, the charge being from himself to his insurer. All the elements that can by possibility enter into general average may be classed under four heads:—1. Sacrifice of part of the ship and stores; 2. Sacrifice of part of the cargo and freight; 3. Remuneration of services required for general preservation; 4. Expenses incurred for raising money to replace what has been sacrificed, and to remunerate services.

1. When any part of the ship is sacrificed for the general benefit, the owner is entitled to receive (deducting, of course, his share of contribution) the amount of his outlay in the replacement of such sacrifice; allowance being made, on the principle stated above, where old works and materials are replaced with new. and the necessi

however, does not invariably apply. For instance, if only is taken off the price of an iron cable that is shipped from for the general benefit, because iron cables are calculated to last for a great number of years; and no reduction is ever made from the price of anchors, or of replacing the loss may amount to considerably more than the value lost, computing the value at the place where the ship was originally fitted. Thus the cost of replacing an anchor and cable shipped from in the Downs is frequently double the value of the anchor and cable at London. But whatever the charge may be, such charge forms the basis of settlement.

2. Sacrifice of the cargo and freight takes place in jettison, or where part of the cargo is flung overboard to lighten the vessel. Upon arrival in port, after such jettison, the owner of the goods jettisoned is entitled to receive (deducting his share of contribution) what the goods would have produced nett to him, supposing them to have arrived sound; and the owner of the ship is entitled to receive (deducting his share of contribution) the freight to which he would have been entitled upon the safe delivery of the goods.

3. Remuneration of services and other charges.

When a ship loses her anchors and cables, very large sums are frequently awarded to boatmen who venture off to her with new ones at the imminent hazard of their lives. A ship disabled at sea is towed into port by another, and remuneration for such service is awarded according to the value saved, the detention occasioned, and the loss sustained. The ship rendering the service may be laden with fish or fruit, that may be totally spoiled by the detention, or may be in ballast. A ship captured by the enemy may be recaptured by a man-of-war or armed merchant vessel: here, salvage is awarded according to the circumstances of the case. All these charges are general averages; that is to say, must be distributed over ship, freight, and cargo. When a ship with a cargo is driven on shore, the expense of attempting to get her off is general average, if she cannot be got off without discharging, the expense of discharging is general average; but the expense of getting the ship off after the cargo has been taken out falls exclusively upon the ship, the warehousing of the cargo, and other expenses incurred for its preservation, are charges exclusively upon the cargo. The expense of reloading the cargo in distress, the pilotage inwards is general average; the pilotage outwards is a charge upon the freight. This distribution of charges has been settled into a tolerably well established practice; upon this principle claims are settled at the Courts, and at Lloyd's.

The money required to meet the above charges is sometimes attainable without expense, if the accident happen near home, and the ship-owner be respectable, he advances the money and repays from the various parties concerned so far as the accounts can be made up; or if the accident happen in a foreign port, where the owner of the ship is well known, the captain's bill to him will sometimes be received in payment of the charges incurred. But where such facilities do not exist, the captain is empowered to pledge the ship, freight, and cargo as security to anyone who will prevail upon to supply the necessary funds. This pledge is termed a bottomry bond, and the captain admits the receipt of the money; he is bound to the payment of a premium (which varies with the distance of the port of destination, the risk of the voyage, the respectability of the parties, and the necessities of the captain); and

assigns the ship, freight, and cargo as security for the repayment of the money advanced and the stipulated premium. Should the captain consider the bottomry premium demanded of him exorbitant, or should he deem it preferable in other respects, he may sell a portion of the cargo for the purpose of raising such money as he may stand in need of towards the prosecution of his voyage. The expense of raising the requisite funds, whether by commission, by bottomry premium, or by loss on the sale of the cargo, is charged to those parties for whose interest the money is required. Thus, if a ship, having struck upon a rock, puts into port in distress, and is obliged to unload to repair; supposing the particular average upon the ship to amount to 500*l.*; the general average, consisting of assistance into port and expense of unloading, 200*l.*; particular charges on freight, consisting of expense of reloading and pilotage outwards, 100*l.*; and particular charges on cargo, consisting of warehouse rent and repair of packages, 200*l.*; and the expense of raising money should be 20 per cent.: these sums would be severally increased by this addition, and would be raised to 600*l.*, 240*l.*, 120*l.*, and 240*l.* [Bottomry.]

It still remains to be enquired in what proportion the general average is to be paid by the different owners of the cargo, and the owner of ship just at the ship's port of destination, and the values of the ship and cargo are taken at what they would produce in their actual state upon arrival, and the freight according to what is actually receivable, less the wages of the captain and crew; the general average being distributed in proportion to these values. Should the cargo be altogether worthless, it cannot be made to contribute; and should the wages of the crew exceed the freight, then the freight is not liable to contribute. In case of jettison, the party whose property has been sacrificed for the general benefit receives indemnity on the same principle; the party would have produced *nett*, supposing it to have been sold on the arrival of the vessel—the same value serving for the basis of his proportion of contribution. Some few cases occur where the general average is adjusted at the port of departure. Thus, if a ship, outward bound to the British colonies, cut from an anchor and cable in the Downs, or incur other general average on our own coast, the insurances being principally effected in this country, it is the custom to adjust it on the spot, by which means both delay and expense are avoided. On these occasions the values at the port of shipment are taken as the basis of contribution. A total loss, subsequently to a general average, does not exonerate the insurer from his prior liability; and although it is customary with the ship-owner, or his agent, specifically to insure the money expended in average, for the purpose of protecting the insurer against any greater liability than 100 per cent., he is not absolutely obliged to do so. When the average funds are raised by bottomry, the party advancing them takes the ship, freight, and cargo as security, and charges a premium to cover the risk of the ship's non-arrival at her port of destination; and thus, on such an occasion, a subsequent total loss relieves the insurer from all liability to average.

The laws and customs by which averages are adjusted vary in different countries; but the insurer in this country is only liable for the averages adjusted according to our laws. The merchant, however, whose goods arrive at a foreign port is

obliged to submit to the laws of that port. He may thus be a considerable loser; paying general average according to one law, and receiving from his insurer according to another. And he never can be a gainer, because, before he is entitled to recover from his insurer, he must prove that he has paid to the owner of the ship. This is one of the many inconveniences to which mercantile men are exposed, which cannot be entirely removed without, what it may be hoped will gradually take place, an assimilation of the commercial laws of different countries. A partial remedy for this grievance has been found in the introduction of a clause into policies when the ship is bound to a foreign port, to this effect: general average to be paid according to the foreign statement.

**Proof of Loss.**—The policy of insurance is the instrument under which the merchant and ship-owner claim indemnification for all losses that are not specially excepted. The proof that the loss has been sustained must also be exhibited; such as the title to the vessel and cargo, and the evidence of the captain and crew to establish the circumstances out of which the claim arises. If A were to insure his vessel for the space of 12 months, and at the expiration of 6 months were to sell his ship to B: A's interest in the vessel having ceased, so also does his insurer's liability, unless the policy be sold with the ship; and B, if he wish to be protected, must make a new insurance, or purchase A's policy. Proof of ownership, therefore, is an essential preliminary to the recovery of a claim. In general practice no difficulty arises from this, because the fact of ownership is sufficiently notorious. The bill of lading is, in most cases, satisfactory proof that the cargo was on board, as well as of the amount of freight.

**Valued and Open Policies.**—If an insurance for 2,000*l.* be effected upon 100 hhd. of sugar, valued at 20*l.* per hhd., the bill of lading, showing that the vessel had 100 hhd. on board, establishes the interest at 2,000*l.*, and the policy is termed a valued policy. But if an insurance for 2,000*l.* be effected on 100 hhd. of sugar, and nothing be expressed as to value, the bill of lading only establishes that 100 hhd. are on board without establishing the amount of interest. The production of the invoice, showing the cost of the goods, is necessary to that end, the policy being termed an open one.

**Return of Premium for Short Interest.**—In a valued policy, when the whole of the property insured does not appear to have been shipped, the difference between the quantity insured and the quantity shipped is termed short interest. Thus, if 2,000*l.* be insured upon 100 hhd. of sugar, valued at 20*l.* per hhd., and 80 hhd. only be shipped; as the insurer's liability does not extend beyond 1,600*l.*, so he is obliged to return the premium upon 400*l.* to which no risk attaches. This return of premium is called a return for short interest.

**For Over-Insurance.**—In an open policy, where the value shipped is not equal to the value insured, the difference is termed over-insurance. If a merchant, A, make an insurance for 5,000*l.* upon goods, without specifying any value, from Calcutta to London, the premium being 60*s.* and the stamp duty 4*s.* per cent., the amount of interest that attaches to the policy is so fixed that he is neither to gain nor lose by the transaction in the event of the vessel's loss, supposing his insurance to be sufficient. To entitle him to recover a profit, the profit to be insured must be stipulated in the policy. The expense of insurance upon 100*l.* being 84*s.*, it is clear that

every 100*l.* insurance covers 96*l.* 16*s.* original cost; that is to say, protects the merchant from loss to that extent in case of the loss of the vessel. If, then, we assume the invoice of the goods shipped to be 40,000 rupees, or, at the exchange of 2*s.* per rupee, 4,000*l.*, the interest attaching to the policy is ascertained as follows: If 96*l.* 16*s.* cost is insured by 100*l.* insurance, what will the 4,000*l.* cost be insured by? Answer, 4,132*l.* Under such circumstances, although a policy exist for 5,000*l.*, the insured is not able to prove interest for more than 4,132*l.*; and consequently, the insured being entitled to recover no more than the sum in case of loss, the insurer is called upon to make a return of premium for over-insurance upon 868*l.*

Although we have treated separately of return for short interest and over-insurance, we should observe that these terms in practice are used indiscriminately; and indeed we cannot say that we perceive much advantage in making the distinction, or preserving the distinctive appellation.

It sometimes happens that the property expected in a vessel is not all insured at one time in one policy. But this makes no difference in the principle of settlement according to our law, although, according to the laws of most other countries, the policies take precedence of another according to their dates, the whole interest falling upon the policy or policies first effected. The foreign law, in this instance, appears to us the more equitable and reasonable of the two; and that our reason for thinking so may be intelligible, and thus gain assent to meet with refutation, we shall state a case of short interest upon a number of policies, such as not unfrequently appears.

A merchant, A, orders his correspondent at Calcutta to ship for him a quantity of sugar, not exceeding 1,000 tons, at a price not exceeding 20*l.* per ton. At due time he receives a letter from his correspondent acknowledging the receipt of his order, expressing confident hopes of being able to purchase the quantity, or the greater part of it, within the limits prescribed, and promising to advise him as he proceeds. A, on receipt of this letter, on January 1, makes a provisional insurance for 5,000*l.* upon sugar valued at 20*l.* per ton. He continues to order sugar, and without further advice, and fearing that his correspondent's letter should have miscarried, and that he might have property at sea, makes on February 1, March 1, and April 1, three similar insurances, thus covering the whole of the quantity ordered. He subsequently receives advice that his correspondent had not been able to purchase more than half the quantity ordered, at his limit; he recovers from his insurers half the premium upon each policy. Now, it was not at all probable that he might have received advice from his correspondent, as he expected, much earlier. And if he had received advice in the middle of February of the shipment of 500 tons, and the ship which contained them was totally wrecked on the river Hooghly, the insurers upon the first policies would have been liable for the whole loss. And it appears to us a defective arrangement by which a party, who is at all times exposed to a total loss, should at all times be compelled to return half his premium. It is not probable that the merchant may, if he please, insert in his policies a clause by which the policies should be made to succeed one another; but we should observe that the law, in insurance cases, as in the case of the property of deceased persons, ought to be the best general disposition, leaving to individuals the right of modification according to particular circumstances.

**Return for Double Insurance.**—Besides returns for short interest and over-insurance, there are returns for double insurance. They are, in fact, to all intents and purposes, the same thing. Double insurance exists where the party, through forgetfulness, makes an insurance upon his property twice over; or where the shippers and consignees of goods, effect each an insurance upon them; or where the captain of a vessel in foreign parts, where the captain's advices should not reach his vessel, effects an insurance upon it, and the owner at the same time, acting with equal caution, effects one also. The observations already made upon returns for short interest, and upon the difference between our laws and those of other countries, apply with equal force here.

We have now gone over all the principal topics connected with marine assurance. Those who peruse this article with ordinary attention will, we hope, gain a tolerably clear insight into the principles and practice of the business; but a perfectly familiar acquaintance with it can only be acquired by those who are daily conversant with its details.

**Duty on Policies of Marine Insurance.**—This is regulated by the Act 30 Vict. c. 23. The Act of 1867 provides that—

On the passing of this Act the stamp duties now payable for policies of sea insurance shall be repealed, and the several Acts and Regulations of Acts specified in the schedule marked (D.) of this Act annexed are hereby repealed, save so far as respects any policy made prior to the passing of this Act, and as respects any forfeiture or penalty incurred in respect of any offence against any enactment so repealed.

In this Act the expression 'sea insurance' means any insurance (including re-insurance) made upon any ship or vessel, or upon the machinery, tackle, or furniture of any ship or vessel, or upon any goods, merchandise, or property, of any description whatever, on board of any ship or vessel, or upon the freight of or any other interest which may be lawfully insured in or relating to any ship or vessel; and the word 'policy' means any instrument whereby a contract or agreement for sea insurance is made or entered into.

The Commissioners of Inland Revenue shall provide blank policies, printed on paper, in the form set forth in Schedule (E.) to this Act, and stamped to the duty payable under this Act; and any person may buy such blank policies, stamped with the duty which he may require, at the price of the duty: provided always, that before any stamped blank policies shall be issued, and before any vellum, parchment, or paper which is to be brought to be stamped shall be delivered to any officer of inland revenue, he shall mark or write thereon the day, month, and year of such issue or delivery, and if he wilfully neglects so to do he shall forfeit the sum of 100*l*.

The said commissioners shall keep an office in the City of London for the distribution of such policies, stamped as aforesaid, to persons engaged in the business of insurance within the City; and purchasing the same, subject to the allowance made on purchase of stamps.

Any contract or agreement for sea insurance made after the 1st day of January 1868, shall be void unless the same is expressed in a policy; and every policy shall specify the particular risk or adventure, the names of the shippers or underwriters, and the sum or sums insured; and in case any of the above-mentioned particulars shall be omitted in any policy, such

policy shall be null and void to all intents and purposes.

No policy shall be made for any time exceeding 12 months, and every policy which shall be made for any time exceeding 12 months shall be null and void to all intents and purposes.

No policy shall be pleaded or given in evidence in any court, or admitted in any court to be good or available in law or in equity, unless duly stamped; and it shall not be lawful for the said commissioners or any officer of inland revenue to stamp any policy at any time after it is signed or underwritten by any person, on any pretence whatever, except in the two cases following; that is to say,

1st. Any policy of mutual insurance having a stamp or stamps impressed thereon may, if required, be stamped with an additional stamp or stamps, provided that at the time such additional stamp or stamps shall be required, the policy shall not have been signed or underwritten to an amount exceeding the sum or sums which the stamp or stamps previously impressed thereon will warrant.

2nd. Any policy made abroad, and chargeable with duty by virtue of Section 15 of the Act of the 28th and 29th years of her Majesty's reign, cap. 96, may be stamped within the time specified in that Act.

Nothing in this Act shall extend or be construed to extend to prohibit the making of any alteration which may lawfully be made in the terms and conditions of any policy after the same shall have been underwritten; provided that such alteration be made before notice of the determination of the risk originally insured, and that it shall not prolong the time covered by the insurance thereby made beyond the period of 6 months in the case of a policy made for a less period than 6 months, or beyond the period allowed by this Act in the case of a policy made for a greater period than 6 months, and that the articles insured shall remain the property of the same person or persons, and that no additional or further sum shall be insured by reason or means of such alteration.

Where any sea insurance is made for a voyage and also for time, or to extend to or cover any time beyond 24 hours after the ship shall have arrived at her destination and been there moored at anchor, the policy shall be chargeable with duty as a policy for a voyage, and also with duty as a policy for time.

Where any carrier by sea or other person shall, in consideration of any sum of money paid or to be paid for additional freight or otherwise, agree to take upon himself any risk attending goods, merchandise, or property of any description whatever while on board any ship or vessel, or engage to indemnify the owner of any such goods, merchandise, or property from any risk, loss, or damage, such agreement or engagement shall be deemed to be a contract for a sea insurance.

If any person shall become an assurer upon any sea insurance, or shall subscribe or underwrite, or otherwise sign or make, or enter into any contract, agreement, or memorandum, for or of any sea insurance, or shall receive or contract for any premium or consideration for any sea insurance, or shall receive or charge, or take credit in account for any such premium or consideration as aforesaid, or any sum of money as or for any such premium or consideration as aforesaid, or shall wilfully or knowingly take upon himself any risk, or render himself liable to pay, or shall pay or allow, or agree to pay or allow, in account or otherwise, any sum of money upon any loss, peril, or contingency relative to any sea in-

insurance, unless such insurance shall be written on vellum, parchment, or paper duly stamped, or if any person shall be concerned in any fraudulent contrivance or device, or shall be guilty of any wilful act, neglect, or omission, with intent to evade the duties payable on policies under this Act, or whereby the duties may be evaded, every person so offending shall for every such offence forfeit the sum of 100*l*.

Every person who shall make or effect, or knowingly procure to be made or effected, any sea insurance, or shall give or pay, or render himself liable to pay, any sum of money, premium, or consideration whatever in the nature of a premium for or upon any sea insurance, or shall enter into any contract or agreement whatever for any sea insurance, unless the same insurance, contract and agreement for insurance, respectively, shall be written on vellum, parchment, or paper, being first duly stamped, shall for every such offence forfeit and pay the sum of 100*l*.; and every broker, agent, or other person negotiating or transacting any sea insurance contrary to the true intent and meaning of this Act, or writing any agreement for any sea insurance upon vellum, parchment, or paper not duly stamped, shall for every such offence forfeit the sum of 100*l*.

If any person shall make or issue, or cause to be made or issued, any document purporting to be a copy of a policy, and there shall not be in existence, at the time of such making or issue, a policy duly stamped whereof the said document shall be a copy, he shall for such offence forfeit the sum of 100*l*. in addition to any other penalty which he may have incurred under this Act.

It shall not be lawful for any broker, agent, or other person negotiating or transacting or making any sea insurance to charge his employer any sum of money for brokerage or agency, or for his pains or labour in negotiating, transacting, or making such insurance, or writing the same, or for any moneys expended or paid by way of premium or consideration in the nature of a premium for such insurance, unless the same shall be written on vellum, parchment, or paper, duly stamped; and all and every sum and sums whatever paid by such employer on any such account to any broker, agent, or other person negotiating or transacting or making any insurance contrary to this Act shall be deemed to be paid without consideration, and shall remain the property of such employer, his executors, administrators, or assigns.

This duty was reduced in 1833, and again in 1844, 1865, and 1867, and is now (1868) less than half what it was formerly.

*Schedule B, containing the Stamp Duties granted by this Act.*

For every policy of sea insurance for or upon any voyage—

In respect of every full sum of 100*l*. and in respect of any fractional part of 100*l*. thereby insured. . . . . 3

For every policy of sea insurance for time—

In respect of every full sum of 100*l*. and in respect of any fractional part of 100*l*. thereby insured—

Where the insurance shall be made for any time not exceeding 6 months . . . . . 3  
Where the insurance shall be made for any time exceeding 6 months and not exceeding 12 months . . . . . 6

But if the separate and distinct interests of two or more persons shall be insured by one policy for a voyage or for time, then the duty of 3*d*. or the duty of 3*d*. or 6*d*., as the case may require, shall be charged thereon in respect of every full sum of 100*l*. and every fractional part of 100*l*. thereby insured upon any separate or distinct interest.

These reductions must, of course, be beneficial. But the tax is altogether wrong in prin-

... and should be repealed altogether. Its obvious tendency is to discourage the coasting trade, by imposing a duty on goods carried by sea, from which those carried by land and canals are exempted. But the influence of the tax on vessels engaged in the foreign or colonial trade is still more objectionable. It is immaterial to a merchant sending a ship to sea, whether he insures in London, Amsterdam, or Hamburg; and as policies executed in the last two cities are either wholly exempted from duties, or subject to such as are merely nominal, the effect of the duty is to transfer to the Continent a considerable part of the business of marine insurance, that would otherwise be transacted in London. It is plain, therefore, that this duty operates to strip a valuable branch of business from amongst us, and though it had no such effect, still it is sufficiently clear that a tax on providence, or on endeavour to guarantee the safety of property at sea, is not one that ought to exist in any country, and least of all in so commercial a country as England.

(This article on Marine Insurance has been revised by a gentleman thoroughly conversant with the principles and details of the business.)

Free from all average on corn flour fish salt fruit and seed, unless general or the ship be stranded. Free from average on sugar rum hides skins hemp flax and tobacco under five per cent. and on all other goods, the ship and freight under three per cent., unless general or the ship be stranded.

By order of the Court of Directors.

III. INSURANCE (FIRE).

Insurance against fire is a contract of indemnity, by which the insurer, in consideration of a certain premium received by him, either in a gross sum or by periodical payments, undertakes to indemnify the insured against all loss or damage he may sustain on his houses or other buildings, stock, goods, and merchandise, by fire up to a certain amount during a specified period.

Insurances against fire are almost invariably made by Joint-Stock Companies, many of which are established in London, but operate by agencies throughout the country, whilst some have their chief offices in a few of the principal towns in the empire. Of these, the greater number insure at their own risk and for their own profit; but there are others, partaking more of the character of mutual insurance offices, in some of which the assured by annual policies, and in others those by septennial policies, only participate in the profit of the concern. The number of such offices is gradually diminishing. How far the insured in such companies as members become liable for the losses of the same, can only be decided by the provisions in the respective deeds of settlement.

The conditions on which the different offices insure are contained in their proposals, and are also printed on the back of every policy; and it is in most instances expressly conditioned that they undertake to pay the loss, not exceeding the sum insured, 'according to the exact tenor of their printed proposals, or according to the conditions.'

Nothing can be recovered from the insurers, in the event of loss, unless the party insuring had an interest or property in the thing insured at the time when the insurance was effected, and when the loss happened. It often occurs that one office will not insure to the full amount required by an individual who has a large property; and in such case the party, to cover his whole interest, is obliged to insure at different offices. But, in order to prevent the frauds that might be practised by insuring the full value in various offices,

there are, in the proposals issued by all the companies, articles, which declare that persons insuring must give notice of any other insurance made elsewhere upon the same houses or goods, that the same may be specified and allowed by indorsement on the policy, in order that each office may bear its rateable proportion of any loss that may happen; and sometimes a clause is added, providing that unless such notice be given of each insurance to the office where another insurance is made on the same effects, the insurance made without such notice will be void.

Any trustee, mortgagee, reversioner, factor or agent, has sufficient interest in the goods under his custody to effect a policy of insurance, provided the nature of such interest be distinctly specified at the time of executing such policy.

Most of the offices stipulate in their proposals against making good any loss occasioned by 'invasion,' 'foreign enemy,' 'civil commotion,' &c.; and under this condition the Sun Fire Office was exonerated from the loss occasioned by the disgraceful proceedings of the mob in 1780.

The risk commences in general from the time the proposal is accepted by the office, unless there be some other time specified.

Policies of insurance may be effected for any period. If for a year (which is most customary) or for a term of years by a single payment it is usual for the office, by way of indulgence to allow fifteen days after each year, or term of years, for the payment of the premium of the next period in succession; and provided the premium be paid within that time the assured is considered within the protection of the office.

A policy of insurance is not in its nature assignable, not can it be transferred without express consent of the office. When, however, any person dies, his interest remains in his executors or administrators respectively, who succeed or become entitled to the property; provided their representatives respectively procure their rights to be indorsed on the policy.

(For further details, see Marshall *On Insurance*, book iv.; Park *On Insurance*, c. 23; *Law of Fire Insurance*, by C. J. Banyon.)

The nature and mode of operation of fire offices may be described as follows:—

They insure against loss or damage by fire in Great Britain and Ireland all descriptions of buildings, including mills and manufactories, goods, wares, and merchandise in the same; also in harbour or in dock; craft on navigable rivers and canals, and the goods laden on the same; waggons travelling the roads and railways; their contents; and farming stock of all descriptions.

Insurances are generally divided into *common*, *hazardous*, and *doubly hazardous*. The distinguishing characteristics of these may be described as follows:—

Common or 1st class. Buildings of brick or stone, and covered with tiles, slates, or metal.  
Hazardous or 2nd class. Buildings partly of brick or wholly constructed of timber, but covered with tiles, slates, or metal; and 1st class buildings which hazardous trades are carried on.  
Doubly hazardous, or third class. Buildings covered with thatch.

The ordinary rates when such buildings are in private occupation are:—

1st class	-	1s. 6d. per cent. per annum.
2nd "	"	2s. 6d. " "
3rd "	"	4s. 6d. " "

The nature of the tenure of a building materially affects the classification thereof for rating. These charges are exclusive of the duty payable, under Act. c. 30, to Government of 1s. 6d. per cent. on the amount of the policy. There is also a stamp duty of 1d. on each policy. There is also a stamp duty, as a contract stamp, of 1d. on every receipt for money (however small the amount) or memorandum issued when an insurance is effected. These stamp duties are borne by the office. Agricultural produce and stock on farms are, by 3 & 4 Wm. IV., exempt from duty. Agricultural produce, farming stock and implements, and utensils of husbandry, on any farm, may be insured, without the average clause, except from duty, provided it be insured to a fair value. The insurance office will not be subject to loss on goods or utensils damaged or destroyed whilst undergoing any process in which the application of fire-heat is necessary, nor will the insurance office be liable for loss on hay, corn,

seeds, or other property, occasioned by its own natural heating, but the loss on any property in consequence (except that which, by its own natural heating, has been the cause of the fire) will be made good, as well as losses from lightning, where the buildings or other effects insured have been actually set on fire thereby, and losses by explosion of gas on the premises insured.

Insurances may also be made by special agreement on the following risks, and on others of a similar description, not included in the 2nd and 3rd heads of insurances, viz. on mills of all kinds, and the stock and utensils in them; also on buildings containing kiln, steam-engine, stove, or oven, used in the process of any manufacture, and the stock therein; sugar refiners, sea biscuit bakers, distillers, varnish makers, chemists' laboratories, theatres, coach painters, colour manufacturers, varnishers, musical instrument makers, refiners of saltpetre, spermaceti, wax, and oil, barge and boat builders, carpenters, cabinet makers, coach

II.—Duties paid to Government by the following Country Fire Insurance Offices for the Years 1862, 1863, 1864, 1865, 1866, and 1867.

Offices	1862	1863	1864 Duty on Stock reduced to 1s. 6d. per cent.	1865 Part as 3s. and part as 1s. 6d.	1866 Duty at 1s. 6d.	1867

makers, coopers, cork burners, floor-cloth painters, jappers, lampblack makers, letter-press printers, machine makers, melters of tallow and of rough fat, candle makers, cart-grease makers, oilmen, soap-boilers, rope and sail makers, ship chandlers, hemp and flax dressers, oil leather dressers, medals, curiosities, pictures, prints, drawings, statuary work, spinners of cotton, flax, lint, and wool, throughout all the operations attending the manufacturing of these materials, from the raw state into thread for the weaver, and such other risks as, by reason of the nature of the trade, the narrowness of the situation, or other dangerous circumstances, may increase the hazard thereof: all which special hazards must be inserted in the policy to render the same valid and in force.

Gunpowder, and buildings in which it is made, cannot be insured on any terms; neither do offices insure writings of any kind, books of accounts, ready money, bonds, bills, or any other securities for money.

Insurances may be made for more years than one by a single payment, and in such cases a discount is allowed on the premium and duty for every year except the first.

Rent may be insured by a special agreement for a term not exceeding 1 year, the amount being specified in the policy.

*Insurance of mills, factories, risks of special hazard &c.*—In consequence of the very frequent changes to which the rates for mills and factories of all kinds, mercantile risks &c. are necessarily subject, arising out of the ever-varying character of the processes, nature of goods &c. on which the degree of hazard depends, details of the rates for

such risks cannot be given in any serviceable form.

N.B.—Several companies likewise insure property in foreign countries, which is not subject to the annual duty unless the same be situated in British colony, and the policy be executed in Great Britain or Ireland.

A fire insurance policy consists of—

- Preamble or inductive clause*, reciting the names of the parties to the contract, the payment of a certain sum as the consideration for the insurance of certain property afterwards described for a certain period and for a specified sum followed by the description of the property arranged under various heads or items whereof is of various kinds.
- The operative clause or obligation*; by which the company contracts, subject to the conditions annexed to the policy, to pay or make good or damage to the property insured up to the amount insured during the period for which the contract is made, or may be subsequently renewed by payment by the assured, and acceptance by the company, of the amount of premium for such renewal.
- The conditions* printed at the foot of or on the back of the policy embrace the following points:—
  - The voiding of the policy if there shall be any misrepresentation or omission in the description of the property on which the estimate of the risk is based.

(2.) As to payment of premium, and the period during which the policy is in force.

(3.) Modification of the liability of the company when there are other insurances on the same property.

4. As to assignments, transfer of interest in policies in case of death, removal of property to a place other than that described &c., to be notified to the company, whose consent (of which it reserves the option to itself) is to be signified by endorsement on the policy.

5. Goods held in trust to be so stated.

6. Risks not covered specifically detailed, such as damage by invasion, foreign enemy, riot, civil commotion, or any military or usurped power.

7. Articles not insured (as pictures, china &c.) to be specially enumerated.

8. No liability for prints, paintings &c., beyond a certain amount on each, unless specifically insured.

9. Insurable articles—books of accounts, money &c.

10. Gunpowder—limit as to quantity.

11. Damage by lightning allowed when the property insured is set on fire thereby; but not damage by explosion.

12. No liability under a farming stock policy for fire stock above a certain price, unless specifically insured.

13. No liability for growing crops.

14. Notice to be given if building near completion or undergoing repair.

15. Goods in case of fire not to be abandoned.

16. Average clause.

17. Condition that in case of goods, the market value at time of fire to be the criterion of value.

18. Definition of period when insurance expires.

19. Statement of claim—how to be made and supported by proofs.

20. Arbitration clause.

21. Clause for reinstating at option of company. With reference to 'No. 16, Average Clause,' mentioned, it may be stated that frequently mercantile insurances, and sometimes for other purposes, the policy covers property in a variety of things or places in one undivided sum. The sum insured is then made subject to the average or 'pro rata' conditions under Act 9 Geo. IV. c. 13.

These sums must be insured on each separate thing, and on the contents thereof, unless excepted to the following average clause.

**Conditions of Average.**—1. It is hereby declared and agreed that whenever a sum insured is made subject to the conditions of average, the property so covered shall, at the breaking out of any fire, be collectively of greater value than the sum insured thereon, then the insurance shall pay or make good such a proportion of the loss or damage as the sum so insured bears to the whole value of the said property at the time when such fire shall first happen.

But if it is at the same time declared and agreed that if any property included in such policy shall, at the breaking out of any fire, be covered by any other policy which, whether subject to average or not, shall apply to part only of the things or places, or of the property to which the average extends, then this policy shall not cover the same excepting only as regards any excess of value beyond the amount of such other insurance, which said excess is declared to be for the protection of this policy, and subject to the average as aforesaid.

And if it is further declared and agreed that the insured shall claim under this policy for damage to property embraced in the terms of an average policy extending as well to other

buildings or places, or to other property not included in the terms of this insurance, and if at the breaking out of any fire there shall not be any such other property actually at risk to be protected by such policy, then, so far as regards the settlement and liability thereof shall be held to be concurrent in all respects with those of such other policy.

The generality of insurances in the United Kingdom are not, however, subjected to these conditions, although on the Continent and many other places abroad the pro rata condition in some form is applied to every insurance.

**Amount of Property insured.** Duty.—Insurance against fire has been practised in England for about 13 century, and is now very much adopted throughout the country.

Introduced at considerably later dates into the different countries on the Continent and in America, it is only in recent years that it has there experienced any active development.

Fire insurance was at an early period after its institution considered, though most erroneously, as we have shown in former editions of this work, to be a legitimate subject for taxation.

The amount of this oppressive and impolitic tax varied frequently, till in the 55 Geo. III. (1815) the duty was fixed at 3s. per cent., at which it remained until the year 1864, when it was reduced, for insurances on stock in trade, to 1s. 6d. per cent., and in the following year the duty was fixed at 1s. 6d. per cent. on insurance on every class of property, except farming stock, which had so far back as 1833 been, and still remains, entirely exempted from duty.

By the official accounts it appears that in the year 1863, the last entire year for which the duty of 3s. per cent. was collected, the gross amount received for insurances was as follows:—

In Great Britain	£ 1,631,817
Ireland	83,865
Total duty	1,715,122
Giving a sum covered of about	1,115,414,666

Whilst the amount insured on—

Farming stock in Great Britain and Ireland	£ 74,785,409
Total sum insured	1,218,200,075

For the year 1866, which was entirely at 1s. 6d. per cent. duty, the amount collected was for—

Great Britain	£ 918,266
Ireland	50,887
Total duty	969,153
Giving a sum insured of about	1,331,301,000
On farming stock in Great Britain and Ireland	77,379,410
Total	1,410,176,410

Much property, however, still remains uninsured, giving great scope for a further expansion of this branch of commerce.

Even if there be not, as there should be, a total abolition of this tax, no long time can probably elapse before a considerable further reduction must be made in the amount of a burden the principle of which has already been condemned by all parties.

An abstract of the duty paid to Government (almost exclusive of Ireland) during the last few years is given in Tables I. and II.

IV. INSURANCE (LIFE).

That part of the business of life insurance which consists of granting annuities upon lives is treated of under INTEREST AND ANNUITIES; so that we have only to treat, in this place, of the insurance of sums payable at the death of the insurers or their nonlives.

Suppose an individual of a given age wishes to insure 100l. payable at his death, the single premium, or the series of annual premiums, he ought to pay an office for such insurance must plainly depend on the expectation of life of such individual, and on the rate of interest or nett profit which the insurers may make by investing the premiums.

With respect to the first of these conditions, or the expectation of life, it is usual in estimating it to have recourse to tables framed from the mortality observed to take place in particular cities or districts, as in Northampton, Carlisle &c. [INTEREST AND ANNUITIES.] But though the actual decrement and expectation of life among an average population at every year of their lives were accurately determined, it is doubted whether it would form a fair basis for an insurance office to proceed upon. The general opinion seems to be that for insured lives are decidedly above the average; for the insurance offices invariably profess to act on the principle of rejecting bad lives or of making them pay a proportional increase of premium; and it may besides, it is said, be fairly presumed that persons insuring their lives are of a superior class, and are not, generally speaking, engaged in those manual and laborious occupations that are esteemed most injurious to health. But, on the other hand, the friends of parties whose lives are supposed to be bad, and the parties themselves, are most anxious they should be insured. It is also far from being an uncommon practice for certain individuals to prevail on persons whom they happen to know, or believe to be bad lives, to insure; and then to get a legal assignment of the policy in their favour, on their giving the 'men of straw' a bonus for their share in the fraud. At all events, there can be no question that large numbers of such lives are perpetually offered for insurance; and every individual conversant with the business knows that, in despite of all precautions, policies are very frequently effected every year. Mr. Milne, on whose judgment that 'all reliance may be placed, states distinctly that 'all the caution and selection which the offices in general can exercise is necessary to keep the bulk of insured up to the average goodness of the bulk of the population.' (*Ency. Brit.*, new ed., art. 'Anthe population.') Since the competition among the different offices became so very keen as it has been of late years, there are but few lives so bad that they will not be taken by one office or another; and we doubt, were the results of their experience made public, whether it would be found that there is much foundation for the opinion as to the superiority of insured lives.

With respect to the second condition in valuing an insurance, or the rate at which the interest of a sum may be estimated, it is impossible to arrive at anything like accurate conclusions. At an average, perhaps, transactions in life insurance may extend over a period of 30 years from the time when they are entered into; and in such a lengthened term the greatest changes may take place in the rate of profit and of interest. Mr. Finlaison, of the National Debt Office, appears to think that  $4\frac{1}{2}$  per cent. may be taken as the true average rate in this country, and that  $4\frac{1}{2}$  is a rate at which no loss need be apprehended. (*Parl. Paper* No. 284, Sess. 1829.) But this is not a point on which (as Mr. Finlaison seems to suppose) previous experience can be safely depended upon in forming engagements for the future; and were this the proper place for entering upon solid discussions, we think we could assign pretty good grounds for concluding that no institution intended to last for the next half century would be warranted in reckoning upon realising more than 3 per cent. upon its investments. We should look upon this as the maximum, and of course could expect nothing but ruin to fall upon any institution founded upon the hypothesis of realising  $4\frac{1}{2}$  per cent. of interest. At the same time we would not be understood as laying any undue stress upon this opinion, and are ready to admit that there must always be more of conjecture than of certainty in such conclusions.

Security being the principal object to be aimed at by every insurance office established on sound principles, they would not act wisely if they did not calculate their premiums considerably higher than may appear necessary to those who look only at the present. Societies contracting prospective engagements that may extend for half a century or more are exposed to innumerable unforeseen contingencies; and they would be highly censurable, and altogether unworthy of the public confidence, were they so to conduct their affairs that they might be liable to serious embarrassments from fluctuations in the rate of interest, or an increase of sickness, or any other cause. The success that has hitherto attended the Equitable, and some of the long-established offices, must not be taken as any criterion of what may befall them and others during the next 100 years. Mr. Morgan, the late Actuary of the Equitable, in his accessible *Actuary of the Equitable*, published in 1828, has satisfactorily shown that the peculiar prosperity has been in a very great degree owing to circumstances which cannot possibly occur again. The premium, for example, charged by the Society, so late as 1771, for insuring on the life of a person aged 30 was 4l. 1s. 6d.; whereas it was then only 2l. 13s. 4d.; and there was a corresponding difference in the premium for other ages. (p. 36.) But the excessive magnitude of the premiums was not the only extraordinary source of profit enjoyed by this Society in the earlier part of its career. We learn from the same unquestionable authority that the insurances made during the first twenty-five years, in many cases, after the premiums had been paid for a considerable number of years, without any valuable consideration being returned by the Society! (p. 38.) So copious a source of profit was alone adequate to create a society; but such things rarely occur now—these facts into view, and couples them with the frugal and cautious management which has always distinguished the Equitable Society, surprised at its success? and can anything more absurd than to appeal to its experience in casting the horoscope of the societies that are sprung into existence within the last few years. But, independently of these considerations, are other circumstances sufficient to account for the great success of some of the old offices? The close of the American war a very diminution has taken place in the rate of interest; the public tranquillity has neither been interrupted by foreign invasion nor intestine commotion, excepted, we have not been once visited by any epidemic disorder; and the investments made during the war made at from 50 to 100 per cent. have been realised at upwards of 90 per cent. now (1868) he realised at upwards of 90 per cent. We presume to say that circumstances may be more advantageous for the insurance office in the next half century; but we should not

think very h proceeded to Security, we insurance, the believe, admi were at one of the tendency a low. A great the most resp lives; and the newspapers resorted to in di ought to make well what he is office with whi statements, unles individuals of anq ought not to go fo the most deceptiv a long time hav which are, notwit insure foundati ship with a societ be gets doubtful, when else. But fient affair. Th finally concluded t inability on the pas sive business to m be productive of a imagined. Life insurance co classes. The first occupancies, who und gree owing to the death of the in the profits made by divided among the p are also joint-stock policies; but instead of a per certain specifi would, they allow t certain extent, along made by the busi of mixed compani insured is not th principle on which disclosed. The R of London and the Scottish Union do third species of based on the basis of of company there from the insured selves the whole p the expense of the Fund &c. belong as compared with an comparison between conditions of the p which it holds or view, as if the would be in all res with, inasmuch as th way any share of the doubtful, however, w more than balanced by establishments. E concern, has not only insurer of the lives of in this capacity, s into disorder, in facilities. The man is very apt to get in be conducted witho interested knowi

think very highly of the prudence of those who proceeded to insure on such an assumption. Security, we take leave again to repeat, is, in life insurances, the paramount consideration. It is, we believe, admitted on all hands that the premiums were at one time too high; but we doubt whether the tendency at present be not to sink them too low. A great relaxation has taken place, even in the most respectable offices, as to the selection of lives; and the advertisements daily appearing in the newspapers, and the practices known to be resorted to in different quarters to procure business, ought to make every prudent individual consider well what he is about before he decides upon the office with which he is to insure. Attractive statements, unless where they emanate from individuals of unquestionable character and science, ought not to go for much. Life insurance is one of the most deceptive of businesses; and offices may for a long time have all the appearance of prosperity, which are, notwithstanding, established on a very insecure foundation. If a man insure a house or a ship with a society, or an individual, of whose credit he gets doubtful, he will forthwith insure somewhere else. But life insurance is quite a different affair. The bargain is one that is not to be finally concluded for, perhaps, 50 years; and any mobility on the part of an establishment in extensive business to make good its engagements would be productive of a degree of misery not easy to be imagined.

Life insurance companies are divided into three classes. The first class consists of joint-stock companies, who undertake to pay fixed sums upon the death of the individuals insuring with them; the profits made by such companies being wholly divided among the proprietors. The second class are also joint-stock companies, with proprietary policies; but instead of undertaking, like the former, to pay certain specified sums upon the death of the insured, they allow the latter to participate, to a certain extent, along with the proprietors, in a share of the business. The mode in which this class of mixed companies allot the profits granted to the insured is not the same in all; and in some, the principle on which the allotment is made is altogether different. The Rock, Sun, Royal Exchange, Liverpool and London and Globe, Alliance, Guarantee, and Scottish Union &c. belong to this mixed class. The third species of company is that which is founded on the basis of mutual insurance. In this class of company there is no proprietary body distinct from the insured; the latter share among themselves the whole profits of the concern, after deducting the expenses of management. The Equitable Society, the Norwich Union, Scottish Widows Fund &c. belong to this class. The advantage to a person insuring in any one of these establishments, when compared with another, must plainly depend upon the comparison between the premiums demanded, and the conditions of the policy, and, above all, the security which it holds out. It may appear, on a superficial view, as if the mutual insurance companies would be in all respects the most eligible to be chosen, inasmuch as they have no proprietors to whom any share of the profits from the insured would be paid; but, however, whether this advantage be more than balanced by disadvantages incident to such establishments. Every one being a partner in the lives of all the other members, and in this capacity, should the affairs of the company get into disorder, incur some very serious liabilities. The management, too, of such a company is very apt to get into the hands of a junto, and to be conducted without the greater number of interested knowing anything of the matter.

There is also considerable difficulty, in constituting such societies, in distinguishing clearly between the rights of old and new members; for supposing a society to be prosperous, it is but reasonable that those who have belonged to it while it has accumulated a large fund should object to new entrants participating in this advantage. But the affairs of a society conducted in this way, or making distinctions in the rights of the members during a long series of years, could hardly fail of becoming at last exceedingly complicated; nor is it, indeed, at all improbable that the conflicting claims of the parties in some of the societies of this sort now in existence may ultimately have to be adjusted in the courts of law, or by an Act of the Legislature.

Supposing the premiums demanded by the societies which retain the whole profits to themselves, to be fairly proportioned to the values insured, we should be inclined to think that they are, on the whole, the most advisable to insure in. The subscribed capital of such associations as the Royal Exchange, Sun, Scottish Union &c. and the wealth of the partners (which is all liable, except in the case of the chartered companies, to the claims of the insured) afford unquestionable security. Individuals dealing with them know exactly what they are about. They know the precise premiums they will have to pay, and the exact amount of the sums that will be paid to their assignees in the event of their death. They incur some very unprecedented and unlooked-for change in their responsibility of any kind whatever; for, unless they may reckon with certainty on the terms of the policy being fulfilled to the letter.

But, as already observed, everything depends, in matters of this sort, on a comparison of the premium with the advantages to be realised. And carelessness or intentionally, in order to provide for the safety of the establishment, to be a little too high, it may be more expedient, perhaps, to deal with a mixed company. The subscribed capital and fortunes of the proprietary body afford a guarantee on which the public may depend in dealing with any respectable company of this sort; while by receiving a share of the profits, the insured gain by the flourishing condition of the association, and it is of less consequence to them though the premiums should be too high.

It should, however, be borne in mind, that an individual insuring with a mixed company, on condition of his getting a proportion of the profits, becomes a partner of such company; and being so, incurs responsibilities. In dealing with such associations as the Alliance, the Rock, Scottish Union, and a few others, this responsibility can hardly be said to amount to anything. But there are companies of this class in the field, and holding out very tempting baits to the unwary, those insured in which may find, at some future period, that this responsibility is by no means a light matter.

A highly respectable company of this mixed class, with a large subscribed capital—the Guardian—inserts in all its policies the following condition, viz.: 'That the responsibility of the individual members shall, in all cases, be limited to their respective shares.' It may be doubted whether this condition be good in law; but if it be, it materially affects the security afforded by the company, which otherwise would justly claim a place in the very first class of offices. As no one attempts to secure himself against a contingency which he is satisfied cannot happen, the existence of a condition of this sort implies a doubt on the part of the proprietary

body of the perfect solidity of the establishment. Such a doubt may be, and we believe really is, very ill-founded; but the public will, most likely, be inclined to think that the proprietors ought to know better than anyone else.

The allotment of profit to the insured made by the mixed companies is sometimes effected by a diminution of the premiums, and sometimes by increasing the sum in the policy; and individuals should, in dealing with such societies, select, other things being equal, the association with which to insure, according as they wish to insure a large sum, or to get the premiums reduced.

We subjoin, from Mr. Habbage's work on *Life Assurance*, the following statement of the terms of the various mixed companies, as to the division of the profits with the insured. They are, for the most part, exceedingly vague. (This work of Mr. Habbage contains a good deal of useful information, intermixed, however, with not a few errors and misstatements. It was most ably reviewed in the 90th Number of the *Edinburgh Review*.) We also subjoin an account of the conditions, in respect of profits, under which new entrants are admitted into the Equitable.

**Alliance.**—At the periods of participation of the Company in the profits of its concerns, every policy for the whole term of life, which shall have paid 5 entire annual premiums, shall, if the allowance be made in reduction of annual premium, be entitled to such reduction from the original charge as shall then, and from time to time, be declared; but if the allowance be in addition to the amount assured, that addition shall also be continually declared from time to time.

Persons assuring their own lives have the option of declaring at the time of effecting the assurance, whether they will participate in the profit by an addition to their policy, or by a reduction of premium.

**Atlas.**—Persons assuring for the whole term of life for 100l. and upwards, in Great Britain and Ireland respectively, will be entitled, at the end of every 5th year, to participate in the surplus premiums, to be then ascertained by actual valuation.

**Crown.**—Two-thirds of such profits as shall periodically be declared divisible will be apportioned amongst assurers for the whole term of life, and may be applied to the reduction of the future annual premiums, or to the increase of the sum assured, as may be desired.

**Economic.**—At present  $\frac{1}{3}$  of the savings and profits divided amongst the assured entitled to participate therein, by additions to their policies, proportioned to their respective contributions, and in order to afford them the immediate benefit of such additions, interest thereon applied annually in reduction of their premiums.

**Equitable.**—That in case any prospective addition shall hereafter be ordered to be made to the claims upon policies of assurance in this Society, such order shall not take effect with respect to any policy granted after December 31, 1816, until the assurances existing in the Society prior in number and date to such policy, and if of the same date, prior in the number thereof, shall be reduced to 5,000; but as soon as such reduction shall have been ascertained in manner hereinafter mentioned, the said policy shall be within the effect and operation of the order for such addition, as to the payments made thereon subsequent to such ascertained reduction; so that if such order should be made to take effect generally from January 1, 1820, for the space of 10 years then next following, a policy effected in the year 1817 shall not be within the operation of such order until the assurances exist-

ing prior to the number and date of the policy, as aforesaid, shall have been reduced to 5,000; but such policy shall be within the operation thereof from the time when the reduction shall have been ascertained, in manner hereinafter mentioned, as to the payments made thereon subsequent to such ascertained reduction. And the like as to other cases. And this by law shall be considered as a part of every such order, and shall be virtually incorporated therein, although the same may not be thereby expressly referred to.

That in case any retrospective addition shall hereafter be ordered to be made to claims upon policies of assurance in this Society, such order shall not take effect with respect to any policy granted after December 31, 1816, until the assurances existing in the Society prior in number and date, and if of the same date, prior in the number thereof, shall be reduced to 5,000; but when the said reduction shall have been ascertained in manner hereinafter mentioned, such policy shall be within the effect and operation, and entitled to the benefit of such order, with respect to every payment made thereon subsequent to such ascertained reduction; so that if such order shall be made to take effect generally as to payments made before January 1, 1820, a policy effected in the year 1817 shall not be within the effect and operation thereof, unless the life assured shall exist, and the payments continue to be made, until the assurances existing in the Society prior to the number and date of the policy, as aforesaid, shall be reduced to 5,000; but as soon as such reduction shall have been ascertained, in manner hereinafter mentioned, such policy shall be within the effect and operation of such order for the several payments made thereon as aforesaid. And the like as to other cases. And this by-law shall be considered as a part of every such order, and shall be virtually incorporated therein, although the same may not be thereby expressly referred to.

That an enquiry be made on April 1 in every year in order to ascertain the number of assurances made and existing in this Society; and what shall have been ascertained by such enquiry of the assurances existing prior to January 1, 1817, were, on December 31 immediately preceding such enquiry, reduced below the number of 5,000, the actuary do report the same to the court of directors who shall communicate such report to the general court, to be holden in the June following; and that as many of such policies as had been made subsequent to December 31, 1816, and were existing in the Society on December 31 immediately preceding such enquiry, be added to the number, according to their dates and dates of maturity, and if of the same date, according to their priority in their numbers, to those above mentioned, as shall be sufficient to complete the number to 5,000; and that the persons having the policies so added shall be considered the same as entitled to such additions as shall hereafter be made in respect of all the payments made subsequent to such ascertained reduction, and, under the same restrictions, to the privileges of attending at the general court, and of being eligible to the office of directors.

That after the vacant numbers in the assurance existing in the Society on Jan. 1, 1817, shall have been filled up agreeably to the foregoing provisions, the actuary, on April 1 in every succeeding year, do ascertain the vacancies which have taken place in the preceding year in the policies consisting of the 5,000 mentioned in the 5th resolution; and report the same to the court of directors, who shall communicate such report to the general court in the month of June following.

and that as to the prior of the same numbers, a number to those policies entitled to be made in respect of the 5th of the same resolution, the office of directors, provided that the same be continued to be assured by an number of payments the present by-law made. X.B.—Those who in addition to a claim payments shall be qualified to the number of persons allowed. **Guardian.**—Persons of life will be entitled to participate in the deduction of a guarantee of the estate; the deed of settlement. The share of the annual may either their respective policies applied in reduction payable on such policy declared in writing after the division of such option be added to the number. **Imperial.**—Upon every term of life, the profits of the Corporation made to the of such clear gains. **Law Life.**—At stated arising from the necessary to answer the court will be ascertain the savings as may be security of the insurance from the proprietors' guaranties, equal to the number of years added to the policy. **London Life Association.**—The term of life will be from its transactions during life, so as they to the assured as. **Medical and Clerical.**—The term of life will be from its proprietors the general court in proportion to the amount. **North British Union.**—The same is added at stated members, in proportion to their respective contribu-

and that as many policies shall be added, according to the priority of their dates and numbers, and if of the same date, according to the priority in their numbers, as shall be sufficient to complete the number to 5,000; and that the persons holding those policies shall thenceforward be considered as entitled to such additions as shall be thereafter made in respect of all payments made subsequent to the 31st of the preceding December, and, under the same restrictions, to the same privileges of attending the general courts, and being eligible to the office of director.

Provided that nothing hereby ordered shall be construed to authorise an addition to the sum assured by any policy, upon which policy the number of payments required in that respect by the present by-laws of the Society shall not have been made.

**S.R.**—Those by-laws require that 6 annual payments at the least shall have been made before any addition to a claim can take place; and when such payments shall have been made, the party will be qualified to be received, in his turn, into the number of persons entitled to additions as aforesaid.

**Guardian.**—Persons assured for the whole term of life will be entitled at the end of every 5 years to participate in the profits of the Company, after deduction of such sum per annum, for the maintenance of the capital, as the directors may think reasonable; the extent of which is, however, limited by the deed of settlement.

The share of the profits to be so allowed to the assured may either be added to the amount of their respective policies, or the value thereof be applied in reduction of the premiums hereafter to be payable on such policies, provided such option be declared in writing within 3 calendar months next after the dividend shall have been declared; but if such option be not declared, such share of profits will be added to the amount of policies.

**Windsor.**—The business of this office has been transferred to the Imperial.

**Imperial.**—Upon every policy effected for the whole term of life, the assured will participate in the profits of the Company by having periodical additions made to the sums insured to the amount of such clear gains and profits.

**Life.**—At stated periods, the surplus of the profits arising from the premiums of assurance, and the accumulation beyond what may be thought necessary to answer the expected claims upon the policy, will be ascertained; and as large a portion of the savings as may be deemed consistent with the security of the institution will be divided between the proprietors and the assured in the following manner:—1 will be transferred to the proprietors' guarantee fund; and rever- sary sums, equivalent to the remaining 3, will be added to the policies of those who shall have been 3 years assured for the whole term of life.

**London Life Association.**—The distinguishing feature of this Society is, that the benefits resulting from its transactions shall be enjoyed by the assured during life, so as to render life insurance as profitable to the assured as a due regard to security and interest.

**General and Clerical.**—Persons assured for the whole term of life will be entitled to share with the proprietors the general profits of the business in proportion to the amount of their respective contributions.

**Windsor Union.**—The whole of the surplus profits is added at stated periods to the policies of the members, in proportion to the sums they respectively contributed.

**Rock.**—That the said bonus shall be short of the actual surplus profits at the time of making the same, by the sum of 5,000*l.* at least.

That the bonus so declared shall be divided into 3 equal parts.

That one of the said parts shall be added to and consolidated with the subscription capital stock. (This is the proprietors' fund.)

That the remaining 2 be allotted to the policies in the manner described in the deed.

That the sum to which any person assured by the Company may become entitled under any such distribution shall be paid by the Company without interest, at the time when the sum assured by the policy shall become payable, and not before.

**Union.**—Those who assure with this Company will participate with the proprietors in the profits of the establishment, which will be added every 7 years to the respective policies.

**University.**—As it is intended that the capital advanced shall be repaid to the shareholder with a bonus of 100*l.* per cent. 3/4 of the profits, when ascertained by a valuation of all existing risks, will every 5 years be applied to form a fund for that purpose.

The remaining 1/4 of the profits to be divided between the assured and the shareholder, in the proportion of 8 parts to the former and 1 to the latter.

The profit or bonus to the assured to be given either by a diminution of the rate of premium, or by an increase of the amount of policy, at the option of the party.

**Westminster.**—By a regulation taking effect from May 9, 1832, this Society makes a positive addition of 10 per cent. every 10th year to all sums insured on single lives, for the whole term of life, by policies issued after that date; but it no longer grants any new policies.

In order to hinder the growth of gambling transactions upon life insurance, it was judiciously enacted by stat. 14 Geo. III. c. 48 that—

No insurance shall be made by any person or persons, bodies politic or corporate, on the life or lives of any person or persons, or any other event or events whatsoever, where the person or persons, for whose use or benefit, or on whose account, such policy or policies shall be made, shall have no interest, or by way of gaining or wagering; and that every insurance made contrary to the true intent and meaning of this Act shall be null and void to all intents and purposes whatsoever. (Sec. 1.)

It shall not be lawful to make any policy or policies on the life or lives of any person or persons, or other event or events, without inserting in such policy or policies the name or names of the person or persons interested therein, or for what use, benefit, or on whose account such policy is so made or underwritten. (Sec. 2.)

In all cases where the insured has an interest in such life or lives, event or events, no greater sum shall be recovered or received from the insurer or insurers than the amount or value of the interest of the insured in such life or lives, or other event or events. (Sec. 3.)

A creditor has an insurable interest in the life of his debtor; but it was decided, in a case which arose out of a policy on the life of the late Mr. Pitt, that if, after the death of a debtor whose life is insured by a creditor, and before any action is brought on the policy, the debt be paid, no action will lie.

All insurance offices either insert in their policies or refer in them to a declaration signed by the insured, setting forth his age, or the age of the party upon whom he is making an insurance;

whether he has or has not had the small-pox, gout, &c.; 'that he is not afflicted with any disorder that tends to the shortening of life; that this declaration is to be the basis of the contract between him and the society; and that, if there be any untrue averment in it, all the money paid to the society upon account of the insurance shall be forfeited to them. (See Form, post.)

The condition as to the party not being afflicted with any disorder that tends to the shortening of life is vague, and has given rise to a good deal of discussion. But it is now settled that this condition is sufficiently complied with if the insured be in a reasonably good state of health; and although he may be afflicted with some disease, yet if it can be shown that this disease does not tend to shorten life, and was not, in fact, the cause of the party's death, the insurer will not be exonerated: 'Such a warranty,' said Lord Mansfield, 'can never mean that a man has not in him the seeds of some disorder. We are all born with the seeds of mortality in us. The only question is, whether the insured was in a *reasonably good state of health*, and such a life as ought to be insured on common terms.' (Marshall *On Insurance*, book iii.; Park *On Insurance*, c. 22.)

Policies of life insurance must be on stamped paper, the duty being as follows:—

When the sum insured shall not exceed 500*l.*, for every 50*l.*, and any fractional part of 50*l.*, 6*d.*

Exceeding 500*l.* and not exceeding 1,000*l.*, for every 100*l.* and any fractional part of 100*l.*, 1*s.*

Exceeding 1,000*l.*, for every 1,000*l.* and any fractional part of 1,000*l.*, 10*s.*

We subjoin a statement of the terms and conditions on which the Sun Life Assurance Society transacts business, and a copy of one of its policies upon the life of a person aged 30, insuring his own life for 1,000*l.* The conditions of most of the other societies are similar, and may be learned by any one, on applying either at the head offices in town or at their agents' in the country. The premiums demanded by the principal offices are exhibited in Table V.

*Sun Life*.—An assurance for a term of years, or for the whole continuance of life, is a contract on the part of the office to continue the assurance during that term, on the payment of a certain annual premium, but the assured may drop it whenever the end is answered for which the assurance was made.

An assurance for the whole duration of life may be effected either with or without participation in the profits of the society, and at an annual, half-yearly, or quarterly premium, at a premium payable during a limited number of years only, or at a single premium.

#### Conditions of Assurance.

Persons effecting assurances on the lives of others must have a pecuniary interest in the lives to the full amount assured.

Assurances effected by persons on the lives of others are not void in case of death by suicide, duelling, or the hands of justice.

In the event of the death by suicide, duelling, or the hands of justice, of persons to whom assurances have been granted on their own lives, the assurances, although void so far as any respect such persons, remain in force so far as any other person or persons shall then have a bona fide interest therein, acquired three months previously to such decease by assignment, or legal or equitable lien, upon due proof of the value of such interest being made to the satisfaction of the managers, according to the claimant's debt or purchase-money, with interest, and premiums paid by him; and if any

person assured upon his own life, and who shall have been so for at least five years, die by his own hands, and not *felo de se*, the managers are at liberty, if they think proper, to pay for the benefit of his family any sum not exceeding what the society would have paid for the purchase of his interest in the policy, if it had been surrendered to the society the day previous to his decease; provided the interest in such assurance then be in the assured, or in any trustee or trustees for him, or for his wife or children.

Assurances which have become void by non-payment of the premium within fifteen days after the time stipulated in the policy, may be renewed on production of satisfactory proof to the manager of the health of the person on whose life the assurance was made, and payment of the premium within three calendar months, together with the additional sum of 10*s.* upon every 100*l.* assured by the policy.

Claims are paid within three months after certificates (according to the required forms) of the death and burial of the deceased are approved by the managers.

No assurance can take place until the first payment is made.

A certificate of birth or baptism should be produced, if possible, before the policy is issued.

Name of the life to be assured.

Profession or occupation.

Present residence.

Place of birth.

Date of birth.

Age next birth-day.

Sum.

Term.

Name and addition of the usual medical attendant of the life proposed.

Name and addition of two non-medical referees.

Has your medical referee often attended you professionally?

When did he last see you professionally, for what complaint or disease?

Has he ever attended you for any serious illness?

What was the nature of it?

Have you ever had any serious illness?

What was the nature of it?

By whom were you then attended?

Have you ever had rheumatic fever, asthma, or any fit or fits?

Have you ever been afflicted with rupture?

Have you ever exhibited any symptom of consumption or other disease of the lungs?

Are your parents living?

If not, state the diseases of which they and their ages at the time of death?

How many brothers and sisters have you had?

Have you lost any?—if so, state the nature of the diseases of which they died; and their ages at the time of death.

Have any of your near relations died of consumption of the lungs, or other pulmonary disease? If so, state the relationship, and the ages at which they died.

Are you afflicted with any disorder tending to shorten life?

Are you afflicted with disease or disorder of any kind?

What is the state of your health generally?

Have you had the small-pox or been vaccinated?

Has your life been declined by any other insurance office, or accepted at an increased premium?

Declaration to be made and signed by or on behalf of a person who proposes to make an assurance on the life of another.

subject and liable to pay and make good to the executors, administrators, or assigns of the said assured, within three months after the demise of the said assured shall have been duly certified to the managers aforesaid, at their said office, the sum of one thousand pounds sterling, of lawful money of Great Britain, with such addition or additions as the managers for the said Society may from time to time make thereto, under the powers vested in them by an Act of Parliament made and passed in the seventh year of King William IV. cap. 47.

It is hereby agreed that this policy may continue in force from year to year, until the expiration of the term first above-mentioned, provided that the said assured shall duly pay, or cause to be paid, to the managers, at their said office, on or before the nineteenth day of October next ensuing, the sum of twenty-four pounds eleven shillings and eight-pence sterling, and the like sum annually, on or before the day aforesaid; which annual payments shall be accepted, at every such period, as a full consideration for such assurance.

And it is hereby further agreed that the assurance by this policy shall be extended during peace to the risk of the above-named A. B. Esq., dying upon the sea in passing between any one part of Europe to any other part of Europe.

Provided nevertheless, that should the said assured, within the term for which this policy is granted, depart beyond the limits of Europe, die upon the seas (except as above stated), or engage in any military or naval service whatsoever, other than in the militia or in any yeomanry or volunteer corps acting within the United Kingdom of Great Britain and Ireland; or should the assurance have been obtained through any misrepresentation of the age, state of health, or description of the said assured; or should the said assured die by duelling, suicide, or the hands of justice; then this policy, and every thing appertaining thereto, shall cease, be void, and of none effect, so far as respects the said assured; but in case the said assured die by suicide, duelling, or the hands of justice, this policy shall remain in force so far as any other person or persons shall then have a bona fide interest therein, acquired three months previously to such decease by assignment, or by legal or equitable lien, upon due proof of the value of such interest being made to the satisfaction of the managers according to the claimant's debt or purchase money, with interest, and premiums paid by him. And if the said assured shall have been so for at least five years, and shall die by own hands, and not *felo de se*, the managers shall be at liberty, if they shall think proper, to pay for the benefit of family any sum not exceeding what the Society would have paid for the purchase of interest in the policy if it had been surrendered to the Society the day previous to decease, provided such interest shall then be in the assured, or in any trustee or trustees for

In witness whereof, we, three of the managers for the said Society, have hereunto set our hands and seals, this day of 18

*N.B.* This Society is in no case bound by notice of any assignment of this policy, unless the same be delivered in writing at their office in Threadneedle Street, London.

Signed, sealed, and delivered, being first duly stamped, in the presence of

From the specimens of premiums in the two preceding tables, the reader will easily judge of the proportional premium for any combination of two ages not inserted in them.

Equitable Assurance Society.—The following is the declaration required to be made and signed in the office, by or on the behalf of a person who proposes to make an assurance on his or her own life:—

I being desirous of becoming a member of the Society for Equitable Assurances on Lives and Survivorships, and intending to make assurance in the sum of

upon and for the continuance of my own life, and having perused and considered that clause of the deed of settlement of the said Society which requires a declaration in writing of the age, state of health, and other circumstances attending the person whose life shall be proposed to be assured, do hereby declare and set forth That my age does not exceed ; that I have

had the small-pox; and have had the gout; and that I am not afflicted with any disorder which tends to the shortening of life; and I do hereby agree that this declaration be the basis of the contract between the said Society and me, and that if any untrue averment is contained in this declaration, all moneys which shall have been paid to the Society upon account of the assurance made in consequence thereof shall be forfeited. In the Lord day of in the year of our

hundredth part of those for the whole period of life; and that the business of the office at present is almost wholly confined to the assurance of persons on their own lives—those on the lives of others, whether for terms or for continuance, being, in consequence of the commission money allowed to agents and attorneys, engrossed by the new offices. (*Account of the Equitable Society*, p. 53.)

Form of a Proposal to be presented to a Weekly Court of Directors.

Name and profession of the life to be assured.  
 Place and date of birth.  
 Piece of residence.  
 Age. Sum. Term.

By whom made.  
 To give reference to two persons of good repute (one, if possible, of the medical profession) to ascertain the present and general state of health of the life to be assured.

If had the small-pox. If vaccinated.  
 If afflicted with the gout. If ever ruptured.  
 Parties who do not appear before the Court of Directors are required to give a reference to three persons for an account of the present and general state of their health.

The following is the clause which is referred to in the declaration:—

That every person desirous of making assurance with the Society shall sign or execute a declaration in writing (in the presence of one credible witness, who shall attest the same), setting forth the age, state of health, profession, occupation, and other circumstances attending the person or persons whose life or lives shall be proposed to be assured; which declaration shall be the basis of the contract between the said Society and the person desiring to make assurance with them; in which declaration if any artful, false, or fraudulent representation shall be used, and the same shall at any time thereafter be discovered, from thenceforth the sums which shall have been paid to the Society on account of any assurance so fraudulently obtained shall be forfeited to the use of the Society; and all claims to be made on that behalf shall cease, determine, and be void, to all intents and purposes whatsoever.

INTEREST AND ANNUITIES. Interest is the sum paid by the borrower of a sum of money, or of any sort of valuable produce, to the lender, for its use.

The rate of interest, supposing the security for and facility of re-possessing the principal, or sum lent, to be equal, must obviously depend on what may be made by the employment of capital in industrious undertakings, or on the rate of profit. Where profits are high, as in the United States, interest is also high; and where they are comparatively low, as in Holland and England, in-

terest is proportionally low. In fact, the rate of interest is nothing more than the net profit capital: whatever returns are obtained by the borrower, beyond the interest he has agreed to pay, really accrue to him on account of his trouble, or skill, or of advantages of situation or connection.

But besides fluctuations in the rate of interest caused by the varying productiveness of industry, the rate of interest on each particular loan, of course, vary according to the supposed solvency of the borrowers, or the degree of risk supposed to be incurred by the lender, of either not recovering the principal, or not recovering it at the stipulated term. No person of sound mind would lend on the personal security of an individual of doubtful character and solvency, and on mortgage over a valuable estate, at the same rate of interest. Wherever there is risk, it must be compensated to the lender by a higher premium or interest.

And yet, obvious as this principle may appear, all governments have interfered with the adjustment of the terms of loans: some to prevent interest altogether, and others to fix certain limits, which it should be deemed legal to charge, and which should not be deemed to exceed. The prejudice against interest seems to have principally originated from a mistaken view of some enactments of the Mosaic law (see Michaelis *On the Law of Moses*, vol. ii. pp. 327—353, Eng. ed.), and a statement of Aristotle to the effect that, as interest did not produce money, no return could be claimed by the lender! But whatever has been the origin of this prejudice, it was formerly universal in Christendom, and is still supported by law in all Mohammedan countries. The famous reformer Calvin was one of the first who saw and exposed the absurdity of such notions (see an extract from one of his works in *Principles of Political Economy*, by the late Adam Smith, 3rd ed. p. 520); and the prohibition, and the consequent relaxation. In 1554 a statute was passed, which relaxed the law, and permitted rising lenders to charge 10 per cent. interest. In 1624 the legal rate was reduced to 8 per cent. and in the reign of Queen Anne it was reduced to 5 per cent., at which it still continues. It is enacted, by the statute (12 Anne) making this reduction, that 'all persons who shall receive, by means of any corrupt bargain, loan, exchange, cleavizance, or interest, for wares, merchandise, or other thing whatsoever, by any deceitful way or means, or by any engine, or deceitful conveyance for the forwarding or giving day of payment, for one whole year, their money or other thing, above the sum of 100*l.* for a year, shall forfeit for every offence the treble value of the moneys, or things, so lent, bargained' &c.

It is needless to waste the reader's time by entering into any lengthened arguments to show the inexpediency and mischievous effect of such interferences. This has been done over and over again.

It is plainly in no respect more desirable to limit the rate of interest than it would be to limit the rate of insurance, or the prices of commodities; and though it were desirable, it cannot be accomplished. The real effect of all legislative enactments having such an object in view is to increase, not diminish, the rate of interest. When the rate fixed by law is less than the market or customary rate, lenders and borrowers are obliged to resort to circuitous devices to evade the law; and as these devices are always attended with more or less trouble and risk, the rate of interest is proportionally enhanced.

During the war ended 1815 it was not uncommon for a person to be paying 10 or 12 per cent. for a loan, which, had there been no usury laws, he might have got for 6 or 7 per cent. Neither was it by any means uncommon, when the rate fixed by law was more than the market rate, for borrowers to be obliged to pay more than they really stipulated for. It is singular that an enactment which prohibited the most obvious principles, and had been repeatedly condemned by committees of the legislature, should have been allowed to preserve its place in the Statute Book for so long a period; and at length it was substantially repealed by an act 2 & 3 Vict. c. 37, which exempts bills of exchange not having more than 12 months to run, and contracts for loans of money above 10*l.*, from its operation.

**Distinction of Simple and Compound Interest.**—When a loan is made, it is usual to stipulate that the interest upon it should be regularly paid at the end of every year, half-year &c. A loan of this sort is said to be at simple interest. It is of the essence of such loan that no part of the interest accruing upon it should be added to the principal to form a new principal; and though payment of the interest were not made when it becomes due, the lender would not be entitled to charge interest upon such unpaid interest. Thus, suppose 100*l.* lent at simple interest at 5 per cent., payable at the end of each year; the lender would, at the end of 4 years, supposing him to have received previous payments, be entitled to 15*l.* or 20*l.*, or more.

Sometimes, however, money or capital is invested so that the interest is not paid at the end of each year when it becomes due, but is progressively added to the principal; so that at every term a new principal is formed, consisting of the original principal and the successive accumulations of interest upon interest. Money invested in this manner is said to be placed at *compound interest*. It appears not unreasonable that when a borrower does not pay the interest he has contracted for, at the end of each year when it is due, he should pay interest upon such interest. This, however, is not allowed by the law of England; nor is it allowed to make money at compound interest. But this rule is evaded by taking a new obligation for the principal with the interest included, when the interest becomes due. Investments at compound interest are also very frequent. Thus, if an individual buy into the funds, and regularly buy up stock with the dividends, the capital will increase at compound interest; and so in any other case.

**Estimation of Interest.**—Interest is estimated at any rate per cent. per annum, or by dividing the principal into 100 equal parts, and specifying how many of these parts are paid yearly for its use. Thus, 5 per cent., or 5 parts out of 100, means

that 5*l.* are paid for the use of 100*l.* for a year, 10*l.* for the use of 200*l.*, and 2*l.* 10*s.* for the use of 500*l.* for the same period, and so on.

Suppose, now, that it is required to find the interest of 210*l.* 13*s.* for 3½ years at 4 per cent. simple interest. In this case we must first divide the principal, 210*l.* 13*s.*, into 100 parts, 4 of which will be the interest for 1 year; and this being multiplied by 3½ will give the interest for 3½ years. But instead of first dividing by 100, and then multiplying by 4, the result will be the same, and the process more expeditious, if we first multiply by 4, and then divide by 100. Thus—

£	s.	d.	
210	13		principal
		4	rate per cent.
1,000	8,42	12	8 ½ 64 1 year's interest
	20		33
	8,52	25	5 64 3 years' interest
	12	4	4 3 3 ½ years' interest
	8,71	29	9 9 3 ½ years' interest

	95		

It is almost superfluous to observe that the same result would have been obtained by multiplying the product of the principal and rate by the number of years, and then dividing by 100.

Hence, to find the interest of any sum at any rate per cent. for a year, multiply the sum by the rate per cent., and divide the product by 100.

To find the interest of any sum for a number of years, multiply its interest for one year by the number of years; or, without calculating its interest for one year, multiply the principal by the rate per cent. and that product by the number of years, and divide the last product by 100.

When the interest of any sum is required for a number of days, they must be treated as fractional parts of a year; that is, we must multiply the interest of a year by them, and divide by 365.

Suppose that it is required to find the interest of 210*l.* for 4 years 7 months and 25 days, at 4½ per cent.—

Principal	210
Rate per cent.	4½
	810
	105
Interest for 1 year	29.45 × 4 = 237.80 ditto for 4 years
Interest for 4 years	= 57.8000
6 months = ½ of 1 year	= 47.250
1 month = ⅙ of 6 months	= 7.875
25 days	= .6472
	£13.9597 = £13 19 <i>s.</i> 2 <i>d.</i>

The interest for 25 days is  $\frac{9.45 \times 25}{365} = .6472$ ;

that is, it is equal to the interest for a year multiplied by the fraction  $\frac{25}{365}$ . Division by 100 is performed by cutting off two figures to the right.

Many attempts have been made to contrive more expeditious processes than the above for calculating interest. The following is the best:—

Suppose it were required to find the interest upon 172*l.* for 107 days at 5 per cent.

This forms what is called in arithmetical books a double rule of three question, and would be stated as follows:—

$$\frac{£ \text{ days}}{100 \times 365} :: \frac{£ \text{ days}}{172 \times 107} : 2 \text{ 10 } \frac{4}{5} \text{ the interest required}$$

Hence, to find the interest of any sum for any number of days at any rate per cent., multiply the sum by the number of days, and the product by the rate, and divide by 36,500 (365 × 100); the quotient is the interest required.

When the rate is 5 per cent., or  $\frac{1}{20}$  of the principal, all that is required is to divide the product of the sum multiplied by the days by 7,300 (365, the days in a year, multiplied by 20). Five per cent. interest being found by this

so long as one or more individuals shall live, and are therefore called *contingent annuities*.

By the amount of an annuity at any given time is meant the sum to which it will then amount, supposing it to have been regularly improved at compound interest during the intervening period.

The present value of an annuity for any given period is the sum of the present values of all the payments of that annuity.

Nos. III. and IV. of the subjoined tables represent the amount and present value of an annuity of 1*l.* reckoning compound interest at 2½, 3, 4, 4½, 5, and 6 per cent. from 1 year to 70. They, as well as Nos. I. and II., are taken from *Tables of Interest, Discount, and Annuities*, by John Smart, Gent., 4to, London, 1726. They are carried to 8 decimal places, and I enjoy the highest character, both here and on the Continent, for accuracy and completeness. The original work is now become very scarce.

The uses of these tables are numerous, and they are easily applied. Suppose, for example, it were required to tell the amount of an annuity of 10*l.* per year for 17 years at 4 per cent. compound interest.

Opposite to 17 (Table III.) in the column of years, and under 4 per cent., is 23·69751,239, being the amount of an annuity of 1*l.* for the given time at the given rate per cent.; and this multiplied by 50 gives 1181·8756195, or 1,181*l.* 17*s.* 6*d.*, the amount required.

Suppose, now, that it is required what sum one must pay down to receive an annuity of 50*l.* to continue for 17 years, compound interest at 4 per cent.?

Opposite to 17 years (Table IV.) and under 4 per cent. is 124666,886, the present value of an annuity of 1*l.* for the given time and at the given rate per cent.; and this multiplied by 50 gives 6,233,344,3, or 608*l.* 5*s.* 8*d.*, the present value required.

When it is required to find the *time* which must elapse in order that a given sum improved at a fixed rate of compound interest may increase to some other given sum, divide the latter sum by the former, and look for the quotient, or the number nearest to it, in Table No. I. under the rate per cent., and the years opposite to it will be the answer.—Thus,

What time will 523*l.* amount to 1,087*l.* 5*s.* 7*d.* at 4 per cent. compound interest?

Divide 1087·2794 &c. by 523, and the quotient will be 20769 &c. which, under 5 per cent. in Table No. I. is opposite to 15 years, the time required.

It had been required to find the time in which an annuity, improved at a certain rate of compound interest, would have increased to some given sum, the question would have been answered by referring, as above, to the given sum by the year, and looking for the quotient (not in Table No. I. but) in Table No. III., under the rate per cent., it would be found on a line the time required.—Thus

What time will 1,000*l.* and resolves to appropriate 10*l.* of his income to its discharge: in what time will the debt be extinguished, reckoning compound interest at 4 per cent.?

1000 divided by 10 gives 100, the number in Table No. III. under 4 per cent., and nearest to which is 99·8265 &c. opposite to 41 years, the required time. Had the rate of interest been 5 per cent., the debt would have been discharged somewhat less than 37 years. This example is given by Dr. Price (*Annuities*, 6th ed. vol. II. p. 100) and on this principle the whole fabric of the sinking fund was constructed.

Of the abstract truth of the principle there cannot, indeed, be a doubt: but everything depends on the increasing sums annually produced being immediately invested on the same terms; and this, when the sum is large, and the period long, is altogether impracticable.

Let it next be required to find an annuity which, being increased at a given rate of compound interest during a given time, will amount to a specified sum: in this case we divide the specified sum by the amount of 1*l.* for the time and rate given, as found in Table III., and the quotient is the answer.—Thus,

What annuity will amount to 1,087*l.* 5*s.* 7*d.* in 15 years at 5 per cent. compound interest?

Opposite to 15 years in Table III., and under 5 per cent., is 21·5785 &c., the amount of 1*l.* for the given time and rate; and dividing 1087·2794 &c. by this sum, the quotient 50·387 &c., or 50*l.* 7*s.* 9*d.*, is the annuity required.

*Deferred Annuities* are those which do not commence till after a certain number of years; and *reversionary annuities*, such as depend upon the occurrence of some uncertain event, as the death of an individual &c.

The present value of a deferred annuity is found by deducting, from the value of an annuity for the whole period, the value of an annuity to the term at which the reversionary annuity is to commence.—Thus,

What is the present value of an annuity of 50*l.* to continue for 25 years, commencing at 7 years from the present time, interest at 4 per cent.?

According to Table No. IV., the value of an annuity of 1*l.* for 25 years at 4 per cent. is 15·62207,995, and that of 1*l.* for 7 years is 0·00205,467, which being deducted from the other, leaves 9·62002,528, which multiplied by 50 gives 481*l.*, the answer required.

Supposing the annuity, instead of being for 25 years, had been a perpetuity, it would have been worth 1,250*l.*, from which deducting 300*l.* 2*s.*, the value of an annuity for 7 years at 4 per cent., there remains 949*l.* 18*s.*, the value of the reversion.

For a selection of problems that may be solved by tables of annuities certain, see Smart's *Tables*, pp. 92—100.

2. *Life Annuities*.—After what has been stated in the article on *INSURANCE (GENERAL PRINCIPLES OF)*, respecting tables of mortality, it will be easy to see how the value of a life annuity is calculated. Supposing—to revert to the example given before [*INSURANCE, PRINCIPLES OF* ]—that it were required to find the present value of 1*l.*, the receipt of which is dependent on the contingency of a person, now 56 years of age, being alive 10 years hence, taking the Carlisle Table of Mortality, and interest at 4 per cent.: Now, according to that table, of 10,000 persons born together, 4,000 attain to 56, and 2,894 to 66 years of age. The probability that a person, now 56 years, will be alive 10 years hence, is, consequently,  $\frac{2,894}{4,000}$ ; and

the present value of 1*l.*, to be received certain 10 years hence, being 0·675564*l.*, it follows that if its receipt be made to depend on a life 56 years of age attaining to 66, its value will be reduced by that contingency to  $\frac{2,894 \times 0.675564}{4,000} = 0.488771$ ,

or 9*s.* 9*d.* If, then, we had to find the present value of an annuity of 1*l.* secured on the life of a person now 56, we should calculate in this way the present value of each of the 48 payments, which, according to the Carlisle table, he might receive, and their sum would, of course, be the present value of the annuity.

of years is considered as exceedingly small, and the tables are subjected to (No. 1) representing at compound interest, and decimals at we wish to know to in 7 years at 4 per cent. and 1·315,932*l.*, which at 4 per cent. compound interest, will amount to 1·315,932*l.* in 7 years; and at the same time, and 1·315,932*l.* or 65*l.* 10*s.* 10*d.* facilitating calculation of any number of years at 2½, 3, 3½, 4, 4½, 5, and 6 per cent. interest, is given in Let it, for example, be required to find the present worth of 500*l.* compound interest at 4 per cent. for 10 years, and under 4 per cent. present worth of 500*l.*; and multiplying the result by 10, being 379·500, the amount required.

When a sum of money is to be paid in a certain number of years, the present value of the annuities usually is the number of years, and the rate of interest to be used.

This statement is enough to show the principle on which all calculations of annuities depend; and in which all calculations, in fact, the method according to this also was, in fact, the method according to which they were calculated, till Mr. Simpson and M. Euler invented a shorter and easier process, determining from the value of an annuity at any age, that of an annuity at the next younger age. There is a considerable discrepancy in the sums at which different authors, and different insurance offices, estimate the present value of life annuities payable to persons of the same age. This does not arise from any difference in the mode of calculating the annuities, but from differences in the tables of mortality employed. These can only be accurate when they are deduced from multiplied and careful observations made, during a long series of years, on a large body of persons; or when the average numbers of the whole population, and the average number of deaths at every age, for a lengthened period have been determined with the necessary care. It has to be regretted that governments, who alone have the means of ascertaining the rate of mortality by observations made on a sufficiently large scale, have been singularly inattentive to their duty in this respect; and until a very few years since, when Mr. Finlaison was employed to calculate tables of the value of annuities from the ages of the nominees in public tontines, and of individuals on whose lives Government had granted annuities, all that had been done in this country to lay a solid foundation on which to construct the vast fabric of life insurance had been the work of a few private persons, who had, of course, but a limited number of observations to work upon.

The celebrated mathematician Dr. Halley was the first who calculated a table of mortality, which he deduced from observations made at Breslan, in Silesia. In 1724, M. de Moivre published his first edition of his tract on *Annuities on Lives*. In order to facilitate the calculation of their values, M. de Moivre assumed the annual decrements of life to be equal; that is, he supposed that out of 86 (the utmost limit of life on his hypothesis) persons born together, one would die every year till the whole were extinct. This assumption agreed pretty well with the true values between 30 and 70 years of age, as given in Dr. Halley's table, but was very remote from the truth in the earlier and later periods. Mr. Thomas Simpson, in his work *On Annuities and Reversions*, originally published in 1742, gave a table of mortality deduced from the London bills, and tables founded upon it of the values of annuities. But at the period when this table was calculated, the mortality in London was so much higher than in the rest of the country, that the values of the annuities given in it were far too small for general use. In 1746, M. Deparcieux published, in his *Essai sur les Probabilités de la Durée de la Vie Humaine*—a work distinguished by its perspicuity and neatness—tables of mortality deduced from observations made on the mortuary registers of several religious houses, and on lists of the nominees in several tontines. In this work separate tables were first constructed for males and females, and the greater longevity of the latter rendered apparent. M. Deparcieux's tables were a very great acquisition to the science, and are decidedly superior to some that are still extensively used. Dr. Price's famous work on *Annuities*, the first edition of which was published in 1770, contributed powerfully to direct the public attention to enquiries of this sort, and was in this respect of very great utility. Of the more recent works, the best are those of Mr. Baily and Mr. Milne, which, indeed, are both excellent.

The latter, besides all that was previously known as to the history, theory, or practice of the science, contains much new and valuable matter, and to it we beg to refer such of our readers as wish to enter fully into the subject.

The table on which Dr. Price laid the greatest stress was calculated from the burial registers kept in the parish of All Saints, Northampton, containing little more than half the population of the town. There can be no doubt, however, that well from original defects in the construction of the table as from the improvement that has since taken place in the healthiness of the public that the mortality represented in the Northampton table is, and has long been, decidedly above the average rate of mortality in England. Mr. Morgan, indeed, the late learned actuary of the Equitable Society, contended that this was not the case, and that the Society's experience shows the Northampton table is still remarkably accurate. But the facts Mr. Morgan discusses in his *View of the Rise and Progress of the Equitable Society* (p. 42), published in 1828, are in variance with this opinion; for he there states that the deaths of persons insured in the Equitable Society, from 50 to 60 years of age, during 12 years previously to 1828, were 521; whereas according to the Northampton table, they should have been 545! And Mr. Milne has endeavoured to show (art. 'Annuities,' new ed. of *Ency. Brit.*) that the discrepancy is really much greater.

The only other table used to any extent in England for the calculation of life annuities, that framed by Mr. Milne from observations by Dr. Haysman on the rate of mortality at Bristol. It gives a decidedly lower rate of mortality than the Northampton table, and there are grounds for thinking that the mortality which it represents is not very different from the rate throughout most parts of England; therefore cannot be supposed that a table founded on a narrow basis should give a perfectly fair average mortality of the entire Kingdom.

In life assurance, the first annual premium always paid at the commencement of the assurance, and the others at the termination of each year, so long as the party assured survives. Hence, beginning of the assurance, the whole of the annual premiums payable for it exceed the value of an equal annuity on the life by one purchase; and, therefore, when the value of present money is given, the equivalent annual premium during the whole present value must be divided by the number of years' purchase an annuity on the life, increased by 1. Thus for an annuity of 100L on a life 40 years of age, according to the Carlisle Table of Mortality, at 4 per cent. interest, requires 53-446L of money. Now, according to that table, the interest, an annuity on a life just 40 years of age is worth 15-074 years' purchase, so that the equivalent annual premium is  $\frac{53-446}{15-074} = 3-545$ .

3l. 6s. 8d. The annual premium may be derived directly from the value of an annuity on the life, without first calculating the present value of the assurance. (Mr. Milne's *Art. Annuities*, or the art. 'Annuities' in the edition of the *Ency. Britannica*.)

In order to exhibit the foundations of tables of life annuities and insurance, founded in this and other countries, given, in No. VII. of the following table, of mortality that has been observed to among 1,000 children born together, or bers alive at the end of each year, till

become extinct, according to the greater part of the Dr. Hutton m 'Life Annuities.' in his work, with the Report of the Com. Friendly Societies, Carlsruhe, represents that observed annuities approach nearest to observations already made those of M. in order to calculate a person of any higher age, number of persons that column of question, by the r given age, and the We have prefixed

*Commons on Friendly Societies*, gives a comparative view of the results of some of the most celebrated tables of mortality, in relation to the rate of mortality, the expectation of life, the value of an annuity &c. The coincidence between the results deduced from M. Deparcieux's table and that for Carlisle is very striking; and to render the information on these subjects laid before the reader as complete as the nature of this work will admit, we have given tables (Nos. XI.—XVII.) of the value of an annuity of 1*l.* on a single life, at every age, and at 3, 4, 5, 6, 7, and 8 per cent., according to the Northampton and Carlisle tables; we have also given tables of the value of an annuity of 1*l.* on 2 equal lives, and 2 lives differing by 5 years, at 3, 4, 5, and 6 per cent., according to the same tables. It is but seldom, therefore, that our readers will require to resort to any other work for the means of solving the questions that usually occur in practice with regard to annuities: and there are not many works in which they will find so good a collection of tables. We subjoin one or

two examples of the mode of using the tables of life annuities.

Suppose it were required, what ought a person, aged 45, to give, to secure an annuity of 50*l.* a-year for life, interest at 4 per cent., according to the Carlisle table?

In Table No. XII., under 4 per cent., and opposite 45, is 14.104, the value of an annuity of 1*l.*, which being multiplied by 50, gives 705.2, or 705*l.* 4*s.*, the value required. According to the Northampton table, the annuity would only have been worth 614*l.* 3*s.*

The value of an annuity on 2 lives of the same age, or on 2 lives differing by 5 years, may be found in precisely the same way.

Some questions in *reversionary* life annuities admit of an equally easy solution. Thus, suppose it is required to find the present value of A's interest in an estate worth 100*l.* a-year, falling to him at the death of B, aged 40, interest 4 per cent., according to the Carlisle table?

The value of the perpetuity of 100*l.* a-year

II.—Table showing the Present Value of 1*l.* receivable at the end of any given Year, from 1 to 70, reckoning Compound Interest at 2, 3, 3½, 4, 4½, 5, and 6 per Cent.

INTEREST AND ANNUITIES 777

interest 4 per cent, is 2,500.; and the value of an annuity of 100l. on a person aged 40, interest at 4 per cent, is 1,507.8s., which deducted from 2,500l. leaves 992.12s., the present value required.

A person, aged 30, wishes to purchase an annuity of 50l. for his wife, aged 25, provided she survive him: what ought he to pay for it, interest at 4 per cent. according to the Carlisle table?

The value of an annuity of 1l. on a life aged 30 is 16.822; from which subtracting the value of

an annuity of 1l. on 2 joint lives of 25 and 30, 14.339, the difference, 2.513 x 50 = 125.650, or 125l. 13s., the sum required.

For the solution of the more complex cases of survivorship, which do not often occur in practice, recourse may be had to the directions in Mr. Milne's *Treatise on Annuities*, and other works of that description. To attempt explaining them here would lead us into details quite inconsistent with the objects of this work.

III.—Table showing the Present Value of an Annuity of 1l. per Annum, improved at Compound Interest, at 2, 3, 3½, 4, 5, and 6 per Cent., at the end of each Year, from 1 to 70.

Year	2 per Cent.	3 per Cent.	3½ per Cent.	4 per Cent.	4½ per Cent.	5 per Cent.	6 per Cent.

INTEREST AND ANNUITIES

Present Value of an Annuity of 1l. per Annum &c.—continued.

Table with columns for Years, 2 1/2 per Cent., 3 per Cent., 3 1/2 per Cent., 4 per Cent., 4 1/2 per Cent., 5 per Cent., 5 1/2 per Cent., and 6 per Cent.

V.—Table of the Progressive Decrement of Life among 1,000 Infants of each Sex, born together according to Mr. Finlason's Observations on the Mortality of the Nominces in the Government Tontines and Life Annuities in Great Britain.

Table with columns for Age, Males, Females, and Age, Males, Females. It shows the number of survivors from 0 to 16 years of age.

VI.—Table showing the Expectation of Life at every Age, according to the Observations at Northampton.

Table with columns for Age, Expect., Age, Expect., Age, Expect., Age, Expect., and Age, Expect. It shows life expectancy values for different ages.

Table of Mortality; showing the Number of Persons alive at the end of every Year from 1 to 100 Years of Age, out of 1,000 born together, in the different Places, and according to the Authorities undermentioned.

X.—Table giving a Comparative View of the Results of the undermentioned Tables of Mortality, in relation to the following Particulars.

	By Dr. Price's Table, founded on the Registrar of Births and Burials at Northampton	By the First Swedish Tables, as published by Dr. Price; for both sexes	By Mr. De-parcieux's Table, founded on the Mortality in the French Tonnies, prior to 1745	By Mr. Milne's Table, founded on the Mortality observed at Carlisle	By Mr. Griffith Davies's Table, founded on the Experience of the Equitable Life Insurance Office	By Mr. Finlaison's Table, founded on the Experience of the Government Life Annuities	According to his First Investigation, as mentioned in his Evidence in 1825	According to his Second Investigation, as mentioned in his Evidence in 1837	Mean of both sexes	Mean of both sexes
Of 100,000 persons aged 25 there would be alive at the age of 65	34,285	43,137	51,033	51,355	49,330	53,470	55,559			
Of 100,000 persons aged 65, there would be alive at the age of 80	28,734	23,704	29,827	31,577	37,267	38,615	25,519			
Expectation of life at the age of 25 years	30.85	34.58	37.17	37.86	37.45	38.33	28.18			
Expectation of life at the age of 65	10.88	10.10	11.25	11.79	12.35	12.81	11.57			
Value of an annuity on a life aged 25, interest being at 4 per cent.	£15,458	£16,839	£17,480	£17,645	£17,191	£17,434	£17,504			
Value of an annuity on a life aged 65, interest being at 4 per cent.	£7,761	£7,398	£8,059	£8,307	£8,635	£8,896	£8,711			
Value of a deferred annuity commencing at 65, to a life now aged 25, interest at 4 per cent.	£0.55424	£0.65842	£0.85452	£0.89823	£0.88723	£0.99078	£0.88723			

Note.—In all the Tables above mentioned, it is to be observed that the mortality is deduced from an equal, or nearly equal, number of each sex; with the single exception of Mr. Davies's Table, founded on the experience of the Equitable, in which office, from the practical objects of life insurance, it is evident the male sex must have composed the vast majority of lives subjected to mortality. But as it is agreed on all hands that the duration of life among females exceeds that of males, it follows that the results of Mr. Davies's Table fall materially short of what they would have been, if the facts on which he has reason to have comprehended an equal number of each sex. The Tables have not, in all cases, been compared at 4 per cent., the rate allowed by Government

The Northampton Table (No. VI.), by under-rating the duration of life, was a very advantageous guide for the insurance offices to go by in insuring lives; but to whatever extent it might be beneficial to them in this respect, it became equally injurious when they adopted it as a guide in selling annuities. And yet, singular as it may seem, some of the insurance offices granted annuities on the same terms that they insured lives; not perceiving that, if they gained by the latter transaction, they must obviously lose by the former. Government also continued for a lengthened period to sell annuities according to the Northampton Tables, and without making any distinction between male and female lives! A glance at the Tables of M. Deparcieux ought to have satisfied them that they were proceeding on entirely false principles. But, in despite even of the admonitions of some of the most skillful mathematicians, this system was persevered in for many years. We understand that the loss there arising to the public may be moderately estimated at 2,000,000*l.* sterling. Nor will this appear a large sum to those who recollect that, supposing interest to be 4 per cent., there is a difference of no less than 9*l.* in the value of an annuity of 50*l.* for life, to a person aged 45, between the Northampton and Carlisle Tables.

INVOICE. An account of goods or merchandise sent by merchants to their correspondents at home or abroad, in which the peculiar marks of each package, with other particulars, are set forth. [BOOK-KEEPING.]

IONIAN ISLANDS. The name given to the islands of Corfu, Paxo, Santa Maura, Ithaca, Cephalonia, Zante, Cerigo, and their dependent islets. With the exception of Cerigo, which lies opposite to the south-eastern extremity of the Morea, the rest lie pretty contiguous, along the western coasts of Epirus and Greece; the most northerly point of Corfu being in lat. 39° 48' 15" N. and the most southerly point of Zante (Cape Kier) on which there is a light-house being in lat. 37° 38' 35" N. Kapsali, the port of Cerigo, is in lat. 36° 7' 30" N., long. 23° E.

The area and population of the different islands may be estimated as follows:—

Islands	Area in Square Miles	Population in 1863
Corfu	227	75,553
Cephalonia	311	71,667
Zante	161	39,732
Santa Maura	156	37,502
Ithaca	44	11,264

Soil and Climate.—These are very various. Zante is the most fruitful. It consists principally of an extensive plain, occupied by plantations of oranges, and having an air of luxuriant fertility and richness. Its climate is comparatively equal and fine, but it is very subject to earthquakes. Corfu and Cephalonia are more rugged and less fruitful than Zante; and the former from its proximity to the snowy mountains of Epirus, and the latter from the Black Mountain in its interior, are exposed in winter to great and sudden variations of temperature; the frost sometimes amounting to a great extent the oranges and vines of these islands and those of Santa Maura. The latter is, in the hot season, exceedingly unhealthy as a consequence of the vapours arising from the marshes and the shallow seas to the N.E. Cerigo is rocky and sterile; it is subject to continued rains, and the currents seldom permit its waters to remain unruined.

History, Government &c.—These islands have undergone many vicissitudes. Corfu, the ancient Coreyra, was famous in antiquity for its naval power, and for the contest between it and its mother state Corinth, which eventually terminated in the Peloponnesian war. Ithaca, the kingdom of the mythical Ulysses; Cephalonia, sometimes called Dulichium, from the name of one of its cities; Zante, or Zacynthus; Santa Maura, known to the ancients by the names of Leucas or Leucadia, celebrated for its promontory surmounted by a temple of Apollo, whence Sappho, it is said, precipitated herself into the ocean; and Cerigo, or Cythera, sacred to Aphroditè, have all acquired an immortality of renown. But, on comparing their present with their former state, we may well exclaim—

Heu quantum luce Niobe Niobe distabat ab illis!

After innumerable revolutions, they fell early in the fifteenth century, under the dominion of Venice. Since the downfall of that republic they have had several protectors, or rather masters, being successively under the dominion of the Russians, the French, and the English. By the Treaty of Paris, in 1815, they were formed into a sort of semi-independent state, with an internal Government of their own, under the protection of Great Britain; a Lord High Commissioner, appointed by the English Government, having charge of the foreign relations, and of the internal, maritime, and sanitary police. The British commander-in-chief had the custody of the fortresses, and the disposal of the forces. It was stipulated in the Treaty of Paris that the islands may be called upon for the pay and subsistence of 3,000 men, as well as for the repair of their fortresses occupied by the British troops. The executive Government was vested in a president nominated by the Commissioner, and a senate of 5 members (1 for each of the larger islands of Corfu, Cephalonia, Zante, and Santa Maura, and 1 representing collectively the smaller ones of Ithaca, Cerigo, and Paxo, by each of which he was elected in rotation). The senators were elected at the commencement of every quinquennial Parliament (subject to a negative from the Commissioner) from a legislative chamber of 40 members, themselves elected by the constituencies of the different islands, for 5 years. The senate and legislative assembly, together with the Commissioner, were thus the supreme authority: they were, when united, termed the Parliament, and as such, passed, amended, and repealed laws, in the mode prescribed by the constitution of 1817. Besides the General Government, there was in each island a local administration, composed of a regent, named by the senate, and from 2 to 5 municipal officers elected by their fellow-citizens. On June 1, 1864, these islands were voluntarily ceded to the kingdom of Greece by the British Government.

The State of Society in these islands is far from being good, and was formerly the most depraved imaginable. The people, when they were placed under the ægis of England, were at once lazy, ignorant, superstitious, cowardly, and bloodthirsty. Their vices may, we believe, be in great degree ascribed to the Government and religion established amongst them. The latter consisted of little more than a series of fasts and puerile observances; while the former was both weak and corrupt. The Venetians appointed to situations of power and emolument belonged mostly to noble and decayed families, and looked upon their offices merely as means by which they might repair their shattered fortunes. Hence the grossest corruption pervaded every department. There was no crime

for which impunity might not be purchased. Justice, in fact, was openly bought and sold; and suits were decided, not according to the principles of law or equity, but by the irresistible influence of faction or of gold. In consequence, the islands became a prey to all the vices that afflict and degrade a corrupt and semi-barbarous society. Sandys, one of the best English travellers who ever visited the Levant, having touched at Zante in 1610, expresses himself with respect to the inhabitants as follows: 'In habite they imitate the Italians, but transcend them in their revenges, and infinitely less civil. They will threaten to kill a merchant that will not buy their commodities; and make more conscience to breake a fast than commit a murder. He is weary of his life that hath a difference with any of them, and will walke abroad after daylight. But cowardice is joined with their cruelty, who dare doe nothing but sodainly upon advantage; and are ever privately armed. They are encouraged to villanies by the remissnesse of their laws. The labourers do go into the fields with swords and partizans, as if in an enemies country; bringing home their oils and wines in hogskins, the inside turned out.' (P. 7, ed. 1637.)

If the Zantiotes did not deteriorate during the next two centuries, which, indeed, was hardly possible, they certainly did not improve. Dr. Holland, by whom they were visited in 1812, tells us that he heard, 'on sure authority, that the number of assassinations in Zante has been more than 1 for each day of the year, though the population was only 40,000!' (*Travels in the Ionian Isles*, &c., 4to. ed. p. 23.)

Matters were, if not quite so bad, very little better in the other islands. In Cephalonia, the inhabitants were divided into factions, entertaining the most implacable animosities, and waging a war of extermination against each other. A little vigour on the part of their rulers would have served to suppress their murderous contests. But this was not an object they wished to attain; on the contrary, their selfish and crooked policy made them seek to strengthen their own power by fomenting the dissensions that prevailed amongst their subjects. (Bellin, *Description du Golfe de Venise*, p. 165.) Considering the state of society at home, we need not wonder that the Cephalonians, who were distinguished among the islanders for activity and enterprise, were much addicted to emigration. The Venetians attempted to check its prevalence; but as they neglected the only means by which it could be prevented—the establishment of security and good order at home—their efforts were wholly unsuccessful.

The islanders did not, however, satisfy themselves with attempting to stab and prey upon each other. They were much addicted to piracy, particularly the inhabitants of Santa Maura and Cerigo; and it has been alleged that the Venetian Government participated in the profits of this public robbery, which, at all events, they took little pains to suppress.

A long series of years will be required to eradicate vices so deeply rooted, and to effect that thorough change in the habits and morals of the people that is so indispensable. The power and influence of the British Government had, however, a very decided effect. Piracy was suppressed; and assassination, though still bursting forth, especially in periods of political excitement, with renewed violence, was, speaking generally, a good deal less prevalent. A spirit of industry, sincerity, and fair dealing began to manifest itself. The present generation of nobles possess a degree of information, and a knowledge of the true interests

of their country, which, though not all that might be wished for, was, at least, unknown to their fathers. But there is, notwithstanding, a vast deal of intrigue and faction, which was kept alive and fostered by the contentions in their noble Parliament. It is not easy to exaggerate the difficulties with which the successive British governors, from Sir Thomas Maitland down to Sir Henry Storks, had to contend. They were opposed by every means that feudal rancour, corruption and pseudo-patriotism could throw in their way. Not that we mean to say they always acted discreetly, or that the public expenditure was as judicious and economical as it might have been. But they, at all events, acted openly and in a straightforward manner; and with an earnest desire to maintain the public tranquillity, and to promote the prosperity of the commonwealth. And now that the responsibility has fallen on the Greeks themselves, it may perhaps be hoped by the more sanguine that the influence of our example, of our unbiased execution of the law, and of the education so generally diffused, may in the end help to accomplish the regeneration of these islanders.

*Manufactures &c.*—These islands possess few manufactures properly so termed. The wives of the villani, or peasants, spin and weave a coarse kind of woollen cloth, sufficient in great part for the use of their families. A little soap is made at Corfu and Zante. The latter manufactures considerable quantity of silk gros-de-Naples and handkerchiefs; the art of dyeing is, however, but little studied, and the establishments are on a small scale. The peasantry, in general, are lazy, vain, delighting in display, and very superstitious. Those of Zante and Cephalonia are more industrious than the Corfiotes; in the first particularly; their superior condition is probably to be ascribed, in part at least, to the nobles residing more on their estates in the country, and contributing, by their example, to stimulate industry. In Corfu, the taste for the city life which prevailed in the time of the Venetian Government, still operates to a great degree. The Corfiote proprietor resides but little in his villa; his land is neglected, while he continues in the practice of his forefathers, who preferred watching opportunities at the seat of a corrupt Government to improving their fortunes by the more legitimate means of honourable exertion and attention to their patrimony. In this respect, however, material change for the better has taken place during the last 20 years.

*Imports of Grain &c.*—Great part of the land held under short tenures, on the *metayer* system, the tenant paying half the produce to the landlord. Owing to the nature of the soil, and the superior attention given to the culture of olives and currants, the staple products of the islands most part of the grain and cattle required for their consumption is imported. The hard wheat of Odessa is preferred, and large sums are annually sent to the Black Sea in payment. The Parliament, in March 1833, repealed the duties on introduction of corn; and the grain monopoly at Corfu, which had been established in favour of the Venetian Government, in order to provide against the possibility of a general or partial scarcity, was then suffered to expire. These two measures of reform, while they existed, did not probably produce more than 20,000*l.* annually.

*Cattle.*—They are similarly dependent on Greece and Turkey for supplies of butchers' meat, a small number only of sheep and goats being bred in the islands. Oxen, whether for agriculture or the slaughter-house, are principally

brought from Turkey. The beeves eaten by our troops were 6 weeks or 2 months walking down to the Danube, and the provinces that skirt the shores of Epirus, where they remained in pasture until fit for the table.

**Exports.**—The staple exports from these islands are oil, currants, wine, soap, salt, and valonia. The first is produced in great abundance in Corfu and Paxos, and in a less quantity in Zante, Santa Maura, and Cephalonia. Corfu has, in fact, the appearance of a continuous olive wood; a consequence, partly, of the extraordinary encouragement formerly given to the culture of the plant by the Venetians. Although there is a harvest every year, the great crop is properly biennial; the tree generally reposing for a year after its activity is of 2 and 3 years. During 5 or 6 months, from October till April, the country, particularly in Corfu, presents an animated appearance, persons of all ages being busily employed in picking up the fruit. The average produce may be about 17, 11s. per barrel. Under the old Venetian system, the oil could only be carried to Trieste. It is charged with an ad valorem duty of 1s per cent., payable on the export. The quality might be much improved by a little more care in the manufacture, the trees being generally more than in any other country. In 1863 the produce of oil was 80,385 barrels.

**Currants** originally introduced from the Morca, are grown in Zante and Cephalonia. The plant is a vine of small size and delicate nature, the cultivation of which requires much care. Six or seven years elapse after a plantation has been made before it yields a crop. In the beginning of October the earth about the roots of the plant is loosened, and gathered up in small heaps, away from the vine, which is pruned in March; after which the ground is again laid down smooth and level. The blight called the 'brina,' and rainy weather in harvest, produce great mischief. In a Report for December 18, 1867, Sir Charles Blegden, British consul at Cephalonia, shows how precious this species of crop must be. The currants are gathered towards September, and being hung carefully picked, are thrown singly on a stone floor, exposed to the sun in the open air. The drying process may occupy a fortnight longer, if the weather be not favourable. A heavy shower or thunder-storm (no unfrequent occurrence at that season) not only interrupts it, but sometimes causes fermentation. The fruit is not only fit to be given to animals. Should it be exposed to these risks, it is deposited in magazines or 'magazines,' until a purchaser casts up. The proprietor, or warehouse keeper, delivers to the buyer a paper acknowledging the receipt for the quantity delivered, which passes currently in exchange from hand to hand till the time of export. Under the old Venetian Government, the export of traffic in this produce was exceedingly restricted. In Zante 5 persons, chosen out of the nobles, regulated what should be the price; those who wished to purchase were under necessity of describing to the Government the quality they desired. This system was called *collegio*. The export duties consisted of an ad valorem duty of 9 per cent. ad valorem; a *dazio fisso* of about 4s. 4d. per cwt.; and a *dazio* of 10s. per cwt., or most recent duty, of 12s. per cwt. This latter was remitted in favour of vessels bringing salt fish &c. from the ports (chiefly English, Danes, and others). It was afterwards relaxed in favour of vessels from Odessa, and abandoned

altogether as vexatious and unproductive. The *provoditure* received in addition 2 per cent., and that of his 2 Venetian councillors 1 per cent.; so about 9s. per cwt., the original cost of which was than 18s. or 19s. Even under British protection, the fruit, which some years before had fetched as much as 30s. or 32s. per cwt., but had declined in 1832 to 8s. per cwt., was burdened with the *dazio fisso* of 4s. 4d., and a duty of 6 per cent. ad valorem, being equivalent together, at that price, to an ad valorem duty of nearly 60 per cent. In raised, in 1829, the import duties in England were per cwt., which, at the same low price, made an ad valorem duty of 500 per cent. The consequences were rapidly visible: a decline took place in the culture of the plant, as well as in the circumstances of the proprietors, whose staple export and means of existence were almost annihilated. As the necessitous grower was obliged to borrow money at high interest from foreign merchants, or from the Jews, who were, consequently, able to dictate the price at which they would take his produce. A legislative enactment on a scale commensurate with the difficulties which it had to grapple with, was, after much deliberation, matured and adopted by the Ionian Legislature in 1834. It commuted the duties upon currants for an ad valorem tax of 19½ per cent. (since reduced to 18 per cent.), being the same as that laid upon oil. The same Act increased, in a small degree, the duties previously paid on the importation of coffee, tea, and sugar, and upon foreign wines, silks, and gloves—articles which, being chiefly consumed by the affluent, were more appropriately subjected to an increase of duty, to supply in part the defalcation of revenue consequent on the reduction of the currant duty. The good effects of this enactment had been universally admitted. The duty on currants imported into the United Kingdom was reduced by Sir Robert Peel, in 1844, from 22s. 6d. to 15s. 9d. per cwt. (15s. + 5 per cent.), and it was lowered to its present rate of 7s. in 1860. The same rate of duty is levied on raisins, thus equalising the duties on raisins and currants, thus advocated in the last edition of this work.

The currant crop of 1863 was 33,638,708 lbs., and was derived almost entirely from Cephalonia and Zante; and the crop of 1866 in the former was 7,854 tons, and exceeded that of 1865 by about 700 tons.

Salt may be obtained in considerable quantities in Corfu, Zante, and Santa Maura, for exportation: the latter island alone produced it until the late Act of Parliament, which provided that Government should let the salt-pans in all the Islands to those bidders who should offer, by sealed tenders, to supply it at the lowest rate to the consumer, paying it at the same time the highest price to Government. No export duty is charged upon it. In 1863, 84,560 lbs. were manufactured.

These statements show that heavy duties are levied upon the exportation of the staple products of the islands—an objectionable system, and one which, if it is to be excused at all, can only be so by the peculiar circumstances under which they are placed. There is no land tax or impost on property in the Ionian Islands, such as exists in many other rude countries; and, supposing it were desirable to introduce such a tax, the complicated state of property in them, the feudal tenures under which it is held, and the variety of usages with respect to it, oppose all but invincible obstacles to its imposition on fair and equal principles. At the same time, too, a large amount of revenue is

required to meet the expenses of the general and local Governments, to maintain an efficient police, and to prevent smuggling and piracy. However, we cannot help thinking that some very material retrenchments might be made from the expenditure; and it is in this source, more, perhaps, than to any other, that the inhabitants must look for any real or effectual relief from their burdens.

Under the British protectorate the duties on exports from the Ionian Islands were regulated by Acts dated June 8, 1835, April 26, 1837, and May 29, 1847.

The value of the exports in 1867 was 434,138.

**Ports.**—The principal ports in the Ionian republic are Corfu and Zante, in the islands of the same names, and Argostoli in Cephalonia. The city and port of Corfu lie on the east side of the island, on the canal or channel between it and the opposite continent, which is here about 5 miles wide. The citadel, which projects into the sea, is furnished with a lighthouse, 240 feet high; the latter being in lat. 39° 37' N., long. 19° 56' E. The town is but indifferently built. Population about 18,000, exclusive of the military. The fortifications were, during the British protectorate, very strong, both towards the sea and the land, but here as elsewhere in the islands they were destroyed before we gave up possession. The canal has deep water throughout: its navigation, which is a little difficult, has been much facilitated by the erection of a lighthouse on the rock of Tignoso in the northern entrance, where the channel is less than a mile in width; and by the mooring of a floating light off Point Leschimo, in the southern entrance. Ships anchor between the small island of Vido and the city, in from 12 to 17 fathoms water.

The port, or rather gulf, of Argostoli, in Cephalonia, lies on the south-west side of the

least double that paid in Greece. (*Consular Report of December 18, 1867.*)

In 1863, the last year for which accounts have been given, the export duties levied on olive oil gave 23,708*l.*, on currants 30,593*l.*, on island wines 761*l.* No other item is found in the exports. In the same year, the revenue was 143,132*l.*, the expenditure 162,233*l.*

**Tonnage.**—In the 3 years 1861-3, the tonnage entered and cleared from the islands was—entered, 555,962, 592,659, 554,710—cleared, 555,800, 674,323, 555,667, respectively. More than 60 per cent. of these amounts were entered and cleared at Corfu. By far the largest portion of this tonnage was of American, i.e. United States, origin.

**Trade with England.**—This is but of limited extent, as will be seen by the subjoined tables.

island. Cape Aji, forming its south-western extremity, is in lat. 30° 8' 40" N., long. 20° 23' Cape San Nicolo, forming the other extremity about 4½ miles from Cape Aji; and between within about 1½ mile of the latter, is the islet of Guardini, on which is a lighthouse. This island the gulf stretches N. ½ W. 7 to 8 miles inland. The town of Argostoli on the west side of a haven on the east side of the gulf formed by Point Statura. The situation low and rather unhealthy. Population about Its appearance and police, particularly the were much improved during its occupation by the English. There is deep water and good anchorage ground in most parts of the gulf. The best entrance is between Cape San Nicolo and Guardini, keeping rather more than a mile eastward of the latter, on account of a reef extending N.E. and S.W. from it nearly the distance.

The port and city of Zante are situated on the eastern side of the island, in lat. 37° 47' N., long. 20° 54' 42" E. The city, the largest in the Ionian Islands, extends along the shore for 1½ mile, but it is nowhere above 300 yards in breadth, except where it exceeds the hill on

IONIAN ISLANDS

the citadel is erected. The style of building is chiefly Italian; and the interior of the city displays everywhere great neatness, and even a certain degree of magnificence. Population estimated at about 20,000. It has a mole or jetty of considerable utility, at the extremity of which a lighthouse is erected; and a lazaretto, situated a little to the south-west. The harbour of which ships anchor opposite the town at from 500 to 1,000 yards' distance, in from 12 to 15 fathoms, when the wind is from the N.E.

The total value of the imports from all countries in 1863 was estimated at 1,232,220*l.*, and that of the exports at 930,556*l.* But a considerable part of the imports was not destined for the consumption of the islands, but sent either merely as to a convenient entrepôt, being intended for the supply of the contiguous provinces of Greece and Turkey. The amount of exports depends materially on the circumstance whether the year be one in which there is, or is not, a crop of olives, and on the goodness of the currant crops.

Money.—Accounts are kept in English money, but in Spanish dollars and oboli, 100 oboli being = 1*l.* = 4*s.* 4*d.*: a doubloon = 1 dollar. (Tate's Compend.)

Weights.—English weights and measures are sometimes made use of, though with Italian denominations; but the following are most generally used.

The pound *peso grosso*, or great weight of 12 oz. = 7,584 grains troy: 9*l.* 8 lbs. = 100 lbs. avoirdupois.

The pound *peso sottile*, or small weight, used for precious metals and drugs, is  $\frac{1}{2}$  lighter than the *peso grosso*. It weighs 12 oz. *peso sottile* corresponding to 8 *peso grosso*.

The oleo, used in the southern islands, weighs about 18,500 grains troy, or 27  $\frac{1}{10}$  lbs. avoirdupois. The Levant cantar, or quintal, should contain 44 lbs.

The *migliaio* (1,000 lbs.), for currants in Zante, is 1*ve.* cent. lighter than for other articles.

Measures of Length.—The Venetian foot is 12  $\frac{1}{16}$  inches English. The *Passo* = 3 Venetian feet.

Measures for cloths &c. = 27  $\frac{3}{8}$  inches English. The *passo* for silks = 25  $\frac{3}{8}$  inches English.

Land is measured by the *misura* or  $\frac{1}{8}$  moggio, or bacile, 100 square *passi* being 1 *misura*, or about  $\frac{3}{10}$  of an acre English.

Measures are measured by the *zappada*; 3 *zappada* (a computed day's work) being 1 *misura*.

Wood is measured by the square *passo*, which, however, only 2 feet thick, this depending on the quality of the wood.

Capacity is measured by the *passo cubo*.

Measures of Capacity.—Corfu and Paxo; Moggio of 8 *misure*, or 3 Winchester bushels.

Ionian: Bacile should contain 80 lbs. *peso grosso*, best quality wheat.

Santa Maura: Cado, of 8 crivelli, 4 = 3 moggio; = 34 bushels English.

Corfu: 5 Bacile = 1 moggio.

Chilo, the measure of Constantinople, = 1 moggio.

Corfu and Paxo: 32 quartucci = 1 jar, = 1 barrel = 18 English wine gallons.

Ionian and Ithaca: 2 quartucci = 1 bocciale = 1 secchio; 6 secchio = 1 barrel = 18 English wine gallons.

Corfu: 13 quartucci = 1 lire; 40 quartucci = 1 jar = 1 barrel = 17  $\frac{1}{2}$  English wine gallons.

Santa Maura: 22 quartucci = 1 stamno; = 1 barrel = 18 English wine gallons.

IRON

Corigo: 2 agosten = 1 boccia; 30 boccie = 1 barrel = 18 English wine gallons.

Oil.—Corfu and Paxo: 4 quartucci = 1 mitro; 6 mitri = 1 jar; 4 jars = 1 barrel = 18 English wine gallons.

Cephalonia: 9 pagliazzi = 1 barrel = 18 English wine gallons.

Zante: 9 lire, or 3 jars of 46 qu. each = 1 barrel = 17  $\frac{1}{2}$  English wine gallons.

Santa Maura: 7 stanni = 1 barrel = 18 English wine gallons  
Ithaca: 13 pagliazzi = 1 " = 11 " "  
Corigo: 24 bocce = 1 " = 11 " "

Salt.—Centinajo, about 4,000 lbs. Venetian peso grosso.

Limc.—Corfu, measure of 4 English cubic feet. In compiling this article, we have consulted, besides the works referred to above, the *Voyage Historique, Pittoresque &c.*, by Saint Sauveur—a diffuse but valuable work. The account of Zante, in the last volume (tome iii. pp. 101-278), is particularly good. We have also looked into the *Archives de Scrofani*, 3 tomes, Paris, 1801; *before the Finance du Commerce*; the *Papiers laid C. Scbrigth's Report* for 1866. But the most important part of the information we have been unable to lay before the reader was derived from manuscript notes obligingly communicated by Earl Lovelace, who (when Lord King) was secretary to the British Government in these islands.

IPPECACUANIA (Fr. *ipecaacuanha*; Ger. *Americanische brechwurzel*; Ital. *ipecaacanna*; Port. *cipo de camaras, ipecaacuanha*; Span. *ipecaacuanha, raiz de oro*). The root of a perennial plant (*Cephaelis ipecaacuanha*) growing in Brazil and other parts of South America. It is, from its colour, usually denominated *white, grey, or ash-coloured*, and *pale-brown*. Little of the first variety is found in the shops. The grey and brown varieties are brought to this country in bales from Rio Janeiro. Both are in short, wrinkled, variously bent and contorted pieces, which break with a resinous fracture. The grey is about the thickness of a small quill, full of down to a white, woody, vascular cord that runs through the heart of each piece; the external part is compact, brittle, and looks smooth; the brown is smaller, more wrinkled, of a blackish brown colour on the outside, and whitish within: the white is woody, and has no wrinkles. The entire root is inodorous; but the powder has a faint nauseous odour, and a somewhat bitter and acrid taste. In choosing *ipecaacuanha*, the larger roots, which are compact and break with a resinous fracture, having a whitish-grey, somewhat semi-transparent appearance in the outside of the cortical part, with a pale straw-coloured medullary fibre, are to be preferred. The medicinal virtues of the drug chiefly reside in the outer bark. When pounded, *ipecaacuanha* forms the mildest and safest emetic in the whole materia medica. Though probably employed in America from time immemorial, it was not introduced into Europe till the time of Louis XIV., when one Grenier, a French merchant, brought 150 lbs. of it from Spain, with which trials were made at the Hôtel Dieu. Helvetius first made known its use in dysentery, for which Louis XIV. munificently rewarded him by a douceur of 1,000*l.* sterling. (Thomson's *Dispensatory*; Thomson's *Chemistry*; *British Pharmacopoeia*, 1867.) 51,819 lbs., valued at 22,937*l.*, were imported in 1866, and 22,855 lbs. exported.

IRON (Dan. *jern*; Dutch, *zyzer*; Fr. *fer*; Ger. *eisen*; Ital. *ferro*; Lat. *ferrum, mars*; Pol. *zelazo*; Port. *ferro*; Russ. *scheleso*; Span. *hierro*;

Swed. jern; Gr. σιδηρος; Sansc. loha; Arab. he-deed; Pers. ahun). The most abundant and most useful of all the metals. It is of bluish white colour; and, when polished, has a great deal of brilliancy. It has a styptic taste, and emits a smell when rubbed. Its hardness exceeds that of most other metals; and it may be rendered harder than most bodies by being converted into steel. Its specific gravity varies from 7.6 to 7.8. It is attracted by the magnet or loadstone, and is itself the substance which constitutes the loadstone. But when iron is perfectly pure, it retains the magnetic virtue for a very short time. It is malleable in every temperature, and its malleability increases in proportion as the temperature augments; but it cannot be hammered out nearly as thin as gold or silver, or even as copper. Its ductility is, however, more perfect; for it may be drawn out into wire as fine at least as a human hair. Its tenacity is such, that an iron wire 0.078 of an inch in diameter is capable of supporting 549.25 lbs. avoirdupois without breaking.

*Historical Notices.*—Iron, though the most common, is the most difficult of all the metals to obtain in a state fit for use; and the discovery of the method of working it seems to have been posterior to the use of gold, silver, and copper. We are wholly ignorant of the steps by which men were led to practise the processes required to fuse it and render it malleable. It is certain, however, that it was prepared in ancient Egypt, and some other countries, at a very remote epoch; but it was very little used in Greece till after the Trojan war. (See the admirable work of M. Goguet on the *Origin of Laws, Arts &c.*, vol. i. p. 140.)

*Species of Iron.*—There are many varieties of iron which artists distinguish by particular names; but all of them may be reduced under one or other of the 3 following classes: *cast or pig iron, wrought or soft iron, and steel.*

1. *Cast or pig iron* is the name given to this metal when first extracted from its ores. The ores from which iron is usually obtained are composed of oxide of iron and clay. The object of the manufacturer is to reduce the oxide to the metallic state, and to separate all the clay with which it is combined. This is effected by a peculiar process; and the iron, being exposed to a strong heat in furnaces, and melted, runs out into moulds prepared for its reception, and obtains the name of cast or pig iron.

The cast iron thus obtained is distinguished by manufacturers into different varieties, from its colour and other qualities. Of these the following are the most remarkable:—

*a. White cast iron*, which is extremely hard and brittle, and appears to be composed of a congeries of small crystals. It can neither be filed, bored, nor bent, and is very apt to break when suddenly heated or cooled.

*b. Grey or mottled cast iron*, so called from the inequality of its colour. Its texture is granulated. It is much softer and less brittle than the last variety; and may be cut, bored, and turned on the lathe. Cannons are made of it.

*c. Black cast iron* is the most unequal in its texture, the most fusible, and least cohesive, of the three.

2. *Wrought or soft iron* is prepared from cast iron by a process termed a refinement or finery. The wrought iron manufactured in Sweden is reckoned the finest in the world.

3. *Steel* consists of pieces of wrought iron hardened by a peculiar process. The Swedish iron imported into this country is mostly used in

the manufacture of steel. [STEEL.] (Thomson's *Chemistry*.)

*Uses of Iron.*—To enumerate the various uses of iron would require a lengthened dissertation. No one who reflects for a moment on the subject can doubt that its discovery and employment in the shape of tools and engines have been of the utmost importance to man, and have done more, perhaps, than anything else, to accelerate his advance in the career of improvement. Locke has the following striking observations on this subject: 'Of what consequence the discovery of one natural body, and its properties, may be to human life, the whole great continent of America is a convincing instance: whose ignorance in useful arts, and want of the greatest part of the conveniences of life, in a country that abounded with all sorts of natural plenty, I think may be attributed to their ignorance of what was to be found in a very ordinary despicable stone—I mean the mineral of iron. And whatever we think of our parts or improvements in this part of the world, where knowledge and plenty seem to vie with each other, yet, to anyone that will seriously reflect upon it, I suppose it will appear not past doubt, that, were the use of iron lost among us, we should in a few ages be unavoidably reduced to the wants and ignorance of the ancient savage Americans, whose natural endowments and provisions came no way short of those of the most flourishing and polite nations; so that he who first made use of that one contemptible mineral may be truly styled the father of arts and author of plenty.' (*Essay on the Understanding*, book iv. c. 12.)

*Manufacture of Iron in Great Britain.*—We are ignorant of the period when iron began to be made in England, but there is authentic evidence to show that iron works were established by the Romans in the Forest of Dean, in Gloucestershire, and in other parts of the kingdom. (Pennant's *Wales*, ed. 1810, vol. i. p. 83.) They were also established, at an early period, in Kent and Sussex; these counties being well supplied, not only with iron ore, but (which was at the time of still greater importance) with timber, the only species of fuel that was then used in the furnace. It is to this latter circumstance that the increase in the production of iron in England during a lengthened period, is to be ascribed. Complaints were very early made of the destruction of timber by the iron works; and in the reign of Elizabeth, when an unusual demand for timber for the navy, and for merchant vessels, also, took place, the decrease of timber excited a great deal of attention. At length, in 1591, an Act was passed prohibiting the manufacture of iron from using any but small wood, and for establishing any new works anywhere within 10 miles of the city of London, and 14 miles of the river Thames, and in several parts of Sussex specified in the Act. Soon after this, Edward Lord Dudley, invented a process for smelting iron ore with pit-coal instead of timber; and it is difficult to point out many inventions that have been so advantageous. The patent which the lordship obtained in 1619 was exempted from the operation of the Act of 1629 (21 Jas. I. c. 24) setting aside monopolies; but though, in consequence, it has proved of immense value to the country, the works of the inventor were destroyed by an ignorant rabble, and he was nearly ruined by his efforts to introduce his perfect his process. (*Report of Committee of House of Commons on Patents*, p. 168 &c.) The invention seems, in consequence, to have been many years almost forgotten. The complaints of the destruction of timber continued; so much

This quantity, estimated at the mean average cost at the place of production, would have a value of 11,902,557L.

According to *Thom's Almanac* for 1868, the produce in 1866 of the iron mines in Ireland was 25,225 tons of ore, valued at 5,313L. It is added that considerable quantities of blackband ironstone are now shipped from Belfast to Scotland, and that 112,686 tons of iron pyrites, value 59,036L, were obtained in 1866 from the mines of Wieklow.

This astonishing increase has been owing to a great variety of causes, among the more prominent of which may be specified the greater cheapness of iron, and its consequent application to a great many purposes, including the construction of various descriptions of agricultural implements, pipes for the conveyance of water, and the building of ships, for which it was not formerly supposed to be applicable. Unquestionably, however, the unprecedented demand of iron for railways in this country, and in the United States and the Continent, has given the most powerful stimulus to the manufacture; and, if only half the railway projects on foot in 1847 had been executed, the production of the iron, vast as it has been, would have been quite inadequate to supply the demand.

It will readily occur to the reader that a demand for iron for railways, depending as the formation of the latter does on many varying circumstances, must necessarily be both capricious and fluctuating; and hence it is not really possible to infer from the state of the iron trade at any given period what may be its state a few months after. In 1842 and 1843 the price of pig iron had sunk from 2l. to 2l. 10s. per ton, and the manufacturers in the least favoured districts were involved in the greatest difficulties. But subsequently the price of iron doubled or trebled; and though it has again receded, larger fortunes have been made in this than in any other department of industry. Similar mutations will,

that, in 1687, the exportation of iron without license was prohibited, and fresh restrictions were laid on the felling of timber. But the evil could not be abated by such means; and, in the early part of last century, complaints of the destruction of timber by the iron works became more prevalent than ever, and their total suppression began to be contemplated as a lesser evil than the continued decrease of the stock of timber. At this period more than  $\frac{1}{3}$  of the iron made use of was imported, and the condition of the manufacture was most unpromising. But the growing scarcity and high price of timber, coupled with the increasing demand for iron, at last succeeded in drawing the attention of some ingenious persons to Lord Dudley's process; and, about 1740, iron was made at Colebrook Dale, and one or two other places, by means of pit-coal, of about as good a quality as that made with timber.

From this period the business steadily increased; at first, however, its progress was comparatively slow, and the furnaces of Kent and Sussex were not wholly relinquished for more than 30 years after iron began to be largely produced by means of pit-coal. The great demand for iron occasioned by the late war, and the obstacles which it threw in the way of supplies from abroad, gave the first extraordinary stimulus to the manufacture, which has now become of vast importance and great value. In 1740 the quantity of pig iron made in England and Wales amounted to about 17,000 tons, produced by 59 furnaces. Since this epoch the increase is believed to have been nearly as follows: viz. In 1750, 22,000 tons; in 1788, 68,000 tons, produced by 85 furnaces; in 1796, 125,000 tons, produced by 121 furnaces; in 1806, 250,000 tons, produced by 169 furnaces; and in 1820 about 400,000 tons were produced but there is no account of the number of furnaces.

The author attributes this chiefly to the removal of the trade to the coal country. The iron trade is now one of the greatest branches of industry carried on in the northern portion of the United Kingdom. It is chiefly confined to the western counties, the great majority of the smelting furnaces and malleable works being in Lanark and Ayr. Glasgow is its central mart.

Notwithstanding its present magnitude, the smelting and manufacture of iron in Scotland are of very recent origin. So late as 1830 there were only 16 blast furnaces in Scotland, the produce of which scarcely reached 40,000 tons. In 1867 there were 112 in blast, producing 1,031,000 tons of pig iron, which, at the average price for the year (which was unusually low), represents a value of 3,051,337L.

With the exception of a small work at Wilson, which was unsuccessfully attempted there in a somewhat remote period, almost nothing was done in Scotland in the manufacture of malleable iron till 1830, and even so late as 1842 the produce did not exceed 35,000 tons. During the year 1842, however, the production of malleable iron reached 122,400 tons; and taking the average of all sorts, including plates for shipbuilding, there have been 10L per ton, the gross amount of the produce would be 1,224,100L. The number of men employed in this branch was about 4,000, the rate of wages paid about 18s. In 1858 there was a falling off in the production.

The increase in the interval has been, if possible, greater than that exhibited above. And in this we have merely to direct the reader's attention to the following, compiled from returns collected by Mr. Hunt, Keeper of Mining Records, and published by the highest authority on such subjects.

Account of the Number of Furnaces, and of the Quantities of Iron in Tons produced in Great Britain in 1825, 1840, and 1848.

Place	Total Furnaces in 1825	Produce of Iron in 1825	Total Furnaces in 1840	Produce of Iron in 1840	Total Furnaces in 1848	Produce of Iron in 1848
Forest of Dean	107	230,112	4	15,000	—	—
South Wales	11	17,756	163	505,000	—	—

				1,395,900	623	2,008,200

For produce in 1867, see p. 789.

2,000,000. And if we recollect that wrought iron is to the hardware manufacture what nit is to the manufacture of beer, and leather to that of shoes, we shall be satisfied alike of its paramount importance in the arts and as a most prolific source of employment and of public wealth.

From extensive enquiries made by Government and others connected with the iron trade, the following statements have been deduced, which exhibit the districts in which iron was made, the number of furnaces, and the total quantity produced in 1825, 1840, and 1848.

Previously to 1845, the imports of foreign iron usually varied from 23,000 to 25,000 tons a-year. But at that epoch the duties on foreign iron (20s. a ton on iron in bars) were repealed; and there has since been an increase in the imports of Swedish bar iron, which is especially well fitted for being made into steel. Our imports of unwrought foreign iron amounted in 1867 to 71,702 tons, and in 1866 to 64,178 tons; while of wrought or manufactured iron and steel, 12,108 tons were imported in 1867. In 1866, 51,533, and in 1867, 60,406, tons of bar iron came from Sweden.

Perhaps in nothing has the fall of price, consequent on the diminution of the cost of production, had so taken place since the peace of 1815, been more conspicuous than in hardware. At an average, articles of hardware are at present (1868) from 50 to 75 per cent. lower than in 1820. And it may be safely affirmed that there are very few descriptions of articles in which a fall of price would have been so advantageous.

**IRON-WOOD** (Ger. eisenholz; Dutch, yserhout; Fr. bois de fer; Ital. legno di ferro; Span. A. species of wood of a reddish cast, so called on account of its corroding as that metal does, and its being remarkably hard and ponderous—even more so than ebony. The tree which produces it grows principally in the West India Islands, and is likewise very common in South America, and in some parts of Asia, especially about Siam.

**ISINGLASS** (Ger. hausenblase, hausblase; Fr. colle de poisson, carlock; Ital. cola di pesce; Russ. klei rybii, karluk). One of the purest and best of the animal glues. It is a product the preparation of which is almost peculiar to Russia. It is made of the air-bladders and sounds of different kinds of fish which are found in the large rivers that fall into the North Sea and the Caspian. That prepared from the sturgeon is generally esteemed the best; next to that the beluga; but isinglass is also prepared from sterlets, shad, and other fish, though not so good. The best is usually sold in little ringlets; the second sort is laid together like the leaves of a book; and the common sort is dried without any care. When dry, it is of a white colour, semi-transparent and dissolves readily in boiling water, and is used extensively in cookery. It is also used for making sticking-plaster, chemical paper, &c. The duty on isinglass, which formerly

amounted to 47s. 6d. per cwt., was wholly repealed in 1853. In 1867 the imports and exports were respectively 2,732 cwt. and 122 cwt. The price varies from 16l. 3s. to 44l. 16s. per cwt. (Thomson's Chemistry; British Pharmacopœia; Tooke's View of Russia, 2nd ed. iii. 343 &c.)

**ISLE OF MAN.** [MAN, ISLE OF.]  
**ITALY.** [FLORENCE; GENOA; NAPLES; VENICE; &c.]

**IVORY.** The name given to the teeth or tusks of the elephant, and of the walrus or sea-horse. Each male elephant comes to maturity has 2 tusks. These are hollow at the root, tapering, and of various sizes, depending principally on the age of the animal. Colour externally yellowish, brownish, and sometimes dark, internally white. The best are large, straight, and light-coloured, without flaws; not very hollow in the stump, but solid and thick. The most esteemed come from Africa, being of a closer texture, and less liable to turn yellow, than those from the East Indies. The trade in London thus divide them:—

First sort, weighing 70 lbs. or upwards; second sort, weighing 56 lbs. to 60 lbs.; third sort, weighing 38 lbs. to 56 lbs.; fourth sort, weighing 28 lbs. to 37 lbs.; fifth sort, weighing 18 lbs. to 27 lbs. All under 18 lbs. are called *scrivelloes*, and are of the least value. In purchasing elephants' teeth, the ends, or cracked and decayed in the inside, may be rejected; and care taken that lead or any other substance has not been poured into the hollow. The freight is rated at 16 cwt. to the ton. (Milburn's Orient. Com.)

**Supply of Ivory.**—The imports of elephants' teeth amounted in 1867 to 10,343 cwt. The medium weight of a tusk may be taken at about 60 lbs., so that the importation of 1867 may be taken at 19,300 tusks; a fact which presumes the destruction of at least 9,500 male elephants &c. Occasionally tusks are accidentally broken, one lost in this way being replaced by a new one; a good many are also obtained from elephants that have died in the natural way; and some more are the produce of the walrus. Still it is sufficiently certain, that the supply from the last mentioned sources is not very large; and if to the quantity of ivory required for Great Britain, we add that required for the other countries of Europe, America, and Asia, the slaughter of elephants must, after every reasonable deduction is made, appear immense. Inasmuch, however, as this destruction falls only on the males, there is less foundation than might at first be supposed for the surprise that has sometimes been expressed that the breed of this noble animal has not been more diminished. The western and eastern coasts of Africa, the Cape of Good Hope, Ceylon, India, Malacca, are the great marts whence supplies of ivory are derived. The imports from Western Africa into Great Britain in 1866 amounted to 2,078 cwt.; the East Coast furnished 1,024 cwt.;

Egypt 3,628 cwt.; the Cape &c. 526 cwt.; and India 1,552 cwt. The Chinese market is principally supplied with ivory from Malacca, Siam, and Sumatra. Of that exported from Zanzibar the various kinds are *babliian*, or that intended for export to England or America; *Bombay ivory*, comprising all that is not suitable for other markets; *Cutch ivory*, for armlets, bangles &c.; and *scrivetloes* or small ivory, for billiard balls &c.

The chief consumption of ivory in England is in the manufacture of handles for knives; but it is also extensively used in the manufacture of musical and mathematical instruments, chessmen, billiard balls, plates for miniatures, toys &c. Ivory articles are said to be manufactured to a greater extent, and with better success, at Dieppe than in any other place in Europe. But the preparation of this beautiful material is much better understood by the Chinese than by any other people. No European artist has hitherto succeeded in cutting concentric balls after the manner of the Chinese; and their boxes, chessmen, and other ivory articles, are far superior to any that are to be met with anywhere else.

The following are the duties levied at the port of Zanzibar on ivory. Ivory from the coast, viz. from Kuliva, 8 dols. 50 cents per

frazil of 35 lbs. avoird.; from Uuyunwoori, 3 dols. Ivory from the last place, according as bought by Arabs or natives, 12 to 15 dols. The duty on other ivories varies, according to the place of production, from 2 dols. to 8 dols. 50 cents per frazil.

*Historical Notice.*—It is a curious fact that the people of all Asiatic countries in which the elephant is found have always had the art of taming the animal and applying it to useful purposes, but that no such art has ever been possessed by any native African nation. Is this owing to any difference between the Asiatic and African elephants, or to the inferior sagacity of the African people? We incline to think that the latter is the true hypothesis. Alexander the Great is believed to have been the first European who employed elephants in war. It appears pretty certain that the elephants made use of by the Carthaginians were mostly, if not wholly, brought from India; and that they were managed by Indian leaders. Some of the latter were captured by the Romans, in the great victory gained by Metellus over Asdrubal. (See, on this curious subject, two very learned and valuable notes in the *Ancient Universal History*, 8vo. ed. vol. xviii. p. 429, and p. 549. Buffon's article 'On the Elephant' is a splendid piece of composition.)

#### JAGGERY. [SUGAR.]

JALAP or JALOP (Ger. jalapp; F. jalap; Ital. scarappa; Span. jalapa). The root of *Ipomoea jalapa*, *Pentandria monogynia*, natural order *Convolvulaceae*, so named from Xalapa, in Mexico, whence we chiefly import it. The root, when brought to this country, is in thin transverse slices, solid, hard, weighty, of a brownish colour on the outside, and internally of a yellowish-grey, with dark brown circular striae. The hardest and darkest coloured is the best; that which is light, spongy, and pale-coloured, should be rejected. The odour of jalap, especially when in powder, is very characteristic. Its taste is exceedingly nauseous, accompanied by a sweetish bitterness. (Lewis's *Mat. Med.*; Brande's *Pharmacy*; *British Pharmacopoeia*, 1867.) Jalap is adulterated with various roots of a similar appearance and botanical character. For these adulterations see Pereira's *Materia Medica*, and Ward and Bache's *United States Dispensatory*. The imports of jalap amounted in 1866 to 125,896 lbs., the average price of which was 3s. 11d. per lb.

#### JAMAICA PEPPER. [PIMENTO.]

#### JAPAN. [NAGASAKI.]

JAPANED WARES (Ger. japanische ware; Dutch, japansh lakwerk; Fr. marchandises de Japon). Articles of every description, such as tea-trays, clock-dials, candlesticks, snuff-boxes &c., covered with coats of japan, whether plain or embellished with painting or gilding. Birmingham is the grand staple of this manufacture, which is there carried on to a great extent. Pontypool, in Monmouthshire, was formerly famous for japanning; but it is at present continued there on a very small scale only. It is prosecuted with spirit and success at Birston and Wolverhampton.

For information as to the history, extent, and character of the trade in japanned wares, see *Birmingham and the Hardware District*, 1865. In 1867 we imported 850 cwt. of japanned or

laacquered ware, valued at 5,928l., and exported 51 cwt., valued at 860l.

JASPER (Ger. jaspis; Dutch, jaspis; Fr. jaspé; Ital. diaspro; Span. jaspé; Russ. jachma). The stone is an ingredient in the composition of many mountains. It occurs usually in large amorphous masses, sometimes in round or angular pieces; its fracture is conchoidal; specific gravity from 2.27. Its colours are various: when heated it does not decrepitate: it is usually divided into species, denominated Egyptian jasper, striped ribbon jasper, porcelain jasper, and common jasper. It is sometimes employed in the formation of seals, and in mosaic work &c. (Emanuel On *Precious Stones*.)

#### JERSEY. [GUERNSEY.]

JET or PITCH COAL (Dutch, git, zand barnsteen; Fr. jais, jayet; Ger. gagat; Ital. gagat lustrino; Lat. gagus, gagates). Of a black jet colour; occurs massive, in plates; sometimes the shape of branches of trees, but without regular woody texture. Internal lustre shining resinous, soft, rather brittle, easily fragilible, specific gravity 1.3. It is used for fuel, and for making vessels and snuff-boxes. In Prussia it is called black amber, and is cut into rosaries and necklaces. It is distinguished by its brilliant and conchoidal fracture. (Thomson's *Chemistry*.)

#### JETSAM. [FLOTSAM.]

JETTISON. The act of casting over goods on board to save ship and cargo. [AVERAGE.] In order to justify jettison, it must have been caused by those who act through fear of perishing. 'Je ne suffit pas qu'on ait fait jet, il faut qu'on y été forcé par le crainte de périr.'—*Emerigon*. 'The old sea laws,' says Mr. Arnould, 'with this quaint precaution, lay down in solemn terms that the captain in the storm, before proceeding to any sacrifice for the general safety. the experience of Jarga, who in the course of 60 years, passed as a magistrate in the consulate of the sea at Genoa, had known but four instances of regular jettison, and all of them were suspected of fraud, because the prescribed forms had been too well observed.

The best illustration of a legitimate jettison is given by Emerigon. On February 16, 1782, Joseph Antoine Demoulin, of Marseilles, was pursued by four enemies, who rapidly gained on him. At nightfall, 5 p.m., he launched his long boat, having rigged her with mast and sail, and having fixed a light at a mast head. He then set her adrift, and changed his route. The enemy was deceived, and the captain reached Marseilles in safety. This jettison was considered to have been made for the sake of saving ship and cargo, and was held to be a general average loss. (*Emerigon*, c. 12, sec. 41, l. 623.)

Goods jettisoned still belong to their owners, and may be reclaimed on payment of salvage.

**JEWELLERY.** The manufacture of personal ornaments in gold, silver, and precious stones.

The chief seats of this manufacture are London (Clerkenwell) and Birmingham, the former for the finer, the latter for the medium and commoner kinds of work. It is one of the staple manufactures of Birmingham, employing, according to Mr. Wright, more hands than any other industry in that town. The trade too is in the hands of a large number of small and independent manufacturers. Mr. Wright calculates that 7,500 persons are engaged in the trade, and that, reckoning three persons to each of these workmen, 20,000 persons at least depend on the jewellery manufacture of Birmingham. The gold consumed in this trade is calculated to amount to 600,000*l.* or 700,000*l.* yearly, and the silver at from 100,000*l.* to 500,000*l.*

The exports of jewellery in the year 1867 were valued at 154,586*l.*, the imports at 120,935*l.* The exports were chiefly sent to Egypt, and most of the imports come from Belgium. (For the Birmingham jewellery trade, see Mr. Wright's essay, *Birmingham and the Midland Hardware District*, 63.)

**JUICE OF LEMONS, LIMES, or ORANGES.** By the 30 & 31 Vict. c. 124, to amend the Merchant Shipping Act, it is provided, sec. 4, that the following rules shall be observed with respect to medicines, medical stores, and anti-scorbutics.

1. The Board of Trade shall from time to time issue and cause to be published scales of medicines and medical stores suitable for different ships and voyages, and shall also prepare or sanction a book or books containing instructions for dispensing the same.

2. The owners of every ship navigating between the United Kingdom and any place out of the same shall provide and cause to be kept on board such ship a supply of medicines and medical stores in accordance with the scale appropriate to the said ship, and also a copy of the said book or of one of the said books containing instructions.

3. No lime or lemon juice shall be deemed fit and proper to be taken on board any such ship, for the use of the crew or passengers thereof, unless the same has been obtained from a bonded warehouse for and to be shipped as stores; and no lime or lemon juice shall be so obtained or delivered from any warehouse as aforesaid unless the same is shown, by a certificate under the hand of an inspector appointed by the Board of Trade, to be proper for use on board ship, such certificate

to be given upon inspection of a sample after deposit of the said lime or lemon juice in the warehouse; nor unless the same contains fifteen per centum of proper and palatable proof spirits, to be approved by such inspector, or by the proper officer of customs, and to be added before or immediately after the inspection thereof; nor unless the same is packed in such bottles, at such time and in such manner, and is labelled in such manner as the Commissioners of Customs may direct; provided that when any such lime or lemon juice is deposited in any bonded warehouse, and has been approved as aforesaid by the said inspector, the said spirits, or so much of the said spirits as is necessary to make up fifteen per centum, may be added in such warehouse, without payment of any duty thereon; and when any spirit has been added to any lime or lemon juice, and the same has been labelled as aforesaid, it shall be deposited in the warehouse for delivery as ship's stores only, upon such terms and subject to such regulations of the Commissioners of Customs as are applicable to the delivery of ship's stores from the warehouse.

4. The master or owner of every such foreign-going ship (except those bound to European ports or to ports in the Mediterranean Sea, and also except such ships or classes of ships bound to ports on the eastern coast of America north of the 35th degree of north latitude, and to any islands or places in the Atlantic Ocean north of the same limit, as the Board of Trade may from time to time exempt from this enactment) shall provide and cause to be kept on board such ship a sufficient quantity of lime or lemon juice from the warehouse duly labelled as aforesaid, such labels to remain intact until 24 hours at least after such ship shall have left her port of departure on her foreign voyage, or a sufficient quantity of such other anti-scorbutics, if any, of such quality, and composed of such materials, and packed and kept in such manner, as her Majesty by order in council may from time to time direct.

5. The master of every such ship as last aforesaid shall serve or cause to be served out the lime or lemon juice with sugar (such sugar to be in addition to any sugar required by the articles) or other such anti-scorbutics as aforesaid to the crew so soon as they have been at sea for 10 days, and during the remainder of the voyage, except during such time as they are in harbour and are there supplied with fresh provisions; the lime or lemon juice and sugar to be served out daily at the rate of a ounce each per day to each member of the crew, and to be mixed with a due proportion of water before being served out, or the other anti-scorbutics, if any, at such times and in such quantities as her Majesty by order in council may from time to time direct.

6. If at any time when such lime or lemon juice or anti-scorbutics is or are so served out as aforesaid any seaman or apprentice refuses or neglects to take the same, such neglect or refusal shall be entered in the official log book in the manner provided by sect. 281 of the principal Act, and shall be signed by the master and by the mate or some other of the crew, and also by the surgeon or medical practitioner on board, if any.

And if in any such ship as aforesaid such medicines, medical stores, book of instructions,

lime or lemon juice, sugar, or anti-scorbutics as are hereinbefore required are not provided, packed, and kept on board as hereinbefore required, the owner or master shall be deemed to be in fault, and shall for each default incur a penalty not exceeding 20*l.*, unless he can prove that the non-compliance with the above provisions, or any of them, was not caused through any inattention, neglect, or wilful default on his part; and if the lime or lemon juice and sugar or other anti-scorbutics are not served out in the case and manner hereinbefore directed, or if entry is not made in the official log in the case and manner hereinbefore required, the master shall be deemed to be in fault, and shall for each default incur a penalty not exceeding 5*l.*, unless he can prove that the non-compliance with the above provisions, or any of them, did not arise through any neglect, omission, or wilful default on his part; and if in any case it is proved that some person other than the master or owner is in default in any case under this section, then such other person shall be liable to a penalty not exceeding 20*l.*

Any person who manufactures, sells, or keeps or offers for sale any such medicines or medical stores as aforesaid which are of bad quality, shall for each such offence incur a penalty not exceeding 20*l.*

In any British possession out of the United Kingdom the governor or officer administering the government for the time being shall, subject to the laws of such possession, have power to make regulations concerning the supply within such possession of lime or lemon juice and anti-scorbutics for the use of ships; and any lime or lemon

juice or anti-scorbutics duly supplied in accordance with any such regulations, shall be deemed to be fit and proper for the use of ships.

Whenever it is shown that any seaman or apprentice who is ill has, through the neglect of the master or owner, not been provided with proper food and water according to his agreement or with such accommodation, medicines, medical stores, or anti-scorbutics as are required by the principal Act or by this Act, then, unless it can be shown that the illness has been produced by other causes, the owner or master shall be liable to pay all expenses properly and necessarily incurred by reason of such illness (not exceeding in the whole 3 months' wages), either by such seaman himself or by her Majesty's Government, or any officer or other local authority on his behalf, and such expenses may be recovered in the same way as they were wages duly earned: provided that the enactment shall not operate so as to affect the further liability of any such owner or master in such neglect, or any remedy which any seaman already possesses.

Where a seaman is by reason of illness incapable of performing his duty, and it is proved that such illness has been caused by his own wilful act or default, he shall not be entitled to wages for the time during which he is incapable of such illness in performing his duty.

In 1867, 242,093 gallons of juice of lemons, limes, and oranges were imported into the United Kingdom.

JUNIPER BERRIES. [BERRIES.]

## K

### KAURI GUM. [GUM.]

**KELP.** A substance composed of different materials, of which the fossil or mineral alkali or, as it is commonly termed, soda, is the chief. This ingredient renders it useful in the composition of soap, in the manufacture of alum, and in the formation of crown and bottle glass. It is formed of marine plants, which, being cut from the rocks with a hook, are collected and dried on the beach to a certain extent; they are afterwards put into kilns prepared for the purpose, the heat of which is sufficient to bring the plants into a state of semi-fusion. They are then strongly stirred with iron rakes; and when cool, condense into a dark blue or whitish mass, very hard and solid. Plants about 3 years old yield the largest quantity of kelp. The best kelp has an acrid, caustic taste, a sulphurous odour, is compact, and of a dark blue greenish colour. It yields about 5 per cent. of its weight of soda. (Barry's *Orkney Islands*, p. 377; Thomson's *Dispensatory*.)

The manufacture of kelp is, or rather was, principally carried on in the Western Islands, and on the western shores of Scotland, where it was introduced from Ireland, about the middle of last century. Towards the end of the war which closed in 1815, the kelp shores of the island of North Uist let for 7,000*l.* a-year. It has been calculated that the quantity of kelp annually manufactured in the Hebrides only, exclusive of the mainland, and of the Orkney and Shetland Isles, amounted, at the period referred to, to about 6,000 tons a-year; and that the total quantity made in Scotland and its adjacent isles amounted to about 20,000 tons. At some periods during

that war it sold for 20*l.* per ton. (Art. Scotch *Edinburgh Encyclopædia*.)

The foundations on which this manufacture rested were, nevertheless, altogether precarious, existence depended on the maintenance of high duties on barilla and salt. Inasmuch, however, as kelp could not be substituted, while undergoing a very expensive process, for barilla in a great many departments of industry in the use of mineral alkali is indispensable, it became necessary materially to reduce the high wages laid on barilla. The ruin of the kelp manufacture has been ascribed to this reduction; but the barilla had been altogether excluded from the markets, which could not have been done without great injury to the many most important manufactures, the result would have been precisely the same, in so far as kelp is concerned, as the high duty on salt had also been maintained. It was the repeal of the latter that gave the manufacture the coup de grace. The purchase of kelp, so as to render it fit for soap-making, is much more troublesome and expensive than the decomposition of salt; and the greater quantity of alkali used is now obtained by the latter method. Had the duty on salt not been repealed, kelp might still have been manufactured notwithstanding the reduction of duty on barilla.

The manufacture is now almost extinct. That formerly yielded the proprietors a revenue of 200*l.* to 500*l.* a-year, are now worth nothing. The price of kelp since 1822 has been, at an average, above 4*l.* per ton; and the article will, most probably, soon cease to be produced.

This result, though injurious to the proprietors of the shores, and productive of temporary distress to the labourers employed in the manufacture, is not to be regretted. It could not have been obtained without keeping up the price of some of the most important necessaries of life at a forced and unnatural elevation. The proprietors had not the vestige of a ground for considering that such a state of things would be permanent; they did not expect that Government was to subject the country, during peace, to some of the severest privations occasioned by the war, merely that they might continue to enjoy an accidental advantage.

**KENTLEDGE.** The name sometimes given to the iron pigs cast in a particular form for ballasting ships, and employed for that purpose. **KERNES** (Ger. *scharlachbeeren*; Dutch, *grain scharlackbeessen*; Ital. *grana, chermes, cermese, scharlackbeessen*; Span. *grana kermes, grana de la cosejoja, cochin*; Fr. *grana kermes, grana de la cosejoja*). An insect (*Coccus ilicis*, Linn.), of the same species as the true Mexican cochineal, found upon the *Quercus ilex*, a species of oak growing in Spain, France, the Levant &c. Before the discovery of America, kermes was the most esteemed drug for dyeing scarlet, and had been used for that purpose from a very remote period. Beckmann inclines to think that it was employed by the Phœnicians, and that it excelled even the famous Tyrian purple. (*History of Inventions*, vol. ii. p. 197, Eng. ed.) From the name of *coccum* or *coccus*, cloth dyed with kermes was called *coccinum*, and persons wearing this cloth were said by the Romans to be *coenati*. (*Mart. lib. i. epig. 97, lin. 6.*) It is singular, however, notwithstanding its extensive use in antiquity, that the ancients had the most incorrect notions with respect to the nature of kermes; many of them supposing that it was the grain (*grana*) or fruit of the *ilex*. This was Pliny's opinion; others, after him, considered it in the same light, or as an excrement formed by the fracture of a particular kind of fly, like the gallnut. It was not till the early part of last century that it was finally and satisfactorily established that the kermes is really nothing but an insect assuming the appearance of a berry in the process of drying. The term kermes is of Persian origin. The Arabians had been acquainted with this production from the earliest periods in Africa; and having found it in Spain, they cultivated it extensively as an article of commerce, as well as a dye drug for their own use. But since the introduction of cochineal, it has become an object of comparatively trifling importance. It is still, however, prepared in some parts of Spain, and dyed with kermes are of a deeper colour; but though much inferior in brilliancy to the scarlet dyes dyed with real Mexican cochineal, they retain the colour better, and are less liable to fade. The old tapestries of Brussels, and other manufactures in Flanders, which have scarcely lost anything of their original vivacity, though 200 years old, were all dyed with kermes. The history of this production has been treated with great accuracy by Beckmann (*History of Inventions*, vol. i. pp. 171—191, 1st ed. trans.); and by Dr. Bancroft (*Permanent Colours*, vol. i. pp. 393—409).

**KEY-WEST.** A small island from 4 to 5 miles length, by 1 in width; 56 miles S.W. from Cape Sable in Florida. It is one of the Florida Keys, or of that extensive circular range of low sandy banks, and reefs, which fences the coast of Florida, and forms the northern boundary of the Gulf Stream, from the Tortugas Islands on the northward to Cape Florida on the N. There are

two lighthouses, one on the N.W. passage, another on the S.W. point of the island. About 7½ miles S.W. from Key-West Lighthouse is another, which gives a flash for 10 seconds every alternate minute. The town of Key-West, near the N.W. part of the island, has about 1,600 inhabitants, and an excellent harbour, with about 25 feet water. A safe passage, about 6 miles in length, leads by Key-West from the Gulf Stream to the Gulf of Mexico. It has 12 feet water at ebb tide, and vessels from the N. bound for New Orleans, Mobile &c., or from the latter for the former, by passing through it, avoid the delay and danger of the more westerly passage round the Tortugas.

Owing to the frequent accidents to shipping from coming in contact with the banks and reefs in this dangerous vicinity, the American Government has organised an establishment at Key-West for the assistance of ships in distress, and made it the seat of an admiralty court for the adjudication of claims for salvage. The former consists of above 20 licensed vessels, with crews of about 10 men each. These are kept constantly cruising about on the look-out for ships in distress or wanting pilots; and as their emolument principally depends on the fees they obtain for their assistance, it may be fairly assumed that it will be rendered with the greatest alacrity. But the desirable thing is to hinder vessels from getting on shore, the assisting them when in that predicament being, though an important, a secondary consideration. The latter, however, and not the former, is the main object which the licensed cruisers of Key-West have in view; and it would be preferable could means be devised for making their remuneration depend rather on their success in preventing disasters than, as at present, in mitigating their influence. This is by no means easily done. Shipwrecks will, perhaps, be more effectually prevented by increasing the number of lighthouses, light-vessels, and sea-marks, along the edges of the islands and reefs, than in any other way. We subjoin an account of the ships wrecked, the sums awarded as salvages by the court of Key-West &c., in each of the 14 years ending with 1857.

Year	Number of Vessels	Salvage	Expenses	Value of Vessels and Cargoes
1844	29	dols. 95,712	dols. 169,665	dols. 725,000
1845	26	69,592	105,709	737,000
1846	56	122,892	251,125	1,597,500
1847	37	109,030	200,600	1,624,000
1848	32	125,300	207,560	1,688,000
1849	47	127,870	219,160	1,305,000
1850	50	122,831	200,860	929,800
1851	51	75,872	165,865	911,500
1852	35	80,112	163,000	675,000
1853	57	171,350	230,100	1,973,000
1854	61	82,940	166,365	2,314,000
1855	80	108,065	189,800	2,844,077
1856	71	163,117	292,641	4,797,600
1857	59	101,890	172,984	2,666,450
Total	635	1,556,153	2,683,295	21,599,067

(Blunt's *American Pilot*, p. 25; Hunt's *Commercial Magazine* for February 1858; &c.)

**KINO** (Fr. *gomme de kino*; Span. *quino*; Ger. *kinoharz*; Ital. *chino*). A gum, the produce of trees that grow in the East and West Indies, Africa, Botany Bay &c. The researches of Dr. Pereira and others have shown that kino is a vegetable extract or gum, obtained by boiling twigs of a tree (*Pterocarpus marsupium*) which grows in the East and West Indies, Africa, South America, and Australia. The nut is that exported from Bombay. The substance is found in small angular brittle fragments of a deep scarlet red colour, and of a glistening appearance. When chewed, it tinges the saliva blood-

red. It has a bitter, highly astringent taste, but leaves a slight sense of sweetness in the mouth. Kino contains a large quantity of a peculiar kind of tannin, 75 per cent, according to some chemists, but is chiefly used in medicine. (*Pereira's Materia Medica*; Wood and Baehre's *United States Dispensary*; *British Pharmacopœia* 1867.)

**KIU KIANG.** This river-port is situated at the outlet of the great Po Yang Lake, which occupies a vast area in the centre of the province of Kiang-si. It is distant 445 geographical miles from Shanghai, and 137 from Hankow. The object which the British ministers had in claiming this as one of the open ports in the treaty of 1861 seems to have been its proximity to the green tea districts of Kiang-si and Ngan-hwei. This important city was almost destroyed by the Taeping rebels, who occupied it from 1853 to 1858. When, however, this rebellion came to an end, the population rose anew from 10,000 to 40,000 souls in 1862. In 1866 there were at Kiu Kiang 8 British mercantile houses or agencies, and 3 United States firms. There is a British consul on the spot.

The following are the exports of tea for the years 1863-6:—

	1863	1864	1865	1866
	lbs.	lbs.	lbs.	lbs.
Black	9,818,008	10,294,555	8,961,558	12,476,400
Green	15,721,415	7,699,003	18,140,790	10,449,666
Leaf	832,635	326,348	152,788	131,313

This return for 1866 is exclusive of tea dust, 823,333 lbs. of which were exported in 1866.

#### Trade of Kiu Kiang, 1864-1866.

	1864	1865	1866
Exports (ex. treasure)	£1,533,053	£2,911,413	£2,009,606
Imports (ex. treasure)	1,041,218	1,161,633	1,301,070

479 vessels (almost exclusively British and American) of 357,875 tons entered, and 477 of 357,016 tons cleared the port in 1866. The chief imports are textile fabrics and opium.

**KNIVES** (Ger. messer; Dutch, messen; Fr. couteaux; Ital. coltelli; Span. cuchillos; Russ. noshi). Well-known utensils made of iron and steel, and employed to cut with; they are principally manufactured in London and Sheffield. Knives are made for a variety of purposes, as their different denominations imply; such as table knives, pen knives, oyster knives, pruning knives &c. Although England at present excels every part of the world in the manufacture of knives, as in most branches of cutlery, the finer kinds were imported until the reign of Elizabeth. It is stated by Mr. Macpherson (*Annals of Com.*, anno 1563) that knives were not made for use in England till 1563; but there can be no doubt that this is an error. They had been made, though probably of a rude and clumsy pattern, for centuries before, in the district called Ilal' shire, of which Sheffield is the centre; and the cutlers of London were formed into a corporation in 1417. (*Manufactures in Metal*, vol. ii. c. i., in Lardner's *Cyclopædia*.)

**KÖNIGSBERG.** The capital of East Prussia, in lat. 54° 42' 11" N., long. 20° 29' 15" E. Population, in 1864, 101,507.

**Port &c.**—Königsberg is situated on the Pregel, which flows into the Frische Hafl, or Fresh Bay, a large lake having from 10 to 14 feet water. The bar at the mouth of the Pregel has only from 10 to 11 feet water, so that vessels of more than that draught of water require to be lightered to come up to Königsberg. Pillau, in lat. 54° 33' 39" N., long. 19° 52' 30" E., on the north side of the entrance from the Baltic to the Frische Hafl, is

properly the port of the town, and since 1866 has been connected with it by railway. Within these few years a lighthouse has been erected on a rising ground a little to the south of Pillau, the lantern of which is elevated 95 feet above the level of the sea. The light is fixed and brilliant. The entrance to the harbour is marked by buoys; those on the larboard side being surmounted by small flags. A Gothic building, 120 feet above the level of the sea, has been erected to serve for a landmark; at a distance it looks like a three-masted ship under sail. There is usually from 15 to 16 feet water between the buoys on entering the harbour; but particular winds occasion material differences in this respect.

**Trade of Königsberg.**—Being situated on a navigable river of considerable importance, Königsberg has a large command of internal navigation, and is the principal emporium of a large extent of country, but her importance will be much increased by the completion of the East Prussian Southern Railway. Wheat, rye, and other species of grain are the chief articles of export. The wheat is somewhat similar to that of Dantzic, but of inferior quality, being larger to the berry, and thicker skinned. The rye is of good quality, but barley, with few exceptions, is thin and light. A few remarkably large and fine pens are exported; but the bulk are of small size and inferior. Oats are common feed, with a slight admixture of tares; but as these last answer in some degree the purpose of beans, the value of the oats is rather enhanced than otherwise by the circumstance. More tares are shipped here than from any other port in the Baltic. The price of all sorts of grain is usually lower at Königsberg than at the neighbouring Prussian ports. Linseed and rapeseed, hemp, flax, linum, oil-cake, oil, bristles, refined sugar &c. are largely exported; with smaller quantities of bones, madder, ashes, feathers, wax, hides and skins &c. The bristles are the best in the Baltic. Timber, deals, and staves are as good as at Memel, but being scarce, few or none are exported. The imports are sugar, tea, herrings, iron and steel, coffee, wines, tin and tin plates, dye woods, tobacco, spices, drugs, coals &c. The Government monopoly of salt has been abolished, and it will for the future, says Mr. Consul Hertzel, be subject to an import duty of 2 thalers or 60 per cwt. In 1866 there arrived at Pillau 1,220 vessels of 154,036 tons, of which one-third were British.

**Money, Weights, and Measures**, same as at DANTZIC.

The following dues are charged on shipping at Königsberg and Pillau.

#### At Pillau.

If with cargo:

On arrival, 4 silbergroschen per last.

On departure, 4 silbergroschen per last.

If in ballast or empty:

On arrival, 2 silbergroschen per last.

On departure, 2 silbergroschen per last.

Ships had formerly to pay, respectively, 10 and 7½ silbergroschen per last, before June 1866, and subsequently, and up to May 15, 1867, 8 and

#### At Königsberg.

River Pregel's Mouth.—Money for vessels coming to Königsberg, in and out—

If with cargo, 3 silbergroschen 6 pfennige per last,

If in ballast, 1 silbergroschen 9 pfennige per last,

, and since 1866 has  
 away. Within these

against the former dues of, respectively, 5 silver-groschen 6 pfennige, and 2 silvergroschen 9 pfennige per last.

The Königsberg town dues, such as stream and bulwark money, River Pregel Mouth money, and bridge money, are reduced to half of the former rates from May 15, 1867, and Consul Hertlet (Report, April 1867) holds out hope that all local dues will be abolished, and that the harbour dues will be assimilated to those of Hanover.

**KURRACHEE.** A sea-port of British India, at the N.W. extremity of the coast of Sind, lat. 24° 51' N., long. 67° 2' E. Population of town and suburbs in 1853, 22,227. It derives almost all its importance from its being the only safe sea-port on the coast of Sind, and from its adaptation to serve as the grand W. emporium of the vast territories traversed by the Indus. In this respect it holds fair entirely to supersede Tatta, elsewhere described. It is situated about 22 miles E. from Cape Monze, on a level piece of ground at the extremity of the Brahooic mountains. The harbour, which is spacious and secure, has a bar in its mouth, on which there are from 16 to 18 feet water at high-water ordinary tides, and from 20 to 21 feet or upwards at high-water springs. And allowing for the difference in the statements with respect to the depth of water on the bar, still there can be no question that the harbour has been safely entered by ships of from 700 to 800 tons burden or upwards; and it is accessible at all times of the year, even during the season of the monsoons. It appears, indeed, to be sufficiently established, that, with a properly organised pilot establishment, and the employment for one or more years of two or three powerful steam dredging machines to deepen or remove the bar, the port would be constantly available for ships of from 800 to 1,000 tons. Kurrachee has a lighthouse at Massora Fort, visible 16 miles in clear weather.

A railway, certainly the most important for its length (10 miles) of any in India, has been completed, from Kurrachee to Hyderabad on the Indian coast, the point at which the latter becomes available for large ships, and from which it may be navigated for about 570 miles by steamers built for the purpose. There is, consequently, every prospect of Kurrachee becoming one of the most important of the Eastern emporiums. It would be useless to dwell on the all but boundless extent, the great natural riches, and the immense capacities of improvement of the countries watered by the Indus and its affluents; and it may fairly be doubted, taking these circumstances into account, whether the anticipations of those who regard that the commerce of Kurrachee is destined, at some future and not very remote period,

to equal that of New Orleans, the emporium of the Mississippi, be really so very wide of the mark as at the first blush of the matter they may seem even at present, its trade is far from inconsiderable.

It has two routes to Tatta, and it has been said that there is a water communication between Kurrachee and the Indus; but this has been denied, and is most probably a mistake. No doubt, however, it would be easy, from the nature of the ground, to cut a canal between them, and this may, at some future period, be an expedient measure. In the mean time the railway, by bringing Kurrachee into contact, as it were, with Hyderabad and the deep water of the Indus, has made it the port of India have been carried in the first instance to Kurrachee.

In 1866-7 the exports consisted principally of wheat and other grain, provisions and oilman's stores, raw silk, raw cotton, oil and oil seeds, saltpetre and wool (which has rapidly increased, and is now by far the most important article), indigo, munjeet or madder, drugs &c. But when the navigation of the Indus is carried on actively, Kashmere shawls, silk, and a great variety of the most valuable articles, will be added to the list of exports.

The imports consist of cotton stuffs and twist, iron, hardware, and machinery, spices, wines &c.

**I.—Account of the Values (in Rupees) of the Imports into and Exports from Kurrachee in each of the 10 Years ending with 1865-6, with Amount of Customs Duties collected.**

Year	Imports		Exports		Total Value	Customs Duty
	Rs.	Rs.	Rs.	Rs.		
1856-7	68,56,657	73,45,222	1,42,01,879	—	1,42,01,879	—

LABUAN. A small island off the N.W. coast of Borneo, a dependency of the British crown, about 6 miles distant from the nearest point of the mainland, and 30 miles N. from the city of Borneo or Bruni, lat. 5° 12' N., long. 115° 19' 36" E. It is from 25 to 30 miles in circuit, flat, and covered with wood. The anchorage, on the S. side of the island, is protected by a greater and 3 smaller islands; and the town of Victoria has been commenced at the embouchure of a rivulet in a small bay, at the head of the anchorage. Coal of good quality is found on the island, and it is well supplied with fresh water. It was ceded by the Sultan of Borneo to Great Britain in 1844; and the late Sir James Brooke, who negotiated its cession, was afterwards appointed its governor. When it came into our possession it

We have been indebted for these details, partly to the art. 'Kurrachee' in Thornton's excellent *Gazetteer of India*, and to the work of Mr. Anderton on the *Indus and its Provinces*, and partly to official papers of a later date, and private information. For tariff, see CALCUTTA.

L

was uninhabited; but its situation is such that provided it be moderately healthy, it can hardly fail to become an important emporium. It lies near the best route for shipping from the Straits of Singapore to China, and, while it is extremely well situated for carrying on trade with the W. and N. coasts of Borneo and the Philippine Islands, it will serve as a harbour of refuge, and as a convenient station for the steamers and other ships of war required to put down the piracy that has been, to the great injury of commerce, carried on to so great an extent from the ports and rivers of Borneo, and of some of the adjacent islands. In this respect its abundant supply of coal will be of the greatest service. In war the possession of Labuan will give us the entire command of the Chinese sea. (Brooke's Journal, and a paper

Mr. Crawford in Keppel's *Borneo*, ii. pp. 144, 203.

The total population of Labuan on January 1, 1867, was 3,828 persons, exclusive of military and convicts. The number of vessels which entered and cleared in 1863 was 25 of 7,332 tons, and 24 of 6,567 tons, the shipping gradually increasing. The shipping was chiefly British and from Singapore. The imports were worth, in 1866, 106,134*l.* 12*s.* 4*d.*, the chief items being piece goods, machinery, birds' nests, and specie. The exports were 58,293*l.* in value. In 1866 the coal mines produced 11,317 tons of coal.

Borneo or Bruai, on the adjacent shore of the mainland, the residence of the Sultan of Borneo Proper, has been termed the Venice of the East. It contains from 30,000 to 40,000 inhabitants, mostly Malays, and really seems as if it floated on the waves. It is situated on an estuary, and although built with little regard to regularity, it is intersected crosswise by two main streets, which divide it into 4 portions, 1 only of which stands on dry land. The houses in the other 3 parts are of wood built on piles, which support them above the water, with streets, if so they may be called, to admit the passage of canoes. The steamer which conveyed Sir James Brooke to Borneo, when Labuan was ceded, anchored in the main street in the centre of the town. 'The greatest novelty at Bruni,' says Mr. Marryat, from whom we have borrowed these details, 'is the floating bazaar. There are no shops in the city, and the market is held every day in canoes. These come in at sunrise every morning from every part of the river, laden with fresh fruit, tobacco, pepper, and every other article which is produced in the vicinity; a few European productions, such as handkerchiefs, check-cotton prints &c. also make their appearance. Congregated in the main street, the canoes are tacked together, forming lanes through which the purchasers in their own canoes paddle, selecting and bargaining for goods with as much convenience as if the whole were transacted on terra firma. This is here so valuable that it is used as money, one hundred flat pieces an inch square are valued at a dollar, and among the lower classes these iron pieces form the sole coin. They are unstamped, and that person appears to be at liberty to cut them into money; but whether such is really the case, I cannot vouch.' (Marryat's *Travels*, p. 113.)

Though deficient in iron, the gold mines of Borneo are said to be of the richest description. Stamford Raffles estimated that in his time about 32,000 Chinese labourers were employed in the mines on the W. coast of Borneo; and it is not easy to say how productive they might have been, were the miners in a condition to prosecute their undertakings in safety, and to bring the resources of science and capital to their aid. Mercury is also found in abundance in Borneo, especially in the district of Sarawak, of which Sir James Brooke was rajah; and the diamonds of Borneo rival those of India and Brazil. But independently of its coal, and of its precious and base metals, its vegetable products might alone furnish the materials of an extensive commerce. The sago palm grows in great perfection in many parts of the island, and sago is largely exported through state to Singapore. The areca nut, betel nut, gutta percha, gumi-benjamin, camphor, benzoin &c. are also considerable articles of commerce; and sugar, pepper, and all the products of the tropical regions, might, with a little care, be raised to any extent in most parts of this vast island. The numbers and ferocity of the savages

by whom it is occupied present, indeed, insurmountable obstacles to its improvement; but civilisation is beginning to make its way amongst them; and, though probably slow, its progress cannot well be arrested. Mr. Vico-Consul Martin's *Report* of February 29, 1868, states the value of the exports from Sarawak in 1866 at 74,849*l.*, and that of the imports 83,844*l.*, showing a decrease as compared with 1865 of about 30,000*l.* in each case.

LAC or GUM LAC (Ger. lack, gummilack; Fr. laque, gomme laque; Ital. lacca, gomma-lacca; Span. goma laca; Russ. lakka, gummilak; Arab. lank; Hin. lak'h; Sansc. laksha). A substance, which has been improperly called a gum, produced in Bengal, Assam, Pegu, Siam &c., on the leaves and branches of certain trees, by an insect (*Chermes lacca*). The trees selected by the insect on which to deposit its eggs are known by the names of the bilhar tree (*Croton laciferum*, Linn.), the rael (*Butea frondosa*), bott, and coosim trees &c. After being deposited, the egg is covered by the insect with a quantity of this peculiar substance, or lac, evidently intended to serve, in the economy of nature, as a nidus and protection to the ovum and insect in its first stage, and as food for the maggot in its more advanced stage. It is formed into cells, finished with as much art as a honeycomb, but differently arranged. Lac yields a fine red dye, which, though not so bright as the true Mexican cochineal, is said to be more permanent; and the resinous part is extensively used in the manufacture of sealing-wax and hats, and as a varnish.

Lac, when in its natural state, encrusting leaves and twigs, is called *stick lac*; it is collected twice a-year; and the only trouble in procuring it is in breaking down the leaves and branches, and carrying them to market. When the twigs or sticks are large, or only partially covered, the lac is frequently separated from them, as it always ought to be when shipped for Europe, to lessen the expense of freight. The best stick lac is of a deep red colour. When held against the light, it should look bright, and when broken should appear in diamond-like points. If it be not gathered till the insects have left their cells, it becomes pale, and pierced at the top; and it is of little use as a dye, though probably better for a varnish.

*Lac dye, lac lake, or cake lac*, consists of the colouring matter extracted from the stick lac. Various processes have been adopted for this purpose. It is formed into small square cakes or pieces, like those of indigo. It should, when broken, look dark-coloured, shining, smooth, and compact; when scraped or powdered, it should be of a bright red colour, approaching to that of carmine. That which is sandy, light-coloured, and spongy, and which, when scraped, is of a dull brickdust colour, should be rejected.

Notwithstanding the continued fall in the price of cochineal, the use of lac dye has been extending in this country. The annual consumption may at present (1868) amount to about 1,200,000 lbs., having more than quintupled since 1818. The finest qualities of lac dye are seldom met with for sale in Calcutta, being generally manufactured under contract for the European market.

When stick lac has been separated from the twigs to which it naturally adheres, and coarsely pounded, the native silk and cotton dyers extract the colour as far as it conveniently can be done by water. The yellowish, hard resinous powder which remains, having somewhat of the appearance of mustard seed, is called *seed lac*. When liquefied by fire, it is formed into cakes, and denominated *lump lac*. The natives use the latter

in making bangles, or ornaments in the form of rings, for the arms of the lower class of females; the best *shellac* being used in manufacturing these ornaments for the superior classes.

*Shellac* is produced from seed lac, by putting the latter into bags of cotton cloth, and holding it over a charcoal fire, when the lac melts, and being strained through the bag, the resinous part, which is the most liquefiable, is obtained in a considerable degree of purity; it is formed into thin sheets or plates.

The largest consumers of shellac are hatters, sealing-wax and varnish makers.

Shellac is of two kinds—the thin flaky, called orange, garnet and liver; and the thicker sort, called button, which again is of two kinds, the bright amber-coloured and the dark.

Hatters use most the flaky dark, which, if pure, is of the strongest body. Varnish makers prefer the bright button. Sealing-wax makers give a decided preference to the button sorts. The bright button being the finest, requires less vermilion to overcome its strong properties, 25 years ago orange shellac was almost the only sort known in the market.

Shellac is greatly adulterated by resin, more especially the dark button sorts. The best test of the purity of button shellac is its fragrance of smell when on fire. This, with the pure buttons, both the amber and the dark, is most agreeable.

In Bengal, lac is chiefly produced in the forests of Sylhet and Burdwan, and nine-tenths of the shellac in the district round Cawnpore. The finest dye is said to be obtained from the stick lac of Siam and Pegu; but the shellac or resinous part obtained from the latter is inferior to that produced from Sylhet stick lac. It may be obtained in almost any quantity.

The duties formerly charged on lac when entered for consumption were repealed in 1845.

In 1867, 31,633 cwts. of shellac were imported, and 26,660 cwts. exported. During the same year the imports of lac dye were 9,260 cwts. Lac dye does not figure in the exports.

The finest lac dye is distinguished by the mark D. I., the 2nd by T. D., the 3rd by J. Mc. R., C. E. &c. The prices vary from 6*d.* to 2*s.* 5*d.* per lb.

The duties used to be 5 per cent. on lac dye, seed lac, and stick lac; and 20 per cent. on shellac; but it was obviously absurd to charge shellac, which, as already seen, is prepared from the refuse of lac dye, with four times the duty laid upon the latter. In 1842 the duties were reduced to 1*s.* per cwt., and, as already seen, were repealed in 1845. (Bancroft *On Permanent Colours*, vol. ii. pp. 1-60; Ainslie's *Mat. Med.*; Milburn's *Orient. Com.*; and *private information*.)

LACE (Dutch, kanten; Fr. dentelle; Ger. spitzen; Ital. merletti, pizzi; Russ. krushewo; Span. encojes). A plain or ornamented net-work, tastefully composed of many fine threads of gold, silver, silk, flax, or cotton, interwoven, from *Lacinia* (Lat.), the guard hem or fringe of a garment.

The origin of this delicate and beautiful fabric is involved in considerable obscurity; but there is no doubt it lays claim to high antiquity. In Mr. Hope's *Costumes of the Ancients*, many beautiful lace patterns are portrayed on the borders of the dresses of Grecian females; and from the derivation of the word 'lace,' it is probable it was not unknown to the Romans. It is supposed that Mary de' Medici was the first who brought lace into France, from Venice, where, and in the neighbouring states of Italy, it is understood to have been long previously worn; but we find that in England, so early as 1483, 'laces of thread, and

laces of gold, and silk and gold,' were enumerated among the articles prohibited to be imported. (1 Rich. III. c. 10.) It is, therefore, fair to presume that this manufacture had begun in England prior to that period, as this and many subsequent Acts were passed (19 Hen. VII. c. 21; 5 Eliz. c. 7; 13 & 14 Ch. II. c. 13; 4 & 5 Wm. & Mary c. 10 &c.) for the encouragement and protection of our home manufacture; but it may equally be concluded, that as *pinis* (which are indispensable in the process of lace making) were not used in England till 1513, the manufacture of lace must have been vulgar in fabric, and circumscribed in its extent. Tradition says that the lace manufacture was introduced into this country by some refugees from Flanders, who settled at or near Cranfield, now a scattered village on the west side of Bedfordshire, and adjoining Bucks; but there is no certain evidence that we are indebted to the Flemings for the introduction of this beautiful art, though we undoubtedly owe to them most part of our manufactures of articles of dress; we have also imitated many of their lace fabrics, and greatly improved our manufacture by profiting by the superior taste which they had displayed in the production of this article.

In 1626 Sir Henry Borlase founded and endowed the free school at Great Marlow, for 24 boys to read, write, and cast accounts; and for 24 girls to knit, spin, and make *bone lace* (Lewin's *Topography*); so that there is reason to suppose that at this time the manufacture had commenced in Buckinghamshire, which by degrees extended to the adjoining counties of Bedford and Northampton. In 1640 the lace trade was a flourishing interest in Buckinghamshire (Fuller's *Works* and different *Itineraries*); and so greatly had advanced in England, that by a royal ordinance in France, passed in 1660, a mark was established upon the thread lace imported from this country and from Flanders, and upon the point lace from Genoa, Venice, and other foreign countries, in order to secure payment of the customs duty. (*Universal Dictionary*.)

*Pillow Lace*—the original manufacture worked upon a hard stuffed pillow, with silk or cotton threads, according to a parchment pattern placed upon it, by means of pins, bobbins and spindles, which are placed and displaced, weaving, and interweaving the threads, so as to make the pattern designed. This manufacture has long pursued in almost every town and village of the midland counties, particularly in Buckinghamshire, Bedfordshire, and Northampton, besides at Honiton in Devon, and various other places in the west of England. The principal places where it is made in the Netherlands are Antwerp, Brussels, Mechlin, Louvain, Valenciennes, and Lisle. It is also made at Chantilly near Paris (celebrated for veils), Chaville, Sedan, Le Comté de Bourgogne, La Dieppe, Havre, Harfleur, Pont l'Évesque, Fécamp, Caen, Arras, Bapaume &c. in France, and at various places in Spain, Portugal, and Italy. In England and Ireland, besides the places named, it has been very generally pursued at different times to encourage and improve the manufacture, associations were formed in various places, with the view of exciting a spirit of emulation and improvement, by holding premiums for the production of the best pillow-bone lace; and although smuggling of this kind of lace was carried on to a great extent (in 1720, 72,000 clls of French lace were seized in the county of Leigh, and lodged in the king's warehouse there, besides numerous other seizures), the British manufacture advanced in an unparalleled degree.  1751, vol. xxi. p.

tel. xiii. p. 434.) It is imagined that the first  
 lace ever made in this country was of the sort  
 called *Brussels Point*, the net work made by bone  
 bobbins on the pillow, and the pattern and sprigs  
 worked with the needle. Such appears to have  
 been the kind worn by the nobility and people of  
 high rank, as is evident by the different portraits  
 now in existence, painted by Vandyke, in the  
 reign of Charles I., and afterwards by Sir Peter  
 Paul and Sir Godfrey Kneller, in the succeeding  
 reigns of Charles II., Queen Anne, and George I.  
 About a century since, the *grounds* in use were  
 the old Mechlin, and what the trade termed the  
*new ground*, which was very similar, if not iden-  
 tical, with the *modern Mechlin*, the principal  
 article in the present French manufacture. The  
 dresses made in these grounds were singularly rich  
 and durable; the designs of the *old Mechlin*  
 resembled the figures commonly introduced in  
 ornamental carving. Between 70 and 80 years  
 ago a great deterioration was occasioned by the  
 introduction of the *Trolly ground*, which was  
 exceedingly coarse and vulgar, the figures angu-  
 lar, and altogether in the worse taste conceiv-  
 able. An improvement, however, took place about the  
 year 1776, when the ground, which is probably  
 the most ancient known, was re-introduced; this  
 was other than the one still in partial use, and  
 denominated the *old French ground*. About 1777,  
 or 1778, quite a *new ground* was attempted by the  
 inhabitants of Buckingham and its neighbourhood,  
 which quickly superseded all the others; this was  
 the *point ground*, which had (as is supposed) been  
 imported from the Netherlands. From the first  
 appearance of this ground may be dated the origin  
 of the modern pillow-lace trade; but it was not  
 until the beginning of the present century that  
 the most striking improvements were made; for  
 during the last quarter of the 18th century, the  
 article, though certainly much more light and  
 elegant than the construction of the ground, was  
 remarkably poor and spiritless in the design. Soon  
 after the year 1800, a freer and bolder style was  
 adopted; and from that time to 1812, the im-  
 provement and consequent success were astonishing  
 and unprecedented. At Honiton, in Devon, the  
 manufacture had arrived at that perfection, was  
 so useful in the workmanship, and so delicate and  
 beautiful in the design, as not to be excelled  
 even by the best specimens of Brussels lace.  
 During the war with France, veils of this lace were  
 sold at from 20 to 100 guineas; they are  
 now sold at from 8 to 15 guineas. The effects of  
 the introduction of machinery, however, were about  
 the same felt; and in 1815 the broad laces began  
 to be superseded by the new manufacture. The  
 lace trade has since been gradually  
 cutting into insignificance, compared with its  
 extent 30 years back. It is difficult to form  
 an accurate estimate of the number of persons employed in  
 the lace-making during its prosperity; but in  
 consequence of the competition from the makers in  
 the neighbourhood, presented to Queen Adelaide  
 in 1819, it was stated that 120,000 persons were  
 employed on the trade; but this number has  
 been very greatly diminished.

**Nottingham Lace.**—A frame-work knitter of  
 Nottingham, named Hammond, about the year  
 1780, was the first who made lace by machinery.  
 Though dissipated and destitute of money, em-  
 ployment, or credit, the idea struck him, while  
 engaged at the broad lace on his wife's cap, that  
 he could fabricate a similar article by means of  
 a frame-work. (Gravener Henson *On Hosiery*,  
 &c. p. 295.) He tried, and succeeded. The  
 machine ostensibly for lace (introduced at  
 Nottingham about the same period) was called a

pin machine, for making single press point net in  
 imitation of the Brussels ground. This machine,  
 although lost here, is still used in France in  
 manufacturing the net called *tulle*. France in  
 the age of experiments; and workmen at their  
 leisure hours employed themselves in forming  
 a complete hexagon, in the hope of perfecting  
 all their efforts to discover. Had hitherto eluded  
 France was introduced, which is still in use for  
 attempting to make *bobbins net* by machinery; but  
 this was not found to answer. During the suc-  
 ceeding 10 years many alterations were made in  
 the construction of the machines, with no better  
 success, until at length, in 1809, Mr. Heathcoat, of  
 Tiverton, succeeded in discovering the correct  
 principle of the bobbin-net frame, and obtained a  
 patent for 14 years for his invention. Steam  
 power was first introduced by Mr. John Lindley,  
 in 1815-16; but did not come into active opera-  
 tion till 1820. It became general in 1822-23; and  
 a great stimulus was at this period given to the  
 trade, owing to the expiration of Mr. Heathcoat's  
 patent, the increased application of power, and  
 the perfection to which the different hand frames  
 had by this time been brought. A temporary  
 prosperity shone on the trade; and numerous  
 individuals—clergymen, lawyers, doctors, and  
 others—readily embarked capital in, and  
 a speculation. Prices fell in proportion as pro-  
 duction increased; but the demand was immen-  
 se; of general supply—rivalling and supplanting, in  
 plain nets, the most finished productions of France  
 and the Netherlands.

**Bobbin Net Manufacture.**—In a former edition of  
 this work, it was estimated that in 1813 there were  
 employed in the production of machine lace 4,000  
 hands, receiving 165,000*l.* in wages; that the trade  
 was confined to about 15 houses in Nottingham  
 and the neighbourhood, and that the 'estimated  
 total value of the bobbin net and warp lace trade  
 amounted to 2,740,000*l.*' A remarkable advance  
 has taken place since that period, owing to the  
 improvements which have been made in the ma-  
 chinery. In an admirable paper on the history of  
 Nottingham (a most competent authority), before  
 the Society of Arts, and published in their Journal  
 for May 1856, he says: 'The era of ornamenting  
 lace upon the machine has certainly been ushered  
 in—the results are now startling and of incalculable  
 importance. Every fancy article, from the narrow  
 lace edging to the two-yard-wide store curtain,  
 requiring some thousands of yards to complete  
 the design, are now as much familiarised to our  
 mechanicians, designers, and workpeople, as they  
 were 20 years ago unthought of or unknown.'  
 Nothing can establish more conclusively the benefit  
 which has resulted to the trade, owing to the im-  
 provements in the machinery, than the periodical  
 reduction which has taken place in the price of  
 the square yard. Mr. Felkin says: 'The second  
 patented machine was a complex one; it required 60  
 motions to the formation of a mesh. A workman  
 at one of these machines, 36 inches in width, could  
 produce 1,000 meshes a minute. The motions  
 have gradually been reduced to six, and a machine  
 5 yards wide will turn off 40,000 meshes per  
 minute with ease. The first finished pieces were  
 sold at 100*s.* the square yard; in 1813, 40*s.*; 1815,  
 30*s.*; 1818, 20*s.*; 1821, 12*s.*; 1824, 8*s.*; 1827, 4*s.*;  
 1830, 2*s.*; 1833, 1*s.* 4*d.*; 1836, 10*d.*; 1842, 6*d.*;  
 1850, 4*d.*; 1856, 6*d.*: the last is about a natural aver-  
 age price.' These reductions, however, have been  
 greatly promoted by the improvements simulta-

neously made in the spinning of fine yarns. In 1810, No. 220 doubled yarn was worth 100s. per lb.; in 1856, only 10s. per lb.; and No. 240 in 1810 brought 140s., while in 1856 its selling price was 13s. only. Mr. Felkin adds:—

‘In 1831 embracing and finishing of lace employed wholly, or in part, about 150,000 hands. They received wages 1,500,000L. in the year. This fell, in 1833, to 550,000L., and 5’000 hands; and in 1836 to 350,000L., and 35,000 hands. Including wages at the machines, as well as the subsequent processes, there has been paid to at least 130,000 hands in 1856, 2,200,000L. in wages alone, in this department of the Nottingham lace trade.

‘In conclusion, the manufacture of bobbin-net lace by machinery is scarcely half a century old. The following will give an approximate idea of what in this brief interval it has become in this country:—

‘At several periods an account of the machines has been taken. In 1815 there were 140; 1820, 1,008; 1826, 2,469; 1831, 4,500—making a return of 3,417,000L.; 1833, 5,000, returning 2,620,000L.; 1836, 3,800, returning 2,212,000L.; in 1841, 4,200, returning 2,995,000L. In 1851 Mr. Birkin, reporting to Section 19 of the Great Exhibition, found 3,200 (34,382 quarters width) at work, returning 2,300,000L., employing about 2,965,915L. capital, and 133,075 hands. Capital in bobbin-net machinery alone was estimated at 1,329,415L.

‘In 1856 the machinery is increased to 3,500 (full 40,000 quarters in width), and greater power in production in the new ones. Also a far larger proportion is employed upon silk materials, and the number of frames making fancy goods forms now far the largest proportion. These changes will serve to account for the very large increase in the returns of the trade this year beyond 1850. 1,350 machines at least are rotary circulars, making plain goods by power in factories. At least 1,050 making fancies are worked by power, probably many more. About 2,158 machines in all, partly “levers,” partly circulars, some pushers, and some traverse warps, make fancy goods now. The materials are all imported, and cost on importation during the past year 920,000L. The returns were 3,680,000L., or thereabouts. This left for wages, interest, and profits, 2,760,000L.

‘If to these figures be added the cost of materials (all imported) in the warp-lace trade, 60,000L., and the ultimate returns, 860,000L., the result of the operations of the entire machine-wrought English lace trade will be: Raw materials used cost, 980,000L.; total returns, 4,040,000L.; paid in wages, interest, wear and tear, and profits, 3,060,000L. The entire number of hands employed may be stated at 135,000.

‘The trade was, until 1850 or thereabouts, cooped up in small unsightly workshops and warehouses for the most part, but has been transferred to a large extent into some of the noblest buildings of which any manufacturing town can boast. Factories, dressing-rooms, and warehouses are all becoming spacious, airy, and, I trust, healthy; at least 250,000L. has been expended within the last 7 years in this class of improvements.’

Between 1856, when the above account of the trade was written, and 1859, the wholesale houses had increased from 115 to upwards of 200; and a great many patents had been taken out for improvements in machinery for making fancy lace, for fabrics to be produced from lace machines, for gloves, shirts &c., and also for making gloves complete on the machines without seams. A new combination, by 4 different machines, of an imitation of Maltese lace was produced, and sold at 7s. per yard, which in Paris was readily

sold for 35 francs. This class of machinery has gradually been increasing in Nottingham and its neighbourhood, and Melbourne in Derbyshire; and from the great variety of articles produced, it is likely to go on increasing. In 1856 the machinery in Nottingham and its suburbs had increased by upwards of 300, making an additional amount of 4,200 quarters in width. This number would have been considerably greater, had not the panic in 1857 prevented it. At present very few machines are being built. The increase of machinery may be classed as follows—viz, 200 for making fancy lace, and 100 for plain nets. A few have been exported to France and Barcelona in Spain. The population of Nottingham and its suburbs was estimated in 1859 at about 159,000, the majority of which was employed in the lace and bobbin-net trades, and it was believed that the number of hands employed, as well as the amount of capital increased beyond Mr. Felkin’s estimate, in proportion to the additional number of machinery which had been introduced. Such had been the progress in the manufacture during the few years previous to 1859, that some descriptions of lace, viz, Spanish, Maltese, and Plat, were produced by machinery in such perfection, that they can scarcely be recognised from cushion-made goods. Looking, however, at the competition which exists in the trade, the manufacturers very generally complain of the anomalous position in which they are placed with respect to the French machine-made lace, which is allowed to be imported duty free; while the English manufacture is strictly prohibited from entering France. They complain also of the mode of registering patents, as it prevents their investigation into the character of the machinery which is so essential towards their improvement.

The *Embroidery* branch of the lace trade is employed to many thousands of females in Nottingham and London, and their neighbourhoods, and also at Coggeshall in Essex. Mr. Felkin estimated that in 1813 not less than 20,000 were employed. At the Great Exhibition in (Class XIX.), a most interesting display of specimens of this industrial art was presented to the public, and a very able paper on the lace generally was contributed by the reporter of Section (Richard Birkin, Esq., of Nottingham). There are, however, no statistics which give any accurate estimate of the number of persons (women and children) now engaged in the department. Owing to the great perfection to which machine-made lace has arrived, particularly the successful introduction of the Jacquard machine, it is understood that the embroidery branch of the trade has very greatly declined of late years, although in numerous articles of dress “*Lace*” still continues to maintain its established character.

The remarkable improvements which have gradually introduced into the manufacture of machine-made lace have seriously interfered with the *pillow-lace* trade, and many thousands of women and children in the counties of Bedford and Nottingham are now finding a better reward for their labour in straw-plaiting. This applies, however, rather to the *narrow* hand-made lace than to the highest descriptions of this industrial art, which continue in great favour with the fashionable classes. At the Great Exhibition in 1851 specimens of Honiton lace (the most tasteful and flourishing of the British pillow-lace manufactures) were exhibited in flouncings, shawls, scarves, kerchiefs, herties, and a variety of other articles, varying in price from 10 to 200 guineas, and there is a strong feeling, from the specimens displayed in the production of elegant designs

this department, that it will continue to hold its ground notwithstanding the remarkable improvements in that produced by machinery, which from low price is within the demand of the lower classes. But, like works of high art, Honiton lace is recognised by the higher classes as that of a master—the original picture and not the copy, and consequently held in highest estimation. But although on the whole the fabrication of pillow lace has unquestionably fallen off a new department of a kindred nature has sprung up, which has given employment to many thousands of women and children in the United Kingdom, but especially in Ireland. A description of lace termed *crochet* has been introduced to a great extent of late in industrial schools, both in the north and south of Ireland. The famine of 1847 directed the attention of humane persons to the expediency of providing employment for the starving class in that country, and this new department of industrial art is now spread there to a great extent. At the present time (1868) it is believed that not less than 250,000 women and children are engaged in that branch and in the embroidery of fine muslins, to meet the prevailing taste, not only required by our own female population, but for export to all parts of the world. The crisis in 1857, which was attended by the failure of several of the larger houses in Glasgow engaged in the embroidered muslin trade, each of whom employed from 50,000 to 70,000 persons in the north of Ireland, led to great privation to those who were engaged in that branch, but they are now recovering from that depression which on that occasion befall the trade. At the meeting of the Social Science Association, held in 1866, Mr. Felkin read a paper on the state of the Nottingham lace trade:—

The progress of the town and suburbs of Nottingham in population and material wealth during the last century has been much advanced, he said, by the increase of the lace manufactures of the place. Nottingham has a population of about 75,000 within the limits of the municipal borough only; including the suburban parishes, which are specially parts of Nottingham, there are about 250,000 souls. It has risen from 35,000 in 1811. In 1862 there were 1797 circular machines making bobbin net; of these 209 were at Tiverton, 100 at Newark, 360 at Clart, 500 in Derbyshire, and 100 in and near Nottingham. Also 1,588 levers, and 42 traverse warps, 42 pushers, all in Nottingham and the neighbourhood, making a total, with 353 treadles, of 2,149 were making silk lace, and 1,442, and on fancy 2,157, the latter being for imitations of cushion lace than ever before seen; although, since 1862, there have occurred great fluctuations in demand, and the prices of silk and cotton materials have advanced full 50 per cent, the amount of machinery and employment was in 1865 about the same as 1862. The entire production continues to be finished and packed in Nottingham, except that at Tiverton, which is sent to London. The approximate number of hands employed in 1865, for the whole of the lace machinery, may be thus stated:—men employed in 180 shops for making machines, bobbins, carriages, points, guides, combs, &c., at average wages of 35s. a week; 300 men and youths at work in 130 larger machines and in lesser machine shops, 1,800 of whom may earn 16s., 5,000 25s., and 3,500 first-class hands 35s. a week on an average. These all work alternate shifts of 4 and 5 hours in the entire day of 18 hours, during

which the engine is going; 4,200 boys clearing, winding, threading bobbins, 6s.; 3,000 women filling bobbins and overlooking, 12s.; 15,000 brown factory menders, who usually receive nets from the factories, and free them from the foul or uneven threads. It is generally supplementary labour to household work, by which 4s. to 8s. may be gained, average 5s. a week. 400 men warpers, tenders of machinery, founders, and superintendents, 35s.; 60 carpenters, 30s.; 360 porters, 17s.; 120 carters, 20s.; 90 watchmen, &c., 20s.; 260 steam engineers, 22s.; 150 bleachers, 20s.; 100 male dressers of lace, 8s. to 30s.; 1,000 female white menders, at 12s.; 500 female folders, 10s.; 1,000 paper-box makers of lace sexes, 7s.; 450 warehouse women, 12s.; 250 female overlookers, 15s.; 100 draughtsmen and designers, 40s.; 1,300 warehousemen and clerks taking salaries. There are employed in each finishing lace warehouse from 6 to 600 females, as the size and nature of the business may require. The number cannot be known except by actual census. They are taken from outdoor hands in brown including and other employment on lace. The hours are 8 A.M. to 7 P.M., and the wages are about 9s. on an average; overtime is paid for. The kinds of work must be seen to be understood, but they are in general more wearisome than heavy. In some of the factories and workrooms in lace houses, and in dressing-rooms, the heat is sometimes oppressive. In general ventilation is provided for, but hands do not always care to make use of it. There is a far greater number of females employed, "mistresses," often their own mothers, upon drawing, scapoling, curling &c., processes light and simple enough upon goods which have been obtained from finishing houses. These young people must exercise care and cleanliness on the goods, or they would be spoilt. When they are returned to the warehouse the mistress receives a price, out of which she takes a portion for her labour, risk of damage, fire, light, house room &c. Some of these persons employ 12 to 20 young girls. The total number cannot be known accurately except by census. It being considered domestic employment, they are not under registration or visitation, except upon complaint made on sanitary grounds. A great improvement has been going on in regard to the age at which these children begin to do labour. The change dates from Mr. Grainger's report on this important subject, in 1844. The remaining department of female labour in con-broderers with hook or needle, seam-joiners, or reduced to a sixth of that number. Their average weekly earnings in 1837 was 4s.; now it is doubled, and more for the better kinds of work. As fast as the improved machinery produced figured work, nearly finished on the machines ready for sale, the lace embroiderers were cast aside. About 1840 an emigration set into Nottingham from all the districts within 50 miles to supply the increasing warehouse and outdoor female labourers required in both the lace and hosiery trades. There has thus been added to the already surplus female population of the place 13,000 within the last 26 years. In these 3 classes are computed from 90,000 to 100,000 females, which, added to the 38,000 above enumerated, makes a total of about 135,000 employed in the lace trade of Nottingham in 1865. The materials worked up cost about 1,715,000l.; the wages and profits amounted to 3,415,000l. or thereabouts, and the net returns may be stated at 5,130,000l.

Our imports of lace, chiefly from Belgium and France, during the year 1867 were estimated at 191,607*l.*, of which 1,290*l.* worth was re-exported. Our exports of cotton lace and patent net wire in 1867 were valued at 476,420*l.*; more than half of this amount was shipped to the United States, France, and Holland.

**Foreign Lace Trade.**—The application of the Jacquard mounting to the bobbin-net machine has been attended with a great increase in the French manufacture, and in a very superior taste, in imitation of the most favoured 'grounds,' particularly at Calais, St. Pierre de Calais, Lyons, and Cambray. The Calais machines numbered in 1839, 765; 1844, 801; 1851, 603. Many have been replaced by wider and speedier machines. They had 8 pushers, 14 traverse warps, 124 common circulars, 141 Jacquard circulars, and 321 levers; 50,000 females were employed, besides the ordinary proportion of machine hands and attendants. There were 800 other machines at Boulogne, St. Omer, Douay, Lille, St. Quentin, Caen, and Lyons. More expensive goods are produced on French machines than on ours; and English plain nets, which were formerly extensively smuggled into France, are now supplanted by the own. They have applied the Jacquard apparatus to their machinery with much success, and of late years have ceased to copy Nottingham patterns, turning their own taste in designs to good use and profit. There were at Brussels in 1850, 16; at Termonde, 8; at Malines, 5; at St. Josse, 4—in all 31 machines in Belgium—chiefly making 3-twist Brussels net, upon which cushion flowers were applied. In bobbin-net machinery there are probably in Switzerland, 80; in Saxony, 70; Austria, 100; Prussia and Russia, 30; in Spain and other countries, 80—altogether 360. (Felkin.) Since 1856 these branches have been steadily increasing. **Embroidery work** has also considerably increased, and for some years past has extended to the departments of La Meurthe, La Moselle, La Meuse, and Des Vosges. In the latter, forming the ancient province of Lorraine, this beautiful branch of industry has arrived at great perfection. It is estimated to give employment to from 150,000 to 180,000 females, spread over more than 20 departments of France, who earn from 8*d.* to 1*s.* per day, and double that sum in Paris. (Birkin.)

**Hand-made Lace** may give employment to upwards of 200,000 females of all ages, who earn from 6*d.* to 1*s.* a day. It is principally carried on at Caen and Bayeux, Chantilly and neighbourhood, Lille, Arras, Mirecourt, Du Puy, Bouleau, and Alençon. The lace of Alençon is the only fabric not made on the pillow, being worked entirely with the needle. It was introduced by Colbert in 1660 from Venice and Genoa, and is the only lace made with pure linen thread (handspun)—the thread being worth from 100*l.* to 120*l.* per pound. (Birkin.) Some beautiful specimens of hand-made lace were exhibited from Switzerland; and so great is now the demand for the article, that the manufacturers are forced to employ large numbers of females in the western provinces of Austria and the southern provinces of the Duchy of Baden. Perhaps 40,000 persons earn their living by the embroidery branch, first-class hands receiving 1*s.* per day, and second-class from 3*d.* to 8*d.* 100,000 pairs of curtains alone are estimated to be imported into Great Britain. But the Swiss also export largely to America, Germany, Italy, Spain, and other southern countries. Specimens of lace and embroidery were also exhibited from Saxony, Spain, Hamburg, Austria, and Malta. Belgium continues to sustain its high character in the production of that beautiful art, and (with the exception of poin. d'Alençon,

made in the north of France) Brussels produces the most valuable known lace. Mechlin laces are made at Malines, Antwerp, and the vicinity; Valenciennes, at Ypres, Menin, Courtray, Bruges, Ghent, and Alost. The village of Grammont is remarkable for great improvements made in white thread lace, and also in black-point trimming laces. Some beautiful specimens of hand-made lace are now also imported from Madeira.

We are indebted for the greater portion of this learned and very excellent article to Mr. Robert Slater, of Fore Street, London.

**LACK or LAC.** A word used in the East Indies to denote the sum of 100,000 rupees, which, supposing them standard, worth 2*s.* each, amounts to 10,000*l.* sterling.

**LADING, BILL OF.** [BILL OF LADING.]

**LAGAN.** [FLOTSAM.]

**LA GUAYRA.** The principal seaport of the republic of Venezuela, in the province of Caracas, on the Caribbean Sea, lat. 10° 36' 19" N., long. 67° 8' 45" W. Population estimated at 8,000. In 1810 the population is believed to have amounted to 13,000; the reduction being a consequence of the loss of life caused by the tremendous earthquake of 1812, and the massacres and persecutions incident to the revolutionary war. The population of the city of Caracas, of which La Guayra may be considered as the port, fell off from the same causes, from 43,000 in 1810, to 23,000 in 1830; but they are now both increasing.

**Port.**—There is neither quay nor mole at La Guayra. Ships moor E.N.E. and W.S.W. with their heads to the N. at from  $\frac{1}{2}$  to  $\frac{3}{4}$  mile from the land, in from 9 to 18 fathoms. The holding ground is good; and notwithstanding the openness of the road, vessels properly found their anchors and cables run very little risk of being driven from their moorings.

**Trade.**—The principal articles of export are coffee, cotton, cocoa, indigo, hides, sarsaparilla &c. The principal imports are cotton, linen, woollen and silk stuffs, with hardware and cutlery, wine, haberdashery &c. La Guayra shares the trade of Venezuela with the ports of Cumana, Puerto Cabello, Maracaibo &c., having about  $\frac{1}{4}$  of the entire amount, which, however, is insignificant. In 1867 the estimated value of our imports from Venezuela amounted to 85,948*l.*, while in 1866 they amounted to 202,086*l.*; and the value of our exports thither in 1867 amounted to 283,111*l.* while in 1866 they were valued at 416,770*l.*

The gross value of the imports of La Guayra in 1864 amounted to 5,023,779*l.* do*l.*, in 207 vessels, 55,784 tons. The imports were chiefly corn, flour, provisions, textile fabrics, cutlery; and the chief exports are coffee, cotton, cocoa, indigo, dye woods, skins and hides. The exports to the port are loaded with heavy duties, and most imports are severely taxed. The following are admitted duty free: corn and provisions. The following are prohibited: salt, cocoa, oil, indigo, sugar, honey, syrup, molasses, and rum.

**Port Regulations.**—On casting anchor, a vessel is paid by the collector of customs, or his agent, accompanied by other officers, who take from the master his register, manifest, and muster-roll, and an officer is left on board until the vessel is discharged. The master must swear to his manifest within 24 hours after his arrival, when a permit to discharge is granted, and within 3 days all invoices must be presented. The discharge completed, the same officers repair on board to examine the vessel, and all being found in order the officer is withdrawn. The clearing of a vessel outwards (that has entered with cargo) in ballast is then completed by paying the port charges

 amounted to 263,117l.

LAGUNA DI TERMINOS or LAGUNA DI  
 ARMEN. A seaport on the S. shore of the  
 Gulf of Mexico, State of Yucatan, lat. 18° 33' 44"  
 long. 91° 51' 22" W. It derives its name  
 from being situated about 1 mile within the S.W.  
 extremity of Camer Island, on the most westerly  
 of the straits or entrances leading into the basin  
 of the lagoon of Terminos. Population about 3,000.  
 The port, which is secure and one of the best on  
 the Gulf, has from 12 to 14 feet water over the  
 bar at the entrance to the lagoon. Vessels of  
 100 tons draught load and unload by means of  
 cranes, outside the bar, in from 3 to 4 fathoms,  
 in a good holding ground.  
 To enter the Port.—Run in over the bar with  
 the lighthouse Point, bearing by compass S. 3/4 E., till  
 the distant light bears S. E. 1/4 S., and then steer for  
 the light, and when the N. side of the island begins  
 to show, haul up for the anchorage off the town.  
 The light is a safe guide on the W. side of the  
 island, but not on the E.  
 The chief trade of the town consists in the  
 export of logwood, known in foreign markets  
 by the name of Campechy wood, from its having  
 been originally cut down in the vicinity of that  
 place and shipped from it. But Campechy has  
 now become an entrepôt for logwood. It is now

LAGUNA DI TERMINOS

proof whereof being produced, the permission to  
 sail is signed by the governor and harbour master.  
 If the vessel take cargo on board, then the same  
 formality, as to visiting, is pursued, as on the  
 coast of a vessel.

Credit.—Goods imported are almost invariably  
 sold upon credit; those exported are, on the other  
 hand, always sold for ready money. The terms  
 of credit vary from 2 to 6 months, or more.  
 Bankruptcy is very rare.

Money, Weights, and Measures.—The currency  
 of the country consists of silver money, known by  
 the name of *macuena*, divided into dollars of 8  
 reales, 1/2 do. of 4 reales, besides reals, 1/2 reals, and  
 quatuorillas or 1/4 reals. This money is of very un-  
 equal weight and purity, the coins issued since  
 the commencement of the revolutionary war  
 having been often a good deal defaced. The real  
 should be worth 5/6 sterling.

Weights and measures same as those of Spain.  
 Tare.—Real tare is taken both at the Custom  
 House and by the merchant.

Commercial Prospects.—The commerce and in-  
 dustry of Venezuela suffered severely from the  
 revolutionary struggle of which she was the  
 theatre. But the country has been for some time  
 passing comparatively tranquil. As the riches of  
 Venezuela consist entirely of the products of her  
 agriculture, the Legislature has wisely exerted  
 itself to give it encouragement, by abolishing  
 duties, the tobacco monopoly &c. But the want  
 of a supply of efficient labour, arising out of the  
 abolition of slavery, is the grand obstacle to the  
 progress of industry. An able-bodied man can  
 earn enough by a day's labour to keep himself  
 for a week; and such being the case, can anyone  
 expect industry to flourish, unless some sort of  
 system for the supply of compulsory labour be  
 resorted to? In countries like this, freedom and  
 industry are synonymous. The British consul at  
 Maracaibo (report for 1867) says that the increase  
 of commerce there has been equal to that at any  
 other port of Venezuela. The import and export  
 of 1867, would, it is stated, have reached 1,000,000  
 dollars, but for the smuggling, connived at by  
 the authorities, and the custom-house employes.  
 We have derived these details partly from  
 Consular Returns, and partly from private infor-  
 mation.

LAGUNA DI TERMINOS or LAGUNA DI

LAMAR

principally cut down on the mainland adjoining  
 the lagoon of Terminos; and being thence con-  
 veyed to Laguna in coasting schooners, is sent  
 from it to all parts of the world.

Vessels arriving with cargoes must bring a  
 general manifest and invoice in triplicate, certified  
 by the Mexican Consul at the port of departure.  
 Those arriving from a foreign port in ballast, must  
 produce a clearance from the Mexican Consul, or  
 consul or the authorities either from the Mexican Con-  
 came, showing that they bring no cargo.  
 Pilotage 1 dollar 75 cents per foot; other port  
 charges, such as harbour master's fees, anchorage,  
 board of health &c., about 25 dollars each vessel.  
 Ships arriving direct from a foreign port pay 1  
 dollar 50 cents per ton for tonnage dues.

LAMAR. Formerly *CONTRA*; a seaport of the  
 republic of Bolivia, the dependent Upper Peru, on  
 the west coast of South America, lat. 22° 39' 30"  
 S., long. 70° 12' W. Population about 5,000.  
 In 1833 Lamar was declared a free port, and in  
 it centres almost the whole direct foreign trade  
 of the republic. Its situation is, however, very  
 unfavourable. It suffers greatly from want of  
 fresh water; and is obliged to import all its pro-  
 visions by sea, either from Valparaiso, on the one  
 hand, or from Arica on the other. The desert of  
 Atacama lies between it and the internal and  
 populous part of the country, where the towns of  
 Potosi, Cochabamba, Charcas &c., are situated.  
 The produce imported at Lamar is conveyed  
 across the desert on the backs of mules to the  
 interior; the gold and silver of the mines being  
 brought in the same way to the port to be shipped.  
 These, with copper, saltpetre, chinchilli, skins,  
 and wool, form the principal articles of export.  
 Saltpetre is found in large quantities in the desert;  
 the copper is found near the coast, and, owing to  
 the scarcity of fuel, most part of it is exported in  
 the shape of ore.

Peru possesses a long narrow slip of land,  
 stretching along the coast of the Pacific from  
 Arequipa to the Bay of Pica, which ought  
 naturally to belong to Bolivia, being, in fact, the  
 littoral of the latter. The Bolivian Government  
 has set on foot various negotiations to obtain the  
 cession of this tract, which, besides greatly im-  
 proving the frontier of the republic, would, at the  
 same time, render her mistress of Arica, which  
 is, in all respects, much better fitted than Lamar  
 for becoming the entrepôt of her trade. Hitherto,  
 however, these negotiations have proved abortive,  
 so that, as already stated, Lamar, at present,  
 engrosses most part of the foreign trade of the  
 state, which, however, is but inconsiderable. Our  
 total imports from Bolivia in 1867 were valued at  
 140,043l., and our total exports at 3,966l.

We subjoin the decree constituting Lamar a  
 free port:—  
 1. From and after July 1 of this present year,  
 1833, Port Lamar shall be absolutely free and  
 open.  
 2. Vessels of every nation may enter this port  
 and remain as long as they please, without being  
 subjected to any tax whatever, either on entrance,  
 or during their stay, or on their departure.  
 3. They shall be free from all duties of anchor-  
 age, tonnage, shifting, unloading, or reloading, of  
 cargo, deposit, storage, or any other, of whatever  
 denomination.  
 4. Goods may be deposited in private ware-  
 houses, without any intervention on the part of  
 the Government.  
 5. The Custom House of Port Lamar is sup-  
 pressed. In its stead will be a Commissioner's  
 office, for the purpose of distributing permits for  
 the transportation of goods into the interior.

1. From and after July 1 of this present year,  
 1833, Port Lamar shall be absolutely free and  
 open.  
 2. Vessels of every nation may enter this port  
 and remain as long as they please, without being  
 subjected to any tax whatever, either on entrance,  
 or during their stay, or on their departure.  
 3. They shall be free from all duties of anchor-  
 age, tonnage, shifting, unloading, or reloading, of  
 cargo, deposit, storage, or any other, of whatever  
 denomination.  
 4. Goods may be deposited in private ware-  
 houses, without any intervention on the part of  
 the Government.  
 5. The Custom House of Port Lamar is sup-  
 pressed. In its stead will be a Commissioner's  
 office, for the purpose of distributing permits for  
 the transportation of goods into the interior.

1. From and after July 1 of this present year,  
 1833, Port Lamar shall be absolutely free and  
 open.  
 2. Vessels of every nation may enter this port  
 and remain as long as they please, without being  
 subjected to any tax whatever, either on entrance,  
 or during their stay, or on their departure.  
 3. They shall be free from all duties of anchor-  
 age, tonnage, shifting, unloading, or reloading, of  
 cargo, deposit, storage, or any other, of whatever  
 denomination.  
 4. Goods may be deposited in private ware-  
 houses, without any intervention on the part of  
 the Government.  
 5. The Custom House of Port Lamar is sup-  
 pressed. In its stead will be a Commissioner's  
 office, for the purpose of distributing permits for  
 the transportation of goods into the interior.

6. Whenever goods are to be sent into the interior, they must first be submitted to the Commissioner, together with the invoice corresponding.

7. The Commissioner will register them in a book, together with their valuation made by two merchants of the place, and the names of their owners, of the person to whom, and the place where they are to be sent. This is to be signed by the person entering the goods, who at the same time binds himself to have them transported direct to the Custom House for which they are destined, without opening any of the cases, bags, or other envelopes, each of which shall be sealed, marked, and numbered before departure. These points are to be expressed in the permit.

8. The Commissioner shall by the earliest post send a notice to the collector of the Custom House for which any merchandise is destined, specifying the numbers, characters, quantities, and qualities of the several articles.

9. The goods must not be carried by any unaccustomed roads, but only through Calama and the public thoroughfares: and whenever they pass through any place at which a guard or commissioner is stationed, the permits must be exhibited, in order that their arrival with their seals unbroken may be ascertained.

10. Merchants, either in person or by a representative, must produce to the Commissioner of the port a certificate of the delivery of the goods at the Custom House for which they are destined within 6 months from the day of their entry; in case they do not, they must at the end of that period pay the whole of the duties on them.

11. From and after July 1, 1833, all goods entered at Port Lamar shall pay a duty of only 5 per cent. over and above that of  $\frac{1}{2}$  per cent. to the consular.

12. The duty of 5 per cent. shall be paid thus: at the port, 2 per cent. on the valuation made as aforesaid; and the other 3 at the Custom House in the interior for which the goods are destined. In each case one half at the end of 3, the other half at the end of 5 months.

13. All goods carried from Port Lamar by land to any of the adjoining republics shall only pay a transit duty of 2 per cent.

14. A duty of 2 per cent. shall be paid on  $\frac{3}{4}$  of all gold and silver money entered at any of the Custom Houses in the interior for exportation through Port Lamar.

15. It is absolutely prohibited to export gold or silver, in bullion or plate, except in small quantities for the use of the person carrying it out. It will be seized wherever it is found on this side the districts of San Antonio, San Vincente, Atoca, Agua de Castilla, Lequepate, or the line of the canal.

16. All hardware for agriculture and mining, machinery, instruments of science or the arts, iron, steel, quicksilver, and moral books, may be introduced free of duty into the republic, and productions of Bolivia may be exported likewise free.

17. A premium of 2 per cent. on their value shall be allowed on the exportation through Port Lamar of cascarilla, wool, tin, cocoa, and coffee, in the shape of remission from duties to the amount on goods carried into the interior from the same port.

The remaining articles of the decree are of a purely local nature.

**LAMB-SKINS** (Ger. lammsfelle; Fr. peaux d'agneaux; Ital. pelli agnelline; Span. pieles de corderos). The value of lamb-skins varies according to the fineness, brilliancy, and colour of

the wool. Black lamb-skins are more generally esteemed than those of any other colour. English lamb-skins are seldom to be met with perfectly black; but since the introduction of Merino sheep into this country, many of the white fleeces have in point of quality, arrived at a pitch of perfection which justly entitles them to be ranked with some of the best fleeces in Spain. The importation of lamb-skins is very large. The great bulk supplied by Italy. Thus, of 1,011,308 undressed skins imported in 1867, no fewer than 582,722 were from Italy, the large proportion being from Tuscany. They are mostly used in the glass manufacture. The total value of our imports of lamb-skins undressed and dressed was, in 1866, 64,645*l.*, and in 1867, 59,049*l.*

**LAMP** (Ger. lampe; Fr. lampe; Ital. lucerna; Span. lampara; Russ. lampada). An instrument used for the combustion of liquid inflammable bodies, for the purpose of producing artificial light.

It is unnecessary to give any description of instruments that are so well known. We may, however, remark that the discovery of Sir H. Davy, who by covering the flame with wire gauze, succeeded in producing a lamp that may be secured in coal mines charged with inflammable gas, is one of the most ingenious and valuable that ever been made. The following extracts from a communication of the late Mr. Buddle, an able and well-informed coal engineer, evince the importance of Sir Humphry Davy's invention.

'Besides the facilities afforded by this invention to the working of coal mines abounding in damp, it has enabled the directors and superintendents to ascertain, with the utmost precision and expedition, both the presence, the quantity, and correct situation of the gas. Instead of cutting inch by inch with a candle, as is usual in the galleries of a mine suspected to contain damp, in order to ascertain its presence, we can now firmly go on with the safe lamps, and, with the most confidence, prove the actual state of the mine. By observing attentively the several appearances upon the flame of the lamp, in a continuation of this kind, the cause of accidents which happened to the most experienced and cautious miners is completely developed; and this has hitherto been in a great measure a matter of mere conjecture.

'It is not necessary that I should enlarge upon the national advantages which must result from an invention calculated to procure a supply of mineral coal, because I think that I can do so without expressing my highest sentiments of admiration for these talents which have developed the properties, and controlled the operations of one of the most dangerous elements of human enterprise has hitherto had to encounter.

**LAMP-BLACK** (Ger. kienrus; Fr. fumée; Ital. nero di fumo, negrofumo; Span. de humo). 'The finest lamp-black is produced by collecting the smoke from a lamp with a wick, which supplies more oil than can be perfectly consumed, or by suffering the flame against a metallic cover, which impedes combustion, not only by conducting off part of the heat, but by obstructing the current of air. Lamp-black, however, is prepared in a much simpler way for the demands of trade. The smoke remains after the eliquation of pitch, or other resinous substances, are burned in furnaces of peculiar construction, the smoke of which is drawn through a long horizontal flue, terminated in a close boarded chamber. The roof of the chamber is made of coarse cloth, through

the current of air escapes, while the soot remains." (Encyc. Dictionary of Chemistry.)

**LAND-WAIVER or LANDING-WAIVER.** A name formerly given to searchers attached to the Customs.

**LAPIS LAZULI.** [ULTRAMARINE.]

**LAST.** An uncertain quantity, varying in different countries, and with respect to different articles. Generally, however, a last is estimated at 4,000 or 6,000 lbs.; but there are great discrepancies.

The following quantities of articles in cases make a last, viz.: 14 barrels of pitch, tar, or ashes; 12 dozen of hides or skins; 12 barrels of cod-fish, perch, or meal; 20 cades, each of 1,000 herrings; every 1,000 ten hundred, and every 100 five score; 10 quarters of coal-seed; 10 quarters of corn or of corn go to a last; 12 sacks of wool; 20 dickers (every dicker 12 skins) of leather; 18 barrels of un-packed herrings; 10,000 pilchards; 24 barrels (each barrel containing 100 lbs.) of gunpowder; 1,000 lbs. of feathers or flax.

**Last** is sometimes used to signify the burden of a ship.

**LATH, LATHS** (Dutch, latten; Fr. lattes; Ger. latten; Ital. corenti; Russ. slegt). Long thin and narrow slips of wood, nailed to the rafters of a roof or ceiling, in order to sustain the covering.

Laths are distinguished into various sorts according to the different kinds of wood of which they are made, and the different purposes to which they are to be applied. They are also distinguished according to their length, into 6, 4, and 3 feet laths. Their ordinary breadth is about an inch, and their thickness  $\frac{1}{4}$  of an inch. Laths are sold by the bundle, which is generally called a hundred; but 7 score or 140, are computed in the bundle for 3 feet laths; 6 score or 120, in such as are 4 feet; and for those which are denominated for the common hundred, or 5 score. In 1867 were imported, chiefly from Russia, 68,949 loads of lath wood, valued at 119,844l.

**LATTEN.** A name sometimes given to tin plates or thin plates of iron, tinned over. [Tin.]

**LAW.** [MORNING LAW; NEUTRALITY; &c.]

**LAWY.** (Ger. and Fr. linon; Ital. linone, renza; Span. cantry, estopilla, clarin). A sort of clear open worked cambric, which, till of late years, was exclusively manufactured in France and Flanders. At present, the lawn manufacture is established in Scotland and in the north of Ireland, where articles of this kind are brought to such a degree of perfection as nearly to rival the productions of the French and Flemish manufactories.

The manufacture of lawns finer flaxen thread used than in that of cambric. In 1866 we exported, chiefly to the United States, 7,570,245 yards of cambric and lawns, valued at 352,643l.

**LAZARETTO.** [QUARANTINE.]

**LEAD** (Ger. blei, blei; Dutch, lood, loot; Fr. plomb; Ital. piombo; Span. plomo; Russ. svinetz; Slav. Lat. plumbum; Arab. anuk; Hin. aisa; Pers. surt). One of the most useful metals. It is of a bluish-white colour, and when newly cast is very bright, but it soon becomes tarnished by exposure to the air. It has scarcely any taste, but emits, on friction, a peculiar smell. It is used in paper or the fingers of a bluish colour, and when taken internally it acts as a poison. It is one of the softest of the metals; its specific gravity is 11.35. It is very malleable, and may be reduced to thin plates by the hammer; it may also be drawn out into wire, but its ductility is not very great. Its tenacity is so small that a lead wire of such diameter is capable of supporting only 10 lbs. without breaking. It melts at 612° (see Thomson's Chemistry.)

Lead is a metal of much importance in the arts. Its durability and malleability make it very suitable for the roofing of buildings, the construction of gutters, and such like purposes. It used to be very extensively employed in the formation of water-pipes and cisterns. But though water has no direct action on lead, it facilitates the action of the external air; and hence the lead of cisterns and of pipes from which the air is not entirely excluded becomes oxidised, and is covered with a white crust at the point where the surface of the water comes into contact with the air. Inasmuch, however, as this oxide is extremely deleterious, lead pipes and cisterns are now very generally superseded by those of cast iron. At present, perhaps, lead is more extensively used in the manufacture of small shot than in any other way. Its salts, though poisonous, are used in medicine to form sedative external applications; and frequently not a little, by the disreputable wine merchant, to stop the progress of acetous fermentation. Wine thus poisoned may, however, be readily distinguished; a small quantity of the bicarbonate of potash producing a white precipitate, and sulphuretted hydrogen a black one. Pure wine will not be affected by either of these tests.

The oxide of lead enters into the composition of white glass, which it renders clearer and more fusible; it is also used in glazing common earthen vessels; hence the reason that pickles kept in common red pans become poisonous. Lead, with tin, and a small quantity of some of the other metals, forms pewter; with antimony, it forms the alloy of which printing types are made.

(Joyce's Chemistry: Mineralogy.)

Mines of this valuable mineral have been wrought in England from the era of the Romans. It does not, however, appear that it was obtained anywhere except in Derbyshire, till 1289, when it was discovered in Wales; and the fact that silver was found intermixed with the Welsh ores having transpired, gave a new stimulus to the business; but in other respects the discovery of silver was of no use; the quantity obtained being insufficient to defray the cost of its separation from the lead. At present, the most productive English lead mines are situated in Allendale, and other western parts of Northumberland; at Aldstone Moor, &c. in Cumberland; in the western parts of Durham; in Swaledale, Arkendale, and other parts of Yorkshire; in the hundred of High Peak in Derbyshire, in Salop, and in Cornwall.

The Welsh mines are principally situated in the counties of Flint, Cardigan, and Montgomery; those of Scotland in Ayr, Kirkcudbright, and Lanark; and those of Ireland, in Wicklow, Down, and Limerick. Lead mines are also wrought to considerable advantage in the Isle of Man. We subjoin an abstract, deduced from the accounts furnished by the Museum of Practical Geology, of the

**Quantities of Lead, Lead Ore, and Silver produced in the United Kingdom in 1867.**

	Lead Ore		Lead		Silver
	tons	cwt.	tons	cwt.	oz.
England	68,712	6	42,839	15	469,547
Wales	26,054	1	19,551	0	147,009
Isle of Man	3,799	0	2,834	0	165,170
Ireland	1,882	12	1,508	0	12,140
Scotland	2,951	2	2,107	19	11,428
Total	83,452	1	68,440	14	805,394
Valued at	£1,158,066		£1,337,509		£215,400

In 1867, 45,158 tons of lead were imported, and 38,950 tons were exported. English pig lead was worth, in the London market, in December 1867, 19l. 1s. 8d. per ton. In 1832 it was only worth 13l. 10s. per ton.

Account of the Real Value of the Lead exported from the United Kingdom in each of the 7 Years ending with 1867.

Articles	1861	1862	1863	1864	1865	1866	1867
Pig, pipe, sheet, shot	£ 425,121	£ 765,448	£ 775,861	£ 779,144	£ 881,684	£ 661,536	£ 675,479
Red and white lead	146,731	174,633	128,213	167,680	186,123	229,667	218,753

Russia, France, the United States, China, Australia, British India &c. are the markets to which our exports of lead are principally sent.

Lead, when first extracted from its ore, always contains a certain portion of silver, varying from a few grains to 45 oz. or more in the ton. When the silver mixed up with the lead is sufficient to repay the expense, it is usual to separate it, which is effected by the process known by the name of its inventor, Mr. Pattison. The lead of some of the English mines, especially those of Cornwall, and also, of the Isle of Man, contains very considerable quantities of silver; and our readers will, perhaps, be surprised to learn that it has been estimated by the highest authority that, in 1867, the United Kingdom furnished no fewer than 805,394 oz. of silver, obtained from lead, worth 215,400*l.* (*Statement compiled by Robert Hunt, Esq. of the Museum of Practical Geology.*)

Of the 45,158 tons of lead imported in 1867, Spain sent us 35,651 tons. The lead mines of Granada would, in truth, be they properly wrought, be among the most productive in the world. Those of Murcia were in 1863 much more productive of lead than all the others put together. And as it is, next to wine, the most important article which Spain has to offer in exchange for foreign products. In 1863, for example, the value of the exports of wool from Spain, once the most important article, had declined to 25,300,896 reals, while that of the exports of lead had risen to 120,891,195, that of wine to 322,019,254 reals.

In 1863, Spain sent about 20,000 tons of lead to France, i.e. about two-thirds of the imports.

The lead mines of the United States are principally situated in Illinois and Wisconsin, and that of Upper Mississippi. Their produce, and that of the other mines in the Union, may, perhaps, amount to from 18,000 to 20,000 tons a-year. LEAD, BLACK, or PLUMBAGO. [BLACK

LEAD.] LEAD, RED, or MINIMUM. [MINIMUM.]

LEAGUE. A measure of length containing more or fewer geometrical paces according to the customs of different countries. [WEIGHTS AND MEASURES.]

LEAKAGE. In Commerce, an allowance in the Customs, granted to importers of wine, for the waste and damage the goods are supposed to receive by keeping. (*Warehousing Act*, art. WAREHOUSING SYSTEM.)

LEATHER (Ger. leder; Dutch, leder, leër; Dan. læder; Swed. läder; Fr. cuir; Ital. cuojo; Span. cuero; Russ. kosha; Lat. corium). The skins of various quadrupeds, dressed in a particular manner for the use of manufacturers, whose business it is to make them up, according to their different employments.

The leather manufacture of Great Britain is of very great importance, and ranks either third or fourth on the list; being inferior only in point of value and extent to those of cotton, wool, and iron, if it be not superior to the latter. Sir F. M. Eden, in his work on *Insurance*, estimated the value of the different articles manufactured of leather, in 1823, at 12,000,000*l.*; and there is reason to think that this statement was not very wide of the mark.

In 1867, the transactions of the various leather trades all over the kingdom were estimated to be represented by from 15,000,000*l.* to 20,000,000*l.* a-year in the aggregate. (This amount, we suspect, is understated.) There are upwards of a quarter of a million of persons engaged in making and selling hoots and shoes in the kingdom, and about 16,000,000*l.* is calculated to be expended in that branch of the trade alone. There are between 200 and 300 leather sellers' shops in London, and there are about 500 tanneries in various parts of the kingdom, employing about 400,000 persons directly and indirectly, in preparing and dressing at least 80,000 tons of leather, the consumption of which in 1867 amounted to upwards of 476,000 cwt., and in the same year 272,333 cwt. of untanned hides were exported. (*Stat. Soc. Journal*, June 1867; and *Parl. Papers*.)

In speaking of the leather manufacture, Dr. Campbell has the following striking observations: 'If we look abroad on the instruments of husbandry, on the implements used in most mechanic trades, on the structure of a multitude of engines and machines; or if we contemplate at home the necessary parts of our clothing—breeches, shoes, boots, gloves—or the furniture of our houses, the books on our shelves, the harness of our horses, and even the substance of our carriages, what do we see but instances of human industry exerted upon leather? What an aptitude has this single material in a variety of circumstances to the relief of our necessities, and supplying our conveniences in every state and stage of life? Witness it, or even without it in the plenty we have it, what difficulties should we be exposed! (*Political State of Great Britain*, vol. ii. p. 176.)

Leather was long subject to a duty; the manufacture being, in consequence, necessarily conducted under the surveillance of the excise. In 1812, the duty, which had previously amounted to 1*½d.* per lb., was doubled; and continued at 3*½d.* per lb. till July 1822, when it was again reduced to 1*½d.* per lb. The reduced duty produced a revenue of about 360,000*l.* It is clear, however, that either the duty ought not to have been reduced in 1822, or that it ought to have been totally repealed. The continuance of any such vexatious regulations required to insure the collection of the revenue, while the reduction of the cost of preparing a pound of leather was trifling as hardly to be sensible. It is, however, unnecessary to enter into any discussion of the extreme inexpediency of laying any such an article so indispensable to the labouring industry, as leather; and still less to show the inexpediency of subjecting so very important a manufacture to the vexatious and unvaluable a manufacture for the sake of only 360,000*l.* a-year. Luckily, these have become a thing of history. The leather duties were abolished in 1830; and as the manufacture

LEGHORN

811

In 1866, a joint-stock bank was established in Leghorn, with a capital of 2,000,000 lire (66,666,666 sterling, taking the lire at 8d.) in shares of 1,000 lire each. The whole of the capital is paid up, and the responsibility is limited to the capital. The managers have the power of issuing promissory notes to the extent of 6,000,000 lire. These notes, though received by the Government, are not legal tender. The operations of the bank are confined to the discounting bills of exchange not having more than 4 months to run, and to the purchase and sale of foreign coins. The rate of discount is fixed at 5 per cent. The superintendence is vested in a director and 8 regents, nominated by the shareholders; and the Government appoints a commissary and 3 censors (from among the shareholders), who exercise the highest authority, to

secure obedience to the statutes. An annual report and balance-sheet is produced, and is accessible to all shareholders. The maximum amount for which notes are issued is 2,000 lire = 66l. 13s. 4d. It is a profitable establishment; its shares are at a considerable premium, and it has a fair prospect of further success.

In 1865, 1,893 foreign vessels, of 423,707 tons, and 4,427 constring vessels, of 558,650 tons, entered Leghorn, and the navigation of the port for 1864 comprised, in the arrivals, 200 British vessels of 31,360 tons; 5,305 Italian vessels; 703 French; 86 Austrian; 22 Spanish; 45 Dutch; 22 Swedish; 25 Roman; 240 Greek; 6 Ottoman &c. &c.; making in all 6,762 vessels of 822,920 tons. Leghorn is connected by railway with Florence, Pisa &c.

Total amount received for licenses in 1866, 2,233,817.

power and authority conferred upon us by the said Act, and in exercise of the same, do hereby revoke the warrants or appointments, and the continuances thereof (renewed before referred to, whereby the persons in London, Dublin, Dover, Folkestone, Southampton and Shoreham, or any of them, were appointed or declared to be, and be continued in the United Kingdom, ports or places in the United Kingdom in which persons acting as agents in the entry or clearance of any ships or of any goods or baggage, or any business relating thereto, are required to be duly licensed for that purpose.

Witness our hands and the seal of the said Treasury Chambers, dated this 14th day of March, 1867.

(Signed) 'J. BAGWELL,  
Wm. DUNBAR.'

'The board directs that copies of their Lordships' warrant be inserted in the London and Dublin Gazettes.'

The total number of excise licenses existing on March 31, 1867, was in England, 779,466; Scotland, 72,874; Ireland, 97,331. Total number, United Kingdom, 949,671; total revenue ditto, including licenses for fractional parts of a year, and surcharges, 2,325,521.

There are, also, in the United Kingdom, sundry businesses which cannot be carried on without a stamp license, such as bankers, attorneys, &c. The license duty paid by these parties amounted in the year ended March 31, 1866, to 134,101.

LIGHTHOUSE. A tower situated on a promontory or headland on the sea coast, or on rocks or banks in the sea, for the reception of a light for

the guidance of ships at night. 'Usus ejus, nocturno navium cursu ignes ostenders, ad prænuntianda vada, portusque introitum.' (Plin. *Hist. Nat.* lib. xxxvi. c. 13.) There are also floating-lights, or lights placed on board vessels moored in certain stations, and intended for the same purposes as those on shore.

**Historical Notices.**—The lighting of fires for the direction of ships at night is of such obvious utility, that we need not wonder at the practice having originated at a very remote era. The early history of lighthouses is, however, involved in much obscurity; but it is reasonable to suppose that no long period would elapse after fires were lighted for the premonition and guidance of mariners, till towers would begin to be constructed for their reception. The most celebrated of all the ancient lighthouses was that erected by Ptolemy Soter, on the small island of Pharos, opposite to Alexandria, 'nocturnis ignibus cursum navium regens.' (Plin. lib. v. c. 31.) It was of great height, and is said to have cost 800 talents. Dr. Gillies tells us (*Hist. of Alexander's Successors*, vol. ii. p. 138, 8vo. ed.), that the tower was 450 feet in height; that each side of its square base measured 600 feet, and that its 'beaming summit' was seen at the distance of 100 miles! It is almost needless to add, that there is no authority for such statements, which indeed carry absurdity on their face. Its celebrity was such that Pharos rapidly became, and still continues to be in many countries, a generic term equivalent to lighthouse. In the ancient world, there were lighthouses at Ostia, Ravenna, Puteoli, Caprea, Rhodes on the Thracian Bosphorus &c. (See *Suetonii Opera*, ed. Pitiscus, tom. i. p. 755; and the *Ancient Universal History*, ix. 366, 8vo. ed.)

The *Tour de Cordouan*, at the entrance of the Gironde, the Eddystone Lighthouse, opposite to Plymouth Sound, that more recently constructed on the Bell Rock, opposite to the Frith of Tay, and that on the Bishop Rocks to the S.W. of the Scilly Islands, are the most celebrated modern lighthouses. The *Tour de Cordouan* was begun in 1584, by order of Henry III., and was completed in 1610. It was at first 169 feet (Fr.) high; but in 1727 it was enlarged, by the addition of an iron lantern, to the height of 175 French, or 186½ English feet. It used to be lighted by a coal fire, but it is now a revolving dioptric light of the first order. It is altogether a splendid structure; and is, besides, remarkable for being the first lighthouse on which a revolving light was exhibited. [BORDEAUX.]

The first lighthouse erected on the Eddystone rocks only stood about 7 years, having been blown down in the dreadful storm of November 27, 1703; a second, erected in 1708, was burnt down in 1755. The present lighthouse, constructed by the celebrated engineer Smeaton, was completed in 1759. It is regarded as a masterpiece of its kind; and bids fair to be little less lasting than the rocks on which it stands.

The Bell Rock Lighthouse was built by Mr. Stevenson on the model of the Eddystone, and that on the Bishop Rocks was completed by Messrs. Walker and Burgess in 1858. The Skerryvore and Smalls Rock lighthouses are also of similar design to Eddystone.

Numerous lighthouses, marking the most dangerous points and the entrance to the principal harbours, are now erected in most civilised maritime countries. They are particularly abundant in the Baltic and in the Sound, and have contributed, in no ordinary degree, to render their navigation comparatively safe. Within these few years several new ones have been erected on the

British coasts, and on those of France, the United States &c.

**Precautions as to Lighthouses.**—Many fatal accidents have arisen from ships mistaking one light for another; and hence the importance of those on the same coast being made to differ distinctly from each other, and of their position and appearance being accurately laid down as described. The modern inventions of revolving, intermitting, and coloured lights, afford facilities for varying the appearance of each light unknown to our ancestors, and have been, in that respect, of the greatest importance. For some interesting details on this subject, we would refer to 'Captain Close on Lighthouses and Coast Illuminations' in vol. iv. of *Reports on the Paris Exhibition* 1867.

**Chart of Lighthouses &c.**—A good descriptive work on lighthouses, beacons &c., is a desideratum. That of Coulier, *Guide des Marins pendant Navigation nocturne*, Paris 1829, is perhaps the best. It must not be judged by its price, which is as bad as possible; consisting of scraps from the most fantastical parts of Bryant's *Mythology*, and of attacks on us for our conduct in relation to Parga, and the alleged ill-treatment of the crew of a vessel wrecked on the island of Aldenay. The book is really pretty good, which could be anticipated from such a commencement. The reader will find the existing English and Irish lighthouses, and the greater number of those long to Scotland, laid down in the chart attached to the article CANALS in this work. Accuracy may be depended upon; for it has been copied from the official chart of the lighthouses the British and contiguous coasts published the Trinity House.

**Law as to British Lighthouses.**—The 8 & c. 13 empowered the Corporation of the Trinity House to erect beacons &c. to prevent access to ships; and though the Act does not expressly mention lighthouses, it has been held to extend to them; and on its authority, and the privilege attached to the office of buoyage and beacon conferred on the Trinity House in 1594, the Corporation erects lighthouses. The tolls for maintenance have been generally collected under the authority of letters patent from the Crown, those for the support of the Eddystone light, some others in different parts of the kingdom being, however, established by Act of Parliament. The first lighthouses erected by the Trinity House were built at Caistor, in Norfolk, in 1600.

All the lighthouses, floating-lights &c. extensive of harbour-lights, from the Fens Islands to the coast of Northumberland, round by Beal Head and the Land's End, to the east of Loughshire, have always belonged to the Trinity House, with the exception of about a dozen lights, Tynemouth, Spurn (shore), Winterton, and Ford, Harwich, Dungeness, Skerries &c. The lights have been partly public and partly private property; but they have latterly been all acquired by the Trinity House. (See below.) The dues on their account have been, for the most part, always payable to the Trinity collectors.

The Act of 1853, 16 & 17 Vict. c. 131, and the Mercantile Shipping Act of 1854, have made the Trinity House directly subordinate in many respects to the Board of Trade. The dues for beaconage &c., formerly payable to the Trinity House, are at present carried to the account of the Mercantile Marine Fund, which is charged with the cost of maintaining beacons, buoys &c., and it, also, is to be charged with the pensions hitherto paid by the Trinity House. The latter is in future to prepare estimates

er any lighthouse

no expense is to be allowed which has not previously been sanctioned by the Board of Trade. The charges for lights &c. are to be revised and fixed by her Majesty in council, who is also to fix the tolls to be taken for new lights. The attention that will thus be drawn to the different charges on shipping cannot fail to be advantageous; and will, no doubt, bring about their reduction to the lowest point consistent with the production of the important objects for which they have been imposed. The most important clause of the Mercantile Shipping Act, the 17 & 18 Vict. c. 104, and of the 25 & 26 Vict. c. 63, having reference to lighthouses, are as follow, viz.:

**Management of Lighthouses, Buoys, and Beacons, in the Trinity House &c.**—Subject to the provisions herein contained, and subject also to any powers or rights now lawfully enjoyed or exercised by any person or body of persons having by law or usage authority over local lighthouses, buoys, or beacons, herein termed "local authorities," the superintendance and management of all lighthouses, buoys, and beacons shall be vested in the following bodies, viz.:

In England and Wales, and the islands of Jersey, Guernsey, Sark, and Alderney, and the adjacent seas and Islands, and in Heligoland and Gibraltar, in the Trinity House:

In Scotland and the adjacent seas and Islands, and in the Isle of Man, in the Commissioners of Northern Lighthouses.

In Ireland and the adjacent seas and islands, in the Port of Dublin Corporation, now (1868) called Commissioners of Irish Lights. And, subject to the provisions herein contained, the said Trinity House, Commissioners, and Corporation, therein termed General Lighthouse Authorities, shall respectively continue to hold and maintain all property now vested in them in that behalf, in the same manner and for the same purpose as they have hitherto held and maintained the same. (17 & 18 Vict. c. 104 s. 389.)

**Commissioners of Northern Lighthouses.**—The persons holding the following offices shall be a body corporate, under the name of the Commissioners of Northern Lighthouses; that is to say:

1. The Lord Advocate and the Solicitor-General for Scotland;

2. The Lords Provosts of Edinburgh and Glasgow, and the Provosts of the cities of Aberdeen, Inverness, and Campbelltown;

3. The eldest bailies of Edinburgh and Glasgow;

4. The sheriffs of the counties of Edinburgh, Dumfriesshire, Dumfries, Bute, Argyll, Inverness, Ross, Shetland, Caithness, Aberdeen, Ayr, Fife, Forfar, Angus, Sutherland, Kincardine, Kirkcubright, and Elgin;

5. And shall have a common seal; and any 5 of such commissioners shall constitute a quorum, and shall have power to do all such matters and things as might be done by the whole body of commissioners. (Sec. 390.)

**Power to elect certain new Members.**—In addition to the persons above mentioned, it shall be lawful for the said commissioners, at any time after the Act comes into operation, to elect the provost or chief magistrate of any royal or parliamentary burgh, or on or near any part of the coasts of Scotland, and the sheriff of any county abutting on such coasts. (Sec. 391.)

**Trinity House may inspect Lighthouses in Scotland and Ireland.**—The Trinity House, their officers, workmen, and servants, may at all times enter any lighthouses within the jurisdiction of

the said commissioners or corporation, to view the condition thereof, or otherwise, for the purposes of this Act. (Sec. 392.)

**Board of Trade may appoint Persons to inspect Lighthouses &c.**—The Board of Trade may, upon complaint to the effect that any lighthouse, buoy, or beacon under the management of any of the said general lighthouse authorities, or any work connected therewith, is inefficient or improperly managed or unnecessary, authorise persons to inspect the same; and every person so authorised may inspect the same accordingly, and make such enquiries in respect thereof as he may think fit; and all officers and others having the care of such lighthouses, buoys, or beacons, or concerned in the management thereof, shall furnish all such information and explanations in relation thereto as he may require; and the said general lighthouse authorities and their respective officers shall at all times give to the Board of Trade all such returns, explanations, or information in relation to the lighthouses, buoys, or beacons within their jurisdiction and the management thereof, as such Board may from time to time require. (Sec. 393.)

The 25 & 26 Vict. c. 63 s. 43 provides that the following rules shall be observed with respect to the inspection of local lighthouses, buoys, and beacons; that is to say—

1. It shall be the duty of each of the general lighthouse authorities, or of such persons as may be authorised by such authority for the purpose, to inspect all lights, buoys, and beacons situate within the limits of the jurisdiction of such general authority, but belonging to or under the jurisdiction of any local authorities, and to make such enquiries in respect thereof and of the management thereof as they may think fit;

2. All officers and others having the care of such lighthouses, buoys, or beacons, or concerned in the management thereof, shall furnish all such information and explanations concerning the same as they may require;

3. All such local authorities and their respective officers shall at all times give to the inspecting authority all such returns, explanations, or information concerning the lighthouses, buoys, and beacons within their jurisdiction, and the management thereof, as the said authority may from time to time require;

4. The inspecting authority shall communicate to each local authority the results of its inspection of the lighthouses, buoys, and beacons within its jurisdiction, and shall also make general reports of the results of its inspection of local lighthouses, buoys, and beacons to the Board of Trade; and such reports shall be laid before parliament;

5. The powers given by sec. 394 of the principal Act to the general lighthouse authorities shall, so far as the same are applicable, extend and apply to the case of local buoys and beacons, other than local buoys and beacons placed or erected for temporary purposes, as well as to the case of local lighthouses. (25 & 26 Vict. c. 63 s. 43.)

**Power to General Lighthouse Authorities to control Local Authorities.**—Each of the said general lighthouse authorities, upon giving due notice of their intention, shall have power, with the sanction of the Board of Trade, to compel any local authority having jurisdiction in the matter of lighthouses, buoys, or beacons at any place situate within the jurisdiction of such general lighthouse authority, to lay down buoys or to remove or discontinue any existing lighthouse or beacon, or to make any variation in the character of any lighthouse or in the mode of exhibiting lights

therein; and no such local authority as aforesaid shall erect any new lighthouse, or remove or discontinue any lighthouse, or vary the character of any lighthouse or the mode of exhibiting lights therein, without the sanction of the general lighthouse authority within whose jurisdiction the same is situate. (17 & 18 Vict. c. 104 s. 394.)

*In case of Default by Local Bodies, Local Lighthouses may be transferred to General Lighthouse Authorities.*—If any local authority having power to erect, maintain, or place any local lighthouse, buoy, or beacon at any place within the jurisdiction of one of the said general lighthouse authorities fails so to do, or fails to obey any direction given by such authority under the last preceding section, her Majesty may, upon application from such general lighthouse authority, by order in council direct that such power as aforesaid shall be transferred to such last-mentioned authority; and such power, together with all powers of levying and receiving dues in respect of such lighthouse, buoy, or beacon, shall thereupon become vested in such last-mentioned authority; and such lighthouse, with its appurtenances, and also such buoy or beacon, and all dues leviable in respect thereof, shall thenceforth be subject in all respects to the same regulations as other lighthouses and light dues, buoys, and beacons provided for by this Act. (Sec. 395.)

*Dues to be levied.*—Subject to any alterations to be made under the powers hereinafter contained, the said general lighthouse authorities shall, in respect of the existing lighthouses, buoys, or beacons within their respective jurisdictions, continue to levy dues, herein called light dues, after the rate at which the same are levied at the time when this Act comes into operation; and such light dues shall be payable in respect of all ships whatever, except ships belonging to her Majesty and ships hereby exempted from payment thereof. (Sec. 396.)

The 25 & 26 Vict. c. 63 ss. 44 & 45 provides that the following persons shall be liable to pay light dues for any ship in respect of which light dues are payable; (that is to say), the owner or master, or such consignees or agents thereof as have paid or made themselves liable to pay any other charge on account of such ship in the port of her arrival or discharge, and in default of payment such light dues may be recovered in the same manner as penalties of the like amount may be recovered by virtue of the principal Act. (25 & 26 Vict. c. 63 s. 43.)

Every consignee and agent (not being the owner or master) hereby made liable for the payment of light dues in respect of any ship may, out of any moneys in his hands received on account of such ship, or belonging to the owner thereof, retain the amount of all dues so paid by him, together with any reasonable expenses he may have incurred by reason of such payment or liability. (Sec. 45.)

*Light Dues to be subject to Revision by her Majesty in Council.*—Her Majesty may, with the advice of her Privy Council, from time to time reduce all or any of the dues for the time being payable in respect of existing or future lighthouses, buoys, or beacons, for the time being under the management of the said general lighthouse authorities; and may also, with the like advice, from time to time increase or vary any of such dues, so that no dues payable in respect of any lighthouse, buoy, or beacon existing at the time when this Act comes into operation, are made to exceed the amount which has at any period previous to such time been received in respect thereof,

or to which the said dues might during any part of such period as last aforesaid lawfully have been raised. (17 & 18 Vict. c. 63 s. 397.)

By 25 & 26 Vict. c. 63 ss. 46, 47, it is enacted that if any lighthouse, buoy, or beacon is erected or placed, or reconstructed, repaired, or replaced by any local authority having jurisdiction in the matter of lighthouses, buoys, or beacons, her Majesty may, by order in council fix such dues to be paid to the said local authority in respect of every ship which enters the port or harbour under the jurisdiction of such local authority or the estuary where such lighthouse, buoy, or beacon is situate, and which passes the said lighthouse, buoy, or beacon, and derives benefit therefrom, as her Majesty may deem reasonable:

The dues for the time being fixed by any such order in council as aforesaid shall be paid accordingly by the master of the said ship or other person or persons by whom the said light dues, levied by one of the general lighthouse authorities, would be payable, and shall be recoverable in the same manner as light dues payable to the general authorities are recoverable.

All light dues leviable by any local authority under this Act shall be applied for the purposes of the construction, placing, maintenance, and improvement of the lighthouses, buoys, and beacons in respect of which the same are levied, and for no other purpose:

The local authority to whom the same are payable shall keep a separate account of the receipt and expenditure of such dues, and shall once in every year, or at such other time as the Board of Trade may determine, send a copy of such account to the Board of Trade, and shall send the same in such form and shall give such particulars in relation thereto as the Board of Trade may require:

Her Majesty may by order in council from time to time reduce, alter, or increase all or any such dues, so that the same may, so far as is practicable, be sufficient and not more than sufficient for the payment of the expenses incurred by the local authority in respect of the lighthouses, buoys, or beacons for which the dues are levied. (Secs. 46 & 47.)

*Powers of General Lighthouse Authorities to alter and regulate Dues.*—Each of the said general lighthouse authorities shall have power, with the consent of her Majesty in council, to do any of the following things; that is to say—  
To exempt any ships or any classes of ships from the payment of light dues receivable by such authority, and to annex any terms or conditions to such exemptions:

To alter the times, places, and modes at which the light dues receivable by such authorities are payable:

To substitute any other dues or class of dues whether by way of annual payment or otherwise in respect of any ships or classes of ships, for such dues payable to such authority for the time being. (17 & 18 Vict. c. 63 s. 398.)

*Publication of Dues and Regulation.*—Tables of all light dues, and a copy of the regulations for the time being in force in respect thereof, shall be posted up at all custom-houses within the United Kingdom; and each of the said general lighthouse authorities shall from time to time, on occasion requires, furnish copies of such tables and regulations to the Court of Customs and Excise, and to the principal officers of customs resident at all places where light dues are levied on account of such lighthouse authorities, and such copies shall be posted up by the

Commissioners at the Custom-house in London, and by such officers at the custom-houses of the places at which they are respectively resident. (Sec. 393.)

*Ship not to be cleared without Production of Receipt for Light Dues.*—A receipt for light dues shall be given by the person appointed to collect the same to every person paying the same, and no officer of customs at any port where light dues are payable in respect of any ship shall grant a clearance or transire for any such ship, unless the receipt for the same is produced to him. (Sec. 400.)

*Power of Distress for Light Dues.*—If the owner or master of any ship falls on demand of the authorised collector to pay the light dues due in respect thereof, it shall be lawful for such collector, in addition to any other remedy which he has the authority by whom he is appointed is enabled to use, to enter upon such ship, and detain the goods, guns, tackle, or any other thing of or belonging to or on board such ship, and to detain such ship until the said light dues are paid; and if payment of the same is not made within the period of 3 days next ensuing such distress, he may, at any time during the continuance of such non-payment, cause the same to be appraised by two sufficient persons or sworn appraisers, and thereupon sell the same, and apply the proceeds in payment of the light dues due, together with all reasonable expenses incurred by him under this section, paying the surplus (if any) on demand to the said owner or master.

Clause 401 regulates the mode in which light dues are to be paid over and accounted for.

*Application of Light Dues.*—All light dues coming to the hands of any of the said general lighthouse authorities under this Act shall be carried to the account of the Mercantile Marine Fund hereinafter mentioned, and shall be dealt with in manner hereinafter described. (Sec. 402.)

*Power to Lighthouse Authorities to erect and repair Lighthouses, Buoys, and Beacons.*—Each of the said general lighthouse authorities shall have power, within its jurisdiction, to execute the following powers, and do the following things; that is to say—

1. To erect or place new lighthouses, with all requisite works, roads, and appurtenances, or alter or remove any existing lighthouses;
2. To erect or place any new buoys or beacons, or alter or remove any existing buoys or beacons;
3. To take and purchase any land which may be necessary for the above purposes, or for the continuance of the works or the residence of the keepers;
4. To vary the character of any lighthouse or mode of exhibiting lights therein;
5. To sell any land belonging to it;
6. The exercise of the above power shall, in the case of the said commissioners and corporation, be subject to the restrictions hereinafter contained. (Sec. 404.)

Clause 405 directs that the powers given by the foregoing clause shall, in the case of the commissioners and corporation, be subject to approval of the Trinity House, with appeal to the Board of Trade.

Sections 406 to 409 relate to proceedings between the said commissioners &c. and the Board of Trade.

*Power of Her Majesty by Order in Council for the Construction of New Lighthouses.*—Upon the recommendation of any new lighthouse, buoy, or beacon, her Majesty may, by order in council, fix the amount of the light dues in respect thereof, to be paid by the

master or owner of every ship which passes the same or derives benefit therefrom, as her Majesty may deem reasonable, and may from time to time alter the amount thereof; and such dues shall be paid and collected in the same manner, by the same means, and subject to the same conditions in, by, and subject to which the light dues authorised to be levied by this Act are paid and collected. (Sec. 410.)

*No Dues to be levied in the Channel Islands without Consent of the States.*—No dues for any lighthouse, buoy, or beacon to be erected or placed in or near the islands of Guernsey, Jersey, Sark, or Alderney, shall be taken in the said islands of Guernsey or Jersey without the consent of the states of the said islands respectively; nor shall any powers hereinbefore given to the Trinity House in respect of any lighthouse, buoy, or beacon erected or placed in the islands of Guernsey or Jersey, or hereafter to be erected or placed in such islands, be exercised without the consent of her Majesty in council. (Sec. 411.)

*Incorporation of 8 & 9 Vict. c. 18 & 19.*—The Lands Clauses Consolidation Act, 1845, and the Lands Clauses Consolidation Act (Scotland), 1845, shall be incorporated in this Act, and shall apply to all lighthouses to be constructed and all land to be purchased under the powers thereof. (Sec. 412.)

Clause 413 relates to the surrender of local lighthouses to general lighthouse authorities.

*Penalty for injuring Lights, Buoys, and Beacons.*—If any person wilfully or negligently commits any of the following offences; that is to say—

1. Injures any lighthouse or the lights exhibited therein, or any buoy or beacon;
2. Removes, alters, or destroys any light ship, buoy, or beacon;
3. Rides by, makes fast to, or runs foul of any light ship or buoy;

He shall, in addition to the expenses of making good any damage so occasioned, incur a penalty not exceeding 50*l.* (Sec. 414.)

*Lighthouse Authorities may prohibit false Lights.*

—Whenever any fire or light is burnt or exhibited at such place or in such manner as to be liable to be mistaken for a light proceeding from a lighthouse, it shall be lawful for the general lighthouse authority within whose jurisdiction such place is situate, to serve a notice upon the owner of the place where the fire or light is burnt or exhibited, or on the person having the charge of such fire or light, either personally or by delivery at the place of abode of such owner or person, or by affixing the same in some conspicuous spot near to such fire or light, and by such notice to direct such owner or person, within a reasonable time to be therein specified, to take effectual means for the extinguishing or effectually screening such existing light, and for preventing for the future any similar fire or light; and any owner or person disobeying such notice shall be deemed guilty of a common nuisance, and in addition to any other penalties or liabilities of any kind thereby incurred, shall incur a penalty not exceeding 100*l.* (Sec. 415.)

*If not obeyed, they may abate such Lights.*—If any owner or person served with such notice as aforesaid, neglects for a period of 7 days to extinguish or effectually screen the fire or light therein mentioned, it shall be lawful for the general lighthouse authority within whose jurisdiction the same may be, by their servants or workmen, to enter upon the place whereon the same may be, and forthwith to extinguish such fire or light, doing no unnecessary damage and

all expenses incurred by such authority in such extinction may be recovered from such person or owner as aforesaid in the same way as penalties are hereby directed to be recoverable. (Sec. 416.)

The next part of the Act, that which refers to the MERCANTILE MARINE FUND, is so much mixed up with the law as to lighthouses, that it may be appropriately introduced in this place.

*Sums to be carried to Mercantile Marine Fund.* The following sums shall be carried to a common fund, to be entitled the 'Mercantile Marine Fund,' viz. :—

1. All fees and other sums (other than fines and forfeitures) received by the Board of Trade under the provisions of the third and fourth parts of this Act:

2. All light dues or other sums received by or accruing to the Trinity House, the Commissioners of Northern Lighthouses, and the Port of Dublin Corporation:

3. All rates and moneys received by the Trinity House under the local Act of the 7 Vict. c. 57, for the regulation of lastage and ballastage in the River Thames:

4. All fees and other sums mentioned in the table annexed hereto, which are received by receivers appointed under this Act, viz. :—

*Fees and Remuneration of Receivers.*—For every examination on oath instituted by a receiver with respect to any ship or boat which may be or may have been in distress, a fee not exceeding 1 0 0

But so that in no case shall a larger fee than 2*l.* be charged for examinations taken in respect of the same ship and the same occurrence, whatever may be the number of the deponents.

For every report required to be sent by the receiver to the Secretary of the Committee for managing the affairs of Lloyd's in London, the sum of 0 10 0

For wreck taken by the receiver into his custody, a percentage of 5 per cent. upon the value thereof.

But so that in no case shall the whole amount of percentage so payable exceed 20*l.*

In cases where any services are rendered by a receiver, in respect of any ship or boat in distress, not being wreck, or in respect of the cargo or other articles belonging thereto, the following fees instead of a percentage, viz. :—

If such ship or boat with her cargo equals or exceeds in value 600*l.*, the sum of 2*l.* for the first, and the sum of 1*l.* for every subsequent day during which the receiver is employed on such service, but if such ship or boat with her cargo is less in value than 600*l.*, one moiety of the above-mentioned sum.

And an account of the said fund, intitled 'The Mercantile Marine Fund Account,' shall be kept with her Majesty's Paymaster-General. (Sec. 417.)

*Application of Mercantile Marine Fund.*—Subject to any prior charges that may be subsisting thereon by virtue of any Act or Acts of Parliament or otherwise, the said fund shall be chargeable with the following expenses, viz. :—

1. The salaries and other expenses connected with the local marine boards, the examinations, and the shipping offices, provided for by the third part of this Act:

2. The salaries of surveyors, and other expenses connected with the survey of passenger steam ships provided for by the fourth part of this Act:

3. All expenses incurred by the general light-

house authorities aforesaid in the works and services of lighthouses, buoys, and beacons provided for by this Act, or in the execution of any works necessary or expedient for the purpose of permanently reducing the expense of such works and services:

4. All expenses incurred by the Trinity House in respect of lastage and ballastage in the river Thames:

5. Such expenses for establishing and maintaining on the coasts of the United Kingdom proper life-boats, with the necessary crews and equipments, and for affording assistance toward the preservation of life and property in cases of shipwreck and distress at sea, and for rewarding the preservation of life in such cases, as the Board of Trade directs:

6. Any expenses incurred in carrying into effect the provisions with regard to receivers and the performance of their duties contained in this Act:

7. Any expenses which by this or any other Act of Parliament are specially charged thereon. And shall, save as hereinafter mentioned, be applicable to no other purpose whatever. (Sec. 418.)

Clause 419 relates to ballast and ballast rates. [BALLAST.]

*Establishments for Lighthouses and Ballast charged on Fund to be fixed by her Majesty's Council.*—Her Majesty may from time to time with the advice of her Privy Council, fix establishments to be maintained by each of said general lighthouse authorities on account of the services of lighthouses, buoys, and beacons, and also as regards the Trinity House, on account of the service of lastage and ballastage in the river Thames (since by the 'Thames Conservancy Act, 27 & 28 Vict. c. 113, vested in the Commissioners), or the annual or other sums to be paid out of the said fund, in respect of such establishments; and if it appear that any of the establishments of the said lighthouse authorities is maintained for the purposes of duties and also for other purposes, to fix from time to time alter the portion of the expense of such establishments to be paid out of the fund; and no increase of any establishment part of an establishment so fixed shall be made without the consent of the Board of Trade. (Sec. 420.)

Clause 421 gives power to the general lighthouse authorities to grant superannuation allowances.

Clause 422 directs that estimates of the expenses to be incurred by lighthouse authorities shall be prepared and laid before the Board of Trade.

*No Expense to be allowed unless sanctioned by the Board of Trade.*—No expense of any kind shall be incurred by any of the said general lighthouse authorities in respect of the said services shall be paid out of the Mercantile Marine Fund, or allowed in accounts, unless the sums so allowed for establishments, expenses as aforesaid, or included in estimates or accounts approved by the Board of Trade. (Sec. 423.)

*For the Purpose of erecting and repairing Lighthouses &c., Treasury may advance Money.*—The purpose of the construction and repair of lighthouses, and of other extraordinary expenses connected with the said services, the Treasury may from time to time, upon the application of the Board of Trade, advance out of the consolidated fund of the United Kingdom any sum of money, upon such terms, and at such rate of interest, as they think fit, and to pay the

into the Mercantile Marine Fund account, so, nevertheless, that the whole sum for the time being due in respect of such advances shall never at any one time exceed 200,000*l.*; and upon any advance so made, the sum advanced and the interest shall be a charge on the Mercantile Marine Fund, and upon the dues, rates, fees, and payments carried thereto as aforesaid; and the Board of Trade shall make such provision for the repayment thereof out of the said fund, either by forming a sinking fund or otherwise, as the Treasury may require; provided that no such advance shall prevent any lawful reduction of any of the said dues, rates, fees, or payments, if such reduction be assented to by the Treasury. (See 424.)

Clause 425 gives power to the Board of Trade to borrow money on the credit of the fund.

Clause 426 gives power to public works loan commissioners to advance money for such purposes on the credit of the fund.

**Lighthouse Authorities to account for Receipts and Expenditure to the Board of Trade.**—Each of the said general lighthouse authorities shall account to the Board of Trade for their receipts from the said light dues and ballastage rates, and for their expenditure as regards expenses paid out of the said fund, in such form, and at such times, and with such details, explanations, and vouchers as the Board of Trade requires, and shall, when required by such Board, permit all books of accounts kept by or under their respective direction to be inspected and examined by such persons as the said Board appoints for that purpose. (See 427.)

Clause 428 directs that the accounts of the Mercantile Marine Fund be audited by commissioners of audit.

Clause 429 directs that the accounts of the fund be laid before Parliament.

Clause 430 directs that all property used for the purposes of lighthouses, buoys, beacons, light dues &c. is to be exempt from all rates and taxes.

The following provisions relative to lighthouses are contained in the Merchant Shipping Act Amendment Act before referred to, 25 & 26 Vict. c. 61.

It is to be the duty of each of the general lighthouse authorities, or such persons as may be authorized, to inspect all lights, buoys, and beacons, though they may belong to local authorities, and the local authorities are bound to furnish all requisite information. The inspecting authority is to communicate the results of its inspection to the local authority.

Light dues are payable from the owner or charterer, or such consignee or agents as have agreed to make themselves liable to pay any other dues.

Consignees or agents may detain the amount of light dues paid by them, together with reasonable expenses out of moneys in their hands received on account of the ship.

Local authorities may, by order in council, make regulations for local lighthouses, buoys, and beacons.

Expenses of such local dues to be applied shortly to the construction, placing, maintenance, and repair of the lighthouses, buoys, and beacons.

The local authority must keep an account of the receipts and expenditure, and forward a copy to the Board of Trade.

The Queen in council may reduce, alter, or increase the rates for local authorities &c.

**Account of Lighthouses.**—A wish to keep

the charges on native ships as low as possible, and to insure them a preference, seems to have given rise to the practice that long existed, of exacting comparatively high duties from the foreign shipping entering our ports. But whatever may have been the motives for making this distinction, its policy seems more than questionable. It is quite right that the foreign ships coming to our shores for commercial purposes should be made to pay, as they now do, the same light and harbour duties as British vessels; but the imposition of comparatively high duties on them was decidedly injurious, inasmuch as it provoked retaliatory measures on the part of other states, obstructed the resort of foreigners to our markets, and consequently, checked the growth of commerce.

This system was very properly condemned in a report by a committee of the House of Commons in 1822. There are, in the evidence annexed to that report, some well-authenticated instances of foreign ships having been totally lost, from the disinclination of the captains to enter a British port, while it was in their power, on account of the heavy charges to which they would have been exposed for lights &c. Down indeed to 1835, all ships, whether native or foreign, coming into any British port by *stress of weather*, were charged with full light duties; but this inhospitable regulation was repealed by an order in council of February 7 of that year (issued at the recommendation of the Trinity House), which exempted such vessels on account of lights. Our whole policy as to light duties, port charges &c., has within these few years been materially improved, and is now the very reverse of illiberal. The discriminating duties on foreign ships have been abolished: but even previously, in consequence of the general establishment of reciprocity treaties, the distinction had become nominal rather than real, and affected very few of the ships using our seas.

Large deductions, too, have been at different times made from the light duties; and after being still further augmented, these deductions were fixed by an order in council of February 2, 1859, at 50 per cent. on vessels making oversea, and at 35 per cent. on those making coasting, voyages; and again by order in council, which came into operation on April 1, 1868, the abatement of 50 per cent. from the tolls, was made uniform on coasting and oversea vessels, whether British or foreign: so that all invidious distinctions are now at an end. [NAVIGATION LAW.] It is indeed quite essential to their utility, that these duties should be moderate. They have the same influence upon the intercourse carried on by sea, that tolls have upon that carried on by land; and it is needless to add, that oppressive tolls are amongst the most effectual of all the engines by which rapacious ignorance has contrived to injure a country. There is nothing new in this statement: 'Avara manus portus claudit; et cum digitis contrahit, navium simul vela concludit; merito enim illa mercatores cuncti refugium quasi sibi disperdenda esse cognoscunt.' (Cassiodorus, *Varia*, lib. vii.)

**Charges on account of Collection &c.**—The lighthouse revenue, though formerly believed to be much greater than was necessary for keeping the establishment in a state of perfect efficiency, now just meets the expenditure, and the abatement allowed is so regulated as to secure the fund against a surplus. The surplus revenue was formerly, in so far at least as depended on the Trinity House, very judiciously expended in maintaining decayed seamen, and other useful purposes. But considering the vast importance of low shipping

charges, such persons should have been provided for in some less onerous way, and this view having been approved, no new pensions are now granted, and the old incumbents are fast dying out. Instead of reducing the charges generally on all lights, it has been proposed to make some of the more important lights duty free, as by this means the expense of collection would be saved, and business materially facilitated. This, however, would in effect impose a proportionally heavy charge on the

ships belonging to the less frequented ports; so that, on the whole, the general reduction of the rates, or their abolition, would seem to be the better plan.

**Lighthouses erected by Private Parties.**—Private individuals erecting lighthouses have generally obtained a lease of the same from the Crown for a definite number of years, with authority to charge certain fees on shipping. Owing to the great increase of navigation, some of these lighthouses

I.—Account of the Lighthouses and Floating Lights under the Management of the Corporation of the Trinity House of Deptford Stroud, the Commissioners of Northern Lighthouses, and the Commissioners of Irish Lights, specifying the Rates of Toll charged on British and Foreign Ships passing such Lights; with the gross Amount of Duties collected on Account of such Lights during 1866.

From 1824, collected in 1856, including that for the Local Lights belonging to the three Boards, 286,404l. 13s. 8d. Abatement.—Until her Majesty, with the advice of her Privy Council, may see fit otherwise to determine, there shall be allowed to every person paying such Tolls (being those specified in the foregoing Tables) an Abatement or Discount upon the amount payable by him; which Abatement or Discount shall, in the case of every Oversea or Coasting Vessel, be 50 per cent. In proof of the effect of Trade on Lighthouse Revenue it may be mentioned that when the Trinity House were authorized to buy up all private messuage Lights, they had to pay in 1811 about 450,000l. for the 'Steries' off the Angles Coast, a light which half a century ago was but one of little money value, but for which the patentees had the right to levy a toll on nearly all the Liverpool trade, and realised an annual income, that a jury awarded them in compensation the above enormous amount.

because very valuable properties. The most valuable were—

The *Sheries*, on a small islet or rock to the north-west of the Island of Anglesey, was granted to the ancestor of its late proprietor, to be for ever holden by him, his heirs and assignees, by the Act 3 Geo. II. c. 36, which also gave the proprietor power to charge certain rates on all vessels passing the light. Previously to its purchase by the Trinity House, this light produced a nett revenue of about 20,000l. a year.

*Harwich Lights* were held by General Rebow, under lease from the Crown, for 22 years from January 5, 1827, paying the Crown  $\frac{2}{3}$  of nett duty collected.

*Dungeness Light* was held under lease from the Crown by the Earl of Leicester for 20 years from August, 1829. Nett produce of the duties equally divided between the Crown and the leasee. The duties were reduced at the renewal of the lease from 1d. to  $\frac{1}{2}$ d. per ton, and it was provided, that at its termination the lighthouses and buildings connected therewith, and the ground on which they are erected, should become the property of the Crown.

*Waterloosness and Orfordness Lights* were held by Lord Braybrooke under a lease from the Crown, which would have expired on June 1, 1849. Nett produce of the duties equally divided between the Crown and his lordship. The duties were reduced at the last renewal of the lease in 1828, from 1d. to  $\frac{1}{2}$ d. per ton. At the expiration of the lease, the lighthouses, grounds &c. were to become the property of the Crown.

*Elwaston Cliff Light* was held by S. Lane, Esq., under a lease from the Crown, which would have expired in 1859. From October 16, 1837, the nett produce would have gone to the Crown; and the lighthouses &c. would have become, at the expiration of the lease, the property of the Crown, as in the case of the Dungeness and Waterloosness lights.

**Abatement.**—Until her Majesty, with the advice of her Privy Council, may see fit otherwise to determine, there shall be allowed to every person

paying such tolls (being those specified in the foregoing tables) an abatement or discount upon the amount payable by him; which abatement or discount shall, in the case of every Oversea vessel, be 50 per cent.; and on every Coasting vessel 35 per cent.

**The Scotch or Northern Lights** are under the management of a body of parliamentary commissioners. By 6 & 7 Wm. IV. c. 79 s. 40, and subsequent Acts, ending with the 25 & 26 Vict. cap. 63, all vessels, British or foreign, not wholly in ballast, which shall pass any Scotch lighthouse, or derive any benefit therefrom, shall pay at the rates specified in the prefixed and annexed tables, Nos. I. & II.

**Irish Lights.**—The various Acts regulating these lights range from 50 Geo. III. c. 95 to the 25 & 26 Vict. c. 63. They are under the management of the Commissioners of Irish Lights, formerly called the Dublin Ballast Board, or Port of Dublin Corporation. The rates of charges will be found in the prefixed and annexed tables.

**Compensation to Private Parties.**—The authority acquired by certain individuals and public bodies under letters patent, Acts of Parliament, and otherwise, of levying certain duties on account of lights, beacons, pilotage, harbour dues, &c. entitled them, for the most part, to demand higher fees from foreign than from British shipping. When, therefore, we entered into reciprocity treaties with foreign Powers, Government had to compensate the parties in question for the diminution that consequently took place in their charges on foreign ships. But this payment has now ceased, the Trinity Corporation having long since relinquished their claim to compensation; and the Act 6 & 7 Wm. IV. c. 79 having forbid such compensation being made to them, to the Commissioners of Northern Lights, and to the Commissioners for managing the Irish Lights.—(For some account of the Trinity Corporation, the reader is referred to the article TRINITY HOUSE; see also BEACONS, BALLAST, DOCKS, PILOTAGE, and other charges on SHIPPING, SHIPS &c.)

Note.—This list (No. II.) must be referred to in all instances where local dues have been stated in the main body of the tables, and it must be observed that where several ports have been classed together on account of the general lights being identical (as for example, Newport, Bristol, Chepstow, Gloucester), the locals peculiar to each port

have all been stated. It does not follow from this that both the Usk and Burnham are due at Newport, or that either of them are due at Chepstow, but only that they must be referred to at this place, in order that whichever of these Lighthouses may be found chargeable by the under-stated conditions may be added to the general rate.

II.—Statement of Duties payable on account of Local Lights in Great Britain.

Table with columns: Lights &c, Classes (British and Foreign Vessels), and Amount (British and Foreign Vessels). Rows include various lighthouses and light dues such as Cromarty, Loch Ryan, Devenar, Tynes Buys, and others.

Vertical text on the right margin, including 'IV.—Accounts', 'Name of Light', and other administrative notes.

LIMA. The capital of Peru, on the west coast of South America, lat. 12° 2' 42" S., long. 77° 7' 15" W. Population estimated at 75,000, in 1863. It is the port of Lima, is about 6 miles from the latter; the two being connected by a railway. The harbour lies to the north of a projecting point of land, in the angle formed by a small uninhabited island of San Lorenzo, and the bay of Callao. It is the chief port of Peru, and the principal Spanish provinces in the New World. Lima was the grand entrepôt for the trade of the west coast of South America; but a considerable portion of the foreign trade of Peru is carried on through Buenos Ayres, and the port of Callao is also in the habit of importing European goods. The exports from Lima consist of silver, cubic nitre, the most important, cotton, copper ore, bark, soap, sheep's wool, &c. Guano is found in large quantities on some parts of the coast of Peru, but is generally imported from some small islands, opposite to Pisco, where it is found in vast quantities. The great value of guano as a manure is generally recognised, and it is hardly of less importance as an article of commerce, 192,308 tons of which were imported in 1867 into the United Kingdom, of which no fewer than 164,112 tons, valued at being worth 1,969,844l., were from Peru. That which she supplies is decidedly the

best. The imports consist principally of cotton stuffs, linens, woollens, and hardware, coals, beer and ale, principally from England; silks, brandy, wine, and quicksilver from Spain and France; stock-fish and flour from the United States; indigo from Mexico, Paraguay herb from Paraguay, spices, dye-stuffs, &c. Timber for the construction of ships and houses is brought from Guayaquil. The declared value of the different articles of British produce and manufacture exported to Peru in 1867, amounted to 1,426,448l. The total value of exports from Peru, in 1865, was 6,245,491l., of which 3,853,554l. worth were from Callao; and the total value of the imports into the United Kingdom from Peru, was, in 1867, 3,701,362l. *Moneys, Weights, and Measures*, same as those of Spain; for which, see CADIZ. **LIME** (Ger. kalk; Fr. chaux; Ital. calcina, calce; Span. cal; Russ. isvest). An earthy substance of a white colour, moderately hard, but which is easily reduced to powder, either by sprinkling it with water or by trituration. It has a hot burning taste, and in some measure corrodes and destroys the texture of those animal bodies to which it is applied. Specific gravity, 2.3. Calcium, the metallic basis of lime, was discovered by Sir H. Davy. There are few parts of the world in which lime does not exist. It is found purest in limestone, marble, and chalk. None of these substances is, however, strictly speaking, lime; but they are all

easily converted into it by a well-known process; that is, by placing them in kilns or furnaces constructed for the purpose, and keeping them for some time in a white heat—a process called the burning of lime. (Thomson's *Chemistry*; Watta's *Dictionary of Chemistry*.)

The use of lime as mortar in building has prevailed from the earliest antiquity, and is nearly universal. As a manure to fertilise land, it is very extensively used in this country, and in an inferior degree in some parts of the Continent and of North America. But it is a curious fact that the use of lime as a manure is entirely a European practice; and that its employment in that way has never been so much as dreamed of in any part of Asia or Africa, unless by Europeans. Lime is used as a medicine, and is of much importance in the arts, as a flux in the smelting of metals, in the shape of chlorate in bleaching, in tanning, and as a disinfectant, &c. (*British Pharmacopœia*, 1867.) Lime and limestones may be carried and landed coastwise without any customs document whatever.

**LIME** (Fr. citronier; Ger. citron; Hfn. neemdo). A species of lemon (*Citrus medica*, var.  $\delta$  C) which grows in abundance in most of the West India islands, and is also to be met with in some parts of France, in Spain, Portugal, and throughout India, &c. The lime is smaller than the lemon, its rind is usually thinner, and its colour, when the fruit arrives at a perfect state of maturity, is a fine bright yellow. It is uncommonly juicy, and its flavour is esteemed superior to that of the lemon; it is, besides, more acid than the latter, and to a certain degree acrid. [JUICE; LEMONS.]

**LINEN** (Ger. linnen, leinwand; Dutch, lyna-waet; Fr. toile; Ital. tela, panno, lino; Span. lienza, tela de lino; Russ. polotno). A species of cloth made of thread of flax or hemp. The linen manufacture has been prosecuted in England for a very long period; but though its progress has been considerable, particularly of late years, it has not been so great as might have been anticipated. This is partly, perhaps, to be ascribed to the efforts that have been made to bolster up and encourage the manufacture in Ireland and Scotland, and partly to the rapid growth of the cotton manufacture—fabrics of cotton having to a considerable extent supplanted those of linen.

In 1691, both Houses of Parliament addressed his Majesty (William III.), representing that the progress of the woollen manufacture of Ireland was such as to prejudice that of this country; and that it would be for the public advantage were the former discouraged, and the linen manufacture established in its stead. His Majesty replied, 'I shall do all that in me lies to discourage the woollen manufacture in Ireland, and encourage the linen manufacture, and to promote the trade of England!' We may remark, by the way, that nothing can be more strikingly characteristic of the illiberal and erroneous notions that were then entertained with respect to the plainest principles of public economy, than this address and the answer to it. But whatever the people of Ireland might think of their sovereign deliberately avowing his determination to exert himself to crush a manufacture in which they had begun to make some progress, Government had no difficulty in prevailing upon the Legislature of that country to second their views, by prohibiting the exportation of all woollen goods from Ireland, except to England, where prohibitory duties were already laid on their importation! It is but justice, however, to the Parliament and Government of England, to state that they have never discovered any

backwardness to promote the linen trade of Ireland which, from the reign of William III. downwards has been the object of regulation and encouragement. It may indeed, be doubted whether the regulations have been always the most judicious that might have been devised, and whether Ireland has really gained anything by the forced extension of the manufacture. Mr. Young and Wakefield, two of the highest authorities as to matters connected with Ireland, contend that the spread of the linen manufacture has not been so advantageous. And it seems to be sufficiently established, that though the manufacture might not have been so widely diffused, it would have been in a sounder and healthier state, had it been less interfered with.

This great increase in the production of linen is easily explained. The stimulus given to the supply of all materials for textile fabrics consequent on the deficiency of cotton, will account for the development of the cultivation of flax in Ireland. The average produce of flax per acre in 1864 and 1866, in stone of 14 lbs., was:—

Leinster	1861	1866
Munster	317	316
Ulster	206	284
Connaught	34.3	219
	31.0	27.4
General average	312	305

#### [FLAX; HEMP.]

**Bounties.**—Besides premiums and encouragements of various kinds, bounties were granted on the exportation of linen for a very long period, previously to 1830. In 1829, for example, notwithstanding it had then been very much reduced, the bounty amounted to about 300,000*l.*, or nearly one seventh part of the entire real or declared value of the linen exported that year! It is easy to imagine a greater abuse. A bounty of this sort, instead of promoting the manufacture, rendered those engaged in it comparatively indifferent to improvements; and though it had been otherwise, what is to be thought of the policy of persisting for more than a century in supporting the foreigner with linens for less than they cost? We have not the least doubt that were the sums expended in well-meant but useless attempts to force this manufacture, added together with their accumulations at simple interest, they would be found sufficient to yield an annual revenue of little, if at all, inferior to the entire value of the linens we now send abroad. And after the business never began to do any real good, it would take firm root, till the manufacture ceased to be a domestic one, and was carried on principally in foreign mills, and by the aid of machinery, which the old forcing system tended to countenance. The only real and effectual legislative encouragement the manufacture has ever met with, was the reduction and repeal of the duties on flax and hemp, and the relinquishing of the absurd attempts to force their growth at home.

**Irish Linen Manufacture.**—Spinning in the hand is now almost unknown in Ireland, and the manufacture has disappeared from several parts of the country, where it had been largely introduced. On the whole, however, there can be no doubt that the introduction of the factory system has done much to improve the linen trade, and will continue to do so, most advantageously. Belfast has long been the great seat of the linen manufacture in Ireland, and there it is carried on in large factories furnished with the best machinery, and conducted on the most approved principles. In 1841, there were in the town and its vicinity, 25 steam mills for spinning linen, one of which employed 800 hands; and in 1866, the number of mills had increased to 39, and the

the linen trade of Ireland. William III. downward calculation and encouragement doubted whether it was the most judicious, and whether Ireland was being by the force of the law. Mr. Young and the most authorities as to Ireland, contend that the manufacture has not yet attained to be sufficient to supply the manufacture of the country, it would be in a better state, had it been...

the production of... The stimulus for... materials for textile... of cotton, will secure... cultivation of flax... produce of flax per acre of 14 lbs., was:—

1861	1905
377	318
504	274
343	314
310	278
312	31

the culture of flax in Ireland, which increased very rapidly down to 1853, declined to 91,500 acres in 1858, and gradually rose again to 263,507 acres in 1866, and 253,105 acres 1867, of which 24,491 were in Ulster. (For further details, see *Smith's Irish Almanac for 1868*, pp. 779-784.)

**Scottish Linen Manufacture.**—In 1827, a Board of Trustees was established in Scotland for the maintenance and improvement of the linen manufacture. It is not easy to suppose that the abolition of this Board could of itself have been of any material service; but considerable bounties and premiums being at the same time given on the production and exportation of linen, the manufacture went on increasing. Still, however, it did not increase so fast as cotton and some others, and machinery began to be extensively employed in the manufacture; so that it is very doubtful whether the influence of the bounty has been so great as it would at first sight appear to have been. The regulations as to the manufacture, after having long objected to by those concerned, were abolished in 1822, and the bounties ceased in 1830. Dundee is the grand seat of the Scotch linen manufacture; and its progress there during the last five years has been so extraordinary, that the following details in respect to it may not be unacceptable.

The manufacture appears to have been introduced into Dundee some time towards the beginning of the last century; but, for a lengthened period, its progress was comparatively slow. It was not until 174 tons of flax were imported, without the shipments of linen cloth during the same year being estimated at about 1,000,000 yards, no mention being made either of sail-cloth or bagging. In 1791, the imports of flax amounted to 2,444 tons, and those of hemp to 299 tons; the exports that year being 7,842,000 yards of 260,000 yards sail-cloth, and 65,000 do. of bagging. From this period the trade began to advance itself gradually, though not rapidly. Precisely the same was employed in spinning; but about 1815, in consequence, partly and principally, of the improvement of machinery, and its extension into the manufacture, and partly of the great regularity with which supplies of the raw material were obtained from the Northern States, the trade began rapidly to increase. Its progress has, indeed, been quite astonishing; the value of flax and hemp having increased from £8,000 tons in 1814 to 15,000 tons in 1830, to £1,000 tons at an average of 1857 and 1858, and £1,655 tons in 1865, though they fell to 87,716 tons in 1866, and 33,491 tons in 1867.

We gave in a former edition an account of the number of pieces of the different descriptions of linen goods annually exported from Dundee. But as the carriage on them is charged by railway; and large quantities are now sent off by Dundee, and account is kept of the pieces so despatched; and consequently, no account can now be given of the total quantities exported. We have, however, been assured, by a high authority in the town, that the total value of the linens exported from Dundee in 1858 may be safely estimated at 3,100,000*l.*

It is not easy to give any satisfactory explanation of the wonderful progress of the linen manufacture at Dundee. Something must be ascribed to the convenient situation of the port for obtaining supplies of the raw material; and more, perhaps, to the manufacture having been long established in the towns and villages of Strathmore, Fife, of which Dundee is the emporium. But the plain superiority to which she has recently attained in this department; and, however unphilosophical it may seem, we do not really know what we can ascribe it to anything else than a concurrence of fortunate accidents. Nothing, in fact, is so difficult to explain as the superiority to which certain towns frequently attain in particular departments of industry, without apparently possessing any peculiar facilities for carrying them on. But from whatever causes their pre-eminence may arise in the first instance, it is very difficult, when once they have attained it, for others to come into competition with them. They have, on their side, established connections, workmen of superior skill and dexterity in manipulation, improved machinery &c. Recently, indeed, the advantages in favour of old establishments have been, to a considerable extent, neutralised by the prevalence of combinations amongst their workmen; but it is to be hoped that means may be devised for obviating this formidable evil.

Dunfermline, in Fife, with the contiguous district, is the principal seat of the manufacture of nappery. The table-cloths which it supplies are of the best quality, and their patterns have latterly been greatly improved. They are now fully equal furnished by Germany and the Low Countries. In fact, table-linen is now shipped from this country for Germany; and the duty of 10 per cent. on the importation of German damasks and such like fabrics has been repealed, without the manufacturer in this country.

In England the linen manufacture is principally seated in Leeds and its immediate vicinity, where there are some very large mills, and in other parts of the W. Riding. It is also carried on in parts of Lancashire, Dorset, Durham, and Salop.

It is perhaps needless to add that, the state of the linen trade during the last five years has been quite exceptional. The complete prostration of the American civil war, was to some extent met by a vast increase in the production of other textile fabrics, and some years must elapse before the manufacture of cotton, flax, and wool, resume their natural proportions. Thus in 1865 the exports of linen were double in quantity those of 1861, and much more than double in value.

**Value of the Manufacture. Number of Persons employed.**—There are no means by which to form an accurate estimate of the entire value of the linen manufacture of Great Britain and Ireland. Dr. Colquhoun estimated it at 15,000,000*l.*, but there cannot be a doubt that this estimate was, at

the time, much exaggerated. In the first edition of this work, we estimated the annual value of the manufacture at 7,500,000*l.* Sir F. M. Eden estimated the entire value of the linen manufacture of Great Britain in 1800 at 2,000,000*l.* (*Treatise on Insurance*, p. 76.)

In 1858, we reckoned it at 12,000,000*l.* But it has increased very rapidly since that time, especially since the commencement of the cotton famine, and its value for the United Kingdom is at present (1867) probably not under, if it do not exceed, 20,000,000*l.* But taking it at this amount, and setting aside a third part of this sum for the value of the raw material, and another third for profits, wages of superintendence, wear and tear of capital, coal &c., we have 6,666,000*l.* to be divided as wages amongst those employed in the manufacture. And supposing each individual to earn, at an average, 40*l.* a year, the total number employed would be nearly 170,000. We may add that according to the returns under the census of 1861, 96,689 persons were then employed in the linen manufacture in Great Britain, of whom 70,897 were employed in Scotland, and 19,792 in England, while in Ireland the linen and damask weavers alone numbered 60,626.

**Export of Linens to France.**—Previously to 1833 the export of linens and linen-yarn from this country to France was quite inconsiderable. It then, however, began to increase; and the oppressive duties that previously existed on the importation of these articles into France having been materially reduced in 1834–36, so powerful a stimulus was given to the trade, that the exports of yarn from the United Kingdom to France rose from 4,012,141 lbs. in 1836, to 22,202,292 lbs. in 1842. This influx of foreign yarn having, of course, subjected the French spinners to consider-

able temporary difficulties, they set up a cry of 'the reimposition of the duties; and the Government being weak enough, or ignorant enough, to listen to their interested representations, the duties were again largely augmented in 1842. In consequence the exports of yarn &c., from this country to France declined even more rapidly than they had increased. But we may shortly state, that the injury which the French Government did to this measure to our spinners is but trifling compared with that which they did to their own subjects; for, while they stopped all progress in the manufacture, and deprived the producers of the articles sent hither in exchange for yarns of the best market, they about doubled the price of linen to the consumers.

Since the negotiation however of the commercial treaty with France, a considerable increase in the exports of linen yarn has taken place, though the amount has only been increasing slowly. The linen trade with France is almost stationary.

**An Account of the Pounds Weight of Linen Yarn Exported from the United Kingdom to France during each of the undermentioned Years ending with 1867.**

Years	British Linen Yarn Exported from United Kingdom to France	Years	British Linen Yarn Exported from United Kingdom to France

The United States, Brazil, Cuba, and the Hanse Towns, but especially the first, are by far the largest importers of manufactured linens. The

great outlets for yarn are at present (Spain, inc. Gibraltar, the Hanse Towns, France, Italy, Belgium, and Prussia.

**The following are the Imports of Flax, Hemp, and Jute for the 7 Years ending 1867.**

Articles	1861	1862	1863	1864	1865	1866

\* Undressed hemp only for 1867.

**LIQUORICE** (Ger. *sussholz*; Fr. *réglisse*, *racine douce*; Ital. *regolizia*, *ligorizia*, *liquirizia*; Span. *regaliz*, *orozuz*). A perennial plant (*Glycyrrhiza glabra*), a native of the south of Europe, but cultivated to some extent in England, particularly at Mitcham in Surrey. Its root, which is its only valuable part, is long, slender, fibrous, of a greyish brown externally, and yellow internally, and when fresh very juicy, sweet, and without odour (*British Pharmacopœia*, 1867). The liquorice grown in England is fit for use at the end of 3 years; the roots, when taken up, are either immediately sold to the brewers' druggists or to common druggists, by whom they are applied

to different purposes, or they are packed like carrots or potatoes, till wanted. Linen root was charged till 1853 with a duty of 5*cts.*, when it became duty free. 5,272 cwt. imported in 1867, valued at 6,857*l.*

**LIQUORICE JUICE** (*Succus Liquiritice*). Popularly *black sugar*, the impasted juice of the roots just mentioned. Very little of this is prepared in Britain, by far the greater our supply being imported from Sicily. It is obtained by crushing the roots in a mill, subjecting them to the press, is slowly boiled becomes of a proper consistency, when it is into rolls of a considerable thickness, the

usually covered with bay leaves. This is the paste in which we import it. Most part of it is afterwards redissolved, purified, and cast into small cylindrical rolls of about the thickness of a goose quill, when it is called *refined liquorice*. It is then of a glossy black colour, brittle, having a sweet mucilaginous taste. It is used in the *materia medica*, particularly in coughs, colds &c. What is called *liquorice paste* is an inferior or coarser variety of the same article, mostly brought from Turkey. (Thomson's *Chemistry*; Thomson's *Dispensatory*.)

The oppressive duty of 3*l*. 15*s*. per cwt., with which it was loaded down to 1842, was reduced in that year to 2*7s*. 6*d*. and in 1853 to 20*s*. The duty was repealed altogether in 1860.

The imports of juice and paste amounted in 1867 to 4,573 and 23,811 cwt., respectively.

**LISBON.** The capital of Portugal, on the N. bank of the Tagus, the observatory of the fort being in lat. 38° 42' 24" N., long. 9° 5' 50" W. The city proper is surrounded by walls with gates or barriers, at which articles of food, drink, and firing for the use of the town pay octrois or duties. Total pop. in 1863, 224,063, whereof about 170,000 are within and the remainder without the walls.

Lisbon, within the walls, paid in 1854-55, from July 1, 1854, to June 30, 1855, 95,000*l*. public taxes, 20,000*l*. town dues, and 46,000*l*. municipal charges: 2,000 pigs, 19,826 oxen, 3,656 calves, 141,000 gallons of wine, and 143,000 imperial quarters of wheat: the town dues are received by Government.

The total revenue of the kingdom was estimated from direct and indirect taxes for 1866-67, at for direct 4,904,393, and indirect 9,085,309 mils.

**Port.**—The harbour, or rather road, of Lisbon is one of the finest in the world, and the quays are at once convenient and beautiful. Fort St. Julian marks the northern entrance of the Tagus. It is built on a steep projecting rock. There is a light-house in the centre, 120 feet above the level of the sea. At the mouth of the Tagus are two large bays, called the North and South *Cachops*. There are two channels for entering the river; the North or Little, and the South or Great Channel, exhibited in the annexed plan. On the middle of the South *Cachop*, about 1½ mile from Fort St. Julian, is the *Barral* fort and light-house, the latter being 66 feet in height. The least depth of water in the north channel on the bar is 4 fathoms, and in the south 8. The only danger in entering the port arises from the strength of the tide; the ebb running down at the rate of 7 miles an hour; and after heavy rains, when there is a great deal of fresh water in the river, the difficulty of entering is considerably augmented. When, at such periods, there is a strong wind from the sea, there is a complete break all over the bar; vessels moor up and down the river with open haws to the southward. In some parts they may come within 200 yards of the shore, being guided by the depth of water, which, from nearly 20 fathoms in mid-channel, shoals gradually to the edge.

**Trade &c.**—Mr. Secretary of Legation Lytton states in his *Report* of January 15, 1867, that since 1861 no annual returns relative to Portuguese commerce have been published. Though one of the best situated commercial cities of Europe, the commerce of Lisbon cannot be very extensive, as the country she supplies is but small, and in a very backward state of improvement, though the capital is now connected by rail with Spain and the rest of Europe. Contrary, however, to what might perhaps be expected, nowhere is political and religious tolerance carried to a greater extent:

there are several daily newspapers, both political and commercial, the latter ably conducted. The police is excellent, and one may walk through all parts of the town at all hours of the night in perfect security. Lisbon has a government commercial school, a commercial association, and a small though pretty exchange. It is lighted by gas.

The importation duties levied at the custom-house for the year ending July 30, 1862, were 551,397*l*. The principal imports were:—

1 milreis = 51*d*.

The duties on exportation are 1 per cent., excepting wines, liquors, oak bark, vinegar, gold and silver, rags and argol. The export duty on port wine has been reduced from 18*s*. 9*d*. to 1*s*. 8*d*. per pipe. The Portuguese tariff is long and complex: a copy of it occupies 34 pages of Mr. Secretary Lytton's *Report* of June 22, 1866. See also his *Report* of January 15, 1867. Chief exports in 1854, wheat 39,100 qrs. (35,400 to England, 3,600 to France); wine 258,000 gallons; 1,170 tons of cork wood, 62,000 tons of salt, 2,350 tons of tartar, 62,000 half-chests oranges, 640 tons wool, and 2,700 tons onions.

The value of the chief exports from Lisbon was in 1861-2, 900,187*l*., of which liquids and vegetable substances represented one-half. The values of the imports into, and exports from the port in 1864, were respectively 3,085,190*l*. and 923,757*l*. The number and tonnage of vessels of each nation entered and cleared at Lisbon in 1864 were as follow:—

Countries	Entered		Cleared	
	Vessels	Tons	Vessels	Tons

<b>Total</b> - - - - -	<b>1,522</b>		<b>1,555</b>	

Few vessels are built at Lisbon. In 1864 only 2 ships came from the stocks in the capital. Most of the Portuguese shipping is built at Vianna, Figueira, and Caminha.

There are no longer any regular mail packets between Southampton and Portugal, except the Brazil packet which touches at Lisbon about the 13th of each month: occasional merchant steamers carry letters between Lisbon and Liverpool, Glasgow, and London.

There are at Lisbon the following insurance companies and agencies:—

Estadade (Sea, Fire, and Life Insurance)	capital £500,000 by shares
União Commercial (Sea and Fire)	175,000 "
Restaurador (Sea and Fire)	44,500 "
Garantie (Ocean Company) Sea and Fire Insurance	225,000 "
Segurancas (do. do.)	225,000 "
Equidade (do. do.)	225,000 "

Agencies of the English companies Athenaeum, Albion, Sun, Liverpool and London and Norwich Union, and of the Madrid Life Insurance Companies; also the London and Lancashire, Fire and Life; Royal, do.; Imperial, do.; El Fenix Español, do.; La Union de Madrid, do.; La Anegaradora, do.; La Capicola, Maritimo.

**Port Regulations.**—All vessels coming over the bar are to heave-to at the Pago d'Arcos, that they may be registered and receive on board a customs officer. Masters of vessels must bring with them 2 manifests of the cargo, containing shippers' and receivers' names, marks, number and contents of packages, legalised by the Portuguese consul at the port of departure. They will otherwise be fined double the amount of duties. The bill of health must contain the number and names of passengers, and be also legalised by the Portuguese consul. Passengers must be provided with passports; masters of vessels are otherwise liable to pay a fine.

Vessels loading, unloading, or merely remaining in the port (in *franchisa*), which they are permitted to do for 6 days (or for 10 days if sufficient grounds be assigned for the indulgence), must anchor in and continue in the situation pointed out by the authorities; and as any infringement of the customs or port regulations is followed by heavy fines, and is often the cause of much delay, they should be carefully attended to.

All masters of vessels, seamen, and passengers are obliged to deliver up to the authorities who come on board all soap and tobacco they may possess, being only allowed to retain what may be deemed sufficient for their own use on board. Any tobacco or soap found in their possession while going on shore is seized, and the bearer subjected to imprisonment and to very heavy fines; the tobacco taken from the parties on arrival is restored to them on leaving.

**Port Charges** consist of pilotage and tonnage dues. Pilotages inwards for vessels of 3 masts, 35s. 6d.; of 2 masts and 1 ditto, 27s. 6d. Pilotages outwards for vessels of 3 masts, 32s.; of 2 masts and 1 ditto, 24s. Tonnage dues are rather complicated. Vessels coming in with a full cargo and leaving in ballast, coming in and leaving in ballast, coming in with cargo and leaving with foreign goods, pay 13½d. per ton; also vessels taking ¾ of the cargo salt and foreign goods pay said tonnage dues on the goods.

Vessels arriving loaded and leaving with cargo pay for Portuguese goods 8d.; the same vessels taking ¾ salt and the remainder goods pay on the Portuguese goods. Vessels coming in and going out with the same cargo pay 34d. per ton, also those which come in loaded and leave with a full cargo of salt, and those which take ¾ of the cargo salt pay this tonnage duty on the salt. Vessels arriving in ballast and leaving with a full cargo of salt pay no tonnage dues, and vessels putting in in distress. No tonnage dues are paid on grain, oil, or salt, if they form ¾ of the cargo, the vessel clearing for Lisbon.

**Money.**—Gold is the circulating medium, silver being only legal tender to the extent of 22s. 3d. in any payment. The gold in circulation is almost all British coin, sovereigns and half-sovereigns, the former having a legal value of 4,500 reis, the latter of 2,250 reis. There are also some Portuguese

coins, 8,000 reis pieces and 4,000 reis in circulation, and a few 5,000, 2,500, and 1,000 reis pieces. Silver, the old coins of 180, 240, 120, and 60 reis, are being withdrawn; the new coins consist of 500, 200, 100, and 50 reis pieces. Copper 40, 20, 10, and 5 reis pieces. The millo reis is thus about 4s. 5½d. Accounts are kept in reis; 1,000 are called millo reis, and 1,000,000 reis are called a conto. In the notation of accounts, the millo reis are separated from the reis by the following sign §; thus a sovereign 4,500 is 4 § 500.

The old cruzado is 400, the new cruzado 480 reis. 100 reis are called tostao (plural tostoes), 20 reis is called a vintem (plur. vintens). The 8,000 pieces are denominated 'peças.' The average rate of exchange on England is 50d. per millo reis. Bills drawn in foreign coin, without any declared exchange, are payable in Portugal at the *uso* exchange at maturity. The *uso* is 30 d. for England, 100d. for France, and 3 m. for Hamburg, Holland, and Genoa. There are no direct exchange operations on other places besides these, excepting Spain, the price of the dollar varying from 920 to 930 reis.

**Weights and Measures.**—The French system has been adopted by Government. Commercial Weights.—The *aravetel*, libra, or pound = 2 marcos = 4 quartels = 16 onças = 128 outavas = 7,040 Eng. grains. 32 aravetels, or lbs. = 1 arroba; 1 arroba = 1 quintal; and 13½ quintals, or 54 arrobas = 1 tonneleira or ton. 100 Portuguese lbs. = 101½ (101) nearly lbs. avoirdupois = 45.89 kilog.

The measure by which corn, salt, and vegetables are principally sold is the *moio* or *moio* = 15 fanegas = 60 alqueires = 240 quartels = 480 outavas = 279 (rather more than 24) imp. quartels. The weight of a moio of corn depends of course on the quality of the grain. A moio of salt may be taken at about 1,600 lbs.

The principal liquid measure, the *almude* = 36 imp. gallons, is divided into 2 poles or cantares 12 canudas, and 48 quartilhos. A pipe in the province = 26 almudes; in Lisbon for shipment is 30 almudes = 109.23 (109) nearly imp. gal.

Measures of length, 1 pe = 1½ palmo = 12 Eng. inch; 3 palmos = 1 covado; 5 palmos = 1 vara; 2 varas, or 10 palmos = 1 braça. A yard reckoned equal to 14 palmos; a metre, to 4½ palmos.

The weights are uniform throughout Portugal, the measures vary almost from one parish to another. (Dourther, *Dictionnaire Universel*, 'Arroba,' &c.; Kelly's *Cambist*, art. 'Lisbon;')

**Bank of Lisbon**, now called Bank of Portugal, was founded in Nov. 1816, being a re-constitution of the old bank founded in 1822. Its capital 1,780,000l., in shares of about 22l. and 110l. rate of discount is invariably 5 per cent. per annum for bills not having more than 3 months to run.

It has the privilege of issuing notes, and which is more valuable, of having its claims on estates paid in full, provided the estate amounts to much! This privilege, which is justly obtained, allows it to be more liberal or less cautious in counting than it would be otherwise. It is obliged to publish monthly statements of its situation, but, like the majority of such documents, they are drawn out so that it is impossible to make any satisfactory out of them. From those of 1855? it appears that the notes in circulation 206,600l.; deposits, 553,500l.; cash, 383,400l.; discounted, 325,200l.

**Commission.**—Portuguese houses generally charge 3 per cent.; foreign houses 2½ per cent. *del credere* ½ per cent. per month.

According to the Portuguese laws, agents are obliged to effect insurance on shipments, unless they have orders to the contrary.

Brokerage,  $\frac{1}{2}$  per cent. for bills,  $\frac{1}{4}$  per cent. for funds and goods, payable by buyer and seller; for grain 400 reis per moya (about 8d. per quarter) is paid; for butter, and sometimes for rice, 1 per cent. is charged.

**Customary Tares.**—Amatto, single baskets 1 lb. each, draft 2 lb. per 320 lb.; cotton, 2 lb. per bushel, draft 2 lb. per 5 bags; coffee, linen bags, 1 lb. per bushel, draft 1 lb. each, draft 2 lb. per 5 bags; cocoa, like coffee. Copava oil in tin canisters, 2 lb. each, draft 2 lb. per 320 lb.; in barrels it is measured; India-rubber (caoutchouc), 2 lb. per basket, draft 2 lb. per 320 lb.; gum, 1 lb. per basket, draft as above; tapioca, 20 lb. per barrel, draft as above; sugar, general tare, 7 to 8 arrobas per box, draft 24 lb. barrel 18 lb. to 20 lb., draft 2 lb. bags, invariable tare, 2 lb. per bag, draft 4 lb. per 5 bags.

Ta. per chest, 15 to 24 lb. according to size; cinnamon, 12 lb. per box; pepper, 2 lb. per bag; rice, 1 lb. draft as above. Oil is now sold by weight, 31 lb. per almude (66 almudes are reckoned in the tun), and rent tares of casks allowed. All

goods for exportation must be accompanied on board by a custom house permit.

**Warehousing.**—The custom house has spacious stores, where all goods, except inflammatory ones, such as pitch and tar, are allowed to remain, free of expense, for 12 months; raw cotton, sugar, coffee, cinnamon, tea, hides, pepper, sarsaparilla, saltpetre, and tobacco may remain for 24 months. After these periods the rent is 20 reis per 128 lb. for dry goods, and 16 reis per almude for liquids. All labour in the custom-house is done by its workmen, for which 85 reis per 128 lb. gross weight is charged. Lisbon possesses an Industrial Institute, where artisans are instructed in arts and trades. It has 47 manufactories moved by steam engines of 722 horse-power, and 68 by manual labour. The latter employ 4,769 workmen.

On sale of goods, credits varying from 9 to 6 months are allowed; export goods are usually paid by cash. (Compiled from private information, obtained from the best sources, direct from Lisbon.)

In 1865 there were 6,940 kilometres of Portuguese railroads in operation and 3,245 in course of construction, but the want of good ordinary roads is severely felt throughout the country. (Mr. Lytton's *Reports*, ending with that of 1867.)

A line of telegraphs now extends throughout the kingdom.

#### LITERARY PROPERTY. [Books.]

LITHARGE (Ger. glütte, glütte; Dutch, gclit; Fr. litharge; Ital. litargirio; Span. almartaga, litargirio; Russ. glet; Lat. litargyrium). An oxide of lead in an imperfect state of vitrification.

Most of the lead met with in commerce contains silver, from a few grains to 30 ounces or more in the fopper: when the quantity is sufficient to pay the expense of separation, it is refined; that is, the metal is exposed to a high heat, passing at the same time a current of air over the surface; the lead is thus oxidised and converted into litharge, while the silver, remaining unchanged, is collected at the end of the process.—(Thomson's *Chemistry*; &c.) Litharge is used for various purposes in the arts, by potters, glass-makers, painters &c.

#### LIVERPOOL DOCKS, SHIPPING &c. [DOCKS, LIVERPOOL.]

LOADSTONE (Ger. magnet; Dutch, magneet; Fr. aimant; Ital. calamita; Span. iman; Russ. magnit; Lat. magnes). M. Hally observes, that the ores in which the iron contains the least oxygen without being engaged in other combinations, form natural magnets; and he calls the loadstones of commerce, which are found in considerable masses in Germany, Sweden, Norway, Spain, Italy, China, Siam, the Philippine Isles, Corsica, and Ethiopia, *oxidulated iron*. The loadstone is characterised by the following properties:—A very strong action on the magnetic needle; specific gravity 4.2457; not ductile; of a dark grey colour, with a metallic lustre.—Primitive form the regular octahedron. Insoluble in nitric acid.

This singular substance was known to the ancients, and they had remarked its peculiar property of attracting iron; but it does not appear that they were acquainted with the wonderful property which it also has, of turning the pole when suspended, and left at liberty to move freely. Upon this remarkable circumstance the mariner's compass depends, an instrument which gives us such infinite advantages over the ancients. It is this which enables the mariner to conduct his vessel through vast oceans out of the sight of land, in any given direction; and this directive property also guides the miner in subterranean excavations, and the traveller through deserts otherwise impassable. The natural loadstone has also the quality of communicating its properties to iron and steel; and when pieces of steel properly prepared are touched, as it is called, by the loadstone, they are denominated artificial magnets. [COMPASS.]

#### LOAN. [FUNDS; INTEREST.]

LOBSTER (Fr. crevise; Lat. cancer) A fish of the crab species, of which vast quantities are consumed in London.

The minimum size of lobsters offered for sale is fixed by 10 & 11 Wm. III. c. 24 at eight inches from the tip of the nose to the end of the middle fin of the tail. No lobsters are to be taken on the coast of Scotland between June 1 and September 1, under a penalty of 5*l*. The Scilly Islands and the Land's End abound in lobsters, as well as several places on the Scottish shores, particularly about Montrose. But the principal lobster fishery is on the coast of Norway; whence it is believed about 1,000,000 lobsters are annually imported into London. Those of Heligoland are, however, esteemed

the best: they are of a deeper black colour, and their flesh is firmer than that of those brought from Norway. Turbots and lobsters may be imported either in British or foreign vessels free of duty.

LOCK, LOCKS (Ger. schlösser; Dutch, sloten; Fr. serrures; Ital. serrature; Span. cerraduras, cerrajos; Russ. Samki). A well-known instrument, of which there are infinite varieties, a great deal of art and delicacy is sometimes displayed in contriving and varying the wards, springs, bolts &c., and adjusting them to the places where they are to be used, and to the occasions of using them. From the various structure of locks, accommodated to their different locations, they acquire various names, as stock lock, spring lock, padlocks &c. The grand difficulty is so that it may not be opened by any key except its own, nor admit of being picked; it should also be possessed of sufficient strength and durability, and not be too complex. Many ingenious contrivances have been proposed for the attainment of the desired security, several of which are possessed of much merit. And though we believe that no lock has hitherto been constructed that may not (if proper facilities are given) be picked, yet it is true that some of the best locks, such as those made by Messrs. Bramah, Chubb, Moore, and other first-rate artists, are so very difficult to pick, that the security which they afford may be regarded as a practical point of view, be regarded as all perfect. Common door-locks are now almost inserted in the wood, instead of being, as formerly, screwed to it; and when so placed are called mortis locks. Carpenter's locks, in which the key is perpendicular, are well known and widely used. Willenhall, Wolverhampton, Walsall and Wednesfield are the chief seats of the lock trade. No less than 5,000 hands are reported to be engaged in the work in these localities. The principal foreign markets for locks are, Australia, New Zealand and India. English locks are, for finish and security, by far the best in the world. (*Birmingham and the Hand-loom District*, p. 77.)

LOG, SHIP'S (Fr. loe). A piece of timber, usually of a fish-like or quadrantal shape, so constructed and balanced, by being loaded at one end, as to swim perpendicularly on the surface of the water. It has a line attached to it, and is employed in ships to ascertain the rate of sailing. The log-line is divided into spaces, or knots, which, if properly measured, bear the same proportion to a marine mile that  $\frac{1}{2}$  minute bears to an hour. On throwing the log into the sea it remains stationary, or nearly so; and the log-line is drawn out, or unwound from its reel, by the proceeding on her course, her speed is estimated by observing the number of knots, each of which represents a mile, run out in  $\frac{1}{2}$  minute as measured by a  $\frac{1}{2}$  minute sand-glass. Hence, if 3 knots are run out in  $\frac{1}{2}$  minute, the rate of sailing is 3, 4, or 5 miles an hour as the case may be; and hence, also, the custom of stating a ship's rate of sailing in knots instead of miles. N.B. A great variety of logs have been suggested; but the principle being the same in them all, it is unnecessary to enter into any particulars with respect to their construction.

From the log being affected by current and other disturbing causes, the results obtained by its means have usually to be subjected to corrections; and, except under favourable circumstances, are but little to be depended on. However, therefore, an opportunity offers, the rate of the ship should be determined by other means. But in hazy weather, or when observations

be taken, and in narrow seas, the log, when carefully used, may be of the greatest service; and it should never be wholly dispensed with.

**Log-Book** (Fr. *livro du log*). This, which is, in fact, the ship's journal, derives its name from the circumstance of the *dead reckoning*, or the results obtained by heaving the log compared with the ship's course, being usually given in it. In the present improved state, the log-book comprises an account of every event of any importance that takes place during a voyage, whether relating to the ship, the crew, the passengers (if any), or the cargo, which should be taken down as soon as possible after its occurrence. Inasmuch, too, as it is of the highest importance in all matters relating to the voyage, the log-book should be carefully and faithfully compiled, and made out in a clear and distinct manner. This, indeed, is one of the principal duties of a master.

**Log (OFFICIAL)**. In addition to, or in conjunction with, the ordinary ship's log, all masters of British ships, not wholly engaged in the coasting trade, are bound to keep an *official log*, in such form as may, from time to time, be prescribed by the Board of Trade. The entries to be made in this log are specified in the Mercantile Shipping Act of 1854, as follows, viz.:

**Official Logs to be kept in forms sanctioned by Board of Trade**.—The Board of Trade shall sanction forms of official log-books which may be different for different classes of ships, so that each such form contains blanks for the entries herein-after required; and an official log of every ship except ships employed exclusively in trading between ports on the coasts of the United Kingdom shall be kept in the appropriate sanctioned form; and such official log may, at the discretion of the master or owner, either be kept distinct from the ordinary ship's log or united therewith, so that in all cases all the blanks in the official log be duly filled up. (Sec. 280.)

**Entries to be made in due Time**.—Every entry in every official log shall be made as soon as possible after the occurrence to which it relates, and if not made on the same day as the occurrence to which it relates shall be made and dated so as to show the date of the occurrence and of the entry respectively; and in no case shall any entry be made in respect of any occurrence happening subsequent to the arrival of the ship at her final port of discharge be made more than 24 hours after such arrival. (Sec. 281.)

**Entries required in Official Log**.—Every master of a ship for which an official log-book is hereby required shall make or cause to be made therein entries of the following matters; (that is to say,)

- (1) Every legal conviction of any member of the crew, and the punishment inflicted;
- (2) Every offence committed by any member of the crew for which it is intended to prosecute, to enforce a forfeiture, or to exact a fine, together with such statement concerning the reading of such entry, and concerning the reply (if any) made to the charge, as hereinbefore required;
- (3) Every offence for which punishment is inflicted on board, and the punishment inflicted;
- (4) A statement of the conduct, character, and qualifications, of each of his crew, or a statement that he declines to give an opinion on such particulars;
- (5) Every case of illness or injury happening to any member of the crew, with the nature thereof, and the medical treatment adopted (if any);
- (6) Every case of death happening on board, and of the cause thereof;

(7) Every birth happening on board, with the sex of the infant and the names of the parents;

(8) Every marriage taking place on board, with the names and ages of the parties;

(9) The name of every seaman or apprentice who ceases to be a member of the crew, otherwise than by death, with the place, time, manner, and cause thereof;

(10) The amount of wages due to any seaman who enters her Majesty's service during the voyage;

(11) The wages due to any seaman or apprentice who dies during the voyage, and the gross amount of all deductions to be made therefrom;

(12) The sale of the effects of any seaman or apprentice who dies during the voyage, including a statement of each article sold, and of the sum received for it;

(13) Every collision with any other ship, and the circumstances under which the same occurred. (Sec. 282.)

**Entries how to be signed**.—The entries to be made in official log-books shall be signed as follows; viz.: Every such entry shall be signed by the master and by the mate or some other of the crew, and every entry of illness, injury, or death shall be also signed by the surgeon or medical practitioner on board (if any); and every entry of wages due to or of the sale of the effects of any seaman or apprentice who dies shall be signed by the master and by the mate and some other member of the crew; and every entry of wages due to any seaman who enters her Majesty's service shall be signed by the master and by the seaman or by the officer authorized to receive the seaman into such service. (Sec. 283.)

**Penalties in respect of official Logs**.—The following offences in respect of official log-books shall be punishable as hereinafter mentioned; viz.:

(1) If in any case an official log-book is not kept in the manner hereby required, or if any entry hereby directed to be made in any such log-book is not made at the time and in the manner hereby directed, the master shall for each such offence incur the specific penalty herein mentioned in respect thereof, or where there is no such specific penalty, a penalty not exceeding 5*l*.

(2) Every person who makes or procures to be made or assists in making any entry in any official log-book in respect of any occurrence happening previously to the arrival of the ship at her final port of discharge more than twenty-four hours after such arrival shall for each such offence incur a penalty not exceeding 30*l*.

(3) Every person who wilfully destroys or mutilates or renders illegible any entry in any official log-book, or who wilfully makes or procures to be made or assists in making any false or fraudulent entry or omission in any such log-book, shall for each such offence be deemed guilty of a misdemeanour. (Sec. 284.)

**Entries in official Logs to be received in Evidence**.—All entries made in any official log-book as hereinbefore directed shall be received in evidence in any proceeding in any court of justice, subject to all just exceptions. (Sec. 285.)

**Official Logs to be delivered to Shipping Master**.—In the case of foreign-going ships the master shall, within 48 hours after the ship's arrival at her final port of destination in the United Kingdom, or upon the discharge of the crew, whichever first happens, deliver to the shipping master before whom the crew is discharged the official log-book of the voyage; and the master or owner of every home trade ship, not exclusively employed in trading between ports on the coasts in the United Kingdom

shall within 21 days after the 30th of June and the 31st of December in every year transmit or deliver to some shipping master in the United Kingdom the official log-book for the preceding half year; and every master or owner who refuses or neglects to deliver his official log-book as hereby required shall be subject to the same consequences and liabilities to which he is hereby made subject for the non-delivery of the list of his crew. (Sec. 286.)

*Official Logs to be sent home in case of Transfer of Ship, and in case of Loss.*—If any ship ceases by reason of transfer of ownership or change of employment to fall within the definition of a foreign-going or of a home trade ship, the master or owner thereof shall, if such ship is then in the United Kingdom, within 1 month, and if she is elsewhere, within 6 months, deliver or transmit to the shipping master at the port to which the ship belonged the official log-book (if any) duly made out to the time at which she ceased to be a foreign-going or home trade ship, and in default shall for each offence incur a penalty not exceeding 10*l*.; and if any ship is lost or abandoned, the master or owner thereof shall, if practicable, and as soon as possible deliver or transmit to the shipping master at the port to which the ship belonged the official log-book (if any) duly made out to the time of such loss or abandonment, and in default shall for each offence incur a penalty not exceeding 10*l*. (Sec. 287.)

**LOGWOOD** (Fr. bois de Campêche; Ger. Kampeescholz; Dutch, Campecheont; Span. palo de Campeche). The wood of a tree (*Hæmatoxylon Campechianum*, Linn.), a native of America, and which attains the greatest perfection at Campechy, and in the West Indies. It thrives best in a wet soil, with a large proportion of clay. The logwood tree is like the white thorn, but a great deal larger. The wood is hard, compact, heavy, and of a deep red colour internally, which it gives out both to water and alcohol. It is an article of great commercial importance, being extensively used as a dye wood. It is imported in logs, that are afterwards chipped. (The logwood tree, and the adventures of those that were formerly engaged in cutting it, are described by Dampier; see his *Voyages*, vol. ii. part 2, p. 56, ed. 1729.)

The imports of logwood in 1867 amounted to 28,530 tons. Of these 22,382 tons came from Honduras and the British West Indies, 1,012 tons

from Mexico, and 944 tons from the United States. Its price in 1867 varied from 10*l*. 10*s*. 10*d*. to 3*l*. 15*s*. 0*d*. per ton. The best is that from Mexico. It was made duty free in 1815.

We borrow from the learned and able work of Dr. Bancroft, the following curious details with respect to the use of logwood in this country:—'Logwood seems to have been first brought to England soon after the accession of Queen Elizabeth: but the various and beautiful colours dyed from it proved so fugacious, that a general outcry against its use was soon raised: and an Act of Parliament was passed in the 23rd year of her reign, which prohibited its use as a dye under severe penalties, and not only authorised but directed the burning of it, in whatever hands it might be found within the realm; and though this wood was afterwards sometimes clandestinely used (under the feigned name of blackwood), it continued subject to this prohibition for nearly 100 years, or until the passing of the Acts 13 & 14 Ch. II.; the preamble of which declares, that the ingenious industry of modern times hath taught the dyers of England the art of fixing colours made of logwood, *alias* blackwood, so as that, by experience, they are found as lasting as the colours made with *any other sort of dyeing wood whatever*; and on this ground it repeals so much of the statute of Elizabeth as related to logwood, and gives permission to import and use it for dyeing. Probably the solicitude of the dyers to obtain this permission induced them to pretend that their industry had done much more than it really had, in fixing the colours of logwood; most of which, even at this time, are notoriously deficient in regard to their durability.' (On *Permanent Colours*, vol. ii. p. 340.)

**LOUIS D'OR.** A French gold coin, first struck in 1640. It was subsequently made by the French mint regulations equal to 24 livres, or 1*l*. sterling. This, however, was under-rating it in respect of silver: and hence, as every one preferred paying his debts in the over-valued coin, silver became the principal currency of France, the gold coin being either sent to the melting-pot or exported. In Britain, the process was reversed. Gold having been, for a lengthened period, over-valued by its mint in respect to silver, it became the principal currency of the country.

**LUBECK.** [*HANSEATIC LEAGUE.*]

**LUGGAGE.** [*BAGGAGE.*]

## M

**MACAO.** A sea-port and settlement belonging to the Portuguese, on the island of the same name, at the mouth of the Canton river in China, in lat. 22° 12' 45" N., long. 113° 35' E. The situation of Macao strikingly resembles that of Cadiz. It is built near the extremity of a peninsula projecting from the south-west corner of the island of Macao, to which it is joined by a long narrow neck. Across this isthmus, which is not more than 100 yards wide, a wall is erected, with a gate and guard-house in the middle for the Chinese soldiers. The greatest length of the peninsula belonging to the Portuguese, from N.E. to S.W., is under 3 miles, and its breadth under  $\frac{1}{2}$  mile. The broadest part, to the north of the town, is flat, and of a light sandy soil: but is well cultivated, principally by Chinese, and produces all sorts of Asiatic and European culinary vegetables. Pro-

visions are obtained from the Chinese part of island or from the main land.

The Portuguese obtained possession of Macao in 1586. It was for a considerable period the seat of a great trade, carried on not only with China but with Japan, Siam, Cochin-China, the Philippine Islands &c.; but for many years past it has been of comparatively little importance. There is probable, that if it belonged to a more enterprising and active people, it might still retain most part of its former prosperity. Formerly the public administration was vested in a senate composed of the bishop, the judge, and a few of the principal inhabitants: but all real authority fell till 1849 in the hands of the Chinese minister resident in the town.

Advantage was taken, however, of the weakness to which the Chinese were reduced

the war with Great Britain in 1839-42, to expel the Chinese civil functionaries and Customs' officials, and since 1849, the settlement has been looked upon as a colony of Portugal, an assumption which the Chinese Government have not, however, admitted, and which will probably be actively combated ere long.

The population of Macao is estimated at some 50,000 Chinese and 5,000 Europeans or Indo-Europeans.

The Government is conducted by a Governor, the Chief Justice, who, with the Secretary of Government, are as a rule the only officials coming from the mother country.

The following return shows the number of Chinese exported as bond-servants from Macao in 1866:—

To Havana	-	-	15,517
To Java	-	-	7,394
Total	-	-	22,911

The following is a summary of imports, with estimated value, for 1866:—

Articles	Quantities	Value
Tea - chests	4,537	dols. 31,696
Tea - piculs	214,515	499,299
Opium - chests	9,078	5,429,103
Merchandise - boxes	868	251,680
Wool - value	..	1,254,068
Wool - value	..	565,413
Total	..	8,012,809

These figures are, however, only approximate, as, in the absence of a custom-house, a simple memorandum of cargo is all that is required by the Government. The value of exports from Macao for 1865 amounted to 4,665,361 dollars, and in 1866 to 3,708,907 dollars.

The following is the return of shipping for the year 1866:—

British	Entered	Cleared
Foreign	40	36
	136	77

The Harbour is on the west side of the town, between it and Priest's Island, and is small and inconvenient of access save by vessels of comparatively light draught, of which, moreover, no great number can be accommodated at one time. The water not being sufficiently deep to admit large ships, they generally anchor in the roads on the other side of the peninsula, from 5 to 10 miles ENE. from the town, an open sea way protected by the south by the island called the Typa. A steamer runs daily from Hong Kong to Macao and back, accomplishing the journey in 4 hours. All vessels coming into the roads send their boats to the Portuguese Custom-house on the south side of the town.

When a ship arrives among the islands, she is generally boarded by a pilot, who carries her to the Macao roads. As soon as she is anchored, the pilot proceeds to Macao to inform the mandarin of her nationality. If there be any women on board, application must be made to the bishop and senate, for leave to send them on shore, as they will not be permitted to proceed to Whampoa on the ship. As soon as the mandarin has made the necessary enquiries, he orders off a river pilot, who brings with him a chop or license to pass the Macao Tigris, or mouth of the Canton river, and sends the ship to Whampoa. For pilot regulations and charges see WHAMPOA. No port dues are levied, but the following harbour regulations are enforced:—

**Macao Port Regulations.**—1. Any vessel nearing the road and waiting a pilot, must have its national flag at the foremast head.  
2. No notice will be taken at the office of the

captain of the port of any damage occurring to vessels coming in or going out when not piloted by the office pilot.

3. The captain of the port will not employ any pilot without having previously examined him; and as it is necessary to keep a pilot establishment, vessels coming in or going out without such office pilot will not be exempted from payment of pilotage dues.

4. Captain of a vessel or his agent shall report his vessel at the captain of the port's office within 24 hours after his arrival, and in default of doing so he shall pay a fine of 100 dollars.

5. The captain of a vessel on landing shall present his ship's papers at the office of the captain of the port; where they will remain until his departure.

6. Vessels cannot enter the inner harbour with gunpowder on board. Such gunpowder must be deposited at the Bar Fort, whence it can be received on going out.

7. It is forbidden to throw ballast or rubbish overboard in port, under a penalty of 100 dollars.

8. Vessels are not permitted to change their moorings in the river without the permission of the captain of the port.

9. Vessels must keep their sheet anchors ready for letting go.

10. If any man deserts his vessel, the same must be reported to the captain of the port, who will assist in his apprehension, and if the deserter cannot be found during the stay of the vessel in port, arrested (if so required) and delivered to the police authorities.

11. It is forbidden to land invalids without the consent of the captain of the port. For contravention of this a fine will be imposed of 100 dollars.

12. If the captain of a vessel wishes to send any sick man to the hospital, he must apply to the captain of the port; the vessel being answerable for the expenses.

13. The captain of a vessel may not discharge either part or the whole of his crew in Macao, without the permission of the captain of the port.

14. Vessels coming to in the roads, with intention of loading or unloading, must report at the office of the captain of the port, as ordained by the 5th art. Agents will be held answerable for the neglect.

Although the independence of Macao is officially ignored by the Chinese Government, its status as a Portuguese colony has been recognised in fact by the British and other Governments, who maintain Consular agents there but leave the control of their respective subjects in the hands of the Portuguese authorities. A treaty was signed on the 13th August 1862 between the Governor of Macao and two Chinese Commissioners, by the wording of which Portugal was left free to infer the undisputed possession of the peninsula; but on the exchange of ratifications being demanded in the Chinese Government, the treaty was disavowed by had been extorted under irregular menaces. The currency of Macao, weights and measures &c. are the same as those of Canton.

**Trade of Macao.** The Chinese regulations do not permit any vessels, except such as belong to Portuguese or Spaniards, of which there are very few, to trade at Macao. But the Portuguese inhabitants lend their names, for a trifling consideration, to such foreigners as wish to be associated with them for the purpose of trading from the port. Independently, however, of this,

China ware &c. pay a higher duty to Macao than to Whampoa.

For details as to the *Weights, Measures &c.* used at Macao, see CANTON.

While our exports to Macao were *nil* in 1867, our imports therefrom (chiefly tea) amounted to 157,354.

For further particulars, see *Hamilton's East India Gazetteer*, art. 'Macao'; *Milburn's Orient. Com.*; and *Consular Reports on Trade of China &c.* 1857-58. [CANTON.]

**MACARONI.** A species of wheaten paste formed into long, slender, hollow tubes, used amongst us dressed with cheese, and in soups, broths &c. It is the same substance as vermicelli; the only difference between them being that the latter is made into smaller tubes. Both of them are prepared in the greatest perfection in Naples, where they form the favourite dish of all classes, and the principal food of the bulk of the population.

The flour of the hard wheat (*grano duro*) imported from the Black Sea is the best suited for the manufacture of macaroni. Being mixed with water, it is kneaded by means of heavy wooden blocks wrought by levers, till it acquires a sufficient degree of tenacity; it is then forced, by simple pressure, through a number of holes, so conceived that it is formed into hollow cylinders. The name given to the tubes depends on their diameter: those of the largest size being macaroni, the next to them vermicelli, and the smallest *fedellini*. At Genoa, and some other places, the paste is coloured by an admixture of saffron; but at Naples where its preparation is best understood, nothing is used except flour and water; the best being made of the flour of hard wheat, and the inferior sorts of the flour of soft wheat. When properly prepared and boiled to a nicety, Neapolitan macaroni assumes a greenish tinge. It is then taken out of the caldron, drained of the water, and being saturated with concentrated salt brine, and sprinkled with finely grated cheese, it forms a dish of which all classes, from the prince to the beggar, are passionately fond.

The macaroni used by the poor is merely boiled in plain water, and is rarely eaten with any condiment whatever. The macaroni usually served up in England is said, by those familiar with that of Naples, to be a disgrace to the name of the name. When properly prepared, macaroni is a delicious and easy of digestion. The Neapolitans themselves on the dexterity with which they swallow long strings of macaroni and vermicelli without breaking them. (We are principally indebted for these details to an article on macaroni in the *Penny Magazine* for August 10, 1851.)

Macaroni is liable to a duty of 4½ per cwt. In 1867 we imported 10,266 cwt. of macaroni and vermicelli, chiefly from Genoa.

**MACE** (Ger. *maceis*, muskatenblüthe; Dutch, *mace*, muscabloem; Fr. *macis*, fleur de macis; Ital. *mace*; Span. *maceis*; Port. *maxis*; Ar. *de noz moscada*; Lat. *macis*). A thin, aromatic substance, enveloping the nutmeg, and consequently only to be found in the nutmegs that produce the latter. It is of a reddish yellow colour, a pleasant aromatic taste, and a warm, bitterish, pungent taste. Mace is chiefly imported from Penang and Singapore in bags each weighing about 100 lb. Mace should be chosen fresh, tough, oleaginous, of an agreeably fragrant smell, and a bright colour—the lighter the better. The smaller pieces are esteemed the best. The preferable mode of packing is in bales, pressed down close and firm, which preserves its fragrance and consistence.

The duty on mace was reduced in 1853 from 2s. 6d. to 1s. per lb. It was abolished in 1859. In 1867 we imported 26,269 lb.

A production is met with on the coast of Malabar, so like mace, that at first it is not easy to be distinguished; but it has not the least flavour of spiciness, and when chewed has a kind of resinous taste. Eight cwt. of mace are allowed to a ton. The East India ton of mace is 50 cubic feet in cases. (*Milburn's Orient. Com.*)

**MADDER** (Ger. *fürberöthe*; Dutch, *mee*; Fr. *alizeri*, *garance*; Ital. *robbia*; Span. *granza*, *rubia*; Russ. *mariona*, *krap*; Hin. *manjith*). The roots of a plant (*Rubia tinctorum*), of which there are several varieties. They are long and slender, varying from the thickness of a goose-quill to that of the little finger. They are semi-transparent, of a reddish colour, have a strong smell, and a smooth bark. Madder is very extensively used in dyeing red; and though the colour which it imparts be less bright and beautiful than that of cochineal, it has the advantage of being cheaper and more durable. It is a native of the south of Europe, Asia Minor, and India; but has been long since introduced into and successfully cultivated in Holland, Alsace, Provence &c. Its cultivation has been attempted in England, but without any beneficial result. Our supplies of madder were for a lengthened period almost entirely derived from Holland (Zealand); but large quantities are now imported from France and Turkey.

Dutch or Zealand madder is never exported except in a prepared or manufactured state. It is divided by commercial men into four qualities, distinguished by the terms *mill*, *gamene*, *ombro*, and *crops*. The roots being dried in stoves, the first species, or mull, consists of a powder formed by pounding the very small roots, and the husk or bark of the larger ones. It is comparatively low priced, and is employed for dyeing cheap dark colours. A second pounding separates about a third part of the larger roots; and this, being sifted and packed separately, is sold here under the name of *gamene* or *gemens*. The third and last pounding comprehends the interior, pure, and bright part of the roots, and is sold in Holland under the name of *hor hraps*, but is here simply denominated *crops*. Sometimes, however, after the mull has been separated, the entire residue is ground, sifted, and packed together under the name of *ombro* or *ombrofile*. It consists of about one third of *gamene*, and two thirds of *crops*. Prepared madder should be kept dry. It attracts the moisture of the atmosphere, and is injured by it.

The Smyrna or Levant madder (*Rubia peregrina*), the alizeri or lizary of the modern Greeks, is cultivated in Bœotia, along the border of lake Copais, and in the plain of Thebes. It also grows in large quantities at Kurdar near Smyrna, and in Cyprus. The madder of Provence has been raised from seeds carried from the latter in 1761. Turkey madder affords, when properly prepared, a brighter colour than that of Zealand. It is, however, imported in its natural state, or as roots; the natives, by whom it is chiefly produced, not having industry or skill sufficient to prepare it like the Zealanders, by pounding and separating the skins and inferior roots; so that, the finer colouring matter of the larger roots being degraded by the presence of that derived from the former, a peculiar process is required to evolve that beautiful Turkey red which is so highly and deservedly esteemed. (*Thomson's Chemistry*; *Bancroft. On Colours*, vol. ii. pp. 221—278; see also *Beckmann, History of Inventions*, vol. iii. art. 'Madder'.)

The duty on madder was reduced in 1853 from 2s. 6d. to 1s. per lb. It was abolished in 1859. In 1867 we imported 26,269 lb.

A production is met with on the coast of Malabar, so like mace, that at first it is not easy to be distinguished; but it has not the least flavour of spiciness, and when chewed has a kind of resinous taste. charges 90 taels per quantity silver, but the same through the boat goods from Canton in other cases. Thus, maces 10 less than to silk piece goods other hand, to

In France, madder is prepared nearly in the same manner as in Zealand. The following instructive details as to its cultivation, price &c. in Provence, were obligingly furnished to us by an English gentleman, intimately acquainted with such subjects, who visited Avignon in the autumn of 1829:—

'This town (Avignon) is the centre of the madder country, the cultivation of which was introduced here about the middle of the 18th century, and, with the exception of Alsace, is still confined (in France) to this department (Vaucluse). The soil appears to be better adapted for its cultivation here than anywhere else, and it has long been the source of great wealth to the cultivators. But the returns fluctuate very greatly.

The root is called *alizari*, and the powder (made from it) *garance* or *garancine*. The plant is raised from seed, and requires 3 years to come to maturity. It is, however, often pulled in 18 months without injury to the quality; the quantity only is smaller. A rich soil is necessary for its successful cultivation; and when the soil is impregnated with alkaline matter, the root acquires a red colour; in other cases it is yellow. The latter is preferred in England, from the long habit of using Dutch madder, which is of this colour; but in France the red sells at 2 fr. per quintal higher, being used for the Turkey red dye.

It is calculated that when wheat sells at 20 fr. per hectolitre, *alizari* should bring 85 fr. per quintal (poids de table), to give the same remuneration to the cultivator. That is, wheat 63s. per English quarter, and *alizari* 34s. per English cwt. The price has, however, been frequently as low as 22 fr. per quintal.

Prices undergo a revolution every 7 or 8 years, touching the minimum of 22, and rising as high as 100 fr. As in every similar case, the high price induces extensive cultivation, and this generally produces its full effect 4 or 5 years after. The

produce of Alsace, which is inferior both in quantity and quality to that of Vaucluse, is generally sold in Strasburg market.

'England employs both the root and the powder, according to the purpose for which they are intended. The Dutch madder is more employed by the woollen dyers, and the French by the cotton dyers and printers.

'In making purchases of *garance*, it is essential to employ a house of confidence, because the quality depends entirely upon the care and honesty of the agent. The *finest* is produced from the roots after being cleaned and stripped of their bark. The *second* by grinding the roots without cleaning. A *third* by mixing the bark of the first while grinding; and so on to any degree of adulteration.

The price of *alizari* in the country, which was only 25 fr. in July, is now (November 1829) at 86 fr., and is expected to be at 40 fr. very shortly. The crop being deficient both here and in Holland, and the certainty of its being also deficient next year, added to the small quantity existing in England, give reason to believe that the price will reach 60 fr. before many months, and will continue to advance for a year or two more.

'The *quintals* above mentioned are of 100 *poids de table*—the weight in general use over the south of France, and even in Marseilles. The weight is different in the different provinces, varying from 22 to 25 per cent. lighter than the *poëmetrique*. At Avignon, 124 *poids de tables* = kilogrammes, consequently 126 lb. are equal to cwt. English. At the exchange of 25 50 the costs (including 11s. for freight, duty, and charges till delivered in London or Liverpool 61s. or 60s.)

The duty on madder was repealed in 1845.

Madder does not deteriorate by keeping, provided it be kept dry.

It is imported in casks weighing from 15 to cwt.

In 1867 we imported 121,146 cwt. of madder and 138,355 cwt. of madder root, and exported 1,105 cwt. madder, and 3,581 cwt. madder root.

In 1867 the garancine imported was valued at 6l. 11s. per cwt., and the madder and madder roots at from 1l. 12s. to 2l. 7s. 6d. per cwt. (For an account of East Indian madder, see *MUNJEET*.)

**MADDEIRA.** [WINE.]

**MADRAS.** The principal emporium of the coast of Coromandel, or western shore of the Bay of Bengal, lat. of lighthouse, 18° 5' 10" N., long. 80° 16' 29" E. It is the seat of the Government of the second presidency of British India, having under it a territory, including the tributary states, of 257,042 square miles, with a population, according to the latest returns, of 36,060,561, paying, in 1865, a gross annual revenue of about 7,000,000l. sterling. The town had a population, in 1862, of 457,771, and is situated in the Carnatic province, a low, sandy, and rather sterile country.

It is without port or harbour, lying close upon the margin of an open roadstead, the shores of which are constantly beaten by a heavy surf. Beyond these disadvantages, a rapid current runs along the coast; and it is within the sphere of the hurricanes or typhoons, by which it is occasionally visited. In every respect, indeed, it is a very convenient place for trade, and its commerce consequently greatly inferior to that of Calcutta or Bombay. It has been in the possession of the English above two centuries, but been founded by them in 1639, and retained since. Fort St. George is a strong and happy fortification, lying close to the shore. The Town of Madras, as it is called, stands to the north and eastward of the fort, from which it is separated by a spacious esplanade. Here reside the native, Armenian, and Portuguese merchants, with many Europeans unconnected with the Government. Like most other Indian towns

inferior both in quantity and quality, is generally

is irregular and confused, being a mixture of brick and bamboo houses. Madras, like Calcutta and Bombay, is subject to English law; having a Supreme Court of Judicature, the judges of which are named by the Crown, and are altogether independent of the local Government. The population is not exactly ascertained, but there are said to be about 400,000 persons within a radius of 2½ miles round Fort St. George.

In Madras roads, large ships moor in from 7 to 8 fathoms, with the flagstaff off the fort bearing S.W. ½ W., 2 miles from shore. From October to January is generally considered the most unsafe season of the year, in consequence of the prevalence of storms and typhoons. On October 15, the flagstaff is struck, and not erected again until December 15; during which period a ship coming into the roads, or, indeed, anywhere within soundings on the coast of Coromandel (reckoned from Palmyra to Ceylon), vitiates her insurance, according to the conditions of the policies of the insurance offices in India. The cargo boats used for crossing the surf, called *Massula* boats, are large and light; made of very thin planks sewed together, with straw in the seams instead of caulking.

The boats belonging to ships in the roads sometimes proceed to the back of the surf, and wait for the country boats from the beach to come to them, when it is dangerous to have communication with the shore, a flag is displayed at the beach house, which stands near the landing place, as a caution.

The fishermen use a species of floating machine of a very simple construction, named a catamaran. It is formed of 2 or 3 logs of light wood, 8 or 10 feet in length, lashed together, with a small piece of wood inserted between them to serve as a stem. They hold generally 2 men, who paddle and row through the surf, to carry letters, or small quantities, to ships, when they can venture out. They wear a pointed mat of matting, where they secure the letters, so that there is no damage. Medals are given to such men as distinguish themselves by saving persons in danger. They are all under the immediate control of the Government.

In the erection of a solid wrought iron screw pile, it is hoped, obviate the dangers of landing at Madras. It is 1,000 feet long, 40 feet in diameter, with 4 lines of railway, turntables, 6 fixed cranes, and 6 cranes. Its total cost was about £100,000, and will be levied on goods and passen-

gers. **Communication.**—The rivers of this country being little or not navigable, communication is held by means of roads, canals, and bridges. Of the last there were, in 1866, 650 bridges open for traffic. Madras communicates with Bombay, and Ceylon by telegraph.

**Lighthouse.**—A powerful 'flashing light' has been established on the new lighthouse immediately to the S. of the fort. This light is elevated 128 feet above the level of the sea, and may be seen in clear weather from the deck of a ship at a distance of 11 to 24 miles. The new lighthouse is situated 22° W., and is distant about 13 miles from the south-eastern extremity of the Pulicat lagoon, but no ship or vessel when standing in the northward for Madras roads should bring the light to bear to the S. of 28° W., or S.S.W. ½ W., unless her position be well ascertained. The light should be well in mind the moment they run by incautiously approaching the coast, and as heavy weather or other causes obscure the light, it is imperatively

necessary to keep the lead going, and to keep a vigilant look-out. (*Statement issued by Marine Board.*)

**Commerce.**—Imports—cotton and hardware goods; manufactured metals; glass; books; wines; provisions; railway materials; spirits; apparel; timber; and horses. Exports—cotton; sugar; coffee; indigo; rice; hides; jaggery; coconut-oil; oil-seeds; cardamoms; semma and pepper. The greater part of the trade is with the United Kingdom; the rest is with the other Indian ports, Ceylon, the Straits, France, Mauritius, New South Wales, and America.

**Customs Tariff: Imports and Exports.**—By the Indian Customs Duties Act of March 1867 one uniform tariff was fixed for all the ports in British India. [CALCUTTA.]

**Moneys, Weights, and Measures.**—The Government rupee (for an account of which see CALCUTTA) No. XIII. of 1862, which provided for a new silver and copper coinage at all the mints in British India.

**Silver Coin.**

- A rupee to be called the Government rupee.
- A half rupee.
- A quarter rupee or four anna piece.
- An eighth of a rupee or two anna piece.

**Copper Coin.**

- A double pice or half anna.
- A pice or quarter anna.
- A half pice or one-eighth of an anna.
- A pie, being one-third of a pice, or one-twelfth of an anna.

**Revised Weights and Measures.**—The weights and measures recognised by Government are as follow:—

180 grains = 1 tolah	Avoirdupois.	lb.	oz.	drs.
3 tolas = 1 pollam		0	0	6.58
40 pollams = 1 vis		0	1	3.75

8 measures = 1 marcal	3.2	3.1	35
4 " = 1 "	10.3	9.6	800
	8.2	7.6	400

The 'garce' is 400 marcals or 185.2 cubic feet or 5.152 tons of water. According to the *old* measure of Madras, the puddee or 'measure' was 93½ cubic inches, and the marcal 750 cubic inches.

Car. paddy weighs about	83 tolas	the 100 cubic inches
Raw rice	114 "	" "
Horse gram	120 "	" "

The standard Madras puddee or 'measure' is generally a cylinder, 4 inches in diameter and 8 inches deep, containing 100 cubic inches, as in the above table. Now 100 cubic inches of water at 80° weigh 3.6 lbs. avoirdupois, or 140 tolas exactly.

1 measure	= 114 quarts
2.77 "	= 1 gallon
23.18 marcals or 177½ measures	= 1 bushel
1 garce	= 1 quart
	= 18 quinters

The seer is often spoken of as a measure, where as it is properly a weight of 80 rupees (though in some places it is 84 rupees).

Where the seer is spoken of as a measure, it is usual to calculate 2 Madras measures to 3 seers, and it so happens that two of the Madras regulation measures contain about 6.2 lbs. of paddy, a

weight equal to 3 seers of 80 rupees, 1 lb. avoirdupois = 38.889 tolas.

**Salt.**—Salt continues to be sold in the Madras Presidency by the garce and marcal. But the accounts are kept in Indian maunds:—

16 chittas or 80 tolas	=	1 seer
40 seers	=	1 Indian maund
120 maunds	=	1 garce
8 maunds	=	1 marcal
400 marcal	=	1 garce or 111 hushia
35 seers	=	72 lb. avoirdupois

At 120 rupees a garce, one measure of salt, costs  $7\frac{2}{3}$  pice, and a marcal as. 4, p. 9<sup>6</sup>.

number of Commerce, and recommended for adoption, June 1, 1845.

- On the total sum of a debit or credit side of account at the option of the agent, excepting sums on which a commission of 5 per cent. is chargeable, 1 per cent.
- On effecting remittances, or purchasing, selling, or negotiating bills of exchange, 1 per cent.
- On subscriptions to Government-loans, purchasing, selling, transferring, or exchanging public securities and bank shares, 3 per cent.
- On delivering up public securities, or lodging them in any of the public offices, 1 per cent.
- On receiving and delivering private commissions of wines, cattle, and merchandise, 2 1/2 per cent.

- On investing proceeds of sales in goods, 2 1/2 per cent.
- On guaranteeing sales, bills, bonds, contracts for goods, or other engagements, 2 1/2 per cent.
- On ships' disbursements, 2 1/2 per cent.
- On chartering ships or engaging tonnage for other parties, 2 1/2 per cent.
- On advertising as the agents of owners or commanders of ships for freight or passengers, on the amount of freight or passage money, by charter or otherwise, whether the same shall pass through the agents' hands or not, 5 per cent.
- On effecting insurance, or writing orders for insurance, whether on lives or property, 1 per cent.
- On settling losses, partial or general, and returns of premium, 2 per cent.
- On procuring money on respondentia, wherever payable, 2 per cent.
- On giving orders for the provision of goods where a commission is not chargeable on sale or shipment, 2 1/2 per cent.
- On attending the delivery of contract goods, 2 per cent.
- On receiving freight of goods, and passage money of troops by ships entered inwards, 2 1/2 per cent.

Entered at Port of Madras, 1865 and 1866.

On all sales or purchases of goods, 5 per cent. with the following exceptions:—  
 On houses, lands, and ships, 2 1/2 per cent.  
 On diamonds, pearls, and jewellery, 2 1/2 per cent.  
 On treasure and bullion, 1 per cent.  
 On all goods and merchandise withdrawn, shipped, or delivered to order, half commission.  
 On all other descriptions of property for sale, withdrawn or otherwise disposed of by the owners, half commission.  
 On goods transferred to auction or commission men, half commission.

Other articles in proportion to the above.

Rule 1.—Goods in the Custom-house to be allowed to remain a week free of charge.  
 2.—After that period on each package, single rates for seven days.  
 3.—After that, treble rates.  
 4.—The day of landing and that of removal to be reckoned as one day; Sundays and holidays are not reckoned in the rent free terms. When delay is caused by the inability of the Custom House officers to examine and pass the goods, such delay is not to be reckoned.  
 Unclaimed Goods.—Goods not cleared within two months from the date of landing will be sold

of our imports from our exports therefrom 1864 and 1,845,153. Commission, returned

by public auction, after due notice in the official *Gazette*. The proceeds will be applied to the payment of duty and other charges, and the surplus (if any) paid to the owner on application within one year from the date of sale.

It would appear from the *Madras Almanac* for 1868, that there are, besides the Government bank or Bank of Madras, the Government savings bank, and various private bankers, three joint stock banks with a paid-up capital of 2,650,000.

**Insurance.**—The only local assurance society appears to be the Madras Equitable, established in 1842, but there were in 1868 42 agencies for English and other establishments.

The foregoing statements sufficiently exhibit the commercial importance of Madras. The limited extent of its trade, as compared with that of Calcutta and Bombay, is partly ascribable to the badness of its port or roadstead, the want of any navigable river or other easy means of communication with the interior, and the backward state of the provinces of which it is the capital, in consequence of the heavy and fluctuating land tax to which they are subject. In 1866, 59,931,904 letters and newspapers (ex books and parcels) passed the post-office of British India. (Hamilton's *East Indian Gazetteer*; *Geographical Dictionary*, art. 'Madras'; *Madras Almanac*; *Official Returns of the Trade of Madras*; &c.)

**MAGNESIA** (Fr. magnésie; Ger. gebrannte erdharz; Ital. magnesina). One of the primitive earths, having a metallic basis. It is not found native in a state of purity, but is easily prepared. It is inodorous and insipid, in the form of a very light, white, soft powder, having a specific gravity of 2.3. It turns to green the more delicate vegetable blues, is infusible, and requires for its solution 2,000 parts of water at 60°.

**MAHOGANY.** The wood of a tree (*Swietenia Mahogani*) growing in the West Indies and Central America. There are two other species of *Swietenia* found in the East Indies, but they are not much known in this country.

Mahogany is one of the most majestic and beautiful of trees: its trunk is often 40 feet in length, and 6 feet in diameter; and it divides into so many massy arms, and throws the shade of its shining green leaves over so vast an extent of surface, that few more magnificent objects are to be met with in the vegetable world. It is abundant in Cuba and Hayti, and it used to be plentiful in Jamaica; but in the latter island most of the larger trees, at least in accessible situations, have been cut down. The principal importations into Great Britain are made from Honduras and Campeachy. That which is imported from the islands

is called Spanish mahogany; it is not so large as that from Honduras, being generally in logs from 20 to 26 inches square and 10 feet long, while the latter is usually from 2 to 4 feet square, and 12 to 14 feet long, but some logs are much larger. Mahogany is a very beautiful and valuable species of wood: its colour is a red brown, of different shades, and various degrees of brightness; sometimes yellowish brown; often very much mottled, with darker shades of the same colour. The texture is uniform, and the annular rings not very distinct. It has no larger septa, but the smaller septa are often very visible. The pores between them, which in the Honduras wood are generally empty, but in the Spanish wood mostly filled with a whitish substance. It neither taste nor smell, shrinks very little, warps or twists less than any other species of timber. It is very durable when kept dry, does not last long when exposed to the weather. It is not attacked by worms. Like the pine the timber is best on dry rocky soils, or in exposed situations. That which is most accessible in Honduras grows upon moist low land, and generally speaking, decidedly inferior to that brought from Cuba and Hayti; being soft, and spongy; while the other is close grained, hard, of a darker colour, and sometimes star-shaped. Honduras mahogany has, however, the advantage of holding glue admirably and is, for this reason, frequently used for ground on which to lay veneers of the finer woods. The best qualities of mahogany bring a high price.

The cuttings in Honduras are established most of the large streams flowing through the departments of Santa Barbara and Yoro. At the mouth of these streams the logs are then shipped to England in vessels of from 400 to 500 tons. The trees are generally the property of the state, and the cutters stipulate to pay from 10 dollars for every tree they fell. The season for cutting is from August till winter sets in.

Not long since, Messrs. Broadwood, distinguished pianoforte manufacturers, gave an immense sum of 3,000*l.* for three logs of mahogany! These logs, the produce of a tree which were each about 15 feet long, and 30 inches square; they were cut into veneers of 1/4 inch. The wood was particularly beautiful, and reflecting the light in the most varied manner, like the surface of a crystal; and from the form of the pores, offering a different appearance whatever direction it was viewed. The mahogany generally introduced into England, when buying a log; but, notwithstanding, it is seldom able to decide with much precision on the quality of the wood, so that there is a great deal of lottery in the trade. The logs of Messrs. Broadwood gave so high a price, that they brought to this country with a full knowledge of their superior worth. Mahogany was first introduced into England by Sir Walter Raleigh's expedition to Trinidad, in 1597; but it was not introduced into England till 1724.

The duty on foreign mahogany used to be 1*l.* a ton, on Honduras 1*l.* 10*s.*, and on Campeachy, 4*s.*; its effect being to force the attention of the inferior in preference to the superior. Luckily, however, the duty on colonial mahogany, after being reduced to 20*s.* and 5*s.* per ton, was wholly repealed in 1860 a duty of 1*s.* per load was imposed on mahogany and other furniture woods, which again was abolished, and the importation of mahogany free, in 1866. There has been, in consequence

reduction and repeal, a very great increase in the consumption of the superior sort of mahogany for upholstery purposes, while the cheaper varieties are now largely employed (notwithstanding the difficulties thrown in the way by Lloyd's regulations), in the construction of ships, and in various fabrics. In 1840 the imports amounted to \$1,115, and in 1867 to 52,737 tons. Honduras, Mexico, and Cuba are the great sources of supply; the timber brought from Central America being the cheapest. (Tredgold's *Principles of Carpentry*, p. 204; *Library of Entertaining Knowledge*, volume on *Timber Trees and Fruits*; Edwards's *West Indies*, vol. iv. p. 208, ed. 1819 &c.; and Fleming, *passim*; &c.)

**MAIZE or INDIAN CORN** (Fr. bled de Turquie; Ger. Türkisch korn, mays; Ital. grano di Sicilia; Span. trigo de Indias, trigo de Guayana). One of the cereal grasses (*Zea Mays*), supposed to be indigenous to South America, being the only species of corn cultivated in the West World previously to its discovery. It was introduced into the Continent about the beginning of the 16th century. Its culture has spread with astonishing rapidity; being now extensively grown in most Asiatic countries, and in all the southern parts of Europe. It has the widest geographical range of all the cerealia, growing abundantly at the equator, and as far as the 40th degree of north, and the 40th of south latitude. It has been raised in England, in nursery gardens near the metropolis, in nursery grounds; and recently it has been attempted to raise it in the fields, but with indifferent success. It has an immense number of varieties. Each ear consists of about 600 grains, set close together in rows, to the number of 8, 10, or 12. The grains are usually yellow; but they are sometimes red, bluish, greenish, or olive-coloured, and sometimes striped and variegated. The maize of Virginia is tall and robust, growing 7 or 8 feet high; that of New England is shorter and more branched; and the Indians farther up the country raise a still smaller sort in common use. The straw is an excellent fodder; and the grain, as a bread stuff, is liked by some; but though it abounds in gluten, it contains little or no gluten, and is not so much used by those who can procure wheat or even rye bread. (Loudon's *Encyclopedia of Agriculture*; &c.) For the imports of maize, duties &c., see **CONY LAWS AND REGULATIONS**.

**MALAGA**. [SINGAPORE.] A city and sea-port in the south of Spain, in Granada, lat. 36° 43' N., long. 4° 37' W. Population in 1860, 113,050. Malaga has an excellent harbour, situated on its eastern side by a fine mole, 1,000 yards in length. The lighthouse of Malaga is 109 yards from the east mole, lat. 36° 30' N., long. 4° 25' 38" W. It gives a light every three minutes, is visible for 15 miles to the east side of the entrance, 48 yards above the sea, is only 41 feet above high water. A shoal has grown up round the mole and the depth of water throughout the harbour is said to be diminishing. Latterly, a dredging machine has been employed to clear it, by clearing out the mud and accumulating sand. The depth of water, at the entrance to the harbour and within the mole, is 10 to 30 feet; and close to the city from 8

to 10 feet. The harbour could easily accommodate more than 450 merchant ships; it may be entered with all winds, and affords perfect shelter.

**Trade &c.**—Owing to the want of official returns, and the prevalence of smuggling, it is not possible to obtain any accurate accounts of the trade of Malaga, or, indeed, of any Spanish ports. The great articles of export are wine and figs, particularly raisins and almonds, grapes, and lemons; there is also a considerable exportation of olive oil, with quantities of brandy, anchovies, cummin seed, aniseed, barilla, *esparto labrado* [ESPARTO], soap &c. The lead which is largely exported from Malaga is brought from Ad. [LEAD.] The imports consist principally of cotton stuffs, iron and hardware, machinery, &c., from England; with salt-fish, dye raw cotton from the colonial produce; linens; cheese from Holland; timber and naval stores from the Baltic &c. The Americans import considerable quantities of Malaga wine.

In 1863 the total tonnage of vessels which entered the port of Malaga was 160,460, and of those that cleared 144,759, while the value of the imports was 1,171,135*l.*, and of the exports 1,576,233*l.* The trade appears to be on the increase; the exports were greater than those from any other Spanish port, but it ranked as the eighth in the value of its imports. The quantity of Malaga wine exported was 6,527,202 litres, or about 1,400,000 gallons. The best markets for this wine are Cuba, Venezuela, and France, a small quantity only coming to England. There is a railway between Cordova and Malaga, which connects it with Madrid and the whole network of European railways.

The following details, abstracted from Mr. Inglis's valuable work on Spain, contain accounts of the trade of Malaga, which are still of interest.

**Wine.**—The wines of Malaga are of two sorts, sweet and dry; and of the former of these there are four kinds; first, the common "Malaga," which is known and exported under that name. In this there is a certain proportion of boiled wine, which is allowed to burn, and which communicates a slightly burnt taste to the "Malaga." The grape from which this wine is made is a white grape, and every pipe of "Malaga" contains no less than eleven gallons of brandy. Secondly, "Mountain." This wine is made from the same grape as the other, and, like it, contains colouring matter and brandy; the only difference is that for "Mountain," the grape is allowed to become riper. Thirdly, "Lagrimas," the richest and finest of the sweet wines of Malaga; the name of which almost explains the manner in which it is made. It is the droppings of the ripe grape hung up, and is obtained without the application of pressure.

The dry wine of Malaga is produced from the same grape as the sweet wine, but pressed when greener; in this wine there is an eighth part more of brandy than in the sweet wine; no less than 1-12th part of the dry Malaga being brandy.

The whole produce of the Malaga vineyards is estimated at from 35,000 to 40,000 pipes; of which about 27,000 pipes may be exported. The principal market is the United States and South America; and to these the export is upon the increase. The average price of the wines shipped from Malaga does not exceed 35 dollars per pipe; but wines are occasionally exported at the price of 170 dollars. Many attempts have been made at Malaga to produce sherry, but not with perfect success. The sherry grape has been reared at Malaga upon a soil very similar to that of Xeres;

but the merchants of Malaga have not ventured to enter the wine for export. One reason of the very low price of the wines of Malaga is to be found in the cheapness of labour; field labour is only 2½ reals a day (1½d.). In the fruit and vintage time it is about double.

**Fruit.**—Next to its wines, the principal export of Malaga is fruit, viz. raisins (the chief), almonds, grapes, figs, and lemons.

The raisins exported from Malaga are of three kinds, *muscatel*, *bloom* or *sun raisin*, and *lexia*. The muscatel is the finest raisin in the world. In its preparation no art is used; the grape is merely placed in the sun, and frequently turned. The bloom or sun raisin is a different grape from the muscatel; but its preparation is the same. The lexia acquire this name from the liquor or ley in which they are dipped, and which is composed of water, ashes, and oil; these, after being dipped, are also dried in the sun. All muscatel raisins are exported in boxes, and also a part of the bloom raisin.

**Oil.**—There is also a large export of oil from Malaga. (Vol. ii. pp. 190–196.)

See also Mr. Consul Marks' Report of August 10, 1865, on Esparto or Spanish grass, and the sudden and extensive demand for it. [ESPAÑO.]

The trade of Malaga, like that of most other Spanish ports, has been materially increased of late years. Lines of steamers have been established that ply along the southern and eastern coasts of the peninsula, and a powerful stimulus has been given to all sorts of industrial pursuits. The influence of the latter is, no doubt, most powerfully felt at Alicante, Valencia, and those towns that have improved communications with the interior, but it is, also, sufficiently obvious here and in others of the less favourably situated seaports.

**Money.**—Accounts are kept in reals of 34 maravedis vellon. (For the coins, and their value, used at Malaga, see CADIZ.)

**Weights and Measures.**—The weights are the same as those of Cadiz. The arroba or cantara = 4·19 English wine gallons; the regular pipe of Malaga wine contains 35 arrobas, but is reckoned only at 34; a bota of Pedro Ximenes wine = 53½ arrobas; a bota of oil is 43, and a pipe 35 arrobas; the latter weighs about 860 lbs. avoirdupois: a carga of raisins in 2 baskets or 7 arrobas; a cask contains as much, though only called 4 arrobas: as a last for freight are reckoned—4 botas or 5 pipes of wine or oil; 4 bales of orange peel; 5 pipes of Pedro Ximenes wine or oil; 10 casks of almonds (each about 380 lbs. English); 20 chests of lemons and oranges; 22 casks of almonds (of 8 arrobas each); 44 casks of raisins (of 4 arrobas each); 88 half casks of raisins; 50 baskets or 160 jars of raisins.

**Port Charges.**—The port and harbour dues amount, on an English vessel of 300 tons, to about 21l.; on a Spanish vessel, of the same burden, they would be about 11l. 10s.

**Warehousing.**—Goods may be warehoused for 12 months, paying 2 per cent. ad valorem in lieu of all charges; but, at the end of the year, they must be either entered for consumption or re-shipped. The 2 per cent. is charged, whether they lie a day or the whole year.

There is an excellent account of Malaga in Townsend's *Travels in Spain*, vol. iii. pp. 10–42.

MALMSEY. [WINE.]

MALT (Ger. maly; Dutch, mout; Fr. mal, blégermé; Ital. malto; Span. cebada retonada ó entalleida; Russ. sold; Lat. maltum). The term malt is applied to designate grain which, being steeped in water, is made to germinate to a

certain extent, after which the process is checked by the application of heat. This evolves the saccharine principle of the grain, which is the essence of malt. The process followed in the manufacture is very simple. Few changes have been made in it; and it is carried on at the present moment very much in the same manner that was carried on by our ancestors centuries ago. Rice, and almost every species of grain, has been used in malting; but in Europe, and especially in England, malt is prepared almost wholly from barley. It is the principal ingredient in the manufacture of beer, and is little used except in brewing and the distillation of spirits.

**Duties on, and Consumption of, Malt.** *Importation of the Duty and the Opening of the Trade.*—Owing to malt liquor having become the favourite beverage of the people of England, the manufacture of malt has been carried on amongst us, for a lengthened period, on a large scale. Instead, however, of increasing with the increasing wealth and population of the country, it was nearly stationary for the hundred years ending with 1816. In proof of this, we may mention that the quantity of malt that was duty in England and Wales, at an average of the 12 years ending with 1720, was 24,120 bushels a-year; whereas the annual average quantity that paid duty during the 12 years ending with 1816, was only 23,197,754 bushels! This apparently anomalous result is probably in measure to be accounted for by the increasing consumption of tea and coffee, which are now almost universal use; but there cannot be a doubt that it is mainly owing to the exorbitant duties with which malt, and the ale or beer manufactured from it, have been loaded, and to the oppressive regulations imposed on the manufacture of malt and the sale of beer. The effect of these duties and regulations was to impose a tax of 7s. on the malt and beer made from a bushel of barley; which, taking the average price of it at from 4s. to 5s. a bushel, was equivalent ad valorem duty of from 140 to 175 per cent. The exorbitance of the duty was not, however, its most objectionable feature. It was equally divided—one half being assessed on malt, and the other on beer; but the beer affected only beer brewed by public breweries for sale, and did not affect that which was brewed for private use; and as rich families brewed the beer they made use of, the consequence of this distinction was, that the beer duty fell on the lower and middle classes, who were compelled to brew any beer; or, in other words, the poor were compelled to pay twice the duty on the beer they made use of that was paid by the rich. That such a distinction should ever have been made, or submitted to for any considerable period, is certainly not a little astonishing. On the other hand, however, the distinction was not so general as afterwards became; and being increased in degrees, the force of habit reconciled the people and the country to the gross inequality and oppressiveness of the tax. But the population being at length forcibly attracted to the subject, and the effect of the exorbitant duties on malt and beer in increasing the consumption of ardent spirits having been clearly pointed out in the *Edinburgh Review*, No. 98, art. 4, the duty was repealed in 1830. This measure of substantial justice and sound policy redounded to the credit of the administration of the Duke of Wellington; which was also entitled to the gratitude for having placed the license on a fair footing, and established, for the first time, a free trade in beer.

Account of the Quantities of Malt charged with Duty in England and Wales, of the Revenue Received thereon, and of the Rates of Duty, in the Undermentioned Years, from 1702.

Table with columns: Year, Number of Bushels of Malt, Amount of Duty (£), Rate of Duty per Bushel, Year, Number of Bushels of Malt, Amount of Duty (£), Rate of Duty per Bushel. Includes data from 1702 to 1867 and various duty rate annotations.

\* Years ended March 31.

The repeal of the duty has materially increased the consumption of malt; and the participations of those who contended that its abolition, if combined with a free trade in beer, would be no great loss to the revenue, are in a fair way of being confirmed. The clamour that was raised against the measure on account of its supposed influence in increasing drunkenness, was, we firmly believe, entirely without foundation. If the measure introduced, as it certainly did, the consumption of malt, the probability is that it equally diminished the consumption of gin; and it is surely superfluous to add, that this is a most beneficial change, since that a number of new public-houses were opened for the sale of beer; but it has not hitherto appeared that this circumstance, though it occasioned no common alarm among the clergy and magistrates in different parts of the country, has produced any public inconvenience. Like every other open line of business, the trade of brewing was overdone; and a considerable number of beer shops have since been shut up, as Adam Smith sagaciously remarked, the multiplication of alehouses that occasions the general disposition to drunkenness among the

common people; but that disposition, arising from other causes, necessarily gives employment to a multitude of alehouses. (Health of Nations, p. 161.) The way to eradicate this disposition is by giving a better education to the poor, and inspiring them with a taste for less grovelling enjoyments. All that the fiscal regulations and police enactments intended to promote sobriety and disgust, to make the lower classes more enamoured of that which they conceive is unjustly withheld from them, and to stimulate them to elude and defeat the law. The duty on malt was first imposed in England in 1697, and in Scotland in 1713; but it was not introduced into Ireland till 1785. The following tables exhibit the progress of the consumption and of the duties directly falling on malt from a remote period. But the principal consumption of malt being in beer, the duties on the latter were, in fact, duties on malt; and must always be taken into account in forming anything like a correct estimate of the influence of the latter. Ample information as to the duties on beer will be found in the art. ALE AND BEER.

\* The last purchase made. Brewing discontinued in 1866, in consequence of reduced number of In-pensioners.

By 23 & 29 Vict. c. 66 the malt charged according to the weight of the first clause, the maltster must give writing, of his desire to the officer of excise whose survey he is, and must commence within a calendar month of his notice. Machinery must be provided. 3. Notice 12 o'clock (noon) of the day before he is to ship grain. 4. Maltster to declare the 5. Mode of ascertaining the weight of malt of the latter, at 145,368; 6. The entire revenue to be provided by the maltster. 8. Maltster may weigh grain with such measures as he may think fit, provided that the weight penalty if declared weight exceeded by

don, or anywhere else. Malta is also admirably well suited for becoming a centre of the corn trade of Egypt, Barbary, Italy &c.

During the war ended in 1815, particularly during the period when Napoleon's anti-commercial system was in operation, Malta became a great entrepôt for colonial and other goods, which were thence conveyed, as opportunities offered, to the adjacent ports. This commerce ceased with the circumstances that gave it birth; and for some years after the return of peace, the trade of the island was depressed below its natural level by the imposition of various oppressive discriminating duties. In 1819, this vexatious system was partially obviated; but it continued to exert a pernicious influence till 1837, when, pursuant to the recommendation of Messrs. Austin and G. C. Lewis, commissioners of enquiry, the then existing tariffs of customs duties and port charges were wholly abolished; and a new tariff (which is subjoined) was issued in their stead. It imposed moderate duties, for the sake of revenue only, on a few articles in general demand, without regard to the country whence they came, at the same time that it equalised the tonnage duties, and reduced the warehouse rent on articles in bond to the lowest level.

There are some good springs of fresh water. Valetta is partly supplied by water brought by an aqueduct a distance of about 6 miles, and partly by the rain collected in cisterns.

**Harbour.**—The harbour of Valetta is double,

and is one of the finest in the world. The city is built on a narrow tongue of land, having the castle and light of St. Elmo at its extremity, and an admirable port on each side. That on the south-eastern side, denominated the grand port, is the most frequented. The entrance to it, about 250 fathoms wide, has the formidable batteries of St. Elmo on the one hand, and those of Fort Ricasoli on the other. In entering, it is necessary not to come within 50 or 60 fathoms of the former, on account of a spit which projects from it; but in the rest of the channel there is from 10 to 12 fathoms water. The port, which runs about 1½ mile inwards, has deep water and excellent anchorage throughout: the largest men-of-war coming close to the quays. Port Marsamuscetta on the north-western side of the city, is also a noble harbour. The entrance to it, which is about the same breadth as that of the grand port, is between St. Elmo and Fort Tigné. In the centre of the basin is an island, on which are built a castle and a lazaretto, for the convenience of ships performing quarantine, by which the port is principally used. Owing to the narrowness of the entrance, and the usual variability of the wind, it is customary for most vessels bound for Valetta to take a pilot on board before entering the harbour.

**TARIFF (A).**—Duties on imports 1835 and 1836 and also dues for store rent, which the collector of customs is required to levy on the account of the Government of Malta.

2. Vessels of whatever size, sailing in quarantine, having entered upon the performance to pay at the above rates, but in no case than 2*s.* a day for the remainder of the quarantine.

3. Vessels liable to quarantine, not having

Vertical text on the right edge of the page, including fragments of other documents and page numbers.

The *salin* of corn, stricken measure 985 of an imperial quarter heaped measure, is reckoned 16 per cent. more. The *caffiso*, or measure for oil, contains  $4\frac{1}{2}$  English gallons = 20.4545 litres. The barrel is double the *caffiso*. The Maltese foot =  $11\frac{1}{4}$  English inches = 2836 metres. The *canua* = 8 palmi = 81.9 English inches = 2.079 metres. Merchants usually convert Malta measure into English in the proportion of  $3\frac{1}{2}$  palmi to a yard, or  $2\frac{1}{2}$  yards to 1 *canua*.

Bills on London are usually drawn at 30 and 60 days' sight. The deputy commissary general is obliged to grant, at all times, bills on the treasury here for British silver tendered to him, at the rate of 100*l.* bill for every 101*l.* 10*s.* silver, receiving, at the same time, other silver, at a fluctuating rate of exchange.

MAN (ISLE OF). Is situated in the Irish Sea, at about an equal distance from England, Scotland, and Ireland. It is about 30 miles long, and 10 or 12 broad. The interior is mountainous, and the soil nowhere very productive. Population, in 1861, 52,469. This island used to be one of the principal stations of the herring fishery; but for a considerable period it has been comparatively deserted by the herring shoals, a circumstance which is not to be regretted; for the fishery, by withdrawing the attention of the inhabitants from agriculture and manufactures, and leading them to engage in what has usually been a gambling and unproductive business, has been, on the whole, injurious to the island. The steam packets from Liverpool and Dublin touch at the Isle of Man; which is, in consequence, largely frequented by visitors from all parts of the empire, whose influx has materially contributed to the improvement of Douglas, the principal port in the island, and other towns.

The feudal sovereignty of Man was formerly vested in the Earls of Derby, and more recently in the Dukes of Athol, a circumstance which accounts for the fact of the duties on most commodities consumed in the island having been, for a lengthened period, much lower than those on the same commodities when consumed in Great Britain. This distinction, which still subsists, though to a smaller extent, has produced a great deal of smuggling, and been in no ordinary degree injurious to the revenue and trade of the empire. During the present century, indeed, the clandestine trade of Man has been confined within comparatively narrow limits; but to accomplish this, a considerable extra force of custom-house officers and revenue cruisers has been required; and the intercourse with the island has to be subjected to various restraints. Nothing, as it appears to us, can be more impolitic than the continuance of such a system. The public has, at a very heavy expense, purchased all the feudal rights of the Athol family; and having done so, it is certainly high time that an end were put to the anomalous absurdity of having a considerable island, lying, as it were, in the very centre of the empire, and in the direct line between some of the principal trading towns, with different duties on many important articles! It might be necessary, perhaps, to make some compensation to the inhabitants for such a change; and this might be done, with advantage to them and without expense to the public, by modifying and improving the internal regulations and policy of the island, which are very much in need of amendment. We do not, indeed, imagine that the island would lose anything by the proposed alteration; for the temptation which the present system holds out to engage in smuggling enterprises diverts the population from the regular pursuits of industry, and, along with the herring lottery, is the principal

cause of that illiness for which the Manx are so notorious. The customs revenue collected in the Isle of Man in 1852 amounted to 28,077*l.*; but from this sum 14,873*l.* was deducted on account of expenses of collection, public works, internal government &c. We subjoin an abstract of the Acts which now (1868) regulate the trade with the Isle of Man: the conditions under which it is carried on have been a good deal simplified.

The regulations under which the trade of the Isle of Man is now conducted are embodied in the Acts 16 & 17 Viet. c. 106, the 16 & 17 Viet. c. 107, the 29 & 30 Viet. c. 23, and 30 & 31 Viet. c. 85, and are as follows, viz.:-

*Duties in Table, to be levied on Goods imported into the Isle of Man.*—In lieu of all duties of customs now payable by law upon the importation of goods into the Isle of Man, there shall be raised, levied, collected, and paid unto Her Majesty, her heirs and successors, the several duties of customs as the same are respectively set forth in figures in following table, viz.:-

Duties applicable to the Isle of Man.		£	s.	d.
Coffee, the import duties in Great Britain or Ireland not having been paid thereon	the gallon	0	10	0
Corn: viz. wheat, barley, bear or bigg, oats, rye, peas, beans, buckwheat, maize or Indian corn	the quarter	0	1	0
Wheat meal and flour, barley meal, oatmeal, rye meal, and flour pea meal, bean meal, buckwheat meal, and maize or Indian corn meal	the cwt.	0	0	0
Spirits: viz. brandy, Geneva, and all foreign spirits, not being liqueurs, cordials, or perfumed spirits	the gallon	0	0	0
Rum and rum shrobs of the British possessions	the gallon	0	0	0
British or Irish spirits exported from a duty-free warehouse under bond in the United Kingdom	the gallon	0	0	0
Such spirits not exceeding the strength of proof, and Syke's hydrometer, and so in proportion for any greater or less strength than the strength of proof, and for any greater or less quantity than a gallon	the gallon	0	0	0
Eau de Cologne, per flask (30 not containing more than 1 gallon)	the gallon	0	0	0
Liqueurs, cordials, and perfumed spirits	the gallon	0	0	0
Sugar, viz. Muscovado	the cwt.	0	3	0
Sugar candy, white or brown, refined sugar, or sugar rendered by any process equal to refined, foreign or British	the cwt.	0	0	0
Tea	the lb.	0	0	0
Tobacco, viz. unmanufactured	the lb.	0	0	0
Manufactured, of all sorts, and cigars	the lb.	0	0	0
Wine containing less than 20 degrees of proof spirit, and Rum and rum shrobs of the British territories having been ascertained by test at Liverpool or some other station or port in Great Britain or Ireland	the gallon	0	0	0
Other wines	the gallon	0	0	0
Goods, wares, and merchandise imported or brought from any place from whence such goods may be lawfully imported into the Isle of Man, and not herebefore charged with duty, or declared to be free of duty, or every 100 <i>l.</i> of the value thereof		15	0	0

*Power to the Treasury to remit and suspend Duties on unenumerated Articles.*—The commissioners of the Treasury may from time to time, any order or orders under their hands, declare in all or any articles legally importable into the Isle of Man, and not enumerated in the said table, upon which the said duty of 15 per cent. is lawfully imposed, shall and may, from and after any day or days named in such order or orders, be imported from the places and in the manner therein mentioned into the Isle of Man duty free, during such time or times as shall be therein named, or any such order or orders respectively, or any of the said shall be rescinded, and such articles shall be imported duty free accordingly so long as any such order or orders, or any of them, shall continue in force; and the said commissioners may at any time, by any order under their hands, revoke whole or any part of any previous order or orders, or any of them, for such time and in such manner as they may see fit; and all orders of the commissioners of the Treasury made in pursuance of this enactment shall be duly published in the London and Dublin *Gazettes* twice at least within 14 days from the date of such orders respectively, and a copy of every such order shall be laid before the Houses of Parliament within 6 weeks after the date of each order, and the same shall be then sitting

not, then within 6 weeks after the commencement of the then next session of Parliament. (16 & 17 Vict. c. 106 s. 5.)

The following Treasury order has since appeared:—

By virtue of the powers vested in us under the 5th section of the Customs Tariff Act, 16 & 17 Vict. c. 106, to remit and re-impose the duties levied on unenumerated articles legally imported into the Isle of Man, these are to authorise you under the said section of the Customs Tariff Act, to allow all articles enumerated in the tariff of the United Kingdom, and not enumerated in the tariff of the Isle of Man, and which, under the tariff of the island, would be subject to an ad valorem duty of 15 per cent., to be admitted free of duty so long as the order permitting such free importation shall remain unrescinded. For which this shall be your warrant.

‘ARHEDDEN, JOHN SADLER.

Whitehall, Treasury Chambers, August 27, 1853.’

**Isle of Man to be deemed Part of the United Kingdom for the Purposes of this Act.**—The Isle of Man shall be deemed and taken to be part of the United Kingdom for all the purposes of this Act, but nothing herein contained shall prejudice or affect, or be construed in any way directly or indirectly to prejudice or affect, any of the rights or privileges legally exercised or enjoyed by the said Isle at the time of the passing of this Act. (16 & 17 Vict. c. 107 s. 316.)

**Goods delivered out of Charge of Customs in Isle of Man not to be brought into Britain or Ireland.**—

No British goods upon which a higher duty is payable on their importation into Great Britain or Ireland, than on their importation into the Isle of Man, shall, after the same have been cleared and delivered out of charge of the proper officer of customs for consumption or otherwise in the said Isle, be carried or shipped, or be waterborne or brought to any quay, wharf, or other place to be wharfed or waterborne to be carried from the said Isle into Great Britain or Ireland; nor shall any such goods which may be brought to the said Isle, though not cleared and delivered as aforesaid, be removed or carried thence into Great Britain or Ireland until the same have been duly cleared for that purpose by the proper officer of customs, nor unless reported for removal in the same ship and in continuation of the voyage to some port in Great Britain or Ireland) until sufficient security for their removal or otherwise shall have been given, in such manner, and on such terms and conditions, as the Commissioners of Customs may direct, for the due delivery thereof at some port or place in Great Britain or Ireland; and all goods carried, though shipped, removed, or waterborne to be shipped, removed, or carried contrary hereto shall be forfeited, and every person who shall carry, remove, or waterborne, or be shipped, removed, or carried, any goods contrary hereto, or who shall aid or be concerned therein, shall forfeit the value of such goods, or the sum of 100*l.*, at the election of the Commissioners of Customs. (Sec. 347.)

**Goods the Growth or Manufacture of the Isle of Man, may be imported into Great Britain or Ireland on Certificate &c.**—Any goods, the growth of the Isle of Man, or there manufactured from materials the growth of the said Isle, or from materials subject to duties in Great Britain or Ireland, from materials upon which the duty has been levied in Great Britain or Ireland, and upon which no drawback has been subsequently granted, may be brought from the said Isle into Great Britain or Ireland without payment of any duty: provided

always, that such goods may nevertheless be charged with such proportion of such duties as shall fairly countervail any duties of excise payable on the like sort of goods the produce of that part of the United Kingdom into which they shall be brought; and any articles, either wholly or in part manufactured in the said Isle from any materials upon which a higher duty is payable upon their importation into the United Kingdom than on their importation into the Isle of Man, may be brought from the said Isle into Great Britain or Ireland on payment of the duty payable on such goods in that part of the United Kingdom into which they shall be so brought. (Sec. 348.)

**Declaration and Certificate of Growth or Manufacture of Goods from Isle of Man.**—Before any goods shall be shipped in the Isle of Man to be carried to Great Britain or Ireland as the growth or produce of that Isle, or as manufactures of that Isle from materials the growth and produce thereof, or from materials not subject to duty in Great Britain or Ireland, or from materials upon which the duties shall have been paid and not drawn back in Great Britain or Ireland, proof shall be made by the written declaration of some competent person, to the satisfaction of the collector or comptroller of customs at the port of shipment, that such goods (describing and identifying them) are of such growth, produce, or manufacture, as the case may be; and in such declaration shall be stated the name of the person by whom such goods are intended to be shipped, and such person, at the time of shipping (not being more than 1 month after the date of such declaration), shall make and subscribe a declaration before such collector or comptroller, that the goods to be shipped are the same as are mentioned in such declaration, and thereupon the collector or comptroller shall, on demand, give to the master of the ship in which the goods are to be exported a certificate of such proof of produce or of manufacture, describing the same, and setting forth the name of the party and of the ship and of the master thereof, and the destination of the goods. (Sec. 349.)

**Act not to affect Excise Drawbacks.**—Nothing herein contained shall be deemed or construed to affect the laws and regulations now in force respecting duties and drawbacks of excise on goods removed to the Isle of Man. (Sec. 350.)

**Stores of Manx Ships.**—If any ship or boat bound from the Isle of Man to Great Britain or Ireland shall have on board any stores of spirits, tobacco, or tea for the use of the crew, exceeding the quantities specified in the following table, such stores, together with the casks or packages containing the same, and also the ship or boat, shall be forfeited:—

	In Ships or decked Vessels	In open Boats
Spirits for each seaman	Half a gallon	One quart
Tobacco for each seaman	One pound	Half a pound
Tea for the whole crew	Two pounds	One pound

**Treasury may restrict Imports.**—The Commissioners of the Treasury shall and may at any time, if they see fit, by order under their hands, restrict or limit the importation into the Isle of Man of any foreign goods to such quantities per annum and in such manner as they may deem necessary, and also determine into what ports in the Isle of Man and from what places such goods may be imported. (Sec. 352.)

**Management of Duties.**—The duties of customs payable on the importation of goods into the Isle of Man shall be collected, paid, recovered, and accounted for under the management and control of the Commissioners of Customs; and, except the

Manx are so collected in the 28,977*l.*; but on account of es, internal g abstract of the the trade with nder which it is simplified, the trade of the embolised in the & 17 Vict. c. 107, & 31 Vict. c. 85, Goods imported all duties of cu- the importation of re shall be raised, her Majesty, her duties of customs forth in figures in

remitted and reimport articles.—The contr from time to time, their hands, declare the importable into the in the said table, 15 per cent. is be on and after any or orders, be impo manner therein m duty free, during herein named, or vely, or any of the articles shall be so long as any em, shall continue mmissioners may at their hands, revoke previous order or and in such man orders of the com in pursuance of blished in the at least within 14 ers respectively, all be laid before 6 weeks after the be then sitting,

necessary charges of collecting, recovering, and accounting for the same, the said duties shall from time to time (subject to the deductions hereinafter mentioned) be brought and paid into the receipt of her Majesty's Exchequer, distinctly and apart from all other branches of the public revenue, and shall go to and make part of the Consolidated Fund of the United Kingdom: Provided always, that any of the collectors of customs of the said isle shall retain, and he and they is and are hereby authorised and required, agreeably to such directions as shall from time to time be given for that purpose by the Commissioners of Customs, to retain, such sum or sums of money in his or their hands as may be sufficient to defray the necessary expenses attending the government of the said Isle of Man and the administration of justice there, and other charges incurred in the said isle, which have heretofore been or may hereafter be deemed fit and proper charges to be deducted from and paid out of the duties of customs collected in the said Isle of Man; and upon the amount of the said expenses and charges being ascertained, the said commissioners are hereby authorised to direct the same to be paid out of the said moneys so retained to such person or persons as may be entitled to receive the same. (Sec. 353.)

*Expenses of the Government, and 2,300*l.* per annum to Harbour Commissioners of Isle of Man, to be paid by Customs.*—The necessary expenses attending the government of the Isle of Man and the administration of justice there, and other charges incurred in the said isle, which have heretofore been deemed fit and proper charges to be deducted from and paid out of the duties of customs collected in the said isle, or which may hereafter be deemed proper charges, and also the annual sum of 2,300*l.* made payable by Act 8 & 9 Viet. c. 94, s. 25 to her Majesty's Receiver-General in the said Isle of Man, and to be applied for the lawful purposes of the harbour commissioners therein mentioned, shall and may be retained and paid by the collector of customs of the said isle, out of the duties of customs collected in the said isle, as hereinbefore provided. (Sec. 354.)

*Additional Allowance for Public Works in the Isle of Man.*—In addition to the deductions from the customs duties hereinbefore provided for, there shall be set aside annually a sum equal to  $\frac{1}{2}$  of the amount derived from such duties, to be applied by the Commissioners of the Treasury in effecting improvements in the harbours and other public works in the Isle of Man, the necessary repairs and improvements in the harbours taking priority of other public works; and it shall be lawful for the Court of Tynwald from time to time to determine what improvements and public works shall be so undertaken, the lieutenant-governor having a veto upon such decision. (Sec. 355.)

Under 23 & 24 Viet. c. 56, the harbour commissioners are entitled, acting with the Receiver-General of the Isle of Man, to borrow such an amount as can be covered by an annual interest of 2,300*l.* for the purpose of improving harbours in the island. The application of the fund so subscribed shall be decided on by the Court of Tynwald, the lieutenant-governor of the island being empowered to exercise a veto.

By 26 & 27 Viet. c. 86, dues may be collected at the harbour of Port Erin, improvements in the harbour at this port having been effected in aid of the herring fishery.

The harbour dues levied are as follows:—As soon as the pier is carried out at a distance of 300 feet from low water mark, the dues levied in the first column are payable; as soon as 150 feet further, those in the second column,

	1st col.	2nd col.
Every vessel of 5 tons burden and upwards, per ton	3	1
After 10 days, from October 1 and June 1, for each 10 days, per ton additional	1	1
Between June 1 and October 1, for each 10 days, per ton additional	1	2

The above dues are to be paid every time a vessel enters the harbour. Composition on vessels under 30 tons for herring fishery season, 21; October 1 to June 1, 1*l.*; whole year, 3*l.* 30 tons and upwards, and under 50 tons, 4*l.* for herring season, 6*l.* whole year. Wind-burned vessels half dues. Steam vessels to pay the same as sailing. Vessels for which dues have been paid returning within 24 hours with same cargo, not to be liable to dues again. Yachts belonging to royal yacht club in the United Kingdom exempt among others.

**MANGANESE** (Ger. *braunstein*, *glasseisen*; Dutch, *bruinsteen*; Fr. *manganèse*, *manganais*; *von du verre*; Ital. *manganese*; Span. *manganese*, Lat. *magnesia nigra*, *manganesium*). A metal which, when pure, is of a greyish white color like cast-iron, and has a good deal of brilliancy. Its texture is granular; it has neither taste nor smell; it is softer than cast-iron, and may be filed; its specific gravity is 8. It is very brittle, and can neither be hammered nor drawn out into wire. Its tenacity is unknown. When exposed to the air it attracts oxygen with considerable rapidity. It soon loses its lustre, and becomes gray, violet brown, and at last black. These changes take place still more rapidly if the metal be heated in an open vessel. Ores of manganese are common in Devonshire, Somersetshire &c. The *black wood*, is remarkable for its spontaneous inflammation with oil. Oxide of manganese is of considerable use; it is employed in making permanganic acid, for forming bleaching liquor. It is also used in glazing black earthenware, for painting colours to enamels, and in the manufacture of porcelain. It is the substance generally used by chemists for obtaining oxygen gas. In 1848, 48,700 tons of manganese ore were imported into the United Kingdom, chiefly from Holland and Spain, and were valued at 216,723*l.* A compound of manganese and potash is one of the most powerful and valuable disinfectants known. (*Thomson's Chemistry*; &c.)

**MANGEL WURZEL** or **FIELD BEET** (*beta vulgaris*; Ger. *mangold-wurzel*; Ital. *beta*). A mongrel between the red and white beets. It has been a good deal cultivated in France, Germany, and Switzerland, partly as food for cattle, and partly to be used in distillation, and in the extraction of sugar. Its culture in Great Britain is comparatively recent; and Mr. Loudon questions whether it has any advantages over the turnip for general agricultural purposes. The preparation of the soil is exactly the same as for turnips; immense crops are raised on strong clays, and produce per acre is about the same as that of Swedish turnip; it is applied almost entirely to fattening of stock, and the feeding of milk cows. (*Loudon's Encyclopaedia of Agriculture*.)

**MANIFEST**. In Commercial Navigation, a document signed by the master, containing the name or names of the places where the cargo or board have been laden, and the place or places to which they are respectively destined; the nature and tonnage of the vessel, the name of the captain, and the name of the place to which the cargo belongs; a particular account and description of all the packages on board, with the number and numbers thereon, the goods contained in the packages, the names of the respective shippers and consignees, as far as such particulars

known to the master &c. A separate manifest is required for tobacco. The manifest must be made out, dated, and signed by the captain, at the place or places where the goods, or any part of the goods, are taken on board. [IMPORTATION AND EXPORTATION.]

By the Customs Tariff Amendment Act, 23<sup>rd</sup> Feb. c. 22, the master and owner must, within 6 days of the final clearance outwards of any ship in which goods are shipped for exportation, deliver to the proper officer of customs a manifest, containing an account of all the goods duly shipped for exportation, and submit a declaration that this account is true, under a penalty. If, however, the whole of the bills of lading relating to the goods exported in the ship, and duly signed by the master or his agent, are delivered to the proper officer of customs either at the time, or within 21 days after the final clearance outwards of the ship, with a declaration that they represent, to the best of his knowledge and belief, the whole of the cargo exported, the manifest may be dispensed with. (Maule and Pollock, *Law of Merchant Shipping*, p. 96.)

MANILLA. The capital of Luzon or Luzon, the largest of the Philippine Islands, and the principal settlement of the Spaniards in the East, is in lat. 14° 30' N., long. 120° 53' E. Population of the capital and its environs, according to some somewhat doubtful statistics of 1865, was 230,143, of which 4,881 were stated to be of European origin, 13,151 Chinese, and 210,811 native Indians. Manilla is built on the shore of a spacious bay of the same name, at the mouth of a river navigable for small craft for about ½ mile, but for the larger brigades at a distance of about 150 yards from its mouth. The bar, on which there is generally a depth of from 11 to 12 feet of water, is the only anchorage to vessels of 2,000 tons and upwards lying close up to the first bridge. The principal anchorage for exports are situated in the space between this bridge and the entrance to the river. Merchant vessels anchor in Manilla Bay, but the Spanish war vessels and those carrying coals to the arsenal anchor at Cavita, about 7 miles to the westward, where there is a good harbor, well sheltered from the W. and S. W. winds, to which the bay is exposed. The arsenal at Cavita is defended by Fort St. Philip, the strongest fortress on the islands. The city is surrounded by a wall and towers, and some of the bastions are well furnished with artillery.

The lights in Manilla Bay are 5 on Burias Island, 2 of which are blue; 1 on the highest point of Corregidor Island, which revolves every minute; 1 on the islet of Caball; another on the north shore of the canal; and 1 on Sungly Point. The light on Burias Island is visible for 20 miles. The light on Corregidor Island is 639 feet above high water mark.

Vessels on entering Manilla Bay between sunrise and sunset must hoist their national flag under a penalty of 5 dols. to 10 dols. Masters of vessels coming to this port from one where there is a Spanish consul or agent must bring their certificates of cargo or ballast, under a penalty of 300 dols. if they are situated within the tropics, the climate of the Philippines is sufficiently temperate; the disadvantage under which they labor in this respect being that the principal part of the group comes within the range of the trade winds. The soil is of very different qualities, but for the most part singularly fertile. They are rich in mineral, vegetable, and animal products. It is stated in a statistical account of the Philippines, published at Manilla in 1818 and 1819, that the entire population of the islands

amounted to 2,249,852, of which 1,376,222 belonged to Luzon. But this return is believed to have been underrated; and the population having increased very considerably in the interval, it is now estimated at upwards of 4,000,000. There are some, but not many, Chinese settlers, and most active, bold, and energetic of any belonging to the Eastern Archipelago. 'These people,' says a most intelligent navigator, 'appear in no respect inferior to those of Europe. They cultivate the earth like men of understanding; are carpenters, joiners, smiths, goldsmiths, weavers, masons &c. They walk through their villages, and treat them as their kind, hospitable, and communicative; and though the Spaniards speak of and treat them with contempt, I perceived that the vices they attributed to the Indians ought rather to be imputed to the Government they have themselves established.' (*Voyage de M. de la Perouse*, c. 15.)

The trade between this country and Manilla fluctuates considerably. The exports to the Philippines were as low as 458,000, in 1862, and reached 955,300, in 1865, 917,847, in 1866, and 1,012,468, in 1867. They are chiefly cotton cloth (the trade in which seems to be steadily increasing, and formed in 1867  $\frac{2}{3}$  of the whole), linens, woollens, and iron. On the other hand, our imports thence, consisting chiefly of sugar, hemp, tobacco and cigars, coffee, and grains copul and mastic, were valued in 1866 at 1,196,557, and in 1867 at 762,244. Cowries figure in the exports to Manilla. The average exportation of the United Kingdom is about 500,000 cwts.

The general exports from Manilla in 1861 were valued at 2,296,174, the imports at 2,679,052. The former represented the following articles:—

Articles	Manilla	Iloilo	Cebu
Sugar - - piculs	805,411	151,067	18,564

**Port Charges.**—On foreign vessels, 2 rs. per ton, and one-half on such as neither load nor unload cargo, beside fees amounting from 5 dols. to 15 dols., according to the size of vessels.

**Import Duties.**—Spanish commodities, by Spanish vessels, pay 3 per cent. ad valorem, and 8 by foreign. Foreign commodities, by foreign vessels 11 per cent., and 7 by Spanish; in general being 8 per cent. under national flag from Singapore, and 9 from China. Spirits and strong liquors, produce of Spain, by Spanish vessels 10 per cent., and 25 by foreign; if they be foreign produce, by Cider and beer, produce of Spain, by Spanish vessels 3 per cent., and 60 by foreign; by Spanish foreign produce, by Spanish vessels 20, and 25 3 per cent., and 8 by foreign. Foreign wines, by Spanish vessels 40 per cent., and 60 by foreign, except champagne, which pays, by Spanish vessels 7 per cent., and 14 by foreign. Cotton twist, grey, black, blue, and purple, knives or tools (such as the natives use) ready-made clothes, vinegar, by Spanish vessels 20 per cent., and 80

by foreign. British and other foreign cotton and silk manufactures, made in imitation of native cloths, chiefly stripes or checks of black, blue, and purple colours, Madras and Bengal, grey, white, and printed cottons, towels, table napkins, and table cloths, 15 per cent. by Spanish vessels, and 25 by foreign. Beche de mer, rattans, diamonds, tortoiseshell, mother-o'-pearl shell, and birds' nests, 1 per cent. by Spanish vessels, and 2 by foreign. Machinery of all sorts for the promotion of the industry of the country, cotton twist of red, rose, yellow and green colours, gold and silver, coined or uncoined, plants and seeds, free. Tropical productions similar to those of the Philippines, also arrack and gunpowder, are prohibited. Opium is only admitted to be deposited for re-exportation. Swords, fowling-pieces, muskets, pistols, and warlike stores may be deposited for re-export, and cannot be introduced without the special license of Government; but cannon and dress swords are admitted. It is probable that Spanish tariffs, both home and colonial, will undergo a complete revision under the auspices of the new Government of 1868.

**Export Duties.**—Commodities and produce of every description to Spain, by national vessels pay 1 per cent., and 2 by foreign. Elsewhere, 1½ by Spanish vessels, and 3 by foreign. Hemp, by national vessels to whatever destination, 1 per cent., and 2 by foreign. Rice, by Spanish vessels free, and 4½ per cent. by foreign. Manufactured tobacco, and cordage of Manilla hemp, free by all flags. Gold dust, gold in bars, and silver in bars, free.

**Entrepôt Duties.**—One per cent. ad valorem, and 1 per cent. at the exportation, with 1 per cent. more if the commodities should be kept there more than twelve months, two years being the longest time allowed for it.

**Port and Custom-house Regulations.**—Vessels newly arrived are not to communicate with the shore until having been visited by the port captain's boat; and within 30 hours after this visit, a manifest must be presented, stating packages, marks, and numbers; but the vessel may retain her cargo 10 days in transit without stating whether for consumption or deposit, and without being obliged to land or incurring any charge on the same, except gunpowder, pocket pistols, and forbidden arms.

**Terms for Sales and Purchases.**—Sales and purchases made, duty paid, at 3 to 5 months' credit, occasionally at 2½ per cent. discount for prompt payment, and exports are bought for cash.

The principal currency of Manilla consists of Spanish dollars, of 8 reals and 96 legu, but South American dollars are also current. The weights in use are the Spanish lb., which is nearly 2 per cent. heavier than the English; the arroba = 25½ Eng. lbs. nearly; the quintal = 102 lbs.; and the pekul of 5 arrobas or 1¼ ewt. English. The cavan is a measure for rice &c., varying from 96 to 135 lbs. The Spanish merchants have a chamber of commerce, and a joint-stock insurance society. The United States, France, and Belgium have consuls, and each of the Canton marine insurance companies has an agent here. There are, however, neither fire nor life offices nor agencies; nor is any newspaper, price-current, or other periodical publication issued in Manilla.

Considering the great fertility and varied productions of the Philippines, and their peculiarly favourable situation for carrying on commerce, the limited extent of their trade may excite surprise. This is naturally and entirely a consequence of the wretched policy of the Spanish Government, which persevered until recently in

excluding all foreign ships from the ports of the Philippines, confining the trade between them and Mexico and South America to a single ship! Even ships and settlers from China were excluded. 'Provisions,' says La Perouse, 'of all kinds are in the greatest abundance here, and extremely cheap, but clothing, European hardware, and furniture bear an excessively high price.' The want of competition, together with prohibitions and restrictions of every kind laid on commerce, render the productions and merchandise of India and China at least as dear as in Europe! Happily, this miserable policy, the effects of which have been admirably depicted by M. de la Perouse, has been materially modified, and, it may be hoped, will, under the régime of 1868, be entirely changed. Even the events of the revolutionary war destroyed for ever the old colonial system of Spain, and the ships of all nations are now freely admitted into Manilla and the other ports in the Philippines. An unprecedented stimulus has, in consequence, been given to all sorts of industry; and its progress will doubt become more rapid, according as a wider experience and acquaintance with foreign manufactures makes the natives better aware of the advantages of commerce and industry, and disabuses them of the prejudices of which they have been so long the slaves. It appears from the Report of the Vice-Consul De Bosc on the Commerce of Sinaloa for 1866, that intercourse between Manilla and Sinaloa by means of steamers had been commenced.

**MANNA** (Fr. manne; Ger. mannaesche; Ital. manna). The concrete juice of several species of ash growing in the south of Europe. The juice exudes spontaneously in warm, dry weather, concretes into whitish tears; but the greater part of the manna of commerce is obtained by making incisions in the tree, and gathering the juice in baskets, where it forms irregular masses of a dish or brownish colour, often full of impurities. Manna is imported in chests, principally from Sicily and Calabria. The best is in oblong pieces from 1 to 6 inches long, moderately dry, porous, of a yellowish white colour, and in a degree transparent; the inferior kinds are more unctuous, and brown. It has a slight peach odour, and a sweet taste, with some degree of bitterness not very pleasant, and leaving a mucous impression on the tongue. In 1867, 200 lbs. were imported, valued at 4,775l.; and 200 lbs. were exported. (Thomson's Dispensary, *British Pharmacopœia*, 1867.)

**MARBLE** (Ger., Russ. and Lat. marmor; Dan. marmor; Fr. marbre; Ital. marmo; Span. mármol). A genus of fossils, composed chiefly of being a bright and beautiful stone, moderately hard, not giving fire with steel, fermenting, and soluble in acid menstrua, and catching a slight fire.

The colours by which marbles are distinguished are almost innumerable. Some are quite white, others, again, are of a snowy white; some are greenish; others greyish, reddish, bluish, yellow, &c.; while some are variegated and spotted with many different colours and shades of colour. The finest solid modern marbles are those of Blankenburg, France, and Flanders. Great quantities of very beautiful marble have been covered at Portsoy in Banffshire, and at other places in the Western Isles. Killybegs in Ireland, has abundance of beautiful marble intermixed with white spots, called *Irish marble*. Derbyshire abounds in this marble. Near Kemlyn-bay, in Anglessea, there is a quantity of beautiful marble called *verde di Cornouailles*; its also being found in Corsica. Its colours are green, black, white, and dull purple.

disposed. Italy produces the most valuable marble and its exportation makes a considerable branch of her foreign commerce. The black and the milk-white marble of Carrara, in the duchy of Modena, are particularly esteemed.

The marbles of Germany, Norway, and Sweden are very inferior, being mixed with a sort of scaly limestone.

Marble is of so hard, compact, and fine a texture as naturally to take a beautiful polish. That most generally by statuariers is brought from the island of Paros, in the Archipelago; it was employed by Phidias and Phidias, both of whom were natives of that island; whence also the famous Parian marbles were brought. The marble of Carrara is likewise in high repute among sculptors. The specific gravity of marble is from 2,700 to 2,800. Black marble owes its colour to a slight mixture of iron.

In 1807 we imported 10,263 tons of rough and 200,000 cuts of sawn or otherwise manufactured marble, chiefly from Tuscany, the value of the whole being 146,711*l*.

**MARITIME LAW.** By maritime law is meant that law relating to harbours, ships, and seamen, which forms an important branch of the commercial law of all maritime nations. It is divided into a great number of different departments; such as those which respect the harbours, the property of ships, the rights and duties of masters and seamen, contracts of affreightment, average, salvage &c. The law will deal with those subjects treated of under their respective heads.

**Sketch of the Progress of Maritime Law.**—The earliest system of maritime law was supplied by the Rhodians several centuries before the Christian era. The most celebrated authors of antiquity have spoken in high terms of the wisdom of the Rhodian laws: luckily, however, we are not enabled to form our opinion upon them, from any original or commendatory statements of Cicero and Strabo. (Cicero *pro lege Manilia*; Strabo lib. xiv.) The laws of Rhodes were adopted by Augustus into the legislation of Rome; and in his estimation in which they were held, the Emperor Antoninus, being solicited to settle a contested point with respect to shipping, ordered to have answered that it ought to be regulated by the Rhodian laws, which were of paramount authority in such cases, unless they happened to be directly at variance with some regulation of the Roman law. ('Ego quidem mundi leges, lex autem maris legis in Rhodia, qua de navium prescripta est, judicatur, quatenus nosstrorum legum adversatur. Hoc idem quoque Augustus judicavit.') The rule of Rhodian law with respect to average contribution in the event of a sacrifice being made at sea in safety of the ship and cargo is expressly given in the *Digest* (lib. xiv. tit. 2); and the probable conclusion seems to be, that most regulations as to maritime affairs embodied in the compilations of Justinian have been derived from the same source. The regulations as to shipping adopted by all modern nations are borrowed with hardly any alteration, from the Rhodian law, as we have seen, from the Rhodian law, as a conclusive proof of the sagacity of those who they had been originally framed. The authentic fragments of the Rhodian laws are preserved in the *Digest*. The collection entitled *Code Rhodiorum*, published at Bale in 1561, is admitted by all critics to be spurious.

The first modern code of maritime law is said to have been compiled at Amalfi, in Italy, a few years subsequent to its birth; but which, besides being distinguished for its commerce, will be for

ever famous for the discovery of the Pandects, and the supposed invention of the mariner's compass. The Amalfitan code is said to have been denominated *Tabula Amalphitana*. But if such a body of law really existed, it is singular that it should never have been published, nor even any extracts from it. M. Pardessus has shown that the authors who have referred to the Amalfitan code and asserted its existence, have copied the statement of Freccia, in his book *De Subp. Feudis* (*Collection des Loix Maritimes*, tome i. Amalfitan code continued to be followed in Naples at the time when he wrote (1570), it is difficult to suppose that it could have entirely disappeared; and it seems most probable, as nothing peculiar to it has ever transpired, that it consisted principally of the regulations laid down in the Roman law, which it is known preserved their ascendancy for a longer period in the south of Italy than anywhere else.

But, besides Amalfi, Venice, Marseilles, Pisa, Genoa, Barcelona, Valencia, and other towns of the Mediterranean were early distinguished for the extent to which they carried commerce and navigation on the subject, it seems reasonable to suppose that their maritime laws would be principally borrowed from those of Rome, but with such alterations and modifications as might be deemed requisite to accommodate them to the particular views of each state. But whether in this or in some other way, it is certain that various and much confusion were established, which led to a degree of the inconveniences thence arising doubtless contributed to the universal adoption of the *Consolato del Mare* as a code of maritime law. Nothing certain is known as to the origin of this code. Azuni (*Droit Maritime de l'Europe*, tome i. pp. 414—439, or rather Jorio, *Codice Ferdinando*, from whose work a large proportion of Azuni's is literally translated) contends, in a very able dissertation, that the Pisans are entitled to the glory of having compiled the whole, or at least the greater part of the *Consolato del Mare*. On the other hand, Don Antonio de Capmany, in his learned and excellent work on the Commerce of Barcelona (*Antiguo Comercio de Barcelona*, tome i. pp. 170—183), has endeavoured to show that the *Consolato* was compiled at Barcelona, and that it contains the rules according to which the consuls in places so early as 1268 were to render their decisions. It is certain that the *Consolato* was printed for the first time at Barcelona in 1502, and that the early Italian and French editions are translations from the Catalan. Azuni has, indeed, sufficiently proved that the Pisans had a code of maritime laws at a very early period, and that the same as those in the *Consolato*. But it does not appear that the Barcelonese were aware of the regulations of the Pisans, or that the resemblance between them and those in the *Consolato* is more than accidental, or may not fairly be ascribed to the concurrence that can hardly fail to obtain among well-informed persons legislating upon the same topics, and influenced by principles and practices derived from the civil law.

M. Pardessus, in the second volume of his excellent work already referred to, appears to have been sufficiently disposed, had there been any grounds to go upon, to set up a claim in favour of Marseilles to the honour of being the birthplace of the *Consolato*; but he candidly admits that such a pretension could not be sup-

ported, and unwillingly adheres to Capmany's opinion. 'Quoique Français,' says he, 'quoique porté par des sentimens de reconnaissance, qu'un événement ne sauroit affaiblir, à faire valoir tout ce qui est en faveur de Marseille, je dois reconnoître franchement que les probabilités l'emportent en faveur de Barcelone.' (Tome ii. p. 24.)

But to whichever city the honour of compiling the *Consolato* may be due, there can be no doubt that its antiquity has been greatly exaggerated. It is affirmed, in a preface to the different editions, that it was solemnly accepted, subscribed, and promulgated, as a body of maritime law, by the Holy See in 1075, and by the kings of France and other potentates at different periods between 1075 and 1270. But Capmany, Azuni, and Pardessus have shown in the clearest and most satisfactory manner that the circumstances alluded to in this preface could not possibly have taken place, and that it is wholly unworthy of attention. The most probable opinion seems to be, that it was compiled, and began to be introduced, about the end of the 13th or the beginning of the 14th century. And notwithstanding its prolixity, and the want of precision and clearness, the correspondence of the greater number of its rules with the ascertained principles of justice and public utility gradually led, without the intervention of any agreement, to its adoption as a system of maritime jurisprudence by all the nations contiguous to the Mediterranean. It is still of high authority. Casaregis says of it, though, perhaps, too strongly, 'Consulatus maris, in materiis maritimis, tanquam universalis consuetudo habens vim legis, inviolabiliter attendenda est apud omnes provincias et nationes.' (Disc. 213, n. 12.)

The collection of sea laws next in celebrity, but anterior, perhaps, in point of time, is that denominated the *Roole des Jugemens d'Oleron*. There is as much diversity of opinion as to the origin of these laws as there is with respect to the origin of the *Consolato*. The prevailing opinion in Great Britain has been, that they were compiled by direction of Queen Eleonor, wife of Henry II., in her quality of Duchess of Guienne, and that they were afterwards enlarged and improved by her son Richard I., on his return from the Holy Land; but this statement is now admitted to rest on no good foundation. The most probable theory seems to be, that they are a collection of the rules or practices followed at the principal French ports on the Atlantic, as Bordeaux, Rochelle, St. Malo &c. They contain, indeed, rules that are essential to all maritime transactions, wherever they may be carried on; but the references in the code sufficiently prove that it is of French origin. The circumstance of our monarch's having large possessions in France at the period when the rules of Oleron were collected, naturally facilitated their introduction into England, and they have long enjoyed a very high degree of authority in this country. 'I call them the laws of Oleron,' said a great civilian (Sir Leoline Jenkins, *Charge to the Cinque Ports*), 'not but that they are peculiarly enough English, being long since incorporated into the customs and statutes of our admiralties, but the equity of them is so great, and the use and reason of them so general, that they are known and received all the world over by that rather than by any other name.' Molloy, however, has more correctly, perhaps, said of the laws of Oleron, that 'they never obtained any other or greater force than those of Rhodes formerly did: that is, they were esteemed for the reason and equity found in them, and applied to the case emergent.' (*De Jure Maritimo et Navali*, Introd.)

A code of maritime law issued at Wisby, in the

island of Gothland, in the Baltic, has long enjoyed a high reputation in the North. The date of its compilation is uncertain, but it is comparatively modern. It is true that some of the Northern jurists contend that the laws of Wisby are older than the rules of Oleron, and that the latter are chiefly copied from the former! But it has been repeatedly shown that there is not so much as the shadow of a foundation for this statement. (Pardessus, *Collection* &c. tome i. pp. 425-467. *Foreign Quarterly Review*, No. 13, art. 'Hanseatic League.') The Laws of Wisby are not certainly older than the latter part of the 14th or beginning of the 15th century, and have obviously been compiled from the *Consolato del Mare*, the rules of Oleron, and other codes that were then in use. Grotius has spoken of these laws in the most laudatory manner: 'Quæ de maritimis negotiis, in insula Gothlandiæ habitatoribus præcipiunt, tantum in se habent, tum æquitas, tum gravitas, ut omnes œceni accole eo, non tam proprio, sed velut gentium jure, utantur.' (*Promemur ad Precepium*, p. 64.)

Besides the codes now mentioned, the ordinances of the Hanse Towns, issued in 1357, 1614, contain a system of laws relating to navigation that is of great authority. The judgments of Damme, the customs of Amsterdam &c. also often quoted.

A translation of the Law of Oleron, by the Hanse Towns is given in the 3rd ed. of Malynes' *Lex Mercatoria*; but the title of them in the work of M. Pardessus is inferior to every other.

But by far the most complete and well-organized system of maritime jurisprudence that has appeared, is that comprised in the famous *Ordonnance de la Marine* issued by Louis XIV. in 1681. This excellent code was compiled under the direction of M. Colbert, by individuals of talent and learning, after a careful revision of the ancient sea laws of France and other countries, and upon consultation with the different ports, the courts of admiralty, and the chambers of commerce, of the different towns. It contains whatever experience and the wisdom of ages have shown to be best in the Roman laws, and the institutions of the modern maritime states of Europe. In the preface to his treatise on the *Law of Shipping*, Lord Tenterden says, 'The reader should be offended at the frequent references to this ordinance, I must request he recollect that those references are made to a maritime code of a great commercial empire, which has attributed much of its national prosperity to that code—a code composed in the reign of a politic prince; under the auspices of an enlightened minister; by laborious and judicious persons, who selected the most valuable parts of all the maritime laws then existing; and in matter, method, and style, is one of the finished acts of legislation that ever was produced.'

The Ordinance of 1681 was published in French with a detailed and most elaborate commentary by M. Valin, in 2 volumes, &c. It is impossible to admire most in this commentary, the learning or the sound good sense of the Lord Mansfield was indebted for a considerable portion of his superior knowledge of the principles of maritime jurisprudence to a careful study of M. Valin's work.

That part of the *Code de Commerce* which treats of maritime affairs, insurance &c. is derived with very little alteration, from the Ordinance of 1681. The few changes that have been made are not always improvements.

No system or code of maritime law has ever been issued by authority in Great Britain. The laws and practices that now obtain amongst us in reference to maritime affairs have been founded principally on the practices of merchants, the principles laid down in the civil law, the laws of Oleron and Wisby, the works of distinguished jurists, the judicial decisions of our own and foreign countries &c. A law so constructed has necessarily been in a progressive state of improvement; and, though still susceptible of amendment, it corresponds at this moment more nearly, perhaps, than any other system of maritime law, with those universally recognised principles of justice and general convenience by which the transactions of merchants and navigators ought to be regulated.

The decisions of Lord Mansfield did much to settle the principles, and to improve and perfect the maritime law of England. It is also under great obligations to Lord Stowell. The decisions of the latter chiefly, indeed, respect questions of neutrality, growing out of the conflicting pretensions of belligerents and neutrals during the war ended in 1815; but the principles and doctrines which he established in treating those questions throw a strong and steady light on those branches of maritime law. It has occasionally, indeed, been alleged—and the allegation is probably in some degree well founded—that his lordship has conceded too much to the claims of belligerents. Still, however, his judgments must be regarded, altogether, as in this excusable bias, as among the noblest monuments of judicial wisdom of which any country can boast. 'They will be contemplated,' says Mr. Sergeant Marshall, 'with applause and veneration, as long as depth of learning, soundness of argument, enlightened wisdom, and the classic beauties of eloquence hold any place in the estimation of mankind.' (*On Insurance*, *Prima Dica*.)

The 'Treatise of the Law relative to Merchant Ships and Seamen,' by the late Lord Tenterden, does credit to the talents, erudition, and liberality of its noble and learned author. It gives within a brief compass a clear and admirable exposition of the most important branches of our maritime law, and may be consulted with equal facility and advantage by the merchant, the general scholar, and the lawyer. Mr. Sergeant Marshall has entered very fully into some and has touched upon most others of maritime law in his work on *Insurance*, and has discussed them with great learning and accuracy. The works of Mr. Justice Park, Mr. Justice Gurney, and a few others, are also valuable. Of the latter treatises, the *Lex Mercatoria* of Malynes is by far the best; and, considering the period of its publication (1622), is a very extraordinary performance.

*Statutes with Respect to Importation and Exportation, Navigation &c.*—The preceding remarks are merely to the principles, or leading doctrines, of our maritime law. These, however, have often been very much modified by statutory enactments, and the excessive multiplication of Acts of Parliament suspending, repealing, or altering parts of our maritime law in almost inextricable confusion, and been most injurious to the public interest. So true, indeed, is this not pretty evident, that an extent this abuse has sometimes been reached. From the Revolution down to 1786 several hundreds of Acts were passed, each enacting some addition, diminution, or change in the laws, drawbacks, bounties, and regulations presently existing in the customs. In consequence,

the customs laws became so intricate and unintelligible, that hardly one merchant in fifty could tell the exact amount of duty affecting any article, or the course to be followed either in entering or clearing out vessels; being obliged to leave it entirely to the clerks of the Custom-house to calculate the amount of duties, and to direct him and the ship! and yet, so powerful is the influence of habit in procuring toleration for the most pernicious absurdities, that this monstrous abuse was allowed to go on increasing for 50 years after it had been denounced as intolerable. Mr. Pitt has order into this chaos. Under his auspices, all the separate customs duties existing in 1787 were abolished, and new ones substituted; consisting, in most instances, of the equivalents, so far at least as they could be ascertained, of the old duties. In carrying this measure into effect, the House of Commons passed no fewer than 3,000 resolutions. The regulations as to entries and clearances were also simplified.

The advantages resulting from this measure were very great; but during the war ended 1815 so many new duties and regulations were passed, that the necessity for a fresh consolidation became again very urgent, and was effected in 1819. It was not, however, in the customs department only, or in the mere article of duties, that the multiplicity of statutory regulations, that the merchants and shipowners were bewildered by the not a single branch of the law regulating their transactions that escaped the rage for legislation. Previously to 1822, no fewer than 113 statutes had been passed relating to the fisheries; and the makers and buyers of sails and cordage were supposed to be familiar with the various obscure and contradictory regulations embodied in the *twenty-three Acts of Parliament* relating to these articles! But the enormity of the abuse will be rendered more apparent by laying before the reader the following extract from the *Report of the Lords' Committee on Foreign Trade in 1826*.

'Before your committee proceed to advert to the points which have been the principal objects of their enquiry, they are anxious to call the attention of the House to the excessive accumulation and complexity of the laws under which the commerce of the country is regulated, with which they were forcibly impressed in the very earliest stage of their proceedings. These laws, passed at different periods, and many of them arising out of temporary circumstances, amount, as stated in a recent computation of them, to upwards of 2,000, of which no less than 1,100 were in force in 1815; and many additions have been since made. After such a statement, it will not appear extraordinary that it should be matter of complaint by the British merchant, that, so far from the course in which he is to guide his transactable to undertake his operations, and to avail himself of favourable openings, as they arise, with promptitude and confidence—he is frequently reduced to the necessity of resorting to the services of professional advisers, to ascertain what he is able to do, and what he must avoid, before he ventures to embark in his commercial adventures with the assurance of being secure from the consequences of an infringement of the law. If this be the case (as is stated to your committee) with the most experienced among the merchants, even in England, in how much greater a degree must operate in foreign countries and on foreign merchants, whose acquaintance with our statute book

must be supposed to be comparatively limited, and who are destitute of the professional authority which the merchant at home may at all times consult for his direction! When it is recollected, besides, that a trivial, unintentional deviation from the strict letter of the Acts of Parliament may expose a ship and cargo to the inconvenience of seizure, which (whether sustained or abandoned) is attended always with delay and expense, and frequently followed by litigation, it cannot be doubted that such a state of the law must have the most prejudicial influence both upon commercial enterprise in the country, and upon our mercantile relations and intercourse with foreign nations; and perhaps no service more valuable could be rendered to the trade of the empire, nor any measure more effectually contribute to promote the objects contemplated by the House in the appointment of this committee, than an accurate revision of this vast and confused mass of legislation, and the establishment of some certain, simple, and consistent principles, to which all the regulations of commerce might be referred, and under which the transactions of merchants engaged in the trade of the United Kingdom might be conducted with facility, safety, and confidence. (p. 4.)

Since this report was printed, a very considerable progress has been made in simplifying and clearing up the statute law, on the principles laid down in it. The law as to shipping and navigation has been particularly improved. The principles laid down in the famous Navigation Acts of 1650 and 1660 were, indeed, sufficiently distinct and obvious; but when these Acts were passed, there were above 200 statutes in existence, many of them antiquated and contradictory, which they did not repeal, except in so far as the regulations in them might be inconsistent with those in the new Acts. But besides these, a number of statutes were passed almost in every session since 1660, explaining, limiting, extending, or modifying, in one way or other, some of the provisions of the Navigation Acts; so that ultimately there were questions perpetually arising, as to which it was very difficult to discover the precise law. On such occasions recourse was often had to the courts; and the good sense and equity which generally characterised their decisions mitigated the mischievous consequences resulting from the uncertainty of the statute law, and even gave it the appearance of consistency. This uncertainty, however, has been well nigh removed. A bill introduced and carried through Parliament in 1824 repealed above 200 antiquated and contradictory statutes; and the new Customs and Navigation Acts passed in the following year were drawn up with a brevity and precision which do honour to the memory of their compiler, the late Mr. Hume, of the Board of Trade. But various alterations having been subsequently made in the customs laws, new statutes embodying these alterations were passed in 1833, and again in 1845. And a still more perfect and complete consolidation has been effected by the Customs Consolidation Act of 1853, the 16 & 17 Vict. c. 107. It has the two great recommendations of being at once brief and perspicuous. It embraces the whole statute law with respect to the importation and exportation of commodities, the coasting and colonial trades, smuggling &c. The law relating to ships and seamen, which, down to 1854, was in a very confused and contradictory state, has also been digested under its different heads, and embodied in two statutes, the Mercantile Shipping Act of 17 & 18 Vict. c. 104, and Merchant Shipping Acts Amendment Act

of 25 & 26 Vict. c. 63. These statutes, which contain no fewer than 626 clauses, might, we think, be advantageously compressed; but they are a vast improvement on the previous state of the statute law on the subject.

The most important modern works on Maritime Law are Maude and Pollock's *Law of Merchant Shipping*, and Pritchard's *Admiralty Digest*.

It may be worth while observing, that hardly a session passes without giving birth to more or fewer Acts, making certain changes or modifications in the customs laws. Where these changes apply only to some particular emergency, without affecting the general principles or rules laid down in the statutes, there can be no doubt that they should be embodied in separate Acts; but where any modification or alteration is to be made in the principles of the law, the better way, as it appears to us, would be to introduce it directly into the leading Act on the subject—re-enacting it in an amended or altered form. In no other way is it possible to preserve that unity and clearness which are so very desirable. The multiplication of statutes is a very great evil, not only from the difficulty of ascertaining the exact degree in which one modifies another, but from its invariably leading to the enactment of contradictory clauses. The property and transactions of merchants ought not to depend upon the subtleties and niceties of forced constructions, but upon plain and obvious rules, about which there can be no mistake. It would, however, be idle to expect that such rules can ever be deduced from the conflicting provisions of a number of statutes those in the same statute are not always in harmony with each other.

**MARK or MARC.** A weight used in several parts of Europe, for various commodities, especially gold and silver.

In France, the mark was divided into 8 oz. 64 drachms = 192 deniers or pennyweights = 480 grains. In Holland, the mark weight was called Troy weight, and was equal to that of France. When gold and silver are sold by mark, it is divided into 24 carats.

The pound, or *livre, poids de marc*, the weight most commonly used in retail dealings throughout France previous to the Revolution, was equal to 2 mares, and consequently contained 16 oz. = 384 drs. = 384 den. = 9,216 gr. One kilogramme is nearly equal to 2 livres. Subjoined is a table of *livres, poids de marc*, from 1 to 10, converted into kilogrammes. Any greater number may be learned by a simple multiplication and addition.

Livres	Kilg.	Livres	Kilg.
1	= 0.4895	6	= 2.9370
2	= 0.9790	7	= 3.4265
3	= 1.4685	8	= 3.9160
4	= 1.9580	9	= 4.4055
5	= 2.4475	10	= 4.8950

**MARK.** A term sometimes used among us for a money account, and in some other countries for a coin. The English mark is  $\frac{3}{4}$  of a pound sterling, or 13s. 4d.; and the Scotch mark is  $\frac{1}{2}$  of a pound Scotch. The mark Lubs, or Lbs. mark, used at Hamburg, is a money of account equal to 14 $\frac{1}{2}$ d. sterling.

**MARK, TRADE.** [TRADE MARK.]

**MARKET.** A public place in a city or town where provisions are sold. No market is kept within 7 miles of the city of London; all butchers, victuallers &c. may hire stalls or standings in the flesh-markets there, and sell meat and other provisions. Every person who has a market is entitled to receive toll for things sold in it; and, by ancient custom, things standing in the market, though not sold, but those who keep a market in any other way

**MARSEILLES.** A large commercial city and seaport of France, on the Mediterranean, lat. 43° 17' 49" N., long. 5° 22' 1" E. Population in 1866, including suburbs, 300,131.

The port now consists of the natural harbour, called 'Vieux Port,' and the two basins formed within the new Breakwater, called respectively 'Port de la Joliette' and 'Port Napoléon.' The Vieux Port, about 1,000 yards long and 300 wide, has a very narrow entrance between two old forts, but is one of the safest ports in the world.

Drilling machines are constantly at work to maintain a uniform depth of about 18 feet throughout the Old Port, which is exclusively reserved for sailing ships, which usually lie in lines on the north and south sides, and mostly discharge their cargoes over their bows on to the quays. These have been considerably widened of late years. There are numerous tug-boats always at command for vessels entering or leaving.

A breakwater, 2,400 metres long, has now been completed. It lies off the land on the north side of the Old Port, and has a lighthouse on each end. A vessel on rounding the south entrance of this breakwater enters the port of La Joliette, to the west, a basin about 600 yards long by about 460 wide. It is surrounded on all sides by spacious quays, and furnished with iron tramways for the conveyance of merchandise in railway trucks to the dock buildings and railway station. La Joliette is used for steam as well as for sailing vessels of considerable draught of water; the whole northern and about half of the western sides being reserved for the fleet of steamships belonging to the Messageries Impériales.

An opening with a turning-bridge leads from La Joliette to the Port Napoléon, which is considerably more spacious than the former. On its eastern side there are two basins, 'du Lazaret' and 'd'Arène,' with spacious quays for the wharves, and in this harbour the ships lie broadside on to the wharves, and discharge their cargoes. The great dock warehouses form a range of buildings of stone and iron, six storeys high, and capable of containing 40,000 tons of general merchandise. The depth of these artificial ports there is ample depth of water for the largest ships, but unfortunately neither of them is very safe when the wind blows violently from the north-west or north-east. The whole, including the old harbour, could contain at one time as many as 2,000 vessels.

The isles of Ratonneau and Pomègues, and that named after the celebrated Château d'If, all situated, lie in a cluster off the port, the latter distant about 1½ mile in a west-south-westerly direction. Ratonneau and Pomègues are connected by a breakwater, and thus form a very convenient port, almost exclusively used for the maritime service.

Outside of these islands lies a reef with a lighthouse called 'Le Planier,' in lat. 43° 11' 54" long. 5° 13' 59" E. It is distant about 4½ miles from the island Le Maire, lying to the east of it, both of them being about 7 miles from the Château d'If.

To the north of the Port Napoléon another port, to be called the Port Impérial, is being formed, and another breakwater, in a line with the existing one, is to enclose the bay formed by the Finède.

The merchandise discharged from the vessels in La Joliette and Port Napoléon, and even in the Old Port, can at once be passed through these buildings and forwarded to the interior of the country;

and any part of the Continent, without going through the town.

There are as yet very insufficient means for docking vessels at Marseilles, but the Port Impérial will have a large stone dry-dock, and one of Clarke's patent hydraulic lifts for repairing vessels.

The custom-house is on the quay of the Old Port, and there is a branch at Port de la Joliette, principally for the examination of passengers' luggage.

The Tribunal of Commerce sits in the Exchange, and the judges are periodically elected from amongst the leading merchants.

All the principal mercantile offices are near the head of the Old Port.

Vessels approaching the harbour of Marseilles generally heave-to for a pilot on approaching the islands, and they are charged pilotage whether they take one or not.

French ships and foreign vessels having reciprocity treaties, upwards of 80 tons burden, pay for pilotage 22 centimes per ton inwards, and 15 outwards. If the pilot is taken on board 6 or 7 miles off the port, the full charge is paid: it is reduced ¼ if he comes on board 2 or 3 miles off, and ⅓ if he comes on board at the entrance of the port.

Immediately on receiving pratique the ship is taken to the old or new harbour, according to the nature of the cargo she has on board, or the goods she may have to take in.

The only charge leviable on ships visiting Marseilles consists of a small payment at the Health Office for the bill of health. It amounts to from 5 to 15 centimes per ton. There are no tonnage, anchorage, or light dues of any sort. Ballast is of course paid for.

Vessels can be well repaired at Marseilles, but the charges are high. The charges for docking are as follow:—

*Sailing Ships.*

Entering into and leaving the dry dock on the same day, per ton	frances centimes
For every day beyond the first day and per ton	0 80

*Steam Ships.*

Entering into and leaving the dry dock on the same day, per horse power	frances centimes
For every day beyond the first day and per horse power	4 0
	2 0

No payment will be received on any sailing vessel for less than 250 tons.

No payment will be received on any steam-vessel for less than 60 horses' power. Upon steam-vessels whose horse power exceeds that of 250 horses, the prices above mentioned will be reduced ½ for every horse power above the first and up to 400, and ⅓ for all beyond the first 400. For sailing ships upwards of 1,000 tons, the foregoing prices will be reduced ¼ for every ton above the first 1,000 and up to 1,500, and ⅓ for every ton above 1,500.

The approaches to the port are admirably lighted, and the service is kept up without any charge to the shipping. The different lights in the bay or at the entrance of the port are described at the end of this article.

The mistral, or north-west wind, is the prevailing one: it blows in very heavy gusts, which render the approach to the port of Marseilles exceedingly difficult at times, and vessels rarely leave the port until it subsides.

*Trade &c.*—Marseilles is a city of great antiquity, and has long enjoyed a very extensive commerce. Havre—partly, no doubt, from its being, as it were, the port of Paris—used to enjoy a greater share of the trade of France; but, not-

OF  
LLES

withstanding the increased importance of the former, it has recently been equalled, and sometimes surpassed, by that of Marseilles.

Great prosperity has manifested itself here of late years, particularly since the annexation of Algeria, and the growth of the railway system.

Marseilles carries on trade with every part of the world. Its principal importations consist of oilseeds from India, the coast of Africa, Egypt, and the Levant ports; raw sugars from the West Indies, Brazil, Réunion, Mauritius, and Manilla; cotton from Egypt and the Levant; and much varied merchandise from all parts. At all times much wheat and grain is brought here from the Black Sea and Danube; but when the crops are short in France, England, Spain, or Italy, the quantity imported is very large, and the port and town then assume an extraordinary state of animation.

Marseilles soap, which has long been famous, continues to be largely made in spite of the exorbitant octroi duties and other difficulties the manufacturers have to contend with.

The exports from Marseilles consist chiefly of silk fabrics, wines, brandies, and liquors; woollen and other stuffs, madder, oil, and colonial products, soap, and refined sugar. Of the last-named article as much as 50,000 tons have been exported from Marseilles to the different parts of the Mediterranean in the course of a year.

A very active trade is carried on between Marseilles and Algeria, as well as with Corsica.

The large steam ships of the Messageries Impériales now connect this port by a monthly service with India, China, Japan, Mauritius, and Réunion, in competition with the Peninsular and Oriental Steam Company.

Two well-equipped life boats lie constantly at the entrance to the port ready for any emergency. The expenses are met by voluntary contributions.

According to Mr. Consul Mark's Report, the customs receipts, which in 1865 amounted to 21,311,216 francs, yielded 20,264,587 francs only in 1866; but business was, in consequence of the commercial crisis and a visit of the cholera, very dull throughout the latter year.

A joint-stock bank established here in 1835 has latterly been converted into a branch of the Bank of France; 4,000 shares and 4,000,000 francs of the stock of the latter having been assigned to its proprietors.

These statements show that the trade of Marseilles is of much importance; she is, in fact, the principal emporium in South Europe; and it is not easy to say in how great a degree her trade would be increased, were the French tariff again revised and placed on a still more liberal footing.

Account of the Number and Tonnage of the French and Foreign Ships which entered and cleared from Marseilles in 1866.

	Entered		Cleared	
	Vessels	Tonnage	Vessels	Tonnage
French steamers	2,914	736,156	2,610	711,079
Foreign "	1,352	194,347	1,539	188,573
French sailing vessels	3,773	364,722	3,674	370,079
Foreign "	2,319	411,415	2,530	466,648
Total	8,358	1,729,703	8,353	1,736,379

There was a large falling off in the foreign shipping which entered and cleared from Marseilles during 1866, as compared with the preceding year, amounting to about one-sixth—

Nations	Arrivals			Departures		
	Ships	Tonnage	Crews	Ships	Tonnage	Crews

Total	2,807	341,313	38,314	2,749	635,160	35,176

The British shipping shows a remarkable falling off in 1866. In 1865, 241 vessels, collectively of 137,454 tons, entered the port; whereas 191 ships came here in 1866, and the total tonnage reached 111,703 tons only. (Mr. Consul

Mark's Report for 1866, printed 1868.) Subjoined is a list of the lights provided the port of Marseilles and its approaches, describing the nature and position of each.

- 1st. A fixed light, of the 4th class, at the foot of the round tower of the Fort St. Jean, on the left hand of the entrance to the old port, on a small round turret. Elevation 9 metres. Visible at 9 miles. Lat. 43° 17' 45". Long. 5° 1' 26" E. N.H. Meridian of Paris. } A white light
- 2nd. A variable light, of the 1th class, on the point called "Tête du Nore, between the bay called "Anse de la Réserve" and the Pharo, in the right of the entrance to the port. On a small turret with a habitation attached. Elevation 19 metres. Visible at 10 miles. Lat. 43° 17' } A white light varied every three minutes by flashes, followed by short obscuration
- 3rd. A fixed light, of the 4th class, upon the southern point of the breakwater, on a round tower. Elevation 25 metres. Lat. 43° 17' 56". Long. 5° 1' 17" E. Visible at 8 miles. } A red light
- 4th. Light on the Châtea d'If. A fixed light, of the 1th class, upon the eastern point of the island, on a round tower. Elevation 9 metres. Lat. 43° 16' 45". Long. 5° 27' 59" E. Visible at 9 miles. } A white light
- 5th. Flanier light. A revolving light of the 4th class. The flashes succeed each other every half minute. It is situated on a rocky reef, on a round tower. Elevation 40 metres. Lat. 43° 11' 57". Long. 5° 35' 53" E. Visible at 20 miles. } At 5 miles to the S.W. of the port of Marseilles, in ordinary weather the light is visible at a distance of 12 miles. The light is white
- 6th. A temporary light has been erected at the north end of the great breakwater, at the entrance to the Port Napoleon. Elevation 123 metres } A white light with red flashes every three minutes

MASTER. In Commercial Navigation, the person intrusted with the care and navigation of the ship.

Formerly none were qualified to be masters of British ships unless natural-born British subjects or those naturalised by Act of Parliament, or denizens by letters of denization &c. But these restrictions no longer exist; and all parties, whether natives or foreigners, provided they have the necessary certificates (see *post*), may be selected to serve as masters.

The master is the confidential servant or agent of the owners; and in conformity to the rules and maxims of the law of England, *the owners are bound to the performance of every lawful contract made by him relative to the usual employment of the ship.* (Abbott, *Lord Tenterden, on the Law of Shipping*, part ii. c. 2.)

From this rule of law it follows that the owners are bound to answer for a breach of contract, though committed by the master or mariners against their will, and without their fault. (Id.) Nor can the expediency of this rule be doubted. The owners, by selecting a person as master, hold him forth to the public as worthy of trust and confidence; and in order that this selection may be made with due care, and that all opportunities of fraud and collusion may be obviated, it is indispensable that they should be made responsible for his acts.

The master has power to hypothecate, or pledge, both ship and cargo for necessary repairs executed in foreign parts during the course of the voyage; but neither the ship nor cargo can be hypothecated for repairs executed at home.

The master has no lien upon the ship for his wages, nor for money advanced by him for stores or repairs. In delivering judgment upon a case of this sort, Lord Mansfield said—'As to wages, there is no particular contract that the ship should be a pledge; there is no usage in trade to that purpose; nor any implication from the nature of the dealing. On the contrary, the law has always considered the captain as contracting personally with the owner; and the case of the captain has, in that respect, been distinguished from that of all other persons belonging to the ship. This rule of law may have its foundation in policy, for the benefit of navigation; for, as ships may be making profit and earning every day, it might be attended with great inconvenience if, on the change of a captain for misbehaviour or any other reason, he should be entitled to keep the ship till he is paid. Work done for a ship in England is supposed to be done on the personal credit of the employer; in foreign parts the captain may hypothecate the ship. The defendant might have told the tradesman that he only acted as an agent, and that they must look to the owner for payment.'

The master is bound to employ his whole time and attention in the service of his employers, and is not at liberty to enter into any engagement for his own benefit that may occupy any portion of his time in other concerns; and therefore, if he do so, and the price of such engagement happen to be paid into the hands of his owners, they may retain the money, and he cannot recover from them. (Abbott, part ii. c. 4.)

Willfully destroying or casting away the ship, or procuring the same to be done by the master or mariners, to the prejudice of the owners, freighters, or insurers; running away with the cargo; and running pirates, are offences punishable by transportation beyond seas for not less than 15 years, or by imprisonment for not less than 3 years. (SEAMEN.)

After the voyage has been commenced, the master must proceed direct to the place of his

destination, without unnecessarily stepping at any intermediate port, or deviating from the shortest course. No such deviation will be sanctioned unless it has been occasioned by stress of weather, the want of necessary repair, avoiding enemies or pirates, succouring of ships in distress, sickness of the master or mariners, or the mutiny of the crew. (Marshall *On Insurance*, book i. c. 6, s. 3.) To justify a deviation, the necessity must be real, inevitable, and imperious; and it must not be prolonged one moment after the necessity has ceased. A deviation without such necessity vitiates all insurances upon the ship and cargo, and exposes the owners to an action on the part of the freighters. If a ship be captured in consequence of deviation, the merchant is entitled to recover from the owners the prime cost of the goods, with shipping charges; but he is not entitled; more, unless he can show that the goods were enhanced in value beyond the sum above mentioned.

If a merchant ship has the misfortune to be attacked by pirates or enemies, the master is bound to do his duty as a man of courage and capacity, and to make the best resistance that the comparative strength of his ship and crew will allow.

By the common law, the master has authority over all the mariners on board the ship—it being their duty to obey his commands in all lawful matters relating to the navigation of the ship, and the preservation of good order. But the master should in all cases use his authority with moderation, so as to be the father, not the tyrant of his crew. On his return home he may be called upon by action at law to answer to a mariner he has either beaten or imprisoned during the course of the voyage; and unless he show sufficient cause for chastising the mariner, and also that the chastisement was reasonable and moderate, he will be found liable in damages. Should the master strike a mariner without cause, or use a deadly weapon as an instrument of correction, and death ensue, he will be found guilty, according to the circumstances of the case, either of manslaughter or murder. (Abbott, part ii. c. 4.)

The master may by force restrain the commission of great crimes; but he has no jurisdiction over the criminal. His business is to secure his person, and to deliver him over to the proper tribunals. (SEAMEN.)

Much abuse having arisen from masters improperly leaving seamen in foreign parts, various penalties have been imposed on those guilty of such offences. These are specified in detail in the article SEAMEN; and it also contains a full statement of the conduct which masters are bound to follow in the hiring of seamen; in the payment of their wages; in the bringing home deserted seamen from abroad; in the registration of returns respecting seamen; and a variety of other particulars.

The law makes no distinction between carriers by land and carriers by water. The master of a merchant ship is, in the eye of the law, a carrier; and is, as such, bound to take reasonable and proper care of the goods committed to his charge, and to convey them to the place of their destination, *harring only the acts of God and the Queen's enemies.*

Every act which may be provided against by ordinary care renders the master responsible. He would not, for example, be liable for damage done to goods on board in consequence of a leak in the ship occasioned by the violence of a tempest, or other accident; but if the leak were occasioned by rats, he would be liable, for these might have been exterminated by ordinary care, as by putting cats

on board &c. On the same principle, if the master run the ship in fair weather against a rock or shallow known to expert mariners, he is responsible; he is also liable for any injury done to the cargo by improper or careless stowage.

The master must not take on board any contraband goods, by which the ship and other parts of the cargo may be rendered liable to forfeiture or seizure. Neither must he take on board any false or colourable papers, as this might subject the ship to the risk of capture or detention. But it is his duty to procure and keep on board all the papers and documents required for the manifestation of the ship and cargo, by the law of the countries from and to which the ship is bound, as well by the law of nations in general, as by treaties between particular states. These papers and documents cannot be dispensed with at any time, and are quite essential to the safe navigation of neutral ships during war. [LOO (OFFICIAL); SHIP'S PAPERS.]

It is customary in bills of lading to insert a clause limiting the responsibility of the master and owners, as follows: 'The act of God, the Queen's enemies, fire, and every other dangers and accidents of the seas, rivers, and navigation, of whatever nature and kind soever, save risk of boats, as far as ships are liable thereto, excepted.' When no bill of lading is signed, the master and owners are bound according to the common law. [BILLS OF LADING.]

The most difficult part of the master's duty is when, through the perils of the sea, the attacks of enemies or pirates, or other unforeseen accidents, he is prevented from completing his voyage. If his ship have suffered from storms, and cannot be repaired within a reasonable time, and if the cargo be of a *perishable nature*, he is at *liberty* to employ another ship to convey it to the place of destination. He may do the same if the ship have been wrecked and the cargo saved, or if his own ship be in danger of sinking, and he can get the cargo transferred to another; and in *extreme cases* he is at liberty to dispose of the cargo for the benefit of its owners. But, to use the words of Lord Chief Justice Tenterden, 'the disposal of the cargo by the master is a matter that requires the utmost caution on his part. He should always bear in mind that it is his duty to convey it to the place of destination. This is the purpose for which he has been intrusted with it, and this purpose he is bound to accomplish by every reasonable and practical method. What, then, is the master to do, if, by any disaster happening in the course of his voyage, he is unable to carry the goods to the place of destination, or to deliver them there? To this, as a general question, I apprehend no answer can be given. Every case must depend upon its own peculiar circumstances. The conduct proper to be adopted with respect to perishable goods will be improper with respect to a cargo not perishable: one thing may be fit to be done with fish or fruit, and another with timber or iron: one method may be proper in distant regions, another in the vicinity of the merchant; one in a frequented navigation, another on unfrequented shores. The wreck of the ship is not necessarily followed by an impossibility of sending forward the goods, and does not of itself make their sale a measure of necessity or expedience: much less can the loss of the season, or of the proper course of the voyage, have this effect. An unexpected interdiction of commerce, or a sudden war, may defeat the adventure, and oblige the ship to stop in her course; but neither of these events doth of itself alone make it necessary to sell the cargo at the place to which it may be proper for the ship to resort. In these and many other cases the master may be discharged of his obliga-

tion to deliver the cargo at the place of destination; but it does not therefore follow that he is authorised to sell it, or ought to do so. What, then, is he to do? In general, it may be said, he is to do that which a wise and prudent man will think most conducive to the benefit of all concerned. In so doing, he may expect to be safe, because the merchant will not have reason to be dissatisfied; but what this thing will be, no general rules can teach. Some regard may be allowed to the interest of the ship, and of its owners; but the interest of the cargo must not be sacrificed to it. Transshipment for the place of destination, if it be practicable, is the first object, because that is the furtherance of the original purpose: if that be impracticable, return, or a safe deposit, may be expedient. A disadvantageous sale (and almost every sale by the master will be disadvantageous) is the last thing he should think of, because it can only be justified by that necessity which supersedes all human laws.' (Law of Shipping, part iii. c. 3.)

The most celebrated maritime codes, and the opinions of the ablest writers, have differed considerably as to these points. According to the Rhodian law (Pand. l. 10, s. 1) the captain is released from all his engagements, if the ship be the perils of the sea, and without any fault on his part, become incapable of proceeding on his voyage. The laws of Oleron (art. 4), and those of Wisby (arts. 16, 37, 55), say that the captain may hire another ship; harmonising in this respect with the present law of England. The famous French Ordinance of 1681 (tit. 'Du Frêt,' art. 11), and the Code de Commerce (art. 236), order the captain to hire another ship; and if he cannot procure one, freight is to be due only for that part of the voyage which has been performed (*pro rata itineris peracti*). Valin has objected to this article, as states that practically it meant only that the captain must hire another ship if he would not bear the whole freight. Emerigon (tom. i. p. 42) holds that the captain, being the agent not only of the owners of the ship, but also of the shippers, the goods on board, is bound, in the absence of both, to use his best endeavours to preserve the goods, and to do whatever, in the circumstances, he thinks will most conduce to the interest of all concerned; or what it may be presumed the shippers would do, were they present. This, which seems to be the best and wisest rule, has been laid down by Lords Mansfield and Tenterden, as stated above, and may be regarded as the law of England on this point.

The master of a ship is liable for goods of which she is robbed in part; and the reason, as Lord Mansfield stated, is, lest room should be given to collusion, and the master should get him robbed on purpose, in order that he might share in the spoil. The master is, however, entitled to indemnify himself out of the seamen's wages for losses occasioned by their neglect.

The conditions under which seamen and apprentices are to be taken on board ship, and obligations of the master with respect to them, are fully set forth in the art. SEAMEN; and it contains, as already stated, full details as to the conduct which masters are bound to pursue with regard to a variety of other particulars.

For the duty of the master, as respects CARRIAGE AND EXPORTATION, QUARANTINE, SURETY, &c.; and for a further discussion of this important subject, see the excellent work of Lord Tenterden, *On the Law of Shipping*, part iii. c. 3 &c.; *On Commercial Law*, vol. iii. c. 8 &c.; and articles CHARTERPARTY, FREIGHT &c.

*Qualification of Masters. Means by which they should be ascertained.*—Considering the important nature of the duties which the master of a ship has to perform, it has been customary in some countries to require that all persons, previously to their being nominated to act in that capacity, should undergo an examination by some public board respecting their knowledge of seamanship, and their possession of the various qualifications necessary to act as masters, and that none should be appointed without their being licensed by such board or other competent authorities. We are inclined to think that this practice is consistent with sound policy, and we are glad it has been adopted in this country. In former editions we observed on this subject as follows, viz. :—

"There can, unhappily, be no doubt that the ignorance and incapacity of the masters and inferior officers of ships has been a copious source of disaster. Officers of the navy have to go through a course of discipline, and are obliged to submit to certain examinations as to their proficiency in seamanship. This, also, was the case with the officers of the East India Company's ships, which were exceedingly well navigated. Indeed, the Company trusted entirely for protection to the goodness of their ships, and the skill of their officers and men; it not being their practice ever to insure. But the masters and officers of ordinary merchant ships, even of those engaged in the conveyance of passengers, are not subjected to any specific training, or regular examination. Everything is left to mere individual investigation and selection; and this, as everyone knows, depends almost wholly on accident; or, which is nearly equivalent to it, on the skill, industry, &c. of the ship-owner. It is sufficiently clear that masters so chosen cannot fail of being, in many instances, very ill qualified for their business. Few, however, have any notion of the extent of the mischief hence arising; but we have been assured by gentlemen of undoubted information, and extensively connected with the business of insurance, that nearly half the losses sustained may be ascribed to the incapacity and carelessness of the masters and crews. Perhaps there may be some exaggeration in this; but supposing that only a third part, or that 212 out of the 636 vessels wrecked in 1841, were lost through the circumstances referred to, is not that enough, not merely to justify Government interposing to avert so great an evil, but to make such interposition an imperative duty?"

"The interposition of Government in a case of this sort is not only absolutely just and necessary, but it is conformable to the highest authority. The famous French Ordinance of 1681 has the following article: "Aucun ne pourra ci-après être reçu capitaine, maître ou patron de navire, s'il n'a été navigué pendant cinq ans, et n'ait été examiné publiquement sur le fait de la navigation, par deux anciens maîtres, en présence des officiers de l'Amirauté et du Professeur d'Hydrographie, s'il y en a dans le lieu." (Liv. 1. s. 1.) A like article has been inserted in the Code de Commerce; and in 1825 the French Government issued an ordinance specifying, in full, the qualifications that are necessary before any one can obtain a certificate of his fitness to command a ship, either on a foreign or a coasting voyage; the persons who are to examine candidates; and the rules to be observed in the examination. A similar system has been adopted in other countries, and we cannot entertain a doubt that it will be of the greatest service were it introduced in this country. The authority of the master is very great, and the trust reposed in him, in-

cluding not merely the ship and goods of his employers, but the lives of the crew and passengers, so very extensive, that it is the bounden duty of the public to provide, in as far as practicable, that it be not committed to ignorant or incapable hands.

"At present the care of the lives of hundreds of passengers may be committed, without check or control of any sort, and without their knowing anything of the matter, to any incapable blockhead who may be able to prevail on an owner to appoint him to a ship. No doubt it is for the interest of the owner to appoint the best captain he can find; but he may be unable to form a correct estimate of the qualifications necessary for such a situation; and though this were not the case, hundreds of circumstances may conspire to blind his judgment, and to make him select a master who is really unworthy. Hence the advantage of the preliminary examination by competent parties, which, if made efficient, would certainly afford a powerful guarantee against the chance of an unfit person being appointed.

"We rather incline to think, should we have occasion to notice this important subject on any future occasion, that it will be to announce this to recommend has been adopted. It has, we are appointed by the House of Commons in the Committee enquire into the causes and prevention of shipwrecks. "Your committee, after carefully weighing the evidence adduced, consider that, under all the circumstances, it would materially promote science, and prevent the loss of life and property, if a legislative enactment were introduced by Government, establishing local boards for the purpose of examining into the abilities, conduct, and character of all who wish to qualify as masters and mates in the merchant service. And your committee further recommend the establishment of schools for the purpose of teaching navigation in the different seaports, to be supported by a small tonnage duty to be levied on the vessels belonging to such ports." (Report, p. 4.)

"This proposal, for subjecting the masters or commanders of merchant ships to an examination by competent parties, with the view of ascertaining their fitness for undertaking their peculiar duties, was adopted and carried into effect under the Mercantile Marine Act, the 13 & 14 Vict. c. 93. This statute authorised the Board of Trade to establish Local Marine Boards in ports having 30,000 tons or upwards of ships trading to foreign parts. These boards were empowered to examine all candidates for the situation of masters and mates who came before them, in such subjects connected with seamanship, navigation &c., and in such manner as the Board of Trade may prescribe. In the event of the examiners being satisfied with their proficiency, they are to grant them 'certificates of competency.' These, however, may be cancelled either from evidence being subsequently had of the incompetency of the parties or of their drunkenness, tyranny &c. The Act took effect on January 1, 1851, since which date no foreign-going ship has been cleared out without the master and mate or mates being qualified according to the statute. And there can be no doubt that if the plan be properly carried out, and the examinations be made sufficiently strict and searching, it will be productive of a great deal of good; but if otherwise—that is, if certificates be given to incompetent parties—it will be decidedly injurious, and will serve as a cloak under which ignorance and presumption may be advanced to situations where skill and caution are indispensable. This

place of destination; how that he is authorized to do so. What, then, is to be said, he is to do what a prudent man will think of all concerned. In the safe, because the on to be dissatisfied; no general rules can be allowed to the interest; but the interest is sacrificed to it. would be a deplorable result; and we are sorry to have to say that some of the very worst shipwrecks that have recently occurred have been occasioned by what would appear to be the gross incapacity of masters holding first-class certificates. This is a matter that requires to be carefully enquired into. Sham examinations are not a security against imposture, but a device to make confidence be given to those who are unworthy of any. The existing statutory regulations in regard to this important subject are embodied in the Mercantile Shipping Act of 1854, the 17 & 18 Vict. c. 104, and are as follows, viz.:

**Examinations to be instituted for Masters and Mates.**—Examinations shall be instituted for persons who intend to become masters or mates of foreign-going ships, or of home trade passenger ships, or who wish to procure certificates of competency herein after mentioned; and, subject as herein mentioned, the Local Marine Boards shall provide for the examinations at their respective ports, and may appoint and remove and re-appoint examiners to conduct the same, and may regulate the same; and any members of the Local Marine Board of the place, where the examination is held may be present and assist at any such examination. (Sec. 131.)

**Powers of Board of Trade over Examinations.**—The Board of Trade may from time to time lay down rules as to the conduct of such examinations and as to the qualifications of the applicants, and such rules shall be strictly adhered to by all examiners; and no examiner shall be appointed unless he possesses a certificate of qualification, to be from time to time granted or renewed by the Board of Trade; and the sanction of the Board of Trade shall be necessary, so far as regards the number of examiners to be appointed, and the amount of their remuneration; and the Board of Trade may at any time depute any of its officers to be present and assist at any examination; and if it appear to the Board of Trade that the examinations for any two or more ports can be conducted without inconvenience by the same examiners, it may require and authorise the Local Marine Boards of such ports to act together as one board in providing for and regulating examinations and appointing and removing examiners for such ports. (Sec. 132.)

**Fees to be paid by Applicants for Examination.**—All applicants for examination shall pay such fees, not exceeding the sums herein specified, as the Board of Trade directs; and such fees shall be paid to such persons as the said board appoints for that purpose. (Sec. 133.)

For a certificate as Master 2*l*.—For a certificate as Mate 1*l*.

**Certificates of Competency to be granted to those who pass.**—Subject to the proviso after contained, the Board of Trade shall deliver to every applicant who is duly reported by the local examiners to have passed the examination satisfactorily, and to have given satisfactory evidence of his sobriety, experience, ability, and general good conduct on board ship, a 'certificate of competency' to the effect that he is competent to act as master, or as first, second, or only mate of a foreign-going ship, or as master or mate of a home trade passenger ship, as the case may be; provided that in every case in which the Board of Trade has reason to believe such report to have been unduly made, such board may remit the case either to the same or to any other examiners, and may require a re-examination of the applicant, or a further enquiry into his testimonials and character, before granting him a certificate. (Sec. 134.)

**Certificates of Service to be delivered to Persons**

*who served as Masters or Mates before 1851 &c.*—Certificates of service, differing in form from certificates of competency, shall be granted as follows (that is to say):—

1. Every person who before the 1st day of January, 1851, served as master in the British merchant service, or who has attained or attains the rank of lieutenant, master, passed mate, or second master, or any higher rank in the service of Her Majesty or of the East India Company, shall be entitled to a certificate of service as master for foreign-going ships:

2. Every person who before the 1st day of January, 1851, served as mate in the British merchant service shall be entitled to a certificate of service as mate for foreign-going ships:

3. Every person who before the 1st day of January, 1854, has served as master of a home trade passenger ship, shall be entitled to a certificate of service as master for home trade passenger ships:

4. Every person who before the 1st day of January, 1854, has served as mate of a home trade passenger ship shall be entitled to a certificate of service as mate for home trade passenger ships:

And each of such certificates of service shall contain particulars of the name, place, and time of birth, and of the length and nature of the previous service of the person to whom the same is delivered; and the Board of Trade shall deliver such certificates of service to the various persons respectively entitled thereto, upon their proving themselves to have attained such rank or to have served as aforesaid, and upon their giving a true and satisfactory account of the particulars aforesaid. (Sec. 135.)

**No Foreign-going Ship or Home Trade Passenger Ship to proceed to Sea without Certificate of Master and Mates.**—No foreign-going ship or home trade passenger ship shall go to sea from any port in the United Kingdom unless the master thereof, and in the case of a foreign-going ship the first and second mates or only mate (the case may be), and in the case of a home trade passenger ship the first or only mate (the case may be), have obtained and possessed certificates either of competency or service appropriate to their several stations in such ship, of a higher grade; and no such ship, if of 100 tons burthen or upwards, shall go to sea as aforesaid unless at least one officer besides the master obtained and possesses a valid certificate appropriate to the grade of only mate therein of a higher grade; and every person who, having been engaged to serve as master or as first or second mate of any foreign-going ship, or as first or only mate of a home trade passenger ship, goes to sea as aforesaid as such master or mate without being at the time entitled to possess of such a certificate as herein required, or who employs any person as master, or second, or only mate of any foreign-going ship as master or first or only mate of a home trade passenger ship, without ascertaining that he is at the time entitled to and possessed of such a certificate, shall for each such offence incur a penalty not exceeding 50*l*. (Sec. 136.)

**Certificates for Foreign-going Ships and Home Trade Passenger Ships.**—Every certificate of competency for a foreign-going ship or for a home trade passenger ship shall be deemed to be of a higher grade than the corresponding certificate for a home trade passenger ship, and shall entitle the lawful holder thereof to sea in the corresponding grade in such last-mentioned ship; but no certificate for a home trade passenger ship shall entitle the holder to go to sea as master or mate of a foreign-going ship. (Sec. 137.)

**The Registrar to record Grants, Cancellations &c. of Certificates.**—All certificates, whether of competency or service, shall be made in duplicate, and one part shall be delivered to the person entitled to the certificate, and the other shall be retained and recorded by the Registrar-General of Seamen; and by such other person as the Board of Trade shall give to such registrar or such other person immediate notice of all orders made by it for cancelling, suspending, altering, or otherwise affecting any certificate in pursuance of the powers herein contained; and the registrar or such other person as aforesaid shall thereupon make a corresponding entry in the record of certificates; and a copy purporting to be certified by such registrar or his assistant or by such person as aforesaid of any certificate shall be *prima facie* evidence of such certificate, and a copy purporting to be so certified as aforesaid of any entry made as aforesaid in respect of any certificate shall be *prima facie* evidence of the truth of the matters stated in such entry. (Sec. 133.)

**In case of Loss, a Copy to be granted.**—Whenever any master or mate proves to the satisfaction of the Board of Trade that he has, without fault on his part, lost or been deprived of any certificate already granted to him, the Board of Trade shall, upon payment of such fee (if any) as it directs, cause a copy of the certificate to which by the record so kept as aforesaid he appears to be entitled, to be made out and certified as aforesaid, and to be delivered to him; and any copy which purports to be so made and certified as aforesaid shall have all the effect of the original. (Sec. 133.)

**Penalties for False Representations.**—Every person who makes, or procures to be made, or assists in making, any false representation for the purpose of obtaining for himself or for any other person a certificate either of competency or service, or who forges, assists in forging, or procures to be forged, or fraudulently alters, assists in fraudulently altering, or procures to be fraudulently altered, any such certificate or any official copy of any such certificate, or who fraudulently makes any such certificate or any copy of any such certificate which is forged, altered, cancelled, suspended, or to which he is not justly entitled, or fraudulently lends his certificate to or allows the same to be used by any other person, shall for such offence be deemed guilty of a misdemeanor. (Sec. 134.)

By the provisions of the Act 25 and 26 Vic. c. 63, the regulations demanding proficiency from the masters and mates in merchant ships are extended to engineers in steam vessels, the fees being payable on an examination as are in the case of masters and mates.

The following clauses are from a subsequent Act of the same statute:—

**Conduct endangering Ship or Life or Limb a Misdemeanor.**—Any master or of any seaman or other person belonging to any British ship who by wilful breach of duty, or by neglect of duty, or by drunkenness, does any act tending to the injury, loss, destruction, or serious damage of any such ship, or tending immediately to endanger the life or limb of any person belonging to or on board of such ship, or who by wilful breach of duty, or by neglect of duty, or by reason of drunkenness, refuses or omits to do any lawful act which he is bound by law to do, or which is requisite to be done by him for preservation of such ship from immediate loss, destruction, or serious damage, or for preserving any person belonging to or on board of such ship from immediate danger to life or limb, shall for every such

offence be deemed guilty of a misdemeanor. (Sec. 239.)

**Power of Admiralty Courts to remove Master.**—Any court having Admiralty jurisdiction in any of Her Majesty's dominions may, upon application by the owner of any ship being within the jurisdiction of such court, or by the part owner or certificated mate, or by one-third or more of the crew of such ship, and upon proof or more of the satisfaction of such court that the removal of the master of such ship is necessary, remove him accordingly; and may also, with the consent of the owner or his agent, or the consignee of the ship, or if there is no owner or agent of the owner or consignee of the ship within the jurisdiction of the court, then without such consent, appoint a new master in his stead; and may also make such order, and may require such security in respect of costs in the matter, as it thinks fit. (Sec. 240.)

**Power to investigate Cases of alleged Incompetency and Misconduct.**—If the Board of Trade or any Local Marine Board has reason to believe that any master or mate is from incompetency or misconduct unfit to discharge his duties, the Board of Trade may either institute an investigation or may direct the Local Marine Board at or nearest to the place at which it may be convenient for the parties and witnesses to attend to institute the same, and thereupon such persons as the Board of Trade may appoint for the purpose, or with the assistance of a local stipendiary magistrate (if any), and if there is no such magistrate, of a competent legal assistant to be appointed by the Board of Trade, conduct the investigation, and shall give him full opportunity of making a defence either in person or otherwise, and shall for the purpose of such investigation have all the powers given by the first part of this Act to the inspectors appointed by the Board of Trade, and such investigation as they may deem just; and shall on the conclusion of the investigation make a report upon the case to the Board of Trade; and in cases where there is no Local Marine Board before which the parties and witnesses can conveniently attend, or where such Local Marine Board is unwilling to institute the investigation, the Board of Trade may direct the investigation, and thereupon such investigation shall be conducted, and the results thereof reported in the same manner and with the same powers in and with which formal investigations into wrecks and casualties are directed to be conducted, and the results thereof reported, under the provisions contained in the eighth part of this Act, save only bringing the charge of incompetency or misconduct to the notice of the Board of Trade shall be deemed to be the party having the conduct of the case. (Sec. 241.)

**Board of Trade may cancel or suspend Certificates in certain Cases.**—The Board of Trade may suspend or cancel the certificate (whether of competency or service) of any master or mate in the following cases; (that is to say.)

1. If, upon any investigation made in pursuance of the last preceding section, he is reported to be incompetent, or to have been guilty of any gross act of misconduct, drunkenness, or tyranny.
2. If, upon any investigation conducted under the provisions contained in the eighth part of this Act, or upon any investigation made by a naval court constituted as hereinafter mentioned, it is

master's list on the day of examination are examined.

The qualifications required for the several ranks unmentioned, are as follows:—  
**QUALIFICATIONS FOR CERTIFICATES OF COMPETENCY FOR 'FOREIGN-GOING SHIP.'**

(a) A SECOND MATE must be sixty-one years of age, and must have been four years at sea.

*In Navigation.*—He must write a legible hand, and understand the four first rules of arithmetic, and the use of logarithms. He must be able to construct the courses steered for variation and leeway, and find the difference of latitude and longitude therefrom; be able to correct the sun's declination for longitude, and find his latitude by every method of a like nature as may be put to use. He must understand the use of the sextant, and be able to observe with it, and read off the arc.

*In Seamanship.*—He must give satisfactory answers as to the rigging and unrigging of ships, sawing of holds, &c.; must understand the management of the log-line, glass, and lead-line; the conversation with the rule of the road, as regards both steamers and sailing-vessels, and the lights carried by them.

(b) An ONLY MATE must be eighteen years of age, and have been four years at sea.

*In Navigation.*—In addition to the qualification required for a second mate, an only mate must be able to work a day's work complete, including the bearings and distance of the port he is bound to by Mercator's method. He must be able to observe and calculate the amplitude of the sun, and deduce the variation of the compass therefrom. He must know how to lay off the place of the ship on the chart, both by bearings of known objects, and by latitude and longitude. He must be able to use a sextant and determine its error, and find it, and find the time of high water from the lunar time at full and change.

*In Seamanship.*—In addition to what is required for a second mate, he must know how to moor and anchor, and to keep a clear anchor; to carry out anchor; to stow a hold; and to make the requisite entries in the ship's log.

(c) A FIRST MATE must be nineteen years of age, and have served five years at sea, of which at least two years must have been as either second or only mate, as both. Service in a superior capacity is in all cases to be equivalent to service in an inferior capacity.

*In Navigation.*—In addition to the qualification required for an only mate, he must be able to observe azimuths and compute the variation; to regulate chronometers and keep their rates, and to find the longitude by them from an observation of the sun; to work the latitude by single altitude of the sun off the meridian; and be able to use and adjust the sextant by the sun.

*In Seamanship.*—In addition to the qualification required for an only mate, a more extensive knowledge of seamanship will be required, as to shifting of spars and sails, managing a ship in stormy weather, taking in and making sail, shifting yards and masts &c., and getting cargo in and out; stowing heavy spars and weights, anchors &c., in the hold; casting a ship on a lee-shore &c., in the event of the masts in the event of accident to the ship.

A MASTER must be twenty-one years of age, and have been six years at sea, of which one year must have been as first or only mate, and one year as second mate; or two years as first and only mate, and one year as superior capacity is in all cases to be equivalent to service in an inferior capacity.

In addition to the qualification for a first mate, he must be able to find the latitude by a star &c. He will be asked questions as to the nature of the attraction of the ship's iron upon the compass, and as to the method of determining it. He must possess a sufficient knowledge of what he is required to do by law, as to entry and discharge, and the management of his crew; as to penalties which will be made in the official log. He will be questioned as to his knowledge of invoices, of charter-party, Lloyd's agent, and as to the nature of bottomry, and he must be acquainted with the leading lights of the channel he has been accustomed to navigate, or which he is going to use.

In cases where an applicant for a certificate as master ordinary has only served in a fore and aft of a square rigged vessel, and is ignorant of the management of a vessel on which the words 'fore and aft rigged vessel' will be written. This is not, however, to apply to mates, who, being younger men, are expected for the future to learn their business completely.

(c) An EXTRA MASTER'S EXAMINATION is intended for such persons as wish to prove their superior qualifications. Before being examined for an extra master's certificate, an applicant must have served one year either as a master with an ordinary certificate of competency, or as a master of the first class certificate granted by one of the former Boards of Examiners.

*In Navigation.*—As the vessels which such masters will command frequently make long voyages, to the East Indies, the Pacific &c., the candidate will be required to work a lunar observation by both sun and star, to determine the latitude by the moon and star, by Polar star off the meridian, and also by double altitude of the sun, and to verify the result by Sumner's method. He must be able to calculate the altitudes of the sun or star when they cannot be observed, for the purposes of equal altitudes, and to correct the altitudes observed with an artificial horizon.

He must understand how to observe and apply the deviation of the compass; and to deduce the set and rate of the current from the D. R. and observation. He will be required to explain the nature of great circle sailing, and know how to apply practically that knowledge; but he will not be required to go into the calculations. He must be acquainted with the law of storms, so far as to know how he may probably escape those tempests common to the East and West Indies, and known as hurricanes.

*In Seamanship.*—The extra examination will consist of an enquiry into the competency of the party to heave a ship down, in case of accident befalling her abroad; to get lower masts and other heavy weights in and out; how to construct taffs, and as to his resources for the preservation of the ship's crew in the event of wreck, and in such operations of a like nature as the examiner may consider necessary.

**QUALIFICATIONS FOR CERTIFICATES OF COMPETENCY FOR 'HOME TRADE PASSENGER SHIPS.'**

(a) A MATE must write a legible hand, and understand the first four rules of arithmetic. He must describe and understand the rule of the road, and miralry regulations as to lights. He must be able to take a bearing by compass, and prick off the ship's course on a chart. He must know the marks in the lead line, and be able to work and heave the log.

(b) A MASTER must have served one year as a

mate in the foreign or home trade. In addition to the qualifications required for a mate, he must show that he is capable of navigating a ship along any coast, for which purpose he will be required to draw upon a chart produced by the examiner the courses and distances he would run along shore from headland to headland, and to give in writing the courses and distances corrected for variation, and the bearings of the headlands and lights, and when the courses should be altered either to clear any dangers or to adapt it to the coast. He must understand how to make his soundings according to the state of the tide.

#### GENERAL RULES AS TO EXAMINATIONS AND FEES.

9. The candidates will be allowed to work out the various problems according to the method and the tables they have been accustomed to use; and will be allowed five hours to perform the work; at the expiration of which, if they have not finished, they will be declared to have failed, unless the Local Marine Board see fit to extend the time.

#### FEES TO BE PAID BY APPLICANTS FOR EXAMINATION.

10. The fee for examination must be paid to the shipping master. If a candidate fail in his examination, half the fee he has paid will be returned to him by the shipping master on his producing a document which will be given him by the examiner. The fees are as follow:—

##### For 'Foreign-going Ships.'

	£	s.	d.
Second mate	-	-	1 0 0
First and only mate, if previously possessing an inferior certificate	-	-	0 10 0
If not	-	-	1 0 0
Master, whether extra or ordinary	-	-	2 0 0

##### For 'Home trade Passenger Ships.'

Mate	-	-	0 10 0
Master	-	-	1 0 0

11. Any one who has been one year in possession of a master's first-class certificate granted by one of the former boards of examiners, or of an ordinary master's certificate of competency granted under the present examiners, may pass an extra examination, and receive an extra certificate in exchange for his former one, without payment of any fee; but if he fails in his first examination he must pay half a master's fee on his coming a second time; and the same sum for every subsequent attempt.

12. If the applicant passes, he will receive a document from the examiner, which will entitle him to receive his certificate of competency from the shipping master at the port to which he has directed it to be forwarded. If his testimonials have been sent to the registrar to be verified, they will be returned with his certificate.

13. If an applicant is examined for a higher rank and fails, but passes an examination of a lower grade, he may receive a certificate accordingly, but no part of the fee will be returned.

14. In all cases of complete failure the candidate must be re-examined *de novo*, and in case of failure in seamanship a candidate will not be re-examined until after a lapse of six months, to give him time to gain experience.

15. As the examinations of masters and mates are made compulsorily, the qualifications have been kept as low as possible; but it must be distinctly understood that it is the intention of the Board of Trade to raise the standard from time to time, whenever, as will no doubt be the case, the general attainments of officers in the merchant service shall render it possible to do so without inconvenience; and officers are strongly urged to employ

their leisure hours, when in port, in the acquirement of the knowledge necessary to enable them to pass their examinations; and masters will do well to permit apprentices and junior officers to attend schools of instruction, and to afford them as much time for this purpose as possible.

#### EXAMINATIONS IN STEAM.

16. Arrangements have been made for giving to those masters or first or only mates who receive certificates of competency, or who may apply for such certificates, and who desire it, an opportunity of undergoing an examination as to their practical knowledge of the use and working of the steam engine. These examinations will be conducted under the superintendence of the Local Marine Boards, at such times as they may appoint for that purpose; and the examiners will be selected by the Board of Trade, from the engineer surveyors appointed under the Act. The examination will not comprise intricate theoretical questions, but will be such as to satisfy the examiner that the applicant is competent to control the working of the engine, and has such a knowledge of the various parts of the machinery as will enable him to judge of the nature of an accident, and, in absence of the engineer, to give the necessary directions in the engine room. The practice to be as follows: The applicant must deliver to the shipping master a statement in writing to the effect that he wishes to be examined in steam. If he is about to pass an examination in navigation, the statement must be on or annexed to the form prepared for that purpose; if the applicant has a certificate of competency the statement to be delivered to the shipping master with his certificate, so that due notice may be given to the examiner, and so that the Board of Trade, receiving it may have the means of indorsing his certificate and recording the fact that he is 'Passed in Steam.' He must also, at the same time, pay a fee of one penny (1*l.*), which will be applied in remunerating the examiners. No applicant is to attend to be examined, and if he passes the result of the examination will be reported to the Board of Trade, and his certificate of competency will be issued or returned to him, as the case may be, with an indorsement as above mentioned, stating that he has 'Passed in Steam.' If he fails, notice of the failure will be recorded on the certificate, but no part of the fee will be returned.

17. Full directions as to the course of examination in steam and the qualifications required of candidates, are contained in the instructions to engineer surveyors appointed as examiners at the larger ports.

**MASTICH** or **MASTIC** (Ger. mastix; Fr. mastik; Er. mastie; Ital. mastice; Span. mastica, almacega; Arab. arāb). This resinous substance is the produce of the *Pistacia Lentiscus*, a native of the Levant and particularly abundant on the island of Chios. It is obtained by numerous transverse incisions in the trunks and branches of the trees, whence the mastic slowly exudes. About 1,500 cwt. are annually exported from Chios, part of which is brought to this country packed in chests. The best is in the form of brittle, yellowish transparent tears; it is odorless, except when heated, and then it has a disagreeable odour; chewed, it is almost insoluble in water, and ultimately softens, becoming sticky at first gritty, and ultimately becoming as brittle as glass. Its virtues are trilling. (Ainslie's  *Materia Medica*, 1867.) The finest mastic yields a green fixed oil, much used by the Arabs of North Africa for food and lighting. The total imports of mastic in 1865 were 1,800

when in port, in the acquire-  
ge necessary to enable them  
ations; and masters will of  
natics and junior officers  
urce, and to afford them a  
urpose as possible.

raised at 71,069/., and in 1867 only 152 cwt.s, of  
which last one-third came from the Philippine  
Islands, and one-third from Australia.

MATE. In a merchant ship, the deputy of  
the master, taking, in his absence, the command.  
There are sometimes only 1, and sometimes 2, 3,  
or 4 mates in a merchantman, according to her  
size; denominated 1st, 2nd, 3rd &c. mates. The  
persons in a merchantman—the master and  
mates—the mates being included in the latter,  
and the captain being responsible for their pro-  
ceedings. For qualifications necessary under Mer-  
chantile Marine Act to obtain certificate of compe-  
tence to act as mate, see MASTER.

In men-of-war, the officers immediately sub-  
ordinate to the captain are called lieutenants.  
But the master, or officer whose peculiar duty it  
is to take charge of the navigation of the ship,  
has certain mates under him selected from the  
midshipmen. The boatswain, gunner, carpenter  
&c. have each their mates or deputies, taken from  
the crew.

The officers subordinate to the commander in the  
ships belonging to the East India Company were  
called 1st, 2nd, 3rd &c. of s. East Indian men  
had no sailing masters, the commanders performing  
that duty. (Falconer's *Marine Dictionary*; &c.)

MATS (Dutch, matten; Fr. nattes; Ger. matten;  
Ital. stajo, stajo; Port. esteiras; Russ. progoshki;  
Spac. esteras). Textures composed, for the most  
part, of flax, reeds, the bark of trees, rushes, grass,  
&c. used for a great variety of purposes. The coarser  
sort are very largely employed in the packing of  
furniture and goods; in the stowage of corn and  
various other articles on board ship; in horticul-  
tural operations; in covering the floors of churches  
and other public buildings &c.; the finer sorts are  
principally employed in covering the floors of  
private houses.

In Europe, mats are principally manufactured  
for sale in Russia, where their production is a  
flourishing branch of national industry. They  
consist of the bark of the lime or linden tree, and  
are known in this country by the name of *bast*  
mats. The Russian peasants manufacture this  
sort of material into shoes, cordage, sacks for corn  
&c., and employ it in an endless variety of ways.  
In consequence of the vast quantities of matting  
required for its use at home and sent abroad,  
the demand for it is immense. It is principally  
produced in the government of *Viatka*, *Kostroma*,  
&c. and these immediately contiguous; and in the  
months of May and June, the period when the  
work is most easily detached from the stem, the  
peasants in the governments in question are almost  
entirely employed in stripping the trees. The  
German physician Köppen, who has carefully investi-  
gated this curious subject, estimates the average  
annual production of mats in European Russia, as  
follows:—

Government of	pieces
Viatka	6,000,000
Kostroma	4,000,000
Ryan	1,000,000
Nijni Novgorod	1,000,000
Volokna, Tamboff, Simbirsk, and Penza	2,000,000
Total	14,000,000

When further estimates that about 1/4 of this vast  
quantity, or 3 1/2 millions, are exported, the rest  
is consumed at home.  
It is obvious from these statements, that the  
total destruction of linden trees must be quite  
immense; and it may well excite astonishment  
that they are not already all but exhausted. But  
after it be from the rapid growth of the tree,

MATS

or the vast extent of the forests in which it is  
found, the gloomy forebodings of Mr. Tooke as to  
its destruction have not hitherto been realised  
(*View of Russia*, iii, 262), and mats have not  
become either scarcer or dearer. It is, however,  
hardly possible to suppose that such should con-  
tinue to be the case, seeing the rapid increase of  
population and of the consumption of matting in  
most parts of the empire. But in the event of its  
becoming scarcer, the inhabitants will have no  
difficulty in finding substitutes; so that we agree  
in opinion with those who think it would be bad  
policy to impose any restrictions on this branch of  
industry, in the view of averting an evil which  
may never occur; and which, if it do occur, may  
be easily obviated. (See a very interesting article  
in the *Supplément au Journal de l'Intérieur de St.-  
Petersbourg*, for 1841, p. 113.)

Archangel is the principal port for the ship-  
ment of mats; and it appears that at an average  
of the years 1851 and 1852, that at an average  
from that port amounted to 615,360 pieces a  
year. During the five years 1861-5 the average  
value of the mats exported from the northern  
Russian ports was about 14,500L. [ARCHI-  
ANGEL.] Large quantities are also shipped from  
Petersburg, Riga, and other ports; and most de-  
scriptions of Russian produce sent abroad are  
packed in mats. The duty of 5 per cent. ad  
valorem formerly charged on mats has been re-  
pealed. Russian mats fetch, in the London  
market, about 3L per 100. In 1867 mats and  
matting of the value of 38,048L. were imported  
into the United Kingdom.

Various descriptions of reed mats are extensively  
manufactured in Spain and Portugal; some of them  
being very beautifully varied. In Spain large  
quantities of matting are made of the Esparto  
rush. [ESPARTO.]

Rush floor mats, and rattan table mats of a  
very superior description are brought from China.  
They should be chosen clean, of a bright clear  
colour, and should, when packed, be thoroughly  
dry.

The mats of the Japanese are soft and elastic,  
serving them both for carpets and beds; they are  
made of a peculiar species of rush cultivated for  
the purpose.

The bags in which sugar is imported from the  
Mauritius consist of matting formed of the  
leaves of a tree growing in the island, interwoven in  
broad strips. They are very strong and durable,  
and may be washed and cleaned without sustain-  
ing any injury. Being imported in large quantities  
they are sold very cheap. Besides the works  
already referred to, see Milburn's *Oriental Com-  
merce*, and the valuable little work entitled  
*Vegetable Substances, Materials of Manufacture*,  
published by the Society for the Diffusion of  
Useful Knowledge, pp. 116-123.

It is probable that mats formed the first sort of  
wove fabrics produced by man; and it is worthy  
of remark, that but few savage tribes have been  
discovered which have not attained to considerable  
eminence in their manufacture. On the coast of  
Guinea and other places in the west of Africa, pieces  
of fine mat, about a yard long, and of a pretty  
uniform texture, were denominated *makkites*, and  
being rated and estimated in them, (Morellet,  
*Prospectus d'un Dictionnaire de Commerce*, p. 122.)  
They enjoyed this distinction, no doubt, from their  
utility, and the great care and labour bestowed on  
their preparation. There is hardly an island in  
the South Seas in which the natives have not  
acquired great skill and dexterity in the making  
of mats. The finer sorts consist, generally, of

dyed reeds or grass; and have a very brilliant appearance.

For some remarks on the mats of Greece, Algeria, Portugal, and India, see Mr. Digby Wyatt's *Report on the carpets &c. in the Paris Exhibition of 1867*.

**MAULMAIN** or **MOULMEIN**. A sea-port town of India, on the eastern side of the Bay of Bengal in the district of Amherst, one of the divisions of the province of British Burmah. The town is situated on a small peninsula formed by the Salween, the Gyne, and the Attaran rivers. Lat.  $16^{\circ} 30'$ , long.  $97^{\circ} 42'$ . There is a fine port formed by a natural breakwater in the island of Balu, which protects it from westerly gales. Customs duties and port dues are levied. The tariff of import and export duties is that promulgated in 1867 as applicable to all the Ports of India. [CALCUTTA.] The population of the town is given at 17,042. Its principal export consists of rice, and paddy, and timber. In consequence of the great forests of teak, Maulmain is famous for its ship-building. (Thornton's *Gazetteer*.)

In 1864, the shipping at this port consisted of 172 vessels of British origin, 19 of American, 3 French, with 143 native craft, forming together a tonnage of 93,778 entered, and 202 British, 14 foreign, and 156 native craft cleared, the tonnage of the latter being 86,169. The total imports, including treasures, at this port during the three years 1862-4 were valued at 54,626*l.*, 57,092*l.*, and 60,541*l.*, respectively, and the exports for the same period at 437,908*l.*, 274,121*l.*, 206,430*l.* The value of the wood exported from British Burmah in the year 1863 was 238,121*l.*, that of the year 1864 was 176,133*l.*, and the value of the total exports from the province by sea in 1866 was 2,825,522*l.*

In 1864 the teak exported from the various provinces and settlements of British India and the Indian Archipelago amounted to more than 50,000 loads, and was worth, at an average, about 11*l.* 19s. the load. In 1867 there were imported into the United Kingdom 12,644 loads, valued at 123,582*l.*, the price for the larger portion per load being 9*l.* 16s., from the Straits settlement, Bengal and Pegu.

For further particulars as to the trade of British Burmah &c. see **EAST INDIES**; **RANGOON**.

**MAURITIUS**. [PORT LOUIS.]

**MEAD** or **METHEGLIN** (Ger. meht, meth; Dutch, meede, meedrank; Fr. hydromel; Ital. idromele; Russ. liper). The ancient, and, for a long time, the favourite drink of the northern nations. It is a preparation of honey and water.

**MEAL** (Ger. mehl; Dutch, meel; Fr. and Ital. farino; Span. farina; Russ. muka; Lat. farina). The edible part of wheat, oats, rye, barley, and pulse of different kinds, ground into a species of coarse flour. [CORN LAWS &c.]

**MEDALS**. Pieces of metal, generally in the form of a coin, and impressed with some peculiar stamp, intended to commemorate some individual or action. Medals are of very different prices—varying according to their rarity and preservation, the fineness of the metal, the beauty of the workmanship &c. The value of medals of all kinds imported, with the knowledge of the Government, in 1867, was only 82*l.*

**MEDITERRANEAN PASS**. The nature of this sort of instrument has been described by Mr. Reeves, in his *Treatise on the Law of Shipping*, as follows:—

'In the treaties that have been made with the Barbary States, it has been agreed, that the subjects of the King of Great Britain should pass the seas unmolested by the cruisers of those states;

and for better ascertaining what ships and vessels belong to British subjects, it is provided that they shall produce a *pass* under the hand and seal of the Lord High Admiral, or the Lords Commissioners of the Admiralty. In pursuance of these treaties, passes are made out at the Admiralty, containing a very few words, written on parchment, with ornaments at the top, through which a scolloped indenture is made; the *scolloped tops* are sent to Barbary; and being put in possession of their cruisers, the commanders are instructed to suffer all persons to pass who have passes that will fit these scolloped tops. The protection afforded by these passes is such, that no ships, which traverse the seas frequented by these rovers, ever fail to furnish themselves with them, whether in the trade to the East Indies, the Levant, Spain, Italy, or any part of the Mediterranean; and from the more particular need of them in the latter, they, no doubt, obtained the name of *Mediterranean passes*. For the accommodation of merchants in distant parts, blank passes, signed by the Lords of the Admiralty, are lodged with the governors abroad, and with the British consuls, to be granted to those who comply with the requisites necessary for obtaining them. As this piece of security is derived wholly from the stipulations made by the Crown with a foreign power, the entire regulation and management of it has been under the direction of his Majesty's ministers, with the advice of the privy council, has prescribed the terms and conditions on which the passes shall be granted. Among others are the following:—They are to be granted for none but British-built ships, or ships made free, navigated with a master and three-fourths of the mariners British subjects, or foreign Protestants made denizens. Bond is to be given in the sum of 300*l.* the vessel is under 100 tons, and in 500*l.* if it is of that or more, for delivering up the pass within 12 months, unless in the case of ships traded from one foreign port to another; and such passes need not be returned in less than 3 years.

'It has been found expedient, at the conclusion of a war, and sometimes during a peace, to revoke and cancel all passes that have been issued, and to issue others in a new form. This has been done for two reasons. 1st. That these useful instruments, by various means, either accidentally or fraudulent, came into the hands of foreigners, and under cover of them, carried on in security a trade which otherwise would belong to British subjects, and which had been purchased by the crown at the expense of keeping up this sort of alliance. 2dly. That the Barbary states complained, in adhering to the rule of fitting the other part of the indenture to the passes, they were obliged to furnish ships to pass that did not belong to British subjects.'

We have thought it right to give this explanation, though, since the occupation of Algiers by the French, and the disappearance of the power of the other Barbary powers, Mediterranean passes have fallen into disuse.

**MELBOURNE**. The capital of the colony of Victoria, formerly Port Phillip, Australia, occupying the S.E. portion of the continent, stretching through  $39^{\circ}$  of longitude from Cape Howe on the E. to the Glenelg river on the W. The town is situated on the north bank of the Yarra-Yarra river, about 9 miles from its windings from its mouth in the bay of Phillip, lat.  $37^{\circ} 49' 5''$  S, long.  $144^{\circ} 50'$  E. It was founded in 1837, and extends to the banks of the river. In 1851, it had a population of 23,000; and such has been the increase consequent on the discovery of the gold

what ships and vessels it is provided that they be in the hand and seal of the Lords Commissioners for the Admiralty. In pursuance of these orders, written on parchment, through which the Admiralty, the *scalloped* type being put in possession, and officers are instructed to who have passes that tops. The protection is such, that no ships, quented by these rovers, ves with them, whether dies, the Levant, Spain, Mediterranean; and need of them in the obtained the name of the accommodation of ts, blank passes, signed rality, are lodged with d with the British ose who comply with the obtaining them. As th wholly from the stipa n with a foreign power management of it he n of his Majesty who rity council, has the ditions on which the Among others are to be granted for noce by made free, naviga fourths of the marine Protestants made de n in the sum of 3000 ns, and in 5000, if it ering up the pass with e case of ships trad another; and such pass edient, at the conclus during a peace, to con t have been issued, in form. This has b st. That these useful eans, either accidenta hands of foreigners, ed on in security to elong to British sub- chached by the crow up this sort of all states complained, the other part of they were obliged to ot belong to British

that including suburbs, it had, in 1867, 126,536 inhabitants. A considerable portion, however, of this immense population is to be regarded as migratory only, and as residing in town merely upon their ultimate destination has been decided upon. The sudden increase of population raised these rents to an unparalleled height; and for some considerable time a large proportion of the population was not housed, but encamped under tents! But partly through the extraordinary circumstances which was thus given to building, and partly through the mercantile failures consequent upon the overtrading of 1853 and 1854, there has been a very heavy fall of rents, which do not now (1868) exceed half their amount in 1852. The site of the town is unfortunate, for the river being obstructed by a bar and shallows, it is not generally navigable for vessels of more than 60 tons burden; and it has the further disadvantage of being low, and liable to be flooded by the overflowing of the river during the wet season. Melbourne was, also, till lately, very ill supplied with fresh water. But this defect has been remedied by the construction of works that were intended for the colony. The reservoirs are of great magnitude, so as to afford an adequate supply in periods of drought. It has been proposed to facilitate the trade of the town by removing the bar at the mouth of the river, and deepening its channel; but this would be a very expensive undertaking, and one of which the success would not be a little doubtful. The excavation of a ship canal from the deep water in the bay to Melbourne has also been proposed; and it probably would be a preferable plan; but in the meantime a railway has been completed, which has obviated many of the inconveniences which were experienced. It seems, however, not unlikely that the trade of the town, and the greater part of the population, will ultimately centre at Geelong, a village a few miles distant, on a peninsula extending into the bay, opposite to which all large vessels coming to Melbourne are obliged to anchor. The principal objection to Geelong is the scarcity and bad quality of

MELBOURNE

the fresh water; but this objection might, perhaps, be obviated by sinking wells, or conveying lither streams, as has been done at Melbourne. In consequence of the discovery in 1851 of the extraordinarily rich gold-fields situated in this colony, its progress has been since quite unprecedented. The population of Victoria, for example, which amounted to about 90,000 in 1851, had increased to above 232,000 in 1854, and to 653,744 on September 30, 1867, of whom 369,103 were males, and 284,641 females. The trade, navigation &c. of the colony have increased in something like the same proportion. But it is a curious fact that the production of gold appears to have attained since its maximum in 1852, and has not been so great

Value of Principal Articles Imported (including Bullion and Specie), in each of the Years 1863, 1865, and 1866.

Account of the Quantities and Values of the Principal Articles of Foreign and Colonial Produce Exported from the United Kingdom to Victoria in each of the 3 Years ending with 1867.

of Victoria, with Cargo

Table with columns: Principal and other Articles, Quantities (1865, 1866, 1867), and Computed Real Value (1865, 1866, 1867). Includes items like Coffee, Tea, Sugar, and various oils.

Table with columns: Cleared, In Ballast, Total. Sub-columns: Vessels, Tons, Vessels, Tons.

Gold, Imported into Victoria during the year ending with 1867.

Table showing Computed Real Value of gold imports for 1865, 1866, and 1867.

Table showing Declared Real Value of gold imports for 1865 and 1866.

The chief imports of grain and provisions are from other Australian colonies, and the fact that such large importations of food are necessary, points to the fact that a far larger portion of the population is engaged in mining and analogous occupations than can be maintained by the labour of those who are engaged in agriculture.

Auctioneer's commission and brokerage to be charged when incurred. Advances and current accounts not liquidated at the end of the season, March 31, the balance to be charged as a fresh advance, subject to a commission of 5 per cent.

Table of Import and Export Duties from April 12, 1866. Lists various goods like spirits, wine, and tobacco with their respective duties.

Commercial Charges, adopted by the Melbourne Chamber of Commerce.

Table listing various commercial charges such as commissions, freight, and other costs with their respective rates.

	Rate of Duty £ s. d.

Military and all articles made up from fabrics of silk, or of silk mixed with other materials	0 5 0 per cubic foot, measuring outside the packages, or for any package less than one cubic foot

Apparel and shaps and all articles made up wholly or in part from fabrics of wool, cotton, linen, or mixed materials (except corn or wool hags) boots or shoes, hosiery and gloves, hats, caps, and bonnets (untrimmed), saddles, harness, and leatherware

Watches, jewels and jewellery of all kinds, manufactures of silk or of mixed materials of which the greater part is silk, musical instruments, carriages, glass and glassware, china-ware and porcelain, furniture, toys, and tawney, wood-ware, brass-ware and wicker-ware, earthenware, oilmen's stores not otherwise enumerated (except oils in bulk, tallow, sugar, arrow-root, spices, pepper, and ginger), woolen blankets and rugs

**Exemptions from Import Duties.**—All goods, wares, and merchandise not included in the above table of imported articles, gold and silver coin, passengers' baggage, cabin and other furniture or personal effects, which have been in use and not imported for sale, carriages used in the conveyance of goods or passengers across the frontier, all packages in which goods are ordinarily imported, and all minor articles used in the making up of apparel of mixed or undescribed materials shall be exempt from duty.

Articles Exported by Land or Sea	Rate and Duration of Duty
Gold, including gold in its natural state, whether mixed with any other substance or not, gold dust and all other gold, except gold coin, watches, and articles of jewellery and plate	1s. per oz. Troy until December 31, 1866, 6d. per oz. Troy from and after that date to December 31, 1867, and from and after December 31, 1867, the said duty shall cease and determine

Like many other British colonies, Victoria has adopted a protective tariff, not so much perhaps with a view to fostering home manufactures as with that of providing a revenue for its very considerable expenditure. Still, protective purposes are avowed, and manufactures are fostered by this system.

**The basin of Port Phillip**, which receives the Yarra-Yarra and other rivers, is a large circular bay, or inlet of the sea, whence the colony derived its former name. It has a narrow entrance, not more than 1½ mile in width, partly occupied with rocks and shoals. A lighthouse has been erected near the extremity of Point Lonsdale, towards the west side of the entrance, lat. 38° 16' S., long. 140° 40' E., and another on Point Gellibrand, near the head of the bay, between Williamstown and the mouth of the Yarra-Yarra river, lat. 37° 52' S., long. 144° 55' E. The bay is about 40 miles broad from S. to N., and at its greatest extent is about 40 miles long from E. to W. It is said to cover an area of above 800 sq. miles, and might accommodate all the navies of all the countries in the world.

The whole trade of the colony, which is already very extensive, and is continuing to increase, is at present carried on from this basin. And from its

advantageous situation, and its stretching so far inland, it is probable it will always continue to engross the largest share of the trade, though, no doubt, it will be partly, also, carried on from other ports. Geelong, at the head of a deep bay on the W. side of the basin, had in 1861 a population of 22,986, and a very considerable trade. For further details see the *Victoria Commercial and Nautical Almanac* annual, a very meritorious publication.

**Prospects of the Colony.**—Of these it would be hazardous to speak with much confidence. The produce of gold, which amounted to above £1,247,000 oz. in 1852, amounted to only £518,000 oz. in 1862, and but £1,479,194 oz. were exported in 1867. But it is impossible to say whether the decline will be permanent, or whether the produce will not again rise to or above its former level. The excitement caused by the discovery of the gold fields was not confined to the colony or the diggers, but neted with such force on the commercial world that the value of the imports into Victoria, which amounted to £1,056,437, 1851, rose to £5,182,530, in 1856-7. As the excessive importation occurred simultaneously with a diminished supply of gold, a ruinous revulsion necessarily followed, accompanied by an all but universal bankruptcy, and a sacrifice of property.

These, however, are but evanescent difficulties. Other industries of a more important and permanent character are occupying the attention of the colonists. Wool, of which 16,315,468 lbs. were exported in 1851, rose to the amount of 42,500 lbs. in 1866. Hides are also an important article of export from the colony. Still, on the whole, it must be admitted that its trade is nearly stationary, the imports during the last ten years have varied only by about a million; and the export being even more nearly uniform. It is of course possible to infer from these facts, that the trade is steady and satisfactory. The system adopted in regard to the disposal of the land, and the results to which it has led, are the grand difficulties with which the colony has to contend. It is impossible, indeed, to condemn too severely our policy in this respect, both in this and other colonies. It is fitted only to injure and to turn the tide of emigration from their shores to the United States. To set a minimum price of 20s. an acre upon the unoccupied pasture lands of Australia, several acres of which are required to feed a single sheep, may be regarded as the triumph of political quackery. While, however, it prevented the sale of land, it necessarily its being let in vast tracts at low rates, certain rights of pre-emption, and to its exclusively occupied by squatters; and that the discovery of the gold fields and the increase of population, these parties have become a distinct class. There can, it is affirmed, be no doubt that their interests are opposed to those of the colonists; and it is believed that the constitution lately given to the colony will command a majority in the legislature.

In consequence of this preposterous system, which, in a colony where large fortunes have been made, has restricted the purchase of land to a very small part of their extent, the colony can, in no proper sense of the word, be said to be occupied. The population has not increased, refusing itself over the surface, but is crowded into the large towns of Melbourne, Geelong, and the camps at the diggings. There are no villages, farms, nor farm steadings. A moderate means may as soon think of a land in Middlesex as in Victoria. And

There are run standings. A as soon think of in Victoria. And

of the vast majority of those who make in the colony hasten to leave it; some going to England, and many to the United States, where they may invest the whole or a part of their earnings in superior lands sold for the price of 1½ dollar an acre. We do not wish to cast the horscope of a policy which has produced such results; but we hardly suppose that this region of anomalies, a suicidal system of railway had been completed and opened in this colony, at a cost for construction of 9,876,611. MEMEL. A commercial town of East Prussia, Population, December 8, 1867, 19,031. Memel is situated on the north-east side of the great bay, denominated the *Currische Haf*, near its junction with the Baltic. It is, consequently, the principal entrepôt of the country traversed by the Niemen, and as such enjoys a pretty extensive commerce.

**Harbour.**—The harbour of Memel is large and safe; but the bar at the mouth of the Currische Haf has seldom more than 17 feet water, and sometimes not more than 13 or 14 feet; so that ships drawing more than 16 feet water are frequently obliged to load and unload a part of their cargoes in the roads, where the anchorage is but indifferent, particularly when the wind is N. or N.W. We find that Mr. Consul Ward, in his Report for 1867, gives the average depth for the year as 18 feet. There is a light, on the N.E. side of the entrance to Memel harbour, 98 feet above high water, and visible 20 miles off. It is lighted from August 1 to May 15. The outer buoy lies in 6 fathoms water, about a mile without the light-house, which bears from it S.E. by E.  $\frac{3}{4}$  E. The channel thence to the harbour is marked by white buoys on the north, and red on the south side. Three beacons to the north of the town, when brought into a line, lead directly into the harbour. Inasmuch, however, as the channel is subject to frequent changes, both in depth and direction, it is always prudent, on arriving at the outer buoy, to heave to for a pilot; but this is not obligatory; and the Prussian authorities have issued directions for ships entering without a pilot, which may be found in Norie's *Sailing Directions for the Cattegat and Baltic*, p. 36.

**Trade.**—Timber forms the principal article of export; for though that of Dantzic be considered better it is generally cheaper, and almost always more abundant, at Memel. Here, as at Dantzic, the best quality of all sorts of wood articles is called *khron*, or crown, the second *brack*, and the third *brack brack*. Large quantities of hemp and flax are also exported, as are bristles, hides, linseed (the finest for crushing brought to England), wax, pitch, and tar &c. The exports of grain, especially rye, are sometimes very considerable. The wheat of Lithuania is reckoned the best. All flax and hemp shipped from Memel must be *bracked*, or assorted by sworn selectors. [FLAX and HEMP.] The imports consist principally of salt, herrings, coffee, sugar, spices, dyewoods, tobacco, tea, iron, cotton stuffs and yarn, cutlery, wine &c. To the war of 1866 is attributed the falling off in trade of the port, exhibited in the following statement of the value of imports and exports for 4 years, ending with 1867:—

	dols.		dols.
1861	- 11,000,000	1866	- 8,626,250
1865	- 9,585,000	1867	- 7,875,510

The abolition of the Government monopoly of salt on June 1, 1868, led to a considerable increase of the importation of that article from England. This port is open to navigation throughout the year, but the navigation of the river Niemen, and adjacent streams, the Currische Haf &c., closes about the latter end of November, and opens about the middle of April. In 1867, 980 ships, of 106,429 lasts, arrived at Memel, and at the end of that year 98 sailing ships, of 23,107 lasts, and 7 small steamers, belonged to the port.

**MERCURY** or **QUICKSILVER** (Fr. *vif argent*; Ger. *quicksilber*; Ital. *argento vivo*; Span. *azogue*; Russ. *ritut*; Lat. *hydrargyrum*; Arab. *zibākh*; Hin. *parah*; Sansc. *pārada*). This metal was known in the remotest ages, and seems to have been employed by the ancients in gilding, and separating gold from other bodies, just as it is by the moderns. Its colour is white, and similar to that of silver; hence the names of *hydrargyrum*, *argentum vivum*, *quicksilver*, by which it has been known in all ages. It has no taste or smell. It is brilliantly lustrous, and when its surface is not tarnished, it makes a very good mirror. Specific gravity 13.568. It differs from all other metals

in being always fluid, unless when subjected to a degree of cold equal to  $-39^{\circ}$ , when it becomes solid. The congelation of mercury was first observed in 1759. (Thomson's *Chemistry*; British *Pharmacopœia* 1867.)

Mercury is found in various parts of the world. Among the principal mines are those of Almaden near Cordova, in Spain; Idria, in Carniola; Wolfstein and Morsfeld, in the Palatinat; Guanacaelica, in Peru &c. Most of the ores of mercury are readily distinguished from those of any other metal; in the first variety, globules of the metal are seen attached to or just starting from the surface, which is at once a sufficient criterion, mercury being unlike every other metal; in the second, by the fine white colour, and the action of the blowpipe, which sublimes the mercury and leaves the silver behind; the third, by its beautiful deep red tint, varying from cochineal to scarlet red, excepting in those termed hepatic cinnabars, which are generally of a lead grey; the fourth, its grey colour, its partial solubility in water, and its complete volatilisation by heat, emitting the same time an arsenical odour. Before the blowpipe, these varieties burn with a blue flame and sulphurous odour, leaving more or less residue behind them, and which may consist of cambric matter, as siliceous alumina, together with oxides of iron and copper. (Joyce's *Chem.*)

Till within comparatively late years, the supplies of quicksilver have been almost entirely derived from Europe. The quantity, however, now supplied from California is large, and rapidly increasing. The average produce of Californian mine at New Almaden is about 76½ lbs. each. The selling price of mercury is from 1s. 8d. to 2s. per lb. The discovery of these mines has greatly lowered the price, and by implication has rendered the process of amalgamating gold and silver much more easy.

Mercury is often adulterated by the addition of lead, bismuth, zinc, and tin. When the metal quickly loses its lustre, is covered with a film, is less fluid and mobile than usual, or does not readily divide into round globules, there is reason to suspect its purity.

Our supplies of mercury are still chiefly derived from Spain. The imports vary very much. In 1861, only 1,264,239 lbs. were imported; in 1865, and rose to 3,315,410 lbs. In 1866, they again to 2,191,143 lbs. in 1867, valued at £1,000,000.

The exports of quicksilver from Spain in 1867 amounted to 771,048 kilogrammes, and it appears, from Mr. Sackville West's Report for January 1, 1867, that the total produce of the quicksilver mines in 1863 was 168,824 quintals, or about 37,770,880 lbs. The province of Idria, in Austria, has also some rather productive quicksilver mines.

There are 2 sulphurets of mercury; the red, or *ethiops mineral*, and the red or *cinnabaris*, mercury and sulphur are triturated together in a mortar, the former gradually disappears, and the whole assumes the form of a black powder, nominated *ethiops mineral*. If this powder be heated red-hot, it sublimes; and on a vessel being placed to receive it, a cake is obtained, of a fine red colour, which is called *red mercury*. This cake, when reduced to powder, is known in commerce by the name of *Cinnabar* may be prepared in various ways. Calomel, or subchloride of mercury, is a useful of all the preparations obtained from it, is in the form of a dull white and earthy powder, having a specific gravity of 7.0, and is more generally employed, and with less

MESSINA

than almost any other remedy in the whole range of the materia medica. (*British Pharmacopœia* 1867.)

Besides its uses in medicine, mercury is extensively employed in the amalgamation of the noble metals, in water-gilding, the making of vermilion, the silvering of looking-glasses, the making of barometers and thermometers &c.

MESSINA. One of the principal ports of Sicily, and second only to Palermo in the number of its inhabitants, of which it contained (1862) 22,024. It stands on ground which rises from the sea on all sides of the port. Its port is one of the largest and safest in the Mediterranean; but the entrance is narrow and difficult. It is protected by a natural breakwater nearly 600 yards long and 65 broad.

The trade of Messina is considerable, and rapidly increasing. The following, as given in Mr. Vice-consul Rickard's Report for 1866, are the values of its exports and imports, for the five years ending with 1866.

Year	Exports	Imports
1861	£289,055	£681,390
1862	87,111	732,512
1863	966,738	891,298
1864	1,091,168	918,777
1865	1,227,966	805,163

The number of ships which entered the port of Messina in 1866 was 5,047, the total burden being 238,471 tons; of these 3,420 were Italian, the remaining being 278,960.

Particulars on British vessels, as given in Mr. Rickard's Report: anchorage dues 5*d.* per ton. Sailing vessels discharging or taking in cargo may proceed to one or more ports to complete their business, without paying a second anchorage fee. Steam vessels pay 50 centimes (5*d.*) a ton per month, less a discount of 40 per cent. for auxiliary dues.—Sailing vessels and steamers

arriving from, or having touched at any place in Italy, Egypt, Syria, America, and the western coast of Africa, landing or taking in cargo or passengers, are charged 40 centimes per ton. Sailing and steamers 5 centimes per ton.

Quarantine dues.—These pay 20 centimes yearly. Bills of health when required. Vessels wind-bound, or sailing for orders, may take pratique without paying any of the above dues. The quarantine regulations of Messina are restrictive and vexatious.

Good table wine at Messina is worth now (1867) about 1*s.* per gallon. There is a great trade in oranges and lemons. In 1866, 700,000 boxes of

METALS

oranges, 2,000 pipes of picked lemons, 2,000 pipes of lemon juice, and 350,000 lbs. avoirdupois of essence, extracted from the peel, were exported. 1,000 lemons yield 1 lb. avoirdupois of essence, and 9 imperial gallons of lemon juice. Sixty gallons of raw, yield 10 gallons of concentrated juice.

The cultivation of silk is largely prosecuted in the neighbourhood of Messina.

A railroad was opened in 1866 between Messina and Catania. The distance is 58 miles. (See Mr. Vice-consul Rickard's Report, from which most of the above particulars are derived. (For Trade of Sicily, see art. PALERMO.)

METALS (*Lat. metalla; Fr. métaux*). Solid (with the single exception of quicksilver, which is fluid), and used, on that account, to be called semi-liquids, opaque, heavy bodies, which melt at previous degrees of temperature, and recover their fractured they exhibit a brilliant or lustrous appearance, and possess more or less malleability, tenacity, and so forth. The really valuable metals, comprising gold, silver, quicksilver, copper, lead, iron, and tin, were all known to the ancients, and were as much esteemed by them as by the moderns. They are sometimes found native, but far more generally in the shape of ores intermixed with other bodies. And their separation from the latter, and manufacture into useful and ornamental articles, is one of the greatest achievements of human industry, and has contributed more, perhaps, than anything else to accelerate the progress of civilisation. At this moment forms one of the most important, if it be not the most important, industrial pursuit carried on in this country. The reader will find notices of the most important metals under their respective names. And we only notice them here that we may insert the following statements, viz., an estimate of the quantity and value of the metals produced in the United Kingdom in 1866 as they came from the furnace, and an account of the quantities and values of the metals exported in each of the three years ending with 1867. The estimate of statement of the quantities and value of the metals produced in a crude state in 1867 is:—

Metals	Quantities	Value
Iron	4,761,023 tons	£11,992,557
Tin	8,709 "	799,203
Copper	10,233 "	331,761
Lead	68,140 "	1,337,599
Zinc	3,750 "	79,693
Silver	805,394 oz.	215,400
Gold	1,520 "	5,390
Other metals	—	15,000
Total	—	15,167,015

Statement of the Quantities of Foreign and Colonial Metals Imported into the United Kingdom during each of the 5 Years ending with 1867.

**METHYLATED SPIRIT.** [SPIRITS.]  
**MILE.** The usual measure of roads in England, being 8 furlongs, or 1,760 yards.

**MILK** (Fr. lait; Ital. latte; Lat. lac). A fluid secreted by the female of all these animals denominated *mammalia*, and evidently intended for the nourishment of her offspring. The milk of every animal has certain peculiarities which distinguish it from all other milk. But the animal whose milk is most used by men, and with which, consequently, we are best acquainted, is the cow. The external character of all milk is that of a white opaque fluid, having a sweetish taste, and a specific gravity somewhat greater than that of water. When allowed to remain at rest, it separates into two parts; a thick whitish fluid called *cream*, collecting in a thin stratum over its surface, and a more dense watery body, remaining below. Milk which has stood for some time after the separation of the cream, becomes acedent, and then coagulates. When the coagulum is pressed gently, a serous fluid is forced out, and there remains the caseous part of the milk, or pure cheese.

Butter, one of the most valuable animal products, is solidified cream, and is obtained artificially by churning. [BUTTER and CHEESE.]

Milk has always been a favourite food of most European nations, and especially of the British. *Lacte et carne vivunt*, says Cæsar of our ancestors; and the same articles still continue to form a large part of our subsistence. Mr. Middleton estimated (*Agricultural Survey of Middlesex*, 2nd ed. p. 419), that, in 1806, no fewer than 8,500 milk cows were kept for the supply of London and its environs with milk and cream; and he estimated the average quantity of milk obtained from each cow at nine quarts a day, or 3,285 quarts a year, leaving, every deduction being taken into account, 2,200 quarts of marketable produce.

But Mr. Youatt, in his valuable work on cattle, their breeds &c., estimated the number of dairy cows kept in 1843, in London and its environs, at 32,000; affording, on Mr. Middleton's hypothesis, an annual supply of 38,400,000 quarts of milk. Now, as milk is sold by the retailers at from 3d. to 4d. a quart after the cream is separated from it, and as the cream is usually sold at from 2s. 6d. to 3s. a quart, and there is reason to suspect that a good deal of water is intermixed with the milk, we believe we should hardly be warranted in estimating that the milk, as obtained from the cow, is sold at less than 5d. a quart, which gives 800,000l. as the total price of the milk consumed in the city and its immediate vicinity. If to this sum were added the further sums paid for cheese and butter, the magnitude of the entire sum paid in the metropolis for milk, and the various products derived from it, would appear not a little astonishing.

Since the last edition of this work was published, statistics of cattle in the United Kingdom have been supplied. From these we learn that the ordinary number of cattle kept in Middlesex is about 24,000, of which number probably 20,000 are cows. But no county, with the single exception of Cheshire, suffered so seriously from the loss of the cattle plague, as Middlesex did; for 20 per cent. of the cattle had perished up to March 1866. The London dairies are in fact dense with disease, and the time, it may be hoped, is not distant, when they will be put an end to altogether.

At present, a very considerable part of the metropolis is supplied with milk drawn a very long way off, and sent regularly, punctually, and at an early hour, by the various railways. In point of fact, nothing in the economy of railways is more striking than the development of a system, by which the supply of the metropolis and other large towns, can be derived from healthy outlying country districts, at considerable distances from the dense populations in the great towns throughout the United Kingdom. On June 25, 1867, the number of cattle returned for Middlesex was 18,724. In 1866, 967 cwt. of condensed or preserved milk were imported, valued at 5,414l.

**MILLET** (Ger. hirse; Fr. millet, mill; Ital. miglio, panicastro; Span. mijo; Lat. milium panicum miliaceum). There are 3 distinct species of millet; the Polish millet, the common or Indian millet, and the Indian millet. It is cultivated as a species of grain; and is sometimes employed to feed poultry, and as a substitute for corn. The Indian millet grows to a large size; but autumns in England are seldom dry and warm enough to allow of its being cultivated here (London's *Encyc. of Agriculture*) 248,138 cwt. of millet were imported in 1865, chiefly from Turin.

**MILL-STONES** (Ger. mülsteine; Fr. pierres moulrières; Ital. mole macine; Span. molinos de molino; Rus. schernowoi kamni). The large circular stones, which, when put in motion by machinery, grind corn and other articles. The diameter of common mill-stones is from 7 feet, and their thickness varies from 12 to 18 inches. These stones have been principally imported from Rouen and other parts of France, which 5,734 were exported from France in 1866, valued at 83,830l.; the burr-stones of that country being supposed to be more durable than our own. Mill-stones are, however, found at Caerwys in North Wales, and in some parts of Scotland, which have been said, though on no very good authority, to be equal to those imported. In 1866, 3,242 tons of burr-stones were imported into the United Kingdom, valued at 14,470l.

neighbourhood of Meaux (Seine and Marne) in calcareous rocks. The substance which is cemented into masses of sufficient dimensions is nearly pure silica, with a slight admixture of alumina and oxide of manganese.

The island of Milo in the Archipelago furnishes mill stones of a very excellent quality. They are exported to Greece, Italy, and other countries on the Mediterranean, where they are employed in grinding the hard wheat, or *grano duro*, used in the manufacture of macaroni, vermicelli &c. The quarries are wrought on account of Government, and the stones sold at moderate prices, fixed by a tariff, which, however, leave a handsome profit to the state. (Tournefort, *Voyage au Levant*, letter iv.; Stroug's *Greece*, p. 222.)

Whether it was owing, as was generally supposed, to the inferiority of the stones, or to some other cause, there can be no doubt of the fact that, down to a late period, our flour mills were less efficient than those of France and some other countries; and hence, in part at least, the late very large importations of French flour. But this inferiority is now all but wholly obviated. The English mills produce flour of a superior quality; and hard, as well as soft wheat is readily bought by our millers. The duties on mill and other stones have been repealed.

**MIXING COMPANIES.** By this designation was formerly meant the associations formed in London, in 1825, for working mines in Mexico and South America; but at present it comprises all mining projects carried on by joint-stock associations.

The mania for mining concerns, which raged in London and the empire generally in 1824 and 1825, after the opening of Mexico and other parts of Spanish America to our intercourse, forms a remarkable and disgraceful era in our commercial history. Now that the delusion is long past, we were difficult in conceiving how mercantile men could be led to entertain such visionary speculations, and to pay immense premiums for shares in distant and hazardous undertakings of which they knew little or nothing. We may, therefore, be excused for appropriating a page or two to the notice of an infatuation hardly second only to that which led to the South Sea and Mississippi schemes.

The American mining companies formed at the outset had some sort of basis for favourable expectations, their directors having made contracts for a number of mines in Mexico, described by Humboldt as having enriched many families. This particularly applies to the Real del Monte Company, whose mines are situated in the mountainous district of that name; to the Anglo-American Company, whose mines are at Guanajuato, the principal mining quarter in Mexico; and to the United Mexican Company, whose prospects, though too widely spread, comprise several valuable mines at Zacatecas, Sombrecete, Matasrato, and other parts.

These associations were formed in London early in 1824, and during the spring and summer of that year their stock or shares bore only a small premium; but towards the winter it began prodigiously to rise; not because of any favourable intelligence from the mines (for the accounts from Mexico merely reported the arrival of the English agents), but from a blind ardour and spirit of speculation in the public, which really took *omne pro magnifico*, every rumour of a mine was certain and inexhaustible source of profit and wealth! It was supposed that our countrymen were about to reap an immediate harvest; to lay

their hands on a treasure hid for ages. This was said to be the true discovery of America, the effectual access to her resources. Every new contract for a Mexican mine produced a rise in the shares of the other companies, as if the fresh undertaking must necessarily be a source of profit to the whole! And the result was, that in January, 1825, the premium on the shares of most of the companies exceeded cent. per cent.! It must not, however, be imagined that this rise of price was occasioned solely by the competition of individuals who intended to continue to hold stock and to trust to the dividends made by the companies for a return. That this was the case in the first instance, is speaking generally, true. But a host of others, actuated by very different views, speedily entered the field. A peculiar combination of circumstances, at the head of which must be placed an almost incredible degree of ignorance and folly on the part of a considerable portion of the public, spread a spirit of gambling among all classes. Many who were most eager in the pursuit of shares, intended only to hold them for a few hours, days, or weeks, to profit by the rise which they anticipated would take place, by selling them to others more credulous or bold than themselves. The confidence of one set of speculators confirmed that of others. Meanwhile the public gullibility, or rather its indiscriminating rapacity, was liberally administered to. Company after company was formed without any previous contract; in other words, without any foundation whatever! The plan was, to fix on a district in America, understood to contain mines; to form a company bearing the name of such district; to obtain a first payment from the shareholders, and to send or pretend to send out agents, to survey the district and engage mines. Such was the case of most of those companies having the names of districts in South America; and such, also, was the case of the Hispaniola or St. Domingo Company, formed on the basis of accounts given by Robertson of mines wrought in that island some three centuries ago! And yet lawyers, clergymen, and even the nobles of the land, were candidates for shares in these miserable bubbles, in the hope of finding (in which, luckily, most of them were disappointed) some dupe to buy their shares at a premium. Those who may be desirous of seeing the extent which the public credulity was practised upon in 1824 and 1825, may consult a pamphlet published by H. English, broker, in 1827, which contains an account of all the joint-stock companies formed and projected in these memorable years. It presents a most extraordinary picture. There were in all 74 mining companies formed and projected! The number and quality of the other schemes were similar. It is due to Mr. Baring (the late Lord Ashburton) to say that he denounced the evil when in progress, and warned the unthinking multitude of the ruin they were bringing upon themselves; but to no purpose.

As the year 1825 proceeded, the mining mania gradually declined, not from any falling off in the prospects of the companies, for in truth they never had any, but in the supply of money in London. That redundancy of the currency in which the mining mania had partly originated, having brought about an adverse exchange, and a heavy drain for bullion on the Bank of England, the latter was obliged to pull up, and in a moment the bubble burst, and unreasonable suspicion took the place of blind unthinking confidence. Mining projects, from being in the highest favour, fell to the lowest point in the public estimation. The shares of the three principal companies, some

of which had been at a premium of 500 per cent., fell to par: that is, 100*l.* in money, and no more, could be got for 100*l.* of the company's stock! They maintained this price for a considerable time, because most of the parties interested continued to have a favourable impression of the undertakings. Demands, however, continued to be made for additional sums to meet the expenditure abroad; and in 1826 and 1827 mining shares progressively declined, so that 100*l.* fetched only 20*l.* or 25*l.* in money. The bubble companies were entirely destroyed, and the few only remained that were founded by capitalists and had some foundation to stand upon.

Even these would have been relinquished, or have shrunk into very small dimensions, had not the directors been able to enforce further payments, by forfeiting, in default of such, whatever had been previously paid by the subscribers. The usage was, that on becoming a shareholder each person subscribed the deed of the company, engaging to pay, when called on, such instalments or sums to account (generally 10*l.* on each share) as should be required by the directors, until he had completed payment of the 100*l.* And many shareholders who had advanced 50*l.* or 60*l.* unwisely preferred paying 10*l.* from time to time, rather than incur the immediate forfeiture of all they had paid. Those who held only a few shares felt this in a less degree; but to the holders of a number of shares, the grievance was most serious. Numbers of them raised the money with great diligence; often selling, at a heavy loss, their family property, or prevailing on relations to make them advances, to their great inconvenience, and, as far as can be seen, with almost no prospect of a return. Resentment would be excited against the directors, had they not been, in general, the heaviest sufferers; their regulations required them to hold a certain number of shares (perhaps 20 or 30); but in their blind confidence they frequently held 200 or 300, and drew on themselves a proportional sacrifice—in several cases, the loss of their whole property.

The managers of the companies formed in the outset were principally chargeable with ignorance, rashness, and overweening confidence. They had, in fact, but little information to go upon. The monopoly enforced by Old Spain had prevented any considerable communication between this country and her colonies. And of the Spaniards settled in Mexico, and driven from it by the civil wars and consequent emancipation of the country, few or none found their way hither, the great majority having repaired to Cuba, the south of France, and Spain. Nor were the published accounts of the country entitled to much confidence: Humboldt's *Travels* formed the chief authority, but their illustrious author, though generally cautious, seems, in this instance, to have placed too much confidence in vague, exaggerated statements. Our merchants knew, generally, that silver mines formed a main branch of the productive industry of Mexico, and had enriched very many families originally in humble circumstances; but they had no idea of the injury sustained by the mines during the civil war, nor of the amount of expenditure required to bring them into a working state; nor were they aware how little useful information could be expected from the natives; the working of the mines, like every operation requiring skill and intelligence, having been superintended by natives of Old Spain, who had either fallen in the civil war, or been expelled after the Mexicans succeeded in the contest. Hence, the agents of our companies found on the spot only native Mexicans, without education or experience

in business, and, speaking generally, without candour or probity. They urged our countrymen to drain the mines, not by machinery, of which they had no idea, but by animal power, the use of which was of advantage to them, by employing their horses and mules, and creating a great consumption of maize, the principal grain of the country. Then, as to the last and most important stage in the business of mining—the mode of extracting the silver from the ore—the Mexicans, wholly unacquainted with the improvements made in Germany during the last half-century, recommended amalgamation, a process conducted by them in a very rude manner, and which in most qualities of silver ore, fails to extract the whole, or any thing like the whole, of the metal. The object of the Mexicans, in short, was merely to make English capital be circulated among them, thus giving employment to their people for time, and bringing the mines into an improved state; when they (the Mexicans) might begin to resume them after our countrymen had exhausted their resources, or had become weary of the contracts.

The expense of conveying the requisite machinery from the coast of Mexico to the mining districts, generally at a great distance in the interior, absorbed much capital. The country has no practicable roads, and these have latterly been allowed to fall into disrepair; draught carriages are almost unknown, and burdens are carried on the backs of mules and horses: add to this, Mexico being under-peopled, labour is nearly as high in value as in the United States of North America; and the mechanical arts being in a manner unknown, all skilled workmen, such as carpenters, blacksmiths, and working engineers, had to be sent from England at a heavy expense. (For an account of the low state of the arts in Mexico, see the extracts from *Chevalier's Letters* in the *Geog. Dict.* art. 'Mexico.')

Such were the chief causes of the failure of Mexican mining companies; and several of them may be referred to one radical disadvantage—the non-existence of silver mines in England, and in Cornwall, considerable mines of this metal, while in the northern countries we have mines of lead; but of silver we have none. How much better had it been, if our countrymen set out with a conviction that Germany is the only country in which the treatment of silver ore is conducted on sound principles! The Saxons extract a profit of one-fourth or fifth part of the ore raised by the means on account of our companies, but the process being wrought by their crude, inefficient, and expensive process, fails to afford anything like a satisfactory return. There seems no reason to doubt that the German process may be applied to silver ore in Mexico as in Europe: the difficulties arise, not from difference in the quality of the ore, but from the want of experienced smelters, and the general backwardness of the Mexican mechanics.

An English company, formed in 1835, for the length applied modern science to the reduction of the ores of the Guanajuato district into water-power.

But though the companies had been, in other respects successful, they had a serious objection to contend with in the unsettled state of the country. No Government has as yet been established in Mexico, nor in any other of the constituted American states, with powers sufficient, in inclination, sufficient to put down anarchy, or to enforce the observance of

So long as the companies were struggling to put their mines into order, they sustained little inconvenience from the circumstances now mentioned; but the moment they had succeeded in bringing them once more into a productive state, and were beginning to have a reasonable prospect of obtaining some return for their enormous outlays, they were annoyed by questions as to title, and by the setting up of claims on the mines, of which they had never heard before. In some instances the claimants had recourse to violence, and the companies' servants were forcibly ejected from their works! Chevallier says that it required an armed force to transport any quantity of ore from the mine to the place of its destination; and he gives an account of a murderous attack made in 1853 on some miners belonging to the Real del Monte Company. (*Geog. Dict. art. 'Mexico.'*)

**MINERAL METALS; VERA CRUZ.]**  
Without, however, pretending to anticipate the result of these remote speculations, we shall conclude with a brief notice of the considerations on both sides of the question. The circumstances adverse to the success of mining companies in America, conducted on account of parties in England or in any part of Europe, are—

1. The various disadvantages of distant management. These are so many and so serious, as to admit of only one corrective—selling the ore as soon as it is raised, and transferring to individuals, for their own account, the extraction of the metal, as they were in Cornwall, and, in a somewhat different manner, in Saxony. The ores also ought to be raised by paying the workmen, not fixed wages, but a share or portion of the proceeds.

2. The half-civilised state of the inhabitants, their unsettled political condition, and the want of power or disposition on the part of those in power to make contracts be observed; and to enforce the former proprietors of the mines, or to connect them with them, from setting up vexatious claims, and enforcing them by violence.

3. The high price of labour; the ignorance of the natives as to mechanics, and still more as to mining; Hence the necessity of having artificers and confidential superintendents from Europe at a heavy expense.

On the other hand, the circumstances in favour of such undertakings are—

1. The abundance of silver ore, which is far more than in any part of Europe.

2. The former success of mining in Mexico, and the system extremely rude and expensive, compared to that which is now followed in Germany.

3. The probability of peace in Europe, and of the abundance of moneyed capital; so that the failure of the present companies may not involve the ruin of their enterprises, any more than the failure of the first New River Company, two centuries ago, implied an abandonment of their project. There is surely, also, some probability that anarchy and disorder will ultimately prevail; and that the security of property will, in the end, be established. We confess, however, that these are but problematical and contingent considerations; and that it may reasonably be doubted whether any considerable future success can be expected.

It seems, however, as if there were something in mining speculations that renders them exceedingly unsuitable for joint-stock associations. At present, hardly one of the joint-stock associations formed in this country for the working of mines has been successful. The company for working the copper mines near Santiago in Cuba seems to be the only one that has in any degree

realised the magnificent prospects that were held out in 1824 and 1825. (See Mr. Secretary Middleton's Reports of July 10, 1866, and November 29, 1867, *On the Silver-mines of Guanajuato.*)

**MINIUM or RED OXIDE OF LEAD.** A tasteless powder of an intense red colour, often inclining to orange, and very heavy; its specific gravity being 8.91. It is extensively used in the arts.

**MOBILE.** [*NEW ORLEANS ad finem.*]  
**MOCHA or MOKHA.** The principal port in the Red Sea frequented by Europeans, in that part of Arabia called Yemen, about 40 miles to the north of the Strait of Hab-el-mandeb, lat. 13° 19' 30" N., long. 43° 20' E. Population variously estimated up to 7,000, but may, perhaps, amount to from 4,000 to 5,000. It is encircled with walls, and indifferently fortified. Its appearance from the sea is imposing. Mocha has greatly declined since the occupation of Aden.

Mocha is situated on the margin of a dry sandy plain. It is built close to the shore, between 2 points of land which project and form a bay. Vessels drawing from 10 to 12 feet water may anchor within this bay at about a mile from the town; but large ships anchor without the bay in the roads, in 5 or 7 fathoms water—the grand mosque bearing E.S.E., and the fort to the south of the town S. by E, distant about two miles from the shore. The great article of export from Mocha is coffee, which is universally admitted to be of the finest quality. It is not possible to form any very accurate estimate of the quantity exported; but we believe it may be taken at 10,000 tons, or perhaps more. The greater portion is sent to Djidda and Suez; but there is a pretty large export to Bombay and other parts of India, whence some is sent to Europe; occasionally, however, the exports from Mocha and Hodeida, direct to Europe, are very considerable. Besides coffee, the principal articles of export are dates, adjuce, or paste made of dates, myrrh, gum arabic, oilbanum, senna (*cassia senna*), sharks' fins, tragacanth, horns, and hides of the rhinoceros, balm of Gilead, ivory, gold-dust, civet, aloes, saganpenum &c. The principal articles of import are rice, piece goods, iron, hardware &c. The ivory, gold-dust, and civet, met with at Mocha, are brought from the opposite coast of Abyssinia, whence are also brought slaves, ghee &c.

The greater part of the foreign trade of Mocha is transacted by the Banims; and it is much safer to deal with them than with either Turks or Arabs. Europeans pay a duty of 3 per cent. ad valorem on all goods imported by them from Europe, India, or China; the duty being levied on the amount of the sales. The buyer pays brokerage, coolery, and boat hire. All kinds of foreign goods are sold on credit, and the payment is made in 3 instalments, or at a certain day, according as may have been agreed on. Coffee is always paid for in ready money. On the sale of other goods, the produce of the country, a credit is given; or if ready money be paid, a discount is allowed at the rate of 9 per cent. When goods are discharging, the master must furnish the Custom-house officer with a manifest, or account of the marks, numbers, and contents of each package. He then opens two or three bales taken at random; and if they correspond with the account delivered, no further examination is made; but if they do not correspond, the whole bales are opened, and double duty is charged upon the excess. The quantities being thus ascertained, their value is learned from the account of sales rendered by the seller, and the duty charged accordingly. In this respect there is nothing to object to at

Mocha; but a good deal of extortion is practised in the exaction of port charges, presents &c., which may, however, be defeated by proper firmness. The port charges on ships, or *three-mast* vessels, may amount to about 400 Mocha dollars, and those on brigs to about half as much. Provisions are plentiful and cheap; but water is dear: that in the vicinity being brackish and unwholesome, whatever is used for drinking, by all but the poorest persons, is brought from Mosa, about 20 miles off. Fish are abundant and cheap, but not very good.

**Money.**—The current coins of the country are carats and commasces; 7 carats=1 commasce; 10 commasces=1 Spanish dollar; 100 Spanish dollars=12½ Mocha dollars.

**Weights and Measures.**—The commercial weights are—

- 15 Vakias = 1 Hottob = 1 lb. 2 oz. avoird.
- 40 Vakias = 1 Maund = 7 lbs. avoird.
- 10 Maunds = 1 Frazel = 30 lbs. avoird.
- 15 Frazels = 1 Bahar = 4.50 lbs. avoird.

There is also a small maund of only 30 vakias: 1 Mocha bahar=16½ Bombay maunds; 1 Mocha bahar=13 Surat maunds=15.123 scers. Grain is measured by the kallah, 40 of which = 1 tomand, about 170 lbs. avoirdupois. The liquid measures are 16 vakias=1 mussenah; 8 mussenahs = 1 cuda, about 2 English wine gallons. The long measures are the guz=25 English inches; the hand covid=18 inches, and the song iron covid = 27 inches.

In compiling this article, we made use of Milburn's *Oriental Commerce*, and Elmore's *Directory*. Niebuhr has given a plan of the port of Mocha in his *Voyage en Arabie*, tom. i. p. 348, ed. Amst. 1776. He has also given some details as to its trade in his *Description de l'Arabie*, p. 191. But the best account we have seen of Mocha is in Hamilton's *Account of the East Indies* (vol. i. pp. 40-52), an accurate and valuable work. Burchhardt did not visit Mocha; which is to be regretted.

**MOGADORE or SUIRA.** A sea-port town

on the west coast of Morocco, lat. 31° 50' N., long. 9° 20' W. Population estimated at 20,000, including about 4,000 Jews. It is indifferently fortified; the country in the immediate vicinity is low, flat, sandy, and unproductive. Water is scarce and rather dear; being either rain water collected and preserved in cisterns, or brought from a river about 1½ mile distant. The port is formed by a small islet lying to the southward of the town; but as there is not more than 10 or 12 feet water in it at ebb tide, large ships anchor without, the long battery bearing E. distant 1½ mile. The principal imports are, English woollens and cotton stuffs and hardware, German linens, tin, copper, earthenware, mirrors, glass, sugar, pepper, and paper. The exports principally consist of sweet and bitter almonds, gum arabic and other gums, beeswax, cow and calf skin, ivory, ostrich feathers, gold-dust, olive oil, dates &c.

The city of Morocco, distant from Mogadore about 4 days' journey (caravan travelling), derives its principal supplies of European produce from the latter; but for a long period, the fiscal regulations and caprice of the Sultan put serious hindrances in the way of trade. Thus, for instance it was part of the Government policy to absolutely prohibit the exportation of grain, even at a time when it was exceedingly plentiful in Morocco and very scarce in the nearest parts of Europe. The export duties were, even when trade was permitted, commonly 30 per cent. on the value of the article, and the import duties were paid in kind, one-fifth of the article imported. Under such a system trade languished, and, as was stated in a former edition, the exports to those regions averaged during the 10 years ending with 1865 only 61,712l. a-year.

Under these circumstances, the British Government entered into negotiations with the Sultan and the result was a treaty of commerce signed December 9, 1856, for the provisions of which see TREATIES, COMMERCIAL.

Tonnage of Mogadore in the Years 1862-4.

	1862			1863			1864		
	Vessels	Tons	Value of Cargoes	Vessels	Tons	Value of Cargoes	Vessels	Tons	Value of Cargoes
Entered	76	21,760	228,737	100	23,576	309,321	75	19,615	430,311
Cleared	71	20,472	215,231	91	20,641	353,988	72	18,964	375,911

More than half of these vessels were British. In ordinary years the most important export is olive oil, of which 94,851 cwts. were exported in 1866 and but 12,689 in 1867. Wool ranks next, then almonds, goat skins, slippers, wax, hides, and ostrich feathers. The principal imports are Manchester goods, specie, and sugar. Mr. Consul White, of Tangier, in his *Reports* of April 9, 1867 and May 23, 1868, on the Trade and Commerce of Morocco, gives the following particulars, which speak for themselves.

**Shipping.**—The following return of vessels which entered Moorish ports during the 4 years ending with 1867, shows that, although the number of vessels in 1867 was smaller than in the previous year and in 1864, the tonnage was greater:—

	Vessels	Tons
1864	1,108	122,950
1865	915	115,276
1866	1,038	120,876
1867	991	125,226

The value of the cargoes in 1866 being 1,037,986l. and in 1867, 936,780l.

**British Shipping.**—The number of British vessels entering ports of Morocco was greater, al-

though the tonnage was less, in 1866 than in 1865, being in 1865, 447 vessels of 77,008 tons, and in 1866, 487 vessels of 69,752 tons, while the entered, in 1867, 517 British vessels of 73,280 tons.

**Foreign Shipping.**—A very considerable increase is observable in the number of French vessels trading with Morocco. In 1865 only 39,946 tons, entered. This increase was caused by the establishment of a line of steamers belonging to the Messageries Impériales, which sail monthly, during 1866, and subsequently twice a month, between Tangier and Oran, in correspondence with Algiers and Marseilles.

**Exports.**—The export trade of Morocco, during the three years ending with 1866 was steadily increasing, the exports to France, during that year, being greatly in excess of former years; but the general exports, and especially those to Great Britain and Gibraltar, during the year 1867, were far short of those of the previous year, thus

	£	of which 575,473 to Great Britain

The British mohair

This falling off, says Mr. Consul White, may be accounted for in a great measure by the shortness of the crops.

Compared with 1865 and 1866, the year 1867 shows a slight decrease, thus:

Year	Value	Value of which was from Great Britain
1865	21,463,177	2,966,119
1866	20,828,228	7,501,680
1867	19,992,961	714,560

The following table represents the value of goods taken by different countries from Morocco during the year 1866—

Country	Value
Great Britain and Gibraltar	637,407
France	307,210
Spain	35,532
Portugal	34,186
Germany	4,193
Belgium	3,558
Italy	2,223

In the year 1866, according to M. St. Chaffray, Vice-Consul at Rabat, there was a great decline at that port. The causes are the loss of crops, and the general circulation of base money—a wrong for which it appears the Government is responsible. *Consular Reports 1866, No. 6.*

Trade of Rabat.

Year	No. of Ships	Tonnage	British Ships	Tonnage	Value of Imports	Value of Exports
1865	11	3,662	12	880	115,806	71,838
1866	38	27,011	12	972	72,372	72,611
1867	39	24,476	8	499	66,683	46,293
1868	40	25,600	8	560	47,683	52,708

Money—Accounts are kept in nutkeels of 10 ounces; the ounce being divided into 4 blankeels, and the blankeel into 24 luccs. From their proportion to the Spanish dollar, the blankeel may be valued at 1*d.*, the ounce at 4*d.*, and the nutkeel at 3*s.* 4*d.*

Weights and Measures.—The commercial pound is generally regulated by the weight of 20 Spanish dollars; and therefore 100 lbs. Mogadore weight, or the quintal, = 119 lbs. avoirdupois. The market pound for provisions is 50 per cent. heavier, or 12½ oz. avoirdupois.

The corn measures are for the most part similar to those of Spain, but there are considerable discrepancies.

The cubic, or canna, = 21 English inches, is the principal long measure.

The most ample details with respect to the commerce of Mogadore, and the trade and productions of Morocco in general, may be found in Jackson's *Annals of Morocco*, c. 6, 7, and 13; see also Kelly's *Manual for treaty with Morocco*.

MOHAIR (Ger. mohr; Fr. moiré; Ital. moerro; Span. moer, muer). The hair of a variety of the gazelle goat, famous for being soft and fine as silk, and of a silvery whiteness. It is not produced anywhere but in the vicinity of Angora, in Asia Minor. The exportation of this valuable and beautiful article, unless in the shape of yarn, is strictly prohibited; but it may now be exported unspun. The production, preparation, and use of Mohair have long engrossed the principal attention of the inhabitants of Angora; and it is held to form an important article of Venetian commerce. It is manufactured into camlets and other expensive stuffs. In 1867, 2,648,360 lbs. of Mohair, valued at 842,106*l.*, were imported into the United Kingdom, nearly the whole of which came from Turkey. It was reported worth 1*l.* 4*s.* per lb. The average annual produce of the hair from Asia Minor is about 15,000 bags; the average weight per fleece 5 lbs.; and the ordinary weight of wool from 6 to 8 inches; average weight per bale 180 lbs.

The British mohair fabrics are principally pre-

pared in Bradford and its immediate neighbourhood. (See for further particulars, *Tournefort, Voyage du Levant*, ii. 463, where there is a figure of the goat; and Urquhart *On Turkey and its Resources*, p. 181.)

MOLASSE or MELASSES (Fr. sirop de sucre, melasses; Ger. syrup; Ital. mielazzo di zucchero; Span. miel de azucar, chancana; Port. melasso, assucar liquido; Russ. patoka sacharnaja). The uncrystallisable part of the juice of the sugar cane, separated from the sugar during its manufacture. It is of a brown or black colour, thick and viscid; has a peculiar odour, and a sweet empyreumatic taste. Molasses is now charged with a duty of 3*s.* 6*d.* per cwt. in place of the old duties of 9*s.* for colonial, and 23*s.* 9*d.* for foreign. It is not, however, used in its original state, but is purchased by the sugar-bankers, who, when it is of an ordinary degree of strength, extract from it a coarse, soft species of sugar, called bastards, and treacle. But it is obvious, inasmuch as the duty on molasses is fixed, that the duty on the sugar extracted from it will vary indirectly according to the quantity of saccharine matter which it contains; and we understand that, in consequence, molasses is frequently imported so rich as to yield good crystallised sugar. We do not know whether the practice has been carried to such an extent as materially to injure the revenue; but it seems pretty clear that the duty should depend, in part at least, on the quality of the molasses, or on the quantity of saccharine matter which it contains, as well as on the weight. It is difficult—unless advantage has been taken of the way in which the duty is assessed, to elude the sugar duties—to account for the fact of the imports of molasses from the West India Islands not having diminished in anything like the same proportion as the imports of sugar. [SUGAR.]

About 8 gallons of proof spirit may, it is said, be obtained from a cwt. of molasses, such as has recently been imported; but this depends, of course, wholly on the richness of the molasses.

Part of the refuse that remains after refining muscovado sugar, is a sweet syrup, which, as well as the syrup that remains after boiling molasses to obtain bastards, is called treacle. But the treacle obtained from the former is always preferred to that obtained from the latter, and fetches 2*s.* per cwt. more.

Molasses is sometimes used in preparing the coarser sort of preserves; and on the Continent it is extensively used in the manufacture of tobacco.

In 1867, 358,316 cwt. of molasses were imported; and 403,709 cwt. entered for consumption, of which 214,969 cwt. were brought from Cuba. The duty during the same year amounted to 56,119*l.*

MONEY. When the division of labour was first introduced, commodities were directly bartered for each other. Those, for example, who had a surplus of corn, and were in want of wine, endeavoured to find out those who were in the opposite circumstances, or who had a surplus of wine and wanted corn, and then exchanged the one for the other. It is obvious, however, that the power of changing, and, consequently, of dividing employments, must have been subjected to perpetual interruptions, so long as it was restricted to mere barter. A carries produce to market, and B is desirous to purchase; but the produce belonging to B is not suitable for A. C, again, would like to buy B's produce, but B is already fully supplied with the equivalent C has to offer. In such cases—and they must be of constant occurrence wherever money is not introduced—no direct exchange could take place between the parties; and

it might be very difficult to bring it about indirectly. The difficulties that would arise on such occasions, and the devices that would be adopted to overcome them, have been very well illustrated by Colonel Torrens, in his work on the *Production of Wealth*, p. 291.

The extreme inconveniences attending such situations must early have forced themselves on the attention of everyone. Efforts would, in consequence, be made to avoid them; and it would speedily appear that the best or rather the only way in which this could be effected, was to exchange either the whole or a part of one's surplus produce for some commodity of known value, and in general demand; and which, consequently, few persons would be inclined to refuse to accept as an equivalent for whatever they had to dispose of. After this commodity had begun to be employed as a means of exchanging other commodities, individuals would become willing to purchase a greater quantity of it than might be required to pay for the products they were desirous of immediately obtaining; knowing that should they, at any future period, want a further supply either of these or other articles, they would be able readily to procure them in exchange for this universally desired commodity. Though at first circulating slowly and with difficulty, it would as the advantages arising from its use were better appreciated, begin to pass freely from hand to hand. Its value, as compared with other things, would thus come to be universally known; and it would at last be used, not only as the common medium of exchange, but as a standard by which to measure the value of other things.

Now this commodity, whatever it may be, is *money*.

An infinite variety of commodities have been used as money in different countries and periods. But none can be advantageously used as such, unless it possess several very peculiar qualities. The slightest reflection on the purposes to which it is applied, must, indeed, be sufficient to convince everyone that it is indispensable, or, at least, exceedingly desirable, that the commodity selected to serve as money should (1) be divisible into the smallest portions; (2) that it should admit of being kept for an indefinite period without deteriorating; (3) that it should, by possessing great value in small bulk, be capable of being easily transported from place to place; (4) that one piece of money, of a certain denomination, should always be equal, in magnitude and quality, to every other piece of money, of the same denomination; and (5) that its value should be comparatively steady, or as little subject to variation as possible. Without the *first* of these qualities, or the capacity of being divided into portions of every different magnitude and value, money, it is evident, would be almost useless, and could only be exchanged for the few commodities that might happen to be of the same value as its indivisible portions, or as whole multiples of them; without the *second*, or the capacity of being kept or hoarded without deteriorating, no one would choose to exchange commodities for money, except only when he expected to be able speedily to re-exchange that money for something else; without the *third*, or facility of transportation, money could not be conveniently used in transactions between places at any considerable distance; without the *fourth*, or perfect sameness, it would be extremely difficult to appreciate the value of different pieces of money; and without the *fifth* quality, or comparative steadiness of value, money could not serve as a standard by which to measure the value of other commodities; and no one would be disposed to

exchange the produce of his industry for an article that might shortly decline considerably in its power of purchasing.

The union of the different qualities of comparative steadiness of value, divisibility, durability, facility of transportation, and perfect sameness in the precious metals, doubtless, formed the insistent reason that has induced every civilized community to employ them as money. The value of gold and silver is certainly not invariable, but generally speaking, it changes only by small degrees; they are divisible into any number of parts, and have the singular property of being easily reunited, by means of fusion, without loss; they do not deteriorate by being kept; and, from their firm and compact texture, they are very difficult to wear. Their cost of production, especially that of gold, is so considerable, that to possess great value in small bulk, and can, of course, be transported with comparative facility, and an ounce of pure gold or silver, taken from the mines in any quarter of the world, is precisely equal, in point of quality, to an ounce of gold or silver dug from the mines in any other quarter. No wonder, therefore, when all qualities necessary to constitute money are possessed in so eminent a degree by the precious metals, that they have been used as such, in civilised societies, from a very remote era. 'It became universal money,' as Turgot has observed, 'not in consequence of any arbitrary agreement among men, or of the intervention of any law, but by the nature and force of things.'

When first used as money, the precious metals were in an unfashioned state, in bars or ingots. The parties having agreed about the quantity of metal to be given for a commodity, that quantity was then weighed off. But this, it is plain, has been a tedious and troublesome process. Doubtless, however, the greatest obstacle would be experienced, in early ages, to the use of gold and silver as money, would be found to consist in the difficulty of determining the degree of their purity with sufficient precision; and the discovery of some means by which their weight and fineness might be readily and correctly ascertained, would be felt to be indispensable to extensive use as money. Fortunately, however, means were not long in being discovered for the fabrication of coins, or the practice of impressing pieces of the precious metals with a stamp indicating their weight and purity, belongs to the remotest antiquity. (Gogue, *De l'Origine des Loix* &c. tome 1. p. 263.) And it may safely be affirmed, that there have been very few instances of greater utility, or that have done more to accelerate the progress of improvement.

It is material, however, to observe, that the introduction and use of coined money may change whatever in the principle on which the changes were previously conducted. The coinage saves the trouble of weighing and assaying gold and silver, but it does nothing more. If a piece of metal and purity of the metal in a coin is of the value of that metal or coin is in itself determined by precisely the same principles that determine the value of other commodities, it would be as little affected by being recoinage into a new denomination, as the burden of a debt is changed by her name.

Inaccurate notions with respect to the origin of coinage seem to have given rise to the so long entertained, that coins were made of signs of values! But it is clear they were more claim to this designation than bars of gold or copper, sacks of wheat, or any other commodity. They exchange for other things, because

desirable articles, and are possessed of real intrinsic value. A draft, check, or bill may not improperly, perhaps, be regarded as the sign of the money to be given for it. But that money is nothing but a commodity; it is not a sign—it is the thing signified.

Money, however, is not merely the universal equivalent, or *merchandise vendite*, used by society: it is also the *standard* used to compare the values of all sorts of products; and the stipulations in the great bulk of contracts and deeds, as to the delivery and disposal of property, have all reference to, and are commonly expressed in, quantities of money. It is plainly, therefore, of the utmost importance that its value should be preserved as invariable as possible. Owing, however, to improvements in the arts, the exhaustion of old mines, and the discovery of new ones, the value of the precious metals is necessarily inconstant: though, if we except the effects produced in the 16th century by the discovery of the American mines, it does not appear to have varied so much at other times as might have been anticipated. Great mischief has, however, been repeatedly occasioned by the changes that have been made in most countries in the weight, and sometimes also in the purity, of coins; and since the impolicy of these changes has been recognised, similar, and perhaps still more extensive, disorders have sprung from the improper use of substitutes for coins. It is, indeed, quite obvious, that no change can take place in the value of money, without proportionally affecting the pecuniary conditions in all contracts and agreements. Much, however, of the influence of a change depends on its direction. An increase in the value of money is uniformly more prejudicial in a public point of view than its diminution: the latter, though injurious to individuals, may sometimes be productive of national advantage; but such can never be the case with the former. (See *Principles of Political Economy*, by the author of this work, 3rd ed. pp. 510—515.)

No certain estimate can ever be formed of the quantity of money required to conduct the business of any country; this quantity being, in all cases, determined by the value of money itself, the services it has to perform, and the devices used for economising its employment. Generally, however, it is very considerable; and when it consists wholly of gold and silver, it occasions a very heavy expense. There can, indeed, be no doubt that the wish to lessen this expense has been one of the chief causes that have led all civilised and commercial nations to fabricate a portion of their money of some less valuable material. Of the various substitutes resorted to for this purpose, paper is, in all respects, the most eligible. Its employment seems to have grown naturally out of the circumstances incident to an advancing society. When Government becomes sufficiently powerful and intelligent to enforce the observance of contracts, individuals possessed of written promises from others, that they will pay certain sums at certain specified periods, begin to assign them to those to whom they are indebted; and when the subscribers are persons of fortune, and of whose solvency no doubt can be entertained, their obligations are readily accepted in payment of debts. But when the circulation of promises, or bills in this way, has continued for a while, individuals begin to perceive that they may derive profit by issuing them in such a form as to fit them for being readily used as a substitute for money in the ordinary transactions of life. Hence the origin of bank notes. An individual in whose wealth and discretion the public have confidence, being applied to for a loan, say of 5,000*l.*, grants

the applicant his bill or note, payable on demand, for that sum. Now, as this note passes, in consequence of the confidence placed in the issuer, currently from hand to hand as cash, it is quite as useful to the borrower as if it had been gold; and supposing that the rate of interest is 5 per cent., it will yield, so long as it continues to circulate, a revenue of 250*l.* a-year to the issuer. A banker who issues notes, coins, as it were, his credit. He derives the same revenue from the loan of his written promise to pay a certain sum, that he could derive from the loan of the sum itself, or of an equivalent amount of produce! And while he thus increases his own income, he, at the same time, contributes to increase the wealth of the public. The cheapest species of currency being substituted in the place of that which is most expensive, the superfluous coins are either used in the arts, or are exported in exchange for raw materials or manufactured goods, by the use of which both wealth and enjoyments are increased. Ever since the introduction of bills, almost all general commercial transactions have been carried on by means of paper only. Notes are also used to a very great extent in the ordinary business of society; and while they are readily exchangeable at the pleasure of the holder for coins, or for the precise quantities of gold or silver they profess to represent, their value is maintained on a par with the value of these metals; and all injurious fluctuations in the value of money are as effectually avoided as if it consisted wholly of the precious metals.

In common mercantile language, the party who exchanges money for a commodity is said to buy; the party who exchanges a commodity for money being said to sell. Price, unless where the contrary is distinctly mentioned, always means the value of a commodity estimated or rated in money. (For a further account of metallic money, see the article *COIN*; and for an account of paper money, see the article *BANKS*.)

MONOPOLY. By this term is usually meant a grant from the Crown, or other competent authority, conveying to some one individual, or number of individuals, the sole right of buying, selling, making, importing, exporting &c., some one commodity, or set of commodities. Such grants were very common previously to the accession of the House of Stuart, and were carried to a very oppressive and injurious extent during the reign of Queen Elizabeth. The grievance became at length so insupportable, that notwithstanding the opposition of Government, which looked upon the power of granting monopolies as a very valuable part of the prerogative, they were abolished by the famous Act of 1624, the 21 *Jas. I. c. 3*. This Act declares that all monopolies, grants, letters patent for the sole buying, selling, and making of goods and manufactures, shall be null and void. It excepts patents for *fourteen* years for the sole working or making of any new manufactures within the realm, to the true and first inventors of such manufactures, provided they be not contrary to law, nor mischievous to the State. It also excepts grants by Act of Parliament to any corporation, company, or society, for the enlargement of trade, and letters patent concerning the making of gunpowder &c. This Act effectually secured the freedom of industry in Great Britain; and has done more, perhaps, to excite the spirit of invention and industry, and to accelerate the progress of wealth, than any other in the statute book.

MONTEVIDEO. A seaport, and the capital of the republic of Uruguay, on the north bank of the Rio de la Plata, lat. of the lighthouse 34° 53' 15" S.,

long. 56° 14' 15" W. Population 37,787 in 1862, and with Cordon and Aquada 45,765 in 1862 (Johnston's Gazetteer). The town is built in the form of an amphitheatre, on a regular plan, and is well fortified. It has suffered much from the various revolutions to which it has been subject during the last 30 years.

Montevideo is situated 29° 3' 33" W. of Cape St. Mary, the northern limit of the embouchure of the La Plata. Vessels from the north bound to Montevideo generally make this cape, entering the river between it and the small island of Lobos, in from 14 to 17 fathoms. The course is thence nearly W. to the Isle of Flores, on which is a lighthouse 112 feet above the level of the sea, with a revolving light. From Flores to Montevideo is 16 miles in a direct line, and the course W. by S. by compass. A lighthouse, 486 feet above the level of the sea, has been erected on the summit of the Montevideo, whence the town has its name. The light is visible for 25 miles in clear weather, and gives a flash every three minutes. Since 1862 the dial plate in the south tower of the Cathedral has been lighted with gas. The latter is built on a projecting tongue of land, the port being on its S. side. This, which is the best on the La Plata, is a large circular basin open to the S.W.; generally the water is shallow, not exceeding from 14 to 19 feet, but the bottom being soft mud, vessels are seldom damaged by grounding. It should, however, be observed that the depth of water in the harbour, as well as throughout the whole of the Rio de la Plata, depends very much on the direction and strength of the

winds. The S.W. wind, called *pampero*, blows right into the bay of Montevideo with much force, not unfrequently causing a rise of a fathom or more in depth of water! But it rarely occasions much damage to vessels properly moored with anchors to the S.W., S.E., and one to the N. (Blunt's *American Pilot*, pp. 542-555; Coulier *Sur les Phares &c.*)

Montevideo has a considerable commerce. The great articles of export consist of animal products, or of hides, beef, tallow, hair, bones, grease, wool &c. The imports principally consist of British cottons, woollens, and hardware, iron, wine and spirits, linens, sugar, tobacco, boots and shoes, salt &c. In 1867 the value of our total exports of British produce to Uruguay was 1,472,064, and of our imports therefrom 1,222,228.

NOTES ON IMPORTS.

In National or Foreign Vessels, at Montevideo.

1. Machinery, agricultural implements, instruments used in the arts and sciences, books, prints, and maps
2. Silk, raw and wrought, laces, blondes, gold and silver embroidery, watches, jewellery, saltpetre, plaster of Paris, coal, timber, cotton fringes, and wooden hoops
3. Powder, pitch, tar, rosin, and naval stores - 6 per cent
4. All raw materials and manufactured articles, not included in the preceding enumeration - 12 per cent
5. Sugar, Paraguay and China teas, cocoa, cassia lignea and cinnamon, spices, drugs, and provisions in general - 20 per cent
6. Furniture, pictures, looking-glasses, musical instruments, all sorts of carriages, carts &c., and harness, saddles, horses' furniture (except horse-cloths of the manufacture of the adjacent provinces, which pay 15 per cent), ready-made clothes, boots and shoes, liquors, brandy, wine, vinegar, ale and porter, cider, tobacco, and soap - 25 per cent
7. Hides of all classes, hair, horns, tallow, silver and gold, in bullion or coin

Account of the Quantities and Values of the Principal Articles Imported into the United Kingdom from Montevideo in each of the 3 Years ending with 1867.

Principal Articles	Quantities			Computed Real Value		
	1865	1866	1867	1865	1866	1867

 1 dollar, when wheat is worth 6 to 10 dollars.  
 Nothing, when wheat is worth above 10 dollars per fanega.

Goods transhipped, or shipped out of bond, pay 2 per cent.  
 Foreign goods, shipped in vessels of less than 150 tons burden, for ports of the Uruguay and Paraguay, pay only 1 per cent.

All goods imported, paying duties, are subject to pay an additional 1 per cent. to the consulado; 1 per cent. to the hospital; and, for the extinction of copper money (this has, much to the honour of the authorities and people, been already accomplished); but the duty is maintained for general purposes, 1 per cent. additional on all goods that pay 3 per cent.

On all goods that pay 15, 15, and 20 per cent. - 3 per cent.  
 On all goods that pay 25 per cent. - 5 per cent.  
 On bullion - 10 per cent.  
 On wool - 3 per cent.

Duties on Exports in National or Foreign Vessels.  
 On and cow hides, 2 reals, 25 centesimos, for reconcondor valuations of 1 dollar, and 1 per cent. consulado.  
 Horses, 1 real for reconcondor, on valuations of 5 reals for reconcondor each, and 2 per cent. consulado.

All other produce of the country pays 4 per cent. on the market value, and 1 per cent. consulado.  
 Jerked and salt beef, pork &c.; also all foreign goods that have paid the import duty, free.  
 Gold and silver, coined or in bullion, 1 per cent.

National and foreign vessels, that neither discharge nor load cargo, and that do not remain in the harbour more than 6 days pay nothing; those that remain in the harbour more than 6 days pay one-third of the above tonnage dues.

National vessels, and vessels belonging to the provinces of Buenos Ayres, employed within the Plate, called coasting, pay for a license for their voyage as follows:—

Moneys, Weights, and Measures.—Paper money there is none.

Current money, the Brazilian patacon and Spanish dollar; they pass for 960 centesimos. 100 cents make a real. 800 cents, or 8 reals, make a dollar. 960 cents, or 9 reals 60 cents, make 1 1/4 current dollar, or 1 hard dollar or patacon.

Weights and measures same as those of Spain. [CADIZ.]

MOROCCO. [MAGADORE; TREATIES, COMMERCIAL.]

MOROCCO or MAROQUIN (Ger. saffiam; Fr. maroquin; Ital. marocchino; Span. marroqui; Russ. saftian). A fine kind of leather, prepared of the skins of goats, imported from the Levant, Barbary, Spain, Franco &c. It is of various colours, as red, green, black, yellow &c. When of the best quality, it is superior to every other material for the binding of books. And a volume that is bound in morocco by a first-rate artist, provided it be well preserved, and of an age to be properly toned down and mellowed, is justly deemed a prize, and always fetches a very high price.

MOROCCO is, however, very extensively counterfeited, and books said to be in morocco are often done up in the vilest sheep-skin, dyed and prepared in imitation of the genuine article. The fraud is easily discovered by connoisseurs, but it is perpetrated to a great extent on the ignorant and unwary.

In 1867 we imported 762,442 undressed, and 2,106,208 tanned, tawed, or dressed goat skins of the total value of 317,364*l*.

MUNJEET. A species of madder (*Rubia munjesta*) produced in Nepal and in other wild districts of India.

That which is brought to England is imported chiefly from Bombay and Sindh. The roots are long and slender, and when broken appear of a red colour. It is used in dyeing; the red which it produces being, though somewhat peculiar, nearly the same as that produced by European madder. Dr. Bancroft says that the colour which it imparts to cotton and linen is not so durable as that of madder, but that upon wool or woollen cloth its colour is brighter and livelier; and, when proper mordants are used, nearly, perhaps quite, as permanent. (*Permanent Colours*, vol. ii. p. 279.) The best munjeet is in pieces about the bigness of a small quill, clean and firm, breakin; short, and not pipy or chaffy. Its smell somewhat resembles liquorice root.

Being a very bulky article, as compared with its value, the freight adds greatly to its cost. This seems to be the principal reason of its being so very little used in Great Britain, that the entire imports, during the 3 years ending with 1840, amounted to only 3,539 cwt., and in 1867 to only 360 cwt., valued at 504*l*. The brokers estimate that 4*l*. per ton of freight is equal to 1*l*s. 1*d*. per cwt. on the value of the article; 7*l*. per ton being equal to 13*s*. 10*d*.; 6*l*. to 16*s*. 7*d*.; and 7*l*. to 19*s*. 4*d*.; and as the price of munjeet in bond varies from 12*s*. to 15*s*. per cwt. it is plain it cannot be imported in any considerable quantity, except when freights are very much depressed. It is mostly imported in small packets or bundles of 600 or 800 to the ton; but sometimes it is packed in bales like cotton. (*Stevens On Stowage*.)

[MADDER.]

MUSCAT. A city and seaport situated on the east coast of Arabia, about 96 miles N.W. of Cape Rasselgate (Ras-el-mad), in lat. 23° 38' N., long. 58° 37' E. It is the chief port of the kingdom of Oman, a slip of land running half-way down the Persian Gulf on its western side and the sea

of Oman to Ras-el-mad, and thence along the S.E. coast of Arabia to Dofar.

In the 16th and 17th centuries, the town was in possession of the Portuguese, as was Oman and the adjoining island. After a century and a half the Dutch drove the Portuguese out. They were expelled, as were also the Persians, in the middle of the last century, when a line of native sovereigns succeeded. Of these Sa'ad, who commenced his reign at the beginning of the present century, was the most energetic and powerful. It was in the interest of this man's son Thomayne, known, but incorrectly, under the name of the Imam of Muscat, that the English interposed (Palgrave's *Arabia*, ii. 285), and the trade of Muscat became so early known. Population uncertain: but estimated by Lieut. Wellsted at 40,000, which we incline to think beyond the mark. There are more Omanians here than in any other city in Arabia. There are amongst them some very extensive merchants, who engross almost the whole pearl trade of the Persian Gulf, and the supply of corn from India. The negro slaves are numerous, and are generally stout, well made, and active.

The harbour, which is the best on this part of the Arabian coast, opens to the north, and is shaped like a horse-shoe. It is bounded on the W. and S. by the lofty projecting shores of the mainland, and on the E. by Muscat Island, a ridge of rocks from 200 to 300 feet high. The town stands on a sandy beach at the south end or bottom of the cove or harbour, about 1½ mile from its mouth. The depth of water near the town varies from 3 to 4 and 5 fathoms. Ships at anchor are exposed to the north and north-west winds; but the anchorage is everywhere good, accidents are of very rare occurrence. The harbour is protected by some pretty strong forts. Vessels are not allowed to enter after dusk, nor to leave before sunrise. If the usual signal be made for a pilot, one will come off, but not otherwise. It is best to make them attend till the vessel be secured, as they have excellent boats for carrying out warp anchors.

Muscat is a place of considerable importance, being at once the key to, and commanding the entrance of, the Persian Gulf. The government of the Sultan of Oman is more liberal and intelligent than any other in Arabia or Persia. The town, situated at the bottom of a high hill, is ill-built and filthy; and, during the months of July and August, is one of the hottest inhabited places in the world. The country in the immediate vicinity of the town is extremely barren; but it improves as it recedes from the shore. Dates and wheat, particularly the first, are the principal articles of produce. The dates of this part of Arabia are held in high estimation, and are largely exported, those of Bushire and Bussorah being imported in their stead. A date tree is valued at from 7 to 10 dollars, and its annual produce at from 1 to 1½ dollar. An estate is said to be worth 2,000, 3,000, or 4,000 date trees, according to the number it possesses.

But the place derives its whole importance from the commerce and navigation of which it is the centre. The Imam has some large ships of war, and his subjects possess some of the finest trading vessels to be met with in the Indian seas. The part of Arabia adjoining to Muscat is too poor to have any very considerable direct trade; but, owing to its favourable situation, the backward state of the country round the Persian Gulf, and the superiority of its ships and seamen, Muscat has become an important entrepôt, and has an extensive transit and carrying trade. Most European ships bound for Bussorah and

Bushire touch at it; and more than half the trade of the Persian Gulf is carried on in ships belonging to its merchants. [Bussing.] But, exclusive of the ports on the Gulf, and the south and west coasts of Arabia, ships under the flag of the Imam trade to all the ports of British India, to Singapore, Java, the Mauritius, the east coast of Africa &c. The pearl trade of the Persian Gulf is now, also, wholly centred at Muscat. All merchandize passing up the Gulf on Arab bottoms pays a duty of ½ per cent. to the Imam. He also rents the islands of Ormuz and Kishmoo, the port of Gombroon, and some sulphur mines from the Persian government.

In the magazines of Muscat may be found every species of produce imported into or exported from the Persian Gulf. Various articles are also imported for the use of the surrounding country, and for the internal consumption of Arabia. Among these, the principal are rice, sugar, coffee from Mecca, cotton and cotton cloth, cambrics, wood for building, slaves from Zanzibar, dates from Bushire and Bussorah &c. Pepper for these is chiefly made in specie and pearls; they also export drugs of various descriptions, ivory, gums, hides, ostrich feathers, horses, skins, furs, a sort of earthen jars, called *Martubani*, Tranquebar, dried fish, an esteemed sweetmeat called *hulwah*, and a few other articles.

The markets of Muscat are abundantly supplied with all sorts of provision. Beef, mutton, and vegetables of good quality may be had at times, and reasonably cheap. The bay is swarmed with the greatest variety of most excellent fish. Water is excellent, and is conveyed to the beach in such a manner that the cask or vessel may be filled in her boats while at anchor. Fire-wood is also abundant, and is cheaper than

Bombay. No imports have reached the United Kingdom from Muscat during the last five years (1865) and the exports are merely a small amount of the value of which, in 1866, was but 2,572. The trade of Muscat with British India is in the decline.

The general rule in all the Government customs houses on the sea line from Bahrein to Sorok, exact a rial, i.e. 1/2s. for every full-sized bale embarked, whatever its contents, a bale weighing on the average from 60 to 70 lb. avoirdupois. The duty is, of course, very unequal, being 15 per cent. on dates, 1 cn cloth, about 4 on rice. The average daily disembarkations at the large havens of Linja, Sohar, Mataah, and the like, they are more, at smaller ports. The medium quota of calls is 60, and the customs duties may be held to amount annually to 810,000l. The total revenue of the Sultan of Oman is reckoned by Palgrave at 1,065,000l. year. (Palgrave's *Arabia*, vol. ii. 384.)

*Money, Weights, and Measures.*—Accounts are kept in goz and mamoodies: 20 mamoodies = 1 goz; and 20 mamoodies = 1 dollar. Persian, Turkish, and Indian coins, as well as French and German crowns, and Spanish dollars, are met with; their value fluctuating according to demand, and they are generally sold by weight.

The weights are, the cusha and mamoodie; the Mosca of Arrian and other Greek (Voyage en Arabie, vol. ii. p. 71 ed. Anst.) a conjecture which seems to be confirmed merely by the resemblance of the name, and by the terms applied by Arrian to Muscat sufficiently descriptive of Muscat; and the port is bounded on all sides by rocks,

**NAGASAKI.** A sea-port town on the south-west coast of the Island of Ximo, one of the Japanese islands, being, according to Krusenstern, in lat. 32° 43' 40" N., long. 103° 11' 47" E. The harbour is one of the finest in the world. It is about a mile in width, and three or four in length. When one is inside, it appears to be completely landlocked, and to be an inland lake. The hills around it are about 1,500 feet high. The town is supposed to contain about 70,000 inhabitants. (*Fortune's Japan.*) Ships lie in 5 or 6 fathoms water, within gunshot of the town, near the middle of the bay, where they are protected from all winds. A lighthouse is being built in the harbour.

The Japanese islands are situated within the temperate zone. They are believed to contain from 25,000,000 to 50,000,000 of people, superior in industry and civilisation to every other Eastern nation. They show more capacity in using European machinery than any other people in that part of the world (*Fortune*). Japan has some thousand miles of sea-coast, and at one time the inhabitants were much addicted to emigration, and carried on an extensive intercourse with the adjacent nations. But in consequence of the alarm occasioned by the attempts of the Jesuit missionaries to make converts to Christianity, the Government, in 1637, expelled the missionaries, put to death their converts, and to obviate the possibility of such attempts being made in future, they prohibited, under the severest penalties, their own people from resorting to foreign parts, and foreigners from entering into or trading with Japan. And singular as it may seem, these exclusive and anti-social regulations have been carried out almost to the letter down to our own times. So far, indeed, as respects the emigration of Japanese, they have not been in any degree modified; but the prohibition against foreigners trading with the empire was so far relaxed, that 1 or 2 ships from Java, and 10 or 12 junks from China, were allowed to enter certain Japanese harbours. But, besides being confined within the narrowest limits, those engaged in this intercourse were subjected to a vexatious surveillance, and had to suffer many indignities. 'The cargoes of the ships,' says Mr. Crawford, 'are landed by, and placed in charge of, the officers of the Japanese Government, and the Dutch have neither control over, nor access to them, except through *solicitation*. The island of Desima, to which they are confined, communicates with the town of Nagasaki by a bridge and a gate, and is palisaded all round, as well as surrounded by a guard. From this imprisonment they are allowed to peep twice or thrice a year, rather to be exhibi-

ted to the great as a curiosity, than out of indulgence. A corps of constables and interpreters are appointed to watch over their minutest actions; and the most degrading servilities are exacted from the highest among them, by the meanest officers of the Japanese Government.

'The Chinese trade with Japan is principally conducted from the port of Ningpo, in the province of Chekiang, which is so conveniently situated that two voyages may be performed in the year, even by the clumsy junks of China. The commodities with which the Chinese furnish the Japanese consist of raw sugar, cow and buffalo hides, wrought silks, consisting chiefly of satin and damasks, eagle and sandal wood, ginseng, tutenague or zinc, tin, lead, fine teas, and, more than 100 years back, some European broad cloths and camlets. The exports consist of copper, limited to 15,000 piculs, or about 900 tons of camphor, sabre blades, pearls, some descriptions of paper and porcelain, and some Japan ware, which is either curious or handsome, but not so substantial as that of China.' (*Indian Archipelago*, p. 297.)

The following are the qualities and value goods exported and imported by the Dutch their trade with Japan in 1825; the ships employed being 1 of 600 and 1 of 700 tons burden.

## Exports to Nagasaki.

	florins
Sandal wood, 100 piculs	...
Sapan wood, 1,167 "	...
Buffalo hides, 500 in number	...
